## PREFACE.

---

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to . . . . . Census and statistics." In the exercise of the power so conferred, a "Census and Statistics Act" was passed in 1905, and in the year following the "Commonwealth Bureau of Census and Statistics" was created. The first Official Year Book was published early in 1908. The publication here presented is the forty-second Official Year Book issued under the authority of the Commonwealth Government.

The Synopsis on pp. xi to xxxi following shows the general arrangement of the work. The special index (preceding the General Index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, owing to limitations of space, have been omitted or abbreviated in the present volume. Where, in the General Index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

Every endeavour has been made to meet the demand occasioned by the current economic and financial conditions for new information, or information expressed in new terms, concerning many branches of statistics, while a Diary of Principal Economic Events of the years 1951 to 1954 is inserted after the last chapter.

It is not proposed to refer here to the whole of the new matter or to the new treatment of existing matter incorporated in the present volume, but attention may be drawn to the following :—

- Chapter I. Discovery, etc., of Australia.—Reprinting of Commonwealth Constitution (p. 6).
- Chapter V. The Territories of Australia.—Information relating to Cocos Is. (pp. 151-2)
- Chapter VI. Labour, Wages and Prices.—Expanded section showing comparison of trends of "Interim" and "C" Series Indexes of retail prices (p. 157); Wage Margins (p. 193).
- Chapter VIII. Trade.—New Table showing Direction of Trade according to Currency Areas (p. 293); Interstate Trade (p. 315).
- Chapter XV. Welfare Services.—The Aged Persons Homes Act (p. 562); The Order of St. John (p. 566).
- Chapter XVI. Population. Details of 1954 Census results (pp. 586-605); details of General Assisted Passage scheme of migration (p. 616).
- Chapter XXV. Fisheries.—Whaling (p. 979).
- Chapter XXVI. Mineral Industry.—Revised and expanded sections on Mineral Oils (pp. 1016-7) and Non-metallic minerals (pp. 1017-20).
- Chapter XXIX. Miscellaneous.—Special article on Snowy Mountains Scheme (pp. 1103-30).
- Appendix.—Commonwealth and State Election Results, 1955 (pp. 1179-80); New Ministries (pp. 1181-3); Details of Commonwealth Conciliation and Arbitration Act 1904-1956; Government Schools, Summary of Statistics for 1954.

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

In a publication of this size, a considerable time must necessarily elapse between the handling, by both author and printer, of the earlier and later parts of the work. In order to offset, to some extent, the consequent delay in presentation, the contents of this issue have already been published in separate Parts as the successive chapters or groups

of chapters were printed. Particulars of these Parts, numbering eleven in all, are shown in the Price List of Printed Publications at the end of this volume. In a statistical publication, the time element, however, does result in an unevenness in the periods to which the statistics relate. To overcome this difficulty, at least partially, much more use is now made of the Appendix to the Year Book. So far as space permits, later particulars, where available, of many statistical series appearing in preceding chapters have been inserted in the Appendix. The insertions have been restricted to figures mainly, as the inclusion of current textual matter is not generally practicable.

The Appendix to this issue contains information for various periods up to 1955-56, that is, one, and in some instances two, years in advance of that contained in the body of the book.

It should be pointed out that for the most recent statistics the reader should refer to other publications issued by this Bureau, notably the *Monthly Review of Business Statistics* and the *Quarterly Summary of Australian Statistics*. There are also numerous mimeographed statements issued from time to time on a wide range of subjects. Particulars of these are shown in Chapter XXX.—Statistical Organization and Sources of Information.

Commencing with issue No. 38 a change in the title of the Year Book was made, the year now shown being the year of issue.

My thanks are tendered to the State Statisticians, who have collected and compiled the data on which a great part of the information given in the Official Year Book is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments, and to others who have kindly, and often at considerable trouble, supplied information.

I also desire to express my keen appreciation of the valuable work performed by Mr. A. E. Callander, Editor of Publications, Mr. E. H. Harry, B.A., B.Com., and Mr. G. I. Neville, B.Com., Assistant Editors, and the other officers of the Publications Division, and of the services rendered by the officers in charge of the several Branches of the Commonwealth Bureau of Census and Statistics upon whom has devolved the duty of revising the chapters relative to their respective Branches.

S. R. CARVER,

Acting Commonwealth Statistician.

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,  
*Canberra, A.C.T., November, 1956.*

§ 3. Higher (Judges') Courts—		3. Strength of Police Force ..	511
1. Convictions at Higher Courts ..	505	4. Prison Accommodation and Prisoners ..	512
2. Convictions at Higher Courts, 1939 and 1949 to 1953 ..	505	5. Prisoners in Gaol ..	513
3. Habitual Offenders ..	506	§ 6. Cost of Administration of Justice—	
4. Capital Punishment ..	506	1. Expenditure by the States ..	513
		2. Commonwealth Expenditure ..	514

## CHAPTER XIV.—PUBLIC HEALTH AND RELATED INSTITUTIONS.

## A. PUBLIC HEALTH.

§ 1. State Public Health Legislation and Administration—	
1-6. States ..	515-8
§ 2. The Commonwealth Department of Health—	
1. General ..	519
2. The National Health Service ..	519
3. Other Activities of the Commonwealth Department of Health ..	521
§ 3. The National Health and Medical Research Council ..	529
§ 4. Control of Infectious and Contagious Diseases—	
1. General ..	530
2. Quarantine ..	530
3. Notifiable Diseases ..	530
4. Vaccination ..	532
§ 5. Inspection and Sale of Food and Drugs ..	532
§ 6. Supervision of Dairies, Milk Supply, etc.—	
1. General ..	532
2. Number of Dairy Premises Registered ..	532
§ 7. Medical Inspection of School Children—	
1. General ..	532
2-8. States and Australian Capital Territory ..	533-6

A. PUBLIC HEALTH—*continued.*

§ 8. Supervision and Care of Infant Life—	
1. General ..	537
2. Government Activities ..	537
3. Nursing Activities ..	537
§ 9. Disposal of the Dead by Cremation ..	538
B. INSTITUTIONS.	
§ 1. General ..	538
§ 2. Public Hospitals (other than Mental Hospitals)—	
1. General ..	539
2. Number, Staff and Accommodation ..	539
3. In-patients (Cases) Treated ..	539
4. Revenue and Expenditure ..	540
5. Summary ..	540
§ 3. Leper Hospitals ..	541
§ 4. Mental Hospitals—	
1. General ..	541
2. Hospitals, Staff, etc. ..	541
3. Patients ..	541
4. Revenue and Expenditure ..	542
5. Summary for Australia ..	543
6. Number of Mental Patients ..	544

## CHAPTER XV.—WELFARE SERVICES.

	PAGE		PAGE
<b>A. COMMONWEALTH SOCIAL SERVICE BENEFITS.</b>		<b>B. OTHER SERVICES.</b>	
§ 1. Introduction .. ..	545	§ 1. Benevolent Homes—	
§ 2. Commonwealth Expenditure on Social and Health Services .. ..	545	1. General .. ..	562
§ 3. Age and Invalid Pensions .. ..	546	2. Principal Institutions .. ..	562
§ 4. Maternity Allowances .. ..	550	3. Revenue and Expenditure .. ..	562
§ 5. Child Endowment .. ..	552	4. The Aged Persons Homes Act .. ..	562
§ 6. Widows' Pensions .. ..	554	§ 2. Orphanages, Industrial Schools, etc.—	
§ 7. Unemployment and Sickness Benefits ..	556	1. General .. ..	563
§ 8. Reciprocal Agreements with Other Countries—		2. Principal Institutions .. ..	564
1. New Zealand .. ..	561	3. Transactions of State Departments ..	564
2. United Kingdom .. ..	561	§ 3. Protection of Aborigines .. ..	565
		§ 4. Royal Life Saving Society .. ..	565
		§ 5. Royal Humane Society .. ..	565
		§ 6. The Order of St. John .. ..	566
		§ 7. Other Charitable Institutions .. ..	566

## CHAPTER XVI.—POPULATION.

§ 1. Population Statistics .. ..	567	§ 7. General Characteristics—	
§ 2. The Census—		1. Sex Distribution .. ..	586
1. Census-taking .. ..	568	2. Age Distribution .. ..	586
2. Population recorded at Censuses ..	568	3. Conjugal Condition .. ..	588
3. Increase since 1831 Census .. ..	568	4. Birthplace .. ..	589
§ 3. Growth and Distribution of Population—		5. Period of Residence in Australia ..	590
1. Growth of Population .. ..	569	6. Nationality .. ..	590
2. Present Numbers .. ..	570	7. Religion .. ..	591
3. Proportion of Area and Population, Density and Masculinity .. ..	570	8. Industry .. ..	592
4. Urban and Rural Distribution .. ..	571	9. Occupational Status .. ..	596
5. Metropolitan Population: Australia and Other Countries .. ..	573	10. Other General Characteristics ..	596
6. Principal Urban Areas .. ..	574	§ 8. Dwellings—	
7. Urban Areas Outside Metropolitan Areas .. ..	575	1. Number of Dwellings .. ..	596
8. Principal Cities in the World .. ..	576	2. Class of Dwelling .. ..	598

## CHAPTER XXIV.—FORESTRY.

§ 1. General—		§ 5. Forestry Production—	
1. Objects of Forestry ..	955	1. Timber ..	963
2. General Account of Forests and Timbers ..	955	2. Wood Pulp and Paper ..	964
3. Extent of Forests ..	956	3. Other Forest Products ..	965
4. Forest Reservations ..	957	4. Value of Production ..	966
5. Plantations ..	958	5. Employment ..	967
6. Fire Protection ..	958		
§ 2. Forestry Activities of the Commonwealth—		§ 6. Imports and Exports of Timber and Tan- ning Substances—	
1. Prior to 1925 ..	959	1. Imports of Dressed and Undressed Timber ..	968
2. Forestry and Timber Bureau ..	959	2. Exports of Undressed Timber and Railway Sleepers ..	968
3. Commercial Forests ..	961	3. Classification of Imports and Ex- ports ..	969
4. Forest Products Research ..	961		
§ 3. Forest Congresses ..	961		
§ 4. State Forestry Departments—			
1. Functions ..	961		
2. Forest Reservations ..	962		
3. Employment ..	962		

## CHAPTER XXV.—FISHERIES.

	PAGE		PAGE
<b>§ 1. General—</b>		<b>§ 4. Inquiries and Research—</b>	
1. Fish Resources .. .. .	971	1. General .. .. .	977
2. Fishing Areas .. .. .	971	2. Commonwealth Scientific and Industrial Research Organization, Division of Fisheries and Oceanography .. .. .	977
3. Fishing Boats and Equipment .. .. .	972	3. Commonwealth Fisheries Office .. .. .	977
4. Administration .. .. .	972	4. North Australia Development Committee .. .. .	977
<b>§ 2. Development and Present Condition of the Fishery—</b>		5. Whaling .. .. .	978
1. Fisheries Proper .. .. .	972	<b>§ 5. The Fishing and Whaling Industry—</b>	
2. Crustaceans and Molluscs .. .. .	975	Statistics—	
3. Pearl-shell and Trochus .. .. .	975	1. Fisheries .. .. .	978
<b>§ 3. Marketing and Distribution—</b>		2. Whaling .. .. .	979
1. Marketing .. .. .	976	3. Value of Production .. .. .	979
2. Consumption of Fish .. .. .	976	4. Fish Preserving .. .. .	980
3. Processing, including Canning .. .. .	976	5. State Revenue from Fisheries .. .. .	981
4. By-products .. .. .	977	<b>§ 6. Oversea Trade in Fishery Products—</b>	
		1. Imports of Fish .. .. .	981
		2. Exports of Fish .. .. .	982
		3. Exports of Pearl and other Shell .. .. .	982

## CHAPTER XXVI.—MINERAL INDUSTRY.

<b>§ 1. The Mineral Wealth of Australia—</b>		<b>§ 7. Other Metallic Minerals—</b>	
1. Place of Mining in Australian Development .. .. .	983	1. Tungsten .. .. .	1003
2. Extent of Mineral Wealth .. .. .	983	2. Mineral Sands .. .. .	1003
3. Standardization of Mineral Statistics .. .. .	983	3. Cadmium and Cobalt .. .. .	1004
4. Quantity and Value of Minerals Produced .. .. .	984	4. Manganese .. .. .	1004
5. Mine Production of Principal Metals and Production of Coal and Sulphur .. .. .	987	5. Other .. .. .	1005
6. Value of Output and Value of Production for Mining and Quarrying .. .. .	987	<b>§ 8. Coal—</b>	
7. Industrial Census of the Mining and Quarrying Industry, 1953 .. .. .	989	1. Total Production of Coal .. .. .	1005
<b>2. Gold—</b>		2. Production of Coal in each State .. .. .	1007
1. Discovery in Various States .. .. .	990	3. Production in Principal Countries .. .. .	1011
2. Mine Production .. .. .	990	4. Exports .. .. .	1011
3. Refinery Production .. .. .	991	5. Consumption in Australia .. .. .	1012
4. Changes in Stocks of Gold held in Australia .. .. .	991	6. Coal Value at the Mine in New South Wales .. .. .	1013
5. Production in Principal Countries .. .. .	992	7. Values in New South Wales, Great Britain and the United States of America .. .. .	1013
6. Employment in Gold Mining .. .. .	992	8. Employment in Coal-mines .. .. .	1013
7. Assistance to Gold Mining Industry .. .. .	992	9. Production of Black Coal per Man-shift .. .. .	1014
<b>§ 3. Silver, Lead and Zinc—</b>		10. Joint Coal Board .. .. .	1015
1. Mine Production .. .. .	993	<b>§ 9. Coke and Other By-products from Coal—</b>	
2. Production and Sales of Refined Silver, Lead and Zinc .. .. .	995	1. Coke .. .. .	1015
3. Silver, Lead and Zinc: Production in Principal Countries and World Total .. .. .	995	2. Other By-products from Coal .. .. .	1015
4. Prices of Silver, Lead and Zinc .. .. .	996	<b>§ 10. Mineral Oils—</b>	
5. Employment in Silver, Lead and Zinc Mining .. .. .	996	1. Australia .. .. .	1016
<b>§ 4. Copper—</b>		2. New South Wales .. .. .	1016
1. Production .. .. .	997	3. Victoria .. .. .	1016
2. Sources of Production .. .. .	997	4. Queensland .. .. .	1016
3. Production and Sales of Refined Copper .. .. .	998	5. South Australia .. .. .	1016
4. World Production of Copper .. .. .	998	6. Western Australia .. .. .	1016
5. Prices .. .. .	999	7. Papua .. .. .	1016
6. Employment in Copper-mining .. .. .	999	8. General .. .. .	1017
<b>§ 5. Tin—</b>		<b>§ 11. Sulphur .. .. .</b>	1017
1. Production .. .. .	999	<b>§ 12. Non-metallic Minerals—</b>	
2. Sources of Production .. .. .	1000	1. Asbestos .. .. .	1017
3. Production of Refined Tin .. .. .	1000	2. Clays .. .. .	1018
4. World Production .. .. .	1000	3. Gypsum .. .. .	1018
5. Prices .. .. .	1001	4. Limestone .. .. .	1019
6. Employment in Tin Mining .. .. .	1001	5. Magnesite .. .. .	1019
<b>§ 6. Iron—</b>		6. Mica .. .. .	1019
1. General .. .. .	1001	7. Salt .. .. .	1020
2. Production .. .. .	1001	8. Other Non-metallic Minerals .. .. .	1020
3. Production of Iron and Steel .. .. .	1002	<b>§ 13. Persons Engaged, Wages Paid and Accidents in Mining—</b>	
		1. Total Employment in Mining .. .. .	1021
		2. Wages Paid in Mining .. .. .	1022
		3. Accidents in Mining .. .. .	1022
		<b>§ 14. Oversea Trade in Minerals and Metals .. .. .</b>	1022
		<b>§ 15. Government Aid to Mining, and Mineral Control—</b>	
		1. Aid to Mining .. .. .	102
		2. Control of Minerals .. .. .	102

## CHAPTER XXVII.—DEFENCE.

# OFFICIAL YEAR BOOK

## OF THE

# COMMONWEALTH OF AUSTRALIA.

### CHAPTER I.

## DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA.

### § 1. Early Knowledge and Discovery of Australia.

1. **Introduction.**—The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A summary of these facts in greater detail, may be found in Year Book No. 39 (*see* page 1) and earlier issues.

2. **Terra Australis.**—It would appear that there was an early Chaldean tradition as to the existence of an Austral land to the south of India, and rumours to that effect found their way in the course of time to Europe. References to this *Terra Australis* are found in the works of Ælianus (A.D. 205-234), Manilius (probably a contemporary of Augustus or Tiberius Caesar), and Ptolemy (A.D. 107-161). Evidence which might warrant the supposition of knowledge of such a land appeared in maps and manuscripts of the Middle Ages and the fourteenth and fifteenth centuries, but there is no evidence definitely connecting this so-called *Terra Australis* with Australia.

Reference by Marco Polo (1254-1324) to a land called Locac, and several indications on maps and globes in the fifteenth and sixteenth centuries have been supposed to relate to Australia, but little weight can now be attached to these suppositions. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, although the oft-quoted passage in his *Descriptionis Ptolemaicæ Augmentum* describing the *Australis Terra* has been considered to have had its origin in the voyages through the Straits of Magellan and the discovery of Tierra del Fuego rather than that of Australia.

3. **Discovery of Australia.**—(i) *The Spaniards.* Disregarding the statement that the Arabs had come to Australia long before the Portuguese, Spaniards or the Dutch, for which there is no evidence, and apart from the possibility that the Portuguese may have discovered part of the Australian coast before 1542, the coastal exploration of Australia began with the Spaniards and the Dutch.

In 1606 the Spaniard Quiros, on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group *La Australia del Espiritu Santo*. After leaving the New Hebrides, Quiros sailed eastward, but Torres, his second-in-command, took a westerly course, and passed through the strait that now bears his name. In all probability he sighted the Australian continent, but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas.

(ii) *The Dutch.* The Dutch discovered Australia when the Dutch East India Company sent the *Duyfken* from Bantam to explore the islands of New Guinea. During March, 1606 the *Duyfken* coasted along the southern shores of New Guinea, and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

In 1642 Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage in 1644 Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

4. Discoveries by the English.—In the meantime the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the *Cygnnet*, a trading vessel whose crew had turned buccaneers. In 1699 he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century it was a question whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it, but themselves formed part of a great Antarctic Continent. Lieutenant James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Tahiti, had also for its objective to ascertain whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burden, carrying about 85 persons, and accompanied by Sir Joseph Banks, Dr. Solander the naturalist, Green the astronomer, draughtsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned towards New Zealand, sighting that land on 7th October, 1769 in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20th April, 1770, at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on 29th April, 1770. The *Endeavour* dropped anchor and Cook landed on the same day. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11th June, 1770, when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13th July, 1771. In 1772 Cook was put in command of the ships *Resolution* and *Adventure*, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance was the existence of a channel between Tasmania and Australia. This was made by Flinders and Bass in 1798.

## § 2. The Annexation of Australia.

1. Annexation of Eastern Part of Australia, 1770.—Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23rd August, 1770 that the history of Australia was brought into definite political connexion with Western civilization. It was on that date that Captain Cook took possession "of the whole eastern coast, from latitude 38° to this place, latitude 104° S., in right of His Majesty King George the Third." Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on 12th October, 1786, and amplified on 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet."

A full historical account of the period referred to may be found in the *Historical Records of New South Wales* Vol. 1., parts 1 and 2.

2. **Original Extent of New South Wales.**—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south, and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south."

Although in November, 1769 Captain Cook had taken possession of the North Island of New Zealand, and in January, 1770 also of the South Island, it is a matter of doubt whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean." The facts that under the Supreme Court Act (Imperial) of 1823 British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have unequivocally become British territory until 1840. In that year, on 29th January, Captain Hobson arrived at the Bay of Islands. On the following day he read the commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5th February the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21st May, British sovereignty over the islands of New Zealand was explicitly proclaimed.

3. **Extension of New South Wales Westward, 1825.**—On 17th February, 1824 Earl Bathurst advised Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. *Tamar*, who was selected for the purpose, took possession on 20th September, 1824 of the coast from the 135th to the 129th degree of east longitude. On 16th July, 1825 the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.

4. **Annexation of Western Australia, 1827.**—An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George III. Sound, sailed from Sydney on 9th November, 1826, landed at the Sound on 26th December following, and on 21st January, 1827 hoisted the British flag. Captain Stirling, in command of H.M.S. *Success*, arrived at Sydney a few weeks after the departure of the expedition to King George's Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17th January, 1827, and on his return in the following April submitted a glowing report on what he described as a "rich and romantic country," urging its occupation for the purpose of settlement. He left for England in July, 1827, continuing his advocacy—notwithstanding much discouragement—with unabated enthusiasm. He was at last successful, the result being mainly due to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship *Parmelia* in June, 1829. On the 2nd of the preceding month Captain Fremantle, in command of H.M.S. *Challenge*, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of "all that part of New Holland, which is not included within the territory of New South Wales." Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

### § 3. The Exploration of Australia.

A fairly complete, though brief, account of the exploration of Australia was given in *Official Year Book No. 2* (pp. 20-39), and a summary of the more important facts relating to the subject was embodied in this Chapter in succeeding issues up to and including No. 22.

### § 4. The Creation of the Several Colonies.

1. **New South Wales.**—In Governor Phillip's commission of 1786 the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present State of Tasmania was actually joined to the mainland, and it was not till 1798 that the contrary was known. In that year, by sailing through Bass Strait, Flinders and Bass proved that it was an island. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840, consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles.

Lord Howe Island, which is a dependency of New South Wales and is included in King, one of the electorates of Sydney, is situated in latitude  $31^{\circ} 30'$  south, longitude  $159^{\circ} 5'$  east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formations of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of Kentia palm seed. The land belongs to the Crown and is occupied rent-free on sufferance.

Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 278 at the Census of 30th June, 1954.

2. **Tasmania.**—In 1825 Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on 14th June of that year. The area of the colony was 26,215 square miles.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December, 1911, five members of the Australian National Antarctic Expedition landed on the island and remained there until 1915. On 3rd March, 1948, another party was landed to man a new base and this has since been maintained as a scientific base. The island is about 21 miles long and 2 miles wide.

3. **Western Australia.**—The territory westward of the 129th meridian comprising 975,920 square miles was constituted a colony under the name of Western Australia in June, 1829. It was always distinct and independent of New South Wales, though until 1831 the settlement on King George's Sound remained under the latter jurisdiction.

4. **South Australia.**—On 15th August, 1834 the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province," and towards the end of the year 1836 settlement took place. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28th December, 1836, and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude, and between the 141st and 132nd meridians of east longitude. On 10th December, 1861, by the authority of the Imperial Act 24 and 25 Vic., cap. 44, the western boundary of South Australia was extended to coincide with the eastern boundary of Western Australia, namely, the 129th

meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6th July, 1863, the Northern Territory comprising 523,620 square miles was, by letters patent, brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles.

5. *New Zealand*.—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales, was, by letters patent of 16th November of that year, constituted a separate colony under the powers of the Act 3 and 4 Vic., cap. 62, of 7th August, 1840. Proclamation of the separation was made on 3rd May, 1841. The area of the colony was 103,862 square miles.

6. *Victoria*.—In 1851 what was known as the "Port Phillip District" of New South Wales was constituted the colony of Victoria, "bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia." The area of the new colony was 87,384 square miles, and its separate existence took effect from 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council.

7. *Queensland*.—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony under the name of Queensland by letters patent dated 6th June, 1859, although separation from New South Wales was not consummated until 10th December of the same year, upon the assumption of office of the first Governor. The territory comprised in the new colony was "so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the MacIntyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean". The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." With this addition the area of Queensland became 670,500 square miles.

## § 5. The Establishment of the Commonwealth of Australia.

1. *General*.—On 1st January, 1901 the colonies mentioned, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies"—except in the case of the Northern Territory, to which the designation "Territory" is applied—being at the same time changed into that of "States".

2. *Transfer of the Northern Territory to the Commonwealth*.—On 7th December, 1907 the Commonwealth and the State of South Australia entered into an agreement for the surrender to and acceptance by the Commonwealth of the Northern Territory, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under The Northern Territory Surrender Act 1907 (assented to on 14th May, 1908), and by the Commonwealth Parliament under the Northern Territory Acceptance Act 1910 (assented to on 16th November, 1910). The Territory was formally transferred to the Commonwealth on 1st January, 1911, and became the Northern Territory of Australia.

3. *Transfer of the Australian Capital Territory to the Commonwealth*.—On 18th October, 1909 the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911

square miles as the seat of Government of the Commonwealth. In December, 1909 Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5th December, 1910 a proclamation was issued vesting the Territory in the Commonwealth on and from 1st January, 1911. By the Jervis Bay Territory Acceptance Act 1915, an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4th September, 1915.

4. **Present Composition of the Commonwealth.**—The total area of the Commonwealth of Australia is 2,974,581 square miles. The dates of creation and the areas of its component States and Territories, as determined on the final adjustment of their boundaries, are shown below :—

**THE COMMONWEALTH OF AUSTRALIA : AREA, ETC., OF COMPONENT STATES AND TERRITORIES.**

State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.	State or Territory.	Year of Formation into Separate Colony or Territory.	Present Area in Square Miles.
New South Wales	1786	309,433	Northern Territory	1863	523,620
Victoria ..	1851	87,884	Australian Capital Territory ..	1911	939
Queensland ..	1859	670,500			
South Australia ..	1834	380,070			
Western Australia	1829	975,920	Commonwealth of Australia ..	..	2,974,581
Tasmania ..	1825	26,215			

**§ 6. The Constitutions of the States and of the Commonwealth.**

1. **General.**—Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the Federal movement in Australia, was embodied in this Chapter in issues of the Official Year Book up to No. 22.

2. **Commonwealth Constitution Act.**—The Commonwealth of Australia Constitution Act, 63 and 64 Vict., Chapter 12, namely : “An Act to constitute the Commonwealth of Australia,” as amended by the Constitution Alteration (Senate Elections) 1906, the Constitution Alteration (State Debts) 1909, the Constitution Alteration (State Debts) 1928, and the Constitution Alteration (Social Services) 1946, is given *in extenso* hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31st July, 1955.

**THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT,  
63 & 64 VICT., CHAPTER 12.**

*An Act to constitute the Commonwealth of Australia. [9th July, 1900.]*

**W**HEREAS the people of New South Wales, Victoria, South Australia, Queensland and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established :

And whereas it is expedient to provide for the admission into the Commonwealth of other Australian Colonies and possessions of the Queen :

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows :—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.

3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.

4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.

5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.

6. "The Commonwealth" shall mean the Commonwealth of Australia as established under this Act.

"The States" shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called "a State."

"Original States" shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

### THE CONSTITUTION.

This Constitution is divided as follows:—

- Chapter I.—The Parliament :
  - Part I.—General :
  - Part II.—The Senate :
  - Part III.—The House of Representatives :
  - Part IV.—Both Houses of the Parliament :
  - Part V.—Powers of the Parliament :
- Chapter II.—The Executive Government :
- Chapter III.—The Judicature :
- Chapter IV.—Finance and Trade :
- Chapter V.—The States :
- Chapter VI.—New States :
- Chapter VII.—Miscellaneous :
- Chapter VIII.—Alteration of the Constitution.
- The Schedule.

## CHAPTER I.—THE PARLIAMENT.

## PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called "The Parliament," or "The Parliament of the Commonwealth."

2. A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise, prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

## PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State\*. The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The Senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

\* The Parliament has otherwise provided, by means of the Representation Act 1948, that the number of senators shall be ten for each State, from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18th May, 1948).

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years,\** and the places of those of the second class at the expiration of [the sixth year] *six years,\** from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before\** the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July\** following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July\** preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified, the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

\* As amended by Section 2 of the Constitution Alteration (Senate Elections) 1906. The words in square brackets have been repealed; amendments are shown in italics.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth, the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

### PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides be determined, whenever necessary, in the following manner :—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows :—

New South Wales ..	23	South Australia ..	6
Victoria ..	20	Tasmania ..	5
Queensland ..	8		

Provided that if Western Australia is an Original State, the numbers shall be as follows :—

New South Wales ..	26	South Australia ..	7
Victoria ..	23	Western Australia ..	5
Queensland ..	9	Tasmania ..	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State ; but in the choosing of members each elector shall vote only once.\*

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows :—

(i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen :

(ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.†

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

\* The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918-1949, Section 39 (repealing an earlier provision made by the Commonwealth Franchise Act 1902). For present qualifications see Chapter III.—General Government.

† The Parliament has otherwise provided, by means of the Commonwealth Electoral Act 1918-1949, Section 69. For present qualifications see Chapter III.—General Government.

## PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power : or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer ; or
- (iii) Is an undischarged bankrupt or insolvent : or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth : or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons :

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section : or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors : or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State :

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.\*

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld :
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

#### PART V.—POWERS OF THE PARLIAMENT.†

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) Trade and commerce with other countries, and among the States :
- (ii) Taxation ; but so as not to discriminate between States or parts of States :
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth :
- (iv) Borrowing money on the public credit of the Commonwealth :
- (v) Postal, telegraphic, telephonic, and other like services :
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth :
- (vii) Lighthouses, lightships, beacons and buoys :
- (viii) Astronomical and meteorological observations :
- (ix) Quarantine :
- (x) Fisheries in Australian waters beyond territorial limits :
- (xi) Census and statistics :
- (xii) Currency, coinage, and legal tender :
- (xiii) Banking, other than State banking ; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money :
- (xiv) Insurance, other than State insurance ; also State insurance extending beyond the limits of the State concerned :
- (xv) Weights and measures :
- (xvi) Bills of exchange and promissory notes :
- (xvii) Bankruptcy and insolvency :
- (xviii) Copyrights, patents of inventions and designs, and trade marks :
- (xix) Naturalization and aliens :
- (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth :
- (xxi) Marriage :

\* The Parliamentary allowance was increased to £600 per annum in 1907 (except in the cases of Ministers, the Presiding Officers of the two Houses, and the Chairmen of Committees, whose allowances remained at £400 in addition to the emoluments of office), and to £1,000 per annum in 1920 (Ministers, etc., £800). Under financial emergency legislation Parliamentary salaries and allowances were reduced generally, the lowest level reached in respect of the Parliamentary allowance being £750 per annum in 1932. Subsequently there was a gradual restoration to former levels, the allowance reaching £1,000 per annum again in 1938, when, also, the proviso for the reduced allowance to Ministers, etc. was removed. In 1947 the Parliamentary allowance was increased to £1,500 per annum, and in 1952 to £1,750. In 1920 additional allowances of £200 and £400 per annum, respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, and in 1947 they were increased to £300 and £600 respectively. In 1947, also, an additional allowance of £400 per annum was granted to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party which has not less than ten members in the House of Representatives, and of which no member is a Minister.

† Particulars of proposed laws which were submitted to referenda are referred to in Chapter III., General Government.

- (xxii) Divorce and matrimonial causes : and in relation thereto, parental rights, and the custody and guardianship of infants :
- (xxiii) Invalid and old-age pensions :
- (xxiiiA) *\*The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances :*
- (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States :
- (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States :
- (xxvi) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws :
- (xxvii) Immigration and emigration :
- (xxviii) The influx of criminals :
- (xxix) External affairs :
- (xxx) The relations of the Commonwealth with the islands of the Pacific :
- (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws :
- (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth :
- (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State :
- (xxxiv) Railway construction and extension in any State with the consent of that State :
- (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State :
- (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides :
- (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law :
- (xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia :
- (xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.

52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes :
- (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth :
- (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

---

\* Under Section 2 of the Constitution Alteration (Social Services) 1946, the Constitution was amended by the insertion of this paragraph.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed laws so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

## CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.\*

66. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.\*

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

\* The Ministers of State were increased to eight in 1915, to nine in 1917, to ten in 1935, to eleven in 1938, and to nineteen in 1941, a special war-time provision during the continuance in operation of the National Security Act which was extended in 1946 on the expiry of that Act. In 1951 the number was increased to twenty. The annual appropriation for Ministers' salaries received in addition to their allowances as Members (*see* page 13), was increased to £13,650 in 1915 and to £15,300 in 1917. Under financial emergency legislation, in addition to the reductions in Members' allowances the appropriation for Ministers was also reduced, in 1932 reaching the level of £10,710. The reductions were removed gradually, and finally in 1938 when the appropriation was £16,950. At the same time, an additional allowance of £1,500 per annum was granted to the Prime Minister, and the proviso for the reduced Parliamentary allowance to Ministers was removed. In 1941 the annual appropriation for Ministers was increased, as a war-time provision, to £21,250. This was extended in 1946. In 1947 the appropriation was increased to £27,650, in 1951 to £29,000, and in 1952 to £41,000.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth :—

Posts, telegraphs, and telephones :		Lighthouses, lightships, beacons, and buoys :
Naval and military defence :		Quarantine.

But the departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

### CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribed.\*

72. The Justices of the High Court and of the other Courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council :
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity :
- (iii) Shall receive such remuneration as the Parliament may fix ; but the remuneration shall not be diminished during their continuance in office.\*

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court :
- (ii) Of any other federal court, or court exercising federal jurisdiction ; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council :
- (iii) Of the Inter-State Commission, but as to questions of law only :

and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

\* The Judiciary Act 1903 provided for a Chief Justice and two other Justices. Subsequent amendments to the Act increased the number of other Justices to four and later six, and then reduced it to five. In 1936 the number was again increased to six. The Judiciary Act 1903 also provided for the payment of a salary of £3,500 per annum to the Chief Justice and of £3,000 per annum to each other Justice. In 1947 these salaries were increased respectively to £4,500 and £4,000 per annum, in 1950 to £5,000 and £4,500 per annum, and in 1955 to £8,000 and £6,500 per annum.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty :
- (ii) Affecting consuls or other representatives of other countries :
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party :
- (iv) Between States, or between residents of different States, or between a State and a resident of another State :
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth :

the High Court shall have original jurisdiction.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation :
- (ii) Arising under any laws made by the Parliament :
- (iii) Of Admiralty and maritime jurisdiction :
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court :
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States :
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

---

#### CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary:
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth:
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament:
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

(i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.

(ii) The Commonwealth shall debit to each State—

(a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth ;

(b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.

(iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

(i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State.

(ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth : and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council :
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity :
- (iii) Shall receive such remuneration as the Parliament may fix ; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],\* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the State shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105A.† (i) *The Commonwealth may make agreements with the States with respect to the public debts of the States, including—*

- (a) *the taking over of such debts by the Commonwealth;*
- (b) *the management of such debts;*
- (c) *the payment of interest and the provision and management of sinking funds in respect of such debts;*
- (d) *the consolidation, renewal, conversion, and redemption of such debts;*
- (e) *the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and*
- (f) *the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.*

(ii) *The Parliament may make laws for validating any such agreement made before the commencement of this section.*

(iii) *The Parliament may make laws for the carrying out by the parties thereto of any such agreement.*

(iv) *Any such agreement may be varied or rescinded by the parties thereto.*

(v) *Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.*

(vi) *The powers conferred by this section shall not be construed as being limited in any way by the provisions of section one hundred and five of this Constitution.*

## CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State; and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

\* Under Section 2 of the Constitution Alteration (State Debts) 1909, the words in square brackets are omitted.

† Under Section 2 of the Constitution Alteration (State Debts) 1928, the Constitution was amended by the insertion of this section.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth ; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State ; but the net produce of all charges so levied shall be for the use of the Commonwealth ; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

---

## CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

---

#### CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

---

#### CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner :—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

## SCHEDULE.

## OATH.

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. SO HELP ME GOD!

## AFFIRMATION.

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

3. The Royal Proclamation.—The preceding Act received the Royal assent on the 9th July, 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on the 17th September, 1900, constituted the Commonwealth as from the 1st January, 1901; it reads as follows:—

BY THE QUEEN.

A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

## § 7. The External Territories of Australia.

1. *Transfer of Norfolk Island*.—In 1856 *Norfolk Island* was created a distinct and separate settlement under the jurisdiction of *New South Wales*. Later, in 1896, it was made a dependency under the Governor of that colony and finally by the passage of the *Norfolk Island Act 1913* it was accepted as a Territory of the Commonwealth of *Australia*. The island is situated in latitude  $29^{\circ} 3' 30''$  S. longitude  $167^{\circ} 57' 5''$  E., and comprises an area of 8,528 acres.

2. *Transfer of British New Guinea or Papua*.—Under the administration of the Commonwealth, but not included in it, is *British New Guinea or Papua*, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the *Queensland Government*, but was transferred to the Commonwealth by proclamation on 1st September, 1906, under the authority of the *Papua Act* (Commonwealth) of 16th November, 1905. The area of *Papua* is about 90,540 square miles.

3. *Territory of New Guinea*.—In 1919 it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on *Australia* for the government of the former German territories and islands situated in latitude between the Equator and  $8^{\circ}$  S., and in longitude between  $141^{\circ}$  E. and  $159^{\circ} 25'$  E. The mandate was issued

by the League of Nations on 17th December, 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the New Guinea Act 1920, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 93,000 square miles, and the administration under the mandate dated from 9th May, 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved 13th December, 1946.

4. **Nauru.**—In 1919 the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude  $0^{\circ} 32'$  south of the Equator and longitude  $166^{\circ} 55'$  east of Greenwich, and comprises about 5,263 acres. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and a supplementary agreement of 30th May, 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. The administration under the mandate operated from 17th December, 1920 until 1st November, 1947 and so far the administrators have been appointed by the Commonwealth Government. As with the Territory of New Guinea, Nauru is now administered under a Trusteeship Agreement with the United Nations.

5. **Territory of Ashmore and Cartier Islands.**—By Imperial Order in Council, dated 23rd July, 1931, Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth in the Ashmore and Cartier Islands Acceptance Act 1933 under the name of the Territory of Ashmore and Cartier Islands on 10th May, 1934. The Act authorized the Governor of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July, 1938 annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.

6. **Australian Antarctic Territory.**—An Imperial Order in Council of 7th February, 1933 placed under Australian authority "all the islands and territories other than Adélie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude."

The Order came into force with a proclamation issued by the Governor-General on 24th August, 1936, after the Commonwealth Parliament had passed the Australian Antarctic Territory Acceptance Act on 13th June, 1933. The boundaries of Adélie Land were definitely fixed by a decree of 1st April, 1938 as latitude  $60^{\circ}$  S., longitude  $136^{\circ}$  E. and longitude  $142^{\circ}$  E.

7. **Territory of Heard and McDonald Islands.**—Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26th December, 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard and McDonald Islands by the Heard and McDonald Islands Act 1953.

8. **Territory of Cocos Islands.**—The Cocos (Keeling) Islands Act 1955 provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts Her Majesty, by Order in Council, specified 23rd November, 1955 as the date of transfer. From that date the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands.

## CHAPTER II.

### PHYSIOGRAPHY.

#### § 1. General Description of Australia.

1. *Geographical Position.*—(i) *General.* The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises in all an area of about 2,974,581 square miles, the mainland alone containing about 2,948,366 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes  $113^{\circ} 9' E.$  and  $153^{\circ} 39' E.$ , while its northern and southern limits are the parallels of latitude  $10^{\circ} 41' S.$  and  $43^{\circ} 39' S.$ , or, excluding Tasmania,  $39^{\circ} 8' S.$  On its north are the Timor and Arafura Seas and Torres Strait—on its south the Southern Ocean. The extreme points are Steep Point on the west, Cape Byron on the east, Cape York on the north, South-East Cape on the south, or, if Tasmania be excluded, Wilson's Promontory.

(ii) *Tropical and Temperate Regions.* Of the total area of Australia nearly 40 per cent. lies within the tropics. Assuming, as is usual, that the latitude of the Tropic of Capricorn is  $23^{\circ} 30' S.$ , the areas within the tropical and temperate zones are approximately as follows :—

**AUSTRALIA : AREAS OF TROPICAL AND TEMPERATE REGIONS.**  
(Square miles.)

Area.	N.S.W. (a)	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	N. Terr.	Total.
Within Tropical Zone	..	..	359,000	..	364,000	..	426,320	1,149,320
„ Temperate Zone	310,372	87,884	311,500	380,070	611,920	26,215	97,300	1,825,261
Total Area	310,372	87,884	670,500	380,070	975,920	26,215	523,620	2,974,581

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent. of Queensland lies within the tropical zone and 46 per cent. in the temperate zone; of Western Australia, 37 per cent. is tropical and 63 per cent. temperate; of the Northern Territory 81 per cent. is tropical and 19 per cent. temperate. All of the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent. of the whole of the continent, and about 53 per cent. of the three territories which have areas within the tropical zone.

2. *Area of Australia compared with Areas of other Countries.*—The area of Australia is almost as great as that of the United States of America, four-fifths of that of Canada, nearly three-quarters of the whole area of Europe, and about 25 times as large as Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the next page.

(a) Excludes U.S.S.R., shown below.

The areas shown in the table are obtained from the *Demographic Yearbook*, 1954, published by the Statistical Office of the United Nations and the countries have been arranged in accordance with the continental groups used therein.

3. **Areas of States and Territories, Coastal Configurations and Standard Times.**—As already stated, Australia consists of six States and the Northern and Australian Capital Territories. Particulars of areas, coastline and standard times are shown in the following table :—

**AUSTRALIA : AREAS OF STATES AND TERRITORIES, COASTLINE AND STANDARD TIMES.**

State or Territory.	Area.	Proportion of Total Area.	Coastline.	Area per Mile of Coastline.	Standard Times.

(a) Includes Australian Capital Territory.

There are no striking features in the configuration of the coast; the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The Cape York Peninsula on the extreme north is the only other remarkable feature in the outline. In Official Year Book No. 1 an enumeration is given of the features of the coastline of Australia (*see pp. 60-68*).

Prior to 1895 the official time adopted in the several colonies was for most purposes the mean solar time of the capital city of each. In 1894 and 1895, after several conferences had been held, legislation was enacted by each of the colonies whereby the mean solar times of the meridians of east longitude 120° (Western Australia), 135° (South Australia and Northern Territory) and 150° (Queensland, New South Wales, Victoria and Tasmania) were adopted. In 1898, however, the South Australian legislature amended its earlier provision and adopted the mean solar time of the meridian 142° 30' E. longitude as the standard time for that colony. For further information on this subject *see* Official Year Book No. 39, page 65.

4. **Geographical Features of Australia.**—(i) *General.* The following description is only a broad summarization of the main physical characteristics of the Australian continent. For greater detail of particular geographical elements earlier issues of the Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.

(ii) *Orography of Australia.* (a) *General Description of the Surface.* Owing to the absence of any very high mountain chains, and to the great depression in the centre of Australia, the average elevation of the Australian continent over the level of the surrounding oceans is less than that of any of the other continents. Three-quarters of the land-mass lies between the 600 and 1,500 feet contours in the form of a huge plateau.

A section through the continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. Of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, its average may, nevertheless, be taken as about forty to fifty miles. From this, the Great Dividing Range, extending from the north of Queensland to the south of New South Wales, and thence sweeping westward through Victoria, rises often abruptly, and frequently presents bold escarpments on its eastern face. The descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level, and occasionally is even below it. Then there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these another coastal plain.

The great central plain or plateau is the most distinctive feature of the Australian continent and its climatic peculiarities can probably be largely ascribed thereto.

(b) *Mountain Systems.* The main mountain feature of Australia is the Great Dividing Range, which runs along the whole eastern coast of the continent and can be traced over the islands of Torres Strait to New Guinea, while in the south one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other—the main branch—finds its termination in Tasmania.

This mountain system is at no place more than 250 miles from the eastern coastline and it approaches to less than 30 miles. On the whole, it is much closer to the coast in both New South Wales and Victoria than it is in Queensland, the corresponding average distances being about 70, 65 and 130 miles respectively.

The mountains of Australia are relatively low. Thus in Queensland the Great Dividing Range reaches a height above sea-level of less than 5,500 feet, the highest peak being Mount Bartle Frere. In New South Wales Mount Kosciuszko is only about 7,300 feet, and Mount Bogong in Victoria about 6,500 feet high. This fact, that there are no high mountains in Australia, is also an important element in considering the climate of Australia.

There is no connexion between the mountains of the eastern and other States of Australia. In South Australia and Western Australia heights of three and four thousand feet are attained. In Tasmania the greatest height is only a little more than 5,000 feet.

It may be of interest to observe that at one time Tasmania was probably connected with the mainland. As the Great Dividing Range can, in the north, be traced from Cape York across Torres Strait to New Guinea, so its main axis can be similarly followed across the shallow waters of Bass Strait and its islands from Wilson's Promontory to Tasmania, which may be said to be completely occupied by ramifications of the chain. The central part of the island is occupied by an elevated plateau, roughly triangular in shape, and presenting bold fronts to the east, west and north. This does not extend in any direction more than about 60 miles. The plateau rests upon a more extensive tableland, the contour of which closely follows the coastline, and occasionally broadens out into low-lying tracts not much above sea-level. The extreme south of the island is rugged in character.

(iii) *Hydrology of Australia.* (a) *Rainfall.* On the whole, Australia is a country with a limited rainfall. This is immediately evident on studying its river systems, its lakes, and its artesian areas. Its one large river system is that of the Murray and Darling Rivers, of which the former stream is the larger and more important. Many of the rivers of the interior run only after heavy rains. Depending almost entirely on rainfall, a consequence of the absence of high mountains, they drain large areas with

widely varying relation as between rainfall and flow. Thus it has been estimated that not more than 10 per cent. of the rainfall on the catchment area of the Darling River above Bourke (New South Wales) discharges itself past that town. The rate of fall is often very slight.

(b) *Rivers.* The rivers of Australia may be divided into two great classes, those of the coastal plains with moderate rates of fall; and those of the central plains with very slight fall. Of the former not many are navigable for any distance from their mouths, and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the eastern coast are the Burdekin, discharging into Upstart Bay, with a catchment area of 53,500 square miles, and the Fitzroy, which reaches the sea at Keppel Bay and drains about 55,600 square miles.

The Hunter is the largest coastal river of New South Wales, draining about 11,000 square miles before it empties itself at Newcastle. The Murray River, with its great tributary the Darling, drains a considerable part of Queensland, the major part of New South Wales and a large part of Victoria. It debouches into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray is about 1,600 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Darling-Murray from the source of the Darling to the mouth of the Murray is about 2,300 miles. In good seasons the river is navigable for a considerable proportion of its length.

The rivers of the north-west coast of Australia (Western Australia) are of considerable size, e.g., the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord. So also are those in the Northern Territory, e.g., Victoria and Daly. The former of these, estimated to drain 90,000 square miles, is said to be navigable for 50 miles.

The rivers on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell, are also of considerable size.

Owing to the small amount of fall of many of the interior rivers, they may flood hundreds of miles of country in wet seasons, while in dry seasons they form a mere succession of waterholes or are entirely dry. It is this fact that explains the apparently conflicting reports of the early explorers, one regarding the interior as an inland sea, and another as a desert.

The rivers of Tasmania have short and rapid courses, as the configuration of the territory would indicate.

(c) *Lakes.* The "lakes" of Australia may be divided into three classes, true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse.

The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lake Torrens, Gairdner, Eyre and Frome, are of considerable extent.

(d) *Artesian Areas.* A considerable tract of the plain country of New South Wales and Queensland carries a water-bearing stratum, usually at a great depth. A large number of artesian bores have been put down, from which there is a considerable flow. These are of great value and render large areas available which otherwise would be difficult to occupy even for pastoral purposes.

For further information on this subject, see Chapter XI.—Water Conservation and Irrigation.

5. *Fauna, Flora, Geology and Seismology of Australia.*—Special articles dealing with these features have appeared in previous issues of the Official Year Book, but limits of space naturally preclude their repetition in each volume. The nature and location of these articles can be readily ascertained from the special index preceding the general index at the end of this issue.

## § 2. Climate and Meteorology of Australia.

NOTE.—This Section has been prepared by the Director, Commonwealth Meteorological Bureau, and the various States and Territories have been arranged in the standard order adopted by that Bureau.

1. *Introductory*.—Previous issues of the Official Year Book, notably No. 3, pp. 79 to 83, and No. 4, pp. 84 and 87, contained outlines of the history of Australian meteorology and the creation and organization of the Commonwealth Bureau of Meteorology. Official Year Book No. 38, pp. 30-32, contained paragraphs devoted to (i) Organization of the Meteorological Service; (ii) Meteorological Publications; (iii) Equipment; and (iv) Meteorological Divisions.

By reason of its insular geographical position and the absence of striking physical features, whether in marine gulfs or in important mountains, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe, and latitude for latitude Australia is generally more temperate.

The average elevation of the surface of the land is low, probably close to 900 feet above the sea. The altitudes range up to a little more than 7,300 feet, hence its climate embraces a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the Great Dividing Range.

On the coast, the rainfall is often abundant and the atmosphere moist, but in some portions of the interior it is very limited, and the atmosphere dry. The distribution of forest, therefore, with its climatic influence, is very uneven. In the interior, in places, there are fine belts of trees, but there are large areas also which are treeless, and here the air is hot and parching in summer. Again, on the coast, even so far south as latitude 35°, the vegetation is tropical in its luxuriance, and to some extent also in character. Climatologically, therefore, Australia may be said to present a great variety of features.

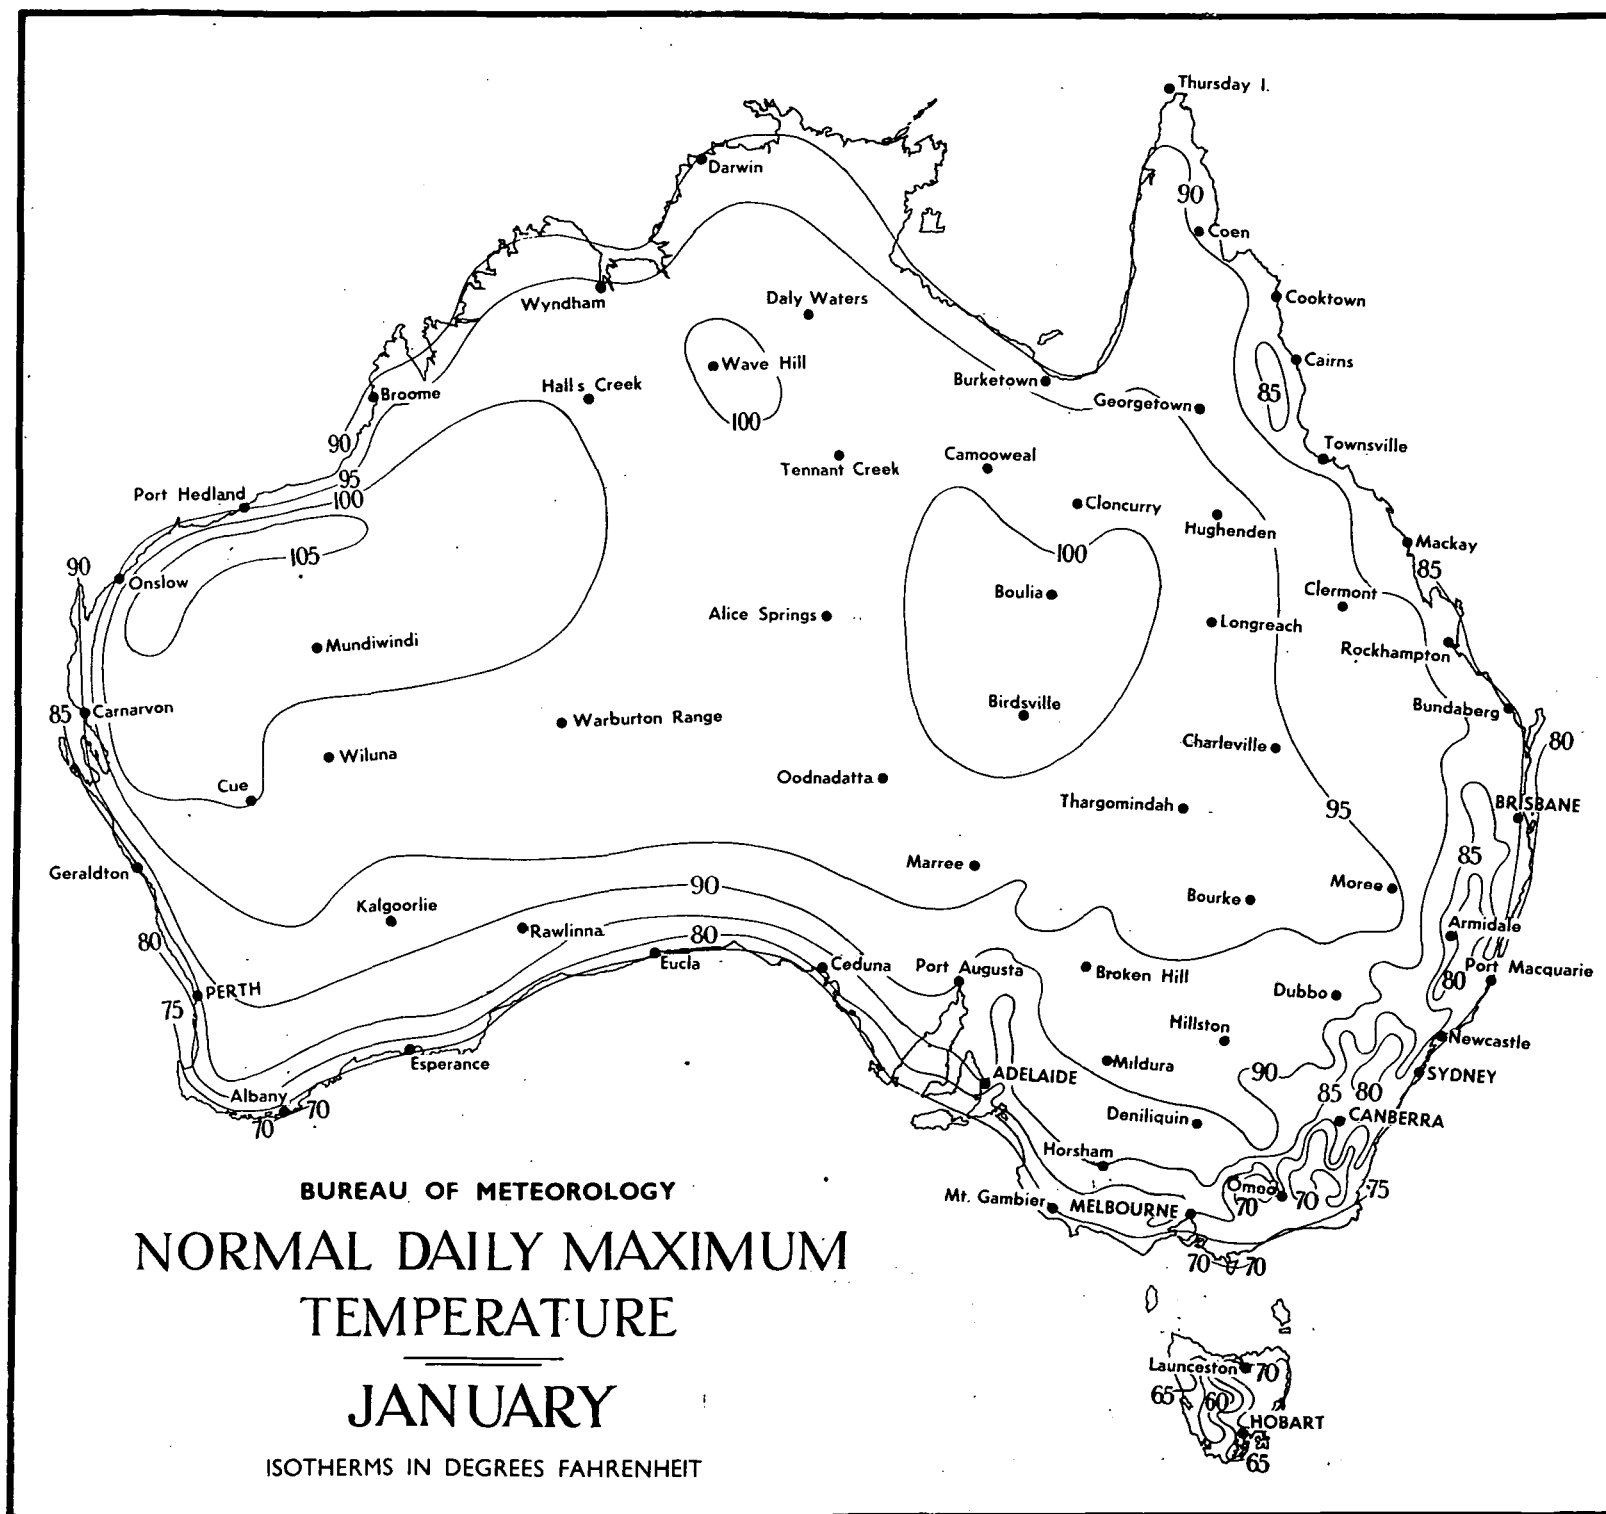

2. *Temperature*.—(i) *Effective Temperature*. When a meteorologist speaks of temperature he means the temperature of the air indicated by a thermometer sheltered from precipitation, from direct rays of the sun and from radiation of heat from the ground and neighbouring objects, yet freely exposed to the circulation of the air. In other words, he means temperature measured under conditions standardized as near as possible in a Stevenson Screen, which is the standard housing for meteorological thermometers.

This shade temperature as measured by a "dry bulb" thermometer shows only the actual temperature experienced by dry inorganic substances, not the *sensible* temperatures felt by organic bodies. In the case of human beings, sensible temperature is affected by the rate of conduction of heat to or from the body by moving air and also by the rate of cooling due to evaporation from the skin and respiratory passages. The wind and humidity therefore determine the sensible temperature.

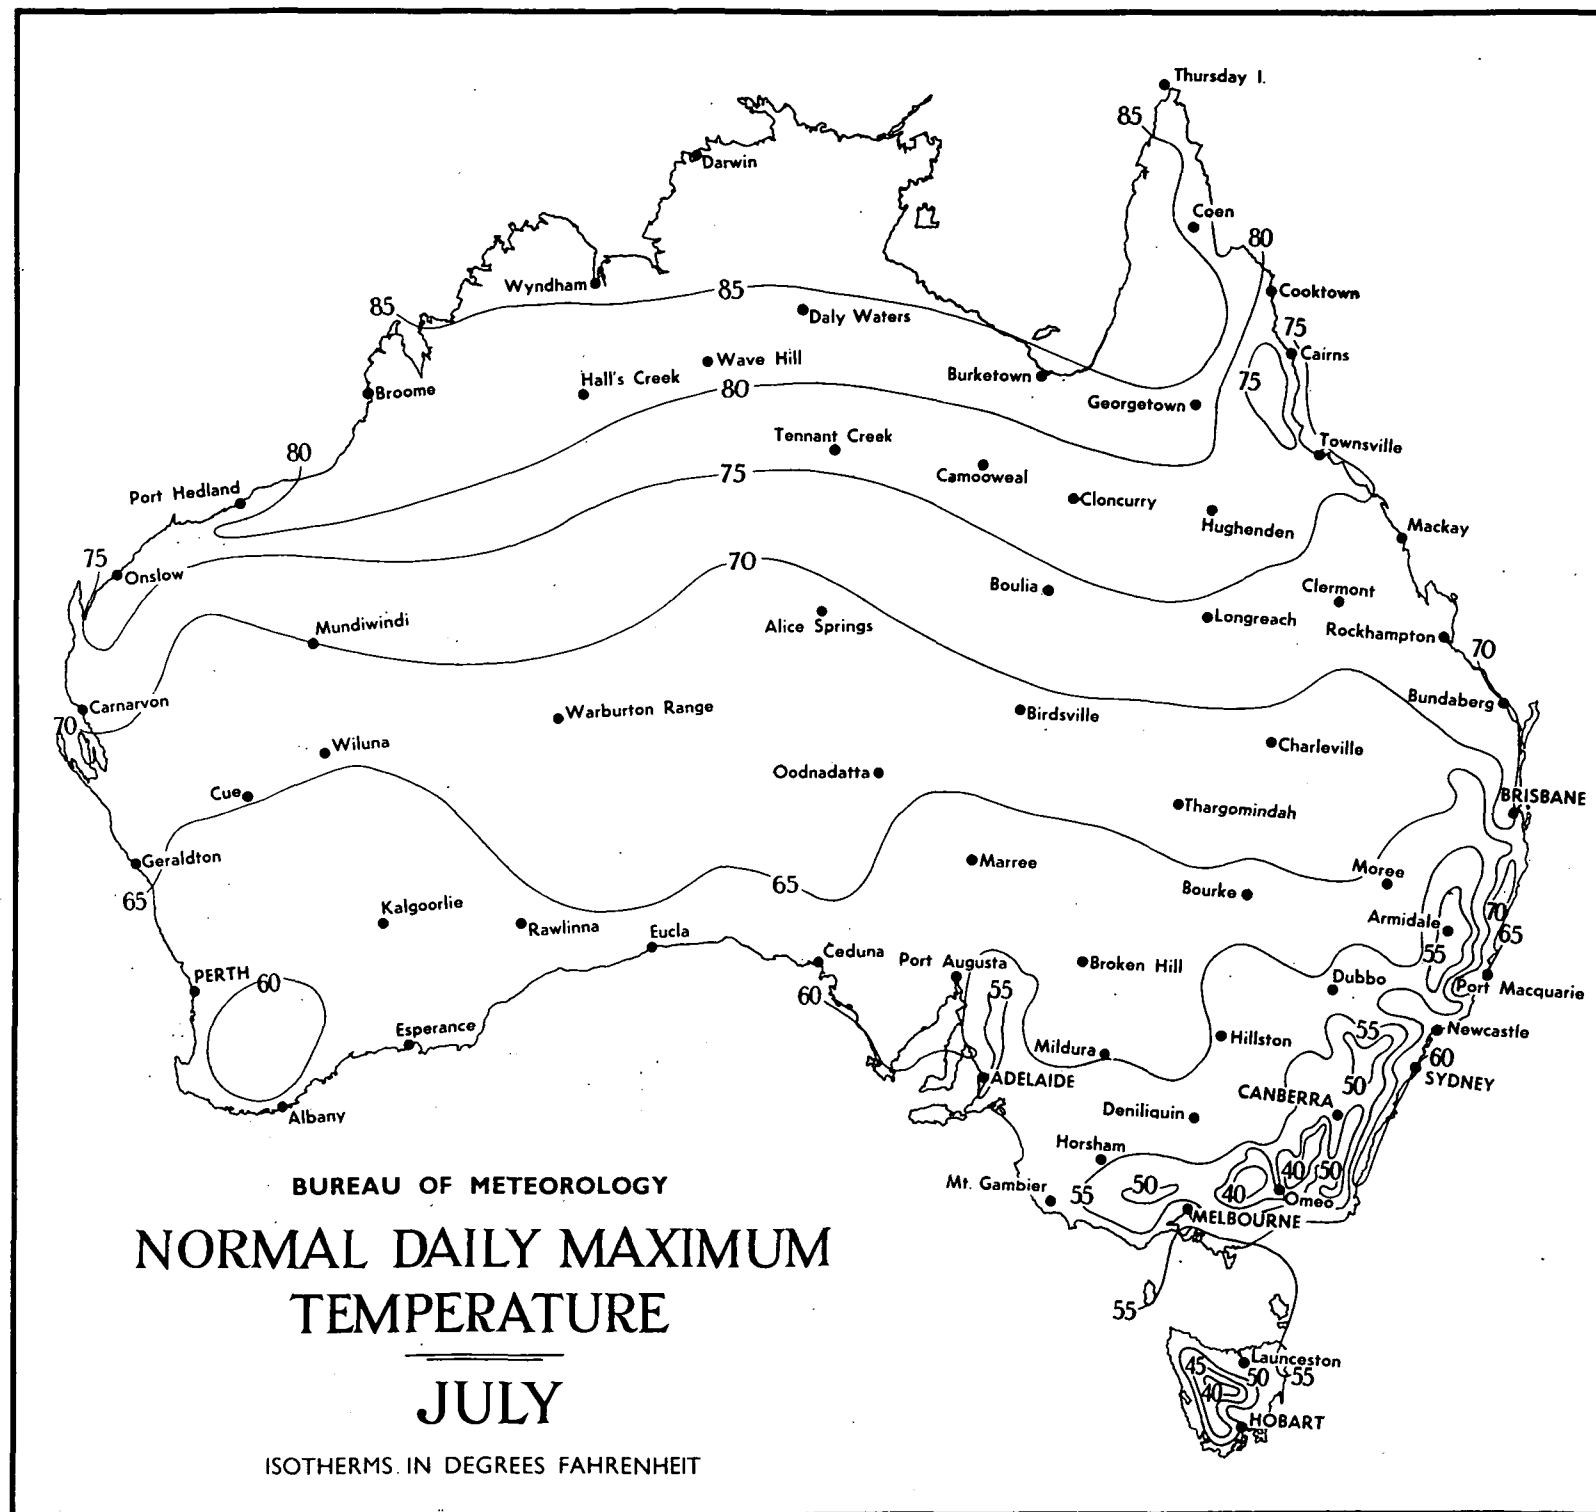

The humidity (relative humidity) is determined from the readings of the dry and wet bulb thermometers. Of late years, however, with increasing interest in human comfort in tropical climates, another term, *effective* temperature, has come into use. It may be defined as "the temperature of a still, saturated atmosphere which would on the average produce the same feeling of warmth or cold as the atmosphere in question".\*

The 80° F. isotherm is confined to a very narrow tract of country on the north-west coast of Western Australia. The 75° F. isotherm extends broadly from Onslow on the north-west coast of Western Australia to Daly Waters to Camooweal to Moreton in Cape York Peninsula following in a general way the coastline of Northern Australia but from 100 to 300 miles inland.

Later investigations have established "comfort zones"\* bounded by limits of effective temperature within which people will feel comfortable. American research workers have determined the following figures † :—

## COMFORT ZONES : EFFECTIVE TEMPERATURES.

Season.	No subjects feel comfortable below—	Fifty per cent. of subjects feel comfortable between—	No subjects feel comfortable above—
Winter .. .. .	60° F.	63° and 71° F.	74° F.
Summer .. .. .	64° F.	66° and 75° F.	79° F.

Queensland investigators‡ in recent years have divided some towns of Queensland into three classes on the basis of deviation from comfort :—

Class 1 (Sub-tropics).—Quite suitable for Caucasian habitation—Rockhampton, Bundaberg, Brisbane, Longreach, Charleville.

Class 2 (Marginal tropics).—Suitable for Caucasian habitation, but requires adaptation in summer—Mackay, Townsville.

Class 3 (Tropics).—(a) Permissible for Caucasian habitation but requires selection and marked adaptation—Cardwell, Cairns, Cloncurry. (b) Not suitable for continuous Caucasian habitation—Cape York, Burketown.

These results of recent years bear out investigations made previously in Australia§ in which the atmospheric vapour pressure was used as a measure of comfort, its value for this purpose being that it has equal effect in both indoor and outdoor climates. The limits of comfort range from .2 to .5 inch of vapour pressure. After drawing isopleths for effective temperature (not corrected for altitude), mean vapour pressure reduced to a logarithmic scale, and mean wet bulb temperature, it is found that there is close agreement in defining zones of relative discomfort.

(ii) *Seasons.* The Australian seasons are :—Summer, December to February ; autumn, March to May ; winter, June to August ; spring, September to November. In most parts of Australia, January is the hottest month, but in Tasmania and southern Victoria, February is the hottest ; in the tropical north, probably because the cooling "monsoon" rains occur in late summer, December is the hottest month, and at Darwin, November.

On a rainfall basis, in the tropical north the year is divisible into "wet" and "dry" seasons, but on the basis of temperatures and physical comfort the "dry" season can be further sub-divided into two parts—"cool dry" and "warm dusty".||

(a) "*Cool dry*" Season. From May to August. The average maximum temperature ranges from 80° to 85° F., the relative humidity is low and in inland areas cold nights are experienced when the temperature drops to 40° F. The skies generally are cloudless, but in about one year in three during June or July one to two inches of rain fall.

(b) "*Warm dusty*" Season. From the end of August temperatures rise and reach a maximum in October or the beginning of November. Temperatures of over 120° F. have been recorded.

(c) "*Wet*" Season. After the first of the heavy storms, the maximum temperatures fall but still remain high with high relative humidity. At Wyndham during January, 1944 the minimum temperature did not drop below 75° F. for fourteen consecutive days. A maximum of over 100° F. was recorded on each rainless day.

\* Yaglou, C. P. (1926) J. Industr. Hyg. † Yaglou, C. P. (1927) Ibid. ‡ Lee, D. H. K. Trans. Roy. Soc. Trop. Med. and Hyg. (1940) Vol. XXXII. § Barkley, H. Zones of Relative Physical Comfort in Australia, Met. Bull. 20, 1934. || Maze, W. H. Austr. Geog. June, 1945. Settlement in E. Kimberleys.

In Central as in Northern Australia during the hottest months, the average temperatures range from 80° to 85° F., whereas in Southern Australia they vary from 65° to 70°. (*See maps pp. 33, 34.*)

Throughout Australia the coldest month is July, when only a very narrow strip of the northern sea-board has an average temperature as high as 75°. Over the southern half of the continent, July temperatures range from 55° to 45° at elevations below 1,500 feet and fall as low as 35° on the Australian Alps. (*See maps pp. 35, 36.*) Here the temperature seldom, if ever, reaches 100° even in the hottest of seasons. Hotham Heights (6,100 feet above Mean Sea Level) recorded the highest maximum of 82.0° on 20th January, 1935. In winter, readings slightly below zero are occasionally recorded on the extreme heights.

Tasmania as a whole enjoys a moderate and equable range of temperature throughout the year, although occasionally hot winds may cause the temperature to rise to 100° in the eastern part of the State.

(iii) *Comparisons with other Countries.* In respect of Australian temperatures generally, it may be pointed out that the mean annual isotherm for 70° F. extends in South America and South Africa as far south as latitude 33°, while in Australia it reaches only as far south as latitude 30°, thus showing that, on the whole, Australia has, latitude for latitude, a more temperate climate than other places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included, for in the United States of America the 70° isotherm extends in several of the western States as far north as latitude 41°. In Europe, the same isotherm reaches almost to the southern shores of Spain, passing afterwards, however, along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia, nearly the whole of the land area south of latitude 40° N. has a higher mean annual temperature than 70°.

The extreme range of temperature is less than 100° over practically the whole of Australia, that figure being only slightly exceeded at a very few places; it is mostly 70° to 90° over inland areas, and somewhat less on the coast. In parts of Asia and North America, the extreme range exceeds 130° and 150° in some localities.

Along the northern shores of Australia the temperatures are very equable. At Darwin, for example, the difference in the means for the hottest and coldest month is only 8.4°, and the extreme readings for the year, or the highest maximum on record and the lowest minimum, show a difference of under 50°.

The highest temperature recorded in Australia was 127.5° F. at Cloncurry on 16th January, 1889. The world's highest (136° F.) was recorded at Azizia (Tripoli) on 13th August, 1922. The lowest temperature ever recorded in Australia was -8° F. at Charlotte Pass on 14th June, 1945, and again on 22nd July, 1947, as contrasted with the world's lowest recorded temperature of -90° F. at Verkhoyansk (Siberia) on 5th and 7th February, 1892.

A comparison of the mean temperatures and the range from the extreme maximum to the extreme minimum temperatures (in whole degrees) of the capital cities of Australia with those of the main cities of some other countries is shown in tabular form in Official Year Book No. 38, p. 42.

(iv) *Hottest and Coldest Parts.* A comparison of the temperatures recorded at coast and inland stations shows that, in Australia, as in other continents, the range increases, within certain limits, with increasing distance from the coast.

In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds 120° in the shade. The hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds 100° continuously for days and weeks. The longest recorded period was 160 days from 31st October, 1923 to 7th April, 1924.

The area affected and the period of duration of the longest heat waves in Australia are shown in the map and diagram on page 37.

(v) *Tabulated Data for Selected Climatological Stations in Australia.* Tables showing normal mean temperature, extreme temperatures and normal rainfall for each month for selected climatological stations in each State and the Northern Territory appeared in Official Year Book No. 40, pp. 16-23, and similar data for other selected stations in the Commonwealth in Official Year Book No. 39, pp. 41-48. Pages 57-64 of this issue contain this information in respect of Canberra, Darwin and the six State capitals.

(vi) *Frosts.\** The Observer's Handbook of the Meteorological Office, London, gives the following definition:—"Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water (32° F.) and a 'ground frost' is regarded as having occurred when the thermometer on the grass has fallen to 30.4° F. or below".

In Australia this definition is adopted for stations equipped with terrestrial minimum thermometers. However, these are few in number, so although many rainfall observers record "hoar frost" when seen, for statistical purposes a screen temperature of 36° F. is taken as indicating light frosts at ground level. For heavy frosts a screen temperature of 32° F. is taken.

In America a "killing" frost is defined as a frost "that is generally destructive of vegetation". A "black frost" is the phenomenon arising out of a combination of low temperature and low humidity causing rupturing of plant cells by expansion, when freezing takes place, of the water which they contain, though frost crystals are not formed on the ground.

The parts of Australia most subject to low temperature are the eastern highlands from about Omeo in Victoria northward to Cambooya and Bybera in Queensland. Most stations in this region experience more than ten nights per month with readings of 32° F. or under for three to five months of the year. In Tasmania, districts on the Central Plateau are subject to such conditions for three to six months of the year. Minimum temperatures of 32° F. are comparatively infrequent in Western Australia except in parts of the south and south-west. In South Australia the Yongala district is much more subject to such temperatures than other parts of the State. Much of the south-east of Queensland has a higher frequency of such readings than South Australia. Generally speaking, the frequency is controlled mainly by altitude, latitude and, to a lesser degree, by proximity to the sea.

Frosts may occur within a few miles of the coastline over the whole continent, except in the Northern Territory and a considerable area of Northern Queensland. Regions subject to frost in all months of the year comprise portions of the tablelands of New South Wales, the Eastern Highlands and parts of the Central Divide and Western district in Victoria, practically the whole of Tasmania and a small area in the south-west of Western Australia.

A map showing the average annual number of frost-free days (i.e., days on which the temperature does not fall below 36° F.) appears on page 39.

Over most of the interior of the continent and on the Highlands in Queensland as far north as the Atherton Plateau frosts appear in April and end in September, but they are infrequent in these months. Minimum temperatures of 32° F. are experienced in most of the sub-tropical interior in June and July.

3. *Humidity.*—After temperature, humidity is the most important element of climate, particularly as regards its effects on human comfort, rainfall supply and conservation and related problems.

"Vapour pressure" is the pressure exerted by the water vapour in the atmosphere. At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the atmosphere. When this limit is reached the air is said to be saturated and the pressure of the water vapour is equal to the "saturation vapour pressure".

---

\* Foley, J. C. Frost in the Australian Region (Bull. 32, 1945).

In this publication the humidity of the air has been expressed by the relative humidity, which is the quotient of the vapour pressure divided by the saturation vapour pressure and multiplied by one hundred. The mean 9 a.m. relative humidity, as well as its highest and lowest recorded mean values at 9 a.m., are shown in the tables of climatological data for the capital cities (pages 57-64). The mean monthly vapour pressure has also been added to these tables.

The annual curve of vapour pressure derived from the normal monthly values for this element is comparable with the maximum and minimum temperature curves, but the relative humidities consisting as they do of the extremes for each month do not show the normal annual fluctuation which would be approximately midway between the extremes.

The order of stations in descending values of 9 a.m. vapour pressure is Darwin, Brisbane, Sydney, Perth, Melbourne, Adelaide, Canberra, Hobart and Alice Springs, while the relative humidity at 9 a.m. diminishes in the order, Melbourne, Sydney, Darwin, Brisbane, Canberra, Hobart, Perth, Adelaide and Alice Springs.

Further reference to humidity will be found in the section on effective temperature (page 32).

40  
4. *Evaporation.*—(i) *General.* The rate and quantity of evaporation in any territory is influenced by the prevailing temperature, and by atmospheric humidity, pressure and wind movement. In Australia the question is, perhaps, of more than ordinary importance, since in its drier regions water has often to be conserved in tanks and dams. The magnitude of the economic loss by evaporation will be appreciated from the map reproduced herein (see page 36) which shows that the yearly amount varies from about 20 inches over Western Tasmania to more than 100 inches over the central and north-western parts of Australia. Over an area of 70 per cent. of the continent, comprising most inland districts and extending to the coast in the North-West and Eucla divisions of Western Australia, during no month of the year does the rainfall exceed the evaporation. The central and north-western portions of the continent, comprising 46 per cent. of the total land mass, experience evaporation more than twice as great as their rainfall; it is noteworthy that the vegetation over most of this region is characterized by acacia, semi-desert, shrub steppe and porcupine grass. Since the loss by evaporation depends largely on the exposed area, tanks and dams so designed that the surface shall be a minimum are advantageous. Further, the more they are protected from the direct rays of the sun and from winds by means of suitable tree planting, the less will be the loss by evaporation. These matters are naturally of more than ordinary concern in the drier districts of Australia.

(ii) *Comments on Map of Average Annual Evaporation.* The map of average annual evaporation in Australia (see page 40) has been compiled on the basis of records obtained from a number of evaporimeters supplemented by estimates derived from records of saturation deficit by applying the Waite Institute factor of 263.\* Some modification of the latter values was found to be necessary in comparison with recordings of evaporimeters.

The standard evaporation tank used in Australia is cylindrical in form and is 36 inches in diameter and 36 inches deep. It is surrounded by a 6-inch water jacket and the whole is sunk into the ground so that the water surface is approximately at ground level.

Saturation deficit is obtained from readings of dry and wet bulb thermometers exposed in a standard Stevenson thermometer shelter. Saturation deficit is the difference between the vapour pressure indicated by the dry and wet bulb readings, and the saturation vapour pressure corresponding to the dry bulb temperature.

The Waite formula,  $e = 263$  s.d., is not an exact relationship, but it takes account of one of the major factors in evaporation, i.e., the difference between saturation vapour pressures at the mean dew point and at the mean air temperature. Errors in the formula are found to be fairly consistent in considerable areas of Australia and corrections have

\* Prescott, J. A. "Atmospheric Saturation Deficit in Australia" (Trans. Royal Society, S.A Vol. LV., 1931).

been applied accordingly. No evaporation records are available north of latitude  $20^{\circ}$ , and corrections have been extrapolated for these areas. The evaporation stations on which estimates for the tropics have been based are Alice Springs (Northern Territory) and Winton (Queensland), and to a lesser degree Blackall (Queensland) and Marble Bar (Western Australia).

The map thus presents an estimate of evaporation for which allowance should be made for a certain margin of error (perhaps 10 per cent. or so) on the conservative side. In the absence of definite information, such a map should serve a useful purpose as a basis for many climatic studies.

For graphs and tables of mean monthly evaporation and rainfall at certain selected stations *see* Official Year Book No. 37, pp. 34-35.

5. *Rainfall.*—(i) *General.* The rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by its geographical features.

Australia lies within the zones of the south-east trades and "prevailing" westerly winds. The southern limit of the south-east trades strikes the eastern shores at about  $30^{\circ}$  south latitude, and, with very few exceptions, the heaviest rains of the Australian continent are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains from the New South Wales northern border to Thursday Island, upon which the rain-laden winds blow. The converse effect is exemplified on the north-west coast of Western Australia, where the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly winds, which skirt the southern shores, are responsible for the reliable, generally light to moderate rains enjoyed by the south-western portion of Western Australia, the agricultural areas of South Australia, a great part of Victoria, and the whole of Tasmania.

(ii) *Distribution of Rainfall.* The average annual rainfall map of Australia (page 41) shows that the heaviest yearly falls occur on the north coast of Queensland (up to more than 160 inches) and in western Tasmania (up to 140 inches), while from 50 to over 60 inches are received on parts of the eastern seaboard from Jervis Bay (New South Wales) to the northern part of Cape York Peninsula, also around Darwin (Northern Territory), on the West Kimberley coast, near Cape Leeuwin (Western Australia), about the Australian Alps in eastern Victoria and New South Wales, and on the north-eastern highlands in Tasmania. A great part of the interior of the continent, stretching from the far west of New South Wales and the south-west of Queensland to the vicinity of Shark Bay in Western Australia, has a very low average rainfall of less than 10 inches a year. Between these two regions of heavy and very low rainfall are the extensive areas which experience useful to good rains, and in the southern and eastern parts of which are found the best country and most of the population and primary production.

(iii) *Factors Determining Occurrence, Intensity and Seasonal Distribution of Rainfall.* Reference has already been made to the frequent rains occurring in the north-eastern coastal districts of Queensland with the prevailing south-east trade winds and to similar rains in the west of Tasmania with the prevailing westerly winds. Other rains in Australia are associated mainly with tropical and southern depressions.

The former chiefly affect the northern, eastern, and to some extent the central parts of the continent and operate in an irregular manner during the warmer half of the year, but principally from December to March. They vary considerably in activity and scope from year to year, occasionally developing into severe storms off the east and north-west coasts. Tropical rainstorms sometimes cover an extensive area, half of the continent on occasions receiving moderate to very heavy falls during a period of a few days. Rain is also experienced, with some regularity, with thunderstorms in tropical areas, especially near the coast. All these tropical rains, however, favour mostly the northern and eastern

parts of the area referred to; the other parts further inland receive lighter, less frequent and less reliable rainfall. With the exception of districts near the east coast, where some rain falls in all seasons, the tropical parts of the continent receive useful rains only on rare occasions from May to September.

The southern depressions are most active in the winter—June to August—and early spring months. The rains associated with them are fairly reliable and frequent over southern Australia and Tasmania, and provide during that period the principal factor in the successful growing of wheat. These depressions also operate with varying activity during the remainder of the year, but the accompanying rains are usually lighter. The southern rains favour chiefly the south-west of Western Australia, the agricultural districts of South Australia, Victoria, Tasmania, and the southern parts of New South Wales. They sometimes extend into the drier regions of the interior, but only infrequently and irregularly.

The map showing mean monthly distribution of rainfall over Australia (page 42) gives in graphic form information on the amount and occurrence of rain.

(iv) *Wettest and Driest Regions.* The wettest known part of Australia is on the north-east coast of Queensland, between Port Douglas and Cardwell, where Deeral on the north coast-line has an average annual rainfall of 172.26 inches and Tully on the Tully River 179.26 inches. In addition, three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 144 and 169 inches. The maximum and minimum annual amounts there are:—Deeral, 287.18 in 1945 and 94.65 inches in 1951, or a range of 192.53 inches; Tully, 310.92 in 1950 and 104.98 inches in 1943, or a range of 205.94 inches; Goondi, 241.53 in 1894 and 67.88 inches in 1915, or a range of 173.65 inches; Innisfail, 232.06 in 1950 and 69.87 inches in 1902, or a range of 162.19 inches; Harvey Creek, 254.77 in 1921 and 80.47 inches in 1902, or a range of 174.30 inches.

On five occasions more than 200 inches have been recorded at Goondi, the last of these being in 1950, when 204.97 inches were registered. The records at this station cover a period of 67 years.

In twenty-seven years of record Tully has exceeded 200 inches on ten occasions, whilst in a record of 28 complete years Harvey Creek has four times exceeded this figure.

In Tasmania the wettest part is in the West Coast region, the average annual rainfall at Lake Margaret being 146.51 inches, with a maximum of 177.30 inches in 1948.

The driest known part of the continent is in an area of approximately 180,000 square miles surrounding Lake Eyre in South Australia, where the annual average is between 4 and 6 inches and where the fall rarely exceeds 10 inches for twelve months.

Records at stations have at times been interrupted, but of the 23 stations in this region which have an annual average of less than 5 inches, six have complete records extending from 30 to 55 years. Of these Mulka has the lowest average of 4.05 inches (34 years), followed by Troudaninna with an average of 4.15 inches in 42 years. Troudaninna in the period 1893 to 1936 had only one year in which the total exceeded 9 inches (11.07 inches in 1894). There have been protracted periods when the average has even been less than 3 inches. From 1895 to 1903 Troudaninna received the following annual totals:—2.78, 0.99, 5.71, 3.04, 3.18, 2.83, 1.80, 1.11, 4.87, an average of 2.91 inches. From 1918 to 1929 the average was only 2.65 inches, and in this period from December, 1924 to November, 1929 the average was only 1.70 inches.

Mulka since 1918 has only once exceeded 10 inches for the annual total (11.72 inches in 1920), and in 34 years on 16 occasions the annual total has been less than 3 inches. In one particular period from October, 1926 to September, 1930, the average was only 1.26 inches (505 points in 48 months). However, at Kanowana, an even lower four-year average of 1.12 inches was recorded between 1896 and 1899 with yearly totals of 43, 225, 87 and 94 points. An even smaller total than 43 points was recorded at Mungeranie in 1889 when only 39 points were recorded on five days.

The average number of days of rain per month in this region is only 1 to 2 and the annual number ranges between 10 and 20. Oodnadatta (standard 30 years' average rainfall equal to 4.44 inches) has an average of 20 days of rain per year, while Cordillo

Downs in the extreme north-east corner of the State of South Australia receives 5.16 inches on twelve days per year, averaging about one day of rain each month in the thirty years' period 1911-1940.

No part of the earth, so far as is known, is absolutely rainless, and although at Arica, in northern Chile, the rainfall over a period of 15 years was nil, a further two years in which there were three measurable showers made the "average" for 17 years 0.02 inches.

(v) *Quantities and Distribution of Rainfall.* The general distribution is best seen from the rainfall map (page 41) which shows the areas subject to average annual rainfalls lying between certain limits. The proportions of the total area of each State and of Australia as a whole enjoying varying quantities of rainfall determined from the latest available information are shown in the following table:—

AVERAGE ANNUAL RAINFALL DISTRIBUTION.  
(Per Cent.)

Average Annual Rainfall.	W. Aust.	N. Terr.	S. Aust.	Q'land.	N.S.W. (a)	Vic.	Tas. (b)	Total.
Under 10 inches ..	58.0	24.7	82.8	13.0	19.7	Nil	Nil	37.6
10 and under 15 ins.	22.4	32.4	9.4	14.4	23.5	22.4	Nil	19.9

Total ..	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

(a) Includes Australian Capital Territory.

(b) Over an area of 2,777 square miles no records are available.

Referring first to the capital cities, the records of which are given in the next table, it will be seen that Sydney, with an average rainfall of 44.80 inches, occupies the chief place; Brisbane, Perth, Melbourne, Hobart, Canberra and Adelaide follow in that order, Adelaide with 21.09 inches being the driest. The extreme range from the wettest to the driest year is greatest at Brisbane (72.09 inches) and least at Adelaide (19.46 inches).

In order to show how the rainfall is distributed throughout the year in various parts of the continent, average figures for the various climatological districts have been selected (*see* map on page 42). The figures for Northern Rivers (District 14), show that nearly the whole of the rainfall occurs there in the summer months, while little or none falls in the middle of the year. The figures for the Central Coast, south-west of Western Australia (District 9), are the reverse, for while the summer months are dry, the winter months are very wet. In the districts containing Melbourne and Hobart the rain is fairly well distributed throughout the twelve months, with a maximum in October for both districts. In Queensland, the heaviest rains fall in the summer months, but good averages are also maintained during the other seasons in eastern parts.

On the coast of New South Wales, the first half of the year is the wettest, with heaviest falls in the autumn; the averages during the last six months are fair, and moderately uniform. Generally it may be said that approximately one-third of the area of the continent, principally in the eastern and northern parts, enjoys an annual average rainfall of from 20 to 50 inches or more, the remaining two-thirds averaging from 5 to 20 inches.

(vi) *Tables of Rainfall.* The following table of rainfall for a fairly long period of years for each of the Australian capitals affords information as to the variability of the fall in successive years, and the list which follows in the next paragraph of the more remarkable falls furnishes information as to what may be expected on particular occasions.

7. **Snowfall.**—Light snow has been known to fall occasionally as far north as latitude  $31^{\circ}$  S., and from the western to the eastern shores of the continent. During exceptional seasons, it has fallen simultaneously over two-thirds of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter, for several months, snow covers the ground to a great extent on the Australian Alps, where the temperature falls below zero Fahrenheit during the night. In the ravines around Mt. Kosciuszko and similar localities the snow never entirely disappears after a severe winter.

8. **Hail.**—Hail falls most frequently along the southern shores of the continent in the winter, and over eastern Australia during the summer months. The size of the hailstones generally increases with distance from the coast. A summer rarely passes without some station experiencing a fall of stones exceeding in size an ordinary hen egg, and many riddled sheets of light-gauge galvanized iron bear evidence of the weight and penetrating power of the stones.

The hailstones occur most frequently when the barometric readings indicate a flat and unstable condition of pressure. Tornadoes or tornadic tendencies are almost invariably accompanied by hail, and on the east coast the clouds from which the stones fall are frequently of a remarkable sepia-coloured tint.

9. **Barometric Pressures.**—The mean annual barometric pressure (corrected to sea level and standard gravity) in Australia varies from 29.80 inches on the north coast to 29.92 inches over the central and 30.03 inches in the southern parts of the continent. In January, the mean pressure ranges from 29.70 inches in the northern and central areas to 29.95 inches in the southern. The July mean pressure ranges from 29.90 inches at Darwin to 30.12 inches at Alice Springs. Barometer readings corrected to mean sea level and standard gravity have, under anticyclonic conditions, ranged as high as 30.935 inches (at Hobart on 13th July, 1846) and have fallen as low as 27.55 inches. This lowest record was registered at Mackay during a tropical hurricane on 21st January, 1918. An almost equally abnormal reading of 27.88 inches was recorded at Innisfail during a similar storm on 10th March, 1918. For graphs of Mean Barometric Pressure at Capital Cities see Official Year Book No. 37, p. 35.

10. **Wind.**—(i) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east trade and the "prevailing" westerly winds. As the belt of the earth's atmosphere in which they blow apparently follows the sun's ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months the anticyclonic belt travels in high latitudes, thereby bringing the south-east trade winds as far south

as 30° south latitude. The "prevailing" westerly winds retreat a considerable distance to the south of Australia, and are less in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and only operate to the north of the tropics for the greater part of the winter. The westerly winds come into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from Cape Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong, and occasionally penetrate to almost tropical latitudes.

(ii) *North-west Monsoon.* As the belt of south-east trade winds retreats southward during the summer, it is replaced in the north and north-west of Australia first by a sequence of light variable winds and then by the north-west monsoon. In Australia, the north-west monsoon has not the persistence nor regularity of the Indian south-west monsoon but is sufficiently characteristic for the summer in the north of Australia to be called the "North-west Season". In central and eastern Queensland, the north-west monsoon in the summer has comparatively little effect and the trade winds, albeit weakened, are still dominant winds. With the migration of the sun northward in the autumn, the north-west monsoon is itself replaced first by light variable winds and then by the trade winds.

Further particulars of Australian wind conditions and meteorology will be found in Official Year Book No. 38, pp. 58-61.

(iii) *Cyclones and Storms.* The "elements" in Australia are ordinarily peaceful, and while destructive cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months, the southern shores of the continent are subject to deep depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Strait, including the coastline of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these disturbances are experienced in their northern half, or in that part of them which has a north-westerly to a south-westerly circulation.

The north-east coast of Queensland is occasionally visited by hurricanes from the north-east tropics. During the first four months of the year, these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve first to the south-west and finally towards the south-east.

Very severe cyclones, locally known as "willy willies," are peculiar to the north-west coast of Western Australia from the months of November to April, inclusive. They usually originate over the ocean to the north or north-west of Australia, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course, their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded in 24 hours at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the northern interior of Western Australia from similar storms.

Some further notes on severe cyclones and on "southerly bursters", a characteristic feature of the eastern part of Australia, appear in previous issues of the Official Year Book (see No. 6, pp. 84-86), and a special article dealing with "Australian Hurricanes and Related Storms" appears in Official Year Book No. 16, pp. 80-84.

Depressions vary considerably in their isobaric forms, intensity and other characteristics. Some bring rain in variable quantities, some heat and others mainly wind. A common type in southern Australia is the "A" shaped trough with an abrupt "backing" of the wind or "line squall" as it passes. The cold front is most frequently found through the centre of the "trough" because it is along this line, and extending into the upper levels of the atmosphere, that the demarcation of different air masses is so well defined. The best rains in inland Australia occur when extensive masses of warm moist tropical air move into the interior and are forced to rise by convergence of flow or by impact with a cold air stream.

The speed of low pressure systems is very variable, but in general in southern latitudes the movement is of the order of 500 to 700 miles per day.

11. *Influences affecting Australian Climate.*—(i) *General.* Australian history does not cover a sufficient period, nor is the country sufficiently occupied, to ascertain whether or not the advance of settlement has materially affected the climate as a whole. Local changes have, however, taken place, a fact which suggests that settlement and the treatment of the land have a distinct effect on local conditions. For example, low-lying lands on the north coast of New South Wales, which originally were seldom subject to frosts, have, with the deforestation of the surrounding hills experienced annual visitations, the probable explanation being that through the absence of trees the cold air of the highlands now flows unchecked and untempered down the sides of the hills to the valleys and lower lands.

(ii) *Influence of Forests on Climate.* As already indicated, forests doubtless exercise a great influence on local climate, and hence, to the extent that forestal undertakings will allow, the weather can be controlled by human agency. The direct action of forests is an equalizing one; thus, especially in equatorial regions, and during the warmest portion of the year, they considerably reduce the mean temperature of the air. They also reduce the diurnal extremes of shade temperatures by altering the extent of radiating surface by evaporation, and by checking the movement of air, and while decreasing evaporation from the ground, they increase the relative humidity. Vegetation greatly diminishes the rate of flow-off of rain and the washing away of surface soil, and when a region is protected by trees a steadier water supply is ensured, and the rainfall is better conserved. In regions of snowfall, the supply of water to rivers is similarly regulated, and without this and the sheltering influence of ravines and "gullies," watercourses supplied mainly by melting snow would be subject to alternate periods of flooding and dryness. This is borne out in the case of the inland rivers, the River Murray, for example, which has never been known to become dry, deriving its steadiness of flow mainly through the causes indicated.

(iii) *Direct Influence of Forests on Rainfall.* Whether forests have a direct influence on rainfall is a debatable question, some authorities alleging that precipitation is undoubtedly induced by forests, while others take the opposite view.

Sufficient evidence exists, however, to prove that, even if the rainfall has not increased, the beneficial climatic effect of forest lands more than warrants their protection and extension. Rapid rate of evaporation, induced by both hot and cold winds, injures crops and makes life uncomfortable on the plains, and, while it may be doubted that the forest aids in increasing precipitation, it must be admitted that it does check winds and the rapid evaporation due to them. Trees as wind-breaks have been successfully planted in central parts of the United States of America, and there is no reason why similar experiments should not be successful in many parts of the treeless interior of Australia. The belts should be planted at right angles to the direction of the prevailing parching winds, and if not more than half a mile apart will afford shelter to the enclosed areas.

12. *Rainfall and Temperatures, Various Cities.*—Official Year Book No. 34, p. 28, shows rainfall and temperature and No. 38, p. 42, temperature, for various important cities throughout the world and for the Australian capitals.

13. *Climatological Tables.*—The averages and extremes for a number of climatological elements, which have been determined from long series of observations at the Australian capitals up to and including the year 1954, are given on the following seven pages.

NOTE.—The following points apply throughout :—

- (i) Where records are available, mean or average values have been calculated on a standard period of 30 years from 1911 to 1940.
- (ii) Extreme values have been extracted from all available years of actual record, but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

## CHAPTER III.

### GENERAL GOVERNMENT.

#### § 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office, and by the instructions which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State was bi-cameral till 1922, in which year the Queensland Parliament became uni-cameral. In the bi-cameral States it consists of (a) a Legislative Council and (b) a Legislative Assembly, or House of Assembly. In Queensland the Legislative Assembly constitutes the legislature. In the Commonwealth Parliament the Upper House is known as the Senate, and in the State Parliaments as the Legislative Council. The Lower House in the bi-cameral Parliaments is known as follows:—in the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly. The legislative powers of these Parliaments are delimited by the Commonwealth and the State Constitutions. The Assembly (Queensland as pointed out is uni-cameral) which is the larger House, is always elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of that State, the constituencies being differently arranged and, in general, some property or special qualification for the electorate being required. In Victoria, however, under the Legislative Council Reform Act passed in October, 1950, adult suffrage was adopted for Legislative Council elections. In the case of New South Wales, the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament the qualifications for the franchise are identical for both Houses.

2. **The Sovereign.**—(i) *Accession of Queen Elizabeth II.* On 7th February, 1952 the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2nd June, 1953.

(ii) *Royal Style and Titles Act 1953.* At a conference of Prime Ministers and other representatives of the British Commonwealth in London in December, 1952 it was agreed that the Royal Style and Titles then in use were not in accord with current relationships within the British Commonwealth and that there was need of a new form which would, in particular, “reflect the special position of the Sovereign as Head of the Commonwealth”.

It was therefore decided that each member of the British Commonwealth should use a form of the Royal Style and Titles suited for its own circumstances, while retaining as a common element the description “Queen of Her other Realms and

Territories and Head of the Commonwealth"; and that consultation between all countries of the Commonwealth should take place on any future proposal to change the form of the Royal Style and Titles used in any country.

To give effect to these decisions in Australia the Royal Style and Titles Act was passed on 3rd April, 1953 giving Parliament's assent to the adoption by the Queen, for use in relation to the Commonwealth of Australia and its Territories, of the following Royal Style and Titles:—"Elizabeth the Second, by the Grace of God of the United Kingdom, Australia and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith." The Act also approves the adoption by the Queen of a Royal Style and Titles for use in relation to other countries of the British Commonwealth in accordance with the principles formulated at the London conference.

### 3. Powers and Functions of the Governor-General and of the State Governors.—

(i) *Governor-General of the Commonwealth.* Section 2 of the Commonwealth Constitution provides as follows:—

"A Governor-General appointed by the Queen shall be Her Majesty's representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen's pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him."

As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen—either by Letters Patent (see Letters Patent dated 29th October, 1900 and 15th December, 1920), by Instructions under the Royal Sign Manual and Signet, by Commission issued to him under the Royal Sign Manual and Signet, or by any instrument of delegation under section 2 of the Constitution. Powers which have been so assigned include, amongst others, the power to appoint a Deputy or Deputies of the Governor-General, to administer or authorize any other person to administer the Oath of Allegiance, to grant pardons and to remit fines for offences against the laws of the Commonwealth and to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth.

Other powers and functions are conferred on the Governor-General by the Constitution. For example, under section 5 of the Constitution he may appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives. Under section 32 the Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives. Under section 58 he assents in the Queen's name to a proposed law passed by both Houses of the Parliament or withholds assent, or reserves the law for the Queen's pleasure; or he may return the proposed law to the House in which it originated and may transmit therewith any amendments which he may recommend. Under section 61 he exercises the executive power of the Commonwealth, under section 62 he chooses and summons Executive Councillors, who hold office during his pleasure, and under section 64 he may appoint Ministers of State for the Commonwealth. By section 68 the command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General, as the Queen's representative. Under the conventions of responsible government obtaining in Commonwealth countries, the Governor-General's executive functions generally are exercised on the advice of Ministers of State. In this regard the Governor-General's position has become assimilated to that of the Queen in relation to her Ministers of State for the United Kingdom.

In addition, many powers and functions are exercised by the Governor-General under Acts of the Commonwealth Parliament. Most Acts, for example, provide that the Governor-General may make regulations, not inconsistent with the Act, either generally to give effect to the Act or to cover certain matters specified in the power. The Governor-General may be authorized by statute to issue proclamations—for example,

to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. The Governor-General has been given power by statute to legislate for certain Territories of the Commonwealth. Other statutory powers include the power to appoint and dismiss statutory officers or bodies. A reference to the Governor-General, in Acts of the Commonwealth Parliament, means, unless the contrary intention appears, the Governor-General acting with the advice of the Executive Council (Acts Interpretation Act 1901-1950, section 17 (f)).

(ii) *Governors of the States.* The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates.

The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the "Governor's Instructions" given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills, which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown.

In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

(iii) *Holders of Office.* For the names of the Governors-General since the inception of the Commonwealth and of the present State Governors, see § 3. following.

4. **The Cabinet and Executive Government.**—(i) *General.* Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as "Cabinet" or "responsible" government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform Governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates by means, chiefly, of constitutional conventions, customs or understandings, and of institutions that do not form part of the legal structure of the government at all. The constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained below. The whole policy of a Ministry is, in practice, determined by the Ministers of State, meeting, without the Governor-General or Governor, under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

(ii) *The Cabinet.* This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, all Ministers are members of the Cabinet. As Ministers are the leaders of the party or parties commanding a

majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact that all Ministers are members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.

(iii) *The Executive Council.* This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State are *ex officio* members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings; for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The meetings of the Executive Council are formal and official in character, and a record of proceedings is kept by the Secretary or Clerk. At Executive Council meetings, the decisions of the Cabinet are (where necessary) given legal form; appointments made; resignations accepted; proclamations issued, and regulations and the like approved.

(iv) *The Appointment of Ministers.* Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. Australian practice follows, broadly, that of the United Kingdom. When a Ministry resigns, the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to "form a Ministry"—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

The customary procedure in connexion with the resignation or acceptance of office by a Ministry is described fully in previous issues of the Official Year Book (*see* No. 6, p. 942). It may be added, however, that legislation now exists in all States, the effect of which is to obviate the necessity of responsible Ministers vacating their seats in Parliament on appointment to office.

(v) *Ministers in Upper and Lower Houses.* The following table shows the number of Ministers with seats in the Upper or Lower Houses of each Parliament in December, 1955 :—

AUSTRALIAN PARLIAMENTS : MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER, 1955.

(a) Abolished in 1922.

For the names of the occupants of ministerial office in each of the Parliaments of Australia in December, 1955, *see* § 3. of this chapter. Subsequent changes of importance in Ministries will be found in the Appendix to this volume.

(vi) *Numbers and Salaries of Commonwealth Ministers.* Under sections 65 and 66, respectively, of the Constitution of the Commonwealth, the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, "until the Parliament otherwise provides."

Subsequently, number and salaries were increased to 8—£13,650 (1915) and to 9—£15,300 (1917). During the period of financial emergency in the early thirties the ministerial salary appropriation was reduced to as low as £10,710 a year, and was not restored to its former level until 1938. During the period of restoration of salary the number of Ministers was increased to 10 (1935). Later increases were as follows:—to 11—£18,600 (1938); 19—£21,250 (1941)—these increases were war-time provisions, extended into peacetime in 1946; £27,650 (1947—number unaltered); 20—£29,000 (1951); £41,000 (1952—number unaltered). In 1938 an additional ministerial allowance of £1,500 a year was granted to the Prime Minister; this was increased to £3,500 a year (exempt from income tax) in 1952 and at the same time an additional ministerial allowance of £1,000 a year (exempt from income tax) was granted to each other Minister.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (*see paras. 5 and 6 below*).

5. **Number and Salary of Members of the Legislatures, Australian Parliaments, December, 1955.**—The following table shows the number and annual salary of members in each of the legislative chambers in December, 1955:—

**AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES,  
DECEMBER, 1955.**

Members in—	C'wealth.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Total.

(a) Abolished in 1922. (b) Plus expense allowances exempt from income tax—Senators, £550; Members of House of Representatives, £400—£900, varying with electoral divisions. *See also para. 6 following.* (c) Increased from £1,050 as from 6th October, 1954. Plus allowance of £400 for metropolitan, £600 for urban, £700 for inner country and £800 for outer country electorates. (d) According to distance of electorate from Adelaide. (e) Subject to adjustment in accordance with variations of the State basic wage. Plus £50 where any part of electorate is more than 50 miles from Perth. (f) According to area of electorate and distance from the capital. Plus a cost of living adjustment. (g) Increased from £1,575 as from 1st July, 1954. Subject to adjustment in accordance with any variation of the equivalent Public Service Award classification. Plus marginal allowances of £100 for metropolitan electorates and ranging from £165 to £270 for non-metropolitan electorates.

6. **Commonwealth Parliamentary Allowances.**—(i) *General Allowance.* Section 48 of the Commonwealth Constitution granted to each Senator and member of the House of Representatives an allowance of £400 a year until Parliament should decide to alter it. The first alteration was made in 1907, when the allowance was increased to £600 for all except the holders of Parliamentary office (i.e., Ministers, and the Presiding Officer and Chairman of Committees of each House), whose allowances in addition to the emoluments of office remained at £400 a year. In 1920 the general allowance was increased to £1,000 a year and the allowance to holders of office to £800 a year. Under financial emergency

legislation Parliamentary salaries and allowances were reduced generally, the lowest level reached for the general allowance being £750 in 1932. Subsequently there was a gradual restoration to former levels, the allowance reaching £1,000 a year again in 1938, when the provision for the reduced allowance for holders of Parliamentary office was removed. In 1947 the general allowance was increased to £1,500 and in 1952 to £1,750 a year.

(ii) *Additional Allowances.* (a) *Holders of Parliamentary Office.* Amounts received by the holders of Parliamentary office in respect of the duties they perform are additional to the allowances to each Senator and Member of the House of Representatives as described above. Appropriations for ministerial salaries are referred to in par. 4 (vi) above, but the amounts received because of their duties of office by the President of the Senate, the Speaker of the House of Representatives and the Chairman of Committees in each House are not included in these appropriations.

In 1901-2 the Presiding Officer of each House received £1,100 a year and the Chairmen of Committees each £500 a year. Before the depression years these amounts had been increased to £1,300 and £700 respectively, but, in common with other Parliamentary salaries and allowances, they were reduced during this period, and in 1933-34 were as low as £900 and £500 a year. Following the gradual restoration to previous levels, they remained unchanged until 1947-48, when they were increased to £1,600 and £900 respectively. In 1952 the allowance to the President of the Senate and to the Speaker of the House of Representatives was increased to £1,750 a year each.

(b) *Other Additional Allowances.* In 1920 the Leaders of the Opposition in the Senate and in the House of Representatives were granted additional allowances of £200 a year and £400 a year respectively. These were increased to £300 and £600 in 1947 and to £750 and £1,750 in 1952. In 1947, also, the Leader in the House of Representatives (other than the Leader—and in 1952 the Deputy Leader—of the Opposition) of a recognized political party with not less than ten members in that House and of which none is a Minister received an additional allowance of £400 a year. This was increased to £500 in 1952.

Further additional annual allowances, all of which were granted in 1952, are as follows:—

Deputy Leader of the Opposition in the House of Representatives, £750; Government Whip in the House of Representatives, £325; Other Whips, £275.

Additional allowances (exempt from income tax) for expenses of discharging duties.—Payable to each Senator—£550; payable to each Member of the House of Representatives—£400-£900, varying with electoral divisions.

Additional allowances (exempt from income tax) for expenses of discharging duties of Office.—President of the Senate, Speaker of the House of Representatives, Leader of the Opposition in the Senate, and Deputy Leader of the Opposition in the House of Representatives—£250; Leader of the Opposition in the House of Representatives—£1,000.

7. *Enactments of the Parliament.*—In the Commonwealth all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States (other than South Australia and Tasmania) laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania, laws are expressed to be enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. The Governor-General or the State Governor acts on behalf of, and in the name of, the Sovereign, in assenting to Bills passed by the Legislatures, but he may reserve them for the special consideration of the Sovereign. The Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is, to the extent of the inconsistency, invalid.

## § 2. Parliaments and Elections.

1. *Commonwealth.*—(i) *Qualifications for Membership and for Franchise—Commonwealth Parliament.* Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any British subject, not under twenty-one years of age and not disentitled on racial or other ground, who has lived in Australia for six months continuously. Residence in a sub-division for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory. A member of the Defence Force on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections whether enrolled or not.

Disqualification of persons otherwise eligible as members of either Commonwealth House is mainly on the grounds of membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown with certain exceptions, or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Excluded from the franchise are persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or of certain non-European races. In the main, these or similar grounds for disqualification apply also to State Parliament membership and franchise.

(ii) *Commonwealth Parliaments and Elections.* From the establishment of the Commonwealth until 1949 the Senate consisted of 36 members, six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament and, as the population of the Commonwealth had more than doubled since its inception, the Parliament enacted legislation in 1948 enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation. Thus the Representation Act 1948 provides that there shall be ten Senators from each State instead of six, increasing the total to 60 Senators. To effect this transition in the Senate, seven Senators were elected from each State at the elections of 1949, four taking office immediately the Senate sat after the election, the remaining three commencing their term on the usual date—1st July, 1950. Members of this Chamber are normally elected for the term of six years, but half the members retire at the end of every third year, although they are eligible for re-election. Accordingly, at each future periodical election of Senators, five Senators will normally be elected in each State, making 30 to be elected at each such election.

In accordance with the Constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Correspondingly, in terms of the Constitution and the Representation Act 1905–38, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows:—New South Wales—from 28 to 47; Victoria—20 to 33; Queensland—10 to 18; South Australia—6 to 10; Western Australia—5 to 8; Tasmania—5, no increase; total—74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by the Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and sub-divisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30th June, 1954 necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia and Western Australia. Representation as from the General Election for the House of Representatives on 12th December, 1955, New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9,

Tasmania 5, the total number of members (excluding the members for the external Territories) being increased from 121 to 122. A redistribution of electoral boundaries was effected by Distribution Commissioners appointed in each State.

Since the general elections of 1922 the Northern Territory has been represented by one member in the House of Representatives. The Australian Capital Territory Representation Act 1948 gave similar representation to the Australian Capital Territory as from the elections of 1949. The members for the Territories may join in the debates but are not entitled to vote, except on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. In elections for Senators, the whole State constitutes the electorate. For the purposes of elections for the House of Representatives, the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Official Year Book.

There have been twenty-one complete Parliaments since the inauguration of Federation. Until 1927 the Parliament met at Melbourne; it now meets at Canberra, the first meeting at Parliament House, Canberra, being opened by the late King George VI., then Duke of York, on 9th May, 1927.

The fifth Parliament, which was opened on 9th July, 1913, was dissolved on 30th July, 1914 in somewhat unusual circumstances, when, for the first time in the history of the Commonwealth, a deadlock occurred between the Senate and the House of Representatives, and, in accordance with Section 57 of the Constitution which provides for such an eventuality, both Houses were dissolved by the Governor-General. The nineteenth Parliament was similarly dissolved. It opened on 22nd February, 1950, but on 19th March, 1951, in its first session, a double dissolution was proclaimed for the second time since the inception of the Commonwealth.

The system of voting for the House of Representatives is preferential and for the Senate, until 1948, voting was also preferential. The Commonwealth Electoral Act 1948, however, introduced with the Representation Act 1948 to enlarge the Commonwealth Parliament (*see page 71*), changed the system of scrutiny and counting of votes in Senate elections from preferential to that of proportional representation. For a description of the system, *see Official Year Book No. 38, pp. 82-3*.

For particulars of electors enrolled and of electors who voted at the various Commonwealth elections, *see earlier Year Books*. Elections for the Senate have usually been held at the same time as those for the House of Representatives. The double dissolution of the nineteenth Parliament, however, referred to above, led to the holding of separate elections for the Senate. An election was held on 9th May, 1953, and particulars of electors and voting in the several States are as follows:—

#### SENATE ELECTION, 9th MAY, 1953.

State.	Electors Enrolled.			Electors who Voted.			Percentage of Electors who Voted.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.

(a) Contested Electorates only.

The twenty-first Parliament opened on 4th August, 1954 and was dissolved on 28th October, 1955.

(iii) *Commonwealth Referenda.* According to Section 128 of the Constitution, any proposed law for the alteration of the Constitution must, in addition to being passed by an absolute majority of each House of Parliament, be submitted to a referendum of the electors in each State, and must further be approved by a majority of the States and of the electors who voted, before it can be presented for Royal Assent. So far 24 proposals have been submitted to referenda and the consent of the electors has been received in four cases only, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referenda and the voting thereon were given in previous issues of the Official Year Book (*see* No. 18, p. 87, No. 31, p. 67, No. 35, p. 60, No. 36, p. 61, No. 37, pp. 64–5, No. 38, p. 84 and No. 40, p. 56), and a brief résumé of the various referenda held in Australia was given in Official Year Book No. 41 (*see* page 67.)

2. *State Elections.*—(i) *Latest in each State. (a) Upper Houses.* The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia and Western Australia. In New South Wales members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

**STATE UPPER HOUSE ELECTIONS.**

(a) Not available.

(ii) *Elections in Earlier Years.* Official Year Book No. 38 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above, and some general information is given in the following paragraphs.

3. *The Parliament of New South Wales.*—The Parliament of New South Wales consists of two Chambers, the Legislative Assembly and the Legislative Council. By legislation assented to in July, 1949, the Assembly was enlarged from 90 to 94 members, elected in single-seat electoral districts, who hold their seats during the existence of the Parliament to which they are elected. The duration of Parliament is limited to three years and by legislation enacted in 1950 cannot be extended beyond that period except with the approval of electors by referendum. Until 1934 the Council was a nominee Chamber, consisting of a variable number of members appointed for life without remuneration, but as from 23rd April, 1934 it was reconstituted and became a House of 60 members to serve without remuneration for a term of twelve years, with one-quarter of the members retiring every third year. As from 1st September, 1948, however, members of the Council have been paid an allowance, now £500 a year. Vacancies are filled by members of both Chambers, who vote as a single electoral body at simultaneous sittings of both Chambers.

Any person who is an elector entitled to vote at a Legislative Assembly election, or a person entitled to become such elector, and who has been for at least three years resident in Australia, and who is a natural-born or naturalized subject of the Queen, is capable of being elected to the Legislative Council. For the Council franchise an elector must be, for the time being, a Member of the Legislative Council or a Member of the Legislative Assembly. Every person qualified to vote at a Legislative Assembly election for any electoral district in New South Wales is qualified to be elected as a Member for that or any other district. Every person not under twenty-one years of age, who is a natural-born or naturalized subject of the Queen, and who has lived in Australia for at least six months continuously, and in New South Wales for at least three months, and in any subdivision for at least one month immediately preceding the date of claim for enrolment, is entitled to enrolment as an elector for the Legislative Assembly. Persons are disqualified either as members or voters for reasons generally the same as those outlined on page 71.

Since the introduction of responsible government in New South Wales there have been 36 complete Parliaments, the first of which opened on 22nd May, 1856, and was dissolved on 19th December, 1857, while the thirty-sixth was dissolved on 14th January, 1953. The thirty-seventh Parliament opened on 11th March, 1953.

The elections of 1920, 1922 and 1925 were contested on the principle of proportional representation, but a reversion to the system of single seats and preferential voting was made at the later appeals to the people. The principle of one elector one vote was

adopted in 1894, and that of compulsory enrolment in 1921. Compulsory voting was introduced at the 1930 election. The franchise was extended to women (Women's Franchise Act) in 1902, and was exercised by them for the first time in 1904.

4. **The Parliament of Victoria.**—Both of the Victorian legislative Chambers are elective bodies, but there is a considerable difference in the number of members of each House, and there was also, until the Legislative Council Reform Act 1950, in the qualifications necessary for members and electors. The number of members in the Upper House is 34, and in the Lower House, 65. In the Legislative Council the tenure of the seat is for six years, except that one-half of the members who are elected for provinces at any general election for the Council are entitled to hold their seats for a period of only three years, one member for each of the seventeen provinces retiring every third year. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years.

Prior to the passing of the Act just referred to, which operated from November, 1951, there were property qualifications required for membership of, and franchise for, the Legislative Council. As alternatives to the property qualifications for the Council franchise, certain professional and academic qualifications were also allowed. As amended, however, the qualifications for membership of the Council are possessed by any adult natural-born subject of the Queen, or by any adult alien naturalized for five years and resident in Victoria for two years. Entitlement for enrolment as an elector is extended to every adult natural-born or naturalized subject who has resided in Australia for at least six months continuously and in Victoria for at least three months and in any subdivision for at least one month immediately preceding the date of claim for enrolment. These qualifications for membership and electors apply also in respect of the Legislative Assembly. Reasons for disqualification follow the general pattern for Australia (*see* page 71).

Since the introduction of responsible government in Victoria there have been 39 complete Parliaments, the first of which opened on 21st November, 1856, and closed on 9th August, 1859, while the thirty-ninth was dissolved on 22nd April, 1955. The fortieth Parliament was opened on 15th June, 1955.

Single voting is observed in elections held for either House, plural voting having been abolished for the Legislative Assembly in 1899 and for the Legislative Council in 1937. A preferential system of voting (*see* Official Year Book No. 6, p. 1182) was adopted for the first time in Victoria at the election held in November, 1911. The franchise was extended to women by the Adult Suffrage Act 1908, while voting at elections was made compulsory for the Legislative Assembly in 1926 and for the Legislative Council in 1935.

5. **The Parliament of Queensland.**—As stated previously, the Legislative Council in Queensland was abolished in 1922, the date of Royal Assent to the Act being 23rd March, 1922. The Legislative Assembly is composed of 75 members, each elected for a period of three years and each representing an electoral district.

Any person qualified to be enrolled for any electoral district is qualified for election to the Legislative Assembly. Any person of the age of twenty-one years, who is a natural-born or naturalized British subject with continuous residence within Australia for six months, in Queensland for three months, and in an electoral district for one month prior to making a claim for enrolment, is qualified to enrol as an elector. The classes of persons not qualified to be elected are similar to those for other Australian Parliaments (*see* page 71).

Under the Electoral Districts Act of 1949 the number of members and the number of electorates were increased from 62 to 75, and the increase became effective from the beginning of the thirty-second Parliament, elected in 1950. The Act divided the State into four zones, and a commission of three appointed by the Governor-in-Council completely distributed the prescribed zones into the number of electoral districts, taking into account community or diversity of interest, means of communication, physical features, boundaries of Petty Sessions Districts and of areas of Local Authorities.

Since the establishment of responsible government in Queensland there have been 32 complete Parliaments, the last of which was dissolved on 6th February, 1953. Opinions differ regarding the opening date of the first Queensland Parliament. According to the

Votes and Proceedings of the Legislative Assembly, the House met for the first time on 22nd May, 1860, when the members were sworn and the Speaker elected. The Governor, however, was unable to be present on that date, but he duly attended on 29th May, 1860, and delivered the Opening Address. The thirty-third Parliament was opened on 4th August, 1953.

At the elections held in May, 1915, the principle of compulsory voting was introduced for the first time in Australia. The election of 1907 was the first State election in Queensland at which women voted, the right being conferred under the Elections Acts Amendment Act 1905. In 1942 the system of preferential voting was abolished and that of election of the candidate obtaining the highest number of votes in the electorate now operates.

6. **The Parliament of South Australia.**—In this State there is a Legislative Council composed of twenty members and a House of Assembly with 39 members, both Chambers being elective. For the Legislative Council the State is divided into five districts each returning four members, two of whom retire alternately, the term of office being six years. Thirty-nine districts return one member each to the House of Assembly; prior to 1938 there were 46 members representing nineteen districts. The duration of the House of Assembly is three years.

Any person who is at least thirty years of age, is a British subject or legally made a denizen of the State and who has resided in the State for at least three years is qualified for membership in the Legislative Council. Qualifications for the Council franchise are that a person is at least twenty-one years of age, a British subject, an inhabitant of the State with residence for at least six months prior to the registration of the electoral claim, and that he or she has had certain war service, or possesses property qualifications relating to ownership, leaseholding, or inhabitant occupancy. Any person qualified and entitled to be registered as an elector for the House of Assembly is qualified and entitled for election as a member of that House. Qualifications for enrolment as an elector for the House of Assembly are that a person is at least twenty-one years of age, is a British subject, and has lived continuously in Australia for at least six months, in the State for three months and in an Assembly subdivision for one month immediately preceding the date of claim for enrolment. Provisions in the Constitution for disqualification from membership or from the franchise in respect of either House follow the usual pattern for Australia (*see page 71*).

Since the inauguration of responsible government in South Australia there have been 33 complete Parliaments, the first of which was opened on 22nd April, 1857. The thirty-third Parliament was opened on 28th June, 1950 and expired on 28th February, 1953. The thirty-fourth Parliament was opened on 25th June, 1953. The duration of the twenty-eighth Parliament was extended from three to five years by the provisions of the Constitution (Quinquennial Parliament) Act 1933, but this Act was repealed by the Constitution Act Amendment Act (No. 2) 1939, and the three-year term was reverted to.

South Australia was the first of the States to grant women's suffrage (under the Constitution Amendment Act 1894), the franchise being exercised by women for the first time at the Legislative Assembly election on 25th April, 1896. Compulsory voting for the House of Assembly, was first observed at the 1944 election. A system of preferential voting is in operation.

7. **The Parliament of Western Australia.**—In this State both Chambers are elective. For the Legislative Council there are 30 members, each of the ten provinces returning three members, one of whom retires biennially. At each biennial election the member elected holds office for a term of six years, and automatically retires at the end of that period. The Legislative Assembly is composed of 50 members, one member being returned by each electoral district. Members of the Legislative Assembly are elected for three years.

Since the establishment of responsible government in Western Australia there have been twenty complete Parliaments, the first of which was opened on 30th December, 1890. The twentieth Parliament was opened on 27th July, 1950 and expired on 15th January, 1953. The twenty-first Parliament was opened on 6th August, 1953. The preferential system of voting in use in Western Australia is described in Official Year Book No. 6, p. 1184.

Qualifications required for membership of the Legislative Council are the age of 30 years, residence in Western Australia for two years, being a natural-born British subject or naturalized for five years prior to election and resident in the State for that period, and freedom from legal incapacity. Qualifications required for Council franchise are the age of twenty-one years, residence in Western Australia for six months, being a natural-born British subject or naturalized for twelve months, freedom from legal incapacity, and certain property qualifications relating to freehold, leasehold, or householder occupancy. Qualifications required for membership of the Legislative Assembly are the age of twenty-one years, residence in Western Australia for twelve months, being a natural-born British subject or naturalized for five years and resident in the State for two years prior to election, and freedom from legal incapacity. Qualifications required for the franchise are the age of twenty-one years, residence in Western Australia for six months and in an electoral district continuously for three months, and being a natural-born or naturalized British subject. Persons may be disqualified as members or voters for reasons similar to those for other Australian Parliaments (*see* page 71).

Women's suffrage was granted by the Electoral Act of 1899. The first woman member to be elected to an Australian Parliament was returned at the 1921 election in this State. Voting for the Legislative Assembly was made compulsory in December, 1936, the first elections for which the provision was in force being those held on 18th March, 1939.

8. The Parliament of Tasmania.—In Tasmania there are two legislative Chambers—the Legislative Council and the House of Assembly, both bodies being elective. In accordance with the Constitution Act 1946, the Council now consists of nineteen members, elected for six years and returned from nineteen divisions. Three members retire annually (except in the 1953 elections and in each sixth successive year thereafter, when four retire) and the Council cannot be dissolved as a whole. Prior to the 1946 Act there were eighteen members elected from fifteen divisions, of which Hobart returned three members and Launceston two. There are five House of Assembly divisions, corresponding to the Commonwealth electoral divisions, each returning six members elected under a system of proportional representation which first came into force at the 1909 elections (*see* Official Year Book No. 6, p. 1185). By the Constitution Act 1936 the life of the Assembly was extended from three to five years except where, after a general election, all the Members elected are members of either of two opposing parties, and of these fifteen are members of one of those parties and fifteen are members of the other of those parties, when the Governor shall by Proclamation, invoke the Constitution Act (No. 2) 1954 which limits the life of the Assembly to three years.

Persons qualified for election to the Legislative Council must be 25 years of age and qualified to vote as Council electors, have been resident in Tasmania for a period of five years at any one time or at least two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for at least five years. An elector for the Council must be twenty-one years of age, a natural-born or naturalized subject and resident in Tasmania for a period of twelve months, with certain freehold or occupancy property qualifications, or the spouse of a person qualified to vote as the owner or occupier of property, or with certain academic, professional, defence force, or war service qualifications. For the House of Assembly members must be twenty-one years of age, have been resident in Tasmania for a period of five years at any one time or for a period of two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for a period of five years. Electors must be twenty-one years of age, natural-born or naturalized subjects and resident in Tasmania for a period of six months continuously. Reasons for disqualification of members or voters are similar to those for other Australian Parliaments (*see* page 71).

The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been 30 complete Parliaments since the inauguration of responsible government. The thirty-first Parliament was opened on 13th April, 1955.

The suffrage was granted to women under the Constitution Amendment Act 1903 and compulsory voting for both Houses came into force on the passing of the Electoral Act in 1928. The system of voting is proportional representation by single transferable vote.

9. **Superannuation Funds of the Parliaments of the Commonwealth and of the Australian States.**—(i) *General.* In Official Year Book No. 38 there is a conspectus of Superannuation Funds of the Parliaments of the Commonwealth and of the five States (New South Wales, Victoria, Queensland, South Australia and Western Australia) in which such schemes operate (*see* pp. 91–9). This conspectus summarized the main features of each fund as at 30th June, 1949. Although the schemes are still essentially as described in the conspectus, there have subsequently been several amending Acts providing for extensions or increases in benefits, increased contributions, etc., in some of the schemes. The Commonwealth Retiring Allowances Act 1952 provided *inter alia* for additional benefit of £1,200 a year, subject to certain conditions, to a retired Prime Minister, and in case of his death, additional benefit of £750 a year to his widow.

(ii) *Finances.* For particulars of the financial operations of these schemes *see* Chapter XIX.—Private Finance of this volume.

### § 3. Administration and Legislation.

1. **The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9th May, 1901, by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since Federation :—

COMMONWEALTH PARLIAMENTS.

Number of Parliament.	Date of Opening.	Date of Dissolution.
First .. .. .	9th May, 1901 .. .. .	23rd November, 1903
Second .. .. .	2nd March, 1904 .. .. .	5th November, 1906
Third .. .. .	20th February, 1907 .. .. .	19th February, 1910
Fourth .. .. .	1st July, 1910 .. .. .	23rd April, 1913
Fifth .. .. .	9th July, 1913 .. .. .	30th July, 1914(a)
Sixth .. .. .	8th October, 1914 .. .. .	26th March, 1917
Seventh .. .. .	14th June, 1917 .. .. .	3rd November, 1919
Eighth .. .. .	26th February, 1920 .. .. .	6th November, 1922
Ninth .. .. .	28th February, 1923 .. .. .	3rd October, 1925
Tenth .. .. .	13th January, 1926 .. .. .	9th October, 1928
Eleventh .. .. .	9th February, 1929 .. .. .	16th September, 1929
Twelfth .. .. .	20th November, 1929 .. .. .	27th November, 1931
Thirteenth .. .. .	17th February, 1932 .. .. .	7th August, 1934
Fourteenth .. .. .	23rd October, 1934 .. .. .	21st September, 1937
Fifteenth .. .. .	30th November, 1937 .. .. .	27th August, 1940
Sixteenth .. .. .	20th November, 1940 .. .. .	7th July, 1943
Seventeenth .. .. .	23rd September, 1943 .. .. .	16th August, 1946
Eighteenth .. .. .	6th November, 1946 .. .. .	31st October, 1949
Nineteenth .. .. .	22nd February, 1950 .. .. .	19th March, 1951(a)
Twentieth .. .. .	12th June, 1951 .. .. .	21st April, 1954
Twenty-first .. .. .	4th August, 1954 .. .. .	28th October, 1955

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Ministry, and under Section 57 of the Constitution.

2. **Governors-General and Commonwealth Ministries.**—(i) *Governors-General.* The following statement shows the names of the Governors-General since the inception of the Commonwealth :—

#### GOVERNORS-GENERAL.

Rt. Hon. JOHN ADRIAN LOUIS, EARL OF HOPETOUN (afterwards MARQUIS OF LINLITHGOW), K.T., G.C.M.G., G.C.V.O. From 1st January, 1901 to 9th January, 1903.  
 Rt. Hon. HALLAM, BARON TENNYSON, G.C.M.G. From 17th July, 1902 to 9th January, 1903 (Acting).  
 Rt. Hon. HALLAM, BARON TENNYSON, G.C.M.G. From 9th January, 1903 to 21st January, 1904.  
 Rt. Hon. HENRY STAFFORD, BARON NORTHCOTE, G.C.M.G., G.C.I.E., C.B. From 21st January, 1904 to 9th September, 1908.  
 Rt. Hon. WILLIAM HUMBLE, EARL OF DUDLEY, G.C.B., G.C.M.G., G.C.V.O. From 9th September, 1908 to 31st July, 1911.  
 Rt. Hon. THOMAS, BARON DENMAN, G.C.M.G., K.C.V.O. From 31st July, 1911 to 18th May, 1914.

- Rt. Hon. SIR RONALD CRAUFURD MUNRO FERGUSON (afterwards VISCOUNT NOVAR OF RAITH), G.C.M.G. From 18th May, 1914 to 6th October, 1920.
- Rt. Hon. HENRY WILLIAM, BARON FORSTER OF LEPE, G.C.M.G. From 6th October, 1920 to 8th October, 1925.
- Rt. Hon. JOHN LAWRENCE, BARON STONEHAVEN, G.C.M.G., D.S.O. From 8th October, 1925 to 22nd January, 1931.
- Rt. Hon. SIR ISAAC ALFRED ISAACS, G.C.B., G.C.M.G. From 22nd January, 1931 to 23rd January, 1936.
- General the Rt. Hon. ALEXANDER GORE ARKWRIGHT, BARON GOWRIE, V.C., G.C.M.G., C.B., D.S.O., K.G.St.J. From 23rd January, 1936 to 30th January, 1945.
- His Royal Highness PRINCE HENRY WILLIAM FREDERICK ALBERT, DUKE OF GLOUCESTER, EARL OF ULSTER AND BARON CULLODEN, K.G., K.T., K.P., P.C., G.C.B., G.C.M.G., G.C.V.O., General in the Army, Air Chief Marshal in the Royal Air Force, One of His Majesty's Personal Aides-de-Camp. From 30th January, 1945 to 11th March, 1947.
- Rt. Hon. SIR WILLIAM JOHN MCKELL, G.C.M.G. From 11th March, 1947 to 8th May, 1953.
- Field-Marshal SIR WILLIAM JOSEPH SLIM, G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C., K.St.J. From 8th May, 1953.

(ii) *Administrators.* In addition to the holders of the office of Governor-General listed above certain persons have, from time to time, been appointed as Administrator of the Government of the Commonwealth during the absence from Australia or illness of the Governor-General. The following is a list of such appointments.

Term of Office.

Rt. Hon. Frederic John Napier, Baron Chelmsford, K.C.M.G.	21st December, 1909 to 27th January, 1910
Lieut.-Colonel the Rt. Hon. Arthur Herbert Tennyson, Baron Somers, K.C.M.G., D.S.O., M.C.	3rd October, 1930 to 22nd January, 1931
Captain the Rt. Hon. William Charles Arcedeckne Vanneck, Baron Huntingfield, K.C.M.G., K.St.J.	29th March, 1938 to 24th September, 1938
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	5th September, 1944 to 30th January, 1945
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	18th January, 1947 to 11th March, 1947
General* Sir John Northcott, K.C.M.G., C.B., M.V.O.†	19th July, 1951 to 14th December, 1951

(iii) *Commonwealth Ministries.* (a) *Names and Tenure of Office, 1901 to 1951.* The following list shows the name of each Commonwealth Ministry to hold office since 1st January, 1901, and the limits of its term of office.

COMMONWEALTH MINISTRIES.

- (i) BARTON MINISTRY, 1st January, 1901 to 24th September, 1903.
- (ii) DEAKIN MINISTRY, 24th September, 1903 to 27th April, 1904.
- (iii) WATSON MINISTRY, 27th April, 1904 to 17th August, 1904.
- (iv) REID-MCLEAN MINISTRY, 18th August, 1904 to 5th July, 1905.
- (v) DEAKIN MINISTRY, 5th July, 1905 to 13th November, 1908.
- (vi) FISHER MINISTRY, 13th November, 1908 to 1st June, 1909.
- (vii) DEAKIN MINISTRY, 2nd June, 1909 to 29th April, 1910.
- (viii) FISHER MINISTRY, 29th April, 1910 to 24th June, 1913.
- (ix) COOK MINISTRY, 24th June, 1913 to 17th September, 1914.
- (x) FISHER MINISTRY, 17th September, 1914 to 27th October, 1915.
- (xi) HUGHES MINISTRY, 27th October, 1915 to 14th November, 1916.
- (xii) HUGHES MINISTRY, 14th November, 1916 to 17th February, 1917.
- (xiii) HUGHES MINISTRY, 17th February, 1917 to 10th January, 1918.
- (xiv) HUGHES MINISTRY, 10th January, 1918 to 9th February, 1923.
- (xv) BRUCE-PAGE MINISTRY, 9th February, 1923 to 22nd October, 1929.
- (xvi) SCULLIN MINISTRY, 22nd October, 1929 to 6th January, 1932.
- (xvii) LYONS MINISTRY, 6th January, 1932 to 7th November, 1938.
- (xviii) LYONS MINISTRY, 7th November, 1938 to 7th April, 1939.
- (xix) PAGE MINISTRY, 7th April, 1939 to 26th April, 1939.
- (xx) MENZIES MINISTRY, 26th April, 1939 to 14th March, 1940.
- (xxi) MENZIES MINISTRY, 14th March, 1940 to 28th October, 1940.
- (xxii) MENZIES MINISTRY, 28th October, 1940 to 29th August, 1941.
- (xxiii) FADDEN MINISTRY, 29th August, 1941 to 7th October, 1941.

\* Lieutenant-General Sir John Northcott was granted honorary rank of General whilst administering the Government of the Commonwealth.

† K.C.V.O., 1954.

COMMONWEALTH MINISTRIES—*continued.*

- (xxiv) CURTIN MINISTRY, 7th October, 1941 to 21st September, 1943.  
 (xxv) CURTIN MINISTRY, 21st September, 1943 to 6th July, 1945.  
 (xxvi) FORDE MINISTRY, 6th July, 1945 to 13th July, 1945.  
 (xxvii) CHIFLEY MINISTRY, 13th July, 1945 to 1st November, 1946.  
 (xxviii) CHIFLEY MINISTRY, 1st November, 1946 to 19th December, 1949.  
 (xxix) MENZIES MINISTRY, 19th December, 1949 to 11th May, 1951.  
 (xxx) MENZIES MINISTRY, 11th May, 1951 to 11th January, 1956.  
 (xxxi) MENZIES MINISTRY, 11th January, 1956.

(b) *Names of Successive Holders of Office, 9th February, 1923 to 31st December, 1955.* In Official Year Book No. 17, 1924, there appeared the names of each Ministry up to the Bruce-Page Ministry (9th February, 1923 to 22nd October, 1929), together with the names of the successive holders of portfolios therein, and issue No. 39 contains a list, commencing with the Bruce-Page Ministry, which covers the period between the date on which it assumed power, 9th February, 1923 and 31st July, 1951, showing the names of all persons who have held office in each Ministry during that period.

This issue shows only particulars of the latest Menzies Ministry as constituted on 11th January, 1956. For any subsequent changes *see* Appendix to this volume.

## MENZIES MINISTRY—from 11th January, 1956.

(The State from which each Minister was elected to Parliament is added in parentheses.)

<i>Departments.</i>	<i>Ministers.</i>
Prime Minister .. ..	The Rt. Hon. ROBERT GORDON MENZIES, C.H., Q.C. (Vic.).
Treasurer .. ..	The Rt. Hon. SIR ARTHUR WILLIAM FADEN, K.C.M.G. (Qld.).
Vice-President of the Executive Council; Minister for Defence Production; and Minister for the Army .. ..	The Rt. Hon. SIR ERIC JOHN HARRISON, K.C.V.O. (N.S.W.).
Minister for Labour and National Service; and Minister for Immigration .. ..	The Rt. Hon. HAROLD EDWARD HOLT (Vic.).
Minister for Trade .. ..	The Rt. Hon. JOHN MCEWEN (Vic.).
Minister for External Affairs .. ..	The Rt. Hon. RICHARD GARDINER CASEY, C.H., D.S.O., M.C. (Vic.).
Minister for Defence .. ..	The Hon. SIR PHILIP ALBERT MARTIN MCBRIDE, K.C.M.G. (S.A.).
Minister for the Navy .. ..	Senator the Hon. NEIL O'SULLIVAN (Qld.).
Attorney-General .. ..	Senator the Hon. JOHN ARMSTRONG SPICER, Q.C. (Vic.).
Minister for National Development .. ..	Senator the Hon. WILLIAM HENRY SPOONER, M.M. (N.S.W.).
Minister for Air; and Minister for Civil Aviation .. ..	The Hon. ATHOL GORDON TOWNLEY (Tas.).
Minister for Territories .. ..	The Hon. PAUL MEERNAA CAEDWALLA HASLUCK (W.A.).
Minister for Repatriation .. ..	Senator the Hon. WALTER JACKSON COOPER, M.B.E. (Qld.).
Minister for Supply .. ..	The Hon. HOWARD BEALE, Q.C. (N.S.W.).
Minister for Primary Industry; and Minister for Social Services .. ..	The Hon. WILLIAM MCMAHON (N.S.W.).
Minister for Shipping and Transport .. ..	Senator the Hon. SHANE DUNNE PALTRIDGE (W.A.).
Minister for Health .. ..	The Hon. DONALD ALASTAIR CAMERON, O.B.E. (Qld.).
Postmaster-General .. ..	The Hon. CHARLES WILLIAM DAVIDSON, O.B.E. (Qld.).
Minister for Customs and Excise .. ..	The Hon. FREDERICK MEARES OSBORNE, D.S.C. (N.S.W.).
Minister for the Interior; and Minister for Works .. ..	The Hon. ALLEN FAIRHALL (N.S.W.).

(iv) *Commonwealth Ministers of State.* In Official Year Book No. 38 a statement was included showing the names of the Ministers of State who had administered the several Departments during the period 1st April, 1925 to 31st December, 1949 (pp. 74-79). This was in continuation of a similar statement covering the period from the inauguration of Commonwealth Government to 1925 which appeared in Official Year Book No. 18.

3. **Governors and State Ministers.**—The names of the Governors and members of the Ministries in each State in December, 1955, are shown in the following statement. (Changes since December, 1955 are shown in the Appendix to this volume.)

## NEW SOUTH WALES.

*Governor*—LIEUT.-GENERAL SIR JOHN NORTHCOTT, K.C.M.G., K.C.V.O., C.B.

*Ministry (from 23rd February, 1953).*

*Premier and Colonial Treasurer—*  
THE HON. J. J. CARILL.

*Deputy Premier and Minister for Education—*  
THE HON. R. J. HEFFRON.

*Minister of Justice and Vice-President of the Executive Council—*  
THE HON. R. R. DOWNING, M.L.C.

*Chief Secretary, Minister for Immigration and Minister for Co-operative Societies—*  
THE HON. C. A. KELLY.

*Minister for Health—*  
THE HON. M. O'SULLIVAN.

*Minister for Agriculture and Minister for Food Production—*  
THE HON. E. H. GRAHAM.

*Attorney-General—*  
THE HON. W. F. SHEAHAN, Q.C.

*Secretary for Lands—*

THE HON. F. H. HAWKINS.

*Secretary for Public Works and Minister for Local Government—*  
THE HON. J. B. RENSHAW.

*Minister for Conservation—*  
THE HON. A. G. ENTICKNAP.

*Minister for Labour and Industry and Minister for Social Welfare—*  
THE HON. A. LANDA.

*Minister for Housing—*  
THE HON. J. F. McGRATH.

*Minister for Transport—*  
THE HON. E. WETHERELL.

*Secretary for Mines—*  
THE HON. W. M. GOLLAN.

*Minister without Portfolio—*  
THE HON. R. B. NOTT.

*Minister without Portfolio—*  
THE HON. J. J. MALONEY, M.L.C.

## VICTORIA.

*Governor*—GENERAL SIR REGINALD ALEXANDER DALLAS BROOKS, K.C.B., K.C.M.G., K.C.V.O., D.S.O., K.St.J.

*Ministry (from 7th June, 1955).*

*Premier, Treasurer and Minister for Conservation—*  
THE HON. H. E. BOLTE.

*Chief Secretary and Attorney-General—*  
THE HON. A. G. RYLAH.

*Minister of Transport and a Vice-President of the Board of Land and Works—*  
THE HON. A. G. WARNER, M.L.C.

*Minister of Agriculture and a Vice-President of the Board of Land and Works—*  
THE HON. G. L. CHANDLER, M.L.C.

*Minister of Education and Minister of Immigration—*  
COL. THE HON. W. W. LEGGATT.

*Commissioner of Public Works and a Vice-President of the Board of Land and Works—*  
THE HON. SIR THOMAS MALTBY.

*Minister of Health—*  
THE HON. E. P. CAMERON, M.L.C.

*Minister of Water Supply and Minister of Mines—*  
THE HON. W. J. MIBUS.

*Minister of Forests and Minister of State Development and Decentralization—*  
THE HON. R. K. WHATELY.

*Minister of Labour and Industry and Minister of Electrical Undertakings—*  
THE HON. J. S. BLOOMFIELD.

*Minister of Housing—*  
THE HON. H. R. PETTY.

*Commissioner of Crown Lands and Survey, Minister of Soldier Settlement and President of the Board of Land and Works—*  
THE HON. K. H. TURNBULL.

*Ministers without Portfolio—*  
THE HON. G. O. REID.

*Minister for Agriculture—*

THE HON. J. J. DWYER, V.C.

THE HON. C. A. BRAMICH

(Minister for Housing).

*Minister for Lands and Works and Minister for Mines—*

THE HON. E. E. REECE.

THE HON. R. J. D. TURNBULL

(Minister for Health).

4. Leaders of the Opposition, Commonwealth and State Parliaments.—The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in December, 1955.

Leader of the Opposition, Commonwealth and State Parliaments—

*Commonwealth*—The Rt. Hon. H. V. Evatt, Q.C.

*New South Wales*—P. H. Morton.

*Victoria*—The Hon. J. Cain.

*Queensland*—G. F. R. Nicklin.

*South Australia*—M. R. O'Halloran.

*Western Australia*—The Hon. Sir Ross McLarty, K.B.E., M.M.

*Tasmania*—R. C. Townley.

5. The Course of Legislation.—The actual legislation by the Commonwealth Parliament up to the end of 1953 is indicated in alphabetical order in Vol. L. "The Acts of the Parliament of the Commonwealth of Australia passed during the year 1953, in portion of the First Session and portion of the Second Session of the Twentieth Parliament of the Commonwealth, with Tables, Appendix and Index."

A "Chronological Table of Acts passed from 1901 to 1953, showing how they are affected by subsequent legislation or lapse of time" is also given, and, further, "A Table of Commonwealth Legislation passed from 1901 to 1953 in relation to the several provisions of the Constitution", is furnished. Reference should be made to these for complete information.

6. Legislation during 1954.—The following paragraphs present a selection from the legislative enactments of the Commonwealth Parliament during the year 1954. The acts included have been selected as the more important new measures and amending measures enacted during the year. The selection is somewhat arbitrary, however, because of the task of determining, in view of the limitations on space that might reasonably be allotted, the relative importance of the acts passed. Certain principles regulating the choice of acts have nevertheless been generally observed. Ordinary appropriation and loan acts are excluded, as are also acts relating to less important changes in existing forms of taxation, in superannuation and pension schemes, and in workers' compensation. Acts providing for minor amendments to existing statutes and continuance acts are similarly excluded.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. About 17 acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939 and 83 in 1954.

In Official Year Book No. 40 (*see pp. 66–70*) and previous Year Books similar information was published for the principal legislative enactments of State Parliaments.

**Legislation Passed in 1954.**—*Aged Persons Homes Act 1954 (No. 81 of 1954)*. An Act to encourage and assist the provision of suitable homes for aged persons, and in particular homes at which aged persons may reside in conditions approaching as nearly as possible normal domestic life, and, in the case of married people, with proper regard to the companionship of husband and wife.

*Australian Antarctic Territory Act 1954 (No. 42 of 1954)*. Repeals the existing laws of the Australian Antarctic Territory, provides for the government of the Territory and specifies the laws which are to be in force in the Territory.

*Bankruptcy Act 1954 (No. 83 of 1954)*. Amends the Bankruptcy Act 1924–1950 by omitting the provisions which conferred on Registrars in Bankruptcy the power to perform duties and functions of a judicial nature.

*Broadcasting Act 1954 (No. 82 of 1954)*. Amends the Broadcasting Act 1942–1953 to make provision for the appointment of two part-time members to the Australian Broadcasting Control Board.

*Cocos (Keeling) Islands (Request and Consent) Act 1954 (No. 76 of 1954)*. Requests and consents to the enactment by the Parliament of the United Kingdom of an Act enabling the Queen to place the Cocos or Keeling Islands under the authority of the Commonwealth and making provision for matters incidental to the placing of those Islands under the authority of the Commonwealth.

*Commonwealth Aid Roads Act 1954 (No. 57 of 1954)*. Replaces the Commonwealth Aid Roads Act 1950 and grants and applies out of the Consolidated Revenue Fund sums for the purpose of financial assistance to the States to be applied in the construction, reconstruction, maintenance and repair of roads and for works connected with transport.

*Commonwealth Employees' Compensation Act 1954 (No. 15 of 1954)*. Amends the Commonwealth Employees' Compensation Act 1930–1951 by increasing rates and amounts of payments of compensation payable to Commonwealth employees and their dependants for injuries received by the employees in the course of or arising out of their employment.

*Dairy Produce Export Control Act 1954 (No. 17 of 1954)*. Amends the Dairy Produce Export Control Act 1924–1953 and establishes a new system of marketing of Australian dairy produce enabling the Australian Dairy Produce Board to control the export, and the sale and distribution after export, of dairy produce produced in Australia.

*Defence Forces Retirement Benefits Act 1954 (No. 20 of 1954)*. Amends the Defence Forces Retirement Benefits Act 1948–1953 by providing for increases in the number of units for which a member of the forces may contribute, the value of existing pension units and the value of pensions payable to ex-members of the forces and their dependants.

*Egg Export Control Act 1954 (No. 18 of 1954)*. Amends the Egg Export Control Act 1947–1953, reconstitutes the Australian Egg Board and provides for the control by the Australian Egg Board of the export, and the sale and distribution after export, of eggs produced in Australia.

*Flags Act 1953 (No. 1 of 1954)*. Declares and describes the Australian National Flag and the Australian Red Ensign.

*Flax Fibre Bounty Act 1954 (No. 68 of 1954)*. Repeals existing flax bounty legislation and provides for the payment of bounty to producers of flax fibre intended for sale and use in Australia and produced at a factory from flax plants grown in Australia.

*Gold-Mining Industry Assistance Act 1954 (No. 79 of 1954)*. Provides for the payment of a subsidy to producers of gold bullion which is produced in Australia or in the Territory of Papua and New Guinea and from which refined gold is or has been obtained.

*Hide and Leather Industries Act Suspension Act 1954 (No. 62 of 1954)*. Suspends the operation of the principal provisions of the Hide and Leather Industries Act 1948–1953.

*Leigh Creek North Coalfield to Maree (Conversion to Standard Gauge) Railway Act 1954 (No. 74 of 1954).* Approves an agreement made between the Commonwealth and the State of South Australia relating to the conversion to standard gauge (4' 8½") of the 3' 6" gauge railway between Leigh Creek North Coalfield and Maree and to provide for the conversion to be effected by the Commonwealth Railways Commissioner.

*Loan (International Bank for Reconstruction and Development) Act 1954 (No. 19 of 1954).* Approves the borrowing by the Treasurer on behalf of the Commonwealth from the International Bank for Reconstruction and Development in accordance with a Loan Agreement dated 2nd March, 1954, between the Commonwealth and the Bank, of moneys not exceeding fifty-four million dollars.

*Loan (Swiss France) Act 1954 (No. 7 of 1954).* Approves the raising of a loan in Swiss currency of a sum not exceeding sixty million francs in accordance with a Loan Agreement made between the Commonwealth and a group of Swiss Banks.

*Pay-roll Tax Assessment Act 1954 (No. 37 of 1954).* Amends the Pay-roll Tax Assessment Act 1941-1953. Increases the exemption from pay-roll tax from £80 to £120 per week and authorizes the exemption of wages paid by non-profit making private hospitals.

*Rayon Yarn Bounty Act 1954 (No. 67 of 1954).* Provides for the payment out of the Consolidated Revenue Fund of a bounty at the rate of sixpence per pound on the production in Australian factories of continuous filament acetate rayon yarn for sale and delivery in Australia.

*Repatriation Act 1954 (No. 31 of 1954).* Increases the rates of pension payable to former members of the Defence Forces, increases the limit of the value of property a pensioner may own and excludes income derived from property for the purposes of assessing the income of a service pensioner.

*River Murray Waters Act 1954 (No. 80 of 1954).* Ratifies the agreement made on 2nd November, 1954, between the Commonwealth and the States of New South Wales, Victoria and South Australia to increase the capacity of the Hume Dam to 2,500,000 acre feet and to approve the construction of certain regulators and effluents on the River Murray between Tocumwal and Echuca.

*Royal Commission Act 1954 (No. 2 of 1954).* Provides for the appointment of a Royal Commission to enquire into and report on the commission of acts of espionage in Australia, the commission in Australia of other acts prejudicial to the security or defence of Australia and related matters.

*Royal Commission on Espionage Act 1954 (No. 28 of 1954).* Confirms the Letters Patent issued to the three members of the Royal Commission on Espionage under the Royal Commission Act 1954 and the authority and powers of the Royal Commission and provides for the protection of its proceedings.

*Seamen's Compensation Act 1954 (No. 16 of 1954).* Amends the Seamen's Compensation Act 1911-1953 by increasing the rates and amounts of compensation payable to seamen who receive injuries in the course of or arising out of their employment.

*Seamen's War Pensions and Allowances Act 1954 (No. 32 of 1954).* Amends the Seamen's War Pensions and Allowances Act 1940-1953 by increasing the rates of pension payable to Australian mariners who are incapacitated by war injuries.

*Social Services Act 1954 (No. 30 of 1954).* Amends the Social Services Consolidation Act 1947-1953 to exclude income from property for the purposes of the means test, to increase the limits of property which a pensioner may own and increase the amount of income a pensioner may receive and be eligible for a pension.

*South-East Asia Collective Defence Treaty Act 1954 (No. 77 of 1954).* Approves the ratification by Australia of the South-East Asia Collective Defence Treaty.

*Stevedoring Industry Act 1954 (No. 75 of 1954).* Amends the Stevedoring Industry Act 1949 by varying the existing procedure by which men are recruited into the stevedoring industry and by authorizing the appointment of a committee of inquiry to examine certain specified matters relating to stevedoring operations.

*Stevedoring Industry Charge Act 1954 (No. 12 of 1954).* Amends the Stevedoring Industry Charge Act 1947-1952 and reduces the rate of the charge made under that Act from elevenpence to sixpence for every man-hour of employment.

*Sugar Agreement Act 1954 (No. 65 of 1954).* Approves an agreement dated 26th November, 1953, between the Commonwealth and the State of Queensland amending the agreement approved by the Sugar Agreement Act 1951. The amending agreement approves the increase in the retail price of sugar of 1d. per lb. on and from 13th October, 1952, and also approves the increase of 1½d. per lb. which operated from 24th March, 1952.

*Sulphuric Acid Bounty Act 1954 (No. 78 of 1954).* Repeals existing sulphur bounty legislation and provides for the payment out of the Consolidated Revenue Fund to the producers of sulphuric acid of a bounty in respect of sulphuric acid produced at a registered factory from materials of Australian origin and sold by the producer for delivery in Australia or used by the producer in the production in Australia of fertilizers.

*Superannuation Act 1954 (No. 11 of 1954).* Amends the Superannuation Act 1922-1952 by increasing pension rates and the amount of pension units, and by increasing the maximum number of units for which an officer may contribute.

*War Service Homes Act 1954 (No. 69 of 1954).* Amends the War Service Homes Act 1918-1951 by increasing to £2,750 the maximum loan for financing the purchase by ex-servicemen of existing homes and by extending the operation of the Act to the Territories of Papua and New Guinea and Norfolk Island.

*Wheat Industry Stabilization Act 1954 (No. 70 of 1954).* Repeals the Wheat Marketing Act 1948-1953. Provides for the continued orderly marketing of wheat and incorporates with it a scheme for the stabilization of the wheat industry.

*Wheat Export Charge Act 1954 (No. 71 of 1954).* Imposes a charge on wheat exported from the Commonwealth under the wheat industry stabilization scheme.

*Wheat Industry Stabilization (Refund of Charge) Act 1954 (No. 21 of 1954).* Provides for the payment, through the Australian Wheat Board, of certain moneys out of the Wheat Industry Stabilization Fund maintained under the Wheat Marketing Act to growers of wheat harvested in the year commencing 1st October, 1951.

*Wine Grapes Charges Act 1954 (No. 40 of 1954).* Amends the Wine Grapes Charges Act 1929-1941 by increasing the maximum rates of levy that may be collected on grapes delivered to wineries and distilleries.

#### § 4. Commonwealth Government Departments.

Official Year Book No. 37 contains, on pp. 76-86, a list of the Commonwealth Government Departments as at 31st March, 1947, showing details of the matters dealt with by each Department, and the Acts administered by the Minister of each Department, and Year Book No. 39 contains, on pp. 100-1, a description of major changes in Departmental structure from 1947 to 1951.

#### § 5. Cost of Parliamentary Government.

The tables in this section are intended to represent the expenditure incurred in the operation of the Parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; they do not attempt to cover the expenditure on Commonwealth and State administration generally.

Comparison between individual items should be made with caution because of differences in accounting and presentation.

The following statement shows this expenditure for the Commonwealth and for each State, as well as the cost per head of population, for the year ended 30th June, 1954. In order to avoid incorrect conclusions as to the cost of the Governor-General's or Governor's establishment, it may be pointed out that a very large part of the expenditure (with the exception of the item "Governor's salary") under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, and carried out at the request of the Government.

## COST OF PARLIAMENTARY GOVERNMENT, 1953-54.

(£.)

Particulars.	C'with.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Total.

### § 6. Government Employees.

Information concerning the number of employees of Australian Government Authorities may be found in Chapter VI.—Labour, Wages and Prices.

## CHAPTER IV.

### LAND TENURE AND SETTLEMENT.

#### § 1. Introduction.

For descriptions of the land tenure systems of the several States and the internal Territories *see* Official Year Book No. 4 (pp. 235-333) and subsequent issues, in particular No. 22 (pp. 133-195). Conspectuses of land legislation in force and of the systems of land tenure in the several States have appeared in issues up to and including No. 38, but only a brief summary is given below.

The land legislation in force in the several States may be classified broadly under five major types of land enactments, i.e., Crown Lands Acts, Closer Settlement Acts, Mining Acts, Returned Service Personnel Settlement Acts, and Advances to Settlers Acts, but within the groupings there is, of course, a wide variety of individual acts. In the two internal Territories the legislation relating to lands is embodied in various ordinances.

In each of the States there is a Lands Department under the direction of a Minister who is charged generally with the administration of the Acts relating to the alienation, occupation and management of Crown Lands. In the Northern Territory the Administrator, under the control of the Minister for Territories, is charged with the general administration of the Lands Ordinance and of Crown lands in the Northern Territory. In the Australian Capital Territory the administration of the Leases Ordinances is in the hands of the Department of the Interior.

In each of the States there is also a Mines Department which is empowered under the several Acts relating to mining to grant leases and licences of Crown lands for mining and allied purposes. In the Northern Territory there are several ordinances relative to mining.

As with land legislation, land tenures may be classified under broad headings ; these indicate the nature of the tenure and comprise :—Free Grants and Reservations, Unconditional Purchases of Freehold, Conditional Purchases of Freehold, Leases and Licences under Land Acts, Closer Settlement, Leases and Licences under Mining Acts, and Settlement of Returned Service Personnel. For details of the various particular forms of land tenure within these seven groups in each State *see* Official Year Book No. 38, pp. 114-116 and earlier issues. Descriptions of the systems operating in the two internal Territories may be found on pp. 329-30 and 338 of Official Year Book No. 39.

The following sections contain figures showing the extent of the different tenures in the several States and Territories, together with some general descriptive matter.

#### § 2. Free Grants and Reservations.

1. New South Wales.—(i) *Free Grants.* Crown lands may, by notification in the *Gazette*, be dedicated for public purposes and be granted therefor in fee simple. Such lands may be placed under the care and management of trustees, not less than three nor more than seven in number, appointed by the Minister.

(ii) *Reservations.* Temporary reservations of Crown lands from sale or lease may be made by the Minister.

(iii) *Areas Granted and Reserved.* During 1953-54, 15,585 acres were permanently reserved or dedicated for miscellaneous recreation reserves and similar purposes. The areas reserved at 30th June, 1954 were as follows:—For travelling stock, 5,319,275 acres; pending classification and survey, 4,341,818 acres; forest reserves, 2,251,473 acres; water and camping reserves, 876,906 acres; mining reserves, 1,117,695 acres; for recreation and parks, 452,358 acres; other reserves, 5,984,800 acres; total, 20,344,325 acres.

2. *Victoria.*—(i) *Free Grants.* The Governor may grant, convey or otherwise dispose of Crown lands for public purposes.

(ii) *Reservations.* The Governor may temporarily or permanently reserve from sale, lease or licence any Crown lands required for public purposes.

(iii) *Areas Granted and Reserved.* During 1954, 529 acres were granted without purchase. The areas both temporarily and permanently reserved at the end of 1954 were as follows:—For roads, 1,794,218 acres; water reserves, 318,239 acres; agricultural colleges, etc., 8,434 acres; forest and timber reserves, 5,368,492 acres; reserves in the mallee, 410,000 acres; other reserves, 551,591 acres; total, 8,450,974 acres.

(iv) *Revoking of Agricultural Reservations.* Under the Agricultural Colleges Act 1944, the land on which the agricultural colleges and experimental farms at Longerenong (2,386 acres) and Dookie (6,048 acres) are established is permanently reserved as sites for the purposes of State Agricultural Colleges and the remainder of the lands previously reserved has become unalienated for treatment as such under the Land Acts.

3. *Queensland.*—(i) *Free Grants.* The Governor may grant in trust any Crown land which is or may be required for public purposes. Under the Irrigation Acts, land to be used for the purpose of any undertaking under the Acts may be vested in fee simple in the Commissioner of Irrigation and Water Supply.

(ii) *Reservations.* The Governor may reserve from sale or lease, either temporarily or permanently, any Crown land which is or may be required for public purposes. Reserved lands may be placed under the control of trustees who are empowered to lease them for not more than 21 years with the approval of the Minister.

Under the State Forests and National Parks Acts, the Governor may permanently reserve any Crown lands and declare them to be a State Forest or a National Park.

(iii) *Areas Granted and Reserved.* During 1954 no areas were granted in fee simple without payment, 144,796 acres were set apart as reserves and reserves cancelled totalled 91,769 acres. The areas reserved, including roads, at the end of 1954 were as follows:—Timber reserves, 3,206,956 acres; for State forests and national parks, 5,475,687 acres; aboriginal reserves, 7,847,531 acres; for streets, surveyed roads and stock routes, 3,663,310 acres; general reserves, 5,679,171 acres; total, 25,872,655 acres.

4. *South Australia.*—(i) *Free Grants.* The Governor may dedicate Crown lands for any public purpose and grant the fee simple of such lands, with the exception of foreshores and land for quays, wharves or landing-places, which are inalienable in fee-simple from the Crown.

(ii) *Reservations.* The Governor may reserve Crown lands for the use and benefit of aboriginals, military defence, forest reserves, railway stations, park lands or any other purpose that he may think fit.

(iii) *Areas Granted and Reserved.* During 1953-54 free grants were issued for an area of 598 acres and reserves comprising 70,652 acres were proclaimed. At 30th June, 1954 the total area of surveyed roads, railways and other reserves was 21,335,543 acres, including 18,274,000 acres set apart as aboriginal reserves.

5. *Western Australia.*—(i) *Free Grants.* The Governor may dispose of, in such manner as for the public interest may seem best, any lands vested in the Crown for public purposes, and may grant the fee simple of any reserve to secure the use thereof for the purpose for which such reserve was made.

(ii) *Reservations.* The Governor may reserve any lands vested in the Crown for public purposes. Areas not immediately required may be leased by the Governor for periods up to 10 years. Reserves may be placed under the control of a local authority or trustees, with power to lease them for a period not exceeding 21 years, or may be leased for 99 years. Temporary reserves may also be proclaimed.

(iii) *Areas Granted or Reserved.* During the year ended 30th June, 1954, approximately 81,726 acres were reserved for various purposes. At 30th June, 1954 the total area reserved was 52,319,734 acres, comprising State forests, 3,462,239 acres, timber reserves, 1,831,503 acres and other reserves 47,025,992 acres.

6. *Tasmania.*—(i) *Free Grants.* No mention is made in the Crown Lands Act respecting free grants of land, and it is expressly stated that no lands may be disposed of as sites for religious purposes except by way of sale under the Act. Under the Returned Soldiers' Settlement Act 1916, returned soldiers who applied prior to 31st March, 1922 were eligible to receive free grants of Crown land not exceeding £100 each in value, but these grants were conditional on the land being adequately improved.

(ii) *Reservations.* The Governor in Council may except from sale or lease, and reserve to Her Majesty any Crown land for public purposes, and vest for such term as he thinks fit any land so reserved in any person or corporate body. Any breach or non-fulfilment of the conditions upon which such land is reserved renders it liable to forfeiture. A school allotment, not exceeding 5 acres in area, may also be reserved.

(iii) *Areas Granted or Reserved.* The total area reserved at 30th June, 1954 was 4,069,811 acres, excluding 21,444 acres of land occupied by Commonwealth and State Departments.

7. *Northern Territory.*—(i) *Reservations.* The Governor-General may resume for public purposes any Crown lands not subject to any right of, or contract for, purchase, and may reserve, for the purpose for which they are resumed, the whole or any portion of the lands so resumed.

(ii) *Areas Reserved.* The total area of reserves at 30th June, 1954 was 47,031,605 acres.

8. *Summary.*—The following table shows the total areas reserved in each State, and the grand totals, for the years 1950 to 1954 :—

## AREAS RESERVED.

('000 Acres.)

Year.	N.S.W. (a)	Victoria. (b)	Q'ld. (b)	S. Aust. (a)	W. Aust. (a)	Tas. (a)	Nor. Terr. (a)	Total.
1950 ..	18,585	8,224	25,045	21,240	51,809	4,016	45,455	174,374
1951 ..	19,654	8,429	25,243	21,249	51,998	4,043	45,648	176,264
1952 ..	20,158	8,429	25,538	21,252	52,014	4,068	46,159	177,618
1953 ..	20,319	8,429	25,797	21,265	52,238	4,069	47,001	179,118
1954 ..	20,344	8,451	25,873	21,336	52,613	4,070	47,032	179,719

(a) At 30th June.

(b) At 31st December.

### § 3. Unconditional Purchases of Freehold.

1. *New South Wales.*—(i) *Auction Purchases.* Crown lands, not exceeding in the aggregate 200,000 acres in any one year, may be sold by public auction in areas not exceeding half-an-acre for town lands, 20 acres for suburban lands, and 640 acres for country lands, at the minimum upset price of £8, £2 10s., and 15s. per acre respectively. At least 10 per cent. of the purchase-money must be paid at the time of sale, and the balance within three months, or the Minister may allow the payment of such balance to be deferred for a period not exceeding ten years, 4 per cent. interest being charged. Town blocks in irrigation areas may also be sold by auction.

(ii) *After-Auction Purchases.* In certain cases, land offered at auction and not sold may be purchased at the upset price. A deposit in accordance with the terms and conditions under which the land was previously offered must be lodged, and, if the application be approved by the Minister, the balance of purchase money is payable as required by the specified terms and conditions.

(iii) *Special Purchases.* Under certain circumstances, land may be sold in fee simple, the purchaser paying the cost of survey and of reports thereon, in addition to the purchase-money as determined by the local Land Board.

(iv) *Improvement Purchases.* The owner of improvements in land in authorized occupation by residence under any Mining or the Western Lands Act of land within a gold-field or mineral field may purchase such land without competition at a price determined by the local Land Board, but at not less than £8 per acre for town lands or £2 10s. per acre for other lands. The area must not exceed  $\frac{1}{4}$  acre within a town or village, or 2 acres elsewhere, and no person may purchase more than one such area within 3 miles of a similar prior purchase by him.

(v) *Road Purchases.* Land from roads that are closed may, with certain exceptions, be sold to the owners of adjoining lands at a value determined by the local Land Board.

(vi) *Areas Sold.* During the year ended 30th June, 1954 the total area sold was 869 acres of which 117 were sold by auction and 35 acres as after auction purchases, while 78 acres were sold as improvement purchases, 596 acres as road purchases and 43 acres as special purchases. The amount realized for the sale of the whole area was £39,799.

2. *Victoria.*—(i) *General.* Lands, not exceeding 100,000 acres in any one year, specially classed for sale by auction, may be sold by auction in fee simple at an upset price of not less than £1 per acre. The purchaser must pay the survey fee at the time of the sale, together with a deposit of  $12\frac{1}{2}$  per cent. of the whole price; the residue is payable in equal half-yearly instalments with interest. Any unsold land in a city, town or borough area, areas specially classed for sale, isolated pieces of land not exceeding 150 acres in area, and sites for churches or charitable purposes, if not more than 3 acres in extent, may be sold by auction on the same terms. Swamp or reclaimed lands may also be sold by auction, subject to the condition that the owner keeps open all drains, etc., thereon.

(ii) *Areas Sold at Auction and by Special Sales.* During 1954 a total of 1,289 acres was disposed of under this tenure, 1,059 acres being country lands and 230 acres town and suburban lands.

3. *Queensland.*—(i) *General.* From 1917 to 1929 the law precluded land being made available for any class of selection which gave the selector the right to acquire the freehold title. Amending legislation giving power to make land available under freehold tenures was passed in 1929, but this provision was repealed by the Act of 1932.

(ii) *Areas Sold, etc.* No unconditional selections were made freehold during 1954.

4. *South Australia.*—(i) *Sales by Auction.* The following lands may be sold by auction for cash :—(a) special blocks ; (b) Crown lands which have been offered for lease and not taken up within two years ; (c) town lands ; and (d) suburban lands which the Governor excepts from the operations of the Land Board. A purchaser must pay 20 per cent. of the purchase money in cash, and the balance within one month or within such extended time as the Commissioner of Crown Lands may allow. Town lands may be sold subject to the condition that they cannot be transferred or mortgaged within six years without the consent of the Commissioner. If the Commissioner of Crown Lands so determines, town lands may also be offered at auction on terms that the buyer may at his option purchase the lands for cash or on agreement for sale and purchase.

(ii) *Areas Sold, etc.* During the year ended 30th June, 1954 the area of town lands and special blocks sold by auction was 65 acres. In addition, 73,952 acres were sold at fixed prices, and purchases on credit of 55,591 acres were completed, making a total of 129,608 acres.

5. *Western Australia.*—(i) *Sales by Auction.* Town, suburban and village lands may be sold by auction after being surveyed into lots and notified in the *Gazette*. Ten per cent. of the purchase-money must be paid in cash together with the value of any improvements, and the balance in four equal quarterly instalments. Suburban land must be fenced within two years, and no Crown grant may be issued until the land is fenced.

(ii) *Areas Sold.* During the year ended 30th June, 1954, the area of town and suburban allotments sold by auction was 678 acres in 609 allotments.

6. *Tasmania.*—(i) *Sales by Auction.* Town lands may be sold by auction.

(ii) *After-auction Sales.* Town lands, not within 5 miles of any city, which, after having been offered at auction, have not been sold, may be sold at the upset price by private contract.

(iii) *Sales of Land in Mining Towns.* Any person being the holder of a residence licence or business licence who shall be in lawful occupation of any residence area or business area, and who shall be the owner of buildings and permanent improvements upon such land of a value equal to or greater than the upset price of such area, shall be entitled to purchase such area at the upset price at any time prior to the day on which such area is to be offered for sale as advertised. The upset price for such area shall not be less than £10, excluding the value of improvements, cost of survey, and of grant deed. The area which may be so purchased may, with the consent of the Commissioner, exceed one-quarter of an acre, but shall not in any case exceed one-half of an acre.

## § 4. Conditional Purchases of Freehold.

1. *General.*—The various methods of obtaining Crown lands by conditional purchase in the several States are given in some detail in preceding issues of the Official Year Book (*see* No. 22, pp. 141–9).

2. *New South Wales.*—At 30th June, 1954 the total number of incomplete conditional purchases in existence was 37,437 covering an area of 12,109,613 acres. During 1953–54 applications received for conditional purchases numbered 18, of which 16, with an area of 1,827 acres, were confirmed ; during the year deeds were issued for 322,241 acres, bringing the total acreage for which deeds had been issued to 34,218,179 at the end of the year. These figures exclude conversions from other tenures—657 comprising 184,723 acres.

3. *Victoria.*—Excluding selections in the Mallee country, the total area purchased conditionally in 1954 was 8,195 acres, all with residence. The number of selectors was 47. There were no selections in the Mallee in 1954.

4. Queensland.—The following selections were made freehold during 1954 :—Agricultural farms, 69,221 acres, prickly pear selections, 104,148 acres, and prickly pear development selections, 14,103 acres.

5. South Australia.—During 1953–54, 3,855 acres were allotted under agreements to purchase, comprising Eyre Peninsula railway lands, 55 acres, closer settlement lands, 2,611 acres, surplus lands, 675 acres, and other Crown lands, 514 acres.

6. Western Australia.—During the year ended 30th June, 1954 the number of holdings conditionally alienated was 840, the total area involved being 1,635,017 acres, comprising conditional purchases by deferred payments with residence, 1,634,317 acres and free homestead farms, 700 acres. Under the heading “deferred payments with residence” are included conditional purchases of grazing lands.

In addition, Crown grants were issued during 1953–54 for the following selections, the prescribed conditions having been complied with :—Free homestead farms, 14,845 acres and conditional purchases, 718,662 acres.

7. Tasmania.—During 1953–54 Crown grants were issued for 23,362 acres. The total area sold conditionally was 3,158 acres, comprising selections for purchase, 2,738 acres, and town and suburban allotments, 420 acres. The numbers of applications confirmed were 63 for country selections and 123 for town and suburban allotments.

### § 5. Leases and Licences under Land Acts.

1. General.—Information regarding the methods of obtaining leases and licences of Crown lands in the several States and Territories is given in earlier issues of the Official Year Book (*see* No. 22, pp. 149–63).

2. New South Wales.—The following table shows the areas held under various descriptions of leases and licences under the control of the Department of Lands, the Water Conservation and Irrigation Commission and the Western Lands Commission at 30th June, 1954.

#### AREAS OCCUPIED UNDER LEASE OR LICENCE AT 30th JUNE, 1954, NEW SOUTH WALES.(a)

(Acres.)

Particulars.	Area.	Particulars.	Area.
<i>Crown Lands or Closer Settlement Acts</i>		<i>Crown Lands or Closer Settlement Acts—continued.</i>

Prickly pear leases .. .. .	144,932	Permissive occupancies .. .. .	367,676
Crown leases .. .. .	7,088,574	Leases being issued—occupation	
Homestead farms .. .. .	4,963,678	licences .. .. .	115,276
Homestead selections and grants .. .. .	1,683,690	Preferential occupation licences .. .. .	2,381,943
Closer settlement leases .. .. .	2,301,571		
Settlement purchase leases .. .. .	1,046,171	Total .. .. .	114,451,671

(a) Excludes mining leases and permits; forest leases and occupation permits; and leases outside irrigation areas, controlled by the Water Conservation and Irrigation Commission—164,689 acres.

3. **Victoria.**—The area of Crown lands occupied under leases and licences in the year 1954 was as follows :—Grazing licences—other than Mallee, 4,287,856 acres, Mallee, 1,965,122 acres ; auriferous lands licences, 15,806 acres ; perpetual leases—other than Mallee, 17,819 acres ; Mallee, 43,092 acres ; swamp lands leases, 4,020 acres ; agricultural college lands, 33,138 acres ; total, 6,366,853 acres.

4. **Queensland.**—The area occupied under lease or licence, excluding mining leases, at the end of 1954 was as follows :—Pastoral leases, 250,983,880 acres ; occupation licences, 10,519,328 acres ; grazing selections and settlement farm leases, 89,438,105 acres ; special purpose leases—Crown land, 485,202 acres ; reserves, 1,589,100 acres ; perpetual lease (including prickly pear) selections, 6,644,998 acres ; auction perpetual leases, 376,558 acres ; forest grazing leases (reserves), 1,620,320 acres ; total, 361,657,491 acres.

5. **South Australia.**—The total area, including repurchased lands held under lease or licence except mining lease and licence, at 30th June, 1954 was 137,866,596 acres of which pastoral leases, 115,387,376 acres, constituted the major proportion.

6. **Western Australia.**—At 30th June, 1954 the total area held under lease or licence issued by the Lands Department amounted to 202,753,778 acres, of which 198,870,488 acres were under pastoral lease.

7. **Tasmania.**—Crown lands leased at 30th June, 1954 for other than mining purposes amounted to 2,576,441 acres of which 2,071,075 acres were leased for pastoral purposes.

8. **Northern Territory.**—At 30th June, 1954 the total area under lease, etc., was 180,019,666 acres of which pastoral leases accounted for 139,962,335 acres and other leases, licences and mission stations, 40,057,331 acres.

9. **Australian Capital Territory.**—Under the terms of the City Area Leases Ordinance 1936–1951 each block is leased for a period of 99 years at a rental of five per cent. per annum of the unimproved capital value as assessed by the Commonwealth. The number of leases granted under this Ordinance to 30th June, 1954 (excluding leases surrendered and determined) was 2,166 representing an unimproved value of £725,420. Auction sales of city leaseholds are described in Official Year Book No. 22, p. 599. During the year ended 30th June, 1954, 365 leases were granted for residential purposes and 38 for business purposes.

Twelve leases under the Church Lands Leases Ordinance 1924–1932, which require the lessees to submit a definite building programme within a specified period, and one lease under the Church of England Lands Ordinance, 1926, have been granted for church purposes. A further 27 leases have been granted for either church or scholastic purposes under various other Ordinances.

The total area held under lease and licence for grazing, agricultural, dairying and other purposes (including the Jervis Bay area) amounted to 322,737 acres in 1953–54.

10. **Summary.**—The following table shows particulars of the land held in each State under lease or licence for purposes other than mining and forestry, the total leased or licensed land in the Territories, and the grand totals, for the years 1950 to 1954.

### AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY.

('000 Acres.)

Year.	N.S.W. (a)	Vic. (b)	Q'land. (b)	S. Aust. (a)	W. Aust. (a)	Tas. (a)	N.T. (a) (c)	A.C.T. (b) (c) (d)	Total.
1950	114,125	8,708	358,940	137,419	222,489	2,799	162,561	331	1,007,372

(a) At 30th June. (b) At 31st December. (c) Leases and licences for all purposes.  
(d) Includes Jervis Bay area.

### § 6. Leases and Licences under Mining Acts.

1. **General.**—Information regarding the various forms of leases and licences under Mining Acts in the several States and the Northern Territory is given in preceding issues of the Official Year Book (*see* No. 22, pp. 170–7). The following paragraphs contain particulars of operations during the year 1953–54 or 1954 and of areas occupied at the end of the year, under the various forms of lease, licence, etc., issued for mining purposes.

2. **New South Wales.**—During the year ended 30th June, 1954, 48,224,445 acres were taken up under Mining Acts of which authorities to prospect comprised 48,206,907 acres and mining for minerals other than gold, 16,816 acres. At the end of the year total areas occupied were as follows:—Gold-mining, 3,879 acres; mining for other minerals, 288,190 acres; authorities to prospect, 13,772,698 acres; other purposes, 13,497 acres; total, 14,078,264 acres.

3. **Victoria.**—During 1954 there were 142 leases and licences granted under Mining Acts, including 42 for gold-mining. Areas occupied at the end of 1954 were as follows: Gold-mining, 16,425 acres; petroleum prospecting, 2,881,280 acres; coal, 13,101 acres; uranium and radio active minerals, 61,772 acres; other purposes, 5,743 acres; total, 2,978,321 acres.

4. **Queensland.**—During 1954 there were 3,937 miners' rights and two business licences issued. Areas taken up during 1954 totalled 725,655 acres, of which petroleum prospecting comprised 703,040 acres and mining for minerals other than gold, 18,969 acres. Total areas occupied at the end of 1954 were as follows:—Gold-mining, 2,929 acres; mining for other minerals, 112,257 acres; miners' homesteads, 426,197 acres; petroleum prospecting, 1,211,840 acres; coal prospecting, 4,086 acres; total, 1,757,309 acres. The area of land held under lease only was 541,383 acres.

5. **South Australia.**—Areas taken up under Mining Acts during 1953–54 totalled 156,650,315 acres, including claims, 2,952 acres, gold leases, 87 acres, mineral and miscellaneous leases, 679,276 acres and oil licences, 155,968,000 acres. Total areas occupied at 30th June, 1954 were as follows:—Gold-mining, 590 acres; other mineral and miscellaneous leases, 763,335 acres; claims, 11,696 acres; oil licences, 155,968,000 acres; other purposes, 29 acres; total, 156,743,650 acres.

6. **Western Australia.**—Areas taken up during 1954 under Mining Acts totalled 33,910 acres, including gold-mining, 13,279 acres, and mining for other minerals, 19,328 acres. Total areas occupied at the end of 1954 were as follows:—Gold-mining, 33,089 acres; mining for other minerals, 92,098 acres; other purposes, 41,191 acres; total, 166,378 acres.

7. **Tasmania.**—During 1954 the number of leases issued covered 2,920 acres, including coal-mining, 255 acres and tin-mining, 486 acres. Total areas occupied at the end of 1954 were as follows :—Gold-mining, 654 acres; coal-mining, 6,514 acres; mining for other minerals, 18,358 acres; other purposes, 4,533 acres; total, 30,059 acres.

8. **Northern Territory.**—At 30th June, 1954 the number and acreage of holdings under mining leases and tenements were as follows :—Gold-mining leases, 269 (4,571 acres); other mineral leases, 283 (6,711 acres); gold and other mineral claims, 5 (851 acres); gold and other mineral prospecting areas, 33 (606 acres); business and residence areas, 186 (50 acres); other purposes, 92 (1,947 acres); total, 868 (14,736 acres). In addition 32 authorities to prospect aggregating 2,352 square miles were held at 30th June, 1954.

9. **Summary.**—The following table shows the total areas occupied under Mining Acts in each State at the end of the years 1950 to 1954 :—

### AREAS OCCUPIED UNDER MINING ACTS.

(Acres.)

Year.	N.S.W. (a)	Victoria.	Q'land. (b)	S. Aust. (a) (b)	W. Aust. (c)	Tasmania. (b)	Total. (d)
1950 ..	455,778	1,095,637	1,267,012	36,672,566	145,847	30,462	39,667,302
1951 ..	364,901	1,096,495	1,285,740	36,669,380	137,523	32,744	39,586,873
1952 ..	477,873	840,989	840,344	740,094	151,376	32,150	3,082,826
1953 ..	2,372,244	957,797	1,040,816	44,742	148,932	31,398	4,595,929
1954 ..	14,078,264	2,978,321	1,757,309	156,743,650	166,378	30,059	175,753,981

(a) Year ended 30th June.

(b) Excludes lands held under miners' rights and dredging claims.

(c) Excludes holdings under miners' rights and mineral oil licences.

(d) Excludes Northern Territory.

## § 7. Closer Settlement.

1. **General.**—Particulars regarding the methods of acquisition and disposal of land for closer settlement in the several States are given in issues of the Official Year Book up to No. 22 (*see* No. 22, pp. 163–9) and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. In more recent years, however, the amalgamation, in some States, of closer settlement records with those of other authorities has made it impossible to obtain up-to-date figures for those States and for Australia as a whole, although aggregations of State totals as at the latest dates available have been published as rough approximations intended to convey some idea of the extent of the schemes throughout Australia. Particulars in this issue are restricted to a summary only of the position in each State at the latest date available.

2. **New South Wales.**—From the inception of closer settlement in 1905 to 30th June, 1954, 2,385 estates totalling 6,511,156 acres had been purchased by the Crown at a cost of £28,123,107 for purposes of closer settlement of civilians and returned service personnel.

Closer settlement is now being effected entirely under perpetual leasehold tenure (closer settlement leases).

3. **Victoria.**—The Closer Settlement Commission was abolished as from 31st December, 1938, and land settlement was placed under the control of the Department of Lands and Survey. On 31st March, 1939 all Closer Settlement and Discharged Soldiers' accounts were amalgamated, the settlers' accounts adjusted and the new debt

made payable over an extended period. Particulars of the operations under the provisions of the Closer Settlement Acts to 30th June, 1938, the latest date for which separate details are available, show that 1,402,568 acres were acquired at a cost, including the value of Crown lands taken over, of £10,244,023, and that 8,722 allotments were made, farm allotments comprising 1,162,676 acres, workmen's homes allotments, 790 acres, agricultural labourers' allotments, 3,484 acres and town allotments, 86,599 acres. The figures for area and cost of land acquired for closer settlement purposes include, in addition to 133,128 acres purchased for £1,246,722 and transferred subsequently to discharged soldiers, a total area of 512,757 acres costing £4,125,822 which was purchased originally for the settlement of discharged soldiers.

4. **Queensland.**—Separate records relating to the closer settlement of re-purchased land are no longer kept by the Land Administration Board, and the operations under this heading are now included with "Leases and Licences under Land Acts." The total area acquired to 31st December, 1934 was 970,778 acres, costing £2,292,881. At the same date the area allotted amounted to 915,690 acres distributed over 3,048 selections, consisting of 2,155 agricultural farms, 257 unconditional selections, 544 perpetual lease selections, 9 prickly pear selections, 6 perpetual lease prickly pear selections and 77 settlement farm leases. An area of 13,038 acres was sold by auction.

5. **South Australia.**—The total area re-purchased for closer settlement at 30th June, 1954 was 948,885 acres, at a cost of £2,865,200. Included in these figures are 51,872 acres purchased for £185,285, and afterwards set apart for returned service personnel, 3,214 acres reserved for forest and waterworks purposes the purchase-money being £16,185, and also 26,563 acres of swamp and other lands, which were purchased for £111,850, in connexion with reclamation of swamp-lands on the River Murray. Of the total area, 822,704 acres have been allotted to 2,791 persons.

6. **Western Australia.**—The total area acquired for closer settlement up to 30th June, 1954 was 2,480,671 acres, costing £4,246,516. Particulars of operations under the Act for the year ended 30th June, 1954 are as follows:—Area selected during the year, 30,582 acres; number of farms, etc., allotted to date, 2,373; total area occupied to date, 1,928,007 acres; area set aside for roads, reserves, etc., 20,972 acres; balance available for selection, 531,692 acres.

7. **Tasmania.**—Up to 30th June, 1954, 38 areas had been opened up for closer settlement, the total purchase-money paid by the Government being £371,486 and the total area acquired amounting to 104,294 acres, including 12,149 acres of Crown lands. The number of farms occupied at 30th June, 1954 was 107.

## § 8. Settlement of Returned Service Personnel : 1939-45 War.

1. **War Service Land Settlement Scheme.**—(i) *General.* The War Service Land Settlement Agreements Act 1945 authorized the execution by or on behalf of the Commonwealth of agreements between the Commonwealth and the States for proposals to settle discharged members of the Forces and other eligible persons on land in the States. The proposals were subsequently ratified by the States, and the agreements were signed in November, 1945.

For more detailed information about the agreements and the methods of operation and administration of the scheme *see* Official Year Book No. 37, pp. 113-8. Issue No. 39 contains a brief general description of the scheme.

(ii) *Summary of Operations to 30th June, 1954.* The tables hereunder show the operations of the War Service Land Settlement Scheme in each State up to 30th June, 1954.

<b>Total ..</b>	<b>859,777</b>	<b>1,659,950</b>	<b>280,685</b>	<b>12,004,336</b>	<b>18,233,110</b>	<b>6,169,609</b>	<b>39,207,467</b>

Repayments of expenditure to 30th June, 1954 on the acquisition, development and improvement of land amounted to £2,945,064, and on the provision of credit facilities to settlers to £3,264,590, so that the total expenditure was reduced by £6,209,554 to £32,997,813. In addition, miscellaneous receipts in South Australia, Western Australia and Tasmania to 30th June, 1954 amounted to £1,091,526.

2. Loans and Allowances (Agricultural Occupations) Scheme.—(i) *General.* Full details of the measures taken to provide for the re-establishment of ex-servicemen in rural occupations are contained in Official Year Book No. 37, pp. 117-8.

(ii) *Loans (Agricultural Occupations).* The following table shows particulars for each State and certain Territories to 30th June, 1954 :—

**LOANS (AGRICULTURAL OCCUPATIONS) : SUMMARY TO 30th JUNE, 1954.**

(a) After deduction of loans declined after approval—£1,257,470.

(b) Includes advances from principal repaid by borrowers.

These loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or discharge of a mortgage, bill of sale, etc.

(iii) *Allowances (Agricultural Occupations)*. The following table shows details for each State and New Guinea to 30th June, 1954:—

**ALLOWANCES (AGRICULTURAL OCCUPATIONS) : SUMMARY TO 30th JUNE, 1954.**

State.	Applications.			Advanced by Commonwealth Treasury to Bank.	Allowances Paid.
	Received.	Approved.	Rejected, Withdrawn or Not Yet Approved.		
				£	£
New South Wales ..	4,071	3,620	451	580,000	578,739
Victoria ..	3,066	2,311	755	296,500	296,013

Tasmania ..	633	522	111	115,000	114,476
New Guinea ..	4	3	1	846	846
Total ..	16,087	13,324	2,763	2,272,090	2,268,175

(a) Includes allowances paid to four ex-servicemen in the Northern Territory.

These allowances are payable only in respect of the period during which the income derived from the occupation by the ex-serviceman concerned is considered inadequate.

3. **War Service Land Settlement Division—Total Expenditure.**—The following table shows details, by States and Territories, of the total expenditure of the War Service Land Settlement Division for the years 1945-46 to 1953-54, and the aggregate to 30th June, 1954. The aggregate, £50,055,299, includes—War Service land settlement, £39,207,467; agricultural loans, £6,201,644; agricultural allowances, £2,272,090; administrative expenses, £960,026; rural training, £1,414,072.

**COMMONWEALTH WAR SERVICE LAND SETTLEMENT DIVISION : EXPENDITURE.**

Total to 30th June, 1954 ..	4,872,494	3,585,065	1,534,650	13,037,347	20,289,510	6,719,143	10,748	6,342	50,055,299

After deducting repayments of expenditure to 30th June, 1954 which amounted to £6,209,654 and miscellaneous receipts (£4,892,420), the net expenditure to 30th June, 1954 was £38,953,225.

## § 9. Advances to Settlers.

1. **General.**—A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory appears in preceding issues of the Official Year Book (*see* No. 22, pp. 179-186).

The summaries of loans and advances in the following paragraphs are compiled from returns supplied by the various State government lending agencies in the several States. They include the transactions in lands acquired under closer and soldier settlement schemes, but exclude the balances owing on former Crown lands sold on the conditional purchase, etc., system.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of reappraisements of land values and the writing down of debts. In general, they include both principal and interest outstanding.

A summary for Western Australia is not included, as practically the only Governmental funds being made available are Commonwealth (*see* § 8 above).

In New South Wales and Victoria expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States, this expenditure is provided for by the Commonwealth and particulars are included in § 8 above.

Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

2. New South Wales.—The following table shows particulars respecting advances, etc., under State Authorities to 30th June, 1954 :—

#### ADVANCES TO SETTLERS, ETC. : NEW SOUTH WALES.

6. **Western Australia.**—The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1st October, 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate similarly to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown in § 8 above.

7. **Tasmania.**—The following table shows particulars of advances under State Authorities to 30th June, 1954. Although not regarded as outstanding advances by the Department of Agriculture the figures in connexion with closer and soldier land settlement have been included in the table for comparative purposes; the areas so purchased have been leased on 99-year terms having an option of purchase which the leaseholder may exercise at any time.

<b>Total ..</b>	<b>194,667</b>	<b>8,035,147</b>	<b>1,753</b>	<b>1,390,146</b>

(a) Excludes £5,600 forfeited properties. (b) Excludes £204,813 advances capitalized, £79,166 advances written off to bad debts, and £40,789 written off to revaluation. (c) Not regarded as outstanding advances by the Department. (d) Number of leaseholders, including those to whom advances have been made.

8. Northern Territory.—During the financial year 1953-54 two advances totalling £1,234 were made. The total amount advanced to 30th June, 1954 was approximately £34,220. At 30th June, 1954 the balance outstanding from 13 settlers, including interest, was £4,806.

9. Summary of Advances.—The following table is a summary for each State (except Western Australia) and the Northern Territory to the 30th June, 1954. The particulars, so far as they are available, represent the total sums advanced to settlers, including amounts spent by the various Governments in the purchase and improvement of estates disposed of by closer and soldier land settlement, while the amounts outstanding reveal the present indebtedness of settlers to the Governments, including arrears of principal and interest but excluding amounts written off debts and adjustments for land revaluations. Particulars of Loans (Agricultural Occupations) under the Commonwealth Re-establishment and Employment Act 1945 and of certain advances for wire-netting and other purposes provided from Commonwealth funds are included.

## ADVANCES TO SETTLERS, ETC. : SUMMARY.

State.	Advances, etc., made during 1953-54.	Total Advances, etc., at 30th June, 1954.	Balance outstanding at 30th June, 1954.	
			Number of Persons.	Amount.

Northern Territory ..	1,234	34,220	13	4,806

(a) Includes expenditure on acquisition, development and improvement of land for war service land settlement (see p. 102). (b) Incomplete. (c) Number of accounts.

## § 11. Alienation and Occupation of Crown Lands.

1. **General.**—The figures shown in the previous parts of this chapter show separately the areas alienated, in process of alienation, or occupied under various tenures. The following tables set out the position in regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory during the latest year for which information is available—1954 in all cases. A summary for each State and Territory and for Australia as a whole is also supplied. Particulars for each year from 1943 to 1953 appear in *Primary Industries Bulletin* No. 47, Part I.—Rural Industries, page 10. The area occupied includes roads, permanent reserves, forests, etc. In some cases, lands which are permanently reserved from alienation are occupied under leases and licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

2. **New South Wales.**—The total area of New South Wales is 198,037,120 acres, of which 26.2 per cent. had been alienated at 30th June, 1954; 7.1 per cent. was in process of alienation; 58.9 per cent. was held under leases and licences; and the remaining 7.8 per cent. was unoccupied, or held by the Crown.

The following table shows particulars as at 30th June, 1954 :—

### ALIENATION AND OCCUPATION OF CROWN LANDS : NEW SOUTH WALES. 30th JUNE, 1954.

(Acres.)

Particulars.	Area.	Particulars.	Area.
<b>1. Alienated.</b>		<b>3. Held under Leases and Licences.</b>	
Granted and sold prior to 1862 ..	7,146,579	Homestead selections and grants ..	1,683,690
Sold by auction and other sales, 1862 to date ..	15,560,557	Alienable leases, long-term and perpetual ..	26,082,601
Conditionally sold, 1862 to date ..	34,218,179	Long-term leases with limited right of alienation ..	1,652,004

2. <i>In Process of Alienation</i> .. ..	345,390	5. <i>Total Area of State</i> .. ..	243,244,800

(a) Mining leases and licences have also been issued over an area comprising 156,743,650 acres.

(b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

6. **Western Australia.**—The total area of Western Australia is 624,588,800 acres, of which, at 31st December, 1954, 3.9 per cent. was alienated ; 2.1 per cent. was in process of alienation ; and 33.4 per cent. was occupied under leases and licences issued either by the Lands, Mines or Forests Departments. The balance of 60.6 per cent. was unoccupied.

The following table shows the distribution :—

**ALIENATION AND OCCUPATION OF CROWN LANDS : WESTERN AUSTRALIA,  
31st DECEMBER, 1954.  
(Acres.)**

Particulars.	Area.	Particulars.	Area.

Closer Settlement .. ..	23,323		

(a) At 30th December, 1954. (b) Includes reservations for roads and various other public purposes 4,069,811 acres, lands occupied by Commonwealth or State Departments, 21,444 acres and land acquired for Soldier and Closer Settlement but not leased, 2,256 acres.

8. *Northern Territory*.—The area of the Northern Territory is 335,116,800 acres, of which, at 30th June, 1954, only 0.1 per cent. was alienated; 53.7 per cent. was held under leases and licences; 14.1 per cent. was reserved for aboriginal, defence and public requirements; and the remaining 32.1 per cent. was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30th June, 1954 :—Alienated, 455,322 acres; leased—pastoral leases, 139,962,335 acres, other leases, licences and mission stations, 40,057,331 acres, total leased, 180,019,666 acres; reserved for aboriginal, defence and public requirements, 47,031,605 acres; unoccupied and unreserved, 107,610,207 acres; total, 335,116,800 acres.

9. *Australian Capital Territory*.—Alienated land of the Territory (excluding the Jervis Bay area) at the end of 1954 comprised 11.0 per cent. of the total area; land in process of alienation 6.9 per cent.; land held under lease and licence 53.7 per cent.; land otherwise occupied, including city tenures, 6.9 per cent.; and unoccupied 21.5 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1954 :—Alienated, 65,857 acres; in process of alienation, 41,224 acres; leased—grazing, agricultural, etc., leases, 302,775 acres, grazing licences, 7,174 acres, total leased, 309,949 acres; otherwise occupied, 36,324 acres; unoccupied, 129,446 acres; total, 582,800 acres. Including the Jervis Bay area of 18,000 acres—12,788 acres leased and 5,212 acres otherwise occupied—the grand total for the whole Territory is 600,800 acres.

10. Summary.—The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1954 :—

### ALIENATION AND OCCUPATION OF CROWN LANDS, 1954.

State or Territory.	Private Lands.				Crown Lands.				Total Area.
	Alienated.		In Process of Alienation.		Leased or Licensed.		Other.

(a) At 30th June.

(b) At 31st December.

(c) Includes Jervis Bay area.

A diagram showing in graphical form the areas alienated from the State, those in process of alienation under the various systems of deferred payments, the areas held under leases or licences and the areas left unoccupied was included in earlier issues of the Year Book (see No. 41, page 73), but is not reprinted in this issue.

## CHAPTER V.

### THE TERRITORIES OF AUSTRALIA.

NOTE.—The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are :— Norfolk Island ; Papua (formerly British New Guinea) ; the Territory of New Guinea (under Trusteeship Agreement with the United Nations) ; Nauru (under Trusteeship Agreement with the United Nations) ; The Territory of Heard and McDonald Islands ; the Australian Antarctic Territory ; the Territory of Ashmore and Cartier Islands ; and the Territory of Cocos (Keeling) Islands. Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pp. 5, 25 and 26 of this issue.

#### THE NORTHERN TERRITORY.

##### § 1. Area and Population.

1. Area.—Upon the extension of New South Wales westward to the 129th meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911. The total area is 523,620 square miles.

2. Population.—(i) *Population excluding Full-blood Aborigines.* At the Census of 30th June, 1954 the population of the Northern Territory, excluding full-blood aborigines, was 10,281 males, 6,171 females, 16,452 persons. Corresponding figures at the Census of 30th June, 1947 were 7,378, 3,490 and 10,868 respectively.

The white population of the Northern Territory increased slowly from 670 at the Census of 1881 to 3,767 in 1918. By 1921 it had decreased to 2,459, and in 1933 was only 3,306. At the Census of 1947 it had risen to 9,116 an increase of 176 per cent. on the 1933 figures, while at the Census of 1954 it had risen a further ~~82~~ <sup>54</sup> per cent. to 16,452. 14028

Although at one time there were more than 4,000 Chinese in the Territory, at 30th June, 1954 there were only 325, these comprising the major proportion of the 486 full-blood non-European population, excluding Australian aborigines, at that date.

The half-caste population recorded at the Census of 1954 numbered 1,955, of whom 1,659 were half-caste Australian aborigines. Corresponding figures at the 1947 Census were, respectively, 1,364 and 1,247.

(ii) *The Aborigines.* The total number of full-blood aborigines at 30th June, 1954 was estimated at 13,744, of whom approximately 3,224 were in regular employment. By virtue of Aborigines Ordinance No. 2 of 1953, part aborigines are not now deemed to be aborigines within the meaning of the Aborigines Ordinance 1918–1953, except children who were committed to institutions prior to the commencement of the ordinance and those who have requested the Director of Native Affairs to declare them aborigines within the meaning of the ordinance. Aboriginal reserves comprise an area of approximately 66,000 square miles. (See also Chapter XVI.—Population.)

## § 2. Legislation and Administration.

On 1st January, 1911 the Territory was transferred by South Australia to the Commonwealth. The terms are outlined in Official Year Book No. 15, p. 940. For particulars of the administration up to the Northern Territory (Administration) Act 1931, by which it was for the second time placed in the hands of an Administrator, *see* Official Year Book No. 38 and earlier issues.

The Northern Territory (Administration) Act 1947 enabled the Northern Territory to set up a Legislative Council. The Council consists of the Administrator and seven official and six elected members who make ordinances for the Territory, which must be submitted to the Administrator for assent. The Administrator may, or may not, assent to them, or he may reserve them for the Governor-General. The Governor-General may disallow any ordinance assented to by the Administrator within six months from the date of assent, and the operation of ordinances relating to certain land or pecuniary transactions or to aboriginal affairs is dependent on his approval. Money votes may be proposed in the Council only by the Administrator himself, or by his permission or direction.

The Territory elects a member to the House of Representatives, who was granted the right to take part in debates but not to vote, except on a motion for the disallowance of any ordinance of the Northern Territory or on any amendment of any such motion. However, the power of the Federal Parliament to disallow ordinances was repealed by the Northern Territory (Administration) Act 1947 referred to above.

## § 3. Physiography.

1. **Tropical Nature of the Country.**—The Territory is within the torrid zone, with the exception of a strip  $2\frac{1}{2}$  degrees wide which lies south of the Tropic of Capricorn.

2. **Contour and Physical Characteristics.**—The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and ironstone form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries.

The principal features of the coast-line are enumerated in Official Year Book No. 1, p. 66; the rivers in No. 2, p. 76; the mountains in No. 3, p. 67; the lakes in No. 4, pp. 77, 78; the islands in No. 5, pp. 71, 72; and the mineral springs in No. 6, p. 65.

Inland, the country generally is destitute of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply of the interior systems. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

## § 4. Climate, Fauna and Flora.

1. **The Seasons.**—There are two main climatic divisions—the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer months. Further particulars appear in Official Year Book No. 6, p. 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous) and frogs abound. There are many varieties of fresh-water fish and littoral mollusca. Butterflies and

beetles are strongly represented. The white ant is a pest which is capable of serious destruction to wooden buildings unless special preventative measures are taken. Another species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Native fauna are in some cases protected. Buffalo formerly existed in large herds, but their number has been greatly reduced by indiscriminate shooting. Buffalo shooting is now controlled by Ordinance.

3. Flora.—The vegetation is North Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's edge. In the north, cypress pine, bloodwood and paperbark timbers are now cut and milled for local building purposes. These three timbers are resistant to termites. On the wide expanses of plain country in the interior there is little vegetation, the principal orders represented being:—*Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae*, *Utricaceae*.

More detailed particulars regarding fauna and flora are given in Official Year Book No. 6, pp. 1116-7.

## § 5. Production.

1. Agriculture.—Up to the present, agriculture has made little progress in the Territory, although rice, peanuts, tobacco, cotton, grain sorghum, bananas, pineapples, citrus, mangoes, papaws, vegetables and fodder plants can be grown in certain areas. At the present time commercial agricultural production is practically confined to peanuts, which have been an export crop for some time (160 tons were exported in 1952), and vegetables and small-scale fruit production (mainly pineapple and citrus) for local consumption.

In 1946, the Commonwealth Scientific and Industrial Research Organization commenced scientific surveys to define more accurately the potentialities of the Territory. Surveys have been completed of the Katherine-Darwin, Barkly Tableland and Victoria River Regions. The survey of the Katherine-Darwin Region indicated that further investigations into agricultural possibilities were warranted. As a result, the Commonwealth Scientific and Industrial Research Organization established an agricultural research station at Katherine to investigate the possibilities of dry farming in a land system covering an area of about 7,000 square miles in the Katherine-Daly River basin. The research work at this station was sufficiently encouraging in regard to the production of peanuts, grain sorghum, cotton and pastures to warrant investigations into the application of the findings on a commercial scale. To further the investigations the Commonwealth Government approved of the establishment by the Northern Territory Administration in 1952 of an experimental farm at Katherine for the purpose of carrying out trials with these crops to determine the requirements for farming them on a commercial scale. The trials are in progress but it is too early to make any pronouncements.

The survey of the Katherine-Darwin Region also indicated various soil types in other parts of the Region on which agricultural production tests would be worthwhile. In order to carry out these tests economically and quickly the Administration organized in 1952 a mobile unit for the purpose of conducting trials on five soil types with pineapples, peanuts, sorghum, tobacco and other crops.

Prospects for rice growing were indicated by the survey and in 1952 the Administration established rice research stations at Humpty Doo and at a location known as Sixty Mile near the Stuart Highway. A quarantine station was also established at an area known as the Chinese Rice Gardens (near Darwin) to enable oversea varieties of rice to be introduced under controlled conditions. At the rice research stations it has been demonstrated that rice can be grown but that the main problems of rice growing in the Territory are adequate water control and drainage, determination of

cultivation techniques in the soil conditions which obtain in the Territory and the production of a suitable rice variety for the rainfall, temperature and soil conditions of the area.

2. **Pastoral Industry.**—The pastoral possibilities of certain parts of the Northern Territory were recognized at an early date, and in 1866 stock was brought into the Macdonnell Range country from South Australia. Six years later cattle were moved from Queensland to the northern parts of the Territory, and in 1879 Giles reached the Katherine River with 2,000 head of cattle and 12,000 sheep from South Australia. For various reasons sheep-raising did not succeed. The cattle industry, however, progressed steadily and development of stock routes and other plans for the expansion of the industry are continuing.

Cattle exported during 1954-55 (1953-54 figures in parentheses) numbered 77,452 (126,125)—21,513 (72,058) to Queensland, 43,786 (46,951) to South Australia, 10,370 (7,116) to Western Australia and 1,783 (nil) to the Philippines. Other livestock exports were:—horses, 479 (8); bulls, 5 (nil); pigs, 104 (nil) and camels, 11 (nil). Importations of live stock were:—bulls, 572 (826); other cattle, 9,340 (6,128); stallions, 1 (4); other horses, 611 (451); rams, 11 (41); other sheep, 2,575 (3,496) and pigs, 4 (nil).

The estimated number of livestock in the Territory at the end of the years 1939 and 1950 to 1954 is given in the table hereunder:—

#### NORTHERN TERRITORY: LIVESTOCK.

31st December—	Horses.	Cattle.	Sheep.	Pigs.	Goats.	Camels.	Donkeys.	Mules.
1939 .. ..	32,721	922,581	38,587	483	20,335	331	1,443	366
1950 .. ..	29,366	1,019,149	28,888	1,122	12,329	94	918	603
1951 .. ..	32,519	1,057,906	30,935	794	10,520	98	1,180	603
1952 .. ..	34,645	935,602	33,773	799	11,861	100	873	546
1953 .. ..	36,985	966,033	31,232	1,132	12,502	53	1,475	626
1954 .. ..	33,035	968,755	28,644	911	11,152	50	661	364

3. **Hides and Skins.**—The number of hides and skins exported from the Northern Territory during 1953-54 was as follows:—buffalo, 5,132; sheep, 748; crocodile, 1,572; and cattle, 6,113. In addition, a considerable number of kangaroo skins were exported, but details are not available.

4. **Mining.**—Alluvial gold digging in the Northern Territory commenced in 1869 and in 1881 the yearly return was valued at £111,945. The value of minerals produced in the Territory in 1953 and 1954 fell slightly from the all-time peak of £1,282,000 in 1952 mainly because of a fall in the value of wolfram. The main mineral was gold, most of which was won at Tennant Creek and the majority from one mine, "Noble's Nob". Five batteries are operated by companies on this field, which is noted for its rich patches of ore. The value of copper production increased, most of the ore being obtained from the "Peko" mine at Tennant Creek. The ore is treated by the Company's own plant at the mine. The Harts Range Mica Field continues to produce the bulk of Australian high grade mica. Tin concentrates were produced at Maranboy, where a Government-owned treatment plant is in operation. Uranium minerals were first discovered at Rum Jungle in September, 1948, and many other deposits were subsequently found. Great interest in uranium mining is now being shown and many Australian and over-sea mining companies are engaged in the search for radio-active minerals. The first full scale uranium treatment plant was opened at Rum Jungle by the Prime Minister on 17th September, 1954, and continuous production of uranium oxide is now being achieved.

The following table shows the value of mineral production for the years 1950 to 1954 compared with 1939:—

**NORTHERN TERRITORY : VALUE OF MINERAL PRODUCTION.**  
(£'000.)

Year.	Gold.	Tin Concen- trates.	Copper Ore.	Mica.	Wolfram.	Total All Minerals. (a)
1939..	163	4	2	16	58	244
1950..	543	15	57	62	26	708
1951..	603	22	44	59	257	987
1952..	681	10	53	92	413	1,282
1953..	820	15	18	102	267	1,221
1954..	839	14	114	123	55	1,145

(a) Excludes uranium.

5. **Pearl and Other Fisheries.**—In 1884, mother-of-pearl-shell was discovered in the harbour of Port Darwin. Since that time the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast. Production of shell since the war has varied considerably, year by year, but since 1950 has shown a decided increase:—1950—89,000 lb., value, £22,000; 1951—188,000 lb., value, £51,000; 1952—260,000 lb., value, £59,000; 1953—487,000 lb., value, £125,000; 1954—460,000 lb., value, £119,000.

The 1954 season was fished by eleven vessels compared with ten for 1953. The price of shell still remains high, £700 a ton for good grade shell being the average for 1953.

Darwin continues to provide a firm and ready market for fish, but supplies are somewhat irregular.

## § 6. Land Tenure.

1. **General.**—A description of the system of land tenure in force in the Territory in 1928 is given in Official Year Book No. 22, Chapter V.—Land Tenure and Settlement. It was revised in Official Year Book No. 39, pp. 329–30, and Chapter IV.—Land Tenure and Settlement of this issue contains statistical information on the subject.

Almost half the land in the Northern Territory is reserved, or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease and licence, which are described briefly below and in more detail in Official Year Book No. 39, pp. 329–30.

2. **Pastoral, Agricultural, etc., Leases.**—*Pastoral Leases*—granted for periods not exceeding 50 years.

*Pastoral Homestead Leases*—granted in perpetuity but available only to persons who intend to reside *bona fide* on the leased land. Firms or companies are incapable of holding this type of lease.

*Agricultural Leases*—granted in perpetuity, with area for any one lease limited according to type of farm (Cultivation Farms, Class 1, 1,280 acres, Class 2, 2,560 acres; Mixed Farming and Grazing, Class 1, 12,800 acres, Class 2, 38,400 acres).

*Leases of Town Lands*—except in Darwin, granted in perpetuity (in Darwin granted for periods up to 99 years).

*Miscellaneous Leases*—granted for any prescribed or approved purpose, for periods not exceeding 21 years.

*Grazing Licences*—granted to graze stock on Crown lands for periods not exceeding one year.

*Occupation Licences*—granted for manufacturing, industrial or any prescribed purposes, for periods not exceeding 5 years.

*Miscellaneous Licences*—granted for periods not exceeding 12 months.

*Leases to Aborigines*—granted for areas not exceeding 160 acres each for any period of years upon such terms and conditions as thought fit.

The foregoing leases and licences are granted at specified rentals or rentals fixed by the Administrator and subject to re-appraisal, and under various prescribed or specified conditions.

3. *Mining Leases, etc.—Holdings under Miners' Rights*—entitling holder, for a fee of 5s. for 12 months from date of issue, to occupy Crown lands for mining and to carry out works thereon.

*Gold-mining Leases*—granted for a period of 21 years, renewable for a further 21 years, for areas not exceeding 20 acres each, at an annual rent of 2s. per acre and with payment of a royalty of 3d. in the £1 on the value of gold won.

*Mineral Leases*—granted in blocks not exceeding 40 acres each, at an annual rent of 1s. per acre, with term and renewal and royalty as for gold-mining leases.

*Dredging Claims*—granted for gold or minerals claims, the area not exceeding 300 acres each, at an annual rent of 2s. per acre.

*Petroleum Prospecting Permits*—granted to search for oil over one, two or three areas not exceeding in aggregate 10,000 square miles for a term not exceeding 12 months and a fee of £100. The permittee must enter into a bond for at least £1,000 to comply with the conditions of the permit and the provisions of the Petroleum (Prospecting and Mining) Ordinances 1954 and the regulations thereunder.

*Petroleum Licences*—confer an exclusive right to carry out the detailed surveys and other operations necessary to test the land for petroleum. A licence is granted to a permittee for a fee of £20 over an area not exceeding 2,500 square miles upon the permittee entering into a bond of at least £5,000 to comply with the provisions of the licence and the Ordinance and Regulations.

*Petroleum Leases*—granted to a licensee for a period of 21 years, and renewable for a further period of 21 years, in respect of an area not exceeding 500 square miles. The lessee shall pay a royalty of 10 per cent. upon the gross value of all crude oil produced.

*Coal Licences*—granted to search for coal over an area not exceeding 1,000 square miles for a period of five years, at an annual fee of £10.

*Coal Leases*—granted for a period of 21 years, renewable for 21 years at an annual rental of 1s. per acre and a royalty fixed by regulation.

*Business and Residence Areas*—granted at the prescribed fee, authorizing the holder to occupy on a gold or mineral field an area not exceeding one acre for residence and carrying on business (one-quarter of an acre if for residence only).

*Garden Areas*—granted under prescribed conditions, on a gold or mineral field for growing fruit or other garden produce, the area of each garden not exceeding 5 acres.

There are various conditions regarding working, employment and value of machinery used, which apply to the foregoing leases and licences.

## § 7. Trade, Transport and Communication.

1. *Trade*.—No record is kept of the trade between the States and the Territory. Direct overseas imports amounted to £34,000 in 1938–39. In the post-war years 1945–46 to 1948–49 they averaged about £200,000 a year, but in the three years 1950–51 to 1952–53 the average was about £620,000 a year. In 1953–54 imports totalled £641,757. Direct overseas exports amounted to £13,000 in 1938–39 and are still relatively small—£30,169 in 1953–54.

2. *Shipping*.—Shipping services to Darwin are provided about once per month by a ship of the Australian Shipping Board from the eastern States and a twice monthly service from Western Australia by ships of the Western Australian State Shipping Service. An overseas tanker visits Darwin quarterly with supplies of aircraft fuel and other petroleum products. Other overseas vessels call at irregular intervals. During 1952–53, 39 calls were made by vessels at Darwin, landing approximately 35,000 tons of merchandise and 27,000 tons of petroleum products. In 1953–54 vessels made 43 calls and landed approximately 33,000 tons of merchandise and 42,000 tons of petroleum products. Total tonnages landed pre-war amounted to approximately 29,000 tons per annum.

3. *Air Services*.—Darwin, a first class international airport, is the first port of arrival in Australia for virtually all aircraft from Europe and Asia. Qantas Empire Airways Ltd. (under contract to the Commonwealth Government) operates, through Darwin, a

Sydney-Singapore-London passenger and freight service; a Sydney-Hong Kong-Japan service; and a Sydney-Manila-Japan service. Calls are also made at Darwin on the return flight of the service from Sydney to Johannesburg. The Air France service from Paris to Noumea via Saigon calls at Darwin. British Overseas Airways Corporation operates a London-Singapore-Sydney service, and Australian National Airways, in conjunction with Air-Ceylon, operates a service to London. Both these services also call at Darwin. Regular inland services calling at Darwin are Trans-Australia Airlines (Adelaide-Darwin and Brisbane-Darwin), MacRobertson-Miller Aviation, which runs regular services between Darwin and Perth, and Darwin and Wyndham, and Connellan Airways, which operates services between Alice Springs, Wyndham, Borroloola, Katherine and the Queensland border. Smaller services, mainly on a charter basis, operate from Darwin. From Darwin the Aerial Medical Service operates two aircraft and the North Australian Airways local charter flights. An aero club with head-quarters at the airport also operates.

4. Railways.—Under the agreement made between the Commonwealth and the State of South Australia for the transfer of the Northern Territory, which was ratified by the Northern Territory Acceptance Act 1910, the Commonwealth was to construct the Northern Territory portion of the transcontinental railway line (connecting Adelaide and Darwin via Port Augusta).

The northern line from Adelaide terminates at Alice Springs, about 192 miles north of the southern boundary of the Territory. The Commonwealth Government acquired, on 1st January, 1911, the property in the line from Port Augusta to Oodnadatta (478 miles), and on 1st January, 1926 the control thereof was transferred to the Commonwealth Railways Commissioner. The extension to Alice Springs (293 miles) was opened for traffic in 1929. The line from Darwin to Pine Creek, about 146 miles, was extended to Katherine River (200 miles from Darwin) in 1917, and as far as Birdum (316 miles from Darwin) in 1929. Extensions are still under consideration.

The Clapp plan for the standardization of Australian railways recommended, *inter alia*, the construction of a standard gauge (4 ft. 8½ in.) strategic and developmental railway between Dajarra (Queensland) and Birdum, and the conversion to standard gauge of the Birdum-Darwin line, but not the conversion of the Port Augusta-Alice Springs line nor the construction of a 4 ft. 8½ in. line between Alice Springs and Birdum. Provision for both of the last two projects, however, was included in an agreement with South Australia enacted in 1949.

It was agreed by the Governments of the Commonwealth and South Australia in 1950 that a standard gauge railway from Stirling North to Leigh Creek coalfields (157 miles) should be constructed. This is now under construction and is regarded as the first step in the ultimate provision of a standard gauge railway between Port Augusta and Alice Springs.

5. Roads.—During the war, roads were built connecting Alice Springs with Darwin, and Mount Isa (Queensland) with Tennant Creek. The first of these roads, known as the North-South Road or Stuart Highway, is 954 miles long, and runs via Larrimah and Tennant Creek. The Mount Isa-Tennant Creek Road (Barkly Highway) is 403 miles long. Both were used extensively during the war, the Stuart Highway, in particular, experiencing very heavy and continuous traffic. Since the war, the Stuart Highway has been used continually as a means of transporting foodstuffs and other supplies to Darwin and northern centres, and is now the main route for overland tourists and travellers from the southern States to Darwin. Both roads have good water bores and communications. There are now 12,274 miles of road in the Territory.

6. Posts, Telegraphs, Telephones and Wireless.—Postal communication is maintained by road and rail transport between Darwin and the capital cities of Australia. In addition, the vessels belonging to the Western Australian State Shipping Service give a regular service between Fremantle and Darwin. Mail is also carried between the capital cities of Australia and Darwin by the airway companies operating in each State. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The transcontinental telegraph line, covering a length of 2,230 miles, runs in a northerly direction from Adelaide to Darwin, and provides telegraphic communication between Darwin and other parts of the world.

Long-distance telephone communication is established between Darwin and the other capital cities of Australia, and oversea telephone communication through Sydney is also available.

Regional national broadcasting stations are situated at Darwin and Alice Springs. The majority of homesteads on pastoral leases are equipped with pedal wireless sets operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor Bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia) and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

## § 8. Education.

1. **European.**—Schools for European and part-European children in the Northern Territory are conducted for the Commonwealth on an agreed basis of reimbursement by the South Australian Department of Education which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools.

At the beginning of the 1954 school year there were 9 Government schools for European children in the Northern Territory, with 61 teachers and 1,650 pupils, providing instruction according to the South Australian curriculum. Facilities for secondary education exist at schools at Darwin and Alice Springs. The former conducts classes for the Leaving Certificate, but the latter at present normally only provides instruction to Intermediate Certificate level.

Children of primary and pre-Intermediate secondary standard who live more than 10 miles from an established school receive an allowance of £70 per annum plus fare concessions if they board away from home in order to attend school. Six exhibitions are available annually on the results of the Intermediate Certificate, the benefits being £50 per annum, a £5 book allowance per annum and annual return fares if the recipients board away from home in order to attend school.

Approximately 100 children receive correspondence education under the South Australian Correspondence School system. The "School of the Air" supplements normal correspondence instruction for certain children. Some of these live as much as 500 miles distant from Alice Springs, from which point the "School of the Air" is conducted. Five half-hourly sessions are given each week and the unique feature of the "School of the Air" is the "Question and Answer" section which forms a part of every session. Children with access to radio transceivers are able to ask questions of their teacher and all other pupils listen to the answers.

Five pre-school centres have been established in the Territory. Of these, three reach the required standards for subsidy by the Administration. Up to the present this subsidy has been the amount of the salary of a trained pre-school teacher. During the year, however, new policy was approved by which the Administration, in addition to subsidizing the teacher's salary, bears the cost of building pre-school centres in approved circumstances. The first centre to be built under these conditions is now under construction. Two scholarships are offered each year for Territory girls to qualify as pre-school teachers.

2. **Native.**—The social, cultural and educational background of the aborigines has made necessary the establishment of special schools for them. It is envisaged that this necessity will ultimately pass. These schools are conducted by the Commonwealth Office of Education in its capacity as agent for the Administration. Nine have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk and school clothes are provided to the pupils. Close touch between the Administration and the Commonwealth Office of Education in connexion with these schools is maintained through the person of the Senior Education Officer (of the Office of Education staff) who is stationed at Darwin. In addition to the 9 Administration schools, 13 schools for aboriginal children are conducted by Missions with the aid of Government subsidies. One school, with similar aid, has been established on a pastoral property and the establishment of others along similar lines is planned.

3. **Theoretical Training of Apprentices.**—The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical School, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

### § 9. Native Welfare.

The Welfare Ordinance, which the Legislative Council passed in June, 1953, established the principle that native people would be committed to the care of the State on the grounds of their need for special care and assistance and not on the grounds of race or colour and it laid on the Director of Welfare a positive responsibility for the advancement of wards in his care. The Employment Ordinance provides for the training of wards and assistance in establishing them in occupations, either on their own account or as employees. The Ordinance envisages apprenticeships for the better-educated wards and training-on-the-job for those wards not yet capable of entering into apprenticeships. It also envisages financial aid to natives or groups of natives who may, under the guidance of the Director, be able to engage on activities (for example in agriculture, cattle raising, hunting or fishing) on their own behalf. The Director of Welfare is responsible for supervising employment for the wards in his care, and protective legislation for those in employment is retained. The legislation does not, of course, apply to any persons who are not wards and it is envisaged that native people who have ceased to be wards will come within the normal industrial customs of the country.

### § 10. Finance.

Details of revenue and expenditure of the Territory for the years 1949-50 to 1953-54 are shown below :—

#### NORTHERN TERRITORY : REVENUE AND EXPENDITURE. (£.)

## THE AUSTRALIAN CAPITAL TERRITORY.

1. *Introductory.*—Information regarding the selection and establishment of Canberra as the Australian capital city, the physiography of the Territory and its early history will be found in earlier issues of the Official Year Book—*See List of Special Articles. etc.*, at the end of this volume under Canberra and Federal Capital City.

On 12th March, 1913 the official ceremony to mark the start of operations in connexion with the establishment of the Seat of Government was carried out. At this ceremony the selection of "Canberra" as the name of the capital city was announced.

On 9th May, 1927 Parliament House at Canberra was officially opened by His Royal Highness Albert, Duke of York—afterwards His Majesty King George VI.—the occasion being the 26th anniversary of the opening of the first Parliament of the Commonwealth at Melbourne by His Royal Highness George, Duke of Cornwall and York—afterwards His Majesty King George V.—on 9th May, 1901. (For particulars of the opening ceremony *see* Official Year Book No. 21, p. 604.)

The development of the Territory administration prior to the taking over of control by the Federal Capital Commission on 1st January, 1925 is described in summarized form in Official Year Book No. 18, and in Official Year Book No. 22 a summary is given of the administrative activities of the Federal Capital Commission. The administration of the Territory by this authority was continued until 30th April, 1930, when the Seat of Government (Administration) Act 1924–1929 was repealed, and the powers and functions of the Commission reverted to the Government.

Since April, 1932 the general control of the Territory has been exercised by the Minister for the Interior, certain specific services, however, being undertaken by the Department of Health, the Department of Works and the Attorney-General's Department.

An amendment to the Seat of Government Acceptance Act in 1938 provides that the Territory shall be known as the Australian Capital Territory.

2. *Progress of Work.*—(i) *General.* Further progress in providing housing and allied community facilities has been shown in the works programme in the Australian Capital Territory for the financial year 1953–54 and engineering services were kept abreast of developmental requirements. Planning was begun for the increase in population which will result from transferring other Departments to Canberra as the various sections of the new Administrative Building are completed.

There has been extensive building construction with the establishment of the Australian National University at Canberra and facilities for the expansion of Defence Services at Duntroon, Fairbairn and Harman.

During 1953–54, the total expenditure on capital and maintenance works in the works programme amounted to £4,626,985.

The average combined labour force of the Department of Works and contractors working for the Department during 1953–54 totalled 2,271 men.

(ii) *Works Programme.* (a) *Housing.* During 1953–54, 489 dwelling units were completed (424 built by contract and 65 by day labour), including 93 brick, 42 brick veneer, 54 timber, 75 monocrete and 225 prefabricated (209 Riley Nevsum and 16 Econo Steel). Of the total units built, 101 and 84, respectively, were built in the suburbs of Narrabundah and O'Connor, 247 in the longer established but recently extended suburbs of Ainslie (86), Deakin (62) and Yarralumla (99), 24 in the suburb of Reid and 22 in Griffith. Four hundred and sixty were built for the Department of the Interior, 9 for War Services Homes, 16 for the Australian National University and 4 for the Department of the Army. At 30th June, 1954 there were 313 houses under construction.

(b) *Other Building.* Major projects completed during the year 1953–54 included an infants school at Turner; the erection of a 50-bed ward at the Canberra Community Hospital; and the erection of four plant laboratories for the Commonwealth Scientific and Industrial Research Organization at Black Mountain.

Projects for the Australian National University comprised the completion of University House, the Studies and Laboratories Block and a workshop for the John Curtin School of Medical Research.

Further progress was made on the permanent Administrative Building at Parkes and about one half had been completed at 30th June, 1954. Work has been concentrated on "A" block, which, when completed will be occupied, while the remainder of the building is being completed.

Work is well advanced on the Griffith infants' school but at Mt. Stromlo work on a dome for a 74-inch telescope has been temporarily suspended. The erection of a 20 chamber Hoffman brick kiln at Westridge, an Olympic Swimming Pool at Parkes and extensions to Staff quarters at the Canberra Community Hospital was commenced.

At the Royal Military College, Duntroon, erection of a new Cadets barracks and an engineering laboratory are both nearing completion.

Further progress was made on the central administrative block of the C.S.I.R.O. at Black Mountain and the erection of a new plant repair shop and depot at Molonglo was commenced.

Telephone exchanges at Barton and Braddon and alterations and additions to the ground floor at the Canberra Post Office, East Block, were almost completed.

(c) *Engineering Works and Services.* During 1953-54 12 miles of sub-divisional roads were constructed to serve newly built areas, bringing the length of city roads at 30th June, 1954 to 208 miles, comprising 3 miles of concrete, 104 miles of bitumen paved and 101 miles of gravel. At the same date the length of city footpaths was 116 miles. During 1953-54 about 9 miles of city roads were sealed and road maintenance works included the resealing of 5 miles of city roads and 3 miles of country main roads. Major projects were the construction of an access road from Harman Naval Station to the new transmitting station at "Bonshaw", sub-divisional roads in Ainslie, Narrabundah, O'Connor and the C.S.I.R.O. areas, and roads constructed at the Australian National University, Canberra. The Cotter road and other main roads were improved.

During 1953-54, 44,454 feet of water mains were laid to reticulate water services to new buildings. At 30th June, 1954, 6,538 houses were connected to the water supply system. The consumption for 1953-54 was 1,807 million gallons with an average daily consumption of about 168 gallons per head.

New works undertaken during the year were the 24" Cotter section main and a 24" main from Lower Red Hill to London Circuit. Progress of work is well advanced. Other major works included completion of a two million gallon water storage tank at Red Hill and the extension of the Cotter pump house which is now ready for the installation of new pumps.

During the same period 35,129 feet of sewer mains were laid to connect newly built houses to the sewerage system and 6,286 houses and buildings had been connected to the sewerage system by 30th June, 1954.

3. *Forestry.*—A considerable amount of reafforestation work has been undertaken and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills and Kowen. Experimental plots have been established in the Brindabella mountains and soil conservation areas at various locations throughout the Territory.

The total area of softwood plantations at 30th June, 1954 was 16,500 acres, of which 14,500 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus ponderosa* and *Pinus laricio*.

Forestry operations were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly on decorative lines, but since then a much wider programme has been undertaken. Sawmill timber is now being obtained from the logs resulting from thinning operations and clear felling of mature plantations. The yearly output of pine timber has increased from 30,000 super. feet in 1930-31 to approximately 10 million super. feet at the present time, the total amount cut to date being about 91 million super. feet. The present output consists of approximately 50 per cent. saw log timber, producing building material, and 50 per cent. case-making materials.

In 1926 a comprehensive review was undertaken of the Territory's potentialities for forest development. A system of forest management was instituted in the existing forest area, and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection, to 100,000 acres of

hardwood forests in the Cotter catchment area. Hardwood produced during 1953-54 amounted to 2,240,000 super. feet log measure all of which was used in building operations in Canberra. The total amount of hardwood cut from A.C.T. forests to date is about 29,500,000 super. feet.

4. *Lands.*—(i) *General.* Reference has been made in previous issues of the Official Year Book to the general conditions of land tenure in the Australian Capital Territory and to the area of alienated and leased land and Chapter IV.—Land Tenure and Settlement, of this issue contains statistical information on the subject.

Under the Seat of Government (Administration) Act 1910, Crown lands in the Territory may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of that Act. Leases of land in the city area are granted under the City Area Leases Ordinance 1936-1951, and leases of other lands under the Leases Ordinance 1918-1937. Land is also leased for various purposes in the city area under the Church Lands Leases Ordinance 1924-1932 and the Leases (Special Purposes) Ordinance 1925-1943, and one lease under the Church of England Lands Ordinance 1926 has been granted for church purposes.

As considerable portions of the Territory lands are not required in connexion with the establishment of the city, large areas have been leased under special improvement conditions in regard to the extermination of noxious weeds and the destruction of rabbits and other pests. The lands are classified into three grades of agricultural and three grades of grazing land. Leases may be granted for grazing, fruitgrowing, horticulture, agriculture or other purposes for a period not exceeding 25 years. The annual rental is 4 per cent. of the assessed value of the land, including improvements which are the property of the Crown, plus the amount of rates payable. No person may hold under lease land of a greater value than £10,000, exclusive of the value of buildings and fences thereon.

Under the City Area Leases Ordinance 1936-1951 the Government may grant leases in the city area of any Crown land for business or residential purposes. Such leases may be issued for a period not exceeding 99 years at a rental equal to 5 per cent. of the unimproved value of the land, which value is subject to re-appraisal at the expiration of 20 years, and thereafter every 20 years. A suitable building must be commenced within 6 months and completed within 12 months unless an extension of time is allowed.

(ii) *Jervis Bay Territory.* The Commonwealth acquired from the State of New South Wales sovereign rights over the area comprising about 28 square miles of land and water at Jervis Bay for possible use as a port in connexion with the Australian Capital Territory. The Royal Australian Naval College was established in this area on a site known as Captain's Point, but was removed in 1930 to Flinders Naval Base, Victoria. Leases have been granted over an area of about 13,000 acres in the Jervis Bay area.

5. *Transport and Communication.*—Canberra is connected with the railway system of New South Wales at Queanbeyan by a line  $4\frac{1}{2}$  miles long. This line was opened for goods traffic on 25th May, 1914, and for passenger traffic on 15th October, 1923. The railway terminus is situated in the suburb of Kingston. A daily passenger service operates between Canberra and Sydney and Canberra and Melbourne.

Two airlines provide several services daily each way on the Sydney-Canberra-Melbourne route.

Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia.

There are three radio broadcasting stations in the Australian Capital Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station.

6. *Population.*—From 1911 until 1921 the population of the Australian Capital Territory remained at about 2,000 persons. In 1922 it commenced to rise, and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, it passed 8,000. Since then the general trend has been upward.

The census return of population on 30th June, 1938, was 11,562 persons in the Australian Capital Territory including 272 in the Jervis Bay area. The population at the Census of 30th June, 1947, was 16,905 persons—15,156 in the city area, 1,389 in the rural districts and 360 in the Jervis Bay area. A census was taken of the city area on 14th–16th September, 1951, the population then being 23,617 persons. At that time the estimated population of the Australian Capital Territory was 25,400 persons. The population of the Territory at the Census of 30th June, 1954 was 30,315 persons, 28,277 being in the Canberra city area and 517 in the Jervis Bay area.

7. **Production.**—During 1952–53 the production of the more important items of the agricultural and pastoral industry was—Wheat, 7,764 bushels; wool, 2,245,000 lb.; whole milk, 688,000 gallons; butter, 5 tons; meat (bone-in weight, fresh), 2,826 tons. The numbers of livestock depastured at 31st March, 1954 were—Horses, 831; cattle, 9,394; sheep, 251,700; and pigs, 276.

8. **Education.**—The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. The New South Wales Education Department, however, provides teachers and the curriculum for schools in the Territory and is reimbursed annually for expenses incurred.

There are two public secondary schools in Canberra providing courses to the Leaving Certificate standard, Canberra High School, Acton, and Telopea Park High School, Barton. Entrance to the Canberra High School is on a competitive basis.

Ten schools provide courses for children in Infants and Primary classes, including two in the Jervis Bay area and three in rural districts. A school for mentally handicapped children was opened early in 1955.

There are six private schools in Canberra. Of these, St. Edmund's Christian Brothers College, St. Christopher's Convent, Canberra Grammar School (Boys) and Canberra Church of England Girls' Grammar School provide courses leading to the Leaving Certificate Examination.

The Australian Capital Territory Education Ordinance provides for the compulsory attendance at school of children between the ages of six and fifteen years.

Eleven pre-school centres, an occasional care centre and a mobile unit which visits outlying areas provide pre-school facilities for approximately 1,000 children between the ages of three and five years.

The Canberra Technical College, which follows the curricula set by the New South Wales Technical Education Department, provides trades courses for apprentices, vocational (non-trades) courses including accountancy, women's handicrafts, and sheep and wool courses, hobbies courses including ceramics, dressmaking, art, woodwork and motor maintenance and courses for Commonwealth authorities including workshop practice for Royal Military College cadets, motor maintenance for Australian Forestry School cadets and shorthand and typing courses for the Public Service Board. In addition the Technical College undertakes the trade testing of migrants seeking to enter skilled trades.

Education at university level is provided by the Canberra University College, details of which will be found in Chapter XII.—Education.

An area of about 250 acres has been set aside at Acton, for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research, and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Further reference to this University appears in § 8 of Chapter XII.—Education.

9. Finance.—Details of revenue and expenditure for the years 1949-50 to 1953-54 are given in the following table :—

(a) Other than Capital Works and Services. (b) Details not available. (c) Payment to Australian Capital Territory Transport Trust Account (loss on omnibus service). (d) Includes loss on operations 1949-50, £62,620; 1950-51, £75,559; 1951-52, £54,900; 1952-53, £12,700; and 1953-54, £24,000. (e) Excludes repairs and maintenance. (f) Expenditure on plant and equipment by Department of Interior only. (g) Includes restoration of bushfire damage, 1951-52, £54,441; 1952-53, £72,783; and 1953-54, £53,701.

The following table, which was prepared by the Department of the Interior, shows the total receipts and expenditure of the Australian Capital Territory from 1901-2 to 30th June, 1954 :—

**AUSTRALIAN CAPITAL TERRITORY: RECEIPTS AND EXPENDITURE TO  
30th JUNE, 1954.**

Receipts.	£	Expenditure.	£
Commonwealth Treasury—		Lands ..	929,802
Parliamentary Appropriations—		Engineering works ..	11,228,300
Revenue ..	36,260,107	Architectural works ..	19,679,993
Loan ..	5,703,199	Other capital expenditure, sundry debtors, etc. ..	2,249,954
		Seat of Government Establishment Account, being maintenance and administration less revenue; expenditure of a capital nature for which assets no longer exist; profit and loss accounts of trading activities, etc. ..	(a) 7,884,256
Total Receipts ..	41,963,305	Net Expenditure ..	41,963,305

(a) Excludes interest £5,799,001 net.

The foregoing figures exclude part cost of national buildings (Parliament House, the Secretariats, etc.), federal highways within the Territory, the Queanbeyan-Canberra Railway, the housing loan, etc., and loans for housing.

## NORFOLK ISLAND.

1. **Area, Location, etc.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude  $29^{\circ} 3' 30''$  South, longitude  $167^{\circ} 57' 5''$  East. Its total area is 8,528 acres, the island being about 5 miles long and 3 miles wide. From Sydney it is distant 930 miles, and from Auckland, 660 miles. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between  $49^{\circ}$  and  $85^{\circ}$  F. with a mean of  $68^{\circ}$  F. The average annual rainfall is 53 inches. It has been said that the healthy climate together with the beauty of its landscapes and seascapes, should make Norfolk Island "the Madeira of the Pacific". The island, both pre-war and post-war, has been popular as a tourist resort. Pre-war the only means of transport to the island was by ship. However, with the inauguration of direct air services from Australia and New Zealand the majority of tourists now take advantage of these services. The tourist traffic is rapidly increasing.

2. **Settlement and Population.**—The first colonization, in 1788, was by Lieutenant King, who in H.M.S. *Supply* established a small penal station as a branch settlement of that at Port Jackson. The settlement was abandoned in 1813, and for 13 years thereafter its chief use was as a whaling station and place of call for British warships.

From 1826 to 1855 it was again a penal station. In 1844 it was annexed to Van Diemen's Land (Tasmania).

The descendants of the *Bounty* mutineers, having become too numerous to subsist on Pitcairn Island, were removed to Norfolk Island in 1856. The new community numbering 94 males and 100 females were the descendants of British sailors and Tahitian women. The last of those transferred died at Norfolk Island on 1st March, 1943. The population of the island as disclosed by the Census of 30th June, 1954 was 942, consisting of 478 males and 464 females.

3. **Administration.**—In 1856 the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896 it was made a dependency under the Governor of that Colony, and finally by the passage of the Norfolk Island Act 1913 it was accepted by the Federal Parliament as a territory of Australia. From July, 1914 until 1st January, 1929, Norfolk Island was administered by the Department of Home and Territories, and then, until 25th June, 1941, by the Territories Branch of the Prime Minister's Department, but is now administered by the Minister for Territories through an Administrator. An amending measure, the Norfolk Island Act 1935, provided for the establishment of an Advisory Council of eight elected members which may advise the Administrator on matters affecting Norfolk Island.

4. **Economic Activity.**—The major economic activities of the island are primary production, the tourist trade and employment in Government instrumentalities.

(i) *Primary Industries.* The soil on the island is particularly fertile, the climate equable, and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation and trading difficulties with New Zealand have hampered production in the past. A recent relaxation of some restrictions enables out-of-season fruit and vegetables up to a limit of 3,000 lb. per week to be sent by air freight to Auckland.

Pre-war the principal primary product was passion fruit pulp. However, the introduction of disease together with the high cost of trellising and land reclamation has led to the curtailment of this industry. The production of bean seed has now become the main export industry. The island's isolation from many plant diseases found on the mainland, plus the fairly reliable dry period (which is conducive to the setting and maturing of seed), together with improved prices, induced a rapid expansion of production. In 1952-53, 3,374 bushels were exported and prices ranged from £5 to £5 10s. per bushel. These conditions also favour the production of other types of seed. Lord Howe Island Palm, Wild Lemon and Norfolk Island Pine seeds are the most important.

Island conditions are also conducive to good pasture growth but for a number of reasons meat production is insufficient to satisfy the demands of both the tourists and the local inhabitants. However, as a joint product to pastoral pursuits quantities of hides and wool are exported.

Fish and (in certain months) whales abound off the island. In the past a number of ventures have been formed to exploit these resources. They have been short-lived owing, for the most part, to the lack of a sheltered harbour.

(ii) *Tourists.* The unique history and unusual beauty of the island had always attracted a number of tourists in pre-war days. The building of the airstrip during the war has made the island far more accessible and a considerable tourist industry has developed, particularly with visitors from New Zealand. The industry is at present limited only by the accommodation available. Approximately 120 can now be catered for and accommodation is being continually expanded.

(iii) *Government Instrumentalities.* A large proportion of the population is employed by Commonwealth Government instrumentalities which are :—Department of Civil Aviation, Norfolk Island Administration, Department of Works, Overseas Telecommunications Commission and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.

5. *Trade, Transport and Communication.*—Imports to Norfolk Island in 1938–39 amounted to £27,590, mainly from Australia. Since the 1939–45 War they have risen from £32,402 in 1945–46 to £216,353 in 1953–54, the major proportion (£177,933 or 82 per cent.) still coming from Australia, while New Zealand supplied 18 per cent. in the latter year. Exports were valued at £16,970 in 1938–39, and have risen from £9,024 in 1945–46 to £45,852 in 1953–54. Australia again is the principal country concerned (£35,133), with New Zealand's proportion of the trade showing a steady increase from negligible amounts pre-war and early post-war to one-quarter or one-third of the total exports in recent years.

No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are (a) the produce or manufacture of Norfolk Island; (b) shipped direct to Australia; and (c) not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the Territory is maintained at approximately seven-weekly intervals by Burns Philp & Co. Ltd., Sydney. The journey from Sydney to Norfolk Island occupies about four days.

The construction of the aerodrome on the island was completed during 1943. A fortnightly passenger and air freight service between Sydney and Norfolk Island is maintained by Qantas Empire Airways Ltd. There is also a weekly air service from New Zealand.

There are approximately 50 miles of usable road on Norfolk Island. As a substantial section of the population possesses private motor cars and taxi-cab services are available, transport is almost exclusively by motor vehicle.

The cable from Great Britain via Vancouver, Fanning Island, Fiji bifurcates at Norfolk Island, one line connecting with New Zealand, the other with Brisbane. Until 10th June, 1947 the post office at Norfolk Island was part of the Commonwealth postal system, but as from that date Norfolk Island was established as a separate postal administration with its own issue of stamps.

6. *Social Condition.*—Education is free and compulsory up to the age of fifteen years. The school conforms to the Australian standard of public education, ranging from kindergarten to the intermediate certificate, with a two years' super-primary course of instruction in cultural subjects and in woodwork, needlework, leatherwork, basketry

and hat-making. The headmaster and assistant teachers are lent by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30th June, 1954 was 144. Dental examination and free dental service are provided for school children.

The Court of Norfolk Island is a court of record with dual jurisdiction. Sitting in its Limited Jurisdiction the Court has power to hear and determine actions of claims not exceeding £30 and to punish summarily all crimes and offences involving a pecuniary penalty or a sentence of imprisonment not exceeding six months. In its Full Jurisdiction the Court can hear and determine all actions, punish all crimes and offences, grant probate and letters of administration, hear and determine appeals from any conviction of the Court sitting in its Limited Jurisdiction, and has authority in all other matters. An appeal lies to the High Court of Australia from any judgment, order, decree or sentence of the Court sitting in its Full Jurisdiction when constituted by a Judge or the Chief Magistrate.

7. *Finance*.—The revenue of the Territory, together with an annual grant from the Commonwealth Government in aid of administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal sources of revenue in 1953–54 were:—Sale of liquor, £24,709; Commonwealth subsidy, £58,000; customs duties, £6,994. The total revenue was £139,236. Major items of expenditure in 1953–54 were:—administrative, £20,995; miscellaneous services, £15,777; repairs and maintenance, £26,613; business undertakings, £22,842. Total expenditure amounted to £104,379. In 1938–39 revenue amounted to £11,784 and expenditure to £13,565.

## PAPUA AND NEW GUINEA.

### § 1. Administration.

Following the outbreak of the Pacific War, civil administration in Papua and New Guinea was suspended on 11th February, 1942 and military control commenced. The Territory of New Guinea came under Japanese occupation in 1942, but the greater part had already been recaptured by Australian and Allied Forces when the Japanese surrendered in August, 1945. Information relating to the transfer back from military to civil control under the Papua-New Guinea Provisional Administration Act 1945–1946 may be found in Official Year Book No. 39 and earlier issues.

The Papua-New Guinea Provisional Administration Act 1945–1946 was repealed by the Papua and New Guinea Act 1949 which came into force on 1st July, 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provides for an Administrative Union, one Administrator, one Supreme Court and one Public Service.

Provision is made for an Executive Council of not less than nine officers of the Territory, who shall be appointed by the Governor-General, and a Legislative Council consisting of twenty-nine members, namely:—(a) the Administrator; (b) sixteen officers of the Territory (who shall be known as official members); (c) three non-official members possessing such qualifications as are provided by Ordinance and elected, as provided by Ordinance, by electors of the Territory; (d) three non-official members representing the interests of the Christian missions in the Territory; (e) three non-official native members; and (f) three other non-official members.

The Legislative Council was inaugurated on 26th November, 1951 by His Excellency Sir John Northcott, while Administrator of Australia.

Subject to the Act, provision may be made by Ordinance for the establishment of Advisory Councils for Native Matters and Native Village Councils.

The Act also makes provision for the continuance of the existing laws of the Territory of Papua and the Territory of New Guinea.

### § 2. Finance.

The following table shows particulars of the financial operations of the Papua and New Guinea Administration since its inception in July, 1949, together with those of the combined Territories in 1938–39. Further information on each Territory will be found on pages 140 and 147.

(a) Included with Lands.

(b) Trust Territory of New Guinea only.

### § 3. Agriculture and Animal Industry.

1. Soils.—Although a large proportion of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all parts where fertile soils occur, suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils of the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far, these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the Delta plains and other parts of the Gulf of Papua, and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the Central Plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas),

Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramu and Markham Rivers.

2. **Climate.**—The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking, the climate is moist and tropical, except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and thus no great variation in day-length over the year. The two seasons which are experienced are generally described as the "south-east" and the "north-west", corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, between the end of December and about March. During the periods between these seasons, November and early December, and about March to April, there are two short spells of calm weather.

Rainfall varies considerably from an average annual rainfall of 245 in. at Gasmata in New Britain and 231 in. at Kikori in Papua, to about 88 in. at Wewak in New Guinea and 40 in. at Port Moresby.

Although the Territory has no summer and winter, it has a wide temperature range, due to altitude differences, varying from an absolute highest temperature of about 100° F. along the coast, to freezing point on its highest peak, Mt. Wilhelm (15,400 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent. are rare at coastal stations, average figures varying from 80 per cent. at 9 a.m. to 65 per cent. at noon and 75 per cent. at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

3. **Suitable Crops.**—The crops which can be grown in Papua and New Guinea include copra, rubber, tea, coffee, cocoa, jute, kenaf, manila hemp, sisal, rice, pepper, tobacco, peanuts, kapok, cassava, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago and tung oil.

The agricultural commodities which, because of their marketing prospects and suitability for production in the Territory, are considered to have the best possibility for development are copra, rubber, cocoa, coffee, tea, fibres and peanuts for export; and rice, fresh meat, dairy products, fresh vegetables and fresh fruit (e.g. bananas, papaws, citrus and pineapples) for local consumption.

4. **Plantation Agriculture.**—The principal plantation crops cultivated are coconuts, rubber, cocoa and coffee.

*Coconuts.* Territory coconut plantations suffered severely from damage and neglect during the 1939-45 War, but rehabilitation has been rapid and about 500 plantations together with native coconut stands produced 83,368 tons of copra for export in 1953-54, valued at £5,915,490. The area (excluding native stands) planted with coconut palms in March, 1954 was 234,935 acres. In addition, 188 tons of desiccated coconut, valued at £28,960, 10,215 tons of coconut oil valued at £1,397,999 and 4,840 tons of coconut meal valued at £102,048 were exported in 1953-54. A copra crushing mill was established at Rabaul in 1952.

A contract with the United Kingdom commenced on 1st March, 1949, for a period of nine years, for the sale of Territory copra in excess of Territory and Australian requirements. The price of copra sold for the first contract year, 1949, was £60 per ton f.o.b. Territory ports, and the contract provides that the price for each subsequent year is to be not more than 10 per cent. higher or lower than that for the preceding year and is to be negotiated before the end of the preceding year. Early in 1952 the termination date of the contract was varied to 31st December, 1957 and prices are now negotiated on the basis of calendar years. The price for the calendar year 1955 is £81 5s. per ton f.o.b. Territory ports for fair merchantable sun-dried copra with small price differentials for the other grades.

*Rubber.* Rubber exports have more than doubled since before the Japanese invasion, increasing from an average of 1,352 tons per year during the three years 1937-38 to 1939-40 to 3,145 tons in 1953-54, valued at £612,788. A total area of 27,071 acres had been planted with rubber trees up to March, 1954.

*Cocoa.* Exports of cocoa beans increased from 207 tons in 1949-50 to 727 tons in 1953-54, valued at £249,588. The area (excluding native stands) planted with cocoa trees in March, 1954 was 19,395 acres.

*Coffee.* Exports of coffee beans increased from 21 tons in 1949-50 to 37 tons in 1953-54, valued at £60,211. The area (excluding native stands) planted with coffee trees in March, 1954 was 806 acres.

5. *Native Agriculture.*—Most of the native inhabitants of Papua and New Guinea are agriculturists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is usually cut largely from naturally occurring stands. In other parts of the country small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years the natives have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. In coconut areas large quantities of copra are produced. In 1953-54 native copra production was estimated at about 20,000 tons.

In many localities the natives follow a farming system known as "Bush Fallowing Rotation". The inhabitants of each village have, at any one time, a number of distinct and separate cleared garden areas in the land surrounding the village. The garden clearings may be located some miles from the village and are not usually contiguous. Each garden area may be made up of a number of distinct plots owned by individual natives or families. Communal ownership of gardens is rare. The number of garden clearings (and their area) attached to each village depends on the size of the village and the fertility of the land.

The method of cultivation followed is for the jungle trees to be felled and undergrowth cleared with axes and knives, the larger trees being usually left standing. The timber and foliage is allowed to dry out and then burnt. In some localities there is a little cultivation before the crops are planted, and root vegetables are placed in holes dug with a stick. In other places, however, there is careful preparation of the soil. Some weeding is done while the crops are growing. After harvesting, a second crop is rarely planted immediately in that garden area, but a new area of land is selected, cleared, burnt and planted. The natives return to the first area to harvest fruit from trees, such as papaw and banana, that may have been planted in the garden, but these are soon submerged in the new growth which quickly appears. The plot is allowed to lie fallow for a number of years, the period varying from 7 to 10 years or even longer, depending upon the local population pressure. During this time high secondary jungle has probably grown. Ultimately the natives return to the original plot, and clear, burn and plant again. The cycle continues year by year throughout the agricultural land belonging to the village. The foregoing is a broad generalization of the method followed. However, there are many variations.

The business of growing food is done by both the men and women. The division of work is usually clearly defined within the village itself but this division is not necessarily the same in all areas. Generally it is found that felling the forests is always done by the men, and carrying the harvested food home to the village is nearly always done by the women. However, other work such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for improved land use in village gardens for food production for local consumption, as well as for economic production of crops for sale, takes a high priority in Government policy.

6. *Animal Industry.*—At 31st March, 1954 the livestock in the Territory consisted of 7,522 cattle, 1,879 sheep, 3,483 goats, 4,841 pigs, besides horses, mules and poultry. These figures exclude native-owned livestock. The introduction of rabbits, foxes, hares and monkeys is prohibited.

A number of British breeds of cattle are represented in Territory herds. For dairying Jersey and Australian Illawarra Shorthorns are most popular, while Black Poll, Polled and Horned Shorthorns are represented for meat production. Under good management these breeds have done well in the Territory.

Most of the sheep now in the Territory are Romney Marsh breed located at Nondugl in the highlands of New Guinea. This breed has been tried in various parts of the Territory. It produces a good carcass, and in drier parts a useful sheep. There are also some Asiatic sheep, and crossed with Romney Marsh they produce good carcasses and are hardy. Current investigations on sheep raising include tests and observations to determine the most suitable breeds and areas for grazing for both mutton and wool.

## PAPUA.

### § 1. General Description.

1. *Early Administration.*—Particulars of the early administration of Papua are given in Official Year Book No. 19, p. 576.

2. *Administration by Commonwealth of Australia.*—The Territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of 18th March, 1902, and was accepted by the Commonwealth by the Papua Act 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is now under the control of the Commonwealth, but not included within it, and is divided into six magisterial districts, namely, Southern Highlands, Western, Gulf, Central, Milne Bay and Northern.

3. *Area, etc.*—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 920 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland, and 1,936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland, and 2,754 on the islands. A reference to the physical characteristics of the Territory appears in previous issues of the Official Year Book (*see* No. 18, p. 633).

### § 2. Population.

1. *Non-indigenous Population.*—At the Census of 30th June, 1954 the non-indigenous population of Papua was 3,867 males, 2,446 females, 6,313 persons. Corresponding figures at the Census of 30th June, 1947 were, respectively, 2,057, 1,182 and 3,239.

The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. At the 1933 Census, it numbered only 1,148, but amounted to 5,295 at the 1954 Census (3,372 males and 1,923 females).

The non-European section of the non-indigenous population at 30th June, 1954 was 1,018, of whom 34 were full-bloods and 984 were half-castes with one of the parents a European. Comparable figures as at the 1947 and 1933 Censuses, respectively, were:—full-bloods—194 and 786; half-castes—503 and 227.

2. *Native Population.*—It is not possible to give exact data regarding the number of natives, because part of the interior is not as yet under complete Government control. However, the enumerated and estimated population of the Territory of Papua at 30th June, 1954 numbered 488,396 persons. This comprised 286,196 enumerated persons (151,464 males and 134,732 females) and 202,200 estimated. The total number was distributed through districts as follows:—Southern Highlands, 169,916; Western, 47,988; Gulf (including the former Delta district), 60,771; Central, 81,972; Milne Bay, 82,298; Northern, 45,451.

### § 3. Native Labour, Taxation, Health, etc.

1. **Native Labour.**—The laws relating to the employment of natives are uniform in Papua and New Guinea, and may be found in the Native Labour Ordinance 1950–53. These provide for the engagement of natives under a permit. Permits are issued by a District Officer, and authorize the holder to engage natives for employment on his own behalf, or on behalf of a registered employer who has authorized him to act on his behalf. Under this Ordinance a native may be issued with a Native Assistant's Permit, which authorizes him to solicit natives to work for his employer, or for other employers who have authorized him to act on their behalf.

Natives are employed under written agreements which have been sanctioned and attested by a District Officer. The period of the agreement must not exceed two years, but one further agreement, for a period not exceeding one year, may be drawn up, if both parties desire it. The period, in both cases, begins on the day on which the agreement is sanctioned and attested. Both parties may, by mutual consent, and with the approval of a District Officer, cancel an agreement. On the termination of an agreement, employers are required to repatriate workers to their own villages.

Natives under the age of sixteen years may not be employed. Employers must provide native employees with housing, medical attention, food and clothing free of charge. A minimum monthly wage of fifteen shillings and a working week of 44 hours are prescribed by Ordinance. Provision is also made for compensation in the case of injury or death.

2. **Native Taxes.**—No direct taxes have been levied on natives since the war. Native Village Councils (which are formed voluntarily by the natives) are, however, empowered to levy rates on villagers for the purpose of providing for local services carried out by the Councils.

3. **Health.**—The Department of Health has the general oversight of all medical and dental services. It maintains a large number of hospitals, which are staffed by fully-trained European medical personnel and trained native assistants, for both European and native patients. The Department has adequate facilities for research in tropical medicine.

At 30th June, 1954 there were in the Territory three European hospitals (one privately controlled); 31 native hospitals (one private and 14 mission); one mental hospital; 221 village aid posts (72 mission); 112 welfare clinics (45 mission); and three Hansende colonies. The Missions employ their own doctors and nurses in their medical establishments. A training school has been established for the purpose of training natives in first aid, elementary physics, chemistry, anatomy, physiology and pathology in preparation for their employment as Native Medical Assistants. Natives are also attending the Central Medical School at Suva, Fiji, to be trained as Native Medical Practitioners. The chief complaints treated in hospital are malaria, yaws, tropical ulcers, respiratory infections, hookworm, venereal and skin diseases.

### § 4. Land Tenure.

The basic principle of the land laws of Papua is that all land not specifically alienated by due process from the natives is native land. At 30th June, 1954, of the total estimated area of Papua, approximately 58,000,000 acres, only 1,838,827 acres had been alienated. The distribution of land in Papua at 30th June, 1954, according to tenure, was as follows:—alienated: held by private non-indigenous inhabitants—freehold, 24,284 acres, leasehold, 278,652 acres; held by administration, 1,499,268 acres; native reserves, 60,907 acres; total alienated, 1,863,111 acres.

Although, as the figures above show, a small amount of freehold land exists in Papua, no further estates in fee-simple or other estate in freehold can be granted under the provisions of the Land Ordinance 1911–1952 of Papua. Leases of various kinds may be granted by the Administration. The principal types of lease available are agricultural leases, pastoral leases, leases of town allotments, business leases and

residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal and, in general, leases may be granted for periods of up to 99 years. Rent is based on the unimproved value of the land. For agricultural leases the rental rate per annum is 5 per cent. of the unimproved value and for pastoral leases the rate is  $2\frac{1}{2}$  per cent. Concessions regarding freedom from, or reduced, rents apply during the early developmental periods of agricultural and pastoral leases. All leases are subject to improvement conditions which may be varied or relaxed under certain circumstances. The following classes of leases were in force in Papua at 30th June, 1954 :—Agricultural, 630—246,673 acres; pastoral, 26—29,695 acres; residence, 149—198 acres; special, 164—848 acres; mission, 323—839 acres; business, 100—192 acres; town allotment, 495—207 acres; total, 1,887—278,652 acres.

Leases of Crown land may be obtained from the Administration. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. If a lease of land which is native-owned is desired, application must be made to the Administration. If the native owners are willing to sell the land, and the Administrator is satisfied that the land over which the lease is applied for is not required or likely to be required by the native owners, and if otherwise satisfied that the lease should be granted, the Administration itself purchases the land and grants an appropriate form of lease to the applicant.

The registration of titles, interests and dealings in alienated land is provided for under the Real Property Ordinance 1913-1951 modelled on the Torrens system of land registration. A start has been made on the recording of native land ownership under the Native Land Registration Ordinance 1952.

## § 5. Production.

1. *General*.—The products of the Territory are obtained from its agricultural, forest, mining and fishing industries. A factory for the extraction of cutch from mangrove bark has been established at Kikori in the Gulf District. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Natives however, do produce copra for export and native enterprise in other fields of agricultural production for export purposes is being encouraged. The principal agricultural products of Papua for the export trade are copra and rubber. All of the timber milled during 1953-54 was absorbed by local building requirements. The main products of fisheries exported from Papua are trochus and green snail shell. Gold and manganese, zinc-lead and copper ores have been mined in commercial quantities.

Agricultural and pastoral conditions in Papua and New Guinea have been dealt with, for the sake of convenience, as a whole, and reference should be made to pp. 131-134 for information on the soils, climate, crops, methods of cultivation, etc., throughout both Territories. The following paragraphs relate to forestry, mining and water-power resources in Papua.

2. *Forestry*.—(i) *General*. A general description of the forest policy which applies in Papua as well as in the Trust Territory of New Guinea is given under the heading "Timber" on page 143.

(ii) *Timbers*. Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Kwila, the most important hardwood found in millable quantities in Papua and New Guinea occurs in important stands east of Port Moresby. Mangroves occur in large areas fringing the Gulf of Papua and are cut for the preparation of cutch from the bark.

(iii) *Survey Work.* Forestry field work is being carried out in Papua with a view to assessing the forest resources available and to survey areas that will be thrown open for cutting.

(iv) *Permits.* At 30th June, 1954 thirteen permits were current. The total area of forest involved was 66,136 acres. Cutting on private land brought the total number of mills to 22, and the total cut of timber for the year to 2 million super. feet. No timber was exported.

3. *Mining.*—(i) *Variety of Minerals.* A large number of minerals have been found in Papua including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum and lignite, but mostly not in deposits of economic importance.

Gold was discovered in 1888 and has been found in many parts of Papua. Before the 1939-45 War gold was an important item in the Territory's production and in 1938-39 (valued at more than £150,000) was the major export, but since the war gold production has dwindled to insignificance. The average annual estimated quantity of gold yielded for the five years ended 1952-53 was less than 300 fine oz. compared with almost 28,000 fine oz., the average for the last three pre-war years. During 1953-54 the production of gold realized £4,785, bringing the total value of gold won up to 30th June, 1954 to £3,299,836.

Of precious stones, only the topaz and beryl have been obtained. Large beds of apparently good coal also exist.

Manganese ore valued at £1,181 was exported from Papua during the year ended 30th June, 1954. Large quantities of copper ore were mined and exported, up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

(ii) *Oil Search.* Since oil search began in Papua in 1911 over £11 million has been spent. The existence of petroleum has been traced at scattered intervals over a large area. At 30th June, 1954 two companies held petroleum prospecting permits under the provisions of the Petroleum (Prospecting and Mining) Ordinance 1951-1954. Oil prospecting was mainly confined to the Gulf and Western Divisions.

4. *Water Power.*—Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that there is at least 10 million horse-power available for this purpose.

## § 6. Trade, Transport and Communication.

1. *Customs Tariff.*—The present customs tariff has been in operation since 1st July, 1950. It provides high revenue rates on ale, spirits, wines, timepieces, cigarette papers, fancy goods, jewellery and certain apparel and piece-goods made of silk. Of 75 items now mentioned in the import schedule, 59 are on the free list and two are partially free. The tariff allows duty-free treatment of necessities, but increases rates on non-necessities. The purpose of the revision was to relieve both general industrial costs and the basic costs of living with a view to encouraging further development of the Territory. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant and machinery to be used mainly for developmental purposes. Under this provision most agricultural machinery would be admitted duty free. The rate of duty on items not specified in the schedule is 10 per cent. *ad valorem*. No preferential rates are specified in the schedule. A surcharge equal to 10 per cent. of duty payable was imposed as from 17th January, 1952. Export duties are imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) 1936 for the free entry into Australia of certain goods produced and imported direct from Papua (*see* Chapter VIII.—Trade), and a proclamation of 25th September 1935 exempted from primage duty goods produced or manufactured in the Territory

2. Imports and Exports.—(i) *Total Values.* The table below summarizes and compares the values of imports and exports for the pre-war year 1938–39 and the post-war years 1951–52 to 1953–54.

## TERRITORY OF PAPUA : IMPORTS AND EXPORTS.

( £.)

Particulars.	1938–39.	1951–52.	1952–53.	1953–54.
Imports .. .. .	514,808	5,858,223	4,895,869	5,722,166
Exports—				
Domestic Exports .. .. .	410,666	2,376,165	1,985,535	1,616,786
Non-Domestic Exports .. .. .	79,492	412,992	337,370	304,376
Total Exports .. .. .	490,158	2,789,157	2,322,905	1,921,162

(ii) *Imports.* The following table summarizes the sources of imports. In the post-war years Australia has supplied a far greater proportion of the imports than was the case pre-war and this proportion has continued to increase in each successive post-war year. The increase in total imports in 1953–54 was due partly to increased purchasing power arising from the higher Commonwealth Government grant and partly to the progressive relaxation of import restrictions imposed to conserve foreign exchange.

## TERRITORY OF PAPUA : COUNTRY OF ORIGIN OF IMPORTS.

( £.)

Country of Origin.	1938–39.	1951–52.	1952–53.	1953–54.
Australia .. .. .	239,105	3,897,992	3,691,696	4,167,341
Canada .. .. .	(a)	11,097	22,102	4,305
China .. .. .	..	15,483	6,861	11,670
Hong Kong .. .. .	..	74,265	55,426	132,236
India .. .. .	..	58,579	36,038	36,199
United Kingdom .. .. .	56,699	765,760	276,570	420,071
United States of America .. .. .	73,446	370,401	332,307	422,658
Other Countries .. .. .	145,558	664,646	474,869	527,686
Total Imports .. .. .	514,808	5,858,223	4,895,869	5,722,166

(a) Not available, included in " Other countries ".

(iii) *Exports.* (a) *Countries of Destination.* The countries of destination of Papuan exports are shown below. The reduction in the value in 1953–54 of total exports and exports to Australia in particular arose from the continued decline in the price of rubber from the peak level it attained in 1951–52, and the cessation of production of desiccated coconut. Australia imports practically the whole of the Territory's production of these crops.

## TERRITORY OF PAPUA : COUNTRY OF DESTINATION, OF EXPORTS.

(£.)

Country of Destination.	1938-39.	1951-52.	1952-53.	1953-54.
Australia .. .. .	409,408	2,582,567	1,917,493	1,690,060
United Kingdom .. .. .	25,840	188,430	342,014	154,483
Other Countries .. .. .	54,910	18,160	63,398	76,619
Total Exports .. .. .	490,158	2,789,157	2,322,905	1,921,162

(b) *Principal Commodities.* The following table provides details of the value of the principal domestic exports for the same years. The reduction in value of total domestic exports was caused by the decline in returns from rubber and "other coconut products". The considerable decrease in value of the latter was due to the cessation of production of desiccated coconut.

## TERRITORY OF PAPUA : PRINCIPAL DOMESTIC EXPORTS.

(£.)

Commodity.	1938-39.	1951-52.	1952-53.	1953-54.
Rubber .. .. .	114,949	1,244,259	736,073	612,788
Copra .. .. .	57,999	958,109	848,177	883,814
Other Coconut Products .. .. .	48,140	127,610	328,134	27,617
Cocoa Beans .. .. .	..	588	3,111	3,638
Kenaf Fibre .. .. .	..	4,865	5,740	1,308
Gold .. .. .	152,103	2,185	2,051	4,785
Shell (Marine) .. .. .	9,600	19,281	41,220	38,803
Hides and Skins (Crocodile) .. .. .	105	11,273	13,823	23,038
Other .. .. .	27,770	7,995	7,206	20,995
Total Domestic Exports .. .. .	410,666	2,376,165	1,985,535	1,616,786

3. *Shipping.*—In 1952-53, 125 British and 6 vessels of other nationalities called at Territory ports and discharged 57,303 tons of cargo and loaded 22,537 tons. Corresponding figures for 1953-54 were 150, 1, 62,035 and 27,111 respectively.

Regular passenger and freight services operate between Australia and the Territory of Papua. Vessels trading between Australia and the East also call at Territory ports. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

4. *Other Forms of Transport and Communication.*—Air services link Papua with Australia, New Guinea and the British Solomon Islands. There were 81 aerodromes and seaplane alighting areas in Papua at 30th June, 1954, and of these 23 were the responsibility of the Department of Civil Aviation, 25 were operated and maintained by the Administration, and 29 owned and maintained by Missions, plantations and mining interests. Much of the internal traffic and freight is carried on a charter basis. Regular air services operate from Port Moresby to Daru and Lake Kutubu in the West, Samarai and Esa Ala in the East, to Lae, Wau, Madang and Wewak in New Guinea, and to Rabaul, Manus and Bougainville.

There are nearly 955 miles of road in Papua, about 454 miles being suitable for medium and heavy traffic, and the greater proportion located in the Central and Northern Districts, which are north-east of Port Moresby.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is jointly shared by the Overseas Telecommunications Service and the Administration. The former provides a service between Papua, Australia and the Territory of New Guinea, while the latter operates radio telephone and radio telegraph services to outstations from Port Moresby and Samarai.

A medium-wave broadcasting station, 9PA Port Moresby, operates under the control of the Australian Broadcasting Commission.

### § 7. Finance.

The principal source of revenue for the Territory of Papua is the annual grant received from the Commonwealth Government, which in 1953-54 amounted to £2,318,905. Customs duties, £723,080 in 1953-54, are next in importance. The total revenue during 1953-54 was £3,296,593 compared with £2,777,271 in 1952-53 and £165,823 in 1938-39. Of a total expenditure of £3,240,309 in 1953-54, £1,543,739 was spent on public works, £455,932 on medical services, £217,738 on native affairs and £1,022,900 on ordinary votes. Expenditure amounted to £2,808,095 in 1953-54 and to £166,330 in 1938-39.

For particulars of the finances of the combined Territory administration, *see* p. 130.

## TRUST TERRITORY OF NEW GUINEA.

### § 1. General Description.

The land area of the Territory of New Guinea is about 93,000 square miles and the area including the sea within the lines drawn through its extreme outer points is more than one million square miles. As the coast of the Territory has not been completely surveyed, the areas of the various islands are known only approximately.

The approximate areas of the principal islands together with the small islands adjacent thereto are as follows:—North-East New Guinea (also called "The Mainland"), 69,700 sq. miles; Bismarck Archipelago—New Britain, 14,600 sq. miles, New Ireland, 3,340 sq. miles, Lavongai, 460 sq. miles, Admiralty Islands, 800 sq. miles, total Bismarck Archipelago, 19,200 sq. miles; Solomon Islands—Bougainville, 3,880 sq. miles, Buka, 220 sq. miles, total Solomon Islands, 4,100 sq. miles; grand total, 93,000 sq. miles.

Information regarding physiography and climate will be found in Official Year Book No. 22, p. 613, and in the *Official Handbook of the Territory*.

### § 2. Government.

1. **The Military Occupation (1914-18 War).**—On 17th September, 1914, the Acting Governor of German New Guinea signed terms of capitulation with the officer commanding a Naval and Military Expedition sent from Australia, and thereafter the Territory was under military administration until the establishment of Civil Government on 9th May, 1921.

2. **Mandate (1920).**—In 1919 it was decided by the Principal Allied and Associated Powers that the Territory of New Guinea, which Germany gave up as one of the terms of peace, should be entrusted under Mandate from the League of Nations to the Government of the Commonwealth. The issuing of the Mandate was, however, delayed, and it was not until 17th December, 1920 that its terms were settled, and the Mandate itself did not reach Australia until April, 1921.

The terms of the Mandate are given in Official Year Book No. 33 (*see* p. 264.)

3. **1939-45 War.**—For the events following the outbreak of the Pacific War and the formation of the Papua-New Guinea Provisional Administration in 1945, *see* p. 130 of this chapter and earlier issues of the Official Year Book.

4. **Trusteeship (1946).**—The Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13th December, 1946. The terms of the Agreement are shown in Official Year Book No. 39, pp. 355-7.

5. **Administration.**—For particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration *see* Official Year Book No. 36 and earlier issues.

For administrative purposes the Territory is divided into the following nine districts:—New Britain, comprising New Britain and adjacent islands; Morobe, Madang, Eastern Highlands, Western Highlands, and Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is under a District Commissioner, assisted by a small staff.

### § 3. Population.

1. **Non-indigenous Population.**—At the Census of 30th June, 1954 the non-indigenous population of the Territory of New Guinea was 7,201 males, 4,241 females, 11,442 persons. Corresponding figures at the Census of 30th June, 1947 were, respectively, 4,369, 1,831 and 6,200.

The European population of the Territory increased from 64 in 1885 to 3,191 at the Census of 1933, and it reached its pre-war peak of 4,608 in 1939. At the 1954 Census the European population numbered 8,020 (5,185 males and 2,835 females).

Malays seem to have been the first Asians brought by the Germans to German New Guinea; 37 of them were recorded on the mainland in 1885. About 1889 the New Guinea Company began to bring Chinese, Malays and Javanese in growing numbers from Singapore and Java to work on the plantations; in the year 1892 there were about 1,800 Asians on the mainland. By 1898 the number had decreased to 300 or 400, but it had risen to 1,830 at the time of the 1933 Census, and at 30th June, 1941 numbered 2,228, mostly Chinese. At the Census of 30th June, 1954 non-Europeans numbered 2,404, of whom Chinese (2,192) constituted the major proportion, whilst half-castes with one of the parents a European numbered 1,018.

The total non-indigenous population at the Censuses of 1921, 1933, 1947 and 1954 was, respectively, 3,773, 5,216, 6,200 and 11,442 persons.

2. **Native Population.**—The enumerated and estimated native population of the Territory of New Guinea as at 30th June, 1954 numbered 1,195,307 persons, comprising enumerated, 1,010,593 (538,113 males and 472,480 females), and estimated, 175,826. The total population was distributed throughout the several districts as follows:—Eastern Highlands, 300,234 persons; Western Highlands, 182,264; Sepik, 220,308; Madang, 116,611; Morobe, 189,410; New Britain, 87,892; New Ireland, 34,584; Bougainville, 48,990; Manus, 15,014.

### § 4. The Natives.

1. **General.**—The natives are divided into two main groups—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands, and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See* Official Year Book No. 16, p. 670, and *Official Handbook of the Territory*, Pt. V.)

2. **Land Tenure.**—Native customs in regard to the ownership and use of land may be briefly outlined as follows. The ownership and use of the land are generally individual, although, in some rare cases, particularly in North Bougainville, the communal system exists. In districts where a great many coconut palms are growing on native lands

it is often found that the land is the property of a chief or of one of the old men of the tribe, and that the coconut palms growing thereon are divided into small groves, and are the property of several members of the tribe. Customs with regard to the use of unoccupied forest lands vary. Right of inheritance to land is almost invariably through the maternal branch. (*See Official Year Book No. 17, p. 634, and Official Handbook of the Territory.*)

3. **Research Work.**—Research work among the native peoples of New Guinea was initiated under the German Administration and this work has been continued on a wider scale.

4. **Education.**—Education in the Territory is provided by the Administration and various mission organizations. Schools for natives have also been established by Native Village Councils. The Education Ordinance 1952 enables the Administrator to establish an education advisory board, district education committees, European and native schools and to grant financial aid for educational purposes. European teachers are recruited from Australia, and native teachers are trained in the Territory by the Administration and the Missions. During the year ended 30th June, 1954, 79 schools were maintained by the Administration for 4,495 children, of whom 468 were Europeans, 329 Asians, 36 of mixed race and 3,662 natives. The total number of pupils in the various grades of mission schools was 88,492, of whom there were 18 Europeans, 364 Asians and 172 of mixed race. To assist the educational work of the Missions the Administration provides expert advice, educational equipment and text-books. In addition, the sum of £56,597 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1954.

5. **Health of Natives.**—The main diseases affecting the natives are malaria, yaws, respiratory diseases, dysentery, tropical ulcers, hookworm and filariasis. The Department of Health is engaged in combating these diseases with a staff of fully-trained medical officers, medical assistants and orderlies in native hospitals at Administration stations and sub-stations. Its staff also supervises hospitals on plantations. It has adequate facilities for research in tropical medicine, and a training scheme for natives as medical orderlies. The Department also provides the Missions with much of their medical stores and supplies, and maintains two Hansenide colonies for the treatment of natives suffering from Hansen's Disease. The Department also undertakes the general oversight of sanitary conditions in the Territory.

6. **Missions.**—A number of mission societies operate in the Territory.

The Society of the Sacred Heart of Jesus works in the Bismarck Archipelago, the Society of the Holy Ghost, the Franciscan Order and the Society of the Divine Word along the coast of north-east New Guinea from Sepik to the Dutch border and in the Central Highlands, and the Marists in Buka and Bougainville. These are Roman Catholic Missions. The Protestant Missions are the Methodist Overseas Mission in New Britain and New Ireland, the New Zealand Methodist Mission in Bougainville, the Lutheran Mission (supported and staffed by the Lutheran Churches in Australia and America) which works in Morobe, Madang, the Eastern and Western Highlands, New Britain and Manus, the New Guinea Anglican Mission in New Britain, the Seventh Day Adventist Mission in Bougainville, New Britain and the mainland of New Guinea, the East and West Indies Bible Mission and the Baptist Mission in the Central Highlands. The South Seas Evangelical Mission (Undenominational) and the Assemblies of God Mission are also working in the Sepik area. All these societies include teaching with their missionary work.

### § 5. Land Tenure.

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua. In New Guinea, although under the Land Ordinance 1922-1951 grants of freehold estates may be made, as a matter of policy freehold estates are no longer granted by the Administration, all grants now being restricted to leaseholds. However, in New Guinea the amount of freehold land of earlier origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase subject only to the general provision in New Guinea that dealings in land are subject to the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,520,000 acres, of which, at 30th June, 1954, 1.80 per cent. was alienated. The following was the distribution according to tenure at 30th June, 1954 :—alienated : held by private non-indigenous inhabitants—freehold, 519,297 acres, leasehold, 228,480 acres ; held by administration, 324,496 acres ; native reserves, 26,926 acres ; total alienated, 1,093,199 acres.

Leases in force at 30th June, 1954 were as follows :—Agricultural, 643—186,624 acres ; dairying, 6—1,300 acres ; pastoral, 9—24,606 acres ; residential and business, 915—1,013 acres ; special, 107—2,297 acres ; mission, 558—2,035 acres ; leases granted to Chinese in towns, 302—90 acres ; long period leases from German régime, 104—4,515 acres ; total, 2,644—222,480 acres.

Under German law there was a system of registration of titles in a " Ground Book ", but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in an Ordinance entitled the *Lands Registration Ordinance 1924-1951*. The land registers were lost during the 1939-45 War, and provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance 1951-53*. A start has been made on the recording of native land interests under the *Native Land Registration Ordinance 1952*.

## § 6. Production.

1. *General*.—The products of the Territory are obtained from its agricultural, mining, fishing and forestry industries. A copra crushing mill at Toboi, near Rabaul, is producing coconut oil at the rate of about 10,000 tons a year. A company (Commonwealth-New Guinea Timbers Ltd.), in which the Commonwealth Government has a controlling interest, has erected a modern factory at Bulolo for the manufacture of plywood and veneer. Production commenced in February, 1954. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the native population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Natives, however, produce copra for export and in recent years the natives have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. The principal agricultural products of New Guinea for the export trade are copra and cocoa. Most of the timber milled during 1953-54 was absorbed by local building requirements, exports of sawn timber amounting to approximately 10 per cent. of production. The main products of fisheries exported from New Guinea are trochus and green snail shell. Gold is the principal mineral mined.

For information on the agricultural and pastoral industries, which for the sake of convenience is related to the Territory of Papua and New Guinea as a whole, see pp. 130-133. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea.

2. *Timber*.—Surveys of the timber resources of the Morobe District indicate that there are approximately 500 million super. feet of timber in the pine forests of the Bulolo Valley. This is supporting sawmills cutting for local use and export, and fitches are also being exported to Australia for the manufacture of battery separator veneer. Commonwealth-New Guinea Timbers Ltd. are now cutting the pine forests for plywood production and the area will be progressively reforested as it is cut. Two sawmills controlled by the Administration established at Yalu and Keravat are supplying local requirements. Exports of sawn timber amounted to nearly 1,400,000 super. feet during 1953-54 and the log export totalled 775,149 super. feet.

The Forestry Ordinance 1936-1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles ; the grant of emergency timber permits to provide timber for Territory requirements ; the disposal by public tender of timber areas designated by forest officials of the Territory ; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. Timber growing on native lands cannot be acquired by private purchasers direct from the natives but must be obtained through the Administration. A prescribed royalty is payable on all forest produce taken under permit or licence. The forest area being exploited in 1953-54 was approximately 271,172 acres.

3. **Fisheries.**—The wealth of the waters of the Territory has been little exploited. Fish are caught at many places along the coast to supply the small local demand of the natives and of the few resident Europeans. Trochus shell to the value of £131,011 and green snail shell to the value of £39,310 were exported during 1953–54.

4. **Mining.**—The production of gold and associated silver is the most important mining activity in New Guinea. Gold has been discovered on the Waria, the Ramu, the Francisco, and the Markham Rivers, and in tributaries of the Sepik River. Rich gold deposits were discovered in the Morobe District in 1926; the field is situated about 90 miles (40 by air) inland from Lae, the nearest coastal port. Communication is established with the coast by regular air service and by road transport. Silver is usually found associated with the gold in these deposits. Osmiridium is reported to have been found on the upper tributaries of the Ramu, and platinum on the Kabenau River. Copper has been discovered in the form of chalcopyrite and malachite in the Baining District. Iron occurs as magnetite and haematite in the Baining District, apparently in large quantities. Sulphur occurs in several localities in the volcanic regions of the Territory. Brown coal has been found on the mainland in the vicinity of Astrolabe Bay, and in the southern portion of New Ireland. Except for gold and silver, however, production of minerals has not proved economical.

The granting of rights, leases and claims for mining purposes are provided for in the Mining Ordinance 1928–1947 and Regulations thereunder.

The production of gold in New Guinea during the last three pre-war years averaged about 228,000 fine oz. a year, at an average value of £2,000,000. In 1940–41 it amounted to 263,113 fine oz., valued at £2,808,835. Although the market price of gold has been fixed at a much higher level than in 1938–39, mining costs have risen to a much greater extent and, as a consequence production since the war has been on a much smaller scale, averaging 91,000 fine oz., at a value of £1,200,000 a year over the five years ended 1951–52. Production in 1953–54 amounted to 90,856 fine oz., valued at £1,409,480, and in 1952–53 to 138,694 fine oz., valued at £2,147,766.

The Petroleum Ordinance 1936 has been superseded by the Petroleum (Prospecting and Mining) Ordinance 1951–54, which has facilitated the carrying out of geological surveys and prospecting activities generally. A search for petroleum is being conducted by one company which has a permit in the Sepik River area.

## § 7. Trade, Transport and Communication.

1. **Customs Tariff.**—The present customs tariff has been in operation since 1st July, 1950. It provides high revenue rates on ale, spirits, wines, timepieces, cigarette papers, fancy goods, jewellery and certain apparel and piece goods made of silk. Of 75 items now mentioned in the import schedule, 59 are on the free list and two are partially free. The tariff allows duty-free treatment of necessities, but increases rates on non-necessities. The purpose of the revision was to relieve both general industrial costs and the basic costs of living with a view to encouraging further development of the Territory. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant and machinery to be used mainly for developmental purposes. Under this provision, most agricultural machinery would be admitted duty free. The rate of duty on items not specified in the schedule is 10 per cent. ad valorem. No preferential rates are specified in the schedule. A surcharge equal to 10 per cent. of duty payable was imposed as from 17th January, 1952.

Export duties are imposed on cocoa, copra, trepang, tortoise shell, mother-of-pearl and trochus shell, cassowary, crown pigeon and heron feathers, rubber, sulphur and sulphur-bearing substances.

Provision is made in the Australian Customs Tariff (Papua and New Guinea Preference) for the free entry into Australia of certain goods produced and imported direct from the Territory of New Guinea (*see* Chapter VIII.—Trade), and a proclamation of 25th September, 1935 exempted from primaga duty goods produced or manufactured in the Territory.

2. **Imports and Exports.**—(i) *Total Values.* The table below summarizes and compares the values of imports and exports for the pre-war year 1938–39 and the post-war years 1951–52 to 1953–54.

## TERRITORY OF NEW GUINEA : IMPORTS AND EXPORTS.

(£.)

Particulars.	1938-39.	1951-52.	1952-53.	1953-54.
Imports .. .. .	1,340,835	8,154,102	7,175,612	9,444,628
Exports—				
Domestic Exports .. .. .	2,960,753	5,823,418	7,515,646	8,681,788
Non-Domestic Exports .. .. .	13,142	694,463	975,750	510,322
Total Exports .. .. .	2,973,895	6,517,881	8,491,396	9,192,110

(ii) *Imports.* The following table summarizes the sources of imports. In the post-war years Australia has supplied a far greater proportion of the imports than she did pre-war and this proportion has continued to increase in each successive post-war year. The increase in total imports in 1953-54 was due partly to increased purchasing power arising from the higher Commonwealth Government grant and partly to the progressive relaxation of import restrictions imposed to conserve foreign exchange.

## TERRITORY OF NEW GUINEA : COUNTRY OF ORIGIN OF IMPORTS.

(£.)

Country of Origin.	1938-39.	1951-52.	1952-53.	1953-54.
Australia .. .. .	563,594	4,920,231	4,756,600	6,319,501
Canada .. .. .	6,333	75,240	27,721	15,931
China .. .. .	69,831	19,184	2,614	693
Hong Kong .. .. .	(a)	367,910	238,272	418,468
India .. .. .	20,235	144,455	222,355	151,667
United Kingdom .. .. .	154,501	592,885	386,314	579,443
United States of America .. .. .	265,591	565,513	687,965	991,191
Other Countries .. .. .	260,750	1,468,684	853,771	967,734
Total Imports .. .. .	1,340,835	8,154,102	7,175,612	9,444,628

(a) Not available; included under "Other countries".

(iii) *Exports.* (a) *Countries of Destination.* The countries of destination of New Guinea exports are shown below. The growth in total exports has been outstanding. The decline in exports to Australia in 1953-54 was caused by decreased production of gold. The major source of increased export earnings, however, arose from increased quantities of coconut products at higher prices to the United Kingdom.

## TERRITORY OF NEW GUINEA : COUNTRY OF DESTINATION OF EXPORTS.

(£.)

Country of Destination.	1938-39.	1951-52.	1952-53.	1953-54.
Australia .. .. .	2,313,127	3,746,451	4,344,448	3,493,369
United Kingdom .. .. .	337,605	2,503,723	3,864,907	4,754,945
Other Countries .. .. .	310,021	267,707	282,041	943,796
Total Exports .. .. .	2,960,753	6,517,881	8,491,396	9,192,110

(b) *Principal Commodities.* The following table provides details of the value of the principal domestic exports for the same years. The increase in value of total domestic exports arose mainly from increased exports of copra and other coconut products which more than offset a decline in the returns from gold.

#### TERRITORY OF NEW GUINEA : PRINCIPAL DOMESTIC EXPORTS.

(£.)

Item.	1938-39.	1951-52.	1952-53.	1953-54.

3. *Shipping.*—Regular passenger and freight services operate between Australia and the Territory of New Guinea. Vessels trading between Australia and the East also call at Territory ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the Shipping Ordinances 1951 and the Coastal Shipping, Ports and Harbours Regulations.

Main ports of call for overseas vessels are established at Lae, Madang and Wewak (mainland), Rabaul (New Britain), Kavieng (New Ireland), Lorengau (Manus), and Kieta (Bougainville). Ports proclaimed under the Coastal Shipping, Ports and Harbours Regulations for the service of local vessels are, in addition to the main ports above-mentioned, Salamaua, Aitape and Wanimo (mainland), Gasmata and Talasea (New Britain), Namatanai (New Ireland), and Buka Passage (Bougainville).

There are no prepared inland waterways. The natural river system is not generally suitable for vessels except those of small tonnage.

In 1952-53, 173 British vessels and 37 vessels of other nationalities called at Territory ports and discharged 96,437 tons of cargo and loaded 91,574 tons. Corresponding figures for 1953-54 were 180, 53, 106,489 and 111,589 respectively.

4. *Other Forms of Transport and Communication.*—Means of communication on land are scanty. There are no railways. Roads lead from Rabaul to places within 30 or 40 miles, and there is a road 200 miles long in New Ireland and also a road 90 miles long from Lae to Wau in the Morobe District. The total mileage of road in the Territory of New Guinea at 30th June, 1954 was 2,904, of which 815 were suitable for heavy traffic.

The discovery of gold in New Guinea resulted in great aviation activity in the vicinity of the goldfields. On account of the mountainous country and dense undergrowth between the coast and the goldfields the task of transporting food and stores to the fields and of bringing the gold to the seaboard by land was a slow and costly process. The goldfields are situated about 90 miles (40 by air) inland from Lae and air transport played an important part in the development of the area.

Air services link the Territory with Papua, Australia, Netherlands New Guinea and the British Solomon Islands. There are 94 aerodromes and seaplane alighting areas in New Guinea, and of these 27 are controlled by the Department of Civil Aviation, 31 by the Administration, 35 by private interests and one by the Royal Australian Air Force.

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang and service is available from subscribers telephones in Port Moresby, Lae and Rabaul, and from the Post Office at Madang. Six zone or group centres for radio telephone communication with outstations have been established at Lae, Madang, Rabaul, Kavieng, Wewak and Lorengau. From these centres radio telegraph services are also available to 111 outstations.

### § 8. Revenue and Expenditure.

The principal sources of revenue for the Territory of New Guinea are the grant by the Commonwealth Government and customs duties. Total revenue in 1953-54 amounted to £5,094,789, towards which the grant contributed £3,103,076 and customs duties, £1,261,589. The major groupings into which the various items of expenditure during 1953-54 may be classed were as follows:—Health, £905,962; district services and native affairs, £695,184; education, £297,492; justice, £301,910; agriculture, etc., £256,670; customs and marine, £93,594; forestry, £151,175; capital works and services, £1,143,576; maintenance, £681,764. Total expenditure in 1952-53 was £4,314,085. In 1938-39 revenue and expenditure each amounted to about £500,000, customs duties and royalty on gold constituting the major items of revenue and district services and native affairs the major items of expenditure.

For information on the finances of the combined Territory administration *see* Papua and New Guinea, § 2, p. 129.

### TRUST TERRITORY OF NAURU.

1. **General.**—Nauru is an oval-shaped atoll about 12 miles in circumference, having an area of about 5,263 acres, of which approximately two-thirds is phosphate-bearing. It is situated in latitude  $0^{\circ} 32'$  south and longitude  $166^{\circ} 55'$  east. Portion of the island between the sandy beach and the coral cliffs is fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British Phosphate Commissioners and the Missions, the whole of the island is owned by individual natives. The temperature range is from  $76^{\circ}$  F. at night to  $94^{\circ}$  F. during the day and the average humidity about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the average for twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.

2. **History.**—The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea.

In November, 1914, Nauru was occupied by a detachment from the Australian Naval and Military Expedition at Rabaul, and it was included in the cession of colonies made by Germany in 1919 to the Allied and Associated Powers, whose representatives agreed that a mandate for its administration should be conferred upon His Britannic Majesty. The mandate was confirmed by the Council of the League of Nations on 17th December, 1920. On 2nd July, 1919 the British, Australian and New Zealand Governments agreed that the administration (which, since 1915, had been in charge of an official appointed by the British Colonial Office) should be vested in an Administrator, who took up duty in June, 1921. The agreement between the three Governments was approved by the Commonwealth Parliament in the Nauru Island Agreement Act 1919, and is shown in the Schedule to that Act. A supplementary agreement concerning Nauru was drafted in May, 1923 and ratified by the Commonwealth Parliament by the Nauru Island Agreement Act 1932.

On 25th August, 1942, nine months after the outbreak of the war in the Pacific, communications with Nauru ceased, and the island was occupied by Japanese forces. It was re-occupied by a joint Australian Naval and Military Force on 14th September, 1945 and civil administration was re-established on 1st November, 1945.

3. **Trusteeship Agreement.**—On 1st November, 1947 the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand and the United Kingdom in substitution for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Official Year Book No. 39, pp. 370-1.

4. **Administration.**—The administration of the island is vested in the Administrator, who is obliged to conform to instructions issued by the Government which appointed him. Until the Government of Australia ceases to exercise full powers of legislation, administration and jurisdiction in and over the Territory on behalf of the Administering Authority in pursuance of Article 4 of the Trusteeship Agreement, all ordinances made by the Administrator are subject to confirmation or disallowance by the Governor-General of Australia acting on the advice of the Federal Executive Council. All administration expenses are met from local revenue and phosphate royalties. Native industries such as canoe-building, fishing, mat-making, etc., are encouraged by the provision of prizes at annual competitions. An agency of the Commonwealth Savings Bank has been established. There is a co-operative store managed to a large extent by the natives. The store books, however, are audited by Government officers. Natives are not allowed to carry or be in possession of firearms, and the use by them of intoxicating liquors and deleterious drugs is prohibited.

5. **Population.**—The Nauruan component of the population of Nauru numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August, 1942. In 1946 it numbered less than 1,400 but by 30th June, 1954 it had risen again to 1,828. Chinese have for many years formed a considerable part of the population of Nauru; their numbers increased, with some reversals of trend, from about 600 in 1921 to more than 1,500 before the 1939-45 War. After the war they increased from about 800 in 1946 to 1,491 in 1950, but at the Census of 30th June, 1954 numbered only 550. The number of other Pacific islanders in the early 1920's was almost 300, but they subsequently declined to less than 40. In recent years the numbers have increased, and at the 1954 Census there were 623 persons. The European population after 1921 fluctuated, but with a generally upward trend, between one and two hundred persons, and in 1940 numbered 192. In 1948 it numbered 247 and in 1954 it was 262. The total non-indigenous population of Nauru at the Census of 30th June, 1954 was 1,269 males, 376 females, 1,645 persons. The total population was 3,473.

6. **Health.**—Cases of the usual diseases known in the Pacific occur. Venereal disease is rare, but elephantiasis is occasionally met with. An area has been set apart for the segregation of lepers, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30th June, 1954 was 46 of whom 9 were in segregation at the Leper Hospital. Two hospitals are maintained on the island, one by the Administration for Nauruans, and one by the British Phosphate Commissioners for their employees. In common with other natives, the Nauruans are very susceptible to tuberculosis and influenza, and in 1921 an influenza epidemic caused the deaths of 230 islanders. Dysentery, both amoebic and bacillary, is endemic. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo a medical examination at intervals of three months. Baby clinics have been established to give help and advice to Nauruan mothers in regard to infant nurture.

7. **Education.**—The Administration assumed full responsibility for education on 1st October, 1923. Prior to that date the education of native children was undertaken by the Missions, which were subsidized by the Administration. There are nine primary schools and two secondary schools for natives, together with one primary school for Europeans. At 30th June, 1954, 455 natives and 45 Europeans were enrolled in the primary schools, and 106 at the secondary school. A teacher, who is on loan from the Victorian Education Department, is in charge of the European school, but education is controlled by a Director of Education.

The curriculum is based on that used in Australian schools, and the teaching is generally in English. Education is compulsory for native children from six to sixteen years. At 30th June, 1954, 29 Nauruans were attending secondary schools in Australia, nineteen as scholarship holders and the balance sponsored by their families. In addition to these, there were 3 students at the Central Medical School, Suva.

8. **Judiciary.**—The judicial power is vested in the Administrator in a Central Court and a District Court. The right of appeal is provided.

9. **Religion.**—The London Missionary Society (Protestant) and the Sacred Heart of Jesus Mission (Roman Catholic) operate in Nauru.

10. **Phosphate Deposits.**—(i) *General.* From 1906 to 1919 the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administered by the Colonial Office). The quantity remaining on Nauru has been estimated at about 70 million tons, and the exports average 85 per cent. to 88 per cent. of tricalcium phosphate.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments in 1919 for £3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent. respectively. The Agreement of 2nd July, 1919 provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government; and the three countries are entitled to receive the output in the same proportions of 42, 42, and 16 per cent.

(ii) *Royalty on Phosphate.* Under an agreement between the British Phosphate Commissioners and the Nauruan landowners, an increased royalty of 1s. 6d. per ton of phosphate exported was payable from 1st July, 1953 as follows:—

- (a) 3d. to the Nauru Royalty Trust Fund to be used for the benefit of Nauruans;
- (b) 10d. to the landowner, being an immediate payment of 8d. per ton, and 2d. per ton to be invested on his account;
- (c) 5d. to the Nauruan Community Long Term Investment Fund.

From 1st July, 1947 the lump sums payable to landowners from whom phosphate-bearing lands are leased were also increased to £45 per acre, with a minimum payment of £7. 10s. for areas less than an acre.

(iii) *Nauru and Ocean Island Phosphate Industry.* Exports of phosphate from Nauru and Ocean Island in 1939–40 amounted to 1,243,428 tons, of which Australia received 54 per cent. and New Zealand 32 per cent. Following the interruption to production by the war in the Pacific, this figure was not exceeded until 1949–50 when 1,285,998 tons were exported (76 per cent. to Australia, 24 per cent. to New Zealand). Figures for 1953–54 were:—1,381,757 tons exported, 63 per cent. Australia, 32 per cent. New Zealand.

Receipts from sale of phosphate in 1939–40 amounted to £1,041,418, and the f.o.b. cost, including interest on capital sinking fund, etc., amounted to £1,037,208. In 1946–47 sales and costs each amounted to about £500,000, but they have since increased to more than £2,500,000. In 1953–54 receipts from sales, etc., amounted to £2,740,859, and costs, etc., to £2,701,967.

During the period of the Japanese occupation from August, 1942 to September, 1945, while waiting to resume activities at Nauru and Ocean Island, the Commissioners were engaged in meeting the phosphate requirements of Australia and New Zealand from other available sources. A programme of improvements and additions to equipment has been commenced.

The amount due by the British Phosphate Commissioners to the partner Governments for purchase-money and other capital sums was £3,666,457 on 30th June, 1921, and at 30th June, 1942, this had been reduced to £3,024,373. The partner Governments agreed to a suspension of interest and sinking fund payments from 1st July, 1942 while operations at Nauru and Ocean Island were curtailed. Modified payments were resumed in 1946-47, pending a review of the position.

The review was carried out in 1950, as a result of which the revised capital indebtedness of the Commissioners to the partner Governments at 30th June, 1950 was determined at £3,881,711. Interest and sinking fund payments were resumed with effect from 1st July, 1950 on the basis of repayment of the revised capital indebtedness in 35 years.

(iv) *Employees.* Apart from a limited number of Europeans, the employees are Chinese and Pacific Islanders engaged under a one year's contract. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

(v) *Christmas Island Phosphates.* It may be appropriate to refer here to the phosphate deposits on Christmas Island in which the Australian Government is interested. The concession to work phosphate at Christmas Island, situated in the Indian Ocean near Java was held from 1897 by the Christmas Island Phosphate Company Limited, a private company incorporated in England.

The Australian and New Zealand Governments, jointly, acquired the Company's interests and assets at Christmas Island as at 31st December, 1948.

The undertaking is controlled by a Board of Commissioners appointed by the Australian and New Zealand Governments. Phosphate is distributed by the British Phosphate Commissioners who have been appointed by the Board as its managing agents.

11. *Transport.*—There is no air service to Nauru. The island has an aerodrome but only two trips were made during the year ended 30th June, 1953.

There is relatively frequent sea communication with the island. During 1953-54, 144 vessels called there. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required.

12. *Trade.*—The Customs Tariff of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider and perry, and cylinder blocks for motor cycle engines. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. Imports into Nauru were valued at £192,749 in 1940 and exports (808,400 tons of phosphate) at £541,168. In 1953-54, imports were valued at £615,716 and exports (1,103,726 tons of phosphate) at £1,931,520. Of the total imports in 1953-54, Australia supplied 66 per cent. (valued at £406,560); the balance came mainly from the United Kingdom, New Zealand, Hong Kong and the United States in that order.

In 1953-54, 863,800 tons of phosphate were exported to Australia, and 432,057 tons to New Zealand.

13. *Revenue and Expenditure.*—The revenue of the Administration has risen from £33,084 in 1939 to £237,174 in 1953-54, and expenditure from £29,391 to £226,996.

Of the revenue for the year ended 30th June, 1954, payments by the British Phosphate Commissioners amounted to £221,342, post office and radio receipts, £11,331, and customs duties, £1,946. Main items of expenditure were salaries, £113,302, works and services, £59,254, and miscellaneous services, £37,578.

### TERRITORY OF HEARD AND McDONALD ISLANDS.

On 26th December, 1947 by an exchange of notes with the United Kingdom Government, the United Kingdom sovereignty over the Heard and McDonald Islands was transferred to the Commonwealth of Australia. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard and McDonald Islands by the Heard and McDonald Islands Act passed 18th March, 1953.

At the end of 1947 an Australian scientific post was established on Heard Island and maintained as a scientific base. Following on the establishment of the base at Mawson, on MacRobertson Land in the Australian Antarctic Territory, the Heard Island base is not being continued on a permanent basis. Heard Island lies 2,500 miles south-west of Fremantle in the South Indian Ocean, and is about 27 miles long and 13 miles wide. The McDonald Islands are 26 miles to the west of Heard. They are small, rocky and precipitous.

### AUSTRALIAN ANTARCTIC TERRITORY.

On 13th February, 1954 the Australian Antarctic Research Expedition established a base on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The base has been named Mawson in honour of Sir Douglas Mawson and is the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

### TERRITORY OF COCOS (KEELING) ISLANDS.

1. **General.**—The Cocos (Keeling) Islands, two separate atolls comprising some 27 small coral islands with a total area of about five square miles, are situated in the Indian Ocean in latitude 12° 5' South and longitude 96° 53' East. They lie some 1,720 miles north of Perth and 2,290 miles almost due west of Darwin, whilst Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 to the north-west of the group.

The main islands of the Territory are West Island (the largest, about 6 miles from north to south) on which is the aerodrome and most of the European community, Home Island, the head-quarters of the Clunies Ross Estate, Direction Island on which is situated the Cable and Wireless Station, the Admiralty Wireless Station and the Department of Civil Aviation's Marine Base, and Horsburgh. North Keeling Island, which forms part of the Territory, lies about 15 miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, being usually under the influence of the south-east trade winds for about three-quarters of the year. However the winds vary at times and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 80° F., the rainfall is moderate and there are occasional violent storms. In 1909 the islands were struck by the worst cyclone in their recorded history; about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

2. **History.**—The islands were discovered in 1609 by Captain William Keeling of the East India Company. The islands were uninhabited and remained so until 1826 when the first settlement was established on the main atoll by an Englishman, Alexander Hare, who quitted the islands in about 1831. In the meantime a second settlement

was formed on the main atoll by John Clunies Ross, a Scottish seaman and adventurer, who landed with several boat-loads of Malay seamen. In 1857 the islands were annexed to the Crown and formally declared part of the British Dominions, and in 1878 responsibility for their supervision was transferred from the Colonial Office to the Government of Ceylon, and then, in 1882, to the Government of the Straits Settlement. By indenture in 1886 Queen Victoria granted the land comprised in the islands to John Clunies Ross in perpetuity, and until about 10 years ago the patriarchal rule of the head of the Clunies Ross family was recognized. The head of the family had semi-official status as resident magistrate and representative of the Government. However in 1946 when the islands became a dependency of the Colony of Singapore a Resident Administrator, responsible to the Governor of Singapore, was appointed.

Other items of significance in the islands' history are :—1901—small cable relay station was established at Direction Island ; 1903—Islands were incorporated in the Settlement of Singapore ; 1909—worst cyclone in the history of the islands struck ; 1914—German cruiser *Emden* raided Direction Island but was defeated by H.M.A.S. *Sydney* ; 1944—Islands were under military administration with allied troops stationed there (A military Administrator was appointed during the minority of the Clunies Ross heir who came of age in 1949) ; 1945—a R.A.F. air-strip was constructed on West Island ; 1946—Civil administration was re-established.

3. **Transfer to the Commonwealth of Australia.**—On 23rd November, 1955 the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955, and by the Cocos (Keeling) Islands Act 1955 of the Commonwealth, whereby the islands are declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth, to be known as the Territory of Cocos (Keeling) Islands.

4. **Administration.**—Responsibility for the administration of the Territory, in terms of the Cocos (Keeling) Islands Act 1955, rests with the Minister for Territories. An Official Representative was appointed on 23rd November, 1955 to take charge of the local administration of the Territory under delegation from the Minister. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer have, with certain exceptions, been continued in force by the Cocos (Keeling) Islands Act 1955. Those laws may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

5. **Population.**—The population of the Territory in December, 1955 was estimated to be 652, comprising 131 Europeans, 460 Cocos islanders and 61 Asians. The Cocos islanders reside on Home Island.

6. **Transport.**—An airport is established on West Island under the control of the Department of Civil Aviation. This is a re-fueling point for aircraft of the overseas air-service between Australia and South Africa operated by Qantas Empire Airways Ltd. at fortnightly intervals, via Darwin.

## CHAPTER VI.

## LABOUR, WAGES AND PRICES.

NOTE.—Reference is made in this chapter to retail and wholesale price indexes. For particulars of the Export Price Index, see Chapter VIII., § 15, and of the Farm Production Price Index, see Chapter XXIX., § 2.

## A. RETAIL PRICES AND PRICE INDEXES.

## § 1. General.

The information on retail prices and price indexes presented in this chapter is extracted from the annual *Labour Report* of the Commonwealth Bureau of Census and Statistics. For a full explanation of methods adopted and an analysis of problems involved see the detailed reference in Chapter I. of *Labour Report* No. 42, 1953.

Retail prices of an extensive range of commodities and services in common demand have been ascertained at frequent and regular intervals since 1923 for each of the six capital cities and for 27 of the more important towns of Australia. Comparable information is available for the month of November in each year from 1914 to 1922 for each of the six capital cities. The list of items priced for index purposes was published in *Labour Report* No. 41, 1952.

Retail prices of food and groceries and average rentals of houses for earlier years extending back to 1901 were collected by this Bureau, and in some cases have been recorded by the Statisticians of various States as far back as 1864.

## § 2. Previous Retail Price Indexes.

1. General.—Four series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1954. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were:—

- (i) The "A" Series Index (covering food, groceries and house rents) was first compiled in 1912 with the year 1911 as base=1,000. It was discontinued in June, 1938.
- (ii) The "B" Series Index (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until December Quarter, 1953. It was the food and rent constituent of the "C" Series Index and was designed to replace the "A" Series Index for general statistical purposes.
- (iii) The "C" Series Index (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921 and published at quarterly intervals from June Quarter, 1922. It was used by the Commonwealth Court of Conciliation and Arbitration for purposes of quarterly wage adjustments from May, 1934 to August, 1953. Some State tribunals use or consider it in their proceedings. Its publication in mimeograph each quarter will be continued for the present in the customary form and on its customary basis. For general statistical purposes it has been replaced by the Interim Retail Price Index (1952-53 base year) described at length in a Statistical Bulletin published on 24th March, 1954, and briefly in the following section of this chapter.
- (iv) The "D" Series Index derived by combining the "A" and "C" Series Indexes was used by the Commonwealth Court of Conciliation and Arbitration from May, 1933 to May, 1934 and then discontinued.

Of the four retail price indexes described above, only the "C" Series is now compiled. The new Interim Index will continue in its present form until the components of certain groups are finalized.

2. The "Court" Index.—In 1937 the Commonwealth Court of Conciliation and Arbitration introduced a "Court" Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court the "Court" Index ceased to be issued by the Industrial Registrar as at December Quarter, 1953. "Court" Index numbers were an arithmetical conversion of the "C" Series Index.

### § 3. The Interim Retail Price Index (1952-53 Base Year).

1. Origin of the Interim Retail Price Index (1952-53 Base Year).—The list of component items and the weighting pattern of the "C" Series Retail Price Index were first adopted in 1922 but were reviewed by Conference of Statisticians in 1936. (*See Labour Report* No. 41, 1952, page 33, paragraph 2.)

From the outbreak of war in 1939 to late in 1948 periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and the pattern of expenditure. This rendered it impracticable either to produce a new index or to revise the old one on any basis that would render the index more representative, than it already was, of the changing pattern.

When commodity rationing had virtually ceased in the latter part of 1948, action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. By the middle of 1949 a considerable number of new price series was coming into being and the body of data available as to expenditure and consumption (in the post-rationing period) was beginning to indicate something of the new weighting pattern likely to be appropriate for post-war review of the components and construction of the "C" Series Index.

There supervened in the next two years conditions which caused wide price dispersion, a very rapid rise in prices and a new sequence of changes in consumption and the pattern of wage earner expenditure. Under these conditions it was not possible to devise any new weighting pattern for the years 1949-50, 1950-51 and 1951-52 likely to be better suited to the index or more continuously representative of conditions then current than was the existing "C" Series Index on the 1936 revision. Conference of Statisticians therefore deferred revision of the weighting system and component items of the "C" Series Index until it was advised by the Acting Commonwealth Statistician in June, 1953 (a) that although the aggregate "C" Series Index (as verified by supplementary indexes) was still reasonably reliable for current use, some of the component groups (more particularly food and miscellaneous) were not satisfactory individually; and (b) that the time had arrived either to produce a new index or to reconstruct the "C" Series Index extensively.

The Interim Retail Price Index has been compiled pursuant to Resolution 13 of the Conference of Statisticians in June, 1953, reading:—

#### " 13. Retail Price Indexes—

- (a) That in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the "C" Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes.
- (b) That an Interim Retail Price Index be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern of consumer usage and expenditure.
- (c) That, having regard to the complexities of the problem and the limit of staff resources available, such interim index relate only to each capital city and to the six capital cities combined.
- (d) That attention be drawn again to the statement already published that the "C" Series Retail Price Index cannot measure changes in relative retail price levels as between capital cities consistently with its main purpose of measuring periodic changes in retail price levels for each city.

- (e) That the problem of measuring comparative retail price levels as between cities at any point of time differs in principle from the problem of measuring periodic variations in price level in an individual city ”.

The Interim Retail Price Index (1952-53 base year) is used as the current retail price index in statistical publications of the Commonwealth Statistician for general statistical purposes. It relates only to six capital cities of Australia because it is not practicable with existing staff resources to collect price data for the greatly enlarged list of items for 28 other cities and towns. These will continue to be covered as to the less extensive list of items used for the “ C ” Series Index.

In respect of any divergency in trends shown by the new index as compared with the old, the following comment is paraphrased from comment made in the course of the Statistician’s memoranda to the Commonwealth Court of Conciliation and Arbitration in 1949 : It is to be expected that the new index will for a period show much the same trend as does the “ C ” Series Index. If there is any appreciable difference in trend, it is certain that the new index would be the more accurate reflex of price movements relevant under current conditions.

2. Definition of the Interim Retail Price Index.—This index provides the interim results of researches designed to measure retail price variations (with 1952-53 = 100 as base year) on the basis of :—

- (a) a current pattern of wage earner expenditure using recent consumption weights for foods and recent expenditure weights for combining groups of items into the aggregate index ;
- (b) a wider range of commodities and services than that covered by any existing price index in order to provide greater representativeness ; and
- (c) individual city weights for such items as electricity, gas and fares.

The components and weighting of the Interim Retail Price Index will be reviewed in the light of data derived from the Census of Retail Sales (1952-53) as to consumer expenditure on various kinds of goods, estimates of consumer expenditure on services relevant to construction of a retail price index of this type and data as to rents and housing derived from the Census of 30th June, 1954. It is proposed to cast the index into final form as soon as possible.

3. Differences between the Structure of the Interim Retail Price Index and the “ C ” Series Retail Price Index.—The main differences between the structure of the Interim Retail Price Index and that of the “ C ” Series Retail Price Index are (a) the group weights and item weights of the Interim Index relate broadly to the consumption pattern 1950-53, while those of the “ C ” Series Index relate to pre-war years ; and (b) the Interim Index includes a large number of items not included in the “ C ” Series Index.

A full list of the items used in the Interim Index was shown in Appendix III. of the Statistical Bulletin of 24th March, 1954, and in Section IV. of the Appendix to *Labour Report* No. 42, 1953. The changes in structure of each group of items as adopted for the Interim Retail Price Index are summarized below :—

(i) *Food Group*.—The weights of some of the main items (e.g., milk, eggs, meat, potatoes and flour) in the Interim Index are substantially different from those of the “ C ” Series Index. Twenty-four new items extend the group coverage over a wider field. The total number of items in the Food Group of the Interim Index is 60 as compared with 38 in the “ C ” Series Index. The principal new items are lamb, packaged breakfast foods, biscuits, ice cream, processed cheese, honey, sandwich spreads, coffee, cocoa, soft drinks and certain types of confectionery.

(ii) *Clothing and Drapery Group*.—In the Interim Index, 17 new items have been added to the Clothing and Drapery Group, and 25 items each formerly represented

by one type of article are now each represented by two or more types. Consequential adjustments have been made in weights of individual items. The principal new items added to this group are:—sports coat, sports trousers, cardigan (and other types of knitted wear), overalls, piece-goods (rayon, cotton and woollen) and knitting wool.

(iii) *Rent Group*.—Only minor changes have been made in the Rent Group. Available data indicate (a) that, in general, very few new houses have been built by private owners for renting in the post-war years; (b) that in some cities considerable numbers of new government houses have been built for renting or occupancy on a quasi-rental basis; and (c) that there has been a substantial increase in the numbers of owner-occupied houses, including new instalment-purchase or quasi-instalment-purchase houses under governmental and private housing schemes. In recent years the difficulty of obtaining data suitable for the housing component of a price index has therefore intensified. The facts will be reviewed in the light of data obtained at the Census of 30th June, 1954 and further study given to the hitherto intractable problems associated with measuring at quarterly intervals "housing price" variations in a form suitable for use in a retail price index in respect of owner-occupied houses, instalment-purchase houses, and houses occupied under the various types of governmental housing schemes.

(iv) *Other Groups*.—Six new sub-groups are included in the Interim Index, comprising 75 items as compared with 32 in the "C" Series Index. The principal new items are garden tools, floor coverings, shaving cream, toilet soap, etc., patent medicines, baby foods, haircuts, dry cleaning, shoe repairs, postage, etc. Necessary adjustments have been made to bring the group weight into conformity with recent expenditure and consumption patterns. The weight of this group is much greater than it was in the "C" Series Index.

(v) *Group Weights*.—The group weights in the new Interim Index have been brought into general conformity with the estimated group distribution of wage earner household expenditure in recent years over the field covered. In some cases the weights are putative weights assessed on available data and are subject to some revision.

In the year 1952-53 the ratio of the individual group "aggregate expenditure" to the "aggregate expenditure" of the whole index for the six capital cities combined was as follows:—

Group.	"C" Series Retail Price Index.	Interim Retail Price Index.
	Per cent.	Per cent.
Food .. .. .	41.0	37.1
Clothing and Drapery ..	33.0	26.8
Rent .. .. .	11.3	9.0
Other Groups ..	14.7	27.1
	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> <math>\left. \begin{array}{l} 4.5 \\ 5.3 \\ 2.8 \\ 2.1 \end{array} \right\}</math> </div> </div>	<div style="display: flex; align-items: center;"> <div style="margin-right: 10px;"> <math>\left\{ \begin{array}{l} 4.6 \\ 4.6 \\ 2.5 \\ 3.0 \\ 6.6 \\ 5.8 \end{array} \right.</math> </div> <div>           Fuel and Light Household Sundries Certain Repairs and Services Cinema, Radio, Newspapers Rail, Tram and Bus Fares Tobacco and Cigarettes         </div> </div>
	100.0	100.0

In the Interim Index common weights are adopted for all groups and items in the index for each city except in respect of fares, gas, electricity and some minor items. The resultant indexes show price variations for each city on a basis appropriate to that city. They are not constructed to provide a precise measure of the relative "cost of living", comparing one city with another. For that reason the Interim Index for each city in the base year 1952-53 is 100.

4. Comparison of Trends of the Interim Retail Price Index with Trends of the "C" Series Retail Price Index.—The following table shows for each of the years 1950-51 to 1954-55 and for each quarter from September Quarter, 1952 to December Quarter, 1955 the Interim Index for the six capital cities combined, with the year 1952-53 as base = 100, in comparison with the "C" Series Index recomputed to the same base :—

Period.	Six Capital Cities : Weighted Average. (Base : Year 1952-53 = 100).	
	"C" Series Index.	Interim Index.
Year ended June—		
1951 .. .. .	74.8	74.9
1952 .. .. .	91.7	91.4
1953 .. .. .	100.0	100.0
1954 .. .. .	102.8	102.5
1955 .. .. .	103.7	103.6
Quarter ended—		
1952—September .. .. .	99.0	98.8
December .. .. .	99.2	99.3
1953—March .. .. .	100.3	100.4
June .. .. .	101.4	101.6
September .. .. .	102.7	102.4
December .. .. .	102.9	102.2
1954—March .. .. .	102.9	102.7
June .. .. .	102.8	102.7
September .. .. .	102.6	102.7
December .. .. .	103.2	103.2
1955—March .. .. .	103.9	103.8
June .. .. .	105.0	104.7
September .. .. .	106.6	105.7
December .. .. .	107.7	107.0

The figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted merely to avoid the distortion that would occur in rounding off the figures to the nearest whole number. For instance, if the Interim Indexes for each quarter of 1953 were rounded off to 100, 102, 102 and 102 respectively, they would suggest a rise of 2 per cent. in June Quarter, 1953 and no change in September Quarter, 1953. The figures for the Interim Index as presented in the table indicate a rise of the order of 1 per cent. in June Quarter, 1953 and 1 per cent. in September Quarter, 1953. Price indexes cannot measure aggregate price variations with an accuracy of the order of one-tenth of 1 per cent.

With changing conditions significant divergencies may occur between the movements shown by a retail price index (such as the "C" Series Index) constructed on pre-war weights and a comparatively limited range of major items and a retail price index (such as the Interim Index) constructed on 1950-53 weights and a broader list of items. The two indexes represent, respectively, two distinct approaches to the measurement of retail price variations in recent years.

Due regard should be paid to the fact that a composite price index is necessarily an approximate summary which combines into one aggregate price variations of many items. Any more rigid use of the index for specific purposes is the responsibility of the bodies or persons using the indexes.

### § 4. Tabular Statements of Retail Price Index Numbers.

1. **General.**—Information on retail price movements is published as follows :—

(i) *Monthly.* The *Monthly Review of Business Statistics* contains annual, quarterly and monthly index numbers to the latest available date.

(ii) *Quarterly.* Statements are issued about three weeks after the end of each quarter relating to the Interim and the "C" Series Retail Price Indexes respectively for that quarter and immediately preceding quarters. The *Quarterly Summary of Australian Statistics* contains annual, quarterly and monthly index numbers to the latest available date. This publication also contains certain average prices of items of food and groceries for the latest available quarter.

(iii) *Annual.* The *Labour Report* contains index numbers for past years, and the monthly and quarterly results for recent years. Certain average prices for the latest year of items of food and groceries are also published in this report.

2. **The "C" Series Retail Price Index.**—A table of "C" Series index numbers for the weighted average of the six capital cities combined, together with index numbers for each of the four main groups of items in the "C" Series Index for each year from 1914 to 1955 is shown on page 161. Detailed tables were last published in *Labour Report* No. 41, 1952, pp. 19-31.

3. **The Interim Retail Price Index.**—On this and the following page are published :—

(i) the Interim Retail Price index numbers for each of the years ended June, from 1951 to 1955, and for each quarter during the period September Quarter, 1952 to December Quarter, 1955, for the weighted average of the six capital cities combined, showing also separate indexes for each of the four groups of items (see table below) ;

(ii) the Interim Retail Price index numbers for each of the years ended June from 1951 to 1955, and for each quarter during the period December Quarter, 1954 to December Quarter, 1955, for each capital city and for the six capital cities combined, and showing also separate indexes for each of the four groups of items (page 159).

(a) Weighted average. (b) Rent.—The rent index numbers shown in the tables in this chapter measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. They are "price" indexes in the strict sense, i.e., they are designed to measure only the "price" element in rent fluctuations. Rentals of new tenanted houses completed since the end of the war are not taken into account. (c) A group of items under the following headings—Electricity, Gas, and Firewood; Household Sundries; Services; Cinema Admission, Radio Licence, and Newspapers; Fares; and Tobacco and Cigarettes.

### § 5. The "C" Series Retail Price Index : 1914-1955.

1. **Construction.**—Full particulars relating to the construction, items, weights and method of tabulation of the "C" Series Retail Price Index were last published in *Labour Report* No. 41, 1952 (see pp. 10-18). Tabular statements of index numbers were shown on pp. 19-27 and historical particulars of the index, and its relation to automatic basic wage variations prior to 12th September, 1953, on pp. 32-40.

2. **Significant Dates.**—The following table furnishes index numbers for the six capital cities as a whole for certain significant dates since November, 1914—the earliest date for which this index is available.

#### "C" SERIES RETAIL PRICE INDEX NUMBERS.

##### WEIGHTED AVERAGE OF SIX CAPITAL CITIES.

(Base : *Weighted Average of Six Capital Cities, 1923-27 = 1,000.*)

1914, November	..	..	..	687	(Beginning of War I.)
1918, November	..	..	..	905	(End of War I.)
1920, November	..	..	..	1,166	(Post-War peak)
1922, November	..	..	..	975	(Post-War trough)
1929, Year	..	..	..	1,033	(Pre-Depression peak)
1933, Year	..	..	..	804	(Depression trough)
1939, September Quarter	..	..	..	916	(Pre-War II.)
1943, March Quarter	..	..	..	1,123	(Pre-Price Stabilization)
1943, June Quarter	..	..	..	1,143	(War II. peak)
1945, September Quarter	..	..	..	1,126	(End of War II.)
1948, September Quarter	..	..	..	1,311	
1950, September Quarter	..	..	..	1,572	
1952, September Quarter	..	..	..	2,238	
1953, September Quarter	..	..	..	2,321	
1954, December Quarter	..	..	..	2,333	
1955, December Quarter	..	..	..	2,435	

The index rose by approximately 32 per cent. during the first world war, and by a further 29 per cent. in the two post-war years (November, 1918 to November, 1920). From November, 1920 to November, 1922, there was a fall of 16 per cent. and the index remained relatively stable until the onset of the depression in 1929. During the four years of the depression 1929 to 1933 the index fell by 22 per cent., rising thereafter steadily until 1939 when it was nearly 14 per cent. above the level of 1933, and approximately at the level it had occupied at the date of the Armistice of 1918. Between the outbreak of war (September, 1939) and March, 1943 (pre-price stabilization) the index rose by approximately 23 per cent. to a level slightly below that reached at the height of the post-war boom in 1920. Compared with the March Quarter, 1943, the index number at the close of the war was practically unchanged.

Immediately after the outbreak of the war price control was established by the Government under Regulations dated 28th September, 1939, and a national policy of price stabilization was applied as from 12th April, 1943, backed by more stringent price control and price subsidies. The retail price level, as measured by the index, remained relatively steady throughout 1944 and 1945 at the level of March, 1943. This stabilized level was approximately 23 per cent. above that of 1939 and 63 per cent. above the level prevailing at the beginning of the first world war in 1914. After June Quarter, 1946, war-time controls, subsidies, etc., were progressively modified and by early 1949 had been virtually eliminated. In the latter part of 1950 export prices (especially for wool) rose very substantially and have remained relatively very high. In December, 1950, the Commonwealth Court of Conciliation and Arbitration raised the basic wage by approximately 14 per cent. Concurrently, public works expenditure and private investment rose to very high levels.

This retail price index rose by 16 per cent. in the three years following the end of the 1939-45 War (i.e., to September Quarter, 1948) and by 77 per cent. in the next five years to September Quarter, 1953 and remained relatively stable at that level until December Quarter, 1954. From December Quarter, 1954 to December Quarter, 1955, it increased by 4 per cent.

3. "C" Series Retail Price Index, Six Capital Cities, 1914 to 1955.—The movement in the various groups of the index and in the index as a whole for each year for which it has been compiled is shown in the following table for the six capital cities combined:—

**"C" SERIES RETAIL PRICE INDEX AND ITS "GROUP" INDEX NUMBERS(a)  
FOR THE SIX CAPITAL CITIES COMBINED.**

(Base of Each Group: Weighted Average of Six Capital Cities, 1923-27=1,000.)

Period.	Food and Groceries.	Rent (4 and 5 Roomed Houses)(b)	Clothing.	Miscell- aneous.	Total "C" Series Index.

1946	1,036	976	1,505	1,167	1,145
1947	1,100	977	1,566	1,199	1,188
1948	1,256	979	1,744	1,257	1,295
1949	1,394	982	1,997	1,338	1,415
1950	1,566	987	2,286	1,435	1,560
1951	2,041	1,009	2,749	1,679	1,883
1952	2,526	1,057	3,096	1,958	2,196
1953	2,641	1,138	3,223	2,053	2,302
1954	2,671	1,192	3,218	2,062	2,326
1955	2,811	1,226	3,237	2,091	2,393
1955—March Quarter	2,730	1,213	3,218	2,046	2,340
June "	2,770	1,222	3,240	2,070	2,375
September "	2,854	1,232	3,243	2,081	2,411
December "	2,891	1,238	3,248	2,128	2,435

(a) "Group" index numbers in the above table cannot be compared with each other in order to show the relative cost of Food and Groceries, Housing, Clothing or Miscellaneous requirements, since each "Group" has its own base = 1,000, namely, the weighted average cost for the six capital cities as a whole during the five-year period 1923-27. (b) See note (b) on page 159. (c) November.

## § 6. International Comparisons.

The following table shows the increases in retail prices in recent years in Australia and certain other countries.

**RETAIL PRICE INDEX NUMBERS.**  
(FOOD, RENT, CLOTHING, MISCELLANEOUS HOUSEHOLD EXPENDITURE.)  
(Base : September Quarter, 1939=100.)

Period.	Australia.	United Kingdom.	Canada.	New Zealand.	Union of South Africa.	United States of America.
1939— September Quarter	100	100	100	100	(a) 100	100

Sept. " ..	263	150	185	191	204	191
Dec. " ..	266	153	(d)	191	(d)	(d)

(a) Food, Rent and Miscellaneous Expenditure. (b) New series (Base : 17th June, 1947 = 100), commencing from September Quarter, 1947. (c) Consumers' Retail Price Index from March Quarter, 1949, onwards. Index numbers for earlier periods (shown for purposes of comparison) are obtained by linking the movement in the Retail Price Index (base 1926-30) with the new index. (d) Not available.

## B. WHOLESALE PRICES AND PRICE INDEXES.

## § 1. General.

Two indexes of wholesale prices have been compiled by the Commonwealth Bureau of Census and Statistics. These are :—

- (i) The Melbourne Wholesale Price Index ;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index.

Particulars of the Melbourne Wholesale Price Index, which is now obsolescent, are given in § 3 commencing on page 164 of this chapter.

After reviewing the regimen and weighting of this index the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index—the Wholesale Price (Basic Materials and Foodstuffs) Index—which extends back to the year 1928 and is compiled monthly, is a special purpose index and one of a series of Wholesale Price Indexes designed for special purposes.

## § 2. Wholesale Price (Basic Materials and Foodstuffs) Index.

1. **Price Quotations.**—The prices used in the index have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and in respect of imported materials as nearly as may be at the point where they first make effective impact on the local price structure. Thus the price of imported goods is not taken at the time of import, but rather on an ex-bond (or into factory) basis.

Broadly, where home-consumption prices exist for local products, they have been used in this index. During the year 1950–51 wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 164.

2. **Commodities and Grouping.**—For purposes of this index “basic” materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The regimen comprises 80 commodities, divided into seven main groups. Each group is sub-divided into goods which are mainly imported, and goods which are mainly home-produced. The percentage of the “aggregate expenditure” in 1950 contributed by each group is shown in the following table :—

Group.	Percentage Value-Weight, 1950.		
	Principally Imported.	Principally Home-produced.	Total.
Metals and Coal .. .. .	0.05	15.51	15.56
Oils, Fats and Waxes .. .. .	10.90	0.24	11.14
Textiles .. .. .	1.10	5.11	6.21
Chemicals .. .. .	1.18	2.77	3.95
Rubber and Hides .. .. .	1.17	0.68	1.85
Building Materials .. .. .	5.07	4.31	9.38
Foodstuffs and Tobacco .. .. .	12.31	39.60	51.91
All Groups .. .. .	31.78	68.22	100.00

A full list of the commodities in the regimen, showing the quantity-multipliers (weights) for each commodity and the percentage of the total aggregate value in 1950 contributed by each commodity and group, is set out on page 395 of Official Year Book No. 39.

3. **Method of Construction.**—The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928–29 to 1934–35 inclusive. Changes in usage, changes of category as between “imported” and “home-produced” as affecting some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

The Bureau is currently developing a plan designed to provide a series of special purpose indexes within an extended field.

4. **Index Numbers.**—Index numbers for each group of commodities and for all groups combined for the index of wholesale prices of basic materials and foodstuffs are given in the following table. Current index numbers, on the base: Average of three years ended June, 1939 = 100, are published in the *Monthly Review of Business Statistics*, and a table showing index numbers computed to the base 1928 = 100 will be found in the *Labour Report*.

## WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX NUMBERS.

(Base of each Group : Average 3 years ended June, 1939 = 100.)

Period.	Basic Materials.						Food-stuffs and Tobacco.	Basic Materials and Foodstuffs.

June ..	402	214	485	315	306	398	340	324	287	350

(a) Represents only such imported commodities as are included in the wholesale price index. This index does not measure changes in the price of imports generally.

NOTE.—The figures given in this table are comparable in the vertical columns but are not directly comparable horizontally.

## § 3. Melbourne Wholesale Price Index.

1. General.—An index of Melbourne wholesale prices was first computed in 1912. It relates chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the component items of the regimen nor the weighting have been varied, except as indicated in footnote (a) to the following table. Consequently, the index is outmoded for current use but it has some historical significance as a measure of changes in the prices of its component items combined in the proportions in which they were in common use about the year 1910. It is used mainly as an approximate indication of long-term trends since the year 1861, for which it was first compiled. It is now published only on an annual basis and consideration is at present being given to the form of its future publication. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pp. 43-45.

2. Index Numbers.—Index numbers for each group of commodities as well as for all groups combined are shown in the following table:—

### MELBOURNE WHOLESALE PRICE INDEX NUMBERS.

(Base of each Group : Year 1911 = 1,000.)

Year.	I. Metals and Coal.	II. Wool, Cotton, Leather, etc.	III. Agri- cultural Produce, etc.	IV. Dairy Produce.	V. Gro- ceries.	VI. Meat.	VII. Building Ma- terials.	VIII. Chem- icals.	All Groups.
1861..	1,438	1,381	1,583	1,008	1,963	..	1,070	2,030	1,538
1871..	1,096	1,257	1,236	864	1,586	..	1,044	1,409	1,429
1881..	1,178	1,115	1,012	935	1,421	..	1,091	1,587	1,121
1891..	895	847	1,024	995	1,032	888	780	1,194	945
1901..	1,061	774	928	1,029	1,048	1,345	841	917	974
1911..	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000
1921..	2,173	1,361	1,767	2,000	1,977	2,158	2,733	2,303	1,903
1931..	1,826	1,040	1,121	1,398	1,794	1,512	2,025	2,166	1,429
1941..	1,960	1,402	1,721	1,554	1,883	1,776	3,138	2,527	1,796
1949..	3,502	3,966	2,876	2,309	2,558	3,356	4,611	3,221	3,191
1950..	3,902	5,464	3,155	2,459	2,829	4,616	(a)5,567	3,263	3,816
1951..	5,080	7,943	4,512	2,930	2,850	6,438	(a)7,074	3,294	5,098
1952..	6,481	7,365	5,038	4,024	3,455	6,289	(a)9,338	3,723	5,647
1953..	6,615	6,950	4,958	4,533	3,707	6,303	(a)8,519	4,601	5,631
1954..	(b)	(b)	(b)	(b)	(b)	(b)	(a)(b)	(a)(b)	5,384

(a) The regimen and weighting of the original Building Materials and Chemicals groups have become unreal. Movements in the Building Materials group (since 1949) and in the Chemicals group (since 1953) have been calculated in accordance with the movements which occurred in the corresponding groups of the Basic Materials and Foodstuffs Index. These imputed movements have been used in calculating the All Groups indexes whilst maintaining the original group combining weights. (b) Not available for publication.

NOTE.—The figures given in this table are comparable in the vertical columns but are not directly comparable horizontally.

### C. CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR.

1. General.—An account of the measures taken by the Commonwealth Government to control prices from September, 1939 (immediately after the outbreak of war), until 29th May, 1948 (the date of the Prices Referendum), was given in Official Year Book No. 37, pp. 458-464.

2. Transfer of Price Control to the States.—Consequent upon the rejection of the proposal embodied in the Prices Referendum held on 29th May, 1948, that permanent power to control rents and prices (including charges) be conferred on the Commonwealth Government, responsibility for price fixation was assumed by the State Governments and steps were taken to pass State Prices Acts. These acts were proclaimed to operate simultaneously on 20th September, 1948. Except in the case of Queensland, each Act was to remain in force for a specific period, but the period varied from State to State.

On 20th September, 1948, each State Government issued declarations covering uniform lists of goods and services, which were brought under price control. Existing Commonwealth Prices Regulation Orders continued to apply to these goods and services until specially varied in accordance with the terms of the State legislation. At the same time, the Commonwealth Government issued an identical list of declared items to operate in the Australian Capital Territory and other Territories of the Commonwealth.

In the operation of State price control, the State Prices Commissioners collaborated closely. Conferences of Commissioners were held at intervals of approximately two months. Thus a large degree of uniformity was attained in controlling and decontrolling items and in the fixation of margins and prices of major items.

In each State the number of commodities and services subject to control has been progressively reduced, and in some States price control has been terminated, viz., Western Australia, 31st December, 1953; Tasmania, 31st October, 1954; Victoria, 31st December, 1954; and the Australian Capital Territory, 10th February, 1955.

3. **Price Stabilization.**—Expenditure by the Commonwealth Government on price stabilization subsidies reached a peak in 1947-48 and since then the Commonwealth Government has progressively reduced the range of commodities eligible for subsidy.

In addition to those subsidies which had been an integral part of the Price Stabilization Plan, the Commonwealth Government paid bounties and subsidies for assistance to primary production, and these payments also had a stabilizing influence on prices.

For particulars of expenditure by the Commonwealth Government on price stabilization and other subsidies and bounties, *see* Chapter XX.—Public Finance.

## D. WAGES.

### § 1. Arbitration and Wages Boards Acts and Associated Legislation.

1. **General.**—Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and conditions of labour were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Official Year Book prior to No. 38.

2. **Commonwealth.**—Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to "conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State". The Parliament has made such a law, namely, the Conciliation and Arbitration Act.

This Act defines "an industrial dispute" as a "dispute (including a threatened, impending or probable dispute) as to industrial matters, which extends beyond the limits of any one State and a situation which is likely to give rise to a dispute as to industrial matters which so extends". Such disputes are dealt with, in part, by a Court constituted under the Act, and otherwise by Conciliation Commissioners appointed under the Act. At the present time, the Court comprises a Chief Judge and six other Judges, whilst there is a Chief Conciliation Commissioner and nine other Conciliation Commissioners.

The Court deals with industrial disputes insofar as they concern the standard hours of work in an industry, the basic wage for both adult males and adult females and questions relating to long service leave with pay, but all other matters in dispute are dealt with by a Conciliation Commissioner. There is, however, provision for a Conciliation Commissioner to refer any dispute or any part of a dispute to the Court for determination, but a Conciliation Commissioner is entitled to so refer a matter only if he is of the opinion, and if the Chief Judge concurs in that opinion, that the matter is one of such importance that, in the public interest, it should be dealt with by the Court.

In addition to the functions outlined above, the Act empowers the Court to make orders concerning the interpretation, and relating to the enforcement, of orders and awards. The Act also makes provision for the registration of associations of employees and employers, and certain powers in connexion therewith are, by the Act, given to the Court.

Although, in certain circumstances, there is a right of approach to the High Court with respect to decisions of the Court, the circumstances are very limited, and, for practical purposes, it can be said that decisions given by the Court are final. Decisions given by a Conciliation Commissioner, however, may be made the subject of appeal to the Court of Conciliation and Arbitration provided the party desiring to appeal can satisfy the Chief Judge, by way of application for leave to appeal, that the order or award, the subject of the application, deals with a matter of such importance that leave to appeal should, in the public interest, be granted.

Whilst many of the minor powers of the Court may be exercised by a Court constituted by one Judge, in all major matters, e.g., questions relating to the basic wage, standard hours of work, long service leave, applications concerning registered organizations and also appeals from orders or awards made by Conciliation Commissioners, the Court must be constituted by at least three Judges one of whom may be the Chief Judge.

Prior to 1947, there was no division of work as between the Court and Conciliation Commissioners, a dispute being dealt with by either one or other part of the Tribunal, with the exception that questions relating to the basic wage and standard hours could only be dealt with by at least three Judges of the Court sitting together. There was also, at that time, a right of appeal to the Court against a decision of a Conciliation Commissioner. The amending Act of 1947 brought about the division of work between the two parts of the Tribunal, and, at the same time, made decisions of Conciliation Commissioners final. However, a further amending Act passed in 1952 altered the position regarding finality of decisions of Conciliation Commissioners, and provided a right of appeal, in the circumstances set out above, to the Court against any such decision.

3. *States*.—In each State, Industrial Tribunals have been established to regulate and arbitrate in industrial matters. The chief of these are the Industrial Commission of New South Wales, the Industrial Courts of Queensland and South Australia, and the Western Australian Court of Arbitration, together with Wages Boards for specific industries or occupations which operate in Victoria, South Australia and Tasmania. Further details concerning the functions and powers of these authorities may be found in *Labour Report* No. 42.

## § 2. Rates of Wage and Hours of Labour.

1. *General*.—The collection of information respecting the current rates of wage payable in different callings and in occupations in various industries was first undertaken by this Bureau in the early part of 1913. The particulars are obtained primarily from awards, determinations and agreements under Commonwealth and State Industrial Acts and are therefore the minimum rates prescribed. They refer generally to the capital city in each State, but in industries which are not carried on in the capital cities, e.g., mining, agriculture, etc., the rates in the more important centres are taken. In those cases where no award, determination or agreement is in force, particulars are taken of the ruling union or predominant rate. During recent years the number of predominant rates of wage included in the tabulations has been reduced considerably, as most of the industries and occupations are now covered by awards, determinations or industrial agreements. The statistics of nominal wages and hours of labour are in course of revision to meet changes in industrial structure. The amounts should not be regarded as actual current averages, but as an index of changes expressed in money and hour terms.

The index numbers for male adult workers are computed with the weighted average wage in 1911 as base (= 1,000). In the case of females, however, it has not been possible to secure information for the years prior to 1914, and the index numbers are therefore computed with the weighted average rate of wage payable to adult female workers in Australia at 30th April, 1914 as base (= 1,000).

An extensive tabular presentation of the minimum rates of wage for adult male and female workers in the main occupations in the capital city of each State is given each year in the Appendix to the *Labour Report*.

2. *Weekly Rates of Wage, 1939 and 1950 to 1954*.—(i) *General*. The average rate of wage for each industrial group is computed by taking the arithmetic average of the rates of wage payable for all classified occupations within that group. These averages are weighted to give the averages for the States and for Australia.

(ii) *Adult Males—States.* The following table gives the weighted average nominal weekly rates of wage payable to adult male workers at the dates specified :—

### WEEKLY WAGE RATES : ADULT MALES.

3. *Hourly Wage Rates, 1939 and 1950 to 1954.*—(i) *General.* The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. The number of hours constituting a full week's work differs, however, in some instances between various trades and occupations in each State, and between the same trades and occupations in the several States. To secure what may be for some purposes a better comparison, the results in the preceding paragraphs are reduced to a common basis, namely, the rate of wage per hour. The particulars of weighted average nominal hourly rates of wage given in the following tables relate to all industrial groups except Groups XI. (Shipping, etc.) and XII. (Pastoral, Agricultural, etc.). Some of the occupations included in these groups are of a casual or seasonal nature, and in a number of cases the hours of labour are not regulated either by awards or determinations of industrial tribunals or by legislation. Thus the necessary particulars for the computation of average working hours and hourly rates of wage are not available.

(ii) *Adult Males—States.* The following table shows the weighted average nominal hourly rates of wage payable to adult male workers in each State at the dates specified. Index numbers are also given for each State with the weighted average for Australia at 30th April, 1914 as base (= 1,000).

HOURLY WAGE RATES(a) : ADULT MALES.

4. **Weekly Hours of Labour, 1939 and 1950 to 1954.**—(i) *General.* The number of hours constituting a full week's work (excluding overtime) differs in some instances between various trades and occupations in each State and between the same trades and occupations in the several States. The particulars of weekly hours of labour given in the following tables relate to all industrial groups except Groups XI. (Shipping, etc.) and XII. (Pastoral, Agricultural, etc.). Some of the occupations included in these groups are of a casual or seasonal nature, and in a number of cases the hours of labour are not regulated either by awards or determinations of industrial tribunals or by legislation. Thus the necessary particulars for the computation of average working hours for these groups are not available.

(ii) *Adult Males—States.* The following table shows the weighted average nominal hours of labour (excluding overtime) in a full working week for adult male workers in each State and Australia at 31st December, 1939 and 1950 to 1954. Index numbers are given for each State with the weighted average hours of labour for Australia at 30th April, 1914, as base (= 1,000).

Working hours have not been generally regulated by industrial tribunals for some of the occupations classified in Industrial Groups XI. and XII. See also note (a) to table on page 168.

(iii) *Adult Females—States.* The following table shows the weighted average nominal hours of labour (excluding overtime) in a full working week for adult female workers in each State and Australia at 31st December, 1939 and 1950 to 1954. Index numbers are given for each State with the weighted average hours of labour for Australia at 30th April, 1914, as base (= 1,000).

# WHOLESALE AND RETAIL PRICES, NOMINAL, AND EFFECTIVE OR REAL WAGES - INDEX NUMBERS AUSTRALIA, 1911 to 1955

(BASE OF EACH SERIES: YEAR 1911 = 1,000)

EXPLANATION.—The index numbers in the graph above are for the Six Capital Cities as a whole, with the exception of those for Wholesale Prices up to the fourth quarter of 1927, which are for Melbourne. The wholesale prices graph shows the trend of prices according to the "old" Melbourne Index up to the fourth quarter of 1927, but thereafter, this index having been "spliced" with the Basic Materials and Foodstuffs Index, the curve line moves in accordance with the variations of the latter. The price quotations for this index are, in the main, obtained from Melbourne sources, but their movements may be taken as representative of fluctuations in most Australian markets. For the period 1911-1914 the "C" Series index numbers are taken back from the true base (November, 1914 = 1,000) by means of the "A" Series Index (Food and Rent of All Houses). Real wages are computed on the basis of the "C" Series Retail Price Index.

5. Nominal and Effective Wage Rates.—(i) *General*. Index numbers of wage rates are said to be *nominal* when they represent changes in the wage rates themselves but are described as *effective* or *real* when they represent changes in equivalent purchasing power, that is, the purchasing power of the corresponding wages in terms of some definite composite unit or regimen the cost of which can be ascertained at different times. The relation between *nominal* and *effective* or *real* wages was discussed at some length in *Labour Report* No. 6, and was also referred to in *Labour Report* No. 11.

Prior to 1936 it was the practice of this Bureau to compute effective wage rate index numbers by dividing the nominal wage rate index numbers by the corresponding retail price index numbers for food, groceries and rent of all houses ("A" series). While wage rates were generally varied on the basis of the "A" series index numbers there was a good deal to be said for this procedure. When the Commonwealth Court abandoned the "A" series, the merits of the "C" series for "deflating" nominal wage rates were strengthened and real wages to the end of 1937 were measured in terms of their purchasing power over both regimens. Since 1938, when computation of the "A" series was discontinued, real wages have been measured in terms of their purchasing power over the "C" series only. The "C" series covers food, groceries, rent of four- and five-roomed houses, clothing and miscellaneous household requirements.

(ii) *Nominal Weekly Wage Rate Index Numbers*. The following table shows, for the period 1911 to 1954, index numbers of the weighted average nominal weekly rates of wage payable for adult males in each State, the weighted average rate for Australia in 1911 being taken as the base (=1,000). These results are based generally upon rates of wage prevailing in the capital city of each State, but in certain industries, such as mining, rates are necessarily taken for places other than the capital cities. The index numbers for 1911 are based on rates current at the end of December, 1911, annual averages not being available. For 1914 and subsequent years, however, the index numbers are based on the average rates current at the end of the four quarters of each year.

(a) For a full week's work (excluding overtime).

(iii) *Effective or Real Wage Rate Index Numbers.* In obtaining the effective wage rate index numbers in the following table, the nominal wage rate index numbers shown above have been divided by the corresponding retail price index numbers for the capital city and multiplied by 1,000. Since the "C" series index numbers were not compiled for periods prior to November, 1914, it has been assumed that fluctuations between 1911 (the base of the table) and 1914 in the "C" series would have been similar to the fluctuations observed in the "A" series. A table showing effective or real wage rate index numbers from 1901 to 1937 measured in terms of purchasing power over the "A" series regimen appeared in earlier issues of the Official Year Book (see No. 37, page 473).

## EFFECTIVE OR REAL WAGE RATE(a) INDEX NUMBERS : ADULT MALES.

(a) For a full week's work (excluding overtime).

In earlier issues of the Official Year Book (see No. 39, page 410) a table was included showing similar index numbers for Australia as a whole under both the "A" and "C" series at intervals from 1901 to 1950.

## § 3. Average Weekly Wage Earnings.

1. *Average Weekly Total Wages Paid and Average Earnings, All Industries.*—The following figures are derived from employment and wages recorded on Pay-roll Tax returns (which cover approximately 80 per cent. of the total employment for Australia) and from estimates of the unrecorded balance. The figures relate to civilian wages and salaries only, pay and allowances of members of the armed forces being excluded. Corresponding figures for each quarter are published in the *Monthly Review of Business Statistics* and the *Quarterly Summary of Australian Statistics*.

## AVERAGE WEEKLY TOTAL WAGES PAID AND AVERAGE EARNINGS.

1948-49 .. ..	8.73	8.84	7.63	8.03	7.75	7.56	8.44
1949-50 .. ..	9.50	9.78	8.34	8.83	8.65	8.49	9.26
1950-51 .. ..	11.46	11.70	9.82	10.58	10.23	9.99	11.09
1951-52 .. ..	14.24	14.20	11.93	13.13	12.80	12.59	13.65
1952-53 .. ..	15.50	15.46	13.32	14.58	14.13	13.97	14.95
1953-54 .. ..	16.15	16.27	14.05	15.30	15.04	14.92	15.69
1954-55 .. ..	16.96	17.06	14.51	16.09	15.55	15.60	16.42

(a) Includes Australian Capital Territory. (b) Includes Northern Territory. (c) Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. The same ratio has been used in each State, and because the average ratio of female to male earnings may vary between States, precise comparisons between average earnings in different States cannot be made on the basis of the figures above.

2. Average Weekly Wage Earnings Index Numbers.—The following table shows, for "All Industries" and for "Manufacturing", the movement in average weekly wage earnings from 1945-46 to the June Quarter, 1955. The "All Industries" index is based on Pay-roll Tax returns and other data. The index for manufacturing industries for the years 1945-46 to 1953-54 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory returns (*see* Chapter IX.—Manufacturing Industry, § 8, para. 2 (iii)); figures subsequent to June, 1954 are preliminary estimates based on Pay-roll Tax returns.

The index numbers show for "All Industries" and "Manufacturing" the movement in average earnings over a period of time. They do not, however, give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1945-46 = 1,000 and both series have been seasonally adjusted.

## AVERAGE WEEKLY WAGE EARNINGS(a) INDEX NUMBERS: AUSTRALIA.

SEASONALLY ADJUSTED.

(Base of each Series: Year 1945-46 = 1,000.)

Year.	All Industries.(b)	Manufacturing.(c)	Quarter.	All Industries.(b)	Manufacturing.(c)
1945-46 .. ..	1,000	1,000	1953—March Qtr. ..	2,362	2,405
1946-47 .. ..	1,037	1,056	June .. ..	2,377	2,427
1947-48 .. ..	1,164	1,206	Sept. .. ..	2,445	2,479

1953-54 .. ..	2,462	2,490	June .. ..	2,652	2,730
1954-55 .. ..	2,572	2,635			

(a) Including salaries. (b) Average earnings per male unit employed. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. (c) Average earnings of male wage and salary earners in factories.

### § 4. Basic Wages in Australia.

1. *General.*—The concept of a “basic” or “living” wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the “minimum” or “basic” wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted “that the dominant factor in fixing the basic wage . . . . is the economic or productivity factor and that the basic wage must be the highest that industry as a whole can pay”.\*

Under the Commonwealth Conciliation and Arbitration Act the Commonwealth Court of Conciliation and Arbitration may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award “altering the basic wage (that is to say, that wage, or that part of a wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which, he [she] is employed) or the principles upon which it is computed”. In practice, the Court holds general basic wage inquiries from time to time and its findings are then applied to industrial awards within its jurisdiction. In New South Wales and South Australia, in general, the State industrial authorities are required to adopt the relevant basic wage prescribed by the Commonwealth Court of Conciliation and Arbitration. In Victoria and Tasmania, where the Wages Boards systems operate, no provision is included in the industrial Acts for the declaration of a basic wage, although, in fact, the Wages Boards have generally adopted basic wages based on those of the Commonwealth Court. In Queensland and Western Australia the determination of a basic wage is a function of the respective State Arbitration or Industrial Courts and (subject to State law) they have regard to rates determined by the Commonwealth Court.

In addition to the basic wage, “secondary” wage payments, including margins for skill, loadings and other special considerations peculiar to the occupations or industry are determined by these authorities. The basic wage, and the “secondary” wage, where prescribed, make up the “minimum” wage for a particular occupation. The term “minimum wage” as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry.

2. *The Commonwealth Basic Wage.*—(i) *Early Judgments.* The principle of a living or basic wage was propounded as far back as 1890 but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by way of an order in terms of Section 2 (d) of the Excise Tariff 1906 in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was “fair and reasonable”. Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of “a fair and reasonable” minimum wage for unskilled labourers as that standard appropriate to “the normal needs of the average employee, regarded as a human being living in a civilized community”.† The rate declared was 7s. per day or £2 2s. per week for Melbourne, the amount considered reasonable for “a family of about five”.

The “Harvester” standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses (“A” series) for the 30 more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. The basic wage rates for towns were thereafter varied with regard to variations in the respective retail price index numbers. Court practice was to equate the retail price index number 875 for Melbourne for the year 1907 to the “Harvester” rate of 42s. per week (or the base of the index (1,000) to 48s. per week).

\* 44 C.A.R., p. 57.

† 2 C.A.R., p. 3.

At intervals thereafter as awards came before it for review, the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index. In some country towns certain "loadings" were added by the Court to wage rates so derived to offset the effect of lower housing standards, and consequently of house rents, on the index numbers for these towns.

Over the period of its operation, the adequacy or otherwise of the "Harvester" standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War strong criticism developed that this system did not adequately maintain the "Harvester" equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's Report was presented in 1920. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court because they were considerably in advance of existing rates and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in *Labour Report* No. 40, p. 106.

The system of making automatic quarterly adjustments of the basic wage in direct ratio to variations in the retail price index ("A" series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. Previously, adjustments had been made sporadically in relation to retail price indexes for the previous calendar year or the year ended with the preceding quarter. The practice adopted by the Commonwealth Court in 1921 of making automatic quarterly adjustments on a sliding scale continued until the Court's judgment of 12th September, 1953 (see page 184).

In 1922 an amount known as the "Powers' 3s." was added by the Court as a general "loading" to the weekly basic wage for the purpose of maintaining during a period of rising prices the full equivalent of the "Harvester" standard. This loading continued until 1934.

(ii) *Basic Wage Inquiries, 1930-31, 1932, 1933.* No change was made in the method of fixation and adjustment of the basic wage until the onset of depression, which began to be felt severely during 1930. Applications were then made to the Court for some greater measure of reduction of wages than that which resulted from the automatic adjustments due to falling retail prices. The Court held a general inquiry, and, while declining to make any change in the existing method of calculating the basic wage, reduced all wage rates under its jurisdiction by 10 per cent. from 1st February, 1931. In June, 1932 the Court refused applications by employee organizations for the cancellation of the 10 per cent. reduction of wage rates. In May, 1933 the Court again refused to cancel the 10 per cent. reduction in wage rates, but decided that the existing method of adjustment of the basic wage in accordance with the "A" series retail price index number had resulted in some instances in a reduction of more than 10 per cent. In order to rectify this the Court adopted the "D" series of retail price index numbers for future quarterly adjustments of the basic wage.

Particulars of the 1930-31 and the 1932 Inquiries may be found in *Labour Report* No. 22, pp. 45-48 and of the 1933 Inquiry in *Labour Report* No. 23, pp. 45-46.

(iii) *Basic Wage Inquiry, 1934.* A summary of the judgment delivered on 17th April, 1934, was shown in *Official Year Book* No. 29, page 545. Until this judgment the "Harvester" standard, adjusted to retail price variations, continued to be the theoretical basis of the wage of the Commonwealth Court. The new rate for the six capital cities was in effect the same as that previously paid under the "A" series, without the "Powers' 3s." and without the 10 per cent. reduction which then ceased to operate.

Automatic quarterly adjustment of the basic wage was transferred from the "A" and the "D" series to the "C" Series Retail Price Index. The base of the index (1,000) was taken by the Court as equal to 81s. per week. This gave rates as declared on this occasion for the capital cities on the basis of their respective index numbers ranging from 61s. for Brisbane to 67s. for Sydney and Hobart, the average wage for the six capital cities being 65s.

(iv) *Basic Wage Inquiry, 1937.* In May, 1937, the Commonwealth Court heard an application by the combined unions for an increase in the basic wage. The unions asked that the equivalent of the base (1,000) of the "C" Series Index be increased from 81s. to 93s., which on index numbers then current would have represented an average increase of about 10s. per week. The chief features of the judgment delivered on 23rd June were :—

(a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as "loadings" additional to the rates payable under the 1934 judgment, which were referred to in the judgment as the "needs" portion of the total resultant basic wages. These loadings, commonly referred to as "Prosperity" loadings, ranged, for capital cities, from 4s. to 6s., that for the "six capitals" being 5s.

(b) The basis of the adjustment of the "needs" portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the "C" series to a special "Court" series based upon the "C" series (*See page 154*).

(c) Female and junior rates were left for adjustment by individual Judges when dealing with specific awards.

The main parts of the judgment were reprinted in Official Year Book No. 30, pp. 564-75 and in *Labour Report* No. 28, pp. 77-87.

(v) *Basic Wage Inquiry, 1940.* On 5th August, 1940 the Full Court commenced the hearing of an application by the combined unions for an increase in the existing basic wage by raising the value of 1,000 (the base of the "C" Series Index upon which the "Court" series was based) from 81s. to 100s. per week, and the incorporation of the existing "Prosperity" loadings in the new rate mentioned. In its judgment of 7th February, 1941, the Court unanimously refused to grant any increase, owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. (*See (vi) following*).

The Chief Judge stated : "The Court has always conceded that the 'needs' of an average family should be kept in mind in fixing a basic wage. But it has never, as the result of its own inquiry, specifically declared what is an average family, or what is the cost of a regimen of food, clothing, shelter and miscellaneous items necessary to maintain it in frugal comfort, or that a basic wage should give effect to any such finding. In the end economic possibilities have always been the determining factor . . . . what should be sought is the independent ascertainment and prescription of the highest basic wage that can be sustained by the total of industry in all its primary, secondary and ancillary forms".\*

The Chief Judge also suggested that the more logical system would be to grade the basic wage according to family responsibilities by means of a comprehensive system of child endowment, and that if a scheme of this nature were established, future fixations of the basic wage would be greatly simplified.†

(vi) "*Interim*" *Basic Wage Inquiry, 1946.* As the result of (a) an application made by the Commonwealth Attorney-General for the restoration to the Full Court List of certain adjourned 1940 basic wage applications (*see (v) above*), (b) a number of fresh cases which had come to the Court since 1941, and (c) an application by the combined unions for an "interim" basic wage declaration, the Court commenced the hearing of this case on 25th November, 1946. Judgment was delivered on 13th December, 1946 whereby an increase of 7s. per week was granted in the "needs" portion of the basic

\* 44 C.A.R., pp. 47-8.

† Legislation covering a scheme to become operative on 1st July, 1941 was passed by the Commonwealth Parliament on 3rd April, 1941. For details *see* Chapter XV.—Welfare Services.

wage then current, the rate for the six capital cities as a whole being increased from 93s. to 100s. per week. For automatic quarterly adjustments a new "Court" Index (Second Series) (Base 1923-27 = 87.0) was adopted. All "loadings" on the basic wage were retained. Further particulars of this judgment may be obtained from *Labour Report* No. 38, page 79.

(vii) *Basic Wage Inquiry*, 1949-50. This finalized the case begun in 1940 and continued in 1946 (*see above*). Evidence was completed on 22nd August, 1950, and the three judges (Kelly *C.J.*, Foster and Dunphy *JJ.*) delivered separate judgments on 12th October, 1950. In these judgments, which were in the nature of general declarations, a majority of the Court (Foster and Dunphy *JJ.*) was of the opinion that the basic wage for adult males should be increased by £1 per week, and that for adult females should be 75 per cent. of the adult male rate. Kelly *C.J.*, dissenting, considered that no increase in either the male or female wage was justified.

On 24th October, 1950, and 23rd November, 1950, the Court made further declarations regarding the "Prosperity" loading of 1937 (*see page 182*) which was being paid at rates between 3s. and 6s. per week according to localities, etc., and the future basis of quarterly adjustments. The "Prosperity" loading was standardized at a uniform rate of 5s. per week for all localities and was declared to be an adjustable part of the basic wage. The Court also declared that the "war" loadings were not part of the basic wage.

With regard to other "loadings" the Court on 17th November, 1950 proceeded to examine the individual awards in the claims before it, for the purpose of determining to what extent such "loadings" formed part of the basic wage. Any "loading" declared to be part of the basic wage ceased to be paid as a separate entity, but apart from the special case of the Australian Capital Territory there were very few "loadings" which fell within this category.

The new rates operated from the beginning of the first pay-period in December, 1950, in all cases being the "needs" rate (Second Series) on the indexes of September quarter, 1950, plus a flat-rate addition of £1, together with the standardized "Prosperity" loading of 5s. (*see above*).

The basic wage rate for the six capital cities (weighted average) arrived at by the Court after applying the foregoing declarations was £8 2s., comprising £6 17s. "needs" (Second Series) plus 5s. uniform "Prosperity" loading plus the £1 addition. The declaration provided that the whole of this basic wage would be subject to automatic quarterly adjustments as from the beginning of the first pay-period commencing in February, 1951, on the basis of the index numbers for the December quarter, 1950. For this purpose the new rate of £8 2s. was equated to the "C" series retail price index number 1572 for the six capital cities (weighted average) for September quarter, 1950. From this equation was derived a new "Court" Index (Third Series) with 103.0 equated to 1,000 in the "C" Series Index.

The basic wage rates operative in November, 1950, are shown below in comparison with those operative from the beginning of the first pay-period commencing in December, 1950 :—

Date of Operation.	Sydney.	Mel- bourne.	Brisbane.	Adelaide.	Perth.	Hobart.	Six Capitals.
	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>	<i>s. d.</i>
November, 1950 ..	146 0	143 0	135 0	137 0	139 0	139 0	142 0
December, 1950 ..	165 0	162 0	154 0	158 0	160 0	160 0	162 0

Further details of this judgment were given in *Labour Report* No. 40, page 81.

(viii) *Basic Wage and Standard Hours Inquiry*, 1952-53. On 5th August, 1952, the Commonwealth Court of Conciliation and Arbitration began hearing claims by—

- (1) The Metal Trades Employers Association and other employers' organizations—
  - (a) that the basic wage for adult males be reduced ;
  - (b) that the basic wage for adult females be reduced ;
  - (c) that the standard hours of work be increased ;
  - (d) that the system of adjusting the basic wages in accordance with variations occurring in retail price index numbers be abandoned.
- (2) The Metal Trades Federation, an association of employees' organizations, that the basic wage for adult males be increased, which would also have resulted in increasing the amount, though not the proportion it bore to the basic wage for adult males, of the basic wage for adult females.

A number of Governments, organizations and other bodies obtained leave to intervene and in this role the Australian Council of Trade Unions supported the claims of the Metal Trades Federation.

The Court consisted of Kelly *C.J.*, Foster, Kirby, Dunphy, Wright, McIntyre and Morgan, *JJ.*, but before the hearing of evidence commenced Wright *J.* withdrew and during the hearing of the case Foster *J.* withdrew from the bench. The Court gave its decision on 12th September, 1953 and stated that reasons for its decision would be delivered later. Before the reasons for the judgment could be delivered McIntyre *J.*, who had been ill during the case, died.

In the early stages of the case the employers applied for an immediate and separate hearing of the question of suspension of the basic wage adjustment provisions in awards. The Court however, after hearing argument, indicated that it was not satisfied that a sufficient case had been made out for such a separate hearing.

Evidence in the employers' case began on 16th September, 1952. On completion of the employers' case the counsel for employee organizations submitted that there was "no case to answer" and asked for the dismissal of the case. The Court rejected this claim and the hearing of evidence for the employee organizations was concluded on 11th September, 1953.

The decision of the Court, announced on 12th September, 1953, was expressed in the following terms :—

"1. The employers' applications for reduction of the current basic wages for adult males and for reduction of the current basic wages for adult females are refused.

2. The employers' applications for an increase of the standard hours of work in the industries covered thereby are refused.

3. The employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages are granted.

4. The Unions' applications for increases of basic wages are refused.

The Court makes orders accordingly, to operate as from to-day. The reasons for the above decisions will be delivered at a later date. The form of the appropriate orders will be settled by the Industrial Registrar." \*

The reasons for the above decision were delivered on 27th October, 1953.

The Court in the course of its judgment said that in the present case nothing had been put before the Court in support of a departure from its now well established principle that the basic wage should be the highest that the capacity of the community as a whole could sustain. If the Court is at any time asked to fix a basic wage on a true needs basis, the question of whether such a method is correct in principle and all questions as to the size of the family unit remain open.

No evidence was submitted in the inquiry to suggest that the basic wage in its character of a "foundational wage" of providing, or helping to provide, a just and

reasonable standard of living to employees whose income is based or dependent upon it, was inadequate, and the arguments of both the employers and employees were directed towards a basic wage based on the capacity of industry to pay.

The Court, in reviewing the claims of the respondents, in the light of the existing economic situation, indicated that although aware of the difficulties besetting industry and of the dependence of Australia's prosperity upon that large part of her productive effort whose rewards are conditioned by good seasons and whose prices are largely beyond her control, the Court was not satisfied that the employers had discharged the onus of proving that the existing situation called for a reduction of general standards either in the matter of the basic wage or in the ordinary working week. The Court was satisfied that there could be, in the existing situation, no increase in the basic wage, as was claimed by the Metal Trades Federation.

The Court decided to discontinue the principle of automatically adjusting the basic wage in accordance with variations in retail price index numbers while the basic wage was assessed on the capacity of industry. It was considered that "the further the Court has withdrawn from relating the basic wage to the fulfilment of any particular standard of needs, the less has become the justification for keeping the nominal wage 'automatically adjusted' during the currency of an award".\* Moreover, there was no ground for assuming that the capacity of industry to pay will be maintained at the same level or that it will rise or fall coincidentally with the purchasing power of money. The Court found that the system of automatic adjustments had undoubtedly been an accelerating factor in the rapid increase in prices in Australia particularly in the years 1951 and 1952 and this factor supported the Court's decision to abolish the system.

In regard to the basic wage for female employees the Court decided that no basis for a review of the existing ratio which the female basic wage bears to the male basic wage existed on the material presented to it, the Court being satisfied that industry had the capacity to maintain the existing female basic wage rates.

In rejecting the claim for an increase in the standard hours of work, the Court considered that the industry of the country was healthy and prosperous enough at present to sustain the existing standard.

The Court intimated that time would be saved in future inquiries if the parties to the disputes, in discussing the principle of the "capacity to pay", directed their attention to the broader aspects of the economy, such as indicated by a study of—

- Employment
- Investment
- Production and Productivity
- Overseas Trade
- Overseas Balances
- Competitive position of secondary industry
- Retail Trade.

In order to remove certain misconceptions about the function of the Court it was stated during the course of the judgment that "the Arbitration Court is neither a social nor an economic legislature. Its function under section 25 of the Act is to prevent or settle specific industrial disputes".† However, this function "must be exercised in the social and economic setting of the time at which it makes its decision. It must settle industrial disputes upon terms which seem to it to be just, having regard to conditions which exist at the time of its decision." In addition, the Court stressed that "the primary rule that a claimant is required to substantiate his claim should always be observed".

In accordance with its decision to abolish the automatic adjustment clause from its awards, the Court began, on 21st October, 1953, to deal with awards which were not

\* 77 C.A.R., p. 497.

† Ibid., p. 506.

actually affected by the original order. During this process the Court announced that it had no other method in mind in substitution of the automatic adjustment clauses. In fact the only issue before the Court was the abolition or retention of the adjustment principle and that issue had been determined. The basic wage as fixed by the Court in the new or amended clauses in awards was that which had become operative in August, 1953, and no provision was made for its automatic quarterly adjustment. The last such adjustment had been made on the "Court" Series Index for June quarter, 1953.

After the Court had amended all the awards listed before it as a result of applications by one of the parties to the awards, the Court, on its own motion under Section 49 of the Commonwealth Conciliation and Arbitration Act, listed those awards not the subject of an application by one of the parties and then proceeded to delete the clauses providing for the automatic adjustment of the basic wage.

The power of the Commonwealth Court of Conciliation and Arbitration to vary awards not the subject of an application by one of the parties was unsuccessfully challenged in the High Court of Australia.

(ix) *Rates Operative, Principal Towns.* The basic wage rates of the Commonwealth Court of Conciliation and Arbitration for adult males and females, operative as from the beginning of the first pay-period commencing in August, 1953, were as shown in the following table:—

COMMONWEALTH BASIC WAGE : WEEKLY RATES.(a)

City or Town.	Rate of Wage.		City or Town	Rate of Wage.	
	Males.	Females.		Males.	Females.

(a) Rates include "prosperity" loadings where applicable. (b) Rates operative from beginning of the first pay-period commencing in the month indicated. (c) By decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, automatic adjustment of basic wages in accordance with variations occurring in retail price index numbers was discontinued in Commonwealth awards. (See page 184.)

3. Australian Territories.—In the Australian Capital Territory the rates payable as from the beginning of the first pay-period commencing in August, 1953, were £11 18s. for adult males and £8 18s. 6d. for adult females.

In the Northern Territory there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the "Darwin" rate and the other in respect of areas south of that parallel and extending down to the 26th parallel (the "Port Augusta" rate).

The basic wage rates payable as from the beginning of the first pay-period commencing in August, 1953, were:—"Darwin" rate, adult males, £12 15s., adult females, £9 11s.; "Port Augusta" rate, adult males, £12 2s., adult females, £9 1s. 6d.

In addition to the above rates special loadings were prescribed in Northern Territory awards following the fixation of the new basic wage rates operative from November, 1951.

4. Basic Wage Rates for Females.—Reference should be made to *Labour Report* No. 42, 1953 (page 60) for an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949-50 Basic Wage Inquiry the Commonwealth Court of Conciliation and Arbitration by a majority decision fixed a new basic weekly wage for adult females at 75 per cent. of the corresponding male rate from the beginning of the first pay-period commencing in December, 1950.

5. State Basic Wages.—(i) *New South Wales*. The first determination under the New South Wales Industrial Arbitration Act of a standard "living" wage for adult male employees was made on 16th February, 1914, by the Court of Industrial Arbitration.

A Board of Trade established in 1918 with power to determine the "living" wage for adult male and female employees in the State made numerous declarations from 1918 to 1925, but ceased to function after the Industrial Arbitration (Amendment) Act 1926 transferred its powers to the Industrial Commission of New South Wales as from 15th April, 1926.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. With the adoption in 1937 of the Commonwealth basic wage, however, the identification of a specified family unit with the basic wage disappeared.

A table showing the variations in the living wages determined by the industrial tribunals of New South Wales up to 27th April, 1937 was published in earlier issues of the Official Year Book (*see* No. 37, page 481). Since that date the rates adopted have followed the Commonwealth basic wage.

Shortly after the Commonwealth Court of Conciliation and Arbitration announced its judgment in the 1937 Basic Wage Inquiry the Government of New South Wales amended the Industrial Arbitration Act to make the State basic wage agree with the Commonwealth rate ruling in New South Wales, and to adopt, as far as practicable, the general principles of operation laid down by the Commonwealth Court.

The principle of supplementing wages by a payment in respect of dependent children under fourteen years of age was operative in New South Wales from July, 1927 until superseded by the Commonwealth Government Scheme operative from 1st July, 1941, and a brief account of the main features of the system appears in Official Year Book No. 37, pp. 485-6.

Further amendments to the Industrial Arbitration Act were made in 1950 to give effect to the new rates declared by the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry.

Differential basic wage rates for country areas (except Broken Hill) and for employees under Crown awards were eliminated by an amendment of the Industrial Arbitration Act in 1951.

The decision of the Commonwealth Court of Conciliation and Arbitration in September, 1953, to discontinue the system of automatic adjustment of the basic wage consequent on changes in the "Court" series retail price index numbers was considered by the New South Wales Industrial Commission. On 23rd October, 1953, it certified that there had been an alteration in the principles of fixation of the basic wage, and instructed that the automatic adjustment clause be deleted from awards, etc., within its jurisdiction.

As a result, the basic wages applicable for the State (excluding Broken Hill) and operative from the beginning of the first pay-period commencing in August, 1953, remained unchanged at £12 3s. per week for adult males and £9 2s. for adult females until November, 1955.

In October, 1955, the Industrial Arbitration Act 1940-1955 was amended to provide for the automatic adjustment of the existing basic wage each quarter, in accordance with the movements in the Commonwealth Statistician's retail price index numbers. The first adjustment, based on the index number for the September quarter, 1955, represented the amount which would have been added to the basic wage if quarterly adjustments had not been suspended, and was made payable from the beginning of the first pay-period in November, 1955. The rates then payable were £12 13s. for adult males and £9 9s. 6d. for adult females.

(ii) *Victoria.* There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted from representatives of employers, employees and an independent chairman, for each industry group or calling, determine the minimum rate of wage to be paid in that industry or calling. In general, these Boards have adopted a basic wage in determining the rate of wage to be paid.

By an amendment to the Factories and Shops Act in 1934, Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards. A further amendment to this Act in 1937 made it compulsory for Wages Boards to adopt such provisions of Commonwealth Awards. The 1937 Act, as amended, also gave Wages Boards power to adjust wage rates, "with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate". The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September, 1953, a number of Wages Boards met in November, 1953, and deleted references to these adjustments. However, an amendment to the Factories and Shops Act in November, 1953, required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers. From 1st July, 1954 the Factories and Shops Acts 1928-1953 were replaced by the Labour and Industry Act 1953, which was, in general, a consolidation of the previous Acts and retained the requirement providing for the automatic adjustment of wages in accordance with variations in retail price index numbers.

The basic wages generally payable under the Victorian Wages Boards determinations from the beginning of the first pay-period commencing in November, 1955, were £12 6s. for adult males and £9 4s. 6d. for adult females.

(iii) *Queensland.* The first formal declaration of a basic wage (£4 5s. for adult males) by the Queensland Court of Industrial Arbitration was gazetted on 24th February, 1921. Prior to this declaration the rate of £3 17s. per week for adult males had been generally recognized by the Court in its awards as the basic or living wage. The Queensland Industrial Conciliation and Arbitration Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

The rates declared by the Queensland Court at various dates were shown in the table on page 74 of *Labour Report* No. 42, 1953.

From 21st April, 1942, the Queensland Industrial Court adopted the practice of making quarterly declarations of the basic wage on the basis of variations in the "C" series retail price index number for Brisbane.

The Queensland Industrial Court granted increases of 7s. and 5s. to the basic wages for adult males and adult females respectively, payable from 23rd December, 1946, following the "interim" basic wage judgment of the Commonwealth Court of Conciliation and Arbitration announced earlier in December, 1946.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to increase the male and female basic wages from December, 1950, the Queensland Industrial Court conducted an inquiry as to what change, if any, should be made to the State basic wage for Queensland. The Industrial Court granted an increase of 15s. weekly to both adult males and adult females, operative from 7th December, 1950. The new male rate was identical with the Commonwealth basic wage for the Brisbane metropolitan area. The basic wage payable to adult females was approximately 66 per cent. of the male rate.

In January, 1953, the Queensland Industrial Court departed from the practice (established in 1942) of varying the basic wage in accordance with quarterly variations in the "C" series of retail price index numbers. If the practice had been continued, a reduction of one shilling in the basic wage for adult males from January, 1953, would have been made. The Court was not satisfied, however, that the movement in the "C" series index for Brisbane for December quarter, 1952 was a true representation or reflex of the economic position for Queensland as a whole and so declined to make any alteration to the then existing basic wage. Quarterly adjustments were made for the next four quarters and the basic wage became £11 5s. for adult males from 1st February, 1954.

Commencing in March, 1954 a Basic Wage Inquiry was conducted by the Court and in its judgment of 11th June, 1954 the Court stated that there would be no change in the basic wage rates declared for February, 1954.

At subsequent hearings consequent on the movement in the "C" series of retail price index numbers for Brisbane in respect of the quarters ended 30th June, 30th September and 31st December, 1954 and 31st March, 1955 the Court again decided not to vary the existing basic wage rates. However, after considering the "C" series index number for the quarter ended 30th June, 1955 and its relation to the index number for the March quarter, 1955, the Court announced that as these figures showed a continued upward trend of cost of living in 1955 the basic wage for adult males should be increased from £11 5s. to £11 7s. from 1st August, 1955. In this judgment the Court emphasized that it holds itself free whether or not to adjust the basic wage upwards or downwards in accordance with movement in the "C" series of retail price index numbers.

Subsequently, the basic wage rates were again increased by the Court as a result of the movement in the "C" series of retail price index numbers for the quarter ended 30th September, 1955 and the rates payable from 24th October, 1955 became £11 9s. for adult males and £7 14s. for adult females in the Southern Division (Eastern District).

The rates shown above are applicable throughout the Southern Division (Eastern District), which includes the metropolitan area; allowances are added for the following divisions—Northern (Eastern District) 10s., Northern (Western District) 17s. 4d., Mackay 5s. 6d., and Southern (Western District) 7s. 4d. Half of these allowances are granted to females.

(iv) *South Australia.* The Industrial Code 1920–1951 provides that the Board of Industry shall after public inquiry declare the living wages to be paid to adult male and female employees. The Board has power also to fix different rates to be paid in defined areas.

The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage is to be declared is a man with a wife and three children.

The first declaration by the Board of Industry was made on 15th July, 1921, when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. per week. A table showing the living wages declared from time to time was published on page 76 of *Labour Report* No. 42, 1953.

Following the "interim" increase in the "needs" basic wage of the Commonwealth Court of Conciliation and Arbitration announced on 13th December, 1946, the South Australian Government made a provision in the Economic Stability Act, 1946 for the declaration by the Governor of a "living wage" based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination, on 5th September, 1946 and under the Industrial Code was not able to make a determination for a further six months.

The Industrial Code Amendment Act, 1949 made provision for the quarterly adjustment of the "living wage" in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect this made the State "living wage" and the Commonwealth basic wage equal from the beginning of the first pay-period commencing in February, 1950. The prescribed adjustment to the female "living wage" was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the "living wage" but any new "living wage" was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry the South Australian Industrial Code was amended to provide for declarations of the "living wage" by proclamation to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30th November, 1950, the South Australian living wage in the metropolitan area was made identical with the December, 1950, rates fixed by the Commonwealth Court of Conciliation

and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 54 per cent. of the male basic wage, was increased to 75 per cent. of the corresponding male rate.

The basic wages of the Commonwealth Court of Conciliation and Arbitration for Adelaide have remained unchanged from the beginning of the first pay-period commencing in August, 1953, consequent on the discontinuance of quarterly adjustments. The rates payable in accordance with the quarterly notifications, by the President of the Board of Industry, of the South Australian living wage for the metropolitan area have also remained unchanged over the period at £11 11s. for adult males and £8 13s. for adult females.

(v) *Western Australia.* The Industrial Arbitration Act 1912-1952 provides that the Court of Arbitration may determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determination shall be made within twelve months of the last preceding inquiry.

The term "basic wage" is defined in the Act as "a wage which the Court considers to be just and reasonable for the average worker to whom it applies". In determining what is just and reasonable the Court must take into account not only the "needs of an average worker" but also the "economic capacity of industry" and any other matters the Court deems relevant.

The Act provides that the Court of Arbitration may make adjustments of the "basic wage" each quarter if the official statement supplied to the Court by the State Government Statistician relating to the cost of living shows that a variation of 1s. or more per week has occurred, compared with the preceding quarter. These adjustments apply from the dates of declaration by the Court.

The first declaration of the basic wage by the Court of Arbitration, since the authority to fix one was vested in the Court in 1925, was made on 11th June, 1926. The family unit is not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. Since that date the principal inquiries have been those of 1938, 1947, 1950 and 1951. A table showing annual and special declarations of the basic wage by the Court of Arbitration will be found in *Labour Report* No. 42, page 78.

Following the judgment of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry the Western Australian Court of Arbitration resumed an inquiry which had been adjourned, to ascertain what change should be made in the State basic wage rates. In its judgment of 7th December, 1950 the Court decided that the basic wage should be increased by £1 per week for adult males and by 15s. per week for adult females. As the result of a subsequent inquiry the basic wage for adult females was increased from 1st December, 1951 to 65 per cent. of the corresponding male rate. This was subject to the condition that the increase in the basic wage should be offset by the reduction in or deletion of existing margins between the basic wage and the total wage as specified by the appropriate award or determination.

The Commonwealth Court of Conciliation and Arbitration announced on 12th September, 1953 the discontinuance of quarterly adjustments. Following this decision the Western Australian Court of Arbitration exercised its discretionary power, and after reviewing the cost of living statements prepared by the Government Statistician for each quarter from September quarter, 1953 to March quarter, 1955, declined to make, where applicable, any adjustment to the basic wage.

However, after reviewing the cost of living statement for the quarter ended 30th June, 1955 the Court decided, from 9th August, 1955, to increase the basic wage for Perth by 5s. 11d. a week for adult males and to make corresponding increases for the other areas. No change was announced in the basic wage for Perth following a review of the cost of living statement for the quarter ended 30th September, 1955.

The rates payable in the metropolitan area in November, 1955 were £12 12s. 3d. for adult males and £8 4s. 1d. for adult females.

(vi) *Tasmania*. A State basic wage is not declared in Tasmania. Wages Boards are constituted for a number of industries, from representatives of employers and employees and an independent chairman, and determine the minimum rate of wage payable in each industry. In general these Boards have adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rate of wage to be paid.

The Wages Board Act gives Wages Boards power to adjust their wage rates with variations in cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September, 1953, the Chairman of the Wages Boards stated he was of the opinion that automatic adjustment clauses should be deleted from all Wages Boards determinations. Before Wages Boards met to consider this matter, the wage rates for all determinations were automatically adjusted upwards from the beginning of the first pay-period commencing in November. By early December, 1953, all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November.

The rates commonly adopted by Tasmanian Wages Boards since the Commonwealth Court's decision to suspend the system of automatic adjustment are £12 2s. for adult males and £9 1s. 6d. for adult females.

(vii) *State Basic Wage Rates*. The "basic" wage rates of State industrial tribunals operative in November, 1954 and November, 1955 are summarized in the following table:—

STATE BASIC WAGES—WEEKLY RATES.

State.	November, 1954.			November, 1955.		
	Date of Operation.	Males.	Females.	Date of Operation.	Males.	Females.

(a) Where dates are not quoted wage rates operate from beginning of first pay-period commencing in month shown. (b) Automatic adjustment discontinued from August, 1953 until November, 1955 (see page 188). (c) No basic wage declared but rates shown (Melbourne) are those commonly adopted by Wages Boards. The Victorian Labour and Industry Act 1953 requires Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers. (d) Between February, 1954 and August, 1955 the Queensland Industrial Court declined to make any alteration in the basic wage consequent on quarterly movements in the "C" series retail price index numbers. (e) The "living wage" declared for the metropolitan area is also adopted in country areas except at Whyalla, where a loading of 5s. is generally payable. Automatic adjustments consequent on variations in retail price index numbers have not been made to the "living wage" since August, 1953, following the decision of the Commonwealth Court of Conciliation and Arbitration on 12th September, 1953. (f) The basic wage remained unchanged from July, 1953 to 9th August, 1955; during this period the Western Australian Arbitration Court declined to adjust the basic wage rates in accordance with movements in the cost of living statements prepared by the Government Statistician. (g) None declared but rates shown (Hobart) are those commonly adopted by Wages Boards. From 9th December, 1953 automatic adjustment was suspended and the adjustment increases of 10s. for males and 7s. 6d. for females payable from early November, 1953 were cancelled.

### § 5. Wage Margins.

On 5th November, 1954 the Commonwealth Court of Conciliation and Arbitration delivered a judgment\* which in effect became a general determination of the basis upon which all relevant wage and salary margins should be assessed. This became known as the Metal Trades Case, 1954.

General principles of marginal rate fixation had previously been enunciated by the Court in the Engineers' Case of 1924, the Merchant Service Guild Case of 1942 and the Printing Trades Case of 1947, and the Court adopted these insofar as they were applicable to current circumstances.

"Margins" were defined as—

"minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance."

A brief account of the Metal Trades Case is as follows :—

The Amalgamated Engineering Union, the Electrical Trades Union and other employee organizations parties to the Metal Trades Award, 1952 filed applications during 1953 for increased margins for all workers covered by this award.

The applications came on for hearing before Mr. Conciliation Commissioner Galvin who decided that they raised matters of such importance that, in the public interest, they should be dealt with by the Commonwealth Court of Conciliation and Arbitration. On 16th September and 6th October, 1953 the Conciliation Commissioner, pursuant to Section 14A of the Conciliation and Arbitration Act, referred these applications to the Court.

The actual claims of the trade unions were that the marginal rate of 52s. per week payable to a fitter in the metal trades should be increased to 80s. per week (86s. for certain electrical trades) with proportionate increases for other award occupations. The margins then current, with a few exceptions, had been in existence since 1947. The employees' claims were in the nature of a test case to determine the attitude of the Court to applications for increased margins.

The Metal Trades Employers' Association and other respondents to the Metal Trades Award had counter-claimed that existing margins for skilled tradesmen should remain unaltered, while those paid to partly skilled or unskilled workers should be reduced.

The Court decided to take the Commissioner's two references together and the matter came on for hearing before the Full Arbitration Court (Kelly C.J., Kirby, Dunphy and Morgan J.J.) in Melbourne on 13th October, 1953.

In a judgment delivered on 25th February, 1954 the Court held that a *prima facie* case had been made for a re-assessment of margins but that the economic situation at that time, particularly in regard to the level of costs, did not permit of such a comprehensive review. The Court decided that to avoid the creation of new disputes, to save expense and to obviate procedural difficulties, it would not reject the claims but adjourn them until 9th November, 1954.

On 25th and 26th August, 1954 summonses were filed by the employees' organizations for orders that proceedings in this case be brought forward and the hearing was resumed on 5th October, 1954.

In a judgment delivered on 5th November, 1954 the Court made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin, the existing margin was to remain unaltered. In effect, this decision increased the margin of a fitter from 52s. per week to 75s. per week, increased similarly margins of other skilled occupations, and made no increases in margins of what may generally be described as the unskilled or only slightly skilled employees under the Metal Trades Award.

At the end of its judgment the Court stated that, while its decision in this case related immediately to one particular industry, it was expected to afford general guidance to all authorities operating under the Conciliation and Arbitration Act or under other

legislation which provided for tribunals having power to make references, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals "which may regard decisions of this Court as of persuasive authority".

Extracts from the judgment are set out in some detail in *Labour Report* No. 43, 1954.

## § 6. Child Endowment in Australia.

1. *General*.—The principle of supplementing wages by a payment in respect of dependent children under sixteen years of age became prominent in Australia following the recommendations of the Royal Commission on the Basic Wage, 1920, and was implemented in Australia as described in the following paragraphs. The system has been in force in various forms in England and on the Continent as far back as 1795, the first instance occurring in England in that year.

2. *National Scheme*.—Details of the appointment of another Royal Commission in 1927 and a brief summary of its findings and of consequent Government decisions were given in earlier issues of the *Official Year Book* (see No. 39, page 425).

In 1941, the Commonwealth Government introduced a scheme of child endowment throughout Australia. The main features of the scheme and a summary of the operations under the scheme from 1st July, 1947 to 30th June, 1955 are given in Chapter XV.—Welfare Services.

3. *Earlier Schemes*.—Consequent upon the operation of the Commonwealth Child Endowment Scheme, appropriate steps were taken for the termination of the schemes operating in the Commonwealth Public Service and in New South Wales. The Commonwealth Public Service Scheme was the first system instituted in Australia and came into operation on 1st November, 1920. In New South Wales an unsuccessful attempt to institute the system was made in 1919 and a scheme was adopted under the Family Endowment Act 1927 which operated from 23rd July, 1927. For further details of these schemes reference may be made to *Official Year Book* No. 37, pages 485 and 486.

## E. EMPLOYMENT AND UNEMPLOYMENT.

### § 1. Employment.

1. *Total Occupied Persons*.—(i) *General*. The following estimates of the total numbers of occupied males and females are based principally on data from the National Register (July, 1939), the Civilian Register (June, 1943), the Occupation Survey (June, 1945) and the Censuses of 1933 and 1947 (June). These sources of information have been supplemented by employment details from Pay-roll Tax returns, which first became available for July, 1941. Owing to some difference in coverage, 1947 figures in the following tables differ slightly from Census figures as shown in Chapter XVI.—Population. The 1947 figures are subject to revision.

(ii) *Australia*. The estimates in the table below are divided into three categories (a) defence forces; (b) all persons fully occupied as employers, or as self-employed in businesses or on farms; and (c) wage or salary earners fully employed, or occupied as casual, part-time, intermittent or seasonal workers. Wage earners unemployed, in the sense that they are incapacitated or have no work to go to, are excluded, as also are persons engaged on Government relief works.

All unpaid "helpers" in non-rural industry have been included with wage and salary earners. Male unpaid "helpers" in rural industry have been included with employers and self-employed persons, as it is considered that the majority of these are sons or other close relatives of farmers working in an unofficial partnership, or as learners with the farm owner. Unpaid female "helpers" on farms are very numerous, but their exact number is not known. Generally they combine part-time dairy or other farm work with part-time duties in the home. Together with women occupied in unpaid home duties they have been excluded from the category of occupied persons.

Statistics of net enlistments in the defence forces shown in the table below represent total enlistments for full-time duty less deaths and discharges. Prior to December, 1941, men in certain age groups were called up for short training courses but these men are excluded from the figures. In July, 1941 the number of such men was approximately 50,000.

## TOTAL OCCUPIED PERSONS : AUSTRALIA.

1945—June(e) ..	648.9	304.5	230.2	534.7	153.2	1,961.3	2,114.5	2,649.2	3,298.1
1947—June ..	54.0	292.7	342.6	635.3	156.3	d 2,309.3	d 2,465.6	d 3,100.9	d 3,154.9

(a) Includes those serving outside Australia. (b) Excludes approximately 50,000 men called up for short training courses. (c) Occupation Survey, 1st June, 1945. (d) Subject to revision. (e) Includes females, in thousands, in private domestic service as follows:—106.7 in June, 1933; 124.5 in July, 1939; 100.0 in July, 1941; 41.5 in June, 1943; 47.6 in June, 1945; and 40.3 in June, 1947.

From June, 1933 to July, 1939, the number of occupied persons of both sexes increased by 488,900, due to the increase of 223,700 in the number of available breadwinners and to the decrease of 265,200 in the number unemployed from 563,200 to 298,000. During the war years from July, 1939 to June, 1943, the number of males occupied as civilians decreased by 288,000, while females occupied as civilians increased by nearly 113,000, representing a net decrease of 175,000 persons. This decrease, together with decrease of unemployment (272,000), normal increase of breadwinners (91,000) and an abnormal war-time increase of 178,000 breadwinners (persons who would not otherwise have been working), balanced the net intake into the defence forces at June, 1943 (716,000). The estimate of 659,900 female wage and salary earners employed in non-rural industries in June, 1947, includes 40,300 private domestics (the Census figure). The remaining 619,600 females in the estimate include females working part-time. The 1947 Census figure for the same industries (i.e., excluding rural

and private domestic) was 579,200. Persons working regularly but for considerably less than normal working hours were instructed on the Census Schedule to exclude themselves from the work force, unless their earnings from such work formed their principal means of livelihood.

(iii) *States.* The following table shows total occupied males and females in each State in July, 1939 and June, 1947, divided into defence forces, employers and self-employed, and wage and salary earners.

Australian Capital Territory and Northern Territory.

(b) Subject to revision.

(c) Includes Aus-

Between July, 1939 and June, 1947, the occupied population of Australia (including defence forces but excluding unemployed, pensioners, retired persons of independent means and dependants) increased by approximately 14.7 per cent. The percentage increase in each State was as follows: New South Wales, 16.1; Victoria, 14.8; Queensland, 13.8; South Australia, 12.7; Western Australia, 8.3; Tasmania, 14.3.

2. **Wage and Salary Earners in Civilian Employment.**—(i) *Australia and States.* Estimates are made monthly of wage and salary earners in employment (excluding employees in rural industry and female domestics in private homes), based on Pay-roll Tax returns and supplementary returns of Government employment. Pay-roll Tax returns cover only a small proportion of wage earners on rural holdings, and practically no private domestic servants. It is not possible to obtain actual numbers of farm employees and private domestic servants except when a Census or quasi-Census such as the Occupation Survey (1st June, 1945) is taken, but estimates have been made from time to time using available data. The next table shows for each State and for Australia as a whole the trend in that section of wage and salary earning employment which it is possible to estimate monthly. Figures are shown as at June, 1933 (Census) and July, 1939 (based on National Register). From July, 1941 (commencement of Pay-roll Tax returns) the estimates are available for each month, and the table shows the level in June in each of the years 1950 to 1955.

### WAGE AND SALARY EARNERS IN CIVILIAN EMPLOYMENT.

(b) Subject to revision.

Estimates for recent months for Australia, corresponding to the foregoing, together with details for certain industrial groups, are published regularly in the *Monthly Review of Business Statistics* and the *Monthly Bulletin of Employment Statistics*.

(ii) *Industrial Groups.* The following table shows the total male and female wage and salary earners in civilian employment (excluding employees in rural industry, female private domestics, persons on the paid strength of the defence forces and National Service trainees in camp) subdivided to show the extent of employment provided by Government authorities and by private employers respectively. Some principal industrial groups included in the total are shown separately and include both Government and private employees, except in the case of retail trade, where there are no Government employees.

(a) Subject to revision. (b) Estimates (subject to revision) based on Pay-roll Tax returns, etc., of employees engaged predominantly in secondary production. The figures include a considerable number of employees outside the scope of the factory employment figures as defined and published in Chapter IX.—Manufacturing Industry. (c) Includes employees of Commonwealth, State and Semi-Government and Local Government Authorities.

A graph showing wage and salary earners in civilian employment by main industrial groups appears on page 174.

(iii) *Factories.* Actual mid-monthly factory employment derived from the results of annual factory censuses is published in the *Secondary Industries Bulletin* issued by this Bureau.

Additional tables regarding employment in factories may be found in Chapter IX.—Manufacturing Industry.

An index of factory employment in Australia, published in the *Monthly Review of Business Statistics*, shows that employment in factories increased steadily throughout 1954–55 to a new post-war peak in June, 1955. For the year 1954–55, the index showed the level of employment in factories to be 77 per cent. higher than the average factory employment for the three years ended June, 1939.

3. *Government Employees.*—(i) *Australia, 1939 and 1951 to 1955.* The following table shows at June in each of the years 1951 to 1955, in comparison with 1939, the number of civilian employees of Commonwealth, State and Semi-Government and Local Government authorities. These include all employees of Government authorities on services such as railways, tramways, banks, post office, air transport, education, broadcasting, police, public works, factories and munitions establishments, migrant hostels, etc., as well as administrative employees, within Australia.

(a) See explanation in para. 3 (i) above.

## § 2. Unemployment.

1. *Total Persons Unemployed.*—The total number of persons unemployed has been recorded only at the dates of the various censuses and quasi-censuses. The census records include all persons who state that they are unemployed, and distinguish between unemployment on account of sickness, accident, scarcity of work, industrial dispute, and all other causes combined. The following table sets out the number of unemployed at the Censuses of 1911, 1921, 1933 and 1947, the National Register, 1939, and the Occupation Survey, 1945. The percentage which the unemployed bore at each date to all wage and salary earners of the same sex, comprising those estimated to be in employment and those unemployed, is also shown.

## UNEMPLOYMENT (ALL CAUSES) : AUSTRALIA.

Year and Month.	Wage and Salary Earners Unemployed..			Proportion of Wage and Salary Earners Unemployed.		
	Males.	Females.	Total.	Males.	Females.	Total.
	'000.	'000.	'000.	%	%	%
1911—April (Census) ..	48.0	8.3	56.3	4.3	2.7	4.0
1921—April " ..	139.4	21.5	160.9	10.7	5.7	9.6
1933—June(a) " ..	460.2	103.1	563.3	27.9	19.1	25.8
1939—July(b) ..	264.0	34.0	298.0	15.0	5.7	12.6
1945—June(c) ..	39.9	16.2	56.1	2.7	2.3	2.6
1947—June (Census)(d)	66.6	16.9	83.5	3.6	2.5	3.3

(a) The figures shown for 1933 are in excess of those actually recorded at the Census, through an allowance having been made for a number of youths and girls who would normally have been wage and salary earners, but who, on account of the economic depression, having never been employed, were not classed as wage and salary earners. (b) Derived from the National Register, 1939. (c) Derived from the Occupation Survey, 1945. (d) Persons in the work force who were not at work at the time of the Census.

The estimates and percentages of unemployment given above for periods subsequent to the Census of 1933 should be interpreted in conjunction with the notes below.

The estimates for 1939 were based on the National Register, which covered males aged 18–64 years, and data available from other sources. The proportion of wage earners unemployed in July, 1939, immediately prior to the 1939–45 War, was estimated at approximately 12½ per cent. In July, 1941, it was about 4 per cent. and by June, 1943, under conditions of intensive mobilization of manpower for war purposes, involuntary unemployment was practically nil. Owing to the use on the Occupation Survey (1945) card of the definition "a person normally working for wages but without a job on 1st June", it appears that the 1945 figures exclude some persons who were temporarily absent from their jobs at the date of the survey.

Of the numbers at the 1947 Census shown above 25.6 per cent. were not at work owing to sickness or accident and 26.6 per cent. stated that they were resting. Of the latter, approximately half said they expected to resume their former jobs.

2. *Commonwealth Unemployment and Sickness Benefits.*—Details of conditions governing the payment of unemployment and sickness benefits under the Social Services Act 1947–1955, and tables showing numbers on benefit and payments made, may be found in Chapter XV.—Welfare Services.

### § 3. Commonwealth Employment Service.

The Commonwealth Employment Service was established under Section 47 of the Re-establishment and Employment Act 1945. The principal functions of the Service, as set out in Section 48 of this Act, are to provide services and facilities for the benefit of persons seeking employment or to change employment, or to engage labour, and to provide facilities to assist in bringing about and maintaining a high and stable level of employment throughout the Commonwealth.

The Commonwealth Employment Service operates within the Employment Division of the Department of Labour and National Service, and is under the control of the Permanent Head of that Department. The Central Office is in Melbourne, and there is a Regional Office in the capital city of each State, with 119 District Employment

Offices and 16 Branch offices in suburban and the larger provincial centres, and 340 agents in the smaller country centres. The District Employment Offices are distributed as follows :—New South Wales, 46 (including Canberra); Victoria, 30; Queensland, 19; South Australia, 9 (including Darwin); Western Australia, 11; Tasmania, 4.

In assisting persons to obtain employment and to engage labour, the Commonwealth Employment Service provides specialist facilities for persons with physical and mental handicaps, older workers, rural workers, youths and persons with professional and technical qualifications. It assists in the administration of the Unemployment and Sickness Benefits provisions of the Social Services Act 1947-1955, and of the Re-employment Allowance provision of the Re-establishment and Employment Act 1945 for certain classes of discharged members of the Forces. All persons who wish to claim unemployment benefits or re-employment allowances are required to register at a District Employment Office which is responsible for certifying whether or not suitable employment can be offered to them.

In each State, other than New South Wales, vocational guidance is provided, free of charge, by a staff of qualified psychologists. (In New South Wales a similar service is provided by officers of the New South Wales Department of Labour and Industry and Social Welfare which acts as agent for the Commonwealth Employment Service in this regard.) Whilst vocational guidance is available to any person, it is provided particularly for youths, ex-servicemen and the physically handicapped.

The Commonwealth Employment Service is responsible for placing in employment all Commonwealth-nominated migrant workers coming to Australia under the free and assisted passage schemes from the United Kingdom and other countries, and, as required, it provides assistance to other migrants wishing to obtain employment. When migrants coming under Commonwealth nomination arrive in Australia, the Commonwealth Employment Service arranges for them to be transported to their initial employment and for their admission, if necessary, to Commonwealth-controlled hostels. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of July, 1955 more than 136,000 British and European migrant workers had been placed in employment by the Commonwealth Employment Service.

Since 1951, the Commonwealth Employment Service has been responsible for recruiting experts for the Colombo Plan and the United Nations Expanded Programme of Technical Assistance. The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health and economic and scientific research and development.

In association with its placement activities, the Commonwealth Employment Service carries out regular surveys of the labour market in all areas and industries and supplies detailed information to interested Commonwealth and State Government Departments and instrumentalities and to the public. It also advises employers, employees and others on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Commonwealth Employment Service is responsible for the medical examination and interview of young men for training in the armed forces under the National Service Act 1951-1953, which is administered by the Department of Labour and National Service. The Commonwealth Employment Service also administers the provisions of the Act relating to the protection of the rights of National Service trainees in relation to their civil employment.

The Service completed its ninth year of operation in May, 1955. During the year ended June, 1955, there were 526,474 new registrations of applicants for employment, of whom 441,596 were referred to employers and 310,063 placed in employment, and 471,971 new vacancies were notified. Vacancies unfilled at the end of June, 1955 numbered 37,645.

With the setting up of the Commonwealth Employment Service most of the State Labour Exchange Organizations existing previously were superseded. Details of the organization and administration of these exchanges in the several States were given in *Labour Report* No. 30, page 133.

#### § 4. Industrial Disputes.

1. **General.**—Information with regard to the collection of particulars and the methods of tabulation of industrial disputes involving stoppage of work is given in the annual *Labour Report*.

Particulars of all disputes in progress during the year are included in the annual figures whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently details of "the number of disputes" and "workers involved" in disputes which commenced in the previous year and were still in progress during the current year will be duplicated in the figures for both years. The number affected is given in a footnote so that allowance can be made in comparing annual figures.

2. **Industrial Disputes involving Stoppage of Work, Classified in Industrial Groups, 1954.**—The following table gives for Australia as a whole particulars of industrial disputes which were in progress during 1954, classified according to industrial groups. Figures for States and Territories on a comparable basis may be found in *Labour Report* No. 43, 1954.

#### INDUSTRIAL DISPUTES IN INDUSTRIAL GROUPS: AUSTRALIA, 1954.(a)

Class.	Industrial Group.	Num- ber.	Workers Involved.			Working Days Lost.	Esti- mated Loss in Wages. (£.)
			Directly.	In- directly. (b)	Total.		
I.	Wood, Furniture, etc. . . . .	1	6	..	6	114	400

	(ii) Other Mining, Quarries, etc. . . . .	4	488	6	494	7,720	41,265
IX.	Railway and Tramway Services . . . . .	39	10,060	978	11,038	13,661	40,926
X.	Other Transport . . . . .	10	3,780	..	3,780	12,670	33,865
XI.	(i) Stevedoring . . . . .	234	129,661	4	129,665	319,366	1,110,262
	(ii) Shipping, etc. . . . .	7	488	550	1,038	6,614	22,879
XII.	Pastoral, Agricultural, etc. . . . .	2	1,026	..	1,026	1,096	3,189
XIII.	Domestic, Hotels, etc. . . . .	2	259	..	259	1,050	2,764
XIV.	Miscellaneous . . . . .	11	3,189	20	3,209	7,215	20,654
	Total . . . . .	1,490	355,580	14,494	370,074	901,639	3,021,211

(a) Two disputes in New South Wales and one in Tasmania involving respectively 184 and 236 workers commenced in 1953 and were still in progress at the beginning of 1954. Particulars of these disputes have been included in statistics of disputes for both 1953 and 1954. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

Graphs showing, for a number of years, the working days lost as a result of industrial disputes in the main industrial groups will be found on pp. 175-6.

3. **Industrial Disputes, States and Territories, 1939 and 1952 to 1954.**—The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved, and the losses in working days and wages caused by disputes which were current during each of the years 1939 and 1952 to 1954.

## INDUSTRIAL DISPUTES : STATES AND TERRITORIES.

State or Territory.	Year.	Number.	Workers Involved.			Working Days Lost.	Estimated Loss in Wages. (£.)

5. Causes of Industrial Disputes.—(i) *General.* In issues of the Official Year Book prior to No. 40 the causes of industrial disputes were classified in some detail for all industries combined. As from 1950 a new classification was introduced and stoppages are now analysed in three separate groups, "Coal-mining", "Stevedoring" and "Other industries". This dissection has been made because the pattern of the disputes in coal-mining and stevedoring differs significantly from that in other industries.

Under this classification, causes are grouped under four main headings:—(1) Wages, Hours and Leave; (2) Physical Working Conditions and Managerial Policy; (3) Trade Unionism; (4) Other Causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, which term covers those arising from disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff and disputes arising from the computation of wages, leave, etc., in individual cases. The third group, Trade Unionism, includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g., political matters, and cases (mainly occurring in the coal-mining industry) where the cause of the stoppage is not officially made known to the management.

As the items included under these headings differ somewhat from those included under the similar headings used for classifying causes of disputes in years prior to 1950, figures for the years 1950 to 1954 are not strictly comparable with those for earlier years.

(ii) *Fears 1939 and 1950 to 1954.* The following table gives particulars of industrial disputes according to causes for the years 1939 and 1950 to 1954.

## CAUSES OF INDUSTRIAL DISPUTES : AUSTRALIA.

6. Results of Industrial Disputes.—In issues of the Official Year Book prior to No. 40, tables were included showing analyses of the results of industrial disputes over a period of years. This tabulation was discontinued because of the difficulty of obtaining the details necessary to make a classification in precise terms of the results of industrial disputes.

7. Methods of Settlement.—The following table shows particulars of industrial disputes for 1954 classified according to method of settlement, in three industry groups :—

### INDUSTRIAL DISPUTES : METHODS OF SETTLEMENT, AUSTRALIA, 1954.(a)

Method of Settlement.	Coal-mining.	Stevedoring.	Other Industries.	All Industries.
NUMBER OF DISPUTES.

5. By filling places of workers on strike or locked out .. .. .	..	451	9	460
6. By closing down establishment permanently .. .. .	..	..	..	..
7. By resumption without negotiation .. .. .	156,691	301,547	48,313	506,551
8. By other methods .. .. .	..	..	1,460	1,460
Total .. .. .	233,291	319,366	323,807	876,464

(a) As there are usually disputes in progress at the end of each year, totals in the above table will not necessarily agree with those shown in preceding tables.

### F. WORKERS' COMPENSATION LEGISLATION.

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 30th June, 1954 will be found in *Labour Report* No. 42, 1953, pages 114-121.

## G. LABOUR ORGANIZATIONS.

## § 1. Labour Organizations in Australia.

1. *Registration.*—(i) *Under Trade Union Acts.* In earlier issues of the Official Year Book (*see* No. 39, page 448) reference was made to the registration of trade unions under the Trade Union Acts. In general the available information is inadequate for statistical purposes.

(ii) *Under State Industrial Legislation.* Information with regard to registrations of employers' associations and trade unions under the various State Industrial Arbitration Acts will be found in earlier issues of the Official Year Book (*see* No. 39, page 448).

(iii) *Under the (Commonwealth) Conciliation and Arbitration Act.* Under Part VI. of the Conciliation and Arbitration Act any association of employers in any industry who have, or any employer who has, employed not less than 100 employees during the six months preceding application for registration, or any association of not less than 100 employees in any industry may be registered.\* Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1954 the number of employers' organizations registered under the provisions of the Commonwealth Conciliation and Arbitration Act was 56. The number of unions of employees registered at the end of 1954 was 150, with a membership of 1,447,646 representing 81 per cent. of the total membership of all trade unions in Australia.

2. *Particulars regarding Trade Unions.*—(i) *Types.* The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations:—(i) the local independent; (ii) the State; (iii) the interstate; and (iv) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions the State organizations are bound together under a system of unification with centralized control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes. The leading characteristics of each of these types were briefly outlined in *Labour Report* No. 2.

(ii) *Number and Membership.* Returns showing membership by States as at 31st December each year are obtained for all trade unions and employee organizations. The affairs of single organizations are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information. The substantial increase in the number of members of trade unions in 1954 was partly the result of an amendment to the New South Wales Industrial Arbitration Act 1940-1953, which gave absolute preference of employment to members of appropriate trade unions, and also made it compulsory for persons over 18 years of age, working under State awards or agreements (except students, those holding managerial positions, conscientious objectors and ex-servicemen), to join an appropriate trade union. The following table shows the position at the end of 1939, 1953 and 1954.

TRADE UNIONS : NUMBER AND MEMBERSHIP.

State or Territory.	Number of Separate Unions.			Number of Members.			Percentage Increase in Membership.(a)		
	1939.	1953.	1954.	1939.	1953.	1954.	1939.	1953.	1954.

(a) On preceding year.

(b) Without interstate duplication. *See letterpress below.*

NOTE.—Minus sign (—) denotes decrease.

\* Under the Public Service Arbitration Act an association of less than 100 employees may be registered as an organization, provided that its members comprise at least three-fifths of all persons engaged in that industry in the Service. Such organizations are included in the figures shown below.

In the table just given, under the heading "Number of Separate Unions", a union reporting members in a State is counted as one union within that State. The figures by States do not add to the Australian total (shown in the last line) because a union represented in more than one State is included in the figure for each State in which it is represented, but is counted only once in the Australian total.

Because of the difficulties involved, the collection of statistics relating to the "Number of Branches" of trade unions appearing in issues of the Official Year Book prior to No. 39 was discontinued.

(iii) *Classification in Industrial Groups.* The following table shows the number of unions and members thereof in Australia at the end of each of the years 1939, 1953 and 1954. Compared with 1939, membership in 1954 had increased by 95 per cent.

#### TRADE UNIONS : INDUSTRIAL GROUPS, AUSTRALIA.

(a) Without interstate duplication. See letterpress above.

(iv) *Number of Members and Proportion of Wage and Salary Earners, Australia.* The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As current estimates of wage and salary earners in employment do not include employees engaged in rural industry or females in private domestic service the percentages have been calculated on figures obtained by adding to the end of year estimates (see page 197 above) the number of employees in rural industry and females in private domestic service recorded at the Census of June, 1947. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

#### TRADE UNIONS : NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA.

Year.	Number of Members.			Proportion of Total Wage and Salary Earners. (Per cent.)		
	Males.	Females.	Persons.	Males.	Females.	Persons.
1939..	778,336	137,134	915,470	52	24	44
1950..	1,301,868	303,476	1,605,344	65	40	58
1951..	1,368,694	321,577	1,690,271	66	42	60
1952..	1,354,248	283,294	1,637,542	67	40	60
1953..	1,381,103	298,655	1,679,758	67	40	60
1954..	1,448,223	339,281	1,787,504	69	44	62

(v) *Interstate or Federated Trade Unions.* The following table gives particulars of the number and membership of interstate or federated unions in 1954 :—

INTERSTATE OR FEDERATED TRADE UNIONS(a) : AUSTRALIA, 1954.

Particulars.	Unions Operating in—					Total.
	2 States.	3 States.	4 States.	5 States.	6 States.	
Number of Unions ..	12	11	26	32	58	139
„ „ Members ..	32,889	54,725	179,527	496,509	809,283	1,572,933

(a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory and in the Australian Capital Territory.

The number of organizations operating in two or more States increased from 72 in 1912 to 139 in 1954, and the ratio of the membership of such organizations to the total membership of all organizations rose from 65 to 88 per cent. during the same period.

3. *Central Labour Organizations.*—In each of the capital cities and in a number of industrial centres elsewhere, delegate organizations, consisting of representatives from a group of trade unions, have been established. Their revenue is raised by means of a *per capita* tax on the members of each affiliated union. In most of the towns where such central organizations exist, the majority of the local unions are affiliated with the central organization, which is usually known as the Labour or the Trades Hall Council. In Western Australia a unified system of organization extends over the industrial centres throughout the State. In this State there is a provincial branch of the Australian Labour Party, having a central council and executive, and metropolitan and branch district councils, with which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other five States, however, the organization is not so close, and, while provision usually exists in the rules of the central council at the capital city of each State for the organization of district councils or for the representation of the central council on the local councils in the smaller industrial centres of the State, the councils in each State are, as a matter of fact, independent bodies.

The table below shows the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith in each State at the end of the year 1954 :—

CENTRAL LABOUR ORGANIZATIONS : NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED, 1954.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Total.
Number of Councils..	11	9	13	6	10	4	1	1	55
Number of Unions and Branch Unions affiliated ..	288	270	152	124	399	92	4	21	1,350

The figures given in the preceding table concerning the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

A Central Labour Organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in Melbourne in May, 1927. The Australian Council of Trade Unions consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the Australian Council of Trade Unions and has the right to appoint two representatives to act on the Executive of the Council. In addition to the representatives from the Metropolitan or State Labour Councils, the Executive consists of four officers—the President, two Vice-Presidents and a Secretary—who are elected by and from the Australian Congress of Trade Unions.

The objectives of the Australian Council of Trade Unions are the socialization of industry, i.e., production, distribution and exchange and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all.

The methods to be adopted are:—the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the amalgamation of unions with a view to the establishment of one union in each industry; the consolidation of the Australian Labour Movement, with the object of unified control, administration and action; the centralized control of industrial disputes; educational propaganda among unions; political action to secure satisfactory working-class legislation.

The Australian Council of Trade Unions is the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference.

Between the trade union and the central organization of unions may be classed certain State or district councils organized on trade lines, and composed of delegates from separate unions whose members' interests are closely connected because of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel, or brass trades, or with the building trades, may be so classed.

## § 2. International Labour Organization.

The International Labour Organization (I.L.O.) was established on 11th April, 1919 as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939-45 War, the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal. In 1946 the Organization became the first of the specialized agencies of the United Nations. Under the terms of agreement, the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organization, social security and other aspects of social policy. The Organization has three basic parts. These are the International Labour Conference, its highest authority, which, as a rule, meets annually; the Governing Body, its executive council, which usually meets four times each year; and the International Labour Office, which provides the secretariat of the Organization. The Conference is composed of delegations from the Member States of the Organization. In June, 1955 there were 70 Member States, each of which is entitled to be represented by four delegates—two Government, one representing employers and one representing workers, together with their advisers. In accordance with amendments adopted at the 36th Session of the International Labour Conference, the Governing Body, as from the elections held in Geneva in 1954, has consisted of the representatives of twenty governments, and ten employers' and ten workers' representatives. Particulars are given in the *Labour Report* of the proceedings of International Labour Conferences up to the 38th Session, held in Geneva in June, 1955.

## H. COMPARATIVE INDEX NUMBERS.

In order to show the relative movements of certain price and related data, the following table of annual and quarterly index numbers for the six capital cities combined has been compiled with a common base 1911 = 1,000.

## COMPARATIVE INDEX NUMBERS FOR THE SIX CAPITAL CITIES COMBINED.

(Bases of each Group : Weighted Average of Six Capital Cities, 1911 = 1,000 (a).)

(a) The index numbers given in the separate columns of the table cannot be compared with each other in order to show, for example, the relative cost of housing and food and groceries, since the cost in 1911 in each group or combination of groups is made equal to 1,000.

(b) See footnote (b) on page 159.

(c) Index of nominal weekly wage rates for adult males divided by "C" Series Retail Price Index number.

(d) Taken back from true base (November, 1914 = 1,000) by means of the "A" Series Index (Food and Rent of all Houses).

## CHAPTER VII.

### TRANSPORT AND COMMUNICATION.

NOTE.—The statistics in some divisions of this chapter cover the year 1953-54; in other divisions, however, it has been possible to include 1954-55 figures. In these cases corresponding figures for 1953-54 will be found in *Transport and Communication Bulletin* No. 45 unless otherwise specifically indicated.

#### A. SHIPPING.

##### § 1. System of Record.

In the system of recording statistics of oversea shipping, Australia is considered as a unit, and therefore only one entry and one clearance are counted for each voyage, without regard to the number of States visited (*see also* § 5 following, paragraph 1).

On arrival at, or departure from, a port in Australia, whether from or for an oversea country or from another port in Australia, the master or agent must "enter" the vessel with the Customs authorities at the port, and supply certain prescribed information in regard to the ship, passengers and cargo. At the end of each month the information so obtained is forwarded to this Bureau. This arrangement has been in operation since 1st July, 1924.

The volume of the vessel, as distinct from the cargo it carries, is recorded in net tons, i.e., the gross tonnage or internal cubic capacity less certain deductions on account of crew spaces, engine room, water ballast and other spaces not used for passengers or cargo. It is thus a rough measure of the capacity of the vessel for cargo or passengers. The unit of measurement is the *ton register* of 100 cubic feet.

Cargo is recorded in *tons weight* or in *tons measurement* (40 cubic feet).

From 1st July, 1914 the Trade and Shipping of Australia have been recorded for the financial years ending 30th June.

##### § 2. Oversea Shipping.

1. *Total Movement.*—The following table shows the number of entrances and clearances combined of oversea vessels at Australian ports, and the aggregate net tonnage, during each of the years 1949-50 to 1954-55 :—

**OVERSEA SHIPPING : ENTRANCES AND CLEARANCES (COMBINED) OF  
VESSELS DIRECT, AUSTRALIA.**

Particulars.	1949-50.	1950-51.	1951-52.	1952-53.	1953-54.	1954-55.
Number of Vessels . . .	3,907	3,903	4,136	4,041	4,127	4,505
Net Tonnage '000 tons	17,378	17,307	18,225	17,571	17,733	20,003

The average net tonnage per vessel has risen from 2,919 tons per vessel in 1921-22 to 4,440 tons in 1954-55.

Particulars of the total oversea movement of shipping for each year from 1822 to 1920-21 will be found in Official Year Book No. 15, p. 507, and for years subsequent thereto, but not shown in the table above, in Official Year Book No. 40, p. 97.

2. **Total Oversea Shipping, States.**—The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels direct from and to overseas countries, and the aggregate net tonnage, during the year 1954-55 :—

**OVERSEA SHIPPING : ENTRANCES AND CLEARANCES OF VESSELS DIRECT. STATES, 1954-55.**

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	Aust.
Entrances	No. 640	452	328	211	561	37	16	2,245
'ooo net tons	2,588	2,103	1,072	831	3,175	124	46	9,939
Clearances	No. 555	393	480	201	578	39	14	2,260
'ooo net tons	2,328	1,826	1,780	821	3,027	230	52	10,064

3. **Shipping Communication with Various Countries.**—Records of the number and tonnage of vessels arriving from and departing to particular countries, as they are invariably made, may be misleading for the reason that the tonnage of a vessel can be recorded against one country only, notwithstanding that the same vessel on the same voyage may carry cargo or passengers to or from Australia from or to several countries. For instance, a mail steamer on a voyage from the United Kingdom to Australia, through the Suez Canal, may call at Marseilles, Genoa, Port Said, Aden and Colombo, yet can be credited only to the United Kingdom, the country where the voyage commenced, to the exclusion of all of the others from the records. Also a number of vessels touch at New Zealand ports on their voyages to and from the United States of America and Canada, but their tonnages are not included in the records of Australian shipping trade with New Zealand. Similarly, the record of shipping engaged in trade between Australia and the United Kingdom via South African ports does not show tonnage to and from South Africa, the whole of it being included in the figures for the United Kingdom. In view of this defect, statistics relating to the direction of the shipping to and from Australia are restricted to the following tables in which countries situated on the main trade routes are grouped together. This grouping into larger geographical divisions to some extent avoids the limitations referred to, except, as already pointed out, in the case of Africa and New Zealand.

**OVERSEA SHIPPING : COUNTRY GROUPS FROM WHICH ENTERED OR FOR WHICH CLEARED, AUSTRALIA.**

<b>Total Cargo and Ballast..</b>	..	8,704	8,882	9,939	8,867	8,851	10,064

(a) See explanation above.

4. **Nationality of Oversea Shipping.**—Owing to war conditions, the proportion of shipping of British nationality progressively declined from 72.82 per cent. of the total tonnage entered in 1938-39 to 43.40 per cent. in 1943-44. On the other hand, the proportion of American (U.S.) shipping visiting Australia during the same period advanced from 2.61 per cent. in 1938-39 to 33.07 per cent. in 1943-44. Thereafter the trend was reversed, and in 1950-51 the proportion of British shipping entered was 70.83 per cent. and of American 2.34 per cent. In 1954-55 the proportion of British shipping entered had fallen to 62.56 per cent.

Particulars of the nationality of overseas shipping which entered Australia during each of the years 1952-53 to 1954-55 are given in the following table :—

**OVERSEA SHIPPING : NATIONALITY OF VESSELS ENTERED, AUSTRALIA.**  
(’000 Net Tons.)

The Australian tonnage which entered Australian ports from overseas during the year 1954-55 represented 3.49 per cent. of the total tonnage entered and was confined mainly to the New Zealand and Pacific Islands trade.

The proportion of overseas shipping tonnage which entered Australia in cargo fell from 88.87 per cent. in 1938-39 to 79.37 per cent. in 1947-48. In 1954-55 it was 92.17 per cent. The proportion of shipping which cleared in cargo, however, declined from 87.64 per cent. in 1938-39 to 66.12 per cent. in 1951-52, the trend over the period being generally downward. A further fall, to 61.17 per cent., occurred in 1954-55.

### § 3. Shipping at Principal Ports.

1. **Total Shipping, Australia.**—The following table shows the total volume of shipping—overseas, interstate and coastwise—which entered the principal ports of Australia during the years 1953-54 and 1954-55. Warships are excluded from the table. Corresponding figures for each year from 1948-49 will be found in *Transport and Communication Bulletin* No. 45.

## § 4. Vessels Built and Registered.

1. Vessels Built.—The following table shows the number and tonnage of vessels built in Australia during each of the calendar years 1949 to 1954, so far as such information can be ascertained from the Shipping Registers of the various States. The Merchant Shipping Act, under which vessels are registered in Australia, does not, however, make it compulsory to register vessels under 15 tons burden if engaged in river or coastal trade. Larger vessels are also exempt from registration if not engaged in trade. Yachts and small trading vessels may be, and frequently are, registered at the request of the owners.

## VESSELS BUILT AND REGISTERED IN AUSTRALIA.

3. World Shipping Tonnage.—Issues of the Official Year Book prior to No. 39 contained tables, compiled from *Lloyd's Register of Shipping*, showing the number and gross tonnage of steam, motor and sailing vessels owned by the various maritime countries of the world. The tables are not repeated in this issue, but the following information is derived from the same source.

At 1st July, 1953, the total steamers, motorships and sailing vessels of 100 gross tons and upwards throughout the world amounted to 32,603 with a gross tonnage of 93,978,000. Of these totals, steamers numbered 17,864 for 64,237,000 gross tons, motorships 13,933 for 29,115,000 gross tons and sailing vessels and barges 806 for 626,000 gross tons. In addition, there were 3,210 oil tankers of 100 gross tons and upwards with a gross tonnage of 21,964,000. Australian steamers, motor-ships and sailing vessels, 364 for 579,000 gross tons, constituted 1.12 per cent. and 0.62 per cent. respectively of the total numbers and tonnage. There were no Australian oil tankers of 100 gross tons and upwards registered.

## § 5. Interstate Shipping.

1. System of Record.—*Interstate Shipping* comprises two elements: (a) Vessels engaged solely in interstate trade; and (b) Vessels trading between Australia and overseas countries and in the course of their voyage proceeding from one State to another. (It should be mentioned that these vessels, except under special circumstances, do not engage in interstate carrying.) No complexity enters into the record of those in category (a), but with regard to the method of recording the movements of the overseas vessels (b) some

explanation is necessary. Each State desires that its shipping statistics (which are prepared in this Bureau) should show in full its shipping communication with overseas countries, but at the same time it is necessary to avoid any duplication in the statistics for Australia as a whole. In order to meet these dual requirements, a vessel arriving in any State from an overseas country—say the United Kingdom—*via* another State, is recorded in the second State as from the United Kingdom *via States*, thus distinguishing the movement from a direct overseas entry. Continuing the voyage, the vessel is again recorded for the statistics of the third State as from the United Kingdom *via* other States. On an inward voyage the *clearance* from the first State to the second State is a *clearance* interstate, and is included with interstate tonnage in conformity with the pre-federation practice of the States, and to preserve the continuity of State statistics. Thus, movements of ships which are, from the standpoint of Australia as a whole, purely coastal movement, must for the individual States be recorded as “Oversea *via* other States” or “Interstate” according to the direction of the movement. The significance of the record of these movements will be more clearly seen from the following tabular presentation of the inward and outward voyages to and from Australia of a mail steamer which, it is presumed, reaches Fremantle (Western Australia) and then proceeds to the terminal port of the voyage—Sydney (New South Wales)—*via* South Australia and Victoria. From the terminal port the vessel will commence the outward voyage, and retrace its inward track.

#### ITINERARY OF AN OVERSEA VESSEL ON THE AUSTRALIAN COAST.

Particulars.	Recorded as—	
	For the State and for Australia.	For the States.
<b>Inward Voyage—</b>		
Enters Fremantle from United Kingdom	Oversea direct	
Clears Fremantle for Adelaide	.. ..	Interstate direct
Enters Adelaide from United Kingdom	.. ..	
<i>via</i> Fremantle	.. ..	Oversea <i>via</i> States
Clears Adelaide for Melbourne	.. ..	Interstate direct
Enters Melbourne from United Kingdom	.. ..	
<i>via</i> Adelaide	.. ..	Oversea <i>via</i> States
Clears Melbourne for Sydney	.. ..	Interstate direct
Enters Sydney from United Kingdom <i>via</i> Melbourne	.. ..	Oversea <i>via</i> States
<b>Outward Voyage—</b>		
Clears Sydney for United Kingdom <i>via</i> Melbourne	.. ..	Oversea <i>via</i> States
Enters Melbourne from Sydney	.. ..	Interstate direct
Clears Melbourne for United Kingdom <i>via</i> Adelaide	.. ..	Oversea <i>via</i> States
Enters Adelaide from Melbourne	.. ..	Interstate direct
Clears Adelaide for United Kingdom <i>via</i> Fremantle	.. ..	Oversea <i>via</i> States
Enters Fremantle from Adelaide	.. ..	Interstate direct
Clears Fremantle for United Kingdom	Oversea direct	

From the method outlined above, the requirements for Australia and for the individual States are ascertained as follows. (a) The aggregate of all ships recorded for each State as “Oversea *direct*” gives the overseas shipping for Australia as a whole; (b) the aggregate for all ships recorded in any State as “Oversea *direct*” plus those recorded as “Oversea *via* States” gives the total overseas shipping for that State; and (c) the aggregate for all ships recorded as “Oversea *via* States” may also be used, together with those recorded as “Interstate *direct*”, to furnish figures showing the total interstate movement of shipping.

It should be remembered, however, that all overseas vessels do not follow the same itinerary as the vessel in the table above.

2. Interstate Movement.—(i) *Interstate Direct*. The following table shows the number of entrances and the net tonnage of vessels recorded into each State and the Northern Territory from any other State (including overseas vessels on interstate direct voyages) during each of the years 1952–53 to 1954–55. The shipping of the Murray River, between the States of New South Wales, Victoria and South Australia, is excluded.

## INTERSTATE MOVEMENT OF SHIPPING : ENTRANCES OF VESSELS INTERSTATE DIRECT.

State or Territory.	Number.			Net Tons ('000).		
	1952-53.	1953-54.	1954-55.	1952-53.	1953-54.	1954-55.
New South Wales .. ..	1,460	1,595	1,584	4,141	4,470	4,552
Victoria .. ..	1,540	1,586	1,555	3,934	4,030	4,057
Queensland .. ..	404	559	598	1,162	1,409	1,541
South Australia .. ..	859	928	963	3,054	3,301	3,475
Western Australia .. ..	497	491	524	2,575	2,428	2,725
Tasmania .. ..	864	965	960	759	1,068	1,085

Australia .. ..	5,761	6,154	6,224	15,665	16,747	17,512

From 1938-39 the total net tonnage of interstate shipping declined steadily each year until 1942-43, when it represented only 38 per cent. of the total for the pre-war year. It remained practically unchanged during the next three years, but increased by almost one-third in 1946-47. By 1954-55 the total had risen to 88 per cent. of the 1938-39 total.

(ii) *Oversea via States.* To ascertain the aggregate movement of shipping between the States, including the total interstate movement of overseas vessels, the figures in the following table, which show the number of entrances and clearances of vessels to and from overseas countries via other Australian States and the aggregate tonnage, must be added to those in the preceding table.

## INTERSTATE MOVEMENT OF SHIPPING : ENTRANCES AND CLEARANCES OF VESSELS OVERSEA VIA OTHER AUSTRALIAN STATES, 1954-55.

Particulars.		N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	Aust.
Entrances	No.	623	711	269	337	50	84	2	2,076
	'000 net tons	3,337	3,790	1,392	1,816	244	410	10	10,999
Clearances	No.	469	473	176	299	34	102	..	1,553
	'000 net tons	2,391	2,632	863	1,529	201	436	..	8,052

Overseas vessels moving interstate are with few exceptions not engaged in the active interstate trade of Australia, but are merely proceeding to the several States in continuation of their overseas voyages.

(iii) *Total, Australia.* The following table shows the total interstate movement of shipping, including overseas vessels travelling overseas via States and interstate direct, for each of the years 1949-50 to 1954-55 :—

## INTERSTATE MOVEMENT OF SHIPPING : TOTAL, AUSTRALIA.

Particulars.			1949-50.	1950-51.	1951-52.	1952-53.	1953-54.	1954-55.

(a) Excludes purely day-passenger accommodation.

NOTE.—This table excludes particulars of a small number of chartered vessels for which returns could not be obtained.

## § 6. Shipping Cargo.

1. *Oversea and Interstate Cargo.*—(i) *Australia.* The table hereunder shows the aggregate tonnage of oversea cargo discharged and shipped and the tonnage of interstate cargo shipped in Australian ports for the years 1949-50 to 1954-55. Cargo which was stated in cubic feet has been converted to tons measurement on the basis of 40 cubic feet to the ton.

## SHIPPING CARGO MOVEMENT : AUSTRALIA.

Owing to war conditions the proportion of cargo carried in British vessels decreased from 72.43 per cent. in 1938-39 to 41.37 per cent. in 1943-44, but increased to 77.51 per cent. in 1946-47. It has since declined, and in 1954-55 was 62.42 per cent.

### § 7. Control of Shipping.

1. War-time Control.—An account of the action taken by the Commonwealth Government to control and regulate shipping throughout Australian waters during the 1939-45 War was given in Official Year Book No. 36, pp. 121-130.

2. Post-war Control and Developments.—A brief account of the post-war control of shipping and the establishment of the Australian Stevedoring Industry Board and the Australian Shipping Board will be found in Official Year Book No. 39, pp. 147-8.

The Maritime Industry Commission established during the 1939-45 War under National Security legislation was abolished on 19th December, 1952. Permanent legislation to cover many of the matters formerly dealt with by the Commission was enacted in 1952 in the form of amendments to the Navigation Act 1912-1950 by Act No. 109 of 1952 (see page 224).

As at 30th June, 1955, the Australian Shipping Board operated 46 vessels totalling 168,490 gross tons, of which five vessels totalling 25,169 gross tons were operated on time charter from private owners. The Government-owned shipping, totalling 41 vessels of 143,320 gross tons (of which two vessels totalling 4,601 gross tons were on charter to private companies or other shipping organizations), comprised thirteen "A" or River Class vessels of an average of 5,133 gross tons, four "B" Class vessels of an average of 3,930 gross tons, seven "D" Class vessels of an average of 2,334 gross tons, two "D/A" Class vessels of an average of 2,407 gross tons, five "E" Class vessels of an average of 584 gross tons, two "Y" Class vessels of an average of 3,460 gross tons and a collier of 4,887 gross tons, all of which were built in Australian yards, plus seven vessels, totalling 24,992 gross tons, which were built overseas.

In the international sphere, ratification is still being awaited from 21 ship-owning nations of a Convention establishing an Inter-Governmental Maritime Consultative Organization within the framework of the United Nations. The major objectives of this organization are to provide machinery for co-operation among governments with shipping engaged in international trade, and to encourage the removal by governments of discriminatory action and unnecessary restrictions regarding such shipping.

This organization is designed to replace the United Maritime Consultative Council which was established on a tentative basis after the expiry of the war-time United Maritime Authority and Combined Adjustment Board.

Up to 1st July, 1955, ratifications by seventeen countries had been lodged, and there is a possibility of the four others ratifying in the near future, thus bringing the organization into force.

## § 8. Miscellaneous.

1. Lighthouses.—A list of the principal lighthouses on the coast of Australia, giving details of the location, number, colour, character, period, candle-power and visibility of each light so far as particulars are available will be found in *Transport and Communication Bulletin* No. 46.

2. Distances by Sea.—The distances by sea between the ports of the capital cities of Australia and the most important ports in other countries which trade with Australia are shown in *Transport and Communication Bulletin* No. 45.

3. Shipping Freight Rates.—The *Quarterly Summary of Australian Statistics* shows a list of the ruling freight rates for general merchandise in respect of both oversea and interstate shipments. At 31st December, 1955, the rate for general merchandise from Australia to the United Kingdom and Continent was £8 6s. 6d. per ton weight or measurement while the rates for wheat (bagged) and wool (greasy) were respectively £8 15s. per ton weight and 2.76d. less 7 per cent. per lb. These rates, which are expressed in sterling, are subject to an adjustment of 25½ per cent. when freight is prepaid in Australia.

4. Depth of Water at Main Ports.—A table, compiled from information supplied by the Director of Navigation, showing the depth of water available and tides at principal ports of Australia at 1st January, 1955, is included in *Transport and Communication Bulletin* No. 45.

5. Shipping Casualties.—Courts of Marine Inquiry are constituted by a Magistrate assisted by skilled assessors, and, when necessary, are held at the principal port in each State and at Launceston (Tasmania). Such courts have power to deal with the

certificates of officers who are found at fault. Particulars of shipping casualties reported on or near the coast during the years 1950 to 1954 are shown in the table below. This information also was furnished by the Director of Navigation.

#### SHIPPING LOSSES AND CASUALTIES : AUSTRALIA.

1954 ..	..	..	..	149	426,878	..

6. Commonwealth Navigation and Shipping Legislation.—By Section 51 (i) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws in respect of trade and commerce with other countries and among the States. By Section 98 the power in this particular respect is further defined as extending to navigation and shipping.

A review of the introduction and development of the Navigation Act 1912–1950 was given in Official Year Book No. 40, pp. 110–2. Amendments to the Principal Act were made by the Navigation Act 1952, the provisions of which covered the settlement of maritime industrial disputes, standards of accommodation to be provided on ships and the engagement and discipline of seamen.

Other shipping Acts under the Trade and Commerce power of the Commonwealth are the Sea-Carriage of Goods Act 1924, the Seamen's Compensation Act 1911–1954, and the Seamen's War Pensions and Allowances Act 1940–1955.

7. Ports and Harbours.—A report on "The Turn-round of Ships in Australian Ports" was submitted to the Commonwealth Government by Henry Basten, C.M.G., on 4th January, 1952. The report deals with all factors affecting the turn-round of ships and congestion in Australian ports and the measures that might be taken to effect improvement on both short-term and long-term bases.

#### B. GOVERNMENT RAILWAYS.

1. General.—The first steam-operated railway in Australia, between Melbourne and Port Melbourne, a distance of two miles, was opened on 12th September, 1854. It was owned and operated by the Melbourne and Hobson's Bay Railway. In the next one hundred years the mileage increased greatly and at 30th June, 1954, 26,633 route-miles (excluding several hundred miles of privately-owned line) were open for traffic. The operation of Australia-wide services is, however, greatly hampered by the presence of many break-of-gauge stations, necessitated by the several gauges at present in use. The policy of Government ownership and control of railways has been adopted in each State and at 30th June, 1954, 24,432 route-miles were owned by the State Governments and 2,201 route-miles by the Commonwealth Government. In the following tables details of the four lines owned by the Commonwealth are grouped and shown with the totals for the various State-owned systems. Separate particulars for each Commonwealth line and more detailed statistics for all lines are shown in the *Transport and Communication Bulletin* issued by this Bureau.

In some States there are comparatively small privately-owned railway systems offering passenger and freight services to the public. Details of these private railways were included in Official Year Book No. 39 and previous issues, but owing to their relative unimportance and the incomplete nature of the statistics available the series has been discontinued.

2. **Railway Communication in Australia.**—An account of the progress of railway construction in Australia since the opening of the first line in 1854 will be found in Official Year Books No. 6, p. 681 and No. 22, p. 259. The main ports on the mainland are connected by lines running approximately parallel to the coast and are the focal points of lines which radiate inland to the agricultural, mining and pastoral areas of the continent to a distance which reaches 600 miles at some points. However, Darwin in the Northern Territory is not connected by rail to any other port in Australia. A 3 ft. 6 in. gauge railway extends southward from Darwin to Birdum, a distance of 317 miles, and from Port Augusta in South Australia northwards to Alice Springs in Central Australia, a distance of 771 miles. The report by the late Sir Harold Clapp to the Commonwealth Government, details of which appear in Official Year Book No. 37, p. 146, did not recommend the linking of the termini at Alice Springs and Birdum.\* An all-weather road was built to cover the intervening distance and much goods traffic now passes along this road. The travelling times of trains on the main lines of Australia are being lessened and the haulage capacity increased by the introduction of diesel railcars and diesel-electric locomotives. Eleven diesel-electric locomotives now operate all train services on the Trans-Australia Railway between Port Pirie and Kalgoorlie, and, in the near future, steam locomotive power on the Central and North Australia Railways will be replaced by diesel-electric power. The State railway systems also are making increasing use of diesel-electric locomotives, particularly to lessen the time taken on long-distance passenger and goods services.

3. **Government Railways Development.**—In spite of the great extensions of State railways since 1875 and also the construction of various railways by the Commonwealth Government, there are still, in some States, immense areas of country which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished. The general policy of the States was to extend the existing lines inland in the form of light railways as settlement increased, and while it is true that lines which were not likely to be commercially successful in the immediate future have been constructed from time to time for the purpose of encouraging settlement, the general principle that the railways should be self-supporting was kept in view.

The greatest recorded route-mileage of Government railways was 27,251 at 30th June, 1940. Although short lengths of line have been opened since that date, most railway construction is being confined to the duplication and electrification of existing main lines. The closure of other lines (mainly developmental branch lines whose retention would have been uneconomic), especially in Victoria and Western Australia, has resulted in a considerable decrease in route-mileage. Variations in route-mileage in each State and Territory during the ten years ended 30th June, 1954 are shown in the following table.

GOVERNMENT RAILWAYS : VARIATIONS IN ROUTE-MILEAGE, TEN YEARS  
ENDED 30th JUNE, 1954.

\* This is, however, provided for in the Commonwealth-South Australia Agreement referred to in para. 4.

4. **Standardization of Railway Gauges.**—A summary of the report and recommendations relating to the standardization of Australia's railway gauges on the basis of a 4 ft. 8½ in. gauge, made in March, 1945 at the request of the Commonwealth Government by the late Sir Harold Clapp, then Director-General of Land Transport, Commonwealth Department of Transport, together with an outline of the agreement between the Commonwealth Government and the States of New South Wales, Victoria and South Australia regarding the standardization of railway gauges in their respective States is contained in Official Year Book No. 37, pp. 146-9. The agreement, which was signed in 1946, was ratified by the Governments of the Commonwealth, of Victoria and of South Australia, but not by the New South Wales Government. After some time had elapsed and New South Wales had failed to ratify the agreement, the Commonwealth Government decided to enter into a separate agreement with South Australia, and the necessary legislation was enacted in 1949 by each Government concerned. Action was also taken to invite the Victorian Government to discuss the subject of a separate agreement, but to date there has been no legislative action. The Commonwealth-South Australia Agreement provides for the same standardization work to be carried out in South Australia as would have been carried out had New South Wales ratified the original Commonwealth-Three States Agreement, and that over a period of years the Commonwealth should contribute 70 per cent. and South Australia be responsible for the remaining 30 per cent. of the estimated cost.

5. **Grafton-South Brisbane (Uniform Gauge) Line.**—The first step towards uniform gauge railway communication between the capitals of the mainland States was effected in 1930 with the construction of the 4 ft. 8½ in. gauge line from Grafton to South Brisbane. The finance required for the construction was provided by the Commonwealth Government. For details of the agreement, between the Commonwealth and New South Wales and Queensland, see Official Year Book No. 31, p.122.

This line is operated by the New South Wales Railways and details of operations in New South Wales are included with those of the New South Wales system. Details of operations on the Queensland portion are included with Queensland railway statistics unless otherwise specified.

6. **Mileage Open for Traffic, all Lines.**—Almost all the railways open for general traffic in Australia are owned and controlled by the State or Commonwealth Governments. Private lines have been laid down for the purpose of opening up forest lands, mining districts or sugar areas. These lines are not generally used for the conveyance of passengers or the public conveyance of goods.

The following table shows the route-mileage of Commonwealth and State lines open in each State at different periods since the inauguration of railways in Australia in 1854 up to the year 1953-54:—

GOVERNMENT RAILWAYS : ROUTE-MILEAGE OPEN.  
(Miles.)

At 30th June—	N.S.W. (a)	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

1954 ..	6,342	4,241	6,560	3,816	4,565	605	490	5	26,624

(a) Includes route-mileage under the control of the Victorian Railways Department as follows—1931, 203 route-miles; 1941 and later years, 241 route-miles. (b) At 31st December.

At 30th June, 1954, 172 route-miles in Victoria and 126 route-miles in New South Wales were electrified.

The next table shows for each State the length of Government lines open in relation to both population and area at 30th June, 1954.

**GOVERNMENT RAILWAYS : ROUTE-MILEAGE OPEN AT 30th JUNE, 1954.**  
(Miles.)

(a) At 30th June, 1954.

(b) Excludes non-revenue train-miles and assistant and light locomotive-miles.

(c) Partly estimated.

10. **Gross Revenue.**—(i) *General.* The gross revenue is composed of (a) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) receipts from the carriage of goods and livestock; and (c) rents and miscellaneous items. State Government grants are excluded. Details of these grants made during 1953-54 are as follows:—£1,000,000 for the working of country development lines and £800,000 to subsidize payments from Superannuation Account in New South Wales; £1,930,908 to limit interest payments to 1 per cent. on loan liability in Victoria; £3,200,000 towards working expenses and £800,000 towards debt charges in South Australia; and £10,000 for sick leave funds in Tasmania.

(ii) *Coaching, Goods and Miscellaneous Receipts.* (a) *Summary.* In the following table the gross revenue is shown for the years 1951-52 to 1953-54, together with the revenue per average route-mile worked and per traffic train-mile:—

**GOVERNMENT RAILWAYS : GROSS REVENUE.(a)**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.	Aust.

Western Australia ..	1,251	9,308	552	11.26	83.77	4.97
Tasmania ..	216	1,855	62	10.12	86.99	2.89
Commonwealth ..	789	2,320	293	23.19	68.20	8.61
Australia ..	37,726	123,807	8,330	22.21	72.89	4.90

NOTE.—Details of gross revenue classified according to coaching, goods and livestock and miscellaneous receipts for the years 1944-45 to 1953-54 are shown in *Transport and Communication Bulletin* No. 45.

11. *Working Expenses*.—(i) *General*. In order to make an adequate comparison of the working expenses as between the several States and Territories, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the different systems of the State and Commonwealth railways, but also on different portions of the same system. When traffic is light, the proportion of working expenses to revenue is naturally greater than when traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—i.e., a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back loading.

Working expenses, wherever presented in the Railways section of this chapter, exclude interest, sinking fund, exchange and certain other payments (see paras. 12 and 13 following).

During the war years large amounts were set aside by the railways as reserves, mainly to provide for depreciation and accrued leave, to be expended as circumstances permit. Particulars of these amounts, which were included in working expenses and which in the year 1942-43 aggregated nearly £10 million and over the whole period about £30 million, were given in *Official Year Book* No. 38, page 175.

(ii) *Working Expenses.* The following table shows the total working expenses, the ratio of working expenses to gross revenue and working expenses per average route-mile worked and per traffic train-mile for the years 1951-52 to 1953-54 :—

**GOVERNMENT RAILWAYS : WORKING EXPENSES.**

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth. (a)	Aust.
<b>TOTAL WORKING EXPENSES.</b> (£'000.)

(a) See para. 8, note (a), page 227.  
Uniform Gauge Railway. £82,375.

(b) Includes Commonwealth Government share of interest on  
(c) Includes exchange.

NOTE.—Minus sign (—) denotes loss.

In the graphs accompanying this chapter the gross and net revenue and working expenses are shown from 1870 to 1954.

13. *Exchange.*—Exchange on interest payments abroad and certain other charges are not included in the table above. These items are not charged against the railways in Queensland and Western Australia and have been excluded for the purposes of comparison. In the remaining States the amounts paid on account of exchange during 1953-54 were :—New South Wales, £527,000; Victoria, £126,506; South Australia, £67,877; and Tasmania, £5,432.

14. *Traffic.*—(i) *General.* Reference has already been made to the difference in the traffic conditions on many of the lines. These conditions differ not only in the several State and Commonwealth systems, but also on different lines in the same system, and apply to both passenger and goods traffic. By far the greater part of the population of Australia is confined to a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to seaborne competition. In recent years competition from road and air transport has become an important factor.

The following table shows particulars of railway traffic for the years 1951-52 to 1953-54 :—

#### GOVERNMENT RAILWAYS : TRAFFIC.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.	Aust.
PASSENGER-JOURNEYS. ('000.)								
1951-52 ..	268,168	165,131	35,003	18,269	10,536	3,186	101	500,484
1952-53 ..	271,699	162,857	35,819	17,565	6,339	3,151	190	497,620
1953-54 ..	278,904	166,106	35,879	17,605	8,678	3,285	224	510,681

1954	1,213	167,468	138	220	2,320	1,054	3.33	459	76,087

(a) Total ton-miles per average route-mile worked. (b) Not available. (c) Partly estimated.  
(d) Excludes Queensland portion of Grafton-South Brisbane (Uniform Gauge) Line. (e) Railways controlled by the Commonwealth Government.

NOTE.—Train-miles refer to traffic mileages only and exclude non-revenue train-miles and assistant and light locomotive miles.

15. *Rolling Stock.*—The following table shows the number of rolling stock of Government railways at 30th June, 1954. Further details may be found in *Transport and Communication Bulletin* No. 45.

## GOVERNMENT RAILWAYS : ROLLING STOCK(a) AT 30th JUNE, 1954.

Railway System.	Locomotives.				Coaching Stock.(b)	Goods Stock.	Service Stock.
	Steam.	Diesel-electric.	Other.	Total.			
New South Wales ..	1,192	31	5	1,228	3,859	25,792	1,131
Victoria ..	533	39	35	607	(c) 2,413	21,922	(d) 1,049
Queensland ..	842	19	2	863	1,502	26,748	1,333
South Australia ..	366	12	..	378	(c) 720	8,774	(d) 498
Western Australia ..	413	13	10	436	634	12,962	665
Tasmania ..	101	32	6	139	184	2,584	104
Commonwealth ..	151	15	..	166	182	1,787	472
Australia ..	3,598	161	58	3,817	(e) 9,545	100,569	(e) 5,253

(a) Included in Capital Account. (b) Includes all brake vans. (c) Excludes 51 interstate coaching stock owned jointly by Victoria and South Australia. (d) Excludes one dynamometer car owned jointly by Victoria and South Australia. (e) Includes stock owned jointly by Victoria and South Australia.

16. Accidents.—The following table shows particulars of the number of persons killed or injured through train accidents and the movement of rolling stock on the Government railways of Australia during 1953-54 :—

## GOVERNMENT RAILWAYS : ACCIDENTS(a), 1953-54.

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	C'wth.	Aust.
Persons killed ..	55	56	17	18	21	2	1	170
Persons injured ..	1,013	544	110	72	205	15	5	1,964

(a) Excludes accidents to railway employees.

Corresponding figures for earlier years will be found in the *Transport and Communication Bulletin*.

17. Consumption of Coal, Oil and Petrol.—The following table shows the quantities of coal, oil and petrol consumed by the various Government railways during 1953-54 :—

## GOVERNMENT RAILWAYS : COAL, OIL AND PETROL CONSUMED, 1953-54.

Railway System.	Coal.		Oil.				Petrol for Rail Cars.
	Locomotives.	Other Purposes.	Lubrication.	Diesel and Distillate.	Furnace Oil.	Other Purposes.	
	'000 tons.	'000 tons.	'000 gals.	'000 gals.	'000 gals.	'000 gals.	'000 gals.
New South Wales ..	1,478	23	440	16,120	352	125	115

Commonwealth ..	45	1	65	1,457	216	634	6
Australia ..	3,208	67	(a)	(e) 28,734	(e) 30,020	(a)	534

(a) Not available. (b) Includes furnace oil. (c) Included with " Diesel and Distillate ".  
(d) 240 tons. (e) See notes (b) and (c).

Particulars of the value of coal, oil and petrol consumed during 1953-54 will be found in *Transport and Communication Bulletin* No. 45.

18. Staff Employed and Salaries and Wages Paid.—The following table shows details of the average staff employed and the salaries and wages paid by the Government railways of Australia during 1953-54. Corresponding figures for 1952-53 will be found in *Transport and Communication Bulletin* No. 44.

**GOVERNMENT RAILWAYS: AVERAGE STAFF EMPLOYED, AND SALARIES  
AND WAGES PAID, 1953-54.**

Railway System.	Number of Operating Staff.			Number of Construction Staff. (a)			Total Salaries and Wages Paid.	Average Earnings Per Employee.
	Salaried.	Wages.	Total.	Salaried.	Wages.	Total.		
New South Wales ..	9,543	45,467	55,010	23	182	205	£'500.	£
Victoria ..	(b) 5,059	24,121	29,180	(c)	(c)	(c)	46,808	851
Queensland ..	4,343	23,661	28,004	9	390	399	24,973	856
South Australia ..	1,911	8,770	10,681	12	1,275	1,287	22,172	792
Western Australia ..	2,086	13,294	15,380	1	10	11	10,105	946
Tasmania ..	351	2,361	2,712	15	132	147	10,459	680
Commonwealth ..	382	2,108	2,490	5	185	190	1,802	664
Australia ..	d 23,675	d 119,782	d 143,457	65	2,174	2,239	1,041	780
							2,230	824

(a) In Victoria, Queensland and Western Australia a considerable amount of construction work is carried out by private contractors and the staff engaged are therefore not under the control of the Railways Commissioners. (b) Includes construction staff. (c) Included with operating staff. (d) Includes construction staff, Victoria.

### C. TRAMWAYS.

NOTE.—Particulars of trolley-bus services in New South Wales, South Australia, Western Australia and Tasmania are included in this section. Particulars of those in Queensland are included with government and municipal omnibus services (see page 240).

1. Systems in Operation.—(i) *General.* Tramway systems are in operation in all the capital cities and in a number of the larger towns of Australia.

Since 1st April, 1947, all systems have been operated by government or municipal authorities. Tramway systems are located in the following cities—New South Wales, Sydney; Victoria, Melbourne, Geelong, Bendigo and Ballarat; Queensland, Brisbane; South Australia, Adelaide; Western Australia, Perth; and Tasmania, Hobart. In Sydney, Brisbane, Adelaide, Perth and Hobart, tramway systems are supplemented by trolley-bus services whilst in Launceston, Tasmania, trolley-buses have completely replaced trams. From 1941-42 all systems have been electric.

In many parts of Australia private lines used for special purposes in connexion with the timber, mining, sugar, or other industries are often called tramways, but they are more properly railways and the traffic on them has nothing in common with that of the street tramways for the conveyance of passengers, which are dealt with in the present section.

(ii) *Total Mileage Open and Classification of Lines.* The following table shows, for each State, the total route-mileage of tramway lines open for general passenger traffic at 30th June, 1955, classified (a) according to the controlling authority; (b) according to gauge. Trolley-bus route-mileage also is shown.

#### ELECTRIC TRAMWAYS: ROUTE-MILEAGE OPEN AT 30th JUNE, 1955.

(Miles.)

Total ..	117	175	(a) 67	92	31	30	(b) 512

(a) Excludes 13 trolley-bus route-miles which are included with the Brisbane Municipal Omnibus Service. (b) Excludes 13 trolley-bus route-miles in Queensland.

2. Summary of Operations, Australia.—The following table gives a summary of the working of all tramway systems in Australia for the years 1950-51 to 1954-55 :—

**ELECTRIC TRAMWAYS : SUMMARY OF OPERATIONS, AUSTRALIA.(a)**

Particulars.	Unit.	1950-51.	1951-52.	1952-53	1953-54.	1954-55.
Average mileage open for traffic ..	route-mile	546	542	525	522	516
	truck-mile	998	988	981	978	973
Tramcars(b) .. .. .	..	3,085	2,984	2,814	2,694	2,600
Net increase in capital equipment during year .. .. .	£'000	1.205	2.075	911	861	910
Gross revenue(c) .. .. .	..	13,610	15,121	15,968	15,780	15,267
Working expenses(d) .. .. .	..	14,553	17,109	18,420	18,181	17,797
Net revenue .. .. .	..	943	1,988	2,452	2,401	2,530
Interest .. .. .	..	491	536	628	656	714
Ratio of working expenses to gross revenue .. .. .	per cent.	106.93	113.15	115.36	115.22	116.57
Car-miles .. .. .	'000	71,746	67,923	65,895	63,762	60,275
Gross revenue per car-mile .. .. .	d.	45.53	53.43	58.16	59.40	60.79
Working expenses per car-mile .. .. .	d.	48.68	60.45	67.09	68.43	70.86
Net revenue per car-mile .. .. .	d.	3.15	7.02	8.93	9.03	10.07
Passenger-journeys .. .. .	'000	749,138	685,724	647,417	629,557	609,254
Passenger-journeys per car-mile .. .. .	..	10.44	10.10	9.82	9.87	10.11
Average gross revenue per passenger-journey .. .. .	d.	4.36	5.29	5.92	6.01	6.01
Persons employed at end of year(e) .. .. .	..	16,566	18,309	16,051	15,743	15,030
Accidents—						
Persons killed .. .. .	..	71	72	72	59	58
„ injured .. .. .	..	5,409	5,448	3,255	2,933	3,177

(a) Includes particulars of Hobart Municipal Council Omnibus Service 1950-51 to 1951-55 and Launceston Municipal Council Omnibus Service 1951-52 to 1954-55. (b) Includes trolley-buses. (c) Excludes Government grants. (d) Includes provision of reserves for depreciation, etc. (e) Includes motor omnibus employees, South Australia, but excludes a number of employees in New South Wales who cannot be distributed between tramways and omnibuses.

NOTE.—Minus sign (—) denotes loss.

3. Traffic and Accidents.—Particulars of the traffic of electric tramways and the accidents which occurred in the movement of rolling stock during 1954-55 are shown for each State in the following table :—

**ELECTRIC TRAMWAYS : TRAFFIC AND ACCIDENTS, 1954-55.**

State.	Average Mileage Open for Traffic.		Number of Tram-cars. (a)	Car-miles.	Passenger-journeys.	Average Number of Passenger-journeys per Car-mile.	Accidents.	
	Route-miles.	Track-miles.					Persons—	
							Killed	Injured.
New South Wales ..	122	233	835	'000. 14,663	'000. 191,958	13.09	(b) 21	(b) 946
Victoria ..	175	324	829	23,173	220,095	9.50	15	1,268
Queensland ..	67	124	407	9,642	101,885	10.57	11	578

(a) Excludes Government grants. (b) Includes provision of reserves for depreciation, etc.  
 (c) Estimated. (d) Excludes administrative staff not distributable between omnibus and tramway services.  
 (e) Excludes 1,447 administrative staff and 566 salaried staff who cannot be distributed between omnibus and tramway services. (f) Excludes trolley-bus services, particulars of which are included with omnibus services. (g) Includes capital expenditure on motor omnibus services.  
 (h) Includes motor omnibus employees of Adelaide Municipal Tramways Trust. (i) Includes particulars of Hobart and Launceston Municipal Council Omnibus Services. (j) Tramway and trolley-bus mileage only. At 30th June, 1955. Hobart and Launceston Municipal Council Omnibus route-mileage was 29 miles. (k) See notes (a) to (j).

## D. MOTOR OMNIBUS SERVICES.

1. General.—Motor omnibus services have been in operation for some years in the capital cities and many of the larger towns of the States of Australia, and in the Australian Capital Territory.

(Government and municipal authorities operate certain services and the others are run by private operators; in the States the former are run in conjunction with the existing electric tramway systems.

2. Government and Municipal Services.—(i) *Summary of Operations, 1953-54.* The following table gives a summary of the operations during the year ended 30th June, 1954 of omnibus systems controlled by government and municipal authorities.

### MOTOR OMNIBUS SERVICES : GOVERNMENT AND MUNICIPAL, 1953-54.

Particulars.	N.S.W.	Vic.	Qld. (a)	S.A.	W.A.	Tas. (b)	A.C.T.	Aust.
Length of route .. miles	463	64	409	38	3,036	563	46	4,619
Omnibuses .. ..	1,258	336	272	104	209	44	65	2,282
Net increase in capital equipment during year .. £'000	359	169	139	(c)	28	13	3	711
Gross revenue(d) .. £'000	4,612	1,477	849	296	1,020	207	134	8,595

Passenger-journeys(a) .. ..	'000	325,079	340,314	333,200	340,477	347,310
Passenger-journeys per omnibus-mile(a) .. ..	..	6.04	6.36	6.16	6.12	6.06
Average gross revenue per passenger-journey(a) .. ..	d.	4.66	5.34	6.15	6.57	6.12
Number of persons employed (a) (d) .. ..	..	7,721	7,720	8,174	7,663	7,308

(a) Excludes Hobart Municipal Council Service 1948-49 to 1952-53 and Launceston Municipal Council Service 1951-52 and 1952-53. (b) Not available. (c) Excludes South Australia. (d) See relevant notes to table above.

NOTE.—Minus sign (—) denotes loss.

3. *Private Services.*—(i) *General.* Particulars of motor omnibus services under the control of private operators are recorded in the States of New South Wales, Victoria, South Australia and Western Australia only.

# RAILWAY SYSTEMS. AUSTRALIA

# GOVERNMENT RAILWAYS: AUSTRALIA, 1870 TO 1954

RATIO GRAPH

## ROUTE - MILEAGE AND TRAFFIC

NOTE:— VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO RATE OF INCREASE OR DECREASE. ACTUAL NUMBERS ARE INDICATED BY SCALE.

# GOVERNMENT RAILWAYS: AUSTRALIA, 1870 TO 1954

# MOTOR VEHICLE REGISTRATIONS : AUSTRALIA, 1920 TO 1955

(EXCLUDING MOTOR CYCLES)

(See pages 247-48.)

In New South Wales, particulars are compiled for the Metropolitan and Newcastle Transport districts only, and in Victoria for the Metropolitan district only, but in South Australia and in Western Australia particulars of all services throughout the State are included.

(ii) *Summary of Operations.* The following table shows the operations of motor omnibus services under the control of private operators in New South Wales, Victoria, South Australia and Western Australia during each of the years ended June, 1952 to 1954 :—

## MOTOR OMNIBUS SERVICES : PRIVATE.

Year.	Number of Omnibuses.	Omnibus-miles Run. ( <sup>000</sup> miles.)	Passenger-journeys. ( <sup>000</sup> ).	Value of Plant and Equipment. (£ <sup>000</sup> .)	Gross Revenue. (£ <sup>000</sup> .)	Persons Employed.
NEW SOUTH WALES.(a)						
1951-52 ..	790	17,358	94,917	999	2,342	1,289
1952-53 ..	792	20,613	87,274	950	2,347	1,273
1953-54 ..	806	20,195	88,639	990	2,426	1,369
VICTORIA.(b)						
1951-52 ..	(c) 407	17,985	79,928	(d)	1,601	972

1952-53 ..	379	11,976	34,592	1,047	1,576	944
1953-54 ..	423	12,550	34,211	1,124	1,661	971

(a) Metropolitan and Newcastle Transport districts only. (b) Metropolitan area only.  
(c) Excludes omnibuses held in reserve. (d) Not available. (e) Vehicles only. (f) Estimated.

## E. FERRY (PASSENGER) SERVICES.

1. *General.*—Ferry services to transport passengers are operated in Sydney and Newcastle, New South Wales, on the Swan River at Perth in Western Australia, and on the Derwent River at Hobart and in Devonport, Tasmania. Control is exercised both by governmental authorities and by private operators. In Victoria and Queensland the services operated are not extensive, and there are no ferry services in South Australia.

2. *Summary of Operations.*—The operations of ferry passenger services in New South Wales, Western Australia and Tasmania during the years 1951-52 to 1953-54 are summarized in the following table. Particulars of passengers carried on vehicular ferries are not included.

## FERRY (PASSENGER) SERVICES.

## F. MOTOR VEHICLES.

1. **Motor Industry.**—Chapter IX.—Manufacturing Industry contains summarized information on the motor industry of Australia and includes therein some data on the imports of motor bodies and chassis. Chapter VIII.—Trade contains further data on imports, including those of petroleum products.

2. **Registration.**—The arrangements for the registration of motor vehicles and the licensing of drivers and riders are not uniform throughout Australia. Particulars regarding methods of registration, licences, fees payable, etc., in each State and Territory at 30th June, 1952 were given in Official Year Book No. 40, pp. 135-8.

3. **Taxi-cabs and Other Hire Vehicles.**—In the capital cities of the States and in many of the provincial centres taxi-cabs and other vehicles ply for hire under licence granted by either the Commissioner of Police or the local government authority concerned. As most of these vehicles are independently controlled by individuals or small companies, it has not been possible to obtain complete data in respect of their operations.

4. **Motor Omnibuses.**—In both urban and provincial centres motor omnibus traffic has assumed considerable proportions during recent years and in some States the railway and tramway systems run motor services complementary to their main services. There has been a considerable replacement also, during the last few years, of existing tramway services by trolley-bus and motor omnibus services. (*See Divisions C. and D. of this chapter.*)

5. **Motor Vehicles on the Register, etc.**—(i) *Registrations and Revenue.* The following table shows particulars of the registration of motor vehicles, licences issued and revenue received for 1954-55 and a summary for Australia for each of the years 1950-51 to 1954-55. It should be noted that in Victoria registration is made on the basis of the purpose for which the vehicle is to be used; consequently, motor car registrations are overstated by the inclusion of commercial vehicles registered for private use.

A graph showing for all motor vehicles other than motor cycles the registrations in force at 30th June of each year from 1920 to 1955 will be found on p. 244.

## MOTOR VEHICLES : REGISTRATIONS AND REVENUE.

(Including Commonwealth-owned vehicles other than those of the Departments of Army and Air.)

(a) Excludes, at 30th June, 1955, trailers (118,742), road tractors, etc. (25,895), and dealers' plates (8,225). Excludes Northern Territory registrations prior to 1953-54. (b) Includes taxis and hire cars. (c) Includes lorries, vans, omnibuses and utilities. (d) See para. 5 on previous page. (e) As from 1st October, 1952, drivers' and riders' licences have not been issued on an annual basis in Queensland. (f) Excludes Queensland. (g) Includes Queensland prior to 1953-54. (h) Prior to 12th November, 1951, primary producers' cars registered in Victoria were included with commercial vehicles.

(ii) *Relation to Population.* The table hereunder shows the number of vehicles (excluding motor cycles) registered per 1,000 of population in each State and Territory at 31st December, 1921, and at 30th June for each of the years 1939 and 1951 to 1955.

## MOTOR VEHICLES (EXCLUDING MOTOR CYCLES) REGISTERED PER 1,000 OF POPULATION.

(Including Commonwealth-owned vehicles other than those of the Departments of Army and Air.)

except those registered in Victoria in 1949-50.

(b) Includes taxis and hire cars,

(c) Includes lorries, vans, omnibuses, utilities,

and, for 1949-50, taxis and hire cars registered in Victoria.

(d) Excludes motor cycles registered

in the Northern Territory.

(e) See para. 5 on page 246.

7. *World Motor Vehicle Statistics, 1955*.—Particulars of motor vehicle registrations throughout the world were included in issues of the *Official Year Book* prior to No. 39. This information was derived from the results of the *World Motor Census*, conducted by the *American Automobile* magazine. Detailed information is not repeated in this issue, but the following particulars from the same source show that there were 87,035,434 motor cars, trucks and omnibuses registered in various countries of the world at 1st January, 1955. This was an increase of 11 per cent. on the figure for the previous year, 81,903,496, and was the highest figure attained to that date. Of these vehicles, 57,595,376 or 66 per cent. of the world total were in the United States of America, and Australian registrations amounted to 2 per cent.

8. *Survey of Motor Vehicles, 1947-48*.—A survey of motor vehicles (excluding motor cycles) on the roads during 1947-48 was carried out by the Commonwealth Statistician in collaboration with the Government Statisticians and Road Transport authorities in the States. Results were published in a series of bulletins dealing with each State separately and with Australia as a whole, and summarized particulars were included in *Transport and Communication Bulletin* No. 40, 1948-49 published by this Bureau. Similar surveys, but of modified scope, have been carried out for later periods in respect of new vehicles only. The results have been published by this Bureau in the *Transport and Communication Bulletin* and, since July, 1951, in the *Monthly Bulletin of Registrations of New Motor Vehicles*. Information contained in the latter includes the make, type and R.A.C. horse-power of new motor vehicles registered in each State and Territory.

## G. ROAD TRAFFIC ACCIDENTS.

1. **General.**—Prior to the year 1949–50 it was not possible to make proper comparisons between States of the number of accidents recorded, because of the differences in legislation regarding the reporting of accidents and the degree to which the legislation could be enforced. However, arrangements were made, in co-operation with the Australian Road Safety Council and the various police and transport authorities concerned, to obtain the numbers of road traffic accidents on a comparable basis from all States in respect of the year ended 30th June, 1950 and subsequent years. This has been achieved by restricting the statistics so that they relate only to those accidents which result in death or bodily injury to any person, or in damage in excess of £10 to property. It should be noted, however, that the comparability of the statistics between States even on this basis still depends on the degree to which accidents so defined are in fact recorded by the police. It is considered that there was little difference in the recording of accidents as between States for the years 1949–50 to 1953–54, except in the case of Western Australia where statistics shown relate to all accidents which occurred in the metropolitan area and, in the remainder of the State, for periods prior to 1st January, 1953, only to those which involved fatal or “near-fatal” injury. Since that date statistics for Western Australia have been collected on a basis comparable with that for the other States. Under legislation passed in Tasmania on 10th August, 1954, it is no longer obligatory to report accidents involving only damage to property. The figures for Tasmania in the tables below are not, however, affected by this legislation.

For further particulars of traffic accidents see the *Transport and Communication Bulletin*.

2. **Total Accidents Recorded, 1953–54.**—(i) *Summary.* The following table shows, for each State and the Australian Capital Territory, the total number of accidents recorded by the police, the number involving casualties, and the number of persons killed or injured during the year 1953–54, together with the number of persons killed or injured per 100,000 of mean population and per 10,000 motor vehicles registered.

**ACCIDENTS (KNOWN TO THE POLICE) WHICH OCCURRED IN PUBLIC THOROUGHFARES : ACCIDENTS RECORDED AND CASUALTIES, 1953–54.**

(a) Persons injured to an extent requiring surgical or medical treatment.

(iv) *Accidents Recorded and Casualties, classified according to Type of Vehicle, Road User, etc., Involved.* The following table shows, for the year 1953-54, the number of accidents in which each of several classes of vehicles, road users, etc., was involved. The accidents involving casualties and persons killed and injured are similarly classified.

**ACCIDENTS (KNOWN TO THE POLICE) WHICH OCCURRED IN PUBLIC THOROUGH-  
FARES : ACCIDENTS RECORDED AND CASUALTIES, CLASSIFIED ACCORDING  
TO TYPE OF VEHICLE, ROAD USER, ETC., INVOLVED, AUSTRALIA, 1953-54.(a)**

Particulars.	Motor Vehicle.	Motor Cycle.	Pedal Cycle.	Tram.	Animal and Animal- drawn Vehicle.	Pedes- trian.	Fixed Object.	Other Vehicle.
Total Accidents Reported <i>b</i>	81,020	11,977	5,233	1,949	2,759	8,282	7,666	398
Accidents Involving								
Casualties ..	29,958	9,040	4,910	840	658	8,209	2,033	184
Persons Killed ..	1,703	424	134	42	30	593	136	60
Persons Injured(c) ..	38,244	10,513	5,190	981	769	8,282	2,715	238

(a) It should be noted that, as accidents and casualties classified according to one type of road user, etc., may also be classified according to another, these totals cannot be added across to obtain grand totals. The table excludes 117 accidents recorded for which no cause was stated, of which 60 involved casualties—9 persons killed and 57 persons injured. (b) Total accidents causing death or injury to persons or damage exceeding £10 to property. (c) Persons injured to an extent requiring surgical or medical treatment.

It will be seen, therefore, that motor vehicles were involved in 81,020 accidents, of which 29,958 involved casualties (1,703 persons killed and 38,244 persons injured). The 81,020 accidents in which motor vehicles were involved comprised 39,177 collisions with other motor vehicles, 7,671 with motor cycles, 3,730 with pedal cycles, 1,266 with trams, 2,245 with animals and animal-drawn vehicles, 6,892 with pedestrians, 7,126 with fixed objects, 347 with vehicles other than those mentioned, 11,890 instances of overturning or leaving the roadway, and 676 accidents to passengers only. The particulars of accidents in which motor cycles, pedal cycles, etc., were involved with motor vehicles are also included under their respective headings in the table above. Consequently, since the figures in each column refer to the *total* accidents in which the particular type of vehicle, etc., was involved, any aggregation across would result, through duplication, in considerable overstatement of the actual totals.

3. Persons Killed or Injured in Road Traffic Accidents.—The following table shows the numbers of persons killed or injured in road traffic accidents in each State and the Australian Capital Territory during each of the years 1948-49 to 1953-54 :—

**ACCIDENTS (KNOWN TO THE POLICE) WHICH OCCURRED IN PUBLIC THOROUGH-  
FARES : PERSONS KILLED OR INJURED.**

(a) Persons injured to an extent requiring surgical or medical treatment. (b) Includes persons injured and detained in hospital only. (c) Includes all persons injured (i.e., requiring surgical or medical treatment) in the metropolitan area but in the remainder of the State, prior to 1st January, 1953, only those suffering "near-fatal" injuries.

## H. AVIATION.

1. **Historical.**—A short review of the progress of civil aviation in Australia up to the date of foundation of a Civil Aviation Administration was published in Official Year Book No. 16, pp. 334-5.

2. **Foundation and Administration of Civil Aviation.**—A brief account of the foundation and objects of this Administration will be found in Official Year Book No. 19, p. 299. Official Year Book No. 38 and earlier issues contain information on the control of civil aviation by the Board (1936) and later (1939) by the Department of that name. The Acts defining the broad principles of operation of the administration of civil aviation and the Regulations amplifying them, and the principal functions of the administration are also described.

The Department was partially re-organized in June, 1954 to provide for the more effective distribution of duties and responsibilities among senior officers. This included the appointment of an additional Assistant Director-General to the executive staff to control all ground facilities. The number of Divisions was increased from six to nine—the three administrative Divisions (Air Transport and External Relations; Administration, Personnel and Establishments; and Finance and Stores) remained unchanged, while in the technical field the Division of Airports remained unchanged; the Division of Air Navigation became the Division of Flying Operations; the Division of Airways was divided into two—Division of Airways Operations and Division of Airways Engineering; and the status of two Branches—Aviation Medicine and Accident Investigation and Analysis—was raised to that of Divisions.

3. **International Activity.**—(i) *International Organizations.* A full report of the formation of the International Civil Aviation Organization, the Commonwealth Air Transport Council and the South Pacific Air Transport Council appeared in Official Year Book No. 37 and particulars of subsequent activity in the international field were included in issue No. 38. I.C.A.O. had a membership of 65 nations at 3rd June, 1955. Australia has continued her representation on the Council, a position which she has held since the organization was established in 1947. The Commonwealth was represented at the ninth I.C.A.O. Assembly meeting at Montreal in June, 1955. The ninth meeting of the South Pacific Air Transport Council was held at Waitomo, New Zealand, in July, 1955. Further details will be found in Official Year Book No. 39 and earlier issues.

(ii) *International Air Services.* Major changes in the organization of trans-Pacific and trans-Tasman airline operations were outlined in Official Year Book No. 41. Qantas Empire Airways continues to operate services to the United Kingdom through the Middle East, to Japan via Hong Kong and Manila, to South Africa across the Indian Ocean, to North America, to the British Solomon Islands, and through Noumea to the New Hebrides. Their total route-mileage at 30th June, 1955 was 53,427. Q.E.A. has re-equipped these services with twelve Super Constellation aircraft which are now operating on the Pacific, United Kingdom and Japan services. This type of aircraft will be used on the South African service at an early date. A summary of the operations of overseas services wholly or partly Australian-owned appears on page 256.

In 1955 Douglas DC4 land planes were substituted for flying-boats on the Pacific Islands service. No Australian international services are now operated by flying-boats. DC6 aircraft now link Sydney with both Auckland and Christchurch and Melbourne with Christchurch.

4. **Regular Air Services within Australia.**—Under the Government's rationalization plan, introduced in 1954, it was agreed that services on competitive routes such as in Queensland and the Riverina (New South Wales), should be regulated to avoid wasteful operations.

A summary of the operations of regular air services within Australia appears on page 255 and a map showing air routes on pp. 261-2.

5. **Air Ambulance Services.**—A brief statement of the foundation and objects of the Air Ambulance Services will be found in Official Year Book No. 32, pp. 145 and 146.

During the year 1954-55 the Air Ambulance and Royal Flying Doctor Services continued to provide medical aid for the outback regions of Australia. The Commonwealth Department of Health operates the Northern Territory Aerial Medical Service with two Drover aircraft and two DH84A aircraft. The Royal Flying Doctor Service of Australia, operating from Archerfield (one Beechcraft), Broken Hill (one DH84A and one Drover) and Port Hedland (one DH83) covers a wide area of inland Australia. The Bush Church Aid Society for Australia and Tasmania, supported by funds from the Church of England, maintains two aircraft (one DH84A and one Percival Proctor III at Ceduna). The Federal Methodist Inland Mission (one DH82A) operates services from Meekatharra, Western Australia, and the Queensland Ambulance Transport Brigade operates a service from Cairns with a DH89A aircraft.

6. **Training of Air Pilots.**—A brief statement of the pre-war policy of the Commonwealth Government regarding assistance to Aero Clubs was given in Official Year Book No. 32, p. 146.

Payment to the clubs, under a plan initiated in July, 1951, continues to be made as follows:—(i) a maintenance grant (for each aircraft-hour flown) at the following rates per hour subject to certain limitations—(a) at home base, £1 13s. 9d., (b) away from home base, £2 7s. 6d.; (ii) an issue bonus (for each pupil trained *ab initio* to "A" licence standard)—(a) at home base, £84, (b) away from home base, £107 10s.; (iii) a renewal bonus (for each licence renewed on club aircraft)—(a) at home base, £11, (b) away from home base, £15. In addition, the Commonwealth has accepted a contingent liability to contribute at the rate of 10s. per flying hour towards each club's replacement reserve. This amount is intended to supplement the club's reserve for the purchase of aircraft and spares specifically approved by the Department of Civil Aviation.

During the year 1954-55, 305 issue and 1,005 renewal courses were gained by the Assisted Flying Training Organization (non-profit aero clubs and commercial flying schools). Hours flown by the subsidized aero clubs totalled 51,964 and a total subsidy of £139,308 was earned by all training organizations, 17 of which were aero clubs. In addition to civil flying training, 11,992 hours were flown on training for the Royal Australian Air Force, 8,213 of which were carried out by the aero clubs.

7. **Gliding Clubs.**—For the year 1954-55 a total subsidy of £2,000 was distributed among the gliding associations in the various States. Of this amount, £1,500 was distributed among member clubs on an active membership basis, and £500 according to the number of gliding certificates issued.

8. **Aeronautical Telecommunications.**—During the year 1954-55 development and modernization of the aeronautical telecommunications system within Australia was continued. The V.H.F. telephone communication services for aircraft, which were introduced in 1949, were progressively developed with more modern equipment. Teletype and tape relay services are being developed extensively along the major Australian routes and at important overseas terminals with which Australia has direct air communication. The Distance Measuring Equipment programme is expected to be completed during 1956 with 75 beacons installed. In 1954-55 Instrument Landing Systems were operating in part at Sydney and Melbourne, together with high-intensity approach lighting. Full Instrument Landing System service is being provided at these airports and similar installations will be placed progressively at Launceston, Hobart, Adelaide and Canberra.

9. **Air Traffic Control.**—Work of the Air Traffic Control Branch has been concentrated primarily on advances in procedures and planning, the full benefits of which will become apparent in the near future. Control areas were established in the Darwin Flight Information Region, giving positive anti-collision service to both international and domestic

aircraft. A procedure using Distance Measuring Equipment was introduced which significantly reduced the handling delays of aircraft arriving in the terminal areas. Procedures for the handling of jet turbine aircraft have been introduced to permit the utmost flexibility in operating this type of aircraft.

10. *Meteorological Aids to Civil Aviation.*—Professional meteorological officers of the Department of the Interior are on duty at many of Australia's aeradio stations. At the remainder, communications personnel make local weather observations and take barometer and thermometer readings for transmission to Area Meteorological Offices.

11. *Aircraft Parts and Materials.*—At 30th June, 1955 the number of firms and organizations approved by the Department of Civil Aviation to trade in the aircraft industry was 430. With the introduction of gas turbine engines and pressurized aircraft certain firms have been approved to undertake the specialized work of overhaul, repair and maintenance of these engines and of accessories. The major fuel and oil companies have been brought under a system of quality control.

12. *Aircraft Overhaul and Repair.*—Aircraft overhaul and repair is carried out in workshops approved by the Director-General of Civil Aviation. Components and accessories are now certified on release notes signed by approved members of the firms' inspection organization.

13. *Test and Examination of Aircraft Parts and Materials.*—In the past the Department adopted the practice of approving laboratories for this work, but these approvals have now been terminated in favour of test houses and laboratories registered by the National Association of Testing Authorities, except when production is for the manufacturer's own use. Certificates issued under registration by the Association are acceptable to any Commonwealth Government Department.

14. *Statistical Summaries.*—(i) *Registrations, Licences, etc.* The following table provides a summary of the civil aviation registrations and licences in force in Australia at 30th June of each of the years 1950 to 1955.

#### CIVIL AVIATION : REGISTRATIONS, LICENCES, ETC., AUSTRALIA. (a)

Particulars.	At 30th June—					
	1950.	1951.	1952.	1953.	1954.	1955.
Registered Aircraft Owners .. ..	359	351	343	369	384	414

Mail—						
Tons (b) .. ..	729	943	1,141	1,168	1,379	1,442
Ton-miles (b) .. ..	'000 3,867	5,367	6,162	6,122	7,718	7,927

(a) Airlines wholly or partly owned by Australian interests.

(b) In terms of short tons (2,000 lb.).

(v) *Accidents and Casualties.* The number of accidents involving aircraft on the Australian register and the number of persons killed or injured are shown in the following table for each of the years 1949-50 to 1954-55.

## CIVIL AVIATION : ACCIDENTS INVOLVING AUSTRALIAN AIRCRAFT.(a)

Particulars.	Year ended 30th June—					
	1950.	1951.	1952.	1953.	1954.	1955.
Number .. ..	22	33	25	16	26	22
Persons killed .. ..	61	13	37	5	36	27
Persons injured .. ..	22	35	22	19	27	19

(a) Accidents involving aircraft on the Australian register, irrespective of the location of the accident. Includes gliders.

15. *Papua-New Guinea Activities.*—(i) *General.* Issues of the Official Year Book up to and including No. 34, 1941 showed particulars of the development of civil aviation in New Guinea and of the companies operating at the outbreak of war with Japan, while issues Nos. 35 to 37 carried the accompanying statistical summary of operations up to the end of September, 1941.

(ii) *Territory of Papua and New Guinea.* In this area there are now 24 Government and 11 licensed aerodromes, approximately 120 authorized landing grounds, 10 cleared heliports and 300 helicopter clearings.

Three companies conduct regular services between the major aerodromes. Charter flights can be arranged to almost any locality. Further information may be found in Chapter V.—The Territories of Australia.

During the year ended 30th June, 1954, three accidents occurred in which six people were injured. There were no fatalities. In the year ended 30th June, 1955 there were no accidents.

## I. POSTS, TELEGRAPHS, TELEPHONES AND WIRELESS.

NOTE.—In all the tables in this Division particulars for the Australian Capital Territory are included with those for New South Wales, while the South Australian figures include particulars for the Northern Territory.

## § 1. General.

1. *The Postmaster-General's Department.*—Under the provisions of the Post and Telegraph Act 1901, the Department was placed under the control of the Postmaster-General, being a responsible Minister. The Director-General of Posts and Telegraphs controls the Department under the Postmaster-General, whilst the principal officer in each State is the Deputy-Director of Posts and Telegraphs.

2. **Postal Facilities.**—(i) *Relation to Area and Population.* The following statement shows the number of post offices, the area in square miles and the number of inhabitants to each post office (including non-official offices) and the number of inhabitants to each 100 square miles in each State and in Australia at 30th June, 1954. In order to judge clearly the relative postal facilities provided in each State, the area of country to each office as well as the number of inhabitants per office should be taken into account.

**POSTAL FACILITIES : RELATION TO AREA AND POPULATION,  
AT 30th JUNE, 1954.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Aust.
Number of post offices (a) ..	2,554	2,374	1,270	889	639	518	8,244
Number of square miles of territory per office .. .. .	122	37	528	1,017	1,527	51	361
Number of inhabitants per office ..	1,352	1,033	1,038	916	1,001	596	1,090
Number of inhabitants per 100 square miles .. .. .	1,113	2,790	197	106	66	1,178	302

(a) Includes "official," "semi-official," and "non-official" offices.

The foregoing table does not include "telephone" offices at which there is no postal business.

(ii) *Number of Offices.* The following table shows the number of post offices (exclusive of telephone offices) in each State at 30th June, 1954.

**NUMBER OF POST OFFICES AT 30th JUNE, 1954.**

Type of Office.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Official and Semi-official ..	499	301	209	165	151	51	1,376
Non-official .. .. .	2,055	2,073	1,061	724	488	467	6,868
Total .. .. .	2,554	2,374	1,270	889	639	518	8,244

(iii) *Employees and Mail Contractors.* The number of employees and mail contractors in the Central Office and in each of the States at 30th June, 1954 are given in the following table:—

**NUMBER OF POSTAL EMPLOYEES AND MAIL CONTRACTORS AT 30th JUNE, 1954.**

Particulars.	Central Office.	N.S.W.	Vic.	Q'land.	S.A.	W. Aust.	Tas.	Aust.
Employees .. .. .	962	32,519	23,303	12,624	7,783	5,534	3,152	85,877
Mail Contractors(a) ..	..	2,095	1,026	1,245	374	292	277	5,309

(a) Includes persons employed to drive vehicles.

Particulars of persons employed are shown in greater detail in *Transport and Communication Bulletin No. 45*.

3. **Gross Revenue, Branches**—Postmaster-General's Department.—The gross revenue (actual collections) in respect of each branch of the Department during the year 1953-54 is shown in the table hereunder:—

**POSTMASTER-GENERAL'S DEPARTMENT : GROSS REVENUE(a), 1953-54.  
(£'000.)**

Sources.	N.S.W.	Vic.(b)	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Postage .. .. .	8,972	6,799	3,009	1,938	1,499	676	22,893
Money order commission and poundage on postal notes	356	298	92	72	46	23	887
Private boxes and bags ..	62	40	32	20	13	8	175
Miscellaneous .. .. .	761	594	302	145	160	58	2,020
Total, Postal .. .. .	10,151	7,731	3,435	2,175	1,718	765	25,975
Telegraphs .. .. .	1,754	1,246	783	432	377	117	4,709
Telephones .. .. .	14,580	11,200	5,013	3,231	2,086	1,003	37,113
Grand Total .. .. .	26,485	20,177	9,231	5,838	4,181	1,885	67,797

(a) The figures in this table relate to revenue actually collected during the year as recorded for Treasury purposes. (b) Includes Central Office collections.

Corresponding figures for the year 1952-53 will be found in *Transport and Communication Bulletin* No. 44. For each of the years 1949-50 to 1953-54 the gross revenue for Australia was £38,349,000, £44,777,000, £59,371,000, £64,398,000 and £67,797,000 respectively.

Gross revenue for the year 1953-54 increased by 5.3 per cent. compared with that for the previous year. Revenue of the Postal, Telegraph and Telephone branches increased by 5.3 per cent., 3.6 per cent. and 5.5 per cent. respectively.

4. Expenditure, Postmaster-General's Department.—(i) *Distribution, 1953-54.* The following table shows, as far as possible, the distribution of expenditure (actual payments) on various items in each State during the year ended 30th June, 1954, as shown by records kept for Treasury purposes. The table must not be regarded as a statement of the working expenses of the Department, since items relating to new works, interest, etc., are included therein.

POSTMASTER-GENERAL'S DEPARTMENT : DISTRIBUTION OF EXPENDITURE(a),  
1953-54.  
(£'000.)

Grand Total ..	8,774	35,863	24,391	13,077	8,396	5,873	3,104	99,478

(a) The figures in this table represent actual payments made during the year as recorded for Treasury purposes.

(b) Expenditure on air-mail services, £2,662,000, and conveyance of Australian mails in other countries, £201,000.

(c) Includes expenditure from loan fund.

(d) Includes expenditure not apportioned to States, i.e., interest on loans, £1,207,000; sinking fund, £2,313,000; superannuation contributions, £1,198,000; transferred officers' pensions and allowances, £5,000; pensions and retiring allowances, £11,000; and loans redemption and conversion, £13,000.

(ii) *Totals.* Actual payments made for each of the years 1949-50 to 1953-54, respectively, were:—£64,297,000, £89,699,000, £93,109,000, £98,344,000 and £99,478,000. Total expenditure increased by 1.2 per cent. during 1953-54.

5. Profit or Loss, Postmaster-General's Department.—(i) *States, 1953-54.* The foregoing statements of gross revenue and expenditure represent actual collections and payments made and cannot be taken to represent the actual results of the working of the Department for the year. The net results for each branch in the several States, after providing for working expenses (including superannuation, pensions and depreciation) and interest charges including exchange, were as follows.

POSTMASTER-GENERAL'S DEPARTMENT : PROFIT OR LOSS, 1953-54.  
(£'000.)

(a) Includes dismantled assets, depreciation written off, and assets transferred.

(ii) *Net Value.* The net value of the fixed assets of the Postmaster-General's Department at 30th June in each of the years 1950 to 1954, respectively, was :—£134,933,000, £162,046,000, £194,749,000, £222,981,000 and £253,627,000.

§ 2. Posts.

1. *Postal Matter Dealt With.*—(i) *States, 1953-54.* The following table shows summary of the postal matter dealt with in each State during the year 1953-54. Mail matter posted in Australia for delivery therein is necessarily handled at least twice, but only the number of distinct articles handled is included in the following table.

**POSTAL MATTER DEALT WITH(a) : STATES, 1953-54.**

(a) Includes registered, cash on delivery and duty parcels.

2. **Cash on Delivery Parcels Post.**—(i) *General.* The Postmaster-General's Department undertakes, upon prepayment of a prescribed commission, to deliver registered articles sent by parcels post within Australia, or between Australia and Lord Howe Island, Norfolk Island, Nauru, Territory of Papua and New Guinea, or Fiji, to recover from the addressee on delivery a sum of money specified by the sender, and to remit the sum to the sender. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and of traders and others who do not wish their goods to be delivered except on payment.

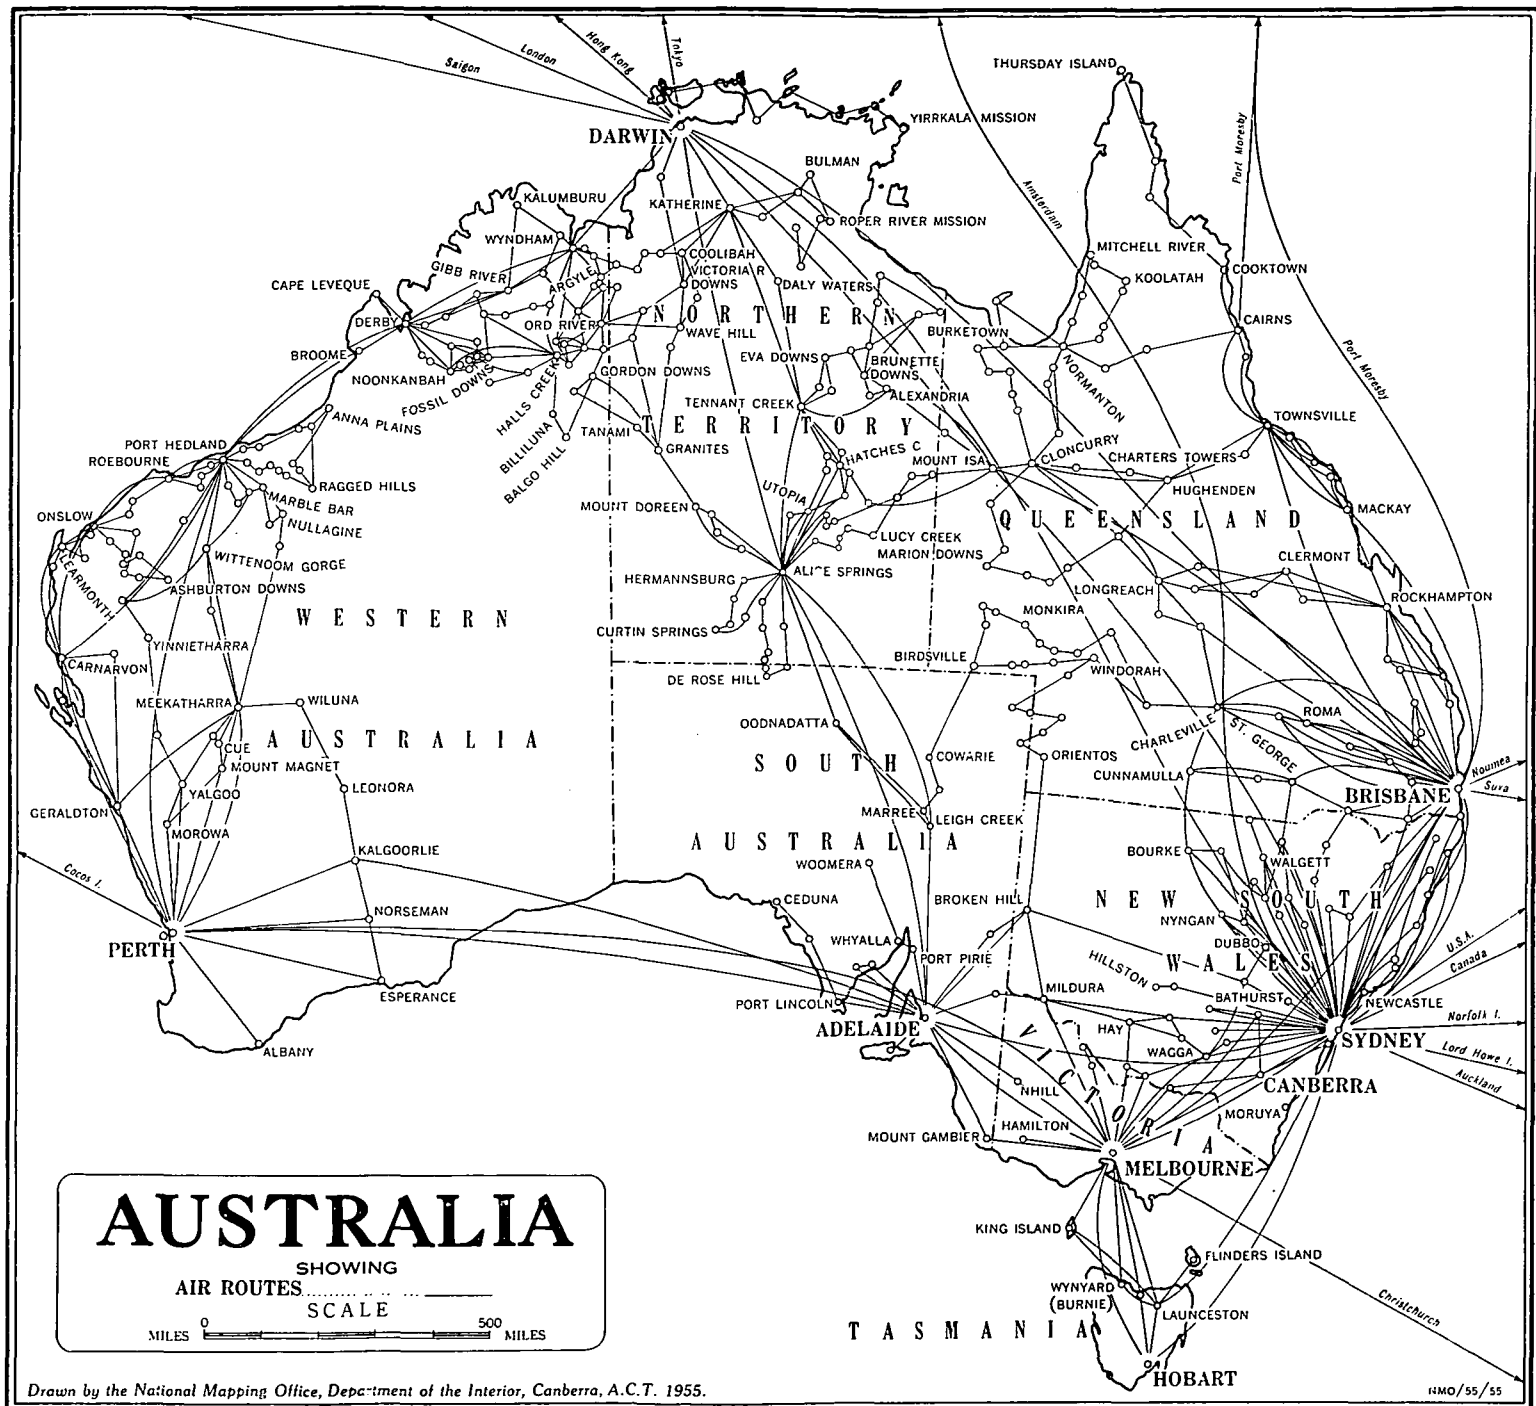

(ii) *States, 1953-54.* The next table shows particulars regarding the cash on delivery parcels posted in each State for the year 1953-54.

**CASH ON DELIVERY PARCELS POST : STATES, 1953-54.**

Revenue(a) ..	£'000	157	188	212	236	221	239

(a) From commission and postage.

3. **Total Cost of Carriage of Mails.**—During 1953-54 the total amounts paid for the carriage of mails, as disclosed by the Profit and Loss Account of the Postal Branch, were as follows :—Inland mails—road £2,064,000, railway £842,000, air £812,000 ; Coastwise mails—£29,000 ; Oversea mails—sea £356,000, air £1,862,000 ; Grand Total—£5,965,000.

4. **Transactions of the Dead Letter Offices.**—During the year 1953-54 2,085,000 letters were returned to writers or delivered, 298,000 were destroyed in accordance with the Act, and 177,000 were returned to other countries as unclaimed—a total of 2,560,000. Corresponding particulars for packets were—396,000, 240,000, 35,000 and 671,000. There were 3,231,000 articles handled in all.

5. **Money Orders and Postal Notes.**—(i) *General.* The issue of money orders and postal notes is regulated by Sections 74-79 of the Post and Telegraph Act 1901-1949. The maximum amount for which a single money order payable within Australia may be obtained is £40, but additional orders will be issued upon request when larger amounts are to be remitted. The maximum amount permitted to be sent to any person in the dollar area is £A.5 per month and for remittances to countries outside the dollar area, £A.10 per week. A postal note cannot be issued for a sum larger than twenty shillings.

(ii) *States, 1953-54.* Particulars regarding the business transactions in each State for 1953-54 are shown hereunder :—

(iv) *Classification of Money Orders Issued and Paid.* Of the total money orders issued in Australia during 1953-54, 5,838,000 valued at £55,372,000 were payable in Australia, 12,000 (£24,000) in New Zealand, 175,000 (£542,000) in the United Kingdom and 55,000 (£237,000) in other countries. Of the total money orders paid in Australia during 1953-54, 5,824,000 (£55,358,000) were issued in Australia, 36,000 (£97,000) in New Zealand, 61,000 (£314,000) in the United Kingdom and 39,000 (£313,000) in other countries.

Money orders payable or issued in foreign countries, and which have been sent from or to Australia through the General Post Office in London, are included in those payable or issued in the United Kingdom.

(v) *Postal Notes Paid.* The following table shows the number and value of postal notes paid in each State during 1953-54. The number and value of postal notes issued and paid in each of the years 1948-49 to 1953-54 have been given in the previous table.

## § 3. Telegraphs.

1. *General.*—A review of the development of telegraph services in Australia up to 1921 appeared in Official Year Book No. 15, p. 625, and subsequent developments of importance have been dealt with in later issues. During the past few years substantial improvements in both the speed and grade of telegraph services throughout Australia have been effected, the entire system being subjected to intensive reorganization. The external circulation system of the Australian telegraph service has been considerably modified, and direct communication has been established between cities and towns which formerly were served through intermediate repeating centres.

Telephone subscribers may telephone telegrams for onward transmission, or have messages telephoned to them. The fee for the service is small, and the system means, in effect, that the telegraph system is brought into the home of every telephone subscriber. The number of telegrams lodged by telephone during the year ended 30th June, 1954 was about 7.5 million or approximately 33 per cent. of the total lodgments. The number of telegrams telephoned to subscribers totalled 3.9 million.

A radiogram service is provided to certain isolated places throughout Australia and a number of privately-operated wireless transceiver stations have been established at various centres throughout the Commonwealth, enabling telegrams to be exchanged with departmental telegraph offices. Stations sponsored by the Royal Flying Doctor Service of Australia can communicate by wireless with base stations.

The picturegram service between Melbourne and Sydney, which was established in 1929, but which was suspended during 1942, was restored and extended to Brisbane and Adelaide in 1949, to Perth in 1950 and to Hobart and Newcastle in 1951. The equipment installed at these points also permits the direct transmission and reception of oversea photo-telegrams. Portable picture-transmitting apparatus has been provided for use at country centres in New South Wales and Victoria and was first used for the opening of the 19th Federal Parliament at Canberra on 21st February, 1950. In 1953-54, 9,407 picturegrams were lodged for destinations within Australia, 888 were transmitted to oversea destinations and 1923 were received from other countries. The service between Australia and overseas was extended by the establishment of facilities for the transmission of pictures to and from Denmark, Greece, Portugal, Switzerland, Federal Republic of Germany, Italy and Singapore.

As from 20th May, 1953, the Department authorized the connexion of privately-owned picturegram equipment to the public telephone trunk line network for the transmission of pictures. The new facilities are provided subject to certain restrictions where Departmental picturegram services operate and to payment of appropriate charges to cover the use of trunk line channels and equipment. Pictures from overseas may now be routed direct to private receivers.

Teleprinter services (i.e., typewriting over electrical circuits), affording the great advantage of direct and instantaneous communication between points within the same building or separated by distances up to thousands of miles, and printergram services, that is, leased teleprinter channels between the premises of subscribers and chief telegraph offices for the transmission and reception of telegrams, are available. The number of printergram services rose from 103 to 110 during 1953-54. Messages transmitted over these services totalled 1.8 million.

2. **Telegraph and Telephone Mileages.**—At 30th June, 1954 the combined single-wire mileages for both telegraph and telephone purposes were :—aerial, underground and submarine cables—exchange 5,211,000 miles, trunk telephone and telegraph 186,000 miles ; aerial wires—telephone, trunk and/or telegraph purposes 514,000 miles, exchange and non-exchange service lines 679,000 miles. The mileages of conduits and pole routes were 9,600 duct miles and 123,000 miles respectively. Conduits now include only ducts and conduits with an internal diameter of two inches or over. Those with a diameter of less than two inches are not recorded separately and are included with underground cables. The mileages in each State at 30th June, 1954 may be found in *Transport and Communication Bulletin* No. 45.

3. **Telegraph Offices.**—(i) *States.* The numbers of telegraph offices, including railway telegraph offices, in the various States at 30th June, 1954 were :—New South Wales, 3,256 ; Victoria, 2,385 ; Queensland, 1,750 ; South Australia, 949 ; Western Australia, 998 ; Tasmania, 571.

(ii) *Australia.* The numbers of telegraph offices in Australia at 30th June of each of the years 1950 to 1954 respectively were :—9,700, 9,764, 9,830, 9,902 and 9,909.

4. **Telegrams Dispatched within Australia.**—(i) *States.* The following table shows, for each State, the number of telegrams dispatched to places within the Commonwealth and to adjacent islands and to ships at sea during 1953-54, according to the class of message transmitted :—

### TELEGRAMS DISPATCHED, 1953-54.

('000.)

State.	Paid and Collect.						Unpaid.			Total Telegrams.
	Ordinary.	Urgent.	Press.	Letter-gram.	Radio-gram.	Total.	Service.	Meteorological.	Total.	
N. S. Wales ..	7,254	430	68	21	53	7,826	293	340	633	8,459
Victoria ..	4,521	166	27	19	5	4,738	149	157	306	5,044

(ii) *Australia.* Telegrams dispatched to destinations within Australia and to adjacent islands and to ships at sea, during each of the years 1949-50 to 1953-54 respectively, numbered :—35,486,000, 34,467,000, 27,080,000, 23,407,000 and 22,536,000.

## § 4. Telephones.

1. **General.**—Particulars of the total mileage of lines used exclusively for telephone purposes are not available, but are combined with all other line mileage. Particulars of the total single wire mileage used for telephone, trunk and/or telegraph purposes are shown on page 265.

During 1953-54, 64,359 telephone subscribers' lines and 93,007 telephones were added to the system, compared with 58,110 lines and 82,912 telephones in 1952-53. With an average at 30th June, 1954 of one telephone to every six persons, Australia had a telephone density exceeded by that of only six other countries. The trunk line network was increased by 81,195 channel miles and at 30th June, 1954, had reached 773,190 miles; 71,661 of these additional channel miles were obtained by the installation of carrier-wave equipment, some of which was installed on radio-telephone bearers. Carrier-wave facilities enable several speech paths to be obtained from one pair of wires or, in the case of radio-telephone systems, without wires at all, and are designed to transmit the voice with greater fidelity than the wire pairs on which they are based. An alternative aerial route between Melbourne and Sydney has been completed and work is in progress to provide a direct route for traffic from Sydney to Adelaide and Perth. Sixteen additional trunk line channels are being provided between Tasmania and the mainland.

Sixteen automatic exchanges were brought into operation in metropolitan areas during the year, together with 6 country and 153 rural automatic exchanges. At 30th June, 1954 there were 238 automatic exchanges in the metropolitan areas and 709 in country districts, to which 984,000 telephones were connected, representing 67 per cent. of the total number in use in Australia.

2. **Summary for States.**—Particulars relating to the telephone services in each State at 30th June, 1954 are shown in the following table :—

TELEPHONE SERVICES : SUMMARY, 30th JUNE, 1954.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Exchanges .. .. .	2,287	1,745	1,310	681	743	388	7,154
Telephone Offices (including Exchanges) .. .. .	3,372	2,504	1,833	1,004	972	540	10,225
Lines connected .. .. .	393	332	141	93	60	31	1,050
Instruments connected .. .. .	563	471	189	128	83	42	1,476
(i) Subscribers' instruments .. .. .	551	461	185	124	80	40	1,439
(ii) Public telephones .. .. .	6.8	4.6	3.0	1.6	1.2	0.8	18.0
(iii) Other local instruments .. .. .	5.9	5.6	2.9	2.2	1.6	0.8	19.0
Instruments per 1,000 of population	163	193	143	157	130	135	164

Of the total telephones (1,476,000) in service at 30th June, 1954, 545,000 or 37 per cent. were connected to exchanges situated beyond the limits of the metropolitan telephone networks.

3. **Subscribers' Lines and Calling Rates.**—The next table shows the number of subscribers' lines and the daily calling rates at central, suburban and country telephone exchanges in the several States for 1953-54 :—

TELEPHONES : SUBSCRIBERS' LINES AND DAILY CALLING RATES, 1953-54.

State.	Central Exchanges.		Suburban Exchanges.		Country Exchanges.	
	Subscribers' Lines Connected.	Average Outward Calls Daily per Line.	Subscribers' Lines Connected.	Average Outward Calls Daily per Line.	Subscribers' Lines Connected.	Average Outward Calls Daily per Line.
New South Wales .. .. .	30,944	9.72	201,726	3.45	137,719	1.81
Victoria .. .. .	20,768	8.28	185,525	3.29	114,148	1.23
Queensland .. .. .	9,861	10.07	55,669	2.49	66,154	1.79
South Australia .. .. .	8,349	8.49	45,246	2.52	33,333	1.20
Western Australia .. .. .	9,465	6.90	26,685	2.90	19,491	1.25
Tasmania .. .. .	5,595	4.42	5,190	2.32	17,969	1.66

A comparison of the average daily calling rates for each class of exchange shows that Queensland registered the greatest number of calls per line at central exchanges, and New South Wales at both suburban and country exchanges.

4. **Effective Paid Local Calls.**—The numbers of effective paid local calls from subscribers' and public telephones in the various States during the year ended 30th June, 1954 appear hereunder.

TELEPHONES : NUMBER OF EFFECTIVE PAID LOCAL CALLS, 1953-54.  
(Million.)

Calls.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Subscribers' .. .. .	382	283	109	69	51	21	915

<b>Total</b> .. .. .	<b>435</b>	<b>315</b>	<b>122</b>	<b>79</b>	<b>58</b>	<b>23</b>	<b>1,032</b>

5. **Trunk Line Calls and Revenue.**—In the next table the number of telephone trunk line calls recorded, the amount of revenue received, and the average revenue per call are shown for each State and Australia for the year 1953-54.

## TELEPHONES : TRUNK LINE CALLS AND REVENUE, 1953-54.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Total calls '000	27,607	23,854	13,673	8,048	4,670	3,921	81,773
Total revenue £'000	4,389	3,227	2,106	1,250	706	424	12,102
Average revenue per call pence	38.16	32.47	36.97	37.27	36.27	25.96	35.52

The number of trunk line calls during 1953-54 increased by 6.8 million, or 9 per cent., compared with the figure for the previous year, whilst the average revenue per call increased by 2.5 per cent.

6. *Oversea Telephone Services.*—During the year 1953-54 radio-telephone services were established between Australia and Japan, Greece, Taiwan and North Borneo, bringing the number of countries with which radio-telephone communication is available to 72. Service is also provided to certain trans-Atlantic liners, ships off the Australian coast, H.M.A. ships, and H.M.N.Z. ships when cruising in Australian waters.

The amount of traffic handled over the radio-telephone services increased by 10 per cent. over that handled in 1952-53. During 1953-54 the number of calls connected was 42,632, comprising 21,599 originating in Australia and 21,033 incoming calls.

7. *Revenue from Telephones.*—Particulars regarding the revenue from telephone services are included in tables in § 1 (*see pp. 256-9*).

8. *World Telephone Statistics, 1954.*—Information derived, in the main, from statistics compiled by the American Telephone and Telegraph Company shows that at 1st January, 1954 there were more than 89 million telephones in use throughout the world. The United States of America, with over 50 million, possessed by far the greatest proportion of these (56.5 per cent.). The United States of America also had the highest recorded number of instruments per 100 of population (*viz.*, 31). Figures for other leading countries were as follows :—Sweden 28, Canada 24, Switzerland 22, New Zealand 22, Denmark 19. At June, 1954 the number of telephones in Australia per 100 persons was 16.

## § 5. Cable and Radio Communication.

1. *General.*—Descriptions of the various cable services between Australia and other countries were given in Official Year Book No. 22, pp. 335-6 and earlier issues.

2. *Merging of Cable and Wireless Interests.*—Following upon the recommendations of the Imperial Wireless and Cable Conference in London in 1928 which examined the situation that had arisen as the result of the competition of the beam wireless with the cable services, Imperial and International Communications Limited (since renamed Cable and Wireless Ltd.) was formed and took over the operations of the Pacific Cable Board and the control of the Eastern Extension Cable Company and the Marconi Wireless Company. For further developments, leading eventually to the establishment of the Overseas Telecommunications Commission, *see* Official Year Book No. 37, pp. 220-4.

3. *Oversea Cable and Radio Traffic.*—(i) *States.* The number of telegrams received from and dispatched overseas in each State during 1953-54 is shown hereunder :—

(a) International business, originating and terminating in Australia, transacted over the cable and radio services.

Words transmitted to "Other places" included 2,922,000 to the United States of America and 5,411,000 to New Zealand and the Pacific Islands. Words received from "Other places" included 2,820,000 from the United States of America and 4,302,000 from New Zealand and the Pacific Islands.

4. *Coast Stations.*—At 30th June, 1955 there were 43 wireless stations established at points around the Australian coast and 11 about the coast of Papua and New Guinea. During 1954-55 these stations handled 530,718 messages (456,601 paying, 12,412 free traffic and 61,705 meteorological) with a total of 8,891,062 paying words. For further information see the *Transport and Communication Bulletin*.

5. *Radio-communication Stations Authorized.*—(i) *States and Territories, 30th June, 1955.* The following table shows particulars of the different classes of radio-communication stations authorized in Australia and Papua-New Guinea at 30th June, 1955. Figures relate to radio-communication (radio telegraph and radio telephone) stations only; particulars of broadcasting stations and of broadcast listeners' licences are shown in § 6, following.

## § 6. Broadcasting and Television.

1. **General.**—Broadcasting services in Australia operate under the Broadcasting Act 1942-1954 and comprise the National Broadcasting Service and the Commercial Broadcasting Service. The following table shows the number of broadcasting stations in operation at 30th June, 1955 :—

## BROADCASTING STATIONS, 30th JUNE, 1955.

2. The Australian Broadcasting Control Board.—The Board, which was constituted on 15th March, 1949 under the above Act, operates under the Ministerial jurisdiction of the Postmaster-General, and its principal functions, as set out in Section 6K of the Act, are to ensure :—(a) the provision of services by broadcasting stations, television stations and facsimile stations, and services of a like kind, in accordance with plans from time to time prepared by the Board and approved by the Minister ; (b) that the technical equipment and operation of such stations are in accordance with such standards and practices as the Board considers to be appropriate ; and (c) that adequate and comprehensive programmes are provided by such stations to serve the best interests of the general public.

In addition, the Board may exercise such other functions as are prescribed by regulation in relation to broadcasting stations, television stations and facsimile stations.

In the exercise of its functions in respect of programmes, the Board is required—(a) to consult the Australian Broadcasting Commission and representatives of licensees of commercial broadcasting stations in relation respectively to the programmes of the national and commercial broadcasting services ; and (b) in particular to—(i) ensure reasonable variety of programmes ; (ii) ensure that divine worship or other matter of a religious nature is broadcast for adequate periods and at appropriate times, and that no matter which is not of a religious nature is broadcast by a station during any period during which divine worship or other matter of a religious nature is broadcast by that station ; (iii) ensure that facilities are provided on an equitable basis for the broadcasting of political or controversial matter ; (iv) determine the extent to which advertisements may be broadcast in the programme of any commercial broadcasting station ; and (v) fix the hours of service of broadcasting stations, television stations and facsimile stations.

The Board is empowered to make recommendations to the Minister as to the exercise by him of any power under Division 1 of Part III. of the Act, which prescribes the conditions under which licences are granted to commercial broadcasting stations.

The Board also has power, subject to the directions of the Minister—(a) to determine the situation and operating power of any broadcasting station, television station or facsimile station ; (b) to determine the frequency of each broadcasting station, television station or facsimile station, within bands of frequencies notified to the Board by the Postmaster-General as being available for such stations ; (c) after consultation with the Commission to determine the conditions upon which a commercial broadcasting station may broadcast a programme of the National Broadcasting Service ; and (d) to regulate the establishment of networks of broadcasting stations and the making of agreements or arrangements by licensees of commercial broadcasting stations for the provision of programmes or the broadcasting of advertisements.

Subject to the approval of the Minister and of the Treasurer, the Board may provide financial and other assistance to commercial broadcasting stations for the purpose of ensuring that programmes of adequate extent, standard and variety are provided in the areas served by these stations.

The Board also has certain powers in connexion with the general control of the broadcasting service, particularly in relation to the operations and programmes of commercial stations.

Section 6B of the Act provides that the Board shall consist of five members (including two part-time members) appointed by the Governor-General, one of whom, other than a part-time member, shall be chairman. No person shall be appointed as a member of the Board who—(a) has any financial interest, whether direct or indirect, in any company which is the licensee of, or an applicant for a licence for, a commercial broadcasting station or a commercial television station or manufactures or deals in equipment for the transmission or reception of broadcasting, television or facsimile programmes ; (b) is a member of the governing body of any company or other association of persons which is the licensee of, or an applicant for a licence for, a commercial broadcasting station or a commercial television station ; or (c) is the licensee of, or an applicant for a licence for, a commercial broadcasting station or a commercial television station.

3. **The National Broadcasting Service.**—(i) *General.* The programmes of the National Broadcasting Service are provided by the Australian Broadcasting Commission and the technical facilities for the transmission of such programmes by the Postmaster-General's Department.

(ii) *The Australian Broadcasting Commission.* The Commission comprises seven Commissioners, one of whom is an officer of the Department of the Treasury and one an officer of the Postmaster-General's Department.

Under the provisions of the Act the Commission "shall provide and shall broadcast from the national broadcasting stations adequate and comprehensive programmes and shall take in the interests of the community all such measures as, in the opinion of the Commission, are conducive to the full development of suitable broadcasting programmes."

The Commission prepares estimates of its receipts and expenditure for each financial year and submits these estimates to the Minister. Appropriations are made by Parliament for the purposes of the Commission and these, together with all other moneys received by the Commission, are paid into an account in the Commonwealth Bank of Australia. From this account are defrayed all costs, charges, expenses, etc., incurred by the Commission in the exercise of its powers and functions under the Act. For particulars of the financial operations of the Commission see Chapter XX.—Public Finance.

(iii) *Technical Facilities.* At 30th June, 1955, the National Broadcasting Service comprised 59 transmitting stations as follows :—

*Medium-wave Stations—*

2CN and 2CY Canberra, 2BL and 2FC Sydney, 2BA Bega, 2CO Corowa, 2CR Cumnock, 2KP Smithtown, 2LG Lithgow, 2ML Murwillumbah, 2NA and 2NC Newcastle, 2NB Broken Hill, 2NR Grafton, 2NU Manilla, 2TR Taree, 3AR and 3LO Melbourne, 3WL Warrnambool, 3GI Sale, 3WV Dooen, 4QG and 4QR Brisbane, 4AT Atherton, 4GM Gympie, 4QA Mackay, 4QB Pinalba, 4QL Longreach, 4QN Townsville, 4QS Dalby, 4QY Cairns, 4RK Rockhampton, 4SO Southport, 5AN and 5CL Adelaide, 5CK Crystal Brook, 5LN Port Lincoln, 5WM Woomera, 5AL Alice Springs, 5DR Darwin, 6WF and 6WN Perth, 6GF Kalgoorlie, 6GN Geraldton 6WA Wagin, 7ZL and 7ZR Hobart, 7NT Kelso, 7QN Queenstown, 9PA Port Moresby, Papua.

*Short-wave Stations—*

VLI Sydney, New South Wales, VLG, VLH and VLR Lyndhurst, Victoria, VLQ and VLM Brisbane, Queensland, VLV and VLX Perth, Western Australia, VLT Port Moresby, Papua.

The medium-wave transmitters operate in the medium frequency broadcast band 540 to 1,600 kilocycles per second. From the short-wave stations, using frequencies within the band 3 to 30 megacycles per second, service is given to listeners in sparsely populated parts of Australia such as the north-west of Western Australia, the Northern Territory, and northern and central Queensland and in Papua and New Guinea and adjacent islands.

Programmes for country stations are normally relayed from the control studio of the nearest capital city, high-quality programme transmission lines being used for the purpose. A number of programme channels are utilized to link national broadcasting stations in the capital cities of Australia, and frequently this system is extended to connect both the national and commercial broadcasting stations.

In June, 1955, 36 of the medium-wave stations were situated outside the capital cities and additional country stations are to be constructed. When these additions have been made the medium-wave and short-wave stations together will provide for clear reception of the programmes of the National Broadcasting Service in practically every part of Australia.

(iv) *Programme Facilities.*—(a) *General.* The programmes of the Australian Broadcasting Commission cover a wide range of activities which are indicated briefly in the following paragraphs. The proportion of broadcasting time allocated to the various types of programme during 1954-55 was as follows :—Classical Music, 23.4

per cent. ; Light Music, 14.7 per cent. ; Variety, 17.8 per cent. ; Drama and Features, 3.9 per cent. ; Youth Education, 3.6 per cent. ; Children's Session, 2.3 per cent. ; Talks, 7.0 per cent. ; Parliament, 3.8 per cent. ; Religion, 3.6 per cent. ; News, 7.7 per cent. ; Sport, 5.4 per cent. ; Rural Broadcasts, 1.7 per cent. ; Non-departmental, 5.1 per cent.

(b) *Music.* The A.B.C. is to-day the biggest concert-giving organization in the Commonwealth, and the immense growth of interest in music in this country is illustrated by the fact that Australian listeners in increasing numbers now welcome the opportunity of hearing fine music on the air and in the concert hall and have magnificently supported the presentation of orchestral concerts and of recitals by the best musicians from their own country and from overseas. In 1936 small regular orchestras were formed by the A.B.C. in Sydney, Melbourne, Brisbane, Adelaide, Perth and Hobart, and from these foundations have grown our present orchestras. Those in Sydney and Melbourne measure up to first-class orchestras overseas, whilst those in the other capital cities are showing rapid improvement and are now the equal of those in many places of comparable size in Europe or America. Until 1946 the cost of these orchestras was met solely by the A.B.C., but since then State Governments and major municipal bodies in all States have agreed to contribute towards the expense.

The close co-operation between a broadcasting organization, city authorities and State Governments to establish and maintain symphony orchestras is unique in the world.

In 1954-55, the A.B.C. organized 539 public orchestral concerts (including 153 free concerts for school children and 40 free concerts for adults) and 244 public recitals by famous artists throughout the Commonwealth. Of these concerts, 256 were given outside the capital cities, including 78 free orchestral concerts for school children.

The policy of the A.B.C. so far as individual artists are concerned has always been to develop local talent and at the same time give its audiences the opportunity of hearing famous international musicians.

(c) *Drama and Features.* Drama programmes are designed to give listeners opportunities, which they might not otherwise have, of hearing the great plays of all nations as well as adaptations of the best modern stage plays and also those written specially for broadcasting. The main regular drama programmes are broadcast on Saturday and Monday evenings, and special series of longer plays are also given at various times during the year.

In recent years the technique of the feature programme has also been developed in this country. The feature is a form of entertainment which is unique to radio, consisting of specially written programmes designed to present information in an interesting way, and it may deal with a very wide variety of subjects ranging from history and current events to science and the arts. A number of Australian writers have become interested in this form of entertainment and about 97 per cent. of the features broadcast are written by Australians. Local writers also contribute a large proportion of the plays broadcast and every effort is made to assist and encourage their work.

(d) *Youth Education.* The A.B.C. provides a regular series of broadcasts to schools as an addition to normal class-room education. The total number of listening schools at the end of June, 1955 was 8,308 or about 84 per cent. of all schools, State and private, throughout the Commonwealth. Many of the school broadcasts are presented in dramatized form, as this method makes the material more vivid and interesting to the young listener. For the very young children, the Commission broadcasts every week-day the "Kindergarten of the Air", a type of broadcast which originated in Australia. (See also Chapter XII.—Education, on this subject.)

(e) *Talks.* The aim of the Talks Department is to provide programmes which will keep the listener well informed on current affairs and on general topics. Many of the talks in the first category are now presented in a magazine type of session consisting of a number of short items linked by a narrator. The most complete of these built-up programmes is the documentary, in which radio goes into the field to analyse or to describe, using the actual sounds and voices recorded on location.

Controversial topics are covered in two sessions—the weekly discussion broadcast, in which the main conflicting points of view on a current topic are discussed by competent authorities, and the "Nation's Forum of the Air", using the debating technique with

questions in person from the studio audience and telephoned from listeners. Another outstanding session is "News Review", containing at least five comments on the news of the day recorded over landline from all States of the Commonwealth and, in the case of significant world events, from overseas by radio-telephone.

(f) *Rural Broadcasts.* The Rural Broadcasts Department was commenced in 1945 to serve the needs of country listeners. It has proved to be of great value to men and women on the land throughout Australia, by giving them the latest market reports and information on general conditions, and by keeping them informed on rural development overseas. The interstate market report is the only Australia-wide market service available to the Australian rural population. Programmes are exchanged with radio organizations in England, Canada, the United States of America and elsewhere, and several visits to Australia by well-known farm radio personalities have also been arranged. The department has encouraged the work of Junior Farmers' Clubs in Australia, and has sponsored competitions for members in connexion with the Royal Agricultural Shows in Sydney and Melbourne.

(g) *News.* On 1st June, 1947, the Australian Broadcasting Commission's independent News Service came into full operation. Since that date the Commission has collected the news for its bulletins independently of the press and it now has, in addition to a large staff throughout Australia, a London news room for the selection and transmission of overseas news secured from the great news agencies. Nine national news bulletins are broadcast daily, and are followed by State bulletins of news of State interest. In addition, two or more regional bulletins are broadcast by local stations in country areas on most days of the week, and for remote country districts special bulletins are broadcast on short-wave. For overseas listeners 19 bulletins daily are broadcast through the Radio Australia transmitters. These bulletins, which are given in English, French, Malay and Thai, are directed to every continent, but concentrate on the Pacific and Asian areas. The A.B.C. also rebroadcasts for Australian listeners, by arrangement with the British Broadcasting Corporation, two B.B.C. news bulletins each day.

(h) *Other Activities.* The broadcasting of the proceedings of Federal Parliament commenced as a regular service in July, 1946, and Australian listeners are now able to hear debates from the House of Representatives and from the Senate. At present these broadcasts are confined to one of the two transmitters in each capital city, but it is hoped that eventually country listeners will also be able to hear them.

The National Children's Hour, presented seven days a week, is composed of over 40 programme items, including stories, music, games, and items about art, literature, natural history and sport. There is a children's newsreel and a Brain's Trust, discussing, through children, topics of wide general interest. The Argonauts' Club is an important part of the session and encourages children between the ages of 7 and 17 in self-expression and the appreciation of cultural subjects, but the provision of entertainment suitable for children is the main purpose of the session.

In co-operation with the various religious denominations, the A.B.C. broadcasts several religious sessions each week-day in addition to those given on Sundays. These religious broadcasts include relays of normal church services and a variety of special programmes of talks and sacred music. The modern trend towards the use of religious drama is also followed.

The variety and sporting programmes of the A.B.C. provide the lighter side of the service. In its variety sessions the A.B.C. does everything possible to assist local artists in order to increase the amount of first-class talent in this country, and encouragement is also given to Australian composers of light music. The A.B.C. dance bands in Sydney and Melbourne are regarded as being two of the most outstanding bands in Australia.

The coverage of sport at home and abroad by the A.B.C. is comprehensive. On Saturday afternoons the sporting panel provides listeners with progress results, scores and descriptions from half a dozen or more fields of sport. Events of international interest such as Test Matches, the Davis Cup, etc., are covered by simultaneous descriptions from A.B.C. commentators. In covering events overseas, the A.B.C. is indebted to the British Broadcasting Corporation for its collaboration in Great Britain, and to the New Zealand Broadcasting Service for events in New Zealand.

4. **The Commercial Broadcasting Service.**—Commercial broadcasting stations are operated under licences granted and renewed by the Postmaster-General after taking into consideration any recommendations which have been made by the Australian Broadcasting Control Board. The maximum initial period of a licence is three years, and renewals are granted for a period of one year. Licences are granted on conditions which ensure satisfactory alternative programmes for listeners. The fee for a broadcasting station licence is £25 per annum in respect of the first period for which the licence is granted and, in the case of a renewal, £25 plus one-half of one per cent. of the gross earnings from the operations of the station if it has made a profit in the preceding year. Licensees of these stations rely for their income on revenue received from the broadcasting of advertisements and other publicity. At 30th June, 1955, there were 106 commercial broadcasting stations in operation. A table showing the call sign, location, frequency and aerial power of each of these stations may be found in *Transport and Communication Bulletin* No. 45.

5. **Overseas Broadcasting Service.**—There are three short-wave stations at Shepparton, Victoria (VLA, VLB, VLC) for use only in the overseas service known as "Radio Australia". As in the case of the National Broadcasting Service, these stations are maintained by the Postmaster-General's Department and their programmes are arranged by the A.B.C. During certain periods station VLG Lyndhurst, a unit of the National Broadcasting Service, is also used for the purpose of overseas transmissions. The programmes, which give news and information about Australia, presented objectively, as well as entertainment, are directed mainly to South-East Asia and the Pacific. Twenty-two of the regular transmissions are in foreign languages. The overseas audience has grown very substantially in recent years, as evidenced by a large and increasing number of letters from listeners abroad.

6. **Television.**—(i) *General.* Under the Television Act 1953, the Postmaster-General may establish National television stations or may grant licences for commercial television stations after taking into consideration any recommendations which have been made by the Australian Broadcasting Control Board.

(ii) *Royal Commission on Television, 1953.* The question of the introduction of television services in Australia was the subject of an investigation during 1953 by a Royal Commission. The principal recommendations of the Royal Commission were that—

- (a) Television should be introduced on a gradual basis.
- (b) The first national television station should be erected in Sydney and the second in Melbourne, and expansion to other State capital cities and to other centres of population should proceed as soon as finances become available.
- (c) The authority for providing the programmes for the National Television Service should be the Australian Broadcasting Commission.
- (d) Initially, licences should be issued for two commercial television stations in both Sydney and Melbourne.
- (e) Before any licence is granted a public hearing should be conducted by the Australian Broadcasting Control Board.

(iii) *Establishment of Services.* Following the Royal Commission on Television, the Government adopted the recommendations set out in (ii) above and the Postmaster-General invited applications for the grant of licences for four commercial television stations—two in Sydney and two in Melbourne. Following public hearings held by the Board, the Government approved of the grant of licences to—

- (a) Amalgamated Television Services Pty. Ltd. for a station in Sydney.
- (b) Television Corporation Ltd. for a station in Sydney.
- (c) General Television Corporation Pty. Ltd. for a station in Melbourne.
- (d) Herald and Weekly Times Ltd., on behalf of a company to be formed, for a station in Melbourne.

Contracts have been placed for the supply of equipment for the national television stations in Sydney and Melbourne, and the stations are in the course of being established.

7. **Broadcast Listeners' Licences.**—(i) *General.* Broadcast listeners' licences are issued at Post Offices in accordance with Section 96 of the Broadcasting Act 1942–1954. A single licence authorizes every broadcast receiver which is :—(a) in the possession of the holder of a licence, or of a member of his family, at the address specified in the licence and/or ordinarily kept at that address; (b) installed in a vehicle which is ordinarily in the possession of the holder, or of a member of his family, and is ordinarily kept at that address while not in use.

The fee for a broadcast listener's licence or a renewal thereof is :—Zone 1, £2; Zone 2, £1 8s. Zone 1 is the area within approximately 250 miles of specified broadcasting stations and Zone 2 is the remainder of the Commonwealth.

A licence may be granted at one-quarter of the ordinary fee to any person who (a) is in receipt of a pension under Part III. or Part IV. of the Social Services Act 1947–1955 or a service pension, or a pension in respect of total and permanent incapacity, under the Repatriation Act 1920–1955; and (b) lives alone or with any person whose income does not exceed the maximum amount of income and pension allowed under Part III. or Part IV. of the Social Services Act 1947–1955 or Section 87 of the Repatriation Act 1920–1955.

Licences are granted free of charge to blind persons over 16 years of age and also to schools.

(ii) *Licences in Force.* The following table shows the number of broadcast listeners' licences in force at 30th June, 1925, 1930, 1935, 1940, 1945 and 1950 to 1955 :—

**BROADCAST LISTENERS' LICENCES IN FORCE.**

At 30th June—	N.S.W.(a)	Vic.	Qld.	S.A.(b)	W.A.	Tas.	Aust.
1925 .. ..	34,857	20,290	1,267	3,331	3,562	567	63,874
1930 .. ..	111,253	140,072	23,335	25,729	5,755	6,048	312,192
1935 .. ..	279,166	237,247	67,546	76,515	41,257	20,121	721,852
1940 .. ..	458,256	348,264	151,152	124,928	87,790	42,191	1,212,581
1945(c) .. ..	548,074	394,315	180,089	146,611	98,210	47,930	1,415,229
1950(c) .. ..	683,271	505,078	260,033	195,261	133,199	64,369	1,841,211
1951(c) .. ..	679,232	522,502	270,587	204,695	139,669	68,149	1,884,834
1952 .. ..	741,355	520,364	279,852	208,691	141,950	68,832	1,961,044
1953 .. ..	742,002	533,329	282,338	212,104	145,141	70,741	1,985,655
1954 .. ..	769,478	545,148	287,683	220,065	148,192	71,047	2,041,613
1955 .. ..	746,050	549,690	293,512	223,593	150,199	71,602	2,034,676

(a) Includes Australian Capital Territory. (b) Includes Northern Territory. (c) Excludes licences for receivers in excess of one. These licences were introduced in July, 1942 and were abolished on 31st December, 1951.

Of the 2,034,676 broadcast listeners' licences in force at 30th June, 1955, 1,181,601 or 58.1 per cent. were held by persons situated in metropolitan areas and 853,075 or 41.9 per cent. by persons in country areas. Of the latter, only 12,247 were in respect of Zone 2.

8. **Radio-inductive Interference.**—In each State of the Commonwealth, the Postmaster-General's Department maintains a staff of experts with suitable equipment and transport, for the purpose of investigating complaints of radio-inductive interference to the reception of broadcast programmes and to defence and civil radio-communication services.

During the year 1954–55, 10,381 sources of trouble were eliminated as a result of Departmental efforts or by other action. More than 3,700 suppressors were fitted to offending appliances as recommended by investigating officers, who carried out 30,093 inspections in metropolitan and country areas.

9. **Prosecutions under the Broadcasting Act.**—Persons convicted during the year ended 30th June, 1955 for operating unlicensed broadcast receivers numbered 3,810. Fines and costs amounting to £15,871 were imposed.

## CHAPTER VIII.

### TRADE.

#### § 1. Introductory.

**Constitutional Powers.**—By the Commonwealth of Australia Constitution Act, Section 51 (i.), the power to make laws with respect to trade and commerce with other countries was conferred on the Commonwealth Parliament. Under Section 86 of the Constitution the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1st January, 1901. Other references to trade and commerce are contained in Sections 87 to 95 of the Constitution (*see pp. 19-21*).

#### § 2. Commonwealth Legislation affecting Oversea Trade.

1. **General.**—The Acts affecting overseas trade at present in force are:—The Customs Act 1901-1954; Customs Tariff 1933-1954; Customs Tariff (Canadian Preference) 1931 and Customs Tariff (Canadian Preference) 1934-1954; Customs Tariff (Industries Preservation) Act 1921-1936; Customs Tariff (New Zealand Preference) 1933-1954; Customs Tariff (Papua and New Guinea Preference) 1936-1950; Customs Tariff (Southern Rhodesian Preference) 1941-1948; Customs Tariff (Primage Duties) 1934-1950; Trading with the Enemy Act 1939-1952.

The Customs Act represents the administrative Act under which the Department of Customs and Excise operates, while the Customs Tariffs provide the statutory authority for imposing the actual rates of duties operative from time to time.

2. **The Customs Tariff.**—(i) *General.* The first Commonwealth Customs Tariff was introduced by Resolution on 8th October, 1901, from which date uniform duties came into effect throughout Australia. The tariff has since been extensively amended. The Act at present in operation is the Customs Tariff 1933-1954.

The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to imports from certain countries of the British Commonwealth. Duties are also imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

Australia has three classes of tariff—the British Preferential Tariff, the Intermediate Tariff and the General Tariff.

(ii) *British Preference.* British Preferential Tariff rates of duty apply to goods the produce or manufacture of the United Kingdom, provided that such goods comply with the laws and statutory regulations for the time being in force affecting the grant of preference, and that the goods have been shipped in the United Kingdom to Australia and have not been transhipped, or, if transhipped, it is proved to the satisfaction of

the Collector of Customs that the intended destination of the goods, when originally shipped from the United Kingdom, was Australia. For the purpose of the preferential tariff the following goods are deemed by Section 151A of the Customs Act 1901-1954 to be the produce or manufacture of the United Kingdom, provided the final process of their production or manufacture was performed in that country :—

- (a) Goods which are wholly produced or wholly manufactured in the United Kingdom from materials in one or more of the following classes—
  - (i) Materials wholly produced or wholly manufactured in the United Kingdom or in Australia ;
  - (ii) Imported unmanufactured raw materials ;
  - (iii) Imported manufactured raw materials as determined by the Minister.
- (b) Goods of the factory or works cost of which not less than seventy-five per cent. is represented—
  - (i) by labour or material of the United Kingdom ; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.
- (c) Goods of a class or kind not commercially produced or manufactured in Australia and of the factory or works cost of which not less than twenty-five per cent. (or fifty per cent. if the Minister so determines) is represented—
  - (i) by labour or material of the United Kingdom ; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.

With the exception of a relatively small number of commodities which carry special rates of duty, the British Preferential Tariff has also been extended, as a result of separate trade agreements, to Canada and New Zealand and by tariff legislation to the Territory of Papua and New Guinea, and the abovementioned preference conditions apply *mutatis mutandis* to each of those countries except that in respect of New Zealand the percentage content of goods under clause (b) of the said conditions is 50 per cent. of New Zealand and Australian labour and materials or 75 per cent. of New Zealand and United Kingdom or of New Zealand, Australian or United Kingdom labour and materials. In relation to specified goods, the British Preferential Tariff also applies to Ceylon and most of the British non-self-governing colonies, protectorates and trust territories.

(iii) *Intermediate Tariff.* The Intermediate Tariff has been a feature of the Australian Tariff for a considerable number of years, although its effective application dates only from 1st January, 1937, consequent upon the conclusion of trade agreements with Belgium, Czechoslovakia and France in 1936. The countries to which the Intermediate Tariff applies include those countries with which Australia has concluded trade agreements (including tariff negotiations pursuant to the General Agreement on Tariffs and Trade). The Intermediate Tariff has also been extended to some countries to which Australia has no formal obligation to accord most-favoured-nation tariff treatment. The countries to which the Intermediate Tariff applies are specified by Customs Proclamation.

(iv) *General Tariff.* The General Tariff applies to goods other than those to which the British Preferential Tariff or Intermediate Tariff or special rates under trade agreements apply.

3. *Primage Duties.*—In addition to the duties imposed by the Customs Tariff, *ad valorem* primage duties at rates of 4 per cent., 5 per cent. or 10 per cent. are charged on specified goods under the Customs Tariff (Primage Duties) 1934-1950. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji and the Territory of Papua and New Guinea are exempt from primage duty.

4. *Tariff Board.*—The Tariff Board Act 1921-1953 provides for the appointment of a Tariff Board consisting of seven members, two of whom shall be administrative officers of the Department of Trade. Members of the Board are appointed for terms of not less than one year nor more than five years. The purpose of the Tariff

Board is to assist the Minister in the administration of matters relating to trade and customs. The more important matters which the Minister shall refer to the Board for inquiry and report include disputes arising out of the interpretation of any Customs or Excise Tariff; the necessity for new, increased or reduced duties; the necessity for granting bounties; any proposal for the application of the British Preferential Tariff to any part of the British Commonwealth or any foreign country; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff by charging unnecessarily high prices for his goods or acting in restraint of trade. The Minister may refer to the Board for inquiry and report the following matters:— the classification of goods under items of the Tariff that provide for admission under by-laws; the determination of the value of goods for duty; the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws of the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and any other matter affecting the encouragement of primary and secondary industries in relation to the Tariff.

Inquiries conducted by the Board relating to any revision of the Tariff, any proposal for a bounty, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff shall be held in public, and evidence in such inquiries shall be taken in public on oath, unless any witness objects to giving any evidence in public which the Board is satisfied is of a confidential nature, when the Board may take such evidence in private. Evidence taken by the Board in connexion with any inquiry under the Customs Tariff (Industries Preservation) Act 1921–1936 shall be taken in public on oath.

5. *Industries Preservation.*—The Customs Tariff (Industries Preservation) Act 1921–1936 provides that, after inquiry and report by the Tariff Board, special duties shall be collected in the following cases when the importation of the goods referred to might be detrimental to an Australian industry. In the case of goods sold for export to Australia at a price less than the fair market value for home consumption or at a price which is less than a reasonable price, a special dumping duty shall be collected equal to the difference between the price at which the goods were sold and the fair market value, or the difference between the price at which the goods were sold and a reasonable price. Similar provision is made for goods consigned to Australia for sale. With regard to goods exported to Australia at rates of freight less than the normal rate of freight the dumping freight duty shall be—on goods carried free—the amount payable as freight at the normal rate; and in the case of any other goods—an amount equal to the difference between the freight paid and the freight which would have been payable at the normal rate.

The Act provides that the Minister for Trade and Customs, after inquiry and report by the Tariff Board, may publish a notice in the *Commonwealth Gazette* specifying the goods upon which the special rates of duty under this Act shall thereupon be charged and collected.

6. *Trade Descriptions.*—The Commerce (Trade Descriptions) Act 1905–1950 gives power to require the application of a proper trade description on certain prescribed goods imported into or exported from the Commonwealth. Goods which must bear a prescribed trade description upon importation into Australia are specified in the Commerce (Imports) Regulations. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.

7. *Import Controls.*—(i) *Customs (Import Licensing) Regulations.* The Customs (Import Licensing) Regulations were first promulgated in December, 1939, and were made pursuant to the Customs Act 1901–1936, Sections 52 (g) and 56. These regulations provide, *inter alia*, that the importation into the Commonwealth of any goods shall be prohibited, unless:—

- (a) a licence to import the goods is in force and the terms and conditions (if any) to which the licence is subject are complied with; or
- (b) the goods are excepted from the application of the regulations.

The regulations were at first applied only to imports from non-sterling sources with the object of conserving non-sterling exchange and enabling priority in shipping space to be given to essential imports. However, with a subsequent decline in Australia's sterling balances in London and changes in the general war situation the restrictions were extended in December, 1941 to cover a wide range of imports from sterling countries. The position remained basically the same during the remainder of the war and in the immediate post-war period.

As Australia's external financial position improved, the restrictions were progressively relaxed until, by November, 1950, imports from most countries had been exempted from the application of the regulations and, with minor exceptions, the restrictions applied only to imports from the dollar area and Japan. This position obtained until March, 1952.

During the financial year 1951-52, following a fall in the price of wool and a large increase in the volume of imports (the product, in turn, of the wool boom of 1950-51), Australia incurred a substantial deficit on current account. Oversea reserves fell rapidly in the latter part of 1951 and early 1952, endangering Australia's external financial position to such a degree that it became necessary on 8th March, 1952 to apply the Customs (Import Licensing) Regulations to imports from all sources, with the exception of goods originating in Papua, New Guinea and Norfolk Island.

During 1953 and the first half of 1954, Australia's balance of payments showed sufficient improvement to justify a gradual general relaxation of the import controls applying to goods from sources other than the dollar area and Japan. By April, 1954, a wide range of commodities was licensed virtually without restriction.

Towards the latter half of 1954 Australia's balance of payments prospects for 1954-55 were such that the Government was forced to review import licensing policy and a general tightening of the controls was announced on 1st October, 1954. A still further reduction in overall import expenditure has operated since 1st April, 1955.

Goods of Japanese origin have been subject to import licensing control since the resumption of private trading with Japan early in 1948. With the introduction of licensing controls on all imports as from March, 1952, the restrictions on Japanese goods were intensified and the issue of licences was restricted within given values to essential goods not available from other non-dollar sources. A gradual relaxation occurred in line with the controls operating on non-dollar, non-Japanese goods but all applications for Japanese goods continued to be dealt with on an individual basis. In November, 1954, effect was given to a policy of assimilating Japan with other non-dollar countries for import licensing purposes. The net result of this assimilation is that import controls are now administered in relation to two currency areas only, namely, the dollar area and all other countries.

Restrictions on imports from the dollar area have been maintained in varying degrees since their imposition in December, 1939 and, in general, the issue of licences for the importation of goods from the dollar area is restricted to goods of a high degree of essentiality, unavailable in adequate quantities from other countries. The goods imported from the dollar area are mainly capital goods, raw materials, semi-manufactures and other producer goods. All applications for licences are treated on the merits of each individual case.

(ii) *Customs (Prohibited Imports) Regulations.* In addition to the Import Licensing Regulations which are imposed for balance of payments reasons, Section 52 of the Customs Act provides for the prohibition of the importation of specified types of commodities and also provides for the making of regulations prohibiting the importation of other types of commodities.

Prohibition by regulation may be exercised by—(a) prohibiting the importation of goods completely; (b) prohibiting the importation of goods except with the consent of the Minister; (c) prohibiting the importation of goods except subject to conditions. Lists of products subject to prohibition are set out in the Customs (Prohibited Imports) Regulations. Commodities the importation of which has been prohibited under the regulations include dangerous drugs, firearms, undesirable publications and articles deleterious to public health.

8. *Export Control.*—(i) *Commodity Control.* Section 112 of the Customs Act provides that the Governor-General may by regulation prohibit the exportation of goods from Australia and that this power may be exercised by—(a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with. Goods subject to export control are listed in the Customs (Prohibited Exports) Regulations.

(ii) *Monetary Control—Banking Act 1945–1953.* As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the Banking (Foreign Exchange) Regulations to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Commonwealth Bank of Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations to control the movement out of Australia of capital in the form of securities, gold and currency.

Provision is made in the regulations for the grant of export licences subject to such terms and conditions as are imposed. On the receipt in Australia by the Commonwealth Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Commonwealth Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions, exports by private individuals are controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds £A50, or where jewellery and other articles of high intrinsic worth either exceed £A1,000 in value or have not been the personal property of the passenger for at least twelve months.

9. *Trade Agreements.*—(i) *The United Kingdom.* The United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on and had effect from 20th August, 1932, although the Australian tariff changes which were necessary in order to implement the preference formula in the agreement did not operate until 14th October, 1932. Broadly speaking, Australia secured preferences in the United Kingdom market for a wide range of Australian export commodities and in return Australia incurred obligations in respect of tariff levels and the grant of preference to United Kingdom goods.

(ii) *Canada.* The existing trade agreement between Canada and Australia came into force on 3rd August, 1931. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. Exceptions to this general rule are specified in the schedules to the agreement.

The Customs Tariff (Canadian Preference) 1931 and the Customs Tariff (Canadian Preference) 1934–1954 give effect to the agreement so far as Australia is concerned.

(iii) *New Zealand.* The existing trade agreement between Australia and New Zealand came into force on 1st December, 1933. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are listed in the schedules to the agreement.

The Customs Tariff (New Zealand Preference) 1933–1954 gives legislative effect to the provisions of the agreement.

(iv) *Federation of Rhodesia and Nyasaland.* During June, 1955 a trade agreement was negotiated with the Federation. Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco, a concession formerly accorded to Southern Rhodesia only, under a trade agreement now terminated. The Federation accorded preferential tariff treatment on a wide range of Australian export products including wheat and powdered and condensed milk.

(v) *Other Countries.* Australia has entered into bilateral trade agreements with the Union of South Africa, Belgium, Brazil, Czechoslovakia, France, Greece and Switzerland. Summaries of the texts of these agreements were given in earlier issues of the Official Year Book. In 1951 Australia entered into a trade agreement with Israel under which each country undertook to accord most-favoured-nation tariff treatment to imports from the other. A similar agreement with Iceland was concluded in 1952.

(vi) *The General Agreement on Tariffs and Trade (G.A.T.T.).* The General Agreement on Tariffs and Trade is an international trade agreement which has been in operation since 1st January, 1948. Australia was an original signatory of the Protocol of Provisional Application, by which Parts I. and III. of the Agreement are being provisionally applied. Part II. is being applied to the fullest extent not inconsistent with existing legislation at the date of signature of the Protocol.

In May, 1956 there were 35 contracting parties to the Agreement, comprising most of the world's larger trading nations.

Many of the Articles in Part II. of the General Agreement are similar to articles which were included in the Havana Charter for an International Trade Organization. Had the Charter come into force, Part II. of the General Agreement, containing general commercial policy provisions to prevent the circumvention of tariff concessions by other measures, would have been suspended.

Four series of tariff negotiations have been conducted under the provisions of the General Agreement. As a result of these negotiations, Australia has obtained tariff concessions on almost all the principal products of which she is an actual or potential exporter to the individual countries concerned. These concessions were a result both of direct negotiation by Australia and of negotiation by other countries—in the latter case, the benefits occur through the operation under the Agreement of the most-favoured-nation principle.

The contracting parties periodically hold plenary sessions to deal with questions arising out of the administration of the Agreement. The tenth session was held at Geneva in October, 1955.

### § 3. Imperial Preference in the United Kingdom.

1. *Preferential Tariff of the United Kingdom.*—Prior to 1919 the United Kingdom levied duties on a limited number of items for revenue purposes and did not extend preferential treatment to any of the Empire countries. The majority of imported goods entered the United Kingdom free of duty and, in fact, there was no scope for preferential treatment. In 1919, however, the range of revenue duties was extended and preferential rates of duty were established on eighteen items. Of these, the preferential rate on twelve items was to be equivalent to five-sixths of the full rate, on four to two-thirds of the full rate and on another (wine) to 50–70 per cent. of the full rate. The items so affected of interest to Australia at that time were currants, dried and preserved fruit, sugar, molasses and wine.

The extension of preferential treatment was conditional on the goods being consigned from, and grown, produced or manufactured in, the British Empire. In the case of manufactured articles, preference applied only where a prescribed proportion of their value was the result of labour within the British Empire. The conditions have been embodied in all subsequent preference arrangements in substantially the same form.

During the period from 1919 to 1932 it became increasingly obvious that the United Kingdom, for economic reasons, was being forced to depart from the free trade principles which had conditioned trade during the years preceding the 1914–18 War. Every time a new duty was introduced, provision was made for further preferential treatment to Empire products, although, in a great many cases, the preferences were of little or no significance to Australia, because the new duties were on products which were neither grown nor manufactured in Australia. The Safeguarding of Industries Act 1921 provided for the imposition of duties on imports of key industry goods from foreign countries with

free entry or preferential rates on similar goods from Empire countries. The purpose of these duties was to provide protection to vital United Kingdom industries in order to encourage their growth without fear of foreign competition. Similarly the Dyestuff Import Regulation of the previous year allowed the unrestricted import of dyestuffs of Empire origin, whereas imports of foreign dyestuffs were subjected to licensing restrictions. In 1925 preferences were accorded or increased on sugar (for ten years), tobacco, dried fruit, wine and several other items. In succeeding years Key Industries Duties were imposed on a further range of industrial goods and in 1927 screening quotas for British films and in 1928 further sugar concessions were introduced.

By 1931, therefore, the United Kingdom imposed duties on a fairly wide range of goods, provision being made in all cases for preferential treatment to Empire goods. The important preferences for Australia which emerged from these enactments were those on sugar, dried fruits, wine and jams and jellies. Even at this time, however, the United Kingdom adhered to the principles of free trade and by far the greater part of imports was free of duty.

In order to counteract the flood of dumping which followed the collapse of world trade in 1929-30 the United Kingdom introduced emergency tariff legislation in 1931. *Ad valorem* duties were imposed on almost all goods imported into the United Kingdom with the exception of certain raw materials, goods from Empire countries being exempt from these duties. These temporary measures were embodied in the Import Duties Act of March, 1932, by the enactment of which the United Kingdom finally abandoned free trade as a policy. This Act provided for the free entry for Empire goods pending the conclusion of some permanent agreement. The Ottawa Agreements Act of November, 1932 emerged from the Imperial Economic Conference held in Ottawa and embodied agreements concluded between the United Kingdom and the Dominions, Newfoundland and Southern Rhodesia. For the purpose of considering the present preferences enjoyed by Australia in the United Kingdom, it is expedient to regard the Import Duties Act and the Ottawa Agreements Act as complementary.

The Import Duties Act provided for the imposition of a general *ad valorem* duty of 10 per cent. on all imports with certain exceptions (i.e., those on the Free List and those already dutiable under previous enactments). Additional duties could be imposed and items on the Free List subjected to duty, and in fact the range of items subject to duties under this Act has been extended from time to time since its enactment.

The freedom of Empire goods from these duties was guaranteed under the Ottawa Agreements Act, which also provided for the imposition of new duties on imports from foreign, but not Empire, countries of a number of products of special interest to the Empire countries concerned. Whilst free entry was guaranteed to Empire producers on a wide range of products, the margins of preference thereby applicable were not bound, and the duties could be varied up or down by the United Kingdom Government without the consent of Empire countries. On a selected range of items, however, which are specified in the schedules to the Ottawa Agreements Act, the duties may not be varied by the United Kingdom without the consent of the other party to the respective agreement.

Since 30th October, 1947, Canada and the United Kingdom have, by an exchange of letters, recognized the rights of their respective Governments to reduce or eliminate the preferences they accord one another without prior consultation or consent.

**2. The Australia-United Kingdom Trade Agreement.**—This Agreement is a unit of the Ottawa Agreements and through it preferences in the United Kingdom were established on a number of export items of considerable importance to Australia. The preferences accorded are summarized as follows, the rates being shown in sterling currency:—

- (a) Continued free entry was guaranteed for three years for Australian eggs, poultry, butter, cheese and other milk products. (This freedom of entry still continues.) Similar foreign goods were subjected to duty, thus giving Australia a preference of 1s. to 1s. 9d. per 120 eggs; 10 per cent. *ad val.* on poultry; 15s. per cwt. on butter; 15 per cent. *ad val.* on cheese; 5s. per cwt. on sweetened whole condensed milk; and 6s. per cwt. on unsweetened whole condensed milk and milk powder and other unsweetened preserved milk.

- (b) Preferences were created on the following products by imposing a duty on like foreign articles whilst guaranteeing free entry to Australian produce : wheat (2s. per quarter); apples and pears (4s. 6d. per cwt.); canned apples (3s. 6d. per cwt.); other canned fruit (15 per cent. *ad val.*); certain dried fruit, raisins, etc. (10s. 6d. per cwt.); honey (7s. per cwt.); oranges (3s. 6d. per cwt. in season); raw grapefruit (5s. per cwt. in season); and grapes (1½d. per lb. in season).
- (c) The preferential margins on the commodities mentioned in (a) and (b) above were not to be reduced without the consent of the Australian Government and this provision also applied to the 10 per cent. preference on leather, tallow, canned meats, barley, wheat flour, macaroni, dried peas, casein, eucalyptus oil, meat extracts and essences, copra, sugar of milk, sausage casings, wattle bark, asbestos and certain dried fruits.
- (d) The Agreement also provided for a preference of 2d. per lb. on unwrought copper, but this was never implemented as Empire producers could not demonstrate their ability to continue offering their copper on first sale to the United Kingdom at prices not exceeding the world price, which was a condition of the preference. A similar condition applied to wheat, zinc and lead. In the case of zinc and lead the duty was changed at an early stage in the life of the Agreement from an *ad valorem* rate of 10 per cent. to a specific rate.
- (e) Australia, although not securing in the Agreement with the United Kingdom a commitment on the amount and duration of the preference margin applying to a number of commodities of some importance to Australia (e.g., rice), had its interests safeguarded by the fact that such items were usually covered by the United Kingdom's agreement with another Empire country. Such benefits were generalized to Australia.
- (f) The United Kingdom agreed to regulate meat imports and stated that its policy was to give the Dominions an expanding share of United Kingdom meat imports.
- (g) Preferential tariff advantages were also obtained in the British non-self-governing colonies and protectorates.

The preferences operating before, and not increased by, the Ottawa Agreement were continued. Thus the preferential margins on heavy wines, sugar, the sugar content of goods containing added sweetening matter, currants, etc., remained in operation.

3. Developments since the Ottawa Agreement.—The Australia-United Kingdom Agreement operated with virtually no alteration until the beginning of 1939. Since then three major factors have been responsible for altering its terms or significance :—

- (a) *The United Kingdom-United States of America Trade Agreement*, 1938. This Agreement became effective from 1st January, 1939, and, to enable the United Kingdom to secure concessions from the United States of America, Australia agreed to the following reductions in the preferences which her products were enjoying in the United Kingdom :—

Wheat (preference eliminated); apples and pears (1s. 6d. per cwt. in Northern Hemisphere season); honey (2s. per cwt.); canned apples (1s. 3d. per cwt.); canned grapefruit (preference eliminated). The *ad valorem* duty of 15 per cent. was replaced by specific duties of 5s. 6d. per cwt. on canned fruit salad, 5s. per cwt. on canned pineapples and 4s. per cwt. on canned loganberries.

- (b) *Long-term Contracts with the United Kingdom.* During the war and in the post-war period Australia negotiated contracts with the United Kingdom under which the Ministry of Food undertook to purchase the whole or a substantial part of the exportable surplus of several important Australian products normally entitled to preferential treatment. The commodities concerned were meat, sugar, flour, dried fruit, apples, canned fruit, butter, cheese, eggs, tallow and copra.

While bulk purchasing was in operation the preferential system was by-passed in respect of the commodities affected, but as the United Kingdom has returned the marketing of foodstuffs to private traders, United Kingdom importers of these goods from foreign sources are again obliged to pay duties.

The only Australian commodity still purchased by the United Kingdom Government under bulk contract is copra. In the case of sugar, the British Commonwealth Sugar Agreement sets an upper limit to the quantity of Australian sugar that may be sold in any year but the Agreement provides for sales at prices above world price levels. Exports of meat to the United Kingdom are protected by the Australia-United Kingdom 15 Year Meat Agreement, which sets minimum prices for Australian meat sold in the United Kingdom.

- (c) *The General Agreement on Tariffs and Trade.* Australia has participated in the four rounds of tariff negotiations under this agreement held at Geneva, 1947, Annecy, 1949, Torquay, 1950-51 and Geneva, 1955-56. In order to reach agreement with the various countries participating in these tariff negotiations, Australia consented to a number of reductions in preference margins guaranteed to her under the Ottawa Agreements, in return for more favourable tariff treatment in some twenty-seven countries with which agreements have been made. The reductions are summarized below :—

Apples (margin eliminated during Northern Hemisphere season); raisins (2s. per cwt.); canned peaches, pears and apricots (3 per cent. *ad val.*); non-tropical canned fruit salad (margin eliminated); dried apricots (2s. 6d. per cwt.); dried prunes, apples, peaches and nectarines (margin eliminated); honey (nil to 1s. 6d. per cwt. according to value for duty). The preference margin was also modified on a number of items in which Australia was interested but on which her consent to reduction was not required under the Ottawa Agreement. Examples are fruit pulp, pig iron, rice, hard soap, glue, gelatine and size.

The preference on heavy wine was increased from 4s. per gallon to 10s. per gallon.

- (d) *Increases in Commodity Prices.* The effective value of margins of preference which were expressed in the Australia-United Kingdom Agreement in terms of British currency ("specific margins") has been reduced in the post-war period by rises in the prices of commodities on which they were granted. The commodities affected are beef, dairy products, eggs, fresh, dried and canned fruits, honey, sugar, wine, lead and zinc, which made up about 29 per cent. of Australia's exports to the United Kingdom in 1954-55.

The following table shows, for selected items, how the *ad valorem* incidence of specific preference margins has been reduced by increases in the average value of the commodities on which they were granted.

## IMPERIAL PREFERENCE : CHANGES IN VALUE OF PREFERENCES.

*Ad Valorem Incidence of Specific Preferences Received by Australia in the United Kingdom.*

Commodity.	Preference Margin.	<i>Ad Valorem Incidence.(a) (Per cent.)</i>			
		1938.	1947.	1953.	1954.
Sugar, raw .. ..	£3 14s. 8d. per ton	35.8	12.2	9.5	9.4
Butter .. ..	15s. per cwt.	13.3	7.6	4.5	4.3
Beef (frozen) .. ..	2s. 3d. per lb. $\frac{2}{3}$ d	17.3	10.3	4.6	4.3
Canned pineapple .. ..	5s. per cwt.	21.4	5.5	3.3	2.9
Currants .. ..	2s. per cwt.	7.2	2.8	2.4	2.4
Raisins .. ..	10s. 6d. per cwt. to 1947; 8s. 6d. per cwt. from 1948	31.2	13.1	9.6	9.7
Honey .. ..	7s. per cwt. to 1938; 5s. per cwt. from 1939	19.0	6.8	5.1	5.4
Milk, condensed, sweetened	5s. per cwt.	13.1	4.8	3.9	3.9
Milk, dried whole .. ..	6s. per cwt.	8.7	4.7	2.9	2.9
Milk, dried skim .. ..	6s. per cwt.	20.1	7.4	5.8	7.0
Apples .. ..	4s. 6d. per cwt.	26.4	9.9	5.6	5.9
Pears .. ..	4s. 6d. per cwt.	19.5	6.7	5.5	5.3

(a) The *ad valorem* incidence of a preference is calculated by expressing the specific margin of preference (in £ sterling per cwt., per ton, etc.) on a particular commodity as a percentage of the average unit value (in £ sterling per cwt., per ton, etc.) of United Kingdom imports of that commodity from all sources in the year concerned.

## § 4. Trade Commissioner Service.

In the interest of building and maintaining a high level of trade, Governments nowadays generally appoint commercial representatives in their main export markets, their duties including the collection of information about trade conditions, assisting exporters in their difficulties and promotion of trade generally.

Prior to 1929, Australian representation abroad was limited to the High Commissioner's Office in London, with a subsidiary agent in Paris, and the Office of the Commissioner-General for Australia in New York. Apart from the facilities afforded by those offices, the only form of overseas trade representation available to Australia was that of the United Kingdom Department of Overseas Trade, whose activities were naturally concerned with the development of United Kingdom rather than Dominion trade.

The growing importance of Australia's trade with Canada led to the appointment in 1929 of an Australian Trade Commissioner in that country. The part played by that official in the subsequent negotiations of the Trade Agreement with Canada, in the cultivation of close and cordial relations with the Canadian authorities, and in general in focussing interest on Australia and Australian products, amply demonstrated the value of such appointments to both the Commonwealth Government and the Australian trading community.

The Trade Commissioners Act 1933 provided for the establishment of an Australian Government Trade Commissioner Service and by the beginning of the 1939-45 War posts had been established at Wellington, Batavia (now Djakarta), Shanghai, Tokyo, Cairo, Bombay, New York and Calcutta. The Trade Commissioner Service was further expanded in 1946 and there are now 24 Trade Commissioner posts in 19 countries.

The general advantages to be derived from the appointment of Trade Commissioners may be briefly stated as follows :—(a) fostering of goodwill, (b) correction and avoidance of misunderstandings, and (c) dissemination of knowledge concerning the respective countries. Particular facilities which they are able to afford to the trading community are (a) information as to present and prospective demand for goods, (b) information as

to foreign and local competition, (c) advice as to best selling methods, (d) reports as to the standing of foreign buyers, (e) specification of articles in demand, (f) dealing with trade inquiries, (g) advice and assistance to commercial visitors regarding trade matters, (h) settlement of difficulties between exporters in Australia and buyers abroad, and (i) furnishing of information as to foreign import requirements, customs duties, trade regulations, etc.

In addition to the foregoing trade functions, it is the duty of a Trade Commissioner to watch and advise the Government of any developments in his territory (which may include several countries) likely to affect trade and commerce with Australia, and other matters of economic interest to the home Government. He may be called upon to represent his Government at oversea conferences, and in certain countries where there is no diplomatic or consular mission (e.g., British West Indies, Hong Kong and the Federation of Rhodesia and Nyasaland), he is called upon to act as the Australian representative on official occasions.

Trade Commissioners usually enter the Service from either the commercial world or the Public Service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts it is the practice for the Trade Commissioner to share his duties with an Assistant Trade Commissioner, who is selected to be trained in the Service and qualify at a later stage for appointment as a Trade Commissioner. These staffing arrangements are designed to enable the Government to draw upon experienced and able executives in both private enterprise and the Public Service, and at the same time to build up a body of competent personnel to carry out a policy of vigorous expansion in the field of oversea trade.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade (as distinct from the diplomatic and consular services, administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission, it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The oversea trade representation is shown in Chapter XXIX.—Miscellaneous.

## § 5. Method of Recording Imports and Exports.

1. **Source of Statistics.**—Oversea trade statistics are compiled from documents obtained under the Customs Act and supplied to this Bureau by the Department of Customs and Excise.

2. **Customs Area.**—The Customs Area, to which all oversea trade statistics issued by this Bureau apply, is the whole area of the Commonwealth of Australia, comprising the States of New South Wales (including the Australian Capital Territory), Victoria, Queensland, South Australia, Western Australia and Tasmania, and the Northern Territory. Non-contiguous territories are treated as outside countries, and trade transactions between Australia and these non-contiguous territories are part of the oversea trade of Australia. Such transactions are shown separately, i.e., the trade of Australia with each particular country is separately recorded and tabulated.

3. **The Trade System.**—There are two generally accepted systems of recording oversea trade statistics, namely, (a) special trade and (b) general trade, and statistics of both are published by the Bureau, although greater emphasis is placed on general trade. The United Nations Statistical Office defines the two systems as follows :—

(a) *Special Trade.* Special imports are the combined total of imports directly for domestic consumption and withdrawals from bonded warehouses or free zones for domestic consumption, transformation or repair. Special exports comprise exports of national merchandise, namely goods, wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported.)

- (b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. Direct transit trade and trans-shipment under bond are excluded. General exports are the combined total of national exports and re-exports of imported merchandise including withdrawals from bonded warehouse or free zone for re-export.

The tables which follow refer to general trade, except for those appearing in § 16, para. 2, which refer to imports cleared for home consumption.

4. *Statistical Classification of Imports and Exports.*—Statistics of overseas imports and exports from which the summary tables in this issue of the Official Year Book have been extracted were compiled according to the revised classification which came into operation on 1st July, 1945. This classification is designed to allow for the inclusion of items which become significant with varying trade conditions, and in 1954–55 provided for 2,123 separate import items and 1,089 export items.

5. *The Trade Year.*—From 1st July, 1914 the statistics relating to overseas trade have been shown according to the financial year (July to June). Prior to that date the figures related to the calendar year. A table is included in § 17 showing the total value of imports and exports in the calendar years 1951 to 1955 inclusive.

6. *Valuation.*—(i) *Imports.* The recorded value of goods imported from countries beyond Australia as shown in the following tables represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*. By Act No. 54 of 1947, which operated from 15th November, 1947, the Customs Act was amended to provide that the value for duty of goods imported into Australia should be the f.o.b. value in Australian currency instead of the British currency f.o.b. value plus 10 per cent.

Section 154 (1) of the Customs Act 1901–1954 provides that “when any duty is imposed according to value, the value for duty shall be the sum of the following :—

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher ; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export.”

“Current domestic value” is defined as “the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country.” All import values shown throughout this and other chapters of this issue of the Official Year Book are therefore uniform f.o.b. values at port of shipment in Australian currency.

(ii) *Exports.* Since 1st July, 1937, the following revised definitions of f.o.b. values have been adopted for exports generally :—

- (a) Goods sold to overseas buyers before export—the f.o.b. port of shipment equivalent of the price at which the goods were sold (e.g., as regards wool, the actual price paid by the overseas buyer plus the cost of all services incurred by him in placing the wool on board ship).
- (b) Goods shipped on consignment—the Australian f.o.b. port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. port of shipment equivalent of the current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. port of shipment equivalent of the price ultimately received).

Exporters are required to show all values in terms of Australian currency, and to include the cost of containers.

An account of the bases of valuation in operation prior to 1st July, 1937 was given on page 469 of Official Year Book No. 39.

7. *Inclusions and Exclusions.*—(i) *Ships' Stores.* Prior to 1906, goods shipped in Australian ports on oversea vessels as ships' stores were included as exports. From 1906, ships' stores have been specially recorded as such, and omitted from the tabulation of exports. A table showing the value of these stores (including bunker coal and oil) shipped each year since 1950-51 is shown in § 12, page 306.

(ii) *Outside Packages.* Outside packages (containers, crates, etc.) have always been included as a separate item in the tabulation of imports, but apart from those received from the United Kingdom a classification according to country of origin has been available only since 1950-51. For exports, however, the value recorded for each item includes the value of the outside package.

(iii) *Trade on Government Account.* Imports and exports on Government account are treated as normal transactions and are an integral part of oversea trade transactions.

(iv) *Currency.* Notes and coins of base metal are included in the oversea trade statistics at their commodity value only.

(v) *Gold Content of Ores and Concentrates.* The value of ores and concentrates imported and exported includes the value of the gold content. The latter is not recorded separately for purposes of inclusion in imports and exports of gold.

(vi) *Personal Effects.* Migrants' effects are included in imports and exports.

8. *Countries to which Trade is Credited.*—(i) *Imports.* From 1st January, 1905, in addition to the record of the countries whence goods directly arrived in Australia, a record of the countries of their origin was kept, as it was considered that classification of imports according to country of origin was of greater interest and value than classification according to country of shipment. Up to and including the year 1920-21, imports continued to be classified both according to country of shipment and according to country of origin, but the former tabulation was discontinued as from the year 1921-22.

(ii) *Exports.* In the export sections of tables in this chapter, "country" refers to country of consignment.

9. *Pre-Federation Records.*—In the years preceding Federation, each State independently recorded its trade, and in so doing did not distinguish other Australian States from foreign countries. As the aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, it is unfortunate that past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Official Year Book prior to No. 41. On the introduction of the Customs Act 1901 the methods of recording values were made uniform throughout the States.

## § 6. Total Oversea Trade.

1. *Including Gold.*—The following table shows the total trade (including gold) of Australia with oversea countries from 1901 to 1954-55. To save space, the period 1901 to 1950-51 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for individual years were published in earlier issues of the Official Year Book, but it should be borne in mind that the figures for imports in issues prior to No. 37 are in British currency.

In this chapter the values in all tables of imports and exports are shown in Australian currency f.o.b. at port of shipment.

### TOTAL OVERSEA TRADE : AUSTRALIA.

(INCLUDING GOLD.)

Period.(a)	Value. (£'000.)			Excess of Exports (+) or Imports (-). (£'000.)	Value per Head of Population. (£.)		
	Imports.	Exports.	Total.		Imports.	Exports.	Total.
1901 to 1905 ..	35,689	51,237	86,926	+ 15,548	9.1	13.1	22.2
1906 „ 1910 ..	46,825	(b) 69,336	116,161	+ 22,511	11.0	16.3	27.3
1911 „ 1915-16 ..	66,737	74,504	141,241	+ 7,767	13.8	15.4	29.2
1916-17 to 1920-21	91,577	115,066	206,643	+ 23,489	17.4	21.9	39.3
1921-22 to 1925-26	124,404	134,545	258,949	+ 10,141	21.1	22.9	44.0
1926-27 to 1930-31	119,337	131,382	250,719	+ 12,045	18.6	20.5	39.1
1931-32 to 1935-36	73,798	120,958	194,756	+ 47,160	11.1	18.1	29.2
1936-37 to 1940-41	123,553	157,610	281,163	+ 34,057	17.8	22.7	40.5
1941-42 to 1945-46	211,514	163,955	375,469	- 47,559	29.1	22.4	51.5
1946-47 to 1950-51	449,273	571,430	1,020,703	+ 610,784	57.2	72.7	129.9
1951-52.. ..	1,053,423	675,008	1,728,431	- 378,415	123.5	79.1	202.6
1952-53.. ..	514,109	871,272	1,385,381	+ 357,163	58.9	99.7	158.6
1953-54.. ..	681,609	828,332	1,509,941	+ 146,723	76.6	93.0	169.6
1954-55.. ..	843,742	774,164	1,617,906	- 69,578	92.8	85.2	178.0

(a) The figures shown for the years 1901 to 1950-51 represent the annual averages for the periods covered. The trade for the individual years will be found in Official Year Book No. 40 and earlier issues, but it should be noted that in issues prior to No. 37 imports are shown in British currency. From 1914-15 onwards the particulars relate to financial years. (b) Prior to 1906, ships' stores were included in exports. For value of such goods shipped on overseas vessels during each of the years 1950-51 to 1954-55 see later table, § 12.

In issues of the Official Year Book prior to No. 23 fluctuations in the value of the overseas trade of Australia for earlier years were treated in some detail. The enhanced prices ruling for commodities and the peculiar conditions affecting Australian trade were responsible for the high value of imports in the years following the 1914-18 War and these factors should be taken into consideration in making comparisons with earlier years. In the three years ended 1928-29 imports fell while exports were well maintained, but in 1929-30 both imports and exports declined substantially. The full effects of the economic depression are reflected in the greatly diminished trade figures for the period 1931-32 to 1935-36 and some years thereafter. The lowest level was recorded in 1931-32 when the total trade amounted to £137,538,000.

The outbreak of war in the Pacific in 1941 resulted in a substantial increase in the value of imports during the years 1941-42 to 1945-46. Since the end of the war the annual values of imports and exports have increased considerably, largely because of higher prices.

2. **Excluding Gold.**—The fluctuations in recent years in merchandise trade (including silver as merchandise) are shown more clearly in the following table, from which all gold movements have been excluded.

**TOTAL OVERSEA TRADE : AUSTRALIA.**  
(EXCLUDING GOLD.)

Year.	Value. (£'000.)			Value per Head of Population. (£.)		
	Imports.	Exports.	Total Trade.	Imports.	Exports.	Total Trade.

(ii) *Proportions.* In view of the fluctuations in the total values of imports and exports, it is somewhat difficult to ascertain from the preceding table the relative importance of the various countries in the trade of Australia. A better idea of the

proportions of imports supplied by the various countries and of their relative importance as markets for Australian produce during the years 1952-53 to 1954-55 may be obtained from the following table of percentages.

### COUNTRIES OF ORIGIN OR CONSIGNMENT OF AUSTRALIAN IMPORTS AND EXPORTS: PROPORTIONS.

2. According to Currency Areas.—The following table shows the trade of Australia according to currency areas during the years 1953-54 and 1954-55.

The sterling area includes the United Kingdom, its colonies and dependencies, all other countries of the British Commonwealth (except Canada and the New Hebrides Condominium) and certain non-British countries of which the most important are Burma, Bahrain Islands, other Arabian States (excluding Saudi Arabia and Yemen) and Iceland.

The dollar area is comprised of the United States of America and dependencies, Canada, Mexico, other Central American countries, Bolivia, Colombia, Ecuador, Venezuela, the Philippines and Liberia.

The O.E.E.C. area consists of non-sterling members of the Organization for European Economic Co-operation, namely, Belgium, France, Italy, Norway, the Netherlands and Portugal together with their associated States and dependencies, Austria, Denmark, the Federal Republic of Germany, Greece, Luxemburg, Sweden, Switzerland, Trieste, Turkey and the New Hebrides Condominium.

Of the remaining countries grouped under "other non-sterling", the more important as regards trade with Australia are Czechoslovakia, Finland, Poland, Spain, the Union of Soviet Socialist Republics, Egypt, Iran, Saudi Arabia, Japan, Korea, Indonesia, Thailand, Brazil and Chile.

(b) Excludes railway sleepers.

4. Imports from the United Kingdom and Competing Countries.—Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8th August, 1907, the Commonwealth Customs Tariffs have provided preferential rates of Customs Duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on previous pages in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. The imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom could not supply. These items, in addition to others not available from that country, have therefore been omitted from the computation following.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, Germany, Japan and the United States of America. These countries have been selected as the principal competitors in normal times with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1952-53 to 1954-55 are shown in the following table.

**IMPORTS FROM THE UNITED KINGDOM AND ITS MAIN COMPETITORS.**  
(£'000.)

Nature of Imports.	Year.	United Kingdom.	France.	Germany. (a)	Japan.	United States of America.	All Countries.

	1954-55b	378,669	14,689	30,838	18,422	102,157	840,972

(a) Federal Republic.

(b) Includes outside packages.

The principal classes of competitive imports are metals, metal manufactures and machinery (value £324,140,000 in 1954-55) and manufactured fibres, textiles and apparel (value £126,752,000 in 1954-55). The value of goods included in these two groups represented 76.8 per cent. of the total value of competitive commodities during 1954-55. In 1954-55 the United Kingdom supplied 57.0 per cent. of the total value of competitive goods.

### § 9. Trade with Eastern Countries.

1. **Merchandise Trade according to Countries.**—The values of imports into Australia from Eastern countries during the years 1952-53 to 1954-55 are shown in the following table. The principal commodities imported in 1954-55 according to countries of origin were :—Borneo (British)—crude petroleum, £14,022,000; Ceylon—tea, £18,099,000; India—bags and sacks, £11,534,000, cotton and linen piece-goods, £4,247,000, hessian, £2,333,000 and cotton fibres, £835,000; Malaya—crude rubber, £9,712,000; Japan—cotton and linen piece-goods, £7,045,000; Indonesia—petroleum spirit, £10,664,000, residual and solar oil, £4,016,000, kerosene, £4,437,000.

**MERCHANDISE TRADE WITH EASTERN COUNTRIES : AUSTRALIA.**

(a) Quantity in terms of greasy wool.

4. Imports of Merchandise, Specie and Bullion.—The table hereunder shows the value of imports into Australia during each of the years 1950–51 to 1954–55, grouped under the headings—Merchandise, and Specie and Bullion. The imports of merchandise are shown under the sub-headings of “free” and “dutiable” goods.

## IMPORTS OF MERCHANDISE, SPECIE AND BULLION : AUSTRALIA.

(£'000.)

Year.	Merchandise.			Specie and Bullion.	Total Imports.
	Free Goods.	Dutiable Goods.	Total Merchandise.		
1950–51 ..	366,229	375,149	741,378	2,493	743,871
1951–52 ..	554,959	494,792	1,049,751	3,672	1,053,423
1952–53 ..	301,870	208,472	510,342	3,767	514,109
1953–54 ..	317,850	360,740	678,590	3,010	681,609
1954–55 ..	399,063	441,909	840,972	2,770	843,742

5. Exports of Merchandise, Specie and Bullion.—The next table shows the recorded value of exports from Australia during each of the years 1950–51 to 1954–55, grouped under the headings—Merchandise, and Specie and Bullion. The exports of Australian produce and re-exports are shown separately :—

## EXPORTS OF MERCHANDISE, SPECIE AND BULLION : AUSTRALIA.

(£'000.)

Year.	Merchandise.			Specie and Bullion.			Total.
	Australian Produce.	Re-exports.	Total.	Australian Produce.	Re-exports.	Total.	
1950–51 ..	972,933	6,163	979,096	2,682	18	2,700	981,796
1951–52 ..	657,344	7,896	665,240	9,716	52	9,768	675,008
1952–53 ..	840,634	7,864	848,498	22,657	117	22,774	871,272
1953–54 ..	803,635	8,231	811,866	16,422	44	16,466	828,332
1954–55 ..	749,765	8,276	758,041	16,117	6	16,123	774,164

6. Imports in Tariff Divisions.—Imports into Australia classified in accordance with the sixteen divisions of the Customs Tariff, for each of the years 1945–46 to 1954–55, will be found in *Oversea Trade Bulletin*, 1954–55, page 523.

7. Imports and Net Customs Revenue.—The percentage of net Customs revenue, omitting primage, collected to the total value of all merchandise imported in each of the years 1950–51 to 1954–55 was as follows :—1950–51, 11.3 per cent. ; 1951–52, 10.0 per cent. ; 1952–53, 12.6 per cent. ; 1953–54, 12.8 per cent. ; and 1954–55, 11.1 per cent. Primage duty was in force during these years and if this is added to net Customs revenue the percentages become :—1950–51, 12.4 per cent. ; 1951–52, 10.9 per cent. ; 1952–53, 13.8 per cent. ; 1953–54, 14.0 per cent. ; and 1954–55, 12.1 per cent. The percentages of net Customs revenue, omitting primage, on the total value of dutiable goods only were : 1950–51, 22.4 per cent. ; 1951–52, 21.1 per cent. ; 1952–53, 31.0 per cent. ; 1953–54, 24.0 per cent. ; and 1954–55, 21.1 per cent. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period.

## § 12. Ships' Stores.

Prior to 1906, goods shipped in Australian ports on board oversea vessels as ships' stores were included in the general exports. From 1906, ships' stores have been specially recorded as such, and have been omitted from the export figures. The value of these stores shipped each year during the period 1950-51 to 1954-55, with fuel oils separate, is shown in the following table :—

VALUE OF STORES SHIPPED ON OVERSEA VESSELS : AUSTRALIA.  
(£'000.)

Item.	1950-51.	1951-52.	1952-53.	1953-54.	1954-55.
Fuel Oils ..	4,635	5,532	6,460	5,674	6,925
All Stores (including Fuel Oils)	9,358	10,478	11,696	10,266	13,181

In addition to fuel oils, the principal items of ships' stores supplied to oversea vessels in 1954-55 were :—Meats, £1,536,395 ; fruit and vegetables, £551,357 ; oils, other than fuel, £402,462 ; eggs, £195,557 ; butter, £176,265 ; fish, £160,810 ; ale, porter, beer, etc., £149,254 ; coal, £111,625 ; milk and cream, £110,858 ; rice, £90,767.

## § 13. Movement of Specie and Bullion.

1. Imports and Exports.—The following table shows the values of gold and silver specie and bullion and of bronze specie imported into and exported from Australia during each of the years 1952-53 to 1954-55.

IMPORTS AND EXPORTS, SPECIE AND BULLION : AUSTRALIA.

**§ 14. Exports according to Industries.**

1. Classification.—The following table provides an analysis of the exports of Australian produce, according to the main classes of industry in which the goods were produced, for each of the years 1952-53 to 1954-55. The index numbers based on the year 1913 show the variations in the total recorded value only of exports in each industrial group, and have not been adjusted either for price changes or in accordance with the variation of the Australian £ in relation to sterling.

**EXPORTS OF AUSTRALIAN PRODUCE ACCORDING TO INDUSTRIAL ORIGIN :  
VALUE.**

Industrial Group.	1952-53.		1953-54.		1954-55.

(a) Base of each group : 1913 = 100.  
of gold each year.

(b) Australian production of gold substituted for exports

2. **Relative Importance of Industrial Groups.**—In the previous table the value of commodities in each industrial group of exports of Australian produce is that recorded at the date of shipment from Australia, with the exception that the value of the production of gold in Australia in each year has been substituted in the mines and quarries group for actual shipments of gold in each year. This has been done to eliminate the exports of gold for monetary purposes. In order of importance the pastoral group occupied the highest place, representing 56.8 per cent. of the total exports in 1954-55, compared with 43.7 per cent. in 1938-39.

Exports of agricultural produce rank next in importance. In 1954-55 they represented 19.6 per cent. of total exports, compared with 19.5 per cent. in 1938-39.

According to value, exports of dairy and farmyard produce decreased from 11.6 per cent. in 1938-39 to 6.1 per cent. in 1954-55. Exports of mine and quarry products in 1938-39 represented 17.7 per cent. of the total but in 1954-55 only 7.7 per cent. The manufacturing group of exports, which represented 6.4 per cent. in 1938-39, had increased to 15.7 per cent. in 1945-46. In 1954-55 this group represented 9.2 per cent. of total exports.

### § 15. Australian Index of Export Prices.

1. **General.**—Over the past fifty years the exports of Australia have become increasingly diversified, but, although the proportion of highly manufactured exports has increased, it is still small in relation to total exports. Most of these exports still consist of basic products, such as wool, wheat, butter, etc.

2. **Historical.**—An annual index of export prices has been published by this Bureau since its inception.

The first index was compiled annually for the years 1901 to 1916-17. The method of computation was to select all those articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The total value so obtained was divided into the total actual (recorded) value of these exports for that year. The quotient (multiplied by 1,000) thus obtained was the export price index number for that year.

The method was changed in 1918. A weight for all principal exports was calculated on the average quantities of exports for the nineteen and a half years from 1st January, 1897 to 30th June, 1916. To these weights were applied the "average unit export values" of each export in successive years, and a weighted aggregative index of "price" variations was derived. It was published for the years 1897 to 1929-30, and particulars of this index were last published in Official Year Book No. 24, page 147.

After the 1914-18 War, however, the relative importance of different exports changed considerably. In addition, the pattern of exports had become liable to vary considerably from year to year.

3. *Present Indexes.*—For the reasons just mentioned, two new series of monthly export price indexes—one using fixed weights, the other changing weights—were published in 1937, computed back to 1928. These are the only export price indexes now published.

The data on which both series are based differ from those utilized in the old series of annual index numbers. The most important change was the use of actual (or calculated) export parities, based on actual price quotations, in place of the "unit-values" declared at the Customs.

The old index took no account of gold exports. The omission is natural and reasonable for countries which produce little or no gold. For gold-producing countries, although some exports of gold would be irrelevant (e.g., the Australian shipments of gold reserves during the depression), the exports of newly-produced gold should be taken into account. In the new series, therefore, gold is included, but the weight given to it is not the quantity exported but the quantity produced.

The two series are compiled monthly, and both relate to commodities which normally constitute about 80 per cent. of the total value of exports of merchandise and silver and gold production.

4. *Monthly Index (Fixed Weights).*—(i) *General.* This is a weighted aggregative index of price variations. It was computed back to 1928, with that year taken as base. It is now usually published on the base—average of three years ended June, 1939 = 100.

The purpose of this index is to provide comparisons, over a limited number of years, of the level of prices of those commodities normally exported from Australia, making no allowance for any benefit or disadvantage accruing from variations during the period in the relative proportions of the different kinds of exports.

(ii) *Weights.* The original weights (used for the period 1928 to 1936) were, in round figures, the average annual exports (production, in the case of gold) during the five years 1928-29 to 1932-33.

From July, 1936 the weights were revised, and are now based on the average annual exports (production, in the case of gold) during the three years 1933-34 to 1935-36. The break of continuity has been bridged by the usual method of splicing. Consideration is being given to adopting weights for a post-war period.

The weight adopted for wheat takes into account the wheat equivalent of flour exported, the weight allotted to greasy wool takes account of the greasy equivalent of scoured wool, tops, and wool on skins, whilst for some metals allowance is made for the metallic content of ores and concentrates exported.

The twenty items, together with the units of quantity and the weights or "quantity multipliers", are given in the following table.

**EXPORT PRICE INDEX : COMMODITIES AND WEIGHTING SYSTEM.**  
(FROM 1ST JULY, 1936.)

Item.	Unit of Quantity.	"Quantity Multipliers".	Percentage Distribution of Aggregative Value.			
			Base Period 1936-37 to 1938-39.		Year 1951-52.

			100.00	100.00	100.00	100.00

(a) Includes "wheat equivalent" of flour.

The percentage distributions of the "Aggregative Values" shown in the foregoing table are of importance, firstly, as showing their variations from time to time as the result of differential price movements as between the various commodities, and secondly, as regards the effect on the indexes as a whole of the percentage price variations in each commodity.

(iii) *Prices.* The adoption of current market prices (as distinct from the former average unit export values) in the present indexes permitted the use of standards for each commodity. All export parities are calculated from price quotations from the most reliable and representative sources available. In most cases, the prices used are those at which current sales are being effected. In recent years, however, great difficulty has been experienced in obtaining appropriate current market price data for some commodities. It has become impossible to adhere to a common principle. Actual (or calculated) export parities currently prevailing, priced at f.o.b. Australian ports, are still used whenever possible. However, since dual or multiple price systems have become operative for some exports, the prices used in the index for wheat (from July, 1945 to September, 1951) and for certain metals represent average actual realizations for current *shipments*. From October, 1951 to July, 1953, the prices used for wheat are the estimated average realizations after weighting prices of quota and non-quota wheat. Prices adopted for months since August, 1953 are derived from available information of current sales. Notes on earlier prices used for wheat were given on pages 508 and 509 of Official Year Book No. 38. Current market prices used for the main commodities are:—

(a) the price for wool is a weighted average (based on clean scoured prices) of representative types at Sydney auctions, expressed in terms of pence per lb., greasy:

(b) where contracts exist between the Australian and the United Kingdom Governments for certain commodities and when most of the exports of such items are sold at these rates, contract prices are used ; and

(c) for those metals which are at present not actually exported, Australian export parities are estimated on the basis of the prices ruling in London.

(iv) *Index Numbers.* The following table shows export price index numbers for Australia for individual commodities, groups of commodities, and all groups combined for each financial year from 1936-37 to 1954-55 and monthly for the year 1954-55.

EXPORT PRICE INDEXES : AUSTRALIA.

(a) See notes above in para. 4 (iii), p. 310. (b) Non-ferrous—silver, copper, tin, zinc, lead. (c) Beef, lamb mutton, pork. (d) Sultanias, lextias, currants. (e) Cattle hides, calf skins. (f) Where Australian gold has been sold on the overseas premium markets such price has been used in the index. (g) For "All Groups (including Gold)"—applicable from 1936-37. (h) For "All Groups (excluding Gold)"—applicable from 1936-37. (i) Subject to revision. (j) Nominal.

A graph showing index numbers for All Groups (including Gold) appears on page 298.

Reference to the group indexes in the table above shows the great fluctuations and the wide dispersion of prices of export commodities in recent years. In particular, very great movements upwards and downwards have occurred in the price of wool. Since wool is a predominant export and comprises 46 per cent. of the Base Aggregate of the index, fluctuations in wool prices obscure the movements affecting the other components in the All Groups index. For purposes of comparison wool and "other groups" are shown separately below.

## RECENT TRENDS—EXPORT PRICE INDEX: WOOL AND "OTHER GROUPS".

5. Monthly Index (Changing Weights).—This series was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. The fixed weights index numbers indicate satisfactorily the general trend of export prices, but take no account of the relative quantities actually sold at the different prices ruling during each month. The impact of the price movements on current sales is indicated more directly by the index numbers in the following table. In computing these, the "quantity multipliers" are the quantities actually exported in the months (or periods) to which the index numbers relate.

For any given month, the procedure is to multiply the price of each commodity in that month, and its price in the corresponding month of the previous year, by the quantity exported during the given month. A comparison of the resulting aggregates gives one possible measure of the change in prices over the period; i.e., the change assuming that the proportions of the different kinds of exports whose prices are to be measured were the same as their proportions in the given month. Another possible measure is given by assuming that the proportions of the different kinds of exports in the given month had been the same as their proportions in the corresponding month of the previous year. Accordingly the first step in the procedure is repeated, substituting the quantities exported during the corresponding month of the previous year.

The index numbers so obtained have been proved over a period of years to lie very close together. As it is convenient for practical reasons to have one single figure rather than two close alternatives the two index numbers are multiplied together and the square root of the product extracted. This is taken to be the index number for the month, the prices of the corresponding month of the previous year being taken as base.

The index numbers for two or more months of one year, as compared with the corresponding period of the previous year, are computed in very much the same way. The process involves merely the cumulative addition of the aggregates computed for the individual months, and extraction of the index numbers as explained above.

Index numbers computed on this basis are shown in the following table for the years 1953-54 and 1954-55 :—

### MONTHLY EXPORT PRICE INDEX (CHANGING WEIGHTS) : AUSTRALIA.

(Base : Weighted Average Price Level in corresponding months of preceding year = 100.)

Monthly export price index numbers are issued in the mimeographed publication *Monthly Index of Australian Export Prices*, in the *Monthly Review of Business Statistics* and in the *Quarterly Summary of Australian Statistics*.

## § 16. External Trade of Australia and other Countries.

1. *Essentials of Comparison.*—Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e., from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand the same class of trade represents a comparatively small proportion of the total trade.

2. *"Special Trade" of Various Countries.*—In the following table the figures, which represent Australian currency values, relate as nearly as possible to imports cleared for consumption in the various countries specified, and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption, and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed below are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available.

**IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY) : VARIOUS COUNTRIES, 1953.**

Country.	Trade. (£A. Million).			Trade per Head of Population. (£A.)

1955(a) ..	863,019	779,237	2,391	20,357	865,410	799,594

(a) Subject to revision.

**§ 18. Excise.**

Although excise goods have no immediate bearing on overseas trade, the rates of excise duty are in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of Customs and Excise Revenue are shown in Chapter XX.—Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the years 1953-54 and 1954-55.

**QUANTITIES OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY  
WAS PAID : AUSTRALIA.**

### § 19. Interstate Trade.

Prior to the federation of the Australian Colonies (now States), each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (Section 93). On the expiry of the "book-keeping" period, these records were discontinued as from 13th September, 1910, and the latest published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States.

At the Conference of Statisticians held in January, 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities.

Interstate trade statistics are published in detail for Queensland and Western Australia by the Government Statisticians in those States. Detailed statistics are also available for Tasmania, prepared by the Deputy Commonwealth Statistician in that State. The Government Statist for South Australia publishes some figures for that State, made up from the records of Western Australia and Tasmania and from various other sources. The statistics of interstate trade for New South Wales and Victoria are very meagre. The Melbourne Harbour Trust publishes, in its annual report, the quantities of various commodities of interstate trade loaded and discharged in the Port of Melbourne. The trade with individual States is not disclosed.

### § 20. The Australian Balance of Payments.

1. General.—Estimates of the Australian balance of payments are of particular importance as an aid to the analysis of Australian economic conditions in view of the marked effect which fluctuations in international commerce tend to exercise on the level of activity in the Australian economy.

Comprehensive estimates of Australia's balance of payments will be found in *The Australian Balance of Payments 1928-29 to 1951-52*, which contains a full explanation of the principles on which the estimates are based and the techniques employed in their compilation. Full details are also given therein of the adjustments made to recorded trade statistics to arrive at statistics of exports and imports, adjusted for balance of payments purposes, as shown in tables in this section. Continuous investigations are conducted with a view to improving the methods of estimation employed, and further revisions to current estimates may be necessary as more refined techniques are adopted in the future.

The estimates used on this occasion have been revised in comparison with those presented in Official Year Book No. 41. Particulars of revisions and changes, together with more detailed estimates, will be found in the mimeographed publication "The Australian Balance of Payments, 1950-51 to 1954-55" and in the Appendix.

2. Australia's Balance of Payments on Current Account.—The table below presents estimates of Australia's balance of payments on current account for the years 1952-53 to 1954-55.

**AUSTRALIA : BALANCE OF PAYMENTS ON CURRENT ACCOUNT.**

BALANCE ON CURRENT ACCOUNT . . . . .	191.0	-17.0	-255.8

(a) Preliminary. (b) Includes gold sold on the premium market valued at the price obtained. (c) Total marine insurance premiums payable on Australian imports (whether payable in Australia or overseas) were £2.6 million in 1952-53, £3.4 million in 1953-54 and £4.3 million in 1954-55. (d) Provisional estimate only.

The record of the post-war years has been one of considerable balance of payments instability. The balance of payments on current account, after a deficit of £47 million in 1946-47, improved to a small favourable balance of £4 million in 1947-48 and this was increased to £32 million in 1948-49. However, a deficit of £43 million occurred in

1949-50, followed by a favourable balance of £104 million in 1950-51. A sharp adverse movement of £687 million, due almost entirely to a decrease in exports and an increase in imports (including freight charges), produced an unfavourable balance of £583 million in 1951-52. Increased exports accompanied by a large reduction in imports (import restrictions were imposed in March, 1952) produced a favourable balance of £191 million in 1952-53. A decrease of £34 million in exports and an increase in imports (plus freight) of £164 million (import restrictions were being progressively relaxed) was largely responsible for the unfavourable current balance of £18 million in 1953-54.

There was a further deterioration in 1954-55, resulting in a deficit of £256 million in the balance on current account. Exports fell by £49 million due mainly to a fall of £58 million in exports of wool and sheepskins (partially offset by a rise of £8 million in exports of foodstuffs). Imports increased by £163 million, increases occurring in all classes of commodities.

Invisible credits rose by £13 million between 1953-54 and 1954-55. This was due mainly to an increase of £9 million in expenditure of oversea ships in Australian ports and an increase of £2.5 million in donations and reparations. Invisible debits rose by £38 million between 1953-54 and 1954-55, mainly as the result of increases of £21 million in freight on imports and £6 million in foreign travel. Other items increased to a smaller extent.

The Commonwealth Statistician's Index of Export Prices (excluding gold) which stood at 505 in 1952-53 fell by 2 per cent. to 496 in 1953-54 and by a further 9 per cent. to 450 in 1954-55. The index of the price of wool fell slightly from 616 in 1952-53 to 615 in 1953-54 and fell sharply by 13 per cent. to 538 in 1954-55.

The Index of Australian Import Prices prepared by the Commonwealth Bank of Australia has been revised since the publication of Official Year Book No. 41. Details of this revision may be obtained from the Statistical Bulletin published by the Commonwealth Bank. This index recorded a steady increase in the post-war years up to 1951-52 but fell by 5 per cent. between 1951-52 and 1952-53. A further fall of 2 per cent. was recorded between 1952-53 and 1953-54 but this trend was reversed when the index rose by 1 per cent. between 1953-54 and 1954-55.

Comparison of the index of export prices with the index of import prices indicates that Australia's terms of trade moved favourably in the post-war years, reaching an extremely favourable level in 1950-51; however, the fall in the price of wool produced an adverse movement of 36 per cent. between 1950-51 and 1951-52. The terms of trade improved by 8 per cent. between 1951-52 and 1952-53 and remained constant between 1952-53 and 1953-54. There was again a deterioration from 1953-54 to 1954-55, amounting to 10 per cent.

3. Australia's Balance of Payments on Capital Account.—The table on page 318 sets out estimates of Australia's balance of payments on capital account for the years 1952-53 to 1954-55.

The balance of payments on capital account records the net changes over specified periods in Australia's international assets and liabilities. In theory, the balance of payments on current account and the balance of payments on capital account together constitute a complete system of accounts, on the double-entry principle, recording Australia's international economic transactions, and the favourable (unfavourable) balance on current account should coincide with the net increase (decrease) in assets shown in capital account.

In practice it is necessary to introduce a "balancing item" (see item 21 in the table on page 318) in the capital account in order to make that account balance at the same figure as the current account. This balancing item is to a certain extent due to errors and omissions in other sections of the estimates but it is believed to be due mainly to movements in short-term funds and to timing differences between the statistical recording of exports and imports and the crediting or debiting of the payments for these transactions against Australia's international reserves.

(a) Preliminary. (b) Provisional estimate only. (c) Not available—included in balancing item.

NOTE.—Minus sign (-) denotes decrease.

The individual items in the table may be conveniently examined in groups.

Items 5 and 15 record transactions on capital account between Australia and the Joint Organization (Wool). The assets item consists of the share of Joint Organization profits on the sale of Australian wool accruing each year (less any disbursements of profits to Australia) and the liabilities item is the change in Joint Organization investments in Australia each year. Joint Organization transactions ended in 1952-53.

Item 10 records movements in public authority debt domiciled overseas between 1952-53 and 1954-55. A small repayment of this debt (due mainly to sinking fund operations) was made in 1952-53, but in 1953-54 there was a substantial net reduction

of £10.1 million. This net reduction consisted of the redemption of \$30 million (£13.4 million) of securities domiciled in New York, a reduction of £2.8 million of other debt from sinking fund operations and an increase of £6.1 million following the negotiation of a loan from Switzerland.

A net increase of £1.1 million occurred in 1954-55. Net redemptions in New York were \$15 million (£6.7 million) while a second loan of £6.1 million was received from Switzerland. After allowing for the appropriate portion of the redemption just mentioned and for other sinking fund transactions State debt domiciled overseas increased by £0.4 million (net). The movement included loans extended to South Australia by the Export-Import Bank, Washington, and by the United Kingdom Atomic Energy Commission, to assist in the development of uranium projects.

Item 12 records drawings of \$40 million in 1952-53, \$48 million in 1953-54 and \$53 million in 1954-55 under loans made to Australia by the International Bank for Reconstruction and Development.

Item 13 shows the changes in Australia's liability in respect of purchases of dollars from the International Monetary Fund. In 1949-50, \$20 million (£8.9 million) were purchased from the Fund and a second purchase of \$30 million (£13.4 million) was made in 1952-53. In 1953-54 repayment of these purchases was commenced with instalments totalling \$24 million (£10.7 million) and repayment was completed in 1954-55 with further instalments of \$26 million (£11.6 million).

Australia's international reserves (items 7 and 8) rose by £189 million during 1952-53. A small increase of £10 million was recorded in 1953-54 but reserves fell by £142 million in 1954-55 to a level of £428.3 million at the end of June, 1955.

Net direct investment (excluding undistributed income), net portfolio investment, net private investment in government securities, net remittances of life assurance offices and the balancing item\* may be conveniently grouped for examination as "private capital movements and balancing items". As mentioned above, the "balancing item" is believed to consist predominantly of various types of private capital movements which cannot be identified from available statistics.

The transactions included in this group resulted in a net outflow of funds of £45 million in 1952-53. This was the first recorded outflow in the post-war period and was to some extent due to delayed payments for part of the record total of imports which arrived in 1951-52. In 1953-54 this group of transactions resulted in a small inflow of £4 million while in 1954-55 there was an apparent inflow of £69 million.

Other items in capital account are of minor importance.

4. Australia's Balance of Payments on Current Account—Various Countries and Monetary Areas.—There was a deterioration of £209 million between 1952-53 and 1953-54 in Australia's balance on current account. This was largely accounted for by a deterioration of £186 million for the sterling area and £25 million for the "other" non-sterling area, while there was a favourable movement of £2 million in the balance for the dollar area. The balance on current account with the United Kingdom decreased by £172 million due to a 15 per cent. fall in the value of exports and a 55 per cent. rise in the value of imports. The small improvement in the balance with the dollar area was due to the reduced flow of imports from the United States of America and a rise in exports to Canada and other dollar area countries.

Between 1953-54 and 1954-55 there was a further deterioration in Australia's balance on current account. The movement affected all the countries and monetary areas shown in the table with the exception of countries included in "Other Dollar Area". Exports to countries of the Organization for European Economic Co-operation (see page 292) declined by £22.6 million, principally as a result of the fall in wool prices, while imports increased by £30.5 million. As a result Australia's current account balance with this area fell from a credit of £105.8 million in 1953-54 to a credit of £53.4 million in 1954-55. Exports to other non-dollar, non-sterling countries also fell in 1954-55, while imports increased, and whereas in 1953-54 Australia had a credit balance of £45.4 million with these countries, in 1954-55 this had changed to a debit balance of £2.4 million.

\* Items 2 (i) (ii), 2 (ii) (ii), 3, 4, 16 (i) (ii), 16 (ii) (ii), 17, 18, 19 and 21.

Exports to the sterling and dollar areas remained relatively unchanged between 1953-54 and 1954-55 but imports from the United Kingdom and "other" sterling area countries rose by £45.5 million and £31.8 million respectively. There was a similar movement in imports from the United States of America; these increased by £30.8 million in 1954-55. In addition the "invisible" deficits with the sterling and dollar areas continued to grow larger. In 1953-54 Australia's deficits on current account with the sterling and dollar areas were £111.6 million and £74.3 million respectively and in 1954-55 deficits of £207.3 million with the sterling area and £116.0 million with the dollar area were recorded. These changes in 1954-55 reflect mainly the fall in wool prices and increased imports from all sources following the progressive easing of import licensing.

(a) For a list of the countries included in each monetary area see page 292.

(b) Includes international bodies.

NOTE.—Minus sign (—) denotes debit; other items are credits.

5. Australia's Balance of Payments with the Dollar Area.—The estimates of the balance of payments with the dollar area included in the previous table are on a purely geographic basis and no attempt has been made to classify transactions according to the currency in which payment was made.

The table on page 322 gives a detailed estimate in respect of dollar currency transactions. This table includes the trade statistics and invisible items included in the former table, but in addition it includes in "Other items (net)" (see item 16 in table on

page 322) several items which make allowance for the fact that not all Australian transactions with the dollar area involve dollar receipts or payments and that some dollar receipts or payments are involved in Australian transactions with countries outside the dollar area, and with international bodies.

Principal among these transactions are receipts of dollars for exports to non-dollar countries (e.g., sales of gold on premium markets); interest payments to sterling area holders of Australian dollar bonds (included in total dollar interest payments in item 13); dollar payments to international bodies; and the difference between the estimated dollar component of Australia's imports of petroleum products from all sources and the estimated c.i.f. value of her direct imports of petroleum products from the dollar area. The statistics in the table are presented in terms of United States dollars.

In 1952-53 Australia's balance of payments on current account with the dollar area disclosed a deficit of \$125 million. In 1953-54 the deficit increased to \$164 million and in 1954-55 there was another sharp deterioration to a deficit of \$242 million.

Principally as a result of reduced imports from the United States of America there was an improvement of \$30 million in Australia's trade balance with the dollar area between 1952-53 and 1953-54. This improvement was more than offset by a deterioration in the invisible balance. Contributing factors were increases of \$23.4 million and \$10.1 million in two investment income items (remitted profits and dividends (item 11) and undistributed income (item 12)) and a fall in item 16 (other items—net) from net receipts of \$46.3 million in 1952-53 to net receipts of \$2.4 million in 1953-54. This latter movement was due principally to a decline in Australian gold sales on the premium market and to an unfavourable movement in the difference between the c.i.f. value of direct imports of petroleum from the dollar area and the estimated dollar component of all Australian petroleum imports.

On investment account, \$32 million of securities domiciled in New York were redeemed in 1953-54, compared with comparatively small sinking fund redemptions in 1952-53. Private capital inflow fell to \$9 million in 1953-54 compared with \$37 million in 1952-53.

The balance on investment account was plus \$15 million in 1953-54 and this, combined with an unfavourable current account balance of \$164 million, led to a dollar deficit of \$149 million in 1953-54—\$86 million greater than in 1952-53. In 1953-54 this deficit was financed by loans of \$24 million (net) from international institutions and drawings of \$97 million on the Sterling Area Dollar Pool.

Exports to the dollar area fell only slightly between 1953-54 and 1954-55 but there was a substantial rise in imports from the United States of America and Canada, with the result that the trade deficit with dollar countries increased to \$141 million.

The unfavourable invisible balance which had grown larger in 1953-54 fell slightly in 1954-55. Important movements in invisibles were confined to freight, which rose from \$22.8 million to \$31.5 million as a result of greatly increased imports, and receipts from "other items (net)", which rose by \$15.9 million.

The investment account shows that \$11 million of securities domiciled in New York were redeemed during 1954-55. Although this represents a high rate of redemption compared with most years it was considerably less than in 1953-54 when securities to the value of \$32 million were redeemed. Private capital inflow (including errors and omissions) was estimated at \$80 million in 1954-55 compared with \$9 million in the previous year. Together with undistributed income, provisionally estimated at \$38 million, this large inflow more than offset the deterioration of \$78 million which occurred in Australia's balance on current account in 1954-55 and Australia's dollar deficit, which was \$149 million in 1953-54, was reduced to \$135 million in 1954-55.

The final section of the table shows how Australia's dollar deficit was financed. In 1954-55 Australia received \$27 million (net) from international institutions. This was \$3 million greater than in the previous year. However, Australia's dollar balances which were run down by \$28 million in 1953-54 increased by \$11 million in 1954-55. Australia's estimated drawings from the Sterling Area Dollar Pool, which were \$97 million in 1953-54, increased by \$22 million to \$119 million in 1954-55.

## CHAPTER IX.

## MANUFACTURING INDUSTRY.

## § 1. General.

1. **Introduction.**—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given owing to the fact that prior to 1906 the necessary statistics were not collected by the several States on a definite and uniform basis. A standard classification of manufacturing industries was formulated at a conference of Australian Statisticians in 1902 and adopted by all States in 1906. Figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was primarily engaged in the production of goods for local use, mainly of food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914-18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia.

A check was made in this expansion by the world-wide economic depression of 1929-33, but subsequently returning general prosperity and the opportunities opened to local manufacturers by import restrictions, together with depreciation of Australian currency, gave renewed stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez and in meeting these demands, as well as those arising locally because of interruption of oversea importations, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibilities for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but after 1945-46 there was renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

2. **Decentralization of Manufacturing Industries.**—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945 to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy affecting the development and location of industry, to investigate in association with the States the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth has assisted decentralization by allocating to private industry munitions and other defence buildings in decentralized areas and accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

3. **Commonwealth Division of Industrial Development.**—The functions of the Division of Industrial Development (formed in February, 1945 as the Secondary Industries Division of the Department of Post-war Reconstruction) were extended in August, 1948 to include the encouragement of industrial development, the exercising of Commonwealth responsibilities for the decentralization of industry, the promotion of industrial efficiency (especially the study of technical, production and managerial problems and the dissemination and application of new knowledge and methods), the encouragement of the development of technological institutes and the publication of studies of the structure and operation of Australian manufacturing industries. The Division was attached to the Ministry of National Development when formed in March, 1950 to plan the development of national resources and to promote decentralization and regional development in conjunction with the States.

At the same time the Secondary Industries Commission which was established in 1943 to investigate post-war uses for munitions factories, to plan for the transition of secondary industries from war-time to peace-time activities, and generally to seek to increase industrial efficiency and to explore opportunities for new industries was disbanded in April, 1950.

4. **Customs and Excise Tariffs and Bounties on Manufactures.**—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter VIII.—Trade.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The Statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

5. **Scientific Research and Standardization.**—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization, reference to which also appears in Chapter XXIX., is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research studentships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research.

(ii) *The Standards Association of Australia.* This Association, which is referred to also in Chapter XXIX., acts as the national standardizing organization of Australia and issues standard specifications for materials and codes of practice. Specifications and codes are prepared and revised periodically in accordance with the needs of industry, and standards are evolved and accepted by general consent.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes national testing facilities throughout Australia to serve private and governmental needs. Laboratories may register voluntarily in respect of tests within their competence and the Association ensures the maintenance of their standards of testing. It is expected that there will be general acceptance of certificates of tests issued in the name of the Association by the registered laboratories.

6. *Definitions in Factory Statistics.*—The statistics relating to factories have been compiled from returns supplied annually by manufacturers to, and tabulated by, the several State Statisticians, in the terms of the Statistical Acts of the States. A return must be supplied in respect of every factory, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries) but does not cover smallgoods makers, laundries, furriers, photography studios, florists and seedsmen, and most abattoirs. It should be noted that details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials and fuel used, and quantities and values of principal materials and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income or expenditure of factories nor to show the profits or losses of factories collectively or individually.

The *average number of persons* employed is quoted on two different bases: the average during the period of operation and the average over the whole year. Of these the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel, and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw materials of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of Government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

7. **Classification of Factories.**—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian Statisticians in 1902 and revised from time to time, was used until the year 1929-30. A new classification was introduced in 1930-31, and this in turn was revised and extended (principally in regard to the placement and composition of sub-classes) in accordance with decisions of the Statisticians' Conference, 1945.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or total factory activity. Particulars of certain of the sub-classes shown below are published in the latter portion of this chapter and full details for all sub-classes may be found in the *Secondary Industries Bulletin*, published annually.

The principal classes and sub-classes in the current classification of factories are as follows :—

### CLASSIFICATION OF FACTORIES.

#### CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS.

Coke Works.  
Briquetting and Pulverized Coal.  
Carbide.  
Lime, Plaster of Paris, Asphalt.  
Fibrous Plaster and Products.  
Marble, Slate, etc.  
Cement.  
Asbestos Cement Sheets, etc.  
Other Cement Goods.  
Other.

#### CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and Tiles, Fire Bricks and Fire-clay Goods.  
Earthenware, China, Porcelain, Terra-cotta.  
Glass (other than Bottles).  
Glass Bottles.  
Other.

#### CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE.

Industrial and Heavy Chemicals and Acids.  
Pharmaceutical and Toilet Preparations.  
Explosives.  
White Lead, Paints, Varnish.  
Oils, Vegetable.  
Oils, Mineral.  
Oils, Animal.  
Boiling Down, Tallow Refining.  
Soap and Candles.  
Chemical Fertilizers.  
Inks, Polishes, etc.  
Matches.  
Other.

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES.

Smelting, Converting, Refining and Rolling of Iron and Steel.  
Foundries—Ferrous.  
Plant, Equipment and Machinery.  
Other Engineering:  
Extracting and Refining of other Metals, Alloys.  
Electrical Machinery, Cables and Apparatus.  
Construction and Repair of Vehicles (no groups).  
Ship and Boat Building and Repairing, Marine Engineering.  
Cutlery and Small Hand Tools.  
Agricultural Machines and Implements.  
Non-Ferrous Metals—  
Rolling and Extrusion.  
Foundries, Casting, etc.  
Iron and Steel Sheets.  
Sheet Metal Working, Pressing, and Stamping.  
Pipes, Tubes and Fittings—Ferrous.  
Wire and Wire Netting (including Nails).  
Stoves, Ovens and Ranges.  
Gas Fittings and Meters.  
Lead Mills.

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—continued.

Sewing Machines.  
Arms, Ammunition (excluding Explosives).  
Wireless and Amplifying Apparatus.  
Other Metal Works.

#### CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE.

Jewellery.  
Watches and Clocks (including Repairs).  
Electroplating (Gold, Silver, Chromium).

#### CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS).

Cotton Ginning.  
Cotton Spinning and Weaving.  
Wool—Carding, Spinning, Weaving.  
Hosiery and other Knitted Goods.  
Silk, Natural.  
Rayon, Nylon and other Synthetic Fibres.  
Flax Mills.  
Rope and Cordage.  
Canvas Goods, Tents, Tarpaulins, etc.  
Bags and Sacks.  
Other.

#### CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR).

Furriers and Fur Dressing.  
Woolscouring and Fellmongery.  
Tanning, Currying, and Leather Dressing.  
Saddlery, Harness, Whips.  
Machine Belting.  
Bags, Trunks, etc.

#### CLASS VIII.—CLOTHING (EXCEPT KNITTED).

Tailoring and Ready-made Clothing.  
Waterproof and Oilskin Clothing.  
Dressmaking.  
Millinery.  
Shirts, Collars, Underclothing.  
Foundation Garments.  
Handkerchiefs, Ties, Scarves.  
Hats and Caps.  
Gloves.  
Boots and Shoes (not rubber).  
Boot and Shoe Repairing.  
Boot and Shoe Accessories.  
Umbrellas and Walking Sticks.  
Dyeworks and Cleaning.  
Other.

#### CLASS IX.—FOOD, DRINK AND TOBACCO.

Flour Milling.  
Cereal Foods and Starch.  
Animal and Bird Foods.  
Chaffcutting and Corn Crushing.  
Bakeries (including Cakes and Pastry).  
Biscuits.  
Sugar Mills.

CLASS IX.—FOOD, DRINK AND TOBACCO—  
*continued.*

Sugar Refining.  
Sugar Confectionery (including Chocolate).  
Jam, Fruit and Vegetable Canning.  
Pickles, Sauces, Vinegar.  
Bacon Curing.  
Butter Factories.  
Cheese Factories.  
Condensed and Dried Milk Factories.  
Margarine.  
Meat and Fish Preserving.  
Condiments, Coffee, Spices, etc.  
Ice and Refrigerating.  
Salt Refining.  
Aerated Waters, Cordials, etc.  
Breweries.  
Distilleries.  
Wine Making.  
Cider and Perry Making.  
Malting.  
Bottling.  
Tobacco, Cigars, Cigarettes, Snuff.  
Dehydrated Fruit and Vegetables.  
Ice-cream.  
Sausage Skins.  
Arrowroot.  
Other.

CLASS X.—SAWMILLS, JOINERY, BOXES, ETC.,  
WOOD TURNING AND CARVING.

Sawmills.  
Plywood and Veneer Mills.  
Bark Mills.  
Joinery.  
Cooperage.  
Boxes and Cases.  
Basketware and Wickerware (including Sea-grass and Bamboo Furniture).  
Perambulators.  
Wall and Ceiling Boards (not Plaster or Cement).  
Other.

## CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.

Billiard Tables, Cabinet and Furniture Making and Upholstery.  
Bedding and Mattresses.  
Furnishing Drapery, etc.

CLASS XII.—FURNITURE OF WOOD, BEDDING,  
ETC.—*continued.*

Picture Frames.  
Blinds.  
Other.

CLASS XIII.—PAPER, STATIONERY, PRINTING,  
BOOKBINDING, ETC.

Newspapers and Periodicals.  
Printing—  
Government.  
General, including Bookbinding.  
Manufactured Stationery.  
Sterotyping and Electrotyping.  
Process and Photo Engraving.  
Cardboard Boxes, Cartons and Containers.  
Paper Bags.  
Paper Making.  
Pencils, Penholders, Chalks, Crayons.  
Other.

## CLASS XIV.—RUBBER.

Rubber Goods and Tyres Made.  
Tyre Retreading and Repairing.

## CLASS XV.—MUSICAL INSTRUMENTS

Gramophones and Gramophone Records.  
Pianos, Piano-Players, Organs.  
Other.

## CLASS XVI.—MISCELLANEOUS PRODUCTS.

Linoleum, Leather Cloth, Oil Cloth, etc.  
Bone, Horn, Ivory and Shell.  
Plastic Moulding and Products.  
Brooms and Brushes.  
Optical Instruments and Appliances.  
Surgical and other Scientific Instruments and Appliances.  
Photographic Materials, including Developing and Printing.  
Toys, Games and Sports Requisites.  
Artificial Flowers.  
Other.

## CLASS XVII.—HEAT, LIGHT, AND POWER

Electric Light and Power.  
Gas Works.

8. Factory Development since 1901—Australia.—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table :—

## FACTORIES : AUSTRALIA.

Year.	Fac- tories.	Employ- ment.(a)	Salaries and Wages Paid.(b)	Value of—				
				Materials and Fuel Used.	Output.	Pro- duction. (c)	Land and Build- ings.	Plant and Ma- chinery.
	No.	'000.	£'000.	£'000.	£'000.	£'000.	£'000.	£'000.
	(d)		(d)	(d)	(d)	(d)	(d)	(d)
1901 .. ..	11,143	198	11,143	81,763	133,022	51,259	32,701	31,516
1911 .. ..	14,455	312	27,528	213,579	323,993	110,434	60,831	68,655
1920-21 .. ..	17,113	367	62,932	172,489	290,799	118,310	112,211	124,498
1930-31 .. ..	21,751	339	62,455	297,003	500,420	203,417	130,920	143,662
1938-39 .. ..	26,941	565	106,743	515,324	867,648	352,324	186,039	185,545
1945-46 .. ..	31,184	745	205,819	856,609	1,425,378	568,769	232,740	246,494
1948-49 .. ..	40,070	890	339,219	983,924	1,645,456	661,532	259,549	285,602
1949-50 .. ..	41,596	917	385,797	1,306,963	2,150,835	843,872	302,785	336,615
1950-51 .. ..	43,147	960	491,718	1,609,839	2,634,706	1,024,867	359,490	410,144
1951-52 .. ..	45,844	978	611,789	1,637,142	2,720,004	1,082,862	414,446	493,534
1952-53 .. ..	47,740	933	635,245	1,868,431	3,095,476	1,227,045	484,431	580,715
1953-54 .. ..	49,576	990	705,137					

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (b) Excludes drawings by working proprietors. (c) Value of output less value of materials and fuel, etc., used. (d) Not available.

Single year tables in this issue relate to the year 1953-54 and in the immediately preceding issue to the year 1951-52. Corresponding tables for 1952-53 may be found in the *Secondary Industries Bulletin* 1952-53, No. 47.

## § 2. Number of Factories.

1. Number of Factories in each State.—The following table shows the number of factories operating in each State in the years 1938-39 and 1948-49 to 1953-54 :—

FACTORIES : NUMBER.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39 ..	9,464	9,250	3,087	2,067	2,129	944	26,941
1948-49 ..	16,087	12,702	4,083	2,927	2,925	1,346	40,070
1949-50 ..	16,346	13,231	4,494	3,046	3,023	1,456	41,596
1950-51 ..	17,129	13,504	4,776	3,141	3,111	1,486	43,147
1951-52 ..	18,144	14,758	4,918	3,245	3,267	1,512	45,844
1952-53 ..	19,251	15,154	5,068	3,339	3,424	1,504	47,740
1953-54 ..	20,199	15,533	5,199	3,577	3,523	1,545	49,576

2. Number of Factories in Industrial Classes.—(i) *Australia*. The next table shows the number of factories in Australia during 1938-39 and 1949-50 to 1953-54 classified in the industrial classes agreed upon by the Conference of Statisticians in 1930. This classification, which was introduced during 1930-31, superseded the grouping which had been in use since 1902. Details of some of the principal industries included in the table will be found in § 11, page 359.

FACTORIES : NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA.

Class of Industry.	1938-39.	1949-50.	1950-51.	1951-52.	1952-53.	1953-54.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	564	1,126	1,235	1,316	1,276	1,280
II. Bricks, Pottery, Glass, etc. ..	471	561	583	601	623	639
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	666	1,006	1,020	1,049	1,090	1,099
IV. Industrial Metals, Machines, Conveyances ..	7,255	12,362	13,106	14,513	15,672	16,868
V. Precious Metals, Jewellery and Plate ..	290	619	629	662	681	720
VI. Textiles and Textile Goods (not Dress)	611	1,155	1,190	1,246	1,270	1,336
VII. Skins and Leather (not Clothing or Footwear) ..	533	751	761	785	778	783
VIII. Clothing (except Knitted) ..	4,314	6,620	6,684	6,989	7,036	7,260
IX. Food, Drink and Tobacco ..	5,202	6,796	6,865	7,033	7,248	7,379
X. Sawmills, Joinery, Boxes, etc., Wood Turning and Carving ..	2,822	4,893	5,165	5,546	5,790	5,769
XI. Furniture of Wood, Bedding, etc. ..	1,149	1,820	1,936	2,052	2,157	2,180
XII. Paper, Stationery, Printing, Book-binding, etc. ..	1,816	1,981	2,010	2,084	2,121	2,179
XIII. Rubber ..	299	404	411	430	446	465
XIV. Musical Instruments ..	34	59	66	68	69	75
XV. Miscellaneous Products ..	413	985	1,032	1,039	1,035	1,095
Total, Classes I. to XV. ..	26,439	41,138	42,693	45,413	47,292	49,127
XVI. Heat, Light and Power ..	502	458	454	431	448	449
Grand Total ..	26,941	41,596	43,147	45,844	47,740	49,576

Although not the best index of manufacturing activity, the number of factories affords some indication of the development of secondary industries. Except for the two war years 1941-42 and 1942-43, when there were decreases, the number of factories increased each year from 1931-32 to 1953-54; in the latter year the number of factories in Australia reached the record total of 49,576 or 84.0 per cent. greater than in 1938-39.

(ii) *States, 1953-54.* The following table shows the number of factories in each State classified according to the nature of the industry :—

**FACTORIES : NUMBER IN INDUSTRIAL CLASSES, 1953-54.**

Class of Industry.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	427	427	88	168	119	51	1,280
II. Bricks, Pottery, Glass, etc. ..	308	150	54	60	50	17	639
III. Chemicals, Dyes, Explosives, Paints, Oils and Grease ..	543	340	66	74	52	24	1,099
IV. Industrial Metals, Machines, Conveyances ..	7,010	5,101	1,737	1,327	1,264	429	16,868
V. Precious Metals, Jewellery and Plate ..	317	240	41	50	66	6	720
VI. Textiles and Textile Goods (not Dress) ..	477	731	31	45	40	12	1,336
VII. Skins and Leather (not Clothing or Footwear) ..	351	294	55	42	32	9	783
VIII. Clothing (except Knitted) ..	3,304	2,560	536	381	407	72	7,260
IX. Food, Drink and Tobacco ..	2,675	2,089	1,051	675	585	304	7,379
X. Sawmills, Joinery, Boxes, etc., Wood Turning and Carving ..	2,265	1,411	873	315	440	465	7,769
XI. Furniture of Wood, Bedding, etc. ..	765	709	290	161	172	83	2,180
XII. Paper, Stationery, Printing, Book-binding, etc. ..	917	702	187	133	117	33	2,179
XIII. Rubber ..	176	133	63	46	28	19	465
XIV. Musical Instruments ..	35	24	5	6	5	..	75
XV. Miscellaneous Products ..	506	431	52	47	49	10	1,095
Total Classes I. to XV. ..	20,076	15,432	5,129	3,530	3,426	1,534	49,127
XVI. Heat, Light and Power ..	123	101	70	47	97	11	449
Grand Total ..	20,199	15,533	5,199	3,577	3,523	1,545	49,576

### § 3. Classification of Factories according to Number of Persons Employed.

1. *General.*—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors). Prior to 1945-46 there was no dissection of the "over 100 employees" group, but for that and subsequent years this group was subdivided into the seven size groups as shown in the table below.

2. *States, 1953-54.*—The following table shows, for each State, the number of factories classified according to the average number of persons employed :—

**FACTORIES : CLASSIFICATION ACCORDING TO SIZE OF FACTORY, 1953-54.**

Size of Factory (Persons employed).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Aust.
NUMBER OF FACTORIES.							
Under 4 ..	7,788	5,474	1,714	1,128	1,559	640	18,303
4 ..	1,655	1,251	496	329	166	162	4,059
5 to 10 ..	5,043	3,841	1,480	960	888	391	12,603
11 to 20 ..	2,646	2,179	686	533	454	168	6,666
21 to 50 ..	1,825	1,660	495	371	279	116	4,746
51 to 100 ..	648	572	158	132	110	37	1,657
101 to 200 ..	322	307	85	63	44	15	836
201 to 300 ..	92	109	50	28	14	6	299
301 to 400 ..	44	41	13	8	6	1	113
401 to 500 ..	34	30	6	7	..	3	80
501 to 750 ..	43	39	8	7	1	2	100
751 to 1,000 ..	23	12	4	3	1	1	44
Over 1,000 ..	36	18	4	8	1	3	70
Total ..	20,199	15,533	5,199	3,577	3,523	1,545	49,576

The relative importance of large and small factories is illustrated by a classification of the average number of persons employed according to the size of factory in which they work :—

**FACTORIES : CLASSIFICATION OF PERSONS EMPLOYED ACCORDING TO SIZE OF FACTORY, 1953-54.**

Size of Factory (Persons employed).	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
<b>AVERAGE NUMBER EMPLOYED DURING PERIOD WORKED.</b>							
Under 4 .. ..	14,927	10,725	3,600	2,408	3,237	1,292	36,189

### § 4. Power Equipment in Factories.

1. General.—In 1936-37 statistics of power equipment in factories were collected on a basis different from that previously in use. Information now obtained relates to the "rated horse-power" of engines ordinarily in use and of engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of Central Electric Stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between Central Electric Stations and other classes of industries. In the following tables Central Electric Stations have been treated separately from other factories.

In para. 2 below, 555 factories are shown in 1953-54 as using no power other than hand-power, the distribution of these factories among the various industries being as follows:—Fibrous Plaster and Products, 33; Galvanized Ironworking, Tinsmithing, 23; Tailoring and Ready-made Clothing, 128; Dressmaking, 26; Millinery, 13; Bakeries, 56; Cabinet and Furniture Making, 12; all other industries, 264.

2. Rated Horse-power of Engines in Factories other than Central Electric Stations.—The following table shows the number of factories using power-driven machinery, those using manual labour only, and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1953-54:—

**FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1953-54.**

State.	Number of Establishments.(a)			Rated Horse-power of Engines and Motors.(a)	
	Using Power.	Others.	Total.	Ordinarily in use.(b)	In Reserve or Idle (omitting obsolete).
New South Wales .. ..	20,089	26	20,115	1,598,121	290,824
Victoria .. ..	15,362	104	15,466	1,089,697	155,315
Queensland .. ..	4,976	169	5,145	426,868	55,672

## § 5. Employment in Factories.

1. *Number Employed.*—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and “outworkers” (see para. 4 (ii), page 337), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen are excluded. Prior to 1945-46 the occupational grouping collected was (i) working proprietors; (ii) managers and overseers; (iii) accountants and clerks; (iv) enginedrivers and firemen; (v) workers in factory, skilled and unskilled; (vi) carters and messengers; and (vii) persons working regularly at home for the establishment. This grouping did not record separate details for technical staff (e.g., chemists, draftsmen, etc.) and supervisory staff and in 1945-46 the set-up on the collection form was amended to obtain the following groupings :—(i) Working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home.

Prior to the year 1928–29 average employment in factories was computed by dividing the sum of the number employed each week by the number of weeks worked. The figures therefore represented the average number employed over the period worked, which, for many factories, was less than a full year. Commencing with the year 1928–29 the figures represent the equivalent average number employed over a full year of fifty-two weeks. The classification of factories according to the number of persons employed (*see* § 3, page 329), however, is still based on the old method, but for all other purposes the average number engaged over the full year is used.

(ii) *Australia.* Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for the years 1938–39 and 1948–49 to 1953–54 in the following table:—

#### FACTORIES : EMPLOYMENT, AUSTRALIA.

XV. Miscellaneous Products	8,659	8,937	607	797	380	185	19,565
Total. Classes I. to XV.	395,022	327,120	96,396	83,868	46,297	197	974,006
XVI. Heat, Light and Power	6,673	4,151	1,723	1,635	1,162	102	15,536
Grand Total	402,595	331,277	98,119	85,503	47,459	24,589	989,542

4. *Persons Employed According to Occupational Grouping.*—(i) *General.* In the following table the average number of persons employed in each State during 1953-54 are classified according to their occupational grouping. As mentioned previously, persons employed in factories are now classified on a basis different from that adopted prior to 1945-46. The nature of this change is indicated in § 5, para. 1, above.

**FACTORIES : PERSONS EMPLOYED—OCCUPATIONAL GROUPING, 1953-54.**

State.	Average Number of Persons Employed.						Total.
	Working Proprietors.	Managerial and Clerical Staff, etc.(a)	Chemists, Draftsmen, etc.	Foremen and Overseers.	Workers in Factory (Skilled and Unskilled).	Carters (excluding Delivery only) and Messengers, etc. (b)	
New South Wales ..	15,611	44,663	5,353	16,816	317,532	2,620	402,595
Victoria ..	13,722	33,789	4,299	14,193	262,916	2,358	331,277
Queensland ..	4,609	8,981	834	3,454	79,585	656	98,119
South Australia ..	2,602	9,491	1,236	3,639	68,156	379	85,503
Western Australia	2,539	3,647	308	1,855	38,993	117	47,459
Tasmania ..	928	2,389	373	1,036	19,740	123	24,589
Total Males ..	35,914	63,866	11,475	37,948	604,250	5,055	758,508
Total Females ..	4,097	39,094	928	3,045	182,672	1,198	231,034
Total Persons ..	40,011	102,960	12,403	40,993	786,922	6,253	989,542

(a) Includes salaried managers and working directors. at home.

(b) Includes persons working regularly

(ii) *Outworkers.* The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and embraces only persons to whom work is given out by factories to be done at home. Owing to the amended employment groupings adopted in 1945-46 (see § 5. 1.) persons working regularly at home for factories are now included with carters, messengers and others and separate details are no longer available. The number of "outworkers" employed by factories in 1944-45 was 1,049.

5. *Monthly Employment, 1938-39 and 1949-50 to 1953-54.*—(i) *Australia.* The following table shows the number of persons (excluding working proprietors) employed in factories on the pay-day nearest to the 15th of each month for years up to 1949-50 and on the last pay-day of the month thereafter.

**FACTORIES: MONTHLY EMPLOYMENT, AUSTRALIA.**

6. Distribution of Employees According to Age.—The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, permits of a distribution of employees (excluding working proprietors) into seven age-groups from 1945-46 onwards, instead of three as in previous years. The particulars are collected as at June. The numbers employed in each age-group on the last pay-day in June, 1953 and 1954 are given below :—

FACTORIES : DISTRIBUTION OF EMPLOYEES ACCORDING TO AGE, JUNE, 1953  
AND 1954.

(EXCLUDING WORKING PROPRIETORS.)

Age Group.	June, 1953.			June, 1954.

### § 6. Sex Distribution in Factories.

1. *Distribution According to Sex of Persons Employed.*—(i) *General.* In New South Wales the ratio of the number of females engaged in factories to the number of males during 1886 was about one to seven; in 1891 one to six; in 1903 it became about one to four; and in 1951-52 was one to three. In Victoria the ratio of females to males during the year 1886 was about one to five. Five years later (1891) it was somewhat less, but in 1896 had increased to about one to three, and in 1951-52 was about two to five. For Australia as a whole the ratio of females employed in factories was highest in 1943-44 at about two females to five males but by 1946-47 the ratio had declined to the level of one female to three males, where it has since remained.

(ii) *Average Number of Males and Females Employed.* The following table shows the average number of males and females employed in factories in each State for 1938-39 and 1949-50 to 1953-54 :—

**FACTORIES: MALES AND FEMALES EMPLOYED.**

State.	1938-39.	1949-50.	1950-51.	1951-52.	1952-53.	1953-54.

NOTE.—Minus sign (—) indicates decrease.

3. **Masculinity of Persons Employed in Factories.**—The extent to which females are employed in the factories of Australia may perhaps be more clearly shown by giving the masculinity of persons employed in each State. The following table shows particulars for the years 1938-39 and 1948-49 to 1953-54 :—

FACTORIES : MASCULINITY(a) OF PERSONS EMPLOYED.

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
1938-39 .. ..	271	208	432	445	415	420	271
1948-49 .. ..	294	248	470	408	475	452	304
1949-50 .. ..	289	248	455	413	480	459	302

1952-53 .. ..	330	279	501	502	587	506	345
1953-54 .. ..	313	266	488	476	576	467	328

(a) Number of males per 100 females.

For a number of years prior to 1926-27 there were on the average 300 males employed in factories for every 100 females, but by 1932-33, as a result of the particularly severe effect of the depression on the heavier industries where males predominate in number, there were only 239 males employed to every 100 females. With the subsequent recovery of employment in the heavier industries the proportion of males per 100 females increased to 271 in 1937-38 and 1938-39. The enlistment of men in the armed services and the expansion of industry and the consequential absorption of women brought about by the 1939-45 War caused a decrease in masculinity from 1938-39 to 1943-44. However, following the cessation of hostilities in 1945 and the return of servicemen to civilian life, the number of females employed in factories declined and masculinity increased, and in 1953-54 there were 328 males to every 100 females employed in factories.

4. **Employment of Females in Particular Industries.**—(i) *General.* The majority of females in manufacturing industries are employed in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1953-54 these industries accounted for 79.68 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 129 females to every 100 males and in Class VIII., Clothing, with 230 females per 100 males. The following tables show the average number of males and females employed in each of these classes in 1953-54 :—

MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1953-54.

Class.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

(a) Number of females per 100 males.

## § 7. Child Labour in Factories.

1. Conditions of Child Labour.—The employment of young persons in factories in the States is regulated by Acts of Parliament, as is the case with the employment of female labour. The object of the restrictions imposed is to ensure, amongst other things, that a proper period shall be devoted to primary education, and that the early years of labour shall not exhaust the worker before the attainment of full growth.

2. Number of Children Employed, 1939, 1953 and 1954.—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The decline in the number of children employed from the peak of 33,553 reached in June, 1940 to 16,522 in June, 1954 which is most marked in all States excepting Western Australia, was probably caused by several factors, including (i) the raising of the school leaving age in New South Wales and Tasmania, (ii) fewer children available for employment owing to the decline in the birth rate which occurred about 1929, and (iii) the high level of employment which enabled parents to keep their children at school beyond the statutory leaving age.

The following table shows the number of children of each sex employed in manufacturing industries in June of the years mentioned.

## FACTORIES : CHILDREN(a) EMPLOYED, JUNE.

State.	1939.			1953.			1954.		
	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.

(a) Excludes working proprietors.

4. Apprenticeship.—In all the States, Acts are in force for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

## § 8. Salaries and Wages Paid and Value of Production.

*Note.*—In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

1. General.—The importance of the manufacturing industries of Australia is indicated by the fact that the total value of the output for 1953–54 was £3,095,476,000, of which amount £1,747,973,000 represented the value of the materials used, including containers, etc., tools replaced and repairs to plant and buildings, and £120,458,000 the value of the power, fuel and light used. The difference between the sum of the last two amounts and the value of the output, namely, £1,227,045,000, represents the value of production as defined by the Conference of Statisticians at Sydney in 1925, i.e., “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production.” The total amount of salaries and wages paid in factories in 1953–54 was £705,136,920. This figure, which excludes amounts drawn by working proprietors, was the highest ever recorded and shows an increase of £69,892,000 or 11 per cent. on that for the previous year.

2. Salaries and Wages Paid.—(i) *In Classes of Industry, 1953–54.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table.

**FACTORIES : SALARIES AND WAGES PAID, 1953-54.**  
(£'000.)

Class of Industry.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of Non-metalliferous Mine and Quarry Products ..	6,345	4,275	1,108	1,230	1,304	516	14,778

1952-53.. ..	728.11	709.15	640.94	724.52	664.59	707.89	710.21
1953-54.. ..	758.65	743.29	678.35	761.27	703.26	734.60	742.62

In comparing the figures in the preceding table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there is a large number of hands employed in Class VIII., Clothing, comprising a relatively high percentage of women and children. The highest average wages per employee in 1953-54 were paid in South Australia, New South Wales and Victoria, in that order.

The average earnings per employee rose annually from 1938-39 to 1943-44 when a record high level of £291 was attained as a result of war-time conditions. In 1944-45 the average dropped to £285 and remained at this level in 1945-46. From 1945-46 average earnings rose each year and in 1953-54 reached a new record level of over £742.

(iii) *Total and Average Earnings of Males and Females, 1938-39 and 1948-49 to 1953-54.* Particulars for these years are given in the table on the following page.

### FACTORIES : TOTAL AND AVERAGE SALARIES AND WAGES—MALES AND FEMALES.

3. Power, Fuel and Light Used.—(i) *In Classes of Industry, 1953-54.* The expenditure by factories on power, fuel and light, including the value of lubricants and water, is of considerable importance; in 1953-54 it amounted to a new high level of £120,458,000, an increase of £11,121,000 as compared with the previous year and nearly eight times the corresponding value in 1938-39. The following table shows the value of power, fuel and light, etc., used in the different classes of industry :—

FACTORIES : VALUE OF POWER, FUEL AND LIGHT USED(a), 1953-54.  
(£'000.)

(a) Includes value of lubricants and water.

4. *Value of Materials Used.*—(i) *In Classes of Industry, 1953-54.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1953-54 reached £1,747,973,000, representing 56.5 per cent. of the value of the final output (see para. 5). The following table shows the value of the materials used in various classes of industry in each State :—

**FACTORIES : VALUE OF MATERIALS USED, 1953-54.**

5. *Value of Output.*—(i) *In Classes of Industry, 1953-54.* The value of the output of factories in the various classes in each State in 1953-54 is shown in the following table. It represents the selling value at the factory of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the real value of factory production (*see para. 6*).

6. Value of Production.—(i) *In Classes of Industry, 1953-54.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production”.

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the “value of output”. All these deductions with the exception of depreciation are included in the items “value of materials used” and “value of fuel used” as defined above. On account of the difficulty experienced in securing accurate figures for depreciation, it was agreed that no deduction should be made on this account for the present. The value of production as given in the following tables is obtained, therefore, by deducting “value of materials used” and “value of fuel used” from the “value of the output”.

The figure thus calculated is, however, not the net value of production. The deduction for depreciation, particulars of which are shown in § 9, para. 4, was recorded as £47,197,000 for 1953-54. Many miscellaneous expenses, such as taxation, insurance, advertising and other sundry charges, have not been taken into account. Therefore, it must not be inferred that when wages and salaries are deducted from the value of production the whole of the “surplus” is available for interest and profit.

The value of factory production therefore approximates “net value added” in the manufacturing process. It amounted in 1953-54 to £1,227 million to which Class IV., Industrial Metals, etc., with £468 million or nearly eight times the value of production of this class in 1938-39, made the greatest contribution. This total value of production in 1953-54 represented an increase of £144 million over the figure for 1952-53 and £1,024 million (503 per cent.) over the value of production recorded in 1938-39.

The following table shows the value of production in 1953-54 in each State for the various classes of industry.

## FACTORIES : VALUE OF PRODUCTION, 1953-54.

(ii) *Total and Averages, 1938-39 and 1948-49 to 1953-54.* The value of production and the amount per person employed and per head of population are shown in the following table. For Australia as a whole the value of production per head of population increased from £29.34 per head in 1938-39 to £137.86 per head in 1953-54. For value per person employed, the increase was not quite so pronounced (from £360 per head in 1938-39 to £1,240 in 1953-54) owing to the considerable increase in the number of persons employed in 1953-54 as compared with 1938-39.

7. Value of Output and Cost of Production.—As the total value of the output for Australia for 1953-54 was recorded as £3,095,476,000 there remained, after payment of £1,747,973,000 for the value of the materials used, £705,137,000 for salaries and wages and £120,458,000 for power, fuel and light, a balance of £521,908,000 to provide for all other costs and overhead expenses such as rent, interest, insurance, pay-roll tax, income tax, depreciation, etc., as well as drawings by working proprietors and profit. The following table gives corresponding particulars for each State for the year 1953-54:—

**FACTORIES : VALUE OF OUTPUT AND COST OF PRODUCTION, 1953-54.**

State.	Materials Used. (a)	Power, Fuel and Light. (b)	Salaries and Wages.	Balance. (Output less Materials, Fuel and Wages.)(c)	Total Value of Output.
VALUE AND COST, ETC. (£'000.)					
New South Wales ..	721,311	58,447	293,586	226,457	1,299,801
Victoria ..	548,111	29,080	236,037	172,277	985,505
Queensland ..	211,451	10,655	63,433	46,822	332,361
South Australia ..	152,590	12,500	63,110	37,111	265,311
Western Australia ..	72,468	6,972	31,590	23,557	134,587
Tasmania ..	42,042	2,804	17,381	15,684	77,911
Australia ..	1,747,973	120,458	705,137	521,908	3,095,476

(a) Includes the value of containers, packing, etc., also the cost of tools replaced and repairs to plant.  
(b) Includes lubricants and water. (c) See paragraph preceding this table.

**§ 9. Value of Land, Buildings, Plant and Machinery.**

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1953-54 :—

**FACTORIES : VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1953-54.**

(£'000.)

Value of—	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia
Land and buildings	196,724	158,389	40,003	36,579	21,739	26,997	483,431
Plant and machinery	233,022	181,058	64,160	46,788	28,195	27,492	580,715
Total ..	429,746	339,447	104,163	83,367	52,934	54,489	1,064,146

(a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. The totals shown in the table consequently do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) *Total for Australia.* The following table shows for Australia as a whole the approximate value of land and buildings occupied in connexion with manufacturing industries for 1938-39, and 1949-50 to 1953-54.

**FACTORIES: VALUE OF LAND AND BUILDINGS(a), AUSTRALIA.**

<b>Grand Total . .</b>	196,724	158,389	40,003	36,579	24,740	26,997	483,431

(a) Includes estimated value of rented premises.

(iii) *Totals in each State.* The following table shows the value of land and buildings in each State for the years 1938-39 and 1948-49 to 1953-54 :—

FACTORIES : VALUE OF LAND AND BUILDINGS.(a)  
(£'000.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39..	57,353	42,026	12,299	8,711	6,814	3,717	130,920
1948-49..	101,241	73,384	18,508	22,218	10,054	7,335	232,740
1949-50..	110,597	84,124	20,806	24,317	11,055	8,650	259,549
1950-51..	130,468	101,326	23,958	23,303	13,380	10,350	302,785
1951-52..	153,662	119,465	28,610	28,507	16,747	12,499	359,490
1952-53..	176,576	135,324	34,720	31,904	20,960	14,962	414,446
1953-54..	196,724	158,389	40,003	36,579	24,739	26,997	483,431

(a) Includes estimated value of rented premises.

Prior to 1929-30 the increase in the value of land and buildings was uninterrupted, rising from £23 million in 1903 to £118 million in 1929-30, a growth of £95 million in 27 years. During the three years ended 1932-33, there was a decline of £12 million to £105.8 million, but since that year the value has risen annually and stood at £483.4 million in 1953-54.

3. Value of Plant and Machinery.—(i) *Total for Australia, 1938-39 and 1949-50 to 1953-54.* The following table shows for Australia the approximate value of plant and machinery used in factories.

FACTORIES : VALUE OF PLANT AND MACHINERY(a), AUSTRALIA.  
(£'000.)

Class of Industry.	1938-39.	1949-50.	1950-51.	1951-52.	1952-53.	1953-54.

XVI. Heat, Light and Power..	35,250	57,109	65,827	80,476	110,131	140,008
Grand Total..	143,662	285,602	336,615	410,144	493,534	580,715

(a) Includes estimated value of rented plant and machinery.

Except for the years 1930-31 to 1933-34, when decreases were recorded, there has been a continuous increase in the value of plant and machinery in factories in Australia. The increase in 1953-54 of £87.2 million over 1952-53 extended over all industrial classes except Class V. The greatest increase occurred in Class XVI., Heat, Light and Power.

(ii) *Totals in each State.* The following table shows the value of plant and machinery in each State during the years 1938-39 and 1948-49 to 1953-54. During 1953-54 increases occurred in all States, Victoria showing the largest increase, £33.7 million.

## § 10. Principal Factory Products.

The monthly factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau and in the *Secondary Industries Bulletin*.

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1952 to 1954. A more complete list, together with values, where available, is published in the *Secondary Industries Bulletin*.

(b) Including mixtures predominantly of the fibre mentioned.

### § 11. Individual Industries.

1. General.—Particulars in pages 328-55, §§ 2-9 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this work, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour and capital or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

The statistics in the following tables should be read in the light of the following definitions.

*Factory.* A factory is taken to be a manufacturing establishment in which four or more persons are employed or in which power, other than manual, is used.

*Average Number of Persons Employed.* All persons employed in the manufacturing activities of a factory are counted as factory employees, including working proprietors and "out-workers". The average number of persons employed means, in general, the average number over the whole year and not the average over the period worked.

*Value of Materials Used.* This item includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of Fuel, etc., Used.* This item includes also the cost of power and light used, of lubricants and of water.

*Value of Output.* The amounts given under this heading represent the selling value at the factory of goods made or processed during the year, including by-products, also the value of other work done.

*Value of Production.* The value of production is obtained by deducting "Value of materials used" and "Value of fuel used", as defined above, from the "Value of output". This method of valuing factory production has been adopted by the Statistical offices throughout Australia.

*Rated Horse-power of Engines Used.* Statistics of power used in factories other than Central Electric Stations relate to the "rated horse-power" of engines ordinarily in use.

For more detailed definitions see § 1, par. 6 of this chapter, page 325.

Details of some of the principal articles produced in factories in Australia during the years 1951-52 to 1953-54 are shown in the table in the preceding pages (§ 10).

2. *Portland Cement and Cement Goods.*—The manufacture of Portland Cement and Cement Goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1953-54 and for a selected number of years in the following table.

### PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS.

AUSTRALIA, 1953-54.

3. *Chemicals, Drugs and Medicines.*—In 1945-46 the classification of factories was amended to provide for the separate tabulation of factories engaged in the production of Industrial and Heavy Chemicals and Acids and those engaged in producing Pharmaceutical and Toilet Preparations, which previously had been combined. Details for each of these industries are given in the next two tables for 1953-54 with comparisons with previous years. However, it should be noted that in order to avoid the publication of confidential information, particulars relating to Industrial and Heavy Chemicals include details for the Explosives industry.

7. Iron and Steel Works and Engineering.—(i) *General.* In 1945-46 the classification of factories was amended to provide for the tabulation in four separate groups of those industries previously included under Iron and Steel and Engineering. The first group (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers, not elsewhere included.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table particulars are shown for each State for 1953-54 and for Australia in selected years for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

## SMELTING, CONVERTING, REFINING AND ROLLING OF IRON AND STEEL.

8. Extracting and Refining of Non-ferrous Metals ; Alloys.—The following table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore, for each State during 1953-54 and for Australia for a series of years. It should be noted that as "Ore Beneficiation and Concentration", formerly included as part of this section of Manufacturing Industry, was transferred to the Mining Industry in 1952-53 details for that and later years are not comparable with those for 1951-52 and earlier years.

## EXTRACTING AND REFINING OF NON-FERROUS METALS : ALLOYS.

(a) Government and Local Authority only.

A railway workshop in the Northern Territory is chiefly engaged in making repairs to rolling stock, etc., no new goods being manufactured. Particulars of this establishment are not included in any of the tables in this chapter.

11. Motor Vehicles.—The industries catering for the motor trade are included in Class IV., Industrial Metals, Machines and Conveyances. In the table below a summary is given of the principal statistics for 1953-54 for each branch of industry associated with the motor trade of Australia.

## MOTOR VEHICLES : CONSTRUCTION, ASSEMBLY, REPAIRS, ETC., AUSTRALIA.

1953-54.

12. Agricultural Machines and Implements.—Owing to the extensive agricultural activities conducted in Australia and the demand for modern mechanized farm equipment, the manufacture of agricultural implements constitutes an important branch of

Australian industry. The articles manufactured include a wide range of implements for tillage, seeding, and planting and the harvesting of crops. Other farm machinery made includes windmills, chaff-cutters and machinery used in the dairying industry.

The following table shows details of establishments classified as agricultural implement works in each State for 1953-54 and for Australia for a series of years.

### AGRICULTURAL MACHINES AND IMPLEMENTS.

13. **Wireless and Amplifying Apparatus.**—The introduction of wireless broadcasting in 1923 gave rise to a new industry in Australia. Early statistical details of the industry are not available as they were grouped together with other electrical apparatus. In 1930-31 a new classification of factories was adopted and "Wireless Apparatus" was shown as a separate industry. The industry is confined mainly to New South Wales and Victoria, but is becoming increasingly important in South Australia. The number of broadcast listeners' licences increased from a third of a million in 1930-31 to over two million at 30th June, 1955, and this increase reflects the advancement of the industry during that period. During the war years considerable expansion took place in the industry to meet the requirements of the fighting services and apart from a slight drop in output in 1945-46, this expansion has continued.

### WIRELESS AND AMPLIFYING APPARATUS : AUSTRALIA.

(a) Including radiograms and car radios.

NOTE.—There were 444,286 domestic receiving sets made in 1954-55.

14. Cotton.—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale. The average annual quantity of unginned cotton produced during the five years ended 1938–39 was 18 million lb. and slightly over 2 million lb. in the five years ended 1953–54. Arising out of the development in the local manufacture of cotton materials and the further expansion following the outbreak of war in 1939, plans were completed for an extension of the area devoted to the cultivation of this crop. The downward trend which commenced with the war in the Pacific persisted until recent years but production has recently risen and in 1953–54 amounted to 5,132,000 lb. The growing of cotton, which is restricted to Queensland, is referred to in some detail in Chapter XXI.—Agricultural Production.

(ii) *Ginning.* The ginning and marketing of cotton is controlled by the Queensland Cotton Board. The Board operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (1953–54) from India, Pakistan, Brazil, Egypt, Peru and the United States of America.

(iii) *Spinning and Weaving.* The recent expansion in the spinning and weaving section of the cotton industry marks an important event in its development. New factories have been established and Australia is now producing an extensive range of cotton goods, including duck and canvas from cotton or flax, denims, drill, etc., tyre cord and tyre cord fabric. The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1938–39, and 1949–50 to 1953–54.

## COTTON SPINNING AND WEAVING : AUSTRALIA.

15. Wool Carding, Spinning and Weaving.—The importance of this industry is emphasised by the fact that Australia is the world's chief source of wool and the development of the woollen industry since its establishment at an early period in Australian history is of singular interest. The production consists chiefly of woollen cloth and tweed, worsted cloth, rugs, blankets and yarn, all of which have acquired a reputation for purity and durability.

The following quantities of yarn were used in these establishments during 1953-54:—Worsted, 8,206,507 lb.; woollen, 104,384 lb.; wool or worsted and cotton, 378,216 lb.; Wool or worsted and nylon, 48,946 lb.; wool or worsted and rayon, 1,241,941 lb.; cotton, 9,257,773 lb.; mercerised cotton, 818,283 lb.; cotton and rayon, 56,848 lb.; rayon, spun 1,787,680 lb.; rayon filament, 6,195,312 lb.; silk, 31,255 lb.; nylon, spun, 295,291 lb.; nylon filament, 1,162,619 lb.; other, 309,219 lb. Production of garments and stockings is shown in § 10.

17. **Tanning, Currying and Leather Dressing.**—(i) *Details of Industry.* In Class VII. the most important industry is tanning. Formerly the production of tanneries in Australia was confined to the coarser sorts of leathers, but there are now very few kinds which cannot be produced locally, and an export trade has been built up in some varieties.

21. *Boots and Shoes.*—(i) *Details of Industry.* The boot and shoe factories hold an important place both in regard to employment afforded and extent of output. The following tables refer to boot and shoe factories as distinct from those devoted to repairing. It has been necessary to include details of boot and shoe repairing in Tasmania, in order to conceal confidential information for that State. Factories engaged in the manufacture of rubber boots and shoes are excluded, being classified under Rubber Goods, *see* para. 38, page 386.

(ii) *Production of Flour and By-products.* The production of flour by the mills in each State (including other than flour mills) for the years 1938-39 and 1948-49 to 1954-55 was as follows :—

## FLOUR-MILLING : PRODUCTION OF FLOUR.

(Tons of 2,000 lb.)

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	Australia.
1938-39 ..	547,162	436,829	84,314	146,262	138,583	19,582	1,372,732
1948-49 (a)	667,645	479,288	110,843	211,787	183,143	26,484	1,679,190
1949-50 (a)	597,491	447,784	112,995	162,259	161,251	27,243	1,509,023
1950-51 (a)	694,036	448,881	116,503	189,962	218,841	27,336	1,695,559
1951-52 (a)	578,686	559,224	124,703	206,856	223,936	27,745	1,721,150
1952-53 (a)(b)	543,693	592,465	132,839	201,685	227,260	28,349	1,726,300
1953-54 (a)(b)	603,575	473,842	138,524	164,907	197,654	30,556	1,609,058
1954-55 (a)(b)(c)	570,895	452,536	156,668	141,517	189,603	29,247	1,538,466

(a) Includes wheatmeal for baking.

(b) Includes also sharps.

(c) Preliminary, subject to revision.

In addition, 610,000 tons of bran and pollard were made in 1953-54 and 566,000 tons in 1954-55. The total quantity of wheat ground in flour mills was 72,354,671 bushels in 1953-54 and 70,287,909 bushels in 1954-55.

23. **Bakeries.**—Information regarding establishments in which the manufacture of bread, cakes, etc., was carried on is given in the table below. It should be noted, however, that the details refer only to establishments coming within the definition of a factory as explained at the beginning of this section. For that reason the tables do not give complete details of the industry, as a large number of bakehouses not coming within the definition are excluded. This is true of all other industries covered by the statistics of manufacturing production, but, in view of the omission of such a large number of establishments in this instance, special mention is deemed necessary.

## BAKERIES (INCLUDING CAKES AND PASTRY).

1953-54.

Items.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.(a)	Australia

24. **Sugar-mills.**—(i) *General.* Sugar-cane is grown in New South Wales and Queensland and particulars of area, yield, etc., are given in extended detail in Chapter XXI.—Agricultural Production.

The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. Particulars of cane crushed and sugar produced embodied in the following table refer to the quantities treated during the years ended 30th June, irrespective of the season in which the cane was grown; consequently the figures relating to cane crushed and sugar produced may differ slightly from those given in Chapter XXI.—Agricultural Production, which relate to harvest years.

(ii) *Details for States.* The following table shows details of the operations of sugar mills in New South Wales and Queensland for the years 1938-39 and 1940-50 to 1953-54 :—

## SUGAR-MILLS.

25. *Sugar-refining.*—The establishment of the sugar-refining industry considerably antedates the establishment of the sugar-milling industry, the raw material operated on in the earlier years coming chiefly from Mauritius and the East. In 1953-54 there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia. The quantity of raw sugar treated amounted to 465,848 tons for a yield of 449,015 tons of refined sugar.

26. *Confectionery.*—The figures for 1953-54 for each State and for Australia for a series of years are shown hereunder :—

(ii) *Production.* During the 1939-45 War, production of jams increased greatly and an output of 171 million lb. was attained in 1943-44. Production afterwards decreased, but attained a new record of 198.5 million lb. in 1947-48. It dropped to 85.7 million lb. in 1953-54. Preliminary figures for 1954-55 show production as being 78.7 million lb.

The peak output of preserved fruit occurred in 1953-54 with 338.6 million lb. compared with the previous highest level of 256.1 million lb. attained in 1951-52. Preliminary figures for 1954-55 show production as being 313.9 million lb.

There has also been a marked development in the production of canned vegetables. In 1938-39 output totalled 10.3 million lb. but, as a result of the war-time demand by the armed services, production reached the record level of 119.1 million lb. in 1944-45. However, it has since declined and in 1953-54 amounted to 40.3 million lb. Preliminary figures for 1954-55 show production as being 46.9 million lb.

The following table shows the total quantity and value of jams, pickles, sauces and other items manufactured in each State in 1953-54 :—

## JAMS, PRESERVED FRUIT AND VEGETABLES, PICKLES AND SAUCES : OUTPUT. 1953-54.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.

 tons of cheese valued at £26,348 made in establishments not classified as factories.

(b) Includes 119

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXIII.—Farmyard, Dairy and Bee Products.

30. Meat and Fish Preserving.—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. The substitution of chilled for frozen meat exported is referred to in Chapter XXII.—Pastoral Production. In recent years there has been considerable expansion in the canning of meat and fish.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XXII.—Pastoral Production.

31. Breweries.—(i) *Details of Industry.* The following table gives particulars of breweries in each State for the year 1953-54 and for Australia for a series of years. It should be noted, however, that the data shown are not strictly comparable throughout, owing to the inability or failure of some breweries to furnish a separate return for each branch of activity. Consequently the figures for some States include details of employment, wages, output, etc., not connected with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

(a) Not available for publication; figures are included in total for Australia.

(b) Excludes Excise Duty.

(ii) *Production, Consumption, Materials Used.* The quantity of ale, stout and beer brewed fell from 73.7 million gallons in 1928-29 to 49.8 million gallons in 1931-32, but thereafter increased each year to 109.2 million gallons in 1941-42. Under the Control of Liquor Order which operated between March, 1942 and March, 1946, the production of beer was restricted and consequently output remained static at about 100 million gallons from 1942-43 to 1944-45. Thereafter production increased, and in 1954-55 amounted to over 220 million gallons.

The average annual consumption of ale, stout and beer prior to the economic depression of the early thirties exceeded 11 gallons per head of the population: it dropped to 7.32 gallons in 1931-32, increased to 13.76 gallons in 1941-42 and declined again to about 13 gallons during the period of control. The consumption per head had increased to 24.09 gallons by 1954-55.

The table below shows the quantities of materials used and the quantity and value of ale, stout and beer (excluding waste beer) brewed in each State during 1953-54:—

## BREWERIES: MATERIALS USED AND PRODUCTION, 1953-54.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
MATERIALS USED.							
Malt .. bus.	2,234,154	2,047,945	683,695	555,319	(a)	(a)	6,378,087
Hops .. lb.	2,094,935	1,332,912	460,248	438,046	(a)	(a)	4,874,837
Sugar .. ton	18,325	12,122	4,139	3,770	(a)	(a)	41,273

## ALE, BEER AND STOUT BREWED (EXCLUDING WASTE BEER).

Quantity .. '000 gals.	79,943	63,633	21,323	19,387	(a)	(a)	208,557
Value(b) .. £'000	11,881	10,396	3,684	3,277	(a)	(a)	33,782

(a) Not available for publication; figures are included in total for Australia.

(b) Excludes Excise Duty.

32. *Wineries and Distilleries.*—The following table shows particulars of the operations of Wineries and Distilleries for each State during 1953-54 and for Australia for a series of years.

(a) Not available for publication; figures are included in total for Australia.

For many years the production of locally-grown leaf was comparatively small, and manufacturers were dependent on imported leaf for the supply of their raw material. Increased import duties stimulated local production, and the quantity of Australian leaf used by manufacturers rose from 1.2 million lb. in 1929-30 to over 3 million lb. in 1930-31. During the 1939-45 War about 4.7 million lb. of Australian-grown leaf was used annually, but in subsequent years the figure fell, and the 1953-54 usage showed an increase to 4.9 million lb. In this connexion, see Chapter XXI.—Agricultural Production.

Imports of tobacco during 1953-54 comprised—manufactured tobacco, 200,925 lb.; cigars, 39,734 lb.; cigarettes, 6,210,425 lb.; unmanufactured tobacco, 37,253,690 lb.

34. Sawmills, etc.—The most important industry in Class X. is that of sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town, they have been combined in the following table, together with plywood and bark mills.

## SAWMILLS, PLYWOOD AND BARK MILLS.

The sawmill output of native timber, which declined from 740 million super. feet in 1925-26 to the abnormally low figure of 237 million super. feet during the depth of the depression, recovered to 717 million super. feet in 1938-39 and by 1954-55 had risen to 1,422 million super. feet. Further reference is made to the sawmilling industry in Chapter XXIV.—Forestry.

35. Cabinet and Furniture Making and Upholstery.—These industries constitute the principal manufactures in Class XI. The following table shows particulars for each State in 1953-54 :—

36. Printing Works.—Printing and bookbinding rank high in importance among the industries of Australia, and in 1953-54 afforded employment for 35,390 employees, and paid £26,023,000 in salaries and wages, while the value of output amounted to £86,054,000. The first table below gives particulars of establishments engaged in general printing in each State for 1953-54. These establishments include those engaged in lithographic

printing, bookbinding, paper ruling and linotyping and Government printing works. Establishments producing newspapers and periodicals are shown separately in the second table to follow :—

37. **Paper Making.**—Although the paper manufacturing industry has been established in Australia for many years it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred.

Plants producing pulp from eucalypt timber are operating in Victoria and Tasmania, whilst in South Australia pulp is being produced from locally-grown softwoods. The production of pulp rose from 6,000 tons in 1938-39 to 88,000 tons in 1946-47, and remained about this level until 1953-54, when production totalled 137,000 tons.

The number of factories operating in 1953-54 comprised two in New South Wales, nine in Victoria, one in Queensland, South Australia and Western Australia and four in Tasmania. In the latter State, newsprint, writing and printing papers are produced, and in the other States wrappings, other papers and boards. Particulars for this industry are shown in the following table.

### PAPER MAKING, INCLUDING PULP MILLS : AUSTRALIA.

39. Electric Light and Power Works.—(i) *Details of Industry.* The increased demand for electrical energy has been responsible for considerable development in electric light and power works during recent years. For further information on this subject see Chapter X.—Electric Power Generation and Distribution. Particulars of the industry for each State during the year 1953-54 and for Australia for a series of years are shown below:—

(a) Not available for publication ; figures are included in total for Australia.  
2,010,404 tons of metallurgical coke were made in Coke Works in 1953-54.

(b) In addition,

Since 1938-39, when the output of gas was 21 thousand million cubic feet, production has increased each year and reached 43 thousand million cubic feet in 1954-55:

## CHAPTER X.

### ELECTRIC POWER GENERATION AND DISTRIBUTION.

This chapter is based on an article contributed by the Division of Industrial Development of the Commonwealth Ministry of National Development which was published in Official Year Book No. 39. The chapter is divided into three major parts. A.—Introduction, which deals briefly with the resources, generation and distribution, and future developments, of electric power in Australia; B.—The Snowy Mountains Hydro-electric Scheme; and C.—The origins, development, present situation and new projects of electrical systems in each Australian State and Territory (internal and external). A Statistical Summary is appended.

It should be noted that the information contained in the chapter relates to situations existing and projects contemplated in 1955 and that it may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

#### A. INTRODUCTION.

1. *Distribution of Population and Location of Power Resources.*—The geographical pattern of electric power generation and distribution in Australia has been affected by two main influences—the distribution of population, with a resulting distribution of industry, and the location of fuel and water resources.

The Australian population between 1939 and 1955 increased by approximately 2,233,000 to reach a total of 9,201,000. The two principal centres of population and industry, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power. Their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of the Commonwealth, materially influences the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1954 thermal power equipment represented 82 per cent., hydro 11 per cent. and internal combustion equipment 7 per cent. of the total installed generating capacity.

Most of Australia is poorly supplied with water, only 15.2 per cent. receiving an annual rainfall of 30 inches or over. This is confined largely to Tasmania and to the narrow coastal strip on the east coast. The possibility of establishing large hydro or steam stations in inland areas is therefore strictly limited by the lack of sufficient water for feed and condensing purposes.

The only region on the mainland of Australia where land is high enough to receive reliable winter snowfall, and from which reasonably constant water supplies throughout the year can therefore be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales through to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW within the next 25 years. The two major construction schemes in this area are the Snowy Mountains and Kiawa projects. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is only a small proportion of the potential of the Alpine region. In Tasmania hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. Whereas on the mainland the chief source of energy is coal, water occupies this position in Tasmania.

### 2. Electric Power Generation and Distribution.—(i) *Ownership of Undertakings.*

At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but some measure of governmental control was exercised through various electric light and power Acts. This legislation was designed to provide standards of safety, and to define the scope and obligations of the private organizations engaged in producing electric power for sale. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1955, all major generating stations supplying the public were, in varying degrees, under the control of State statutory organizations, constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies within the various States. There are, however, still a large number of small private and municipal enterprises generating power for supply to country towns, but, where practicable, central authorities are extending supply to these places. In many areas, however, it has been and remains the practice for central authorities to sell power in bulk to local distributing organizations who undertake local reticulation.

In addition to the private, local government and statutory organizations who generate and/or distribute electricity for sale, there are numerous firms generating power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, and the power regularly produced for such internal consumption is, in any case, a relatively small proportion of total power produced.

(ii) *Power Production and Generating Capacity.* In the period between 1938-39 and 1953-54 production of electric power in Australia increased by about 190 per cent. from 4,688 to 13,587 million kilowatt hours.

Since the 1939-45 War, industry and commerce have expanded rapidly, many new houses have been built and the population has increased by approximately 20 per cent. These factors, together with extension of electricity supplies to rural areas and the increased use of domestic electric appliances, have all contributed to bring about a position where the greatly increased demand for power cannot be satisfied by the existing installed capacity of central generating stations.

At 30th June, 1954, installed generating capacity in Australia totalled approximately 3.4 million kW compared with 1.6 million kW in 1939, an increase of about 110 per cent. In 1938-39 each kW of installed capacity produced an average of 3,000 kWh per annum, compared with an average of 3,977 kWh in 1953-54. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed. In Tasmania, for example, average output per kW installed was 5,000 kWh in 1938-39 and 4,943 kWh in 1953-54 compared with 2,300 and 3,538 kWh respectively in South Australia.

3. *Future Developments.*—Each central authority has embarked upon constructional programmes to overcome the lag between supply and demand. However, industrial and commercial expansion has continued on a high level, and several projects have been commenced or planned in various parts of the Commonwealth for suburban and main railway line electrification. Other fields directly connected with the demand for power, such as house building, must also be taken into account.

An important factor to be considered in regard to future development is the increasing relative importance of the generation of electric power from water resources.

## B. SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME.\*

1. *Geography of Area.*—The Snowy country in south-eastern New South Wales is the only part of the continent in which any altitudes exceed 7,000 feet, and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 120 inches a year in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy, which flows southwards to Bass Strait.

\* See also Chapter XI.—Water Conservation and Irrigation, §3, para. 4. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson), which appears in Chapter XXIX.—Miscellaneous.

2. *Historical.*—The Murray and Murrumbidgee have been subject to control and intensive development for irrigation for many years; the Snowy, however, flows through mountainous and practically uninhabited country until debouching onto the river flats of East Gippsland, not many miles above its mouth. It has never been controlled in any way, either for the production of power or for irrigation, and a great proportion of its waters flow to waste into the sea. As a result, attention has long been directed towards this river, which has the highest source of any in Australia and which conducts away a large proportion of the waters from the south-eastern New South Wales snowfields, and it has been consecutively considered as a means of supplementing the flow of the great inland rivers, a source of water supply to the rapidly growing metropolitan area of Sydney, a means for developing hydro-electric power and, again, as a source of increasing agricultural production in the rich Murray and Murrumbidgee valleys.

The 1939–45 War, and the plans for post-war reconstruction which then originated, led to a proposal by the State of New South Wales for diversion for irrigation and agricultural purposes of the waters of the Snowy to the Murrumbidgee River—a scheme in which little emphasis was placed on the generation of power. The Victorian Government proposed a counter-scheme, involving very much greater generation of power, and involving diversion, not to the Murrumbidgee, but to the Murray.

The Commonwealth Government, however, being seized with the national implications of these proposals, brought about a meeting in 1946 of Commonwealth and State representatives to discuss the general utilization of Snowy waters, and subsequently a Committee was set up to examine the whole question on the broadest possible basis. This Committee, in a report submitted in November, 1948, suggested consideration of a far greater scheme than any previously put forward. It involved not only the simple question of utilization of the waters of the Snowy, but a general consideration of the possible diversion of a number of rivers in the area, tributaries, not only of the Snowy, but of the Murray and Murrumbidgee. The recommendations of the Committee were generally agreed to by a conference of Ministers representing the Commonwealth and States of New South Wales and Victoria, and it was also agreed that the Committee should continue its investigations. A further report was submitted by the Committee in June, 1949, as a result of which the Commonwealth Parliament passed the Snowy Mountains Hydro-electric Power Act. In the next month the Snowy Mountains Hydro-electric Authority was constituted, and thus was inaugurated the greatest engineering scheme in Australian history.

3. *Description of Scheme.*—(i) *General.* The proposals at present being implemented fall into two groups, Tumut Development and Snowy-Murray Development—each having its associated plans for hydro-electric power production. The features described hereunder may be identified by reference to the map on page 397. It should be remembered that, as the final designs for practically every element of the scheme have not yet been completed, and in many cases will not be completed for many years, any figures which are now quoted in respect of those elements will undoubtedly be subject to modification in the future.

(ii) *Tumut Development.* The central feature of this part of the plan is diversion to, and regulation of, the waters of the Tumut River, a stream at present completely unregulated, but which contributes approximately half of the flow of the Murrumbidgee River at Gundagai below the existing main storage on the Murrumbidgee at Burrinjuck. To the Tumut will be diverted the waters of the Eucumbene, a major tributary of the Snowy, and the headwaters of the Tooma, a tributary of the Upper Murray. The headwaters of the Murrumbidgee itself will also be diverted to the Tumut, principally to secure desirable electric power.

A major dam is being constructed on the Eucumbene River at Aaminaby, creating a storage of at least 3.5 million acre feet, and from this, water will be conveyed by a 14-mile tunnel to Tumut Pond on the upper reaches of the Tumut River, where it will be joined by the waters from the Tooma, diverted by aqueducts and tunnels. From Tumut Pond another tunnel will convey the water to power station T.1 with an installed capacity of about 320,000 kW and a further tunnel to power station T.2 with a capacity of 280,000 kW thence discharging into a smaller storage at Lob's Hole.

As originally planned the waters of the Upper Murrumbidgee were to be brought to the Lob's Hole Reservoir from another major storage at Tantangara, holding 480,000 acre feet by tunnel to power station T.3 with an installed capacity of 150,000 kW, discharging into a pond on the Yarrangobilly River, a tributary of the Tumut, and from Yarrangobilly Pond by further tunnel to power station T.4 with an installed capacity of 150,000 kW which, in turn, would discharge into the Lob's Hole Reservoir. This part of the scheme has been temporarily abandoned and the waters to be stored at Tantangara will now be diverted to the Adaminaby storage through nine miles of tunnel.

Between the foot of the Lob's Hole storage and the top of the Blowering storage will be power stations T.5 and T.6. The total capacity of these stations will be 410,000 kW.

The Blowering storage with its capacity of about 860,000 acre feet, is an adjunct to the Snowy Mountains Hydro-electric Scheme and will be required for the regulation both of the Tumut waters and of the waters diverted into the Tumut. This regulation is essential if the waters impounded are to be fully utilized for irrigation purposes. At the foot of the Blowering Dam will be the last of the Tumut Power stations, T.7, with a capacity of some 60,000 kW, but this station will operate only when water is released for irrigation. The State of New South Wales will be responsible for the construction of the Blowering works.

The total extra new water which will reach the Murrumbidgee is expected to average 528,000 acre feet per annum and the total installed capacity of the various power stations is estimated at 1,310,000 kW (excluding T.7).

(iii) *Snowy-Murray Scheme.* The central feature of this part of the scheme is the diversion of the waters of the Upper Snowy itself from a major dam to be constructed at Jindabyne on that river, a little below its junction with the Eucumbene and the Crackenback Rivers. This reservoir will have a storage capacity of approximately 1,100,000 acre feet and from it a tunnel approximately 28 miles in length will run right through the Great Dividing Range finally discharging into Swampy Plains River, not far above its junction with the Murray proper.

Into this tunnel will be collected a considerable quantity of water from the very high altitude country of the Kosciusko area, and from a number of smaller tributaries of the Murray. The collection from the Kosciusko area commences at the Kosciusko Reservoir at an altitude of 5,725 feet, not many miles below the source of the Snowy. A tunnel will convey water from this reservoir to power station M.1.A. with an installed capacity of 60,000 kW and thence to a pond on the Snowy River, at its junction with the Guthega River.

From the Guthega Pond, a further tunnel and penstock lead to station M.1.B. with a capacity of 60,000 kW (ultimate capacity 90,000 kW), which discharges into a pond at the junction of the Munyang and Snowy Rivers. Construction of this part of the scheme has been completed. Munyang Pond will discharge into a tunnel leading to station M.2.L., with installed capacity of 60,000 kW. This station also receives the flow of a tributary of the Snowy River via station M.2.H. From station M.2.L. the water discharges into a reservoir at Island Bend on the main stream of the Snowy.

From the Island Bend reservoir, a vertical shaft, 1,700 feet deep, will lead to the main tunnel from Jindabyne reservoir previously referred to, passing on its way through power station M.3 with installed capacity of 265,000 kW. Into this main tunnel will also be collected waters from the Upper Murray tributary streams previously mentioned.

Of these, the most important is the Windy Creek-Geehi River series. A pond on Windy Creek, a small tributary of the Geehi, situated at an altitude of over 5,000 feet, will provide water through a tunnel to station M.4 with an installed capacity of 75,000 kW thence by aqueducts and tunnel to station M.5.H. with an installed capacity of 40,000 kW discharging into the M.5.L. Intake Pond on the Geehi River.

A vertical shaft will lead this water into the main tunnel, passing through station M.5.L. with an installed capacity of 20,000 kW. The combined waters thus collected into the main tunnel will pass through station M.6 with an installed capacity of 540,000 kW and then discharge into a pond on Bogong Creek, another of the Upper Murray tributaries. At this point, the water is still at an altitude of nearly 2,000 feet, and the main tunnel will thence continue to station M.7 with a capacity of 540,000 kW.

From M.7 the total collected waters will flow into the Swampy Plains River at a point some seven miles, in a direct line, above its confluence with the Murray. It will be necessary, however, to provide on the Murray a further storage for the proper regulation of these waters for irrigation purposes.

The total water flowing to the Murray from these works will amount on the average to 722,000 acre feet per annum, but as 280,000 acre feet which now reaches the Murray from the Tooma will be, as indicated previously, diverted to the Tumut, the total extra water actually reaching the Murray will be, on the average 442,000 acre feet per annum : the total installed capacity of the power stations will be 1,700,000 kW.

An integral part of each development is the construction of hundreds of miles of aqueducts to collect and divert water from the many streams in the area into storages and tunnels.

4. *Utilization of Power.*—The total capacity of all stations in the scheme will be of the order of 3,000,000 kW, which is only slightly less than the present total installed capacity of all the generating stations in the Commonwealth.

If, however, the demand for power continues to increase as is expected, the major source of power must still be thermal stations. The operation of the whole scheme is dependent on the appropriate development and integration of these stations, as otherwise there would be a serious loss in ultimate economy ; all economic estimates therefore postulate that thermal capacity will be expanded so as to preserve an appropriate ratio.

It has been estimated with a reasonable degree of probability that the power available from the scheme will save coal to the order of five million tons annually.

The first call on the power generated under the Snowy Scheme will be by the Commonwealth Government for supply to the Australian Capital Territory of power which it needs in that area, particularly for certain projects with defence significance, and no indication can at present be given as to how great that call will be. It is not likely, however, to amount to more than a relatively small fraction of the total power available, and it has been agreed that the balance will be divided between the States of New South Wales and Victoria in a proportion of two-thirds to New South Wales and one-third to Victoria.

The first power station in the scheme, M.1.B., the Guthega Project, is now producing power. A 132,000 volt transmission line extends from the power station via Cooma to the Australian Capital Territory where it joins into the main New South Wales transmission network. The construction of the Eucumbene-Tumut diversion tunnel, Tumut Pond Dam and Power Station T.1 is in progress. Adaminaby Dam is in course of construction by the Public Works Department of New South Wales on behalf of the Authority. Power Station T.1 will enter the New South Wales network via a 330,000 volt transmission line early in 1959.

## C. STATES AND TERRITORIES.

### § 1. New South Wales.

1. *General.*—In Official Year Book No. 39 an account is given in some detail of the origin and development of electricity generation and distribution in New South Wales, describing in particular the growth of the systems of the Sydney County Council, the Department of Railways, the Electric Light and Power Supply Corporation Ltd., the Southern Electricity Supply and the Clarence River County Council (now the Northern Rivers County Council). A description is also given of the legislation existing prior to, and that which constituted, the Electricity Authority of New South Wales and the Electricity Commission of New South Wales. At present, the three main Acts governing electricity supply in New South Wales are :—

- (i) The Local Government Act 1919 which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

- (ii) The Electricity Development Act 1945-1948 which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.
- (iii) The Electricity Commission Act 1950 which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

2. **Organization.**—(i) *The Electricity Commission of New South Wales.*—The Commission, which was constituted under the Electricity Commission Act 1950, consists of five members of whom one is a full-time Chairman. In its administration the Commission is directly responsible to the Minister for Local Government.

When the Commission was established, 93 per cent. of the State's power requirements were generated by four bodies—the Sydney County Council, the Department of Railways, Southern Electricity Supply (a division of the Department of Public Works) and the privately-owned Electric Light and Power Supply Corporation Ltd. The Electricity Commission Act 1950 and the Electricity Commission (Balmain Electric Light Company Purchase) Act 1950 provided for the acquisition of the power stations and main transmission lines of those bodies. The transfer of the power stations and transmission lines of the Sydney County Council, Southern Electricity Supply and the Department of Railways has now been effected. The date of transfer of the undertaking owned by the Electric Light and Power Supply Corporation Ltd. is dependent upon the determination of the valuation of the undertaking by the Land and Valuation Court.

The main function of the Commission is the generation and transmission of electricity which it sells in bulk to distribution authorities (mainly local government bodies) throughout a large part of the State, to the government railways and tramways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources. An important exception is the hydro-electric resources of the Snowy Mountains region which are being developed by the Snowy Mountains Hydro-electric Authority, a Commonwealth Government body.

(ii) *Other Electricity Supply Authorities.* The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of a grouping of shire and/or municipal councils) or private franchise holders. At 1st July, 1955 there were 123 of these supply authorities throughout the State of which 37 also generated part or the whole of their power requirements. A few authorities—the most notable being Tamworth City Council—also supply in bulk to other councils. The great majority of country power stations are, however, small oil engine plants which are becoming increasingly costly to operate. Consequently, they are gradually being closed down as the main transmission network is extended further afield.

Over the past few years there has been a distinct trend towards the consolidation of supply areas, many of which have been regarded as being too weak individually to form satisfactory areas for distribution. Generally these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped for electricity supply purposes only and administered by a county council of representatives elected by the constituent shire and municipal councils.

It is interesting to note that of the 238 shires and municipalities in New South Wales, 135 are included in one or other of the 26 electricity county districts. Twenty-one (21) of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council which at 30th June, 1954 was supplying 314,904 consumers in the Sydney Metropolitan Area. Unlike the other county councils, which are constituted under the provisions of the Local Government Act 1919, the Sydney County Council was specially constituted under the Gas and Electricity Act 1935.

(iii) *The Electricity Authority of New South Wales.*—The Electricity Authority was constituted under the Electricity Development Act 1945 for the stated purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. The Authority, which is a regulatory body only, consists of seven members of whom one is a full time Chairman. Like the Commission, it is responsible to the Minister for Local Government.

The main functions of the Authority are as follows :—

- (a) *Distribution.* Under the Act the approval of the Authority is required, *inter alia*, for the establishment or acquisition of an electricity trading undertaking by a local government council; for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils; and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.
- In exercising these powers the Authority is mainly concerned to see that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts. Many of the new county districts referred to earlier have been formed largely as a result of the Authority's advice.
- (b) *Rural Electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (*see below*).
- (c) *Safety.* The Electricity Development Act 1945–1948 contains provisions for the making of regulations relating to most aspects of safety and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumer's installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.
- (d) *Generation and Transmission.* The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission). The Authority may, for example, refuse approval for the establishment of a new power station if it is more economical and in the general interest for the supply authority concerned to purchase in bulk from another body.

3. *Generation and Transmission.*—(i) *General.* Except in the Snowy Mountains district, and in one or two other areas, New South Wales is lacking in major water power potential and for the generation of electricity, the State is, therefore, mainly dependent on steam power stations. During the year ended 30th June, 1954 coal-fired stations generated 94 per cent. of the State's energy requirements, hydro-electric stations 4 per cent. and internal combustion plants 2 per cent.

The proportion of power generated in hydro-electric stations will increase considerably in the future with the development of the Snowy Mountains Scheme by the Commonwealth Government. The possibility of developing the hydro-electric potential of the Clarence River and other rivers is also being investigated. Nevertheless, coal-fired steam power stations will continue to supply the greater part of requirements for the foreseeable future.

(ii) *Major Generating Stations.* In New South Wales the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through inter-connected transmission networks. The greater part of the coal-fired generating plant is now concentrated within the bounds of the major coal-fields, where the big industrial centres and most of the population are also located.

As at 1st July, 1954, the major power stations within the main inter-connected system and their installed capacities were as follows :—*Steam*—Bunnerong "A" and "B" (Sydney), 370,000 kW; Pyrmont "A" and "B" (Sydney), 182,000 kW; White Bay (Sydney), 118,000 kW; Ultimo (Sydney), 80,000 kW; Balmain (Sydney), 70,625 kW; Port Kembla, 69,000 kW; Zarra-street (Newcastle), 67,000 kW; Maitland, 25,000 kW; Penrith, 25,000 kW; Lithgow, 22,000 kW. *Hydro*—Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 69,100 kW. The total installed capacity of the main inter-connected system was 1,117,725 kW.

It will be seen therefore that the greater part of the State's generating plant is concentrated within a hundred mile radius of Sydney—that is, at Sydney itself (five stations), Port Kembla, Newcastle, Maitland, Penrith and Lithgow. The largest single station outside this area is located at Tamworth.

(iii) *Interconnected Network.* Over 90 per cent. of electricity consumers in New South Wales are now supplied through the main interconnected systems. In this network, transmission lines operating mainly at 132,000, 66,000 or 33,000 volts interconnect the various power stations and distribute power to load centres throughout most of the south-eastern portion of the State and the north coast region. At 30th June, 1954, 132,000 volt transmission lines were in service between Sydney and Newcastle; Sydney and Orange; Sydney and Port Kembla; and Port Kembla and Burrinjuck. The total installed capacity of the interconnected systems, which includes an aggregated capacity of 46,226 kW for various stations, including the Northern Rivers County District, linked with the main system, was 1,163,951 kW (as at 1st July, 1954).

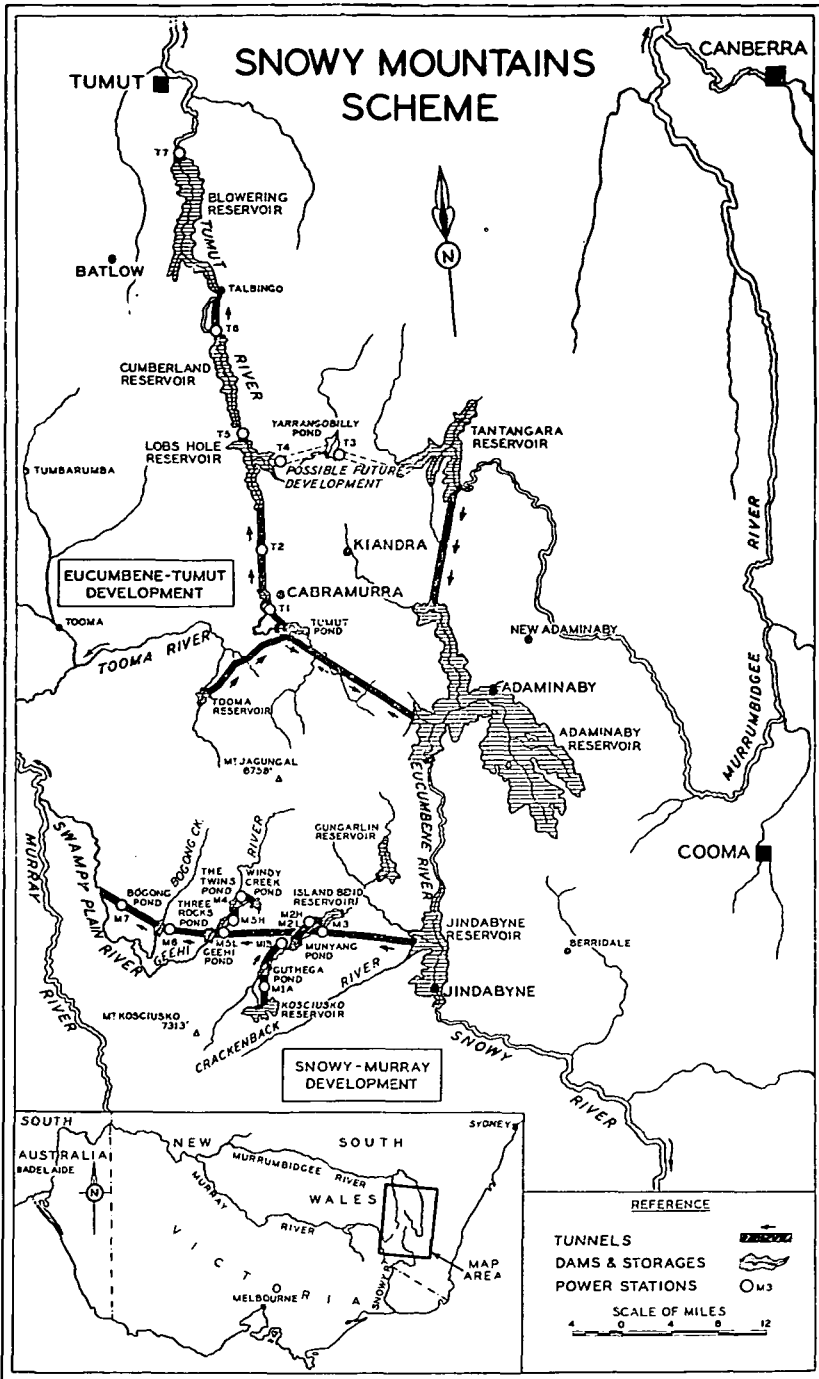

(iv) *Separate Systems and Total State Installed Capacity.* There are a number of separate systems and isolated plants which have not yet been interconnected with the main network and which at 1st July, 1954, had an aggregate installed capacity of 66,405 kW. The most notable are the Tamworth and Muswellbrook Coal Company systems and that of the Bega Valley County Council on the far south coast. The Tamworth system (22,000 kW) supplies power to an extensive district in the north-east of the State through 66,000 volt and 33,000 volt transmission lines. The Bega Valley system is shortly to be interconnected by means of a 66 kV transmission line from Cooma to the Bega Valley County Council's power station at Brown Mountain. Some councils along the Victorian border receive bulk supplies from Victorian authorities.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 1,230,356 kW (as at 1st July, 1954).

(v) *Future Development.* The following major power stations in Sydney are at present being extended by the installation of additional generating plant:—Pymont "B", 50,000 kW; Balmain, 43,000 kW; White Bay, 50,000 kW. Construction is also proceeding on new major power stations on the coalfields at Lake Macquarie, near Newcastle (330,000 kW), Tallawarra, near Port Kembla (120,000 kW), and Wallerawang, near Lithgow (120,000 kW). These stations will be linked with Sydney by 132,000 volt transmission lines, and extensive additions to the 132,000 volt system to supply increasing loads at various centres are also planned. A 132,000 volt system will be established around the outer Sydney Metropolitan Area for the supply of load centres at present fed through 33,000 volt circuits direct from the inner Sydney power stations. Future plans provide for the construction of a hydro-electric power station on the Hume Reservoir of 25,000 kW capacity, connected to the New South Wales network through a 132,000 volt transmission line between Hume and Wagga Wagga. Plans provide for the construction of a hydro-electric power station on the Warragamba Dam of 50,000 kW capacity to be connected to the 132 kV Sydney metropolitan network.

In addition to the power stations mentioned above which are under construction or planned for the system controlled by the Electricity Commission, a number of local government bodies have plans in hand for the development of independent power stations. Of these the more important are as follows:—The Northern Rivers County Council is constructing a steam power station at Koolkhan (near Grafton). Plans provide for an installed capacity of 25,000 kW. The first two units, totalling 10,000 kW, were in operation at 30th June, 1954. The Tamworth City Council is proceeding with the construction of a new steam power station at Gunnedah for the augmentation of supply to the separate system now supplied from Tamworth power station. The initial installation will be 30,000 kW and the ultimate now envisaged will be 75,000 kW. The North-West County Council has made plans for the establishment of a 10,000 kW steam power station on the Ashford coal-field. The New England County Council and the Bega Valley County Council are constructing small hydro-electric power stations on the Oakey River (near Armidale), and Georges Creek (near Bega) respectively.

(vi) *Hydro-electricity.* The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains Area (*see* Snowy Mountains Hydro-Electric Scheme, p. 390-393). Apart from this area there is, at present, only one hydro-electric station in New South Wales with an installed capacity of more than 10,000 kW. This is the 20,000 kW station at Burrinjuck Dam on the Murrumbidgee River (1927) the largest of the other installations being the 7,000 kW station at Wyangala Dam on the Lachlan River (1947). The output of both these plants is dependent on the release of waters for irrigation purposes.

Similar schemes, for which the water release will be dependent upon other than electrical requirements, are being constructed at the Hume Irrigation Dam on the Murray River and at Warragamba Dam which is being constructed to provide water supply for the Sydney Metropolitan Area. At Hume, two 25,000 kW units are to be installed and the output of the station will be shared equally between New South Wales and Victoria. At Warragamba, a 50,000 kW unit is to be installed.

Of the remaining hydro installations, the largest is that of the Northern Rivers County Council on the Nymboida River, a tributary of the Clarence. This station, which now has a capacity of 4,600 kW, commenced operation in 1924. The County Council also has two 100 kW hydro units in operation at Dorrigo on Bielsdown Creek, a tributary of the Nymboida River. The investigation of a number of much larger schemes for the further development of the Nymboida River is at present in progress.

The Clarence Gorge Scheme is a proposal for combined flood mitigation and hydro-electric generation on the Clarence River about 40 miles from Grafton and 240 miles from Newcastle. In February, 1955, the Clarence Advisory Committee which was set up by the New South Wales Government to report on the scheme recommended, because of economic reasons, against the construction of a dam at the Clarence Gorge either solely for flood mitigation or for the dual purpose of hydro-electric power generation and flood mitigation. The scheme is, however, still being considered, together with other alternatives, as a source of hydro-electric power.

The New England County Council has under construction a 2,500 kW hydro scheme near Armidale on the Oakey River, a tributary of the Macleay River.

The Mullumbimby Municipal Council has in operation two 150 kW hydro units, which were installed in 1925, on Wilson's Creek, a tributary of the Richmond River.

The Bega Valley County Council operates a hydro-electric scheme at Brown Mountain, utilizing the headwaters of the Bemboka River. This installation, which now has a capacity of 1,900 kW, was opened in 1944. Work is in progress on extensions to provide for two further 1,000 kW units.

There are also possibilities of relatively large scale developments on the Shoalhaven and Macleay Rivers. Preliminary investigations have been made by the New South Wales Government but no concrete proposals have as yet been adopted.

4. *Rural Electrification.*—When the Electricity Authority of New South Wales was constituted in 1946, one of its first tasks was the devising of a scheme for subsidizing the cost of rural electrification. At that time only 16,000 New South Wales farms were being served with electricity—less than one-third of those within reasonable reach of public electricity supply systems. In August, 1946 a subsidy scheme was approved by the Government and put into immediate operation. Under this scheme local electricity supplies receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of a proposed extension and the number of consumers able to be served by the new lines. In order that the funds available for subsidy purposes might be used to the best possible advantage, the scheme is designed to encourage local electricity supply authorities to construct the more economic extensions first. This has been achieved by fixing a limit to the cost

eligible for subsidy. Originally this limit was £250 per consumer when averaged over the cost of the whole extension but the limit was raised to £400 in December, 1953. Some subsidy is paid on higher cost extensions but the excess over an average of £400 is not subsidized.

Between August, 1946 and June, 1955 about 17,500 miles of new distribution lines in rural areas were erected at a cost of over £11,250,000. These lines served 25,000 farms and 18,750 other rural consumers. At 30th June, 1955, the Electricity Authority was committed to the payment of £4,285,354 in subsidies of which over £1,804,327 had actually been paid. At that time the percentage of farms connected had been raised from 22 per cent. (in 1946) to 58 per cent.

Surveys have indicated that with the aid of subsidies, it should be possible to supply, from the public mains, about 90 per cent. of the 72,000 farms in New South Wales. At the present rate of progress, which shows no slackening, this target should be reached within the next ten years.

## § 2. Victoria.

1. *General.*—In Official Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in these cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

2. *The State Electricity Commission of Victoria.*—(i) *Functions of Commission.* Under the terms of the State Electricity Commission Act, three Commissioners were appointed, who took up duty on 4th March, 1919. Subsequently, in 1921, a full time Chairman was appointed, in addition to the three part-time Commissioners. Their powers authorized them to erect and operate electrical undertakings; to supply electricity in bulk to any corporation; to supply electricity to any person outside any area in which there was an existing undertaking; to carry on any business associated with an electrical undertaking; to make regulations as to precautions to be adopted in the use of electricity and arrange for the licensing of wiremen (powers which were subsequently extended to include the registration of electrical contractors, and the testing and approval of electrical appliances); and to establish and operate State coal winning projects.

In addition to these powers, the Commissioners were to enquire into and report to the Government as to the steps which should be taken to co-ordinate and concentrate all electrical undertakings in Victoria; to secure the efficient inter-connexion of such undertakings by adopting the necessary standards of plant, voltages, etc.; to encourage and promote the use of electricity for industrial purposes; to report to the Government on the prospects of establishing new industries in Victoria requiring large quantities of electrical energy; and to carry out investigations of coal deposits or hydro-potential that could be used for the generation of electrical energy.

(ii) *Newport and Yallourn Power Stations.* Action was taken to investigate the practicability of utilizing the State's brown coal and water power resources for the production of electricity. In a Report dated 26th November, 1919, the Commissioners concluded, *inter alia*, that the brown coal field located at what is now known as Yallourn in the neighbourhood of Morwell should be developed and a power house established thereon by 1923, with an initial capacity of 50,000 kW. As to water power, they were of the opinion that consideration of hydro-electric power schemes should be deferred until further investigations then being undertaken were completed. It was further concluded that in order to obtain maximum economy, the proposed station in the neighbourhood of Morwell and any other power house to be erected in connexion with the

proposed State electricity supply scheme should be interconnected with the Railways Department power station at Newport and operated under the control of a single authority.

The actual transfer of the Railways Department station at Newport did not take place until 1951, and in the meantime two new stations had been constructed by the Commission and were in operation. By the latter months of 1954, the total installed generator capacity of the Newport power station, consisting of Newport "A" (originally under the control of the Railways Department), Newport "B", and Newport "C", was 311,000 kW, which, added to Spencer Street (Melbourne City Council—89,000 kW) and Richmond (53,000 kW), made a total of 453,000 kW installed in the Melbourne metropolitan area.

To implement one of the main reasons for the establishment of the State Electricity Commission, namely, development of Victoria's brown coal resources, particularly for production of electrical energy, construction commenced in 1920 of the Yallourn power station, designed for an initial capacity of 50,000 kW, but increased within a few years by the addition of two further machines. On 24th June, 1924, power was first transmitted on a commercial basis from Yallourn to Melbourne.

The site chosen for the power station on the bank of the Latrobe River, about 6 miles from Morwell, had numerous advantages. Adequate water was available for the station's requirements, land nearby provided a good town site, while, most important of all considerations, an initial area of one square mile, adjacent to the station, contained proved reserves of brown coal totalling about 150 million tons with averages of 174 feet thickness and 33 feet overburden. By the use of mechanized methods for open-cut coal winning, the coal could be extracted and delivered to the power station at a cost of only a few shillings a ton. Development of these resources was designed to ensure to a large degree the State's independence in fuel requirements for the production of electrical energy.

Subsequent investigation in the Latrobe Valley has revealed what are believed to be the largest continuous deposits of brown coal in the world.

Proven coal suitable for open cut working totals 20,000 million tons. The Yallourn-Morwell brown coal-field, covering an area of 40 square miles and estimated to contain 10,000 million tons of brown coal capable of being won by open cut methods, forms an important part of the Latrobe Valley coal belt.

As the Yallourn station was intended to carry the base load of the system, steps were taken to augment its capacity to keep pace with the anticipated and continually increasing demand for electric power, and by the middle of 1955 Yallourn "A", "B" and "C" had a total capacity of 275,000 kW. In addition, an average of 8,000 kW of by-product electricity is fed into the system from the Yallourn briquette factory.

(iii) *Hydro-electric Development.* Development of the State's hydro-electric potential, the necessity of which was foreseen in the Commissioners' initial Report of November, 1919, but deferred pending further investigations, commenced in 1922. The project selected was dependent on the waters of the Goulburn River and adjacent mountain streams in the Cereberan Range, about 65 miles north of Melbourne. These two sources of water power provided a distinct advantage in that one was mainly summer flow and the other winter flow, thus permitting the continuous generation of power. Five small stations, namely, Sugarloaf (Eildon Dam, 15,000 kW), Rubicon (9,100 kW), Lower Rubicon (2,700 kW), Royston (840 kW), and Rubicon Falls (275 kW), were installed totalling approximately 27,900 kW. The complete project was in service by 1929. In conjunction with the new Big Eildon Dam, the Sugarloaf station has since been replaced by one designed for an ultimate total installed capacity of 135,000 kW. Two new generators, totalling 120,000 kW capacity are in process of being installed, while the two 6,750 kW machines in the former Sugarloaf power station have been re-built and re-installed at the revised rating of 7,500 kW each. The new power station, already in

partial operation, will operate on the increased flow of water from the new Big Eildon Reservoir constructed by the State Rivers and Water Supply Commission of Victoria. The power station is scheduled for completion early in 1957.

Located within a few miles of Eildon Dam is a group of four hydro-electric power stations operating on the natural flow of the Rubicon and Royston Rivers. With a total installed capacity of 12,900 kW, the group has an average annual production of 75 million kWh. The Rubicon and Royston stations form the oldest existing hydro development in Victoria. The stations came into service in 1928 and for 25 years operated in conjunction with the former Sugarloaf power station (at the old Eildon Dam). Maximum production of the group is in winter and spring when water flow is at its greatest. The Rubicon and Royston stations will continue to offset the winter-time reduction in output at the new Eildon power station, which is designed to operate primarily on the summer-time release of water for irrigation purposes.

In a Report to Parliament during 1920, the Commissioners included details of a large-scale project for harnessing the Kiewa River in the valleys and tablelands of the Bogong High Plains area of the Main Dividing Range, located approximately 150 miles north-east of Melbourne. At that time the Commission was not prepared to recommend adoption of the plan, but, on the other hand, suggested further consideration of the smaller Sugarloaf and Rubicon scheme. However, during the following 17 years, hydrological investigations were carried out in the Kiewa area which greatly facilitated the subsequent planning of a major hydro-electric project. On 12th June, 1937, a further Report was submitted to Parliament recommending adoption of a plan to provide an ultimate capacity of 117,000 kW from the Kiewa project. The plan, which included construction of four power stations with an initial installation comprising 20,000 kW to be in service by 1942, was approved and its provisions embodied in the State Electricity Commission (Extension of Undertaking) Act 1937. Construction commenced during 1938, but the war delayed progress and it was not until September, 1944 that the first station came into partial operation with 13,000 kW—a second unit of 13,000 kW was brought into service in April, 1945 and is contributing annually an average of 57 million kWh of electricity to the State system.

The 1937 Kiewa project, prior to its submission to the Government, was critically reviewed by a group of oversea consulting engineers, and their report confirmed that an enlarged scheme might be possible after further detailed investigation of the water power resources of the terrain adjacent to the Bogong High Plains. On 21st November, 1947, the Commission submitted proposals for expanding the original Kiewa scheme of 117,000 kW to one of 289,000 kW. Approval for the amended scheme was contained in the State Electricity Commission Act 1948. In accordance with this revised project, a second power station of 62,000 kW capacity began operation in 1955 and is due for completion early in 1956. On completion early in 1957 of a new supplementary diversion tunnel, combined production of the two power stations at Kiewa will average more than 200 million kWh annually. Work is in progress in connexion with a third power station of 96,000 kW, which is due to start operating in 1958; and work, suspended for three years on account of financial conditions, has been resumed on one of the main storage reservoirs at Rocky Valley on the Bogong High Plains.

Continued investigation of the area has resulted in further modification of the scheme to provide for an ultimate capacity of 333,000 kW, and an average annual production exceeding 800 million kWh.

Irrigation water will also be utilized at the Hume Reservoir where a new power station being erected for the Electricity Commission of New South Wales will serve both Victoria and New South Wales. Initially, the installed capacity of the power station will be 50,000 kW. Production of electricity, averaging about 200 million kWh a year, will be shared equally by the two States, each contributing its quota of the

annual cost. Victoria's share of the electricity generated will be fed into the State system. The power station is due to begin operating in 1957. Victoria will also buy its allotted share of electricity from the Snowy Mountains Hydro-electric Authority. Power will be fed into the Victorian system by a high voltage transmission line from the Snowy undertaking, connecting initially to the Victorian network near Kiewa. Transmission from the Snowy Mountains to the Victorian system is due to start in 1959.

(iv) *State Supply System. (a) Growth and Extent.* Since its inception, the Commission has gradually extended the State's system of supply so that it now serves two-thirds of the populated area of the State, in which nine-tenths of the population reside, and certain towns in New South Wales, including Albury. The following comparative table indicates the growth of the Commission's State system between 1929 and 1954

VICTORIA : STATE ELECTRICITY COMMISSION SYSTEM.(a)

Particulars	Year ended 30th June—			
	1929.	1939.	1949.	1954.
Installed Capacity .. .. kW	148,000	(b) 281,400	480,300	(c) 811,500
Units Generated .. .. million kWh	422	898	2,148	(c) 3,502
No. of consumers (approx.) (including bulk supply areas) .. ..	230,000	368,000	500,000	657,000
Country and Provincial Centres Served	141	419	699	973
Farms Served .. ..	700	4,985	14,419	27,082

(a) About 99 per cent. of electricity produced in Victoria is now generated by the State Electricity Commission, which also supplies 96 per cent. of consumers. Statistics for 1949 and 1954 include 1,850 kW and 20,000 kW, respectively for regional power stations not at present connected with the State system. (b) Includes Geelong power station (acquired 1st September, 1939) and Ballarat power station (acquired 1st July, 1934, but not in 1939 connected with the rest of the State system); excludes Spencer-street power station, which was not connected with the State system until 1st January, 1941. (c) Includes 25 cycle generation at Newport Power Station.

During 1953-54 electricity was reticulated to the various classes of consumers in the following proportions—domestic, 35 per cent.; commercial, 14 per cent.; industrial, 40 per cent.; public lighting, 1 per cent.; and traction (including railways), 10 per cent.

To 30th June, 1954 the Commission had acquired 85 country undertakings in addition to those acquired in the metropolitan area and in provincial cities. It carries out retail distribution throughout its area of supply, except for part of the metropolitan area where eleven municipal undertakings, operating under Orders-in-Council granted before the foundation of the Commission, purchase their electricity in bulk from the Commission. Bulk supply is given to the following New South Wales border municipalities and shires: Albury, Berrigan, Coreen, Corowa, Moama and Wentworth, and to a number of irrigation settlements bordering the River Murray. There were, at 30th June, 1954, 50 independent undertakings in various country towns in Victoria generating and distributing their own supplies. Operations of independent undertakings are governed by the Electric Light and Power Act 1928, which the Commission administers.

(b) *Composition and Control of Inter-connected Generating System.* Included in the inter-connected State generating system there were at 30th June, 1954 fifteen steam-electric, hydro-electric and diesel-electric power stations located at different centres in the State, and all comprised in one State-wide system. The distribution system comprised approximately 19,200 miles of high and low voltage power lines, nine terminal

receiving stations and 9,900 distribution sub-stations. The Commission's inter-connected generating system comprises three principal groups of power stations, namely :—

*Steam stations.*

Yallourn—burning raw brown coal; Metropolitan and provincial stations—burning mainly briquettes and brown coal. (Supplementary fuels used in metropolitan power stations comprise oil fuel, black coal and coke).

*Hydro stations.*

Kiewa; Eildon (commenced August, 1954); Rubicon-Royston.

*Diesel stations.*

Shepparton; Warrnambool.

In meeting the total demand on the system which, of course, fluctuates throughout the day and from month to month throughout the year, each group of stations is assigned a predetermined function dependent upon the availability of power from each group and the overall economics of generation. The various stations are utilized in a combination that will most economically meet the system load at a given time. For a description of the arrangement of the system thus involved see Official Year Book No. 39, p. 1170.

(c) *Organization.* In the Commission's organization, the functions of generating and distributing electrical energy are under the control of two separate departments—the Production Department in charge of power stations, brown coal winning, briquette manufacture, terminal stations and main substations, and the Electricity Supply Department, responsible for distribution to consumers. Energy throughout the inter-connected system is delivered by the Production Department to the Electricity Supply Department from the main transmission network, and not specifically from local power stations, since all power stations in the interconnected system, wherever they are situated feed into a common "pool". The territory covered by the Electricity Supply Department is divided into nine areas, each constituting a supply branch. Isolated areas, not at present included in the interconnected system—namely, Mildura and Wimmera (Horsham undertaking acquired in June, 1955)—operate as sub-branches of the North Western Region. The Metropolitan Branch supplies Melbourne and suburbs, with the exception of certain areas supplied by City Councils reticulating Commission electricity. Energy is supplied by the Production Department to the Metropolitan Branch, and those metropolitan municipal supply authorities which purchase electricity in bulk, at metropolitan terminal stations and a number of main transmission substations. Supply to the Eastern Metropolitan Branch (which has its headquarters at Dandenong) is on similar lines.

Headquarters of the Electricity Supply Department's branches outside the metropolis are located at Dandenong (Eastern Metropolitan), Traralgon (Gippsland), Geelong, Colac (South Western), Ballarat, Castlemaine (Midland), Benalla (North Eastern), and Bendigo, which is also the headquarters of the North Western Region.

Supply to the Gippsland Branch is obtained from the system via Yallourn power station at 22,000 volts and by 66,000 volt transmission lines extending within the branch to Maffra in the east, Leongatha in southern Gippsland and Warragul in western Gippsland.

Supply to the Geelong Branch is obtained from the two Geelong power stations and Geelong terminal station, the three being inter-connected with the rest of the system by a 66,000 volt transmission line to Newport power station.

Supply to the South Western Branch is obtained through Geelong terminal station by a 66,000 volt transmission line extending through Colac to Warrnambool, and also from Warrnambool power station and Hamilton power station which was interconnected with the rest of the system in November, 1954.

Ballarat Branch obtains its supply through the two Ballarat power stations and Ballarat terminal station which are inter-connected with the rest of the system by a 66,000-volt transmission line from Sunshine terminal station in the Melbourne Metropolitan area.

Both the Midland and Bendigo Branches obtain their supply through the 66,000-volt power line from Thomastown terminal station, one of the major metropolitan terminal stations in the system.

For the North Eastern Branch, supply is obtained through Rubicon "A" switching station and the Kiewa hydro-electric undertaking, while local reinforcement of supply is provided by Shepparton power station. Inter-connexion with the rest of the system is provided by the 66,000-volt transmission line extending from Thomastown terminal station to Kiewa via Rubicon "A" and Benalla, with branches to Shepparton and Kyabram, Yarrawonga and Mulwala (New South Wales), and via Wangaratta to Wodonga for supply to Albury.

The two isolated sub-branches not at present included in the interconnected State supply network are served by regional stations located as follows :—

Mildura sub-branch—

Mildura and Redcliffs (locally interconnected).

Wimmera sub-branch—

Horsham.

(v) *New Capacity.* Approved new electric power projects, all due for operation by 1960, will add about 500,000 kW to the installed capacity of the State generating system. This total does not include Victoria's half share in the hydro station now being built at Hume Dam, nor the quota it is proposed to take from the Snowy Mountains hydro-electric scheme; nor does it include additional plant at Yallourn programmed for service in 1960 but not yet formally authorized.

Major works brought into service since 30th June, 1954, or now under construction include—

(a) *Thermal stations.*

Yallourn extension—156,000 kW (under construction). Of this total, one 50,000 kW generator came into service in May, 1955. Further extensions (in addition to those now in progress) are to be made later.

Morwell—91,000 kW (initial stages), being the generating capacity available for public supply by 1960 at the new power station to be built in association with two new brown coal briquette factories. Further expansion would be possible, but development after 1960 has not yet been decided.

Metropolitan—40,000 kW at Spencer-street (Melbourne City Council) power station, comprising 15,000 kW brought into service for the latter months of 1954 and a 25,000 kW generator scheduled for service in 1959.

(Plant on order also includes a 40,000 kW steam-electric generator, the location of which has not yet been determined).

(b) *Hydro Stations.*

Kiewa—62,000 kW station (in partial service 1955) to be completed early 1956; 96,000 kW station; and a further construction to follow at a later date.

Eildon Dam—135,000 kW—comprising 120,000 kW of new plant (under construction) and 15,000 kW from re-designed plant.

Hume—25,000 kW representing Victoria's share of a 50,000 kW power station shared equally by Victoria and New South Wales (under construction).

A 220 kV transmission line from the Kiewa undertaking to Thomastown terminal station in Melbourne was completed in 1955 and is now being linked with the completed new 200 kV line built from Yallourn to Malvern terminal station to reinforce the existing 132 kV circuits already linking Yallourn with metropolitan terminal stations.

The Commission's long-term plans for State-wide extension of electricity supply involve the construction of a 220 kV transmission line from Kiewa to Mildura by way of Shepparton—a distance of approximately 350 miles. Construction has begun of the first section of this line to Shepparton, with a 220 kV spur line to Bendigo. The new regional station for Mildura at Redcliffs will function primarily as a peak-load station when the line is completed.

The Commission has submitted to the State Parliament its plan for the final phase of rural electrification of Victoria, extending supply to all populated regions of the State. The plan provides for the extension of State Electricity Commission supply to every home in Victoria except for about 15,000 homes located in the most isolated parts of the State.

### § 3. Queensland.

1. *General.* In Official Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to the City Electric Light Co. Ltd. of Brisbane (now the Southern Electric Authority of Queensland), the Brisbane City Council and the Toowoomba Electric Light and Power Co. Ltd.

The first of these organizations, which was operating in Brisbane well before the end of the last century, now supplies a large part of Brisbane's electric power requirements and a considerable rural area in the south-east corner of the State. By 1933 this organization was operating a modern power station at Bulimba, a suburb of Brisbane, with an installed generator capacity of 37,500 kW, from which it supplied more than 16,000 consumers and generated about 60 million kWh of energy per annum. Capacity is now 95,000 kW at Bulimba "A" plus 10,000 kW, "packaged plant" at Abermain (near Ipswich) and 60,000 kW at a new generating station known as "Bulimba B". The output from a 3,200 kW hydro-electric unit installed at Somerset Dam near Brisbane is fed into the Southern Electric Authority system. With these plants 553 million kWh were generated in 1953-54 while the total number of the Authority's consumers at 30th June, 1954 was 75,311.

The Brisbane City Council established an electricity supply service after the 1914-18 War, and by 1938 it was supplying an area of about 365 square miles, purchasing energy in bulk from a power station located at New Farm (administered by the Tramways and Power House Department) and from the City Electric Light Co. Ltd. Growth of the Council's electrical undertaking and power production is indicated by the following comparisons between 1937-38 and 1953-54 figures, respectively:—Installed capacity, 56,250 kW and 75,000 kW plus a 10,000 kW "packaged" plant erected at Tennyson; units purchased and generated, 71 million kWh and 438 million kWh; consumers, 57,000 and 111,230. Since 30th June, 1954 the first 30,000 kW set at a new power station at Tennyson has been commissioned by the Council.

During 1905, the Toowoomba Electric Light and Power Co. Ltd. established supply in Toowoomba, and has since supplied a considerable area including portion of the Darling Downs. Power was generated at the Company's diesel stations of 3,300 kW supplemented by bulk supplies purchased from the Southern Electric Authority of Queensland. In 1940 the company purchased the power undertakings at Warwick, and in 1946 the Killarney undertaking. The Toowoomba Electric Light and Power Co. Ltd. has now been absorbed by the Southern Electric Authority of Queensland.

The generation and distribution of electric power in Queensland had, until the last decade, tended to lag behind developments in this field in other States of Australia. The comparatively slow growth in the production and consumption of electricity can be attributed to some extent to the absence, prior to 1938, of a central statutory authority constituted to undertake the functions of co-ordinating, unifying and controlling the production and transmission of electric power. In addition, Queensland's vast area, coupled with a low population density, made large-scale rural electrification, elsewhere than in the south-eastern portion of the State which surrounds the major centres of industry and population, an uneconomic proposition.

Before establishment of the Regional Electricity Boards in 1945, no attempts had been made to unify or co-ordinate electricity supplies outside of South Eastern Queensland, and rural electrification, apart from reticulation within certain townships, was practically unknown.

2. **Royal Commission on Generation and Distribution of Electric Power in Queensland, 1936.**—On 5th December, 1935, the Queensland Government appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. An account of the results of its investigations and of the alternative proposals put before it will be found on p. 1182 of Official Year Book No. 39.

3. **The State Electricity Commission of Queensland.**—In 1937, the State Government legislated to constitute a State Electricity Commission (legislation administering the generation and distribution of electricity in Queensland prior to the establishment of the Commission is referred to on p. 1181 of Year Book No. 39), which commenced to function during January, 1938—to it was passed administration of the Electric Light and Power Acts 1896–1938. The Commission's main powers were :—to secure a proper and efficient supply of electric power; review tariffs; grant licences to supply electricity; secure the safety of the public; and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. In addition, the Commission was empowered to co-ordinate the industry's development throughout Queensland. Between 1938 and 1954, the number of private companies was reduced by absorption and acquisition from twenty-one to six, and publicly owned undertakings, by amalgamation into Regional Authorities, from forty-seven to forty-one including thirteen new schemes for small Western Queensland towns.

By agreement with the Commission in 1939, the City Electric Light Co. Ltd. (now the Southern Electric Authority of Queensland) became the co-ordinating authority for the provision of electricity in an area of some 10,062 square miles, extending from the New South Wales-Queensland border to Gympie, north of Brisbane. The Company acquired the undertakings at Bonnah, Beaudesert, Gympie, Coolangatta, Ipswich, Nambour, Southport, Redcliffe and the Somerset Dam supply and transmission line to Brisbane. Certain restrictions were placed on the Company's dividend rate, namely, limitation to the rate on Commonwealth bonds, plus 2 per cent. During 1940, a similar agreement was made with the Toowoomba Electric Light and Power Co. Ltd. for the supply of electricity in the Toowoomba, Warwick, Killarney and Allora districts, subsequently being extended to cover a comprehensive area of 9,324 square miles, including Stanthorpe and other districts. Transmission line extensions since that year have made supply available to a number of adjacent districts on the Darling Downs. The City Electric Light Co. Ltd. was converted to a public authority as from 1st February, 1953 by the Southern Electric Authority of Queensland Act of 1952 (see para. 5 below).

Amending legislation, passed by the Queensland Parliament in March, 1948, changed the constitution of the State Electricity Commission from a body corporate to a corporation sole. On 1st July, 1948, a Commissioner for Electricity Supply was appointed in lieu of the previous Commission of four Commissioners. Since its inception in 1938,

the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favorably with other States in the Commonwealth.

4. **Regional Electricity Boards.**—With a view to facilitating the control and development of electricity supply in areas of low population density or those having a predominantly primary producing economy, the Government in 1945 passed the Regional Electric Authorities Act. This legislation, as later amended, provides for the creation of regions of electricity supply and constitution of Regional Electricity Boards. The Act provided for transfer to the Boards of local authority electricity undertakings in their regions, and for acquisition by the Boards of privately owned undertakings when purchasing rights fell due. Each Board comprises representatives of local authorities in the region and a representative of the Commission. Financial operations of the Boards are under the control of the Commission.

Soon after passage of the Regional Electric Authorities Act, four regions were defined and four Regional Boards constituted, namely, Wide Bay, Capricornia, Townsville and Cairns. A fifth Board, entitled South Burnett, became an operating authority in October, 1947, but on 1st July, 1951 was absorbed in the Wide Bay Regional Board and the organization is now known as the Wide Bay-Burnett Regional Electricity Board. As power was to be obtained from the Wide Bay Regional Board's station at Howard, the Commission decided that development of the two regions could be planned more effectively by a single authority.

Activities of the four Regional Boards in 1953-54 compared with operations of the stations located in regions in 1945-46, and totals for Queensland as a whole, are shown in the following table:—

QUEENSLAND : REGIONAL OPERATIONS.

Region.	1945-46.		1953-54.	
	Units Generated.	No. of Consumers.	Units Generated.	No. of Consumers.
	m.kWh		m.kWh	
Wide Bay-Burnett .. .. .	13.7	11,467	46.1	21,910
Capricornia .. .. .	19.5	11,196	69.5	17,483
Townsville .. .. .	25.8	11,612	70.0	17,532
Cairns .. .. .	22.7	9,722	67.6	16,212
<b>Total</b> .. .. .	<b>81.7</b>	<b>43,997</b>	<b>253.2</b>	<b>73,137</b>
<b>Queensland</b> .. .. .	<b>487.0</b>	<b>194,429</b>	<b>1,388.0</b>	<b>305,636</b>

Generator capacity of the four existing Regional Boards installed at 30th June, 1955 was:—Wide Bay-Burnett, 22,500 kW; Capricornia, 22,500 kW; Townsville, 22,500 kW; Cairns, 17,070 kW; total, 84,570 kW.

5. **Creation of Southern Electric Authority of Queensland.**—A further major step in electrical progress, comparable with that taken when the agreements with the City Electric Light Co. Ltd. and Toowoomba Electric Light and Power Co. Ltd. were first entered into, was taken by the passing of the Southern Electric Authority of Queensland Act of 1952. This Act constituted the City Electric Light Co. Ltd. as a public authority to be known as the Southern Electric Authority of Queensland.

Two Government representatives are included on the Board of the new Authority, whose establishment prepares the way for the complete amalgamation, in due course, of the electrical undertakings serving the south-eastern Queensland area of supply.

An important advantage gained by the creation of this Authority is that on 30th June, 1968, acquisition of the Authority by the State Government can be effected without the necessity of a cash payment as the Government will have the power to convert the Authority's existing stock to inscribed stock. Furthermore, the replacement of the City Electric Light Co. Ltd. by the Southern Electric Authority as a public body relieves electricity consumers in the Authority's area of supply from the burden of taxation which has hitherto been payable by the City Electric Light Co. Ltd., but will not require to be met by the new Authority. An agreement has been signed between the State Government and the Southern Electric Authority giving effect to the principles contained in the new legislation.

As from 1st July, 1954 the Southern Electric Authority acquired the Toowoomba Electric Light and Power Co. Ltd., thus bringing this company's area of supply under its control. The Southern Electric Authority is now responsible for the electrical supply and development of a consolidated area of 19,386 square miles.

6. New Capacity.—(i) *Regions.* To provide for development of the electric power resources in the regions, the State Electricity Commission formulated a ten-year programme divided into two five-year periods. In the first, it was planned to erect main transmission systems to connect existing power stations located within the regions and supplement generating capacity by the construction of new stations. Work on this section of the plan is now nearing completion. In the second period, the transmission system will be extended to more sparsely settled areas, the ultimate purpose being the provision of "ring" transmission lines throughout each region and inter-connexion between the regions.

A number of new generating stations have been commissioned as follows:—Wide Bay (Burnett Region), of which 15,000 kW was placed in service during September, 1951—a further 7,500 kW in 1954 and a further set of 15,000 kW is scheduled for installation in 1956; Rockhampton (Capricornia Region) of which 22,500 kW was placed in service during September, 1952 and a further 15,000 kW is scheduled for installation in 1955; and Townsville (Townsville Region) of which 22,500 kW was commissioned in July, 1953, with a further 15,000 kW to follow in 1955. Each of these stations will have an ultimate capacity of 52,500 kW and be steam-operated. In the Cairns Region, construction is proceeding on the Tully Falls hydro-electric scheme and two 18,000 kW turbo alternator sets should be giving a supply of electric power by the end of 1956. The scheme is designed for an ultimate installed capacity of 92,400 kW. To augment existing capacity and to meet anticipated demands pending operation of Tully Falls, the Cairns Regional Board has installed nineteen diesel units with a total capacity of 13,110 kW.

The Tully Falls scheme is planned to link with the Townsville Regional Electricity Board's system for the purpose of marginal supply, and construction of this interconnexion has now commenced. Plans for the development of the Burdekin Falls Hydro-electric project are also proceeding. These schemes and the existing Barron Falls hydro-electric plant will exploit North Queensland's principal hydro-electric potential estimated conservatively at more than 316,000 kW.

At Mackay, where supply was first given in 1924, and Bowen, both situated on the coast between the Capricornia and Townsville Regions, the local Councils operate power stations of 4,500 kW and 1,000 kW respectively. The Mackay City Council has embarked on a scheme for rural development under an agreement with the State Electricity Commission. To cater for the anticipated growth in demand, the capacity of its station will be increased to 9,500 kW in 1954–55. At Bowen, the Town Council,

which established the service in 1925, is extending the station's capacity by installation of one 1,000 kW unit. During 1935, a small (3,800 kW) power house—Australia's first underground hydro station—was placed in service at Barron Falls near Cairns. When the Cairns Regional Board was established during 1946, operation of the station passed to the Board's control and now comprises part of its generating plant, totalling 15,370 kW, supplying an area of approximately 42,000 square miles.

(ii) *Western Queensland.* In Western Queensland, where a number of small isolated generating stations supply power to some of the larger towns, the Commission has evolved a plan to increase and modernize existing capacity. It involves installation of small internal combustion units ranging in size from 100 kW to 600 kW according to the load likely to be experienced, and conversion from direct to alternating current supply. The Government is assisting the scheme by subsidy—a feature of electrical development in Queensland. In general, the assistance provided comprises subsidies of up to one-third of capital cost on annual loan charges, with special subsidies of up to 50 per cent. for authorities in isolated areas.

In addition to improving supplies to the larger western towns, a scheme has been devised for electricity supplies for smaller towns in the western districts, where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. will apply in those cases where the number of consumers supplied is less than 100 and 200, respectively. This plan is now being implemented and at 30th June, 1955, twenty-two townships in the west of Queensland have been provided with the amenities of electricity. Work is at present proceeding on similar schemes for a further four townships and such supply is expected to be available before the close of 1955. In addition investigations of the possibility of supply are being carried out at eleven other centres. The power is being supplied by small oil driven generating sets with automatic controls which can be run with a minimum of operating attendance.

Coal-burning gas producers have been successfully commissioned for public electricity supply purposes in the West. They have been or are now being installed at Longreach, Clermont, Dalby, Blackall and Barcaldine and further extensions of their use in Western Queensland is predicted, as lower tariffs and more efficient production of electricity should follow their use.

(iii) *South-eastern Queensland.* To increase the availability of electric power in the south-eastern area of the State, the two major generating authorities, in conjunction with the Commission, have power station projects under construction which are designed to place in service by 1956 new generating units totalling 335,300 kW. The Southern Electricity Authority is building a station known as Bulimba "B" on a site adjacent to Bulimba "A"—60,000 kW has been installed, but the ultimate capacity may reach 180,000 kW. A 3,200 kW unit at Somerset Dam near Brisbane is now in service and feeds into the Southern Electric Authority's system. At Tennyson in the Brisbane area the Brisbane City Council is constructing a new power station—initial capacity 60,000 kW which may be ultimately increased to 180,000 kW. The first 30,000 kW set has been commissioned and the second set is scheduled for commissioning in 1956. To supplement capacity pending operations of these projects, "packaged" generating units totalling 20,000 kW were obtained from overseas and commissioned early in 1953, one 10,000 kW set having been installed at Tennyson and another 10,000 kW set at Ipswich.

The power stations of the two major generating authorities at New Farm and Bulimba are interconnected at 33,000 volts.

(iv) *The Burdekin River Hydro-electric Project.* In the vicinity of Townsville, the Commission, acting on behalf of the Burdekin River Authority, has investigated the proposed hydro-electric development of the Burdekin. This project is linked with the plan to conserve the waters of the river for irrigation and flood mitigation and surveys undertaken indicate that approximately 80,000 kW could be generated. It has been

estimated that a hydro-electric station approaching this size should meet the requirements of Townsville and the coal mines in the region of Collinsville, for at least 20 years, and also transmit supply to Bowen and Proserpine and possibly to the Mackay area, and by obviating the continuous operation of thermal plant achieve significant savings in fuel.

(v) *The Tully Falls Hydro-electric Project.* The development of the Tully Falls for the hydro generation of electricity is now well advanced, the initial plant installation being 36,000 kW, and is scheduled for commissioning in 1956. This installation comprises a storage weir upstream from the falls, with an underground power station in the gorge at the foot of the falls. Arrangements were recently approved whereby a marginal supply of electricity will be provided from the project to the Townsville Regional Electricity Board, and tenders have been accepted for a further 36,000 kW of hydro generating plant to be installed. This hydro scheme is capable of development to supply the electrical needs of North Queensland for many years to come.

7. *Hydro-electricity.*—Behind the coastal plain of the Cairns-Ingham area is an extensive plateau, the elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the old divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can in most cases be provided, is essential to control the very variable flow.

The Barron Falls scheme, 14 miles north-west of Cairns, came into operation in 1935. The installed plant operates under a head of 410 feet and comprises three 2,000 h.p. turbines each connected to a 1,320 kW generator. Average rainfall varied from 80-150 inches along the ranges to less than 35 inches in the western portion of the catchment. There is extreme variation from year to year, resulting in great fluctuation of stream flow which, at Kuranda, has varied from a maximum of 117,000 cusecs in 1911 to a minimum of 30 in 1915. Storage to regulate the flow is possible but has not yet been provided. During periods of low flow the supply of electricity is supplemented by fuel plants at Cairns, Atherton and Innisfail. Power is distributed over 22,000 volt transmission lines serving the tableland and extending southward along the coast to Tully.

A small hydro-electric scheme on the Mossman River, 5 miles from Mossman, North Queensland, comprises two 120 h.p. turbines operating under a head of 200 feet.

A hydro-electric power scheme at Tully Falls is being constructed. Water controlled by Koombooloomba Dam to be built on the upper Tully River will be diverted, a short distance above Tully Falls, through a tunnel and steel penstocks to Pelton-driven generators under a head of 1,485 feet. Ultimate installation will be four 18,000 kW sets, two of which will be installed initially. Future automatic power plants upstream and downstream from Tully Falls will consist of two 7,500 kW sets under 405 feet head and one 5,400 kW set under 230 feet head. The combined peak load for the three plants will be 69,000 kW. Interconnexion of the Townsville area, currently supplied by a thermal station, with the Tully scheme has been authorized and revision of the 160 mile duplicate 132 kV transmission line is under way. On present estimates power from the Tully scheme will be sufficient to supply the interconnected area until 1965, when addition power will be required. A full investigation by the State Electricity Commission of the electricity supply industry in North Queensland is proceeding and the terms of reference include the survey of additional hydro-electric projects.

Other northern schemes which have been investigated include Freshwater Creek (3,900 kW); North Johnstone-Russell Rivers (32,000 kW); Beatrice-North Johnstone Rivers (9,000 kW); South Johnstone River (25,000 kW); extension of Barron Falls scheme (22,000 kW); Herbert River (90,000 kW). The total potential of the plateau region is therefore about 250,000 kW at 50 per cent. load factor.

A power plant immediately below the Burdekin Falls Dam of the proposed Burdekin River Irrigation scheme will operate under an average head of 225 feet. The output of firm power will depend upon the varying demand for water for irrigation, but it is expected to average about 50,000 kW.

South of the Burdekin River no appreciable hydro-electric development is practicable. A plant of 3,200 kW capacity has been installed to utilize the outflow from Somerset Dam on the Stanley River a few miles above its confluence with the Brisbane River.

## § 4. South Australia.

1. *General.*—An account referring to the companies generating electric power in South Australia prior to the advent of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Official Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following upon an inquiry instituted by the Government in 1943 relative to measures for increasing electricity supply to the metropolitan area and country districts the Electricity Act 1943 was passed which, *inter alia*, established the South Australian Electricity Commission. However, until the State assumed full responsibility for the supply of electric power, this body was not able to do much more than exercise the formal functions conferred on it by the Act.

Under the provisions of Section 3 of the Adelaide Electric Supply Company Act 1944, a Royal Commission was appointed to inquire into and report upon the supply of electricity by the Company and upon all matters concerning it. The Commission presented its report on 28th August, 1945, the main substance of which was, subject to certain considerations and assumptions, that the Government acquire the assets and liabilities of the Adelaide Electric Supply Co. Ltd., and the responsibility for the generation and transmission of electric power in South Australia be vested in a public authority to be called the South Australian Electricity Trust, or, alternatively, if acquisition were not considered desirable, that prices charged for the supply of electricity by the Company be fixed by regulation and determined from time to time by a Committee appointed by the Governor in Council, giving due regard to the interests of the public and a fair return to the shareholders of the Company. The Commission also recommended that an inquiry be held forthwith by the South Australian Electricity Commission regarding the co-ordination of electricity supplies in the State, and that the Commission have power to veto any proposals for the construction of works to generate and transmit electric power.

2. *The Electricity Trust of South Australia.*—Early in 1946, a Bill was passed transferring the assets of the Adelaide Electric Supply Co. Ltd. to the newly formed Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supplies. This legislation provided that the Trust should take over the powers vested in the South Australian Electricity Commission under the 1943 Act, which, after establishment of the Trust, would cease to exist. In addition to the powers specified in the Adelaide Electric Supply Company's Acts 1897–1931, the Trust may, *inter alia*, supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other persons who generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other persons, and give or receive supplies of electricity in bulk.

3. **Capacity and Production.**—There are three main categories of organizations generating electric power in South Australia, namely :—(a) Governmental, which include the Electricity Trust ; (b) Local Authorities, e.g., municipal and district councils, Renmark Irrigation Trust, Municipal Tramways Trust ; and (c) Other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power for their own use.

In 1953-54 total installed capacity in South Australia was 269,992 kW, an increase of 1,858 kW on the year before. The units generated totalled 955 million kWh compared with 822 million kWh in the previous year.

Of the total installed capacity, the Electricity Trust of South Australia operated plant with a capacity of 219,700 kW. It is thus the most important authority supplying electricity in the State. There were approximately 216,289 ultimate consumers of electricity, of whom 188,936 were supplied by the Trust. Its major steam stations were Osborne "A" (79,000 kW), Osborne "B" (120,000 kW) and Port Augusta "A" (15,000 kW) while the balance of the capacity controlled consists of a limited number of small internal combustion plants located in rural districts.

No hydro-electric potential exists in South Australia. Steam generating units comprise 94 per cent. of installed capacity and the balance, 6 per cent., is internal combustion equipment. Until recently, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

4. **Leigh Creek and other new Capacity.**—With a view to reducing the dependence on external sources of fuel, steps have been taken to produce local coal and to install plant to use it. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act Amendment Act 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944 and in the year ended 30th June, 1954, 455,510 tons of coal were sold. Of this amount the Electricity Undertaking used 332,365 tons.

In order to cope with the rapidly increasing demand for power, the Electricity Trust is installing two additional 30,000 kW units at Osborne "B" Power Station. These will complete the "B" station which will then have a total capacity of 180,000 kW. Another major work under construction is the power station at Port Augusta with an ultimate capacity of 90,000 kW. The first 15,000 kW boiler and 30,000 kW turbo-alternator were commissioned in June, 1954. This power station is located at Port Augusta because of its proximity to the Leigh Creek coalfield and the station will use Leigh Creek coal exclusively. A new standard gauge railway line to connect Leigh Creek with Port Augusta is being constructed by the Commonwealth Railways Department. The power station is inter-connected with the Metropolitan Area by two transmission lines which will also supply power at intermediate points. The Trust has now decided to construct a second power station at Port Augusta to be known as Port Augusta "B". This station will have a capacity of 180,000 kW making the combined capacity at Port Augusta 270,000 kW. With the two Port Augusta power stations and the extensions to Osborne "B" station the planned increase in generating capacity is 315,000 kW.

5. **The Municipal Tramways Trust.**—In addition to the instrumentalities mentioned above which are engaged in the generation and distribution of electric power in South Australia, the Municipal Tramways Trust operates a power station of 19,100 kW at Port Adelaide, which supplies energy for traction purposes. In 1943 a 5,500 kW frequency changer was installed to form a link between the power stations of the Trust and the Electricity Trust of South Australia to permit interchange of power when necessary. In 1954 the service consumed approximately 19 million kWh of electricity.

## § 5. Western Australia.

1. **General.**—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan municipal and road board supply authorities have now been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area see Official Year Book No. 39, p. 1189.

2. **Metropolitan Undertaking.**—Statistics relating to activities at the Metropolitan undertaking are shown in the following comparative table.

WESTERN AUSTRALIA : METROPOLITAN UNDERTAKING.

Particulars.					1928-29.	1938-39.	1953-54.
Plant capacity	..	..	..	kW	32,000	57,000	124,000
Maximum load	..	..	..	kW	21,500	33,000	89,000
Units generated	..	..	..	Million kWh	80	137	401
Coal used per unit generated	..	..	..	lb.	3.1	2.77	1.75
Coal used—							
Colliery small..	..	..	..	tons	110,460	165,355	312,903
Imported	..	..	..	..	427	3,367	..

As a result of a separate inquiry conducted at the same time as the early investigations into the proposed new station at South Fremantle, a recommendation was made favouring conversion of the East Perth 40 cycle system to the British and Australian Standard Frequency of 50 cycles per second. The recommendation was adopted and implemented by making the frequency of generation at South Fremantle 50 cycles and installing at East Perth a frequency changer able to convert 25,000 kW of energy from one frequency to the other. Change-over of consumers' plant is proceeding and a large number of important loads are now supplied at 50 cycles.

3. **Kalgoorlie.**—In Kalgoorlie, the Municipal Council in 1895 first established electricity supply and by 1945 it was supplying 3,350 consumers with direct current from a diesel station of 1,350 kW generating capacity. Primarily established to supply power for the gold mines and for traction, the Kalgoorlie Electric Power and Lighting Corporation operates a steam station of 18,750 kW and maintains a 22 kV line of 21 miles to the Celebration mine. Alternating current is also supplied to about 1,000 consumers. The Corporation's undertaking generates approximately 42 million kWh and new boilers have been installed to permit steam-raising from Colliery coal, since depletion of timber in neighbouring areas has proceeded to the point where firing on wood fuel is no longer economic.

4. **General Pattern of Electricity Supply.**—The pattern of the generation and distribution of electric power in Western Australia consisted until recently of a number of isolated systems each supplying a particular area. Except in the metropolitan area and in the area embraced by the South-West Power Scheme (See para. 6 below), where in both cases electricity supply is in the hands of the State Electricity Commission of Western Australia, local authorities are generally responsible for the supply of electricity for domestic, industrial and traction purposes. In the area between the Great Southern Railway from Northam to Albany and the west coast, however, the State Electricity Commission has now constructed transmission lines to give central station supply to the towns and their surrounding rural areas. In addition, there are

several mining companies which generate electricity for use in their mines. In order to cater for the expected growth in demand, capacity of the State's major generating stations is being increased and designs are proceeding for the inter-connexion of the Perth-Fremantle system with the south-western area.

The main load centre of the State is, of course, the Perth-Fremantle area into which is concentrated the major portion of the State's population and industry. The pending inter-connexion between the Metropolitan and Country systems is, however, expected to lead to a gradual decentralization of load.

5. The State Electricity Commission of Western Australia.—(i) *Origin and Aims.* In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government introduced a Bill in 1945 to establish the State Electricity Commission, which, together with an Electricity Bill, became law early in 1946. Under these Acts, the Commission was given power, *inter alia*, to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines and purchase as a going concern and carry on the undertaking of any supply authority. Under the Electricity Act, which should be read in conjunction with, and is subject to, the State Electricity Commission Act, no person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and any proposals are not inconsistent with the Commission's plans.

(ii) *New Projects.* Since its inception in 1946, the Commission has proceeded with the task of increasing generating capacity in an endeavour to cater for a greatly increased demand for power. Long-range plans have been formulated to inter-connect the south-western portion of the State with the Perth-Fremantle system. One of its most important and immediate problems was to increase the capacity of the generating equipment serving Perth and Fremantle. During the 1939-45 War years, it became evident that the growth of demand for electric power would necessitate provision of additional generating equipment in the metropolitan area as soon as possible. Accordingly, the Government Electricity Supply authority commenced design work for a new station of 50,000 kW capacity. Contracts were let in 1945 and construction commenced on a site selected at South Fremantle, on the coast south of Fremantle proper. Responsibility for completion of this project was given to the Commission under the Act of 1946. As it was considered that an even larger station would be required, provision was made for the installation of two additional units giving an ultimate capacity of 100,000 kW. Steam is furnished by eight boilers designed to use pulverized coal from Collie, which is located about 120 miles from the station. At the end of 1954 four units had been placed in service and the output was being fed into the metropolitan system.

Most of the plant at the East Perth power station, which passed to the Commission's control in 1946, is due for retirement. Work is now proceeding upon dismantling the oldest boilers and generators in order to make room within the existing buildings for new and modern plant which will possess the merit of high efficiency, yet may be cheaply installed by requiring a minimum of site preparation, building and distribution expenditure. Current contracts provide for the installation of 30,000 kW of new plant in this station.

6. *South-west Development.*—At the request of the Government, the Electricity Advisory Committee in 1945 submitted a report recommending, amongst other things, that a National Power Scheme for the south-west be proceeded with (implementation of the recommendation of a previous Committee in 1939 had been prevented by the conditions then prevailing). The plan provided for acquisition of the existing Collie

power station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connexion of the south-west scheme with the metropolitan system. On 12th October, 1946, the State Electricity Commission acquired the Collie power station, which prior to 1946 was owned and operated by the Collie Power Company Limited. At the date of acquisition, the station's installed capacity was 5,000 kW, comprising two steam units. The capacity of the station was increased to 12,500 kW in 1952.

Since 1950, the Commission has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie and many of the south-west towns have now been connected by transmission line to the Collie Power Station. When completed, a system of power lines will reticulate electricity over an area of approximately 1,800 square miles. Contracts have been let for the first three 30,000 kW units for a new power station at Bunbury, which will be inter-connected by transmission lines to the Collie and the metropolitan stations, permitting an interchange of power between the metropolitan and south-west systems.

## § 6. Tasmania.

1. *General.*—A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Other contributing factors to the low costs are that rainfall is distributed fairly evenly throughout the year, with comparatively small yearly variations. The cheap power has led to the establishment in Tasmania of several large electro-chemical works with high load factor, and as a consequence the system load factor is also very high and at present is 61 per cent.

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930 see Official Year Book No. 39, pp. 1192-3.

2. *The Hydro-Electric Commission.*—(i) *Present System.* In 1929 the Government passed the Hydro-Electric Commission Act, under which was established the Hydro-Electric Commission and which vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania and authorizes it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The first project undertaken by the Commission was the Shannon Power Development which utilizes 258 feet of the difference in level between the Great Lake (Miena Dam) and Waddamana forebay. A small earthen dam diverts the outflow from the Great Lake through 2½ miles of canal and then by two pipelines to the Shannon Power Station, where 10,500 kW was added to the system in 1934. After passing through Shannon Power Station the water discharges into the Waddamana canals to be used again at the Waddamana Power Stations.

In 1933 it was decided to proceed with the Tarraleah Power Development. In this scheme the waters of the River Derwent are picked up near Butler's Gorge by a canal and conveyed 14 miles to the pipeline forebay 982 feet above the power station on the Nive River where three 15,000 kW generators were placed in service in 1938. Shortly afterwards two more 15,000 kW units were added and a sixth machine installed in 1951 brought the total installed capacity at Tarraleah Power Station to 90,000 kW. Storage is provided at Lake St. Clair and at Lake King William, an artificial lake created by the 200-ft. high Clark Dam across the Derwent at Butler's Gorge. In the Butler's Gorge Power Station at the foot of the dam a single 12,200 kW generator was installed in 1951. To increase the security of the system and to permit variable seasonal loading of Tarraleah station a second canal from Clark Dam to Tarraleah was completed in 1955.

Early in 1939 it was decided to make full use of the Great Lake storage by increasing the peak capacity at Waddamana. War conditions impeded progress, but by the end of the war two 12,000 kW generators had been installed in a new power station, Waddamana "B", adjacent to the original station Waddamana "A". A third unit installed in 1946 and a fourth in 1949 brought the total to 48,000 kW. To enable a full peak capacity to be maintained at both Waddamana stations a duplicate of the original Waddamana canal was constructed during 1947-48.

Between 1930 and 1948 the generating capacity of the system was increased by 121,500 kW but the demand for power continued to increase rapidly and it was obvious that a greatly accelerated construction programme would have to be undertaken. Construction of the Tungatinah Power Development was started in 1948 and the Trevallyn Power Development in 1949.

The Tungatinah scheme draws water from three separate catchment areas located on the Central Plateau between the Great Lake (Shannon-Waddamana) and the Lake St. Clair (Butler's Gorge-Tarraleah) catchments and control of practically the whole run-off from the Central Plateau has now been effected.

The principal catchment utilized by the Tungatinah scheme is drained by the Nive River. A 120-ft. high dam at Pine Tier diverts the waters of the Nive through 6½ miles of canal system to the first of a chain of four artificial lakes, created by dams constructed across the outlets from natural marshes and linked by large open cuts. From the southernmost lake a tunnel and then five steel pipelines lead to the six 25,000 kW generators in Tungatinah Power Station, 1,005 feet below on the Nive River just upstream from Tarraleah station on the opposite bank of the river. Power was first generated at Tungatinah in mid-1953 and with a capacity of 150,000 kW it is the largest hydro-electric power station in Australia. Water from the smaller Clarence River catchment is brought into one of the lakes in the Tungatinah system by means of a woodstave pipeline 5½ miles in length and the third catchment area utilized is the Lake Echo-Dee River catchment. Regulation of this catchment has been achieved by construction of a dam at Lake Echo to provide the main storage reservoir for the Tungatinah scheme, construction of the Lake Echo Power Station (one 32,400 kW generator) to utilize 568 feet of the difference in level between Lake Echo and Dee Lagoon and the diversion of water from Dee Lagoon through 2 miles of tunnel to the main Tungatinah system.

The Trevallyn Power Development, the first constructed by the Commission outside the Central Plateau region, was undertaken primarily to meet the requirements of the aluminium industry. The waters of the South Esk River are diverted through 2 miles of tunnel and pipeline to a power station on the Tamar River near Launceston. Three 20,000 kW generators were installed in mid-1955 and a fourth unit has since brought the total capacity of Trevallyn Power Station to 80,000 kW.

(ii) *New Capacity.* The Hydro-Electric Commission is still engaged in the most progressive construction programme in its history. Since 1948 the generating capacity of the system has been increased by 276,600 kW to a total of 447,100 kW and present construction is planned to bring this total to 569,000 kW by 1960. There will still remain very considerable resources for future development as it is considered that at least 2,400,000 kW can be economically developed.

The Wayatinah Power Development, now under construction, will comprise two power stations and headworks to utilize water which is in the main already regulated and which has been used several times. The volume of water available is much larger and the head smaller than in the case of other major stations. All the water which has passed through Tarraleah or Tungatinah stations will be diverted, by a weir across the Nive River below Tarraleah, through 4 miles of tunnel and then steel pipes to Wayatinah "A" Power Station lower down on the Nive River where 83,700 kW will be installed by 1960.

A dam across the River Derwent, just below its junction with the Nive, will create a small lake into which will flow all the water from Wayatinah "A" plus water collected by the Derwent below Clark Dam. One mile of tunnel and one mile of pipeline will lead the water to Wayatinah "B" Power Station on the Derwent three-quarters of a mile below its junction with the Florentine River. The lower station, Wayatinah "B", is being constructed first for completion by 1958. Installed capacity will be 38,250 kW.

There is every indication that the demand for power in Tasmania will continue to increase. The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme.

3. *Power Usage by Secondary Industry.*—After 1930, every effort was made to keep pace with anticipated increases in demand by means of a progressive construction policy. The abundant and comparatively cheap supplies of electricity and other natural resources attracted to Tasmania a number of important secondary industries for which energy costs constitute a significant proportion of the total cost of production. Some of the more important organizations and their continuous power demands when plant is operating are as follows:—Electrolytic Zinc Company of Australasia Ltd., 51,000 kW; Australian Commonwealth Carbide Company Ltd., 6,500 kW; Goliath Portland Cement Company Ltd., 1,800 kW; Associated Pulp and Paper Mills Ltd., 8,600 kW; Australian Newsprint Mills Ltd., 24,000 kW; and Australian Aluminium Production Commission, 30,000 kW.

## § 7. Commonwealth Territories.

1. *Internal Territories.*—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government. Administration and control of these undertakings is vested in the Commonwealth Department of Works.

(ii) *Australian Capital Territory.* Supply was first established at Canberra during 1915. The Department owns steam stand-by plant of 2,100 kW capacity which is operated in conjunction with the New South Wales Electricity Commission's generating equipment. The major portion of Canberra's power requirements are supplied in bulk from the New South Wales inter-connected system. Within the next few years, defence projects at present under construction in Canberra will greatly increase the demand for electrical energy. These requirements will be met from the Snowy Scheme, the first section of which came into operation early in 1955, the power produced being fed into the New South Wales inter-connected system at Cooma.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but later, during April, 1937, responsibility for generation and supply was placed in the hands of the Northern Territory Administration. The power station is equipped with diesel generating plant of 3,925 kW capacity. Two 970 kW diesel sets will be installed in 1955–56. Small diesel generating units supply the requirements of Katherine (297 kW), Tennant Creek (165 kW) and Alice Springs (1,042 kW).

In 1948 it was announced that the Department of Works and Housing (now the Department of Works) had selected a site for a hydro-electric station on the Adelaide River, 72 miles from Darwin. The scheme is designed to augment supply to Darwin and suburbs when the diesel equipment at present installed is unable to cope with the demand for power. No constructional work has yet been undertaken on the project.

2. *External Territories—Papua and New Guinea.*—Responsibility for the operation and establishment of electrical undertakings in Papua and New Guinea is vested in the Administration of the Territory of Papua and New Guinea, whose headquarters are

located at Port Moresby. The total generating capacity of the diesel engine-driven generating sets amounts to 4,708 kW. The generating capacity of the power plants at the main centres is—Port Moresby, 2,569 kW; Rabaul, 561 kW; Lae, 598 kW; Madang, 280 kW; Samarai, 200 kW; Kavieng, 67 kW; Wewak, 110 kW; Lorengau, 100 kW; and 223 kW distributed among eleven outstations where generating capacity is between 5 kW and 60 kW. New power plant is under construction at Lae (874 kW) and Rabaul (1,451 kW). The townships of Wau and Bulolo are supplied by the Bulolo Gold Dredging Co., which operates a hydro-electric plant of 5,500 kW. This power is produced mainly to supply the alluvial dredges and, in addition, now supplies the recently constructed plywood mill at Bulolo.

Vast hydro-electric potential exists in New Guinea—it has been estimated at 15,000,000 kW, but because of the island's location, absence of large load centres and lack of industrialization, only a very small proportion could, at present, be economically developed.

In 1950 it was announced that the Commonwealth Government had joined with British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A new company was formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth holds 51 per cent. of the shares and has a controlling interest on a board of five members. The agreement for formation and operation of the Company is administered by the Commonwealth Department of Supply, except in matters requiring compliance with the law of New Guinea, when responsibility for administration rests with the Department of Territories. Surveys and comprehensive investigations are in progress.

The following hydro-electric schemes are under construction:—Port Moresby—at Rouna on the Laloki River providing 3,000 kW when complete, with provision for expansion to 5,000 kW. It is anticipated that the power station should be in operation during 1956. The present project utilizes only portion of the power available from the Laloki River and the economic ultimate development will be of the order of 50,000 kW; Goroka—with an initial capacity of 100 kW and Aiyura (for the Agricultural Experimental Station) with an initial capacity of 30 kW. Stream gauging and other preliminary investigations for hydro-electric schemes have been carried out at Lae, Rabaul and Madang.

There are possibilities for major hydro-electric development in the following localities:—Rouna Falls (near Port Moresby), Upper Snake and Busu-Erap-Leron (near Lae), Upper Ramu (near Markham-Ramu divide—80 miles from Lae) and Hathor Gorge (on Purari River) with an estimated average power of 100,000 kW, 150,000 kW, 2 million kW, 250,000 kW, and 3 million kW respectively. These have estimated run-offs of 1,400; 600; 12,000; 1,000; and 75,000 cusecs respectively.

In an area of 150,000 square miles of the Eastern New Guinea mainland, the power potential has been estimated at 150 kW per square mile which compares favourably with potentials of 170 kW per square mile for Switzerland and 95 kW per square mile for Norway.

#### D. STATISTICAL SUMMARY, 1948-49 AND 1953-54.

The following table shows statistics for each State separately and for the six States combined for 1948-49 and 1953-54 and relates to:—(i) the numbers and installed capacity of central electric generating stations, (ii) the values of production and output and the average numbers of persons employed in the generating side of the electricity supply industry and (iii) the amount of electricity generated in both years and the number of ultimate consumers of electricity in 1954-55.

For further statistics of the electricity supply industry (years 1938-39 and 1949-50 to 1953-54) see Chapter IX.—Manufacturing Industry.

Value of production(d) ..	13,996	6,862	3,154	(a)	2,309	(a)	30,098
Electricity generated (e) Million kWh	5,450	3,573	1,511	955	627	1,472	13,588
Ultimate consumers(f) No.	921,229	687,949	305,636	216,289	118,117	97,400	2,346,620

(a) Not available for publication; included in total for Australia. (b) Average employment over whole year including working proprietors. (c) Value of electricity produced plus certain earnings. (d) Value added to materials and fuel in the process of generation. (e) Total generated including that generated by factories for their own use. (f) Approximate figures supplied by the electricity authority in each State. This detail is not available for 1948-49. An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not synonymous with the number of persons served with electricity because one ultimate consumer may embrace three or four persons, e.g., in a household.

## CHAPTER XI.

## WATER CONSERVATION AND IRRIGATION.

## A. RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS.

## § 1. Introduction.

Official Year Book No. 37, pp. 1096-1141, contained a special article "The Conservation and Use of Water in Australia" prepared by Mr. Ulrich Ellis of Canberra. In subsequent issues much of Mr. Ellis's article of a statistical nature has been advanced, as has the general information on the more important developments in this field, but for details of general, descriptive and historical matter reference should be made to the original article. Appended to the special article was a bibliography of selected books, reports, papers, etc. dealing with the development of the water resources of Australia and their conservation (*see* pp. 1140-41).

For further details on geographical and climatic features determining the Australian water pattern reference should be made to Chapter II.—Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XVIII.—Local Government: and on the generation of hydro-electric power to Chapter X.—Electric Power Generation and Distribution.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States was published on pp. 1073-9 of Official Year Book No. 40.

## § 2. Water Resources and their Utilization.

1. *Surface Supplies.*—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. Therefore, it is impossible at present to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it is doubtful whether the total average annual flow of all Australian rivers would exceed 60,000,000 acre feet, a figure small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America, 900 (in the aggregate).

2. *Major Dams and Reservoirs.*—The table below lists existing major dams and reservoirs together with those under construction or projected as at June, 1955.

## MAJOR DAMS AND RESERVOIRS IN AUSTRALIA.

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS.				
Eildon .. ..	Upper Goulburn River, Victoria	2,750,000	250	Earthen embankment 3,300 feet long. Storage for irrigation and for the generation of electricity.
Hume .. ..	Murray River near Albury	1,382,000	110	Part of Murray River Scheme—storage for domestic, stock and irrigation purposes. Being increased to 2,500,000 acre feet. Hydro-electric power to be developed.
Miena .. ..	Great Lake, Tas- mania	1,125,000	40	Regulates water to Waddamana hydro-electric power station.
Burrinjuck ..	Murrumbidgee River, New South Wales	652,200	247	Storage for irrigation and production of hydro-electric power.
Lake Victoria ..	Murray River near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia.
Waranga .. ..	Goulburn River, Victoria	333,400	..	Earthen embankment, 23,800 feet long. Irrigation storage.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued.*

Name.	Location.	Capacity (Acre feet).	Height of Wall (Feet).	Remarks.
EXISTING DAMS AND RESERVOIRS— <i>continued.</i>				
Wyangala ..	Lachlan River, New South Wales	303,900	190	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power.
Rocklands ..	Glenelg River, Victoria	272,000	..	Part of Wimmera-Mallee domestic and stock water supply system.
Clark ..	Derwent River, Tasmania	243,000	200	Serves Tarrareah hydro-electric power station.
Avon ..	Nepean River, New South Wales	173,800	230	Part of Sydney water supply.
Lake Brewster ..	Lachlan River, near Hillston, New South Wales	108,000	..	Storage of rural water supplies for the Lower Lachlan.
Glenmaggie ..	Gippsland, Victoria	106,000	100	Storage for irrigation.

## DAMS AND RESERVOIRS UNDER CONSTRUCTION OR PROJECTED.

Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	Projected for generation of hydro-electric power, irrigation and flood mitigation.
Adaminaby ..	Eurombene River, New South Wales	3,500,000	390	Projected as part of Snowy Mountains Hydro-electric Scheme.
Menindee Lakes Project	Darling River near Menindee, New South Wales	2,000,000	..	Part of Darling River water conservation scheme—under construction.
Warragamba ..	Warragamba River, New South Wales	1,678,500	415	Under construction for Sydney water supply.
Jindabyne ..	Snowy River, New South Wales	1,100,000	260	Projected as part of Snowy Mountains Hydro-electric Scheme.
Burrendong ..	Macquarie River, near Wellington, New South Wales	914,000	193	Under construction for rural water supplies.
Blowering ..	Tumut River, New South Wales	860,000	300	Projected as part of Snowy diversion scheme.
Somerset ..	Stanley River, Queensland	724,000	130	Under construction for Brisbane-Ipswich water supply.
Tantangara ..	Murrumbidgee River, New South Wales	480,000	183	Projected as part of Snowy Mountains Hydro-electric Scheme.
Warkworth ..	Wollombl Brook (Hunter Valley), New South Wales	400,000	100	Projected as a flood mitigation dam for the Hunter Valley.
Lake Echo ..	Lake Echo, Tasmania	384,000	55	Under construction for hydro-electric purposes.
Keepit ..	Namoi River, near Gunnedah, New South Wales	345,000	135	Under construction for rural water supplies.
Tinaroo Falls ..	Barron River, North Queensland	320,000	133	Under construction for irrigation purposes in the Mareeba-Dimbulah area.
Glenbawn ..	Hunter River, near Scone, New South Wales	296,000	240	Under construction as part of Hunter Valley conservation work.
Wellington ..	Collic River, Western Australia	150,000	..	Existing dam to be enlarged for supply of water to irrigation districts and to agricultural areas and towns.
Koombooboomba ..	Tully River, North Queensland	146,000	123	Under construction for hydro-electric and possibly irrigation purposes.
Calra Curran ..	Loddon River, Victoria	120,000	..	To be completed in 1955-56. Storage for irrigation.
Upper Yarra ..	Yarra River, Victoria	110,000	270	Under construction for Melbourne water supply.

The maps on pp. 1073-9 of Official Year Book No. 40 show the positions of the above-mentioned dams and reservoirs.

3. Irrigation.—(i) *History.* For some brief remarks on the history of irrigation in Australia referring to the efforts of the Chaffey Brothers and to the Victorian Irrigation Act in 1886 see issues of the Official Year Book prior to No. 39.

(ii) *Extent and Nature of Irrigated Culture.* About half of Australia's irrigated acreage is now in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In these areas served by the Murray and its tributaries irrigation water is used extensively for vines, orchards, pastures, fodders, and for domestic and stock purposes. Approximately half of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodders and pastures are served. Irrigation schemes have not been developed in Tasmania or the Northern Territory.

The following table shows the area of land irrigated in each State during the years 1938-39 and 1950-51 to 1954-55 :—

## AREA OF LAND UNDER IRRIGATED CULTURE.

(Acres.)

Season.	N.S.W. (a)	Vic. (b)	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	N.T.	Aust.
1938-39 ..	183,518	515,357	48,953	43,602	14,278	8,599	50	..	814,357
1950-51 ..	597,773	716,051	83,150	79,062	28,197	7,242	468	..	1,511,943
1951-52 ..	596,601	723,797	113,040	58,427	29,106	6,830	656	..	1,528,457
1952-53 ..	494,900	755,035	126,693	57,057	31,067	8,414	666	..	1,473,767

(a) Source : Water Conservation and Irrigation Commission. (b) Source : State Rivers and Water Supply Commission. (c) Included in Other Crops. (d) Includes tobacco, 4,533 acres. (e) Includes lucerne for pasture.

(iii) *Irrigation Trends.* In Official Year Book No. 37, p. 1099, the following trends in irrigation practice were described :—the improvement of irrigation techniques in established areas, a growing appreciation of the benefits and necessity of irrigation in humid and sub-humid areas with a flush annual rainfall, the use of irrigation to stabilize the stock industries, especially on an "extensive" basis, consideration regarding the provision of weirs to prevent the entry of salt water, the increasing quest for cheap electric power to aid pumping operations for stock, domestic and irrigation purposes, and an increase in the extent of spray irrigation.

(iv) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; increasing density of stock on irrigated pastures which leads to the spread of such diseases as foot rot and fluke in sheep, and mastitis and contagious abortion in cattle; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

The Commonwealth Scientific and Industrial Research Organization maintains the following research stations:—Merbein (Victoria)—horticultural problems, particularly of the dried vine fruits industry; Griffith (New South Wales)—influence of irrigation on plant life (using horticultural trees as test plants), irrigation methods, land drainage and soil structure; Deniliquin (New South Wales)—pastures; Werribee (Victoria)—diseases of dairy cattle, and the Kimberley Research Station (Western Australia)—tropical crops and pastures. In the maintenance of Merbein and Griffith Stations the Commonwealth is assisted, financially and otherwise, by the New South Wales Water Conservation and Irrigation Commission, by the Dried Fruits Export Control Board and by private organizations.

The Soils Division of the Organization has made detailed surveys of more than a million acres since 1927, with less detailed reconnaissance surveys over many millions of acres. The Division works closely with State authorities. The keynote of soil investigations is relationship between soil and land use, and there is an increasing tendency to seek such surveys before irrigation districts are established. Research is also conducted in the field of water percolation in relation to soil structure.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the State Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including Extension Groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. *Preservation of Catchments.*—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion to conserve soil generally, and to minimize effects of floods, overstocking, bush fires, and destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. *Sub-surface Supplies.*—(i) *General.* While a more or less complete general picture of the available and potential surface water resources exists, much remains to be done with regard to the location and development of sub-surface supplies (artesian, sub-artesian and ground water), in view of their importance as the basis of settlement over large areas of Australia.

The extent of the artesian basins—particularly the Great Artesian Basin—has been fairly accurately determined, and the use of sub-artesian supplies is extensive and more development is possible. The shallower ground-water supplies, however, particularly along alluvium valleys and coastal sandbed areas, have not been investigated and developed in any degree, except in a few localities.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water, variable in quantity and quality, either artesian or sub-artesian, is obtainable in many parts of Australia, the various artesian basins extending over approximately one-third of the continent. A map of Australia showing the extent of the known artesian basins appears on page 1211 of Official Year Book No. 39.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 670,000 square miles, comprising about 430,000 in Queensland, 80,000 in New South Wales, 120,000 in South Australia and 40,000 in the Northern Territory. Of the numerous defined major and minor water-bearing basins in Australia, the following are the principal :—

#### PRINCIPAL WATER-BEARING BASINS : AUSTRALIA.

Name.	State.	Geological Age of Chief Aquifers.	Approximate Area.	Depth to Pressure Water.
			Square Miles.	Feet.
Great Artesian..	Queensland, New South Wales, South Australia and Northern Territory	Pliocene-Permian ..	670,000	Up to 7,000
Murray ..	Victoria, New South Wales, and South Australia	Miocene-Oligocene ..	107,000	100 to 900
Torrens ..	South Australia	Recent Pleistocene ..	4,000	Up to 600
Coastal Plain ..	Western Australia	Recent Jurassic ..	10,000	200 to 2,500
Adelaide ..	South Australia..	Recent Oligocene ..	1,100	10 to 850
Gippsland ..	Victoria ..	Pleistocene-Oligocene	1,800	200 to 1,800
Port Phillip ..	Victoria ..	Pleistocene-Oligocene	300	Up to 600
Eucla.. ..	Western Australia, South Australia	Pliocene-Miocene ..	68,000	300 to 2,000
North-west ..	Western Australia	Tertiary Permian ..	50,000	230 to 4,000
Collie ..	Western Australia	Permian ..	500	..
Desert ..	Western Australia	Permian ..	130,000	100 to 3,000
Barkly ..	Northern Territory, Queensland	Cretaceous, Cambrian and Upper Pre-cambrian	57,000	150 to 1,000

More than 3,000 artesian bores have been constructed within the Great Artesian Basin and the daily free discharge from all bores continuing to flow in Australia has been stated to exceed 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but it is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In some districts a considerable amount of irrigation is carried out from shallow ground-water supplies.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, many will not cease, but will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed

by sandstone outcrops. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or "bore drains" and the careless use of water. (For greater detail on this subject *see* Official Year Book No. 37, pp. 1103-4.)

(iii) *Ground Water.* Ground water supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 10 million gallons per day for general use from the Tomago coastal sands near Newcastle and at Botany, Sydney, private industry pumps 5 million gallons per day for its own use from similar sands.

### § 3. National and Interstate Aspects.

1. *General.*—As the Commonwealth Constitution makes special reference to water problems, both the Federal and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources resides in the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following sections.

In the Report on Irrigation, Water Conservation and Land Drainage presented to the Commonwealth Government by the Rural Reconstruction Commission in 1945 national aspects of water conservation and use were emphasized. The report recommended that to obviate lack of co-ordination, an all-Australian plan, having the assent of the various governments be adopted, and that the Commonwealth should endeavour to promote interstate co-operation and co-ordinated development generally.

In 1946 a conference between the Commonwealth and States agreed to revive the Irrigation Production Advisory Committee first established under the authority of the Australian Agricultural Council in 1938. Its functions are:—(a) to prepare for the consideration of the Australian Agricultural Council, or any Committee of Ministers appointed by the Council, conclusions formed from investigations to be carried out by Commonwealth and State Officers into the various agricultural industries which it is possible to develop on irrigated lands; (b) to undertake long-term co-ordination of land utilization in irrigable areas served by the River Murray and its tributaries, this involving co-ordination of all available lands and the carrying out of such supplementary investigations as may prove necessary.

2. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Murrumbidgee (980 miles), the Darling (1,700 miles), and the Goulburn (280 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,506,000 acre feet; Murrumbidgee River, 2,280,000 acre feet; Goulburn River (including Broken River), 2,502,000 acre feet; Darling River, 2,224,000 acre feet; and Ovens River, 1,169,000 acre feet. Irrigated production in the River Murray basin is mainly in the form of wine, dried fruits, fresh fruits, dairy produce, wool, fat lambs, rice, vegetables, poultry, eggs and pigs.

For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia *see* issues of the Year Book prior to No. 39. The Agreement provided for the construction of works, the allocation of the water between the three States, and the appointment of a Commission to implement the Agreement. The Commission comprises four Commissioners, representing the Commonwealth and the three States respectively. The Commonwealth representative presides.

(ii) *River Murray Waters Agreement.* Under the Agreement, construction works are carried out by the States (who are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to fill Lake Victoria storage once, and with the aid of water returned from Lake Victoria, to maintain certain specified flows in the lower river varying from 47,000 acre feet per month in the winter months to 134,000 acre feet per month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. These flows are to meet domestic and stock requirements in South Australia, losses of water in lockages and evaporation losses other than in the lakes at the Murray mouth, together with 603,000 acre feet per annum for diversion from the Murray for irrigation in South Australia. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Official Year Book No. 40 (p. 1065) and earlier issues.

At a Conference of Ministers held in July, 1949, to consider the diversion of the Snowy River, it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 400,000 acre feet per annum would be added to the Murray River and that a storage of not less than 1,500,000 acre feet should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and found that an increase in capacity of 500,000 acre feet in storage on the Upper Murray River above Albury was the maximum that was economically justifiable for the regulation for irrigation purposes of the waters of the Upper Murray River and of waters added from the Snowy River. The Commission agreed that this increase could best be provided by increasing the size of the Hume Reservoir from its previously designed capacity of 2,000,000 acre feet to 2,500,000 acre feet, but if for hydro-electric purposes additional storages become justified in the future further increases would best be provided at some other site. It subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for this enlargement of the Hume Reservoir to 2,500,000 acre feet. A conference of Ministers considered the recommendation in July, 1954 and agreed to the enlargement. In addition it was agreed that the Commission should be given power to construct regulators to carry out such other work on the River Murray between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955.

The total estimated quantity of water diverted in 1954-55 for irrigation and other purposes from the Murray and its tributaries (under the River Murray Agreement) was as follows (in acre feet):—New South Wales, 1,531,000; Victoria, 2,197,000; South Australia, 205,000; a total of 3,933,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 33,000 acres. The design comprises a mass concrete spillway and outlet works extending 1,000 feet and an earthen embankment 106 feet high extending for 4,000 feet across the river flats. The length of the total structure is approximately one mile. Work on the installation of a hydro-electric generating station below the dam is now in progress. Work is also proceeding on the completion of the reservoir to its recently approved capacity of 2,500,000 acre feet.

The Yarrawonga Diversion Weir was completed in 1939 to raise the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan Junction; and the other below the Lachlan Junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet per second, and will serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet per second, and is designed to serve 270,000 acres. Only a portion of both these areas will be irrigated.

Adjoining the river in New South Wales and 35 miles from the Murray-Darling Junction, Lake Victoria storage, with a capacity of 551,700 acre feet and a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. Work is proceeding on the enlargement of the inlet channel to Lake Victoria to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The total capacities of such main storages are: New South Wales—Burrinjuck (Murrumbidgee), 652,200 acre feet; Wyangala (Lachlan), 303,900 acre feet; Victoria—Eildon (Goulburn), 2,750,000 acre feet Waranga (Goulburn), 333,400 acre feet. No storages exist on the Murray in South Australia. More details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

3. **New South Wales-Queensland Border Rivers Agreement.**—The New South Wales-Queensland Border Rivers Agreement which was ratified by the Parliament of both States, was executed on 27th November, 1946 and came into effect on 1st July, 1947 while the Dumaresq-Barwon Border Rivers Commission, which is charged with the duty of giving effect to the Agreement and the ratifying Acts, was constituted on 1st May, 1948. The Agreement provides for the construction of certain works on parts of those portions of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland, for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir in the Macintyre River at Goondiwindi and the existing weir in the Barwon River at Mungindi. The costs of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharged from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, has for some time past been carrying out investigations of alternate dam sites on the Dumaresq River near Mingoola Station Homestead which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages investigations have now been extended to tributary streams and superficially suitable sites have been located on Pike's Creek and the Mole River. A geophysical survey has recently been made at each of these sites and comparative estimates are in course of preparation to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries.

The Irrigation and Water Supply Commission of Queensland, which is the constructing authority for the new weirs and regulators, has carried out detailed investigations as to sites for such works. The construction of Bonshaw and Cunningham Weirs on the Dumaresq River was completed in January, 1953 and June, 1954 respectively.

Investigations are proceeding and designs are being prepared for a weir and regulator on the Barwon River at the offtake of the Boomi River and for a low level weir to establish a pumping pool at a location 32.9 miles on the Dumaresq River. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that it is necessary to supplement rainfall from April to October by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry, is being examined.

4. **Snowy Mountains Hydro-electric Scheme.\***—(i) *General.* Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament in July, 1949 passed the Snowy Mountains Hydro-electric Power Act setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme will be constructed in two parts, the first being known as the Snowy-Murray system, where the water is to be diverted by tunnel from a large dam across the Snowy River at Jindabyne, to the Swampy Plains River in the Murray Valley; and the second as the Snowy-Tumut system, the water in which will be diverted by tunnel from a dam on the Eucumbene River—a tributary of the Snowy—at Adaminaby to the Tumut River, a tributary of the Murrumbidgee. The whole scheme will involve the construction of:—seven major dams (with a total storage capacity of approximately 7 million acre feet); sixteen power stations; 80 miles of tunnels varying in diameter from 18 feet to 42 feet—one projected tunnel 30 miles long under the Alps will be one of the largest in the world; nearly 500 miles of racelines at high elevations.

The total expenditure was originally estimated to be £225 million but latest expectations are that the cost will be approximately £419 million. The scheme will form the greatest engineering and developmental work ever undertaken in Australia and one of the major engineering projects of the world.

(ii) *Snowy Mountains Hydro-electric Power Act 1949.* The Snowy Mountains Hydro-electric Authority is constituted by a Commissioner; he is assisted by two Associate Commissioners. The functions of the Authority are defined in the Act as follows:—(a) to generate electricity by means of hydro-electric works in the Snowy Mountains area and (b) to supply electricity so generated to the Commonwealth for defence purposes and for consumption in the Australian Capital Territory. The general powers of the Authority as defined in the Act are as follows:—For the purpose of performing its functions the Authority shall have power to construct, maintain, operate, protect, manage and control works—(a) for the collection, diversion and storage of water in the Snowy Mountains Area; (b) for the generation of electricity in that area; (c) for the transmission of electricity generated by the Authority; and (d) incidental or

\* See also Chapter X.—Electric Power Generation and Distribution, pp. 390–393. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appears in Chapter XXIX.—Miscellaneous.

related to the construction, maintenance, operation, protection, management or control of any of the works specified above. The Act provides that the Authority may sell to a State, or to an authority of a State, electricity generated by the Authority which is not immediately required by the Commonwealth for defence purposes or for consumption in the Australian Capital Territory.

(iii) *The Authority's Objectives and Programme.* The two basic objectives are the production of electricity and the diversion of water inland.

The first power station, at Guthega, came into service in April, 1955. Additional generating capacity is scheduled to become available progressively.

By the end of 1959 the Snowy Scheme will supply the Murrumbidgee River with approximately 530,000 acre feet per annum of additional water, by diversions from the Eucumbene and the Upper Tooma Rivers. Ultimately the scheme will provide approximately 1,818,000 acre feet per annum of additional regulated water of which 1,020,000 acre feet will go to the Murrumbidgee and 798,000 acre feet per annum to the Murray.

The Department of Public Works, New South Wales, is constructing the Adaminaby Dam and the Department of Main Roads, New South Wales, and the Snowy River Shire are reconstructing over 70 miles of existing roads. Construction is now in progress on the 14 mile Eucumbene-Tumut Tunnel, Tumut Pond Dam, the 8,000 feet pressure tunnel leading to Station T1, and on Station T1 itself. Designs are in progress for the Tooma-Tumut Diversion, construction of which should begin about the end of 1956, and also for the T2 Project, construction of which will commence about one year later.

## B. STATES AND TERRITORIES.

### § 1. Australian Local Pattern of Water Conservation and Use.

The foregoing sections deal generally with water conservation and irrigation in Australia and with national and interstate projects. The following survey indicates the local pattern of water resources and the steps taken by the State Governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water for the stock industries (mainly underground sources), and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest appertains to hydro-electric generation almost exclusively. The Northern Territory is primarily concerned with stock supplies and the safeguarding of long stock routes.

### § 2. New South Wales.

1. *General.*—(i) *Rainfall and History.* In issue No. 37 of this publication (p. 1110) information on the pattern of rainfall and the history of irrigation in New South Wales preceded the description of water conservation and use in that State, but it has now been omitted. (See also Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Administration.* Under an amendment of the Irrigation Act, made by the Conservation Authority of New South Wales Act 1949, the Water Conservation and Irrigation Commission of New South Wales now consists of three members appointed by the Governor, one of whom is appointed as Chairman. The operations of the Commission cover water conservation, control of irrigation areas, establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue

of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme and river improvement works.

Under the Water Act the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947 see page 428 of this Chapter.

**2. Schemes Summarized.**—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam and Lake Brewster on the Lachlan, another tributary. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and head storages have been commenced on the Macquarie, Namoi and Hunter Rivers. Substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including Irrigation Areas, Irrigation Districts, Water Trust Districts, Flood Control and Irrigation Districts and River Improvement Districts. There are five Irrigation Areas :—The Murrumbidgee Irrigation Areas consisting of 403,256 acres served with water through a channel system stemming from the river at Berembend Weir; the Coomealla Irrigation Area of 35,432 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,209 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,806 acres, supplied with water pumped from the Murrumbidgee; and the Tullakool Irrigation Area of 16,305 acres supplied from the Edward River at Stevens Weir. All these areas are administered by the Commission, and details of the various schemes are given in subsection (iii) below.

(ii) *Works.* The capacities of the main storages (in acre feet) are :—

*Murray* :—Half share of Hume Reservoir, weirs and locks to Wentworth (736,420); Stevens Weir, Edward River (7,165).

*Murrumbidgee* :—Burrinjuck Dam (652,200); Berembend Weir (10,000); Maude Weir (6,740); Redbank Weir (7,360).

*Lachlan* :—Wyangala Dam (303,900); Lake Cargelligo (29,435); Jemalong Weir (2,200); Lake Brewster (108,000).

Water from the Hume Reservoir is used for domestic and stock purposes, to provide bulk supplies for country towns, for the irrigation of vines, fruits and fodder in the Curlwaa and Coomealla areas, for rice and other cereals and for pastures in the Tullakool Irrigation Area, for domestic and stock supply and irrigation in the Berrigun, Wakool and Denimein Districts, and for water trusts for domestic and stock purposes and/or irrigation.

The Wyangala Dam is 30 miles upstream from Cowra in the Central West. It has a catchment of 3,200 square miles. Water from the dam, supplemented by the unregulated flow of the Belubula River, provides for domestic and stock purposes along the full length of the river (over 700 miles) and also for irrigation by land holders operating licensed pumps. The towns of Cowra, Forbes, Condobolin, Hillston and Booligal are supplied. Balance storages at Lake Cargelligo and at Lake Brewster conserve water during periods of high flow for release as required. Water from the Lachlan, diverted at Jemalong Weir, supplies the districts of Jemalong and Wylde's Plains, serving an area of 224,556 acres. Wyangala is now producing hydro-electric power. Proposals for future development include provision of a head storage on the Belubula River.

The approximate total length of channels (including main canals) in New South Wales is 2,890 miles. The approximate length of drains and escape channels is 983 miles, and the approximate total length of pipe lines is 68 miles, making a grand total of 3,941 miles of channels and pipe lines, etc.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems and the areas under irrigated culture in New South Wales during 1954-55, the latter according to the nature of irrigated culture.

## AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE : NEW SOUTH WALES, 1954-55.

(Acres.)

System, etc.	Total Area.	Area under Irrigated Culture.										Total.

(a) Includes grazing and cutting. (b) Perennial and annual self-seeding. Perennial amounted to 23,449 acres. (c) Citrus and deciduous. Deciduous amounted to 8,435 acres of which 7,587 acres were in the Murrumbidgee Irrigation Area. (d) Not available. (e) Incomplete. (f) Works incomplete. (g) Area irrigable; details of area actually irrigated are not available. (h) Excludes domestic and stock supplies for which particulars are not available. (i) Tobacco. (j) Includes Flood Control Districts—see (g).

3. **Murrumbidgee Irrigation Areas.**—(i) *Description.* These areas comprise about a third of the State's irrigated acreage and in 1954-55 received 280,920 acre feet of the total water allocated for stock, domestic supply and irrigation (1,043,552 acre feet). They are served by the Burrinjuck Dam (capacity 652,200 acre feet), 40 miles north-west of Canberra, on the Murrumbidgee. The catchment above the dam is 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where rainfall exceeds 60 inches. Flow for the irrigation districts is supplemented by unregulated flow below the dam from the Tumut River. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied for the Irrigation Districts of Tabbita, Benerembah and Wah Wah and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter and spring freshets, fed by melting snows, and is released during the September-April irrigation season. It passes along the river channel to Berembd Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet per second. The main canal has been completed to beyond Griffith, 96½ miles from the off-take. Reticulation channels aggregate approximately 870 miles and drainage channels 828 miles.

In addition approximately 413 miles of supply channels run through adjacent irrigations districts in which the water supply is operated and maintained by the Commission, but land transactions are not under its control. The land on which the Murrumbidgee Irrigation Areas are situated originally comprised large sheep stations with a sparse population.

Population was 12,000 in 1923, 15,000 in 1929, 20,000 at the 1947 Census and 24,000 at the 1954 Census. At the 1954 Census the population of the Yanco district (with Leeton as the centre) was 10,000; and the population of the Mirrool Area (with Griffith as the centre) was 14,000.

(ii) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas, also the distribution of electricity throughout those areas. Other local government services, including town water supply, are provided by Shire Councils. Land is disposed of by the Commission under freehold or perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1955 was 356,558 acres, including 41,570 held for short lease grazing, agriculture, etc.

(iii) *Production.* Since the inauguration of the scheme in 1911 the volume of production from the area has greatly increased. Numbers of new crops are grown while the volume of the major products of the area prior to the scheme, such as wool and livestock for slaughtering has expanded considerably. The principal products to-day are: wool, livestock (sheep, cattle and pigs) for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables.

Rice growing was initiated on the Murrumbidgee Irrigation Areas in 1924. Since then, aggregate production from those areas and from the other localities mentioned hereunder has been approximately 1,348,000 tons. In 1954-55 total area sown was 38,674 acres, including 26,628 acres on the Murrumbidgee Irrigation Areas and adjoining districts, 8,300 acres at Wakool, 1953 acres at Denimein and 1,793 acres at Tullakool. The total quantity of water delivered for the rice crops during the 1954-55 season was 207,855 acre feet. Water supplied for rice represents about one-half of the total delivered on the Murrumbidgee Irrigation Area and slightly less than a quarter of the water artificially supplied for irrigation in New South Wales. During and after the 1939-45 War the area planted was increased to the limit of water available.

Co-operation is a prominent feature in the Murrumbidgee Areas. Co-operative organizations in the Mirrool section handle about 300,000 bushels of fruit per year (compared with 54,600 in 1927-28). The annual sales turnover of the Leeton cannery in recent years has been over £1,000,000. Settlers and government agencies co-operate extensively in all matters relating to irrigation practice.

4. **Other Irrigation Areas.**—The Curlwaa, Coomealla, Hay and Tullakool Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which also is responsible for operation and maintenance of works to supply water at rates determined by the Commission.

Curlwaa Area, on the Murray near Wentworth, consists of 10,209 acres of which 2,242 acres at 30th June, 1955, comprised irrigated holdings. Production consists of dried vine fruits, deciduous fruits and fodder crops.

Coomealla Area, 9 miles upstream from Curlwaa, comprises 35,432 acres of which 6,031 acres at 30th June, 1955 comprised irrigated holdings. Other land in the undeveloped part is leased for grazing. Production consists of vine and citrus fruits. An extension of the Coomealla Irrigation Area has been undertaken in recent years to provide irrigation farms for ex-servicemen. As a result, 100 ex-servicemen have now been placed on these new farms.

Hay Area, on the lower Murrumbidgee, consists of 6,806 acres, of which 1,164 acres are occupied as irrigated holdings. Production comprises dairy products, fat lambs, sheep, wool and fodders.

5. **Irrigation Districts.**—These Districts are set up under the Water Act for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders. The following are the districts or provisional districts constituted and the areas of land benefited:—*Murray River*—Wakool District (completed) 495,430 acres, Berriquin Provisional District (completed) 779,564 acres, Deniboota Provisional District (first section completed) 304,321 acres, Denimein Provisional District (completed) 147,005 acres, Jernargo Provisional District (certain portions of which have been included in Berriquin District) 4,505 acres, Barramein Provisional District (domestic and stock supply only—works not yet commenced) 88,651 acres; *Murrumbidgee River* (completed)—Bencrembah District 134,921 acres, Tabbita District 10,745 acres, Wah Wah Provisional District 572,904 acres, Gumly Provisional District 345 acres; *Lachlan River* (completed)—Jemalong and Wyldes Plains District 224,556 acres.

Since the completion of the Hume Reservoir several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on "extensive" irrigation—that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. "Water right" means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin and Wakool Districts is diverted through a main canal which will be 100 miles long when completed. At 30th June, 1955, the total length of completed canal and channels was 836 miles, including Mulwala Canal 75 miles, Berriquin channel 22 miles, subsidiary channels 697 miles, escape channels 33 miles and cross drainage channels 9 miles. Off-take capacity of the Mulwala Canal is 5,000 acre feet per day. Ultimately the water will serve Deniboota and other districts for which works have yet to be completed.

Wakool, with 361 miles of channel, contains 289 holdings and it is expected that the area developed by irrigation will comprise about one acre in 13 of the total area. The total area irrigated in 1954–55 was 79,474 acres and water supplied was 146,747 acre feet. Crops comprised fodders, pastures, rice, cereals and vegetables, but sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District and it is expected that the proportion of total area to be developed for irrigation will be considerably higher than in the case of Wakool. Total irrigated acreage was 161,522 at 30th June, 1955.

Sheep and wheat growing are the main industries. The fat lamb industry is well developed and expanding. Dairying is making headway, and a butter factory has been established at Finley.

In the Benerembah, Tabbita and Wah Wah Districts, supplied from the channels of the Murrumbidgee Irrigation Areas, the quantity of water supplied during the 1954-55 season for irrigation, etc. was 77,412 acre feet, and the area irrigated was 69,492 acres, including rice and other cereals, pastures and fodder crops.

For the same season 12,935 acre feet of water were supplied from the Lachlan River to irrigate a total area of 16,434 acres within the Jemalong and Wylde's Plains Districts.

6. **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The Water Act provides for the constitution of Trust Districts for domestic and stock water and irrigation and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district is shown in parentheses)—*Murray River*—Tuppal Creek (78,080), Bullatale Creek (68,320), Little Merran Creek (157,440), Poon Boon (32,980), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,001,210); *Lachlan River*—Torriganny, Muggabah and Merrimajoele Creeks (170,240) Condobolin West Weir (4,480), Marrowie Creek (292,640), Ulonga (71,655), Micabil Weir (11,500); *Miscellaneous*—Algudgerie Creek (9,760), Nidgerly Weir (46,880), Great Ana Branch of Darling River (967,339), Collarenebri town water supply (117)—making in all a total area of 2,914,831 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. The following are the Trust Districts (area in acres is shown in parentheses):—*Hunter River*—Blairmore (315); *Murray River*—Bama (3,446), Goodnight (1,167), Bungunyak—Koraleigh (1,810), Glenview (661), Bringan (4,933); *Darling River*—Pomona (1,580)—making in all a total area of 13,912 acres.

The Lowbidgee Provisional Flood Control and Irrigation District (375,000 acres), the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. There are 48 holdings. Another district, Medgun (272,800 acres) near Moree in the North-West is also now in operation. There are 20 holdings in the district and the area benefited by controlled floodings is approximately 61,800 acres.

7. **River and Lake, and Farm Water Supplies.**—During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in lean months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

The Farm Water Supplies Act was passed in 1946. Technical advice and assistance, and also financial assistance, are made available to aid individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams.

8. **Underground Water.**—Extensive use is made of artesian, sub-artesian, and shallow underground water. Eighty thousand square miles in the northern and western portions are covered by the Great Artesian Basin. Eighty-one Bore Water Trusts and twelve Artesian Wells Districts have been constituted. The Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts settlers maintain the drains. Bore Trusts and Artesian Districts cover about 5 million acres and water is

distributed through 3,368 miles of open earth drains. The number of artesian bores giving a flowing or pumping supply at 30th June, 1955, was 1,012 and the estimated total daily flow from 575 flowing bores was 60 million gallons. The estimated flow in 1914-15 was 99 million gallons per day for 372 bores. The deepest bore is Boronga No. 2 (4,570 feet), which also has the greatest flow, namely, 1,115,000 gallons per day. Of the total number of bores sunk, 224 have been installed by the Government in connexion with public watering places, Bore Water Trusts or Artesian Wells Districts.

Since 1912 the Government has assisted settlers in shallow boring operations for which repayments are required over a period. To 30th June, 1955, the total constructed by the Commission's plants was 4,504 and their average depth was 304 feet.

**9. Future Programme.**—The programme of post-war development already in hand includes the provision of eighteen dams and storages, eight diversion weirs and flood mitigation and river protection works in various parts of the State. Construction has been commenced on head storages at Keepit on the Namoi, Glenbawn on the Hunter and Burrendong on the Macquarie, while legislation has been passed authorizing the construction of a flood control dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. In the case of Burrendong Dam work has been temporarily suspended in order to enable the Water Conservation and Irrigation Commission to concentrate its available resources on the speedy completion of works having higher priority. The Menindee Lakes storage project—part of the scheme for conserving the waters of the Darling River has been commenced, but as in the case of Burrendong Dam, work has been temporarily suspended. The Hunter River development concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. Total estimated capacity of all proposed new storages is 5,500,000 acre feet.

**10. Hydro-electricity.**—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (*see* page 399).

### § 3. Victoria.

**1. General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Official Year Book No. 37. (*See also* Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Administration.* The passage of the Irrigation Act of 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. In 1905, the Water Act established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted Waterworks Trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust and the various Waterworks Trusts and local governing bodies, as well as the various Sewerage Authorities which control sewerage undertakings in country towns, are also subject to general supervision by the Commission.

**2. Systems Summarized.**—(i) *Works.* Since 1902, when a great drought emphasized the need for a concerted attack on water problems, the total capacity of water storages has increased from 172,000 to 4,808,950 acre feet (including Victoria's share of the Hume Reservoir. By means of channels, bores, etc., one-fourth of the State is artificially supplied for stock and domestic purposes. Large areas, which would be largely unproductive without water, are now contributing to the State's wealth. The area actually irrigated has increased from 105,000 acres in 1906 to 864,000 in 1954-55 and irrigation channels command 2,150,000 acres.

The Commission controls 37 large reservoirs and 240 subsidiary storages. The capacities of the storages in acre feet within the various systems at 30th June, 1955 were as follows:—

*Goulburn System*:—Eildon Reservoir, 2,750,000; Goulburn Weir, 20,700; Waranga Basin, 333,400; *Murray-Loddon System*:—Half share of River Murray Commission storages including Hume, Yarrawonga, Torrumbarry, Euston, Mildura and Wentworth, 802,420; Kow Swamp, Laanecoorie, Kerang-North-West Lakes, Lake Boga and Lake Cullulleraine, 148,210; Total, 950,630; *Wimmera-Mallee*:—538,900; *Maffra-Sale*:—106,040; *Coliban*:—62,730; *Werribee*:—34,900; *Mornington Peninsula*:—5,800; *Otway*:—1,080; *Miscellaneous*:—4,770; *Total*:—4,808,950.

Irrigation channels extend 5,000 miles, domestic and stock channels 9,500 miles and drainage and flood protection channels 2,000 miles, a total of 16,500 miles. In addition, the Commission controls 1,200 miles of piping, comprising 250 miles of mains and 950 miles of reticulation. Farm holdings served with water total 44,000. Urban districts with a reticulated water supply number 275, of which 130 are served by the Commission's channels and pipelines and 145 are supplied by Trusts under the supervision of the Commission. The total number of persons served by a reticulated water supply is 685,000 or 70 per cent. of the State's population outside Greater Melbourne.

To 30th June, 1955, the net capital expenditure on irrigation, rural water supply, country town water supply, and flood protection and drainage works amounted to £83,779,000, two-thirds of which was in respect of irrigation.

Of this net capital liability, at 30th June, 1955, £74,533,000 was borne by the State and £9,246,000 was borne by the water users. Waterworks Trusts and local governing bodies had a net capital liability of £7,845,000 at 30th June, 1955, of which £3,677,000 was borne by the State and £4,168,000 by the Authorities.

(ii) *Extent of Systems and Nature of Irrigated Culture.* Although the area irrigated is less than 2 per cent. of the State, it yields approximately 15 per cent. of Victoria's rural production. The following table shows the areas of the various irrigation systems and the areas under irrigated culture during 1954-55.

AREAS OF SYSTEMS AND OF LAND UNDER IRRIGATED CULTURE: VICTORIA.  
1954-55.  
(Acres.)

System	Total Area.	Area under Irrigated Culture.									Total.
		Cereals.	Lucerne. (a)	Other Fodder Crops.	Pastures.		Vineyards.	Orchards.	Market Gardens.	Fallow and Miscellaneous.

(a) Includes lucerne for both hay and pasture.  
Mildura Irrigation Trust only.

(b) Area of Campaspe District only.

(c) Area of First

(iii) *Production.* The influence of irrigation on Victorian production has been considerable, the value of production from irrigation districts as estimated by the Commission having risen from £500,000 in 1905-6 to about £40 million in 1953-54. The major products of irrigated farms are : livestock for slaughtering (cattle, sheep and pigs), dairy products, wool, vine fruits, fresh and canning orchard fruits and vegetables.

3. *Goulburn System.*—This comprises the Eildon and Waranga Reservoirs, the Goulburn Weir and over 2,570 miles of distributory channels. The total capacity of these storages was 3,104,100 acre feet at 30th June, 1955. The Eildon Reservoir (capacity 2,750,000 acre feet) which was completed in June, 1955 is the largest dam in Australia and the largest earthen dam in the Southern Hemisphere. The enlargement of Eildon means that when the necessary distributory works are completed, the area at present irrigated from the Goulburn River can be practically doubled to 600,000 acres.

Water from Eildon Reservoir flows down the Goulburn for 150 miles to the Goulburn Weir, which raises the summer level of the river about 45 feet to 408 feet above sea level, and where water is diverted to two main channels. The eastern main channel conveys water to four irrigation districts surrounding Shepparton and the western main channel fills Waranga Basin in addition to supplying the eastern portion of the Rodney Irrigation District.

Two main outlet channels issue from the Waranga Reservoir ; one serves the Western part of the Rodney district, while the other serves districts as far west as Boort, and continuing to Beulah East, about 230 miles by channel from Waranga Basin or some 400 miles from Eildon, supplements the Wimmera-Mallee system.

Districts served comprise 196,000 acres east of the Goulburn ; 602,000 acres between the Goulburn and Campaspe ; 380,000 acres between the Campaspe and Loddon ; and 80,000 acres west of the Loddon—a total of 1,258,000 acres.

The main products of the Goulburn districts are dairy products, fruit and wool and fat lambs. The development of the fruit canning industries is an index of the results of irrigation policy. Annual production from the Shepparton, Kyabram and Mooropna canneries, together with that of city canneries—from Goulburn Valley fruit—amounts to an aggregate which represents about 65 per cent. of Australia's total production of canned peaches, pears and apricots.

4. *Murray River System.*—The waters of the River Murray are used to supply an area of more than 700,000 acres between Yarrawonga and Merbein, and channels totalling 1,450 miles are in service. The districts between Yarrawonga and Swan Hill, except Tresco, are supplied by gravitation and those down the river (Red Cliffs, Merbein, Nyah and Mildura) are supplied by pumping.

The Murray Valley Irrigation District, supplied from Yarrawonga, will serve 280,000 acres when completed. At 30th June, 1955, 550 miles of main and distributory channels were completed and supplied 267,000 acres west of Yarrawonga.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves an area of 377,600 acres with 846 miles of supply channels. The weir raises the level of the river some 16 feet and enables water to be diverted throughout the year.

Red Cliffs Irrigation District comprising 13,600 acres, of which, at present, 11,650 acres are irrigated, ranks first in importance among Victoria's pumping schemes. A system of main and distributory channels commands every holding in the district. The district, originally for soldier settlement, has been subdivided into 700 blocks. The area planted is composed mainly of vines and citrus. The first harvest (1924) returned 570 tons of dried fruit in addition to table grapes. The average harvest is now 18,000 tons of raisins, currants and sultanas as well as large quantities of grapes for dessert and distillation.

Merbein Irrigation District comprises 9,200 acres and contains over 300 holdings averaging about 30 acres each. A reticulated pipe system supplies the town of Merbein, and the pumps also supply 51,200 acres forming part of the Millewa Waterworks District.

Nyah Irrigation District is supplied with water diverted from the Murray by a high-lift pumping plant, serving 3,840 acres in about 200 holdings devoted mainly to vineyards.

5. *First Mildura Trust District.*—The First Mildura Irrigation Trust—which is the only Irrigation Trust operating in Victoria—controls an area of 45,000 acres, of which

15,000 acres are irrigated. This area irrigated includes 12,000 acres of vines, 950 acres of fruit trees and small areas of apricots, peaches, prunes, figs, almonds, olives, lucerne and other fodder. It produces approximately 15,000 tons of raisins, currants and sublimates each year. The irrigation water is pumped from the River Murray and distributed through 163 miles of channels.

6. *Wimmera-Mallee System.*—The Wimmera-Mallee scheme is regarded as the most extensive domestic and stock supply system in the world. The main supply is drawn from the Campians storages with a capacity of 538,900 acre feet. Supplementary water is drawn from the Goulburn channels and the Loddon River. The system serves an area of 10,000 square miles or nearly one-eighth of the State, which is largely devoted to wheat and pastoral industries. Without the artificial supply of water, development would be meagre.

Once a year, in the winter or spring, a volume of 72,000 acre feet of water is distributed through 6,500 miles of open channels and some 3,000 miles of farm channels. It is the responsibility of farmers to provide storages sufficient in size to meet their stock and domestic requirements for the ensuing year. About 10,000 farmers' tanks are served. In addition, forty-seven towns with a total population of 40,000 obtain their water from the system. A total population of 80,000 depends upon the scheme. In the vicinity of Hensham and Murtoa, near the main storage, 3,500 acres are irrigated for soft fruits and pastures. With the completion of the Rocklands Reservoir, this irrigation area is being extended to 7,000 acres.

The northern part of the system is affected by sand drifting into the channels, particularly in years of dry weather conditions, and the Commission is involved in substantial annual expenditure to remove this sand drift before the annual water distribution can be made. This expenditure can be reduced by better farming methods, and efforts in this direction such as the sowing of rye-corn, and including the use of compulsory powers to prohibit the fallowing of land or burning of stubble within three chains of channels in light sandy country, have resulted in marked savings in maintenance costs.

7. *Farm Water Supplies.*—The Rural Finance Corporation Act 1949 gave farmers assistance in establishing or improving domestic and stock water supplies on their farms. Water may be obtained from underground sources, from catchment and gully dams by diversion from existing streams and channels, by storage of sufficient water to meet a year's requirements and by installation of windmills or hydraulic rams.

A Farm Water Supplies Branch has been set up by the State Rivers and Water Supply Commission to advise farmers on farm water supply matters even if finance is not required. Comprehensive booklets entitled "Farm Water Supplies for Domestic and Stock Purposes" and "Farm Irrigation and Drainage" prepared by this Branch have been widely circulated to landholders.

8. *Underground Resources.*—Due to inadequate information, the underground waters of Victoria have not yet been utilized to any great extent. The first stage of a comprehensive survey of these resources by the Victorian State Rivers and Water Supply Commission, which is responsible for the location, investigation and development of subterranean waters, has been completed and published recently. It provides records of bores in the Mallee, Wimmera and Glenelg regions, and a description of the Murray Artesian Basin. Investigations have also been made into the underground water resources of local areas such as Orbost Flats, Llowalong Estate on the Avon River and elsewhere.

The Murray Artesian Basin underlies an area of 107,250 square miles, of which 26,808 square miles are in Victoria, 28,269 square miles in South Australia and 52,173 square miles in New South Wales. The quality of the water varies from suitable for domestic purposes in much of the South-western part of the basin to saline and suitable for stock in the rest of the basin. Over 300 bores exist in Victoria, with an average daily flow of 3,000,000 gallons. Bores range in depth from 50 to 3,000 feet.

9. *Future Programme.*—With the completion of the Eildon Reservoir, storage capacity in Victoria has risen from 172,000 acre feet in 1902 to nearly 5,000,000 acre feet in 1955. In the near future there will be a further increase of 727,000 acre feet in storage

capacity. Cairn Curran, to be completed before July, 1956, will add 120,000 acre feet to the existing capacity, while a further 607,000 acre feet will be available as a result of the enlargement of the Glenmaggie and Hume Reservoirs.

The most important work at present facing the Commission is the enlargement of the Goulburn Channel System to enable full advantage to be taken of the additional water now available from Eildon Reservoir. The total cost of the work to be carried out is estimated at £10 million. Major works involve the duplication of the Goulburn Weir—Waranga Reservoir Main Channel (nearly completed) and enlargement of the Waranga Western and East Goulburn Main Channels. However, it will be possible to develop the present districts progressively before the whole operation is completed and in the meantime, the water already stored in the Eildon Reservoir will provide a valuable safeguard against any possible drought.

10. *Hydro-electricity*.—Details of hydro-electricity potential and utilization in Victoria may be found in the previous chapter (see page 401).

#### § 4. Queensland.

1. *General*.—(i) *Rainfall*. Particulars of the rainfall pattern of Queensland were given in Official Year Book No. 37, page 1122. (See also Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Administration*. The first comprehensive Water Act in Queensland was the Water Act of 1926 which vested in the Crown the right to the use and flow of all streams, lakes, watercourses, etc. which flowed through or were within the boundaries of two or more occupiers, and also vested in the Commissioner of Irrigation and Water Supply the bed and banks of all boundary streams. The Irrigation Act of 1922 provided for the establishment of Irrigation Areas in approved localities. From 1922 to 1931 the Commissioner of Irrigation and Water Supply administered the Acts, but in 1931 the Land Administration Board was appointed to act as the Commissioner and continued to act until the Irrigation and Water Supply Commission Act of 1946 was proclaimed in 1947. Under this Act the Corporation of the Commissioner of Irrigation and Water Supply was reconstituted. The Commissioner is responsible for carrying out the provisions of the Irrigation Acts 1922 to 1949 and the Water Acts 1926 to 1942. He is also responsible for investigations into, and the planned development of, water resources of Queensland under the Land and Water Resources Development Acts 1943 to 1946. For particulars of the New South Wales—Queensland Border Rivers Agreement ratified by Acts of both States in 1947 see page 428.

(iii) *Water Utilization in Queensland*. Queensland's predominant interest in the field of water conservation has in the past been the provision of stock and domestic water supplies in its great pastoral areas which contain nearly half of the Commonwealth's cattle, a seventh of the sheep and a third of the horses. Nearly half the value of the State's rural production is derived from cattle and sheep. The cattle are distributed throughout the State, but most thickly between the east coast and the 20-inch isohyet. Sheep are mainly pastured on the inland areas west of this isohyet whilst dairying is concentrated in the south-eastern quarter of the State. In addition to the stabilization of water supplies in the pastoral areas and the provision of water along stock routes for travelling stock, the development of irrigated pastures on the eastern seaboard for fattening stock adjacent to meat works and markets has lately received much attention.

The State's agricultural crops differ from those of other States in that a large proportion are tropical. Sugar-cane is the greatest individual crop, representing in value some 50 per cent. of total agricultural production. Approximately 16 per cent. of the sugar-cane acreage is irrigated and represents some 45 per cent. of the total irrigated area in Queensland. Queensland is Australia's major tobacco-producing State, and plans are in hand to increase annual production of this crop greatly by means of development under irrigation.

2. *Great Artesian Basin*.—(i) *General*. Western Queensland beyond the 20 inch rainfall belt is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on

excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, but excluding the Cloncurry Mineral Field and the Barkly Tableland. It comprises 430,000 square miles of the total State area of 670,500 square miles. Statistics of bores and flow as at 30th June, 1955 are:—Artesian bores drilled, 2,427; artesian bores still flowing, 1,533; total depth drilled, 3,480,160 feet; deepest bore, 7,009 feet; total estimated flow, 209,000,000 gallons per day. Artesian pressure and flow are both steadily diminishing despite new bores drilled. The rate of diminution varies widely throughout the basin. Present general average rates of diminution are:—pressure, 1·2 feet/head, total flow, 1½–2 per cent. per annum.

The greater part of the artesian discharge is distributed by open earth channels totalling some 16,000 miles in length. The greater part of the water flowing along these channels is lost by soakage and evaporation and less than 10 per cent. is actually used by stock. The amount of soakage depends largely on the permeability of the earth and the rate of evaporation varies from season to season, but the shape and maintenance of the drains constitute further factors. The effective utilization of this water can be increased by the use of piping to overcome the loss by soakage and evaporation occurring in open earth channels.

Although artesian beds underlie such a large area of the State, only 80,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores are not economical watering facilities, because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. High costs have restricted deep drilling. Very few new bores exceed 2,000 feet in depth, and a new bore greater than 3,000 feet in depth is exceptional.

Shallow sub-artesian supplies, of variable quality and volume, are available at depths less than 1,000 feet over a large area of the basin. These beds are not connected with the artesian beds. An essential practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

Though the number of bores has gradually increased over the years the total flow of all bores has declined since the peak flow of 351 million gallons per day was recorded in 1914. By 1938 the flow was only 230 million gallons per day. The decline gave rise to the fear that supplies were giving out and that the basin was seriously threatened. In 1939 the Queensland Government appointed a committee to ascertain the nature and structure of the Great Artesian Basin with particular reference to the problem of diminishing supply. In its final report presented in 1954 the majority of the Committee found that the output would continue to decline during the next sixty years when the flow from the remaining flowing bores will be of the order of 110 million gallons per day. At this stage the discharge from windmills, springs and other leakages and the underflow past the Queensland borders will be of the order of 20 million gallons per day. The total discharge of the order of 130 million gallons per day will be in equilibrium with the recharge of the basin. Numbers of bores on higher ground will cease to flow during the next sixty years and the area served by flowing bores will contract by perhaps 20 per cent.

From its investigation of the problem the majority of the Committee found against a general programme of strict conservation of flows from existing artesian bores. Apart from the high cost the gradual increase in the recharge rate consequent on the depletion of surplus water in the basin would be greater if such a programme was not undertaken.

In the past, many excavated tanks failed in dry seasons, because of insufficient original depth and capacity, and subsequent silting. Mechanical plant is now almost exclusively in use and much larger tanks are being excavated, even in areas where artesian water may be obtained at a reasonable depth. New tanks with capacities of 20,000 cubic yards and depths of 25 feet are not uncommon. Two tanks with capacities of 65,000 cubic yards each, and depths of 42 feet and 46 feet respectively have been completed for watering stock in an area where a good artesian flow may be obtained at a depth less than 2,000 feet.

(ii) *Bore Water Areas.* The Constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity and to conserve artesian supplies by fully utilizing the flows

from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by Local Boards or by the Commissioner of Irrigation and Water Supply, acting as a Board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1954-55 are:—Areas constituted, 64; administered by Commissioner, 54; administered by Local Boards, 10; area benefited, 4,756,116 acres; average rate per acre, 1.04d.; number of flowing bores, 61; total flow, 26,361,000 gallons per day; drains served, 3,317 miles.

3. **Stock Route Watering.**—During 1935 a scheme was inaugurated to water stock routes adequately in the western portion of the State including main trunk routes connecting Eromanga to Burketown, Charleville to Normanton, and Clermont to Einalleigh, with branches to railheads, a total distance of 3,117 miles. Watering facilities were also provided on subsidiary routes. Under the Stock Routes and Rural Lands Protection Act of 1944 a co-ordinating board was constituted, representative of Government departments and pastoral interests, under the direction of the Minister for Lands, and with an officer of that Department as superintendent, whose duty was, *inter alia*, to investigate and implement a long-range, co-ordinated plan for adequate watering of all stock routes throughout the State. Natural waters are being supplemented by artificial facilities at intervals of about 9 miles. Construction is supervised by the Irrigation and Water Supply Commission and by local authorities. Completed facilities are vested in local authorities for control and maintenance. From 1935 to 30th June, 1955, 352 facilities had been completed and at 30th June, 1955, 154 facilities were under construction or investigation.

4. **Irrigation.**—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production is receiving growing attention in Queensland. In addition to the Theodore Irrigation Area on the Dawson River, orthodox projects served by a channel system are being developed at Clare, Millaroo and Dalbeg, all on the Burdekin River, Gibber Gonyah on the Dawson River and St. George on the Balonne River. Construction of the Clare and Millaroo Irrigation Areas is nearing completion whilst at Dalbeg, Gibber Gonyah and St. George construction is well advanced. A start has been made in construction of part of the main channel system within the Mareeba-Dimbulah Irrigation Area. Because of the large variations in both monthly and annual river flows, major developments cannot be undertaken until large storage works are provided. Most irrigation in Queensland is performed by private farmers operating under licence, and obtaining water by pumping from streams or from natural underground storages. Where available, electricity is the most popular source of power for pumping; the principal areas supplied with electricity comprise the Burdekin Delta and the Lockyer Valley.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is adopted to a considerable extent for fruit, vegetables, fodder crops and a small part of the tobacco. Spraying is well suited to the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Experimental use of the border check method in the irrigation of pasture and fodder crops has proved successful and may supersede other methods.

The following table shows for each division of the State the number of irrigators and the areas under irrigated culture for the year ended 31st March, 1955.

AREA OF LAND UNDER IRRIGATED CULTURE : QUEENSLAND. 1954-55.(a)

Division.	No. of Irrigators.	Area under Irrigated Culture (Acres).							Total.
		Vegetables.	Fruit.	Sugar-cane.	To-bacco.	Cotton.	Other Crops.	Pastures.	
Southern Queensland ..	3,759	14,359	3,061	11,020	1,500	21	23,596	20,995	74,592
Central Queensland ..	326	567	126	23	..	346	3,047	282	4,391
Northern Queensland ..	1,441	3,909	714	51,280	2,993	36	632	867	60,431
<b>Total ..</b>	<b>5,526</b>	<b>18,835</b>	<b>3,901</b>	<b>62,323</b>	<b>4,533</b>	<b>403</b>	<b>27,275</b>	<b>22,144</b>	<b>139,414</b>

(a) Year ended 31st March, 1955.

The growth of irrigation is illustrated by the following figures for the total area of irrigated land :—1906, 9,922 acres ; 1916, 10,886 acres ; 1926, 24,250 acres ; 1936-37 44,509 acres ; 1946-47, 79,030 acres ; 1954-55, 139,414 acres.

The pattern of irrigation in Queensland is unlike that in southern States ; the more important developments in tropical and sub-tropical areas are therefore discussed briefly in the sub-sections following. It should be noted that the spring to autumn " irrigation season " of the temperate southern irrigated lands is not applicable, and that round-the-year irrigation is required throughout most of the State, the timing and duration of the summer " wet " season being too variable to enable a definite non-irrigation season to be fixed.

(ii) *Lockyer Valley.* West of Brisbane and within 50 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The Valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation. Despite a mean rainfall of 30 inches the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that some 60,000 acres of land highly suitable for irrigation are available. Of this area only about 30 per cent. is under irrigation, the number of pumps operating from wells and open water exceeding 550 and 600 respectively. Over 60 per cent. of the farmers operate electric pumps for irrigation purposes and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland which serves the Valley. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,370 acre feet. These also tend to augment and conserve underground supplies. To study local problems, an Irrigation Research Station was established at Gatton in 1946 by the Bureau of Investigation.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(iii) *Burdekin River.* The Burdekin River, which joins the sea between Townsville and Bowen, is a major factor in the life of North Queensland. In most years heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disabilities. On the other hand, the fertile Delta Area with its underground water supplies at shallow depth has contributed greatly to the agricultural prosperity of North Queensland. The projected irrigation, hydro-electric and flood mitigation scheme, together with the high-level railway bridge at present under construction, will change the Burdekin from a mixed blessing to one of the Commonwealth's greatest resources for agricultural and industrial production. Present development is confined to the Delta Area. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently sugar growers and other farmers have tapped the underground water resources of the Delta to obtain supplies in the dry periods. Sugar is the main irrigated crop, though citrus, pineapples, vegetables and tobacco are also irrigated. The irrigated area is in excess of 30,000 acres, up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being adopted in place of the individual internal combustion engines previously used. At both Home Hill and Ayr water for domestic supply is raised by a windmill on each property.

In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the Delta from erosion and floods. An Irrigation Research Station has recently been established to study the development of pastures and irrigated crops under local conditions.

A major multi-purpose scheme, involving irrigation, flood control and hydro-electric power generation, is being investigated by the various interested Government Departments under the general supervision of the Burdekin River Authority. The development envisaged would include a dam storing 6,584,000 acre feet, which would make water available for the irrigation of at least 250,000 acres. The principal industries anticipated are tobacco-growing, dairying and cattle fattening, with sorghum, sunflowers, peanuts, cotton and sugar-cane as other possible forms of production.

The Clare Irrigation Area, constituted in 1949, and the Millaroo Irrigation Area, constituted in 1952, are at present being developed for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 12,000 acres and will obtain irrigation waters from central pumping stations drawing initially on the unregulated flow of the Burdekin. A temporary storage of 6,700 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin. To 30th June, 1955, 70 farms had been opened for selection in the Clare Area and 56 farms in the Millaroo Area.

(iv) *Dawson Valley.* The Dawson River, a 392-mile long tributary of the Fitzroy River, rises in the Carnarvon Range and joins the Mackenzie River to form the Fitzroy 50 miles west of Rockhampton. Lands bordering the river in its northerly course of about 170 miles before its confluence with the Mackenzie River are commonly termed the Dawson Valley. A scheme for the development of the Dawson Valley under irrigation was inaugurated in 1923, providing for the irrigation of 70,000 acres. Storage for the scheme was to be provided by a dam at Nathan Gorge of 2,000,000 acre feet capacity. Much investigational and survey work on the scheme was carried out, but the general financial depression and limited loan funds brought about the cessation of this work. However, the initial step in construction had been completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 9,000 acre feet. Pasture, vegetables, cotton, fruit and dairying products are the principal produce. Attention has recently been given to the former plans for the Valley and earlier work is now under close scrutiny as a prelude to future development. Construction of works to serve some 2,400 acres at Gibber Gunyah, adjacent to the existing Theodore Area, is in progress.

(v) *Mareeba-Dimbulah Area.* The existence of large areas of sandy soils suitable for tobacco production in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah has led to large-scale investigations into possible irrigation development in the area. Surveys indicate that 40,000 acres of land suitable for irrigated culture, including 32,000 acres suitable for tobacco, are available. In 1954 55 some 2,775 acres of high-grade tobacco were grown. Seven weirs of combined capacity of 2,600 acre feet have been completed on a number of streams to store water for irrigation.

During 1952 a report on the utilization of waters of the Barron and Walsh Rivers was prepared and establishment of an irrigation undertaking approved by the Queensland Government. The projected undertaking provides for construction of a major storage at Tinaroo Falls on the Barron River to store 320,000 acre feet, and construction of irrigation works to serve 78,000 acres commanded by this storage. Further development by construction of a second storage at Nullinga on the Walsh River has been deferred for the present. Tobacco will be the basic crop while peanuts, vegetables, maize, cotton and stock fattening also appear suitable.

(vi) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project see page 428.

(vii) *Balonne River.* The St. George Irrigation Area has been constituted and construction of works to serve some 11,000 acres is in progress. Water supply for the area will be obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.

5. **Bureau of Investigation.**—Under the Land and Water Resources Development Act of 1943 a Bureau of Investigation has been set up for the co-ordinated investigation of land and water resources development.

The Bureau consists of representatives from the authorities controlling water resources, lands and agriculture, under the chairmanship of the Co-ordinator-General of Public Works. Among notable works carried out by the Bureau of Investigation since its inception has been the trial planting of irrigated pastures with a view to developing mixtures suited to the special conditions of each part of the State. Other valuable work has included the mapping of the ultimate land uses of the State and the detailed investigation of the agricultural and pastoral potentialities of many regions.

6. **Channel Country.**—Extensive investigations of the Channel Country fed by inland rivers in the south-western corner of the State have been made by the Bureau of Investigation. This country is intersected by shallow and irregular flood channels through which huge volumes of flood waters pass in favourable seasons; consequent on the flooding, a heavy growth of natural pastures is produced on the flooded lands, providing feed in quantities far in excess of that required for the normal stock population of the area. If the occurrence of flooding could be made more reliable by means of storages to create artificial floods, the pastoral resources of the area would be enormous. However, inquiries directed on these lines have revealed that little can be done to increase or stabilize the turn-off of fat cattle by artificial storage.

At 30th June, 1952, 41 watering facilities, at an estimated cost of £277,000, had been proposed under a Federal-State agreement for stock routes through, and in the approaches to, the Channel Country. By 30th June, 1955, fourteen had been completed. In addition, nine large excavated tanks and two bores were finished, but still required equipping with windmills, tanks and troughs.

7. **Hydro-electricity.**—An outline of Hydro-electricity Schemes operating in Queensland is given in the previous chapter (*see* page 411).

## § 5. South Australia.

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in South Australia were given on page 1129 of Official Year Book No. 37. (*See also* Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Administration.* Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act governing the supply of water through mains in water districts for townships and farm lands. The Water Conservation Act provides for the construction of storages in non-reticulated areas and authorizes the Minister to “divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district”.

(iii) *Methods of Catchment and Conservation.* Early steps were taken to vest all running streams, springs and “soaks” in the Crown. Since the Water Conservation Act was passed in 1886 more than 550 dams, tanks and “rainsheds” have been built or acquired by the State, in addition to 460 wells and 340 bores, at a total cost of £1,476,878. The rainsheds comprise timber frameworks roofed with galvanized iron to catch precipitation which is delivered to storage tanks. Rainshed catchments vary from a few hundred square feet to four acres, discharging water into tanks ranging in capacity from 2,000 to 500,000 gallons. Over most of the State extraordinary precautions are taken to counter-act evaporation. Pipelines in preference to open channels are used to reduce seepage and evaporation. Meters are attached to practically all services to check usage by individual consumers.

2. **Irrigation.**—In South Australia irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped on to the land or gravitated from the river. The upper Murray of South Australia and the Mildura area of Victoria formed the cradle of Australian irrigation. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. Including land allotted for War Service Land Settlement purposes, the Department of Lands administers in the Murray Valley an area of 32,659 acres of irrigable high land together with 9,432 acres of reclaimed swamp and 167,090 acres of non-irrigable land in the irrigation areas and 29,898 acres of land temporarily leased and reserved for common-age or other purposes, amounting in all to 239,079 acres. In addition, the Renmark

Irrigation Trust controls 20,557 acres, of which more than 9,000 are irrigated. Water used for irrigation purposes in 1954-55 in the high land irrigation areas controlled by the Department of Lands, excluding War Service Land Settlement areas in course of development, was approximately 100,000 acre feet, in addition to which approximately 60,000 acre feet were used on reclaimed areas by gravitational watering. In the Renmark area 28,490 acre feet of water were used for irrigation in 1954-55. The production of the upper Murray areas is almost exclusively fruit and vines. Principal crops are sultanas, currants, lemons, apricots, peaches, nectarines, pears and figs (mainly for dried fruit), wine grapes and citrus fruits. Before irrigation, these semi-arid lands were of little productive value. The following tables show the acreage devoted to various crops in the government-controlled and Renmark Irrigation Trust areas on the upper Murray, and in the government-controlled reclaimed swamp districts near the mouth of the Murray, which are devoted to dairying.

**IRRIGATION AREAS ADMINISTERED BY THE DEPARTMENT OF LANDS AND THE RENMARK IRRIGATION TRUST, SOUTH AUSTRALIA : AREA OF LAND UNDER IRRIGATED CULTURE, 1954-55.**

Total .. ..	..	..	..	348	8,657	9,005

The expenditure incurred by the State Government to 30th June, 1955, in purchase of land, reclamation of swamps, preparation of irrigable lands for fruit growing, and purchase of pumping plants for drainage and water supply was approximately £5,600,000. Further irrigation development is being undertaken as a part of the Commonwealth-wide War Service Land Settlement Scheme. South Australia's share of horticultural plantings under the scheme is 13,000 acres, comprising citrus 3,500 acres, vines 8,300

acres, and deciduous tree fruits 1,200 acres. Schemes already approved and under construction will absorb between 7,500 and 8,000 acres, and a further area of 3,000 acres has been selected by the State and submitted to the Commonwealth Government for consideration. The area of 13,000 acres would provide holdings for about 500 settlers, from which, if developed, the estimated production would be :—Citrus, 750,000 bushels; deciduous tree fruits—fresh, 6,000 tons; dried vine fruits, 2,500 tons; wine grapes, 11,000 tons. On present-day prices, the value of this production would approximate £1,500,000.

Renmark Irrigation Trust is administered by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold, self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of channel for reticulation to 9,080 acres.

3. **Water Supply Schemes.**—(i) *Summary.* Water conservation and distribution works in South Australia have cost £42,467,000 (exclusive of river control and irrigation works on the River Murray which are dealt with above). A summary of statistical information concerning country supplies in 1954–55 is as follows :—Length of water mains, 5,814 miles; capacity of storages, 35,092 acre feet; approximate population served, 254,000; area served, approximately 4,500,000 acres; and total capital cost, £23,815,000.

Areas extending for a distance of 90 miles north of Adelaide are supplied from the Warren and Barossa Reservoirs in the Barossa Ranges. Further developments currently being undertaken include the construction of a main pipeline and pumping stations for pumping water from the River Murray to Adelaide and, by means of a branch pipeline, to Warren Reservoir. Another reservoir (South Para Reservoir), to supplement the Warren and Barossa Reservoirs, is also being constructed on the South Para River. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, with a connexion to the Warren system. Eyre Peninsula has, up to the present, been supplied from the Tod River Reservoir (9,167 acre feet) and three small reservoirs near the Franklin Harbour District, but demands have increased to such an extent in recent years that further sources of supply are necessary, and with this end in view a water-bearing area known as the Uley-Wanilla Basin has been developed, and water from it is now being used in the Tod River system.

(ii) *Morgan-Whyalla Water Supply Scheme.* For particulars of the construction and works of the main 223-mile pipe line bringing water from the Murray at Morgan to Whyalla on Spencer Gulf see Official Year Book No. 37, page 1132. A 19-mile branch-line has also been constructed to Jamestown. The Morgan-Whyalla Water Supply Scheme forms part of the South Australian Country Water Supply system referred to above.

4. **Underground Water.**—The occupied portion of South Australia is, on the whole, well endowed with underground water. The extent of the several artesian basins is tolerably well known. There are also considerable areas, notably in the south-east of the State, in which ground water occurs. Quality varies widely, but a great deal is at least useful for watering stock, the major use to which it is put. Apart from numerous boreholes and wells tapping underground water for farms, stations and towns, two basins are being developed on Eyre Peninsula—one at Flinders (Streaky Bay) and the other at Uley-Wanilla, near Port Lincoln.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are large in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government, however, to provide watering places along stock routes, and pastoralists rely largely on supplies from non-pressure aquifers at shallower depths.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms, but also for township supplies to Mount Gambier, Naracoorte, Bordertown and Pinnaroo. The deepest township borehole is 357 feet.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, for which the Government maintains about 30 drills. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and an examination of a large part of Kangaroo Island

and Southern Eyre Peninsula has been completed in connexion with Soldier Settlement schemes. Examination of large areas in the Upper South-East has been undertaken in connexion with land development schemes.

The results of comprehensive surveys of underground supplies undertaken by geologists of the South Australian Government have been published in the State's geological survey bulletins in recent years. Bulletin 23, published in 1946, gives a comprehensive general statement for the whole of the State.

5. **Farm Water Schemes.**—While the Department of Mines and the Engineering and Water Supply Department give assistance to individual farmers in the provision of supplies from underground sources, a great part of the farming areas derive water supply under pressure from the extensive distribution systems connected to various reservoirs on the Murray River.

6. **South-Eastern Drainage.**—For some information on the drainage schemes necessary for the disposal of surplus water in areas in the south-east of South Australia see Official Year Book No. 37, page 1133.

## § 6. Western Australia.

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia were given on page 1133 of Official Year Book No. 37. (See also Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Administration.* Irrigation districts are administered under the Rights in Water and Irrigation Act 1914–1951 and the Government is advised by an Irrigation Commission representing the local irrigationists and government technical and financial branches. The Goldfields Water Supply is administered by a branch of the Public Works Water Supply Department and its responsibilities include control of water from this scheme for country towns, mining and agricultural purposes. The metropolitan water supply is controlled by a separate department under the control of the Minister for Water Supply, Sewerage and Drainage. Under the Water Boards Act 1904–1953 twelve towns are administered by local water boards and 45 are under direct Ministerial control. The Minister also controls three District Farming Schemes. Water rights over water flowing in streams and water courses are vested in the Crown unless specifically appropriated for irrigation purposes under the irrigation legislation.

2. **Irrigation.**—The main irrigation districts—Harvey, Waroona and Collie—are along the south-west railway line between Waroona (70 miles from Perth) and Dardanup (116 miles from Perth). The total area irrigated in these districts during 1954–55 was 25,342 acres and the total water used was 74,317 acre feet. The total acre waterings (i.e., the number of acres watered multiplied by the average number of waterings) were 122,550. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the existing Collie Irrigation District.

Harvey Districts (Nos. 1 and 2—32,663 acres) are supplied from the Harvey Weir (8,300 acre feet) and Stirling Dam (44,344 acre feet), Waroona District (10,325 acres) from Drakesbrook Dam (1,855 acre feet) and Samson Brook Dam (6,540 acre feet), and Collie District (28,762 acres) from Wellington Dam (31,800 acre feet).

The following table, which shows acre waterings supplied to crops in the irrigation districts of Harvey, Waroona and Collie during the seasons 1938–39 and 1950–51 to 1954–55 illustrates the growth of these irrigation schemes.

IRRIGATION, WESTERN AUSTRALIA : ACRE WATERINGS(a).

Year	Pasture.	Fodder.	Potatoes.	Vegetables.	Orchard.	Flax, Broom Millet, and Preparation of Ground.	All Crops.
1938–39 ..	31,049	934	3,142	692	922	..	36,739
1950–51 ..	76,431	793	2,946	4,090	1,180	..	85,440
1951–52 ..	88,091	1,417	2,793	2,442	1,088	..	95,831
1952–53 ..	95,491	2,235	4,185	2,588	1,070	536	106,105
1953–54 ..	98,645	3,435	4,405	3,003	1,072	115	110,675
1954–55 ..	112,659	3,268	2,363	3,294	845	121	122,550

(a) Number of acres watered multiplied by average number of waterings.

3. *Water Supply Schemes.*—(i) *Goldfields Scheme.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Official Year Book No. 37, and an account in greater detail on page 576 of Official Year Book No. 6. Mundaring reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the goldfields, and has a capacity of 55,460 acre feet and a catchment of 569 square miles. The water now passes through 350 miles of main, mostly steel and 30 inches in diameter, aided by seven pumping stations and one booster station, involving a total net lift of 1,280 feet.

Maximum pumping capacity from No. 1 Pumping Station at Mundaring is now 11.7 million gallons per day. The total capacity of all receiving and regulating tanks, etc., along the pipe line is 154 million gallons, which includes two standby reservoirs at Kalgoorlie having a combined capacity of 36 million gallons.

Hundreds of miles of branch mains and pipes have been laid to mining districts, towns and farming districts, the most important being the Norseman extension of 101 miles. The system serves 54 towns and water is reticulated to 1,800,000 acres of farming lands. Total length of mains is 1,850 miles and the population served is 68,000. Total quantity of water pumped from Mundaring in 1954-55 was 2,810 million gallons. Total cost of the system to the end of 1954-55 was £9,417,014.

(ii) *South-West Scheme (Comprehensive).* The Commonwealth Government has agreed to assist a scheme to extend water for agricultural areas and towns in the south-west of Western Australia, which will be administered by the State Government. Twenty-three towns and over 4 million acres of agricultural country will benefit. The original estimated cost of this scheme was £4,300,000 of which the Commonwealth Government agreed to contribute 50 per cent., £2,150,000. The revised estimate in 1955 is £10 million. These estimates exclude the cost of the raising of Mundaring and Wellington Dams, the works of which form the headworks of the scheme and are financed solely by the State Government.

The work of raising Mundaring Weir 32 feet in height, giving a total capacity of 55,460 acre feet, was completed in 1951 and preparations are well in hand for commencing work in the raising of Wellington Dam 50 feet in height, increasing storage to 149,860 acre feet capacity. Sixty-two miles of 30-inch pipe line from Wellington Dam to Narrogin have been laid, i.e., over half the total distance. The new electric pumping station at Mundaring, having an ultimate capacity of 16 million gallons per day, was opened in December, 1953 and construction of two electric stations on the Wellington Dam-Narrogin pipe line with a maximum capacity of nearly 7 million gallons per day is nearing completion.

(iii) *Rock Catchments.* An interesting feature of the State's conservation system is found in the Barbalin, Narembeen and Kondinin District Farming Land Schemes in the wheat belt, where extensive granite outcrops have been used as catchments. The rain is caught at the foot of the rocks, and pumped to tanks from which the water is reticulated to farms and to a number of small towns. For further particulars see Official Year Book No. 37, page 1135.

4. *Underground Water.*—Individual farmers, orchardists, market gardeners and others derive water from wells using windmills or, where power is available, pumps and motors are used to tap such supplies. The Department of Public Works has twelve hand-boring plants which are lent out to farmers to facilitate boring operations to an average depth of 150 feet, also eight power-boring plants which are hired to local authorities. The Department also contracts with private firms to bore for communal farm supplies. During the past 62 years 341 artesian and sub-artesian bores have been sunk, in 290 of which fresh or stock water was struck. The total daily flow of all recorded bores in Western Australia is 90,872,000 gallons, and the average depth at which water is struck is 791 feet. Maximum depth of any bore is 4,006 feet and minimum 21 feet. Outside the artesian and sub-artesian basins over 5,000 bores have been sunk for water supplies.

5. *Ord River Scheme.*—The Ord River in the north-west of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are

sparse. The Western Australian Government is considering a proposal to build a dam to conserve 2,000,000 acre feet of water, equipped with hydro-electric plant, which might supply irrigation water for an area of 100,000 acres, if investigations show that the climate and soil conditions are suitable for vegetables, tropical fruits and rice. The economic production of these and other crops, as well as the possible use of such irrigation areas for interim fattening of cattle, is being examined at the Kimberley Research Station on the Ord River.

## § 7. Tasmania.

1. *General.*—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania were given on page 1136 of Official Year Book No. 37. (*See also* Chapter II.—Physiography, p. 30 of this issue.)

(ii) *Main Purposes of Conservation and Utilization.* Owing to Tasmania's fortunate rainfall position, scarcity of water is not a serious problem in normal seasons. Conservation of water for hydro-electric generation is the predominant interest, and conservation for domestic and industrial purposes is more important than irrigation. Conservation of water on farms is not practised to the same extent as on the mainland, probably because running streams and good rainfall are on a more generous scale. Provision of artificial storages (apart from house tanks) is rare, but progressive landowners are beginning to take advantage of modern plant, such as bulldozers, to provide small excavated storages on their properties. Underground water is of poor quality, but a small quantity which has been exploited to a limited extent only by bores and windmills exists over an area in the Midlands. Geological conditions do not appear to favour the utilization of underground water except on a minor scale. There is only one known flowing bore—at Spreyton—which yields 1,690 gallons per hour.

(iii) *Administration.* The State does not own all natural waters, and consequently the subject of water rights is a difficult one. The Mines Department has power to grant certain rights for mining operations, and the Hydro-Electric Commission must approve the abstraction of water from any stream or lake of potential value for power generation. Under the provisions of an Act passed in 1944, the Water, Sewerage and Drainage Board was constituted to consider the financial and technical practicability of all water supply schemes constructed by local authorities, other than the cities of Hobart and Launceston. Legislation was also enacted during 1952 empowering Local Authorities to take water from specific sources of supply and to construct waterworks. The Act does not cover irrigation, which is practised to a limited extent only by private interests. Provision has been made in the Act for the protection of riparian rights, but there is no general legislation for the control of water courses.

2. *Hydro-electricity.\**—Tasmania depends entirely on water for power development. The Hydro Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geophysical exploration. Although the survey is not yet conclusive it is considered that at least 1,300,000 kW of continuous power can be economically developed. At present only 447,100 kW of generating plant is in commission, but plant under construction will raise this total to 569,000 kW by 1960.

Most of the water potential is located on the Central Plateau with an area of about 1,500 square miles at an altitude of from 2,000 to 4,000 feet and subject to rainfall of from 30 inches a year in the east to 80 inches on the western perimeter. On the plateau are a large number of lakes which provide the means for storage at low cost. These include Great Lake with an area of 58 square miles, Lake St. Clair and Lake Echo, each more than 12 square miles, and others of smaller area.

The Derwent River and its tributaries which flow south-easterly carry off by far the greater part of the water which falls on the plateau and these rivers are therefore the most abundant source of power. They have been the cheapest to develop to date and most of the existing generating stations are located on them.

The three main rivers running westerly from the plateau—the Arthur, Pieman and Gordon—have only a small portion of their catchment areas at high level, but they run

\* *See also* Chapter X.—Electric Power Generation and Distribution, p. 416.

through regions of high rainfall and their power potentials are considerable. However, because of inaccessibility and climate, development of these rivers may be rather expensive and has been deferred in favour of more convenient schemes.

Rivers draining from the plateau towards the north and north-west coast, including the Emu, Forth and Mersey, have small catchments at high levels and no natural storages.

Two other important water power sources, independent of the Central Plateau, are the South Esk River in the north and the Huon River in the south. A power station at Trevallyn, near Launceston, utilizes water from the South Esk. The Huon has a large low-level catchment in the high-rainfall area near the west coast. Storage could be provided on it at a reasonable cost and because of the proximity to Hobart of a future power station, it has considerable value for peak load development.

3. **Industrial.**—Three principal industrial schemes have been installed privately. Australian Newsprint Mills Ltd. pump approximately 6 million gallons a day from the Derwent River at Lawitta for the Boyer Mills. Associated Pulp and Paper Mills Ltd. pump several million gallons a day from the Emu River at Burnie, and Titan Products Pty. Ltd. reticulate water from Chasm Creek to their factory at Heybridge. In addition the State has constructed a regional water scheme to serve the Australian Aluminium Production Commission's plant at Bell Bay on the River Tamar. Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, at present largely unsettled. Diversion to the eastern side of the watersheds is not regarded as practicable.

4. **Irrigation.**—There are no State irrigation projects, but preliminary inquiries as to the possibility of establishing one in the Coal River Valley have been made. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies. Irrigation, as practised in Tasmania, was applied in 1954-55 to 13,761 acres devoted to : hops (1,286 acres) ; fruit (1,148 acres) ; pastures (8,879 acres) ; green fodder, etc. (1,289 acres) ; and other crops (1,159 acres).

## § 8. Northern Territory.

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory were given on page 1138 of Official Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II.—Physiography, and a brief outline of contour and physical characteristics in Chapter V.—The Territories of Australia.

2. **Administration.**—Under the Control of Waters Ordinance (1938) of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under conditions prescribed.

3. **Underground Water.**—Artesian water is found mainly in the south-east where the Great Artesian Basin enters the Territory. Pastoral (beef) production accounts for the bulk of the Territory's income, and the marked seasonal conditions affect the industry's economy. During the wet summer season there is adequate water, but during the winter most natural watering points disappear, and pastures dry. Bores supplement the permanent watering points, which are mainly along river frontages. The cattle industry is concentrated in the area in which the feed retains an appreciable nutritive value during the winter despite the dry conditions. This area is not in the wetter coastal regions, but in the inland belt of 15 to 25 inch rainfall and to the north of Alice Springs. Lack of bores is a limiting factor in the industry's economy, as cattle are able to thrive only within certain distances of reliable water.

In 1954-55 some 985 equipped bores were recorded, comprising 786 on pastoral properties (54 provided by the Government by way of assistance to pastoralists), 163 established by the Government on stock routes, 18 on Native Affairs Settlements, 11 on mining fields, 6 for town water supplies and one maintained by the Postmaster-General's Department. Latest details of bores on pastoral properties in the various districts relate to 1952 and understate the present position. They are :—Alice Springs, 357; Barkly Tableland, 288; Victoria River Downs, 87; Total, 732.

The number of stock route bores, watering some 2,500 miles of stock routes, has increased by approximately 53 per cent. in the period 1947-1955, and the present figure of 163 bores represents on the average approximately one per 15 miles.

Regional surveys by the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization from 1947 to 1955 have established the existence of the valuable Barkly Basin of 57,000 square miles in the eastern part of the Territory and extensions of the Gulf Basin in the north-western part.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. A small area (151 acres) was irrigated in the year ended 31st March, 1955, mainly for growing fruit and vegetables. For particulars of potentialities see p. 1138 of Official Year Book No. 37.

## § 9. Papua and New Guinea.

1. **Rainfall.**—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 231 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).

2. **General.**—For a general description of these territories see Chapter V.—The Territories of Australia, page 130, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development. The main water conservation interest in New Guinea at present is the hydro-electric potential.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (a description of which is given in Chapter XXVI. of Year Book No. 40), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

It is known that the opportunities for production of hydro-electric power are extensive. However, present investigations have been limited to those areas where an early demand for power is likely to arise.

## CHAPTER XII.

### EDUCATION.

#### § 1. Evolution of Educational Systems in Australia.

An account of the development of the Australian school system up to 1929 is to be found in Official Year Books Nos. 1, 2, 17 and 22, and in Official Year Book No. 40 a reasonably complete review of changes which had occurred up to 1951 and of the practices then current was presented from material furnished in the main by the Commonwealth Office of Education.

In the sections which follow, the information relating to the educational programme applies mainly to the year 1955. The statistics given in the tables, however, relate to 1953 for schools and technical colleges and to 1954 for universities.

#### § 2. Government Schools.

1. *Administration.*—Education is the responsibility of the State Governments. The Commonwealth is, however, empowered to provide financial assistance to students and meets the full cost of education in Commonwealth Territories, although this is largely provided by State education authorities.

Although there is a tendency towards regional administration, State educational administration is centralized. The permanent head of the Department of Education or Public Instruction in each State is responsible to the Minister for Education (or Public Instruction). Contact with the schools is maintained principally through Inspectors, called Superintendents in Western Australia and Tasmania. Departments are usually divided into primary, secondary and technical divisions. Some technical colleges are, however, in a large measure autonomous. Universities are independent foundations although much of their income is derived from State and Commonwealth grants.

Examination Boards, representative of the universities, the Education Departments and non-government schools, control public examinations and syllabuses, and curriculum committees prepare primary and secondary curricula. State Ministers for Education meet periodically as the Australian Education Council, to discuss matters of common interest, and Directors of Education meet annually as a Standing Committee of this Council.

2. *The School System.*—(i) *Compulsion.* In all States, there is legislation for compulsory school attendance. The original Victorian Education Act was passed in 1872, followed by similar Acts in Queensland (1875), South Australia (1878), New South Wales (1880), and Tasmania and Western Australia (1893).

In 1955 the ages between which children were legally required to attend school were as follows:—New South Wales, 6 to 15 years; Victoria, 6 to 14 years; Queensland, 6 to 14 years; South Australia, 6 to 14 years (children may not leave school until the end of the term during which they reached the age of 14 years); Western Australia, 6 to 14 years; and Tasmania, 6 to 16 years.

In Victoria, South Australia and Western Australia amendments to the Acts have provided for the raising of the school leaving age to 15 years, but to date this legislation has not been implemented.

Schooling may be given in government schools (including correspondence and special schools) or non-government schools and in a small minority of cases by private tuition.

The employment of children of school age is prohibited by law.

(ii) *Beyond compulsion.* In recent years, the development of large-scale industry and scientific farming has demanded a diversity of skills and a general raising of the educational level of the population. The raising of the school leaving age in two States

and the tendency everywhere for children to stay longer at school have been expressions of public realization of this. In recent years less than half of all children left school when they reached the age limit for compulsory attendance. Indeed, almost half now proceed to some form of further education beyond secondary school, either as full-time students, as part-time apprentices or trainees released during the day by their employers, or as part-time evening students.

In the early years of government provision of education, the main emphasis was on the primary school, which catered for children under compulsion and offered a course largely confined to the tool subjects, reading, writing and arithmetic. However, a process of extension and differentiation both at the bottom—infants' schools and kindergartens—and at the top—secondary schools—was well under way during the early years of this century.

3. **The Educational Ladder.**—(i) *Infants' Schools.* It is now customary, although not compulsory, for children to begin school when they are five years old. In larger primary schools they enter the infants' school, and in smaller schools "infants' classes", which occupy two or three years, the first year in some States being called "Kindergarten" or "Preparatory". The emphasis in the infants' classes is very much on general development, on play activities and on the informal aspects of the educational processes. In some cases the first two grades of primary education, together with any "Preparatory" or "Kindergarten" classes, are to be found in separate infants' schools or departments. But whether in a separate establishment or as a part of a primary school, there is a gradual move towards formal instruction. At the end of the period most children are able to read with some fluency, carry out simple arithmetical operations founded on the basic number facts, and can write in pencil. In addition, they have acquired skills with art materials and the like. A good deal of the instruction is carried on through activity methods, involving, for example, dramatic work, puppetry, and school "shops". Children then pass at about the age of 8 or 9 to the more formal primary school, in which they normally spend four or five years.

(ii) *Primary Schools.* The main emphasis in the primary school as distinct from the infants' school still lies on the tool subjects (reading, writing and arithmetic) and, in more recent years, on oral language, but the methods of teaching have undergone considerable changes. Changes in the purpose and outlook of educationists, and the raising of the professional standards of teachers, have made for greater freedom for pupils and teachers, some departure from the methods of mass instruction, and the closer linking of the curriculum with the child's social environment.

In general, it is true to say that there is now less emphasis on results, and that basic skills are taught at a somewhat later stage. At the same time, the curriculum has been broadened. More individual instruction has led to a reduction of minimum standards of achievement for the less able and a stress on curriculum enrichment for the bright. Retardation, i.e., the repeating of grades, has been considerably reduced, the aim being for each child to remain with his age group. In all States "opportunity classes" exist for backward children, and in one State "opportunity classes" are provided for the especially bright.

(iii) *Secondary Schools.* At the age of 12 or 13 (in Queensland, 14) children transfer to a secondary school course. In the cities and larger country centres this is provided in a separate school, but in less densely populated areas secondary classes share the same buildings as primary classes. In rural areas secondary pupils may share teachers or classrooms with primary pupils, and even in one-teacher schools a few secondary students may carry out correspondence assignments under the supervision of the primary teacher-in-charge.

Secondary curricula have developed from the matriculation requirements of the universities. English grammar and literature, mathematics, including algebra, geometry and trigonometry, were the core. Languages, chiefly Latin and French, or science, chiefly physics and chemistry, and history had an important place. Geography and drawing were often taken in the first two or three years.

As a result of changes in the academic course for matriculation, greater emphasis has been placed on oral language and written expression in the English course; Latin has waned in popularity and modern languages other than French and German are being taught in a few schools. A general science course has been introduced in some States, and social studies, a synthesis of history, geography and civics, is a subject to third-year level. More emphasis has been placed on art, music and physical education. In recent years the provision of a secondary education for all has gained ground rapidly, although the entrance requirements of tertiary institutions are still provided for.

Consequently, alongside the academic course, other courses have grown up. In country areas they may be offered in the same school or the academic course may even be largely abandoned. In the city, it is usual to offer non-academic courses in separate schools. The academic schools and multi-lateral country schools are usually known as High Schools, while the other types are generally distinguished by such names as Junior Technical Schools and Home Science Schools.

Particular mention should be made of the recent development of the all-age consolidated school sometimes with an agricultural bias, found under various names in different States. Tasmania and South Australia adapted the idea of the English village area schools to Australian conditions and established "Area Schools", some of which have farms attached.

The courses followed in the non-academic schools are in general broader than in the academic schools. There is less concentration on establishing an academic discipline and method peculiar to each subject, but more attention to correlation between fields of knowledge, sometimes expressed by projects involving them all. Less time is generally devoted to mathematics and the formal sciences, more time to practical work and to art and musical appreciation. In English, oral language is emphasized rather more and grammar much less than in the academic schools.

(iv) *State Details.* Very brief particulars of the position in each of the States were given on pp. 432-3 of Official Year Book No. 40.

4. *Examinations and Accrediting.*—(i) *Examinations.* In earlier years most States had three examinations for school children. The first came at the end of primary school and was variously known as the "Qualifying Certificate" or "Scholarship". These examinations were regarded as a qualification for secondary education. The third came at the end of the secondary course, at the age of sixteen or seventeen, and was known as the "Leaving" or "Senior Public" Examination, which qualified students for university matriculation. Between these came the "Intermediate Certificate" or "Junior Public Certificate", usually one or two years before the end of the full course of secondary schooling. A pass in this examination was a useful entrance qualification for clerical occupations, nursing, some Public Service positions, and other callings requiring academic training.

The entrance examination for secondary schools was administered by the Education Departments, although students from private schools also sat for it. The two higher examinations were generally under the control of a board, on which universities, Education Departments and non-government schools were represented.

The external examination for secondary school entrance has now been abolished in every State except Queensland, where the age of transition is fourteen and the "Scholarship" Examination must be passed to entitle the student to free secondary education and, if necessary, boarding allowances. The external Intermediate Examination has declined in importance, some States substituting internal examinations in some, or all, schools, other States providing a variety of internal certificates from different types of schools. The Leaving Certificate in most States has not been supplanted, but has been modified to provide a greater variety of subjects and, as for example in mathematics, the opportunity of choosing several specialized courses or a broad course.

The length of the secondary course has been increased in two States from two to three years for the Intermediate Certificate and from a further one to a further two for the Leaving. South Australia has a further year beyond the Leaving Certificate for a separate

examination known as "Leaving Honours". Only the "Leaving Certificate" is necessary for matriculation, but good results—credits as distinct from passes—in the Leaving Honours Examination may carry exemption from some subjects of the first-year university course. In Victoria the optional Leaving Honours year has been replaced by adding a further year after the Leaving Examination for a course leading to a special matriculation examination. Separate matriculation examinations also exist in New South Wales, Western Australia and Tasmania, but successful Leaving candidates are not required to sit.

(ii) *Accrediting.* The system of granting certificates, or credit for subjects passed, without external examination is a major development and now operates in four States. Credit is assessed mainly on the student's record of work for the year, although some internal examinations are generally given. Syllabuses can be less rigidly controlled and can be more freely adapted to local conditions, although standards are maintained by the supervision of the central authority.

(iii) *State Details.* The details of accrediting in each State were given on pp. 433-4 of Official Year Book No. 40.

5. *Health Services to Schools.*—Information relating to school medical and dental services is given in Chapter XIV.—Public Health and Related Institutions.

6. *Guidance.*—Each of the Australian States has now a comprehensive system of educational guidance administered by trained and experienced educational psychologists and backed by a system of school record cards. In general, the functions of these services are:—selection and differentiation for secondary education, diagnosis and guidance of atypical children, preliminary vocational guidance and, in some States, research. The weight given to each of these functions varies considerably from State to State, but the aim is the provision of thorough educational guidance services for all children.

The Vocational Guidance Division of the Commonwealth Employment Service co-operates with State Education Departments by giving post-school vocational guidance, using the data obtained and made available by the Education Departments during the school career of the children.

7. *Research.*—(i) *State Education Departments.* All State Education Departments have set up research branches which function as integral parts of head offices. In several States the officer who directs research is also responsible for the guidance service offered by his Department. The research undertaken is directed towards departmental activities and the findings of research are examined carefully in the determination of policy and procedures; in addition, many problems of immediate importance are handled. In the majority of States, too, the Research Branch supervises the collation of statistics; it also plays an important part in curriculum revision and modification of examinations.

(ii) *Australian Council for Educational Research.* Research in education is also carried out by a non-governmental body called the Australian Council for Educational Research. It is engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and enquiries, makes grants to approved educational investigators, serves as a centre to disseminate educational information, provides training for research workers, and standardizes and distributes educational and psychological tests for use in Australia. Although this Council is an autonomous body, the Commonwealth and State Governments contribute some financial support to it.

8. *Atypical Children.*—Pupils who, for one reason or another, cannot progress to their best advantage in an ordinary school are catered for by special schools or classes. Among groups given special attention are the mentally backward, the gifted, the physically handicapped, the blind, deaf and dumb, the epileptic, the cerebral palsied, the partially sighted, the hard of hearing and the delinquent. The provision of special schools and classes has involved the appointment of departmental specialists, special training courses and close liaison with school health services. In some States, special clinics attached

to hospitals or functioning as an independent child-welfare service handle cases of personality maladjustment ; they work in co-operation with the psychological services of the Education Departments.

9. *Education of Migrant Children.*—At 30th June, 1954, the number of children of post-war migrants who were of school age was approximately 129,000 or 7 per cent. of the total school age population, more than half being alien and non-English speaking on arrival. During this period the impact of the increased birth rate of the Australian population in the mid 1940's also contributed to the heavy burden placed on State education resources.

It is generally considered desirable for migrant children to attend schools with Australian children, although some purely migrant schools have been built, with Commonwealth assistance, in hostels, etc., and in some States, schools or classes exclusively for alien migrant children assist the children until they can take their place in their age group classes in the normal schools. As is to be expected, alien children find little difficulty in learning the English language, which is the language of instruction in all schools in Australia. Non-government schools absorb a significant proportion of migrant children.

The major problems have been those of staffing and accommodation. The Commonwealth assists by providing school buildings in migrant centres and in some residential hostels. Some States have relieved the staffing position by employing suitably qualified English-speaking migrants as teachers in schools exclusively used by migrant children, although the policy of teaching migrant children in schools with Australian children is adhered to wherever possible. Where it is not possible, particularly in large migrant centres, parents are encouraged to move into Australian communities. In almost all cases children of secondary school age are accommodated in existing Australian secondary schools.

10. *Education of Native Children in Australia.*—The Commonwealth Government is responsible for the education of full-blood native children in the Northern Territory. Each State has responsibility for the welfare and education of native children within its boundaries.

Native children are admitted to government schools in all States except in areas where separate facilities are provided for the natives. In those States where natives are more numerous special schools are located at or near aboriginal reserves, settlements and stations. The schools are for the most part staffed by teachers from the Education Departments, and the curriculum is similar to that in ordinary government schools with a bias towards handicrafts. Numbers of native children also attend the mission schools conducted in several States by the various denominations. The standard of education in these schools generally is similar to that in the government schools.

11. *Provision for Rural Areas.*—(i) *General.* The population of Australia is so scattered that there is a problem in providing primary, and more especially secondary, education for all eligible pupils. One method of meeting this problem was the establishment of a wide network of one-teacher primary schools, staffed in the main with trained teachers. The practice of sending itinerant teachers to outlying areas is still in force in the far north of Western Australia, and mobile railway cars are used for technical and agricultural education in New South Wales and domestic science in Queensland. However, in general, it has been the practice to bring the child to the educational facilities rather than vice versa.

(ii) *Subsidized Schools.* Where there is a group of children too few in number to warrant the establishment of a one-teacher school, a "subsidized school" may be opened. The Education Department pays part of the cost, and in some States appoints a teacher. Some States also administer "provisional schools", which are completely financed by the Government, but which are not large enough, or sufficiently assured of adequate continued attendance of pupils, to warrant classification as permanent schools.

(iii) *Consolidation.* As early as 1904, the policy of transporting pupils to larger and more central schools began to come into operation. Trains, bicycles and horses were first employed, but the use of buses has led to a very great development of school transport systems. This policy, known as "consolidation", has been responsible for a substantial reduction in the number of small schools, and is one of the most striking developments of the past twenty years. The consolidated school is usually not merely a larger primary or secondary school; it generally provides a curriculum specially adapted to the needs of the rural area it serves. Organized transport for children attending country primary and secondary schools has been developed considerably.

(iv) *Special Assistance.* Another way of bringing children and schools together has been the provision of financial assistance for children who have to live away from home in order to attend school. Most of these board in private homes but there are six government hostels and 56 private ones (excluding private boarding schools) which cater for more than 1,500 children of secondary school age and a small number of primary school children also. Special scholarships for country children, giving allowances for living away from home, and substantial fare concessions for vacation travel are provided by all States.

(v) *Correspondence.* For those who are still unable to attend school, correspondence tuition has been established in every State. Technical Correspondence Schools, which grew out of the Commonwealth scheme of technical training, were established in each State by 1942, and have grown under State administration since. An interesting development in 1947 was the appointment of a liaison officer for correspondence school pupils in Tasmania. The activities have been made more effective by his personal contact with pupils and parents and his practical aid in supervision.

12. *School Broadcasting in Australia.*—Over the years an extensive school broadcasting system has been developed in Australia by the co-operative efforts of the Australian Broadcasting Commission and education authorities. The School and Youth Education Department of the A.B.C. is responsible for the broadcasting of the programmes, but it draws freely on the advice and services of teachers and maintains permanent liaison officers with the Education Department. More than two-thirds of Australian schools are equipped with radio receivers.

School broadcasts are presented as part of the regular A.B.C. programmes without separate stations or wave lengths. Special efforts are made, however, to relate the broadcasts to the actual work in the schools by the extensive distribution of booklets giving details of programmes in advance and subject notes accompanied by picture sheets, work books, and teachers' notes.

Broadcasting has proved to be a most effective way of reaching the outback children of Australia. The "Kindergarten of the Air", begun in 1942 as a service to children unable to attend kindergarten, has proved popular in both town and country. Children are encouraged to take part in the programme in response to suggestions made by the broadcaster. Radio lessons have been designed to supplement those being done by means of correspondence.

13. *Teacher Training and Recruitment.*—(i) *General.* The training of government school teachers is carried out by the State Education Departments, but in most States persons who wish to train for teaching in private schools may attend government training colleges on payment of a fee. Many non-government school teachers have been drawn from the government teaching services; others have been recruited at the university graduate level. Private training institutions also provide some teachers.

An account of the early growth of teacher training systems is to be found in *Official Year Book No. 22* and subsequent developments were reviewed extensively in *Official Year Book No. 40*. Under the pupil-teacher system, the student spent one or two years, or even longer, teaching in school under supervision, studying and receiving instruction from the headmaster in the art of teaching. In some States, at the end of that period

he passed into a teachers' college. After emerging as a trained teacher, he often continued his studies to obtain a series of graded certificates which were necessary for promotion. The pupil-teacher system has, however, been abandoned as the chief method of training teachers and teacher students are now recruited at matriculation level and given a professional course of training at colleges controlled by Education Departments or by University Departments of Education. The raising of entrance standards and prolongation of training has led to a close association between the Education Departments and universities. The trend has been towards placing teacher training on the same basis as other professional training.

There is at present a shortage of teachers in Australia. Measures taken to overcome this shortage include publicity drives to attract recruits, increased allowances to student teachers amounting in some States to more than £200 per annum, substantial increases in teachers' salaries and liberalization of promotion systems.

Despite increased training facilities and higher teachers' college enrolments in the post-war period, the supply of teachers throughout Australia has done little more than replace wastage, and has not kept pace with the rising enrolments. Difficulty is being experienced in staffing small schools in remote areas, while the shortage of secondary teachers is reported to be acute in some States.

(ii) *Training Colleges.* Every State maintains at least one teachers' training college. Most students are trained at colleges in the capital cities, although there has been a movement towards the establishment of colleges in the country. In 1953 there were in Australia twenty teachers' colleges conducted by Departments of Education and professional training for teachers was provided by five universities.

The entrance standard is generally at the Leaving Certificate level at about the age of seventeen. In some States intending teachers can obtain a scholarship at the Intermediate Certificate level to enable them to complete teachers' college entrance requirements. In return they are required to enter into a bond of service additional to that normally required of teachers' college trainees.

(iii) *Training of Primary Teachers.* In most States, teachers for government primary schools are trained in teachers' training colleges controlled and administered by the State Education Departments. Colleges are conducted on a co-educational basis, and departmental trainees are given a monetary allowance while in training and are required to enter into a bond to serve for a specified period or to repay all or portion of the cost of training.

In general, the duration of courses is two years for primary teachers, including infants' teachers. There is a variety of subject detail in training courses in the different States. The basic subjects taken in the various courses are principles, history and general methods of teaching, special methods of teaching primary school subjects and educational psychology. In addition, students undertake courses in physical education, art, music, school hygiene and handicrafts as well as lectures designed to widen their own cultural background. In Tasmania teacher training is provided by the university and in South Australia student teachers attend lectures in normal degree courses at the university to complete the academic part of their training.

(iv) *Training of Secondary Teachers.* Prospective secondary teachers are generally required to undertake a degree course, and then are required to undertake a course of professional training of one year's duration. This normally qualifies trainees for a Diploma in Education. The year's professional training in education includes lectures and seminars on subjects associated with educational theory and practice, study of methods and techniques appropriate to secondary school subjects, periods of practice teaching and the observation of classroom techniques in the teaching of special subjects.

(v) *Training of Specialist Teachers.* Teachers of specialist subjects such as music, art, manual arts, physical education and domestic science receive from two to five years' training. Physical education courses are generally conducted at teachers' colleges

or at a university ; use is made of technical colleges and conservatoria of music for other specialist training. Teacher trainees attending the institutions, however, are regarded as being in attendance at a teachers' training college and are normally required to spend a portion of each week at the teachers' college.

(vi) *Training of Technical Teachers.* Teachers of general subjects in technical schools and colleges generally receive their training either as primary or as secondary teachers and after some experience in either or both fields are transferred to a technical institution.

Teachers of specialist subjects in technical schools are in the main recruited from the ranks of qualified tradesmen engaged in either industry or commerce. Upon appointment teachers of technical subjects usually receive instruction in classroom teaching techniques and procedures. A Technical Teachers' Training Centre has been established in Victoria.

(vii) *In-service Training.* As almost all teachers now enter the profession by way of teachers' training colleges, where they receive basic professional training, in-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training. Education Departments have always encouraged practising teachers to pursue university courses, which are free to approved applicants in some States, and facilities have been made available for teachers to obtain the academic qualifications for higher certificates where such exist.

Efforts are also made to keep teachers informed of new ways of meeting classroom problems. District Inspectors are usually responsible for the conduct of meetings where professional topics are discussed and for the arrangement of visits to other schools where special work is being done. Official publications of the Education Departments contain articles dealing with both educational theory and practice. In most States, the teachers' organizations publish magazines containing, among other material, articles dealing with educational theory. These reach the great majority of government teachers.

(viii) *State Details.* The details of teacher training in the States were given on pp. 442-3 of Official Year Book No. 40.

(ix) *Sex and Status of Teachers.* Although about one half of the teachers in State schools in Australia are men, the ratio varies considerably from State to State. The increase in the proportion of men in recent years is the result of the difficulty of recruiting females at a rate rapid enough to replace their greater "wastage" rate. Only women teachers are employed in the infants' schools and generally in girls' departments. However, men predominate in the senior positions, both because of their greater preponderance amongst those with long service and because the higher promotion positions are generally reserved for men, except for some in infants' schools and girls' schools which are reserved for women.

14. *School Buildings and Grounds.*—In 1930, school building programmes were seriously cut because of the financial difficulties of the depression. The 1939-45 War intervened before school building could be resumed on a large scale. During the post-war period the building of schools has been given a high official priority in order to obtain labour and materials. Most schools are therefore either quite new or more than 25 years old.

The post-war buildings fall into two groups, portable and permanent. In primary schools, in particular, some Education Departments favour a mixture of both kinds of classrooms, thus enabling them to cope with the changing age-composition of different areas. Prefabricated classrooms have been imported or locally produced in very large numbers—the Bristol aluminium dual units being especially popular. Generally, these have been used to extend existing schools, although in a few cases entire schools have been composed of them. To meet the very acute shortage all kinds of emergency measures have been taken, including the hiring of halls, and the use of cloak-rooms,

weather sheds and verandahs for class instruction. However, a considerable number of modern and imposing new secondary schools have been built and equipped with special facilities for the varied activities of the pupils.

15. *Equipment.*—(i) *Text Books and Materials.* All equipment regarded as essential by the Education Department in each State, including equipment for manual training and home arts, is provided free of charge, except for text books for pupils.

The more widespread application in recent years of activity and play-way methods in the infants' schools has been stimulated by the provision of a greater volume of free materials such as blocks, counters, peg-boards and modelling clay.

Secondary schools are almost always provided with laboratories, but these are not found in primary schools, with the exception of the larger all-age schools in the country.

(ii) *Furniture.* There has been considerable development in this field. Originally most schools were equipped with long desks and benches, seating six to eight pupils, but these were later replaced by the standard dual desk with tip-up seat, and in infant classes by individual chairs and small tables. In the post-war period considerable research was undertaken on posture and the physical measurement of children. The dual desk is now being replaced in some States by the individual table and chair, provided in a range of sizes suitable to each class. In some States tubular steel is used. The new type of furniture is more suitable for flexible arrangements of the class in line with modern educational practice.

(iii) *Visual Aids.* In the past 20 years there has been a remarkable growth in the use of visual aids in education. After some resourceful pioneering work had been done by individuals the Departments of Education between 1936 and 1939 appointed special committees and teacher demonstrators to guide the development of the new educational medium. Production units to produce film strips suitable for use in schools were set up in five States and an Australian-produced film-strip projector was manufactured. After the war, the emphasis moved from the strip projector to the 16 mm. sound machine and the National Film Board, set up by the Commonwealth Government to promote the use of educational films, became the main producer of these films. Film companies are also designing films primarily for class-room use and several manufacturers have produced 16 mm. sound projectors. Education Departments have their own film libraries to distribute films to schools and borrow largely from the National Library which is the main distributing centre for non-technical films in Australia.

16. *Parent and Citizen Organizations.*—In Australia, where all government schools are administered by central Departments, there is little opportunity for local administration of education. Public interest is expressed through parent and citizen organizations. Although the names of these bodies differ in the various States they have similar aims which are:—to promote the interests of the school by bringing parents, pupils and teaching staff together; to help provide teaching aids not supplied by the Department; to provide recreational materials; to assist in the regular attendance of children at school; to help find accommodation for teachers.

In all States the parent and citizen organizations have affiliated to become State-wide bodies. These, in turn, are the members of the Australia-wide body, the Australian Council of School Organizations.

17. *Statistics of Government Schools.*—(i) *General.* The government schools shown in the following tables include primary, secondary, junior technical, correspondence and subsidized schools, but exclude senior technical colleges, evening schools and continuation classes.

Particulars relating to senior technical colleges are given in § 5 following.

(ii) *Year 1953.* (a) *General.* The following table shows for 1953 the number of government schools, together with the teachers employed, teachers in training and the number of individual children enrolled.

## GOVERNMENT SCHOOLS(a), 1953.

State or Territory.	Schools open at end of year.	Teachers Employed (excluding Teachers in Training).	Teachers in Training.	Net Enrolment.
New South Wales(b) .. ..	2,533	14,989	2,678	478,546
Victoria .. ..	2,000	10,267	2,305	295,825
Queensland .. ..	1,563	6,101	1,442	182,572

Tasmania .. ..	322	1,822	250	51,377
Northern Territory(d) .. ..	10	68	..	1,632
Australia .. ..	7,595	40,237	7,787	1,206,034

(a) Excludes Senior Technical Colleges.  
weekly enrolment.(b) Includes Australian Capital Territory.  
(d) Year ended 30th June, 1954.

(c) Average

(b) *Average Enrolment and Attendance.* The methods of calculating enrolment are not identical throughout the States. The unit in South Australia is the daily enrolment, while New South Wales, Victoria, Western Australia and Tasmania employ the weekly enrolment. In Queensland no average enrolment is compiled, and the August census enrolment figure has been taken.

As with enrolments, there is not complete uniformity in arriving at the average attendance, but the matter of securing uniformity in these respects has been under consideration for some time. Most of the States aggregate the attendances for the year and divide by the number of school sessions. New South Wales and Western Australia, however, employ averages of term averages. The average enrolment and attendance in each State and the Northern Territory during 1953 are shown below :—

## GOVERNMENT SCHOOLS(a) : AVERAGE ENROLMENT AND ATTENDANCE, 1953.

State or Territory.	Average Weekly Enrolment.	Average Daily Attendance.	Percentage of Attendance to Enrolment.
New South Wales(b) .. ..	448,914	401,679	89.48
Victoria .. ..	283,041	257,784	91.08
Queensland .. ..	(c) 176,300	155,974	88.41

Western Australia .. ..	82,590	76,032	92.06
Tasmania .. ..	48,592	43,907	90.36
Northern Territory (d) .. ..	1,632	1,541	94.42
Australia .. ..	1,149,915	1,037,641	90.24

(a) Excludes Senior Technical Colleges.  
enrolment at 1st August, 1953.(b) Includes Australian Capital Territory.  
(d) Year ended 30th June, 1954.

(c) Census

Recurring epidemics of contagious diseases, minor illnesses and bad weather are all serious factors which affect the full attendance of pupils at school.

The average attendance at government schools in Australia is shown in the following table for the year 1891 and at varying intervals to 1953.

## GOVERNMENT SCHOOLS(a) : AVERAGE ATTENDANCE, AUSTRALIA.

Year.	Total Population. (b)	Average Attendance.	Year.	Total Population. (b)	Average Attendance.
	'000.	No.		'000.	No.
1891 .. ..	3,421	350,773	1941 .. ..	7,144	73,116
1901 .. ..	3,825	450,246	1948 .. ..	7,792	770,554
1911 .. ..	4,574	463,799	1949 .. ..	8,066	810,800
1921 .. ..	5,511	666,498	1950 .. ..	8,307	844,123

1933 .. ..	6,657	805,334	1952 .. ..	8,710	974,314
1939 .. ..	7,005	744,095	1953 .. ..	8,903	1,037,641

(a) Excludes Senior Technical Colleges.

(b) At 31st December.

(c) *Schools in the Australian Capital Territory.* During 1953 eleven government schools were in operation in the Australian Capital Territory; enrolment numbered 3,439; and average attendance was 3,052. By arrangement with the Commonwealth Government these schools are conducted by the New South Wales Education Department with provision for primary and secondary education, the Department being recouped for expenditure. The cost of the teaching staff in 1953-54 was £167,623, while the cost of general maintenance amounted to £93,650. The figures quoted exclude enrolment, etc., at the Canberra Technical College and the Evening Continuation School. For further particulars of education facilities in the Australian Capital Territory see Chapter V.—The Territories of Australia, Australian Capital Territory, p. 124.

(iii) *Expenditure.* (a) *Maintenance—All Schools (except Senior Technical Colleges).* The net expenditure on maintenance in all grades of schools, except senior technical colleges and, in Victoria and (in 1939) Tasmania, junior technical schools, and the cost per head of average attendance for 1939 and each of the years 1949 to 1953 are shown in the following table. The figures do not include expenditure on buildings, which is shown separately in a subsequent table. In all expenditure tables the figures for Victoria, Queensland and Western Australia relate to the financial year ended six months later than the calendar year.

(a) Excludes Senior Technical Colleges.

(b) Gross figures, receipts not being available

(c) Excludes Junior Technical Schools.

(b) *Maintenance—Secondary Schools.* The figures shown in the preceding table refer to expenditure on maintenance of all government primary and secondary schools, excluding senior technical colleges. It has been the practice of the State Education Departments to give separate information in regard to the cost of secondary education. The difficulty of making any satisfactory allocation of the kind, however, will be understood, when it is realized that both elementary and higher education are in some instances given in the same school and by the same teacher. Unfortunately, too, the term "secondary" has not the same meaning in all States. It might be mentioned here that similar difficulties arise in connexion with the apportionment amongst the various branches of expenditure on administration, inspection and the training of teachers. The figures quoted hereunder in regard to cost have been extracted mainly from the Reports of the State Education Departments, and are subject to the above qualifications.

#### GOVERNMENT SECONDARY SCHOOLS(a) : EXPENDITURE ON MAINTENANCE.

State.	1952.		1953.	
	Cost.	Cost per Head of Population.	Cost.	Cost per Head of Population.
	£	£ s. d.	£	£ s. d.
New South Wales .. ..	5,102,176	1 10 6	5,747,866	1 13 11
Victoria .. ..	3,084,780	0 6 1	3,377,023	1 7 11
Queensland .. ..	602,682	1 9 8	735,821	0 11 4
South Australia .. ..	898,831	1 4 4	982,065	1 5 4
Western Australia .. ..	900,998	1 9 5	1,118,198	1 15 5
Tasmania(b) .. ..	364,126	1 4 5	396,503	1 5 11

(a) Excludes Senior Technical Colleges.

(b) Includes High and Junior Technical Schools.

The figures in all cases exclude the cost of buildings. In Queensland, the figure quoted excludes the cost of the Agricultural High School and College, which amounted in 1952-53 to £198,876 and in 1953-54 to £214,080.

(c) *Buildings.* Expenditure on government school buildings, excluding senior technical colleges, for the years 1939 and 1949 to 1953 was as follows :—

#### GOVERNMENT SCHOOLS(a) : EXPENDITURE ON BUILDINGS.

(Including Loan Fund Expenditure.)

(£.)

Year.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Total.

(a) Excludes Senior Technical Colleges.

The totals for the various States in 1953 include the following amounts expended from loan and other funds :—New South Wales, £2,631,944 ; Victoria, £3,864,707 ; Queensland, £607,046 ; South Australia, £673,126 ; Western Australia, £840,495 ; and Tasmania, £596,376.

(d) *Net Total Cost.* The net total cost of education in government schools, including buildings, during the years 1939 and 1949 to 1953 was as follows:—

## GOVERNMENT SCHOOLS(a) : NET TOTAL COST.

(£.)

Year.	N.S.W. (b)	Vic. (c)	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	Total.

(a) Excludes Senior Technical Colleges.

(b) Gross figures, receipts not being available.

(c) Excludes Junior Technical Schools.

The figures in this and the preceding tables refer to all grades of government schools with the exception of senior technical colleges, and in Victoria and (in 1939) Tasmania, junior technical schools. Including buildings, the net cost per scholar in average attendance for the whole of the government schools in Australia amounted in 1953 to £59 6s. 9d., compared with £4 9s. 3d. in 1901.

(e) *School Banking.* Particulars of School Savings Banks are included in Chapter XIX.—Private Finance.

## § 3. Non-Government Schools.

1. *Public Authority and the Non-Government Schools.*—In all States education is compulsory for all children between certain ages. It must be received in a government school, unless the child is under “regular and efficient” instruction elsewhere. This may be at home, or in a non-government school. The provision for control over the regularity and efficiency of instruction in the non-government schools varies considerably from State to State. In Queensland and South Australia it is possible under the present regulations for schools to exist without inspection. In New South Wales and Western Australia provision is made for an initial inspection when a new school starts, and for inspections thereafter as the Minister requires, to ensure efficiency. In Victoria and Tasmania, registers are kept of teachers and schools, and both teachers and schools must satisfy the administering authority that they are efficient before registration is granted. Without such registration, neither a teacher nor a school can operate. Provision is made, too, for inspections at any time by the registering authority.

Public authority over schools or institutions having scholars above the compulsory ages is generally less direct. It is effected directly by the registration procedures in Victoria and Tasmania, and in all States there is a measure of indirect control through provisions governing the awards of State scholarships for secondary education, which can be taken only in government or in approved non-government schools.

The eight State-subsidized grammar schools in Queensland are the only non-government schools in Australia for which an annual inspection is prescribed by statute.

In all States, non-government schools are required, under the authority of either the Education Acts or Statistics Acts, to furnish certain returns. The form of these returns may be prescribed in the Acts or may be subject to alteration by the Minister's consent.

2. Numbers of Non-Government Schools, Teachers and Enrolments, 1953.—The numbers of non-government schools, teachers and enrolments for 1953 are shown in the following table :—

(a) Includes Australian Capital Territory.

(b) Presbyterian and Methodist Schools' Association.

3. Growth of Non-Government Schools.—The enrolment and average attendance at non-government schools in 1891 and at varying intervals to 1953 were as follows :—

### NON-GOVERNMENT SCHOOLS : ENROLMENT AND ATTENDANCE.

Year.	Enrolment.	Average Attendance.	Year.	Enrolment.	Average Attendance.
1891 ..	124,485	99,588	1948 ..	281,354	251,092

1939 ..	247,482	219,171	1953 ..	366,086	337,156

4. The Organization of Roman Catholic Education.—There is, in each State capital, an official who acts under the Archbishop as a Director of Catholic Education for the area. Each diocese within the area is, however, autonomous and manages its own educational affairs subject to the local episcopal authority. The State Director has, in addition to possible inspectorial functions within his own diocese, the duty of co-ordination of educational matters within his area, and of liaison with other educational authorities, particularly the State Education Department.

The system includes kindergartens, sub-primary, primary, academic secondary, home science, commercial, agricultural and technical schools, juniorates and minor

seminaries, schools for the mentally and physically handicapped, orphanages and a variety of special schools of a charitable nature for under-privileged or socially handicapped children.

With the exception of a small number of permanent lay teachers and a number of visiting teachers—usually specialists in such matters as physical education, sport, speech, etc.—teaching is done by members of religious orders.

5. **The Organization of Other Non-Government Education.**—(i) *General.* Within each State, although the other non-Government schools may be organized into loose forms of association for purposes such as sports, conferences, uniform conditions, etc., there is no system corresponding in size, detail or organization with the Roman Catholic Schools.

(ii) *Church of England.* In certain schools under direct church control the appointment of a majority of Council members rests with the Synod. More frequently perhaps the appointment of such Council members lies in the hands of the diocese or even the parish. The ecclesiastical head of the area, the archbishop or bishop, is typically *ex-officio* chairman of the school Council. The church may appoint all members or on the other hand it may appoint a majority or only one or two. The other members are secured in many ways; some may be nominated by parents, some by "old boys," some by the "school association," some by co-option by the existing Council. Many combinations of these forms of membership occur.

(iii) *Other Denominations.* In general the pattern is similar to that described above, with appointments usually controlled by the State authority of the Church concerned, either alone or acting in conjunction with the local congregation. In Queensland there are five schools operated under the joint auspices of the Presbyterian and Methodist Churches.

(iv) *Undenominational.* There are three main groups of such schools; firstly, those partly controlled by State action, such as those grammar schools for which some members of the controlling body are appointed under Act of Parliament; secondly, those operated under the auspices of corporate bodies, usually in the form of limited liability companies which may be affiliated with particular churches; and, thirdly, a number of privately-owned schools, many of which are small and restricted to kindergarten or primary schooling.

## § 4. Pre-school Education.

1. **Types of Pre-school Centres.**—Nursery-kindergartens under trained teachers provide daily sessions for children aged three to six, while play groups or play centres provide shorter periods for smaller groups. Day nurseries or crèches care for the children of mothers in employment and Lady Gowrie Child Centres are special centres set up in each State capital city by the Commonwealth Government to demonstrate a child development programme. There are also some private and denominational nursery schools which vary considerably in standard.

Free kindergartens were originally established and financed mainly in congested industrial areas, by voluntary effort, but over the years State Governments and some municipal councils have provided an increasing amount of financial assistance.

2. **The Training of Teachers.**—Since the development of this work depends on the availability of trained teachers, nearly all kindergarten unions now have teacher training colleges providing three-year courses. The minimum entrance age is seventeen, and the Leaving Certificate is usually required before admission.

The New South Wales Department of Education gives a two-years' course at the Teachers' College, covering such subjects as biology, physiology, child development, psychology, mental hygiene, child welfare, home science, English, world history, current affairs, sociology, art, crafts, physical education, music and early child development (which embraces principles and methods, play activities, children's literature, music for children, art and other creative experiences, and curriculum planning). A considerable amount of time is also spent in all colleges in practice teaching.

Financial help, such as free training, bursaries provided by the Government or voluntary bodies and living allowances, is provided for teachers, but there is a considerable shortage of trained pre-school teachers.

The six kindergarten unions in 1938 united to form the "Australian Association for Pre-School Child Development", a federal body whose aim is to promote the continuous advancement of the pre-school movement throughout Australia.

3. **Kindergarten of the Air.**—Daily kindergarten sessions of half an hour are now broadcast in all States by the Australian Broadcasting Commission in collaboration with kindergarten unions.

4. **Kindergarten Unions.**—The following information regarding kindergarten unions has been compiled from particulars supplied by the principals of the chief institutions or the organizing secretary in each State, except in the case of Western Australia where the details were furnished by the Education Department. It refers to kindergarten unions or associations, and excludes the kindergarten branches in the government schools of the various States.

#### KINDERGARTEN UNIONS, 1954.

State.	No. of Schools.	Average Attendance.	Permanent Instructors.	Student Teachers.	Voluntary Assistants.
New South Wales ..	37	1,538	103	43	..
Victoria(a) ..	47	970	91	..	..
Queensland ..	4	186	11	..	..
South Australia(b) ..	83	2,757	211	..	9
Western Australia ..	33	1,016	40	..	..
Tasmania ..	5	222	10	..	..
Total ..	209	6,689	466	43	9

(a) Year 1953. (b) Includes affiliated suburban and country centres.

In 1954 only 25 of these 209 kindergartens were located outside metropolitan areas, mainly in the larger provincial cities. In each capital city except Hobart there is a training college and the number of students in training during 1954 was 113 in Sydney, 132 in Melbourne, 24 in Brisbane, 50 in Adelaide, and 16 in Perth.

### § 5. Technical Education.

1. **General.**—In this section technical education refers to that branch of education which is concerned with the preparation for entry to skilled occupations, including trades and professions. In the main this education is vocational and is chiefly part-time, being carried out by the student while he is engaged in his occupation. The work of technical high schools, junior technical schools and other schools of this nature which provide courses with a bias towards technical handwork has been excluded, as they provide a form of education which is more properly regarded as secondary education.

The chief institutions for vocational training other than the universities are the senior technical colleges. These offer training not only in industrial skills, but also in commercial, agricultural and pastoral occupations, the plastic arts and homecrafts. There are, in addition, agricultural colleges and a substantial number of private business colleges.

Although, as in other branches of education, the main lines of technical education were determined many years ago, expansion and development in the past 20 years has perhaps been greater in this field than in any other. The following table gives some indication of the growth of technical education in the years 1939 and 1949 to 1953.

#### TECHNICAL EDUCATION: AUSTRALIA.

Year.	No. of Colleges.	No. of Students.	No. of Teachers.(a)	Total Expenditure.
				£
1939 .. ..	94	89,215	3,276	1,359,800
1949 .. ..	131	153,547	6,530	4,081,331
1950 .. ..	141	161,564	6,409	5,096,563
1951 .. ..	146	158,179	6,179	5,930,370
1952 .. ..	141	170,325	6,408	7,145,402
1953 .. ..	141	178,301	6,688	7,826,645

(a) Includes both full-time and part-time teachers.

Technical education is the field most sensitive to changing material needs and has expanded to meet the requirements of new industries and techniques. The desire for the comparative economic security of skilled jobs during the period of economic depression and the increasing demand for skilled workers due to the development of more advanced techniques in industry stimulated public interest in all States.

A characteristic feature of technical education is the close co-operation between the Commonwealth and the States. This is understandable as the technical colleges were able to play an important part in meeting two crises with Australia-wide implications. During the years of the economic depression in the 1930's States sought means to provide technical training for the young unemployed and this led, in 1936, to the Youth Employment Scheme, in which the States and the Commonwealth participated. During the 1939-45 War the Commonwealth and the States worked together in the Commonwealth Technical Training Scheme to meet the war-time need for technicians; after the war this type of training was continued in the technical colleges in the States as a part of the Commonwealth Reconstruction Training Scheme. In addition, during the period 1940 to 1944 technical correspondence schools were founded in each State in conjunction with the Commonwealth and these have become an important part of the system of technical education in the Australian States.

The expansion of technical education in the last two decades has paralleled the growth of secondary production from predominantly scattered small-scale and light industry to more concentrated large-scale heavy industry utilizing advanced techniques. Technical colleges have always been linked with the industries from which they draw staff and students, but whereas formerly they produced skilled craftsmen they now also accept the responsibility for turning out persons capable of adapting themselves to swift technological changes and able to assume responsibilities of management and leadership. Furthermore, rapid changes in industrial methods call for a close connexion between college curricula and workshop practice in order that they may keep in step and so that applied research can make available to industry the results of pure research. The introduction of day training classes for apprentices is an indication of the development of this relationship between technical education and industry.

The history of the development of technical education is one of increasing government support and control, increasing financial commitments by both State and Commonwealth Governments as well as considerable financial support and greater participation by industrial undertakings in the work of the colleges, increasing enrolments and facilities and the development of curricula and courses to meet new needs, and the growing realization of the need to recruit and train teaching staff in a systematic way.

2. *Teacher Training.*—Another important feature of technical education relates to the training of teachers. Prior to the 1939-45 War technical colleges were staffed chiefly by men (and a few women) drawn from two sources. They were either trained teachers in the employment of the Education Department or technicians drawn from industry. Although some of the latter were highly qualified, the great majority had not been trained as teachers. In order to remedy this, there has been a move to develop schemes of training technical college teachers without breaking the important link provided by recruiting specialist tradesmen to teach in the colleges. For example, since the 1939-45 War, New South Wales has extended a system whereby tradesmen-instructors receive a course of teacher training in both general educational theory and teaching method. After appointment a teacher in a large centre attends classes for six hours each week during his first year of service and two hours weekly thereafter until he has completed the training course. Correspondence courses and itinerant teachers care for the newly appointed teacher-instructor in country colleges. Modifications of this aspect are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teachers' certificates from teachers' colleges.

3. Colleges, Teachers and Students.—The numbers of colleges, teachers and enrolments of individual students during the years 1939 and 1950 to 1953 are given in the following table :—

TECHNICAL EDUCATION : COLLEGES, TEACHERS AND ENROLMENTS.

1953 .. ..	141	3,072	3,616	6,688	119,119	59,182	178,301

(a) Partly estimated.

4. Expenditure.—The expenditure on technical education in each State for 1953 is shown below :—

TECHNICAL EDUCATION : EXPENDITURE, 1953.

(Including Loan Fund Expenditure.)

(£.)

State.	Salaries and Maintenance.	Equipment.	Buildings.	Total Expenditure.	Receipts—Fees, etc.	Net Expenditure.
New South Wales ..	1,954,916	91,305	519,808	2,570,420	468,531	2,101,889
Victoria (a) ..	2,326,373	40,062	889,306	3,455,160	245,283	..
Queensland ..	362,890	154,018	129,752	646,660	38,575	608,085
South Australia ..	427,944	(b)	126,740	555,034	66,507	488,527
Western Australia ..	400,430	(b)	19,146	419,576	20,828	398,748
Tasmania ..	104,439	32,568	42,588	179,795	575	179,220
Total ..	5,576,992	317,953	1,727,340	7,826,645	840,299	..

(a) Includes expenditure on Junior Technical Schools.

(b) Included with salaries and maintenance.

Fees and other receipts are paid into Consolidated Revenue in all States except Victoria, where they are retained and spent by the Technical School Councils. The expenditure on buildings is financed largely from loan moneys, the sums provided from this source in 1953 being :—New South Wales, £431,191 ; Victoria, £853,700 ; Queensland, £117,288 ; South Australia, £101,811 ; Western Australia, £2,501 ; and Tasmania, £37,978.

The net expenditure on maintenance (including salaries) for technical education in Australia in 1953 amounted to 12s. 8d. per head of the mean population, as compared with £5 13s. 1d. per head expended on the net maintenance (including salaries) for primary and secondary education.

## § 6. Commonwealth Activities.

Although the primary responsibility for education rests with the Australian States, the Commonwealth Government is committed to a number of educational activities related to its other functions. For example, it maintains officer training colleges and education services for each of its Defence Services, a School of Pacific Administration for training administrators for Papua-New Guinea and a School of Forestry. In each of the Australian Territories there is an education programme which provides for both the native and white children who live there. References to education in the Territories appear in Chapter V.—The Territories of Australia.

The Commonwealth Office of Education, established in 1945, acts as the Commonwealth's educational adviser, undertakes research work as Commonwealth activities require, and is the channel for liaison between Commonwealth and State educational authorities. This Office has responsibilities with regard to the education of migrants, the education of natives in the Northern Territory, the provision of scholarships at the tertiary level under the Commonwealth Scholarship Scheme and the Reconstruction Training Scheme, international relations including the association of Australia with the aims and activities of the United Nations Educational, Scientific and Cultural Organization and the provision of scholarships and fellowships for selected students under the Commonwealth Technical Co-operation Scheme, the UNESCO Fellowship Scheme and the South-East Asian Scholarship Scheme.

The Australian Broadcasting Commission features school broadcasts and other educational broadcasts as part of its daily programmes. The Commonwealth Scientific and Industrial Research Organization undertakes research, the results of which are made available to educational institutions. In 1951 the Commonwealth Government introduced a free-milk scheme for school children. This extended a service which some State authorities were already providing for a proportion of the school population. Under the Commonwealth Reconstruction Training Scheme many ex-servicemen and women have received the training which has enabled them to enter many different trades and professions.

The Commonwealth also assists a number of other bodies concerned with education. Besides grants to organizations such as the Australian Council for Educational Research and the National Fitness Council, Australian universities have received grants for specific purposes through the Universities Commission.

## § 7. Australia and International Relations in Education.

Despite its isolation, Australia has always been responsive to educational developments in overseas countries, particularly those in the United Kingdom, but it is only recently that it has begun to make any considerable impact on educational thought overseas.

In this connexion there have been important developments since the 1939–45 War. For instance there has been a remarkable increase in the volume of information on educational matters exchanged between Australia and South-East Asia, and Australia has participated in the Commonwealth Technical Co-operation Scheme and the United Nations Technical Assistance programme.

Perhaps the most important single factor behind the quickening of Australian interest in international cultural affairs has been membership of the United Nations Educational, Scientific and Cultural Organization. Australia has been a member since 1946. Some eleven expert committees in Australia are responsible for a wide and varied programme of activities on behalf of UNESCO. Their advice has helped to make Australia's contribution to UNESCO International Conferences and Seminars highly effective. Other work undertaken by these committees has included the supervision of studies relating to community attitudes towards international affairs, and to the assimilation of migrants, the conducting of seminars in Australia, arranging for exhibitions and displays in Australia, and the publication of handbooks and brochures to assist teachers and other persons in meeting the problems involved in educating for international understanding.

The Australian National Advisory Committee for UNESCO, on which all the other committees are represented, advises the Commonwealth Government and co-ordinates the work of the specialist committees.

## § 8. Universities.

1. **General.**—The last quarter of a century has seen a marked increase in the number of students and staff, the establishment of three new universities and two new university colleges, and the provision in the older universities of additional courses. In spite of difficulties due, in some measure, to the economic depression of the 1930's and a World War, this period has been one of significant development.

2. **University Expansion.**—(i) *The Establishment of New Universities.* The three new universities represent new departures in the Australian university tradition.

(a) *The Australian National University.* By the Australian National University Act 1946, provision was made for the establishment of a university in the Australian Capital Territory. The university is required by the Act to provide facilities for post-graduate research including:—The School of Medical Research to be known as "The John Curtin School of Medical Research"; The Research School of Physical Sciences; The Research School of Social Sciences; and The Research School of Pacific Studies.

The Act also provides for the incorporation of the Canberra University College. In the first instance the Council has decided to concentrate on the establishment of the four Research Schools mentioned in the Act.

The government of the university is vested in a Council consisting of two representatives each of the Senate and the House of Representatives, up to eight nominated by the Governor-General, up to nine elected by Convocation, two elected by the students, and three elected by the academic staff; up to three members may be co-opted and the Vice-Chancellor is an *ex officio* member.

The senior academic body in the university is the Board of Graduate Studies of which all professors are members. The Board deals with questions affecting education, learning and research in the university.

The Act provides for a statutory grant of £325,000 per annum and in addition a supplementary grant is made to meet the running costs. A separate vote is made for capital works.

An area of 204 acres at Acton has been vested in the university. University House, a residential college for single members of the staff and the student body, was opened in February, 1954. University House also acts as the social centre for the whole university community.

The laboratories and office block for the Research School of Physical Sciences have been completed. The John Curtin School of Medical Research (with the exception of the Department of Medical Chemistry which is at present located in the Wellcome Foundation, London) is housed in temporary laboratories on the university site. The construction of the permanent building has been commenced and it is expected that it will be completed in 1956. The Research Schools of Social Sciences and Pacific Studies and the library are housed in existing buildings on the site.

Fifteen professors and 77 other members of the academic staff have been appointed.

Each department of the Research Schools accepts a small number of graduate students. Each student is assigned to a supervisor and pursues a course of research. Subject to certain conditions, the following degrees may be awarded by the University:— Master of Arts (M.A.); Master of Science (M.Sc.); Doctor of Philosophy (Ph.D.); Doctor of Letters (Litt.D.); Doctor of Science (D.Sc.); and Doctor of Laws (LL.D.). The Right Honourable Viscount Bruce of Melbourne is Chancellor of the University and Mr. L. G. Melville, C.B.E., is the Vice-Chancellor. Mr. R. A. Hohnen is the Registrar.

Each of the Research Schools will eventually be headed by a Director. Professor M. L. Oliphant, F.R.S., is Director of the Research School of Physical Sciences and until further appointments can be made the following Deans have been appointed to act: Professor A. H. Ennor, Dean of the School of Medical Research; Professor J. W. Davidson, Dean of the School of Pacific Studies, and Professor G. Sawyer, Dean of the Research School of Social Sciences. In 1955 seventy-eight students were enrolled in the University.

(b) *The New South Wales University of Technology.* Officially incorporated by the Technical Education and the New South Wales University of Technology Act of the New South Wales Parliament in April, 1949, the New South Wales University of Technology was established to provide facilities for training and research in the fields of applied science and technology and to ensure a more adequate supply of highly skilled scientists and technologists to the expanding industries of Australia.

The university is governed by a Council consisting of not more than 39 members representing Parliament, industry, commerce, the trade unions, technical education, professional bodies, the University of Sydney and the teaching staff and the graduate and under-graduate members of the University of Technology. The Chancellor of the Council is Mr. Wallace C. Wurth, C.M.G., Chairman of the New South Wales Public Service Board. The Vice-Chancellor of the university, who is also a member of the council, is Professor J. P. Baxter, O.B.E.

The Council may provide courses in applied science, engineering technology, commerce, industrial organization, and such related courses as it deems fit, and may after examination confer the several degrees of Bachelor, Master and Doctor, and such other degrees and such certificates in the nature of degrees or otherwise as it thinks fit.

The Council is empowered to establish and maintain branches, departments or colleges of the university at Newcastle, Wollongong, Broken Hill or such other places in the State of New South Wales as it may approve. Under this authority, a college of the university was established at Newcastle in December, 1951.

Under the guidance of a Developmental Council established on 8th July, 1947, the first courses leading to the degree of Bachelor of Engineering were instituted in 1948 in Civil, Electrical, Mechanical and Mining Engineering. Courses leading to the degree of Bachelor of Science were introduced in Applied Chemistry and Chemical Engineering in 1949, and in Applied Physics and Wool Technology in 1951. A first degree course in Architecture was established in 1950. In 1954, first degree courses in Food Technology, Metallurgy, and Applied Geology were established, and part-time degree courses in Applied Psychology were instituted in 1955. During 1954, part-time degree courses were introduced in Applied Biology, Applied Chemistry, Applied Geology, Chemical Engineering, Civil Engineering, Electrical Engineering, Food Technology, General Science, Industrial Chemistry, Leather Chemistry, Mechanical Engineering and Metallurgy.

Two features are emphasized in the planning of first degree courses of the University of Technology, namely, the inclusion of industrial experience as an essential part of the courses to supplement the laboratory and lecture-room work at the university, and the study, in all faculties, of humanities and social science subjects.

By mutual agreement of the Council of the university and of the New South Wales Department of Technical Education the following diploma courses, formerly provided by the Department of Technical Education and requiring matriculation standard for admission, are now administered by the University of Technology : Aeronautical Engineering, Applied Biology, Applied Chemistry, Architecture, Building, Chemical Engineering, Civil Engineering, Electrical Engineering, Food Technology, Leather Chemistry, Mechanical Engineering, Metallurgy, Mining Engineering, Naval Architecture, Optometry, Physics, Production Engineering, Quantity Surveying, Radio Engineering, Science and Secondary Metallurgy.

In general, the full-time courses for the degree of Bachelor extend over four years. In some courses (e.g., Chemical Engineering) the Honours course requires a further year. The degree course in Architecture, Pass or Honours, is of six years' duration. Part-time degree courses extend over six or seven years with an additional year for Honours. The diploma courses generally are of five stages of one year each.

Special investigations may be carried out on problems of technology or applied science on request, and in respect of any special investigation the Council may charge an appropriate fee.

*Arts Courses.*—In conjunction with the establishment of the University of New England in February, 1954, as an autonomous body with authority to confer degrees, arrangements were made to provide Arts courses at Newcastle University College in co-operation with the University of New England. Under these arrangements, the syllabuses of study are prescribed by the University of New England, which is also the examining body, and instruction is provided by members of the School of Humanities and Social Sciences of the University of Technology.

*Staff.*—The academic appointments are as follows :—*Faculty of Applied Science*—nine professors, three associate professors, 42 senior lecturers, 80 lecturers and 21 teaching fellows. *Faculty of Engineering*—four professors, two associate professors, 26 senior lecturers, 83 lecturers and 7 teaching fellows. *Faculty of Architecture*—one professor, one associate professor, four senior lecturers and nine lecturers. *Faculty of Humanities and Social Sciences*—two professors, one associate professor, 10 senior lecturers, 15 lecturers and two teaching fellows. *Faculty of Commerce*—one professor.

*Library.*—The number of volumes in the library in 1954 was 57,000. (This figure covers the collections at the University Library at Kensington, at Newcastle University College Library, Tighes' Hill, and university publications in the joint libraries of the university and the Department of Technical Education.)

*Buildings and Sites.*—Pending completion of its new buildings, the university has had at its disposal the facilities of the New South Wales Department of Technical Education. The first permanent building on the university site of 71 acres at Kensington, near Sydney, was officially opened on 16th April, 1955 and is now occupied by the Schools of Architecture and Building, Humanities and Social Sciences, Applied Physics, Textile Technology and Mining Engineering and Geology and the university administration. The Schools of Metallurgy and Chemical Engineering occupy eleven light frame buildings on the Kensington site. The Schools of Applied Psychology and Commerce were transferred to Kensington early in 1956.

*Student Hostel.*—The university conducts a student hostel at the university site at Kensington, where single room accommodation is available for approximately 200 students.

(c) *University of New England.* The New England University College was established as a branch of the University of Sydney on 1st January, 1938 by the Senate of the University of Sydney. It was established in accordance with the expressed wish of the people of northern New South Wales and for the purpose of providing education at university level for country students particularly. New England thus became the first experiment in university decentralization in Australia.

The original gift to the University of Sydney in 1937 by the late T. R. Forster, of "Abington", comprised the old homestead of "Booloominbah", together with several other buildings and 183 acres of land. The New South Wales Government bore the cost of converting the property to its present use and of providing additional buildings. The Commonwealth Government made funds available under the Commonwealth Reconstruction Training Scheme for the erection of another large building to provide additional lecture rooms, laboratories and staff studies.

By virtue of the University of New England Act 1953, the New England University College was incorporated as the University of New England. It came into legal existence as an independent university on 1st February, 1954, and, in addition to fulfilling its previous functions, is now entitled to examine its own students and grant degrees and diplomas. The university is authorized by the Act to co-operate with the New South Wales University of Technology in the provision of degree courses at the Newcastle University College.

There are at present four Faculties in the University of New England—The Faculty of Arts, which was established in 1938; the Faculty of Science, established in 1939; and the Faculties of Rural Science and Agricultural Economics, established in 1955.

The university offers correspondence courses to external students in an adequate range of subjects leading to the degree of Bachelor of Arts.

(ii) *Canberra University College.* Particulars were given in Official Year Book No. 39, pp. 227-8, concerning the Canberra University College, which was created in 1930 mainly to establish courses of lectures for degrees in co-operation with the University of Melbourne.

(iii) *Expansion within the Universities.* An important administrative development in all universities has been the appointment of full-time salaried Vice-Chancellors or Principals. This has given much greater effectiveness to university administration.

Within the past twenty years the appearance of some of the universities has altered to a striking extent. New permanent buildings and some temporary ones have been erected and new wings have been added. An impressive expansion has been that taking place in Queensland where, since 1937, building has been proceeding upon a new site at St. Lucia, and, beginning with the transfer of some of the Engineering School in 1947, the university is being gradually moved into its new quarters.

This very considerable building activity has been made necessary primarily by the vast expansion in student numbers from 9,000 in 1929 to 29,374 in 1954. There was a continued increase in university enrolments from 1929 to 1940 followed by a slight recession. In the closing year of the war, however, the number of students had risen beyond any previous figure, and rapid post-war expansion was responsible for a peak enrolment of 32,453 students in 1948. After 1948 the numbers decreased each year as ex-service personnel completed their training under the Commonwealth Reconstruction Training Scheme, but it is anticipated that by 1960 some 40,000 students will be enrolled in Australian universities.

3. *Courses.*—The post-war period has seen a noticeable expansion in the ranges of courses offered, particularly in the younger and smaller universities. New Faculties of Education were established in Western Australia and Queensland. Two new Faculties of Dentistry, two of Commerce (Economics), three of Architecture and one each of Medicine, Law, Veterinary Science, Applied Science, and Engineering also came into being.

Within existing faculties, many new departments were set up. In Engineering, specialist departments of Chemical and Aeronautical Engineering, Civil, Electrical, Mechanical, Mining and Metallurgical Engineering and Surveying have been instituted.

In Medicine the most notable development has been the establishment of specialist courses leading to graduate diplomas in Radiology, Anaesthesia, Clinical Pathology, Ophthalmology, Laryngology, Gynaecology, Tropical Medicine, Dermatology and Psychological Medicine at Melbourne and Sydney.

In Science the smaller universities followed the development of those in Melbourne and Sydney by breaking up departments such as Biology into Zoology and Botany, etc., and adding new departments such as Bacteriology and Biochemistry. Melbourne and Sydney also introduced some new courses and a new degree in Forestry was introduced in each University.

In Arts the same processes can be observed. New departments in Semitic Studies, Fine Arts, Music and Statistics were opened in various universities, and other departments were divided or sub-divided. The most prominent addition was the rapid development of Psychology departments which, in the post-war period, expanded into one of the biggest of the Arts departments.

In the smaller faculties, similar innovations and expansions, reflecting an increasing demand for specialized study, have taken place. Examples are the development of departments of Oriental Studies, Physical Education, Social Studies, Town and Country Planning and Criminology.

In addition, however, there were several attempts to provide integrated general education courses within the faculties of Arts and Science.

4. *Research.*—Australian universities have long been criticized for their lack of provision for graduate students, but in recent years a notable feature of student enrolments has been the steady increase in the number of higher degree students. Factors contributing to the extension of research and the training of graduate students have been :—

- (a) The Commonwealth Government grant begun in 1936 for the prosecution of research and the training of research workers in universities ;
- (b) the enlistment of university staffs on extensive research projects in connexion with the 1939-45 War ;
- (c) the establishment of research schools like the Departments of Experimental Medicine and Metallurgical Research in Melbourne and the Australian National University in Canberra ;
- (d) the institution of the Ph.D. degree requiring two years of full-time graduate research ; and
- (e) the development of four-year honours courses for the degrees of B.A. and B.Sc.

5. *Services.*—(i) *General.* The traditional division of the function of universities into teaching and research seems no longer applicable. A third function has been added in recent times, that of community service. The university has long been responsible for providing an important service to the community in the form of professional training in many fields and in a number of other intangible ways, but in recent years there has been

a noticeable increase in the performance by university departments of direct and deliberate services to the community. This was most apparent in time of war when the universities whole-heartedly accepted the role given them by the Minister for War Organization of Industry when he said in 1942 to a meeting of the Vice-Chancellors, "the Government requires of the universities specific services, falling under two heads: (i) investigations and research into particular problems relating to the war effort; (ii) the training of personnel with special qualifications for the armed services, war production and other essential needs". The trend, however, was noticeable before the 1939-45 War and is still continuing. These services, which are of three main kinds, are dealt with hereunder.

(ii) *Service Research*. This is a form of applied research in which a university department applies itself to the solution of a problem of immediate practical importance to the community. The development of producer-gas units for use on motor vehicles during the 1939-45 War, research on poliomyelitis, tropical food plants, bovine mastitis, and mosquito control are examples of work of this type recently undertaken in various university departments.

(iii) *Applied Research*. Closely associated with the kind of research just mentioned are the projects which are requested of the university by outside bodies and are usually in the field of applied research. Services of this kind are most frequently rendered by the engineering faculty. Testing work for government departments and private industry is carried out in almost every engineering department. In Melbourne, a large number of reports on problems associated with ores and concentrates submitted from all over Australia have been issued by the Department of Mining. Research on servomechanisms for the Department of Supply, aeriels for the R.A.A.F., the stability of power systems for the Electrical Research Board and studies on the site, materials and design for the Warragamba Dam are some of other tasks that have been undertaken. However, services of this kind are by no means confined to the technological field. They have been rendered by almost all university departments and not least by workers in the social sciences who have been called upon to investigate matters such as colour-vision tests for the Civil Aviation Department, the teaching of English to foreign-born immigrants and anthropological problems encountered in the administration of New Guinea.

(iv) *Advisory Services*. Consultant and advisory services have come to occupy much of the time of the staff of many departments. There has been a long tradition of service in this field by members of the Departments of Agriculture and Medicine, and almost equally prominent have been the economists whose services were sought by governments and businesses in the depression period of the 1930's. The 1939-45 War saw an increase in demand for expert advice from university faculties and the seconding of personnel to government departments in considerable numbers. In the post-war period much of this demand has continued. Problems of land utilization have called for advice from agriculturalists, geographers and economists. Personnel and training problems in industry have required the services of psychologists and educationists. Scripts of school broadcasts have been written by scientists, and lecturers in English history, modern languages and political science. University physicists, chemists and medical staff have played an important role in recent defence programmes. Developmental schemes have needed the services of engineers, geologists and architects.

**6. The Commonwealth and the Universities.**—(i) *General*. Commonwealth financial support for university activities may be regarded as having developed in three phases. Firstly, in the period up to 1939, Commonwealth interest in research projects carried out by or in collaboration with the universities led to the granting of increasing sums for this purpose. Secondly, during and after the 1939-45 War the Commonwealth extended assistance to university students, at first with the object of increasing the number of highly qualified people available for the war effort, then with the object of rehabilitating ex-servicemen and finally as a social service of benefit to the community. Thirdly, since 1951, the Commonwealth has made special grants to the States for university purposes.

(ii) *Grants for Research.* The Commonwealth had given some support to research prior to 1926, chiefly through the Institute of Science and Industry, but the amount spent did not exceed £25,000 per annum. In 1926 the Institute was replaced by the Council for Scientific and Industrial Research (known since 1949 as the Commonwealth Scientific and Industrial Research Organization) with an annual appropriation of £250,000. It has since worked in close association with the universities. Both kinds of research, fundamental and applied, have at times occupied the attention of both the universities and the Commonwealth Scientific and Industrial Research Organization but, in general, the preliminary training of graduates in research work has been left to the universities.

In 1936 the Commonwealth Government made a grant of £30,000 per annum for five years to Australian universities for research in physical and biological sciences. This figure rose over the years to £100,000 in 1950 and was subsequently absorbed in the larger general grant which was then made available by the Commonwealth to the States for universities. These research grants, together with other Commonwealth payments for research purposes, totalled more than £3½ million in 1950–51, compared with less than £500,000 in 1939–40.

(iii) *Assistance to Students.* The Commonwealth Government in 1942 set up the Universities Commission to ensure that the flow of trained professional personnel from the universities would be sufficient to meet the needs of the nation during the war and post-war periods. Selected university students were reserved from war service and were eligible for supplementary assistance of £104 per annum if living at home and £143 if living away from home.

Financial assistance to students was continued for five years after the end of the 1939–45 War with some increases in living allowances and in 1951 the Commonwealth Scholarship Scheme was planned by the Universities Commission.

Under this scheme 3,000 scholarships are allocated annually to the States on a population basis, 2 per cent. of them being reserved for students over the age of 25 years. Awards are made on merit to students completing secondary courses and no regard is paid to the income of the students or their parents. Scholarship holders have their fees paid and, subject to a means test, are eligible for a maximum allowance of £169 per annum (£240 10s. for a student living away from home) and married scholars receive additional family allowances. At 30th June, 1954, there were 7,917 scholars in training at universities and 1,298 at other institutions.

In addition to the above eligible ex-service personnel receive training at universities and similar institutions at Commonwealth expense under the Reconstruction Training Scheme. A general description of the scheme is to be found on page 240 of Official Year Book No. 39. The Commonwealth Government made available to the training institutions approximately £1 million for buildings and £500,000 for equipment and also paid all tuition fees and subsidies designed to meet the cost to the universities of the Reconstruction Trainees.

At 30th June, 1954, 25,205 full-time and 19,519 part-time students had been selected for training under this scheme and more than 21,000 had successfully completed their courses.

(iv) *Commonwealth Grants to the States for University Purposes.* Following a report submitted by a committee of inquiry appointed to report on university finances and requirements the Commonwealth passed the States Grants (Universities) Acts in 1951, 1953 and 1955 to enable grants to be made to the States for their universities.

The States Grants (Universities) Act No. 28 of 1955 (assented to 15th June, 1955) repealed the 1953 Act. Notwithstanding the repeal, a condition subject to which an amount of financial assistance was paid to a State under the 1953 Act continues to have effect in relation to that payment. The main provisions are summarized below :—

Section 4 (1).—If the sum of the fees and State grants received by a university during the year 1955 exceeds the amount specified in column 2 of the table below, the grant to the State for that year is—

- (a) an amount equal to one-third of the excess, and
- (b) the amount shown in column 3 of the table.

Section 4 (2).—The maximum amount payable under Section 4 (1.) (a) above is shown in column 4.

Section 5.—The State will, in the year in which payment is received, pay to the university concerned an amount equal to the grants received and will ensure that—

- (a) the grant under Section 4 (1.) (a) is applied for expenditure, not being capital expenditure, on university purposes ;
- (b) of the grant under Section 4 (1.) (b), the amount shown in column 5 is applied towards the teaching and administrative costs of the residential colleges of the university and the remainder for expenditure, not being capital expenditure, on university purposes.

Total .. ..	21,213	315	5,093	677	2,182	29,374

(a) Adjustment made for students enrolled for more than one course.

(b) Includes six students enrolled but attending Canberra University College.

Of the total students in 1954, 23,113 were males and 6,261 females. Included in those enrolled for degrees were 73 enrolled for higher degree courses in Sydney, 213 in Melbourne, 79 in Queensland, 193 in Adelaide, 86 in Western Australia, 14 in Tasmania, 165 at the New South Wales University of Technology, 5 at the New England University and 22 at the Canberra University College.

(ii) *New Students Enrolled.* The number of new students (of whom 15 males were Commonwealth Reconstruction Training Scheme students) enrolled for courses at the universities during the year 1954 is shown in the following table :—

## UNIVERSITIES : NEW STUDENTS ENROLLED, 1954.

University or College.	Degree Courses.	Diploma Courses.		Certificate Courses.	Miscellaneous Subjects.	Total.(a)
		Post-Graduate.	Sub-Graduate			
Sydney .. .. .	1,587	1	245	..	56	1,889

Canberra University College	82	..	5	..	59	144
Total .. .. .	5,061	37	1,265	175	856	7,389

(a) Adjustment made for students enrolled for more than one course.

Of the total new students enrolled in 1954, 5,364 were males and 2,005 females. Included in those enrolled for degrees were 2 enrolled for higher degree courses in Sydney, 10 in Melbourne, 5 in Queensland, 43 in Adelaide, 5 in Western Australia, 2 in Tasmania, 33 at the New South Wales University of Technology, 2 at the New England University, and 8 at the Canberra University College.

9. *University Income for General Activities.*—The income of the universities is derived principally from State and Commonwealth Government grants (including capital grants), students' fees, and income from private foundations, etc. From all sources other than new bequests the income during 1954 for general university functions was as shown in the table below. In South Australia, Government grants and income from private foundations include amounts in respect of the Waite Agricultural Research Institute.

(a) Period 1st February to 31st December, 1954.

10. **Principal University Benefactions.**—In earlier issues of the Official Year Book information was given in some detail in regard to the extent to which the universities have benefited from private munificence. (See Year Book No. 40, pages 467–8).

11. **University Expenditure for General Activities.**—The principal item of disbursements from revenue under the general university activities consists of the maintenance of the teaching and research staff, representing 69.3 per cent. of the total in 1954 compared with 70.4 per cent. in 1953.

The following table shows the expenditure including capital expenditure during the year 1954 :—

**UNIVERSITIES : EXPENDITURE FOR GENERAL ACTIVITIES, 1954.**

(a) Separate degrees for M.B. and B.S. are conferred at the Sydney University; this fact has to be taken into account to arrive at the number who qualify to practise as medical practitioners.

### § 9. Further Education.

1. **General.**—Beyond the schools, colleges and universities there are agencies engaged in less direct educational work which cannot be readily assessed and described. Among them are the mass media of communications (press, film and radio) which are powerful educational forces—whether they are used specifically to disseminate information such as new agricultural techniques or preventive health measures, or on the other hand in a much more general way to exert a powerful influence on the cultural level of the population. There are also bodies such as adult education authorities, libraries, art galleries and museums which aim at catering for the educational requirements of particular groups.

2. **Adult Education.**—(i) *New South Wales.* *University Department of Tutorial Classes.* In 1914 the University Senate established a Department of Tutorial Classes to provide classes and study groups along the lines of similar work in England. The Department conducts tutorial classes in a variety of subjects, grouped under the broad headings of social, political and economic studies; history and international affairs; psychology; philosophy; literature and drama; foreign languages; child study; music and art. Courses range from 9 to 28 lectures, and some go on from first to second and sometimes fourth year.

Since 1938 the Department has conducted a discussion group scheme, designed to provide country people in particular with opportunities for group study of the same type of subjects as are studied in its tutorial classes, and in 1946 made provision in the "kits" scheme for groups of people interested in activities such as play reading and performance, writing, public speaking, painting and music-making, rather than discussion. In all the Department enrolled 6,140 students for continuous work in classes and groups in 1955. The Department also produced the Current Affairs Bulletin which is issued fortnightly and distributed widely to educational bodies, groups, business organizations and individual subscribers in Australia and overseas.

A library service is provided to all students in classes and groups by the Adult Education Section of the Public Library of New South Wales, and finance for the Department's activities is provided by university appropriation (£15,237 in 1955), Government Adult Education Extension Grant (£21,488 in 1955) and from other fees.

(ii) *Victoria.* The Council of Adult Education is a statutory body, with a basic annual grant of £25,000. Its expenditure was £64,000 in 1953-54. The Council organizes evening classes, summer and week-end schools, public lectures, sends drama and music to the country centres through its Travelling Theatre and Music Tours, co-operates with the National Gallery of Victoria in the organization of a Travelling Art Exhibition, operates an extensive system of discussion groups in Victoria and provides service for country dramatic and music societies.

(iii) *Queensland.* Facilities for adult education are provided by the State Government, working through the Board of Adult Education. Attendance at all courses is free. In 1954 courses were provided in 56 towns and film screenings were conducted in many of these as well as in 66 other places, arrangements being made from Brisbane and the five country towns where centres are established. The total attendance recorded at 5,098 lectures, group meetings, etc., was 138,715. Subjects most in demand were English literature, English expression, psychology, travel talks, music and art appreciation, handicrafts and photography.

Three thousand students were enrolled in Brisbane and about four times that number attended country courses. The total expenditure of £36,695 in 1953-54 was borne by the Government.

(iv) *South Australia.* Since 1917 the University of Adelaide, through the Joint Committee for Tutorial Classes, has provided each year in the metropolitan area series of tutorial classes, lecture classes and study circles on a wide range of subjects of cultural and current interest, for people who have no intention of proceeding to a degree or diploma and are unable to attend the ordinary university courses. The fee is £1 15s. a course and is paid to the Workers' Educational Association, which accepts the responsibility for organizing the classes. The enrolment for these classes in 1953 was 1,238. The Joint Committee extends its activities into the larger country centres by sending art exhibitions and plays on tour, lending boxes of books and arranging lectures and film screenings.

(v) *Western Australia.* In Western Australia the policy of the Adult Education Board is to provide men and women of varying educational attainments in country districts as well as in the metropolitan area with facilities for the constructive use of leisure by use of head or hands and in such a way as to stimulate in the individual a sense of citizenship and to encourage community activities among groups.

The Board organizes lecture classes, summer schools and discussion groups, sends music, drama and ballet companies to country towns, and encourages the activities of local organizations. The Board was principally responsible for the commencement of the Festival of Perth, which is now in its fourth year. The Festival is held during the summer months of January, February and March and consists of high quality orchestral and dramatic presentations and the screening of films. The Festival is held in open-air theatres and other locations in the metropolitan area.

(vi) *Tasmania.* Although some form of adult education has existed since 1913 it was not until 1948 that provision was made by legislation for the formation of an Adult Education Board to plan and develop adult education in Tasmania and to assist other bodies actively engaged in adult education.

The executive officer of the Board is the Director of Adult Education, at Hobart, under whose direction three Regional Officers organize adult education in areas each covering approximately one-third of the State, and a fourth is organizer for Hobart. In Hobart and Burnie there are also Deputy Regional Officers.

In 1955 there were 519 courses in all subjects, with an enrolment of approximately 6,000 students. The State Government grant in 1955-56 was £33,500 and additional income amounted to about £6,000. Subjects taught include crafts, drama, public speaking, languages, psychology, world affairs, geology, economics and painting. One hundred recitals of music, 50 theatrical performances, 65 showings of documentary films and 60 lectures by visitors from overseas were given for the most part in the smaller communities of the State under the auspices of the Board. Each January a summer school is held which is attended by about 120 students; to this parents are encouraged to bring their children, who are cared for separately. Subjects studied at the summer school include international affairs, literature, drama, music and crafts.

3 *Workers' Educational Associations.*—In 1913, Workers' Educational Associations were formed in all the States of Australia, and later in New Zealand. The movement has for its object the bringing of the university into closer relationship with the community in general, and providing for the higher education of the workers in civic and cultural subjects.

In Victoria the Association has been superseded by the Council of Adult Education, a statutory body appointed by the Government. A Statutory Board has also been appointed in Queensland. Direct grants are made by the Governments of New South Wales and South Australia. Grants in 1952, for classes and discussion groups organized by the Association and serviced by their respective State universities in these two States, were as follows:—New South Wales, £32,590, 110 tutorial classes, 120 discussion groups (taking 181 separate courses) and 57 kit groups; South Australia, £5,000, 34 tutorial classes and extension lectures at country centres.

Grants from fees from the Tutorial Classes amounting to £10,850 were made to the Association in New South Wales for both organizing work and a teaching service. The teaching service in 1952 included 25 classes, 5 summer schools (two each of 10 days, one of 7 days, and 2 of 5 days), 24 week-end schools, 37 public lectures (mainly in short courses of 3 lectures), 63 lectures to various organizations, and 35 broadcast talks. In South Australia the Association receives a grant of £812 for general organizing purposes. In Tasmania the Association received a grant of £1,000 from the Adult Education Board and 108 lectures were organized in 1952, mostly in short series from 3 to 12. The Association's primary interest has been in subjects related to social change such as industrial history, economics, political science and sociology. In recent years, however, there has been a substantial increase in the number of classes studying psychology, history, literature, music, drama and popular science.

4. *The New Education Fellowship.*—The New Education Fellowship is a world organization of parents, educators, and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State.

One of its principal functions is the organization of periodic conferences, to which leading overseas educators are invited. Sessions are usually held in each of the capitals and in various country centres, thus enabling overseas leaders of educational thought to influence considerable numbers of Australian teachers and others. Conferences of this type were held in 1937, 1946, 1949 and 1951.

### § 10. Libraries.

1. *General.*—The Munn-Pitt Report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is seen in the rapid development of libraries in all States, all of which have now passed legislation to increase library services, and in the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia, its functions now including the promotion and improvement of libraries and library services. The Association conducts annual examinations for which students are prepared by courses of instruction in all States. Formal library schools exist in the National Library, Canberra, and the Public Libraries at Sydney and Melbourne.

2. *Commonwealth.*—(i) *Commonwealth National Library.* This library grew directly from the Library of the Commonwealth Parliament established in 1901. Whilst providing, as a primary responsibility, for the general reading and reference needs of the Members of the Parliament, it has developed into a central source of information for the Government and its departments and other agencies. The close association of the National Library with the Central Government follows the pattern of the Library of Congress at Washington, U.S.A. Like the latter, it has also inherited the basic elements of the national library concept of the older countries of Europe: that a national library is the proper place to collect the national literature systematically and to make it known and available for use, and that it is a place to which the most profound scholars may turn with confidence for what is most significant in the literature of other countries.

Through its Legislative Reference Branch the National Library aims to provide for the Parliament and the Government an up-to-date reservoir of fact and opinion on public issues both domestic and foreign. In addition to assembling material, the staff compiles bibliographies and reference guides to the literature on special subjects and in 1954 handled 1,347 inquiries involving special search. A further service to the Government flows from the activities of the Archives Division, a central element in the Government machinery for the management and preservation of its records. Archival repositories for Commonwealth records are maintained in Canberra, Sydney, Melbourne, Brisbane and Adelaide, and one is to be opened shortly in Perth.

As well as the governmental record of national life and development the National Library systematically collects and preserves Australian books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving-picture films and sound recordings. It is assisted by the Copyright Act 1912–1950, which requires one copy of all material printed in Australia to be deposited in the Library and has been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews ornithological collection in 1940, and the Ferguson sociological collection now being transferred to the Library. A special feature of the Library's Australian work is the copying on microfilm of all important unique material overseas relating to Australia, including more than a million pages in the Public Record Office in London.

The Library fulfils its obligations to make Australian publications widely known, both at home and abroad, through a series of select lists which include *Australian Public Affairs Information Service* (monthly) and *Australian Books* (annual) and full bibliographies in the monthly *List of Australian Government Publications and Books Published in Australia*, cumulated as the *Annual Catalogue of Australian Publications*. Collections of Australian books are maintained by the Library at all posts at which Australia is officially represented abroad. In London and New York the National Library maintains and staffs Australian Reference Libraries.

The Library is the central library of documentary and educational films and the non-theatrical film-distributing agency in Australia for the Australian National Film Board, and its film collection contains nearly 5,000 titles, together with Australian historical films and a great number of film strips. Special efforts are being made to discover and preserve samples of early Australian film-making.

Local library services are provided by the Library for the residents of the Australian Capital Territory, the Northern Territory, the Territory of Papua-New Guinea, Norfolk Island and Nauru.

The National Library's collections contain more than 400,000 volumes, together with very extensive holdings of pamphlets, pictures, prints, maps, manuscripts and microfilm, and about 3½ million feet of moving-picture films and its permanent and temporary holdings of archives were, in 1955, approximately 100,000 cubic feet. Special features of the Library's book collections are its strong holdings of Australiana, materials relating to the Pacific area and to East and South-East Asia, the publications of foreign governments and of international organizations, works in the social services and in particular in political and economic science.

(ii) *Patent Office Library.* The library of the Commonwealth Patent Office, Canberra, contains over 56,000 volumes. Patent specifications of inventions are received from the principal countries of the world, and a wide range of technical literature and periodicals is available.

(iii) *The Australian War Memorial Library.* In the War Memorial library are housed the documentary and pictorial records of Australia's fighting Services, collected during and after both world wars. This mass of material is constantly being augmented by the addition of books, periodicals and other records covering contemporary trends and events in the field of military history and science, as well as records of earlier wars in which Australian troops participated.

The printed records section contains approximately 50,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings of war leaders and personalities, war posters and postage stamps. Many personal collections by distinguished soldiers and historical documents relating to the wars have also been placed in the Memorial's custody.

Written records comprise correspondence files of headquarters and units of both world wars, and the original war diaries compiled from day to day by each unit during its existence.

The collection of official war photographs covering the 1914-18 and 1939-45 Wars numbers over 250,000, and a similar collection of official motion picture film depicting Australia at war totals about 4 million feet.

Facilities for public research are not yet fully developed, but all requests for information are met where practicable.

(iv) *Other Departmental Libraries.* The following Commonwealth authorities in Canberra have specialized collections in their own fields, and in addition draw largely on the National Library:—Attorney-General's Department, Commonwealth Bureau of Census and Statistics, Commonwealth Forestry and Timber Bureau, Department of Trade, Department of Primary Production, Department of External Affairs, Department of Territories, Department of Health, Department of National Development, Commonwealth Public Service Board, Department of Customs and Excise, Department of Works and News and Information Bureau of the Department of the Interior.

The Department of Labour and National Service has its main library in Melbourne, and branch libraries in Sydney and Adelaide. Other departmental libraries in Melbourne are those of the Department of Air, Department of Defence, Department of Social Services, Repatriation Commission and Postmaster-General's Department. The library of the Commonwealth Office of Education is in Sydney.

(v) *Commonwealth Scientific and Industrial Research Organization.* The head office in East Melbourne maintains a library covering all branches of science except the medical sciences. In addition, each division and section of the Organization has its own library;

together, these form a series of specialist libraries covering such subjects as food preservation, horticulture, fisheries, entomology, botany, agriculture, veterinary science, animal husbandry, building research, dairy products, etc. There are 22 such branches, each with its own staff varying in number from one to sixteen, and also smaller collections under the care of research officers aided by visiting librarians. Ten of the branches are in Victoria, eight in New South Wales, two in South Australia, and one each in the Australian Capital Territory and Queensland. The head office library maintains a union catalogue of the holdings of all C.S.I.R.O. libraries, and small union catalogues are being developed among groups of branch libraries with similar interests. The collections are particularly strong in the publications of overseas scientific and technical research institutions, with many of which exchange relations exist. The general public may have access to these materials for reference purposes.

3. States.—(i) *Metropolitan Public Libraries.* In each of the capital cities there is a well equipped public library, the libraries in Melbourne and Sydney especially comparing very favourably with similar institutions elsewhere in the world. The following statement gives the number of volumes in the public library of each capital city at 30th June, 1954 :—

**METROPOLITAN PUBLIC LIBRARIES, 30th JUNE, 1954.**

City.	Number of Volumes in—			Total.
	Reference Branch.	Ordinary Lending Branch.	Country Lending Branch.	
Canberra (a)	400,000	..	(b)	400,000
Sydney ..	(c) 487,496	(d)	160,197	(e) 647,693
Melbourne ..	617,675	90,944	39,226	747,845
Brisbane ..	115,546	..	29,236	144,782
Adelaide ..	175,919	34,369	(f) 56,870	267,158
Perth ..	196,357	..	3,027	199,384
Hobart ..	51,233	29,463	(g) 161,831	242,527
Darwin ..	200	..	(h) 20,300	20,500

(a) Commonwealth National Library, including Parliamentary Section. (b) Books are lent to libraries or students throughout Australia whenever necessary for research work. (c) Includes 155,885 volumes in the Mitchell Library. (d) The maintenance and control of the ordinary lending branch of the Public Library at Sydney were transferred in 1908 to the Municipal Council. In 1954, books in this library numbered 135,890. (e) Includes 10,000 volumes in the Dixon Library and 2,069 in the Model School Library. (f) Includes 8,308 volumes in the Children's Branch. (g) Includes 97,301 volumes in the Children's Branch. (h) Ordinary and Country Lending Branch and 300 volumes in the Children's Branch.

(ii) *New South Wales.* The Free Library Movement in New South Wales, founded for the establishment of a system of public libraries on the basis suggested in the Munn-Pitt Report of 1935, helped to pave the way for the Library Act 1930, which was fully proclaimed as from 1st January, 1944. The Library Board was fully constituted in 1944, and came into effective operation in September of that year. One hundred and thirty-eight Councils have adopted the Library Act and during 1953–54 spent £275,135 on their libraries from rates, as well as £132,560 received in subsidy. There are 130 libraries of which 5 are in Sydney, 22 in suburbs of Sydney, 5 in Greater Newcastle and 98 in country municipalities and shires. These libraries contain 1,002,500 volumes.

New South Wales departmental libraries are staffed by officers seconded from the State Library, which also provides a central book-buying and master cataloguing service for departmental libraries, and for municipal and shire libraries constituted under the 1939 Act. The State Library also manages the libraries of the University Tutorial Classes and the Workers' Educational Association.

The Country Circulation Department forwards books on loan to State schools, to Schools of Arts and to individual students. During 1953–54, 111,101 books were lent to small State schools, 38,199 to Schools of Arts and small country libraries, 306 to the Far Western Division, and 11,007 on special loan for extended periods to shire and municipal libraries and to Lord Howe Island, while 29,340 reference works were lent to individual country students.

The Mitchell Library in Sydney, of more than 60,000 volumes and pamphlets and 300 paintings, principally relating to Australasia and the Southern Pacific, and then valued at £100,000, was bequeathed to the trustees of the Public Library in 1907 by Mr. D. S. Mitchell, together with an endowment of £70,000. The testator stipulated that the regulations of the British Museum were to be adopted as far as possible, hence the library is the resort of specialists. There are now 155,885 volumes in the library, in addition to valuable manuscripts, collections of Australian postage and fiscal stamps, and various pictures, coins, etc.

In Newcastle the collection given by Dr. Roland Pope, worth £10,000, is housed at the School of Arts.

Other important libraries in New South Wales are the Australian Museum, 31,268 volumes; Teachers' Colleges, 141,998; Technical Education Branch, 59,504; Public Schools, 1,384,201; Railways Institute, 136,498; Road Transport and Tramways Institute, 50,900; Cooper Library of the New South Wales Public School Teachers' Federation, 17,467; and the Library at the National Herbarium, 10,000 volumes. At 30th June, 1955, the Parliamentary Library contained 116,808 volumes.

(iii) *Victoria*. Until the establishment of the Free Library Service Board in 1947, the only public library facilities available in Victoria except from the State Public Library and one or two Metropolitan Municipal Libraries were those offered by about 200 out-moded Mechanics' Institute Libraries situated in country areas all over the State. The Board's policy has been to substitute for these inadequate services an efficient system of adequately stocked, modern public libraries controlled by local Municipal Councils and subsidized by the Board. Since the Board's inception 65 municipalities, comprising 1,189,898 of the State's population, have established libraries. Of these, 17 are in the city, serving 782,248 people, and 49 in the country, serving 401,650 people. The amount of £137,000 was paid to the Councils in library subsidy for the year 1954-55 and a total of £253,213 was expended in Municipal Library Service for the same year. There are 589,900 books available to the communities in which libraries are established and combined circulation figures were 3,700,000 as at 30th September, 1954.

A feature of the services provided in the country is the number of co-operative or regional library groups now being developed. These services, of which there are 8, comprising a total of 28 Councils, consist of groups of Councils which pool their financial resources, book-stocks and trained staff, in order to provide more comprehensive, efficient library facilities.

(iv) *Queensland*. Prior to 1945 Queensland's library needs were met by the State Public Library, established in 1902 and administered by the Chief Secretary's Department, and by Schools of Arts or similar libraries in metropolitan and country districts supported by members' subscriptions. The Libraries Act 1943 constituted a Library Board "to attain efficient co-ordination and improvement of the library facilities of the State with the object of placing such facilities on a sound basis for the benefit and educational improvement of the citizens generally throughout the State".

The control and management of the Public Library has been entrusted to the Board, which had built up the book collection to 144,782 volumes in 1953-54. The Libraries Act Amendment Act of 1949 provides for the deposit in the Public Library of a copy of all books, pamphlets, maps and other printed material published in Queensland. A country extension service for people residing outside the metropolitan area is now operating on a limited scale. Its book collection numbered 29,236 in 1953-54.

The Board endeavours to encourage the establishment of new library services and the extension of existing facilities by subsidizing local bodies on a £1 for £1 basis for the purchase of books and the cost of library space and equipment. The number of local bodies subsidized was 98 in 1953-54.

The Act empowers local authorities to establish library facilities. In 1955, 32 local authorities were conducting library services, and several others have indicated that they will do so in the near future. The Brisbane City Council has established nine libraries, of which five have separate children's collections, and hopes to increase the number to 28.

The Oxley Memorial Library was established in 1926 to promote the study of Australian literature, literature relating to Australia and Queensland historical material. Since 1946 it has been administered as a department of the Public Library, and the

collection kept segregated. During the year 1953-54 its holdings in volumes increased from 16,710 to 17,168. A valuable addition in 1950 was the L'Estrange collection of Queensland stamps.

The Library of the Parliament of Queensland was established in 1860. At 30th June, 1955, the library held 81,206 books and pamphlets, consisting of official publications and books devoted largely to history and the social sciences. The cataloguing and reclassification of the library commenced in 1948. The library is entitled to a copy of every book published in Queensland.

(v) *South Australia.* Following the Price Report of 1937, the Public Library of South Australia was separated from the Museum and Art Gallery early in 1940 and became a government department, administered by a Principal Librarian and a Libraries Board.

In the reference department there are about 176,000 volumes and seating for 300 readers. Most of the books may be borrowed. Over 3,000 periodicals are filed, and the collection of newspapers includes every newspaper printed in South Australia. There are 34,400 volumes in the lending department available to persons living in the metropolitan area, and the Country Lending Service has 48,560 volumes, of which more than half are suitable for children.

The Research Service specializes in scientific and technical inquiries, and supplements the resources of the Public Library by borrowing from other libraries and by obtaining microfilm copies of material not available locally. It has an extensive collection of trade catalogues.

The library of the Parliament of South Australia held approximately 65,000 volumes at 31st December, 1955.

The Institutes Association in 1954 comprised 231 suburban and country libraries with 746,661 volumes.

(vi) *Western Australia.* In 1955 the Library Board of Western Australia was made responsible for all forms of public library services throughout the State, to which the State Government contributes funds.

The Board has the following major functions :—

- (a) To encourage local authorities throughout the State to establish public libraries and to provide as a State subsidy all books and bibliographical services necessary for such libraries when established ;
- (b) To administer for a limited period a former scheme of monetary grants of up to £50 per annum to local authorities which maintain public libraries ;
- (c) To administer the State Library ;
- (d) To advise the Government on all matters relating to libraries ;
- (e) To provide for the training of librarians.

Local public libraries are subsidized on a £1 for £1 basis ; the local authority providing accommodation and staffing and the Board all books and related services.

Books are provided on a minimum basis of one volume per head of the population of the district concerned, and if the cost of so doing exceeds the local costs of the local authority a balancing payment is made to the Board to equalize the expenditure. All books throughout the State are available at any library, on request to the Board. All cataloguing is done by the Board. The first library under this scheme was opened in August, 1954 and at 31st December, 1955, 14 libraries had been established. The Board's book stock at that date was 42,000.

Prior to the establishment of the Library Board, in 1944 the Government appointed a Country Free Lending Libraries Committee to make small grants to local authorities for library purposes. That Committee has now been merged with the Board and its activities will cease in about 1962, and will be replaced by the full service of the Board.

The State Library was established in 1887 in commemoration of Queen Victoria's Jubilee. At present it contains some 200,000 bound volumes. It is now the reference division of the State library service and, in addition to providing the normal facilities of a reference library for the metropolitan area, extends its service throughout the State through local public libraries. The Local History section of the State Library is wholly responsible for the custody and management of the State archives and contains much of

the historical material of the Western Australian Historical Society. Many of the early newspapers of the State, private diaries and other articles are being microfilmed for permanent preservation.

The University of Western Australia, through its Adult Education Board, manages the Adult Education Library of some 12,000 volumes of general reading and fiction. Books are sent to country readers by post.

There are some 40 to 50 special libraries in government departments and industrial firms.

(vii) *Tasmania.* Library service in Tasmania has expanded rapidly during the past few years. Under the Libraries Act 1943 the Tasmanian Library Board was constituted, and the State Library of Tasmania was established on 1st January, 1944. The Board, in addition to administering the State Library headquarters in Hobart, is responsible for the extension of library services throughout the State and for the control of State aid. Municipalities adopting the Act spend the proceeds of local rates on library premises, salaries and maintenance, and books for permanent retention. State aid is provided in the form of books of a value equal to the amount collected in rates, which are exchanged at intervals. In Launceston State aid is given in cash. In 1953-54 the Launceston City Council contributed £6,079 and £6,168 was received in State aid.

Of the 49 municipalities in the State, 36 have adopted the Act and seven libraries have been established with the support of the Hydro-Electric Commission.

The State Library provides lending and reference services for the people of Hobart and operates a reference service for people throughout the State. In addition, it conducts screenings of documentary films, recitals of recorded music, summer schools, lectures, library weeks in country centres, puppetry demonstrations, etc.

The Parliamentary Library works in close collaboration with the State Library, which provides a reference officer to serve members during session, and undertakes to catalogue all new books added to the library as well as supplying recreational reading.

4. *University Libraries.*—The libraries of the Australian universities provide material not only for the education of graduates and undergraduates, but also for scholars, research workers and practical investigators all over the continent. Much of the material they contain is not available elsewhere, for although in most cases smaller, they are in many directions more highly specialized than the public libraries. They lend to one another and to State and private institutions as well as to individual investigators. Each of them is governed by a librarian, who is responsible as a rule to an executive sub-committee and a committee which is practically co-extensive with the professional staff. In size, the library of the University of Sydney is the fourth library in Australia, and the libraries of the Universities of Melbourne and Adelaide are respectively seventh and ninth. The following table shows the sizes and rates of growth and expenditure of the Australian university libraries; it is impossible to give borrowing statistics, as they differ too widely to be comparable without much explanation.

UNIVERSITY LIBRARIES, 1954.

University or College.	Volumes.	Accessions during year.	Expenditure.
			£
Sydney .. .. .	358,333	8,650	53,026
Melbourne .. .. .	205,601	9,179	51,317
Queensland .. .. .	124,004	6,489	37,187
Adelaide .. .. .	190,784	7,963	39,852
Western Australia .. .. .	121,561	6,407	23,725
Tasmania .. .. .	83,000	3,716	17,420
New South Wales University of Technology	57,000	11,512	39,580
New England .. .. .	27,591	2,432	8,465
Australian National University .. .. .	100,588	8,886	40,857
Canberra University College .. .. .	19,539	3,306	9,273

The first books were bought for the library of the University of Sydney as early as 1851; only since 1910, however, has it possessed a building of its own. It is named after the principal benefactor, Thomas Fisher, who bequeathed to it in 1885 the sum of £30,000. It contains an up-to-date bookstack of glass and steel and a fine reading room in which, since the beginning of 1941, about 18,000 volumes of the collection have been made available on open access shelves. In addition, members of the teaching staff and certain classes of undergraduates are admitted to the bookstacks; all readers are encouraged to borrow freely. The library possesses a large number of periodicals, especially scientific, valuable collections of seventeenth-century pamphlets and Elizabethan translations from the classics, and an extensive collection of Australian literature. Besides medical and law branches, there are a number of departmental libraries.

Early in 1854 the University of Melbourne made its first allocation for books, but the library was housed in temporary quarters for a number of years. In recent years the university authorities have treated the library generously, and there have been some welcome benefactions, but accommodation is insufficient and a new library building is a pressing need of the university. The W. L. Baillieu Trust has made available the first instalments of a £100,000 gift for building purposes. All the books are accessible on open shelves, and though the library is intended primarily for reference purposes, borrowing, except of text-books and certain valuable volumes, is made as easy as possible. The library is administered from the centrally situated general library; there is a large medical branch library specially rich in periodicals, and smaller branch libraries in some of the science departments.

The library of the University of Queensland, founded in 1911, began with £3,000 worth of books, £2,000 having been raised by public subscription and £1,000 granted by the Government. The main library is now in its own building in the new University at St. Lucia.

The Adelaide University library bears the title of its original benefactor, Robert Barr Smith, who, with members of his family in and after 1892, gave the university about £50,000 for library purposes. Some 20,000 volumes are shelved in the reading room and are available to the ordinary student. Up-to-date steel bookstacks provide accommodation for about 100,000 volumes. Borrowing facilities are available to all matriculated students, to country students and to graduates. There are medical and law departmental libraries. The medical library has on permanent loan the collection of the Institute of Medical and Veterinary Science, and also incorporates the library of the British Medical Association (South Australian Branch).

In the University of Western Australia the first permanent library staff was not appointed until 1927. Provision of permanent library accommodation was not possible when the university moved to its present site, and space and facilities have consequently been inadequate. Extensions to the temporary quarters were made in 1946. The whole collection, consisting of about 122,000 volumes, is accessible on open shelves, and there are several departmental libraries. A special feature is the use made of students' co-operation.

The library of the University of Tasmania was founded in 1893, but for many years it comprised little more than a collection of text-books. In 1913 a substantial increase of funds was allotted and important gifts were received. In 1919 it was organized for the first time in accordance with modern library practice. A full-time librarian was appointed for the first time at the end of 1945, and the staff has increased from two to ten. The library is now providing a cataloguing service for the library of the Royal Society of Tasmania.

The New England University library was founded in 1938, and bears the name of its first benefactor, Sir William Dixson. At the end of 1954 it contained 27,591 volumes, mainly on open shelves.

The Canberra University College library was established in 1938. At the end of 1954 it contained 19,539 volumes, which are on open shelves; reference books may be borrowed.

The library of the Australian National University is unique in that it is designed to serve the research staff of a wholly post-graduate institution. It specializes in the fields of the physical and medical sciences, excluding clinical materials. In the social sciences and Pacific studies consideration is given to the holdings of the Commonwealth National Library to avoid unnecessary duplication. The library was established in 1948 and operated in Melbourne until December, 1950, when it was transferred to Canberra. In 1954 the collection comprised 100,588 volumes, including a special collection of 25,000 volumes in Oriental languages.

5. *Children's Libraries and School Libraries.*—(i) *General.* A survey conducted early in 1946 revealed that only a small proportion of children was being catered for by adequate library service. The effective use made of the few existing children's libraries is proof that the growing interest in this branch of library work will be well rewarded.

(ii) *New South Wales.* Children's libraries are being developed as departments of municipal and shire libraries. Three formerly independent children's libraries at Mosman, Wollongong and Moss Vale are now departments of municipal and shire libraries and have greatly increased budgets.

School library work is fostered by the State Library in co-operation with the Education Department. A "Model School Library" has been established, and vacation classes for teacher-librarians are held.

(iii) *Victoria.* Since 1943-44 children's libraries have shared an annual grant of £500 between them, the number participating in 1950 being 34.

The Education Department is making provision for libraries in new schools being erected. Where accommodation is available in existing schools, grants of up to £4 for £1 are provided to furnish and equip libraries. In addition, the Government subsidizes the purchase of approved books on the basis of £1 for £1, or £2 for £1, according to the size of the school, to a maximum grant of £60 per annum.

With the assistance of school committees and municipalities, subsidized by the Department, many country districts have established circulating group libraries. Boxes of books are circulated to all schools in the group, changes being made at the commencement of each school term. Financed by a bequest from the late William Gillies, a scheme of circulating libraries for small schools, particularly in remote areas, has been operating for some years.

The Department has a Library Services Officer with a small staff to advise and assist schools in the organization of libraries. A number of Education Department teachers have been trained at the Library School of the Public Library of Victoria, and an increasing number of schools have well-equipped library rooms with trained teacher-librarians in charge.

(iv) *Queensland.* The purchase of books in State school libraries in Queensland is financed by school committees and parents' associations, with a subsidy from the Department of Public Instruction on a £1 for £1 basis.

In 1937 a system of Circulating Supplementary Readers was commenced. Books are graded for age levels and are moved from school to school, sufficient copies of each book for a whole class being sent, and reading being done in school. There are 96,000 such books now in use, the distribution at present being confined to primary schools.

(v) *South Australia.* A Children's Library of 8,300 volumes is used by school classes and individual children living in the metropolitan area. Books of fiction are lent to children of fourteen years and over, while other books may be borrowed by children of any age.

(vi) *Western Australia.* For schools with more than two teachers, including high schools and technical schools, a £1 for £1 subsidy up to £50 is granted each year. New primary schools are provided with a room for a library, while high schools and some technical schools have a teacher acting as librarian.

For schools with one or two teachers there are two services. Through the Small Schools Fixed Library Service reference books up to the value of £15 are supplied annually to be kept permanently in the school. The Charles Hadley Travelling Library provides recreational reading, and operates 320 boxes which can be exchanged every three months through a local school acting as distributing centre for a district. The Government grants £250 per annum for this service, and the participating schools contribute the commission received from the Commonwealth Savings Bank for the teachers' services—about £200.

Children in isolated country areas are catered for by books sent out by the State Correspondence Schools Library. The children are kept in touch with the library by means of radio talks and leaflets issued periodically. There is as yet no general scheme to serve children in the metropolitan area.

The Federation of Police and Citizens Boys' Clubs of Western Australia aims at establishing a system of circulating boxes of books at an estimated cost of £10,000. Books are in circulation to 44 centres, of which 15 are Police Boys' Clubs, 24 State schools, and 5 children's libraries.

Western Australian Children's Book Council Inc. was incorporated in 1948 and receives a government grant to assist its work of interesting local authorities in establishing children's free libraries.

(vii) *Tasmania.* The Lady Clark Memorial Children's Libraries, at the State Library, Hobart, aim to serve all children in Tasmania with books. They work through the municipal authorities; at 30th June, 1954, 55 children's libraries had been established in 49 municipalities, including Hobart, and in six special Hydro-electric districts, children's books being provided on a population basis.

Practically all State secondary schools in Tasmania have libraries, with full-time librarians in four of them. The libraries of the Friends' School, Hobart, and the Hobart High School are among the foremost of their kind in Australia.

A Schools' Library Service assists with loans of curriculum books, and provides advice and guidance in the use of books. In 1953 the number of schools receiving service was 115 and the number of books issued was 7,924. The majority of primary schools have libraries; most area schools, in particular, have good ones.

The Education Department sends, each year, selected students or teachers to the Library School in Sydney.

6. *Special Libraries.*—Before the 1939-45 War the number of special libraries, apart from those maintained by government departments, was small, but during recent years many manufacturing, commercial, research and other firms, as well as statutory bodies, have found it necessary to establish special libraries to serve their specialist or other staff. These libraries, which are most numerous in Sydney and Melbourne, are being increasingly staffed by trained librarians.

7. *Microfilms.*—The following libraries supply microfilm or photostat copies of material, usually at a small charge (the letter "P" signifies photostat supplied and "M" microfilm supplied):—*Australian Capital Territory*—Australian War Memorial (P), Commonwealth National Library (PM), C.S.I.R.O. (M); *New South Wales*—Metropolitan Water, Sewerage and Drainage Board (P), Public Library of New South Wales (M), Standards Association of Australia (P), School of Public Health and Tropical Medicine (M), Fisher Library, University of Sydney (PM); *Victoria*—Commonwealth Serum Laboratories (P), Technical Information Section, Munitions Supply Laboratories (PM),

Public Library of Victoria (M), Standards Association of Australia (Melbourne Branch) (P), University of Melbourne (PM), C.S.I.R.O. (M); *Queensland*—Public Library (P); *South Australia*—Public Library of South Australia (PM), University of Adelaide (PM), Waite Agricultural Research Institute (P); *Western Australia*—State Library (PM); *Tasmania*—University of Tasmania (PM).

## § 11. Public Museums.

The Australian Museum in Sydney, founded in 1836, is the oldest institution of its kind in Australia. In addition to possessing fine collections of the usual objects found in kindred institutions, the Museum contains a very valuable and complete set of specimens of Australian fauna. The cost of construction of the building to 30th June, 1954 was £87,660. The number of visitors to the institution during 1953-54 was 259,773, and the average attendance on week-days 602, and on Sundays 1,373. The expenditure for 1953-54 amounted to £57,881. A valuable library containing 33,551 volumes is attached to the Museum. Courses of evening popular lectures are delivered and lecturers also visit distant suburbs and country districts, and afternoon lectures for school children are provided. Nature talks are also broadcast by radio. Representative collections illustrative of the natural wealth of the country are to be found in the Agricultural and Forestry Museum and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids to country schools. The "Nicholson" Museum of Antiquities, the "Macleay" Museum of Natural History and the Museum of Normal and Morbid Anatomy attached to the University, and the National Herbarium and Botanical Museum at the Sydney Botanic Gardens, are all accessible to the public. There is a Museum of Technology and Science in Sydney with branches in four country centres. Expenditure during the year 1953-54 was £51,616. Valuable research work is being performed by the scientific staff in connexion with oil and other products of the eucalyptus and the gums, kinos, tanning materials, and other economic products of native vegetation generally.

The National Museum at Melbourne, devoted to natural history, geology and ethnology, is located in the eastern section of the Public Library Building. The National Art Gallery is situated in the same building. The Museum of Applied Science, also housed under the same roof, contained at 30th June, 1951, 23,423 exhibits which covered applied and economic aspects of all branches of science. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. In addition to the large collection in the geological museum attached to the Mines Department in Melbourne, well-equipped museums of mining and geological specimens are established in connexion with the School of Mines in the chief mining districts.

The Queensland Museum, founded in 1855, comprises exhibited and reference collections of zoology, geology and ethnology. It is maintained entirely by the State Government, and the cost of the building at 30th June, 1954 was £42,638. Expenditure for the year 1953-54 was £21,304. The collections are principally, but not exclusively, Australian; there is, for example, the excellent series of ethnological material formed by Sir William McGregor in New Guinea. The publication is *Memoirs of the Queensland Museum* which was preceded by the *Annals of the Queensland Museum*. The library is extensive and valuable, and of great assistance to research workers in the State.

The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and in Brisbane, opened in 1892.

The South Australian Museum has considerable collections of most branches of natural history and was attended by 150,000 visitors in 1953-54. Cost of construction of the museum building was £65,000. In 1953-54 expenditure was £36,100.

The Western Australian Museum and Art Gallery contains altogether 214,413 specimens, of an estimated value of £107,750. The Museum, Art Gallery and Library are housed in one building. At 30th June, 1954, the structure was valued at £65,500.

There are two museums in Tasmania—the Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston—both of which contain valuable collections of botanical, mineral and miscellaneous products. The museums received aid from the Government during 1953–54 to the extent of £14,000. The cost of construction in each case is included in that of art galleries given below.

## § 12. Public Art Galleries.

The National Art Gallery of New South Wales originated in the Academy of Art founded in 1871. Cost of construction of the present building amounted to about £96,000. At the end of 1953 its contents comprised 1,162 oil paintings, 749 water colours, 1,986 black and white, 239 statuary and bronzes, and 1,304 ceramics, works in metal and miscellaneous. Since 1895, loan collections of pictures have been forwarded regularly for exhibition in important country towns.

The National Gallery at Melbourne at 30th June, 1953 contained 970 oil paintings, 7,200 objects of statuary, bronzes, ceramics, etc., and 7,440 water colour drawings, engravings and photographs. The Gallery is situated in the same building as the Museum and Public Library, the total cost of construction being £439,000. The expenditure on the Public Library, Art Gallery and Museum in 1953–54 was £232,786. Cost of purchases during 1952–53 was £7,286. Several munificent bequests have been made to the institution. That of Mr. Alfred Felton, given in 1904, amounts to about £8,000 per annum. In 1913, Mr. John Connell presented his collection of art furniture, silver, pictures, etc., the whole being valued at £10,000. There are provincial art galleries at Ararat, Bendigo, Castlemaine, Shepparton, St. Arnaud and Warrnambool, and periodically, pictures are sent on loan from the National Gallery.

The Queensland National Art Gallery, Brisbane, maintained by the State Government, was founded in 1895. A Director was appointed in 1950, in which year the interior of the Gallery was remodelled. More recently an Art Museum and a Print Room have been opened. At 30th June, 1954, there were on view 340 oil paintings, 190 water colours, 298 black and white, and 50 pieces of statuary, together with 151 various prints, mosaics, and miniatures. Exclusive of exhibits on loan, the contents are valued at about £25,160. Visitors during the year averaged 1,154 on Sundays and 367 on week-days.

The Art Gallery at Adelaide dates from 1880, when the Government expended £2,000 in the purchase of pictures, which were exhibited in the Public Library Building in 1882. The liberality of private citizens caused the Gallery rapidly to outgrow the accommodation provided for it in 1889 at the Exhibition Building, and on the receipt of a bequest of £25,000 from the late Sir Thomas Elder, the Government erected the present building, which was opened in April, 1900. The Gallery also received bequests of £16,500 in 1903 from the estate of Dr. Morgan Thomas, and valuable prints and £3,000 in 1907 from Mr. David Murray. In 1935 Mr. Alex Melrose gave £10,000 for the extension of the building. At 30th June, 1954 there were in the Gallery 1,545 paintings in oil and water colours, 572 drawings and black and white, and 105 items of statuary, the contents being valued at £102,000. The cost of construction of the Art Gallery amounted to £48,000. The expenditure during 1953–54 was £18,500.

The foundation stone of the present Art Gallery at Perth in Western Australia was laid in 1901, and the Public Library, Museum and Art Gallery are all situated in the one structure. The collection comprises 246 oil paintings, 163 water colours, 419 black and white, 277 statuary, and 1,497 ceramic and other art objects, the whole being valued at £35,000. Cost of construction of the building amounted to £10,000.

In Tasmania, the Art Gallery at Hobart was opened in 1887. At June, 1954 the contents consisted of 152 oil paintings, 127 water colours, 114 black and white, 3 statuary and 132 etchings, engravings, etc. The cost of construction of the building was £4,500. Expenditure in 1953–54 was £16,065.

The Art Gallery at Launceston was erected in 1888 at a cost of £6,000, and opened on 2nd April, 1891. Only a small proportion of the contents belongs to the gallery, the bulk of the pictures being obtained on loan. At June, 1954 there were on view 53 oil paintings, 25 water colours, 4 black and white, and 3 miscellaneous exhibits. Expenditure in 1953-54 was £8,656.

### § 13. Scientific Societies.

1. **Royal Societies.**—In earlier issues of the Official Year Book an outline was given of the origin and progress of the Royal Society in each State. The accompanying table contains the latest available statistical information regarding these institutions, the headquarters of which are in the capital cities.

ROYAL SOCIETIES, 1954.

Particulars.	Sydney.	Mel- bourne.	Bris- bane.	Ade- laide.	Perth.	Hobart.	Can- berra.

2. **The Australian and New Zealand Association for the Advancement of Science.**—This Association was founded in 1887. Its headquarters are at Science House, Gloucester Street, Sydney, and meetings are held at intervals of approximately eighteen months within the various States and in the Dominion of New Zealand. The next meeting is scheduled to take place in Dunedin in January, 1957.

3. **Other Scientific Societies.**—The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1874. Sir William Macleay, who died in 1891, during his lifetime and by his will endowed the society to the amount of £67,000, which has been increased by investment to approximately £100,000. The Society offers annually to graduates of the University of Sydney, who are members of the Society and resident in New South Wales, research fellowships (Linnean Macleay Fellowships) in various branches of natural history. Two fellowships were awarded in 1955. The library comprises some 18,000 volumes. Eighty volumes of Proceedings have been issued, and the Society exchanges with about 300 kindred institutions and universities throughout the world. The membership at the end of 1955 was 236.

The British Astronomical Society has a branch in Sydney, and in each of the States the British Medical Association has a branch.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation.

### § 14. State Expenditure on Education, Science and Art.

The expenditure in each State on education, science and art during the year 1953-54 is shown in the following table. Owing to the details not being available in all States, the figures exclude officers' pensions and superannuation, pay-roll tax, and interest and sinking fund on capital expended on buildings. The cost of the medical and dental inspection of school children is also excluded, as this service is more appropriately classified under Public Health, etc..

**STATE EXPENDITURE ON EDUCATION, SCIENCE AND ART, 1953-54.**  
(£'000.)

State.	Expenditure from—				Receipts.	Net Expendi- ture.
	Revenue.	Loan.	Other Funds.	Total.		
New South Wales ..	27,807	5,281	..	33,088	675	32,413
Victoria ..	17,506	4,867	..	22,373	(a) 244	22,129
Queensland ..	8,231	855	335	9,421	243	9,178
South Australia ..	5,993	840	..	6,833	285	6,548
Western Australia ..	5,574	853	..	6,427	126	6,301
Tasmania ..	2,771	837	..	3,608	11	3,597
Total ..	67,882	13,533	335	81,750	1,584	80,166

(a) In addition, fees in respect of technical education amounting to £245,283 were received and spent by the School Councils.

## CHAPTER XIII.

### PUBLIC JUSTICE.

#### § 1. Introduction.

Each State has its own separate judicial system, the Commonwealth jurisdiction being confined to the High Court of Australia (largely a Court of Appeal intermediate to the Privy Council although it has also original jurisdiction), the Commonwealth Court of Conciliation and Arbitration and the Federal Court of Bankruptcy. Full particulars regarding the judicial power of the Commonwealth will be found in Chapter III. of the Commonwealth Constitution which appears on page 17 of this volume.

In considering the crime statistics of the various States, due allowance must be made for certain factors, such as the relative powers of the higher and lower courts. In the case of lower courts, the actual number of laws in each State whose breach renders a person liable to fine or imprisonment must be taken into account. Again, the attitude of the magistracy and police towards certain classes of offences is a factor, for in the case of liquor laws or laws connected with vagrancy or gaming, the views of the magistrates, and instructions issued to the police, may be responsible for considerable variations in the numbers. The strength and distribution of the police forces, and the age-constitution and distribution of the population of the States, also influence the results. Due weight should be given also to the prevalence of unsolved crime, but information on this point is not available.

#### § 2. Lower (Magistrates') Courts.

1. Powers of the Magistrates.—(i) *New South Wales*. There is no general limit to the powers of the magistrates in regard to offences punished summarily, their authority depending in each case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to twelve months. Imprisonment in default of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of liquidated debts, and damages whether liquidated or unliquidated, the amount is limited to £50 before a court constituted by a stipendiary magistrate. The amount in actions of debt before two or more Justices of the Peace is limited to £30 and in actions of damage to £10, but may extend to £30 with the consent of the defendant. Outside the Metropolitan Area of Sydney and certain other prescribed districts one justice of the peace may hear cases of debt, liquidated or unliquidated, or damage up to £5 and to £30 by consent of parties.

(ii) *Victoria*. The civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £50, and to actions arising out of torts or contracts. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences up to two years may be imposed. The proportion of long sentences is, however, comparatively small.

(iii) *Queensland*. Generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233, 344, and 445 of the Criminal Code (betting houses, aggravated assaults, and illegally using animals), sentences of twelve months may be imposed.

There is provision for applying cumulative sentences, but in practice not more than one sentence is generally made cumulative on a previous sentence.

Magistrates have no power to deal with habitual offenders, but there are such powers vested in the Supreme Court.

(iv) *South Australia.* In South Australia the power of special magistrates to impose fine and imprisonment is defined by the special act creating the offence and conferring jurisdiction. In the case of minor indictable offences, triable summarily, a maximum penalty of £100 fine or 2 years' imprisonment is fixed by the Justices Act 1921-1943. Magistrates also have power to hear certain civil actions in which the amount claimed is less than £750.

(v) *Western Australia.* The powers of magistrates and justices in regard to offences triable summarily are governed by the act creating the offence and giving them jurisdiction. Imprisonment in default of payment of a fine is regulated by a scale limiting the period according to the amount of the fine but not to exceed six months.

The civil jurisdiction of magistrates and courts is restricted in general to £250, but disputed actions, the subject matter of which exceeds £100, must be tried by a judge. By consent of the parties, any action that might be brought in the Supreme Court may be dealt with in a Local Court. Justices may act in the case of illness or absence of the magistrate.

Magistrates are coroners and justices may be appointed as acting coroners.

Magistrates have appellate jurisdiction under some statutes and in country districts act as Chairmen of the Courts of Session. They may be appointed as Commissioners of the Supreme Court.

On the goldfields, the magistrate is also the warden.

(vi) *Tasmania.* Magistrates may hear and determine in Courts of Petty Sessions all offences other than those punishable on indictment. Stealing and analogous crimes where the property involved does not exceed £10 in value may be dealt with by magistrates unless the defendant objects.

No general limit is fixed in respect of sentences, the statute creating the offence almost invariably laying down the penalty. Where this is not the case, the Contravention of Statutes Act 1889 provides that a fine of £50 may be imposed. Generally speaking, sentences which justices can impose are limited to six months, although in several cases sentences of up to two years may be imposed. The aggregate term of cumulative sentences cannot exceed two years.

The civil jurisdiction of magistrates is divided into two categories. A Commissioner of the Court of Requests, who must be a legal practitioner, and is invariably a police magistrate, may hear actions for the recovery of debts and damages not exceeding £100. The jurisdiction of these courts may be increased by proclamation to £250, and this has been done in five instances. Courts of General Sessions, constituted by at least two justices, exercise similar powers, but the jurisdiction cannot exceed £50. Only one court has the maximum jurisdiction, the others being limited to £30.

2. *Cases Tried at Magistrates' Courts.*—The total number of arrest and summons cases tried at Magistrates' Courts in each State is given below for 1939 and for the years 1949 to 1953 :—

#### CASES TRIED AT MAGISTRATES' COURTS.

State or Territory.	1939.	1949.	1950.	1951.	1952.	1953.
New South Wales ..	144,848	205,817	214,894	242,165	269,197	276,566
Victoria ..	82,858	80,511	97,201	109,066	129,091	134,912
Queensland(a) ..	32,501	40,503	43,932	49,849	44,868	46,482
South Australia ..	22,776	(a)28,349	(a)31,964	(a)30,953	(a)33,688	(a)28,757
Western Australia ..	24,111	27,373	29,521	31,985	40,674	43,495
Tasmania ..	9,498	11,713	12,403	14,649	16,964	20,381
Northern Territory(a)	1,494	1,199	1,269	1,178	1,657	2,077
Aust. Cap. Territory ..	284	1,018	1,237	1,500	1,610	1,294
Total ..	318,370	396,483	432,421	481,345	537,749	553,964

(a) Year ended 30th June following.

Investigation of the returns shows that considerable variations in the figures for single States are occasioned by breaches of new Acts, or the more stringent enforcement of the provisions of existing Acts. Any deductions drawn from the total returns as to the increase or decrease of criminality should, therefore, be based upon a careful analysis of the detailed list of offences.

3. **Convictions at Magistrates' Courts.**—The figures given in the previous table include a number of people who were charged without sufficient reasons, and, statistically, are not of general importance. A classification of convictions of persons who appeared before the lower courts in each State during 1953 is given in the following table :—

**CONVICTIONS AT MAGISTRATES' COURTS, 1953.**

Class of Offence.	N.S.W.	Vic.	Qld.(a)	S.A.(a)	W.A.	Tas.	N.T.(a)	A.C.T.	Aust.
Against the Person ..	2,838	1,111	479	245	348	220	49	31	5,321
Against Property ..	14,491	5,794	2,747	1,493	3,284	962	122	15	28,878

(a) Year ended 30th June following.

4. **Convictions for Serious Crime at Magistrates' Courts.**—(i) *General.* While the figures given in the preceding table refer to the entire body of convictions, the fact must not be overlooked that they include a large proportion of offences of a technical nature, many of them unwittingly committed, against various Acts of Parliament. Cases of drunkenness and minor breaches of good order, which, if they can be said to come under the heading of crime at all, at least do so in a very different sense from some other offences, also help to swell the list. The following table has therefore been prepared for the purpose of showing the convictions at magistrates' courts, for what may be regarded as the more serious offences, i.e., against the person and property, either separately or conjointly, and forgery and offences against the currency. Owing to the smallness of the population, the rates for the Northern and the Australian Capital Territories are subject to considerable variation.

(ii) *Number and Rates, Years 1939 and 1949 to 1953.*—The following table shows the number and rates of convictions for serious crime at magistrates' courts for the years 1939 and 1949 to 1953 :—

### CONVICTIONS FOR SERIOUS CRIME AT MAGISTRATES' COURTS.

State or Territory.	1939.	1949.	1950.	1951.	1952.	1953.
NUMBER.						
New South Wales ..	12,724	12,983	14,141	15,632	17,858	17,612
Victoria ..	5,727	4,675	5,204	6,495	7,602	6,905
Queensland(a) ..	2,402	2,481	2,699	3,041	2,916	3,226
South Australia ..	1,224	(a) 1,488	(a) 1,654	(a) 1,926	(a) 1,945	(a) 1,744
Western Australia ..	2,614	2,320	2,901	3,115	3,446	3,632
Tasmania ..	959	940	810	829	1,126	1,185
Northern Territory(a)	44	112	43	144	149	195
Aust. Cap. Territory ..	59	145	183	171	173	53
Total ..	25,753	25,144	27,635	31,353	35,215	34,552
Rate per 10,000 of population ..	36.91	31.66	33.67	37.12	40.64	39.08

(a) Year ended 30th June following.

(iii) *Rate of Convictions, 1881 to 1951.* The rate of convictions at ten-yearly intervals over a period of seventy years is shown below ; only the more serious offences particularized on the preceding page have been taken into consideration.

### RATE OF CONVICTIONS FOR SERIOUS CRIME AT MAGISTRATES' COURTS : AUSTRALIA.

Year .. .. .	1881.	1891.	1901.	1911.	1921.	1931.	1941.	1951.
Convictions per 10,000 persons	69.3	44.8	29.1	24.6	29.2	37.1	33.6	37.1

5. *Committals to Higher Courts.*—(i) *General.* In a previous paragraph it has been pointed out that comparisons of criminality based on a consideration of the total returns from magistrates' courts are somewhat inadequate, inasmuch as the figures include numbers of cases which are merely technical breaches of laws having in some instances a purely local significance. The committals to higher courts give a better basis of comparison, although even in this connexion allowances must be made for the want of uniformity in jurisdiction. A classification of the offences for which persons appearing in the lower courts were committed to higher courts in each State and Territory for the year 1953 is shown in the following table :—

### COMMITTALS TO HIGHER COURTS, 1953.

Class of Offence.	N.S.W.	Vic.	Qld.(a)	S.A.(a)	W.A.	Tas.	N.T.(a)	A.C.T.	Aust.
Against the Person ..	1,158	355	247	133	111	77	23	12	2,116
Against Property ..	2,818	1,451	352	240	250	224	1	7	5,343
Forgery and Offences against the Currency ..	115	208	..	20	5	34	21	..	403
Against Good Order ..	83	9	1	2	3	..	1	..	99
Other Miscellaneous ..	89	48	9	27	15	2	..	..	190
Total .. .. .	4,263	2,071	609	422	384	337	46	19	8,151

(a) Year ended 30th June following.

The following table shows the number of committals in 1939 and in each year from 1949 to 1953, with the rate of such committals per 10,000 of population :—

### COMMITTALS TO HIGHER COURTS.

State or Territory.	1939.	1949.	1950.	1951.	1952.	1953.
NUMBER.						
New South Wales .. ..	2,288	3,776	3,513	3,706	4,504	4,263
Victoria .. ..	1,777	1,751	1,638	1,650	1,671	2,071

Aust. Cap. Terr.	114	114	430	426	477	476	545	541	381	378
Total .. ..	61,782	61,397	140,600	139,936	148,201	147,422	138,199	137,676	127,136	126,631
Rate per 10,000 of population ..	88.0		170.5		174.5		158.9		143.2	

(a) Year ended 30th June following.

Under the heading "drunkenness" are included cases of ordinary drunkenness, drunkenness and disorderliness, and habitual drunkenness.

The number of convictions, as might naturally be expected, is almost identical with the number of cases.

(ii) *Convictions per 10,000 of Population.* In the twenties the convictions for drunkenness averaged approximately 100 per 10,000 of population, but the rate fell away considerably during the following years and was only 57.1 in 1931. Following that year, the average rose steadily to 84.1 in 1936 while the annual average for the period 1936 to 1939 was 82.7 and that for the years 1940 to 1945 was 90.8. Following an appreciable increase in the previous year the convictions per 10,000 rose very steeply in 1946 to 132.1 and increased to 174.5 in 1951, but declined to 143.2 in 1953.

The convictions for drunkenness taken by themselves are not altogether a satisfactory test of the relative sobriety of the inhabitants of each State as several important factors must be taken into consideration. The age and sex constitution of the people, for example, are by no means identical in all the States. Another factor is the distribution of the population. Arrest or summons for drunkenness obviously is more likely in the regions densely populated than in those sparsely populated. In addition, allowance must be made for the attitude of the magistracy, the police and the general public in regard to the offence.

(iii) *Consumption of Intoxicants.* The following table shows the consumption of spirits, wine and beer per head of population in Australia during the years 1938-39 and 1949-50 to 1953-54 :—

CONSUMPTION OF INTOXICANTS IN AUSTRALIA PER HEAD OF POPULATION.

Year.				Spirits.	Wine.	Beer.
				Proof Gals.	Gals.	Gals.
1938-39	..	..	..	0.22	0.65	12.47
1949-50	..	..	..	0.32	1.50	18.83
1950-51	..	..	..	0.38	1.61	20.41
1951-52	..	..	..	0.32	1.80	21.19
1952-53	..	..	..	0.20	1.36	21.80
1953-54	..	..	..	0.25	1.39	23.01

(iv) *Remedial Treatment of Drunkenness.* Legislation has been passed in each State providing for the commitment of inebriates to special Government institutions. The laws in the various States are as follows :—New South Wales, Inebriates Act 1912 amended in 1949; Victoria, Inebriates Act 1928; Queensland, Inebriate Institutions Act 1896; South Australia, Inebriates Act 1908-1934, Convicted Inebriates Act 1913-1934; Western Australia, Inebriates Act 1912-1919; Tasmania, Inebriates Act 1885, Inebriate Hospitals Act 1892 and 1941. Curative work was first undertaken by the Government of New South Wales in 1907. In most cases the institutes are connected with the gaols, and, naturally, custodial measures are still a strong feature in their management; nevertheless, the results of remedial measures have been encouraging.

7. *First offenders.*—In all the States, statutes dealing with first offenders have been in force for many years. Existing legislation is as follows :—New South Wales, Crimes Act 1900 amended in 1924 and 1929, First Offenders (Women) Act 1919 as amended in 1929; Victoria, Crimes Act 1928; Queensland, Criminal Code Acts 1899 to 1945; South Australia, Offenders Probation Act of 1913-1953; Western Australia, Criminal Code Act 1913-1942; Tasmania, Probation of Offenders Act 1934. The method of procedure is practically the same in all cases, i.e., with regard to most first offenders convicted of a minor offence the magistrate or judge is empowered to allow the offender to go free on

recognizances being entered into for his good behaviour for a certain period. In practice, this humane law has been found to work excellently, very few of those convicted under it having been found to relapse into crime.

8. **Children's Courts.**—Special courts for the trial of juvenile offenders have been established in New South Wales, Victoria, Queensland, Western Australia and Tasmania, while Children's Courts, although not under that title, are provided for by the Maintenance Act 1926-1952 in South Australia. The object of these courts is to avoid, as far as possible, the unpleasant associations of the ordinary police court.

### § 3. Higher (Judges') Courts.

1. **Convictions at Higher Courts.**—The following table shows for each State and Territory during 1953 and in Australia as a whole in that and the previous year, the number of convictions at Higher Courts for each of the principal offences.

CONVICTIONS AT HIGHER COURTS, 1953.

Offence.	N.S.W. (a)	Vic.	Qld. (a)	S.A.	W.A.	Tas.	N.T. (a)	A.C.T.	Australia.

(a) Year ended 30th June, 1954. (b) Includes one conviction for causing death by dangerous driving. (c) Includes 2 convictions for causing death by negligent driving.

2. **Convictions at Higher Courts, Years 1939 and 1949 to 1953.**—The number of convictions at higher courts and the rate per 10,000 of population for these years are given below.

## CONVICTIONS AT HIGHER COURTS.

State or Territory.	1939.	1949.	1950.	1951.	1952.	1953.
NUMBER.						
New South Wales(a) ..	982	1,352	1,299	1,388	1,629	1,449
Victoria .. ..	690	669	722	761	883	918
Queensland(a) .. ..	214	313	346	336	419	502
South Australia .. ..	179	205	207	307	328	330
Western Australia .. ..	71	110	149	141	213	241
Tasmania .. ..	39	109	148	163	171	203
Northern Territory(a) ..	11	39	44	44	26	51
Australian Capital Territory	14	23	49	33	16	10
Total .. ..	2,200	2,820	2,964	3,173	3,685	3,704
Rate per 10,000 of population	3.2	3.5	3.6	3.8	4.3	4.2

(a) Year ended 30th June following.

3. **Habitual Offenders**—In most States judges have power to declare as habitual criminals persons who have a certain scheduled number of previous convictions. A summary of the methods adopted in each State was given on pp. 497-8 of Official Year Book No. 40.

4. **Capital Punishment**.—There were fifteen executions in Australia during the period 1939 to 1953. One took place in New South Wales (in 1939), six in Victoria (two in 1939, one in 1942 and three in 1951), four in South Australia (one in 1944, one in 1946, one in 1950 and one in 1953), one in Western Australia (in 1952), one in Tasmania (in 1946), and two in the Northern Territory (in 1952).

Under the Criminal Code Amendment Act 1922 capital punishment was abolished in Queensland.

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which at the present time would be dealt with in the lower or magistrates' court. With the growth of settlement and the general improvement in social and moral conditions, the list was, however, considerably curtailed, and the existing tendency is practically to restrict death sentences to cases of murder. It may be stated that in cases of rape, which is a capital offence in some of the Australian States, the penalty has been but sparingly inflicted in recent years. Juries are reputed to be loath to convict on this charge, owing to the uncertainty whether sentence of death will be carried out.

The average annual number of executions in Australia from 1861 to 1880 was 9; from 1881 to 1900, 6; from 1901 to 1910, 4; from 1911 to 1920, 2; from 1921 to 1930, 2; from 1931 to 1940, 1; and from 1941 to 1950, 0.5.

## § 4. Civil Courts.

1. **Lower Courts**.—The total number of plaints entered and the amounts awarded to plaintiffs during the year 1953 are shown in the following table. The figures represent the returns from the Small Debts Courts in New South Wales, Courts of Petty Sessions in Victoria, Magistrates' Courts in Queensland, Local Courts of South Australia and Western Australia, Courts of Requests in Tasmania, Courts of Summary Jurisdiction in Northern Territory and Court of Petty Sessions in the Australian Capital Territory.

## CIVIL CASES AT LOWER COURTS, 1953.

(a) Year 1953-54.

2. **Higher Courts.**—The following table shows the transactions on the civil side in the Higher Courts during the year 1953. The particulars given below include the number and amount of judgments entered by default or confession, or agreement, and differ from those in issues of the Official Year Book prior to No. 29, which related in most States only to causes actually tried during the year.

The New South Wales returns refer to judgments in the District Courts only, and exclude 3,276 judgments signed in the Supreme Court.

## CIVIL CAUSES AT HIGHER COURTS, 1953.

(vi) *Divorces Granted—Duration of Marriage and Issue of Persons Involved.* The following table shows the number of divorce decrees made absolute in 1954, classified according to the legal duration of the marriage (i.e., the period from the date of marriage to the date when the decree nisi was made absolute) and the issue involved. In respect of 42 per cent. of the divorces finalized in that year the marriages had been celebrated within the previous 10 years. Of the couples divorced, 35 per cent. had no children, 29 per cent. had one child, 21 per cent. had two children, 9 per cent. had three children and 6 per cent. had four or more children.

## DIVORCES : DURATION OF MARRIAGE AND ISSUE OF PARTIES, AUSTRALIA, 1954.

(NOTE.—Excludes nullity of marriage.)

(vii) *Number of Divorced Persons at Censuses 1901 to 1954.* The following table shows the number and proportions of divorced males and females in Australia at each Census from 1901 to 1954. A classification of these persons by age appeared in earlier issues of the

Official Year Book (see No. 39, page 269). Prior to 1911 no record was made of divorced persons in South Australia, so comparisons cannot be made to extend beyond that date.

### DIVORCED PERSONS AT CENSUS DATES : AGE DISTRIBUTION, AUSTRALIA.

Sex.	Number.						Proportion per 10,000, 15 years of age and over.					
	1901. (a)	1911.	1921.	1933.	1947.	1954.	1901. (a)	1911.	1921.	1933.	1947.	1954.
Males ..	1,234	2,368	4,233	10,298	25,052	32,389	10	15	23	42	89	100
Females ..	1,149	2,140	4,304	10,888	27,516	36,650	10	15	24	46	96	115

(a) Excludes South Australia.

4. **Bankruptcies.**—Particulars relating to bankruptcy in each State up to the end of 1927 were incorporated under this heading in issues of the Official Year Book prior to No. 23. Under the terms of the Bankruptcy Act 1924–1955 jurisdiction in bankruptcy and insolvency was taken over by the Commonwealth from 1st August, 1928. The Act made provision for the declaration of districts, and each State (except Queensland) and the Northern Territory have been declared bankruptcy districts. The bankruptcy district of New South Wales includes the Australian Capital Territory. Queensland has been divided into three districts corresponding to the three Supreme Court districts in that State. Operations under the Act for the year ended 31st July, 1954 are shown in the following table. For purposes of comparison, annual averages for the five-yearly period 1948–49 to 1952–53 are appended to the table.

### FEDERAL BANKRUPTCY ACT : OPERATIONS, 1953–54.

It is pointed out that the procedure in certain States has been influenced largely by the procedure in force prior to the passing of the Commonwealth Act, and that therefore, no particular significance attaches to the large number of compositions, etc., in South Australia and Western Australia.

The Bankruptcy Act 1930 created a Federal Court of Bankruptcy and provided for the appointment of a Judge or two Judges thereto. In 1930 a Commonwealth Judge in Bankruptcy was appointed, in addition to the State Judges, to deal with bankruptcy work in New South Wales and Victoria, as the Courts in these States were unable to cope with the business. All the bankruptcy cases in these States are now heard in the Federal Court which sits in Sydney and Melbourne alternately.

5. **High Court of Australia.**—Under the provisions of Section 71 of the Commonwealth Constitution, the judicial power of the Commonwealth is vested in a Supreme Court called the High Court of Australia, and in such other courts as the Parliament creates or invests with federal jurisdiction. The High Court of Australia possesses both original and appellate jurisdiction. The powers of the Court are defined in the Commonwealth Constitution, and in the Judiciary Act 1903-1955. The Court consists of a Chief Justice and six other judges. Sittings of the Court are held in the capitals of the various States as occasion may require. The High Court functions as a Court of Appeal for Australia. The following statement shows the transactions of the High Court for 1953 and 1954.

#### TRANSACTIONS OF THE HIGH COURT OF AUSTRALIA.

Original Jurisdiction.	1953.	1954.	Appellate Jurisdiction.	1953.	1954.
Number of writs issued	173	250	Number of appeals set down for hearing ..	124	131
Number of causes entered for trial ..	48	51	Number allowed ..	35	46
Judgments for plaintiffs	67	56	Number dismissed ..	64	60
Judgments for defendants	16	10	Otherwise disposed of	18	34
Otherwise disposed of ..	10	18			
Amount of judgments	£1,006,978	£68,019			

During 1953 and 1954 respectively the High Court dealt also with the following : Appeals from Assessments under Taxation Assessment Act, 68, 49 ; Special cases stated for the opinion of the Full Court, 13, 8 ; Applications for Prohibitions, etc., 47, 28. The fees collected amounted to £8,633 in 1953 and £3,202 in 1954.

6. **Commonwealth Court of Conciliation and Arbitration.**—Information regarding this Court, which was established under the Conciliation and Arbitration Act 1904-1955, will be found in Chapter VI.—Labour, Wages and Prices, of this volume and in the *Labour Report* issued by this Bureau.

### § 5. Police and Prisons.

1. **General.**—Early issues of the Official Year Book (*see* No. 4, p. 918) contain a *résumé* of the evolution of the police force in Australia up to the passing of the Police Act 1862 (25 Vic. No. 16) in New South Wales.

2. **Duties of the Police.**—In addition to the ordinary employment attaching to their office, the police are called upon to perform many duties which in other countries are carried out by other officials. Much of the time of the several forces is taken up in extraneous duties not connected with the protection of life and property, while the cash value of the services rendered to other Government departments is considerable.

3. **Strength of Police Force.**—The strength of the police force including probationers, cadets, special constables and women police, in each State and Territory at the end of 1939 and the years 1949 to 1953 is shown in the following table.

The police forces (with the exception of the small body of Commonwealth police maintained in the Northern Territory and in the Australian Capital Territory) are entirely under State control, but, by arrangement, the Commonwealth Government utilizes their services in various directions, such as acting as aliens registration officers, and policing the various regulations, etc.

#### STRENGTH OF POLICE FORCES.

State or Territory.	Area of State in Sq. Miles.	No. of Police.					
		1939.	1949.	1950.	1951.	1952.	1953.
New South Wales	309,433	3,907	4,382	4,449	4,527	4,688	4,661
Victoria..	87,884	2,333	2,597	2,751	2,879	2,992	3,047

Population to each Police Officer ..	..	733	720	715	695	692	703

(a) 30th June of year following.

The figures for New South Wales for 1953 exclude 7 black trackers and cadet trackers (i.e., natives employed in detection of offenders chiefly in outlying districts) and 4 matrons, while the Victorian returns exclude one black tracker. For Queensland the figures exclude 24 black trackers, for South Australia 4 wardresses, for Western Australia 18 black trackers and 6 female searchers, and for the Northern Territory 28 black trackers. Women police are employed in all the States, the respective numbers for 1953 included in the table above being :—New South Wales 36, Victoria 28, Queensland 9, South Australia 20, Western Australia 9, Tasmania 5 and Australian Capital Territory 2. Their work is mainly preventive, relating particularly to females and neglected children. They also carry out escort duties in respect of female prisoners.

4. Prison Accommodation and Prisoners, 1953.—The table below shows the number of prisons in each State, the accommodation therein, and the number of prisoners under sentence at the end of 1953 :—

#### PRISON ACCOMMODATION AND PRISONERS, 1953.

Particulars.	N.S.W. (a)	Vic.	Qld. (a)	S. Aust.	W. Aust. (a)	Tas. (a)	N.T. (a)	Total.
No. of Prisons ..	15	10	7	16	19	2	2	71
Accommodation in—								
Separate cells ..	2,295	1,263	597	681	669	154	31	5,690
Wards ..	..	347	239	203	207	1	28	1,025
Prisoners at end of year ..	2,155	1,173	617	401	360	152	47	4,905

(a) Year ended 30th June following.

The figures refer to prisoners under sentence and exclude aborigines and debtors. There are no gaols in the Australian Capital Territory, but there is a lock-up consisting of five cells attached to the police station at Canberra, and a similar lock-up at Jervis Bay, where offenders are held while awaiting trial or serving short sentences not exceeding one week imposed by the Magistrate's Court.

5. Prisoners in Gaol, 1939 and 1949 to 1953.—The number of prisoners in gaol at 31st December in each of the years 1939 and 1949 to 1953 and the proportion per 10,000 of the population are shown in the following table. The figures refer to prisoners under sentence and exclude aborigines and debtors.

## PRISONERS IN GAOL.

State or Territory.	1939.	1949.	1950.	1951.	1952.	1953.
NUMBER.						
New South Wales(a)	1,355	1,853	1,885	2,070	2,135	2,155
Victoria ..	1,144	993	981	1,048	1,248	1,173
Queensland ..	261	(a) 406	(a) 454	(a) 472	(a) 538	(a) 617
South Australia ..	199	234	261	316	437	401
Western Australia(a)	244	333	342	362	374	360
Tasmania(a) ..	108	122	114	142	154	152
Northern Territory ..	23	(a) 41	(a) 52	(a) 34	(a) 44	(a) 47
Total ..	3,334	3,982	4,089	4,444	4,930	4,905
Per 10,000 of population ..	4.8	4.9	4.9	5.2	5.6	5.5

(a) 30th June of year following.

In recent years the proportion of prisoners in gaol to the total population has remained about 5 per 10,000. This figure compares very favorably with that obtaining in 1891, when the proportion was a high as 16 per 10,000.

## § 6. Cost of Administration of Justice.

1. Expenditure by the States.—The table below shows the expenditure from Consolidated Revenue during 1953-54 in connexion with the administration of justice in each of the States.

Net costs are shown instead of gross expenditure as it is difficult to obtain comparable figures of the total costs of the various services under this heading. It will be noted that in South Australia the receipts for legal fees and registrations exceed the actual expenditure under "Justice".

## NET EXPENDITURE ON ADMINISTRATION OF JUSTICE, 1953-54.

State.	Net Expenditure.			Per Head of Population.		
	Justice.	Police.	Prisons.	Justice.	Police.	Prisons.
	£	£	£	s. d.	s. d.	s. d.
New South Wales ..	928,903	5,066,266 <sup>7</sup> / <sub>8</sub>	832,467	5 6	29 10	4 11
Victoria ..	531,319	3,603,610	443,273	4 4	29 9	3 8
Queensland ..	192,128	2,657,407 <sup>5</sup> / <sub>8</sub>	181,844	3 0	40 11	2 10
South Australia ..	— 3,846	1,254,112	169,928	— 0 1	31 11	4 4
Western Australia ..	34,068	1,159,918	151,165	1 1	36 10	4 9
Tasmania ..	125,613	502,374	73,998	8 2	32 5	4 9
Total ..	1,808,185	14,243,687	1,852,675	4 2	32 2	4 2
1952-53 ..	1,890,836	13,478,847	1,723,190	4 4	31 0	4 0
1951-52 ..	1,599,109	12,011,760	1,560,028	3 9	28 4	3 8
1950-51 ..	979,263	9,361,578	1,177,452	2 5	22 7	2 10
1938-39 ..	315,881	3,499,202	417,679	0 11	10 1	1 2

2. **Commonwealth Expenditure.**—The expenditure shown in the previous table is that incurred by the State Governments only, and does not include expenditure of the Commonwealth Attorney-General's Department which is shown hereunder for the years 1938-39 and 1949-50 to 1953-54.

**EXPENDITURE OF THE COMMONWEALTH ATTORNEY-GENERAL'S DEPARTMENT.**

(£.)

Year.					Gross Expenditure.	Receipts.	Net Expenditure.
1938-39	..	..	..	..	281,497	111,036	170,461
1949-50	..	..	..	..	820,560	183,398	637,162
1950-51	..	..	..	..	1,096,274	204,362	891,912
1951-52	..	..	..	..	1,348,721	238,676	1,110,045
1952-53	..	..	..	..	1,438,139	286,746	1,151,393
1953-54	..	..	..	..	1,549,991	321,683	1,228,308

The expenditure for each year includes that in connexion with patents and copyright which amounted in 1953-54 to £381,122. The Commonwealth took over jurisdiction in bankruptcy in August, 1928, and the expenditure thereon in 1953-54 amounted to £112,788. Revenue of the Attorney-General's Department for the year 1953-54 amounted to £321,683, comprising £186,684 for patents, copyright, trade marks and designs, £48,856 for bankruptcy and £86,143 miscellaneous, including fees and fines.

In addition to the foregoing, during 1953-54, £108,726 was expended in the Northern Territory for the upkeep of the police force and prison services.

Expenditure in connexion with the Australian Capital Territory police in 1953-54 amounted to £86,413.

## CHAPTER XIV.

### PUBLIC HEALTH AND RELATED INSTITUTIONS.

#### A. PUBLIC HEALTH.

##### § 1. State Public Health Legislation and Administration.

1. **New South Wales.**—The Department of Public Health comes under the jurisdiction of the Minister for Health, with an Under-Secretary as Permanent Head of the Department for administrative purposes.

There is also a Director-General of Public Health and Chief Medical Adviser to the Government, who is *ex-officio* President of the Board of Health and Chairman of the Nurses' Registration Board. He is assisted by a Deputy Director-General.

The Inspector-General of Mental Hospitals is responsible for the administration of that part of the Lunacy Act relating to the care and treatment of mental patients. There is also a Deputy Inspector-General.

The following statutory authorities are constituted under Acts administered by the Minister for Health:—Board of Health (Public Health Act), Hospitals Commission of N.S.W. (Public Hospitals Act), Milk Board (Milk Act), Dental Board (Dentists Act), Pharmacy Board (Pharmacy Act), Medical Board (Medical Practitioners Act), Board of Optometrical Registration (Opticians Act), N.S.W. State Cancer Council (N.S.W. State Cancer Council Act), Ambulance Transport Service Board (Ambulance Transport Service Act), Physiotherapists Registration Board (Physiotherapists Registration Act) and Nurses Registration Board (Nurses Registration Act).

The Department's activities extend over the whole of the State and embrace all matters relating to public health and the greater part of the general medical work of the Government. These include the following:—(a) Supervision of the work of local authorities (municipal and shire councils) in relation to public health matters connected with the following Acts—Public Health Act, Noxious Trades Act and Pure Food Act; (b) Scientific Divisions (Government Analyst, Microbiological Laboratory, and Division of Industrial Hygiene); (c) Tuberculosis and Social Hygiene Divisions; (d) Medical Officers of Health at Sydney, Broken Hill, Newcastle, Wollongong, Bathurst and Lismore; (e) State Hospitals and Homes and State Sanatoria; (f) Mental Hospitals; (g) Public Hospitals (Hospitals Commission); (h) Maternal and Baby Welfare (Baby Health Centres); (i) School Medical and Dental Services; and (j) Publicity, Nutrition and Library Services.

2. **Victoria.**—The Ministry of Health Act 1943 created the position of Minister of Health and made the Minister holding that position responsible for all Acts formerly administered by the Minister of Public Health as well as all other legislation, including the Mental Hygiene Acts and the Hospitals and Charities Acts, which related to the health and well being of the people of the State.

The original Department of Public Health became the General Health Branch of the Department of Health controlled by a Chief Health Officer. Subsequently various functions were taken from that Branch to form the Maternal and Child Hygiene Branch and the Tuberculosis Branch. With the Mental Hygiene Branch these three make up the four branches of the Department.

At the end of 1951, an Authority was established under the Mental Hygiene Authority Act 1950 to take charge of the Mental Hygiene Branch. The Authority consists of three members of whom one, an expert in psychiatry, is Chairman. Although the Authority is Head of the Branch, detailed administration can be carried out by its officers leaving the Authority free to deal with major problems relating to the improvement of

treatment and accommodation for the mentally ill. The efforts of the Authority at the present time are principally concerned with improving existing hospitals and providing additional accommodation made necessary by the increase in population in the State and with developing preventive out-patient psychiatric services designed to reduce the need for in-patient beds.

The General Health Branch, in collaboration with local government health authorities, is actively carrying on its fight against infectious diseases. The success of this campaign may be illustrated by the following figures concerning diphtheria, 3,254 cases with 93 deaths in 1927 and only 107 cases with 4 deaths in 1954.

New legislation, the Infectious Diseases Hospitals Act 1954, was introduced late in 1954. This Act repealed all previous legislation relating to infectious diseases hospitals and made the State Government, through the Hospitals and Charities Commission, responsible from 1st October, 1954 for the whole of the cost of treating cases of infectious disease.

Work in regard to the treatment and prevention of venereal disease and improvements in methods of treatment have resulted in a very marked advance. It is now no longer necessary to maintain a special hospital unit in this State for the treatment of cases of venereal disease. Special clinics for prophylaxis and treatment are attached to several public hospitals in the State and treatment may be obtained at all public hospitals.

The Poliomyelitis Division which has been operating since 1949 provides a consultant diagnostic service and maintains an aftercare treatment service for the whole of the State. Three medical officers and a number of visiting physiotherapists and nurses provide such treatment for a great number of patients mainly in their own homes.

The Industrial Hygiene Division staffed by medical and scientific officers with a number of specially trained inspectors supervises the working conditions of the 325,000 persons employed in industry in this State.

The Tuberculosis Branch under the control of a Director of Tuberculosis carries on work aimed at preventing as far as possible the spread of tuberculosis. Using improved diagnostic facilities and better methods of treatment, it has been possible to reduce greatly the incidence of this disease. No longer is there a waiting list for entry into a sanatorium, in fact, the closure of one of the State sanatoria at an early date is contemplated.

The Maternal and Child Hygiene Branch has been largely responsible for the reduction of Victoria's infant mortality rate to a point where it is now probably the lowest in the English-speaking world. This Branch is also concerned with pre-natal hygiene, the development of pre-school services generally and the school medical and dental services.

The Cancer Institute, set up in 1949, under the provisions of the Cancer Institute Act 1948, is now operating a very active out-patients treatment centre as well as a small in-patient unit. Facilities provided at the Institute for radiation therapy are being extended by installing a 4 m.e.v. linear accelerator. It will be the first of this type of machine to operate in Australia.

Legislation which is the concern of the Minister of Health includes the following :—Anti-Cancer Council Act, Births Notification Acts, Cancer Institute Act, Cemeteries Acts, Dietitians Registration Act, Part V. of the Goods Act, Hairdressers Registration Acts, Health Acts, Hospitals and Charities Acts, Infectious Diseases Hospitals Act, Masseurs Acts, Medical Acts, Mental Deficiency Act, Mental Hygiene Acts, Midwives Act, Nurses Acts, Opticians Registration Act, Poisons Acts and Venereal Diseases Act.

3. *Queensland.*—(i) *General.* The Health Acts 1937 to 1949 are administered by the Director-General of Health and Medical Services subject to the Minister for Health and Home Affairs. A Central Staff controls the following Divisions :—

(a) *Division of Public Health Supervision.* This Division is controlled by the Deputy Director-General of Health and Medical Services and comprises separate sections of environmental sanitation, food and drug control, enthetic (venereal) diseases, hookworm control and Hansen's disease control. Qualified full-time officers are in charge of each

section. Free treatment of venereal diseases is offered at the Department's male and female clinics in Brisbane, and at any public hospital. Two institutions (one at Peel Island in Moreton Bay for white patients and one at Fantome Island near Townsville for aboriginal patients) are maintained for the treatment of Hansen's disease. Modern therapy with sulphone drugs has caused a dramatic decline in numbers of patients at these institutions. Free immunization against diphtheria, whooping cough and tetanus is offered by most of the Local Authorities. A recent survey showed that 94 per cent. of school children in the Greater Brisbane area and 90 per cent. in the rest of the State had been immunized against diphtheria.

(b) *Division of Tuberculosis.* The Director, assisted by medical officers and nurses, exercises control of patients with tuberculosis. A central chest clinic in Brisbane offers Mantoux tests, X-ray examinations, and inoculations of Mantoux negative reactors free of charge and this service is extensively used. A mobile X-ray unit visits country districts. Children in the final grade of primary schools are now being Mantoux tested and given B.C.G. vaccine.

(c) *Division of Industrial Medicine.* This Division exercises supervision over the health of workers in both primary and secondary industries, including control of leptospirosis (Weil's disease) scrub typhus and other fevers of occupational origin in the sugar-cane growing districts north of Ingham.

(d) *Division of Maternal and Child Welfare.* The Director, assisted by full-time and part-time health officers and a staff of qualified nurses, offers supervision and advice on the rearing and health of infants and pre-school children at 217 baby health centres throughout the State. Outlying centres are visited by air or by special rail car. Homes for in-patient treatment of infants with feeding problems have been established at Brisbane, Toowoomba, Ipswich and Rockhampton.

(e) *Division of School Health Services.* This Division comprises the Chief Medical Officer, School Health Services, and a staff of medical officers, dentists and visiting school nurses. Every child has a medical examination at least once in three years.

(f) *Division of Mental Hygiene.* The Director is responsible for the care and treatment of mentally sick patients in the State's four mental hospitals, at Brisbane, Toowoomba, Ipswich and Charters Towers.

(g) *Division of Laboratory Services.* Two laboratories—the Laboratory of Microbiology and Pathology and the Government Chemical Laboratory—are maintained to ensure the purity of a wide range of foodstuffs and materials. The former also offers a service in clinical pathology to country hospitals and private medical practitioners.

(ii) *Hospitals.* All public hospitals operate under the district system, which provides for the constitution of Hospitals Districts and Hospitals Regions and a Hospitals Board for each district. The State is divided into 11 Hospitals Regions with a base hospital for each region which comprises a number of Hospitals Districts. The purpose of the regional scheme is to co-ordinate the public hospitals in the region with the base hospital. The administration of the hospitals services, including public dental services, in each Hospitals District is vested in the Hospitals Board which comprises not less than four members nor more than eight members appointed by the Governor-in-Council and one member elected by the component Local Authorities. There are 54 Hospitals Boards controlling 130 public hospitals.

4. *South Australia.*—The Department of Public Health embraces the activities of the Central Board of Health, the School Medical Services, and the public health aspect of the control of tuberculosis, including the State X-ray Health Survey, under the control of the Director of Tuberculosis.

The Central Board of Health consists of five members, three of whom (including the chairman) are appointed by the Governor while one each is elected by metropolitan local boards and all other local boards. The Central Board of Health administers the Health, Food and Drugs, Dangerous Drugs, Noxious Trades, Bakehouses Registrations and Early Notification of Birth Acts. The Board is also concerned to some degree with

Acts relating to local government, abattoirs and cremation. Other legislation administered by the Department of Public Health relates to venereal diseases and vaccination.

The Health Act, 1935-1954 constitutes every municipal council and every district council a local board of health for its municipality or district. There are 143 of these local boards under the general control and supervision of the Central Board. Under the Food and Drugs Act each local board is constituted the local authority for its respective district, except in the metropolitan area, for which the Metropolitan County Board is the local authority.

The medical staff of the Department includes the Director of Tuberculosis, a Senior Medical Officer and the Principal Medical Officer for Schools, six full-time medical officers, one temporary medical officer and seven part-time medical officers. Two dentists, one dental assistant and seven nurses are engaged in connexion with the School Medical Services. There are seven full-time and fourteen part-time inspectors directly responsible to the Board. There is also a nurse inspector employed to advise and assist local boards in connexion with infectious diseases. A consulting radiologist, three radiographers and three nurses are engaged in the State X-ray Health Survey and one nurse in B.C.G. vaccination. The inspectors appointed under the Health and Food and Drugs Acts periodically visit the local districts and see, generally, that the local boards are performing their duties.

5. *Western Australia.*—The legislation in this State is the Health Act 1911-1954. This was consolidated and reprinted in 1948 and amended in 1950, 1952 and 1954. The Central Authority is the Department of Public Health, controlled by a Commissioner, who must be a qualified medical practitioner. The State is covered by Local Authorities which are constituted as Municipalities or Road Boards.

It is provided that a Local Board of Health may be set up in lieu of a Road Board, but this method of control is no longer used. In any emergency the Commissioner may exercise all the powers of a Local Health Authority in any part of the State.

Interesting features of recent legislation are as follows:—(a) Act No. 70 of 1948 gave compulsory power to control sufferers from tuberculosis and established a Tuberculosis Control Branch; (b) Act No. 11 of 1952 gave wide powers to regulate the sale and use of pesticides; (c) Act No. 34 of 1954 provides for the licensing of manufacturers of therapeutic substances. The Act has not yet been proclaimed; and (d) Act No. 45 of 1954 requires every medical practitioner who attends a child which dies within 28 days of birth to notify the Commissioner.

6. *Tasmania.*—The Department of Public Health is under the jurisdiction of the Minister for Health, and the administration of the various services is controlled by the permanent head of the Department, the Director-General of Medical Services, who is also responsible for the administration of the Hospital and Medical section. Associated with the permanent head are the Director of Public Health, the Director of Tuberculosis, and the Director of Mental Hygiene.

The Hospital and Medical Services section is responsible for administration of the laws relating to hospitals and nurses' registration, and the following services: Government Medical Service, Cancer Clinics, Bush Nursing Service, and Institutions for the Aged and Infirm at St. John's Park and Cosgrove Park.

Public Health functions comprise administration of laws relating to public health, food and drugs, places of public entertainment, cremation, and the following services: School Medical and Dental, Maternal and Child Welfare, Infectious and Venereal Disease control, Analytical Laboratory, and Mothercraft Home.

The Tuberculosis section is responsible for administration of the laws relating to tuberculosis, for conducting a continuous State wide X-ray survey and for the management of chest clinics in four centres in the State and of the chest hospitals at New Town and Evandale.

The Mental Hygiene section is responsible for administration of the laws relating to mental hospitals and mental defectives, and for the management of Lachlan Park Hospital (Mental Hospital) and Millbrook Psychopathic Home.

## § 2. The Commonwealth Department of Health.

1. **General.**—The Commonwealth Department of Health was created by an Order-in-Council of 3rd March, 1921. This Order specified the functions to be performed by the Department in addition to Quarantine. An amendment to the Constitution in 1946 gave the Commonwealth power to make laws with respect to pharmaceutical, hospital and sickness benefits, and medical and dental services.

As part of the National Health Service the following benefits and services are provided under the National Health Act 1953: a free general practitioner medical service to pensioners and their dependants, and pharmaceutical, hospital and medical benefits to the community generally.

Assistance to sufferers from tuberculosis is provided under the Tuberculosis Act 1948 and free milk for school children under the States Grants (Milk for School Children) Act 1950. Details of these services are provided in the following paragraphs.

The functions of the Department, apart from the National Health Service, are very widespread. They include Quarantine (Human, Animal and Plant), the fostering of medical research through the National Health and Medical Research Council, the provision of hospital and medical services in the Northern Territory, the manufacture of a large number of sera and pharmaceuticals by the Commonwealth Serum Laboratories, and the maintaining of fourteen Health Laboratories throughout Australia to provide X-ray, pathological and other services to the surrounding communities. A short description of these and other activities is provided below. (For additional information see Official Year Book No. 40, p. 515.)

2. **The National Health Service.**—(i) *Pharmaceutical Benefits.* Since September, 1950, under the provisions of the Pharmaceutical Benefits Act 1947–1952 and the National Health Act 1953, certain life-saving and disease-preventing drugs have been provided free of charge to the general community. Such drugs are supplied free if they have been duly prescribed by a medical practitioner registered within Australia.

The number of drugs listed as available as general pharmaceutical benefits has steadily increased and at present 251 separate preparations are supplied. Before a drug is listed as being available it must first be approved by the Pharmaceutical Benefits Advisory Committee, a body appointed by the Minister for Health.

All drugs listed in the British Pharmacopœia and other drugs as specified, are supplied free to eligible pensioners (i.e., those receiving age, invalid, widows' and service pensions and persons receiving a tuberculosis allowance) and their dependants.

Total expenditure on pharmaceutical benefits in the year 1954–55 was £10,739,467.

(ii) *Hospital Benefits.* The payment of hospital benefits to the States is authorized under Part V. of the National Health Act 1953. This Act continues the agreements entered into with the various States under the Hospital Benefits Act 1951. Under these agreements the Commonwealth pays the States certain sums of money which vary according to the number of occupied beds in public hospitals.

The rates of payment for occupied beds in public hospitals are determined by the category into which patients are grouped. Payment of 12s. per day is made for a patient who is a pensioner or a dependant of a pensioner. The rate of 8s. per day is paid for all other qualified patients.

A payment of 8s. per day is made also for patients in approved private hospitals. This payment is made to the proprietor of the private hospital.

An additional benefit of 4s. per day is paid in the case of patients who are members of an approved hospital benefit fund. This payment is made through the benefit organization and is normally paid to the patient with the amount payable by the organization.

Australian residents who are temporarily living overseas and their dependants who receive hospital treatment are eligible to receive the benefit of 8s. a day.

Total payments made for all types of hospital benefits (excluding patients in mental hospitals) in 1954–55 were £9,320,603.

(iii) *Medical Benefits.* A Medical Benefits scheme commenced to operate as from July, 1953, being authorized under the National Health (Medical Benefits) Regulations. These regulations were superseded by the National Health Act 1953. The basic principle of the scheme is the support of voluntary insurance against the costs of medical attention. The scheme provides for the payment of benefits by the Commonwealth, through medical insurance organizations that have been registered for the purpose. The Commonwealth benefits supplement the benefits paid by the registered organizations in respect of medical expenses incurred by members of those organizations and their dependants.

In 1954-55 Commonwealth expenditure on medical benefits was £4,209,495.

(iv) *Pensioner Medical Service.* The Pensioner Medical Service which commenced on 21st February, 1951 was introduced under the authority of the National Health (Medical Services to Pensioners) Regulations made under the provisions of the National Health Service Act 1948-1949. The service has been continued under the provisions of the National Health Act 1953.

Under this scheme pensioners and their dependants, as defined in the section above describing pharmaceutical benefits, are provided with a free general practitioner service. Specialist services are not provided. A small fee may be charged by practitioners who attend qualified patients outside normal surgery or visiting hours. Practitioners in the scheme are remunerated on a fee-for-service basis by the Commonwealth.

At the 30th June, 1955 there were 4,567 medical practitioners enrolled in the Pensioner Medical Service to provide medical services to approximately 640,200 eligible persons. More than 97 per cent. of eligible persons have now been enrolled in the scheme and more than 80 per cent. of general practitioners are participating.

In the year ended 30th June, 1955 medical practitioners in the scheme made 4,721,481 visits or surgery consultations to persons enrolled in the scheme. For these services they were paid a sum of £2,516,077. The average number of medical services rendered by practitioners to enrolled persons in this period was 7.5.

(v) *Tuberculosis Act.* The main provisions of this Act, which was assented to on 25th November, 1948, are as follows :—(a) Section 5, which authorizes the Commonwealth to enter into an arrangement with the States for an effectual national campaign against tuberculosis ; (b) Section 6, which empowers the Commonwealth to take over or provide specified facilities for the diagnosis, treatment and control of tuberculosis ; (c) Section 8, which provides for the setting up of an Advisory Council to advise the Commonwealth Minister for Health on matters relating to the national campaign ; and (d) Section 9, which authorizes the Commonwealth to pay allowances to sufferers from tuberculosis and their dependants to enable sufferers to give up work and undergo treatment, and thus minimize the spread of infection.

The Commonwealth has completed an arrangement with each State, whereby each State is required to conduct an effectual campaign against tuberculosis and to provide adequate facilities for that purpose. In consideration of this, the Commonwealth undertakes to reimburse the State for all approved capital expenditure in relation to tuberculosis on and after 1st July, 1948, and for net maintenance expenditure to the extent that it is in excess of net maintenance expenditure for the base year 1947-48. Thus, the States are required to carry out the actual physical or field work of the national campaign with the Commonwealth acting in an advisory, co-ordinating and financial capacity. For this reason, the Commonwealth has not found it necessary to make much use of its powers under Section 6.

An Advisory Council, known as the National Tuberculosis Advisory Council, has been set up and has already held seven meetings. There are eleven members under the chairmanship of the Commonwealth Director-General of Health. The members are the Commonwealth Director of Tuberculosis, the six State Directors of Tuberculosis, the Consultant (Chest Diseases) of the Department of Repatriation, two specialist private practitioners, and the Chief Administrative Officer of the Commonwealth Department of Health.

A system of tuberculosis allowances has been drawn up and is an important factor in the campaign against the disease. Payments under the scheme were commenced on 13th July, 1950. The rates of allowance from 27th October, 1955 were £9 12s. 6d. a week for a married sufferer with a dependent wife, £6 2s. 6d. a week for a sufferer without dependants (reducible to £4. when maintained free of charge in an institution), and 10s. a week for each dependent child under the age of sixteen (which is additional to child endowment). There is a means test, generous to the sufferer, which has regard only to income and not to property.

(vi) *Free Milk for School Children Scheme.* In 1950 the States Grants (Milk for School Children) Act was passed. The object of this Act was to improve the diet of school children by the addition of a small quantity of milk each day. All children under the age of thirteen years attending public or private primary schools, including nursery schools, kindergartens, crèches and aboriginal missions, are eligible to receive this issue. Wherever practicable the milk is given to the children in one-third of a pint bottles. The cost of the milk plus half the capital or incidental costs, including administrative expenses incurred in administering the scheme is reimbursed by the Commonwealth to the States. All States are now participants in the scheme, and at 30th June, 1955 approximately one million children were receiving free milk.

In the years 1953-54 and 1954-55 the following amounts were reimbursed to the various States and Territories:—1953-54, New South Wales £881,600, Victoria £429,000, Queensland £204,600, South Australia £156,000, Western Australia £107,138, Tasmania £219,580, Northern Territory £552, Australian Capital Territory £6,891, Total £2,005,361. 1954-55, New South Wales £980,589, Victoria £498,000, Queensland £323,349, South Australia £156,000, Western Australia £127,015, Tasmania £145,695, Northern Territory £921, Australian Capital Territory £10,760, Total £2,242,320.

3. *Other Activities of the Commonwealth Department of Health.*—(i) *Human Quarantine.* All passengers and crews arriving in Australia from overseas, either by air or sea are subjected to a medical inspection by quarantine officers for the purpose of preventing the introduction of disease into Australia.

At the major ports full-time quarantine officers carry out the work but in the minor ports use is made of local medical practitioners acting as part-time quarantine officers. In each State quarantine activities are controlled by a medical officer of the Commonwealth Department of Health with the title of Commonwealth Director of Health.

The main concern of the examining officers is to detect cases of quarantinable diseases smallpox, cholera, yellow fever, plague and typhus fever. These are not endemic in Australia and it becomes a matter of extreme moment to prevent their entry. In addition, infectious diseases such as chicken pox, mumps, scarlet fever and measles discovered on vessels are directed to appropriate care and placed in isolation where necessary.

For the quarantinable diseases quarantine stations are provided at the major ports and at Darwin, Thursday Island and Townsville. These are kept ready for occupation at all times and in them a case is kept until it is no longer a danger to the community.

The increasing use of air travel has created particular quarantine problems. Before the use of air transport Australia was some ten days travelling time from the nearest overseas port, e.g. Colombo. Persons suffering from an infectious or quarantinable disease would show the rash or other signs on arrival and before disembarkation. Passengers travelling by air, however, can arrive well within the incubation period, even from as far as England, which is only four days away by air.

It is for this reason that all intending passengers are required to be vaccinated against smallpox before departure and those from an area infected with cholera or yellow fever are in addition required to be inoculated against the particular disease. Passengers arriving by air are required to report any sickness which they might suffer within the fourteen days after arrival. All passengers are required to give their intended place of residence so that they may be traced if a case of disease occurs among the passengers on the aircraft or ship.

It will be seen that the security given to Australia for many years by its isolated geographic position is no longer complete and increasing reliance needs to be placed on a vigilant and flexible quarantine organization.

(ii) *Animal Quarantine.* Animal quarantine is authorized by the provisions of the Quarantine Act 1908-1950 and has as its objective the prevention of the introduction or spread of diseases of animals. This legislation covers the importation of all animals, raw animal products, biological cultures, etc., associated with animal diseases and goods associated with animals.

Domesticated animals, i.e., horses, cattle, pigs, sheep, goats, dogs, cats and poultry, are admitted from a limited number of countries depending on diseases present in the country of origin. All must be accompanied by health certificates which include prescribed tests. On arrival in Australia they are subject to quarantine detention.

Zoological specimens are imported into registered zoos where they remain in permanent quarantine. Circuses are also registered if exotic species of animals are kept. In a somewhat similar manner, animals for scientific purposes are imported to approved laboratories. All of these premises are kept under constant surveillance. Raw animal products such as hair, special types of wool, skins, hides, etc., are subjected to special treatment under quarantine control, whilst such items as raw meat, sausage casings and eggs, which cannot be sterilized, are admitted from very few countries. Other items such as harness, fittings, fodder, ship's refuse, etc., are appropriately treated to destroy possible infection.

The Division of Veterinary Hygiene was created in 1926 to deal with the administration of animal quarantine: formerly the full responsibility for this administration fell on the Director of Quarantine. The organization of the Division provides an excellent example of Commonwealth and State co-operation. The Central Administration is situated within the Health Department at Canberra, with a Director, an Assistant Director and Veterinary Officers. By provision in the Quarantine Act and by arrangement with the States, the Principal Veterinary Officer of the Department of Agriculture in each State is appointed Chief Quarantine Officer (Animals) of the State and members of his staff Quarantine Officers (Animals). These State officers, acting in their Commonwealth capacity, carry out the quarantine policy formulated by the Central Administration. Quarantine accommodation is provided at permanent animal quarantine stations at each Capital City.

The Division participates in world-wide international notification of the more serious contagious diseases of animals and maintains a census of such diseases throughout the world. Information regarding animal diseases and parasites in Australia is also collected and disseminated by means of service publications. Consultation on technical matters is maintained with various scientific institutions, notably the Commonwealth Scientific and Industrial Research Organization. In matters of policy and the quarantine control of imports there is a close liaison with the Department of Customs and Excise.

The Division collaborates with the "General" and "Plant" Divisions of the Quarantine Service. Many diseases of animals are communicable to man and for this reason "Animal" and "General" quarantine administration are in some respects inseparable. Similarly the interests of "Animal" and "Plant" Divisions overlap, many items such as insects, fodder, straw, etc., being the subject of combined control.

In each alternate year the Director of the Division convenes the Biennial Conference of Principal Commonwealth and State Veterinarians which meets under the aegis of the Australian Agricultural Council. At this Conference problems of animal health and disease control are discussed from a national point of view and consideration is given to Animal Quarantine matters. A report is made to the Agricultural Council.

In the Australian Capital Territory the control of animal disease, dairy and piggyery hygiene, advice to stockowners and management of the Canberra abattoir are carried out by veterinary officers of the Division.

(iii) *Plant Quarantine.* Since 1st July, 1906, the importation into Australia of all plants or parts of plants, cuttings, seeds and fruits, whether living or dead, has been subject to an increasingly stringent quarantine with the object of preventing the introduction of insect pests, plant diseases and weeds not yet established in this country. Under the Quarantine Act 1908-1950 general powers are held by which the quarantine inspectors are required to examine all plant material at the first port of entry and to release only such material as is free from diseases and pests. Everyone entering Australia is required to declare if he or she has any plant material in luggage or personal effects. Heavy penalties are laid down for those found deliberately evading the regulations. All plant material entering as cargo must also be declared.

When the Commonwealth became responsible for all plant quarantine, the State Governments agreed to co-operate by providing and maintaining inspection facilities and personnel for which they are reimbursed by the Commonwealth. In 1921 the administration of the regulations came under the newly-formed Department of Health, and in 1927 the Division of Plant Quarantine was created under a Director who is responsible for policy and legislation and for co-ordinating the work of the State Officers who carry out the detailed administration in their capacity as Commonwealth Officers.

Any plant material found carrying diseases or pests or suspected of doing so may be ordered into quarantine for remedial treatment, or if the treatment be impracticable, may be destroyed. Such treatments are paid for by the importer. Air transport has created many new problems in maintaining effective control. It is impossible in this summary to give details of regulations governing the different types of plants, but the following will indicate certain broad principles in them:—(a) The importation of plants likely to be infected with plant diseases, noxious fungi or poison plants is prohibited; (b) Agricultural seed must conform to standards of purity, insect pest and disease freedom; (c) Many commodities such as hops, cotton, peanuts in shell, nursery stock, potatoes, certain crop seeds, vines and specified plants may only be imported by approved importers under special conditions; (d) Certain plant products such as bulbs and timber (in logs or sawn), from specified areas may only be imported if accompanied by certificates showing that prescribed treatment has been given in the country of origin.

The regulations are constantly being amended in the light of experience, with the object of maintaining for Australia the freedom from a large number of serious diseases and pests of plants which ravage crops in other lands.

(iv) *The Commonwealth Serum Laboratories.* The laboratories were established in 1916 under the administration of the Quarantine Branch, Department of Trade and Customs (later the Commonwealth Department of Health, Order-in-Council, March, 1921). Work began in temporary quarters, but new buildings were erected and occupied in 1918 at Royal Park, Melbourne, where the Commonwealth had acquired 23 acres. In 1936, a farm of 325 acres was purchased for experimental and other purposes at Broadmeadows, 9 miles from Melbourne. The laboratories function as a Public Health Institute and are part of the Commonwealth Department of Health, conducting research and training of laboratory personnel. In addition, biological products are prepared on a large scale for use in the diagnosis, prevention and treatment of human and animal diseases.

Since their foundation 39 years ago, the laboratories have been greatly extended in size and scope. The number and variety of biologicals available for issue have thus been increased to the extent that Australia is practically independent of overseas supplies.

Continuous research is being conducted into all relevant aspects of Bacteriology and Immunology and related fields of work. New kinds of biological agents are prepared and tested as the growth of medical or scientific knowledge provides fresh means of diagnosis, prevention and treatment. Investigations are also made into other aspects of public health work. For the past 30 years the production of veterinary biologicals has been a feature of the work, and in recent years extensive development has occurred in this direction.

The result of increasing employment of veterinary products in the prevention of diseases of domestic animals and stock is reflected in the diminution of incidence of certain infectious diseases amongst stock with economic benefit to the community.

The laboratories also serve as a national centre for the maintenance in Australia of the International Standards of the Permanent Commission on Biological Standards (World Health Organization), and act as the regional reference centre for the World Health Organization in collating reports of prevalence of certain infectious diseases in Australia, and at the same time conduct laboratory investigations for the identification of diseases thus reported.

(v) *The Commonwealth Health Laboratories.* The fourteen health laboratories of the Department are situated at strategic points throughout Australia. They are located at Canberra, Darwin, Cairns, Townsville, Rockhampton, Toowoomba, Bendigo, Launceston, Hobart, Port Pirie, Kalgoorlie, Lismore, Tamworth and Albury. These laboratories were established as an essential part of the quarantine system but were also to undertake research into local health problems and to provide medical practitioners of each district with up-to-date facilities for laboratory investigation and diagnosis. It was realized that co-operation between the general practitioner with his clinical observations and knowledge of the environment of disease on the one hand, and the staff of a well-equipped laboratory on the other hand, is essential to the efficient investigation of disease and the effective operation of control measures.

From this standpoint, the laboratories have already proved their value in the determination of leptospirosis and endemic typhus in North Queensland, in the investigation of special local problems at Darwin, of undulant fever throughout Australia, of silicosis and tuberculosis at Kalgoorlie and of plumbism at Port Pirie. In these investigations close co-operation has existed with State and local health and hospital services; especially is this so in Queensland where collaboration has yielded exceptionally valuable results in differentiating the groups of fevers previously unclassified in that State. In this investigational work, as well as in more routine activities, the laboratories have at their disposal the full resources and technical and specialist facilities available at the Commonwealth Serum Laboratories and the School of Public Health and Tropical Medicine, Sydney.

(vi) *The School of Public Health and Tropical Medicine.* The Commonwealth Government, under an agreement with the University of Sydney, established a School of Public Health and Tropical Medicine at the University of Sydney as from 4th March, 1930, for the purpose of training medical graduates and students in the subjects of public health and tropical medicine. The organization of the Australian Institute of Tropical Medicine at Townsville was merged in the new school, and the staff, equipment and material were transferred to Sydney.

The work of the school comprises both teaching and investigation. Courses are held for the University post-graduate diploma of public health and the diploma of tropical medicine and hygiene. Lectures are given in public health and preventive medicine as prescribed for the fifth year of the medical curriculum. Other classes include students in architectural, social and school hygiene, lay officers and nurses in the tropical services, and missionaries, while training is also provided to certain personnel of the Armed Services, to sister tutors, and laboratory workers from various services and institutions.

Investigational work covers a wide field of public health and medical subjects, both in the laboratory and in the field. Field work has been carried out not only in Australia but in co-operation with the local administrations in Papua, New Guinea, Norfolk Island and Nauru and with the South Pacific Commission. Sections of Child Health, Occupational Health and Medical statistics have been recently added.

(vii) *Commonwealth Acoustic Laboratories.* The Department of Health established the first of the series of Acoustic Laboratories in January, 1947, in Sydney. The laboratory continued and expanded the work of the Acoustic Research Laboratory which was sponsored by the National Health and Medical Research Council during the years

1942-46 for the purpose of investigating problems of noise and difficulties of intercommunication in aircraft and tanks. After the 1939-45 War the Acoustic Research Laboratory directed its attention to the problem of deafness in children, particularly the group whose affliction was caused by the mothers contracting rubella in the early months of pregnancy.

The taking over of the Acoustic Research Laboratory by the Department of Health was influenced by a request from the Repatriation Commission for technical assistance in the matter of providing hearing aids for deafened ex-servicemen. Arrangements for this purpose were completed and branch laboratories were established in all other State Capital Cities.

During 1948 the Acoustic Laboratories Act was passed to allow the expansion of activities on the following lines :—(1) To carry out the requirements of the Repatriation Commission for deafened ex-Service personnel and to provide a similar service for the Commonwealth Department of Social Services in respect of deafened ex-Service personnel whose disability was not caused by war service ; (2) to assist the Education Departments of the States in measuring deafness, by providing and maintaining portable audiometric equipment ; (3) to act on behalf of various State and other authorities who desire to have independent tests made before assisting financially in the purchase of hearing aids for people under their care ; (4) to investigate problems associated with noise in industry ; (5) to make hearing tests on Civil Aviation aircrew as required by International agreement ; (6) to give advice to the Armed Services on noise problems as required ; and (7) to provide hearing aids to school children.

The laboratory in Sydney is responsible for the training of personnel for the whole Acoustic Service, the production of equipment, the calibration of hearing aids and audiometers and the technical administration of the branch laboratories.

(viii) *Commonwealth Bureau of Dental Standards.* The National Health and Medical Research Council sponsored the Dental Materials Research Laboratory during the years 1939-46, for the purpose of assisting the Defence Services, the Medical Equipment Control Committee and other Government Departments in the selection and purchase of suitable dental equipment and materials. Valuable assistance was also given to Australian manufacturers of dental materials in relation to improvement of their products and the development of new materials.

Much of the work was of a routine nature and after the 1939-45 War the National Health and Medical Research Council decided to cease its sponsorship, but recommended that the Department of Health should take over the laboratory as it was serving a good purpose. This was done in January, 1947, and the laboratory was renamed the Commonwealth Bureau of Dental Standards and is at present situated in the grounds of the University of Melbourne.

The functions of the Bureau are as follows :—(1) Original research into dental equipment, materials, techniques and processes ; (2) the development, through the Standards Association of Australia, in consultation with a committee representative of the Commonwealth Department of Health, of the Australian Dental Association and of manufacturers and distributors, of specifications for dental materials and equipment ; (3) regular systematic surveys of dental materials on sale to the profession in Australia, and the reporting of the results of such investigations in recognized Australian scientific journals ; and (4) the provision of a consultative service and testing facilities for local manufacturers and distributors of dental materials with the view to assisting them in the improvement of existing products and the development of new materials.

(ix) *Commonwealth X-ray and Radium Laboratory.* The persistent increase in cancer mortality has led to the development in Australia of a national organization directed towards the control of this disease. The Commonwealth Department of Health has actively participated in this movement. Annual cancer conferences, convened by the Department from 1928 onward, provided an opportunity each year for those actively engaged in the campaign against the disease to meet for the discussion of problems and

the determination of lines of action for further development. The tenth conference in this series met in New Zealand in February, 1939 and so marked an association which had been maintained between Australia and the Dominion since the inception of the conferences.

Cancer Conferences were not held during the war years and have not been revived, primarily because facilities for the discussion of the various aspects of the treatment of cancer have been provided by the regular Congresses of the British Medical Association and of the different specialist Colleges and Associations. The Department has, however, continued to maintain liaison in the general programme against cancer and in March, 1955, convened a conference in Canberra of representatives of the Commonwealth and States to discuss the co-ordination of anti-cancer activities. This conference recommended that an annual Conference of State-sponsored Anti-Cancer Organizations should be convened by the Commonwealth Government and that consideration should be given to the formation of a nation-wide Anti-Cancer Organization comprising representatives of the Statutory Anti-Cancer Organizations.

A total of 10 grams of radium, purchased in 1928 by the Commonwealth Government for use in treatment and research, has been distributed on loan to treatment centres throughout Australia. Under the terms of this loan, treatment at well-equipped clinics is available to all requiring it, irrespective of ability to pay. This work is co-ordinated by the Department. From time to time portions of the original radium holding have been remounted by the Department in forms more suitable for the more modern techniques which have been developed.

Realizing the essential importance of accuracy in determining the quality of radiation used in the treatment of cancer and in measuring the dosage of this radiation actually delivered to the tumour, and the need for the investigation of physical problems in connexion with the utilization of X-rays and radium in the treatment of disease, the Commonwealth Department of Health in 1935 extended the work of the Commonwealth Radium Laboratory, established in 1929, to include the investigation of the physical problems of radiation therapy generally. This laboratory, known as the Commonwealth X-ray and Radium Laboratory, is situated by agreement with the University of Melbourne within the University grounds, and is maintained, controlled, and staffed by the Commonwealth Department of Health. It is accommodated in a building specially designed for work with X-rays and radium, and is amply provided with all necessary equipment for research work, including a 500,000 volt high tension generator.

The laboratory co-operates closely with the local physical services which have been developed in the other capital cities of Australia to provide local facilities for the production of radon, for the calibration of X-ray therapy equipment, and for the measurement of radiation exposure of X-ray and radium workers. The laboratory has continued to repair radium containers. It also undertakes investigations into physical problems arising in the use of X-rays and radium in treatment.

During the year 1954-55, a total of 94,774 millicuries of radon was prepared and issued from the laboratory in the form of implants, needles and tubes for use in Victoria, Tasmania, South Australia and Western Australia. A further 30,663 millicuries were issued by the associated centres in Sydney and Brisbane. The corresponding figures for 1953-54 were 99,454 and 34,423 millicuries respectively. The issue of radon from a few centres to serve hospitals all over the continent is a unique Australian development and enables a very efficient use to be made of the radium available.

The development of atomic energy programmes overseas has made available supplies of artificial radio-isotopes which can be used either as an alternative to natural isotopes such as radium and radon, or may be applied internally when they are selectively secreted in a particular organ. All radio-isotopes in use in Australia in medicine, research and industry are subject to the approval of the laboratory and are imported by the laboratory. Regular supplies of radio-phosphorus and radio-iodine are obtained and are distributed free of charge for the treatment of patients throughout Australia according to a policy developed by the Committee on Radio-isotopes of the National Health and Medical

Research Council. The laboratory has been responsible for the development of a scheme of physical measurements required in the use of radio-iodine which can be readily carried out in individual hospitals.

Supplies of radio-gold and radio-chromium have also been obtained when required, while applicators for special purposes, containing radio-strontium and radio-cobalt have been purchased and issued to some hospitals.

Close co-operation is maintained between the medical men engaged in the clinical investigation and treatment of cancer and research workers, physicists, and biochemists, so that problems are mutually investigated and treatment applied with the highest obtainable degree of scientific accuracy.

(x) *The Northern Territory Medical Service.* The Commonwealth Department of Health is responsible for the administration of hospital health and medical services in the Northern Territory.

Four general hospitals have been established. The Darwin Hospital has accommodation for 187 in-patients, Alice Springs Hospital, 90, Katherine Hospital, 25, and Tennant Creek Hospital, 25. A modern institution for the treatment of leprosy, known as the East Arm Settlement, was opened in August, 1955. A full range of ancillary services is available at the Darwin Hospital which serves as a base hospital for the Territory.

Dental clinics, which provide a fine service have been set up at Darwin and Alice Springs. Medical and dental services to outback areas are fully developed and are provided either by road or air.

Two Drovser aircraft are stationed at Darwin and one is stationed at Alice Springs. These are staffed and serviced by Trans-Australia Airlines and are extensively used in ambulance and survey medical work. At Alice Springs medical officers of the Northern Territory provide the medical services to the Flying Doctor Service (South Australian) Base.

A section of the Department undertakes continuous investigation of native health.

School Medical and Dental Officers move throughout the area providing diagnostic and treatment facilities. Public Health Services are provided and health inspectors periodically visit all settlements.

Darwin as a first port of entry for overseas aircraft and shipping is provided with a quarantine station.

(xi) *National Fitness.* A national fitness movement was launched in Australia in 1939 following the world-wide movement for the advancement of physical fitness which preceded the last world war. In 1938, arising from a recommendation of the National Health and Medical Research Council, the Commonwealth Government agreed to appoint a Commonwealth Council for National Fitness, under the Commonwealth Minister for Health, to effect collaboration of Commonwealth, State and Local Government authorities in the movement. Meetings of this Council are held at regular intervals, and an annual report submitted to Parliament. Autonomous State National Fitness Councils operate in all States, each sending one representative to the Commonwealth Council meetings. Following the recommendations of the first Commonwealth Council meeting in 1939, the Commonwealth Government agreed to make available an annual sum of £20,000 for five years and grants were allocated to each State for purposes of organization and to each of the six Australian universities to establish lectureships in physical education. In July, 1941 a National Fitness Act was passed by the Commonwealth Parliament to ensure greater permanence to the movement, and in June, 1942, the Commonwealth grant was increased to £72,500 to include grants to State Education Departments and for the work in the Australian Capital Territory. In 1951 the total grants were extended for a further period of three years. The movement continues to develop and to gain public interest and support throughout Australia, particularly through its physical and recreational activities with voluntary youth organizations and amateur sports organizations.

(xii) *The Pre-school Child.* Sessions of the National Health and Medical Research Council and the reports of the Commonwealth Advisory Council on Nutrition have called attention to the need for greater effort throughout Australia directed towards the care of the growing child, especially during the pre-school period. Movements for the welfare of the school child and the care of the infant are already developed by State authorities as recorded in §§ 7 and 8 below. The Commonwealth Government felt that more could be done for the child of pre-school age, and it was decided to give a lead by making it possible to demonstrate what could be done and the practical methods which could be applied.

The Commonwealth Government therefore decided to establish in each capital city a pre-school demonstration centre, known as the Lady Gowrie Child Centre, and in order to achieve the best results in association with those who have had experience in this field, it has secured the co-operation of the Federal Organization of Kindergarten Unions, which is operating under the title of "The Australian Association for Pre-school Child Development". A suitable site was secured in each capital city and the necessary school structure was built. Formerly the administration of these centres was under the direction of the local Kindergarten Union and the employment of staff was made with the approval of the Commonwealth Department of Health. Recently the local Lady Gowrie Child Centre Committees were given a greater degree of autonomy, so that while the technical supervision still rests with the Australian Association for Pre-school Child Development, the management of each centre, including staffing, is in the hands of the local Committee. This development is associated with a change in the method of financial control. An annual grant is made to each Committee towards the cost of the centre, the disbursement of these funds being at the discretion of the local Committee, subject to the general supervision of the Australian Association for Pre-school Child Development. This applies in so far as the educational side is concerned, and in this field advantage is being taken of the opportunity to try new methods and to make systematic records of observations with the object of securing reliable knowledge of the educational technique of this pre-school period.

Along with this educational practice there proceeds also the study of physiological requirements of the child and of the interaction between physical and mental health under varying conditions. The children at these centres provide a considerable mass of human material for control and study, which is of great value in view of the importance of the study of growth and of nutrition of their age-period. Not only are routine measurements made of height, weight and other bodily data, but problems of nutrition are studied in detail. The medical work at each State centre is conducted on a uniform basis, according to a scheme formulated at, and directed from, the Australian Institute of Anatomy, Canberra, where parallel investigations on the laboratory side are being undertaken.

An annual grant of £30,000 is paid by the Department to the Australian Association for Pre-school Child Development to assist this body in its work.

(xiii) *The Australian Institute of Anatomy.* The Australian Institute of Anatomy, situated in Canberra, occupies a monumental building erected by the Commonwealth Government under the Zoological Museum Agreement Act of 1924 on a site which adjoins that of the Australian National University. Prior to the passing of this Act, the Commonwealth Government had expressed regret that the Australian nation possessed neither a collection of specimens of the unique and fast disappearing fauna of Australia, nor a museum in which such specimens could be preserved for future generations. Comparative anatomy is the basis of medical science, and while the importance of a study of Australian animals in the solution of various medical problems had for years been recognized by other countries and steps taken by them to procure specimens for their museums, national effort in this direction was neglected in Australia. The late Sir Colin MacKenzie, the first Director of the Institute of Anatomy, however, very kindly presented to the Commonwealth Government his entire private collection, and this magnificent gift was acquired and provision was made for its proper housing under special legislation

by the Commonwealth Government. In 1931 the Institute became an integral part of the Commonwealth Department of Health, and the original collection has been greatly augmented. A list of gifts to the Australian nation may be found in Official Year Book No. 39, p. 1277. In addition to these donations of material, there have been several endowments for orations and lectures, particulars of which are shown in previous issues of the Official Year Book.

The Institute consists of two separate and distinct entities: A museum section and a laboratory section. In the museum section there is displayed a portion of the original collection of anatomical specimens assembled by the late Sir Colin MacKenzie, together with ethnological collections which have been added since the foundation of the Institute. The materials in the museums, which are open to the general public, has been arranged so as to present simple lessons in human hygiene, to display the anatomical features and peculiarities of the Australian fauna, and to display interesting aspects of the character of Australian Aborigines and Natives of Papua and New Guinea.

A number of Health Department units are now concentrated within the Institute. These include the Museum and Medical Artistry Section; the Nutrition Section; the Diabetes and Enzyme Research Section; the Commonwealth Health Laboratory for the Australian Capital Territory; the Veterinary Laboratory; and the office of the Australian Pre-school Association.

The scientific research work of the Institute has now been concentrated on problems of nutrition. These take the form of field surveys of the dietary status of the Australian population and laboratory investigations into the biochemistry of nutrition and metabolism. For further information concerning the Institute see Year Book No. 32 pp. 919-21.

### § 3. The National Health and Medical Research Council.

In 1926 the Commonwealth Government established a Federal Health Council, in accordance with a recommendation of the Royal Commission on Health (1925), "for the purpose of securing closer co-operation between Commonwealth and State Health Authorities". This Council held sessions each year except in 1932. In 1936 the Commonwealth Government decided to create a body with wider functions and representation, and the National Health and Medical Research Council was established with the following functions:—

- To advise Commonwealth and State Governments on all matters of public health legislation and administration, on matters concerning the health of the public and on medical research.
- To advise the Commonwealth Government on the expenditure of money specifically appropriated to be spent on the advice of this Council.
- To advise the Commonwealth Government on the expenditure of money upon medical research and on projects of medical research generally.
- To advise Commonwealth and State Governments upon the merits of reputed cures or method of treatment which are from time to time brought forward for recognition.

The Council consists of the Commonwealth Director-General of Health (as Chairman), two officers of his Department, the official head of the Health Department in each State, together with representatives of the Federal Council of the British Medical Association, the Royal Australasian College of Surgeons, the Royal Australasian College of Physicians, the Australian Regional Council of the Royal College of Obstetricians and Gynaecologists, the Australian Dental Association, and (jointly) the four Australian Universities having medical schools. A prominent layman and laywoman, appointed by the Commonwealth Government, also serve on the Council.

The first session of the National Health and Medical Research Council met at Hobart in February, 1937. The thirty-ninth session met at Sydney in May, 1955.

Under the Medical Research Endowment Act 1937, the Commonwealth Government has made an annual appropriation of funds to provide assistance :—(a) to Departments of the Commonwealth or of a State engaged in medical research ; (b) to Universities for the purpose of medical research ; (c) to institutions and persons engaged in medical research ; and (d) in the training of persons in medical research.

Approved research institutions under this system now number 51. During 1954 grants for projects numbered 55 in the following fields :—bacteriology, biochemistry, biophysics, clinical research, dental research, epidemiology, haematology, medical chemistry, neurology, neuro-physiology, obstetrics, pathology, physiology and pharmacology, tuberculosis and virus diseases. In certain instances, equipment and apparatus have been made available by the Council ; this has greatly facilitated some specialized lines of research. The wide scope of work being carried out is greatly assisted by the formation of committees which meet regularly and advise the Council in such subjects as industrial hygiene, public health, epidemiology, maternal and child welfare, radioactive isotopes, antibiotic distribution, tropical physiology and hygiene, tuberculosis, dental research and the latest developments in X-ray technology and application.

The research work being done under these grants is of a high standard, many of the individual investigators enjoying international reputation. Beyond this practical achievement, the original objectives of the Council are being attained in encouraging young graduates to take up research work and in securing a continuity and permanence of medical research in Australia.

An insurance benefit scheme for such medical workers on the lines of the Federated Superannuation System for Universities is now in operation.

#### § 4. Control of Infectious and Contagious Diseases.

1. *General*.—The provisions of the various Acts in regard to the compulsory notification of infectious diseases and the precautions to be taken against the spread thereof may be conveniently dealt with under the headings—Quarantine ; Notifiable Diseases, including Venereal Diseases ; and Vaccination.

2. *Quarantine*.—The Quarantine Act is administered by the Commonwealth Department of Health, and has three sections of disease control, as follows :—(i) Human quarantine which controls the movements of persons arriving from overseas until it is apparent that they are free of quarantinable disease ; (ii) Animal quarantine which controls the importation of animals and animal products from overseas and the security of other animals present on vessels in Australian ports ; and (iii) Plant quarantine which regulates the conditions of importation of all plants and plant products with the object of excluding plant diseases, insect pests and weeds. (See pages 521 to 523 above.)

In regard to interstate movements of animals and plants, the Act becomes operative only if the Governor-General considers that Federal action is necessary for the protection of any State or States ; in general, the administration of interstate movements of animals and plants is left in the hands of the States.

The Commonwealth controls stations in each State for the purposes of quarantine of humans, animals and plants.

3. *Notifiable Diseases*.—(i) *General*. (a) *Methods of Prevention and Control*. Provision exists in the Health Acts of all the States for the observance of precautions against the spread and for the compulsory notification of infectious disease. When any

such disease occurs, the local authority must at once be notified, and in some States notification must be made also to the Health Department. The duty of making this notification is generally imposed, first, on the head of the house to which the patient belongs, failing whom on the nearest relative present, and, on his default, on the person in charge of or in attendance on the patient, and, on his default, on the occupier of the building. Any medical practitioner visiting the patient is also bound to give notice.

As a rule, the local authorities are required to report from time to time to the Central Board of Health in each State as to the health, cleanliness and general sanitary state of their several districts, and must report the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of premises, and for the disinfection or destruction of bedding, clothing, or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as small-pox and leprosy.

(b) *Diseases Notifiable and Cases Notified in each State and Territory.* The following table, which has been compiled by the Commonwealth Department of Health, shows for each State and Territory the diseases notifiable in 1954 and the number of cases notified. Diseases not notifiable in a State or Territory are indicated by an asterisk.

**DISEASES NOTIFIABLE IN EACH STATE AND TERRITORY OF AUSTRALIA AND NUMBER OF CASES REPORTED DURING THE YEAR ENDED 31ST DECEMBER, 1954.**

Typhus—flea, mite or tick borne .. ..	3	..	34	7	19	..	..	..	63

\* Not notifiable.

NOTE.—No cases of cholera, plague, smallpox, epidemic typhus or yellow fever were notified.

(ii) *Venereal Diseases.* The prevention and control of venereal diseases are undertaken by the States. Each State has a Venereal Diseases Act, or provisions in the Health Act govern the working of the measures taken to combat these diseases. Under these Acts notification has been made compulsory in every State. Steps have been taken to ensure free treatment by medical practitioners or in subsidized hospitals and clinics. Registered pharmaceutical chemists are allowed to dispense prescriptions only when signed by medical practitioners. Clinics have been established and, in some cases, beds in public hospitals have been set aside for patients suffering from these diseases.

Penalties may be imposed on a patient who fails to continue under treatment. Clauses are inserted in the Acts which aim at preventing the marriage of any infected person and the employment of an infected person in the manufacture or distribution of foodstuffs.

4. *Vaccination.*—There is statutory provision for compulsory vaccination in all States except New South Wales. Jennerian vaccine for vaccination against smallpox is prepared at the Commonwealth Serum Laboratories in Melbourne. There has been a considerable increase in the demand for vaccination, especially by people about to travel overseas by air, so that they may conform with the quarantine requirements of countries to which they are travelling.

### § 5. Inspection and Sale of Food and Drugs.

Public Health legislation in force in all States provides for the inspection of foods and drugs with the object of ensuring that all goods sold shall be wholesome, clean and free from contamination or adulteration; and that all receptacles, places and vehicles used for their manufacture, storage or carriage shall be clean. For further particulars in this connexion see § 1. State Public Health Legislation and Administration, p. 515.

### § 6. Supervision of Dairies, Milk Supply, Etc.

1. *General.*—In earlier issues of the Official Year Book (*see* No. 22, p. 498) reference was made to the legislation in force in the various States to ensure the purity of the milk supply and of dairy produce generally.

2. *Number of Dairy Premises Registered, 1954.*—The following table shows, so far as the particulars are available, the number of dairy premises registered and the number of cows in milk thereon. In some States registration is compulsory within certain proclaimed areas only.

DAIRY PREMISES REGISTERED, AND COWS IN MILK THEREON, 1954.

Particulars.	N.S.W. (a)	Victoria. (b)	Q'land. (a)	S. Aust. (c)	W. Aust. (c)	Tasmania. (a)
Premises registered ..	16,572	26,794	21,500	9,971	652	7,258
Cows in milk thereon	568,593	829,366	647,500	98,073	23,180	97,288

(a) March, 1954.

(b) Year 1954-55.

(c) Dairies registered with the Milk Board for whole milk or sweet cream for table use.

### § 7. Medical Inspection of School Children.

1. *General.*—Medical inspection of school children is carried out in all the States and the Australian Capital Territory. Medical staffs have been organized, and in some States travelling clinics have been established to deal with dental and ocular defects.

2. New South Wales.—(i) *School Medical Service.* A definite scheme of medical inspection of school children was established by the Department of Education during the years 1913-14. About the same time travelling Dental Officers were appointed, and inspection and treatment were carried out mainly in country districts.

The School Medical Services have gradually been extended since that time, additional services, such as child guidance clinics, speech therapy clinics and hearing clinics, having been introduced.

Up till the year 1946, the School Medical Service was attached to and under the control of the Department of Education, but since 1946 it has been under the control of the Department of Public Health. In 1947 the dental section was separated from the School Medical Service and a Division of Dental Services was formed.

*Establishment.* There are 32 permanent and 2 part-time medical officers; 5 psychiatrists; 2 part-time ear, nose, and throat surgeons; 5 psychologists; 29 nurses; 9 social workers; 10 speech therapists; 8 trainees in speech therapy; 13 clerical officers; and a telephonist.

The primary object of the service is the medical examination of children to discover any departure from normal in the health of a child, either physical or mental, and to notify the parent or guardian, in order that the child may be further investigated to determine the need for treatment. In many cases it is not possible to make a diagnosis of the conditions found at the time of the examination. This is due partly to the fact that only a limited time can be devoted to each individual examination, and also to lack of facilities within the Service for further investigation. Treatment is accepted as the responsibility of the practising medical profession.

The children attending all schools administered by the Department of Education are medically examined, as are also children attending the majority of other schools in the State. Medical officers visit schools annually in the metropolitan, Newcastle and Wollongong areas, and in five country towns (Armidale, Tamworth, Bathurst, Orange and Wagga), and examine children in kindergarten or 1st grade in primary schools and 1st and 4th years in secondary schools. Children in other classes are examined or reviewed, as necessary. The vision and hearing of pupils are re-tested in 4th grade.

In country areas the object is for medical officers to visit schools every three years, and for all children attending to be examined. Owing to insufficient staff, the country portion of the programme cannot be completed each year.

When an abnormal condition has been found by the examining medical officer and it is not under effective treatment, the parent is informed in writing by the medical officer. If possible, the parent is called in for interview, with the examining medical officer. In the metropolitan, Newcastle and Wollongong areas school nurses follow up these cases with the object of persuading parents to seek medical advice.

It is considered that the full medical examination on entrance to school, on entrance to secondary school, and in 4th year, together with the referral of children to the school medical officer by parent, teacher or school nurse, will provide sufficient cover so that the great majority of children with defects, either physical or mental, will be seen by the medical officer.

During 1954, medical officers of this service examined 152,138 children, compared with 164,845 examinations carried out in 1953. Of the total number, 108,806 children were fully examined, equalling 17.34 per cent. of the school population for the State. In addition, the cases of 43,332 children were reviewed during the year.

Defects of notifiable standard, including unhealthy mouths, were found in 27.2 per cent. of the children fully examined. It was found necessary to notify 52.0 per cent. of the total 29,633 defects recorded to parents or guardians, in order that further investigation and/or treatment could be effected.

Arrangements are made for oculists to visit schools in the more remote areas. As well as carrying out a full examination the oculist refracts the eyes of children found to have defective eyesight and prescribes glasses where necessary.

*Surveys.* Various surveys of school children are undertaken from time to time, e.g. hookworm survey, height-weight survey, nutrition surveys, and investigations to determine the incidence of enlargement of the thyroid gland, defective vision, postural defects, etc.

*Hearing Surveys.* In addition to the hearing tests carried out by the school nurses and medical officers in the course of the routine medical examination, audiometric surveys and follow-up tests are undertaken. Part-time ear, nose and throat specialists review the condition of children found to have any significant degree of deafness, give advice with regard to treatment, and, if necessary, advise whether the use of a hearing aid is indicated. Their suitability for admission to an opportunity deaf class or school for deaf children is also considered.

*Teachers' Colleges.* Medical officers of the School Medical Service are attached to Teachers' Colleges. They lecture in school health and other subjects to students in the colleges. These officers are also responsible for the health supervision of college students.

*Child Guidance Clinics.* Starting with the appointments of a psychiatrist and a psychologist in 1936, five child guidance clinics have now been established under the administration of the school medical service. They are all located in the metropolitan area. One clinic functions at the Yasmar Boys' Shelter and deals exclusively with cases before the Children's Courts.

Each clinic is now staffed by a psychiatrist, a psychologist and social workers.

*Speech Therapy Clinics.* The establishment provides for a staff of ten speech therapists. Treatment is undertaken in clinics in the metropolitan area.

*Bush Nursing Association.* An arrangement exists whereby bush nurses act as school nurses in schools at or near the Bush Nursing Centres and carry out a limited inspection for the detection of defects or unhygienic conditions.

(ii) *School Dental Service.* There are 21 School Dental Clinics. The aim of the School Dental Service is not only to provide dental treatment for children on school premises, but also to train them in the care of their teeth, and teach them the principles of dental health.

The visit of a dental clinic to a school is of educational value, and should be treated as part of the school routine. Teachers, parents and children become interested in the clinic and therefore in dental health.

Of the total number of children examined in both city and country schools, 32,974 were included in a Sound Mouth Survey. Of these 6.9 per cent. were found to have naturally sound mouths, whilst an additional 16.6 per cent. were found to have sound mouths as a result of treatment. 76.5 per cent. were in need of treatment.

In 1954, the clinic treated 19,362 children in 50,786 visits; 36,016 teeth were extracted; 36,727 permanent fillings and 46,816 other treatments were provided. There was a general increase in the work compared with 1953.

The number of clinics has never been sufficient to provide more than a limited service. It has been found necessary to restrict treatment to the ages 6-8 years in the metropolitan area, and 6-9 years in large country centres. In small outlying rural schools children of all ages are included.

In addition to the normal dental services in schools, treatment was carried out for the children at the Glenfield Special School.

3. *Victoria.*—The School Medical and Dental Services are gradually being extended throughout the State. The objective of the medical service is to ensure that each child is examined to ascertain any physical defects at least once in every three years of school life. Parents are informed concerning such defects and advised how treatment may best be obtained. In 1954, 117,154 children were examined, 70 per cent. of them being in the metropolitan area.

Nurses employed for the purpose perform valuable follow-up work in interviewing parents to ensure that as far as possible treatment recommended is carried out. There are at present 25 medical officers and 36 nurses employed in this service.

The School Dental Service affords dental treatment to children attending primary schools and resident in institutions in certain parts of the State. The districts included are progressively extending as facilities and staff increase.

Children from metropolitan schools in industrial suburbs are transported to the School Dental Centres by contract bus service. Country schools are visited by mobile dental units.

Six dental vans and five semi-trailer (two-surgery) units are operating in the mobile service.

The Dental Service has a staff of 35 dentists and 37 dental attendants. During 1954, 35,000 children attending 392 schools were examined and all necessary dental treatment carried out. This treatment included 40,129 extractions and 67,477 fillings.

4. Queensland.—During 1953-54 the School Health Services Branch employed 3 full-time and 1 part-time medical officers, 21 nurses, 19 dentists and 1 part-time dentist.

The medical officers and nurses examined school children regularly, referring children with defects to their own medical advisers. During 1953-54 76,801 medical examinations were conducted.

Advice is given on school sanitation, infectious diseases in schools and health education.

During 1953-54 school dentists gave treatment to 10,796 school children whose parents could not afford private treatment. The treatment was carried out at four Rail Dental Clinics and at schools with portable equipment. In addition school children are treated at Hospital Dental Clinics in the larger towns.

In Western Queensland local practitioners act as part-time Ophthalmic Officers.

In North Queensland two school sisters assist in the control of hookworm.

During 1953-54 the cost of the service was £76,878.

5. South Australia.—Children in State schools are examined while in Grades 1, 4 and 7 in the primary schools and in their second and fourth years in secondary schools. Efforts are made to visit country schools every three or four years and all the children are examined. Students who wish to become teachers are examined on appointment as preliminary probationary students while still attending secondary schools, again immediately prior to entering the Teachers' College and finally when they leave the college to take up teaching duties. Courses of lectures in hygiene and in first aid are given to all college students and, in addition, domestic arts students are lectured on home nursing.

The medical staff consists of a principal medical officer, 3 full-time and 3 part-time medical officers and 7 trained nurses. One part-time senior dentist and one full-time dentist and his assistant are attached to the Branch.

During 1954, 26,482 children were examined by medical officers and of these 1,713 required notices for defective vision, 726 for defective hearing, and 940 for their tonsils and adenoids.

Expenditure for the year 1953-54 was £24,351.

The Psychology Branch consists of a senior psychologist, 2 psychologists, a senior guidance officer, 2 guidance officers, 2 social workers, an advisory teacher of opportunity classes, an advisory teacher of hard-of-hearing children, a part-time speech therapist, a part-time consultant psychiatrist and a part-time consultant neurologist. The work of the Branch may be divided into three sections—clinical, educational and vocational.

*Clinical.* The clinical work involves examining difficult children of many types, including those with such problems as backwardness, truancy, delinquency, etc. In addition, the parents of all children examined are interviewed and their co-operation is sought.

*Educational.* In addition to supervising opportunity and special classes for children backward in school work, the Branch advises on questions of placement and types of education for ordinary children in schools.

*Vocational.* The guidance officers test and advise all children about to leave school. The guidance officers are also responsible for the supervision of record cards where used in primary schools.

The Branch also lectures to students of the Teachers' College as well as to other interested organizations such as mothers' clubs.

6. **Western Australia.**—Under the Health Act 1911–1954 the medical officers appointed by the local authorities became medical officers of schools and of school children.

In the Health Department there are five full-time medical officers for schools. During 1955, 40,964 children were examined (metropolitan 20,150, country 20,814), of whom 20,189 were boys and 20,775 girls. There were 295 schools visited, comprising metropolitan, 43 State schools, 24 convents and 9 kindergartens, and country, 167 State schools, 45 convents and 7 kindergartens. The principle aimed at is to examine every school child once every two years.

During 1954 the 10 full-time dental officers employed visited 17 metropolitan schools, 86 country schools, and 9 metropolitan orphanages. The number of children examined was 6,938 of whom 4,222 were treated with their parents' consent. The cost of this service for 1953–54 was £38,865.

7. **Tasmania.**—During the year 1954, 2 full-time and 2 part-time medical officers were employed in the examination of school children. Some Government medical officers also performed routine examinations as part of their ordinary duties. One part-time and 12 full-time sisters visited homes and schools regularly. Of the 19,996 children examined by medical officers 10,222 were found to have defects, 7,347 requiring dental treatment.

There are static dental clinics at Hobart, Launceston and Devonport and six mobile clinics operated in various parts of the State. Each clinic has a full-time dental surgeon in charge. During the year 11,498 children were examined by school dentists.

The cost of the school medical and dental services for the year ended June, 1954 was £32,585.

8. **Australian Capital Territory.**—Education facilities are provided in the Australian Capital Territory, under agreement, by the Education Department of New South Wales. In 1930, however, the Commonwealth Department of Health took over from the State the medical inspection of school children and carried out examinations of entrants and those leaving in that year. From 1943 to 1951, all primary pupils of Government schools in the Territory had an annual medical examination.

During 1951, with the appointment of an Infant Welfare and Schools Medical Officer, a plan for triennial examinations of children in primary and secondary schools was introduced, more attention being paid to those children with defects who were marked for review.

In 1954, 775 school children were fully examined and 568 given review examinations. At the Pre-School Play Centres 578 were fully examined as entrants and 278 were given review or other special examination.

Diphtheria immunisation in schools was introduced in October, 1954. Initial treatments numbered 350. Reinforcing treatments numbered 1,220. Preliminary Schick testing was carried out for the majority of children over 8 years of age.

Infants and pre-school children numbering 228 were immunised at Infant Welfare Centres.

## § 8. Supervision and Care of Infant Life.

1. *General.*—The number of infant deaths and the rate of infant mortality for the five years 1950 to 1954 are given in the following table, which shows that during this period 23,446 children died in Australia (excluding Territories) before reaching their first birthday. Further information regarding infant mortality will be found in Chapter XVII.—Vital Statistics.

(a) Excludes Territories.  
registered.

(b) Number of deaths under one year of age per 1,000 live births

During recent years greater attention has been paid to the fact that the health of mothers and infants depends largely on pre-natal attention as well as after-care. Government and private organizations, therefore, provide instruction and treatment for mothers before and after confinement, while the health and well-being of mother and child are looked after by the institution of baby health centres, baby clinics, crèches, visits by qualified midwifery nurses, and special attention to the milk supply, etc.

2. *Government Activities.*—In all the States acts have been passed with the object of supervising and ameliorating the conditions of infant life and reducing the rate of mortality. Departments control the boarding-out to suitable persons of the wards of the State, and wherever possible the child is boarded out to its mother or near female relative. Stringent conditions regulate the adoption, nursing and maintenance of children placed in foster-homes by private persons, while special attention is devoted to the welfare of ex-nuptial children. (*See also* in this connexion Chapter XV.—Welfare Services.) Under the provisions of the Maternity Allowances, Part V. of the Social Services Act 1947–1955, from 1st July, 1947 a sum of £15 is payable to the mother in respect of each confinement at which a living or viable child is born. Where there are one or two other children under 16 the amount payable is £16, and where there are three or more other children under 16 the amount payable is £17 10s. Where more than one child is born at a birth the amount of the allowance is increased by £5 in respect of each additional child born at that birth. Detailed particulars regarding Maternity Allowances are given in Chapter XV.—Welfare Services.

3. *Nursing Activities.*—(i) *General.* In several of the States the Government maintains institutions which provide treatment for mothers and children, and, in addition, subsidies are granted to various associations engaged in welfare work.

(ii) *Details by States.* In earlier issues of the Official Year Book (*see* No. 22, pp. 515–6) information may be found concerning the activities of institutions in each State.

(iii) *Summary.* The following table gives particulars of the activities of Baby Health Centres and Bush Nursing Associations :—

**BABY HEALTH CENTRES AND BUSH NURSING ASSOCIATIONS, 1954.**

(b) Includes eight mobile units.

In the last twenty years the number of attendances at the Baby Health Centres has more than trebled. The numbers of attendances, at five-yearly intervals, since 1930 were as follows :—1930, 919,893 ; 1935, 1,355,306 ; 1940, 2,035,299 ; 1945, 2,927,764 ; 1950, 3,049,375. During the year 1953 the number of attendances was 3,153,008.

### § 9. Disposal of the Dead by Cremation.

The disposal of the dead by cremation has been in existence in Australia for many years, as the first crematorium was opened in South Australia in 1903. The number of crematoria in New South Wales is five; the first was opened in 1925. There are two crematoria in Victoria; the first opened in 1905, but was closed in 1926 and re-opened in 1936, while the other one was opened in 1927. There are two crematoria in Queensland, the first being opened in 1934. In South Australia there is one crematorium which opened in 1903. In Western Australia there is one crematorium which opened in 1939. In Tasmania there are two crematoria; the first was opened in 1936.

The following table shows the number of cremations in each State for the five years 1950 to 1954 :—

#### CREMATIONS.

(a) Year ended 30th June.

## B. INSTITUTIONS.

### § 1. General.

In Australia, institutions related to public health may be classified to three groups, (a) State; (b) public; and (c) private. To the first group belong those institutions wholly provided for by the State, such as the principal mental hospitals in the various States and the Government and leased hospitals in Western Australia. To the second group belong public institutions of two kinds, namely :—(i) those partially subsidized by the State or by State endowments for maintenance, but receiving also private aid, and (ii) those wholly dependent upon private aid. To the first of these two kinds belong such institutions as the principal metropolitan hospitals; in the second are included institutions established and endowed by individuals for the benefit of the needy generally. All institutions of a private character are included in the third group. A more or less accurate statistical account is possible in classes (a) and (b), but in regard to (c) general tabulation is impossible. Owing to differences in the dates of collection and tabulation it is impossible to bring statistics of some charitable institutions to a common year.

## § 2. Public Hospitals (other than Mental Hospitals).

1. General.—All the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres there are hospitals for infectious diseases, tubercular patients, women, children, chronic diseases, etc.

The particulars given herein refer to public hospitals at the latest available date and include all institutions affording hospital relief, whether general or special, with the exception of mental hospitals, repatriation hospitals and private hospitals conducted commercially. The particulars for New South Wales in the following tables relate to public hospitals operating under the control of the Hospitals Commission.

2. Number, Staff and Accommodation, 1953-54.—Details regarding the number of hospitals, staffs and accommodation for the year 1953-54 are given in the following table:—

**PUBLIC HOSPITALS : NUMBER, STAFF AND ACCOMMODATION, 1953-54.**

Average daily number resident ..	13,961	7,291	6,768	2,352	2,511	1,351	212	141	34,587

(a) Year ended 31st March, 1954.

In addition to those admitted to the hospitals there are large numbers of out-patients. During 1953-54 there were 1,083,857 out-patients (cases) treated in New South Wales, 447,838 in Victoria, 544,795 in Queensland, 108,542 in South Australia, 104,986 (estimated) in Western Australia, 106,950 in Tasmania, 55,275 in the Northern Territory and 6,388 in the Australian Capital Territory, making a total for Australia of 2,458,631.

4. **Revenue and Expenditure.**—Details of the revenue and expenditure for the year 1953-54 are shown in the next table. The revenue includes the Commonwealth Hospital Benefits Scheme which operated in Victoria, Queensland, Western Australia and Tasmania from 1st January, 1946, in South Australia from 1st February, 1946, and in New South Wales and the Australian Capital Territory from 1st July, 1946.

(a) Partly estimated.

### § 3. Leper Hospitals.

Isolation hospitals for the care and treatment of lepers have been established in New South Wales (Little Bay); Queensland (Peel Island, near Brisbane, and Fantome Island, North Queensland); Western Australia (Derby); and the Northern Territory (East Arm Settlement, near Darwin). At the end of 1954 there were 6 cases in residence at Little Bay, 24 at Peel Island, 49 at Fantome Island, 245 at Derby, 195 at East Arm Settlement, 3 in Victoria and 6 cases at Wooroloo, Western Australia. Of the 528 cases, 472 were full-blood aborigines, 14 half-caste aborigines, 2 Asians and 40 Europeans.

### § 4. Mental Hospitals.

1. *General.*—The methods of compiling statistics of mental diseases are fairly uniform throughout the States, but there is an element of uncertainty about possible differences in diagnosis in the early stages of the disease. The figures for the States cannot be brought to a common year; consequently the following particulars relate to a combination of calendar and financial years. Licensed houses are included in all particulars excepting revenue and expenditure for New South Wales. The figures exclude those of reception houses and observation wards in gaols. In New South Wales the expenditure includes the cost of Broken Hill patients treated in South Australian mental hospitals.

2. *Hospitals, Staff, etc., 1953-54.*—Particulars regarding the number of hospitals, the medical and nursing staffs, and accommodation are given in the following table for the year 1953-54 :—

MENTAL HOSPITALS : NUMBER, STAFF, ACCOMMODATION, 1953-54.(a)

Average daily number resident—							
Males .. .. .	5,448	3,256	2,259	1,309	947	359	13,578
Females .. .. .	6,160	3,713	2,068	1,223	635	411	14,210
Total .. .. .	11,608	6,969	4,327	2,532	1,582	770	27,788
Number of patients at end of year per 1,000 of population—							
Males .. .. .	3.72	3.01	3.56	3.29	3.08	2.31	3.37
Females .. .. .	3.97	3.56	3.44	3.34	2.34	2.69	3.57
Total .. .. .	3.85	3.28	3.51	3.32	2.72	2.50	3.47
Average number of patients resident in mental hospitals per 1,000 of population—							
Males .. .. .	3.18	2.71	3.38	3.29	2.95	2.28	3.04
Females .. .. .	3.64	3.11	3.27	3.15	2.11	2.71	3.26
Total .. .. .	3.41	2.91	3.33	3.22	2.55	2.49	3.15

(a) See footnote (a) to previous table.

(b) Includes the Epileptic Home.

Persons who are well advanced towards recovery are allowed to leave the hospitals and live with their relatives or friends, but they are under supervision and their names are kept in the records.

4. Revenue and Expenditure, 1953-54.—The revenue of Government mental hospitals is small in comparison with their cost, and consists chiefly of patients' fees, and mental

institution benefits. The agreements made between the Commonwealth and the States under the 1948 Mental Institution Benefits Act, lapsed in the latter half of 1954.

Under the State Grants (Mental Institutions) Act, No. 67, 1955, the Commonwealth is authorised to make payments to the States of amounts equal to one-third of the amounts expended by the States for or in connexion with the buildings or equipment of mental institutions on or after 1st July, 1955. The Commonwealth grants are limited to the following maximum amounts—

New South Wales, £3,830,000; Victoria, £2,740,000; Queensland, £1,460,000; South Australia, £895,000; Western Australia, £720,000; Tasmania, £355,000; Total, £10,000,000.

The proportion of expenditure borne by the State amounts to about 90 per cent. In New South Wales the expenditure includes the cost of Broken Hill patients treated in South Australian mental hospitals :—

6. Number of Mental Patients, 1938-39 and 1950-51 to 1953-54.—The total number returned as under treatment shows slight increases during the period but the proportion to total population shows a slight decline. A more rational attitude towards the treatment of mental cases has resulted in a greater willingness in recent years to submit afflicted persons to treatment at an early stage, and an increase in the number of recorded cases, therefore, does not necessarily imply an actual increase in mental diseases.

## MENTAL PATIENTS IN HOSPITALS.

State.	1938-39.	1950-51.	1951-52.	1952-53.	1953-54.

Australia .. ..	3.81	3.47	3.46	3.46	3.47

(a) Includes the Epileptic Home.

The difference between States in the number of mental patients in hospitals per 1,000 of population may to some extent be the result of differences in classification.

## CHAPTER XV.

### WELFARE SERVICES.

#### A. COMMONWEALTH SOCIAL SERVICE BENEFITS.

##### § 1. Introduction.

Commonwealth social service benefits are provided under the Social Services Act 1947-1955 which came into operation on 1st July, 1947. This Act provided for the repeal of the existing laws relating to age and invalid pensions, maternity allowances, child endowment, widows' pensions and unemployment and sickness benefits, and for the immediate re-enactment of the necessary provisions for the grant and payment of these benefits under a unified law. Its more important effects were the elimination of obsolete provisions and of anomalies, the amalgamation of like provisions, and the modernizing and grouping of the legislation so that it presented a symmetrical part of a well-defined pattern of social security.

##### § 2. Commonwealth Expenditure on Social and Health Services.

The Commonwealth expenditure in each State and Territory on Social and Health Services for the year 1954-55 is shown in the following table:—

**COMMONWEALTH EXPENDITURE ON SOCIAL AND HEALTH BENEFITS, 1954-55.**  
(£'000.)

(a) Includes allowances and reimbursements to States for the maintenance of Hospitals.

### § 3. Age and Invalid Pensions.

Age pensions are payable to men, 65 years of age and over, and women, 60 years of age and over, who have resided in Australia continuously for at least 20 years which need not be immediately prior to the date of claim for pension. Absence in a Territory of the Commonwealth does not break continuity of residence. Any periods of absence during which a person's home remained in Australia, and absences in certain other circumstances, and in the case of a claimant who has had at least 18 years' residence, occasional absences aggregating up to 2 years plus 6 months for every year of residence in excess of 18 years are counted as residence.

Invalid pensions are payable to persons, 16 years of age and over, who have resided in Australia for a continuous period of five years, and who are permanently incapacitated for work or permanently blind. For the purpose of the residential qualification, the position in regard to absences is the same as for age pensioners. The degree of permanent incapacity has to be not less than 85 per cent. and the claimant must have become permanently incapacitated or permanently blind while in Australia or during a temporary absence from Australia, but this condition is waived if he has resided in Australia for not less than 20 years (continuous or otherwise), which may be partly before or partly after the occurrence of the permanent incapacity or blindness.

All permanently blind persons qualified in other respects, are eligible for a pension of £4 a week free of the means test, and any blind pensioner who has a child under 16 years of age is entitled to receive a child's allowance of 11s. 6d. per week in addition to the pension.

A pension is not payable to:—an alien (except a woman who, prior to marriage, was a British subject); a person who has directly or indirectly deprived himself of property or income in order to qualify for a pension; a person in receipt of income of £390 per annum (£780 per annum for a married couple); a person who owns property, apart from his permanent home and other exempt property, to the net value of more than £1,750 (£3,500 for married persons); a person who is not deserving of a pension; a person who is not of good character or who has deserted his wife (or her husband) or children for six months immediately preceding the date of the claim (age pension only).

Pensions may be granted to aboriginal natives of Australia who have been granted exemption from State control laws, or who, in any State where exemption is not provided for, are considered suitable persons to receive pensions.

The maximum rate of pension from 27th October, 1955 is £208 per annum.

Permissible income is £182 per annum. Any income in excess of this amount is deducted from the pension. The income of a married person is deemed to be half the total income of husband and wife except where they are legally separated or in certain other circumstances. A married couple where only one is a pensioner may have an income of £7 a week between them without reduction of the pension. "Income" does not include gifts or allowances from children or parents, benefits from friendly societies, payments in respect of illness, infirmity or old-age from any trade union, the value of State food relief, child endowment or other payments for or in respect of children, Commonwealth Hospital Benefits, Pharmaceutical Benefits and interest on Commonwealth war gratuities.

The rate of pension is reduced by £1 per annum for every complete £10 of the value of property which exceeds £200 up to £1,750. The value of property of a married person is deemed to be half the total value of property of husband and wife.

The value of a home, furniture and personal effects, the surrender value (up to £750) of any life assurance policies, the capital value of any life interest, annuity or contingent interest, the value of any property from the estate of a deceased person which has not been received and the amount of any Commonwealth war gratuity are disregarded in the computation of property. From October, 1954 income received from property owned by a pensioner or his spouse and income such as dividends on shares and interest from bonds or on money in a bank or investments, is also disregarded.

A pensioner who is an inmate of a benevolent home is paid £72 16s. per annum of his pension and the balance of the pension is paid to the institution for his maintenance.

An allowance, not exceeding £91 per annum, may be granted to the wife of an invalid pensioner (or an age pensioner who is permanently incapacitated for work or permanently blind) if she is living with her husband and is not receiving an age or invalid pension or a service pension. The rate of the allowance is affected by income and property on the same basis as an age or invalid pension.

An allowance of £29 18s. per annum in respect of one child under the age of 16 years may be granted to the wife of an invalid pensioner (or age pensioner who is permanently incapacitated for work or permanently blind) if she is living with her husband and is not receiving a service pension. This child's allowance is additional to the wife's allowance and may also be granted where the wife is ineligible for a wife's allowance on account of income or property. The allowance may also be granted to any invalid pensioner who has the custody, care and control of a child under the age of 16 years, but where both husband and wife are invalid pensioners (living together) the child's allowance is payable only to the wife.

The rehabilitation service has been set up to help persons who are too disabled to work or who have had to give up their employment because of sickness or injury. It aims at restoring disabled persons so they can earn a living and lead useful lives. They are given suitable treatment and training, the cases selected being those in which the person's disability is remediable and where there are reasonable prospects of his engaging in a suitable vocation within three years after the commencement of treatment or training.

The benefits are available to invalid pensioners, persons receiving unemployment or sickness benefits or tuberculosis allowances. The treatment of certain other disabled persons may also be approved by the Director-General of Social Services. During the treatment stage of rehabilitation the payment of pension or benefit is continued. If, however, vocational training is provided the pension or benefit is suspended and the trainee is paid instead a rehabilitation allowance equivalent to the amount of invalid pension for which he is qualified, or which would be payable if he were qualified, together with the amount of any wife's and child's allowances, plus a training allowance of £1 10s. per week.

Living-away-from-home allowances, where necessary, are paid by the Commonwealth. Fares and living expenses (including those of an attendant where required) incurred in connexion with treatment, training or attendance for an interview or for medical examination may also be paid. A person receiving treatment or training may be provided, free of charge, with necessary artificial replacements, surgical aids and appliances. He may also be provided with books, equipment and tools of trade, costing not more than £40. If these are retained by him, he is required to pay the cost, but payments may be made by small instalments after he has commenced employment.

If the treatment or vocational training does not result in the trainee being able to engage in employment, his right to the continuance of his pension or benefit is not prejudiced.

The number of persons receiving benefits who were examined, accepted, trained and placed in employment during the years 1953-54 and 1954-55 are shown in the following table:—

#### COMMONWEALTH REHABILITATION SERVICE: OPERATIONS, AUSTRALIA.

Type.		Examined.	Accepted.	Completed Training.	Placed in Employment.	
					After Training.	Without Training.
Invalid Pensioners	1953-54	9,764	290	118	85	91
	1954-55	10,724	337	112	101	104
Unemployment and Sickness Beneficiaries	1953-54	10,116	784	124	111	537
	1954-55	9,933	829	120	98	581
Recipients of Tuberculosis Allowances	1953-54	480	266	152	153	25
	1954-55	1,085	344	177	175	54
Special Cases	1954-55	71	73	..	..	55

From 1st July, 1943 a funeral benefit of up to £10 has been payable to the person who has paid, or is liable to pay, the cost of the funeral of an age or invalid pensioner or of a claimant who, but for his death, would have been granted an age or invalid pension. This provision has been extended to include payment in respect of the death of a person who at the time of his death was receiving, or was a claimant for, a tuberculosis allowance, if he was otherwise qualified to receive an age or invalid pension. Where the cost of the funeral has been partly met by payment from a contributory funeral benefit fund of an organization other than a friendly society, funeral benefit is payable to the extent of the amount (not above £10) by which the cost of the funeral exceeded the amount paid from the fund. A funeral benefit is not payable to a person administering a contributory funeral benefit fund.

The following statement shows the rates of pension at 1st July, 1909 and the rates as they have been varied since that date and are subject to income and property qualifications:—

(a) Additional pension of £6 ros. per annum (2s. 6d. per week) was payable to a pensioner with no income. Pensioners with income of less than 2s. 6d. per week were paid additional pension of 2s. 6d. less the amount of income. (b) Variation according to rise in retail price index-number. (c) Increase paid on 9th July, 1942, retrospective to 2nd April, 1942. (d) Rate restored to £70 4s. per annum under National Security (Supplementary) Regulation 112A—Statutory Rule 315 of 1943.

NOTE.—Provision for variations according to retail price index-numbers was repealed on 6th April, 1944.

At 30th June, 1953, there were 374,791 age pensions in force. During 1953-54 54,204 age pensions claims were granted and 2,653 pensioners were transferred from the invalid pension list, while 33,864 pensions expired through cancellations and deaths. The net increase for the year was 22,993 and the number in force at 30th June, 1954 was 397,784.

Of the age pensioners at 30th June, 1954, 138,055 (or 35 per cent.) were males, and 259,729 (or 65 per cent.) were females.

The recorded ages of the 54,204 persons (20,924 males and 33,280 females) to whom age pensions were granted during the year 1953-54 varied considerably, ranging from 7,642 at age 60 to three at age 99, but 37,079 were in the 60-69 years age-group. The conjugal condition of these new pensioners was as follows:—Males—single, 2,320; married, 15,000; and widowed, 3,604: Females—single, 4,255; married, 16,862; and widowed, 12,163.

The number of invalid pensioners increased from 70,232 in 1952-53 to 73,732 in 1953-54, an increase of 3,500. Total pensions granted during 1953-54 were 11,350 while 5,197 pensions ceased through cancellations or deaths and 2,653 were transferred to the age pension list.

Of the 73,732 persons in receipt of invalid pensions at 30th June, 1954, 41,996 (or 57 per cent.) were males and 31,736 (or 43 per cent.) were females.

The recorded ages of the 11,350 persons (6,903 males and 4,447 females) to whom invalid pensions were granted during 1953-54 varied from 16 to 98, 5,484 (or 48 per cent.) being in the 45-59 years age-group.

The conjugal condition of persons to whom invalid pensions were granted during the year was as follows:—Males—single, 2,361; married, 4,107; and widowed, 435: Females—single, 1,920; married, 1,785; and widowed, 742.

(a) Based on an estimate of the aggregate of males aged 65 years and over and females aged 60 years and over at 30th June of each year. (b) Includes allowances to wives of invalid pensioners payable from the 8th July, 1943, but excludes funeral benefits in respect of deaths of pensioners, £243,058 in 1950-51; £275,850 in 1951-52; £270,448 in 1952-53; £287,798 in 1953-54; and £303,784 in 1954-55. (c) Not available.

## § 4. Maternity Allowances.

A maternity allowance is payable to a woman who, at the date of giving birth to a child, is residing in Australia or is in Australia and intends to remain. The allowance is payable in respect of a birth which occurs in Australia or on board a ship proceeding from a port in Australia or a Territory of the Commonwealth to another port in Australia or a Territory of the Commonwealth, or on board a ship proceeding to Australia, provided the mother receives no maternity benefit in respect of the birth from the country whence she came. Payment may be made in respect of the birth of a still-born child, or a child which lives for less than twelve hours, if the period of intra-uterine life of the child was at least 5½ calendar months. There is no means test.

Payment may be made to an alien mother if she was a British subject prior to her marriage, or if she or her husband resided in Australia for at least twelve months immediately prior to the birth of the child. Payment in respect of a birth which occurs within twelve months of the mother's arrival in Australia may be made at the end of that time, but may be made immediately if the mother is likely to remain in Australia, and to Australian residents who are temporarily abroad.

The allowances may be paid only to those aboriginal natives of Australia who have been granted exemption from State control laws or who, in any State where exemption is not provided for, are considered suitable persons to receive the allowance.

From 1st July, 1947, the amount of a maternity allowance has been £15 where there are no other children; £16 where there are one or two other children; and £17 10s. where there are three or more other children. "Other children" means children under the age of sixteen years who were in the custody, care and control of the claimant on the date of the birth in respect of which the claim is made. The amount payable is increased by £5 in respect of each additional child born at a birth. Payment of £5 on account of a maternity allowance may be made available, upon application, within a period of four weeks prior to the expected date of birth. The balance is payable immediately after the birth.

The following table gives details of the maternity allowance claims paid and rejected and of the amount paid for the years 1938-39 and 1950-51 to 1954-55 and since the inception of maternity allowances in 1912-13:—

### § 5. Child Endowment.

Any person who is resident in Australia and has the custody, care and control of one or more children under the age of sixteen years, and an approved institution of which children are inmates shall be qualified to receive an endowment in respect of each child. There is a twelve months residential requirement in respect of a claimant and a child who were not born in Australia, but this is waived if the claimant and the child are likely to remain permanently in Australia. A child born during the mother's temporary absence from Australia is deemed to have been born in Australia. There is no means test.

Endowment may be paid in respect of a child whose father is not a British subject if—the child was born in Australia; the mother is a British subject; and the child is likely to remain permanently in Australia. Endowment is also payable to aboriginal natives of Australia unless they are nomadic, or unless the child concerned is wholly or mainly dependent on the Commonwealth or a State and also to children of members of the Naval, Military or Air Forces of the United Kingdom who are serving with the Australian Forces from the time of arrival of the children in Australia.

From 20th June, 1950, the rate of endowment payable has been (a) where the endowee has the custody of one child only—5s. per week; (b) where the endowee has the custody of two or more children—in respect of the elder or eldest child 5s. per week and in respect of each other child 10s. per week; and (c) in the case of an approved institution the rate is 10s. per week for each child inmate. From 1st July, 1941, the rate of endowment was 5s. per week for each child in excess of one in a family, and for each child under sixteen years in an approved institution. The rate was increased to 7s. 6d. per week from 25th June, 1945, and to 10s. per week from 9th November, 1948. There are provisions to meet cases of families divided by reason of divorce, separation, unemployment, death of a parent or other circumstances.

The number of endowed family group claims in force at 30th June, 1954 was 1,280,439 an increase of 33,453 or 2.7 per cent. during the year. The following table shows particulars of the operations in each State and Australia during 1953-54 :—

## CHILD ENDOWMENT : SUMMARY, 1953-54.
