devoted to Australian and Pacific material. The Circulation Department lends books to municipal and shire libraries and to individual borrowers. The total stock of the Department is 69,079 volumes, and 42,815 books were lent to public libraries and individual borrowers during 1967-68. The Mitchell Library, with more than 60,000 volumes and pamphlets and 300 paintings, was bequeathed to the trustees of the Public Library in 1907 by Mr D. S. Mitchell, together with an endowment of \$140,000. In 1968 there were 235,325 volumes in the library, in addition to valuable manuscripts, maps and other material. In 1929 Sir William Dixson gave a collection of historical pictures then valued at \$50,000. These were subsequently added to and at his death in 1952 Sir William bequeathed the whole of his collection of books, manuscripts, pictures and other material, together with an endowment of more than \$226,000, mainly for the printing or reprinting of historical documents relating to Australia and the Pacific. The total number of volumes in the State Library now exceeds 918,000 apart from manuscripts, historical pictures and other material. The State Library maintains an adult education section servicing adult education activities for the Universities of Sydney and New England and the Workers Educational Association.

The maintenance and control of the ordinary lending branch of the Public Library were transferred in 1908 to the Sydney Municipal Council to become the City of Sydney Public Library. The State Library, which had previously been the repository for State archives, transferred this responsibility to an Archives Authority in June 1961. The Authority consists of nine members, of whom the trustees of the Public Library have a right to nominate one.

Other important libraries in New South Wales are: Teachers Colleges, 326,043 volumes; the City of Sydney Public Library, 250,562; Technical Education Branch, 249,881; Railway Institute 169,853; Parliamentary Library, 135,000; Australian Museum, 35,630; Government Transport Institute, 25,818; New South Wales Teachers' Federation Library, 24,000; Workers' Educational Association, 15,000; and the Library at the National Herbarium, 11,226 volumes.

*Victoria.* The modern movement in municipal library service dates from the inception of the Free Library Service Board in 1947. The Free Library Service Board was a State Government instrumentality which planned, encouraged and subsidised the development of municipal library services. Under the *Library Council of Victoria Act 1965* the control of the Board passed to the Library Council of Victoria and in 1966 its office was redesignated the Library Services Division of the Library Council.

In 1969, 151 Councils, representing 2,776,000 Victorians, shared Government library grants amounting to \$1,275,000. Of this amount, \$1,197,234 was direct municipal library subsidy. With the addition of expenditure from these Councils' own funds the total expenditure on municipal library services for 1968-69 will be nearly \$3,250,000, representing an average expenditure of approximately \$1.20 per head of the population served. In 1968, 610,000 borrowers used the free library services, now totalling 2,100,000 books, to the extent of 12,210,000 issues.

Particularly in the country, service has been developed by means of regional libraries. These services, of which there are 23 at present, comprising a total of 102 councils, consist of groups of councils which pool their resources, book-stocks and trained staff. A development since 1962 has been the formation of three Metropolitan Regional Library Services. The Victorian Government provides an Establishment and Regional Library Development Grant of \$60,000 per annum.

There are 9 bookmobile services operating in Victoria, 6 in country regions and 3 in the metropolitan area.

The State Library of Victoria was established in 1856. It is controlled by the Library Council of Victoria and receives its finance from the State Government. The reference collections now total about 860,000 items, and the lending and travelling libraries have another 185,000 volumes. In addition, the State Library receives 6,660 periodicals, annuals and newspapers. A copy of each book, periodical and newspaper published in Victoria is deposited in the Library. Special collections include the J. K. Moir Collection of Australiana, the M. V. Anderson Chess Collection, and the Green and Brodie Shipping Collections. The Victorian Historical Collection contains pictures, drawings, prints, and objects of historical interest. The Archives Division is responsible for the preservation of government records.

*Queensland.* The Library Board of Queensland was established in 1945 under the provisions of 'The Libraries Act of 1943'. Its duty is to attain the fullest co-operation and improvement of the library facilities of the State, with the object of placing such facilities on a sound basis for the benefit and educational improvement of the citizens generally. The Board consists of six members including the State Librarian as *ex officio* member and secretary. A general function of the Board is to ensure that the fullest co-operation exists with the Department of Education, the University of Queensland, local bodies, and other bodies having for their object the encouragement of education, literature and the arts and sciences. A specific function of the Board is the control and management of the Public Library of Queensland. Its policy is to build up the main collection of the Library as the State's reference centre.

The Country Extension Service, which is administered as a department of the Public Library, lends books on non-fiction to adults and children residing outside the metropolitan area and to municipal libraries in areas of low population.

The Oxley Memorial Library, established in 1923, has been administered as a department of the Public Library since 1946, but the collection has been kept separate. It contains books, manuscripts, pamphlets, and other graphic material relating to the history and literature of Australia, and of Queensland in particular, and provides facilities for research students in Queensland literature and history.

In 1958 the section of the Libraries Act dealing with the preservation of public records was proclaimed, and in 1959 an Archives Section of the Public Library was instituted.

The Library Board staffs 13 libraries for 11 government departments of which the largest is the Department of Primary Industries. The work is co-ordinated by an officer-in-charge, who also gives assistance and advice to independently staffed departmental libraries.

Since 1948 a course in librarianship has been held annually at the Public Library to prepare trainees for the examinations of the Library Association of Australia. In 1959 a course covering some subjects of the Association's Registration Examination was inaugurated at the Central Technical College, Brisbane.

The holdings of the Public Library of Queensland and its extension services in 1967-68 were: main reference collection, 201,350 volumes and 11,856 maps and pamphlets; Country Extension Service, 90,828; Oxley Memorial Library, 25,758 volumes and 33,150 maps, pamphlets and miscellaneous items.

Local authorities are empowered by the Libraries Act to establish and conduct library services as a function of local government. The Board encourages local authorities to use these powers. In 1967-68, 80 local authorities were conducting 140 library services. The Brisbane City Council has established 21 of these libraries. There were 113 libraries in Queensland free to adults. To help overcome the problems of a large area and sparse population, various local authorities provide library services on a regional basis. By 30 June 1968, 4 regional library services had been established; the South Western (7 shires), the Central Western (8 shires), the North Western (10 shires), and the Central Highlands (5 shires), with headquarters at Charleville, Barcaldine, Mount Isa and Emerald, respectively. During 1967-68 the Board received a grant of \$660,087 from consolidated revenue to finance the activities of the Public Library and to pay subsidies to local bodies conducting free library services of 50 per cent of endowable expenditure on books and the acquisition or improvement of library buildings and equipment with an upper limit of \$8,000 in respect of new library buildings, and seventy-five per cent of endowable expenditure on books, equipment and maintenance to local bodies conducting subscription libraries. Subsidies were paid to 4 regional library service boards, 75 local authorities and 33 other bodies.

The Parliamentary Library of Queensland was established by the first Parliament in 1860. At 30 June 1968 it contained 98,000 volumes and pamphlets. Included in its collection are long sets of periodicals, newspapers, statutes and government publications, which are currently maintained. The books are devoted largely to the social sciences, although history, geography and biography are well represented. Among the features of its service to Members of Parliament are its newspaper clippings file and copying facilities.

'*The Libraries Act Amendment Act of 1949*' provides for the Public Library and the Parliamentary Library each to receive a copy of all books, pamphlets, maps and other printed material published in Queensland.

*South Australia.* In the Reference Department of the State Library of South Australia there are 250,721 volumes, most of which may be borrowed. Approximately 5,000 periodical titles are filed and the collection of newspapers includes every newspaper printed in South Australia. There are 48,266 volumes in the Adelaide Lending Service; these books are available to persons living in the metropolitan area. The Country Lending Service has 360,965 volumes, of which more than one-third are suitable for children. The Adelaide Lending Service lent 316,575 books in 1967-68, and the Country Lending Service, 199,951. The Library has an active programme for the publishing of facsimile editions of early Australian texts.

The Research Service specialises in scientific and technical inquiries and supplements the resources of the State Library by borrowing from other libraries and by obtaining microfilm copies of material not available locally. It has an extensive collection of trade catalogues and standards.

The library of the Parliament of South Australia held approximately 60,000 volumes in 1968.

There are 29 local public libraries in South Australia provided by 22 local government and other authorities. The libraries are subsidised on a \$1 for \$1 basis by the State Government. The Libraries Board of South Australia, through the State Library of South Australia, provides various central services. Book-stocks are pooled in the State Library of South Australia and are interchanged between the libraries.

At the end of June 1968 these local public libraries contained 233,193 books. There were 143,147 registered borrowers. During 1967-68, 1,942,494 books were lent.

*Western Australia.* In 1955 the Library Board of Western Australia was made responsible for all public library services throughout the State to which the State Government contributes funds. The Board has the following major functions: to encourage local authorities throughout the State to establish public libraries and to provide as a State subsidy all books and bibliographical services necessary for such libraries; to administer the State Reference Library; to advise the Government on all matters relating to libraries; and to provide for the training of librarians.

Local public libraries are subsidised on a \$1 for \$1 basis, the local authority providing accommodation and staffing and the Board all books and related services. The Board provides at least one volume per head of the population. All non-fiction books may be made available at any public library throughout the State on request to the Board. All cataloguing is done by the Board. The first library under this scheme was opened in August 1954. By 31 December 1968, 111 libraries had been established.

The State Reference Library, established in 1887, is the reference division of the Library and Information Service of Western Australia. In addition to providing the normal facilities of a reference library for the metropolitan area, it extends its service throughout the State through local public libraries. It is divided into three divisions responsible for service in the subject fields of Western Australian history, science and technology, and the humanities.

The State Bibliographical Centre and the Central Music Library are housed in the State Reference Library Building, and there is also a commercial information centre. The State archives are maintained by the State Reference Library and managed by the staff of the Battye Library. The State Reference Library is fully equipped with microfilm and photocopy apparatus.

The book-stock of the Board at 30 June 1968 was: 858,997 volumes, comprising circulation stock (including books in public libraries), 606,379 volumes; State Reference Library, 236,230 bound volumes; Central Music Library, 3,665 books on music and 12,723 scores.

There are over 130 special libraries in government departments and industrial firms. Union catalogues of periodicals and books received in the libraries in Western Australia are maintained by the Library Board of Western Australia in the Bibliographical Centre in the State Reference Library building.

*Tasmania.* The Tasmanian Library Board administers the State Library in Hobart, the extension of library services throughout the State and State aid to libraries, and controls the State Archives. State Government expenditure on library services in 1967-68 was \$553,933

Through the State Library, the Board provides reference and information services, documentary film and recorded music libraries, and arranges recorded music recitals, film screenings, displays, exhibitions. etc. Two bookmobiles, based in Hobart, provide a library service to the rural areas of fourteen southern municipalities. All municipalities receive loans of children's books, the number of books being dependent on the child population of each municipality.

To qualify for State aid for an adults library, a municipal council is required to spend on library services an amount equal to a rate of 0.25 cents in the dollar of the assessed annual value of all rateable property in the municipality. In 1968 all municipalities except Glamorgan received assistance. The Board's aid consists of the loan of collections of books at least equal in value to municipal expenditure from rates. Most of the books supplied this way are exchanged by the Board each year.

A regional library, formed by the Board to give a more efficient and comprehensive service, operates in the north-western municipalities of Penguin, Burnie, Circular Head, Wynyard and Waratah, with headquarters in Burnie. The regional scheme has a reference library in Burnie, small libraries in the larger towns and a bookmobile for rural areas.

The Hobart City Council library service is amalgamated with the State Library in Hobart and is run by the Board. In addition, a bookmobile serves schools in the metropolitan area. The libraries of the cities of Glenorchy and Launceston are administered by the Board; a bookmobile serves municipalities close to Launceston. At 30 June 1968 the State Library in Hobart held 115,593 reference volumes and 102,888 lending volumes. Municipal libraries (which include Launceston and Glenorchy) had 381,256 books, of which 162,835 were children's books. The State Library works closely with the Parliamentary Library and provides a reference officer to help with Members' queries when Parliament is in session.

#### University libraries

These libraries provide material not only for the education of graduates and undergraduates, but also for research workers and practical investigators all over the continent. Much of the material they contain is not available elsewhere, for although in most cases smaller, they are in many directions

more highly specialised than the public libraries. They lend to one another and to State and private institutions as well as to individual investigators. Each of them is governed by a librarian, who is responsible as a rule to an executive sub-committee and a committee which is practically co-extensive with the professorial staff.

The following table shows the volumes held, accessions during the year, and expenditure of the Australian university libraries.

## UNIVERSITY LIBRARIES

University	Volumes	Accessions	Expenditure
	(a)	during year (b)	(c)
	'000	'000	\$'000
Australian National . . . . .	478	45	798
Sydney . . . . .	1,141	87	1,201
New South Wales . . . . .	460	47	780

Newcastle . . . . .	125	11	205
Macquarie . . . . .	156	62	289
Melbourne . . . . .	536	30	803
Monash . . . . .	291	49	886
La Trobe . . . . .	76	20	340
Queensland . . . . .	556	71	820
Adelaide . . . . .	472	31	574
Flinders . . . . .	112	16	285
Western Australia . . . . .	324	19	416
Tasmania . . . . .	166	11	250
<b>Total . . . . .</b>	<b>5,139</b>	<b>517</b>	<b>7,915</b>

(a) 30 June 1968. (b) Year ended 30 June 1968. (c) During year ended 31 December 1967.

*Australian National University.* This library comprises three main sections attached to the Institute of Advanced Studies, the School of General Studies, and the Centre of Oriental Studies. The Advanced Studies collection of some 260,000 volumes is closely related to the special interests of the six Research Schools in the Institute. It has a wide range of periodical literature and is strong in the fields of anthropology and linguistics, mathematics, mathematical statistics, physics, chemistry and the non-clinical medical sciences, and has sought to acquire a good working collection of secondary material of high standard in the social sciences. The General Studies collection (135,000 volumes) is designed to further teaching at all levels in the Faculties of Arts, Economics and Science, and to provide research facilities in the humanities. The Oriental collection (mainly Chinese, Japanese and Indonesian) is primarily a research collection and at present contains 82,000 volumes. Branch libraries have been established to serve the Faculty of Law (22,000 volumes), the John Curtin School of Medical Research, the Research School of Physical Sciences, the Research School of Chemistry, the Research School of Biological Sciences, the Department of Astronomy at Mount Stromlo and the New Guinea Research Unit at Port Moresby. The resources of the National Library of Australia are available to members of the University, who also have access to many specialised collections of material held by government instrumentalities in Canberra.

*University of Sydney.* The library consists of the central collections, housed in the Fisher Library, eleven branch libraries including the Law Library, the Medical Library, the Badham Library in agriculture, biology and veterinary science, the Wolstenholme Library in economics, the Engineering Libraries, and a number of departmental libraries. The University Library holds a total of more than one million volumes.

The first books were acquired in 1851, and shortly afterwards the library of Sydney College was added. The collection of Nichol D. Stenhouse was acquired in 1878 as the gift of Thomas Walker. In 1885 Thomas Fisher bequeathed the sum of \$60,000, the income from which is used as a book fund. The Fisher Fund was matched in 1961 by establishment of the W. H. and Elizabeth M. Deane Library Fund. Perhaps the finest collection in extent and importance which has been given to the University is that of Sir Charles Nicholson. There have been numerous other benefactions, among which may be mentioned the library of Sir Francis Anderson, the W. H. Deane collection of books and manuscripts and the Dalley-Scarlett music library. In 1961 the University acquired the English literature collection of the late Hugh Macdonald, and the late Professor J. Stewart's library, an outstanding collection on archaeology and numismatics, was acquired in 1963. The Sydney University Library has an extensive collection of mediaeval manuscripts and early printed books.

*University of New South Wales.* The libraries in this university consist of the Central Library and a Bio-medical Library at Kensington. There is also a library at Wollongong University College and the Broken Hill Division.

*University of New England.* The library was founded in 1938, when the New England University College was established. Sir William Dixon was its first benefactor. The library is adding to its collection at the rate of approximately 20,000 volumes a year. It receives approximately 5,500 current periodicals annually. It is housed in a three-storied, air-conditioned building, which also makes provision for a bindery and photographic and archives division. A post-graduate and research library is planned as an extension of the present building. The library has its own lecturer in bibliography and library service and conducts formal courses in librarianship. A multi-copy collection of 36,000 volumes for external teaching is housed in the Public Library of New South Wales in Sydney.

*University of Newcastle.* Beginning in 1951 with science-technology materials and associated, through common staffing and housing, with Newcastle Technical College Library until 1961, the library now has a collection of 135,000 volumes and is increasing at the rate of about 13,000 volumes per year. More than 4,000 periodicals are received regularly by subscription and donation. The resources of the library are used extensively on inter-library loan both within the Newcastle district, particularly by local industries, and increasingly, as the library's resources grow, by the other research libraries of the country.

The first stage of the permanent library building was completed in January 1968. To it will be brought, as the departments move to Shortland, the one-eighth of the collection still at Tighes Hill. There are no departmental libraries.

*Macquarie University.* The library began in 1965 to acquire books and to plan for its opening in 1967. It occupied temporary quarters in North Sydney until mid-1967, when it moved into the first stage of a new air-conditioned building, which is centrally situated on the university site at North Ryde and planned to house eventually 800,000 volumes. The library subscribes to 2,583 serials and has an audio-visual area. When the library opened in March 1967, approximately half of its total collection of 70,000 volumes had been donated by private individuals, firms and other libraries. On 1 January, 1969 its stock stood at 189,481 and its acquisition programme was still being heavily supported by donors. The library staff conducts an extensive programme of lectures and tutorials in bibliography and library use for both undergraduate and post-graduate students.

*University of Melbourne.* Early in 1854 the first allocation for books was made, but the library was housed in temporary quarters until 1959. The W. L. Baillieu Trust made available the first instalments of a \$200,000 gift for building purposes, which have been followed by subsequent gifts and substantial grants from the Commonwealth and State Governments, and a new building was occupied at the beginning of 1959, the first in the university to be designed specifically for library purposes. Since 1959 the use of the library has increased fourfold, and during the academic year admissions of readers to the building averaged 8,000 a day. The building has become inadequate for all purposes and a doubling of its present floor area is required urgently. The resources of the library are also used extensively on inter-library loan by government instrumentalities, industries and other organisations throughout Australia. The University Library, including 13 branch libraries in various departments, is administered from the centrally situated Baillieu Library. The large medical branch library is especially rich in periodicals.

*Monash University.* The library contains about 310,000 volumes and subscribes to some 7,000 journals. It has been decided that the library organisation will develop into four large units—the main library, a bio-medical library, a law library, and a library for the physical sciences and technology. The physical sciences and technology library has been named the Hargrave Library and was opened in December 1962. The main library, catering mainly for the humanities, was occupied in November 1963. The bio-medical library was occupied in 1966, and the law library in February 1968.

*La Trobe University.* The university was founded in December 1964 and the first books were acquired in 1965. The library was opened in February 1967; it is a three-storey air-conditioned building which is designed to be extended horizontally. The first stage has accommodation for about 130,000 volumes and 420 readers. By the end of 1968 the library had acquired about 89,000 volumes and received about 2,000 periodicals and serials, catering for the Schools of Agriculture, Biological Sciences, Humanities, Physical Sciences and Social Sciences.

*University of Queensland.* The library was founded in 1911. There is a main library and a number of departmental libraries at St Lucia, and medical libraries at the Medical School and at teaching hospitals. The library receives more than 15,000 current periodicals. It has notable collections in geology, the history, development and culture of the Pacific region, and tropical aspects of agriculture, veterinary sciences and biological sciences.

*University of Adelaide.* The main library is the Barr Smith Library which commemorates its first benefactor, Robert Barr Smith, who, with members of his family in and after 1892, gave the university

over \$100,000 for the library. Seats are provided for 1,000 readers, including 270 in the main reading room. There are branch libraries for medicine, law and music, with seats for 450 readers. The South Australian branches of the Australian Medical Association, the Australian Physiotherapy Association and the Australian Dental Association make annual contributions towards the maintenance of the medical library in return for borrowing privileges for their members. The Waite Agricultural Research Institute has a separately administered library of about 23,500 volumes in agricultural science. Some 15,716 serial titles are received.

*The Flinders University of South Australia.* The acquisition of books for the library commenced in 1963 when the first library staff were appointed. By the time teaching began in March 1966 a collection of some 60,000 volumes had been assembled. At the end of 1968 the collection contained over 121,000 volumes. Approximately 20,000 volumes are being added each year, and the library receives currently about 3,700 periodical titles. During the early development of the library emphasis is being placed on material to support the current teaching and research programmes of the university. Special attention is being paid to fields where little material is available elsewhere in Australia, for example Spanish literature. The first stage of the library building was occupied at the end of 1965, and the second stage extension which completed the building was finished late in 1967.

*University of Western Australia.* The first full-time library staff was appointed in 1927. Provision for a permanent library building was not possible when the university moved to its present site, and space and facilities were inadequate for many years. A new four-storey building was completed at the end of 1963 and named the Reid Library after the late Chancellor of the University, Sir Alex Reid. The building has seating accommodation for 1,000 readers and facilities for photo-copying and the reading of microfilms. The University Library developed very slowly in the early years, but recently has been adding about 20,000 volumes a year to its stock. In addition to the Reid Library there are a number of departmental libraries of which the more important are engineering, agriculture, pre-clinical medicine, music and law. There is also a medical library, in accommodation provided by the Royal Perth Hospital, for the use of the Medical School.

*University of Tasmania.* Although the University of Tasmania was established in 1890, library development was slow and the University Library could not be said to have existed in an organised way until 1913. The present collection numbers about 180,000 volumes and over 4,000 current serial titles. Apart from the main library, where central services are located, there are three branch libraries, five departmental collections on the Sandy Bay campus, and a Clinical Library within the Clinical School of the Faculty of Medicine which is associated with the Royal Hobart Hospital. The University Library also collects private and business archives and has a rare book collection.

#### Children's libraries and school libraries

*New South Wales.* Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents and citizens associations and partly by departmental subsidy. Secondary and central schools, and an increasing number of primary schools, have teacher librarians.

*Victoria.* Throughout Victoria an essential feature of libraries is the service for children; 134 municipal libraries share in a special children's library grant of \$10,000, and on the staff of the Library Services Division is a professional children's librarian who supervises, and advises on, work with children.

The Education Department is making provision for the building of library rooms in new schools. Where accommodation is available in existing schools, library furniture is provided free of cost to the schools, and the Government subsidises the purchase of books. In June 1968, 670 schools had central libraries. The Education Department has a library service officer with a small staff to advise and assist schools in the establishment and organisation of libraries. A one-year course for the training of teacher-librarians was established at Melbourne Teachers' College in 1955. Approximately 60 teachers are trained each year. A four-year course for the training of teacher librarians for secondary schools was instituted in 1968. There is an annual intake of 25 students for this course.

*Queensland.* The Library Board of Queensland stresses to local bodies the importance of providing adequate library services for children. There are in Queensland 138 libraries free to children, of which 18 are conducted by the Brisbane City Council. The children's libraries at Rockhampton, Toowoomba and Townsville are particularly active. Country children who are not catered for locally may borrow from the Country Extension Service which possesses a separate children's collection. The purchase of books for State school libraries in Queensland is financed by school committees and parents associations, with a subsidy from the Department of Education on a \$1 for \$1 basis. Trainees at the teachers colleges are instructed in school library organisation and management.

*South Australia.* A children's library of 38,937 volumes is used by school classes and individual children living in the metropolitan area. In 1967-68, 261,248 books were lent. There is a large collection of historical children's books assembled for the use of research workers. In August 1957 a youth lending service was opened for young people from thirteen to eighteen years of age. It has a stock of 15,292 volumes, and in 1967-68, 111,513 loans were recorded.

*Western Australia.* The Education Department provides library services, issues of books and subsidies on library books to schools. School libraries are supplied with shelving, furniture, stationery, and library supplies. The Library Services Branch of the department provides advisory services to assist schools in all aspects of library organisation and service. It also relieves schools of the professional and routine tasks of book preparation by providing a central cataloguing service for both new books and those previously uncatalogued in school libraries, a central processing service to cover books in plastic and prepare them for use, and a library book repair and binding service. Book selection in schools is assisted by a model library and by lists of recommended books.

The teachers colleges provide courses in school library organisation and service and have developed college libraries directed by qualified librarians. At the Perth Technical College part-time courses are provided on the syllabus for the examinations of the Library Association of Australia and are attended by many school librarians. The Perth Technical College and technical schools are equipped with libraries, and an allocation of funds is provided annually to each school and college department for the purchase of books and periodicals. Books for technical schools other than Perth Technical College are centrally ordered, catalogued and processed by the Library Services Branch.

All high schools are provided with library accommodation and furniture. New high schools have been provided with a main library, reading room, study room, students' lounge, teachers' lounge and librarian's office. High school libraries are staffed by one or two trained school librarians according to the size of the school and trained library assistants have been appointed to some schools. New high schools are issued with books to a value of \$1,000 in each of their first three years and new primary schools are issued with books to the value of \$400 in their first year. All high schools receive annually an issue of books, as well as being entitled to a subsidy for the purchase of library books, while all non-government schools with post-junior students receive an annual issue of books for matriculation studies. A number of primary schools have organised school libraries in rooms which have become available, or in premises provided by the parents and citizens associations. Annual issues of books are made to all primary schools, varying according to the size of the school, and a subsidy is provided for the purchase of library books. The Charles Hadley Travelling Library provides 500 boxes of books which are circulated to all small schools, mission schools and special classes. Children who are unable to attend school, mainly those in isolated areas, are provided with books from the Correspondence School's library.

*Tasmania.* All the State's municipal libraries have Lady Clark Memorial Children's Libraries. The Lady Clark Memorial Children's Library in the State Library in Hobart has 24,300 books and serves schools in the Hobart metropolitan area by bookmobile. More than 150 schools which are not close to a municipal library have collections of books on loan from the Lady Clark Memorial Children's Library.

### Special libraries

Before the 1939-45 War the number of special libraries, apart from those maintained by government departments, was small, but during recent years many manufacturing, commercial, research and other firms, as well as statutory bodies, have found it necessary to establish special libraries to serve their staff. These libraries, which are most numerous in Sydney and Melbourne, are being increasingly administered by professional librarians.

### Archives

General interest in archives in Australia was aroused in 1888, when the Colony of New South Wales celebrated its centenary, the occasion being marked by official publication in 1889-1894 of the *History of New South Wales from the Records* by G. B. Barton and A. Britton, and in 1893-1898 of the series of *Historical Records of New South Wales*, edited by A. Britton and F. M. Bladen. Both publications were based on transcripts of documents in London which had been made by Mr James Bonwick, appointed Archivist by the Government of New South Wales in 1884.

In 1902 Mr F. M. Bladen presented to the Commonwealth Government a report on European Archives, in which he recommended the establishment of a Commonwealth Archives Office and the copying of further official records in London. The copying project continued and some of its results were embodied in the volumes of *Historical Records of Australia*, published by the Commonwealth in 1914-1925, under the editorship of Dr J. F. Watson.

Measures for the preservation and storage of original documents were not taken until later years. In the absence of duly constituted archives offices, the various major libraries throughout Australia undertook the collection of historical records, both from official and private sources. An Archives Department of the Public Library of South Australia was established in 1920, and other institutions formed archives branches in, 1944 (Commonwealth National Library), 1945 (Public Library of Western Australia), 1948 (State Library of Victoria), 1949 (State Library of Tasmania), 1953 (Public Library of New South Wales), and 1959 (State Library of Queensland). Legislation to govern arrangements for official records was passed as follows: South Australia (1925, 1936), Tasmania (1943, 1965), Queensland (1943) and New South Wales (1960). Since 1961, separate authorities for official archives have been established: Commonwealth Archives Office, 1961; Archives Office of New South Wales, 1961; Archives Office of Tasmania, 1965. A Business Archives Council was established in 1954 to co-ordinate activities in the field of company records and a number of firms have established their own archives services. Certain churches have also provided appropriate facilities for ecclesiastical records. Other corporate and private archives continue to be collected by several archives offices, libraries and, more recently, universities.

### **Commonwealth Archives Office**

In 1943, following a report by an inter-departmental committee, the Prime Minister directed the formation of a War Archives Committee to arrange for the preservation of war records. This Committee recognised that war archives could not be separated from peace-time archives, and in 1946 the name was changed to the Commonwealth Archives Committee. In 1952 the National Library became the sole archival authority for the Commonwealth and the Chief Archives Officer became the Executive Officer for the Committee. In March 1961, in accordance with a recommendation of the National Library Inquiry Committee, the Archives Division of the National Library was reconstituted as the Commonwealth Archives Office within the Prime Minister's Department. The Archives Office functions, in part, as a central agency for the control of those records created by the Commonwealth Government which are no longer required for frequent use in the day-to-day business of government and which, in many cases, contribute towards the development of a unique record of the heritage of the Australian nation. As a complementary function the Office also provides services for members of the public. These functions are carried out through the following basic activities.

*Records and archival management.* From 1967, the Office has been responsible for a Central Information Bureau on Records and Archival Management, providing advisory and information services to agencies of the Commonwealth Government.

*Registration of record series.* The Office maintains the Commonwealth Register of Record Series, in which details of all Commonwealth records are entered, including those in government departments as well as archival holdings. The records of the Commonwealth are particularly varied, ranging from early Customs, Post Office, Defence, and other material transferred from the Australian Colonies and States, to records of territories now under Australian administration, in addition to those of the Commonwealth Government proper from 1901. Some papers from non-official sources are also held, such as the records of enemy firms expropriated during the two World Wars, records of the Chaplain of Norfolk Island, and papers of former Commonwealth ministers and officials.

*Control of disposal.* No Commonwealth records may be destroyed without the concurrence of the Chief Archivist, whose responsibility it is to safeguard broader national interests as distinct from those of the department which compiled the records. This concurrence is given as far as practicable through continuing disposal authorities which enable Commonwealth departments to destroy certain routine classes of records automatically, but records not covered by such continuing authorities are checked before destruction is authorised. Records selected for permanent preservation are assessed as having evidential or informational value to the nation. In the first category are all records documenting the democratic, constitutional, and legal basis of the Commonwealth Government; the origin, development, organisation, functions, policies, and substantive activities of Commonwealth departments; and the rights and entitlements of Australian citizens. These range from the signed copies of Acts of Parliament to duplicate certificates of naturalisation. The second category, while including many records from the first, also covers source material considered of value to researchers in social, economic, and scientific affairs (such as migrant documentation preserved for demographic purposes) and the nation's cultural and technological heritage (represented, for example, in records of copyrights and patents).

*Provision of accommodation.* Any records which are no longer in active use but which are considered by the originating department or by the Archives Office to warrant preservation, either permanently as national archives or temporarily for a further specified period, may be transferred to an archives repository. While in archival custody they are analysed, arranged, and described, as resources permit, by a wide variety of processes, so that the broadest range of research interests

may be served by a comprehensive system of information retrieval. At 30 June 1968 the total holdings of the Archives Office throughout Australia amounted to 345,000 shelf feet of records, including 125,000 feet of permanent material, such as files, manuscripts, registers, cards, books, maps, plans, models, paintings, films, photographs, microfilms, recordings and tapes, conservatively estimated to be more than 10,000,000 items.

*Regulation of access.* The current policy of the Commonwealth is to designate the generality of official records created before 1 January 1923 as 'open' to public access. However, as is customary, a small number of exceptions have to be made to this rule. The examination of records for this purpose and the development of access arrangements generally are the responsibility of the Archives Office.

*Provision of information.* The Office provides an advisory service to enquirers, both official and public, on appropriate sources of information for particular topics including material held by the Office itself, by other Commonwealth agencies and elsewhere. Records in the custody of the Archives Office are available for use by depositing and other departments of the Commonwealth Public Service. During 1967-68 some 272,000 items were lent to departments. The Office also provides departments with special searches and information from the records in its custody (13,200 requests in 1967-68). In accordance with the Commonwealth Government's access rules, the Office also supplies information to members of the public engaged in academic or other forms of research. Records may be consulted by holders of a search ticket in the public search rooms provided and 40 public search tickets are currently valid. During 1967-68 enquiries were received from 235 researchers. There were 6,400 daily visits to archives search rooms and repositories by officials and the public, and 24,600 items were produced for consultation.

The headquarters of the Commonwealth Archives Office is in Canberra, and there are branches in Sydney, Melbourne, Brisbane, Adelaide and Perth. Regular visits are made to areas not yet served by Commonwealth Archives repositories, and in 1968 records surveys were conducted in the Northern Territory, Papua and New Guinea, Norfolk Island and Christmas Island. The Office maintains liaison with similar organisations in overseas countries and is the Australian national member of the International Council on Archives, established under the auspices of UNESCO.

#### Archives Office of New South Wales

Prior to 1961 the State archives were in the care of the Public Library of New South Wales, first in its Mitchell Library but from 1954 in an Archives Department. Under the *Archives Act 1960*, the Archives Authority of New South Wales was established in 1961 as a statutory corporation of nine members, appointed by the Governor, to have the custody and control of the State archives. These are preserved in the Archives Office of New South Wales which was also established under the Act as an office and repository for that purpose. The Principal Archivist is the chief executive officer of the Authority.

The Act requires that before any public records of the State are destroyed or disposed of, notice must be given to the Archives Authority which may then require any such records to be made available to it. Records transferred to the Authority become State archives and are generally 'open' when 35 years old, to holders of a reader's ticket.

The State archives at 31 December 1968 occupied 30,816 feet of shelving. This excludes more than 16,000 maps and plans besides other records which can not be readily measured statistically. In addition there were about 100,000 feet of permanently valuable records housed mainly in the Government Records Repository.

#### Archives Office of Tasmania

The Archives Office of Tasmania operates under the *Archives Act 1965, No. 47*. The statutory authority under the Act is the Tasmanian Library Board. No records of state and local authorities may be destroyed or otherwise disposed of except on the written authority of the Principal Archivist. A survey of Tasmanian records is concentrating at present on municipal councils and local courts.

The holdings of the Archives Office amount to about 10,000 feet (including non-public records) housed in part in the State Library building completed in 1962 and in part in the vaults beneath the nineteenth century Public Buildings, Franklin Square. On the completion (probably in 1971) of the second phase of the State Library Building the archives will be accommodated in the tower block. The storage space will be air conditioned and will provide an ideal environment for records.

A publication programme has produced three parts of a Guide to the Public Records of Tasmania and five further record groups are being inventoried with a view to producing additional publications.

A file lending service is conducted for the benefit of departments and authorities which have deposited semi-current records in the Archives Office. Research workers have access to records in the search room and a mail reference service is provided for country and interstate enquirers.

**Business Archives Council of Australia**

The Business Archives Council of Australia (New South Wales Branch) was established in 1954 to promote activity in the field of business records. A Victorian branch of the Council was established in 1957. Both branches work for the preservation of business records and promote the writing of business history. The Council itself does not collect business records. The main collecting centres are the Archives of the University of Melbourne, The Australian National University and the University of Sydney. Melbourne and the Australian National University hold the largest collections of business records in the British Commonwealth.

The University of New England also collects business records. Whereas the collections at Melbourne and the A.N.U. span a wide range of business activity, New England concentrates on rural industries. In addition, Melbourne holds a strong collection of legal records, and the A.N.U. a strong collection of trade union records.

**Museums and art galleries**

In 1964 an annual collection of statistics on a uniform basis was commenced from Australian museums and art galleries. The following paragraphs provide summarised results of the collection and refer individually to the more important museums and art galleries.

A museum or art gallery is considered to be a building, group of buildings or parts of buildings, managed as a unit and intended predominantly for the permanent display of objects of interest (museum) or objects of art (art galleries) to the general public. Institutions displaying live exhibits are excluded (the more important of these are mentioned on pages 549-50), as are buildings used for temporary displays (exhibitions, commercial galleries exhibiting only for sale) without a permanent stock of exhibits; permanent exhibitions which are ancillary to other activities such as exhibits at council chambers, libraries, hotels, and other commercial enterprises providing services to tourists and sightseers; collections which are not readily accessible to the general public, such as university collections for the use of students and research workers; and historic homes, etc. not specifically intended for the permanent display of objects of interest (i.e. where the building itself and its normal fittings are essentially on display).

**Museums and art galleries, 1968**

The following table classifies by States and Territories and by ownership the institutions in Australia which have been identified in 1968 as museums and art galleries (branches of museums and art galleries are not shown separately).

MUSEUMS AND ART GALLERIES: STATES AND A.C.T., AND OWNERSHIP, 1968

(a) Includes branches at Albury, Bathurst, Broken Hill and Goulburn. (b) Estimated.

Some descriptive detail follows in respect of the seventeen major institutions listed in the foregoing table.

#### **Australian Capital Territory**

*The Australian War Memorial, Canberra.* The memorial comprises the national collection of war relics and the building in which these are preserved. The building was opened in 1941. The memorial is administered by a director responsible to a board of twelve trustees. There is a collection of 4,000 art works and a museum collection of more than 40,000 war relics, the gathering of which began on the battlefields of the 1914–18 War and was continued during the subsequent campaigns in which Australian forces have participated. The collection has been enhanced by gifts of relics from the governments of Great Britain, the sister dominions and allied countries, and also by presentations made by ex-servicemen and relatives of those who died. The collection consists of items such as tanks, aeroplanes, submarines, field-guns, boats, and the widest possible range of war trophies down to the smallest items, each relic dependent for its value on its historical background. The works of art, all by Australian artists, depict battle scenes, individual officers and men, etc., and include oil and water colour paintings, drawings, statuary, bronzes, dioramas, and mosaics. There is also a library, which is described on page 535.

*The Australian Institute of Anatomy, Canberra.* The Institute is described in the chapter Public Health, page 470. It contains displays of biological and anatomical aspects of man and the anatomy of Australian animals. A display of Aboriginal and Melanesian artefacts from the National Ethnographic Collections is temporarily housed in the Institute.

#### **New South Wales**

*The Australian Museum, Sydney.* Founded in 1836, this is the oldest museum in Australia. It is administered by a director and a board of twenty-five trustees as a government department attached to the New South Wales Department of Education. It has fine collections of all groups of animal, including insect, fossils as well as mineral and ethnological collections, particularly in relation to Australia and the Pacific.

*Museum of Applied Arts and Sciences, Sydney.* This museum, with branches at Bathurst, Goulburn, Broken Hill, and Albury, is administered by a director and a board of seven trustees appointed by the Governor of New South Wales. The museum specialises in applied arts (ceramics, glass, oriental arts, costumes, musical instruments, furniture, etc.), applied science and technology (engineering, transport, textiles, electronics, etc.), and among its special features are a Watt beam engine of 1785, No. 1 New South Wales locomotive, Lawrence Hargrave models, colour television, and a planetarium.

*Geological and Mining Museum, Sydney.* This museum is administered as a branch of the Department of Mines by a curator under the control of the Director, Geological Survey of New South Wales. The display contains a unique collection of ores and economic minerals from New South Wales with material from the other States and from overseas for comparison. Its most important functions are the identification of mineral and rock specimens, several thousands of which are received annually, and the supply of some 20,000 to 30,000 specimens free of charge to schools.

*Art Gallery of New South Wales, Sydney.* The Gallery originated in the Academy of Art founded in 1871. It is administered by a director and secretary under a board of thirteen trustees responsible to the New South Wales Minister for Education. The gallery has over 8,000 exhibits, including nearly 1,700 oils and 170 pieces of sculpture. Australian art and modern European painting and sculpture are featured. An Aboriginal art collection includes a unique set of large Melville Island graveposts. Assistance is provided to governments and private organisations in the design of books, coins, notes, etc., the preparation and judging of exhibitions, and the supply of research material and information.

#### **Victoria**

*National Museum of Victoria, Melbourne.* The museum was founded in 1854. It is administered by a director and board of seven trustees. It houses substantial collections in the fields of zoology, geology and anthropology. There is a small branch at Tidal River, Victoria.

*Institute of Applied Science of Victoria, Melbourne.* The Institute was founded in 1870. It is administered by a director and board of seven trustees. Its collections are concerned with aspects of application of all science subjects, but with special emphasis on engineering, transport, astronomy, physics, biology, public health, arms and agriculture. The Institute has a planetarium, an observatory and a radiocarbon dating laboratory.

*National Gallery of Victoria, Melbourne.* The gallery is administered by a director and board of nine trustees. Its large collections of over 20,000 items feature paintings by Rembrandt, Tiepolo and the Flemish primitives, Dürer engravings, Blake drawings, and English 18th century furniture.

In the first half of 1968 the National Gallery occupied its new building in the Victorian Arts Centre. The new Gallery was opened to the public in August of that year.

### Queensland

*Queensland Museum, Brisbane.* The museum, founded in 1855, is the State Museum of Natural Science. It is administered by a director as a sub-department of the Queensland Department of Education. The collections are in the fields of the natural sciences, ethnology and history, and include extensive collections of fossil vertebrates.

*Queensland Art Gallery, Brisbane.* This gallery was established in 1895. It is administered by a director and board of thirteen trustees. The gallery especially features Australian art of all periods, British modern art, French sculpture, and French paintings from the Rubin collection. The Art Gallery has 1,859 display items, including 573 oils.

### South Australia

*The South Australian Museum, Adelaide.* The museum is a department of the South Australian Public Service and is administered by a director and board of five trustees. It features natural science and anthropological collections. The latter refer to the Australasian and Pacific regions and include an outstanding collection of Aboriginal artefacts.

*National Gallery of South Australia, Adelaide.* The gallery originated in 1881. It is administered by a director and board of seven trustees. Apart from the usual art gallery collections, devoted chiefly to British and Australian works, it features a large collection of prints containing examples from European, British, Oriental, and Australian schools, and a numismatic collection which is widely regarded as the finest in Australia. It also contains the South Australian Historical Collection and a small collection of weapons. It has 56,996 exhibits, including 2,132 oils and watercolours, and 12,144 engravings and prints.

### Western Australia

*Western Australian Museum, Perth.* The museum was established in 1895. It is administered by a director and board of five trustees appointed by the Western Australian Government. The zoological collections cover all vertebrate and most invertebrate fields, particularly marine. There are collections relating to vertebrate palaeontology and meteorites, fossil invertebrates, and some fossil plants. There are extensive collections of Aboriginal artefacts and European arms and armour.

*The Western Australian Art Gallery, Perth.* The gallery was established in 1895 and is administered by a director and government-appointed board of five trustees. It features especially collections of Australian paintings, drawings, ceramics and sculpture, a fine collection of Australian contemporary art, and a major Henry Moore sculpture. It has collections of coins and of Western Australian stamps. Altogether there are 3,698 items, including 464 oils and 51 pieces of sculpture.

### Tasmania

*Tasmanian Museum and Art Gallery, Hobart.* Opened in 1887, the Tasmanian Museum and Art Gallery is administered by a board of seven trustees. It has a branch at Zeehan, namely the West Coast Pioneers' Memorial Museum. The museum part contains zoological, anthropological and geological displays relating to Tasmania and special displays relating to Tasmanian Aborigines and Macquarie Island. The art displays contain an excellent holding of Tasmanian historical works.

*Queen Victoria Museum and Art Gallery, Launceston.* This institution, opened in 1891, is owned and administered by the Launceston City Council through a director and a sub-committee of aldermen. It has a branch at Cradle Mountain. Attention is concentrated on collections relating to the natural, biological and historical environment of Tasmania, featuring Tasmanian fauna, Aboriginal relics and historical material. The arts associated with Tasmania are represented by an excellent collection of early colonial period painting and also by a fine collection of costumes, lace and ceramics.

### Other museums and art galleries

A short description of some of the thirty remaining museums and art galleries is given in the following paragraphs. The institutions are grouped into those owned by the States, by municipalities and private trusts, by universities, and by private persons.

*State-owned institutions.* The Dixon and Mitchell Libraries (sections of the Public Library of New South Wales) have galleries in which paintings, drawings, engravings, photographs, coins and postage-stamps, all related to Australian and south-west Pacific history, are exhibited. The main area of display comprises 7,051 square feet. Only a fraction of the many thousands of items can be shown. There is a geological museum, maintained by the Victorian State Mines Department, with a comprehensive collection of geological specimens. In South Australia there is a small museum of local and tourist interest—the Old Government House, Belair, displaying furniture, etc. of the colonial era.

*Municipal and private trust institutions.* In addition to the Queen Victoria Museum and Art Gallery in Launceston, eleven institutions are owned by local government authorities throughout Australia, one of which, in Warrnambool, Victoria, is closed pending construction of new premises. The largest of them are the Newcastle Art Gallery in New South Wales and the Museum and Art Gallery at the Mildura Arts Centre in Victoria. Institutions are also maintained in major provincial cities by private trusts. These and the municipal institutions often exhibit artistic, historical and other items of special local interest, and as a rule there are associated with them various local societies devoted to the exploration and encouragement of the arts, local history and the like. Thus the Lionel Lindsay Art Gallery and Library at Toowoomba, Queensland, is administered by a board of trustees, originally appointed in 1959 by deed of trust.

*University institutions.* Most university collections, some of them comprehensive and containing unique material, are reserved essentially for the use of students and research workers, and are therefore not included as museums or art galleries. However, the John Darnell Art Gallery of the University of Queensland, originating from a bequest in 1930, the Macleay Museum of Natural History at the University of Sydney, stemming from a gift to the university in 1888, and the Nicholson Museum of Antiquities at the University of Sydney are open to the public.

*Private museums and art galleries.* Only six establishments of this nature are included here as museums or art galleries. Five are in South Australia and one in the Australian Capital Territory.

### Botanical and zoological gardens

In addition to the zoological gardens referred to in the following paragraphs there are numerous privately owned zoos and sanctuaries, many of them at tourist resorts, which maintain collections of Australian flora and fauna. There are also various national parks, forests, reserves, etc., dedicated for public use, which are preserved largely in their natural condition.

#### New South Wales

The Sydney Botanic Gardens are situated on the shores of Farm Cove, Sydney Harbour, close to the heart of the city and on the site of the first farm established in 1788 by Governor Phillip. Now occupying sixty-six acres, they contain a large and varied collection of flowering plants, shrubs and trees as well as hothouses of orchids and ferns.

The Zoological Gardens at Taronga Park, on the northern side of Sydney Harbour, were opened in 1916. The area is about seventy acres. The natural formation has been retained as far as practicable, with the object of displaying the animals in natural surroundings, and an aquarium has been built within the gardens. In 1967–68 admissions to the grounds were 883,262 and to the aquarium 324,464. The receipts of the zoological department of the Taronga Park Trust amounted to \$494,156 in 1967–68, excluding an annual State grant of \$50,000, and expenditure amounted to \$493,101. Exhibits at 30 June 1968 comprised 1,010 mammals, 2,746 birds, 261 reptiles, and 1,085 fish.

#### Victoria

The main botanical gardens in the State are the Royal Botanic Gardens, an area of eighty-eight acres within one mile of the centre of the City of Melbourne, containing over 12,000 species of plants, of which there are some 30,000 individual specimens. Many species of native birds breed on islands in lakes within the gardens.

The Zoological Gardens are situated in Royal Park, and contain a wide selection of animals, birds and reptiles. A wild life sanctuary is also maintained at Healesville.

#### Queensland

Botanical gardens have been established in Brisbane and in several other cities. The Brisbane Botanic Gardens were established in 1855 by the Government of New South Wales. In 1925 the Queensland Government transferred them to the Brisbane City Council. They occupy approximately forty-six acres on the banks of the Brisbane River in the central city area and are noted for their collections of palms, tropical trees and shrubs, and succulents; they contain over 7,500 species.

### South Australia

The Botanic Garden was established in 1855 and opened to the public in 1857. It covers forty-five acres, on which are established collections of Australian and exotic plants from low rainfall and sub-tropical regions. In a large range of glasshouses are collections of tropical, ornamental, and economic plants. Special collections include cacti and succulents, bromeliads, and begonias. An up-to-date and comprehensive botanical and horticultural library is maintained.

Mount Lofty Botanic Garden, of approximately 180 acres, was established in 1960 and is to be opened to the public in the early 1970s.

The State Herbarium was established in 1952 and moved to the present building in 1965. It contains about 250,000 specimens.

The Zoological Gardens, opened in 1883, have an area of approximately 19 acres, and contain a fine collection of animals, reptiles, and birds.

### Western Australia

A botanic garden and arboretum for the native plants of Western Australia were commenced in 1962 and officially opened in October 1965. The site of this development is in King's Park, a reserve of almost 1,000 acres close to the centre of Perth. The Botanic Garden is the counterpart of the Museum in the botanical field, maintaining living collections of plants for scientific and educational purposes. The West Australian collections at present comprise a total of 1,200 species of trees and wildflowers. Virtually all trees native to the southern half of the State, with the exception of some rare mallees, are represented in the arboretum.

Parties from the Botanic Garden are regularly in the field for the collection of propagating material and contribute to the botanical exploration of the State. Special attention is devoted to locating rare species or species threatened with extinction. Vegetation maps of the State are being built up. Seed of native plants collected is distributed to botanical institutions throughout the world and to private growers and nurserymen. A seed list which normally offers from 900 to 1,000 species is published annually. In 1967-68 almost 5,000 packets of seed were distributed.

Research on propagation of native plants is carried on in the nursery and information acquired is passed on to growers through State branches of the Society for Growing Australian Plants, using the medium of the Society's journal. Within Western Australia members of the staff regularly lecture and demonstrate, and the nursery is open to conducted parties at regular intervals. Official guides may be engaged by parties of visitors, and as the Botanic Garden develops it is designed to become of value for nature study groups. A Wildflower Exhibition is held in the Park each spring. Facilities are provided for the employment and ancillary training of students enrolled in the three-year course for the Western Australian Certificate of Horticulture and Park Administration.

The Zoological Gardens, which were opened in 1898 at South Perth, have an area of 44 acres and are under the control of the Acclimatisation Committee. Animals, birds and reptiles are exhibited. During the year 1967-68, 190,952 adults and 171,101 children visited the zoo.

### Tasmania

The Royal Tasmanian Botanical Gardens adjoining Government House on the Queen's Domain contain a fine collection of exotic trees and shrubs and a small aviary. The gardens are controlled by a board appointed by the State Government, which supports the gardens by annual grants.

There are two privately owned wildlife sanctuaries and zoos, each with a few exotic animals. One is at Granton near Hobart, the other is at Punch Bowl near Launceston. The Launceston City Council keeps a small collection of animals and birds at City Park.

### Northern Territory

The Darwin Botanical Gardens were established in 1873 and were planted with exotic plants and trees. The gardens now occupy eighty acres and feature tropical plants of both native and overseas origin. They are controlled by the Darwin City Council.

### Australian Capital Territory

The Canberra Botanic Gardens have been under development on the lower slopes of Black Mountain since 1950. The gardens are on a 100-acre site and are being developed by the Department of the Interior for the study of the botany, propagation, and cultivation of Australian native plants with the aim of promoting scientific and educational interest in these plants. The gardens were opened for public inspection in 1967 and will be officially opened in 1970.

### Book publishing

#### Australian book publishing

Statistics about Australian book publishing are prepared from data supplied by the National Library of Australia (*see* page 533). Through the deposit provisions of the *Copyright Act* 1912-1966, its overseas collection agents and its own efforts, the National Library receives practically all books and pamphlets published in Australia (including the External Territories), although not necessarily in the year of publication. Where the statistics compiled and shown hereunder are classified according to the year of publication, the figures are subject to revision as publications come to hand subsequent to the year of publication.

The method of counting conforms with international practice. Each title is counted as one unit. The figures cover all non-periodical publications published in Australia. They refer to all publications of five pages or more and include pamphlets, new translations and re-editions. They include government publications, educational textbooks, published university theses, etc., but exclude publications not available to the general public, advertising material, publications of transitory interest, musical works, and maps and charts.

#### Number of publications

The first table following shows the number of books and pamphlets published in Australia during the years 1964 to 1968 and *cumulative* number received by the National Library, and the second table the number published during the years 1964 to 1968 classified according to State or Territory of publication.

NUMBER OF AUSTRALIAN PUBLICATIONS (1964 TO 1968)  
RECEIVED BY THE NATIONAL LIBRARY

### Commonwealth Literary Fund

In 1908 the Commonwealth Government, under Alfred Deakin, first established the Commonwealth Literary Fund. The Fund was entirely a compassionate one devoted to literary pensions for aged or infirm authors, for the families of literary men who died in poverty, and for writers who were unable for financial reasons to continue their activities.

In 1939, in an endeavour to encourage the development of Australian literature and to foster appreciation of it, the Commonwealth Government greatly enlarged the scope of the Fund. The Fund now awards fellowships each year, assists in the publication of manuscripts of high literary merit, makes annual grants for lectures in Australian literature, and awards pensions to writers who have achieved a nation-wide reputation for their work in the field of creative literature. The fellowships are awarded each year to writers who have proved their capacity in the field of creative literature and to writers of promise, to enable them to devote their time to working on a literary project they specify. A fellowship carries a maximum value of \$6,000 a year. The Fund does not seek out people on whom to bestow fellowships, but considers only those who submit applications.

The Fund also assists in the publication of manuscripts which have outstanding literary merit, but which, in the opinion of publishers, may constitute a commercial risk. This assistance takes the form of a guarantee of assistance to the publisher. The Fund does not itself enter the field of publishing, nor does it make outright grants to authors to enable them to arrange publication.

From 1940 to 1965 the Fund made grants to universities for special lectures in Australian literature. In 1940, with rare exceptions, universities ignored Australian writing, but by 1964 the majority of them were actively engaged in its study, and Australian literature had become an accepted field of university scholarship. The Commonwealth Literary Fund lectures played an important role in stimulating interest in Australian literature. At present universities may apply for a grant to enable lectures to be given on special occasions.

In 1956 the Fund initiated a scheme of lectures to the general public and to schools, mainly in country areas, with the co-operation of State adult education authorities and Education Departments. All States receive grants for this purpose. The Fund also assists certain literary magazines of recognised literary value.

The Fund is administered by a committee consisting of one representative of each of the three main political parties in the Parliament, the chairman being the Prime Minister. The committee is advised on all literary matters by an advisory board of six persons with literary qualifications.

#### Commonwealth assistance to Australian composers

In 1967 the Commonwealth Government appointed an advisory board to advise it on projects to encourage Australian composers. The purpose of Commonwealth aid in this field is to assist any project which will facilitate the performance of Australian compositions and to promote a better understanding of Australian music, thereby improving the status of Australian composers.

#### National Literature Board of Review

On 1 January 1968 the Commonwealth Government introduced legislation to provide for a National Literature Board of Review of nine members. The Board replaced the Commonwealth Literature Censorship Board and Appeal Board, both of which were advisers to the Commonwealth only in respect of imported literature. A brief history of these Boards appears in Year Book No. 53, page 646.

The National Literature Board of Review was established following Commonwealth-State agreement in 1967, to achieve uniformity in the administration of laws relating to blasphemous, indecent or obscene publications of *prima facie* literary, artistic or scientific merit. In terms of the Agreement the Board is established under the Customs (National Literature Board of Review) Regulations. Appropriate Ministers of any State may, under the Agreement, refer works published or distributed locally to the Board for advice. Subject to retention of final responsibility by each Minister it is the intention of the Governments concerned not to act against a publication of merit which the Board advises is suitable for distribution in Australia.

## Film production

#### Australian film production

Australia was one of the pioneers in the history of film-making, *Soldiers of the Cross*, a multi-reel story film, having been made in 1900, three years before America's *The Great Train Robbery*, which is generally considered to be the first genuine story-film. It has been claimed that *The Kelly Gang*, made in 1905-6, was the first full-length feature film produced in the world. Following the outbreak of the 1914-18 War a series of short patriotic films was produced. In 1917 the first of a successful series of rural comedies was made, featuring a family called the Hayseeds. In the same year *The Kelly Gang* was remade and the first film version of *For the Term of His Natural Life* appeared. A first film version of C. J. Dennis's *The Sentimental Bloke* was made in 1919.

The year 1920 was notable for a number of productions with an authentic Australian flavour: *On Our Selection* a first version of *Robbery Under Arms*, another remake of *The Kelly Gang*, and C. J. Dennis's *Ginger Mick*. Production continued at about the same level until the coming of sound in 1928. Altogether, approximately 255 theatrical films were produced by Australian units in the silent period (1900-1930). Lack of equipment hampered the commencement of production of sound films in Australia, but during the 1930's nearly 60 sound films were produced.

During the 1939-45 War, commercial film producers combined with the Commonwealth Government in making films. Since the war, a number of British and American companies have made films in Australia. Altogether, about 140 feature films were produced in Australia between 1930 and 1968.

#### Australian National Film Board

The Australian National Film Board was inaugurated in April 1945, on the recommendation of a Commonwealth Government inter-departmental committee. It was attached for administrative purposes to the Department of Information. With the abolition of that Department in March 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November 1950 the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration; and for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The constitution provides for a membership of twelve, with the Director of the News and Information Bureau as chairman and the remainder representative of Commonwealth departments, State government instrumentalities, and organisations interested in the production, distribution or utilisation of films for national publicity.

#### Commonwealth Film Unit

Official government film production originated with the appointment in May 1913 of a cinematographer and photographer in the Department of External Affairs. A later development was the establishment, in Melbourne in 1920, of the Cinema and Photographic Branch of the Department of Commerce, and a Government film unit has existed in one form or another to the present day. Early in the 1939-45 War the newly-established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit. When the Australian National Film Board was established in 1945, the Film Division of the Department of Information became the official film production and distribution agency for Commonwealth departments and instrumentalities. In 1950, with the closing down of the Department of Information and the transfer of its functions, the Division became the Film Division of the News and Information Bureau then set up within the Department of the Interior. It is referred to in Australia as the Commonwealth Film Unit, and internationally as the Australian Commonwealth Film Unit. Theatrical and television distribution of Film Unit productions in Australia and overseas is organised by the Commonwealth Film Unit or its representatives at Australian official posts. Non-theatrical distribution in Australia is arranged in co-operation with State film distribution agencies, and through the National Library, Canberra.

Since 1946 the Film Unit has produced films for general exhibition, as well as training and special purpose films. In 1968-69 the Film Unit produced approximately 110 reels of new films and 150 reels of foreign versions of existing films. Prints are distributed through 70 overseas embassies and diplomatic posts. While many films are released commercially abroad, the emphasis is on distribution of educational and information films through non-theatrical circuits. Films are frequently shown on television in Europe, Asia and North America. Selected films have been recorded in most Asian and European languages and in Esperanto and Pidgin.

In addition to films made on its own initiative, the Commonwealth Film Unit produces films under the sponsorship of, or with the co-operation of, Commonwealth departments and other government instrumentalities. It competes regularly in international film festivals and has been awarded many distinctions. It also participates in other cultural events such as those surrounding the Olympic Games in Mexico and Expo '70 in Japan.

With a staff of 148, the Commonwealth Film Unit is the largest producer of documentary and information films in Australia.

#### Film censorship

*Legislation.* The Commonwealth Government's powers over censorship of films extend only to imported films and imported advertising matter, and stem from the Customs Act. Under that Act the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films and related advertising material coming within certain defined categories are not admitted into Australia. Under those regulations the Film Censorship Board may pass films in their original form, reject them, or pass them after eliminations have been made. Legislation passed by the State Governments of Victoria, Queensland, Western Australia, and Tasmania names the Commonwealth Film Censorship Board as the censorship authority and vests in it the power to classify films as suitable for general exhibition or not. The State Acts give the Commonwealth Board the authority to censor films made in Australia for commercial exhibition and advertising matter made in Australia.

The censorship organisation comprises a Censorship Board of seven persons and an appeal censor, the headquarters being in Sydney. Importers have a right of appeal to the Minister against decisions of the Board and the Appeal Censor.

*Thirty-five mm films for exhibition in motion picture theatres.* In 1968, 1,617 films comprising approximately 5.5 million feet were censored. This represented approximately 1,070 hours screening time. Of these films, 568 originated in the United Kingdom, 404 in the United States of America, and 645 in other countries. Principal suppliers among the last mentioned were: U.S.S.R. 105, Italy 79, Greece 78, France 47, Japan 33, Germany 26, Sweden 15, Poland 13, Switzerland 12 and Hungary 11. Included in these figures were 549 full-length feature films which constitute the main theatrical attractions. This was an increase of 72 over imports for 1967. Feature films mainly came from: the United States of America, 161; the United Kingdom, 85; Italy, 61; U.S.S.R., 54; France, 40; Greece, 38;

Japan, 14; and Sweden, 12. Thirty-five feature films were rejected and cuts were made from 141. There were 29 appeals, 18 against rejection, 9 against cuts and one each against classification and the rejection of advertising matter. Two appeals were allowed and 27 were disallowed.

Feature films classified as suitable for general exhibition numbered 184, and 330 were considered not suitable for children. Of the latter, 100 carried the special condition that all advertising should indicate that they were suitable only for adults. These classifications are advisory only and are designed to enable picture-goers and particularly parents to obtain a general idea of the nature of any particular film. In addition to these imported films, 172 35 mm films of 161,975 feet produced in Australia were cleared. These were mainly newsreels and documentaries intended for commercial exhibition or export.

*Sixteen mm films.* Excluding those imported for television use, 7,696 16 mm films of approximately 6 million feet were examined. These were films commercially produced for screening in theatres used by business undertakings for advertising and instructional purposes, and for screening in churches, schools, and universities. They also included home movies and a number of 16 mm theatrical features, some of the latter having been previously imported in 35 mm. Six were rejected.

*Eight mm and 9.5 mm films.* Approximately 240,000 feet of these small dimension type films were examined. One hundred and sixty-four films with an approximate footage of 13,000 feet were rejected.

*Television films.* In 1968, 7,476 films, all 16 mm, of approximately 10 million feet, for use on television, were censored. The number of films is not a true indication of volume because many of these were of short duration. In terms of screening time the films censored for television amounted to approximately 4,670 hours. On a footage basis the United States of America supplied 70 per cent of the total imports and the United Kingdom 19 per cent. Thirty-four television films were rejected outright and an additional 38 were classified as unsuitable for televising. Eliminations were made from 933. There were 21 appeals, 7 against rejection and 14 against classification, of which 6 were allowed and 15 disallowed.

*Foreign language films.* Countries other than the United Kingdom and the United States of America supplied 645 of the 35 mm films imported for theatrical exhibition, of which 303 were feature films. Generally, the dialogue is in a foreign language with explanatory English captions. A few have an English commentary and in some cases English 'dubbed' dialogue. Of 7,696 16 mm commercial films censored, 1,674 originated from non-English speaking countries. The chief supplying countries were: France, 399; Germany, 269; Japan, 193; Italy, 89; Czechoslovakia, 75; Switzerland, 71; Israel, 69; U.S.S.R., 60; Sweden, 51; Holland, 47; Belgium, 37; India, 31; Denmark, 26.

*Export of films.* The quantity of films exported for the year was approximately 2.5 million feet, consisting mainly of newsreels, advertising films and documentaries. This footage included in many cases several prints of the one film. It also included large quantities of exposed negatives sent overseas for processing.

## Cultural organisations

### Arts Council of Australia

Patterned on the Council for the Encouragement of Music and Arts which operated in the United Kingdom during the Second World War, an Australian organisation was brought into being in 1943. In 1945 it became The Arts Council of Australia. Originating in New South Wales, divisions are active now in the Australian Capital Territory, New South Wales, Northern Territory, Queensland, South Australia, and Tasmania. The New South Wales Division has over 50 branches, Queensland has over 40, South Australia 12 and Tasmania 8. A Federal Council was re-formed in 1964 and received financial assistance from the Australian Council for the Arts in 1969.

The Arts Council Divisions receive State Government grants through the Departments of Education in New South Wales, Queensland and South Australia. From 1963 to 1966 substantial contributions were received from a private organisation. Some activities of the Council are supported financially by non-metropolitan local government bodies, and grants were made by the Gulbenkian Foundation in 1964 to 1966 to help re-establish the Federal Council. The New South Wales Division is represented on the Adult Education Advisory Board in that State, representing the 'live art' section of adult education, and on the Music Committee of UNESCO. The Tasmanian Division is represented on, and works closely with, the Adult Education Board of that State.

Activities of the Arts Council are directed towards decentralisation of the arts for the benefit of country centres and metropolitan and country schools. It is greatly concerned with taking the arts to children as a basic cultural development. Tours of high standard companies in opera, ballet, drama, puppets, etc. are operating throughout the year. The Arts Council works closely with the Australian Ballet, the Trust Opera and the Old Tote Theatre Company in organising country tours for these bodies.

The Council handles a wide range of art exhibitions, both for city and country areas. Summer schools and other courses for drama, painting, pottery, music, and other arts are an established feature of the work of the New South Wales and Queensland Divisions, as are weekend schools of drama, music, painting and pottery.

Yearly drama festivals are conducted. In 1965 the New South Wales Division sponsored the first arts festivals for Sydney (North Side Arts Festival), with a wide range of cultural activities concentrated on the north side of Sydney Harbour. The festival is now a biennial event with the fourth festival being planned for August 1969. Also in 1965 the Queensland Division of the Arts Council organised a Summer School of the Arts which has become an annual event.

School tours are organised, particularly in New South Wales, where over 450,000 school children saw live performances in 1968, and in Queensland over 186,000 children attended live performances.

#### **Australian Elizabethan Theatre Trust**

Inaugurated in 1954 to commemorate the first visit to the Commonwealth of Her Majesty the Queen, the Australian Elizabethan Theatre Trust has since presented drama, opera, ballet and puppetry throughout the Commonwealth. The Trust receives annual grants from the Commonwealth Government, the State Governments and city councils. Its income also includes subscriptions from members and donations from business houses.

In the field of drama it has presented, *inter alia*, about 35 works of Australian playwrights, including plays which were subsequently presented overseas. The Elizabethan Trust Opera Company has given seasons of opera and has presented overseas guest artists, conductors and producers. From 1956 to the end of 1968 more than 1,400 performances of opera have been given by the Trust Opera Company in all States and the Australian Capital Territory. Thirty-four operas have been the repertoire in this period. The Australian Ballet, which commenced its inaugural season in November 1962, has visited all mainland capitals and New Zealand and has presented world premiere productions of seven commissioned ballets since 1964. The Commonwealth Government gave financial assistance for the Ballet to represent Australia at the Commonwealth Festival of Arts in Britain in 1965. The company also danced at Baalbek, Nice, Paris, Berlin, Copenhagen and Honolulu. It toured New Zealand, Canada and major Latin American cities during 1967 and a number of Asian countries during 1968. The Trust has also been associated with commercial managements in the presentation of overseas attractions and large-scale musicals.

In 1965 the Trust and Arts Council of Australia jointly formed the Marionette Theatre of Australia to promote puppetry, and one puppet company with sponsorship from the Department of External Affairs completed a twelve-nation tour of Asia during 1966-67.

Country areas have been visited by Trust companies presenting opera, drama, ballet and puppetry, in association with the Council of Adult Education in Victoria and the Arts Council of Australia. Each year a number of special companies present Shakespeare and other curricular plays for schools in all States, similar work having been undertaken annually since 1958. Units of singers and dancers perform a similar educational function in bringing opera and ballet to school audiences.

In Victoria the Trust is associated with the University of Melbourne in the Melbourne Theatre Company (formerly known as the Union Theatre Repertory Company). It is also associated with the University of New South Wales Drama Foundation in the Old Tote Theatre Company. The corresponding activity in Adelaide, the South Australian Theatre Company, was introduced by the Trust in 1965. Assistance is given to the Adelaide Festival of Arts, the Festival of Perth, the Perth Playhouse, the National Theatre and Fine Arts Society of Tasmania, and other companies. From a special commissioning fund the Trust commissions theatrical works in all major forms from Australian creative artists.

An important activity of the Trust is its association with the University of New South Wales and the Australian Broadcasting Commission in maintaining the National Institute of Dramatic Art, which they jointly established. This provides a training ground for young Australian actors, producers and technicians. Performing a similar function for selected ballet students, the Australian Ballet School is maintained by the Trust in Melbourne.

#### **Australian Council of National Trusts**

The Australian National Trusts were founded to further the general objectives of preservation and conservation of lands, places, buildings, works, and articles which are of national importance by reason of educational, aesthetic, historic, architectural, artistic, scientific, cultural, or other special interest.

The first Australian National Trust, the National Trust of Australia (New South Wales), was formed in 1945. Since then National Trusts have been formed in each of the other States. The Trusts in New South Wales, Queensland, South Australia, and Western Australia have statutory authority,

and those in Victoria and Tasmania are incorporated under the Companies Acts of their respective States. The Australian Council of National Trusts was incorporated in 1965 to co-ordinate the activities of the State National Trusts and represent them at the federal level and internationally.

Membership of the National Trusts is open to all individuals and organisations. Total membership throughout the Commonwealth is approximately 24,000. The Trusts are financed by members' subscriptions and donations from individuals and commercial and industrial organisations, the proceeds of charges for entry to Trust properties and the fund-raising activities of members, including inspections of historic houses. In some States the Trusts are subsidised by the State Governments.

The number of properties owned or controlled by the Trusts exceeds sixty. These include houses, natural reserves, a powder magazine, a police station, two paddle steamers and a hulk, a joss house, and a garden. The Trusts have also established a register of buildings (totalling several thousand) including public buildings, churches and buildings in private ownership which they consider should be preserved in the national interest because of their historical and or architectural significance.

#### **Historic Memorials Committee**

The Historic Memorials Committee was established in 1911 for the purpose of securing portraits of distinguished Australians who had taken an active part in Federation. Later the Committee decided to obtain portraits of all Governors-General, Prime Ministers, Presidents of the Senate, Speakers of the House of Representatives, and other notable Australians. In addition the Committee has commissioned paintings recording special events connected with the Commonwealth Parliament.

The Committee comprises the Prime Minister (Chairman), the President of the Senate, the Speaker of the House of Representatives, the Vice-President of the Executive Council, the Leader of the Opposition, and the Leader of the Opposition in the Senate. An Art Advisory Board, comprising a group of artists, was established in 1912 to assist the Committee by advising on portraits to be commissioned by the Committee.

#### **Commonwealth Art Advisory Board**

Since its beginning in 1912 the Art Advisory Board has always consisted of artists. At present there are five members. As well as assisting the Historic Memorials Committee the Board advises the Government on the purchase of works of art for inclusion in the National Collection. In 1968-69 \$100,000 was provided for this purpose. The National Collection now contains over 2,000 works of art.

The Board, on behalf of the Government, organises and finances exhibitions of Australian art in overseas countries. In addition, it financially assists the showing in State Art Galleries of major exhibitions from abroad or assembled by one or more State Art Galleries. In 1968-69 \$14,000 was provided to meet the costs involved in these exhibitions.

### **SCIENTIFIC AND INDUSTRIAL RESEARCH IN AUSTRALIA**

A special article on Science and Technology in Australia, prepared by the Commonwealth Scientific and Industrial Research Organization of Australia, was included in Year Book No. 49 (see page 781). A short account of the development of research in Australia and of the governmental and university organisations engaged in research was included in Year Book No. 53 (see pages 650-2).

The following is a brief description of the research activities of selected Commonwealth Government agencies and scientific societies.

#### **Australian Industrial Research and Development Grants Board**

Research in industry has expanded somewhat in recent years, though not at the same rate as in Government agencies or the universities. There is a trend for larger firms to establish their own laboratories, and appreciable sums are being spent on research in the chemical, metals, sugar, and paper industries. To encourage this trend the Government introduced the *Industrial Research and Development Grants Act 1967*. The legislation, administered by the Australian Industrial Research and Development Grants Board, provides for the payment of grants on a dollar for dollar basis to Australian manufacturing and mining companies for increased research and development expenditure.

Companies employing professional research staff are assisted in the performance of their own research and development, but the Act also makes provision for companies to contract research and development with approved research organisations.

The first grants to industry under this Act were made in 1968 and the Government has made available \$6 million a year for this purpose. Special taxation concessions also apply to expenditure on research and development.

### Commonwealth Scientific and Industrial Research Organization

The Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.) is Australia's largest civil scientific body. Established as the Council for Scientific and Industrial Research (C.S.I.R.) in 1926, it was re-organised in 1949 under the Science and Industry Research Act and now has a staff of over 6,000 including some 1,800 professional scientists. An account of the organisation and work of the former Council, and the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Year Book. (*See* No. 14, page 1061 and No. 37, page 1183.)

The principal function of C.S.I.R.O. is to carry out scientific research for the primary and secondary industries of the Commonwealth and its Territories. C.S.I.R.O. does not conduct defence research, medical research or atomic energy research. The other powers and functions of C.S.I.R.O. as defined in the Science and Industry Research Act of 1949, include:

- the training of scientific research workers and the awarding of scientific research studentships and fellowships;
- the making of grants in aid of pure scientific research;
- the recognition or establishment of associations of persons engaged in any industry, for the purposes of carrying out industrial scientific research and the co-operation with, and the making of grants to, such organisations;
- the testing and standardisation of scientific apparatus and instruments and the carrying out of scientific investigation connected with standardisation;
- the collection and dissemination of information relating to scientific and technical matters;
- the publication of scientific and technical reports, periodicals and papers.

#### Organisation

C.S.I.R.O. is a statutory corporation operating under its own Act of Parliament and exercising its powers subject to the regulations and the approval of the Minister for Education and Science.

The governing body of the Organization is the Executive, which consists of nine members appointed by the Governor-General. There are five full-time members, one of whom is chairman, and four part-time members. At least five of the members must possess scientific qualifications. The Executive is responsible to the Minister for the policy and the work of the Organization.

For carrying out its research work, C.S.I.R.O. is divided into four major group laboratories and a number of Divisions and Sections. The four group laboratories are the Animal Research Laboratories comprising four Divisions, the Chemical Research Laboratories comprising five Divisions, the National Standards Laboratory comprising two Divisions, and the Wool Research Laboratories comprising three Divisions. There are also twenty-one independent Divisions in other research fields and an additional five independent Sections. The Head Office is in Melbourne and regional administrative offices are located at Brisbane, Canberra, Melbourne, and Sydney. The Organization also maintains the Australian Scientific Liaison Office in London and the Office of the Scientific Attaché in Washington.

Since the Organization's activities are Commonwealth-wide and often involve extensive field work, a number of branch laboratories and field stations have been established in various parts of Australia. The more important of these are included in the following lists.

#### Laboratories and Divisions

*Animal Research Laboratories*, consisting of the following four Divisions.

Animal Genetics, Sydney, with a branch laboratory and field station at Rockhampton, Queensland, and field stations at Armidale and Badgery's Creek, New South Wales.

Animal Health, Melbourne, with branch laboratories in Sydney and Brisbane, and field stations at Jimboomba, Queensland, and Tooradin North and Werribee, Victoria.

Animal Physiology, Sydney, with a laboratory and field station at Armidale, New South Wales, and a branch laboratory in Brisbane.

Nutritional Biochemistry, Adelaide, with a field station at O'Halloran Hill, South Australia.

*Chemical Research Laboratories*, Melbourne, consisting of the following five divisions.

- Applied Chemistry.
- Applied Mineralogy, with branch laboratories in Perth and Sydney.
- Chemical Engineering.
- Chemical Physics.
- Mineral Chemistry, with a branch laboratory in Sydney.

*National Standards Laboratory*, Sydney, consisting of the following two Divisions.

- Applied Physics.
- Physics, with an optical observatory at the Solar Observatory, Culgoora, New South Wales.

*Wool Research Laboratories*, consisting of the following three Divisions.

- Protein Chemistry, Melbourne.
- Textile Industry, Geelong, Victoria.
- Textile Physics, Sydney.

The other Divisions are as follows.

- Building Research, Melbourne, with an office in Port Moresby, New Guinea.
- Computing Research, Canberra, with subsidiary installations at Adelaide, Melbourne, Sydney, Brisbane, Perth and Griffith, New South Wales.
- Dairy Research, Melbourne.
- Entomology, Canberra, with branch laboratories in Sydney, Brisbane, Hobart, Perth and at Armidale, New South Wales, and Townsville, Queensland.
- Fisheries and Oceanography, Cronulla, New South Wales, with branch laboratories in Melbourne, Perth and Redcliffe, Queensland.
- Food Preservation, Sydney, with branch laboratories at Gosford, New South Wales, (operated jointly with the New South Wales Department of Agriculture), and in Brisbane.
- Forest Products, Melbourne.
- Horticultural Research, Adelaide, with a field station at Merbein, Victoria.
- Irrigation Research, Griffith, New South Wales.
- Land Research, headquarters in Canberra, and field stations and laboratories at Alice Springs, Katherine and Darwin, Northern Territory, and Kununurra, Western Australia.
- Mathematical Statistics, Adelaide, with officers stationed at a number of Divisions and Sections and at the University of Melbourne.
- Mechanical Engineering, Melbourne.
- Meteorological Physics, Melbourne.
- Plant Industry, Canberra, with branch laboratories in Perth, Hobart, and Brisbane, and at Deniliquin and Armidale, New South Wales, field stations and experimental farms at Canberra and Deniliquin, New South Wales and Baker's Hill, Western Australia, and a tobacco research institute at Mareeba, Queensland.
- Radiophysics, Sydney, with the Australian National Radio Astronomy Observatory at Parkes, New South Wales, and a radio observatory at the Solar Observatory, Culgoora, New South Wales.
- Soil Mechanics, Melbourne, with a branch laboratory in Adelaide.
- Soils, Adelaide, with branch laboratories in Brisbane, Canberra, Perth, Hobart, and Townsville, Queensland.
- Tribophysics, Melbourne.
- Tropical Pastures, Brisbane, with branch laboratories at Townsville and Lawes, Queensland, and field stations at Mundubbera, Samford and Woodstock, Queensland.
- Wildlife Research, Canberra, with branch laboratories in Perth, Western Australia and Alice Springs, Northern Territory

## Sections

- Editorial and Publications, Melbourne.
- Ore Dressing Investigations, Melbourne.
- Physical Metallurgy, Melbourne.
- Upper Atmosphere, Camden, New South Wales.
- Wheat Research Unit, Sydney.

The Organization's total budget for 1968-69 was about \$49,000,000. Nearly four-fifths of this was provided by the Commonwealth Government, while much of the remainder was provided by trust funds which have been set up by various primary producer groups. The largest of these is the Wool Research Trust Fund, but the wheat, dairy, meat, and tobacco industries also contribute substantial amounts. The funds are derived from a levy on produce matched by a Government contribution.

### Mount Stromlo and Siding Spring Observatories

Mount Stromlo Observatory and Siding Spring Observatory are the two astronomical research stations of the Research School of Physical Sciences, Australian National University. The staff of the observatories are academic staff of the University's Institute of Advanced Studies. The permanent headquarters of the observatories is located at Mount Stromlo, together with the library, laboratories and offices of the scientific staff. The older telescopes are located on Mount Stromlo, the newer ones on Siding Spring Mountain. At Siding Spring there is a lodge to house the astronomers, permanently based at Mount Stromlo, who visit for short periods to make observations there.

The observatories constitute the principal centre of optical astronomical research in the southern hemisphere. Their research facilities are second only to the great observatories of the south-western United States, and because of their geographical latitude observations can be made on parts of the sky permanently inaccessible to northern astronomers. The functions of the observatories are to carry out original investigations (both observational and theoretical) in astronomy and astrophysics, and to provide post-graduate training for future Australian astronomers.

The direction of the researches conducted depends on the steadily widening interests of the staff and scholars as the subject of astronomy itself rapidly progresses. Areas of permanent interest to which the observatories have made important contributions include the evolution of stars and of stellar systems, the study of the Magellanic clouds and their globular star clusters, the chemical composition of the stars and the study of pulsating stars. The results of the work carried out at the observatories are published in the international scientific periodicals, principally in the *Monthly Notices of the Royal Astronomical Society* and the *Astrophysical Journal*.

Mount Stromlo Observatory is situated at 35° 19' 16" south latitude and 149° east longitude at an altitude of 2,560 feet. It is on the summit of a ridge of low hills in the Australian Capital Territory seven miles west of the city of Canberra. The first regular scientific work was started at this site in 1925, and the Observatory was incorporated in the Australian National University in 1957. The main instruments are 30-inch, 50-inch and 74-inch reflecting telescopes and associated spectrographs, photometers and spectral scanners.

Siding Spring Observatory was established in 1965. It is located at 31° 16' south latitude and 148° 41' east longitude at an altitude of 3,820 feet and occupies the summit of Siding Spring Mountain in the Warrumbungle Ranges, near Coonabarabran, New South Wales. This site has one of the best climates for astronomical research to be found anywhere in Australia—considerably better than that at Mount Stromlo. The instruments at present operating at Siding Spring Observatory include a 40-inch and a 24-inch reflector.

### Australian Atomic Energy Commission

#### Establishment and functions of the Commission

In November 1952 a Commission of three members was appointed to control the Commonwealth's activities in relation to uranium and atomic energy, and in April 1953, upon the enactment of the *Atomic Energy Act 1953*, the Commission was established as a statutory authority with powers and functions as defined in the Act. Under amending legislation the number of Commissioners was increased to five in April 1958. The Commission is a corporate and autonomous body controlling its own service. It functions under the direction of the Minister for National Development.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology.

#### Uranium prospecting and mining

Production of uranium concentrate in Australia is now confined to the Rum Jungle Plant, Northern Territory. Since 1953, mining and treatment operations here have been conducted for the Commonwealth by a mining company. Mining of presently known reserves of uranium in this area was finished in 1963, but treatment of stock-piled ore has continued. Australia's own domestic requirements of uranium oxide to the end of the present century are expected to be greater than currently known reserves. Because of this the Commonwealth has continued exploration for uranium in the Rum Jungle area and has encouraged private producers to resume exploration.

## Research

The Commission's Lucas Heights Research Establishment is Australia's atomic energy research centre. Its research programme is concerned with the development of nuclear power, the production and utilisation of radioisotopes, and other related fields. It is directed towards the long-term development of national resources.

The research programme centres on a technical and economic assessment of a natural uranium fuelled, heavy water moderated reactor. This type of reactor system is now considered to be most suitable for future installation in Australia for the economic production of nuclear power. Particular attention is being devoted to the possibility of making reactor fuel by refining and fabricating uranium from Australian mines. During 1967 some twenty-six members of the Commission's technical staff were sent to Britain and Canada on long-term postings, in order to participate directly in development and construction of power reactors of this type.

The use of radioisotopes is increasing rapidly in Australia in scientific research and development, in treatment of diseases, and in agriculture and industry generally. Most of these, especially short-lived radioisotopes which cannot be imported, are being produced in the Commission's high flux research reactor HIFAR at Lucas Heights. Since 1967, a widening range of radio-pharmaceutical products has been produced to stringent standards for medical use and these are in considerable demand. The A.A.E.C. is also producing the majority of cobalt 60 teletherapy sources for cancer treatment in Australia, and is exporting high activity sources to New Zealand and to Asia. The Commission is promoting research into radioisotope applications and is co-operating with universities, industry and governmental bodies in making available the most up-to-date techniques involving the use of radioisotopes in every field.

Large-scale hydrological investigations using radioactive tracers have been conducted by the Commission. These have included sand tracing in Botany Bay and silt tracing in Newcastle Harbour and the Hunter River in association with maritime and development authorities.

Extensive research and development work on the technical and scientific applications of gamma radiation is also being carried out. The possibilities of radiation for such purposes as industrial sterilisation, production of new and improved materials, and the control of fruit fly and other insect pests are being investigated. Scientists at Lucas Heights are also studying the biological effects of radiation and questions of health and safety.

The Research Establishment has developed facilities for the absolute standardisation of radioisotopes and has participated in international intercomparisons in the health and safety field. Work is directed to various aspects of radiation dosimetry, to radiation biology, and to aspects of the toxicology of beryllium compounds.

Lucas Heights is a centre of specialised equipment and information. In addition to the research reactor HIFAR, used for testing materials and producing radioisotopes, there is much other equipment unique in Australia. All these facilities are available to universities and other institutions under suitable conditions. In these endeavours the Atomic Energy Commission is working in close co-operation with the United Kingdom Atomic Energy Authority, under arrangements which give Australia access to results of British research on peaceful atomic energy uses. Results of research in Australia are in like manner available to Britain. Work in Australia, though constituting a self-contained programme, is co-ordinated with the British programme to avoid overlapping of research objectives and duplication of investigations. Australia also has bilateral arrangements with the United States, Canada and Japan, and has accredited a diplomatic mission to the European Atomic Energy Community (Euratom). Australia is also taking part in the promotion of the peaceful uses of atomic energy through the International Atomic Energy Agency. For the year 1967-68 the Commission placed \$112,129 worth of research contracts mainly within Australian universities on matters related to the research programme at Lucas Heights.

## Civil Nuclear Explosives

Considerable potential exists in Australia for application of nuclear explosives for large civil engineering and mining projects. The Commission has kept in close touch with the development of the United States Plowshare programme. A United States expert visited Australia in 1962, and two others made a preliminary survey in 1968. In 1963 an Australian technical mission visited the United States of America to make a detailed examination of the use of nuclear explosives for peaceful purposes and the Commission has been represented at a number of field tests in the United States.

The Australian Institute of Nuclear Science and Engineering comprises the Australian Atomic Energy Commission and Australian universities. The Institute's operations are financed by membership subscriptions and a Commonwealth Government grant which amounted to \$150,000 in 1967-68. The purpose of the Institute is to stimulate research and training in nuclear science and engineering within the universities and to arrange access for university research workers to the highly specialised equipment at the A.A.E.C. Research Establishment.

The Australian School of Nuclear Technology is jointly sponsored by the Commission and the University of New South Wales. Courses are being offered in nuclear technology, production and use of radioisotopes, radiological safety, health physics, and other related topics.

### Scientific societies

#### Royal Societies

The following table contains the latest available statistical information regarding the Royal Societies in each State and in the Australian Capital Territory.

ROYAL SOCIETIES, DECEMBER 1968

	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Canberra</i>
Year of charter . . . . .	1866	1859	1884	1880	1913	1844	1930
Number of members . . . . .	395	578	326	266	240	595	159
Volumes of transactions issued(a) . . . . .	101	81	79	92	57	102	..
Number of books in library . . . . .	33,180	32,500	70,596	24,000	7,190	36,600	..
Societies on exchange list . . . . .	400	336	301	345	244	315	..

(a) Cumulative total.

#### Australian Academy of Science

The Australian Academy of Science is the national institution representing science in Australia. Constituted by Royal Charter in 1954, the Academy promotes scientific knowledge and research, maintains standards of scientific endeavour and achievement in the natural sciences in Australia, and recognises outstanding contributions to the advancement of science. The Academy represents Australian science and scientists at the national and international level, organises meetings of scientists, holds symposia, and arranges for visits of scientists from other countries to Australia.

In its functions it is comparable with the Royal Society of London and national academies of science of many other countries. Its Fellows (designated F.A.A.) are eminent in some branch of the physical or biological sciences in Australia, occupying professional positions in universities, the Commonwealth Scientific and Industrial Research Organization, other research organisations, and industry. A very few places are reserved for Fellows who have rendered conspicuous service in the cause of science. No more than six new Fellows are elected in any one year. Its present membership is about 120 Fellows.

The Academy co-ordinates Australian contributions to such co-operative ventures as the International Geophysical Year, the International Year of the Quiet Sun, and the International Biological Programme. Representation is provided at the general assemblies of the International Scientific Unions and similar bodies relating to astronomy, geophysics, geology, physics, crystallography, mathematics, biochemistry, physiology, geography, biological sciences, chemistry, Antarctic research, space research, and oceanic research.

As the Australian Academy of Science is too young a body to be financially self-sufficient, the Commonwealth Government makes annual grants of general purpose funds without affecting the autonomy of the Academy. These grants, together with substantial private benefactions, enable the Academy to continue its work. Research fellowships provided by industry are administered. The Academy is managed by an elected council comprising a president, treasurer, two secretaries and eight ordinary members who are drawn equally from the physical sciences and biological sciences. Chief administrative officer is the Executive Secretary, who is not a Fellow. Its conference centre in Canberra was opened in 1959.

#### Australian and New Zealand Association for the Advancement of Science (ANZAAS)

This Association was founded in 1887. Its objects are 'to advance the knowledge and to promote a spirit of co-operation between scientific workers and scholars and those in sympathy with science and scholarship generally, especially in Australia and New Zealand'. The 41st ANZAAS Congress was held in Adelaide on 18 to 22 August 1969, and the 42nd Congress will be held in Port Moresby, 17 to 21 August 1970.

The ANZAAS Central Office is in Sydney and Divisions are operating in both New South Wales and Western Australia.

**Other scientific societies**

The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1874 for 'the cultivation and study of the science of natural history in all its branches'. Sir William Macleay, who died in 1891, during his lifetime and by his will endowed the Society to the amount of \$134,000, which has been increased by investment to approximately \$260,000. The objects of the Society are achieved by holding meetings, by publishing proceedings, by maintaining a library, and by offering research fellowships. The Society publishes annual volumes of the proceedings, issued in three parts, in which are printed papers read at the general meetings. Ninety-two volumes of such proceedings have been issued and the Society exchanges with about 300 kindred institutions and universities throughout the world. The library has some 19,000 volumes. The Society offers annually to graduates of the University of Sydney, who are members of the Society and resident in New South Wales, a research fellowship (Linnean Macleay Fellowship) in various branches of natural history. The membership at the end of 1968 was 307.

The British Astronomical Society has a branch in Sydney, and in each of the States there is a branch of the Australian Medical Association.

There are more than 200 other learned societies devoted to the study of particular sciences. Some of these, including the Royal Australian Chemical Institute and the Institution of Engineers, Australia, are qualifying bodies, admission to which is by qualification only. Others, such as the Institute of Food Technologists, are open to any interested person. Some societies, such as the Australian Biochemical Society, have annual symposia of a very high standard. A great many of these bodies publish appropriate journals.

## CHAPTER 16

### PUBLIC JUSTICE

Statistics of public justice are influenced by a number of factors which affect comparability from State to State and from year to year, e.g.:

- (a) differences in the jurisdiction of courts;
- (b) changes in the law in particular States and differences in the laws between States;
- (c) differences in the methods of compiling the figures (e.g. in respect of persons convicted for more than one offence);
- (d) the attitude to laws such as those connected with liquor, vagrancy, gaming, and traffic offences;
- (e) the strength and distribution of the police force;
- (f) the proportion of various types of crimes reported and solved.

### The Australian legal system

#### Development of the system

The two major factors in the development of the Australian legal system have been its British origin and the Commonwealth Constitution of 1900. When the various parts of Australia were first settled by British colonists, the common law and statutes of England were brought with them by the settlers. When local law-making bodies were established, the law so brought in was gradually modified and augmented by local legislation, but the Imperial Parliament in London also continued to legislate (to a lesser and lesser extent) in respect of Australia. The Commonwealth Constitution of 1900, which is itself an Imperial Act, limited the legislative power of State Parliaments in some respects and created a federal legislature. Since the *Statute of Westminster Adoption Act 1942*, the Imperial Parliament can legislate for Australia only at Australia's request. The sources of Australian law of today are, therefore, found in Commonwealth and State legislation, in some Imperial legislation and in the common law. Three of the States (Queensland, Western Australia and Tasmania) have Criminal Codes, and separate consolidations of the Statutes of the Commonwealth and of all States except Western Australia (which has adopted a system of reprinting of individual statutes at intervals) have been brought out from time to time.

There are few constitutional or other legislative guarantees of individual rights and liberties in Australia. These rights are nevertheless protected, because a basic feature of the Australian system is the 'rule of law': no act, official or unofficial, however bona fide and apparently reasonable, which infringes the liberty or rights of an individual is justifiable unless it is authorised by law, and for any such unlawful act, by whatever authority commanded, the official or other person is personally liable in an action in the ordinary courts. In the case of subordinate legislation, and even in the case of Commonwealth or State Acts, the validity of the law itself may be challenged in the courts. The remedy for the protection of the personal liberty of the individual is the writ of habeas corpus, which requires the person named therein to be produced in the court.

Australian law adheres to the principle that judicial control must in general be exercised by ordinary courts. There is no integrated system of administrative tribunals, but there is a great variety of such tribunals of various descriptions. The ordinary courts exercise supervision over administrative tribunals either by way of statutory appeal or by the use of prerogative writs of mandamus, prohibition, or certiorari, by which the administrative tribunals can be enjoined to perform a duty or to abstain from excess of jurisdiction, or can have their decisions set aside.

Independence of the judiciary is an essential part of the Australian legal system. Security of tenure of superior court judges is guaranteed, mostly by the Constitutions of the Commonwealth and the States, and they can be removed from office only by resolution of both Houses of Parliament of the Commonwealth or the States, as the case may be, for proven misbehaviour or incapacity. Their independence is further secured by relatively high salaries which, in the case of High Court judges, cannot be reduced during their tenure of office, and liberal (mostly non-contributory) pensions for the judges or their widows. Salaries of High Court judges were increased in June 1969 to \$30,000 for the Chief Justice and \$27,000 for each other Justice. Allowances of \$2,000 and \$1,500 respectively are also provided.

Civil judgments given in the courts of any part of Australia can be enforced in any other part of Australia under the *Service and Execution of Process Act* 1901–1963. Since 1 January 1964 this applies also to fines imposed by courts of summary jurisdiction.

#### State and Territory courts

*Civil jurisdiction.* Lower civil courts (i.e. Magistrates' Courts, Courts of Petty Sessions, Local Courts, Small Debts Courts, Courts of Request, and Courts of General Sessions) are usually constituted or presided over by a stipendiary or special magistrate or a commissioner. In some limited instances justices of the peace may exercise the jurisdiction of the court. Local Courts are sometimes constituted by a judge. The powers of the magistrates in the various States and Territories are set out on pages 567–9. In most cases, unless the amount involved is very small, appeal may be made to a higher court against a magistrate's decision. In any case the Supreme Court has a supervisory power, by means of prerogative writs, to examine whether a lower court has properly exercised its jurisdiction. In the higher courts (i.e. District Courts, County Courts and the Supreme Courts) actions are usually tried by a single judge, sitting with or without a jury, from whose judgment appeal lies to the bench of the Supreme Court. In certain cases the appeal can be carried to the High Court of Australia. Appeals to the Privy Council are referred to on page 567.

*Criminal jurisdiction.* Criminal courts are of two kinds, namely, courts of summary jurisdiction and higher courts. Courts of summary jurisdiction, usually called Courts of Petty Sessions, may deal summarily with minor offences; higher courts, known as Courts of Sessions, Quarter Sessions or General Sessions (not to be confused with the lower court of civil jurisdiction of that name) and the Supreme Court, hear indictable offences. A court of summary jurisdiction consists of a stipendiary or police magistrate, or two or more justices of the peace; a higher court consists of a judge or chairman, sitting with a jury. The jury finds as to the facts of the case, and the judge determines the applicable law and, within the limits of the law, the punishment of the convicted person.

In the case of other than minor offences a preliminary hearing is held before a stipendiary magistrate or justice of the peace for the purpose of determining whether a *prima facie* case has been made out. If the magistrate or justice of the peace finds that there is a case to answer, the person charged is committed for trial at a higher court. A magistrate or justice of the peace has power to release on bail. There is an appeal to a higher court from the decision of a court of summary jurisdiction hearing a minor offence, and an appeal from a higher court to the full bench of the Supreme Court, or Court of Criminal Appeal. A further appeal may, with leave, be brought to the High Court of Australia.

#### Federal courts

The judicial power of the Commonwealth is vested in the High Court of Australia (the Federal Supreme Court), in the Federal courts created by Parliament (the Federal Court of Bankruptcy and the Commonwealth Industrial Court), and in the State courts invested by Parliament with Federal jurisdiction, both civil and criminal. The nature and extent of the judicial power of the Commonwealth are set out in Chapter III. (§§ 71–80) of the Commonwealth Constitution (*see* pages 15–16 of this Year Book). Particulars concerning the Federal Court of Bankruptcy are given on pages 586–8 of this chapter, and information regarding the Commonwealth Industrial Court, which was established under the *Conciliation and Arbitration Act* 1904–1967, is included in the chapter Labour, Wages and Prices (pages 261–2). In November 1968 a bill was introduced in Federal Parliament to establish a new Federal Court to be known as the Commonwealth Superior Court. The new court would replace the present Federal Court of Bankruptcy and the Commonwealth Industrial Court, be a superior court of general Federal jurisdiction in matters other than matrimonial causes and criminal prosecutions and perform multifarious special functions under Commonwealth statutes.

#### High Court of Australia

The High Court of Australia consists of a Chief Justice and six other Justices. Its principal seat is in Melbourne, but sittings are held in every State capital as occasion requires. The High Court has both original and appellate jurisdiction. Its original jurisdiction is usually exercised by a single Justice, appellate jurisdiction by at least three Justices.

The Constitution itself confers original jurisdiction on the High Court in all matters (i) arising under any treaty, (ii) affecting consuls or other representatives of other countries, (iii) in which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party, (iv) between States, or between residents of different States, or between a State and a resident of another State, (v) in which a writ of mandamus or prohibition or an injunction is sought against an officer of the Commonwealth. In addition, Parliament may, under the Constitution, confer additional original jurisdiction on the High Court in certain classes of matters, and has in fact conferred original jurisdiction on the High Court in all matters arising under the Constitution or involving its interpretation and in trials of indictable offences against the laws of the Commonwealth. In matters (i) and (v) and

in suits between the Commonwealth and a State or between States the jurisdiction of the High Court is exclusive of that of the State Courts, and in matters (other than trials of indictable offences) involving any question as to the limits *inter se* of the constitutional powers of the Commonwealth and those of the States the jurisdiction of the High Court is exclusive of that of the Supreme Courts of the States. The High Court's jurisdiction in trials of indictable offences has not been used for many years.

Under the Constitution the High Court has jurisdiction, with such exceptions and subject to such regulations as the Parliament permits, to hear and determine appeals from all judgments, decrees, orders, and sentences of (i) any Justice or Justices exercising the original jurisdiction of the High Court, (ii) any other Federal Court or court exercising Federal jurisdiction and (iii) from the Supreme Court or other court of any State from which appeal lay to the Privy Council at the establishment of the Commonwealth. In respect of (iii) the Parliament has prescribed that, generally, appeal can be brought only by special leave of the High Court. However, in the case of judgments affecting the status of any person under the laws relating to aliens, marriage, bankruptcy or insolvency, or in respect of any sum or matter at issue, or involving any claim, demand or question regarding any property or civil right, of the value of \$3,000, appeal may be brought as of right from final judgments, and by leave of the High Court or the Supreme Court from interlocutory judgments.

By Acts of Parliament and by subordinate legislation the High Court has also been given appellate jurisdiction in respect of the courts of the Territories under the control of the Commonwealth. Provision is also made in various enactments for appeal to the High Court on points of law from administrative determinations, such as decisions of the Commissioner of Taxation, Taxation Boards of Review, the Commissioner of Patents, or the Registrar of Trade Marks. Such proceedings, although called appeals, are in reality proceedings in the original jurisdiction of the High Court. Under the proposals announced in Parliament in 1967 and 1968, these functions would be transferred to the new Commonwealth Superior Court.

Transactions of the High Court are shown on page 579.

#### Appeal to the Privy Council

There had been since Federation an appeal, by special leave of the Privy Council, from the High Court to the Privy Council, except in certain important types of constitutional disputes, involving questions of the powers of the Commonwealth vis-à-vis the States. In the latter type of case a certificate of the High Court, in effect granting leave to appeal, is necessary.

In 1968 the Commonwealth Parliament passed an Act, which came into operation on 1 September 1968, restricting appeals to the Privy Council. Under the Act, no appeal can be taken to the Privy Council from the Supreme Court of any Territory or from any Federal court other than the High Court, and special leave of the Privy Council to appeal from the High Court may be asked only in matters that come to the High Court on appeal from the Supreme Court of a State exercising jurisdiction not derived from Commonwealth legislation and which do not raise in the High Court any questions of the application or interpretation of the Commonwealth Constitution, or Commonwealth or Territory legislation.

There is provision for appeals from the State Supreme Courts direct to the Privy Council, but another Federal Act passed in 1968 makes it clear that a decision of a court of a State, including a decision of a Supreme Court, is not subject to appeal to the Privy Council, whether by special leave or otherwise, if it was given in federal jurisdiction.

### Lower (magistrates') courts

#### Powers of magistrates

*New South Wales.* The powers of the magistrates with regard to offences punishable summarily depend in each case on the statute which creates the offence and gives them jurisdiction. A magistrate may, with the consent of the accused, deal summarily with certain indictable offences under the Commonwealth Crimes Act and offences involving \$500 or less under the State Crimes Act; offences under the Commonwealth Act and certain offences under the State Act may be disposed of summarily without such consent if the amount involved does not exceed \$100. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to twelve months. Imprisonment in default of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of liquidated debts, and damages whether liquidated or unliquidated, the amount is limited to \$300 before a court constituted by a stipendiary magistrate. Where the amount claimed exceeds \$100 the Court must transfer the action to the District Court when the defendant gives notice that he objects to the action being heard and determined by a Court of Petty Sessions. Magistrates have power to entertain claims of up to \$1,000 under the Money Lenders and Infants Loans Act, 1941-1961. The amount in actions of debt or damages before one or more justices of the peace ranges up to \$60 in certain cases.

*Victoria.* The civil jurisdiction of magistrates is restricted as follows: (a) ordinary debts, to \$200; (b) any action in tort or contract, with the exception of a few torts such as breach of promise or illegal arrest (on which magistrates have no power to adjudicate), to \$600; and (c) any action in tort arising out of any accident in which a vehicle is involved, to \$1,000. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences of up to two years' imprisonment may be imposed. The proportion of long sentences is, however, comparatively small.

*Queensland.* Generally speaking, the maximum term of imprisonment which a magistrate or justice of the peace can impose is six months, but in certain cases sentences of twelve months may be imposed. Some examples are Sections 233, 344 and 445 of the Criminal Code (betting houses, aggravated assaults, and unlawfully using animals). There is also provision for applying cumulative sentences. In civil matters, a magistrate has jurisdiction in actions involving an amount of not more than \$1,200, unless all parties to the action agree that no such limitation shall apply.

*South Australia.* The power of special magistrates to impose fines and imprisonment is defined by the special Act creating the offence and conferring jurisdiction. In the case of minor indictable offences which are tried summarily, a maximum penalty of \$200 fine or two years' imprisonment is fixed by the Justices Act, 1921-1965. Magistrates also have power to hear certain civil actions in which the amount claimed is less than \$2,500.

*Western Australia.* The powers of magistrates and justices of the peace with regard to offences which are tried summarily are governed by the Act creating the offence and giving them jurisdiction. Imprisonment in default of payment of a fine is regulated by a scale limiting the period according to the amount of the fine but cannot exceed six months. The civil jurisdiction of Local Courts is restricted in general to \$1,000. By consent of the parties, any action that might be brought in the Supreme Court may be dealt with in a Local Court. Justices may act in the case of illness or absence of the magistrate. Magistrates are coroners, and justices may be appointed as acting coroners. Magistrates have appellate jurisdiction under some statutes and in country districts act as Chairmen of the Session Courts. They may be appointed as Commissioners of the Supreme Court. On the goldfields the magistrate is also the warden.

*Tasmania.* Magistrates are empowered to hear and determine in Courts of Petty Sessions all offences when an enactment expressly or by implication provides that the matter is to be determined summarily, or by or before justices of the peace, or that any offence is to be punishable upon summary conviction. Stealing and certain allied crimes are deemed to be summary offences where the value of the property concerned does not exceed \$20. Where the value of the property exceeds \$20 but is not more than \$400 the defendant may elect summary trial or trial by jury. This right of election applies to certain other charges such as escape or rescue; facilitating the escape of a prisoner; rescuing goods legally seized; making a false declaration or statement, etc. In the case of a charge of forgery or uttering, a right of election exists provided the complaint is in respect of a cheque for not more than \$400. In the case of a charge of breaking into a building, other than a dwelling house, a defendant may elect to be tried summarily under certain conditions. No general limit is fixed in respect of sentences, the statute creating the offence almost invariably laying down the penalty. Where this is not the case, the *Contravention of Statutes Act* 1889 provides that a fine of \$100 may be imposed. Sentences of imprisonment which justices may impose vary with the nature of the offence, with a maximum of two years. The aggregate of terms of cumulative sentences may not exceed two years. The civil jurisdiction of magistrates is divided into two categories. A Commissioner of the Court of Requests, provided he is a legal practitioner, may hear actions for the recovery of debts up to \$1,500 or damages up to \$1,000. As Commissioners are invariably police magistrates, this jurisdiction is State-wide. Courts of General Sessions, constituted by at least two justices of the peace, exercise similar powers, but the jurisdiction cannot exceed \$100.

*Northern Territory.* Stipendiary and special magistrates constituting courts of summary jurisdiction try offences punishable summarily. The punishment that may be imposed depends on the law creating the offence. Where there is no magistrate available, the offence may be tried by two or more justices of the peace or, if all parties consent, by one justice. Proceedings for committal on indictable offences may be heard by either a magistrate or a justice. Certain indictable offences under the Territory law may be tried summarily by a magistrate or two justices, who may impose a fine of up to \$200 or imprisonment for up to two years. A stipendiary magistrate constituting a local court has a civil jurisdiction to hear and determine claims for not more than \$2,000. A local court constituted by two justices (every special magistrate is also a justice of the peace) has a civil jurisdiction to hear claims up to \$100.

*Australian Capital Territory.* Stipendiary and special magistrates have general jurisdiction to try offences punishable summarily and also where a person is made liable to a penalty or punishment and no other provision is made for trial. The punishment depends on the law which creates the offence. In addition to jurisdiction (possessed by stipendiary and special magistrates throughout

Australia) to try summarily with the consent of the defendant offences indictable under the *Crimes Act 1914-1966* (in which case the magistrate cannot impose a fine exceeding \$200 or imprisonment exceeding one year), under Territory law certain indictable offences may also be tried summarily by a magistrate, who may impose a fine not exceeding \$100 or imprisonment for up to one year. Magistrates also hear proceedings for committal on indictable offences. In civil proceedings, magistrates try actions for amounts up to \$400. Justices of the peace have no judicial functions.

#### First offenders

In all States and Territories statutes are in force for dealing with first offenders. Provisions are incorporated in the various Acts whereby courts may extend leniency to the offender by means such as: (i) dismissal of the charge without proceeding to a conviction; (ii) freeing the offender or suspending sentence with the requirement of a recognisance for good behaviour for a specified period; and (iii) by placing the offender under the supervision of a probation officer for a specified period.

#### Children's courts

Special provisions exist in all States and Territories for dealing with juvenile offenders in special courts. Particulars of the relevant legislation and the constitution and powers of these courts are given below.

*New South Wales.* Children's Courts, first established in 1905, now exercise jurisdiction under the *Child Welfare Act, 1939-1967*. Each court consists of a special magistrate with jurisdiction within a proclaimed area. Elsewhere the jurisdiction of a Court may be exercised by a special magistrate or two justices of the peace. Where practicable, Children's Courts are not held in ordinary court rooms, and persons not directly interested are excluded from any hearing.

The magistrates exercise all the powers of a Court of Petty Sessions in respect of offences committed by or against children under eighteen years of age. They also exercise jurisdiction in respect of neglected and uncontrollable children. Their functions are reformatory, not punitive; they may commit children to institutions, to the care of persons other than the parents, or to the care of the Minister.

*Victoria.* Under the *Children's Court Act 1958*, the jurisdiction of Children's Courts is restricted, with certain exceptions, to children under 17 years of age. Two stipendiary special magistrates with jurisdiction throughout the State and, in addition, honorary special magistrates, operate in some metropolitan courts and provincial cities. At Country Courts to which no special magistrates are appointed, the local stipendiary magistrate usually constitutes the bench. The Children's Court may deal with all offences except homicide. However, consent to the jurisdiction of the Children's Court must be indicated by the child (or a parent if the child is under 15 years of age) before an indictable case may proceed.

The primary aim of the Children's Court is reformation and rehabilitation of the offender, and the Court, under Section 27 (3) of the *Children's Court Act 1958*, must 'firstly have regard to the welfare of the child'.

The probation system has been in use by the Children's Court since 1907, and there are now in Victoria a large number of honorary probation officers as well as six stipendiary probation officers. Problem cases are referred by the Court for investigation to a Children's Court Clinic, which is staffed by psychiatrists, psychologists and social workers.

*Queensland.* Children under the age of seventeen years who come before the Court are dealt with under *The Children's Services Act of 1965*. A Children's Court has jurisdiction to try or sentence a child charged with an indictable offence other than such an offence for which he would be liable, were he not a child, to imprisonment with hard labour for life. Children charged with simple offences or breaches of duty also appear before a Children's Court, as do children in respect of whom an application may be made to the Court for their committal to care and control (unruly children, etc.) or admission to care and protection (neglected children, etc.). The custody and or maintenance of a person under the age of twenty-one years may be sought by the mother or father of that person by application to a Children's Court.

The Children's Court in the metropolitan and near country areas is presided over by a specially appointed Children's Court magistrate. Proceedings are held *in camera*. A non-commissioned police officer is present to offer any observations he considers necessary and to assist the magistrate. An officer of the Department of Children's Services is also present. In country areas the Court is presided over by the local stipendiary magistrate, or in his absence, by two justices of the peace.

A child guilty of an offence shall not be imprisoned unless the Court is satisfied that he is so unruly that he should be detained in custody other than under the control of the Director of the Department of Children's Services, in which case it may order that he be imprisoned for a period not exceeding two years; if a child is convicted of an offence of a sexual nature committed on a child, the Court may make orders and deal with the child as if he were not a child and as if such

Court were a Magistrate's Court; a child guilty of an offence may be committed to the care and control of the Director for a period not exceeding two years with or without conviction; upon conviction the Court may order that the Director exercise supervision over a child until eighteen years or for a period not exceeding two years (even though he may turn eighteen years in that period) or without conviction for a period not exceeding twelve months; the Court may fine the child in accordance with the Act under which he was charged; it may order the parent or guardian to enter into a recognisance with or without surety to exercise proper care, protection, and guardianship over the child; it may order the child, parent, or guardian to pay compensation, costs, or make restitution; the Court may admonish and discharge the child without convicting him.

*South Australia.* Persons under the age of eighteen years charged with offences are dealt with in Juvenile Courts, from which the public are excluded. The procedure and powers of the Court are laid down in the Juvenile Courts Act, 1965-66, the Justices Act, 1921-1960, the Social Welfare Act, 1926-1965, and the Offenders Probation Act, 1913-1963. Any Court of Summary Jurisdiction may be a Juvenile Court provided that it is constituted by a special magistrate if one is available; and if it is constituted by two justices of the peace, they must be from a special panel of justices selected for the purpose. Any case may be referred by any other Juvenile Court to the Adelaide Juvenile Court. A Juvenile Court has power to deal finally with all offences except homicide, but in the case of indictable offences it may commit for trial in the Supreme Court. For offences punishable by fine, it may impose the fine provided, subject to a maximum of \$100. A juvenile may not be imprisoned; but if the Court is constituted by a special magistrate, he may be committed to a reformatory institution. The Court, however constituted, may place the defendant under the control of the Minister of Social Welfare and disqualify him from driving a motor vehicle.

*Western Australia.* Children's Courts deal with offenders under the age of eighteen years and hear cases of all offences against children. Special magistrates are appointed for Children's Courts and the Governor may appoint other persons to be members of a particular Children's Court. One member may sit and adjudicate with the special magistrate, but in the magistrate's absence at least two members must be present.

A Children's Court is deemed to be a court of summary jurisdiction and may exercise exclusive jurisdiction in respect of all offences except wilful murder, murder, manslaughter, or treason alleged to have been committed by children.

Adults charged with certain indictable offences against children may forgo the right to trial by jury and agree to be dealt with summarily by Children's Courts. This power to exercise summary jurisdiction is designed to eliminate as far as possible the necessity for children to appear in open courts as witnesses in cases dealing with sex offences. A Children's Court may commit such offenders for sentence by the Supreme Court.

*Tasmania.* Under the provisions of the *Child Welfare Act 1960* (as amended in 1963), Children's Courts are established to deal with offenders under the age of seventeen years. Special magistrates may be appointed by the Governor to adjudicate in these Courts and one such magistrate is sufficient to constitute a Court. In the absence of a special magistrate, the Court may be constituted by a police magistrate or two justices of the peace.

The Court is empowered to deal with children under seventeen years of age and no proceedings can be instituted without the consent of the Director of Social Welfare. Before disposing of the case the Court must receive a report from a child welfare officer, unless the offence is considered trivial or the Director decides not to provide one.

In summary proceedings a conviction is normally recorded only when the child receives a prison sentence. Children under sixteen years cannot be sentenced to imprisonment and children sixteen years of age cannot be sentenced for more than two years. Maximum fines are \$20 for offenders under fourteen years and \$50 for those over fourteen years. The Court may impose supervision orders or make the child a ward of the State, i.e. the child is placed under the supervision of the Director of Social Welfare until his eighteenth birthday.

*Northern Territory.* The *Child Welfare Ordinance 1958-1967* provides for the establishment of Children's Courts. These courts are constituted by a special magistrate. Where no Children's Court has been established for a particular area or where special circumstances require it, the jurisdiction of a Children's Court may be exercised by a court of summary jurisdiction constituted by a special magistrate.

A Children's Court has jurisdiction in respect of all offences committed by persons under seventeen years of age in respect of which proceedings may be taken in a court of summary jurisdiction. In dealing with such offences, the Court may, in cases other than homicide, impose a fine not exceeding one hundred dollars or, if the child is not under fourteen years of age, a sentence of imprisonment of not more than six months. In addition, the Court's powers include releasing an offender on probation, committing him to the care of a specified person (in which case the offender may be declared a State child), or committing him to an institution for a specified period.

Children's Courts also exercise jurisdiction in respect of destitute, neglected, incorrigible, or uncontrollable children.

*Australian Capital Territory.* The *Child Welfare Ordinance 1957-1966* provides that the Court of Petty Sessions constitutes the Children's Court when it is hearing proceedings involving persons under the age of eighteen years. Its proceedings are similar to those of an ordinary Court of Petty Sessions, except that persons not directly interested are excluded from the Court.

In addition to the power to deal with summary offences, the Children's Court has power to hear and determine summarily a charge for an indictable offence other than an offence punishable by death. In either case, the Court's powers include releasing an offender on probation, committing him to the care of a specified person, making him a government ward, or committing him to an institution for up to three years. The Children's Court also exercises jurisdiction in respect of neglected or uncontrollable children.

**Proceedings at lower (magistrates') courts**

Particulars of the differences in the jurisdiction of lower courts in the various States are given under Powers of Magistrates (pages 567-9). The proceedings of these courts are summarised in this paragraph. The statistics in the following tables are influenced by the factors affecting comparability listed at the beginning of this chapter (page 565).

*Criminal proceedings—total cases.* The total numbers of cases dealt with at magistrates' courts in each State and Territory for the years 1963 to 1967 are shown in the following table.

**CASES AT MAGISTRATES' COURTS(a): OFFENCES CHARGED, STATES AND TERRITORIES, 1963 TO 1967(b)**

State or Territory	1963	1964	1965	1966	1967
New South Wales . . . . .	323,501	341,351	341,171	338,808	336,746
Victoria . . . . .	290,332	303,096	323,644	307,465	318,172
Queensland(c) . . . . .	87,737	97,878	113,568	111,743	95,155
South Australia(c) . . . . .	67,372	64,401	71,468	83,080	98,588
Western Australia . . . . .	60,086	60,510	67,244	66,863	76,458
Tasmania . . . . .	34,728	31,702	36,535	37,624	36,550

Australian Capital Territory . . . . .	6,435	7,797	7,845	9,025	7,318
<b>Australia . . . . .</b>	<b>876,077</b>	<b>913,316</b>	<b>968,994</b>	<b>962,569</b>	<b>979,323</b>

(a) Includes Children's Courts, except for Northern Territory. (b) Excludes minor traffic offences settled without court appearance. (c) Year ended 30 June. (d) Excludes courts at Tennant Creek and Katherine.

Differences in the figures in the preceding table between States, and within a State over a period of time, are influenced by the large number of traffic offences and the arrangements which have been introduced at various times for dealing with them. Provision exists in the States and the Australian Capital Territory for settlement of parking and minor traffic offences by payment of fines without court appearance.

**MINOR TRAFFIC OFFENCES SETTLED WITHOUT COURT APPEARANCES STATES AND A.C.T., 1963 TO 1967**

State or Territory	1963	1964	1965	1966	1967

<b>Australia . . . . .</b>	<b>139,094</b>	<b>135,143</b>	<b>136,385</b>	<b>129,665</b>	<b>130,742</b>

(a) Includes Children's Courts except for Northern Territory. (b) Year ended 30 June. (c) Excludes courts at Tennant Creek and Katherine.

*Civil proceedings.* Civil proceedings in the lower courts refer to those in the Small Debts Courts in New South Wales, Courts of Petty Sessions in Victoria, Magistrates' Courts in Queensland, Local Courts in South Australia and Western Australia, Courts of Requests in Tasmania, Local Courts in the Northern Territory, and the Court of Petty Sessions in the Australian Capital Territory. Statistics of civil proceedings in the lower courts are given on page 579.

### Higher (judges') courts

Higher courts are presided over by a judge, sometimes with a jury (*see* page 566). The general jurisdiction of the higher courts in the States and Territories, which for this purpose include District, County and Supreme Courts, includes appeals from the lower courts, cases of serious crime committed from lower courts, and civil cases involving common law, commercial causes, equity, etc. Under the *Matrimonial Causes Act* 1959–1966 of the Commonwealth, the Supreme Courts of the various States and Territories have exclusive jurisdiction in matrimonial causes, and under the *Bankruptcy Act* 1966–1968, the Supreme Courts of New South Wales, Queensland, Western Australia, Tasmania and the Northern Territory, and the Courts of Insolvency in Victoria and South Australia, can deal with bankruptcy cases.

Proceedings at higher courts include therefore criminal, civil, divorce, and bankruptcy proceedings. Separate details of each are given on pages 577–88.

An account of the methods adopted in each jurisdiction in connection with habitual offenders is given in Year Book No. 49, pages 668–9.

#### Capital punishment

There were eight executions in Australia during the period 1955 to 1968. Three took place in South Australia (in 1956, 1958 and 1964), four in Western Australia (one in 1960 and 1961, two in 1964) and one in Victoria in 1967. In each case the offence was murder.

Under *The Criminal Code Amendment Act* of 1922 capital punishment was abolished in Queensland. In New South Wales the Crimes Act was amended in 1955, abolishing capital punishment. The death penalty for piracy with violence is retained in the Piracy Punishment Act 1902. In Tasmania capital punishment was abolished in 1968 by an amendment to the Criminal Code. In the Australian Capital Territory the *Child Welfare Ordinance* 1957–1968 provides that no death sentence is to be pronounced or recorded against a person under the age of 18 years.

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which would now be dealt with in a court of summary jurisdiction. The present tendency is to restrict death sentences to persons convicted of murder. Although rape is a capital offence in some States, the penalty of death has not been imposed in recent years on persons convicted of it. The average annual number of executions in Australia from 1861 to 1880 was 9; from 1881 to 1900, 6; from 1901 to 1910, 4; from 1911 to 1920, 2; from 1921 to 1930, 2; from 1931 to 1940, 1; from 1941 to 1950, 0.5; and from 1951 to 1960, 0.7.

### Serious crime

#### Selected crime reported or becoming known to police

The tables on pages 575–6 show some details of certain categories of offences reported or becoming known to police. This series, which commenced in 1964, is derived from police records and is based, as far as possible, on definitions and procedural arrangements uniformly determined for all States. The following explanations are necessary in order to interpret the figures in this series.

*Number of offences reported or becoming known.* All incidents reported or becoming known to the police which are found to constitute offences within the scope of the crimes covered are included. Offences are shown as 'reported or becoming known' in the year during which it has been established that the incident constitutes a crime, not necessarily in the period when the incident occurred. However, the incident is included when the police are satisfied that a crime has been committed, even though it may be established in subsequent proceedings that no crime or a crime of a different nature was committed. As far as possible, the offences are recorded in respect of the State in which the incident occurred, regardless of which police force undertakes investigations or prosecutions, or where an arrest is made. In the case of homicide, assault, robbery, and rape, one offence is counted in respect of each victim, regardless of the number of offenders involved. In the case of breaking and entering, and fraud, etc., one offence is counted for each act or series of directly related acts occurring at the same time and place and under the same circumstances. Each motor vehicle stolen is counted as constituting a separate offence.

*Number of offences cleared.* An offence of the type included in this series is counted as 'cleared' when an information (charge, arrest or summons to appear) has been laid against at least one person involved. However, an offence may also be counted as 'cleared' without an information being laid. This may occur when the offender has received an official caution or has died, has committed suicide, has been committed to a mental institution, or is in another jurisdiction from which extradition is not desired or available, or is serving a sentence; or if there are other obstacles to prosecution, such

as diplomatic immunity or that the complainant refuses to prosecute. A clearance is always shown against the classification under which the offence was 'reported', regardless of the nature of the charge laid or changes in the description of an offence due to later information. The entries are made in respect of the year when the offence was 'cleared', whether or not the offence was 'reported' in that or an earlier year.

*Persons involved in crimes cleared.* This is the sum of the number of persons dealt with in each of the offences shown as 'cleared'. If more than one person is involved in the one offence, each person is counted. If the same person is involved in more than one offence cleared, he is counted separately for each offence. Persons involved are shown against the categories of offences to which an incident was originally allocated, regardless of the actual offences they are charged with. This basis of counting 'persons involved in offences cleared' was adopted to reveal trends in crime participation by persons in various age-groups. The figures in this series are not directly comparable with statistics of persons charged or convicted in court, or of cases brought before the courts; nor do these figures reveal the number of offenders in the community.

*Offences included in the statistics*

*Homicide.* Separate details are provided for murder, attempted murder (i.e. acts done with intent to murder) and manslaughter (unlawful killing other than murder), excluding manslaughter arising from motor traffic accidents.

*Serious assault.* These are assaults normally dealt with on indictment. Includes woundings, offences causing bodily harm, assaults with a weapon, etc., and attempts of this nature. Excludes sexual assault and robbery. *Uniform interpretation of this definition between States is especially difficult to effect.*

*Robbery.* Stealing anything, if at or immediately before or after the time of stealing the offender uses or threatens to use violence to any person or property in order to obtain the thing stolen, or to prevent or overcome resistance to its being stolen. Includes attempts of this nature.

*Rape.* Includes attempted rape and assault with intent to rape. Excludes unlawful carnal knowledge (i.e. where consent is given, but the girl is below the legal age of consent, etc.) and indecent assault.

*Breaking and entering.* Breaking and entering a building (or entering a building and breaking out) and committing or intending to commit a crime. Includes burglaries. Separate details are shown according to the type of building involved, namely, *dwellings* (including unoccupied dwellings, tents, caravans, etc., used as dwellings, and the residential parts of hotels, schools, etc.); *shops* (including kiosks, service stations, restaurants, bars, non-residential clubs, etc.); and *offices, factories and warehouses* (including parts of buildings, but excluding dwellings and shops used for such purposes). Includes attempts. From 1967 the figures exclude breakings involving property valued at \$100 or less.

*Motor vehicle thefts, illegal use, etc.* Includes all offences of illegal, unlawful or unauthorised use, use without consent, unlawfully assuming control, etc., no matter under which legislation these offences are prescribed. Excludes cases of 'interference', but includes attempts at illegal use. The number of stolen motor vehicles which are recovered is also shown.

*Fraud, forgery, false pretences.* Includes embezzlement, 'omit to account', misappropriation, fraudulent appropriation, conversion, larceny as bailee, falsification of accounts, company fraud, forgery, uttering, false pretences, passing of valueless cheques and offences by trustees. Includes attempts, but excludes imposition. As a general rule, offences are included only if there is an element of deception or trickery. Separate details are shown for *valueless cheque* offences (i.e. passing of valueless cheques, whether there is no account, insufficient funds or a false signature of the purported drawer of the cheque. However, this sub-group excludes cases where a genuine cheque is altered or the endorsement of the payee is forged. These cases are regarded as forgery and or uttering and included in 'other').

**Number of offences reported or becoming known to police**

The following table shows, for each State and Territory, the number of offences in each of the seven categories covered by this series which were reported or became known to police during the years 1964 to 1968.

(a) Age last birthday at time of clearance.

The number of stolen motor vehicles recovered was: 1966, 24,490; 1967, 24,701; 1968, 27,191.

**Convictions for serious crime at lower (magistrates') courts**

The figures given in the tables on page 572 refer to all convictions, and include offences of a technical nature, drunkenness, and minor breaches of good order, which come under the heading of crime in a very different sense from the more serious offences. The following table has therefore been prepared to show convictions at magistrates' courts for the years 1963 to 1967 for what may be regarded as the more serious offences, i.e. offences against the person, offences against property, forgery, and offences against the currency.

**CONVICTIONS FOR SERIOUS CRIME(a) AT MAGISTRATES' COURTS(b): STATES AND TERRITORIES, 1963 TO 1967**

<i>State or Territory</i>	<i>1963</i>	<i>1964</i>	<i>1965</i>	<i>1966</i>	<i>1967</i>
New South Wales . . . . .	32,656	31,826	34,585	34,911	35,809

## Civil cases

The statistics in the two tables in this section are influenced by factors which affect comparability between States and between courts. The total number of plaints entered and amounts awarded plaintiffs in the lower courts during 1967 are shown in the following table.

## CIVIL CASES AT LOWER COURTS: STATES AND TERRITORIES, 1967

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i> (a)	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>

## Transactions of the High Court

## TRANSACTIONS OF THE HIGH COURT OF AUSTRALIA, 1967 AND 1968

<i>Original jurisdiction</i> (a)	1967	1968	<i>Appellate jurisdiction</i>	1967	1968
Number of writs issued . . . . .	74	98	Number of appeals set down for hearing . . . . .	114	89
Number of causes entered for trial . . . . .	46	43	Number allowed . . . . .	27	49
Judgments for plaintiffs . . . . .	6	7	Number dismissed . . . . .	67	70
Judgments for defendants . . . . .	7	3	Otherwise disposed of . . . . .	25	20
Otherwise disposed of . . . . .	19	21			
Amounts of judgments . . . . .	\$74,175	\$441,760			

(a) Some matters dealt with by the High Court neither originate as writs nor are entered as causes.

During 1967 and 1968, respectively, the High Court dealt also with the following: appeals from assessments under the Taxation Assessment Acts, 55, 19; special cases stated for the opinion of the Full Court, 4, 6; applications for prohibition, etc., 15, 5. The fees collected amounted to \$7,327 in 1967 and \$16,764 in 1968.

## Divorce and other matrimonial causes

### Separation and maintenance orders of courts of summary jurisdiction

In all States and Territories there are laws enabling a wife whose husband leaves her or the children of the marriage without adequate means of support to obtain a maintenance order against the husband from a court of summary jurisdiction. In some States and in the Northern Territory, courts of summary jurisdiction also have power to make separation orders. A separation order is intended primarily for the protection of the person of the wife.

### Divorce and other matrimonial proceedings in higher courts

A marriage may be terminated by a Supreme Court of a State or Territory, under powers vested in these courts by Commonwealth legislation, in one of three ways. Firstly, there may be a dissolution of the marriage, commonly known as divorce; secondly, the courts may annul a marriage; and thirdly, there can be a judicial separation of the parties. Until the Commonwealth *Matrimonial Causes Act* 1959 came into operation each State was primarily responsible for legislation relating to matrimonial causes. The law varied from State to State, for example, as to the period of desertion needed to obtain a decree for the dissolution of marriage. In 1959, however, the Commonwealth Matrimonial Causes Act was passed, and it came into force on 1 February 1961. The Act establishes uniform grounds throughout the whole of the Commonwealth for the termination of marriage. While the Act displaces corresponding State law, it vests jurisdiction in existing State and Territorial Courts.

### Matrimonial Causes Act 1959-1966

Under this Act a decree for the dissolution of marriage may be granted on one or more of fourteen grounds, which include adultery, desertion, separation for five years in certain circumstances, cruelty, drunkenness, and failure to comply with a restitution decree.

Proceedings for nullity of marriage may be instituted in respect of a marriage which is void or voidable. A marriage which is void has no existence at all, and so it is not legally necessary to obtain a decree of nullity of marriage, but since the issue may depend on difficult questions of fact, such as proof that the consent of one of the parties to the marriage was not a real consent, it is advisable and customary to seek a court judgment which decides the question of the validity of the marriage.

Proceedings for annulling a voidable marriage may be instituted on various grounds, as, for example, where at the time of the marriage either party was a mental defective. A voidable marriage is void from the date of the decree absolute, but until then the parties have the status of married people and transactions concluded on the basis of the existence of that status cannot be undone or re-opened. Since the parties to a marriage which is void or which has been voided do not have the status of married people, they may remarry.

The death of either husband or wife terminates any proceedings under the Act. A decree for dissolution or annulment of a voidable marriage is first a decree *nisi*. The decree automatically becomes absolute at the expiration of three months, unless it is in the meantime rescinded, appeal proceedings are instituted, or there are children of the marriage under the age of 16, in which case the Court must be satisfied that appropriate arrangements have been made for their welfare before the decree will become absolute. The parties cannot remarry until a decree *nisi* has become absolute.

A decree of judicial separation is available on most of the grounds available for divorce. It leaves unimpaired the status of marriage, but suspends rights and duties with respect to cohabitation. A husband is not responsible for the acts of his wife, except that he is liable for necessaries supplied to her if he has failed to pay maintenance ordered by a court. Persons who have judicially separated cannot remarry, but a divorce may be obtained on the same facts as those on which the decree of judicial separation was based.

The Act provides for financial grants to approved marriage guidance organisations and the courts are enjoined to consider at all times the possibility of reconciliation and they may take certain steps to endeavour to effect a reconciliation.

### Number of petitions filed

The following table shows the number of petitions for dissolution of marriage, nullity of marriage and judicial separation filed in each State and Territory during 1968.

PETITIONS FILED FOR DISSOLUTION OF MARRIAGE, NULLITY OF MARRIAGE AND JUDICIAL SEPARATION: STATES AND TERRITORIES, 1968

(a) See footnote (a) to preceding table.

### Number of divorced persons at each census, 1911 to 1966

The following table shows the number and proportion of divorced persons in Australia as recorded from returns supplied at each census from 1911 to 1966. A classification of divorced persons by ages for the censuses from 1891 to 1947 appeared in earlier issues of the Year Book (*see* No. 39, page 269). Prior to 1911 no record was made of divorced persons in South Australia, so comparisons cannot be made beyond that date.

#### DIVORCED PERSONS AT CENSUS DATES: AUSTRALIA, 1911 TO 1966

Sex	Number							Number per 10,000 of males or females 15 years of age and over						
	1911	1921	1933	1947	1954	1961	1966	1911	1921	1933	1947	1954	1961	1966

### Bankruptcy

Particulars of bankruptcy in each State to the end of 1927 were incorporated in issues of the Year Book before No. 23. On 1 August 1928 the first Bankruptcy Act of the Commonwealth came into operation. This Act as amended was repealed by the *Bankruptcy Act 1966-1968* which came into operation on 4 March 1968.

Under the *Bankruptcy Act 1966-1968* the Commonwealth is divided into nine Bankruptcy Districts, of which three are in Queensland, and the remainder coincide with the boundaries of the States and of the Northern Territory of Australia. The State of New South Wales and the Australian Capital Territory together constitute one district.

The Federal Court of Bankruptcy is invested with jurisdiction throughout Australia, but exercises it only in the Bankruptcy Districts of the State of New South Wales and the Australian Capital Territory, and the State of Victoria. Certain State Courts have been invested with federal jurisdiction in bankruptcy and, outside New South Wales and Victoria, exercise that jurisdiction in the appropriate Bankruptcy District. The Supreme Court of the Northern Territory has also been invested with federal jurisdiction in bankruptcy, but certain restrictions are placed on its powers unless the debtor or bankrupt resides or carries on business in the Territory.

Any debtor unable to pay his debts may present to a Registrar in Bankruptcy a petition against himself accompanied by a statement of his affairs. Upon their acceptance by the Registrar the debtor becomes a bankrupt. A creditor may apply for a compulsory sequestration if the debtor has committed an act of bankruptcy. The act of bankruptcy usually relied on is that the debtor has failed to comply with the requirements of a bankruptcy notice issued in respect of a debt due under a judgment or order, or to satisfy the Court that he has a counter-claim, set-off, or cross demand equal to or exceeding the debt and which he could not have set up in the proceedings in which the judgment or order was obtained. The prescribed form of bankruptcy notice requires the debtor, within a specified time, to pay the amount of the debt due under the judgment or order, secure payment of the debt, or compound the debt. If an act of bankruptcy is committed, a creditor may thereupon present a petition against a debtor, provided that the debt or debts amount to not less than \$500, the act of bankruptcy relied on has occurred within six months preceding the presentation of the petition, and the statutory requirements relating to presence or residence in Australia are applicable to the debtor.

When a debtor becomes bankrupt, either by acceptance of his own petition, or by the making of a sequestration order, the property of the bankrupt vests forthwith in The Official Receiver in Bankruptcy and after-acquired property of the bankrupt vests, as soon as it is acquired by the bankrupt, in the Official Receiver in Bankruptcy or, if a person other than an official receiver is trustee of the property of the bankrupt, in that trustee. The property of the bankrupt is divisible among his creditors in accordance with the provisions of the Act. No creditor may, in respect of a debt provable in bankruptcy, enforce any remedy against the person or property of the bankrupt, or, except with the leave of the Court, commence any legal proceeding or take any fresh step in such a proceeding.

Part X of the Act enables a debtor and his creditors to enter into arrangements without having a sequestration order made against him. These arrangements may take the form of a composition, a deed of assignment, or a deed of arrangement. A debtor who desires that his affairs be dealt with under this Part may authorise a solicitor or a registered trustee to call a meeting of his creditors.

The Court has power to decide questions of law affecting a bankrupt estate. Questions of fact may be tried before a jury.

The Act provides for an Inspector-General in Bankruptcy. It also provides for a Registrar in Bankruptcy to be appointed for each Bankruptcy District, and for so many Deputy Registrars in Bankruptcy as are necessary. Each Registrar and Deputy Registrar has such powers and functions as are conferred or imposed on a Registrar by the Act, and may exercise such of the powers and functions of an administrative nature exercisable by the Court as the Court directs or authorises him to exercise. He may examine a bankrupt, the spouse of a bankrupt, and a person indebted to a bankrupt or having in his possession any of the estate or effects of a bankrupt.

There is an official receiver for each District and the official receivers together constitute a body corporate known as 'The Official Receiver in Bankruptcy'. An official receiver is a permanent officer of the Commonwealth Public Service. His duties are to investigate the conduct, property and transactions of a bankrupt, and the cause of his bankruptcy, and to realise and administer the property of the bankrupt. In respect of these activities an official receiver is under the control of the Court.

A person registered by the Court as qualified to act as a trustee may be appointed by resolution of the creditors to be the trustee of the estate of a bankrupt. Until a trustee of the estate of a bankrupt is appointed by the creditors or the Court, or if a trustee is not so appointed, or there is, for any other reason, at any time no trustee so appointed, the official receiver for the District in which the sequestration order was made or the debtor's petition was presented is the trustee of the estate.

In cases where a vacancy occurs in the office of trustee under a deed of arrangement, a deed of assignment or a composition under Part X of the Act, a meeting of creditors or the Court may appoint a registered trustee to the vacant office. The Court may also appoint an official receiver or a registered trustee who is willing so to act as trustee until the vacant office is filled by a meeting of creditors.

#### Bankruptcy proceedings

The following table shows the number of bankruptcies of the various types in each State, together with the assets and liabilities of the debtors, during 1967-68.

#### BANKRUPTCY PROCEEDINGS: STATES AND TERRITORIES, 1967-68

(a) Includes the Australian Capital Territory.

### Police

The primary duties of the police are to prevent crime, to detect and detain offenders, to protect life and property, to enforce the law, and to maintain peace and good order. In addition, they perform many duties in the service of the State, e.g. they act as clerks of petty sessions in small centres, as crown land bailiffs, foresters, mining wardens, and inspectors under the fisheries and various other Acts. In metropolitan and large country areas they also regulate the street traffic. With the exception of the Commonwealth Police Force and the police in the Northern Territory and the Australian Capital Territory, the police forces of Australia are under the control of the State Governments, but their members perform certain functions for the Commonwealth Government, such as acting as aliens registration officers and policing various Commonwealth Acts and Regulations.

Women police perform special duties at places where young women and girls are subject to moral danger, control traffic at school crossings and lecture school children on road safety. They also assist male police as required in the performance of normal police duties.

The strength of the police force and the duties and ranks of the personnel involved in each State and Territory for 1968 are shown in the following table. Comparability between States is affected by differences in the classification of ranks and duties, and known differences between States are mentioned in footnotes.

Also included in the table are statistics of ancillary and civilian staff employed by police departments. Differences between States in the use of such staff are considerable. These differences arise, on the one hand, from differences in the extent to which police make use of such staff for police functions and, on the other hand, in the extent to which such staff are required to undertake additional functions (such as parking control) which are allocated to the police in varying degree between States. There is also some overlap between duties of ancillary and civilian staff as defined in footnotes (i), (j), (k) and (m) of the following table.

**POLICE FORCES AND ASSISTANT STAFFS: STATES AND TERRITORIES, 30 JUNE 1968—**  
*continued*

<i>Duty and rank(a)</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>
<b>TOTAL STAFFS</b>								
<b>Grand total—</b>								
Full-time . . . . .	7,958	5,659	3,389	2,453	1,720	786	221	257
Part-time . . . . .	..	51	23	10	134	..	..	1

(a) Where more than one duty is involved, officers have been allocated to the category of duties in which the greater part of their time is spent. The allocation of executive officers and inspectors to categories of duties is necessarily somewhat arbitrary and varies from State to State. (b) Includes probationary constables. (c) Excludes probationary constables; included with trainees and cadets. (d) Includes sub-inspectors. (e) Does not include transport and maintenance; each section undertakes its own transport, and maintenance is done on contract and/or by the government transport pool. (f) Includes officers engaged on motor vehicle examination and testing and licensing drivers. (g) Includes 1 chief inspector. (h) Includes 1 commissioner's inspector and 1 chief inspector. (i) Parking police, native trackers, wardresses, etc.; special constables in New South Wales and Tasmania; police reservists in Victoria. (j) Includes clerical workers in the Women Police Auxiliaries. (k) Clerks, typists, artisans, cleaners. (l) Does not include cleaning which is done by the Cleaning Services Branch of the Government Stores Department. (m) Includes 41 cadets whose appointment is not subject to the W.A. Police Act.

**Commonwealth Police Force**

The Commonwealth Police Force commenced operations on 21 April 1960, and is the principal agency for the enforcement of the laws passed by the Commonwealth Parliament. It is also responsible for the protection of Commonwealth property and interests at various buildings and establishments under the control of the Commonwealth. This force co-ordinates the work of other Commonwealth investigation and law enforcement agencies and acts on behalf of the United Nations Organization for the suppressing of traffic in women and the suppression of obscene literature.

Under the control of the force is the Australian Police College at Manly, New South Wales, which provides training for officers of various police forces and other agencies in Australia and New Zealand. The force has its Head Office in Canberra and District Offices in each capital city. The strength of the force at 30 June 1968 was 800 policemen and 3 policewomen. At that date there were, in addition, 85 civilian employees.

**Prisons**

**Prisons and prison accommodation**

**PRISONS AND PRISON ACCOMMODATION: STATES AND NORTHERN TERRITORY, 1967**

	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>Aust</i>

Accommodation . . . . .	3,100	2,490	1,078	1,118	1,238	404	96	9,524

There is no gaol in the Australian Capital Territory, but there is a lock-up attached to the police station at Canberra and another lock-up at Jervis Bay where offenders are held for short periods. Prisoners remanded or sentenced by a court in the Australian Capital Territory for more than five days are usually held in New South Wales prisons.

(a) Includes Australian Capital Territory prisoners held in New South Wales prisons.

## Patents, trade marks and designs

## Patents

Patents for inventions are granted under the *Patents Act* 1952–1966, which applies to the Commonwealth of Australia and the Territories of Norfolk Island, Papua and New Guinea. The Act is administered by a Commissioner of Patents. The principal fees payable up to and including the grant of a patent amount to \$39. Renewal fees are payable as follows: \$10 before the expiration of the fourth year, and an amount progressively increasing by \$2 before the expiration of each succeeding year up to the final fee of \$32, payable before the expiration of the fifteenth year. An extension of time for six months for payment of a renewal fee may be obtained.

## PATENTS: AUSTRALIA, 1964 TO 1968

	1964	1965	1966	1967	1968
Applications . . . . .	14,134	15,150	16,007	15,733	16,712
Applications accompanied by provisional specifications . . . . .	3,603	3,783	3,853	3,708	3,899
Letters patent sealed . . . . .	5,456	7,277	6,140	6,356	5,537

## Trade marks and designs

Under the *Trade Marks Act* 1955–1966 the Commissioner of Patents is also Registrar of Trade Marks. Provision is made for the registration of users of trade marks and for their assignment with or without the goodwill of the business concerned. A new classification of goods was adopted in 1958, and trade marks registered under repealed Acts are reclassified on renewal. Under the *Designs Act* 1906–1968 the Commissioner of Patents is also Registrar of Designs.

## TRADE MARKS AND DESIGNS: AUSTRALIA, 1964 TO 1968

	1964	1965	1966	1967	1968

### Copyright

Copyright is regulated by the Commonwealth *Copyright Act* 1912-1963 wherein, subject to modifications relating to procedure and remedies, the British Copyright Act of 1911 has been adopted and scheduled to the Australian law. The Act is administered by the Commissioner of Patents.

Reciprocal protection of unpublished works was extended in 1918 to citizens of Australia and of the United States of America, under which copyright may be secured in the latter country by registration at the Library of Congress, Washington. The Commonwealth Government promulgated a further Order-in-Council which came into operation on 1 February 1923 and extended the provisions of the Copyright Act to the foreign countries of the Copyright Union, subject to the observance of the conditions contained therein.

#### COPYRIGHT: AUSTRALIA, 1964 TO 1968

	1964	1965	1966	1967	1968
Applications lodged . . .	1,360	1,438	1,291	1,387	1,584
Applications registered . . .	1,275	1,277	1,113	1,231	1,405

### Cost of administration of law and order

#### Expenditure by the States

The tables following show the net expenditure (i.e. gross expenditure less receipts from fees, fines, recoups for services rendered, etc.) from Consolidated Revenue in connection with the administration of justice, police and prisons. The figures exclude Loan Fund expenditure and expenditure on debt charges, pay-roll tax and superannuation payments. Because of differing legislative and administrative arrangements in the various States, the activities covered by the figures shown are not exactly the same in each State. Small differences also result from differing accounting practices. However, the figures shown for individual States are comparable from year to year.

#### STATE NET EXPENDITURE ON LAW AND ORDER, 1967-68

State	Net expenditure			Per head of population		
	Justice	Police	Prisons(a)	Justice	Police	Prisons
	\$'000	\$'000	\$'000	\$	\$	\$
New South Wales . . . . .	5,786	28,040	5,321	1.33	6.45	1.22
Victoria . . . . .	(b) -950	22,159	2,944	(b) -0.29	6.71	0.89

Western Australia . . . . .	73	6,218	1,811	0.08	6.96	2.03
Tasmania . . . . .	613	2,931	731	1.62	7.73	1.93
<b>Total . . . . .</b>	<b>3,552</b>	<b>82,286</b>	<b>14,072</b>	<b>0.30</b>	<b>7.00</b>	<b>1.20</b>

(a) Excludes expenditure on reformatories, which amounted to N.S.W., \$2,401,547; Vic., n.a.; Qld, \$162,062; S.A., \$476,140; W.A., \$717,173; Tas., \$169,857. (b) Receipts for fines, legal fees and registrations exceed expenditure.

#### STATE NET EXPENDITURE ON LAW AND ORDER AUSTRALIA, 1963-64 TO 1967-68 (\$'000)

Year	Justice	Police	Prisons (a)
1963-64 . . . . .	5,454	60,051	8,462
1964-65 . . . . .	5,408	64,338	10,633
1965-66 . . . . .	5,495	68,132	10,261
1966-67 . . . . .	4,133	77,197	11,824
1967-68 . . . . .	3,552	82,286	14,072

(a) Excludes expenditure on reformatories, which amounted to: 1963-64, \$2,944,662; 1964-65, \$1,970,083; 1965-66, \$3,239,536; 1966-67, \$3,672,797; 1967-68, \$3,926,779. Expenditure on reformatories in Victoria is not included in these amounts.

**Commonwealth expenditure**

Since the functions of the Commonwealth Government in the administration of law and order differ considerably from those of the States, precise comparison between Commonwealth and State expenditure in this field is not possible. The following tables show expenditure by the Commonwealth Government on the services it performs in relation to law and order.

**COMMONWEALTH EXPENDITURE ON LAW AND ORDER, 1967-68**

## CHAPTER 17

# NATIONAL ACCOUNTS

## NATIONAL INCOME AND EXPENDITURE

National accounting aims at providing a systematic summary of the transactions taking place in the economy, especially of those that relate to the production and use of goods and services, and to transfers of income or capital between sectors of the economy.

Estimates of national income and expenditure have been compiled by the Bureau since 1944–45 and have been published annually as papers entitled *National Income and Expenditure* accompanying the Commonwealth Budgets. Detailed annual estimates of national income and expenditure on a revised basis were published in *Australian National Accounts, National Income and Expenditure, 1967–68*. Preliminary estimates (less detailed) for 1967–68 were published earlier in a Budget Paper. Quarterly estimates are published in *Quarterly Estimates of National Income and Expenditure*.

The figures shown on pages 599–606 are as published in *Australian National Accounts, National Income and Expenditure, 1967–68*.

### Description of the National Accounts

A brief description of the conceptual basis of national accounts is given in this section, but for a more detailed treatment of the concepts and structure of the Australian National Accounts reference should be made to *Australian National Accounts, National Income and Expenditure, 1967–68*, or to Year Book No. 50, pages 1253–68.

#### Definition and relationship of the concepts of product, income and expenditure

The main concepts of product, income and expenditure in the Australian National Accounts are defined and expressed in equivalents as follows.

*Gross national expenditure* is the total expenditure within a given period on final goods and services (i.e. excluding goods and services used up in the process of production) bought for use in the Australian economy. It is equivalent to gross national product plus imports of goods and services less exports of goods and services.

*National turnover of goods and services* is the total flow within a given period of final goods and services (i.e. excluding any goods and services used up during the period in the process of production) entering the Australian economy from production and imports. This value is equivalent to gross national product plus imports of goods and services or, alternatively, to gross national expenditure plus exports of goods and services.

*Gross national product* is the total market value of goods and services produced in Australia within a given period after deduction of the cost of goods and services used up in the process of production but before deducting allowances for the consumption of capital equipment. Thus gross national product, as here defined is 'at market prices'. It is equivalent to gross national expenditure plus exports of goods and services less imports of goods and services.

*Gross national product at factor cost* is that part of the cost of producing the gross national product which consists of gross payments to factors of production (labour, land, capital, and enterprise). It represents the value added by these factors in the process of production and is equivalent to gross national product less indirect taxes plus subsidies. *Gross farm product at factor cost* is that part of gross national product at factor cost arising from production in rural industries (excluding forestry). *Gross non-farm product at factor cost* arises from production in all other industries.

*Net national product* is the part of the value added within a given period by factors of production (labour, land, capital, and enterprise) which accrues as income to their suppliers after allowing for the depreciation of capital equipment. It is equivalent to gross national product at factor cost less depreciation allowances.

*National income* is the net income accruing within a given period to Australian residents from their services in supplying factors of production (labour, land, capital, and enterprise) in Australia or overseas. It is equivalent to net national product plus income receivable from overseas less income payable overseas.

*Personal income* is the total income, whether in cash or kind, received by persons normally resident in Australia. It includes both income received in return for productive activity (such as wages, salaries and supplements, incomes of unincorporated enterprises, etc.) and transfer incomes (such as cash, social service benefits, interest, etc.). Personal income also includes any property income received by non-taxable organisations such as private schools, churches, charitable organisations, etc. However, it excludes any income which might be said to accrue to persons in the form of undistributed company income and retained investment income of life insurance, etc., funds.

#### Framework of accounts and sectors

In the accounts shown in Tables 1 to 7 four internal sectors are distinguished—trading enterprises, financial enterprises, persons and public authorities. In addition, there is an overseas sector which shows a summary of the transactions into which overseas governments, persons and businesses enter with Australian residents. All the sectors (except the overseas sector) engage in productive activity, but in the tables a national production account for the whole economy is shown instead of separate accounts for each sector. Similarly, the tables show only a national capital account for the economy, but a current (or income appropriation) account is shown for each sector. The system of accounts as thus envisaged is a completely articulated system in that a credit in any account must be matched with a corresponding debit in some other account—or in the same account if a complete consolidation of the transactions appropriate to that account has not been carried through.

The framework of sectors and accounts underlying the form of social accounts shown in this Year Book is set out in the following diagram. As stated in the previous paragraph, each sector could be envisaged as having separate production, appropriation and capital accounts, but in the tables compiled for Australia the production and capital accounts have been combined. In the diagram the solid rectangles depict the actual form of the tables, and the remaining rectangles show the full amount of detail which would be needed to provide a complete articulation of the accounts. The appropriate number of each table on pages 599–603 is shown on the left of the diagram.

#### ARTICULATION OF AUSTRALIAN NATIONAL ACCOUNTS

PLATE 35

### Description of the accounts

The *national production account* is a consolidation of the production accounts of each sector. The production account is shown as receiving revenue from the sale of goods and services to final buyers; all intermediate goods and services are cancelled out, since they represent a cost to one producer to offset the revenue of the other. On the payments side are shown the payments of indirect taxes, and, since the account is presented from the point of view of the producing unit, the wages and salaries paid to employees. The balance is the gross operating surplus which is carried to the trading enterprises income appropriation account.

The *trading enterprises income appropriation account* is shown as receiving the gross operating surpluses from the national production account and property incomes (dividends, non-dwelling rent and interest) from other sectors. This total of receipts is appropriated to depreciation allowances and to various transfer payments (interest, etc., paid, income tax payable, dividends payable and undistributed income). All net income of unincorporated enterprises is treated as being transferred to persons and the same is true of personal income from dwelling rent. Any income of trading companies not distributed but retained for use in the business is shown as undistributed income and transferred to the national capital account either directly or by way of the overseas current account (where accruing to non-residents).

The *financial enterprises income appropriation account* is, in the main, similar to the preceding account. However, there is no operating surplus, as property income (which is treated as transfer income, not as income of factors of production) is the sole receipt.

The *personal current account* records all receipts on current account whether of factor incomes (wages and salaries) or transfer incomes (interest, etc., dividends, net business incomes, cash benefits from public authorities, and remittances from overseas). On the payments side are shown current payments for goods and services and transfer payments (taxes, interest, etc., remittances to overseas). The balance is transferred to the national capital account under the heading of personal saving.

The *public authorities current account* reflects a distinction between current and capital expenditure, which is necessarily arbitrary in some measure and has been made on the basis of excluding from the current account expenditure on public works and increase in stocks. Expenditure on public works is taken to include new buildings, construction, plant and machinery, and any replacement of assets charged to loan funds or capital works votes. Current account excludes capital expenditure of public enterprises (including replacement of assets charged to depreciation reserves but not those, if any, charged directly to working expenses) and all expenditure on roads, because a satisfactory distinction between new works and maintenance cannot be made. All defence expenditure is included in the current account.

The income of public enterprises shown in this account is derived by deducting from their operating surplus any depreciation shown by these enterprises in their published accounts, except in the case of enterprises whose accounts are included in the Commonwealth or State budgets and are at present analysed on the basis of cash accounts in which depreciation is not allowed. These depreciation allowances are included in the capital account. As in the case of persons, all overseas gifts are included in the current account. These include gifts for international relief, technical assistance, etc., grants, contributions to international organisations and expenditure in connection with the administration of Papua and New Guinea.

The *overseas current account* records all transactions of a current nature between Australian and overseas residents. It should be emphasised that this account is shown here from the point of view of overseas residents, i.e. receipts from Australia are shown as credits, and payments to Australia as debits. Australians temporarily overseas are regarded as residents, and visitors to Australia as non-residents.

Capital transactions of the four domestic sectors and the net deficit on current account with overseas are shown in the *national capital account*. On the receipts side are shown the savings of the various sectors—saving by enterprises, personal saving, the retained investment income of insurance funds, and the public authority surplus on current account. Net apparent capital inflow from overseas and withdrawal from monetary reserves are reflected in the item 'overseas balance on current account'. On the payments side are shown the purchases by all sectors of new buildings and capital equipment and the increase in the value of stocks. The private component of capital expenditure includes new dwellings, additions and major alterations to dwellings and expenditure of a capital nature by private non-profit institutions (churches, schools, clubs, etc.) but excludes motor vehicles for personal use and other durable consumer goods, which are included in personal consumption expenditure.

### Estimates at constant prices

For certain types of economic analysis it is useful to examine estimates of the principal flows of goods and services in the economy revalued in such a way as to remove the direct effects of changes in their prices which have occurred over the period under review. Such estimates, conventionally described as 'at constant prices', are presented in Table 8 for gross national product, gross national expenditure, and the principal components of the latter.

Constant price estimates amount to an attempt to express every component item of expenditure as the product of a price and a quantity, instead of only as a value, and to substitute for the actual current prices the prices that ruled in the chosen base year. Such estimates can be made only on the basis of approximations and assumptions, and this should be borne in mind in the interpretation and use of the results.

Gross national product is equivalent to gross national expenditure, plus exports of goods and services, less imports of goods and services. This relationship has been used in deriving the estimates of gross national product at constant prices shown in Table 8.

For a considerable part of personal consumption expenditure, exports, and imports, it is possible to identify specific units of quantity and price and to revalue the quantities at base year prices. Where it is not possible to express the values in successive years as the product of prices and homogeneous units of quantity, the treatment generally adopted is to divide values by appropriate price indexes.

For gross fixed capital expenditure, some components are revalued by means of appropriate price or volume indexes; but where homogeneous or standard units of quantity do not exist, the values are divided by indexes of prices of labour and materials. This latter method of revaluation is also applied to current expenditure by financial enterprises and public authorities. The resulting estimates have considerable limitations for many uses, for example in studies of productivity.

The information available on which to base an estimate of changes in stocks at constant prices is very limited, and hence any estimate made is subject to an appreciable margin of error. The method used involves an adjustment for stock revaluation, arising out of the replacement during the year of opening stocks with equivalent new stocks at different prices, or because of the practice of revaluing stocks at the end of the period.

Part I of *Australian National Accounts, National Income and Expenditure, 1967-68* contains a fuller discussion of the conceptual problems involved in making these estimates, and Appendix B of that publication contains a brief account of the sources and methods used in preparing the estimates.

### Reliability and future revisions

Estimates of national income and expenditure are necessarily prepared from a very wide range of statistical information, some of which is available quickly, some of it only with a delay of several years after the period to which it relates. Some of it is closely related to the desired national income concepts, but some of it is not completely satisfactory in various respects, including coverage, concepts and timing. Estimates, in particular for the most recent years, are therefore subject to revision.

This applies particularly to estimates based on income tax statistics—income of companies, non-farm unincorporated enterprises, depreciation, and part of gross private fixed investment—which are subject to substantial revisions for the last two years, as tabulations of income tax statistics do not become available until about twenty-two months after the end of each financial year.

It is not possible to put precise limits on the degree of revision likely in any particular series, nor to state degrees of reliability in a statistical sense. These depend in large part on the range and quality of the basic statistical data. For illustrations of common causes of revisions reference should be made to *Australian National Accounts, National Income and Expenditure, 1967-68*.

## National accounts and tables

Items in tables 1 to 7 are consecutively numbered from 1 to 28, with or without the addition of a letter, and this system is used to identify the corresponding credit and debit entries in the accounts and as a key to the notes on pages 607-10. In some cases the items correspond exactly, while in other cases an entry in one table is the sum of two or more entries in other tables; here the total is given a number, and the components have a number and a letter. In the remaining type of case all entries are given the same number and a distinguishing letter, because in this group one item is not the sum of one or more entries. The relationship between these items can still be traced through because the sum of all credit entries must equal the sum of all debit entries.

## Description of items in the National Accounts

### Tables 1 to 7

*Item 1. Wages, salaries and supplements.* Payments in the nature of wages and salaries as defined for pay-roll tax, including allowances for income in kind (board and quarters, etc.), together with supplements to wages, and pay and allowances of members of the forces. In addition to wages and salaries paid by employers subject to pay-roll tax, this item includes wages and salaries paid by employers not subject to pay-roll tax, based on estimates of employment and average earnings. Supplements consist of employers' contributions to pension and superannuation funds, direct payments of pensions and retiring allowances, and amounts paid as workers' compensation for injuries. Pay and allowances of members of the forces consist of active pay, field, subsistence and dependants' allowances, and the value to the members of the forces of food, clothing, normal medical attention, etc. supplied in kind. They include deferred pay, but exclude war gratuities which are included in item 25.

*Item 2. Gross operating surplus of trading enterprises.* The operating surplus, before deduction of depreciation provisions, dividends, interest, rent and royalties, and direct taxes payable, of all trading enterprises operating in Australia. Trading enterprises include all companies, public enterprises, partnerships and self-employed persons engaged in the production of goods and services for sale, but exclude financial enterprises. Public trading enterprises are government undertakings which attempt to recover all, or a substantial part, of their costs through charges made to the public for the sale of goods and services. All owners of dwellings are included whether they let the dwellings or occupy them themselves. Trading enterprises' gross operating surplus is shown separately for companies (item 2a), unincorporated enterprises (item 2b), dwellings owned by persons (item 2c), and public enterprises (item 2d).

*Item 3. Indirect taxes less subsidies.* Indirect taxes comprise taxes on purchases, sales or other transactions, or on the ownership of property, etc. paid by enterprises, public authorities and persons. They include licence fees in respect of rights conferred, such as liquor licences, etc. Subsidies are transfer payments made by public authorities, credited to the production accounts of enterprises, with the object of providing incentives to, or of assisting, certain industries or activities. Such payments may take the form of bounties on goods produced, subsidies to producers to ensure a guaranteed price, payments to transport undertakings to permit a reduction of freights on certain classes of goods, assistance to producers, etc.

*Item 4. Imports of goods and services.* The value of goods imported from overseas and amounts payable overseas for services. In Table 6 this item is sub-divided into the following components.

*Item 4a Imports f.o.b.* Recorded trade figures adjusted for the purpose of balance of payments estimates. The principal adjustments are the addition of unrecorded imports, including ships and aircraft for use on overseas routes, the subtraction of films imported on a rental basis, imports of gold, passengers' personal effects, goods for repair and goods intended for re-export, and the deduction of a 'valuation adjustment' representing the excess of the recorded value of imports (based on value for duty) over the estimated selling price to the importer as shown on invoices accompanying customs entries.

*Item 4b. Transportation.* Freight payable to foreign carriers on goods imported into Australia and transported between Australian ports, fares payable in Australia including fares paid by the Commonwealth government for the carriage of migrants under various assisted passage schemes. It also includes the overseas expenditure of Australian ships and aircraft, and premiums (less claims) on marine insurance payable overseas on imports into Australia, less the net earnings on marine insurance business undertaken by Australian firms in respect of both exports and imports.

*Item 4c. Travel.* Expenditure less refunds, by Australians visiting overseas for pleasure and for business, which may take the form of travellers' cheques, letters of credit, etc.

*Item 4d. Government transactions.* Expenditure overseas for defence, including the pay and allowances of personnel serving overseas, expenditure overseas on diplomatic, consular and trade representation, grants, contributions to international organisations, government pensions paid abroad, administrative expenditure overseas on immigration, and other miscellaneous payments for services.

*Item 4e. Other goods and services.* Cinema and television film rentals payable overseas, expenses of Australian firms transacting business overseas, commissions, brokerage, etc., and the value of repairs on goods previously exported for repair and return, etc.

*Item 5. Net current expenditure on goods and services—personal consumption.* Net expenditure on goods and services for purposes of consumption by persons and private non-profit making bodies serving persons. This item excludes the purchase of dwellings and capital expenditure by non-profit making bodies (included in item 8), and maintenance of dwellings (treated as expenses of private enterprises), but includes personal expenditure on motor vehicles and other durable goods and the imputed rent of owner-occupied dwellings. Purchase of motor vehicles is the estimated expenditure by persons on new motor vehicles, second-hand motor vehicles purchased from business enterprises and public authorities, and net dealers' margins on purchases and sales of motor vehicles within the personal sector. Motor vehicles include cars, station wagons, motor cycles, and motor scooters bought on personal account. The value of income in kind (e.g. food produced and consumed on farms, board and lodging provided free to employees) is included in both personal income and personal consumption expenditure, but goods chargeable to business (expense) accounts are excluded.

*Item 6. Net current expenditure on goods and services—financial enterprises.* The current expenditure of banks, instalment credit companies, short-term money market companies, and building societies after deduction of bank charges to customers. Charges by instalment credit companies are treated as interest receipts and therefore are not offset against expenditure. This item includes wages, salaries and supplements, indirect taxes, and other payments for goods and services. Public financial enterprises are government businesses (mainly banks, including the Reserve Bank) which operate in a manner analogous to other financial enterprises, in that their current expenditure is largely financed by the net receipt of interest. The interest received by government housing authorities is treated as a receipt by public financial enterprises, but their other receipts, including net profit on sale of houses, and all their expenditure, are included in those of public trading enterprises.

*Item 7. Net current expenditure on goods and services—public authorities.* Expenditure by public authorities (not public enterprises) which does not result in the creation of fixed tangible assets or in the acquisition of land, buildings or second-hand goods (other than imported). It comprises expenditure on wages, salaries, and supplements, and on goods and services other than fixed assets and stocks. Fees, etc. charged by public authorities for goods sold and services rendered are offset against purchases. Net expenditure overseas by public authorities and purchases from public enterprises are included. All expenditure on defence is classified as current.

*Item 8. Gross fixed capital expenditure—private.* Expenditure on fixed assets whether for additions or replacements. This item includes expenditure on dwellings (item 8a), other building and construction (item 8b), and vehicles, plant, machinery, etc. (item 8c). It includes also expenditure on second-hand assets (other than houses purchased from public authorities) as well as new assets, less sales of existing assets. Expenditure on ordinary repair and maintenance of fixed assets is excluded as being chargeable to current account. Major additions are, however, regarded as capital expenditure. New dwellings purchased by persons from public housing authorities are included in private capital expenditure.

*Item 9. Gross fixed capital expenditure—public enterprises.* Expenditure on fixed assets whether for additions or replacements, including wages and salaries paid by public enterprises in connection with capital works.

*Item 10. Gross fixed capital expenditure—public authorities.* Expenditure on fixed assets whether for additions or replacements other than for defence purposes. Because it has not been possible to make a satisfactory dissection, all expenditure on roads, including maintenance, is classified as fixed capital expenditure. Expenditure on housing, included in this item, includes the estimated expenditure on construction of dwellings for rental purposes and hostels for migrants and others, but excludes houses built for sale, which are included in private capital expenditure. Also excluded are advances under the *War Service Homes Act* and other advances for financing home purchase schemes, and expenditure on development and sub-division of land for residential purposes.

*Item 11. Increase in value of stocks.* The change in book value of non-farm stocks held by trading enterprises and public authorities (item 11b) and the change in the value of farm stocks (item 11a).

*Item 12. Statistical discrepancy.* The difference between the sum of the direct estimates of gross national product and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. Inclusion of the discrepancy on the expenditure side of the national production account implies nothing as to the relative accuracy of the estimates of gross national product and expenditure. Similarly its inclusion in the capital account does not imply that estimates in this table are less accurate than those in other tables, or that capital expenditure estimates are less accurate than estimates on the receipts side of this account.

*Item 13. Exports of goods and services.* The value of goods exported overseas and receipts from overseas for other goods and services. In Table 6 this item is sub-divided into the following components,

*Item 13a. Exports f.o.b.* The recorded trade figures adjusted for balance of payments purposes. The adjustments are similar to those made to the recorded import figures except that no change is made to the basis of valuation. The adjustment for unrecorded exports includes exports of uranium ores.

*Item 13b. Transportation.* The expenditure of overseas carriers in Australian ports, the overseas earnings of ships owned or chartered by Australian operators, and earnings by Australian airlines overseas.

*Item 13c Travel.* Expenditure less refunds by persons visiting Australia for pleasure or business, which may take the form of travellers' cheques, letters of credit, etc. including expenditure in Australia of foreign students studying under the Colombo Plan; and earnings of Australian domestic airlines for the carriage of overseas visitors over Australian domestic air routes.

*Item 13d. Government transactions.* Receipts for services rendered by the Australian Government to other governments and international organisations, and other payments in Australia by foreign governments on defence and other projects, on diplomatic, consular and trade representation, and for pensions paid in Australia.

*Item 13e. Other goods and services.* The value of Australian production of gold less net industrial usage, business expenses of overseas firms in Australia, and commissions, brokerage, etc.

*Item 14. Depreciation allowances.* The financial provisions made for depreciation which are deducted to obtain net income. The estimates represent, in the main, amounts allowed under income tax legislation, but include also the estimated depreciation on tenanted and owner-occupied dwellings and provisions made by public enterprises. This item is divided into depreciation allowances of trading enterprises (item 14a) and of financial enterprises (item 14b).

*Item 15. Interest, etc.* Comprises interest, non-dwelling rent and royalties. This item appears in most accounts as receipts and payments of interest, etc., but in the case of some entries the amounts are combined with dividends and overseas profits. The item is shown net of intra-sector receipts and payments. Payment of interest, etc. by public enterprises is included in item 15g. Payment of interest, etc. by trading enterprises (item 15a) includes interest charged on borrowings for the purchase of houses by persons, which is treated as an appropriation from the gross operating surplus of dwellings owned by persons. Non-dwelling rent includes only actual payments and is estimated net of the expenses of the owner of the premises on rates, maintenance, etc., which are treated as working expenses of the enterprises renting the building. Royalties include mining and forestry royalties paid to public authorities, and royalties and fees for use of trade marks, patents, etc. paid overseas.

*Item 16. Income tax, estate and gift duties.* Income tax payable by trading and financial companies (items 16a and 16b) and persons (item 16c) are amounts payable at rates of taxation applicable in each year. Income tax payable by companies in respect of the most recent year's income is estimated on the basis of rates of tax applicable in respect of the preceding year's income. The difference between the amounts of income tax payable and the cash receipts by public authorities (part of item 16e) is included in item 16f. Income tax payable by persons (item 16c) includes the total income tax payable by individuals on all forms of income whether wages, business income or property income. Estate and gift duties (item 16d) are the amounts actually paid by persons in that year.

*Item 17. Dividends.* All receipts and payments of dividends, including dividends payable overseas and the remitted profits of Australian branches of overseas enterprises. Dividends payable (items 17a and 17c) are the dividends declared by trading and financial companies in respect of the year (including an estimate of dividends to be declared in respect of the most recent year). Receipts of dividends (other than dividends receivable from overseas subsidiaries) are cash receipts, and the difference between the amounts payable and received is included in item 17h. The items are shown net of intra-sector receipts and payments.

*Item 18. Undistributed income.* The undistributed income of companies comprising trading enterprises (item 18a) and financial enterprises (item 18c) is the balance of total company income, including profits receivable from overseas (items 18b and 18d) after deduction of income tax and dividends payable, and is equal to the sum of undistributed income accruing to overseas residents (item 18f) and undistributed company income accruing to residents (item 18g). Profits receivable from overseas is the unremitted part of profits earned by overseas branches of Australian companies and undistributed profits of overseas subsidiaries of Australian companies.

*Item 19. Unincorporated enterprises income.* The gross operating surplus of unincorporated enterprises less depreciation allowances and interest, etc. paid. It comprises the income of farm unincorporated enterprises (item 19a) and the income of all other unincorporated enterprises (item 19b).

*Item 20. Personal income from dwelling rent.* The gross operating surplus of dwellings owned by persons less depreciation allowances and interest, etc. paid.

*Item 21. Public enterprises income.* Includes income of public trading enterprises (item 21a) and income of public financial enterprises (item 21b). For trading enterprises it is equal to gross operating surplus after the deduction of depreciation allowances; for financial enterprises it is the net income after depreciation allowances, interest paid, and net current expenditure on goods and services by government banks are deducted from total receipts of interest and non-dwelling rent. Depreciation allowances deducted in arriving at the income of public trading enterprises are those shown in their published accounts, except in the case of enterprises whose accounts are included in the Commonwealth or State budgets and are analysed on the basis of their cash accounts (in which depreciation is not charged).

*Item 22. Retained investment income of life insurance funds, etc.* Total dividends, interest, etc. received by life insurance and superannuation funds, less rent and interest paid, depreciation allowances, income tax and dividends payable.

*Item 23. Overseas grants, contributions and remittances.* All transfers to or from overseas on public authority or private account which are not payments for goods and services or payments of dividends, interest, etc.

*Item 23a. Personal remittances overseas.* Gifts of money by resident persons and private institutions, payments for sustenance, and transfers of emigrants' funds and legacies from Australia to overseas, together with the value of goods exported as gifts.

*Item 23b. Personal remittances from overseas.* Gifts of money received from non-resident persons and private institutions, receipts for sustenance, and transfers of immigrants' funds and legacies from overseas to Australia.

*Item 23c. Public authority overseas grants and contributions.* Grants to, and payments made on behalf of the Territories of Papua and New Guinea, and expenditure overseas in respect of technical assistance and relief under the Colombo Plan and United Nations projects. Includes contributions to United Nations and other organisations due by virtue of membership of these organisations.

*Item 24. Personal saving.* The excess of personal income over the sum of personal consumption expenditure, interest paid, income tax payable, estate and gift duties paid, and remittances overseas. Personal saving is estimated as the balancing item in the personal current account. It includes saving through life insurance and superannuation funds (defined as premiums, etc. paid less claims, etc. received and administrative expenses of life insurance offices) and the increase in assets of marketing authorities. Personal saving may also take the form of increases in holdings of cash and net purchases of securities, the net increase in bank deposits less advances, the reduction in the outstanding advances of instalment credit companies to persons and unincorporated enterprises, and the increase in the equity of persons in dwellings and in capital equipment, buildings and stocks of unincorporated enterprises.

*Item 25. Cash benefits.* Current transfers to persons from public authorities in return for which no services are rendered or goods supplied. Principal components are scholarships; hospital, medical, pharmaceutical, maternity, sickness, and unemployment benefits; child endowment; widows', age, invalid, and repatriation pensions; and attendance money for waterside workers.

*Item 26a. Grants towards private capital expenditure.* Grants to meet part of the costs of private capital expenditure, e.g. Commonwealth Home Savings grants, grants towards construction of science laboratories in private schools and houses for aged persons, payments under the *Currency Act* in relation to the conversion of accounting and other machines following introduction of decimal currency, etc.

*Item 26b. Devaluation compensation.* Compensation to primary industry marketing authorities for losses on overseas debts outstanding at the time of sterling devaluation.

*Item 27. Public authorities surplus on current account.* The excess of current revenue, including income of public enterprises, over current outlay. Current outlay includes current expenditure on goods and services, as defined in item 7, and transfer payments (interest, cash benefits, subsidies, grants towards private capital expenditure, and overseas grants). The surplus is transferred to the capital account where it is shown as part of total funds available for financing capital outlay.

*Item 28. Overseas balance on current account.* The excess of payments to the rest of the world on current account over receipts from the rest of the world on current account. In the national capital account it is shown divided into drawings on Australia's overseas monetary reserves (item 28a) and net apparent capital inflow (item 28b).

## CHAPTER 18

### PRIVATE FINANCE

Further information on the subjects dealt with in this chapter is contained in the annual bulletins *Banking and Currency* and *Insurance and Other Private Finance*. Current information is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics* (monthly), and the monthly mimeographed statements *Banking Statistics* (bulletin and preliminary statement), *Savings Bank Statistics* (bulletin and preliminary statement), *Monthly Bulletin of Life Insurance Statistics*, and *Finance Companies: Australia*. The annual mimeographed bulletins *Australian Fire, Marine and General Insurance Statistics* and *Life Insurance* contain the latest information on these subjects. Other relevant mimeographed statements are: *Finance Companies*, 1968; *Instalment Credit for Retail Sales*; *Unit Trusts, Land Trusts and Mutual Funds*; *New Capital Raisings by Companies in Australia*; and *Capital and Maintenance Expenditure by Private Business in Australia*—quarterly; *Government Pension and Superannuation Schemes*, 1966–67; *Survey of Private Pension and Retiring Allowance Schemes*, 1962–63; *Survey of Selected Private Pension Funds*, 1967–68; and *Registered Building Societies*, 1966–67. Preliminary monthly statements *Instalment Credit for Retail Sales* and preliminary quarterly estimates of *New Capital Raisings by Companies in Australia* are also issued.

### CURRENCY

Until 13 February 1966 Australian currency was based on the British unit, which is the pound (£) divided into 20 shillings (s) each of 12 pence (d). A decimal currency system was introduced in Australia on 14 February 1966 based on a major unit—the dollar—equal to ten shillings in the old currency. The minor unit—the cent—is one-hundredth part of the major unit and is equal to 1.2 pence in the old currency. Decimal notes and coins became legal tender from 14 February 1966. The par value of the Australian dollar, under the terms of the International Monetary Fund, was established at 0.99531 grams of fine gold.

The official changeover arrangements provided for a dual currency and for a transition period of eighteen months to two years following the changeover. From the changeover day all cheques and other bills of exchange and all promissory notes had to be executed in dollars and cents. During the transition period, however, contracts and other monetary transactions were permitted in terms of either £ s. d. or \$ c.

Since the end of the transition period (1 August 1967 fixed by proclamation) contracts and other documents have had to be made out in terms of \$ c. All references to £ s. d. in existing contracts, agreements, etc. with continuing effect are converted automatically into their exact equivalents in decimal currency. Payments of amounts owing in £ s. d. are made in \$ c on a nearest-cent basis according to the conversion table shown in the Currency Act (*see* Year Book No. 52, page xvi). Threepences, pennies and halfpennies are legal tender only in multiples of sixpence. All £ s. d. notes and coins from sixpence upwards continue to be legal tender on the same basis as decimal notes and coins.

Historical notes of the arrangements for the introduction of decimal currency and the relationship between £ s. d. and \$ c are published in Year Book No. 52, pages 671–4.

### Australian coinage

Prior to Federation in 1901 the coins circulating throughout Australia were many and varied. For a full account of the history of pre-Federation coinage *see* Year Book, No. 51, 1965, pages 812–14. After Federation the only coins which were legal tender within Australia until 1909 were English coins.

The Constitution in 1901 gave the Commonwealth Parliament power to make laws with respect to coinage and in 1909 the Coinage Act was passed prescribing the standard weight and fineness of coins. The first coins exclusively for circulation in Australia—silver (925 fine) florins, shillings, sixpences and threepences—were minted in 1910 by the Royal Mint, London, followed by bronze

coins in 1911. The Melbourne Branch of the Royal Mint produced in 1916 the first Commonwealth coins (pence) minted in Australia. The Sydney Branch of the Royal Mint commenced production of halfpennies in 1919 and in 1922 the Perth Branch minted its first pennies.

The Commonwealth Treasury administered the Coinage Act which was repealed and replaced by the *Currency Act* 1965. All coins produced under authority of these two Acts have been ordered by the Treasury.

#### Australian mints

Brief historical notes relating to Australian mints and details of pre-decimal Australian coins obtained from each mint to 30 June 1965 are given in Year Book No. 52, page 675.

The construction of the Royal Australian Mint in Canberra provided the Commonwealth Government for the first time with facilities for minting its own coinage. All Australia's coin requirements are now met by the Royal Australian Mint, with the Melbourne and Perth branches of the Royal Mint providing some bronze coins on contract to the Commonwealth Treasury.

#### Coins in circulation

Brief historical notes relating to the Australian pre-decimal coinage are given in Year Book No. 37, pages 557 and 558. For weight, metal composition, etc. of Australian pre-decimal coins in circulation see Year Book No. 39, page 697.

The net issues of Australian pre-decimal silver and bronze coins from 1910 to 30 June 1968 were: crown (5s.), \$551,000; florin (2s.), \$21,109,000; shilling (1s.), \$15,298,000; sixpence (6d.), \$11,492,000; threepence (3d.), \$8,555,000; total silver coin, \$56,874,000; penny (1d.), \$4,076,000; half-penny (½d.), \$1,081,000; total bronze coin, \$5,157,000. Except in the total, no allowance has been made for \$131,000 worth of damaged silver coin, for which denominations are not available, withdrawn since 1910. Australian decimal coins issued from 14 February 1966 to 30 June 1968 were: 50 cents, \$18,147,000; 20 cents, \$27,586,000; 10 cents, \$10,151,000; 5 cents, \$7,341,000; 2 cents, \$7,395,000; 1 cent, \$4,510,000; total \$75,130,000.

In the following table details are given of the value of decimal coins issued, the cost of bullion, the cost of minting, and sundry expenses connected with the issue, and the surplus during the years 1965-66 to 1967-68. A similar table on pre-decimal coinage was shown on page 676 of Year Book No. 53 and in earlier issues.

**AUSTRALIAN DECIMAL COIN: COSTS OF COIN ISSUED**  
(\$'000)

Year	Cost of bullion	Cost of minting	Freight and sundry charges	Total cost	Face value of coin issued (a)	Surplus (b)
<b>Silver—</b>						
1965-66 . . . .	9,077	406	106	9,589	11,607	2,018
1966-67 . . . .	3,808	170	34	4,012	4,869	857

1967-68 . . . .	407	589	36	1,032	1,823	791
<b>Total—</b>						
1965-66 . . . .	11,080	3,723	534	15,337	29,404	14,067
1966-67 . . . .	5,123	1,935	289	7,347	21,989	14,642
1967-68 . . . .	3,098	2,401	81	5,580	23,737	18,157

(a) Includes selected and proof pieces.

(b) Used to assist in purchase of pre-decimal coin withdrawn from circulation.

**Gold receipts and issues**

Since early in the 1939-45 War all gold has been acquired by the Reserve Bank, and the export and use of gold has been subject to regulation by the Commonwealth Government. All trading banks in Australia, the Deputy Master of the branch of the Royal Mint in Perth, and three private refining companies are authorised under the Banking (Gold) Regulations to deal in gold on behalf of the Reserve Bank. The Melbourne Mint ceased to deal in gold in 1964. The Royal Australian Mint at Canberra is not authorised to receive and issue gold.

Details of the production of gold, subsidy payable, etc. are given in the chapter Mineral Industry.

**Price of gold**

The following table shows the average prices of gold, the average values of the sovereign's gold content in London, and the sovereign's Reserve Bank buying price in Australia for the years 1963-64 to 1967-68. The average price of gold in Australia is fixed by the Reserve Bank and at present reflects the parity value of Australian currency established in conformity with the *International Monetary Agreements Act 1947*.

**PRICE OF GOLD: LONDON AND AUSTRALIA, 1963-64 TO 1967-68**

Year	London		Australia		
	Average price per fine oz	Average value of sovereign's gold content	Sovereign		
			Average price per fine oz	Reserve Bank buying price	Equivalent to a premium on mint par value of—
	£stg s d	£stg s d	\$	\$	per cent
1963-64	12 10 9	2 19 1	31.25	7.25	267.8
1964-65	12 11 8	2 19 3	31.25	7.25	267.8
1965-66	12 11 8	2 19 3	31.25	7.25	267.8
1966-67	12 11 11½	2 19 3	31.25	7.25	267.8
1967-68	12 11 11½	2 19 3	31.25	7.25	267.8

In December 1951 arrangements were made whereby producers could sell a proportion of newly-mined gold for industrial purposes on overseas premium markets. Under these arrangements gold is acquired by the Reserve Bank in the usual manner and sold, at the Bank's buying price, to an association representing gold producers participating in the scheme. The association pays the Bank's handling charges and the costs of preparation of the gold and makes arrangements for export and sale. Profits earned by the association after meeting administrative expenses are distributed to members in proportion to the quantity of gold delivered to the Reserve Bank. Until August 1952, when permission was given for the export of fine gold, gold exported under this arrangement was not to exceed a fineness of 22 carats (11/12ths).

The average prices per fine ounce in Australian currency obtained for gold exported under this scheme for each month during 1967-68 were: July \$31.500; August \$31.527; September \$31.577; October \$31.570; November \$31.607; December \$31.669; January \$31.552; February no gold sales reported; March \$31.378; April \$32.838; May \$34.642; and June \$37.034.

**The Australian note issue**

In 1901 notes in circulation in Australia consisted of bank notes payable in gold coin and issued by the trading banks, and Queensland Treasury notes. Bank notes circulated in all States except Queensland, but were not legal tender except for a brief period in 1893 in New South Wales. There were, however, some restrictions on their issue or other provisions for the protection of the public. Queensland Treasury notes were issued by the Queensland Government and were legal tender in that State. Notes of both categories continued in circulation until 1910, when the *Australian Notes Act 1910* and *Bank Notes Tax Act 1910* were passed by the Commonwealth Parliament. The *Australian Notes Act 1910* prohibited the circulation of State notes as money and the *Bank Notes Tax Act 1910* imposed a tax of ten per cent per annum on 'all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act, and not redeemed'. These Acts put an end to the issue of notes by the trading banks and the Queensland Treasury. The *Reserve Bank Act 1959* expressly prohibits persons, including States, from issuing bills or notes payable to bearer on demand and intended for circulation.

The *Reserve Bank Act* 1965 authorised the Bank to issue Australian notes in denominations of \$1, \$2, \$5, \$10, \$20, or \$50, or in any other denomination that the Treasurer, by instrument of writing published in the Gazette, determines. The Act provided that each note of the previous currency should have the value in dollar currency set out in the following table:

10s.	.	.	.	.	\$1
£1	.	.	.	.	\$2
£5	.	.	.	.	\$10
£10	.	.	.	.	\$20
£20	.	.	.	.	\$40
£50	.	.	.	.	\$100
£100	.	.	.	.	\$200
£1,000	.	.	.	.	\$2,000

The Act came into force on 14 February 1966, and notes of \$1, \$2, \$10, and \$20 denominations were issued forthwith as legal tender to any amount throughout Australia. A description of these notes is published in Year Book No. 52, page 678. On 29 May 1967 \$5 notes were issued throughout Australia and the Territory of Papua and New Guinea. A description of the \$5 note is published in Year Book No. 53, page 678.

#### Gold reserves against the note issue

The *Australian Notes Act* 1910 provided that the Treasurer should hold, in gold coin, a reserve of an amount not less than one-fourth of the notes issued up to \$14,000,000 and an amount equal to the excess over \$14,000,000. In 1911 this provision was amended and the Treasurer was required only to hold, in gold coin, an amount not less than one-fourth of the total amount of Australian notes issued. In June 1931, to permit further shipments of gold to meet short-term obligations in London, an amendment to the Commonwealth Bank Act provided for the reduction of the gold reserve for the two years ended 30 June 1933 to not less than 15 per cent. The reserve was to be increased, by graduated steps, to 25 per cent by 30 June 1935. In May 1932 a further amendment to the Commonwealth Bank Act provided that the reserve might be held 'in gold or in English sterling or partly in gold and partly in English sterling'. English sterling was defined as 'currency which is legal tender in the United Kingdom, and included (a) balances standing to the credit of the Bank at the Bank of England or at any other of its bankers in London; (b) Bills of Exchange or advances secured by Bills of Exchange which (i) are payable in the United Kingdom in currency which is legal tender in the United Kingdom; (ii) will mature in not more than three months, and the security for the payment of which bills is, in the opinion of the Bank, satisfactory; and (c) Treasury Bills or other securities of the United Kingdom which will mature in not more than three months'.

The statutory reserve against the note issue was abolished by the *Commonwealth Bank Act* 1945 which provided that the assets of the Note Issue Department should be held in gold, on deposit with any bank, or in securities of the Government of the United Kingdom or of the Commonwealth or a State. This provision was continued in the *Reserve Bank Act* 1959.

## Reserve Bank—Note Issue Department

**RESERVE BANK OF AUSTRALIA: NOTE ISSUE DEPARTMENT**  
**LIABILITIES AND ASSETS, 30 JUNE 1967 AND 1968**  
 (\$ million)

<i>Liabilities</i>	1967	1968	<i>Assets</i>	1967	1968
Notes on issue(a)	930.1	998.5	Gold and balances held abroad (including money at short call)	394.5	315.5
Special reserve—			Other overseas securities	174.8	151.4
Premium on gold sold	9.5	..	Government securities (including Commonwealth Treasury bills)	391.7	501.0
Other liabilities(a)	22.1	20.3	Other assets	0.7	(b)50.9
<b>Total</b>	<b>961.7</b>	<b>1,018.8</b>	<b>Total</b>	<b>961.7</b>	<b>1,018.8</b>

(a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years and notes of a denomination exceeding one pound which have been on issue for more than forty years are not included in the item 'Notes on issue' but are included in the item 'Other liabilities.' (b) Increase is due mainly to changes in the form of investments following devaluation of sterling.

Until June 1951 all profits of the Note Issue Department, with the exception of \$4,000,000 and \$2,400,000 paid to the capital accounts of the Rural Credits Department and Mortgage Bank Department respectively, were paid to the Commonwealth Consolidated Revenue Fund. For the years 1951-52 to 1955-56 the profits were distributed as follows: (a) \$1,000,000 per annum to the capital accounts of the Commonwealth Trading Bank (prior to 3 December 1953 the General Banking Division of the Commonwealth Bank) and the several departments of the Commonwealth Bank, distributed two-sevenths each to the Commonwealth Trading Bank, Mortgage Bank Department and Industrial Finance Department and one-seventh to the Rural Credits Department, and (b) the balance to the Commonwealth Consolidated Revenue Fund. Since 1955-56 the profits have been paid to the Commonwealth Consolidated Revenue Fund. Profits of the Note Issue Department in 1967-68 amounted to \$23,041,935.

### Rates of exchange

In the following table the par of exchange (based on par values agreed with the International Monetary Fund) and average telegraphic transfer selling rates of exchange for Sydney on a number of overseas countries are shown. Generally, the averages, which are averages of daily quotations, are based on rates quoted by the Commonwealth Trading Bank. Where these were not available, rates used by the Department of Customs and Excise in converting import values to \$A for purposes of calculating customs duty are shown.

**OVERSEAS EXCHANGE RATES: PAR OF EXCHANGE AND AVERAGE TELEGRAPHIC TRANSFER SELLING RATES FOR SYDNEY ON OVERSEAS COUNTRIES, 1967-68**

Country	Basis of quotation	Australian decimal currency equivalents		Country	Basis of quotation	Australian decimal currency equivalents	
		Par of exchange (a)	Selling rate 1967-68			Par of exchange (a)	Selling rate 1967-68
Belgium	Francs to \$A1	56.00	54.99	Netherlands	Guilders to \$A1	4.054	3.993
Canada	Dollars to \$A1	1.211	1.266	New Zealand	\$A to \$NZ1	1.00	1.0986
Ceylon	Rupees to \$A1	6.667	5.990	Norway	Kroner to \$A1	8.000	7.91

France	Francs to \$A1	5.530	5.448	Switzerland	Francs to \$A1	(b)	4.805
Germany, Fed. Rep. of	Deutsche Marks to \$A1	4.480	4.425	United Arab Republic	£E to \$A1	0.390	0.475
Hong Kong	Dollars to \$A1	(b)	6.611	United Kingdom	\$A to £stg1	2.143	2.2948
India	Rupees to \$A1	8.400	8.330	United States of America	Dollars to \$A1	1.120	1.1122
Italy	Lire to \$A1	700.00	690.00	U.S.S.R.	Roubles to \$A1	(b)	1.004
Japan	Yen to \$A1	403.20	400.95				

(a) As at 30 June 1968, established under International Monetary Fund Agreement. (b) Not a member of the International Monetary Fund. (c) No par value established.

## VOLUME OF MONEY

## VOLUME OF MONEY: AUSTRALIA, JUNE 1964 TO 1968

(Source: Reserve Bank of Australia)

(\$ million)

June—	Notes and coin in hands of public	Deposits of public with all cheque-paying banks(a)		Deposits with all savings banks(b)	Total volume of money
		Current	Fixed		
1964 . . . . .	815	2,917	1,380	4,444	9,556
1965 . . . . .	814	2,977	1,688	4,858	10,337
1966 . . . . .	783	3,033	1,898	5,223	10,938
1967 . . . . .	882	3,192	2,026	5,724	11,824
1968 . . . . .	964	3,450	2,191	6,200	12,805
December(c) 1968 . . . . .	1,069	3,683	2,376	6,507	13,635

(a) Excludes Government and inter-bank deposits, but includes deposits of the public with the Reserve Bank.  
 (b) Interpolated 'weekly average' based on end of month figures. (c) Excludes one Wednesday.

## BANKING

The Australian banking system has developed along the lines of the British system with widespread branch banking conducted by relatively few banks.

## Development since federation

With federation in 1901 the new Commonwealth Parliament was given power, under section 51 of the Commonwealth Constitution, to legislate with respect to 'Banking, other than State Banking, also State Banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money'. In 1911 the Commonwealth entered the field of banking, with the establishment of the Commonwealth Bank of Australia, which conducted both trading bank and savings bank operations. A separate Commonwealth Savings Bank was established in 1928.

## Central bank

Central banking functions of the Commonwealth Bank developed gradually over the years prior to and during the second world war. In November 1935 a Royal Commission was appointed by the Commonwealth Government to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report in July 1937, and a summary of the recommendations appears in Year Book No. 31, page 1010.

In 1945 the Commonwealth Government legislated to give full legal effect to the central banking functions already being exercised by the Commonwealth Bank of Australia and to regulate the banking system as a whole. The Commonwealth Bank of Australia further developed mainly as a central bank when from 3 December 1953 the Commonwealth Trading Bank of Australia was established to take over most of the general trading bank functions of the Commonwealth Bank of Australia.

Legislation in 1959 completed the separation of the trading and central banking functions of the Commonwealth Bank of Australia with the establishment of the Commonwealth Development Bank of Australia under the *Commonwealth Banks Act 1959* to take over the Industrial Finance Department and Mortgage Bank Department of the Commonwealth Bank of Australia.

A new bank, the Reserve Bank of Australia, was established under the *Reserve Bank Act 1959* as the nation's central bank to administer the provisions of a new banking Act (*Banking Act 1959*). A statutory corporation, The Commonwealth Banking Corporation, was set up under the *Commonwealth Banks Act 1959* to control the Commonwealth Trading Bank of Australia, the Commonwealth Development Bank of Australia, and the Commonwealth Savings Bank of Australia.

### Trading banks

Commercial banking in Australia is predominantly carried on by eight major trading banks. One of these banks is owned by the Commonwealth Government and seven are privately owned companies established by Act or Charter or incorporated under State or British law. Two of these private banks are owned by British interests. Since 1945 no new private trading banks may be established without the approval of the Commonwealth. State-owned trading banks operate in three States under State law and confine their activities to their own States. One small trading bank confines its operations to one city and three foreign banks operate on a restricted basis.

A new bank, The Australian Resources Development Bank Limited, owned by the trading banks of Australia, was established in 1967. The bank uses funds raised from banks, the public and overseas lenders in the financing of large-scale projects whose principal activity is the development of Australia's natural resources. Finance is made available either by direct lending or by the refinancing of loans by the trading banks. The Bank commenced operations in February 1968.

### Term Loan Fund

Lending by trading banks is generally conducted on an overdraft basis. A departure from this practice followed discussions during 1961-62 involving the Commonwealth Government, the Reserve Bank and the major trading banks, which resulted in arrangements whereby the banks agreed to create a fund known as the Term Loan Fund, the resources of which would be employed to make loans for capital expenditure on production in the rural, industrial and (to a lesser extent) commercial fields and to finance exports. The loans would be made for fixed terms, varying usually between three and eight years. The term lending arrangements operated from April 1962.

### Farm Development Loan Fund

Discussions in March 1966 between the Commonwealth Government, the Reserve Bank and the major trading banks resulted in the establishment of a fund known as the Farm Development Loan Fund, from which resources would be available to provide rural producers, particularly smaller producers, with greater access to medium and long-term finance. The Fund was established in April 1966.

### Savings banks

Until 1956 savings bank operations were, apart from two small trustee banks in Tasmania, conducted by the Commonwealth Government and some State Governments. In January 1956 private savings banks were established as subsidiary companies by two of the private trading banks. By mid-1962 all the major private trading banks had established savings bank subsidiary companies.

### Current legislation

Operations of banks and banking in Australia are currently governed by (i) Commonwealth legislation enacted in 1959 in respect of banking other than State banking, and (ii) State legislation relating to the incorporation of banks and management of State banks.

### Commonwealth banking legislation

(a) The *Banking Act 1959-1967* provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth. This Act, which replaced the *Banking Act 1945-1953*, was assented to on 23 April 1959 and came into operation on 14 January 1960 as the *Banking Act 1959*. It was amended by the *Banking Act 1965* and the *Statute Law Revision (Decimal Currency) Act 1966* in order to make certain changes required by the change to decimal currency and by the *Banking Act 1967* relating to the Papua and New Guinea Development Bank and the Australian Resources Development Bank Limited. It applies to all banks, including savings banks, operating in Australia or the Territories of the Commonwealth except State banks trading in their own State. The objects of the Act are: (i) to provide a legal framework uniform throughout Australia for regulating the banking system; (ii) to safeguard depositors of the banks from loss; (iii) to provide for the co-ordination of banking policy under the direction of the Reserve Bank; (iv) to control the volume of credit in circulation and bank interest rates; (v) to mobilise and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the *Banking Act 1959* is given in Year Book No. 46, pages 759-60.

(b) The *Reserve Bank Act 1959-1966* provides for the constitution and management of the Reserve Bank of Australia and the management of the Australian note issue.

(c) The *Commonwealth Banks Act 1959-1968* provides for the constitution and management of the Commonwealth Banking Corporation, Commonwealth Trading Bank of Australia, Commonwealth Savings Bank of Australia, and Commonwealth Development Bank of Australia.

The Commonwealth Banking Corporation came into being on 14 January 1960. It is the controlling body for the Commonwealth Trading Bank, Commonwealth Savings Bank and Commonwealth Development Bank. Under the *Banking Act 1959-1967* the Corporation and its constituent banks are subject to the same central banking controls as are the private trading banks.

The Board of the Corporation consists of the Managing Director of the Corporation, the Deputy Managing Director, the Secretary to the Treasury, and eight other members appointed by the Governor-General of whom one is Chairman and another Deputy Chairman. In addition, there is an Executive Committee of the Board for each of the three separate banks. These Executive Committees are appointed by the Treasurer, after consultation with the Board, and are charged with taking such action as is necessary to ensure that effect is given by the respective banks to the policies laid down for them and to any directions given by the Board in relation to their affairs. Under the Board the Corporation is managed by the Managing Director and the Deputy Managing Director. Each of the three constituent banks of the Corporation has its own statutory functions and responsibilities and its separate identity within the framework of the Corporation. Each bank is managed by a General Manager under the Managing Director of the Corporation.

On page 622 details are given of the assets and liabilities of the Commonwealth Development Bank. Details for the Commonwealth Savings Bank are shown on pages 644-6. Details for the Commonwealth Trading Bank are included in statistics of cheque-paying banks—Major Trading Banks, on pages 624-30.

#### *State banking legislation*

The State Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g. the Bank of New South Wales by Act of Council 1817, the Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the financial crisis of 1893. State banks, constituted under State Acts, transacting general banking business are The Rural Bank of New South Wales, the State Bank of South Australia, and the Rural and Industries Bank of Western Australia. State savings banks, constituted under State Acts, transacting savings bank business are The State Savings Bank of Victoria, The Savings Bank of South Australia and the Savings Bank Division of the Rural and Industries Bank of Western Australia (see pages 643-8).

#### **Presentation of banking statistics**

Because of the different purposes they serve in the Australian financial system, Australian banks have been divided for statistical purposes into the following four groups and a separate series is presented for each.

- (i) *The Reserve Bank of Australia.* Statistics of the Central Banking Business, the Note Issue Department, and the Rural Credits Department are shown separately. (See pages 619-21.)
- (ii) *The Commonwealth Development Bank of Australia.* The prime purpose of this Bank is to assist in the development of worthwhile enterprises in the field of both primary and secondary industries which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. (See pages 622-3.)
- (iii) *Cheque-paying banks—Major Trading Banks.* These comprise the Commonwealth Trading Bank of Australia, Australia and New Zealand Bank Ltd, The Bank of Adelaide, Bank of New South Wales, The Commercial Bank of Australia Ltd, The Commercial Banking Company of Sydney Ltd, The English, Scottish and Australian Bank Ltd, The National Bank of Australasia Ltd. (See pages 623-41.)

*All cheque-paying banks.* These comprise the major trading banks and the following banks—the Bank of China, Bank of New Zealand, The Brisbane Permanent Building and Banking Co. Ltd, Banque Nationale de Paris, the General Bank Department of the Rural Bank of New South Wales, the State Bank of South Australia, and the Rural Department of the Rural and Industries Bank of Western Australia. (See pages 623 and 629-34.)

*Australian cheque-paying banks* (see pages 624-28). These comprise all cheque-paying banks except the Bank of China, Bank of New Zealand and Banque Nationale de Paris.

- (iv) *Savings Banks.* Savings banks operating at 30 June 1968 were—the Commonwealth Savings Bank of Australia, the Australia and New Zealand Savings Bank Ltd, the Bank of New South Wales Savings Bank Ltd, and the National Bank Savings Bank Ltd (in all States and Territories within and without Australia); The Bank of Adelaide Savings Bank Ltd (all States except Tasmania); The Commercial Savings Bank of Australia Ltd and the E.S. & A.

Savings Bank Ltd (in all States and Territories within Australia), the C.B.C. Savings Bank Ltd (in all States and in the Australian Capital Territory); the State Savings Bank of Victoria, The Savings Bank of South Australia, the Savings Bank Division of The Rural and Industries Bank of Western Australia, and the two trustee banks, The Hobart Savings Bank and Launceston Bank for Savings. (See pages 643-52.)

### Reserve Bank of Australia

The Reserve Bank of Australia, established under the *Reserve Bank Act 1959*, which came into operation on 14 January 1960, continued in existence the body corporate known as the Commonwealth Bank of Australia. An account of the progress and development of that bank is given in earlier issues of the Year Book (see No. 37, pages 570-2, and No. 43, pages 735-7).

The general functions of the Reserve Bank are set out in Section 10 of the *Reserve Bank Act 1959-1966*, which states:

'It is the duty of the Board, within the limits of its powers, to ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank under this Act, the *Banking Act 1959*, and regulations under that Act are exercised in such a manner as, in the opinion of the Board, will best contribute to,

- (a) the stability of the currency of Australia;
- (b) the maintenance of full employment in Australia; and
- (c) the economic prosperity and welfare of the people of Australia.'

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department, provides special banking facilities through the Rural Credits Department, and acts as banker to the Commonwealth and some of the States.

#### Management

Under the provisions of the *Reserve Bank Act 1959-1966* the policy of the Reserve Bank is determined by a Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary to the Treasury, and seven other members appointed by the Governor-General. The Bank is managed by the Governor, who acts in accordance with the policy of the Board and with any directions of the Board. The Bank is required to inform the Government of the monetary and banking policy of the Board. In the event of a disagreement between the Government and the Board as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General, acting with the advice of the Executive Council, may determine the policy to be adopted by the Bank.

#### Central banking business

Under the powers it possessed under the *Commonwealth Bank Act 1911-1943* and under its war-time powers under the National Security Regulations the Commonwealth Bank gradually assumed the functions of a Central Bank. Part III of the *Commonwealth Bank Act 1945* formally constituted the Bank as a Central Bank and granted the necessary powers to carry on the business of a Central Bank, and these powers were carried through into the present Act constituting the Reserve Bank. Under the provisions of the *Reserve Bank Act 1959-1966* the capital for the Central Banking Business is the capital of the Commonwealth Bank for Central Banking purposes immediately prior to 14 January 1960, and such other sums as are transferred from the Reserve Bank Reserve Fund. The profits of the Bank are distributed as follows: (a) such sums as the Treasurer, after consultation with the Bank, determines shall be placed to the credit of the Reserve Bank Reserve Fund and (b) the remainder shall be paid to the Commonwealth.

#### Note Issue Department

The Note Issue Department, established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank, was maintained in the same form under the *Reserve Bank Act 1959*. The Reserve Bank may, through this Department, issue, re-issue and cancel Australian notes. Under the *Reserve Bank Act 1959-1966* the profits of the Note Issue Department are paid to the Commonwealth.

#### Rural Credits Department

The Rural Credits Department, established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce, was continued in the same form under the *Reserve Bank Act 1959*. The Reserve Bank may, through this Department, make advances upon the security of primary produce placed under the legal control of the Bank, or other security associated

with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not exceed one year. Under the provisions of the *Reserve Bank Act* 1959-1966 the capital of the Rural Credits Department is the capital of the Rural Credits Department of the Commonwealth Bank immediately prior to 14 January 1960, and \$4,000,000 provided by the Reserve Bank. The profits of the Rural Credits Department are dealt with as follows: (a) one-half to the credit of the Rural Credits Department Reserve Fund and (b) one-half to the credit of the Rural Credits Development Fund.

### Commonwealth Development Bank of Australia

The Commonwealth Development Bank of Australia was established by the *Commonwealth Banks Act 1959* and commenced operations on 14 January 1960. It was formed basically from an amalgamation of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank. Under the Act the Bank is authorised to provide assistance for the development of worthwhile enterprises in the fields of primary and secondary industries, which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. The Commonwealth Development Bank is managed by a General Manager under the Managing Director of the Commonwealth Banking Corporation, and its policy is determined by the Board of that Corporation. The capital of the Development Bank consists of the capital of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank immediately prior to 14 January 1960, \$10,000,000 provided by the Reserve Bank, \$20,000,000 appropriated from the Consolidated Revenue Fund in 1961-62 by the *Commonwealth Banks Act 1961* and the *Commonwealth Banks Act 1962*, \$10,000,000 appropriated in 1963-64 by the *Commonwealth Banks Act 1963*, and such other sums as are provided from the Commonwealth Development Bank Reserve Fund. The net profits of the Bank are paid to the Commonwealth Development Bank Reserve Fund.

#### Profit and loss

The profit and loss of the Commonwealth Development Bank for the years 1963-64 to 1967-68 is shown in the following table. The net profit was appropriated to the Commonwealth Development Bank Reserve Fund.

**COMMONWEALTH DEVELOPMENT BANK OF AUSTRALIA**  
**PROFIT AND LOSS, 1963-64 TO 1967-68**  
(\$ million)

Year	<i>Discount and interest earned, etc.(a)</i>	<i>Expenses (b)</i>	<i>Taxes and payments in lieu of taxes</i>	<i>Net profit</i>
1963-64 . . .	6.1	4.1	..	1.9
1964-65 . . .	7.2	5.0	0.1	2.1
1965-66 . . .	8.7	6.5	0.1	2.2
1966-67 . . .	10.7	8.7	0.1	2.0
1967-68 . . .	12.2	10.0	0.1	2.1

(a) Discount and interest earned, net exchange commissions and other items (including transfers from contingencies accounts)—after deducting interest paid and accrued on deposits, rebate on bills current at balance date, amounts written off assets, and losses on realisation of assets and transfers to the credit of contingencies accounts (out of which accounts provision for all bad and doubtful debts has been made).  
(b) Includes proportion of expenses of Commonwealth Banking Corporation attributable to the Development Bank.

### Cheque-paying banks

#### Banks transacting business in Australia

At 30 June 1968 the fifteen banks operating in Australia transacted all classes of banking business at 4,670 branches and 1,624 agencies. The major trading banks have branches throughout Australia. The Rural Bank of New South Wales, the State Bank of South Australia, and The Rural and Industries Bank of Western Australia, being State Government banks, have branches only in their respective States. The Brisbane Permanent Building and Banking Co. Ltd transacts business only in Brisbane. The remaining three banks are branches of overseas banks.

#### Australian cheque-paying banks—balance sheets

Liabilities and assets of individual Australian cheque-paying banks at balance dates in 1968 (and corresponding totals for these banks in 1967) are shown in the following tables. The information for the Major Trading Banks and The Brisbane Permanent Building and Banking Co. Ltd has been obtained from the annual returns lodged with the Commonwealth Statistician under Section 52 of the *Banking Act* 1959-1967, whereas that for the other banks has been compiled from information published in their annual reports.

(a) Discount and interest earned, net exchange, commissions and other items (including transfers from contingencies accounts) after deducting interest paid and accrued on deposits, rebate on bills current at balance date, amounts written off assets and losses on realisation of assets, and transfers to the credit of contingencies accounts (out of which accounts provision for all bad and doubtful debts has been made). (b) Includes directors' fees. (c) Excludes accumulated profits and profit and loss accounts. (d) Dividends paid or payable out of profits earned during the year. (e) Commonwealth of Australia. (f) Four per cent on Preference shares, ten per cent on Ordinary shares, and two and a half per cent on New Ordinary Stock Units. (g) Earnings represent gross earnings; expenses include interest paid, management expenses and provisions for contingencies. (h) Includes profit and loss on account of Savings Bank business.

## All cheque-paying banks—average liabilities and assets within Australia

Particulars of the average liabilities and assets *within Australia* for all cheque-paying banks in Australia for the months of June 1968 and earlier years are shown in the following tables. The details in these tables relate only to liabilities and assets within Australia and include the overseas banks, the Bank of China, Bank of New Zealand, and Banque Nationale de Paris. The tables on pages 624-6, Australian cheque-paying banks, relate to liabilities and assets both inside and outside Australia and exclude the overseas banks.

**Major Trading Banks—classification of bank advances within Australia**

Classification of bank advances of the Major Trading Banks outstanding for each State at 8 January 1969 and for Australia at July 1966 to 1968 and January 1969 are shown in the following tables.

Resident borrowers cover institutions (including branches of overseas institutions) engaged in business in Australia and persons permanently residing in Australia. Non-resident borrowers cover all other persons and institutions incorporated abroad, which, though represented, do not carry on business in Australia.

Advances to resident borrowers have been classified as business advances, advances to public authorities, personal advances, and advances to non-profit organisations.

Business advances have been further classified to the main industry of the borrower and include advances to partnerships, companies and other institutions engaged in business in Australia, advances to persons actively engaged in business on their own behalf if the advance is mainly for business purposes, advances to mutual, co-operative and benefit societies which distribute their profits or surpluses (if any) to members by way of dividends, rebates on charges for goods and services, or increased benefits.

Advances to public authorities cover advances to local and semi-governmental authorities including separately constituted government business undertakings but not the Commonwealth or State Governments. Personal advances cover advances to persons for purposes other than carrying on a business. Advances to non-profit organisations cover advances to organisations which are not carried on for the purpose of making a profit or gain to individual members, any income of the organisation being used for the purposes of the organisation or for the benefit of the community.

(a) Excludes deposits of Commonwealth and State Governments. (b) Includes Papua and New Guinea. (c) The combined deposits of these two groups are distributed over the industries above.

## Major Trading Banks—new and increased lending commitments and overdraft limits

Particulars of new and increased lending commitments and overdraft limits of the Major Trading Banks are shown on page 638. The figures represent gross new lending commitments of banks and do not take account of cancellations and reductions of existing limits. Figures for cancellations and reductions of existing limits can be obtained from this series (after deducting term loan component and adjusting the weekly averages to a monthly basis) in conjunction with that of overdraft limits shown in the following table. However, these derived figures should be regarded as an approximation only, since there are unavoidable differences in the basis of compilation of the two series.

(a) Excludes commitments in respect of temporary advances to woolbuyers. (b) Excludes limits in respect of temporary advances to woolbuyers, term loans and farm development loans. (c) Year ended second Wednesday of July.

The following table shows new and increased lending commitments in respect of the Major Trading Banks to selected industrial groups for the six months ended July 1967 to January 1969. The classification is an abridgment of that used for bank advances (*see* page 634).

The table indicates the sources of demand for new lending. If taken in conjunction with the classification of overdraft limits outstanding (see foot of page), it shows the approximate rate of cancellations and reductions of limits in the main industrial groups.

<b>Total . . . . .</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>	<b>100.0</b>

(a) Excludes term loans and farm development loans. (b) Comprises categories of loans specifically exempted from the prescribed maximum overdraft requirement—short-term mortgage and bridging loans and post-shipment wool advances subject to a disincentive rate of interest.

On 17 November 1960 the maximum rate chargeable on advances was 7 per cent, but the average rate of interest on all advances was not to exceed 6 per cent. The maximum average rate requirement was discontinued on 13 April 1962. The maximum rate chargeable on advances was reduced from 7 per cent per annum to 6½ per cent per annum on 1 April 1963, and was raised to 7 per cent per annum on 27 April 1964, to 7½ per cent per annum on 10 March 1965, and to 7½ per cent per annum on 14 October 1968.

## Cheque-paying banks—debits to customers' accounts

Statistics of debits to customers' accounts have been collected since September 1945. Generally they represent the total of all cheques drawn by the customers of the banks. The following table shows the average weekly debits to customers' accounts of all cheque-paying banks (including the Rural Credits Department of the Reserve Bank and the Commonwealth Development Bank). Debits to accounts of Australian Governments in capital cities are excluded, as they are subject to abnormal influences and are not uniform for each State.

**CHEQUE-PAYING BANKS: AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS, STATES AND TERRITORIES, 1963-64 TO 1967-68**

(Excluding debits to Commonwealth and State Government accounts in capital cities)

## Trading bank charges

In October 1962 the trading banks instituted a system of charges on current accounts, and abolished the interstate exchange rates obtaining prior to this date. Details of interstate exchange rates prior to October 1962 may be found in Year Book No. 48, page 785. Charges on current account comprise a basic maintenance fee, a ledger activity fee and a cheque collection fee, each calculated on a quarterly basis and debited as a composite item to accounts four times a year. These charges were revised from 1 October 1966. The following are the current charges.

*Basic maintenance current account fee.* Sixty-five cents quarterly (non-rebated).

*Ledger activity fee (quarterly).* Up to ½ folio (20 entries), 25 cents; over ½ folio to 1 folio, 80 cents; over 1 folio to 2 folios, \$2.25; over 2 folios to 3 folios, \$5; over 3 folios to 4 folios, \$7.75; over 4 folios to 5 folios, \$10.50; over 5 folios to 6 folios, \$13.25; over 6 folios to 7 folios, \$16; over 7 folios to 15 folios, \$16, plus \$2.25 per folio or part thereof exceeding 7; over 15 folios to 35 folios, \$34, plus \$1.75 per folio or part thereof exceeding 15; over 35 folios, \$69, plus \$1.25 per

folio or part thereof exceeding 35. Rebates of one free folio (or equivalent of approximately 40 entries) will be allowed for each complete \$1,000 minimum quarterly credit balance. Where rebates are applicable the number of free folios is deducted before the activity fee is calculated.

*Collection fee on cheques, etc., deposited.* Up to 20 cheques per quarter, free; 21 to 100, 60 cents, plus 30 cents per 10 cheques or part thereof exceeding 20; 101 to 500, \$3.00, plus \$1.50 per each 50 or part thereof exceeding 100; 501 to 1,000, \$15, plus \$3 for each 100 or part thereof exceeding 100; 1,001 to 10,000, \$30, plus \$15 per each 500 or part thereof exceeding 1,000; 10,001 to 50,000, \$300, plus \$20 per each 1,000 or part thereof exceeding 10,000; 50,001 to 100,000, \$1,100, plus \$75 per each 5,000, or part thereof exceeding 50,000; over 100,000, \$1,850, plus \$125 per each 10,000 or part thereof exceeding 100,000.

## Savings banks

### Savings banks in Australia

For information on the origin of savings banks in Australia and the facilities currently available, see Year Book No. 46, page 779, and earlier issues.

All savings banks, including trustee savings banks, but not State savings banks, are subject to the *Banking Act 1959-1967*. Details of this Act and the special provisions applying to savings banks are given in Year Book No. 46, pages 759-60.

*Commonwealth Savings Bank.* The Commonwealth Savings Bank of Australia was established as a separate institution on 9 June 1928, having functioned previously as a department of the Commonwealth Bank (for particulars of the origin of the Savings Bank Department and the extension of its services see Year Book No. 46, page 782, and earlier issues). It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The *Commonwealth Bank Act 1927*, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the savings bank. This Commission was never appointed, and the *Commonwealth Bank Act 1945* placed the Commonwealth Savings Bank under the control of the Governor of the Commonwealth Bank. Under the provisions of the *Commonwealth Banks Act 1959-1968*, which came into operation on 14 January 1960, the Commonwealth Savings Bank was maintained in the same form, but was placed under the control of the Commonwealth Banking Corporation (see also page 618).

*State savings banks.* State savings banks at present operating (with date of establishment shown in parentheses) are: The State Savings Bank of Victoria (1841); The Savings Bank of South Australia (1848); the Savings Bank Division of the Rural and Industries Bank of Western Australia (1956).

*Trustee savings banks.* Two trustee savings banks, The Hobart Savings Bank and Launceston Bank for Savings, operate within Tasmania. These banks commenced business in 1845 and 1835 respectively.

*Private savings banks.* The Bank of New South Wales Savings Bank Ltd., the Australia and New Zealand Savings Bank Ltd., and the C.B.C. Savings Bank Ltd. commenced business in 1956, the E.S. & A. Savings Bank Ltd. in 1961, The Bank of Adelaide Savings Bank Ltd., The National Bank Savings Bank Ltd., and The Commercial Savings Bank of Australia Ltd. in 1962.

(a) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June. (b) Includes inter-branch transfers.

## Savings banks—depositors' balances

The amount in credit in depositors' accounts and the average per head of population for each State and Territory at the end of June 1964 to 1968 are shown in the following table. Deposit stock and non-interest bearing cheque accounts at the State Savings Bank of Victoria and the Savings Bank of South Australia and fixed deposit and non-interest bearing cheque accounts at the Trustee Savings Banks in Tasmania are included in the depositors' balances shown in the following table. Separate details are not available.

## SAVINGS BANKS: DEPOSITORS' BALANCES IN AUSTRALIA, JUNE 1964 TO 1968

<i>End of June(a)—</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>

1968 . . .	485.07	627.38	437.01	572.06	410.82	465.48	230.14	387.48	517.13

(a) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June.

## Savings banks—cheque accounts

At most savings banks, cheque accounts are available to non-profit organisations such as friendly, co-operative and charitable societies. Similar facilities are also available to other depositors at The State Savings Bank of Victoria, The Savings Bank of South Australia and the trustee savings banks in Tasmania. Details of the transactions on these accounts during the year ended June 1968 (excluding The Savings Bank of South Australia), together with the number of operative accounts and the amount on deposit at the end of June 1968, were as follows: deposits during the year \$1,824.7 million; withdrawals during the year, \$1,813.4 million; interest added during the year, \$3.3 million; amount on deposit at end of year, \$173.3 million; number of operative accounts at the end of year 356,146. These figures are included in the statistics in previous paragraphs.

## School savings banks

Agencies of the savings banks have been established at most of the schools throughout Australia. Particulars of operative accounts within Australia at the end of June 1964 to 1968 appear below.

## SCHOOL SAVINGS BANKS: AUSTRALIA, JUNE 1964 TO 1968

<i>End of June(a)—</i>	<i>Number of school agencies</i>	<i>Number of operative accounts</i>	<i>Deposits</i>	<i>Average deposit per operative account</i>
		'000	\$'000	\$
1964 . . . . .	9,878	1,294	20,374	15.75
1965 . . . . .	9,544	1,364	22,055	16.16
1966 . . . . .	9,999	1,390	23,313	16.77
1967 . . . . .	10,301	1,445	24,815	17.18
1968 . . . . .	10,400	1,516	26,482	17.47

(a) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June.

**Savings banks—assets**

The assets within Australia of all savings banks at the end of June 1967 and 1968 are shown in the following table. In the table on pages 645–6 assets are shown at balance-sheet dates which are not in June for some banks. In addition, the table on pages 645–6 excludes statistics for the Savings Bank Division of the Rural and Industries Bank of Western Australia, which are included in the table below.

**SAVINGS BANKS: ASSETS WITHIN AUSTRALIA(a), JUNE 1967 AND 1968**  
(*\$ million*)

Housing . . . . .	1,548.8	1,751.3
Other . . . . .	222.3	266.1
Bank premises, furniture and sites . . . . .	76.0	84.5
Bills receivable and all other assets . . . . .	19.5	21.4
<b>Total . . . . .</b>	<b>6,077.3</b>	<b>6,567.5</b>

(a) Includes assets in Papua, New Guinea and other external Territories. (b) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June.

**Savings banks—rates of interest on deposits**

**SAVINGS BANKS: INTEREST RATES ON DEPOSITS(a), 30 JUNE 1964 TO 1968**  
(*Per cent per annum*)

<i>Size of account</i>	<i>30 June—</i>				
	<i>1964</i>	<i>1965</i>	<i>1966</i>	<i>1967</i>	<i>1968</i>
Ordinary accounts (including cheque accounts)—					
\$1 to \$10,000(b) . . . . .	3.25	3.50	3.50	3.50	3.75
Friendly and other society accounts—					
\$1 to \$6,000 . . . . .	3.25	3.50	3.50	3.50	3.75
\$6,001 and over . . . . .	1.75	2.00	2.00	2.00	2.25

(a) Rates allowed by the Commonwealth Savings Bank, private savings banks and The State Savings Bank of Victoria. Trustee savings banks, The Savings Bank of South Australia and the Savings Bank Division of the Rural and Industries Bank of Western Australia allow slightly higher rates of interest. (b) Before 1 March 1967 no interest was payable on amounts greater than \$6,000. From 1 March 1967 no interest is payable on amounts greater than \$10,000.

## Savings banks—predominant lending rates

The following table shows the predominant lending rates in respect of different types of loans by savings banks from 1961 to 1968.

SAVINGS BANKS: PREDOMINANT LENDING RATES OF INTEREST  
(Per cent per annum)

<i>Date of change in rate</i>	<i>Loans to local government authorities</i>	<i>Crédit foncier housing loans (a)</i>	<i>Loans to co-operative housing societies</i>
1961—1 January . . . . .	5.75—5.875	5.25—5.75	(b)5.25—5.50
1962—26 January . . . . .	5.375—5.50	..	..
1963—11 April . . . . .	..	4.75—5.25	4.75—5.00
17 June . . . . .	5.00—5.125	..	..
2 October . . . . .	4.875—5.00	..	..
1964—1 June . . . . .	..	4.75—5.50	4.75—5.25
August . . . . .	5.50	..	..
1965—1 April . . . . .	..	5.00—5.75	5.00—5.50
8 April . . . . .	5.75	..	..
1967—2 February . . . . .	5.875	..	..
1968—1 August . . . . .	..	5.50—6.25	5.50—6.00

(a) The rate of interest on *crédit foncier* loans may be varied only at the expiration of each ten years of the currency of a loan. (b) The changes in interest rates on 1 January 1961 applied to all societies then financed and to future loans.

## FINANCE COMPANIES

Information relating to the lending operations of finance companies in Australia is given in the following tables. A comprehensive account of the scope of these statistics and fuller details of the transactions of finance companies is provided in the bulletin *Finance Companies, 1968* and in the monthly statements *Finance Companies*. For the purpose of these statistics, finance companies are defined as companies which are engaged mainly in providing to the general public (businesses as well as persons in their private capacity) credit facilities of the following types: hire purchase and other instalment credit for retail sales, wholesale hire purchase, other consumer and commercial loans, and factoring. The finance companies covered in these statistics, insofar as they provide instalment credit for retail sales, are also included in the statistics of Instalment Credit for Retail Sales (see pages 675–9).

In general, companies which are engaged both in financing activities and other activities come within the scope of these statistics, provided that the major portion of their assets consists of financial assets of the types listed above and or a major proportion of their income is derived from such assets. Companies are excluded if the major proportion of their balances outstanding consists of agreements written for the purpose of financing their own sales. Companies which are engaged mainly in financing, in any way, the operations of related companies ('related' as defined in the Companies Act) are also excluded from these statistics, as are unincorporated finance companies. Also excluded are the following classes of financial and quasi-financial institutions: banks; life insurance companies; fire, marine, and general insurance companies; short-term money market dealers; pastoral finance companies; investment companies; unit trusts; land trusts; mutual funds and management companies for the foregoing trusts and funds; pension and superannuation funds; building and friendly societies including credit unions.

Summary definitions of the categories into which finance agreements have been classified and of the items of data given in the tables are as follows.

*Instalment credit for retail sales.* This category is defined in the same way as in the Instalment Credit for Retail Sales statistics, and covers the operations of all types of instalment credit schemes undertaken by finance companies which relate primarily to the financing of retail sales of goods. In general, the term *instalment credit* is defined as relating to schemes in which repayment is made in regular predetermined instalments. Types of schemes covered include hire purchase, time payment, and personal loan schemes relating primarily to the financing of retail sales of goods. In these statistics, the term 'retail sales' relates not only to retail sales coming within the scope of the censuses of retail establishments conducted periodically by this Bureau, but includes also other sales of goods to final purchasers (e.g. plant and machinery, tractors, etc.). This category does not cover credit accounts which do not involve repayment by regular predetermined instalments, financing of sales of land and buildings, property improvements, or services such as repair work and travel facilities.

*Wholesale hire purchase.* This term is adopted in accordance with finance companies' usage, although not all the transactions covered by this category are strictly 'hire purchase' contracts. The category relates mainly to the financing of motor vehicle dealers' stocks held under bailment or floor plan schemes, but it also includes finance in respect of other trading stock.

*Other consumer and commercial loans.* This broad term is used to cover the following three categories.

*Personal loans.* All loans to persons in their private capacity, other than loans classified to the categories instalment credit for retail sales or mortgage loans.

*Mortgage loans.* All loans, for any business or private purpose, which are secured over houses, home units (whether new or existing) and residential land.

*Commercial loans.* All loans and advances to businesses, not included elsewhere in these statistics. Commercial loans secured on existing finance agreements are also included in this item. This category is sub-divided into the following two classes.

(a) *Loans and advances repayable at call or within ninety days* of the time of origin of the loan or investment (including loans and advances in the form of short-term commercial loans, intercompany lending, and notes, debentures, deposits, etc., repayable at call or within ninety days). Loans of this type to other finance companies are excluded.

(b) *Other commercial loans and advances.*

*Factoring.* The term 'factoring' is used by finance companies in different senses, but in these statistics it is applied to the category comprising loans on the security of 'trade' debts (i.e. debts due to businesses for goods and services supplied to other businesses for use in their business or for resale), and trade debts purchased. While there is little uniformity in the terminology used by finance companies, it is fairly common for finance companies to group these types of transactions as a separate category in their accounts.

*Loans to related non-finance companies.* This category includes loans made by a finance company to any related company other than a related finance company (as defined above). Investments in shares of related companies are excluded.

*Leasing of business equipment and plant.* This category comprises the transactions, by finance companies and their related companies, in the form of leasing agreements in respect of business equipment and plant. Broadly, a 'leasing agreement' is a legal agreement between an owner of property (the lessor) and a user of that property (the lessee) whereby the lessee compensates the lessor for permitting the lessee to retain possession and use of the property. The types of goods covered by leasing agreements in this bulletin are restricted to business equipment and plant including motor vehicles for business use. Leasing agreements relating to all other types of goods and property (including real estate and consumer goods) are excluded from the tables; the total balances outstanding in respect of such leasing agreements made by finance companies and their related companies are estimated not to have exceeded \$2.5 m during the period July 1965 to June 1968. It is thought that almost all of the leasing transactions included in these statistics relate to agreements initially written for a period of at least eighteen months.

*Bills of exchange.* This item relates to the drawing and discounting of bills of exchange by finance companies and their related companies. A bill of exchange is defined for the purpose of these statistics in the *Bills of Exchange Act 1909-1958* as 'an unconditional order in writing, addressed by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand, or at a fixed or determinable future time, a sum certain in money to, or to the order of, a specified person, or to bearer'. Promissory notes used as collateral security for any of the other types of loans specified in this paragraph are excluded.

*Amount financed.* Amount financed is the actual amount of cash provided. It excludes interest, insurance, hiring, and other charges and initial deposits. For purchases of existing finance agreements and trade debts purchased, it represents the amount of cash paid to the seller. Amount financed in respect of instalment credit for retail sales agreements is further classified by type of commodity.

*Balances outstanding.* Balances outstanding represents the amounts owing on all finance agreements entered into prior to the end of the relevant period as shown in the books of the companies concerned. Accounting practice with respect to inclusion, in balances outstanding, of unmatured charges, interest and insurance differs between finance companies and between types of finance agreements. Because of this, separate details of balances outstanding are given in the tables for those contracts for which balances outstanding are recorded including such charges, and for those contracts for which balances outstanding are recorded excluding such charges. It is not practicable to adjust either to a common basis. Figures for 'balances outstanding excluding unmatured charges' do, however, include any charges, etc. (e.g. monthly and annual interest charges) accrued and unpaid at the end of the period concerned.

*Collections and other liquidations of balances.* This item covers cash collections of capital repayments, hiring charges, interest and insurance, and also other liquidations such as bad debts written off and rebates for early payouts. For reasons stated on page 653 separate details of collections and other liquidations are given for contracts recorded including charges, etc., and contracts recorded excluding charges, etc. The item 'collections and other liquidations' in respect of instalment credit for retail sales agreements is divided between cash collections and other liquidations.

*Initial capital cost of business equipment and plant newly leased.* The initial capital cost is the actual cost to finance companies for business equipment and plant newly leased during the period, and the depreciated value of business equipment and plant re-leased during that period. This item can be considered to correspond broadly with amount financed for the other categories listed on page 653.

*Balances outstanding on leasing agreements.* The basis of valuation specified for this item is the initial capital cost of business equipment and plant less depreciation to date. However, as yet it has not been practicable to obtain data on leasing transactions by finance companies on a completely uniform basis because of the varying methods adopted by companies to record these transactions in their accounts. For example, various methods are used to record and report depreciation of the business equipment and plant on lease. Furthermore, some companies record leasing transactions on a similar basis to other forms of financing (namely balances outstanding including unmatured charges) and so are unable to report on the specified basis. Although different methods are used by companies to report their leasing transactions, an attempt has been made to ensure that each company has reported on a consistent basis throughout the period covered by the statistics. In these circumstances, although the statistics of balances outstanding on leasing agreements should be treated with caution, it is thought that the movement in this series should provide a reasonable indication of the broad trend in this category of financing. This series should be regarded as subject to revision until agreement has been reached with companies on a uniform basis of reporting.

*Amounts paid for bills acquired.* This item includes the amounts paid for bills drawn by finance companies, bills discounted for the first time, and bills purchased from banks, authorised dealers in the short-term money market, and others. Broadly, this item corresponds with the item amount financed for the other categories listed on page 653.

*Amounts received for bills sold and matured.* This item comprises amounts received from sales of bills to banks, and to authorised dealers in the short-term money market, and from maturities (including early maturities). This item broadly corresponds with the item collections and other liquidations of balances for the other categories listed above.

*Balances outstanding.* This represents the amounts owing on all bills of exchange held at the end of the period.

Additional classifications of amount financed, and collections and other liquidations of balances are provided for the instalment credit for retail sales transactions of finance companies. Amount financed is classified according to the following types of commodities.

*Motor vehicles, etc.:* motor cars and motor cycles, commercial vehicles, tractors, caravans, trailers, motor parts and accessories, etc. (new and used separately).

*Plant and machinery:* farm machinery and implements, earth-moving equipment, aircraft, industrial plant and machinery, business machinery and equipment (including commercial refrigeration equipment), etc.

*Household and personal goods:* furniture, furnishings and floor coverings, domestic refrigerators, electrical goods, radios, television, musical instruments, bicycles, motor mowers, clothing, etc.

The item collections and other liquidations of balances in respect of instalment credit for retail sales agreements is divided between cash collections and other liquidations. Cash collections comprise the actual flow of cash from the public to finance companies; other liquidations consist of rebates for early payouts, bad debts written off, and any other reductions in balances outstanding other than by cash collections.

**Summary of transactions by finance businesses**

The following table gives a summary of the amount financed, collections and other liquidations of balances, and balances outstanding in Australia for the years 1964-65 to 1967-68.

**FINANCE COMPANIES: SUMMARY, AUSTRALIA, 1964-65 TO 1967-68**  
(\$ million)

Year	Collections and other liquidations			Balances outstanding at end of period			
	Amount financed	Contracts including charges	Contracts excluding charges	All contracts	Contracts including charges	Contracts excluding charges	All contracts (a)
1964-65	1,923.6	1,001.1	1,057.1	2,058.2	1,455.3	363.1	1,818.3
1965-66	1,916.0	1,067.2	1,058.5	2,125.7	1,481.2	431.0	1,912.3
1966-67	2,301.8	1,167.5	1,355.5	2,523.0	1,635.4	471.8	2,107.2
1967-68	2,721.0	1,255.0	1,543.4	2,798.4	1,858.7	580.5	2,439.1

(a) Amounts shown in this column are intended to provide a broad overall measure of total balances outstanding. However, movements in this series may be affected by changes in the proportions of the two components of the series to the total.

**Amount financed, by type of agreement**

The following table shows the separate amount financed, for each type of agreement, i.e. instalment credit for retail sales, wholesale hire purchase, personal loans, mortgage loans, commercial loans (repayable at call or within ninety days, and other), and factoring, in Australia for the years 1964-65 to 1967-68.

**FINANCE COMPANIES: AMOUNT FINANCED, BY TYPE OF AGREEMENT**  
AUSTRALIA, 1964-65 TO 1967-68  
(\$ million)

Year	Other consumer and commercial loans								Total

## INSURANCE

### Legislation

Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate with respect to 'insurance other than State insurance; also State insurance extending beyond the limits of the State concerned'. Commonwealth legislation includes the *Marine Insurance Act 1909-1966* defining the limits of marine insurance and regulating the terms of contracts, etc., the *Insurance Act 1932-1966* requiring the lodgment of deposits by insurance companies, and the *Life Insurance Act 1945-1965* generally regulating life insurance business in Australia. The *Marine Insurance Act 1909-1966* and the *Insurance Act 1932-1966* have limited application, and except for life insurance business, which is regulated by the *Life Insurance Act 1945-1965*, insurance business is conducted almost entirely under State laws.

### Insurance Act 1932-1966

Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to lodge a deposit with the Commonwealth Treasurer. Money deposited is invested by the Treasurer in prescribed securities selected by the depositor, and all interest is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies. Deposits held by States on 1 February 1932 could, however, remain with the States subject to the conditions embodied in the laws of the States, and depositors to the extent of the value of these deposits were exempt from liability to make deposits under the Commonwealth Act.

The following are not regarded as insurance business under the Act: staff superannuation schemes; schemes of religious organisations solely for insurance of their property; friendly society, union and association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and under the *Life Insurance Act 1945-1965* ceased to apply to life insurance business.

### Life Insurance Act 1945-1965

The objects of this Act are: (a) to replace all State legislation on the subject of life insurance, except that relating to the life insurance operations of State Government insurance offices within the State concerned, and to provide uniform legislation for the whole of Australia; (b) to appoint an Insurance Commissioner to exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy holders; (c) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency. The Act came into operation on 20 June 1946. A summary of the provisions of the Act is given in Year Book No. 37, pages 595-7.

### Deposits under Insurance Acts

Deposits lodged under the Insurance Acts at 30 June 1968 totalled \$35.6 million, comprising \$4.4 million held by the Commonwealth in respect of life insurance, and \$31.2 million held by the Commonwealth in respect of other forms of insurance. The deposits consisted of Commonwealth Government securities \$21.5 million, United Kingdom Government securities \$1.8 million, fixed deposits \$0.9 million, bank guarantees and undertakings \$8.6 million, corporation debentures and stock \$0.8 million, and titles and mortgages \$2.1 million.

## Life insurance

Since 1947, returns lodged under the *Life Insurance Act 1945-1965* have been used to compile life insurance statistics. Except where otherwise indicated, the figures in the succeeding paragraphs refer only to Australian business. Business in the Territories of Papua and New Guinea is, however, included in the Australian figures. The information shown has been compiled from returns of life insurance business submitted in the financial years which ended during the year stated.

### Offices transacting business

The number of offices which transacted life insurance business in Australia during 1967 was 45, including 12 overseas companies. Of the 33 Australian offices, 6 are purely mutual, including one which transacts general business in respect of which share capital is used, 25 are public companies, and 2 are State Government institutions. Of the total, 33 transacted ordinary business only and the remainder both ordinary and industrial business. Where possible, ordinary, industrial and superannuation business have been kept separate in the following tables.

1967 . . .	29,445	258,790	18,517	127,976	434,727

(a) Excludes annuities. (b) See footnote (a) on page 664.

Minus sign (-) denotes an increase in existing business due to an excess of transfers from overseas registers to Australian registers, or conversions from other classes of business over discontinuances.

#### Australian revenue from premiums

Details of revenue from premiums in respect of all offices transacting business in Australia are shown in the following tables for each State and the Australian Capital Territory for the year 1967 and for Australia for the years 1963 to 1967.

(a) Includes adjustments which have resulted from sterling devaluation on 18 November 1967.

**Liabilities and assets**

The liabilities of the Australian offices consist mainly of their insurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. Separate details of liabilities in respect of Australian business are not available.

*Total liabilities and assets.* In the two tables which follow the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life insurance business of the two State Government offices, and the Australian business only of the twelve overseas companies operating in Australia. For various reasons several offices do not attempt the dissection of liabilities and assets according to type of business, and, therefore, the figures in the following tables relate to all types of business combined.

**Loans**

In the following table details are given of new loans paid over by life insurance companies during each of the years ended 31 December 1964 to 1968. The information has been compiled from monthly returns furnished by each company. New loans paid over by the Government Insurance Office of New South Wales and the Queensland State Government Insurance Office are excluded. Advances of premiums are also excluded.

**Fire, marine and general insurance**

The following statistics, which are in respect of the Australian business of companies operating in Australia and State Government insurance offices, conform to the following definitions and should be interpreted accordingly.

- Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from 'earned premium income' appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than 'earned premium income' appropriate to the year. The converse applies when business is declining.
- Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.
- Contributions to fire brigades, commission and agents' charges, and expenses of management represent mainly charges paid during the year.
- Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The figures relate to selected items of statistics and are not construable as 'Profit and Loss' statements or 'Revenue Accounts'.

In cases where the business is underwritten in one State and the risk is situated in another, the business is included in the State in which the policy was issued.

During 1967-68 revenue from premiums amounted to \$716.6 million, and that from net interest on investments, etc. to \$46.9 million, a total of \$763.5 million. Expenditure on claims amounted to \$470.9 million, contributions to fire brigades \$17.9 million, commission and agents' charges \$64.8 million, expenses of management \$119.9 million, and taxation \$21.4 million, a total of \$694.9 million.

**Premiums and claims**

The following tables show the aggregate premium income less returns, rebates and bonuses, and claims or losses less amounts recoverable, for each State and for all classes of insurance other than life for the years 1963-64 to 1967-68.

**Export Payments Insurance Corporation**

The Export Payments Insurance Corporation was established under the *Export Payments Insurance Corporation Act 1956* to provide exporters with insurance against risks associated with overseas trade which are not usually acceptable to commercial insurers, and to give certain guarantees in connection with that trade. The Corporation commenced business in 1957. Where the Corporation is not in a position to accept business on its commercial account it may be authorised under its statute to provide insurance facilities on the Commonwealth Government's account in the national interest. See also the chapter Overseas Transactions, pages 311-2.

**INSTALMENT CREDIT FOR RETAIL SALES**

Information relating to instalment credit for retail sales in Australia is given in the following tables. Information in more detail may be found in the annual bulletin *Insurance and Other Private Finance* and in the monthly and quarterly statements relating to instalment credit for retail sales issued by this Bureau (see beginning of chapter).

The statistics cover operations of all types of instalment credit schemes which relate primarily to the financing of retail sales of goods, whether the credit is advanced by a retail business or by a non-retail finance business. In general, the term 'instalment credit' is defined as relating to schemes in which repayment is made by regular pre-determined instalments. Types of schemes covered include hire purchase, time payment, budget account, and personal loan schemes which relate primarily to the financing of retail sales of goods. In these statistics the term 'retail sales' relates not only to retail sales by retail establishments coming within the scope of the Censuses of Retail Establishments conducted periodically by this Bureau, but includes also other sales of goods to final purchasers (e.g. plant and machinery).

Figures for amounts financed *exclude* interest, hiring charges, insurance, etc. Figures for balances outstanding and collections *include* interest, hiring charges, insurance, etc. Details are not available of these charges or of other items (e.g. rebates allowed for early payments, late payment charges, bad debts written off) which affect the reconciliation of the three main instalment credit series—amount financed, collections, and balances outstanding.

Statistics of amounts financed are classified by type of goods, defined as follows: *motor vehicles* (new and used separately)—motor cars and motor cycles, commercial vehicles, tractors, caravans, trailers, motor parts and accessories, etc.; *plant and machinery*—farm machinery and implements, earth-moving equipment, aircraft, industrial plant and machinery, business machines and equipment (including commercial refrigeration equipment), etc.; *household and personal goods*—furniture, furnishings and floor coverings, domestic refrigerators, electrical goods, radios, television, musical instruments, bicycles, motor mowers, clothing, etc.

Further explanatory detail on these series may be found in the bulletin and statements referred to on page 675.

#### Total instalment credit, by type of business

The following table gives separate particulars of the instalment credit transactions of retail businesses and non-retail finance businesses for the years 1963–64 to 1967–68.

**INSTALMENT CREDIT FOR RETAIL SALES, BY TYPE OF BUSINESS: AMOUNT FINANCED, BY COMMODITY GROUP, COLLECTIONS, AND BALANCES OUTSTANDING, AUSTRALIA, 1963–64 TO 1967–68**

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

## NEW CAPITAL RAISINGS BY COMPANIES IN AUSTRALIA

Information relating to capital raised by companies in Australia is given in the following tables. More detailed information may be found in the annual bulletin *Insurance and Other Private Finance* and in quarterly bulletins dealing with capital raisings (see beginning of chapter).

The statistics (the collection of which commenced in July 1954) relate to capital raised by companies through issues of shares, and in the case of companies listed on stock exchanges, through the issue of debentures, notes and similar securities and the acceptance of deposits, and in the case of unlisted companies, by way of loans secured over the entire assets of the company. Capital obtained by way of bank overdraft or bank loans, trade credit, temporary advances, and loans secured over part only of the assets of the company is not included. Totally unsecured loans are included in the case of listed companies, but are excluded in the case of unlisted companies.

Separate statistics are given for listed and unlisted companies. Listed companies are companies incorporated in Australia or the Australian territories and listed on one or more of the Australian stock exchanges. All other companies incorporated in Australia, including subsidiaries of listed companies, are classified as unlisted companies. Companies incorporated overseas, whether listed on an Australian stock exchange or not, are excluded from the statistics of share issues. However, subsidiaries of overseas companies, if incorporated in Australia, are included in the statistics of share issues. The statistics of new capital raised through issues of debentures, notes, etc., and the acceptance of deposits, include, in addition to capital raised by companies incorporated in Australia (including subsidiaries of overseas companies), capital raised in this way from Australian sources by overseas public companies through their Australian offices.

The following are explanatory notes relating to some of the items shown in the tables.

**New money.** This is the net amount of cash transferred from the investing public to the companies. For this purpose the 'investing public' includes banks and life insurance companies (except when subscribing to issues by associated companies) and government and private superannuation funds, but excludes other government agencies. Subscriptions by associated companies, whether local or overseas, are excluded. In the tables which follow the amount of new money is obtained by deducting from the total cash raised the 'amount not involving new money'.

**Amounts not involving new money.** These amounts include cash subscriptions received by issuing companies from associated companies. Such subscriptions represent inter-company transfers only,

and do not involve a receipt of funds from the 'investing public'. Also included are amounts which, although subscribed by the 'investing public' (i.e. subscribers other than 'associated companies'), are not retained by the issuing company or its associates, but are used to redeem shares, debentures or unsecured notes, etc., or are used to purchase from individuals existing shares, debentures, etc., in other companies, including existing shares, etc., in associated and subsidiary companies. The funds used in this way are thus returned to another section of the 'investing public' and do not represent a *net* transfer of cash from the 'investing public' to the companies. (Besides these purchases of existing shares, etc., from individuals, purchases of existing shares, etc., from companies other than associates of the issuing company might also be included in this item, but the amounts involved are small and separate details have not been collected.)

#### Companies listed on stock exchanges

Details of new capital raised through issues of shares, debentures, or registered notes, or through accepting deposits are given in the following table for each of the years 1963-64 to 1967-68. Figures are subject to revision in some instances.

**LISTED AUSTRALIAN COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES, DEBENTURES, OR REGISTERED NOTES, ETC.(b), OR ACCEPTING DEPOSITS(c), 1963-64 TO 1967-68**  
(\$ million)

Year	Share capital					Debentures, registered notes and deposits			
	Value of issues commenced	Non-cash issues commenced (d)	Cash issues commenced	Cash raised during period (e)	Amounts not involving new money	New money	Total amount raised (f)	Amounts not involving new money (f)	New money
1963-64	260.8	119.3	141.4	169.2	42.8	126.4	907.7	746.8	160.9
1964-65	394.4	136.6	257.9	209.2	62.3	146.9	1,074.5	906.0	168.5
1965-66	292.1	85.6	206.3	232.6	61.5	171.3	990.7	840.5	150.2
1966-67	313.7	148.0	165.8	151.6	39.2	112.4	1,099.4	898.9	200.6
1967-68	280.7	79.3	201.5	169.8	47.2	122.6	1,394.5	1,045.7	348.7

(a) Includes companies incorporated in the Australian Territories. (b) Includes convertible notes. (c) Deposits accepted by banks, life insurance companies, pastoral companies and building societies, and loans to authorised dealers in the short-term money market are not included. (d) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (e) Amounts paid up on issues commenced during the year plus calls on issues commenced in earlier years. (f) Includes conversions, renewals, etc.

#### Companies not listed on stock exchanges

Details of new capital raised by unlisted companies through issues of shares and loans secured by charges over the companies' entire assets are given in the following table for each of the years 1963-64 to 1967-68.

**UNLISTED COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES AND LOANS SECURED BY CHARGES OVER THE COMPANIES' ENTIRE ASSETS, 1963-64 TO 1967-68**  
(\$ million)

Year	Share capital					Loans secured by charges over the companies' entire assets			
	Value of issues commenced	Non-cash issues commenced (b)	Cash issues commenced	Cash raised during period (c)	Amounts not involving new money	New money	Total amount raised (d)	Amounts not involving new money (d)	New money
1963-64	432.3	222.5	209.9	211.6	163.2	48.4	68.7	46.1	22.6
1964-65	563.5	303.1	260.5	233.9	182.2	51.7	65.3	40.1	25.2
1965-66	455.3	260.1	195.4	216.3	165.5	50.8	63.8	40.7	23.1
1966-67	392.7	178.8	214.0	150.6	110.2	40.4	74.2	37.9	36.4
1967-68	400.1	190.9	209.1	209.2	158.4	50.8	66.5	48.2	18.1

(a) Includes companies incorporated in the Northern Territory. (b) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (c) Amounts paid up on issues commenced during year plus calls on issues commenced in previous years. (d) Includes conversions, renewals, etc.

**Listed and unlisted companies—new money raised, classified by industry group**

A summary of new money raised by listed and unlisted companies during each of the years 1963-64 to 1967-68, as shown in the preceding tables, is given below, together with a classification by industry groups of the amounts raised. Figures are subject to revision in some instances.

**LISTED AND UNLISTED COMPANIES: NEW MONEY RAISED, BY INDUSTRY GROUP, 1963-64 TO 1967-68**  
(\$ million)

Year	Companies listed on stock exchanges			Companies not listed on stock exchanges			Grand total

September 1968 . . . . .	263.3	0.9	4.2	5.2
December 1968 . . . . .	275.1	2.6	5.9	8.5
March 1969 . . . . .	281.1	4.0	5.0	9.0

(a) Includes value of land trusts at valuation. (b) Includes cash on hand and at bank.  
(c) Includes loans to authorised dealers in the short-term money market and other deposits under three months' term or notice.

## PASTORAL FINANCE COMPANIES

## Rural advances

The following table is derived from returns supplied to the Reserve Bank by major pastoral finance companies and shows the total rural advances outstanding at the end of June 1964 to 1968.

**PASTORAL FINANCE COMPANIES: RURAL ADVANCES(a), STATES  
JUNE 1964 TO 1968**

(Source: Reserve Bank of Australia)

(\$ million)

End of—	N.S.W.	Vic.	Qld	S.A.	W.A. and Tas.	Total
June—						
1964 . . . . .	64.1	39.0	51.9	36.3	37.1	228.3
1965 . . . . .	66.6	43.9	58.5	42.8	47.1	258.9
1966 . . . . .	62.4	40.9	55.6	44.3	46.6	249.9
1967 . . . . .	68.4	50.2	58.8	50.1	57.9	285.5
1968 . . . . .	72.2	54.8	63.5	61.0	62.9	314.4

(a) Compiled from returns supplied by major pastoral finance companies. Advances are classified according to the location of the branch holding the advance, which in some cases may differ from the State of residence of the borrower. The statistics refer to the total advances outstanding at the end of the month shown.

## Liabilities and assets

## PASTORAL FINANCE COMPANIES: LIABILITIES AND ASSETS(a)

JUNE 1963 TO DECEMBER 1968

(Source: Reserve Bank of Australia)

(a) Compiled from returns supplied by major pastoral finance companies.

(b) Excludes Commonwealth Govern-  
ment securities.

## RURAL DEBT

Major sources of credit for rural purposes include banks, Commonwealth and State government financial agencies, pastoral finance companies, and life insurance companies. The following table shows the estimated rural debt to these lenders.

## ESTIMATED RURAL DEBT TO SPECIFIED LENDERS, 30 JUNE 1964 TO 1968

(Source: Reserve Bank of Australia)

(\$ million)

Lender	30 June—				
	1964	1965	1966	1967	1968
Major trading banks . . . . .	514	584	650	751	918
Ex-service settlement . . . . .	103	104	99	92	88
Other government, including State banks and State savings banks . . . . .	191	216	245	274	331
Pastoral finance companies . . . . .	228	258	250	285	314
Commonwealth Development Bank . . . . .	55	72	92	120	143
Life insurance companies . . . . .	56	66	75	81	97
<b>Total . . . . .</b>	<b>1,152</b>	<b>1,300</b>	<b>1,411</b>	<b>1,603</b>	<b>1,891</b>

In addition, credit is supplied to the rural sector by finance companies, merchants, co-operative producer organisations, and by private lenders and investors, the most noteworthy of these last-mentioned sources involving family arrangements and property vendors. No data are currently available on the extent of the outstanding debt by the rural sector to these sources.

## SHORT-TERM MONEY MARKET

For some years prior to 1959 leading stockbrokers had been actively engaged in the acceptance of short-term funds against the security of government securities, but their operations were limited by the absence of suitable short-term securities and their liquidity requirements. In February 1959 the Commonwealth Bank (now the Reserve Bank) gave official status to the market by announcing that under certain conditions it would act as lender of last resort to authorised dealers in the short-term money market.

The form of organisation consists of nine companies whose functions are:

- (i) to accept loans overnight, at call or for fixed periods, in minimum amounts of \$50,000 and to invest these funds in Commonwealth Government securities with currencies not exceeding three years and, since March 1965, in commercial bills that had been accepted or endorsed by a trading bank; and
- (ii) to engage as traders in the buying and selling of these specific classes of securities.

Dealers are required to have a minimum paid-up capital of \$400,000 and a level of shareholders' funds sufficient to permit the lodgment of 'margins' with the Reserve Bank, in the form of Commonwealth Government securities, as general backing for their operations. These securities lodged as margins are required to be, on market values, equivalent to at least:

- (a) one-half per cent of the dealer's holding of Treasury Notes;
- (b) one per cent of the dealer's holding of Commonwealth Government securities and commercial bills maturing within one year;
- (c) two per cent of the dealer's holding of Commonwealth Government securities maturing within one to two years; and
- (d) four per cent of the dealer's holding of Commonwealth Government securities maturing within two to three years.

The total amount of loans a dealer may accept is determined by the Reserve Bank in relation to the level of the dealer's shareholders' funds. Under the lender of last resort arrangements the dealer may borrow from the Reserve Bank against the lodgment of securities.

## Selected assets and liabilities of authorised dealers and rates of interest on loans accepted

## SHORT-TERM MONEY MARKET: SELECTED LIABILITIES AND ASSETS AND INTEREST RATES OF AUTHORISED DEALERS, JUNE 1963 TO DECEMBER 1968

(a) Compiled from returns supplied by authorised dealers in the short-term money market. Liabilities to Reserve Bank as lender of last resort are excluded. (b) Includes marketing boards and trustee companies.

## FRIENDLY SOCIETIES, REGISTERED BUILDING SOCIETIES AND CO-OPERATIVE SOCIETIES

### Friendly societies

The total membership of friendly societies in Australia is about 426,000, but as certain benefits such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies, even when due allowances are made for young and unmarried members. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports dealing with the returns received are published in most of the States.

#### Societies, members and revenue

The following table sets out the number of societies, members, etc., revenue and expenditure, and funds of registered societies for the year. More detailed information is available in the bulletin *Insurance and Other Private Finance*, and issue No. 6, 1967-68 contains particulars for the year 1966-67.

(a) Excludes juvenile branches, dispensaries, medical institutes, and certain miscellaneous societies. Receipts and payments of subsidy under the Commonwealth medical and hospital benefit schemes are excluded. (b) Includes the Australian Capital Territory. (c) Year 1967.

### Registered building societies

#### Summary

In the following table general information is given relating to the societies in each State for the year 1966-67 and to the combined States for 1965-66. The information is not exhaustive, as particulars regarding a number of organisations are not included. More detailed information is available in the mimeographed bulletin *Registered Building Societies*. Issue No. 5 contains information for the year 1966-67.

(a) See footnote (a) to table above. (b) Includes advances on mortgage of terminating societies which are on a gross basis. Net advances may be derived by subtracting borrowing members' funds. See table above.

## Co-operative societies

Co-operative societies are divided into three classes: (i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as producers' co-operative societies and the second as consumers' co-operative societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act, 1923-1967. A summary of the business of all co-operative societies for the year 1966-67 for all States is given in the following tables. Separate particulars for each of the three types of co-operative societies are given in the annual bulletin *Insurance and Other Private Finance*, and issue No. 6, 1967-68 contains details for 1966-67.

## LOTTERIES AND BETTING

### Lotteries

State Governments operate lotteries in New South Wales, Queensland, South Australia, and Western Australia. The Lotteries Commission of South Australia commenced operations on 15 May 1967. Tattersall Lotteries are operated under government licence in Victoria and also sell tickets under government licence in Tasmania and New Zealand. The statistics of sales of tickets and prizes for Victoria include sales and allotments of prizes in Tasmania and New Zealand by Tattersall of Victoria. Tasmanian Lotteries were operated under government licence until 30 September 1961, when they surrendered their licence. In general, revenue derived by the State Governments from these lotteries is used directly or indirectly to provide funds for expenditure on hospitals, charities, etc. For information as to the origin, purpose and method of payment of proceeds or taxes to State revenues see Year Book No. 46, page 808 and earlier issues.

Details of ticket sales, prizes allotted, and taxes paid and other net contributions to State Government revenues, relating to lotteries drawn during each of the years 1963-64 to 1967-68, are given in the following table.

**LOTTERIES: VALUE OF TICKET SALES, PRIZES ALLOTTED, TAXES PAID

(a) Off-course investments only. Totalizator Agency Board commenced operating from 1 September 1964.

(b) Estimated from taxes on betting with licensed bookmakers.

**PENSION AND SUPERANNUATION SCHEMES****Government, local government and semi-governmental pension and  
superannuation schemes**

The Commonwealth and all State Governments have established pension and superannuation schemes for their employees. These schemes are operated through funds to which both the Governments and their employees make contributions. Employees of local government and semi-governmental authorities are covered either by the Commonwealth and State Government schemes or by a separate scheme of the authority which is operated either through a separately constituted fund or through a life insurance office.

## Schemes operated through separately constituted funds

**GOVERNMENT, LOCAL GOVERNMENT AND SEMI-GOVERNMENTAL PENSION AND  
SUPERANNUATION SCHEMES OPERATED THROUGH SEPARATELY  
CONSTITUTED FUNDS, 1966-67**

(a) Includes the Ministerial Retiring Allowances Fund. (b) State Government proportion of current pensions payable. (c) Includes both widows and children in receipt of pensions.

### Coal and oil-shale mine workers' superannuation schemes

In all States except South Australia superannuation schemes have been established for coal and oil-shale mine workers. These schemes are operated through funds to which mine workers, mine owners and the State Governments contribute.

### Private superannuation, pension and retiring allowance schemes

Details of the results of a survey of private superannuation, pension and retiring allowance schemes conducted by private businesses for the benefit of their employees during the year ended June 1963 or the accounting period nearest that year and of similar surveys conducted in 1960-61 and 1961-62 are published in Year Book No. 51 (pages 898-900).

In 1955-56, 1960-61, 1961-62, and 1962-63 sample surveys were conducted of pension and retiring allowance schemes in private businesses subject to pay-roll tax, other than in rural industries, private domestic service, and certain businesses such as accountants, trade associations, consultant engineers, etc. Commonwealth Government airlines and banks were included where they had

established their own funds separately from the Commonwealth superannuation funds, but statutory coal miners' pension funds were excluded. Details were asked for three types of pension and retiring allowance schemes. They were (a) schemes operated through life insurance offices, (b) schemes operated through separately constituted funds, and (c) direct payments of pensions and retiring allowances.

The results of the 1955-56 survey are available in *Finance Bulletin* No. 47, Part I—*Public and Private Finance*, and the 1960-61, 1961-62 and 1962-63 survey results were published in *Insurance and Other Private Finance*, Bulletin No. 2 and Year Book No. 51 (pages 898-900). Details of the operations of government and semi-governmental superannuation schemes were published in *Insurance and Other Private Finance*, Bulletins No. 1 and No. 2 for 1961-62 and 1962-63 respectively, and in Parts I of the *Finance Bulletin* for years prior to 1961-62. The results of the 1965-66 survey of government and semi-governmental superannuation schemes were published in November 1967 in a mimeographed bulletin. The monthly bulletin *Life Insurance Statistics* contains some information on the superannuation business of life insurance offices.

In the years 1956-57 to 1958-59, 1963-64 and 1964-65 information was collected from a small number of selected larger funds, and for the years 1955-56 and 1960-61 to 1962-63 the returns for the selected pension schemes were extracted from the sample surveys and tabulated in respect only of the business of their separately constituted funds. In order to improve the coverage of the surveys of selected pension funds, a larger number of funds were surveyed in 1964-65 than in previous surveys of selected funds. The results of the 1964-65 survey were published in September 1966 in a mimeographed bulletin.

Further surveys, relating to the same funds that were included in the 1964-65 survey of selected private pension funds, were made in respect of 1965-66, 1966-67, and 1967-68. The results of the 1967-68 survey are shown below, together with details of the 1964-65, 1965-66 and 1967-68 surveys for comparison. The separately constituted private pension funds included in these surveys accounted for about 72 per cent of the total contributions, 71 per cent of the income, 68 per cent of the expenditure, and 77 per cent of the assets of the funds covered by the 1962-63 sample survey.

Since the *Survey of Selected Private Pension Funds* for 1967-68 was not a representative sample, it is not known to what extent their share of the whole field has changed since the 1962-63 survey; nor is the pattern of income, expenditure and asset distribution of the large funds included in this survey necessarily representative of the whole field.

Net value . . .	\$'000	461,766	294,213	176,886	71,542	51,352	27,610

(a) Total estates of deceased persons assessed for death duty. (b) Net value includes duty-free bequests of \$613,000.  
(c) Figures not comparable with those for earlier periods. (d) Estates dealt with by the Taxation Department.

## CHAPTER 19

### PUBLIC FINANCE

The subject of public finance is dealt with in this chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand also a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States' securities existing at the date of the Agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of such securities. In view of this it is convenient to deal with the Commonwealth and State Government securities on issue in a separate division of this chapter (page 752). The subject of income taxes is also dealt with in a separate division at the end of this chapter (page 768).

For further detailed information on the subjects covered by this chapter see the annual bulletins published by this Bureau: *Australian National Accounts; National Income and Expenditure; Commonwealth Finance; State, Territory and Local Government Authorities' Finance and Government Securities;* and *Commonwealth Taxation Assessments*. Current information in summarised form is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, and the *Digest of Current Economic Statistics*. A mimeographed statement *Commonwealth, State and Territory Taxation Collections* is issued annually as soon as possible after the relevant information has been assembled.

#### COMMONWEALTH FINANCE

##### Financial provisions of the Constitution

The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (see pages 16–19 of this Year Book). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer from the States to the Commonwealth of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Sections 87 and 96 deal with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Year Book, and on pages 707–16 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The *Audit Act 1901–1966* lays down the procedure which must be followed in accounting for the receipt and disbursement of public funds. The general administration of Commonwealth finances is the responsibility of the Treasurer of the Commonwealth.

#### Commonwealth Public Account

##### Nature of account

The Commonwealth Public Account includes the Consolidated Revenue Fund, the Trust Fund and the Loan Fund. Ordinary revenues from taxation and other sources are paid into the Consolidated Revenue Fund, from which the main expenditures are for defence, war and repatriation services, social services, payments to the States, Commonwealth business undertakings (mostly postal, telephone and telegraph), and administration. The Trust Fund covers special transactions outside the ordinary operations of departmental expenditures, such as pension funds and moneys held for expenditure by the Commonwealth at some future time. The Loan Fund receives its funds from the sale of Commonwealth securities, and expenditures from the Fund are made in accordance with the purpose of issue of each loan. The main disbursements from the Loan Fund are to the States, either by way of distribution of the proceeds of loans raised by the Commonwealth on their behalf or in accordance with the provisions of the Commonwealth and State Housing Agreements, and the remaining disbursements are for Commonwealth purposes such as defence or war service land settlement.

**Summary of receipts and expenditure**

A summary of transactions on the Commonwealth Public Account for 1967-68 and the four preceding years is given in the table which follows. The transactions are recorded on a cash basis.

**COMMONWEALTH PUBLIC ACCOUNT: SUMMARY OF TRANSACTIONS**  
**1963-64 TO 1967-68**  
(\$ million)

	1963-64	1964-65	1965-66	1966-67	1967-68
Expenditure(a)(b) . . . . .	4,389.1	4,784.6	5,379.7	5,922.5	6,557.7

Credit arrangements for defence purchases in the United States of America . . . . .	..	..	..	90.6	132.1
Less repayments . . . . .	..	..	..	..	14.1
Net credit arrangements, etc.; U.S.A. . . . .	..	..	..	90.6	118.0
<b>Residual financing—</b>					
Borrowings from Reserve Bank . . . . .	-68.0	+38.0	-36.0	+165.0	+51.0
Treasury Notes (Issue +, Redemption -) . . . . .	+13.6	-72.1	+35.7	-25.9	+183.6
Cash balances (Increase -, Decrease +) . . . . .	-0.9	-3.6	-0.4	-0.9	+0.2
Total residual financing . . . . .	-55.3	-37.7	-0.7	+138.2	+234.7
<b>Total borrowings</b> . . . . .	395.8	156.8	251.1	534.6	595.3

(a) Excludes payments to Loan Consolidation and Investment Reserve: 1963-64, \$29.8 million; 1964-65, \$222.7 million; 1965-66, \$210.5 million; 1966-67, \$227.7 million; and 1967-68, \$312.8 million. (b) Comparisons between these figures are affected by accounting changes. (c) Overseas refinancing operations are treated as adding to both loan proceeds and redemptions where they involve receipts into and expenditures from Loan Fund. (d) Excludes State domestic raisings and loans raised on behalf of Qantas Airways and Australian National Airlines Commission.

Minus sign (-) denotes decrease.

**All Commonwealth funds: summary of receipts and expenditure**

The following table represents a reclassification of Commonwealth Government receipts and expenditure in a national accounts form. It includes the Commonwealth Government components (with slight re-arrangement) of Tables 57 and 60 in *Australian National Accounts, National Income and Expenditure 1967-68*. Advances to semi-governmental business undertakings are included in 'Other advances', but grants to other semi-governmental bodies (National Capital Development Commission, Australian National University, Stevedoring Industry Authority, etc.) are classified according to the final expenditure of the authority concerned.

<sup>(a)</sup> This table includes the Commonwealth Government component of Tables 66 and 75 in *Australian National Accounts, National Income and Expenditure 1958-59 to 1967-68* together with net expenditure on stocks.

### Main components of Commonwealth expenditure

The tables on pages 704-14 supply details of some of the main components of total expenditure of the Commonwealth Government.

#### Subsidies

The following table shows details of Commonwealth expenditure from all funds on assistance to primary producers, subsidies and bounties for the years 1963-64 to 1967-68. Expenditure on special relief such as drought, frost, flood, and bush fire, etc., is not included here (included as cash benefits to persons in tables, pages 705-6) nor is expenditure from the proceeds of certain taxes on primary products and profits from marketing schemes, which have been paid to trust funds for the purpose of price or other stabilisation schemes or for distribution to producers (*see* pages 729-30). Payments to the States for cattle tick control, dairy industry extension and agricultural advisory services are not included under this heading, but included under the heading Grants to the States (*see* pages 707-11). Further information relating to assistance to primary producers is given in the chapter Rural Industry. Details of price stabilisation subsidies and of various forms of assistance to primary producers for earlier years are given on pages 414 and 1014-15, respectively, of Year Book No. 38.

#### ALL COMMONWEALTH FUNDS: EXPENDITURE ON SUBSIDIES, 1963-64 TO 1967-68 (\$'000)

Further information concerning items in the two preceding tables is given in the appropriate chapters of this Year Book.

**Payments to or for the States**

An outline of the provisions of the Constitution providing for the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Year Book (see No. 37, pages 633 to 638). A distinction is made in this Year Book between (a) direct Commonwealth financial assistance to the States in the form of grants to provide revenue for general and specific purposes and (b) those forms of assistance for developmental and other specific purposes which include, in part or in total, payments made in the form of repayable advances. Some information about the more important or most recent of these forms of financial assistance is given on pages 713-6, but for greater detail on these and other forms of financial assistance see Year Book No. 51, pages 921-4, and earlier issues. Further information is available also in the chapters of this issue dealing with the respective subjects.

*Grants.* The following three tables show particulars of the amounts paid to the States as grants for the purposes referred to in (a) above.

The figures in the table above represent gross advances, and take no account of repayments made by the States.

*Contributions under Financial Agreement.* Details of the Financial Agreement between the Commonwealth and the States are given in Year Book No. 37, pages 685–90. Under this Agreement the Commonwealth undertook to contribute \$15,169,824 per annum towards interest payable on the State loan securities for a period of 58 years from 1 July 1927. This amount is distributed among the States as follows: New South Wales, \$5,834,822; Victoria, \$4,254,318; Queensland, \$2,192,470; South Australia, \$1,407,632; Western Australia, \$946,864; Tasmania, \$533,718. These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926–27 at the rate of \$2.50 per head of population, the rate at which the Commonwealth had contributed annually to the States since 1 July 1910 as compensation for the States relinquishing, after federation, the right to levy customs and excise duties.

In addition, under the Financial Agreement the Commonwealth agreed to make certain contributions to the National Debt Sinking Fund for redemption of State loan securities. Details of these are given on pages 761–3 of this chapter.

*Special grants to the States.* The Constitution provides in Section 96 for the granting of special financial assistance to the States. The Commonwealth Grants Commission inquires into and reports upon claims made by any State for a grant of financial assistance and any matters relevant thereto. The recommendations of the Commission in respect of the years 1964–65 to 1968–69 are shown in their two parts in the following table. One part is the Commission's estimate of the indispensable need of the claimant State for the year in which the payment is to be made after allowing a sufficient margin for safety. The other part is an adjustment of this estimate for an earlier year after an examination of the audited accounts for that year. Thus the grants for 1968–69 include an estimate of the indispensable need of the claimant State for 1968–69 and an adjustment to the estimated grant for 1966–67.

Under the provisions of the *States Grants Act 1965–1967*, the financial assistance grant paid to each State is determined by increasing the grant paid to that State for previous financial year (with the addition of \$2,000,000 to the grant paid to Queensland in each year up to 1969–70) in accordance with a formula using the percentage change of the population of the State during the year ending 31 December of the year of payment, the percentage increase in average wages for Australia as a whole for the year ended 31 March of the year of payment, and a betterment factor of 1.2 per cent.

(a) Adjustment to estimated grant paid two years previously.

*Natural disasters.* Under the States Grants (Drought Assistance) Acts, New South Wales, Victoria, Queensland and South Australia have been given Commonwealth financial assistance to relieve the effects of drought. In addition, the Commonwealth is assisting those States to meet budgetary problems arising from the effects of drought on their revenues.

Under the *Tasmania Grant (Fire Relief) Act 1967*, the Commonwealth provided for a maximum grant of \$14,500,000 as well as for loans where the State makes loans to assist in the rehabilitation and restoration for damage caused by bushfires in February 1967.

*Grants for road construction.* Details of the *Main Roads Development Act 1923-1925*, *Federal Aid Roads Acts 1926, 1931 and 1936*, *Federal Aid Roads and Works Act 1937*, *Commonwealth Aid Roads and Works Act 1947-1949*, *Commonwealth Aid Roads Act 1950*, *Commonwealth Aid Roads Act 1954*, *Commonwealth Aid Roads (Special Assistance) Act 1957*, and *Commonwealth Aid Roads Act 1959* are given in earlier issues of the Year Book (see No. 38, pages 787-8, No. 41, page 621, No. 46, page 838, and No. 51, page 922) and in the annual bulletin *Commonwealth Finance*. For details of the present scheme of Commonwealth assistance to the States for roads under the *Commonwealth Aid Roads Act 1964* which is to expire at the end of 1968-69. (See Official Year Book No. 54 page 744).

*Beef cattle roads.* The *States Grants (Beef Cattle Roads) Act 1968* provides for grants of \$39,500,000, \$9,500,000, and \$1,000,000 for Queensland, Western Australia, and South Australia respectively for a further programme of beef cattle road construction over a period of seven years commencing from 1 July 1967.

*Health reimbursement under Tuberculosis Act 1948.* The *Tuberculosis Act 1948* provided for the reimbursement by the Commonwealth of capital and maintenance expenditure incurred by the States in the provision of facilities for the diagnosis, treatment and control of tuberculosis. Re-imbursements from the National Welfare Fund of maintenance expenditure on tuberculosis hospitals are classified as cash benefits under Health and Welfare expenditure, and they equal the amounts by which such expenditures of the States in any financial year exceed those for the year 1947-48. As from 1 July 1948 the States have also been reimbursed from annual appropriations of the Department of Health for all their capital expenditure on buildings, furnishings, equipment, and plant.

The *States Grants (Mental Health Institutions) Act 1964-1967* authorised assistance to the States amounting to one-third of their total expenditure on building and equipping approved mental health institutions during the six years ending 30 June 1970.

*Education.* Payments to the States for universities were first introduced in 1951-52, and details of the States Grants (Universities) Acts under which they were continued are given in earlier issues of the Year Book (see No. 51 page 923 and No. 52 page 770). The *Universities (Financial Assistance) Act 1967* authorised grants totalling approximately \$175,600,000 for the Commonwealth share of the agreed programme of development of State Universities for the years 1967 to 1969. (See also the chapter Education, Cultural Activities, and Research, pages 515-21.)

*Colleges of Advanced Education.* Under the States Grants (Advanced Education) Acts, the Commonwealth is providing financial assistance to the States for recurrent and capital expenditures of Colleges of Advanced Education.

The *States Grants (Science Laboratories) Act 1968* extends for the three years ending 30 June 1971 the operation of the scheme outlined in Official Year Book No. 54 page 745. A total payment of \$37.7m is provided for and not more than one-third may be authorised for payment before 30 June 1969 and two-thirds before 30 June 1970.

Grants for buildings and equipment for use in technical training in schools and colleges conducted by States only are provided for under the *States Grants (Science Laboratories and Technical Training) Act 1964* and the *States Grants (Technical Training) Act 1965-1966*.

Under the *States Grants (Research) Act 1966* the Commonwealth is making available during the 1967-1969 triennium \$9,000,000 to support selected research projects.

Under the *States Grants (Teachers Colleges) Act 1967* the Commonwealth is providing a maximum amount of \$24,000,000 over the three years ending 30 June 1970 for the construction and equipping of teachers colleges.

Under the *States Grants (Secondary School Libraries) Act 1968* grants totalling \$27m are to be made to the States over the three years commencing 1 January 1969 to finance buildings and associated capital facilities for libraries in government and non-government secondary schools.

The *States Grants (Pre-school Teachers Colleges) Act 1968* provides for capital grants totalling \$2.5m over the three financial years commencing 1968-69 for the purpose of increasing the physical capacity of approved pre-school teachers colleges.

#### *Railway projects*

The *Railway Agreement (New South Wales) Act 1968* provides for a contribution of \$10m towards the cost of improving the existing railway from Parkes to Broken Hill as a work necessary to provide a uniform gauge railway across Australia.

*Other railway projects.* The Commonwealth is also continuing to provide financial assistance to South Australia and Western Australia under its railway standardisation agreements with those two States.

#### *Water resources*

*Investigation and measurement of water resources.* The *States Grants (Water Resources Measurement) Act 1967* authorised payments to the States of up to \$4,500,000 during the three years ending 30 June 1970 to assist State programmes of water measurement and investigation of underground water resources.

*Chowilla Reservoir.* As further work on this project was suspended in August 1967 pending a reassessment by the River Murray Commission of the relationship between costs and benefits of the scheme, Commonwealth assistance has been confined to meeting contractual commitments already entered into by the constructing authority. A number of operational studies were proceeding at 30 June 1968 including an assessment of the likely yield benefits from both Chowilla and any alternative storage on the Upper Murray in catchments controlled by the River Murray Commission.

*Maraboon Dam.* The *Queensland Grant (Maraboon Dam) Act 1968* provides for grants to Queensland of up to \$20,000,000 for the construction of a dam on the Nogoa River near Emerald.

*Ord River Irrigation Project.* The *Western Australia (Ord River Irrigation) Act 1968* provides for financial assistance to Western Australia on the basis of grants for dam construction and interest-bearing loans in respect of the irrigation works.

*River Murray salinity reduction.* The *Victoria Grant (River Murray Salinity) Act 1968* provides for grants to Victoria of up to \$3,600,000 for two salinity reduction projects on the River Murray.

*Flood mitigation, New South Wales.* Commonwealth payments under the *New South Wales Grant (Flood Mitigation) Act 1964-1968* are limited to \$8,000,000 in respect of flood mitigation works on the Macleay, Clarence, Richmond, Tweed, Shoalhaven, and Hunter Rivers. The Commonwealth grants will match State expenditure which, in turn, will be in a prescribed ratio to local authority expenditure on flood mitigation works.

*Blowering Reservoir, New South Wales.* The Blowering Reservoir is to be constructed at the expense of the State of New South Wales mainly by the Snowy Mountains Hydro-electric Authority, and the Commonwealth will finance half the cost in the form of repayable interest-bearing loans to that State.

Under the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*, the Commonwealth is providing financial assistance of up to \$10,500,000 by way of interest-bearing loans to Western Australia to accelerate works undertaken by the State to extend the comprehensive water supply scheme in the south-west portion of the state.

#### *Other specific purpose payments*

*Brigalow lands.* Under the *Brigalow Lands Agreement Acts Commonwealth advances to the State of Queensland for specified works associated with the production of beef cattle and other*

primary products in the Fitzroy River Basin and the supply of beef for export are fixed at an overall limit of \$23,000,000. Repayments over a twenty-year period are to commence in 1968 in respect of advances made prior to 1 July 1967 and in 1971 in respect of advances made from 1 July 1967.

*Development of Exmouth township, Western Australia.* In 1967-68 the Commonwealth contributed an amount of \$417,000 to the Western Australian Government towards the cost of developing a township at Exmouth in connection with the United States Communications Base being established at North West Cape.

*Weipa development, Queensland.* Under the *Weipa Development Agreement Act 1965* the Commonwealth provided financial assistance of \$3,270,000 during 1965-66 and 1966-67 to Queensland by way of interest-bearing advances to finance harbour works carried out at Weipa on Cape York Peninsula.

*Natural gas pipeline, South Australia.* Under the *Natural Gas Pipeline (South Australia) Agreement Act 1967* the Commonwealth is providing a maximum of \$15,000,000 by way of interest-bearing loans to help finance the construction of a pipeline to transport gas from natural gas fields at Gidgealpa and Moomba.

*Softwood forestry.* The *Softwood Forestry Agreement Act 1967* authorises the Commonwealth to provide assistance during the five years ending 30 June 1971 for increased planting of softwood forests. Total assistance of the order of \$20,000,000 is in the form of interest-bearing loans repayable over twenty-five years.

The *Tasmania Agreement (Hydro-Electric Power Development) Act 1968* provides for interest-bearing loans with an overall limit of \$47m to Tasmania for the financing of a five-year programme of accelerated hydro-electric development based on the commencement of development of the Gordon River area in the south west of the State.

#### War service land settlement

The following section deals with the financial operations of the War Service Land Settlement Division of the Department of Primary Industry. This information was formerly included in the chapter Land Settlement and Tenure (*see Year Book No. 52, page 80*). Additional information concerning the operations of the Division appears in Chapter 21, Rural Industry.

#### *Loans and Allowances (Agricultural Occupations) Scheme*

Full details of the measures taken for the re-establishment of ex-servicemen in rural occupations were given in earlier Year Books (*see List of Special Articles, etc., preceding General Index to this volume*). These measures provide for a scheme of loans and allowances to assist ex-servicemen in establishing themselves in agricultural occupations. The loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or

discharge of a mortgage, bill of sale, etc. At 30 June 1968, 14,307 loans had been approved, and advances amounting to \$20,357,000 had been made. The allowances are payable only in respect of the period during which the income derived from the occupation by the ex-serviceman concerned is considered inadequate. At 30 June 1968, 16,114 applications for allowances had been made, and the total amount paid in allowances was \$4,553,000.

Year Book No. 48 (page 98) contains details of the applications received and approved and the amounts involved for the individual States and Territories to 30 June 1961. There has been little subsequent change.

#### War Service Land Settlement Branch—total expenditure

The following table shows the total expenditure on various projects by the War Service Land Settlement Branch to 30 June 1968.

#### COMMONWEALTH WAR SERVICE LAND SETTLEMENT BRANCH: EXPENDITURE STATES AND TERRITORIES TO 30 JUNE 1968 (\$'000)

(a) Excludes interest, rent, and rates, \$32,568,000. (b) Includes expenditure on new loans of money repaid by borrowers. (c) Includes Northern Territory, \$20,000 and New Guinea, \$14,000. (d) Excludes interest, \$3,062,000. (e) Includes New Guinea, \$3,000. (f) Includes Northern Territory, \$20,000 and New Guinea, \$17,000. (g) Excludes interest, rent, and rates, \$32,568,000.

### All Commonwealth funds: receipts

#### Commonwealth taxation

Taxation constitutes the main sources of Commonwealth revenue, accounting for almost 90 per cent in 1967-68. The following tables show details of taxation receipts from each source during the years 1963-64 to 1967-68 and their proportions of the totals.

#### ALL COMMONWEALTH FUNDS: TAXATION RECEIPTS, 1963-64 TO 1967-68 (\$'000)

**Other Commonwealth taxation**

Taxes other than customs and excise duties, the various export charges and some taxes on particular commodities are assessed and collected by the Commissioner of Taxation. The Commissioner's organisation comprises a head office in Canberra, an office in each State assessing the returns of taxpayers whose interests are restricted to that State, and a central office situated in Melbourne assessing taxpayers whose interests are in the Australian Capital Territory or are in more than one State.

Details of the purposes and rates applicable to the main forms of Commonwealth taxation, excluding customs and excise, currently imposed and of current legislation are given in the following pages. Historical information is given in Year Book No. 51, pages 905-10, and in earlier issues.

Taxes on income are treated separately on pages 763-73 and customs and excise duties are dealt with in the chapter Overseas Transactions. For detailed statistics relating to Commonwealth income taxes, estate duty, gift duty, and sales tax see the annual bulletin *Commonwealth Taxation Assessments*.

*Sales tax.* The general rate of tax levied on all goods other than those specified in the schedules to the *Sales Tax (Exemptions and Classifications) Act 1935-1968* was raised from 12½ per cent to 15 per cent from 14 August 1968 and goods subject to special rates were taxed at the rates of 2½ and 25 per cent.

Particulars of the net amount of sales tax payable and the sales of taxable and exempt goods in each State for 1967-68 are given in the following table. The figures relate to sales during the period 1 July to 30 June. The figures for sales tax payable differ from those for net collections shown on page 717 because the latter include some adjustments in respect of earlier tax years and relate to tax payable on returns lodged during the year, which in general cover sales for the period June to May.

(a) Includes Australian Capital Territory.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole are shown in the following table for the years 1963-64 to 1967-68.

COMMONWEALTH SALES TAX AND AMOUNT OF SALES  
AUSTRALIA, 1963-64 TO 1967-68  
(\$ million)

<i>Year of sale</i>	<i>Net sales on which sales tax was payable</i>	<i>Sales of exempt goods by registered persons</i>	<i>Total sales of taxable and exempt goods</i>	<i>Sales tax payable</i>
1963-64 . . . . .	2,393	6,116	8,509	329
1964-65 . . . . .	2,589	6,819	9,408	365
1965-66 . . . . .	2,645	7,112	9,757	367
1966-67 . . . . .	2,838	7,802	10,640	386
1967-68 . . . . .	3,095	8,394	11,489	424

In the foregoing tables sales include goods transferred to stock for sale by retail, goods imported by persons other than registered taxpayers, and goods used in the business of the taxpayer. Exempt sales relate to goods exempted from sales tax under the *Sales Tax (Exemptions and Classifications) Act 1935-1968*. The figures shown do not represent the total sales of all commodities, as vendors trading only in exempt goods are not required to be registered, and consequently the volume of their sales is not included in the statistics above. In addition, non-taxable sales (i.e. goods sold by one registered taxpayer to another registered taxpayer) are excluded.

*Pay-roll tax* came into operation on 2 May 1941 and provided for the imposition of a tax on wages accruing after 30 June 1941. The relevant laws are *Pay-roll Tax Assessment Act 1941-1968*, *Pay-roll Tax Act 1941-1966*, and *Pay-roll Tax Regulations*. From 1 September 1957 pay-roll tax of 2½ per cent (rate unchanged since its inception) was payable by employers on all wages and salaries in excess of \$400 a week or \$20,800 per annum. Collections of pay-roll tax amounted to \$172,232,000 in 1966-67 and \$184,416,000 in 1967-68.

The *Payroll Tax Assessment Act* 1968 continues for five years until 30 June 1973, with some important modifications, the operation of the payroll tax rebate which was introduced in 1961 as an export incentive and which expired on 30 June 1968.

A rebate of payroll tax is available in certain circumstances to employers who increased the level of their annual export sales above their average annual export sales in a base period. For export sales up to 30 June 1968 the base period was the two years ended 30 June 1960. From 1 July 1968 the base period is represented by the first three years of the eight year period preceding the rebate year. A special formula applies in the case of a new exporter by which a person who did not export in any of the three years ended on 30 June 1961 progressively reaches the same position as an established exporter. The rebate is equivalent to 10.5 per cent of the increase in exports for the rebate year over the average annual exports in the base period.

*Estate duty.* Under the *Estate Duty Assessment Act* 1914-1967 estate duty is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula, applying from 31 October 1963: (a) where the whole of the estate passes to the widow or widower, children (including adopted children, step-children and ex-nuptial children), or grand-children of the deceased, the sum of \$20,000 decreasing by \$2 for every \$8 by which the value exceeds \$20,000 and ceasing to apply at \$100,000; (b) where no part of the estate passes to the widow or widower, children or grand-children, the sum of \$10,000 decreasing by \$2 for every \$8 by which the value exceeds \$10,000 and ceasing to apply at \$50,000; and (c) where only part of the estate passes to the widow or widower, children or grand-children, an amount calculated proportionately under (a) and (b). Special exemptions are also allowed in respect of estates of defence personnel who die on active service or within three years of termination of their active service from injuries received or diseases contracted while on active service, and prescribed personal property held in Australia by certain United States personnel who are in Australia solely for purposes connected with projects of the United States Government. A rebate of duty may be allowable if the deceased was a beneficiary in an estate (upon which duty is payable or has been paid) of a person who predeceased him by not more than five years.

The rates of duty levied under the *Estate Duty Act* 1914-1966 increase as the value of the estate for duty increases, as follows: does not exceed \$20,000, 3 per cent; \$20,001 to \$40,000, 3 per cent to 6 per cent; \$40,001 to \$240,000, 6 per cent to 26 per cent; \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; \$1,000,000 or more, 27.9 per cent.

Particulars of the number and value of estates and duty assessed, for each of the assessment years 1964-65 to 1968-69, are given in the following table.

#### COMMONWEALTH ESTATE DUTY ASSESSMENTS, 1964-65 TO 1968-69

		1964-65	1965-66	1966-67	1967-68	1968-69

Average duty assessed per estate . . . . .	\$	3,295	3,508	3,634	3,983	4,541

(a) Debts, Exempt Estate and State Probate Succession Duties.

*Gift duty.* The *Gift Duty Act* 1941-1966 and the *Gift Duty Assessment Act* 1941-1967 impose a gift duty on gifts made after 29 October 1941. A gift is defined as any disposition of property which is made otherwise than by will, without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty. However, if a return is furnished by the donor, the donee is relieved of this obligation.

Certain exemptions from duty are provided by the Assessment Act, the more important being: payments to an employees' superannuation or like fund; retiring allowances or gratuities granted to employees; gifts to non-profit organisations; gifts to the Commonwealth or a State; and small gifts not exceeding \$100.

The rate of gift duty applicable to any particular gift is fixed by reference to the total value of all gifts made by the same donor within the period of eighteen months before and eighteen months after the time of making that gift. Where the total value of all gifts as defined does not exceed \$4,000, no duty is payable; The present rates of duty are (a) \$4,001 to \$20,000, 3 per cent provided that the gift duty payable shall not exceed half the amount by which the gift exceeds \$4,000, or a proportionate amount where more than one gift is involved; (b) \$20,001 to \$40,000, 3 per cent to 6 per cent; (c) \$40,001 to \$240,000, 6 per cent to 26 per cent; (d) \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; and (e) \$1,000,000 or more, 27.9 per cent.

Particulars of the number of gift duty assessments, value of gifts as assessed and duty assessed for each of the assessment years 1964-65 to 1968-69 are given in the following table.

## COMMONWEALTH GIFT DUTY ASSESSMENTS, 1964-65 TO 1968-69

		1964-65	1965-66	1966-67	1967-68	1968-69
Assessments . . . . .	No.	8,306	7,516	8,946	9,293	10,053
Value as assessed . . . . .	\$'000	124,709	111,658	130,771	150,322	163,476
Duty assessed . . . . .	"	6,870	5,911	7,633	8,701	9,501

*Wool tax.* The present rate of wool tax is 2 per cent of the sale value of the wool and this rate has operated since 1 July 1965.

*Wheat export charge and wheat tax.* The *Wheat Export Charge Act 1968* repealed the *Wheat Export Charge Act 1963-1966* and provided for an export charge on wheat and wheat products for the seasons 1968-69 to 1972-73 inclusive. The charge which may be levied is the excess of the export price over the sum of the guaranteed price and five cents per bushel, the maximum charge being 15 cents per bushel. Under the *Wheat Industry Stabilization Act 1968*, to which the *Wheat Export Charge Act* is complementary, the Commonwealth Government guarantees a return to wheat-growers of 145 cents per bushel for fair average quality bulk wheat, free on board vessel on up to 200 million bushels of wheat harvested each season exported from Australia. Collections from the wheat export charge are paid into the *Wheat Prices Stabilization Fund*, out of which payments are made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price in respect of exports up to 200 million bushels. When the fund is exhausted (as it was at 30 June 1968) payments will be made as necessary from the Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 (No. 20) Pool, when \$3,178,000 was collected. The *Wheat Tax Act 1957-1966* imposes a tax of three-tenths of a penny (0.25 cents) for each bushel of wheat delivered to the Wheat Board on or after 1 October 1965. (*See also* the chapter Rural Industry).

*Miscellaneous export charges.* These consist of charges levied on exports of apples and pears (*Apple and Pear Export Charges Act 1938-1968*), canned fruits (*Canned Fruits Export Charges Act 1926-1966*), dried fruits (*Dried Fruits Export Charges Act 1924-1965*), and eggs (*Eggs Export Charges Act 1947-1965*).

*Stevedoring Industry Charge.* The rates in operation since 27 November 1967 have been as follows:

Class of Waterside Worker	Rate
	\$
A . . . . .	16.85 per man-week
B . . . . .	0.80 per man-hour
C . . . . .	0.55 per man-hour

Class A waterside workers are regular waterside workers on weekly hire in permanent and non-permanent continuous ports. Class B are regular casual workers in non-permanent continuous ports and Class C are regular casual workers in non-continuous and seasonal ports and irregular workers in all ports.

*Tobacco charge.* The rates of tobacco charge currently in force are as follows:

- (a) in respect of leaf sold to a manufacturer:
  - (i) one half cent per pound of leaf, payable by the grower or other persons who own the leaf immediately before sale, and
  - (ii) one cent per pound of leaf, payable by the manufacturer;
- (b) in respect of leaf grown and used by grower-manufacturers:
  - (i) where the manufacturer grows nine-tenths of the leaf used by him—one half cent per pound of leaf,
  - (ii) in other cases—one cent per pound of leaf.

(*See also* the chapter Rural Industry.)

*Dairy produce and butterfat levies.* The *Butter Fat Levy Act 1965-1966*, which superseded the *Dairy Produce Levy Act 1958*, and the *Dairy Produce Export Charge Act 1924-1962* provide for a maximum rate of \$0.60 per hundredweight of butterfat content of specified dairy produce and for the apportionment of the proceeds between overseas marketing (40 per cent), local promotion (40 per cent), and research (20 per cent). (*See also* the chapter Rural Industry).

*Canning-fruit charge.* The present rate of canning-fruit charge is \$0.75 per ton of fruit. This rate has operated since 1 December 1964.

*Honey levy.* The current rate of levy on honey sold for domestic consumption in Australia is four-tenths of a cent per pound.

*Livestock slaughter levy.* The present operative rate of levy for cattle is 33 cents per head of which 20 cents is for beef research, 1 cent for research into the meat processing industry and 12 cents to finance the operations of the Australian Meat Board. For sheep and lambs the levy is 3.1 cents per head and the components are 1.75 cents for sheep meat research, 0.1 cents for research into the meat processing industry and 1.25 cents for the Australian Meat Board.

*Dried Vine Fruits Contributory Charge.* Charges in respect of 1965 season fruits were paid into the varietal stabilisation funds at the following rates: currants, \$4.12 a ton, and raisins \$3.76 a ton.

*Poultry industry levy.* The rates of levy for each hen kept for commercial purposes (the first twenty hens being exempt) was three pence and one farthing per fortnight from 1 July 1965 to 23 February 1966, 2.8 cents per fortnight from 23 February 1966 to 13 July 1966, 3.5 cents per fortnight from 13 July 1966 to 19 April 1967, 5.0 cents per fortnight from 19 April 1967 to 12 July 1967, 4.0 cents per fortnight from 12 July 1967 to 11 June 1968, 2.0 cents per fortnight from 12 June 1968 to 30 June 1968 and 4.0 cents per fortnight from 1 July 1968.

## Commonwealth Consolidated Revenue Fund: expenditure

### Details of expenditure from Consolidated Revenue

In the following table gross expenditure from Consolidated Revenue is classified by function and economic type, the classification being consistent with that used for tables on pages 701-3. As with grants to other Commonwealth authorities, transfers to trust funds are here classified as expenditure according to the nature of the respective trust funds. Further information on the expenditure of business undertakings and the Territories, and on other particular functions is included in the chapters Transport and Communication and The Territories of Australia and in the chapters dealing with the respective activities.

(a) Includes expenses of undertakings in Northern Territory and Australian Capital Territory. (b) Includes grants to Administration of Papua and New Guinea and grants under Colombo Plan, United Nations Technical Assistance Administration, etc. (c) Includes \$21,000,000 devaluation compensation paid to marketing authorities. (d) Includes \$19,768,000 for sugar marketing assistance and \$3,999,000 for sugar industry assistance. (e) Excludes loan management expenses included in other functions.

More detailed information on defence expenditure, on current and capital expenditure on goods and services, and on primary production research and sales promotion, etc. is given in the following tables.

#### Defence services expenditure

Details of the expenditure on defence services shown in the following table cover expenditure from Consolidated Revenue and Loan Funds by the services and associated departments, including the cost of maintaining forces in overseas posts. In recent years there has been no expenditure on defence services from Trust Funds.

**COMMONWEALTH CONSOLIDATED REVENUE FUND**

**Current expenditure on goods and services**

This table gives details of expenditure on items included under this general heading in the table on pages 724-5, and in the main includes expenditure on administrative services and other activities (i.e. what might be termed 'running expenses') and therefore *excludes* expenditure on capital works (see table on page 729). Information on the functions of departments and the Acts administered by the Ministers of Departments may be found on pages 87-98 of Year Book No. 49.

**Expenditure on primary production—research and sales promotion, export funds, etc.**

Expenditure under this item is classified in the table on page 727 to development of resources and assistance to industry as it includes the proceeds of special industry taxes and profits from marketing schemes which are paid to trust funds or other authorities for the purposes of the industries concerned. Information relating to the taxes levied is given in the table on page 720. Some details of expenditure from the trust funds are included in the table on page 731. Details of expenditure from the Consolidated Revenue Fund during the last five years are given in the following table.

### Commonwealth Loan Fund

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Year Book (*see* No. 37, page 640). The following tables show details for the years 1963-64 to 1967-68 of receipts by, and expenditure from, Commonwealth Loan Fund in respect of loans raised for both Commonwealth and State Governments. Information relating to the Commonwealth Government securities on issue is given in the division Government Securities on Issue, Commonwealth and States, of this chapter.

## STATE FINANCE

## Functions of State Governments

In comparing the financial results of the States allowances must be made for the various functions discharged by the respective State Governments and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult owing to the fact that functions which in one State are assumed by the central government are in another delegated to local government or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the central government. Care is needed, therefore, in making comparisons, and the particulars contained in this chapter should be read with those contained in the chapter Local Government.

## Accounts of State Governments

The various financial transactions of the States are in each case concerned mainly with one or other of three funds—the Consolidated Revenue Fund, the Trust Fund and the Loan Fund.

All revenue (except certain items paid into special funds) collected by a State is paid into its *Consolidated Revenue Fund*, from which payments are made under authority of an annual Appropriation Act passed by the legislature, or by a permanent appropriation under a special Act. Figures relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the business undertakings included in the annual budget papers. These undertakings are: railways, tramways and omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to eliminate duplications caused by inter-fund payments. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The *Trust Fund* comprises all moneys held in trust by the Government and includes such items as superannuation funds, road funds, insurance companies' deposits, etc.

The *Loan Fund* is debited with all loan moneys raised for the State and credited with the expenditure therefrom on public works or other purposes.

#### Inter-relation of Commonwealth and State finances

A statement in some detail, covering the inter-relation of Commonwealth and State finances during the period from the inception of federation to the passing of the *Financial Agreement Act* 1928, was published in Year Book No. 22, pages 379-80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Year Book from year to year.

### State Consolidated Revenue Fund: expenditure

The principal heads of State expenditure from Consolidated Revenue Funds are: (a) interest, exchange and debt redemption charges in connection with debt; (b) working expenses of business undertakings; (c) education; (d) health and charitable expenditure; (e) justice; (f) police; (g) penal establishments; and (h) all other expenditure, including expenditure on public works, lands and surveys, agriculture and forestry, legislative and general administration, pensions, and miscellaneous.

In 1967-68 education constituted 25.2 per cent of the total expenditure from the State Consolidated Revenue Funds; the working expenses of railways, tramways, and omnibuses, 19.8 per cent; debt charges, 17.2 per cent; charitable, public health and hospitals, 13.4 per cent; and law, order and public safety, 6.2 per cent.

#### Total expenditure

The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1963-64 to 1967-68 are shown in the following table.

STATE CONSOLIDATED REVENUE FUND EXPENDITURE, 1963-64 TO 1967-68

### State Consolidated Revenue Fund: receipts

The principal sources of State revenue are: (a) taxation; (b) the business undertakings controlled by the State Governments; (c) sale of and rental from crown lands; (d) interest on advances; (e) payments by the Commonwealth Government under the Financial Agreements, Special Grants and Financial Assistance Acts, etc.; (f) Commonwealth National Welfare Fund payments; and (g) miscellaneous sources, comprising fines, fees, etc.

Of these sources, that yielding the largest revenue to the Consolidated Revenue Funds for the States as a whole in the year 1967-68 was Commonwealth payments under financial assistance and other grants (40.5 per cent of the total revenue). Next in magnitude was the group of business undertakings (25.0 per cent), the principal contributors being the Government railways and tramways, followed by taxation receipts (19.5 per cent). More than one-quarter of the total State taxation collections are not paid into Consolidated Revenue Funds, however, but into trust and other funds (see page 740). Of the remaining sources of revenue, interest (n.e.i.) constituted 4.2 per cent, land revenue 2.5 per cent, and National Welfare Fund payments 1.0 per cent.

#### Total receipts

The following table shows particulars of the total receipts and the receipts per head of population of the Consolidated Revenue Funds of the several States.

# STATE CONSOLIDATED REVENUE FUNDS

1967-68

(a) See page 734. (b) Tasmanian transport services are under the separate control of semi-governmental authorities. (c) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (d) Excludes Commonwealth payments paid to trust funds. (e) Includes payments under Financial Agreement, special grants, additional financial assistance, grants to universities, etc. (f) Consolidated Revenue Fund receipts only. Excludes payments to Trust Funds.

## State receipts from taxation

In the tables on taxation collections in these paragraphs the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under Racing instead of under Stamp duties and Licences respectively.

## Net taxation collections

The following tables show, for the year 1967-68, details of the collections by each State from the various types of tax in operation, irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and present a comprehensive statement of all taxation collections in each State. For local government taxation collections, see chapter 20.

**State Consolidated Revenue Fund receipts  
from business undertakings**

A considerable proportion of State gross revenue is made up of receipts from business undertakings under the control of the Governments. The most important of these are railways and tramways, harbour works, water supply and sewerage, and electricity supply. In addition, State batteries for the treatment of auriferous ores in Western Australia and various minor revenue-producing services rendered by the Governments of all States are included. For the year 1967-68 the receipts from these sources was \$615,431,000 or 25.0 per cent of the receipts from all sources.

**STATE CONSOLIDATED REVENUE FUND: RECEIPTS FROM BUSINESS

### Other State Consolidated Revenue Fund receipts

#### State land receipts

The receipts from the sale and rental of Crown lands have, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and have been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1967-68.

STATE CONSOLIDATED REVENUE FUND: LAND RECEIPTS, BY SOURCE, 1967-68  
(\$'000)

Source	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total
Sales . . . . .	2,896	484	2,430	245	374	185	6,614

<b>Total . . . . .</b>	<b>22,917</b>	<b>9,144</b>	<b>13,281</b>	<b>2,074</b>	<b>11,845</b>	<b>1,972</b>	<b>61,233</b>

(a) Includes mining royalties, rents, etc.

The total land receipts for all States for the years 1963-64 to 1967-68 respectively were: \$38,478,000, \$56,458,000, \$62,281,000, \$61,635,000, and \$61,233,000.

#### State receipts from Commonwealth grants

Commonwealth grants to the States represent a very large proportion of the States' receipts. In 1967-68 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was \$998,000,000 (40.5 per cent). Details were as follows: contribution towards interest on States' debts under the Financial Agreement, \$15,170,000; special grants to the States of Western Australia and Tasmania, \$35,407,000; financial assistance, \$907,539,000; drought assistance, \$24,605,000; grants to universities, \$9,695,000; and other grants, \$5,584,000. In addition to these, the States receive a number of other grants which are paid to Trust Funds. The main items in this class are the contribution to the sinking fund on States' debts (\$20,387,000 in 1967-68) paid to the National Debt Sinking Fund, grants for Commonwealth Aid Roads (\$160,000,000 in 1967-68), and grants for universities (\$46,546,000 in 1967-68) paid to State Trust Funds. More detailed information concerning Commonwealth grants to the States is given on pages 707-11.

#### State receipts from Commonwealth National Welfare Fund

The States also receive payments from the Commonwealth in respect of hospital and pharmaceutical benefits, milk for school children, and reimbursement of maintenance expenditure on tuberculosis sanatoriums. These receipts are paid into Consolidated Revenue Funds or Trust Funds according to the varying accounting procedures in the States. In 1967-68 the total amount paid to State Consolidated Revenue Funds was \$25,232,000 (1.0 per cent). This amount was made up of hospital benefits, \$3,463,000; pharmaceutical benefits, \$8,341,000; milk for school children, \$3,357,000; tuberculosis—reimbursement of maintenance expenditure, \$9,001,000; other, \$1,070,000.

Minus sign (-) indicates deficit.

## State Loan Funds

The principal purpose of State public borrowing is to assist in financing the development of the resources of the country, e.g. the establishment and operation of railway systems and electricity undertakings, construction of roads and water and sewerage works, and improvements to harbours and rivers.

Statements relating to 'gross' loan expenditure are shown on page 745. Gross expenditure represents the amounts disbursed during each year. Details of 'net' loan expenditure, i.e. gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds, may be found in the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

## Gross loan expenditure

Particulars of gross loan expenditure on works, services, etc., are shown in the following tables.

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC.: DETAILS, 1967-68

(a) Includes exchange, discounts and flotation expenses, revenue and general cash deficits. (b) From Consolidated Revenue Fund.

Information relating to the government securities and borrowings on issue on behalf of the States is given in the division on Government Securities on Issue: Commonwealth and States (see page 748).

## COMMONWEALTH AND STATE FINANCE

## Consolidated Revenue Fund expenditure and receipts

The following table shows the aggregate expenditure and receipts of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1963-64 to 1967-68. In the table the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other divisions of this chapter. The items excluded from the total figures are: payments made by the Commonwealth to the States and included in the State Consolidated Revenue Funds on account of financial assistance grants in 1963-64 to 1967-68, interest under the Financial Agreement, special grants, special financial assistance, grants to universities, specific purpose payments, Tuberculosis Act capital expenditure, National Welfare Fund payments, and estimated payments of pay-roll tax by the States to the Commonwealth. There are other relatively minor payments for which adjustments have not been made, and the adjusted figures are therefore still slightly overstated.

## COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUND EXPENDITURE AND RECEIPTS, 1963-64 TO 1967-68

Year	Expenditure			Receipts		
	Commonwealth	States	Total	Commonwealth	States	Total

### GOVERNMENT SECURITIES ON ISSUE: COMMONWEALTH AND STATES

For the following reasons, Government Securities on Issue, as set out in the tables in this division, may not be aggregated without adjustment to indicate what is sometimes described as the 'public debt' or 'net public debt' of the Commonwealth and State Governments. There are forms of debt not evidenced by the issue of securities. Again, some of the securities included in the tables are held by the Governments themselves. For example, a State Government may hold temporarily, or even for long periods, securities issued by the Commonwealth Government. The Commonwealth Government itself, through such institutions as the National Debt Commission, or through the Trust Funds, holds large investments in securities issued, either directly by itself or on behalf of the States. In addition, some of the securities issued on behalf of the States and held by the Commonwealth Government represent the proceeds of overseas loans, securities for which were issued directly by the Commonwealth Government. From the point of view of the aggregate net debt of the Commonwealth and the States, it would thus involve duplication if the sum of the securities on issue were to be regarded as representing the 'net public debt'.

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth Government accepted responsibility for the securities of the State Governments then on issue, and was empowered to arrange for all future borrowings on behalf of the Commonwealth and the States and to issue Commonwealth securities for all money borrowed. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf, and the securities are redeemed from the National Debt Sinking Fund to which both the Commonwealth and State Governments make contributions.

In the statistical tables relating to Government securities, details of securities on issue, annual interest liability and average rate of interest liability, except on pages 752-4, are shown in the currencies in which they are repayable or payable respectively. Australian currency equivalents for overseas loans have been calculated using International Monetary Fund par rates of exchange (and the calculated equivalent for Swiss francs) ruling at 30 June in each year shown. Rates of exchange to \$A at 30 June 1968 were as follows: £Sterling, 0.46667; United States dollars, 1.1200; Canadian dollars, 1.2108; Swiss francs, 4.8978; Netherlands guilders, 4.0544; Deutsche marks, 4.4800.

The full text of the original Financial Agreement between the Commonwealth and the States was given in Year Book No. 31, page 21, a summary of the original Agreement as affected by the subsequent Agreements in later issues up to No. 37 (see pages 685-90), and a summary of the main provisions in further issues up to No. 50 (see pages 952-3).

### Government securities on issue: Commonwealth and States

Government securities on issue, annual interest payable and average rate of interest

In the following tables details are given of government securities on issue on account of the Commonwealth and States, annual interest payable and average rates of interest.

**Government securities on issue at each rate of interest and according to earliest and latest years of maturity**

For details of securities on issue for Commonwealth and State purposes at 30 June 1968 at each rate of interest and classified according to the earliest and latest years of maturity *see* the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*.

**Short-term securities on issue**

Particulars of the short-term securities (Treasury bills, Treasury notes and seasonal securities) of the Commonwealth and States in Australia at intervals from 30 June 1963 to 30 June 1967 are shown on page 814 of Year Book No. 53, and particulars at earlier dates are shown in previous issues. These securities are included in the government securities on issue as shown elsewhere. No short-term securities have been raised overseas since September 1956, when all such securities held in London were expatriated to Australia.

The Treasury bill discount rate in Australia has remained at 1 per cent since 29 July 1952.

In 1962–63, daily issues of Treasury notes replaced those of seasonal securities which had, during the three previous financial years, all matured in the course of the same financial year in which they were issued. Treasury notes with a currency of thirteen weeks were issued in multiples of \$2,000 of the minimum subscription of \$10,000. In 1967–68 the issue prices of Treasury notes were 99.95 per cent from 1 July to 13 July, 98.95 per cent from 14 July to 23 November, 98.89 per cent from 24 November to 7 March and 98.91 per cent from 8 March to 30 June and yields varied accordingly from 4.256 per cent to 4.502 per cent.

**Government securities on issue on account of the States; local government and semi-governmental authority securities on issue**

In some States certain public utilities, such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which, in addition to receiving advances from the central government, raise loans by borrowing on their own behalf, while in other States these services are controlled by the central government. Direct comparisons between States of the securities on issue on account of the several States should therefore be made with caution. The table following shows for 1962–63 to 1966–67 particulars of the securities on issue on account of the States, the securities on issue by local government and semi-governmental authorities, and the aggregates of these.

(a) Excludes amounts due to the central government. Includes bank overdrafts. (b) Overseas holdings have been converted to Australian currency at the rates of exchange current at 30 June of each year shown.

NOTE. The considerable changes in the figures for local government and semi-governmental debt in the table above when compared with figures in Official Year Book prior to issue No. 54 are due to the transfer of New South Wales County Councils from the semi-governmental division to that of local government authorities (see page 782).

## Commonwealth loan raisings

Under the Financial Agreement between the Commonwealth and the States the Commonwealth is responsible for raising all loan moneys required either by the Commonwealth or by the State Governments. Details of loan transactions given in this section relate, therefore, to all loans raised for the Commonwealth and the States.

## New loans raised

*Australia.* The following table shows details of new loans raised in Australia by the Commonwealth during the three years 1965-66 to 1967-68.

COMMONWEALTH NEW LOANS<sup>(a)</sup> RAISED IN AUSTRALIA, 1965-66 TO 1967-68

(a) Includes loans raised for redemption of Treasury bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see page 759). (b) Special issue. For details see following paragraph. (c) As from February 1967 the practice of specifying the amount invited for each loan was discontinued.

The loan of \$193,000,000 raised in June 1968 (Loan No. 180) was for the purpose of fulfilling an undertaking given by the Commonwealth that the States would have access to loan funds for their works programmes up to the approved Loan Council borrowing programmes. These programmes totalled \$580,000,000 in 1964-65, \$605,000,000 in 1965-66, \$645,000,000 in 1966-67 and \$677,000,000 in 1967-68. The subscription to the special loan in 1967-68 came from the Loan Consolidation and Investment Reserve Trust Account. Loan No. 163 of June 1966 and Loan No. 172 of June 1967 were for the same purpose.

Finance for the approved Loan Council programmes from 1964-65 to 1967-68 was provided from the following sources:

	1964-65	1965-66	1966-67	1967-68
	\$'000	\$'000	\$'000	\$'000
Public loans, domestic raisings, etc.	424,092	413,871	501,133	407,655
Overseas loans and special Commonwealth assistance	155,908	191,129	143,867	269,345
<b>Total</b>	<b>580,000</b>	<b>605,000</b>	<b>645,000</b>	<b>677,000</b>

In addition to the new loans raised as shown in the table on the previous page and the redemption and conversion loans shown on page 758 there were other miscellaneous loan operations in Australia (see page 759).

*London.* A loan of £Stg 14,000,000, 7 per cent interest, price of issue 99 per cent, maturing 1982 was raised in 1967-68.

*New York.* The following table gives details of the loans raised during the period 1965-66 to 1967-68.

July-June (special bonds) . . . . .	90,550	4.4-5.25	90,550	4.4-5.25	100	1976	..

(a) Special bonds.

Minus sign (—) indicates reduction in liability for interest.

*New York.* Between May 1965 and June 1967 five loans each of \$US25,000,000 were raised, mainly in Europe.

## Credit arrangements for defence purchases in the United States of America

The *Loan (Defence) Act* 1966 authorises arrangements for the financing on extended payment terms of purchases of defence equipment in the United States. Drawings of \$US100,989,000 were made under these arrangements in 1966-67 and of \$US148,236,000 in 1967-68.

**International Bank for Reconstruction and Development loans**

Drawings from International Bank loans have been made mainly in United States dollars but partly in Canadian dollars, Swiss francs and Deutsche marks. The amount outstanding 30 June 1968 was \$US194,863,000.

**Swiss loans**

At the 30 June 1968 an amount of 290,000,000 Swiss francs was outstanding on the five Swiss loans. The fifth loan of 50,000,000 Swiss francs was raised in April 1967 at the rate of 5.5 per cent maturing in 1982.

**Canadian loans**

During 1967-68 an amount of \$Can2,050,000 was raised at par for the Australian National Airlines Commission with an interest rate of 6 to 6.75 per cent maturing in 1974.

**Netherlands loan**

No loans have been raised in the Netherlands since 1961.

**German loan**

In October 1967 an amount of D.M.100,000,000 was raised at 99 per cent with an interest rate of 6.5 per cent maturing in 1982.

**Summary of loan transactions**

The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the five years 1963-64 to 1967-68.

**COMMONWEALTH LOAN TRANSACTIONS: SUMMARY, 1963-64 TO 1967-68**

	1963-64	1964-65	1965-66	1966-67	1967-68

(b) Includes securities held by Commonwealth Development Bank of Australia.

### National Debt Sinking Fund

#### Securities on issue on behalf of the Commonwealth

The National Debt Sinking Fund was established by the *National Debt Sinking Fund Act 1923-1950* and came into operation on 11 August 1923. Particulars of the creation and operation of sinking funds by that Act are included in issues of the Year Book prior to No. 23. The *National Debt Sinking Fund Act 1966* repealed all previous legislation on sinking funds relating to securities on issue on behalf of the Commonwealth. Under the Act of 1966 the period of redemption is 25 years from 1 July 1966 for debt outstanding at 30 June 1966 and 25 years for net debt created in subsequent years.

Broadly, the amounts payable to the National Debt Sinking Fund each year are made up of contributions from the Consolidated Revenue Fund of the Commonwealth as follows:

- (a) an amount of \$30.94m each year for a period of 25 years;
- (b) an amount equal to 4 per cent of the amount of net debt created (if any) in any year for a period of 25 years.

In addition, an amount equal to specified receipts by the Commonwealth in repayment of loans or advances made out of moneys in the Loan Fund will be paid to the Sinking Fund.

The amounts payable to the Fund in any year from Consolidated Revenue Fund are to be reduced by the following:

- (a) the net income from investments in any year; and
- (b) an amount equal to 4 per cent of the amount of the net reduction of debt in any year.

Particulars of receipts and expenditure of the Commonwealth Account for the years 1963-64 to 1967-68 are as follows.

NATIONAL DEBT SINKING FUND: COMMONWEALTH ACCOUNT, 1963-64 TO 1967-68

## TAXES ON INCOME

A description of the development of income taxes in Australia appeared in Year Book No. 35, page 926. Since July 1942 the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

The laws dealing with the assessment and imposition of Income tax at 30 June 1968 were—*Income Tax Assessment Act 1936-1968, Income Tax Act 1967, Income Tax (Partnerships and Trusts) Act 1967, Income Tax (Non-Resident Dividends) Act 1967*, and the Income Tax Regulations. The second-mentioned Act is an annual measure, and its primary purpose is to declare the rates of tax payable for the financial year.

Both individuals and companies are liable for income tax. Private companies are subject to tax on undistributed income in addition to the primary income tax levied on all companies.

The operation of the *Income Tax Assessment Act 1936-1968* is affected by the following Acts:

- (a) *Taxation Administration Act 1953-1966*, which provides for the administration of certain Acts relating to taxation;
- (b) *Income Tax (International Agreements) Act 1954-1968* which gives the force of law to agreements between the Commonwealth and the Governments of the United Kingdom, Canada and New Zealand, and to a convention between the Government of the Commonwealth and the United States of America, for the avoidance of double taxation and the prevention of evasion of taxes on income.
- (c) *Diplomatic Privileges and Immunities Act 1967* which provides for the exemption from Income Tax of certain income of diplomatic representatives, their staff and families.

#### Lodgment of returns and assessment of income tax

Individuals and non-profit companies with total income in excess of \$416 and all partnerships, trusts and companies deriving income are required to lodge returns of income by 31 July each year (31 August for business incomes). The income tax payable is assessed, and assessment notices showing the amounts payable are issued, during the year following the year of income. In respect of individuals the approximate amount payable, however, has already been collected during the income year from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already paid and any difference either collected or refunded. No such system of 'pay-as-you-earn' is in operation in respect of companies.

#### Pay-as-you-earn system

*Salary and wage earners* are subject to instalment deductions by employers for payment of the tax in accordance with a prescribed scale which shows the amount to be deducted according to income and number of dependants. Under the group scheme of deduction, covering most employers of more than ten persons, the amount deducted is required to be remitted to the Taxation Department within seven days of the close of the month in which the deduction is made.

Not later than 14 July each year employers are required to supply each employee with a group certificate showing amount earned and total deductions during the year ended 30 June. This certificate, together with the employee's return of income, is forwarded to the Taxation Department. If the tax assessed on the basis of the return is less than the amount shown on the group certificate, a refund is forwarded with the assessment, if not, the employee is required to pay the balance.

Under the stamp scheme used by employers other than group employers a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

*Taxpayers with income other than salary or wages* pay provisional tax in respect of that income. Collection of tax for the current year is made at the same time as collection and assessment for the previous year are adjusted. The notice of assessment shows an amount of provisional tax for the current year. The provisional amount is an approximation to the tax which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged), but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax paid in the previous year as a credit against the tax assessed on the basis of the return for that year. On receipt of his assessment, the taxpayer may elect to substitute his own estimate of income for the current year and pay tax on basis of this estimate. To protect the revenue, a penalty is imposed if the taxpayer elects to pay provisional tax on an estimate of income more than twenty per cent lower than the income of the previous year and he underestimates his income by more than twenty per cent. An employee with income of \$300 or more from sources other than salaries or wages is required to pay provisional tax in respect of that income.

*Tax collected.* During the collection years 1963-64 to 1967-68 net receipts (i.e. tax collected less refunds to taxpayers) from individual taxpayers were \$1,272m; \$1,570m; \$1,731m; \$1,923m and \$2,177m respectively. Of these amounts, instalments from salaries and wages in the respective years accounted for \$792m (62.3 per cent), \$991m (63.8 per cent), \$1,160m (67.0 per cent), \$1,324m (68.8 per cent) and \$1,508m (69.2 per cent). The remainder came from direct cash payments from individual taxpayers.

#### Assessable income

As a general principle income assessable to income tax includes all income other than exempt income derived directly or indirectly from sources in Australia. Thus a non-resident is taxed on income derived in Australia, while a resident, in general, is not taxed on income (other than dividends) derived from overseas if the income is taxed in the country in which it is derived.

The word income is used in its ordinary sense and includes certain other receipts declared by the Assessment Act to be assessable income. Receipts such as gifts (other than gratuities received by an employee from his employer in the course of his employment), legacies, profits from the sale of property (not acquired for the purpose of profit making by sale), lottery wins, and most capital gains are not regarded as income and are not assessable.

Certain types of Australian income are exempt from tax in Australia, the more important being (i) war and service pensions, (ii) age and invalid pensions, child endowment and other payments under the *Social Services Act 1947-1967* and the *Tuberculosis Act 1948*, (iii) income from gold-mining and some other mining operations, (iv) twenty per cent of certain mining profits, (v) dividends paid out of

exempt mining profits, (vi) income received from a scholarship, bursary or other educational allowance, (vii) income of certain non-profit institutions and mutual income of some other organisations, and (viii) income of specified superannuation funds. No amount is included in assessable income on account of a house occupied by its owner.

The pay and allowances and bounties for part-time duty, and the gratuity payable on a call out for continuous full-time service of members of each service of the Defence Force Emergency Reserves is exempt from income tax. This exemption does not apply to pay and allowances for continuous full-time service in Australia. Also the pay and allowances earned by members of the Defence Force for service outside Australia while allotted for duty in special areas (i.e. part of Borneo and adjacent waters, and South Vietnam) are exempt from income tax.

Expenditure incurred in gaining or producing assessable income or necessarily incurred in carrying on a business for that purpose is an allowable deduction, except to the extent that such expenditure is of a capital, private, or domestic nature, or is incurred in gaining or producing exempt income. Certain subscriptions to business associations and trade union dues are also allowable deductions.

Special deductions for both resident and non-resident taxpayers include such items as trading losses incurred in previous years, bad debts, depreciation, annual rates and land taxes, gifts to various institutions (e.g. scientific, charitable, benevolent, etc.), and, subject to certain conditions, one-third of amounts paid as calls to mining, prospecting, oil-prospecting, or afforestation companies operating in Australia. In lieu of the one-third deduction for calls, capital subscribed to companies engaged in exploration or mining for petroleum and certain other minerals in Australia or Papua and New Guinea may, in certain circumstances, be deductible in full.

Special deductions may be allowed for certain expenditure of a capital nature incurred in mining or prospecting operations conducted for the purpose of earning assessable income and in the provision of certain transport facilities necessary for and directly related to those operations. In the case of primary producers certain developmental expenditure of a capital nature may be deducted. Deductions in addition to depreciation are allowed to manufacturers and primary producers by way of an investment allowance for expenditure on specified plant and equipment. Subject to a maximum permissible tax saving, a double deduction is effectively allowed for certain expenditure incurred, before 1 July 1968, in export market development. Under new provisions, subject to a maximum permissible tax saving, the second deduction will be replaced by a rebate of tax in respect of such expenditure incurred after 30 June 1968.

Zone allowance deductions are prescribed for residents of isolated areas subject to uncongenial climatic conditions and high costs of living. Two zones, A and B, have been prescribed and the allowances are: Zone A, \$540 plus an amount equal to half the total deductions allowable for the maintenance of dependants; and Zone B, \$90 plus an amount equal to one-twelfth of the total deductions allowable for the maintenance of dependants. Members of the defence forces serving in certain overseas localities, other than those declared to be special areas (see top of page), for more than half the year of income are also entitled to a deduction of the same amount as residents of Zone A.

Income tax is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in the following paragraphs.

**Concessional deductions**

Concessional allowances to residents for dependants, medical and dental expenses, life insurance and superannuation contributions, etc. are made by way of a deduction from income. The maximum deduction allowed for the income year 1968-69 for each dependant or for a housekeeper is shown in the following table.

<i>Dependant, etc. (resident)</i>	<i>Maximum deduction(a)</i>
	\$
Spouse . . . . .	312
Daughter-housekeeper(b); housekeeper(c) . . . . .	312
Parent or parent-in-law . . . . .	312
One child under 16 years of age . . . . .	208
Other children under 16 years of age . . . . .	156
Invalid relative(d) . . . . .	208
Child 16 to 21 years receiving full-time education . . . . .	208

(a) If the dependant is maintained for part only of the year, a partial deduction is allowed. (b) Of a widower or widow. (c) Caring for a spouse in receipt of an invalid pension, or caring for children under 16 years of age of a widower or widow. (d) Child, step-child, brother or sister over 16 years of age.

When the dependant maintained derives separate income, the amount of the concessional deduction is reduced by the amount, if any, by which the separate net income exceeds \$130. Separate net income includes age and invalid pensions but not child endowment. Scholarships are excluded except insofar as they relate to maintenance.

For the 1968-69 income year medical expenses (less amounts recouped from hospital and medical funds) paid by a taxpayer who is a resident, in respect of himself or dependants, including children under twenty-one years of age, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or to a hospital, in respect of an illness or operation, payments for dental services, payments for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, the remuneration of an attendant of a person who is blind or confined to a bed or invalid chair, and payments for the maintenance of a trained dog used for the guidance of a blind person.

Other concessional deductions allowed to resident taxpayers include: (i) payments of life insurance premiums and contributions to superannuation funds and friendly societies, not exceeding an aggregate of \$1,200, (ii) payments to medical or hospital benefits funds, (iii) funeral expenses of a dependant not exceeding \$100, and (iv) expenditure incurred for the full-time education of children or dependants who are less than twenty-one years of age, with a maximum of \$300 for each child or dependant.

#### Effective exemption from tax

For the income years up to 1962-63 a taxpayer without dependants was exempt from income tax if income did not exceed \$208. From 1963-64 onwards the exemption was \$416. The effect of the deductions for dependants was to exempt resident taxpayers up to the incomes shown in the examples hereunder.

#### RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX (£)

Income years ended June—	Taxpayer with—		Wife and—			
	No dependants	Wife only	one child	two children	three children	four children
Up to 1963 . . .	208	494	676	806	936	1,066
1964 to 1967 . . .	416	702	884	1,014	1,144	1,274
1968 and 1969 . . .	416	728	936	1,092	1,248	1,404

For the 1968-69 income year an aged person (i.e. a man who has attained the age of sixty-five years or a woman who has attained the age of sixty years and is a resident of Australia during the whole of the year of income) is exempt from income tax if taxable income does not exceed \$1,248. If taxable income exceeds \$1,248 but does not exceed \$1,532 the tax cannot exceed nine-twentieths of the excess of taxable income over \$1,248. An aged person who contributes to the maintenance of a spouse is exempt from tax if the combined taxable incomes do not exceed \$2,184. Where the combined taxable incomes exceed \$2,184 the tax payable by the taxpayer (provided his taxable income does not exceed \$3,514) is limited to nine-twentieths of the excess of the combined taxable incomes over \$2,184.

#### Rates of income tax on individuals

The table on page 767 shows the rates of income tax for income years 1953-54 to 1968-69 as set out in the first schedule to the Income Tax Act.

Assessable income represents total actual income minus exempt income. Taxable income is the amount remaining after all allowable deductions have been made on assessable income.

The minimum amount of income tax payable is 50c.

Where the taxable income of a person does not exceed \$428 the amount of tax payable is limited to one half of the amount by which the taxable income exceeds \$416.

The only cases in which incomes below \$416 attract tax are those for which special rates are payable in accordance with the provisions of the *Income Tax (Partnerships and Trusts) Act 1967*.

For primary producers the rate of income tax for the current year is determined by the average of the taxable incomes for the five years up to and including the current year. In 1951 a taxpayer was given the right to elect not to have the averaging provisions applied to his assessment but up to

1965-66 income year the election, if made under then existing legislation, was irrevocable. The *Income Tax Assessment Act 1966* amended this and a primary producer who elected to withdraw from the averaging system prior to the 1966-67 income year is now able to review that decision. He may return to the averaging system provided that he makes the necessary election in respect of any one of the income years 1966-67 to 1969-70. In the year of re-entry the taxpayer will be treated for averaging purposes as though he had never withdrawn from the system. However, he will not have the right to withdraw again. The application of the averaging provisions is limited to that part of the taxable income which does not exceed \$16,000. When the taxable income does exceed \$16,000, the balance is taxed at ordinary rates applicable to that part. When the taxable income is less than \$16,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of \$16,000.

The taxable income, including any abnormal receipts, of actors, artists, composers, inventors, etc. is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest derived from bonds, debentures, stocks or other securities issued between 1 January 1940 and 31 October 1968 by the Commonwealth, together with interest on certain State semi-governmental loans issued free of State income tax, is subject to a rebate of 10 cents for each \$1 of interest included in the taxable income. The rebate does not apply to interest received from bonds etc., issued on or after 1 November 1968.

(a) Income remaining after allowing all deductions other than deductions for dependants.

**Company income taxes**

For taxation purposes companies are divided into two main groups—private and public. Broadly, a private company is defined as a company in which all the issued shares are held by not more than twenty persons, or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested, or is a subsidiary of a public company. All other companies are regarded as public companies. Both private and public companies pay primary tax assessed on a taxable income ascertained on the same principles as for individuals.

Dividends received are assessable income; resident companies, however, receive a rebate at the average rate on the amount of dividends included in the taxable income, while this rebate is not allowed to non-resident companies.

**Rates of tax.** A private company incurs liability for additional tax on its undistributed income if it fails to make a sufficient distribution of income within a specified period after the close of the year of income. The tax is levied on the undistributed amount which, for practical purposes, is the taxable income less—(a) primary income tax payable; (b) retention allowance (i.e. the proportion of the reduced distributable income which a company may retain without incurring liability for undistributed income tax); and (c) certain dividends paid by the company.

The rates of primary tax for all companies and additional tax for private companies applicable to income years 1956–57 to 1967–68 are shown in the following table.

**RATES OF TAX: COMPANIES, 1956–57 TO 1967–68 INCOME YEARS**  
(Cents per \$)

Income years ended June	Resident private company			Resident public company(a)		Non-resident company	
	On taxable income		Additional tax on un- distributed income	On taxable income		On dividends only	
	Up to \$10,000	On remainder		Up to \$10,000	On remainder	Up to \$10,000	On remainder
1957 to 1959 . . . . .	22½	32½	50	32½	37½	27½	37½
1960 to 1963 . . . . .	25	35	50	35	40	30	40
1964 to 1967 . . . . .	27½	37½	50	37½	42½	32½	42½
1968 . . . . .	30	40	50	40	45	35	45

(a) Excludes co-operative, non-profit and life insurance for which the rates of tax (in cents per \$) for 1967–68 were as under:

Type of company	Taxable income	
	Up to \$10,000	On remainder
Co-operative . . . . .	35	45
Non-profit—Friendly societies' dispensaries . . . . .	35	35
Other . . . . .	35	45
Mutual life insurance . . . . .	30	40
Other life insurance—Mutual income . . . . .	30	40
Other income . . . . .	40	45

For 1967–68 where the taxable income of a non-profit company did not exceed \$1,386 the amount of tax payable was limited to half the amount by which the taxable income exceeded \$416.

For the income years 1956–57 to 1967–68 the retention allowance (see above) was the proportion of the reduced distributable income shown in the following table.

**RETENTION ALLOWANCE: PRIVATE COMPANIES**  
1956–57 TO 1967–68 INCOME YEARS  
(Per cent)

Reduced distributable income(a)	1956–57	1958–59	1962–63
	and 1957–58	to 1961–62	to 1967–68
First \$2,000 or part . . . . .	50	50	..
Next \$2,000 „ „ . . . . .	40	40	..
„ \$2,000 „ „ . . . . .	35	..	..
„ \$2,000 „ „ . . . . .	30	..	..
First \$10,000 „ „ . . . . .	..	..	50
Next \$10,000 „ „ . . . . .	..	..	45
Balance . . . . .	25	35	40

(a) Calculated by deducting from the taxable income the primary tax payable and the amount of all property income included in taxable income.

In addition to the foregoing proportions, 10 per cent of distributable income from property, except dividends from other private companies, is also allowed.

The additional tax on undistributed income is imposed at a flat rate of 50 cents in the dollar on the undistributed amount.

### Income tax assessments

1966-67 income year. The following tables show, for the 1966-67 income year, the number of taxpayers, income, and net income tax assessed for individuals and resident and non-resident companies. For further information of this nature see the annual bulletin *Commonwealth Taxation Assessments*.

#### COMMONWEALTH INCOME TAX ASSESSMENTS(a): RESIDENT INDIVIDUALS BY GRADE OF INCOME AND BY STATE, ETC. OF ASSESSMENT (Income derived in the year 1966-67)

(a) Assessments in respect of 1966-67 incomes issued to 30 September 1968. Assessments issued after that date are not included. (b) Actual income is defined briefly as 'Gross income including exempt income less expenditure incurred in gaining that income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions.

(a) Actual income is defined briefly as 'Gross income including exempt income less expenditure incurred in gaining that income'. (b) Taxable income is the income remaining after deducting from assessable income all allowable deductions. (c) Excludes additional tax levied on the undistributed income of private companies. (d) Net tax assessed is nil because of rebates. (e) This figure is not included in the total shown for taxable income. (f) Not included in figures shown in adjoining column.

*Income tax on residents, by grade of income.* Individual income taxes assessed on residents are distributed according to grades of actual income in the following table. The year shown in each case is the year of income of the taxpayer. Assessments issued after the normal assessing period are not included.

**COMMONWEALTH INCOME TAX ASSESSMENTS: RESIDENT INDIVIDUALS, BY

*Income tax assessed.* The amounts of income tax covered by statistical analyses of assessments for recent years are shown in the following table. The amounts are shown under the year of income of the taxpayer. Tax is usually paid by companies in the year following the year of income. Individuals pay tax in the year of income, but there is usually an adjustment in the following year. Tax assessed after the close of the normal assessing period is not included.

INCOME TAXES ASSESSED, 1962-63 TO 1966-67  
(\$'000)

Tax	Income year—				
	1962-63	1963-64	1964-65	1965-66	1966-67
Individuals . . . . .	1,056,060	1,232,442	1,447,886	1,608,952	1,835,333
Companies—					
Primary tax . . . . .	599,972	715,938	787,099	786,925	832,582
Additional tax on undistributed income of private companies . . . . .	1,532	1,609	2,260	2,618	2,934
<b>Total . . . . .</b>	<b>1,657,564</b>	<b>1,949,989</b>	<b>2,237,245</b>	<b>2,398,495</b>	<b>2,670,849</b>

*Refunds of revenue.* Income tax collections, as previously shown, are net amounts after refunds of revenue made in the course of the year. Refunds are of two types—those charged to special appropriations under authority of the Income Tax Assessment Act and those charged to special appropriations under authority of the Audit Act. Income tax instalment refunds, by far the greatest part of income tax refunds, are made when the instalments deducted during the year exceed the tax assessed on incomes for that year. Refunds made from special appropriations under section 37A of the Audit Act include refunds of moneys paid to the revenue in error, refunds of tax overpaid, refunds due to the amendment of assessments, etc. Refunds of income tax during the collection years 1963-64 to 1967-68 were: 1963-64, \$242,422,000; 1964-65, \$264,366,000; 1965-66, \$305,830,000; 1966-67, \$353,194,000 and 1967-68, \$398,371,000.

## CHAPTER 20

# LOCAL GOVERNMENT

This chapter includes, in addition to information on the operation of local government authorities, information on the operation of certain semi-governmental authorities. The latter information is not comprehensive for this type of authority, and is included partly because of the association of the functions performed with those of local government authorities, and partly for convenience in preparation. Particulars of the activities of other semi-governmental authorities, e.g. transport, electricity and gas, and banking undertakings, for which only some financial statistics are given in this chapter, are included in the chapters relevant to those subjects.

### Coverage

#### Local government authorities

In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local government authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas, and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers. While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc. differ considerably.

The areas over which local government bodies, numbering 900, exercise general control, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, towns and shires; and in Tasmania as cities and municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g. the county councils. Within shires there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia, and the Commonwealth Territories (except for the City of Darwin), practically the whole of Australia comes within local government jurisdiction.

The financial statistics in the following section are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

#### Semi-governmental authorities

In addition to local government authorities, a large number of authorities have been set up to control specific activities, which are often identical with some of those performed by either, or both of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g. roads and bridges, water and sewerage, electricity and irrigation, harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority. In the sections which deal with debt, roads and bridges, water supply and sewerage, harbours, and fire brigades particulars are included of the more important of these authorities which operate within the range covered by this chapter.

**Roads, bridges, etc.**

The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a government department whose duties relate to the construction, reconstruction and maintenance of 'main' and 'developmental' roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Owing to difficulty in obtaining complete particulars of receipts and expenditure of the various local governing bodies in respect of roads under their control, the details of receipts and expenditure given on pages 786-93 are those of central governments only, relating either to the supervisory board or commission in the State or to direct activities of a department. However, estimates of the aggregate net expenditure of all public authorities concerned with roads and bridges in Australia are given on page 794 of that section. On pages 779-81 some information is given of the revenue and expenditure of local government authorities in respect of roads.

**Water supply and sewerage**

In the cities of Sydney, Melbourne and Perth the control of water supply and sewerage is in the hands of special boards, while in Adelaide these services are under the direct supervision of a government department. In most of the other cities and towns the municipal councils or, in some cases, water trusts are the controlling bodies, which either construct the works out of their own resources or take them over after they have been constructed by the government.

**Harbours**

The majority of the harbours in Australia are managed by boards, the members of which are either elected by persons interested, or appointed by the government. In some instances, however, they are directly controlled by the government.

**Fire brigades**

In all the States the management of fire brigades is undertaken by boards. These boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the government. Occasionally volunteer or country fire brigades are represented.

**Local government authorities****New South Wales**

For purposes of local government the whole of the Eastern and Central land divisions and more than two-thirds of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which include important towns). At the end of 1968 the area incorporated was 272,000 square miles, or nearly nine-tenths of the total area of the State. All cities, municipalities and shires in the State are subject to the general provisions of the Local Government Act. Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g. electricity, water, gas, abattoirs. At 31 December 1968 there were fifty-three county councils, including the Sydney County Council (constituted under the Gas and Electricity Act).

**Victoria**

Local government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island (41,600 acres) in Westernport Bay, Lady Julia Percy Island (653 acres) off Port Fairy, Bass Strait Islands (966 acres), part of Gippsland Lakes (81,920 acres), and Tower Hill (1,459 acres) adjacent to the Borough of Koroi. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act.

**Queensland**

The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under the Local Government Act (City of Brisbane Act in the case of Brisbane).

**South Australia**

The settled portion of South Australia is incorporated, being mostly under municipal corporations in the larger cities and towns and district councils in the agricultural areas.

## Western Australia

Local government is established throughout the State, the divisions being cities, towns and shires.

## Tasmania

The whole State is divided into municipal districts, Hobart, Launceston, and Glenorchy being incorporated as cities under separate Acts.

## Area, population, dwellings, and value of rateable property

The area, population, dwellings, and value of rateable property in the incorporated areas of each State are shown in the following table. The valuations relate to rateable property only and exclude government and other non-rateable property, whose value in the aggregate is considerable. In some cases councils rate on annual value, or unimproved capital value, or improved capital value, or partly on each of these bases of valuation. The amounts stated are the totals for the areas rated according to each basis of valuation. Particulars of dwellings are in accordance with the definition used in the 1966 census, and are compiled from information collected on the census schedules. For the purpose of the census a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include vacant dwellings available for sale and renting, 'week-end' and holiday dwellings, and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

In the following table particulars of number, area, and value of rateable property refer to estimates made, where practicable, for the capital city statistical division and outside this division. Wherever the statistical boundary cuts across a local government area the estimates have involved either the inclusion or exclusion of the whole of the local government authority concerned in, or from, the capital city statistical division. Particulars of population refer to estimates made for capital city statistical division and outside this division in accordance with the definition of boundaries used in the 1966 census and exclude migratory population and population in unincorporated areas.

(a) Year ended 30 June 1967. Total population less migratory and unincorporated. (b) Particulars as at Census 30 June 1966. (c) Year ended 31 December 1965. (d) Year ended 30 September 1967. (e) Excludes Yallourn Works Area under the jurisdiction of the State Electricity Commission.

### Local government finances

The following tables show the latest available financial statistics for local government authorities. The figures relate to the year 1966-67 except for New South Wales, where they relate to the year 1965. For further detail on local government finances see *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 6, 1967-68, issued by this Bureau.

*Ordinary services.* In the returns of revenue and expenditure in the following tables the proceeds from loans and expenditure thereof have been excluded. The financial operations of business undertakings controlled by the various local government authorities are given in the next paragraph. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

### Local government and semi-governmental authorities' debt

Statistics of local government and semi-governmental debt for 1962-63 to 1966-67 are given in the following paragraphs. The information covers all local government authorities (including New South Wales County Councils previously included with semi-governmental authorities) and those semi-governmental authorities responsible for the provision of the following services.

*New South Wales.* Water Supply, Sewerage and Drainage, Electricity and Gas Supply, Fire Brigades, Banking, Housing, Harbours, Grain Elevators, Roads and Bridges, Marketing, Industry Assistance, General Works, and Miscellaneous.

*Victoria.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity and Gas Supply, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, and Housing.

*Queensland.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity Supply, Fire Brigades, University, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.

*South Australia.* Irrigation and Drainage, Transport, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, University and Miscellaneous.

*Western Australia.* Water Supply and Sewerage, Harbours, Transport, Electricity Supply, Fire Brigades, Hospitals, Marketing (Agency), Housing, University, and Miscellaneous.

*Tasmania.* Harbours, Electricity Supply, Fire Brigades, Transport, Housing, and Water Supply. A detailed list of the authorities included is shown in *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 6, 1967-68.

The following table provides a summary of new money loan raisings, provisions for debt redemption, debt outstanding and interest payable by local government and semi-governmental authorities for the year 1966-67. For greater detail see *State, Territory and Local Government Authorities' Finance and Government Securities*.

(a) Includes debt or interest payable in London and New York. Debt in London is payable in £ sterling which have been converted at the I.M.F. rate of £\$1g to \$A2.50; New York debt is payable in U.S. dollars which have been converted at the I.M.F. rate of \$US1.12 to \$A1. (b) Included in debt figures above. (c) Not yet available.

NOTE. The considerable changes in the figures for New South Wales in the table above when compared with figures published in Official Year Books prior to No. 54 (1968) are due to the transfer of New South Wales County Councils from the semi-governmental division to that of local government authorities (see previous page).

In the table above and the following table debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalised and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalised), trade creditors, amounts held in trust, and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised from the public to repay indebtedness to the Government, and interest capitalised. Loans raised and redeemed within the year, increases in overdrafts, and loans raised for conversion or redemption of

existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

## Roads and bridges

### Commonwealth Government grants

The following table shows the allocations to the States under the several Commonwealth Aid Roads Acts for road construction, maintenance, repair and other works connected with transport for each of the years 1964-65 to 1968-69. After 1 July 1959, when the *Commonwealth Aid Roads Act 1959* came into operation, the Commonwealth made separate provision for expenditure on strategic roads and the promotion of road safety practices. See also the chapter Public Finance, and Finance bulletins.

### New South Wales

Main roads administration is organised as a separate department under the control of a Commissioner. The activities of the Department of Main Roads include works on main, developmental, secondary and tourist roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed and maintained from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system. Public roads may be proclaimed (*see page 406*) by the Governor as main roads on the recommendation of the Commissioner for Main Roads.

In the County of Cumberland, which for the purposes of the Main Roads Act is deemed to include the City of Blue Mountains and small sections of other councils' areas on the boundary of the County of Cumberland, the full cost of main road and bridge construction, half the cost of secondary roads, and a proportion (in general, up to half) of the cost of tourist roads are met from the funds of the Department of Main Roads. The Councils do not contribute directly to the cost of these works but are required to pay a levy of 0.2083 cents in the \$ on the unimproved capital value of rateable property within Council's area or at a uniform percentage determined annually by the Commissioner of between ten per cent and fifteen per cent of Council's total rate income, whichever is the less. In the former case the rate payable in respect of lands used principally for primary production is half the rate levied on other lands.

In country districts the Department meets the full cost of road and bridge works on State highways, the full cost of bridge construction works and three-quarters of the cost of road construction and road and bridge maintenance works on trunk roads, three-quarters of the cost of bridge construction works and two-thirds of the cost of road construction and road and bridge maintenance works on ordinary main roads, and, in most cases, up to half the cost of works on tourist roads. The cost of constructing developmental roads and works is borne in full by the Department of Main Roads, but local Councils are required to maintain them in a satisfactory condition. In December 1965 a toll work comprising the first stage (5.8 miles from the Hawkesbury River to Mount White) of the proposed Sydney to Newcastle Expressway was opened for traffic. In October 1966 the toll work was extended to Calga (a further 3.4 miles). A second toll work (5.3 miles) south from the Hawkesbury River was opened for traffic in December 1968. Tolls imposed on vehicles using the toll works will be used to cover the costs of construction and maintenance work.

*Length of roads.* The total length of proclaimed roads (*see page 406*) in New South Wales at 30 June 1968 was 25,508 miles classified as: Expressways, 21 miles; State highways, 6,542 miles; trunk roads, 4,228 miles; ordinary main roads, 11,593 miles; secondary roads, 159 miles; developmental roads, 2,747 miles; and tourist roads, 218 miles. The length of main roads (expressways, highways, trunk and ordinary main roads) maintained by the Department of Main Roads at 30 June 1968 was 6,233 miles (28 per cent) while the length maintained by Councils was 16,151 miles (72 per cent). These figures exclude secondary, developmental and tourist roads, and unclassified roads in the Western Division of the State. In the area outside the County of Cumberland (the metropolis and adjoining areas) the proportions of main roads maintained by the Department and Councils respectively were: State highways and expressways 79 per cent, 21 per cent; and trunk and ordinary main roads, 4 per cent, 96 per cent. Unclassified roads in the Western Division of the State, totalling 1,530 miles, were maintained by the Department, while developmental roads, (mainly outside the County of Cumberland), totalling 2,747 miles, were maintained by Councils. In the County of Cumberland the proportions of main roads maintained by the Department and Councils respectively were: State highways, 99 per cent, 1 per cent; and ordinary main roads, 56 per cent, 44 per cent. Secondary roads totalling 159 miles were maintained by Councils. Of the 218 miles of tourist roads throughout the State 198 miles (91 per cent) were maintained by Councils and 20 miles (9 per cent) by the Department. In 1966 the total length of all roads in New South Wales was estimated at 131,330 miles. The lengths of roads, according to their surfaces, were as follows: bitumen or concrete, 28,621 miles; gravel or stone, 44,668 miles; formed only, 26,947 miles; cleared only, 31,094 miles.

*Department of Main Roads—operations.* Progress has continued with the implementation of the Department's plan for main roads development in the County of Cumberland. Most of the Department's proposals have been incorporated in the County of Cumberland Planning Scheme approved by Parliament under the Local Government (Amendment) Act, 1951. The Department's proposals for the development of the main roads system in Newcastle and the surrounding districts have been largely incorporated in the Northumberland County District Planning Scheme, and some sections of the system have been constructed. With some modifications, the Department's proposals for the planning of the main roads in the Wollongong-Port Kembla district have been incorporated in the planning scheme prepared by the Illawarra Planning Authority. The Commissioner for Main Roads is a member of the State Planning Authority which was established in June 1964 to co-ordinate these and other planning schemes throughout the State.

During 1967-68, 67 new bridges, including 16 major bridges, were constructed. In addition, 126 concrete box culverts each having a waterway width of twenty feet or more were completed. At 30 June 1968 there were 61 bridges (including 22 major bridges) and 52 concrete box culverts under construction.

*Department of Main Roads—revenue and expenditure.* The funds of the Department of Main Roads are derived principally from motor vehicle taxation, charges on heavy commercial goods vehicles under the Road Maintenance (Contribution) Act, 1958-1965, grants under Commonwealth Aid Roads Act (see page 785 and the chapter Public Finance), other grants from the State or Commonwealth Governments, and proceeds of a levy on municipal and shire councils in the County of Cumberland in accordance with the Main Roads Act, 1924-1965. The State Government also makes repayable advances for Main Roads Department works, and since 1963 the Commissioner for Main Roads has had the power (with the approval of the Governor on the recommendation of the Treasurer) to borrow moneys.

(a) Excludes repayable advances by the State Government and private loans (\$4,020,000 in 1963-64, \$7,500,000 in 1964-65, \$5,005,000 in 1965-66, \$6,500,000 in 1966-67 and \$8,750,000 in 1967-68), and transfers from Sydney Harbour Bridge Account for Expressway construction (\$3,078,000 in 1963-64, \$2,360,000 in 1964-65, \$4,750,000 in 1965-66, \$3,743,241 in 1966-67 and \$4,775,000 in 1967-68). Expenditure from these amounts is fully reflected in Expenditure.

(b) Excludes debt redemption (\$123,992 in 1963-64, \$209,588 in 1964-65, \$441,368 in 1965-66, \$346,449 in 1966-67 and \$477,430 in 1967-68) and repayment of government advances (\$120,000 in 1963-64, \$1,020,000 in 1964-65, and \$200,000 in 1965-66 and later years).

(c) Mainly purchase of assets not subject to annual depreciation charge. The purchase of other assets is omitted here because the depreciation charge for them is reflected each year in 'Roads and bridges'.

Figures shown on page 786 represent the aggregate revenue and expenditure of five funds: the County of Cumberland Main Roads General and Special Purposes Funds, the Country Main Roads General and Special Purposes Funds, and the Developmental Roads Fund.

*Sydney Harbour Bridge.* The Sydney Harbour Bridge was opened for traffic on 19 March 1932. The main span is 1,650 feet and clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway of eight traffic lanes and two railway tracks, and there is also a footway on each side. The capital cost of the bridge and associated roadways to 30 June 1968 was \$33,194,000, but this amount will be reduced slightly on completion of the disposal of the remaining surplus resumed property. The portion met from repayable loan funds, \$29,863,000, is repayable from toll income. Income for 1967-68 amounted to \$4,444,000, including road tolls, \$4,011,000; railway passenger tolls, \$287,000; and omnibus passenger tolls, \$27,000. Expenditure amounted to \$3,323,000, including interest, exchange, flotation expenses, etc., \$1,310,000; sinking fund, \$585,000; maintenance, \$571,000. The accumulated surpluses of the Bridge Account have been used to finance conversion of tram tracks to roadway on, and the construction of expressway-type approaches to, the bridge. From 1957-58 to 1967-68 a total of \$2,011,000 was expended on tram track conversion and \$30,767,000 on the bridge expressway-type approaches. The account showed a deficiency of \$1,944,000 at 30 June 1968. During 1967-68, 39,572,876 road vehicles (excluding omnibuses and exempt vehicles), 25,977,097 rail travellers and 12,444,518 omnibus travellers crossed the bridge, contributing respectively 92 per cent, 7 per cent, and 1 per cent of the total toll revenue.

### Victoria

With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine which roads should be declared in the various classifications; to supervise the construction, reconstruction and maintenance of these roads; to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance; and to recommend deviations in existing roads or the construction of new roads in order to facilitate communications or to improve the conditions of traffic.

*Length of roads.* The total length of *declared roads* (see page 406) by the Country Roads Board in Victoria at 30 June 1968 was 14,541 miles, classified as follows: State highways, 4,460 miles; main roads, 9,097 miles; by-pass roads, 40 miles; tourist roads, 483 miles; forest roads, 461 miles. The length of the surface sealed (bitumen or concrete) included in the foregoing mileage was 12,883 miles or 89 per cent of the total. In addition to the 14,541 miles of classified roads, there were approximately 86,400 miles of unclassified roads at 30 June 1968. The *total length of roads and streets* in Victoria at 30 June 1968 is estimated as: bitumen or concrete, 29,365 miles; gravel or stone, 29,618 miles; formed only, 20,606 miles; cleared only, 21,333 miles; total, 100,922 miles.

*Country Roads Board—operations.* During 1967-68, 1,829 miles of declared roads under the Board's control were treated with bitumen. In addition, 1,129 miles of undeclared roads, for which the Board contributed funds, were similarly treated. The total length of bitumen treatment carried out in 1967-68 was 3,078 miles (including 120 miles for other authorities). Of the work on the roads under the Board's control in 1967-68, 741 miles related to State highways and by-pass roads. During 1967-68, 154 bridge projects of an estimated total value of \$7,470,000 were initiated. Of these, 89, estimated to cost \$1,930,000, were under municipal supervision.

*Country Roads Board—receipts and payments.* The funds of the Country Roads Board are derived principally from motor registration fees, two-thirds of additional registration fees (charged on initial registration or transfer), a proportion of drivers' licence fees, fines, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, roads charges under the Commercial Goods Vehicles Act, and repayments by municipalities. As from 1 July 1964 proceeds from fines are paid to consolidated revenue, but an equivalent amount to replace them is made available to the Board from the loan fund. In addition, loans have been authorised from time to time under the Country Roads Acts for permanent works on main and developmental roads, State highways, tourists' roads and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. During 1967-68 loan receipts and payments each amounted to \$987,000. The total loan expenditure to 30 June 1968 was \$35,904,650. This figure does not include loan expenditure from the Developmental Roads Loan Account, a fund which was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan money raised on this account was exhausted at 30 June 1937, the total expenditure at that date being \$12,851,516. In 1967-68 \$3,145,000 was allocated to the Board for expenditure on certain special road projects. This was part of the revenue raised by the increase in motor registration fees under the *Roads (Special Projects) Act 1965*.

*Melbourne and Metropolitan Board of Works.* Since assuming responsibility for carrying-out planning scheme proposals relating to metropolitan highways and bridges, a tentative construction programme of urgent highway works throughout the metropolitan area of Melbourne has been adopted. Expenditure on these projects up to 30 June 1968 was \$23.6m. Of this amount, \$11.5m was financed from the proceeds of the Board's Metropolitan Improvement Rate and \$12.1m was contributed by the Treasurer of Victoria from the Roads (Special Projects) Fund.

*Level crossings.* In 1954-55 the Level Crossings Fund was created under the *Country Roads and Level Crossings Funds' Act* 1954 to finance (a) the elimination of level crossings or the provision of alternative routes to enable road traffic to avoid level crossings; (b) the provision of lights, signs, and lighting at, and the improvement of approaches to, level crossings; and (c) generally, the reduction of danger at level crossings. The Act provides for the payment into the Fund of one-third of all moneys received by way of additional motor registration fees and money provided under any other Act. The amount available for expenditure in 1967-68 was \$851,340, consisting entirely of receipts from additional registration fees. Expenditure from the Fund amounted to \$824,650, of which \$699,154 was incurred by the Railways Department and \$125,496 by the Country Roads Board, leaving a balance carried forward of \$1,229,814.

### Queensland

The Department of Main Roads was constituted in February 1951, with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main developmental, and secondary roads;

and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is financed by the State Government by means of Treasury loans. Other roads may be built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

*Length of roads.* The total length of declared roads (see page 406) in Queensland at 30 June 1968 was 24,662 miles; comprising State highways, 6,242 miles; main roads, 5,150 miles; developmental roads, 4,377 miles; and secondary roads, 8,893 miles. By the amendments to the Main Roads Act published in the Government Gazette of 6 April 1959, mining access, farmers' and tourist roads became secondary roads, and the provisions relating to the declaration of tourist tracks were repealed. The total length of roads and streets in Queensland at 30 June 1968 was: bitumen or concrete, 18,161 miles; gravel or stone, 18,401 miles; formed only, 41,037 miles; cleared only, 40,758 miles; total, 118,357 miles.

*Department of Main Roads—operations.* During 1966–67 the Department completed the following mileages of road works: 458 miles of new bitumen; 241 miles reconstructed to bitumen; 220 miles of re-sealed bitumen; 190 miles of gravel road; 102 miles of newly formed road, and 20 miles of gravel road reconstructed. Bridges of all types to a length of 9,129 linear feet were constructed, bringing the total constructed by the Department at 30 June 1967 to 265,988 feet. In addition, at 30 June 1967, 9,531 feet were under construction.

*Department of Main Roads—receipts and payments.* The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collections, fees, etc. under the Transport Acts, contributions under the Commonwealth Aid Roads Acts, and loans, grants and advances from the State Government. The total receipts and payments during each of the years 1962–63 to 1966–67 are shown below.

(a) Includes grants to local authorities for road purposes.

### South Australia

The Highways and Local Government Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads, to undertake the construction, maintenance and protection of the principal roads of the State, allocate grants to councils for roadworks and supervise the expenditure of these grants, and assist Councils to purchase road-making plant and to defray the cost of roadworks. In addition, the Commissioner advises Councils on technical questions concerning the construction, maintenance or repair of roads. Funds of the Department are derived mainly from the Highways Fund, into which are paid the proceeds from motor vehicle registration and drivers' licences (less cost of collection), appropriations from loan funds, repayments of advances made to Councils, and contributions by the Municipal Tramways Trust, and from contributions under the Commonwealth Aid Roads Acts.

*Length of roads.* In South Australia there are only two classifications of roads. These are main roads proclaimed (*see* page 406) under the provisions of the Highways Act and all other roads, commonly designated district roads. At 30 June 1968 there were 8,156 miles of *proclaimed main roads* and approximately 66,859 miles of district roads, including roads and tracks outside local government areas, totalling 75,015 miles. *Total lengths of roads*, classified by surface, were estimated to be: bitumen or concrete, 8,547 miles; gravel or stone, 16,834 miles; formed only, 9,347 miles; unformed, 40,287 miles.

*State Highways and Local Government Department—receipts and payments.* The following table shows particulars of receipts and payments, during the years 1963-64 to 1967-68, of funds controlled by the Highways and Local Government Department.

(a) Includes reimbursement works for Commonwealth Government. (b) Includes administration expenses.  
(c) Represents gross repayments less recoveries by charges to works on account of depreciation and materials used.

### Western Australia

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities throughout the State. The Department operates under the *Main Roads Act, 1930-1967*, and is administered by a Commissioner of Main Roads responsible to the Minister

for Works. The Act makes provision for public roads in the categories of main roads, controlled-access roads and developmental roads (*see* page 406). An additional category, that of important secondary roads, is used by the Department in determining its works programme. Within its own district each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

*Length of roads.* The total length of constructed roads for which financial provision was made by the Main Roads Department at 30 June 1967 was: main roads, 3,435 miles, including seven miles of controlled-access roads; important secondary roads, 7,958 miles; and developmental roads, 43,930 miles. In addition, there were 74 miles gazetted as controlled-access roadway as yet not constructed. The total length of roads and streets in Western Australia at 30 June 1967 was made up as follows: bitumen or concrete, 13,806 miles; gravel or stone, 23,193 miles; formed only, 45,746 miles; cleared only, 26,362 miles; total, 109,107 miles.

*Main Roads Department—operations.* During the year 1966–67 the activities of the Department included clearing, 2,393 miles; forming, 3,697 miles; gravelling, 2,334 miles; reconditioning, 6,421 miles; and stabilising, 58 miles. In addition, 1,464 miles were primed or sealed (including widening). New and replacement bridges constructed totalled 43, while 13 bridges were widened.

*Main Roads Department—receipts and payments.* The funds of the Main Roads Department are derived principally from allocations made under the *Commonwealth Aid Roads Act* 1964. In addition, special Commonwealth assistance is given for the improvement of roads used for the transport of beef cattle in the Kimberley District. For the six-year period ended 30 June 1967 additional grants totalling \$8,400,000 were received from Commonwealth funds and were matched by a corresponding State contribution. In a further seven year period to 30 June 1974 an additional maximum amount of \$9,500,000 is to be allocated, including \$1,400,000 received in 1967–68. Other sources of income include overload permit fees, one-half of the net amount of traffic fees collected in the Metropolitan Traffic Area, and an allocation from drivers' licence fees. Further moneys for expenditure on road maintenance are available under the *Road Maintenance (Contribution) Act* 1965, administered by the Commissioner of Transport. (Outside the Metropolitan Traffic Area motor vehicle licence fees are collected and retained by the local authorities with the provision that from 1 January 1965 they are required to contribute to the Central Road Trust Fund the amount of their annual vehicle licence collections which exceeds that of the base year 1958–59. Such amount is reimbursed together with an addition of 75 per cent from Commonwealth matching grants.) Receipts and payments for the years 1963–64 to 1967–68 are shown in the following table.

(a) For 1967-68 the funds are derived from the *State Grants (Beef Cattle Roads) Act 1968*. (b) Includes \$1,896,000 transferred from an Overhaul Account previously administered by the Public Works Department. (c) Excludes \$1,000,000 advance from State Treasury. (d) Includes administration and expenditure on hire and maintenance of road construction plant, etc., and on purchase of materials. (e) Excludes \$1,400,000 refund of advance from State Treasury. (f) Excludes \$1,000,000 refund of advance from State Treasury.

### Tasmania

Under the *Road Construction (Transfer of Functions) Act 1951*, which came into operation on 1 July 1951, the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorised by the Minister in respect of roads classified as State highways, tourist and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund, into which are paid the proceeds from Commonwealth Aid Roads grants, motor vehicle registration fees and taxes, licence fees for drivers and public transport, and other moneys made available by Parliament. In addition, provision was made under the *Road Construction (Transfer of Functions) Act* for certain works authorised by the Transport Commission to be carried out and constructed by the Department. The expenditure by the Public Works Department during 1967-68 on the construction and maintenance of roads, tracks and bridges amounted to \$13,051,197 of which \$11,741,413 was charged to road funds, \$28,402 to revenue, \$1,200,455 to loan, and \$80,927 to other funds. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads.

*Length of roads.* The length of *classified roads* (see page 406) at 30 June 1968 was 2,296 miles, comprising State highways, 1,206 miles; main roads, 667 miles; secondary roads, 197 miles; tourist roads, 47 miles; and other roads, 179 miles. The mileages of sealed (bitumen or concrete) roads and their proportions to the respective totals were: State highways, 1,008 miles (84 per cent); main roads, 461 miles (69 per cent); secondary, tourist and other roads, 169 miles (40 per cent). The total length of classified sealed roads was 1,638 miles (71 per cent). The total length of local authorities roads at 30 June 1968 was 9,027 miles, comprising bitumen or concrete, 1,677 miles (19 per cent); gravel or stone, 5,955 miles (66 per cent); formed only or cleared only, 1,395 miles (15 per cent). Roads of other authorities (Hydro-Electric Commission, Forestry Commission and the sawmilling industry) totalled 2,089 miles.

The *total length of all roads* in Tasmania at 30 June 1968 was 13,411 miles, comprising bitumen or concrete 3,366 miles (25 per cent); gravel or stone 8,608 miles (64 per cent); formed only or cleared only, 1,437 miles (11 per cent).

*Combined road funds—receipts and payments.* The table following shows particulars of the receipts and payments of the combined Road Funds for the years 1963-64 to 1967-68.

(a) Includes Commonwealth Employment Stimulation Grant (\$15,302 in 1963-64, and \$14,946 in 1964-65).

#### Summary of roads open for general traffic

The tables showing road lengths in the several States and Territories classified according to class of road and surface of road formerly included in this section have been transferred to Chapter 12, Transport, Communication, and Travel.

#### Aggregate net expenditure on roads and bridges in Australia

In most States there are three classes of authorities concerned with roads and bridges, the State Government, the central road authority, and numerous local government bodies. The Commonwealth Government, in addition to the grants it makes to the States for road purposes, is concerned with roads in the Northern Territory and the Australian Capital Territory and roads of access to Commonwealth property in the various States. Some information relating to Commonwealth grants to the States for road purposes and particulars of the expenditure on roads and bridges by local government bodies and the central road authorities are given in preceding sections of this chapter.

Most of these authorities may expend money directly on road construction or indirectly by means of grants and payments to other authorities. These indirect payments, if included in an aggregate, would duplicate expenditure; this, together with the fact that some authorities are unable to supply separate information concerning their road expenditure, makes it difficult to compile precise statistics of aggregate expenditure on roads and bridges.

The information in the following table, which is partly estimated and which excludes the main indirect payments, provides an approximate measure of the aggregate net expenditure by the three classes of authorities mentioned above on roads and bridges in Australia during each of the years ended 30 June 1964 to 1968. Expenditure on roads by those authorities whose primary activity is directed towards functions other than roads, e.g. electricity, forestry, housing, etc., authorities, is not included. The figures cover expenditure on the construction, reconstruction and maintenance of roads and bridges, and direct administration but not debt charges. Because of the difficulties associated with the indirect payments mentioned above, it is not possible to give separate net details for each authority.

**PUBLIC AUTHORITY NET EXPENDITURE ON ROADS AND BRIDGES  
STATES AND TERRITORIES, 1963-64 TO 1967-68**

### Water supply, sewerage and drainage

The information in this section relates primarily to the metropolitan areas and provincial cities and towns. For information on water supply and irrigation in rural areas see the chapter Water Conservation and Irrigation.

#### New South Wales

The two largest domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government, and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e. in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, Shellharbour and Kiama, and (b) the Hunter District Water Board serving the Newcastle-Maitland-Cessnock areas. At Broken Hill and Cobar similar boards include representatives of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.

*Metropolitan and Hunter District water supply (to 30 June 1968).* The storage reservoirs of the metropolitan system with a combined available capacity of 574,335 million gallons, drain catchment areas of 3,890 square miles (including Warragamba, 3,480 square miles, Upper Nepean, 347 square miles, and Woronora, 29 square miles). The development of a water supply system on the Warragamba River was completed with the official opening of the Warragamba Dam in October 1960. This dam, constructed in concrete, has a storage capacity of 452,505 million gallons. Its safe net draught is estimated to be 274 million gallons a day. At 30 June 1968 there were 174 service reservoirs in use with a combined capacity of 701 million gallons. Rating for water for 1967-68 was 3.75 cents in the \$ of 'assessed annual value'. The payment of the rate entitled the user to an amount of water calculated at 1,000 gallons per 30 cents. For water in excess of this allowance a further charge of 30 cents per 1,000 gallons was made. Fluoridation of the metropolitan water supply commenced in April 1968.

The water supply of the *Hunter District system* is drawn principally from three sources: the Chichester Reservoir, with a storage capacity of about 4,320 million gallons and draining a catchment of 76 square miles, the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens, and the Grahamstown Water Supply Scheme which is still being developed. Another source of supply is provided by the Nelson Bay-Anna Bay Scheme. Service reservoirs and tanks distributed throughout the water supply district have a total storage capacity of 126 million gallons. Water rates were calculated in 1967-68 at the rate of 6.9792 cents in the \$ of 'assessed annual value'. The payment of this rate entitled the user to an amount of water calculated at 1,000 gallons per 30 cents. For water in excess of this allowance a further charge of 30 cents per 1,000 gallons was made.

The following tables show, for the Metropolitan and Hunter District systems, the number of properties, the estimated population supplied, and other details.

**METROPOLITAN WATER SUPPLY(a), NEW SOUTH WALES  
SERVICES, 1963-64 TO 1967-68**

Year	Improved properties for which water mains available	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of mains	Number of meters
					Per property	Per head of estimated population		
		'000	mill gal	mill gal	gallons	gallons	miles	
1963-64	669,948	2,600	255	93,211	381	98	7,397	457,215

1967-68	756,063	2,816	270	98,981	357	96	8,325	532,859

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

**HUNTER DISTRICT WATER SUPPLY(a): SERVICES  
1963-64 TO 1967-68**

Year	Properties supplied	Estimated population supplied	Average daily consumption	Total consumption for year	Average daily consumption		Length of mains
					Per property	Per head of estimated population	
			mill gal	mill gal	gallons	gallons	miles
1963-64	91,616	309,609	36.4	13,336	398	118	1,590
1964-65	93,646	316,625	41.5	15,139	443	131	1,623
1965-66	94,779	320,451	32.8	11,970	346	102	1,673
1966-67	96,755	327,514	31.6	11,521	326	96	1,702
1967-68	99,066	335,565	37.4	13,675	377	111	1,740

(a) Newcastle, Maitland and Cessnock areas.

*Metropolitan and Hunter District sewerage and drainage system (to 30 June 1968).* The metropolitan system serving Sydney and suburbs comprises 3 major sewerage systems and 7 minor systems, consisting of 7 outfalls discharging directly into the Pacific Ocean and 3 treatment works. There are also 8 centres outside the metropolitan area of which 5 (Camden, Campbelltown, St Mary's, Richmond and Warragamba township) are served by local treatment works and 3 (Bellambi, Port Kembla and Wollongong) discharge directly into the Pacific Ocean. Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30 June 1968 were 184 miles long. Sewerage rating for 1967-68 was 3.95 cents in the \$ of 'assessed annual value', and drainage rating 0.52 cents in the \$.

The main sewerage system of the Hunter District serves the City of Newcastle and discharges into the Pacific Ocean at Burwood Beach. There are also local treatment works at Maitland, Cessnock and some of the outlying districts. Sewerage rates for 1967-68 were 4.7917 cents in the \$ of 'assessed annual value', and drainage rates (on certain areas served) 0.5208 cents in the \$.

The following table gives details of sewerage services and stormwater drains of the Metropolitan system.

**METROPOLITAN SEWERAGE AND DRAINAGE(a)  
NEW SOUTH WALES: SERVICES, 1964 TO 1968**

30 June—	Improved properties for which sewerage available	Estimated population served	Length of sewers	Length of stormwater channels
		'000	miles	miles
1964 . . . .	475,735	1,870	5,074	180
1965 . . . .	501,389	1,930	5,328	179
1966 . . . .	524,225	2,000	5,585	181
1967 . . . .	547,630	2,052	5,881	182
1968 . . . .	574,847	2,135	6,166	184

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

At 30 June 1968, 78,276 premises had been connected to the Hunter District Water Board's sewerage system (Newcastle-Maitland-Cessnock areas). The total length of sewers under the Board's control was 1,088 miles, and the length of drains was 52 miles.

*Metropolitan and Hunter District systems' finances.* The following table shows the debt, revenue and expenditure of the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board for each of the services of water supply, sewerage and drainage during 1967-68, and for the three services combined for the years 1963-64 to 1967-68.

(a) Includes provision for renewals, long service leave, etc. (b) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires. (c) Newcastle-Maitland-Cessnock areas. (d) Includes General Fund indebtedness not dissected by services.

*Local government country water supply and sewerage systems.* At 31 December 1966, country water supply services were conducted or under construction by 48 municipalities, 92 shires and 6 county councils, and country sewerage services by 51 municipalities and 46 shires. The capital indebtedness of these schemes was \$103,776,000 at 31 December 1966, namely \$69,251,000 for water and \$34,525,000 for sewerage. Debt of the municipalities amounted to \$50,080,000, shires to \$41,200,000, and county councils to \$12,496,000. Government advances amounting to \$622,000 are included in these figures. Aggregate income and expenditure amounted to \$17,702,000 and \$13,510,000, respectively, in 1966.

*Other country water supply and sewerage systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31 December 1967 was \$6,112,000. In 1967, income (excluding subsidies, State Government \$198,000 and mining companies \$505,000) amounted to \$758,000 and expenditure (excluding debt redemption \$272,000) amounted to \$1,182,000. The Cobarr Water Board was constituted in February 1964. At 31 December 1967 its capital indebtedness was \$2,391,000. The following country water supply systems—South-West Tablelands, Junee, and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Electricity Commission of New South Wales, and other large consumers. Only a small quantity is sold direct to private consumers. The capital indebtedness of these systems was \$15,093,000 at 31 December 1967. The Mulwala Water Supply and Sewerage Service was constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

### Victoria

*Melbourne and Metropolitan Board of Works.* The Board consists of a Chairman and fifty-two Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The principal functions of the Board are: to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage system; to deal with main drains and main drainage works; to control and manage the rivers, creeks and watercourses within the metropolitan area; and to carry out the functions of a permanent planning authority.

*Metropolitan water supply.* There are 6 storage reservoirs serving the metropolitan area—Yan Yean, 7,233 million gallons (available for consumption, 6,649 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,289 million gallons (4,870 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); and Upper Yarra, 45,400 million gallons (44,120 million gallons); total 68,765 million gallons (65,452 million gallons). Service reservoirs number 47, with a total capacity of 369 million gallons. The water rate levied by the Board in 1967-68 was 2.5 cents in the \$ on the net annual value of the properties served. The charge for water consumed in excess of the quantity which, at 20 cents per 1,000 gallons, would equal the assessed water rates on each property, was 20 cents per 1,000 gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1963-64 to 1967-68.

MELBOURNE WATER SUPPLY: SERVICES, 1963-64 TO 1967-68

Year	Number of houses supplied	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of aqueducts, etc. mains and reticulation	Number of meters
					Per head of estimated population	Per house		
1963-64	572,431	'000	mill gal	mill gal	gallons	gallons	miles	485,856
1964-65	595,727	2,021	162.9	59,621	285	80.6	5,882	485,856
1965-66	612,844	2,079	168.2	61,409	282	80.9	6,098	511,077
1966-67	626,690	2,120	178.7	65,218	292	84.2	6,280	536,093
1966-67	626,690	2,143	188.5	68,815	301	88.0	6,517	559,713
1967-68.	642,039	2,170	139.0	50,876	216	64.1	6,791	577,713

*Metropolitan sewerage and drainage.* Particulars of sewerage and drainage services for 1963-64 to 1967-68 are shown on the next page. The rate levied in 1967-68 for sewerage was 4.7 cents in the \$ on the net annual value of the property served. The drainage rate was 1.0 cent in the \$.

## MELBOURNE SEWERAGE AND DRAINAGE: SERVICES, 1963-64 TO 1967-68

Year	Number of houses for which sewers are provided	Estimated population for which sewers are provided	Average daily pumping	Total sewage pumped for the year	Average daily pumping		Length of sewers, etc.	Length of main drains
					Per house	Per head of estimated population		
		'000	mill gal	mill gal	gallons	gallons	miles	miles
1963-64	443,291	1,446	89.7	32,833	202.4	62.0	3,932	211
1964-65	453,078	1,491	93.6	34,152	206.5	62.8	4,113	218
1965-66	467,705	1,599	94.6	34,545	202.4	59.2	4,311	229
1966-67	484,798	1,629	98.1	35,793	202.3	60.2	4,554	233
1967-68	509,185	1,719	86.1	31,514	169.1	50.1	4,739	240

The metropolitan sewerage system consists of the main system (serving an area of 111,521 acres) and 6 subsidiary systems—the Braeside system (serving an area of 6,157 acres), the Kew system (serving an area of 112 acres), the Maribyrnong system (serving an area of 182 acres), the Watsonia system (serving an area of 253 acres), the Lower Plenty system (serving an area of 1,099 acres), and the Heatherton system (serving an area of 231 acres). The Board of Works Farm, 26,809 acres in extent and situated about twenty-four miles south-west of Melbourne beyond the township Werribee, serves to purify and dispose of approximately ninety-seven per cent of the sewage flow of the metropolis before its discharge into Port Philip Bay. The total capital cost (less depreciation) of the farm to 30 June 1968 was \$10,776,059. Revenue during 1967-68 amounted to \$423,031, cost of sewage disposal to \$673,631, trading expenses to \$318,465, interest to \$589,818, and net cost of sewage purification to \$1,158,883. These financial particulars are included in the sewerage items of the summary below.

*Melbourne and Metropolitan Board of Works' finances.* The following table provides for the year 1967-68 a summary of the financial operations of the water supply, sewerage and drainage services conducted by the Melbourne and Metropolitan Board of Works, and of the combined services for the years 1963-64 to 1967-68.

**MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES**  
1963-64 TO 1967-68  
(\$'000)

Service, etc.	Capital cost of works and buildings at 30 June (a)	Revenue	Expenditure			Total	Surplus (+) or deficit (-)

(a) Total loan indebtedness—1967-68, \$384,522,692.

(b) Statutory and general expenditure not distributed over services.

*State Rivers and Water Supply Commission.* Water supply and conservation throughout Victoria (except for the area controlled by the Melbourne and Metropolitan Board of Works) is under the jurisdiction of the State Rivers and Water Supply Commission. The events leading to the establishment of the Commission, and its works in the spheres of irrigation, domestic and stock water supply to farms, drainage, flood protection, and river improvements, are described in the chapter Water Conservation and Irrigation. This section is therefore confined to the Commission's functions in connection with urban water supply and sewerage.

*Extra-metropolitan water supply.* At 30 June 1968 the Commission provided a reticulated water supply from its own works to 148 cities and towns having a combined population of 225,000 persons. The principal systems operated by the Commission serve part of the Mornington Peninsula—Dandenong area (about 107,000 people supplied); Bendigo, Castlemaine, etc. (58,000); and about 8,700 people in the Western District. In addition, 14,000 persons in a number of towns in the Bellarine Peninsula receive supply through a Commission-operated distributory system from headworks controlled by the Geelong Waterworks and Sewerage Trust. The Bendigo-Castlemaine supply also provides for the irrigation of 9,000 acres as well as urban requirements in the area. Outside these areas the Commission supplies mainly small towns in the north of the State in areas where it also supplies farms with water for irrigation or domestic and stock purposes. Capital expenditure by the Commission on urban water supply at 30 June 1968 was divided between the several systems as follows: Mornington Peninsula, \$29,527,000, Bendigo-Castlemaine, \$14,021,000 (includes the cost of supplying a comparatively large rural system with water for irrigation, stock and domestic purposes); Bellarine Peninsula, \$3,446,000; Otway System (Western District), \$2,983,000; other, \$2,936,000; total, \$52,913,000. This expenditure is net of redemption payments and includes expenditure on Lake Eppalock and Tarago Reservoir not yet charged to the water users. In addition to the towns supplied by the Commission there are some 653,000 people in 252 cities and towns throughout the State who get a reticulated water supply from works operated by local authorities.

All these authorities operate under the supervision of the State Rivers and Water Supply Commission, largely because the Government subsidises their capital expenditure. Most new works are financed from Government loan funds, but the Geelong Trust and in recent years some other local authorities borrowed money privately. In most cases the local authority controls both headworks and distribution system, but several towns draw their water from the State Rivers and Water Supply Commission and are concerned only with reticulation of the water. Together, therefore, the Commission and local authorities supply 400 urban centres containing some 878,000 people. Very few towns of any importance are now without reticulated water supply. The following table presents the financial position in respect of Government loan funds expended on town water supply at 30 June 1968.

**TOWN WATER SUPPLY, VICTORIA: CAPITAL LIABILITY**  
30 JUNE 1968  
(\$'000)

	<i>Water supply provided by—</i>		
	<i>Local authorities</i>	<i>State Rivers and Water Supply Commission</i>	<i>Total</i>
Government advances . . . . .	60,000	53,500	113,500
Less redemption . . . . .	4,700	600	5,300
<b>Government advances outstanding . . . . .</b>	<b>55,300</b>	<b>52,900</b>	<b>108,200</b>
Borne by State . . . . .	11,400	23,700	35,100
Borne locally . . . . .	43,900	29,200	73,100

In addition, nearly \$21,000,000 has been borrowed locally, mainly by the Geelong Waterworks and Sewerage Trust.

The proportion of loan capital borne by the State is much higher in the case of Commission undertakings than for towns supplied by local authorities. This is because most Commission undertakings have been developmental in nature. Besides meeting interest on capital borne by it, the State pays the difference between three per cent and the actual rate paid on practically all the capital carried locally. The total annual subsidy on country town water supply is currently about \$3,300,000.

*Extra-metropolitan sewerage systems.* With the exception of the town of Eildon, whose sewerage system is controlled directly by the State Rivers and Water Supply Commission, the construction and management of sewerage works in Victoria's country cities and towns are the responsibility of local authorities supervised by the Commission. Except for the Geelong Waterworks and Sewerage Trust and the Latrobe Valley Water and Sewerage Board, which have special Acts dealing with their

activities, all sewerage authorities operate under the Sewerage Districts Act. At 30 June 1968 92 sewerage authorities had been constituted. Of these 66 had systems in operation and 11 had works under construction.

Expenditure on sewerage in Victorian country towns at 30 June 1968 was approximately \$75,200,000, of which some \$60,400,000 had been advanced by private lenders. The annual State subsidy on country sewerage in Victoria is currently about \$1,550,000, provided mainly in the form of subsidies on interest rates paid along the same lines as for town water supply.

*Geelong Waterworks and Sewerage Trust.* The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the *Geelong Waterworks and Sewerage Act 1909*. It was further reconstituted in September 1950 to include a government nominee (chairman). An amendment in 1966 reduced the number of commissioners from seven to six. The amount of loan money which may be raised is limited to \$30,000,000 for water supply undertakings and \$20,000,000 for sewerage undertakings. The population supplied is estimated by the Trust at 115,094 persons. This and other general information relates to 30 June 1968.

The *Geelong water supply scheme* comprises two systems for gathering and storing water, the water in both systems being brought over fifty miles to Geelong. There are 8 storage reservoirs and 11 service basins whose total storage capacity is 13,292 million gallons. The length of water mains and reticulation is 567.8 miles. The total expenditure on water supply to 30 June 1968 was \$17,922,017. General fund expenditure for 1967-68 comprised \$479,578 for working expenses and \$1,190,345 for interest, redemption and reserves, while revenue amounted to \$1,658,691. The sinking fund appropriations at 30 June 1968 amounted to \$1,186,805. The replacement and contingencies reserve amounted to \$1,280,427. There is a water rate of 6 cents in the \$ on the net annual value of rateable properties.

The *Geelong sewerage scheme* consists of a main outfall sewer to the ocean and 326.2 miles of main and reticulation sewers. The sewerage area is 11,851 acres, and the number of buildings connected within the sewered areas is 28,497. The total expenditure on sewerage works to 30 June 1968 was \$12,658,883. The revenue in 1967-68 amounted to \$1,084,756, and the general fund expenditure comprised \$274,556 on working expenses and \$782,362 on interest, redemption, and reserves. Sinking fund appropriations at 30 June 1968 were \$618,556. Replacement and contingencies reserve amounted to \$1,285,357. A general rate, 5.5 cents in the \$, is levied on the net annual value of rateable properties.

Under the *Barwon River Improvement Act 1939* a portion of the Barwon River is vested in the Geelong Waterworks and Sewerage Trust. General maintenance and improvement of the surrounding area is financed by the levying of an improvement rate of 0.25 cents in the \$ on the net annual value of all lands within the drainage area. The revenue for 1967-68 amounted to \$52,955.

*The Ballarat Water Commissioners and the Ballarat Sewerage Authority.* The body known as the Ballarat Water Commissioners was constituted on 1 July 1880 and the Ballarat Sewerage Authority on 30 November 1920. The members of the Water Commissioners constitute the Sewerage Authority. General and financial information given herein relates to the year ended 31 December 1968.

The *Ballarat water supply district* comprises an area of about 65 square miles, containing a population of about 63,000. The total storage capacity of the 7 reservoirs is 5,435 million gallons and the catchment area is 24,182 acres. The capital cost of construction of the waterworks was \$6,207,320 to 31 December 1968. The liabilities amounted to \$3,898,555 at 31 December 1968, including loans due to the Government totalling \$3,530,210. The revenue for the year 1968 was \$493,064. Working expenses during 1968 amounted to \$277,917 and interest and other charges to \$241,711. A water rate of 3.4 cents in the \$ on the net annual valuation is levied, with a minimum charge of \$6 per annum on any rateable property; water by measure, 16 cents per 1,000 gallons.

The *Ballarat sewerage district* comprises the City of Ballarat, the Borough of Sebastopol, and parts of the Shires of Ballarat, Bungaree and Grenville. There are more than 217 miles of sewers. The capital cost of sewerage construction works to 31 December 1968 was \$5,532,677. Two hundred and ninety-nine sewered areas had been declared as at 31 December 1968. Assessments in the sewerage district numbered 20,654, while those in sewered areas numbered 18,543. There were 15,926 buildings connected. The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31 December 1968 amounted to \$4,665,729, redemption payments at that date totalled \$932,098. House connections financed by the Authority numbered 4,565. Revenue during 1968 amounted to \$476,844, and expenditure, which included \$317,227 for interest and redemption, was \$476,535. A sewerage rate of 4.3 cents in the \$ on the net annual valuation is levied, with a minimum charge of \$10 per annum in respect of land on which there is no building and \$12 per annum in respect of any land on which there is a building. The charge for trade wastes is 15 cents per 1,000 gallons.

*Latrobe Valley Water and Sewerage Board.* The Latrobe Valley Water and Sewerage Board was constituted on 1 July 1954. The Board consists of seven members, namely: two Government nominees (one of whom is Manager and also Board Chairman), three members elected by water supply, sewerage and river improvement authorities within the Latrobe Valley, and one representative each of the State Electricity Commission of Victoria and the Gas and Fuel Corporation of Victoria.

The Board is empowered to construct *water supply works within the Latrobe Valley*, but at present its main construction activities are confined to the central industrialised areas and the new township of Churchill. The total capital cost of construction of the waterworks was \$11,425,537 to 30 June 1968. Liabilities amounted to \$12,024,449, including loans due to the Government totalling \$11,341,602. Revenue for the year was \$720,188. Expenditure during 1967-68 amounted to \$591,884 including interest amounting to \$335,469. The Board does not strike a rate, but supplies consumers, including local water supply authorities, by measure. The quantity supplied during the year ended 30 June 1968 was 10,814 million gallons.

The *Latrobe Valley sewerage system* consists of a main outfall sewer, about 52 miles in length, to convey wastes to an area where they are disposed of on land for agricultural purposes. Wastes conveyed consist mainly of industrial wastes, such as paper wastes and gasification wastes, together with small quantities of domestic sewage. The capital cost of the sewerage construction works to 30 June 1968 was \$6,645,845. Liabilities amounted to \$7,244,191, including loans due to the Government totalling \$5,922,576. Revenue in 1967-68 was \$325,402 and expenditure totalled \$418,021, including \$107,517 interest payments. No sewerage rate is levied, but a charge is made by measure for wastes both from industries and public authorities.

### Queensland

*Brisbane City Council (to 30 June 1968).* This organisation conducts the water supply and sewerage systems of the City of Brisbane, and also supplies, in bulk, the whole of the water used by the City of Ipswich and a portion of that used by the City of Redcliffe and Albert Shire Council. Redcliffe supplements its supply from that of the Pine Rivers Shire Council, while Albert also draws on its own reservoirs.

Storage facilities for *Brisbane water supply* comprise the following (available capacities are shown in parentheses): Somerset Reservoir, 200,000 million gallons (67,500 million gallons); Lake Manchester, 5,800 million gallons (5,720 million gallons); Brisbane River, Mount Crosby Weir, 540 million gallons (500 million gallons); Pure Water Reservoir, Holt's Hill, 11 million gallons (11 million gallons); Enoggera Reservoir, 1,000 million gallons (600 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are 22 service reservoirs with a capacity of approximately 52 million gallons. The Somerset reservoir is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 67,500 million gallons to be for water storage and 132,500 million gallons for flood mitigation. Water rating for the year ended 30 June 1968 was 1.25 cents in the \$ on the unimproved valuation of all rateable land, with a minimum charge of \$30 for the year for each assessment. The following table is a summary of operations of the complete Brisbane City Council system (Brisbane, Ipswich, Redcliffe, and portion of Albert Shire) for the years 1963-64 to 1967-68.

BRISBANE WATER SUPPLY(a): SERVICES, 1963-64 TO 1967-68

Year	Services connected	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of trunk and reticulation mains
					Per service	Per head of estimated population	
			mill gal	mill gal	gallons	gallons	miles
1963-64	188,032	685,223	51.2	18,696	272	74.8	2,410
1964-65	193,471	703,258	61.4	22,409	317	87.3	2,564
1965-66	197,707	722,970	67.6	24,668	342	93.5	2,666
1966-67	202,886	740,332	66.1	24,110	326	89.2	2,735
1967-68	207,657	759,434	76.7	27,984	369	101.0	2,823

(a) Includes Ipswich, Redcliffe and portion of Albert Shire.

The sewage treatment works of the *Brisbane sewerage scheme* is situated at Luggage Point at the entrance to the Brisbane River. Sewerage rating for the year ended 30 June 1968 was 1.4 cents in the \$ on the unimproved valuation of each portion of land, with a minimum charge of \$30 for the year. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1963-64 to 1967-68.

**BRISBANE SEWERAGE: SERVICES, 1963-64 TO 1967-68**

Year	Premises connected	Estimated population served	Total sewage pumped for the year	Length of main, branch, reticulation, etc. sewers
1963-64 . . .	75,964	281,067	7,211	1,042
1964-65 . . .	84,390	312,243	7,190	1,222
1965-66 . . .	90,940	336,478	8,821	1,341
1966-67 . . .	102,062	377,629	9,042	1,472
1967-68 . . .	109,364	404,647	8,358	1,607

*Brisbane City Council water supply and sewerage systems—finances.* The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1963-64 to 1967-68.

**BRISBANE WATER SUPPLY AND SEWERAGE: FINANCES, 1963-64 TO 1967-68**  
((\$'000))

Service and year	Gross capital cost to 30 June	Revenue	Expenditure		Total (a)	Surplus (+) or deficit (-)
			Working expenses	Interest, redemption, etc. charges		
<b>Water supply—</b>						
1963-64 . . .	46,175	5,989	2,492	2,330	5,318	+ 670
1964-65 . . .	49,768	7,030	2,827	2,436	5,889	+ 1,141
1965-66 . . .	54,635	8,365	3,069	2,503	8,471	- 106
1966-67 . . .	59,947	8,977	3,414	2,630	8,803	+ 174
1967-68 . . .	64,626	9,808	3,661	2,760	9,132	+ 676
<b>Sewerage—</b>						
1963-64 . . .	45,439	2,763	651	1,550	2,571	+ 192
1964-65 . . .	50,184	3,664	803	1,705	3,434	+ 230

1966-67 . . .	61,517	5,535	1,024	1,966	4,709	+ 826
1967-68 . . .	69,264	7,237	1,105	2,225	6,619	+ 618

(a) Total, including other expenditure.

*Country towns.* In addition to the City of Brisbane, there were at 30 June 1967, 215 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils. At 30 June 1967 there were 53 cities or towns in addition to Brisbane with sewerage systems. The receipts (other than loan and loan subsidy) of water undertakings controlled by the cities and towns referred to above amounted to \$8,433,087 in 1966-67. Expenditure amounted to \$8,651,141, including \$3,775,915 for debt charges. In addition, expenditure from loans and loan subsidy amounted to \$10,130,478. Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

**South Australia**

The water supply and sewerage systems in this State were constructed mainly, and are maintained, by the *Engineering and Water Supply Department*, under the control of the Minister of Works. Works controlled by the Department are the Adelaide, Barossa, Beetaloo, Bundaleer, Moorook, Tod River, Warren, Yorke Peninsula, and other country water districts systems, the Morgan-Whyalla water supply system, the metropolitan and country sewerage systems, the

Metropolitan Flood Waters Scheme, and works on the River Murray constructed under the River Murray Waters Agreement. Several water supply schemes on the Murray River are administered by the Department of Lands in conjunction with irrigation works, and supplies to Woomera and Leigh Creek coalfield are controlled by the operating authorities. The following tables show particulars of metropolitan and country waterworks combined.

## WATERWORKS, SOUTH AUSTRALIA: SERVICES, 1963-64 TO 1967-68

Year	Assessments(a)		Area of districts supplied (a)	Capacity of reservoirs, tanks, etc.	Length of mains	Number of meters
	Number	Annual value				
		\$'000	'000 acres	mill gal	miles	
1963-64 . . . . .	365,579	104,159	13,373	45,173	10,469	278,183
1964-65 . . . . .	376,425	109,651	13,524	45,179	10,748	292,212
1965-66 . . . . .	390,045	127,599	13,849	45,189	11,091	303,288
1966-67 . . . . .	404,013	137,002	13,887	45,193	11,287	312,535
1967-68 . . . . .	421,764	143,217	13,927	45,332	11,447	320,461

(a) Excludes Morgan-Whyalla Water Supply—water sold by measure.

WATERWORKS, SOUTH AUSTRALIA: FINANCES, 1963-64 TO 1967-68  
(\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Deficit
			Working expenses (b)	Interest	Total	
1963-64 . . . . .	172,583	11,103	7,752	6,960	14,711	3,608
1964-65 . . . . .	189,205	11,955	8,475	7,694	16,169	4,214
1965-66 . . . . .	201,828	13,393	9,845	8,376	18,221	4,828
1966-67 . . . . .	213,768	15,674	9,959	8,937	18,896	3,222
1967-68 . . . . .	226,477	14,607	12,008	9,684	21,692	7,085

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide waterworks.* At 30 June 1968 the Adelaide waterworks supplied districts covering 377 square miles of the metropolis and extending to near country areas. The capacity of reservoirs and storage tanks was 36,630 million gallons and there were 3,472 miles of metropolitan mains. The Mannum-Adelaide pipeline conveys water from the River Murray to Adelaide at a rate of up to 66 million gallons a day. Water is delivered to a terminal storage near Adelaide and hence to the metropolitan distribution system or alternatively it can be delivered into metropolitan reservoirs on the River Torrens or to reservoirs on the River Onkaparinga by further pumping. The pipeline supplements the Warren system and other country areas.

ADELAIDE WATERWORKS: FINANCES, 1963-64 TO 1967-68  
(\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus (+) or deficit (-)
			Working expenses (b)	Interest	Total	
1963-64 . . . . .	86,692	7,796	3,861	3,610	7,471	+ 326
1964-65 . . . . .	92,872	8,417	4,222	3,907	8,129	+ 289
1965-66 . . . . .	98,056	9,521	5,292	4,248	9,540	- 19
1966-67 . . . . .	104,067	11,083	5,142	4,500	9,642	+1,441
1967-68 . . . . .	108,936	10,267	6,746	4,730	11,476	-1,209

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide metropolitan sewerage system.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg, Port Adelaide, Christies Beach, and Salisbury-Elizabeth areas of 184 square miles in all, includes treatment works at Glenelg, Port Adelaide, Bolivar, and Christies Beach. Financial and other particulars for 1963-64 to 1967-68 are shown hereunder.

ADELAIDE METROPOLITAN SEWERAGE: SUMMARY, 1963-64 TO 1967-68

Year	Length of sewers (b)	Number of connections	Invested capital at 30 June (a)	Expenditure				
				Revenue	Working expenses (b)	Interest	Total	Surplus
	miles		\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1963-64 . . .	1,774	194,889	38,996	5,239	2,201	1,265	3,466	1,774
1964-65 . . .	1,854	204,128	47,127	5,513	2,363	1,380	3,743	1,769
1965-66 . . .	1,952	213,375	56,235	6,386	2,614	1,561	4,175	2,211
1966-67 . . .	2,039	220,799	66,158	6,804	2,880	2,195	5,075	1,729
1967-68 . . .	2,125	227,489	74,808	7,156	3,375	2,822	6,197	959

(a) After deduction of depreciation. (b) Includes debt redemption.

*Country sewerage schemes.* Sewerage schemes are operating at Port Lincoln, Naracoorte, Mount Gambier, Lobethal, Gumeracha, Nangwarry, Mount Burr, Myponga, and Angaston. At Port Lincoln and Mount Gambier the sewers discharge to ocean outfalls, and treatment works are used on the other systems. There are 215 miles of sewers and 10,715 connections in the country systems. Sewerage schemes for Whyalla, Mannum and Millicent are under construction and operating in part.

*Country water supply.* Water districts systems at 30 June 1968 comprised an area of 13,685,159 acres. Supply came from reservoirs having a total capacity of 20,995 million gallons, from the River Murray, and from underground sources. Apart from local supplies, water from the River Murray comes from branches of the Mannum-Adelaide main and from the Morgan-Whyalla main. The principal areas of underground supplies are in the south-east of the State, where water from the Murray Basin can be had at moderate depths or from lakes, and from sand beds on Eyre Peninsula. In the year 1967-68 supplies made to Mount Gambier, Naracoorte and other towns amounted to 1,313 million gallons, and the Uley-Wanilla, Lincoln and Poldas Basins contributed 788 million gallons to the Tod River Water District.

COUNTRY WATERWORKS, SOUTH AUSTRALIA: FINANCES, 1963-64 TO 1967-68  
(\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			
			Working expenses (b)	Interest	Total	Deficit
1963-64 . . .	85,892	3,307	3,891	3,350	7,241	3,934
1964-65 . . .	96,333	3,538	4,253	3,787	8,040	4,502
1965-66 . . .	103,772	3,872	4,553	4,128	8,681	4,809
1966-67 . . .	109,701	4,591	4,817	4,437	9,254	4,663
1967-68 . . .	117,541	4,340	5,262	4,954	10,216	5,876

(a) After deduction of depreciation. (b) Includes debt redemption.

*Morgan-Whyalla water supply scheme.* This scheme, which has 223 miles of main via Port Augusta and 176 miles of main via the Spencer Gulf undersea crossing, was officially opened on 31 March 1944, the capital invested to 30 June 1968 being \$33,562,156. Particulars of the scheme, where applicable, are included in the tables of the combined waterworks, page 803. Apart from supplying Whyalla, the mains have been used to allow expansion of reservoir supplies in the northern agricultural area of the State, and to meet new demands caused by industrial growth at Whyalla. During 1967-68 water used from the scheme amounted to 5,507 million gallons.

Western Australia

The principal water supply systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage and Drainage Board and the Department of Public Works and Water Supply. The Metropolitan Water Supply, Sewerage and Drainage

Board is constituted under the provisions of the *Metropolitan Water Supply, Sewerage, and Drainage Act 1909-1968* and consists of seven members appointed by the Governor. The area which constitutes the territory administered by the Board encompasses approximately 1,270 square miles and extends from Perth southward to Rockingham and Serpentine, northward to Sorrento, and eastward to Greenmount and Kalamunda. The Department of Public Works and Water Supply controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as 114 local water supplies (see also the chapter Water Conservation and Irrigation). Four independent town schemes are controlled by local Water Boards in country areas, and individual water supplies serve railways, timber mill towns, isolated mines, pastoral properties, stock routes, and agricultural areas, mainly from dams, tanks, wells and bores.

*Metropolitan water supply, sewerage and drainage.* The sources of the metropolitan water supply are Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, and Victoria Reservoir. The largest of these sources are the Serpentine Reservoir and the Canning Reservoir. Serpentine Reservoir is constructed of rolled earth fill, and the embankment rises 171 feet above the stream bed, the length at the crest being 1,390 feet. Its capacity is 39,000 million gallons, and the area of the catchment is 245 square miles. Canning Reservoir, with an estimated catchment area of 302 square miles, has a storage capacity of 20,550 million gallons retained by a concrete wall 218 feet high and 1,534 feet long at the crest. Water from storages on the Darling Range is conveyed to service reservoirs to serve the City of Perth and the metropolitan area. A limited quantity of water is drawn from Mundaring Weir to serve sections of Greenmount, and to meet the peak demands of summer consumption supplies are supplemented from artesian bores, which can provide a daily maximum of 15 million gallons. The amount of bore water used is rarely more than 10 per cent of the metropolitan consumption and is usually considerably less.

The following table shows particulars of the *metropolitan water supply services* for 1963-64 to 1967-68.

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA: SERVICES  
1963-64 TO 1967-68**

Year	Number of services (a)	Average daily consumption	Total consumption for year	Average daily consumption per service (b)	Length of mains	Number of meters
		mill gal	mill gal	gallons	miles	
1963-64 . . . . .	149,033	53.2	19,454	362	2,411	130,480
1964-65 . . . . .	154,051	55.7	20,339	367	2,526	135,471
1965-66 . . . . .	158,675	59.5	21,707	375	2,654	139,435
1966-67 . . . . .	164,782	70.8	25,843	430	2,798	146,028
1967-68 . . . . .	173,068	68.2	24,958	409	2,923	152,603

(a) Figures relate to 30 June.      (b) Calculated from averages for the year.

Water rating for 1967-68 was 5 cents in the \$ on annual valuation on land used for residential purposes and 7.5 cents in the \$ on annual valuation on land not so used.

Some particulars of the *metropolitan sewerage and main drainage services* for 1963-64 to 1967-68 are shown in the following table.

**METROPOLITAN SEWERAGE AND MAIN DRAINAGE  
WESTERN AUSTRALIA: SERVICES  
1963-64 TO 1967-68**

Year	Services	Length of sewers	Length of main drains
		miles	miles
1963-64 . . . . .	68,958	769	94
1964-65 . . . . .	69,553	777	100
1965-66 . . . . .	70,283	816	102
1966-67 . . . . .	71,188	848	109
1967-68 . . . . .	72,177	886	118

Sewerage rating for 1967-68 was 8.75 cents in the \$ on annual valuation, while metropolitan main drainage rating was 2.25 cents in the \$.

*Metropolitan Water Supply, Sewerage and Drainage Board—finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Board.

**METROPOLITAN WATER SUPPLY, SEWERAGE AND MAIN DRAINAGE

*Country water supplies.* Information concerning country water supplies is included in the chapter Water Conservation and Irrigation.

### Tasmania

*Waterworks.* At the end of 1967-68 there were 106 municipally operated waterworks in Tasmania. The capacity of the reservoirs was approximately 2,938 million gallons, the estimated population served was 328,000, and the number of properties served was approximately 106,000. The North Esk Regional Water Supply Scheme is operated by the Rivers and Water Supply Commission as a State concern, supplying bulk water to the municipalities of St Leonards, George Town, Lilydale, and portion of Westbury. This scheme also supplies water to industries situated near the Tamar River. Also vested in the Commission is the West Tamar Water Supply Scheme which serves the Municipality of Beaconsfield, and is operated by the Beaconsfield Council as the agent of the Commission. The over-all control of water supply in the greater Hobart area, comprising the municipalities of Hobart, Clarence, Glenorchy, and Kingborough, is vested in the Metropolitan Water Board, but the municipalities retain primary responsibility for reticulation. The Board has constructed a large bulk supply at Bryn Estyn, near New Norfolk, which supplies bulk water from the Derwent River to the metropolitan area and has a pipeline capacity of 20 million gallons a day. In addition, the Board also controls the Southern Regional Water Supply Scheme, which supplies water to Hobart's eastern shore. In addition to supplying the metropolitan area, the Board extended its service to supply the towns of Cambridge, Midway Point, Sorell, Seven Mile Beach, Rokeby, and Lauderdale, and it is planned to take it to the towns of Margate, Snug, and Howden in due course. The storage at Risdon Brook with a capacity of 800 million gallons was completed in February 1968. The Board has at present under construction 2 half-million gallon reservoirs to serve the towns of Kingston, Howden and Margate.

*Sewerage.* At the end of 1967-68 there were 28 municipal sewerage schemes in operation in Tasmania. They served an estimated population of 225,000 and the number of tenements served was approximately 71,000.

### Northern Territory

Information relating to water supply in the Northern Territory may be found in the chapter Water Conservation and Irrigation.

### Australian Capital Territory

The water supply, sewerage and drainage systems in the Australian Capital Territory are under the control of the Commonwealth Department of Works. The sources of the water supply are: Cotter Dam (capacity 967 million gallons), Bendora Dam (2,360 million gallons) and Corin Dam (capacity 16,600 million gallons). Water is fed from Bendora Dam by gravity to 17 major reservoirs. The maximum daily supply is 45 million gallons. In addition, a pumping capacity of 38.5 million gallons per day is available from 9 pumps. The total population served in the Australian Capital Territory, which during 1967-68 consumed 4,797.3 million gallons of water, was 110,000 (at 30 June 1968). In addition, the Canberra water supply system supplied 367.3 million gallons of water to Queanbeyan, New South Wales. The total number of water meters at 30 June 1968 was 27,982 and the total length of water lines was 534.9 miles. The sewerage system for Canberra and suburbs has three treatment works: the Weston Creek works provides for 100,000 persons, the Fyshwick works provides for 10,000 persons and the Belconnen works provides for 5,000 persons. There were 462.4 miles of sewerage, and 6½ miles of sewer rising mains (at 30 June 1968). There were also 491.4 miles of storm-water drains.

## Harbour boards and trusts

The number and net tonnage of vessels which entered the major ports in each State during the years 1966-67 and 1967-68 are shown in Chapter 12, Transport, Communication and Travel (*see* page 374). Particulars of overseas and interstate cargo discharged and shipped are shown on page 376 of the same chapter.

### New South Wales

*Maritime Services Board of New South Wales.* The Maritime Services Board of New South Wales is a corporate body of seven commissioners comprising three full-time members and four part-time members representing shipping and other maritime interests. The Board was constituted on 1 February 1936, under the Maritime Services Act, 1935, to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation. The Board exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft, and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys, and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State. At the ports of Sydney, Newcastle and Botany Bay the Board is also responsible for the provision of adequate wharfage and channels and carries out all construction, maintenance and dredging work. All revenue earned by the Board at the ports of Sydney, Newcastle and Botany Bay, with the exception of that earned from pilotage and navigational services, is credited to the Maritime Services Board Fund, and all revenue expenditure incurred at the three ports is drawn from that fund. The following table shows particulars of the finances of the Board in respect of the ports of Sydney, Newcastle and Botany Bay.

MARITIME SERVICES BOARD FUND: FINANCES OF THE PORTS OF SYDNEY,  
NEWCASTLE AND BOTANY BAY, 1963-64 TO 1967-68  
(\$'000)

Year	Revenue			Total	Expenditure(a)			Total	Surplus
	Wharfage and transhipment rates	Tonnage rates and berthing charges	Other charges		Adminis-tration and maintenance	Interest, debt redemption, exchange, etc.			
1963-64	10,838	1,755	2,933	15,526	7,864	7,567	15,431	95	
1964-65	11,594	1,858	3,565	17,017	9,109	7,835	16,945	72	
1965-66	10,711	1,832	3,980	16,523	9,512	6,916	16,428	95	
1966-67	11,501	1,895	4,282	17,678	9,476	8,113	17,589	89	
1967-68	12,664	2,024	5,645	20,333	10,830	9,451	20,280	53	

(a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account (\$4,778,000 in 1963-64, \$5,080,000 in 1964-65, \$3,060,000 in 1965-66, \$3,975,000 in 1966-67, and \$4,940,000 in 1967-68).

*Port of Sydney.* The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as 'The Heads', and the Harbour proper, a distance of four miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 45 feet deep (low water ordinary spring tide) and the Eastern Channel 38 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length, and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated close to the business centre of the city, about four or five miles from the Heads. At 30 June 1968 there were 5 dolphin berths 3,350 feet long, and 86 effective commercial cargo berths, with a total length of 43,186 feet, controlled by the Board. Accommodation for harbour craft amounts to 2,245 feet, while the length of other berths, including oil and private wharves, totals 28,815 feet. Depth of water at wharves is up to 36 feet. Special facilities for the storage and handling of products such as wheat, wool, coal, etc. are provided, and modern plant has been installed for replenishing ships' bunkers with oil or coal. Docking facilities are available for large vessels and the Captain Cook Graving Dock ranks among the largest graving docks in the world, being 1,139 feet by 147 feet 7½ inches with a depth of 45 feet 2 inches over the sill at high water. There are also several smaller dry docks and floating docks in the port.

*Port of Newcastle.* As from 1 May 1961 the Maritime Services Board of New South Wales became the single authority for the port of Newcastle. An Advisory Committee consisting of eight members, appointed by the Governor, assists the Board in matters associated with the operation of the port. Shipping at Newcastle is concerned primarily with the coal, iron and steel and other heavy industries located in the district, however facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 36 feet at low water, is 500 feet wide. Wharfage accommodation amounts to approximately 15,000 feet, including about 3,000 feet of privately owned wharfage. There are also two dolphin berths available for tie-up purposes. A floating dock of 15,000 tons capacity is available at the port and a coal loading plant capable of loading at the rate of 2,000 tons an hour is now operating. The bulk berth which recently became operative at Walsh Island is equipped with two grab unloaders each with a nominal capacity of 650 tons an hour.

*Botany Bay.* The Maritime Services Board of New South Wales is the administrative and controlling authority. The port is primarily a discharging centre for the oil refinery at Kurnell, near Sydney, and two berths are available as well as tanker mooring buoys. The entrance to the Bay is approximately one and a quarter miles wide, with a minimum depth of about 38 feet in the dredged swinging basin.

*Port Kembla.* As from 3 May 1948 the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. This Department, however, continues to be the constructing authority in respect of works, dredging and maintenance. An Advisory Committee consisting of seven members, appointed by the Governor, has been formed to assist the Board in the operation of the port. It has an area of approximately 340 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation totalling 9,000 feet has been provided for large ocean-going vessels. No cargo sheds are available, as the nature of trade at the port does not call for the provision of sheltered storage accommodation at the berths. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong. The developmental programme for Port Kembla includes the construction of an inner harbour to provide wharfage for the steelworks in addition to modern general cargo berths. The first stage has been completed and a coal loading plant capable of loading at the rate of 2,000 tons an hour is now available. Present accommodation is 2,550 feet of wharfage, with 36 feet (low water ordinary spring tide) of water alongside. Width in the entrance to the inner harbour basin is 400 feet.

*Other ports.* In addition to the ports of Sydney, Newcastle, Port Kembla, and Botany Bay, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

*Port charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1 February 1936 the State enactments have been administered by the Maritime Services Board. The gross collections

by the State authorities amounted to \$27,278,000 in 1967-68. This figure includes the revenue for the ports of Sydney, Newcastle and Botany Bay (see table on page 807) and State navigation service collections, \$6,944,000 in 1967-68.

### Victoria

*Melbourne Harbor Trust.* Information regarding the origin and constitution of this Trust, which controls the port of Melbourne, appears in Official Year Book No. 12, pages 970-2. The port of Melbourne comes under the control of the Melbourne Harbor Trust Commissioners, an independent autonomous statutory organisation, with a full-time chairman and five part-time commissioners with specialised knowledge of the requirements of exporters, primary producers, shipowners, importers, and of all aspects of port labour. The area of water and land under the control of the Trust is ten and a half square miles, with sheds available for cargo in transit totalling 22,928 feet in length and covering an area of about 43 acres. Three of the largest transit sheds on the Australian coast are in operation at Appleton Dock. The sheds are 600 feet long by 150 feet wide, each with a cargo stacking area of 81,000 square feet. The berths are used for conventional general cargo trade as well as the unit-load container handling for general cargo in the overseas trade. The total length of wharves, piers and jetties in the port is 61,550 feet, covering an area of about 59 acres with 56,940 feet of effective berthing space.

In line with world-wide changes in cargo handling methods, current planning and construction in the Port of Melbourne are almost exclusively devoted to facilities catering for container ships and cargo as well as for the multi-purpose unit-load container conventional ships and cargo. The port's first overseas container terminal, Swanson Dock, which has 1,050 ft of concrete wharf apron with 22.5 acres stacking area behind the berth, was officially opened on 7 March 1968. An additional 800 ft long 'common user' container berth on the east side of Swanson Dock was expected to be completed in August 1969. Two roll-on roll-off container unit-load berths were also completed in early 1969, one at North Wharf for the trans-Tasman trade to New Zealand, having a 830 ft wharf apron and 3.3 acre stacking area behind the berth and the other at the River Entrance Docks, with a 600 ft wharf apron and additional 11.3 acre stacking area for the eastern seaboard trade.

The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is 31 to 39 feet.

The following table shows particulars of the financial operations of the Trust.

MELBOURNE HARBOR TRUST: FINANCES, 1964 TO 1968  
(\$'000)

Year	Gross loan indebtedness at 31 December	Revenue		Expenditure				Surplus (+) or deficit (-)
		Wharfage and tonnage rates	Total	Operation, administration and maintenance	Interest, debt redemption, exchange, etc.	General reserve, depreciation, renewals and insurance account	Total	
1964 . .	29,773	7,145	11,312	6,687	2,632	1,812	11,131	+181
1965 . .	30,473	7,058	11,434	6,451	2,393	2,382	11,226	+208
1966 . .	32,229	6,393	10,695	6,235	1,712	2,583	10,530	+165
1967 . .	34,484	6,692	11,322	6,441	2,142	2,567	11,150	+172
1968 . .	36,029	8,357	13,573	6,972	2,381	4,002	13,355	+218

*Geelong Harbor Trust.* The Geelong Harbor Trust, constituted in 1905, is under the control of three Commissioners appointed from time to time by the Governor-in-Council. At the end of 1967 there were 18 effective berths in the port, plus 2 berths at the Commonwealth Explosives Pier, Point Wilson, owned and operated by the Commonwealth. The construction of a modern dry bulk berth with an initial discharge rate of 1,000 tons an hour commenced in 1967, but the 4 seven and a half ton cranes to operate on this berth have in the meantime commenced to operate on the adjacent Kings Wharf. The Trust operates its own towage fleet of seven tugs, the largest of 1,900 b.h.p. Eight berths have a depth of 36 feet at low water; all other berths (except Commonwealth Explosives Pier,

Point Wilson and Point Henry Pier, 30 feet) have a depth of 32 feet at low water. Revenue for the year 1967 was \$3,479,463, and expenditure from revenue totalled \$2,211,170. At 31 December 1967 the value of the Trust's fixed assets was \$25,855,472 and loans outstanding amounted to \$7,735,915.

*Portland Harbor Trust.* The port of Portland provides unimpeded access for large ocean-going vessels to the entrance of a 250-acre harbour basin having a minimum depth of 36 feet of water under all tidal conditions. A Board of three commissioners controlling the port is a corporate body appointed on a part-time basis and nominated to represent interests concerned with port operating activities.

Construction of an all-weather deep sea port at Portland was completed to operational standards during 1960. A new oil tanker berth was commissioned during 1963 and the completion of a 1.25 million bushel bulk grain terminal in 1965 provided in-transit storage for grain awaiting overseas shipment. In 1968 a new berth for handling bulk commodities was completed. This berth was designed primarily to handle imports associated with the manufacture of fertiliser at Lady Bay.

Operating revenue and expenditure for the year ended 30 June 1968 were \$352,373 and \$299,697 respectively. The fall in revenue and expenditure was due to the effect of the drought on the grain crops. The value of the Trust's fixed assets, less depreciation, was \$17,948,837 at 30 June 1968, and loans and advances outstanding amounted to \$18,498,496.

### Queensland

The ports of Queensland, except Brisbane and certain minor ports, are administered by harbour boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

*Brisbane.* Brisbane, in its dredged and improved river, accommodates comfortably the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly because of the increasing size of vessels, are still within easy access of the city. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1962-63 to 1966-67 are shown below.

#### BRISBANE HARBOUR: FINANCES, 1962-63 TO 1966-67 (\$'000)

Year	Loan indebtedness at 30 June	Receipts		Payments	
		Harbour dues	Total	Working expenses (a)	Total
1962-63 . . .	5,296	1,640	2,514	1,774	2,146
1963-64 . . .	5,032	1,859	2,500	3,346	3,837
1964-65 . . .	4,912	2,125	2,796	2,305	2,646
1965-66 . . .	4,787	2,094	3,121	2,157	2,498
1966-67 . . .	4,636	2,044	2,987	2,228	2,561

(a) Excludes interest and redemption included in total.

In addition to Brisbane harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, and 10 smaller harbours not administered by harbour boards.

*Harbour boards.* Harbour boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton, and Townsville. Finances for each port for the year ended 30 June 1967 are shown on page 811, together with a summary for the years ended 30 June 1963 to 1967.

**HARBOUR BOARDS, QUEENSLAND: FINANCES, 1962-63 TO 1966-67**  
(\$'000)

Harbour board	Loan indebtedness at 30 June	Revenue		Expenditure (excluding loan)		Surplus(+) or deficit(-)
		Wharfage and harbour dues	Total	Working expenses	Total including interest and redemption (a)	
Bowen . . . . .	545	17	21	21	21	..
Bundaberg . . . . .	6,282	780	1,354	288	1,188	+166
Cairns . . . . .	6,951	569	1,306	397	1,033	+273
Gladstone . . . . .	6,957	402	3,056	227	3,236	-180
Mackay . . . . .	4,149	480	1,158	354	1,033	+125
Rockhampton . . . . .	2,806	110	208	68	215	-7
Townsville . . . . .	8,694	752	1,269	521	1,475	-206
<b>Total, 1966-67 . . . . .</b>	<b>36,384</b>	<b>3,109</b>	<b>8,372</b>	<b>1,876</b>	<b>8,201</b>	<b>+171</b>
1965-66 . . . . .	35,436	2,524	8,862	1,792	9,088	-226
1964-65 . . . . .	33,824	2,412	6,337	1,398	6,169	+168
1963-64 . . . . .	28,369	2,329	5,419	1,362	5,402	+17
1962-63 . . . . .	22,619	2,179	4,119	1,203	3,731	+388

(a) Includes expenditure on capital works from accumulated revenue.

### South Australia

*Department of Marine and Harbors.* All South Australian harbours are controlled by the Department of Marine and Harbors, which is responsible to the Minister of Marine for the discharge of its duties and functions. The most important ports are the 5 deep-sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln, and Thevenard. In South Australia there are also 8 privately-owned and operated ports. The principal of these are Whyalla, Ardrossan, Rapid Bay, and Proper Bay (Broken Hill Pty Co. Ltd), Port Augusta (Commonwealth Railways) and Port Stanvac (Petroleum Refineries (Aust.) Pty Ltd). Maximum depths of water (low water) at the wharves of the main ports range from 27 feet at Port Pirie to 35 feet at Port Adelaide. The following table shows the finances of the Department for 1963-64 to 1967-68.

**DEPARTMENT OF MARINE AND HARBORS, SOUTH AUSTRALIA: FINANCES**  
**1963-64 TO 1967-68**  
(\$'000)

Year	Loan indebtedness at 30 June	Revenue	Expenditure from revenue			Surplus
			Working expenses	Interest	Total	
1963-64 . . . . .	40,030	6,114	3,591	1,581	5,172	942
1964-65 . . . . .	41,393	6,201	3,908	1,679	5,587	614
1965-66 . . . . .	43,172	6,194	3,941	1,734	5,675	519
1966-67 . . . . .	44,264	6,734	4,019	1,807	5,827	907
1967-68 . . . . .	45,478	6,418	4,196	1,869	6,065	352

### Western Australia

*Fremantle Port Authority.* The Port of Fremantle is operated and controlled by the Fremantle Port Authority, a body corporate administered by a Board of five commissioners appointed triennially by the Governor. The port covers an extensive water area of some 180 square miles and comprises an inner and an outer harbour. The inner harbour includes 18 deep-water land-backed berths, providing more than 665,450 square feet of covered storage space and 11,237 feet of wharf berth accommodation. All inner harbour berths are dredged to a low water depth of 36 feet. The outer harbour includes 3 main anchorages, Gage Roads, Owen Anchorage and Cockburn Sound. Deep-water

jetties, including the oil refinery jetty in Cockburn Sound, are available in the outer harbour. Ocean-going deep draft ships enter the Sound by means of a channel dredged through Success and Parmelia Banks to a low water depth of 45 feet and a bottom width of 500 feet. In the outer harbour there are 3 tanker berths each with a low water depth of 44 feet at the Kwinana oil refinery, 2 berths at the nearby steelworks jetties with a low water depth of 38 feet, 1 berth at the alumina works jetty with a low water depth of 40 feet and 1 berth at the bulk cargo jetty with a low water depth of 44 feet. There is also a special berth for the handling of explosives. Gross earnings for 1967-68 amounted to \$9,638,118, working expenses to \$7,270,130, interest charges on loan capital \$817,775, sinking fund contributions \$224,581, and loan indebtedness totalled \$20,279,893.

*Albany Harbour Board.* The Albany Harbour is controlled by a board of five members appointed by the Government. The depth of water in the entrance channel is 33 feet, at one arm of the jetty 31 feet and at the other arm 33 feet. In the approaches to wharf berths the depth is 33 feet. Berthing accommodation totals 3,615 feet, comprising 1,115 feet at the wharf berths and 2,500 feet at the Deepwater Jetty. Gross earnings for the year 1967-68 amounted to \$520,498, working expenses \$188,216, interest and sinking fund charges \$226,772, and loan indebtedness totalled \$3,987,255.

*Bunbury Harbour Board.* The Bunbury Harbour is controlled by a board of five members appointed by the Government. The depth of water in the harbour is 30 feet and berthing accommodation is 4,808 feet. Gross earnings for the year 1967-68 amounted to \$785,020, working expenses \$293,675, interest on loan capital \$332,376, and loan indebtedness totalled \$6,784,108.

*Other ports.* The following ports are controlled by the State Government Harbour and Light Department: Broome, Busselton, Carnarvon, Derby, Esperance, Geraldton, Onslow, Point Samson, Port Hedland, and Wyndham. Ports privately controlled comprise Yampi and Dampier, both operated by iron ore mining companies, and Exmouth, the port serving the communications installation at North West Cape. A private buoyed sea terminal is operated at Barrow Island for the shipment of crude oil, and private interests ship salt at Useless Loop in Shark Bay.

### Tasmania

Marine boards control all Tasmanian ports, except those controlled by the Port of Launceston Authority and the Smithton Harbour Trust. Ports controlled by the seven marine boards are: Hobart, Stanley (Circular Head), Burnie, Devonport, Strahan, Currie (King Island), and Whitemark (Flinders Island). Port Latta (specialised port for the shipment of iron ore pellets) is managed by North-West Iron and Dahlia Mining companies for the Circular Head Marine Board. Hobart, Launceston, Burnie and Devonport are the principal ports in Tasmania. In addition to their interstate and intra-state traffic, they receive considerable overseas shipping. Depths of water at wharves vary, in general, between 16 and 40 feet.

#### AUTHORITIES CONTROLLING PORTS, TASMANIA: FINANCES 1964-65 TO 1967-68 (\$'000)

Authority	Loan indebtedness at 30 June (a)	Receipts (revenue account)		Expenditure (revenue account)		Surplus (+) or deficit (-)
		Wharfage charges	Total	Loan charges	Total	
Hobart . . . . .	2,658	925	1,756	386	1,442	+314
Launceston . . . . .	3,341	681	1,756	280	1,781	-24
Devonport . . . . .	5,258	639	1,061	452	909	+152
Burnie . . . . .	10,443	716	1,204	748	1,147	+56
Circular Head . . . . .	437	17	68	33	57	+11
King Island . . . . .	91	37	44	17	39	+5
Strahan . . . . .	20	34	46	4	46	..
Flinders Island . . . . .	1	15	17	1	10	+7
Smithton . . . . .	..	..	1	..	2	-1
<b>Total, 1967-68 . . . . .</b>	<b>22,249</b>	<b>3,064</b>	<b>5,953</b>	<b>1,921</b>	<b>5,433</b>	<b>+519</b>
1966-67 . . . . .	20,361	2,910	5,628	1,646	5,333	+295
1965-66 . . . . .	18,622	2,674	5,541	1,504	5,147	+394
1964-65 . . . . .	17,099	2,542	5,062	1,302	5,015	+47

(a) The total of new loans raised during 1967-68 was \$2,598,000, of which Hobart raised \$350,000, Launceston \$450,000, Devonport \$700,000, Burnie \$850,000, and Circular Head \$238,000.

## Fire brigades

### New South Wales

A Board of Fire Commissioners, consisting of five members, one appointed by the State Government (President) and one each representing insurance companies, local government authorities, volunteer firemen, and permanent firemen, operates under the Fire Brigades Act, 1909-1965, and 163 fire districts had been constituted at the end of 1967. The cost of maintenance of fire brigades is borne in proportions of local councils and the Government each one-eighth, and the insurance companies three-quarters. The Board's borrowing power is limited to \$2,000,000.

At 31 December 1967 the actual strength of the Fire Brigade throughout the fire districts of New South Wales was 455 officers and 1,330 permanent and 2,690 volunteer firemen. Corresponding figures for the Sydney Fire District were 374, 1,178 and 297. The revenue for the year 1967 was \$9,366,000, as follows; from the Government \$1,154,000; municipalities and shires, \$1,154,000; fire insurance companies and firms, \$6,923,000; and from other sources, \$136,000. The disbursements for the year were \$9,547,000. The Board of Fire Commissioners provides the fire protection services for Canberra, in the Australian Capital Territory, and the cost of these services is reimbursed by the Commonwealth Government.

Under the Bush Fires Act, 1949-1965 a Bush Fire Fighting Fund exists from which finance is provided for the prevention and fighting of bush fires. Contributions to the Fund by the Government, councils and insurance companies are in the proportion of one-quarter, one-quarter and one-half, respectively. At 30 June 1968 Volunteer Brigades equipped by means of this fund numbered 2,500 with an active membership of about 65,000 persons. The approved expenditure from the Fund for equipment, up to 30 June 1969, amounted to \$10,340,000.

### Victoria

In Victoria, fire brigades are controlled by the Metropolitan Fire Brigades Board consisting of ten members, including an employees' representative, and the Country Fire Authority consisting of eleven members.

*Metropolitan Fire Brigades Board.* The Metropolitan Fire Brigades Board receives contributions from the municipalities and the insurance companies in the proportion of one-third and two-thirds respectively. On 30 June 1968 the Board had under its control 45 stations, 1,153 permanent staff, 234 special service and clerical, etc. staff, and 7 part-time firemen. The total receipts for 1967-68 were \$6,904,188, comprising contributions \$6,053,012, receipts for services \$526,859, and interest and sundries \$324,317. The expenditure was \$6,460,925.

*Country Fire Authority.* This authority is responsible for the prevention and suppression of fires in the 'country area of Victoria', which embraces the whole of the State outside the Metropolitan Fire District, excluding State forests and certain Crown lands. The country area has been divided into twenty-five fire control regions, four of which (Ballarat, Bendigo, Geelong and the Dandenong, Chelsea and Frankston areas) are wholly urban and the remainder mixed urban and rural. The Country Fire Authority receives contributions in the proportion of two-thirds from insurance companies and one-third from the Treasury. At 30 June 1968 the Country Fire Authority Act applied to 191 insurance companies and 208 urban and 1,048 rural fire brigades. The effective registered strength of the brigades was 117,333 members. Income for the year 1967-68 amounted to \$2,952,993. Total expenditure other than loan amounted to \$2,764,160.

### Queensland

There are two controlling bodies responsible for fire fighting services throughout Queensland. The State Fire Services Council controls brigades set up under *The Fire Brigades Acts 1964 to 1966*, and the Rural Fires Board under provisions of *The Rural Fires Act, 1946 to 1968* administers Bush Fire Brigades. In addition a Local Authority may establish a fire fighting brigade of its own as do some major establishments such as the State Forestry Department and private companies whose activities involve fire hazards.

Fire districts are constituted under '*The Fire Brigades Acts, 1964 to 1966*'. For each district, there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows: Treasury one-eighth, insurance companies three-quarters, and local authorities one-eighth. The insurance companies' contribution is paid to the State Government and thence to fire brigades.

At 30 June 1967 there were 84 Fire Brigades Boards. The number of stations was 171 and full-time staff numbered 994, including 21 administrative, 239 officers and 734 firemen. Volunteers numbered 23. Part-time staff numbered 1,284 including 83 administrative, 123 officers and 1,078

firemen. The total revenue for the year 1966-67 was \$4,581,300, received mainly from the following sources: Government \$550,170, local authorities \$550,170, insurance companies \$3,301,017. Loan receipts (Government and other) were \$538,504. The total expenditure for the year was \$4,428,391, the chief items being salaries and wages \$3,029,556, and interest and redemption of loans \$504,038.

The Rural Fires Board consists of a chairman and six members all appointed by the Governor-in-Council from Government Departments and the Minister of Lands has power to add up to three additional members from the community as a whole. For administrative purposes the State is divided into Rural Fire Districts under the control of a Chief Fire Warden and in these districts Fire Wardens are appointed to assigned areas. These officers co-ordinate and control the Bush Fire Brigades on a voluntary basis. At 30 June 1967 there were 163 Rural Fire Districts with 1,316 Fire Wardens and Bush Fire Brigades numbered 881. Expenditure by the State Government during 1966-67 amounted to \$45,544.

#### South Australia

The Fire Brigades Act, 1936-1958 provides for a board of five members, that the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies and two-ninths by the municipalities concerned, and that when the Treasury proportion exceeds its statutory contribution of approximately \$27,000, the excess is borne five-sevenths by insurance companies and two-sevenths by the municipalities. At 30 June 1968 there were altogether 37 fire brigade stations, of which 15 were metropolitan and 22 country.

The strength of the permanent staff at 30 June 1968 was 509, including 387 officers and men, 90 country auxiliary firemen and 32 other employees (including maintenance workers). The total revenue for the year 1967-68 was \$1,669,902, including contributions of \$1,447,299 made up as follows: insurance companies \$871,079, Treasury \$227,788 and municipalities \$348,432. The Treasury contribution includes a special grant of \$198,970.

#### Western Australia

By the provisions of the *Fire Brigades Act, 1942-1966* certain local government areas are constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 56 fire districts at 30 June 1968. The contribution to the Board is made in the proportion of 16 per cent from the Government, 20 per cent from local government authorities, and 64 per cent from insurance companies. The number of local government authorities and insurance companies who contributed numbered 77 and 177 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30 June 1968 numbered 75, with a staff of 1,748 including 349 permanent officers and firemen and 1,399 volunteer brigade officers and firemen. The revenue for nine months of the year ended 30 June 1968 was \$1,622,107 and the expenditure \$1,647,667.

Under the *Bush Fires Act, 1954-1965* a Bush Fires Board, consisting of thirteen members, six of whom are nominated by the Country Shire Councils' Association, was set up to advise the Minister for Lands on bush fire control. The Act also provides for the registration of bush fire control officers, who numbered 2,204 at 30 June 1968, and the establishment of bush fire brigades, 930 at 30 June 1968. Many individual brigades are large organisations with numerous self-contained sections.

#### Tasmania

The *Fire Brigades Act 1945* provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of existing fire brigade boards, while leaving the responsibility for individual control and management with the boards. The Commission consists of two persons nominated by the Minister, one person elected by the City or Municipal Councils' representatives and three persons elected by the insurance representatives of the Fire Brigades Boards. Contributions towards the cost of operations are on the basis of 22.5 per cent each from the Treasury and the municipalities and 55 per cent from the insurance companies concerned. The cost for the year 1967-68 amounted to \$808,478. There were, at 30 June 1968, 23 boards controlling 36 stations, and their aggregate staffs numbered 617 (officers and firemen), including 193 permanent firemen, 384 part-time firemen and 40 volunteers; the volunteers all operate under the Hobart Board in the forested and mountainous Fern Tree area.

## CHAPTER 21

### RURAL INDUSTRY

This chapter is divided into four major parts:

Introduction, dealing with the disposal of Crown lands, closer settlement and war service settlement and general rural activity in Australia;

Agricultural production;

Pastoral production; and

Other rural industries, which includes the dairying, poultry and bee industries.

For greater detail on the subjects dealt with in this chapter see the annual bulletins *Rural Industries, Value of Production*, and *Manufacturing Commodities* (regarding butter, cheese, etc., factories) issued by this Bureau. Current information on commodities produced is obtainable in the *Quarterly Summary of Australian Statistics*, *Monthly Review of Business Statistics*, *Monthly Bulletin of Production Statistics*, and *Digest of Current Economic Statistics* (monthly). The series of bulletins *Classification of Rural Holdings by Size and Type of Activity* (see page 819) shows particulars of rural holdings classified by size, nature and area of crops, and numbers of livestock, and also according to main type of activity. The mimeographed annual *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia* contains details of the production and utilisation of foodstuffs. The following mimeographed publications also contain considerable detail on the particular subjects dealt with.

**General.** *Value of Production and Indexes of Price and Quantum of Farm Production* (annual), *Value of Primary Production (Preliminary Statement)* (annual), *Value of Primary Production (Preliminary Estimates)* (annual), *Farm Machinery on Rural Holdings* (annual), *Tractors on Rural Holdings, 31 March 1966* (detailed information, triennial), *Grain and Seed Harvesters on Rural Holdings, 31 March 1967* (detailed information, triennial), *New Tractors: Receipts, Sales and Stocks* (quarterly), and *New Agricultural Machinery* (quarterly).

**Agricultural production.** *Rural Land Use and Crop Production* (annual), *Agricultural Statistics (Preliminary Statement)* (annual), *The Wheat Industry* (two a year), *The Fruit Growing Industry* (annual), and *Fruit Statistics (Preliminary Statement)* (annual).

**Pastoral production.** *Livestock Statistics* (annual), *Livestock Numbers* (annual), *The Meat Industry* (monthly), *Wool Production* (annual), and *Wool Production and Utilisation* (annual).

**Other rural production.** *The Dairying Industry* (monthly and half-yearly), *Livestock Statistics* (annual), *Livestock Numbers* (annual), *Chicken Hatchings and Poultry Slaughterings* (monthly), *Manufacturing Industries No. 20—Bacon Curing and No. 21—Butter, Cheese and Condensed, Concentrated, etc., Milk* (annual), *Production Summaries No. 36—Preserved Milk Products and No. 55.—Butter and Cheese* (monthly), and *Bee-farming* (annual).

Detailed particulars of the early development of various aspects of Australian rural industry are given in previous issues of the Year Book up to No. 53 (see, for example No. 53, pages 885, 888, 891–2).

Throughout this chapter yearly periods for area and production of crops relate to years ended 31 March. Other periods in respect of e.g. factory and trade statistics relate to years ended 30 June.

### INTRODUCTION

#### Disposal of Crown lands

##### Land legislation and tenures

The following sections contain figures showing the extent of the different land tenures in the several States and Territories, classified under broad headings indicating the nature of the tenure, together with some general descriptive matter. Information in greater detail, descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure were provided in Year Book No. 48 and previous issues (see also Year Book No. 50, page 85 and List of Special Articles, etc. preceding General Index to this Volume).

### Free grants and reservations

Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and or permanent reservation of Crown lands for public purposes. In the Northern Territory any Crown lands not subject to any right of, or contract for, purchase may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act 1910*, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

### AREAS OF CROWN LANDS RESERVED: STATES AND TERRITORIES, 1964 TO 1968 (<sup>'000</sup> acres)

Year	N.S.W. (a)	Vic. (b)	Qld (b)	S.A. (a)	W.A. (a)	Tas. (a)	N.T. (a)	Total (c)
1964 . . .	15,931	8,847	25,234	22,764	76,450	4,852	60,903	214,981
1965 . . .	15,943	8,861	25,451	22,802	78,088	4,861	60,903	216,909
1966 . . .	15,937	8,874	25,662	22,878	78,226	4,913	60,922	217,412
1967 . . .	15,875	8,921	27,240	22,878	80,491	4,938	60,974	221,317
1968 . . .	15,872	8,952	27,833	22,919	80,658	5,327	60,988	222,549

(a) At 30 June.

(b) At 31 December.

(c) Excludes the Australian Capital Territory.

The purposes for which areas were reserved are given hereunder for the latest years available as set out in the table above.

*New South Wales.* For travelling stock, 4,941,904 acres; forest reserves, 1,490,014 acres; water and camping reserves, 768,098 acres; mining reserves, 1,027,414 acres; recreation and parks, 730,318 acres; other reserves, 6,913,841 acres; total, 15,871,589 acres.

*Victoria.* For roads, 1,707,565 acres; water reserves, 315,494 acres; forest and timber reserves, 5,818,285 acres; mallee reserves, 410,000 acres; other reserves, 701,121 acres; total, 8,952,465 acres.

*Queensland.* For timber reserves, 1,775,192 acres; State forests and national parks 9,482,138 acres; Aboriginal reserves, 6,978,443 acres; streets, surveyed roads and stock routes, 4,195,343 acres; general reserves, 5,401,386 acres; total, 27,832,502 acres.

*South Australia.* Total area of surveyed roads, railways and other reserves, 22,919,170 acres, including 18,833,822 acres set apart as Aboriginal reserves.

*Western Australia.* For State forests, 4,451,351 acres; timber reserves, 1,864,637 acres; other reserves 74,341,945 acres; total, 80,657,933 acres.

*Tasmania.* For forest reserves, 4,304,000 acres; national parks, 1,023,000 acres; total, 5,327,000 acres.

*Northern Territory.* For Aboriginal, defence and public requirements, 60,988,000 acres.

### Conditional and unconditional purchases of freehold

Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details *see* Year Book No. 48, pages 91-2). Conditional purchases of various types may also be made. In the Northern Territory only 0.1 per cent of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory about 16 per cent of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

### Leases and licences

Well over half the area of the States of New South Wales and South Australia and of the Northern Territory and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; in Tasmania about one-quarter is leased or licensed, while about one-third of the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

*Land Acts and Ordinances.* The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples: grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and unconditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence

which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 878-81 of Year Book No. 53.

**AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY: STATES AND TERRITORIES, 1964 TO 1968**  
(\*000 acres)

Year	N.S.W. (a)	Vic. (b)	Qld (b)	S.A. (a)	W.A. (a)	Tas. (a)	N.T. (a) (c)	A.C.T. (a) (c)	Total
1964	111,386	6,147	367,209	146,382	242,309	1,062	191,436	285	1,066,216
1965	111,567	6,263	365,318	147,661	241,911	984	191,840	282	1,065,826
1966	111,262	6,269	362,866	150,422	241,662	933	190,688	279	1,064,381
1967	111,300	5,993	359,152	149,192	244,715	915	194,543	262	1,066,072
1968	110,499	(d)5,856	353,163	149,530	244,804	766	191,595	254	1,056,467

(a) Year ended 30 June. (b) Year ended 31 December. (c) Leases and licences for all purposes. (d) Includes 75,000 acres of reserved Crown lands held under grazing licences.

### Closer settlement and war service settlement

#### Closer settlement

Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (see No. 22, pages 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30 June 1960 of the areas and costs for those States for which separate information is available.

#### War Service Land Settlement Scheme

The War Service Land Settlement Scheme provides for the settlement on the land of eligible servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects of the scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the scheme, to find their own finance for the acquisition and development of properties. In 1954 Queensland abandoned the scheme and made available for general settlement all unallotted lands held under it. Detailed information about the agreements and the methods of operation and administration of the scheme are contained in earlier Year Books (see List of Special Articles, etc., preceding General Index to this volume).

#### WAR SERVICE LAND SETTLEMENT: SUMMARY, STATES, TO 30 JUNE 1968

State	Land acquired		Farms allotted		Farms in course of development		Other
	acres	No.	acres	No.	acres	acres	
New South Wales	9,094,021	3,047	9,094,021	..	..	..	
Victoria	1,181,599	3,048	1,181,599	..	..	..	
Queensland	398,524	470	218,640	..	..	(a)179,884	
South Australia	755,873	1,021	690,225	..	..	(b)65,648	
Western Australia	2,053,972	1,010	1,905,475	..	..	(b)148,497	
Tasmania	449,629	552	439,745	..	..	(b)9,884	
<b>Total</b>	<b>13,933,618</b>	<b>9,148</b>	<b>13,529,705</b>	<b>..</b>	<b>..</b>	<b>403,913</b>	

(a) War Service Land Settlement was discontinued in 1954, and unallotted lands were made available for general settlement. (b) Includes land disposed of outside the scheme and discrepancies to be corrected upon survey.

Particulars of expenditure on war service land settlement are given in Chapter 19, Public Finance (see pages 716-7).

### Alienation and occupation of Crown lands

Detailed particulars of the alienation and occupation of Crown lands in the several States and Territories are given in previous issues of the Year Book up to No. 53 (*see* No. 53, pages 878-81).

The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1968.

#### ALIENATION AND OCCUPATION OF CROWN LANDS: STATES AND TERRITORIES, 1968

State or Territory	Private lands				Crown lands				Total area '000 acres
	Alienated		In process of alienation		Leased or licensed		Other (a)		
	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	
N.S.W.(b)	61,700	31.2	4,805	2.4	112,299	56.7	19,233	9.7	198,037
Vic.(c)	32,156	57.2	2,140	3.8	5,781	10.3	16,168	28.7	56,246
Qld(d)	26,793	6.3	19,620	4.6	355,780	83.3	24,687	5.8	426,880

(d) At 31 December 1968.

(b) At 30 June

(c) At 31 December 1967.

(e) Includes Jervis Bay area.

### Number and area of rural holdings

#### Number and area

A holding in Australia has been defined by statisticians on a more or less uniform basis, and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics a holding has been defined as land of one acre or more in extent used in the production of agricultural produce or for the raising of livestock and the production of livestock products.

There are considerable fluctuations from time to time in the numbers of very small holdings, and it is very difficult to determine in some cases whether or not they are rural holdings within the definition. In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied for extensive grazing under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also occasionally occupied.

#### RURAL HOLDINGS: NUMBER AND AREA, STATES AND TERRITORIES, 1963-64 TO 1967-68

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
NUMBER OF RURAL HOLDINGS									
1963-64	77,339	69,775	43,183	28,711	22,770	10,949	299	214	253,240
1964-65	77,098	69,737	43,565	28,754	22,856	10,979	307	207	253,503

1967-68	76,225	(a)72,802	43,694	29,058	23,116	10,631	305	196(b)	256,027
TOTAL AREA OF RURAL HOLDINGS ( <sup>000</sup> acres)									
1963-64	172,076	37,798	376,687	158,905	266,556	6,377	165,734	373	1,184,506
1964-65	172,148	37,844	377,010	156,955	268,553	6,420	171,482	358	1,190,770
1965-66	171,200	37,844	380,325	159,394	270,054	6,496	175,862	355	1,201,531
1966-67	171,652	38,653	379,977	161,510	274,765	6,507	170,018	350	1,203,431
1967-68	171,767	(a)39,564	380,993	160,765	275,334	6,579	174,385	350(b)	1,209,737

(a) New Series. The lists of land holdings used in the collection of agricultural and pastoral statistics in Victoria have been reconciled with lists of rateable land of one acre or more in extent as recorded by municipalities for rating purposes. This has resulted in an increase in number and area of holdings in the 1967-68 collection.

(b) See footnote (a).

**Land utilisation of rural holdings**

The following table shows the purposes for which the land on the rural holdings referred to in the preceding paragraph was used.

**RURAL HOLDINGS: LAND UTILISATION, 1963-64 TO 1967-68**  
(’000 acres)

Year	Area used for crops (a)	Land lying fallow(b)	Area under sown grasses and clovers(c)	Balance of holdings (d)	Total area of holdings
1967-68—					
New South Wales . . . . .	12,845	2,865	10,475	145,582	171,767
Victoria(e) . . . . .	5,641	2,647	16,725	14,552	39,564
Queensland . . . . .	4,777	843	4,655	370,718	380,993
South Australia . . . . .	6,319	1,063	5,999	147,384	160,765
Western Australia . . . . .	8,883	1,846	14,528	250,078	275,334
Tasmania . . . . .	257	77	1,842	4,403	6,579
Northern Territory . . . . .	6	..	68	174,311	174,385
Australian Capital Territory . . . . .	7	1	82	259	350
<b>Australia . . . . .</b>	<b>38,735</b>	<b>9,340</b>	<b>54,374</b>	<b>1,107,287</b>	<b>1,209,737</b>
1966-67 . . . . .	37,087	9,784	51,471	1,105,090	1,203,431
1965-66 . . . . .	32,798	10,471	48,519	1,109,742	1,201,531
1964-65 . . . . .	32,251	8,466	47,159	1,102,894	1,190,770
1963-64 . . . . .	29,948	8,510	44,211	1,101,837	1,184,506

(a) Excludes (i) duplication on account of area double cropped, except for New South Wales and South Australia, and (ii) clovers and grasses cut for hay and seed which have been included in Area under sown grasses and clovers, and differs therefore from crop area figures shown later in this chapter. (b) Excludes short or summer fallow. (c) Includes paspalum. (d) Used for grazing, lying idle, etc. (e) See footnote (a) to previous table.

**Classification by size and type of activity**

Some of the information obtained from the 1965-66 Agricultural and Pastoral Census has been classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops, and numbers of livestock). In addition, all holdings have been classified according to type of activity. Tables showing this information, for statistical divisions and States, and an outline of the methods used have been published in a series of bulletins *Classification of Rural Holdings by Size and Type of Activity, 1965-66*. Similar information was published in a series of bulletins for the year 1959-60. A size classification for each State is available for the year 1955-56.

**Employment on rural holdings****Persons engaged**

The following table shows, for each State and Territory, the recorded number of males working on rural holdings. Particulars for females are not available except for New South Wales and Victoria. Additional particulars relating to the number of males employed in agriculture up to 1941-42 are shown in Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

(a) Details for females not available except for New South Wales and Victoria. (b) Not available for publication.

Information regarding the number of persons (males and females) working full-time on rural holdings in Australia at 31 March of years to 1958 appears in Year Book No. 50, page 987, and in earlier Year Books. Data for subsequent years are the subject of investigation and are not available at this stage.

## Salaries and wages paid

Particulars of salaries and wages paid to employees (including amounts paid to contractors) working full-time on rural holdings are shown below for the year 1967-68. Data for New South Wales, and hence Australia, are not available.

**EMPLOYEES ON RURAL HOLDINGS: SALARIES AND WAGES PAID(a)**  
**STATES AND TERRITORIES, 1967-68**

Farm machinery on rural holdings

The tables following show data for the principal types of farm machinery on rural holdings in the several States and Territories at 31 March 1968 and throughout Australia for a series of years. A more detailed analysis of tractors on rural holdings according to horse-power, type of fuel used, and age of tractor has been published in the Statistical Bulletin *Tractors on Rural Holdings—Australia*, 31 March 1966. Details of grain and seed harvesters on rural holdings at 31 March 1967, classified according to type of propulsion, width of cut, age and type of front have been published in the statistical bulletin: *Grain and Seed Harvesters on Rural Holdings, 31 March 1967*.

### The soils of Australia

Year Book No. 52 contains an article (pages 873-9) on the soils of Australia which deals with the following matters: nature and development of Australian soils, including the agricultural development of soils, and types of Australian soils. A soil map of Australia and illustrations are included on plates 47 to 51 of Year Book No. 52.

### Soil improvement and conservation

#### Fertilisers

The Australian output of prepared fertilisers is derived chiefly from imported rock phosphate. Complete information regarding local production of fertilisers is not available. The number of firms engaged in the manufacture of chemical fertilisers in Australia for the year 1967-68 was 48 made up as follows: New South Wales, 13; Victoria, 6; Queensland, 4; South Australia, 10; Western Australia, 9; and Tasmania, 6. The production of superphosphate in Australia during 1967-68 amounted to 3,935,000 tons.

Information regarding the area treated with artificial fertilisers and the quantity of artificial fertilisers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1967-68 season is given in the following table.

AREA FERTILISED AND QUANTITY OF ARTIFICIAL FERTILISERS USED  
STATES AND TERRITORIES, 1967-68

State or Territory	Crops			Pastures			Total		
	Area fertilised	Super-phosphate used	Other artificial fertilisers used	Area fertilised	Super-phosphate used	Other artificial fertilisers used	Area fertilised	Super-phosphate used	Other artificial fertilisers used

The chief sources of Australia's supplies of natural phosphate are Nauru, Christmas Island (Indian Ocean) and the United States of America. Sodium nitrate is obtained chiefly from Chile.

## ARTIFICIAL FERTILISERS: IMPORTS INTO AUSTRALIA, 1963-64 TO 1967-68

<i>Fertiliser</i>	1963-64	1964-65	1965-66	1966-67	1967-68
QUANTITY ( <sup>0</sup> 000 cwt)					
Ammonium fertilisers . . . . .	2,533	1,565	1,311	1,973	2,893
Potassium fertilisers . . . . .	1,935	2,180	2,163	2,398	2,602
Natural phosphate . . . . .	39,788	50,346	55,901	65,436	65,916

Exports of fertilisers (manufactured locally) amounted to 32,000 cwt valued at \$166,000 in 1967-68 compared with 20,000 cwt valued at \$93,000 in 1966-67.

**Aerial agriculture**

Extensive use is made of aircraft for top-dressing and seeding, for spraying and dusting of crops and pastures, and for pest and vermin extermination.

For 1956-57 (the first year for which data are available) the total area treated was 1,466,000 acres; in 1967-68 the total was 14,348,000 acres. The following table shows details of area treated and materials used for each State for the five years ended 31 March 1968.

## AERIAL AGRICULTURE, 1963-64 TO 1967-68

<i>Year ended 31 March</i>	<i>Area</i>		<i>Total area treated (a)</i>	<i>Materials used</i>		<i>Total flying time</i>
	<i>topdressed and seeded</i>	<i>Area sprayed</i>		<i>Super-phosphate</i>	<i>Seed</i>	
1968—	<sup>0</sup> 000 acres	<sup>0</sup> 000 acres	<sup>0</sup> 000 acres	tons	<sup>0</sup> 000 lb	hours

(a) Includes other types of treatment (rabbit baiting, etc.). (b) Includes details for the Australian Capital Territory.  
(c) Not available for publication. (d) Includes details for the Northern Territory.

**Pasture improvement**

An article on pasture improvement, which includes notes on indigenous and introduced species of grasses and which traces the development of pasture research in Australia, appears on pages 1001-2 of Year Book No. 49.

**Soil conservation**

Year Book No. 49 contains an article (pages 1003-4) on soil conservation which deals with the following matters: land use and soil erosion, agents of erosion, prevention and control, and the activities of various Commonwealth and State authorities which promote and co-ordinate research into the problems of soil erosion and the initiation of preventive measures.

**AGRICULTURAL PRODUCTION**

In general, statistics in this chapter relating to agricultural production are derived from 'census' returns supplied by approximately 256,000 farmers who utilise one acre or more of land for agricultural or pastoral purposes. The latest figures available are those for the year 1967-68. The returns are collected on a substantially uniform basis in all States at 31 March each year, and relate mainly to crops sown in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources these are used in conjunction with the 'census' returns. The statistics published in this section are therefore shown in 'agricultural' years. For most purposes there will be little error involved in considering them as applying to years ended 30 June.

For more detailed information on period covered and details of the weights and measures used in recording production of agricultural commodities see introductory notes to the bulletin *Rural Industries*. Details of weights and measures are also included after the Contents of this Year Book.

**Progress, assistance and control**

**Progress of cultivation**

The following table shows the area of crops in each of the States and Territories of Australia at ten-yearly intervals since 1860-61 and during each of the ten seasons 1958-59 to 1967-68. Plate 40 in this chapter shows the area of crops in Australia from 1900-01 onward (page 828).

**AREA OF CROPS: STATES AND TERRITORIES, 1860-61 TO 1967-68**  
(<sup>'000 acres</sup>)

**The Australian Agricultural Council**

The influence of governmental and semi-governmental authorities on Australian rural industry is most apparent in the fields of guaranteed prices, subsidies and controlled marketing. Many of these aspects of intervention at the national level take place indirectly through the Australian Agricultural Council. This is a permanent organisation which was formed following a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December 1934. The Council consists of the Commonwealth Ministers for Primary Industry, Trade and Industry, Interior, and External Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are: the promotion of the welfare and development of agricultural industries generally; the exchange of information on agricultural production and marketing; the improvement of the quality of agricultural products and the maintenance of high grade standards; to ensure, as far as possible, balance between production and available markets; and organised marketing.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council, to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

The Standing Committee on Agriculture comprises the permanent heads of the State Departments of Agriculture, the Secretary, Department of Primary Industry, and a representative each from the Commonwealth Departments of the Treasury, Health, Trade and Industry, Interior, External Territories, and from the Commonwealth Scientific and Industrial Research Organization.

#### **Financial assistance to primary producers**

Financial assistance to primary producers by the Commonwealth Government may be provided in a number of ways. Examples of these follow.

*Bounties.* A bounty to producers, not exceeding \$4,000,000 in any one year, is currently paid on raw cotton produced in Australia. Commencing with the 1969 cotton crop the bounty will be phased out. In 1969 the total available will be \$4,000,000; in 1970, \$3,000,000 and in 1971 \$2,000,000. Payments will cease after that time.

A bounty of \$27,000,000 paid annually on the production of butter, cheese and related butterfat products and an export bounty on processed milk products of a maximum of \$800,000 annually are both continued in the fifth Five Year Dairy Industry Stabilization Plan which commenced 1 July 1967.

*Commitments to industry-financed stabilisation schemes.* In schemes of this nature the Commonwealth generally accepts a defined contingent liability to contribute to Government-approved stabilisation funds if falling prices, or rising costs, or both, lead to a situation where growers' contributions prove inadequate. The Dried Vine Fruits Stabilization Fund and the Wheat Prices Stabilization Fund are examples of this.

#### **Other financial assistance**

The Commonwealth Government also pays for cattle tick control, flood, drought and bush fire relief, fisheries research, and farm mechanisation research.

Over recent years, legislative research schemes financed by matching contributions from the Commonwealth, and industry or States, or both, have been initiated in regard to tobacco, wool, wheat, dairy produce, meat, eggs, wine and honey. Non-legislative schemes, on a similar financial basis, have been operative in relation to other research projects, e.g. plague locusts, pest management in pome fruit orchards, grape crop forecasting, honey research, barley research, banana research, fruit fly research and poultry research.

#### **Agricultural training and research**

Agricultural colleges have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agriculture and livestock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree, they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying, etc., according to the course undertaken. These courses have been progressively upgraded over recent years (*see also* the chapter Education, Cultural Activities and Research).

Experimental farms have been set up by State Departments of Agriculture in all States. They are concerned primarily with agricultural research and experimentation, each farm concentrating on problems specific to the region in which it is located. The results of the work undertaken are passed on to farmers at field days which are held at regular intervals, through publication in various agricultural or scientific journals, and through the agricultural extension services of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations in many parts of Australia, and sometimes undertakes research jointly with the appropriate State authorities. It also has regional laboratories in several States, conducting research into agronomic and livestock problems as they occur in each particular region (*see also* the chapter Education, Cultural Activities and Research). The State Departments of Agriculture study problems of particular significance within their own boundaries. In addition, the universities carry out valuable work in their laboratories and on their experimental farms.

#### **Extension services**

Extension services operate in each State and in the Northern Territory, Australian Capital Territory and the Territory of Papua-New Guinea. Commonwealth funds have been provided in the States to enable them to expand their extension activities, through the Commonwealth Extension

Services Grant since 1952-53 and the Commonwealth Dairy Industry Grant since 1948-49. The funds made available annually increased over the period and by 1963 had reached \$1.4 million. In 1966 the Commonwealth decided to amalgamate the two grants and to increase the funds available progressively over a period of five years to a maximum of \$5.4 million per annum. The amounts made available from the Commonwealth Extension Services Grant under this expanded programme have been \$2.9 million in 1966-67, \$3.65 million in 1967-68 and \$4.4 million in 1968-69. The scope of the Grant now includes agricultural extension and regional research, information and farm management services and training for extension and regional research. State Departments of Agriculture have been the main recipients of the Grant.

### Distribution, production and value of crops

#### Distribution of crops

The wide range of climatic and soil conditions over the agricultural regions of Australia has resulted in a diversity of crops being grown throughout the Commonwealth. Generally, cereal crops (excluding rice and sorghum) are grown in all States over wide areas, while industrial crops are confined to specific locations in a few States. A graph showing the area sown to principal crops for the years 1900-01 to 1967-68 appears on plate 40, over the page.

(a) No deduction has been made for depreciation and maintenance.

**Indexes of quantum and price of agricultural production**

Indexes of quantum and price of agricultural production are shown in the following table. The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been revalued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realised at the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. Further details on weights used, etc. are to be found in the chapter Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF AGRICULTURAL PRODUCTION, 1963-64 TO 1967-68**

(Base: Average three years ended June, 1939 = 100)

	1963-64	1964-65	1965-66	1966-67	1967-68

**Wheat**

Wheat is grown on a large scale in all States except Tasmania, and is the most important crop in Australia in terms of area, production and exports. The present limits of the wheat belt have been established after considerable fluctuation over the last four decades. In January 1934 a Royal Commission was appointed to inquire into and report upon the economic condition of the growing, handling and marketing of wheat, and the manufacturing, distributing and selling of flour and bread. The Report of this Royal Commission provides an authoritative description of all aspects of the industry up to that time.

**Wheat marketing and research**

Two of the aspects of governmental and semi-governmental assistance and control which have contributed to the development of the industry are the organisation of overseas marketing and of research.

As a large proportion of the Australian wheat crop is normally exported, the marketing of wheat plays an important part in the industry. The Australian Wheat Board was constituted in September 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of wheat or wheat products, and to manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations. Details of the operations of the Australian Wheat Board and the Wheat Stabilization Board in licensing wheat grown during the seasons 1941-42 to 1948-49 will be found in Year Book No. 38, pages 940-1, and a detailed survey of legislation relating to stabilisation of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, is given in the Appendix to Year Book No. 37, pages 1295-9.

The Wheat Stabilization Board ceased to function on 31 December 1948, and under the *Wheat Industry Stabilization Act 1948* the Australian Wheat Board was reconstituted to administer the first stabilisation plan and was given powers similar to those held under the National Security Regulations. The new Board commenced to function on 18 December 1948. The Board has been continued in existence by the *Wheat Industry Stabilization Acts 1954, 1958, 1963-66 and 1968* for the purpose of administering the second, third, fourth and fifth five-year stabilisation plans. Details of the more recent plans were published in Year Book No. 40, pages 841 and 842 (1947-48 to 1952-53 Plan), No. 44, page 861 (1953-54 to 1957-58), No. 48, pages 903 and 904 (1958-59 to 1962-63) and No. 54, pages 868 and 869 (1963-64 to 1967-68).

*Fifth Post-war Wheat Industry Stabilisation Plan.* Following negotiations during 1968, the fifth post-war Wheat Industry Stabilisation Plan was enacted by the Commonwealth and States towards the end of 1968. The new plan operates on very much the same lines as the previous ones. However, there are some important changes in detail in the main features of the plan which are set out below.

The plan operates for five years. It commenced with the 1968-69 wheat crop and will end with the marketing of the 1972-73 crop.

The *Wheat Export Charge Act 1968* repealed the *Wheat Export Charge Act 1953* and provided for an export charge on wheat and wheat products for the seasons 1968-69 to 1972-73 inclusive. The charge which may be levied is the excess of the average export return over the sum of the guaranteed price (*see below*) and five cents per bushel with a maximum charge of fifteen cents per bushel. The ceiling on the Wheat Prices Stabilisation Fund, into which this charge is paid, has been raised from \$60 million to \$80 million. Any excess beyond this figure is returned to growers on a 'first in, first out' basis.

Payments from the Wheat Prices Stabilisation Fund will be paid to the Australian Wheat Board when required, for the purpose of building up the average export price for any season to the guaranteed price. When the average export realisations fall below the guaranteed price the deficiency is made up first by drawing upon the Stabilisation Fund in respect of up to 200 million bushels of wheat from each crop. If the Fund is exhausted, the necessary deficiency payments will be made from the Commonwealth Government's Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 No. 20 Pool when \$3,178,000 was collected. In fact, growers' money in the Fund was exhausted with the closure of the 1959-60 Pool, and since then the Commonwealth has been obliged to meet its commitment in respect of the export guarantee. Up to the closure of the 1966-67 Pool, this has involved an amount totalling \$112 million.

The Commonwealth has guaranteed a price to growers applying to 200 million bushels of wheat exported from each crop during the period of the plan. The guaranteed price is subject to adjustment in each year of the plan in accordance with changes in its cash cost elements. There will no longer be any adjustment for imputed costs such as interest on farmers' equity. The guaranteed price per bushel in the 1968-69 season is \$1.45 f.o.b. vessel, equivalent to approximately \$1.415 f.o.r. ports.

The Australian Wheat Board is retained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.

The home consumption price for 1968-69, the first year of the new plan, was established at \$1.71 per bushel, bulk basis, f.o.r. ports. (This price includes a loading of one cent per bushel to cover the cost of transporting wheat from the mainland to Tasmania.) There is provision in the plan for annual adjustments to be made in the following years by the same amount as the guaranteed price is adjusted. The home consumption price was \$1.565 per bushel for the 1966-67 season and \$1.655 for the 1967-68 season. These prices included a loading of 1.5 cents per bushel to meet freight charges on wheat shipped to Tasmania.

A premium is paid from export realisations on wheat grown in Western Australia and exported from that State, in recognition of the natural freight advantage enjoyed by Western Australia owing to its proximity to the principal overseas markets for wheat. The premium is the amount of the actual freight advantage enjoyed by Western Australia up to a maximum of 2.5 cents a bushel.

#### Wheat standards

A description of the F.A.Q. (fair average quality) standard of wheat which was formerly in use is given in issues of the Year Book up to No. 53 (*see*, for example No. 53 page 902). Australian wheat is now marketed under eleven different and distinct classifications. Each reflects the climatic and growing characteristics of its region of origin and also the particular characteristics of the varieties of wheat cultivated.

For each classification, samples of wheat are obtained each year and are mixed to give a representative sample of that grade. From these samples, which are representative of all the wheat of a particular classification grown in that region, standards for each grade are established; the bushel weight is determined by the use of the Schopper 1-litre scale chondrometer. This standard is used as the basis for sales of each grade and varies from year to year and from State to State. The eleven different grades of wheat are:

- Queensland prime hard
- New South Wales prime hard
- South Australian hard
- Queensland F.A.Q.
- New South Wales northern F.A.Q.
- New South Wales southern-western F.A.Q.
- Victorian F.A.Q.
- South Australian F.A.Q.
- Western Australian F.A.Q.
- Western Australian soft
- Victorian soft

The six F.A.Q. grades, while possessing some characteristics in common, vary in protein content, milling characteristics, and dough qualities, and all are distinct grades. Similarly, the prime hard, hard, and soft grades are individual grades segregated for specific end uses.

Australia currently produces a full range of wheats for all purposes from high protein hard wheats to low protein soft wheats.

#### Bulk handling and storage of wheat

A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954-8 of Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, and in more recent years other States have also introduced bulk systems. The bodies concerned with the administration of bulk handling in the various States are: Grain Elevators Board of New South Wales, Victorian Grain Elevators Board, State Wheat Board (Queensland), South Australian Co-operative Bulk Handling Ltd., Co-operative Bulk Handling Ltd. (Western Australia), and the Tasmanian Grain Elevators Board.

#### WHEAT: TOTAL CAPACITY OF BULK HANDLING FACILITIES<sup>(a)</sup> STATES, 30 NOVEMBER 1964 TO 1968

(Source: Bulk handling authorities in the various States. *See above*)

('000 bushels)

State	1964	1965	1966	1967	1968
New South Wales . . . . .	(b)105,152	(b)101,992	(b)141,182	(b)132,792	184,972
Victoria <sup>(c)</sup> . . . . .	95,974	102,609	105,038	105,514	108,090

(a) Includes terminals, sub-terminals, country installations, and temporary storage. (b) Storage at beginning of season. (c) Includes storage in southern New South Wales operated by the Victorian Grain Elevators Board.

Particulars of the operation of the bulk handling and storage systems in each State are set out on pages 916 and 917 of Year Book No. 48.

### International Wheat Agreement

Details of the first and second International Wheat Agreements operative from 1 August 1949 to 31 July 1953, and from 1 August 1953 to 31 July 1956, respectively, were published in Year Book No. 42 (see pages 840-1) or previous issues. Details of the third and fourth International Wheat Agreements which covered the period from 1 August 1956 to 31 July 1959 and 1 August 1959 to 31 July 1962 were published in Year Books 43 (page 836) and 48 (page 906), respectively.

A fifth International Wheat Agreement, ratified by the required number of wheat exporting and importing countries, came into force on 1 August 1962. This was intended to cover the three-year period from 1 August 1962 to 31 July 1965, but at a special meeting held in February 1965 the International Wheat Council adopted the text of a protocol providing for the prolongation of the Agreement, without amendment, to 31 July 1966. The Council stated that it recognised the need for the maintenance of institutional arrangements to provide for continuing international co-operation in wheat matters, and that, following its decision to recommend a one-year extension of the existing agreement, it had given immediate consideration to preparatory work designed to ensure effective arrangements to follow the expiry of the term of the protocol. The Agreement was subsequently extended by protocol to 31 July 1967 and, with respect to its administrative provisions only, for a further year to 31 July 1968.

### International Grains Arrangement

In August 1967 agreement was reached on a new International Grains Arrangement to operate for a period of three years from 1 July 1968. The new arrangement consists of two legal instruments, the Wheat Trade Convention and the Food Aid Convention.

The Wheat Trade Convention seeks to continue the orderly marketing arrangements which have been developed over a series of International Wheat Agreements, whilst introducing a number of important new elements and improvements. It preserves the institutional and administrative structures of previous wheat agreements and will be administered by the International Wheat Council and its Secretariat.

The convention goes further than earlier wheat agreements in regard to pricing provisions. In contrast with previous agreements, which specified minimum and maximum prices for only one type of wheat, the convention specifies minimum and maximum prices for fourteen types. The basic wheat is now United States Hard Red Winter No. 2 Ordinary Protein, the minimum price for which has been fixed at \$US1.73 per bushel f.o.b. from loading ports in the Gulf of Mexico. The minimum price per bushel for No. 1 Manitoba Northern Wheat is now \$US1.955 f.o.b. Gulf ports, and for Australian f.a.q. wheat \$US1.68 f.o.b. Gulf ports. It is estimated that, after allowing for quality differentials and for the change in geographical basing points, the general level of minimum prices is approximately 19 US cents per bushel above the minimum prices in the 1962 International Wheat Agreement. The maximum price for each type of wheat is 40 US cents above the minimum.

The convention provides for the establishment of a Prices Review Committee, on which Australia is represented. The committee will conduct a continuous review of world wheat prices and is empowered to initiate action to restore market stability when prices approach the agreed limits.

The convention continues the arrangement in the 1962 agreement whereby the member importing countries undertake to buy each year from the member exporting countries a specified percentage of their total commercial purchases of wheat. Exporting countries undertake that wheat will be made available at prices consistent with the price range and will not be sold below minimum prices to any purchaser whether a member of the arrangement or not. Member countries importing wheat from non-member countries undertake to do so at prices consistent with the price range. When prices are at the maximum of the range, exporters agree to supply to member importing countries, at prices not above the maximum, certain minimum quantities of wheat based on the importing country's historical purchases. A provision is also included under which member countries undertake to conduct any concessional transactions in grains in such a way as to avoid harmful interference with normal patterns of commercial trade.

The Food Aid Convention provides for a programme of food aid to developing countries amounting in total to 4.5 million metric tons of grains for human consumption in each of the three years of the arrangement. Australia's contribution has been fixed at 225,000 metric tons annually (8,267,000 bushels) which is approximately 5 per cent of the total contribution. Donor countries are free to specify the country or countries to which the grain may be supplied.

### Research into the wheat industry

The extension and growth of the wheat industry in the past has been made possible to a large extent through research into new varieties of seed, crop rotation and fertiliser treatments by governmental, university and private research organisations. In recent years there has been a growing awareness of the value of this research, and funds are being raised by a direct levy on the growers' returns.

The *Wheat Tax Act* 1957 imposed a tax of 0.21 cents for each bushel of wheat:

- (a) which was delivered to the Wheat Board on or after the first day of October 1956 and before the date of commencement of the Act, or
- (b) which was delivered to the Wheat Board on or after that date.

The Act was amended in October 1965 to become the *Wheat Tax Act 1957-1965* to provide for an increase in the rate of taxation from 0.21 cents to 0.25 cents for each bushel of wheat delivered to the Board on or after 1 October 1965. The *Wheat Research Act 1957* provided for the establishment of a Wheat Research Trust Account to receive moneys payable under the *Wheat Tax Act 1957* and for the setting up of a Wheat Industry Research Council to direct the expenditure of moneys from that account for research, etc. to benefit the wheat industry. This money, contributed by the growers, is being spent by the Wheat Industry Research Committees set up in the wheat-growing States. These Committees, which consist of representatives of wheatgrowers, universities and State Departments of Agriculture, also received a total of \$568,000 under the provisions of the *Wheat Acquisition (Undistributed Moneys) Act 1958*.

The Commonwealth Government has undertaken to supply additional funds for research (with a maximum of \$1 for \$1 against the growers' contribution) and has set up the Wheat Industry Research Council to make recommendations on the appropriate expenditure of the Commonwealth contribution. The Council, at its inaugural meeting in February 1958, considered that possible avenues of research would include the breeding of better varieties, cereal chemistry, soil fertility, mechanisation, the industry's cost structure, and marketing problems. To the end of June 1968 the Council and the State Committees had spent \$11,394,000, including grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, universities, and agricultural colleges.

#### Wheat farms: number and classification by activity

Particulars of the number of farms growing twenty acres and upwards of wheat for grain during each of the years 1963-64 to 1967-68 are shown in the following table. A farm worked on the share system or as a partnership is included as one holding only.

NUMBER OF FARMS GROWING TWENTY ACRES AND UPWARDS  
OF WHEAT FOR GRAIN: STATES AND A.C.T., 1963-64 TO 1967-68

State or Territory	1963-64	1964-65	1965-66	1966-67	1967-68
New South Wales . . . . .	17,753	18,537	16,150	19,575	20,619
Victoria . . . . .	11,370	11,981	11,355	11,202	11,056
Queensland . . . . .	4,927	5,236	4,941	5,674	5,867
South Australia . . . . .	9,902	9,657	9,387	9,419	8,905
Western Australia . . . . .	8,983	8,779	9,044	8,897	8,746
Tasmania . . . . .	251	255	213	194	159
Australian Capital Territory . . . . .	29	20	13	25	20
<b>Australia . . . . .</b>	<b>53,215</b>	<b>54,465</b>	<b>51,103</b>	<b>54,986</b>	<b>55,372</b>

There is in Australia a widespread combination of wheat growing with other rural activities. This is illustrated, for all States and for Australia, in respect of the 1965-66 season, in a series of statistical bulletins: *Classification of Rural Holdings by Size and Type of Activity*, 1965-66, Nos 1 to 7. These publications also contain details of numbers of rural holdings classified according to area of wheat for grain.

#### Varieties of wheat sown

The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845-1905) did invaluable work in pioneering this field, and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown in any one season is restricted to about forty-five.

The principal varieties of wheat sown and the percentage of each to the total area sown in the five main wheat-producing States of Australia in 1967-68 were as follows: New South Wales, Heron (25.6), Falcon (12.8), Olympic (10.1); Victoria, Insignia (46.8), Olympic (24.7), Pinnacle (14.2); Queensland, Mendos (36.7), Gamut (25.9), Spica (15.1); South Australia, Insignia (31.3), Heron (29.8); and Western Australia, Gamenya (41.3), Insignia (13.8), Falcon (11.4). A detailed table of wheat varieties sown appears in the annual bulletin *The Wheat Industry* (see No. 114, published in March 1969).

**Wheat area, production and yield per acre**

Prominent factors in the early development of the wheat industry were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

A graph showing the area sown to wheat for grain in Australia since 1900-1 appears on plate 40 of this Year Book, and a map showing the distribution of areas growing wheat for grain throughout Australia in 1962-63 appears on page 1013 of Year Book No. 50. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39, 1947-48, and 1954-55 appeared respectively in Year Books No. 22, page 695, No. 34, page 451, No. 39, pages 977-8, and No. 43, page 833.

# WHEAT FOR GRAIN: AUSTRALIA

1935-36 to 1967-68

Apart from the variations in the area sown, the size of the wheat harvest in Australia is determined largely by the nature of the season, resulting in considerable year-to-year fluctuations in production. The main wheat-producing States of Australia are New South Wales, Western Australia and Victoria. Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits.

The 1967-68 wheat crop was seriously affected by severe drought conditions in New South Wales, Victoria, South Australia and to some extent in Queensland. Overall, production in the 1967-68 season was 41 per cent below the record crop of 1966-67.

The following table shows the average area, production and yield per acre for decennial periods since 1861 together with similar details for the latest season, 1967-68. Repeated cropping and short rotations (mainly in the eastern States) are believed to have led to the decline in yield to 1900, while fallowing and the widespread use of artificial fertilisers contributed to the increased yields in the decade following. The increase in yield since 1950 has been generally ascribed to the impact of improved pastures and ley-farming (broadly, the alternation of crops and pastures) upon soil fertility in wheat-growing areas. The production and yield per acre of wheat for each year from 1935-36 to 1967-68 are shown on plate 41, page 839.

#### Price of wheat

The prices charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed were as follows: year ended 30 November 1965, \$1.47; 1966, \$1.53; 1967, \$1.57; 1968, \$1.66; and 1969, \$1.71. These prices include a loading to meet freight charges incurred on wheat shipped to Tasmania (0.83 cents in 1965; 1.66 cents in 1966; 1.50 cents in 1967 and 1968; and 1.0 cents in 1969).

The Wheat Board's monthly basic export selling prices for f.a.q. bulk wheat f.o.b. basis, both for wheat sold under the International Wheat Agreement and for 'free' wheat sold on the open market, fell in the following ranges; season ended 30 June 1965, \$1.35 to \$1.53; 1966, \$1.38 to \$1.48; 1967, \$1.51 to \$1.60; 1968, \$1.41 to \$1.49.

The 1962 International Wheat Agreement, operative from 1 August 1962 to 31 July 1967, set the maximum price at \$US2.025 a bushel and the minimum at \$US1.625 for f.a.q. wheat sold under the Agreement. Under the new International Grains Arrangement, which is operative from 1 July 1968, provision has been made for minimum and maximum prices for fourteen types of wheat, the basic wheat being United States Hard Red Winter No. 2 Ordinary Protein, the minimum price for which has been fixed at \$US1.73 per bushel. The minimum price per bushel for No. 1 Manitoba Northern Wheat is now \$US1.955 and for Australian f.a.q. wheat \$US1.68 (see page 836 for a description of the International Grains Arrangement).

Details of export prices of wheat in earlier years, including those received for wheat sold under the terms of the 1949-1953 International Wheat Agreement, are given in Year Book No. 40, pages 849-50, and in the statistical bulletin *The Wheat Industry, Australia*, No. 99, March 1961, and in previous issues of these publications.

#### Value of the wheat crop

The estimated gross value of the wheat crop in each State and in Australia during the season 1967-68 and the value per acre are shown below.

#### WHEAT FOR GRAIN: VALUE OF CROP(a), STATES, 1967-68

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.(b)</i>
Aggregate value	\$'000	136,434	43,856	42,339	42,183	170,102	462	435,443
Value per acre	\$	16.61	13.60	28.67	14.73	25.59	38.44	19.40

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of \$43,464,000 by the Commonwealth Government. (b) Includes the Australian Capital Territory.

#### Production and disposal of wheat in Australia

In the following tables details are given of Australian Wheat Board transactions and of total production and disposal of wheat during each of the years ended 30 November 1964 to 1968.

#### AUSTRALIAN WHEAT BOARD WHEAT RECEIVED, STATES, 1963-64 TO 1967-68 HARVESTS (<sup>'000</sup> bushels)

<i>Pool</i>	<i>Harvest</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>

30	1966-67	184,643	74,619	32,884	50,007	96,823	247	439,224
..	1967-68	73,005	27,814	24,367	22,083	99,946	154	247,369

Stocks of wheat (including flour in terms of wheat) held by the Australian Wheat Board in each State at 30 November for the years 1964 to 1968 are shown in the following table. These data relate to stocks held at mills, sidings, ports, and depots as recorded by the Australian Wheat Board.

#### AUSTRALIAN WHEAT BOARD: STOCKS(a) OF WHEAT (INCLUDING FLOUR IN TERMS OF WHEAT), STATES, 30 NOVEMBER 1964 TO 1968 (<sup>'000</sup> bushels)(b)

<i>Year</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
1964	7,340	7,490	806	3,048	1,257	472	20,413
1965	15,265	3,716	862	2,602	1,556	382	24,383
1966	3,406	6,020	343	2,623	3,626	529	16,547
1967	43,238	22,709	596	8,160	5,285	536	80,524
1968	10,668	13,076	612	6,801	19,954	351	51,462

(a) Held at mills, sidings, ports and depots. Excludes new season's wheat received from growers prior to 30 November of years shown. (b) One short ton (2,000 lb) of flour is taken as being equivalent to 46.3 bushels of wheat.

Particulars of the disposal of wheat during the years ended 30 November 1964 to 1968, as recorded by the Australian Wheat Board, are shown in the following table.

**AUSTRALIAN WHEAT BOARD: DISPOSAL OF WHEAT, 1964 TO 1968**  
(<sup>'000</sup> bushels)

	<i>Year ended 30 November—</i>				
	1964	1965	1966	1967	1968
Exported as wheat . . . . .	221,530	243,725	158,104	293,958	187,996
Exported as flour(a) . . . . .	31,797	23,318	16,615	19,329	19,314
Sold for local consumption as flour	42,954	44,160	44,164	43,845	45,025
Sold for other purposes . . . . .	13,658	30,556	22,705	17,384	25,006

(a) Includes wheat equivalent of manufactured wheat products exported.

A summary of *all* transactions in wheat for Australia, as distinct from those recorded for the Wheat Board above, appears in the following table.

**WHEAT: PRODUCTION AND DISPOSAL, AUSTRALIA, 1964 TO 1968**

(e) Subject to additional \$15,508,000 provided by the Commonwealth Government and payment of \$1,097,000 to Wheat Industry Research Fund. (f) Subject to an estimated additional \$43,464,000 to be provided by the Commonwealth Government and payment of \$616,000 to Wheat Industry Research Fund.

Details of earlier pools will be found in previous issues of the Year Book.

#### Imports of wheat

Wheat and flour have been imported in substantial quantities on three occasions since 1900; in 1902-3 the wheat harvest was only 12,378,000 bushels, and wheat and flour equivalent to 12,468,000 bushels of wheat were imported. An equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. Owing to drought conditions in 1957-58 supplies of high protein wheat were insufficient for local requirements and, as a result, 1,485,000 bushels were imported from Canada in 1958. No wheat has since been imported.

#### Exports of wheat and flour

Statistics in the following three tables are for years ended 30 June and relate to the exports of *Australian produce* only.

**WHEAT AND FLOUR: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68**

<i>Year</i>	<i>Quantity</i>			<i>Total (in terms of wheat)</i>	<i>Value</i>

### World area and production of wheat

The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from statistics published by the International Wheat Council. Harvests in the northern hemisphere occur in the first of the two years mentioned in each column heading, and in the southern hemisphere at the end of that year and the beginning of the next. Harvests of the northern hemisphere countries are thus combined with those of the southern hemisphere which immediately follow; e.g. in 1967-68 the Canadian harvest occurred from August to September 1967 and the Australian harvest from October 1967 to February 1968.

### Principal wheat exporting and importing countries

The following table shows world exports of wheat and wheat flour (in terms of wheat) by the major wheat exporting countries, according to continents and countries of primary destination, based on statistics recently published by the International Wheat Council. While Australia's production of wheat has averaged about three per cent of the world's total during recent years, its exports account for a much higher proportion of the total quantities shipped. For the three years ended 1967-68 Australia's share of the world wheat exports has averaged 12 per cent.

*(a) Excludes U.S.S.R., details for which are shown separately.*

The above particulars are based on customs clearances of the exporting countries, and relate to years ended 30 June. There are small differences between Australian exports as shown and those on pages 843-4 due in part to the use by the International Wheat Council of a slightly different factor to convert flour to wheat equivalent.

### Oats

This cereal is widely grown in all agricultural areas which have autumn, winter and spring rainfall; it is tolerant of wet conditions and heavy soils. It has excellent feed value and produces a higher yielding crop than other winter cereals. It needs less cultivation, but requires ample fertiliser. Oats has a variety of uses—as a pasture plant when rough sown into stubble or heavy clover pastures, as silage if cut before maturity, as a hay crop when mown and baled or cut for chaff, or as a grain when stripped (the stubble then being grazed off). The grain is sold on a 'fair average quality' basis through voluntary pools in Victoria, South Australia and Western Australia.

## Oats area, production and yield per acre

Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1967-68 accounted for 56 per cent of the area of all crops, oats grown for grain represented only 8 per cent.

(a) 40 lb per bushel.

Graphs showing the area sown to oats and production of oats in Australia appear on pages 993 and 995 of Year Book No. 49, and a map showing the distribution of areas growing oats for grain throughout Australia in 1962-63 appears on page 1015 of Year Book No. 50. The area sown to oats from 1900-01 is shown in plate 40, page 828.

In 1967-68 production and yield per acre of oats for Australia were seriously affected by drought conditions in the eastern States. Production of 39,628,000 bushels was the lowest recorded since 1957-58. It was 63 per cent below the record production in 1966-67.

#### Value of oat crop

The average wholesale price in the Melbourne market for oats of good milling quality was \$1.13 per bushel in 1967-68, compared with \$0.80 in 1966-67. The estimate gross value of the oat crop in each State for the 1967-68 season and the value per acre were as follows.

#### OATS FOR GRAIN: VALUE OF CROP, STATES, 1967-68

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.(a)</i>

(a) Includes the Australian Capital Territory.

#### Exports of oats

#### OATS: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68

		1963-64	1964-65	1965-66	1966-67	1967-68
Quantity	'000 bus	16,673	20,161	13,825	22,134	10,033
Value	.\$'000 f.o.b.	12,623	15,616	11,980	17,450	8,407

In 1967-68 the principal countries of destination were the Netherlands (3,213,000 bushels), the Federal Republic of Germany (2,387,000 bushels), Japan (809,000 bushels), the United States of America (623,000 bushels) and South Africa (542,000 bushels).

#### Oatmeal and other oat products

In 1967-68 the production of granulated or rolled oats or oatmeal (kilned and unkilned) for breakfast foods, porridge and other purposes was 21,518 tons.

#### World production of oats

The world production of oats for the year 1967, according to figures issued by the United States Department of Agriculture, amounted to 3,255 million bushels, harvested from 74.2 million acres, resulting in an average yield of 43.9 bushels an acre. This compared with an estimated production in the previous year of 3,109 million bushels from an area of 73.6 million acres and an average yield of 42.2 bushels an acre.

## Barley

This cereal contains two main groups of varieties, 2-row and 6-row. The former is generally, but not exclusively, preferred for malting purposes. Barley was formerly stubble-sown, but is now grown principally on pasture land worked up early in the year of sowing. In this way it forms an important phase in the rotation of crops. Like oats, it may also be sown for fodder production or for grain. When sown for fodder, sowing may take place either early or late in the season, as it has a short growing period. It may thus provide grazing or fodder supplies when other sources are not available. Barley grain may be crushed to meal for stock (especially pigs) or sold for malting.

Crops sown for malting purposes require well-worked, weed-free paddocks of even soil, and are thus restricted to specific districts. The main barley-growing areas in Australia are situated in South Australia (Murray-Mallee, Eyre and Yorke Peninsulas), but considerable quantities are grown also in New South Wales, Victoria, Queensland and Western Australia.

#### Barley boards

The bulk of the barley crop in the various States is acquired and marketed by grower-controlled boards. Pooled returns from sales are distributed to growers at standard rates for the individual grades and varieties delivered. The Victorian and South Australian crops are marketed by the

Australian Barley Board (a joint board established by the two State Governments), and the Queensland and Western Australian Barley Boards handle the crops of their respective States. Particulars of the proportion of barley production which was received by the Australian Barley Board (for Victoria and South Australia), together with details of quantity sold, advances and total payments to growers, are presented below.

**AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC.  
1963-64 TO 1967-68**

Pool	Quantity received	Quantity sold(a)	Total advances made per bushel on 2-row No. 1 grade less freight	Total net payments to growers
			\$	\$'000
	'000 bushels	'000 bushels		
No. 25 (1963-64 Crop)	23,145	23,204	1.1862	22,446
„ 26 (1964-65 „ )	25,465	25,404	1.2000	25,184
„ 27 (1965-66 „ )	14,922	14,894	1.2873	14,824
„ 28 (1966-67 „ )	22,043	22,026	1.2515	22,759
„ 29 (1967-68 „ )	7,985	7,914	(b)1.1800	(b)7,005

(a) Includes surplus or shortage in out-turn, except for No. 29 Pool for which the surplus has not yet been ascertained. (b) As at 31 May 1969. At that date it was estimated that the amount still to be paid to growers was 6.347 cents per bushel.

**Barley area, production and yield per acre**

There was a substantial increase in the area of barley sown for grain (particularly in Western Australia and Queensland) in the years up to 1960-61, and in that year the area sown reached the record level of 2,830,000 acres. However, the area sown in 1967-68, 2,611,000 acres, was 8 per cent less than the area in 1960-61. The production of barley for grain in 1967-68, 36,798,000 bushels, was 46 per cent less than the record production of 67,970,000 bushels in 1960-61, and was the lowest recorded production since 1959-60. The area, production and yield per acre of barley for grain in the several States for the years 1963-64 to 1967-68, compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. Separate details for 2-row and 6-row varieties are shown for all States for 1967-68. The area sown to barley from 1900-01 is shown in plate 40, page 828.

(a) 50 lb per bushel.

For Australia, 79 per cent of the area of barley for grain in 1967-68 was sown with 2-row barley, while the remainder consisted of 6-row varieties. The proportion, however, varied considerably in the several States. The utilisation of barley during the season ended November 1968 was as follows: exports, 5,655,000 bushels; malting and distilling, 13,280,000 bushels; pearl barley, 141,000 bushels; seed, 3,400,000 bushels.

#### Value of barley crop

The average wholesale price for 2-row English malting barley in the Melbourne market was \$1.53 per bushel in 1967-68 compared with \$1.48 in 1966-67. The estimated gross value of the barley crop in each State for the 1967-68 season and the value per acre are shown in the following table.

BARLEY FOR GRAIN: VALUE OF CROP, STATES, 1967-68

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
Aggregate value	\$'000	6,456	3,261	10,683	12,818	7,690	1,314	42,222
Value per acre	\$	17.57	10.69	31.19	11.08	18.50	54.63	16.17

#### Exports of barley

Western Australia is the principal exporting State, and Japan, Saudi Arabia, China (Taiwan) and the United Kingdom were the principal countries to which barley was shipped in 1967-68. Particulars of exports of Australian-produced barley for the years 1963-64 to 1967-68 are shown in the following table.

BARLEY: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68

		<i>1963-64</i>	<i>1964-65</i>	<i>1965-66</i>	<i>1966-67</i>	<i>1967-68</i>
Quantity	'000 bus	17,756	16,281	9,994	18,718	5,701
Value	\$'000 f.o.b.	18,299	18,002	11,508	21,569	6,569

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1967-68 amounting to 89,000 lb, valued at \$7,000, the main countries of consignment being Malaysia and Mauritius. Imports of barley into Australia amounted to 6,563,000 lb, valued at \$164,000 during 1967-68.

#### Barley malt

Details of the recorded usage of barley and the production of barley malt in the years 1963-64 to 1967-68 are given in the following table.

BARLEY MALT: GRAIN USED AND MALT PRODUCED, AUSTRALIA  
1963-64 TO 1967-68

		<i>1963-64</i>	<i>1964-65</i>	<i>1965-66</i>	<i>1966-67</i>	<i>1967-68</i>
Barley used	'000 bus(a)	11,886	11,667	12,883	13,601	13,003
Malt produced	'000 bus(b)	11,988	12,127	13,235	14,027	13,547

(a) 50 lb per bushel. (b) 40 lb per bushel.

Since 1952-53 the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports of Australian produce amounting to 5,235,000 bushels (value \$10,543,000) and 4,469,000 bushels (value \$9,362,000) were recorded in 1966-67 and 1967-68 respectively.

#### World production of barley

In comparison with the barley production of other countries that of Australia is extremely small. The main producers in 1967 were the Union of Soviet Socialist Republics, France and the United Kingdom. China is also normally a major producer, but details for 1967 are not available. Australian production in that year was approximately 1 per cent of the world total.

According to estimates made by the United States Department of Agriculture, world production of barley in the year 1967 amounted to 4,734 million bushels harvested from 158.5 million acres, equivalent to a yield per acre of 29.9 bushels. This compared with the production of 4,593 million bushels in the previous year from 153.8 million acres, giving a similar yield per acre.

### Sorghum

Grain sorghum is a summer-growing annual palatable to stock and more drought and frost-resistant than maize. It requires a summer rainfall. The growing of this crop for grain on an extensive scale is a comparatively recent development in Australia, and, as with other cereals, operations are highly mechanised.

The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghum, and development has so far been restricted mainly to these areas, more particularly to Queensland. The grain produced is fed to livestock and has become an important source for supplementing other coarse grains for this purpose. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). In Queensland the growing of grain sorghum is concentrated in the Burnett, Dawson-Callide areas and in the central highlands. In New South Wales the north-western slopes and Murrumbidgee Irrigation Areas are the main areas. This crop is also suitable for the semi-tropical areas of the Northern Territory, where development is proceeding, and the Kimberleys.

GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, STATES  
1963-64 TO 1967-68

Year	Area			Production(a)			Yield per acre(a)		
	N.S.W.	Qld	Aust. (b)	N.S.W.	Qld	Aust. (b)	N.S.W.	Qld	Aust. (b)
	acres	acres	acres	'000 bushels	'000 bushels	'000 bushels	bushels	bushels	bushels
1963-64	61,203	303,857	365,708	1,269	6,612	7,889	20.7	21.8	21.6
1964-65	51,699	292,769	345,737	1,270	5,883	7,164	24.6	20.1	20.7
1965-66	99,576	332,768	433,437	605	6,533	7,149	6.1	19.6	16.5
1966-67	98,161	403,500	502,349	1,527	10,172	11,711	15.6	25.2	23.3
1967-68	78,165	382,192	461,834	1,580	8,939	10,582	20.2	23.4	22.9

(a) 60 lb per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year.  
(b) Includes small areas sown and quantities produced in other States and Territories. Excludes Northern Territory for 1967-68.

### Maize

Like sorghum, maize is a summer cereal demanding specific soil and climatic conditions. For grain, it is grown almost entirely in the south-east and Atherton Tablelands of Queensland and the north coast and northern tablelands of New South Wales. On the Atherton Tablelands in Queensland, and generally in New South Wales and Victoria, it provides a stock feed for dairy cattle, fat stock and pigs. In times of drought it is used also as a sheep feed. In all States except South Australia, however, this crop is grown to some extent for green fodder and silage, particularly in connection with the dairying industry. There is practically no difference between grain and fodder varieties.

There has been a continuing increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialised industry of growing hybrid strains for seed.

(a) Not available for publication. (b) Incomplete. (c) Included in Other maize. (d) 56 lb per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year.

The average yield for Australia for the five-year period ended 1967-68 was 32.3 bushels per acre. Among principal producing countries, the United States of America averaged 78.6 bushels per acre and Brazil 21.0 bushels for 1967.

**Value of maize crop**

The average wholesale price of maize in the Melbourne market in 1967-68 was \$2.14 per bushel compared with \$2.28 in 1966-67. The estimated gross value of the crop in each State for the 1967-68 season and the value per acre were as follows.

**MAIZE FOR GRAIN: VALUE OF CROP, STATES, 1967-68**

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
Aggregate value	\$'000	3,341	48	6,071	..	3	..	9,463
Value per acre	\$	64.79	52.34	41.09	..	19.35	..	47.23

**Exports of maize****MAIZE: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68**

		1963-64	1964-65	1965-66	1966-67	1967-68
Quantity	'000 bus	14	20	1	80	101
Value	\$'000 f.o.b.	27	42	4	114	169

Imports of maize into Australia in 1967-68 amounted to 17,000 bushels.

**World production of maize**

According to figures issued by the United States Department of Agriculture, world production of maize in the year 1967 amounted to 9,444 million bushels, harvested from 255 million acres, giving an average yield per acre of 37.1 bushels. This compared with production in the previous year of 8,944 million bushels from 246 million acres, and an average yield of 36.3 bushels per acre.

The United States of America is the most important maize-producing country in the world, and during the three years ended 1967 the area sown to maize in that country averaged 58 million acres or 23 per cent of the world total. During the same period production averaged 4,316 million bushels or 49 per cent of the world total.

**Rice**

The principal rice-growing areas of the world are confined almost entirely to Asia, although limited quantities are grown in other countries. In Australia rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Areas until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

Apart from small experimental areas in Western Australia and the Northern Territory, rice-growing in Australia is practically confined to the Murrumbidgee Irrigation Areas in New South Wales. The bulk of Australia's exports of rice in 1967-68 was shipped to Papua and New Guinea and Okinawa. Details relating to area, production, and Australian-produced exports for the years 1963-64 and 1967-68 are shown in the following table.

**RICE: AREA, PRODUCTION AND EXPORTS, AUSTRALIA(a)  
1963-64 TO 1967-68**

Year	No. of holdings growing rice(b)	Area	Production (Paddy rice)		Average yield (paddy) per acre	Imports	Exports
			Quantity	Gross value(c)

1967-68.	1,210	75,957	11,597	12,831	152.7	3,749	224,983

(a) For some years particulars of area and production for Western Australia and the Northern Territory are not available for publication, and are excluded. (b) Twenty acres or more in area. (c) Excludes the value of straw. (d) 42 lb per bushel.

## Fodder crops

## Hay

Because of the comparatively unreliable nature of rainfall in Australian agricultural and pastoral areas, hay as a fodder crop occupies a position of importance. In 1967-68 hay represented 7 per cent of the total area of crops. Up to 1946-47 hay, in terms of area, was second only to wheat for grain, but in more recent years it has been supplanted by green fodder (for feeding-off) and oats for grain. Hay is generally considered to include cereal hay, meadow hay and lucerne hay. Cereal crops cut early for hay contain a higher level of protein than those cut late.

In most European countries hay is made almost entirely from meadow pastures, but in Australia a very large proportion is made from cereals and lucerne, the hay being stored loose, in sheaves or baled. Because of its bulk, hay is usually produced for individual or local use, except in times of drought, when large inter-regional transfers may take place. Meadow hay requires greater care in preparation than cereal hay. Baling must be spaced carefully behind mowing to ensure that the bales are dry enough to prevent moulding, but not so dry as to result in excessive leaf loss. The leaves contain the bulk of the protein. Lucerne hay requires similar attention.

1968 . . . . .	1,273,385	1,104,034	241,922	267,677	223,115	297,118	3,594	3,410,845

(a) Excludes the Northern Territory, for which particulars are not available.

Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for overseas trade, and consequently does not figure largely among Australian exports. During 1967-68 exports amounting to 4,777 tons, valued at \$235,000, were made, principally to Kuwait, Singapore and Malaysia. Imports of hay are not recorded separately, but are considered to be negligible.

**Green fodder**

Considerable areas are devoted to the growing of green fodder, usually as an adjunct to cereal operations or as a minor crop in irrigation areas. The areas recorded in respect of green fodder include areas of crops cut for feeding to livestock as green fodder or ensilage, together with areas fed off to stock as green forage. Statistics of green fodder exclude areas which may have been sown with the intention of harvesting for grain, but which, owing to adverse conditions, showed no promise of producing grain or even hay and were fed off to livestock. The principal crops cut for green fodder are lucerne and oats, while small quantities of barley, sorghum, wheat, maize, rye, and sugar cane are also used in this way. In 1967-68 the area under green fodder (5,916,141 acres) consisted of oats (2,466,456 acres), lucerne (2,346,498 acres), barley (233,245 acres), sorghum (228,217 acres), wheat (177,478 acres), rye (25,599 acres), maize (22,874 acres), sugar cane (1,070 acres), and other crops (414,704 acres). Particulars concerning the area of green fodder in the several States during each of the years 1963-64 to 1967-68 are given in the following table.

**GREEN FODDER: AREA, STATES AND TERRITORIES, 1963-64 TO 1967-68**

('000 acres)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1963-64	1,974	431	1,011	972	418	71	..	1	4,877
1964-65	2,397	454	1,111	1,135	446	67	1	1	5,614
1965-66	1,952	526	1,143	1,210	414	78	1	1	5,324
1966-67	2,133	443	1,179	1,169	399	74	..	1	5,399
1967-68	2,326	545	1,337	1,217	414	75	..	1	5,916

In the 1967-68 season green fodder ranked second to wheat in area of crops throughout Australia. A graph showing the area sown to green fodder appears on plate 40. The value of these crops is variously estimated in the several States, but the Australian total, excluding Western Australia, may be taken as approximately \$25,000,000 for the 1966-67 season and \$29,000,000 for the 1967-68 season.

**Ensilage**

Ensilage is produced from herbage compacted tightly to exclude air and kept from contact with air and extraneous moisture to avoid moulding. Fermentation results in a dark mass of high protein and lactic acid content. Molasses may be added to hasten fermentation. Ensilage may be stored in pits or stacks or in constructed silos.

The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connection with the design of the silos and the cutting and packing of the ensilage. Information regarding production and farm stocks of ensilage for the years 1963-64 to 1967-68 is given in the following table.

**ENSILAGE: PRODUCTION AND FARM STOCKS, STATES AND A.C.T.**

1963-64 TO 1967-68

## Sugar cane

The growing of sugar cane is restricted to those coastal areas in Queensland and northern New South Wales which have suitable climatic and soil conditions.

The Bureau of Sugar Experiment Stations in Queensland and the Colonial Sugar Refining Company Limited render useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilisers, lime, etc. and by producing and distributing improved varieties of cane. In common with these two organisations, Sugar Research Ltd, of Mackay, undertakes technological research in raw sugar milling practices.

### Sugar agreements and marketing arrangements in Australia

In Year Book No. 37, pages 940-1, a summary is given of the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The current agreement was for the period from 1 September 1961 to 31 August 1967. It was extended until 30 June 1969 by supplementary agreements which prescribed prices for sugar equivalent to a retail price of 10.5 cents per lb.

Production of sugar is regulated under the terms of the agreement. At the mill level control is exerted by means of seasonal 'mill peaks' in respect of Queensland mills and a proportionate allowance for New South Wales mills. The combined total equals the estimated requirements of the domestic and export markets. Farm production is regulated according to the limit on the mill which the farm supplies. Exports are limited by the export quota provisions of the International Sugar Agreement (*see below*).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and uniform prices paid to mills. Production for 1968-69 is estimated to be 2,724,000 tons 94 net titre, to which New South Wales is expected to contribute approximately 121,000 tons.

### International Sugar Agreement

The International Sugar Agreement of 1937 was superseded by the International Sugar Agreements of 1953, 1958 and 1968. Details of the 1937, 1953 and 1958 Agreements were given in Year Books No. 40, pages 881-2, No. 48, page 936 and No. 54, page 892 respectively.

The 1968 International Sugar Agreement came into force on 1 January 1969. The Agreement is for a five year period, but the operation of the Agreement is to be reviewed before the end of the third year. It is possible that such a review will result in modifications to the Agreement to apply in its final two years.

Like its predecessors, the 1968 Agreement is built around a schedule of export quotas governing the net exports of exporting members to the world 'free' market. The Agreement is designed to maintain a balance between total world free market supply and demand by adjustments to the level of quotas in effect of exporting members. Quotas in effect cannot be adjusted downwards below 90 per cent of basic export tonnages except in exceptional circumstances where adjustments down to 85 per cent may be possible.

Quota adjustments under the Agreement must take account of the prices ruling in the world free market. The quota adjustment provisions pivot around a world free market price of four U.S. cents per pound f.o.b. and stowed Caribbean port, in bulk. When the price is below four cents, the system is designed to provide an upward pressure on prices by quota reductions. When the price is above four cents, the system is designed to apply a downward pressure on prices by increases in the level of quotas in effect above basic export tonnages.

Under the Agreement, exporters are required to establish and maintain certain levels of minimum stocks which are only to be released to the market when the price rises above 4.75 cents. If the price rises above 5.25 cents all quota restraints become inoperative and, if the price rises above 6.50 cents, exporters are required to supply importer members with certain quantities of sugar at prices not exceeding the commercial equivalent of 6.50 cents.

If the price is below 3.50 cents, minimum export quotas in effect are to apply, while at prices below 3.25 cents, members are obliged to prohibit imports from non-member countries.

Australia has a quota under this Agreement of 1,100,000 metric tons raw value (about 1,040,000 long tons of actual raw sugar) and is obliged to establish a minimum level of uncommitted stocks amounting to 15 per cent of this quantity.

Australian exports of negotiated price sugar to the United Kingdom under the British Commonwealth Sugar Agreement, and to the U.S.A. market, are not controlled by the International Sugar Agreement.

### British Commonwealth Sugar Agreement

On 1 January 1953 the British Commonwealth Sugar Agreement became effective. The Agreement is now of indefinite duration but is subject to triennial review, with the next such review to be held in

1971. Under the Agreement Australia has a negotiated price quota of 335,000 tons per annum to the United Kingdom. The negotiated price for the years 1966, 1967 and 1968 of £stg43. 10s. per ton of bulk raw sugar, f.o.b. and stowed, has been extended for the three years to 1971.

The Agreement also allows an adjusted overall Agreement quota (which includes the negotiated price quota) of 630,000 tons per annum to Australia. The balance of this quota over the negotiated price quota may be sold to preferential markets on the basis of the world market price plus preference, as part of Australia's export quota under the International Sugar Agreement.

#### **Exports to the United States of America**

Australian exports to the U.S.A. are governed by legislation enacted by the U.S.A. in 1965 and covering the period to the end of 1971. These exports are sold on the U.S. domestic raw sugar market, the supplies to which are regulated with a view to ensuring stable and equitable prices, independently of prices ruling elsewhere in the world.

Australian export entitlements to this market vary from year to year but have recently been of the order of 175,000 tons of raw sugar per year.

#### **Fruit Industry Sugar Concession Committee and sugar rebates**

The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the sugar industry.

Until 15 May 1960 a rebate of \$4.40 a ton of refined sugar used in processing approved fruit products was paid to Australian manufacturers, provided they bought fresh fruit at prices not lower than those declared by the Committee as reasonable. This was increased to \$10 a ton from 16 May 1960.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for the Australian sugar content than the price for which the cheapest imported sugar could be landed duty free in Australia. The Queensland Government is responsible for payment of a similar rebate to exporters of other approved products. Payment of the export sugar rebate in respect of approved fruit products has been made conditional upon satisfactory arrangements having been made for payment for such fruit at not less than the prices (if any) which the Committee has declared to be reasonable.

Under the Sugar Agreement 1962 the Queensland Government contributes to the fund \$528,000 annually, reimburses the Committee for the actual expenditure on export sugar rebates, and, by a supplementary agreement operating from 1 September 1962, pays the Committee an additional sum equal to the amount payable by way of domestic sugar rebate in respect of the products exported. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for research for the purpose of increasing the yield per acre of Australian fruit, or of obtaining information regarding Australian fresh marketable fruits.

#### **Financial assistance to the sugar industry**

Under the provisions of the *Sugar Marketing Assistance Agreement Act 1967* the Commonwealth Government arranged a repayable grant of \$19 million, plus interest on a temporary advance of this amount from the Reserve Bank, to assist the returns from No. 1 Pool in the 1966 season, and \$3,559,193 for a similar purpose in respect of the 1967 season. The total amount of \$23,327,590 so advanced will be repayable over ten years commencing in mid-1970, and will not be subject to interest before then. Thereafter it will incur interest at the medium term bond rate prevailing when each grant was made.

#### **Bulk handling of sugar**

Bulk handling and mechanised loading and unloading of raw sugar is now in operation throughout the Australian sugar industry, except for the operation of a bagging station specially provided at Townsville to meet the needs of a few overseas customers. Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, at Mourilyan in 1960, and at Cairns in 1964. A second storage shed at Bundaberg, a third shed at Mackay and second sheds at Lucinda and Townsville have been opened subsequently. The comparatively small New South Wales sugar industry was converted to bulk handling in 1954. Bulk receiving facilities are in operation at all Australian refineries.

#### **Area of sugar cane**

A brief outline of the development of the industry was included in earlier issues of the Year Book (see No. 38, page 985). The area of sugar cane in Australia for the seasons 1963-64 to 1967-68 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. The areas shown in the table do not include the small acreage cut for green fodder, which in 1967-68 amounted to 1,070 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and 'stand-over' cane as well as a small quantity required for plants.

**SUGAR CANE: AREA(a), STATES, 1936-37 TO 1967-68**

(a) Raw sugar at 94 net titre.

Climatic conditions in New South Wales are such that the crop matures in from twenty to twenty-four months, whereas in Queensland a period of from twelve to sixteen months is sufficient. The average yields of cane and sugar per acre for the years 1963-64 to 1967-68 and for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

**SUGAR CANE AND SUGAR: YIELD PER ACRE, STATES, 1936-37 TO 1967-68**

### Production and utilisation of sugar

Details of the production and utilisation of sugar for the years 1963-64 to 1967-68 are shown below. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

#### SUGAR: PRODUCTION AND UTILISATION, AUSTRALIA, 1963-64 TO 1967-68

Year	Changes in stocks(a)	Production (raw)	Exports(b)	Miscellaneous uses(c)	Consumption in Australia(d)	
					Total	Per head
	'000 tons	'000 tons	'000 tons	'000 tons	'000 tons	lb
1963-64	- 64.8	1,648.7	1,156.0	20.9	536.7	108.7
1964-65	- 4.1	1,880.0	1,308.2	20.5	555.4	110.3
1965-66	+ 82.6	1,961.8	1,289.0	22.1	568.2	110.7
1966-67	- 36.5	2,222.1	1,674.6	20.8	563.2	107.7
1967-68	+170.4	2,393.9	1,634.8	20.8	567.9	106.7

(a) Includes allowance for estimated sugar content of imported foodstuffs. (b) Raw and refined, including ships' stores and sugar in exported foodstuffs. (c) Includes refining losses and quantities used in golden syrup and treacle. (d) Includes sugar content of manufactured products consumed.

The quantity of sugar recorded as used in factories in 1967-68 amounted to 377,132 tons compared with 372,394 tons in 1966-67 and 371,713 tons in 1965-66. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1967-68 the reported consumption by factories engaged in the production of jams, jellies and preserved and dried fruit and vegetables amounted to 77,288 tons, by those producing confectionery, ice cream, etc., to 74,196 tons, by breweries to 47,438 tons, and by factories producing aerated waters, cordials, etc., to 70,775 tons.

### Sugar by-products

Industrial chemicals, together with large quantities of molasses, are produced as by-products in sugar mills. Further, during the period 1939 to 1960 building boards were made from the residue of crushed fibre after removal of the sugar content from sugar cane. These boards possessed high insulating and sound absorbing properties which made them particularly suitable for use in walls and ceilings. Early in the period referred to, the boards were manufactured almost entirely from crushed fibre residue, the remaining component being non-millable pine, but gradually the pine content was increased until by 1960 fibre residue was no longer being used. The main purpose for which crushed cane fibre residue is now used is furnace fuel in sugar mills.

### Sugar prices and returns

The current prices of sugar in Australia (as determined under the Sugar Agreement in Australia, see page 858) and details of net returns for raw sugar from 1963-64 to 1966-67 are shown in the following tables.

#### SUGAR: PRICES IN AUSTRALIA

Year	Raw sugar, 94 net titre			Refined sugar		
	Average return per ton received by millers and growers for—			Date of determination	Wholesale price to retailer per ton	Retail price capital cities per lb
	Home consumption	Exports (a)	Whole crop (a)			
	\$	\$	\$		\$	cents
1963	122.00	131.22	127.97	16.5.60 to 18.6.67	180.52	9.2
1964	120.75	83.89	95.78	19.6.67	206.72	10.5
1965	121.95	67.27	85.14			
1966	121.25	57.47	75.01			
1967(b)	142.80	59.45	82.05			

(a) Includes 'excess' sugar. (b) Excludes repayable Commonwealth grant (see page 859).

## RAW SUGAR(a): NET RETURNS, AUSTRALIA, 1963-64 TO 1967-68

(Source: The Queensland Sugar Board)

Year	Proportion exported	Net value of exports per ton	Average price per ton for whole crop	Estimated value of crop
	per cent	\$	\$	\$'000
1963-64 . . . . .	64.70	131.22	127.97	220,520
1964-65 . . . . .	67.76	83.89	95.78	186,728
1965-66 . . . . .	67.31	67.27	85.14	166,270
1966-67 . . . . .	72.50	57.47	75.01	175,694
1967-68 . . . . .	72.89	59.45	82.05	191,471

(a) 94 net titre.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated comprise the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges. They include concessions to the fruit industry and other rebates which in 1967-68 amounted to \$3,820,000, but exclude the repayable Commonwealth grants referred to earlier. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent and 30 per cent respectively.

## Exports of sugar

## RAW AND REFINED SUGAR: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68

	1963-64	1964-65	1965-66	1966-67	1967-68
Quantity . . . . . tons	1,116,190	1,269,139	1,252,546	1,638,263	1,597,240
Value . . . . . \$'000 f.o.b.	156,513	112,683	93,925	99,535	97,582

## Tobacco

Tobacco is a summer-growing annual which requires a temperate to tropical climate, adequate soil moisture and a frost-free period of approximately five months. In Australia almost all tobacco is grown under irrigation. Because of specialised requirements, commercial production is restricted mainly to river valleys where suitable light friable soil types are found. Grown in the three eastern States of Australia, the centres of production include Mareeba (northern Queensland), Bundaberg (central coastal Queensland), Beerwah (Glasshouse Mountains, Queensland), Texas (south-western Queensland), Ashford (north-western New South Wales), Myrtleford (north-eastern Victoria), and Gubower (northern Victoria). A small quantity of burley tobacco is produced, but most of the tobacco grown in Australia is of the flue-cured type. The main flue-cured variety is Hicks.

## Marketing

Between 9 May 1941 and 24 September 1948 all leaf was under the direct control of the Australian Tobacco Board, and prices were paid on leaf appraisal. Subsequently the Board was disbanded, and sales have been by open auction through the Tobacco Leaf Marketing Board (Queensland and northern New South Wales) and the Victorian Tobacco Growers Association Ltd (southern New South Wales and Victoria). In 1964 the Victorian Tobacco Leaf Marketing Board was set up to market the portion of the crop that was formerly sold by the Victorian Tobacco Growers Association Ltd, and in 1965 a Board was established in New South Wales. However, the actual physical handling of New South Wales leaf at auction is carried out by the Queensland and Victorian authorities.

In 1965 the Commonwealth and State Governments agreed to a stabilisation plan for the tobacco growing industry with an annual marketing quota of 26 million pounds (green weight) of leaf to be sold under an agreed grade and price schedule providing for an average minimum price, based on

normal crop fall-out. The overall marketing quota is divided among tobacco-producing States according to a formula approved by the Australian Agricultural Council. The determination of quotas for underdeveloped growers from State allocations is the responsibility of State Quota Committees.

In 1968, the final year of the plan, the Governments concerned agreed that it should continue for a further period of five years with an increased marketing quota for the 1969 selling season of 28.5 million pounds. Provision was made for an annual review of the quota and in 1969 it was set at 31 million pounds for the 1970 selling season, to be divided among the producing States in the same proportions as the original quota.

The plan is administered by the Australian Tobacco Board, constituted under the *Tobacco Marketing Act* 1965-66 and representative of the Commonwealth, tobacco-producing States, growers, and manufacturers.

The guaranteed average minimum price for the 1969 season remained at 109.0 cents per lb, the amount set for the 1968 season.

#### Central Tobacco Advisory Committee

The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems. The Committee was reconstituted by the Agricultural Council during 1952-53.

In 1955 the Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme were estimated at \$336,000, of which the Commonwealth Government and tobacco manufacturers each agreed to contribute half. Annual contributions are made to a fund by the Commonwealth and State Governments and tobacco growers and manufacturers. A Tobacco Industry Trust Account has been established under the *Tobacco Industry Act* 1955-1965 to receive these contributions. The contributions from growers and manufacturers are obtained under the Tobacco Charges Assessment Act and the Tobacco Charge Acts, whose purpose is to provide funds to be used in research and otherwise with a view to fostering and expanding the Australian tobacco industry. This programme commenced in 1956, and since then \$5,281,457 has been paid to State and Commonwealth departments for expenditure on tobacco research and extension. The allocation for 1968-69 was \$794,100. As from 1 July 1964 the annual Commonwealth contribution has been increased to one-half of approved expenditure from the Tobacco Industry Trust Account. In 1961 a Research Sub-Committee was established to review annually scientific programmes and finance in relation to the Tobacco Industry Trust Account and make recommendations to the Central Tobacco Advisory Committee. However, following the establishment of the Australian Tobacco Board, the Australian Agricultural Council in 1966 abolished this sub-committee and reconstituted the Central Tobacco Advisory Committee with the following terms of reference:

'To make recommendations annually to the Australian Agricultural Council, through the Standing Committee on Agriculture, regarding research and extension programmes to be financed from the Tobacco Industry Trust Account.'

#### Tobacco research and extension

Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30 June 1953 are given in Year Book No. 40, pages 895-6, and in previous issues.

The Commonwealth Scientific and Industrial Research Organization and the State Departments of Agriculture in the tobacco growing States are carrying out investigations into a wide range of problems involving fundamental research, plant breeding, variety trials, irrigation, disease and pest control, fertilisers, crop rotation, and cultural practices. The State Departments also provide extension services for tobacco growers.

#### Tobacco factories

Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages, which in November 1946 stood at 3 per cent for cigarettes and 5 per cent for tobacco, have been increased progressively in intervening years and since 1 January 1966 have been set at 50 per cent for both cigarettes and tobacco.

In 1967-68 the quantity of cured leaf recorded as used in tobacco factories in Australia amounted to 50 million lb, of which 23 million lb was of local origin. The balance was imported, chiefly from the United States of America and South Africa.

#### Tobacco area and production

The area of tobacco in 1967-68 was 21.8 per cent below the record area established in 1962-63. Production at 24,721,000 lb was 28.0 per cent below the record established in 1963-64.

#### TOBACCO: AREA AND PRODUCTION, STATES, 1936-37 TO 1967-68

1967-68 . . .	2,075	7,625	15,021	..	..	..	24,721

#### Imports and exports of tobacco

Imports of tobacco and tobacco manufactures into Australia during 1967-68 were valued at \$22.5 million. This included 20.8 million lb of unmanufactured tobacco valued at \$15.3 million. Exports of tobacco and tobacco manufactures during 1967-68 were valued at \$2,623,000, including Australian produce, \$1,994,000.

### Cotton

This annual shrub requires a hot climate and inter-row weed control. Lint (long fibres) is extracted from the seed cotton in the ginneries and is used for yarn. The residue, consisting of linters (short fibres), kernels and hulls (outer seed coat), is treated in oil mills. Linters are used in the manufacture of felts and other materials where fibre length is of little importance. The kernels when crushed produce an oil which is used for both edible and industrial purposes. The residual meal is a useful high protein stockfeed; the hulls may be used as fuel.

Until 1964 cotton growing was mainly confined to Queensland, most of it being grown under conditions of natural rainfall. Since then there has been an increasing trend in the use of irrigation. A sound industry has been established in the Namoi Valley in New South Wales with water provided by the Keepit Dam. More than three quarters of Australia's raw cotton requirements are now produced in that area. Cotton is also grown under irrigation in Queensland and on the Ord River of Western Australia and to a lesser extent in the Murrumbidgee Irrigation Areas of New South Wales. Nearly all Australian cotton is now grown with the assistance of irrigation and acreage yields compare more than favourably with those obtained by traditional overseas cotton producing countries.

**Cotton bounty**

For particulars of the *Cotton Bounty Act* 1951-1958, see page 1044 of Year Book No. 49. This Act was replaced by the *Raw Cotton Bounty Act* 1963-1966 under which the Commonwealth agreed to pay a bounty on raw cotton produced and sold for use in Australia at the rate of 13.4375 cents per lb for Middling 1" White, with premiums and discounts on grades and staples above and below, up to a maximum of \$4 million in any one year, for a period of five years from 1 January 1964. In 1968 this Act was amended to extend bounty payments to all cotton produced in Australia of a grade higher than Strict Good Ordinary, whether used in Australia or not, provided it has a staple length of  $\frac{3}{4}$ " or greater. The Commonwealth Government proposes to phase out the bounty assistance over the next three years, commencing with the 1969 crop. That year the maximum bounty will remain at the previous level of \$4 million, falling to \$3 million in 1970, and to \$2 million in 1971 after which it will cease.

**Cotton area and production**

1967-68	3,180	..	1,610	..	2,203	..	..	..	2,793

(a) Not available for publication. (b) Incomplete; see individual States.

NOTE. Production in Queensland relates to the crop harvested in the first of the years mentioned, and in other States to the year following: e.g., for 1967-68, the Queensland crop was harvested during 1967, while the crop in other States was harvested during 1968.

Production of ginned cotton for 1963-64 was 6,570,000 lb; 1964-65, 17,286,000 lb; 1965-66, 40,885,000 lb; 1966-67, 35,510,000 lb; and 1967-68, 70,405,000 lb.

The gross value of unginning cotton for the five years ended 1967-68 was \$2,212,000; \$7,685,000; \$14,323,000; \$12,468,000; and \$19,675,000 respectively.

Imports of raw cotton (excluding linters) during the past five years were: 1963-64, 56,663,000 lb; 1964-65, 55,474,000 lb; 1965-66, 32,096,000 lb; 1966-67, 19,963,000 lb; and 1967-68, 27,066,000 lb.

Small quantities of Australian raw cotton have been exported since 1966-67, when 3,280,000 lb was sent overseas. The quantity exported in 1967-68 was 1,746,000 lb. Japan is the main importing country.

**Peanuts**

Peanuts, or groundnuts, are a sub-tropical legume (and hence summer growers), the pods of which mature beneath the surface of the soil. They thus require well drained, light textured soils. At harvest the plant is pulled, wind-rowed, field-cured for two to four weeks, and then threshed to recover the pods. The main products of the industry are nuts, peanut oil, oil cake, and synthetic protein fibre.

The production of peanuts in Australia is confined mainly to Queensland, although small quantities are grown in New South Wales, the Northern Territory and, in some years, Western Australia.

PEANUTS: AREA AND PRODUCTION, STATES, 1963-64 TO 1967-68

Year	Area (acres)			Production (cwt)		
	N.S.W.	Qld	Aust.	N.S.W.	Qld	Aust.
1963-64 . . . . .	478	44,482	(a)44,960	4,744	455,982	(a)460,726
1964-65 . . . . .	400	45,554	(a)45,954	4,746	202,369	(a)207,115
1965-66 . . . . .	394	57,298	57,708	4,468	543,735	548,279
1966-67 . . . . .	397	69,330	(a)69,727	5,194	821,957	(a)827,151
1967-68 . . . . .	353	61,373	61,738	3,920	602,207	606,159

(a) Incomplete: excludes Northern Territory.

The gross value of the 1967-68 crop was \$6,136,000 which was approximately \$1,830,000 less than in 1966-67. Total supplies available for consumption in Australia in 1967-68 were 23,290 tons (in shell equivalent), after allowing for a decrease of 3,262 tons in stock held by the Peanut Marketing Board, exports of 574 tons of peanut and peanut product, and industrial usage of 11,760 tons. Supplies were made up of 30,247 tons from Australian production received into store by the Board and 2,115 tons imported.

### Flax

Prior to 1948-49 flax for the production of linseed oil had not been grown extensively in Australia. Since then, however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. The main producing areas are the Darling Downs in Queensland, the wheat belt of New South Wales, and the western and north-eastern districts of Victoria. In recent years there has been increased production, principally for export, in the Esperance district of Western Australia.

Particulars of area and production of flax for linseed, by States, are given in the following table for the years 1963-64 to 1967-68.

FLAX FOR LINSEED: AREA AND PRODUCTION, STATES, 1963-64 TO 1967-68

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Aust.
Area (acres)—						
1963-64 . . . . .	15,335	16,240	83,336	1,002	1,588	117,501

1967-68 . . . . .	952	804	6,571	72	2,083	10,482

### Hops

Hops are grown from perennial rootstocks over deep, well-drained soils in localities sheltered from the wind. The hop-bearing vine shoots are carried upon wire and coir trellises, from which they are later harvested, principally by hand. The green hops are kiln-dried and bleached with sulphur dioxide fumes, following which the cured hops are pressed into bales.

Hop growing in Australia is confined to the Derwent, Huon and Channel areas of Tasmania and the Ovens and King Valleys in Victoria. A small area is also under hops in Western Australia, near Manjimup, but the details are not available for publication.

## Production and imports of hops

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1963-64 to 1967-68. Exports of hops are negligible and are not recorded separately.

**HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA  
1963-64 TO 1967-68**

Year	Production(a)			Net available supplies (b)	Quantity used in breweries
	Quantity	Gross value	Imports		
	cwt	\$'000	cwt	cwt	cwt
1963-64 . . .	19,858	1,534	536	20,394	37,033
1964-65 . . .	27,892	2,372	9,521	37,413	39,517
1965-66 . . .	36,463	3,020	12,696	49,159	35,223
1966-67 . . .	28,907	2,531	2,683	31,590	31,347
1967-68 . . .	36,752	3,211	1,370	38,122	30,634

(a) Excludes production in Western Australia, for which details are not available for publication.  
(b) Disregards movements in stocks.

### Safflower

The cultivation of safflower in Australia has developed rapidly in recent years to make it one of the major oilseed crops. It is best cultivated either in the warm temperate zones or as a winter crop in the tropical or sub-tropical regions, on moderately fertile, weed-free, clay or sandy loams. Adequate moisture is required up to the flowering stage, after which it is relatively drought resistant. The soil preparation and sowing techniques are similar to those employed for small grains; it is usually harvested by combine when the seed is hard and dry. The oil, produced by crushing, is used in the manufacture of margarine, soaps, paints, varnishes, enamels, and textiles.

Queensland is the main producer of safflower where suitable growing conditions exist particularly in the marginal wheat regions of Dawson-Callide Valleys, Fitzroy Basin, Central Highlands, and the Darling Downs. Suitable growing conditions also exist in New South Wales, Victoria and Western Australia, but, at present, production in the latter two States is relatively small.

**SAFFLOWER: AREA AND PRODUCTION, STATES AND TERRITORIES  
1963-64 TO 1967-68**

(a) Incomplete; see individual States. (b) Not available for publication. (c) 40 lb per bushel.

Imports of crude safflower seed oil in 1966-67 and 1967-68 totalled 1,267,000 gallons and 833,000 gallons respectively. These imports came mainly from the United States of America.

## Vegetables for human consumption

### Area, production and trade

Vegetables were initially grown on a large scale near the main cities, where there was ready access to reliable water supplies and to markets. Later, the expansion of irrigation areas and improvement in transport services resulted in their production being extended into many other areas. At present, because of the wide diversity of climatic conditions across Australia, supplies for main city markets are drawn from widely different areas, depending upon the times of maturity of the various crops. Apart from potatoes and onions, which are sold in some States through marketing boards, the bulk of vegetable trading takes place at the metropolitan markets of the cities concerned.

Details of the areas planted and production of individual kinds of vegetables are shown below for the seasons 1965-66 to 1967-68. Certain particulars shown are incomplete in that details for specific vegetables in some States are either not available or are not available for publication. For further information see the bulletin *Rural Industries*. Details of the estimated consumption of vegetables for a series of years ending 1967-68 are given in the chapter *Miscellaneous*.

### FRESH VEGETABLES FOR HUMAN CONSUMPTION: AUSTRALIA 1965-66 TO 1967-68

Vegetable	1965-66		1966-67		1967-68

### Processed vegetables

Total production of canned vegetables in 1967-68 amounted to 182,051,000 lb. The principal types produced were green peas (excluding mint-pro peas), 24,489,000 lb; green beans, 9,807,000 lb; baked beans (including pork and beans), 41,810,000 lb; asparagus, 11,750,000 lb; beetroot, 39,810,000 lb; and mushrooms, 8,142,000 lb.

The production of dehydrated vegetables, including split peas, during 1967-68 amounted to 10,494,000 lb, while the production of potato crisps, chips and flakes was 25,378,000 lb.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957-58, when 13,846,000 lb of frozen vegetables were produced, made up principally of 10,131,000 lb of peas and 2,540,000 lb of beans. In 1967-68 production had risen to 100,862,000 lb, of which 63,891,000 lb were peas and 21,595,000 lb were beans.

### Exports and imports of vegetables

Overseas exports of fresh and frozen vegetables during 1967-68 amounted to 43,439,000 lb valued at \$4,113,000; dried vegetables, 7,964,000 lb valued at \$548,000; preserved vegetables, 4,413,000 lb valued at \$816,000; and other prepared or preserved vegetables, 108,000 lb valued at \$65,000.

Imports of fresh and frozen vegetables during 1967-68 amounted to 13,487,000 lb valued at \$1,424,000.

### Potatoes

This crop requires deep friable soils, which in Australia are usually basaltic, alluvial or swampy in origin. Fertiliser requirements, which are generally high, vary with the type of soil. Potatoes are killed by heavy frost, but require only moderate temperatures for growth. Mechanical planters and diggers are used to a variable extent depending upon a variety of factors including terrain, state of the soil and scale of operations. Seed certification schemes, which operate in all States except Queensland, provide a supply of seed which is free from viral, fungal and bacterial diseases. In Australia potatoes are used almost entirely for human consumption and not for the production of starch or alcohol. They are rarely used as stock feed.

*Area, production, and yield per acre.* Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. New South Wales and Queensland come next in order of acreage sown. In New South Wales production is chiefly in the tablelands district.

(a) Not available for publication.

(b) Incomplete; excludes Northern Territory.

*Potato marketing boards* were established in all States except Tasmania under separate State legislation after Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948. The life of the Queensland Board was not extended when its term ended in 1954. The New South Wales Board was voted out by growers in 1956, and the Victorian Board also ceased functioning in that year. The Boards in South Australia and Western Australia are the only statutory boards still in operation.

*Value of potato crop.* The estimated gross value of the potato crop of each State for the 1967-68 season and the value per acre are shown in the following table.

POTATOES: VALUE OF CROP, STATES, 1967-68

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Aggregate value	\$'000	9,438	18,566	9,444	5,176	5,537	3,818	51,985
Value per acre	\$	388	460	544	793	900	348	492

(a) Includes Northern Territory and Australian Capital Territory.

*Consumption and exports of potatoes.* The annual consumption of potatoes in Australia during each of the three years 1965-66 to 1967-68 amounted to 573,700 tons, 574,700 tons and 591,600 tons respectively or 111.7 lb, 109.9 lb and 111.1 lb respectively per head of population. These figures exclude the quantities used for seed, which averaged about 52,000 tons annually over this period. Details showing exports and imports for the years 1963-64 to 1967-68 are given in the following table.

POTATOES: EXPORTS AND IMPORTS, AUSTRALIA  
1963-64 TO 1967-68

Year	Exports		Imports	
	Quantity	Value	Quantity	Value
	tons	\$'000 f.o.b.	tons	\$'000 f.o.b.
1963-64	12,722	643	..	..
1964-65	4,715	427	5,404	343
1965-66	10,064	626	7,208	455
1966-67	13,593	839	..	..
1967-68	8,150	693	..	..

Western Australia has emerged in recent years as the principal exporting State, accounting for nearly two-thirds of the Australian total in 1967-68. Australia's principal markets are Singapore, Papua and New Guinea and New Caledonia.

### Onions

*Area, production and yield per acre.* Australia's onion supply comes chiefly from Victoria, Queensland and South Australia. The Victorian crop consists almost entirely of brown onions, and the bulk of the crop is grown in a small section of the Western Division of the State, where the volcanic ash soils have been found to be particularly suitable for onion growing on a commercial scale. Most of Queensland's onion production is grown in the Lockyer Valley and also consists mainly of brown varieties.

(a) Includes, for some of the years shown, the Northern Territory and the Australian Capital Territory.

*Value of onion crop.* The estimated gross value of the onion crop and the value per acre are shown in the following table for the 1967-68 season.

**ONIONS: VALUE OF CROP, STATES, 1967-68**

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
Aggregate value	\$'000	802	1,427	2,325	1,888	541	184	7,167
Value per acre	\$	719	395	788	1,122	1,591	1,260	727

*Consumption and exports of onions.* The consumption of onions in Australia during 1967-68 was 63,000 tons or 11.7 lb per head of population. Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. In 1967-68 exports amounted to

851 tons, valued at \$152,000, and were shipped mainly to Papua and New Guinea and New Caledonia. The quantity of exports in 1966-67 was 8,816 tons, valued at \$525,000. Imports of fresh onions amounted to 2,803 tons, valued at \$300,000, in 1967-68, and 849 tons, valued at \$95,000, in 1966-67. The principal country from which onions were imported was New Zealand.

### Fruit

The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales citrus fruit (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears, and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges, and apricots. In Queensland apples, pineapples, bananas, oranges, mandarins, peaches, and plums are the varieties most largely cultivated. In South Australia, in addition to oranges, apples, peaches, apricots, and pears, almonds and olives are grown extensively. In Western Australia apples, oranges, plums, and pears are the chief varieties. In Tasmania apples occupy over three-quarters of the fruit-growing area, but small fruit, such as currants, raspberries and gooseberries, is grown extensively, the balance of the area being mainly taken up with pears and apricots.

#### Overseas marketing of fruits

The *Apple and Pear Organization Act 1938-1966* provides for the establishment of an Australian Apple and Pear Board comprising representatives of growers, exporters, employees, and the Commonwealth Government. A representative in London has also been appointed by the Board. An export levy to meet the expenses of the Board is provided for in the *Apple and Pear Export Charges Act 1938-1968*. The function of the Board is the organisation and control of exports of fresh apples and pears, and it has the power to regulate shipments, determine export quotas, allocate consignments from each State, and recommend the licensing of exporters. The Board contributes to apple and pear publicity activities overseas.

Since January 1964 the *Canned Fruits Marketing Act 1963-1968* has replaced the *Canned Fruits Export Control Act 1926-1959* under which the overseas marketing of canned fruit was initially organised (see Year Book No. 49, page 1050). The Australian Canned Fruits Board, which is constituted under the Act, determines the terms and conditions for overseas sales. The Board exercises this control through a system of export licences. The Board, whose membership was increased from five to eleven members and which was granted greater powers under the new Act, comprises representatives of the Commonwealth Government (one), canners of deciduous fruit (six), growers of deciduous fruit (three), and pineapple interests (one). The Board maintains a London office. The *Canned Fruits Export Charges Act 1926-1966* provides for a levy on exports to meet the Board's expenses, which include contributions to overseas publicity connected with the canned fruit industry. In 1963 an excise duty was imposed by the *Canned Fruits Excise Act 1963* on canned deciduous fruit entered for domestic consumption, and the proceeds of the duty are made available to the Board to assist in the promotion of overseas sales of canned deciduous fruit.

In 1959 the Australian Canned Fruit Sales Promotion Committee was established to promote the sale of canned deciduous fruit on the home market and overseas. The operations of the Committee are financed by a levy on fruit accepted by the canneries for the production of canned fruit. The Committee comprises representatives of growers and processors of canning fruit and a representative of the Commonwealth Government.

#### Area and production of fruit

In general the area under fruit in Australia has been increasing steadily during recent years.

**Production and consumption of jams and jellies and preserved fruit**

In Australia considerable quantities of fruit are used in the production of jams and jellies and for preserving. During 1967-68 output of jams, conserves, fruit spreads, etc., amounted to 83,917,000 lb, while output of preserved fruit amounted to 659,700,000 lb. Of the latter figure, peaches accounted for 253,592,000 lb, pears 152,780,000 lb, and pineapples 72,820,000 lb.

In 1967-68, 9,102,000 cwt of fruit was recorded as used in factories classified to the sub-classes Oils, vegetable; Jam, fruit and vegetable canning; Condiments, coffee, spices; Aerated waters and cordials; and Dehydrated fruit and vegetables. Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1967-68 are shown in the chapter Miscellaneous.

**Imports and exports of fruit and fruit products**

The imports of fresh fruit into Australia are negligible, while those of dried fruit consist mainly of dates obtained almost entirely from Iraq and Iran. A considerable export trade in both fresh and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1967-68 amounted to \$27,538,000 and \$22,790,000 respectively. Apples constitute the bulk of the fresh fruit exported, although exports of pears and citrus fruit are considerable.

1967-68 . . . .	8,996	750	8,027	2,016

(a) Excludes sultanas, raisins and currants dealt with separately under Vineyards (see page 878). (b) Dates and figs only.

Exports of jams and jellies in 1967-68 were 10,361,000 lb, valued at \$1,463,000, compared with 8,731,000 lb, valued at \$1,227,000 in 1966-67. Imports of jams and jellies in 1967-68 were 1,637,000 lb, valued at \$324,000, compared with 1,045,000 lb, valued at \$247,000 in 1966-67.

Large quantities of canned or bottled fruit are normally exported from Australia, the quantity recorded in 1967-68 being 425,328,000 lb, valued at \$50,661,000. Exports in 1967-68 were made up principally of peaches (198,736,000 lb), pears (108,712,000 lb), fruit salad (37,673,000 lb), pineapples (33,898,000 lb), and apricots (17,729,000 lb). In addition, the exports of pulped fruits during 1967-68 amounted to 1,108,000 lb valued at \$188,000.

The total value of preserved fruit and fruit preparations (including fruit juices) imported into Australia during 1967-68 was \$2,491,000. The value of exports of fruit juices in 1967-68 was \$943,000.

### Vineyards

Grapes require a warm to hot climate and a predominantly winter rainfall. Freedom from late spring frosts is essential. They are grown for wine-making, drying and, to a minor extent, for table use. In Australia wine is produced very largely from irrigated crops, as are dried fruits. Some of the better known wine producing areas are the Murray Valley (South Australia and Victoria), Barossa Valley and Southern Vales Areas (South Australia), the Murrumbidgee Irrigation Areas and the Hunter Valley (New South Wales), the Mildura, Rutherglen and Stawell districts of Victoria, and the Swan Valley (Western Australia). Nearly all the dried fruit is produced along the River Murray and its tributaries, with small localised areas in the other States.

#### Area of vineyards

The area under vineyards in the 1967-68 season in Victoria and South Australia constituted 76 per cent of the total area of vineyards.

**Wine industry**

Australia produces wine of every type and also brandy. In recent years there has been a distinct trend towards greater consumption and production of unfortified or table wines. Until 1957-58 production of these wines (which include burgundy, claret, riesling, sauterne, and sparkling wines) was less than half that of the fortified varieties (sherries, ports, etc.). By 1967-68 production of table wines had reached a volume almost equal to that of fortified varieties.

The *Wine Overseas Marketing Act* 1929-1966 was introduced to place the overseas marketing of wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London the Board maintains an Australian Wine Centre, which is a medium for promoting interest in Australian wines and brandy. It is also a retail shop for the sale of these products. The *Wine Grapes Charges Act* 1929-1966 provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to meet the Board's projects in Australia and overseas and to defray the administrative expenses of the Board, which has no other source of income.

**Production and consumption of wine and brandy**

In 1967-68 the total production of wine (beverage and distillation) in Australia was 44.3 million gallons, while total consumption of beverage wine was 19.8 million gallons (1.66 gallons per head of population). Similar particulars for 1966-67 are 41.5 million gallons and 17.5 million gallons (1.49 gallons per head of population) respectively.

1967-68 . . .	715,147	872,428

(a) Includes New South Wales and Victoria, for which separate details are not available for publication.

**Exports and imports of wine and brandy**

Principal markets for exports of Australian wine are the United Kingdom, Canada and New Zealand. During 1967-68 these countries received 1,040,000 gallons, 409,000 gallons and 116,000 gallons respectively. Exports of Australian-produced wine for the five years ended 1967-68 are shown in the following table.

**WINE: EXPORTS, AUSTRALIA, 1963-64 TO 1967-68**

Year	Quantity ('000 gals)			Value (\$'000 f.o.b.)		
	Sparkling	Other	Total	Sparkling	Other	Total
1963-64 . . .	10	1,526	1,537	62	2,679	2,741
1964-65 . . .	16	1,976	1,992	96	3,425	3,521
1965-66 . . .	35	1,922	1,957	171	3,364	3,535
1966-67 . . .	65	1,709	1,774	251	2,917	3,169
1967-68 . . .	88	1,751	1,839	359	2,794	3,153

Imports of wine for 1967-68 amounted to 305,000 gallons valued at \$1,364,000, compared with 189,000 gallons valued at \$828,000 in the previous year. During 1967-68 Italy supplied 120,000 gallons valued at \$417,000, France 71,000 gallons valued at \$532,000 and the Federal Republic of Germany 29,000 gallons valued at \$144,000.

Exports of Australian-produced brandy in 1967-68 amounted to 92,000 proof gallons, valued at \$422,000. Imports of brandy, mainly from France, amounted to 133,000 proof gallons, valued at \$736,000.

**Dried vine fruit industries**

The dry period from November to March in the lower Murray valley makes this an ideal area for dried vine fruit. Harvesting for drying takes place at the end of summer. The sun-drying process is often accelerated by using a dip of cold potash.

The *Dried Fruits Export Control Act 1924-1966* was passed to organise overseas marketing of Australian dried vine fruit. The Australian Dried Fruits Control Board, consisting of growers' representatives, members with commercial experience in marketing dried fruits and a Government representative, controls the sale and distribution of dried fruit exports, recommends the licensing of exporters and contributes to dried vine fruit publicity activity overseas. In conjunction with its London office, the Board has improved dried fruit marketing overseas by its system of appraisal, regulation of shipments and advertising. The *Dried Fruits Export Charges Act 1924-1965* provides for a levy on exports of dried fruit to defray costs and expenses incurred by the Board.

For details of the bulk purchase agreements between the Governments of the United Kingdom and Australia which operated during the period 1946-53 see Year Book No. 40, page 888. From 1 December 1953 exports to the United Kingdom have been on a trader to trader basis.

In June 1963 Australian, Greek and Turkish dried vine fruit interests concluded an agreement to maintain minimum prices for sultanas on world markets. The agreement, which aims at international price stability, is periodically reviewed. A permanent committee of the contracting parties was established in London for the purpose of supervising the working of the agreement, and a sub-committee of the permanent committee was established in Hamburg in 1964.

The Dried Vine Fruits Stabilization Scheme was introduced under the *Dried Vine Fruits Stabilization Act 1964-1966* to stabilise seasonal returns to growers of currants, sultanas and raisins. Its main features are as follows.

Growers are guaranteed an average return from seasonal sales of currants, sultanas and raisins equal to the average cost of production of each variety less \$10.00 a ton.

The maximum quantities for which returns are guaranteed each season are 13,500 tons of currants, 75,000 tons of sultanas and 11,000 tons of raisins.

Growers are required to contribute to separate varietal stabilisation funds when the average return to the industry from seasonal sales of a variety exceeds cost of production by more than \$10.00 a ton, with a limit on such contributions of \$20.00 a ton.

When the quantity received for packing in any season does not reach 8,000 tons of currants, 50,000 tons of sultanas or 6,000 tons of raisins, growers are not required to contribute to the stabilisation fund for the variety concerned.

Contributions are to be made by the Commonwealth to raise average returns to the guaranteed price when there is insufficient industry money in a stabilisation fund for this purpose.

Limits are set to the accumulation of money in the stabilisation funds. These are \$1,000,000 in the case of both the currant and raisin stabilisation funds, and \$4,000,000 in the case of the sultana stabilisation fund.

Where these limits are exceeded during the operation of the scheme, the excess will be used first to reimburse the Government for any contribution it may have made to a fund; any balance will be repaid to growers on a first-in first-out basis.

The scheme is to operate for five years. At the end of the fifth year any credit balance in the stabilisation funds will be used, in the first instance, to reimburse the Government for unrepaid contributions (if any). If the scheme is not renewed any remaining money will be returned to growers.

Growers' contributions for the scheme are collected under the *Dried Vine Fruits Contributory Charges Act 1964-1966* and the *Dried Vine Fruits Contributory Charges (Collection) Act 1964-1966*.

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian dried vine fruit are the United Kingdom, Canada, the Federal Republic of Germany, New Zealand, and Ireland. The quantities exported to these countries in 1967-68 were 27,925 tons, 16,910 tons, 7,356 tons, 5,954 tons, and 2,030 tons respectively.

#### Table grapes

Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 8 per cent of the productive area of vines in 1967-68. The quantities of table grapes produced during the season 1967-68 in each State are shown on page 830.

**PASTORAL PRODUCTION****Livestock numbers**

A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given on page 748 of Year Book No. 35. Since 1860 annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia, at decennial intervals from 1860 to 1960, and from 1964 onwards in single years, are given in the following table, and are shown continuously since 1870 on the graph on plate 42 following.

LIVESTOCK: AUSTRALIA, 1860 TO 1968  
(\*000)

Year	Horses	Cattle	Sheep	Pigs	Year	Horses	Cattle	Sheep	Pigs
1860	432	3,958	20,135	351	1940	1,699	13,080	119,305	1,455
1870	717	4,276	41,594	543	1950	1,057	14,640	112,891	1,123
1880	1,069	7,527	62,184	816	1960	640	16,503	155,174	1,424
1890	1,522	10,300	97,881	891	1964	536	19,055	164,981	1,468
1900	1,610	8,640	70,603	950	1965	520	18,816	170,622	1,660
1910	2,166	11,745	98,066	1,026	1966	n.a.	17,936	157,563	1,747
1920	2,416	13,500	81,796	764	1967	479	18,270	164,237	1,804
1930	1,793	11,721	110,568	1,072	1968	n.a.	19,218	166,912	2,056

While livestock numbers (particularly sheep) have increased substantially since 1860, marked fluctuations have taken place during the period, mainly on account of widespread droughts which have from time to time left their impressions on the pastoral history of Australia. These occurred in 1868, 1877, 1883-84, 1892, 1893, 1895, 1901-02, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41, 1944-45 to 1946-47, and 1965-67. The years in which the numbers of livestock attained their peaks are as follows: horses, 1919 (2,527,000); cattle, 1968 (19,218,000); sheep, 1965 (170,622,000); and pigs, 1968 (2,056,000).

The distribution throughout Australia of sheep, beef cattle, dairy cattle, and pigs at 31 March 1963 is shown in the maps on pages 1049 and 1050 and facing pages 1082 and 1083 of Year Book No. 50.

The numbers of horses, cattle, sheep, and pigs in each State and Territory are shown later in this chapter.

**Value of pastoral production**

Values of pastoral production are shown for 1967-68 and earlier years in the following tables. Further details of the source of the information and an explanation of the terms used in this compilation will be found in the chapter Miscellaneous. Maintenance costs and depreciation have not been deducted; consequently the net values are inflated to the extent of these amounts.

GROSS, LOCAL AND NET VALUES OF PASTORAL PRODUCTION: STATES AND TERRITORIES, 1967-68  
(\$'000)

State or Territory	Gross production valued at principal markets	Marketing costs	Local value of production	Value of materials used in process of production	Net value of production(a)
New South Wales . . . . .	431,411	40,281	391,130	(b)60,792	330,338
Victoria . . . . .	355,318	30,547	324,772	70,584	254,187

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power, power kerosene, petrol and other oils.

**Indexes of quantum and price of pastoral production, 1963-64 to 1967-68**

The quantum indexes shown in the following table relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been revalued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realised in the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. For further details of the methods of calculating these indexes and of the weights used see the chapter Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF PASTORAL PRODUCTION  
AUSTRALIA, 1963-64 TO 1967-68**

(Base: Average 3 years ended June 1939 = 100)

	1963-64	1964-65	1965-66	1966-67	1967-68
<b>Quantum(a) produced—</b>					
Wool	183	183	169	180	180
Other products	158	158	157	151	165
<i>Total, pastoral</i>	<i>172</i>	<i>172</i>	<i>163</i>	<i>167</i>	<i>174</i>
Per head of population	107	105	97	98	100
<b>Price—</b>					
Wool	531	437	458	433	382
Other products	480	496	567	593	573
<i>Total, pastoral</i>	<i>511</i>	<i>460</i>	<i>501</i>	<i>496</i>	<i>457</i>

(a) Index of value at constant prices, i.e. quantities revalued at average unit values of base years 1936-37 to 1938-39.

## Sheep

### Distribution throughout Australia

With the exception of a short period in the early eighteen-sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, although its relative importance has declined somewhat in recent years, due, among other factors, to heavy losses caused by drought conditions in 1965-66. Concurrently, there has been a marked increase in the sheep population of Western Australia, where figures have doubled in little more than a decade to give that State second position of importance in terms of sheep numbers.

A map showing the distribution of sheep in Australia at 31 March 1963 appears on page 1049 of Year Book No. 50. Graphs showing the number of sheep in Australia from 1870 onwards appear on plates 42 and 43 of this Year Book (pages 880 and 890).

### SHEEP: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1968 (\*000)

<i>Period</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
<b>Average for three years ended—</b>									
1939 . . . . .	51,202	17,845	21,889	8,916	8,972	2,460	23	251	111,558
1949 . . . . .	46,525	17,900	16,442	8,793	10,368	2,060	24	227	102,339
1959 . . . . .	67,006	26,615	22,537	15,285	15,609	3,259	25	265	150,601
<b>At 31 March—</b>									
1964 . . . . .	71,764	28,413	24,337	16,403	20,165	3,600	10	289	164,981
1965 . . . . .	72,396	30,437	24,016	17,289	22,392	3,793	9	290	170,622
1966 . . . . .	61,396	30,968	18,384	17,993	24,427	4,127	9	258	157,563
1967 . . . . .	63,848	31,239	19,305	17,864	27,370	4,321	8	281	164,237
1968 . . . . .	67,786	27,909	19,948	16,405	30,161	4,428	9	267	166,912

The percentage distribution of sheep and lambs in the several States in 1968 was: New South Wales, 41; Victoria, 17; Queensland, 12; South Australia, 10; Western Australia, 18; and Tasmania, 2.

### Movement in sheep numbers

#### SHEEP AND LAMBS: ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA 1963-64 TO 1967-68 (\*000)

<i>Year ended 31 March</i>	<i>Numbers at beginning of season</i>	<i>Lambs marked</i>	<i>Net exports</i>	<i>Sheep and lambs slaughtered (a)</i>	<i>Estimated deaths on farms (b)</i>	<i>Numbers at close of season</i>
1964 . . . . .	158,626	47,818	312	33,240	7,911	164,981
1965 . . . . .	164,981	47,608	307	33,549	8,111	170,622
1966 . . . . .	170,622	40,330	273	33,671	19,445	157,563
1967 . . . . .	157,563	47,830	337	33,350	7,469	164,237
1968 . . . . .	164,237	50,648	362	38,145	9,466	166,912

(a) Includes an estimate for numbers boiled down. (b) Balance figure; excludes lambs which died before marking.

Comparisons of Australian flock numbers with those of certain other principal sheep-producing countries are given on page 896.

## Classification of sheep according to age, sex, and breed

SHEEP, BY AGE AND SEX: AUSTRALIA, 31 MARCH 1964 TO 1968  
(<sup>'000</sup>)

Description	1964	1965	1966	1967	1968
Rams, 1 year and over . . . . .	1,986	2,047	2,002	2,013	2,079
Breeding ewes (including ewes intended for mating) . . . . .	72,862	75,580	73,626	76,618	76,698
Other ewes, 1 year and over . . . . .	8,631	8,952	7,397	7,117	7,873
Wethers, 1 year and over . . . . .	46,203	49,284	45,649	44,186	42,512
Lambs and hoggets, under 1 year . . . . .	35,299	34,759	28,890	34,302	37,750
<b>Total, sheep and lambs . . . . .</b>	<b>164,981</b>	<b>170,622</b>	<b>157,563</b>	<b>164,237</b>	<b>166,912</b>

Particulars of the principal breeds of sheep at 31 March 1968 (details are collected on a triennial basis) are shown in the following table.

SHEEP, BY PRINCIPAL BREED: STATES AND TERRITORIES, 31 MARCH 1968  
(<sup>'000</sup>)

Breed	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Merino . . . . .	48,977	12,810	19,414	13,418	27,286	315	9	209	122,438
Other recognised breeds . . . . .	6,333	6,909	203	1,383	1,304	2,809	..	14	18,954
Merino comeback(a) . . . . .	1,846	1,584	52	214	339	476	..	5	4,516
Crossbreds(b) . . . . .	10,630	6,605	279	1,391	1,232	829	..	39	21,005
<b>Total . . . . .</b>	<b>67,786</b>	<b>27,909</b>	<b>19,948</b>	<b>16,405</b>	<b>30,161</b>	<b>4,428</b>	<b>9</b>	<b>267</b>	<b>166,912</b>

(a) Merino comeback is the progeny of a crossbred Merino ewe and a Merino ram, i.e. finer than half-bred. (b) Half-bred and coarser.

## Exports and imports of sheep

The overseas exports of live sheep from Australia are of comparatively minor importance. On 27 November 1929 the export of stud Merino sheep was prohibited, except with the approval of the Minister for Primary Industry. Exports of sheep are now principally for slaughter overseas. Consignments for this purpose in recent years were made chiefly from Western Australia to Kuwait and Singapore. In 1967-68 the number of sheep exported was 358,143, valued at \$3,301,000 (1966-67, 340,382, valued at \$3,254,000). Since June 1958 an embargo has been imposed on the import of sheep in order to prevent the introduction of the disease 'blue-tongue'.

## Cattle

## Objects of cattle-raising in Australia

Cattle-raising is carried out in all States, the main object in certain districts being the production of stock suitable for slaughtering purposes and in others the raising of profitable dairy herds. While dairy cattle are restricted mainly to coastal districts, beef cattle are more widely distributed, particularly in the eastern States, and are raised in areas unsuitable for dairy cattle, such as the tropical area of northern Queensland, the Northern Territory and the Kimberley district in the north of Western Australia.

## Distribution throughout Australia

Although cattle numbers declined after 1957 because of drought conditions and heavy slaughtering, they began to rise again in 1960 and in 1964 reached 19,055,000. Again because of drought in the eastern States, this figure declined to 17,936,000 in 1966, but recovered to reach a record level of 19,218,000 in 1967-68.

A graph showing the number of cattle in Australia from 1870 onwards appears on plate 42, page 880.

**CATTLE: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1968**  
(\*000)

<i>Period</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
Average for three years ended—									
1939 . . . . .	3,040	1,861	6,002	324	767	260	882	8	13,144
1949 . . . . .	3,122	2,153	5,971	443	830	244	1,006	9	13,778
1959 . . . . .	3,770	2,722	7,177	598	985	367	1,173	10	16,802
At 31 March—									
1964 . . . . .	4,789	3,301	7,402	694	1,299	450	1,105	15	19,055
1965 . . . . .	4,619	3,316	7,393	697	1,258	451	1,068	14	18,816
1966 . . . . .	4,153	3,397	6,888	690	1,271	492	1,032	13	17,936
1967 . . . . .	4,146	3,528	6,919	687	1,357	522	1,097	14	18,270
1968 . . . . .	4,555	3,474	7,361	695	1,427	564	1,130	13	19,218

The percentage of cattle in each State and Territory during 1968 was: New South Wales, 24; Victoria, 18; Queensland, 38; South Australia, 4; Western Australia, 7; Tasmania, 3; and Northern Territory, 6.

Maps showing the distribution of beef and dairy cattle in Australia appear on page 1050 and facing page 1082 of Year Book No. 50, and maps showing the distribution in earlier years were published in previous issues of the Year Book.

**Classification of cattle**

**CATTLE, BY PURPOSE, AGE AND SEX: STATES AND TERRITORIES, 31 MARCH 1968**

(a) Mainly for meat production. (b) Includes vealers, and bull calves intended for service.

For beef cattle and dairy cattle numbers prior to 1964 *see* pages 1056 and 1078 respectively of Year Book No. 50.

#### Exports and imports of cattle

In 1967–68 the number of cattle exported was 3,989, valued at \$563,000 (1966–67, 5,480 valued at \$1,108,000). Prior to June 1958 small numbers of cattle were imported, consisting mainly of valuable animals for stud purposes. Since that date an embargo has been imposed on the import of cattle in order to prevent the introduction of the disease 'blue-tongue'.

#### Comparison with other countries

The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world at the latest available date.

## Horses

The number of horses in Australia reached a peak of 2,527,000 in 1919. Since then it has declined, because of mechanisation of transport and farming, and the number recorded at 31 March 1967 was 479,000. In future, particulars of horses will be collected only at triennial intervals.

A graph showing the number of horses in Australia since 1870 appears on plate 42, page 880.

### Overseas trade in horses

Exports of Australian-bred horses in 1967–68 numbered 845, valued at \$1,733,000, made up of horses for breeding (137 valued at \$304,000), horses for racing (494 valued at \$1,310,000, shipped principally to Singapore, Republic of Korea and the United States of America), and horses for other purposes (214 valued at \$119,000). Horses imported into Australia in 1967–68 (820 valued at \$2,741,000) were mainly from New Zealand and the United Kingdom.

## Pastoral products: wool

With about one-sixth of the world's woolled sheep, Australia produces almost one-third of the world's wool and more than half the world's fine-quality Merino wool. The bulk of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonised wool, wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on page 896.

### Wool marketing

Details of past wool marketing schemes and agreements, including the 1914–18 War Imperial Purchase Scheme, the British Australian Wool Realization Association Ltd, the 1939–45 War Acquisition Scheme, Joint Organization, and Minimum Reserve Price Plan, are given in previous issues of the Year Book.

More than ninety per cent of the Australian wool clip is disposed of at auction. (During both world wars, however, auction selling was suspended and replaced by bulk purchase schemes.) There are fourteen recognised wool-selling centres, namely Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Portland, Brisbane, Adelaide, Perth, Albany, Hobart, and Launceston. At these centres wool-selling brokers operate large stores where wool received from growers is held awaiting sale.

Each year a wool-selling programme is drawn up jointly by the selling brokers and wool-buyers on the basis of the expected clip. Selling dates and the quantities to be offered are then determined for each centre. Before each sale the selling brokers, who act as agents for the wool-growers, display a representative portion of the wool to be sold on show floors for buyers' inspection and valuation. Auction sales are attended by buyers purchasing on behalf of wool users in more than fifty countries.

### Wool Marketing Committee of Enquiry

In 1961 the Commonwealth Government appointed an independent committee to inquire into the marketing and promotion of Australian wool and related matters (see Year Book No. 48, page 977, for further details). The Committee presented its report to the Government in 1962. Its most important recommendation was that wool promotion, research and testing should be brought under the control of a single body, which should also act as an advisory authority on wool marketing. This recommendation was implemented under the *Wool Industry Act 1962–1967* which set up the Australian Wool Board.

### Australian Wool Board

This Board consists of a chairman, six woolgrower representatives, three members with special qualifications, and a representative of the Commonwealth Government. The first chairman of the

Board was appointed by the Minister for Primary Industry after consultation with the Australian Wool Industry Conference (*see below*), but subsequent chairmen are to be appointed on the nomination of the Board. The six woolgrower representatives are appointed by the Minister on the nomination of the Wool Industry Conference, and the three members with special qualifications are appointed from a panel of names submitted by the Conference. The Act provides that the latter members must be experienced in one of the following fields: wool marketing and manufacturing, research, finance, and commerce.

When the Board came into being on 1 May 1963 it took over the functions of the Australian Wool Bureau. On 1 July 1963 the Australian Wool Testing Authority became part of the Board, and on 1 January 1964 the Board took over the functions of the Wool Research Committee. Information on these three former instrumentalities appears in Year Book No. 48, pages 977–81.

Following the organisational changes carried out under the Wool Industry Act, the functions of the Board embrace the following activities.

*Wool promotion in Australia and overseas by publicity and other means.* Promotion overseas is carried out through the International Wool Secretariat, which is maintained jointly by the Wool Boards of Australia, New Zealand and South Africa.

*Provision of a testing service for wool and wool products.* This service is administered by a subsidiary board retaining the name Australian Wool Testing Authority.

*Administration of wool research.* The Board is responsible for preparing annual programmes of research expenditure which are subject to the approval of the Minister for Primary Industry. Two committees established by the Board, the Wool Production Research Advisory Committee and the Wool Textile Research Advisory Committee, assist in this task.

*Investigation into all aspects of wool marketing on a continuing basis.* The Wool Marketing Committee, an ancillary body appointed by the Board, assists in carrying out this function. The Board is required to report to the Australian Wool Industry Conference on its findings and advise it on measures which should be adopted to meet changing marketing conditions. However, the Board has no executive powers over marketing.

In July 1964 the Board, after an investigation by the Wool Marketing Committee, made recommendations to the Australian Wool Industry Conference for the introduction of a Reserve Price Plan for wool, which were put to woolgrowers in a referendum in December 1965. However, the plan was rejected by 53.4 per cent of the enfranchised woolgrowers who voted. For details *see* Year Book No. 52, page 945.

Following the rejection of the Reserve Price Plan at this referendum, the Board continued with its investigations and on 31 October 1967 presented its second report on wool marketing to the Australian Wool Industry Conference. The report included proposals for the establishment of an Australian Wool Marketing Authority to enforce standards of clip preparation, administer the elimination of one, two, and three bale lots, conduct a price averaging plan for these wools and others voluntarily submitted, and conduct, in conjunction with wool selling brokers, a system of supply management involving chiefly wools in the price averaging plan. The report also recommended a system of financial advances for woolgrowers and the establishment of an organisation of woolgrowers, brokers, and buyers to conduct and control the sale of wool at auction.

A further recommendation that these proposals, with some amendments, be implemented by a non-statutory Australian Wool Marketing Corporation was accepted by the Australian Wool Industry Conference in November 1968. The Conference asked the Board to take all further steps necessary to set up such a Corporation.

*Maintenance and administration of the wool stores which were entrusted to the Board by the Commonwealth Government.* Further details concerning these stores appear in Year Book No. 48, page 978.

*Other activities approved by the Minister for the benefit of the wool industry, including the operation of the Wool Statistical Service and the registration of wool classers.* The Wool Statistical Service (described in more detail in Year Book No. 48, pages 977–8) provides comprehensive statistics on the Australian wool clip, while the registration of wool classers is designed to improve the standards of wool classing in Australia.

At present the main sources of finance for the various activities of the Board are a levy paid by woolgrowers and contributions by the Commonwealth Government.

### **The Australian Wool Industry Conference**

This body was formed by woolgrowers in October 1962 to meet the need for an organisation with sufficient authority to speak on behalf of the woolgrowing industry as a whole. It is not a statutory body and consists of twenty-five members each from the Australian Woolgrowers' and Graziers'

Council and the Australian Wool and Meat Producers' Federation, and, from October 1965, five members from the Australian Primary Producers' Union. The fifty-five member conference is presided over by an independent chairman.

The Conference makes recommendations to the Commonwealth Government on policy matters concerning the wool industry. Under the Wool Industry Act it is the responsibility of the Conference to nominate woolgrower representatives for appointment to the Australian Wool Board and to prepare panels of names from which the three Board members with special qualifications are selected. Under the Wool Tax Acts (*see below*) the Conference is also responsible for recommending to the Commonwealth Government what rates of levy should be paid by woolgrowers to finance the activities of the Wool Board and the wool research programme.

### Wool levy

Since 1936 a statutory levy has been collected from woolgrowers to finance wool promotion activities. The initial rate of 5c a bale was increased at the request of woolgrowers to 20c a bale in 1945 and 40c a bale in 1952, the latter rate continuing until 1960. Further details regarding the operation of this levy prior to 1957 appear in Year Book No. 48, page 978.

Under legislation passed in 1957 provision was also made for the payment by woolgrowers of a contribution for wool research which was fixed at 20c a bale. In 1960 the wool promotion levy was raised to 50c a bale, and the following year it was increased further to \$1 a bale. The operation of this rate was subsequently extended for 1962-63 and 1963-64.

On 1 July 1964 the basis for collecting the woolgrowers' combined levy for wool promotion and research was changed from a flat rate per bale to a percentage deduction from the gross value of shorn wool sold. A maximum rate of 2 per cent was fixed, but provision was made for a lower rate to be prescribed, if appropriate. For 1964-65 the rate was set at 1.875 per cent, which involved a substantial increase in payments by woolgrowers for promotion (from \$1 per bale to the equivalent of about \$2.70 per bale), while the research component of the levy was left unaltered at 20c per bale. In 1965-66 the levy was set at 2 per cent and it remained at the maximum rate for 1966-67, 1967-68 and 1968-69.

The imposition and collection of the combined levy from woolgrowers is governed by six complementary Acts, the Wool Tax Acts (Nos 1 to 5) 1964 and the *Wool Tax Administration Act* 1964-1966.

### Commonwealth Government's contributions to wool research and promotion

In 1945 the Commonwealth Government commenced contributing on a statutory basis to wool research. Initially the contribution was at the rate of 20c a bale, but this was doubled in 1957 to 40c a bale. At this rate the Commonwealth Government contributed about \$2,000,000 to wool research in 1965-66, and a similar sum was provided in 1966-67.

Prior to 1964-65 the Commonwealth Government had not contributed to wool promotion. However, following representations made by the Australian Wool Industry Conference, the Commonwealth Government undertook to provide assistance to the Australian Wool Board in financing its commitment to the greatly expanded wool promotion programme of the International Wool Secretariat. The expanded wool promotion programme, announced by the Secretariat, envisaged an increase in the Wool Board's annual contribution to overseas wool promotion campaigns from the then level of \$5,000,000 to about \$20,000,000.

From 1 July 1964 the Commonwealth Government agreed to match on a \$1 for \$1 basis any increase in contributions by woolgrowers for wool promotion in excess of the levy of \$1 a bale then in force, and the Wool Industry Conference agreed to increase the growers' levy to the equivalent of about \$2.70 a bale, which resulted in a Commonwealth commitment of about \$1.70 a bale. In aggregate this commitment entailed a Commonwealth contribution for promotion of about \$8,500,000 a year. This arrangement operated until 30 June 1967.

During 1967 the Wool Industry Act was amended following negotiations between the Executive of the Australian Wool Industry Conference and the Government. The amendment provided for a Government contribution for wool research and promotion during the three years 1967-68 to 1969-70 on a \$1 for \$1 basis matching woolgrowers' contribution by levy, to a maximum of \$14,000,000 in any one year. It provided for the grower levy and the Government grant to be apportioned annually between wool research and promotion by the Minister for Primary Industry after considering the recommendations of the Australian Wool Industry Conference. No change occurred in the legislation providing for the payment by woolgrowers of a levy at a rate not exceeding two per cent per annum.

### Wool production

Wool as shorn from the sheep contains an appreciable amount of grease, dirt and other extraneous matter, and is termed 'greasy wool'. The quantity of grease and other matter in a fleece differs not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. To allow for this factor, the weight of

greasy wool is sometimes given on a 'clean' basis, i.e. minus the estimated amount of impurities. The net wool fibre content of greasy wool, expressed as a percentage, is termed 'clean yield'.

From 1946-47 to 1952-53 the Australian Wool Realisation Commission, and from 1953-54, the Wool Statistical Service, have assessed annually the clean yield of the Australian wool clip. During the period of assessment the clean yield showed a continuous rise up to 1951-52, when it reached 57.5 per cent. It has since fluctuated between 55.7 per cent and 57.7 per cent. It was 56.1 per cent in 1967-68.

Wool scoured, washed and carbonised in Australia before export, however, has a clean yield somewhat lower than for the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonised contains quantities of dirty and low-grade wool. The quantity of scoured wool exports during 1967-68 was about 9 per cent of the total raw wool exports (excluding wool exported on skins) in terms of greasy. For the clean yield of Australian scoured wools exported a standard factor of 93 per cent is taken.

The production of wool in the States and Territories varies broadly in accordance with the number of sheep depastured and with seasonal conditions which affect clip per head (*see* page 891). In general, however, South Australia obtains from its large-framed Merinos a much heavier fleece per sheep than the Australian average. In addition, as a result of better management (improved pastures, fodder conservation, better breeding, control of diseases, etc.), the long-term trend has been towards higher fleece weights.

The following table shows details of total wool (i.e. shorn, dead and fellmongered, and exported on skins) produced by each of the States and Territories during the years 1963-64 to 1967-68 compared with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. A graph showing the production of wool in relation to sheep numbers from 1870 onwards appears on plate 43 following.

PRODUCTION OF WOOL (GREASY BASIS): STATES AND TERRITORIES, 1936-37 TO 1967-68

The bulk of the Australian wool production (about 91 per cent in recent years) is shorn from live sheep. The remainder is obtained by fellmongering (less than 1.5 per cent) or is exported on skins (about 8 per cent). The following table shows details of total wool production according to method of obtaining wool, and also the gross value of wool produced. Gross value is based, for shorn wool, upon the average price realised for greasy wool sold at auction and, for skin wools, on prices recorded by fellmongers and skin exporters.

QUANTITY (GREASY BASIS) AND VALUE OF WOOL PRODUCED  
AUSTRALIA, 1936-37 TO 1967-68

## Classification of wool according to quality

The following table provides a detailed analysis of wool sold at auction, according to quality, for the years 1963-64 to 1967-68. These data are compiled by the Wool Statistical Service on the basis of catalogues of auction sales. 'Quality' ('64's, 60's, 58's,' etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb of tops (combed wool) of that particular wool.

**CLASSIFICATION OF GREASY WOOL SOLD AT AUCTION(a): AUSTRALIA**  
**1963-64 TO 1967-68**  
(Bales of approximately 300 lb)

<i>Predominating quality</i>	1963-64		1964-65		1965-66		1966-67		1967-68

## CHAPTER 22

### WATER CONSERVATION AND IRRIGATION

#### RESOURCES, UTILISATION AND NATIONAL AND INTERSTATE ASPECTS

Official Year Book No. 51, pages 228–31, contains a description of recent developments in the measurement of Australia's water resources. For information concerning general, descriptive and historical matter *see also* Year Book No. 37, pages 1096–1141.

An article on droughts in Australia appeared in Year Book No. 54, pages 991–6.

For further details on geographical and climatic features determining the Australian water pattern, *see* the chapter Physical Geography and Climate; on water supply and sewerage in metropolitan areas, cities and towns, the chapter Local Government; and on the generation of hydro-electric power, the chapter Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259–65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

#### Water resources and their utilisation

##### Surface supplies

An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 2,950; Mississippi, 465; Mekong, 405; Niger, 308; Volga, 205; and the ten major rivers of the United States of America in the aggregate, 900.

##### Major dams and reservoirs

The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June 1968. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia.

#### MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

<i>Name</i>	<i>Location</i>	<i>Capacity (acre feet)</i>	<i>Height of wall (feet)</i>	<i>Remarks</i>
<b>EXISTING DAMS AND RESERVOIRS</b>				
Eucumbene	Eucumbene River, New South Wales	3,890,000	381	Part of Snowy Mountains Hydro-electric Scheme
Eildon	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume	Murray River, near Albury, New South Wales	2,480,000	142	Part of Murray River Scheme—storage for domestic stock and irrigation purposes. Hydro-electric power also developed
Menindee Lakes Storage	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River Water Conservation Scheme
Miena	Great Lake, Tasmania	1,710,000	60	Storage for Poatina hydro-electric power station
Warragamba	Warragamba River, New South Wales	1,670,000	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>EXISTING DAMS AND RESERVOIRS—<i>continued</i></b>				
Burrundong . . .	Macquarie River, near Wellington, New South Wales	1,361,000	250	Storage for rural water supplies
Blowering . . .	Tumut River, New South Wales	1,320,000	368	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for hydro-electric power generation
Burrinjuck . . .	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset . . .	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Wyangala . . .	Lachlan River, New South Wales	(a)560,000	(b)220	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. (See also under Dams and Reservoirs under Construction)
Jindabyne . . .	Snowy River, New South Wales	558,000	235	Part of Snowy Mountains Hydro-electric Scheme
Lake Victoria . . .	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo . . .	Lake Echo, Tasmania . . .	442,000	60	Storage for Lake Echo, Tungatinah, Liapootah, Wayatinah and Catagunya hydro-electric power stations
Clark . . .	Derwent River, Tasmania . . .	434,000	220	Storage for Tarraleah, Liapootah, Wayatinah, and Catagunya hydro-electric power stations
Arthur Lakes . . .	Source of Lake River, near Great Lake, Tasmania	410,000	50	Part of Great Lake hydro-electric power development
Keepit . . .	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation
Waranga . . .	Goulburn River, Victoria . . .	333,400	45	For irrigation storage
Tinaroo Falls . . .	Barron River, North Queensland	330,000	136	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn . . .	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands . . .	Glenelg River, Victoria . . .	272,000	93	Part of Wimmera-Mallee domestic and stock water supply system
Eppalock . . .	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Tantangara . . .	Murrumbidgee River, New South Wales	206,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon . . .	Avon River, New South Wales	(a)163,390	232	Part of Sydney water supply
Upper Yarra . . .	Yarra River, Victoria . . .	162,000	270	For Melbourne water supply
Glenmaggie . . .	Gippsland, Victoria . . .	154,300	121	Storage for irrigation
Lake St Clair . . .	Central Highlands, Tasmania	154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington . . .	Collie River, Western Australia	150,100	112	For supply of water to irrigation districts and to agricultural areas and country towns
Grahamstown . . .	Grahamstown River, near Newcastle, New South Wales	147,000	35	To supplement supply to Newcastle and district
Koombooloomba . . .	Tully River, North Queensland	146,000	123	For hydro-electric and irrigation purposes
Serpentine . . .	Serpentine River, Western Australia	144,000	171	For Perth water supply
Lake Brewster . . .	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran . . .	Loddon River, Victoria . . .	120,600	144	For irrigation storage
Rowallan . . .	Mersey River, North Tasmania	110,000	140	Storage for Mersey Forth power development

## DAMS AND RESERVOIRS UNDER CONSTRUCTION

Gordon . . .	Gordon River, South-west Tasmania	9,600,000	450	Storage for Gordon River power development
Ord River (main) . . .	Near Wyndham, Western Australia	4,600,000	220	For irrigation, generation of hydro-electric power and flood mitigation (additional 6,000,000 acre feet flood control proposed)
Fairbairn Dam . . .	Nogoa River, Central Queensland	(c)1,170,000	148	Storage for the Emerald Irrigation Area
Copeton . . .	Gwydir River, New South Wales	1,100,000	373	For irrigation storage

(a) Present (temporary) storage capacity. (b) Maximum height of water at wall. (c) Subject to final survey.

## MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—continued

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>DAMS AND RESERVOIRS UNDER CONSTRUCTION—continued</b>				
Wyangala . . .	Lachlan River, New South Wales	1,000,000	280	Strengthening and enlarging of existing dam for increased water supply and hydro-electric power generation. (See also under Existing Dams and Reservoirs)
Talbingo . . .	Tumut River, New South Wales	747,000	530	Part of Snowy Mountains Hydro-electric Scheme
Serpentine . . .	Serpentine River, south-west Tasmania	307,200	135	Storage for Gordon River power development
Scotts Peak . . .	Huon River, south-west Tas- mania		160	
Mokoan . . .	Winton Swamp, near Benalla, Victoria	300,000	35	For irrigation storage
Wuruma . . .	Nogoa River, Central Queens- land	157,000	120	For irrigation storage
Eungella . . .	Broken River, North Queens- land	106,000	130	Provision of cooling water for Collinsville power station, supply to Collinsville town and for irrigation purposes

## DAMS AND RESERVOIRS PROJECTED

Chowilla(a) . . .	Murray River, in South Aus- tralia, near Victorian border	(a)5,000,000	41	Regulation of the lower Murray River
Dartmouth(a) . . .	Mitta-Mitta River in North- Eastern Victoria	3,000,000	590	Additional regulation of Upper Murray flow to secure River Murray irrigation development
Buffalo (second stage) . . .	Buffalo River, near Myrtle- ford, Victoria	800,000	260	For irrigation storage
Warkworth . . .	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for Hunter Valley
Cardinia Creek . . .	Near Emerald, Victoria	220,000	260	For off river storage for Melbourne water supply
Pike Creek . . .	Near Stanthorpe, Queensland	200,000	150	For irrigation, part of Dumaresq-Barwon Border Rivers Scheme
North Pine . . .	North Pine River, near Petrie, Queensland	164,000	125	To supplement supply to northern Brisbane area

(a) See page 933.

## Irrigation

For some brief remarks on the history of irrigation in Australia see issues of the Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Year Book No. 37, page 1099.

AREA OF LAND IRRIGATED, STATES AND TERRITORIES, 1963-64 TO 1967-68

**Irrigation research**

Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilisation of irrigated pastures by stock; and growth problems affecting plants and trees.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Division of Irrigation Research at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, rice and lucerne. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Adelaide (South Australia) and Merbein (Victoria) the Division of Horticultural Research is working on problems of the dried-fruit industry and on wine grapes and pome-fruit. The Division of Land Research conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed, and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connection with the utilisation of underground water for irrigation. The Division of Soils and the Division of Soil Mechanics are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation areas and associated districts, and the Coleambally Irrigation Area. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales, the Water Conservation Service of New South Wales, the Rice Marketing Board of New South Wales, the Wine Grape Marketing Board of New South Wales, co-operative and secondary industries, and farmers' organisations. Finance is provided by these authorities on an agreed basis. The objectives are: to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organisation; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

Two other organisations with similar objectives are the Victorian Irrigation Research and Promotion Organisation which operates from Shepparton, and the Murray Research and Extension Committee centred at Deniliquin.

**Preservation of catchments**

Since water conservation commences on the catchments it is becoming increasingly recognised that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimise the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

**Sub-surface supplies**

Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes and domestic use. These supplies are indispensable in the dry areas which comprise most of the inland and extensive coastal areas as well. The quality of water ranges from usable to very saline.

Considerable use is also made of sub-surface water, other than pressure water, from localised groundwater basins, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies and irrigation, but its use for these purposes is increasing.

*Artesian and sub-artesian supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. A table setting out the principal defined water-bearing basins in Australia appears on page 1001 of Year Book No. 53.

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life; in certain areas sub-artesian waters are suitable for all uses. Some of these areas are in the Canning, Murray, Georgina and Barkly, Perth, Ord-Victoria, Pirie-Torrens and Adelaide Basins. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognised early that flows were diminishing as more bores were drilled, but it is now considered that while many of these bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average recharge from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasised the need to eliminate wastage as much as possible. Licences now issued for the construction of new artesian bores prohibit the distribution of water through drains, channels, etc., and the supplies must be confined to the borehead or piped to appropriate watering points.

*Shallow groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock, and domestic purposes. Two examples of the use of these shallow supplies for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps up to 15 million gallons a day (average use over 30 years is 9.2 million gallons per day) for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 50,000 acre feet per annum (about 37 million gallons a day).

Schemes for artificial recharge of underground supplies have been implemented on both sides of the Burdekin River delta. Diversions from unregulated river flows of 61,000 acre feet per annum to the north side and of 40,200 acre feet per annum (when available) to the south side have been authorised.

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

### **National and interstate aspects**

In terms of the Commonwealth Constitution primary responsibility for control and conservation of water rests with the individual State Governments. The Commonwealth Government is responsible for matters relating to water in its Territories. However, because political boundaries sometimes intersect river valleys and underground water basins, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

#### **Australian Water Resources Council**

The Australian Water Resources Council was established by joint action of the Commonwealth and State Governments in 1962. The council comprises Commonwealth and State Ministers primarily responsible for water resources, with the Commonwealth Minister for National Development as Chairman, and is serviced by a Standing Committee consisting mainly of the heads of Departments responsible to these Ministers, and by a number of technical committees.

The primary objective of the Council is the provision of a comprehensive assessment on a continuing basis of Australia's water resources, and the extension of measurement and research to provide a sound basis for the planning of future development.

In terms of its main objective, the Council in 1964 recommended, and the Commonwealth and State Governments agreed, that there should be an accelerated programme of establishment of stream gauging stations and investigation of underground water. The Commonwealth Government agreed to contribute a total of up to \$2,750,000 for the first three years of what was envisaged as a ten-year programme. The Commonwealth contribution for the current three-year period, which began in 1967-68, will be up to \$4,500,000. In the first three years the States spent about \$8,000,000 from their own financial resources, and expenditure in excess of this amount is expected in the current three years.

The Council has also given attention to the collation of available data on Australia's water resources, and in 1965 a *Review of Australia's Water Resources (Stream Flow and Underground Resources) 1963* was published. This document was the first official assessment of surface and underground water resources. Four groundwater maps with an explanatory booklet are to be published in 1970. In 1967 a catalogue *Stream Gauging Information, Australia, June 1965* was published on behalf of the Council by the Department of National Development. The 1966 and 1967 annual supplements to this catalogue have been issued. Water authorities have also agreed to publish stream flow records at five-yearly intervals. The Council continues to support Australian participation in the programme of the International Hydrological Decade (1965-1974). An important contribution will follow from the decision of the Council to select one hundred representative basins throughout Australia for detailed hydrological studies.

Studies of the requirements and facilities for education in the water resources field have been undertaken by the Council. Research studies in progress on a number of topics requiring urgent attention are being published in a new Australian Water Resources Council Hydrological Series, the first volume of which is *A Survey of Water Desalination Methods and their Relevance to Australia*, published in 1966.

The Commonwealth Government is providing \$130,000 in 1968-69 for a new programme of water research which complements research already undertaken by Commonwealth agencies, universities and other organisations. The Water Resources Council has approved fifteen water research projects in this programme which covers topics of special concern to authorities involved in the investigation and development of water resources.

#### **National Water Resources Development Programme**

In developing water resources, the Commonwealth Government's role in the past, while important, had been confined to assisting special projects or areas, e.g. the Snowy Mountains Scheme, participation in the River Murray Commission, and financial support for individual State projects such as the Ord River project. However, the National Water Resources Development Programme, announced in November 1966, represents a very important move towards closer collaboration between State and Commonwealth Governments, and a more continuing and detailed involvement by the Commonwealth in the development of Australia's water resources.

Under the National Water Resources Development Programme the Commonwealth has undertaken to provide grants to the States amounting to a total of about \$50,000,000 over the next five years for water conservation works aimed at reducing the hazards of droughts and expanding primary production. *The first two grants under this Programme were announced late in 1967. For the Emerald irrigation project in central Queensland, the Queensland Government is to receive a non-repayable grant of up to \$20,000,000 for the construction of the dam, with the State financing the irrigation, drainage, and associated works. Grants totalling \$3,600,000 were provided for two Victorian schemes to reduce salinity levels in the Murray River. These works were constructed in time for the 1968-69 irrigation research.*

Proposals submitted by the States are examined by the Commonwealth to determine which are suitable, from a national point of view, for inclusion in the Programme, and accordingly grants will be announced from time to time.

#### **Murray River scheme**

The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 408,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and approximately one-fourteenth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows: Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,820,000 acre feet; Darling River, 2,820,000 acre feet; Goulburn River (including Broken River), 2,580,000 acre feet; Murrumbidgee River, 2,050,000 acre feet; and Ovens River, 1,266,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

*River Murray Waters Agreement.* For a brief summary of historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales,

Victoria, and South Australia *see* issues of the Year Book prior to No. 39. Under the Agreement construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 *see* Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (*see* Snowy Mountains Hydro-electric Scheme, page 935) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to approximately 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7 April 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6 November 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30 April 1964. However, in view of the greatly increased cost by the time the project came to tender in 1967 and other significant factors (including water quality in the Lower Murray) which had arisen in the interim, the River Murray Commission resolved that, pending further investigations, construction of Chowilla Dam should be deferred. Further investigations then followed, including a re-assessment of the likely yield from both Chowilla and alternative storages on the Upper Murray and Mitta-Mitta Rivers.

Following careful consideration of this re-assessment, the River Murray Commission in February 1969 agreed that a 3,000,000 acre feet storage at Dartmouth on the Mitta-Mitta River provided the greatest overall benefits in terms of cost and yield and should be the next development of the resources of the River Murray. The question of sharing the benefits could not be resolved by the Commission and was therefore referred to the respective Governments. Subsequently, Ministers representing the four Governments concerned met in March 1969 and agreed on conditions for the construction of the Dartmouth Project and for the sharing of the increased system yield between Victoria, New South Wales and South Australia. Among other things, the meeting of Ministers agreed to continue the Menindee Lakes Agreement (due to expire on 31 December 1969) in perpetuity.

The Commonwealth Government has offered to assist the three States with financing the project by way of a loan to the extent of 50 per cent of each State's contribution. At the same time the Commonwealth itself will make its own quarter contribution of the cost of the project.

Before work can proceed with detailed design and construction, it is necessary that each of the four Parliaments ratify appropriate amendments to the River Murray Waters Agreement.

The year 1967–68 was a period of severe drought, during which restrictions were imposed by the River Murray Commission on deliveries of water. The quantities (in acre feet) diverted from the River Murray and its tributaries were as follows: New South Wales, 3,324,000; Victoria, 2,562,000; South Australia, 477,000; a total of 6,363,000 acre feet.

*River Murray Works.* One of the major works of the Murray River scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, ten miles above Albury, forming a lake of 50,000 acres. The design comprises a mass concrete spillway and outlet works extending for 1,000 feet, and an earthen embankment 142 feet high extending for 4,000 feet across the river flats, the length of the total structure being approximately one mile. Work on the enlargement of the reservoir to its approved capacity of 2,480,000 acre feet was completed in 1961.

The Yarrowonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrowonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, supplied from the Yarrowonga Weir, has an off-take capacity of 2,500 cubic feet a second, serving 1,800,000 acres of land in New South Wales. The Yarrowonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, serving 300,000 acres. Not all of this area is irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Burrinjuck (Murrumbidgee), Keepit (Namoi), Burrendong (Macquarie), and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Eppalock (Campaspe) and Cairn Curran (Loddon). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia at present, and the proposed construction of a storage at Chowilla has been deferred.

#### **New South Wales-Queensland Border Rivers Agreement**

The catchments for the border streams of New South Wales and Queensland (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments, and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilise and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

The New South Wales-Queensland Border Rivers Agreement came into effect on 1 July 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, MacIntyre, and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Water Conservation and Irrigation Commission of New South Wales (the constructing authority) to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the MacIntyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi (the Irrigation and Water Supply Commission of Queensland is the constructing authority for new weirs and regulators). The cost of these works and of administration are to be borne by the States in equal shares. The Agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

After unfavourable foundation conditions were disclosed at several dam sites on the Dumaresq River, investigations were extended to tributary streams, and superficially suitable sites located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates were prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. Consequent upon these investigations an Amending Agreement was executed between the States of New South Wales and Queensland which included, *inter alia*, provision for the construction of storages on Pike Creek (Queensland) and the Mole River (New South Wales). The new agreement also provided for investigation and construction of works for the improvement of flow and of the distribution of flow in streams which intersect the New South Wales-Queensland border west of Mungindi.

Works completed under the original agreement include Bonshaw and Cunningham Weirs on the Dumaresq River, a weir and regulator on the Barwon River at the off-take of the Boomi River, and a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed it is unlikely that any other weirs will be required.

### Snowy Mountains Hydro-electric Scheme\*

Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the Committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act 1949* setting up an Authority to implement the proposals agreed upon.

The basis of the proposals was to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in the chapter *Electric Power Generation and Distribution*.

When all works are completed, it is estimated that the total gain by diversion and regulation will amount to 1,120,000 acre feet per annum to the Murrumbidgee and 800,000 acre feet per annum to the Murray. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land, which is expected to result in a substantial increase in primary production.

### International aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-nine countries, including Australia, have so far been admitted to membership.

The Central Office of the International Commission on Irrigation and Drainage is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain, Japan, in that order and again in India in 1966. The seventh Congress was held in Mexico in April 1969.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, 'that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms, and individuals actively interested in irrigation and drainage'. The Committee meets annually.

### STATES AND TERRITORIES

The foregoing text deals with water conservation and irrigation in Australia generally and with international, national and interstate aspects. The following survey covers the local pattern of water resources and the steps taken by the State Governments to bring about their development. In the various States water policies tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilise sugar production. Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

\* See also the chapter *Electric Power Generation and Distribution*. For more detailed information see special article by the then Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. *Miscellaneous of Year Book No. 42*.

### New South Wales

On page 1110 of Year Book No. 37 information is given on the pattern of rainfall and the history of irrigation in New South Wales. (*See also the chapter Physical Geography and Climate of this issue.*)

#### Administration

The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912-1955 the right to the use and flow and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, *see* page 934 of this chapter.

#### Schemes summarised

The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, by Burrendong Dam on the Macquarie River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places. A head storage on the Tumut River near Tumut is nearing completion and preliminary establishment work at Copeton Dam site on the Gwydir River commenced on 14 February, 1968. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are: The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembled Weir; the Coomealla Irrigation Area of 34,626 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,393 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,739 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (177,509 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in the table on page 937.

The capacities of the main storages for irrigation in New South Wales (in acre feet) are:

*Darling*—Menindee Lakes Storages (2,000,000);

*Murray*—Half share of Hume Reservoir, weirs and locks to Wentworth (1,351,570); Stevens Weir, Edward River (7,165);

*Macquarie*—Burrendong Dam (964,000 irrigation storage; 397,000 flood mitigation storage);

*Murrumbidgee*—Burrinjuck Dam (837,000); Berembled Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

*Namoi*—Keepit Dam (345,000);

*Lachlan*—Wyangala Dam (temporary capacity 560,000); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200);

*Hunter*—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage); and

*Snowy Mountains Hydro-electric Scheme*—Lake Eucumbene (3,890,000); Blowering Dam (1,320,000); Jindabyne Reservoir (558,000); Tantangara Dam (206,000).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 4,997 miles. This comprises 3,433 miles of supply channels (including main canals), 1,495 miles of drains and escape channels, and 69 miles of pipe lines.

## Extent of systems and nature of irrigated culture

The following table shows the areas of the various irrigation systems and the areas irrigated in 1967-68 and corresponding particulars for the State as a whole during the seasons 1963-64 to 1967-68.

AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES  
1963-64 TO 1967-68

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous; in 1967-68 deciduous amounted to 12,983 acres, of which 10,535 acres were in the Murrumbidgee Irrigation Areas. (c) Includes lands outside irrigation areas supplied under special agreement. (d) Incomplete. (e) Includes total area irrigated by Licensed Diversions, but details for individual crops, etc., are not available.

### Irrigation Areas

*Murrumbidgee.* These areas, together with adjacent lands supplied under agreement, received 453,204 acre feet, or about a fifth of the total water (2,270,944 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, forty miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerembah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September–May irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30 June 1968 was 414,273 acres, including 36,869 acres held for short lease grazing, agriculture, etc.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30 June 1968 its population was approximately 30,500, that of Leeton Shire being 11,040 and that of Wade Shire, 18,700. The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans, and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season the water supplied for rice represents about half the total delivered to the Areas.

*Other Irrigation Areas.* The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa, and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

### Irrigation Districts

These districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilise the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on 'extensive' irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. 'Water right' means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. The total length of completed canals and channels in Berriquin District is 1,000 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 788 miles, escape channels 105 miles, and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day. Wakool, with 422 miles of channel, contains 318 holdings, and the area developed by irrigation includes about one acre in six of the total area. Sheep raising and rice growing are the main industries. Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying, wheat, and rice growing are the main industries.

### Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts

The Water Act, 1912-1966 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilise necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis): *Murray River*—Little Merran Creek (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajee Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condobolin West Weir (4,480); *Miscellaneous*—Great Anabranch of Darling River (959,184), Nidgerly Weir (46,880), Algdudgerie Creek (9,760), Collarenebri town water supply (117)—making in all a total area of 2,829,791 acres. Twelve of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. There are seven of these trusts.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

### River, lake and farm water supplies

During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognised as a means of stabilising production in dry months. There has also been a considerable increase along the Murrumbidgee, Lachlan, Namoi, and Macquarie Rivers.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, and flood and spray irrigation systems.

### Underground water

Extensive use is made of artesian, sub-artesian, and shallow underground water. The Great Artesian Basin underlies an area of some 81,250 square miles in north-western New South Wales. Eighty-seven Bore Water Trusts and twelve Artesian Wells Districts have been constituted. Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts the settlers maintain the drains. Bore Trusts and Artesian Districts cover 5,500,000 acres and distribute water through 3,592 miles of open earth drains. At 30 June 1968, 1,167 artesian bores had been constructed in the New South Wales section of the Basin. At that date 692 bores were flowing and were capable of producing an aggregate unrestricted flow of about 64,000,000 gallons a day. Conservation measures control this to about 50,000,000 gallons a day. The total length of bore drains, including those for Trusts and Districts, is approximately 8,000 miles.

Of other structural basins of sedimentary rocks, e.g. Murray, Sydney, Oxley, and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and, in some instances, small scale irrigation, are obtained from porous sandstone in the Moss Vale-Picton area, but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin, but the centre of this basin lies under the Liverpool range. The Clarence Basin is relatively unimportant from a groundwater viewpoint, but stock supplies are obtained from some sections.

In other parts of the State the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western-flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies ranging from 10,000 to 210,000 gallons an hour are obtained from wells and bores in these areas and are used for irrigation and town water supply. The Government is carrying out investigations to determine the ground-water potential of the alluvium of such valleys, particularly with regard to irrigation use, and test-boring programmes are in progress in the Lachlan, Namoi, Murrumbidgee and Macquarie Valleys. Investigation programmes have also been initiated in the coastal river systems, commencing with the Hastings and Bega river

valleys, but the groundwater potential of the coastal valleys is quite limited compared with the inland drainage systems. Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney's water supply, the Botany sands are now utilised mainly by industry. The Tomago sands provide a considerable proportion of the Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their groundwater potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain, they yield useful stock supplies, mostly at depths between 50 and 250 feet.

A licence under the Water Act, 1912-1966 is required for all bores sunk in any part of New South Wales, and details of over 30,000 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

#### Future programme

The programme of development in hand includes the provision of additional dams and storages, weirs, and flood mitigation and river protection works in various parts of the State. Work has commenced at Copeton Dam site on the Gwydir River and continued at Pindari Dam on the Severn River. Legislation has been passed authorising the construction of Carcoar Dam (Belubula River), Lastock Dam (Paterson River), and Toonumbar Dam (Iron Pot Creek—a tributary of the Richmond River) as single purpose water conservation projects and existing legislation authorises the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyngala Dam, on the Lachlan River, the strengthening and enlargement of the original dam is nearing completion. The new storage capacity of 560,000 acre feet will be increased to 1,000,000 acre feet by 1970 following the installation of radial gates in the new spillway. Construction of the Blowering Dam on the Tumut River was completed in 1968. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At 30 June 1968, 194 large area farms and 15 horticultural farms had been allotted whilst another 21 mixed farms were occupied under agreement with the Commission pending the granting of permanent title.

## Victoria

Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

#### Administration

Victorian Governments have been active in the development of country water supplies since the 1860's when major works to supply the Bendigo goldfields were undertaken. Local trusts to construct and operate waterworks under Government supervision were provided for in the *Water Conservation Act* 1881. Development under the trust system was greatly stimulated by the *Irrigation Act* 1886, which provided for the construction of national headworks by the State, and vested in the Crown the right to the use and control of all surface waters. By 1900 there were 33 irrigation trusts and 18 other rural water supply trusts, but the system of local control was then breaking down under financial difficulties.

The *Water Act* 1905 established the State Rivers and Water Supply Commission to take over the *Irrigation Trust* districts (except the still-existing *First Mildura Irrigation Trust*) and to exercise the State's functions in the further control and development of surface waters outside the metropolis. The Commission now supervises all private diversions from streams and directly administers irrigation districts covering 2,261,000 acres, rural waterworks and urban districts covering 12,077,000 acres, flood protection districts covering 149,000 acres, and urban water supplies serving 225,000 people. It also supervises the activities of local urban water supply authorities supplying 653,000 people in 252 towns, as well as 91 local sewerage authorities and 29 river improvement and drainage authorities.

#### Works summarised

Since the State Rivers and Water Supply Commission began its operations in 1906 the capacity of storages under its control has been increased from 172,000 acre feet to 4,679,620 acre feet. In addition, Victoria has in effect a half share in River Murray Commission storages totalling 2,703,150

acre feet, bringing total capacity available to Victoria at 30 June 1968, to 6,031,190 acre feet. Most of the water used from these storages is for irrigation. The area irrigated in 1967-68 totalled 1,301,305 acres (compared with 105,000 acres in 1906). Irrigation deliveries in 1967-68 totalled 1,984,970 acre feet. The value of irrigation production in 1966-67 was estimated at \$179,000,000. Of the total irrigation production about one-quarter was from lands irrigated by 'private diverters', i.e. irrigators who are authorised to take water from streams, lakes, etc., but who do not come within the boundaries of an irrigation district.

**Storages**

Capacities of principal storages (in acre feet) and system totals at 30 June 1968 were as follows:

- Goulburn System*—Eildon, 2,750,000; Waranga, 333,400; total, 3,130,650;
- Murray System*—half share of Murray storages, 1,351,570; total, 1,392,430;
- Ovens System*—Lake Buffalo, 19,500; total, 19,500;
- Loddon System*—Cairn Curran, 120,600; Tullaroop, 60,000; Kerang Lakes, 57,700; total, 276,250;
- Campaspe-Coliban System*—Eppalock, 252,860; Coliban storages, 63,830; total, 316,690;
- Wimmera-Mallee Systems*—Rocklands, 272,000; Toolondo, 86,000; Bellfield, 63,680; total, 627,890;
- Maffra-Sale System*—Glenmaggie, 154,300; total, 154,340;
- Werribee-Bacchus Marsh*—total, 34,900;
- Mornington Peninsula*—total, 38,340.

**Nature of irrigated culture**

The following table shows the areas irrigated in the various irrigation systems in 1967-68, and corresponding particulars for the State as a whole during the seasons 1963-64 to 1967-68.

**AREA OF LAND IRRIGATED: VICTORIA, 1963-64 TO 1967-68**

(a) Includes First Mildura Irrigation Trust.

(b) Excludes private diverters in the Torrumbarry System, but includes all other private diverters along the Murray River.

**Irrigation systems**

*Goulburn-Campaspe-Loddon.* The principal storage for Goulburn waters is Lake Eildon, which was completed in 1956, submerging the original 306,000 acre feet Eildon storage completed in 1927. For the distribution of additional supplies available from Eildon and from other new storages on the Loddon and Campaspe rivers it has been necessary to undertake major enlargements in the distribution system by a long-term programme of channel works which is still in progress. Deliveries during 1967-68 amounted to 841,000 acre feet, compared with 395,000 acre feet in 1954-55. Goulburn River water is diverted to the irrigation areas by gravitation from the pool formed by the Goulburn Weir, near Nagambie, completed in 1890 as a State work. The East Goulburn main channel of 1,000 cusecs capacity supplies the areas around Shepparton. Two 1,500 cusec channels to the west convey water to the off-river Waranga Reservoir and supply part of the Rodney area through off-takes on the way. From Waranga Reservoir there are two main outlets, one supplying the western part of the Rodney area and the other, of 1,200 cusecs capacity, supplying the Waranga Western Main Channel, which runs 230 channel miles west across the Campaspe and Loddon Valleys to beyond Birchip.

Flows in the Waranga Western Main Channel are augmented by the injection of Campaspe water through a pumping station of 200 cusecs capacity near Rochester. Supply to the Tragowel and Boort areas is augmented by gravitational diversion of Loddon water.

The gross area of holdings in the Goulburn-Campaspe-Loddon systems is 1,353,721 acres. The main products are dairy produce, fruit, wool, and fat lambs. Annual production of deciduous canning fruits in the eastern part of the system is about two-thirds of Australia's total.

*Murray River system.* Water is diverted from the Murray by gravity at the Yarrowonga Weir for the Murray Valley Irrigation Area and at the Torrumbarry Weir for the Torrumbarry irrigation system which extends to Swan Hill. Holdings in the Murray Valley area total 301,653 acres, devoted mainly to dairying, fat lambs and canning fruit. Holdings in the Torrumbarry system total 377,815 acres, devoted mainly to dairying and the production of fat lambs, with a concentration of vineyards, orchards and market gardens around Swan Hill.

Downstream from Swan Hill there are 5 districts supplied by pumping: the district of the First Mildura Irrigation Trust and the 4 Commission districts of Nyah, Robinvale, Red Cliffs, and Merbein. These districts together serve 80,585 acres, producing mainly dried vine fruits, with some citrus fruits and table and wine grapes.

*Southern systems.* The Macalister district, covering 130,506 acres around Maffra and Sale, is supplied from the Macalister River, regulated by Lake Glenmaggie, and from the unregulated flow of the Thomson River. Dairy farming is the principal activity. The Bacchus Marsh and Werribee Districts, supplied from storages in the Werribee River only 20 miles west of Melbourne, cover 16,342 acres intensively developed for dairying and vegetables.

#### **Wimmera-Mallee domestic and stock supply system**

Storages in the Grampians in south-west Victoria ensure farm water supplies over an area of 11,000 square miles extending northward through riverless pastoral and cereal lands to the Murray. Farm dams throughout this region, which covers one-eighth of the total area of the State, are filled once each year, in the winter-spring season, through the medium of 6,600 miles of Commission channels and about 4,000 miles of private channels. Without this supply, occupation of the region would be extremely hazardous. Storage capacity has now been increased from 564,210 acre feet to 627,890 acre feet by construction of Lake Bellfield. Fifty towns, with a population of 46,000, receive their supply from the same system. Near Horsham and Murtoa, close to headworks in the south, a supply is maintained for the irrigation of an area of 7,500 acres, mainly for dairying.

#### **Drainage, flood protection and river improvement**

The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 89,245 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million dollars each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and since 1950, 29 such trusts have been formed (including the Dandenong Valley Authority). The importance of river improvement work is expected to continue to grow.

The Dandenong Valley Authority was created in 1963 by special legislation, with jurisdiction over the whole catchment of the Dandenong Creek (300 square miles) for purposes of arterial drainage, river improvement and flood protection. In June 1966 the Authority took over the Commission's Carrum Drainage District.

#### **Finance**

The net capital liability of the Commission at 30 June 1968 for works under its direct control was \$291 million. Of this amount, \$189 million was expended for irrigation and \$25 million for rural, domestic and stock supplies, the cost being borne entirely by the State. The total liability for urban supplies was \$55 million, of which \$30 million was borne by the districts concerned. The remaining \$22 million was for expenditure on flood protection (\$2 million), and items such as loan flotation expenses, miscellaneous surveys and investigations, and buildings, plant and stores.

#### **Underground resources**

The investigation, exploration and survey of underground water resources in Victoria is carried out jointly by the State Rivers and Water Supply Commission and the Department of Mines. The Commission is concerned mainly with investigation of shallow waters in irrigation districts, while the Department covers all other work, including exploratory drilling to 5,500 feet. Underground water is the only available source of supply other than rain in some areas of the State. It is of particular importance in the western portions of the Wimmera-Mallee districts where annual rainfall ranges between 10 and 20 inches and there are no surface streams. Elsewhere underground water is used to supplement surface supplies and in places it may be the only developed source for town, industry, rural, domestic, stock, or irrigation use.

The Wimmera and Mallee districts are situated over part of the Murray Basin where, to the west of the Wimmera River, Miocene marine limestones form an aquifer with water suitable for town supply and irrigation. It is used for this purpose at Kaniva, Murrayville and Nhill, where yields between 10,000 and 60,000 gallons per hour may be obtained. On an experimental farm at one of these localities, total pumpage during each irrigation season is of the order of 1,500–2,000 acre feet. North of Murrayville and Underbrook the water in the limestones is more saline and in the extreme north it is too saline even for stock use. East of the Wimmera River to Lake Tyrrell and north of Swan Hill the marine rocks consist of marls and silts with calcareous beds capable of yielding saline water at less than 1,000 gallons per hour. These aquifers are not developed. Lower Tertiary swamp, deltaic and estuarine carbonaceous and ligneous sediments underlie and extend eastward of the marine rocks. Sands in these sediments contain water of greater or lesser salinity than that of the marine deposits. Yields of up to 10,000 gallons per hour have been obtained from the deltaic aquifers between Swan Hill and Robinvale. In the Natya-Kenley area the water is suitable for most stock purposes and for limited irrigation under favourable conditions. Overlying the marine and estuarine sediments there are aquifers consisting of Pliocene to Pleistocene terrestrial, fluvial and lacustrine sands and sandstones. Yields from these rocks are limited to windmill supplies. The quality is variable and in the north-west highly saline. East of the Avoca River the deposits of the Murray Basin are entirely non-marine and consist of terrestrial, fluvial and lacustrine gravels, sands, silts, and clays to a maximum depth of about 600 feet. Water from the sands and gravels is of variable quality. In places it is too saline for stock use, but the quality improves towards the east and it is used for town supply at Katunga and Wangaratta, and at Barnawartha, Bright and Chiltern where the deposits partly fill valleys in the bedrock of the highlands.

In the Otway Basin in the south-west of Victoria the Upper Cretaceous-Lower Tertiary sands have been developed for underground water supplies to Portland, Heywood, Port Fairy, Peterborough, Port Campbell, and Timboon. In the central (Warrnambool and Koroit) and northern parts of the basin the waters are suitable only for stock. In the areas of better quality water the depth of the aquifers (2,000–4,500 feet) renders their development uneconomic except for town supply and industry although there was one case, during 1968, of development of aquifers down to 1,950 feet for small farm use. Oligocene to Miocene marine limestones occur in the south-central and western portions of the basin. The salinity of the water in the limestones is often less than that of the water in the sands beneath, but the limestone waters are generally hard. They are used in part to supply Portland and also for irrigation. Small underground water supplies are obtained from the Pliocene-Pleistocene deposits of ferruginous sands, marine sandy limestones and dune limestones in the west and from the dune limestones along the coast between Warrnambool and Portland.

In and around the structural depressions of the Port Phillip and Westernport Bay districts there are several small areas where underground water of good quality occurs. Among these are the Lower Tertiary sand aquifers at Anglesea which are being developed to yield approximately 200,000 gallons per hour for industrial purposes; the Middle Miocene sands, shelly silts and limestones which have been developed for market garden watering south-east of Melbourne; and the Pleistocene sands and shelly silts on the Nepean Peninsula where the water is used for market gardens and pasture irrigation.

Brackish waters in the Eocene to Oligocene sands under the Werribee Plains have some potential for industrial use. The Westernport area has yielded large supplies of water from Tertiary marine and non-marine sands, and from fractured fresh basalt in some areas. Extensive use is made of water from the sands for irrigation of pastures and cash crops in the Koo-wee-rup Swamp area. Yields of up to 30,000 gallons per hour are common. In the Lang Lang area the water is used for town and industrial supply, but not as yet for irrigation. Stock supplies with one or two minor exceptions are available at shallow depth over the whole of the area.

The Gippsland Basin contains two main groups of water-bearing rocks, the Lower Tertiary coal measures and marine sands, and the Upper Tertiary sands and gravels. Water from the Lower Tertiary rocks is frequently soft. It is used for irrigation in the Bairnsdale and Yarram districts, and some abnormally hot water is used for industrial purposes at Maryvale. The Upper Tertiary rocks yield large quantities of very good quality water, mainly in the east-central part of the basin where it is used extensively for irrigation. Development of these aquifers for irrigation supplies also took place in the Yarram district during 1968. Stock supplies are generally available at shallow depth in rocks of various types and ages.

The pre-Upper Cretaceous sedimentary and igneous rocks of the highland areas generally yield small supplies of water suitable for stock. Exceptions to this are the Devonian sandstones of the Grampians where large supplies of good quality water may be obtained, and the better quality waters suitable for domestic use from the higher rainfall area of the eastern highlands of the State.

The Lower Tertiary volcanic rocks, mainly basalts, yield large supplies, up to 15,000 gallons per hour where the basalt is well jointed and little weathered, but only small quantities where the rocks are weathered. Where yields are large as in the west and south-west of Gippsland and on French Island the water quality generally is suitable for irrigation, but on the Bellarine and Mornington

Peninsulas, Phillip Island and at Cranbourne the small yields of water are suitable for limited stock use only. Pliocene to Pleistocene volcanic rocks, basalts with tuffs and agglomerate occur extensively over the Werribee Plains and Western District and in valleys in the western half of the Central Highlands. Yields from these rocks are variable, the maximum recorded being 16,000 gallons per hour. From the weathered basalt yields are usually less than 1,000 gallons per hour. The quality is generally suitable only for stock but may be suitable for irrigation. Underground water derived from the later basalts of the stony rises west of Colac usually has high nitrate content.

#### Future programme

In July 1963 the Government announced plans for a long-term storage programme for irrigation purposes to cost a total of \$75 million between 1963-64 and 1973-74. This included the projected Chowilla Reservoir referred to on page 933. Another of the storages is Lake Buffalo (second stage) which appears in the list of dams and reservoirs projected in the table on page 929.

Since the long-term storage programme came into operation, new storages have been completed for the Wimmera-Mallee System (Lake Bellfield, near Horsham); the Mornington Peninsula System (Devilbend Reservoir and Tarago Reservoir); the Goulburn-Murray System (Corop Lakes) and private diverters near Benalla (Lake Nillahcootie); and along the Buffalo River (Lake Buffalo, first stage).

At present work is proceeding on new storages to supplement supply to the Bacchus Marsh-Werribee System (Lake Merrimu) and the Goulburn-Murray System (Lake Mokoan, near Benalla).

Works expenditure of about \$4,000,000 per year is carried out from about thirty-five operating centres throughout the State. In addition, four major construction centres have been spending about \$2,500,000 annually for many years on a programme of channel and drainage works in the Goulburn-Murray System, and the end of this programme is not yet in sight.

A major new development has been a grant of \$3,600,000 from the Commonwealth Government to finance a scheme to reduce the flow of saline drainage water into the River Murray.

Details of a projected storage on the Mitta-Mitta River at Dartmouth in North-Eastern Victoria appear on page 933.

## Queensland

Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* the chapter Physical Geography and Climate of this issue.)

#### Administration

In Queensland the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply. Private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner. For a description of the development of the present administration *see* Year Book No. 42 and earlier issues.

#### Irrigation—extent, systems and methods

Queensland sugar cane represents in value about 40 per cent of the agricultural production of the State. In 1967-68, 22 per cent of the sugar cane acreage was irrigated, representing 40 per cent of the total area irrigated in the State. Tobacco is another major crop, and the area irrigated during 1967-68 represented 97 per cent of the total plantings. Irrigation of grain crops has increased considerably in recent years and this trend is expected to continue.

Most irrigation in Queensland is undertaken by farmers operating under licence to obtain water by pumping from streams or from natural underground storages. Over half the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley, and Redland Bay.

Furrow irrigation is used for cotton, sugar cane, some tobacco, and miscellaneous row crops. Spray irrigation is used widely on fruit, vegetables, fodder crops, sugar cane, and the major part of the tobacco crop. Irrigation is required around-the-year for most of Queensland, as the timing and duration of the summer 'wet' season are too variable to enable a definite non-irrigation season to be fixed, as can be done in southern States.

## AREA OF LAND IRRIGATED: QUEENSLAND, 1963-64 TO 1967-68

Season and division	No. of irrigators	Area irrigated (acres)							Total
		Vegetables	Fruit and vineyards	Sugar cane	Tobacco	Cotton	Other crops	Pastures	
1967-68—									
Southern Queensland .	6,559	33,154	7,742	44,931	2,395	5,540	77,722	32,803	204,287

**Areas under private irrigation**

In five important areas irrigation has been developed by private pumping. In the Lockyer Valley, thirty miles west of Brisbane, more than a third of an estimated total irrigable area of 60,000 acres is under irrigation. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation, which is necessary for continuous agricultural production. A number of small weirs with a total storage of 1,340 acre feet have been constructed on Lockyer Creek by the Irrigation and Water Supply Commission; these also tend to augment and conserve underground supplies. Construction has recently commenced on an off-stream storage in the Atkinson's Lagoon area which will be supplied by diversion from Buaraba Creek and several adjoining catchments. The storage will provide a regulated supply of water in Buaraba Creek and along the lower end of Lockyer Creek. The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize, and dairy products.

The Callide Valley in central Queensland is an important source of grain, dairy products, fodder, and cotton and is largely dependent on irrigation from underground water resources. Some 10,000 acres are now irrigated from underground supplies. The broad expanses of alluvium in the Pioneer Valley near Mackay have been extensively developed for cane production. The area under irrigation from groundwater and surface supplies is some 12,000 acres. The lands in the vicinity of Bundaberg are cultivated for sugar cane production and over 40,000 acres are irrigated from surface and underground supplies.

The other important area is the fertile delta region of the Burdekin River, where the irrigated area is over 67,000 acres. The delta has ground water supplies at shallow depth, and these have been tapped to obtain supplies in the dry periods of the year. Sugar is the main crop irrigated. A scheme to replenish the subterranean water supplies in the North Burdekin Delta by pumping from the Burdekin River is in operation under the control of the North Burdekin Water Board. There is a similar Board in operation in the South Burdekin Delta.

**Government irrigation areas and projects**

The Irrigation and Water Supply Commission has constructed and operates five dams and forty-five weirs with a storage capacity of 572,271 acre feet. Water from these storages supplies the following four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

*Mareeba-Dimbulah Irrigation Area.* In 1952 an irrigation undertaking was established to assist tobacco production in the valleys of the Walsh and Barron Rivers. Tinaroo Falls Dam on the Barron River (330,000 acre feet) has been completed, and construction is in hand on irrigation works to serve 78,000 acres (comprising 910 tobacco farms and 180 mixed farms), of which 49,000 acres will be irrigated. Two hundred and four miles of channels have been constructed, and irrigation water from the dam is being supplied to 546 farms. Tinaroo Falls Dam is also providing a regulated flow of water in Barron River at Kuranda for the generation of hydro-electric power at Barron Falls.

*Burdekin River Irrigation Area.* The first stage of the Burdekin River Irrigation Area, comprising the Clare-Millaroo and Dalbeg sections, has been completed. Located from twenty-five to sixty-five miles from the mouth of the Burdekin, these areas comprise 18,862 acres and obtain water from central pumping stations drawing from the river. Two storages of 7,670 acre feet and 2,550 acre feet capacity have been constructed about seventy-nine miles and seventy-two miles respectively from the mouth of the river. Sugar cane production predominates in the area but rice production is expected to increase in the next few years following recent highly successful trials. Additional water for the region will become available following completion of the Eungella Dam on the Broken River.

*Dawson Valley Irrigation Area.* A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923, but work was discontinued after three weirs had been built in this area. Their total storage is 10,280 acre feet, covering about sixty-one farms (4,894 acres) in production. Cotton and grain account for the major part of the production from irrigated areas. Further development of the scheme is dependent on the provision of additional storage works.

*St George Irrigation Area.* This area comprises twenty farms, on which some 7,100 acres were irrigated during 1967-68 from a weir on the Balonne River (8,200 acre feet). Cotton, grain, fodder, wool and fat lambs are the main products. Construction has commenced on additional storage and the provision of irrigation and other works to serve a further thirty-two farms. The major storage, to be built on the Balonne River (Kajarabie Dam), will have a capacity of 81,000 acre feet.

*Emerald Irrigation Area.* Formal approval for the establishment of the Emerald Irrigation Area was given on 28 March 1968, following agreement by the Commonwealth Government to make a non-reimbursable grant of up to \$20,000,000 available for the construction of the dam. The project involves the construction of Fairbairn Dam on the Nogoa River with a capacity of 1,170,000 acre feet and the construction of irrigation, drainage, road and other works to serve some 130 irrigation farms on which up to 49,000 acres could be irrigated annually. Construction of Fairbairn Dam has commenced and is expected to be completed by 1972.

Several additional projects have recently been completed and work is in progress on others. Moogerah Dam (Warrill Valley Project) on Reynolds Creek (75,000 acre feet) is capable of irrigating some 7,000 acres of the Warrill Valley, and is providing water for the thermal power station at Swanbank, near Ipswich. Borumba Dam (Mary Valley Project) on Yabba Creek (34,500 acre feet) makes water available to maintain the town water supply for Gympie and will allow extension of the area irrigated from the Mary River to about 18,000 acres. Callide Dam (37,800 acre feet) on Callide Creek, nine miles upstream from Biloela, will provide cooling water for the Calcap power station and compensation water for maintenance of underground supplies along Callide Creek. Leslie Dam (Upper Condamine Project), on Sandy Creek, has an initial capacity of 38,200 acre feet, with provision for later increase to 87,000 acre feet. Water from the dam is available for irrigation along the Condamine River as far as Cecil Plains and for a supply to the city of Warwick. Coolmunda Dam (Macintyre Brook Project) nearing completion, with a capacity of 61,000 acre feet, will provide irrigation water for up to 8,000 acres along Macintyre Brook. Wuruma Dam (Upper Burnett Project), under construction on the Nogoa River, will have a storage capacity of 157,000 acre feet for irrigation of 11,000 acres along 100 miles of the Burnett River. Eungella Dam (Bowen-Broken Project), nearing completion on the Broken River, will have a storage capacity of 106,000 acre feet and will provide cooling water for the Collinsville power station, water for Collinsville town and irrigation water along the Bowen and Lower Burdekin rivers. As indicated on page 945, work is also in hand on the Atkinson's Lagoon Storage (capacity 25,400 acre feet), to provide irrigation water in the Lower Lockyer Valley. Bedford Weir (storage capacity 5,500 acre feet), situated on the Mackenzie River some 15 miles north of Blackwater is under construction and will provide an assured supply of water for mineral development and urban requirement in the Blackwater area and some irrigation along the Mackenzie River. The development of rivers constituting portion of the Queensland-New South Wales border, under the authority of the Dumaresq-Barwon Border Rivers Commission, is described on page 934.

#### **Rural Water Supply Areas**

Although provisions existed in the Water Acts for many years for the constitution of rural water supply Areas and Boards, little advantage was taken of these powers until 1964 when an amendment of the Acts extended the purposes for which these Areas and Boards may be constituted and the methods of rating and financing of works, and provided for resumption or acquisition of lands by such Boards. This form of water supply is being sought increasingly by groups of landholders in various parts of Queensland to provide a reasonably economical measure of permanent supply for stockwatering, dairy and domestic purposes in areas prone to drought, and thus achieve a permanent form of drought relief. Usually the capital cost of works is met by a 50 per cent subsidy by the Government and the balance by a Board borrowing by Government guaranteed loan on the security of debentures.

At present nine Rural Water Supply Areas, Grevillea, Back Creek, Brigooda, Tarampa, Coreen, Roadvale, Proston, Merlwood and Kooingal are operating, supplying 413 rural holdings, covering 192,250 acres and reticulated by 227 miles of pipelines. Other schemes are in course of construction at Woodmillar, Glamorgan Vale and Benleith; these will supply a further 89 rural holdings by 67 miles of pipelines and serve 51,000 acres.

Water conservation, irrigation and drainage schemes may also be carried out under these Acts, and two group irrigation proposals and ten group drainage proposals are currently under investigation. A 20 per cent subsidy has been applied to the drainage proposals.

#### **Underground water—Great Artesian Basin and other sources**

The use of underground water supplies has been a very important factor in agricultural and pastoral development in Queensland. The Great Artesian Basin is the major source of stock water supplies over more than half the State. Elsewhere, supplies obtained at shallower depths, in porous, fractured or fissured rocks, are extensively used for domestic and stock purposes. Underground water also supports more than half the irrigated area in the State, supplies being obtained chiefly from alluvial formations along river valleys, and from river deltas, the most conspicuous example of which is the Burdekin River (see page 945).

### Great Artesian Basin

Western Queensland, beyond the 20-inch rainfall belt, is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry mineral field and the Barkly Tableland. It comprises 421,000 square miles or nearly two-thirds of the total State area of 667,000 square miles.

*Artesian water.* Although the number of bores has gradually increased over the years, the total flow of all bores has declined from the peak flow of 351 million gallons a day. A report on the nature and structure of the Great Artesian Basin, presented in 1954, indicated that the output would continue its decline during the next sixty years, at which stage the flow from the remaining flowing bores would be of the order of 110 million gallons a day. The discharge from windmills, springs and other leakages, together with the underflow past the Queensland borders, would then be about 20 million gallons a day. It was further expected that the total discharge, of the order of 130 million gallons a day, would be in equilibrium with the recharge of the basin. It was expected that numbers of bores on higher ground would cease to flow during the next sixty years and the area served by the flowing bores would contract by perhaps twenty per cent.

Up to 30 June 1968, 3,060 artesian bores had been drilled, of which 2,022 were still flowing. The total depth drilled amounted to 4,273,763 feet and the estimated daily flow was 192 million gallons. Although very few bores exceed 2,000 feet in depth (the average depth is 1,400 feet) and a new bore greater than 4,000 feet deep is exceptional, the deepest bore recorded was sunk to 7,009 feet. Some bores which had been classified as 'ceased' have been inspected and found to be still flowing, while other ceased bores have responded to deepening and have recommenced flowing. Both the pressure and flow of artesian bores are steadily diminishing, the rate of decrease varying widely throughout the basin. Present average rates of diminution are: pressure, 1-2 feet of head; total flow, 2-3 per cent per annum. The greater part of the artesian discharge is distributed by some 15,500 miles of open earth channels, from which a large proportion of water is lost by soakage and evaporation, less than 10 per cent being actually used by stock.

Although artesian beds underlie a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams, and natural waterholes. At the present time an increasing use is being made of pipelines for the reticulation of artesian water. In many districts artesian bores do not provide economical watering facilities because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. The quality of artesian water from the greater part of the basin is not suited for prolonged use for irrigation on most soils, nor are the supplies sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

Shallower supplies, which come from beds unconnected with artesian beds, are of variable quality and volume. These supplies are available at depths of less than 1,000 feet over a large area of the basin. A total of 12,358 sub-artesian bores within the Great Artesian Basin have been registered in Queensland. An important practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

*Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity, and to conserve artesian supplies by fully utilising flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by local boards or by the Commissioner of Irrigation and Water Supply, acting as a board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1967-68 are: areas constituted, 74; administered by the Commissioner, 55; administered by local boards, 6; number abolished, 13; area benefited, 4,800,156 acres; average rate per acre, 1.1 cents; number of flowing bores, 59; total flow, 24,755,000 gallons a day; drains served, 2,529 miles.

### Other underground sources

Outside the Great Artesian Basin, ground water supplies can conveniently be divided into two broad groupings, (a) those obtained in porous, weathered, fissured, or fractured rocks, and (b) those obtained in unconsolidated sediments of Cainozoic age. In the first group, supplies, often within short distances, are widely variable both in quantity and quality, but are normally sufficient only for stock-watering purposes. Because storage is generally small, seasonal fluctuation of water level tends to be high, and this can have a significant effect on the supply available during dry seasons. Small to moderate irrigation supplies (up to a few thousand gallons an hour) are sometimes obtained, and, in exceptional cases, particularly with basalts and limestones, supplies may be as much as 10,000 gallons an hour. The second group comprises the main irrigation supplies, and, although a wide range may be

found in the supply normally available from individual bores in any area, pumping rates as high as 10,000 gallons an hour are common. The availability of underground water has been investigated in a considerable number of alluvial valleys in south-eastern Queensland and in a number of coastal areas, particularly in the vicinity of the estuaries of the Burnett, Pioneer, Haughton, and Burdekin Rivers, where underground water is the main source for irrigation of sugar cane.

Reference has already been made to the importance of underground water for irrigation in the Lockyer and Callide Valleys (*see* page 945). Other areas in which irrigation supplies from alluvial formations have been extensively utilised include the Monto area, parts of Barker and Barambah Creeks, Warrill Creek, Cressbrook Creek, the Upper Logan River, Don River (Bowen), Bremer River, and parts of the Condamine River and its tributaries. Government authorities do not normally undertake private drilling for landholders, but assistance is given in the location and development of ground water supplies through the provisions of '*The Farm Water Supplies Assistance Acts, 1958 to 1965*' (*see* below). This assistance has considerably accelerated the use of underground water for irrigation, and there is no doubt that there are many areas with a large potential for future expansion.

#### Stock watering

A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about an eighth of the sheep. In addition to the stabilisation of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

*Main stock routes.* The Queensland Irrigation and Water Supply Commission acts as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance. From 1935, when the scheme was inaugurated, to 30 June 1968, 678 facilities had been completed, and at 30 June 1968, sixteen facilities were under construction or investigation. A State-wide investigation is being carried out by the two authorities mentioned above to ascertain the general movement of stock, determine primary and secondary routes, register existing water facilities, and formulate a co-ordinated plan in regard to the provision of new watering facilities.

*Channel Country stock routes.* Under the *States Grants (Encouragement of Meat Production) Act 1949-1954* the Commonwealth Government agreed to meet half the cost of providing additional watering facilities in stock routes leading into, along, and out of, the Channel Country and on the route from Camooweal to Mount Isa. These routes connect with the main far-western route included in the State scheme inaugurated in 1935. Under this scheme, which was completed during 1962-63, thirty-seven watering facilities have been constructed, at a total cost of \$599,184.

#### Technical and financial assistance to farmers

'*The Farm Water Supplies Assistance Acts, 1958 to 1965*' are designed to improve the standard of water supply installations on individual holdings, encourage greater development in individual irrigation schemes, provide greater stability of production, and avoid losses in time of drought as well as generally increase production. To achieve this purpose, the Acts authorise the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Acts are carried out under Commission guidance, and for the payment of a small charge the Commission will advise on the construction of works designed by its staff, but for which the landowners do not require financial assistance under the acts.

During 1967-68, 657 requests (446 for technical assistance only and 211 for technical and financial assistance) were dealt with in addition to advice on a further 447 requests on ground-water supplies. An amount of \$1,031,916 was approved for advances under the Acts in 1967-68, and the amount advanced was \$838,381.

### South Australia

Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (*See also* the chapter Physical Geography and Climate of this issue.)

#### Administration

Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1932-1966 and Water Conservation Act, 1936, both of which empower the Minister of Works to impound or divert the water from any lake, watercourse or underground source for the purpose of establishing and maintaining public water supply schemes. The Waterworks Act, 1932-1966 governs the principal reticulated water supplies in proclaimed water districts throughout the State. A feature of these supplies is the extensive network of water mains supplying country townships and farmlands where local water resources are practically non-existent.

Under the Water Conservation Act, 1936, small dams, wells, bores, rainsheds, storages and, in some instances, minor reticulation works are provided in remote areas to assist local settlers in development and to supply travellers and travelling stock.

### Irrigation

Australian irrigation originated in the upper Murray in South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for quantities held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains eighty miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in the various areas during 1967-68 and in South Australia as a whole during the seasons 1963-64 to 1967-68.

#### AREA OF LAND IRRIGATED: SOUTH AUSTRALIA, 1963-64 TO 1967-68

### Water supply schemes

*Adelaide Metropolitan Water Supply.* Adelaide and surrounding areas of development including Elizabeth derive their water from eight reservoirs in the nearby Mount Lofty Ranges and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 133,000 acre feet and the pipeline has a nominal capacity of 80,000 acre feet a year. The consumption for the whole area for the year 1967-68 was 94,600 acre feet, equivalent to a consumption of 90 imperial gallons per head per day. The capital cost to 30 June 1968 was \$115,931,000.

*Country reticulated supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Supplies to these areas are supplemented by River Murray water delivered into Warren Reservoir through a branch from the Mannum-Adelaide pipeline. A pipeline to pump water from the River Murray at Swan Reach directly into the Warren Trunk Main at a point near Stockwell is at present under construction. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. The original 223-mile pipeline from Morgan to Whyalla and a second and larger pipeline completed in 1966 are at present able to carry 30,000 acre feet of water a year from the River Murray. The ultimate designed capacity of the two pipelines is 61,000 acre feet per year. A large part of Eyre Peninsula is supplied, through the 240-mile Tod River Main and the 104-mile East Coast Main, with water from the Tod River Reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and Poldia Basin. Along the Murray River all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles, and a pipeline currently being extended from Tailm Bend to Keith will provide the means of reticulating Murray water to numerous towns and a large area of farmlands in the upper south-east. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes. Water conservation and distribution works in country districts to 30 June 1968 have cost \$134,346,000 (exclusive of river control and irrigation works on the Murray River) and contain 7,975 miles of water mains.

### Underground water

Underground water supplies in South Australia come under the supervision of the Department of Mines, which has explored for and developed groundwater supplies in South Australia for many years. This search has involved geological surveys throughout much of the State, supported by drilling operations carried out by departmental drilling plants.

By virtue of the Underground Waters Preservation Act, 1959-1966, the Department of Mines is empowered to exercise control over water boring operations and groundwater usage in 'defined areas'. There are at present two such areas, the North Adelaide Plains and the Kingston-Beachport area in the south-east of the State.

Results of groundwater surveys are published from time to time as Bulletins or Reports of Investigation of the Department of Mines. The *Groundwater Handbook*, published in 1959, outlines the basic principles controlling the occurrence of groundwater and the methods of drilling for, and development of, groundwater supplies.

In the north-east of the State, the deepest section of the Great Artesian Basin is not extensively developed because development costs are high in proportion to land utilisation capacity. Deep boreholes have been drilled by the Government to provide water along stock routes, and pressure waters have been utilised around the basin margin. Waters from the South Australian section of the Great Artesian Basin are generally suitable only for stock because of the composition of their salt content. The marginal waters occur at comparatively shallow depth, as at Maree township, where the artesian bore is 575 feet deep. In addition to pressure waters, non-pressure waters are sometimes obtainable at shallower depths and these provide pastoralists with stock water supplies which can be readily and economically developed.

Usage of groundwater of the Murray Basin has allowed development of the Murray-Mallee country and the south-east of the State. Mount Gambier draws its water supply from the Blue Lake, which is fed from the Basin, and many other townships obtain their water supplies from boreholes.

About 150 boreholes tap an artesian aquifer in the Kingston-Beachport area, where flow rates have exceeded 50,000 gallons per hour in some areas. This water has been extensively used for flood irrigation on improved pastures. Intensive development of the artesian aquifers in this area has resulted in falling flow rates and water levels over the past few years, and it has been found necessary to declare this area a 'defined area' in the terms of the Underground Waters Preservation Act, 1959-1966.

On Eyre Peninsula, the Uley-Wanilla Basin has been a source of groundwater since 1948, but by 1963 the water level had lowered critically, and pumping was suspended until 1966. The Lincoln Basin is now fully developed, yielding up to 20 million gallons per week, and providing water for the

town of Port Lincoln since 1960. Development of the Polda 'aeolianite' aquifer began in 1962. This basin is centred 25 miles west of Lock. The present pumping plant has a capacity of 7 million gallons per week. The water is reticulated to towns and farming properties on the Upper Eyre Peninsula. Large diameter boreholes are each capable of yielding 20,000 gallons per hour. Investigations of the aeolianite aquifer are currently being undertaken in County Musgrave, to the west of the Polda area. Investigations of the South Uley Basin have been completed; one borehole yielded 100,000 gallons per hour, but a safe yield of 20 cusecs has been recommended to safeguard against aquifer depletion.

Pastoralists, farmers, market gardeners, and others have been assisted with advice on drilling, and the Department of Mines maintains and operates 24 drilling plants, which to date have developed an underground water supply potential in excess of 150 million gallons a day throughout the State. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and considerable tracts of previously undeveloped country in the upper south-east Yorke Peninsula have been found to have usable water and have been opened up.

#### **Farm water schemes**

The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs, on farms, and on the suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied with water under pressure from the extensive distribution systems connected to various reservoirs and the Murray River.

#### **South-eastern drainage**

In the south-east of South Australia it has been necessary to construct drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage. The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston, southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of \$1,441,752. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,100,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work on the northern section of 140,000 acres is virtually complete with the construction of 85 miles of drains which involved the excavation of 2,989,880 cubic yards of material. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. Part of the first stage of this work provided for the construction of a main diversion drain (consisting of the enlargement of an existing drain for a distance of 24 miles and the excavation of 22 miles of new drain) from Beachport to Struan. The work to date has required the excavation of 6,493,300 cubic yards of material; the total length of the diversion drain and associated relief drains is 50½ miles. Work is proceeding on the internal drainage of the area, and 530,040 cubic yards of excavation have been carried out in constructing 21½ miles of new drains and enlarging existing drains. The capital cost of drainage in the South-Eastern Drainage Area System to 30 June 1968 was \$17,672,600, and the length of drains constructed was 852 miles. An extensive system of private drains (many of which are connected to the drains constructed under Government authority) also exists in the south-east of the State.

#### **Murray River Irrigation District**

Excess waters from the irrigation of orchards in the Murray River Irrigation Districts are building up a perched water table, which is rising to the levels of the tree root system. Investigations have proved that better drainage can be obtained if the underlying limestone aquifer is fully utilised. It is doubtful, however, that large scale drainage can be absorbed by the limestone aquifer close to the river as the outflow of saline waters into the River Murray must be prevented.

### **Western Australia**

Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

The Minister for Water Supply, Sewerage and Drainage administers the departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1964*. He is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. He also administers, under the *Country Areas Water Supply Act, 1947-1964*, the water supplies to certain country towns and reticulated farmland. As Minister for Works he controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. A small number of town supplies are administered by local boards under the *Water Boards Act, 1904-1964*, which provides a large degree of autonomy with ultimate Ministerial control.

### Irrigation

Irrigation schemes have been established by the Government on the coastal plain south of Perth in the Waroona, Harvey and Collie River Irrigation Districts between Waroona and Dardanup, the water being channelled from dams in the adjacent Darling Range.

Logue Brook Dam with a capacity of 19,717 acre feet, Harvey Weir (6,495 acre feet) and Stirling Dam (46,191 acre feet) supply the Harvey Irrigation District, the rated area of which is 13,610 acres. The Harvey District links up with the Waroona Irrigation District, which is served by Waroona Dam (12,105 acre feet), Drakes Brook Dam (1,855 acre feet) and Samson Brook Dam (7,437 acre feet) and comprises a rated area of 3,060 acres. Wellington Dam on the Collie River with a capacity of 150,107 acre feet serves an area of 10,870 rated acres in the Collie River Irrigation District. Pastures for cattle comprise 89 per cent of water usage in these districts.

During the past thirty years a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. Private pumping from sands of the Gascoyne River is the principal source of irrigation water for the 158 plantations. Because of the high risk of drawing in surrounding saline ground waters by over-pumping, the usage of water by the planters is controlled strictly by the Government. The Government is developing up-river sources and delivers water by pipeline to 29 plantations in the district. Bananas for the Perth market and fruit and vegetables for the Perth and Adelaide markets are the principal crops. A tropical research station is maintained at Carnarvon by the Department of Agriculture.

A project has been embarked upon to provide water supplies for irrigation in the area traversed by the Ord River in the Kimberley Division. The project provides for the eventual development of an area of 178,000 acres of land agriculturally and topographically suitable for irrigation. The first stage, in which water was supplied to 30 farms averaging 660 acres plus a 2,400 acre pilot farm from the Bandicoot Bar Dam with a capacity of 80,000 acre feet, was completed in 1965. Cotton has been the principal crop but in 1968 approximately 13 per cent of the cropped area was used for grain sorghum.

Construction has now commenced on an earth and rock fill dam storing 4.6 million acre feet of water to serve a further area of 148,000 acres, approximately one third of which is located in the Northern Territory.

On the Liveringa flood plain, water is diverted from the Fitzroy River through Uralla Creek to a natural storage of about 1,200 acre feet, which, together with a dam on Uralla Creek (4,600 acre feet), provides for irrigation at Camballin 65 miles south-east of Derby. Grain and fodder sorghums are grown in the area.

AREA OF LAND IRRIGATED: WESTERN AUSTRALIA, 1963-64 TO 1967-68  
(Acres)

Season	Vegetables	Fruit	Vineyards	Cotton	Other crops(a)	Pastures	Total
1963-64	9,166	10,425	966	1,526	6,153	26,958	55,194
1964-65	9,379	11,710	1,081	5,496	5,259	30,110	63,035
1965-66	9,944	11,566	844	8,307	6,707	30,039	67,407
1966-67	9,770	11,704	795	11,892	4,676	31,790	70,627

(a) Includes fodder crops. (b) Not available for publication, included with Other crops.

### Country water supplies controlled by Department of Public Works and Water Supply

Since 1947 enlargement and extensions of the Goldfields and Agricultural Water Supply and the development of the Great Southern Towns Water Supply have been carried out, mainly in accordance with a project known as the Modified Comprehensive Scheme. Under this scheme water has been supplied to towns and farms in an area of 4.1 million acres in mixed farming (cereal

and sheep) districts of Western Australia. The modified scheme was completed in 1961 at a cost of \$20.6 million, of which the Commonwealth contributed \$10 million under the *Western Australia Grant (Water Supply) Act 1948*. A further request was made by the State Government in 1963 for a grant of \$10.5 million representing half the estimated cost of proposed extensions which would increase by 3.7 million acres the area served by the scheme. The Commonwealth agreed to provide assistance in the form of an interest-bearing loan up to a maximum of the amount requested, advances to be made during a period of eight years commencing 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*.

Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields. It has a capacity of 62,435 acre feet and is connected to Kalgoorlie by a pipeline with extensions to towns and agricultural areas. At 30 June 1968 the Goldfields and Agricultural Water Supply was serving 116 towns and localities, and water was being reticulated to farms in an area of 4.8 million acres. The total length of pipelines was 4,187 miles and the number of services was 26,305. Consumption during 1967-68, including supplies drawn from local schemes and from the Metropolitan Water Supply, was 3,077 million gallons.

The Great Southern Towns Water Supply pipes water from Wellington Dam to towns on the Great Southern Railway from Brookton to Katanning as well as a number of other towns. At 30 June 1968 the Supply was serving 25 towns, the total length of pipelines was 530 miles, and the number of services was 8,507. Consumption during 1967-68, including supplies drawn from local sources, was 689 million gallons.

One hundred and fourteen local schemes supply water from stream flow, dams, tanks, wells, and bores, mainly to country towns. At 30 June 1968 the total length of water mains was 857 miles and the number of services was 25,372.

#### Other country water supplies

As well as the schemes controlled by the Department of Public Works and Water Supply, there are four local Water Boards which draw supplies from stream flow, dams, wells, and bores. In addition, some local authorities supply water within their boundaries. The Forests Department, sawmilling companies, and mining companies operate schemes to supply water to their towns. Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the railways from other sources, such as those controlled by the Department of Public Works and Water Supply and the Metropolitan Water Supply, Sewerage and Drainage Board.

#### Underground water

Considerable use is made of underground water by individual farmers, pastoralists, market gardeners, etc., and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of it is too saline for irrigation or even stock. However, artesian aquifers are tapped to supply or augment the town supplies of Perth, Bunbury, Busselton, Eaton, and Denham, and non-pressure water is used in the public supplies of 37 other towns.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins have been made as a result of extensive geological surveys by oil exploration companies and exploratory drilling by the Mines Department.

The Public Works Department and the Metropolitan Water Supply, Sewerage and Drainage Board are responsible for development work. The Geological Survey Branch of the Mines Department is responsible for all exploratory works, as well as for investigating and assessing the State's groundwater resources, advising local Government authorities, private industry and individuals on groundwater problems, and supervising departmental drilling.

Groundwater exploration projects are in progress or have recently been completed for the towns of Port Hedland, Exmouth, Geraldton, Morawa, Jurien Bay, Yunderup, Mandurah, Albany, Esperance and Watheroo, and additional supplies have been located for the Perth metropolitan area. A long-term systematic exploratory drilling programme in the Perth Basin is continuing.

### Tasmania

Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

#### Main purposes of water conservation and utilisation

Because of the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are

some moderately sized dams built by mining and industrial interests and by municipal authorities for town water supplies. 'Run of the river' schemes are quite adequate for assured supply in many municipalities.

Until a few years ago irrigated areas were negligible except for long established hop fields, but there is a rapidly expanding use of spray irrigation on orchards, pastures, potatoes, and beans. Until recent years there has been almost complete dependence on natural stream flows, but the need for some regulating storages has become apparent. Increasingly, farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works and domestic use is exploited in the consolidated rocks of southern, midlands and north-western Tasmania. In the south and midlands nearly all groundwater is obtained from Permian and Triassic rocks. In the north-west, water is recovered from a variety of rocks ranging from Precambrian dolomites, quartzites and schists to Tertiary basalts and Quaternary sands. The highest yields are obtained from the dolomites and the basalts.

In the central north and north-east unconsolidated Tertiary clays and gravels yield water of variable quality, and in some coastal areas, notably King and Flinders Islands, water is obtained from Aeolian sands.

The Mines Department is charged with the investigation of underground water resources and is currently drilling in the Longford (central north) and Scottsdale-Bridport (north-east) Tertiary areas, and is also examining the prospects of coastal sand supplies on the East Coast.

#### **Administration**

In Tasmania, water supply was once exclusively the responsibility of local government authorities, but two statutory authorities now operate bulk supply schemes, piping water for distribution by the local government authorities in the Hobart and Launceston regions, and directly to certain industrial consumers. The Rivers and Water Supply Commission is empowered to take water at streams and lakes, or to issue others with licences to do so; licensing covers supply to specific industries and municipalities as well as irrigation. The Commission is concerned with drainage trusts' operations, river improvements (including repairs after flood damage), stream gauging, its own regional water schemes, and with water supply, sewerage and drainage of towns.

The second body, the Metropolitan Water Board, has overall control of water supplies to the cities of Hobart and Glenorchy and the municipalities of Kingborough, Clarence and Sorell; these authorities, however, are responsible for reticulation. The Board also controls a second scheme serving other southern municipalities. In the rest of the State, water supply is still completely a function of local government, subject to the approval of plans and finance by the Rivers and Water Supply Commission.

#### **Regional water schemes**

Four regional water schemes are in operation. The first draws water from the east bank of the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities, and the second, which increases existing supplies to Greater Hobart, pumps water from the west bank of the River Derwent at Lawitta. These two schemes are controlled by the Metropolitan Water Board. In addition, the State Government has constructed two other regional water schemes; the first, to serve the aluminium refinery and other industries at Bell Bay on the eastern bank of the River Tamar and to supply bulk water to several municipalities; the second, to supply water along the western bank of the Tamar. The two northern schemes are the responsibility of the Rivers and Water Supply Commission.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey, and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. The State's largest rivers discharge in the west, but diversion to the eastern half of the watersheds is not regarded as practicable.

#### **Industrial water schemes**

Four principal industrial water schemes have been installed privately—for a paper mill near Lawitta on the Derwent River, for a paper mill at Burnie using water from the Emu River, for another at Wesley Vale using water from the Mersey River, and for a factory at Heybridge reticulating water from Chasm Creek. The State Government has constructed some water schemes for use primarily for industrial purposes. These include the scheme serving the aluminium refinery at Bell Bay referred

to above, a storage supplementing the summer flows of the Kermandie River for use by a wood-pulping plant at Geeveston, and the Prosser River Scheme which supplies water to a sodium alginate industry at Louisville near Orford and supplements the water supply of the township of Orford.

### Irrigation

There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing several schemes, notably in the Cressy area, the Huon region, and the valleys at the Jordan and Coal rivers. The *Water Act 1957* provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose, but no such works have been undertaken to date. With the exception of the Lawrenny estate at Ouse, which is the largest single area under irrigation in the State, and also the only formally constituted irrigation district, there are no extensive schemes utilising one common source of water supply in Tasmania. The larger proportion of the area under irrigation is watered by pumping systems.

AREA OF LAND IRRIGATED: TASMANIA, 1963-64 TO 1967-68  
(Acres)

Season	Vegetables	Fruit	Hops	Other crops(a)	Pastures	Total
1963-64 . . .	6,319	5,933	1,463	4,162	15,693	33,570
1964-65 . . .	8,302	5,955	1,553	4,318	14,194	34,322
1965-66 . . .	12,994	7,241	1,524	5,786	17,651	45,196

1967-68 . . .	17,303	9,042	1,587	9,132	29,182	66,243

(a) Includes fodder and fallow land.

### Northern Territory

Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in the chapter Physical Geography and Climate, and a brief outline of contour and physical characteristics in the chapter The Territories of Australia.

### Administration

Under the *Control of Waters Ordinance 1938-1965* of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and the diversion of water is prohibited except under prescribed conditions. There is a Mines and Water Resources Branch of the Northern Territory Administration under the control of a Director. The functions of the branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, and flood prevention and control.

Under the *Water Supplies Development Ordinance 1960-1963* the Mines and Water Resources Branch gives financial assistance to landholders for the development and improvement of water supplies on agricultural and pastoral leases. Another function of the branch, which is increasing in importance as it builds up a body of technical data and information about the Territory's water resources, is the dissemination of this knowledge by the provision of advice and technical assistance to professional drillers and to landholders.

### Underground water

The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry, which provides a large proportion of the Territory's income. Underground water supplies are of great importance in the Territory, where most of the cattle numbers are dependent on underground supplies for three to five months each year, because of the inadequacy of surface water during the dry season.

Rainfall is one of the factors controlling cattle numbers, but geological features, controlling both soils and the storage of underground water, are equally important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, the area has a comparatively low carrying capacity for cattle, and the pastoral industry is concentrated more in inland areas where

feed retains more nutritive value in winter, despite dry conditions. South from this well-watered northern-most portion, the Territory becomes progressively drier, with an average annual rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lower rainfall areas the search for potable underground water becomes exacting, but in the Ord-Victoria region and the Barkly Tablelands the best pastures are generally in areas where sub-surface conditions are suitable for the storage of underground water.

In the Ord-Victoria region the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Outcrops of sandstone, limestone and shale also occur in this area and underlie the volcanic rocks in most places. In general, these sedimentary rocks dip gently to the east, and sub-artesian conditions prevail. Underground water in this region is obtained from sandstone aquifers which yield supplies ranging up to 4,000 gallons an hour. Most of the bores are required in areas where the sediments are overlain by basalts; selection of bore sites is usually difficult. Supplies of shallow groundwater from joints, cracks and faults in the basalt are insignificant, and virtually all the bores obtain water from the sub-basalt sandstone aquifers. Successful bores in this area have ranged in depth from 200 feet to more than 900 feet. There are also small basins of younger sedimentary rocks in the region, some of which yield sub-artesian, and in places artesian, water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places underground water is under pressure but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level, and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent of the bores is suitable for stock and over 50 per cent of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

In the Alice Springs district valuable pastures occur on a great variety of rock types, and from some of these very little underground water is available. Many shallow bores obtain water from alluvium near stream channels. There are also many successful bores in porous sands and limestone in Mesozoic and Cainozoic sedimentary basins and in some Upper Proterozoic and Palaeozoic limestones and sandstones. Small supplies of underground water are obtained from bores intersecting joint zones in metamorphic rocks and granite of Archaean age. However, except in areas close to recharge, the water quality varies from moderate to poor.

The Mines and Water Resources Branch of the Northern Territory Administration has intensified research aimed at increasing the water supplies for Alice Springs and Darwin. Bores into the Palaeozoic Mereenie sandstone, twelve miles south of Alice Springs, have intersected sub-artesian aquifers at depths between 500 and 1,000 feet, and water from these bores is now the main source for the town supply. Promising finds of water have also been made in the Ti Tree and Dulcie basins to the north of Alice Springs, with possible potential for irrigation use. Tennant Creek obtains its water supply from two small sedimentary basins located respectively nine miles and sixteen miles south of the town, known as the Cabbage Gum and Kelly Well basins, which currently supply more than 1,000,000 gallons per week to the town reticulation. High yielding dolomite aquifers of lower Proterozoic age in the area sixteen miles south of Darwin have been developed and are augmenting the Darwin water supply.

At 30 June 1968, 5,751 bores and wells were registered in the Territory. Of these, 3,634 were for pastoral use, 324 were for agricultural use, 410 served town and domestic water supplies, 48 were in use on mining fields, 714 were investigation bores, 407 were Government established stock route bores, and 214 were classified under other uses. These include successful bores which have collapsed, and bores which were unsuccessful owing to drilling difficulties, or to insufficient quantity or poor quality of underground water.

### **Irrigation**

There are no large water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for additional water to augment Darwin's water supply are proceeding on the Darwin River, and in the McMinns Lagoon area.

The hydrological investigations required in the Northern Territory as part of the National Water Resources Assessment Programme are being carried out by the Mines and Water Resources Branch.

A network of base gauging stations is being built and operated for this purpose, and the results will help development planning as well as providing data for environmental scientists. In particular areas of development where water supply or irrigation proposals require surface water data, supplementary gauging stations are being built to obtain this information. Since the start of stream-gauging activity in the Northern Territory the Branch has established 305 gauging stations. As at 1 July 1968, the Northern Territory stream-gauging network comprised 221 operating stations; of these, 145 were base stations for measuring stream flow and 76 were supplementary stations.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River, and Alice Springs areas, with only small acreages being utilised. In the Territory 55 licences to divert water from streams have been issued. The total licensed area for irrigation is 2,253 acres, but the actual area irrigated is less than this. There are also a number of farms irrigated from bore supplies, particularly in the Alice Springs area. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and also dairying and mixed farming. Some 300 acres of irrigated rice were grown commercially on the Adelaide River in the 1964-65 season in a pilot farm project.

The Northern Territory Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production. In this area there are fifteen licensed stream diversions covering an area of 460 acres, and investigations are continuing into the possibility of using the Adelaide and Daly Rivers for irrigation. A dam site is under investigation at Adelaide River Township. The Daly River appears promising for irrigation purposes as it has a minimum dry season flow of 275 cusecs and a reliable annual flow, without regulation, of 300,000 acre feet. The mean annual flow of the river is more than 2,000,000 acre feet per year. Extensive surveys are being carried out on the coastal plains in the Daly area, including details of topography, hydrology, and soils. Surveys of a dam site at Nancar are being undertaken.

### Papua and New Guinea

Rainfall in Papua and New Guinea varies considerably from approximately 240 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua). For a general description of these territories *see* the chapter The Territories of Australia of this Year Book. Irrigation has not been developed on any organised basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet, but complete data regarding water resources are not available. During 1967-68 the Commonwealth Government continued to implement the policy of establishing a national network of stream-gauging stations which can be used in assessing the water resources of the Territory, while continuing to collect hydrological data for specified proposed hydro-electric projects.

The largest rivers in the Territory include the Fly (700 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles), and the Markham (110 miles). The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in Chapter 27, Electric Power Generation and Distribution.

## CHAPTER 23

### FORESTRY

For further details on subjects dealt with in this chapter see the annual bulletins *Non-Rural Primary Industries* and (for sawmills, etc. operations) *Manufacturing Industry*.

#### Source of statistics

Statistics relating to forestry are, in general, provided by the various authorities concerned with forestry administration. Particulars of forest reservations contained in this chapter have been collected by the Statisticians of the various States, mainly from information provided by the State forestry authorities. Other information on forested areas, together with certain other data, has been provided by the Commonwealth Forestry and Timber Bureau. Statistics of timber and by-products have been compiled from the annual factory collections undertaken by the Statisticians in the several States. Figures of production of gums, resins and tanning barks have been provided by the State forestry authorities. Data of imports and exports of forest products and timber and timber products have been compiled in the Commonwealth Bureau of Census and Statistics as part of the statistics of overseas trade. The figures shown relate, in general, to years ended 30 June.

#### Forestry in Australia

##### Objects of forestry

The main object of forestry authorities is to manage the forests of the country in a manner that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oil, and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, provision of recreational facilities, and aesthetic effects. Forestry also aims at improving existing forests and woodlands by properly controlled harvesting, by protection from such destructive agencies as fire and insect attack, and by inducing regeneration where it is desirable. The provision of a partial tree cover on denuded lands where this cover is necessary for protective purposes, and a complete cover when the land is better under forest than under any other land use, are further aims of forestry.

##### General account of forests and timbers

The area of land in Australia suitable for the production of commercial timber as a primary crop is very small in comparison with the size of the continent. Broadleaved forests (hardwoods) cover 97 per cent of the total forested area, and approximately 94 per cent of the broadleaved forest area is occupied by eucalypts.

*Eucalypts*. The genus *Eucalyptus* is remarkable in that it includes over 600 species, ranging in size from the mighty forest giants, mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, down to the small mallee species which inhabit vast areas of the inland. The habitats range from the dry inland areas to the high mountain areas in the Australian Alps, from areas with the annual rainfall as low as 10 inches to those where it is 150 inches. Of the 600 species, only about 100 are used for sawmilling, and not more than 40 of these are exploited extensively.

The better class of eucalypt forest is concentrated mainly in the higher rainfall areas such as the east coast, the highlands of southern New South Wales, Victoria and Tasmania, and the south-western corner of Western Australia. The more important species include blackbutt (*E. pilularis*), tallwood (*E. microcorys*), flooded gum (*E. grandis*), and red mahogany (*E. resinifera*) of New

South Wales and Queensland; alpine ash (*E. delegatensis*) of New South Wales, Victoria and Tasmania; mountain ash (*E. regnans*), messmate (*E. obliqua*) and blue gum (*E. bicostata*) of Victoria and Tasmania; and karri (*E. diversicolor*) of Western Australia. For height and grandeur, mountain ash and karri are unequalled among the broadleaved trees of the world and are excelled only by a few North American coniferous (softwood) species.

In the coastal regions with lower rainfall the eucalypt forests contain many durable species such as the ironbarks, grey gums and bloodwoods of the east coast, and jarrah (*E. marginata*) and tuart (*E. gomphocephala*) of Western Australia. The spotted gum (*E. maculata*) occurring in New South Wales and Queensland is another example.

Along most of the inland streams and adjacent flood-plains there are riverain forests consisting mainly of river red gum (*E. camaldulensis*), a very durable broadleaved tree which has supplied large quantities of sawn timber, railway sleepers and fence posts.

Eucalypts also occur in open forest and savannah woodland formations in areas receiving a reliable rainfall of about 10 to 20 inches per annum, as on the goldfields of Western Australia where salmon gum (*E. salmonophloia*), brown mallett (*E. astringens*) and wandoo (*E. wandoo*) occur. These forests are of considerable value for firewood, as mining timbers and for fencing. Minor forest products such as sandalwood, tan bark, essential oils, etc., also come from isolated areas in this type of country, and in the more arid areas.

In 1967-68 the volume of eucalypt sawn wood produced was 965 million super feet.

*Other broadleaved timbers (hardwoods).* Broadleaved genera other than *Eucalyptus* cover a comparatively small portion of the forested land in Australia; however, the areas concerned provide a great variety of timbers suitable for a multitude of uses. There are two basic types of forest containing supplies of broadleaved timbers other than eucalypts, namely, the tropical and sub-tropical rainforests of coastal New South Wales and Queensland and the temperate rainforests of southern Victoria and Tasmania, both of which yield species known collectively as rainforest or brushwood species. The total volume of brushwood species produced in 1967-68 was estimated at 83 million super feet, i.e. less than 7.9 per cent of the total broadleaved timber cut in Australia.

The tropical and sub-tropical rainforest along the eastern coast of Australia contains a large number of different species. Tropical rainforest occurs in northern Queensland in the vicinity of Cairns and on the Atherton Tableland, providing such well-known cabinet woods as Queensland maple (*Flindersia brayleana*), Queensland walnut (*Endiandra palmerstonii*) and the silky oaks. The sub-tropical rainforest found in southern Queensland and northern New South Wales yields the tulip oak, crab apple (*Shizomeria ovata*) and white beech (*Gmelina leichhardtii*). Coachwood (*Ceratopetalum apetalum*) and sassafras (*Doryphora sassafras*) occur in regions to the south near Dorrigo and have yielded valuable timber for many years.

Turpentine (*Syncarpia glomulifera*), an excellent harbour pile timber resistant to marine borer attack, and brush box (*Tristania conferta*), a superior structural and decking timber, are found in association with some eucalypts in the wetter rainfall areas on the north coast of New South Wales and in southern Queensland.

Temperate rainforest which is to be seen in southern parts of Victoria and western Tasmania consists of myrtle beech (*Nothofagus cunninghamii*), but produces also southern sassafras (*Atherosperma moschata*) and blackwood (*Acacia melanoxylon*).

*Conifers (softwoods).* One of the most important species of native conifers is white cypress pine (*Callitris hugelii*). The main cypress pine forests of commercial value occur in New South Wales and southern Queensland west of the Great Dividing Range. The trees are comparatively small, but the timber has particular value owing to its durability and resistance to termites. It is suitable for use as scantlings, flooring, linings, weatherboards, poles, and posts. As much of the area originally covered by cypress pine has been cleared for wheat farming and grazing, the production from the remaining State forests is now strictly regulated to ensure a continuous supply. The volume of cypress pine cut in 1967-68 was approximately 64.8 million super feet.

Another important native conifer is hoop pine (*Araucaria cunninghamii*), which occurs naturally in the sub-tropical rainforest of southern Queensland and northern New South Wales associated with tulip oak, crab apple, white beech, coachwood, and sassafras. The greater part of the original hoop pine forests has been exploited, but considerable areas have been replanted to this species in Queensland and, to a lesser extent, in New South Wales.

Other native conifers which have played a useful but minor part in the Australian timber industry include bunya and kauri pines (*Araucaria bidwillii* and *Agathis palmerstonii*) of Queensland, and celery-top, Huon and King William pines (*Phyllocladus asplenifolius*, *Dacrydium franklinii* and *Athrotaxis selaginoides*) of Tasmania. Kauri pine is found in the tropical rainforest of northern

**PLATE 46**

**Controlled fires burning after aerial release of incendiary capsules on a predetermined pattern.**

**PLATE 47**

**A bushfire brigade unit in operation.**

Queensland in association with non-eucalypt broadleaved trees, while bunya pine occurs in the sub-tropical rainforests. In the temperate rainforests of Tasmania celery-top, Huon and King William pines are found in association with myrtle beech, southern sassafras and blackwood.

#### Extent of forested areas

Estimates prepared for the Ninth British Commonwealth Forestry Conference held in India in 1968 show the total area of forest in Australia as 599.7 million acres, or about 32 per cent of the total land area of the continent. In making these estimates the Food and Agriculture Organization definition of 'forest' (published in *World Forest Inventory*, 1958, page 123) was used. This definition includes areas of sparse or stunted tree growth, classified as 'woodland' in the following table, and in the case of Australia some four-fifths of the total forest area falls into this category. If 'woodland' is excluded from total forested area a more realistic assessment of real forest area of 87.7 million acres is obtained.

#### CLASSIFICATION OF FOREST AREA(a): AUSTRALIA

(Source: Forestry and Timber Bureau)

('000 acres)

<i>Type of forest</i>	<i>Area</i>
LANDS	
Economically exploitable forest land—	
Productive forests—	
Coniferous (softwood)(b) . . . . .	3,021
Other(c) . . . . .	34,166
<i>Total, productive forests</i> . . . . .	<i>37,187</i>
Non-productive areas—unstocked(d) . . . . .	11,455
Not economically exploitable forest land . . . . .	39,038
Woodlands(e) . . . . .	512,010
<i>Total, forested area</i> . . . . .	<i>599,690</i>

#### OWNERSHIP OF ACCESSIBLE FORESTS

Publicly-owned forests—	
State forests . . . . .	29,699
Other forests . . . . .	22,472
<i>Total, publicly-owned forests</i> . . . . .	<i>52,171</i>
Privately-owned forests . . . . .	29,191
Ownership not yet determined . . . . .	290,166
<i>Total, accessible forests</i> . . . . .	<i>371,528</i>

(a) Date of inventory 30 June 1965. (b) Includes exotics, cypress, and other indigenous pines. (c) Includes broadleaved and mixed woods. (d) Areas enclosed or within or adjacent to forest land, but which are kept cleared of tree cover for management reasons or 'are temporarily free' of tree cover. (e) All lands dominated by trees which for ecological and botanical reasons are not now capable of producing economic forest products.

## Forest reserves

The distribution of forest reserves is shown by States in the following table. Detailed comparisons between States are not possible because of the lack of uniform definitions.

**LEGALLY ESTABLISHED PERMANENT FOREST RESERVES: STATES AND TERRITORIES  
31 MARCH 1968**

<i>Total area, all reserves</i>	<i>6,957</i>	<i>6,255</i>	<i>11,178</i>	<i>291</i>	<i>4,874</i>	<i>3,544</i>	<i>2,405</i>	<i>139</i>	<i>35,643</i>

(a) Not comparable with previous years due to a difference in definition on which estimates were based. (b) As at 31 March 1967. (c) South-west zone only. (d) In the Australian Capital Territory there are no permanent forest reserves, only managed forests.

## Categories of forest reserves

- (i) *Production Reserves* consist of forest lands 'permanently' reserved—by law whether Federal, State or local—for the production of logs, pulpwood, pit props, poles, posts or fuelwood for commercial purposes.
- (ii) *Protection Reserves* consist of reserved lands, the management of which is principally aimed at the protection of natural resources, of fauna and flora, or at other purposes not directly related to the production of wood (e.g., parks, watersheds, soil conservation areas, etc.). Industrial cutting may or may not be allowed in these Protection Reserves. Industrial cutting includes the cutting of logs, pulpwood, pit props, poles, posts, fuelwood for commercial purposes. The production of logs for the production of sawnwood for local consumption is considered as industrial cutting; however, the cutting of poles and fuelwood for personal consumption on a casual or occasional basis is not considered as an industrial cutting.
- (iii) *All other reserves* consist of reserved forest lands not included above.

A considerable proportion of the permanently reserved areas is in inaccessible mountainous country, and many of the forests contain a mixture of species, only some of which are at present of commercial value. Much of the area consists of inferior forest, and a large proportion of the whole has been seriously degraded by recurrent fires.

## Plantations

The indigenous forest of Australia does not contain adequate supplies of coniferous timber, and Australia's requirements have had to be met largely by imports. As a result of the planned policy of the forest services and of several private commercial organisations, the area of coniferous plantations, mainly of exotic species, is steadily increasing. It was natural that this aspect of forestry should receive earliest attention in South Australia, as this is the State most poorly endowed with natural forest. South Australia now has a larger area of planted conifers than any other State in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. Production is also increasing in the other States, and the thinnings from their plantations are already supplying a significant volume of timber.

The total production of roundwood from Australia's coniferous plantations is now more than 75 million cubic feet per annum and is expected to increase substantially during the next decade.

A special article prepared by the Forestry and Timber Bureau giving a detailed account of the history and development of coniferous plantations and of the characteristics of individual species is included in Year Book No. 44, page 975.

Broadleaved plantations (mainly *Eucalyptus spp.*) comprise a much smaller area, and the total acreage at 31 March 1968 was about 34,000 acres, about two-thirds of which was mallee. Plantations of this species have been established in Western Australia for tan bark production.

#### Forest administration and research

*Commonwealth Forestry and Timber Bureau.* The functions of the Commonwealth Forestry and Timber Bureau are laid down in the *Forestry and Timber Bureau Act 1930-1953* and include forestry research and education, the study of timber supply, and advice to the Government on forestry matters. The administering department is the Department of National Development.

In 1961 the Commonwealth Government decided to expand its activities in forestry research in Australia. The existing Forestry and Timber Bureau Divisions of Silvicultural Research and Forest Management Research were combined to form the Forest Research Institute as a separate branch of the Bureau. The purpose of the Institute is to provide complete coverage in forestry research, ensuring that all problems of primary importance to the practice and development of forestry in Australia are investigated. In developing a programme with this objective, the Institute takes account of the research activities and potential of the State forest services and other organisations. The research work carried out by the existing sections of the Forest Research Institute covers a wide range of studies, including the following: factors affecting tree growth, tree breeding, introduction of exotic species, forest nutrition, forest botany, forest entomology and pathology, fire protection, watershed management, forest mensuration, forest management and management economics, aerial inventory, biometrics, and tree seed. The Forest Research Institute maintains six regional establishments in the Commonwealth, two of which have an outstation in addition to the regional headquarters. These regional stations are run on a co-operative basis with State forest services and private forest companies or other government instrumentalities.

The Forestry and Timber Bureau also maintains a Timber Supply Economics Branch concerned with the compilation and analysis of statistics of production, consumption and trade in timber and other forest products. This Branch also carries out studies in forest economics and research into logging methods and machines. Advice on timber supply matters is currently made available to government departments and private enterprise. Research is also undertaken on matters associated with the marketing of timber products.

*Commonwealth Scientific and Industrial Research Organization, Division of Forest Products.* The Division of Forest Products was formed in 1928 to carry out investigations into Australian forest products, assist in the effective use of such products, reduce waste, reduce losses from decay and insect attack, and conduct research into the fundamental chemical, physical and mechanical properties of Australian timbers.

The research work of the Division is carried out by eight separate sections: wood and fibre structure, wood chemistry, timber physics, timber mechanics, timber preservation, timber seasoning, plywood and glueing, and timber utilisation. In addition, the Division provides assistance to individuals and local industry, administers courses of instruction on timber properties and usage, and maintains co-operative projects with several overseas authorities operating in the same field.

*Forestry in the Territories.* Forestry activities in the Territory of Papua and New Guinea are controlled by the Administration through its Department of Forests. The management of forests in the Australian Capital Territory is the responsibility of the Forestry Branch of the Department of the Interior.

The Forestry and Timber Bureau advises the Administrations of the Australian external Territories on the management of the forests in those Territories. Forests in the Northern Territory are under the control of the Forestry Branch of the Northern Territory Administration.

*Forestry activities of the States.* Forestry on State-owned lands in the various States is the responsibility of the respective State Governments, but they do not exercise any control over forestry activities on private property. The powers and functions of State forest authorities are laid down under forest Acts and Regulations. In each State there is a department or commission to control and manage State forests. Its functions include the introduction of proper measures for the control and management of forest land; the protection of forest land; the conversion, marketing and economic utilisation of forest products; the securing of an adequate and permanent reservation of State forests; and the establishment and maintenance of coniferous forests to remedy the existing deficiency of conifers in Australia. All State forest services are actively engaged on research programmes. Annual reports are issued by each State forest authority.

In addition to developing permanent forest reserves in each State, foresters are surveying all forested Crown lands with a view to obtaining dedications of new State forests to add to the permanent forest estate or to release for other uses areas unsuitable for forestry. State forest authorities control over 10 million acres of timber reserves, national parks, etc. They also usually control all timber on unoccupied Crown lands.

*Private forestry.* Privately owned lands contribute considerably to the total production from Australian forests. The most important areas of managed native forest in private ownership are the forests owned by pulp and paper companies. Schemes of financial assistance to individual land owners—designed primarily to encourage establishment and management of coniferous plantations—have been introduced by the Governments of New South Wales and Victoria.

The area of privately owned coniferous plantations is rapidly increasing, and here again the pulp and paper companies are very active. In step with the increase in afforestation programmes, the number of professional foresters employed in private forestry enterprise is increasing, while several are engaged on research.

An estimate of the area of coniferous plantations established by private companies and individuals is included in the table on page 963.

### **Forestry education**

The functions of the Australian Forestry School at Canberra, previously a division of the Forestry and Timber Bureau, were taken over by the Australian National University at the beginning of the 1965 academic year. The school was absorbed into the University's School of General Studies as the Department of Forestry. This department provides a full four-year training leading to the degree of B.Sc. in forestry. The University of Melbourne also maintains a School of Forestry which gives training leading to a B.Sc. degree in forestry. The Universities in all States provide facilities for post-graduate studies in forestry leading to higher degrees.

The Victorian Forests Commission maintains a Forestry School at Creswick where recruits are trained, mainly for employment in the Commission.

### **The Australian Forestry Council**

Following extensive discussions the Commonwealth Government and the Governments of the six Australian States agreed in 1964 to establish an Australian Forestry Council, comprising the Ministers responsible for forestry in the seven Governments and the Commonwealth Ministers of the Interior and External Territories.

The Council is intended to provide the means for the mutual exchange between the State and Commonwealth Governments of information and views on forestry. It will co-ordinate research into problems affecting the establishment, development, management, and fire protection of all forests, and the utilisation of forest products. It will assist in co-ordinating the work of State and Commonwealth Governments and also private enterprise in the development of Australian forestry.

The Council is supported by a Standing Committee, consisting of the Director-General of the Forestry and Timber Bureau, the heads of each of the six State Forest Services, the Chief of the Division of Forest Products, C.S.I.R.O., the Secretary of the Department of the Interior and the Secretary of the Department of External Territories.

#### Fire protection

The provision of adequate fire protection is one of the main problems facing forest and rural authorities. The commercial forest area is estimated at 37 million acres with a further 39 million acres of forest not at present exploitable. The forest services maintain a high degree of protection over a relatively accessible area of about 23 million acres, about 17 million acres in the more inaccessible area receive a lesser degree of protection, and about 8 million acres are at present not protected. The remaining area of 28 million acres is mainly vacant Crown Land or is privately owned or leased, and under some degree of fire protection from the rural volunteer fire-fighting organisations or Government-financed fire protection associations.

During the 1967-68 fire season a total of 1,754 fires were recorded over the area of 40 million acres of forest land afforded either intensive or extensive protection. An area of 754,000 acres was burnt by these fires, which represents 1.9 per cent of the area protected. This is the fifth largest area of forest land burnt over the last twelve years.

A large proportion of this burnt area was located in Victoria and southern New South Wales where particularly severe drought conditions prevailed throughout most of the summer and autumn period. The drought index exceeded a value of 700 on a scale of (0-800) over most of the forest land at higher elevations in the Australian Alps and was one of the severest droughts experienced in this region for over 100 years. Although large areas of forested land were in a state of extreme dryness, the absence of strong dry continental winds prevented severe 'blow-up' conditions, which result in extreme fire danger, except on a few isolated days.

The number of forest fires and the forest area burnt over the last twelve years is shown in the following table.

NUMBER OF FIRES AND FOREST AREA BURNT,  
1956-57 TO 1967-68

Year	Protected forest areas (a)		
	Number of fires	Forest area burnt	Percentage of forest area burnt
		'000 acres	
1956-57	1,999	344	0.9
1957-58	2,908	2,078	5.2
1958-59	1,175	456	1.1
1959-60	1,504	1,314	3.3
1960-61	2,667	1,294	3.5
1961-62	1,761	297	0.8
1962-63	1,299	275	0.7
1963-64	1,494	549	1.5
1964-65	2,307	1,626	4.1
1965-66	1,865	465	1.2
1966-67	1,422	388	1.0
1967-68	1,754	754	1.9

(a) The area receiving protection has been taken as the 40 million acres for which State forest services provide protection.

Although drought conditions were not particularly severe along the coastal area of New South Wales and Queensland during the summer and autumn months of 1968, drought breaking rains which occurred over Victoria and southern New South Wales during May 1968 did not extend to the coast. Drought conditions thus prevailed during the winter months and intensified during the spring. Widespread fires occurred along the entire eastern seaboard from September onwards and an area of around 5 million acres of forested land was burnt in Queensland and New South Wales.

Very intensive fire protection is afforded to the coniferous plantation area of Australia. This area is increasing rapidly and the annual planting programme is now between 60,000 and 70,000 acres. During the 1967-68 fire season a total of 288 acres were burnt, representing 0.04 per cent of the area of 729,928 acres for which fire statistics are available. This was the smallest area of coniferous plantation burnt during the last twelve years.

The area of coniferous plantations burnt during the past twelve years is shown in the following table.

**CONIFEROUS PLANTATIONS: AREA BURNT AND  
TOTAL AREA, 1956-57 TO 1967-68**

<i>Year</i>	<i>Area burnt</i>	<i>Area of coniferous plantations</i>	<i>Percentage of coniferous area burnt</i>
	acres	acres(a)	
1956-57 . . . . .	1,317	360,000	0.37
1957-58 . . . . .	1,339	386,000	0.35
1958-59 . . . . .	1,594	402,000	0.40
1959-60 . . . . .	329	435,000	0.07
1960-61 . . . . .	507	452,000	0.11
1961-62 . . . . .	598	472,000	0.13
1962-63 . . . . .	475	492,000	0.10
1963-64 . . . . .	418	515,000	0.06
1964-65 . . . . .	3,130	556,000	0.56
1965-66 . . . . .	1,520	610,000	0.25
1966-67 . . . . .	461	660,835	0.07
1967-68 . . . . .	288	729,928	0.04

(a) This area does not include some 81,000 acres of privately owned coniferous forest for which fire statistics are not available.

Protection of private property outside urban areas is undertaken by volunteer bush fire brigade organisations which are co-ordinated in each State by a committee or board carrying out functions of an advisory or educational nature and fostering the growth and organisation of the bush fire brigade movement. Throughout the main agricultural and forest areas of Australia there are over 5,000 registered volunteer bush fire brigades with a membership approaching 300,000. Although forest and rural fire organisations are entirely separate entities, a high degree of co-operation and liaison is maintained.

In addition to the forest service and rural organisations, various private and semi-governmental bodies in each State maintain fire protection organisations, which are generally concerned with the protection of private forestry operations and hydro-electric and water catchment areas.

Over the five-year period 1964 to 1968 the annual cost of protecting from fire the 40 million acres of forest land for which State forest services, semi-governmental bodies and private companies provide protection is estimated at \$6,000,000 or about 15 cents an acre. The cost of rural fire control as a whole cannot be estimated with any degree of accuracy because by far the greatest contribution comes from the personal efforts of volunteer brigade members.

The Australian fire season is very variable, especially in the eastern and southern States. On the average, damaging fires can occur over a period of four months in all climatic zones. Occasionally this occurrence can extend one month either side of the main fire period. Individual fire seasons are generally of much shorter duration than four months, and the severity of a season is judged more on the number of 'blow-up' days of extreme fire danger than on its length. On the average, four years in ten are classified as of average severity and two years in ten as severe, the remaining four years being of below-average severity. During severe seasons in the past as much as 15 per cent of the protected forest area has been burnt. However, with improving fire control services, it can be expected that the area burnt in severe fire seasons will in future be significantly reduced.

Intensive research work is being carried out on bushfire problems and both Commonwealth and State agencies maintain active research groups.

Research into the factors affecting fire behaviour has resulted in improved fire fighting techniques and safety on the fireline. In addition, research in this field has led to a greater knowledge of the effect of controlled burning on resource values and has permitted precise prescriptions to be laid down so that the work of hazard removal in forested country can be carried out more expeditiously and with greater safety.

Recent developments of techniques of aerial control burning have greatly reduced costs and permit larger areas to be burnt during favourable weather conditions. Small incendiary capsules are dropped from fixed wing aircraft or helicopters on a predetermined grid pattern at a rate of one incendiary every 5 or 10 acres (see Plate 46) and the resulting fires burn together slowly and remove excessive accumulations of fuel which have built up in the absence of fire. These very low intensity fires have low flame heights and seldom scorch the leaves on the standing forest trees. The cost of this type of control burning is around 4-5 cents per acre and one aircraft can cover an area of 15,000-20,000 acres in an afternoon. Care is taken to confine the fires within the area specified for treatment.

This technique of aerial control burning is unique to Australia and all the associated equipment and the incendiary capsule were developed by Australian fire research groups.

Control burning of forested country is one positive way in which damage from wildfires can be reduced. During 1968 an area of some 2 million acres was control burnt and of this area over 50 per cent was burnt by aerial ignition techniques (see Plate 46). During 1969 it is expected the area will increase to around 2½ million acres.

Research is continuing into the use of water bombing aircraft for the suppression of fires caused by lightning which occur in remote forested areas not readily accessible to conventional ground suppression forces. The Victorian Forests Commission now has an aerial attack system in operational practice and the use of light agricultural aircraft in this role is extending to other States. A programme of evaluation of all agricultural aircraft available for use in aerial fire suppression has been recommended by the Australian Forestry Council and is being carried out by the Forestry and Timber Bureau of the Department of National Development.

A special infra-red fire detector has been recently developed in Australia which will permit the location and mapping of bushfires through heavy continuous smoke. It will be especially valuable in picking up spotfires which may have been thrown long distances ahead of a bushfire and which are normally obscured by the heavy smoke pall. This latest equipment covers a range of wavelengths from 1-15 microns and can be operated from light aircraft.

Since fire prevention is one of the most important aspects of the problem, intensive campaigns are being conducted to reduce the incidence of man-caused fires. A study of fire causes in recent years reveals that human agencies account for about 90 per cent of all fires, and of this figure at least 80 per cent are preventable. It is estimated that 'burning-off' (much of which is started illegally) accounts for 30 per cent of all fires. Lightning accounts for a little over 10 per cent of all fires in Australia, although the incidence of fires caused by lightning is much higher in certain areas, especially the southern highlands regions in New South Wales and Victoria. Although lightning is a relatively small numerical cause of fire, the percentage area burnt from this cause is estimated at about 20 per cent. This higher figure is due to the occurrence of multiple fire outbreaks which cause fire fighting difficulties, and to the inaccessibility of the areas in which such fires generally occur.

An increasing number of fires are starting from roadsides, and smoking materials account for a high proportion of these fires. The fire proofing of roadsides by chemical and mechanical means should reduce this incidence, which has accounted for over 25 per cent of all fires in some regions.

The damage resulting from bushfires in Australia is difficult to estimate. Eucalypts, which comprise the main forest species are seldom killed by fire, and damage estimates frequently involve the complicated question of loss of increment and degradation of timber quality. It may be conservatively estimated that damage to forest values lies between \$2 and \$4 per acre burnt per year and that over the last ten years the average value of forest fire damage is of the order of \$4 million a year. In very severe fire seasons such as 1925-26, 1938-39 and 1951-52, which affected large areas of the continent, fire losses may have been as high as \$200 million. The monetary damage resulting from the Tasmanian bushfires of 7 February 1967 was estimated at \$40 million over the 640,000 acres burnt in Tasmania. These fires involved heavy housing losses in the city of Hobart and surrounding townships.

#### Commonwealth loans to expand softwood plantations

In February 1965 the Australian Forestry Council recommended that the rate of expansion of softwood timber planting in Australia should be increased from their existing level of about 40,000 acres a year to 75,000 acres a year for the next thirty-five years. The recommendations envisaged a phased increase in the rate of Government plantings by the various State Governments up to a level of some 65,000 acres per annum, and an average of at least 10,000 acres per annum by private forest owners. This programme would make a major contribution towards meeting Australia's future requirements for softwood products.

In February 1966 the Commonwealth Government endorsed this recommendation and agreed, as a first step towards achieving the proposed annual target of 75,000 acres, to provide financial assistance to each State, over a five-year period commencing 1 July 1966, to enable them to accelerate their rate of softwood plantings. The assistance, which will be provided to the States under section 96 of the Constitution, will take the form of long-term loans repayable over twenty-five years with repayments of principal and the payment of interest to commence ten years after the date of each advance. The *Softwood Forestry Agreements Act 1967* authorised the Commonwealth to enter into agreements with each of the States to provide financial assistance by way of loans during the financial years 1966-67 to 1970-71 inclusive. Payments under the Act by the Commonwealth to all States in 1966-67 amounted to \$291,000, in 1967-68 to \$3,456,000, and in 1968-69 to \$3,872,000. It is estimated that \$4,879,000 will be provided in 1969-70.

### Employment in forestry

#### Persons engaged in forestry activities, 1966 census

The number of persons whose industry statements were classified to 'forestry' (excluding sawmilling) at the 1966 population census was 13,492 out of a total of 512,994 in all primary industries and 4,856,455 in the total work force. For further information see the chapter *Employment and Unemployment*, also 1966 Census Bulletin No. 9.6, *Population: by Industry and Occupational Status, Australia*.

### Employment by Forestry Departments

In the table following details are shown of the number of persons employed by State forestry departments and by the Forestry and Timber Bureau in the Australian Capital Territory and the Northern Territory at 30 June 1968.

#### PERSONS EMPLOYED BY FORESTRY DEPARTMENTS STATES AND TERRITORIES, 30 JUNE 1968

Occupational group	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Excludes some production from private land, thought to be relatively small, details of which are not available.  
 (b) See footnote (b) to previous table. (c) See footnotes (c) and (d) to previous table. (d) Incomplete; see footnote (d) to previous table. (e) See footnotes (e) and (f) to previous table. (f) Includes timber used for tannin extract and sandalwood and substitutes in Western Australia.

## Value of production

While statistics of both the gross value (at principal markets) and local value (at place of production) of the forestry industry are available, particulars of the value of materials used in the process of production are not available for all States. For this reason values cannot be stated on a net basis, as has been done with most other industries. A more detailed reference to the value of production of forestry and other industries in Australia, as well as a brief explanation of the terms used, will be found in the chapter Miscellaneous.

GROSS AND LOCAL VALUE OF FORESTRY PRODUCTION  
 STATES AND TERRITORIES, 1967-68  
 (\$'000)

State or Territory	Gross value(a)	Marketing costs	Local value(b)
New South Wales . . . . .	35,140	931	34,209
Victoria . . . . .	27,845	397	27,448

### Timber and timber products

#### Mill production of timber

Particulars of logs treated and the production of sawn, peeled and sliced timber by sawmills and other woodworking establishments are shown in the following table. These figures have been compiled from annual factory collections, which cover virtually all sawmills. The only omissions are some small portable mills operated by itinerants, e.g. sleeper cutters.

<i>Total, timber produced . . . .</i>	<i>1,487,189</i>	<i>1,533,213</i>	<i>1,517,540</i>	<i>1,468,960</i>	<i>1,481,615</i>

(a) Excludes Australian Capital Territory and Northern Territory. (b) Gross hoppus basis: not necessarily comparable with details for previous years, which are generally on a true volume basis.

In addition to the mill production of timber shown in the preceding tables, a large quantity of hewn and round timber, e.g. sleepers, piles, poles, fencing timber, timber used in mining and fuel, is obtained directly from forest and other areas. Complete information in respect of the volume of this output is not available.

#### Veneers, plywood, etc.

Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. In recent years this has been considerably extended, since plywood manufacture has allowed the use of some species unsuitable for sawing. Special attention has been paid to ensure that logs suitable for peeling are diverted to ply factories.

**PLYWOOD PRODUCED: STATES, 1963-64 TO 1967-68**  
('000 square feet:  $\frac{1}{8}$ -in basis)

State	1963-64	1964-65	1965-66	1966-67	1967-68
New South Wales . . . .	58,880	59,045	54,201	58,791	63,909
Queensland . . . .	97,252	94,766	80,761	81,313	93,185
Other States . . . .	60,150	63,249	52,296	60,348	71,929
<i>Australia . . . .</i>	<i>216,282</i>	<i>217,059</i>	<i>187,258</i>	<i>200,451</i>	<i>229,023</i>

Of the total plywood produced in 1967-68, 128,672,850 square feet ( $\frac{1}{8}$ -in basis) were classed as 'Commercial', 73,331,689 as 'Waterproof', 2,664,942 as 'Case', and 24,353,525 as 'Sliced fancy'.

During 1967-68, 828.8 million square feet ( $\frac{1}{8}$ -in basis) of veneers were produced by the rotary process for the manufacture of plywood, including 260.5 million square feet ( $\frac{1}{8}$ -in basis) sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 73.4 million square feet of sliced veneers were produced.

#### Manufactured boards

Particle board, resin or cement bonded of acoustic and other composition, amounted to 115,579,513 square feet surface measurement during 1967-68.

**Wood pulp and paper**

*Wood pulp.* During 1967-68 wood pulp production was 351,268 tons of chemical, mechanical and other pulp. During the previous year production was 357,665 tons.

Detailed information relating to the types and methods of production of wood pulp in the various States was published in Year Book No. 50, 1964, page 1110.

*Paper and paper board.* Paper and paper board are manufactured in all States, but the greater part of the industry is in New South Wales, Victoria and Tasmania. During 1967-68 twenty-one paper mills were operating, nine in Victoria, three in New South Wales, four in Tasmania, two each in Queensland and South Australia, and one in Western Australia. A wide variety of paper and paper board is produced in Australian mills. The table below gives details of the production of some of the principal items.

**PRODUCTION OF PAPER PRODUCTS: AUSTRALIA, 1965-66 TO 1967-68**

Type of paper	Quantity (tons)			Value (\$'000)

Cork manufactures . . . . .	..	..	1,187	1,431

Imports of coniferous timbers, shaped or simply worked, came mainly from Canada and the United States of America in 1967-68. Malaysia was the source of by far the greater proportion of non-coniferous timber imports. Papua and New Guinea and the United Kingdom supplied most of Australia's imports of veneers, while plywood imports came mainly from Japan and Papua and New Guinea.

(a) Excludes re-exports.

Owing to the adoption of the new Australian Export Commodity Classification from July 1966 (see Year Book No. 54, page 339) completely comparable figures for years prior to 1966-67 are not available.

## CHAPTER 24

### FISHERIES

Further information on subjects dealt with in this chapter is contained in the annual printed bulletin *Non-Rural Primary Industries* and in the annual mimeographed statistical bulletin *Fisheries*, particularly as regards types of fish, etc. caught.

#### Fisheries resources and their commercial exploitation

##### Fish

It has been estimated that there are approximately 2,000 species of fish (including freshwater species) in Australia and the waters surrounding it. Fishing is carried out continually in estuarine, coastal and offshore Australian waters in the east and south from Port Douglas in Queensland to Ceduna in South Australia, and in Western Australia from Esperance to Exmouth Gulf, and more recently in the Onslow, Broome, Darwin, and Karumba areas in the north. Most fishing is done in waters over the continental shelf, which varies greatly in width around the continent, but tuna is sometimes fished beyond the shelf. As in other countries, fisheries in Australia may be divided into estuarine fisheries, located in the tidal waters of rivers and coastal lakes, beaches and bays; pelagic fisheries, which exploit species inhabiting the surface layers of the open ocean; and demersal fisheries, which fish the bottom layers of the sea. The estuarine fisheries produce considerable quantities of the table varieties, such as mullets (*Mugil cephalus* and associated species) and breams (*Acanthopagrus spp.*). In addition to these there is a small freshwater commercial fishery, principally in New South Wales and South Australia, exploiting Murray cod (*Maccullochella macquariensis*), golden perch (*Plectroplites ambiguus*). The pelagic fisheries produce species exploited during their seasonal migration, such as Australian 'salmon' (*Arripis trutta*), which is a member of the order Perciformes, or perch-like fishes, tunas (*Fam. Thunnidae, Katsuwonidae, Sardidae*), snoek (*Leionura atun*), garfish (*Hemirhamphidae*), and mackerels (*Cybiium spp.*). These fisheries, with the exception of some tuna, mackerel and reef fisheries, are concentrated in the temperate waters around the southern half of the continent. The offshore demersal fisheries include those carried out on reefs which may be found virtually right around the continent, and which yield such species as snapper (*Chrysophrys auratus*), whiting (*Sillaginidae*), the so-called 'cods' (*Epinephelus, Choerodon, Callyodon spp.*) and associated species; the trawl fisheries which produce species such as flathead (*Neoplatycephalus, Trudis spp.*), morwong (*Nemadactylus spp.*), John Dory (*Zeus faber*), etc.; and the important fishery for school shark (*Galeorhinus australis*) and gummy shark (*Mustelus antarcticus*) in south-eastern Australia.

##### Crustaceans

Crustaceans taken in Australia include crayfish (i.e. rock lobster), prawns, crabs, and freshwater crayfish. Crayfish (southern, *Jasus lalandei*; western, *Panulirus cygnus*; and eastern, *Jasus verreauxi*) constitute the most important crustaceans exploited in Australia, and various species occur on the reefs of the continental shelf in all States. The commercial fishery has not extended to the tropical species (*P. ornatus*), etc., for technical reasons, but is concentrated on species found around the southern half of Australia. Prawns (*Penaeus* and *Metapenaeus spp.*) are taken in the estuarine coastal and offshore waters of New South Wales and Queensland, in the Shark Bay and Exmouth Gulf region of Western Australia, in restricted areas of South Australia, in the Gulf of Carpentaria, and in the waters of the Northern Territory. Crabs (*Scylla* and *Portunus spp.*) are taken mainly in Queensland and Western Australia, but small quantities are also taken in the other States. Freshwater crayfish (*Euastacus serratus*) are caught in inland streams in New South Wales, and one species, marron (*Cherax tenuimanus*) forms the basis of an amateur fishery in the south-west of Western Australia.

##### Molluscs

Edible molluscs produced in Australia include oysters (mainly *Crassostrea commercialis*), scallops, mussels, squid, octopus, cuttlefish, and abalone. Naturally-grown oysters are produced in all States. In New South Wales, and to a lesser extent in Queensland, edible oysters are cultured commercially. The scallops (*Pecten meridionalis* and *Equichlamys bifrons*) are taken in Tasmania, the saucer scallop

(*Amusium balloti*) is harvested in Queensland and there are prospects for the establishment of a scallop fishery in Western Australia, but the major fishery is that in Port Phillip Bay, which is based on *Pecten alba*. Mussels (*Mytilus planulatus*) are gathered mainly in Victoria. Small quantities of cephalopods, mainly squid (*Loligo spp.*), are produced in many localities. The fishery for abalone (mainly *Notohalotis ruber*), which has developed very rapidly in recent years, now extends from southern New South Wales to South Australia, with Tasmania and Victoria providing the bulk of the catches.

#### Pearl-shell and trochus-shell

The shell of the Australian species of pearl oyster (*Pinctada maxima*) is taken in the tropical waters of Australia from Exmouth Gulf in Western Australia to Cairns in Queensland for the manufacture of buttons, knife handles, etc. Live pearl-shell is used for pearl culture, *Pinctada maxima* being capable of producing pearls which are the largest in the world and which command top market prices. Trochus-shell is found mainly on coral reefs off the Queensland coast, although small quantities occur in Western Australia.

#### Whales

The Australian whaling industry formerly exploited the baleen (humpback) whales during their winter migrations along the east and west coasts of Australia. However, owing to the total prohibition placed on their capture by the International Whaling Commission in 1963, Australian whaling is now confined to the sperm whale (*Physeter catodon*) which has been taken in the southern waters of Western Australia since 1955.

#### Marine flora

Seaweeds of possible commercial value occur in the coastal waters of New South Wales, Tasmania, South Australia, and Western Australia. At Triabunna, Tasmania, a factory is processing seaweed (*Macrocystis pyrifera*) for its alginate content.

## History of the development of fisheries industries in Australia

### Fishing

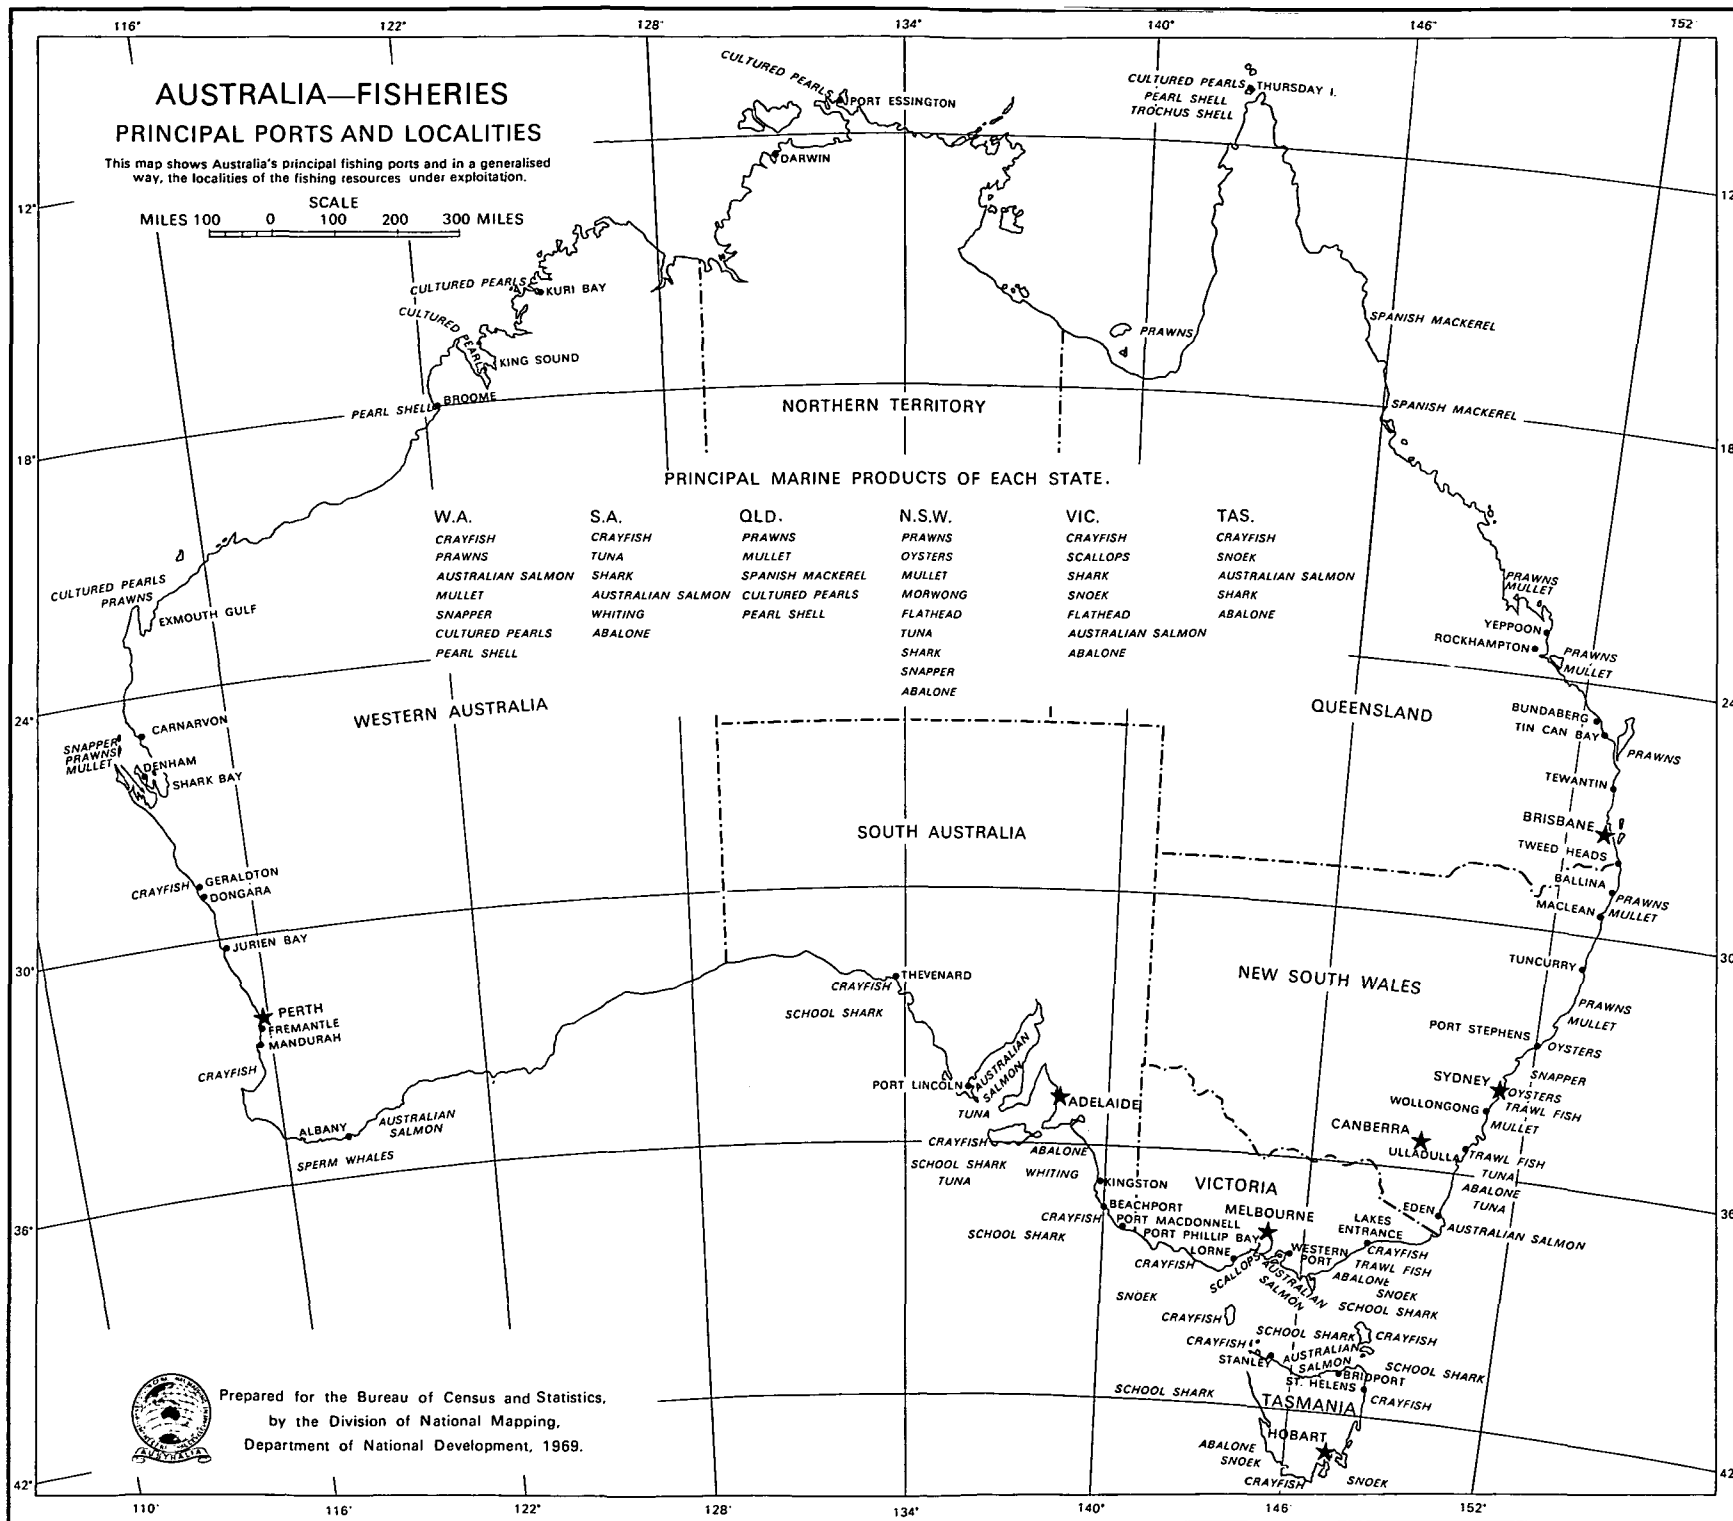

At the beginning of this century Australian fisheries were principally estuarine and onshore, and the deeper offshore resources were comparatively unknown. Vessels were generally sail-powered, and catching and preservation methods were primitive.

From 1909 to 1914 a Commonwealth vessel was engaged in research into fisheries resources around Australia. As a result of this exploration, otter trawling in the south-eastern waters began in 1915. There have been several years of high production from this fishery, but in each case the peak year was followed by a period of low production. Danish seine trawlers entered this fishery in 1936. In 1958–59 the steam otter trawlers used in this area were taken out of service. This fishery is at present stabilised at a relatively low level of production.

The tuna fishery began with the establishment in 1937 of a cannery at Narooma in New South Wales to exploit the occurrences, mainly of southern bluefin tuna (*Thunnus thynnus maccoyii*), which had been revealed by aerial surveys in 1936. However, landings were insignificant for over a decade. In 1950 the Commonwealth Government sponsored an American-owned clipper and trained crew to instruct fishermen in the pole-and-live-bait method of catching tuna. Development of the South Australian tuna fishery followed the visit of two American tuna experts in 1956. Attempts have been made to use gill netting, long lining, and the purse seine techniques, but these have not become established in the tuna fisheries.

### Crustaceans

The crayfishery, which is undertaken off south-eastern Australia and off the west coast of Western Australia, was for many decades small. It was not until 1944 that the major sector, the western crayfishery, began to develop into what is now Australia's most productive single fishery. Between 1944 and 1947 production from the shallow areas of Houtman Abrolhos was used for canning for the armed forces. From 1948 to 1953 mechanisation of the fleet was introduced progressively and deeper waters were worked. The United States market for frozen craytails was established during this period. The period 1954 to 1962 saw the introduction of larger and more powerful vessels, of conservation measures designed to maximise the sustainable yield, and of increased processing facilities. The number of boats operating in this fishery is now carefully controlled. In the southern crayfishery development has followed similar lines, but production is lower because of the smaller crayfish population.

The prawn fishery was pursued for many decades on a small scale, but it was not until the discovery that prawns spawn in oceanic waters that interest developed in catching them during this phase of their life cycle. The discovery in 1947 of stocks of prawns in Stockton Bight and off Evans Head (both in New South Wales) initiated the development of deep-sea prawning in Australia. Since that time the prawn fishery has expanded to the eastern offshore grounds. Commercial prawn fisheries in Western Australia commenced at Shark Bay in 1962 and at Exmouth Gulf in 1964. More recently grounds at Nickol Bay, Western Australia and further north have been exploited. The greatest development in the prawn fishery in recent years has occurred in the Gulf of Carpentaria. A joint Queensland-Commonwealth Government survey of a part of this area in 1963-1965 showed the presence of quantities of prawns, and commercial operators have now begun to exploit this resource on a large scale. The success of the ventures has encouraged the establishment of other ventures around northern Australia and substantial development of these fisheries is expected.

#### **Molluscs**

Natural oyster-beds were being harvested soon after the first settlement, but by 1870 rapid depletion of the stocks had resulted in restrictive legislation being passed in New South Wales. By the end of the nineteenth century, however, farms had been established in New South Wales and oyster cultivation was a notable industry. This cultivation has been almost entirely confined to the river estuaries of New South Wales. Very few oysters are exported and importation of oysters is necessary to cope with home demand. During 1964 an important scallop fishery was established in Port Phillip Bay, and a commercial fishery for abalone was developed in the waters of New South Wales, Tasmania, Victoria, and South Australia.

#### **Whaling**

Whaling has been undertaken from time to time in Australia since the early days of settlement. Baleen (humpback) whaling was carried out from stations on the west coast of Australia from 1949 and on the east coast from 1952. However, depleted stocks of the species resulted in the closing down of the eastern stations by 1962, and in 1963, following a severe decline in world stocks of humpback whales, the International Whaling Commission, of which Australia is a member, prohibited the capture of the species south of the equator for an indefinite period. Australian whaling is now carried out from Albany only, and the catch is confined to sperm whales.

#### **Pearling**

Since the middle of the nineteenth century, when pearling by Europeans first began in Australia, the collection of natural pearls has been incidental to the production of mother-of-pearl shell. Although attempts to establish pearl culture in Australia had been partially successful as early as the end of the last century, it was not until 1956 that the modern technique, as developed by the Japanese, was introduced into Australia at Kuri Bay in Western Australia. The joint venture between Australian and Japanese interests proved successful, and others entered the industry. There are now eighteen pearl culture farms in Western Australia, the Northern Territory, Queensland and Papua. Fifteen of the farms are operated as joint ventures by Australian and Japanese interests, while three are wholly Australian enterprises. The technique of pearl culture is still a closely-guarded trade secret.

#### **General**

A map showing Australia's principal ports and the localities of the fishery resources under exploitation appears on plate 48.

## **Fisheries administration and research**

#### **Government administration**

The fisheries within territorial waters are administered by State departments and Territory administrations. The Fisheries Branch of the Department of Primary Industry develops and administers fisheries in extra-territorial waters and co-ordinates fisheries administration. In 1968 the Commonwealth Government established an exclusive fishing zone around Australia from three to twelve miles. This does not involve any change in territorial waters.

The fisheries laws of each State and Territory and of the Commonwealth provide for the licensing of boats used in commercial fishing operations and of commercial fishermen. The provisions are broadly similar in each State, the general requirement being that any person who takes fish for sale, and any boat used in such fishing operations, must be licensed in the State or Territory concerned. Some States extend the licensing requirements to amateur or part-time fishermen. Australian nationals who fish commercially outside the territorial waters of a State or Territory, but within Australian waters as proclaimed under the *Fisheries Act* 1952-1966, are required to take out licences and to register their boats under that Act.

Fish stocks inhabiting Australian waters are a common property resource. With the exception of the Western Australian and Tasmanian crayfisheries and the Shark Bay and Exmouth Gulf prawn fisheries, there are no restrictions on recruitment of men and vessels to any fishery. It has, therefore, been necessary for governmental action to be taken to control operations in certain fisheries which are sensitive to over-exploitation. The policy basic to the management of these fisheries is the greatest sustainable yield consistent with economic operations. Where a fishery, for economic reasons, is not producing its maximum yield, efforts to discover new methods of utilisation of the catch are made.

The *Continental Shelf (Living Natural Resources) Act* 1968 is expected to become operative during late 1969. The Act repeals the *Pearl Fisheries Act* 1952-1966 and provides for regulation of the exploitation of the living natural resources of the continental shelf. These resources comprise species proclaimed as being sedentary organisms to which the Act applies. The Convention on the Continental Shelf, Geneva, 1958, defines sedentary organisms as those which 'at the harvestable stage, either are immobile on or under the seabed or are unable to move except in constant physical contact with the seabed or the subsoil'. The Act requires boats and operators engaged in searching for and taking of sedentary organisms for commercial purposes on the continental shelf to be licensed and this applies 'to all persons, including foreigners, and to all ships including foreign ships'. It also provides for the protection of organisms for conservation purposes generally, i.e., for the regulation of certain kinds of non-commercial collection.

Under the *Whaling Act* 1960-1966 the Commonwealth controls whaling from Australian stations in accordance with conditions laid down by the International Whaling Commission. This Commission was established by the International Convention for the Regulation of Whaling, 1946, to organise world-wide conservation measures.

### Research

The main aim of fisheries research in Australia is to achieve the greatest sustainable yield of fish and to assist in the development of an efficient industry. To this end much of the biological research already undertaken has been directed at formulating recommendations for management of various fisheries. Research work is also carried out which is expected to lead to the development of new fisheries, the expansion of under-exploited fisheries, more economical operations, and the use of more efficient equipment.

The organisations in Australia at present engaged in research into fisheries matters are:

- (i) Division of Fisheries and Oceanography, C.S.I.R.O. (fisheries science and oceanography);
- (ii) Division of Food Preservation, C.S.I.R.O. (research into handling, storage, processing, and transportation of fish);
- (iii) the several State fisheries departments (general biological research);
- (iv) Fisheries Branch, Department of Primary Industry (economic and management research, gear technology, extension work to the industry).

## Collection and presentation of fisheries statistics

### Source and basis of statistics

Statistics presented in this chapter have been collected by a number of authorities. The various State fisheries authorities have supplied, through the Deputy Commonwealth Statisticians in the States, the details of employment, boats, equipment, and production of the general fisheries and the pearl and shell fisheries. The Fisheries Branch of the Department of Primary Industry has supplied particulars of the whaling industry. Statistics of the processing of general fisheries products and of overseas trade in the products of fishing and whaling have been compiled in the Commonwealth Bureau of Census and Statistics.

The statistics refer, in general, to financial years. However, pearl and shell fishing data refer to the season ended in the financial year shown. Whaling statistics are shown by calendar years, and refer to the season in the calendar year. All overseas trade information refers to financial years.

In the preparation of Australian fisheries production statistics the quantities of individual products are generally in terms of the form in which they are taken from the water. For example, the statistics of fish production published in this chapter are in terms of 'estimated live weights' which are calculated from landed weights by using conversion factors for each species in each State. These conversion factors allow for the fact that the quantities of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Crustaceans are reported on a 'whole weight' basis and molluscs (edible) on a 'gross (in-shell) weight' basis. The figures of pearl-shell and trochus-shell refer to the actual quantities of dry shell for sale and exclude the weight of the fish.

In Australia the basic source of statistical information on commercial fishing operations is the fishermen. In four of the six States monthly returns of catch by species have been obtained from fishermen for a number of years. In the other two States (Queensland and South Australia) there have been no statistical collections from fishermen, and catch statistics have been derived from other sources such as markets and receiving depots. In general it is recognised that catch statistics in Australia have been somewhat incomplete in past years. For example, details of production given in this chapter refer in most cases only to the recorded commercial production. In view of the importance of amateur fishermen in certain types of fishing, details shown cannot be taken as representing the total catch. In addition, it is likely that the figures shown understate the full commercial catch because no information is available on fish taken for sale by persons not licensed as professional fishermen.

Two weaknesses of fisheries statistical collections in Australia to date have been the lack of uniformity, which makes it difficult to compile statistics on an Australia-wide basis, and the lack of data on the effort involved in taking fish (time spent fishing, gear used, etc.). Recognising these weaknesses, the Commonwealth-States Fisheries Conference in 1960 appointed a Statistics Committee 'to examine all aspects of fisheries statistics and fully document a proposed system for submission to the States and Commonwealth for approval'.

#### **Model system of catch and effort statistics, 1962**

The model system of catch and effort statistics designed by the Committee was adopted by the Commonwealth-States Fisheries Conference in 1962. The new system was introduced in Tasmania in 1963 and in Victoria and Western Australia in 1964. The system was introduced in Queensland for the otter trawl fishery early in 1965, but there are no definite plans at present to extend it to other fisheries. The system is now being introduced into South Australia in respect of major fisheries, and arrangements are proceeding for its introduction into New South Wales.

Under the new system fishermen are asked to report monthly the various fishing methods used, catch of each species taken and the locality where the greatest proportion of the catch is taken. Fishermen record catch in terms of landed weight, and appropriate conversion factors are used to obtain live weight where this is required. A grid system of 1° rectangles (relating to latitude and longitude) is used for recording location of catches at sea, and estuaries and inland waters are recorded where appropriate. Other data obtained include details of fishing effort, ports at which catch is landed, and employment details.

The eventual implementation of this system in all States is expected to ensure the availability of statistical information of a much higher standard. In addition to the new system of catch and effort statistics, a uniform boat registration system has been introduced by all States. This new system will provide details of various characteristics of the commercial fishing fleet on a uniform basis for all States.

### **Boats and equipment used in fisheries**

#### **Fish, crustaceans and molluscs (edible)**

The boats used for the estuarine fisheries are mostly small vessels, propelled by diesel or petrol engines of low power. The offshore vessels range in length from 30 feet to 120 feet and are almost invariably powered by diesel engines. Many of them have insulated holds to carry fish in ice, and some of the crayfish boats are fitted with wells in which the catch is kept alive. Some vessels have dry refrigeration and others, including some of the tuna live-bait pole-fishing vessels, are equipped with brine refrigeration.

A recent survey showed that about 50 per cent of Australia's commercial fishing fleet, including tenders, consists of vessels up to twenty feet in length, about 25 per cent are in the 20-29 feet category, and the remainder are greater in length. Only a very small number are greater than fifty feet in length. More precise information on this aspect of the fishing fleet will be available in the future when results from the uniform boat registration system become available. A great variety of fishing equipment is used, and the following are the types of equipment most commonly used for the main types of fish, crustaceans, and molluscs: mullet, beach seine, gill net; shark (edible), long-lines, gill net; Australian salmon, beach seine; snoek, trolling lines; flathead, Danish seine, otter trawl; snapper, long-lines, traps, gill net, hand-line; morwong, Danish seine, otter trawl, traps; whiting, handlines, Danish seine, beach seine; garfish, gill net, beach seine; mackerel, trolling lines; tuna, pole and live-bait, trolling lines (lampara nets and purse seines are used for taking live bait for tuna); prawns, otter trawl, beam trawl, seine net; crayfish, pots, traps; scallops, dredge, otter trawl.

#### **Pearls, pearl-shell and trochus-shell, whaling**

Ketch-rigged luggers about fifty-five feet long which carry crews of eight to fourteen members are used for pearl and pearl-fishing around Australia.

The whaling industry is highly mechanised. Standard equipment includes aircraft to locate whales, diesel-powered catchers of about 100 to 125 feet in length, and tow boats.

**Boats and equipment employed by industry**

The following two tables show details of boats and equipment employed in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and the number of chasers and stations engaged in whaling operations. The reservations mentioned below regarding the use of employment information are also applicable to these tables. Boats employed in more than one industry are classified to their main activity.

## Employment in fisheries

### Persons engaged in fishing activities, 1966 census

The number of persons whose industry statements were classified to 'fishing' at the 1966 census was 8,021 out of a total of 512,994 in all primary industries and 4,856,455 in the total work force. The census classification 'fishing' includes such activities as fishing, whaling, pearl-shell fishing, oyster-farming, etc. For further information see the chapter Employment and Unemployment, also 1966 Census Bulletin No. 9.6, *Population: By Industry and Occupational Status, Australia*.

### Classification of registered commercial fishermen by industry

The following two tables are derived mainly from the licensing records of the various State fisheries authorities. Because the definitions and licensing procedures used by these authorities are not uniform the statistics should not be used to compare the relative productivities of fishing industries in the several States. Persons engaged in more than one industry are classified according to their main activity, and so may be classified differently from one year to the next.

Production, processing and domestic marketing of fisheries products

The tables on pages 981-3 show details of the production of the main types of fish, crustaceans, and molluscs caught in each State and the Northern Territory in 1967-68 and throughout Australia for the years 1963-64 to 1967-68.

Total . . . . .	710	668	606	587	658

(a) Sperm whales only.

**Processing of fish**

Quick-freezing is used at sea and ashore to preserve fish before delivery to consumers. The main technique employed in Australia is brine-freezing, as used extensively in the tuna and salmon fisheries.

Fish canning in Australia on a modern scale dates from 1937, before which fish canning was carried out on an occasional basis only by factories handling other foodstuffs. The main canneries handle tuna (Eden, New South Wales; Melbourne, Victoria; Port Lincoln, South Australia); Australian salmon (Eden, New South Wales; Melbourne, Victoria; Port Lincoln and Adelaide, South Australia; Albany, Western Australia; Margate, Tasmania); snoek (Melbourne, Victoria; Margate, Tasmania); scallops and abalone (Melbourne, Victoria).

Other methods of fish processing include smoking and bottling, but these are undertaken on a minor scale only. Among the few fish by-products produced are small quantities of fish meal.

FISH PROCESSING (EXCEPT FREEZING): AUSTRALIA, 1963-64 TO 1967-68

Fish meal(d) . . . . .	2,222	2,373	1,778	1,813	2,776

(a) Fish used for canning (including fish loaf), smoking and the manufacture of fish paste, but excluding the weight of oysters, other shellfish and crustaceans used for canning. (b) Excludes canned crayfish, lobsters, prawns, oysters, and clams, details of which are not available for publication. (c) Includes fish loaf, fish cakes, etc. (d) Excludes whale meat.

Processed crustaceans and molluscs

The chief technique employed to preserve crayfish and scallops is blast freezing, although plate contact freezing is also being used. Crayfish for the domestic market are usually cooked whole and then frozen, as are some exported crayfish. However, the bulk of crayfish exports consists of frozen raw craytails. Most prawns for domestic consumption are sold in a whole cooked condition. Some are also exported in this form, after freezing. As a rule, however, the majority of prawn exports consist of green headless prawns, sometimes de-veined, sometimes split in 'butterfly' style, but in all cases frozen into five pound blocks. Scallops are normally frozen in cello-wrapped five pound blocks, although packaging of individually frozen scallops is growing in popularity. Small quantities of frozen abalone are now being exported to the United States of America and Asia. Canned abalone is also packed for the Asian market, and small quantities of abalone soup are being prepared for the domestic and overseas markets.

Whale processing

Oil from sperm whales is used in the manufacture of soap, plastics and watch lubricants, and in automatic transmission systems in motor cars.

WHALE PROCESSING: AUSTRALIA, 1964 TO 1968  
(Source: Fisheries Branch, Department of Primary Industry)

		1964	1965	1966	1967	1968

(a) 6 barrels = 1 ton.

Domestic marketing of fisheries products

Although virtually the whole of the tuna and Australian salmon catches and a large proportion of the snoek catch are canned, the greater part of Australian fisheries production is marketed fresh or frozen.

Marketing arrangements for fresh fish vary. In New South Wales fish marketing is the responsibility of the New South Wales Fish Authority, which operates the Metropolitan and Wollongong Fish Markets. In other coastal centres of New South Wales fishermen's co-operatives may become registered as local fish markets. Fish for industrial use do not pass through any of these markets. The Queensland Fish Board sells all production on behalf of fishermen in that State, and has branches in eighteen centres, as well as depots at eight others. The Board also purchases fish on its own account to stabilise prices. In Victoria, Western Australia and Tasmania the marketing of fish is undertaken through agents. In South Australia the great majority of the fishermen are members of the South Australian Fishermen's Co-operative Ltd, which handles the whole of their production. Canned fish and frozen fish in the form of consumer packs are marketed mainly by the supermarket-type retail establishments. Oysters are usually sold live in the shell directly to restaurants, or are shelled and bottled before being sent to retailers.

#### Value of fisheries production

The following tables show details of the values of production of edible fisheries products, pearl-shell and trochus-shell for the years 1963-64 to 1967-68. See also the chapter Miscellaneous for an explanation of the value terms used.

#### SELECTED FISHERIES PRODUCTS: GROSS VALUE, STATES AND NORTHERN TERRITORY 1967-68 (\$'000)

Product	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Fish . . . . .	5,434	2,253	(a)1,847	2,884	1,100	722	92	14,333
Crustaceans . . . . .	3,003	1,030	3,973	3,518	18,441	2,898	14	32,877
Molluscs (edible) . . . . .	3,591	2,618	136	590	(b)13	1,087	..	8,036
Pearl-shell(c) . . . . .	..	..	99	..	(d)91	..	(d)1	(e)271

(a) Excludes freshwater fish, particulars of which are not available. (b) Excludes scallops, particulars of which are not available for publication. (c) Source: Department of Primary Industry. (d) Estimated. (e) Includes manufacturing shell produced from pearl culture operations; details classified by States are not available for publication.

#### SELECTED FISHERIES PRODUCTS: GROSS VALUE, AUSTRALIA, 1963-64 TO 1967-68 (\$'000)

Product	1963-64	1964-65	1965-66	1966-67	1967-68
Fish(a) . . . . .	13,660	12,187	13,730	12,646	14,333

**Pearls**

Pearls valued at \$451,000 were imported into Australia in 1967-68 (\$405,000 from Japan), compared with imports valued at \$583,000 in 1966-67 (\$554,000 from Japan).

Cultured pearls exported from Australia in 1967-68 (excluding re-exports) were valued at \$1,532,000 compared with exports valued at \$1,888,000 in 1966-67, the bulk of the exports each year being shipped to Japan. The value of natural pearls exported from Australia in 1967-68 (excluding re-exports) was \$12,000 compared with \$19,000 in 1966-67, the major proportion again being shipped to Japan.

**Pearl, etc., shell and marine animal oils**

Of the pearl-shell exported in 1967-68, exports valued at \$129,000 were consigned to the United States of America, \$128,000 to Japan and \$66,000 to the Federal Republic of Germany.

**OVERSEAS TRADE IN SHELLS: AUSTRALIA, 1965-66 TO 1967-68**

	Quantity ('000 lb)			Value (\$'000 f.o.b.)

## CHAPTER 25

### MINERAL INDUSTRY

Further detailed statistics and information on the subjects dealt with in this chapter are contained in the annual printed bulletins *Non-Rural Primary Industries* issued by this Bureau and in *The Australian Mineral Industry—Annual Review* and other publications issued by the Bureau of Mineral Resources, Geology and Geophysics, which also issues, in conjunction with this Bureau, a quarterly publication, *The Australian Mineral Industry*, comprising two parts—Part 1—Quarterly Review and Part 2—Quarterly Statistics. The annual mimeographed statistical bulletins *Mining and Quarrying*, *Minerals and Mineral Products*, *Mineral Exploration*, and *Overseas Participation in Australian Mining Industry* of this Bureau contain economic statistics of the industry prepared and published as soon as possible after the data have been compiled. A monthly statistical bulletin *Minerals and Mineral Products* is issued also, and other current statistics on mining or mine products are contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*.

#### GENERAL

##### Geology

###### General geology

The greatest part of the area of outcropping rock on the Australian continent is Precambrian in age. These basement rocks form the western and central core of the continent and are flanked by younger Palaeozoic rocks, which, along the eastern edge of the continent, form a belt several hundred miles wide extending from north Queensland to Tasmania. Mesozoic sediments overlie large areas of the continent and reach their greatest development in central Queensland. Cainozoic rocks occur mainly in the southern parts of Victoria and South Australia and as residual basalt cappings over an extensive area of the Palaeozoic rocks of eastern Australia.

###### Economic geology

Minerals of economic significance occur widely throughout the Precambrian and Palaeozoic rocks of the continent. Palaeozoic mineralisation is perhaps more varied, but the Palaeozoic deposits now being worked are in general smaller than those found in Precambrian rocks. Most of Australia's metallic mineral deposits occur within two broad regions, a region of Precambrian rocks in the west and central areas of the continent and a region of younger Palaeozoic rocks in the east. This situation is especially true in the case of the larger base metal deposits and also for smaller deposits of metallic minerals.

The major deposits of metallic minerals, including iron ore, lead, zinc, silver, copper, uranium, nickel, and gold, are contained in the Precambrian rocks of the Australian shield. Smaller deposits of tin, tungsten, tantalum, mica, beryllium, manganese, and cobalt are also contained in these rocks.

The mineralised Palaeozoic rocks contain major deposits of gold, now mostly worked out, and a few large copper and lead-zinc-silver occurrences. Smaller amounts of tin, tungsten, molybdenum, bismuth, and other metals also occur in these rocks.

Outside these two main categories, however, there are some metallic mineral deposits of considerable economic importance which were formed during the Tertiary Period. These include bauxite which occurs as a surface capping over various rocks, mostly of Mesozoic age. Extensive deposits of bauxite occur at Weipa on Cape York peninsula in north Queensland, at Gove on the north-eastern tip of the Northern Territory, in the Darling Range in Western Australia, and near Kalumburu in the north-west of Western Australia. These deposits are the result of a long period of weathering.

Mineral sands, another important exception, contain rutile, zircon, ilmenite, monazite, and other minerals, and are particularly well developed on the central and northern New South Wales coast, southern Queensland and south-western Western Australia. The deposits of the eastern States are considered to be derivatives of Mesozoic rocks. The Western Australian deposits are thought to be derivatives of the Precambrian granites of the Australian shield.

Occurrences of fuel minerals (coal, oil and natural gas) are characteristically located in former sedimentary basins. Large areas of Australia are covered by these basins, and more than twenty major sedimentary basins have been identified on the Australian mainland. In addition, sedimentary basins are known to exist in off-shore areas adjacent to the Australian coast. The individual basins range in area from 4,000 to 680,000 square miles and contain marine and continental sedimentary rocks ranging in maximum thickness from 1,000 to about 30,000 feet and including rocks of all ages from Proterozoic to Tertiary.

Deposits of black coal in Australia are mainly of Permian age and are located in sedimentary basins in the coastal areas of the eastern States. The majority of the New South Wales and Queensland black coal deposits are bituminous in type. The extensive brown coal deposits of Victoria were formed during the Tertiary Period.

Crude oil and natural gas have been found in a number of sedimentary basins. In the Bowen-Surat Basin, Queensland, commercial deposits of oil exist at the Moonie and Alton fields, and commercial deposits of natural gas exist in numerous prospects in the Roma and Rolleston areas. In the Adavale basin, Gilmore is a proven gas field. In general the oil reservoir rocks in Queensland are of Lower Jurassic age, and the gas reservoir rocks are of Mesozoic and Permian age. In the Gippsland Basin, off-shore Victoria in the Bass Strait, oil in considerable quantities was discovered in the Kingfish and Halibut fields, and oil and natural gas in the Marlin and Barracouta fields. In the same basin, deposits of hydrocarbons, the magnitude of which has yet to be evaluated, were encountered in the Flounder, Tuna, Snapper and Bream prospects. In the Gippsland Basin, the Cretaceous and Tertiary strata are the reservoir rocks. In the Cooper Basin, South Australia, commercial deposits of natural gas were discovered at Gidgealpa and Moomba, and also at Daralingie and Toolachee. The reservoir rocks are of Permian age. In the Carnarvon Basin, Western Australia, commercial crude oil mainly in the Cretaceous formations, and also to a lesser degree in the Jurassic, was discovered at Barrow Island. Further south, in the Perth Basin, natural gas in commercially significant quantities was discovered in the Yardarino, Gingin, Dongara, Mondarra and Whicher Range prospects, the reservoir rock being of Lower Permian age. In the Amadeus Basin, Northern Territory, natural gas was discovered in commercial quantities in formations of Ordovician age at Mereenie and Palm Valley.

Of the non-metallic minerals, many, such as clay, sand and silica, etc., are not restricted to the rocks of any particular era and are often polycyclic in nature. However, Precambrian rocks do contain deposits of blue asbestos in Western Australia, limestone and dolomite in South Australia, and mica in the Northern Territory.

Opals are found in the flat-lying sedimentary beds of the Great Artesian Basin in Queensland, New South Wales and South Australia. These opal deposits were formed during the Tertiary Period.

A table showing most of the larger mineral deposits now being mined in Australia according to the age of the geological formation in which they are found is shown in Year Book No. 53, page 1062.

### Mineral resources

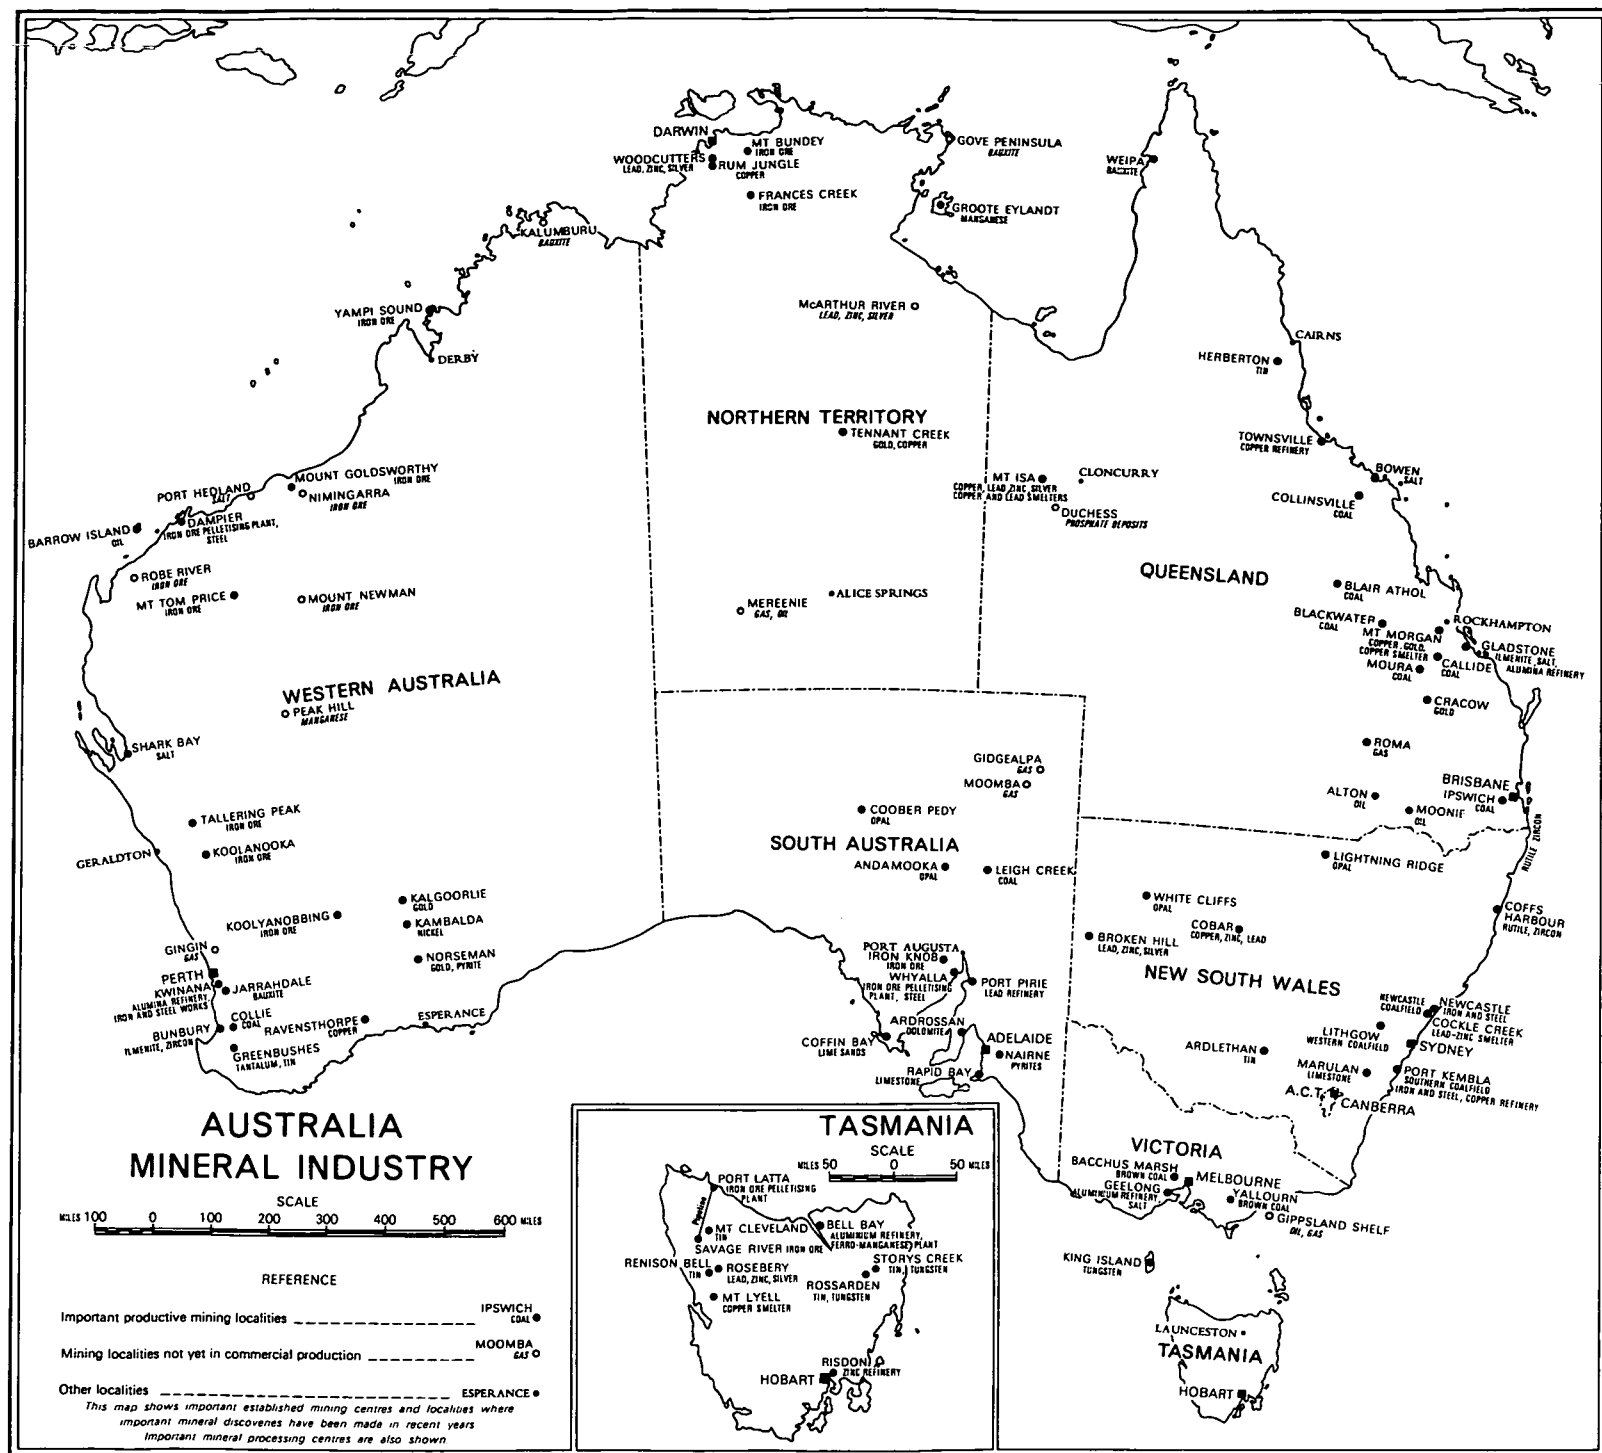

Australia is self-sufficient in most minerals of economic importance and much more than self-sufficient in some. The following table summarises, in a general way, known reserves and production of the principal metals and minerals in relation to Australian consumption of these commodities and present export availability. Many qualifications are necessary to a simple summary of this kind, and the table should be read in conjunction with the following detailed notes on principal minerals.

#### RESERVES OF MINERALS: AUSTRALIA

(Source: Bureau of Mineral Resources, Geology and Geophysics)

<i>Production</i>	<i>Reserves adequate</i>	<i>Reserves uncertain</i>	<i>Reserves negligible</i>
Production sufficient for domestic demand and exports	Barite Bauxite Cadmium Coal (black) Copper Gold Gypsum Iron ore Lead	Beryl Talc Tantalite	

For footnotes see next page.

RESERVES OF MINERALS: AUSTRALIA—*continued*

<i>Production</i>	<i>Reserves adequate</i>	<i>Reserves uncertain</i>	<i>Reserves negligible</i>
Production sufficient for domestic demand and exports	Manganese ore (metallurgical) Mineral sands(a) Nickel Opal Salt Silver Tin Tungsten Zinc		
Production sufficient for domestic demand	Clays (except light grade china clay) Coal (brown) Dolomite Felspar Limestone	Glass sands Sillimanite	
Production not sufficient for domestic demand	Bismuth Lithium minerals Phosphate rock Sulphides (as source of sulphur)	Abrasives Antimony Bentonite China clay Chromite Cobalt Diatomite Fluorite Magnesite Manganese ore (chemical) Mercury Mineral pigments Petroleum Platinum	Asbestos (chrysotile) Molybdenum
Production nil	Magnesium Potassium salts	Arsenic Asbestos (crocidolite) Diamonds Graphite Vanadium Vermiculite	Borates Nitrates Sulphur

(a) Ilmenite, monazite, rutile, zircon.

**Aluminium**

As a result of the recent discoveries at Weipa, Gove and the Darling Range, Australia's reserves of bauxite are known to be very large, perhaps the largest in the world. Total reserves in the Weipa region are in excess of 2,000 million tons, while the deposits at Gove are reported to contain up to 250 million tons of bauxite. The Darling Range deposit has nearly 80 million tons of proved reserves, and preliminary estimates by the company indicate that the base areas contain at least 500 million tons of economic bauxite. In addition, another significant deposit of about 200 million tons has so far been proved in the Kimberley district of Western Australia.

**Coal**

Australia has coal resources adequate to provide for future domestic requirements and a substantial export surplus. These resources include coal of all types, except pure anthracite. Australia's coal reserves are concentrated mainly in the mainland eastern States. The bituminous coal is located mainly in New South Wales and Queensland; Victoria has very substantial brown coal reserves in the Latrobe Valley. A table showing Australian coal reserves is published in Year Book No. 53, page 1065.

**Copper**

The principal deposit of this metal is at Mt Isa, where ore reserves were estimated at 46.5 million tons in 1968. Recent discoveries have indicated very large additional reserves at Mt Isa, and further

exploration and testing is proceeding. Other important deposits are situated at Cobar, New South Wales, Mt Morgan, Queensland, and Mt Lyell, Tasmania. Small deposits at Ravensthorpe, Western Australia, and Tennant Creek, Northern Territory, have also been developed.

#### **Crude oil**

From recent exploratory activity it is now apparent that Australia possesses substantial resources of crude oil. The Moonie and Alton fields in Queensland, and the Barrow Island field in Western Australia have been producing since 1964, 1966 and 1967 respectively. The Kingfish, Halibut, Marlin and Barracouta fields in the off-shore Gippsland Basin should begin commercial production in late 1969. Current recoverable reserves in Australia are conservatively estimated to be 1,800 million barrels and with exploration activity continuing at a high level there is a possibility of further upward revision of these estimates in the near future.

#### **Gold**

Australia's gold resources are heavily concentrated in Western Australia, mainly in the Kalgoorlie-Coolgardie area. However, small deposits of gold-bearing ore occur in all States. In addition, gold is commonly obtained as a by-product of other mining activities, particularly copper mining. Gold ore reserves at Kalgoorlie were estimated at more than 13.5 million tons in 1967, with a gold content of 5.64 dwt per ton.

#### **Iron ore**

In recent years very extensive deposits of iron ore have been discovered in Australia. These discoveries have established Australia as one of the most important iron ore provinces in the world. The largest deposits are located in the Hamersley and Ophthalmia Ranges of north-west Western Australia. Other commercially important deposits of iron ore are situated in the Savage River area of Tasmania, in the Middleback Ranges of South Australia, at Yampi Sound, Koolyanobbing, and Talling Peak in Western Australia, and at Mt Bundey and Frances Creek in the Northern Territory. These deposits are adequate to supply the estimated needs of the Australian iron and steel industry far into the future, as well as providing a large export availability. Total Australian reserves are estimated to be more than 16,000 million tons.

#### **Lead-zinc**

Since the discovery in 1883 and subsequent development of the ore body at Broken Hill, Australia has been a major producer of lead and zinc. Ore reserves in the Broken Hill area are stated to exceed 17 million tons, and further exploration is being undertaken to extend reserves. Mt Isa, with ore reserves of 32 million tons, is the major lead-zinc deposit in Queensland, and further substantial reserves exist in adjacent leases. In Tasmania substantial lead-zinc deposits are situated at Read-Rosebery near the west coast. In the Northern Territory lead-zinc ore bodies have been located at Macarthur River and at Woodcutters near Rum Jungle. A small zinc silicate ore body is to be developed at Beltana, South Australia.

#### **Manganese**

Australia's known reserves of manganese, which is highly important for the iron and steel industry, are in excess of domestic requirements, and exports have increased sharply in recent years. The principal deposits currently being worked are in the Pilbara and Peak Hill areas of Western Australia and on Groote Eylandt in the Gulf of Carpentaria. Reserves on Groote Eylandt are substantial.

#### **Mineral sands**

Ores of titanium (rutile and ilmenite), zirconium (zircon) and thorium (monazite) occur in beach sands over extensive areas of the north and central coasts of New South Wales, the south and central coasts of Queensland, and the south-western corner of Western Australia. Resources are large and easily workable. Australia's reserves of rutile represent a large proportion of the world's reserves of this mineral.

#### **Natural gas**

Several significant discoveries of natural gas have been made throughout Australia, the most notable being the Barracouta and Marlin fields in Bass Strait, off-shore Victoria, where reserves are estimated to be approximately 5 U.S. trillion cubic feet. Commercial production from these fields commenced in March 1969.

In Queensland numerous gas fields have been discovered in the Roma area and to the north near Rolleston. The combined reserves estimate is approximately 215 U.S. billion cubic feet. Other fields at Gidgealpa and Moomba in South Australia, which are to supply Adelaide in the near

future, have combined estimated reserves of 1.5 U.S. trillion cubic feet. To this must be added the as yet unknown reserves of the nearby Daralingie and Toolache prospects. In Western Australia significant discoveries have been made at Yardarino, Gingin, and Dongara where reserves are thought to be of the order of 500 billion cubic feet; also in this region, significant reserves of natural gas are indicated in the Mondarra prospect. In the Northern Territory the Mereenie and Palm Valley fields show evidence of 1.5 U.S. trillion cubic feet gas reserves, in association with some crude oil.

#### **Nickel**

Deposits of nickel have been discovered in Western Australia, central Australia, and Queensland. At Kambalda, near Kalgoorlie in Western Australia, there are reserves of more than 9 million tons of high grade nickel ore.

#### **Phosphate rock**

Accelerated search for phosphate rock commencing in late 1964 resulted in the discovery of major deposits in north-west Queensland in 1966. Detailed assessment and feasibility studies have yet to be completed.

#### **Tin**

The main deposits of tin now being exploited are in the Herberton field inland from Cairns, Queensland, in north, west, and central Tasmania, in the Pilbara region and in the south-west of Western Australia, and in the New England area, at Mt Tallebang, and Ardlethan in New South Wales. As the result of exploration and expansion of known deposits in recent years, Australia is now self-sufficient in tin.

#### **Tungsten**

The main deposits of tungsten ores are in northern Tasmania (wolfram) and on King Island (scheelite). Australia's own requirements are small, and production is principally for export.

#### **Uranium**

Australia's known reserves of uranium ore were exploited during the years 1953 to 1963. During this period substantial quantities of uranium concentrate were exported to the United Kingdom and the United States. In May 1967 it was stated that reserves of 11,620 short tons of uranium oxide were reasonably assured and a further 3,230 short tons were possible but not proven; of these reserves, 10,660 short tons were said to be economically recoverable within the price range \$5 to \$10 per pound and 4,190 short tons economically recoverable within the price range \$10 to \$30 per pound.

## **Administration**

For all practical purposes all mineral rights in Australia are vested in the Crown. In the States, sovereign rights are held by the State Governments with respect to mineral resources within their boundaries. In the Territories of the Commonwealth these rights are vested in the Commonwealth Government. The Commonwealth Government is able also to influence over-all development and production activity in the mineral industry by virtue of its statutory powers with respect to international trade, customs and excise, taxation, and loan raisings. Certain specially formed bodies such as the Joint Coal Board and the Australian Atomic Energy Commission have been given administrative responsibility in defined areas.

#### **Control of mining**

Each State or Territory in the Commonwealth has its own mining Acts or Ordinances and regulations governing the prospecting for and working of mineral deposits. These Acts, etc. are similar in principle, but differ in detail. They all make provision for the following tenures.

- (i) The holding of a miner's right gives the holder the right to prospect on Crown Land, and to use the timber and water necessary for his operations. The miner's right does not give the power to remove or sell any mineral.
- (ii) Small mining leases, having a maximum area of about 100 acres, necessitate the payment of rent and, in most cases, a royalty. There is usually no limit on the number of such leases which may be held by any one person, partnership, private or public company. In practice a restriction is imposed by the requirement that a lease must be continuously worked, or that work to a given value must be done annually, but exemption from the labour requirements

may be obtained under certain circumstances. The exemption is given for limited periods only, and where the labour requirements are not met and exemption has not been granted any person may apply for forfeiture of the lease in his favour. If the rental is not paid the lease is forfeited.

Provision is also made in the various Acts and Ordinances for prospecting areas, claims, etc. Such areas, claims, etc. are all quite limited in size and from the practical viewpoint are cheap forms of mining lease which carry limited powers relating to the removal of minerals. A very large enterprise may take the course of acquiring mining titles by negotiation with the appropriate Minister for Mines and having the agreed terms and conditions embodied in an Act of the State Parliament. This method of acquisition has been used in several cases where the leasing company undertook an obligation (such as the erection of a large treatment works) in return for leases over large areas for a long period, and has become more common in recent years, particularly where very large-scale capital intensive projects are involved (e.g. iron ore in Western Australia, coal and bauxite in Queensland, bauxite in the Northern Territory).

The following table sets out particulars of the areas occupied under mining Acts and Ordinances in the several States and Territories for the period 1964 to 1968. Further details of the various types of mining lease and licence are given in Year Book No. 48, pages 94-5.

**AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES  
STATES AND NORTHERN TERRITORY, 1964 TO 1968**

('000 acres)

Year	N.S.W.(a)	Vic.	Qld(b)	S.A.(a)(b)	W.A.(c)	Tas.	N.T.	Total
1964 . . .	956	50	2,097	7,894	221	40	61	11,319
1965 . . .	1,015	60	2,494	6,621	263	43	61	10,557
1966 . . .	1,083	84	2,591	29,638	343	53	36	33,828
1967 . . .	1,177	74	2,304	15,508	372	58	37	19,530
1968 . . .	1,146	81	2,618	14,521	705	65	43	19,179

(a) Year ended 30 June. (b) Excludes lands held under miners' rights and dredging claims. (c) Excludes holdings under miners' rights.

#### Control of exploration

Following the introduction of large-scale modern prospecting methods (particularly air-borne prospecting), small prospecting areas were found to be unsuitable, and steps have been taken in the States and Territories to ensure the availability of large areas for prospecting by interested persons. Large areas may be made available in either of the following ways:

- (i) by the Minister of Mines withdrawing an area from the provisions of the Mining Act and giving an informal agreement that the prospector would have preference in applying for titles to leases within the area; or
- (ii) by provision within the Mining Acts or Ordinances for the issue of authorities to prospect over an area defined by a written agreement which also sets out provisions as to the amount of money to be spent, methods of prospecting, tenure of the agreement, etc.

The tenure of such areas is limited, usually to one or two years only, and, if renewed for a further period, is only over an area selected from the larger area as a result of work done during the life of the initial agreement. Neither form of prospecting concession gives the holder any rights over, or authorities to prospect on, land already held under a mining title within the agreed area. Unless specifically stated in an agreement, the discovery of minerals, whether inside or outside an area covered by an authority to prospect, gives the discoverer no legal rights except the right to apply for a mining lease over the area in which the discovery was made. Suitable prospects are converted to mining tenements by making application for lease under the appropriate mining Act.

The above discussion refers in general to the exploration for all types of mineral deposits in Australia. Additional information relating to the search for petroleum is given below.

#### Control of petroleum exploration

*On-shore.* In Australia, all petroleum on or below the land is, and shall be deemed always to have been, the property of the Crown. Consequently, full control of petroleum mining rights is vested in the Government or Administration of each State or Territory. Any company, syndicate, or individual proposing to join in the search for petroleum must first satisfy the Government concerned that the necessary financial resources are available to carry out exploration activity.

The names given to different types of exploration permits differ with variations in petroleum legislation from State to State, but there are in general, three basic types of permits: (a) permit for geological and geophysical survey; (b) licence for more detailed surveys and exploration drilling; (c) leases for commercial production.

In most States, the minimum permit area is 1,000 square miles, however in the Northern Territory, it is 500 square miles and in Queensland and Tasmania it is left to the discretion of the Minister of Mines. The maximum permit area in the Northern Territory is 10,000 square miles and in New South Wales and Victoria 5,000 square miles. In Queensland and Tasmania the size of the area is left to the discretion of the Minister of Mines and in South Australia and Western Australia there is no limit.

The term of the initial permit varies from State to State. The period being five years in South Australia and the Northern Territory, two years in New South Wales, Victoria and Western Australia and at the discretion of the Minister of Mines in Queensland and Tasmania. The term of the permit may be extended at the Minister's discretion in the light of valid reasons submitted by the holder or for periods designated in the legislation. All permits carry obligations to initiate geological and/or geophysical surveys, usually within three or six months of the granting of the permit. Quarterly reports, maps and other relevant data are required.

Licence areas vary between States as do terms, bonds, etc. The maximum licence area is 200 square miles in all States except Tasmania where it is five square miles. The licence stage in the Northern Territory was omitted by a 1966 Amendment. The minimum area varies between 8 square miles in New South Wales, South Australia and Western Australia and no minimum in Victoria, Queensland and Tasmania. There is no limit on the number of licences that may be held by one holder in all States except Tasmania, where it is limited to one. The term of initial licence is five years in South Australia, four years in New South Wales and Victoria and two years in each of Queensland, Western Australia and Tasmania. There is provision in all States for renewal for periods ranging from one to five years. Licences carry obligations that a more detailed survey be carried out, usually within three to six months of the granting of the licence. In some cases, drilling is also required. Quarterly reports, maps, samples, etc. are a requisite.

*Leases.* If exploration during the permit and licence shows promise then a lease is usually granted, which gives the right to produce petroleum. The maximum lease area in the Northern Territory is 1,000 square miles. In all other States it is 100 square miles except in Tasmania where it is at the discretion of the Minister for Mines. The minimum area of a lease is four square miles in New South Wales, South Australia and Western Australia and no minimum has been set for the remaining States and the Northern Territory.

In most States there is no limit to the number of leases that may be held by one holder, however in Queensland the maximum number of leases permitted to any one holder is five. The initial term of the lease in most cases is twenty-one years and it may be renewed for a similar period; however in New South Wales the period is twenty years and in Victoria it is fifteen years. In all States and the Northern Territory except Queensland drilling for production must begin within six months of the granting of the lease. In Queensland the period is within three months. Sound oilfield practice and approved safety measures must be observed at all times.

*Off-shore. The Petroleum (Submerged Lands) Act 1967* was assented to on 22 November 1967. This Act is the instrument whereby the control and safeguarding of the exploration for, and the exploitation of, petroleum resources on the territorial sea-bed, and on the outer continental shelf are assured. Complementary legislation was passed by each State Government and by the Federal Government, the laws becoming fully effective on 1 April 1968.

The State Governments administer the legislation and collect all rents and fees, but the granting of tenements is subject to Federal Government approval, because of its commitments on defence, customs, navigation, external affairs, etc.

Basically, the legislation consists of a two-stage system of tenements—exploration and production.

*Exploration Permit.* All off-shore areas are divided into graticular blocks, each being 5 minutes of arc of longitude by 5 minutes of arc of latitude. This approximates to 30 square miles in Northern Australia and 25 square miles in Southern Australia, the reduction being due to the decrease in latitude length from the Equator to the South Pole. An Exploration Permit may be granted for a maximum of 400 such blocks (10–12,000 square miles), and covers all forms of exploration, including drilling, but all work programmes are subject to Government approval. There is no limit to the number of permits which may be granted to any one holder. The initial term is six years, with successive renewal periods of five years each. At each renewal, the holder is required to surrender one half of the permit area, with Governmental discretion to allow a minimum area of sixteen blocks (400–480 square miles).

An annual fee equivalent to \$5 per block, (\$100 minimum) is payable to the adjacent State in respect of each permit.

*Production Licence.* On discovery of petroleum, the permittee must nominate one block as the centre of a 'location' comprising all available contiguous blocks, thus giving a 'location' of nine blocks (three by three). Within two to four years thereafter, the permittee may apply for a primary Production Licence covering not more than five blocks in the 'location', the remaining four blocks reverting to the Crown. The licensee may apply for a secondary licence for any or all of these four blocks. The State may offer for sale any location blocks which the holder of a primary licence may not wish to retain.

The standard royalty payable is 10 per cent of the well-head value of the petroleum produced if only the first five blocks are retained. Should a secondary licence be granted for any or all of the remaining four blocks, an over-riding royalty of up to 2½ per cent is applicable and is negotiated between the adjacent State and the licensee, which would raise the total royalty payable up to a maximum of 12½ per cent of the well-head value.

Royalty is shared between the State and the Federal Governments on a 60:40 basis in the 'primary' case, and the State retains all overriding royalties in the 'secondary' case. The State also receives an annual licence fee of \$3,000 per block in each licence, and the proceeds from sales of relinquished blocks.

Production licences are issued for a term of twenty-one years, with the right of renewal for further periods of twenty-one years.

The only licences issued so far under this legislation have been for the Gippsland Shelf prospects, where primary and secondary licences were granted over the maximum 'location' of nine blocks for each of the four fields to be developed initially. The following table shows rates of royalty and expiry dates:

#### LICENCES ISSUED FOR GIPPSLAND SHELF

Field	Royalty Rate	Licences Expire
	%	
Barracouta . . . . .	11	31.3.88
Marlin . . . . .	11	31.3.88
Halibut . . . . .	12½	13.5.89
Kingfish . . . . .	12½	17.7.89

The off-shore legislation gives the holder of a production licence a preferential right to a pipe-line licence. This licence allows the construction and operation of a marine pipeline for transmission of petroleum from field to shore. Licence renewal is available on expiry.

#### AREAS OCCUPIED UNDER PETROLEUM EXPLORATION AND DEVELOPMENT TITLES : STATES AND NORTHERN TERRITORY, 1964 TO 1968

(\*000 acres)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Total
1964 . . . . .	176,768	64,895	595,865	351,526	831,948	35,325	216,188	2,272,518
1965 . . . . .	156,439	58,921	609,058	376,326	762,921	54,375	268,673	2,236,713
1966 . . . . .	151,122	43,561	621,506	371,236	672,609	54,775	289,144	2,208,953
1967 . . . . .	117,020	49,786	389,780	353,634	643,158	59,342	222,353	1,840,073
1968(a) . . . . .	77,593	51,436	327,714	323,844	549,854	54,237	156,318	1,546,101

(a) To 30 June 1968.

#### Mineral royalties

The collection by governments of royalties for the production of minerals within their area of authority is an internationally accepted practice. In Australia the responsibility for mineral royalties is largely a State concern, and all States currently collect some form of mineral royalty payments. In the past most States have relied on an established system of standard rates which were uniform for all producers of any particular mineral in the State concerned. These charges were either a fixed monetary amount per ton (e.g. 5c per ton on gypsum mined in New South Wales) or an *ad valorem* royalty (e.g. 1.5 per cent of gross value of gold produced in New South Wales).

In recent years there has been an important basic change in the system of establishing royalty commitments, and it is now quite common for State Governments to negotiate special royalty rates with companies which are seeking mineral leases for large scale developments: These royalty rates may vary, depending on whether production is for export or for domestic processing. The rates for a particular mineral may also vary between producers. Important examples of this type of royalty agreement are the iron ore development agreements in Western Australia and coal development agreements in Queensland. Mineral royalties received by State Governments in recent years are shown in the table below.

**MINERAL ROYALTY RECEIPTS: STATES AND NORTHERN TERRITORY**  
1963-64 TO 1967-68  
(\$)

State or Territory	1963-64	1964-65	1965-66	1966-67	1967-68
New South Wales . . . . .	5,090,622	19,946,772	24,317,168	16,326,973	11,029,697
Victoria(a) . . . . .	94,072	494,128	546,117	597,639	661,214
Queensland . . . . .	642,560	1,201,264	1,183,046	2,241,575	1,711,503
South Australia . . . . .	860,371	926,984	985,560	1,091,582	1,036,552
Western Australia . . . . .	243,182	291,354	478,295	2,639,895	6,237,593
Tasmania . . . . .	712	1,376	2,570	6,306	11,105
Northern Territory . . . . .	68,682	80,894	88,727	110,574	290,701

(a) Includes, in addition to mineral royalties receipts, mine-tailing licences and rents.

### Control of exports

The Commonwealth Government maintains export controls over certain minerals and metals. These controls are enforced by means of Customs (Prohibited Exports) Regulations as amended from time to time by Statutory Rules. The Commonwealth authorities having jurisdiction over mineral and metal exports, together with the relevant products, are listed below. A clearance to export is needed in each case.

*Department of National Development*—iron ores, beneficiated iron ores and iron concentrates; mineral sands (whether treated or untreated), and concentrates of mineral sands, containing zircon, rutile or ilmenite; manganese ores; beryllium ores and concentrates; tin ores and concentrates, refined tin in the form of ingots or in any other refinery form, and any of the following materials from which tin may be obtained, being materials resulting from the refining of tin, that is to say residues, slag, dross, dust and other wastes; copper matte, blister copper, copper anodes, copper cathodes, copper ingots, copper rods, copper scrap, copper refinery shapes in the form of ingots, wire bars, billets, cakes, rolling blocks, or ingot bars; copper alloys in the form of ingots, billets, cakes, rolling blocks, or ingot bars; copper alloy scrap; any of the following materials from which copper may be obtained, that is to say, residues, speiss, slag, dross, scale, sweepings, ash, sludge, slime, dust and wastes.

*Department of Primary Industry*—phosphate rock, phosphate and superphosphate, and fertilisers containing phosphate or superphosphate.

*Australian Atomic Energy Commission*—minerals, raw and treated (including residues and tailings) containing more than 0.05 per cent of uranium or thorium, singly or together; uranium and thorium minerals including pitchblende and monazite; uranium, thorium, beryllium and lithium metals, compounds and alloys; hafnium-free zirconium metal, alloys and compounds; nickel metal in certain forms.

In addition to these controls which are, in general, of fairly long standing, the Commonwealth Government has imposed export controls on copper and copper-bearing materials in recent years. These controls have been administered by the Department of National Development. The Commonwealth Government announced on 5 March 1969 that the ban on the export of copper scrap and ingots, and copper alloy scrap and ingots would be continued. Export permits are freely issued for primary copper materials, copper anodes (for electro-plating purposes) and copper rods. Exports of copper scrap and ingots and copper alloy scrap and ingots are in general prohibited, but consideration will be given to the issue of export permits for ingots of certain copper master alloys, and nickel silver (copper-based) scrap contaminated with solder or certain other metals. Export permits are generally issued also for copper residues, dross, ashes, slag and similar materials.

Export controls on tin and other tin-bearing materials were introduced by the Commonwealth Government on 23 December 1968 for reasons arising from Australia's membership of the International Tin Agreement. Under the provisions of the Agreement Australia was requested by the International Tin Council to co-operate with other producers of tin by way of exercising some restraint on its exports of tin.

### Joint Coal Board

The Joint Coal Board was established in 1946 under joint legislation of the Commonwealth and of the State of New South Wales to carry out special administrative functions in regard to the New South Wales black coal mining industry. A summary of these functions is given below.

- (i) To ensure that coal is produced in the State of New South Wales in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries;
- (ii) to ensure that the coal resources of the State are conserved, developed, worked, and used to the best advantage in the public interest;
- (iii) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades, and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and
- (iv) to promote the welfare of workers engaged in the coal industry in the State.

### Australian Atomic Energy Commission

During 1953, Commonwealth legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilisation of uranium in Australia. This Act, the *Atomic Energy Act 1953*, superseded the *Atomic Energy (Control of Materials) Act 1946*, but retains a provision of that Act which provides for the control of substances which could be used for production or use of atomic energy.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. The Commission functions under the direction of the Minister for National Development.

## Government assistance

The Commonwealth Government and the various State Governments provide assistance to the mineral industry in a variety of ways. The main forms of assistance are discussed below.

### Commonwealth Government assistance

Assistance provided by the Commonwealth Government takes the form of income taxation concessions, subsidies, bounties, and technical assistance mainly through the work of the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization. A table showing direct Commonwealth Government payments to sectors of the mineral industry is included on page 1004.

*Income taxation concessions.* One-fifth of the net income derived from mining for prescribed minerals in Australia or the Territory of Papua and New Guinea is exempt from tax. Principal minerals to which this concession applies are as follows: asbestos, bauxite, radio-active ores, rutile and zircon; and ores of copper, nickel and tin.

Income derived from mining principally for gold in Australia or the Territory of Papua and New Guinea is exempt from tax. The exemption is also available in respect of income derived from mining principally for gold and copper if the value of the gold obtained is not less than 40 per cent of the value of the total output.

Dividends paid wholly and exclusively out of exempt mining income are also exempt from tax.

One-third of call moneys paid by resident and non-resident investors on non-redeemable shares in a company, whose principal business is mining or prospecting for minerals in Australia or the Territory of Papua and New Guinea, is allowable as a deduction from the investors' assessable income. Where the shares in such a company are issued after 9 May 1968, the deduction is dependent upon the company lodging a declaration that the call moneys have been, or will be, expended exclusively on the search for minerals (including petroleum) obtainable by mining.

Other valuable assistance has been given in the form of certain taxation concessions to encourage the search for petroleum and other minerals. Resident investigators are permitted, for tax purposes, to deduct from their assessable income all application, allotment and call moneys paid for shares issued by petroleum exploration companies or companies engaged in prospecting or mining for other minerals obtainable by mining. These deductions are allowable only if the company elects to forgo an equivalent amount of the special deductions for capital expenditure to which it would otherwise be entitled. Many companies engaged in exploring for petroleum and other minerals have elected to pass on this benefit to their shareholders.

**Special deductions for capital expenditure** incurred in the discovery and mining of petroleum are allowable to a company deriving income from the sale of petroleum, and products of that petroleum, mined by the company in Australia or the Territory of Papua and New Guinea. A company is entitled to these deductions only when it produces Australian petroleum in commercial quantities. The general effect of the deductions is to free the proceeds from the sale of Australian or Territory petroleum and its products from tax until all allowable capital expenditure has been fully recouped. Dividends paid wholly and exclusively out of profits so freed from tax are exempt.

Capital expenditure allowable to petroleum exploration companies includes, broadly, the cost of exploratory surveys, drilling and well-head plant, access roads and expenditure on housing and welfare.

A company mining or prospecting for minerals other than petroleum and gold may also be allowed special deductions for capital expenditure. Broadly, allowable capital expenditure includes expenditure on exploration and prospecting, preparation of a site for extractive mining operations, buildings, other improvements and plant necessary for those operations, access roads, certain treatment plant and housing and welfare.

The allowable capital expenditure of a general mining company may be deducted over the life of the mine, or twenty-five years, whichever is the lesser. Alternatively, the mine owner may elect to have the allowable capital expenditure deducted in the year it is incurred or, where appropriations have been made for such expenditure to be incurred in the following year, the deduction may be allowed in the year of the appropriation. Annual deductions for depreciation on mining plant may be allowed in lieu of spreading the cost over the life of the mine. Expenditure on housing and welfare may, at the option of the mine owner, be allowed over the life of the mine, or five years.

Special deductions are allowable for capital expenditure incurred on certain transport facilities used primarily and principally in relation to minerals mined in Australia, for the transport of raw minerals and certain specified products obtained from the processing of such minerals, or for transporting petroleum between the oil or gas field and a refinery or other terminal. The special deduction applies to expenditure incurred on a railway, road, pipe-line or similar transport facility. Allowable expenditure on transport facilities is deductible in equal annual instalments over a period of ten years.

*Petroleum search subsidy.* In 1957 the Commonwealth Government introduced the *Petroleum Search Subsidy Act 1957* whereby stratigraphic drilling operations were subsidised to the extent of 50 per cent of cost. The *Petroleum Search Subsidy Act 1959* widened the scope of operations for which subsidy was offered to include all types of geophysical surveys and off-structure drilling operations. Another amendment in 1961 further widened the scope of the 1959 Act to provide subsidy for test drilling and detailed structure drilling operations. It also provided for the calculation of drilling subsidies on a footage basis as an alternative to the total cost basis. A sum of \$10 million was allocated to the petroleum search subsidy scheme for 1962-63 compared with an allocation of \$5.4 million in the previous year. Applications for subsidy increased to such an extent, however, that in spite of the increased allocation, the maximum rate of subsidy was reduced from 50 per cent of the allowable cost of approved operations to 30 per cent.

The *Petroleum Search Subsidy Act 1959-1964* was amended in June 1967 to extend Commonwealth subsidy for a further one year. The *Petroleum Search Subsidy Act 1959-1967* provides subsidy for approved geophysical surveys and test and stratigraphic drilling operations; bore-hole surveys and detailed structure drilling are no longer eligible. As in the previous Act, an applicant may elect to receive subsidy for both types of drilling operations on either a footage basis or a total cost basis. In addition, the production testing of any well approved for subsidy is also eligible for additional subsidy. Under the Act the Minister may vary the rates of subsidy for prescribed operations, but they may not exceed one-half the total cost. The present rates of subsidy for approved operations on a cost basis are 30 per cent for test-drilling and 40 per cent for stratigraphic drilling. The rate for all types of geophysical operations is 30 per cent. The 1959-1967 Act also specifies that exploration for petroleum on the Australian continental shelf is eligible for subsidy retrospective to 1959. The Federal budget for 1968-69 contained an appropriation of \$19.3 million for subsidies under the Act. Payments under this Act in each of the years 1964 to 1968 are shown in the table on page 1004.

On 28 October 1964 the Minister announced that action was necessary to limit the burden of the Commonwealth subsidy scheme on the Australian taxpayer in view of the many recent encouraging discoveries of oil and gas which were now providing the incentive to further exploration. To this end the Minister announced that operations within certain defined areas around discovery wells and fields would not be approved for subsidy. For the present, projects in the following areas would not be eligible for subsidy: twenty miles from a gas well; thirty miles from an oil well; forty miles from a gas field; fifty miles from an oil field. Specified areas excluded from subsidy payments are periodically announced by the Minister.

*Pricing of Australian crude oil.* Early in 1965 the Tariff Board conducted a public inquiry to determine an appropriate price for Australian crude oil, having regard to the Commonwealth Government's desire to encourage the search for oil and the consequent need to offer sufficient incentive to exploration companies. At the same time the Government indicated that it was anxious to prevent or minimise increased costs of petroleum products to consumers and to ensure that refineries using Australian crude oil were not detrimentally affected in relation to other refineries. Evidence was heard from oil exploration, marketing and refining interests, government officials, coal and power interests, and major users of refined petroleum products. The Tariff Board recommended at that time that Australian crude oil should be valued at \$US 2.48 (\$A 2.21) a barrel at the nearest refinery centre, plus a differential for the quality of the oil produced. The Government adopted the Tariff Board's recommendations, and raised the incentive margin to 67 Australian cents a barrel; this margin to apply to all Australian crude oil producers.

To ensure that indigenous crude oil is used to the maximum extent in Australian refineries, the Government also adopted the Tariff Board's recommendation to impose penal import duties of 0.8 cents a gallon on crude oil and 2.4 cents a gallon on motor spirit to be paid by the companies which do not take their share of local crude oil. The share of local crude to be taken will be based on the importer's share of total imports of refinery feedstock or refined products or both.

Any oil found in the Territory of Papua and New Guinea will be covered by these policies in the same way as oil found in Australia.

Under these arrangements the price of Moonie crude is \$A3.14 a barrel delivered Brisbane, broken down as follows: crude oil value \$2.21; incentive margin \$0.67; quality differential \$0.26.

Subsequently, the Barrow Island field began production and is \$3.24 a barrel delivered Kwinana.

This pricing structure was to remain operative until 17 September 1970.

However, the discovery of very large crude oil reserves in the Gippsland Shelf fields, due to begin production in 1969, revealed that this pricing structure could result in the Australian consumer paying more for indigenous petroleum products, than for similar products refined from imported crude oils. Following negotiations with the Commonwealth Government the Gippsland Shelf operators agreed to forego the \$0.67 a barrel incentive, plus a further \$0.05 per barrel. This will result in the pricing of Gippsland Shelf crude oil at \$2.47 per barrel in the early stages of production and \$2.44 per barrel in the third quarter of 1970 to 17 September 1970, i.e. the original price of \$3.19 minus 72 cents (incentive plus 5 cent discount). The further reduction to \$2.44 is a quality differential reduction of 3 cents as heavier crude oils commingle with the stream.

An agreement was reached between the Commonwealth Government and representatives of private enterprise on the price structure for indigenous crude oil for the five-year period commencing 18 September 1970.

Gippsland Shelf crude oil will be priced at \$2.06 per barrel f.o.b., Long Island Point, Westernport. This price is calculated as follows:

	<i>per barrel</i>
	\$
Weighted average posted price as at 10 October 1968 of principal crudes imported into Australia . . . . .	1.62
less weighted average discounts as at 10 October 1968 . . . . .	0.26
	<hr/>
	1.36
plus weighted average overseas freights as at 10 October 1968 . . . . .	0.46
Wharfage and other charges as at 10 October 1968 . . . . .	0.07
	<hr/>
	1.89
less a deduction for coastal freight . . . . .	0.09
	<hr/>
	1.80
	<hr/>

To this, the quality differential of 26 cents per barrel is added giving a total of \$2.06 per barrel.

Moonie crude oil on the same basis, for the five-year period will be \$2.15 per barrel f.o.b. Brisbane, since the coastal freight deduction of 9 cents per barrel does not apply.

Barrow Island crude will be the basic \$1.89 per barrel plus a quality differential of 32 cents, giving a total of \$2.21 per barrel f.o.b. Kwinana.

The price structure of any indigenous crude will be subject to any changes in composition and quality that might occur during the course of production.

*Assistance to the gold-mining industry.* Assistance to the gold-mining industry by subsidy was introduced at a time of rising costs in the industry and fixed official world price for gold. Because many producers were faced with the likelihood of closing down, the Government decided to subsidise marginal producers in Australia and the Territories of Papua and New Guinea. Under the *Gold-Mining Industry Assistance Act 1954* a producer, the value of whose gold output exceeded 50 per cent of the total value of his mine output, was eligible for assistance, subject to certain conditions, on the production of gold from 1 July 1954. The assistance scheme has been reviewed on a number of occasions since the Act was originally passed, and some liberalisations have been approved, including increases in the rates of subsidy payable authorised in amendments enacted on 22 October 1957, 22 May 1959 and 2 June 1965.

Under the Act as it now stands the subsidy payable to small producers whose annual deliveries do not exceed 500 fine oz is \$6 per fine oz, irrespective of cost of production. For large producers, subject to certain provisions, the rate of subsidy payable is an amount equal to three-quarters of the excess of the average cost of production over \$27 per fine oz, with a maximum amount of subsidy of \$8 per fine oz. A producer whose deliveries during the year exceed 500 fine oz may elect to be treated as a small producer. In this case the subsidy rate payable per fine oz on total deliveries is \$6 reduced by 1c for each fine oz by which deliveries exceed 500 fine oz. The benefit under this provision terminates when deliveries in a year reach 1,100 fine oz. Where a producer receives an amount in excess of the official price of \$31.25 per fine oz as a result of sales on overseas premium markets or otherwise, the subsidy payable is, with effect from 1 July 1968, reduced by seventy-five per cent of the amount of the excess. Prior to 1 July 1968 subsidy was reduced by the full amount of the excess.

Payments under the Act apply to production until 30 June 1970. Payments under the Act commenced in March 1955, and the amounts paid to gold producers in the various States and Territories of Australia in each of the years 1964 to 1968 are shown in the table on page 1004.

The purpose of the *Gold Mines Development Assistance Act 1962* was to provide assistance to gold producers in Australia and the Territories of Papua and New Guinea not receiving subsidy under the *Gold-Mining Industry Assistance Act 1954-1962*, in order to increase the rate of their development work and so to add to their proved reserves of gold-bearing minerals. With the liberalisation of the *Gold-Mining Industry Assistance Act* from 1 July 1965, the Commonwealth Government decided not to extend the development assistance legislation, which, accordingly, lapsed on 30 June 1965.

*Assistance to the copper mining industry.* After a Tariff Board investigation, assistance was accorded to the industry in 1958, partly by import duty and partly by bounty. The assistance was continued until 31 December 1965. However, because of the unsettled conditions in the industry at this time, it was decided to defer a Tariff Board Inquiry and to continue the existing bounty assistance until 31 December 1966 unless an earlier date of cessation was proclaimed. Under the *Copper Bounty Act 1958-1966* bounty was payable, subject to specified conditions, on refined copper sold for use in Australia. The rate of bounty was \$70 per ton when the overseas price, as determined by the Minister for Customs and Excise, was \$580 (£Stg232) or less. When the overseas price rose above \$580, the bounty fell by the same extent, so that no bounty was payable when the overseas price was \$650 (£Stg260) or more. The Act lapsed on 31 December 1966. Payments under the Act in each of the years 1964 to 1966 are shown on page 1004. The import duty continues in operation, and is imposed on imports of copper when the overseas price falls below \$580 a ton, to the extent of \$1 for each \$1 that the price falls below \$580. Including freight and other charges, the landed cost of imported copper is thus expected not to fall below \$610 a ton.

*Assistance to producers of sulphuric acid and iron pyrites.* Following recommendations of the Tariff Board, the *Sulphuric Acid Bounty Act 1954* was extended for a period of five years from 1 July 1960. Arising from these same recommendations, the *Pyrites Bounty Act 1960* was enacted on 15 December 1960 to be operative for a period of four and a half years from 1 January 1961. The Acts provide for bounties to be paid, subject to specified conditions, on sulphuric acid produced from prescribed materials of Australian origin and to producers of iron pyrites. In June 1965 it was announced that assistance under these Acts would continue until 31 December 1965. Both of these Acts have now been extended by legislation to 30 June 1969. Payments under the above Acts in each of the years 1964 to 1968 are shown in the table on page 1004.

*Payments to producers of phosphate fertilisers.* The *Phosphate Fertilizers Bounty Act 1963-1968* provides for a bounty to be paid on superphosphate and ammoniated phosphate fertilisers manufactured and sold for use in Australia on and after 14 August 1963. A recent amendment to this Act provides that approved trace elements, compounds or substances, when added to superphosphate, shall be deemed to be superphosphate for purpose of bounty eligibility. The bounty is based on the fertiliser value of superphosphate as measured by its soluble content of phosphorus pentoxide. A standard grade of superphosphate containing 20 per cent, plus or minus 0.5 per cent, soluble

content of phosphorus pentoxide qualifies for the full bounty of \$8 per ton. When the phosphorus pentoxide content of the superphosphate is less than 19.5 per cent or above 20.5 per cent, bounty is payable at the rate of \$40 for each ton of contained phosphorus pentoxide. Bounty in respect of ammonium phosphate is payable at the rate of \$40 for each ton of the phosphorus pentoxide content of the ammonium phosphate. In addition to standard grade superphosphate, 'double' and 'triple' superphosphates are produced in Australia and bounty on these products is payable in accordance with the phosphorus pentoxide content. The intention of this Act is to assist consumers of superphosphate (primary producers), to this end the benefits of bounty are required to be passed on to the end user of the bountiable product. The Act is due to expire on 31 October 1971. Payments under the above Act in each of the years 1964 to 1968 are shown in the following table.

**COMMONWEALTH GOVERNMENT PAYMENTS TO THE MINERAL INDUSTRY  
AUSTRALIA, 1964 TO 1968**

(\$)

Year	Petroleum exploration (a)	Gold mining (b)	Copper mining (c)	Pyrites mining (d)	Sulphuric acid production (e)	Phosphate fertiliser production (f)
1964 . . . .	9,121,910	1,382,124	1,065,782	1,320,668	2,046,542	22,772,978
1965 . . . .	10,412,842	1,984,966	5,262	1,113,964	2,138,914	22,604,562
1966 . . . .	10,154,169	3,784,241	1,314	288,319	1,397,679	25,817,516
1967 . . . .	10,326,587	3,858,763	..	45,714	1,382,485	25,543,785

**Bureau of Mineral Resources, Geology and Geophysics.** The functions of the Bureau of Mineral Resources, Geology and Geophysics are to explore, investigate and encourage the development of mineral deposits; to survey and assess the mineral resources of the Commonwealth and its Territories and to initiate and investigate proposals for their development; to interpret the results of completed surveys and recommend ways of remedying or meeting mineral deficiencies and to advise on all aspects of the mineral economy of Australia, including the best utilisation of mineral resources in the national interest; to carry out geological and geophysical surveys and investigations and advise on all aspects of applied geology and geophysics.

The Bureau comprises five branches under the Director: Operations, Mineral Resources, Geological, Geophysical, and Petroleum Exploration. The Operations Branch consists of three sections, Planning and Co-ordination, Publications and Information, and Administrative. It carries out central office functions, including planning and control of programme, assessment of results, co-ordination of activities, liaison, and distribution of information. The Mineral Resources Branch comprises the sections Mineral Economics, Mining Engineering, and Petroleum Technology, and is concerned largely with those aspects of the Bureau's work which involve studies of the mineral industry as a whole, and the preparation of advice and reviews for the Government, industry and the public. The Geological and Geophysical Branches are responsible for the principal field activities of the Bureau, and the operation of observatories; while the Petroleum Exploration Branch is concerned with the administration of the *Petroleum Search Subsidy Act 1959-1967* and is also engaged in the assessment of sedimentary basins in Australia and its Territories. The establishment of the Bureau is 622 officers, of whom 308 are professional. The budget for the financial year 1967-68 was \$18.0 million, of which \$11.8 million was provided for payment under the *Petroleum Search Subsidy Act 1959-1967*.

The Bureau maintains laboratories in Canberra and Darwin which are engaged on geochemical, geochronological and petroleum technological studies and basic research into the design and testing of geophysical equipment. The Bureau also maintains a volcanological observatory at Rabaul and geophysical observatories at Melbourne, Toolangi, Mundaring, Darwin, Port Moresby, Mawson and Wilkes (Antarctica), and Macquarie Island. The geophysical observatories are engaged in magnetic, ionospheric, and seismic investigations and are base stations for field operations.

**Commonwealth Scientific and Industrial Research Organization.** The activities of this body with respect to the mineral industry are discussed on page 1007 under Research.

**State Government assistance**

In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments

provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

*New South Wales.* State aid to assist metalliferous mining may consist of grants to assist the prospecting and or mining for gold and minerals, and for the purchase, removal and installation of mining plant or equipment. A quantity of mechanical equipment is also available in several localities for hire at reasonable rentals to prospectors and small mine operators, and district inspectors have geiger counters and scheelite detectors which are loaned to approved persons. In the year 1967-68 \$530,000 was made available for exploration work carried out by the Department and to give financial assistance to exploration groups and prospectors.

*Victoria.* Loans may be granted to assist prospecting and development or the purchase of machinery for gold mining. The Mines Department has stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities. Drilling with diamond, rotary and percussion drills is carried out by the Mines Department for mining companies and for general mineral exploration. The production of 1 : 63,630 and 1 : 250,000 series geological maps of the State is continuing and three quarters of the State is now covered by provisional 1 : 250,000 maps. Memoirs and Bulletins are being published regularly on specific regional geology and economic studies. Mineral Resources surveys for extractive industry materials, radioactive minerals and base metal ores are currently in progress. In addition a continual assessment is being made on the work carried out by Mineral Exploration Companies to ensure that a high standard of mineral search is maintained.

Detailed sedimentary basin studies are continuing in the Otway, Gippsland and Murray Basins to elucidate the stratigraphy and structure and evaluate the economic potential. The survey of the State's groundwater resources is now well advanced and a large amount of data is now compiled. In conjunction with this survey the development of provisional town supplies from groundwater sources is being investigated.

*Queensland.* Various forms of assistance to mining are made available by the Queensland Department of Mines. Grants are made from the Consolidated Revenue Fund for use on construction and maintenance of roads in mining areas. Advances are made from the Gold Mining Encouragement Fund for mining development work. This assistance is restricted to gold mines, and advances are repayable from proceeds of the mine, if any. From the Assistance to Metalliferous Mining Fund, plant such as jackhammers, compressors and pumps is purchased and maintained. Such plant is made available on hire, the rental payments being credited back to the fund. Prospecting assistance is made available in approved cases, the rates being \$5 a week for a single man and \$7 a week for a married man with dependants. This is not repayable. From the Advances to Mining Fund, assistance by way of subsidy is advanced for mine development. This is repayable from proceeds of the mine. The department also maintains a treatment works for tin ores, etc. at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State battery at Charters Towers is available for the treatment of gold-bearing ores.

*South Australia.* The Department of Mines provides the following services and facilities to the mineral industry: (i) hire of drilling plant and mining equipment, drilling and testing of mineral deposits, financial assistance in approved cases for prospecting and mining development, development of sub-surface water supplies for farming, pastoral, irrigation, and mining purposes; (ii) geological examination of mineral deposits, water supply, dam foundation and drainage problems, guidance on mining legislation, and publication and issue of geological bulletins and maps. It also provides, through the Australian Mineral Development Laboratories, chemical and metallurgical and analytical and assay investigation, testing and treatment of ores and minerals, and petrographic, mineralogical and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

*Western Australia.* Prospectors receive assistance of either \$15 or \$17.50 a week according to the prospecting locality. North of the 26th parallel and within a defined area south of this lying largely outside the agricultural areas assistance is given to the extent of \$17.50 a week. In the remainder of the State prospectors receive \$15 a week. Provision is also made for the supply of some tools required for prospecting. There are twenty State batteries operating intermittently throughout the goldfields for the treatment of ore from prospectors and small mine-owners at a nominal charge. A cartage subsidy is also granted to such operators sending ore to State batteries for treatment. Provision is made for loans to mine-owners who require assistance to develop mines. The Government also has a drilling scheme, financing mine-owners on a \$1 for \$1 basis.

*Tasmania.* The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or de-watering of shafts, for construction of dams and water races, for testing and proving a deposit of any mining product, for developmental

work, and for diamond and other types of drilling. The Department has available for hire percussion and diamond drills for exploration, as well as a complete plant for small shaft sinking and tunnelling. Other assistance is rendered to the industry in the form of geological and engineering advice, through ore-dressing research into metallurgical recoveries, and the selection and design of treatment plant.

*Northern Territory.* To encourage the development of the mining industry the Northern Territory Administration operates two batteries for the treatment of miners' ores. The batteries are at Tennant Creek and at Mount Wells near Burrundie. The Tennant Creek battery is currently cyaniding the gold in accumulated tailings while the Mount Wells battery is crushing parcels of tin ores and small quantities of gold, lead and copper ores. The crushing charges are subsidised by government grants. In addition, the Administration provides cartage subsidies and financial advances to encourage miners to carry out mining operations. Assistance is also given to the industry by drilling encouraging prospects. Roads and water supply services are provided and maintained for mines under active development throughout the Territory.

## Research

Research investigations into problems of mining, ore-search, ore-dressing and metallurgy are conducted by Governmental bodies, by universities, by private enterprise, and by combined efforts of these bodies. A summary of their functions follows.

### Australian Atomic Energy Commission

The Australian Atomic Energy Commission conducts research at its laboratories at Lucas Heights in Sydney on the development of nuclear power, including research on nuclear materials and on metals and ceramics used for nuclear power. Research conducted by the Commission is discussed in detail in the chapter Education, Cultural Activities and Research.

### Australian Mineral Development Laboratories

Contract research and technical consulting for the mineral and associated industries is undertaken by The Australian Mineral Development Laboratories (Amdel), at Adelaide. This organisation is sponsored by the South Australian Government, the Commonwealth Government and the Australian Mineral Industries Research Association (*see* Research by private enterprise, page 1007). The laboratories have sections dealing with mineralogy, petrology, analytical chemistry, chemical and metallurgical engineering, ceramics, materials technology and operations research.

### The Baas Becking Geobiological Research Laboratory

In 1965 the Baas Becking Geobiological Research Laboratory was established in the Bureau of Mineral Resources Building in Canberra, under the joint sponsorship of the Commonwealth Scientific and Industrial Research Organization, the Bureau of Mineral Resources, and the Australian Mineral Industries Research Association (*see* Research by private enterprise, page 1007). The broad objective of the research work is to investigate the biological and chemical processes associated with the formation of mineral deposits of the stratiform type.

Initial emphasis is being placed on investigations to establish the relationship of biological factors to the natural physico-chemical environment with particular reference to the possible role of these factors in the formation and transformation of sulphide minerals. Investigations will include the response of micro-organisms to heavy metals; biochemistry and physiology of oxidative and reductive sulphur transformations; role of organisms in the concentration of mineral elements; physico-chemistry of low-temperature mineral synthesis; mobility of sulphides under the influence of temperature and pressure and the interaction of mineral types; and biological leaching of low-grade sulphide minerals.

The laboratory is named after the late Dr L. G. M. Baas Becking, who was one of the first to recognise the possibility that biological, in particular microbial, activity may play an important part in the genesis of sulphide ores. Dr Baas Becking carried out research in this field while on loan to the Bureau of Mineral Resources from the C.S.I.R.O.

### Bureau of Mineral Resources, Geology and Geophysics

Mineral research by the Bureau of Mineral Resources is concerned with basic problems of mineral emplacement. Special studies are undertaken of: the sedimentary environment of potentially oil-bearing rocks; the genesis of continental and marine phosphate; the fundamental chemistry of metallic ore deposits; the structural, chemical, and stratigraphic contents of ore deposits; and geophysical interpretation by means of model testing.

For details of the functions of the Bureau of Mineral Resources, Geology and Geophysics, *see* page 1004.

### **Commonwealth Scientific and Industrial Research Organization**

Research for the mineral industry by the Commonwealth Scientific and Industrial Research Organization is undertaken mainly in the Divisions of Applied Mineralogy and Mineral Chemistry and in the Ore Dressing Investigations Laboratory. Work of a more specifically chemical engineering nature is undertaken in the Division of Chemical Engineering. All of these groups have laboratories in Melbourne. In addition, the Division of Applied Mineralogy has laboratories in Perth and Sydney, and the Division of Mineral Chemistry has a laboratory in Sydney.

The research programme of the Division of Applied Mineralogy is concerned mainly with the production and utilisation of natural and synthetic mineral products. Research is undertaken on cement and concrete, industrial refractories, engineering ceramics, clays, mineral-organic complexes, fillers, foundry materials, and the geochemistry of some economic minerals. The Division of Mineral Chemistry is undertaking research aimed at a more thorough evaluation of Australian minerals and their better utilisation through chemical, electrochemical and metallurgical processes. It includes studies on mineral exploration techniques, chemical upgrading of minerals, and the production of metals, and investigations on processes with possibilities for application in the exploitation of minerals. Work is continuing on the evaluation of coals from all the significant deposits in Australia, and on the technical problems of coal combustion in large power stations. In the Division of Chemical Engineering, projects of particular interest to the mineral industry include studies on the dynamics and automatic control of mineral processing operations such as grinding, classifying and flotation, fluidised-bed techniques, high-temperature extraction metallurgy and metal refining. The Ore Dressing Investigations laboratory undertakes research on problems arising in the processing of particular Australian ores. In addition, it is collaborating with interested firms in long-term studies on the chemistry of flotation pulps and the assessment of the resistance of ores to grinding.

All C.S.I.R.O. groups taking part in mineral research are in close contact with industry. Several projects are being developed by collaboration between C.S.I.R.O. and Australian firms and a significant proportion of the Organization's mineral research is now carried on with funds provided by industry. A committee set up by the Advisory Council of C.S.I.R.O. is continuing to examine and advise on research needs in the mining and processing industries in the changing environment.

### **National Coal Research Advisory Committee**

The functions of the National Coal Research Advisory Committee, which began operating in January 1965, are to report on all programmes of research into coal winning, beneficiation and utilisation in Australia, as well as developments in these fields overseas; and to advise the contributing Governments and industry as to the disposition of funds made available for such research. The Commonwealth matches additional funds made available by State Governments and by the coal producing and consuming industries. In the first four years of operation of the scheme additional funds of \$520,000 have been made available in each year for increased coal utilisation research, bringing total expenditure on coal research in Australia to approximately \$3.0 million annually. In association with the setting up of the National Coal Research Advisory Committee, a new company, the Australian Coal Industry Research Laboratories Limited, was formed in late 1965 to take over the research and industrial service activities of the Australian Coal Association (Research) Limited, which was financed largely by the coal producing industry. Additional funds have been made available to this company from the coal producing and consuming industries and from State and Commonwealth Governments to permit the expansion of the work of the former Australian Coal Association (Research) Limited initially in the particular direction of coal utilisation research, latterly in the direction of coal winning and beneficiation research. The constitution of the Advisory Committee and the establishment of the laboratories have brought into effect the major recommendations of the Coal Utilisation Research Advisory Committee which tabled its Report to Parliament in 1962.

### **University Research**

The various universities in Australia carry out research into various aspects of the mineral industry such as geology, ore mineralogy and genesis, mining techniques, mineral processing, extractive metallurgy, and materials and metals technology.

### **Research by private enterprise**

Most large mining and smelting companies have laboratories dealing with their own individual immediate problems. Private industry has formed the Australian Mineral Industries Research Association, which is composed of fifty members representing a large proportion of the mining, metallurgical and related companies operating in Australia at present. It was set up in 1959, chiefly to represent private industry in the management of the Australian Mineral Development Laboratories, but the Association now finances other research work into geology, mining and ore-dressing at Universities, C.S.I.R.O. and elsewhere. Expenditure for the year 1967-68 was \$106,024.

In addition, the Association provided \$50,000 to the Australian Mineral Development Laboratories toward the cost of a new building (the first of four such payments) and an advance of \$20,000 to underwrite the formation of International Technical Services Limited. The latter is a new non-profit consulting company jointly owned by the Association and Battelle Memorial Institute, Columbus, U.S.A. and associated with the Australian Mineral Development Laboratories.

### International relations

Because Australia is a large supplier of certain minerals to the rest of the world and because the welfare of the domestic industry depends to a large extent on the maintenance of a high level of exports, international relations are of considerable importance to the industry, and the Commonwealth Government takes an active role in international consultations and discussions relating to minerals. The most important international commitments are discussed below.

#### International Tin Agreement

The First International Tin Agreement (of the post-war period) was in operation for five years from 1 July 1956 to 30 June 1961. This Agreement was subsequently replaced by the Second International Tin Agreement, which came into force provisionally on 1 July 1961 and definitively on 21 February 1962.

This Agreement was for a period of five years and had the following objectives:

- (a) to prevent or alleviate widespread unemployment or under-employment and other serious difficulties likely to arise from maladjustments between the supply and the demand for tin;
- (b) to prevent excessive fluctuations in the price of tin and to achieve a reasonable degree of stability of price;
- (c) to ensure adequate supplies of tin at prices which are fair to consumers and provide a reasonable return to producers; and
- (d) to provide a framework for the consideration of measures to promote the progressively more economic production of tin, while protecting deposits of tin from unnecessary waste or premature abandonment, thus facilitating expansion in world consumption of tin; and to keep under review the long-term need for the development of new deposits of tin.

The Third International Tin Agreement, which came into force provisionally on 1 July 1966 and definitively on 21 March 1967, contains several additional objectives:

- (a) to ensure conditions which will help achieve a dynamic and rising rate of production of tin on the basis of a remunerative return to producers, which will help secure an adequate supply at prices fair to consumers and which will help provide a long-term equilibrium between production and consumption;
- (b) in the event of a serious shortage of supplies of tin occurring or being expected to occur, to take steps to secure an increase in the production of tin and a fair distribution of tin metal at equitable prices.

Although the framework of the Third Agreement is basically that of the Second, objectives have been broadened in line with the principles of the United Nations Conference on Trade and Development (UNCTAD) and, as such, emphasise the need for expansion of export earnings in the developing countries. Thus the emphasis has been shifted from surplus production and export controls inherent in the Second Agreement to one of increased production in the new Agreement.

The Agreement is operated by the International Tin Council, which is made up of the following Governments: Australia, Austria, Belgium, Bolivia, Canada, Czechoslovakia, Democratic Republic of the Congo, Denmark, France, India, Indonesia, Italy, Japan, Korea, Malaysia, Mexico, Netherlands, Federation of Nigeria, Spain, Thailand, Turkey, United Kingdom. Member Governments participate as producing or consuming countries. The producing countries hold a total of 1,000 votes, distributed so that each country receives five initial votes and an additional number corresponding to its percentage as laid down by the Agreement. The consuming countries hold a total of 1,000 votes also distributed so that each country receives five initial votes and an additional number proportionate to tonnages. The allocation of votes in each category is periodically reviewed.

The International Tin Agreement establishes floor and ceiling prices for tin and, by the medium of a buffer stock and remedial trading on the London Metal Exchange, aims at confining the price within these limits. The buffer stock was established with contributions from producing countries, equivalent to 10,000 tons of metal, wholly made in cash at £stg1,000 a ton; a further £10 million remains on call from the producer members and a standby-credit facility of £10 million from a consortium of banks. The original buffer stock price range under the Third Agreement was: ceiling £1,400—must sell; £1,300 to £1,400—may sell; £1,200 to £1,300—no action; £1,100 to £1,200—may buy; floor £1,100—must buy. However, following devaluation of sterling, the buffer stock price range was adjusted to the following limits: £1,630—must sell; £1,515 to £1,630—may sell; £1,400 to £1,515—no action; £1,280 to £1,400—may buy; £1,280—must buy.

On 18 September 1968 the International Tin Council declared the period 19 September 1968 to 31 December 1968 to be a period of export control. The total permissible export amount during that period for the six producing members in the agreement, Bolivia, Congo D.R., Indonesia, Malaysia, Nigeria, and Thailand, was 42,950 long tons. The quotas established for the producer members represented a moderate cut, in effect some 4 per cent on reports in the second quarter of 1968. The Council also addressed an invitation to the Australian Government, asking that Australia limit its exports of tin to the same degree and for the same period as the producer members of the Agreement. The Australian Government introduced export controls on tin and tin concentrates as from 6 December 1968.

#### **International Lead-Zinc Study Group**

With the cessation of stockpile buying of lead and zinc by the United States Government in 1958, world producers were faced with the prospect of a serious imbalance between world supply and demand for these metals. To meet this problem a series of meetings of interested governments was held, at which Australia was represented. These meetings culminated in the formation of the International Lead-Zinc Study Group which was established in January 1960. The Study Group comprises the following Governments: Algeria, Australia, Austria, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Finland, France, the Federal Republic of Germany, Hungary, India, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Peru, Poland, the Republic of South Africa, Spain, Sweden, Tunisia, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia, Zambia. The Group provides opportunities for inter-governmental consultations on international trade in lead and zinc and for studies of the world situation in lead and zinc having regard especially to the desirability of providing continuous accurate information regarding the supply and demand position and its probable development.

### **MINERAL INDUSTRY STATISTICS**

Statistics presented in this chapter refer mainly to mining and quarrying, mineral exploration, and overseas participation in Australian mining industry. Data relating to mineral processing and treatment activities are included where appropriate to present a more complete picture of the place of minerals in the Australian economy.

#### **Mining and quarrying**

##### **Definition**

The mining and quarrying industry is defined for statistical purposes as including all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc., and ore-dressing and elementary smelting of gold and miscellaneous treatment of non-metallic minerals where these operations are carried out in an associated plant at or near the mine. However, establishments primarily engaged in smelting and or refining (including the smelting and refining sections of the large plants operated at Mount Morgan and Mount Isa in Queensland and at Mount Lyell in Tasmania) are excluded from the statistical definition of the mining industry and are classified to the manufacturing industry.

##### **Coverage**

The statistical coverage of establishments engaged in mining is considered to be satisfactory. However, coverage of establishments engaged in the quarrying of construction materials is incomplete in most States. This deficiency is due primarily to the inherent difficulty of obtaining complete lists of quarries (including those operated by government authorities), many of which operate intermittently and in different locations. There is difficulty also in obtaining satisfactory returns from quarries operated in conjunction with some other activity, e.g. roadmaking, brick-works, etc., and quarries operated in conjunction with large construction projects, such as the Snowy Mountains Scheme, are excluded from these statistics. In some States there have been deficiencies also in the collection of data for certain non-metal (excluding fuel) mining industries, mainly because these are outside the fields normally under the administrative control of Mines Departments. Products chiefly affected are clays, loam and silica.

##### **Sources of statistics**

Mining industry data (such as employment, costs, value of output, etc.) have been obtained annually since 1952 from the Mining and Quarrying Census. This Census is carried out in collaboration with the several Mines Departments and involves the uniform collection of particulars from all establishments employing on the average four or more persons during the period worked by the mine. A representative specimen collection form is included in the bulletin *Non-Rural Primary*

*Industries*, No. 3, 1964-65. For smaller mines either simplified census returns covering number of persons employed and value of output are collected, or these particulars are compiled from data made available by the Mines Departments. Oil search operations are excluded from the annual census, but the Bureau of Mineral Resources conducts an annual survey of these activities.

Mineral production statistics contained in this chapter consist, in the main, of data from the annual census and official statistics of the Mines Departments of the several States and of the Northern Territory Mines Branch. The particulars shown have been compiled as far as practicable on the standardised basis which has been used in Australia since 1950, and this presentation has involved some re-arrangement of official statistics published by the Mines Departments in some States. These statistics have been supplemented, as necessary, by data obtained from the Statisticians of the several States, the Bureau of Mineral Resources, Geology and Geophysics, the Joint Coal Board, and from several other sources.

#### Classification of mining and quarrying industry

The mining and quarrying industry is classified into four major groups, namely metal mining, fuel mining, non-metal mining (excluding fuel), and construction material quarrying. Mining and quarrying establishments are classified to these groups and to sub-divisions of these groups on the basis of the product or products of the establishments. This method of classification is straightforward for those establishments which produce only one product, but for mines and quarries which produce more than one product classification is not as simple a matter. Such establishments are classified according to the most important mineral produced in terms of value. Thus a mine producing, say, both tin and tungsten minerals would be classified as a tin mine if tin were the more important product by value, and as a tungsten mine if tungsten were the dominant product. There is, however, one important exception to this rule in that the mining establishment at Mount Isa is classified to the silver-lead-zinc sector rather than to the copper-gold sector.

For mines and quarries which produce more than one product it is not possible to apportion particulars of operations (such as employment, salaries and wages paid, costs) to the minerals produced. In practice, then, these data are recorded only as a total for each mine, and the mine is classified to an industry sector as outlined above.

Statistics relating to the structure of the industry, employment, production costs, value of additions and replacements to fixed assets, and value of output and production are given below and in the following pages.

#### Number of mines and quarries

The following tables show the number of mines and quarries which operated in each State and Territory in 1967 and in Australia for the years 1963 to 1967.

NUMBER OF MINES AND QUARRIES: STATES AND TERRITORIES, 1967

(a) Included in Other metal. (b) Incomplete. See Coverage, page 1009.

## Employment in mining and quarrying

*Persons engaged.* Statistics of persons employed in the mining and quarrying industry are derived mainly from the annual census of that industry. Data on the work force employed in the industry are also obtained from the population censuses of Australia. The population census figure for mining and quarrying includes a number of persons excluded from the mining and quarrying census employment figure, e.g. persons engaged in exploration activities, prospectors, head office employees, etc. The number of persons whose industry statements were classified to 'mining and quarrying' at the population census of 30 June 1966 was 56,343 out of a total of 512,994 for all primary industries, and 4,856,455 in the total work force. For further information see the chapter Employment and Unemployment and 1966 Census Bulletin No. 9.6, *Population, By Industry and Occupational Status, Australia*.

The following two tables are derived from mining census data and show the average numbers engaged in the various mining industries in each State or Territory in 1967 and in Australia for the years 1963 to 1967. The figures show the average number of persons employed during the whole year, including working proprietors.

MINING AND QUARRYING: EMPLOYMENT(a)

<b>Total—</b>								
Establishments . . . . .	1,209	558	727	375	280	177	87	3,413
Persons . . . . .	23,172	4,595	10,414	2,372	7,532	3,278	1,105	52,468

(a) Average during period worked. Includes working proprietors.

*Accidents in mining.* Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States, as varying criteria are used in determining what constitutes injury. In 1967, 35 persons were recorded as killed and 1,145 as injured in mining (excluding quarrying) accidents. Recorded deaths and injuries in that year in black coal mines were 12 and 339, silver-lead-zinc mines 5 and 252, gold mines 5 and 242. In mineral sands mining there were no recorded deaths and 42 injuries reported. Persons killed and injured in the construction material quarrying industry numbered 4 and 138 respectively in 1967.

#### Salaries and wages paid

Salaries and wages paid in the mining and quarrying industries in Australia during each year 1963 to 1967 are shown in the following table. Information regarding rates of wages paid in the mining industry is shown in the chapter Labour, Wages and Prices (page 265) and also in the *Labour Report*.

**MINING AND QUARRYING: SALARIES AND WAGES PAID(a), AUSTRALIA

## Value of output and production

The following tables show particulars of value of output on an ex-mine basis (local value of production) and value of production (net value of production) for recent years. *These statistics are on an industry basis and not by product.* A more detailed reference to the value of production of mining and quarrying and other industries together with a brief explanation of terms used will be found in the chapter Miscellaneous.

*Local value of mining and quarrying production.* The following tables show particulars of the local value of production of mining and quarrying for 1967 and earlier years.

(a) Local value (i.e. value of output at mine or quarry), less cost of power, fuel, light, and other materials and stores used; depreciation and maintenance costs have not been deducted.

**Quantities of principal minerals produced**

In the preparation of Australian mineral commodity production statistics the quantities and values of individual minerals produced are recorded in terms of the form in which they are dispatched from the locality of each mine. For example, in the case of metalliferous mines, the output is recorded as ore if no treatment is undertaken at the mine, or as a concentrate if ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the contents of metallic minerals and contents or average grade of selected non-metallic minerals are recorded. Whenever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a 'pay metal' or a 'refiners' prize' when present in the particular mineral. In general, other metallic contents which are not recovered are excluded. Individual mineral products are arranged in four groups corresponding to the major groups of the industry, namely metal mining, fuel mining, non-metal mining (excluding fuels), and construction material quarrying, referred to on page 1010. Particulars relating to uranium bearing minerals are excluded.

The following tables show particulars of the quantity of the principal minerals produced during 1967 and earlier years.

(a) Not available for publication. (b) Included with black coal. (c) Incomplete owing to difficulties of coverage. See scope and sources of statistics, page 1009.

NOTE. Particulars of the value of uranium concentrate produced are not available for publication and have been excluded from the table above.

Owing to the necessity of classifying individual mines according to the principal mineral produced, the values in the table on page 1015 for mining industry groups differ slightly in some cases from totals of the corresponding groups of mine products shown in the table above.

## Overseas participation in Australian mining industry

### Introduction

Any attempt to provide statistical information on the extent of overseas participation in local industry involves difficult problems of statistical concept and measurement. Broadly, there are two ways in which overseas participation may be measured. One is to examine the financial accounts of Australian companies and compare the value of *assets* of companies in which there is significant overseas investment with those other Australian companies. The other is to examine the *operations* (as expressed in terms of production, wages and salaries, output etc.) of establishments of Australian

companies in which there is significant overseas investment and compare their operations with those of establishments of other Australian companies. The second method has been adopted for a series of studies in overseas participation in the Australian mining industry.

#### Scope of the statistics

The statistics relate to the operations of establishments employing four or more persons in the mining and quarrying industry as defined for the annual mining and quarrying census except for establishments engaged in construction material quarrying and clay mining, which are excluded.

#### Classification of companies

The extent of overseas participation in the mining industry is measured by the operations of the establishments of companies in which there is direct investment from overseas (as determined by the annual survey of overseas investments). These are defined as follows.

- (i) Companies in Australia in which at least 50 per cent of the ordinary shares (or voting stock) is held by individual shareholders or companies resident in one overseas country, or where 25 per cent or more of the ordinary shares (or voting stock) is held by one company, or a group of companies, incorporated in one overseas country.
- (ii) Branches of companies incorporated overseas and registered in Australia as foreign companies.
- (iii) Wholly and partly owned subsidiaries and sub-subsidiaries, etc., of companies included in (i) and (ii) above, provided that the proportion of their equity which is attributable to overseas ownership does not fall below the percentage limits specified in (i) above.

Investment in ordinary shares (or voting stock) of Australian companies (including companies in which there is direct investment from overseas) where the proportion of shares held in a single country falls below the percentages specified in (i) above is defined as portfolio investment. Because of the difficulties encountered in determining the proportion of ordinary shares (or voting stock) of individual Australian companies held by portfolio investors overseas, *the figures for overseas participation in the mining industry exclude participation by way of portfolio investment.*

#### Further information available

In the following tables the degree of overseas participation is expressed in terms of value of production only. Further details in terms of the value of power, fuel and materials used, value of output, value of additions and replacements to fixed assets, salaries and wages paid, and average number of persons employed, as well as the value of production, may be found in the mimeographed bulletin *Overseas Participation in Australian Mining Industry, 1967.*

### OVERSEAS OWNERSHIP AND CONTROL

In analysing the extent of overseas participation in local industry it is usual to distinguish between two aspects, overseas ownership and overseas control.

#### Overseas ownership

Statistics which give a general indication of the degree of overseas ownership in terms of the value of production of Australian mining establishments are presented in the two following tables. In the compilation of these statistics the data for an establishment of a company in which there is no direct investment from overseas are allocated wholly to Australian ownership. The data relating to an establishment of a company in which there is direct investment from overseas are apportioned to overseas and Australian ownership according to the proportion of the ordinary shares (or voting stock) of the company that is held by the direct overseas investors.

However, an exception has been made to the strict application of the definition of direct overseas investment in the measurement of overseas ownership of the Australian mining industry. This exception is designed to take account of a small number of important cases of portfolio investment where overseas companies participated in a consortium of companies which made the initial decision to develop a major mining project. The participation of these companies in the initial decision for the development of the mining project implies a kind of participation different from that normally associated with portfolio investment and more akin to direct investment. Special arrangements have been made therefore, to include in the measurement of overseas ownership, investment by overseas companies whose participation is represented by 10 per cent or more of the ordinary shares of such projects. This participation is not taken into account in statistics of overseas control. This change has had a minor effect on statistics of overseas ownership of the Australian mining industry for 1966 and earlier years.

**MINING(a): VALUE OF PRODUCTION APPORTIONED TO AUSTRALIAN AND DIRECT OVERSEAS OWNERSHIP, BY INDUSTRY, 1965 TO 1967**

Industry and ownership	Value (\$'000)			Proportion Australian and overseas (per cent)		
	1965	1966	1967	1965	1966	1967
<b>Metal mining—</b>						
Australian(b) . . . . .	120,179	144,588	149,095	56.4	53.7	50.0

(a) Excludes construction material quarrying and clay mining. (b) Excludes ownership by overseas portfolio investors. (c) Of total value of mining production.

**Overseas control**

The statistics in the following tables provide an indication of the relative importance of mining establishments of companies in which there is direct overseas investment. The concept of direct overseas investment is directly related to the concept of overseas control, and the statistics in these tables provide a measure of the value of production of mining establishments of companies which can be regarded as subject to a degree of overseas control. The statistics have been derived by allocating data relating to each mining establishment wholly to either one or the other of the following categories: (i) establishments of direct overseas investment companies; (ii) other establishments.

The classification of establishments of companies in which 50 per cent of the voting stock is held in one overseas country (or 25 per cent by one overseas company) as subject to a degree of overseas control is, of course, based on a statistical convention. Such a convention is needed because of the lack of specific information as to the arrangements for managerial control of individual companies.

The convention adopted for this study (including the actual percentages used) is the one suggested by the International Monetary Fund for use in the absence of other information. There are avenues of control other than through direct equity interest, e.g. through franchise or patent rights, marketing arrangements, financial commitments, etc. Such arrangements, of course, also typically exist between companies in which there is direct investment and their overseas parent companies and associated companies. Further, ownership of less than 25 per cent of voting stock may, in some cases, be sufficient to achieve effective control of a company's activities, just as in other cases ownership of more than 25 per cent of voting stock may not constitute control. In addition, the relationship between overseas parent companies and their Australian branches and subsidiaries covered by the statistics in the following tables can be one of *potential* rather than *actual* control.

A special problem does exist, however, in the strict application of the definition of direct overseas investment described above to the measurement of overseas control. This occurs where a single overseas company has an equity interest in an Australian company which is 25 per cent or more but less than 50 per cent. In such cases, a single Australian company may have an equity interest which is greater than the equity interest of the direct overseas investment company. To overcome this problem, an examination has been made of all companies engaged in mining in which the direct overseas equity is 25 per cent or more but less than 50 per cent. Where an Australian company holds a greater proportion of the equity than the direct overseas investment company the company is not regarded as subject to a degree of overseas control and is classified to 'other establishments'. However, this departure from the strict application of the definition of direct overseas investment to the measurement of overseas control does not affect the statistics for 1966 and earlier years.

**MINING(a): VALUE OF PRODUCTION OF ESTABLISHMENTS OF DIRECT OVERSEAS INVESTMENT COMPANIES AND OTHER ESTABLISHMENTS, BY INDUSTRY 1965 TO 1967**

## Mineral exploration (other than for petroleum)

### Definition

Mineral exploration consists of the search for, and or appraisal of, new ore occurrences and known deposits of minerals (including extensions to deposits being worked) by geological, geophysical, geochemical, and other methods (including drilling). Exploration for water is excluded. The construction of shafts and adits is included if primarily for exploration purposes. Excluded are mine development activities (which include the construction of drives, shafts, winzes, etc.) in underground mines and the preparation of quarrying sites for open-cut extraction (including overburden removal) carried out primarily for the purpose of commencing or extending mining and quarrying operations. Mine development activities (including mines under development) are included in the scope of the annual census of mining and quarrying.

### Sources of statistics

The statistics of exploration for minerals *other than petroleum* are derived from the annual mineral exploration collection (excluding petroleum exploration), which is carried out by this Bureau in association with State Mines Departments.

### Scope of mineral exploration collection

The scope of the mineral exploration collection is limited to private exploration on leases held for production and exploration purposes, and all government exploration. General exploration survey work and other exploration activity not connected with particular leases are excluded.

Leaseholders were instructed to report details of total exploration activity on areas held by them including exploration carried out on these areas by other companies or persons under joint venture agreements, options to purchase, etc. However, it appears that some leaseholders may not have reported details of exploration carried out by others under option.

The scope of the collection is divided into the following three sections.

(a) *Private exploration on production leases*—relates to exploration carried out *on the production lease* by privately operated mines currently producing or under development for production of minerals other than petroleum. This also includes particulars of exploration within their production leases by business undertakings operated by State government authorities. Mines included in this section of the mineral exploration collection are practically the same as those in the annual census of mining and quarrying (see Statistical Bulletin *Mining and Quarrying*, No. 16, 1967 for further details) with the exception of a limited number of itinerant prospectors and small mines for which information was not collected.

(b) *Private exploration in other areas*—relates to exploration carried out on areas covered by exploration licences, authorities to enter, authorities to prospect, and similar licences and authorities issued by State Governments for exploration for minerals other than petroleum. Other commercial exploration, such as that carried out under option to purchase agreements, is excluded.

(c) *Exploration by government*—relates to exploration for minerals other than petroleum carried out by—

- (i) Commonwealth Government (Bureau of Mineral Resources, Geology and Geophysics, and Joint Coal Board), and
- (ii) State Mines Departments.

## Summary of operations

The following table shows the amounts expended, the man-weeks worked, and the footage drilled, etc. in mineral exploration other than for petroleum during the years 1965 to 1967.

**MINERAL EXPLORATION (OTHER THAN FOR PETROLEUM)

**Petroleum exploration****Definition**

Petroleum exploration and development consists of the search for, and or development of, deposits of crude petroleum and or gas by geological, geophysical, geochemical, and other means, including drilling. Included in the expenditures are the costs of drilling both exploratory and developmental oil and or gas wells and the testing and completion (up to and including the wellhead fittings and valves to control flow—christmas tree—or pumping wells) of these wells. Also included are the cost of access roads, site construction, permits, licences and similar fees, relevant office buildings and furniture, transportation equipment, storage facilities, plant and equipment, and review work, all of which are undertaken primarily for purposes of exploration for, and or development of, deposits of petroleum or natural gas. Details of expenditure on production facilities, and pipelines and production costs, etc. are excluded.

**Source of statistics**

These statistics were collected and compiled by the Bureau of Mineral Resources, Geology and Geophysics, Canberra. Statistical and other information relating to petroleum exploration is published by the Bureau of Mineral Resources in *The Petroleum Newsletter* (issued quarterly), *The Australian Mineral Industry—Annual Review and Expenditures on Petroleum Exploration and Development, 1965* (B.M.R. Record No. 1966 (205)).

**Operations**

The following tables show particulars of expenditure, and wells and footage drilled in petroleum exploration in recent years.

### Mineral processing and treatment

The extraction of minerals from ore deposits, as in mining and quarrying, is only part of the wider field of mineral technology. It is only in rare instances that minerals can be used directly in the form in which they are produced by mines, and, much more commonly, minerals must undergo considerable processing and treatment before their full utility and value can be realised. Examples of this processing and treatment are the smelting and refining of metals, the production of coke from coal, the refining of oil, and the treatment of non-metallic minerals as in the production of superphosphate and other chemicals and building materials like bricks and cement. The sectors of the economy which carry out this work are classified for statistical purposes to the manufacturing industry, and particulars relating to those activities which principally involve mineral processing and treatment—i.e. the treatment of non-metalliferous mine and quarry products, the manufacture of mineral oils and chemical fertilisers, the smelting, converting, refining and rolling of iron and steel, the extracting and refining of other metals, and the manufacture of alloys are given in the chapter Manufacturing Industry, pages 1044–68 and 1077–82.

#### Principal products

The following table shows particulars of the production of certain important manufactured products of mineral origin during the years 1963–64 to 1967–68. Secondary metal is excluded from the metal production statistics except in the case of ingot steel. For blister copper and lead bullion the figures shown relate to the copper and lead content respectively.

### Overseas trade

#### Exports and imports

Data of imports and exports of minerals and mineral products have been extracted from the official trade statistics compiled in the Commonwealth Bureau of Census and Statistics. Particulars of the quantities and values (\$ f.o.b. port of shipment) of the principal minerals and mineral products exported from and imported into Australia during the years 1965 to 1967 are shown in the following table.

**EXPORTS AND IMPORTS OF PRINCIPAL MINERALS AND MINERAL PRODUCTS  
AUSTRALIA, 1965 TO 1967**

Item	Quantity			Value (\$'000 f.o.b.)			
	1965	1966	1967	1965	1966	1967

(a) Excludes gold movements. (b) Excludes alumina, details of which are not available for publication.

## REVIEW OF RECENT DEVELOPMENTS IN THE AUSTRALIAN MINERAL INDUSTRY

Prior to Year Book No. 52 it was customary to include a series of detailed reviews of the principal commodities produced by the Australian mineral industry and recent developments concerning these commodities. However, with the increasing diversification and development of the industry, it has become impractical to continue these reviews in the Year Book and the reader who wishes to obtain information of this kind is referred to *The Australian Mineral Industry—Annual Review* published by the Bureau of Mineral Resources, Geology and Geophysics. That publication contains comprehensive reviews of mineral commodities of importance to the Australian economy, as well as a general review of the industry's performance during each year. Major developments in the industry, particularly during the last year, are reviewed briefly in subsequent parts of this section.

### General review, 1968

Expansion of the Australian mineral industry was maintained during 1968, with the preliminary value of mineral production increasing by 22 per cent from \$697 million in 1967 to \$853 million in 1968. The major reasons for this increase in the value of mineral production were continued expansion of iron ore mining, and the increased production of crude oil at Barrow Island, copper concentrates in Queensland and black coal in New South Wales and Queensland. The total value of mineral exports continued to increase, mainly because of the increase of iron ore and coal shipments to Japan.

### Bauxite

The history of the aluminium industry and recent significant developments in the industry were reviewed in previous issues of the Year Book (No. 51, page 1168 and No. 52, page 1048). The year 1968 was a period of continued growth in the industry both in mining and processing as detailed below.

Bauxite production from deposits at Weipa, Queensland, has been increased to a rate of 6 million tons per annum following completion of a further stage in the development of the mine and associated township, and of ore treatment and loading facilities. It is expected that production will rise to 7 million tons in 1970. Approximately 1.9 million tons from Weipa will be used by the Gladstone, Queensland, alumina refinery, a further 110 thousand tons will be shipped to Bell Bay, Tasmania, and the remaining production will be exported.

Bauxite deposits at Gove, Northern Territory, covering reserves of the order of 250 million tons of bauxite, are being developed by a consortium of seven Australian and one overseas company. The consortium plans to construct an alumina plant at Gove by 1971 with an initial capacity of 500,000 metric tons per annum.

An agreement was signed in Perth in December 1968 with the Western Australian Government for the development of a bauxite/alumina project in the Admiralty Gulf area. The company involved has an option to submit proposals to the State Government before the end of 1969, for all the facilities required for bauxite mining and alumina refining.

### Alumina

An alumina refinery with a capacity of 600,000 tons per annum at Gladstone, Queensland, which was completed at a cost of approximately \$115 million, was commissioned in March 1967. A \$45 million expansion programme was completed at the end of 1968, increasing the capacity of the refinery to 900,000 tons per annum; the plant will be further expanded to 1,275,000 tons yearly by mid-1971 and is scheduled to have an eventual capacity of 1,800,000 tons per annum. Plans were also announced to increase the capacity of the alumina refinery at Kwinana, Western Australia, from 620,000 metric tons to 830,000 metric tons per annum by the end of 1969 and further to 1,040,000 metric tons by the later half of 1970. Bauxite supplies for the Kwinana refinery are obtained from deposits 28 miles away at Jarrahdale, Western Australia, the reserves of which were recently re-assessed from 200 million tons to 500 million tons.

### Aluminium

Initial construction of an aluminium smelter with a capacity of 50,000 tons per annum at Kurri Kurri near Newcastle, New South Wales, was commenced in 1967 for completion in 1969. An aluminium powder and paste plant, capable of supplying the whole of Australia's needs, was commissioned in 1968 at Bell Bay, Tasmania. A letter of intent has been received by the Western Australian Government regarding the possible establishment of an aluminium smelter at Kwinana in possibly ten to twelve years.

### **Copper**

A \$130 million expansion programme at Mount Isa was completed in 1966 with the commissioning of a new shaft and concentration plant. During the development period when lower grade ore was being extracted, the Mount Isa output was supplemented by ore from the Young Australia mine, fifty miles south of Cloncurry, Queensland, where mining operations were terminated at the end of 1967.

A new copper-gold ore body, the Warrego Mine, is being developed near Tennant Creek, Northern Territory. The first stage of development, which will cost \$10 million, will have an installed mining capacity of 400,000 tons of ore per annum.

Since the beginning of 1967 the Australian Producers' price has been adjusted regularly to reflect movements in the London Metal Exchange daily settlement price, the price at the end of January 1969 being 53 cents per pound (\$1,187.2 per ton) after reaching \$1,350 per ton during February to April 1968.

### **Iron ore**

During 1968, iron ore production expanded by 54 per cent with the largest increase in production being in Western Australia.

Substantial new commitments have been made with the Western Australian Government by the company currently mining at Mount Tom Price to develop the Paraburdoo iron ore deposits, 35 miles south of Mount Tom Price. In addition this company must be ready to produce iron ore from Paraburdoo at an annual rate of not less than 1 million tons between 1974-76. If the company is successful in finding world markets for metallised agglomerates, it is committed to produce 1 million tons by the end of 1972, 2 million tons by the end of 1977 and 3 million tons by the end of 1980.

The consortium has contracted to supply an additional 37,500,000 tons of iron ore to Japan from 1971 from the deposits at Mount Whaleback, Western Australia. In signing this contract, the consortium concerned agreed to deepen the harbour at Port Hedland so that vessels of 100,000 tons dwt could be used.

Total Australian iron ore contracts with Japanese steel mills now amount to about 400 million tons valued at over \$3,000 million.

### **Lead and zinc**

At Mount Isa the majority of projects associated with the K57 shaft were completed and production of lead in bullion rose by 15 per cent to 117,000 tons in 1968.

At the zinc refinery at Risdon, Tasmania, a fluid bed roaster is being installed as part of a programme to replace the present hearth and flash roasters. The same company has a prospect at Beltana, South Australia, where 730,000 tons of silicate ore have been proved assaying 37 per cent zinc and 97,000 tons assaying 24 per cent zinc.

Following the commissioning of a slag fuming plant at Port Pirie, plans to recover zinc from residue dumps at Mount Isa and Risdon have been announced.

During 1968 production was restricted by an industrial dispute at mines at Broken Hill.

### **Black coal**

There has been a significant revival in the Australian black coal industry in recent years as a result of increased exports and increased consumption of black coal in iron and steel production and electricity generation. These increases have more than balanced reduced consumption in some applications due to competition from fuel oil.

The expansion of the export trade has been of major significance. In 1955 exports were about 200,000 tons valued at about \$1.7 million; in 1968 exports were 12.1 million tons valued at \$103.5 million. These increased exports have been almost wholly to Japan for use in the iron and steel industry. As a result of this increased demand, new mines have been opened and others are under development in Queensland and New South Wales, and many established mines are being expanded. Exploration for coal has been stimulated and further rich deposits of coking coal have been located in Queensland.

### **Petroleum**

Developments in the last few years were reviewed in previous issues of the Year Book, and the following is a summary of developments in 1968.

Australia now has seven proved commercial oil-fields. Moonie and Alton in Queensland began production in 1964 and 1966, and the Barrow Island field, Western Australia, was inaugurated in 1967. Off-shore Victoria, in the Gippsland Shelf, commercially producible oil has been discovered in the Kingfish, Halibut, Marlin and Barracouta fields, and production from this area to the mainland is scheduled for early 1970.

Commercial production of natural gas on a substantial scale is now a reality. Construction of pipe-lines for the supply of natural gas and natural gas liquids from the Barracouta and Marlin fields to Melbourne has been completed. A 480-mile long 22-inch line from the Gidgealpa-Moomba fields to Adelaide is being constructed, and completion is expected in 1969. A 280-mile line from the Roma gas fields to Brisbane has been completed.

The provisional figure for footage drilled in petroleum exploration and development in 1968 was 1,106,804 feet, the second highest figure for any one year. Some 645,941 feet (58.4 per cent) of this total was attributed to exploration drilling. A tentative total of 226 wells were completed, of which ninety were exploration wells. Of these exploration wells, five were completed as potential producers, and nine had hydrocarbon shows.

A notable feature of 1968 was that off-shore drilling accounted for some 312,613 feet. This reflects the beginning of development drilling in the offshore Gippsland Shelf fields.

#### Nickel

Significant discoveries of nickel have been made near Kambalda, Western Australia. Mining operations at Kambalda commenced in mid-1967. Shipments of ore are being made according to a contract to sell 40,000 tons of contained nickel over ten years to Japan and Canada for refining at a rate of 1,500 tons of contained nickel per year. An agreement with the Western Australian Government providing for the erection of a refinery at Kwinana by 1971, with a minimum annual production capacity of 15,000 tons of metal, was signed in January 1968. Plans to begin mining and concentrating nickel ore from Scotia, Western Australia, about August 1969 were announced in November 1968. Exploration activities continued in the Kalgoorlie area and Blackstone Ranges in Western Australia and near Rockhampton and Greenvale in Queensland.

#### Phosphate

Major deposits of phosphate rock were discovered during 1966 near Duchess and Lady Annie in north-west Queensland. The deposits are large by world standards, and feasibility studies are still in progress. Survey work has finished on a possible railway route between Lady Annie and the Gulf of Carpentaria, 800 miles away. Lady Annie is likely to be the first deposit developed. Transport and port facilities will be key factors in determining whether the project is to be undertaken.

## CHAPTER 26

# MANUFACTURING INDUSTRY

Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Manufacturing Industry* and *Manufacturing Commodities*, formerly *Secondary Industries*, Parts I and II. Information is also published, as soon as the data can be prepared, in a series of thirty-five annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in Statistical and other official publications of Australia of the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economics Statistics*, and the *Monthly Bulletin of Production Statistics*. A preliminary annual statement (*Factory Statistics*) and a monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of fifty-two *Monthly Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical publications).

The annual mimeographed bulletin *Indexes of Factory Production* deals comprehensively with this subject, which is treated only in summarised fashion on pages 1064–5.

### Introduction

A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

An historical summary of the development of the manufacturing industry in Australia since 1901 is contained in earlier issues of the Year Book (see No. 51, pages 143–4).

### Decentralisation of manufacturing industries

The decentralisation of secondary industries, and the steps taken by Commonwealth and State Governments towards its development, are referred to in previous issues of the Year Book (see No. 51, page 144).

### Bounties on manufacture

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards. (See Chapter 19, Public Finance for products on which bounties are paid.)

### Standardisation

*The Commonwealth Scientific and Industrial Research Organization* has functions concerned with the improvement of efficiency in industrial operations. For further particulars see the chapter Education, Cultural Activities, and Research of this Year Book.

*The Standards Association of Australia* is the organisation responsible for industrial standardisation on a national basis. It issues Australian standards for materials and products and standard codes of practice.

Formed as the Australian Commonwealth Engineering Standards Association in 1922, it was reconstituted as the Standards Association of Australia in 1929, and was incorporated by Royal Charter in 1950. It is an independent body having the full recognition and support of the Commonwealth and State Governments and of industry. Half its funds are provided by Commonwealth

Government grant, the remainder coming primarily from membership subscriptions and from sale of publications. Organisations, companies, and individuals are eligible for subscribing membership.

The Association is controlled by a Council comprising representatives from Commonwealth and State Governments and their departments, from associations of manufacturing and commercial interests, and from professional institutions. Standards are prepared by committees composed of expert representatives from the interests associated with the subjects under consideration. This assistance is on a voluntary basis.

Preparation of standards is undertaken in response to requests from industrial associations or firms or from government departments. Standards may relate to one or more of several aspects of industrial practice such as terminology, test methods, dimensions, specifications of performance and quality of products, and safety or design codes. In general, standards derive authority from voluntary adoption based on their intrinsic merit, but in special cases where safety of life or property is involved, they may have compulsory application through statutory reference. The Association is the owner of a registered certification trade mark covering conformity of products to standards.

The Association has international affiliations and is a member, representing Australia, of the International Organization for Standardization (ISO) and of the International Electrotechnical Commission (IEC). Close links are maintained with overseas standards organisations, and the Association acts as Australian agent for the procurement of ISO and IEC publications and the standards of other countries.

The Association has two specialised libraries, one in Sydney and one in Melbourne, containing the national standards of all countries with standards organisations. These libraries provide necessary material for committee work and a free information service to those concerned with standards.

The headquarters office of the Association is in Sydney, and there is a major branch office in Melbourne. Branch offices are located also in other capital cities and at Newcastle, New South Wales.

*The National Association of Testing Authorities* organises testing facilities throughout Australia to serve private and governmental needs.

Membership is open to authorities whose testing laboratories conform to the standards of staffing and operation defined by the Association. Testing authorities may register their laboratories voluntarily. The Association assesses the competence of the laboratories and ensures that their standards of competence are maintained. Certificates of test issued by registered laboratories may be endorsed in the name of the Association. NATA endorsed test certificates are generally accepted by governmental, industrial and commercial interests.

Laboratories are registered for performance of specific tests in the fields of metrology, mechanical testing, electrical testing, optics and photometry, non-destructive testing, heat and temperature measurement, chemical testing, biological testing, and acoustic and vibration measurement. At the end of 1968 there were 695 laboratories registered with the Association, which had a further seventy applications for registration before it.

*The Industrial Design Council of Australia* was established in June 1958 for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. It has a membership fully representative of industry, commerce and government, together with designers and educationists, and is financed by donations from industry and by Commonwealth grants. The Council is responsible for the Australian Design Index which provides a detailed, illustrated record of well-designed Australian products. A Record of Designers has been set up to register information about industrial designers and their work. The Council is also concerned, in co-operation with education authorities, with raising the standard of training in industrial design. For further particulars see Year Book No. 51, page 145.

#### Definitions in factory statistics

The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the statistical Acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover smallgoods makers, laundries, photography studios, florists and seedsmen, or most abattoirs.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry wherever practicable.

Manufacturers are requested to state in their returns particulars of the number, age, etc. of their employees, salaries and wages paid, the value of premises and equipment, the horse-power of machinery, the value of raw materials (including containers), tools replaced, etc., the values and in most cases the quantities of fuel used, and quantities and values of principal materials used and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

*Persons employed* in the manufacturing activities of the factory only are counted as factory employees. The figures relating to employment therefore include working proprietors as well as out-workers, but *exclude* all those engaged in selling and distribution such as salesmen, travellers, collectors, carters engaged solely on outward delivery of manufactured goods, and retailing storemen.

The *average number of persons* employed is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

*Value of materials used* includes also the value of stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of fuel, etc., used* includes also the cost of power and light used, lubricants and water.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the finished articles at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer. In the special case of government factories and workshops, the value of output is, in most cases, estimated by adding ten per cent to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The *value of production* is the value added to materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges). In the process of manufacture many goods are treated in several industries, the output from one becoming the material for another, so that such commodities are counted more than once in the aggregate value of output and of materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become materials in establishments concerned in the production of metal goods, timber from the sawmills used in furniture factories and in joinery, and synthetic resins from chemical works used to make plastic products. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of output, is used as a measure of activity in the manufacturing industries as a whole.

The *rated horse-power of engines used* for factories other than central electric stations relates to the rated horse-power of engines ordinarily in use.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are included in the figures contained in this chapter as from 1 July 1964, unless otherwise indicated.

A standard classification of manufacturing industries is used in compiling statistical data relating to factories in Australia. It is designed in accordance with decisions of the 1945 Conference of Statisticians, and represents a revision and extension of a classification which was introduced in 1930-31, replacing the revised versions of the original classification formulated in 1902.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below are published in the latter portion of this chapter, and full details for all sub-classes may be found in the bulletin *Manufacturing Industry* (previously entitled *Secondary Industries, Part I—Factory and Building Operations*).

The classes and sub-classes in the current classification of factories are as follows.

### CLASSIFICATION OF FACTORIES

#### CLASS 1. TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

1. Coke works
2. Briquetting and pulverised coal
3. Carbide
4. Lime, plaster of paris, asphalt
5. Fibrous plaster and products
6. Marble, slate, etc.
7. Cement, portland
8. Asbestos cement sheets and mouldings
9. Other cement goods
10. Other

#### CLASS 2. BRICKS, POTTERY, GLASS, ETC.

1. Bricks and tiles
2. Earthenware, china, porcelain, and terracotta
3. Glass (other than bottles)
4. Glass bottles
5. Other

#### CLASS 3. CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

1. Industrial and heavy chemicals and acids
2. Pharmaceutical and toilet preparations
3. Explosives (including fireworks)
4. White lead, paints and varnish
5. Oils, vegetable
6. Oils, mineral
7. Oils, animal
8. Boiling-down, tallow refining
9. Soap and candles
10. Chemical fertilisers
11. Inks, polishes, etc.
12. Matches
13. Other

#### CLASS 4. INDUSTRIAL METALS, MACHINES, CON- VEYANCES

1. Smelting, converting, refining, rolling of iron and steel
2. Foundries (ferrous)
3. Plant, equipment and machinery, including machine tools
4. Other engineering
5. Extracting and refining of other metals; alloys
6. Electrical machinery, cables and apparatus
- 7-16. Construction and repair of vehicles (10 groups)
- 17, 18. Ship and boat building and repairing, marine engineering (government and other)
19. Cutlery and small hand tools
20. Agricultural machines and implements
- Non-ferrous metals—
21. Rolling and extrusion
22. Founding, casting, etc.
24. Sheet metal working, pressing and stamping
25. Pipes, tubes and fittings—Ferrous
26. Wire and wire working (including nails)
27. Stoves, ovens and ranges
28. Gas fittings and meters
29. Lead mills
30. Sewing machines
31. Arms, ammunition (excluding explosives)
32. Wireless and amplifying apparatus
33. Other metal works

#### CLASS 5. PRECIOUS METALS, JEWELLERY, PLATE

1. Jewellery
2. Watches and clocks (including repairs)
3. Electroplating (gold, silver, chromium, etc.)

#### CLASS 6. TEXTILES AND TEXTILE GOODS (NOT DRESS)

1. Cotton ginning
2. Cotton spinning and weaving
3. Wool—Carding, spinning, weaving
4. Hosiery and other knitted goods
5. Silk, natural
6. Rayon, acrylics and other synthetic fibres
7. Flax mills
8. Rope and cordage
9. Canvas goods, tents, tarpaulins, etc.
10. Bags and sacks
11. Textile dyeing, printing and finishing
12. Other

#### CLASS 7. SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

1. Furriers and fur-dressing
2. Woolscouring and fellmongery
3. Tanning, currying and leather-dressing
4. Saddlery, harness and whips
5. Machine belting (leather or other)
6. Bags, trunks and other goods of leather and leather substitutes

#### CLASS 8. CLOTHING (EXCEPT KNITTED)

1. Tailoring and ready-made clothing
2. Waterproof and oilskin clothing
3. Dressmaking, hemstitching
4. Millinery
5. Shirts, collars, underclothing
6. Foundation garments
7. Handkerchiefs, ties and scarves
8. Hats and caps
9. Gloves
10. Boots and shoes (not rubber)
11. Boot and shoe repairing
12. Boot and shoe accessories
13. Umbrellas and walking sticks
14. Dyeworks and cleaning (including renovating and repairing)
15. Other

#### CLASS 9. FOOD, DRINK AND TOBACCO

1. Flour-milling
2. Cereal foods and starch
3. Animal and bird foods
4. Chaffcutting and corncrushing
5. Bakeries (including cakes and pastry)
6. Biscuits
7. Sugar mills
8. Sugar refining
9. Confectionery (including chocolate and icing sugar)
10. Jam, fruit and vegetable canning
11. Pickles, sauces, vinegar
12. Bacon curing
13. Butter factories
14. Cheese factories
15. Condensed and dried milk factories
16. Margarine

CLASS 9. FOOD, DRINK AND TOBACCO—*continued*

17. Meat and fish preserving
18. Condiments, coffee, spices
19. Ice and refrigerating
20. Salt
21. Aerated waters, cordials, etc.
22. Breweries
23. Distilleries
24. Winemaking
25. Cider and perry
26. Malting
27. Bottling
28. Tobacco, cigars, cigarettes, snuff
29. Dehydrated fruit and vegetables
30. Ice cream
31. Sausage casings
32. Arrowroot
33. Other

CLASS 10. SAWMILLS, JOINERY, BOXES, ETC., WOOD TURNING AND CARVING

1. Sawmills
2. Plywood mills (including veneers)
3. Bark mills
4. Joinery
5. Cooperage
6. Boxes and cases
7. Woodturning, woodcarving, etc.
8. Basketware and wickerware (including sea-grass and bamboo furniture)
9. Perambulators (including pushers and strollers)
10. Wall and ceiling boards (not plaster or cement)
11. Other

CLASS 11. FURNITURE OF WOOD, BEDDING, ETC.

1. Cabinet and furniture making (including billiard tables and upholstery)
2. Bedding and mattresses (not wire)
3. Furnishing drapery
4. Picture frames
5. Blinds

CLASS 12. PAPER, STATIONERY, PRINTING, BOOK-BINDING, ETC.

1. Newspapers and periodicals
- Printing—
2. Government
3. General, including bookbinding
4. Manufactured stationery
5. Stereotyping, electrotyping
6. Process and photo engraving
7. Cardboard boxes, cartons and containers
8. Paper bags
9. Paper making
10. Pencils, penholders, chalks, crayons
11. Other

CLASS 13. RUBBER

1. Rubber goods (including tyres made)
2. Tyre retreading and repairing

CLASS 14. MUSICAL INSTRUMENTS

1. Gramophones and gramophone records
2. Pianos, piano-players, organs
3. Other

CLASS 15. MISCELLANEOUS PRODUCTS

1. Linoleum, leather-cloth, oil-cloth, etc.
2. Bone, horn, ivory, and shell
3. Plastic moulding and products
4. Brooms and brushes
5. Optical instruments and appliances
6. Surgical and other scientific instruments and appliances
7. Photographic material (including developing and printing)
8. Toys, games and sports requisites
9. Artificial flowers
10. Other

CLASS 16. HEAT, LIGHT, AND POWER

- 1-3. Electric light and power
- 4-6. Gas works

Factory development since 1901, Australia

FACTORIES: AUSTRALIA(a), 1901 TO 1967-68

Year	Factories	Employment (b)	Value of—					
			Salaries and wages paid (c)	Materials and fuel used	Output	Production (d)	Land and buildings (e)	Plant and machinery (e)

**Employment in factories****Number employed**

All persons employed in the manufacturing activities of a factory are counted as factory employees. The figures relating to employment, therefore, exclude all those engaged in selling and distribution, such as salesmen, travellers, collectors, carters engaged solely on delivery of manufactured goods, and retailing storemen. The figures, however, do include proprietors who work in their own business, as well as 'out-workers' (see page 1050). From 1960-61 the occupational groupings collected have been—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and

working directors; (iii) chemists, draughtsmen and other laboratory and research staff; and (iv) foremen and overseers, workers in factory and others, in which were amalgamated the three former groups—(iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers, and persons working regularly at home.

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to size (*see* pages 1046-7), which is based on the average number employed during the period of operation.

Particulars of the numbers employed in Australia, the increase in employment, and the rate per cent of such increase are given in the table below.

**FACTORIES: EMPLOYMENT, AUSTRALIA(a), 1963-64 TO 1967-68**

Year	Males			Females			Persons

## Persons employed, by occupational grouping

**FACTORIES: AVERAGE NUMBER OF PERSONS EMPLOYED, BY OCCUPATIONAL GROUPING  
STATES AND TERRITORIES, 1967-68**

State or Territory	Average number of persons employed				Total
	Working proprietors	Managerial and clerical staff, etc.	Chemists, draughtsmen etc.	Foremen and overseers, workers in factory and others(a)	
New South Wales . . . . .	13,825	78,755	12,183	426,422	531,185
Victoria . . . . .	12,025	63,164	10,189	364,567	449,945
Queensland . . . . .	4,690	15,216	1,704	99,242	120,852
South Australia . . . . .	3,997	16,206	2,787	98,427	121,417
Western Australia . . . . .	3,455	7,706	914	55,260	67,335
Tasmania . . . . .	975	4,204	715	29,284	35,178
Northern Territory . . . . .	88	238	4	1,189	1,519
Australian Capital Territory . . . . .	156	629	27	2,904	3,716
Total males . . . . .	32,906	114,791	25,447	825,530	998,674
Total females . . . . .	6,305	71,327	3,076	251,765	332,473
Total persons . . . . .	39,211	186,118	28,523	1,077,295	1,331,147

(a) Includes persons working regularly at home.

The term 'outworker' or 'homeworker' has acquired a special meaning in connection with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory, and others, and separate details are not available.

## Monthly employment

The following tables show the number of persons (excluding working proprietors) employed in factories on the last pay-day of each month.

**FACTORIES: MONTHLY EMPLOYMENT, BY SEX, AUSTRALIA(a), 1963-64 TO 1967-68**

1967-68 . . . . .	292	236	429	440	541	431	993	424	300

(a) Number of males per 100 females. (b) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

**Employment of females in particular industries**

The majority of females in manufacturing industries are employed in four classes, namely: 4, Industrial metals, machines, etc.; 6, Textiles; 8, Clothing; and 9, Food, drink and tobacco. In 1967-68 these industries accounted for 76.75 per cent of all females in factories. In two classes only did the number of females exceed the number of males—in Class 6, Textiles, where there were 137 females to every 100 males, and in Class 8, Clothing, with 300 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes.

**MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES

(a) Under sixteen years of age. (b) Excludes working proprietors.

### Apprenticeship

Acts are in force in all States for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

### Power equipment in factories

Since 1936-37 statistics of power equipment in factories relate to the 'rated horsepower' of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of central electric stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between central electric stations and other classes of industries. In the following tables central electric stations have been treated separately from other factories.

#### Rated horsepower of engines in factories other than central electric stations

**FACTORIES<sup>(a)</sup>: TOTAL RATED HORSEPOWER OF ENGINES  
AND ELECTRIC MOTORS, STATES AND TERRITORIES, 1967-68**

State or Territory	Factories <sup>(a)</sup>	Rated horsepower of engines and motors

**Salaries and wages paid, value of materials used, output, and production**

In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

The gross value of factory output for 1967-68 was \$17,094 million, of which \$9,104 million (53.3 per cent) was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and \$559 million the value of the power, fuel, light, water, and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, \$7,431 million, represents the net value of factory production, defined as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'. Depreciation, however, is not deducted (*see* page 1063). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories.

**Salaries and wages paid**

(a) For full titles *see* table on page 1060.

(b) Not available for publication.

*Totals and averages.* The following table shows the total amount of salaries and wages paid, and the average amount paid, according to sex, per employee in each State and Territory. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there are a large number of employees in Class 8, Clothing, comprising a relatively high percentage of women and children.

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

## Value of output

*By class of industry.* The value of the output of factories in the various classes in each State and Territory in 1967-68 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done, such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output, is the net value of factory production (see page 1063).

**Value of production**

*By class of industry.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'.

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the 'value of output'. Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items 'value of materials used' and 'value of fuel used' as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only 'value of materials used' and 'value of fuel used' from the 'value of output'. The value of factory production therefore, approximates 'net value added' in the manufacturing process.

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that when wages and salaries are deducted from the value of production the whole of the 'surplus' is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising, and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows the value of production in each State and Territory for the various classes of industry.

**Indexes of Factory Production**

The tables following contain annual indexes of factory production for the years 1949-50 to 1966-67. They present indexes, on 1955-56 and 1959-60 bases respectively, for classes and combinations of classes of manufacturing industry. The indexes are designed to provide broad measures of growth in manufacturing industry over the period.

The indexes have been compiled by methods which are commonly adopted, the indexes for classes and combinations of classes comprising in fact indexes of the output of factory sub-classes at constant prices combined by the use of base period value-added weights. Indexes of this type are subject to a number of limitations, and can be compiled only on the basis of many assumptions and approximations. An understanding of the basis of the indexes is therefore essential if inappropriate use of

the indexes is to be avoided. For a comprehensive treatment of concepts, sources, and methods, reference should be made to the annual mimeographed bulletin *Indexes of Factory Production*. This bulletin also contains indexes for a considerable number of individual factory sub-classes.

## INDEXES OF FACTORY PRODUCTION(a): AUSTRALIA(b), 1949-50 TO 1959-60

(Base of each index: year 1955-56 = 100)

Class of industry	Proportion of total value added(c) 1955-56	1949-	1950-	1951-	1952-	1953-	1954-	1955-	1956-	1957-	1958-	1959-

All classes (combined) . . . .	100.0	71	78	79	76	85	94	100	104	110	118	130

(a) The indexes in this table are combinations of sub-class indexes of value of output as estimated at constant prices. Indexes for all sub-classes within the respective groupings have been combined according to the value-added weights of 1955-56. (b) Excludes factories in Northern Territory and Australian Capital Territory. (c) Value of production—see pages 1041 and 1063. (d) Combination of Class 5, Precious metals, jewellery, plate; Class 14, Musical instruments; and Class 15, Miscellaneous products.

## INDEXES OF FACTORY PRODUCTION(a): AUSTRALIA(b), 1955-56 AND 1959-60 TO 1966-67

(Base of each index: year 1959-60 = 100)

Class of industry	Proportion of total value added(c) 1959-60	1959-	1960-	1961-	1962-	1963-	1964-	1965-	1966-	
		60	61	62	63	64	65	66	67	
		per cent								
1. Treatment of non-metalliferous mine and quarry products . . .	2.5	100	113	114	122	137	149	153	157	
2. Bricks, pottery, glass, etc. . .	2.2	100	101	97	104	116	129	127	134	
3. Chemicals, dyes, explosives, paints oils, grease . . . . .	8.6	100	104	113	123	136	151	158	174	
4. Industrial metals, machines, conveyances . . . . .	40.9	100	104	102	116	130	143	149	157	
6. Textiles and textile goods (not dress) . . . . .	5.2	100	98	100	111	121	128	130	138	
7. Skins and leather (not clothing or footwear) . . . . .	0.9	100	94	95	100	99	102	98	94	
8. Clothing (except knitted) . . .	5.7	100	103	105	111	116	121	125	132	
9. Food, drink, and tobacco . . .	12.5	100	103	108	113	118	127	133	140	
10. Sawmills, joinery, boxes, etc. .	4.7	100	100	96	100	107	117	119	123	
11. Furniture of wood, bedding, etc.	1.6	100	97	100	105	112	121	126	132	
12. Paper, stationery, printing, etc.	7.2	100	107	106	117	129	146	151	158	
13. Rubber . . . . .	1.6	100	102	99	115	126	132	132	140	
Other (classes 5, 14 and 15)(d) . .	2.5	100	102	106	120	139	157	168	200	
Classes 1 to 15 (combined) . . .	96.1	100	103	104	115	126	138	142	152	
16. Heat, light and power . . . .	3.9	100	107	112	127	135	149	158	170	
All classes (combined) . . . . .	100.0	100	104	105	115	126	138	143	153	

(a) The indexes in this table are combinations of sub-class indexes of value of output as estimated at constant prices. Indexes for all sub-classes within the respective groupings have been combined according to the value-added weights of 1959-60. (b) Excludes factories in Northern Territory and Australian Capital Territory. (c) Value of production—see pages 1041 and 1063. (d) Combination of Class 5, Precious metals, jewellery, plate; Class 14, Musical instruments; and Class 15, Miscellaneous products.

### Value of land, buildings, plant and machinery

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

**Land and buildings, plant and machinery—values, additions and replacements, depreciation**

The following table summarises the recorded totals for Australia and also includes particulars of additions and replacements.

**FACTORIES: VALUE OF LAND AND BUILDINGS, PLANT AND MACHINERY  
AUSTRALIA(a), 1963-64 TO 1967-68  
(\$'000)**

Year	Book values at 30 June (b)		Additions and replace- ments during year(b)		Depreciation allowed during year	
	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery
1963-64 . . . . .	3,204,685	3,480,673	192,419	564,958	39,711	336,929
1964-65 . . . . .	3,505,859	3,766,253	249,779	666,490	46,095	366,702
1965-66 . . . . .	3,776,590	4,154,652	272,052	773,322	51,895	407,388
1966-67 . . . . .	4,061,193	4,706,843	284,951	1,030,889	52,440	450,146
1967-68 . . . . .	4,303,156	4,962,203	270,762	760,894	58,412	494,210

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory. (b) Includes estimated values of rented premises, plant and machinery.

**Principal factory products**

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Manufacturing Commodities*, formerly *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories*.

The following table shows the total recorded production of some of the principal articles (i.e. of those for which production can be represented in quantitative terms) manufactured in Australia. A more complete list, together with values, where available, is published in the aforementioned bulletin and in the mimeographed statement *Principal Factory Products*. Because of revisions, figures for some items for the year 1967-68 in the following table may differ from corresponding figures in earlier publications.

## Individual industries

Particulars on pages 1043-1068 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible within the limits of this publication to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour or capital, or for other features of special interest. Details for individual States are available from publications issued by the Deputy Commonwealth Statistician in each State and, for selected industries, in the Central Office series *Manufacturing Industries*.

Horsepower of engines ordinarily in use . . . . .	114,317	122,086	132,552	153,257	159,966

(a) Jobbing and general engineering works, n.e.i. Capital Territory.

(b) Before 1 July 1964, excludes Northern Territory and Australian

The following table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore. Ore dressing and elementary smelting of metallic minerals (e.g. in the case of gold), when these are carried out in an associated plant at or near the mine, are included in the mineral industry (see the chapter Mineral Industry).

EXTRACTING AND REFINING OF NON-FERROUS METALS; ALLOYS  
AUSTRALIA(a), 1963-64 TO 1967-68

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

Sugar-cane is grown in New South Wales and Queensland, and particulars of area, yield, etc., are given in detail in the chapter Rural Industry. The products of the sugar-mills are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. In 1967-68 there were two sugar refineries in Queensland and one in each of New South Wales, Victoria, South Australia, and Western Australia.

## SUGAR MILLS: NEW SOUTH WALES AND QUEENSLAND, 1963-64 TO 1967-68

Value of materials used . . . . .	244,587	261,066	262,480	286,631	264,775
Value of production . . . . .	59,236	65,028	67,970	68,535	65,262
Total value of output . . . . .	309,961	332,458	336,949	362,154	337,222
Value of land and buildings . . . . .	31,534	34,544	38,681	42,699	43,988
Value of plant and machinery . . . . .	39,361	40,445	46,398	52,842	53,236
Horsepower of engines ordinarily in use . . . . .	120,084	120,208	127,837	133,449	126,676

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

The following industries are engaged chiefly in the freezing and preserving of meat. Most abattoirs are excluded, except in Queensland and Western Australia. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. In recent years there has been considerable expansion in the canning of meat and fish. Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in the chapter Rural Industries.

**MEAT AND FISH PRESERVING: AUSTRALIA(a), 1963-64 TO 1967-68**

	1963-64	1964-65	1965-66	1966-67	1967-68

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

Sawmilling is the most important industry in Class 10. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the following table, together with plywood and veneer mills. The figures exclude particulars of a small number of itinerant and travelling sawmills.

**SAWMILLS AND PLYWOOD AND VENEER MILLS  
AUSTRALIA(a), 1963-64 TO 1967-68**

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber in 1938-39 that any marked development occurred. The number of factories operating in 1967-68 comprised three in New South Wales, nine in Victoria, two in Queensland, two in South Australia, one in Western Australia, and four in Tasmania. In Tasmania, newsprint, writing and printing papers are mainly produced, and in the other States, wrappings, other papers and boards. Mills producing pulp from eucalypt timber are operating in Victoria and Tasmania, while in South Australia pulp is being produced from locally-grown softwoods.

## CHAPTER 27

# ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts: the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory.

The information contained in the chapter relates to situations existing and projects contemplated in December 1968, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves. Greater descriptive and historical detail about the various systems is contained in earlier issues of the Year Book.

## INTRODUCTION

### Distribution of population and location of power resources in Australia

The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations. By far the most important source of energy used in the production of electric power in Australia is coal. At 30 June 1968 thermal power equipment represented 71 per cent, hydro plant 26 per cent, and internal combustion equipment 2.5 per cent of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland. The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 4,000,000 kW by 1975. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

### Electric power generation and distribution

At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety and to define the scope and obligations of the private organisations. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organisations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organisations which undertake reticulation.

In addition to the private, local government and statutory organisations which generate and or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly produced for such internal consumption is, in any case, a relatively small proportion of

the total power produced. The measures taken by authorities to satisfy the demand created by the post-war growth in population and building and by developments in industry and commerce are described in the following pages.

## SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME\*

### Snowy Mountains Hydro-electric Power Act 1949

In July 1949 the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

### Snowy Mountains Hydro-electric Scheme

The broad basis of the Snowy scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development (*see* plate 53 opposite). For purposes of both power production and irrigation it is necessary to regulate run-off, and this is achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other smaller storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers of the Snowy-Tumut Development and of the Snowy and Geehi Rivers for the Snowy-Murray Development. A sectional diagram of the scheme appears on plate 54, page 1100.

*Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee, and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

Tumut 3 Power Station, the largest station of the scheme (generating capacity 1,500,000 kW and pumping capacity 10,500 cubic feet per second) is being constructed below Talbingo Reservoir and will discharge into Jounama Pondage on the Tumut River. This pondage will provide a downstream pumping pool and also re-regulate discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage will then enter Blowering Reservoir formed by Blowering Dam. This dam, constructed by the Snowy Mountains Authority as an agent for the State of New South Wales, provides for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority is constructing a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

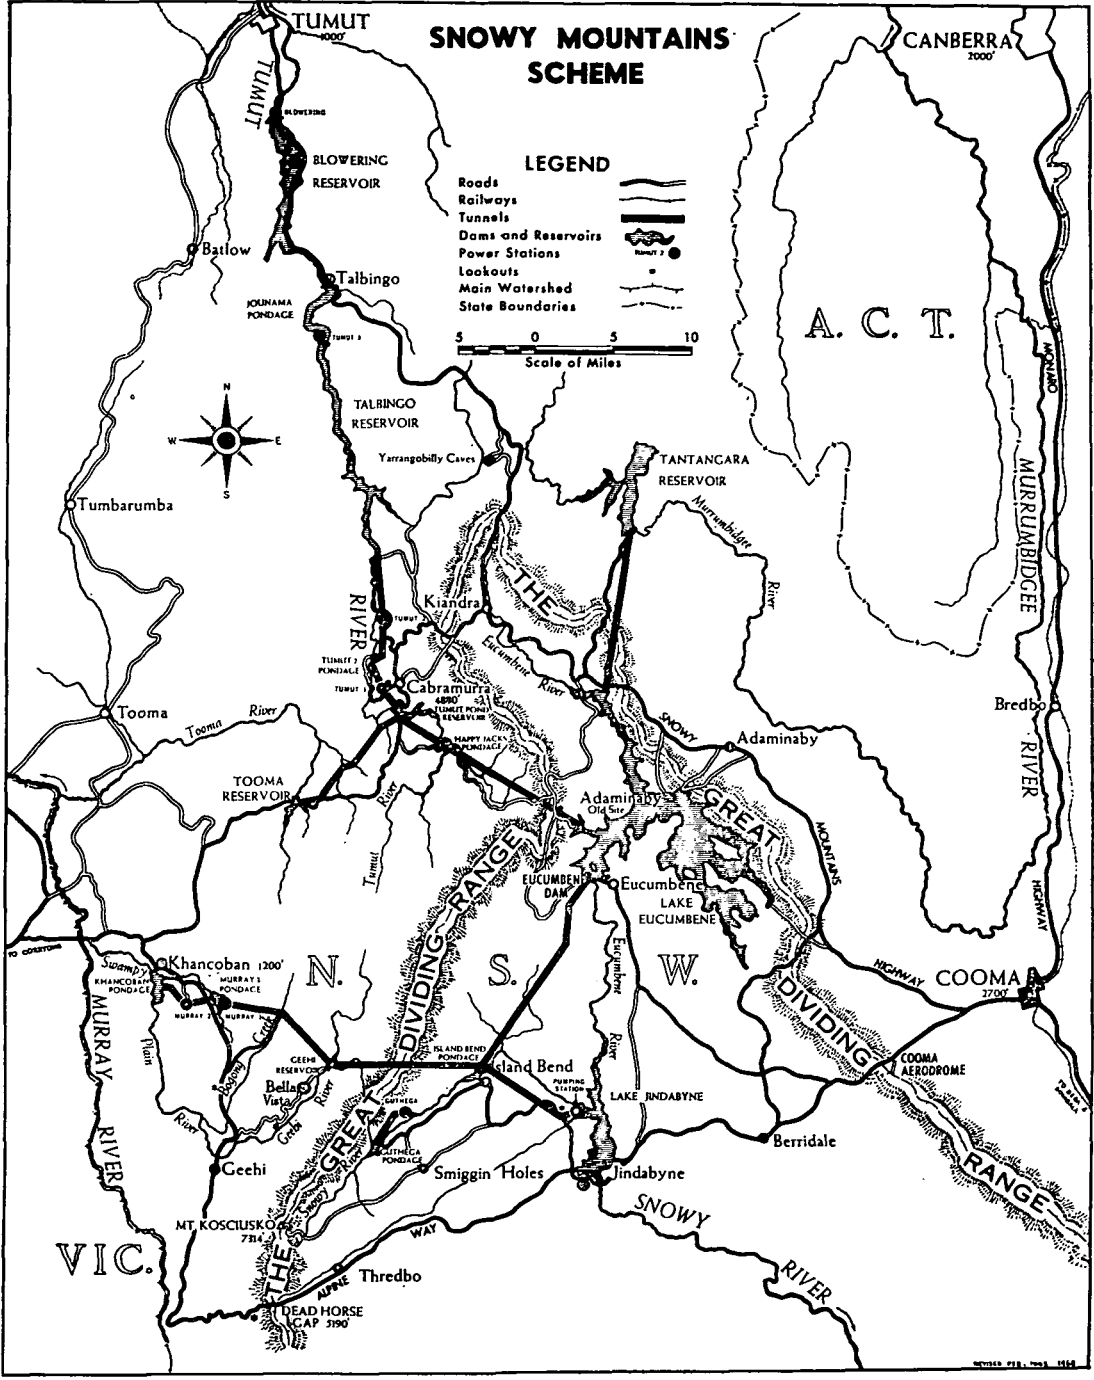

PLATE 53

*Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development are as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water is returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it joins the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme is increased by the Guthega Project, a subsidiary hydro-electric project on the Upper Snowy River above Island Bend with a generating capacity of 60,000 kW.

#### Utilisation of power from scheme

The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilise the potential of the Snowy Mountains Scheme most effectively, the order of development is being arranged so that the early stations operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States. Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2:1.

#### Progress of scheme and future programme

The scheme's first power station, Guthega, of 60,000 kW initial capacity, came into operation in February 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground Power Station in 1962. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May 1958. Tumut Pond Dam, completed in September 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity was concentrated on the Snowy-Murray development. The first unit of this development, the Eucumbene-Snowy project which comprises Island Bend Dam and the 15-mile Eucumbene-Snowy Tunnel, commenced diverting Snowy River water to storage in Lake Eucumbene in August 1965. Completion of a 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the first of the 1-mile long Pressure Pipelines, and the first two units of the 950,000 kW

Murray 1 Power Station in April 1966 allowed the first diversion of the water from the Snowy River to the Murray River in the west. All of the ten turbo-generators were brought into commercial operation with the opening of the Murray 1 Project in July 1967. The total installed capacity of the scheme has now reached 1,610,000 kW.

Khancoban Dam, designed to regulate power station releases before their discharge into the Murray River, was completed in February 1966. The Murray 2 Project in the base of the open cut excavated in the bank of Khancoban Reservoir downstream of Murray 1 Project is expected to come into operation late in 1969. The four units of Murray 2 Power Station totalling 550,000 kW are scheduled to come into commercial operation in the first half of 1969.

Construction is also proceeding on the Jindabyne Project. The earth and rockfill dam was completed in September 1967, and the pumping station and Jindabyne-Island Bend Tunnel came into service early in 1969.

Blowering Dam on the Tumut River came into service in May 1968, and the 80,000 kW Blowering Power Station, also under construction, will begin commercial operation in October 1969 when the stored water in the Blowering Reservoir is released for the irrigation season downstream on the Murrumbidgee Irrigation Areas.

For the Tumut 3 Project the construction of Jounama Dam was completed in 1968 so that the storage of water in Blowering Dam could commence. Work is under way on the remaining sections of the Tumut 3 Project, and the six units in the power station are scheduled to be brought into service progressively from 1972 to 1974.

## STATES AND TERRITORIES

### New South Wales

In Year Book No. 39 an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present the following three main Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Electricity Development Act, 1945-1968, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950-1965, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

#### Electricity Commission of New South Wales and electricity supply authorities

The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities. At 30 June 1968 there were 41 supply authorities throughout the State, 34 electricity county councils (consisting of groups of shire and/or municipal councils), 2 city and 2 municipal councils, 1 shire council, and 2 private franchise holders. In addition to the Electricity Commission, 2 coal companies supply electricity in bulk to retail supplying authorities. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

In recent years, most electricity distribution areas have been consolidated on a district basis. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal and city areas grouped for electricity supply purposes, and administered by a county council comprising representatives elected by the constituent councils. Of the 224 cities, municipalities and shires in New South Wales, 215 are included in one or other of the thirty-four electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30 June 1968 was supplying 572,772 consumers in the Sydney metropolitan area.

### Electricity Authority of New South Wales

The Electricity Authority was constituted for the purposes of promoting and regulating the co-ordination, development, expansion, extension, and improvement of electricity supply throughout the State. The following are the main functions of the Authority.

*Distribution.* The approval of the Authority is required for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils. In exercising these powers, the Authority is concerned mainly with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts.

*Rural electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State has progressed very rapidly (*see* page 1104).

*Safety.* The Electricity Development Act, 1945–1968 contains provisions for the making of regulations relating to most aspects of safety, and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumers' installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen, and overhead line construction.

*Generation and transmission.* The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

*Traffic route lighting.* The authority administers a Traffic Route Subsidy Scheme under which a subsidy is paid to councils for the lighting of traffic routes to a standard approved by the Authority.

### Generation and transmission

Except in the Snowy Mountains district and in one or two other areas New South Wales is lacking in major water power potential, and for the generation of electricity the State is dependent mainly on steam power stations. During the year ended 30 June 1968, coal-fired power stations generated 89.3 per cent of the State's energy requirements, hydro-electric stations 10.3 per cent and internal combustion plants 0.4 per cent. Of the 10.3 per cent generated from hydro-electric stations approximately 81 per cent was from the Snowy Mountains Scheme. This proportion will increase with the expansion of that scheme, but it is not expected that more than 15 per cent to 20 per cent of the State's power needs will be supplied from this source. The coal-fired steam power stations (and possibly atomic power stations in the future) will therefore continue to supply the greater part of requirements.

*Major generating stations.* At 30 June 1968 the major power stations of the State system of the Electricity Commission of New South Wales and their effective capacities were as follows: *Steam*—Vales Point (Lake Macquarie), 875,000 kW; Munmorah (Tuggerah Lakes), 700,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 61,000 kW; Zarra Street (Newcastle), 42,000 kW; Muswellbrook, 30,000 kW; Lithgow, 27,000 kW; Tamworth, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume (near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 36,000 kW. The total effective capacity of the Electricity Commission's system was 3,722,000 kW. The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

*Major transmission network.* The retailing of electricity to 97 per cent of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30 June 1968 there were in service 1,092 route miles of 330 kV (including 64 miles operating for the time being at 132 kV) and 2,395 miles of 132 kV transmission lines (including 55 miles operating for the time being at 66 kV or lower). There were also in service 2,598 miles of transmission line of 66 kV and lower voltages, and 83 miles of underground cable. The installed transformer capacity at the Commission's 133 sub-stations was 13,158,150 kVA.

*Separate systems and total State installed capacity.* A number of small plants which supply isolated towns and villages have not yet been interconnected with the main network. Some local government bodies have undertaken the development of independent power stations. Of these, the more important are: the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 15,000 kW steam power station on the Ashford coalfield. The aggregate effective capacity for the whole of the New South Wales systems and isolated plants was 3,824,910 kW at 30 June 1968 and the number of ultimate consumers at this date was 1,470,761.

#### **Future development**

The major new thermal stations already built and those now being developed on the coalfields will become the main base load supply sources for the State. Vales Point and Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

Construction of the Munmorah Power Station, located between Lakes Munmorah and Budgewoi (on the central coast), is in progress. The plant at Munmorah will ultimately comprise four 350,000 kW generating units, the first of which was commissioned in 1967, the second in 1968, and the third and fourth units will follow at yearly intervals thereafter.

During the first half of 1965 work commenced on the Liddell Power Station project in the Hunter Valley, between Singleton and Muswellbrook. The designed capacity of Liddell is 2,000,000 kW, consisting of four 500,000 kW generating units, and is the biggest thermal power station yet planned in Australia. The first unit is scheduled for commissioning in 1971, and the second, third and fourth units in 1972, 1973 and 1974 respectively.

The development of the 330 kV main system is continuing. New work in hand includes the provision of 330 kV transmission from Liddell direct to Sydney and the construction of major 330 kV transmission centres at Tamworth and Newcastle and later at Armidale. Plans to augment the transmission system during the next five years provide for the construction of 900 route miles of 330 kV lines, 1,200 miles of 132 kV overhead lines, and 26 new sub-stations.

#### **Hydro-electricity**

The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains area (*see* Snowy Mountains Hydro-electric Scheme, page 1098). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW), Burrinjuck Dam (20,000 kW), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney metropolitan area, and the output of the other stations on the release of water for irrigation. There are, in addition, four smaller hydro-electric installations in operation in various parts of the State.

#### **Rural electrification**

When the Electricity Authority of New South Wales was constituted in 1946 less than one-quarter of New South Wales farms within reasonable reach of public electricity supply systems were being served with electricity. Under a subsidy scheme approved in August 1946, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidised. Originally this limit was \$500 per consumer when averaged over the cost of the whole extension, but the limit was raised to \$800 in December 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of \$800 was not subsidised.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State the subsidy scheme was extended from May 1959 to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of \$1,200–\$1,600.

Between August 1946 and June 1968, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing \$84 million to give supply to some 60,653 farming properties and 36,231 other rural consumers and involving 59,798 miles of line. The greater part of this work had been completed at 30 June 1968. At this date the Authority was committed to the payment of \$34,533,158 in subsidies, of which \$21,385,374 had been paid.

## Victoria

In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

Constituted by the *Electricity Commissioners Act* 1918, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, provide for the statutory payment of 3 per cent of its revenue to State Consolidated Revenue, and meet depreciation and all other charges on capital funds.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material, and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo.

### State Electricity Commission of Victoria

Since it began operating in 1919 the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves over 98 per cent of the population. Development of Victoria's electricity system is based on the utilisation for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria is entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for its purposes. Victoria also shares with New South Wales in the electricity generated at Hume Hydro Station on the River Murray. Fuels used at S.E.C. power stations for 1967-68 were as follows; brown coal, 17,294,000 tons; briquettes, 456,000 tons; black coal, 29,000 tons; and oil, 34,000 tons. All the brown coal and briquette fuel is supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1967-68 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 22,520,734 tons, of which 17,294,280 tons were used in the Commission's own power stations, and 4,805,107 tons were manufactured into 1,744,948 tons of brown coal briquettes, 26 per cent of the briquette output then being used for electricity production in metropolitan and provincial steam power stations. The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel consumed in the power stations, the process of briquette manufacture results also in the generation of electricity, since the steam needed for processing the raw coal for briquetting is first used to operate turbo-generators.

### Electricity supply

At 30 June 1968 the number of ultimate consumers in Victoria was 1,173,110. Of these, 1,168,045 were served by the State system and 5,065 by local country undertakings.

Complete electrification of the State is now within sight. By 30 June 1968 about 985,000 homes and 70,610 farms were supplied with electricity. Of the new consumers connected to supply each year, more than two-thirds are outside the metropolitan area. New farm connections approximate 3,000 a year. It is expected that fewer than 3,000 homes and 1,250 farms in remote and isolated areas are now out of reach of public supply mains. Efforts will continue to be made to supply as many of these as possible.

The Commission sells electricity retail in areas of Victoria supplied with electricity, except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established and in four small country areas where municipal or private undertakings distribute, and in two locations generate, electric power. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray.

The Commission's retail consumers numbered 994,434 at 30 June 1968. Of these 788,407 are domestic, 70,283 are industrial and 85,432 are commercial. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches (Barwon, Eastern Metropolitan, Gippsland, Mallee, Midland, Mid-Western, North-Eastern, Northern, South-Western and Wimmera). At 30 June 1968 there were branch and district supply offices in Melbourne and 98 other cities and towns in Victoria.

#### **Electricity production, transmission and distribution**

Electricity generated in the State system or purchased by it totalled 11,935 million kWh in 1967-68, or more than 99 per cent of all Victoria's electricity for public supply. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30 June 1968 was 3,121,000 kW. Power stations are interconnected and feed electricity into a common pool for general supply. The major power station in this interconnected system is the Hazelwood brown coal burning power station near Morwell, which alone generates over 40 per cent of Victoria's electricity. Hazelwood now has five of its planned eight 200,000 kW generating sets in service. Other power stations in the interconnected system comprise two further base load brown coal burning power stations, Morwell and Yallourn; steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat, and also at Red Cliffs, which has, in addition, some internal combustion plant; and hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston Rivers near Eildon, and at Cairn Curran. All generators for public supply within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system and two small generators at Omeo and Mallacoota. A 300 kV transmission line links the Victorian system with the Snowy Mountains undertaking, and also provides facilities for interconnection between the Victorian and New South Wales State generating systems. Also linked with the Victorian interconnected system is the hydro station at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales. In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system is assigned a predetermined function dependent upon the availability of power from each group and the economics of generation. The various stations are utilised in the combination that will meet the system load most economically at a given time.

The electrical transmission and distribution system in the State supply network at 30 June 1968 comprised 56,138 miles of power-lines, 24 terminal receiving stations, 95 main transmission sub-stations, and more than 55,000 distribution sub-stations. Main transmission is by 330 kV, 220 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnection between the power stations. The 330 kV and 220 kV systems total 1,501 route miles.

#### **Future development**

Major new construction is concentrated on the erection, on the brown coal fields of the Latrobe Valley, of a large brown coal burning power station (Hazelwood), which is designed to operate on raw brown coal fuel supplied by belt conveyor direct from the Morwell open cut. Hazelwood Power Station is the largest project yet undertaken by the Commission and is designed to have a capacity of 1,600,000 kW in 1971. By that year the State's power resources, including Victoria's share of the output of the Snowy scheme, will have increased by 21 per cent to 3,788,000 kW. The first of Hazelwood's eight 200,000 kW turbo-generators was commissioned in October 1964, the second generating set went into service in 1965, the third set in 1966, the fourth set in 1967 and the fifth set in 1968. Three other 200,000 kW sets will follow at yearly intervals. Power generated at Hazelwood Power Station is transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network. To follow the Hazelwood project a new power station—to be known as Yallourn 'W'—will be built about half a mile west of the present Yallourn Power Station. It will also operate on brown coal which will be supplied by conveyors from Yallourn open cut. Yallourn 'W' will have two 350,000 kW turbo-generators, the first to be in service in 1972 and the second in 1973.

#### **Local country electricity undertakings**

At 30 June 1968 in country areas in Victoria there were two independent electricity undertakings at Omeo and Mallacoota generating and distributing their own local supply. In addition there were independent electricity distributing undertakings at Ararat and Stawell. Under the State Electricity Commission's rural electrification programme almost all the independent local country undertakings

will ultimately be acquired and absorbed into the State system. For the year 1967-68 the total production of the independent undertakings was 21 million kWh. The number of consumers at 30 June 1968 was 5,065. The operation of the independent undertakings is governed by the *Electric Light and Power Act 1958*, which is administered by the State Electricity Commission.

## Queensland

In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland, and of the events leading up to the establishment in 1937 of the State Electricity Commission of Queensland. In Year Book No. 53 an account is given of the post-war development and organisation of the electricity supply in Queensland.

Electricity supply in Queensland is governed by the following Acts which are administered by the Commission.

'*The State Electricity Commission Acts, 1937 to 1965.*' These Acts constituted the Commission and define its powers and duties.

'*The Electric Light and Power Acts, 1896 to 1967.*' These Acts relate to the constitution of electric authorities, except the Southern Electric Authority and the Northern Electric Authority, and define their powers and duties and the conditions under which electricity is to be supplied and used.

'*The Regional Electric Authorities Acts, 1945 to 1964.*' These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.

'*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*' These Acts established the Southern Electric Authority and define the powers and responsibilities of the Authority.

'*The Northern Electric Authority of Queensland Acts, 1963 to 1964.*' These Acts established the Northern Electric Authority. They also define its powers and responsibilities.

'*The Electrical Workers and Contractors Acts, 1962 to 1968.*' These Acts provide for the certification of electrical workers and for the licensing of electrical contractors.

### State Electricity Commission of Queensland

The Commission commenced to function in January 1938. The Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organisation and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own directly and operate generating stations and transmission lines and to sell electricity in bulk, but up to the present it has not been found necessary or desirable to implement this power.

### Organisation

Regional electrification, with centralised generation and main transmission, is the predominant feature of the organisation of the electricity supply industry in Queensland. The more populous eastern part of the State is served by three major networks.

The southern network embraces the areas of supply of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board, and the Dalby Town Council. Generation and main transmission in this area are the responsibility of the Southern Electric Authority, which sells energy in bulk to the other three Authorities. The Wide Bay-Burnett Board also operates its own base load power station at Howard. The Southern Electric Authority is also responsible for the distribution of electricity to a large rural area outside metropolitan Brisbane.

The central network is within the area of supply of the Capricornia Regional Electricity Board, which is responsible for the generation, main transmission and distribution of electricity.

The northern network covers the areas of supply of the Cairns, Townsville, and Mackay Regional Electricity Boards. Generation and main transmission are the responsibility of the Northern Electricity Authority, and electricity is purchased in bulk for distribution by the three Regional Electricity Boards. In addition, the Cairns Regional Electricity Board operates small internal combustion generating stations at certain isolated centres in its area, and the Townsville Regional Electricity Board supplies the western area of its region by means of a distribution system based on an internal combustion station at Hughenden.

At present there is no interconnection between these three main networks. West of the three main networks the form of organisation which has been adopted is determined by the stage of electrical development which has been reached. Immediately west of the Capricornia region the Central Western Regional Electricity Board operates with generation being progressively centralised at internal combustion stations at Longreach and Barcaldine. Other smaller regions of electricity supply are centred on Roma and Mount Isa. In addition, parts of southern Queensland are supplied by the Tenterfield Municipal Council and the North West County Council of New South Wales. In the remaining parts of Western Queensland there are a number of isolated electricity undertakings operated by Shire Councils.

The organisation of the industry in Queensland is moving progressively towards a greater integration of generating authorities so that the production of electricity can be centred to an increasing extent on larger and more efficient power stations.

#### **Electricity generation, transmission and distribution**

Electricity generated in the State is based primarily on black coal, 84.1 per cent of the total production during 1967-68 being derived from this fuel. Hydro-electric stations, located mainly in north Queensland, provided 14.5 per cent, and the balance of the production was provided from internal combustion stations and a gas turbine station. Most of the internal combustion stations use oil as fuel but the power station at Roma uses a combination of locally produced natural gas and crude oil. The turbine station at Rockhampton uses fuel oil as its primary energy source. Electricity generated by public electricity undertakings in Queensland during 1967-68 totalled 4,920 million kWh. A further 55 million units were purchased in bulk from other producers of electricity for re-distribution to consumers.

At 30 June 1968 the total generating capacity of all Queensland power stations was 1,407,245 kW which comprised 1,219,865 kW of steam plant, 135,205 kW of hydro-electric plant, 27,175 kW of internal combustion plant and a 25,000 kW gas turbine unit. In the southern electricity network major power stations are as follows: Bulimba 'A' (92,500 kW), Bulimba 'B' (180,000 kW), New Farm (75,000 kW), Tennyson 'A' (120,000 kW), Tennyson 'B' (120,000 kW), Swanbank 'A' (264,000 kW), and Howard (37,500 kW). In the central network major power stations are at Rockhampton (52,500 kW steam and 25,000 kW gas turbine) and Callide (90,000 kW). In the northern electricity network the principal power stations are at Townsville (37,500 kW), Kareeya (72,000 kW), Barron Gorge (60,000 kW) and Collinsville (30,000 kW). With the exception of the 25,000 kW gas turbine station at Rockhampton and the Kareeya, Barron Gorge and Somerset Dam hydro-electric stations all other stations in the large eastern networks are thermal, using coal as their primary energy source.

The electrical transmission and distribution systems within the State comprised 42,600 circuit miles of electric lines at 30 June 1968. The main transmission voltages are 132 kV, 110 kV, 66 kV and in certain areas 33 kV. Extensive rural electrification has been undertaken using the single wire earth return system. At 30 June 1968 the total number of electricity consumers was 528,000, of whom 208,000 were in metropolitan Brisbane.

#### **Future development**

Major new construction is concentrated on the development of four new power stations sited on coalfields. These are at Swanbank (396,000 kW and 480,000 kW) on the West Moreton coalfield near Ipswich, Callide (120,000 kW) on the Callide open-cut coalfield near Biloela, and at Collinsville (120,000 kW) on the Collinsville coalfield. These stations will supply the southern, central and northern networks, respectively. Cooling water for the Callide station is provided from a dam on Callide Creek. A dam on the Broken River will serve the Collinsville station. The water requirements of the Swanbank power station will be supplied from the Moogerah Dam. The Swanbank A station will consist of six 66,000 kW generating sets. Four of the six sets at this station had been commissioned by 30 June 1968. The fifth set was commissioned in September 1968 and the final set is scheduled to be commissioned in May 1969. Gas turbine plants with generating capacities of 30,000 kW and 60,000 kW will be commissioned at Swanbank and Middle Ridge in 1969 and 1970, respectively. These units will be used as peak load plant. The planned ultimate capacity of Swanbank B power station is 480,000 kW. It will comprise four 120,000 kW generating sets, one of which will be commissioned annually from 1970 to 1973.

At 30 June 1968 three 30,000 kW generating sets had been commissioned at the Callide power station. The final 30,000 kW set is scheduled for commissioning early in 1969. A 25,000 kW gas turbine unit was installed at Rockhampton in December 1967. At Collinsville power station, the first 30,000 kW set was commissioned in June 1968 and the second in December 1968. The third and fourth sets of similar size, are scheduled for commissioning in 1970 and 1971 respectively. Investigations are

currently proceeding into the next major power station, or stations, to supply south, central and northern Queensland after the early 1970's. The economics of interconnecting the three major grids are an essential part of these investigations.

### South Australia

A general historical survey concerning the electricity supply industry in South Australia is given in Year Book No. 39, page 1186. The survey traces the development of the industry from its formation in South Australia in 1895 until the establishment of the South Australian Electricity Commission in 1943.

#### Electricity Trust of South Australia

In 1946 the assets of the Adelaide Electric Supply Co. Ltd were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897-1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organisations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organisations, and give or receive supplies of electricity in bulk.

#### Capacity and production

Three main categories or organisations generate electric power in South Australia, namely: (a) governmental, which includes the Electricity Trust; (b) local authorities, e.g. municipal and district councils; and (c) other, including individuals and firms engaged primarily in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

Of the total installed capacity in South Australia at 31 December 1968, the Electricity Trust operated plant with a capacity of 841,000 kW, and is the most important authority supplying electricity in the State. There were approximately 408,000 ultimate consumers of electricity in the State, of whom 392,000 were supplied directly and approximately 11,100 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne 'B' (240,000 kW), Port Augusta Playford 'A' (90,000 kW) and Playford 'B' (240,000 kW), and Torrens Island (240,000 kW).

The Trust operates two smaller power stations. The Mt Gambier station has an installed capacity of 21,800 kW and burns either wood waste or fuel oil. The other station at Port Lincoln has a 5,000 kW steam and a 4,600 kW diesel plant. Both locations are connected with the Trust's interconnected system with 132 kV lines.

No hydro-electric potential exists in South Australia. Steam generating units comprise 98 per cent of installed capacity and the balance is internal combustion equipment.

#### Leigh Creek and other new capacity

Fairly extensive deposits of low grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act, 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30 June 1968, 2,081,290 tons of coal were produced, practically all of which was used by the electricity undertaking at the Port Augusta Playford Power Stations, which use Leigh Creek coal exclusively.

A power station is being constructed on Torrens Island near Adelaide consisting of four 120,000 kW turbo-alternators and associated boilers modified to use both natural gas or oil and will be completed by 1971. The No. 2 unit consisting of 120,000 kW turbo-alternator and associated boiler was placed on load for the first time in June 1968.

### Western Australia

Since 1952 the State Electricity Commission of Western Australia has generated and distributed all electric current in the Perth metropolitan area. For information on the early history of electricity supply in the metropolitan area, see Year Book No. 39, page 1189.

### State Electricity Commission of Western Australia

The State Electricity Commission of Western Australia was established by the *State Electricity Commission Act, 1945*, and, as at present constituted, consists of nine members, including the Chairman, appointed by the Governor. Four of the Commissioners are representatives of consumers, one for the metropolitan area, two for the rest of the State and one representing commercial consumers. Of the remaining five, one is the Under Treasurer of the State or his deputy, one represents employees of the Commission and three are required to be qualified engineers.

The Commission is empowered to co-ordinate all power undertakings in the State and to encourage and promote the use of electricity and other power, especially for industrial, manufacturing and rural purposes.

### General pattern of electricity supply

The State Electricity Commission gives central power station supply to the metropolitan area, an area of approximately 30,000 square miles in the South-West and Great Southern Areas, and an area extending eastward from Perth to Koolyanobbing. The policy of extending power supplies to rural holdings is continuing, and at 30 September 1968 some 9,660 such consumers were connected. A scheme known as the Northern Areas State Power Scheme is also being developed, and a depot has been established in the Geraldton area where the Commission purchases power in bulk to supply districts north to Northampton and south to Dongara. It also supplies Port Hedland with power which is generated by a diesel station situated in the town.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes.

In Kalgoorlie the large goldmines generate their own power requirements. The Kalgoorlie Town Council operates a 50-cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Councils will continue to operate for some time at least.

The total number of consumers at 30 June 1968 was 238,252, of whom 216,991 were supplied by the Commission.

The Commission has developed its system to provide for the rapid expansion of industry and housing, and generating plant has increased almost eight-fold in the past twenty-one years. The four major power stations in the system are interconnected with the South-West Power Station at Collie, enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is also being undertaken to keep pace with the growth in consumer demand, which is being maintained at a high level. The activities of the interconnected system for the year 1967-68 were as follows: plant capacity, 469,500 kW; maximum load, 456,000 kW; units generated, 1,672,961 kW; fuel used per unit (kWh) generated, 1.34 lb; coal used, 897,922 tons.

### New projects

The power station at Muja (near Collie) was completed in January 1969 when a fourth 60 MW turbo-alternator was commissioned, giving the station a total capacity of 240 MW. Contracts have been let for four 120,000 kW oil-fired units for a new station being built at Kwinana. It is expected that these units will be commissioned in 1969, 1970, 1971 and 1972.

## Tasmania

A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries, including large electro-chemical and metallurgical works with high load factor (in consequence of which the system load factor is also very high—70 per cent), for which energy costs constitute a large proportion of the total cost of production. The continuous power demand of these organisations when plant is in full operation aggregates 390,000 kW. For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

### Hydro-Electric Commission

In 1929 the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vested in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorised it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The total installed capacity of alternators in the various power stations operating now, under construction, or projected is as follows.

<i>Power stations</i>	<i>Water system</i>	<i>Date of entry into system(a)</i>	<i>kW</i>
Waddamana 'B'	Great Lake	1944	48,000
Tarraleah	Derwent	1938	90,000
Butlers Gorge	Derwent	1951	12,200
Tungatinah	Nive/Ouse/Little Pine	1953	125,000
Trevallyn	South Esk(b)	1955	80,000
Lake Echo	Little Pine/Ouse	1956	32,400
Wayatinah	Derwent	1957	38,250
Liapootah	Derwent	1960	83,700
Catagunya	Derwent	1962	48,000
Poatina	Great Lake	1964	250,000
Tods Corner	Arthurs Lake	1966	1,600
Meadowbank	Derwent	1967	40,000
Cluny	Derwent	1967	17,000
Repulse	Derwent	1968	28,000
Rowallan	Mersey-Forth	1968	10,450
Lemonthyme	Mersey-Forth	1969	51,000
Devils Gate	Mersey-Forth	1969	60,000
Wilmot	Mersey-Forth	1970	30,600
Bell Bay Thermal	..	1970	120,000
Cethana	Mersey-Forth	1971	85,000
Paloona	Mersey-Forth	1971	28,000
Fisher	Mersey-Forth	1971	43,200
Gordon River, Stage 1	Gordon/Serpentine/Huon	1975	240,000

(a) Actual till 1968; planned dates for subsequent years. (b) Discharge from Poatina enters South Esk via tributaries.

The number of ultimate consumers at 30 June 1968 was 139,886.

### New capacity

The Hydro-Electric Commission is engaged on a construction programme comprising the Mersey-Forth Power Development, Gordon River Power Development, Stage 1, and Bell Bay Thermal Power Station.

The Mersey-Forth Power Development is scheduled to be completed progressively between 1968 and 1971. The essence of this development is the diversion of the flows of the Mersey and Wilmot Rivers and tributaries into the Forth River and the construction of Forth River dams. These diverted flows will be used for power generation at seven distinct power stations. The Mersey-Forth Project will add a total of 308,250 kW to the system. The first stage of the Gordon River Power Development involves the construction of a dam and a power station with a proposed instalment of 240,000 kilowatt capacity with provision for an increase to 320,000 kilowatts. An oil-fired thermal station with a single 120,000 kilowatt generator, to be built at Bell Bay on the River Tamar, is scheduled for completion by August 1970.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme. Investigations are continuing into the very considerable resources as yet untouched, principally in the west and south-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 2,400,000 kW to the system.

## Statistical summary

The following table shows statistics for each State and Territory separately and for Australia for the year 1967-68. Statistics of the electricity supply industry for the years 1963-64 to 1967-68 are given in the chapter Manufacturing Industry. Particulars of the Snowy Mountains scheme are included under New South Wales in the following table.

CENTRAL ELECTRIC STATIONS: STATES AND TERRITORIES, 1967-68

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Generating stations—										
Government . . . . .	No.	28	12	..	13	12	19	5	..	89
Local authority . . . . .	"	8	3	42	7	35	..	..	..	95
Companies . . . . .	"	14	1	1	8	42	2	..	..	68
<i>Total stations</i> . . . . .	"	50	16	43	28	89	21	5	..	252
Installed capacity of generators—										
Steam . . . . .	'000 kW	3,768	2,292	1,220	797	514	10	47	..	8,647
Hydro . . . . .	"	1,751	333	135	..	2	915	..	..	3,136
Internal combustion . . . . .	"	81	20	(a)52	14	158	34	11	..	370
<i>Total capacity</i> . . . . .	"	5,600	2,644	1,407	811	675	958	58	..	12,153
Persons employed(b) . . . . .	No.	4,141	3,654	1,893	(g)	1,255	(g)	105	..	12,999
Value of output(c) . . . . .	\$'000	153,078	101,380	55,347	(g)	31,040	(g)	2,531	..	386,132
Value of production(d) . . . . .	"	112,955	72,259	28,514	(g)	18,231	(g)	1,320	..	263,018
Electricity generated(e)										
million kWh		18,043	11,419	5,189	3,890	2,216	3,773	122	(h)	44,663
Ultimate consumers(f) No.		1,470,761	1,173,110	528,000	408,000	238,252	139,886	8,556	33,286	3,999,851

(a) Including gas turbine. (b) Average employment in generating stations over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. The generation of electricity within each State takes no account of interchange of electricity between States. Furthermore, Victorian details exclude entitlements to generation from Hume Power Station and the Snowy Mountains Hydro-electric Scheme. (f) Approximate figures supplied by the electricity authority in each State. An 'ultimate consumer' is a person, business, undertaking, etc. that has contracted to receive electric power from a public or private organisation supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household. (g) Not available for publication; included in the total for Australia. (h) Not available. Excluded from Australian total.

## Commonwealth Territories

The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek, and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

## Australian Capital Territory

The supply authority is the A.C.T. Electricity Authority, which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1 July 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connection to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies. The total number of ultimate consumers at 30 June 1968 was 33,268. During the year 1967-68 the bulk electricity purchased was 403,458,000 kWh and the system maximum demand was 107,450 kW.

## Northern Territory

At Darwin, supply was established by the Town Council in October 1934, but during April 1937 responsibility for generation and supply was transferred to the Northern Territory Administration. The Stokes Hill Power Station is now equipped with four turbo alternators with a total capacity of 47,000 kW. Old Diesel Power Station with a capacity of approximately 5,000 kW is available as a stand-by. A 66kV transmission system is used in Darwin area. At Alice Springs the power station is equipped with a diesel generating plant of 8,000 kW total capacity. At Katherine the power station is equipped with a diesel generating plant of 2,700 kW total capacity while at Pine Creek and Elliot power is supplied by a small automatic diesel alternator of 90 kW capacity. The total number of ultimate consumers served in the Territory at 30 June 1968 was 8,556.

**Papua and New Guinea**

*Papua and New Guinea Electricity Commission.* Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1 July 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works. The Commission, on its own behalf, operates the public supplies in the main centres of population and, on behalf of the Administration, operates the supply in the minor centres and patrol posts, hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply. It has also regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory.

*Generating facilities.* The Electricity Commission owns and operates thermal and hydro-electric facilities at Port Moresby and Goroka and thermal facilities at Lae, Madang, Samarai, Wewak, Rabaul, Kavieng and Kokopo, with a total installed capacity of 34.2 MW at 30 June 1968.

	<i>Hydro</i> kW	<i>Thermal</i> kW	<i>Total</i> kW
Port Moresby . . . . .	23,500	..	23,500
Lae . . . . .	..	2,700	2,700
Madang . . . . .	..	1,720	1,720
Goroka . . . . .	400	750	1,150
Wewak . . . . .	..	1,360	1,360
Rabaul . . . . .	..	3,000	3,000
Kavieng, Kokopo, Samarai . . . . .	..	790	790
<b>Total . . . . .</b>	<b>23,900</b>	<b>10,320</b>	<b>34,220</b>

In addition, the Commission purchases bulk power from the hydro-electric power stations of Placer Development Ltd for consumption in the township of Lae. The Commission also owns and operates the distributing systems in these centres. The total substation capacity of all the systems combined amounts to approximately 60,500 kVa divided up in 403 stations. The Commission maintains the generating plant and distribution systems in all minor centres, acting as an agent of, and from funds provided by, the Administration. In the financial year 1967-68, 126 centres with a total installed capacity of approximately 6.0 MW were supplied with power. The townships of Wau and Bulolo are supplied exclusively with power generated by Placer Development Ltd. The number of consumers served by the Commission at 30 June 1968 was 12,786.

*Future Development.* Numbers 4 and 5 generators are at present being installed at the Rouna No. 2 Power Station. These are expected to be completed by mid 1969 bringing the Rouna No. 2 Power Station to its full planned capacity of 30 MW. Tenders are now being called for the raising of the Sirinumu Dam which is planned for completion in December 1970. This will ensure adequate water for the full output of the Rouna No. 2 Power Station and provide potential for further development of the Laloki River to supply Port Moresby.

Investigations have been completed on the proposed hydro-electric development of the Upper Ramu River, and recommendations have been submitted by the Administration to the Commonwealth Government. The recommendations include proposals to build a station designed for an ultimate installed capacity of 72,000 kW for a regional supply to Lae, Madang, Kainantu, Goroka, and Mount Hagen. Some 400 miles of 66 kV and 132 kV transmission line will be required to bring power to the centres of consumption.

Pending construction of the Upper Ramu hydro-electric scheme the diesel power stations at Lae, Madang, Goroka, and Mt Hagen are being extended. One 1,340 kW set is at present being installed at Madang and will be completed in May 1969. Three 2,400 kW sets have been ordered for Lae and two 400 kW sets for Goroka. A 5,000 kW hydro-electric scheme is being investigated for Mt Hagen for supply prior to the commissioning of the Upper Ramu scheme.

Investigations have commenced in determining the next stage in developing supply to Port Moresby. Besides further development of the Laloki River, the potential of the Musa, Angabunga, and Vanapa Rivers are being examined. The feasibility of connecting Port Moresby with the future Upper Ramu scheme is also being considered. Several small hydro-electric schemes for remote centres are being investigated. These include a 160 kW scheme for Finschhafen and a 200 kW scheme for Wabag.

An additional 1,200 kW diesel set was commissioned at the Rabaul Station in January 1969 and negotiations are proceeding for the installation of a second similar set. The development of a 20 MW hydro-electric scheme on the lower Warangai River has proved uneconomical for supplying the Gazelle Peninsula.

## CHAPTER 28

### EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with in this chapter is contained in the *Labour Report* and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the chapter Miscellaneous of this Year Book. Detailed information on employment and unemployment and the Labour Force Survey is contained in mimeographed bulletin *The Labour Force*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary estimates of civilian employment are issued in a monthly statement *Wage and Salary Earners in Civilian Employment*.

#### THE LABOUR FORCE

The labour force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the labour force, classified according to characteristics such as age, sex, marital status, industry, occupational status, and occupation are obtained only at a general census of population. Quarterly estimates of the civilian labour force are derived from the results of surveys of a sample of households selected by area sampling methods. A summary of the information about the labour force that was obtained at the population census of June 1966 is given on pages 1116-24.

#### Population censuses\*

At the 1961 and previous censuses the labour force† was determined as:

'Those who are engaged in an industry, business, profession, trade or service at the time of the Census (including those on long service leave, etc.) . . .'; and

' . . . those out of a job at time of the Census but who are usually engaged in an industry, business, profession, trade or service . . .'

At the 1966 census an additional set of four questions was asked in order to obtain information on the basis of which the labour force could be determined more precisely. The *questions* were as follows.

16. 'Did the person have a job or business of any kind last week (even though he may have been temporarily absent from it)? ANSWER "YES" or "NO".'
17. 'Did the person do any work at all last week for payment or profit? ANSWER "YES" or "NO". Persons working without pay as a helper in a "family business" or farm and members of the clergy and of religious orders (other than purely contemplative orders) should answer "YES" to this question. Persons doing only unpaid housework should answer "NO".'
18. 'Was the person temporarily laid off by his employer without pay for the whole of last week? ANSWER "YES" or "NO".'
19. 'Did the person look for work last week? ANSWER "YES" or "NO". (Note. "Looking for work" means (i) being registered with Commonwealth Employment Service, or (ii) approaching prospective employers, or (iii) placing or answering advertisements, or (iv) writing letters of application, or (v) awaiting the result of recent applications).'

The labour force includes all persons for whom the answer 'yes' was given to any one of these four questions, except that persons helping but not receiving wages or a salary who usually worked less than fifteen hours a week were excluded from the labour force. Persons under fifteen years of age were also excluded by definition from the labour force.

\* Particulars of Aborigines are not included in the tables in this section. See page 117, Chapter 7, Population. † The term 'work force' has been used in 1961 and 1966 census publications and has the same meaning as the term 'labour force' recently adopted.

Persons in the labour force were classified into two categories: those employed and those unemployed. A person was considered to be unemployed if he answered the above questions in any one of the following ways.

Question No.	In labour force—Unemployed				
	No	No	No	Yes	Yes
16.	No	No	No	Yes	Yes
17.	No	No	No	No	No
18.	No	Yes	Yes	Yes	Yes
19.	Yes	No	Yes	No	Yes

This approach conforms closely to the recommendations of the Eighth International Conference of Labour Statisticians held in Geneva in 1954.

The net effect of the new definition is to include approximately 108,000 additional persons in the Australian labour force, i.e. a proportionate increase in the Australian labour force of approximately 2.3 per cent. The major factor in this change was females working part-time (sometimes for only a few hours a week) some of whom, in 1961, did not consider themselves as '... engaged in an industry, business, profession, trade or service.'

#### Occupational status

Persons in the labour force were asked at the 1966 census to state occupational status in accordance with the following instructions.

'If working for wages or salary (including apprentices), write "W".

If conducting own business or profession and not at present employing others, write "O".

If conducting own business or profession and at present employing others, write "E".

If helping but not receiving wages or salary, write "H".

If looking for first job, write "F".'

The table following shows the occupational status of the population of Australia at the 1966 census.

#### POPULATION, BY OCCUPATIONAL STATUS: AUSTRALIA CENSUS, 30 JUNE 1966

Occupational status	Males	Females	Persons
<b>In labour force—</b>			
Employed—			
Employer . . . . .	250,391	60,221	310,612
Self-employed . . . . .	315,808	68,419	384,227
Employee on wage or salary . . . . .	2,797,118	1,241,442	4,038,560
Helper, unpaid . . . . .	13,048	32,317	45,365
<b>Total employed . . . . .</b>	<b>3,376,365</b>	<b>1,402,399</b>	<b>4,778,764</b>
Unemployed . . . . .	45,449	32,242	77,691
<b>Total in labour force . . . . .</b>	<b>3,421,814</b>	<b>1,434,641</b>	<b>4,856,455</b>
<b>Not in labour force—</b>			
Child not at school . . . . .	611,590	581,429	1,193,019
Child attending school or full-time student . . . . .	1,315,221	1,223,726	2,538,947
Mainly dependent on pension or superannuation . . . . .	296,756	460,858	757,614
Of independent means . . . . .	50,800	56,619	107,419
Home duties . . . . .	..	1,873,146	1,873,146
Inmates of institutions . . . . .	39,333	41,921	81,254
Other not in labour force . . . . .	80,845	61,763	142,608
<b>Total not in labour force . . . . .</b>	<b>2,394,545</b>	<b>4,299,462</b>	<b>6,694,007</b>
<b>Grand total . . . . .</b>	<b>5,816,359</b>	<b>5,734,103</b>	<b>11,550,462</b>

**Occupation and industry**

The working population may be classified according to distinct concepts: (i) the *occupation*, which is personal to the individual, and (ii) the *industry*, in which the individual carries on his occupation. Thus the occupation of a person is the kind of work that he or she personally performs, while industry is defined as any single branch of productive activity, trade, or service.

The precise classification of persons in the labour force according to occupation and industry is extremely difficult, but continuing efforts are made to improve the quality of the data from census to census. Consequently, the comparison of data compiled at the 1966 census with that obtained at previous censuses is influenced not only by changes in the definition and content of the labour force, but also by the different responses which may have been evoked by efforts to improve the questions on the census schedule, and by some changes in coding rules designed to rectify known deficiencies in the data. Classification according to occupation and industry is difficult mainly because of the problem of conveying through a printed form the exact nature of the information required (e.g. the conceptual difference between 'occupation' and 'industry') and the consequential inadequacy of many replies.

Classification according to occupation is particularly difficult because: (a) the range of occupations is so extensive; (b) there is lack of uniformity in occupational terms, which vary between industries, locations, and States; and (c) respondents fail to give precise descriptions, especially of other members of their family, either through carelessness or ignorance of occupational designations. Classification according to industry is complicated by the development of new fields of industrial enterprise and the splitting and overlapping of previously identifiable fields.

It is proposed to undertake a detailed analysis of the industry information obtained at the 1966 census to evaluate the precision of the data and as an aid to the framing of classifications and the wording of instructions for the 1971 census.

**Industry**

At the 1966 census persons in the labour force were asked to state industry in accordance with the following instructions.

'State the exact branch of industry, business or service in which mainly engaged last week, using two or more words where possible. For example, "Dairy Farming", "Coal Mining", "Woollen Mills", "Retail Grocery", "Road Construction", etc. Employees should state the industry of their employer. For example, a carpenter employed by a coal mining company should state "Coal Mining". If employed by a Government Department or other public body, state also its name. For paid housekeepers and domestic servants in private households, write "P.H.".'

From the answers to this question, persons were classified according to the Bureau's *Classification of Industries*, which provides for each person to be classified according to the nature of the business in which mainly engaged, regardless of whether operated by a government authority, corporation, or individual.

**POPULATION, BY INDUSTRY: AUSTRALIA, CENSUS, 30 JUNE 1966**

<i>Industry group and sub-group</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
<b>Primary production—</b>			
Fishing . . . . .	7,719	302	8,021
Hunting and trapping . . . . .	1,032	46	1,078
Rural industries . . . . .	359,359	74,701	434,060
Forestry . . . . .	13,232	260	13,492
<i>Total, primary production . . . . .</i>	<i>381,342</i>	<i>75,309</i>	<i>456,651</i>
<b>Mining and quarrying—</b>			
Mining (including opencut mining) . . . . .	47,419	1,972	49,391
Quarrying . . . . .	6,608	344	6,952
<i>Total, mining and quarrying . . . . .</i>	<i>54,027</i>	<i>2,316</i>	<i>56,343</i>

POPULATION, BY INDUSTRY: AUSTRALIA, CENSUS, 30 JUNE 1966—*continued*

<i>Industry group and sub-group</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
<b>Manufacturing—</b>			
Manufacture relating to cement, bricks, glass and stone . . . . .	48,570	5,342	53,912
Manufacture of products of petroleum and coal (excluding chemical and gas works) . . . . .	7,546	551	8,097

**Industry and occupational status**

Males and females in the labour force at the 1966 census are classified in the following table according to industry and occupational status. Only the major industry groups are shown; particulars for each sub-group are available in the mimeographed 1966 Census Bulletin No. 9.6, *Population: By Industry and Occupational Status, Australia* and in the corresponding bulletin for each State and Territory.

**Occupation**

At the 1966 Census persons in the labour force were asked to state occupation in accordance with the following instructions.

'State in precise (or award) terms the person's main occupation last week, using where possible two or more words. For example, "Builder's Labourer", "Dairy Farm Hand", "Clothing Machinist", "Wood Machinist", "Motor Mechanic", "Electrical Fitter", "Coal Wheeler", "Dairy Farmer", etc. Employees of Government Departments or Authorities should be described by their official designation, such as "District Employment Officer", "Shire Clerk", etc., and not by such terms as "Public Servant", etc.'

**The population survey**

The population survey is the general title given to the household sample survey carried out in February, May, August and November of each year in all States and Territories. Emphasis in the survey is placed on the collection of data on demographic and labour force characteristics, the principal survey component being referred to as the labour force survey. The remaining part of the population survey consists of supplementary collections which are carried out from time to time in conjunction with the labour force survey.

The population survey was instituted in November 1960 in the six State capital cities, and was extended to include non-metropolitan areas in February 1964. About 38,000 households, representing one per cent of all households, are selected by area sampling methods and enumerated each quarter, the information being obtained by carefully chosen and specially trained interviewers during a four-week period on each occasion.

A description of the labour force survey and a selection of principal statistics obtained from it are given in this section. Data from supplementary surveys are published in mimeographed bulletins which are available on request (results of the surveys Leavers from Schools, Universities or Other Educational Institutions, and Multiple Jobholding, were given in Year Book No. 54, pages 1162-6). A list of the subjects covered by supplementary surveys is shown below.

Leavers from Schools, Universities or Other Education Institutions—February 1964, 1965, 1966 and 1967.

Australian Ex-Service Personnel, November 1966.

Multiple Jobholding, November 1965; August 1966; August 1967.

Superannuation, Victoria, May 1968.

Chronic Illnesses, Injuries and Impairments, May 1968.

Study Courses, August 1968.

Work Experience in 1968.

Child Care, May 1969.

### The labour force survey

This survey includes all persons fifteen years of age and over (including full-blood Aborigines), except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.

The classification used in the survey conforms closely to that recommended by the Eighth International Conference of Labour Statisticians held in Geneva in 1954. In this classification, the labour force category to which an individual is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) during a specified week, known as 'survey week', which is the week immediately preceding that in which the interview takes place. The interviews are carried out during a period of four weeks, so that there are four survey weeks in each of the months to which the survey relates. These survey weeks generally fall within the limits of the calendar month.

A person's activity during survey week is determined from answers given to a set of questions specially designed for this purpose. The principal categories appearing in the tables in this bulletin are the employed and unemployed, who together constitute the labour force, and the remainder, who are classified as not in the labour force. Definitions of these categories are as follows:

(i) *The labour force* comprises all persons who, during survey week, were employed or unemployed as defined in (ii) and (iii) below.

(ii) *Employed persons* comprise all those who, during survey week,

(a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or

(b) worked fifteen hours or more without pay in a family business (or farm), or

(c) had a job, business or farm, but were not at work because of illness, accident, leave, holiday or industrial dispute; or because of production hold-up due to bad weather, plant breakdown, etc.

A person who had a job but was temporarily laid off by his employer for the whole week without pay is excluded, and is classified in the tables as unemployed. A person who did some work during the week, however, before he either lost his job or was laid off, is classified as employed. A person who held more than one job is counted only once, in the job at which he worked most hours during survey week.

(iii) *Unemployed persons* comprise all those who, during survey week, did no work at all, and who either,

(a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week), or

(b) were laid off from their jobs without pay for the whole week.

A person who either lost his job or was laid off *during* survey week, but did some work at his job during that week, is classified as employed.

(iv) *Persons not in the labour force* are all those who, during survey week, were not in the categories 'employed' or 'unemployed' as defined. This category therefore includes persons without a job, business or farm who were not actively looking for work, and who, during survey week, were either keeping house (unpaid), attending school, university, etc., retired or voluntarily idle, permanently unable to work or inmates of institutions. A person who worked less than fifteen hours without pay in a family business during survey week is also classified as not in the labour force.

Figures of total population fifteen years of age and over for each sex are derived from the official population estimates, which in turn are based on the census of June 1966. Figures of marital status and all labour force characteristics of these populations are derived from the sample survey data. For this and other reasons, including differences in timing, methods of collection (personal interview in the survey, self-enumeration in the census) and, in some cases, concepts and definitions, the survey estimates of marital status and labour force characteristics for May 1966 may not agree closely with the corresponding census figures for June 1966.

#### Reliability of the estimates

Since the estimates which appear in the following tables are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

Space does not allow for the separate indication of the standard errors of all estimates in this section. A table of standard errors which is intended to be of general application is therefore given below (Table A), and approximate standard errors of estimates of the total number of persons in Australia in each of the principal employment status categories, classified by sex only, in Table B.

The standard errors in these tables are averages based on calculations for a limited number of surveys and are also averages over a wide range of labour force characteristics. These figures thus give not a precise measure but an indication of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of Table A is as follows: if the estimate obtained from the sample is 100,000 and the standard error is 3 per cent of the estimate, i.e. 3,000, there are about two chances in three that the true figure is within the range 97,000 to 103,000 and about nineteen chances in twenty that this figure is within the range 94,000 to 106,000.

TABLE A  
STANDARD ERRORS OF QUARTERLY ESTIMATES

Size of estimate (persons)	Approximate standard error of estimates	
	Persons	Percentage of estimate
4,000 . . . . .	750	19
5,000 . . . . .	850	17
10,000 . . . . .	1,100	11
20,000 . . . . .	1,400	7
50,000 . . . . .	2,000	4
100,000 . . . . .	3,000	3
200,000 . . . . .	4,000	2
500,000 . . . . .	5,000	1
1,000,000 . . . . .	5,500	0.5
2,000,000 . . . . .	8,000	0.4

TABLE B  
STANDARD ERRORS OF PRINCIPAL EMPLOYMENT STATUS CATEGORIES

Category	Approximate standard error of estimates					
	Males		Females		Persons	
	'000	Per cent	'000	Per cent	'000	Per cent
Employed—						
Agriculture . . . . .	12	3.2	3	6.3	14	3.2
Other industries . . . . .	8	0.3	10	0.7	12	0.3
Total . . . . .	8	0.2	10	0.7	12	0.3
Unemployed . . . . .	2	6.1	2	5.7	3	4.4
Labour force . . . . .	7	0.2	10	0.7	12	0.3
Not in the labour force . . . . .	7	1.1	10	0.4	12	0.4

It should be noted that the standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors relative to estimates of equivalent size for males in similar employment categories.

The reliability of estimated percentages given in the following tables, which have been computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the denominator. Percentages quoted and any other percentages calculated from figures in the following tables, have generally somewhat lower standard errors (proportionally) than have the estimates which form the numerators of the percentages, particularly where the percentages are large.

As the standard errors in Table A show, the smaller the estimate the higher is the relative standard error. Very small estimates would thus be subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the following tables, estimates less than 4,000 have not been shown. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

\* Estimates less than 4,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived, they should not be regarded as reliable.  
(a) Civilians 15 years of age and over. For definitions see page 1125. (b) Period from the time the person began looking for work, or was laid off, to the end of survey week. (c) Includes persons laid off from full-time jobs. (d) Includes persons laid off from part-time jobs.

## WAGE AND SALARY EARNERS IN EMPLOYMENT

NOTE: The series in this section have been revised to new benchmarks derived from the population census of June 1966. When this chapter was sent for press the revision had not been completed, and the old series have therefore been included in order to give an indication of employment trends. For an explanation of the differences between the new and old series see following paragraphs.

The series contained in this section, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as 'benchmarks') derived for the purpose from the population census of June 1961. From July 1961 to date the figures shown are estimates designed to measure month-to-month changes in the sector of employment to which the benchmarks relate. Between population censuses the employment data are obtained from three main sources, namely (a) current pay-roll tax returns; (b) current returns from government bodies; and (c) some other direct current records of employment (e.g. for hospitals). The total of recorded employment is supplemented each month by estimates of changes in the number of wage and salary earners not covered by the foregoing collections. The series relate only to wage and salary earners. They therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are employees in agriculture and in private domestic service.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' pay-rolls because they are on leave without pay, on strike, or stood down for the entire period are excluded.

Pay-roll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals, and other similar organisations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1968*).

The level of the estimates in this section is affected by the exclusion of many employees from the 1961 census benchmarks (*see below*); nevertheless, they measure reasonably well the short-term trends in employment in the *defined field*. However, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and pay-roll data, and changes in such factors as labour turnover, multiple jobholding, and part-time working affect the trend over longer periods.

The benchmark figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly figures are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in scope and in the reporting of industry, the industry dissection of the benchmark totals was adjusted to conform as closely as possible to an enterprise-establishment reporting basis. The industry classification used throughout the series is that of the population census of June 1961.

At the 1961 population census those persons who were not stated to be engaged in an industry, business, profession, trade, or service were required to be described as students, pensioners, engaged in home duties, etc., and were automatically classified as not being in the labour force. It is believed that many persons—particularly married women—classified themselves according to their main or usual activity or status (e.g. home duties) and overlooked the part-time or casual employment that they had at the time of the census. Had the census questions been designed to obtain particulars of each person's actual activity during a specified period (as the 1966 population census labour force questions were), so that any employee who did any paid work at all, or who had a job, would have been included, these persons would have been counted in the total of employed wage and salary earners.

The scope of the current monthly series is similar to and subject to the same limitations as that of the population census benchmarks. For this reason the totals shown in this section for Australia, for States and Territories, and for industries do not necessarily represent, at any point of time, the total numbers of wage and salary earners employed full-time or part-time in those areas or industries. Instead, they represent the estimated numbers of persons who would have been counted as wage and salary earners at a population census in which the concepts and definitions were the same as those of the 1961 census. The concepts and definitions adopted at the 1966 population census conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians, all persons who did any paid work for an employer or who had a job as an employee from which they were temporarily absent being classified as employed wage and salary earners. Census figures have been published in a series of mimeographed bulletins which show particulars of the occupational status and industry of the population in each State and Territory at June 1966. The figures therein for wage and salary earners classified by industry are not comparable with those in this section, because they are based on different work force concepts and definitions and on a different method of allocating persons to industries. Furthermore, the figures in this section are still based on June 1961 benchmarks.

The table below gives a comparison, at June 1966, of the estimated number of employed wage and salary earners (excluding defence forces and employees in agriculture and private domestic service), compiled on the current basis, and figures from the population census. In adjusting the census figures to exclude the categories of persons excluded from the estimates, allowance has been made for persons whose industry was either inadequately described or not stated.

## COMMONWEALTH EMPLOYMENT SERVICE

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act 1945-1966* (sections 47 and 48). In brief, the main functions of the C.E.S. are to assist people seeking employment to obtain positions best suited to their training, experience, abilities, and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organisation and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organisation, which was ratified by Australia in December 1949. In addition, C.E.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralised basis within the Employment and Industrial Services Division of the Department of Labour and National Service. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State. There are 154 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 324 agents in the smaller country centres. The District Employment Offices and Branch Offices are distributed as follows: New South Wales, 54; Victoria, 38; Queensland, 26; South Australia, 14; Western Australia, 15; Tasmania, 4; Northern Territory, 2; Australian Capital Territory, 1.

Specialised facilities are provided for young people, persons with physical and mental handicaps, ex-members of the defence forces, national service dischargees, migrants, rural workers, and persons with professional and technical qualifications. The C.E.S. provides vocational guidance free of charge in all States and has a staff of qualified psychologists for this function. Guidance is available to any person, but is provided particularly for young people, ex-servicemen and the handicapped. In New South Wales the C.E.S. provides vocational guidance to adults, including ex-servicemen and the handicapped, while the State Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act 1947-1968* must register at a District Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance in obtaining employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of June 1969, about 261,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twenty-third year of operation in May 1969. During 1968 there were 1,091,758 applicants who registered for employment, of whom 784,475 were referred to employers and 461,388 placed in employment. New vacancies notified numbered 655,713.

**Persons registered for employment**

The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include persons in receipt of unemployment benefit (*see* the chapter Welfare Services).

## CHAPTER 29

### THE TERRITORIES OF AUSTRALIA

The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are: Norfolk Island; the Territory of Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, deemed to form part of the Northern Territory.

Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 22, and 23 of Chapter I. More detailed statistics and additional descriptive matter are to be found in the Annual Reports of the Administrations of the various Territories and in the *Northern Territory Statistical Summary* and the *Australian Capital Territory Statistical Summary* issued by this Bureau. Statistics for the Northern Territory and the Australian Capital Territory are also included in chapters dealing with particular subjects. The Statistician, Territory of Papua and New Guinea, issues a number of publications containing statistics relative to these two Territories, separate and combined.

Responsibility for the general administration of the Territories of Norfolk Island, Papua, New Guinea, Cocos (Keeling) Islands and Christmas Island is vested with the Commonwealth Department of External Territories; for the Northern Territory (including Ashmore and Cartier Islands) and the Australian Capital Territory with the Department of the Interior; and for Antarctica and Heard and McDonald Islands with the Department of Supply. Matters excepted are defence and civil aviation, and, in the Northern Territory and the Australian Capital Territory, public health, justice, education (excluding Aborigines) and the provision of the basic physical services, which are the responsibility of the Department of Health, the Attorney-General's Department, the Department of Education and Science, and the Department of Works, respectively.

### THE NORTHERN TERRITORY

#### General description

##### Area

Upon the extension of New South Wales westwards to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1 January 1911. The total area is 520,280 square miles.

##### Legislation and administration

On 1 January 1911 the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Year Book No. 15, page 940.

The *Northern Territory (Administration) Act 1910-1968* provides for an Administrator, appointed by the Governor-General, to administer the Territory on behalf of the Commonwealth.

It provides for a Legislative Council for the Northern Territory to make ordinances for the peace, order and good government of the Territory. This Council consists of six official members and eleven elected members. A President of the Council is elected from among these elected members. Money votes may be proposed in the Council only upon recommendation by message of the Administrator.

Ordinances are presented to the Administrator for assent. He is obliged to reserve ordinances relating to certain matters, including Crown lands and Aborigines, for the Governor-General's pleasure. Others he may assent to, withhold assent from, or return to the Legislative Council with recommended amendments. The Governor-General may disallow any ordinance assented to by the Administrator and, in respect of an ordinance reserved for his pleasure, he may assent, withhold assent, withhold assent to part, or recommend to the Administrator any amendments to the laws of the Territory that he considers desirable arising out of his consideration of the ordinance.

The Act also provides for an Administrator's Council to advise the Administrator on any matter referred to it, either by the Administrator, or in accordance with the provisions of any ordinance of the Northern Territory. The Council consists of the Administrator, and two official and three elected members of the Legislative Council.

The Territory elects one member to the House of Representatives.

The Corporation of the City of Darwin, established in 1957, consisting of a Mayor and eight Aldermen elected by adult franchise, provides municipal administration in Darwin. Elsewhere in the Territory municipal services are provided by the Administration. Town management boards representing local interests have been established in Alice Springs, Katherine and Tennant Creek to advise the Administration on local matters.

### Physiography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coastline seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland the country generally is devoid of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the seventeenth or eighteenth parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior systems. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### Climate, fauna and flora

There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly all the rainfall occurs in the summer months. Further particulars appear in Year Book No. 6, page 1116.

The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. A species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been reduced by indiscriminate shooting. Buffalo shooting is, however, now strictly controlled by ordinance.

The vegetation is north Australian in type but a number of forms belong to the Malayan and Oceanic regions. The climate and generally poor soils associated with it give rise to tropical savannah vegetation, with the size and volume of woody material present being closely related to rainfall and the quality of the forests decreasing strikingly as one proceeds inland from the northern coastline. In the north, cypress pine which is termite resistant, ironwood, bloodwood and paperbark timbers are cut and milled for local building purposes. Further inland particularly on the Barkly Tableland and parts of the Victoria River district there are better grazing grasses and some shrubs, while the wide belt of sandy plain, between the Barkly Tableland and the ranges in the Alice Springs area, carries mainly spinifex grass and low scrub. The Alice Springs ranges and uplands carry chiefly a dwarf acacia scrub known as mulga, spinifex and other sparse grasses. The principal orders represented in the interior are *Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodenoviaceae*, *Leguminosae* and *Utricaceae*.

## Population

See also the chapters Population and Vital Statistics.

The estimated population of the Northern Territory at 31 December 1968, including Aborigines, was 34,800 males, 29,100 females, 64,000 persons. The Aboriginal population at the census of 30 June 1966 totalled 10,651 males, 10,468 females, 21,119 persons. While few Aborigines now live outside settled areas and not all choose to live on reserves, a large area of reserved land totalling 94,196 square miles has been maintained to provide economic resources from which the Aborigines may benefit either directly or from royalty payments.

## Advancement of Aborigines

The Commonwealth and State governments have adopted a common policy of assimilation which seeks that all persons of Aboriginal descent will choose to attain a similar manner and standard of living to that of other Australians and live as members of a single Australian community, enjoying the same rights and privileges, accepting the same responsibilities and influenced by the same hopes and loyalties as other Australians.

### Legal status

Under the *Nationality and Citizenship Act* 1948–1966, all Aborigines are British subjects and Australian citizens. Since the commencement of the *Social Welfare Ordinance* 1964 in September 1964, Aborigines in the Northern Territory have been equal at law with all other residents, although some special benefits have been retained for them or have been introduced since then. The Ordinance enables assistance to be given to any person who is socially or economically in need.

## Production

See also the chapters dealing with particular subjects.

### Land tenure

Three-sevenths of the land in the Territory is reserved or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described in Year Book No. 48, pages 111–12. The following changes should, however, be noted.

*Leases to Mission Organisations* are now granted under the *Special Purpose Leases Ordinance* 1953–1965 for fixed terms or in perpetuity.

*Miscellaneous Leases* are now granted in perpetuity for purposes such as a market garden, plantation, orchard, vineyard, poultry farm, piggery, or the like.

*Darwin Town Area Leases* are granted in perpetuity for business or residential purposes, or both, in the Darwin Town Area.

The chapter Rural Industry of this issue contains statistical information concerning areas occupied under various forms of tenure.

### Agriculture

Until the 1967–68 season, commercial agricultural production was confined to vegetables and small-scale fruit production for local consumption. The introduction of grain sorghum production on a commercial basis has thrown new emphasis on the development of agriculture. Townsville lucerne seed production has grown considerably and has become an important contributor to the income of many small landholders.

Information concerning scientific surveys (commenced in 1946), conducted by the Commonwealth Scientific and Industrial Research Organization to determine more accurately the potentialities of the Northern Territory, and the resulting establishment of an agricultural research station at Katherine and experimental farms at Katherine and Berrimah (near Darwin), is given in Year Book No. 51, page 101, and in earlier issues. Information is given also on the establishment of rice research stations and investigational work carried out, and on subsequent rice crop commercial scale operations. The appointment by the Minister for Territories in 1959 of an expert committee to carry out investigations relative to agricultural settlement in the Territory and subsequent developments are also referred to.

**NORTHERN TERRITORY: AREA AND PRODUCTION OF CROPS

(a) Excludes rice; details are not available for publication. (b) Not available for publication, included in Other crops. (c) Not available for publication, excluded from totals. (d) Principally fodder crops. (e) Not available or publication.

**Pastoral industry**

The pastoral possibilities of certain parts of the Territory were recognised at an early date, and both cattle and sheep raising have been attempted. For various reasons sheep-raising has not been very successful, but the cattle industry has progressed steadily and is continuing to expand. There is substantial potential for further expansion in the higher rainfall area of the Territory through the introduction of improved pastures and the use of superphosphate.

**NORTHERN TERRITORY: LIVESTOCK, JUNE 1964 TO 1968**

<i>30 June—</i>	<i>Horses</i>	<i>Cattle</i>	<i>Sheep</i>	<i>Pigs</i>
1964 . . . . .	38,391	1,105,161	10,023	1,806

1967 . . . . .	37,638	1,097,114	8,319	2,791
1968 . . . . .	38,000	1,130,000	9,000	2,000

**Mining**

During 1967, the value of output of the mining and quarrying industry in the Territory, excluding uranium mining, particulars of which are not available for publication, was \$19,316,000. The main minerals produced were copper, manganese, iron ore and gold. This represented an increase of 45 per cent on the previous year.

The bulk of the copper and gold produced in the Territory is obtained from underground mines in the Tennant Creek district. A new small rich gold-mine at Juno came into production in 1967. At Warrego, a low grade copper/gold ore body is being developed and production is scheduled to commence at the end of 1969.

Manganese ore is being produced by open cut methods from extensive deposits at Groote Eylandt in the Gulf of Carpentaria. Production capacity at Groote Eylandt was progressively increased during 1967 with the object of reaching an annual capacity of 400,000 tons. This production supplied

all Australian requirements of manganese ore and large tonnages were exported to Japan, Europe and the U.S.A. Preliminary figures for 1968 show that the value of output of manganese ore exceeded that of copper. A further major expansion of manganese ore production is planned.

Production of iron ore at Frances Creek commenced in 1966 and at Mount Bundey in 1967. The output from both of these mines is being exported to Japan. Ore shipments in 1968 from Frances Creek and Mount Bundey were running at an annual rate of 550,000 tons and 200,000 tons respectively.

At Gove, considerable construction activity is in progress as part of a large scale development of extensive bauxite deposits. Under an agreement between the Commonwealth and Nabalco Pty Ltd signed in February 1968 and ratified by ordinance passed by the Northern Territory Legislative Council on 16 May 1968, Nabalco undertook to build an alumina plant with an annual capacity of not less than 500,000 tons by 31 December 1971 in the Northern Territory. In May 1969, under the terms of a supplemental agreement, the equity capital of the project is to be held as to 70 per cent by Swiss Aluminium Australia Pty Ltd, and as to 30 per cent by Gove Aluminium Ltd (a consortium of seven Australian companies). Further, the alumina plant is to have an eventual capacity of 1 million tons per annum and is to be built in two stages, of which the first is scheduled for completion by the end of 1971 with a capacity of 500,000 tons per annum. Under this agreement, exports of bauxite will amount to 40 million tons over twenty years.

In September 1968 the Commonwealth Government accepted a joint proposal from two private companies to carry out further exploration and development work on the Woodcutters lead-zinc prospect.

Further investigations have been carried out into possible methods of treating the extensive lead-zinc deposits located in the McArthur River district. Conventional methods are not considered to be suitable for the treatment of these ores.

The search for oil and natural gas in the Territory is continuing. Expenditure on petroleum exploration activity in the Northern Territory for 1968, excluding direct Commonwealth expenditure, totalled \$7.7 million. The main areas of interest are the Amadeus Basin of Central Australia and the offshore areas of the Bonaparte Gulf Basin and the Ashmore and Cartier Islands area. Natural gas was discovered in the Amadeus Basin in 1964. Combined reserves at Mereenie and Palm Valley near Alice Springs are estimated at 1,500,000 million cubic feet. Petroleum exploration is being carried out in the Northern Territory in permit areas covering some 286,000 square miles, of which over one-third is off-shore.

#### NORTHERN TERRITORY: MINING AND QUARRYING OPERATIONS, 1964 TO 1967

(Excluding uranium mining)

	1964	1965	1966	1967
Number of mines and quarries . . . . .	84	67	80	74
Average number of persons employed during whole year (including working proprietors) . . . . .	585	688	814	1,006
Salaries and wages paid(a)(b) . . . . . \$'000	2,138	2,867	3,361	4,609
Total fuel, materials, etc., used . . . . . "	1,727	2,571	2,212	2,901
Value of additions and replacements to fixed assets(a) . . . . . "	2,866	5,677	7,282	5,195
Value of output (at mine or quarry) . . . . . "	7,233	8,308	13,283	19,316
Value of production(c) . . . . . "	5,506	5,736	11,070	16,416

(a) Excludes mines employing less than four persons. (b) Excludes drawings by working proprietors; the amounts are net after deducting value of explosives sold to employees. (c) Value of output less cost of power, fuel and light and other materials and stores used; depreciation and maintenance costs have not been deducted.

#### Forestry

A programme of forest improvement and development to preserve existing forest areas and increase timber resources is undertaken by the Forestry Branch of the Northern Territory Administration, which was formed in 1967 to take over normal State-type forestry functions previously performed by the Forestry and Timber Bureau. Basic forestry research is carried out by the Bureau at a Regional Research Station established at Berrimah. The Territory forestry programme includes the establishment of softwood plantations (mainly native cypress pine) at the rate of 1,000 acres per year and makes provision for the employment and training of Aborigines in forestry work. Local production of log timber, mainly cypress pine, amounted to 1,159,578 super feet in 1967-68 but this was insufficient to meet local needs and some 4,122,200 super feet of sawn timber was imported from the States and overseas. During 1967-68 interested companies were issued with feasibility study licences to permit them to conduct pre-investment feasibility studies into the possibility of establishing wood chip industries in the Northern Territory.

## Pearl fisheries

In 1884 mother-of-pearl shell was discovered in Darwin harbour. Since then the areas fished have extended to the various banks to seaward and along the Northern Territory coast. Because of competition from plastic materials pearling has declined in recent years, but it is hoped that the commercial production of cultured pearls will succeed in replacing the old pearling industry.

## NORTHERN TERRITORY: FISHING AND PEARLING(a), 1963-64 TO 1967-68

	1963-64	1964-65	1965-66	1966-67	1967-68
General fisheries—					
Number of boats engaged . . . . .	30	28	43	60	53
Number of men employed . . . . .	54	69	120	133	123
Estimated live weight of fish catch '000lb	269	316	376	601	607
Gross value of fish . . . . \$'000	45	55	57	73	92
Pearl-shell fisheries(b)—					
Number of boats engaged . . . . .	2	2	3	3	3
Number of men employed . . . . .	23	22	37	36	36
Total take of pearl-shell . . . tons	4.9	5.4	8.9	16.6	4.8
Gross value of pearl-shell . . . \$'000	2	2	4	7	1

(a) Excludes operations of Japanese pearling fleet. (b) Season ended January.

In April 1968 seven companies were approved by the Minister for the Interior and the Minister for Primary Industry to participate in the development of prawn fishing and processing in respect of waters adjacent to the Northern Territory. Three of the companies were joint ventures involving the use of foreign vessels and foreign crews for a limited period. Conditions of the Ministers' approval include the establishment of shore prawn processing plants in the Territory, the replacement of foreign vessels and crews with Australian-built vessels and Australian crews, the location at Darwin of all the processing plants of the joint ventures, and protection, during a limited establishment period, against the development of shore processing plants on parts of the coast other than at Darwin. Provision has also been made for participation in the industry by Aborigines.

## Secondary industries

The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, such as electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Major industrial investments by private interests in recent years include two breweries, a bitumen plant, and a factory for the manufacture of milk products, ice cream and aerated waters.

## NORTHERN TERRITORY: FACTORIES, 1963-64 TO 1967-68

	1963-64	1964-65	1965-66	1966-67	1967-68
Number of factories(a) . . . . .	139	174	185	187	188
Average number employed(b)—					
Males . . . . .	978	1,098	1,182	1,308	1,380
Females . . . . .	97	112	112	115	139
Persons employed . . . . .	1,075	1,210	1,294	1,423	1,519
Salaries and wages paid(c)—					
Males . . . . . \$'000	2,628	3,298	3,666	4,146	4,721
Females . . . . . ,,	142	185	192	203	263
Total salaries and wages paid . . . ,,	2,770	3,483	3,859	4,349	4,983
Value of power, fuel, light, etc. used(d) ,,	735	865	856	946	1,159
Value of materials used(e) . . . ,,	3,384	4,550	5,497	7,214	7,995
Value of production(f) . . . . . ,,	4,938	6,654	7,103	7,847	9,680
Value of output(g) . . . . . ,,	9,057	12,068	13,456	16,007	18,831
Value of land and buildings(h) . . . ,,	4,586	5,668	6,101	6,482	8,150
Value of plant and machinery(h) . . . ,,	6,046	6,103	5,954	6,825	6,696

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used. (b) The aggregate of the average number of persons employed in each factory. Includes working proprietors. Figures represent average employment over the whole year. (c) Excludes drawings by working proprietors. (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant. (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book value at end of year, including estimated value of rented premises and machinery.

## Trade, transport and communication

## Trade

No comprehensive record is kept of the trade between the States and the Territory. The following table shows the values of the principal commodities imported into and exported from the Northern Territory from or to overseas countries during the years 1963-64 to 1967-68.

**NORTHERN TERRITORY: PRINCIPAL OVERSEAS  
IMPORTS AND EXPORTS, 1963-64 TO 1967-68**  
(\$'000)

Commodity	1963-64	1964-65	1965-66	1966-67	1967-68
<b>IMPORTS</b>					
Petroleum and shale spirit—					
Aviation spirit . . . . .	232	143	158	277	216
Other (motor spirit) . . . . .	389	339	456	542	587
Aviation turbine fuel . . . . .	670	1,022	955	615	1,099
Other oil(a) . . . . .	310	487	838	781	1,112
Sulphur . . . . .	141	71	..	70	486
Portland cement . . . . .	174	322	410	311	370
Timber (undressed hardwood) . . . . .	151	214	334	183	206
Iron and steel manufactures . . . . .			832	3	1,195

<b>Total imports</b> . . . . .	<b>2,937</b>	<b>4,124</b>	<b>5,596</b>	<b>7,386</b>	<b>9,407</b>
<b>EXPORTS(c)</b>					
Meats . . . . .	1,546	2,323	3,348	3,422	4,864
Hides and skins, raw . . . . .	237	123	61	227	135
Iron ore and concentrates . . . . .	..	..	..	..	3,053
Non-ferrous ores and concentrates . . . . .	..	9	173	2,682	4,474
Copper ores and concentrates . . . . .	78	805	2,044	1,512	775
Pearls . . . . .	180	170	179	34	39
Other articles . . . . .	433	379	593	1,091	4,515
<b>Total exports</b> . . . . .	<b>2,474</b>	<b>3,809</b>	<b>6,398</b>	<b>8,968</b>	<b>17,855</b>

(a) Includes kerosene, gas oil, diesel oil, residual oil, etc. (b) Included in other articles. (c) Includes domestic exports and re-exports.

## Shipping

Shipping services to Darwin are provided from the eastern States by ships of the Australian National Line and from Western Australia by the Western Australian State Shipping Service. Oil tankers carrying supplies of aircraft fuel and other petroleum products, overseas cargo ships carrying iron ore to Japan and other miscellaneous vessels also visit Darwin. A vessel operated from Brisbane serves settlements on the Gulf of Carpentaria, and some mission-owned boats carry cargo from Darwin to mission stations and government settlements along the coast.

## Air services

At 30 June 1967 there were 128 aerodromes in the Territory, nine of which are maintained by the Commonwealth Department of Civil Aviation. The overseas passenger services using the Darwin international airport are Lufthansa (Sydney to Frankfurt); Qantas/B.O.A.C. (Sydney to London); B.O.A.C. (Sydney to Hong Kong); Union de Transports Aeriens (Paris to Los Angeles via Noumea); and T.A.A. on behalf of Transportes Aereos de Timor (Darwin to Baucau). Regular inland services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett Airlines (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd (from Perth and Derby). MacRobertson-Miller Airways Ltd and Connellan Airways Ltd operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

### Railways

The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of 822 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Maree, a distance of 217 miles, and 3ft 6 in from Maree to Alice Springs. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft 6 in gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

### Roads

The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Larrimah and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. These highways are used for carrying various freights, including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 12,000 miles of roads in the Territory of which 1,798 miles are sealed.

Work on a programme for reconstruction and development of beef cattle roads was commenced in 1961-62. To June 1968 \$30.2 million has been authorised for this work, and actual expenditure to 30 June 1968 was \$14.2 million. The transport of cattle by road is expected to increase the number, quality and value of cattle turned off.

### Posts, telegraph, telephones and wireless

Postal communication is maintained by road, rail and air transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering a length of 2,230 miles, runs from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world. Long-distance telephone communication is established between Darwin and the capital cities of Australia, and overseas telephone communication through Sydney or Perth is also available.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine, and there is a commercial station at Darwin. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia), Broken Hill (New South Wales), and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

## Education

*See also* the chapter Education, Cultural Activities and Research.

### Special Aboriginal schools

While the Department of Education and Science is now responsible for education in the Northern Territory, special schools and pre-schools for Aboriginal children remain the responsibility of the Welfare Branch of the Administration. These special schools and pre-schools are intended as an interim measure only, policy being that all Aboriginal children should eventually receive their education in the community schools. Following expert enquiries, however, it was decided that schools should be established having a syllabus and school texts which take account of the social and cultural background of the Aborigines. In these schools there is a shift of emphasis from theoretical to practical subjects, but where progress warrants it, the child transfers to the ordinary curriculum leading to the general community schools. A transitional school system has also been established, and one of its main objectives is to provide a bridge between the special schools and the community high schools.

Fifty-six special schools for Aboriginal children had been established by the middle of 1968. Forty-two of these were conducted by the Administration, ten by missions and four by the managements of pastoral properties. Government subsidies were provided to the missions and pastoral managements concerned. Nineteen pre-school centres had also been established. Fourteen of these were conducted by the Administration and five by the missions.

### Community schools

Since February 1968 the Commonwealth Minister of Education and Science has been responsible for community education in the Northern Territory. His Department is represented in Darwin by an officer holding the rank of Director. Community schools are operated by the Commonwealth under an agreement with the South Australian Department of Education which provides teachers and curricula and is represented in Darwin by a Director, Northern Territory Schools. At 30 June 1968 there were twenty-six government schools in the Territory, with 8,091 pupils, and five non-government schools, with 1,214 pupils, providing instruction according to the South Australian curriculum. High schools have been established with classes to matriculation level at Darwin and to leaving certificate level at Alice Springs.

All children who live more than ten miles from an established school receive an allowance of up to \$310 (\$250 plus \$120 on a graduated scale according to family income) per annum plus fare concessions if they board away from home in order to attend school. Limited numbers of special Northern Territory secondary and tertiary scholarships supplement the normal Commonwealth scholarship provisions. The secondary scholarship provides a benefit of \$100 per annum; the tertiary awards cover the costs of tuition and other compulsory fees. There are also book allowances ranging from \$16 to \$20 per annum for secondary students. Approximately 300 children receive correspondence education under the South Australian Correspondence School system. Where a governess is employed or where domestic help is engaged to enable a mother to supervise correspondence lessons, an allowance of up to \$100 is payable for each correspondence school pupil up to the age of twelve. The radio session 'School of the Air' supplements normal correspondence instruction for certain children in isolated areas.

Fourteen pre-school centres are in operation in the Territory, with an enrolment of 947 pupils. A number of scholarships are offered each year for training as pre-school teachers.

### Theoretical training of apprentices

The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

## Assistance to Aborigines

Reserves for Aborigines comprise a total area of 94,196 square miles. While few Aborigines now live outside settled areas and not all choose to live on reserves, this large area of reserved land has been maintained to provide economic resources from which the Aborigines may benefit, either through the grant of legal title and other rights or from royalty payments. Royalties from mining operations on Aboriginal reserves are levied at double the normal rate and are paid into the Aborigines Benefits Trust Fund which was established in 1952. The fund was later extended to include royalties from timber taken from reserves.

An intensive welfare programme to prepare Aborigines for the demands of modern living is being carried out, and nineteen Government settlements and fourteen mission stations have been established where Aborigines are assisted to adopt a settled way of life. Health services (including infant clinics), education, housing, vocational training and employment are provided, and Aborigines are encouraged to take part in the social activities of the community.

Financial and technical assistance is available to Aborigines who wish to develop their own commercial or industrial enterprises. Financial assistance is available through the Aborigines Benefits Trust Fund controlled by the Minister for the Interior and the Capital Fund for Aboriginal Enterprises controlled by the Minister in Charge of Aboriginal Affairs. Policy is to ensure that any assisted enterprise has sound economic prospects and that all Aborigines with a possible interest in the venture are considered.

## Finance

Details of receipts and expenditure of the Territory for the years 1963-64 to 1967-68 are shown in the table following. In this table the receipts and expenditure of the Northern Territory have been classified into a National Accounts form. The table covers transactions relating to the Northern Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Northern Territory Government Settlements Canteens, Northern Territory Housing Commission, Northern

Territory Housing Loans, and Northern Territory Transport. Details of the financial transactions of the Darwin City Council are also incorporated in the table. Revenue derived by the Commonwealth from income taxes, customs duties, etc. levied in the Northern Territory and expenditure by the Commonwealth in the Northern Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

THE AUSTRALIAN CAPITAL TERRITORY

General description

The Commonwealth Constitution provides that the Seat of Government of the Commonwealth shall be in the State of New South Wales but distant not less than 100 miles from Sydney. After a number of alternative sites were considered, an area of 911 square miles lying approximately 200 miles south-west of Sydney was transferred to the Commonwealth as from 1 January 1911. A further 28 square miles at Jervis Bay were transferred as from 4 September 1915 to serve as a port for the Territory.

The primary responsibility for administering the Australian Capital Territory lies with the Department of the Interior, whose functions include housing, police, and municipal services. Education, public health, justice and the provision of basic physical services, including water supply, sewerage and roads, are the responsibility of the Departments of Education and Science, Health, Attorney-General's, and Works. The National Capital Development Commission has the responsibility for the planning and development of the Canberra city area.

The Australian Capital Territory Advisory Council was established in 1930. It has eight elected members and a representative from each of the Departments of Interior, Works, and Health, and the National Capital Development Commission. The Council advises the Minister for the Interior on matters affecting the Australian Capital Territory. Ordinances are submitted in draft form to the Council for advice and comment before being implemented.

At the census of 30 June 1966 the population of the Australian Capital Territory was 96,013, made up of 92,308 in the Canberra metropolitan area and 3,705 in rural areas (including Jervis Bay). The estimated population of the Territory at 31 December 1968 was 60,600 males and 56,600 females, 117,200 persons. *See also* the chapters Population and Vital Statistics.

### National Capital Development Commission

The *National Capital Development Commission Act 1957-60* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1967-68 was the tenth year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Department of Works and private consultants. Details of the expenditure by the Commission in each year from 1963-64 to 1967-68 are included in the table on page 1155. Total expenditure in 1967-68 was \$45.9 million, comprising national works \$3.6m, Commonwealth offices \$7.0m, Territory works \$23.4m, land development \$7.5m, city works \$2.5m, and others \$1.9m.

The following major works were completed during 1968 by the Commission and its agents: Corin Dam, Bendora Gravity Main, National Library, Russell Building No. 9, Phillip Offices Stage 1, Dickson Traffic Centre, Aranda (Canberra) High School, Dickson High School extensions, Aranda Primary School, Mawson Primary School, Cook Primary School, Parkes Place Development Stage 1, Woden Town Centre—Services, Woden Parkway Stage 2 and Belconnen Way.

Works under construction at the beginning of 1969 included the following projects: The Treasury Stage 3, Russell Building No. 14, Phillip Offices Stage 2, Australian War Memorial extensions, Dickson District Library, Melrose High School, Lyneham High School extensions, Farrer Primary School, Garran Opportunity 'F' School, Page Primary School, Scullin Primary School, Hindmarsh Drive Stage 2, Adelaide Avenue Duplication, Commonwealth Avenue/Parkes Way Interchange, Sturt Avenue Duplication and Belconnen Water Pollution Control Centre.

### Works and services

#### Housing

Until the period following the 1939-45 War most houses and flats in Canberra were built and rented by the Department of the Interior. More recently, an increasing number of houses and flats have been built by private enterprise, and as a result the proportion of houses and flats in Canberra occupied by tenants of the Department of the Interior has fallen from 79.7 per cent of total occupied houses and flats in 1954 to 58.3 per cent in 1961 and 38.8 per cent in 1966. Although the bulk of rented accommodation is provided by public authorities and will continue thus in the foreseeable future, there has been a considerable increase in the proportion of home ownership in Canberra, since 1954. The proportion of houses and flats owned or being purchased by instalments has risen from 19.5 per cent in 1954 to 29.0 per cent in 1961 and 45.6 per cent in 1966. In June 1966, 39.7 per cent of the total occupied dwellings in Canberra were owned by the Department of the Interior, and in June 1967, 37.7 per cent. Home building activity in the Woden Valley, south-west of the former city area, has continued to expand, and at June 1967 there were 4,682 occupied dwellings in this area. *See also* the chapter Housing and Building.

#### Municipal services

Canberra has been developed as a garden city. More than three million trees and many acres of lawns have been planted since 1927. The development of new areas of parkland and the maintenance of existing tree and lawn areas is the responsibility of the Parks and Gardens Branch of the Department of the Interior. Municipal services are also provided by the Department of the Interior.

At 30 June 1968, 27,982 meters were connected to the city water supply, drawn through nine service reservoirs from three storages on the Cotter River with a total capacity of nearly 20,000 million gallons. In 1967-68 some 4,797 million gallons of water were consumed in Canberra, and in addition the system supplied 367 million gallons to Queanbeyan in New South Wales. Treatment works at Weston Creek dispose of Canberra sewage. At 30 June 1968, 462 miles of sewers, 6½ miles of rising sewerage mains and 491 miles of storm water drains were laid.

#### Department of Works

Apart from the work it carries out for the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1967-68 on all operations amounted to \$10.7 million (\$10.6 million in 1965-66), comprising: building works—housing \$168,163, other building \$3,852,826; engineering works \$1,404,177; repairs and maintenance—building \$2,334,573, engineering \$2,784,719, purchase of plant \$174,247. Major work completed during 1967-68, excluding those works on behalf of the National Capital Development Commission, included the Weetangerra (now Scullin) Telephone Exchange, C.S.I.R.O. L.R.R.S. Building Stage 2, Hospital alterations Stages 2 and 4, and the A.N.U. Research Clinic Hospital.

New major works under construction at the close of 1967-68 included Belconnen 'A' Post Office, Visitors Reception Centre at Tidbinbilla, Extensions and alterations to Tharwa School, the erection of C.M.F. Depot, City and the new Terminal Building at the Canberra Airport.

### Production

See also the chapters dealing with particular subjects.

#### Lands

Reference has been made in earlier issues of the Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and the chapter Rural Industry of this issue contains statistical information on the subject. (See also § 1. Canberra: Fifty Years of Development, page 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910-1965, no Crown lands in the Territory may be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. In general, leases of land in the city area are granted under the *City Area Leases Ordinance* 1936-1968. In special circumstances land may be leased for purposes other than business or residential under the *Leases (Special Purposes) Ordinance* 1925-1953 and for church purposes under the *Church Lands Leases Ordinance* 1924-1966. As considerable areas of Commonwealth owned land in the Territory are not immediately required in connection with the establishment of the City, they have been leased for agricultural or grazing purposes for terms consistent with the anticipated growth of Canberra under the *Leases Ordinance* 1918-1966. Some lands in the Territory, in areas generally remote from the City, remain in private ownership under Freehold Title.

The Commonwealth Territory at Jervis Bay, comprising about 28 square miles, was acquired from New South Wales for the possible provision of port facilities in connection with the Australian Capital Territory. A portion of the area is occupied by the Royal Australian Naval College (H.M.A.S. *Creswell*) and a Royal Australian Navy airfield. Several blocks fronting Sussex Inlet have been leased for guest houses and holiday camps, etc., under the *Leases Ordinance* 1918-1966. Apart from picnic and camping areas, experimental planting, afforestation and soil conservation activities, the remainder of the area is being maintained in its natural state.

#### Forestry

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly decorative, but since then a much wider programme has been undertaken. In 1926 a comprehensive review was made of the Territory's potential for forest development, and a programme for the development of commercial forests was approved. Most of the better native forest has since been placed under management, and, following survey and assessment work, forestry operations, including fire-control, have been extended to 100,000 acres of eucalypt forest in the lower Cotter Catchment Area.

Afforestation work has also been undertaken, and softwood plantations (mainly *Pinus radiata*) have been established at Uriarra, Stromlo-Green Hills, Pierce's Creek, Kowen, Tidbinbilla, Jervis Bay and Boboyan. Experimental plots have been established at Jervis Bay and in the Brindabella Ranges, and soil conservation plantings made at various locations throughout the Territory. The

total area of softwood plantations within the Australian Capital Territory at 30 June 1969 was 29,800 acres, of which 27,200 acres were *Pinus radiata*, the balance consisting chiefly of *Pinus ponderosa* and *Pinus nigra*, plus 720 acres at Jervis Bay, mainly *Pinus radiata* and *Pinus elliottii*.

Continued thinning operations have improved all Australian Capital Territory forests so that they now yield a wide variety of products. Board-logs and case timber form the bulk of production, but some poles, fencing timber, and pulpwood are now being produced. The yearly output from pine plantations has increased from 2,500 cubic feet in 1930-31 to 1.5 million cubic feet in 1968-69, valued at \$394,000 delivered at purchasing mills in Canberra. There was no hardwood log production in 1968-69. Up to 30 June 1969 a total of 23.3 million cubic feet of pine logs had been cut from plantations, while hardwood production from the Australian Capital Territory, including Jervis Bay, remained at 4.3 million cubic feet.

#### Agricultural, pastoral and secondary industries

During 1967-68 the production of the more important items of the agricultural and pastoral industry was: wheat 41,602 bushels; wool 2,238,000 lb; whole milk 1,998,000 gallons; meat (carcass weight), fresh 3,862 tons. The numbers of livestock depastured at 31 March 1968 were: horses 722; cattle 12,548; sheep 267,078.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory.

#### AUSTRALIAN CAPITAL TERRITORY: FACTORIES, 1963-64 TO 1967-68

	1963-64	1964-65	1965-66	1966-67	1967-68
Number of factories(a) . . . . .	170	187	217	238	241
Average number of employed(b)—					
Males . . . . .	2,236	2,634	2,896	2,992	3,002
Females . . . . .	458	593	599	639	708
<i>Persons employed</i> . . . . .	2,694	3,227	3,495	3,631	3,710
Salaries and wages paid(c)—					
Males . . . . . \$'000	5,666	7,854	8,819	9,306	9,936
Females . . . . . "	607	848	1,047	1,177	1,315
<i>Total salaries and wages paid</i> . . . . . "	6,273	8,702	9,866	10,483	11,251
Value of power, fuel, etc., used(d) . . . . .	502	644	760	735	827
Value of materials used(e) . . . . .	8,428	11,440	13,349	14,918	16,119
Value of production(f) . . . . .	11,097	14,060	17,418	18,860	19,257
Value of output(g) . . . . .	20,026	26,145	31,528	34,514	36,203
Value of land and buildings(h) . . . . .	11,669	20,583	21,891	22,779	23,377
Value of plant and machinery(h) . . . . .	5,103	9,682	10,134	10,368	10,012

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used.  
 (b) Average over whole year; includes working proprietors. (c) Excludes amounts drawn by working proprietors.  
 (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant.  
 (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book values at end of year including estimated value of rented premises and machinery.

### Transport and communication

Canberra is connected with the railway system of New South Wales at Queanbeyan by a line 5 miles long. This line was opened for goods traffic on 25 May 1914 and for passenger traffic on 15 October 1923. Direct or linking services operate between Canberra and Sydney and Melbourne. Two airlines provide many services daily each way on the Sydney-Canberra-Melbourne route. Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia. The total length of roads in the Territory at 30 June 1968 was: bitumen and concrete, 535 miles; gravel, 213 miles; other formed roads, 78 miles; total, 826 miles. There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system and CTC Channel 7, a commercial station.

## Social

*See also* the chapter Education, Cultural Activities and Research.

### Education

The *Education Ordinance 1937-1966* provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of Education and Science is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides the teaching staff. It is reimbursed for expenses incurred.

At 30 June 1969 there were nine public secondary schools in Canberra providing courses proceeding to the Higher School Certificate. Thirty schools provided courses at infants and primary levels, three of these being in rural districts and one in the Jervis Bay area. There were also: a school for mentally handicapped children; a school for physically handicapped children, located at Canberra Community Hospital; classes for deaf children, located at Ainslie and Mawson primary schools; classes for O.A. children located at Ainslie, Mawson and Narrabundah primary schools; a therapy clinic for children with speech defects; and a clinic for educational guidance. A further four primary schools, one secondary school and a school for moderately handicapped children are scheduled to commence at the beginning of the 1970 school year.

At 30 June 1969 there were twenty private schools in Canberra. Of these, St Edmund's Christian Brothers' College, the Catholic Girls' High Schools at Braddon and Griffith, the Daramalan College, the Canberra Grammar School (Boys), and the Canberra Church of England Girls' Grammar School provide courses leading to the Higher School Certificate.

Forty pre-school centres, including one in the Jervis Bay area and a mobile unit which visits outlying areas of the A.C.T. provide pre-school facilities for approximately 2,700 children between the ages of three and five years. Pre-school education is also provided for deaf children and in 1970 the Commonwealth will provide for the pre-school education for moderately mentally handicapped children.

The Canberra Technical College, which follows generally the curriculum set by the New South Wales Department of Technical Education, provides trade, post-trade, certificate, and some hobby courses. At 30 September 1968 the Technical College provided instruction in one hundred courses in twenty-one different schools of study. Student enrolments at 30 September 1968 were 5,956.

The Canberra School of Music provides a Diploma Course and individual study in a range of instruments and voice. At the end of June 1969, enrolments totalled 580.

An area of about 250 acres has been set aside at Acton for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Provision for undergraduate studies and some post-graduate study is made by the School of General Studies.

A College of Advanced Education has been established in Canberra and permanent buildings are being erected.

### Health

The Canberra Community Hospital serves the population of Canberra and surrounding districts. At 30 June 1968 it had 576 beds, an honorary medical staff of 134, 20 salaried medical staff, and a nursing staff of 624. For further information *see* the chapter Public Health in this Year Book and in Year Book No. 53.

### Justice

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force, which at 30 June 1969 numbered 288, including 5 policewomen. Of the total, 114 were engaged on general duties, including 1 at Jervis Bay and 2 caring for the Police Boys Club; the traffic branch comprised 66, including the specialist water police and accident investigation squads, 30 were engaged in criminal investigation, 21 in recruitment and training, 55 in planning and research and 2 in the special branch. *See also* the chapter Public Justice.

**Finance**

In the following table the receipts and expenditure of the Australian Capital Territory have been classified in a National Accounts form. The table covers transactions relating to the Australian Capital Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Australian Capital Territory Electricity Supply (1962-63), Australian Capital Territory Forestry, Australian Capital Territory Housing, and Australian Capital Territory Transport. In addition, details of the financial transactions of the following semi-governmental authorities are also covered: Australian Capital Territory Electricity Authority, Commonwealth Brickworks, National Capital Development Commission, and Canberra Theatre Trust. Revenue derived by the Commonwealth from income taxes, sales tax, etc., levied in the Australian Capital Territory and expenditure by the Commonwealth in the Australian Capital Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

(a) Includes movements in cash, investments, etc. (b) Minus sign (-) denotes excess of receipts (from sales) over expenditures on, or purchases of, existing assets, including housing.

## NORFOLK ISLAND

### General description

Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29°S., longitude 168° E. approximately. Its total area is approximately 14 square miles, the island being about 5 miles long and 3 miles wide. It is 1,035 miles from Sydney and 660 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 45° and 81°F. with a mean of 68°F. The average annual rainfall is 56 inches.

After serving as a penal station from 1788 to 1813 and from 1825 to 1855, Norfolk Island in 1856 became the home of the remaining descendants of the *Bounty* mutineers. The estimated population at 30 June 1968 was 1,440.

### Administration

In 1856 the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896 it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, it was accepted by the Commonwealth Parliament as a Territory of Australia. It is controlled by the Minister for External Territories through an Administrator. The Norfolk Island Council is established pursuant to the *Norfolk Island Act* 1957-1966 and is constituted in accordance with the provisions of the *Norfolk Island Council Ordinance* 1960-1964. The Council may consider and tender advice to the Administrator on any matter affecting the peace, order and good government of Norfolk Island, and must be consulted on certain legislative and financial matters. The Council comprises the Administrator as *ex officio* chairman and voting member and eight members elected biennially.

### Economic activity

The major economic activities of the island are the tourist trade, primary production, and Government instrumentalities.

*Primary industries.* The soil on the island is particularly fertile, the climate equable and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties, and production of bean seed, formerly the major export, has declined rapidly since 1962-63.

Fish abound off the island. In the past a number of ventures have been formed to exploit this resource, but they have been short-lived, mainly because of the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. Owing to a marked scarcity of whales after 1961, however, the station was closed down.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

*Tourists.* Regular sea and air services to the island are available for those who seek a quiet holiday in surroundings of beauty and historic interest. There are at present, apart from flats and unlicensed guest houses, nine hotels and licensed guest houses, and further accommodation is being built to meet the steadily increasing number of visitors.

*Employment.* A large proportion of the population derives its income from various aspects of the tourist industry including the operation of hotels and duty-free stores. The Commonwealth Government provides services through staff from the Departments of Civil Aviation and Interior (Meteorological Branch) and teachers are seconded by the N.S.W. State Education Department. A number of clerical and other positions are available to islanders in the Norfolk Island Administration. Very few people rely for their income entirely on agricultural pursuits.

### Trade, transport and communication

Imports to Norfolk Island since the 1939-45 War have risen from \$65,000 in 1945-46 to \$2,221,000 in 1967-68. In 1967-68 the major proportion (\$1,291,810) came from Australia, while New Zealand and the Pacific Islands supplied \$358,000. Exports rose from \$18,500 in 1945-46 to \$420,000 in 1960-61, but had declined to \$235,200 by 1967-68, after whaling had ceased in 1962-63. Exports to Australia, the principal market, amounted to \$172,800, while exports to New Zealand and to Pacific Islands amounted to \$45,900. No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are the produce or manufacture of Norfolk Island, shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately six-week intervals from Sydney via Norfolk Island to the New Hebrides and Solomon Islands, and thence back to Brisbane and Sydney. A service linking Sydney and Noumea includes a call at Norfolk Island on the outward voyage about every three weeks. Shipping between the island and New Zealand is infrequent.

A passenger and air freight service between Sydney and Norfolk Island is operated by Qantas Airways Ltd twice a week, and more frequently in peak periods. The service extends to New Zealand under charter to Air New Zealand Ltd.

There are approximately fifty miles of motor road on the island. As a substantial section of the population possesses private motor cars, and taxi-cab and bus services are available, transport is almost exclusively by motor vehicle.

A limited telephone service is operated during business hours with 24-hour connections to emergency services. The Overseas Telecommunications Commission provides a radio telegram service to Sydney. A local broadcasting service is operated by the Administration.

#### Education

Education is free and compulsory up to the age of fifteen years. The school, which is conducted by the New South Wales Department of Education, conforms to the Australian standard of public education, ranging from kindergarten to the School Certificate examination. The teachers are provided by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30 June 1968 was 276.

#### Judiciary

The judicial system of Norfolk Island consists of a Supreme Court and a Court of Petty Sessions. The Supreme Court is the highest judicial authority in the Territory and is a superior court of record with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by one judge sitting in Court or, to the extent and in the cases provided by or under ordinance, sitting in Chambers. The jurisdiction of the Court of Petty Sessions is exercised by a Chief Magistrate or any three magistrates other than the Chief Magistrate.

#### Finance

The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1963-64 to 1967-68 were as follows.

#### NORFOLK ISLAND: REVENUE AND EXPENDITURE, 1963-64 TO 1967-68 (\$'000)

## PAPUA AND NEW GUINEA

The information under this heading is applicable to both the Territory of Papua and the Trust Territory of New Guinea. For details of the respective Territories *see* pages 1178 (Papua) and 1185 (New Guinea) and following pages. The sections on pages 1158-63 have been prepared by the Director of the Commonwealth Bureau of Meteorology.

### General description

#### Geographical position

The Territory of Papua and New Guinea includes the Territory of Papua and the Trust Territory of New Guinea. The total area of approximately 180,000 square miles lies in the equatorial zone between latitudes 2° S. and 12° S. and longitudes 141° E. and 156° E. The Territory of Papua comprises south-east New Guinea and also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The Trust Territory of New Guinea extends from 2° S. to 8° S. and includes north-east New Guinea (also called 'the mainland'), Bismarck Archipelago (New Britain, New Ireland, Lavongai, Admiralty Islands), and Solomon Islands (Bougainville, Buka).

#### Geographical features

There is a high backbone mountain chain extending generally along the centre of the main island with coastal plains which widen in some areas, particularly in the Fly River Basin. The mountains, which are rugged, rise to 15,000 feet above sea level in some areas; the larger islands mostly have mountain backbones, some rising to about 10,000 feet. In many parts the highlands extend to the coast.

### Weather and climate

The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, presents many variations. Generally speaking, the climate is hot and humid, except in the highlands where days are mild and nights are cool. Mean temperatures vary little throughout the year, and there are no winter and summer seasons comparable to those of higher latitude.

The predominant seasonal feature of the Territory is the regular alternation between two major air-streams, the south-east trade winds and north-west monsoon. The 'southeast' season prevails approximately from May to October, and the 'northwest' season persists for a shorter period from about December to early April. Two short spells of calm weather occur between these two seasons.

#### Rainfall

There are great spatial variations in the amount of rainfall received over the Territory of Papua and New Guinea. The variations depend mainly upon the direction and speed of the air streams. These streams are moist, requiring only a small amount of lifting for condensation of water vapour to occur. Topography therefore has a dominating influence on the rainfall distribution.

#### Average annual rainfall

The table on page 1160 shows the average annual and monthly rainfalls for selected stations in the Territory. It may be seen that the spatial distribution of average annual rainfall varies greatly, being dependent mainly on topography in relation to prevailing winds. The annual averages vary from 39 inches at Port Moresby to 227 inches at Kikori at the head of the Gulf of Papua. There are few rainfall observing stations above 6,000 feet, so that rainfall above that height must generally be estimated. The map facing page 1184 shows the rainfall distribution over the region for the year 1967.

#### Seasonal distribution of rainfall

Places in Papua such as Port Moresby, where the south-east trade wind does not blow directly onshore, have a dry season during May-October. Places such as Kikori have heavier rainfall during May-October because of the onshore south-east winds. In the Territory of New Guinea, where conditions are more equatorial, rainfall occurs throughout the year, but is heaviest in the November-April period at most places.

#### Variability of rainfall

There are marked variations from year to year in annual rainfall totals throughout the Territory. At Port Moresby, for example, in forty-two years of record the annual rainfall has varied from 72 inches to 23 inches; at Daru in fifty-two years of record the annual rainfall has varied from 156 inches to 46 inches; and at Madang in thirty-eight years of record the variation has been from 180 inches to 92 inches. The table on page 1161 shows the annual rainfall at Port Moresby and Lae for the years 1946 to 1967 inclusive.

### Heavy rainfalls

Highest twenty-four hour rainfall registrations have included 21.60 inches at Pondo Plantation in New Britain and 17.60 inches at Cape Nelson on the east coast of the main island. Twenty-four hour falls greater than 15 inches have been recorded at a number of other stations in the Papua and New Guinea region. The highest twenty-four hour fall recorded in Australia was 36 inches at Crohamhurst, Queensland. All these registrations were for the restricted twenty-four hour period from 9 a.m. to 9 a.m. Higher falls, possibly approaching 30 inches, have probably occurred in the Territory in unrestricted periods of twenty-four consecutive hours.

### Temperature

Although the Territory has no summer and winter seasons, it has a wide range in temperature because of elevation differences. For each month the mean daily maximum temperature decreases by about 2° F. and the mean daily minimum temperature by about 4° F. for each 1,000 feet increase in elevation up to 5,000 feet.

A table on page 1161 shows temperature and humidity data for five lowland and two highland stations. Mount Hagen, elevation 5,500 feet, is the highest station for which temperature data are available. However, both day and night temperatures continue to decrease with elevation above this level.

### Average seasonal temperature distribution

In the lowland areas there is a difference in temperature pattern between the areas south of the highlands and those to the north. In the south there is a tendency for temperatures to be lower in the May–October period than in the November–April period (e.g. Samarai). In the north there is little difference throughout the year (e.g. Madang). In the highlands, temperatures are appreciably lower than in the lowlands and are slightly lower in the middle of the year than they are at the beginning of the year (e.g. Goroka). The nights are cold in the highlands throughout the year; the mean daily minimum at Mount Hagen for July is 53.6° F.

### Extreme temperatures

The highest air temperature recorded at Lae (in eighteen years of record) was 101.7° F. and the lowest was 66.3° F.; at Port Moresby (in twenty-two years of record) the highest was 97.3° F. and the lowest was 57.3° F.; at Mount Hagen (in thirteen years of record) the highest was 88.0° F. and the lowest 35.0° F. The mean daily range of temperature is about 15° F. at lowland stations and 20° F. at highland stations up to 5,000 feet elevation.

### Humidity

Humidity is high generally throughout the year. In the lowlands persistently high humidity in association with high temperatures is responsible for the human discomfort experienced. The average index of mean relative humidity for January and July is shown for selected stations in a table on page 1161. This index has been derived from the ratio of the average 9 a.m. vapour pressure to the saturation vapour pressure at the mean temperature. Being thus related to the mean temperature, this value of relative humidity is a good approximation to the daily mean.

In the lowland areas the average index of mean relative humidity (*see* table on page 1161) is in the range 75–85 per cent throughout the year. There is little variation in the index from month to month at any station. This is in contrast with northern Australian localities where the south-east winds of the dry season result in low relative humidities. For example, Darwin's average index of mean relative humidity ranges from 81 per cent in February to 62 per cent in July.

In the highland areas up to 6,000 feet elevation the average index of mean relative humidity is within the range 70–80 per cent throughout the year. The lower temperatures experienced on the highlands relative to the lowlands result in conditions being generally more comfortable in the highlands.

### Evaporation

The only evaporation data available are records for Port Moresby. These show that the mean monthly tank evaporation varies from 5–6 inches per month in the early part of the year to 6–7 inches per month in the latter part of the year. The average annual tank evaporation at Port Moresby over an eleven-year period was 73.59 inches. It is probable that evaporation is less than this value in the higher humidity areas.

### Sunshine and cloud

Mean daily sunshine hours are recorded for each month at Port Moresby, and the figures show a variation from 6.2 hours per day in February and March to 8.4 hours per day in November. The mean daily amount of sunshine at Port Moresby for the year is 7.0 hours, which is significantly less than Darwin (8.4 hours) but comparable with Brisbane (7.5 hours).

At Port Moresby the mean cloud amount varies from 5.1 eighths per day in May and June to 6.9 eighths in February; at Lae the variation is from 6.1 eighths in May and June to 7.0 eighths in March. The mean daily cloud amounts for the year at Port Moresby and Lae are 5.8 and 6.5 eighths respectively, which are high in comparison with Darwin (3.1).

### Winds

As mentioned previously the south-east trade winds prevail from May to October and the north-west monsoonal winds prevail from December to March over most of the region. However, the broad-scale wind pattern may be completely masked by the effects of local topography and land and sea breezes. The mean 9 a.m. and 3 p.m. wind speeds and prevailing directions are shown in the tables on pages 1162-3 for Port Moresby and Lae.

At Port Moresby the mean winds are stronger during the period May-November than during December-April; for example, the 3 p.m. mean wind for August is 15.4 m.p.h. and for March is 7.6 m.p.h. The winds at 3 p.m. are much stronger than at 9 a.m.; for example, for the year the 3 p.m. mean wind is 11.5 m.p.h. and the 9 a.m. mean wind is 4.1 m.p.h. The prevailing direction of the wind is south-east during May-November and north-north-west to south-west during December-April.

At Lae the winds are mainly lighter than at Port Moresby. In the period May-October the winds at Lae are lighter than in the period November-April. The winds at 3 p.m. are greater than at 9 a.m. except in February. The prevailing direction is north-west at 9 a.m. and south-east at 3 p.m. throughout the year.

### Storms and cyclones

The Papua and New Guinea region is subject to thunderstorm activity, squall lines, and local storms throughout the year. Severe thunderstorms are frequent in the mountainous areas, but also occur in coastal lowlands. The main tropical cyclone belt lies to the south of the region, but occasionally a tropical cyclone affects the region, causing loss of life and property.

### Climatological tables

The averages and extremes for a number of elements recorded at Port Moresby and Lae are given in the tables on pages 1162-3. These tables generally follow the format given for Australian capital cities included in Chapter 2 of this Year Book, the observational data being for available years of record to 1966 inclusive unless otherwise stated. Some elements included in the Australian capital city tables have been omitted from the tables for Port Moresby and Lae because of the inadequacy of observational records.

### Population

Censuses of the non-indigenous population of the Territory of Papua and New Guinea have been taken in conjunction with censuses of the Commonwealth of Australia. For the indigenous population of the Territory of Papua and New Guinea, estimates of size, geographic location, and the broad age distribution of the population were available from the results of the Department of District Administration census (formerly known as the Tax Census). This was conducted over most of the Territory, but was continuous rather than conducted at a common date for all areas covered. No regular pattern of operations was adopted, although once the census had been taken in an area it was in general repeated fairly frequently. Although these estimates were of great value, the limitations of the information on population characteristics and the lack of simultaneous collection for all areas made them insufficient for many purposes. The 1966 census covered both indigenous and non-indigenous populations, and thus superseded the traditional census of non-indigenes.

Figures for the non-indigenous population as enumerated at censuses held in conjunction with Commonwealth censuses and estimates of the indigenous population based on the Department of District Administration censuses are set out below.

#### TERRITORY OF PAPUA AND NEW GUINEA: POPULATION AT CENSUSES, 1921 TO 1966

1966 . .	810,153	748,205	1,558,358	..	1,558,358	11,746	8,546	20,292

(a) 1920; figures for 1921 not available. (b) Includes 34,087 indentured labourers, 1,127 native constabulary, 4,823 attending approved mission schools, and 429 patients at Anelaua Leprosarium and Taskul Observation Colony (New Ireland), for which particulars of sex are not available.

The total indigenous population of Papua and New Guinea at the 1966 census was 2,150,317 persons, and the total non-indigenous, 34,669 persons. Estimated totals for 30 June 1968 are 2,276,632 and 40,363 persons respectively. See pages 1179 and 1185 for further details.

#### Population Census, 1966

The census was conducted over the period June–July 1966 and covered both indigenous and non-indigenous populations. For census purposes the indigenous population comprised the aboriginal peoples of the Territory of Papua and New Guinea, Australia, New Zealand, and the other islands

of Polynesia, Melanesia, and Micronesia, and all persons descended from these aboriginal peoples to the extent of more than one half. The non-indigenous population comprised all persons not covered by the definition of the indigenous population given above. The Census completely enumerated virtually all the non-indigenous population, together with all the indigenous population located in areas outside rural villages. The rural village population was estimated by means of a representative sample of approximately 10 per cent of rural villages. Consequently the figures published for the population of rural villages are estimates of total figures based on a representative sample, while those published for other areas are totals based on complete enumeration. Totals for a District or Territory as a whole are the sums of these estimated and actual figures.

A short description of the development operations undertaken before the 1966 census and of the actual census operations is given in Year Book No. 53, pages 141-2. A description of Methods and definitions used can be found in *Population Census, 1966—Preliminary Bulletin No. 20: Summary of Population* issued by the Bureau of Statistics, Konedobu, Papua.

#### Selected characteristics

The following tables and text present statistics relating to some selected characteristics as derived from the 1966 census. Details of all characteristics published can be found in Bulletin No. 20 (*see* preceding paragraph). In the tables, minor discrepancies between totals and sums of components are due to the rounding of estimates calculated from sample data.

(a) For location of districts *see* map on plate 55.

The chart on plate 55 shows the indigenous populations of districts classified by the categories urban, rural (village and non-village).

The population (indigenous and non-indigenous) of the major towns at the census, June-July 1966, was as follows: Port Moresby, 41,848; Lae, 16,546; Rabaul, 10,561; Wewak, 8,945; Madang, 8,837; Goroka, 4,826; Daru, 3,663; Mount Hagen, 3,315; Bulolo, 2,724; Lorengau, 2,446; Samarai, 2,201; Kavieng, 2,142.

# INDIGENOUS POPULATION OF PAPUA AND NEW GUINEA

CENSUS JUNE-JULY 1966

INDIGENOUS POPULATION: (i) Aboriginal peoples of Papua and New Guinea, Australia, New Zealand and other islands of Polynesia, Melanesia and Micronesia, and (ii) all persons descended from such peoples to the extent of more than one half.

URBAN AREAS: Centres with populations of 500 or more, excluding separately located schools, hospitals, missions, etc.

RURAL AREAS: (i) Non-village areas — Administration and focal government centres with populations of less than 500 (but including isolated Administration schools of all sizes); missions (including mission schools, hospitals, plantations, etc.); plantations, etc.

(ii) Rural villages — villages recorded as such by Department of District Administration except those in urban areas.

# MAP SHOWING CENSUS DISTRICTS

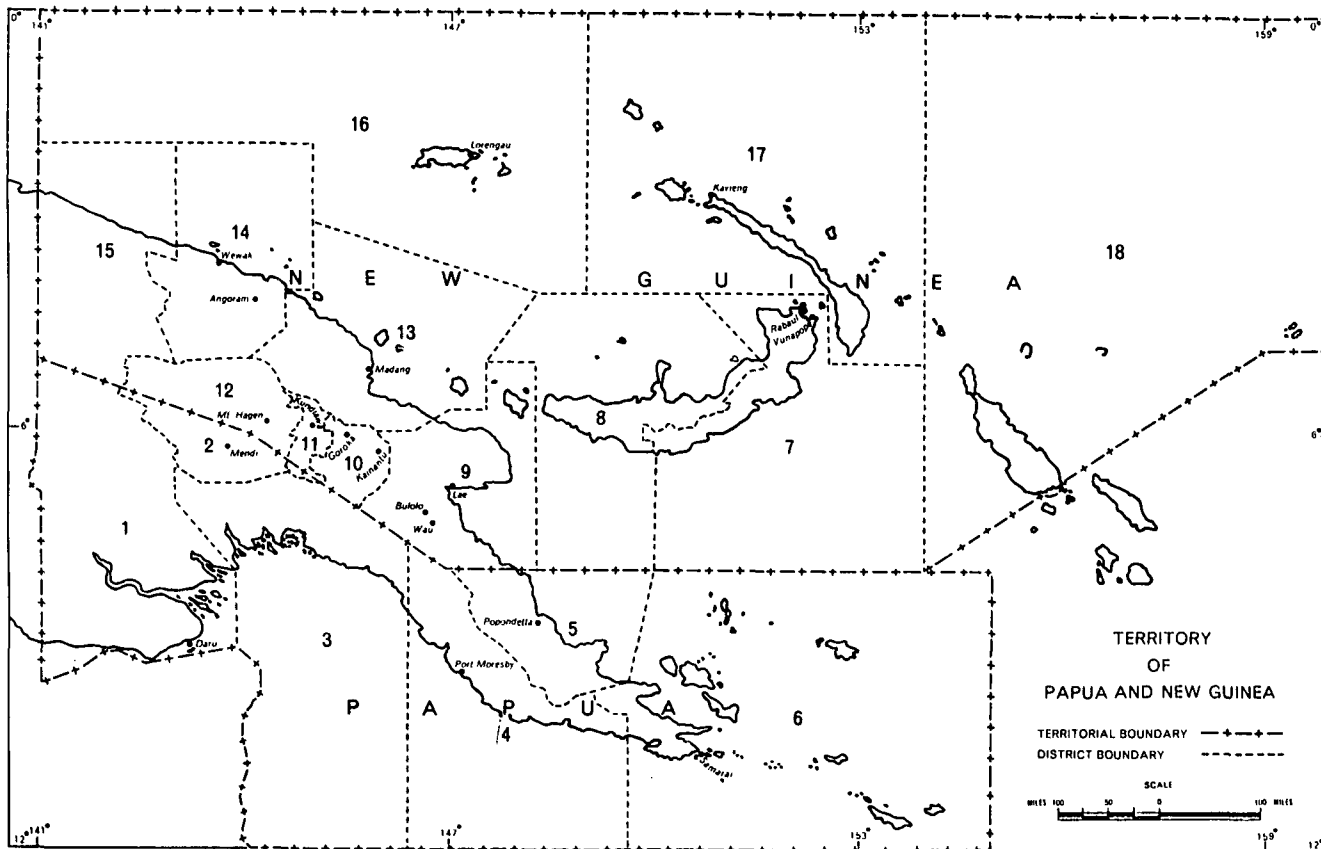

PLATE 55

**POPULATION, BY SCHOOL EDUCATION**  
**TERRITORY OF PAPUA AND NEW GUINEA, CENSUS, JUNE-JULY 1966**  
(Persons)

School education	Indigenous			Non-indigenous

Primary 'A' schools(a) . . . . .	405	459	864	2,460	4,083	6,543
Primary 'T' schools(b) . . . . .	98,473	186,172	284,641	484	279	763
Primary school (English not taught)	89,447	216,740	306,191	23	149	172
<i>Total primary education . . . . .</i>	<i>188,325</i>	<i>403,371</i>	<i>591,698</i>	<i>2,967</i>	<i>4,511</i>	<i>7,478</i>
Attended school, grade not known . . . . .	2,193	6,222	8,416	225	467	692
Never attended school . . . . .	395,090	1,140,319	1,535,409	1,981	3,082	5,063
Not stated . . . . .	77	172	249	157	49	206
<b>Total . . . . .</b>	<b>591,959</b>	<b>1,558,358</b>	<b>2,150,317</b>	<b>14,377</b>	<b>20,292</b>	<b>34,669</b>

(a) Schools where lessons are taught in English and the primary school syllabus of New South Wales is followed.  
(b) Schools where lessons are taught in simplified English and a specially designed syllabus is followed.

NOTE. The above table includes persons of all ages. The category 'never attended school' therefore includes a large number of persons too young to attend school.

At the census the *literacy* of persons aged ten years and over was determined on the basis of whether a person could read and write very simple sentences in any of the following languages, or a combination of them, English, Pidgin, Police Motu, any indigenous or foreign language. The indigenous population ten years and over totalled 1,458,054. The numbers of persons who were literate in one or more of the three main languages of administration were as follows: English 166,386, Pidgin 178,271, Police Motu 49,310. Persons who were literate in more than one language are included in each category which applies, for example 28,240 persons were literate in both English and Pidgin and are therefore included in both totals. Of the total population aged ten years and over, 1,126,995 (72 per cent) were illiterate.

The *work force* of Papua and New Guinea was divided into three main categories as follows:

- (i) Wholly or mainly money-raising.
- (ii) Mainly subsistence but with some money-raising.
- (iii) Wholly subsistence.

The questions on the interview questionnaire concerned with subsistence occupation and employment status were as follows.

'Subsistence occupation—

- (a) What is the person's subsistence occupation?

Write one of the following: Food gardener, 'G'. Fisherman, 'F'. Other subsistence, give details. Sago processor, 'P'. Hunter, 'H'. No subsistence, 'N'.

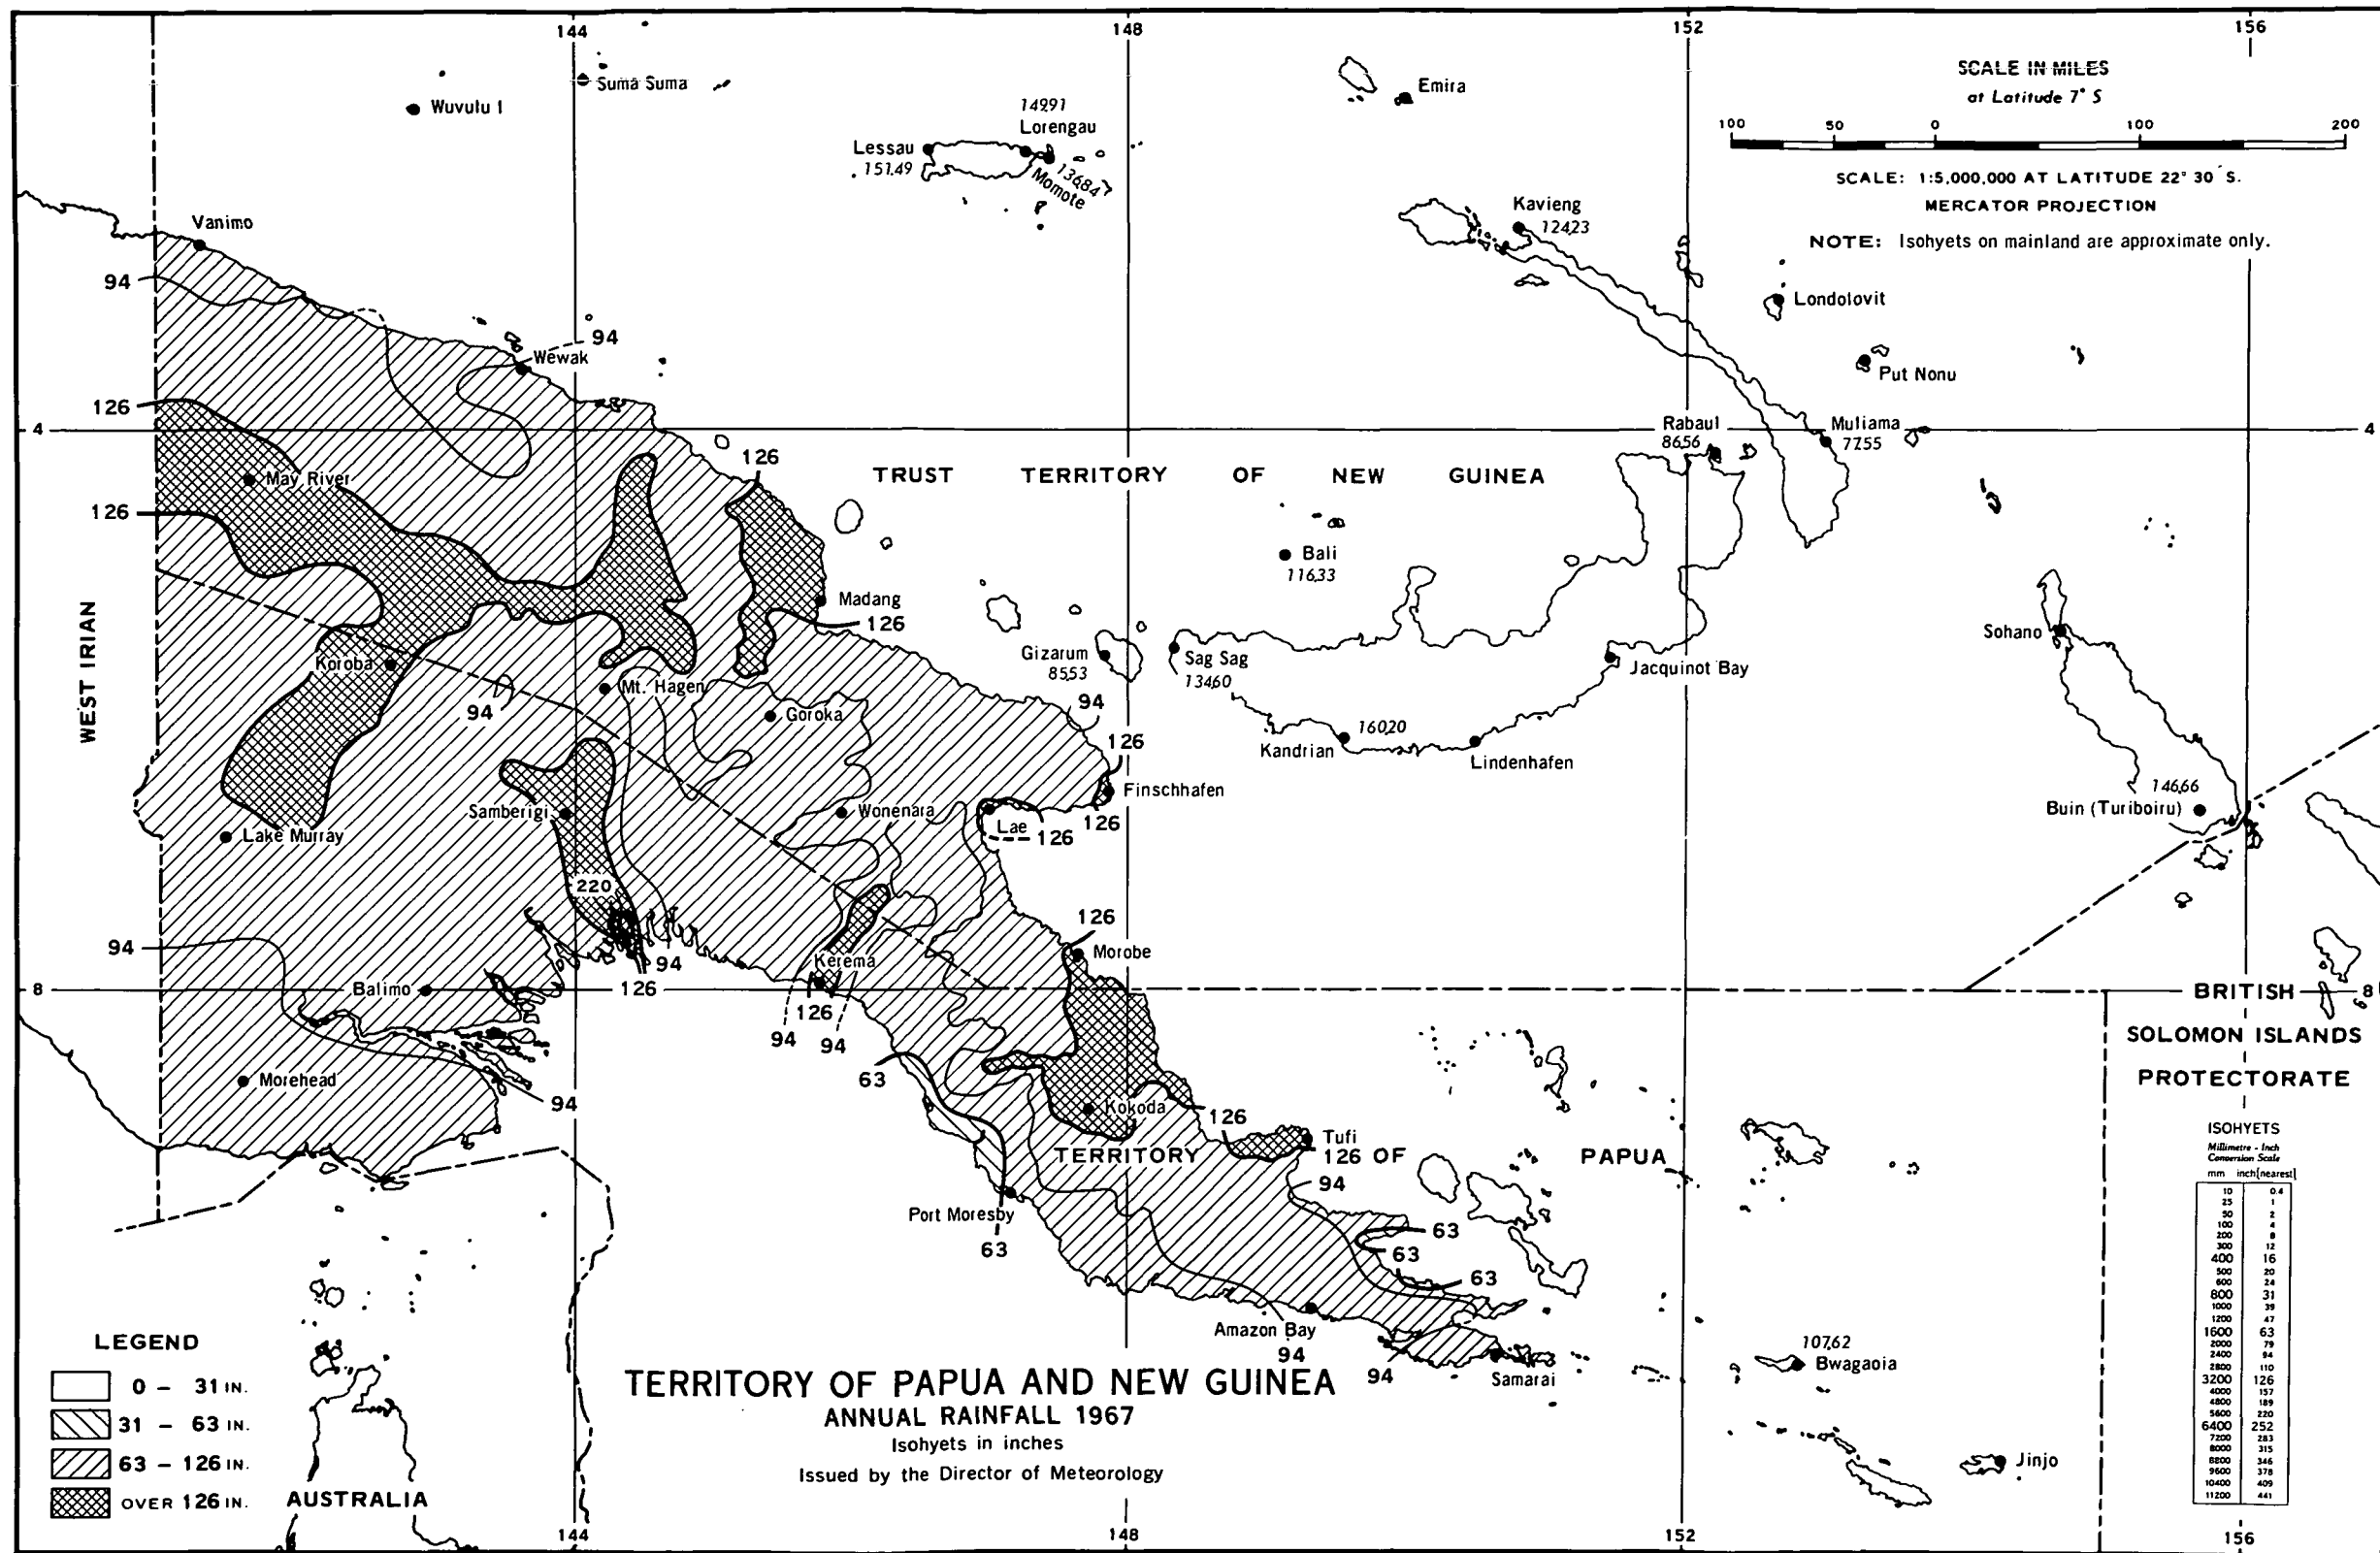

- (b) Does the person spend more time at subsistence work (write 's') or working at a money-raising occupation (write 'm')? If no occupation of any kind write 'NA'.
- (c) Does the person do this subsistence work on his own account (write 'o') or as a family helper (write 'h')? If no subsistence occupation write 'NA'.

'Employment status—

- (a) Did the person have a paid job or money-raising occupation of any kind excluding subsistence work, last week (even though he may have been absent from it)? Answer YES or NO.
- (b) Did the person do any money-raising work at all last week? Answer YES or NO. Persons working in a family business or plantation should answer YES.
- (c) Was the person temporarily laid off by his employer without pay for the *whole* of last week? Answer YES or NO.
- (d) Was the person actively looking for a paid job last week? Answer YES or NO.  
'Actively looking for work' means (i) being registered with an employment agency or Labour Office, or (ii) approaching or trying to find possible employers.
- (e) Was he looking for his first paid job? Answer YES or NO.'

It should be noted that by definition persons who were less than ten years of age were excluded from the work force.

Persons who indicated 'YES' to any one of the employment status questions (a) to (e) were classified as in the money-raising work force. This approach conforms closely to the recommendations of the Eighth International Conference of Labour Statisticians held in Geneva in 1954.

It should be noted that during the field interviewing the money-raising ability of persons was taken into account in the decision to include them in either the money-raising or wholly subsistence work force. For example where it could be ascertained that a person with a subsistence occupation had the capacity and inclination to make money, i.e. he had in the past and expected in the near future to make money from the crop of his coffee garden, vegetable garden, etc., (although he may not have made any money during the reference week) he was included in the money-raising work force. As a result the total for the money-raising work force (particularly the mainly subsistence with some money-raising category) tends to be somewhat higher than would be obtained from a pure 'last week' approach.

These persons were then classified to one of the above-mentioned work force categories by reference to subsistence occupation question (b). If a person spent more time at subsistence work ('s') he was classified as in the 'mainly subsistence but with some money-raising' work force category. On the other hand if he spent more time working at a money-raising occupation ('M') or ('NA') to subsistence occupation question (b) he was classified as in the 'wholly money-raising or mainly money-raising with some subsistence' work force category.

Persons not in the money-raising work force who indicated in subsistence occupation questions (a) to (c) that they were actively engaged in subsistence work, e.g. (a) ('G')—Food Gardener (b) ('s')—more time at subsistence work and (c) ('H')—Family Helper, were classified to the 'wholly subsistence' work force category. *All other persons were classified as not in the work force.*

### Administration

The *Papua-New Guinea Provisional Administration Act 1945-1946*, which provided for the transfer back of control from the military authorities to civil authorities after the 1939-45 War, was repealed by the *Papua and New Guinea Act 1949*, which came into force on 1 July 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, a Legislative Council and an Executive Council, one Supreme Court, and one Public Service.

For an outline of the development of the Legislative and Executive (later Administrator's) Councils between 1949 and 1963, see Year Book No. 51, page 117.

In May 1963 the Commonwealth Government passed an amendment to the Papua and New Guinea Act, making provision for a House of Assembly of sixty-four members to replace the Legislative Council. The house then consisted of ten official members appointed by the Governor-General on the advice of the Administrator, forty-four members elected by the people of the Territory on a common roll in forty-four open electorates, and ten non-indigenous persons elected on a common roll in ten special electorates comprising one or more open electorates. The first elections for the House of Assembly were held in February-March 1964, and the inaugural meeting of the new House was convened on 8 June 1964.

The 1963 Act also increased the membership of the Administrator's Council from seven to eleven, seven of whom must be elected members of the House of Assembly.

In October 1966 the Commonwealth Parliament passed a further amendment to the Papua and New Guinea Act, providing for an increase in the membership of the House of Assembly to ninety-four, sixty-nine members representing open electorates, fifteen from regional electorates and ten official members.

The second general election for the House of Assembly was held from 17 February-16 March 1968, and the Second House was convened on 4 June 1968. The Ministerial Nomination Committee in conjunction with the Administrator chose fifteen elected members who were appointed to seven Ministerial Member and eight Assistant Ministerial Member positions.

The *Papua and New Guinea Act 1968* provides for the Administrator's Council to become the Administrator's Executive Council, deciding major matters of Territory policy. In June 1968 it had its first meetings. It consists of the Administrator, the seven Ministerial Members, three official Members, and a twelfth Councillor who is an elected M.H.A. but a non-office holder.

Local government was introduced in 1949 by the Native Village Councils Ordinance which was replaced by the *Local Government Ordinance 1963*. The Administrator may establish by proclamation local government councils with authority in defined areas. Provision is also made for the establishment of multi-racial local councils.

### Judiciary

The courts which exercise jurisdiction within the Territory are: the Supreme Court of the Territory of Papua and New Guinea, District Courts (Papua and New Guinea), Local Courts and Children's Courts (Papua and New Guinea), and Warden's Courts.

The Supreme Court is the highest judicial authority in the Territory and has unlimited criminal and civil jurisdiction. District Courts have criminal jurisdiction over the less serious offences which are punishable on summary conviction, but have no jurisdiction to try treason crimes, misdemeanours and other indictable offences. They also exercise a limited civil jurisdiction. The Local Courts exercise a substantially similar jurisdiction but at a more subordinate level. The Administrator has power to establish, in respect of each gold-field or mineral field, warden's courts with jurisdiction over civil cases respecting mining or mining lands held under the *Mining Ordinance 1937-1966* of Papua and *Mining Ordinance 1928-1966* of New Guinea and offences against the mining laws of the Territory.

In addition, there is the Land Titles Commission set up under the *Land Titles Commission Ordinance 1962-1967* to inquire into and determine rights in land, particularly native land. The Commission has the particular function under the *New Guinea Land Titles Restoration Ordinance 1951-1966* to inquire into and determine claims to interest in land where the official records have been lost or destroyed as a result of the Japanese invasion of New Guinea. For the purposes of the latter Ordinance the jurisdiction of the Commission is exercised by the Chief Commissioner or a Commissioner appointed under the *Land Titles Commission Ordinance* who is a qualified legal practitioner.

## Agriculture and animal industry

### Soils

Although many parts of Papua and New Guinea are covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur suitable for growing a variety of crops. Much of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolised alluvium. So far these have been mostly under coconut plantations, although other crops such as rubber, coffee and cocoa are also grown. The coastal swamp soils, of which there are extensive areas in the delta plains of the Sepik and Fly rivers and intermittently around the coasts and along the lower reaches of other rivers, are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the valley occupied by the Ramu and Markham Rivers.

### Land tenure

The *Land Ordinance* 1962 of the Territory of Papua and New Guinea, which came into operation in 1963, replaced much land legislation previously in force separately in the two Territories. This simplification in legislation was a major step towards applying uniform principles to land tenure throughout the whole of the Territory of Papua and New Guinea. All land in the Territory other than native land or land subject to any estates, rights, titles, or interests in force from time to time is Administration land.

There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes, the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua and New Guinea is to introduce throughout the Territory a single system of land holding regulated by the central Administration by statute, administered by the Department of Lands of the central Administration and providing for secure individual registered titles after the pattern of the Australian system.

Only the Administration working through the Department of Lands, Surveys and Mines and through the Registrar of Titles may issue and register land titles.

Land subject to native custom remains subject only to native custom until it is taken out of custom either by acquisition by the Administration or by a process, provided for by the *Land (Tenure Conversion) Ordinance* 1963-1967, of conversion of title to an individual registered title.

Upon either acquisition or conversion of title, compensation is provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration. Land may not be acquired by the Administration except for prescribed public purposes unless the native owners are willing to sell and the Administration is convinced, through its Department of District Administration, that the land is not required by them, and conversion of title from native custom to individual registered title may take place only if all those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance* 1962-1967 are used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The Commissioners, as opportunity offers, continue investigations into the holding of land under native custom; the results of such investigations are recorded for use in connection with future acquisitions or conversions of title.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

### Suitable crops

Most tropical crops can be grown in Papua and New Guinea. Those of commercial importance at present are coconuts, cocoa, rubber, coffee, tea, peanuts, pyrethrum and passion fruit. Major developments in the production of oil-palm are under way. This crop is expected to be of future economic significance.

### Non-indigenous rural production

In 1967-68 there were 1,240 holdings in use by non-indigenous persons, 341 being in Papua and 899 in New Guinea. The total area of these holdings was 1,026,882 acres, 279,835 in Papua and 753,047 in New Guinea. The following tables summarise the information available for principal activities.

(a) Includes all produce acquired by purchase during the year from sources outside the holding. (b) Not available for publication. (c) Included in All other crops. Total area planted to tea was 2,402 acres.

**Livestock**

Total non-indigenous stockholding was estimated as 22,000 in 1967-68. Indigenous involvement in the cattle industry is being encouraged. An estimated 4,600 head of cattle were owned by indigenes in 1967-68. Dairy farming is carried out on a small scale near major towns.

A number of British breeds of cattle are represented, but for best results the use of Zebu crossbred types of cattle is desirable. For dairying the Jersey seems to be the best breed and adapts quite well to tropical conditions.

Central abattoirs controlled by the Administration have been set up at Lae and Port Moresby and there are smaller private slaughterhouses at other centres.

The following table shows the numbers of the various kinds of livestock on non-indigenously occupied holdings in Papua and New Guinea at 30 June 1968.

Geese . . . . .	10	46	56
Total poultry . . . . .	65,334	44,160	109,494

(a) Only recorded where poultry products are marketed or flocks exceed 100 birds.

### Fishing

Over 1,400 different species of fish are to be found in the coastal and inland waters of Papua and New Guinea and many are important food fish. Those of greatest commercial significance are barramundi, tuna, skipjack, crayfish and prawns. Efforts are being made to encourage indigenous fishermen to regard fishing as a source of cash income and not merely as a means of subsistence. This involves the Administration in research and extension work and requires the improvement of refrigeration, transportation and marketing facilities throughout the Territory. In the Highlands there is increasing interest in fish culture in freshwater ponds.

### Native agriculture

Most of the indigenous inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar cane, cassava, beans, peanuts, rice, cucurbits, and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is cut largely from naturally occurring stands, In other parts of the country small areas of sago are

grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, tobacco and maize for their own consumption, and cocoa, coffee and pyrethrum for export. Some small-scale rubber growing is now being undertaken. In coastal areas large quantities of copra are produced. In 1966-67 estimated indigenous production was: copra 35,000 tons, coffee 10,600 tons, cocoa 5,000 tons. In many localities the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48 and earlier issues.

The growing of food is done both by the men and the women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally the felling of forests is done by the men, and carrying the harvested food home to the village is done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply and improved land use in village gardens as well as for economic production of crops for sale have a high priority in Government policy for the Territory. In recent years the Administration has intensified the programme of agriculture extension work among the indigenes.

#### Survey of indigenous agriculture and ancillary surveys, 1961-62

A survey of the agriculture of indigenes of Papua and New Guinea was carried out in 1961-62 by the Territory Bureau of Statistics in conjunction with the Commonwealth Bureau of Census and Statistics and the Territory Department of Agriculture, Stock and Fisheries. A comprehensive report on the surveys was published by the Territory Statistician in 1963, and reference should be made to this for further information. A summary of the principal results of the survey appears on pages 1104-10 of Year Book No. 52.

#### Co-operative societies

Co-operatives are under the supervision and guidance of the Division of Co-operative Extension within the Department of Trade and Industry. A Territory-wide Federation of Co-operative Unions and a Co-operative Wholesale Society were established recently. A new co-operative college to be built at Laloki, near Port Moresby, will replace the existing Co-operative Educational Centre.

For the year ended 31 March 1968 primary societies numbered 316, with a membership of 109,175, a total capital of \$2,329,405, and a turnover of \$5,378,418. Secondary organisations numbered 14, with 239 member societies, a total capital of \$666,840, and a turnover of \$1,147,106.

### Indigenous labour

The 1966 population census shows that there were 235,000 persons wholly or mainly engaged in the money-raising work force, 200,000 of these being employed in the private sector.

Minimum wages and conditions of employment for indigenous workers are prescribed under the *Native Employment Ordinance* 1958-1967. An employer is required to pay a minimum cash wage to every worker employed by him, and provide the worker, and his family in appropriate cases, with food, clothing, cooking and eating utensils, towels, soap and other articles, medical attention, and, where necessary, accommodation. The estimated minimum cost of providing these entitlements, excluding accommodation, is estimated at \$143.00 a year per worker. The value of accommodation varies, but it would be in most cases about \$30.00 a year.

The legal minimum cash portion of the wage for unskilled rural workers is \$52 a year for the first year of employment, \$58.50 in the second year and \$65.00 for subsequent years.

In urban areas industrial agreements negotiated between employers and workers' organisations determine the rates of wages payable to workers. Provision is made by legislation for the employer-employee agreements reached to be registered by the Industrial Registrar, and they are then deemed to be judicial awards between the parties, and to have the force of law. Under this system minimum wage rates have been determined for the principal urban centres, and cover an increasing number of workers. In Lae, Rabaul and Madang, the current minimum rate payable as a total cash wage, for unskilled adults or married juniors is \$6.75 per week; in Port Moresby and Wewak \$6.50; other towns \$6.00.

Other provisions of the awards relate to: Annual leave and sick leave (two weeks' leave on full pay and six days' sick leave per annum); the employment of qualified tradesmen (weekly rates of pay \$14.00 to \$16.00 for second class tradesmen and \$18.00 to \$20.00 for first class tradesmen); rates of pay and conditions of employment of stevedoring workers and ships' crews; tradesmen who have not completed a formal approved apprenticeship (weekly rates of pay \$15.00 to \$17.00); and rates of pay and conditions of employment of workers in the timber and sawmilling industries.

There has been a continued expansion of the trade union movement since industrial legislation for the Territory was introduced in March 1963. In December 1968 nineteen associations with a membership of 16,163 had been registered as industrial organisations of workers under the Industrial Organisations Ordinance.

Provision is made in other legislation for the establishment and maintenance of modern standards of industrial safety and for the payment of compensation for injury or disease arising out of, or in the course of, employment.

An apprenticeship scheme was inaugurated in 1955 and reorganised in 1968. An Apprenticeship Board, comprising representatives of private enterprise and government, advises the Administration on apprenticeship matters. By March 1969, 609 apprentices had received trade certificates and 1,186 were under agreement.

### Housing

Village housing is still constructed to traditional patterns using local materials including bush timber, bamboo, grass, pit-pit and palm leaves. Town housing is generally constructed from comparatively expensive imported material including fibrous asbestos cement, aluminium and galvanised iron.

The rapid growth of town populations has created a housing shortage. Major programmes are directed towards reducing this backlog. Administration expenditure on housing for local officers was programmed at \$2,650,000 in 1968-69.

The Housing Commission completed its first year of operations in 1968-69 building some 300 houses at an average cost of about \$2,000. It has commenced construction of proto-type \$1,300 units and also offered blocks for builders wishing to demonstrate new building materials.

### Secondary industries

The major manufacturing industries are generally those processing primary products, mainly for export. Examples of these are plywood, coconut oil, copra by-products, desiccated coconut and pyrethrum.

Nevertheless industries catering for the rapidly expanding local market remain numerically predominant. These include the brewing of beer, furniture making and assembly of electrical appliances; the production of cigarettes and twist tobacco, concrete products, drums, industrial gases, chemicals, fibreglass products, nails and other wire products, packaging and paper products, paints, metal louvre frames, terrazzo and other building materials; and printing and ship-building.

A wide variety of services has also been established such as engineering workshops, plumbing establishments, motor repairs and electrical services.

#### TERRITORY OF PAPUA AND NEW GUINEA: SUMMARY OF FACTORY OPERATIONS, 1966-67 AND 1967-68p

(Source: *Production Bulletin*, Part II: *Secondary Industries*, Bureau of Statistics, Papua)

## Finance

### Revenue and expenditure

Information on the financial operations of each Territory will be found on pages 1183-4 and 1189-90.

### Taxation

The main forms of taxation are income tax and import duties. *Income Tax* was imposed on 1 August 1959 to operate from 1 July 1959. In the case of individuals two different methods of calculating tax payable are used. Tax on taxable incomes has applied since 1 July 1959 and is calculated on a similar basis to that in Australia. The scale of taxation is about 50 per cent of the tax payable on the same taxable income in Australia. Deductions for dependants the taxpayer is maintaining are considerably higher than those allowed in Australia. Tax on chargeable income was introduced to apply from 1 January 1967 and has supplanted a previous *Personal Tax* of \$4.00 payable by all males eighteen years and over. Chargeable income consists of gross income less expenses directly incurred in earning the income. No deductions are allowable for dependants or any other private expenditure such as medical or education expenses. The tax is a flat rate of 2.025 cents in the \$1 applying on income above \$416 with a maximum of \$20.50. The two methods of calculating tax payable are supplementary, the method applied to any particular taxpayer being the one resulting in the greater amount of tax payable. Companies are taxed on a similar basis to that in Australia, and deductions allowable are generally comparable to those in Australia. From 1 July 1959 to 30 June 1967 the rates on public and private companies differed, public companies being taxed at a flat rate of 20 cents in the \$1 and private companies at 12.5 cents in the \$1 for the first \$10,000 and 17.5 cents in the \$1 for the remainder. From 1 July 1967 a flat rate of 22.5 cents in the \$1 applies to all companies, and from the same date private companies are no longer required to distribute a portion of their income in dividends each year. To encourage industry in the Territory certain companies manufacturing products new to the Territory may be granted complete tax exemption for the first five years of operation under the *Industrial Development (Incentive to Pioneer Industries) Ordinance* 1965. Additionally to income taxes Native Local Government Councils (which are formed voluntarily by the indigenes) are empowered to levy local taxes for the purpose of providing for local services carried out by the councils. These taxes are set off against the taxpayers' personal taxation.

The present *Customs Tariff* provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods, and jewellery, but allows entry of most necessities affecting living and building costs duty free or at a low rate of duty. Under the Customs Tariff, plant, machinery and chemicals to be used mainly for industrial and developmental purposes are generally

duty-free. A by-law covers goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July 1959.

Provision is made in the *Australian Customs Tariff (Papua and New Guinea Preference) 1936* for the free entry into Australia of certain agricultural goods produced in and imported direct from the Territory (see chapter Overseas Transactions). In addition, goods produced or manufactured in the Territory and imported directly into Australia are exempted from primage duty.

### Banking

The banking system in the Territory of Papua and New Guinea is based on Australia's, and provides full trading and savings bank facilities. Four Australian trading banks have branches in the main centres. They are: the Commonwealth Trading Bank of Australia, the Bank of New South Wales, the Australia and New Zealand Bank and the National Bank of Australasia Ltd. Affiliates or subsidiaries of banking institutions operate savings banks in the Territory. Rates of interest for bank deposits and advances are the same as those applying in Australia. A branch of the Reserve Bank of Australia in Port Moresby carries out central bank functions and acts as banker for the Administration and Commonwealth Government Departments in the Territory. The Territory uses the same currency as Australia.

The Banking (Foreign Exchange) Regulations of the Commonwealth of Australia apply to the Territory of Papua and New Guinea. The Regulations are administered by the Reserve Bank of Australia in a way that is consistent with the policy of encouraging overseas investment in Australia and the Territory. All remittances abroad require exchange control approval, though in practice no restrictions are imposed on current transactions and the trading banks have been authorised to deal with the great majority of these transactions as agents of the Reserve Bank.

The Papua and New Guinea Development Bank which opened in July 1967, has as its prime objective the provision of funds to assist individuals and enterprises in developing the Territory. The Bank was established to provide finance where it was not otherwise available on reasonable terms and conditions. Both indigenes and non-indigenes can qualify for advances. When considering applications the Bank is concerned mostly with the borrower's prospects for success rather than his security.

Average weekly deposits of cheque-paying banks in the Territory of Papua and New Guinea for the year 1967-68 were \$34,758,000 and loans, advances, etc., \$18,393,000. Average weekly debits to customers' accounts amounted to \$14,075,000. Savings banks depositors' balances at 30 June 1968 amounted to \$32,896,000, comprising indigenous \$12,252,000 and non-indigenous \$20,644,000, having increased since June 1958 from \$2,311,000 and \$6,352,000 respectively.

## TERRITORY OF PAPUA

### General description

#### Area, etc.

Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 930 miles; towards either end the breadth from north to south is about 320 miles, but about the centre it is considerably narrower. The Territory includes also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland and 1,936 on the islands. The total area is 86,100 square miles, of which 83,325 are on the mainland and 2,775 on the islands. A description of the physical characteristics of the Territory appears in earlier issues of the Year Book (see No. 18, page 633) and in the Administration Annual Reports.

#### Administration

Particulars of the early administration of Papua are given in Year Book No. 19, page 576. The Territory was placed under the authority of the Commonwealth on 1 September 1906 by proclamation issued in pursuance of Letters Patent of 18 March 1902 and was accepted by the Commonwealth by the *Papua Act* 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is under the control of the Commonwealth, but not included within it, and is divided into seven administrative districts, Southern Highlands Chimbu (part), Western, Gulf, Central, Milne Bay, and Northern.

## Population

### Indigenous population

Within the major division, Melanesian, into which most indigenous inhabitants of the Territory are classified, a distinction may be made between a Melanesian type and a Papuan type, the former representative of the eastern mainland and the island archipelagos to the east and south-east, and the latter representative of the western third and the interior of the Territory. Some negrito traits have been noted in a few of the inland mountain groups. The indigenous population of the Territory of Papua as recorded in the 1966 census is shown on page 1165. The estimated indigenous population for 30 June 1968 was 598,825 persons, comprising Central, 117,471; Gulf, 64,708; Milne Bay, 102,513; Northern, 56,934; Southern Highlands, 192,260; and Western, 64,939.

### Non-indigenous population

Preliminary results of the numbers of non-indigenous population from the 1966 census are given on page 1164. The estimated non-indigenous population for 30 June 1967 was 8,290 males, 6,436 females, 14,726 persons.

## Land tenure

The basic principles applying to land tenure in Papua are the same as those applying to the whole of the Territory of Papua and New Guinea described on pages 1171-1172. At 30 June 1968, of the total area of Papua, 55,102,000 acres, only 1,928,718 acres had been alienated. The distribution of alienated land at 30 June 1968 according to tenure was as follows: held by private non-indigenous inhabitants, freehold, 24,280 acres; land tenure conversions, freehold, 4,448 acres; leasehold, 388,295 acres; native reserves, 67,255 acres; other Administration land, including land reserved for public purposes, 1,444,440 acres.

Although a small amount of freehold land exists in Papua, present legislation does not provide for the granting of estates in freehold. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal, and, in general, leases may be granted for periods of up to ninety-nine years. Rent is based on the unimproved value of the land.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available, and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the *Real Property Ordinance* 1913-1962, modelled on the Torrens system of land registration.

## Production

### Primary production

The products of the Territory are obtained principally from its agricultural, forestry, mining, and fishing industries. Native subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, bananas, and pawpaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Indigenous, however, produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g. cocoa and coffee, is undertaken. The principal agricultural products of Papua for the export trade are copra and rubber. Native production of copra is increasing. The fishing industry is also of increasing importance. Gold, manganese, zinc-lead, and copper ores have been mined in commercial quantities in the past, but current production is limited.

For information on the agricultural and animal industries, which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined, see pages 1171–1175. The following paragraphs relate to forestry, mining, fisheries, and water-power resources in Papua.

### Forestry

A general description of the forest policy, which applies in Papua as well as in the Trust Territory of New Guinea, is given under the heading, Timber, on page 1186.

Mixed species of tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilisation on an economical basis is somewhat difficult. Mangroves occur in large areas fringing the Gulf of Papua. Forestry field work is carried out in Papua with a view to assessing the forest resources available and also to survey areas subsequently made available for cutting.

At 30 June 1968 twenty-two permits and thirty-six licences were current. The total areas of forest involved were 334,324 acres and 69,573 acres respectively. The total number of logging mills was twenty-one and the total sawn-timber produced during 1967–68 was 9.7 million super feet.

### Mining

Although a large number of minerals have been found in Papua, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, and lignite, current mineral production is not of economic importance. Before the 1939–45 War gold was an important item in Papuan production, but it has since dwindled to insignificance. Large quantities of copper ore were mined and exported up to 1940. Extensive deposits of magnetite sands exist along the Gulf of Papua coastline, but these contain the undesirable impurity titanium, and ways of separating this from magnetite are under investigation. The *Mining Ordinance* 1937–1966 and the *Mining Development Ordinance* 1955–1960 control mining in Papua.

Indications of oil have been found at scattered locations over a large area, but commercial quantities have not been discovered. Natural gas has been found in several wells, but its commercial use is not yet economically feasible. At 30 June 1968 eighteen permits and licences were effective under the provisions of the *Petroleum (Prospecting and Mining) Ordinance* 1951–1965. Oil prospecting is confined mainly to the Gulf and Western Districts, including off-shore areas in the Gulf of Papua.

### Fisheries

The fishing industry in Papua is considered to have considerable potential. In 1967–68 the most important export from Papua and New Guinea was 888,410 lb of frozen crayfish tails and prawns from the north coast of Papua, valued at \$977,627. Exports of barramundi to Australia are also important. Two large international firms are surveying the potential for commercial prawn fishing ventures.

Two cultured pearl farms have recently commenced production of both round and half pearls of high quality.

### Water power

Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that at least 1,850 MW could be developed.

The Rouna No. 1 hydro station on the Laloki River near Port Moresby has a capacity of 5.5 MW. A second hydro station, Rouna No. 2, came into operation in 1967, with an initial installed capacity of 18 MW. Total planned capacity of this station is 30 MW.

**Shipping**

In 1967-68 shipping entries (overseas and inter-Territory vessels) at Territory ports totalled 545, and 302,652 tons of cargo were discharged and 90,574 tons were loaded. Corresponding figures for 1966-67 were 563, 298,976 and 89,830 respectively.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

**Other forms of transport and communication**

Scheduled flights provide a network of air transport throughout Papua, and regular air services link the Territory with Australia and neighbouring Territories, and also with Manila and Hong Kong. There were 377 licensed aerodromes in the whole of Papua and New Guinea at 30 June 1968, and of these 12 were the responsibility of the Department of Civil Aviation, 125 of the Administration, and 240 were privately owned. Much of the internal traffic and freight is carried on a charter basis.

At 30 June 1968 there were 2,164 miles of roads in Papua of which 345 were adequately paved. Total motor vehicle registrations (excluding defence force vehicles) at 31 December 1967 were 8,228.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is shared by the Overseas Telecommunications Commission and the Administration. The former provides all external radio-telephone and telex circuits, while the latter operates internal telephone and telegraph services. Trunk line services are available at Port Moresby, Daru, Popondetta, Kerema, Samarai, and Tapini. Continuous telephone services are available at Port Moresby, Samarai, and Sogeri, and a limited service at Daru, Popondetta, Kerema, and Tapini. Port Moresby is connected by direct radio-telephone trunk circuits with Popondetta and Samarai and with Lae, Rabaul and Wewak in New Guinea. Radio telegraph services are provided from Port Moresby, Samarai, Kerema, and Daru to nearly 300 outstations. The Australian Broadcasting Commission broadcasts from medium wave station 9PA and short wave stations VLK and VLT located at Port Moresby. The Administration Department of Information and Extension Services operates transmitters at Alotan, Daru and Kerema and produces programmes in several local languages covering news, health features, general information and programmes of local and regional significance.

**Education and health****Education**

Education in the Territory is provided by the Administration and various Mission organisations. Schools for indigenes, also, have been established by Local Government Councils. The *Education Ordinance* 1952-63 enables the Administration to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and Missions. During the year ended 30 June 1968, 168 schools were maintained by the Administration for 32,276 children. The total number of pupils

in the various grades of mission schools was 39,426. To assist the educational work of the Missions the Administration provides expert advice, educational equipment and text-books. In addition, the sum of \$571,621 was distributed among the Missions as grants-in-aid during the year ended 30 June 1968.

### Health

The Department of Public Health of the Territory of Papua and New Guinea has the general oversight of all medical and dental services. The Department has the following seven functional divisions: medical services; preventive medicine; medical training; infant, child and maternal health; medical research; administration; and mental health. The services for the Territory of Papua are under the administrative control of a regional medical officer, with headquarters staff at Port Moresby.

The cases treated in hospitals are mainly pneumonia, gastro-enteritis, skin disease, malaria, accidents, diseases due to old age, and confinements. At 30 June 1968 the Administration had established 32 general hospitals, 2 hospitals for the treatment of Hansen's disease, 1 Hansenide-tuberculosis hospital, 2 tuberculosis hospitals, and 1 mental hospital; the Missions had established 25 general hospitals, 2 Hansenide hospitals, and 2 tuberculosis hospitals. There were 879 village aid posts or medical centres (112 Mission), 30 maternal and child welfare clinics (66 Mission), and 600 mobile clinic centres (1,523 Mission). School medical examinations, immunisation, ante-natal and post-natal care, and pre-school services are also provided. The Missions employ their own doctors and nurses in their medical establishments.

For some years suitably qualified indigenes attended the Central Medical School at Suva, Fiji, to be trained as Assistant Medical Officers. In 1959 the Administration began training indigenous medical officers at the Papuan Medical College which is associated with the Port Moresby General Hospital. The College, planned to accommodate 600 students eventually, is being built in stages. The course consists of a preliminary year and five years further study. Training for nurses and medical auxiliaries in many categories is also being provided.

(a) Special appropriations have been reduced by taxation refunds and refunds of revenue.  
 (b) Includes the Administrator's Council which replaced the Executive Council during 1960-61 and the House of Assembly which replaced the Legislative Council during 1963-64. (c) Includes expenditure of the Administrative College. (d) Includes costs of general stores for all departments except Public Works. (e) Before 1964-65, Department of Native Affairs. (f) Up to 1963-64 the Land Titles Commission was included in the Department of Law. The two figures have been combined for 1964-65 and 1965-66. (g) Includes Trade and Industry, Customs and Migration, and Marine. (h) Additional expenditure on this item included under 'Expenditure chargeable to Loan Fund'. (i) 'Capital Purchases' has been distributed among the individual departments. (j) Grants and loans by individual departments have been brought together under 'Other institutions'.

## TRUST TERRITORY OF NEW GUINEA

### General description

#### Area, etc.

The Trust Territory of New Guinea extends almost from the equator to latitude 8° S., a distance of 400 nautical miles, and from longitude 141° E. to 160° E., a distance of 1,000 nautical miles. The land area is 92,160 square miles, that of the New Guinea mainland being 69,095 square miles and that of adjacent islands, including the two northernmost islands of the Solomon Islands, Buka and Bougainville, and the Bismarck Archipelago, 23,065 square miles. Information regarding physiography and climate will be found in Year Book No. 22, page 613, in the *Official Handbook of the Territory of New Guinea*, and the Administration Annual Reports.

#### Administration

The terms of the League of Nations mandate (1920) of the former German possession of New Guinea are given in Year Book No. 33 (*see* page 264). Particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration are given in Year Book No. 36 and earlier issues, and of events following the outbreak of the Pacific War in Year Book No. 37 and subsequent issues up to No. 48.

Following the 1939–45 War the Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13 December 1946. The terms of the Agreement are shown in Year Book No. 39, pages 355–7.

For administrative purposes the Territory is divided into the following twelve districts: East New Britain and West New Britain, comprising New Britain and the adjacent islands; Morobe, Madang, Eastern Highlands, Chimbu, Western Highlands, East Sepik and West Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

### Population

#### Indigenous population

The indigenous people of the Territory may in general be grouped with the Melanesians who occupy the greater part of the Western Pacific. They may be divided into two main types—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See* Year Book No. 16, page 670, and *Official Handbook of the Territory of New Guinea*, Part V.)

The indigenous population of the Territory at the Census of 30 June 1966 is shown on page 1165. At 30 June 1968 the estimated indigenous population was 1,677,807 persons, comprising Bougainville, 72,393; Eastern Highlands, 218,018; Chimbu, 180,570; Western Highlands, 317,686; Madang, 158,609; Manus, 23,126; Morobe, 230,026; East New Britain, 91,279; West New Britain, 50,120; New Ireland, 53,507; East Sepik, 162,274; and West Sepik, 120,199.

#### Non-indigenous population

The non-indigenous population of the Territory of New Guinea at the 1966 Census is shown on page 1164. At 30 June 1967 the estimated non-indigenous population of the Territory was 13,685 males, 9,671 females, 23,356 persons.

### Land tenure

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua, and grants of estates are restricted to leasehold tenure. In New Guinea, however, the amount of freehold land of earlier origin held by

private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase, subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at approximately 59,000,000 acres, of which at 30 June 1968 only 1,851,100 acres were alienated. The following was the distribution of alienated land according to tenure at 30 June 1968: held by private non-indigenous inhabitants—freehold, 516,558 acres, leasehold, 441,235 acres; native reserves, 26,810 acres; other Administration land, including land reserved for public purposes, 865,997 acres.

Under German law there was a system of registration of titles in a Ground Book, but registration did not necessarily confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in the *Lands Registration Ordinance* 1924–1962. The land registers were lost during the 1939–45 War, but provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance* 1951–1966.

### Production

The products of the Territory are obtained principally from its agricultural, mining, fishing, and forestry industries. A copra crushing mill near Rabaul, established in 1952, commenced crushing at about 18,000 tons of copra per annum, and its capacity is now about 60,000 tons of copra per annum. Early in 1968 a factory capable of manufacturing 7,000 tons of dessicated coconut a year was established also near Rabaul. At Bulolo a company is producing high quality moisture-proof plywood in a factory with an approximate annual plywood production of 28 million square feet (on a  $\frac{3}{8}$  in basis). Native subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas, papaws. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, produce copra for export, and in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and cocoa, coffee and pyrethrum for export. The principal agricultural products of New Guinea for the export trade are copra and coconut oil, cocoa, and coffee, but exports of timber and timber products are substantial. The fishing industry is based upon the supply of fish to local markets, and the export of small quantities of shell. Gold is the principal mineral mined. Indigenes are taking an increasing interest in mining for alluvial gold on their own account, and production from this source is continually rising, in contrast to falling European production.

For information on the agricultural and animal industries, which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined, see pages 1171–5. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea alone.

#### Timber

Various species of timber are found in the Territory, and one accessible pure stand is the valuable pine forests of the Bulolo Valley. This timber is used mainly for the production of plywood and veneer. The Territory forests also provide fitches, battery veneer, and egg-case parts. The Administration operates a training centre for forestry workers, nurseries and a herbarium, and has established a research institute at Hohola near Port Moresby.

The Government intends to make available a number of large-scale permit areas containing from 2,000 to 5,000 million super feet of timber to help overcome the problems of multiplicity of species and continuity of supply of particular species. In opening up these major permit areas consultants are being employed to investigate the forest resources, assess the market potential and recommend working places and forms of processing for each area. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation. Timber growing on native lands cannot be acquired by private purchasers direct from the native people, but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Royalties are negotiable in many instances. Reafforestation of areas dedicated for forestry in perpetuity is carried out by the Administration.

At 30 June 1968, 68 permits and 20 licences were current, the total areas of forest involved being 846,635 acres and 76,985 acres respectively. The total number of logging mills was 50, and the total sawn timber produced during 1967–68 was 30.1 million super feet.

#### Mining

The production of gold and associated silver is the most important mining activity in New Guinea, although other minerals, such as osmiridium, platinum, copper, iron ore, sulphur, and brown coal, have been discovered. The production of gold in New Guinea since the 1939–45 War has been on a

much smaller scale than before the war, decreasing from \$1,410,000 in 1959-60 to \$823,749 in 1967-68. The discovery of extensive low-grade copper deposits on Bougainville has given impetus to the copper industry in the Territory.

The laws in operation governing mining are the *Mining Ordinance* 1928-1966, the *Mines and Works Regulation Ordinance* 1935-1962 and the *Mining Development Ordinance* 1955-1960 and the regulations made thereunder.

The *Petroleum (Prospecting and Mining) Ordinance* 1951-1967 deals with the issue of permits and the granting of licences and leases for oil exploration. There were three prospecting permits for oil current at June 1967.

#### Water power

An approach was made during 1966-67 to the International Bank for Reconstruction and Development with regard to a loan for the Upper Ramu Hydro-electric Scheme, a 72 MW project planned for supplying Lae, Madang, Goroka, Mount Hagen, and intervening areas. Further investigations recommended by the Bank are being carried out.

**Shipping**

Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between the East and Australia and the Pacific Islands call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the *Shipping Ordinance 1951-1960* and the Coastal Shipping, Ports and Harbours Regulations. Main ports of call for overseas vessels are Lae, Madang, Wewak (mainland), Rabaul (New Britain), and Kavieng (New Ireland). In 1967-68 shipping entries at Territory ports totalled 1,070, and 495,677 tons of cargo were discharged and 333,950 tons loaded. Corresponding figures for 1966-67 were 1,054, 473,087, 303,108 respectively. There are no inland waterways, and the natural river system is not generally suitable for vessels except those of small tonnage.

**Other forms of transport and communication**

There are no railways in New Guinea, but a road construction programme is being undertaken progressively to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mount Hagen. The total mileage of roads in the Territory of New Guinea at 30 June 1968 was 5,215, of which 1,888 were adequately paved. Total motor vehicle registrations (excluding defence force vehicles) at 31 December 1967 were 12,468.

Scheduled flights provide a network of air transport throughout New Guinea, and regular air services link the Territory with Australia and neighbouring territories and also with Manila and Hong Kong. There were 377 licensed aerodromes in the whole of Papua and New Guinea at 30 June 1968, and of these 12 were the responsibility of the Department of Civil Aviation, 125 of the Administration, and 240 privately owned.

Telephone services are operated in the main centres by the Administration, and radio telephone trunk circuits link Port Moresby with Lae, Rabaul, Wewak, and Madang. The latter is connected via the SEACOM cable operated by the Overseas Telecommunications Commission with Australia

and south-east Asia. Nine zone or group centres for radio telegraph communications with about 811 out-stations have been established at Lae, Rabaul, Kavieng, Lorengau, Madang, Mount Hagen, Wewak, Sohano, and Goroka.

The Australian Broadcasting Commission broadcasts from medium wave station 9RB Rabaul. The Administration Department of Information and Extension Services operates transmitters at Goroka, Kieta, Mount Hagen, Rabaul and Wewak. The stations broadcast a balanced programme of news, information, health features and entertainment designed particularly for the people in the district in which each is located.

### Education and health

#### Education

Education in the Territory is provided by the Administration and various Mission organisations. Schools for indigenes have also been established by Local Government Councils. The *Education Ordinance* 1952-1963 enables the Administrator to establish an education advisory board, district education committees and schools for all sections of the community, and to grant financial aid for educational purposes. Teachers are recruited from Australia and overseas, and indigenous teachers are trained in the Territory by the Administration and the Missions. During the year ended 30 June 1968, 358 schools were maintained by the Administration for 56,298 children. In addition, there is a correspondence school. The total number of pupils in the various grades of mission schools, excluding exempt schools, was 100,721. To assist the educational work of the Missions the Administration provides expert advice, educational equipment and text-books. In addition, the sum of \$1,528,000 was distributed among the Missions as grants-in-aid during the year ended 30 June 1968.

#### Health

The cases treated in hospital are mainly pneumonia, gastro-enteritis, skin diseases, malaria, accidents, diseases due to old age, and confinements. At 30 June 1968 there were 74 Administration hospitals, including 3 Hansenide colonies, 1 tuberculosis hospital, and 2 Hansenide and tuberculosis hospitals. The Missions have established an additional 73 hospitals, including 3 Hansenide colonies and 1 Hansenide and tuberculosis hospital. There were 1,005 village aid posts or medical centres (116 conducted by Missions) and 2,291 maternity and child welfare centres (1,661 provided by Missions). The Missions staff their own medical establishments but receive financial assistance and much of their medical stores and supplies from the Administration.

### Finance

Total expenditure . . . . .	44,861	52,691	60,309	76,762	85,004

(a) Special appropriations have been reduced by taxation refunds and refunds of revenue. (b) Includes the Administrator's Council, which replaced the Executive Council during 1960-61, and the House of Assembly, which replaced the Legislative Council during 1963-64. (c) Includes the Administrative College. (d) Includes costs of general stores for all departments except Public Works. (e) Before 1964-65, Department of Native Affairs. (f) Up to 1963-64 the Land Titles Commission was included in the Department of Law. The two figures have been combined for 1964-65 and 1965-66. (g) Includes Trade and Industry, Customs and Migration, and Marine. (h) Additional expenditure on this item included under Expenditure chargeable to Loan Fund. (i) 'Capital Purchases' has been distributed among the individual departments. (j) Grants and loans by individual departments have been brought together under 'Other institutions'.

### HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26 December 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act 1953*.

In December 1947 an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March 1955 following the establishment of Mawson station on the Antarctic mainland. Australian expeditions have since visited the island from time to time. Heard Island is about twenty-seven miles long and thirteen miles wide. The McDonald Islands are twenty-six miles to the west of Heard Island. They are small, rocky and precipitous.

### AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7 February 1933 placed under Australian authority all the islands and territories other than Terre Adélie situated south of 60° S. latitude and lying between 160° E. longitude and 45° E. longitude. The Order came into force with a Proclamation issued by the Governor-General on 24 August 1936 after the passage of the *Australian Antarctic Territory Acceptance Act* 1933. The boundaries of Terre Adélie were definitively fixed by a French Decree of 1 April 1938 as the islands and territories south of 60° S. latitude lying between 136° E. longitude and 142° E. longitude. The *Australian Antarctic Territory Act* 1954 declared that the laws in force in the Australian Capital Territory are, so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory.

On 13 February 1954 the Australian National Antarctic Research Expeditions (ANARE) established a station on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The station was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13 January 1957 at latitude 68° 35' S. and longitude 77° 59' E. The station was named Davis in honour of the late Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. The station was temporarily closed down in January 1965 and reopened in February 1969. In February 1959 the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on 16 January 1957 on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 33' E. The station was named in honour of Lieut Charles Wilkes, who commanded the 1838-40 United States expedition to the area. A new station of advanced design, built about 1½ miles south of Wilkes, was opened in February 1969 and named Casey in honour of Lord Casey, who has had a long association with Antarctic Expeditions. Wilkes ceased operations early in April 1969. ANARE have also operated a station, since the 1947-48 Antarctic season, at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

On 1 December 1959 Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom, and the United States of America. Poland, Czechoslovakia and Denmark have subsequently acceded to the Treaty. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23 June 1961. Since then the Antarctic Treaty powers have held five consultative meetings under the Treaty, the first at Canberra in July 1961, the second at Buenos Aires in July 1962, the third at Brussels in June 1964, the fourth at Santiago in 1966, and the fifth in Paris in 1968. The sixth is to be held in Tokyo in 1970.

### COCOS (KEELING) ISLANDS

#### General description

The Cocos (Keeling) Islands, two separate atolls comprising some twenty-seven small coral islands with a total area of about 5½ square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about six miles from north to south, on which are the aerodrome and most of the European community; Home Island, the headquarters of the Clunies-Ross Estate; Direction Island; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about fifteen miles to the north of the groups and has no inhabitants.

Main settlements are on West Island and Home Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and the average rainfall is about 67 inches. There are occasional violent storms. The estimated population at 30 June 1968 was 622 (323 males and 299 females).

#### History and administration

Summarised particulars of the discovery of the islands and their history up to 1946, when they became a dependency of the Colony of Singapore, are given in Year Book No. 51, page 140, and in earlier issues. On 23 November 1955 the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the *Cocos (Keeling) Islands Act 1955* of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth, to be known as the Territory of Cocos (Keeling) Islands.

Responsibility for the administration of the Territory rests with the Minister for External Territories. The first Official Representative was appointed on 23 November 1955 to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955-1961* of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955-1966* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955-1966*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

#### Transport and communication

There is an international airport at West Island under the control of the Commonwealth Department of Civil Aviation. A three-weekly air service is provided between Perth and the Cocos Islands by Ansett and T.A.A. alternatively. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals. A radio teletype link with Perth airport is maintained by the Department of Civil Aviation. Local postal and telephone services exist, and a non-commercial broadcasting station operates.

### CHRISTMAS ISLAND

Christmas Island is an isolated peak situated in the Indian Ocean in latitude 10° 25' S., longitude 105° 40' E. It is approximately 224 miles south from Java Head at the south entrance to Sunda Strait, 815 miles from Singapore and 1,630 miles from Fremantle. Christmas Island covers an area of about fifty-two square miles. It consists of a central plateau of about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove, where the principal settlement is located and which is also the only known anchorage.

The climate is healthy and pleasant, and the prevailing winds come from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round to between north and west. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

The economy of the Territory is based almost entirely on the mining and extraction of phosphate. Because of the nature of the land there appears little prospect of establishing any other economic activity.

At 30 June 1968 the estimated population was 3,524 (2,385 males and 1,139 females).

### Education

At 30 June 1967 there were two school systems on the Island—the Christmas Island school system which serves the majority of the children, and a European school which serves a small number of children. The Christmas Island school system follows the Singapore curriculum, and has a staff of 29 teachers mostly recruited from Singapore (including four locally recruited teachers-in-training receiving in-service practical instruction at the primary school), and 817 pupils (579 primary and 238 secondary). The European school follows the Western Australian primary school syllabus, with two teachers seconded from the Western Australian Department of Education, and fifty-five pupils.

### History and administration

Summarised particulars of the history of Christmas Island up to its administration by the United Kingdom as a separate Crown Colony from 1 January 1958, pending transfer to Australia, are given in Year Book No. 51, page 141, and in earlier issues. On 1 October 1958 the island was transferred to the Commonwealth of Australia by the *Christmas Island Act 1958* and is now administered as a Territory under the authority of the Commonwealth. Responsibility for the administration and government of the Territory rests with the Minister for External Territories, and day to day affairs on the island are administered by an Administrator under delegation from the Minister. The laws which were in force on the island at 30 September 1958 were continued as the laws of the Territory after its transfer to Australia.

### Phosphate deposits

The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission. There are three principal phosphate deposits on the islands, of which the largest is that now being worked at South Point. This field is situated on the 600 feet to 800 feet level and is approximately 12 miles from the drying and shipping plant at Flying Fish Cove. During 1967–68 approximately 1,058,228 tons of phosphate were exported to Australia and New Zealand. In addition some 69,558 tons of phosphate dust were exported to Malaysia, Singapore and Australia.

### Transport and communication

Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Australian ports and New Zealand.

A post office and internal telephone system are operated by the Administration. The latter comprises four automatic exchanges and three small subscriber-attended exchanges. A radio station is also operated by the British Phosphate Commissioners for messages via Perth and Singapore and for communication with ships at sea. A limited broadcasting station commenced operating during 1966–67.

## CHAPTER 30

### MISCELLANEOUS

This chapter comprises statistics and other descriptive information not directly related to the subjects of the preceding chapters, or which it is convenient to assemble in single sections, arranged as follows: Valuation of Australian production; Indexes of farm production; Consumption of foodstuffs and beverages; Retail trade; Interstate trade; Statistical organisation in Australia; Statistical and other official publications of Australia.

#### VALUATION OF AUSTRALIAN PRODUCTION

The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published in the following tables have been compiled by the Statisticians in the various States from the latest and best data available and are on a substantially uniform basis. However, marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationships of local to gross value should be treated with some reserve.

Attention is directed to the fact that the values shown in the tables herein refer only to the production of primary industries and factories, and exclude the building and construction industry, those industrial establishments not classified as factories, and certain agricultural and farmyard produce obtained from areas of less than one acre.

#### Explanation of terms used

The following is a brief explanation of the terms used.

- (a) *Gross value of production* is the value placed on recorded production at the wholesale price realised at the principal markets. In general, the 'principal markets' are the metropolitan markets in each State. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) *Local value* (i.e. gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) *Net value of production* represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays, and other costs. No deductions have been made for depreciation or certain maintenance costs, as particulars are not available for all States. The net value of production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

For the years shown in the following tables, no allowance for power, power kerosene, petrol, and other oils has been made in New South Wales. In the case of the mining and quarrying industry, however, this allowance has been made in all States. Marketing costs for mining and quarrying and costs of materials used in the process of production in respect of bee-farming, trapping, forestry, and fisheries are not available for all States. Local values have been used for these industries, with consequent understatement in gross value for the mining and quarrying industry and overstatement in net value for the other industries. Because of revisions, some figures differ from corresponding figures in earlier chapters of this Year Book.

## Value of production, Australia

**GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES AND FACTORIES: AUSTRALIA, 1967-68**  
(\$'000)

<i>Industry</i>	<i>Gross production valued at principal markets</i>	<i>Local value—gross production valued at place of production</i>	<i>Net value of production (without deduction of depreciation or maintenance)</i>

## INDEXES OF FARM PRODUCTION

In the first two tables in this section indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups: Agriculture, Pastoral, Dairying, poultry and bee-farming, and All farming combined (including separate indexes for Wool and Products other than wool). In the third table indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown.

## Farm production price indexes

The farm production price indexes shown in the following table relate to average 'prices' of agricultural, pastoral, dairying, poultry and bee-farming products realised at the principal markets of Australia. The 'price' data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year, and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. 'Prices' for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers the average quantities of the relevant commodities *produced* in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43, page 1050). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average quantities of each product *marketed* during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All farming index of quantities of crops marketed for livestock feeding in Australia.

## FARM PRODUCTION: INDEXES OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA

1953-54 TO 1967-68

*(Base: Average of 3 years ended June 1939 = 100)*

Year	Agriculture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool
1953-54	324	534	395	429	621	365
1954-55	316	489	371	401	540	355
1955-56	330	451	392	397	468	373
1956-57	336	536	386	432	607	374
1957-58	336	435	382	388	473	359
1958-59	322	396	386	369	370	369
1959-60	329	464	402	403	440	391
1960-61	349	443	402	401	397	403

1963-64	351	511	402	431	531	398
1964-65	351	460	423	415	437	408
1965-66	354	501	422	431	458	423
1966-67	350	496	418	427	433	425
1967-68	371	457	413	417	382	429

## Indexes of quantum (i.e. value at constant prices) of farm production

The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base: average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43 page 1051). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All farming index, of quantities of crops fed to livestock in Australia.

INDEXES OF QUANTUM(a) OF FARM PRODUCTION: AUSTRALIA  
1953-54 TO 1967-68

(Base: Average of 3 years ended June 1939 = 100)

Year	Agri- culture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool
1953-54	129	123	107	122	128	120
1954-55	120	127	117	123	132	120

1967-68	189	174	141	175	180	173

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (*see* text preceding table).

## Farm products for food use: indexes of quantum (i.e. value at constant prices) of production, exports and consumption

The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit-gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas.

**FARM PRODUCTS FOR FOOD USE: INDEXES OF QUANTUM(a) OF  
PRODUCTION, EXPORTS AND CONSUMPTION  
AUSTRALIA, 1953-54 TO 1967-68**

(Base: average of 3 years ended June 1939 = 100)

Year	Production		Exports		Consumption in Australia	
	Total	Per head of total population	Total	Per head of total population	Total	Per head of total population

1967-68	178	102	194	112	171	99

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

## CONSUMPTION OF FOODSTUFFS AND BEVERAGES

### Quantities consumed

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from the sum of production and imports and allowing for recorded movements in stocks of the respective commodities. While the estimates may be generally accepted as being reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of fish, rabbits and hares and the quantities of certain oils and fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc. which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at 'producer' level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years wastage of foodstuffs has possibly been less than previously because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by production by householders for their own requirements. In most cases broad estimates of non-commercial (householders') production have been made. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. It is felt that the foregoing deficiencies do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been derived by dividing the total apparent consumption of each commodity or commodity group in a given year by the mean population of Australia in the same period.

More detailed information on the consumption of foodstuffs and beverages is contained in the statistical bulletin: *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients*, issued by this Bureau.

The following tables show the average annual consumption during the three-year periods ended 1938-39, 1948-49 and 1958-59, together with the data for each of the years 1965-66, 1966-67 and 1967-68. Because of revisions, figures for some items in the following tables differ from corresponding figures in earlier chapters of this Year Book.

#### Level of nutrient intake

The next table shows details of the estimated supplies of nutrients available for consumption in Australia during the three years 1965-66 to 1967-68 in comparison with the annual averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

**RETAIL TRADE**

The statistics in this section relate to retail establishments throughout Australia and the value of retail sales of goods by these establishments.

Information of this nature was first collected in respect of the year ended 30 June 1948 by a full census of all retail establishments. As this was the first census of its type in Australia, its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods, and a simple commodity dissection, together with a record of the value of certain services provided. This census was followed by a second census of all retail establishments trading during the year ended 30 June 1949.

Further censuses were taken in respect of the years ended 30 June 1953 and 1957. In these censuses retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups, and questions were asked about stocks of goods on hand, the number of persons engaged in retail activities, and credit sales. In addition, the 1956-57 census included questions relating to purchases, customers' indebtedness and type of organisation.

The most recent census for which results are available was taken in respect of the year ended 30 June 1962, and results have been published for all States and Australia. With the exception of some modifications to the scope of collection (*see* hereunder), the 1961-62 census followed the same general principles adopted for the 1956-57 census.

In general terms the census covered the retail trading activities of establishments which normally sell goods by retail to the general public from fixed premises (i.e. shops, rooms, kiosks, and yards). Retail activities of wholesalers and manufacturers were included if they sold regularly by retail to the general public. Sales by itinerant vendors (e.g. hawkers, street sellers, etc.) and sales from casual stalls or booths were excluded. Organisations such as clubs and societies making sales to their own members were excluded from the main census collection, but a supplementary collection was made, covering sales by *licensed* clubs.

In general, establishments with retail sales of goods amounting to less than \$1,000 in the census year are not included in the census tabulations. However, some 'service' establishments with retail sales of less than \$1,000, but with takings of \$1,000 or more from repairs, meals or hairdressing were included in the main census collection, and details of these establishments are included in tables in Year Book No. 50, page 1244. The types of establishments in this category are boot repairers, repair-only garages, cafes and restaurants, and hairdressers.

The design of the census is such that particulars of retail sales relate principally to sales to the final consumer of new and second-hand goods generally used for household and personal purposes. For this reason, sales of building materials, farm and industrial machinery and equipment, earth-moving equipment, etc., have been excluded from the censuses. For the same reason, and also because of difficulties in obtaining reliable and complete reporting, sales of builders' hardware and supplies, business machines and equipment, grain, feed, fertiliser and agricultural supplies, and tractors were excluded from the 1961-62 census. Retail sales of motor vehicles, parts, etc., have been included, whether for industrial, commercial, farm, or private use.

During the period between censuses variations in the value of retail sales have been measured by means of quarterly sample surveys. Annual totals derived from these surveys, adjusted to a basis comparable in scope with the 1961-62 census, and some of the results of the 1961-62 census, are included in this section.

Year Book No. 50, pages 1239-45, contains details of the number of retail establishments, the values of retail sales and of retail stocks, and particulars of hairdressing, boot repairing and motor repairing establishments, restaurants, self-service stores and licensed clubs, for each State and Territory, from the results of the 1961-62 census. Major classifications are by commodity groups and type of business. More complete details are set out in published bulletins of the 1961-62 Census of Retail Establishments (*see* page 1211).

**Value of retail sales in each commodity group, Australia**

The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1961-62 and 1964-65 to 1967-68 on a comparable basis throughout. The figures for the year 1961-62 were obtained from the census, whereas figures for the other years shown are estimates based on sample surveys.

## INTERSTATE TRADE

Prior to the federation of the Australian Colonies (now States) each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the 'bookkeeping' period these records were discontinued as from 13 September 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July 1953.

At the Conference of Statisticians held in January 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities. Complete interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania by the Deputy Commonwealth Statisticians in those States, and incomplete statistics, relating mainly to trade with Western Australia and Tasmania, by the Deputy Commonwealth Statisticians in the remaining States.

## STATISTICAL ORGANISATION IN AUSTRALIA

### Early development of Australian statistics

Statistical organisation in Australia was founded in the 'Blue Books' which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although intended primarily for administrative purposes, these documents have been important sources of statistical data, and formed the basis from which later statistical publications were developed. Following the advent of responsible government, the 'Blue Book' was succeeded in all States by 'Statistical Registers' which, however, were still largely confined to summaries of the 'by-product' statistics of government administrative departments.

The growing need for quantitative data concerning the progress of the several young communities of Australia led eventually to the appointment of official Statisticians commissioned to prepare and publish such data, and conferences were held between the Statisticians to provide for the interchange of ideas between States and to obtain uniform State statistics which could be aggregated to Australian totals. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906—in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences has been continued since the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928.

### Creation of the Commonwealth Bureau of Census and Statistics

Under the provisions of Section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament 'to make laws for the peace, order, and good government of the Commonwealth with respect to . . .' (*inter alia*) '(XI.) Census and Statistics'. In compliance with this provision, the *Census and Statistics Act* 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State had its own 'Statistics Act', and although these were not identical for all States, they embodied common principles. The Commonwealth Bureau did not attempt to duplicate the existing State statistical organisations, but endeavoured to use their services whenever possible, and undertook the initial collection of statistics only in fields not covered by the States, or in which efficiency demanded complete centralisation.

### Integration of statistical services

The creation and development of the Commonwealth Bureau of Census and Statistics, the frequent conferences of Commonwealth and State Statisticians, and the close and increasing liaison between officers dealing with the same subjects in the State and Commonwealth fields did much to promote uniformity in official statistics and methods employed in their collection throughout Australia. The complete realisation of this aim could not, however, be achieved, even with the utmost co-operation of those concerned, while seven separate statistical systems operated. This became apparent when economic problems following the 1914-18 War drew attention to deficiencies in Australian statistical data.

The first step towards integration was taken in 1924, when, in response to a proposal by the Prime Minister to the Premiers' Conference that State and Commonwealth Statistical Bureaux be amalgamated, the Tasmanian office was transferred to the Commonwealth. (Other States did not agree to the proposal at that time.) The Tasmanian office has since functioned as a Commonwealth office which also serves State statistical needs.

The varied economic and social problems of the 1920's and 1930's, the 1939-45 War and the post-war boom, and the development during and since the war of a volume of new statistics, imposed a severe strain on the statistical systems and increased the complexities of the several administrations in their efforts to secure and maintain uniformity in statistical collections.

The difficulties of maintaining efficient statistical services were further emphasised during the immediate post-war years when the problems of planning for post-war reconstruction greatly increased the demand for current economic statistics. In 1949, discussions with the Premiers were initiated by the Prime Minister, with the object of integrating the statistical services of the Commonwealth and the States by agreement. Following negotiations, all State Governments accepted the terms of draft agreements to integrate their respective statistical offices with that of the Commonwealth, and effect was given to this by the *Statistics (Arrangements with States) Act 1956*. This legislation, permissive in nature, was designed to enable the Commonwealth to enter into an agreement with any State to effect an amalgamation of Commonwealth and State statistical offices and services. The object of such an agreement was to establish an integrated statistical service, with branches in each State, operated by Commonwealth statistical officers under the immediate direction of a statistician who would hold office under both the Commonwealth and State Governments. Both Commonwealth and State were to be adequately served with statistics, and no State would be required to surrender its existing powers in the field of statistics. Integration of the Commonwealth and State statistical services was finally accomplished when the integration arrangement with Victoria came into effect on 15 September 1958.

The relationships which at present obtain between the Bureau and the several State Governments are a reflection of these agreements. Each State has retained its power to collect statistics under State laws, but the Commonwealth provides the staff and the funds, and is responsible for all statistical work required by both Commonwealth and State Governments. Annual conferences of the Commonwealth and Deputy Commonwealth Statisticians meet to discuss current and projected future operations of the Bureau.

Under the system as it now operates, Deputy Commonwealth Statisticians and their staffs provide the principal avenue of contact between State Government agencies and other State users and suppliers of statistical information. Special requirements of State users and problems of obtaining statistical information from them are normally dealt with by correspondence between Deputy Statisticians and the Commonwealth Statistician, or are discussed at the annual conferences referred to above. For the most part, negotiations with Commonwealth agencies and other national users and suppliers of statistical information are undertaken by the Commonwealth Statistician and his Central Office staff. However, the division of responsibility between the Bureau's Central and State Offices in the matter of relationships with users and suppliers of statistical information is by no means as precise as might be assumed from the above remarks. The statistical services are highly integrated and operate as one unit rather than as seven separate Bureaux. In general, it might be said that moves to develop new statistical series or to modify existing ones for State purposes are normally initiated by Deputy Statisticians, whereas moves to develop new or modified series for national socio-economic policy purposes are usually initiated by the Commonwealth Statistician.

#### **Scope of the Commonwealth Bureau of Census and Statistics**

The scope of the Commonwealth Bureau of Census and Statistics has continually been widened. Additional requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All these activities are covered by the Census and Statistics Act, which empowers the Statistician to collect information and contains stringent provisions to ensure that the secrecy of information provided by individual persons and businesses is preserved.

In the Australian centralised official statistical service, it is recognised that there is a danger that official statisticians may become isolated from the thinking of the users of statistics and insensitive to the problems of the firms or individual persons whose responsibility it is to supply statistical information. The dangers inherent in this situation are for the most part obviated because the six State Offices of the Bureau keep in very close contact with the individual businesses which use statistics and supply statistical information, and special steps are taken to ensure that users have adequate scope for expression of their needs and that requests for information are kept within reasonable and practical limits. The methods towards this end which have been adopted in the Bureau

are reflected in its organisational structure. The organisation is on the basis of specialist subject-matter branches, and to each relatively narrow field of socio-economic activity there is a corresponding branch within the Bureau which is responsible for obtaining statistics and providing statistical services. Thus, for example, in the Central Office, there are specialist branches dealing with primary industries; secondary industries; wholesale and retail trade; employment; population and vital statistics; etc. A broadly similar organisational pattern exists in State Offices of the Bureau, although local requirements have naturally given rise to differences in detail.

#### **Organisation of the Central Office of the Commonwealth Bureau of Census and Statistics**

The Central Office of the Bureau is organised functionally into the following branches, listed alphabetically. As shown below, these branches are further sub-divided into specialist subject-matter sections.

*Demography and Employment Branch.* Demographic and Social; Employment and Field Survey Operations; Population Research.

*Finance and Overseas Transactions Branch.* Balance of Payments; Overseas Trade and Shipping; Public Finance and Taxation; Private Finance.

*National Accounts Branch.* National Income and Expenditure; Inter-industry and Sector Financial Accounts.

*Population Census Branch.* Classifications Research; Field Organisation and Mapping; Operations.

*Prices and Labour Branch.* Household Expenditure; Labour; Quantum Indexes; Retail Prices; Wholesale Prices and Price Indexes.

*Production and Distribution Branch.* Development, Integration and Classification; Internal Trade; Primary Industry; Secondary Industry.

*Sampling and Methodology Branch.* Methodology; Sampling; Special Projects.

*Services Branch.* Establishments and Finance; Publications; Secretariat.

In addition to the above-mentioned branches, the Bureau's *Computer Service Centre* operates the largest computer network in Australia and one of the largest used for statistical purposes in the world. It comprises Control Data 3600 and 3300 computers in Canberra, 3300, 3200 and 160-A computers in Sydney and Melbourne, and 3200 computers in the remaining State capitals. All installations use a full complement of peripheral devices. Mass storage and interrogation facilities are available at Canberra, Sydney and Melbourne.

At 30 June 1969 the staff of the Bureau numbered approximately 3,080, of whom 618 were university graduates. Of the total staff, some 1,300 were employed in the Bureau's Central Office in Canberra. Expenditure for the year 1968-69 amounted to \$15,210,353, of which \$1,122,907 was expenditure on equipment of a capital nature.

#### **Relation of the Bureau to other Commonwealth Departments**

The Commonwealth Statistician is the co-ordinating authority on all statistical activities in Commonwealth Departments, and where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician must be consulted to ensure that they are necessary and that they are based on sound statistical methods; furthermore, the Commonwealth Statistician is empowered to make regular inspections of all statistical work undertaken in Departments to ensure that their needs are being met by the most economical means and without duplication of effort.

The Bureau provides methodological and general statistical advice to Commonwealth Departments and instrumentalities from time to time as required. However, for a small number of Departments, which have a continuing need for specialised statistical services, the Bureau provides, from its own staff, the key personnel to serve these needs.

### **STATISTICAL AND OTHER OFFICIAL PUBLICATIONS OF AUSTRALIA**

The official statistical publications of Australia may be divided bibliographically into two main divisions, namely: (i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only. Commonwealth publications containing statistics may be grouped under two heads, namely: (i) publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers. State publications may similarly be grouped into publications issued by the Deputy Commonwealth Statistician in each State and State Parliamentary and Departmental Reports and Papers. The statistics contained in the second group in each case are in the main incidental to the primary purpose of the particular report or paper.

### Publications issued by the Commonwealth Statistician

#### Principal statistical publications issued to date

The following is a list of the principal statistical publications issued from the Central Office of the Commonwealth Bureau of Census and Statistics since its inauguration. Minor changes in titles have not been referred to. Copies of a number of these publications, particularly earlier issues, are not now available.

- Australian Capital Territory Statistical Summary*. Annually, 1963 to 1969.
- Balance of Payments, Australia*. Statements Nos 1 to 3, 1928–29 to 1951–52.
- Banking and Currency*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1966–67.
- †*Building and Construction*. Bulletin, annually, 1964–65 to 1966–67.
- Causes of Death*. Bulletin, annually, 1963 to 1967.
- Census (1911) Results*. Bulletin. Vols I (Statistician's Report), II and III, with Appendix *Mathematical Theory of Population*.
- Census (1921) Results*. Bulletins, Nos 1 to 26. Parts I to XVI, forming Vol. I, and Parts XVII to XXIX (Part XXVII, Life Tables), forming, with the Statistician's Report, Vol. II.
- Census (1933) Results*. Bulletins, Nos 1 to 25. Parts I to XIV, forming Vol. I, Parts XV to XXVIII, forming Vol. II, and Parts XXIX to XXXVII, forming, with the Statistician's Report and Australian Life Tables, 1932–1934, Vol. III.
- Census (1947) Results*. Bulletins, Nos 1 to 25. Parts I to XVI, forming Vol. I, Parts XVII to XIX, forming Vol. II, and Parts XX to XXVIII, forming with the Statistician's Report and Australian Life Tables, 1946–1948, Vol. III.
- Census (1954) Results*. Bulletins, Nos 1 to 3. Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1953–1955, and the Statistician's Report.
- Census (1961) Results*. Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; and Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1960–1962, and the Statistician's Report.
- Census (1966) Results*. Summarised results for each State and Territory and for Australia have been published in a series of mimeographed bulletins available from the Commonwealth Statistician while the volumes which will contain the final figures are currently being prepared. (see pages 1213–4).
- \* *Conference of British Commonwealth Statisticians, 1951, Report of Proceedings*.
- \* *Dairying Industry* (formerly *Summary of Dairying Industry*). Statistical Bulletin, monthly and half-yearly; first issue, September 1937.
- Demography*. Bulletin, annually, 1911 to 1966. Commencing 1963, excludes details of causes of death, see *Causes of Death*.
- \* *Digest of Current Economic Statistics*. Monthly from August 1959 onward.
- \* *Export Commodity Classification, Australian*. Annually, 1966–67 to 1968–69 (sectional revisions).  
*Exports, Australian*. Annually, 1958–59 to 1967–68.
- \* *Factories, Principal Statistics, Summary*. Annually, 1948–49 to 1967–68.
- Finance*, Bulletin, 1907 to 1960–61. Commencing 1955–56, issued in two parts—Part I, Public and Private Finance; Part II, Commonwealth Taxation. Commencing 1961–62, issued as five separate bulletins, see *Banking, Finance (2), Insurance, and Taxation*.
- Finance, Commonwealth*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1968–69.
- Finance, State, Territory and Local Government Authorities', and Government Securities*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1966–67.
- \* *Food Production and the Apparent Consumption of Foodstuffs and Nutrients, Report on*. Statistical Bulletin, half-yearly, 1946–47 to 1947–48; annually, 1948–49 to 1967–68.
- \* *Fruit Growing Industry* (formerly *Summary of Fruit Growing Industry*). Statistical Bulletin, annually, 1944–45 to 1967–68.
- \* *Import Commodity Classification, Australian*. Annually, 1965–66 to 1968–69 (sectional revisions).  
*Imports, Australian*. Bulletin, annually, first issue 1967–68.
- Imports Cleared for Home Consumption*. Annually, 1950–51 to 1967–68.
- Insurance and Other Private Finance (other than Banking and Currency)*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1967–68.
- Labour and Industrial Statistics*. Memoranda and Reports, various, to 1922.
- Labour Report, 1913 to 1965 and 1966* (combined issue).
- Life Tables, Australian, 1901–1910*. *Australian Joint Life Tables, 1901–1910*.
- Life Tables, Australian, 1920–1922*.
- Life Tables, Australian, 1932–1934*. *Australian Joint Life Tables, 1932–1934*.

- Life Tables, Australian, 1946-1948.*  
*Life Tables, Australian, 1953-1955.*  
*Life Tables, Australian, 1960-1962.*
- \**Livestock Numbers* (formerly *Summary of Livestock Statistics*). Statistical Bulletin, annually, 1943 to 1968.
- Local Government in Australia.* July 1919.
- Manufacturing Industries.* Bulletins on individual industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete) and 1944-45 to 1967-68.†
- Manufacturing Industry.* Bulletin, annually, 1963-64 to 1965-66.
- Manufacturing Commodities.* Bulletin, annually, first issue 1963-64 and 1964-65 (combined issue).
- ‡*Mineral Industry, The Australian* (formerly *Minerals and Metals Bulletin*). Part 2—*Quarterly Statistics* of a quarterly bulletin issued jointly with the Bureau of Mineral Resources.
- Monthly Review of Business Statistics.* October 1937 onward.
- Motor Vehicles, Census of, 31st December, 1955.* Bulletin Nos 1 to 8.
- Motor Vehicles, Census of, 31st December, 1962.* Bulletins Nos 1 to 9.
- Motor Vehicles, Survey of (1947-48), Results.* Bulletins Nos 1 to 7.
- National Accounts, Australian (National Income and Expenditure), 1948-49 to 1961-62,* first issue, mimeographed\*, to 1967-68.
- §*Non-rural Primary Industries.* Bulletin, annually, first issue, 1964-65.
- Non-rural Primary Industries and Value of Production.* Bulletin, annually, 1962-63 and 1963-64. (Commencing 1964-65 issued as two separate Bulletins, see *Non-rural Primary Industries, and Value of Production*).
- Northern Territory Statistical Summary.* Annually, 1960 to 1969.
- \**Occupation Survey (1945) Results.* Detailed tables.
- Official Year Book of the Commonwealth of Australia.* 1907 to present issue (No. 55). Issues Nos 40 to 51 also published in parts.
- Pocket Compendium of Australian Statistics* (formerly *Statistical Digest*). 1913, 1914, 1916 and 1918 to 1969, annually.
- Population and Vital Statistics.* Bulletins and Reports, various, 1906-1910.
- Primary Industries.* Bulletins, annually, 1950-51 to 1961-62 in two parts—Part I, Rural Industries; Part II, Non-rural Industries and Value of Production. Commencing 1962-63, issued as two separate Bulletins, see *Rural Industries and Non-rural Primary Industries and Value of Production.*
- Primary Industries, Australian.* Report prepared for the Empire Producers Conference, Sydney, March 1938.
- Production.* Bulletin, annually, 1906 to 1949-50. From 1936-37 to 1949-50 issued in two parts—Part I, Secondary Industries; Part II, Primary Industries (including Total Recorded Production); thereafter separate Bulletins (see *Primary Industries and Secondary Industries*).
- Professional Papers.* Various. A full list appears in Official Year Book No. 13, page 3.
- \**Publications of the Commonwealth Bureau of Census and Statistics.* Annually since 1950 (1964 to 1969 printed).
- Quarterly Summary of Australian Statistics* (replaced *Monthly Summary of Australian Statistics*). December 1917 onward.
- \**Retail Establishments, Census of (1947-48), Results.* Bulletins, Nos 1 to 7.
- \**Retail Establishments, Census of (1948-49), Results.* Bulletins, Nos 1 to 7.
- \**Retail Establishments, Census of (1952-53), Results.* Bulletins, Nos 1 to 14.
- Retail Establishments, Census of (1956-57), Results.* Bulletins, Nos 1 to 8 (mimeographed\*) and 9 to 15 (printed).
- Retail Establishments and Other Services, Census of (1961-62), Results.* Bulletins Nos 1 to 7 (printed) and 8 and 9 (mimeographed\*).
- \**Rural Holdings, Classification by Size and Type of Activity, 1959-60.* Bulletins, Nos 1 to 7.
- Rural Holdings, Classification by Size and Type of Activity, 1965-66.* Bulletins, Nos 1 to 7.
- Rural Holdings, Size Classification of, 1955-56.* Bulletins, Nos 1 to 7.
- Rural Industries.* Bulletin, annually, 1962-63 to 1965-66.
- \**Rural Land Use and Crop Production* (formerly *Summary of Crop Statistics*). Statistical Bulletin, annually, 1943-44 to 1967-68.
- \**Seasonally Adjusted Indicators.* Bulletin, annually, 1967 to 1969.
- Secondary Industries.* Bulletin, annually, 1950-51 to 1962-63 (commencing 1960-61 issued in two parts—Part I, Factory and Building Operations; Part II, Materials Used and Articles Produced in Factories). Commencing 1963-64 issued as separate bulletins, see *Manufacturing Industry, Manufacturing Commodities, and Building and Construction.*
- Social Insurance.* Report to the Hon. the Minister for Trade and Customs, 1910.
- Social Statistics.* Bulletin, 1907 to 1915 annually, and 1918.

- Superannuation for the Commonwealth Public Service*. Report to the Hon. the Minister for Home Affairs, 1910.
- Tariff Items and Statistical Key Codes, Description of*, Supplement to *Imports Cleared for Home Consumption*, 1966-67 and 1967-68.
- Taxation Assessments, Commonwealth*. Annually, 1961-62 to 1967-68.
- Trade, Overseas*. Bulletin, annually, 1906 to 1967-68.
- \**Trade Overseas*. Preliminary Bulletin, annually, 1952-53 to 1968-69, in two parts—Part 1, Exports; Part 2, Imports. (See also *Exports, Australian and Imports Cleared for Home Consumption*.)
- Transport and Communication*. Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually and 1932 to 1966-67 annually.
- § *Value of Production*. Bulletin, annually, 1964-65 and 1966-67.
- Wealth*. The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- \**Wheat Industry* (formerly *Summary of the Wheat Situation*). Statistical Bulletin, periodically; first issue, July 1936.
- \**Wool Production and Utilisation*. Bulletin, annually, 1952-53 to 1967-68.

### Current or recent statistical publications

The publications listed on the following pages comprise all current or recent publications of the Central Office of the Commonwealth Bureau of Census and Statistics. For further information, including particulars of publications issued by the State offices of the Bureau, see *Publications of the Commonwealth Bureau of Census and Statistics* (Reference 1.8, page 1213).

The publications listed are grouped into (i) *General publications*, (ii) *population census publications*, and (iii) *other publications*.

*General publications* contain statistics on a wide variety of subjects, including all major topics.

*Other publications* comprise reports, bulletins, statements, surveys, etc., which deal mainly with particular fields or subjects, and are listed alphabetically according to topic. They are of three kinds:

- (i) publications (mainly annual) containing detailed tables of the main statistics collected which constitute the Bureau's permanent detailed printed records;
- (ii) supplementary publications in mimeographed form (triennial, annual, half-yearly, quarterly; and monthly) which advance the statistics contained in (i), provide further detail, or issue new statistics;
- (iii) preliminary reports of special surveys or censuses, such as the Population, Retail Trade and Motor Vehicle Censuses in mimeographed form.

*Population census publications* have been issued in respect of each Commonwealth census taken from 1911 to 1966, namely 1911, 1921, 1933, 1947, 1954, 1961 and 1966. Only the mimeographed publications issued for the 1966 census and a summarised list of the 1966 census volumes are shown in the following pages, but details of publications for earlier censuses are shown on page 1210. The issue of preliminary figures from the 1966 census in mimeographed form is now complete, and the volumes which will contain the final figures are currently being prepared.

Publications of the *Census of retail establishments and other services* and the *Census of motor vehicles* are listed respectively under the headings of **Retail Trade** and **Transport and Communication**.

*Frequency of issue* is indicated as follows:

<i>tri</i> — triennially	<i>m</i> — monthly
<i>a</i> — annually	<i>irr</i> — irregularly
<i>hy</i> — half-yearly	<i>occ</i> — occasionally
<i>q</i> — quarterly	

The *most recent issue* of each annual publication is shown in parentheses.

*Prices*. Those publications for which a charge is made are listed at the end of this Year Book. The prices are shown after the number and year of issue—in order, price excluding postage, and price including postage in Australia.

\* Distributed by the Commonwealth Statistician—for methods of obtaining other publications still in print see back of this volume.

† See pages 1218-9 for 1967-68 series.

‡ Previously included in *Secondary Industries, Part I—Factory and Building Operations*.

§ Previously included in *Non-rural Primary Industries and Value of Production*.

|| Copies available from the Bureau of Mineral Resources, Canberra and the Department of National Development, Melbourne and Sydney.

## Volumes ‡

## Volume 1.

*Parts 1-11 Population: Single Characteristics.* (Part 1, Age; Part 2, Marital status; Part 3, Birthplace; Part 4, Nationality; Part 5, Period of residence in Australia; Part 6, Educational attainment; Part 7, Religion; Part 8, Occupational status; Part 9, Industry; Part 10, Occupation; Part 11, Race.)

## Volume 2.

*Parts 1-5 Population: Related Characteristics.* (Part 1, Growth and distribution of the population; Part 2, Demographic data; Part 3, The overseas-born population; Part 4, The work force; Part 5, Families and households.)

## Volume 3.

*Housing.*

## Volume 4.

*Parts 1-7 Population and dwellings in local government areas.* (Part 1, New South Wales; Part 2, Victoria; Part 3, Queensland; Part 4, South Australia; Part 5, Western Australia, Part 6, Tasmania; Part 7, Northern Territory and Australian Capital Territory.)

## Volume 5.

*Parts 1-7 Population and dwellings in localities.* (Part 1, New South Wales; Part 2, Victoria; Part 3, Queensland; Part 4, South Australia; Part 5, Western Australia; Part 6, Tasmania; Part 7, Northern Territory and Australian Capital Territory.)

## Volume 6.

*Parts 1-6 Statistician's Report.* (Part 1, Introduction; Part 2, Preparation for the Census; Part 3, The enumeration; Part 4, Processing the data; Part 5, Dissemination of results; Part 6, Evaluation.)

Mimeographed statements issued in respect of the 1966 Census are of two kinds:

- (a) field count statements, containing preliminary figures compiled by field personnel during the taking of the census; and
- (b) bulletins, which contain, in general, preliminary summarised particulars of the detailed information that will eventually be published in the appropriate Parts of final printed Volumes of the Census. They should therefore *not* be regarded as providing the final detailed analysis available of the topic in question.

\* Distributed by the Commonwealth Statistician free of charge.

† See page 1210 for previous Censuses.

‡ In the course of preparation.

1966 POPULATION CENSUS PUBLICATIONS—*continued*

## FIELD COUNT STATEMENTS\*

## Reference

- 2.1 FC 1 Population: Australian Capital Territory
- 2.2 „ 2 Population: Nauru, Norfolk Island, Christmas Island, and Cocos (Keeling) Islands
- 2.3 „ 3 Population: States and Territories of Australia
- 2.4 „ 4 Population: Principal Urban Centres of Australia
- 2.5 „ 5 Population: Administrative Divisions, Australian Capital Territory
- 2.6 „ 6 Population: Local Government Areas and Urban Centres, New South Wales
- 2.7 „ 7 Population: Local Government Areas and Urban Centres, Victoria
- 2.8 „ 8 Population: Local Government Areas and Urban Centres, Queensland
- 2.9 „ 9 Population: Local Government Areas and Urban Centres, South Australia

**Information on current or recent Bureau publications**

Further information on current or recent publications of the Commonwealth Bureau of Census and Statistics is contained in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1969, available free on request from the Commonwealth Statistician, Canberra. This contains a list of all Bureau publications, a subject index to show the Central Office publications in which information on the various subjects dealt with by the Bureau is to be found, and short descriptions of major Central Office publications. The information on issues in this publication is supplemented in monthly statements.

**Publications issued by the Deputy Commonwealth Statisticians**

A list of the current publications issued by the Deputy Commonwealth Statistician of each State appears in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1969, and this information is supplemented also in the monthly statements mentioned above.

**Commonwealth and State Parliamentary and Departmental Reports and Papers**

No comprehensive list of current publications of this nature is available, but the National Library of Australia issues an annual publication *Australian Government Publications*, a list of official publications of the Commonwealth, States and Territories, compiled from records of material received by the Library during the year.

The Publications Branch of the Commonwealth Government Printing Office, Canberra, issues a monthly publication *Australian Government Publications* and at irregular intervals Consolidated Lists. These publications list Commonwealth publications currently becoming available or in stock, showing the titles and prices of Parliamentary Papers, Parliamentary Debates (Hansard), records of Parliamentary proceedings, Acts, Statutory Rules, Ordinances, and departmental bulletins and reports issued annually or irregularly.

Australian Government publications may be obtained from the Director of Publications, Commonwealth Government Printing Office, Canberra, A.C.T. 2600; and from or through the Publications Branch Book Counter, The Foyer, Commonwealth Centre, Sydney; the Commonwealth Sub-Treasury in each State capital city; the New South Wales Government Information and Sales Centre, Sydney; the Commonwealth Government Bookshop, 347 Swanston Street, Melbourne; or booksellers.

The National Library of Australia issues annually a publication *Australian Books*, a reprint of the 1966 issue of which is included on pages 1231-77 of Year Book No. 53. See page 534 of the chapter Education, Cultural Activities and Research for further information concerning the National Library's publicising of Australian publications.

## STATISTICAL SUMMARY: AUSTRALIA

In earlier issues of the Year Book, it was the practice to include in the Statistical Summary figures for every tenth year of the period 1861 to 1901, plus the latest year for which data were available. In each subsequent issue the latest year available was substituted for the year immediately preceding it until the next tenth year had been reached, and the earliest year in the series was eliminated as space was needed. In consequence of this system no single issue of the Year Book contained a continuous yearly series.

In this and the previous issue of the Year Book, this defect has been remedied in part by the inclusion of a continuous series back to the year 1941, with earlier tenth years back to 1901 (the National Accounts series on page 1232 has been carried back to 1900-01 in single years). In issue No. 39, pages xxviii-xxix, some of the series are shown for every tenth year from 1861 to 1941. There are, however, discrepancies between the original series and the series now published.

It is intended that in future issues of the Year Book, as circumstances permit, the continuous series will be carried further back and that other series will be added, although it will not be possible to carry all of them back to the earlier years.

Breaks in series, preliminary figures, etc. are indicated by the symbols shown on page xiii of this Year Book.

### STATISTICAL SUMMARY: AUSTRALIA DEMOGRAPHY

Year ended 31 December—	Population(a)			Natural Increase	Over-seas migration(b)	Marriages		Divorces(c) and Judicial separations	Births		Deaths		Infant deaths

(a) Excludes Northern Territory and Australian Capital Territory before 1 July 1964. (b) Average over whole year; includes working proprietors. (c) Excludes amounts drawn by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (e) Depreciated or book value at end of year, including estimated value of rented premises and machinery. (f) Year ended previous December. (g) Owing to variation in classification, effective comparison is not possible.

(a) At 31 December. Base: year 1954 = 100, weighted average. Excludes rural industry. (b) Base: year 1911 = 100. The index numbers are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946–47, the 'C' Series Retail Price Index; from 1946–47 to 1948–49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; and from 1948–49 onwards, the Consumer Price Index. (c) November.

(a) These series relate to gross national product after stock valuation adjustment, at constant prices (see *Australian National Accounts*, *op. cit.* pp. 15 and 101). (b) N. G. Butlin, *Australian Domestic Product, Investment and Foreign Borrowing 1861-1938-39*, Cambridge University Press, Cambridge, 1962. Gross domestic product excluding livestock accumulation, approximates conceptually gross national product as defined in the Australian National Accounts. (c) Published by the Commonwealth Statistician. Figures prior to 1948-49 are from *National Income and Expenditure 1955-56* and are not strictly comparable with subsequent figures because of a number of definitional changes and statistical revisions; see pages 18-19, 117-20, *Australian National Accounts 1948-49 to 1961-62*, Commonwealth Bureau of Census and Statistics. (d) *Australian National Accounts 1967-68*, Commonwealth Bureau of Census and Statistics, and, for the last five years, the Budget Paper *National Income and Expenditure 1968-69*. The figures of \$1,800m for gross national product and \$316m for gross fixed capital expenditure in 1938-39 are based on a reconstruction of earlier estimates, and are approximately consistent with the present Australian National Account series. Mr B. D. Haig ('1938-39 National Income Estimates', *Australian Economic History Review*, Vol. vii, No. 2, September 1967) has adjusted components of gross national expenditure and imports and exports for changes in prices. If the price indexes implied by Mr Haig's estimates are used to revalue at 1938-39 prices gross national product and gross fixed capital expenditure for 1948-49, values of \$2,384m and \$434m, respectively, are obtained. (e) N. G. Butlin, *op. cit.* For a variety of reasons, Professor Butlin's gross domestic capital formation figures given here differ conceptually from those for gross fixed capital expenditure in the Australian National Accounts.

## CHRONOLOGICAL TABLE

### CHIEF EVENTS IN AUSTRALIA SINCE 1955

NOTES. In issues of the Year Book up to No. 48 (*see* No. 48, page 1201) this table covered events back to the establishment of settlement in Australia in 1788. Later issues up to No. 50 (*see* No. 50, page 1289) covered events back to 1945. This issue covers the years 1955 to 1968 and the first half of 1969.

For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

- 1955 First power generated by Snowy Mountains Hydro-electric Authority. Australian population reached 9,000,000. Cocos (Keeling) Islands became Territory under authority of Commonwealth.
- 1956 Amendment to Conciliation and Arbitration Act altered the structure of the arbitration machinery by separating judicial functions from conciliation and arbitration functions.
- 1957 High Court ruled that interstate vehicles could not be compelled to register in New South Wales, but upheld validity of Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads. National Capital Development Commission set up to co-ordinate development of Canberra as centre of government.
- 1958 Prime Minister officially opened Australia's first nuclear reactor at Lucas Heights, near Sydney. Christmas Island (Indian Ocean) transferred to Australian Administration.
- 1959 Annual Holidays Act, 1944-1958 provided for three weeks' annual holiday for all New South Wales workers. Population reached 10,000,000.
- 1960 Provision made for Social Service benefits to be paid to Australian Aborigines. *Commonwealth Banks Act* 1959 and *Reserve Bank Act* 1959 proclaimed (*see* page 617). Goods comprising 90 per cent of Australia's current imports exempted from licensing provisions. National Service training suspended. Commonwealth Government announced special economic measures designed to counter inflationary trend and safeguard overseas funds.
- 1961 Australia's first guided missile base established at Williamstown (New South Wales). *Commonwealth Matrimonial Causes Act* 1959 unifying State Acts became operative (*see* page 580). Commonwealth Government announced tax concessions to exporters for promotional expenses in developing overseas export markets. Oil discovered in south-west Queensland. Australian population census taken. Iron ore deposits estimated at 1,800 million tons discovered at Pilbara (Western Australia).
- 1962 Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines. Work began on standardisation of rail gauge from Kwinana to Kalgoorlie (Western Australia). First production of bauxite ore from Weipa deposits. Aborigines exercised voting rights in Northern Territory for first time.
- 1963 Approval given to agreement for United States to operate a naval communications station at North West Cape, Western Australia. Western Australian Government signed \$156 million contract for the establishment and development of a new iron and steel industry in the State. Decimal currency legislation introduced into House of Representatives (*see* Year Book 52, page 672). Australian population reached 11,000,000.
- 1964 R.A.N. Destroyer *Voyager* sunk in collision off Jervis Bay with loss of eighty-two lives. First general election from common roll in Papua-New Guinea. New South Wales Government employees granted four weeks' annual leave. Moonie to Brisbane oil pipeline opened and Australia's first commercial oil production started. Northern Territory Legislative Council passed legislation removing discrimination against Aborigines. Commonwealth Government established licensing system for intra-state civil aviation. Australian forces saw action in Malaysia. Prime Minister announced expansion of defence provisions involving additional defence expenditure of \$2,440 million over three years, resumption of National Service Training and establishment of special Reserve Forces (*see* page 81). *National Service Act* 1964 passed. Commonwealth Government allowed export of iron ore to Japan from fields in Western Australia.

- 1965 Full High Court judgment on intra-state airlines case held that New South Wales Air Transport Act requiring intra-state services to hold a State licence was valid, but also that four out of five relevant Commonwealth regulations were valid, so that airlines needed Commonwealth licence as well. Martin Report on tertiary education tabled in House of Representatives. New steelworks opened at Whyalla (South Australia). Report of Vernon Committee of Economic Enquiry (appointed in 1963) tabled in House of Representatives. First trade agreement between Australia and U.S.S.R. signed in Moscow. Economic sanctions imposed on Rhodesia. Mills Cross radio telescope opened near Hoskinstown (N.S.W.). Largest Australian built ship, the 49,000 ton bulk ore carrier *Darling River*, launched.
- 1966 The New Zealand–Australia Free Trade Agreement came into force. Mr Harold Holt sworn in as Prime Minister. Dame Annabelle Rankin included in new ministry, first woman to administer a Commonwealth Government department in Australia. Australia adopted dollar-cent system of decimal currency. Immigration laws amended to provide for relaxation of restrictions on entry of persons of non-European race (see page 152). Member for Australian Capital Territory given full voting rights. Australia's third commercial oilfield declared at Barrow Island, 50 miles off Western Australian coast. First shipment of iron ore from Mount Goldsworthy field. Australia joined eight other nations in forming Asian and Pacific Co-operation Council (ASPAC). 1966 census taken. Increase of \$2 a week granted in the Basic Wage. Burrinjuck Reservoir only one-third full. First shipment of iron ore (52,000 tons) from Mount Tom Price for Japan. Viscount aircraft crashed in Queensland with loss of twenty-four lives. President Johnson of United States of America made four-day visit to Australia. Permanent employment of married women by Commonwealth Government proclaimed. Minimum housing and food standards for Aboriginal employees in Northern Territory gazetted. New minimum wage rate for Aborigines employed under Northern Territory Wards Employment Ordinance became effective. First television programmes interchanged direct between Britain and Australia by means of the orbiting satellite INTELSAT II. New Commonwealth Department of Education and Science established. Australia's commitment in Vietnam increased.
- 1967 Worst bushfires in history of Tasmania caused loss of 51 lives and property damage estimated to be more than \$20 million in Hobart environs and southern Tasmania. Australian Agricultural Council decided to maintain existing margarine quota limits. Honeysuckle Creek space tracking station for Apollo moon-probe opened by Prime Minister. Queen Elizabeth opened SEACOM communications cable linking Australia with south-east Asia. Commonwealth and State Governments reached agreement on off-shore oil and gas legislation. Under new regulations for export of uranium, exporters must find new deposits at least equal in quantity to proposed exports. First tanker loaded with oil from Barrow Island (W.A.). Referendum in northern New South Wales concerning proposed new State of New England resulted in defeat of proposal. Two Commonwealth referendums held—proposal to abolish link between size of Senate and House of Representatives defeated; removal of discriminatory wording concerning Aborigines from Constitution approved (see page 65). Announced that Snowy Mountains Hydro-electric Authority would be disbanded as an integrated construction force on completion of scheme. First direct satellite telecast from North America to Australia. Second Royal Commission into loss of H.M.A.S. *Voyager* (statement of Lieut.-Commander Cabban) commenced. Commonwealth Government approved a two-year trial of a permanent employment scheme for waterside workers proposed in Woodward Report. End of transition period to decimal currency after changeover on 14 February 1966 (see page 611). Major alumina plant opened at Gladstone, Queensland. *Defence Forces Protection Act 1967* came into operation, making it an offence to give, to collect, to solicit, to send or to take moneys or goods to certain named bodies that support forces opposed to Australian troops in or near Vietnam or to similar bodies which may be proclaimed. H.M.A.S. *Oxley*, first of Australia's new submarines, arrived at new submarine base, H.M.A.S. *Platypus*. 36th Session of International Statistical Institute held in Sydney. *Trade Practices Act 1965–1967*, designed to preserve competition in Australian trade and commerce to the extent required by the public interest, came into force. Announced that Commonwealth Government would establish an Office of Aboriginal Affairs to co-ordinate policy and to provide the machinery necessary for joint consultations with the States. A new migration agreement signed between Italy and Australia (see page 148). Agreement signed between Australian and Turkish Governments concerning the residence and employment of Turkish citizens in Australia (see page 149). Daylight saving became effective in Tasmania. Prime Minister announced that Australia's forces in Vietnam would be increased by more than 1,700 in November–December. Drought in Victoria became increasingly severe. Australian Resources Development Bank formed by Australia's Major Trading Banks and Reserve Bank to finance Australian participation in

- 1967 projects of national importance. Prime Minister announced Government's decision not to devalue Australian dollar with pound sterling. Legislation for control of off-shore oil and gas leases received Royal Assent. Australia launched its first satellite at Woomera. Senate select committee recommended that Australia change over to metric system of weights and measures. Commonwealth Conciliation Commission awarded increases of up to \$7.40 in margins to metal trade workers. Lone yachtsman, Alec Rose, reached Australia from England. Prime Minister, Rt Hon. Harold Holt, disappeared while swimming off Portsea, Victoria; Rt Hon. J. McEwen sworn in as Prime Minister.
- 1968 *January*. Uniform Commonwealth-State censorship laws came into force. Senator J. G. Gorton elected leader of Liberal Party and sworn in as Prime Minister. Memorial service for late Prime Minister Holt held in Westminster Abbey. Twelve-mile fishing limit around Australia, Nauru, Papua and New Guinea, and Cartier Islands operated from 30 January. Nauru became an independent nation on 31 January.
- February*. New Victorian stamp duty on receipts. Second Papua and New Guinea general election held. The full bench of the Arbitration Court decided that thirty per cent of wage increases exceeding \$1.60 per week granted to metal trade employees in December 1967 will be deferred until August. Announced that an agreement had been signed between the Commonwealth Government and a consortium of Swiss and Australian companies for the development of the bauxite deposits at Gove, Northern Territory (see page 1036). Report of the second Royal Commission into loss of H.M.A.S. *Voyager* (see 1967). Second Gorton Ministry appointed.
- March*. Commonwealth Government approved in principle the transfer of the principal seat of the High Court to Canberra.
- April*. Joint Commonwealth-State off-shore petroleum legislation operated from 1 April. Announced that Australia would give 500,000 tons of grain to India. Twenty-fourth session of E.C.A.F.E. held in Canberra. First liver transplant operation in Australia performed in Sydney. Population reached 12,000,000.
- May*. Commonwealth Government granted States \$30 million for technical and agricultural colleges over next three years in addition to \$40 million granted over past four years. A direct shipping service between Australia and Chile commenced. Northern Territory member in House of Representatives given full voting rights. Report of United Nations mission to Territory of New Guinea issued by Trusteeship Council.
- June*. Melbourne became one of the three vital links in World Weather Watch, the other two being Washington and Moscow. The \$25 million Warringah Expressway opened in Sydney. Vietnam Medal for Australian Armed Forces instituted and created by Queen.
- July*. The Commonwealth and State Transport Ministers agreed to new safety design standards for motor cars to be adopted by each state and which are expected to be introduced on all cars first registered from 1 January 1970. Two additional commissioners were appointed to the Arbitration and Conciliation Commission. The new Ambassador of the United States of America to Australia arrived. Dr H. C. Coombs retired, after nineteen years as Governor of the Reserve Bank or its earlier equivalent, the Commonwealth Bank, and Mr J. C. Phillips was appointed to replace him. It was announced that a Sydney firm of architects had been selected to design the National Art Gallery and that an interim council, of twelve members, responsible for the planning and construction of the gallery had been created. The Prime Minister announced that as extra patrol vessels had become available to the Royal Australian Navy they would be used to increase the sea patrols within Australia's 12-mile exclusive fishing zone.
- August*. New customs procedures were introduced to speed up the movement and clearance of sea cargo in the capital city ports. The Arbitration Commission ordered that the outstanding 30 per cent of the December 1968 judgment be paid from 21 August (see February). Mr Bjelke-Petersen sworn in as Premier of Queensland following the death of Mr Pizzey. Two pulsars, mysterious radio sources in the Milky Way, discovered by the Mills Cross radio telescope. The National Library of Australia was opened by the Prime Minister. Announced that the Commonwealth, New South Wales, Victoria and Tasmania will co-operate over the next five years to reduce 'unnecessary differences' in State education curricula. Announced that the immigration programme for 1968-69 of 160,000 settlers would be the biggest ever. The United States Presidential Unit Citation presented to the 6th Battalion R.A.R. The Victorian National Gallery was officially opened.
- September*. *Privy Council (Limitation of Appeals) Act 1968*, which makes the High Court of Australia the final court of appeal in all issues involving Commonwealth law and jurisdiction, came into operation. Announcement of a five year \$1,000 million development plan for Papua

1968 and New Guinea, with the basic aim of developing the territory economically for self-determination. President Park of Korea arrived for a three-day visit. The first complete map coverage of Australia with topographic information completed by the Division of National Mapping; it contains 541 sheets with a scale of 4 miles to the inch and each sheet covers approximately 6,000 square miles. Blowering Dam officially opened.

*October.* A twenty-four-hour dispute involved teachers in New South Wales and Australian Capital Territory government schools. The Arbitration Commission handed down the national wage judgment that the total wage be increased by \$1.35 per week (*see* page 285). The Prime Minister announced that the price of Australian produced oil was to be cut once the incentive scheme for Australian producers of crude oil had been amended (*see* page 1002). An earthquake devastated the town of Meckering in Western Australia. The first heart transplant in Australia was performed in Sydney but patient died in December from causes not associated with the transplanted heart. Announced that scholarships and residential facilities would be provided for Aborigines at all educational levels. Northern Territory Legislative Council Election held, and new council to have an elected majority for the first time. Work commenced on the \$27 million Fairbairn Dam in Queensland which is the first part of the Emerald Irrigation Area. Through late October and early November there were disastrous bushfires in New South Wales around Wollongong and in Blue Mountains where three firefighters died, over one hundred houses were destroyed and damage estimated at \$12 million was caused. Stoppages of work by railway workers occurred in most States in support of claims for increased wages.

*November.* Announced that Commonwealth Government will finance a treatment works for an Aboriginal co-operative copper mine in the Northern Territory. Inaugural meeting of the Australian Minerals Council held; it was composed of representatives of the Commonwealth and State Governments. Commonwealth legislation introduced to establish a fund of \$4.65 million to enable Aborigines to set up in business, and to provide a non-repayable grant of \$3.65 million to the States for Aboriginal advancement. Commonwealth plan for 'new deal' for the aged announced. Announced that Aborigines will get tertiary education study grants, commencing in 1969, of up to \$1,100 per annum for single persons, plus allowances where applicable for wives and children. An Ordinance to prevent the takeover of life insurance companies registered in the Australian Capital Territory became operative. London to Sydney car marathon started in London on 24 November and finished in Sydney on 17 December 1968. Announced that the Snowy Mountains Authority will become a statutory corporation and act as a consultant body.

*December.* Full award wages for Aborigines employed in the Northern Territory pastoral industry became operative. Gas leak at Marlin oil rig in Bass Strait and eventually sealed by an American expert brought to Australia. The last of the 110 Australian manufactured Mirage jets was delivered to the R.A.A.F. The Tasmanian anti-capital punishment legislation received Royal Assent.

1969 *January.* Viscount airliner crashed at Port Hedland, Western Australia, killing all twenty-six on board. The Prime Minister attended the conference of Commonwealth Prime Ministers (to June) in London. The Australian stock exchanges took steps to permit differential voting rights on the shares of listed companies to prevent overseas takeovers. The modernisation and expansion of the railway marshalling yard at Melbourne, costing \$11 million, was completed. Fifteen died and more than 200 houses were destroyed in disastrous fires in Southern Victoria. Cannon from Captain Cook's ship the *Endeavour* were found in Northern Queensland waters. It was announced that Queen Elizabeth and the Duke of Edinburgh would visit Australia in March and April 1970. Stoppages of work by railway workers occurred in most States in support of claims for increased wages.

*February.* The Sydney-Melbourne express train the *Southern Aurora* collided head-on with a goods train at Violet Town, Victoria, causing loss of life and extensive damage to both trains. Announced that three Aborigines would be appointed as liaison officers for the Commonwealth Office of Aboriginal Affairs. The New South Wales cabinet, which has been increased by two, was sworn in. The new Bass Strait ferry, the *Australian Trader*, of 8,500 tons, was launched at the State dockyard in Newcastle, N.S.W. The Prime Minister announced that Australian Defence Forces would be kept in Malaysia and Singapore for an indefinite period after Britain withdraws her military strength in 1971. Further stoppages of work by railway workers occurred.

*March.* Australia's first natural gas pipe line from Roma to Brisbane was opened. The New South Wales Government adopted the \$75 million Botany Bay port development scheme and it is to be carried out in four stages over fifteen years. The Nimmo report on national

1969 health insurance scheme tabled in the House of Representatives. The Prime Minister visited the United States of America and Canada, and during the visit he attended the funeral of the former President of the United States, General Dwight D. Eisenhower. Natural gas entered the Melbourne metropolitan system for the first time.

(to  
June)  
-cont

*April.* A receipts tax in Tasmania became operative. The second annual meeting of the Board of Governors of the Asian Development Bank was held in Sydney. Announced that the Commonwealth Government would buy two container vessels costing \$9 million instead of chartering them (one for the Europe-Australia run and the other for the North America-Australia run) and that the Australian National Line would operate them in a joint venture with British shipping lines. The Prime Minister announced that Australia would give Malaysia ten Sabre aircraft and associated support services. Mr Gorton announced that the Government had accepted the proposal of the United States Government to establish a defence space communications facility at Woomera. Sir Paul Hasluck was sworn in as Governor-General.

*May.* The *Copyright Act 1968* became operative and at the same time Australia became a party to the Universal Copyright Convention and to the Brussels revision of the Berne Copyright Convention. The Prime Minister visited the United States of America for discussions with the President, Mr Nixon. Construction commenced on the main Ord River Dam (\$12.9 million) in Western Australia. Announced that the B.H.P. Company, in conjunction with an English Company, would establish a steelworks at Westernport, Victoria, and that the first stage—a rolling mill—would be completed by 1972. Mr Bethune, the leader of the Tasmanian Liberal-Centre party coalition, was sworn in as Premier following the elections in which the Labor Party was defeated after thirty-five years in office. Australia wide stoppages took place over the operation of the penal provisions of the Commonwealth Conciliation and Arbitration Act. The Commonwealth Government decided that Camp Hill would be the site for the new and permanent Parliament House in the National Capital.

*June.* Announcement of a major programme to encourage employers to take on more Aborigines for long-term job training by subsidising employers by 30 per cent of the applicable award rate, and by paying living-away-from-home allowances to young Aborigines. The H.M.A.S. *Melbourne* collided with the destroyer U.S.S. *Evans*, cutting that ship in half, during a SEATO exercise in the South China Sea, with the loss of fifty-seven American seamen. A joint inquiry (United States Navy and Royal Australian Navy) into the collision was held at Subic Bay in the Philippines. The first passenger train used the Perth-Port Pirie section of the new standard gauge railway. The Prime Minister announced that Navy and Air Force patrols along the Great Barrier Reef would be increased following incidents involving foreign fishing vessels. Five power (Australia, New Zealand, United Kingdom, Malaysia and Singapore) talks on the future defence of Malaysia and Singapore were held in Canberra. The Arbitration Commission handed down its decision on equal pay for women (see Appendix). The new Australian Chancery in Washington (cost \$9 million) was opened by Lord Casey. The Governor-General Sir Paul Hasluck officially opened the Mount Newman, Western Australia, iron ore enterprise from which the first shipment of iron ore had been made on 1 April 1969.

## DIARY OF PRINCIPAL ECONOMIC EVENTS, 1968-69

The principal economic events in earlier years were shown in the following issues:

<i>Years</i>	<i>Year Book No.</i>	<i>Pages</i>
1931 to 1938 . . . . .	33 . . . . .	968-77
1939 to 1944 . . . . .	36 . . . . .	1129-41
1945 to 1948 . . . . .	37 . . . . .	1235-45
1949 to 1951 . . . . .	39 . . . . .	1331-40
1952 to 1955 . . . . .	42 . . . . .	1149-60
1956 to 1958 . . . . .	46 . . . . .	1185-92
1958-59 to 1961-62 . . . . .	48 . . . . .	1188-1200
1962-63 . . . . .	49 . . . . .	1253-56
1963-64 . . . . .	50 . . . . .	1283-88
1964-65 . . . . .	51 . . . . .	1269-74
1965-66 . . . . .	52 . . . . .	1185-88
1966-67 . . . . .	53 . . . . .	1279-82
1967-68 . . . . .	54 . . . . .	1253-57

Rapid growth characterised the Australian economy in the year 1968-69. Gross national product measured at current prices rose 12 per cent to \$27,114 million; at constant prices it increased by 8.5 per cent. Relief from the severe drought conditions in south-eastern Australia, which last year caused a fall of 21 per cent in gross farm product at factor cost, was reflected in an increase of 27 per cent to \$2,194 million in gross farm product at factor cost. It should be noted, however, that approximately two-thirds of the increase in farm product in 1968-69 was reflected in a large build-up in wheat stocks.

Demand increased strongly with gross national expenditure rising by \$2,704 million, or 11 per cent, compared with an increase of 8 per cent in 1967-68. Much of this increase was attributable to the sharp rise of \$407 million in the value of farm stocks, which was also reflected in the estimate of personal saving. In 1967-68 farm stocks decreased in value by \$195 million. Non-farm stocks are estimated to have increased in value by \$389 million, compared with an increase of \$414 million in 1967-68. Personal consumption expenditure rose by 7 per cent to \$15,677 million compared with a rise of 8 per cent in 1967-68. Current expenditure of public authorities increased by \$286 million, or 9 per cent. Commonwealth authorities raised their spending by \$111 million, or 7 per cent, while State and local government authorities increased their current expenditure by \$175 million, or 12 per cent. Fixed capital expenditure of public authorities and enterprises rose 8 per cent to \$2,553 million. Private gross fixed capital expenditure accelerated strongly. Expenditure on dwellings was \$1,256 million, a rise of 16 per cent over the 1967-68 level. Expenditure on other buildings and construction rose 15 per cent to \$1,015 million, while expenditure on business vehicles, plant and machinery was \$2,375 million, an increase of 10 per cent which was a marked improvement on the 3 per cent increase of last year. Once again, mining featured prominently in these rises in capital expenditure. Significant discoveries during the year of mineral deposits, particularly bauxite, lead and zinc, phosphate, petroleum and natural gas, coal and nickel, promise further heavy development expenditure in these industries.

The gross operating surplus of non-farm enterprises increased by 11 per cent in both 1968-69 and 1967-68, while wages, salaries and supplements increased by 11 per cent in 1968-69 compared with an increase of less than 9 per cent in 1967-68.

In the first three months of 1968-69 new and increased lending commitments of major trading banks had risen to a weekly rate of \$36 million which was \$2.8 million higher than the weekly rate for 1967-68. An additional one per cent of trading banks' deposits was called into their statutory reserve deposits, with the Reserve Bank in October and November 1968; at the same time the maximum overdraft rate was increased by  $\frac{1}{4}$  per cent. Lending commitments averaged \$34 million per week between September 1968 and June 1969. However, a high rate of repayments, cancellations and reductions had the net effect for the year of cutting the growth of loans and advances outstanding. A significant balance of payments surplus had the effect of injecting liquidity into the economy from overseas. Financing of the large wheat crop meant that Rural Credit advances outstanding turned

from a decline of \$142 million in 1967-68 to a rise of \$260 million in 1968-69. Net sales of Commonwealth securities by the Reserve Bank in 1968-69 amounted to \$75 million, compared with net purchases of \$178 million in 1967-68. The Commonwealth Budget also had liquidity reducing effects, budget receipts exceeding domestic outlays by some \$200 million. Deposits with trading and savings banks plus notes and coin held by the public increased by 9.3 per cent (\$1,185 million) compared with a rise of 8.3 per cent in 1967-68. Balances outstanding of finance companies increased by over 15 per cent in the year to March 1969. As a whole, expansionary influences prevailed and there was a net increase in monetary liquidity.

Exports of goods and services increased in value in 1968-69 by \$338 million or almost 10 per cent, which compared favourably with the 2 per cent increase of 1967-68. Both the quantity of wool exported and average export price received rose by about 5 per cent to lift the value of wool exports from \$643 million in 1967-68 to \$718 million. Dramatic increases were recorded in the value of exports of minerals: exports of iron ore and concentrates rose from \$103 million to \$180 million and coal from \$85 million to \$116 million. Chemical elements and compounds increased from \$58 million to \$85 million. These gains were somewhat offset by a decrease in the value of exports of cereal grains and cereal preparations from \$419 million in 1967-68 to \$352 million in 1968-69. The total value of imports of goods and services rose by 3 per cent, or \$115 million, compared with a 12 per cent increase in 1967-68. Australia's balance of payments deficit on current account decreased from \$1,058 million in 1967-68 to \$991 million in 1968-69. This was more than offset by a net apparent capital inflow of \$1,149 million which resulted in a favourable net official monetary movement of \$158 million. The year ended with Australia's holdings of gold and foreign reserves standing at \$1,310 million, an increase of about \$200 million for the year.

Immigration in 1968-69 was at its highest level since 1950. Net immigration for the year was 126,400 persons. As a result, some 60,000 migrant workers were added to the work force. During 1968-69 the total number of persons in employment increased by approximately 3 per cent, or 150,000, and in the second half of the year it became evident that employment conditions were tightening. In these 6 months registered unemployment declined from 67,000 to 55,000 while registered vacancies rose from 8,000 to 44,000. Both average weekly earnings and weighted average minimum weekly wage rates increased slightly more in 1968-69 than in 1967-68. The Commonwealth Conciliation and Arbitration Commission ordered that the deferred work value increases granted to Metal Trades Award classifications should be payable as from late August 1968, giving most tradesmen an extra \$2.20 a week on their award rate. Total wages for adult males and adult females in Commonwealth awards increased by \$1.35 a week operative from late October 1968. In June 1969 the Arbitration Commission announced it was prepared to implement the principle of equal pay for equal work for adult females working under Commonwealth awards and determinations. Australia-wide stoppages took place in May 1969 over the operation of the penal provisions of the Commonwealth Conciliation and Arbitration Act. Other major disputes occurred in October, January and February when railway workers in most States stopped work in support of claims for increased wages.

Between June quarter 1968 and June quarter 1969 the Consumer Price Index rose by 2.9 per cent, the same rate of increase as in the previous year.

During 1968-69 payments of cash benefits to persons rose by \$117 million to \$1,442 million. Social service pensions were increased. Special provisions were made for Aboriginal people in the fields of health, education, housing and business enterprise.

During the year the first preliminary hearing of the Commonwealth Trade Practices Tribunal was held in Hobart. Later, the validity of the Commonwealth Trade Practices Act was challenged in the High Court and a writ of prohibition from proceeding with the hearing was issued against the Tribunal. In the Australian Capital Territory, following substantial purchases of shares by an overseas company in a holding company which owned, *inter alia*, a large Australian insurance company, an ordinance was gazetted to restrict the foreign ownership of shares in life insurance holding companies registered in the Territory. This also led to some reconsideration of overseas investment policies and of problems associated with borrowing in Australia by overseas-owned companies. During March, Federal and State Attorneys-General agreed to adopt the recommendations of the Eggleston Committee on company law reform which were mainly to compel disclosure of the identity of major shareholders in public companies and to restrict take-overs.

#### 1968-69

10 July. Savings bank interest rates increased from 3.50 to 3.75 per cent.

24 July. Special Bonds Series Q issued at par with interest rates ranging from 4.6 to 5.2 per cent and optional redemption prices ranging from par to 103 per cent at maturity on 1 April 1976.

25 July. Commonwealth DM100 million (\$A22 million) public loan opened in Germany, issued at 98½ with interest at 6.75 per cent, for a period of 15 years, and a yield of 6.91 per cent per annum.

- 30 *July*. Commonwealth cash loan opened with yields of 4.88 per cent for 2 years 6 months, 5.10 per cent for 9 years 9 months, 5.25 per cent for 21 years 6 months and 5.25 per cent for 35 years 6 months. An amount of \$125 million was raised.
- 1 *August*. Announced that the Commonwealth Government would pay an extra \$14.5 million to primary producers to compensate for the Sterling devaluation, bringing total payments to \$48.5 million.
- 5 *August*. Announced that the Commonwealth Government will compensate exporters of manufactured goods affected by the Sterling devaluation to the extent of the price deductions made in order to remain in overseas markets. On 12 *August* it was announced that compensation of \$6.8 million would be paid to the sugar industry.
- 6 *August*. The Commonwealth Conciliation and Arbitration Commission ordered that the deferred work value increases granted to Metal Trades Award classifications should be payable as from the beginning of the first pay period commencing on or after 21 August 1968, giving most tradesmen under this award an extra \$2.20 a week.
- 11 *August*. Announced that payroll tax rebates amounting to \$25.2 million had been allowed to exporting firms during 1967-68.
- 13 *August*. Commonwealth Budget for 1968-69 introduced into House of Representatives. The Budget provided for estimated expenditure of \$6,590.9 million and estimated receipts of \$6,044.2 million in the year 1968-69. Further details of the 1968-69 Budget are set out in the Appendix to this Year Book. In 1967-68 receipts of the Commonwealth were \$5,468.2 million, and expenditure amounted to \$6,112 million. The main items of revenue (1966-67 figures shown in parentheses) were: income taxes \$3,036.7 million (\$2,729.8 million); excise duties \$853.6 million (\$805.9 million); sales tax \$417 million (\$379.3 million); customs duties \$313.7 million (\$277 million); and pay-roll tax \$184.4 million (\$172.2 million). The main items of expenditure were: payments to or for the States \$1,353.5 million (\$1,216.8 million); defence services \$1,115.4 million (\$957.9 million); social and health services \$1,075 million (\$1,031.1 million); State works and housing programmes \$677 million (\$645 million); advances for capital purposes \$356.6 million (\$328.4 million); and repatriation services \$260.1 million (\$250.7 million).
- Announced that the Commonwealth Government would spend \$27 million over the 3 years 1969 to 1971 on secondary school libraries, mainly on reference books in the initial period.
- 20 *August*. The Commonwealth Government announced that it had allocated \$19.3 million for drought relief in the States during 1968-69, as follows: Victoria \$11 million, New South Wales \$6 million, South Australia \$1.4 million and Queensland \$0.9 million.
- 23 *August*. Proposals for the new 5-year scheme for the financial support of the Wheat Industry were announced (*see page 834*).
- 3 *September*. 1968-69 Tasmanian Budget introduced, providing for a deficit of \$3,879,000 before receipt of the completion payment of the special grant. It was estimated that revenue would be \$106,342,000 and expenditure \$110,221,000. In 1967-68 revenue amounted to \$100,563,000 and expenditure to \$102,413,000 leaving a deficit of \$1,850,000 before receipt of the completion payment of the special grant.
- 5 *September*. 1968-69 South Australian Budget introduced, providing for a surplus of \$21,000. It was estimated that revenue would be \$295,305,000 and expenditure \$295,284,000. In 1967-68 revenue amounted to \$274,544,000 and expenditure to \$277,404,000 leaving a deficit of \$2,860,000.
- 10 *September*. Announcement of a 5-year \$1,000 million development plan for Papua and New Guinea, with the basic aim of developing the Territory economically for self determination.
- 18 *September*. 1968-69 Victorian Budget introduced, providing for a balanced budget with estimated revenue and expenditure at \$650,671,000. Railway operating expenses and income were estimated at \$115,520,000 and \$107,292,000 respectively, leaving a loss of \$8,228,000. In 1967-68 total budget revenue amounted to \$601,328,000 and total budget expenditure to \$604,122,000 leaving a deficit of \$2,794,000.
- 25 *September*. 1968-69 New South Wales Budget introduced, providing for an overall deficit of \$4,332,000 after allowing for the net results of business undertakings. It was estimated that receipts and expenditure, excluding business undertakings, would be \$653,820,000, and \$658,152,000, respectively. In 1967-68, revenue was \$601,336,000 and expenditure \$600,876,000 leaving a surplus of \$459,000.
- 26 *September*. 1968-69 Queensland Budget introduced providing for a small surplus of \$16,000 with estimated revenue and expenditure at \$377,028,000 and \$377,012,000 respectively. In 1967-68 revenue amounted to \$357,219,000 and expenditure to \$356,249,000 leaving a surplus of \$970,000.

- 27 *September*. The Australian Meat Board imposed a major reduction in meat exports to the United States of America to avoid the application of quotas by America.
- 1 *October*. 1968–69 Western Australian Budget introduced providing for a balanced budget with revenue and expenditure estimated to be \$272,216,000. In 1967–68 revenue amounted to \$250,738,000 and expenditure to \$249,909,000, leaving a surplus of \$829,000.
- 2 *October*. Arrangements made for loan of \$US25 million by Export-Import Bank of the United States to assist in financing importation of capital equipment from United States of America. The loan was issued at par, with interest at 7 per cent for a period of 15 years.
- 4 *October*. The Arbitration Commission handed down the national wage judgment that the total wage be increased by \$1.35 per week (*see* page 285).
- 10 *October*. The Prime Minister announced that the price of Australian produced oil was to be cut once the incentive scheme for Australian producers of crude oil had been amended (*see* page 1002).
- 11 *October*. The Reserve Bank announced that overdraft lending would be tighter and dearer and that the maximum interest rates chargeable by the trading banks had been increased by one-quarter per cent to  $7\frac{1}{4}$  per cent.
- 14 *October*. It was announced that the raw cotton bounty for the 1968 crop would be paid on the basis of production instead of the previous basis of locally grown cotton sold for use in Australian mills.
- 23 *October*. The Reserve Bank increased the statutory reserve deposit ratio of the major trading banks by one-half per cent to  $8\frac{1}{2}$  per cent.
- 1 *November*. *Income Tax Assessment Act (No. 3) 1968* became effective. This Act abolished the income tax rebate of 10 cents in the dollar on interest received from Commonwealth loan securities issued after 1 November 1968.  
Special Bonds Series R issued at par with interest rates ranging from 4.80 to 5.40 per cent and optional redemption prices ranging from par to 103 per cent at maturity on 1 July 1976. Maximum limit for individual holdings raised from \$20,000 to \$30,000.
- 7 *November*. Commonwealth cash loan opened with yields of 4.96 per cent for 2 years 6 months, 5.25 per cent for 10 years, 5.40 per cent for 21 years 6 months and 5.40 per cent for 35 years 6 months. An amount of \$114 million was raised. At the same time and on the same terms and conditions, a conversion offer was made with respect to \$428 million maturing on 15 November 1969—conversions totalled \$314 million.
- 15 *November*. The Reserve Bank increased the statutory reserve deposit ratio of the major trading banks by one-half per cent to 9 per cent.
- 19 *November*. An ordinance, to restrict the number and value of foreign shares that may be held in certain life insurance holding companies incorporated in the Australian Capital Territory, became operative.
- 20 *November*. Commonwealth 60 million Swiss francs (\$A12 million) public loan issued at par with interest at 5.50 per cent for a period of 15 years.
- 29 *November*. Issue price of Commonwealth Treasury Notes reduced to 98.90 per cent for three-month notes to yield 4.461 per cent to maturity and to 97.78 per cent for six-month notes to yield 4.553 per cent to maturity.
- 2 *December*. Further payments announced bringing the total compensation for rural industries for losses on exports from Sterling devaluation to \$58 million.
- 3 *December*. The last of the 110 Australian manufactured Mirage jets was delivered to the R.A.A.F.
- 9 *December*. Government approval was announced of the plan to double the size of the bauxite project at Gove which will cost \$300 million. Approval was also announced of the Australian ownership being reduced from 50 per cent to 30 per cent.
- 10 *December*. Announced that the Australian and New Zealand Bank Ltd (A.N.Z.) and the English, Scottish and Australian Bank Ltd (E.S. & A.) planned to merge.
- 18 *December*. Announced that the Commonwealth Government had increased its aid to local manufacturers of small motor cars by reducing the minimum Australian content from 95 per cent to 85 per cent for manufacturers with a sales volume less than 25,000 per annum.
- 20 *December*. Issue price of Commonwealth Treasury Notes reduced to 98.89 per cent for three-month notes to yield 4.502 per cent to maturity, and to 97.76 per cent for six-month notes to yield 4.595 per cent to maturity.

- 1 *January*. The 1968 International Sugar Agreement became operative (*see* page 858).  
The landing fees for international aircraft landing in Australia were increased from \$744 to \$898.
- 5 *January*. The Australian stock exchanges took steps to permit differential voting rights on the shares of listed companies to prevent overseas takeovers.
- 20 *January*. A contract, worth more than \$900 million, was signed in Tokyo for the supply of 85 million tons of coal from central Queensland. The coal will be exported over 13 years commencing July 1971.
- 24 *January*. Issue price of Commonwealth Treasury Notes reduced to 98.88 per cent for three-month notes to yield 4.543 per cent to maturity, and to 97.74 per cent for six-month notes to yield 4.637 per cent to maturity.
- 28 *January*. It was announced that a record sale of 2.2 million tons of wheat, worth \$125 million, had been made to China (mainland).
- 5 *February*. Commonwealth DM200 million public loan (\$A44 million) opened in Germany, issued at 99.50 per cent with interest at 6.50 per cent for a period of 15 years to give a yield of 6.55 per cent per annum.  
A DM100 million (\$A22 million) private loan was arranged in Germany, issued at 99.50 per cent with interest at 6.25 per cent for a period of 6 years to give a yield of 6.35 per cent per annum.  
Commonwealth cash loan opened with yields of 5 per cent for 2 years 7 months, 5.13 per cent for 5 years 3 months, 5.30 per cent for 11 years 9 months, 5.40 per cent for 18 years 3 months and 5.40 per cent for 31 years. An amount of \$202 million was raised. At the same time, and on the same terms and conditions, a conversion offer was made with respect to \$120 million maturing on 15 February 1969. Conversions totalled \$83 million.
- 12 *February*. Announced that the Government Aircraft Factory, Melbourne had won a \$13 million contract from General Aircraft Corporation of America to supply parts for the new G.A.C.100 turboprop airliner.
- 13 *February*. The price for Bass Strait oil was fixed by the Commonwealth Government at \$2.06 a barrel for 5 years from September 1970 (*see* page 1002).
- 12 *March*. The Reserve Bank gave the trading banks permission to issue marketable certificates of deposit. These deposits are issued in amounts of \$50,000 or more for a period of over 3 months and up to 2 years, yielding up to 4.75 per cent per annum.
- 13 *March*. It was announced that the States would receive \$1,252 million in road grants over the next 5 financial years. This was an increase of \$502 million over the previous 5-year period and it would be distributed on a new basis so that all States would receive an increase of not less than 50 per cent.  
The Australian Wheat Growers' Federation approved the introduction of a bushel quota system because of over production in the wheat industry (*see* 30 April).
- 18 *March*. The New South Wales Government announced that it had adopted the \$75 million Botany Bay Port Development Scheme which would be carried out in four stages over 15 years.
- 1 *April*. A receipts tax in Tasmania became operative.
- 11 *April*. Issue price of Commonwealth Treasury Notes reduced to 98.87 per cent for three-month notes to yield 4.584 per cent to maturity, and to 97.71 per cent for six-month notes to yield 4.700 per cent to maturity.
- 13 *April*. Announced that a \$150 million expansion scheme would be undertaken at the Port Kembla Steel Works. The expansion would include a \$40 million blast furnace which is to be completed in 1971.
- 17 *April*. The Commonwealth Government announced that it would buy two container vessels costing \$9 million instead of chartering them (one for the Europe–Australia run and the other for the North America–Australia run) and that the Australian National Line would operate them in a joint venture with British shipping lines.
- 23 *April*. Special Bonds Series S issued at par with interest rates ranging from 5 to 5.40 per cent and optional redemption prices ranging from par to 103 per cent to maturity on 1 March 1977.
- 28 *April*. Announced that a \$1,200 million contract had been signed for the supply of 123 million tons of iron pellets and fines to be produced from Western Australian mines and shipped to Japan over 15 years commencing in 1971.
- 30 *April*. Commonwealth cash loan opened with yields of 5.20 per cent for 3 years, 5.30 per cent for 6 years 11 months, 5.40 per cent for 14 years 2 months, 5.40 per cent for 25 years 6 months and 5.40 per cent for 35 years. An amount of \$81 million was raised.

- 30 *April*. The Treasurer announced the main principles of the Drought Bond Scheme which would be introduced later in the year.  
Announced that the Commonwealth Government had accepted the plan put forward by the Australian Wheat Growers' Federation and that it will guarantee finance to provide an advance of \$1.10 per bushel on wheat of the 1969-70 season not exceeding in aggregate 357 million bushels.
- 1 *May*. It was announced that the Commonwealth Government had approved the second stage of the internal airlines \$70 million jet re-equipment programme. Each airline is to purchase one extra Boeing 727 and six more DC9 aircraft.
- 21 *May*. Freight rates between East coast North American ports and Australia were increased by 10 per cent.
- 23 *May*. Issue price of Commonwealth Treasury Notes reduced to 98.85 per cent for three-month notes to yield 4.666 per cent to maturity and to 97.67 per cent for six-month notes to yield 4.784 per cent to maturity.
- 24 *May*. Announced that the B.H.P. Company, in conjunction with an English company, would establish a steelworks at Westernport, Victoria. The first stage, a rolling mill, would be completed by 1972.
- 6 *June*. Issue price of Commonwealth Treasury Notes reduced to 98.82 per cent for three-month notes to yield 4.789 per cent to maturity and to 97.61 per cent for six-month notes to yield 4.910 per cent to maturity.
- 19 *June*. The Arbitration Commission handed down its decision on equal pay for women (*see Appendix*).
- 26 *June*. Australian Loan Council met and approved a borrowing programme for 1969-70 of \$758 million (\$626 million for State Works, \$132 million for Commonwealth-State housing). A borrowing programme of \$372 million was also approved for State semi-government and local government authorities.
- 30 *June*. Special cash loan of \$112 million, financed from a Commonwealth trust fund, issued to complete State loan programmes for 1968-69. Terms were the same as those of the cash loan which opened on 30 April 1969.

## APPENDIX

Some recent information which has come to hand since the various chapters were sent to press is given in summarised form in the following pages, but for later statistics on the subjects dealt with in chapters reference should in general be made to other publications issued by this Bureau, e.g. the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, the *Digest of Current Economic Statistics*, and the various mimeographed statements issued on particular subjects (see Publications issued by the Commonwealth Statistician, pages 1210-21 of the chapter Miscellaneous)

## CHAPTER 10. LABOUR, WAGES AND PRICES

### WHOLESALE PRICES AND PRICE INDEXES

#### Wholesale Price Index of Materials used in Building other than House Building

##### General

This index was introduced in April 1969 and relates to the construction of buildings other than houses. It is the first of a series of indexes which will be prepared as circumstances permit and which will relate to materials used and articles produced by important and defined areas (or 'sectors') of the economy. To a considerable extent it provides an up-to-date replacement for the Building Materials group of the Wholesale Price (Basic Materials and Foodstuffs) Index.

Further information concerning the method of compiling the Index, as well as more detailed group index numbers for each capital city, will be found in the publication *Price Index of Materials used in Building other than House Building* (reference no. 9.6) of 23 April 1969 and subsequent issues, as well as in the Appendix to *Labour Report* No. 53.

##### Scope and composition

The index measures changes in prices of selected materials used in the construction of buildings other than houses and 'low-rise' flats (in general, those up to three storeys).

Its composition is in accordance with the materials usage in actual building projects which were selected as representative for the purpose. The building 'use-types' (e.g. office building, factory, etc.) directly represented are:

- (i) 'High-rise' flats (in general, those of more than three storeys)
- (ii) Offices
- (iii) Factories
- (iv) Health buildings (i.e. hospitals, nurses' quarters, clinics, etc.)
- (v) Education buildings (i.e. schools, universities, kindergartens, etc.)
- (vi) Other Commercial Premises (i.e. the Building Statistics categories of Hotels, Hostels, etc.; Shops; and Other Business Premises).

The completed values of these types of buildings constituted approximately 86 per cent of the completed values of all new buildings other than houses and low-rise flats in the years 1964-65 to 1966-67 inclusive. Not directly represented are buildings for entertainment and recreation purposes, buildings for religious purposes, and the Building Statistics category 'Miscellaneous' buildings.

The index includes 72 items, combined in eleven groups, in addition to an 'All Groups' index. Some items carry the weights of similar items not directly priced. Items are described in terms of fixed specifications with the aim of recording price changes for representative materials of constant quality.

Although the selected materials (or many of them) are also used in house (and low-rise flat) building, in building repair, maintenance and alteration work, and in 'engineering construction' work (e.g. projects such as roads, dams, bridges and the like), the weighting pattern of the index, being designed for the specific purpose mentioned in the first paragraph of this Section, is not applicable to these other activities of the Construction industry. In addition, since the weights are based on an average materials usage over the stated range of building use-types, the index is not necessarily applicable to any specific building or any of the separate use-types.

##### Base period and method of calculation

The reference base of the index is the year 1966-67 = 100.0. The weighting base corresponds broadly with the reference base, but does not exactly coincide because of the nature of the data from which the weights were derived.

The index is a fixed-weights index and is calculated by the method known as 'the weighted arithmetic mean of price relatives'.

##### Derivation of items and weights

The items and weights used in the index were derived from reported values of each material used in selected representative buildings constructed in or about 1966-67. The selection took account of building use-type and construction characteristics (e.g. type of frame, wall, floor, etc.) within use-types. Information of the former was obtained from building statistics, and of the latter from an ad hoc survey of approximately 800 buildings.

The form used to obtain particulars of materials used in each selected building was set out on a 'trades' basis in the manner employed in a Bill of Quantities, using trades headings broadly based on those set out in the second edition of the *Australian Standard Method of Measurement of Building Works*. Under each heading it was required that each material used in that particular phase of building should be specified, together with its value.

Satisfactory analyses were received for 83 buildings, whose aggregate value was equivalent to approximately ten per cent of the value of building (other than house building) completed during 1966-67. The data from these analyses were combined to obtain a single list of materials and values relating to the sum of all building use-types directly represented in the index. Within each use-type the data were combined in accordance with the estimated relative importance of buildings of different value sizes. The data for the different use-types were then combined in accordance with their relative proportions by value in building commencements in Australia over the three years ended June 1967. The final step was to combine the hundreds of different varieties, etc., of materials into index items and to determine groupings thereof.

#### The weights

The weighting pattern used in the index is given on pages 1259-60. This single weighting pattern, relating to the whole of Australia, is applied (with minor exceptions) to local price measures in calculating indexes for each State capital city.

The index for the six State capital cities combined is a weighted average of individual city indexes. The relative weighting of the capitals is in proportion to the estimated value on completion of building other than house building in the separate States during the three years ended June 1967.

#### Prices

Price series used relate to specified standards of each commodity and are obtained in all State capital cities from representative suppliers of materials used in building. In the main they are collected as at the mid-point of the month to which the index refers, or as near thereto as practicable. However, the indicator used for the group Electrical Installation Materials is the existing wholesale price index described on pages 254-6, for which index prices were obtained each February, May, August and November until February 1969 when monthly compilation was commenced. In the Electrical Installation Materials group index observations are therefore quarterly up to February 1969, with the last observed level being used in intervening months, and monthly from February 1969 onwards.

There are some exceptions to the use of local prices in the indexes for each metropolitan area. In a few cases where suitable price series are not currently available for an item in a given city, imputation is necessary. For each metropolitan area, the whole of the group Electrical Installation Materials and the majority of the items in the group Mechanical Services Components are based on Sydney and Melbourne price series.

The point of pricing adopted for the new index is in keeping with sector wholesale price index concept. In terms of this concept a 'ring-fence' is set up around building other than house building. The items to be priced for index purposes are then those materials which are used in building activity within the ring-fence, and the point of pricing is that at which the materials cross the ring-fence. In general, this is the price 'delivered on-site'.

#### Index numbers

The index has been compiled for each month from July 1966, and for the financial years from 1966-67. Index numbers for the individual groups and all groups for the weighted average of the six State capital cities, and for all groups combined for each State capital city, are given on pages 1256-58. Figures are published to one decimal place to avoid distortions that would occur in rounding off the index numbers to the nearest whole number.

The separate city indexes measure price movements in each State capital city individually. They enable comparisons to be drawn between capitals as to differences in degree of price movement from period to period, but not as to differences in price level.

## WAGES, EARNINGS AND HOURS

**Determination of Wage Rates in Australia, page 282****Equal Pay Cases 1969**

Two benches of the Commonwealth Conciliation and Arbitration Commission sat jointly from 25 February 1969 to 22 May 1969 to take evidence and hear argument on trade union claims for equal pay between the sexes.

Both benches of the Commission reached a common conclusion and on 19 June 1969 published their decision and reasons for their decision. The Commission said it was prepared to implement the principle of equal pay for equal work by introducing into Commonwealth awards and determinations the principles contained in State Acts on equal pay. The Commission stated that no increases should be granted to adult females without an examination of the work done. It also suggested a number of principles to be applied in deciding applications for equal pay. In summary these were: (i) the work considered should be restricted to that performed by both adult males and adult females under terms of the same determination or award; (ii) the work should be the same or of a like nature and of equal value (from the point of view of wage or salary assessment), and to be of the same range and volume and performed under the same conditions; (iii) consideration should be restricted to the general work situation under the determination or award and not to that of one establishment; and (iv) equal pay should not be provided where the work is essentially or usually performed by females but upon which male employees may also be employed.

The Commission decided that implementation of equal pay should be spread over a period so that as from 1 January 1970 implementation would be the same as that under South Australian, Western Australian and Tasmanian Acts. Where a decision was reached prior to 1 October 1969 the female rate would become 85 per cent of the male rate from the beginning of the first pay period to commence on or after 1 October 1969, increase to 90 per cent of the male rate from the beginning of the first pay period to commence on or after 1 January 1970, increase to 95 per cent of the male rate from the beginning of the first pay period to commence on or after 1 January 1971, and become equal to the male rate from the beginning of the first pay period to commence on or after 1 January 1972. Where a decision was reached on or after 1 October 1969 it should not operate retrospectively. For decisions reached between 1 October 1969 and up to 1 January 1970, 85 per cent of the male rate at the date of operation should apply, and so on according to the above scale. No female rates should be reduced by operation of these formulae.

**CHAPTER 19. PUBLIC FINANCE****COMMONWEALTH FINANCE****Commonwealth Budget, 1969-70**

(see page 1245 for particulars of 1968-69 Budget)

The 1969-70 Commonwealth Budget provided for an estimated outlay of \$7,085 million (\$6,559 million in 1968-69) and estimated receipts of \$7,055 million (\$6,174 million) in 1968-69). The deficit for 1969-70 was thus estimated at \$30 million (\$385 million in 1968-69).

**Outlay**

The main increases in Budget allocation in 1969-70 over 1968-69 were in the fields of cash benefits to persons (from \$1,406 million to \$1,591 million), and grants to the States (from \$1,419 million to \$1,610 million). The estimated increase in cash benefits to persons is due mainly to increased pensions and allowances. The main increases were as follows.

**Health Benefits.** Tuberculosis allowances: From 9 October 1969 the weekly rates payable are \$18.25 for a single person, \$29.75 for a man and wife, \$2.50 for the first child under 16 years and \$3.50 for each subsequent dependent child under 16 years. (See Chapter 14, Public Health, Commonwealth Government Activities, page 467).

**Social Services Benefits.** Increased weekly rates payable from 9 October 1969 are as follows. Age and invalid pensions: single rate, \$15; married rate (both eligible), \$13.25 each. Widows pensions: Class 'A', \$15 with a mother's allowance of \$4 (\$6 if caring for a child under 6 years or an invalid child requiring full-time care); Class 'B' and Class 'C', \$13.25. Sheltered employment allowances: single rate, \$15; married rate (both eligible), \$13.25 each. Unemployment, sickness and special

benefits: adult or married minor, \$10 with a wife's allowance of \$7; person 18 and under 21 years \$6; person 16 and under 18 years, \$4.50. Allowances to pensioners, etc., for the second and subsequent dependent children were also increased, from \$2.50 to \$3.50 a week.

A personal care subsidy of \$5 a week became payable under certain conditions in respect of persons 80 years or more who reside in hostel-type accommodation eligible under the *Aged Persons Home Act* (see Chapter 13, Welfare Services).

*Repatriation Pensions.* From October 1969 the maximum weekly rates payable for war pensions are: special (T.P.I.) rate, \$36; intermediate rate, \$26.50; general rate, \$12, with special compensation allowance of \$5; war widows, \$15 with a domestic allowance of \$7.50.

Service pensions were also increased to equal the new rates payable for age and invalid pensions (see Chapter 5, Repatriation).

### Receipts

Of the expected increase of \$881 million in receipts, it was estimated that \$800 million would be derived from increased taxation collections, mainly at the same rates as in 1968-69. Amendments were proposed to income tax law relating to age allowances, convertible notes, capital subscriptions to mining and other companies and deductions for structural improvements by primary producers. Relaxation of estate duty law was also proposed, to grant some relief in the case of estates of primary producers not exceeding \$250,000 value for duty. In addition, air navigation charges payable by the air transport industry for the use of airport and airway facilities provided by the Commonwealth were increased by 10 per cent.

## LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

## GENERAL INDEX\*

This index is preceded by a list of the special articles, etc. which have appeared in previous issues of the Year Book. The illustrations contained in this issue are listed under the various chapters in the Contents (pages vii-xi). *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*

- 'A' Series Retail Price Index, 245
- Aboriginal**  
 children, education of, 1148  
 welfare, 440, 1149
- Aborigines**, 137, 440, 1143, 1263
- Academy of Science, Australian**, 562
- Accidents**  
 aviation, 203, 413  
 deaths from, 194, 197-9, 202, 387, 400-1, 403-5, 413  
 mining, 1013  
 railway, 203  
 road traffic, 197-9, 202-3, 403  
 shipping, 387  
 tramway and bus services, 400-1
- Acoustic Laboratories, Commonwealth**, 469
- Acts administered by Commonwealth Departments**, 68
- Adelaide**  
 climatological data, 31, 41  
 population, 126  
 Public Library, 537, 542  
 University, 507-21, 539-40

## PRINTED PUBLICATIONS

(As at November 1969)

### *issued by the Central Office of the Commonwealth Bureau of Census and Statistics*

The publications listed below may be purchased either over-the-counter or through the post from The Director of Publications, Commonwealth Government Printing Office, Canberra, A.C.T. 2600.

When ordering publications through the post, the price including postage should be forwarded. Prices including postage in Australia are shown; air mail and overseas rates are available on application. The Director of Publications will arrange account, standing order or reminder facilities if required.

These publications may also be purchased over-the-counter or through the post either from the Office of the Deputy Commonwealth Statistician or the Commonwealth Sub-Treasury in each State capital, through the Publications Branch Book Counter, The Foyer, Commonwealth Centre, Sydney; the New South Wales Government Information and Sales Centre, Sydney; the Commonwealth Government Bookshop, 347 Swanston Street, Melbourne; or from booksellers.

In addition to printed publications, a number of mimeographed publications are available in limited numbers free of charge.

Publications dealing with individual States only are produced by the Deputy Commonwealth Statistician in each State.

A complete list of publications issued by the Bureau is given in *Publications of the Commonwealth Bureau of Census and Statistics* available from the Commonwealth Statistician, Canberra, A.C.T. 2600.

Dates of publication are printed in *italics*.

#### GENERAL PUBLICATIONS—
