(a) See page 562 for transactions included. (b) Tasmanian transport services are under the separate control of semi-government authorities. (c) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (d) Excludes Commonwealth payments paid to trust funds. (e) Includes payments under Financial Agreement, special grants, additional financial assistance, grants to universities, etc. (f) Consolidated Revenue Fund receipts only. Excludes payments to Trust Funds.

## State receipts from taxation

In the tables on taxation collections in these paragraphs the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under Racing instead of under Stamp duties and Licences respectively.

## Net taxation collections

The following tables show, for the year 1968-69, details of the collections by each State from the various types of tax in operation, irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and present a comprehensive statement of all taxation collections in each State. For local government taxation collections, see chapter 19.

**State Consolidated Revenue Fund receipts  
from business undertakings**

A considerable proportion of State gross revenue is made up of receipts from business undertakings under the control of the Governments. The most important of these are railways and tramways, harbour works, water supply and sewerage, and electricity supply. In addition, State batteries for the treatment of auriferous ores in Western Australia and various minor revenue-producing services rendered by the Governments of all States are included. For the year 1968-69 the receipts from these sources was \$635,897,000 or 23.7 per cent of the receipts from all sources.

For further information on the finances of the various types of business undertakings in the States see the chapters, Transport, Communication and Travel, and Local Government, of this Year Book.

## State Loan Funds

The principal purpose of State public borrowing is to assist in financing the development of the resources of the country, e.g. the establishment and operation of railway systems and electricity undertakings, construction of roads and water and sewerage works, and improvements to harbours and rivers.

Statements relating to 'gross' loan expenditure are shown below and on page 573. Gross expenditure represents the amounts disbursed during each year. Details of 'net' loan expenditure, i.e. gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds, may be found in the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

## Gross loan expenditure

Particulars of gross loan expenditure on works, services, etc., are shown in the following tables.

STATE GROSS LOAN EXPENDITURE ON WORKS, SERVICES, ETC.: DETAILS, 1968-69

(a) See footnote (a) to previous table.

Information relating to the government securities and borrowings on issue on behalf of the States is given in the Section on Government Securities on Issue: Commonwealth and States (see pages 576-82).

## COMMONWEALTH AND STATE FINANCE

### Consolidated Revenue Fund expenditure and receipts

In the following table, aggregate expenditure and receipts of Commonwealth Consolidated Revenue Fund for each of the years 1964-65 to 1968-69 may be compared with State Consolidated Revenue Fund totals for the same years as shown in the section State Finance. The combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other divisions of this chapter. The items excluded from the total figures are: payments made by the Commonwealth to the States and included in the State Consolidated Revenue Funds on account of financial assistance grants in 1964-65 to 1968-69, interest under the Financial Agreement, special grants, special financial assistance, grants to universities, specific purpose payments, Tuberculosis Act capital expenditure, National Welfare Fund payments, and estimated payments of pay-roll tax by the States to the Commonwealth. There are other relatively minor payments for which adjustments have not been made, and the adjusted figures are therefore still slightly overstated.

### Government Borrowing and Financing the Commonwealth Deficit

Movements in government securities on issue are the most important transactions involved in financing the Commonwealth deficit in each of the years 1964-65 to 1968-69 as shown in the table on page 538.

Specifically the deficit, as derived, consists of the following:

Net sales of Commonwealth securities (new issues, *less* redemptions, *less* net purchases from Commonwealth balances in the Trust Fund),

*less* net purchases of other investments from Commonwealth balances in the Trust Fund,

*plus* minor items of indebtedness (such as borrowing by Australian Capital Territory and Northern Territory housing trust accounts, and transactions associated with the issue of coin),

*less* net additions to cash balances and funds provided for the International Monetary Fund.

The following table summarises the relationship of the deficit in each of the years 1964-65 to 1968-69 with the net movement in securities on issue which are derivable from the tables shown on the following pages.

<b>Deficit . . . . .</b>	<b>183</b>	<b>255</b>	<b>552</b>	<b>642</b>	<b>385</b>

(a) Excludes investment of other than Commonwealth balances in the Trust Fund. (b) Includes adjustment of Australian currency equivalent of Sterling debt, following devaluation of Sterling. See page 19 of the white paper on 'Government Securities on Issue at 30 June 1968.'

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth Government accepted responsibility for the securities of the State Governments then on issue, and was empowered to arrange for all future borrowings on behalf of the Commonwealth and the States and to issue Commonwealth securities for all money borrowed. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf, and the securities are redeemed from the National Debt Sinking Fund to which both the Commonwealth and State Governments make contributions.

In the statistical tables relating to Government securities, details of securities on issue, annual interest liability and average rate of interest liability, except on pages 579-80, are shown in the currencies in which they are repayable or payable respectively. Australian currency equivalents for overseas loans have been calculated using International Monetary Fund par rates of exchange (and the calculated equivalent for Swiss francs) ruling at 30 June in each year shown. Rates of exchange to \$A at 30 June 1969 were as follows: £Sterling, 0.46667; United States dollars, 1.1200; Canadian dollars, 1.2108; Swiss francs, 4.8978; Netherlands guilders, 4.0544; Deutsche marks, 4.4800.

The full text of the original Financial Agreement between the Commonwealth and the States was given in Year Book No. 31, page 21, a summary of the original Agreement as affected by the subsequent Agreements in later issues up to No. 37 (see pages 685-90) and a summary of the main provisions in further issues up to No. 50 (see pages 952-3).

Summary information shown in tables on pages 583 and 585-6 includes transactions related to the raising, disbursement, management and redemption of loans required to finance State deficits and works expenditure in accordance with this agreement. On the other hand, the series excludes

non-negotiable, non-interest-bearing securities issued to international institutions (International Monetary Fund, International Development Association, Asian Development Bank, etc.) because no cash receipts or expenditure were involved when these securities were issued. Transactions with these authorities are included in Commonwealth receipts, expenditure or financing items when they occur.

For this and the following reasons, Government Securities on Issue, as set out in the following tables may not be aggregated without adjustment to indicate what is sometimes described as the 'public debt' or 'net public debt' of the Commonwealth and State Governments. There are forms of debt not evidenced by the issue of securities. Again, some of the securities included in the tables are held by the Governments themselves. For example, a State Government may hold temporarily, or even for long periods, securities issued by the Commonwealth Government. The Commonwealth Government itself, through such institutions as the National Debt Commission, or through the Trust Funds, holds large investments in securities issued, either directly by itself or on behalf of the States. In addition, some of the securities issued on behalf of the States and held by the Commonwealth Government represent the proceeds of overseas loans, securities for which were issued directly by the Commonwealth Government. From the point of view of the aggregate net debt of the Commonwealth and the States, it would thus involve duplication if the sum of the securities on issue were to be regarded as representing the 'net public debt'.

### Government securities on issue: Commonwealth and States

#### Government securities on issue, annual interest payable and average rate of interest

In the following tables details are given of government securities on issue on account of the Commonwealth and States, annual interest payable and average rates of interest.

Government securities on issue at each rate of interest and according to earliest and latest years of maturity

For details of securities on issue for Commonwealth and State purposes at 30 June 1969 at each rate of interest and classified according to the earliest and latest years of maturity see the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*.

#### Short-term securities on issue

Particulars of the short-term securities (Treasury bills, Treasury notes and seasonal securities) of the Commonwealth and States in Australia at intervals from 30 June 1962 to 30 June 1966 are shown on page 814 of Year Book No. 53, and particulars at earlier dates are shown in previous issues. These securities are included in the government securities on issue as shown elsewhere. No short-term securities have been raised overseas since September 1956, when all such securities held in London were expatriated to Australia.

The Treasury bill discount rate in Australia has remained at 1 per cent since 29 July 1952.

Treasury notes with currencies of thirteen weeks (A Notes) and of twenty-six weeks (B Notes) were issued in multiples of \$1,000 with a minimum subscription of \$10,000. In 1968-69 the issue prices of A Notes varied from 98.91 per cent to 98.82 per cent and yields from 4.420 per cent to 4.789 per cent. The issue prices of B Notes varied from 97.80 per cent to 97.61 per cent and yields from 4.51 per cent to 4.910 per cent.

#### Government securities on issue maturing in Australia, classified by holder

The following table shows details of government securities maturing in Australia classified according to holder as at 30 June 1968 and 1969.

(a) Total stock inscribed, bonds in circulation, amounts paid up on outstanding applications, in transit claims and advance applications, Commonwealth Treasury Bills and Treasury Notes, debentures, and Savings Certificates.  
(b) Includes securities held by Commonwealth Development Bank of Australia.

**Government securities on issue on account of the States; local government and semi-government authority securities on issue**

In some States certain public utilities, such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which, in addition to receiving advances from the central government, raise loans by borrowing on their own behalf, while in other States these services are controlled by the central government. Direct comparisons between States of the securities on issue on account of the several States should therefore be made with caution. The table following shows for 1963-64 to 1967-68 particulars of the securities on issue on account of the States, the securities on issue by local government and semi-government authorities, and the aggregates of these.

1964 . . . . .	606.31	86.38	895.10

(a) Excludes amounts due to the central government. Includes bank overdrafts. (b) Overseas holdings have been converted to Australian currency at the rates of exchange current at 30 June of each year shown.

NOTE. The considerable changes in the figures for local government and semi-government debt in the table above when compared with figures in Official Year Book prior to issue No. 54 are due to the transfer of New South Wales County Councils from the semi-government division to that of local government authorities (see pages 604-6).

## Commonwealth loan transactions: summary

Under the Financial Agreement between the Commonwealth and the States, the Commonwealth is responsible for raising loan moneys to meet approved Loan Council borrowing programmes of both the Commonwealth and State Governments.

The following table indicates sources of finance for State works and housing programmes as approved by the Loan Council.

**GOVERNMENT BORROWING: STATE WORKS AND HOUSING PROGRAMMES**  
1964-65 TO 1968-69

London . . . . . £Stg'000	..	..	..	32,000	..

(a) Includes loans raised for redemption of Treasury bills. (b) Includes proceeds of, \$US23,519,000, \$US17,057,000 and \$US555,000 in 1964-65, 1965-66 and 1966-67 from International Bank for Reconstruction and Development loan used for the purposes of the Snowy Mountains Hydro-electric Authority and proceeds of \$US100,989,000, \$US148,236,000 and \$US101,519,000 in 1966-67, 1967-68 and 1968-69 under credit arrangements for defence purchases in the United States. (c) Advance loan subscriptions (net change), 'over the counter sales' (instalment stock and inscribed stock and bonds issued by State Governments), and Peace Savings Certificates (interest credited).

Minus sign (-) denotes a decrease in debt.

### National Debt Sinking Fund

#### Securities on issue on behalf of the Commonwealth

The National Debt Sinking Fund was established by the *National Debt Sinking Fund Act 1923-1959* and came into operation on 11 August 1923. Particulars of the creation and operation of sinking funds by that Act are included in issues of the Year Book prior to No. 23. The *National Debt Sinking Fund Act 1966* repealed all previous legislation on sinking funds relating to securities on issue on behalf of the Commonwealth. Under the Act of 1966 the period of redemption is 25 years from 1 July 1966 for debt outstanding at 30 June 1966 and 25 years for net debt created in subsequent years.

Broadly, the amounts payable to the National Debt Sinking Fund each year are made up of contributions from the Consolidated Revenue Fund of the Commonwealth as follows:

- (a) an amount of \$30.94 million each year for a period of 25 years;
- (b) an amount equal to 4 per cent of the amount of net debt created (if any) in any year for a period of 25 years.

In addition, an amount equal to specified receipts by the Commonwealth in repayment of loans or advances made out of moneys in the Loan Fund will be paid to the Sinking Fund.

The amounts payable to the Fund in any year from Consolidated Revenue Fund are to be reduced by the following:

- (a) the net income from investments in any year; and
- (b) an amount equal to 4 per cent of the amount of the net reduction of debt in any year.

Particulars of receipts and expenditure of the Commonwealth Account for the years 1964-65 to 1968-69 are as follows.

#### NATIONAL DEBT SINKING FUND: COMMONWEALTH ACCOUNT, 1964-65 TO 1968-69 (\$'000)

### TAXES ON INCOME

A description of the development of income taxes in Australia appeared in Year Book No. 35, page 926. Since July 1942 the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

The laws dealing with the assessment and imposition of Income tax at 30 June 1969 were—*Income Tax Assessment Act 1936-1969, Income Tax Act 1968, Income Tax (Partnerships and Trusts) Act 1968, Income Tax (Non-Resident Dividends and Interest) Act 1967*, and the Income Tax Regulations. The second-mentioned Act is an annual measure, and its primary purpose is to declare the rates of tax payable for the financial year.

Both individuals and companies are liable for income tax. Private companies are subject to tax on undistributed income in addition to the primary income tax levied on all companies.

The operation of the *Income Tax Assessment Act 1936-1969* is affected by the following Acts:

- (a) *Taxation Administration Act 1953-1966*, which provides for the administration of certain Acts relating to taxation;
- (b) *Income Tax (International Agreements) Act 1953-1969* which gives the force of law to agreements between the Commonwealth and the Governments of the United Kingdom, Canada and New Zealand, and to a convention between the Commonwealth and the Government of the United States of America, for the avoidance of double taxation and the prevention of evasion of taxes on income.
- (c) *Diplomatic Privileges and Immunities Act 1967* which provides for the exemption from Income Tax of certain income of diplomatic representatives, their staff and families.

### Lodgment of returns and assessment of income tax

Individuals, partnerships and trusts, non-profit companies with total income in excess of \$416 and all other companies deriving income are required to lodge returns of income each year. Partnerships and Trusts are not required to pay tax except in certain circumstances when they may be assessed as individuals. In general the net income is distributed to the partners or beneficiaries concerned and is assessable for tax in their respective individual returns.

Income tax payable is assessed, and assessment notices showing the amounts payable are issued, during the year following the year of income. In respect of individuals the approximate amount payable, however, has already been collected during the income year from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already paid and any difference either collected or refunded.

### Pay-as-you-earn system

*Salary and wage earners* are subject to tax instalment deductions by employers according to a prescribed scale which shows the amount to be deducted according to income and number of dependants. Under the group scheme of deduction, covering most employers of more than ten persons, the amount deducted is remitted to the Taxation Department.

Not later than 14 July each year employers are required to supply each employee with a group certificate showing amount earned and total deductions made during the year ended 30 June.

Under the stamp scheme used by employers, other than group employers, a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

*Individuals with taxable income of \$400 or more from other than salary or wages* pay provisional tax in respect of that income. Collection of tax for the current year is made at the same time as collection and assessment for the previous year are adjusted. The notice of assessment shows an amount of provisional tax for the current year. The provisional amount is an approximation to the tax which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year, but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax paid in the previous year as a credit against the tax assessed on the basis of the return for that year.

### Assessable income

Assessable income includes all income, other than exempt income, derived directly or indirectly from sources in Australia and, in the case of resident taxpayers, includes income from sources outside Australia.

Income includes certain other receipts declared by the Assessment Act to be assessable income. Receipts such as gifts (other than gratuities received by an employee from his employer in the course of his employment), legacies, profits from the sale of property (not acquired for the purpose of profit making by sale), lottery wins, and most capital gains are not regarded as income and are not assessable.

Certain types of income are exempt from tax, the more important being (i) war and service pensions (ii) age and invalid pensions, child endowment and other payments under the *Social Services Consolidation Act 1947-1950* and the *Tuberculosis Act 1948*, (iii) income from gold-mining and some other mining operations, (iv) twenty per cent of certain mining profits, (v) dividends paid out of exempt mining profits, (vi) income received from a scholarship, bursary or other educational allowance, (vii) income of certain non-profit institutions and mutual income of some other organisations, (viii) income of specified superannuation funds, (ix) pay, allowances and bounties for part-time duty, and gratuity payable on a call out for continuous full-time service of members of the Defence Force Emergency Reserves, and (x) pay and allowances of members of the Defence Forces while allotted for duty in special areas (i.e. part of Borneo and adjacent waters, and South Vietnam).

Expenditure incurred in producing assessable income or in carrying on a business is an allowable deduction, except to the extent that it is of a capital, private, or domestic nature, or is incurred in producing exempt income. Subscriptions to certain business associations and trade union dues are also allowable deductions.

Special deductions for both resident and non-resident taxpayers include such items as trading losses incurred in previous years, bad debts, depreciation, annual rates and land taxes paid, gifts to various institutions and, subject to certain conditions, one-third of amounts paid as calls to mining, prospecting, oil-prospecting, or afforestation companies operating in Australia. In lieu of the one-third deduction for calls, capital subscribed to companies engaged in exploration or mining for petroleum and certain other minerals in Australia or Papua and New Guinea may, in certain circumstances, be deductible in full.

Special deductions may be allowed for certain expenditure of a capital nature incurred in mining or prospecting operations conducted for the purpose of earning assessable income and in the provision of certain transport facilities necessary for and directly related to those operations. In the case of primary producers certain developmental expenditure of a capital nature may be deducted. Deductions in addition to depreciation are allowed to manufacturers and primary producers by way of an investment allowance for expenditure on specified plant and equipment. Subject to a maximum permissible tax saving, a special rebate is allowed for certain expenditure on export market development. The rebate is in addition to any normal deduction for the expenditure allowed as a business expense.

Residents of Zone A and Zone B, prescribed isolated areas subject to uncongenial climatic conditions and high costs of living are entitled to a zone allowance deduction. Members of the defence forces serving in certain overseas localities, are entitled to a deduction of the same amount as residents of Zone A.

#### Concessional deductions

Concessional allowances to residents for dependants, medical and dental expenses, life insurance, superannuation contributions, etc. are made as a deduction from income. The maximum deduction allowed for the income year 1969-70 for each dependant or for a housekeeper is shown below:

<i>Dependant, etc. (resident)</i>	<i>Maximum deduction(a)</i>
	\$
Spouse, Daughter-housekeeper(b); housekeeper(c); Parent or parent-in-law . . . . .	312
One child under 16 years of age; Invalid relative(d); Student child 16 to 21 years . . . . .	208
Other children under 16 years of age . . . . .	156

(a) If the dependant is maintained for part only of the year, a partial deduction is allowed. (b) Of a widower or widow  
(c) Caring for a spouse in receipt of an invalid pension, or caring for children under 16 years of age of a widower or widow.  
(d) Child, step-child, brother or sister over 16 years of age.

If a dependant derives separate net income, which includes age or invalid pension but not child endowment, the deduction is reduced by the amount, by which the separate net income exceeds \$130. Scholarships are excluded except insofar as they relate to maintenance.

Medical expenses (less amounts recouped from hospital and medical funds) paid by a resident taxpayer in respect of himself or dependants, including children under twenty-one years of age, are allowed as a concessional deduction. These expenses include payments to a legally qualified medical practitioner, dentist, nurse or chemist, or hospital, in respect of an illness or operation, therapeutic treatment or eye tests, expenditure on medical or surgical appliances, artificial limbs or eyes, hearing aids and spectacles, payment of an attendant of a blind or bed-ridden person or for the maintenance of a trained dog used by a blind person.

Other concessional deductions allowed to resident taxpayers include: (i) payments of life insurance premiums and contributions to superannuation funds and friendly societies, (maximum \$1,200), (ii) payments to medical or hospital funds, (iii) funeral expenses (maximum \$100), and (iv) expenditure incurred for the full-time education of children less than twenty-one years of age (maximum \$300 for each child).

**Effective exemption from tax**

For the income years from 1963-64 onwards the income of a taxpayer without dependants was exempt from income tax if it did not exceed \$416. The effect of the deductions for dependants was to exempt resident taxpayers up to the incomes shown in the examples hereunder.

**RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX**  
(**\$**)

Income years ended June—	Taxpayer with—		Wife and—			
	No dependants	Wife only	one child	two children	three children	four children
1964 to 1967 . . .	416	702	884	1,014	1,144	1,274
1968 to 1970 . . .	416	728	936	1,092	1,248	1,404

Special provisions applying for the 1969-70 income year to *resident aged persons* (i.e. men aged 65 years or more or women aged 60 years or more) were:

(A) *Individuals*

Taxable Income \$	Amount of Tax payable
Up to 1,300	Nil
1,301 to 1,532	One-sixth of the excess over \$1,300
1,533 to 2,080	\$38.66 plus one-fifth of the excess over \$1,532
2,081 to 2,275	\$148.26 plus two-thirds of the excess over \$2,080

(B) *Aged Persons Contributing to Maintenance of Spouse*

Combined Taxable Income \$	Amount of Tax Payable
Up to 2,262	Nil
2,263 to 2,500	One-sixth of the excess over \$2,262
2,501 to 3,000	\$39.66 plus one-third of the excess over \$2,500
3,001 to 3,640	\$206.32 plus nine-twentieths of the excess over \$3,000
3,641 to 4,121	\$494.32 plus two thirds of the excess over \$3,640

**Rates of income tax on individuals**

The table on page 590 shows the rates of income tax for income years 1953-54 to 1969-70 as set out in the first schedule to the Income Tax Act.

Assessable income represents total actual income minus exempt income. Taxable income is the amount remaining after all allowable deductions have been made on assessable income.

The minimum amount of income tax payable is 50c.

Where the taxable income of a person does not exceed \$428 the amount of tax payable is limited to one half of the amount by which the taxable income exceeds \$416.

The only cases in which incomes below \$416 attract tax are those for which special rates are payable in accordance with the provisions of the *Income Tax (Partnerships and Trusts) Act 1968*.

For primary producers the rate of income tax for the current year is, in general, determined by the average of the taxable incomes for the five years up to and including the current year. In 1951 a taxpayer was given the right to elect not to have the averaging provisions applied to his assessment but up to 1965-66 income year the election, if made under then existing legislation, was irrevocable. The *Income Tax Assessment Act 1966* amended this and a primary producer who elected to withdraw from the averaging system prior to the 1966-67 income year is now able to review that decision.

He may return to the averaging system provided that he makes the necessary election in respect of any one of the income years 1966-67 to 1969-70. In the year of re-entry the taxpayer will be treated for averaging purposes as though he had never withdrawn from the system. However, he will not have the right to withdraw again. The application of the averaging provisions is limited to that part of the taxable income which does not exceed \$16,000. When the taxable income does exceed \$16,000, the balance is taxed at ordinary rates applicable to that part. When the taxable income is less than \$16,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of \$16,000.

The taxable income, including abnormal receipts, of actors, artists, inventors, etc. is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest derived from bonds, etc. issued between 1 January 1940 and 31 October 1968 by the Commonwealth, or on certain State semi-governmental loans issued free of State income tax, is subject to a rebate of tax of 10 cents for each \$1 of interest received. The rebate does not apply to interest received from bonds, etc., issued on or after 1 November 1968.

(a) Assessments in respect of 1967-68 incomes issued to 30 September 1969. Assessments issued after that date are not included. (b) Actual income means, broadly, 'gross income including exempt income less expenditure incurred in gaining that income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions.

Details of the number of individual taxpayers and net tax assessed by grades of actual income for the income years 1964-65 to 1967-68 are shown in the following table.

COMMONWEALTH INCOME TAX ASSESSMENTS: RESIDENT INDIVIDUALS, BY GRADE OF ACTUAL INCOME<sup>(a)</sup> (INCOME YEARS 1964-65 TO 1967-68)

Grade of actual income <sup>(a)</sup> (\$)	Income year

(a) Actual income means, broadly, gross income including exempt income less expenditure incurred in gaining that income.

### Company income taxes

For taxation purposes companies are divided into two main groups—private and public. Broadly, a private company is defined as a company in which all the issued shares are held by not more than twenty persons, or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested, or is a subsidiary of a public company. All other companies are regarded as public companies. Both private and public companies pay primary tax assessed on a taxable income ascertained on the same principles as for individuals.

Dividends received are assessable income; resident companies, however, receive a rebate at the average rate on the amount of dividends included in the taxable income, while this rebate is not allowed to non-resident companies.

A private company is liable to pay additional tax upon the amount, if any, by which the dividends paid by the company within the prescribed period fall short of sufficient distribution as defined.

*Rates of tax.* The rates of primary tax for all companies and additional tax for private companies applicable to income years 1959-60 to 1968-69 are shown in the following table.

## RATES OF TAX: COMPANIES, 1959-60 TO 1968-69 INCOME YEARS

(Cents per \$)

Income years ended June	Resident private company			Resident public company(a)		Non resident company			
	On taxable income		Additional tax on undistributed income	On taxable income		On dividends income		On other income	
	Up to \$10,000	On remainder		Up to \$10,000	On remainder	Up to \$10,000	On remainder	Up to \$10,000	On remainder
1960 to 1963 . . . . .	25	35	50	35	40	30	40	35	40
1964 to 1967 . . . . .	27½	37½	50	37½	42½	32½	42½	37½	42½
1968 and 1969 . . . . .	30	40	50	40	45	35	45	40	45

(a) Excludes co-operative, non-profit and life insurance for which the rates of tax (in cents per \$) for 1968-69 were:

Type of company	Taxable income	
	Up to \$10,000	On remainder
Co-operative . . . . .	35	45
Non-profit—Friendly societies' dispensaries . . . . .	35	35
Other . . . . .	35	45
Mutual life insurance . . . . .	30	40
Other life insurance—Mutual income . . . . .	30	40
Other income . . . . .	40	45

Where the taxable income of a non-profit company does not exceed \$1,386 the amount of tax payable is limited to half the amount by which the taxable income exceeds \$416.

Details in respect of company assessments for the 1967-68 income year are shown in the following table.

## COMMONWEALTH INCOME TAX ASSESSMENTS: RESIDENT AND NON-RESIDENT COMPANIES, BY GRADE OF INCOME AND STATE, ETC., OF ASSESSMENT

(Income derived in the year 1967-68)

Grade of taxable income(b) (\$) and State or Territory of assessment	Taxable				Non-taxable

*Income tax assessed.* The amounts of income tax covered by statistical analyses of assessments for recent years are shown in the following table. The amounts are shown under the year of income of the taxpayer. Tax is usually paid by companies in the year following the year of income. Individuals pay tax in the year of income, but there is usually an adjustment in the following year. Tax assessed after the close of the normal assessing period is not included.

INCOME TAXES ASSESSED: INCOME YEARS 1963-64 TO 1967-68  
(\$'000)

Tax	1963-64	1964-65	1965-66	1966-67	1967-68
Individuals . . . . .	1,232,442	1,447,886	1,608,952	1,835,333	1,986,843
Companies—					
Primary tax . . . . .	715,938	787,099	786,925	832,582	1,010,357
Additional tax on undistributed income of private companies . . . . .	1,609	2,260	2,618	2,934	6,648
<b>Total . . . . .</b>	<b>1,949,989</b>	<b>2,237,245</b>	<b>2,398,495</b>	<b>2,670,849</b>	<b>3,003,848</b>

*Refunds of revenue.* Income tax collections, as previously shown, are net amounts after refunds of revenue made in the course of the year. Refunds are of two types—those charged to special appropriations under authority of the Income Tax Assessment Act and those charged to special appropriations under authority of the Audit Act. Income tax instalment refunds, by far the greatest part of income tax refunds, are made when the instalments deducted during the year exceed the tax assessed on incomes for that year. Refunds made from special appropriations under section 37A of the Audit Act include refunds of moneys paid to the revenue in error, refunds of tax overpaid, refunds due to the amendment of assessments, etc. Refunds of income tax to individuals during the collection years 1964-65 to 1968-69 were: 1964-65, \$264,366,000; 1965-66, \$305,830,000; 1966-67, \$353,194,000; 1967-68, \$398,371,000; and 1968-69 \$477,965,000.

## CHAPTER 19

# LOCAL GOVERNMENT

This chapter includes, in addition to information on the operation of local government authorities, information on the operation of certain semi-government authorities. The latter information is not comprehensive for this type of authority, and is included partly because of the association of the functions performed with those of local government authorities, and partly for convenience in preparation. Particulars of the activities of other semi-government authorities, e.g. transport, electricity and gas, and banking undertakings, for which only some financial statistics are given in this chapter, are included in the chapters relevant to those subjects.

### Coverage

#### Local government authorities

In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local government authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas, and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers. While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc. differ considerably.

The areas over which local government bodies, numbering 900, exercise general control, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, towns and shires; and in Tasmania as cities and municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g. the county councils. Within shires there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia, and the Commonwealth Territories (except for the City of Darwin), practically the whole of Australia comes within local government jurisdiction.

The financial statistics in the following section are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

#### Semi-government authorities

In addition to local government authorities, a large number of authorities have been set up to control specific activities, which are often identical with some of those performed by either, or both of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State of Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-government authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g. roads and bridges, water and sewerage, electricity and irrigation, harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct

from the general services of the local authority. In the sections which deal with debt, roads and bridges, water supply and sewerage, harbours, and fire brigades particulars are included of the more important of these authorities which operate within the range covered by this chapter.

#### **Roads, bridges, etc.**

The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a government department whose duties relate to the construction, reconstruction and maintenance of 'main' and 'developmental' roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Owing to difficulty in obtaining complete particulars of receipts and expenditure of the various local governing bodies in respect of roads under their control, the details of receipts and expenditure given on pages 608-14 are those of central governments only, relating either to the supervisory board or commission in the State or to direct activities of a department. However, estimates of the aggregate net expenditure of all public authorities concerned with roads and bridges in Australia are given on page 607 of that section. On pages 600-3 some information is given of the revenue and expenditure of local government authorities in respect of roads.

#### **Water supply and sewerage**

In the cities of Sydney, Melbourne and Perth the control of water supply and sewerage is in the hands of special boards, while in Adelaide these services are under the direct supervision of a government department. In most of the other cities and towns the municipal councils or, in some cases, water trusts are the controlling bodies, which either construct the works out of their own resources or take them over after they have been constructed by the government.

#### **Harbours**

The majority of the harbours in Australia are managed by boards, the members of which are either elected by persons interested, or appointed by the government. In some instances, however, they are directly controlled by the government.

#### **Fire brigades**

In all the States the management of fire brigades is undertaken by boards. These boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the government. Occasionally volunteer or country fire brigades are represented.

## **Local government authorities**

### **New South Wales**

For purposes of local government the whole of the Eastern and Central land divisions and more than two-thirds of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which include important towns). At the end of 1969 the area incorporated was 272,452 square miles, or nearly nine-tenths of the total area of the State. All cities, municipalities and shires in the State are subject to the general provisions of the Local Government Act. Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g. electricity, water, gas, abattoirs. At 31 December 1969 there were fifty-three county councils, including the Sydney County Council (constituted under the Gas and Electricity Act).

### **Victoria**

Local government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island (41,600 acres) in Westernport Bay, Lady Julia Percy Island (653 acres) off Port Fairy, Bass Strait Islands (966 acres), part of Gippsland Lakes (81,920 acres), and Tower Hill (1,459 acres) adjacent to the Borough of Koroit. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act.

### **Queensland**

The whole of the State (except certain islands along the coast) is incorporated into cities, towns, and shires under the Local Government Act (City of Brisbane Act in the case of Brisbane).

### **South Australia**

The settled portion of South Australia is incorporated, being mostly under municipal corporations, in the larger cities and towns and district councils in the agricultural areas.

**Western Australia**

Local government is established throughout the State, the divisions being cities, towns and shires.

**Tasmania**

The whole State is divided into municipal districts, Hobart, Launceston, and Glenorchy being incorporated as cities under separate Acts.

**Area, population, dwellings, and value of rateable property**

The area, population, dwellings, and value of rateable property in the incorporated areas of each State are shown in the following table. The valuations relate to rateable property only and exclude government and other non-rateable property, whose value in the aggregate is considerable. In some cases councils rate on annual value, or unimproved capital value, or improved capital value, or partly on each of these bases of valuation. The amounts stated are the totals for the areas rated according to each basis of valuation. Particulars of dwellings are in accordance with the definition used in the 1966 census, and are compiled from information collected on the census schedules. For the purpose of the census a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include vacant dwellings available for sale and renting, 'week-end' and holiday dwellings, and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

In the following table particulars of number, area, and value of rateable property refer to estimates made, where practicable, for the capital city statistical division and outside this division. Wherever the statistical boundary cuts across a local government area the estimates have involved either the inclusion or exclusion of the whole of the local government authority concerned in, or from, the capital city statistical division. Particulars of population refer to estimates made for capital city statistical division and outside this division in accordance with the definition of boundaries used in the 1966 census and exclude migratory population and population in unincorporated areas.

**LOCAL GOVERNMENT AUTHORITIES: AREA, POPULATION, DWELLINGS, AND

### Local government finances

The following tables show the latest available financial statistics for local government authorities. The figures relate to the year 1967-68 except for New South Wales, where they relate to the year 1966. For further detail on local government finances *see* annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*, issued by this Bureau.

*Ordinary services.* In the returns of revenue and expenditure in the following tables the proceeds from loans and expenditure thereof have been excluded. The financial operations of business undertakings controlled by the various local government authorities are given in the next paragraph. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

### Local government and semi-government authorities' debt

Statistics of local government and semi-government debt for 1963-64 to 1967-68 are given in the following paragraphs. The information covers all local government authorities (including New South Wales County Councils previously included with semi-government authorities) and those semi-government authorities responsible for the provision of the following services.

*New South Wales.* Water Supply, Sewerage and Drainage, Electricity and Gas Supply, Fire Brigades, Banking, Housing, Harbours, Grain Elevators, Roads and Bridges, Marketing, Industry Assistance, and Miscellaneous.

*Victoria.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity and Gas Supply, Roads and Bridges, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, and Housing.

*Queensland.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity Supply, Fire Brigades, University, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.

*South Australia.* Irrigation and Drainage, Transport, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, University and Miscellaneous.

*Western Australia.* Water Supply and Sewerage, Harbours, Transport, Electricity Supply, Fire Brigades, Hospitals, Marketing (Agency), Housing, University, and Miscellaneous.

*Tasmania.* Harbours, Electricity Supply, Fire Brigades, Transport, Housing, Industry Assistance and Water Supply.

A detailed list of the authorities included is shown in the annual **bulletin** *State, Territory and Local Government Authorities' Finance and Government Securities*,

The following table provides a summary of new money loan raisings, provisions for debt redemption, debt outstanding and interest payable by local government and semi-government authorities for the year 1967-68. For greater detail see the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*.

Annual interest payable(a) . . . . .	(c)	113,753	19,940	27,347	17,051	18,619	(c)

(a) Includes debt or interest payable in London and New York. Debt in London is payable in £ sterling which have been converted at the I.M.F. rate of £\$1 to \$A2.1428; New York debt is payable in U.S. dollars which have been converted at the I.M.F. rate of \$US1.12 to \$A1. (b) Included in debt figures above. (c) Not yet available.

NOTE. The considerable changes in the figures for New South Wales in the table above when compared with figures published in Official Year Books prior to No. 54 (1968) are due to the transfer of New South Wales County Councils from the semi-government division to that of local government authorities (see previous page).

In the table above and the following table debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalised and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalised), trade creditors, amounts held in trust, and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised from the public to repay indebtedness to the Government, and interest capitalised. Loans raised and redeemed within the year, increases in overdrafts, and loans raised for conversion or redemption of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

## Roads and bridges

### Summary of roads open for general traffic

Tables showing road lengths in the several States and Territories classified according to class of road and surface of road may be found in Chapter 12, Transport, Communication, and Travel.

### Aggregate net expenditure on roads and bridges in Australia

In most States there are three classes of authorities concerned with roads and bridges, the State Government, the central road authority, and numerous local government bodies. The Commonwealth Government, in addition to the grants it makes to the States for road purposes, is concerned with roads in the Northern Territory and the Australian Capital Territory and roads of access to Commonwealth property in the various States. Some information relating to Commonwealth grants to the States for road purposes and particulars of the expenditure on roads and bridges by local government bodies and the central road authorities are given in later sections of this chapter.

Most of these authorities may expend money directly on road construction or indirectly by means of grants and payments to other authorities. These indirect payments, if included in an aggregate, would duplicate expenditure; this together with the fact that some authorities are unable to supply separate information concerning their road expenditure, makes it difficult to compile precise statistics of aggregate expenditure on roads and bridges.

The information in the following table, which is partly estimated and which excludes the main indirect payments, provides an approximate measure of the aggregate net expenditure by the three classes of authorities mentioned above on roads and bridges in Australia during each of the years ended 30 June 1965 to 1969. Expenditure on roads by those authorities whose primary activity is directed towards functions other than roads, e.g. electricity, forestry, housing, etc., authorities is not included. The figures cover expenditure on the construction, reconstruction and maintenance of roads and bridges, and direct administration but not debt charges. Because of the difficulties associated with the indirect payments mentioned above, it is not possible to give separate net details for each authority.

**PUBLIC AUTHORITY NET EXPENDITURE ON ROADS AND BRIDGES  
STATES AND TERRITORIES, 1964-65 TO 1968-69**

**Commonwealth Government grants**

The following table shows the allocations to the States under the several Commonwealth Aid Roads Acts for road construction, maintenance, repair and other works connected with transport for each of the years 1964-65 to 1968-69. After 1 July 1959, when the *Commonwealth Aid Roads Act 1959* came into operation, the Commonwealth made separate provision for expenditure on strategic roads and the promotion of road safety practices. See also the chapter Public Finance, and Finance bulletins.

**New South Wales**

Main roads administration is organised as a separate department under the control of a Commissioner. The activities of the Department of Main Roads include works on main, developmental, secondary and tourist roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed and maintained from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system.

In the County of Cumberland, which for the purposes of the Main Roads Act is deemed to include the City of Blue Mountains and small sections of other councils' areas on the boundary of the County of Cumberland, the full cost of main road and bridge construction, half the cost of secondary roads, and a proportion (in general, up to half) of the cost of tourist roads are met from the

funds of the Department of Main Roads. The Councils do not contribute directly to the cost of these works but are required to pay a levy of 0.2083 cents in the \$ on the unimproved capital value of rateable property within Council's area or at a uniform percentage determined annually by the Commissioner of between ten per cent and fifteen per cent of Council's total rate income, whichever is the less. In the former case the rate payable in respect of lands used principally for primary production is half the rate levied on other lands.

In country districts the Department meets the full cost of road and bridge works on State highways, the full cost of bridge construction works and three-quarters of the cost of road construction and road and bridge maintenance works on trunk roads, three-quarters of the cost of bridge construction works and two-thirds of the cost of road construction and road and bridge maintenance works on ordinary main roads, and, in most cases, up to half the cost of works on tourist roads. The cost of constructing developmental roads and works is borne in full by the Department of Main Roads, but local Councils are required to maintain them in a satisfactory condition.

The funds of the Department of Main Roads are derived principally from motor vehicle taxation, charges on heavy commercial goods vehicles under the Road Maintenance (Contribution) Act, 1958-1965, grants under Commonwealth Aid Roads Act (see page 607 and the Chapter, Public Finance), other grants from the State or Commonwealth Governments, and proceeds of a levy on municipal and shire councils in the County of Cumberland in accordance with the Main Roads Act, 1924-1967. The State Government also makes repayable advances for Main Roads Department works, and since 1963 the Commissioner for Main Roads has had the power (with the approval of the Governor on the recommendation of the Treasurer) to borrow moneys. The figures shown below represent the aggregate revenue and expenditure of five funds: the County of Cumberland Main Roads General and Special Purposes Funds, the Country Main Roads General and Special Purposes Funds, and the Developmental Roads Fund.

(a) Excludes repayable advances by the State Government and private loans (\$7,500,000 in 1964-65, \$5,005,000 in 1965-66, \$6,500,000 in 1966-67, \$8,750,000 in 1967-68 and \$12,900,000 in 1968-69), and transfers from Sydney Harbour Bridge Account for Expressway construction (\$2,360,000 in 1964-65, \$4,750,000 in 1965-66, \$3,743,000 in 1966-67, \$4,775,000 in 1967-68 and \$900,000 in 1968-69). Expenditure from these amounts is fully reflected in Expenditure.  
 (b) Excludes debt redemption (\$210,000 in 1964-65, \$441,000 in 1965-66, \$346,000 in 1966-67, \$477,000 in 1967-68 and \$812,000 in 1968-69) and repayment of government advances (\$1,020,000 in 1964-65, and \$200,000 in 1965-66 and later years).  
 (c) Mainly purchase of assets not subject to annual depreciation charge. The purchase of other assets is omitted here because the depreciation charge for them is reflected each year in 'Roads and bridges'.

Toll facilities operated by the Department of Main Roads include the Sydney Harbour Bridge and the three completed sections of the Sydney-Newcastle Expressway.

The Sydney Harbour Bridge was opened for traffic on 19 March 1932, and has a main span of 1,650 feet with clearance for shipping of 170 feet. The deck, 160 feet wide, carries eight road traffic lanes, two railway tracks and two footways. During 1968-69, 42,558,984 road vehicles (excluding buses and exempt vehicles), 24,958,330 rail passengers and 12,403,394 bus passengers crossed the bridge. Income from tolls during 1968-69 amounted to \$4,615,000, including road tolls \$4,303,000, rail passenger tolls \$284,000 and bus passenger tolls \$28,000.

The three sections of the Sydney-Newcastle Expressway now open to traffic provide 14.5 miles of expressway conditions through very difficult terrain north of Sydney from an interchange between Cowan and Berowra north across the Hawkesbury River to Calga. Total cost of the project to 30 June 1969 was \$28.7 million. Toll collections during the year ended 30 June 1969 amounted to \$1,530,000.

### Victoria

With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine which roads should be declared in the various classifications; to supervise the construction, reconstruction and maintenance of these roads; to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance; and to recommend deviations in existing roads or the construction of new roads in order to facilitate communications or to improve the conditions of traffic.

The funds of the Country Roads Board are derived principally from motor registration fees, two-thirds of additional registration fees (charged on initial registration or transfer), a proportion of drivers' licence fees, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, roads charges under the Commercial Goods Vehicles Act, repayments by municipalities and, since 1965, a share of the addition to registration fees paid to the Roads (Special Projects) Fund and a grant under the Public Works Loan Application Act. In addition, loans have been authorised from time to time under the Country Roads Acts for permanent works on main and developmental roads. State highways, tourists' roads and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. Finance for the elimination of level crossings and for improved approaches, signs, lighting and other work to reduce danger at level crossings is derived mainly from the one third of additional registration fees paid into the Level Crossings Fund, maintained by the Board.

*The Melbourne and Metropolitan Board of Works* bears the responsibility for carrying-out planning scheme proposals relating to metropolitan highways and bridges, and is now carrying out a programme of urgent highway works throughout the metropolitan area of Melbourne including the extension of the South-Eastern Freeway from Burnley to Tooronga (estimated cost \$18m) and the Tullamarine Freeway to serve the new Tullamarine airport (estimated cost \$20.7m). Expenditure on these projects up to 30 June 1969 was \$36.7m. Of this amount, \$15.2m was financed from the proceeds of the Board's Metropolitan Improvement Rate and \$21.5m was contributed by the Treasurer of Victoria from the Roads (Special Projects) Fund.

The Lower Yarra Crossing Authority was incorporated in October 1965 as a company limited by guarantee and given powers under the *Lower Yarra Crossing Authority Act 1965* to construct, operate and maintain a toll crossing over the lower reaches of the River Yarra. The estimated cost of the bridge and approaches is to be \$42m. The bridge will provide eight traffic lanes and will have an overall length of 8,472 feet, the bridge structure being 2,782 feet with a main span of 1,102 feet; clearance is to be 176 feet. The bridge will be operated by the Authority for up to 40 years, after which it will be surrendered to the State of Victoria.

### Queensland

The Department of Main Roads was constituted in February 1951 with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main developmental, and secondary roads; and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is financed by the State Government by means of Treasury loans. Other roads may be built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collection, fees, etc., under the Transport Acts, contributions under the Commonwealth Aid Roads Acts, and loans, grants and advances from the State Government. The total receipts and payments during each of the years 1963-64 to 1967-68 are shown below.

**DEPARTMENT OF MAIN ROADS, QUEENSLAND: RECEIPTS AND PAYMENTS**

(a) Includes grants to local authorities for road purposes.

### South Australia

The Highways Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads and Transport, to undertake the construction, maintenance and protection of the principal roads of the State, allocate grants to councils for road-works and supervise the expenditure of these grants, and assist Councils to purchase road-making plant and to defray the cost of roadworks. In addition, the Commissioner advises Councils on technical questions concerning the construction, maintenance or repair of roads. Funds of the Department are derived mainly from the Highways Fund, into which are paid the proceeds from motor vehicle registration and drivers' licences (less cost of collection), appropriations from loan funds, repayments of advances made to Councils, and contributions by the Municipal Tramways Trust, and from contributions under the Commonwealth Aid Roads Acts.

The following table shows particulars of receipts and payments, during the years 1964-65 to 1968-69, of funds controlled by the Highways Department.

**HIGHWAYS DEPARTMENT, SOUTH AUSTRALIA**  
**RECEIPTS AND PAYMENTS, 1964-65 TO 1968-69**

(a) Includes reimbursement works for Commonwealth Government. (b) Includes administration expenses.  
(c) Represents gross repayments less recoveries by charges to works on account of depreciation and materials used.

### Western Australia

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities throughout the State. The Department operates under the *Main Roads Act, 1930-1969*, and is administered by a Commissioner of Main Roads responsible to the Minister for Works. The Act makes provision for the construction and maintenance of public roads in the categories of main roads, controlled-access roads and developmental roads. An additional category, that of important secondary roads, is used by the Department in determining its works programme. Within its own district each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

The funds of the Main Roads Department are derived principally from allocations made under the *Commonwealth Aid Roads Act 1969* under which Western Australia has been allotted grants totalling \$200,400,000 for the five-year period commencing 1 July 1969. During the five years ended 30 June 1969 Western Australia received \$133,555,000 under the Commonwealth Aid Roads Act of 1964 of which \$121,961,000 was made available to the Main Roads Department. In addition special Commonwealth assistance is given for the improvement of roads used for the transport of beef cattle in the Kimberley District. For the six-year period ended 30 June 1967 grants totalling \$8,400,000 were received from the Commonwealth for this purpose, and were matched by a corresponding State contribution. In a further seven-year period to 30 June 1974 grants totalling a maximum of \$9,500,000 are to be distributed, including \$1,400,000 received in 1967-68 and \$1,451,000 received in 1968-69. Other sources of income include a portion of vehicle licence fees collected by local government authorities and the Commissioner of Police, overload permit fees and an allocation from drivers' licence fees. Further moneys for expenditure on road maintenance are available under the *Road Maintenance (Contribution) Act 1965* administered by the Commissioner of Transport. Receipts and payments for the years 1964-65 to 1968-69 are shown in the following table.

<b>Total</b>	<b>(d)26,557</b>	<b>30,192</b>	<b>36,262</b>	<b>36,393</b>	<b>36,442</b>

(a) Includes \$1,896,000 transferred from an Overhaul Account previously administered by the Public Works Department. (b) Includes administration and expenditure on hire and maintenance of road construction plant, etc., and on purchase of materials. (c) Consists of payments to local authorities for work carried out on behalf of the Main Roads Department. For 1968-69 these payments have been included in 'Construction and reconstruction of roads and bridges' and 'Maintenance of roads and bridges'. (d) Excludes \$1,000,000 refund of advance from State Treasury.

**Tasmania**

Under the *Road Construction (Transfer of Functions) Act 1951*, the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorised by the Minister in respect of roads classified as State highways, tourist and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund, into which are paid the proceeds from Commonwealth Aid Roads grants, motor vehicle registration fees and taxes, licence fees for drivers and public transport, and other moneys made available by Parliament. In addition, provision was made under the Road Construction (Transfer of Functions) Act for certain works authorised by the Transport Commission to be carried out and constructed by the Department. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads.

The table following shows particulars of the receipts and payments of the combined Road Funds for the years 1964-65 to 1968-69.

**ROAD FUNDS, TASMANIA: RECEIPTS AND PAYMENTS, 1964-65 TO 1968-69**

### Water supply, sewerage and drainage

The information in this section relates primarily to the metropolitan areas and provincial cities and towns. For information on water supply and irrigation in rural areas see Chapter 24, Water Conservation and Irrigation.

#### New South Wales

The two largest domestic water supply and sewerage systems are controlled by statutory boards each consisting of a president and a vice-president appointed by the State Government, and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e. in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, Shellharbour and Kiama, and (b) the Hunter District Water Board serving the Newcastle-Maitland-Cessnock areas. At Broken Hill and Cobar similar boards include representatives of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.

*Metropolitan and Hunter District water supply.* The storage reservoirs of the metropolitan water supply system with a combined available capacity of 574,335 million gallons, drain catchment areas of 3,890 square miles (including Warragamba, 3,480 square miles, Upper Nepean, 347 square miles, and Woronora, 29 square miles). The development of a water supply system on the Warragamba River was completed with the official opening of the Warragamba Dam in October 1960. This dam, constructed in concrete, has a storage capacity of 452,505 million gallons. Its safe net draught is estimated to be 274 million gallons a day. At 30 June 1969 there were 175 service reservoirs in use with a combined capacity of 706 million gallons. Rating for water for 1968-69 was 3.75 cents in the \$ of 'assessed annual value'. The payment of the rate entitled the user to an amount of water calculated at 1,000 gallons per 30 cents. For water in excess of this allowance a further charge of 30 cents per 1,000 gallons was made. Fluoridation of the metropolitan water supply commenced in April 1968.

The water supply of the *Hunter District* system is drawn principally from three sources; the Chichester Reservoir, with a storage capacity of about 3,902 million gallons and draining a catchment of 76 square miles, the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens, and the Grahamstown Water Supply Scheme which is still being developed. Another source of supply is provided by the Nelson Bay-Anna Bay Scheme. Service reservoirs and tanks distributed throughout the water supply district have a total storage capacity of 126 million gallons.

The following tables show, for the Metropolitan and Hunter District systems, the number of properties, the estimated population supplied, and other details.

**METROPOLITAN WATER SUPPLY(a), NEW SOUTH WALES: SERVICES, 1964-65 TO 1968-69**

Year	Improved properties for which water mains available	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of mains	Number of meters
					Per property	Per head of estimated population		
		'000	mill gal	mill gal	gallons	gallons	miles	
1964-65	693,185	2,660	290	105,892	418	109	7,649	479,321
1965-66	712,059	2,723	230	83,802	323	84	7,972	495,850
1966-67	735,360	2,756	234	85,383	318	85	8,105	515,653
1967-68	756,063	2,816	270	98,981	357	96	8,325	532,859
1968-69	775,548	2,885	302	110,347	389	106	8,534	550,017

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

**HUNTER DISTRICT WATER SUPPLY(a): SERVICES, 1964-65 TO 1968-69**

Year	Properties supplied	Estimated population supplied	Average daily consumption	Total consumption for year	Average daily consumption		Length of mains
					Per property	Per head of estimated population	
			mill gal	mill gal	gallons	gallons	miles
1964-65	93,646	316,625	41.5	15,139	443	131	1,623
1965-66	94,779	320,451	32.8	11,970	346	102	1,673
1966-67	96,755	327,514	31.6	11,521	326	96	1,702
1967-68	99,066	335,565	37.4	13,675	377	111	1,740
1968-69	100,941	342,167	42.5	15,513	421	124	1,786

(a) Newcastle, Maitland and Cessnock areas.

*Metropolitan and Hunter District sewerage and drainage systems.* The metropolitan sewerage and drainage system serving Sydney and suburbs comprises 3 major sewerage systems and 9 minor systems, consisting of 7 outfalls discharging directly into the Pacific Ocean and 5 treatment works. There are also 8 centres outside the metropolitan area of which 5 (Camden, Campbelltown, St Mary's, Richmond and Warragamba township) are served by local treatment works and 3 (Bellambi, Port Kembla and Wollongong) discharge directly into the Pacific Ocean. Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30 June 1969 were 186 miles long.

The main sewerage system of the *Hunter District* serves the City of Newcastle and discharges into the Pacific Ocean at Burwood Beach. There are also local treatment works at Maitland, Cessnock and some of the outlying districts. Sewerage rates for 1968-69 were 5.0923 cents in the \$ of 'assessed annual value', and drainage rates (on certain areas served) 0.5208 cents in the \$.

The following table gives details of sewerage services and stormwater drains of the Metropolitan system.

**METROPOLITAN SEWERAGE AND DRAINAGE(a)  
NEW SOUTH WALES: SERVICES, 1965 TO 1969**

30 June—	Improved properties for which sewerage available	Estimated population served	Length of sewers	Length of stormwater channels
		'000	miles	miles
1965 . . .	501,389	1,930	5,328	179
1966 . . .	524,225	2,000	5,585	181
1967 . . .	547,630	2,052	5,881	182
1968 . . .	574,847	2,135	6,166	184
1969 . . .	602,312	2,235	6,504	186

(a) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires.

At 30 June 1969, 80,911 premises had been connected to the Hunter District Water Board's sewerage system (Newcastle-Maitland-Cessnock areas). The total length of sewers under the Board's control was 1,116 miles, and the length of drains was 52 miles.

*Metropolitan and Hunter District systems' finances.* The following table shows the debt, revenue and expenditure of the Metropolitan Water, Sewerage and Drainage Board and the Hunter District Water Board for each of the services of water supply, sewerage and drainage during 1968-69, and for the three services combined for the years 1964-65 to 1968-69.

**METROPOLITAN AND HUNTER DISTRICT WATER SUPPLY, SEWERAGE  
AND DRAINAGE, NEW SOUTH WALES: FINANCES, 1964-65 TO 1968-69

(a) Includes provision for renewals, long service leave, etc. (b) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires. (c) Newcastle-Maitland-Cessnock areas. (d) Includes General Fund indebtedness not dissected by services.

*Local government country water supply and sewerage systems.* At 31 December 1966, country water supply services were conducted or under construction by 48 municipalities, 92 shires and 6 county councils, and country sewerage services by 51 municipalities and 46 shires. The capital indebtedness of these schemes was \$103,776,000 at 31 December 1966, namely \$69,251,000 for water and \$34,525,000 for sewerage. Debt of the municipalities amounted to \$50,080,000, shires to \$41,200,000, and county councils to \$12,496,000. Government advances amounting to \$622,000 are included in these figures. Aggregate income and expenditure amounted to \$17,702,000 and \$13,510,000, respectively, in 1966.

*Other country water supply and sewerage systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31 December 1968 was \$5,858,000. In 1968, income (excluding subsidies, State Government \$204,000 and mining companies \$553,000) amounted to \$715,000 and expenditure (excluding debt redemption \$283,000) amounted to \$1,184,000. The Cobar Water Board was constituted in February 1964. At 31 December 1968 its capital indebtedness was \$2,332,000. The following country water supply systems—South-West Tablelands, Junee, and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Electricity Commission of New South Wales, and other large consumers. Only a small quantity is sold direct to private consumers. The capital indebtedness of these systems was \$15,088,000 at 31 December 1968. The Mulwala Water Supply and Sewerage Service was constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

### Victoria

*Melbourne and Metropolitan Board of Works.* The Board consists of a Chairman and fifty-two Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The principal functions of the Board are: to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage system; to deal with main drains and main drainage works; to control and manage the rivers, creeks and watercourses within the metropolitan area; and to carry out the functions of a permanent planning authority.

*Metropolitan water supply.* There are 6 storage reservoirs serving the metropolitan area—Yan Yean, 7,233 million gallons (available for consumption, 6,649 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,289 million gallons (4,870 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); and Upper Yarra, 45,400 million gallons (44,120 million gallons); total 68,765 million gallons (65,452 million gallons). Service reservoirs number 49, with a total capacity of 373 million gallons. The water rate levied by the Board in 1968-69 was 2.5 cents in the \$ on the net annual value of the properties served. The charge for water consumed in excess of the quantity which, at 20 cents per 1,000 gallons, would equal the assessed water rates on each property, was 20 cents per 1,000 gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1964-65 to 1968-69.

MELBOURNE WATER SUPPLY: SERVICES, 1964-65 TO 1968-69

Year	Number of houses supplied	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of aqueducts, etc. and reticulation	Number of meters
					Per house	Per head of estimated population		
		'000	mill gal	mill gal	gallons	gallons	miles	
1964-65	595,727	2,079	168.2	61,409	282	80.9	6,098	511,077
1965-66	612,844	2,120	178.7	65,218	292	84.2	6,280	536,093
1966-67	626,690	2,143	188.5	68,815	301	88.0	6,517	559,713
1967-68	642,039	2,170	139.0	50,876	216	64.1	6,791	577,713
1968-69	658,944	2,227	173.4	63,288	263	77.9	7,034	595,560

*Metropolitan sewerage and drainage.* Particulars of sewerage and drainage services for 1964-65 to 1968-69 are shown on the next page.

## MELBOURNE SEWERAGE AND DRAINAGE: SERVICES, 1964-65 TO 1968-69

Year	Number of houses for which sewers are provided	Estimated population for which sewers are provided	Average daily pumping					Length of sewers, etc.	Length of main drains
			Average daily pumping	Total sewage pumped for the year	Per house	Per head of estimated population	gallons		
		'000	mill gal	mill gal	gallons	gallons	miles	miles	
1964-65	453,078	1,491	93.6	34,152	206.5	62.8	4,113	218	
1965-66	467,705	1,599	94.6	34,545	202.4	59.2	4,311	229	
1966-67	484,798	1,629	98.1	35,793	202.3	60.2	4,554	233	
1967-68	509,185	1,719	86.1	31,514	169.1	50.1	4,739	240	
1968-69	528,983	1,788	96.7	35,300	182.8	54.1	4,906	250	

The metropolitan sewerage system consists of the main system (serving an area of 115,751 acres) and 6 subsidiary systems—the Braeside system (serving an area of 6,589 acres), the Kew system (serving an area of 112 acres), the Maribyrnong system (serving an area of 182 acres), the Watsonia system (serving an area of 253 acres), the Lower Plenty system (serving an area of 1,400 acres), and the Heatherton system (serving an area of 1,136 acres). The Board of Works Farm, 26,809 acres in extent and situated about twenty-four miles south west of Melbourne beyond the township Werribee, serves to purify and dispose of approximately ninety-seven per cent of the sewerage flow of the metropolis before its discharge into Port Philip Bay.

*Melbourne and Metropolitan Board of Works' finances.* The following table provides for the year 1968-69 a summary of the financial operations of the water supply, sewerage and drainage services conducted by the Melbourne and Metropolitan Board of Works, and of the combined services for the years 1964-65 to 1968-69. The financial operations of the Board as the Authority responsible for metropolitan highways and bridges are referred to on pages 609-10.

(a) Total loan indebtedness—1968-69, \$416,578,399. services.

(b) Statutory and general expenditure not distributed over

*State Rivers and Water Supply Commission.* Water supply and conservation throughout Victoria (except for the area controlled by the Melbourne and Metropolitan Board of Works) is under the jurisdiction of the State Rivers and Water Supply Commission. The events leading to the establishment of the Commission, and its works in the spheres of irrigation, domestic and stock water supply to farms, drainage, flood protection, and river improvements, are described in the chapter, Water Conservation and Irrigation. This section is therefore confined to the Commission's functions in connection with urban water supply and sewerage.

*Extra-metropolitan water supply.* At 30 June 1969 the Commission provided a reticulated water supply from its own works to 148 cities and towns having a combined population of 235,000 persons. The principal systems operated by the Commission serve part of the Mornington Peninsula—Dandenong area (about 116,000 people supplied); Bendigo, Castlemaine, etc. (58,500); and about 8,700 people in the Western District. In addition, 14,000 persons in a number of towns in the Bellarine Peninsula receive supply through a Commission-operated distributory system from headworks controlled by the Geelong Waterworks and Sewerage Trust. The Bendigo-Castlemaine supply also provides for the irrigation of 9,000 acres as well as urban requirements in the area. Outside these areas the Commission supplies mainly small towns in the north of the State in areas where it also supplies farms with water for irrigation or domestic and stock purposes. Capital expenditure by the Commission on urban water supply at 30 June 1969 was divided between the several systems as follows: Mornington Peninsula, \$31,380,000, Bendigo-Castlemaine, \$10,918,000 (includes the cost of supplying a comparatively large rural system with water for irrigation, stock and domestic purposes); Bellarine Peninsula, \$3,576,000; Otway System (Western District), \$3,169,000; other \$3,199,000; total, \$52,243,000. This expenditure is net of redemption payments and includes expenditure on Lake Eppalock and Tarago Reservoir not yet charged to the water users. In addition to the towns supplied by the Commission there are some 671,000 people in 256 cities and towns throughout the State who get a reticulated water supply from works operated by local authorities.

All these authorities operate under the supervision of the State Rivers and Water Supply Commission, largely because the Government subsidises their capital expenditure. Most new works are financed from Government loan funds, but the Geelong Trust and in recent years some other local authorities borrowed money privately. In most cases the local authority controls both headworks and distribution system, but several towns draw their water from the State Rivers and Water Supply Commission and are concerned only with reticulation of the water. Together, therefore, the Commission and local authorities supply 404 urban centres containing some 907,000 people. Very few towns of any importance are now without reticulated water supply.

*Extra-metropolitan sewerage systems.* With the exception of the town of Eildon, whose sewerage system is controlled directly by the State Rivers and Water Supply Commission, the construction and management of sewerage works in Victoria's country cities and towns are the responsibility of local authorities supervised by the Commission. Except for the Geelong Waterworks and Sewerage Trust and the Latrobe Valley Water and Sewerage Board, which have special Acts dealing with their activities, all sewerage authorities operate under the Sewerage Districts Act. At 30 June 1969, 97 sewerage authorities had been constituted. Of these 73 had systems in operation and 12 had works under construction.

Expenditure on sewerage in Victorian country towns at 30 June 1969 was approximately \$86,308,000, of which some \$70,132,000 had been advanced by private lenders. The annual State subsidy on country sewerage in Victoria is currently about \$1,325,000, provided mainly in the form of subsidies on interest rates paid along the same lines as for town water supply.

The *Geelong water supply scheme*, operated by the Geelong Waterworks and Sewerage Trust, comprises two systems for gathering and storing water, the water in both systems being brought over fifty miles to Geelong. There are 8 storage reservoirs and 11 service basins whose total storage capacity is 13,446 million gallons. The length of water mains and reticulation is 569.4 miles. The total expenditure on water supply to 30 June 1969 was \$18,849,465. General fund expenditure for 1968-69 comprised \$505,443 for working expenses and \$1,274,377 for interest, redemption and reserves, while revenue from water rates amounted to \$1,761,809. The sinking fund appropriations at June 1969 amounted to \$1,318,581. The replacement and contingencies reserve amounted to \$1,479,048.

The *Geelong Waterworks and Sewerage Trust sewerage scheme* consists of a main outfall sewer to the ocean and 352.2 miles of main and reticulation sewers. The sewerage area is 21,220 acres, and the number of buildings connected within the sewered areas is 29,357. The total expenditure on sewerage works to 30 June 1969 was \$13,515,202. The revenue from sewerage rates in 1968-69 amounted to \$1,160,657, and the general fund expenditure comprised \$308,418 on working expenses and \$850,934 on interest, redemption, and reserves. Sinking fund appropriations at 30 June 1969 were \$668,414. Replacement and contingencies reserve amounted to \$1,393,910.

The *Ballarat water supply district* comprises an area of about 65 square miles, containing a population of about 65,800. The total storage capacity of the 7 reservoirs is 5,435 million gallons and the catchment area is 24,182 acres. The capital cost of construction of the waterworks was \$6,284,703 to 31 December 1969. The liabilities amounted to \$3,933,070 at 31 December 1969, including loans due to the Government totalling \$3,569,387. The revenue from rates and metered sales for the year 1969 was \$521,016. Working expenses during 1969 amounted to \$276,073 and interest and other charges to \$244,902.

The *Ballarat sewerage district* comprises the City of Ballarat, the Borough of Sebastopol, and parts of the Shires of Ballarat, Bungarce and Grenville. There are more than 225 miles of sewers. The capital cost of sewerage construction works to 31 December 1969 was \$5,834,153. Assessments in the sewerage district numbered 20,590 while those in sewered areas numbered 19,100. There were 16,419 buildings connected. The liabilities on account of loans secured for construction at 31 December 1969 amounted to \$4,919,330, redemption payments at that date totalled \$978,497. House connections financed by the Authority numbered 4,674. Revenue from rates during 1969 amounted to \$538,553, and expenditure, which included \$345,074 for interest and redemption, was \$538,226.

The *Latrobe Valley Water and Sewerage Board* constructs and operates water supply works within the Latrobe Valley. The main construction activities have been centred on the new township of Churchill, the total capital cost of construction activities to 30 June 1969 being \$11,578,823. Liabilities amounted to \$12,260,365, including loans due to the Government totalling \$11,192,657. Revenue for the year was \$739,202. Expenditure during 1968-69 amounted to \$582,198 including interest on loans amounting to \$335,099. The Board does not strike a rate, but supplies consumers, including local water supply authorities, by measure. The quantity supplied during the year ended 30 June 1969 was 13,425 million gallons.

The *Latrobe Valley sewerage system* consists of a main outfall sewer, about 52 miles in length, to convey wastes to an area where they are disposed of on land for agricultural purposes. The capital cost of the sewerage construction works to 30 June 1969 was \$6,925,535. Liabilities amounted to \$7,561,811, including loans due to the Government totalling \$6,044,081. Revenue in 1968-69 was \$326,948 and expenditure totalled \$534,801, including interest on loans \$111,916. No sewerage rate is levied, but a charge is made by measure for wastes both from industries and public authorities.

### Queensland

The *Brisbane City Council* operates the water supply and sewerage systems of the City of Brisbane, and also supplies, in bulk, the whole of the water used by the City of Ipswich and a portion of that used by the City of Redcliffe and Albert Shire Council. Redcliffe supplements its supply from that of the Pine Rivers Shire Council, while Albert also draws on its own reservoirs. Storage facilities for *Brisbane water supply* comprise the following (available capacities are shown in parentheses): Somerset Reservoir, 200,000 million gallons (67,500 million gallons); Lake Manchester, 5,800 million gallons (5,720 million gallons); Brisbane River, Mount Crosby Weir, 540 million gallons (500 million gallons); Pure Water Reservoir, Holt's Hill, 11 million gallons (11 million gallons); Enoggera Reservoir, 1,000 million gallons (600 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are 23 service reservoirs with a capacity of approximately 69 million gallons. The Somerset reservoir is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 67,500 million gallons to be for water storage and 132,500 million gallons for flood mitigation. The following table is a summary of operations of the complete Brisbane City Council system (Brisbane, Ipswich, Redcliffe, and portion of Albert Shire) for the years 1964-65 to 1968-69.

BRISBANE WATER SUPPLY(a): SERVICES, 1964-65 TO 1968-69

Year	Services connected	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of trunk and reticulation mains
					Per service	Per head of estimated population	
			mill gal	mill gal	gallons	gallons	miles
1964-65	193,471	703,258	61.4	22,409	317	87.3	2,564
1965-66	197,707	722,970	67.6	24,668	342	93.5	2,666
1966-67	202,886	740,332	66.1	24,110	326	89.2	2,735
1967-68	207,657	759,434	76.7	27,984	369	101.0	2,823
1968-69	213,445	772,356	85.4	31,170	400	110.6	2,834

(a) Includes Ipswich, Redcliffe and portion of Albert Shire.

The sewage treatment works of the *Brisbane sewerage scheme* is situated at Luggage Point at the entrance to the Brisbane River. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1964-65 to 1968-69.

## BRISBANE SEWERAGE: SERVICES, 1964-65 TO 1968-69

Year	Premises connected	Estimated population served	Total sewage pumped for the year	Length of main, branch, reticulation, etc. sewers
			mill gal	miles

1968-69	72,123	8,404	1,250	2,443	7,696	- 708

(a) Total, including other expenditure.

*Country towns.* In addition to the City of Brisbane, there were at 30 June 1968, 233 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils. At 30 June 1968 there were 59 cities or towns in addition to Brisbane with sewerage systems. The receipts (other than loan and loan subsidy) of water undertakings controlled by the cities and towns referred to above amounted to \$9,532,643 in 1967-68. Expenditure amounted to \$9,522,082, including \$4,110,867 for debt charges. In addition, expenditure from loans and loan subsidy amounted to \$10,579,300. Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

## South Australia

The water supply and sewerage systems in this State were constructed mainly, and are maintained by the Engineering and Water Supply Department, under the control of the Minister of Works. Works controlled by the Department are the Adelaide, Barossa, Beetaloo, Bundaleer, Moorook, Tod River, Warren, Yorke Peninsula, and other country water districts systems, the Morgan-Whyalla water supply system, the metropolitan and country sewerage systems, the Metropolitan Flood Waters

Scheme, and works on the River Murray constructed under the River Murray Waters Agreement. Several water supply schemes on the Murray River are administered by the Department of Lands in conjunction with irrigation works, and supplies to Woomeera and Leigh Creek coalfield are controlled by the operating authorities.

*Adelaide waterworks.* At 30 June 1969 the Adelaide waterworks supplied districts covering 384 square miles of the metropolis and extending to near country areas. The capacity of reservoirs and storage tanks was 36,534 million gallons and there were 3,554 miles of metropolitan mains. The Mannum-Adelaide pipeline conveys water from the River Murray to Adelaide at a rate of up to 66 million gallons a day. Water is delivered to a terminal storage near Adelaide and hence to the metropolitan distribution system or alternatively it can be delivered into metropolitan reservoirs on the River Torrens or to reservoirs on the River Onkaparinga by further pumping. The pipeline also supplies various country areas along and extending from its route.

**ADELAIDE WATERWORKS: FINANCES, 1964-65 TO 1968-69**  
(\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus (+) or deficit (-)
			Working expenses (b)	Interest	Total	
1964-65 . . . . .	92,872	8,417	4,222	3,907	8,129	+ 289
1965-66 . . . . .	98,056	9,521	5,292	4,248	9,540	- 19
1966-67 . . . . .	104,067	11,083	5,142	4,500	9,642	+ 1,441
1967-68 . . . . .	108,936	10,267	6,746	4,730	11,476	- 1,209
1968-69 . . . . .	114,121	10,793	5,552	4,919	10,471	+ 322

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide metropolitan sewerage system.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg, Port Adelaide, Christies Beach, and Salisbury-Elizabeth areas of 184 square miles in all, includes treatment works at Glenelg, Port Adelaide, Bolivar, and Christies Beach. Financial and other particulars for 1964-65 to 1968-69 are shown hereunder.

**ADELAIDE METROPOLITAN SEWERAGE: SUMMARY, 1964-65 TO 1968-69**

Year	Length of sewers miles	Number of con- nections	Invested capital at 30 June(a)	Revenue	Expenditure			Surplus
					Working expenses (b)	Interest	Total	
			\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1964-65 . . . . .	1,854	204,128	47,127	5,513	2,363	1,380	3,743	1,769
1965-66 . . . . .	1,952	213,375	56,235	6,386	2,614	1,561	4,175	2,211
1966-67 . . . . .	2,039	220,799	66,158	6,804	2,880	2,195	5,075	1,729
1967-68 . . . . .	2,125	227,489	74,808	7,156	3,375	2,822	6,197	959
1968-69 . . . . .	2,193	234,818	78,141	7,601	3,463	3,073	6,536	1,065

(a) After deduction of depreciation. (b) Includes debt redemption.

*Country sewerage schemes.* Sewerage schemes are operating at Port Lincoln, Naracoorte, Mount Gambier, Lobethal, Gumeracha, Nangwarry, Mount Burr, Myponga, Mannum, Whyalla and Angaston. At Port Lincoln and Mount Gambier the sewers discharge to ocean outfalls, and treatment works are used on the other systems. There are 248 miles of sewers and 12,939 connections in the country systems. Sewerage schemes for Murray Bridge and Millicent are under construction and operating in part.

*Country water supply.* Water districts systems at 30 June 1969 comprised an area of 14,037,000 acres. Supply came from reservoirs having a total capacity of 20,995 million gallons, from the River Murray, and from underground sources. Apart from local supplies, water from the River Murray is distributed over wide areas through the Mannum-Adelaide, Morgan-Whyalla, Swan Reach-Stockwell and Taillem Bend-Keith pipelines and branches of these pipelines. The principal areas of underground supplies are in the south-east of the State, where water from the Murray Basin can be had at moderate depths or from lakes, and from sand beds on Eyre Peninsula. In the year 1968-69 supplies made to Mount Gambier, Naracoorte and other towns amounted to 1,125 million gallons, and the Uley-Wanilla, Lincoln and Polda Basins contributed 499 million gallons to the Tod River Water District.

**COUNTRY WATERWORKS, SOUTH AUSTRALIA: FINANCES, 1964-65 TO 1968-69**  
(S'000)

Year	Invested capital at 30 June(a)	Expenditure				Deficit
		Revenue	Working expenses (b)	Interest	Total	
1964-65	96,333	3,538	4,253	3,787	8,040	4,502
1965-66	103,772	3,872	4,553	4,128	8,681	4,809

1967-68	117,541	4,340	5,262	4,954	10,216	5,876
1968-69	123,870	4,722	5,236	5,284	10,520	5,798

(a) After deduction of depreciation. (b) Includes debt redemption.

*Morgan-Whyalla water supply scheme.* This scheme, which has 223 miles of main via Port Augusta and 176 miles of main via the Spencer Gulf undersea crossing, was officially opened on 31 March 1944, the capital invested to 30 June 1969 being \$35,500,000. Apart from supplying Whyalla, the mains have been used to allow expansion of reservoir supplies in the northern agricultural area of the State, and to meet new demands caused by industrial growth at Whyalla, Port Pirie and Port Augusta. During 1968-69 water used from the scheme amounted to 3,618 million gallons.

#### Western Australia

The principal water supply systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage and Drainage Board and the Department of Public Works and Water Supply. The area which constitutes the territory administered by the Board encompasses approximately 1,270 square miles and extends from Perth southward to Rockingham and Serpentine, northward to Sorrento, and eastward to Sawyers Valley and Kalamunda. The Department of Public Works and Water Supply controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as 114 local water supplies (*see also* Chapter 24, Water Conservation and Irrigation). Four independent town schemes are controlled by local Water Boards in country areas, and individual water supplies serve railways, timber mill towns, isolated mines, pastoral properties, stock routes, and agricultural areas, mainly from dams, tanks, wells and bores.

*Metropolitan water supply, sewerage and drainage.* The sources of the metropolitan water supply are Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, and Victoria Reservoir. The largest of these sources are the Serpentine Reservoir and the Canning Reservoir, which have a capacity of 39,000 million gallons and 20,550 million gallons respectively. Water from storages on the Darling Range is conveyed to service reservoirs to serve the City of Perth and the metropolitan area. A limited quantity of water is drawn from Mundaring Weir to serve sections of Greenmount, and to meet the peak demands of summer consumption supplies are supplemented from artesian bores, which can provide a daily maximum of 19 million gallons. The amount of bore water used is rarely more than 10 per cent of the metropolitan consumption and is usually considerably less.

The following table shows particulars of the *metropolitan water supply services* for 1964-65 to 1968-69.

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA: SERVICES  
1964-65 TO 1968-69**

Year	Number of services (a)	Average daily consumption	Total consumption for year	Average daily	Length of mains	Number of meters
				consumption per service (b)		
		mill gal	mill gal	gallons	miles	
1964-65 . . .	154,051	55.7	20,339	367	2,526	135,471
1965-66 . . .	158,675	59.5	21,707	380	2,654	139,435
1966-67 . . .	164,782	70.8	25,843	437	2,798	146,028
1967-68 . . .	173,068	68.2	24,958	403	2,923	152,603
1968-69 . . .	185,340	76.7	28,015	429	3,144	161,859

(a) Figures relate to 30 June. (b) Calculated from averages for the year.

Some particulars of the *metropolitan sewerage and main drainage services* for 1964-65 to 1968-69 are shown in the following table.

**METROPOLITAN SEWERAGE AND MAIN DRAINAGE WESTERN AUSTRALIA: SERVICES 1964-65 TO 1968-69**

Year	Services	Length of sewers	Length of main drains
		miles	miles
1964-65 . . . . .	69,553	777	100
1965-66 . . . . .	70,283	816	102
1966-67 . . . . .	71,188	848	109
1967-68 . . . . .	72,177	886	118
1968-69 . . . . .	74,018	931	126

*Metropolitan Water Supply, Sewerage and Drainage Board—finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Board.

*Country water supplies.* Information relating to country water supplies is included in Chapter 24, Water Conservation and Irrigation.

#### **Tasmania**

*Waterworks.* At the end of 1968-69 the capacity of reservoirs in Tasmania was approximately 3,936 million gallons, supplying approximately 115,000 properties which consumed almost 16,000 million gallons of water during the year. The North Esk Regional Water Supply Scheme is operated by the Rivers and Water Supply Commission as a State concern, supplying bulk water to the municipalities of St Leonards, George Town, Lilydale, and portion of Westbury. This scheme also supplies water to industries situated near the Tamar River. Also vested in the Commission is the West Tamar Water Supply Scheme which serves the Municipality of Beaconsfield, and is operated by the Beaconsfield Council as the agent of the Commission. The over-all control of water supply in the greater Hobart area, comprising the municipalities of Hobart, Clarence, Glenorchy, and Kingborough, is vested in the Metropolitan Water Board, but the municipalities retain primary responsibility for reticulation. The Board has constructed a large pumping station at Bryn Estyn, near New Norfolk, which supplies bulk water from the Derwent River to the metropolitan area and has a pipeline capacity of 20 million gallons a day. In addition, the Board also controls the Southern Regional Water Supply Scheme, which supplies water to Hobart's eastern shore and the towns of Cambridge, Midway Point, Sorell, Seven Mile Beach, Rokeby, Lauderdale, Margate, Snug, and Howden. During 1968-69, 2 half-million gallon reservoirs to serve the towns of Margate, Snug and Howden were completed.

*Sewerage.* At the end of 1968-69 the number of tenements connected to sewerage services was about 72,000; only about 50 per cent of sewerage discharge goes through treatment plants.

#### **Northern Territory**

Information relating to water supply in the Northern Territory may be found in the chapter, Water Conservation and Irrigation.

#### **Australian Capital Territory**

The water supply, sewerage and drainage systems in the Australian Capital Territory are under the control of the Commonwealth Department of Works. The sources of the water supply are: Cotter Dam (capacity 967 million gallons), Bendora Dam (2,360 million gallons) and Corin Dam (capacity 16,600 million gallons). Water is fed from Bendora Dam by gravity to 17 major reservoirs. The maximum daily supply is 45 million gallons. An alternative supply is available from 9 pumps at the Cotter Dam at a rate of 38.5 million gallons per day.

The total population served in the Australian Capital Territory, which during 1968-69 consumed 6,089.4 million gallons of water, was 119,000 (at 30 June 1969). In addition, the Canberra water supply system supplied 382.6 million gallons of water to Queanbeyan, New South Wales. The total number of water meters at 30 June 1969 was 31,283 and the total length of water lines was 633 miles.

The sewerage system for Canberra suburbs has three treatment works: the Weston Creek works provides for 101,500 persons, the Fyshwick works provides for 10,000 persons and the Belconnen works provides for 8,500 persons. There were 533.8 miles of sewerage, and 9 miles of sewer rising mains (at 30 June 1969). There were also 572.6 miles of storm-water drains.

### **Harbour boards and trusts**

The number and net tonnage of vessels which entered the major ports in each State during the years 1967-68 and 1968-69 are shown in Chapter 12, Transport, Communication and Travel (*see page 344*). Particulars of overseas and interstate cargo discharged and shipped are shown on page 355 of the same chapter.

#### **New South Wales**

*The Maritime Services Board of New South Wales* exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State. At the ports of Sydney, Newcastle and Botany Bay the Board is also responsible for the provision of adequate wharfage and channels and carries out all construction, maintenance and dredging work.

*Port of Sydney.* The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as 'The Heads', and the Harbour proper, a distance of four miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 45 feet deep (low water ordinary spring tide) and the Eastern Channel 38 feet deep. The foreshores are 152 miles in length, and the total area of the port is 13,600 acres, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated close to the business centre of the city, about four or five miles from the Heads. At 30 June 1969 there were 5 dolphin berths, 3,350 feet long, and 80 effective commercial cargo berths, with a total length of 40,655 feet, controlled by the Board. Accommodation for harbour craft amounts to 2,245 feet, while the length of other berths, including oil and private wharves, totals 27,727 feet. Depth of water at wharves is up to 38 feet. Special facilities for the storage and handling of products such as wheat, wool, coal, etc. are provided. Docking facilities are available for large vessels at the Captain Cook Graving Dock. Containers facilities became available in March 1969 with the opening of the eastern section of the Balmain container terminals to cellular container vessels.

*Port of Newcastle.* Shipping at Newcastle is concerned primarily with the coal, iron and steel and other heavy industries located in the district. However, facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber. The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 36 feet at low water, is 500 feet wide. Wharfage accommodation amounts to approximately 15,000 feet, including about 3,000 feet of privately owned wharfage. A floating dock of 15,000 tons capacity is available at the port and a coal loading plant capable of loading at the rate of 2,000 tons an hour is now operating. The bulk berth which recently became operative at Kooragang is equipped with two grab unloaders each with a nominal capacity of 650 tons an hour.

*Botany Bay.* The Maritime Services Board of New South Wales is the administrative and controlling authority. The port is primarily a discharging centre for the oil refinery at Kurnell, near Sydney, and four berths are available as well as three tanker mooring buoys. The entrance to the Bay is approximately one and a quarter miles wide, with a minimum depth of 50 feet and about 42 feet in the dredged swinging basin.

*Port Kembla* is the port of the southern coalfields and for the major industrial areas in and about Wollongong. The port has an area of approximately 340 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation totalling 9,000 feet is provided for large ocean-going vessels. No cargo sheds are available, as the nature of the trade at the port does not call for the provision of sheltered storage accommodation. The first stage of a developmental programme to provide wharfage in an inner harbour for the steelworks and for general cargo shipment has been completed; 2,550 feet of wharfage is available and facilities include a 2,000 tons per hour coal loader.

*Other ports.* In addition to the port of Sydney, Newcastle, Port Kembla, and Botany Bay, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

*Port charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1 February 1936 the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to \$30,168,000 in 1968-69. This figure includes the revenue for the ports of Sydney, Newcastle and Botany Bay.

Financial details relating to these three ports are shown in the following table.

MARITIME SERVICES BOARD FUND: FINANCES OF THE PORTS OF SYDNEY  
NEWCASTLE AND BOTANY BAY, 1964-65 TO 1968-69  
(\$'000)

Year	Revenue			Expenditure(a)				Surplus
	Wharfage and transhipment rates	Tonnage rates and berthing charges	Other charges	Total	Administration and maintenance	Interest, debt redemption, exchange, etc.	Total	
1964-65	11,594	1,858	3,565	17,017	9,109	7,835	16,945	72
1965-66	10,711	1,832	3,980	16,523	9,512	6,916	16,428	95
1966-67	11,501	1,895	4,282	17,678	9,476	8,113	17,589	89
1967-68	12,664	2,024	5,645	20,333	10,830	9,451	20,280	53
1968-69	13,580	2,085	7,294	22,959	12,150	10,716	22,866	93

(a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account (\$5,080,000 in 1964-65, \$3,060,000 in 1965-66, \$3,975,000 in 1966-67, \$4,940,000 in 1967-68 and \$5,800,000 in 1968-69)

### Victoria

The Port of Melbourne comes under the control of the Melbourne Harbour Trust Commissioners, an independent autonomous statutory organisation, with a full-time chairman and five part-time commissioners. The area of water and land under the control of the Trust is ten and a half square miles, with sheds available for cargo in transit totalling 22,928 feet in length and covering an area of about 43 acres. Three of the largest transit sheds on the Australian coast are in operation at Appleton Dock. The sheds are 600 feet long by 150 feet wide, each with a cargo stacking area of 81,000 square feet. The berths are used for conventional general cargo trade as well as the unit-load container handling for general cargo in the overseas trade. The total length of wharves, piers and jetties in the port is 61,550 feet, covering an area of about 59 acres with 56,940 feet of effective berthing space.

In line with world-wide changes in cargo handling methods, current planning and construction in the Port of Melbourne are almost exclusively devoted to facilities catering for container ships and cargo as well as for the multi-purpose unit-load container conventional ships and cargo. The port's first overseas container terminal, Swanson Dock, which has 1,050 feet of concrete wharf apron with 22.5 acres stacking area behind the berth, was officially opened on 7 March 1968. Of the two additional 800 feet long 'common user' container berths on the east side of Swanson Dock one was expected to be completed in November 1970 and the other in November 1971. Two roll-on roll-off container unit-load berths were completed in early 1969, one at North Wharf for the trans-Tasman trade to New Zealand, having a 830 feet wharf apron and 3.3 acre stacking area behind the berth and the other at the River Entrance Docks, with a 600 feet wharf apron and additional 11.3 acre stacking area for the eastern seaboard trade.

The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is 31 to 39 feet.

The following table shows particulars of the financial operations of the Trust.

MELBOURNE HARBOUR TRUST: FINANCES, 1965 TO 1969  
(\$'000)

Year	Gross loan indebtedness at 31 December	Revenue		Expenditure			Total	Surplus (+) or deficit (-)
		Wharfage and tonnage rates	Total	Operation, administration and maintenance	Interest, debt redemption, exchange, etc.	General reserve, depreciation, renewals and insurance account		
1965	30,473	7,058	11,434	6,451	2,393	2,382	11,226	+ 208
1966	32,229	6,393	10,695	6,235	1,712	2,583	10,530	+ 165
1967	34,484	6,692	11,322	6,441	2,142	2,567	11,150	+ 172
1968	36,029	8,357	13,573	6,972	2,381	4,002	13,355	+ 218
1969	37,888	8,901	14,321	7,903	2,127	4,049	14,079	+ 242

The *Port of Geelong* operated by the Geelong Harbour Trust, has available 18 effective berths, plus 2 berths at the Commonwealth Explosives Pier, Point Wilson, owned and operated by the Commonwealth. A modern dry bulk berth (Lascelles Wharf No. 1 berth) adjoining Kings Wharf (now named Lascelles Wharf No. 2 berth) will be operational in 1970 as well as a roll-on roll-off berth being constructed at an adjunct of Corio Quay South No. 1 berth. The Trust operates its own towage fleet of six tugs, the largest of 1,900 b.h.p. Eight berths have a depth of 36 feet at low water; all other berths (except Commonwealth Explosives Pier, Point Wilson and Point Henry Pier, 30 feet) have a depth of 32 feet at low water. Revenue for the year 1968 was \$3,365,368, and expenditure from revenue totalled \$2,441,668. At 31 December 1968 the value of the Trust's fixed assets was \$26,402,870 and loans outstanding amounted to \$7,933,519.

The *Port of Portland* provides unimpeded access for large ocean-going vessels to the entrance of a 250-acre harbour basin having a minimum depth of 36 feet of water under all tidal conditions. Since the new all-weather deep sea port was completed to operational standards during 1960 an oil tanker berth has been commissioned, a new berth completed for the handling of dry bulk commodities and a 1.25 million bushel bulk grain terminal erected. Foundations for an extension to double the storage capacity of the terminal were completed at the end of June 1969, whilst at the same time construction of a 1,600 h.p. ocean-going tug had reached the stage where it was ready for launching.

Operating revenue and expenditure for the year ended 30 June 1969 were \$585,056 and \$385,911 respectively. The value of the Trust's fixed assets, less depreciation, was \$18,932,022 at 30 June 1969, and loans and advances outstanding amounted to \$19,283,190.

### Queensland

The ports of Queensland, except Brisbane and certain minor ports, are administered by harbour boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

*Brisbane.* Brisbane, in its dredged and improved river, accommodates comfortably the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly because of the increasing size of vessels, are still within easy access of the city. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1963-64 to 1967-68 are shown in the following table.

BRISBANE HARBOUR: FINANCES, 1963-64 TO 1967-68  
(\$'000)

Year	Loan indebtedness at 30 June	Receipts		Payments	
		Harbour dues	Total	Working expenses(a)	Total
1963-64	5,032	1,859	2,500	3,346	3,837
1964-65	4,912	2,125	2,796	2,305	2,646
1965-66	4,787	2,094	3,121	2,157	2,498
1966-67	4,636	2,044	2,987	2,228	2,561
1967-68	4,504	2,019	3,475	3,039	3,376

(a) Excludes interest and redemption included in total.

In addition to Brisbane harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, and 11 smaller harbours not administered by harbour boards.

*Harbour boards.* Harbour boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton, and Townsville. Finances for each port for the year ended 30 June 1968 are shown on page 629, together with a summary for the years ended 30 June 1964 to 1968.

HARBOUR BOARDS, QUEENSLAND: FINANCES, 1963-64 TO 1967-68  
(\$'000)

Harbour board	Revenue		Expenditure (excluding loan)			Surplus (·) or deficit (-)
	Loan indebtedness at 30 June	Wharfage and harbour dues	Total	Working expenses	Total including interest and redemption (a)	
Bowen	545	23	36	20	24	12
Bundaberg	6,040	706	1,076	431	1,148	72
Cairns	6,525	553	1,205	455	1,152	53
Gladstone	7,442	752	3,785	208	3,573	212
Mackay	4,165	475	1,553	328	1,264	289
Rockhampton	3,492	112	204	51	215	11
Townsville	8,362	858	1,443	587	1,744	301
<b>Total 1967-68</b>	<b>36,571</b>	<b>3,479</b>	<b>9,302</b>	<b>2,080</b>	<b>9,120</b>	<b>182</b>
1966-67	36,384	3,109	8,372	1,876	8,201	171
1965-66	35,436	2,524	8,862	1,792	9,088	226
1964-65	33,824	2,412	6,337	1,398	6,169	168
1963-64	28,369	2,329	5,419	1,362	5,402	17

(a) Includes expenditure on capital works from accumulated revenue.

### South Australia

*Department of Marine and Harbors.* All South Australian harbours are controlled by the Department of Marine and Harbors, which is responsible to the Minister of Marine for the discharge of its duties and functions. The most important ports are the five deep-sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln, and Thevenard. In South Australia there are also eight privately-owned and operated ports. The principal of these are Whyalla, Ardrossan, Rapid Bay, and Proper Bay (Broken Hill Pty Co. Ltd), Port Augusta (Commonwealth Railways) and Port Stanvac (Petroleum Refineries (Aust.) Pty Ltd). Maximum depths of water (low water) at the wharves of the main ports range from 27 feet at Port Pirie to 35 feet at Port Adelaide. The following table shows the finances of the Department for 1964-65 to 1968-69.

DEPARTMENT OF MARINE AND HARBOURS, SOUTH AUSTRALIA: FINANCES  
1964-65 TO 1968-69  
(\$'000)

Year	Loan indebtedness at 30 June	Expenditure from revenue				Surplus
		Revenue	Working expenses	Interest	Total	
1964-65	41,393	6,201	3,908	1,679	5,587	614
1965-66	43,172	6,194	3,941	1,734	5,675	519
1966-67	44,264	6,734	4,019	1,807	5,827	907
1967-68	45,478	6,418	4,196	1,869	6,065	352
1968-69	47,614	6,653	4,365	1,957	6,322	331

### Western Australia

The *Port of Fremantle* is operated and controlled by the Fremantle Port Authority. The port covers an extensive water area of some 180 square miles and comprises an inner and an outer harbour. The inner harbour includes 20 deep-water land-backed berths, providing more than 665,450 square feet of covered storage space and 12,787 feet of wharf berth accommodation. All inner harbour berths are dredged to a low water depth of 36 feet. The outer harbour includes 3 main anchorages, Gage Roads, Owen Anchorage and Cockburn Sound. Deep-water jetties, including the oil refinery jetty in Cockburn Sound, are available in the outer harbour. Ocean-going deep draft ships enter the Sound by means of a channel dredged through Success and Parmelia Banks to a low water depth of 45 feet and a bottom width of 500 feet. In the outer harbour there are 3 tanker berths each with a low water depth of 44 feet at the Kwinana oil refinery, 2 berths at the nearby steelworks jetties with a low water depth of 38 feet, 1 berth at the alumina works jetty with a low water depth of 40 feet and 1 berth at the bulk cargo jetty with a low water depth of 44 feet. There is also a special

berth for the handling of explosives. Total effective berth accommodation in the outer harbour is 7,530 feet. Gross earnings for 1968-69 amounted to \$10,009,346, working expenses to \$7,455,044, interest charges on loan capital \$891,567, and loan indebtedness totalled \$21,249,139.

The *Port of Albany* is controlled by the Albany Port Authority. The depth of water in the entrance channel is 33 feet, at one arm of the jetty 31 feet and at the other arm 33 feet. In the approaches to wharf berths the depth is 33 feet. Berthing accommodation totals 3,615 feet, comprising 1,115 feet at the wharf berths and 2,500 feet at the Deepwater Jetty. Gross earnings for the year 1968-69 amounted to \$517,573, working expenses \$345,192, interest and sinking fund charges \$240,918, and loan indebtedness totalled \$4,449,515.

The *Port of Bunbury* is controlled by the Bunbury Port Authority. The depth of water in the harbour is 30 feet and berthing accommodation is 4,808 feet. Gross earnings for the year 1968-69 amounted to \$807,513, working expenses \$287,865, interest on loan capital \$354,790, and loan indebtedness totalled \$7,244,557.

The *Esperance Port Authority* was established by the *Esperance Port Authority Act 1968*. Three berths provide a total length of 1,720 feet with a minimum depth alongside of 31 feet 6 inches. Bulk handling facilities are provided for petroleum products, grain, and minerals, including salt, nickel and copper. Gross earnings from 14 March to 30 June 1969 were \$96,667, working expenses \$79,738, and interest charges \$44,954. Loan indebtedness was \$3,044,018 at 30 June 1969.

The *Geraldton Port Authority* was established by the *Geraldton Port Authority Act 1968*. Four land-backed berths have a total length of 2,238 feet with a minimum depth alongside of 30 feet and a tide rise of 4 feet. The grain terminal provides storage for 5,000,000 bushels and permits ships to be loaded at the rate of 800 tons per hour. The iron ore berth is associated with a privately-operated ore stockpile and automatic conveyor system with a rated capacity of 1,500 tons per hour. Gross earnings from 14 March to 30 June 1969 were \$235,264, working expenses \$47,552 and interest charges \$77,858. Loan indebtedness stood at \$5,261,165 at 30 June 1969.

*Other ports.* The following ports are controlled by the State Government Harbour and Light Department: Broome, Busselton, Carnarvon, Derby, Onslow, Point Samson, Port Hedland, and Wyndham. Ports privately controlled comprise Yampi and Dampier, both operated by iron ore mining companies, and Exmouth, the port serving the communications installation at North West Cape. A private buoyed sea terminal is operated at Barrow Island for the shipment of crude oil, and private interests ship salt at Useless Loop in Shark Bay and from Cape Cuvier.

#### Tasmania

There are nine port authorities: the marine boards of Hobart, Devonport, Burnie, Circular Head (Stanley), King Island (Currie), Strahan and Flinders Island (Whitemark); also the Port of Launceston Authority and the Smithton Harbour Trust. The ports at Hobart, Launceston, Burnie and Devonport are terminals for overseas shipping. Port Latta in Circular Head's area is a specialised port for the shipment overseas of iron ore pellets, the loading point lying a mile out to sea in over 50 feet of water.

#### AUTHORITIES CONTROLLING PORTS, TASMANIA: FINANCES 1965-66 TO 1968-69 (\$'000)

Authority	Loan indebtedness at 30 June (a)	Receipts (revenue account) Total	Expenditure (revenue account)		Total (b)	Surplus (+) or deficit (-)		Loan expenditure
			Works and Services	Loan charges				
Hobart . . .	2,760	1,791	963	331	1,583	+	208	300
Launceston . . .	4,399	1,974	849	336	2,018	-	44	891
Devonport . . .	5,766	1,074	406	490	1,007	+	67	1,401
Burnie . . .	10,782	1,243	544	791	1,470	-	227	1,844
Circular Head . . .	438	64	10	45	68	-	4	25
King Island . . .	87	53	24	9	52	+	1	4
Strahan . . .	144	57	12	9	39	+	18	109
Flinders Island . . .	..	18	8	1	15	+	3	..
Smithton . . .	..	1	1	..	2	-	1	..
<b>Total, 1968-69</b>	<b>24,376</b>	<b>6,274</b>	<b>2,817</b>	<b>2,011</b>	<b>6,253</b>	<b>+</b>	<b>21</b>	<b>4,574</b>
1967-68	22,249	5,953	2,272	1,921	5,433	+	520	2,395
1966-67	20,361	5,628	2,711	1,646	5,333	+	295	2,184
1965-66	18,622	5,541	2,557	1,504	5,147	+	394	1,846

(a) The total of new loans raised during 1968-69 was \$2,836,500, of which Hobart raised \$300,000, Launceston \$1,186,500, Devonport \$700,000, Burnie \$500,000, Circular Head \$20,000, and Strahan \$130,000. (b) Includes other expenditure.

## Fire brigades

### New South Wales

A Board of Fire Commissioners, consisting of five members, one appointed by the State Government (President) and one each representing insurance companies, local government authorities, volunteer firemen, and permanent firemen, operates under the Fire Brigades Act, 1909-1965, and 163 fire districts had been constituted at the end of 1968. The cost of maintenance of fire brigades is borne in proportions of local councils and the Government each one-eighth, and the insurance companies three-quarters. The Board's borrowing power is limited to \$2,000,000.

At 31 December 1968 the actual strength of the Fire Brigade throughout the fire districts of New South Wales was 465 officers and 1,354 permanent and 2,805 volunteer firemen. Corresponding figures for the Sydney Fire District were 382, 1,182 and 280. The revenue for the year 1968 was \$11,061,000, as follows: from the Government \$1,365,000; municipalities and shires, \$1,365,000; fire insurance companies and firms, \$8,193,000; and from other sources, \$138,000. The disbursements for the year \$11,201,000. The Board of Fire Commissioners provides the fire protection services for Canberra, in the Australian Capital Territory, and the cost of these services is reimbursed by the Commonwealth Government.

Under the Bush Fires Act, 1949-1965 a Bush Fire Fighting Fund exists from which finance is provided for the prevention and fighting of bush fires. Contributions to the Fund by the Government, councils and insurance companies are in the proportion of one-quarter, one-quarter and one-half, respectively. At 30 June 1969 Volunteer Brigades equipped by means of this fund numbered 2,500 with an active membership of about 65,000 persons. The approved expenditure from the Fund for equipment, up to 30 June 1970, amounted to \$11,940,000.

### Victoria

In Victoria, fire brigades are controlled by the Metropolitan Fire Brigades Board consisting of ten members, including an employees' representative, and the Country Fire Authority consisting of eleven members.

*Metropolitan Fire Brigades Board.* The Metropolitan Fire Brigades Board receives contributions from the municipalities and the insurance companies in the proportion of one-third and two-thirds respectively. On 30 June 1969 the Board had under its control 45 stations, 1,175 permanent staff, and 254 special service and clerical, etc. staff. The total receipts for 1968-69 were \$7,285,315, comprising contributions \$6,221,188, receipts for services \$687,827, and interest and sundries \$376,300. The expenditure was \$7,846,592.

*Country Fire Authority.* This authority is responsible for the prevention and suppression of fires in the 'country area of Victoria', which embraces the whole of the State outside the Metropolitan Fire District, excluding State forests, National Parks and certain Crown lands. The country area has been divided into twenty-five fire control regions, four of which (Ballarat, Bendigo, Geelong and the Dandenong, Chelsea and Frankston areas) are wholly urban and the remainder mixed urban and rural. The Country Fire Authority receives contributions in the proportion of two-thirds from insurance companies and one-third from the Treasury. At 30 June 1969 the Country Fire Authority Act applied to 192 insurance companies and 209 urban and 1,050 rural fire brigades. The effective registered strength of the brigades was 118,569 members. Income for the year 1968-69 amounted to \$3,213,467. Total expenditure other than loan redemption and capital expenditure amounted to \$3,054,436.

### Queensland

There are two controlling bodies responsible for fire fighting services throughout Queensland. The State Fire Services Council controls brigades set up under *The Fire Brigades Acts 1964 to 1966*, and the Rural Fires Board under provisions of *The Rural Fires Act, 1946 to 1968* administers Bush Fire Brigades. In addition a Local Authority may establish a fire fighting brigade of its own as do some major establishments such as the State Forestry Department and private companies whose activities involve fire hazards.

Fire districts are constituted under '*The Fire Brigades Acts, 1964 to 1966*'. For each district, there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows: Treasury one-eighth, insurance companies three-quarters, and local authorities one-eighth. The insurance companies' contribution is paid to the State Government and thence to fire brigades.

At 30 June 1969 there were 84 Fire Brigades Boards. The number of stations was 177 and full-time staff numbered 1,145, including 50 administrative, 289 officers and 806 firemen. Volunteers numbered 18. Part-time staff numbered 1,341 including 85 administrative, 126 officers and 1,130

firemen. The total revenue for the year 1968-69 was \$5,705,554, received mainly from the following sources: Government \$682,670, local authorities \$682,670, insurance companies \$4,096,008. Loan receipts (Government and other) were \$569,945. The total expenditure for the year was \$5,758,808, the chief items being salaries and wages \$4,152,881, and interest and redemption of loans \$579,628.

The Rural Fires Board consists of a chairman and nine members all, except the one representing the United Graziers Association, are appointed by the Governor-in-Council from Government Departments and the Minister of Lands has power to add up to three additional members from the community as a whole. For administrative purposes the State is divided into Rural Fire Districts under the control of a Chief Fire Warden and in these districts Fire Wardens are appointed to assigned areas. These officers co-ordinate and control the Bush Fire Brigades on a voluntary basis. At 30 June 1969 there were 165 Rural Fire Districts with over 1,500 voluntary Fire Wardens and Bush Fire Brigades numbered 942. Expenditure by the State Government during 1968-69 amounted to \$62,242.

#### South Australia

The Fire Brigades Act, 1936-1958 provides for a board of five members, that the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies and two-ninths by the municipalities concerned, and that when the Treasury proportion exceeds its statutory contribution of approximately \$29,000, the excess is borne five-sevenths by insurance companies and two-sevenths by the municipalities. At 30 June 1969 there were altogether 37 fire brigade stations, of which 15 were metropolitan and 22 country.

The strength of the permanent staff at 30 June 1969 was 517, including 390 officers and men, 90 country auxiliary firemen and 37 other employees (including maintenance workers). The total revenue for the year 1968-69 was \$1,801,685, including contributions of \$1,546,614 made up as follows: insurance companies \$930,835, Treasury \$243,444 and municipalities \$372,334. The Treasury contribution includes a special grant of \$214,082.

#### Western Australia

By the provisions of the *Fire Brigades Act*, 1942-1966 certain local government areas are constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 59 fire districts at 30 June 1969. The contribution to the Board is made in the proportion of 16 per cent from the Government, 20 per cent from local government authorities, and 64 per cent from insurance companies. The number of local government authorities and insurance companies who contributed numbered 79 and 183 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30 June 1969 numbered 78, with a staff of 1,820 including 380 permanent officers and firemen and 1,440 volunteer brigade officers and firemen. The revenue for the year ended 30 June 1969 was \$2,507,471 and the expenditure \$2,542,563.

Under the *Bush Fires Act*, 1954-1965 a Bush Fires Board, consisting of thirteen members, six of whom are nominated by the Country Shire Councils' Association, was set up to advise the Minister for Lands on bush fire control and to administer the Bush Fires Act. The Act also provides for the registration of bush fire control officers, who numbered 2,295 at 30 June 1969, and the establishment of bush fire brigades, 947 at 30 June 1969. Many individual brigades are large organisations with numerous self-contained sections.

#### Tasmania

The *Fire Brigades Act* 1945 provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of existing fire brigade boards, while leaving the responsibility for individual control and management with the boards. The Commission consists of two persons nominated by the Minister, one person elected by the City or Municipal Councils' representatives, one person nominated by the Chairman of the Rural Fires Board and three persons elected by the insurance representatives of the Fire Brigades Boards. Contributions towards the cost of operations are on the basis of 22.5 per cent each from the Treasury and the municipalities and 55 per cent from the insurance companies concerned. The cost for the year 1968-69 amounted to \$962,741. There were, at 30 June 1969, 22 boards controlling 37 stations, and their aggregate staffs numbered 647 (officers and firemen), including 210 permanent firemen, 397 part-time firemen and 40 volunteers; the volunteers all operate under the Hobart Board in the forested and mountainous Fern Tree area.

## CHAPTER 20

# EDUCATION, CULTURAL ACTIVITIES, AND RESEARCH

For the most recent statistics available on subjects dealt with in this chapter reference should be made to the series of mimeographed bulletins on *Social Statistics* issued by this Bureau. The *Quarterly Summary of Australian Statistics* contains summarised information on these subjects, and financial aspects are dealt with in the annual bulletins *Commonwealth Finance* and *State, Territory and Local Government Authorities' Finance and Government Securities*. The Annual Reports of the respective State education departments provide detailed statistical and other information about particular States. Publications on education in Australia, secondary schooling, and other topics are issued by the Commonwealth Department of Education and Science.

## EDUCATION

An account of the development of the Australian school system up to 1929 may be found in Year Book No. 22. In Year Book No. 40 a review of changes which occurred up to 1951 and of the practices then current was presented. The present situation is summarised in the early part of this chapter, in textual material provided by the Commonwealth Department of Education and Science.

### Education in Australian schools

#### Administration and organisation

In Australia the provision of schools is mainly the responsibility of State governments. During the nineteenth century all six Australian colonies had established systems of compulsory education, beginning with the *Education Act 1872* in Victoria, and followed by similar Acts in Queensland (1875), South Australia (1875), New South Wales (1880), Tasmania (1893), and Western Australia (1893). After Federation in 1901 education was one of the responsibilities retained by the States, and these acts, with subsequent amendments, constitute the legal basis of compulsory education in the Australian States to-day. The Commonwealth has responsibilities for the provision of education facilities in the Northern Territory and the Australian Capital Territory. The government school system in the Australian Capital Territory is staffed by the New South Wales Department of Education and follows the educational syllabus of that State, the cost being recovered from the Commonwealth Government. A similar arrangement exists with the South Australian Department of Education in the operation of schools in the Northern Territory. The Commonwealth also provides direct financial assistance in various forms to schools throughout Australia.

School attendance is compulsory throughout Australia between the ages of six and, at least, fifteen. The minimum leaving age is fifteen years in New South Wales, Victoria, Queensland, and South Australia, and sixteen years in Tasmania, while in Western Australia attendance is compulsory until the end of the year in which the child turns fifteen years. The Education Acts require that all children between the prescribed ages must attend either a government school or some other recognised educational institution. Children may be exempted from the requirement of compulsory attendance if they live too far from a school or suffer a physical disability. These children usually receive correspondence tuition.

The school year in Australia begins at the end of January or early in February; it ends in mid-December. The long vacation is taken over the summer months (December to February) and two short vacations divide the school year into three terms.

At government primary schools it is usual for both boys and girls to attend the same school; at the secondary level practices vary, but the trend is towards co-educational schools. Non-government secondary schools cater mainly for boys and girls separately.

#### Government school systems

Although the educational systems in the six States are not identical, they have many similar features. Responsibility for framing educational policy and having it put into effect rests with a Minister for Education, who is a member of the State Cabinet. The administrative authority in

each State is an education department headed by a Director-General of Education. Separate divisions of the education department in each State administer primary, secondary and technical education (in New South Wales there is a separate Department of Technical Education). Other divisions look after such matters as the recruitment and training of teachers, pupil guidance, research, and the education of atypical children. In New South Wales and Queensland, administration has been decentralised to a degree by the appointment of directors who are responsible for policy in the area which they control.

Tuition at government primary and secondary schools is free in all States. Parents are usually expected to bear the cost of textbooks, uniforms and charges for such things as the use of sports materials. However, income tax concessions exist in respect of these expenditures for both government and non-government systems, and certain textbook costs are subsidised in the case of pupils attending government and non-government schools in some States.

#### **Non-government school systems**

Approximately 28 per cent of Australian school children are enrolled at non-government primary and secondary schools and about 80 per cent of these attend Roman Catholic schools. The majority of other non-government schools, sometimes known as 'private' or 'independent' schools, are conducted by, or are under the auspices of, various other religious denominations, particularly the Church of England, Presbyterian and Methodist Churches. A few non-government schools are undenominational and are conducted under the auspices of corporate bodies. Non-government schools follow curricula similar to those laid down by State education departments, and prepare their pupils for examinations conducted by public examining bodies.

The methods adopted by the education authorities to ensure an acceptable standard of education at non-government schools vary from State to State. In New South Wales, Victoria, South Australia and Tasmania, these schools are regularly inspected. In Victoria and Tasmania, schools and teachers must be registered. Non-government schools in Queensland and also those in Western Australia are inspected on request.

The principals of a number of the larger non-government schools have formed organisations with both State and Australia-wide coverage, namely the Headmasters Conference of the Independent Schools of Australia and the Association of Headmistresses of the Independent Schools of Australia.

Most Roman Catholic parish schools charge fees, but payment is not insisted on in the case of families who cannot afford it. At the majority of non-government secondary schools, privately endowed scholarships are available, and reductions in fees are normally made for children of clergy or for two or more members of one family attending the same school. With these exceptions, pupils of non-government schools must pay fees.

Certain State scholarships and bursaries are tenable at approved non-government secondary schools. From the establishment of school systems by the State governments, official policy has been largely against the provision of direct financial assistance to non-government schools, but since 1967, all States have introduced some system of direct assistance to non-government schools, usually in the form of pupil allowances. Most States also assist non-government schools in approved building projects. For details of Commonwealth finance for the building and equipping of science laboratories and school libraries, see pages 664-5 and 669.

#### **Schools and courses**

A diagram of State and Territory school systems, showing current grades, examinations, and age levels is shown on page 641.

*Primary education.* Though school attendance is not compulsory until the age of six, many children begin school before that age, attending infants schools or infants classes attached to a primary school. In some States the first year in the infants department is known as 'kindergarten'. The emphasis in infants classes is on the development of skills in language and numbers.

Primary schools are normally provided when and where there is sufficient population to justify them. Irrespective of the size or the location of the school, standards of tuition are similar because teachers within a State follow similar courses of training and transfer between metropolitan and country areas. The education departments prescribe syllabuses of instruction, which are drawn up with the assistance of expert committees.

Progression from primary to secondary school is usually automatic. Allocation to particular schools or particular courses is based on the district in which the child lives, the recommendations of the headmaster, general ability tests, tests of achievement in the basic subjects, and parents' wishes.

*Secondary education.* The age of transfer from a government primary to secondary school is usually between twelve and thirteen. The secondary pupil takes up new studies, such as foreign languages,

technical or commercial subjects, and moves on to more specialised studies in natural and social sciences and mathematics. The actual subjects studied depend on the ability of the pupil and, in some States, the type of school.

The most common type of secondary school is the comprehensive or multi-purpose high school, which offers a wide range of subjects. To cater for this diversity of subjects, most high schools now have modern facilities for the teaching of domestic science, commercial subjects, woodwork, and other technical subjects. In some States there are still, however, separate high schools specialising in technical, agricultural, commercial, or home science subjects. Some of the agricultural high schools are residential. The curriculum consists of general educational subjects and practical farm training. There are also 'area' and 'rural' schools offering up to three years of secondary study.

### Examinations

For information on examination procedures up to 1969, see Year Book No. 55, pages 485 and 486. Changes occurring or foreshadowed in 1969 are set out below.

*Victoria.* From 1970, the Victorian matriculation examination will be called the Victorian Higher School Certificate Examination.

*Western Australia.* From 1970, all first year high school pupils in government schools and many in non-government schools will study under the Achievement Certificate System which replaces the Junior Certificate examination. Pupils will be required to take four 'core' subjects (English, mathematics, social studies, and science) and to study one or more of a wide range of subjects, including languages, art, trade subjects, music, and drama. An Achievement Certificate will be awarded when the pupil leaves school, assessment being based on a cumulative record of achievements maintained at the school.

*Tasmania.* The Schools Board Certificate examination at the end of fourth year was discontinued in 1969, and replaced by an internal School Certificate examination. The matriculation examination has been renamed the Higher School Certificate.

### Special facilities for pupils

Details of medical and dental inspection of school children, and the provision of free milk are given in Chapter 14, Public Health. In Year Book No. 55, a general description is given of provisions for isolated areas, Schools of the air and correspondence schools, (pages 494 and 495), handicapped children and physical education (page 495), and educational guidance and school broadcasting and television (page 496). The following particulars supplement that information.

*Aboriginal education.* Aboriginal children in towns and cities attend the same schools as other Australian children, but special schools for Aborigines have been developed on isolated settlements and mission stations, financed partly or wholly from government sources.

*School television.* Television programmes from pre-school to secondary school level are produced by the Australian Broadcasting Commission. The annual production is approximately 300 titles and about 250 titles are purchased each year from overseas organisations and independent film companies. During 1969, there were between 25 and 30 hours of educational television each week in each State. The number of schools equipped to receive programmes was 4,600.

*Handicapped children.* A plan to have the Commonwealth Department of Social Services survey the special needs of handicapped children, with the assistance of the Commonwealth Departments of Health and of Education and Science, was announced in 1969. Payments under the *States Grants (Independent Schools) Act 1969*, which provides assistance to approved schools for the handicapped will commence in the 1970 school year.

### Scholarships and bursaries

All States have schemes of financial assistance to school pupils, mostly at the secondary level, through scholarships or bursaries. As tuition in government schools is free, this assistance is usually in the form of maintenance allowances, both for children living with their parents and for those living away from home. These may be paid in a lump sum or in instalments throughout the year. Awards are usually made on the results of a competitive examination, and sometimes a means test is applied. Other government and private authorities, such as the Repatriation Department and the Legacy War Orphans Fund, assist certain categories of pupils with their school education. Many non-government schools also award scholarships, on a competitive basis, which enable pupils to attend the particular schools at reduced fees or without payment of fees.

In 1964 the Commonwealth Government, with the co-operation of the State education departments, introduced a programme of secondary scholarships to encourage successful candidates to complete the final two years of secondary schooling. Further details of the Commonwealth secondary scholarships scheme and the Commonwealth technical scholarship scheme are given on page 665.

Various forms of financial assistance, both government and non-government are available to help Aborigines to undertake further studies. In 1969, 100 secondary scholarships were awarded by Abschol, a scholarship scheme organised by the National Union of Australian University Students, for Aborigines. *See* page 666 for details of the Aboriginal Study Grants Scheme, begun in 1968 by the Commonwealth.

#### **Subsidised transport to and from school**

All the States have systems of subsidies by which transport is free or at a concession rate for children who have to travel to and from school daily. In some States an allowance is paid if private transport has to be used.

#### **Subsidies to children living away from home**

For children whose homes are too far away from a secondary school to allow daily travel, some States run hostels or give financial assistance to privately owned hostels. The States also pay boarding allowances to the holders of State bursaries or scholarships and, in some cases, agricultural scholarships include free board at an agricultural high school.

#### **School buildings**

The increase in the school population in the last decade led to an expansion in school building. To cope with this growth in population, it has been necessary to make use of temporary and emergency structures. Quite large schools are being built in stages to match increases in local population in new and rapidly developing suburbs in metropolitan areas. For details of assistance provided by the Commonwealth for the building and equipping of science laboratories, *see* page 669.

#### **Textbooks, materials and other equipment**

The State education departments supply government schools, free of charge, with essential equipment, including scientific apparatus, maps, blackboards, chalk, and cleaning materials, and non-consumable equipment for commercial, home science and manual training. Garden tools and physical training equipment are also supplied in most States. Readers and writing equipment for individual pupils are sometimes supplied free in primary schools, and several education departments produce monthly school magazines which are supplied free or at a nominal price. In primary schools (except in one State where textbooks are made available free to children in both government and non-government primary schools) and in secondary schools, textbooks must, however, be purchased by pupils. In several States, schools own stocks of textbooks which are hired to pupils, and in one State, secondary textbooks are sold at reduced prices. In four States certain textbook costs are subsidised for pupils attending government and non-government schools. The parent and citizen organisations, with the assistance of subsidies from the education departments, are usually responsible for providing equipment such as radios and television sets, film strip projectors, pianos, duplicators and, in particular, library books.

#### **Visual aids**

Each of the State education departments has a visual education branch to handle the production and distribution of such materials. Film strips and posters are distributed free or at low costs. Films are held in central libraries and are requisitioned by schools as required for teaching purposes. Commonwealth financial assistance under the Secondary Schools Libraries Programme is available to State education departments for a range of audio-visual equipment.

#### **Parent and citizen organisations**

In Australia, where all government schools are administered by central departments, there is limited opportunity for local participation in education. Public interest is expressed through parents committees or organisations of parents and other citizens interested in supporting their local school. The Education Acts of all States provide for the formation of groups of this type, whose aims are to promote an interest in the school by bringing parents and teaching staff together, to help provide supplementary teaching aids and recreation materials, to foster the regular attendance of children at school, and to help find accommodation for teachers. In several States the general maintenance of school buildings, equipment and grounds is a statutory responsibility of the parent groups, costs being covered by government grants. Lunch canteen services at local schools are maintained by groups in some States. Parent groups have established school children's insurance schemes, operated through State Government insurance offices or private insurance companies. These schemes cover accidents to children which occur between the time of leaving home for school and returning home by the usual direct route.

State-wide councils of federations of parent groups are associated in a federal body, the Australian Council of School Organisations.

## Research

All State education departments have branches undertaking research directed towards departmental activities. The work of the research branches is concerned with such matters as curriculum content, new teaching methods, evaluation procedures, wastage rates, and educational statistics. Education research is also carried out by the faculties and departments of education in the universities, the Commonwealth Department of Education and Science and the Australian Council for Educational Research. Information on current research projects is summarised below:

*New South Wales.* The New South Wales Education Department, with officers from the Department of Public Health and Commonwealth Acoustic Laboratories is represented on a committee set up in 1969 to investigate the education of pre-school deaf children. A second survey was made by the Department, in collaboration with the Commonwealth Departments of Education and Science and Immigration into migrant education in New South Wales. Under the chairmanship of Sir Walter Scott, a survey was conducted of class sizes and teaching loads in secondary schools, and the results were published in 1969. The Rydge Committee, convened to investigate the possibility of setting up an education commission in New South Wales, released its findings in 1969.

The Adult Education Department of the University of Sydney has been developing Aboriginal Family Education Centres, and for the five-year period 1969-74, it has \$350,000 available for the project. A five-year research project, begun in 1969, into the pre-school aspects of these centres is being financed by the Bernard Van Leer Foundation.

*Queensland.* A committee of eight Queensland educationists, chaired by the Director of the Australian Council for Educational Research, has been appointed by the Queensland Government to consider the secondary level examination system.

The Bernard Van Leer Foundation has made a grant of \$90,000 to assist the Queensland Government with a project which, among other things, involves an investigation of the language skills of Aboriginal children and the development of special language programmes to overcome language difficulties.

*South Australia.* A committee of inquiry, under the chairmanship of Professor P. Karmel, has been set up by the government. Its aim is to investigate the whole range of education in South Australia, including the use of available resources, teacher training, and a review of teaching and curricula methods.

*Tasmania.* A committee, chaired by the Director of Personnel in the Education Department, with representatives of the Tasmanian Council of Churches, the Roman Catholic Church, the Tasmanian Council of State School Parents and Friends Associations, and the Tasmanian Teachers' Federation was appointed in 1969 to examine religious instruction in State schools. A teaching kit has been developed by the Education Department Research Branch which enables children to learn about their community. The education department of the Australian Broadcasting Commission has produced a series of television programmes to augment the kit. Rural education in Tasmania is being investigated by an Education Department committee under the chairmanship of the State Director of Primary Education.

*Australian Science Education Project.* This project, which developed out of the Junior Secondary Science Project initiated by the Victorian, South Australian, and Tasmanian Governments, has been extended to all States. It is the first national curriculum project to be established under government sponsorship. The Commonwealth will contribute \$750,000 and the States \$450,000 over the five-year period commencing in 1969.

*Asian studies.* An advisory committee was set up by the Commonwealth in 1969 to survey and make recommendations on the study of Asian topics in Australia. The committee is named the Advisory Committee on the Teaching of Asian Languages and Cultures. Professor J. J. Auchmuty is its chairman.

*Tertiary Education Entrance Project.* A set of aptitude tests for improving methods of selection of students for tertiary studies is being developed by the Australian Council for Educational Research, supported by the Commonwealth through the Department of Education and Science.

## Numbers of schools, teachers and pupils

The statistics which follow relate generally to schools providing education according to the primary or secondary school curricula of the various State education departments, or both, whether provided in government or non-government schools. Junior technical schools, correspondence schools, and schools in institutional homes, hospitals and similar establishments are included. Institutions providing only pre-school education, senior technical and agricultural colleges, evening schools, continuation classes, and institutions such as business colleges and coaching establishments are, as a rule, excluded.

School censuses are conducted annually at or about the beginning of August throughout all States and Territories of Australia. The numbers of pupils in the tables which follow refer to enrolments at the school census date. The numbers of schools and teachers refer to the position at dates which vary from State to State and in some instances from year to year. While it has not been possible to present all figures on a uniform basis between States, continuity of the figures for any one State over the period of years shown has been maintained as far as possible.

### Schools, teachers and pupils

The numbers of government and non-government schools, teachers and pupils in 1969 and earlier years are shown in the following tables. For more detailed statistics, see *Schools* bulletin (reference No. 13.5).

### NUMBERS OF SCHOOLS, TEACHERS AND PUPILS, BY CATEGORY OF SCHOOL STATES AND TERRITORIES, 1969

Australia—1969	p89,337	p5,871	p2,804	20,962	5,002	1,467	p110,299	p10,873	p4,271
1968	84,988	5,583	2,639	20,474	5,056	1,371	105,462	10,639	4,010
1967	80,256	5,215	2,290	19,475	4,829	1,225	99,731	10,044	3,515
1966	76,028	4,932	2,224	18,663	4,423	1,146	94,691	9,355	3,370
1965	73,134	4,209	1,867	18,264	4,111	1,023	91,398	8,320	2,890

(a) Excludes teachers-in-training generally. (b) The methods used for calculating equivalent full-time units of part-time teaching vary from State to State, between government and non-government schools, and between primary and secondary schools within States. For most schools the information is based on either the total hours worked or total number of class periods taken in a week by part-time teachers, in relation to the normal hours worked or periods taken by full-time teachers. (c) Visiting teachers who attend more than one school are counted as part-time in each. (d) If a full-time teacher teaches both senior and junior technical school pupils, he is counted as part-time in these statistics (which include junior technical, but not senior technical schools), if his teaching load in the junior school is less than 75 per cent. (e) Excludes unqualified teachers and teaching assistants at mission schools.

### Grades of pupils

The classification of pupils as primary and secondary and the allocation of primary and secondary pupils to grades differs from State to State because of differences in the curricula and the organisation of schools and grades. The numbers of pupils in grades in each State were shown in previous issues of the Year Book. Current figures of pupils in grades are shown in the *Schools* bulletin (reference No. 13.5) and the annual reports of the State Ministers of Education. See also Plate 36 page 641.

### Pre-school education

Pre-school centres were first established in the Australian mainland states by voluntary organisations and a large number are still supported and supervised by them. The organisations include kindergarten unions, day nurseries and creche associations, pre-school associations and denominational kindergartens. All now receive financial assistance from State governments but the amounts granted vary considerably from State to State. Other pre-schools are subsidised directly by States. In Tasmania pre-school teachers are employed by the State Education Department and in the internal Territories by the Commonwealth Department of Education and Science; buildings are also provided in the Territories. In all cases parents assist in the provision of equipment.

Pre-school centres are situated in city and country areas and programmes are adapted to meet the needs of the children attending. A typical pre-school centre provides half-day sessions for two groups of children. Active parent participation in the running of the centres is encouraged. A limited number of creches and day nurseries provide full-day care in closely settled areas, and there is an increasing demand for care for children of working mothers, met in part by privately run centres of varying standards. In a few cities occasional care is available and there are a few residential centres. Some results of a Survey of Child Care are given in Chapter 21, Employment and Unemployment.

The Australian Pre-School Association is a national body comprising all the voluntary organisations who have as their main concern the welfare and education of pre-schoolage children. It co-ordinates and strengthens pre-school work, sets standards, and is responsible for the administration and supervision of the six Lady Gowrie Centres established by the Commonwealth for child-study, research, and demonstration.

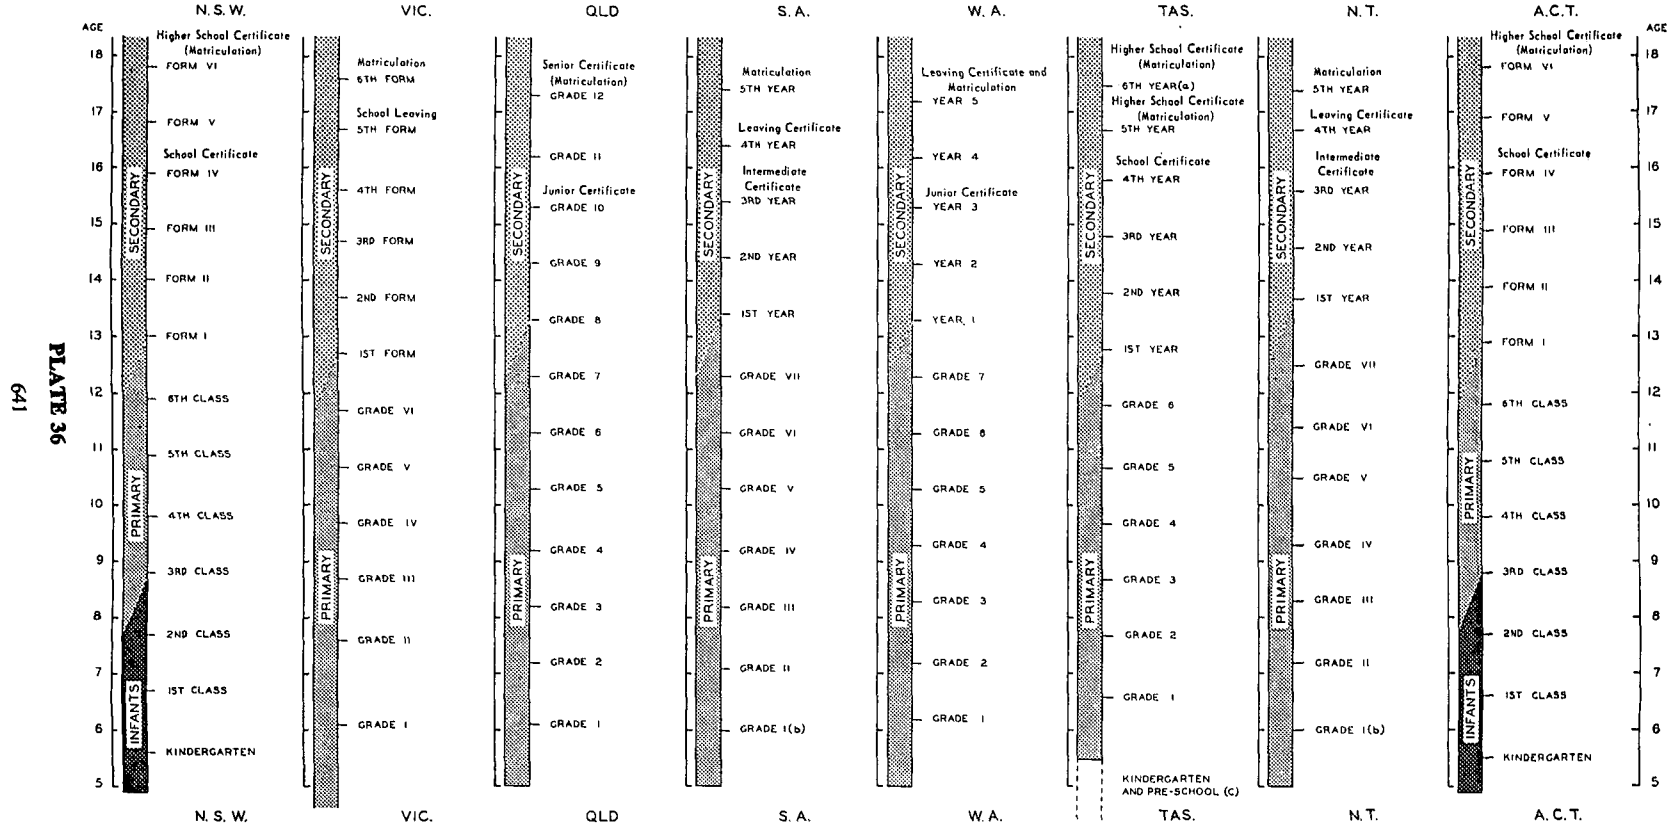

Radio and television bring some experience of pre-school education within the reach of practically every pre-school child in Australia. The Australian Broadcasting Commission pioneered the programme 'Kindergarten of the Air', a twenty-five minute session, broadcast throughout the country from Monday to Friday. This session is designed to reach children in isolated areas. The half-hour television programme 'Play-School' is also available each week-day to children of kindergarten age in State capital cities and some country areas.

### Post-school study courses

As part of the quarterly population survey (see Chapter 21, Employment and Unemployment) a survey was conducted in all States and Territories in August 1968 to obtain estimates of persons enrolled for courses of study or training outside school. The results of the survey supplement data about enrolments collected from schools and other institutions, and present a general indication of post-school education.

## GRADES AND EXAMINATIONS IN THE PRIMARY AND SECONDARY SCHOOL SYSTEMS IN EACH STATE AND TERRITORY, 1969

The grade terminology follows, as nearly as possible, that used in government primary and high schools in each State in 1969. It is not necessarily used in all types of schools. The grades have been written in to agree with the age-scale shown on the diagram, in order to indicate differences in age-grade patterns between States. However, age-grade information is not precise enough to allow determination of accurate average age of pupils in each grade; and the age indications are therefore only approximate. The diagram should not be taken as a comparison of academic standards of grades between States. The columns of the diagram have been closed with a line where pupils are not accepted into government schools below the age shown. For a more detailed presentation of the systems operating in each State, reference should be made to diagrams etc. appearing in the annual reports of State Education Departments.

- (a) In Tasmania many pupils study for the Higher School Certificate over a two year period.  
 (b) Preparatory grades are attached to some schools in South Australia and the Northern Territory.  
 (c) In Tasmania, many children attend two years pre-school, one year kindergarten grade, or one year of both, before entering grade 1.

A course of study was defined for purposes of the survey as the provision of training, instruction, or supervision of study, according to a given syllabus or programme, but excluding sporting, recreational and cultural activities, on-the-job training, correspondence courses which do not require submission of written work or sitting for examinations, full-time courses lasting less than three months, and part-time courses lasting less than six months.

The survey was not designed to yield detailed accurate information about total enrolments in particular courses or in particular institutions. Differences between figures of enrolments at universities, colleges of advanced education, etc., derived from this survey, and those derived from statistical collections from institutions arise because the survey estimates are based on a sample. Also, there are differences in timing, and it was not always possible to use the same definitions.

For the purposes of the survey, *advanced level courses* are, broadly, those leading to professional qualifications and usually requiring as pre-requisites the completion of secondary education to matriculation level or its equivalent. *Technician level courses* are intermediate between courses leading to professional qualifications and those leading to trade qualifications. Most certificate courses in technical colleges are at this level. Technician level courses have been classified according to field of study as technical (mainly engineering and technological), commercial (accounting, administration, secretarial, etc.) or other (including nursing). *Trade level courses*, mainly apprenticeship courses, usually supplement on-the-job training for skilled manual occupations. *Miscellaneous courses* are those which cannot be allocated to the above levels. They have been classified into those providing instruction (for persons not at school) in school subjects for school qualifications, commercial courses below the technician level (mainly typing and shorthand) and other courses, such as more substantial adult education courses, which do not belong to one of the three levels. 'Post-trade', 'post-certificate', 'post-diploma', and 'post-graduate' courses (i.e. courses, usually shorter, providing specialised further training within a level) are not classified as miscellaneous but are associated with each level.

A classification was made of persons enrolled for post-school study courses according to the type of institution providing the course. Educational institutions (such as universities, colleges of advanced education, teachers colleges, technical colleges) were distinguished from other institutions not primarily set up for teaching purposes, such as employers providing courses for their employees and hospitals at which nurses are trained (teaching hospitals); also government institutions were distinguished from non-government institutions. For the purposes of this classification, universities, colleges of advanced education, hospitals where nursing training is provided, and similar government-supported or semi-governmental institutions, were classified as government. Teachers colleges include government and non-government teachers colleges and kindergarten teachers colleges. Colleges of advanced education are those which were recognised as such under the *States Grants (Colleges of Advanced Education) Act* at the time of the survey.

The labour force comprises all persons who, during survey week (the week immediately preceding that in which the interview took place) were either employed or unemployed according to the definitions customarily used in the population survey. (For detailed definitions see Chapter 21, Employment and Unemployment.) The remainder of the population is classified as not in the labour force, and includes pupils at school and full-time students at other educational institutions, who were neither employed nor unemployed. Wage and salary earners are defined as persons who, during survey week, either worked (or had a job but did not work because of illness, etc.) for wages, salary, commission, kind, etc., or who were unemployed during survey week but worked for wages, salary, etc. in their last job. Trainee teachers at teachers colleges are classified as wage and salary earners.

The survey covered all persons aged fifteen years and over except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from the population censuses and estimates. Persons regarded as patients of institutions such as hospitals, sanatoria and nursing homes were also excluded from the survey.

Estimates derived from the survey were published in a mimeographed bulletin, *Survey of Non-School Study Courses, August 1968* (reference No. 13. 11). The following tables summarise the results. Estimates less than 4,000 are not shown because these would be subject to such high standard errors (relative to the size of the estimate) as to seriously detract from their value for most reasonable uses. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable. For details of the reliability of estimates (sampling and non-sampling errors) see section 'The labour force survey', chapter 21, Employment and unemployment, pages 694-6.

### Universities

Applicants for enrolment in Australian universities are required to have passed the matriculation examination in one of the States after five or six years of secondary education. Each university has its own regulations for matriculation, specifying the number and combination of subjects to be passed or the level of performance required. Students entering the universities have the choice of undergraduate study in various faculties. All universities provide also post-graduate courses of study.

There are fifteen universities and two university colleges in Australia. The James Cook University of North Queensland, which was formerly the University College of Townsville, was raised to the status of a full university in 1970. Details of the courses offered by these institutions, together with background information on their teaching and research programmes, and a summary of general university development in recent years, is given in Year Book No. 55, pages 507 to 509.

The following tables show statistics of university staff, student enrolments, assisted students, degrees conferred, diplomas and certificates granted, income and expenditure. The first table gives summary statistics for each university and branch whereas the other tables provide State figures only. Reference should also be made to the annual publications *University Statistics, Parts I-III* for further details.

(a) Figures shown for 1968 and 1969 refer to net enrolments, i.e. gross enrolments adjusted for students enrolled for more than one course. If a student is enrolled for two or more courses at different levels, the adjustment is made against the lesser course. (b) These are full-time university staff enrolled in higher degree courses. (c) Includes post-graduate diploma, sub-graduate diploma, certificate and other non-degree course and enrolment. (d) Figures shown are gross enrolments except in the 'all students' columns.

## Assistance to university students

The Commonwealth Government, through the Commonwealth Scholarships Board, grants undergraduate and post-graduate scholarships to university students. (Details of the Commonwealth Scholarship Scheme are given on page 665. Commonwealth, State and local governments also award cadetships and other assistance to their employees. Foreign students are assisted by the Commonwealth Government under arrangements such as the Colombo Plan. The universities themselves grant exhibitions and scholarships as well as special assistance to teachers, etc.

## UNIVERSITIES: ASSISTED STUDENTS, 1969

(a) No awards have yet been made at Macquarie University. (b) No awards have yet been made at La Trobe University. (c) Figures for the years 1965 to 1967 refer to the year ended 31 July; those for 1968 onwards refer to the year ended 30 June. Figures included in both 1967 and 1968 are shown in brackets against 1968 figures.

## University income and expenditure

UNIVERSITIES: INCOME, 1968  
(\$'000)

	Government grants(a)		Other income			Total income
	Cwlth Government grants	State Government grants	Donations and endowments(b)	Student fees(c)	Other income	
<b>TOTAL INCOME</b>						
New South Wales . . . . .	25,841	28,917	4,722	7,255	3,656	70,390
Victoria . . . . .	19,347	20,990	2,490	6,201	2,291	51,318
Queensland . . . . .	6,713	8,130	2,742	3,293	537	21,416
South Australia . . . . .	7,114	7,955	533	1,560	870	18,032
Western Australia . . . . .	3,895	4,352	864	1,423	851	11,386
Tasmania . . . . .	2,418	2,511	179	631	209	5,948
Australian Capital Territory . . . . .	23,471	..	454	556	1,334	25,816
<b>Australia—1968 . . . . .</b>	<b>88,798</b>	<b>72,855</b>	<b>11,984</b>	<b>20,919</b>	<b>9,748</b>	<b>204,306</b>
1967 . . . . .	79,872	64,304	10,461	19,145	8,597	182,379
1966 . . . . .	71,012	65,509	10,781	16,653	7,053	171,008
1965 . . . . .	64,537	56,993	9,885	14,869	5,895	152,178
1964 . . . . .	54,203	46,449	8,569	11,833	5,598	126,652

(a) Includes funds expended by various government departments and other bodies in respect of universities but not controlled by the universities. (b) In the case of endowments, only income from property and other investment of these endowments is included. The treatment of donations depends on the terms of the gift, etc. When the capital sum is specified to be expended over several years, only the portion of the capital sum allocated to each year is shown as income in that year, but if the capital sum is available for spending without limitation as to time, the full amount is recorded as income in the year it is received, irrespective of whether it is spent in that year or not. The capital value of land and buildings donated to the universities is not recorded as income, unless these properties are sold, in which case the amounts realised are included.

(c) Excludes fees collected on behalf of student unions, adult education fees, ad hoc course fees and public examination fees.

## Colleges of advanced education

The Committee on the Future of Tertiary Education in Australia recommended that interim capital grants be made by both the States and the Commonwealth to twelve specified institutions in five States during 1965-66 preliminary to an arrangement for the expansion and development of tertiary education outside the universities. This recommendation was accepted by all governments, and the Commonwealth established the Commonwealth Advisory Committee on Advanced Education to advise it on the continued development of the colleges which provide training with a vocational emphasis, as distinct from the academic education provided by the universities.

In some States the colleges are being developed from existing technological institutions, but new colleges are also being established. Many colleges cater for a number of vocations in fields such as accountancy, architecture, art, applied chemistry, building, business management, data processing, engineering, librarianship, medical laboratory technology, metallurgy, nutrition, pharmacy, and textile sciences. Provision is being made for teacher education to be introduced into a number of these multi-purpose colleges. Other colleges are specialist institutions, such as agricultural colleges, art schools, conservatoria of music, schools of physiotherapy and occupational therapy, and colleges offering courses in advanced nursing administration, domestic science, forestry and horticulture.

Administrative changes are taking place in the States to co-ordinate the activities of colleges of advanced education. In New South Wales, an Advanced Education Board has been established; in Victoria, the co-ordinating powers of the Victoria Institute of Colleges have been strengthened; in Tasmania, a Council of Advanced Education has been created; and in Queensland, legislation is being enacted to make the institutes of technology autonomous under an advanced education board. In some States provision is also being made for co-ordination of all tertiary education; notably through the Higher Education Authority in New South Wales, the Tertiary Education Commission in Western Australia, and the Joint Consultative Council in Tasmania.

Further information about the development of colleges of advanced education can be found in the reports of the Commonwealth Advisory Committee on Advanced Education: the First Report, 1967-69, and the Second Report, 1970-72. Details of the maximum Commonwealth grants for the development of the colleges are given on page 663.

(a) Directly supporting staff are those who work in laboratories, etc., and, whilst not teaching, form an integral part of the teaching services. (b) Includes the following number of teachers engaged in teaching both advanced level and other courses: New South Wales, 75; Victoria, 513; South Australia, 114; and Tasmania, 8. (c) Comprises directly supporting staff wholly engaged in assisting teaching of advanced level courses, and others engaged in assisting teaching of both advanced level and other courses. (d) The estimated portion of time (expressed in terms of equivalent full-time staff) devoted to advanced level courses by full-time teaching and directly supporting staff engaged in both advanced level and other work. (e) The component of advanced level course work (in terms of equivalent full-time staff) undertaken by all part-time teaching and directly supporting staff engaged during the year. (f) Includes some full-time teaching staff not wholly engaged in teaching advanced level courses. (g) Full-time equivalent units for 13 part-time teaching staff are not available. (h) Full-time equivalent units for 10 teachers are not available. (i) Includes 0.85 equivalent full-time units for an unspecified number of part-time teachers.

### Teacher education

State education departments recruit most prospective teachers for government service from students leaving schools after completion of secondary education. Each department offers training awards annually on the basis of academic merit and personal suitability. These awards cover the cost of a teacher training course (which may include university studies) and provide a living allowance. Students are usually required to enter into an agreement to serve for a specified number of years in the government schools of the State where they have trained. In some States intending teachers can obtain a scholarship at the first public secondary examination to enable them to complete teachers college entrance requirements. Such an award entails a bond of service for a longer period.

The State education departments conduct teachers colleges to train teachers for government schools. These colleges are co-educational and, in the larger States, have been established in country areas as well as in cities. The principal and staff of the colleges are responsible to the Director-General of Education in the State concerned. Teachers colleges are also conducted by other organisations. For details of Commonwealth financial assistance to the States for building projects, see pages 671-2.

In 1969, there were 9 government teachers colleges in New South Wales, 14 in Victoria, 4 in Queensland, 5 in South Australia, 3 in Western Australia and 2 in Tasmania. Excluding kindergarten teachers colleges (see page 655) there were 8 private colleges in New South Wales, 6 in Victoria, 1 in Queensland, and 1 in the Australian Capital Territory. The Australian School of Pacific Administration in New South Wales also conducts teacher education courses.

#### Teachers for government schools

*Training of teachers.* Most teachers for government primary schools are trained in teachers colleges. Intending secondary school teachers either obtain a university degree with additional professional teaching training such as a Diploma in Education, or are required to hold a diploma or certificate from a teachers college. Teachers of specialist subjects, such as music, art, manual arts, domestic science, and commercial subjects, receive from two to five years training which varies according to the institution concerned and the type of school in which the teacher is to serve. Where the specialist course is given at an institution other than the teachers college—e.g. at a university, technical college, or conservatorium of music, students are required to attend teachers college or university lectures in education, and in some cases the specialist course is followed by a year of professional training. Courses designed to train physical education teachers are offered in universities in most States, and in at least one teachers college in every State.

Training for teachers of agricultural subjects in secondary schools consists of either an agricultural college diploma or a university degree course together with professional training. Teachers of technical subjects in secondary schools may be trained in manual or industrial arts courses of two to four years' duration, at teachers colleges, technical colleges, or, in one State, at a university.

At several Australian universities, students wishing to take up teaching as a profession can receive their professional training along with the study of their teaching subjects as part of a first degree course. Courses of a similar nature are available at some colleges of advanced education where teacher education courses are integrated into the general teaching of the college.

The following table shows departmental students undergoing teacher education courses in 1969. Departmental students are those awarded State education department scholarships or fellowships and who have executed an agreement for periods of teaching service after completion of their teacher education. The table also shows private students at government colleges, including those sponsored by government departments other than State education departments. The figures exclude enrolments for short refresher courses and summer schools. The figures include 708 departmental students at various universities who have not been enrolled at a teachers college. Some students enrolled at universities may take part of their university course at a teachers college (e.g. graduate students in New South Wales undergoing a 'professional year' leading to the award by the university of Diploma in Education).

(a) There are no government teachers colleges in the Australian Capital Territory and the Northern Territory. (b) Excludes enrolments in part-time courses, at the Technical Teachers College, Victoria, of 283 practising teachers from government schools and council controlled technical colleges. The figures also exclude 221 Technical Teachers College students undergoing one or two years industrial experience. (c) These one year courses are chiefly extension courses for students who have qualified as teachers and for practising teachers, or for students already holding approved subject qualifications. However, practising teachers in such courses were excluded from the tables. (d) This table excludes 26 male and 19 female students enrolled in courses for primary teaching, and 67 male and 34 female students enrolled in courses for secondary teaching at the Australian School of Pacific Administration.

The following table shows departmental students enrolled in the first year of their courses and also those enrolled in the final year of their courses. The figures exclude enrolments in one year courses (see footnote (c) to the preceding table).

DEPARTMENTAL STUDENTS ENROLLED IN THE FIRST  
AND IN THE FINAL YEAR OF COURSE, 1969

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Australia		
							Males	Females	Persons
Enrolled in the first year of a course	4,652	4,368	1,886	1,398	1,082	446	4,754	9,078	13,832
Enrolled in the final year of a course	2,815	2,982	1,430	1,172	670	330	2,751	6,648	9,399

*In-service training.* As almost all teachers now enter the profession by way of teachers colleges or universities, where they receive basic professional training, in-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training. In-service training usually takes the form of short courses held sometimes during vacations, sometimes during school-time or in the evening. In some States in-service courses for teachers in remote areas are provided by correspondence. In some States there are also in-service courses for special groups of teachers such as headmasters or teachers in one-teacher schools. In addition, district inspectors are responsible for organising short conferences of teachers, where professional topics are discussed. Education departments encourage teachers to pursue university courses and in some States pay the cost of courses undertaken by selected teachers.

*Status of teachers.* Most teachers in government schools are permanent public servants and have security of tenure, superannuation rights, and the right of appeal in matters of promotion. The centralised education systems and the general policy of providing fully trained teachers for both city and country areas mean that teachers are subject to transfer to any part of the State in which they serve.

#### Training of technical teachers

To preserve links with industry and trade practice, schemes have been developed for the recruitment of specialist tradesmen as teachers and for their training in educational method and teaching techniques. In Victoria, the Technical Teachers College provides training for students with appropriate diploma or trade qualifications and suitable industrial experience. In New South Wales, technical college lecturers and tradesmen-teachers receive an in-service course of teacher training in general education theory and teaching method, while correspondence courses and visiting lecturers assist the newly appointed tradesman-teacher in country colleges. Variations in this scheme are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teachers' certificates from teachers colleges.

#### Training of non-government school teachers

Teachers for non-government schools receive their training in a number of ways. The Roman Catholic Church staffs both its primary and secondary schools as far as possible with members of religious orders. In recent years there has been an increase in the number of lay teachers being employed in Catholic schools, and training of students to become lay primary teachers has been instituted.

Other non-government schools tend to recruit their staff from teachers who have already obtained qualifications in Australia or overseas. In New South Wales and Victoria, non-government school authorities offer courses designed specially for teachers in their schools. Non-government schools also recruit university graduates, who are then given professional guidance by senior members of the school staff. Private students may enrol at government teachers colleges on payment of a fee, but the number of places available is limited. The Commonwealth Government provides financial assistance to the States for approved building projects provided that the colleges admit a number of private students. Some teachers destined for non-government schools train in this way.

The following table shows, for non-government teachers colleges, the number of students enrolled, and the number in the final year of their courses.

**NON-GOVERNMENT TEACHERS COLLEGES: ENROLMENTS<sup>(a)</sup>, AUSTRALIA, 1969**

	<i>Enrolments</i>			<i>Students in final year of course</i>		
	<i>Males</i>	<i>Females</i>	<i>Persons</i>	<i>Males</i>	<i>Females</i>	<i>Persons</i>
For primary teaching . . .	242	1,067	1,309	81	452	533
For secondary teaching . . .	152	123	275	25	27	52
<i>Total . . . . .</i>	<i>394</i>	<i>1,190</i>	<i>1,584</i>	<i>106</i>	<i>479</i>	<i>585</i>

<sup>(a)</sup> These figures include students taking university degree courses whether instruction is given at the university or the college. They exclude students at kindergarten teachers colleges.

During vacations many non-government teachers attend in-service training courses organised by education departments. In recent years vacation courses have been provided by bodies other than education departments for teachers from both government and non-government schools. For example, an independent body, the Science Foundation for Physics within the University of Sydney, has provided such courses for teachers of science in secondary schools in New South Wales.

#### Kindergarten teachers colleges

The kindergarten unions, which are non-government organisations, have established colleges providing three-year courses in all States except Tasmania, where an infant and pre-school course is provided by the Hobart Teachers College. The minimum entrance age is usually seventeen years and applicants with matriculation status are preferred. In New South Wales, the Sydney Day Nursery and Nursery Schools Association maintains a training college which provides a course for pre-school and kindergarten teachers. These colleges provide full-time diploma courses which are similar in content and standards. Teachers are trained for work with children between the ages of two and seven years. The Melbourne Kindergarten Teachers College offers a one year full-time post-diploma course of advanced studies for teachers holding recognised qualifications and having a minimum of four years teaching experience.

In 1969 there were 870 students enrolled for diploma courses at kindergarten teachers colleges, of whom 210 were in their final year. In addition there were 7 students enrolled in a one-year post-diploma course for qualified kindergarten teachers. There are no male students enrolled at kindergarten teachers colleges.

The Commonwealth Government provides financial assistance for pre-school teachers colleges. For details, see page 664.

### Technical education

Australian technical colleges offer training in all the major industrial skills and in a wide variety of commercial, artistic and domestic occupations. The main types of courses are described in Year Book No. 55, pages 498 and 499.

Technical colleges in Queensland, South Australia, Western Australia, and Tasmania are administered by branches of the State education departments. In Western Australia and South Australia, the Institutes of Technology function as autonomous institutions. New South Wales has a separate State Department of Technical Education. In Victoria there is a dual system with a number of the older colleges controlled by their own 'councils' in addition to government-controlled colleges administered by the Technical Education Branch of the Education Department. The council-controlled colleges receive government grants-in-aid. The diploma awarding schools or sections of technical institutions are in process of being separated from the trade, certificate and other sections of technical education, and of being developed as colleges of advanced education, and are now receiving Commonwealth financial assistance.

The numbers of colleges, teachers and enrolments in each State and Territory during 1968, and for Australia for the period 1964 to 1968 are given in the following table. The statistics include senior technical schools and colleges, institutes of technology and colleges of advanced education providing technical education, and their teachers and students at all levels. Whilst details for colleges of advanced education are included, the basis of collection differs from that used for advanced level courses, statistics of which are given on pages 651-2.

**TECHNICAL EDUCATION: COLLEGES, TEACHERS AND ENROLMENTS  
STATES AND TERRITORIES, 1968**

1964	211	6,165	9,598	15,763	n.a.	n.a.	340,080

(a) Students enrolled represent gross enrolments, no allowance having been made for students enrolled in more than one course. (b) Includes Australian Capital Territory. Gross enrolments at Canberra Technical College were 5,956 in 1968; 5,578 in 1967; 4,855 in 1966; 4,267 in 1965; and 3,551 in 1964. (c) Figures include teachers and students at technical colleges and other centres, such as high school classrooms, in which technical classes are conducted. (d) Includes correspondence course teachers and students. (e) Teachers include those at both senior and junior technical colleges. (f) Teachers represent number of teaching positions.

### Agricultural and forestry education

Agricultural faculties have been established in universities in all States. Seven provide degree courses in agricultural science, one in rural science, one in wool and pastoral sciences, one in agricultural economics and three in veterinary science. Besides undergraduate courses, these faculties collectively provide a wide range of post-graduate diploma courses as well as facilities for training for higher degrees and doctorates.

At least one government agricultural college in each State, except Tasmania, has been or is being developed as a college of advanced education. The primary role of these colleges is now to train students for professional extension work or technology roles in the agricultural services. Other colleges which aim to teach the principles and practices of agriculture and farm management to those intending to take up farming as a career, are being developed in New South Wales, Queensland, and Victoria. There is no agricultural college in Tasmania. With the transfer of the C. B. Alexander Presbyterian Agricultural College to the New South Wales government agricultural college system, the Marcus Oldham farm management college in Victoria is the only remaining independent institution of this type in Australia.

Training in forestry is provided by a Department of Forestry in the Faculty of Science within the Australian National University's School of General Studies. A four-year degree course is offered. At the Victorian School of Forestry, Creswick, a three-year diploma course can be taken.

State expenditure on agricultural and forestry education from Consolidated Revenue and certain special funds is shown on page 673.

### Other education

#### Conservatoria of music, schools of art, etc.

In addition to the conservatoria of music which are attached to universities or which constitute separate colleges of advanced education, there is the Canberra School of Music which offers a four year full-time diploma course of theoretical and practical studies. Some schools of art have been developed into colleges of advanced education or included as departments in such colleges, and offer courses in printing, sculpture, and design as well as in basic art.

At the end of 1969, the New South Wales Government set up an expert committee to carry out a comprehensive survey of art and design education in the State. The Committee has been asked to determine whether to set up a special college of advanced education for fine arts and design, or whether to arrange for these to be taught in other institutions in close relationship to other disciplines such as architecture and engineering.

In 1969 a joint committee, comprising members from the Melbourne University Conservatorium of Music and the Victoria Institute of Colleges, was formed to make recommendations on future developments in music teaching.

A Concert Diploma in Music course of three years full-time or six years part-time study commenced at the Queensland Conservatorium in 1969. Also beginning in 1969 were courses by fellowship for music teachers in Queensland schools.

#### Educational training in the defence services

Each of the three defence services maintains institutions for the training of officers. The Royal Australian Naval College, Jervis Bay, Australian Capital Territory, became an affiliated college of the University of New South Wales in 1968. Selected matriculated cadets complete first year degree studies in science or engineering at the College, and subsequent years of degree studies at the University. The Royal Military College, Duntroon, Australian Capital Territory, became a college of the University of New South Wales in 1968. The Royal Australian Air Force Academy, Point Cook, Victoria, has evolved from the Royal Australian Air Force College, which was established in 1948 as a tertiary training centre to provide a professional education for permanent officers of the Air Force. It is affiliated with the University of Melbourne and has adopted that University's Bachelor of Science course. The Academy is also permitted to present students for higher degrees in science and the degree of Doctor of Philosophy. Students may also proceed to the University of Sydney to take a degree in aeronautical engineering. The Australian Staff College and the Royal Australian Air Force Staff College provide one year courses for officers. Educational training is also provided in the apprentice training schools conducted by each of the Defence Services, and in the Royal Australian Navy School for Junior Recruits. The Royal Australian Air Force School of Languages, Point Cook, Victoria, conducts courses in French and Asian languages. In 1969 there were 43 students enrolled, of whom 7 were Royal Australian Air Force personnel.

The following table shows the number of officers, officer cadets and other ranks enrolled in the training establishments mentioned above.

#### SERVICE ESTABLISHMENTS PROVIDING EDUCATIONAL TRAINING AUSTRALIA, 1969

<i>Establishment</i>	<i>Enrolments</i>	<i>New entrants during year</i>	<i>Number completing course during year</i>
<b>OFFICERS AND OFFICER CADETS (a)</b>			
Staff Colleges—			
Australian Staff College . . . .	70	70	70
Royal Australian Air Force Staff College	30	30	24
Officer cadets—			
Royal Australian Navy—			
Royal Naval College . . . .	130	76	20
H.M.A.S. <i>Leeuwin</i> . . . .	2	..	2
Royal Military College . . . .	252	98	54
Royal Australian Air Force—			
R.A.A.F. Academy . . . .	86	33	14
R.A.A.F. Diploma Squadron . . .	166	61	12
<b>APPRENTICES AND OTHER RECRUITS (b)</b>			
Royal Australian Navy—			
Naval artificer apprentices . . . .	689	217	154
Junior recruits . . . .	630	630	578
Topmen scheme . . . .	78	78	67
Army Apprentice School . . . .	161	n.a.	77
Royal Australian Air Force—			
School of Technical Training . . . .	295	158	152
School of Radio . . . .	84	58	44

(a) Includes 141 cadets enrolled for university courses, 2 enrolled at teachers college, and 166 enrolled at an institute of technology. (b) Includes 90 apprentices enrolled at a technical college or institute of technology.

### **The Australian School of Pacific Administration**

The Australian School of Pacific Administration, controlled by the Department of Territories, trains students in the various aspects of service and administration in Commonwealth Territories, including teaching. In 1969, the number of students training as teachers was 26 males and 19 females in primary teaching courses, and 67 males and 34 females in secondary teaching courses. Eight of these students were also enrolled for a university degree course.

### **Australian Administrative Staff College**

Opened in 1957, the Australian Administrative Staff College is a private organisation working in close co-operation with government and other public bodies, the armed services, and the trade union movement. It was founded, and is owned, by a large group of leading Australian companies and has its permanent premises at Mount Eliza, near Melbourne. The College conducts residential courses for administrators to further the study of the problems which arise in managerial work.

### **Technical training by government departments**

Although most needs of departments for trained staff are met by apprenticeship schemes and other technical college courses and by the universities, some departments provide training which is not available elsewhere. The most important field for which such training is provided is the training of telephone, telegraph, radio, and television technicians by the Postmaster-General's Department.

### **Migrant education**

The Department of Immigration is responsible for the teaching of English to migrants as part of its assimilation programme. Advice about migrant education and teaching materials are provided by the Department of Education and Science, and the courses are administered by the State education departments.

The Australian Government allocates funds to the Intergovernmental Committee for European Migration which, in Greece, Italy, Germany, and Austria, provides class and correspondence instruction for intending migrants to Australia. Courses are also being organised in Turkey and a recorded Australian course is in use in Finland. The governments of Holland and Belgium assist with courses conducted in these countries. Many migrants, however, receive their first instruction in English from shipboard education officers.

The Department of Education and Science, the State education departments, and the Australian Broadcasting Commission co-operate in producing a radio/correspondence course in English. Films of common situations with a graded English dialogue produced by the British Broadcasting Commission are shown on Australian television.

Accelerated English courses for migrants with a professional background were introduced in 1969. A special course 'English for Migrants in Industry' has been prepared for use in factories and other places of employment.

In 1969, about 14,000 New Australians were enrolled in continuation classes, and 7,000 were taking part in the various radio and correspondence courses.

### **Adult education**

The term 'adult education' as used in Australia refers mainly to non-vocational educational and cultural activities for adults. While the nature of the recognised adult education authorities varies from State to State, their major activities have many common features. Regular courses of lectures are organised on such topics as literature, music, drama, international affairs, languages, and crafts. Some authorities also organise discussion groups, festivals and summer schools, and provide special services for groups in remote areas. In 1960 an Australian Association of Adult Education was formed, and its first annual conference was held in Adelaide in 1961. The Association handles matters pertaining to adult education at a national level and arranges liaison with similar bodies in other countries.

One of the first bodies active in the field of adult education in Australia was the Workers' Educational Association, which formed associations in all States in 1913. Its aims were to bring the universities into closer relationship with the community in general and to provide for higher education in civic and cultural subjects. These associations have been superseded by Adult Education Boards or Councils set up by the State governments in Victoria, Queensland, and Tasmania, and by the university in Western Australia. In the other two States, New South Wales and South Australia, the associations continue to co-operate with the universities in their extension work and are given direct grants by the governments concerned.

There are throughout Australia various other organisations which are active in the field of adult education. The World Education Fellowship, for example (*see below*), since its inception in Australia has been interested in adult education.

The organisation of adult education and some of the activities in each State are described in Year Book No. 53, pages 625 to 627.

#### Overseas students

Information about overseas students in Australia is available from three statistical series. The Department of Education and Science compiles statistics of *government sponsored overseas students in Australia*. The statistics of government sponsored students in institutions of higher learning are compiled from records held by that Department; those of other government sponsored students are estimates from information held by the Department of External Affairs. In June 1969, there were 1,409 government sponsored overseas students in institutions of higher learning, and 624 other government sponsored students. These figures exclude some personnel of overseas armed forces taking courses at Australian Defence Colleges. Altogether, there were just over 2,000 government sponsored overseas students in Australia in 1969. Students under the Colombo Plan Technical Co-operation Scheme numbered 1,478. The largest numbers of government sponsored students came from Malaysia, Indonesia, Singapore, and Thailand.

The Department of Immigration prepares statistics of overseas students in Australia who have been admitted under the *Private Overseas Student Programme*. In 1969, there were 9,550 students undertaking courses or training in Australia under the Programme; 4,524 from Malaysia, 2,007 from Hong Kong, and 1,019 from Singapore. Courses chosen were mainly in engineering and building (1,657), economics and commerce (1,350), medical and para-medical (1,294) and general and school courses (2,484).

A survey of *overseas students enrolled for advanced level courses* in Australian education institutions is conducted annually. The institutions reported some 7,500 enrolments in 1969, about 6,000 at universities, 1,200 at colleges of advanced education and some 300 at other institutions.

### Organisations associated with education

#### Australian Council for Educational Research

The Australian Council for Educational Research, a non-governmental body, is engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and inquiries, makes grants to approved educational investigators, serves as a centre for disseminating educational information, provides training for research workers, and standardises and distributes educational and psychological tests for use in Australia. Although this council is an autonomous body, the Commonwealth and State governments give substantial financial support.

#### World Education Fellowship

The World Education Fellowship is a world organisation of parents, educators and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State. Its Australia-wide journal *New Horizons in Education* is published twice a year.

#### Australian College of Education

The Australian College of Education was formed in 1959. Its aims are to bring together leading teachers and administrators in every field of education, to raise the standard of the profession of education in Australia, to establish and proclaim fundamental educational values, and to recognise outstanding contributions to educational practice. Chapters of the College have been set up in all States, and several of the addresses and papers delivered at meetings of the College have been issued in published form.

## Commonwealth activities in education

### Fields of activity

Although education is primarily the responsibility of the States, the Commonwealth has instituted a number of measures of direct assistance to educational institutions and to students. It is responsible for public education in its own Territories and is engaged in educational activities incidental to its responsibilities in such areas as defence, external relations, immigration, and social services. Education in Commonwealth Territories is outlined in Chapter 29, The Territories of Australia; various schools and colleges for the Defence Services are referred to on page 657, and other activities which may be considered broadly as educational are referred to in the section on Broadcasting and Television in Chapter 12, Transport, Communication and Travel. Details of Commonwealth expenditure on education are provided on pages 668-72.

### Department of Education and Science

The Commonwealth Department of Education and Science was created in December 1966. The Department, which absorbed the former Education Division of the Prime Minister's Department including the Commonwealth Office of Education, and subsequently, in 1968, the Education Branch of the Department of the Interior, is concerned with direct grants for educational purposes, e.g. for universities, colleges of advanced education, school libraries, technical schools, and science buildings, as well as with grants for building teachers and pre-school teachers colleges. It is responsible for assistance to students for the various Commonwealth scholarship schemes, for the scheme of Queen Elizabeth II Fellowships, and for special scholarships offered by overseas countries for Australians. Among the Department's other responsibilities are matters in the field of international relations in education, including Unesco and Commonwealth Co-operation in Education, and liaison with State and other education bodies throughout Australia. The Department provides professional advice on education to other Commonwealth departments and authorities. It administers grants to such bodies as the Academy of Science, the Humanities Research Council, the Social Sciences Research Council and the Institute of Aboriginal Studies, and is responsible for grants for scientific research such as those recommended by the Australian Research Grants Committee. It administers educational services in the Australian Capital Territory.

The *Australian Universities Commission* and the *Commonwealth Advisory Committee on Advanced Education* are responsible to the Minister for Education and Science. The Minister is also responsible for the *Commonwealth Scientific and Industrial Research Organization*, the *National Standards Commission*, the *Australian National University*, the *Institute of Aboriginal Studies*, and the *College of Advanced Education* in Canberra. The Prime Minister's Department continues to be responsible for the National Library and for art, literature and other cultural activities in which the Commonwealth is interested.

### Commonwealth Scholarships Board

This Board, under its former title of the Universities Commission, was established by the *Education Act* 1945. Prior to 1945 the Commission had functioned under wartime National Security Regulations. The Board consists of a chairman and three other members. The main responsibility of the Board, at present, is advising the Government on the policy and administration of Commonwealth university and advanced education scholarships and Commonwealth post-graduate awards. For a brief description of each type of award, see page 665.

### Advisory bodies

The Commonwealth Government has established various advisory bodies whose fields of concern relate to matters of education. Already mentioned above is the Australian Universities Commission, which advises the Commonwealth Government on university development. The Commonwealth Advisory Committee on Advanced Education advises the Minister on the balanced development of tertiary education outside universities. Within financial limits nominated by the Minister, the Committee recommends grants to the States for colleges of advanced education and directs grants to any such colleges established by the Commonwealth. The Australian Research Grants Committee advises the Minister on the merit of applications for research grants from individuals and research teams, and suggests the allocation of funds. The Queen Elizabeth II Fellowships Committee advises the Minister on the merit of applicants for these fellowships, which are awarded for post-doctoral study in the physical and biological sciences, and advises generally on the administration of this scheme of fellowships.

In 1969 the triennial reports of the Australian Universities Commission, the Commonwealth Advisory Committee on Advanced Education, and the Australian Research Grants Committee were presented to Parliament. For details of the financial programmes, see pages 662-3 for universities, page 663 for colleges of advanced education, and page 661 for research.

**International relations**

An account of the relations and exchanges in the field of education before 1969 between Australia and other countries can be found in Year Book No. 55, pages 526–527.

In 1969, delegates from Australia participated in a number of conferences in Paris organised in connection with the International Hydrological Decade including one in mid-December intended to provide assessment of the IHD programme to the present and to determine guidelines for the second half of the Decade. Delegates were also sent to the conference sponsored by Unesco—Symposium on the University of Tomorrow (Osaka).

The Department of Education and Science arranged for several specialists sponsored by Unesco to visit Australia and to confer with and advise Australian experts. They attended the Australian Unesco Seminar on Support for the Performing Arts (Canberra), the Australian Unesco Seminar on Music in Tertiary Education (Queensland), the Selection Committee for the Post-graduate Training Course in Research Techniques in Chemistry at the University of New South Wales, and they participated in discussions with Australian hydrologists and scientists in related fields (Sydney, Canberra and Melbourne).

Under the programme of Commonwealth Co-operation in Education special teaching courses were arranged in 1969 by the Department of Education and Science. A two-year course in infant teaching methods was begun by the New South Wales Department of Education. The Western Australian Education Department conducted a one-year refresher course in primary teaching methods, which was attended by teachers from Zambia, Western Samoa, New Hebrides and the British Solomon Islands. A short course for school inspectors was again provided by the South Australian Education Department. Inspectors and teachers from Nigeria, Sierra Leone and Jamaica attended the course. The University of Queensland conducted a one-year course leading to a Certificate of Education for Overseas Teachers. During the year arrangements were made for a mathematics workshop for overseas teachers to be conducted by Macquarie University in 1970. The provision of this training follows a Commonwealth Conference on Mathematics in Schools which was held at Trinidad in September 1968.

Although arrangements for educational assistance for the award of scholarships are made on a bilateral basis between the relevant Commonwealth countries, a Commonwealth Education Liaison Committee has been established in London to act on matters of common interest. The Department of Education and Science liaises with the Australian representative of this Committee.

**Commonwealth grants for education purposes**

*Grants for research purposes.* The Second Report of the Australian Universities Commission recommended that during the calendar years 1964, 1965 and 1966 a total of \$10 million should be provided for universities to support research activities at the post-graduate level, half the sum to be provided by the Commonwealth and half by the States. The advisory committee entrusted with the task of advising on the allocation for particular research projects, the Australian Research Grants Committee, was established in April–May 1965 under the chairmanship of Professor R. N. Robertson. Its immediate function was to advise the Commonwealth on the distribution of the \$4 million for the year 1966.

At the beginning of 1967 it was decided that the Committee would continue to function through the 1967–1969 triennium, and was asked to recommend to the Commonwealth Government the distribution of \$9 million for the triennium, to be provided solely by the Commonwealth. Details of the distribution of this money may be obtained from the *Australian Research Grants Committee, Report 1967–69*. An amount of \$12.5 million is being provided by the Commonwealth for the triennium 1970–72. Details of grants for 1970 are available in *Grants Approved for 1970* published by the Committee. For details of Commonwealth expenditure under the scheme in 1968–69 see page 671.

*Grants for universities.* Australian universities depend greatly on government grants for their income. In 1968 income from other than Commonwealth and State grants amounted to just over one-fifth of the total income. Commonwealth grants to the States for universities are made on the recommendation of the Australian Universities Commission which was established by the Commonwealth Government under the *Australian Universities Commission Act 1959*. The principal function of the Commission is to advise the Minister for Education and Science on financial assistance for the maintenance and balanced development of Australian universities. The Commission commenced its work in July, 1959. An historical summary of the financial assistance provided for universities by the Commonwealth Government in the past is given in Year Book No. 55, pages 515–18.

The Fourth Report of the Australian Universities Commission was published in 1969. It recommended Commonwealth grants to the States for State universities of over \$225 million for the triennium 1970-72. In addition, it recommended grants totalling \$88 million for the Australian National University. These recommendations were accepted by the Government and the grants to State universities were given effect in the *States Grants (Universities) Act 1969*. A summary of the maximum grants supported by the Commonwealth for all universities for the 1970-72 triennium and for the 1964-66 and 1967-69 triennia is shown in the following tables and details of Commonwealth payments for universities are given on pages 668-9 and 671.

**ALL UNIVERSITIES: SUMMARY OF MAXIMUM COMMONWEALTH GRANTS FOR  
THE 1964-66, 1967-69 AND 1970-72 TRIENNA  
(\$'000)**

<i>Type of grant</i>	<i>1964-66</i>	<i>1967-69</i>	<i>1970-72</i>
<b>Recurrent grants—</b>			
General . . . . .	120,833	174,970	231,842
Teaching hospitals . . . . .	369	809	1,006
Student residences . . . . .	1,427	1,938	2,541
<i>Total recurrent grants</i>	<i>122,629</i>	<i>177,717</i>	<i>235,389</i>
<b>Capital grants—</b>			
Building projects . . . . .	40,231	50,683	58,896
Teaching hospitals . . . . .	3,112	4,927	2,560
Student residences . . . . .	9,244	12,693	11,967
Computers . . . . .	1,098	985	1,022
Capital equipment . . . . .	..	..	1,025
<i>Total capital grants</i>	<i>53,685</i>	<i>69,288</i>	<i>75,470</i>
Research . . . . .	6,000	3,000	4,000
<b>Total Commonwealth grants for all universities</b>	<b>182,314</b>	<b>250,005</b>	<b>314,859</b>

The Commonwealth makes the above grants available to the States on the following bases.

<i>Grant</i>	<i>Basis</i>
<b>Recurrent—</b>	
University recurrent expenditure . . . . .	\$1 Commonwealth for every \$1.85 of income from fees and State grants
Teaching hospitals recurrent expenditure . . . . .	\$1 Commonwealth for every \$1.85 of State grants
Teaching and administrative costs of halls of residence and residential colleges	No matching grant required
<b>Capital—</b>	
Building projects in universities and teaching hospitals	\$1 Commonwealth for every \$1 of State grants
Building projects at residential colleges and halls of residence	\$1 Commonwealth for every \$1 of college funds and/or State grants
<b>Research—</b>	
Research and research training . . . . .	\$1 Commonwealth for every \$1 of State grants

Details of the maximum Commonwealth grants to each State for 1970-72 triennium are shown in the following table.

**MAXIMUM COMMONWEALTH GRANTS TO UNIVERSITIES FOR THE 1970-72 TRIENNIUM  
(\$'000)**

<i>Type of grant</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>A.C.T.</i>	<i>Aust.</i>

(a) Less fees.

*Grants for technical colleges.* The scheme began in July 1964 and between that date and June 1969, the amount made available totalled \$47,587,200. Funds are now being provided at the rate of \$10 million per year and, since the introduction of the Advanced Education Programme, are being devoted almost entirely to apprentice and technical training. The maximum amounts available to the States during the triennium ending 30 June 1971 are shown in the following table. For details of payments made under the Act during 1968-69, see page 671.

**TECHNICAL TRAINING: MAXIMUM COMMONWEALTH GRANTS  
FOR THE TRIENNIUM ENDING 30 JUNE 1971  
(\$'000)**

<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>All States</i>
11,127	8,462	4,369	2,868	2,198	976	30,000

*Grants for teachers colleges.* The Commonwealth Government reviewed its policy on teachers colleges in 1969 and decided that the unmatched capital grants made to the States should be increased to \$30 million in the next triennium as against \$24 million in the present triennium 1968-70. The maximum amounts available to the States during the triennium ending 30 June 1970 are shown in the following table. For details of payments made under the Act during 1968-69, see page 671.

**TEACHERS COLLEGES: MAXIMUM COMMONWEALTH GRANTS  
FOR THE TRIENNIUM ENDING 30 JUNE 1970  
(\$'000)**

<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.</i>
7,500	5,350	3,750	3,200	2,700	1,500	24,000

The Commonwealth also decided to support the introduction of teacher education into the colleges of advanced education and to provide funds for this purpose under the normal sharing arrangements for expenditure on colleges of advanced education in the States.

In addition the Commonwealth Government has introduced a new programme to assist the training of pre-school teachers. Legislation enacted in December 1968 provided \$2 million for pre-school teacher training facilities during the period 2 December 1968 to 30 June 1971, that is planned to double the existing capacity of training colleges in the States. For details of payments made under the Act during 1968-69, see page 671. Pre-school teacher training is a function of the State Education Department in Tasmania and in other States it is administered by private organisations.

*Per capita grants to independent schools.* A provision announced by the Commonwealth Government in 1969 was that of annual per capita grants to independent schools within the States. Payments will be made to these schools at the rate of \$35 for each primary student and \$50 for each secondary student, and will commence in 1970. The grants are intended to assist independent schools with their running costs.

*Grants for science laboratories.* From July 1968 to June 1971, \$37.7 million will be distributed to the States in unmatched grants for science buildings and equipment in government and non-government secondary schools. Grants to State schools have been provided on the basis of lists of projects agreed to between the Commonwealth and State Ministers of Education, whilst grants to independent schools are approved by the Commonwealth Minister for Education and Science on the basis of reports by an Advisory Committee on Standards for Science Facilities in Independent Schools, and State advisory committees representing independent schools. Non-government schools in the Australian Capital Territory and the Northern Territory will receive grants for science facilities and for school libraries in conjunction with the capital aid scheme under which the Commonwealth Government meets interest charges on loans and also repays, in equal annual instalments, the costs for school building projects. For details of payments made under the Act during 1968-69, see page 671.

*Grants for library facilities in secondary schools.* During the three-year period January 1969 to December 1971, the Commonwealth is distributing \$27 million for the development of library facilities (erection, alteration or extension of library buildings and provision of furniture, equipment, books, and library materials) in government and independent secondary schools in the States. Besides the Commonwealth Secondary Schools Libraries Committee, the Commonwealth, as with the science facilities scheme, has the advice of two committees in each State, one representative of Roman Catholic secondary schools and the other representative of other non-government secondary schools. The maximum amounts available to the States during the triennium are shown below. For details of payments made under the Act during 1968-69, see page 671.

**SECONDARY SCHOOL LIBRARIES: MAXIMUM COMMONWEALTH  
GRANTS FOR THE TRIENNium ENDING 31 DECEMBER 1971**  
(\$'000)

<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>All States</i>
9,984	7,591	3,945	2,576	2,032	873	27,000

As a contribution towards meeting the urgent need for more trained librarians to staff the new and existing libraries \$50,000 was made available during 1968-69. The funds enabled the Commonwealth to sponsor several short specialist courses in school librarianship in conjunction with State education departments and independent school authorities. The courses were available to teachers from government and independent schools. Eight courses, which 373 persons attended, were held during 1969. Further funds were made available during 1969-70.

#### **Assistance to students**

*Commonwealth scholarships.* The Commonwealth Government provides financial assistance to students through five major scholarship schemes. A total of 27,150 new awards were made available in 1970 under these schemes.

Under the Commonwealth Post-graduate Awards Scheme 650 new awards were made available in 1970 for students taking courses leading to higher degrees at Australian universities. The awards are for full-time study and may be renewed annually up to a maximum period of four years. The awards carry a stipend of \$2,350 per annum and certain other allowances.

The Commonwealth University Scholarship Scheme made provision for 11,500 scholarships in 1970. Of these 7,500 are open entrance scholarships which are allocated amongst the States in proportion to population and are awarded on the basis of results achieved in Australian matriculation examinations. A small quota of open entrance awards is set aside as Mature Age Scholarships for students who have reached the age of thirty years. The remaining 4,000 scholarships are Later Year Awards for students who have already completed one or more years of a university course. Scholarship holders have their fees paid and may receive a living allowance subject to a means test. The maximum rates of living allowances are \$1,000 per annum in the case of scholars living away from their parents and \$620 for scholars living with parents.

The Commonwealth Advanced Education Scholarship Scheme made provision for 2,500 scholarships in 1970 for students taking approved courses of advanced education at institutions other than universities. Conditions for selection and benefits are similar to those for university scholarships.

In 1964 the Commonwealth Government also introduced the Commonwealth Technical Scholarship Scheme under which it makes available 2,500 new awards annually to assist students to take approved technical courses. Most of these courses are at certificate level in technical colleges. Full-time technical scholarship holders receive the same benefits as Commonwealth secondary scholars. The benefits paid each year to part-time technical scholars are an allowance of \$100, free of means test, and reimbursement of compulsory fees up to a maximum of \$100.

Under the Commonwealth Secondary Scholarship Scheme students compete each year for 10,000 scholarships to assist them during the final two years at secondary school. Secondary scholarship benefits are free of means test and comprise a yearly living allowance of \$200, a textbook and equipment allowance of \$50 per annum and reimbursement of compulsory fees up to a maximum of \$150 per annum.

## COMMONWEALTH SCHOLARSHIPS: NUMBERS OF SCHOLARS IN TRAINING, 1969

Type of award	N.S.W.(a)	Vic.	Qld	S.A.(b)	W.A.	Tas.	Aust.

Prior to 1969 . . . . .	3,715	2,685	1,402	907	707	236	9,652
Total . . . . .	7,487	5,378	2,809	1,909	1,435	544	19,562

(a) Includes the Australian Capital Territory.

(b) Includes the Northern Territory.

*Australian Agricultural Council Scholarships.* At the request of the Australian Agricultural Council the Department of Primary Industry makes available from the Commonwealth Extension Services Grant funds 12 scholarships annually (two in each State) to students in Australia who have qualified for a Commonwealth University scholarship and who wish to proceed to an approved course of study leading to a degree in Agricultural Science, Agricultural Engineering, Agricultural Economics, Rural Science or Veterinary Science. The purpose of the awards is to foster interest in agriculture and related fields of study.

As at 30 June 1970, there were 50 students holding Agricultural Council scholarships in Australia.

*Aboriginal study grants.* The first awards under the Aboriginal Study Grants Scheme were made in 1969 and the Department of Education and Science co-operates with the Commonwealth Office of Aboriginal Affairs in the administration of this scheme. The grants available to any person of Aboriginal descent, provide a living allowance of \$1,100 per annum, and other allowances. Expenditure on the scheme in 1968-69 amounted to \$62,177.

### Expenditure on education

The first part of this section summarises, on an Australian National Accounts basis, total expenditure on education, while the second and third parts show expenditure on education by the Commonwealth and States respectively.

#### Summary of expenditure on education

The presentation in the following tables is based on the Australian National Accounts. The figures exclude expenditure on goods and services which do not enter the market, such as education provided in the home, or for which it is not practical to impute a value, such as the unpaid services of some teachers, or certain educational services which cannot be separated readily from other services, such as instruction on the job. Most of the education services provided by public authorities are included. Some education services are provided by trading enterprises, such as business colleges, but it is not possible to provide separate figures of their transactions. Nor is it possible to provide separate figures for the expenditure of non-profit organisations, such as non-government schools. Information for these organisations is insufficient to make direct estimates of the cost value of their services. Their contribution is included as part of personal consumption expenditure on education.

Current and capital transactions are shown separately. Current expenditure by public authorities on goods and services classified to education is measured net of receipts, such as fees. These fees are included in private consumption expenditure. Gross fixed capital expenditure represents the value of new capital assets, such as new buildings and additions to buildings, equipment, etc. While it is possible to show to some extent details of education expenditure incurred by the various public authorities, it is not possible to provide consistent figures in total of expenditure on various types of education. Generally, expenditure on libraries, cultural activities, and the like is excluded from 'education', as are most education services provided in the armed forces, by child welfare institutions, and those provided by governments and private employers for their employees, other than teacher education. Identifiable expenditure on education administration and educational research is, however, included. In many cases strict definitions cannot be applied. Thus it is not possible to differentiate between the components of scholarships which are intended for education fees, textbooks, etc. (clearly education expenditure) and those intended as living allowances. University research cannot be separated from universities expenditure on teaching. With the exception of expenditure on fees, private expenditure on education (such as for books, equipment provided by parents associations, and the like) cannot be identified and is therefore excluded.

<b>TOTAL EXPENDITURE ON EDUCATION</b>					
Grand total . . . . .	738	824	905	996	1,115

(a) Transfer payments from the public authority to the private sector for educational purposes are included in private sector expenditure and therefore excluded from the public authority sector expenditure.

Direct expenditure of public authorities excludes government payments to persons and non-profit organisations. Such transfer payments from the public authority to the private sector consist mainly of scholarships to persons and grants to non-government schools. They include all scholarship payments, whether or not they are intended towards the payment of fees or towards living expenses. Total government expenditure on education, including such transfer payments, is set out in the following table.

**ESTIMATES OF PUBLIC AUTHORITY EXPENDITURE ON EDUCATION: AUSTRALIA**  
**1964-65 TO 1968-69**  
(\$ million)

Because of conceptual and accounting differences the figures above are not strictly comparable with figures of State expenditure on schools, technical education, etc., Commonwealth expenditure on education, and university expenditure shown in other sections of this chapter.

### Commonwealth expenditure on education

An analysis of Commonwealth expenditure is provided in the following table. Current direct expenditure includes the cost of the Department of Education and Science, the Australian Universities Commission and other administrative expenditure, expenditure by the Australian National University, and the provision of education services in the Australian Capital Territory and the Northern Territory (including re-imbursements to States for educational services in these Territories, such amounts being excluded from State expenditure). This expenditure is net of receipts in the form of fees, etc. Capital expenditure relates mainly to expenditure on new buildings and equipment by the Australian National University and for schools, etc. in the Northern Territory and the Australian Capital Territory. The table is based on an analysis by major function of all Commonwealth expenditure. The figures exclude expenditure on certain items which are related to education, such as payments for the Australian Broadcasting Commission education series, Australian Agricultural Council scholarships, the education of Aborigines in the Northern Territory, Aboriginal Study Grants, and the Office of Aboriginal Affairs, which are classified to other functional headings. The amounts involved in the above-mentioned items were: 1964-65, \$775,000; 1965-66, \$866,000; 1966-67, \$1,100,000; 1967-68, \$3,167,000; 1968-69, \$3,819,000. Commonwealth figures shown in the tables above differ from those shown in the following table because: education grants to the States by the Commonwealth (mainly for universities, science facilities in State schools, technical schools, and colleges of advanced education) are included in the following table, while expenditure by the States from these education grants is included in the State education expenditure figures on pages 673-4, grants by the Commonwealth Government to the Australian National University and the Canberra College of Advanced Education are shown on page 663, while only the actual net expenditure by these institutions is included in Commonwealth direct expenditure on page 669.

(a) Specifically for education.

The following paragraphs provide further details about the various items of expenditure in the foregoing table.

#### Department of Education and Science

Current expenditure shown under this heading in the above table relates mainly to salaries of departmental officers (\$2,301,000 in 1968-69) and other administrative expenses (\$748,000 in 1968-69). Some of the items included refer to research and investigations into colleges of advanced education; special investigations by, and grants to, the Australian Council of Educational Research; Commonwealth support for the training of school librarians; curriculum development; assistance to the University of Sydney for the production of the Current Affairs Bulletin; departmental rentals, and repairs and maintenance. Capital expenditure relates mainly to furniture and fittings for departmental offices. Departmental activities are described on page 660.

#### Australian Universities Commission

Expenditure shown under this heading in the above table relates to salaries of officers (\$138,000 in 1968-69) and other administrative expenses (\$79,000 in 1968-69). For a brief description of the Commission's activities see page 661. For detailed information see the *Australian Universities Commission, Fourth Report, May 1969*.

#### Expenditure on education in the Territories

Expenditure by the Commonwealth Government on education in the Australian Capital Territory and the Northern Territory in 1968-69 is shown in the following table. For further information about education in the Territories see Chapter 29, The Territories of Australia.

**COMMONWEALTH GOVERNMENT EXPENDITURE ON EDUCATION

(a) Includes expenditure in respect of non-government schools not separately identifiable. (b) Included in 'grants towards private capital expenditure' in table on page 669. (c) Excludes Commonwealth Secondary and Technical Scholarships. (d) Included in 'cash benefits to persons' in the table on page 669.

**Other Commonwealth expenditure on goods and services**

Current expenditure shown under this heading in the table on page 669 relates to grants to the School of Tropical Health and Medicine, the Chair of Natural Philosophy at the University of Melbourne, the Lady Gowrie Child Centres, and the Australian Pre-School Association; capital expenditure relates to the grant to the School of Tropical Health and Medicine, for plant and equipment. Further information about the School of Tropical Health and Medicine and the Lady Gowrie Child Centres is given in Chapter 14, Public Health.

**Payments to the States specifically for education**

The next table shows payments to the States specifically for education, by function, for 1968-69. Further descriptive information is given in the paragraphs following this table.

**PAYMENTS BY THE COMMONWEALTH TO THE STATES SPECIFICALLY FOR  
EDUCATION, BY FUNCTION: EACH STATE, 1968-69**

*Research grants.* The amounts shown represent payments by the Commonwealth to the States under the States Grants (Research) Acts. The payments are based on the recommendations of the Australian Research Grants Committee. In addition to the amounts shown, \$73,000 was made available to the Australian National University in 1968-69. A brief description of the history and activities of the Australian Research Grants Committee is given on page 660.

*Universities.* The amounts shown here represent payments by the Commonwealth under the Universities (Financial) Assistance) Acts. The amounts paid are based on the recommendations of the Australian Universities Commission, *see* pages 661-3. Further detail of income and expenditure of universities is given on page 650. Commonwealth expenditure in relation to the Australian National University is shown in the table on page 669.

*Colleges of advanced education.* The Commonwealth provides financial assistance to the States for colleges of advanced education under the States Grants (Advanced Education) Acts. Payments to the States are approved by the Minister for Education and Science acting on the recommendations of the Commonwealth Advisory Committee on Advanced Education. During the triennium 1967-69 the Commonwealth made available \$250,000 for research into advanced education, \$130,000 of this was expended in the financial year 1968-69. Commonwealth expenditure in relation to the Canberra College of Advanced Education is shown in the table on page 669. Further details of the activities of colleges and available Commonwealth grants are given in pages 650-2 and 663.

*Technical training.* The States Grants (Technical Training) Act 1968 provides for financial assistance to the States for buildings and equipment for use in technical training in State schools and similar institutions during the three years ending June 1971. Assistance available under this Act totals \$30 million.

*Teachers colleges.* Under the *States Grants (Teachers Colleges) Act 1967* the Commonwealth provides financial assistance to the States for approved building projects in connection with teachers colleges. A maximum of \$24 million is available during the three years ending June 1970. For further details of teachers colleges and teacher education, see pages 652-5.

*Science laboratories.* The amounts shown under this heading in the above table represent payments under the *States Grants (Science Laboratories) Act 1968* which provides for financial assistance to States for science laboratories and equipment in State and independent schools. For further details of this assistance, see page 664.

*Secondary school libraries.* The *States Grants (Secondary Schools Libraries) Act 1968* provides for grants totalling \$27 million to be paid to the States over the three years ending December 1971, by way of financial assistance for secondary school libraries in State and independent schools. See page 665 for further details. There were no payments in 1968-69 in respect of independent schools. In addition, the Commonwealth has sponsored special training courses, organised by the States, for school librarians. Expenditure in connection with these courses during 1968-69 totalled \$21,000 and is included under 'Department of Education and Science—Current' in the table on page 668.

*Pre-school teachers colleges.* Under the *States Grants (Pre-school Teachers Colleges) Act 1968*, the Commonwealth provides financial assistance to the States for building projects. Payments not exceeding \$2.5 million in aggregate may be authorised under the Act during the period December 1968 to June 1971. No payments were made to New South Wales or Queensland during the year.

#### Cash benefits to persons.

The distribution of cash benefits, on a State basis, is shown in the following table.

CASH BENEFITS TO PERSONS: STATES, 1968-69  
(\$'000)

	N.S.W.(a)	Vic.	Qld	S.A.(a)	W.A.	Tas.	Aust.

<b>Total . . . . .</b>	<b>11,349</b>	<b>9,310</b>	<b>4,985</b>	<b>3,085</b>	<b>2,106</b>	<b>840</b>	<b>(e)32,595</b>

(a) Totals for New South Wales and South Australia include unallocable expenditure on cash benefits to persons resident in the Australian Capital Territory and the Northern Territory respectively. (b) Includes \$2,000 paid to Australians abroad. (c) Includes \$14,000 paid to Australians abroad. (d) Not allocable by State. (e) Excludes Aboriginal Study Grants (\$70,000).

A brief description of each type of Commonwealth scholarship is given on page 665. Detailed information is available in the annual reports of the Commonwealth Scholarships Board. For additional information about the Soldiers' Children Education Scheme, see Chapter 5, Repatriation, and the annual reports of the Soldiers' Children Education Boards.

Included under 'other' in the table above are the following items: Australian-American Education Foundation (\$180,000), Confederation of British Industries and Scholarships (\$4,000), Royal Society and Nuffield Foundation (\$4,000), Scholarships for New Zealand (\$17,000), Forestry scholarships (\$50,000), C.S.I.R.O. research studentships (\$337,000), scholarships and allowances to students in the Australian Capital Territory (special university scholarships, \$61,000; secondary school bursaries, \$1,000; textbook allowances, \$83,000) and special scholarships to students in the Northern Territory (\$156,000). This table excludes Australian Agricultural Council scholarships (\$50,000) and Aboriginal study grants (\$70,000). Further details of these schemes are given on page 666.

#### Grants towards private capital expenditure.

This item represents amounts paid to independent schools in the Australian Capital Territory (\$397,000) and the Northern Territory (\$7,000) for approved capital programmes; and grants to affiliated residential colleges at the Australian National University (\$428,000).

**Overseas grants and contributions.**

This item represents expenditure in connection with the Commonwealth Educational Co-operation Scheme. Details of Australia's participation in this scheme are given on page 661.

**State expenditure on education**

The following table shows, for the six States, expenditure on education classified into current expenditure and capital expenditure. Figures of current expenditure are based on an analysis which has been made for special use by the Commonwealth Grants Commission. In this analysis the purpose has been to show a comparison of State expenditure from the Consolidated Revenue Funds and certain special funds for the headings of education expenditure shown. Expenditures from Commonwealth grants for specific educational purposes have been excluded. Other items excluded are, inter alia, expenditure on education of Aborigines, where there is considerable variation from State to State, and expenditure on payroll tax and superannuation as suitable dissections are not available. The capital expenditure figures are limited to gross expenditure on educational buildings from the loan funds. This also excludes expenditure from Commonwealth capital grants for educational purposes and expenditure on buildings from certain special funds. Any capital expenditure from the Consolidated Revenue Fund would be included as current expenditure.

The totals of the table do not agree exactly with the totals which can be derived from the table on page 667. The overall analysis for National Accounts purposes, on which the table on page 667 is based, was originally in a very summary form and did not take account of some of the detail available in the Commonwealth Grants Commission work. The system is being developed into a more complete system of public finance statistics with the object of providing a more detailed classification and a reconciliation between the two analyses. Although comparisons of expenditure between the States are only approximate due to differences in organisation and accounting practices, for the present this table represents the most detailed breakdown available which is reasonably comparable between States. The figures relate to the year ended 30 June 1969 and expenditure per head of population relates total expenditure to the mean population.

## CULTURAL ACTIVITIES

### Libraries

The Munn-Pitt report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is evidenced by the development of libraries, the passing of legislation in all States to increase library services, and the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia and incorporated by Royal Charter in 1963, and its functions now include the promotion and improvement of libraries and library services. The Association conducts annual examinations in librarianship for which courses of instruction are available in all States and the Australian Capital Territory.

An account of the establishment, growth and functions of the National, Commonwealth, and State libraries is given on pages 533-538 of Year Book No. 55.

#### Commonwealth libraries

*National Library of Australia, Canberra.* The Library comprehensively collects and preserves Australian books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving picture films, and sound recordings. It is assisted in this by the deposit provisions of the *Copyright Act* 1968 and has also been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews ornithological collection in 1940, the Nan Kivell collection of 16,000 items of Australian and Pacific interest including original paintings, prints, manuscripts, and printed material in 1959, and the Ferguson collection of Australiana, acquired in 1970. The Library maintains a permanent exhibition of paintings, prints, and other historical material selected from its various collections.

In association with the Public Library of New South Wales, the Library copies on microfilm all important unique material overseas relating to Australia.

*Australian National Bibliography*, which appears weekly, monthly and annually, lists books published in Australia and books dealing wholly or substantially with an Australian subject or written by Australian authors. Associated with this compilation the Library provides a catalogue card service to libraries and others wishing to use its catalogue cards for Australian books. The publications of Australian governments, included in *Australian National Bibliography*, are also listed annually in *Australian Government Publications* and a subject list of serials is published each year under the title *Current Australian Serials*. The Library's principal activity in subject bibliography is its *Australian Public Affairs Information Service*, published monthly since 1945, with annual cumulations since 1955.

Co-operative bibliographical activity includes recording, in a series of union catalogues, the holdings of the major Australian libraries. The national union catalogue of monographs was commenced in 1960, since when all the larger and an increasing number of the smaller libraries have reported their monograph accessions to the National Library. The major published union catalogue is the loose leaf, continually revised *Serials in Australian Libraries, Social Sciences and Humanities*, which complements another catalogue, *Scientific Serials in Australian Libraries* published by the Commonwealth Scientific and Industrial Research Organization. The Library operates the Australian Medical Literature Analysis and Retrieval System (MEDLARS) service.

The National Library acts as a central library of documentary and educational films, its film collection containing approximately 8,000 titles, together with Australian historical films. It published *Australian Films: a Catalogue of Scientific, Educational and Cultural Films, 1940-58* in 1959 and annual supplements in succeeding years.

The National Library's collections contain over 1,000,000 volumes, 26,500 paintings, pictures and prints, 33,000 reels of microfilm, 2,200 running feet of manuscripts, 35,200 motion picture stills, 17,500 reels of moving picture films, 189,035 maps, and 500,000 aerial photographs.

*Patent Office Library.* The Library of the Commonwealth Patent Office, Canberra, contains approximately 15,000 books and a wide variety of periodicals and other literature relating to pure and applied science, industrial technology and the industrial property (patent, trade mark, design and copyright) laws and practice of most countries. Patent specifications of inventions are received from the principal countries of the world; present holdings are over 11,000,000. Indexes include a microfilm of a classified index to 3,000,000 U.S.A. patents and translations of abstracts of U.S.S.R. patents.

*Commonwealth Scientific and Industrial Research Organization.* The library holdings of the Organization cover the pure and applied sciences. In addition to the Central Library in East Melbourne, each of the Divisions and Sections has a specialised collection covering such subjects as food preservation, forest products, chemistry, physics, animal health, and fisheries. The Central Library maintains a union catalogue of the holdings of all CSIRO libraries.

*The Australian War Memorial Library.* In the War Memorial library are housed the documentary and pictorial records of Australia's fighting services in wars in which they have participated. The printed records section contains over 70,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings, war posters, and postage stamps. The collection of official war photographs covering the 1914-18, 1939-45 and Korean Wars numbers over 250,000, and a collection of official motion picture film depicts Australia at war.

*The Commonwealth Parliamentary Library.* The Library provides a special type of service designed to meet the needs of Parliament. The Legislative Research Service prepares briefs covering the history of a subject, background information, summary of viewpoints and arguments, and the compilation and interpretation of statistical information. The Legislative Reference Service answers questions and provides information on any subject from books, government documents, Hansard reports, periodical articles, and newspapers. The Library collection is concentrated on topical material, supported by a wide collection of standard references; the collection totals 40,000 volumes, including 6,000 serial titles. The Library produces a regular series of abstracting bulletins, such as *Education and Welfare; Finance, Industries, Trade and Development; Science and Technology; and Defence and Foreign Affairs*, for the use of Parliament.

*Other Commonwealth Government libraries.* Most Commonwealth authorities have specialised collections in their own fields and in addition draw largely on the National Library.

*Library services in the Territories.* The Northern Territory Library Service maintains five centres in the Territory. At 30 June 1969 stocks totalled 67,903 volumes which were held at the following centres: Darwin, 30,305; Nightcliff, 8,421; Alice Springs, 18,276; Tennant Creek, 5,804; Katherine, 5,097. The National Library, through its Extension Services Section, conducts the Canberra Public Library Service to residents of the Australian Capital Territory, to whom 995,639 loans were made in 1968-69. At 30 June 1969, 248,136 volumes were held, 152,697 at adult libraries, and 95,439 at children's libraries.

### State libraries

*New South Wales.* At 31 December 1969, 182 councils had established libraries in terms of the Library Act, 1939-1959. During 1968-1969 they spent on their libraries \$5,586,796 including \$1,170,162 received in subsidy. There are 261 libraries, of which 94 are in the metropolitan area and 167 in the country. There are also 24 bookmobiles, of which one is in Sydney, 9 in the suburbs of

Sydney, and 14 in country municipalities and shires. These libraries contain 3,993,990 volumes. The State Library provides a central cataloguing service for municipal and shire libraries constituted under the Act.

Under the Library of New South Wales Act, 1969, the former Public Library of New South Wales became the Library of New South Wales. It includes a General Reference Department of 583,737 volumes, a Circulation Department, together with the Shakespeare Tercentenary Memorial Library, and the Mitchell and Dixon Libraries and Galleries which are mainly devoted to Australian and Pacific material. The circulation Department lends books to municipal and shire libraries and to individual borrowers. The total stock of the Department is 73,302 volumes, and 39,939 books were lent to public libraries and individual borrowers during 1968-69. In 1969 there were 243,985 volumes in the Mitchell Library, in addition to manuscripts, maps and other material. The total number of volumes in the Library of New South Wales now exceeds 955,500 apart from manuscripts, historical pictures, and other material. The library maintains an adult education section servicing adult education activities for the Universities of Sydney and New England and the Workers' Educational Association.

Other important libraries in New South Wales are: Teachers Colleges, 352,289 volumes; the City of Sydney Public Library, 219,255; Technical Education Branch, 281,882; Railway Institute, 169,792; Parliamentary Library, 137,000; Australian Museum, 36,400; Government Transport Institute, 23,988; New South Wales Teachers' Federation Library, 25,000; Workers' Educational Association, 15,443; and the Library at the National Herbarium, over 10,000 volumes.

*Victoria.* In 1970, 157 Councils shared Government library grants amounting to \$1,335,000. Of this amount, \$1,272,893 was direct municipal library subsidy. With the addition of expenditure from these Councils' own funds the total expenditure on municipal library services for 1969-70 will be nearly \$3,940,000. In 1969, 705,000 borrowers used the free library services, now totalling over 2,500,000 books, to the extent of 13,640,000 issues.

Particularly in the country, service has been developed by means of regional libraries. These services, of which there are 25 at present, comprising a total of 108 councils, consist of groups of councils which pool their resources, book-stocks and trained staff. The Victorian Government provides an Establishment and Regional Library Development Grant of \$54,250 per annum.

There are 13 bookmobile services operating in Victoria, 10 in country regions and 3 in the metropolitan area.

The State Library of Victoria contains about 880,000 items, and the lending and travelling libraries have another 187,500 volumes. In addition, the State Library receives 7,027 periodicals, annuals and newspapers.

*Queensland.* The holdings of the Public Library of Queensland and its extension services in 1968-69 were: main reference collection, 211,335 volumes and 12,772 maps and pamphlets; Country Extension Service, 90,828; Oxley Memorial Library, 27,114 volumes and 39,163 maps, pamphlets and miscellaneous items.

Local authorities are empowered by the Libraries Act to establish and conduct library services as a function of local government. In 1968-69, 82 local authorities were conducting 142 library services. The Brisbane City Council has established 21 of these libraries. There were 115 libraries in Queensland free to adults. To help overcome the problems of a large area and sparse population, various local authorities have established 4 regional library services with headquarters at Charleville, Barcaldine, Mount Isa and Emerald, respectively. During 1968-69 the State Government provided a grant of \$716,685 from consolidated revenue to finance the activities of the Public Library, to pay subsidies to local bodies conducting free library services, and for the acquisition or improvement of library buildings and equipment and to pay seventy-five per cent of endowable expenditure on books, equipment and maintenance to local bodies conducting subscription libraries. Subsidies were paid to 4 regional library service boards, 75 local authorities and 33 other bodies.

At 30 June 1969 the Parliamentary Library of Queensland contained about 100,000 volumes and pamphlets.

*South Australia.* The Reference Department of the State Library of South Australia contains 259,103 volumes and receives about 5,000 periodical titles. There are 51,052 volumes in the Adelaide Lending Service. The Country Lending Service has 399,972 volumes. The Adelaide Lending Service lent 300,058 books in 1968-69, and the Country Lending Service, 178,884.

The library of the Parliament of South Australia held approximately 60,000 volumes in 1969.

There are 29 local public libraries in South Australia provided by 22 local government and other authorities. The libraries are subsidised on a \$1 for \$1 basis by the State Government. The Libraries

Board of South Australia, through the State Library of South Australia, provides various central services. Book-stocks are pooled in the State Library of South Australia and are interchanged between the libraries.

At the end of June 1969 these local public libraries contained 255,935 books. There were 143,963 registered borrowers. During 1968-69, 2,103,129 books were lent.

*Western Australia.* The Library Board of Western Australia administers the State Reference Library and the Central Music Library, and provides all books and related services to 125 local public libraries throughout the State. Its stocks at 30 June 1969 were 956,315 volumes, comprising circulation stock (including books in public libraries), 657,149 volumes, State Reference Library, 283,267 bound volumes and Central Music Library, 3,900 books on music and 11,999 scores.

*Tasmania.* The Tasmanian Library Board administers the State Library in Hobart, the extension of library services throughout the State and State aid to libraries. State Government expenditure on library services in 1968-69 was \$593,520. A regional library operates in 5 north-western municipalities, with headquarters in Burnie, smaller libraries in other large towns and a bookmobile in rural areas. The formation of a second regional library, with headquarters in Launceston, is being negotiated. Fourteen southern municipalities are served by 2 bookmobiles based in Hobart and a bookmobile serves schools in the metropolitan area. At 30 June 1969 the State Library in Hobart held 127,482 reference volumes and 111,143 lending volumes. It loaned 401,097 books to municipal libraries during 1968-69.

#### University libraries

A description of libraries in Australian universities appears on pages 539-41 of Year Book No. 55. The following table shows the number of books and pamphlets held, accessions during the year, and expenditure on libraries for each university. For further information, see annual mimeograph publication *University Statistics—Part 2: Staff and Libraries* (reference No. 13.8).

#### Children's libraries and school libraries

For details of Commonwealth grants for the development of secondary school library services, see page 665 of this chapter.

*New South Wales.* Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents and citizens associations and partly by departmental subsidy. Secondary and central schools, and an increasing number of primary schools, have teacher librarians.

*Victoria.* The Education Department provides for the building of libraries in secondary and technical schools, and new primary schools with 10 or more classrooms. A subsidy of up to \$7,000 is available to other primary schools for library buildings. Library furniture is provided, establishment grants are given to new schools for the purchase of books, and the Government provides an annual per capita grant to all schools. At June 1969, 386 primary, 246 secondary, and 86 technical schools had central libraries.

*Queensland.* In Queensland, 136 libraries are free to children, of which 21 are conducted by the Brisbane City Council. Country children may borrow from the Country Extension Service which has a separate children's collection. The purchase of books for State school libraries in Queensland is financed by school committees and parents associations, with a \$1 for \$1 subsidy from the Department of Education.

*South Australia.* A children's library of 39,404 volumes is used by school classes and individual children living in the metropolitan area. In 1968-69, 230,597 books were lent. A lending service for young people from thirteen to eighteen years of age has a stock of 15,740 volumes, and in 1968-69, 99,465 loans were recorded.

*Western Australia.* The Education Department provides library services, books and subsidies on library books purchased by schools. All government high schools are provided with library accommodation and furniture and their libraries are staffed by one or two trained school librarians according to the size of the school. New high schools are issued with books to a value of \$1,000 in each of their first three years and all high schools receive an annual issue of books and a subsidy for book purchases. New primary schools are issued with books to the value of \$400 in their first year. All non-government schools with post-junior students receive an annual issue of books for matriculation studies. A number of primary schools have organised school libraries in rooms available, or in premises provided by the parents and citizens associations. Annual issues of books are made to all primary schools, varying according to the size of the school, and a subsidy is provided for the purchase of library books. The Charles Hadley Travelling Library provides 500 boxes of books which are circulated to all small schools, mission schools, and special classes. Children who are unable to attend school are provided with books from the Correspondence School's library.

*Tasmania.* All the State's municipal libraries have Lady Clark Memorial Children's Libraries. The Lady Clark Memorial Children's Library in the State Library in Hobart has 26,006 books and serves schools in the Hobart Metropolitan area by bookmobile. More than 150 schools which are not close to a municipal library have collections of books on loan from the Lady Clark Memorial Children's Library, which has a stock of 191,393 books. Libraries have been built up in most schools, with Education Department subsidies matching local funds to levels determined by the size of the school. A new Central Library Service Branch offers bibliographic and technical advice on school library development.

## Archives

General interest in archives in Australia was aroused in 1888, when the Colony of New South Wales celebrated its centenary, the occasion being marked by official publication in 1889-1894 of the *History of New South Wales from the Records* by G. B. Barton and A. Britton, and in 1893-1898 of the series of *Historical Records of New South Wales*, edited by A. Britton and F. M. Bladen. Both publications were based on transcripts of documents in London which had been made by Mr James Bonwick, appointed Archivist by the Government of New South Wales in 1884.

In 1902 Mr F. M. Bladen presented to the Commonwealth Government a report on European Archives, in which he recommended the establishment of a Commonwealth Archives Office and the copying of further official records in London. The copying project continued and some of its results were embodied in the volumes of *Historical Records of Australia*, published by the Commonwealth in 1914-1925, under the editorship of Dr J. F. Watson.

Measures for the preservation and storage of original documents were not taken until later years. In the absence of duly constituted archives offices, the various major libraries throughout Australia undertook the collection of historical records, both from official and private sources. An archives Department of the Public Library of South Australia was established in 1920, and other institutions formed archives branches in, 1944 (Commonwealth National Library), 1945 (Public Library of Western Australia), 1948 (State Library of Victoria), 1949 (State Library of Tasmania), 1953 (Public Library of New South Wales), and 1959 (State Library of Queensland). Legislation to govern arrangements for official records was passed as follows: South Australia (1925, 1936), Tasmania (1943, 1965), Queensland (1943) and New South Wales (1960). Since 1961, separate authorities for official archives have been established: Commonwealth Archives Office, 1961; Archives Office of New South Wales,

1961; Archives Office of Tasmania, 1965. A Business Archives Council was established in 1954 to co-ordinate activities in the field of company records and a number of firms have established their own archives services. Certain churches have also provided appropriate facilities for ecclesiastical records. Other corporate and private archives continue to be collected by several archives offices, libraries and, more recently, universities.

#### **Commonwealth Archives Office**

An account of the development of the Commonwealth Archives Office and a detailed description of its functions appear on pages 543–4 of Year Book No. 55. The Archives Office functions as a central agency for the control of records created by the Commonwealth Government which are no longer required in the day-to-day business of government. At 30 June 1969 the total holdings of the Archives Office throughout Australia amounted to 407,000 shelf feet of records, including 147,000 feet of permanent material, such as files, manuscripts, registers, cards, books, maps, plans, models, paintings, films, photographs, microfilms, recordings and tapes. In general official records created before 1 January 1923 are open to public access. The Office provides an advisory service to inquirers, both official and public, on appropriate sources of information for particular topics including material held by the Office itself, by other Commonwealth agencies and elsewhere. During 1968–69 some 328,000 items were lent to departments. The Office carries out searches for departments and provides information from the records in its custody. About 13,700 requests for these services were received in 1968–69. In accordance with the Commonwealth Government's access rules, the Office also supplies information to members of the public engaged in academic or other forms of research. Records may be consulted by holders of a search ticket and 113 public search tickets are currently valid. During 1968–69 inquiries were received from 233 researchers. There were 7,000 daily visits to archives search rooms and repositories by officials and the public, and 30,650 items were produced for consultation.

The headquarters of the Commonwealth Archives Office is in Canberra, and there are branches in Sydney, Melbourne, Brisbane, Adelaide and Perth. In 1969 records surveys were conducted in the Northern Territory, Papua and New Guinea, Norfolk Island and Cocos (Keeling) Islands. The Office maintains liaison with similar organisations in overseas countries and is the Australian national member of the International Council on Archives, established under the auspices of Unesco.

#### **Archives Office of New South Wales**

The Archives Authority of New South Wales is a statutory corporation established under the Archives Act 1960 and has custody and control of the State archives. These are preserved in the Archives Office of New South Wales.

The Act requires that before any public records of the State are destroyed or disposed of, notice must be given to the Archives Authority which may then require any such records to be made available to it. Records transferred to the Authority become State archives and when 35 years old are generally open to holders of a reader's ticket.

The State archives at 31 December 1969 occupied 31,959 feet of shelving. This excludes more than 16,000 maps and plans besides other records which cannot be readily measured. In addition there were about 100,000 feet of permanently valuable records housed mainly in the Government Records Repository.

#### **Archives Office of Tasmania**

The Archives Office of Tasmania operates under the *Archives Act* 1965, No. 47. The statutory authority under the Act is the Tasmanian Library Board. No records of state and local authorities may be destroyed or otherwise disposed of except on the written authority of the Principal Archivist. The holdings of the Archives Office amount to about 11,000 feet (including non-public records).

Three parts of a Guide to the Public Records of Tasmania have been published and five further record groups are being inventoried for publication. A file lending service is conducted for the benefit of departments and authorities which have deposited semi-current records in the Archives Office. Research workers have access to records in the search room and a mail reference service is provided for country and interstate inquirers.

#### **Australian National University Archives**

The Australian National University Archives was established in 1954 when the records of the Australian Agricultural Company were acquired, and in 1959 its collecting activities were expanded to include records of employee organisations. The University now holds a collection of the records of businesses (approximately 110 accessions) and of trade unions (approximately 170 accessions).

The aim is to gather primary source material to support advanced research within the University in economic history, history, and political science. Detailed arrangement and description are undertaken and close liaison is maintained with scholars in the Research School of Social Sciences to keep the collecting policy abreast of trends in research. Scholars from other universities are also helped, and reference work is carried out to answer inquiries. The University Archives include deposits which have been microfilmed and pamphlet collections of interest to research workers in political history.

#### Business Archives Council of Australia

The Business Archives Council of Australia works for the preservation of business records and promotes the writing of business history. The Council itself does not collect business records. The main collecting centres are the Archives of the Australian National University, the University of New England and University of Melbourne. The University of New England concentrates on rural industries.

### Museums and art galleries

In 1964 an annual collection of statistics on a uniform basis was commenced from Australian museums and art galleries. The following paragraphs provide summarised results of the collection.

A museum or art gallery is considered to be a building, group of buildings or parts of buildings, managed as a unit and intended predominantly for the permanent display of objects of interest (museum) or objects of art (art galleries) to the general public. Institutions displaying live exhibits are excluded (the more important of these are mentioned on pages 681-2), as are buildings used for temporary displays (exhibitions, commercial galleries exhibiting only for sale) without a permanent stock of exhibits; permanent exhibitions which are ancillary to other activities such as exhibits at council chambers, libraries, hotels, and other commercial enterprises providing services to tourists and sightseers; collections which are not readily accessible to the general public, such as university collections for the use of students and research workers; and historic homes, etc. not specifically intended for the permanent display of objects of interest (i.e. where the building itself and its normal fittings are essentially on display).

#### Museums and art galleries, 1969

The following table classifies by States and Territories and by ownership the institutions in Australia which have been identified in 1969 as museums and art galleries (branches of museums and art galleries are not shown separately).

MUSEUMS AND ART GALLERIES: STATES AND A.C.T., AND OWNERSHIP, 1969  
(Number)

(a) Excludes certain funds not controlled by the institution.

Some descriptive detail in respect of the major institutions is given on pages 547 to 549 of Year Book No. 55.

### Botanical and zoological gardens

In addition to the zoological gardens referred to in the following paragraphs there are numerous privately owned zoos and sanctuaries, many of them at tourist resorts, which maintain collections of Australian flora and fauna. There are also various national parks, forests, reserves, etc., dedicated for public use, which are preserved largely in their natural condition.

#### New South Wales

The Sydney Botanic Gardens are situated on the shores of Farm Cove, Sydney Harbour. They occupy sixty-six acres and contain a large collection of flowering plants, shrubs and trees as well as hothouses of orchids and ferns.

The Zoological Gardens at Taronga Park, on the northern side of Sydney Harbour, occupy about seventy acres and contain an aquarium. In 1968–69 admissions to the grounds were 941,350 and to the aquarium 323,108. The receipts of the zoological department of the Taronga Park Trust amounted to \$573,968 in 1968–69 and expenditure was \$517,420. Exhibits at 30 June 1969 comprised 917 mammals, 2,871 birds, 354 reptiles, 10 amphibians and 1,010 fish.

#### Victoria

The main botanical gardens in the State are the Royal Botanic Gardens, an area of eighty-eight acres within one mile of the centre of the City of Melbourne, containing over 12,000 species of plants, of which there are some 30,000 individual specimens. Many species of native birds breed on islands in lakes within the gardens.

The Zoological Gardens in Royal Park contain a wide selection of animals, birds and reptiles. A wild life sanctuary is also maintained at Healesville.

#### Queensland

Botanical gardens have been established in Brisbane and in several other cities. The Brisbane Botanic Gardens occupy approximately forty-six acres on the banks of the Brisbane River in the central city area and are noted for their collections of palms, tropical trees and shrubs, and succulents; they contain over 7,500 species.

**South Australia**

The Botanic Garden covers forty-five acres and contains collections of Australian and exotic plants from low rainfall and sub-tropical regions. In glasshouses are collections of tropical, ornamental and economic plants. Special collections include cacti and succulents, bromeliads, and begonias. An up-to-date and comprehensive botanical and horticultural library is maintained.

Mount Lofty Botanic Garden, of approximately 180 acres, was established in 1960 and is expected to be opened to the public by the mid-1970s.

The State Herbarium was established in 1952 and moved to the present building in 1965. It contains about 250,000 specimens.

The Zoological Gardens, opened in 1883, have an area of approximately 19 acres, and contain a fine collection of animals, reptiles, and birds.

**Western Australia**

A botanic garden and arboretum for the native plants of Western Australia is in King's Park, a reserve of almost 1,000 acres close to the centre of Perth. The West Australian collections at present comprise a total of 1,200 species of trees and wildflowers. Virtually all trees native to the southern half of the State, with the exception of some rare mallees, are represented in the arboretum.

Regular field work is undertaken to collect material and carry out botanical exploration. Seed of native plants collected is distributed to botanical institutions throughout the world and to private growers and nurserymen. An annual seed list offers from 900 to 1,000 species. About 8,000 packets of seed are distributed each year.

Research on propagation of native plants is carried on in the nursery and information acquired is passed on to growers through State branches of the Society for Growing Australian Plants and its journal. Facilities are provided for the employment and ancillary training of students enrolled in the three-year course of the *Western Australian Certificate of Horticulture and Park Administration*.

The Zoological Gardens at South Perth have an area of 44 acres and are under the control of the Zoological Gardens Board. Animals, birds and reptiles are exhibited. During the year 1968-69, 198,726 adults and 169,684 children visited the zoo.

**Tasmania**

The Royal Tasmanian Botanical Gardens adjoining Government House on the Queen's Domain contain a fine collection of exotic trees and shrubs and a small aviary.

There are three main privately owned wildlife sanctuaries and zoos, each with a few exotic animals, at Granton near Hobart, at Punch Bowl near Launceston and at Westbury, 20 miles from Launceston. The Launceston City Council keeps a small collection of animals and birds at City Park.

**Northern Territory**

The Darwin Botanical Gardens occupy eighty acres and feature tropical plants of both native and overseas origin. They are controlled by the Darwin City Council.

**Australian Capital Territory**

The Canberra Botanic Gardens on the lower slopes of Black Mountain have been under development since 1950. The gardens are on a 100-acre site and are being developed for the study of the botany, propagation, and cultivation of Australian native plants. The gardens were opened for public inspection in 1967 and were officially opened in 1970.

## **Book publishing**

**Australian book publishing**

Statistics about Australian book publishing are prepared from data supplied by the National Library of Australia, which receives practically all books and pamphlets published in Australia (including the External Territories), although not necessarily in the year of publication.

The method of counting conforms with international practice. Each title is counted as one unit. The figures cover all non-periodical publications published in Australia. They refer to all publications of five pages or more and include pamphlets, new translations, and re-editions. They include government publications, educational textbooks, published university theses, etc., but exclude publications not available to the general public, advertising material, publications of transitory interest, musical works, and maps and charts.

**Number of publications received**

The following table shows the number of publications received by the National Library in 1969 by subject group and publisher. Trade publishers are those organisations set up predominantly for publishing, whose title output is significant and widely available throughout the bookselling trade. Comparative figures are given for receipts from 1965 to 1968.

**AUSTRALIAN PUBLICATIONS RECEIVED BY THE NATIONAL  
LIBRARY IN 1969: SUBJECT GROUP AND PUBLISHER**

1965 . . . . .	n.a.	n.a.	2,733

**Commonwealth Literary Fund**

The Commonwealth Literary Fund awards fellowships each year, assists in the publication of manuscripts of high literary merit, makes annual grants for lectures in Australian literature, and awards pensions to creative writers who have achieved a nation-wide reputation for their work. The fellowships are awarded each year to writers who have proved their capacity and to writers of promise, to enable them to work full-time on a literary project. A fellowship carries a maximum value of \$6,000 a year.

The Fund also guarantees assistance to publishers who cannot wholly finance the publication of manuscripts which have outstanding literary merit.

Australian literature is now an accepted field of university scholarship but universities may still apply for a grant to enable lectures to be given on special occasions. In 1956 the Fund initiated a scheme of lectures to the general public and to schools, mainly in country areas, with the co-operation of State adult education authorities and Education Departments. All State adult education authorities receive grants for this purpose. The Fund also assists certain literary magazines.

The Fund is administered by a committee consisting of one representative of each of the three main political parties in the Parliament, the chairman being the Prime Minister. The committee is advised on all literary matters by an advisory board of six persons with literary qualifications.

**Commonwealth assistance to Australian composers**

In 1967 the Commonwealth Government appointed an advisory board to advise it on projects to encourage Australian composers. The purpose of Commonwealth aid in this field is to assist any project which will facilitate the performance of Australian compositions, and to promote a better

understanding of Australian music. On the advice of the Board, the Commonwealth provides financial assistance to enable composers to work full-time on compositions which are assured of performance; finances a scheme to enable young composers to gain experience in advanced techniques; assists the publication of scores which music publishers cannot wholly finance; assists to meet the costs of copying parts for performance; acquires copies of compositions for insertion in the Australian Society of Music Education Journal, to introduce school children to Australian music; and promotes Australian music overseas.

## Film production

### Australian National Film Board

The Australian National Film Board advises the Minister for the Interior on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration; and for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The Board has twelve members, with the Director of the News and Information Bureau, Department of the Interior, as chairman and the remainder representative of Commonwealth departments, State government instrumentalities, and other interested organisations.

### Commonwealth Film Unit

The Film Division of the News and Information Bureau, Department of the Interior, is the official film production and distribution agency for Commonwealth departments and instrumentalities. It is referred to as the Australian Commonwealth Film Unit. It distributes theatrical and television Film Unit productions in Australia and overseas through its representatives at Australian official posts. Non-theatrical distribution in Australia is arranged in co-operation with State film distribution agencies, and through the National Library of Australia.

The Film Unit produces films for general exhibition, as well as training and special purpose films. In 1969-70 the Film Unit produced approximately 110 reels of new films and 150 reels of foreign versions of existing films. While many films are released commercially abroad, the emphasis is on distribution of educational and information films through non-theatrical circuits. Selected films have been recorded in most Asian and European languages and in Esperanto and Pidgin.

In addition to films made on its own initiative, the Commonwealth Film Unit produces films under the sponsorship of, or with the co-operation of, Commonwealth departments and other government instrumentalities. It participates in cultural events such as those surrounding Expo '70 in Japan.

## Censorship

### National Literature Board of Review

The National Literature Board of Review was established in 1968, following Commonwealth-State agreement, to achieve uniformity in the administration of laws relating to blasphemous, indecent or obscene publications of *prima facie* literary, artistic or scientific merit. In terms of the Agreement the Board is established under the Customs (National Literature Board of Review) Regulations. Appropriate Ministers of any State may, under the Agreement, refer works published or distributed locally to the Board for advice. Subject to retention of final responsibility by each Minister it is the intention of the Governments concerned not to act against a publication of merit which the Board advises is suitable for distribution in Australia.

### Film censorship

The Commonwealth Government's powers over censorship of films under the Customs Act extend only to imported films and imported advertising matter. Under that Act the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films and related advertising material coming within certain defined categories are not admitted into Australia. The Film Censorship Board may pass films in their original form, reject them, or pass them after eliminations have been made. Legislation passed by the State Governments of Victoria, Queensland, Western Australia, and Tasmania names the Commonwealth

Film Censorship Board as the censorship authority and vests in it the power to classify films as suitable for general exhibition or not. The State Acts give the Commonwealth Board the authority to censor films made in Australia for commercial exhibition and advertising.

The censorship organisation comprises a Censorship Board of seven persons and an appeal censor, the headquarters being in Sydney. Importers have a right of appeal to the Minister against decisions of the Board and the Appeal Censor.

*Thirty-five mm films for exhibition in picture theatres.* In 1969, 1,772 films comprising approximately six million feet, were censored. This represented approximately 1,144 hours screening time. Of these films, 688 originated in the United Kingdom, 386 in the United States of America and 698 in other countries. Principal suppliers among the last mentioned were: U.S.S.R. (124), Greece (78), Italy (75), France (74), Japan (35), India (22), Sweden, Germany (19 each), South Africa (17), Holland (16) and Yugoslavia (15). Included in these figures were 581 full-length feature films. Feature films came from the United States of America (185), the United Kingdom (84), Italy (57), U.S.S.R. (51), France, (41) Greece (36), Sweden (17), Yugoslavia (11), India, Israel and Japan (9 each). Sixty-one feature films were rejected and cuts were made from 146. There were 35 appeals; 21 against rejection, 2 against cuts and classification, 11 against cuts, and 1 against refusal to export. Four appeals were allowed and 31 disallowed.

Feature films classified as suitable for general exhibition numbered 176, and 344 were considered not suitable for children. Of the latter, 116 carried the special condition that all advertising should indicate that they were suitable only for adults. These classifications are advisory only. In addition to these imported films, 169 thirty-five mm films of 189,680 feet produced in Australia were cleared. These were mainly newsreels and documentaries intended for commercial exhibition or export.

*Sixteen mm films.* Excluding those imported for television use, 8,005 sixteen mm films of approximately 7 million feet were examined. These were films commercially produced for screening in theatres used by business undertakings for advertising and instructional purposes, and for screening in churches, schools and universities. They also included a number of 16 mm theatrical features, some having been previously imported in 35 mm. Three were rejected.

*Eight and 9.5 mm films.* Approximately 268,000 feet of 8 mm and 9.5 mm films were examined. One hundred and fifty-four films with an approximate footage of 16,100 feet were rejected.

*Television films.* In 1969, 7,325 films for use on television, predominantly 16 mm, of approximately 11 million feet, were censored. The films censored for television amounted to approximately 5,030 hours screening time. On a footage basis the United States of America supplied 67 per cent of the total imports and the United Kingdom 25 per cent. Nineteen television films were rejected outright and an additional 37 were classified as unsuitable for televising. Eliminations were made from 736. There were 20 appeals, 5 against rejection and 15 against classification, of which 2 were allowed and 18 disallowed.

*Foreign language films.* Countries other than the United Kingdom and the United States of America supplied 698 of the 35 mm foreign language films imported for theatrical exhibition, of which 312 were feature films. Generally, the dialogue is in a foreign language with explanatory English captions. A few have an English commentary and in some cases English dubbed dialogue. Of 8,005 sixteen mm films censored, 1,784 originated from non-English speaking countries. The chief supplying countries were Germany (339), France (318), Japan (249), Italy (215), India (97), Holland (91), Switzerland (55), Czechoslovakia (51), USSR and Poland (47 each), Sweden (43), Yugoslavia (19), and Denmark (18).

*Export of films.* The quantity of films exported for the year was approximately 2.5 million feet, consisting mainly of newsreels, advertising films and documentaries. This footage included in many cases several prints of the one film. It also included large quantities of exposed negatives sent overseas for processing.

## Cultural organisations

### Arts Council of Australia

The Arts Council of Australia has divisions in the Australian Capital Territory, New South Wales, Victoria, Queensland, South Australia, Tasmania and the Northern Territory. The New South Wales Division has over 50 branches, Queensland has over 40, South Australia 22 and Tasmania 8. A Federal Secretariat was opened in Canberra in 1969.

The Arts Council Divisions receive State Government grants through the Departments of Education in New South Wales, Queensland and South Australia. Some activities of the Council are supported financially by non-metropolitan local government bodies. The New South Wales Division is represented on the Adult Education Advisory Board in that State, and on the Music Committee of Unesco. The Tasmania Division is represented on, and works closely with, the Adult Education Board of that State.

The Arts Council works to bring the arts to country centres and metropolitan and country schools and is concerned with taking the arts to children. Tours of high standard companies in opera, ballet, drama, puppets, etc., operate throughout the year. The Arts Council works closely with the Australian Ballet, the Australian Trust Opera and the Old Tote Theatre Company in organising country tours for these bodies.

The Council handles a wide range of art exhibitions in city and country areas. Summer schools and other courses for drama, painting, pottery, music, and other arts are an established feature of the work of the New South Wales and Queensland Divisions, as are weekend schools of drama, music, painting and pottery.

Yearly drama festivals are conducted. The New South Wales Division sponsors biennial arts festivals in Sydney (North Side Arts Festival), with the fifth festival being planned for August 1971. The Queensland Division of the Arts Council organises an annual Summer School of the Arts.

School tours are organised in New South Wales and Queensland.

#### **Australian Elizabethan Trust**

The Australian Elizabethan Theatre Trust presents drama, opera, ballet and puppetry throughout Australia. It receives annual grants from the Commonwealth Government, the State Governments and city councils and its income is supplemented by subscriptions from members and donations from business houses.

In the field of drama it has presented, *inter alia*, about 35 works of Australian playwrights since 1954, some of which were subsequently presented overseas. The Australian Ballet has visited all mainland capitals and New Zealand and has performed world premieres of ten commissioned ballets since 1964. The Australian Opera, formerly the Elizabethan Trust Opera Company, became independent of the Trust in 1969 but works in close alliance with it. It has presented overseas guest artists, conductors and producers, and since 1956 it has given more than 1,600 performances of forty operas in all States and the Australian Capital Territory. It is intended that other performing companies created by the Trust will eventually be autonomous, with the Trust acting as an entrepreneur. The Trust has also been associated with commercial managements in the presentation of overseas attractions and large-scale musicals.

In 1965 the Trust and Arts Council of Australia jointly formed the Marionette Theatre of Australia to promote puppetry. The Theatre now operates solely under Trust sponsorship.

Each year a number of special companies present Shakespeare and other curricular plays for schools in all States, and units of singers and dancers perform a similar educational function in bringing opera and ballet to school audiences.

The Trust is associated with the University of Melbourne in the Melbourne Theatre Company, with the University of New South Wales Drama Foundation in the Old Tote Theatre Company, and with the South Australian Theatre Company. Assistance is given to the Adelaide Festival of Arts, the Festival of Perth, the Perth Playhouse, the National Theatre and Fine Arts Society of Tasmania, and other companies. From a special commissioning fund the Trust commissions theatrical works in all major forms from Australian creative artists.

The Trust is associated with the University of New South Wales and the Australian Broadcasting Commission in maintaining the National Institute of Dramatic Art, which provides a training ground for young Australian actors, producers and technicians. The Australian Ballet School, maintained by the Trust in Melbourne, performs a similar function for selected ballet students.

#### **Australian National Trusts**

The Australian National Trusts were founded to further the preservation of lands, places, buildings, works, and articles which are of national importance by reason of educational, aesthetic, historic, architectural, artistic, scientific, cultural, or other special interest.

The first Australian National Trust, the National Trust of Australia (New South Wales), was formed in 1945. Since then National Trusts have been formed in each of the other States. The Trusts in New South Wales, Queensland, South Australia, and Western Australia have statutory authority, and those in Victoria and Tasmania are incorporated under the Companies Acts of their respective States. The Australian Council of National Trusts was incorporated in 1965 to co-ordinate the activities of the State National Trusts and represent them at the federal level and internationally.

Membership of the National Trusts is open to all individuals and organisations. Total membership throughout the Commonwealth is approximately 26,500. The Trusts are financed by members' subscriptions and donations from individuals and commercial and industrial organisations, the proceeds of charges for entry to Trust properties and the fund-raising activities of members, including inspections of historic houses. In some States the Trusts are subsidised by the State Governments.

The number of properties owned or controlled by the Trusts exceeds sixty. These include houses, natural reserves, a powder magazine, a police station, a gaol, two paddle steamers and a hulk, a joss house, and a garden. The Trusts have also established a register of buildings (totalling several thousand) which they consider should be preserved in the national interest because of their historical and or architectural significance.

#### **Historic Memorials Committee**

The *Historic Memorials Committee* was established in 1911 for the purpose of securing portraits of distinguished Australians who had taken an active part in Federation. Later the Committee decided to obtain portraits of all Governors-General, Prime Ministers, Presidents of the Senate, Speakers of the House of Representatives, and other notable Australians. In addition the Committee has commissioned paintings recording special events connected with the Commonwealth Parliament.

The Committee comprises the Prime Minister (Chairman), the President of the Senate, the Speaker of the House of Representatives, the Vice-President of the Executive Council, the Leader of the Opposition, and the Leader of the Opposition in the Senate. The Art Advisory Board, *see* below, assists the Committee by advising on portraits to be commissioned.

#### **Commonwealth Art Advisory Board**

The Art Advisory Board, which consists solely of artists, advises the Commonwealth Government on all artistic matters as well as assisting the *Historical Memorials Committee*. It also purchases works of art for the National Collection, for which \$250,000 was provided in 1969-70. In addition, the Board is acquiring a collection of South-East Asian art and Melanesian artefacts which, together with the National Collection, will be housed in the proposed Australian National Gallery.

On behalf of the Government, the Board organises and finances exhibitions of Australian art in overseas countries and contributes towards the cost of exhibitions from overseas arranged by State Art Galleries. \$60,000 was provided for this purpose in 1969-70.

### **SCIENTIFIC AND INDUSTRIAL RESEARCH IN AUSTRALIA**

A special article on Science and Technology in Australia, prepared by the Commonwealth Scientific and Industrial Research Organization of Australia, was included in Year Book No. 49 (*see* page 781). A short account of the development of research in Australia and of the governmental and university organisations engaged in research was included in Year Book No. 53 (*see* pages 650-2).

The following is a brief description of the research activities of selected Commonwealth Government agencies and scientific societies.

#### **Australian Industrial Research and Development Grants Board**

To encourage industrial research and development in Australia the Government introduced the *Industrial Research and Development Grants Act 1967*. The legislation, administered by the Australian Industrial Research and Development Grants Board, provides for the payment of grants on a dollar for dollar basis to Australian manufacturing and mining companies for increased research and development expenditure.

Companies employing professional research staff are assisted in their own research and development, but the Act also provides for companies to contract research and development with approved research organisations.

The first grants to industry under this Act were made in 1968 and the Government provided \$10.8 million for this purpose in 1969-70. Special taxation concessions also apply to expenditure on research and development.

#### **Commonwealth Scientific and Industrial Research Organization**

The Commonwealth Scientific and Industrial Research Organization (CSIRO) is Australia's largest civil scientific body and now has a staff of about 6,200 including some 2,000 professional scientists. Its main function is to carry out scientific research for the primary and secondary industries of the Commonwealth and its Territories. It does not conduct defence research, medical research or atomic energy research. The other powers and functions of CSIRO as defined in the Science and Industry Research Act of 1949, include:

the training of scientific research workers and the awarding of scientific research studentships and fellowships;

- the making of grants in aid of pure scientific research;
- the recognition or establishment of associations of persons engaged in any industry, for the purposes of carrying out industrial scientific research and the co-operation with, and the making of grants to, such organisations;
- the testing and standardisation of scientific apparatus and instruments and the carrying out of scientific investigation connected with standardisation;
- the collection and dissemination of information relating to scientific and technical matters;
- the publication of scientific and technical reports, periodicals and papers.

### Organisation

CSIRO is a statutory corporation operating under its own Act of Parliament and exercising its powers subject to the regulations and the approval of the Minister for Education and Science.

The governing body of the Organization is the Executive, which is located in Canberra and consists of nine members appointed by the Governor-General. There are five full-time members, one of whom is chairman, and four part-time members. At least five of the members must possess scientific qualifications. The Executive is responsible to the Minister for the policy and the work of the Organization.

For carrying out its research work, CSIRO is divided into four major group laboratories and a number of Divisions and Sections. The four group laboratories are the Animal Research Laboratories comprising four Divisions, the Chemical Research Laboratories comprising five Divisions, the National Standards Laboratory comprising two Divisions, and the Wool Research Laboratories comprising three Divisions. There are also twenty-one independent Divisions in other research fields and an additional three independent Sections. The Head Office is in Melbourne but will transfer to Canberra in 1971. Regional administrative officers are located at Brisbane, Canberra, Melbourne, and Sydney. The Organization also maintains the Australian Scientific Liaison Office in London and the Office of the Scientific Attaché in Washington.

Since the Organization's activities are Commonwealth-wide and often involve extensive field work, a number of branch laboratories and field stations have been established in various parts of Australia.

The Organization's total budget for 1969-70 was about \$53,600,000. Nearly four-fifths of this was provided by the Commonwealth Government, while much of the remainder was provided by trust funds which have been set up by various primary producer groups. The largest of these is the Wool Research Trust Fund, but the wheat, dairy, meat, and tobacco industries also contribute substantial amounts. The funds are derived from a levy on produce matched by a Government contribution.

### Mount Stromlo and Siding Spring Observatories

Mount Stromlo Observatory and Siding Spring Observatory are the two astronomical research stations of the Research School of Physical Sciences, Australian National University. The staff of the observatories are academic staff of the University's Institute of Advanced Studies. The permanent headquarters of the observatories are located at Mount Stromlo, together with the library, laboratories and offices of the scientific staff. The older telescopes are located on Mount Stromlo, the newer ones on Siding Spring Mountain. At Siding Spring there is a lodge to house the astronomers, permanently based at Mount Stromlo, who visit for short periods to make observations there.

The observatories constitute the principal centre of optical astronomical research in the southern hemisphere. Their research facilities are second only to the great observatories of the south-western United States, and because of their geographical latitude observations can be made on parts of the sky permanently inaccessible to northern astronomers. The functions of the observatories are to carry out original investigations (both observational and theoretical) in astronomy and astrophysics, and to provide post-graduate training for future Australian astronomers.

The direction of the researches conducted depends on the steadily widening interests of the staff and scholars as the subject of astronomy itself rapidly progresses. Areas of permanent interest to which the observatories have made important contributions include the evolution of stars and of stellar systems, the study of the Magellanic clouds and their globular star clusters, the chemical composition of the stars and the study of pulsating stars. The results of the work carried out at the observatories are published in international scientific periodicals, principally in the *Monthly Notices of the Royal Astronomical Society* and the *Astrophysical Journal*.

Mount Stromlo Observatory is situated at 35° 19' 16" south latitude and 149° east longitude at an altitude of 2,560 feet. It is on the summit of a ridge of low hills in the Australian Capital Territory seven miles west of the city of Canberra. The first regular scientific work was started at this site in 1925, and the Observatory was incorporated in the Australian National University in 1957. The main instruments are 30-inch, 50-inch and 74-inch reflecting telescopes and associated spectrographs, photometers and spectral scanners.

Siding Spring Observatory was established in 1965. It is located at 31° 16' south latitude and 148° 41' east longitude at an altitude of 3,820 feet and occupies the summit of Siding Spring Mountain in the Warrumbungle Ranges, near Coonabarabran, New South Wales. This site has one of the best climates for astronomical research to be found anywhere in Australia—considerably better than that at Mount Stromlo. The instruments at present operating at Siding Spring Observatory include a 40-inch and a 24-inch reflector. Work is proceeding on the installation of a 150-inch reflecting telescope due for completion in 1973. The project is being jointly funded by the Department of Education and Science and the United Kingdom Government.

## Australian Atomic Energy Commission

### Functions of the Commission

The Australian Atomic Energy Commission is a statutory corporation which functions under the direction of the Minister for National Development. It consists of five members. The Commission is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. It is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology. A detailed description of its activities is contained on pages 560–562 of Year Book No. 55.

### Nuclear Power

In October 1969 the Commonwealth Government announced a proposal to build a nuclear power station of 500 megawatt capacity at Jervis Bay, on the New South Wales south coast, by 1975, subject to a satisfactory tender. This followed discussions early in 1969 between the Commonwealth and all State Governments.

The project will be undertaken in collaboration with the Government of New South Wales and its Electricity Commission. The station is to be financed and owned by the Commonwealth, and the power will be supplied to the State electricity network. New South Wales is being asked to guarantee the long-term power requirements of the Australian Capital Territory. The Commonwealth will supply the fuel and retain the spent fuel.

A detailed programme of environmental surveys, including meteorology, tides, currents and marine life, is being undertaken to ensure that the power station causes the minimum of disturbance to the environment.

### Associated training and research organisations

The Australian Institute of Nuclear Science and Engineering comprises the Australian Atomic Energy Commission and Australian universities. The Institute's operations are financed by membership subscriptions and a Commonwealth Government grant which amounted to \$150,000 in 1968–69. The purpose of the Institute is to stimulate research and training in nuclear science and engineering within the universities and to arrange access for university research workers to the highly specialised equipment at the A.A.E.C. Research Establishment.

The Australian School of Nuclear Technology is jointly sponsored by the Commission and the University of New South Wales. Courses are being offered in nuclear technology, production and use of radioisotopes, radiological safety, health physics, and other related topics.

### Scientific societies

#### Royal Societies

The following table contains the latest available statistical information about the Royal Societies in each State and in the Australian Capital Territory.

ROYAL SOCIETIES, DECEMBER 1969

	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>A.C.T.</i>
Year of charter . . . . .	1866	1859	1884	1880	1913	1844	1930
Number of members . . . . .	375	580	278	285	248	569	152
Volumes of transactions issued (a) . . . . .	102	83	80	93	58	103	..
Number of books in library . . . . .	33,585	33,000	71,954	25,000	7,820	37,000	..
Societies on exchange list . . . . .	395	336	301	362	245	317	..

(a) Cumulative total

#### Australian Academy of Science

The Australian Academy of Science is the national institution representing science in Australia. Constituted by Royal Charter in 1954, the Academy promotes scientific knowledge and research, maintains standards of scientific endeavour and achievement in the natural sciences in Australia, and recognises outstanding contributions to the advancement of science. The Academy represents Australian science and scientists at the national and international level, co-ordinates Australian contributions to international co-operative scientific ventures, organises meetings of scientists, holds symposia, and arranges for visits of scientists from other countries to Australia. It also administers research fellowships provided by industry.

Its Fellows (designated F.A.A.) are eminent in some branch of the physical or biological sciences in Australia, occupying professional positions in universities, the Commonwealth Scientific and Industrial Research Organization, other research organisations, and industry. A few places are reserved for Fellows who have rendered conspicuous service in the cause of science. No more than seven new Fellows are elected in any one year. Its present membership is about 130 Fellows.

The Academy is financed by general purpose grants from the Commonwealth Government and considerable private benefactions. In 1969-70 the Academy received from the Government \$180,300, including \$55,300 for the International Biological Programme. The Academy is managed by an elected council comprising a president, treasurer, three secretaries and ten ordinary members who are drawn equally from the physical sciences and biological sciences. Chief administrative officer is the Executive Secretary, who is not a Fellow. Its conference centre is in Canberra.

#### Australian and New Zealand Association for the Advancement of Science (ANZAAS)

This Association was founded in 1887. Its objects are 'the advancement of science and scholarship through the connection of knowledge and the promotion of a spirit of co-operation among scientific workers, scholars and those in sympathy with science and scholarship generally, especially in Australia, New Zealand and the Australian Territories'. The 42nd ANZAAS Congress was held in Port Moresby on 17 to 21 August 1970, and the 43rd Congress will be held in Brisbane, 24 to 28 May 1971.

The ANZAAS Central Office is in Sydney and Divisions operate in New South Wales, South Australia and Western Australia.

#### Other scientific societies

The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1874 for 'the cultivation and study of the science of natural history in all its branches'. The Society publishes proceedings, maintains a library, and offers research fellowships. Ninety-three volumes of proceedings have been issued and the library has some 19,000 volumes. The Linnean Macleay Fellowship for research in natural history is offered annually to graduates of the University of Sydney who are members of the Society and resident in New South Wales. The membership at the end of 1969 was 305.

The British Astronomical Society has a branch in Sydney and there are more than 200 other learned societies devoted to the study of particular sciences. Some of these, including the Royal Australian Chemical Institute and the Institution of Engineers, Australia, are qualifying bodies, admission to which is by qualification only. Other, such as the Institute of Food Technologists, are open to any interested person. Some societies, such as the Australian Biochemical Society, have annual symposia of a very high standard. A great many of these bodies publish appropriate journals.

## CHAPTER 21

### EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with in this chapter is contained in the *Labour Report* and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the chapter Miscellaneous of this Year Book. Detailed information on the labour force and on employment and unemployment is contained in mimeographed bulletins *The Labour Force* and *Employment and Unemployment*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary employment estimates are issued in a monthly statement *Employed Wage and Salary Earners*.

#### THE LABOUR FORCE

This chapter contains a number of series relating to the labour force and its components. The labour force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the labour force, classified according to industry, occupation and occupational status (i.e. whether employers, self-employed persons, wage and salary earners or unpaid helpers) and personal characteristics such as age, sex, marital status and birthplace, are obtained only at a general census of population. Information about the labour force questions in the population census of June 1966 and a table showing the industry and occupational status of the labour force are given on pages 691-3.

In the periods between population censuses, estimates of the labour force for the whole of Australia are obtained through the population survey, which is carried out by means of personal interviews at a one per cent sample of households throughout Australia in February, May, August and November each year, see pages 694-700. The survey provides, in addition to particulars of the demographic composition of the labour force, broad estimates of occupational status, occupation, industry and hours of work.

Detailed industry estimates for each State and Territory are obtained only in respect of wage and salary earners, through a monthly collection from employers. These estimates, which exclude employees in agriculture and private domestic service, are based on benchmarks derived from the population census, but they do not agree exactly with census figures at relevant dates because of a different method of allocating employees to industries. Further information about estimates of employed wage and salary earners is given on pages 700-4.

#### The population census\*

A new definition of the labour force† was adopted at the 1966 census, which conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians, held in Geneva in 1954. At the census the following questions were asked.

16. 'Did the person have a job or business of any kind last week (even though he may have been temporarily absent from it)? ANSWER "YES" or "NO".'
17. 'Did the person do any work at all last week for payment or profit? ANSWER "YES" or "NO". Persons working without pay as a helper in a "family business" or farm and members of the clergy and of religious orders (other than purely contemplative orders) should answer "YES" to this question. Persons doing only unpaid housework should answer "NO".'
18. 'Was the person temporarily laid off by his employer without pay for the whole of last week? ANSWER "YES" or "NO".'

---

\* Particulars of Aborigines are not included in the table on page 693. See page 121, Chapter 7, Population. † The term 'work force' has been used in 1966 census publications and has the same meaning as the term 'labour force'.

19. 'Did the person look for work last week? ANSWER "YES" or "NO". (Note. "Looking for work" means (i) being registered with Commonwealth Employment Service, or (ii) approaching prospective employers, or (iii) placing or answering advertisements, or (iv) writing letters of application, or (v) awaiting the result of recent applications).'

The labour force includes all persons for whom the answer 'yes' was given to any one of these four questions, except that persons helping but not receiving wages or a salary who usually worked less than fifteen hours a week were excluded from the labour force. Persons under fifteen years of age were also excluded by definition from the labour force.

Persons in the labour force were classified into two categories: those employed and those unemployed. A person was considered to be unemployed if he answered the above questions in any one of the following ways.

<i>Question No.</i>	<i>In labour force—Unemployed</i>				
16.	No	No	No	Yes	Yes
17.	No	No	No	No	No
18.	No	Yes	Yes	Yes	Yes
19.	Yes	No	Yes	No	Yes

The net effect of the new definition was to include approximately 108,000 additional persons in the Australian labour force, i.e. a proportionate increase of approximately 2.3 per cent. The major factor in this change was females working part-time (sometimes for only a few hours a week), some of whom, at earlier censuses, did not consider themselves as '. . . engaged in an industry, business, profession, trade or service.'

#### **Industry and occupational status of the labour force**

At the 1966 census persons in the labour force were asked to state industry in accordance with the following instructions.

'State the exact branch of industry, business or service in which mainly engaged last week, using two or more words where possible. For example, "Dairy Farming", "Coal Mining", "Woollen Mills", "Retail Grocery", "Road Construction", etc. Employees should state the industry of their employer. For example, a carpenter employed by a coal mining company should state "Coal Mining". If employed by a Government Department or other public body, state also its name. For paid housekeepers and domestic servants in private households, write "P.H.".'

From the answers to this question, persons were classified according to the Bureau's *Classification of Industries*, which provides for each person to be classified according to the nature of the business in which mainly engaged, regardless of whether operated by a government authority, corporation, or individual.

Males and females in the labour force at the 1966 census are classified in the following table according to industry and occupational status. Only the major industry groups are shown; particulars for each sub-group are available in the mimeographed 1966 Census Bulletin No. 9.6, *Population: By Industry and Occupational Status, Australia* and in the corresponding bulletin for each State and Territory. Persons in the labour force in each industry sub-group were shown for Australia on pages 1117-19 of Year Book No. 55.

**LABOUR FORCE, BY INDUSTRY AND OCCUPATIONAL STATUS: AUSTRALIA, CENSUS  
30 JUNE 1966**

Industry (major group)	Employed				Total	Un- employed	Total in the labour force	Proportion of total (per cent)
	Employer	Self- employed	Employee (on wage or salary)	Helper (not on wage or salary)				
<b>MALES</b>

### The population survey

The population survey is the general title given to the household sample survey carried out in February, May, August and November of each year in all States and Territories. Emphasis in the survey is placed on the collection of data on demographic and labour force characteristics, the principal survey component being referred to as the labour force survey. The remaining part of the population survey consists of supplementary collections which are carried out from time to time in conjunction with the labour force survey.

The population survey was instituted in November 1960 in the six State capital cities, and was extended to include non-metropolitan areas as from February 1964. About 38,000 households, representing one per cent of all households, are selected by area sampling methods and enumerated each quarter, the information being obtained by carefully chosen and specially trained interviewers during a four-week period on each occasion.

A description of the labour force survey and a selection of principal statistics obtained from it are given in this section. Data from supplementary surveys are published in mimeographed bulletins which are available on request. Results of the surveys Leavers from Schools, Universities or Other Educational Institutions, and Multiple Jobholding, were given in Year Book No. 54, pages 1162-6. More recent surveys, results of which are included in this issue, include Chronic Illnesses, Injuries and Impairments, May 1968 (*see* Appendix); Post-school Study Courses, August 1968 (*see* Chapter 20, Education, Cultural Activities, and Research); and Child Care, May 1969 (*see* pages 705-8).

### The labour force survey

The labour force survey commenced in November 1960, and until November 1963 it was confined to the six State capital cities. The first survey for the whole of Australia was carried out in February 1964. Quarterly estimates of the civilian labour force in the six capital cities were published regularly in the mimeographed bulletin *Employment and Unemployment*, and covered the period November 1960 to May 1968. Thereafter they were discontinued. The first estimates covering the whole of Australia appeared in a mimeographed bulletin *The Labour Force, August 1966 to February 1969*. More comprehensive statistics of the labour force have been published in two bulletins *The Labour Force, 1964 to 1968* and *The Labour Force, 1969*.

The survey includes all persons fifteen years of age and over (including full-blood Aborigines), except members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.

The classification used in the survey conforms closely to that recommended by the Eighth International Conference of Labour Statisticians held in Geneva in 1954. In this classification, the labour force category to which an individual is assigned depends on his actual activity (i.e. whether working, looking for work, etc.) during a specified week, known as 'survey week', which is the week immediately preceding that in which the interview takes place. The interviews are carried out during a period of four weeks, so that there are four survey weeks in each of the months to which the survey relates. These survey weeks generally fall within the limits of the calendar month.

A person's activity during survey week is determined from answers given to a set of questions specially designed for this purpose. The principal categories appearing in the tables in this section are the employed and unemployed, who together constitute the labour force, and the remainder, who are classified as not in the labour force. Definitions of these categories are as follows:

- (i) *The labour force* comprises all persons who, during survey week, were employed or unemployed as defined in (ii) and (iii) below.
- (ii) *Employed persons* comprise all those who, during survey week,
  - (a) did any work for pay, profit, commission or payment in kind, in a job or business, or on a farm (including employees, employers and self-employed persons), or
  - (b) worked fifteen hours or more without pay in a family business (or farm), or
  - (c) had a job, business or farm, but were not at work because of illness, accident, leave, holiday or industrial dispute; or because of production hold-up due to bad weather, plant breakdown, etc.

A person who had a job but was temporarily laid off by his employer for the whole week without pay is excluded, and is classified in the tables as unemployed. A person who did some work during the week, however, before he either lost his job or was laid off, is classified as employed. A person who held more than one job is counted only once, in the job at which he worked most hours during survey week.

(iii) *Unemployed persons* comprise all those who, during survey week, did no work at all, and who either,

(a) did not have a job or business and were actively looking for work (including those who stated that they would have looked for work if they had not been temporarily ill or believed no work was available, or had not already made definite arrangements to start work in a new job after survey week), or

(b) were laid off from their jobs without pay for the whole week.

A person who either lost his job or was laid off *during* survey week, but did some work at his job during that week, is classified as employed.

(iv) *Persons not in the labour force* are all those who, during survey week, were not in the categories 'employed' or 'unemployed' as defined. This category therefore includes persons without a job, business or farm who were not actively looking for work, and who, during survey week, were either keeping house (unpaid), attending school, university, etc., retired or voluntarily idle, permanently unable to work or inmates of institutions. A person who worked less than fifteen hours without pay in a family business during survey week is also classified as not in the labour force.

Figures of total population fifteen years of age and over for each sex are derived from the official population estimates, which in turn are based on the census of June 1966. Figures of marital status and all labour force characteristics of these populations are derived from the sample survey data. For this and other reasons, including differences in timing, methods of collection (personal interview in the survey, self-enumeration in the census) and, in some cases, concepts and definitions, the survey estimates of marital status and labour force characteristics for May 1966 may not agree closely with the corresponding census figures for June 1966.

#### Reliability of the estimates

Since the estimates which appear in the following tables are based on a sample, they may differ from the figures that would have been obtained from a complete census using the same questionnaires and procedures. One measure of the likely difference is given by the standard error, which indicates the extent to which an estimate might have varied by chance because only a sample, and not the whole population, was enumerated. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained from a comparable complete enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors.

Space does not allow for the separate indication of the standard errors of all estimates in this section. A table of standard errors which is intended to be of general application is therefore given below (Table A), and approximate standard errors of estimates of the total number of persons in Australia in each of the principal employment status categories, classified by sex only, in Table B.

The standard errors in these tables are averages based on calculations for a limited number of surveys and are also averages over a wide range of labour force characteristics. These figures thus give not a precise measure but an indication of the magnitude of the standard error of any particular estimate for any particular survey. An example of the use of Table A is as follows: if the estimate obtained from the sample is 100,000 and the standard error is 3 per cent of the estimate, i.e. 3,000, there are about two chances in three that the true figure is within the range 97,000 to 103,000 and about nineteen chances in twenty that this figure is within the range 94,000 to 106,000.

TABLE A  
STANDARD ERRORS OF QUARTERLY ESTIMATES

Size of estimate (persons)	Approximate standard error of estimates	
	Persons	Percentage of estimate
4,000	750	19
5,000	850	17
10,000	1,100	11
20,000	1,400	7
50,000	2,000	4
100,000	3,000	3
200,000	4,000	2
500,000	5,000	1
1,000,000	5,500	0.6
2,000,000	8,000	0.4

**TABLE B**  
**STANDARD ERRORS OF PRINCIPAL EMPLOYMENT STATUS CATEGORIES**

Category	Approximate standard error of estimates					
	Males		Females		Persons	
	'000	Per cent	'000	Per cent	'000	Per cent
Employed—						
Agriculture . . . . .	12	3.2	3	6.3	14	3.2
Other industries . . . . .	8	0.3	10	0.7	12	0.3
Total . . . . .	8	0.2	10	0.7	12	0.3
Unemployed . . . . .	2	6.1	2	5.7	3	4.4
Labour force . . . . .	7	0.2	10	0.7	12	0.3
Not in the labour force . . . . .	7	1.1	10	0.4	12	0.4

It should be noted that the standard errors of estimates relating to agricultural employment are generally somewhat higher than the standard errors of other estimates of the same magnitude. Estimates for females also tend to have higher standard errors relative to estimates of equivalent size for males in similar employment categories.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the denominator. Percentages quoted in the following tables, and any other percentages calculated from figures shown, have generally somewhat lower proportional standard errors than have the estimates which form the numerators of the percentages, particularly where the percentages are large.

As the standard errors in Table A show, the smaller the estimate the higher is the relative standard error. Very small estimates would thus be subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the following tables, estimates less than 4,000 have not been shown. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

(a) Civilians 15 years of age and over. For definitions see page 694. (b) Actual hours worked during survey week, not hours paid for. The figures may be affected by public holidays, leave, absenteeism; temporary absence from work due to sickness, accidents, and industrial disputes; and work stoppages due to bad weather, plant breakdown, etc. (c) Excludes persons laid off for the whole of survey week without pay; these persons are classified as unemployed. (d) Persons with jobs who did not work during survey week have been included in the calculation of average hours worked. (e) Never married, widowed and divorced.

\* Estimates less than 4,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived by subtraction, they should not be regarded as reliable.

(a) Civilians 15 years of age and over. For definitions see page 694. (b) Period from the time the person began looking for work, or was laid off, to the end of survey week. (c) Includes persons laid off from full-time jobs. (d) Includes persons laid off from part-time jobs.

## EMPLOYED WAGE AND SALARY EARNERS

Estimates of wage and salary earners in civilian employment that were published in previous issues of the Year Book were based on data derived from the population censuses of June 1954 and June 1961. Estimates in this issue are based on data derived from the 1966 census. Because of the adoption of a new definition of the labour force in the 1966 census these estimates are not comparable with those for periods prior to June 1966.

Detailed industry figures for each State and Australia, on the new basis, and a revised government employment series, were published in a mimeographed bulletin *Employed Wage and Salary Earners, June 1966 to June 1969*. This bulletin contained estimates for each month of the period covered. Estimates for subsequent months have been published in *Employment and Unemployment*.

Particulars of the questions asked in the 1966 census in order to determine each person's labour force status are given on pages 691-2. Provided he had not been temporarily laid off by his employer without pay for the whole of the week prior to the census, a person who answered 'yes' to either of the first two of those questions was classified as employed.

The data needed to derive the estimates for periods subsequent to the benchmark date (June 1966) are obtained from three main sources, namely, (a) current pay-roll tax returns; (b) current returns from government bodies; and (c) some other current returns of employment (e.g. for hospitals); the balance, i.e. unrecorded private employment, is estimated. At June 1966, recorded employment obtained from the foregoing sources accounted for about 85 per cent of the total number of employees in the industries covered, as determined by the census.

The figures in this section, except those in the table on page 701, relate only to civilian wage and salary earners, not the total labour force. They therefore exclude employers, self-employed persons, unpaid helpers and defence forces. Also excluded, because of the inadequacy of current data, are employees in agriculture and in private domestic service, and some part-time employees.

The June 1966 figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly changes are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in the reporting of industry, the industry dissection of the census totals has been adjusted to conform as closely as possible to an establishment reporting basis. For this reason, and because crews of

overseas ships were excluded from the benchmark figures, the estimates for June 1966 in this chapter differ from those published in the series of census bulletins (Nos. 1.6, 2.6, etc.) which show particulars of the occupational status and industry of the population in each State and Territory, and in other publications which contain population census results. The industry classification used throughout the series is that of the population census of June 1966.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' pay rolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Pay-roll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organisations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1969*).

Particulars of employment obtained from other collections, such as the annual manufacturing census and censuses and sample surveys of retail establishments, are used to check and where desirable to revise estimates in relevant sections. Some figures are subject to further revision as the results of later censuses and surveys become available.

Although the series measure reasonably well the short-term trends in employment in the defined field, they may be less reliable for longer-term measurement. There are conceptual differences between benchmark and pay-roll data, and changes in such factors as labour turnover, multiple jobholding and part-time working all affect the trend over longer periods.

### COMMONWEALTH EMPLOYMENT SERVICE

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act 1945-1966* (sections 47 and 48). In brief, the main functions of the C.E.S. are to assist people seeking employment to obtain positions best suited to their training, experience, abilities, and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organisation and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organisation, which was ratified by Australia in December 1949. In addition, C.E.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralised basis within the Employment and Industrial Services Division of the Department of Labour and National Service. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State. There are 157 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 325 agents in the smaller country centres. The District Employment Offices and Branch Offices are distributed as follows: New South Wales, 54; Victoria, 38; Queensland, 26; South Australia, 15; Western Australia, 16; Tasmania, 5; Northern Territory, 2; Australian Capital Territory, 1.

Specialised facilities are provided for young people, persons with physical and mental handicaps, ex-members of the defence forces, national service dischargees, migrants, rural workers, and persons with professional and technical qualifications. The C.E.S. provides vocational guidance free of charge in all States and has a staff of qualified psychologists for this function. Guidance is available to any person, but is provided particularly for young people, ex-servicemen and the handicapped. In New South Wales the C.E.S. provides vocational guidance to adults, including ex-servicemen and the handicapped, while the State Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act 1947-1970* must register at a District Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance in obtaining employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of June 1970, about 272,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twenty-fourth year of operation in May 1970. During 1969 there were 1,072,399 applicants who registered for employment, of whom 822,967 were referred to employers and 474,601 placed in employment. New vacancies notified numbered 704,146.

**Persons registered for employment**

The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include persons in receipt of unemployment benefit (*see* the chapter Welfare Services).

(a) Generally at Friday nearest end of month. (b) Includes Australian Capital Territory. (c) Includes Northern Territory.

**SURVEY OF CHILD CARE**

In May 1969 a survey, based on the quarterly population survey sample (a one per cent sample of households), was conducted throughout Australia in order to obtain, for persons who were in the labour force and who also had the responsibility for the care of children under twelve years of age, information about the arrangements they made to have their children cared for while they themselves were at work (including arrangements for after-school and school holiday care). In addition, information was sought as to the numbers of persons who would have entered the labour force had suitable child care facilities been available. The inquiry was directed mainly to working mothers, but males with the sole responsibility for children were also included.

For the survey of child care, questions were asked of all females in the population survey aged less than sixty years and all widowed, divorced and permanently separated males in the population survey aged less than sixty years, with the following exceptions: persons attending school, university, etc. full-time, persons permanently unable to work, and inmates of institutions such as hospitals, sanatoria and gaols, for whom, for the purposes of the survey, the institution was regarded as their dwelling.

The *labour force* comprises all persons who, during the survey week, were employed or unemployed, according to the definitions customarily used in the population survey. *Employed* persons are those who, during the survey week, did any work for pay, profit, etc. in a job or business, or

on a farm, worked fifteen hours or more without pay in a family business (or farm), or had a job, business or farm from which they were temporarily absent. *Unemployed* persons are those who during the survey week did not have a job or business and were actively looking for work or were laid off from their jobs without pay for the whole week. For more detailed definitions see page 694.

For the purposes of the survey, a *child care centre* was defined as a registered or unregistered establishment, other than a private dwelling, where care was provided for five or more children below compulsory school age. Some other common names given to these centres are 'child minding centre', 'creche', 'cot room' and 'nursery school'. Centres such as pre-schools and kindergartens which are educational institutions were also included in this category. A *home care centre* was defined as one operated on a commercial basis in a private dwelling, in which the proprietor generally lived.

The *person responsible* for the care of a child under twelve years of age was defined as the person who, being a member of the household to which the child belonged, ranked highest in the following list:

- (a) Child's mother, step-mother, foster mother, female guardian.
- (b) Child's father, step-father, foster father, male guardian.
- (c) Any other person considered by the respondent as being responsible for the child.

The standard errors given in Table A on page 695 also apply to the Survey of Child Care. In general, comments on the reliability of estimates on pages 695-6 are also applicable to this survey.

For further details reference should be made to the mimeographed bulletin *Child Care, May 1969* (Reference No. 17.2).

## CHAPTER 22

# MANUFACTURING INDUSTRY

Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Manufacturing Industry* and *Manufacturing Commodities*. Information is also published, as soon as the data can be prepared, in a series of thirty-five annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in the list of Statistical and other official publications of Australia in the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*. A preliminary annual statement (*Factory Statistics*) and a monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of fifty-two *Monthly Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical publications).

The annual mimeographed bulletin *Indexes of Factory Production* deals comprehensively with this subject, which is treated only in summarised fashion on pages 729-30.

### **Economic censuses, 1968-69**

In respect of the year 1968-69, the Commonwealth Bureau of Census and Statistics has conducted the annual census of manufacturing industry as part of a programme of fully integrated economic censuses covering manufacturing and mining industries, and retail and wholesale trade. For a detailed description of the purposes served by this project, and of the new concepts and methods adopted, the reader is referred to the special article on the censuses, which appears as Chapter 31 of this Year Book.

The integrated economic censuses have been a major undertaking involving the development of new concepts, definitions and procedures. Inevitably there has been a considerable delay in finalising the results of the censuses and, for this chapter on manufacturing industry, it has not been possible to provide more up to date statistics than those for 1967-68 which were included in the previous issue. In view of this, the detailed tables showing statistics for individual industries, included in the previous issue, on pages 1075-95, have not been repeated. Results of the 1968-69 censuses will be available in a set of special bulletins.

## Introduction

A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

An historical summary of the development of the manufacturing industry in Australia since 1901 is contained in earlier issues of the Year Book (see No. 51, pages 143-4).

### **Decentralisation of manufacturing industries**

The decentralisation of secondary industries, and the steps taken by Commonwealth and State Governments towards its development, are referred to in previous issues of the Year Book (see No. 51, page 144).

### **Bounties on manufacture**

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum

amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards. (See Chapter 18, Public Finance for products on which bounties are paid.)

### **Standardisation**

*The Commonwealth Scientific and Industrial Research Organization* has functions concerned with the improvement of efficiency in industrial operations. For further particulars see the chapter Education, Cultural Activities, and Research of this Year Book.

*The Standards Association of Australia* is the organisation responsible for industrial standardisation on a national basis. It issues Australian standards for materials and products and standard codes of practice.

Formed as the Australian Commonwealth Engineering Standards Association in 1922, it was reconstituted as the Standards Association of Australia in 1929, and was incorporated by Royal Charter in 1950. It is an independent body having the full recognition and support of the Commonwealth and State Governments and of industry. Approximately half its funds are provided by Commonwealth Government grant, the remainder coming primarily from membership subscriptions and from sale of publications. Organisations, companies, and individuals are eligible for subscribing membership.

The Association is controlled by a Council comprising representatives from Commonwealth and State Governments and their departments, from associations of manufacturing and commercial interests, and from professional institutions. Standards are prepared by committees composed of expert representatives from the interests associated with the subjects under consideration. This assistance is on a voluntary basis.

Preparation of standards is undertaken in response to requests from industrial associations or firms or from government departments. Standards may relate to one or more of several aspects of industrial practice such as terminology, test methods, dimensions, specifications of performance and quality of products, and safety or design codes. In general, standards derive authority from voluntary adoption based on their intrinsic merit, but in special cases where safety of life or property is involved, they may have compulsory application through statutory reference.

The Association is the owner of a registered certification trade mark covering conformity of products to standards. Manufacturers of products covered by Australian standards may obtain a licence to use the Australian Standard Mark, under conditions established by the Association.

The Association has international affiliations and is a member, representing Australia, of the International Organization for Standardization (ISO) and of the International Electrotechnical Commission (IEC). Close links are maintained with overseas standards organisations, and the Association acts as Australian agent for the procurement of ISO and IEC publications and the standards of other countries.

The Association has two specialised libraries, one in Sydney and one in Melbourne, containing the national standards of all countries with standards organisations. These libraries provide necessary material for committee work and a free information service to those concerned with standards.

The headquarters office of the Association is in Sydney, and there is a major branch office in Melbourne. Branch offices are located also in other capital cities and at Newcastle, New South Wales.

*The National Association of Testing Authorities* organises testing facilities throughout Australia to serve private and governmental needs.

Membership is open to authorities whose testing laboratories conform to the standards of staffing and operation defined by the Association. Testing authorities may register their laboratories voluntarily. The Association assesses the competence of the laboratories and ensures that their standards of competence are maintained. Certificates of test issued by registered laboratories may be endorsed in the name of the Association. NATA endorsed test certificates are generally accepted by governmental, industrial and commercial interests.

Laboratories are registered for performance of specific tests in the fields of metrology, mechanical testing, electrical testing, optics and photometry, non-destructive testing, heat and temperature measurement, chemical testing, biological testing, and acoustic and vibration measurement. In June 1970 766 laboratories held NATA registration. A further 52 laboratories had been nominated for registration.

*The Industrial Design Council of Australia* was established in June 1958 for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. The Council is fully representative of industry, commerce and government, together with designers and educationists. Its activities are financed by donations from industry

and commerce, and by Commonwealth and State grants. IDCA has established Australian design centres in Adelaide, Melbourne and Sydney. These centres display Australian products of approved design and present changing exhibitions relating to design in manufactured articles. IDCA is also responsible for the Australian Design Index which provides a detailed, illustrated record of well-designed Australian products.

The Design Delegate scheme enables regular contact to be maintained with senior executives of manufacturing companies, departmental officers and designers wishing to participate actively in IDCA's programme of lectures, information, and guidance on all aspects of industrial design. Services to design delegates are administered by IDCA through its design centres.

A Record of Designers has been set up to register information about industrial designers and their work. The Council, which has its headquarters in Melbourne, is also concerned with raising the standard of training in industrial design in co-operation with education authorities. For further particulars see Year Book No. 51, page 145.

### Definitions in factory statistics

For the purposes of this Chapter, statistical definitions refer to the basis on which the statistics were compiled up to and including 1967-68. Important changes were introduced in the 1968-69 census (see page 709). The reader should refer to Chapter 31 for a detailed discussion of these new definitions and procedures, which will apply to 1968-69 statistics.

The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the statistical Acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover smallgoods makers, laundries, photography studios, florists and seedsmen, or most abattoirs.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry wherever practicable.

Manufacturers are requested to state in their returns particulars of the number, age, etc., of their employees, salaries and wages paid, the value of premises and equipment, the horse-power of machinery, the value of raw materials (including containers), tools replaced, etc., the values and in most cases the quantities of fuel used, and quantities and values of principal materials used and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

*Persons employed* in the manufacturing activities of the factory only are counted as factory employees. The figures relating to employment therefore include working proprietors as well as out-workers, but *exclude* all those engaged in selling and distribution such as salesmen, travellers, collectors, carters engaged solely on outward delivery of manufactured goods, and retailing storemen.

The *average number of persons employed* is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

*Value of materials used* includes also the value of stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of fuel, etc., used* includes also the cost of power and light used, lubricants and water.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the finished articles at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer. In

the special case of government factories and workshops the value of output is, in most cases, estimated by adding ten per cent to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The *value of production* is the value added to materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges). In the process of manufacture many goods are treated in several industries, the output from one becoming the material for another, so that such commodities are counted more than once in the aggregate value of output and of materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become materials in establishments concerned in the production of metal goods, timber from the sawmills used in furniture factories and in joinery, and synthetic resins from chemical works used to make plastic products. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of output, is used as a measure of activity in the manufacturing industries as a whole.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are included in the figures contained in this chapter as from 1 July 1964, unless otherwise indicated.

A standard classification of manufacturing industries is used in compiling statistical data relating to factories in Australia. It is designed in accordance with decisions of the 1945 Conference of Statisticians, and represents a revision and extension of a classification which was introduced in 1930-31, replacing the revised versions of the original classification formulated in 1902.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below were published in the latter portion of Chapter 26 of Year Book No. 55, and full details for all sub-classes may be found in the bulletin *Manufacturing Industry* (previously entitled *Secondary Industries, Part I—Factory and Building Operations*).

The classes and sub-classes in the current classification of factories are as follows.

#### CLASSIFICATION OF FACTORIES

##### CLASS 1. TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

1. Coke works
2. Briquetting and pulverised coal
3. Carbide
4. Lime, plaster of paris, asphalt
5. Fibrous plaster and products
6. Marble, slate, etc.
7. Cement, portland
8. Asbestos cement sheets and mouldings
9. Other cement goods
10. Other

##### CLASS 2. BRICKS, POTTERY, GLASS, ETC.

1. Bricks and tiles
2. Earthenware, china, porcelain, and terracotta
3. Glass (other than bottles)
4. Glass bottles
5. Other

##### CLASS 3. CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

1. Industrial and heavy chemicals and acids
2. Pharmaceutical and toilet preparations
3. Explosives (including fireworks)
4. White lead, paints and varnish
5. Oils, vegetable
6. Oils, mineral
7. Oils, animal
8. Boiling-down, tallow refining
9. Soap and candles
10. Chemical fertilisers
11. Inks, polishes, etc.
12. Matches
13. Other

##### CLASS 4. INDUSTRIAL METALS, MACHINES, CON- VEYANCES

1. Smelting, converting, refining, rolling of iron and steel
2. Foundries (ferrous)
3. Plant, equipment and machinery, including machine tools
4. Other engineering
5. Extracting and refining of other metals; alloys
6. Electrical machinery, cables and apparatus
- 7-16. Construction and repair of vehicles (10 groups)
- 17, 18. Ship and boat building and repairing, marine engineering (government and other)
19. Cutlery and small hand tools
20. Agricultural machines and implements
- Non-ferrous metals—
21. Rolling and extrusion
22. Founding, casting, etc.
24. Sheet metal working, pressing and stamping
25. Pipes, tubes and fittings—Ferrous
26. Wire and wire working (including nails)
27. Stoves, ovens and ranges
28. Gas fittings and meters
29. Lead mills
30. Sewing machines
31. Arms, ammunition (excluding explosives)
32. Wireless and amplifying apparatus
33. Other metal works

##### CLASS 5. PRECIOUS METALS, JEWELLERY, PLATE

1. Jewellery
2. Watches and clocks (including repairs)
3. Electroplating (gold, silver, chromium, etc.)

## CLASS 6. TEXTILES AND TEXTILE GOODS (NOT DRESS)

1. Cotton ginning
2. Cotton spinning and weaving
3. Wool—Carding, spinning, weaving
4. Hosiery and other knitted goods
5. Silk, natural
6. Rayon, acrylics and other synthetic fibres
7. Flax mills
8. Rope and cordage
9. Canvas goods, tents, tarpaulins, etc.
10. Bags and sacks
11. Textile dyeing, printing and finishing
12. Other

## CLASS 7. SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

1. Furriers and fur-dressing
2. Woollscouring and fellmongery
3. Tanning, currying and leather-dressing
4. Saddlery, harness and whips
5. Machine belting (leather or other)
6. Bags, trunks and other goods of leather and leather substitutes

## CLASS 8. CLOTHING (EXCEPT KNITTED)

1. Tailoring and ready-made clothing
2. Waterproof and oilskin clothing
3. Dressmaking, hemstitching
4. Millinery
5. Shirts, collars, underclothing
6. Foundation garments
7. Handkerchiefs, ties and scarves
8. Hats and caps
9. Gloves
10. Boots and shoes (not rubber)
11. Boot and shoe repairing
12. Boot and shoe accessories
13. Umbrellas and walking sticks
14. Dyeworks and cleaning (including renovating and repairing)
15. Other

## CLASS 9. FOOD, DRINK AND TOBACCO

1. Flour-milling
2. Cereal foods and starch
3. Animal and bird foods
4. Chaffcutting and corncrushing
5. Bakeries (including cakes and pastry)
6. Biscuits
7. Sugar mills
8. Sugar refining
9. Confectionery (including chocolate and icing sugar)
10. Jam, fruit and vegetable canning
11. Pickles, sauces, vinegar
12. Bacon curing
13. Butter factories
14. Cheese factories
15. Condensed and dried milk factories
16. Margarine
17. Meat and fish preserving
18. Condiments, coffee, spices
19. Ice and refrigerating
20. Salt
21. Aerated waters, cordials, etc.
22. Breweries
23. Distilleries
24. Winemaking
25. Cider and perry
26. Malting
27. Bottling

28. Tobacco, cigars, cigarettes, snuff
29. Dehydrated fruit and vegetables
30. Ice cream
31. Sausage casings
32. Arrowroot
33. Other

## CLASS 10. SAWMILLS, JOINERY, BOXES, ETC., WOOD TURNING AND CARVING

1. Sawmills
2. Plywood mills (including veneers)
3. Bark mills
4. Joinery
5. Cooperage
6. Boxes and cases
7. Woodturning, woodcarving, etc.
8. Basketware and wickerware (including sea-grass and bamboo furniture)
9. Perambulators (including pushers and strollers)
10. Wall and ceiling boards (not plaster or cement)
11. Other

## CLASS 11. FURNITURE OF WOOD, BEDDING, ETC.

1. Cabinet and furniture making (including billiard tables and upholstery)
2. Bedding and mattresses (not wire)
3. Furnishing drapery
4. Picture frames
5. Blinds

## CLASS 12. PAPER, STATIONERY, PRINTING, BOOK-BINDING, ETC.

1. Newspapers and periodicals  
Printing—
2. Government
3. General, including bookbinding
4. Manufactured stationery
5. Stereotyping, electrotyping
6. Process and photo engraving
7. Cardboard boxes, cartons and containers
8. Paper bags
9. Paper making
10. Pencils, penholder, chalks, crayons
11. Other

## CLASS 13. RUBBER

1. Rubber goods (including tyres made)
2. Tyre retreading and repairing

## CLASS 14. MUSICAL INSTRUMENTS

1. Gramophones and gramophone records
2. Pianos, piano-players, organs
3. Other

## CLASS 15. MISCELLANEOUS PRODUCTS

1. Linoleum, leather-cloth, oil-cloth, etc.
2. Bone, horn, ivory, and shell
3. Plastic moulding and products
4. Brooms and brushes
5. Optical instruments and appliances
6. Surgical and other scientific instruments and appliances
7. Photographic material (including developing and printing)
8. Toys, games and sports requisites
9. Artificial flowers
10. Other

## CLASS 16. HEAT, LIGHT, AND POWER

- 1-3. Electric light and power
- 4-6. Gas works

## Factory development since 1901, Australia

## FACTORIES: AUSTRALIA(a), 1901 TO 1967-68

Year	Factories	Employment(b)	Value of—					
			Salaries and wages paid(c)	Materials and fuel used	Output	Production (d)	Land and buildings (e)	Plant and machinery (e)
	No.	'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1901	11,143	198	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
1911	14,455	312	55,056	163,526	266,044	102,518	65,402	63,032
1920-21	17,113	367	125,864	427,118	647,986	220,868	121,662	137,310
1930-31	21,751	339	124,910	344,978	581,598	236,620	224,422	248,996
1940-41	27,300	650	275,838	773,762	1,289,590	515,828	288,188	322,712

1960-61	57,782	1,145	2,289,230	6,115,930	10,465,765	4,349,835	2,389,140	2,785,565
1963-64	59,375	1,210	2,651,620	7,372,682	12,642,686	5,270,003	3,204,685	3,480,673
1964-65	61,042	1,269	2,993,709	8,140,600	14,037,355	5,896,754	3,505,859	3,766,253
1965-66	61,686	1,294	3,162,769	8,437,958	14,689,819	6,251,861	3,776,590	4,154,652
1966-67	62,500	1,309	3,407,683	9,015,844	15,892,845	6,877,001	4,061,193	4,706,843
1967-68	62,954	1,331	3,665,902	9,663,217	17,094,070	7,430,853	4,303,156	4,962,203

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory. (b) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (c) Excludes amounts drawn by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel, etc. used). (e) Depreciated or book values at 30 June. Includes estimated values of rented premises and machinery.

## Number of factories

## Number in each State and Territory

## FACTORIES: NUMBER, STATES AND TERRITORIES, 1963-64 TO 1967-68

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust. (a)

## Classification of factories by number of persons employed

The classification of factories by size in the following tables on page 716 is based on the average weekly number of persons employed during the period of operation (including working proprietors).

**FACTORIES: NUMBER OF FACTORIES AND PERSONS EMPLOYED, BY SIZE OF FACTORY STATES AND TERRITORIES, 1967-68**

<i>Persons employed</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>

### Employment in factories

#### Number employed

All persons employed in the manufacturing activities of a factory are counted as factory employees. The figures relating to employment, therefore, exclude all those engaged in selling and distribution, such as salesmen, travellers, collectors, carters engaged solely on delivery of manufactured goods, and retailing storemen. The figures, however, do include proprietors who work in their own business, as well as 'out-workers' (see page 719). From 1960-61 the occupational groupings collected have been—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draughtsmen and other laboratory and research staff; and (iv) foremen and overseers, workers in factory and others, in which were amalgamated the three former groups—(iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers, and persons working regularly at home.

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to size (see page 716), which is based on the average number employed during the period of operation.

Particulars of the numbers employed in Australia are given in the table below.

**FACTORIES: EMPLOYMENT, AUSTRALIA<sup>(a)</sup>**  
1963-64 TO 1967-68

Year	Males	Females	Persons
1963-64	918,130	291,790	1,209,920
1964-65	957,261	311,674	1,268,935
1965-66	973,411	320,412	1,293,823
1966-67	982,907	326,301	1,309,208
1967-68	998,674	332,473	1,331,147

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

The following table shows the average number of persons employed in manufacturing industries; the percentage for each State and Territory of the total number employed in factories in Australia; and the number so employed per thousand of mean population in each State and Australia.

**FACTORIES: EMPLOYMENT, STATES AND TERRITORIES, 1963-64 TO 1967-68**

(a) Includes persons working regularly at home.

The term 'outworker' or 'homeworker' has acquired a special meaning in connection with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory, and others, and separate details are not available.

## Distribution of employees according to age

The following table shows the number of each sex employed in Australia in each age group on the last pay day in June.

FACTORIES: DISTRIBUTION OF EMPLOYEES, BY AGE AND SEX, AUSTRALIA(a)  
JUNE 1964 TO JUNE 1968  
EXCLUDING WORKING PROPRIETORS

(b) Number of males per 100 females.

**Employment of females in particular industries**

The majority of females in manufacturing industries are employed in four classes, namely: 4, Industrial metals, machines, etc.; 6, Textiles; 8, Clothing; and 9, Food, drink and tobacco. In 1967-68 these industries accounted for 76.75 per cent of all females in factories. In two classes only did the number of females exceed the number of males—in Class 6, Textiles, where there were 137 females to every 100 males, and in Class 8, Clothing, with 300 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes.

**Salaries and wages paid, value of materials used, output, and production**

In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

The gross value of factory output for 1967-68 was \$17,094 million, of which \$9,104 million (53.3 per cent) was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and \$559 million the value of the power, fuel, light, water, and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, \$7,431 million, represents the net value of factory production, defined as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'. Depreciation, however, is not deducted (see page 727). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories.

**Salaries and wages paid**

(b) Not available for publication.

*Totals and averages.* The following table shows the total amount of salaries and wages paid, and the average amount paid, according to sex, per employee in each State and Territory. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, there are a large number of employees in Class 8, Clothing, comprising a relatively high percentage of women and children.

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory.

## Value of output

*By class of industry.* The value of the output of factories in the various classes in each State and Territory in 1967-68 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done, such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output, is the net value of factory production (see page 727).

**Value of production**

*By class of industry.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'.

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the 'value of output'. Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items 'value of materials used' and 'value of fuel used' as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only 'value of materials used' and 'value of fuel used' from the 'value of output'. The value of factory production, therefore, approximates 'net value added' in the manufacturing process.

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that when wages and salaries are deducted from the value of production the whole of the 'surplus' is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising, and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows the value of production in each State and Territory for the various classes of industry.

### Indexes of Factory Production

The tables following contain annual indexes of factory production for the years 1949-50 to 1967-68. They present indexes, on 1955-56 and 1959-60 bases respectively, for classes and combinations of classes of manufacturing industry. The indexes are designed to provide broad measures of growth in manufacturing industry over the period.

The indexes have been compiled by methods which are commonly adopted, the indexes for classes and combinations of classes comprising in fact indexes of the output of factory sub-classes at constant prices combined by the use of base period value-added weights. Indexes of this type are subject to a number of limitations, and can be compiled only on the basis of many assumptions and approximations. An understanding of the basis of the indexes is therefore essential if inappropriate use of the indexes is to be avoided. For a comprehensive treatment of concepts, sources, and methods, reference should be made to the annual mimeographed bulletin *Indexes of Factory Production*. This bulletin also contains indexes for a considerable number of individual factory sub-classes.

#### INDEXES OF FACTORY PRODUCTION(a): AUSTRALIA(b), 1949-50 TO 1959-60

All classes (combined) . . . . .	100.0	71	78	79	76	85	94	100	104	110	118	130

(a) The indexes in this table are combinations of sub-class indexes of value of output as estimated at constant prices. Indexes for all sub-classes within the respective groupings have been combined according to the value-added weights of 1955-56. (b) Excludes factories in Northern Territory and Australian Capital Territory. (c) Value of production—see page 712 and 727. (d) Combination of Class 5, Precious metals, jewellery, plate; Class 14, Musical instruments; and Class 15, Miscellaneous products.

## INDEXES OF FACTORY PRODUCTION(a): AUSTRALIA(b), 1959-60 TO 1967-68

(Base of each index: year 1959-60 = 100)

Class of industry	Proportion										
	of total value added(c) 1959-60	1959- 60	1960- 61	1961- 62	1962- 63	1963- 64	1964- 65	1965- 66	1966- 67	1967- 68	
	per cent										
1. Treatment of non-metalliferous mine and quarry products . . .	2.5	100	113	114	122	137	149	153	157	166

All classes (combined) . . .	100.0	100	104	105	115	126	138	143	152	161	

(a) The indexes in this table are combinations of sub-class indexes of value of output as estimated at constant prices. Indexes for all sub-classes within the respective groupings have been combined according to the value-added weights of 1959-60. (b) Excludes factories in Northern Territory and Australian Capital Territory. (c) Value of production—see page 712 and 727. (d) Combination of Class 5, Precious metals, jewellery, plate; Class 14, Musical instruments; and Class 15, Miscellaneous products.

## Value of land, buildings, plant and machinery

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

**Land and buildings, plant and machinery—values, additions and replacements, depreciation**

The following table summarises the recorded totals for Australia and also includes particulars of additions and replacements.

**FACTORIES: VALUE OF LAND AND BUILDINGS, PLANT AND MACHINERY  
AUSTRALIA(a), 1963-64 TO 1967-68  
(\$'000)**

Year	Book values at 30 June(b)		Additions and replacements during year(b)		Depreciation allowed during year	
	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery
1963-64 . . . . .	3,204,685	3,480,673	192,419	564,958	39,711	336,929
1964-65 . . . . .	3,505,859	3,766,253	249,779	666,490	46,095	366,702
1965-66 . . . . .	3,776,590	4,154,652	272,052	773,322	51,895	407,388
1966-67 . . . . .	4,061,193	4,706,843	284,951	1,030,889	52,440	450,146
1967-68 . . . . .	4,303,156	4,962,203	270,762	760,894	58,412	494,210

(a) Before 1 July 1964, excludes Northern Territory and Australian Capital Territory. (b) Includes estimated values of rented premises, plant and machinery.

**Principal factory products**

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Manufacturing Commodities*, formerly *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories*.

The following table shows the total recorded production of some of the principal articles (i.e. of those for which production can be represented in quantitative terms) manufactured in Australia. A more complete list, together with values, where available, is published in the aforementioned bulletin and in the mimeographed statement *Principal Factory Products*. Because of revisions, figures for some items for the year 1967-68 in the following table may differ from corresponding figures in earlier publications.

**QUANTITIES OF PRINCIPAL ARTICLES PRODUCED IN FACTORIES: AUSTRALIA(a)  
1964-65 TO 1967-68**

## Overseas participation in Australian manufacturing industry

### Introduction

Any attempt to provide statistical information on the extent of overseas participation in local industry involves difficult problems of statistical concept and measurement. Broadly, there are two ways in which overseas participation may be measured. One is to examine the financial accounts of Australian companies and compare the value of *assets* of companies in which there is significant overseas investment with those of other Australian companies. The other is to examine the *operations* (as expressed in terms of production, wages and salaries, output, etc.) of establishments of Australian companies in which there is significant overseas investment and compare their operations with those of establishments of other Australian companies. The second method has been adopted for a series of studies in overseas participation in Australian manufacturing industry.

### Scope of the statistics

The statistics relate to Australian manufacturing industry and are derived from data collected from the Annual Factory Census. For the purpose of the census a 'factory' is defined as an establishment in which four or more persons are employed or where power (other than manual) is used in any manufacturing process.

### Classification of companies

The extent of overseas participation in the manufacturing industry is measured by the operations of the establishments of companies in which there is direct investment from overseas (as determined by the annual survey of overseas investments). These are defined as follows.

- (i) Companies in Australia in which at least 50 per cent of the ordinary shares (or voting stock) is held by individual shareholders or companies resident in one overseas country, or where 25 per cent or more of the ordinary shares (or voting stock) is held by one company, or a group of companies, incorporated in one overseas country.
- (ii) Branches of companies incorporated overseas and registered in Australia as foreign companies.
- (iii) Wholly and partly owned subsidiaries and sub-subsidiaries, etc., of companies included in (i) and (ii) above.

Investment in ordinary shares (or voting stock) of Australian companies (including companies in which there is direct investment from overseas) where the proportion of shares held in a single country falls below the percentages specified in (i) above is defined as portfolio investment. Because of the difficulties encountered in determining the proportion of ordinary shares (or voting stock) of individual Australian companies held by portfolio investors overseas, *the figures for overseas participation in the manufacturing industry exclude participation by way of portfolio investment.*

### Further information available

In the following tables the degree of overseas participation is expressed in terms of value of production only. Further details in terms of value of salaries and wages, and average number of persons employed, as well as the value of production, may be found in Parts I and II of the mimeographed bulletin *Overseas Participation in Australian Manufacturing Industry 1962-63 and 1966-67.*

## OVERSEAS OWNERSHIP AND CONTROL

In analysing the extent of overseas participation in local industry it is usual to distinguish between two aspects, overseas ownership and overseas control.

### Overseas ownership

Statistics which give a general indication of the degree of overseas ownership in terms of the value of production of Australian manufacturing establishments are presented in the two following tables. In the compilation of these statistics the data for an establishment of a company in which there is no direct investment from overseas are allocated wholly to Australian ownership. The data relating to an establishment of a company in which there is direct investment from overseas are *apportioned* to overseas and Australian ownership according to the proportion of the ordinary shares (or voting stock) of the company that is held by the direct overseas investors.

## MANUFACTURING: VALUE OF PRODUCTION APPORTIONED TO AUSTRALIAN AND DIRECT OVERSEAS OWNERSHIP, BY INDUSTRY, 1962-63 AND 1966-67

Industry and ownership	Value (\$'000)		Proportion Australian and overseas (per cent)	
	1962-63	1966-67	1962-63	1966-67
Treatment of non-metalliferous mine and quarry products—

Overseas	937,860	1,526,599	19.6	22.2
Grand total	4,795,241	6,877,001	100.0	100.0

(a) Includes ownership by overseas portfolio investors, and miscellaneous products.

(b) Includes musical instruments, heat, light and power.

## Overseas control

The statistics in the following tables provide an indication of the relative importance of manufacturing establishments of companies in which there is direct overseas investment. The concept of direct overseas investment is directly related to the concept of overseas control, and the statistics in these tables provide a measure of the value of production of manufacturing establishments of companies which can be regarded as subject to a degree of overseas control. The statistics have been derived by allocating data relating to each manufacturing establishment *wholly* to either one or the other of the following categories: (i) establishments of direct overseas investment companies; (ii) other establishments.

(a) Percentage of direct equity for all overseas countries.

## CHAPTER 23

### RURAL INDUSTRY

This chapter is divided into four major parts:

Introduction, dealing with the disposal of Crown lands, closer settlement and war service settlement and general rural activity in Australia;

Agricultural production;

Pastoral production; and

Other rural industries, which includes the dairying, poultry and bee industries.

For greater detail on the subjects dealt with in this chapter see the annual bulletins *Rural Industries, Value of Production*, and *Manufacturing Commodities* (regarding butter, cheese, etc., factories) issued by this Bureau. Current information on commodities produced is obtainable in the *Quarterly Summary of Australian Statistics*, *Monthly Review of Business Statistics*, *Monthly Bulletin of Production Statistics*, and *Digest of Current Economic Statistics* (monthly). The series of bulletins *Classification of Rural Holdings by Size and Type of Activity* (see page 749) shows particulars of rural holdings classified by size, nature and area of crops, and numbers of livestock, and also according to main type of activity. The mimeographed annual *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia* contains details of the production and utilisation of food stuffs. The following mimeographed publications also contain considerable detail on the particular subjects dealt with.

**General.** *Value of Production and Indexes of Price and Quantum of Farm Production* (annual), *Value of Primary Production (Preliminary Statement)* (annual), *Value of Primary Production (Preliminary Estimates)* (annual), *Farm Machinery on Rural Holdings* (annual), *Tractors on Rural Holdings, 31 March 1969* (detailed information, triennial), *Grain and Seed Harvesters on Rural Holdings, 31 March 1967* (detailed information, triennial), *New Tractors: Receipts, Sales and Stocks* (quarterly), and *New Agricultural Machinery* (quarterly).

**Agricultural production.** *Rural Land Use and Crop Production* (annual), *Agricultural Statistics (Preliminary Statement)* (annual), *The Wheat Industry* (two a year), *The Fruit Growing Industry* (annual), and *Fruit Statistics (Preliminary Statement)* (annual).

**Pastoral production.** *Livestock Statistics* (annual), *Livestock Numbers* (annual), *The Meat Industry* (monthly), *Wool Production* (annual), and *Wool Production and Utilisation* (annual).

**Other rural production.** *The Dairying Industry* (monthly and half yearly), *Livestock Statistics* (annual), *Livestock Numbers* (annual), *Chicken Hatchings and Poultry Slaughtering* (monthly), *Manufacturing Industries No. 20—Bacon Curing and No. 21—Butter, Cheese and Condensed, Concentrated, etc.*, *Milk* (annual), *Production Summaries No. 36—Preserved Milk Products and No. 55—Butter and Cheese* (monthly), and *Bee farming* (annual).

Detailed particulars of the early development of various aspects of Australian rural industry are given in previous issues of the Year Book up to No. 53 (see, for example No. 53, pages 885, 888, 891-2).

Throughout this chapter yearly periods for area and production of crops relate to years ended 31 March. Other periods in respect of e.g. factory and trade statistics relate to years ended 30 June.

### INTRODUCTION

#### Disposal of Crown lands

##### Land legislation and tenures

The following sections contain figures showing the extent of the different land tenures in the several States and Territories, classified under broad headings indicating the nature of the tenure, together with some general descriptive matter. Information in greater detail, descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure were provided in Year Book No. 48 and previous issues (see also Year Book No. 50, page 85 and List of Special Articles, etc. preceding General Index to this Volume).

**Free grants and reservations**

Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and or permanent reservation of Crown lands for public purposes. In the Northern Territory any Crown lands not subject to any right of, or contract for, purchase may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act 1910*, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

**AREAS OF CROWN LANDS RESERVED: STATES AND TERRITORIES, 1965 TO 1969**  
(’000 acres)

Year	N.S.W.(a)	Vic.(b)	Qld(b)	S.A.(a)	W.A.(a)	Tas.(a)	N.T.(a)	Total(c)
1965 . . .	15,943	8,861	25,451	22,802	78,088	4,861	60,903	216,909
1966 . . .	15,937	8,874	25,662	22,878	78,226	4,913	60,921	217,411
1967 . . .	15,875	8,921	27,240	22,878	80,491	4,938	60,974	221,317
1968 . . .	15,872	8,952	27,833	22,919	80,658	5,327	60,988	222,549
1969 . . .	15,849		28,209	22,919	80,772	6,546	61,124	

(a) At 30 June. (b) At 31 December. (c) Excludes the Australian Capital Territory.

The purposes for which areas were reserved are given hereunder for the latest years available as set out in the table above.

*New South Wales.* For travelling stock, 4,926,738 acres; forest reserves, 1,518,842 acres; water and camping reserves, 761,074 acres; mining reserves, 1,007,102 acres; recreation and parks, 733,872 acres; other reserves, 6,901,640 acres; total, 15,849,268 acres.

*Victoria.* For roads, 1,707,565 acres; water reserves, 315,494 acres; forest and timber reserves, 5,818,285 acres; mallee reserves, 410,000 acres; other reserves, 701,121 acres; total 8,952,465 acres.

*Queensland.* For timber reserves, 1,750,537 acres; State forests and national parks, 9,824,854 acres; Aboriginal reserves, 6,978,466 acres; streets, surveyed roads and stock routes, 4,267,588 acres; general reserves, 5,387,826 acres; total, 28,209,271 acres.

*South Australia.* Total area of surveyed roads, railways and other reserves, 22,918,983 acres, including 18,842,822 acres set apart as Aboriginal reserves.

*Western Australia.* For State forests, 4,456,326 acres; timber reserves, 1,865,876 acres; other reserves 74,449,558 acres; total, 80,771,760 acres.

*Tasmania.* For forest reserves, 5,523,000 acres; national parks, 1,023,000 acres; total, 6,546,000 acres.

*Northern Territory.* For Aboriginal, defence and public requirements, 61,124,000 acres.

**Conditional and unconditional purchases of freehold**

Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Year Book No. 48, pages 91-2). Conditional purchases of various types may also be made. In the Northern Territory only 0.1 per cent of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory about 16 per cent of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

**Leases and licences**

Well over half the area of the States of New South Wales and South Australia and of the Northern Territory and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; in Tasmania about one-third is leased or licensed, while about one-quarter of the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

*Land Acts and Ordinances.* The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples: grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and unconditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 878-81 of Year Book No. 53.

**AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY: STATES AND TERRITORIES, 1965 TO 1969**

('000 acres)

<i>Year</i>	<i>N.S.W.(a)</i>	<i>Vic.(b)</i>	<i>Qld(b)</i>	<i>S.A.(a)</i>	<i>W.A.(a)</i>	<i>Tas. (a)</i>	<i>N.T. (a)(c)</i>	<i>A.C.T. (a)(c)</i>	<i>Total</i>

1969 . .	112,133		346,946	149,327	245,240	767	192,966	251	

(a) Year ended 30 June. (b) Year ended 31 December. (c) Leases and licences for all purposes. (d) Includes 75,000 acres of reserved Crown lands held under grazing licences.

### Closer settlement and war service settlement

#### Closer settlement

Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (*see* No. 22, pages 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30 June 1960 of the areas and costs for those States for which separate information is available.

#### War Service Land Settlement Scheme

The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects of the scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine. At 30 June 1969, 13,936,731 acres had been acquired under the scheme and of this 13,531,646 acres has been allotted to 9,105 farms.

Particulars of expenditure on war service land settlement, to 30 June 1968, are given in Year Book No. 55, pages 716-17.

### Alienation and occupation of Crown lands

Detailed particulars of the alienation and occupation of Crown lands in the several States and Territories are given in previous issues of the Year Book up to No. 53 (*see* No. 53, pages 878-81).

The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1969.

## ALIENATION AND OCCUPATION OF CROWN LANDS: STATES AND TERRITORIES, 1969

State or Territory	Private lands				Crown lands				Total area '000 acres
	Alienated		In process of alienation		Leased or licensed		Other(a)		
	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	
N.S.W.(b) . . .	61,821	31.2	4,740	2.4	112,843	57.0	18,632	9.4	198,037

<b>Australia . . .</b>	<b>178,280</b>	<b>160.8</b>	<b>47,581</b>	<b>17.9</b>	<b>1,064,907</b>	<b>381.4</b>	<b>608,691</b>	<b>239.9</b>	<b>1,899,462</b>

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30 June. (c) At 31 December 1968. (d) At 31 December 1969. (e) Includes Jervis Bay area.

## Number and area of rural holdings

## Number and area

A holding in Australia has been defined by statisticians on a more or less uniform basis, and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics a holding has been defined as land of one acre or more in extent used in the production of agricultural produce or for the raising of livestock and the production of livestock products.

There are considerable fluctuations from time to time in the numbers of very small holdings, and it is very difficult to determine in some cases whether or not they are rural holdings within the definition. In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied for extensive grazing under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also occasionally occupied.

## RURAL HOLDINGS: NUMBER AND AREA, STATES AND TERRITORIES, 1964-65 TO 1968-69

Year	N.S.W.	Vic.(a)	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
NUMBER OF RURAL HOLDINGS									
1964-65 . . .	77,098	69,737	43,565	28,754	22,856	10,979	307	207	253,503
1965-66 . . .	76,152	69,199	43,914	28,759	22,853	10,777	305	203	252,162
1966-67 . . .	76,251	68,466	43,858	28,957	23,181	10,641	304	200	251,858
1967-68 . . .	76,225	72,802	43,694	29,058	23,116	10,631	305	196	256,027
1968-69 . . .	76,103	71,056	44,074	29,137	23,004	10,384	317	195	254,270
TOTAL AREA OF RURAL HOLDINGS ( <sup>'000</sup> acres)									
1964-65 . . .	172,148	37,844	377,010	156,955	268,553	6,420	171,482	358	1,190,770
1965-66 . . .	171,200	37,844	380,325	159,394	270,054	6,496	175,862	355	1,201,531
1966-67 . . .	171,652	38,653	379,977	161,510	274,765	6,507	170,018	350	1,203,431
1967-68 . . .	171,767	39,564	380,993	160,765	275,334	6,579	174,385	350	1,209,737
1968-69 . . .	171,020	39,182	378,956	162,109	276,174	6,591	177,942	346	1,212,320

(a) Since 1967-68 the lists of land holdings used in the collection of agricultural and pastoral statistics in Victoria were reconciled with lists of rateable land of one acre or more in extent as recorded by municipalities for rating purposes.

**Land utilisation of rural holdings**

The following table shows the purposes for which the land on the rural holdings referred to in the preceding paragraph was used.

**RURAL HOLDINGS: LAND UTILISATION, 1964-65 TO 1968-69**  
(\*000 acres)

Year	Area used for crops(a)	Land lying fallow(b)	Area under sown grasses and clovers(c)	Balance of holdings(d)	Total area of holdings
1968-69—					
New South Wales . . . . .	15,259	2,686	10,268	142,807	171,020
Victoria(e) . . . . .	6,156	2,727	18,003	12,295	39,182
Queensland . . . . .	5,268	918	4,973	367,796	378,956
South Australia . . . . .	7,382	1,302	5,961	147,463	162,109
Western Australia . . . . .	9,490	1,828	15,363	249,494	276,174
Tasmania . . . . .	268	61	1,934	4,329	6,591
Northern Territory . . . . .	2	..	103	177,837	177,942
Australian Capital Territory . . . . .	10	2	88	246	346
<b>Australia . . . . .</b>	<b>43,836</b>	<b>9,525</b>	<b>56,693</b>	<b>1,102,266</b>	<b>1,212,320</b>
1967-68 . . . . .	38,735	9,340	54,374	1,107,287	1,209,737
1966-67 . . . . .	37,087	9,784	51,471	1,105,090	1,203,431
1965-66 . . . . .	32,798	10,471	48,519	1,109,742	1,201,531
1964-65 . . . . .	32,251	8,466	47,159	1,102,894	1,190,770

(a) Excludes (i) duplication on account of area double cropped, except for New South Wales and South Australia, and (ii) clovers and grasses cut for hay and seed which have been included in Area under sown grasses and clovers, and differs therefore from crop area figures shown later in this chapter. (b) Excludes short or summer fallow. (c) Includes paspalum. (d) Used for grazing, lying idle, etc. (e) See footnote (a) to previous table.

**Classification by size and type of activity**

Some of the information obtained from the 1965-66 Agricultural and Pastoral Census has been classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops, and numbers of livestock). In addition, all holdings have been classified according to type of activity. Tables showing this information, for statistical divisions and States, and an outline of the methods used have been published in a series of bulletins *Classification of Rural Holdings by Size and Type of Activity, 1965-66*. Similar information was published in a series of bulletins for the year 1959-60. A size classification for each State is available for the year 1955-56.

**Employment on rural holdings****Persons engaged**

The following table shows, for each State and Territory, the recorded number of males working on rural holdings. Particulars for females are not available except for New South Wales and Victoria. Additional particulars relating to the number of males employed in agriculture up to 1941-42 are shown in Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

**MALES(a) ENGAGED ON RURAL HOLDINGS: STATES AND TERRITORIES, 31 MARCH 1969**

Males engaged	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Permanent—									
Owners, lessees or share-farmers . . . . .	61,609	52,827	44,817	21,802	18,866	6,915	220	136	207,192

(a) Incomplete; excludes tractor-drawn rotary hoes and rotary tillers in Queensland. (b) Definition changed in 1969 when informants were asked to report in terms of number of units, i.e. the number of rows that can be planted simultaneously. Figures not strictly comparable with earlier years.

## The soils of Australia

Year Book No. 52 contains an article (pages 873-9) on the soils of Australia which deals with the following matters: nature and development of Australian soils, including the agricultural development of soils, and types of Australian soils. A soil map of Australia and illustrations are included on plates 47 to 51 of Year Book No. 52.

## Soil improvement and conservation

### Fertilisers

The Australian output of prepared fertilisers is derived chiefly from imported rock phosphate. Complete information regarding local production of fertilisers is not available. But the production of superphosphate in Australia during 1968-69 amounted to 3,928,000 tons.

Information regarding the area treated with artificial fertilisers and the quantity, of artificial fertilisers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1968-69 season is given in the following table.

AREA FERTILISED AND QUANTITY OF ARTIFICIAL FERTILISERS USED  
STATES AND TERRITORIES, 1968-69

State or Territory	Crops			Pastures			Total		
	Area fertilised	Super-phosphate used	Other artificial fertilisers used	Area fertilised	Super-phosphate used	Other artificial fertilisers used	Area fertilised	Super-phosphate used	Other artificial fertilisers used

The chief sources of Australia's supplies of natural phosphate are Nauru, Christmas Island (Indian Ocean), the United States of America and Gilbert and Ellice Islands. Sodium nitrate is obtained chiefly from Chile.

## ARTIFICIAL FERTILISERS: IMPORTS INTO AUSTRALIA, 1964-65 TO 1968-69

<i>Fertiliser</i>	1964-65	1965-66	1966-67	1967-68	1968-69

Exports of fertilisers (manufactured locally) amounted to 34,000 cwt valued at \$184,000 in 1968-69 compared with 31,000 cwt valued at \$160,000 in 1967-68.

**Aerial agriculture**

Extensive use is made of aircraft for top-dressing and seeding, for spraying and dusting of crops and pastures, and for pest and vermin extermination.

For 1956-57 (the first year for which data are available) the total area treated was 1,466,000 acres; in 1968-69 the total was 14,416,000 acres. The following table shows details of area treated and materials used for each State for the five years ended 31 March 1969.

## AERIAL AGRICULTURE, 1964-65 TO 1968-69

<i>Year ended 31 March</i>	<i>Area</i>		<i>Total area treated(a)</i>	<i>Materials used</i>		<i>Total flying time</i>
	<i>topdressed and seeded</i>	<i>Area sprayed</i>		<i>Super-phosphate</i>	<i>Seed</i>

1965 . . . . .	14,147	2,416	16,640	656,094	3,467	108,753

(a) Includes other types of treatment (rabbit baiting, etc.). (b) Includes details for the Australian Capital Territory.  
(c) Not available for publication. (d) Includes details for the Northern Territory.

**Pasture improvement**

An article on pasture improvement, which includes notes on indigenous and introduced species of grasses and which traces the development of pasture research in Australia, appears on pages 1001-2 of Year Book No. 49.

**Soil conservation**

Year Book No. 49 contains an article (pages 1003-4) on soil conservation which deals with the following matters: land use and soil erosion, agents of erosion, prevention and control, and the activities of various Commonwealth and State authorities which promote and co-ordinate research into the problems of soil erosion and the initiation of preventive measures.

**AGRICULTURAL PRODUCTION**

In general, statistics in this chapter relating to agricultural production are derived from 'census' returns supplied by approximately 254,000 farmers who utilise one acre or more of land for agricultural or pastoral purposes. The latest figures available are those for the year 1968-69. The returns are collected on a substantially uniform basis in all States at 31 March each year, and relate mainly to crops sown in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources these are used in conjunction with the 'census' returns. The statistics published in this section are therefore shown in 'agricultural' years. For most purposes there will be little error involved in considering them as applying to years ended 30 June.

For more detailed information on period covered and details of the weights and measures used in recording production of agricultural commodities see introductory notes to the bulletin *Rural Industries*. Details of weights and measures are also included after the Contents of this Year Book.

**Progress, assistance and control****Progress of cultivation**

The following table shows the area of crops in each of the States and Territories of Australia at ten-yearly intervals since 1860-61 and during each of the ten seasons 1959-60 to 1968-69. Plate 38 in this chapter shows the area of crops in Australia from 1900-01 onward (page 758).

### The Australian Agricultural Council

The influence of governmental and semi-governmental authorities on Australian rural industry is most apparent in the fields of guaranteed prices, subsidies and controlled marketing. Many of these aspects of intervention at the national level take place indirectly through the Australian Agricultural Council. This is a permanent organisation which was formed following a conference of Commonwealth and State Ministers on agricultural and marketing matters held at Canberra in December 1934. The Council consists of the Commonwealth Ministers for Primary Industry, Trade and Industry, Interior, and External Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are: the promotion of the welfare and development of agricultural industries generally; the exchange of information on agricultural production and marketing; the improvement of the quality of agricultural products and the maintenance of high grade standards; to ensure, as far as possible, balance between production and available markets; and organised marketing.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council, to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research and to secure co-operation, between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

The Standing Committee on Agriculture comprises the permanent heads of the State Departments of Agriculture, the Secretary, Department of Primary Industry, and a representative each from the Commonwealth Departments of the Treasury, Health, Trade and Industry, Interior, External Territories, and from the Commonwealth Scientific and Industrial Research Organization.

### Financial assistance to primary producers

Financial assistance to primary producers by the Commonwealth Government may be provided in a number of ways. See also pages 546 and 557-9, Chapter 19, Public Finance. Examples of these follow.

*Bounties.* A bounty to producers, not exceeding \$4,000,000 in any one year, is currently paid on raw cotton produced in Australia. Commencing with the 1969 cotton crop the bounty will be phased out. In 1969 the total available will be \$4,000,000; in 1970, \$3,000,000 and in 1971 \$2,000,000. Payments will cease after that time.

A bounty of \$27,000,000 paid annually on the production of butter, cheese and related butterfat products and an export bounty on processed milk products of a maximum of \$800,000 annually are both continued in the fifth Five Year Dairy Industry Stabilization Plan which commenced 1 July 1967.

*Commitments to industry-financed stabilisation schemes.* In schemes of this nature the Commonwealth generally accepts a defined contingent liability to contribute to Government-approved stabilisation funds if falling prices, or rising costs, or both, lead to a situation where growers' contributions prove inadequate. The Dried Vine Fruits Stabilization Fund and the Wheat Prices Stabilization Fund are examples of this.

The Commonwealth Government also pays for cattle tick control, flood, drought and bush fire relief and fisheries research.

Over recent years, legislative research schemes financed by matching contributions from the Commonwealth, and industry or States, or both, have been initiated in regard to tobacco, wool, wheat, dairy produce, meat, chicken meat, eggs and wine. Non-legislative schemes, on a similar financial basis, have been operative in relation to other research projects, e.g. plague locusts, pest management in pome fruit orchards, grape crop forecasting, honey research, barley research, banana research, fruit fly research and vegetable research.

### Agricultural research

Each State Department of Agriculture has a number of research stations, investigating mainly problems of the regions in which they are located. In addition, a substantial amount of research and investigational work is carried out by these departments on farmers' properties. The work is supported by central laboratory and service facilities in capital cities, and increasingly also by research, analytical and diagnostic laboratories in the country areas. Research results are passed on to farmers through field days, meetings and publications, and through extension staff of the State Departments of Agriculture. In recent years, there has been increasing interest in economic interpretation of research results.

The Commonwealth Scientific and Industrial Research Organisation carries out research at field stations and laboratory facilities in many parts of Australia, and also undertakes developmental studies at national level. Its research programmes in the agricultural and livestock fields are generally designed to give information which is widely applicable in the Australian environment, and which may require further regional interpretation and adaptation in order that it may be of use to the farming industries. The Universities also carry out agricultural research at laboratory and field levels, in addition to their teaching functions.

For details of agricultural training *see* Chapter 20, Education, Cultural Activities and Research.

### **Extension services**

Agricultural extension services are provided by the States through their Departments of Agriculture, and in certain special fields by other State departments and authorities. Extension services also operate in the Northern Territory, Australian Capital Territory and Territory of Papua and New Guinea.

All State Departments of Agriculture have university or agricultural college trained officers located in country areas. They carry out advisory and educational activities in the farming community, through contact with individual farmers, and through group and general publicity channels. In recent years several States have placed agricultural economists in country areas, strengthening the economic and farm management content of extension.

Support for the field extension staff is provided by information service groups, by applied research teams and industry and subject matter specialist groups, and by diagnostic and analytical services. Some States have advisory staff specialising in agricultural mechanisation, and one State has begun to place extension method specialists in country areas.

Information services operated by Departments of Agriculture include agricultural journals, periodicals in various industry fields, pamphlets, newsletters, films, radio talks and television presentations. Group activities include discussion groups, field days, demonstrations, evening meetings and displays.

Since 1948 the Commonwealth has provided unmatched grants to the States to assist them in expanding their extension activities. In 1966, a five-year programme of rapid expansion of this assistance beyond the existing provision of \$1.4 million per annum was undertaken. The amount available for 1969-70 is \$4.9 million, and the Commonwealth is prepared to make available up to \$5.4 million per annum by the end of the five years. The Commonwealth Extension Services Grant is used mainly by State Departments of Agriculture, and its scope includes extension, regional research, information, economic services and training.

Limited services are available from non-government sources. Some commercial firms and co-operatives provide extension or advisory services primarily for their clients. Farmers themselves have grouped together to employ advisors in farm management clubs, and this movement has no doubt helped stimulate the development of independent management consultants who can provide services ranging from property assessment or supervision to detailed farm management and development plans.

## **Distribution, production and value of crops**

### **Distribution of crops**

The wide range of climatic and soil conditions over the agricultural regions of Australia has resulted in a diversity of crops being grown throughout the Commonwealth. Generally, cereal crops (excluding rice and sorghum) are grown in all States over wide areas, while industrial crops are confined to specific locations in a few States. A graph showing the area sown to principal crops for the years 1900-01 to 1968-69 appears on plate 38, page 758.

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power, power kerosene, petrol and other oils.

### Indexes of quantum and price of agricultural production

Indexes of quantum and price of agricultural production previously shown in this section are now incorporated in the farm production price and quantum indexes shown in the chapter Miscellaneous.

## Wheat

Wheat is grown on a large scale in all States except Tasmania, and is the most important crop in Australia in terms of area, production and exports. The present limits of the wheat belt have been established after considerable fluctuation over the last four decades. In January 1934 a Royal Commission was appointed to inquire into and report upon the economic condition of the growing, handling and marketing of wheat, and the manufacturing, distributing and selling of flour and bread. The Report of this Royal Commission provides an authoritative description of all aspects of the industry up to that time.

### Wheat marketing and research

Two of the aspects of governmental and semi-governmental assistance and control which have contributed to the development of the industry are the organisation of overseas marketing and of research.

As a large proportion of the Australian wheat crop is normally exported, the marketing of wheat plays an important part in the industry. The Australian Wheat Board was constituted in September 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of wheat or wheat products, and to manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations. Details of the operations of the Australian Wheat Board and the Wheat Stabilization Board in licensing wheat grown during the seasons 1941-42 to 1948-49 will be found in Year Book No. 38, pages 940-1, and a detailed survey of legislation relating to stabilisation of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, is given in the Appendix to Year Book No. 37, pages 1295-9.

The Wheat Stabilization Board ceased to function on 31 December 1948, and under the *Wheat Industry Stabilization Act 1948* the Australian Wheat Board was reconstituted to administer the first stabilisation plan and was given powers similar to those held under the National Security Regulations. The new Board commenced to function on 18 December 1948. The Board has been continued in existence by the *Wheat Industry Stabilization Acts 1954, 1958, 1963-66 and 1968* for the purpose of administering the second, third, fourth and fifth five year stabilisation plans. Details of the more recent plans were published in Year Book No. 40, pages 841 and 842 (1947-48 to 1952-53 Plan), No. 44, page 861 (1953-54 to 1957-58), No. 48, pages 903 and 904 (1958-59 to 1962-63) and No. 54, pages 868 and 869 (1963-64 to 1967-68).

*Fifth Post-war Wheat Industry Stabilisation Plan.* Following negotiations during 1968, the fifth post-war Wheat Industry Stabilisation Plan was enacted by the Commonwealth and States towards the end of 1968. The new plan operates on very much the same lines as the previous ones. However, there are some important changes in detail in the main features of the plan which are set out below.

The plan operates for five years. It commenced with the 1968-69 wheat crop and will end with the marketing of the 1972-73 crop.

The *Wheat Export Charge Act 1968* repealed the *Wheat Export Charge Act 1963* and provided for an export charge on wheat and wheat products for the seasons 1968-69 to 1972-73 inclusive. See also page 557, Chapter 19, Public Finance. The charge which may be levied is the excess of the average export return over the sum of the guaranteed price (*see below*) and five cents per bushel with a maximum charge of fifteen cents per bushel. The ceiling on the Wheat Prices Stabilisation Fund, into which this charge is paid, has been raised from \$60 million to \$80 million. Any excess beyond this figure is returned to growers on a 'first in, first out' basis.

Payments from the Wheat Prices Stabilisation Fund will be paid to the Australian Wheat Board when required, for the purpose of building up the average export price for any season to the guaranteed price. When the average export realisations fall below the guaranteed price the deficiency is made up first by drawing upon the Stabilisation Fund in respect of up to 200 million bushels of wheat from each crop. If the Fund is exhausted, the necessary deficiency payments will be made from the Commonwealth Government's Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 No. 20 Pool when \$3,178,000 was collected. In fact, growers' money in the Fund was

exhausted with the closure of the 1959–60 Pool, and since then the Commonwealth has been obliged to meet its commitment in respect of the export guarantee. Up to the closure of the 1967–68 Pool, this has involved an amount totalling \$156 million.

The Commonwealth has guaranteed a price to growers applying to 200 million bushels of wheat exported from each crop during the period of the plan. The guaranteed price is subject to adjustment in each year of the plan in accordance with changes in price of cash costs, rail freights and handling and storage charges. There will no longer be any adjustment for imputed costs such as interest on farmers' equity. The guaranteed price per bushel in the 1969–70 season is \$1.459 f.o.b. vessel, an increase of 0.9 cents on that of the previous season.

The Australian Wheat Board is retained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.

Amending legislation, with effect from December 1969, gave the Australian Wheat Board discretionary power to sell wheat in Australia for purposes other than human consumption at prices below that set for human consumption but not less than the guaranteed price.

The home consumption price for 1969–70, the second year of the fifth plan, has been established at \$1.725 per bushel, bulk basis, f.o.r. ports for wheat for human consumption. Wheat for the manufacture of flour for industrial use is priced at \$1.435. The basic price for wheat for stock feed is \$1.50; however, any purchaser who undertakes to buy the whole of his wheat requirements for stock feed purposes from the Board throughout the year ending 30 November 1970 will be charged \$1.435 per bushel. These prices include a loading of 1.6 cents per bushel to cover the cost of transporting wheat from the mainland to Tasmania. There is provision in the plan for annual adjustments to be made to the home consumption price by the same amount as the guaranteed price is adjusted. The home consumption price for the 1968–69 season was \$1.71 per bushel for wheat for human consumption and stock feed. This price included a loading of 1 cent per bushel to meet freight charges on wheat shipped to Tasmania.

#### Wheat delivery quotas plan

In March 1969 the Australian Wheat Growers' Federation put forward proposals for the allotment of quotas on deliveries of wheat to the Australian Wheat Board. The Federation's proposals were mainly designed to bring marketable supplies of wheat more into line with available outlets, following the record 1968–69 harvest. The proposals became effective for the 1969–70 harvest. State governments have the responsibility, for Constitutional reasons, of implementing the quota plan within the States. Each State (except in Queensland where the legislation will operate retrospectively from about March 1970) enacted the necessary enabling legislation in 1969. The period of operation of the legislation varies among the States.

Quotas are subject to annual review. Wheat in excess of a quota may be received from a grower if storage space is available but 'quota wheat' will receive preference as far as receipt and subsequent sale by the Australian Wheat Board is concerned.

State quotas effective for the 1969–70 season and those proposed by the Federation and agreed to by all parties for 1970–71 are given below:

	1969–70 mil. bus	1970–71 mil. bus
<i>Basic—</i>		
New South Wales . . . . .	123	92
Victoria . . . . .	65	52
South Australia . . . . .	45	36
Western Australia . . . . .	86	83
Queensland . . . . .	25	25
	<hr/>	<hr/>
	344	288
<i>Extra—</i>		
New South Wales hard . . . . .	..	7
New South Wales prime hard . . . . .	7	12
Queensland prime hard . . . . .	6	11
	<hr/>	<hr/>
<i>Total</i> . . . . .	357	318
	<hr/>	<hr/>

Deliveries in 1969–70 made within the quotas established received the usual first advance payment of \$1.10 per bushel for f.a.q. bulk wheat, f.o.r. ports basis. The same arrangement will apply to 1970–71 season's quota wheat. In addition, the quota plan provides that wheat received which is

declared by the Australian Wheat Board to have been sold and paid for within the season will be treated as quota wheat of the season and receive a first advance payment.

The States are responsible for determining the method of allocation of individual quotas within their respective boundaries. The bases of quota allocation vary from State to State, but in the main, quotas are based on a farm's average deliveries over a recent period.

#### Wheat standards

A description of the F.A.Q. (fair average quality) standard of wheat is given in issues of the Year Book up to No. 53 (*see*, for example No. 53 page 902). However, over recent years there has been an extension of the system and Australian wheat is now marketed under eleven main different and distinct classifications. Each reflects the climatic and growing characteristics of its region of origin and also the particular characteristics of the varieties of wheat cultivated.

For each classification, samples of wheat are obtained each year and are mixed to give a representative sample of that grade. From these samples, which are representative of all the wheat of a particular classification grown in that region, standards for each grade are established; the bushel weight is determined by the use of the Schopper 1-litre scale chondrometer. This standard is used as the basis for sales of each grade and varies from year to year and from State to State. The eleven different classifications of wheat are:

Queensland prime hard	Victorian F.A.Q.
New South Wales prime hard	South Australian F.A.Q.
South Australian hard	Western Australian F.A.Q.
Queensland F.A.Q.	Western Australian soft
New South Wales northern hard	Victorian soft
New South Wales southern-western F.A.Q.	

The six F.A.Q. grades, while possessing some characteristics in common, vary in protein content, milling characteristics, and dough qualities, and all are distinct grades. Similarly, the prime hard, hard, and soft grades are individual grades segregated for specific end uses.

Australia currently produces a full range of wheats for all purposes from high protein hard wheats to low protein soft wheats.

#### Bulk handling and storage of wheat

A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954-8 of Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, and in more recent years other States have also introduced bulk systems. The bodies concerned with the administration of bulk handling in the various States are: Grain Elevators Board of New South Wales, Victorian Grain Elevators Board, State Wheat Board (Queensland), South Australian Co-operative Bulk Handling Ltd, Co-operative Bulk Handling Ltd. (Western Australia), and the Tasmanian Grain Elevators Board.

(a) Includes terminals, sub-terminals, country installations, and temporary storage. (b) Storage at beginning of season. (c) Includes storage in southern New South Wales operated by the Victorian Grain Elevators Board. (d) Includes current contracts.

Particulars of the operation of the bulk handling and storage systems in each State are set out on pages 916 and 917 of Year Book No. 48.

### International Wheat Agreement

Details of the first and second International Wheat Agreements operative from 1 August 1949 to 31 July 1953, and from 1 August 1953 to 31 July 1956, respectively, were published in Year Book No. 42 (see pages 840-1) or previous issues. Details of the third, fourth and fifth International Wheat Agreements which covered the periods from 1 August 1956 to 31 July 1959, 1 August 1959 to 31 July 1962 and 1 August 1962 to 31 July 1968 were published in Year Books 43 (page 836), 48 (page 906) and 55 (page 836) respectively.

### International Grains Arrangement

In August 1967 agreement was reached on a new International Grains Arrangement to operate for a period of three years from 1 July 1968. Details of the Arrangement were published in Year Book No. 55 (see page 836).

### Research into the wheat industry

Details of research into the Wheat Industry were published in Year Book No. 55 and previous issues. To the end of June 1969, the Wheat Industry Research Council (set up by the Commonwealth Government) and the Wheat Industry Research Committees (set up in the wheat-growing States) had spent \$13,128,000 including grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, universities and agricultural colleges.

### Wheat farms: number and classification by activity

Particulars of the number of farms growing twenty acres and upwards of wheat for grain during each of the years 1964-65 to 1968-69 are shown in the following table. A farm worked on the share system or as a partnership is included as one holding only.

NUMBER OF FARMS GROWING TWENTY ACRES AND UPWARDS  
OF WHEAT FOR GRAIN: STATES AND A.C.T., 1964-65 TO 1968-69

State or Territory	1964-65	1965-66	1966-67	1967-68	1968-69
New South Wales . . . . .	18,537	16,150	19,575	20,619	21,340
Victoria . . . . .	11,981	11,355	11,202	11,056	11,686
Queensland . . . . .	5,236	4,941	5,674	5,867	6,063
South Australia . . . . .	9,657	9,387	9,419	8,905	9,884
Western Australia . . . . .	8,779	9,044	8,897	8,746	8,964
Tasmania . . . . .	255	213	194	159	239
Australian Capital Territory . . . . .	20	13	25	20	27
<b>Australia . . . . .</b>	<b>54,465</b>	<b>51,103</b>	<b>54,986</b>	<b>55,372</b>	<b>58,203</b>

There is in Australia a widespread combination of wheat growing with other rural activities. This is illustrated, for all States and for Australia, in respect of the 1965-66 season, in a series of statistical bulletins: *Classification of Rural Holdings by Size and Type of Activity*, 1965-66, Nos 1 to 7. These publications also contain details of numbers of rural holdings classified according to area of wheat for grain.

### Varieties of wheat sown

The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845-1905) did invaluable work in pioneering this field, and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown in any one season is restricted to about forty-five.

The principal varieties of wheat sown and the percentage of each to the total area sown in the five main wheat-producing States of Australia in 1968-69 were as follows: New South Wales, Heron (27.7), Gamut (10.5), Falcon (10.0), Olympic (10.0); Victoria, Insignia (48.2), Olympic (20.2), Pinnacle (12.6); Queensland, Mendos (38.7), Gamut (21.6), Spica (11.9), Timgalen (10.1); South Australia, Heron (34.3), Insignia (including Insignia 49) (27.5); and Western Australia, Gamenya (45.2), Falcon (15.3), Insignia (11.1). A detailed table of wheat varieties sown appears in the annual bulletin *The Wheat Industry* (see No. 116, published in March 1970).

**Wheat area, production and yield per acre**

Prominent factors in the early development of the wheat industry were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

**WHEAT FOR GRAIN: AREA, PRODUCTION AND YIELD PER ACRE

1968-69 . . .	21.6	22.8	23.5	22.2	15.4	23.6	20.1	20.3

(a) 60 lb per bushel.

A graph showing the area sown to wheat for grain in Australia since 1900-01 appears on plate 38 of this Year Book, and a map showing the distribution of areas growing wheat for grain throughout Australia in 1962-63 appears on page 1013 of Year Book No. 50. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39, 1947-48, and 1954-55 appeared respectively in Year Books No. 22, page 695, No. 34, page 451, No. 39, pages 977-8, and No. 43, page 833.

The size of the wheat harvest in Australia is determined largely by the nature of the season, resulting in considerable year-to-year fluctuations in production. The main wheat-producing States of Australia are New South Wales, Western Australia and Victoria. Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits.

The area and production of wheat for grain in the 1968-69 season were at record levels. The area sown was 19 per cent above the previous record area sown in 1967-68. Production was 17 per cent greater than the previous record crop of 1966-67.

**Price of wheat**

The prices charged, per bushel, by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed were as follows: year ended 30 November 1966, \$1.53; 1967, \$1.57; 1968, \$1.66; 1969, \$1.71; and 1970, \$1.725 for wheat to millers and \$1.50 for wheat sold for stock feed. These prices include a loading to meet freight charges incurred on wheat shipped to Tasmania (1.66 cents in 1966; 1.50 cents in 1967 and 1968; 1.0 cents in 1969; and 1.6 cents in 1970).

# WHEAT FOR GRAIN: AUSTRALIA

1935-36 to 1968-69

PLATE 39

The Wheat Board's monthly basic export selling prices for f.a.q. bulk wheat f.o.b. basis, both for wheat sold under the International Wheat Agreement and for 'free' wheat sold on the open market, fell in the following ranges; season ended 30 June 1966, \$1.38 to \$1.48; 1967, \$1.51 to \$1.60; 1968, \$1.41 to \$1.49; 1969, \$1.38 to \$1.43.

The 1962 International Wheat Agreement, operative from 1 August 1962 to 31 July 1967, set the maximum price at \$US2.025 a bushel and the minimum at \$US1.625 for f.a.q. wheat sold under the Agreement. Under the new International Grains Arrangement, which is operative from 1 July 1968, provision has been made for minimum and maximum prices for fourteen types of wheat, the basic wheat being United States Hard Red Winter No. 2 Ordinary Protein, the minimum price for which has been fixed at \$US1.73 per bushel. The minimum price per bushel for No. 1 Manitoba Northern Wheat is now \$US1.955 and for Australian f.a.q. wheat \$US1.68 (see Year Book No. 55, page 836 for a description of the International Grains Arrangement).

Details of export prices of wheat in earlier years, including those received for wheat sold under the terms of the 1949-1953 International Wheat Agreement, are given in Year Book No. 40, pages 849-50, and in the statistical bulletin *The Wheat Industry, Australia*, No. 99, March 1961, and in previous issues of these publications.

#### Value of the wheat crop

The estimated gross value of the wheat crop in each State and in Australia during the season 1968-69 and the value per acre are shown below.

#### WHEAT FOR GRAIN: VALUE OF CROP(a), STATES, 1968-69

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(b)
Aggregate value	\$'000	289,061	122,008	55,827	112,551	151,306	467	731,334
Value per acre	\$	29.02	30.62	31.21	30.03	20.74	26.85	27.29

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of \$24,172,000 by the Commonwealth Government. (b) Includes the Australian Capital Territory.

#### Production and disposal of wheat in Australia

In the following tables details are given of Australian Wheat Board transactions and of total production and disposal of wheat during each of the years ended 30 November 1965 to 1969.

#### AUSTRALIAN WHEAT BOARD WHEAT RECEIVED, STATES, 1964-65 TO 1968-69 HARVESTS (<sup>'000</sup> bushels)

Pool	Harvest	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

67-68	1967-68	73,006	27,819	24,367	22,084	99,940	154	247,370
68-69	1968-69	196,828	94,672	38,781	79,447	105,679	210	515,617

Stocks of wheat (including flour in terms of wheat) held by the Australian Wheat Board in each State at 30 November for the years 1965 to 1969 are shown in the following table. These data relate to stocks held at mills, sidings, ports, and depots as recorded by the Australian Wheat Board.

#### AUSTRALIAN WHEAT BOARD: STOCKS(a) OF WHEAT (INCLUDING FLOUR IN TERMS OF WHEAT), STATES, 30 NOVEMBER 1965 TO 1969 (<sup>'000</sup> bushels)(b)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
1965	15,265	3,716	862	2,602	1,556	382	24,383
1966	3,406	6,020	343	2,623	3,626	529	16,547
1967	43,238	22,709	596	8,160	5,285	536	80,524
1968	10,148	13,298	688	6,791	20,580	353	51,858
1969	84,834	61,793	6,785	46,097	66,502	572	266,582

(a) Held at mills, sidings, ports and depots. Excludes new season's wheat received from growers prior to 30 November of years shown. (b) One short ton (2,000 lb) of flour is taken as being equivalent to 46.3 bushels of wheat.

Particulars of the disposal of wheat during the years ended 30 November 1965 to 1969 are shown in the following table.

**WHEAT: PRODUCTION AND DISPOSAL, AUSTRALIA, 1965 TO 1969**

(a) One short ton (2,000 lb) of flour is taken as being equivalent to 46.3 bushels of wheat. (b) In terms of wheat. (c) Held at ports, depots, mills, and sidings. (d) Source; Australian Wheat Board. (e) Includes allowance for unrecorded movements in stocks, gain or loss in out-turn, etc. and in differences related to the timing of official export statistics.

The *Wheat Industry Stabilization Act* 1948 empowered the Minister to arrange with the Commonwealth Bank for advances to the Board, the advances being guaranteed by the Commonwealth Government. These provisions have been continued in the subsequent legislation, with the exception that advances are now arranged through the Reserve Bank.

(e) Subject to an estimated additional \$42,870,000 to be provided by the Commonwealth Government and payment of \$618,000 to Wheat Industry Research Fund. (f) Subject to an estimated additional \$24,172,000 to be provided by the Commonwealth Government and payment of \$1,287,000 to Wheat Industry Research Fund.

Details of earlier pools will be found in previous issues of the Year Book.

**Imports of wheat**

Wheat and flour have been imported in substantial quantities on three occasions since 1900; in 1902-3 the wheat harvest was only 12,378,000 bushels, and wheat and flour equivalent to 12,468,000 bushels of wheat were imported. An equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. Owing to drought conditions in 1957-58 supplies of high protein wheat were insufficient for local requirements and, as a result, 1,485,000 bushels were imported from Canada in 1958. No wheat has since been imported.

**Exports of wheat and flour**

Statistics in the following three tables are for years ended 30 June and relate to the exports of Australian produce only.

**WHEAT AND FLOUR: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69**

Year	Quantity				Value		
	Wheat	Flour(a)		Total (in terms of wheat)	Wheat	Flour(a)	Total
		As flour	In terms of wheat(b)				
	'000 bushels	short tons	'000 bushels	'000 bushels	\$'000 f.o.b.	\$'000 f.o.b.	\$'000 f.o.b.

(a) One short ton (2,000 lb) of flour is taken as being equivalent to 46.3 bushels of wheat. (b) Includes particulars of shipments made 'for orders' which could not be classified to countries.

**World area and production of wheat**

The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from statistics published by the International Wheat Council. Harvests in the northern hemisphere occur in the first of the two years mentioned in each column heading, and in the southern hemisphere at the end of that year and the beginning of the next. Harvests of the northern hemisphere countries are thus combined with those of the southern hemisphere which immediately follow; e.g. in 1968-69 the Canadian harvest occurred from August to September 1968 and the Australian harvest from October 1968 to February 1969.

(b) International Wheat Council estimate.

## Principal wheat exporting and importing countries

The following table shows world exports of wheat and wheat flour (in terms of wheat) by the major wheat exporting countries, according to continents and countries of primary destination, based on statistics recently published by the International Wheat Council. While Australia's production of wheat has averaged about three per cent of the world's total during recent years, its exports account for a much higher proportion of the total quantities shipped. For the three years ended 1968-69 Australia's share of the world wheat exports has averaged 12 per cent.

(a) Excludes U.S.S.R., details for which are shown separately.

The above particulars are based on customs clearances of the exporting countries, and relate to years ended 30 June. There are small differences between Australian exports as shown and those on pages 770-1 due in part to the use by the International Wheat Council of a slightly different factor to convert flour to wheat equivalent.

## Oats

This cereal is widely grown in all agricultural areas which have autumn, winter and spring rainfall; it is tolerant of wet conditions and heavy soils. It has excellent feed value and produces a higher yielding crop than other winter cereals. It needs less cultivation, but requires ample fertiliser. Oats has a variety of uses—as a pasture plant when rough sown into stubble or heavy clover pastures, as silage if cut before maturity, as a hay crop when mown and baled or cut for chaff, or as a grain when stripped (the stubble then being grazed off). The grain is sold on a 'fair average quality' basis through voluntary pools in Victoria, South Australia and Western Australia.

**Oats area, production and yield per acre**

Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1968-69 accounted for 57 per cent of the area of all crops, oats grown for grain represented only 8 per cent.

(a) 40 lb per bushel.

Graphs showing the area sown to oats and production of oats in Australia appear on pages 993 and 995 of Year Book No. 49, and a map showing the distribution of areas growing oats for grain throughout Australia in 1962-63 appears on page 1015 of Year Book No. 50. The area sown to oats from 1900-01 is shown in plate 38, page 758 and the production of oats from 1935-36 is shown in plate 40, page 777.

Production of oats in 1968-69, 94,250,000 bushels was 12 per cent below the record production in 1966-67. Yield per acre was 24.3 bushels, compared with the record yield per acre of 25.2 bushels in 1966-67.

**Value of oat crop**

The average wholesale price in the Melbourne market for oats of good milling quality was \$0.72 per bushel in 1968-69, compared with \$1.13 in 1967-68. The estimated gross value of the oat crop in each State for the 1968-69 season and the value per acre were as follows.

**OATS FOR GRAIN: VALUE OF CROP, STATES, 1968-69**

## Exports of oats

## OATS: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

		1964-65	1965-66	1966-67	1967-68	1968-69
Quantity . . . . .	'000 bus	20,161	13,825	22,134	10,033	18,373
Value . . . . .	\$'000 f.o.b.	15,616	11,980	17,450	8,408	13,042

In 1968-69 the principal countries of destination were the Federal Republic of Germany (4,768,000 bushels), the Netherlands (4,597,000 bushels), Japan (3,401,000 bushels), the United Kingdom (2,164,000 bushels) and Italy (2,141,000 bushels).

## World production of oats

The world production of oats for the year 1968, according to figures issued by the United States Department of Agriculture, amounted to 3,493 million bushels, harvested from 76.3 million acres, resulting in an average yield of 45.8 bushels an acre. This compared with an estimated production in the previous year of 3,255 million bushels from an area of 74.2 million acres and an average yield of 43.9 bushels an acre.

## Barley

This cereal contains two main groups of varieties, 2-row and 6-row. The former is generally, but not exclusively, preferred for malting purposes. Barley was formerly stubble-sown, but is now grown principally on pasture land worked up early in the year of sowing. In this way it forms an important phase in the rotation of crops. Like oats, it may also be sown for fodder production or for grain. When sown for fodder, sowing may take place either early or late in the season, as it has a short growing period. It may thus provide grazing or fodder supplies when other sources are not available. Barley grain may be crushed to meal for stock (especially pigs) or sold for malting.

Crops sown for malting purposes require well-worked, weed-free paddocks of even soil, and are thus restricted to specific districts. The main barley-growing areas in Australia are situated in South Australia (Murray-Mallee, Eyre and Yorke Peninsulas), but considerable quantities are grown also in New South Wales, Victoria, Queensland and Western Australia.

## Barley Boards

The bulk of the barley crop in the various States is acquired and marketed by grower-controlled boards. Pooled returns from sales are distributed to growers at standard rates for the individual grades and varieties delivered. The Victorian and South Australian crops are marketed by the Australian Barley Board (a joint board established by the two State Governments), and the Queensland and Western Australian Barley Boards handle the crops of their respective States. Particulars of the proportion of barley production which was received by the Australian Barley Board (for Victoria and South Australia), together with details of quantity sold, advances and total payments to growers, are presented below. As the proportion of bagged barley to total receipts has been falling in recent years (14 per cent of Pool No. 30 as compared to 85 per cent of Pool No. 26) the following table shows details of advances made per bushel of bulk barley and not bagged as in previous issues.

AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC.  
1964-65 TO 1968-69

Pool	Quantity received	Quantity sold(a)	Total advances per bushels(b)	Net payments to growers
	'000 bushels	'000 bushels	\$	\$'000
No. 26 (1964-65 Crop) . . . . .	25,465	25,404	1.1292	25,184
„ 27 (1965-66 „ ) . . . . .	14,922	14,894	1.1993	14,824
„ 28 (1966-67 „ ) . . . . .	22,043	22,026	1.1940	22,759
„ 29 (1967-68 „ ) . . . . .	7,985	7,975	1.1912	7,511
„ 30 (1968-69 „ ) . . . . .	27,280	27,251	0.9200	(c)20,433

(a) Includes surplus or shortage in out-turn except for No. 30 Pool for which the sales are not yet complete. (b) 2-row No. 1 Grade (bulk) less freight. (c) As at 30 June 1970. At that date it was estimated that the amount still to be paid to growers was 4.881 cents per bushel.

**Barley area, production and yield per acre**

There was a substantial increase in the area of barley sown for grain (particularly in Western Australia and Queensland) in the years up to 1960-61, and in that year the area sown reached the then record level of 2,830,000 acres. However, the area sown in 1968-69, 3,314,000 acres, was 17 per cent more than the area in 1960-61. The production of barley for grain in 1968-69, 72,588,000 bushels, was a record and was 7 per cent more than the previous record production of 67,970,000 bushels in 1960-61. The area, production and yield per acre of barley for grain in the several States for the years 1964-65 to 1968-69, are shown in the following table. Separate details for 2-row and 6-row varieties are shown for all States for 1968-69. The area sown to barley from 1900-01 is shown in plate 38, page 758 and the production of barley from 1935-36 is shown in plate 40, page 777.

(a) 50 lb per bushel.

For Australia, 79 per cent of the area of barley for grain in 1968-69 was sown with 2-row barley. The proportion, however, varied considerably in the several States. The utilisation of barley during the season ended November 1969 was as follows: exports, 24,189,000 bushels; malting and distilling, 14,000,000 bushels; pearl barley, 119,000 bushels; seed, 4,300,000 bushels.

A graph showing the production of barley in Australia since 1935-36 is shown in plate 40, page 777, and a map showing the distribution of barley growing areas throughout Australia in 1962-63 appears on page 1014 of Year Book No. 50. The area sown to barley from 1900-01 is shown in plate 38, page 758.

#### Value of barley crop

The average wholesale price for 2-row English malting barley in the Melbourne market was \$1.52 per bushel in 1968-69 compared with \$1.53 in 1967-68. The estimated gross value of the barley crop in each State for the 1968-69 season and the value per acre are shown in the following table.

BARLEY FOR GRAIN: VALUE OF CROP, STATES, 1968-69

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value	· \$'000	13,479	8,868	12,766	25,657	8,619	1,142	70,531
Value per acre	· \$	27.71	21.68	29.90	18.17	15.59	43.56	21.28

#### Exports of barley

South Australia is the principal exporting State, and China (Taiwan), Italy, Japan and the United Kingdom were the principal countries to which barley was shipped in 1968-69. Particulars of exports of Australian-produced barley for the years 1964-65 to 1968-69 are shown in the following table.

BARLEY: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

		1964-65	1965-66	1966-67	1967-68	1968-69
Quantity	· · · '000 bus	16,281	9,994	18,718	5,701	19,871
Value	· · · \$'000 f.o.b.	18,002	11,508	21,569	6,569	18,246

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1968-69 amounting to 77,000 lb, valued at \$5,000, the main countries of consignment being Malaysia and Mauritius. Imports of barley into Australia amounted to 66,322,000 lb, valued at \$1,757,000 during 1968-69.

#### Barley malt

Details of the recorded usage of barley and the production of barley malt in the years 1964-65 to 1968-69 are given in the following table.

BARLEY MALT: GRAIN USED AND MALT PRODUCED, AUSTRALIA  
1964-65 TO 1968-69

		1964-65	1965-66	1966-67	1967-68	1968-69
Barley used	· · · '000 bus(a)	11,667	12,883	13,601	13,003	n.a.
Malt produced	· · · '000 bus(b)	12,127	13,235	14,027	13,547	n.a.

(a) 50 lb per bushel. (b) 40 lb per bushel.

Since 1952-53 the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports of Australian produce amounting to 4,469,000 bushels (value \$9,362,000) and 3,971,000 bushels (value \$7,268,000) were recorded in 1967-68 and 1968-69 respectively.

#### World production of barley

In comparison with the barley production of other countries that of Australia is extremely small. The main producers in 1968 were the Union of Soviet Socialist Republics, the United States of America, France and the United Kingdom. China (Mainland) is also normally a major producer, but details for 1968 are not available. Australian production in that year was approximately 1 per cent of the world total.

# PRODUCTION OF OATS, BARLEY AND RAW SUGAR

AUSTRALIA, 1935-36 TO 1968-69

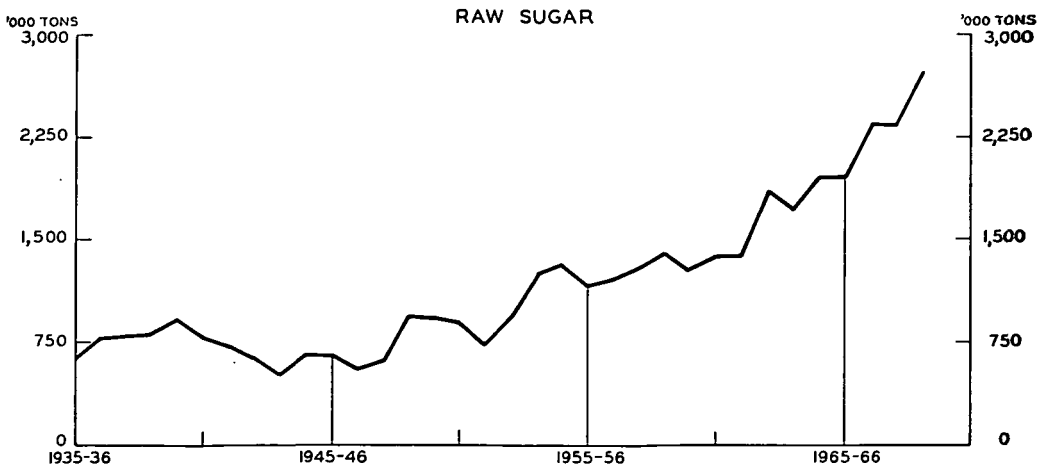

PLATE 40

According to estimates made by the United States Department of Agriculture, world production of barley in the year 1968 amounted to 5,094 million bushels harvested from 165 million acres, equivalent to a yield per acre of 30.9 bushels. This compared with the production of 4,734 million bushels in the previous year from 158.5 million acres, giving a yield per acre of 29.9 bushels.

## Sorghum

Grain sorghum is a summer-growing annual palatable to stock and more drought and frost-resistant than maize. It requires a summer rainfall. The growing of this crop for grain on an extensive scale is a comparatively recent development in Australia, and, as with other cereals, operations are highly mechanised.

The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghum, and development has so far been restricted mainly to these areas, more particularly to Queensland. The grain produced is fed to livestock and has become an important source for supplementing other coarse grains for this purpose. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). In Queensland the growing of grain sorghum is concentrated in the Burnett, Dawson-Callide areas and in the central highlands. In New South Wales the north-western slopes and Murrumbidgee Irrigation Areas are the main areas. This crop is also suitable for the semi-tropical areas of the Northern Territory, where development is proceeding, and the Kimberleys.

GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, STATES  
1964-65 TO 1968-69

Year	Area			Production(a)			Yield per acre(a)		
	N.S.W.	Qld	Aust.(b)	N.S.W.	Qld	Aust.(b)	N.S.W.	Qld	Aust.(b)

1968-69	136,945	436,479	583,409	3,927	11,800	15,831	28.7	27.0	27.1

(a) 60 lb per bushel. Production in New South Wales (for years prior to 1968-69) and Queensland harvested from crop sown in previous year. (b) Includes small areas sown and quantities produced in other States and Territories. Excludes Northern Territory for 1967-68 and 1968-69.

## Maize

Like sorghum, maize is a summer cereal demanding specific soil and climatic conditions. For grain, it is grown almost entirely in the south-east and Atherton Tablelands of Queensland and the north coast and northern tablelands of New South Wales. On the Atherton Tablelands in Queensland, and generally in New South Wales and Victoria, it provides a stock feed for dairy cattle, fat stock and pigs. In times of drought it is used also as a sheep feed. In all States except South Australia, however, this crop is grown to some extent for green fodder and silage, particularly in connection with the dairying industry. There is practically no difference between grain and fodder varieties.

There has been a continuing increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialised industry of growing hybrid strains for seed.

Maize area, production and yield per acre

Exports of maize

MAIZE: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

	1964-65	1965-66	1966-67	1967-68	1968-69
Quantity . . . . '000 bus	20	1	80	101	7
Value . . . . \$'000 f.o.b.	42	4	114	169	5

Imports of maize into Australia in 1968-69 amounted to 27,000 bushels, valued at \$183,000.

### World production of maize

According to figures issued by the United States Department of Agriculture, world production of maize in the year 1968 amounted to 9,046 million bushels, harvested from 252 million acres, giving an average yield per acre of 35.9 bushels. This compared with production in the previous year of 9,444 million bushels from 255 million acres, and an average yield of 37.1 bushels per acre.

The United States of America is the most important maize-producing country in the world, and during the three years ended 1968 the area sown to maize in that country averaged 58 million acres or 23 per cent of the world total. During the same period production averaged 4,417 million bushels or 48 per cent of the world total.

### Rice

The principal rice-growing areas of the world are confined almost entirely to Asia, although limited quantities are grown in other countries. In Australia rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Areas until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

Apart from small experimental areas in Queensland, Western Australia and the Northern Territory, rice-growing in Australia is practically confined to the Murrumbidgee Irrigation Areas in New South Wales. The bulk of Australia's exports of rice in 1968-69 was shipped to Papua and New Guinea, and Okinawa. Details relating to area, production, and Australian-produced exports for the years 1964-65 and 1968-69 are shown in the following table.

RICE: AREA, PRODUCTION AND EXPORTS, AUSTRALIA(a)  
1964-65 TO 1968-69

Year	No. of holdings growing rice(b)	Area	Production (Paddy rice)		Average yield (paddy) per acre	Imports	Exports
			Quantity	Gross value(c)			
		acres	'000 bushels (d)	\$'000	bushels (d)	'000 lb	'000 lb
1964-65	1,074	61,617	8,030	8,529	130.3	2,987	142,724
1965-66	1,115	64,398	9,540	10,224	148.1	3,951	142,256
1966-67	1,164	73,724	11,250	12,445	152.6	3,718	198,370
1967-68	1,210	75,957	11,597	12,831	152.7	3,749	224,956
1968-69	1,464	83,267	13,420	14,358	161.2	3,225	245,202

(a) For some years particulars of area and production for Western Australia and the Northern Territory are not available for publication, and are excluded. (b) Twenty acres or more in area. (c) Excludes the value of straw. (d) 42 lb per bushel.

### Fodder crops

#### Hay

Because of the comparatively unreliable nature of rainfall in Australian agricultural and pastoral areas, hay as a fodder crop occupies a position of importance. In 1968-69 hay represented 8 per cent of the total area of crops. Up to 1946-47 hay, in terms of area, was second only to wheat for grain, but in more recent years it has been supplanted by green fodder (for feeding-off). Hay is generally considered to include cereal hay, meadow hay and lucerne hay. Cereal crops cut early for hay contain a higher level of protein than those cut late.

In most European countries hay is made almost entirely from meadow pastures, but in Australia a very large proportion is made from cereals and lucerne, the hay being stored loose, in sheaves or baled. Because of its bulk, hay is usually produced for individual or local use, except in times of drought, when large inter-regional transfers may take place. Meadow hay requires greater care in preparation than cereal hay. Baling must be spaced carefully behind mowing to ensure that the bales are dry enough to prevent moulding, but not so dry as to result in excessive leaf loss. The leaves contain the bulk of the protein. Lucerne hay requires similar attention.

(a) Not available for publication; included in 'Other hay'. (b) Incomplete; excludes the Northern Territory.

For all States and the Territories combined, the proportions of the areas sown to the principal kinds of hay in 1968-69 were 18.0 per cent for oaten, 12.7 per cent for lucerne, 6.7 per cent for wheaten, and 62.5 per cent for other hay.

The following table shows the estimated gross value, and the value per acre, of the hay crop of the several States for the 1968-69 season.

## HAY: VALUE OF CROP, STATES 1968-69

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.(a)</i>
Aggregate value	\$'000	44,985	79,274	9,547	14,114	10,132	7,850	166,284
Value per acre	\$	54.67	42.92	85.30	22.95	29.70	37.28	42.04

(a) Includes \$166,000 and \$216,000 for the Northern Territory and Australian Capital Territory respectively.

## Farm stocks of hay

Particulars of stocks of hay held on farms at 31 March for the years 1965 to 1969 are given in the table below.

## STOCKS OF HAY HELD ON FARMS, STATES AND A.C.T., 1965 TO 1969

(Tons)

<i>31 March—</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>A.C.T.</i>	<i>Aust.(a)</i>
1965 . . .	1,586,969	2,402,299	145,737	614,451	275,948	414,415	7,606	5,447,425
1966 . . .	1,158,481	1,915,693	190,659	444,089	291,528	296,196	5,171	4,301,817
1967 . . .	1,888,668	2,175,731	270,470	544,676	249,531	399,891	8,151	5,537,118
1968 . . .	1,273,385	1,104,034	241,922	267,677	223,115	297,118	3,594	3,410,845
1969 . . .	1,819,874	2,987,848	152,945	723,057	243,836	450,547	4,975	6,383,082

(a) Excludes the Northern Territory, for which particulars are not available.

Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for overseas trade, and consequently does not figure largely among Australian exports. During 1968-69 exports amounting to 3,412 tons, valued at \$178,000, were made, principally to Kuwait, Malaysia and Singapore. Imports of hay are not recorded separately, but are considered to be negligible.

## Green fodder

Considerable areas are devoted to the growing of green fodder, usually as an adjunct to cereal operations or as a minor crop in irrigation areas. The areas recorded in respect of green fodder include areas of crops cut for feeding to livestock as green fodder or ensilage, together with areas fed off to stock as green forage. Statistics of green fodder exclude areas which may have been sown with the intention of harvesting for grain, but which, owing to adverse conditions, showed no promise of producing grain or even hay and were fed off to livestock. The principal crops cut for green fodder are lucerne and oats, while small quantities of barley, sorghum, wheat, maize, rye, and sugar cane are also used in this way. In 1968-69 the area under green fodder (5,713,886 acres) consisted of oats (2,148,069 acres), lucerne (2,478,293 acres) barley (225,095 acres), sorghum (304,909 acres), wheat (177,190 acres), rye (27,317 acres), maize (21,517 acres), sugar cane (1,086 acres), and other crops (330,410 acres). Particulars concerning the area of green fodder in the several States during each of the years 1964-65 to 1968-69 are given in the following table.

## GREEN FODDER: AREA, STATES AND TERRITORIES, 1964-65 TO 1968-69

('000 acres)

<i>Year</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
1964-65 . . .	2,397	454	1,111	1,135	446	67	1	1	5,614
1965-66 . . .	1,952	526	1,143	1,210	414	78	1	1	5,324
1966-67 . . .	2,133	443	1,179	1,169	399	74	..	1	5,399
1967-68 . . .	2,326	545	1,337	1,217	414	75	..	1	5,916
1968-69 . . .	2,428	352	1,406	1,130	297	99	1	1	5,714

In the 1968-69 season green fodder ranked second to wheat in area of crops throughout Australia. A graph showing the area sown to green fodder appears on plate 38, page 758. The value of these crops is variously estimated in the several States, but the Australian total, excluding Western Australia, may be taken as approximately \$30,000,000 for the 1967-68 season and \$33,000,000 for the 1968-69 season.

**Ensilage**

Ensilage is produced from herbage compacted tightly to exclude air and kept from contact with air and extraneous moisture to avoid moulding. Fermentation results in a dark mass of high protein and lactic acid content. Molasses may be added to hasten fermentation. Ensilage may be stored in pits or stacks or in constructed silos.

The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connection with the design of the silos and the cutting and packing of the ensilage. Information regarding production and farm stocks of ensilage for the years 1964-65 to 1968-69 is given in the following table.

**Sugar cane**

The growing of sugar cane is restricted to those coastal areas in Queensland and northern New South Wales which have suitable climatic and soil conditions.

The Bureau of Sugar Experiment Stations in Queensland and the Colonial Sugar Refining Company Limited render useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilisers, lime, etc. and by producing and distributing improved varieties of cane. In common with these two organisations, Sugar Research Ltd, of Mackay, undertakes technological research in raw sugar milling practices.

**Sugar agreements and marketing arrangements in Australia**

In Year Book No. 37, pages 940-1, a summary is given of the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The current agreement, which replaced the 1961 agreement (extended by supplementary agreements) is for the period from 1 July 1969 to 30 June 1974 and prescribes prices for sugar equivalent to a retail price of 10.5 cents per lb.

Production of sugar is regulated under the terms of the Agreement. At the mill level control is exerted by means of seasonal 'mill peaks' in respect of Queensland mills and a proportionate allowance for New South Wales mills. The combined total equals the estimated requirements of the domestic and export markets. Farm production is regulated according to the limit on the mill which the farm supplies. Exports are limited by the export quota provisions of the International Sugar Agreement (*see below*).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and uniform prices paid to mills. Production for 1969-70 is estimated to be 2,178,000 tons 94 net titre, to which New South Wales is expected to contribute approximately 98,000 tons.

### **International Sugar Agreement**

The International Sugar Agreement of 1937 was superseded by the International Sugar Agreements of 1953, 1958 and 1968. Details of the 1937, 1953 and 1958 Agreements were given in Year Books No. 40, pages 881-2, No. 48, page 936 and No. 54, page 892 respectively.

The 1968 International Sugar Agreement came into force on 1 January 1969. The Agreement is for a five year period, but the operation of the Agreement is to be reviewed before the end of the third year. It is possible that such a review will result in modifications to the Agreement to apply in its final two years.

Like its predecessors, the 1968 Agreement is built around a schedule of export quotas governing the net exports of exportation members to the world 'free' market. The Agreement is designed to maintain a balance between total world free market supply and demand by adjustments to the level of quotas in effect of exporting members. Quotas in effect cannot be adjusted downwards below 90 per cent of basic export tonnages except in exceptional circumstances where adjustments down to 85 per cent may be possible.

Quota adjustments under the Agreement must take account of the prices ruling in the world free market. The quota adjustment provisions pivot around a world free market price of U.S. four cents per pound f.o.b. and stowed Caribbean port, in bulk. When the price is below U.S. four cents, the system is designed to provide an upward pressure on prices by quota reductions. When the price is above U.S. four cents, the system is designed to apply a downward pressure on prices by increases in the level of quotas in effect above basic export tonnages.

Under the Agreement, exporters are required to establish and maintain certain levels of minimum stocks which are only to be released to the market when the price rises above U.S. 4.75 cents. If the price rises above U.S. 5.25 cents all quota restraints become inoperative and, if the price rises above U.S. 6.50 cents, exporters are required to supply importer members with certain quantities of sugar at prices not exceeding the commercial equivalent of U.S. 6.50 cents.

If the price is below U.S. 3.50 cents, minimum export quotas in effect are to apply, while at prices below U.S. 3.25 cents, members are obliged to prohibit imports from non-member countries.

Australia has a quota under this Agreement of 1,100,000 metric tons raw value (about 1,040,000 long tons of actual raw sugar) and is obliged to establish a minimum level of uncommitted stocks amounting to 15 per cent of this quantity.

Australian exports of negotiated price sugar to the United Kingdom under the British Commonwealth Sugar Agreement, and to the U.S.A. market, are not controlled by the International Sugar Agreement.

### **British Commonwealth Sugar Agreement**

On 1 January 1953 the British Commonwealth Sugar Agreement became effective. The Agreement is now of indefinite duration but is subject to triennial review, with the next such review to be held in 1971. Under the Agreement Australia has a negotiated price quota of 335,000 tons per annum to the United Kingdom. The negotiated price for the years 1966, 1967 and 1968 of £stg43.10s. per ton of bulk raw sugar, f.o.b. and stowed, has been extended for the three years to 1971.

The Agreement also allows an adjusted overall Agreement quota (which includes the negotiated price quota) of 630,000 tons per annum to Australia. The balance of this quota over the negotiated price quota may be sold to preferential markets on the basis of the world market price plus preference, as part of Australia's export quota under the International Sugar Agreement.

### **Exports to the United States of America**

Australian exports to the U.S.A. are governed by legislation enacted by the U.S.A. in 1965 and covering the period to the end of 1971. These exports are sold on the U.S. domestic raw sugar market, the supplies to which are regulated with a view to ensuring stable and equitable prices, independently of prices ruling elsewhere in the world.

Australian export entitlements to this market vary from year to year but have recently been of the order of 170,000 tons of raw sugar per year.

### **Fruit Industry Sugar Concession Committee and sugar rebates**

The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the sugar industry.

Until 15 May 1960 a rebate of \$4.40 a ton of refined sugar used in processing approved fruit products was paid to Australian manufacturers, provided they brought fresh fruit at prices not lower than those declared by the Committee as reasonable. This was increased to \$10 a ton from 16 May 1960 and to \$15 from 1 July 1969.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for the Australian sugar content than the price for which the cheapest imported sugar could be landed duty free in Australia. The Queensland Government is responsible for payment of a similar rebate to exporters of other approved products. Payment of the export sugar rebate in respect of approved fruit products has been made conditional upon satisfactory arrangements having been made for payment for such fruit at not less than the prices (if any) which the Committee has declared to be reasonable.

Under the Sugar Agreement 1969 the Queensland Government contributes to the fund \$924,000 annually, reimburses the Committee for the actual expenditure on export sugar rebates, and, pays the Committee an additional sum equal to the amount payable by way of domestic sugar rebate in respect of the products exported. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for research for the purpose of increasing the yield per acre of Australian fruit, or of obtaining information regarding Australian fresh marketable fruits.

#### Financial assistance to the sugar industry

Under the provisions of the *Sugar Marketing Assistance Agreement Act 1967* the Commonwealth Government arranged a loan of \$19 million, plus interest on a temporary advance of this amount from the Reserve Bank, to assist the returns from No. 1 Pool in the 1966 season, and \$3,559,193 for a similar purpose in respect of the 1967 season. The total amount of \$23,327,590 so advanced will be repayable over ten years commencing in mid-1970, and will not be subject to interest before then. Thereafter it will incur interest at the rate of five per cent per annum.

#### Bulk handling of sugar

Bulk handling and mechanised loading and unloading of raw sugar is now in operation throughout the Australian sugar industry, except for the operation of a bagging station specially provided at Townsville to meet the needs of a few overseas customers. Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, at Mourilyan in 1960, and at Cairns in 1964. A second storage shed at Bundaberg, a third shed at Mackay and second sheds at Lucinda and Townsville have been opened subsequently to give a total bulk storage capacity of 1,300,000 long tons. The comparatively small New South Wales sugar industry was converted to bulk handling in 1954. Bulk receiving facilities are in operation at all Australian refineries.

#### Area of sugar cane

A brief outline of the development of the industry was included in earlier issues of the Year Book (*see* No. 38, page 985). The area of sugar cane in Australia for the seasons 1964-65 to 1968-69 are shown in the following table. The areas shown in the table do not include the small acreage cut for green fodder, which in 1968-69 amounted to 1,086 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and 'stand-over' cane as well as a small quantity required for plants.

SUGAR CANE: AREA(a), STATES, 1964-65 TO 1968-69

(a) Raw sugar at 94 net titre.

Climatic conditions in New South Wales are such that the crop matures in from twenty to twenty-four months, whereas in Queensland a period of from twelve to sixteen months is sufficient. The average yields of cane and sugar per acre for the years 1964-65 to 1968-69 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

**SUGAR CANE AND SUGAR: YIELD PER ACRE, STATES, 1964-65 TO 1968-69**

1968-69	n.a.	2,563.2	2,058.4	n.a.	584.7	107.6

(a) Includes allowance for estimated sugar content of imported foodstuffs. (b) Raw and refined, including ships' stores and sugar in exported foodstuffs. (c) Includes refining losses and quantities used in golden syrup and treacle. (d) Includes sugar content of manufactured products consumed.

The statistics of sugar usage in factories for 1968-69 are not yet available. However, the quantity recorded as used in factories in 1967-68 amounted to 377,132 tons compared with 372,394 tons in 1966-67 and 371,713 tons in 1965-66. Particulars of sugar used in establishments not classified as

factories are not available, and consequently these quantities are deficient to that extent. In 1967-68 the reported consumption by factories engaged in the production of jams, jellies and preserved and dried fruit and vegetables amounted to 77,288 tons, by those producing confectionery, ice cream, etc., to 74,196 tons, by breweries to 47,438 tons, and by factories producing aerated waters, cordials, etc., to 70,775 tons.

#### Sugar prices and returns

The current prices of sugar in Australia (as determined under the Sugar Agreement in Australia, see page 783) and details of net returns for raw sugar from 1964-65 to 1967-68 are shown in the following tables.

#### SUGAR: PRICES IN AUSTRALIA

Year	Raw sugar, 94 net titre			Refined sugar		
	Average return per ton received by millers and growers for—			Date of determination	Wholesale price to retailer per ton	Retail price capital cities per lb
	Home consumption	Exports(a)	Whole crop(a)			
	\$	\$	\$		\$	cents
1964	120.75	83.89	95.78	16.5.60 to 18.6.67	180.52	9.2
1965	121.95	67.27	85.14	19.6.67	206.72	10.5
1966	121.25	57.47	75.01			
1967(b)	142.80	59.45	82.05			
1968(b)	143.20	63.04	82.10			

(a) Includes 'excess' sugar. (b) Excludes repayable Commonwealth grant (see page 785).

#### RAW SUGAR(a): NET RETURNS, AUSTRALIA, 1964-65 TO 1968-69

(Source: The Queensland Sugar Board)

Year	Proportion exported	Net value of exports per ton	Average price per ton for whole crop	Estimated value of crop
	per cent	\$	\$	\$'000
1964-65	67.76	83.89	95.78	186,728
1965-66	67.31	67.27	85.14	166,270
1966-67	72.50	57.47	75.01	175,694
1967-68	72.89	59.45	82.05	191,471
1968-69	76.23	63.04	82.10	223,638

(a) 94 net titre.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated comprise the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges. They include concessions to the fruit industry and other rebates which in 1968-69 amounted to \$4,451,000, but exclude the repayable Commonwealth grants referred to earlier. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent and 30 per cent respectively.

#### Exports of sugar

#### RAW AND REFINED SUGAR: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

	1964-65	1965-66	1966-67	1967-68	1968-69
Quantity . . . . . tons	1,269,139	1,252,546	1,652,263	1,597,235	2,029,177
Value . . . . . \$'000 f.o.b.	112,683	93,925	100,026	97,582	122,214

## Tobacco

Tobacco is a summer-growing annual which requires a temperate to tropical climate, adequate soil moisture and a frost-free period of approximately five months. In Australia almost all tobacco is grown under irrigation. Because of specialised requirements, production is limited to areas with suitable soils and climate. The main centres of production are the Mareeba-Dimbulah districts of north Queensland and Myrtleford in north-eastern Victoria. Other areas where tobacco is grown include Bundaberg, Beerwah and Texas (Queensland), Ashford (New South Wales) and Gunbower (Victoria). All tobacco grown in Australia is of the flue-cured type except for small quantities of burley tobacco produced mainly in Victoria.

### Marketing

Between 9 May 1941 and 24 September 1948 all leaf was under the direct control of the Australian Tobacco Board, and prices were paid on leaf appraisal. Subsequently the Board was disbanded, and sales have been by open auction through the Tobacco Leaf Marketing Board (Queensland and northern New South Wales) and the Victorian Tobacco Growers Association Ltd (southern New South Wales and Victoria). In 1964 the Victorian Tobacco Leaf Marketing Board was set up to market the portion of the crop that was formerly sold by the Victorian Tobacco Growers Association Ltd, and in 1965 a Board was established in New South Wales. However, the actual physical handling of New South Wales leaf at auction is carried out by the Queensland and Victorian authorities.

In 1965 the Commonwealth and State Governments agreed to a stabilisation plan for the tobacco growing industry with an annual marketing quota of 26 million pounds (green weight) of leaf to be sold under an agreed grade and price schedule providing for an average minimum price, based on normal crop fall-out. The overall marketing quota is divided among tobacco-producing States according to a formula approved by the Australian Agricultural Council. The determination of grower disputes in regard to quotas from State allocations is the responsibility of State Quota Committees.

In 1968, the final year of the plan, the Governments concerned agreed that it should continue for a further period of five years with an increased marketing quota for the 1969 selling season of 28.5 million pounds, which was subsequently increased to 31.5 million pounds to correct industry stockholdings which were depleted by higher than expected manufacturer usage. Provision was made for an annual review of the quota and in 1970 a basic quota of 34 million pounds was set for the 1971 season, to be divided among the producing States in the same proportions as the original quota.

The plan is administered by the Australian Tobacco Board, constituted under the *Tobacco Marketing Act* 1965-66 and representative of the Commonwealth, tobacco-producing States, growers, and manufacturers.

The guaranteed average minimum price for the 1970 season, 109.4 cents per lb, is 0.4 cents per lb above the amount set for the 1969 season.

### Central Tobacco Advisory Committee

The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems. The Committee was reconstituted by the Agricultural Council during 1952-53.

In 1955 the Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme were estimated at \$336,000, of which the Commonwealth Government and tobacco manufacturers each agreed to contribute half. Annual contributions are made to a fund by the Commonwealth and State Governments and tobacco growers and manufacturers. A Tobacco Industry Trust Account has been established under the *Tobacco Industry Act* 1955-1965 to receive these contributions. The contributions from growers and manufacturers are obtained under the Tobacco Charges Assessment Act and the Tobacco Charge Acts, whose purpose is to provide funds to be used in research and otherwise with a view to fostering and expanding the Australian tobacco industry. This programme commenced in 1956, and since then \$6,564,924 has been paid to State and Commonwealth departments for expenditure on tobacco research and extension. The allocation for 1969-70 was \$773,865. As from 1 July 1964 the annual Commonwealth contribution has been increased to one-half of approved expenditure from the Tobacco Industry Trust Account. In 1961 a Research Sub-Committee was established to review annually scientific programmes and finance in relation to the Tobacco Industry Trust Account and make recommendations to the Central Tobacco Advisory Committee. However, following the establishment of the

Australian Tobacco Board, the Australian Agricultural Council in 1966 abolished this sub-committee and reconstituted the Central Tobacco Advisory Committee to make annual recommendations to Council, regarding research and extension programmes financed from the Trust Account. In order to facilitate the early disbursement of funds the Central Tobacco Advisory Committee now submits its financial recommendations directly to the Minister under new terms of reference approved by the Australian Agricultural Council in July 1969. These are:

'To report annually to the Australian Agricultural Council, through the Standing Committee on Agriculture, regarding research and extension programmes to be financed from the Tobacco Industry Trust Account.'

#### Tobacco research and extension

Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30 June 1953 are given in Year Book No. 40, pages 895-6, and in previous issues.

The Commonwealth Scientific and Industrial Research Organization and the State Departments of Agriculture in the tobacco growing States are carrying out investigations into a wide range of problems involving fundamental research, plant breeding, variety trials, nutrition, disease and pest control, fertilisers, crop rotation, and cultural practices. The State Departments also provide extension services for tobacco growers.

#### Tobacco factories

Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages, which in November 1946 stood at 3 per cent for cigarettes and 5 per cent for tobacco, have been increased progressively in intervening years and since 1 January 1966 have been set at 50 per cent for both cigarettes and tobacco.

In 1967-68 the quantity of cured leaf recorded as used in tobacco factories in Australia amounted to 50 million lb, of which 23 million lb was of local origin. The balance was imported, chiefly from the United States of America and South Africa. Figures for 1968-69 are not yet available.

#### Tobacco area and production

The area of tobacco in 1968-69 was 12.3 per cent below the record area established in 1962-63. Production at 34,072,000 lb was 0.8 per cent below the record established in 1963-64.

#### TOBACCO: AREA AND PRODUCTION, STATES, 1964-65 TO 1968-69

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.

1967-68	2,075	7,625	15,021	..	..	..	24,721
1968-69	2,481	12,075	19,517	..	..	..	34,072

#### Imports and exports of tobacco

Imports of tobacco and tobacco manufactures into Australia during 1968-69 were valued at \$28.4 million. This included 29.2 million lb of unmanufactured tobacco valued at \$21.8 million. Exports of tobacco and tobacco manufactures during 1968-69 were valued at \$2,374,000, including Australian produce, \$1,667,000.

### Cotton

This annual shrub requires a hot climate and inter-row weed control. Lint (long fibres) is extracted from the seed cotton in the ginneries and is used for yarn. The residue, consisting of linters (short fibres), kernels and hulls (outer seed coat), is treated in oil mills. Linters are used in the manufacture of felts and other materials where fibre length is of little importance. The kernels when crushed produce an oil which is used for both edible and industrial purposes. The residual meal is a useful high protein stockfeed; the hulls may be used as fuel.

Until 1964 cotton growing was mainly confined to Queensland, most of it being grown under conditions of natural rainfall. Since then there has been an increasing trend in the use of irrigation. A sound industry has been established in the Namoi and Macquarie Valleys in New South Wales with water provided by the Keepit Dam. More than three quarters of Australia's raw cotton requirements are now produced in that area. Cotton is also grown under irrigation in Queensland and on the Ord River of Western Australia and to a lesser extent in the Murrumbidgee Irrigation Areas of New South Wales. Nearly all Australian cotton is now grown with the assistance of irrigation and acreage yields compare more than favourably with those obtained by traditional overseas cotton producing countries.

#### Cotton bounty

For particulars of the *Cotton Bounty Act 1951-1958*, see page 1044 of Year Book No. 49. This Act was replaced by the *Raw Cotton Bounty Act 1963-1966* under which the Commonwealth agreed to pay a bounty on raw cotton produced and sold for use in Australia at the rate of 13.4375 cents per lb for Middling 1" White, with premiums and discounts on grades and staples above and below, up to a maximum of \$4 million in any one year, for a period of five years from 1 January 1964. In 1968 this Act was amended to extend bounty payments to all cotton produced in Australia of a grade higher than Strict Good Ordinary, whether used in Australia or not, provided it has a staple length of  $\frac{3}{4}$ " or greater. The Commonwealth Government proposes to phase out the bounty assistance over the next three years, commencing with the 1969 crop. The maximum bounty will remain at the previous level of \$4 million for 1969, falling to \$3 million in 1970, and to \$2 million in 1971 after which it will cease.

#### Cotton area and production

##### COTTON: AREA, PRODUCTION AND YIELD PER ACRE, STATES AND TERRITORIES 1964-65 TO 1968-69

1968-69	2,907	..	1,924	..	2,589	..	..	..	2,725

(a) Not available for publication. (b) Incomplete; see individual States.

NOTE. Production in Queensland relates to the crop harvested in the first of the years mentioned, and in other States to the year following: e.g., for 1968-69, the Queensland crop was harvested during 1968, while the crop in other States was harvested during 1969.

Production of ginned cotton for 1964-65 was 17,286,000 lb; 1965-66, 40,885,000 lb; 1966-67, 35,510,000 lb; and 1967-68, 70,405,000 lb. Figures for 1968-69 are not yet available.

The gross value of unginced cotton for the five years ended 1968-69 was \$7,685,000; \$14,323,000; \$12,468,000; \$19,675,000; and \$20,715,000 respectively.

Imports of raw cotton (excluding linters) during the past five years were: 1964-65, 55,474,000 lb; 1965-66, 32,096,000 lb; 1966-67, 19,963,000 lb; 1967-68, 27,066,000 lb; and 1968-69, 12,497,000 lb.

Exports of raw cotton (excluding linters) in 1968-69 were 8,231,000 lb, valued at \$1,890,000. Japan and the Philippines were the principal importing countries.

### Peanuts

Peanuts, or groundnuts, are a sub-tropical legume (and hence summer growers), the pods of which mature beneath the surface of the soil. They thus require well drained, light textured soils. At harvest the plant is pulled, wind-rowed, field-cured for two to four weeks, and then threshed to recover the pods. The main products of the industry are nuts, peanut oil, oil cake, and synthetic protein fibre.

The production of peanuts in Australia is confined mainly to Queensland, although small quantities are grown in New South Wales, the Northern Territory and, in some years, Western Australia.

PEANUTS: AREA AND PRODUCTION, STATES, 1964-65 TO 1968-69

Year	Area (Acres)			Production (cwt)		
	N.S.W.	Qld	Aust.	N.S.W.	Qld	Aust.
1964-65 . . . . .	400	45,554	(a)45,954	4,746	202,369	(a)207,115
1965-66 . . . . .	394	57,298	57,708	4,468	543,735	548,279
1966-67 . . . . .	397	69,330	(a)69,727	5,194	821,957	(a)827,151
1967-68 . . . . .	353	61,373	61,738	3,920	602,207	606,159
1968-69 . . . . .	183	78,454	(a)78,637	1,861	332,740	(a)334,601

(a) Incomplete: excludes Northern Territory.

The gross value of the 1968-69 crop was \$3,152,000 which was approximately \$2,984,000 less than in 1967-68. Total supplies available for consumption in Australia in 1968-69 were 27,196 tons (in shell equivalent), after allowing for a decrease of 14,916 tons in stock held by the Peanut Marketing Board, exports of 1,723 tons of peanut and peanut products, and industrial usage of 26,473 tons. Supplies were made up of 9,922 tons from Australian production received into store by the Board and 2,358 tons imported.

### Flax

Prior to 1948-49 flax for the production of linseed oil had not been grown extensively in Australia. Since then, however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. The main producing areas are the Darling Downs in Queensland, the wheat belt of New South Wales, and the western and north-eastern districts of Victoria. In recent years there has been increased production, principally for export, in the Esperance district of Western Australia.

Particulars of area and production of flax for linseed, by States, are given in the following table for the years 1964-65 to 1968-69.

## FLAX FOR LINSEED: AREA AND PRODUCTION, STATES, 1964-65 TO 1968-69

## Hops

Hops are grown from perennial rootstocks over deep, well-drained soils in localities sheltered from the wind. The hop-bearing vine shoots are carried upon wire and coir trellises, from which they are later harvested, principally by hand. The green hops are kiln-dried and bleached with sulphur dioxide fumes, following which the cured hops are pressed into bales.

Hop growing in Australia is confined to the Derwent, Huon and Channel areas of Tasmania and the Ovens and King Valleys in Victoria. A small area is also under hops in Western Australia, near Manjimup, but the details are not available for publication.

## Production and imports of hops

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1964-65 to 1968-69. Exports of hops are negligible and are not recorded separately.

HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA  
1964-65 TO 1968-69

Year	Production(a)		Imports	Net available supplies(b)	Quantity used in breweries
	Quantity	Gross value			
	cwt	\$'000	cwt	cwt	cwt
1964-65 . . . . .	27,892	2,372	9,521	37,413	39,517
1965-66 . . . . .	36,463	3,020	12,696	49,159	35,223
1966-67 . . . . .	28,907	2,531	2,683	31,590	31,347
1967-68 . . . . .	36,752	3,211	1,370	38,122	30,501
1968-69 . . . . .	42,757	3,788	1,501	44,258	34,077

(a) Excludes production in Western Australia, for which details are not available for publication.  
(b) Disregards movements in stocks.

## Safflower

The cultivation of safflower in Australia has developed rapidly in recent years to make it one of the major oilseed crops. It is best cultivated either in the warm temperate zones or as a winter crop in the tropical or sub-tropical regions, on moderately fertile, weed-free, clay or sandy loams. Adequate moisture is required up to the flowering stage, after which it is relatively drought resistant. The soil preparation and sowing techniques are similar to those employed for small grains; it is usually harvested by combine when the seed is hard and dry. The oil, produced by crushing, is used in the manufacture of margarine, soaps, paints, varnishes, enamels, and textiles.

Queensland is the main producer of safflower where suitable growing conditions exist particularly in the marginal wheat regions of Dawson-Callide Valleys, Fitzroy Basin, Central Highlands, and the Darling Downs. Suitable growing conditions also exist in New South Wales, Victoria and Western Australia, but, at present, production in the latter two States is relatively small.

## SAFFLOWER: AREA AND PRODUCTION, STATES AND TERRITORIES 1964-65 TO 1968-69

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Not available for publication. (b) Incomplete; see individual States. (c) 40 lb per bushel.

Imports of crude safflower seed oil in 1967-68 and 1968-69 totalled 833,000 gallons and 468,000 gallons respectively. These imports came mainly from the United States of America.

## Vegetables for human consumption

## Area, production and trade

Vegetables were initially grown on a large scale near the main cities, where there was ready access to reliable water supplies and to markets. Later, the expansion of irrigation areas and improvement in transport services resulted in their production being extended into many other areas. At present, because of the wide diversity of climatic conditions across Australia, supplies for main city markets are drawn from widely different areas, depending upon the times of maturity of the various crops. Apart from potatoes and onions, which are sold in some States through marketing boards, the bulk of vegetable trading takes place at the metropolitan markets of the cities concerned.

Details of the areas planted and production of individual kinds of vegetables are shown below for the seasons 1966-67 to 1968-69. Certain particulars shown are incomplete in that details for specific vegetables in some States are either not available or are not available for publication. For further information see the bulletin *Rural Industries*. Details of the estimated consumption of vegetables for a series of years ending 1968-69 are given in the chapter Miscellaneous.

**Processed vegetables**

Total production of canned vegetables in 1968-69 amounted to 190,015,000 lb. The principal types produced were green peas (excluding mint-pro peas), 30,364,000 lb; green beans, 9,615,000 lb; baked beans (including pork and beans), 40,933,000 lb; asparagus, 8,907,000 lb; beetroot, 40,422,000 lb; and mushrooms, 9,529,000 lb.

The production of dehydrated vegetables, including split peas, during 1967-68 amounted to 10,494,000 lb. Production of potato crisps, chips and flakes during 1968-69 was 25,577,000 lb.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957-58, when 13,846,000 lb of frozen vegetables were produced, made up principally of 10,131,000 lb of peas and 2,540,000 lb of beans. In 1968-69 production had risen to 141,842,000 lb, of which 80,425,000 lb were peas and 35,041,000 lb were beans.

**Exports and imports of vegetables**

Overseas exports of fresh and frozen vegetables during 1968-69 amounted to 44,418,000 lb valued at \$2,678,000; dried vegetables, 6,674,000 lb valued at \$366,000; preserved vegetables, 4,006,000 lb valued at \$790,000; and other prepared or preserved vegetables, 116,000 lb valued at \$71,000.

Imports of fresh and frozen vegetables during 1968-69 amounted to 16,836,000 lb valued at \$2,094,000.

**Potatoes**

This crop requires deep friable soils, which in Australia are usually basaltic, alluvial or swampy in origin. Fertiliser requirements, which are generally high, vary with the type of soil. Potatoes are killed by heavy frost, but require only moderate temperatures for growth. Mechanical planters and diggers are used to a variable extent depending upon a variety of factors including terrain, state of the soil and scale of operations. Seed certification schemes, which operate in all States except Queensland, provide a supply of seed which is free from viral, fungal and bacterial diseases. In Australia potatoes are used almost entirely for human consumption and not for the production of starch or alcohol. They are rarely used as stock feed.

*Area, production, and yield per acre.* Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. New South Wales and Queensland come next in order of acreage sown. In New South Wales production is chiefly in the tablelands district.

The production of potatoes from 1935-36 is shown in plate 41, page 795.

# PRODUCTION OF POTATOES AND ONIONS

AUSTRALIA, 1935-36 TO 1968-69

PLATE 41

*Potato marketing boards* were established in all States except Tasmania under separate State legislation after Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948. The life of the Queensland Board was not extended when its term ended in 1954. The New South Wales Board was voted out by growers in 1956, and the Victorian Board also ceased functioning in that year. The Boards in South Australia and Western Australia are the only statutory boards still in operation.

*Value of potato crop.* The estimated gross value of the potato crop of each State for the 1968-69 season and the value per acre are shown in the following table.

POTATOES: VALUE OF CROP, STATES, 1968-69

		<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>Aust.(a)</i>
Aggregate value	\$'000	9,595	10,343	11,679	4,045	5,613	2,119	43,399
Value per acre	\$	328	259	631	529	852	185	383

(a) Includes Australian Capital Territory.

*Consumption and exports of potatoes.* The annual consumption of potatoes in Australia during each of the three years 1966-67 to 1968-69 amounted to 574,700 tons, 587,700 tons and 721,200 tons respectively or 109.9 lb, 110.4 lb and 132.7 lb respectively per head of population. These figures exclude the quantities used for seed, which averaged about 55,000 tons annually over this period. Details showing exports and imports for the years 1964-65 to 1968-69 are given in the following table.

POTATOES: EXPORTS AND IMPORTS, AUSTRALIA  
1964-65 TO 1968-69

<i>Year</i>	<i>Exports</i>		<i>Imports</i>	
	<i>Quantity</i>	<i>Value</i>	<i>Quantity</i>	<i>Value</i>
	tons	\$'000	tons	\$'000
1964-65	4,715	427	5,404	343
1965-66	10,064	626	7,208	455
1966-67	13,593	839	..	..
1967-68	8,150	693	..	..
1968-69	12,591	966	237	12

Western Australia has emerged in recent years as the principal exporting State, accounting for over two-thirds of the Australian total in 1968-69. Australia's principal markets are Ceylon, Papua and New Guinea, and Singapore.

## Fruit

The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales citrus fruit (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears, and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges, and apricots. In Queensland apples, pineapples, bananas, oranges, mandarins, peaches, and plums are the varieties most largely cultivated. In South Australia, in addition to oranges, apples, peaches, apricots, and pears, almonds and olives are grown extensively. In Western Australia apples, oranges, plums, and pears are the chief varieties. In Tasmania apples occupy over three-quarters of the fruit-growing area, but small fruit, such as currants, raspberries and gooseberries, are grown extensively, the balance of the area being mainly taken up with pears and apricots.

### Overseas marketing of fruits

Details of the overseas marketing of fruits were published in Year Book No. 55 and earlier issues.

### Area and production of fruit

In general the area under fruit in Australia has remained static during recent years.

## Production and consumption of jams and jellies and preserved fruit

In Australia considerable quantities of fruit are used in the production of jams and jellies and for preserving. The statistics of fruit usage in factories for 1968-69 are not yet available. However, during 1968-69 output of jams, conserves, fruit spreads, etc., amounted to 91,985,000 lb, while output of preserved fruit amounted to 512,578,000 lb. Of the latter figure, peaches accounted for 193,613,000 lb, pears 90,957,000 lb, and pineapples 66,839,000 lb.

In 1967-68, 9,102,000 cwt of fruit was recorded as used in factories classified to the sub-classes Oils, vegetable; Jam, fruit and vegetable canning; Condiments, coffee, spices; Aerated waters and cordials; and Dehydrated fruit and vegetables. Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1968-69 are shown in the chapter Miscellaneous.

## Imports and exports of fruit and fruit products

The imports of fresh fruit into Australia are negligible, while those of dried fruit consist mainly of dates obtained almost entirely from Iraq and Iran. A considerable export trade in both fresh and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1968-69 amounted to \$29,456,000 and \$21,601,000 respectively. Apples constitute the bulk of the fresh fruit exported, although exports of pears and citrus fruits are considerable.

## FRESH AND FROZEN FRUIT: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

Year	Apples		Pears		Citrus		Total value(a)
	Quantity	Value	Quantity	Value	Quantity	Value	
		\$'000		\$'000		\$'000	\$'000
	'000lb	f.o.b.	'000lb	f.o.b.	'000lb	f.o.b.	f.o.b.
1964-65	296,142	20,989	65,745	5,297	51,936	3,382	30,543
1965-66	351,246	25,863	94,005	7,464	58,080	3,685	37,819
1966-67	288,834	18,280	64,620	4,800	58,656	3,779	27,869
1967-68	277,814	17,368	68,922	5,442	54,875	3,656	27,535
1968-69	287,135	19,964	46,652	4,107	68,312	4,423	29,456

(a) Includes exports of all other fresh and frozen fruit.

The quantity and value of overseas imports and exports of dried fruit, other than raisins and currants, for the years 1964-65 to 1968-69 are shown below.

**DRIED TREE FRUIT(a): IMPORTS AND EXPORTS, AUSTRALIA  
1964-65 TO 1968-69**

	Quantity	Value	Quantity	Value
	'000 lb	\$'000	'000 lb	\$'000
		f.o.b.		f.o.b.
1964-65 . . . . .	8,454	601	9,415	1,808
1965-66 . . . . .	8,145	557	11,907	2,450
1966-67 . . . . .	8,936	671	8,038	2,037
1967-68 . . . . .	8,996	750	8,027	2,016
1968-69 . . . . .	9,942	843	5,401	2,087

(a) Excludes sultanas, raisins and currants dealt with separately under Vineyards (see pages 801-2). (b) Dates and figs only.

Exports of jams and jellies in 1968-69 were 7,335,000 lb valued at \$1,104,000, compared with 10,361,000 lb, valued at \$1,463,000 in 1967-68. Imports of jams and jellies in 1968-69 were 3,116,000 lb, valued at \$555,000, compared with 1,637,000 lb, valued at \$324,000 in 1967-68.

Large quantities of canned or bottled fruit are normally exported from Australia, the quantity recorded in 1968-69 being 311,061,000 lb, valued at \$37,841,000. Exports in 1968-69 were made up principally of peaches (126,176,000 lb), pears (91,739,000 lb), fruit salad (37,300,000 lb), pineapples (16,781,000 lb), and apricots (13,970,000 lb). In addition, the exports of pulped fruits during 1968-69 amounted to 1,920,000 lb valued at \$367,000.

The total value of preserved fruit and fruit preparations (including fruit juices) imported into Australia during 1968-69 was \$2,801,000. The value of exports of fruit juices in 1968-69 was \$784,000.

### Vineyards

Grapes require a warm to hot climate and a predominantly winter rainfall. Freedom from late spring frosts is essential. They are grown for wine-making, drying and, to a minor extent, for table use. In Australia wine is produced very largely from irrigated crops, as are dried fruits. Some of the better known wine producing areas are the Murray Valley (South Australia and Victoria), Barossa Valley and Southern Vales Areas (South Australia), the Murrumbidgee Irrigation Areas and the Hunter Valley (New South Wales), the Mildura, Rutherglen and Stawell districts of Victoria, and the Swan Valley (Western Australia). Nearly all the dried fruit is produced along the River Murray and its tributaries, with small localised areas in other States.

#### Area of vineyards

The area under vineyards in the 1968-69 season in Victoria and South Australia constituted 77 per cent of the total area of vineyards.

**Wine industry**

Australia produces wine of every type and also brandy. In recent years there has been a distinct trend towards greater consumption and production of unfortified or table wines. Until 1957-58 production of these wines (which include burgundy, claret, riesling, sauterne, and sparkling wines) was less than half that of the fortified varieties (sherries, ports, etc.). By 1968-69 production of table wines had exceeded the volume of fortified varieties.

*The Wine Overseas Marketing Act 1929-1966* was introduced to place the overseas marketing of wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London the Board maintains an Australian Wine Centre, which is a medium for promoting interest in Australian wines and brandy. It is also a retail shop for the sale of these products. *The Wine Grapes Charges Act 1929-1966* provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to meet the Board's projects in Australia and overseas and to defray the administrative expenses of the Board, which has no other source of income.

**Production and consumption of wine and brandy**

In 1968-69 the total production of wine (beverage and distillation) in Australia was 51.9 million gallons, while total consumption of beverage wine was 22.0 million gallons (1.81 gallons per head of population). Similar particulars for 1967-68 are 44.2 million gallons and 19.8 million gallons (1.66 gallons per head of population) respectively.

1967-68 . . . . .	715,147	872,428

(a) Includes New South Wales and Victoria, for which separate details are not available for publication.

**Exports and imports of wine and brandy**

Principal markets for exports of Australian wine are the United Kingdom, Canada and New Zealand. During 1968-69 these countries received 1,003,000 gallons, 435,000 gallons and 91,000 gallons respectively. Exports of Australian-produced wine for the five years ended 1968-69 are shown in the following table.

## WINE: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69

Year	Quantity ('000 gals)			Value (\$'000 f.o.b.)		
	Sparkling	Other	Total	Sparkling	Other	Total
1964-65 . . . . .	16	1,976	1,992	96	3,425	3,521
1965-66 . . . . .	35	1,922	1,957	171	3,364	3,535
1966-67 . . . . .	65	1,709	1,774	251	2,917	3,169
1967-68 . . . . .	88	1,751	1,839	359	2,794	3,153
1968-69 . . . . .	73	1,729	1,802	314	3,081	3,395

Imports of wine for 1968-69 amounted to 456,000 gallons valued at \$1,883,000, compared with 305,000 gallons valued at \$1,364,000 in the previous year. During 1968-69 Italy supplied 126,000 gallons valued at \$455,000, France 78,000 gallons valued at \$523,000 and Portugal 75,000 gallons valued at \$233,000.

Exports of Australian-produced brandy in 1968-69 amounted to 97,000 proof gallons, valued at \$463,000. Imports of brandy, mainly from France, amounted to 152,000 proof gallons, valued at \$702,000.

## Dried vine fruit industries

The dry period from November to March in the lower Murray valley makes this an ideal area for dried vine fruit. Harvesting for drying takes place at the end of summer. The sun-drying process is often accelerated by using a dip of cold potash.

The *Dried Fruits Export Control Act 1924-1966*. For details of the *Dried Fruits Export Control Act 1924-1966* see Year Book No. 55, page 877, and earlier issues.

For details of the bulk purchase agreements between the Governments of the United Kingdom and Australia which operated during the period 1946-53 see Year Book No. 40, page 888. From 1 December 1953 exports to the United Kingdom have been on a trader basis.

In June 1963 Australian, Greek and Turkish dried vine fruit interests concluded an agreement to maintain minimum prices for sultanas on world markets. The agreement, which aims at international price stability, is periodically reviewed. A permanent committee of the contracting parties was established in London for the purpose of supervising the working of the agreement, and a sub-committee of the permanent committee was established in Hamburg in 1964.

The *Dried Vine Fruits Stabilization Act 1964-1966*. For details of the *Dried Vine Fruits Stabilization Scheme* see Year Book No. 55, page 877, and earlier issues.

(a) Excludes quantities exported as mince meat.

The chief countries importing Australian dried vine fruit are Canada, the United Kingdom, the Federal Republic of Germany, and Ireland. The quantities exported to these countries in 1968-69 were 19,792 tons, 17,631 tons, 7,517 tons and 1,952 tons respectively.

**Table grapes**

Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 7 per cent of the productive area of vines in 1968-69. The quantities of table grapes produced during the season 1968-69 in each State are shown on page 759.

**PASTORAL PRODUCTION****Livestock numbers**

A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given on page 748 of Year Book No. 35. Since 1860 annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia, at decennial intervals from 1860 to 1960, and from 1965 onwards in single years, are given in the following table, and are shown continuously since 1870 on the graph on plate 42 following.

LIVESTOCK: AUSTRALIA, 1860 TO 1969  
(<sup>'000</sup>)

Year	Horses	Cattle	Sheep	Pigs	Year	Horses	Cattle	Sheep	Pigs

While livestock numbers (particularly sheep) have increased substantially since 1860, marked fluctuations have taken place during the period, mainly on account of widespread droughts which have from time to time left their impressions on the pastoral history of Australia. These occurred in 1868, 1877, 1883-84, 1892, 1893, 1895, 1901-02, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41, 1944-45 to 1946-47, and 1965-67. The years in which the numbers of livestock attained their peaks are as follows: horses, 1919 (2,527,000); cattle, 1969 (20,606,000); sheep, 1969 (174,602,000); and pigs, 1969 (2,253,000).

The distribution throughout Australia of sheep, beef cattle, dairy cattle, and pigs at 31 March 1963 is shown in the maps on pages 1049 and 1050 and facing pages 1082 and 1083 of Year Book No. 50.

The numbers of horses, cattle, sheep, and pigs in each State and Territory are shown later in this chapter.

#### Value of pastoral production and indexes of quantum and price

Values of pastoral production are shown for 1968-69 in the table following. Further details of values of pastoral production and indexes of quantum and price, together with details of the source of the information and an explanation of the terms used in this compilation will be found in the chapter Miscellaneous.

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power kerosene, petrol and other oils.

### Sheep

#### Distribution throughout Australia

With the exception of a short period in the early eighteen-sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, although its relative importance has declined somewhat in recent years, due, among other factors, to heavy losses caused by drought conditions in 1965-66. Concurrently, there has been a marked increase in the sheep population of Western Australia, where figures have doubled in little more than a decade to give that State second position of importance in terms of sheep numbers.

A map showing the distribution of sheep in Australia at 31 March 1963 appears on page 1049 of Year Book No. 50. Graphs showing the number of sheep in Australia from 1870 onwards appear on plates 42 and 43 of this Year Book (pages 804 and 812).

#### SHEEP: NUMBERS IN STATES AND TERRITORIES, 1965 TO 1969 ('000)

<i>Year Ended 31 March</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
1965 . . . . .	72,396	30,437	24,016	17,289	22,392	3,793	9	290	170,622
1966 . . . . .	61,396	30,968	18,384	17,993	24,427	4,127	9	258	157,563
1967 . . . . .	63,848	31,239	19,305	17,864	27,370	4,321	8	281	164,237
1968 . . . . .	67,786	27,909	19,948	16,405	30,161	4,428	9	267	166,912
1969 . . . . .	68,153	30,185	20,324	18,392	32,901	4,395	7	246	174,602

The percentage distribution of sheep and lambs in the several States in 1969 was: New South Wales, 39; Victoria, 17; Queensland, 12; South Australia, 11; Western Australia, 19; and Tasmania, 2.

# LIVESTOCK: AUSTRALIA, 1870 TO 1969

1969 . . . . .	166,912	51,171	361	35,676	7,444	174,602

(a) Includes an estimate for numbers boiled down. (b) Balance figure; excludes lambs which died before marking.

Comparisons of Australian flock numbers with those of certain other principal sheep-producing countries are given on page 818.

## Classification of sheep according to age, sex, and breed

SHEEP, BY AGE AND SEX: AUSTRALIA, 31 MARCH 1965 TO 1969  
(<sup>'000</sup>)

Description	1965	1966	1967	1968	1969
Rams, 1 year and over . . . . .	2,047	2,002	2,013	2,079	2,184
Breeding ewes (including ewes intended for mating) . . . . .	75,580	73,626	76,618	77,872	83,607
Other ewes, 1 year and over . . . . .	8,952	7,397	7,117	6,700	6,424
Wethers, 1 year and over . . . . .	49,284	45,649	44,186	42,512	45,178
Lambs and hoggets, under 1 year . . . . .	34,759	28,890	34,302	37,750	37,209
<b>Total, sheep and lambs . . . . .</b>	<b>170,622</b>	<b>157,563</b>	<b>164,237</b>	<b>166,912</b>	<b>174,602</b>

Particulars of the principal breeds of sheep at 31 March 1968 (details are collected on a triennial basis) are shown in the following table.

SHEEP, BY PRINCIPAL BREED: STATES AND TERRITORIES, 31 MARCH 1968  
(<sup>'000</sup>)

Breed	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Merino . . . . .	48,977	12,810	19,414	13,418	27,286	315	9	209	122,438
Other recognised breeds . . . . .	6,333	6,909	203	1,383	1,304	2,809	..	14	18,954
Merino comeback(a) . . . . .	1,846	1,584	52	214	339	476	..	5	4,516
Crossbreeds(b) . . . . .	10,630	6,605	279	1,391	1,232	829	..	39	21,005
<b>Total . . . . .</b>	<b>67,786</b>	<b>27,909</b>	<b>19,948</b>	<b>16,405</b>	<b>30,161</b>	<b>4,428</b>	<b>9</b>	<b>267</b>	<b>166,912</b>

(a) Merino comeback is the progeny of a crossbred Merino ewe and a Merino ram, i.e. finer than half-bred. (b) Half-bred and coarser.

## Exports and imports of sheep

The overseas exports of live sheep from Australia are of comparatively minor importance. On 27 November 1929 the export of stud Merino sheep was prohibited, except with the approval of the Minister for Primary Industry. Exports of sheep are now principally for slaughter overseas. Consignments for this purpose in recent years were made chiefly from Western Australia to Kuwait and Singapore. In 1968-69 the number of sheep exported was 368,676, valued at \$2,932,000 (1967-68, 358,143, valued at \$3,301,000). Since June 1958 an embargo has been imposed on the import of sheep in order to prevent the introduction of the disease 'blue-tongue'.

## Cattle

## Objects of cattle-raising in Australia

Cattle-raising is carried out in all States, the main object in certain districts being the production of stock suitable for slaughtering purposes and in others the raising of profitable dairy herds. While dairy cattle are restricted mainly to coastal districts, beef cattle are more widely distributed, particularly in the eastern States, and are raised in areas unsuitable for dairy cattle, such as the tropical area of northern Queensland, the Northern Territory and the Kimberley district in the north of Western Australia.

## Distribution throughout Australia

Although cattle numbers declined after 1957 because of drought conditions and heavy slaughtering, they began to rise again in 1960 and in 1964 reached 19,055,000. Again because of drought in the eastern States, this figure declined to 17,936,000 in 1966, but recovered to reach a record level of 20,606,000 in 1968-69.

A graph showing the number of cattle in Australia from 1870 onwards appears on plate 42, page 804.

CATTLE: NUMBERS IN STATES AND TERRITORIES, 1965 TO 1969  
(\*000)

Year ended 31 March	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1965 . . . . .	4,619	3,316	7,393	697	1,258	451	1,068	14	18,816
1966 . . . . .	4,153	3,397	6,888	690	1,271	492	1,032	13	17,936
1967 . . . . .	4,146	3,528	6,919	687	1,357	522	1,097	14	18,270
1968 . . . . .	4,555	3,474	7,361	695	1,427	564	1,130	13	19,218
1969 . . . . .	4,864	3,878	7,668	865	1,546	586	1,185	14	20,606

The percentage of cattle in each State and Territory during 1969 was: New South Wales, 24; Victoria, 19; Queensland, 37; South Australia, 4; Western Australia, 7; Tasmania, 3; and Northern Territory, 6.

Maps showing the distribution of beef and dairy cattle in Australia appear on page 1050 and facing page 1082 of Year Book No. 50, and maps showing the distribution in earlier years were published in previous issues of the Year Book.

(a) Mainly for meat production. (b) Includes vealers, and bull calves intended for service.

For beef cattle and dairy cattle numbers prior to 1964 *see* pages 1056 and 1078 respectively of Year Book No. 50.

#### Exports and imports of cattle

In 1968–69 the number of cattle exported was 3,301, valued at \$738,000 (1967–68, 3,989 valued at \$563,000). Prior to June 1958 small numbers of cattle were imported, consisting mainly of valuable animals for stud purposes. Since that date an embargo has been imposed on the import of cattle in order to prevent the introduction of the disease 'blue-tongue'.

#### Comparison with other countries

The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world at the latest available date.

#### CATTLE: NUMBERS IN VARIOUS COUNTRIES

(a) Includes buffaloes.

### Horses

The number of horses in Australia reached a peak of 2,527,000 in 1919. Since then it has declined, because of mechanisation of transport and farming, and the number recorded at 31 March 1967 was 479,000. In future, particulars of horses will be collected only at triennial intervals.

A graph showing the number of horses in Australia since 1870 appears on plate 42, page 804.

HORSES: NUMBERS IN STATES AND TERRITORIES, 1965 TO 1969

(a) Estimated. (b) See South Australia.

#### Overseas trade in horses

Exports of Australian-bred horses in 1968–69 numbered 622, valued at \$1,370,000, made up of horses for breeding (201 valued at \$234,000), horses for racing (335 valued at \$1,078,000, shipped principally to the Philippines, Singapore and the United States of America), and horses for other purposes (86 valued at \$58,000). Horses imported into Australia in 1968–69 (947 valued at \$2,620,000) were mainly from New Zealand and the United Kingdom.

### Pastoral products: wool

With about one-sixth of the world's woolled sheep, Australia produces almost one-third of the world's wool and more than half the world's fine-quality Merino wool. The bulk of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonised wool, wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on page 818.

#### Wool marketing

Details of past wool marketing schemes and agreements, including the 1914–18 War Imperial Purchase Scheme, the British Australian Wool Realization Association Ltd, the 1939–45 War Acquisition Scheme, Joint Organization, and the 1951 Minimum Reserve Price Plan, are given in previous issues of the Year Book.

More than ninety per cent of the Australian wool clip is disposed of at auction. (During both world wars, however, auction selling was suspended and replaced by bulk purchase schemes). There are fourteen recognised wool-selling centres, namely Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Portland, Brisbane, Adelaide, Fremantle, Albany, Hobart, and Launceston. At these centres wool-selling brokers operate large stores where wool received from growers is held awaiting sale.

Each year a wool-selling programme is drawn up by the Joint Wool Selling Organisation representing wool growers, selling brokers and wool-buyers on the basis of the expected clip. Selling dates and the quantities to be offered are then determined for each centre. Before each sale the selling brokers, who act as agents for the wool-growers, display a representative portion of the wool to be sold on show floors for buyers' inspection and valuation. Auction sales are attended by buyers purchasing on behalf of wool users in more than fifty countries.

#### Wool Marketing Committee of Enquiry

In 1961 the Commonwealth Government appointed an independent committee to inquire into the marketing and promotion of Australian wool and related matters (see Year Book No. 48, page 977, for further details). The Committee presented its report to the Government in 1962. Its most important recommendation was that wool promotion, research and testing should be brought under the control of a single body, which should also act as an advisory authority on wool marketing. This recommendation was implemented under the *Wool Industry Act 1962–1970* which set up the Australian Wool Board.

### Australian Wool Board

This Board consists of a chairman, six woolgrower representatives, three members with special qualifications, and a representative of the Commonwealth Government. The first chairman of the Board was appointed by the Minister for Primary Industry after consultation with the Australian Wool Industry Conference (*see below*), but subsequent chairmen will be appointed by the Minister for Primary Industry after consultation with the Board. The six woolgrower representatives are appointed by the Minister on the nomination of the Wool Industry Conference, and the three members with special qualifications are appointed by the Minister after consultation with the Conference.

When the Board came into being on 1 May 1963 it took over the functions of the Australian Wool Bureau. On 1 July 1963 the Australian Wool Testing Authority became part of the Board, and on 1 January 1964 the Board took over the functions of the Wool Research Committee. Information on these three former instrumentalities appears in Year Book No. 48, pages 977-81.

Following the organisational changes carried out under the *Wool Industry Act 1970*, the functions of the Board embrace the following activities.

*Wool promotion in Australia and overseas by publicity and other means.* Promotion overseas is carried out through the International Wool Secretariat, which is maintained jointly by the Wool Boards of Australia, New Zealand, South Africa and Uruguay.

*Provision of a testing service for wool and wool products.* This service is administered by a subsidiary board retaining the name Australian Wool Testing Authority.

*Wool Research.* The Board is required to advise the Minister for Primary Industry on the general scope of those research programmes of the C.S.I.R.O. and the Bureau of Agricultural Economics in relation to the needs of the wool industry. The Board is also responsible for recommending grants from the Fund to recipients other than the C.S.I.R.O. and the Bureau of Agricultural Economics.

*Investigation into all aspects of wool marketing on a continuing basis.* The Board is required to inquire into, and from time to time report to the Australian Wool Industry Conference upon, methods of marketing wool and related matters. However, the Board has no executive powers over marketing.

In July 1964 the Board made recommendations to the Australian Wool Industry Conference for the introduction of a Reserve Price Plan for wool, which were put to woolgrowers in a referendum in December 1965. However, the plan was rejected by 53.4 per cent of the enfranchised woolgrowers who voted. For details *see* Year Book No. 52, page 945.

On 31 October 1967 the Board presented another report on wool marketing to the Australian Wool Industry Conference. The report included proposals for the establishment of an authority to enforce standards of clip preparation, administer the elimination of one, two, and three bale lots, conduct a price averaging plan for these wools and others voluntarily submitted, and conduct, in conjunction with wool selling brokers, a system of supply management involving chiefly wools in the price averaging plan. The report also recommended the establishment of an organisation of woolgrowers, brokers, and buyers to conduct and control the sale of wool at auction.

A recommendation that these proposals, with some amendments, be implemented by a non-statutory Australian Wool Marketing Corporation was accepted by the Australian Wool Industry Conference in November 1968. The proposals were then submitted to the Government with a request for assistance in financing some of their elements. In September 1969 the Minister for Primary Industry announced details of assistance offered by the Government in response to this request. The Government undertook to meet, for a period of three years, half of the costs involved in handling one, two and three bale lots admitted to the price averaging plan and half of wool selling brokers' administrative charges relating to the price averaging plan, on the understanding that the Government would share equally in any reductions in these charges.

The Government also undertook to meet any losses, incurred by the Wool Marketing Corporation, on wool it may have purchased at the end of a price averaging period and sold in a subsequent period. The Government's offer was conditional upon the Corporation undertaking to limit its activities to one, two and three bale lots and on the understanding that the total borrowings of the Corporation for the purchase and carry over of price averaging plan wool will not exceed \$14,000,000 at any one time.

The Government's offer was accepted by the Wool Industry Conference at its meeting in November 1969. Arrangements were immediately commenced by the Wool Board to bring the Wool Marketing Corporation to operational status. The Price Averaging Plan Wool Marketing Scheme, administered by the Corporation, came into operation on 1 July 1970. Included in the Corporation's responsibilities are the operation of the Wool Statistical Service and the Wool Classer Registration Scheme, both formerly administered by the Wool Board. The Wool

Statistical Service (described in more detail in Year Book No. 48, pages 977-8) provides comprehensive statistics on the Australian wool clip, while the registration of wool classers is designed to improve the standards of wool classing in Australia.

*Maintenance and administration of the wool stores which were entrusted to the Board by the Commonwealth Government.* Further details concerning these stores appear in Year Book No. 48, page 978.

*The establishment of integrated wool selling complexes.* The aim is to make the cost savings inherent in this wool handling technique available to the woolgrowing industry as soon as possible.

At present the main sources of finance for the various activities of the Board are a levy paid by woolgrowers and contributions by the Commonwealth Government, *see below*.

#### **The Australian Wool Industry Conference**

This body was formed by woolgrowers in October 1962 to meet the need for an organisation with sufficient authority to speak on behalf of the woolgrowing industry as a whole. It is not a statutory body and consists of twenty-five members each from the Australian Woolgrowers' and Graziers' Council and the Australian Wool and Meat Producers' Federation. The fifty member conference is presided over by an independent chairman.

The Conference makes recommendations to the Commonwealth Government on policy matters concerning the wool industry. Under the Wool Industry Act it is the responsibility of the Conference to nominate woolgrower representatives for appointment to the Australian Wool Board. Under the Wool Tax Acts (*see below*) the Conference is also responsible for recommending to the Commonwealth Government what rates of levy should be paid by woolgrowers to finance the activities of the Wool Board and the wool research programme.

#### **Wool levy**

Since 1936 a statutory levy has been collected from woolgrowers to finance wool promotion activities. The initial rate of 5c a bale was increased at the request of woolgrowers to 20c a bale in 1945 and 40c a bale in 1952, the latter rate continuing until 1960. Further details regarding the operation of this levy prior to 1957 appear in Year Book No. 48, page 978.

Under legislation passed in 1957 provision was also made for the payment by woolgrowers of a contribution for wool research which was fixed at 20c a bale. In 1960 the wool promotion levy was raised to 50c a bale, and the following year it was increased further to \$1 a bale. The operation of this rate was subsequently extended for 1962-63 and 1963-64.

On 1 July 1964 the basis for collecting the woolgrowers' combined levy for wool promotion and research was changed from a flat rate per bale to a percentage deduction from the gross value of shorn wool sold. A maximum rate of 2 per cent was fixed, but provision was made for a lower rate to be prescribed, if appropriate. For 1964-65 the rate was set at 1.875 per cent, which involved a substantial increase in payments by woolgrowers for promotion (from \$1 per bale to the equivalent of about \$2.70 per bale), while the research component of the levy was left unaltered at 20c per bale. In 1965-66 the levy was set at 2 per cent and it remained at the maximum rate till 1969-70. From 1 August 1970, the rate of levy was reduced to 1 per cent.

The imposition and collection of the combined levy from woolgrowers is governed by six complementary Acts, the Wool Tax Acts (Nos 1 to 5) 1964 and the *Wool Tax Administration Act* 1964-1966.

#### **Commonwealth Government's contributions to wool research and promotion**

In 1945 the Commonwealth Government commenced contributing on a statutory basis to wool research. Initially the contribution was at the rate of 20c a bale, but this was doubled in 1957 to 40c a bale. At this rate the Commonwealth Government contributed about \$2,000,000 to wool research in 1965-66, and a similar sum was provided in 1966-67.

Prior to 1964-65 the Commonwealth Government had not contributed to wool promotion. However, following representations made by the Australian Wool Industry Conference, the Commonwealth Government undertook to provide assistance to the Australian Wool Board in financing its commitment to the greatly expanded wool promotion programme of the International Wool Secretariat. The expanded wool promotion programme, announced by the Secretariat, envisaged an increase in the Wool Board's annual contribution to overseas wool promotion campaigns from the then level of \$5,000,000 to about \$20,000,000.

From 1 July 1964 the Commonwealth Government agreed to match on a \$1 for \$1 basis any increase in contributions by woolgrowers for wool promotion in excess of the levy of \$1 a bale then in force, and the Wool Industry Conference agreed to increase the growers' levy to the equivalent of

about \$2.70 a bale, which resulted in a Commonwealth commitment of about \$1.70 a bale. In aggregate this commitment entailed a Commonwealth contribution for promotion of about \$8,500,000 a year. This arrangement operated until 30 June 1967.

During 1967 the Wool Industry Act was amended following negotiations between the Executive of the Australian Wool Industry Conference and the Government. The amendment provided for a Government contribution for wool research and promotion during the three years 1967-68 to 1969-70 on a \$1 for \$1 basis matching woolgrowers' contribution by levy, to a maximum of \$14,000,000 in any one year. It provided for the grower levy and the Government grant to be apportioned annually between wool research and promotion by the Minister for Primary Industry after considering the recommendations of the Australian Wool Industry Conference. No change occurred in the legislation providing for the payment by woolgrowers of a levy at a rate not exceeding two per cent per annum.

In August 1969, the Government announced that when the then current arrangements for Government financial support for wool research and promotion expired on 30 June 1970, it would increase its contribution for these activities to an average of \$27,000,000 a year for each of the three years 1970-71 to 1972-73. An amendment to the Wool Industry Act was enacted in 1970 to give effect to this undertaking. At the same time, as mentioned above, the levy on woolgrowers was reduced from 2 per cent to 1 per cent of the gross proceeds from the sale of shorn wool.

### Wool production

Wool as shorn from the sheep contains an appreciable amount of grease, dirt and other extraneous matter, and is termed 'greasy wool'. The quantity of grease and other matter in a fleece differs not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. To allow for this factor, the weight of greasy wool is sometimes given on a 'clean' basis, i.e. minus the estimated amount of impurities. The net wool fibre content of greasy wool, expressed as a percentage, is termed 'clean yield'.

From 1946-47 to 1952-53 the Australian Wool Realisation Commission, and from 1953-54, the Wool Statistical Service, have assessed annually the clean yield of the Australian wool clip. During the period of assessment the clean yield showed a continuous rise up to 1951-52, when it reached 57.5 per cent. It has since fluctuated between 55.7 per cent and 57.7 per cent. It was 57.1 per cent in 1968-69.

Wool scoured, washed and carbonised in Australia before export, however, has a clean yield somewhat lower than for the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonised contains quantities of dirty and low-grade wool. The quantity of scoured wool exports during 1968-69 was about 8 per cent of the total raw wool exports (excluding wool exported on skins) in terms of greasy. For the clean yield of Australian scoured wools exported a standard factor of 93 per cent is taken.

The production of wool in the States and Territories varies broadly in accordance with the number of sheep depastured and with seasonal conditions which affect clip per head (*see* page 813). In general, however, South Australia obtains from its large-framed merinos a much heavier fleece per sheep than the Australian average. In addition, as a result of better management (improved pastures, fodder conservation, better breeding, control of diseases, etc.), the long-term trend has been towards higher fleece weights.

The following table shows details of total wool (i.e. shorn, dead and fellmongered, and exported on skins) produced by each of the States and Territories during the years 1964-65 to 1968-69. A graph showing the production of wool in relation to sheep numbers from 1870 onwards appears on plate 43 following.

### PRODUCTION OF WOOL (GREASY BASIS): STATES AND TERRITORIES, 1964-65 TO 1968-69 (\*000 lb)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

The bulk of the Australian wool production (about 91 per cent in recent years) is shorn from live sheep. The remainder is obtained by fellmongering (less than 1.5 per cent) or is exported on skins (about 8 per cent). The following table shows details of total wool production according to method of obtaining wool, and also the gross value of wool produced. Gross value is based, for shorn wool, upon the average price realised for greasy wool sold at auction and, for skin wools, on prices recorded by fellmongers and skin exporters.

## Classification of wool according to quality

The following table provides a detailed analysis of wool sold at auction, according to quality, for the years 1964-65 to 1968-69. These data are compiled by the Wool Statistical Service on the basis of catalogues of auction sales. 'Quality' ('64's, 60's, 58's,' etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1lb of tops (combed wool) of that particular wool.

**CLASSIFICATION OF GREASY WOOL SOLD AT AUCTION(a): AUSTRALIA  
1964-65 TO 1968-69  
(Bales of approximately 300 lb)**

(a) All greasy wool sold at auction except 'wool re-offered account buyer'.

**Price and value**

During 1968-69 the price of greasy and scoured wool sold in the selling centres of Australia averaged 44.7c per lb compared with the average price of 41.75c per lb in 1967-68 and 47.39c per lb in 1966-67. These prices are as compiled by the National Council of Wool Selling Brokers and represent the average price realised for all greasy and scoured wool, of whatever type or quality, marketed during the years indicated.

Fluctuation in Australian wool prices has a marked effect on the nation's rural and national income. In 1945-46 the gross value of wool production was \$117,194,000, representing 17.4 per cent of the gross value of production of all rural industries, while in 1950-51, when prices reached a peak, wool was valued at \$1,303,804,000 or 55.6 per cent of the total value of production for all rural industries. The value of wool production fluctuated considerably in subsequent years. In 1968-69 it was \$838,651,000, 21.2 per cent of the gross value of production of rural industries.

**ESTIMATED GROSS VALUE OF TOTAL WOOL PRODUCTION(a)**  
**STATES AND TERRITORIES, 1964-65 TO 1968-69**  
 (\$'000)

<i>Season</i>	<i>N.S.W.</i>	<i>Vic.</i>	<i>Qld</i>	<i>S.A.</i>	<i>W.A.</i>	<i>Tas.</i>	<i>N.T.</i>	<i>A.C.T.</i>	<i>Aust.</i>
1964-65	336,675	176,041	117,218	94,328	95,804	19,051	39	1,396	840,552

(a) Includes shorn, dead and fellmongered wool and wool exported on skins.

**Stocks of wool**

Stocks of raw wool held in Australia at 30 June 1969 amounted to 330.2 million lb (greasy basis) of which 59.0 million lb (37.0 million lb as greasy and 22.0 million lb as scoured and carbonised) was held by woollen mills, wool scourers and fellmongers, and 271.2 million lb, assumed to be all greasy, was held by brokers. Of the wool held by brokers, 82.4 million lb was unsold wool and 188.8 million lb was sold wool held awaiting shipment. These stocks exclude wool on skins, since this wool is not recorded as production until fellmongered in Australia or exported on skins.

**Consumption of wool**

Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonised wool used on the woollen and worsted systems (mill consumption), plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects, as they disregard overseas trade in semi-processed wool (e.g. tops and yarns) as well as woollen goods. Estimates of raw wool used on the woollen and worsted systems and by felt manufacturers in Australia are shown in the following table for the years 1964-65 to 1968-69.

**ESTIMATED CONSUMPTION OF RAW WOOL: AUSTRALIA, 1964-65 TO 1968-69**  
 ('000 lb)

<i>Year</i>	<i>Greasy basis</i>			<i>Clean equivalent</i>		
	<i>Used on woollen and worsted systems</i>	<i>Used for felt manufacture (including hats)</i>	<i>Total</i>	<i>Used on woollen and worsted systems</i>	<i>Used for felt manufacture (including hats)</i>	<i>Total</i>
1964-65	121,621	2,826	124,447	71,764	1,342	73,106
1965-66	126,119	1,990	128,109	74,418	945	75,363
1966-67	121,777	2,210	123,987	71,412	1,050	72,462
1967-68	128,401	2,530	130,931	73,043	1,202	74,245
1968-69p	130,903	2,530	133,433	74,466	1,202	75,668

As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown on page 814 is over-stated to this extent. The series 'Estimated consumption of processed wool in Australia' provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. This series is shown in the following table for the years 1964-65 to 1968-69. Briefly, the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes, and scoured wool used for felt manufacture. No allowance has been made for overseas trade in woollen piece goods, clothing, etc., because of the obvious difficulties of estimating accurately the wool content of these products.

**Value of wool exported**

The value of wool (other than wool on sheepskins) exported from Australia during 1968-69 was 25 per cent of the total value of exports of merchandise of Australian origin, while the proportion for the five years ended 1968-69 averaged 27 per cent. The value for the five years ended 1968-69, together with the principal countries to which wool was exported, is shown in the following table.

(a) Excludes wool exported on sheepskins

**World sheep numbers and wool production**

The following table shows particulars of the woolled sheep numbers and total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred, and carpet type wool for the latest available years.

In 1968-69 Australia produced 32 per cent of the world total of all types of wool. Other principal wool producers were New Zealand with 12 per cent of the world total, Argentina, 7 per cent, South Africa, 5 per cent, and United States of America, 4 per cent. Production in the U.S.S.R., China, and eastern European countries together amounted to 21 per cent.

Australia's wool clip is predominantly merino. New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. is largely of the carpet type.

**Principal importing countries and sources of supply**

The following table, prepared from information published by the Commonwealth Secretariat, furnishes, in respect of the principal importing countries, details of their imports of wool for 1968 together with the chief sources of supply. The quantities imported refer to the actual weight of wool without distinguishing between greasy and scoured, except in the case of the United States of America, where estimated clean content of wool is quoted.

**PRINCIPAL WOOL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1968**

*(Source: Information published by the Commonwealth Secretariat, London)*

(Million lb)

Importing country	Quantity imported from(a)—					Total imports
	Australia	New Zealand	Argentina	South Africa	Other countries	
Japan . . . . .	518.3	49.8	23.4	42.4	13.1	647.1
United Kingdom . . . . .	147.0	141.6	46.8	40.0	169.6	545.0
France . . . . .	133.8	101.2	19.4	39.6	16.0	310.1
Italy . . . . .	126.0	22.6	14.8	23.5	49.0	235.9
Belgium . . . . .	92.8	49.0	17.7	11.4	34.1	205.0
Germany, Federal Republic of . . . . .	83.6	35.3	20.4	34.8	51.7	225.8
United States of America(b) . . . . .	59.2	77.8	42.5	17.5	51.6	248.6

*(a) Actual weight of greasy and scoured wool. (b) Imports are in terms of estimated clean content of greasy and scoured wool. Actual weight of total United States of America imports was 330.5 million lb.*

As a considerable transit trade exists between European countries, it must not be assumed that the whole of the imports recorded by these countries is retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom and Belgium.

## Pastoral products: meat

### Australian Meat Board

The Australian Meat Board, which was re-constituted under the Meat Industry Act 1964–1969, is the body responsible for controlling the external marketing of Australian beef, mutton and lamb. Powers and membership of the Board prior to 1964 are set out on page 801, Year Book No. 40. Following its reconstitution it consisted of five members representing meat producers, two representing meat exporters, one representing the Commonwealth Government, and an independent Chairman. The Meat Industry Act was amended in 1969 to provide for the appointment of an additional member to represent meat producers. The Board's primary function is to ensure that Australian meat exports are marketed in a manner which will safeguard the long-term interests of the Australian meat industry.

The Board regulates overseas marketing of Australian meat by means of an export licensing system. It has power of control over the kinds of meat that may be exported by licensed exporters to particular places, or to particular agents and representatives. The Board also has power to undertake measures to promote the sale and consumption of meat both in Australia and overseas, and it may purchase and sell meat in its own right for the purpose of market development. However, the exercise of this power is limited to activities aimed at meeting special marketing problems or circumstances which preclude the effective participation of private traders. The Board may also purchase and sell meat, with the approval of the Minister for Primary Industry, for the purpose of administering any international arrangements to which Australia may be a party.

### Meat research schemes

In November 1965 the Commonwealth Parliament passed legislation providing for the extension of the cattle and beef research scheme to cover beef, mutton and lamb research. Details of the beef research scheme were set out on page 1050, Year Book No. 51. Under the new legislation the Cattle and Beef Research Committee was re-constituted as the Meat Research Committee, its powers and functions being similar to those of the former Committee extended to include mutton and lamb research. The Meat Research Committee consists of twelve members—seven meat producer representatives, the Chairman of the Australian Meat Board (Chairman), one representative from the universities engaged in meat research, the Commonwealth Scientific and Industrial Research Organization, the Australian Agricultural Council, and the Department of Primary Industry. The new Committee came into being in March 1966 and the Cattle and Beef Research Committee ceased to exist from that date.

The scheme is financed from the Livestock Slaughter Levy (*see below*). The Commonwealth makes a matching contribution on a \$1 for \$1 basis to meet expenditure on research. The research is conducted by such bodies as the universities, C.S.I.R.O., State Departments of Agriculture and the Bureau of Agricultural Economics.

The Minister for Primary Industry has approved a beef research programme of \$1,835,000, and a mutton and lamb research programme of \$919,600 for 1969–70.

### The Livestock Slaughter Levy

The *Livestock Slaughter Levy Act* 1964–1966 imposed a levy on all cattle (over 200 lb dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies operated from 1 August 1964 and have replaced the charge imposed on meat exports and also subsumed the cattle levy for beef research purposes imposed in 1960 (*see page 909*, Year Book No. 51). In November 1968 legislation was passed amending the Act to provide for an additional levy to finance service and investigation activities relating to meat processing. The amended legislation (the *Livestock Slaughter Levy Act* 1964–68) now provides three elements in the levy for each class of livestock—an amount to finance meat research; an amount to finance the operations of the Australian Meat Board; and, from 1 January 1969 until 31 December 1971, an amount to finance service and investigation activities relating to meat processing. The first two elements are paid by producers while the third element is paid by meat processors.

Under the Act the total levy may not exceed 75.0c a head for cattle or 7.5c a head for sheep and lambs. The amount levied for research may not exceed 25.0c a head for cattle or 3.3c a head for sheep and lambs while the amount for service and investigation activities relating to meat processing is set for the period of its operation at 1.0c a head for cattle and 0.1c a head for sheep and lambs. The present operative rate for cattle is 33.0c (20.0c for research; 12.0c to the Australian Meat Board; 1.0c for service and investigation) and for sheep and lambs, 3.10c (1.75c for research; 1.25c to the Australian Meat Board; 0.10c for service and investigation).

### United Kingdom long-term purchase arrangements

Details of the long-term meat contracts with the United Kingdom from 1939 to 1952 and of the Fifteen Year Meat Agreement (1952–67) are given on page 710, Year Book No. 41 and in earlier

issues. In September 1953 the trade in meat between the United Kingdom and Australia reverted to private traders. The main features of the arrangements were given in Year Book No. 47, page 960. Details of minimum prices operating and deficiency payments received in recent years under private trading appear in Year Book No. 48 (page 973) and No. 50 (page 1068).

On 30 September 1967 the Fifteen Year Meat Agreement expired, and no new agreement has been negotiated. However, Australia still retains guaranteed duty-free entry for meat and a number of tariff preferences in the United Kingdom market under the provisions of the United Kingdom-Australia Trade Agreement.

#### Lamb Guarantee Scheme

Since the 1962-63 lamb export season the Australian Meat Board has guaranteed exporters a minimum price on all lambs 36 lb and under shipped to the United Kingdom. For the 1966-67 season the prices were set at 16.0c per lb and 14.5c per lb, and for 1967-68 and 1968-69, 17.0c per lb and 15.5c per lb. Prices set for the 1969-70 season are 18.0c per lb and 16.5c per lb. The higher guaranteed price for the initial period is aimed at stimulating early shipments of lamb, because normally the most opportune time for selling Australian lamb in the United Kingdom market is early in the export season. Any commitment by the Board is payable from moneys accrued in the Lamb Deficiency Payments Account under the Fifteen Year Meat Agreement.

#### United States-Australia Meat Agreement

In February 1964 the Governments of Australia and the United States concluded an agreement for the regulation of beef, veal and mutton exports from Australia to the United States with the object of promoting the orderly development of the trade in these classes of meat between the two countries. The agreement sought to preserve approximately the current pattern of trade in beef and mutton and to permit Australia to obtain a reasonable share of the expected market growth. Under the agreement Australia undertook to limit its exports of beef, veal and mutton to the United States to 242,000 tons in 1964. In the succeeding two years (1965 and 1966) exports were permitted to increase at a compound rate of 3.7 per cent. The agreement provides for a triennial review of the growth factor, the first of which was to take place before 1 October 1966, but no review has been held.

In August 1964 the United States Congress passed a Bill providing for the imposition of quotas on imports of beef and veal, mutton and goatmeat from all sources, for 1965 and subsequent years, if imports of these items are estimated by the United States Department of Agriculture to equal or exceed 110 per cent of a basic quantity. The basic quantity, 323,840 tons, is approximately the average of imports from 1959 to 1963. This quantity may be increased or decreased in any future calendar year by a percentage equal to that by which the United States average annual commercial production of beef and veal, mutton and goatmeat has changed since the base period 1959-1963. For this purpose the level of domestic production is the average of estimated commercial production for the year in which quotas may be applied and the two preceding years. An increase of 37.7 per cent in the basic quantity was set for 1970, providing for allowable imports of approximately 445,900 tons (441,100 tons in 1969) and an import ceiling, at which quotas would be established, of about 490,500 tons (485,200 tons in 1969). (Figures for earlier years are given in previous issues of the Year Book.) On the basis of the first official estimate of United States meat imports during 1970 the United States Secretary for Agriculture announced on 12 January 1970 that, as in 1969, it would not be necessary to invoke meat import quotas for 1970 as supplying countries had agreed to restrain shipments to 473,900 tons—16,600 tons below the point at which quotas would become operative. However, if a later quarterly estimate in 1970 indicated that the import ceiling would be equalled or exceeded, then quotas would be imposed. Australia's restraint level for 1970 is 235,400 tons compared with 225,000 tons in 1969.

#### Cattle slaughtered

## Consumption of beef and veal

The highest post-war consumption of beef and veal (including canned beef and veal) was 132.7 lb per head in 1956-57. With the buoyant overseas market for beef and the high prices ruling in Australia during the following four years, consumption per head fell substantially, and in 1960-61 amounted to only 88.3 lb. In 1968-69 consumption per head was 94.0 lb, of which 90.2 lb was carcass meat and 3.8 lb was canned meat (in terms of carcass equivalent).

PRODUCTION AND DISPOSAL OF BEEF AND VEAL (CARCASS WEIGHT)  
AUSTRALIA, 1964-65 TO 1968-69

1968-69	+12	920	384	34	490	90.2

(a) Includes carcass equivalent of boneless beef exported and all fresh and frozen meat shipped as ships' stores.

## Exports of beef and veal

While beef and veal were previously shipped largely in carcass form, there has been in recent years a substantial increase in the amount of boneless beef exported. From 1958-59 to 1968-69 the quantity of boneless beef shipped exceeded that exported in carcass form. The trade in boneless beef has been developed principally with the United States of America. In 1968-69, the principal markets for Australian beef and veal exports were the United States (451,084,000 lb, valued at \$173,332,000); Japan (33,022,000 lb, valued at \$9,960,000); and the United Kingdom (30,889,000 lb, valued at \$8,040,000).

## Consumption of mutton and lamb

In 1959-60 consumption of mutton and lamb, at 103 lb per head of population, exceeded that of beef and veal for the first time on record. Subsequently, it showed a continuous decline until 1965-66, when it fell to 82.8 lb per head. Since then this downward trend has been reversed and in 1968-69 consumption per head reached 90.3 lb, exceeding that of beef and veal by 0.1 lb per head.

(a) Actual weight shipped, not carcass equivalent.

In 1968-69 the principal buyers of Australian frozen mutton and lamb were the United States of America (64,378,000 lb, valued at \$15,818,000); Japan (51,260,000 lb, valued at \$8,669,000); Canada (50,185,000 lb, valued at \$9,907,000); and the United Kingdom (39,250,000 lb, valued at \$6,509,000).

## Consumption of meat and meat products

The apparent consumption of meat (including cured and canned meat) and edible offal per head of population in Australia is shown in the table below for the years 1964-65 to 1968-69.

MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL  
AVAILABLE FOR CONSUMPTION: AUSTRALIA, 1964-65 TO 1968-69  
(lb per head per year)

Year	Beef and veal(a)	Mutton (a)	Lamb(a)	Pork(a)	Offal	Canned meat(b)	Bacon and ham(c)	Carcass equivalent of meat and meat products (d)

(a) Carcass weight. (b) Canned weight. (c) Cured carcass weight. (d) Includes offal.

## Other pastoral products

## Tallow

Details of tallow consumption are collected from the principal factories using tallow. Recorded usage of inedible tallow in factories classified to industry sub-classes industrial and heavy chemicals and acids, and soap and candles, for the five years 1963-64 to 1967-68 was as follows: 1963-64, 1,077,000 cwt; 1964-65, 1,157,000 cwt; 1965-66, 1,061,000 cwt; 1966-67, 1,007,000 cwt; 1967-68, 880,000 cwt. These figures are, however, deficient to the extent that no allowance has been made for small unrecorded amounts used in other types of establishments. Details of edible tallow consumed in factories are not available.

Particulars of exports of edible and inedible tallow of Australian origin are shown in the following table for the five years 1964-65 to 1968-69.

**TALLOW: EXPORTS, AUSTRALIA, 1964-65 TO 1968-69**  
(cwt)

	1964-65	1965-66	1966-67	1967-68	1968-69
Edible . . . . .	96,611	51,869	244,582	88,465	201,847
Inedible . . . . .	1,846,543	1,243,684	1,767,130	1,654,071	2,035,529
<b>Total . . . . .</b>	<b>1,943,154</b>	<b>1,295,553</b>	<b>2,011,712</b>	<b>1,742,536</b>	<b>2,237,376</b>

**Overseas trade in hides and skins**

The value of cattle and horse hides, sheep and other skins, and skin pieces sent overseas during 1968-69 amounted to \$76,855,000, compared with a total of \$63,731,000 in 1967-68 and \$87,710,000 in 1966-67.

Of the total exports of sheepskins with wool during 1968-69, amounting to 216,182,000 lb valued at \$55,784,000, 133,083,000 lb valued at \$33,350,000 (60 per cent of total value) were shipped to France, 41,970,000 lb valued at \$12,478,000 (22 per cent) to Italy, and 10,505,000 lb valued at \$2,509,000 (4 per cent) to Yugoslavia. In the previous year France received 56 per cent (by value) of all sheepskin with wool exported, Italy 29 per cent and Yugoslavia 5 per cent. The exports of sheepskins with wool during each of the years 1964-65 to 1968-69 were as follows.

**EXPORTS OF SHEEPSKINS WITH WOOL: AUSTRALIA**  
1964-65 TO 1968-69

	1964-65	1965-66	1966-67	1967-68	1968-69
Number . . . '000	27,248	28,952	27,578	29,757	30,473
Value . . . \$'000	59,621	63,042	62,074	45,620	55,784

In 1968-69 a total of 1,634,000 sheepskins without wool were exported, valued at \$744,000. Of these, sheepskins without wool to the value of \$161,000 (22 per cent) were shipped to the United States of America, \$150,000 (20 per cent) to France and \$116,000 (16 per cent) to Spain.

The export trade in cattle hides and calfskins during 1968-69 was distributed among the main importing countries as follows: Japan, \$7,841,000, the Federal Republic of Germany, \$1,844,000, and Italy, \$1,776,000. The total quantity exported was 118,969,000 lb, valued at \$17,460,000.

The exports of furred skins in 1968-69 were valued at \$1,937,000, of which kangaroo and wallaby skins constituted \$1,209,000 and rabbit and hare skins \$547,000. In 1967-68 they accounted for \$1,180,000 and \$534,000 respectively, out of a total of \$1,845,000. The skins were shipped principally to the United States of America, Italy, the Federal Republic of Germany and the United Kingdom; the values shipped to each in 1968-69 being \$1,187,000, \$208,000, \$172,000, and \$159,000 respectively.

The quantity of cattle hides, including calfskins, imported into Australia during the year 1968-69 amounted to 2,347,000 lb, valued at \$503,000. The chief sources of supply were New Zealand and the United States of America.

**OTHER RURAL INDUSTRIES: DAIRYING, PIG, POULTRY AND  
BEE-FARMING**

**The dairying industry**

The introduction of cattle into Australia and the early history of the dairying industry are treated in some detail in earlier issues of the Year Book. Australian dairy cattle have shown steady improvement in quality, as demonstrated by yield, over the years. This is attributable to improved breeding, associated with herd recording, better feeding, resulting from the use of improved pastures and better farming methods, arising from the development of modern farm machinery and the application of the results of research.

The Australian dairying industry is conducted under conditions ranging from tropical to temperate and Mediterranean type climates, and in general, is confined to the coastal and near coastal regions where rainfall and topography are favourable. These conditions are found in parts of the eastern, southern and south-western coasts. Inland districts include the lower north-east of Victoria, the south-western slopes of New South Wales, the fertile Darling Downs in Queensland, and the irrigated districts of the Riverina in New South Wales and northern Victoria.

The manufacturing and processing sections of the industry are well advanced technologically and certain techniques and equipment developed in Australia are now being adopted overseas. State Agricultural Departments give advice on approved methods of production and inspect animals, buildings and marketable produce, to ensure that the latest advances in technology are passed on to the farmer and that hygiene standards are maintained at a high level.

#### Marketing of dairy products

The export trade is regulated by the terms of the Commonwealth *Customs Act* 1901–1967 and the Commonwealth *Commerce (Trade Descriptions) Act* 1905–1966 and regulations thereunder. This legislation requires that the true trade descriptions, etc., be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

Details of the *Dairy Produce Export Control Act* 1924–1966 and of the Australian Dairy Produce Board constituted under it were given in earlier issues of the Year Book (see No. 48, pages 999–1000). The administrative expenses of the Australian Dairy Produce Board and other sundry expenditure were met from the proceeds of a levy imposed by the *Dairy Produce Export Charges Act* 1964 (see Year Book No. 51, page 1070). In 1965 this Act, together with the *Dairy Produce Levy Act* 1958, was replaced by the *Butterfat Levy Act* 1965–1966 (see page 827).

#### Equalisation schemes

Reference is made to the butter and cheese equalisation schemes in Year Book No. 48, pages 998–9. Particulars of the returns realised on local and overseas sales and of the average equalisation rate for the years ended June 1965 to 1970 are given on page 834 of this issue. Details are also given on page 833 of the wholesale prices of butter and cheese for home consumption as determined by the Commonwealth Dairy Produce Equalisation Committee Ltd.

An equalisation scheme for casein similar to that for butter and cheese has been operated since 1952 by the Commonwealth Dairy Produce Equalisation Committee Ltd. Average realisations per cwt under the scheme were \$17.381 in 1964–65, \$24.918 in 1965–66, \$23.556 in 1966–67, 24.573 in 1967–68, and \$22.235 in 1968–69. For 1969–70, the initial rate had been set at \$17.000 but was subsequently raised to \$20.000 per cwt.

#### Commonwealth bounties and stabilisation plans

*Butter and cheese.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided bounties on milk supplied for the manufacture of butter and cheese. Bounties were paid on a seasonal basis prior to 1 April 1946, but from that date have been on a flat rate basis. Bounties are distributed by the Commonwealth Dairy Produce Equalisation Committee Ltd, through factories, to milk producers by payments on butter and cheese manufactured. Details of the three five-year stabilisation plans which operated up to 30 June 1962, will be found in Year Book No. 49, page 1084. Information regarding the plan which operated during the five years ended 30 June 1967 appears in Year Book No. 52, page 961.

A new five-year stabilisation plan came into operation on 1 July 1967. All the features of the previous plan have been retained. The fixed bounty of \$27,000,000 payable in each year of the plan on butter, cheese and butterfat products containing 40 per cent or more butterfat is continued.

The underwriting of final minimum equalised returns on butter and cheese, each year, is also continued. Returns to producers which were underwritten at 33c per lb on commercial butter each year since the inception of the underwriting arrangement in 1958 were raised to 34c per lb for the 1967–68 season and maintained at that level for 1968–69 and 1969–70.

Amounts realised on exports of butter and cheese were, in 1948–49 and 1949–50, in excess of the f.o.b. equivalent of the then guaranteed return and were credited to the Dairying Industry Stabilisation Fund, which was established in July 1948 for the purpose of stabilising returns from exports. During 1951–52 the Stabilisation Fund met the deficiency in respect of all exports which did not earn sufficient to meet the basic return to the factory. From 1 July 1952 to 30 June 1957 it was available to the industry to be used, in whatever manner it considered desirable, to make good any deficiency in respect of all exports other than the 20 per cent provided for under the Commonwealth Government's Five-year Stabilisation Plan. The Act was amended in 1957 to enable the Board to use the fund for such other purposes as are approved by the Minister for Primary Industry, and this amendment was later extended by the *Dairying Industry Act* 1967 to the present time. The amount standing to the credit of the Dairying Industry Stabilisation Fund at 30 June 1969 totalled approximately \$4,983,000. The major portion of the fund represents capital and other investments in milk recombining plants now established or under construction by the Board in Bangkok, Cambodia, Djakarta and Manila.

*Processed milk products.* Bounty on milk supplied for the manufacture of processed milk products was also payable from 1942 until 30 June 1948, and again from 1 July 1949 to 30 June 1952. The Commonwealth Government provided, under the *Processed Milk Products Bounty Act 1968*, for the payment of a maximum amount of \$800,000 as a bounty on exports of processed milk products in 1967-68. The bounty is to continue under present legislation until 30 June 1972, the maximum amount available being \$800,000 per annum.

*Whole milk.* In addition to the bounties referred to above, the Commonwealth Government subsidised the production of whole milk consumed directly from 1943-44 to 1948-49. Details of the amounts distributed during each year will be found in Year Book No. 38, page 1031.

#### Extension, research and promotion of the dairying industry

*Dairy Industry Extension Grant.* An annual grant of \$500,000, to be expended by State Governments for the purpose of promoting improved farming practices in the dairying industry, was first made by the Commonwealth Government for the five years from 1 July 1948. The grant was renewed at the same level until 30 June 1963 when it was increased to \$700,000 per annum. On 1 July 1966 the Dairy Industry Extension Grant was incorporated in the Commonwealth Extension Services Grant, and assistance to the State agricultural departments for extension services to the dairying industry will be maintained from funds from this source until 1970-71 at least.

*Dairy industry research and sales promotion.* At the request of the Australian Dairy Industry Council, legislation was enacted in 1958 to provide for a sales promotion campaign for butter and cheese in Australia and also for research into industry problems. The legislation provided for a statutory levy on the manufacture of butter and cheese (the Dairy Produce Levy) which was initially set at rates of 0.104c per lb for butter and 0.052c per lb for cheese, the proceeds being divided equally between research and sales promotion. The rates of levy operative from November 1959 were 0.156c per lb for butter and 0.078c per lb for cheese, of which two-thirds was allocated to sales promotion and one-third to research.

In August 1964 the legislation was amended to include butter powder, at the same rates as for butter, and butteroil and ghee at 0.065c per lb for research and 0.130c per lb for sales promotion. In 1965 the Dairy Produce Levy Act was repealed and replaced by the *Butterfat Levy Act 1965-1966* which provides for the amalgamation of the three levies into one levy on butterfat used in the manufacture of butter, cheese and related products. The maximum rate of levy in the Act is 60 cents per cwt of butterfat, and the prescribed rate operative from 1 September 1970 is 57 cents per cwt (24 cents for promotion, 23 cents for administration and overseas market development, and 10 cents for research).

The Commonwealth Government agreed to contribute one half of the costs incurred on approved projects included in the programme of research, with a maximum contribution of \$1 for \$1 against funds raised by way of levy and allocated to research. The sales promotion programme is financed solely by the levy. The following table lists the amounts of levies collected for research and sales promotion during the five years 1964-65 to 1968-69.

**BUTTERFAT LEVY: AMOUNTS COLLECTED FOR RESEARCH AND SALES PROMOTION, 1964-65 TO 1968-69**  
(£)

	1964-65(a)	1965-66	1966-67	1967-68	1968-69
Research(b) . . . . .	262,800	310,200	406,100	363,700	367,720
Sales promotion . . . . .	543,000	823,600	891,400	804,300	811,860
<b>Total collected(b)</b>	<b>805,800</b>	<b>1,133,800</b>	<b>1,297,500</b>	<b>1,168,000</b>	<b>1,179,580</b>

(a) Collected under Dairy Produce Levy Act. (b) Excludes amounts contributed by the Commonwealth Government.

The scheme is administered by the Australian Dairy Produce Board, which, in respect of research, is advised by a statutory committee, the Dairy Produce Research Committee.

## Cattle for milk production

(a) The number of units indicates the number of cows that can be milked simultaneously, i.e. the cow capacity of installed milking machines.

## Production of milk

The quantity of milk produced by a dairy cow can be as high as 1,000 gallons a year, and varies greatly with breed, locality and season. For all dairy cows and for all seasons for Australia prior to 1916 production averaged considerably less than 300 gallons per annum. Largely owing to an improvement in the quality of the cattle and the increased application of scientific methods the 300-gallon average has been exceeded in each year since 1924. In the last five years an average of 498 gallons per cow per annum has been obtained. In 1968-69 the average yield was 525 gallons. The annual average yields per cow shown in the following table are obtained by dividing the total production of whole milk for the year ended June by the mean of the number of cows in milk and dry and house cows at 31 March of that year and of the preceding year. They are, in effect, based on

the approximate number of cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater part of the year, but it may be accepted as sufficiently reliable to show the general trend.

**AVERAGE MILK PRODUCTION PER COW: STATES AND TERRITORIES  
1964-65 TO 1968-69

In the following table particulars of the production of whole milk in the various States and Territories are shown for the years 1964-65 to 1968-69. In 1968-69, the production of whole milk in Australia reached a level of 1,531 million gallons, which was 5 per cent below the record of 1,605 million gallons attained in 1966-67. Victoria is the principal milk-producing State, and in 1968-69 the output from that State, 816 million gallons, represented 53 per cent of total production. Output from New South Wales in 1968-69 was 279 million gallons (18 per cent of the total) and that of Queensland 172 million gallons (11 per cent). Production in the remaining States and Territories accounted for 18 per cent.

**TOTAL PRODUCTION OF WHOLE MILK: STATES AND TERRITORIES

1965-66 . . .	1,522,013	949,270	126,575	99,221	346,947
1966-67 . . .	1,604,725	1,011,000	146,547	99,502	347,676
1967-68 . . .	1,497,484	892,898	149,444	98,555	356,587
1968-69 . . .	1,530,597	908,565	158,286	98,945	364,801

(a) Quantities of milk used to produce two or more products (for example, initially as full cream milk and subsequently as skim milk) are counted once only. (b) Principally fluid milk for domestic purposes. Includes milk used for farm production of butter and cheese.

**Production of butter, cheese and processed milk products**

The establishment of large central butter factories, either on a co-operative or independent basis, has resulted in a considerable reduction in the cost of manufacture. The product is also of a more uniform quality, and whereas formerly the average quantity of milk used per pound of hand-made butter was about three gallons, factory butter requires only about two gallons. In addition, subsidy payments by the Commonwealth Government are made only on factory-produced butter. As a result the production of farm-made butter has declined to negligible proportions. A similar position exists in the cheese-making industry.

In 1967-68 factories classified to industry sub-classes Butter factories, Cheese factories, and Condensed and processed milk factories numbered 315 and were distributed among the States as follows: New South Wales, 69; Victoria, 109; Queensland, 60; South Australia, 38; Western Australia, 16; and Tasmania, 23. More details regarding numbers of factories, output, etc., are given in the chapter Manufacturing Industry. Statistics of the number of factories in 1968-69 are not yet available.

Factory production of butter in 1968-69 was 439,220,000 lb. This was 49,997,000 lb (10.2 per cent) below the record of 489,217,000 lb attained in 1966-67.

**BUTTER PRODUCTION IN FACTORIES: STATES, 1964-65 TO 1968-69  
(‘000 lb)**

## Local consumption of butter and cheese

Following the cessation of butter rationing after the 1939–45 War, consumption per head rose to 31.2 lb in 1951–52. However, in later years it gradually declined, and in 1968–69, at 21.1 lb per head, it reached its lowest level since the war. Consumption of cheese per head rose steadily in recent years and in 1965–66 reached a record level of 7.9 lb. There was a slight decline thereafter, however in 1968–69 it again attained the record level of 7.9 lb per head.

(a) Interim rates.

## Overseas trade in dairy products

The production of butter and cheese in Australia is considerably in excess of local requirements, and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon seasonal conditions.

Exports of butter in 1968-69 amounted to 140.9 million lb, compared with 148.6 million lb in 1967-68. Exports of cheese in these years were 56.1 million lb and 76.0 million lb respectively. The principal importing country for Australian butter in 1968-69 was the United Kingdom, accounting for 82.5 per cent of total exports. In 1968-69 Japan replaced the United Kingdom as the principal importing country for Australian cheese with 30.8 per cent of total shipments.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to supervision, inspection and examination by officers appointed for that purpose. These commodities are graded according to quality, which has been fixed by regulation

as follows: flavour and aroma, 50 points; texture, 30 points; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality; at 90 to 92 points, first quality; at 86 to 89 points, second quality; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, will be found in *Rural Industries*, 1967-68, Bulletin No. 6.

**BULK BUTTER AND CHEESE GRADED FOR EXPORT: AUSTRALIA, 1966-67 TO 1968-69**

Grade	Quantity ('000 lb)			Percent

### The pig industry

In line with the general trend of increased specialisation common to most of the rural industries, pig farming has developed into a separate industry being no longer mainly associated with the dairy industry.

At 31 March 1969 the number of pigs in Australia reached a record level of 2,253,000 which represented an increase of 197,000 (9.6 per cent) on the previous record at 31 March 1968 (2,056,000).

#### PIGS: NUMBERS IN STATES AND TERRITORIES, 1965 TO 1969

### The poultry industry

Once part of the mixed farming sector the poultry industry is now a highly specialised and distinct industry. The bulk of the commercial production is obtained from this source, though many farm households and some private homes in suburban areas keep poultry to supply their domestic needs and some supplies from this source are also marketed. Because the data from this latter sector is incomplete, details of poultry numbers throughout Australia are not published. There is an increasing tendency for producers in the large scale commercial sector to specialise in either egg production or the production of poultry meats. These two sectors of the industry each have separate statistics and separate research schemes. Both sectors are good examples of the general movement towards specialised, large scale capital intensive production which is common to all rural industries.

### Stabilisation scheme for the egg industry

A Commonwealth industry stabilisation scheme for the egg industry has been in operation since 1 July 1965. The principal features of the scheme are embodied in three Commonwealth Acts—*Poultry Industry Levy Act 1965–1966*, *Poultry Industry Levy Collection Act 1965–1966*, and *Poultry Industry Assistance Act 1965–1966*.

The scheme provides for the imposition of a levy on hens over six months of age kept for commercial purposes. The money obtained from the levy is used to meet trading losses on surplus eggs. Previously, returns to producers were equalised by State Egg Boards, who imposed an equalisation deduction to cover deficits which resulted from sales to overseas markets.

In determining the rate of the hen levy, the Minister for Primary Industry is required to take into consideration any recommendations by the Council of Egg Marketing Authorities of Australia (which consists of all members of the State Egg Marketing Boards) and is precluded from prescribing a rate in excess of such recommendations. The maximum rate of levy permitted under the legislation is \$1 per hen per annum. The levy is payable fortnightly by the owner of the hen. The levy operated at its maximum in 1967–68 and 1968–69. It was apportioned at a rate of 4 cents per hen per fortnight for the first 24 fortnights and 2 cents per hen per fortnight for the remaining two fortnights, in accordance with the recommendations of the Council of Egg Marketing Authorities of Australia.

Exemptions from payment are granted on the first twenty hens in each flock and also on a substantial proportion of broiler breeder hens. The eggs produced by broiler breeder hens which are not used for hatching determine the proportion of those hens on which the levy becomes payable in accordance with a formula incorporated in the legislation.

By arrangement between the Commonwealth and State Governments, the State Egg Boards collect the levy due in each State from individual producers and remit the total amount to the Commonwealth (the Department of Primary Industry collects the levy in the Australian Capital Territory). The Commonwealth Government pays into the Poultry Industry Trust Fund amounts equal to the receipts obtained from the hen levy. These amounts totalled \$10,786,000 in 1968–69 (\$10,949,000 in 1967–68). Payments from the Fund are made to the State Governments for financial assistance to the poultry industry, and are authorised by the Minister for Primary Industry, after consideration has been given to the recommendations by the Council of Egg Marketing Authorities of Australia. Payments from the Trust Fund totalled \$10,920,228 in 1968–69 (\$10,420,000 in 1967–68).

### Research

The *Poultry Industry Assistance Act 1965–1966* permits expenditure from the Poultry Industry Trust Fund to be made for research. The Commonwealth Government has agreed to match expenditure from this Fund on a \$1 for \$1 basis with a limit to its contribution of \$100,000 per annum. There is no restriction on the amount which may be expended from the Fund for research purposes.

Research projects are recommended by the Council of Egg Marketing Authorities of Australia for approval by the Minister for Primary Industry. Expenditure may be approved for scientific, technical or economic research, the publication of reports thereon, the training of persons for research, and the dissemination of information and advice on scientific, technical or economic matters.

### Chicken Meat Research

In June 1969 a research scheme for the chicken meat industry was established along the lines of the schemes existing for the meat, wheat, dairy, tobacco, wine, wool and poultry industries. The legislation provides for a levy of 10 cents per 100 meat type chickens hatched to be paid into a trust fund. Research expenditure from this fund will be matched by an equal Commonwealth contribution. It is expected that some \$160,000 will be available for research purposes in the initial years of the scheme.

### Marketing of eggs

Details of the *Egg Export Control Act 1947–1966* were given in earlier issues of the Year Book (see No. 47, page 997).

### Chicken hatching and poultry slaughterings

Statistics shown in the following section have been compiled on a Commonwealth basis since 1965–66 from returns supplied by commercial chicken hatcheries (i.e. those making sales of day-old chicks) and by commercial poultry slaughtering establishments. Poultry farmers hatching chicks solely for replenishing their own flocks, and the many very small producers, including producers in the Australian Capital Territory and the Northern Territory are excluded from the collection. However, the statistics represent a high level of coverage in respect of commercial hatcheries and slaughtering establishments.

**Poultry slaughtered for human consumption**

No allowance has been made in the following figures for interstate movement of dressed poultry or changes in stocks held, and figures therefore do not necessarily represent the level of consumption in the States concerned.

Statistics for poultry slaughtered in Queensland are based on numbers slaughtered as collected by the Queensland Department of Primary Industries. From 1968-69, New South Wales slaughtering statistics include poultry slaughtering by producers in the Australian Capital Territory.

1966-67 . . .	6,293	4,114	n.a.	1,925	1,253	273	(c)13,858
1967-68 . . .	6,093	4,251	2,862	1,904	1,143	371	16,624
1968-69 . . .	6,310	4,455	2,922	1,854	1,246	299	17,085

(a) Excludes chicks destroyed. (b) Not available for publication. (c) Incomplete; see individual States. (d) Includes (for States other than Queensland) a proportion of unsexed egg strain chicks.

**Recorded production of eggs and egg products**

Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Australian Egg Board and the Egg Marketing Board of New South Wales. Details of production as recorded by these authorities are shown in the following table.

**SHELL EGGS: PRODUCTION<sup>(a)</sup> RECORDED BY EGG BOARDS  
STATES, 1964-65 TO 1968-69  
(\*000 dozen)**

State	1964-65	1965-66	1966-67	1967-68	1968-69
New South Wales <sup>(b)</sup>	62,918	65,240	68,043	74,682	76,062
Victoria	28,016	29,925	34,100	38,231	41,147
Queensland	14,182	17,062	20,474	21,393	20,854
South Australia	9,354	11,218	13,176	15,813	15,692
Western Australia	9,620	9,295	9,810	11,583	11,491
Tasmania	n.a.	n.a.	n.a.	n.a.	n.a.
<b>Total<sup>(c)</sup></b>	<b>124,089</b>	<b>132,740</b>	<b>145,603</b>	<b>161,702</b>	<b>165,247</b>

<sup>(a)</sup> Receipts from consignors and sales by producer agents. <sup>(b)</sup> Includes Australian Capital Territory.  
<sup>(c)</sup> Excludes Tasmania.

Particulars of the production of whole egg pulp as recorded by the Egg Marketing Board for the State of New South Wales and by the Australian Egg Board for the other States are shown in the following table.

**LIQUID WHOLE EGG PULP: PRODUCTION RECORDED BY EGG BOARDS  
STATES, 1964-65 TO 1968-69  
(\*000 lb)**

State	1964-65	1965-66	1966-67	1967-68	1968-69
New South Wales	18,463	12,540	15,734	14,532	15,691
Victoria	5,512	3,286	6,029	8,841	10,093
Queensland	5,731	5,450	6,809	7,877	5,288
South Australia	2,639	4,148	4,953	7,024	5,370
Western Australia	1,450	977	1,143	1,802	1,510
Tasmania	n.a.	n.a.	n.a.	n.a.	n.a.
<b>Total<sup>(a)</sup></b>	<b>33,795</b>	<b>26,401</b>	<b>34,667</b>	<b>40,076</b>	<b>37,952</b>

<sup>(a)</sup> Excludes Tasmania.

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1968-69 amounted to 7,112,000 lb and 4,928,000 lb respectively, compared with 5,968,000 lb and 4,541,000 lb respectively, in the previous year. These figures exclude small quantities produced in Tasmania for which details are not available.

**Consumption of eggs and egg products**

Because of the operation of producers outside the control of the Egg Boards and the extent of 'back-yard' poultry-keeping, for which no statistics are collected, figures relating to total egg production must be accepted with some reserve. The production shown in the following table, together with details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control, plus estimates of production from uncontrolled areas and from 'back-yard' poultry-keepers.

**ESTIMATED PRODUCTION AND DISPOSAL OF EGGS IN SHELL  
AUSTRALIA, 1964-65 TO 1968-69**

Year	Change in stocks	Estimated total production	Exports <sup>(a)</sup>	For drying and pulping <sup>(b)</sup>	Apparent consumption in Australia	
					Total	Per head per year
	mil. doz	mil. doz	mil. doz	mil. doz	mil. doz	doz
1964-65	-0.2	225.5	4.2	31.9	189.6	16.8
1965-66	-0.3	228.1	4.7	27.2	196.5	17.1
1966-67	+0.2	237.8	5.3	31.3	201.0	17.2
1967-68	-0.3	253.3	6.5	42.3	204.7	17.2
1968-69	+0.3	257.0	6.7	41.0	208.9	17.2

<sup>(a)</sup> Includes ships' stores. <sup>(b)</sup> Includes wastage.

Details of the annual consumption of shell eggs, liquid whole egg and total shell egg equivalent per head of population are shown in the following table.

**SUPPLIES OF EGGS AND EGG PRODUCTS AVAILABLE  
FOR CONSUMPTION: AUSTRALIA, 1964-65 TO 1968-69**  
(Per head per year)

Year	Eggs in shell	Liquid whole egg and egg powder(a)	Total	
			Number	Weight(b)
	number	number		lb
1964-65 . . . . .	202	15	217	27.1
1965-66 . . . . .	205	15	220	27.5
1966-67 . . . . .	206	13	220	27.5
1967-68 . . . . .	206	17	223	27.9
1968-69 . . . . .	206	18	224	28.0

(a) In terms of number of eggs in shell.

(b) The average weight of an egg in Australia is taken as 2 oz.

**Overseas trade in poultry products**

Australian exports of shell eggs in 1968-69 amounted to 6,043,000 dozen compared with 5,813,000 dozen in 1967-68. The main outlets for Australian eggs in 1968-69 were the United Kingdom (1,964,000 dozen), Trucial States (874,000 dozen), Hong Kong (765,000 dozen), and Bahrain (462,000 dozen).

**EXPORTS OF POULTRY PRODUCTS: AUSTRALIA  
1966-67 TO 1968-69**

		Quantity			Value (\$'000 f.o.b.)		
		1966-67	1967-68	1968-69	1966-67	1967-68	1968-69
Eggs in shell . . . . .	'000 doz	4,451	5,813	6,043	1,161	1,417	1,356
Eggs not in shell—							
In liquid form . . . . .	'000 lb	18,226	25,707	28,505	3,224	4,115	4,214
Dry . . . . .	'000 lb	100	144	99	77	81	31
Frozen poultry . . . . .	'000 lb	1,410	2,102	2,699	503	694	858
Poultry, live(a) . . . . .	number	276,259	167,060	86,574	69	42	24

(a) Includes day-old chicks.

Imports of canned poultry in 1968-69 amounted to 210,000 lb, valued at \$70,000, compared with 247,000 lb, valued at \$81,000, in 1967-68.

**The bee-farming industry**

**Production of honey and bees-wax**

Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming. A feature of the industry is that it consists mainly of itinerant apiarists operating on a large scale with mobile equipment. Some of these apiarists move as far afield as from Victoria to Queensland in an endeavour to provide a continuous supply of nectar from flora suitable for their bees. Production of honey in 1968-69 amounted to 29,081,000 lb (96.6 lb per productive hive) compared with 43,958,000 lb (122.0 lb per productive hive) in 1967-68. Bees-wax produced in 1968-69 was 425,000 lb compared with 609,000 lb in the previous year.

In the following tables, statistics for 1968-69 for each State are confined to apiarists with five or more hives, except in New South Wales where, since 1966-67, details relate to beekeepers with six or more hives. Prior to 1966-67, statistics for States other than Queensland related to beekeepers with five or more hives. In Queensland, details were confined to beekeepers on rural holdings with five or more hives and to beekeepers not on rural holdings with ten or more hives.

## BEEHIVES, HONEY AND BEES-WAX: STATES AND A.C.T., 1968-69

State or Territory	Beehives(a)			Honey produced		Bees-wax produced	
	Pro- ductive	Unpro- ductive	Total	Quantity	Gross value	Quantity	Gross value
	'000	'000	'000	'000 lb	\$'000	'000 lb	\$'000
New South Wales . . . . .	113	60	173	10,654	932	145	90
Victoria . . . . .	57	43	100	3,638	520	50	37
Queensland . . . . .	32	27	58	1,718	173	32	20

1968-69 . . . . .	145	50	32	92	94	11	1	425

**Honey levy**

A levy is imposed on domestic sales of honey for the purpose of financing the operations of the Australian Honey Board. The current rate of levy, which became effective on 14 February 1966, is four-tenths of a cent per lb, but under the provisions of the *Honey Levy Act 1962-65*, it can be increased by regulation to a maximum of one cent per lb. The proceeds of this levy may be expended on the regulation of Australian exports of honey and on associated promotional and research activities. In 1966-67, 1967-68 and 1968-69 collections amounted to \$92,000, \$96,000 and \$106,000 respectively.

**Overseas trade in bee products**

The principal importer of Australian honey in 1968-69 was the United Kingdom, accounting for 50.4 per cent, by value, of total exports.

Bees-wax was exported mainly to the United Kingdom and the Federal Republic of Germany in 1968-69.

## EXPORTS OF HONEY AND BEES-WAX: AUSTRALIA, 1966-67 TO 1968-69

	Quantity ('000 lb)			Value (\$'000 f.o.b.)		
	1966-67	1967-68	1968-69	1966-67	1967-68	1968-69

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power kerosene, petrol and other oils.

**Indexes of quantum and price of dairy, poultry and bee production**

For details of these indexes *see* the chapter Miscellaneous.

## CHAPTER 24

### WATER CONSERVATION AND IRRIGATION

#### RESOURCES, UTILISATION AND NATIONAL AND INTERSTATE ASPECTS

Official Year Book No. 51, pages 228–31, contains a description of recent developments in the measurement of Australia's water resources. For information concerning general, descriptive and historical matter *see also* Year Book No. 37, pages 1096–1141.

An article on droughts in Australia appeared in Year Book No. 54, pages 991–6.

For further details on geographical and climatic features determining the Australian water pattern, *see* the chapter Physical Geography and Climate; on water supply and sewerage in metropolitan areas, cities and towns, the chapter Local Government; and on the generation of hydro-electric power, the chapter Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259–65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

#### Water resources and their utilisation

##### Surface supplies

An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 2,950; Mississippi, 465; Mekong, 405; Niger, 308; Volga, 205; and the ten major rivers of the United States of America in the aggregate, 900.

##### Major dams and reservoirs

The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June 1969. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia. As a general rule, the figures shown for the height of wall (feet) refer to the vertical distance measured from the lowest point of the general foundations to the 'crest' of the dam, i.e. the level of the roadway or walkway on the dam.

#### MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>EXISTING DAMS AND RESERVOIRS</b>				
Eucumbene	Eucumbene River, New South Wales	3,890,000	381	Part of Snowy Mountains Hydro-electric Scheme
Eildon	Upper Goulburn River, Vic- toria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume	Murray River, near Albury, New South Wales	2,480,000	167	Part of Murray River Scheme—storage for domestic, stock and irrigation purposes. Hydro-electric power also developed
Miena	Great Lake, Tasmania	1,710,000	60	Storage for Poatina hydro-electric power station
Warragamba	Warragamba River, New South Wales	1,670,000	450	For Sydney water supply. Also provides for generation of hydro-electricity
Menindee Lakes Storage	Darling River, near Menindee, New South Wales	1,468,700	60	Part of Darling River Water Con- servation Scheme

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>EXISTING DAMS AND RESERVOIRS—<i>continued</i></b>				
Burrundong	Macquarie River, near Wellington, New South Wales	1,361,000	250	Storage for rural water supplies
Blowering	Tumut River, New South Wales	1,322,400	368	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for hydro-electric power generation
Burrinjuck	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Jindabyne	Snowy River, New South Wales	558,000	235	Part of Snowy Mountains Hydro-electric Scheme
Lake Victoria	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Wyangala	Lachlan River, New South Wales	(a)543,800	(b)220	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. (See also under Dams and Reservoirs under Construction)
Lake Echo	Lake Echo, Tasmania	442,000	60	Storage for Lake Echo, Tungatinah, Liapootah, Wayatinah and Catagunya hydro-electric power stations
Clark	Derwent River, Tasmania	434,000	220	Storage for Tarraleah, Liapootah, Wayatinah, and Catagunya hydro-electric power stations
Arthur Lakes	Source of Lake River, near Great Lake, Tasmania	410,000	50	Part of Great Lake hydro-electric power development
Keepit	Namoi River, near Gunnedah New South Wales	345,300	177	For rural water supplies and hydro-electricity generation
Waranga	Goulburn River, Victoria	333,400	45	For irrigation storage
Tinaroo Falls	Barron River, North Queensland	330,000	155	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn	Hunter River, near Scone, New South Wales	293,300	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands	Glenelg River, Victoria	272,000	93	Part of Wimmera-Mallee domestic and stock water supply system
Eppalock	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Tantangara	Murrumbidgee River, New South Wales	206,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon	Avon River, New South Wales	(a)163,390	232	Part of Sydney water supply
Upper Yarra	Yarra River, Victoria	162,000	293	For Melbourne water supply
Wuruma	Nogoa River, Central Queensland	157,000	151	For irrigation along Burnett River
Glenmaggie	Gippsland, Victoria	154,300	121	Storage for irrigation
Lake St Clair	Central Highlands, Tasmania	154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington	Collie River, Western Australia	150,100	121	For supply of water to irrigation districts and to agricultural areas and country towns
Grahamstown	Grahamstown River, near Newcastle, New South Wales	147,000	35	To supplement supply to Newcastle and district
Koombooloomba	Tully River, North Queensland	146,000	170	For hydro-electric and irrigation purposes
Serpentine	Serpentine River, Western Australia	144,000	181	For Perth water supply
Lake Brewster	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran	Loddon River, Victoria	120,600	144	For irrigation storage
Rowallan	Mersey River, North Tasmania	110,000	140	Storage for Mersey Forth power development
Eungella	Broken River, North Queensland	106,000	160	Provision of cooling water for Collinsville power station, supply to Collinsville town and for irrigation purposes

**DAMS AND RESERVOIRS UNDER CONSTRUCTION**

Lake Gordon	Gordon River, South-west Tasmania	9,440,000	450	Storage for Gordon River power development
Ord River (main)	Near Wyndham, Western Australia	4,600,000	300	For irrigation, generation of hydro-electric power and flood mitigation (additional 6,000,000 acre feet flood control proposed)
Lake Pedder	Serpentine River, Huon River, Lake Edgar, South-west Tasmania	2,400,000	{ 135 160 50}	Storage for Gordon River power development

For footnotes see end of table.

## MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—continued

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
DAMS AND RESERVOIRS UNDER CONSTRUCTION—continued				
Fairbairn Dam . . .	Nogoa River, Central Queens- land	(c)1,170,000	160	Storage for the Emerald Irrigation Area
Copeton . . . . .	Gwydir River, New South Wales	1,105,000	370	For irrigation storage
Wyangala . . . . .	Lachlan River, New South Wales	987,100	280	Strengthening and enlarging of existing dam for increased water supply and hydro-electric power generation. (See also under Existing Dams and Reservoirs)
Talbingo . . . . .	Tumut River, New South Wales	747,000	530	Part of Snowy Mountains Hydro- electric Scheme
Mokoan . . . . .	Winton Swamp, near Benalla, Victoria	300,000	35	For irrigation storage
Cardinia Creek . . .	Near Emerald, Victoria	220,000	260	For off river storage for Melbourne water supply

## DAMS AND RESERVOIRS PROJECTED

Chowilla(d) . . . . .	Murray River, in South Aus- tralia, near Victorian border	(d)5,000,000	86	Regulation of the lower Murray River
Dartmouth(d) . . . .	Mitta-Mitta River in North- Eastern Victoria	3,000,000	590	Additional regulation of Upper Murray flow to secure River Murray irrigation development
Buffalo (second stage) .	Buffalo River, near Myrtle- ford, Victoria	800,000	260	For irrigation storage
Monduran . . . . .	Kolan River, near Gin Gin, Queensland	475,000	171	For irrigation storage
Warkworth . . . . .	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for Hunter Valley
Ross River . . . . .	Near Townsville, Queensland	338,000	115	Flood mitigation and water supply to Townsville (First and Second Stages)
Pike Creek . . . . .	Near Stanthorpe, Queensland	200,000	150	For irrigation, part of Dumaresq- Barwon Border Rivers Scheme
North Pine . . . . .	North Pine River, near Petrie, Queensland	164,000	142	To supplement supply to northern Brisbane area
Tallowa . . . . .	Shoalhaven River and Kang- aroo River Junction, New South Wales	120,000	135	Water supply and pumped storage power development

(a) Present (temporary) storage capacity.

(b) Maximum height of water at wall.

(c) Subject to final survey.

(d) See page 854.

## Irrigation

For some brief remarks on the history of irrigation in Australia see issues of the Year Book prior to No. 39. Trends in irrigation practice were described in Year Book No. 37, page 1099

## AREA OF LAND IRRIGATED, STATES AND TERRITORIES, 1964-65 TO 1968-69

### **Irrigation research**

Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilisation of irrigated pastures by stock; and growth problems affecting plants and trees.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Division of Irrigation Research at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, rice, lucerne and vegetables. Special attention is also given to the manner in which plants utilise carbon dioxide from the air with water and nutrients from the soil. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Adelaide (South Australia) and Merbein (Victoria) the Division of Horticultural Research is working on problems of the dried-fruit industry and on wine grapes and pome-fruit. The Division of Land Research conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed, and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connection with the utilisation of underground water for irrigation. The Division of Soils and the Division of Soil Mechanics are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation areas and associated districts, and the Coleambally Irrigation Area. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales, the Water Conservation Service of New South Wales, the Rice Marketing Board of New South Wales, the Wine Grape Marketing Board of New South Wales, co-operative and secondary industries, and farmers' organisations. Finance is provided by these authorities on an agreed basis. The objectives are: to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organisation; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

Two other organisations with similar objectives are the Victorian Irrigation Research and Promotion Organisation which operates from Shepparton, and the Murray Research and Extension Committee centred at Deniliquin.

### **Preservation of catchments**

Since water conservation commences on the catchments it is becoming increasingly recognised that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimise the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use, factors regarded as parts of a single problem.

### **Sub-surface supplies**

Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes and domestic use. These supplies are indispensable in the dry areas which comprise most of the inland and extensive coastal areas as well. The quality of water ranges from usable to very saline.

Considerable use is also made of sub-surface water, other than pressure water, from localised groundwater basins, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies and irrigation, but its use for these purposes is increasing.

*Artesian and sub-artesian supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. The table below shows the principal defined water-bearing basins in Australia.

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life; in certain areas sub-artesian waters are suitable for all uses. Some of these areas are in the Canning, Murray, Georgina and Barkly, Perth, Ord-Victoria, Pirie-Torrens and Adelaide Basins. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognised early that flows were diminishing as more bores were drilled, but it is now considered that while many of these bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average recharge from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasised the need to eliminate wastage as much as possible. Licences now issued for the construction of new artesian bores prohibit the distribution of water through drains, channels, etc., and the supplies must be confined to the borehead or piped to appropriate watering points.

#### PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

Name	State	Geological age of chief aquifers	Approximate area	Depth to pressure water
			square miles	feet
Great Artesian	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic	676,250	Up to 7,000
Canning	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Murray	Victoria, New South Wales and South Australia	Miocene-Eocene	109,000	100 to 1,300
Georgina (including Barkly and Daly)	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian, and Upper Proterozoic	108,000	150 to 1,000
Eucla	Western Australia, South Australia	Pliocene-Miocene	74,000	300 to 2,000
Carnarvon	Western Australia	Cretaceous, Permian	45,000	200 to 4,000
Perth	Western Australia	Recent, Jurassic	21,000	200 to 2,500
Western District (Otway)	Victoria	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian, and Permian	12,000	200 to 1,000
Pirie-Torrens	South Australia	Recent, Pleistocene	9,000	Up to 600
East Gippsland	Victoria	Pleistocene-Eocene	3,500	200 to 3,500
Adelaide	South Australia	Recent, Oligocene	1,100	200 to 600

*Shallow groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock, and domestic purposes. Two examples of the use of these shallow supplies

for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps up to 15 million gallons a day (average use over 30 years is 9.2 million gallons per day) for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 50,000 acre feet per annum (about 37 million gallons a day).

Schemes for artificial recharge of underground supplies have been implemented on both sides of the Burdekin River delta. Diversions from unregulated river flows of 61,000 acre feet per annum to the north side and of 40,200 acre feet per annum (when available) to the south side have been authorised.

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

### National and interstate aspects

In terms of the Commonwealth Constitution primary responsibility for control and conservation of water rests with the individual State Governments. The Commonwealth Government is responsible for matters relating to water in its Territories. However, because political boundaries sometimes intersect river valleys and underground water basins, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

#### Australian Water Resources Council

The Australian Water Resources Council was established by joint action of the Commonwealth and State Governments in 1962. The council comprises Commonwealth and State Ministers primarily responsible for water resources, with the Commonwealth Minister for National Development as Chairman, and is serviced by a Standing Committee consisting mainly of the heads of Departments responsible to these Ministers, and by a number of technical committees.

The primary objective of the Council is the provision of a comprehensive assessment on a continuing basis of Australia's water resources, and the extension of measurement and research to provide a sound basis for the planning of future development.

In terms of its main objective, the Council in 1964 recommended, and the Commonwealth and State Governments agreed, that there should be an accelerated programme of establishment of stream gauging stations and investigation of underground water. The Commonwealth Government agreed to contribute a total of up to \$2,750,000 for the first three years of what was envisaged as a ten-year programme. The Commonwealth contribution for the current three-year period, which began in 1967-68, will be up to \$4,500,000. In the first three years the States spent about \$8,000,000 from their own financial resources, and expenditure in excess of this amount is expected in the current three years.

The Council has also given attention to the collation of available data on Australia's water resources, and in 1965 a *Review of Australia's Water Resources (Stream Flow and Underground Resources)* 1963 was published. This document was the first official assessment of surface and underground water resources. A *Review of Australia's Water Resources (Monthly Rainfall and Evaporation)* by the Bureau of Meteorology was issued in 1969. Four groundwater maps with an explanatory booklet are to be published in 1971. In 1967 a catalogue *Stream Gauging Information, Australia, June 1965* was published on behalf of the Council by the Department of National Development. The 1966, 1967 and 1968 annual supplements to this catalogue have been issued. Water authorities have also agreed to publish stream flow records at five-yearly intervals. The Council continues to support Australian participation in the programme of the International Hydrological Decade (1965-1974). An important contribution will follow from the decision of the Council to select one hundred representative basins throughout Australia for detailed hydrological studies.

Studies of the requirements and facilities for education in the water resources field have been undertaken by the Council. Research studies in progress on a number of topics are being published. A new Australian Water Resources Council Hydrological Series includes *A Survey of Water Desalination Methods and their Relevance to Australia, The Representative Basin Concept in Australia and Sediment Sampling in Australia*.

The Commonwealth Government is providing \$400,000 in the three years ending 30 June 1971 for a new programme of water research which complements research already undertaken by Commonwealth agencies, universities and other organisations. The Water Resources Council has approved eighteen water research projects in this programme which covers topics of special concern to authorities involved in the investigation and development of water resources.

#### **National Water Resources Development Programme**

In developing water resources, the Commonwealth Government's role in the past, while important, had been confined to assisting special projects or areas, e.g. the Snowy Mountains Scheme, participation in the River Murray Commission, and financial support for individual State projects such as the Ord River project. However, the National Water Resources Development Programme, announced in November 1966, represents a very important move towards closer collaboration between State and Commonwealth Governments, and a more continuing and detailed involvement by the Commonwealth in the development of Australia's water resources.

Under the National Water Resources Development Programme the Commonwealth has undertaken to provide grants to the States amounting to a total of about \$50,000,000 over five years for water conservation works aimed at reducing the hazards of droughts and expanding primary production. The grants under this programme apply to the Emerald dam and irrigation project in Central Queensland (\$20,000,000); two Victorian schemes to reduce salinity levels in the Murray River (\$3,600,000); Tailem Bend-Keith pipeline, South Australia (\$6,000,000); Copeton dam on the Gwydir River, New South Wales (\$20,000,000); King River dam, Victoria (\$4,000,000); and the Cressy-Longford irrigation scheme, Tasmania (\$750,000). In October 1969 the Commonwealth undertook to provide a further sum of \$100,000,000 under this programme.

Proposals submitted by the States are examined by the Commonwealth to determine which are suitable, from a national point of view, for inclusion in the Programme, and accordingly grants are announced from time to time.

#### **Murray River scheme**

The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 408,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and approximately one-fourteenth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows: Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,820,000 acre feet; Darling River, 2,820,000 acre feet; Goulburn River (including Broken River), 2,580,000 acre feet; Murrumbidgee River, 2,050,000 acre feet; and Ovens River, 1,266,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

*River Murray Waters Agreement.* For a brief summary of historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia see issues of the Year Book prior to No. 39. Under the Agreement construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see Snowy Mountains Hydro-electric Scheme, page 855) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to approximately 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray

River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7 April 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6 November 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30 April 1964. However, in view of the greatly increased cost by the time the project came to tender in 1967 and other significant factors (including water quality in the Lower Murray) which had arisen in the interim, the River Murray Commission resolved that, pending further investigations, construction of Chowilla Dam should be deferred. Further investigations then followed, including a re-assessment of the likely yield from both Chowilla and alternative storages on the Upper Murray and Mitta-Mitta Rivers.

Following careful consideration of this re-assessment, the River Murray Commission in February 1969 agreed that a 3,000,000 acre feet storage at Dartmouth on the Mitta-Mitta River provided the greatest overall benefits in terms of cost and yield and should be the next development of the resources of the River Murray. The question of sharing the benefits could not be resolved by the Commission and was therefore referred to the respective Governments. Subsequently, Ministers representing the four Governments concerned met in March 1969 and agreed on conditions for the construction of the Dartmouth Project and for the sharing of the increased system yield between Victoria, New South Wales and South Australia. Among other things, the meeting of Ministers agreed to continue the Menindee Lakes Agreement (due to expire on 31 December 1969) in perpetuity.

The Commonwealth Government has offered to assist the three States with financing the project by way of a loan to the extent of 50 per cent of each State's contribution. At the same time the Commonwealth itself will make its own quarter contribution of the cost of the project.

Before work can proceed with detailed design and construction, it is necessary that each of the four Parliaments ratify appropriate amendments to the River Murray Waters Agreement.

Above average inflows during the winter and spring months of 1968 enabled the Hume and Lake Victoria storages, which had been virtually empty at the end of the 1967-68 irrigation season, to completely recover. Restrictions to supply were therefore unnecessary during the 1968-69 irrigation season during which 4,094,000 acre feet was diverted by New South Wales from the Murray and its tributaries, 3,202,000 acre feet by Victoria, and 337,000 acre feet by South Australia.

*River Murray Works.* One of the major works of the Murray River scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, ten miles above Albury, forming a lake of 50,000 acres. Work on the enlargement of the reservoir to its approved capacity of 2,480,000 acre feet was completed in 1961.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, supplied from the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, serving 1,800,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, serving 300,000 acres. Not all of this area is irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling),

Burrinjuck (Murrumbidgee), Keepit (Namoi), Burrendong (Macquarie) and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Eppalock (Campaspe) and Cairn Curran (Loddon). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems.

#### **New South Wales-Queensland Border Rivers Agreement**

The catchments for the border streams of New South Wales and Queensland (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilise and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

The New South Wales-Queensland Border Rivers Agreement came into effect on 1 July 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, MacIntyre, and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Water Conservation and Irrigation Commission of New South Wales (the constructing authority) to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the MacIntyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi (the Irrigation and Water Supply Commission of Queensland is the constructing authority for new weirs and regulators). The cost of these works and of administration are to be borne by the States in equal shares. The Agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

After unfavourable foundation conditions were disclosed at several dam sites on the Dumaresq River, investigations were extended to tributary streams, and superficially suitable sites located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates were prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. Consequent upon these investigations an Amending Agreement was executed between the States of New South Wales and Queensland which included, *inter alia* provision for the construction of storages on Pike Creek (Queensland) and the Mole River (New South Wales). The new agreement also provided for investigation and construction of works for the improvement of flow and of the distribution of flow in streams which intersect the New South Wales-Queensland border west of Mungindi.

Works completed under the original agreement include Bonshaw and Cunningham Weirs on the Dumaresq River, a weir and regulator on the Barwon River at the off-take of the Boomi River, and a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed it is unlikely that any other weirs will be required.

#### **Snowy Mountains Hydro-electric Scheme\***

Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the Committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act* 1949 setting up an Authority to implement the proposals agreed upon.

The basis of the proposals was to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

\* See also the chapter Electric Power Generation and Distribution. For more detailed information see special article by the then Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. Miscellaneous of Year Book No. 42.

The scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in Chapter 28, Electric Power Generation and Distribution.

When all works are completed, it is estimated that the total gain by diversion and regulation will amount to 1,120,000 acre feet per annum to the Murrumbidgee and 800,000 acre feet per annum to the Murray. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land, which is expected to result in a substantial increase in primary production.

### International aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-nine countries, including Australia, have so far been admitted to membership.

The Central Office of the International Commission on Irrigation and Drainage is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain, Japan, in that order and again in India in 1966. The seventh Congress was held in Mexico in April 1969.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, 'that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms, and individuals actively interested in irrigation and drainage'. The Committee meets annually.

### STATES AND TERRITORIES

The foregoing text deals with water conservation and irrigation in Australia generally and with international, national and interstate aspects. The following survey covers the local pattern of water resources and the steps taken by the State Governments to bring about their development. In the various States water policies tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation, in New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilise sugar production. Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

### New South Wales

On page 1110 of Year Book No. 37 information is given on the pattern of rainfall and the history of irrigation in New South Wales. (*See also* the chapter Physical Geography and Climate of this issue.)

#### Administration

The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation,

control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912-1955 the right to the use and flow, and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 855 of this chapter.

#### Schemes summarised

The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, by Burrendong Dam on the Macquarie River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places. A head storage on the Tumut River near Tumut is nearing completion and preliminary establishment work at Copeton Dam site on the Gwydir River commenced on 14 February 1968. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are: The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembed Weir; the Coomealla Irrigation Area of 34,626 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,388 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,739 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (203,379 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in the table on page 858.

The capacities of the main storages for irrigation in New South Wales (in acre feet) are:

*Darling*—Menindee Lakes Storages (1,468,700);

*Murray*—Half share of Hume Reservoir, weirs and locks to Wentworth (1,351,570); Stevens Weir, Edward River (7,165);

*Macquarie*—Burrendong Dam (964,200 irrigation storage; 396,800 flood mitigation storage);

*Murrumbidgee*—Burrinjuck Dam (837,000); Berembed Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

*Namoi*—Keepit Dam (345,300);

*Lachlan*—Wyangala Dam (temporary capacity 543,800); Lake Brewster (123,900); Lake Cargelligo (29,430); Jemalong Weir (2,200);

*Hunter*—Glenbawn Dam (185,300 acre feet irrigation storage; 108,000 acre feet flood mitigation storage); and

*Snowy Mountains Hydro-electric Scheme*—Lake Eucumbene (3,890,000); Blowering Dam (1,322,400); Jindabyne Reservoir (558,000); Tantangara Dam (206,000).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 5,169 miles. This comprises 3,503 miles of supply channels (including main canals), 1,597 miles of drains and escape channels, and 69 miles of pipe lines.

## Extent of systems and nature of irrigated culture

The following table shows the areas of the various irrigation systems and the areas irrigated in 1968-69 and corresponding particulars for the State as a whole during the seasons 1964-65 to 1968-69.

**AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES  
1964-65 TO 1968-69**

(Source: Water Conservation and Irrigation Commission)

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous; in 1968-69 deciduous amounted to 12,333 acres, of which 9,612 acres were in the Murrumbidgee Irrigation Areas. (c) Includes total area irrigated by licensed diversions, but details for individuals crops, etc., are not available.

### Irrigation areas

*Murrumbidgee.* These areas, together with adjacent lands supplied under agreement, received 350,792 acre feet, slightly under a fifth of the total water (1,934,577 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, forty miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerambah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September–May irrigation season. It passes along the river channel to Berembend Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30 June 1969 was 409,112 acres, including 31,669 acres held for short lease grazing, agriculture, etc.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30 June 1969 its population was approximately 31,000, that of Leeton Shire being 11,350 and that of Wade Shire, 18,890. The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans, and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season the water supplied for rice represents about half the total delivered to the Areas.

*Other Irrigation Areas.* The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa, and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

### Irrigation Districts

These districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilise the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on 'extensive' irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. 'Water right' means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. The total length of completed canals and channels in Berriquin District is 1,004 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 792 miles, escape channels 105 miles, and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day. Wakool, with 427 miles of channels, contains 324 holdings, and the area developed by irrigation includes about one acre in six of the total area. Sheep raising and rice growing are the main industries. Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying, wheat, and rice growing are the main industries.

### Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts

The Water Act, 1912-1966 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilise necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis): *Murray River*—Little Merran Creek (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torriganny, Muggabah and Merrimajcel Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condobolin West Weir (4,480); *Miscellaneous*—Great Anabranch of Darling River (959,184), Nidgerly Weir (46,880) and Algdudgerie Creek (9,760)—making in all a total area of 2,829,674 acres. Twelve of these trusts have been formed for the provision of water for domestic and stock purposes and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. There are seven of these trusts.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Morce in the north-west, is also in operation.

### River, lake and farm water supplies

During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognised as a means of stabilising production in dry months. There has also been a considerable increase along the Murrumbidgee, Lachlan, Namoi, and Macquarie Rivers.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, and flood and spray irrigation systems.

### Underground water

For information on underground water resources in New South Wales see Year Book No. 55 and earlier issues.

### Future programme

The programme of development in hand includes the provision of additional dams and storages, weirs, and flood mitigation and river protection works in various parts of the State. Work is continuing at Copeton Dam site on the Gwydir River. Legislation has been passed authorising the construction of Carcoar Dam (Belubula River), Lostock Dam (Paterson River), and Toonumbar Dam (Iron Pot Creek—a tributary of the Richmond River) as single purpose water conservation projects and existing legislation authorises the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyangala Dam, on the Lachlan River, the strengthening and enlargement of the original dam is nearing completion. Storage capacity will be increased to approximately 1,000,000 acre feet by 1971 following the installation of radial gates in the new spillway. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At 30 June 1969, 233 large area farms and 22 horticultural farms had been allotted whilst another 31 mixed farms were in process of allocation.

## Victoria

Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

Victorian Governments have been active in the development of country water supplies since the 1860's when major works to supply the Bendigo goldfields were undertaken. Local trusts to construct and operate waterworks under Government supervision were provided for in the *Water Conservation Act* 1881. Development under the trust system was greatly stimulated by the *Irrigation Act* 1886, which provided for the construction of national headworks by the State, and vested in the Crown the right to the use and control of all surface waters. By 1900 there were 33 irrigation trusts and 18 other rural water supply trusts, but the system of local control was then breaking down under financial difficulties.

The *Water Act* 1905 established the State Rivers and Water Supply Commission to take over the Irrigation Trust districts (except the still-existing First Mildura Irrigation Trust) and to exercise the State's functions in the further control and development of surface waters outside the metropolis. The Commission now supervises all private diversions from streams and directly administers irrigation districts covering 2,263,544 acres, rural waterworks and urban districts covering 12,089,500 acres, flood protection districts covering 149,000 acres, and urban water supplies serving 235,380 people. It also supervises the activities of local urban water supply authorities supplying 671,130 people in 256 towns, as well as 97 local sewerage authorities and 29 river improvement and drainage authorities.

### Works summarised

Since the State Rivers and Water Supply Commission began its operations in 1906 the capacity of storages under its control has been increased from 172,000 acre feet to 4,695,720 acre feet. In addition, Victoria has in effect a half share in River Murray Commission storages totalling 2,703,150 acre feet, bringing total capacity available to Victoria at 30 June 1969, to 6,047,290 acre feet. Most of the water used from these storages is for irrigation. The area irrigated in 1968-69 totalled 1,359,987 acres (compared with 105,000 acres in 1906). Irrigation deliveries in 1968-69 totalled 1,792,360 acre feet. The value of irrigation production in 1967-68 was estimated at \$177,000,000. Of the total irrigation production about one-quarter was from lands irrigated by 'private diverters', i.e. irrigators who are authorised to take water from streams, lakes, etc., but who do not come within the boundaries of an irrigation district.

### Storages

Capacities of principal storages (in acre feet) and system totals at 30 June 1969 were as follows:

*Goulburn System*—Eildon, 2,750,000; Waranga, 333,400; total, 3,130,650;

*Murray System*—half share of Murray storages, 1,351,570; total, 1,392,430;

*Ovens System*—Lake Buffalo, 19,500; total, 19,500;

*Loddon System*—Cairn Curran, 120,600; Tullaroop, 60,000; Kerang Lakes, 57,700; total, 276,250;

*Campaspe-Coliban System*—Eppalock, 252,860; Coliban storages, 64,930; total, 317,790;

*Wimmera-Mallee Systems*—Rocklands, 272,000; Toolondo, 86,000; Bellfield, 63,680; total, 627,890;

*Maffra-Sale System*—Glenmaggie, 154,300; total, 154,340;

*Werribee-Bacchus Marsh*—total, 49,900;

*Mornington Peninsula*—total, 38,340.

## Nature of irrigated culture

The following table shows the areas irrigated in the various irrigation systems in 1968-69, and corresponding particulars for the State as a whole during the seasons 1964-65 to 1968-69.

## AREA OF LAND IRRIGATED: VICTORIA, 1964-65 TO 1968-69

## Irrigation systems

**Goulburn-Campaspe-Loddon.** The principal storage for Goulburn waters is Lake Eildon, which was completed in 1956, submerging the original 306,000 acre feet Eildon storage completed in 1927. For the distribution of additional supplies available from Eildon and from other new storages on the Loddon and Campaspe rivers it has been necessary to undertake major enlargements in the distribution system by a long-term programme of channel works which is still in progress. Deliveries during 1968-69 amounted to 731,152 acre feet, compared with 395,000 acre feet in 1954-55. Goulburn River water is diverted to the irrigation areas by gravitation from the pool formed by the Goulburn Weir, near Nagambie, completed in 1890 as a State work. The East Goulburn main channel of 1,000 cusecs capacity supplies the areas around Shepparton. Two 1,500 cusec channels to the west convey water to the off-river Waranga Reservoir and supply part of the Rodney area through off-takes on the way. From Waranga Reservoir there are two main outlets, one supplying the western part of the Rodney area and the other, of 1,200 cusecs capacity, supplying the Waranga Western Main Channel, which runs 230 channel miles west across the Campaspe and Loddon Valleys to beyond Birchip.

Flows in the Waranga Western Main Channel are augmented by the injection of Campaspe water through a pumping station of 200 cusecs capacity near Rochester. Supply to the Tragowel and Boort areas is augmented by gravitational diversion of Loddon water.

The gross area of holdings in the Goulburn-Campaspe-Loddon systems is 1,352,081 acres. The main products are dairy produce, fruit, wool, and fat lambs. Annual production of deciduous canning fruits in the eastern part of the system is about two-thirds of Australia's total.

**Murray River system.** Water is diverted from the Murray by gravity at the Yarrawonga Weir for the Murray Valley Irrigation Area and at the Torrumbarry Weir for the Torrumbarry irrigation system which extends to Swan Hill. Holdings in the Murray Valley area total 301,888 acres, devoted mainly to dairying, fat lambs and canning fruit. Holdings in the Torrumbarry system total 382,162 acres, devoted mainly to dairying and the production of fat lambs, with a concentration of vineyards, orchards and market gardens around Swan Hill.

Downstream from Swan Hill there are 5 districts supplied by pumping: the district of the First Mildura Irrigation Trust and the 4 Commission districts of Nyah, Robinvale, Red Cliffs, and Merbein. These districts together serve 80,583 acres, producing mainly dried vine fruits, with some citrus fruits and table and wine grapes.

*Southern systems.* The Macalister district, covering 130,501 acres around Maffra and Sale, is supplied from the Macalister River, regulated by Lake Glenmaggie, and from the unregulated flow of the Thomson River. Dairy farming is the principal activity. The Bacchus Marsh and Werribee Districts, supplied from storages in the Werribee River only 20 miles west of Melbourne, cover 16,339 acres intensively developed for dairying and vegetables.

#### **Wimmera-Mallee domestic and stock supply system**

Storages in the Grampians in south-west Victoria ensure farm water supplies over an area of 11,000 square miles extending northward through riverless pastoral and cereal lands to the Murray. Farm dams throughout this region, which covers one-eighth of the total area of the State, are filled once each year, in the winter-spring season, through the medium of 6,600 miles of Commission channels and about 4,000 miles of private channels. Without this supply, occupation of the region would be extremely hazardous. Storage capacity has now been increased from 564,210 acre feet to 627,890 acre feet by construction of Lake Bellfield. Fifty towns, with a population of 46,000, receive their supply from the same system. Near Horsham and Murtoa, close to headworks in the south, a supply is maintained for the irrigation of an area of 7,500 acres, mainly for dairying.

#### **Drainage, flood protection and river improvement**

The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 89,245 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million dollars each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and since 1950, 29 such trusts have been formed (including the Dandenong Valley Authority). The importance of river improvement work is expected to continue to grow.

The Dandenong Valley Authority was created in 1963 by special legislation, with jurisdiction over the whole catchment of the Dandenong Creek (300 square miles) for purposes of arterial drainage, river improvement and flood protection. In June 1966 the Authority took over the Commission's Carrum Drainage District.

#### **Finance**

The net capital liability of the Commission at 30 June 1969 for works under its direct control was \$304 million. Of this amount, \$190 million was expended for irrigation and \$29 million for rural, domestic and stock supplies, the cost of capital and interest repayments being borne almost entirely by the State. The total liability for urban supplies was \$57 million, of which \$30 million was borne by the districts concerned. The remaining \$28 million was for expenditure on storages for private diversion and to supplement supplies to local authorities (\$10 million), flood protection (\$2 million), and items such as loan flotation expenses, miscellaneous surveys and investigations, and buildings, plant and stores.

#### **Underground resources**

For further information on underground water resources in Victoria see Year Book No. 55 and earlier issues.

#### **Future programme**

In July 1963 the Government announced plans for a long-term storage programme for irrigation purposes to cost a total of \$75 million between 1963-64 and 1973-74. This included the projected Chowilla Reservoir referred to on page 854. Another of the storages is Lake Buffalo (second stage) which appears in the list of dams and reservoirs projected in the table on page 849.

Since the long-term storage programme came into operation, new storages have been completed for the Wimmera-Mallee System (Lake Bellfield, near Horsham); the Mornington Peninsula System (Devilbend Reservoir and Tarago Reservoir); the Goulburn-Murray System (Corop Lakes) and private diverters near Benalla (Lake Nillahcootie); and along the Buffalo River (Lake Buffalo, first stage).

At present work is proceeding on new storages to supplement supply to the Bacchus Marsh-Werribee System (Lake Merrimu) and the Goulburn-Murray System (Lake Mokoan, near Benalla).

During 1970 a start will be made on three new storages: Tandarra-Calvil Pondage north of Bendigo, Lake Howitt on the Mitchell River and Little Scotland Reservoir at Sunbury.

Lake William Hovell at present being constructed on the King River under a grant of \$4 million from the Commonwealth Government will supplement supply to irrigators along the King Valley.

Works expenditure of about \$4,000,000 per year is carried out from about twenty-six operating centres throughout the State. In addition, four major construction centres have been spending about \$2,500,000 annually for many years on a programme of channel and drainage works in the Goulburn-Murray System, and the end of this programme is not yet in sight.

A major new development has been a grant of \$3,600,000 from the Commonwealth Government to finance a scheme to reduce the flow of saline drainage water into the River Murray.

About 390 miles of pipelines will replace earthen channels in the new \$2.5 million Millewa scheme situated west of Sunraysia.

Details of a projected storage on the Mitta-Mitta River at Dartmouth in North-Eastern Victoria appear on page 849.

## Queensland

Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* the chapter Physical Geography and Climate of this issue.)

### Administration

In Queensland the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply. Private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner. For a description of the development of the present administration see Year Book No. 42 and earlier issues.

### Irrigation—extent, systems and methods

Queensland sugar cane represents in value about 40 per cent of the agricultural production of the State. In 1968-69, 24 per cent of the sugar cane acreage was irrigated, representing 38 per cent of the total area irrigated in the State. Tobacco is another major crop, and the area irrigated during 1968-69 represented 97 per cent of the total plantings. Irrigation of grain crops has increased considerably in recent years and this trend is expected to continue.

Most irrigation in Queensland is undertaken by farmers operating under licence to obtain water by pumping from streams or from natural underground storages. Over half the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley, Darling Downs, and Redland Bay.

Furrow irrigation is used for cotton, sugar cane, some tobacco, and miscellaneous row crops. Spray irrigation is used widely on fruit, vegetables, fodder crops, sugar cane, and the major part of the tobacco crop. Irrigation is required around-the-year for most of Queensland, as the timing and duration of the summer 'wet' season are too variable to enable a definite non-irrigation season to be fixed, as can be done in southern States.

AREA OF LAND IRRIGATED: QUEENSLAND, 1964-65 TO 1968-69

Season and division	No. of irrigators	Area irrigated (acres)							
		Vegetables	Fruit and vineyards	Sugar cane	Tobacco	Cotton	Other crops	Pastures	Total
1968-69—									
Southern Queensland . . . . .	7,046	37,685	8,801	47,998	2,922	6,439	98,546	34,412	236,804
Central Queensland . . . . .	734	1,165	668	287	82	3,432	18,714	3,929	28,278
Northern Queensland . . . . .	2,418	6,993	1,018	104,547	10,422	204	6,260	6,923	136,366
<b>Total, 1968-69 . . . . .</b>	<b>10,198</b>	<b>45,844</b>	<b>10,487</b>	<b>152,832</b>	<b>13,427</b>	<b>10,075</b>	<b>123,520</b>	<b>45,264</b>	<b>401,448</b>

1964-65 . . . . .	9,310	35,020	8,092	120,556	13,499	4,148	71,634	28,224	281,173

### Areas under private irrigation

In six important areas irrigation has been developed by private pumping. In the Lockyer Valley, thirty miles west of Brisbane, more than a third of an estimated total irrigable area of 60,000 acres is under irrigation. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation, which is necessary for continuous agricultural production. A number of small weirs with a total storage of 1,340 acre feet have been constructed on Lockyer Creek by the Irrigation and Water Supply Commission; these also tend to augment and conserve underground supplies. Construction of an off-stream storage in the Atkinson's Lagoon area, which will be supplied by diversion from Buaraba Creek and several adjoining catchments, is nearing completion. The storage will provide a regulated supply of water in Buaraba Creek and along the lower end of Lockyer Creek. The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

The Darling Downs area west of Toowoomba is extensively irrigated from both surface and underground sources. Approximately 35,000 acres is under irrigation, of which 26,500 acres is supplied from underground sources. Much of the remainder derives its water from the Condamine River in a section which is supplemented by Leslie Dam (*see* page 866). Cereal, fodder, cotton and oil seed crops comprise a large proportion of the irrigated production in this region.

The Callide Valley in central Queensland is an important source of grain, dairy products, fodder, and cotton and is largely dependent on irrigation from underground water resources. Some 10,000 acres are now irrigated from underground supplies. The broad expanses of alluvium in the Pioneer Valley near Mackay have been extensively developed for cane production. The area under irrigation from groundwater and surface supplies is some 12,000 acres. The lands in the vicinity of Bundaberg are cultivated for sugar cane production and over 40,000 acres are irrigated from surface and underground supplies.

The other important area is the fertile delta region of the Burdekin River, where the irrigated area is over 67,000 acres. The delta has ground water supplies at shallow depth, and these have been tapped to obtain supplies in the dry periods of the year. Sugar is the main crop irrigated. A scheme to replenish the subterranean water supplies in the North Burdekin Delta by pumping from the Burdekin River is in operation under the control of the North Burdekin Water Board. There is a similar Board in operation in the South Burdekin Delta.

### Government irrigation areas and projects

The Irrigation and Water Supply Commission has constructed and/or operates eight dams and forty-eight weirs with a storage capacity of 904,731 acre feet. Water from these storages supplies the following four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

*Mareeba-Dimbulah Irrigation Area.* In 1952 an irrigation undertaking was established to assist tobacco production in the valleys of the Walsh and Barron Rivers. Tinaroo Falls Dam on the Barron River (330,000 acre feet) was completed in 1958, and construction of irrigation works to serve 78,000 acres (comprising 910 tobacco farms and 180 mixed farms), of which 49,000 acres will be irrigated, is well advanced. Two hundred and ten miles of channels have been constructed, and irrigation water from the dam is being supplied to 554 farms. Tinaroo Falls Dam is also providing a regulated flow of water in Barron River at Kuranda for the generation of hydro-electric power at Barron Falls, and the necessity to maintain this supply has temporarily limited the number of farms receiving irrigation water.

*Burdekin River Irrigation Area.* The first stage of the Burdekin River Irrigation Area, comprising the Clare-Millaroo and Dalbeg sections, has been completed. Located from twenty-five to sixty-five miles from the mouth of the Burdekin, these areas comprise 18,862 acres and obtain water from central pumping stations drawing from the river. Two storages of 7,670 acre feet and 2,550 acre feet capacity have been constructed about seventy-nine miles and seventy-two miles respectively from the mouth of the river. Sugar cane production predominates in the area but rice production is increasing following recent highly successful trials. Additional water for the region is now available from the recently completed Eungella Dam on the Broken River.

*Dawson Valley Irrigation Area.* A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923, but work was discontinued after three weirs had been built in this area. Their total storage is 10,280 acre feet, and at present sixty-one farms (4,894 acres) are in production. Cotton and grain account for the major part of the production from irrigated areas. Following the severe drought conditions in 1968 when all storages were exhausted the construction of a further weir on the Dawson River, with a capacity of 16,000 acre feet, was approved.

*St George Irrigation Area.* This area comprises twenty farms, on which some 8,000 acres were irrigated during 1968-69 from a weir on the Balonne River (8,220 acre feet), and from a further two recently constructed weirs with a combined capacity of 7,350 acre feet. These two weirs also form part of the new major supply system. Cotton, grain, fodder, wool and fat lambs are the main products. Construction is in progress on a major storage and irrigation and other works to serve a further thirty-two farms. The major storage (E. J. Beardmore Dam), will have a capacity of 81,000 acre feet.

*Emerald Irrigation Area.* Formal approval for the establishment of the Emerald Irrigation Area was given on 28 March 1968, following agreement by the Commonwealth Government to make a non-reimbursable grant of up to \$20,000,000 available for the construction of the dam. The project involves the construction of Fairbairn Dam on the Nogoa River with a capacity of 1,170,000 acre feet and the construction of irrigation, drainage, road and other works to serve some 130 irrigation farms on which up to 49,000 acres could be irrigated annually. Construction of Fairbairn Dam is in progress and is expected to be completed by 1972.

*Miscellaneous Irrigation Projects.* Additional projects which have been completed since 1961 or for which construction work has commenced include the following: Moogerah Dam (Warrill Valley Project) on Reynolds Creek (75,000 acre feet) is capable of irrigating some 7,000 acres of the Warrill Valley, and is providing water for the thermal power station at Swanbank, near Ipswich. Borumba Dam (Mary Valley Project) on Yabba Creek (34,500 acre feet) makes water available to maintain the town water supply for Gympie and will allow extension of the area irrigated from the Mary River to about 18,000 acres. Callide Dam (37,800 acre feet) on Callide Creek, nine miles upstream from Biloea, provides cooling water for the Calcap power station and compensation water for maintenance of underground supplies along Callide Creek. Leslie Dam (Upper Condamine Project), on Sandy Creek, has an initial capacity of 38,200 acre feet, with provision for later increase to 87,000 acre feet. Water from the dam is available for irrigation along the Condamine River as far as Cecil Plains and for a supply to the city of Warwick. Coolmunda Dam (Macintyre Brook Project) has a capacity of 61,000 acre feet, and provides irrigation water for up to 8,000 acres along Macintyre Brook. Wuruma Dam (Upper Burnett Project), on the Nogoa River, has a storage capacity of 157,000 acre feet for irrigation of 11,000 acres along 100 miles of the Burnett River. Eungella Dam (Bowen-Broken Project), on the Broken River, has a storage capacity of 106,000 acre feet and provides cooling water for the Collinsville power station, water for Collinsville town, 4,000 acre feet per annum for mining development at Goonyella on the Isaac River and irrigation water along the Bowen and Lower Burdekin rivers. Bedford Weir (storage capacity 5,200 acre feet), situated on the Mackenzie River some 15 miles north of Blackwater provides an assured supply of water for mineral development and urban requirement in the Blackwater area and some irrigation along the Mackenzie River. Work is nearing completion on the Atkinson's Lagoon Storage (capacity 25,400 acre feet), to provide irrigation water in the Lower Lockyer Valley. Construction has commenced on Maroon Dam (31,000 acre feet) on Burnett Creek, which will supply irrigation water along the Logan River. The development of rivers constituting portion of the Queensland-New South Wales border, under the authority of the Dumaresq-Barwon Border Rivers Commission, is described on page 855.

#### **Rural Water Supply Areas**

Although provisions existed in the Water Acts for many years for the constitution of rural water supply Areas and Boards, little advantage was taken of these powers until 1964 when an amendment of the Acts extended the purposes for which these Areas and Boards may be constituted and the methods of rating and financing of works, and provided for resumption or acquisition of lands by such Boards. This form of water supply is being sought increasingly by groups of landholders in various parts of Queensland to provide a reasonably economical measure of permanent supply for stockwatering, dairy and domestic purposes in areas prone to drought, and thus achieve a permanent form of drought relief. Usually the capital cost of works is met by a 50 per cent subsidy by the Government and the balance by a Board borrowing by Government guaranteed loan on the security of debentures.

At 30 June 1969 nine Rural Water Supply Areas, Grevillea, Back Creek, Brigooda, Tarampa, Coreen, Roadvale, Proston, Merlwood and Kooingal were operating, supplying 423 rural holdings covering 195,130 acres and reticulated by 277 miles of pipelines. Other schemes are nearing completion at Woodmillar, Glamorgan Vale, Benleith and Mulgildie; these will supply a further 124 rural holdings and serve 65,850 acres.

Water conservation, irrigation and drainage schemes may also be carried out under these Acts. One group irrigation scheme near Brookstead is now in operation and three group drainage schemes have been approved. Further group drainage schemes are currently under investigation.

#### **Underground water**

For information on underground water resources in Queensland see Year Book No. 55 and earlier issues.

### Stock watering

A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about an eighth of the sheep. In addition to the stabilisation of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

At 30 June 1969, there were 866 facilities throughout the State and in addition, at that time, there were 13 facilities under construction and 15 under investigation.

Since 1935, the Queensland Irrigation and Water Supply Commission has acted as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance.

The two authorities mentioned above carry out a continuous investigation to ascertain general stock movements so that new facilities may be provided as required.

### Technical and financial assistance to farmers

'The Farm Water Supplies Assistance Acts, 1958 to 1965' are designed to improve the standard of water supply installations on individual holdings, encourage greater development in individual irrigation schemes, provide greater stability of production, and avoid losses in time of drought as well as generally increase production. To achieve this purpose, the Acts authorise the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Acts are carried out under Commission guidance, and for the payment of a small charge the Commission will advise on the construction of works designed by its staff, but for which the landowners do not require financial assistance under the acts.

During 1968-69, 887 requests (511 for technical assistance only and 376 for technical and financial assistance) were received in addition to 817 applications for advice on ground-water supplies. An amount of \$1,086,661 was approved for advances and the amount actually advanced was \$777,574.

## South Australia

Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Administration

Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1932-1966 and Water Conservation Act, 1936, both of which empower the Minister of Works to impound or divert the water from any lake, watercourse or underground source for the purpose of establishing and maintaining public water supply schemes. The Waterworks Act, 1932-1966 governs the principal reticulated water supplies in proclaimed water districts throughout the State. A feature of these supplies is the extensive network of water mains supplying country townships and farmlands where local water resources are practically non-existent.

Under the Water Conservation Act, 1936, small dams, wells, bores, rainsheds, storages and, in some instances, minor reticulation works are provided in remote areas to assist local settlers in development and to supply travellers and travelling stock.

### Irrigation

Australian irrigation originated in the upper Murray in South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for quantities held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains eighty miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in the various areas during 1968-69 and in South Australia as a whole during the seasons 1964-65 to 1968-69.

### Water supply schemes

*Adelaide Metropolitan Water Supply.* Adelaide and surrounding areas of development including Elizabeth derive their water from nine reservoirs in the nearby Mount Lofty Ranges and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 155,000 acre feet and the pipeline has a nominal capacity of 95,500 acre feet a year. A second pipeline extending from Murray Bridge to convey River Murray water to the metropolitan supply system is under construction. This pipeline will initially have a capacity of 132,200 acre feet per year. The consumption for the whole area for the year 1968-69 was 95,000 acre feet, equivalent to a consumption of 89 imperial gallons per head per day. The capital cost to 30 June 1969 was \$120,977,000.

*Country reticulated supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Supplies to these areas are supplemented by River Murray water delivered into the Warren trunk main by a pipeline extending from Swan Reach to a point near Stockwell. This pipeline has a nominal capacity of 20,200 acre feet per year. Agricultural towns and areas further north are

supplied from Beetaloo, Bundalcer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. The original 223-mile pipeline from Morgan to Whyalla and a second and larger pipeline completed in 1966 are at present able to carry 53,300 acre feet of water a year from the River Murray. A large part of Eyre Peninsula is supplied, through the 240-mile Tod River Main and the 104-mile East Coast Main, with water from the Tod River Reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and Poldas Basin. Along the Murray River all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles, and a pipeline being extended from Tailem Bend to Keith provides the means of reticulating Murray water to numerous towns and a large area of farmlands in the upper south-east. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes. Water conservation and distribution works in country districts to 30 June 1969 have cost \$140,506,000 (exclusive of river control and irrigation works on the Murray River) and contain 8,028 miles of water mains.

#### **Underground water**

For information on underground water resources in South Australia see Year Book No. 55 and earlier issues.

#### **Farm water schemes**

The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs on farms, and on the suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied by the Engineering and Water Supply Department with water under pressure from the extensive distributions systems connected to various reservoirs and the Murray River.

#### **South-eastern drainage**

In the south-east of South Australia it has been necessary to construct drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage. The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the State Government at public expense, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston, southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of \$1,441,752. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,100,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work on the northern section of 140,000 acres is virtually complete with the construction of 85 miles of drains which involved the excavation of 2,989,880 cubic yards of material. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. Part of the first stage of this work provided for the construction of a main diversion drain (consisting of the enlargement of an existing drain for a distance of 24 miles and the excavation of 22 miles of new drain) from Beachport to Struan. The work to date has required the excavation of 6,503,300 cubic yards of material; the total length of the diversion drain and associated relief drains is 51½ miles. Work is proceeding on the internal drainage of the area, and 795,380 cubic yards of excavation have been carried out in constructing 24½ miles of new drains and enlarging existing drains. The capital cost of drainage in the South-Eastern Drainage Area System to 30 June 1969 was \$18,089,000, and the length of drains constructed was 856½ miles. An extensive system of private drains (many of which are connected to the drains constructed under Government authority) also exists in the south-east of the State.

#### **Murray River Irrigation Areas**

Where irrigation water in excess of plant requirements has been applied, perched water tables develop. Rising to the level of tree roots, these cause death of orchards from salination and water-logging. Most orchards and vineyards are now drained by plastic and tile drainage systems, thus restoring their health and productivity. Disposal of the drainage water is by pumping to basins on River flats where it evaporates, or by discharge into underlying sand and limestone aquifers. The usefulness of the latter strata is declining as they are becoming fully charged with water.

### Western Australia

Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

#### Administration

The Minister for Water Supply, Sewerage and Drainage administers the departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1964*. He is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. He also administers, under the *Country Areas Water Supply Act, 1947-1964*, the water supplies to certain country towns and reticulated farmland. As Minister for Works he controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. A small number of town supplies are administered by local boards under the *Water Boards Act, 1904-1964*, which provides a large degree of autonomy with ultimate Ministerial control.

#### Irrigation

Irrigation schemes have been established by the Government on the coastal plain south of Perth in the Waroona, Harvey and Collie River Irrigation Districts between Waroona and Dardanup, the water being channelled from dams in the adjacent Darling Range.

Logue Brook Dam with a capacity of 19,717 acre feet, Harvey Weir (6,495 acre feet) and Stirling Dam (46,191 acre feet) supply the Harvey Irrigation District, the rated area of which is 13,610 acres. The Harvey District links up with the Waroona Irrigation District, which is served by Waroona Dam (12,105 acre feet), Drakes Brook Dam (1,855 acre feet) and Samson Brook Dam (7,437 acre feet) and comprises a rated area of 3,060 acres. Wellington Dam on the Collie River with a capacity of 150,107 acre feet serves an area of 10,870 rated acres in the Collie River Irrigation District. Pastures for cattle comprise 89 per cent of water usage in these districts.

The recently completed Glen Mervyn Dam (1,209 acre feet) stores water for regulated release down the Preston River for irrigation of orchards and crops when the natural summer stream flow is insufficient to meet the demand.

During the past thirty years a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. Private pumping from sands of the Gascoyne River is the principal source of irrigation water for the 158 plantations. Because of the high risk of drawing in surrounding saline ground waters by over-pumping, the usage of water by the planters is controlled strictly by the Government. The Government is developing up-river sources and delivers water by pipeline to 36 plantations in the district. Bananas for the Perth market and fruit and vegetables for the Perth and Adelaide markets are the principal crops. A tropical research station is maintained at Carnarvon by the Department of Agriculture.

A project has been embarked upon to provide water supplies for irrigation in the area traversed by the Ord River in the Kimberley Division. The project provides for the eventual development of an area of 178,000 acres of land agriculturally and topographically suitable for irrigation. The first stage, in which water was supplied to 30 farms averaging 660 acres plus a 2,400 acre pilot farm from the Bandicoot Bar Dam with a capacity of 80,000 acre feet, was completed in 1965. Cotton has been the principal crop but considerable interest is now being shown in grain sorghum.

Construction has now commenced on an earth and rock fill dam storing 4.6 million acre feet of water to serve a further area of 148,000 acres, approximately one third of which is located in the Northern Territory.

On the Liveringa flood plain, water is diverted from the Fitzroy River into a dam on Uralla Creek, which together with a natural storage of about 1,200 acre feet, provides for irrigation at Camballin 65 miles south-east of Derby. Grain and fodder sorghums are grown in the area.

AREA OF LAND IRRIGATED: WESTERN AUSTRALIA, 1964-65 TO 1968-69  
(Acres)

Season	Vegetables	Fruit	Vineyards	Cotton	Other crops(a)	Pastures	Total
1964-65	9,379	11,710	1,081	5,496	5,259	30,110	63,035
1965-66	9,944	11,566	844	8,307	6,707	30,039	67,407
1966-67	9,770	11,704	795	11,892	4,676	31,790	70,627
1967-68	10,148	12,808	634	11,782	2,992	35,116	73,480
1968-69	9,740	13,059	749	8,327	3,847	35,856	71,578

(a) Includes fodder crops.

### Country water supplies controlled by Department of Public Works and Water Supply

Since 1947 enlargement and extensions of the Goldfields and Agricultural Water Supply and the development of the Great Southern Towns Water Supply have been carried out, mainly in accordance with a project known as the Modified Comprehensive Scheme. Under this scheme water has been supplied to towns and farms in an area of five million acres in mixed farming (cereal and sheep) districts of Western Australia. The modified scheme was completed in 1961 at a cost of \$20.6 million, of which the Commonwealth contributed \$10 million under the *Western Australia Grant (Water Supply) Act 1948*. A further request was made by the State Government in 1963 for a grant of \$10.5 million representing half the estimated cost of proposed extensions which would increase by 3.7 million acres the area served by the scheme. The Commonwealth agreed to provide assistance in the form of an interest-bearing loan up to a maximum of the amount requested, advances to be made during a period of eight years commencing 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*.

Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields. It has a capacity of 62,435 acre feet and is connected to Kalgoorlie by a pipeline with extensions to towns and agricultural areas. At 30 June 1969 the Goldfields and Agricultural Water Supply was serving 105 towns and localities, and water was being reticulated to farms in an area of 4.8 million acres. The total length of pipelines was 4,197 miles and the number of services was 24,973. Consumption during 1968-69, including supplies drawn from local schemes and from the Metropolitan Water Supply, was 3,238 million gallons.

The Great Southern Towns Water Supply pipes water from Wellington Dam to towns on the Great Southern Railway from Brookton to Katanning as well as a number of other towns. At 30 June 1969 the Supply was serving 26 towns, the total length of pipelines was 536 miles, and the number of services was 8,891. Consumption during 1968-69, including supplies drawn from local sources, was 714 million gallons.

One hundred and seventeen local schemes supply water from stream flow, dams, tanks, wells, and bores, mainly to country towns. At 30 June 1969 the total length of water mains was 945 miles and the number of services was 27,481.

### Other country water supplies

As well as the schemes controlled by the Department of Public Works and Water Supply, there are four local Water Boards which draw supplies from stream flow, dams, wells, and bores. In addition, some local authorities supply water within their boundaries. The Forests Department, sawmilling companies, and mining companies operate schemes to supply water to their towns. Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the railways from other sources, such as those controlled by the Department of Public Works and Water Supply and the Metropolitan Water Supply, Sewerage and Drainage Board.

### Underground water

For information on underground water resources in Western Australia see Year Book No. 55 and earlier issues.

## Tasmania

Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (See also the chapter Physical Geography and Climate of this issue.)

### Main purposes of water conservation and utilisation

Because of the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests and by municipal authorities for town water supplies. 'Run of the river' schemes are quite adequate for assured supply in many municipalities.

Until a few years ago irrigated areas were negligible except for long established hop fields, but there is a rapidly expanding use of spray irrigation on orchards, pastures, potatoes, and beans. Until recent years there has been almost complete dependence on natural stream flows, but the need for some regulating storages has become apparent. Increasingly, farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as

valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works and domestic use is exploited in the consolidated rocks of southern, midlands and north-western Tasmania. In the south and midlands nearly all groundwater is obtained from Permian and Triassic rocks. In the north-west, water is recovered from a variety of rocks ranging from Precambrian dolomites, quartzites and schists to Tertiary basalts and Quaternary sands. The highest yields are obtained from the dolomites and the basalts.

In the central north and north-east unconsolidated Tertiary clays and gravels yield water of variable quality, and in some coastal areas, notably King and Flinders Islands, water is obtained from Aeolian sands.

The Mines Department is charged with the investigation of underground water resources and is currently drilling in the Longford (central north) and Scottsdale-Bridport (north-east) Tertiary areas, and is also examining the prospects of coastal sand supplies on the East Coast.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey, and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. The State's largest rivers discharge in the west, but diversion to the eastern half of the watersheds is not regarded as practicable.

### Administration

In Tasmania, water supply was once exclusively the responsibility of local government authorities, but two statutory authorities, the Metropolitan Water Board and the Rivers and Water Supply Commission, now operate bulk supply schemes, piping water for distribution by the local government authorities in the Hobart and Launceston regions, and directly to certain industrial consumers.

*Metropolitan Water Board.* The overall control of the supply of water to the cities of Hobart and Glenorchy and the municipalities of Kingborough and Clarence is vested in the Metropolitan Water Board, the local government authorities retaining primary responsibility for reticulation and sale to consumers. Water is also supplied by the Board to urban areas in the Sorell, New Norfolk and Brighton municipalities. The major source of water is the River Derwent at Lawitta, where two pumping stations are installed. The Metropolitan Water Board controls two schemes, the West Derwent Water Supply and the Southern Regional Water Supply. The first was originally constructed to serve Hobart, Glenorchy, Kingborough and Clarence; the second constructed by the Rivers and Water Supply Commission, but now under the control of the Board, serves that portion of Greater Hobart situated on the eastern shore of the River Derwent. The responsibility for raising loans and debt servicing necessary to meet the capital cost of constructing and adding to the schemes rests with the Metropolitan Water Board.

*Rivers and Water Supply Commission.* The Commission is empowered by the *Water Act 1957* to take water at streams and lakes, or to issue others with licences to do so; licensing covers supply to specific industries and municipalities as well as irrigation. The Commission is concerned with drainage trusts' operations, river improvements (including repairs after flood damage), stream gauging, its own regional water schemes, and with water supply, sewerage and drainage of towns. It operates in a similar manner to the Metropolitan Water Board in controlling the water schemes serving the East Tamar region (North Esk Regional Water Supply), the West Tamar area (West Tamar Water Supply) and the Prosser River Scheme which supplies water to a sodium alginate industry at Louisville near Orford and supplements the water supply of the township of Orford. The North Esk Regional Water Supply was constructed to meet industrial requirements of the aluminium refinery and other industries at Bell Bay and to provide bulk supplies to surrounding municipalities on the eastern bank of the River Tamar. The West Tamar Water Supply was constructed primarily to meet domestic requirements of urban areas in the Beaconsfield municipality. The local government authorities retain primary responsibility for reticulation and sale to consumers, except to certain industrial users.

In municipalities not serviced by the Metropolitan Water Board or the Rivers and Water Supply Commission, the supply of water is a function of the local municipal council. Where the construction of water and sewerage schemes is beyond the financial capacity of a local government authority, or if it requires assistance to pay for water supplied from regional schemes, the Commission may make recommendations to the Minister for payment of a subsidy.

### Industrial water schemes

Four principal industrial water schemes have been installed privately—for a paper mill near Lawitta on the Derwent River, for a paper mill at Burnie using water from the Emu River, for another

at Wesley Vale using water from the Mersey River, and for a factory at Heybridge reticulating water from Chasm Creek. The State Government has constructed some water schemes for use primarily for industrial purposes. These include the scheme serving the aluminium refinery at Bell Bay referred to above, a storage supplementing the summer flows of the Kermadie River for use by a wood-pulping plant at Geeveston, and the Prosser River Scheme referred to above.

### Irrigation

There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing several schemes, notably in the Huon region, and the valleys of the Jordan, Coal and Meander rivers. An irrigation scheme for the Cressy-Longford area, utilising water from the tail-race of the Hydro-Electric Commission's power station at Poatina, was recently approved. The *Water Act* 1957 provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose. With the exception of the privately owned Lawrenny estate at Ouse, which is the largest single area under irrigation in the State, there are no extensive schemes utilising one common source of water supply in Tasmania. The larger portion of the area under irrigation is watered by private schemes pumping water from natural streams.

#### AREA OF LAND IRRIGATED, 1964-65 TO 1968-69

(Acres)

Season	Vegetables	Fruit	Hops	Other crops(a)	Pastures	Total
1964-65 . . . .	8,302	5,955	1,553	4,318	14,194	34,322
1965-66 . . . .	12,994	7,241	1,524	5,786	17,651	45,196
1966-67 . . . .	12,979	8,287	1,495	6,353	18,111	47,225
1967-68 . . . .	17,303	9,042	1,587	9,132	29,182	66,243
1968-69 . . . .	17,013	8,157	1,550	6,369	23,167	56,256

(a) Includes fodder and fallow land.

### Northern Territory

Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37. and in this issue information on climatic conditions will be found in the chapter Physical Geography and Climate, and a brief outline of contour and physical characteristics in the chapter The Territories of Australia.

#### Administration

Under the *Control of Waters Ordinance* 1938-1965 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and the diversion of water is prohibited except under prescribed conditions. The Ordinance requires that drilling for ground-water be carried out only by drillers who are registered under the Ordinance. Registered drillers are required to provide the Government with information on bores drilled including the location, depth and size of bore, strata encountered and water produced. In particular areas where stricter control is necessary the construction or use of a well or water bore without a permit can be prohibited.

Under the *Water Supplies Development Ordinance* 1960-1963 any landholder engaged in pastoral or agricultural production may seek information or advice from the Commissioner of Water Development who is appointed under the Ordinance. He may also apply for an advance towards the cost of work proposed to be carried out. The Ordinance also provides for a refund to the landholder of the cost of drilling an unsuccessful bore where the landholder had applied to the Commissioner for advice on its construction and has carried out all drilling operations in accordance with advice given.

There is a Mines and Water Resources Branch of the Northern Territory Administration under the control of a Director. The Water Resources Section of this Branch carries out systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies and flood prevention and control. It also provides a general advisory service to the public on water resources and water conservation by providing information on the geology of the country, the prospects of obtaining ground-water, the possible location of bore sites, the method of drilling and equipping bores, information on stream flows, surveys of dam sites, the design of water supply schemes and reticulation layouts and on the chemical and bacteriological quality of water supplies.

### Underground water

For information on underground water resources in the Northern Territory *see* Year Book No. 55 and earlier issues.

### Irrigation

There are no large water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for additional water from Darwin River to augment Darwin's water supply have been completed, and work will soon commence on the Darwin River Dam. Groundwater is being pumped from McMinn's Lagoon area to augment the supply.

The hydrological investigations required in the Northern Territory as part of the National Water Resources Assessment Programme are being carried out by the Mines and Water Resources Branch. A network of base gauging stations is being built and operated for this purpose, and the results will help development planning as well as providing data for environmental scientists. In particular areas of development where water supply or irrigation proposals require surface water data, supplementary gauging stations are being built to obtain this information. Since the start of stream-gauging activity in the Northern Territory the Branch has established 338 gauging stations. At 1 July 1969, the Northern Territory stream-gauging network comprised 241 operating stations; of these, 164 were base stations for measuring stream flow and 77 were supplementary stations.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River, Wickham River, Douglas River, Edith River and Alice Springs areas, with only small acreages being utilised. In the Territory 56 licences to divert water from streams were current at the end of 1969. The total licensed area for irrigation is 4,250 acres, but the actual area irrigated is less than this. There are also a number of farms irrigated from bore supplies, particularly in the Alice Springs area. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and also dairying and mixed farming. The Commonwealth Scientific and Industrial Research Organisation is conducting experiments on rice growing in the coastal plains of the Adelaide River.

Both the Daly and Adelaide Rivers appear to offer considerable potential for irrigation development with regulation of the rivers. Extensive investigations are being conducted into possible dam sites and areas of land suitable for irrigation in the region. Irrigation trials are in progress using water from the high-production bores in the Daly Basin. Further exploratory drilling in this area is being carried out.

## Papua and New Guinea

Rainfall in Papua and New Guinea varies considerably from approximately 240 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua). For a general description of these territories *see* Chapter 29, The Territories of Australia of this Year Book. Irrigation has not been developed on any organised basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet, but complete data regarding water resources are not available. During 1968-69 the Commonwealth Government continued to implement the policy of establishing a national network of stream-gauging stations which can be used in assessing the water resources of the Territory, while continuing to collect hydrological data for specified proposed hydro-electric projects.

The largest rivers in the Territory include the Fly (700 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles), and the Markham (110 miles). The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in Chapter 28, Electric Power Generation and Distribution.

## CHAPTER 25

### FORESTRY

For further details on subjects dealt with in this chapter see the annual bulletins *Non-Rural Primary Industries* and (for sawmills, etc. operations) *Manufacturing Industry*.

#### Source of statistics

Statistics relating to forestry are, in general, provided by the various authorities concerned with forestry administration. Particulars of forest reservations contained in this chapter have been collected by the Statisticians of the various States, mainly from information provided by the State forestry authorities. Other information on forested areas, together with certain other data, has been provided by the Commonwealth Forestry and Timber Bureau. Statistics of timber and by-products have been compiled from the annual factory collections undertaken by the Statisticians in the several States; manufacturing industry statistics for 1968–69 are not yet available; see page 709. Figures of production of gums, resins and tanning barks have been provided by the State forestry authorities. Data of imports and exports of forest products and timber and timber products have been compiled in the Commonwealth Bureau of Census and Statistics as part of the statistics of overseas trade. The figures shown relate, in general, to years ended 30 June.

#### Forestry in Australia

##### Objects of forestry

The main object of forestry authorities is to manage the forests of the country in a manner that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oil, and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, provision of recreational facilities, and aesthetic effects. Forestry also aims at improving existing forests and woodlands by properly controlled harvesting, by protection from such destructive agencies as fire and insect attack, and by inducing regeneration where it is desirable. The provision of a partial tree cover on denuded lands where this cover is necessary for protective purposes, and a complete cover when the land is better under forest than under any other land use, are further aims of forestry.

##### General account of forests and timbers

The area of land in Australia suitable for the production of commercial timber as a primary crop is very small in comparison with the size of the continent. Broadleaved forests (hardwoods) cover 97 per cent of the total forested area, and approximately 94 per cent of the broadleaved forest area is occupied by eucalypts.

*Eucalypts*. The genus *Eucalyptus* is remarkable in that it includes over 600 species, ranging in size from the mighty forest giants, mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, down to the small mallee species which inhabit vast areas of the inland. The habitats range from the dry inland areas to the high mountain areas in the Australian Alps, from areas with the annual rainfall as low as 10 inches to those where it is 150 inches. Of the 600 species, only about 100 are used for sawmilling, and not more than 40 of these are exploited extensively.

The better class of eucalypt forest is concentrated mainly in the higher rainfall areas such as the east coast, the highlands of southern New South Wales, Victoria and Tasmania, and the south-western corner of Western Australia. The more important species include blackbutt (*E. pilularis*), tallowwood (*E. microcorys*), flooded gum (*E. grandis*), and red mahogany (*E. resinifera*) of New South Wales and Queensland; alpine ash (*E. delegatensis*) of New South Wales, Victoria and Tasmania; mountain ash (*E. regnans*), messmate (*E. obliqua*) and blue gum (*E. bicostata*) of Victoria and Tasmania; and karri (*E. diversicolor*) of Western Australia. For height and grandeur, mountain ash and karri are unequalled among the broadleaved trees of the world and are excelled only by a few North American coniferous (softwood) species.

In the coastal regions with lower rainfall the eucalypt forests contain many durable species such as the ironbarks, grey gums and bloodwoods of the east coast, and jarrah (*E. marginata*) and tuart (*E. gomphocephala*) of Western Australia. The spotted gum (*E. maculata*) occurring in New South Wales and Queensland is another example.

Along most of the inland streams and adjacent flood-plains there are riverain forests consisting mainly of river red gum (*E. camaldulensis*), a very durable broadleaved tree which has supplied large quantities of sawn timber, railway sleepers and fence posts.

Eucalypts also occur in open forest and savannah woodland formations in areas receiving a reliable rainfall of about 10 to 20 inches per annum, as on the goldfields of Western Australia where salmon gum (*E. salomonophloia*), brown mallet (*E. astringens*) and wandoo (*E. wandoo*) occur. These forests are of considerable value for firewood, as mining timbers and for fencing. Minor forest products such as sandalwood, tan bark, essential oils, etc., also come from isolated areas in this type of country, and in the more arid areas.

In 1968-69 the volume of eucalypt sawn wood produced was 960 million super feet.

*Other broadleaved timbers (hardwoods).* Broadleaved genera other than *Eucalyptus* cover a comparatively small portion of the forested land in Australia; however, the areas concerned provide a great variety of timbers suitable for a multitude of uses. There are two basic types of forest containing supplies of broadleaved timbers other than eucalypts, namely, the tropical and sub-tropical rainforests of coastal New South Wales and Queensland and the temperate rainforests of southern Victoria and Tasmania, both of which yield species known collectively as rainforest or brushwood species. The total volume of brushwood species produced in 1968-69 was estimated at 85 million super feet, i.e. about 8.1 per cent of the total broadleaved timber cut in Australia.

The tropical and sub-tropical rainforest along the eastern coast of Australia contains a large number of different species. Tropical rainforest occurs in northern Queensland in the vicinity of Cairns and on the Atherton Tableland, providing such well-known cabinet woods as Queensland maple (*Flindersia brayleana*), Queensland walnut (*Endiandra palmerstonii*) and the silky oaks. The sub-tropical rainforest found in southern Queensland and northern New South Wales yields the tulip oak, crab apple (*Shizomeria ovata*) and white beech (*Gmelina leichhardtii*). Coachwood (*Ceratopetalum apetalum*) and sassafras (*Doryphora sassafras*) occur in regions to the south near Dorrigo and have yielded valuable timber for many years.

Turpentine (*Syncarpia glomulifera*), an excellent harbour pile timber resistant to marine borer attack, and brush box (*Tristania conferta*), a superior structural and decking timber, are found in association with some eucalypts in the wetter rainfall areas on the north coast of New South Wales and in southern Queensland.

Temperate rainforest which is to be seen in southern parts of Victoria and western Tasmania consists of myrtle beech (*Nothofagus cunninghamii*), but produces also southern sassafras (*Atherosperma moschata*) and blackwood (*Acacia melanoxylon*).

*Conifers (softwoods).* One of the most important species of native conifers is white cypress pine (*Callitris hugelii*). The main cypress pine forests of commercial value occur in New South Wales and southern Queensland west of the Great Dividing Range. The trees are comparatively small, but the timber has particular value owing to its durability and resistance to termites. It is suitable for use as scantlings, flooring, linings, weatherboards, poles, and posts. As much of the area originally covered by cypress pine has been cleared for wheat farming and grazing, the production from the remaining State forests is now strictly regulated to ensure a continuous supply. The volume of cypress pine cut in 1968-69 was approximately 60.4 million super feet.

Another important native conifer is hoop pine (*Araucaria cunninghamii*), which occurs naturally in the sub-tropical rainforest of southern Queensland and northern New South Wales associated with tulip oak, crab apple, white beech, coachwood, and sassafras. The greater part of the original hoop pine forests has been exploited, but considerable areas have been replanted to this species in Queensland and, to a lesser extent, in New South Wales.

Other native conifers which have played a useful but minor part in the Australian timber industry include bunya and kauri pines (*Araucaria bidwillii* and *Agathis palmerstonii*) of Queensland, and celery-top, Huon and King William pines (*Phyllocladus asplenifolius*, *Dacrydium franklinii* and *Athrotaxis selaginoides*) of Tasmania. Kauri pine is found in the tropical rainforest of northern Queensland in association with non-eucalypt broadleaved trees, while bunya pine occurs in the sub-tropical rainforests. In the temperate rainforests of Tasmania celery-top, Huon and King William pines are found in association with myrtle beech, southern sassafras and blackwood.

#### Extent of forested areas

Estimates prepared for the Ninth British Commonwealth Forestry Conference held in India in 1968 show the total area of forest in Australia as 599.7 million acres, or about 32 per cent of the total land area of the continent. In making these estimates the Food and Agriculture Organization definition of 'forest' (published in *World Forest Inventory*, 1958, page 123) was used. This definition includes areas of sparse or stunted tree growth, classified as 'woodland' in the following table, and in the case of Australia some four-fifths of the total forest area falls into this category. If 'woodland' is excluded from total forested area a more realistic assessment of real forest area of 87.7 million acres is obtained.

## CLASSIFICATION OF FOREST AREA(a): AUSTRALIA

(Source: Forestry and Timber Bureau)

('000 acres)

Type of forest	Area
LANDS	
Economically exploitable forest land—	
Productive forests—	
Coniferous (softwood)(b)	3,021
Other(c)	34,166
<i>Total, productive forests</i>	<i>37,187</i>
Non-productive areas—unstocked(d)	11,455
Not economically exploitable forest land	39,038
Woodlands(e)	512,010
<i>Total, forested area</i>	<i>599,690</i>
OWNERSHIP OF ACCESSIBLE FORESTS	
Publicly-owned forests—	
State forests	29,699
Other forests	22,472
<i>Total, publicly-owned forests</i>	<i>52,171</i>
Privately-owned forests	29,191
Ownership not yet determined	290,166
<i>Total, accessible forests</i>	<i>371,528</i>

(a) Date of inventory 30 June 1965. (b) Includes exotics, cypress, and other indigenous pines. (c) Includes broadleaved and mixed woods. (d) Areas enclosed or within or adjacent to forest land, but which are kept cleared of tree cover for management reasons or 'are temporarily free' of tree cover. (e) All lands dominated by trees which for ecological and botanical reasons are not now capable of producing economic forest products.

## Forest reserves

The distribution of forest reserves is shown by States in the following table. Detailed comparisons between States are not possible because of the lack of uniform definitions.

## FOREST RESERVES: STATES AND TERRITORIES

31 MARCH 1969

(Source: Forestry and Timber Bureau)

('000 acres)

	N.S.W.	Vic.	Qld	S.A.	W.A.(a)	Tas.	N.T. A.C.T.(b)	Aust

<i>Total area, all reserves</i>	<i>9,465</i>	<i>6,319</i>	<i>11,270</i>	<i>293</i>	<i>4,891</i>	<i>4,771</i>	<i>1,489</i>	<i>139</i>

(a) South-west zone only. (b) Managed forests. (c) Land 'permanently' reserved by law for the production of timber for commercial purposes. (d) Land managed principally for the protection of natural resources (e.g. parks, scenic areas, water sheds, soil conservation areas). (e) Excluded are Aboriginal Reserves totalling 29,286,000 acres which are estimated to be 90 per cent forest.

### Categories of forest reserves

- (i) *Production reserves* consist of forest lands 'permanently' reserved—by law whether Federal, State or local—for the production of logs, pulpwood, pit props, poles, posts or fuelwood for commercial purposes.
- (ii) *Protection reserves* consist of reserved lands, the management of which is principally aimed at the protection of natural resources, of fauna and flora, or at other purposes not directly related to the production of wood (e.g., parks, watersheds, soil conservation areas, etc.). Industrial cutting may or may not be allowed in these Protection reserves. Industrial cutting includes the cutting of logs, pulpwood, pit props, poles, posts, fuelwood for commercial purposes. The production of logs for the production of sawnwood for local consumption is considered as industrial cutting; however, the cutting of poles and fuelwood for personal consumption on a casual or occasional basis is not considered as an industrial cutting.
- (iii) *All other reserves* consist of reserved forest lands not included above.

A considerable proportion of the permanently reserved areas is in inaccessible mountainous country, and many of the forests contain a mixture of species, only some of which are at present of commercial value. Much of the area consists of inferior forest, and a large proportion of the whole has been seriously degraded by recurrent fires.

### Plantations

The indigenous forest of Australia does not contain adequate supplies of coniferous timber, and Australia's requirements have had to be met largely by imports. As a result of the planned policy of the forest services and of several private commercial organisations, the area of coniferous plantations, mainly of exotic species, is steadily increasing. It was natural that this aspect of forestry should receive earliest attention in South Australia, as this is the State most poorly endowed with natural forest. South Australia now has a larger area of planted conifers than most other States in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. Production is also increasing in the other States, and the thinnings from their plantations are already supplying a significant volume of timber.

The total production of roundwood from Australia's coniferous plantations is now more than 80 million cubic feet per annum and is expected to increase substantially during the next decade.

A special article prepared by the Forestry and Timber Bureau giving a detailed account of the history and development of coniferous plantations and of the characteristics of individual species is included in Year Book No. 44, page 975.

Broadleaved plantations (mainly *Eucalyptus spp.*) comprise a much smaller area, and the total acreage at 31 March 1969 was about 60,000 acres, about one-third of which was brown mallet (*E. astringens*). Plantations of this species have been established in Western Australia for tan bark production.

### AREA OF CONIFEROUS PLANTATIONS, BY TYPE OF PLANTATION

### Forest administration and research

*Commonwealth Forestry and Timber Bureau.* The functions of the Commonwealth Forestry and Timber Bureau are laid down in the *Forestry and Timber Bureau Act 1930-1953* and include forestry research and education, the study of timber supply, and advice to the Government on forestry matters. The administrating department is the Department of National Development.

In 1961 the Commonwealth Government expanded its activities in forestry research in Australia. The existing Forestry and Timber Bureau Divisions of Silvicultural Research and Forest Management Research were combined to form the Forest Research Institute as a separate branch of the Bureau. The purpose of the Institute is to provide complete coverage in forestry research, ensuring that all problems of primary importance to the practice and development of forestry in Australia are investigated. In developing a programme with this objective, the Institute takes account of the research activities and potential of the State forest services and other organisations. The research work carried out by the existing sections of the Forest Research Institute covers a wide range of studies, including the following: factors affecting tree growth, tree breeding, introduction of exotic species, forest nutrition, forest botany, forest entomology and pathology, fire protection, watershed management, forest mensuration, forest management, and management economics, aerial inventory, biometrics, and tree seed. The Forest Research Institute maintains six regional establishments in the Commonwealth, two of which have an outstation in addition to the regional headquarters. These regional stations are run on a co-operative basis with State forest services and private forest companies or other government instrumentalities.

The Forestry and Timber Bureau also maintains a Timber Supply Economics Branch concerned with the compilation and analysis of statistics of production, consumption and trade in timber and other forest products. This Branch also carries out studies in forest economics and research into logging methods and machines. Advice on timber supply matters is currently made available to government departments and private enterprise. Research is also undertaken on matters associated with the marketing of timber products.

*Commonwealth Scientific and Industrial Research Organization, Division of Forest Products.* The Division of Forest Products was formed in 1928 to carry out investigations into Australian forest products, assist in the effective use of such products, reduce waste, reduce losses from decay and insect attack, and conduct research into the fundamental chemical, physical and mechanical properties of Australian timbers.

The research work of the Division is carried out by eight separate sections: wood and fibre structure, wood chemistry, timber physics, timber mechanics, timber preservation, timber seasoning, plywood and glueing, and timber utilisation. In addition, the Division provides assistance to individuals and local industry, administers courses of instruction on timber properties and usage, and maintains co-operative projects with several overseas authorities operating in the same field.

*Forestry in the Territories.* Forestry activities in the Territory of Papua and New Guinea are controlled by the Administration through its Department of Forests. The management of forests in the Australian Capital Territory is the responsibility of the Forestry Branch of the Department of the Interior.

The Forestry and Timber Bureau advises the Administrations of the Australian External Territories on the management of the forests in those Territories. Forests in the Northern Territory are under the control of the Forestry Branch of the Northern Territory Administration.

*Forestry activities of the States.* Forestry on State-owned lands in the various States is the responsibility of the respective State Governments, but they do not exercise any control over forestry activities on private property. The powers and functions of State forest authorities are laid down under forest Acts and Regulations. In each State there is a department or commission to control and manage State forests. Its functions include the introduction of proper measures for the control and management of forest land; the protection of forest land; the conversion, marketing and economic utilisation of forest products; the securing of an adequate and permanent reservation of State forests; and the establishment and maintenance of coniferous forests to remedy the existing deficiency of conifers in Australia. All State forest services are actively engaged on research programmes. Annual reports are issued by each State forest authority.

In addition to developing permanent forest reserves in each State, foresters are surveying all forested Crown lands with a view to obtaining dedications of new State forests to add to the permanent forest estate or to release for other uses areas unsuitable for forestry. State forest authorities control over 15 million acres of timber reserves, national parks, etc. They also usually control all timber on unoccupied Crown lands.

*Private forestry.* Privately owned lands contribute considerably to the total production from Australian forests. The most important areas of managed native forest in private ownership are the forests owned by pulp and paper companies. Schemes of financial assistance to individual land owners—designed primarily to encourage establishment and management of coniferous plantations—have been introduced by the Governments of New South Wales and Victoria.

The area of privately owned coniferous plantations is rapidly increasing, and here again the pulp and paper companies are very active. In step with the increase in afforestation programmes, the number of professional foresters employed in private forestry enterprise is increasing, while several are engaged on research.

The area of coniferous plantations established by private companies and individuals is included in the table on page 878.

#### Forestry education

The functions of the Australian Forestry School at Canberra, previously a division of the Forestry and Timber Bureau, were taken over by the Australian National University at the beginning of the 1965 academic year. The school was absorbed into the University's School of General Studies as the Department of Forestry. This department provides a full four-year training leading to the degree of B.Sc. in forestry. The University of Melbourne also maintains a School of Forestry which gives training leading to a B.Sc. degree in forestry. The Universities in all States provide facilities for post-graduate studies in forestry leading to higher degrees.

The Victorian Forests Commission maintains a Forestry School at Creswick where recruits are trained, mainly for employment in the Commission.

#### The Australian Forestry Council

The Australian Forestry Council comprises the Ministers responsible for forestry in the six State Governments and the Commonwealth Ministers for National Development, Interior, and External Territories.

The Council is intended to provide the means for the mutual exchange between the State and Commonwealth Governments of information and views on forestry. It co-ordinates research into problems affecting the establishment, development, management, and fire protection of all forests, and the utilisation of forest products. It assists in co-ordinating the work of State and Commonwealth Governments and also private enterprise in the development of Australian forestry.

The Council is supported by a Standing Committee, consisting of the Director-General of the Forestry and Timber Bureau, the heads of each of the six State Forest Services, the Chief of the Division of Forest Products, C.S.I.R.O., the Secretary of the Department of the Interior and the Secretary of the Department of External Territories.

#### Fire protection

The provision of adequate fire protection is one of the main problems facing forest and rural authorities. The commercial forest area is estimated at 37 million acres with a further 39 million acres of forest not at present exploitable. The forest services maintain a high degree of protection over a relatively accessible area of about 23 million acres, about 17 million acres in the more inaccessible area receive a lesser degree of protection, and about 8 million acres are at present not protected. The remaining area of 28 million acres is mainly vacant Crown Land or is privately owned or leased, and under some degree of fire protection from the rural volunteer fire-fighting organisations or Government-financed fire protection associations.

During the 1968-69 fire season a total of 1,744 fires were recorded over the area of 40 million acres of forest land afforded either intensive or extensive protection. An area of 1,885,000 acres was burnt by these fires, which represents 4.7 per cent of the area protected.

The number of forest fires and the forest area burnt over the last ten years is shown in the following table.

NUMBER OF FIRES AND FOREST AREA BURNT 1959-60 TO 1968-69

Year	Protected forest areas(a)		
	Number of fires	Forest area burnt '000 acres	Percentage of forest area burnt
1959-60 . . .	1,504	1,314	3.3
1960-61 . . .	2,667	1,294	3.5
1961-62 . . .	1,761	297	0.8
1962-63 . . .	1,299	275	0.7
1963-64 . . .	1,494	549	1.5
1964-65 . . .	2,307	1,626	4.1
1965-66 . . .	1,865	465	1.2
1966-67 . . .	1,422	388	1.0
1967-68 . . .	1,754	754	1.9
1968-69 . . .	1,744	1,885	4.7

(a) The area receiving protection has been taken as the 40 million acres for which State forest services provide protection.

Very intensive fire protection is afforded to the coniferous plantation area of Australia. This area is increasing rapidly and the annual planting programme is now between 60,000 and 70,000 acres. During the 1968-69 fire season a total of 2,247 acres were burnt, representing 0.29 per cent of the area of 781,000 acres for which fire statistics are available.

The area of coniferous plantations burnt during the past ten years is shown in the following table.

CONIFEROUS PLANTATIONS AREA BURNT AND  
TOTAL AREA, 1959-60 TO 1968-69

Year	Area burnt	Area of coniferous plantations	Percentage of coniferous area burnt
	acres	acres(a)	
1959-60 . . .	329	435,000	0.07
1960-61 . . .	507	452,000	0.11
1961-62 . . .	598	472,000	0.13
1962-63 . . .	475	492,000	0.10
1963-64 . . .	418	515,000	0.06
1964-65 . . .	3,130	556,000	0.56
1965-66 . . .	1,520	610,000	0.25
1966-67 . . .	461	660,835	0.07
1967-68 . . .	288	729,928	0.04
1968-69 . . .	2,247	781,000	0.29

(a) This area does not include certain privately owned coniferous forest (121,000 acres in 1968-69) for which fire statistics are not available.

Detailed information on fire protection is given in Year Book No. 55, 1969, pages 966-7.

#### Commonwealth loans to expand softwood plantations

In February 1965 the Australian Forestry Council recommended that the rate of expansion of softwood timber planting in Australia should be increased from their existing level of about 40,000 acres a year to 75,000 acres a year for the next thirty-five years. The recommendations envisaged a phased increase in the rate of Government plantings by the various State Governments up to a level of some 65,000 acres per annum, and an average of at least 10,000 acres per annum by private forest owners. This programme would make a major contribution towards meeting Australia's future requirements for softwood products.

In February 1966 the Commonwealth Government endorsed this recommendation and agreed, as a first step towards achieving the proposed annual target of 75,000 acres, to provide financial assistance to each State, over a five-year period commencing 1 July 1966, to enable them to accelerate their rate of softwood plantings. The assistance, which is provided to the States under section 96 of the Constitution, takes the form of long-term loans repayable over twenty-five years with repayments of principal and the payment of interest commencing ten years after the date of each advance. The *Softwood Forestry Agreements Act 1967* authorised the Commonwealth to enter into agreements with each of the States to provide financial assistance by way of loans during the financial years 1966-67 to 1970-71 inclusive. Payments under the Act by the Commonwealth to all States in 1966-67 amounted to \$291,000, in 1967-68 to \$3,456,000, in 1968-69 to \$3,872,000, and in 1969-70 to \$4,814,000. It is estimated that \$5,548,000 will be provided in 1970-71.

### Employment in forestry

#### Persons engaged in forestry activities, 1966 census

The number of persons whose industry statements were classified to 'forestry' (excluding saw-milling) at the 1966 population census was 13,492 out of a total of 512,994 in all primary industries and 4,856,455 in the total work force. For further information see the chapter Employment and Unemployment, also 1966 Census Bulletin No. 9.6, *Population: by Industry and Occupational Status, Australia*.

### Employment by Forestry Departments

In the table following details are shown of the number of persons employed by State forestry departments, the Northern Territory Administration, and by the Forestry and Timber Bureau in the Australian Capital Territory at 30 June 1969.

#### PERSONS EMPLOYED BY FORESTRY DEPARTMENTS STATES AND TERRITORIES, 30 JUNE 1969

Occupational group	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust

(a) Excludes milling of timber.

### Employment in milling operations

Details of the average number of persons employed, including working proprietors, in sawmills during the year 1967-68 are shown in the next table. Further details regarding the operations of sawmills in 1967-68 are shown in the chapter Manufacturing Industry.

#### NUMBER OF SAWMILLS AND NUMBER OF PERSONS EMPLOYED STATES AND TERRITORIES, 1967-68(a)

Total value of forest products(g) . . . . .	„	116,338	120,589	117,975	119,004	121,177

(a) Excludes some production from private land, thought to be relatively small, details of which are not available.  
 (b) See footnote (b) to previous table. (c) See footnotes (c) and (d) to previous table. (d) Incomplete; see footnote (d) to previous table. (e) Includes "other forest products" for Tasmania. (f) See footnotes (f) and (g) to previous table. (g) Includes timber used for tannin extract and sandalwood and substitutes in Western Australia.

## Value of production

While statistics of both the gross value (at principal markets) and local value (at place of production) of the forestry industry are available, particulars of the value of materials used in the process of production are not available for all States. For this reason values cannot be stated on a net basis, as has been done with most other industries. A more detailed reference to the value of production of forestry and other industries in Australia, as well as a brief explanation of the terms used, will be found in the chapter Miscellaneous.

GROSS AND LOCAL VALUE OF FORESTRY PRODUCTION: STATES AND TERRITORIES  
 1964-65 TO 1968-69  
 (\$'000)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
GROSS VALUE(a)									
1964-65	32,539	29,167	17,777	8,846	12,093	15,326	276	314	116,338
1965-66	33,663	29,691	18,043	9,729	12,731	15,990	358	384	120,589
1966-67	31,632	29,675	17,199	8,888	13,300	16,627	303	351	117,975
1967-68	35,140	27,845	17,683	8,128	14,077	15,488	278	365	119,004
1968-69	34,369	29,920	18,411	8,518	13,465	15,885	238	371	121,177
LOCAL VALUE(b)									
1964-65	31,586	28,358	13,482	8,801	11,334	13,270	276	314	107,421
1965-66	32,342	28,870	13,590	9,693	11,965	13,837	358	384	111,039

(a) Gross production valued at principal markets. (b) Gross production valued at place of production.

### Timber and timber products

#### Mill production of timber

Particulars of logs treated and the production of sawn, peeled and sliced timber by sawmills and other woodworking establishments are shown in the following table. These figures have been compiled from annual factory collections, which cover virtually all sawmills. The only omissions are some small portable mills operated by itinerants, e.g. sleeper cutters.

#### OUTPUT OF AUSTRALIAN-GROWN TIMBER: ALL MILLS STATES 1967-68(a) (\*000 super ft)

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total(b)
Logs treated (gross hoppus)(c)—							
Broadleaved . . . . .	689,357	499,225	327,363	6,800	467,028	352,122	2,341,895
Coniferous . . . . .	118,497	74,030	114,586	201,805	17,121	6,926	532,965
<i>Total, logs treated . . . . .</i>	<i>807,854</i>	<i>573,255</i>	<i>441,948</i>	<i>208,605</i>	<i>484,149</i>	<i>359,048</i>	<i>2,874,860</i>
Sawn, peeled or sliced timber produced from logs above—							
Broadleaved . . . . .	361,219	283,184	151,617	4,006	201,993	171,912	1,173,931
Coniferous . . . . .	69,934	36,718	64,050	124,085	9,643	3,254	307,684
<i>Total, timber produced . . . . .</i>	<i>431,153</i>	<i>319,903</i>	<i>215,666</i>	<i>128,091</i>	<i>211,637</i>	<i>175,165</i>	<i>1,481,615</i>

(a) Statistics for 1968-69 are not yet available, see page 709. (b) Excludes Australian Capital Territory and Northern Territory. (c) Gross hoppus measure is approximately 78.5 per cent of the true volume.

#### OUTPUT OF AUSTRALIAN-GROWN TIMBER, ALL MILLS: AUSTRALIA(a) 1963-64 TO 1967-68(b) (\*000 super ft)

	1963-64	1964-65	1965-66	1966-67	1967-68
Logs treated—					
Broadleaved . . . . .	2,681,691	2,767,843	(c)2,371,263	2,313,256	2,341,895
Coniferous . . . . .	696,831	728,691	(c)569,521	554,838	532,965
<i>Total, logs treated . . . . .</i>	<i>3,378,522</i>	<i>3,496,535</i>	<i>(c)2,940,784</i>	<i>2,868,093</i>	<i>2,874,860</i>
Sawn, peeled or sliced timber produced from logs above—					
Broadleaved . . . . .	1,157,175	1,203,705	1,185,831	1,151,369	1,173,931
Coniferous . . . . .	330,014	329,508	331,709	317,591	307,684
<i>Total, timber produced . . . . .</i>	<i>1,487,189</i>	<i>1,533,213</i>	<i>1,517,540</i>	<i>1,468,960</i>	<i>1,481,615</i>

(a) Excludes Australian Capital Territory and Northern Territory. (b) Statistics for 1968-69 are not yet available, see page 709. (c) Gross hoppus basis: not necessarily comparable with details for years prior to 1965-66, which are generally on a true volume basis.

In addition to the mill production of timber shown in the preceding tables, a large quantity of hewn and round timber, e.g. sleepers, piles, poles, fencing timber, timber used in mining and fuel, is obtained directly from forest and other areas. Complete information in respect of the volume of this output is not available.

#### Veneers, plywood, etc.

Cutting of timber for the manufacture of veneers, plywood, etc., has been carried out in most States for a number of years. In recent years this has been considerably extended, since plywood manufacture has allowed the use of some species unsuitable for sawing. Special attention has been paid to ensure that logs suitable for peeling are diverted to ply factories.

#### PLYWOOD PRODUCED: STATES, 1963-64 TO 1967-68(a) (\*000 square feet: $\frac{3}{16}$ -in basis)

State	1963-64	1964-65	1965-66	1966-67	1967-68
New South Wales . . . . .	58,880	59,045	54,201	58,791	63,909
Queensland . . . . .	97,252	94,766	80,761	81,313	93,185
Other States . . . . .	60,150	63,249	52,296	60,348	71,929
<i>Australia . . . . .</i>	<i>216,282</i>	<i>217,059</i>	<i>187,258</i>	<i>200,451</i>	<i>229,023</i>

(a) Statistics for 1968-69 are not yet available, see page 709.

Of the total plywood produced in 1967-68, 128,672,850 square feet ( $\frac{1}{16}$ -in basis) were classed as 'Commercial', 73,331,689 as 'Waterproof', 2,664,942 as 'Case', and 24,353,525 as 'Sliced fancy'.

During 1967-68, 828.8 million square feet ( $\frac{1}{16}$ -in basis) of veneers were produced by the rotary process for the manufacture of plywood, including 260.5 million square feet ( $\frac{1}{16}$ -in basis) sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 73.4 million square feet of sliced veneers were produced.

#### Manufactured boards

Particle board, resin or cement bonded of acoustic and other composition, amounted to 115,579,513 square feet surface measurement during 1967-68.

#### Wood pulp and paper

*Wood pulp.* During 1967-68 wood pulp production was 351,268 tons of chemical, mechanical and other pulp. During the previous year production was 357,665 tons.

Detailed information relating to the types and methods of production of wood pulp in the various States was published in Year Book No. 50, 1964, page 1110.

*Paper and paper board.* Paper and paper board are manufactured in all States but the greater part of the industry is in New South Wales, Victoria and Tasmania. During 1967-68 twenty-one paper mills were operating, nine in Victoria, three in New South Wales, four in Tasmania, two each in Queensland and South Australia, and one in Western Australia. A wide variety of paper and paper board is produced in Australian mills. The table below gives details of the production of some of the principal items.

#### PRODUCTION OF PAPER PRODUCTS: AUSTRALIA, 1965-66 TO 1967-68(a)

Type of paper	Quantity (tons)			Value (\$'000)		
	1965-66	1966-67	1967-68	1965-66	1966-67	1967-68
Newsprint . . . . .	93,211	97,255	92,648	12,106	13,365	12,688
Blotting . . . . .	601	508	569	161	149	161
Duplicating . . . . .	9,721	8,291	10,212	3,758	3,467	3,876
Printing and writing . . . . .	120,540	114,992	112,780	35,818	35,704	35,952
Wrapping—						
Kraft . . . . .	149,331	184,561	183,591	34,568	40,637	43,344

Paper felts . . . . .	1,700	1,905	1,164	366	415	243
Paper boards . . . . .	317,553	329,496	334,660	51,465	53,726	57,093

(a) Statistics for 1968-69 are not yet available, see page 709.

### Overseas trade in forest products, timber and timber products

#### Imports

#### IMPORTS OF FOREST PRODUCTS, TIMBER AND TIMBER PRODUCTS AUSTRALIA, 1966-67 TO 1968-69

	Quantity			Value (\$'000 f.o.b.)		
	1966-67	1967-68	1968-69	1966-67	1967-68	1968-69
Wood in the rough or roughly squared . . . '000 sup ft	44,763	53,166	49,033	2,896	3,695	3,322
Wood shaped or simply worked—						
Timber sawn lengthwise, sliced or peeled, but not further prepared, of a thickness exceeding 5 mm—						
Conifer—						
Douglas fir . . . . .	177,183	171,316	195,132	16,366	16,104	21,785
Hemlock and balsam . . . . .	15,395	11,200	12,562	1,003	865	1,175
Radiata pine . . . . .	26,531	25,016	29,474	2,004	1,868	2,108
Redwood and western cedar . . . . .	22,414	28,905	30,065	2,728	3,851	4,455
Non-conifer . . . . .				6,981	11,278	10,707
Tanning extracts of vegetable origin . . . . . cwt	79,601	74,005	96,015	550	504	565
Wood and cork manufactures (except furniture)—						
Veneers, plywoods, 'improved' or reconstituted wood and other wood, worked, n.e.s. . . . .				6,355	7,777	8,580
Wood, worked, n.e.s. . . . .				2,725	3,722	4,417
Cork manufactures . . . . .				1,187	1,431	1,372

Imports of coniferous timbers, shaped or simply worked, came mainly from Canada and the United States of America in 1968-69. Malaysia was the source of by far the greater proportion of non-coniferous timber imports. Malaysia, Papua and New Guinea and the United Kingdom supplied most of Australia's imports of veneers, while plywood imports came mainly from Japan and Papua and New Guinea.

### Exports

#### EXPORTS OF AUSTRALIAN FOREST PRODUCTS, TIMBER AND TIMBER PRODUCTS(a) AUSTRALIA, 1966-67 TO 1968-69

	Quantity			Value (\$'000 f.o.b.)

## CHAPTER 26

### FISHERIES

Further information on subjects dealt with in this chapter is contained in the annual printed bulletin *Non-Rural Primary Industries* and in the annual mimeographed statistical bulletin *Fisheries*, particularly as regards types of fish, etc. caught.

#### Fisheries resources and their commercial exploitation

##### Fish

Approximately 2,000 species of marine and freshwater fish occur in and around Australia, about forty of which support substantial commercial fisheries. Most fishing is confined to waters over the continental shelf on the populous eastern and south-eastern seaboard, including Tasmania and South Australia, and off the south-western corner of the continent. As in other countries, fisheries in Australia may be divided into estuarine fisheries, located in the tidal waters of rivers and coastal lakes, beaches and bays; pelagic fisheries, which exploit species inhabiting the surface layers of the open ocean; and demersal fisheries, which fish the bottom layers of the sea. Estuarine fisheries produce considerable quantities of mullet (mainly *Mugil cephalus*), bream (*Acanthopagrus spp.*) and, in northern Australia, the valuable giant perch (*Lates calcarifer*). Important freshwater fisheries in New South Wales, Victoria and South Australia include those for Murray cod (*Maccullochella macquariensis*), golden perch (*Plectroplites ambiguus*) and eels (*Anguilla australis occidentalis*). Rainbow trout are farmed in Tasmania. Important pelagic fisheries include those for Australian 'salmon' (*Arripis trutta*), southern bluefin tuna (*Thunnus thynnus maccoyii*), snoek (*Leionura atum*), mackerel (*Cybium spp.*) and clupeoids (*Sardinops neopilchardus* and *Engraulis australis*). Demersal fisheries include those for snapper (*Chrysophrys auratus*), whiting (*Sillaginidae*) and the so called 'cods' (*Epinephelus*, etc.) from tropical waters. Trawl fisheries off New South Wales and Victoria yield species such as flathead (*Neoplatycephalus* and *Trudis spp.*), morwong (*Nemadactylus spp.*) and John Dory (*Zeus faber*). There is also an important fishery for edible shark (*Galeorhinus australis* and *Mustelus antarcticus*) in south-eastern Australia. A fishery for clupeoids in the Bass Strait which supplies the raw material for a fish meal plant at Lakes Entrance, Victoria, is the only 'industrial fishery' in Australia.

##### Crustaceans

The western and southern rock lobsters (*Jasus lalandei* and *Panulirus cygnus*) which are taken on rocky reefs around the southern half of Australia, provide the most valuable fishery in Australia. Prawns (*Penaeus* and *Metapenaeus spp.*) are taken in estuarine, coastal and offshore waters of all States except Tasmania. This fishery has grown rapidly in recent years, especially in northern Australia. Bay lobsters (*Thomus spp.*) are taken incidentally to prawn trawling operations. Crabs (*Scylla* and *Portunus spp.*) are taken mainly in Queensland, New South Wales and Western Australia.

##### Molluscs

Naturally occurring oysters are harvested in all States, and in New South Wales edible oysters (*Crassostrea commercialis*) are cultured commercially. There is limited culture of other species in Queensland and Tasmania. Despite a serious decline in catches in recent years, the major scallop (*Pecten alba*) fishery is that based on stocks in Port Phillip Bay, Victoria. A fishery based on the scallop (*Amusium balloti*) is developing in Western Australia, and there are also smaller fisheries in Queensland and Tasmania. An important abalone fishery has been developed since 1964 in south-east Australia with South Australia, Tasmania and Victoria providing the bulk of the catches. Mussels (*Mytilus planulatus*) are harvested in Victoria, and small quantities of cephalopods, mainly squid, are produced in many localities.

##### Pearl-shell and trochus-shell

The shell of the Australian species of pearl oyster (*Pinctada maxima*) is taken in the tropical waters of Australia from Exmouth Gulf in Western Australia to Cairns in Queensland for the manufacture of buttons, knife handles, etc. Live pearl-shell is used for pearl culture, *Pinctada maxima*

being capable of producing pearls which are the largest in the world and which command top market prices. Trochus-shell is found mainly on coral reefs off the Queensland coast, although small quantities occur in Western Australia.

### Whales

The Australian whaling industry formerly exploited the baleen (humpback) whales during their winter migrations along the east and west coasts of Australia. However, owing to the total prohibition placed on their capture by the International Whaling Commission in 1963, Australian whaling is now confined to the sperm whale (*Physeter catodon*) which has been taken in the southern waters of Western Australia since 1955.

### Marine flora

Seaweeds of possible commercial value occur in the coastal waters of New South Wales, Tasmania, South Australia, and Western Australia. At Triabunna, Tasmania, a factory is processing seaweed (*Macrocystis pyrifera*) for its alginate content.

### General

A map showing Australia's principal ports and localities of the fishery resources under exploitation appears on plate 46, page 890. Detailed information on the history of the development of fisheries industries in Australia is given in Year Book No. 55, pages 976-7.

## Fisheries administration and research

The Constitution of the Commonwealth (Section 51 (x) ) assigns to the Commonwealth power to legislate for fisheries in Australian waters beyond territorial limits, the residual power in respect of waters within territorial limits (including inland waters) resting with the States. The Commonwealth has made similar arrangements for each of its Territories. Each State and Territory has legislation regulating fisheries in waters within its jurisdiction. Persons taking fish for sale, and their boats, are required to be licensed, and provision is made for management of the fisheries.

The Commonwealth laws regulating the fisheries are the *Fisheries Act* 1952-1968, the *Continental Shelf (Living Natural Resources) Act* 1968 and the *Whaling Act* 1960-1966. Each of these applies in accordance with the Commonwealth's fishery power under the Constitution.

### Fisheries Act

This Act requires persons engaging in fishing and boats used for fishing to be licensed and their equipment for taking fish to be registered if the purpose of the fishing is commercial. It also provides for management and conservation of the fisheries. The Act applies to Australian residents and their boats in waters proclaimed under the Act and, since 1968, to foreign boats and their crews in the zone of waters extending 12 miles from the baselines of the territorial sea but excluding waters within territorial limits, where State law applies.

### Continental Shelf (Living Natural Resources) Act

This Act implements in Australian law the sovereign rights, conferred on Australia in respect of the organisms belonging to sedentary species (that is, organisms which, at the harvestable stage, either are immobile on or under the seabed, or are unable to move except in constant physical contact with the seabed or the subsoil) on the continental shelf. The continental shelf comprises the seabed and subsoil of the submarine areas adjacent to the coast but outside the territorial sea to a depth of 200 metres, or beyond that depth where the depth of the superjacent waters admits of the exploitation of the natural resources of the area, by the Convention on the Continental Shelf, Geneva, 1958. The Act requires the licensing of persons searching for and taking sedentary organisms, of boats used to search for and take sedentary organisms, and of persons employing divers, trial divers and divers' tenders in taking sedentary organisms, if such activities are carried out in controlled areas of the continental shelf of Australia or the Territories for a commercial purpose. Provision is made for proclamation of sedentary organisms to which the Act applies, for the establishment of controlled areas of continental shelf in respect of specified sedentary organisms, and for the management and conservation of sedentary organisms in controlled areas (the last of these applying to all persons whether the purpose of the taking of the sedentary organism was commercial or not.) The Act applies to all persons including foreigners, and to all boats including foreign boats.

### Whaling Act

This Act implements in Australian law the obligations imposed on Australia by virtue of our adherence to the International Convention for the Regulation of Whaling, Washington, 1946. The Act requires the licensing of factories engaged in treating whales and of ships (and aircraft) used for taking whales. It also provides for the management and conservation of whale stocks.

### Administration

Australian fisheries are administered by the authority having jurisdiction over the waters concerned. In inland waters and in waters within territorial limits, administration is the responsibility of the State or Territory fisheries authority. In proclaimed waters, and on the continental shelf beyond territorial limits, administration is the responsibility of the Commonwealth which, by agreement, has delegated to State fisheries authorities the necessary authorities for day-to-day administration of the Acts.

The administration of the fisheries is directed to a number of objectives, of which the two most important are conservation of the living resources in order to ensure their ability to sustain a maximum yield consistent with economy in their exploitation and the orderly conduct of the fishing industry. Fishery resources are common property and apart from fisheries such as those for rock lobster, where the numbers of boats and the quantities of fishing gear are controlled, the only other restrictions on the entry of boats into the Australian fishing industry are those relating to foreigners, and to processing and carrying boats in the northern prawn fishery. Management measures have been introduced in several fisheries to provide controls such as minimum sizes, closed areas, closed seasons and regulation of the types of fishing gear that may be used.

The Fisheries Development Trust Account (established under the *Fishing Industry Act 1956*) and the Fishing Industry Research Account (established under the *Fishing Industry Research Act 1969*) are available to support financially projects of kinds consistent with the purposes of those Acts for the development and management of the fisheries and fishing industry. The former is supported by the proceeds of the sale of the assets of the Australian Whaling Commission. The latter is a matching fund into which is paid each year an appropriation from Commonwealth Revenue equal to amounts collected from the fishing industry by the State Fisheries Authorities and expended by the States for the same purposes.

### Research

The main aim of fisheries research in Australia is to achieve the greatest sustainable yield of fish and to assist in the development of an efficient industry. To this end much of the biological research already undertaken has been directed at formulating recommendations for management of various fisheries. Research work is also carried out which is expected to lead to the development of new fisheries, the expansion of under-exploited fisheries, greater economy in operations and the use of more efficient equipment and methods.

Organisations in Australia at present engaged in research into fisheries matters are:

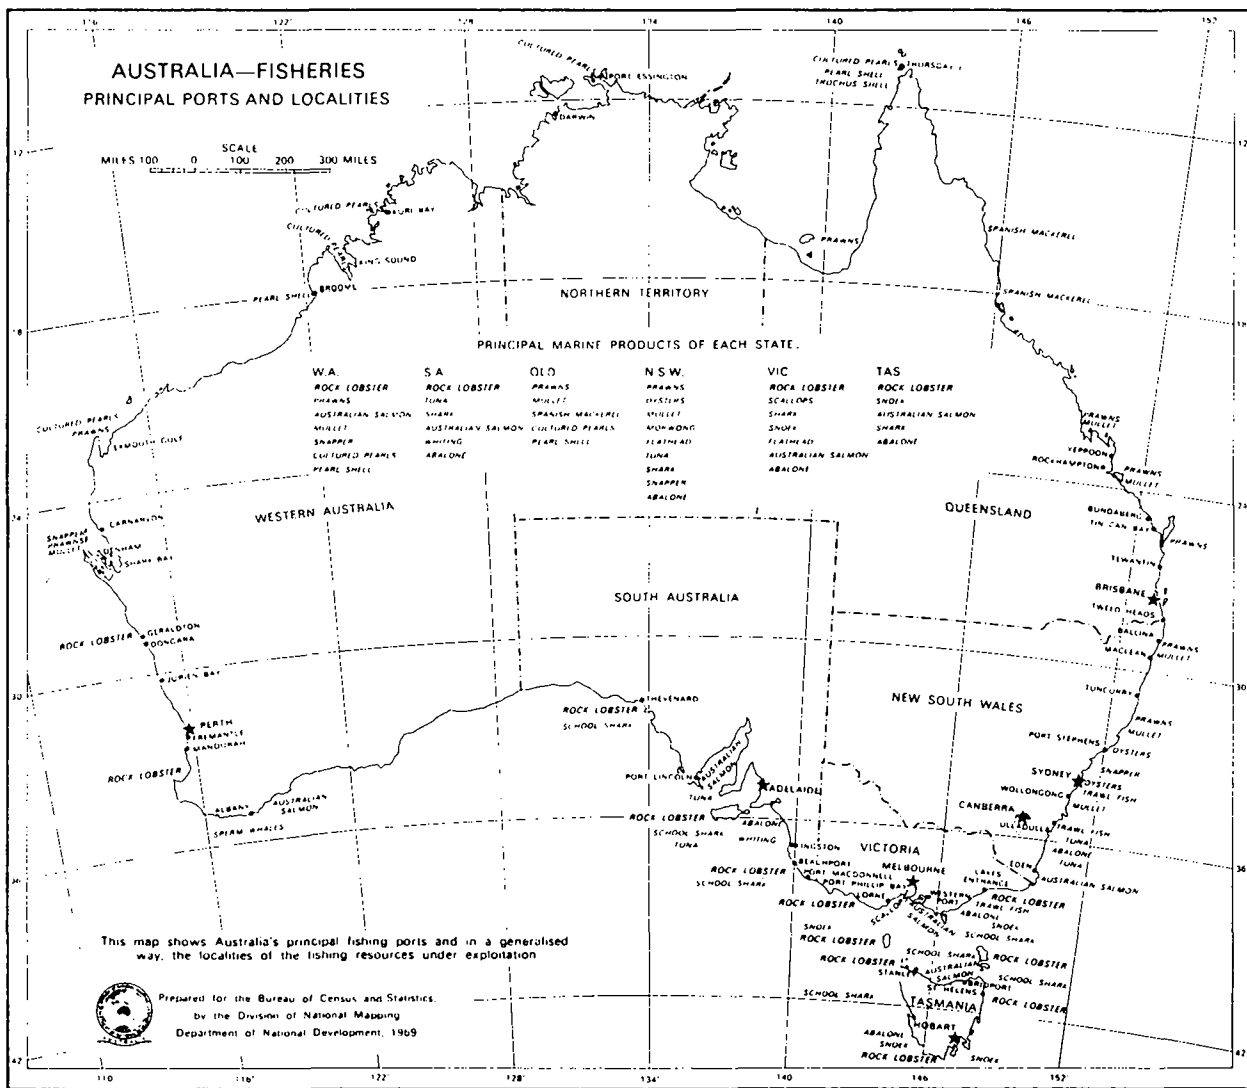

- (i) C.S.I.R.O. Division of Fisheries and Oceanography, with its headquarters and main laboratory at Cronulla, N.S.W. (fisheries science and oceanography);
- (ii) C.S.I.R.O. Division of Food Preservation located at Ryde, N.S.W. (handling, storage, processing and transportation of fish);
- (iii) State fisheries departments (fisheries laboratories have been established in Perth, Hobart, Melbourne and Sydney; new research vessels have been launched by Victoria and New South Wales; the Northern Territory Administration has recently established a Prawn Research Unit in Darwin);
- (iv) Fisheries Division, Department of Primary Industry, Canberra (economic and management research, gear technology, extension and education service); and
- (v) private fishing companies (surveys of fisheries resources, research into handling and processing).

## Collection and presentation of fisheries statistics

### Source and basis of statistics

Statistics presented in this chapter have been collected by a number of authorities. The various State fisheries authorities have supplied, through the Deputy Commonwealth Statisticians in the States, the details of employment, boats, equipment, and production of the general fisheries. The Fisheries division of the Department of Primary Industry has supplied particulars of the whaling

industry and pearl-shell fishery. Statistics of the processing of general fisheries products and of overseas trade in the products of fishing and whaling have been compiled in the Commonwealth Bureau of Census and Statistics.

The statistics refer, in general, to financial years. However, pearl and shell fishing data refer to the season ended in the financial year shown. Whaling statistics are shown by calendar years, and refer to the season in the calendar year. All overseas trade information refers to financial years.

In the preparation of Australian fisheries production statistics the quantities of individual products are generally in terms of the form in which they are taken from the water. For example, the statistics of fish production published in this chapter are in terms of 'estimated live weights' which are calculated from landed weights by using conversion factors for each species in each State. These conversion factors allow for the fact that the quantities of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Crustaceans are reported on an 'estimated live weight' basis and molluscs (edible) on a 'gross (in-shell) weight' basis. The figures of pearl-shell and trochus-shell refer to the actual quantities of dry shell for sale and exclude the weight of the fish.

Two weaknesses of fisheries statistical collections in Australia to date have been the lack of uniformity, which makes it difficult to compile statistics on an Australia-wide basis, and the lack of data on the effort involved in taking fish (time spent fishing, gear used, etc.). Recognising these weaknesses, the Commonwealth-States Fisheries Conference in 1960 appointed a Statistics Committee 'to examine all aspects of fisheries statistics and fully document a proposed system for submission to the States and Commonwealth for approval'.

#### **Model system of catch and effort statistics, 1962**

The model system of catch and effort statistics designed by the Committee was adopted by the Commonwealth-States Fisheries Conference in 1962. The new system was introduced in Tasmania in 1963, in Victoria and Western Australia in 1964 and in South Australia in 1969. The system was introduced in Queensland for the otter trawl fishery early in 1965, but there are no definite plans at present to extend it to other fisheries.

Under the new system fishermen are asked to report monthly the various fishing methods used, catch of each species taken and the locality where the greatest proportion of the catch is taken. Fishermen record catch in terms of landed weight, and appropriate conversion factors are used to obtain live weight where this is required. A grid system of 1' rectangles (relating to latitude and longitude) is used for recording location of catches at sea, and estuaries and inland waters are recorded where appropriate. Other data obtained include details of fishing effort, ports at which catch is landed, and employment details.

### **Boats and equipment used in fisheries**

#### **Fish, crustaceans and molluscs (edible)**

The boats used for the estuarine fisheries are mostly small vessels, propelled by diesel or petrol engines of low power. The offshore vessels range up to 120 feet in length and are almost invariably powered by diesel engines. Most of them have either insulated holds and carry ice, or are equipped with dry or brine refrigeration. Some rock lobster vessels are fitted with wells in which the catch is kept alive. About 25 per cent of the vessels registered in Australia for commercial fishing are over 30 feet in length. Recently, a number of well equipped, double rigged, prawn trawlers of 60 feet to 75 feet in length have been built for the rapidly developing northern prawn fisheries.

The following are the types of equipment most commonly used in the main fisheries: *mullet*, beach seine, gill net; *shark (edible)*, long-lines, gill net; *Australian Salmon*, beach seine; *snoek*, trolling lines; *fluthead*, Danish seine, otter trawl; *snapper*, long-lines, traps, gill net, hand-line; *morwong*, Danish seine, otter trawl, traps; *whiting*, handlines, Danish seine, beach seine; *garfish*, gill net, beach seine; *mackerel*, trolling lines; *tuna*, pole and live-bait, trolling lines (lampara nets and purse seines are used for taking live bait for tuna); *prawns*, otter trawl, beam trawl beach seine net; *rock lobster*, pots, traps; *scallops*, dredge, otter trawl.

#### **Pearls, pearl shell and trochus shell**

Ketch-rigged luggers about fifty-five feet long which carry crews of eight to fourteen members are used for pearl-shell fishing around Australia.

#### **Whaling**

The whaling industry is highly mechanised. Standard equipment includes aircraft to locate whales, diesel-powered catchers of about 100 to 125 feet in length, and tow boats.

**Boats and equipment employed by industry**

The following two tables show details of boats and equipment employed in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and the number of chasers and stations engaged in whaling operations. The reservations mentioned below regarding the use of employment information are also applicable to these tables. Boats employed in more than one industry are classified to their main activity.

### Employment in fisheries

**Persons engaged in fishing activities, 1966 census**

The number of persons whose industry statements were classified to 'fishing' at the 1966 census was 8,021 out of a total of 512,994 in all primary industries and 4,856,455 in the total work force. The census classification 'fishing' includes such activities as fishing, whaling, pearl-shell fishing, oyster-farming, etc. For further information see the chapter Employment and Unemployment, also 1966 Census Bulletin No. 9.6, *Population: By Industry and Occupational Status, Australia*.

**Classification of registered commercial fishermen by industry**

The following two tables are derived mainly from the licensing records of the various State fisheries authorities. Because the definitions and licensing procedures used by these authorities are not uniform the statistics should not be used to compare the relative productivities of fishing industries in the several States. Persons engaged in more than one industry are classified according to their main activity, and so may be classified differently from one year to the next.

(a) Sperm whales only were taken.

**Processing of fish, crustaceans and molluscs**

Ice is extensively used for the chilling of fish taken in estuarine and inshore fisheries. Refrigeration is used particularly on vessels operating in the tuna fishery and prawn fisheries to chill or freeze the catch. Refrigerated brine tanks are most commonly used.

Processing plants are located strategically throughout Australia close to fishing grounds. In recent years a number of shore-based plants have been established in remote areas of northern Australia to service the expansion of the prawn fishery. Processing vessels receiving prawns from a fleet of trawlers are also operating in this fishery.

Rock lobsters, prawns and scallops are frozen for export; tuna, snoek, Australian salmon and abalone are canned; small amounts of fish are smoked; some molluscs are bottled. Hand labour is still used extensively in processing operations, but mechanisation is being progressively introduced.

Edible fish for local consumption is mainly dispatched fresh iced to markets.

**FISH PROCESSING (EXCEPT FREEZING): AUSTRALIA 1964-65 TO 1968-69**  
(\*000 lb)

<i>Total value of products</i>	..	754	938	705	748	953

(a) 6 barrels = 1 ton.

**Domestic marketing of fisheries products**

Although virtually the whole of the tuna and Australian salmon catches and a large proportion of the snoek catch are canned, the greater part of Australian fish production is marketed fresh or frozen.

Marketing arrangements for fresh fish vary. In New South Wales fish marketing is the responsibility of the New South Wales Fish Authority, which operates the Metropolitan and Wollongong Fish Markets. In other coastal centres of New South Wales fishermen's co-operatives may become registered as local fish markets. In Queensland the Fish Board and North Queensland Fish Board sells all production on behalf of fishermen in that State, except for fish intended for export and interstate trade. In Victoria, Western Australia, South Australia and Tasmania there is no restriction on market outlets. In South Australia the great majority of fishermen are members of the South Australian Fishermen's Co-operative Ltd, which handles the whole of their production. Other outlets for fish products include retail and catering establishments.

## Value of fisheries production

The following tables show details of the values of production of edible fisheries products, pearl-shell and trochus-shell for the years 1964-65 to 1968-69. See also the chapter Miscellaneous for an explanation of the value terms used.

**Pearls**

Pearls valued at \$720,000 were imported into Australia in 1968-69 (\$325,000 from Papua and New Guinea, \$314,000 from Japan) compared with imports valued at \$451,000 in 1967-68 (\$405,000 from Japan, \$19,000 from Papua New Guinea).

Cultured pearls exported from Australia in 1968-69 (excluding re-exports) were valued at \$1,981,000 compared with exports valued at \$1,532,000 in 1967-68, the bulk of the exports each year being shipped to Japan. The value of natural pearls exported from Australia in 1968-69 (excluding re-exports) was \$17,000 compared with \$12,000 in 1967-68, the major proportion being shipped to the United Kingdom.

**Pearl, etc., shell**

Of the pearl-shell exported in 1968-69, exports valued at \$122,000 were consigned to the United States of America, \$98,000 to Papua and New Guinea, \$88,000 to the Federal Republic of Germany and \$73,000 to Japan.

## OVERSEAS TRADE IN SHELLS: AUSTRALIA, 1966-67 TO 1968-69

## CHAPTER 27

# MINERAL INDUSTRY

Further detailed statistics and information on the subjects dealt with in this chapter are contained in the annual printed bulletins *Non-Rural Primary Industries* issued by this Bureau and in *The Australian Mineral Industry—Annual Review* and other publications issued by the Bureau of Mineral Resources, Geology and Geophysics, which also issues, in conjunction with this Bureau, a quarterly publication, *The Australian Mineral Industry*, comprising two parts—Part 1—Quarterly Review and Part 2—Quarterly Statistics. The annual mimeographed statistical bulletins *Mining and Quarrying*, *Minerals and Mineral Products*, *Mineral Exploration*, and *Overseas Participation in Australian Mining Industry* of this Bureau contain economic statistics of the industry prepared and published as soon as possible after the data have been compiled. A monthly statistical bulletin *Minerals and Mineral Products* is issued also, and other current statistics on mining or mine products are contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*.

### GENERAL

#### Geology

##### General geology

Most of the western and central part of the Australian continent consist of basement rocks of Precambrian age. Younger Palaeozoic rocks, mostly of geosynclinal origin, form a belt several hundred miles wide extending from north Queensland to Tasmania. Mesozoic platform sediments form a broad zone separating the Palaeozoic and Precambrian rocks and extending from the Gulf of Carpentaria to central New South Wales. Cainozoic rocks occur mainly in Victoria, south-western New South Wales and southern South Australia, and as residual basalt cappings over extensive areas of the Palaeozoic rocks of eastern Australia.

##### Economic geology

Minerals of economic significance occur widely throughout the Precambrian and Palaeozoic rocks of the continent. Palaeozoic mineralisation is perhaps more varied, but the Palaeozoic deposits now being worked are in general smaller than those found in Precambrian rocks. Most of Australia's metallic mineral deposits occur within two broad regions, a region of Precambrian rocks in the west and central areas of the continent and a region of younger Palaeozoic rocks in the east.

The major deposits of metallic minerals, including iron ore, lead, zinc, silver, copper, uranium, nickel, and gold, are contained in the Precambrian rocks of the Australian shield. Smaller deposits of tin, tungsten, tantalum, mica, beryllium, manganese, and cobalt are also contained in these rocks.

The mineralised Palaeozoic rocks contain major deposits of gold, now mostly worked out, and a few large copper and lead-zinc-silver occurrences. Smaller amounts of tin, tungsten, molybdenum, bismuth, antimony, and other metals also occur in these rocks.

Outside these two main categories, however, there are some metallic mineral deposits of considerable economic importance which were formed during the Tertiary Period. These include bauxite which occurs as a surface capping over rocks of various ages. Extensive deposits of bauxite occur at Weipa on Cape York peninsula in north Queensland, at Gove on the north-eastern tip of the Northern Territory, in the Darling Range in Western Australia, and near Kalumburu in the north-west of Western Australia. These deposits are the result of a long period of weathering.

Mineral sands, another important exception, contain rutile, zircon, ilmenite, monazite, and other minerals, and are particularly well developed on the central and northern New South Wales coast, southern Queensland and south-western Western Australia. The deposits of the eastern States are considered to be derivatives of Mesozoic rocks. The Western Australian deposits are thought to be derivatives of the Precambrian granites of the Australian shield.

Occurrences of fuel minerals (coal, oil and natural gas) are characteristically located in former sedimentary basins. Large areas of Australia are covered by these basins, and more than twenty

major sedimentary basins have been identified on the Australian mainland. In addition, sedimentary basins are known to exist in off-shore areas adjacent to the Australian coast. The individual basins range in area from 4,000 to 680,000 square miles and contain marine and continental sedimentary rocks ranging in maximum thickness from 1,000 to about 30,000 feet and including rocks of all ages from Proterozoic to Tertiary.

The main Australian deposits of black coal are in eastern Queensland and New South Wales. Most are Permian in age, and they predominantly have a bituminous rank; both coking and non-coking types occur. The extensive brown coal deposits of Victoria were formed during the Tertiary Period.

Crude oil and natural gas have been found in a number of sedimentary basins. In the Bowen-Surat Basin, Queensland, commercial deposits of oil exist at the Moonie and Alton fields, and commercial deposits of natural gas exist in numerous prospects in the Roma and Rolleston areas. Gas reserves are present in the Adavale Basin at Gilmore, and in the Cooper Basin at Roseneath. In general the oil reservoir rocks in Queensland are of Lower Jurassic age, and the gas reservoir rocks are of Mesozoic and Permian age. In the Gippsland Basin, off-shore Victoria in the Bass Strait, oil in considerable quantities was discovered in the Kingfish and Halibut fields, and oil and natural gas in the Marlin and Barracouta fields. In the same basin, significant deposits of hydrocarbons, were encountered in the Flounder, Tuna, Snapper, Bream, and Emperor prospects. In the Gippsland Basin, the Cretaceous and Tertiary strata are the reservoir rocks. In the Cooper Basin, South Australia, commercial deposits of natural gas were discovered at Gidgealpa and Moomba, and also at Daralingie, Toolachee and Tirrawarra. The reservoir rocks are of Permian age. In the Carnarvon Basin, Western Australia, commercial crude oil mainly in the Cretaceous formations, and also to a lesser degree in the Jurassic, was discovered at Barrow Island. Off-shore, significant hydrocarbon shows have been discovered in Lower Cretaceous rocks at Legendre. Further south, in the Perth Basin, natural gas in commercially significant quantities was discovered in the Yardarino, Gingin, Dongara, Mondarra and Whicher Range prospects, the reservoir rock being of Lower Permian age. In the off-shore Bonaparte Gulf Basin high pressure natural gas was encountered at the Petrel prospect. In the Amadeus Basin, Northern Territory, natural gas was discovered in commercial quantities in formations of Ordovician age at Mereenie and Palm Valley.

Of the non-metallic minerals, many occur in, or were formed from, rocks of various ages. The most important are asbestos, clays, sand and gravel, limestone, gypsum, and silica. Salt won by evaporation of sea water is another important product.

Opals are found in the flat-lying sedimentary beds of the Great Artesian Basin in Queensland, New South Wales and South Australia. These opal deposits were formed during the Tertiary Period.

A table showing most of the larger mineral deposits now being mined in Australia according to the age of the geological formation in which they are found is shown in Year Book No. 53, page 1062.

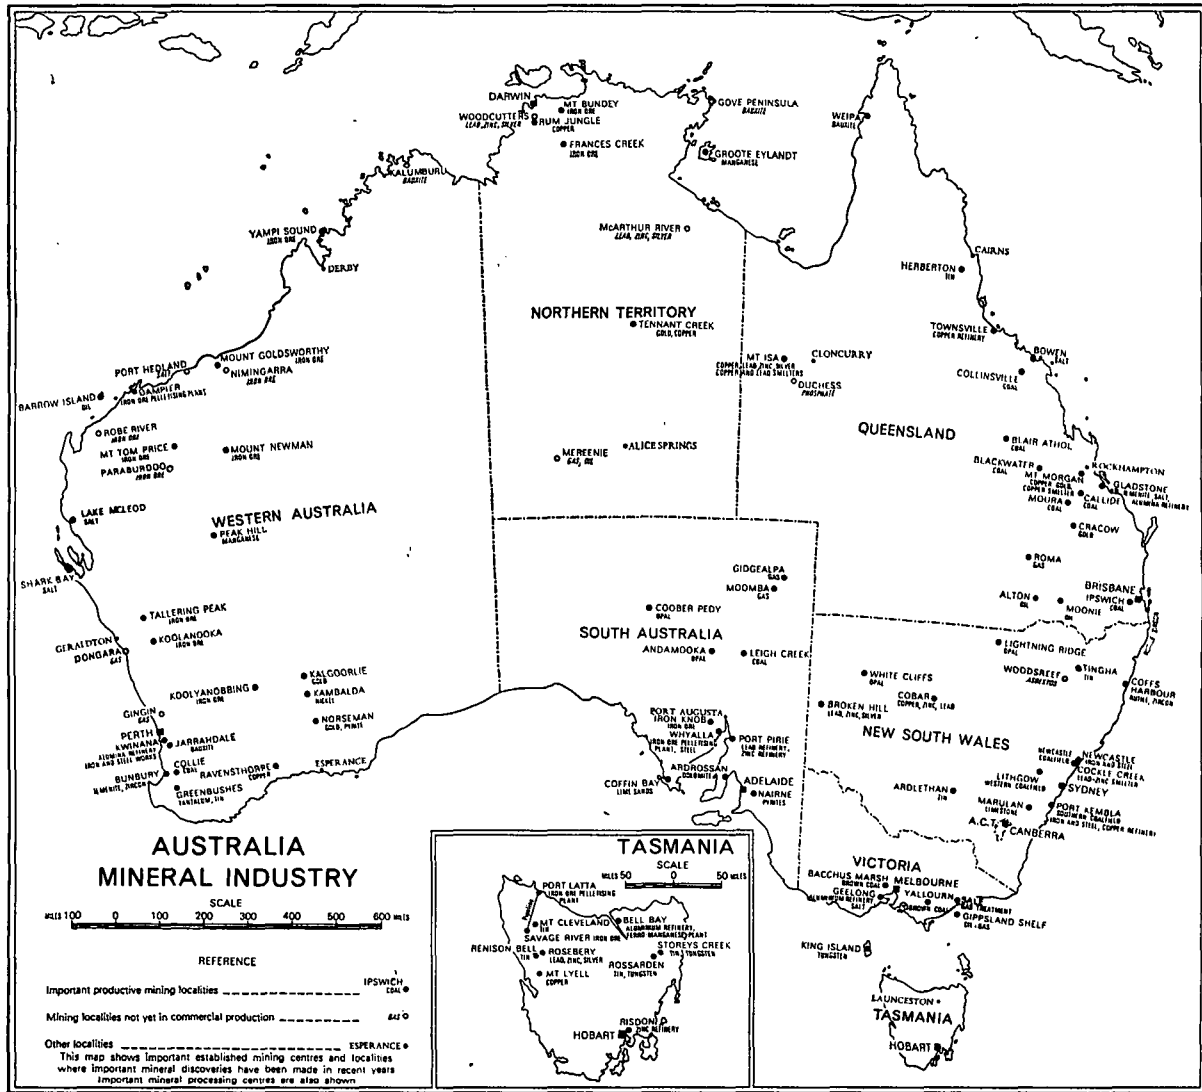

### Mineral resources

Australia is self-sufficient in most minerals of economic importance and much more than self-sufficient in some. The following table summarises, in a general way, known reserves and production of the principal metals and minerals in relation to Australian consumption of these commodities and present export availability. Many qualifications are necessary to a simple summary of this kind, and the table should be read in conjunction with the following detailed notes on principal minerals.

#### RESERVES OF MINERALS: AUSTRALIA

(Source: Bureau of Mineral Resources, Geology and Geophysics)

<i>Production</i>	<i>Reserves adequate</i>	<i>Reserves uncertain</i>	<i>Reserves negligible</i>
Production sufficient for domestic demand and exports	Barite Bauxite Cadmium Coal (black) Copper Gold Gypsum Iron ore Lead	Beryl Talc Tantalite	

Figures in parentheses between figures of States and Territories.

RESERVES OF MINERALS: AUSTRALIA—*continued*

<i>Production</i>	<i>Reserves adequate</i>	<i>Reserves uncertain</i>	<i>Reserves negligible</i>
Production sufficient for domestic demand and exports	Bismuth Manganese ore (metallurgical) Mineral sands(a) Nickel Opal Salt Silver Tin Tungsten Zinc	Glass sands	
Production sufficient for domestic demand	Clays (except light grade china clay) Coal (brown) Dolomite Felspar Limestone	Sillimanite	
Production not sufficient for domestic demand	Asbestos (chrysotile) Lithium minerals Phosphate rock Sulphides (as source of sulphur)	Abrasives Antimony Bentonite China clay Chromite Cobalt Diatomite Fluorite Magnesite Manganese ore (chemical) Mercury Mineral pigments Petroleum Platinum	Molybdenum
Production nil	Magnesium Potassium salts Vanadium	Arsenic Asbestos (crocidolite) Diamonds Graphite Vermiculite	Borates Nitrates Sulphur

(a) Ilmenite, monazite, rutile, zircon.

**Individual minerals**

**Aluminium.** As a result of recent discoveries at Weipa, Gove, in the Darling Range, and in the Kimberley area, Australia's reserves of bauxite are known to be very large, perhaps the largest in the world. Total reserves at Weipa are believed to be in excess of 3,000 million tons, while the deposits at Gove are reported to contain up to 250 million tons of bauxite. In the Darling Range, reserves of economic grade bauxite are estimated to exceed 500 million tons spread over several locations. Another significant deposit of over 200 million tons has so far been proved in the Mitchell Plateau area in the Kimberley district of Western Australia.

**Coal.** Australia has coal resources adequate to provide for future domestic requirements and a substantial export surplus. These resources include coal of all types, except pure anthracite. Australia's coal reserves are concentrated mainly in the mainland eastern States. The bituminous coal is located mainly in New South Wales and Queensland; Victoria has very substantial brown coal reserves in the Latrobe Valley. A table showing Australian coal reserves is published in Year Book No. 53, page 1065.

**Copper.** The principal deposit of this metal is at Mount Isa, where ore reserves were estimated at 75 million tons in 1969. Other important deposits are situated at Cobar, New South Wales, Mount Morgan, Queensland, Mount Lyell, Tasmania and Tennant Creek, Northern Territory. A small deposit at Ravensthorpe, Western Australia has also been developed.

**Crude oil.** Recent exploration and development activity indicates that Australia has substantial reserves of crude oil and that additional reserves will be discovered in the near future as exploration activity finds further drilling prospects, particularly in the off-shore areas. The Moonie and Alton

fields in Queensland, and the Barrow Island field in Western Australia have been producing since 1964, 1966 and 1967 respectively. The Barracouta, Marlin and Halibut fields in the off-shore Gippsland Shelf area in Victoria commenced production in 1969. Production from the nearby Kingfish field is expected to start in mid to late 1970. At the end of 1969, recoverable reserves in Australia were estimated to be 1,860 million barrels and the recent discoveries indicate the possibility of an upward revision of this figure in the near future.

**Gold.** Australia's gold resources are heavily concentrated in Western Australia, mainly in the Kalgoorlie-Coolgardie area, but small deposits of gold-bearing ore occur in all States. In addition, gold is commonly obtained as a by-product of other mining activities, particularly copper mining. Economic gold ore reserves at Kalgoorlie were estimated at more than 10.8 million tons in 1969, with a gold content of 5.20 dwt per ton.

**Iron ore.** In recent years very extensive deposits of iron ore have been discovered in Australia. These discoveries have established Australia as one of the most important iron ore provinces in the world. The largest deposits are located in the Hamersley and Ophthalmia Ranges of north-west Western Australia. Other commercially important deposits of iron ore are situated in the Savage River area of Tasmania, in the Middleback Ranges of South Australia, in the Mount Goldsworthy area, and at Yampi Sound, Koolyanobbing, and Koolanooka in Western Australia, and at Mount Bunday and Frances Creek in the Northern Territory. These deposits are adequate to supply the estimated needs of the Australian iron and steel industry far into the future, as well as providing a large export availability. Total Australian reserves with an iron content greater than 50 per cent are estimated to be more than 20,000 million tons.

**Lead-zinc.** Australia has been a major producer of lead and zinc since the discovery of ore at Broken Hill, New South Wales in 1883. Reserves of lead-zinc ore at Broken Hill are currently 17.3 million tons assaying 12 per cent lead and 11 per cent zinc. Reserves at another major producing mine, Mount Isa in Queensland, are 34.6 million tons assaying 7 per cent lead, 6 per cent zinc. Preparations are now being made to start production from a new mine near Mount Isa with reserves of 35.0 million tons of ore, assaying 8 per cent lead and 10 per cent zinc. The capacity of the mine at Rosebery in Tasmania (reserves of 9.3 million tons, 6 per cent lead and 18 per cent zinc) is being increased. Definite proposals for the development of McArthur River in Northern Territory (reserves of 200.0 million tons, 4 per cent lead and 9 per cent zinc) have not yet been announced. Reserves also exist at Cobar, New South Wales, Beltana, South Australia, and Brown's Prospect and Woodcutters, Northern Territory.

**Manganese.** Australia's known reserves of manganese, which is highly important for the iron and steel industry, are in excess of domestic requirements, and exports have increased sharply in recent years. The principal deposits currently being worked are in the Pilbara area of Western Australia and on Groote Eylandt in the Gulf of Carpentaria. Reserves on Groote Eylandt are substantial.

**Mineral sands.** Ores of titanium (rutile and ilmenite), zirconium (zircon) and thorium (monazite) occur in beach sands over extensive areas of the north and central coasts of New South Wales, the south and central coasts of Queensland, and the south-western corner of Western Australia. Resources are large and easily workable. Australia's reserves of rutile and zircon represent a large proportion of the world's reserves of these minerals. Australia is responsible for about 90 per cent of the world's supplies of rutile, 85 per cent of zircon, 30 per cent of monazite and 25 per cent of ilmenite.

**Natural gas.** Significant discoveries of natural gas have been made throughout Australia, the most notable being the Barracouta and Marlin fields with combined reserves of 5.3 U.S. trillion cubic feet, the Gidgealpa and Moomba fields with reserves of 1.23 U.S. trillion cubic feet in South Australia and numerous small fields in the Roma and Rolleston areas in Queensland with combined reserves of 200 U.S. billion cubic feet. Commercial production is being undertaken from the Barracouta, Marlin, Gidgealpa, Moomba and Roma fields. Total daily gas production at the end of 1969 was of the order of 57 million cubic feet. To these commercial fields must be added the significant discoveries at Yardarino, Gingin, Dongara and Mondarra in Western Australia where reserves are estimated at 500 U.S. billion cubic feet and the reserves of 1.1 U.S. trillion cubic feet at Mereenie and Palm Valley in the Northern Territory. The total reserves of natural gas in Australia, excluding Papua and New Guinea, are estimated at 13.2 U.S. trillion cubic feet.

**Natural gas liquids.** The production of natural gas liquids in association with natural gas is becoming an important facet of Australian petroleum production. Natural gas liquids, also known as condensate, are produced in association with gas from the Barracouta, Marlin, Gidgealpa and Moomba fields and to a lesser degree at Roma. Natural gas liquids from Barracouta and Marlin are separated from the gas at the Dutson gas and crude stabilisation plant and piped to Westernport Bay for shipment to local and export markets. As yet, the liquids extracted from the Gidgealpa and Moomba gas are not used commercially but are returned to the reservoir for future reclamation. The liquids produced at Roma, because of their small quantity, are mainly used as fuel on the producing fields.

Reserves of natural gas liquids in Australia, excluding Papua and New Guinea, are estimated to be 208 million barrels.

*Nickel.* In the Kalgoorlie region of Western Australia a number of nickel sulphide ore bodies have been discovered since 1966. Reserves contained in more than 14 separate ore bodies total more than 27 million tons averaging 3 per cent nickel. Large lateritic nickel deposits have been discovered at Wingellina in Central Australia and at Greenvale and Marlborough in Queensland; plans to develop the Greenvale deposit were announced in early 1970.

*Phosphate.* Accelerated search for phosphate rock commencing in late 1964 resulted in the discovery of major deposits in north-west Queensland in 1966. Detailed assessment and feasibility studies have yet to be completed.

*Tin.* The main deposits of tin now being exploited are in the Herberton field inland from Cairns, Queensland, north-west and north-east Tasmania, in the Pilbara region and in the south-west of Western Australia, and in the New England area, at Mt Tallebung, and Ardlethan in New South Wales. As the result of exploration and expansion of known deposits in recent years, Australia is now a net exporter of this metal.

*Tungsten.* The main deposits of tungsten ores are in northern Tasmania (wolfram) and on King Island (scheelite). Australia's own requirements are small, and production is principally for export.

*Uranium.* Australia's known reserves of uranium ore were mined during the years 1953 to 1963. During this period substantial quantities of uranium concentrate were exported to the United Kingdom and the United States. In 1967, the Minister for National Development announced a partial embargo on exports of uranium from Australia, which was designed to conserve known resources while encouraging exploration for new deposits. The policy represents a liberalisation of former policies in that prospecting companies are given an assurance in advance that approval would be given to export specified quantities of uranium from existing or newly discovered deposits, depending on their size and date of discovery. Stated reserves amounted to 11,620 short tons of uranium oxide reasonably assured and a further 3,230 short tons possible but not proven; of these reserves, 10,660 short tons were said to be economically recoverable within the price range \$5 to \$10 per pound and 4,190 short tons economically recoverable within the price range \$10 to \$30 per pound. A marked increase in exploration activity following the relaxation of export restrictions has resulted in several important discoveries. At Mary Kathleen in north-west Queensland, an extensive programme of diamond drilling is reported to have significantly extended previously known reserves, while at Westmoreland also in north-west Queensland a preliminary assessment of recently discovered deposits suggests that total reserves could exceed those at Mary Kathleen. Other important areas of exploration are Mount Painter in South Australia, Rum Jungle and South Alligator River in Northern Territory and the Kimberley region of Western Australia.

## Administration

For all practical purposes all mineral rights in Australia are vested in the Crown. In the States, sovereign rights are held by the State Governments with respect to mineral resources within their boundaries. In the Territories of the Commonwealth these rights are vested in the Commonwealth Government. The Commonwealth Government is able also to influence over-all development and production activity in the mineral industry by virtue of its statutory powers with respect to international trade, customs and excise, taxation, and loan raisings. Certain specially formed bodies such as the Joint Coal Board and the Australian Atomic Energy Commission have been given administrative responsibility in defined areas.

### Control of mining

Each State or Territory in the Commonwealth has its own mining Acts or Ordinances and regulations governing the prospecting for and working of mineral deposits. These Acts, etc. are similar in principle, but differ in detail. They all make provision for miner's rights to prospect and small mining leases for mineral production. The principles embodied in these Acts, etc. were established many years ago when mining operations were generally small scale and labour intensive. Although amendments have been enacted to modernise the legislation, it is generally inadequate for the large scale capital-intensive operations often involved with modern mineral development. For this reason a large enterprise may take the course of acquiring mining titles by negotiation with the appropriate Minister for Mines and having the agreed terms and conditions embodied in an Act of the State Parliament. This method of acquisition has been used in several cases where the leasing company undertook an obligation (such as the erection of a large treatment works) in return for leases over large areas for a long period, and has become more common in recent years (e.g. iron ore in Western Australia, coal and bauxite in Queensland, bauxite in the Northern Territory).

The following table sets out particulars of the areas occupied under mining Acts and Ordinances in the several States and Territories at 31 December 1965 to 1969. These figures exclude data relating to exploration licences, etc., covering the large areas referred to in the next section below. Also excluded are areas occupied under petroleum exploration and development titles, particulars of which are shown in the table on page 910.

AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES<sup>(a)</sup>  
STATES AND NORTHERN TERRITORY, 31 DECEMBER 1965 TO 1969  
(<sup>'000</sup> acres)

Year	N.S.W. <sup>(b)</sup>	Vic.	Qld <sup>(c)</sup>	S.A. <sup>(b)(c)</sup>	W.A. <sup>(d)</sup>	Tas.	N.T. <sup>(b)</sup>	Total
1965 . . .	1,015	60	2,494	93	263	45	61	4,031
1966 . . .	1,083	84	2,591	98	343	54	36	4,289

1969 . . .	1,397	626	2,607	97	1,566	54	93	6,440

(a) Excludes areas held under special arrangements: see following text. (b) At 30 June. (c) Excludes lands held under miners' rights and dredging claims. (d) Excludes holdings under miners' rights.

### Control of exploration

This section refers in general to the exploration for all types of mineral deposits in Australia. Additional information relating to the search for petroleum is set out in the following section.

Following the introduction of large-scale modern prospecting methods (particularly air-borne prospecting), the small prospecting areas referred to in the previous section were found to be unsuitable in some instances, and steps have been taken in the States and Territories to ensure the availability of large areas for prospecting by interested persons. Large areas may be made available in either of the following ways:

- (i) by the Minister of Mines withdrawing an area from the provisions of the Mining Act and giving an informal agreement that the prospector would have preference in applying for titles to leases within the area; or
- (ii) by provision within the Mining Acts or Ordinances for the issue of authorities to prospect over an area defined by a written agreement which also sets out provisions as to the amount of money to be spent, methods of prospecting, tenure of the agreement, etc.

The tenure of such areas is limited, usually to one or two years only, and, if renewed for a further period, is only over an area selected from the larger area as a result of work done during the life of the initial agreement. Neither form of prospecting concession gives the holder any rights over, or authorities to prospect on, land already held under a mining title within the agreed area. Unless specifically stated in an agreement, the discovery of minerals, whether inside or outside an area covered by an authority to prospect, gives the discoverer no legal rights except the right to apply for a mining lease over the area in which the discovery was made. Suitable prospects are converted to mining tenements by making application for lease under the appropriate mining Act.

### Control of petroleum exploration

*On-shore.* In Australia, all petroleum is, and shall be deemed always to have been, the property of the Crown. Consequently, full control of petroleum mining rights is vested in the Government or Administration of each State or Territory. Any company, organisation or individual proposing to undertake petroleum exploration or development must first satisfy the Government concerned that the necessary financial and technological resources are available to carry out the operation.

There are three main types of petroleum titles:

- (a) the permit, covering initial geological, geophysical and exploration drilling;
- (b) the licence (in Victoria only), which covers detailed surveys and drilling; and
- (c) the lease, which covers development operations and production.

Further details of the petroleum legislation are given in Year Book No. 55, pages 996 and 997.

*Off-shore.* The *Petroleum (Submerged Lands) Act 1967* is the instrument whereby the control and safeguarding of the exploration and exploitation of petroleum resources on the territorial sea-bed and on the continental shelf are assured. Complementary legislation has been passed by each State Government and by the Federal Government.

The legislation provides for a two-stage system of titles: the exploration permit, which covers all forms of exploration including drilling, and the production licence, which covers development and exploration. Royalty is generally shared between State and Federal Governments on a 60 : 40 basis; however, overriding royalty is payable to the State under certain conditions. Mineral royalty receipts of Governments under these Acts are included in the table on this page. For full details of the off-shore legislation, see Year Book No. 55, pages 997-8.

The table following shows details of areas occupied under both on-shore and off-shore petroleum exploration and development titles at 31 December 1965 to 1969.

**AREAS OCCUPIED UNDER PETROLEUM EXPLORATION AND DEVELOPMENT

(a) At 30 June.

#### Mineral royalties

The collection by governments of royalties for the production of minerals within their area of authority is an internationally accepted practice. In Australia the responsibility for mineral royalties is largely a State concern, and all States currently collect some form of mineral royalty payments. In the past most States have relied on an established system of standard rates which were uniform for all producers of any particular mineral in the State concerned. These charges were either a fixed monetary amount per ton (e.g. 5c per ton on gypsum mined in New South Wales) or an *ad valorem* royalty (e.g. 1.5 per cent of gross value of gold produced in New South Wales).

In recent years there has been an important basic change in the system of establishing royalty commitments, and it is now quite common for State Governments to negotiate special royalty rates with companies which are seeking mineral leases for large scale developments. These royalty rates may vary, depending on whether production is for export or for domestic processing. The rates for a particular mineral may also vary between producers. Important examples of this type of royalty agreement are the iron ore development agreements in Western Australia and coal development agreements in Queensland. Mineral royalties received by Governments in recent years are shown in the table below.

**MINERAL ROYALTY RECEIPTS: GOVERNMENTS 1964-65 TO 1968-69**  
(\$)

	1964-65	1965-66	1966-67	1967-68	1968-69
New South Wales . . . . .	19,946,772	24,317,168	16,326,973	11,029,697	9,067,603

Commonwealth . . . . .	..	..	..	..	360

#### Control of exports

The Commonwealth Government maintains export controls over certain minerals and metals. These controls are enforced by means of Customs (Prohibited Exports) Regulations as amended from time to time by Statutory Rules. The Commonwealth authorities having jurisdiction over mineral and metal exports, together with the relevant products, are listed below. A clearance to export is needed in each case.

*Department of National Development*—iron ores, beneficiated iron ores and iron concentrates; mineral sands (whether treated or untreated), and concentrates of mineral sands, containing zircon,

rutile or ilmenite; manganese ores; beryllium ores and concentrates; tin ores and concentrates, refined tin in the form of ingots or in any other refinery form, and any of the following materials from which tin may be obtained, being materials resulting from the refining of tin, that is to say, residues, slag, dross, dust and other wastes; copper matte, blister copper, copper scrap, copper refinery shapes; copper alloys in the form of ingots, billets, etc.; copper alloy scrap; any of the following materials from which copper may be obtained, that is to say, residues, speiss, slag, dross, scale, sweepings, ash, sludge, slime, dust and wastes; and natural gas.

*Department of Primary Industry*—phosphate rock, phosphate and superphosphate, and fertilisers containing phosphate or superphosphate.

*Australian Atomic Energy Commission*—minerals, raw and treated (including residues and tailings) containing more than 0.05 per cent of uranium or thorium, singly or together; uranium and thorium minerals including pitchblende and monazite; uranium, thorium, beryllium and lithium metals, compounds and alloys; hafnium-free zirconium metal, alloys and compounds; nickel metal in certain forms.

After a review of the copper controls administered by the Department of National Development, the Commonwealth Government announced in March 1969 that the ban on the export of copper scrap and ingots, and copper alloy scrap and ingots would be continued. Export permits are generally issued also for copper residues, dross, ashes, slag and similar materials, and primary copper materials.

Export controls on tin and other tin-bearing materials were introduced by the Commonwealth Government in 1968 for reasons arising from Australia's membership of the International Tin Agreement. The restrictions were lifted a year later.

The Minister for National Development announced on 20 January 1970 that the export of natural gas would be subject to control in order to conserve supplies for local use. Export will be permitted only from fields remote from significant local markets.

#### **Joint Coal Board**

The Joint Coal Board was established in 1946 under joint legislation of the Commonwealth and of the State of New South Wales to carry out special administrative functions in regard to the New South Wales black coal mining industry. A summary of these functions is given below.

- (i) To ensure that coal is produced in the State of New South Wales in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries;
- (ii) to ensure that the coal resources of the State are conserved, developed, worked and used to the best advantage in the public interest;
- (iii) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades, and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and
- (iv) to promote the welfare of workers engaged in the coal industry in the State.

#### **Australian Atomic Energy Commission**

During 1953, Commonwealth legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilisation of uranium in Australia. This Act, the *Atomic Energy Act 1953*, superseded the *Atomic Energy (Control of Materials) Act 1946*, but retains a provision of that Act which provides for the control of substances which could be used for production or use of atomic energy.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. The Commission operates under the direction of the Minister for National Development.

### **Government assistance**

The Commonwealth Government and the various State Governments provide assistance to the mineral industry in a variety of ways. The main forms of assistance are discussed below.

#### **Commonwealth Government Assistance**

Assistance provided by the Commonwealth Government takes the form of income taxation concessions, subsidies, bounties, and technical assistance mainly through the work of the Bureau

of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization. A table showing direct Commonwealth Government payments to sectors of the mineral industry is included on page 915.

*Income taxation concessions.* One-fifth of the net income derived from mining for prescribed minerals in Australia or the Territory of Papua and New Guinea is exempt from tax. Principal minerals to which this concession applies are as follows: asbestos, bauxite, radio-active ores, rutile and zircon; and ores of copper, nickel and tin.

Income derived from mining principally for gold in Australia or the Territory of Papua and New Guinea is exempt from tax. The exemption is also available in respect of income derived from mining principally for gold and copper if the value of the gold obtained is not less than 40 per cent of the value of the total output.

Dividends paid wholly and exclusively out of exempt mining income are also exempt from tax.

One third of call moneys paid by resident and non-resident investors on non-redeemable shares in a company, whose principal business is mining or prospecting for minerals in Australia or the Territory of Papua and New Guinea, is allowable as a deduction from the investors' assessable income. Where the shares in such a company are issued after 9 May 1968, the deduction is dependent upon the company lodging a declaration that the call moneys have been, or will be, expended exclusively on the search for minerals (including petroleum) obtainable by mining.

Other valuable assistance has been given in the form of certain taxation concessions to encourage the search for petroleum and other minerals. Resident investors are permitted, for tax purposes, to deduct from their assessable income all application, allotment and call moneys paid for shares issued by petroleum exploration companies or companies engaged in prospecting or mining for other minerals obtainable by mining. These deductions are allowable only if the company elects to forgo an equivalent amount of the special deductions for capital expenditure to which it would otherwise be entitled. Many companies engaged in exploring for petroleum and other minerals have elected to pass on this benefit to their shareholders.

Special deductions for capital expenditure incurred in the discovery and mining of petroleum are allowable to a company deriving income from the sale of petroleum, and products of that petroleum, mined by the company in Australia or the Territory of Papua and New Guinea. A company is entitled to these deductions only when it produces Australian petroleum in commercial quantities. The general effect of the deductions is to free the proceeds from the sale of Australian or Territory petroleum and its products from tax until all allowable capital expenditure has been fully recouped. Dividends paid wholly and exclusively out of profits so freed from tax are exempt.

Capital expenditure allowable to petroleum exploration companies includes, broadly, the cost of exploratory surveys, drilling and well-head plant, access roads and expenditure on housing and welfare.

A company mining or prospecting for minerals other than petroleum and gold may also be allowed special deductions for capital expenditure. Broadly, allowable capital expenditure includes expenditure on exploration and prospecting, preparation of a site for extractive mining operations, buildings, other improvements and plant necessary for those operations, access roads, certain treatment plant and housing and welfare.

The allowable capital expenditure of a general mining company may be deducted over the life of the mine, or twenty-five years, whichever is the lesser. Alternatively, the mine owner may elect to have the allowable capital expenditure deducted in the year it is incurred or, where appropriations have been made for such expenditure to be incurred in the following year, the deduction may be allowed in the year of the appropriation. Annual deductions for depreciation on mining plant may be allowed in lieu of spreading the cost over the life of the mine. Expenditure on housing and welfare may, at the option of the mine owner, be allowed over the life of the mine, or five years.

Special deductions are allowable for capital expenditure incurred on certain transport facilities used primarily and principally in relation to minerals mined in Australia, for the transport of raw minerals and certain specified products obtained from the processing of such minerals, or for transporting petroleum between the oil or gas field and a refinery or other terminal. The special deduction applies to expenditure incurred on a railway, road, pipe-line or similar transport facility. Allowable expenditure on transport facilities is deductible in equal annual instalments over a period of ten years.

*Petroleum search subsidy.* In 1957 the Commonwealth Government introduced the *Petroleum Search Subsidy Act 1957* whereby stratigraphic drilling operations were subsidised to the extent of 50 per cent of cost. An amendment in 1959 widened the scope of operations for which subsidy was offered to include all types of geophysical surveys and off-structure drilling. Subsidy payments under the Act for the years 1965 to 1969 are shown in the table on page 1004 of Year Book No. 55.

Various amendments to the Act have altered the amount of subsidy and the type of operations to which a subsidy is applicable. The most recent amendment in 1969, provides for the payment of subsidy for approved operations completed before 30 June 1974. On-shore operations, both exploration drilling and geophysical, are subsidised at the rate of 30 per cent of approved costs. All similar off-shore operations are subsidised at a rate dependant upon the Australian financial contribution to the operation, the maximum rate being 30 per cent for operations wholly financed by Australian companies. Details of earlier amendments are given on page 1001 of Year Book No. 55.

*Pricing of Australian crude oil.* Early in 1965 the Tariff Board conducted a public inquiry to determine an appropriate price for Australian crude oil, having regard to the Commonwealth Government's desire to encourage the search for oil and the consequent need to offer sufficient incentive to exploration companies. At the same time the Government indicated that it was anxious to prevent or minimise increased costs of petroleum products to consumers and to ensure that refineries using Australian crude oil were not detrimentally affected in relation to other refineries. Evidence was heard from oil exploration, marketing and refining interests, government officials, coal and power interests, and major users of refined petroleum products. The Tariff Board recommended at that time that Australian crude oil should be valued at \$US2.48 (\$A2.21) a barrel at the nearest refinery centre, plus a differential for the quality of the oil produced. The Government adopted the Tariff Board's recommendations, and raised the incentive margin to 67 Australian cents a barrel; this margin to apply to all Australian crude oil producers.

To ensure that indigenous crude oil is used to the maximum extent in Australian refineries, the Government also adopted the Tariff Board's recommendation to impose penal import duties of 0.8 cents a gallon on crude oil and 2.4 cents a gallon on motor spirit to be paid by the companies which do not take their share of local crude oil. The share of local crude to be taken will be based on the importer's share of total imports of refinery feedstock or refined products or both.

Any oil found in the Territory of Papua and New Guinea will be covered by these policies in the same way as oil found in Australia.

Under these arrangements the price of Moonie crude is \$A3.14 a barrel delivered Brisbane, broken down as follows: crude oil value \$2.21; incentive margin \$0.67; quality differential \$0.26.

Subsequently, the Barrow Island field began production and is \$3.24 a barrel delivered Kwinana.

This pricing structure was to remain operative until 17 September 1970.

However, the discovery of very large crude oil reserves in the Gippsland Shelf fields, due to begin production in 1969, revealed that this pricing structure could result in the Australian consumer paying more for indigenous petroleum products, than for similar products refined from imported crude oils. Following negotiations with the Commonwealth Government the Gippsland Shelf operators agreed to forgo the \$0.67 a barrel incentive, plus a further \$0.05 per barrel. This will result in the pricing of Gippsland Shelf crude oil at \$2.47 per barrel in the early stages of production and \$2.44 per barrel in the third quarter of 1970 to 17 September 1970, i.e. the original price of \$3.19 minus 72 cents (incentive plus 5 cent discount). The further reduction to \$2.44 is a quality differential reduction of 3 cents as heavier crude oils commingle with the stream.

An agreement was reached between the Commonwealth Government and representatives of private enterprise on the price structure for indigenous crude oil for the five-year period commencing 18 September 1970.

Gippsland Shelf crude oil will be priced at \$2.06 per barrel f.o.b., Long Island Point, Westernport. This price is calculated as follows:

	<i>per barrel</i>
	\$
Weighted average posted price as at 10 October 1968 of principal crudes imported into Australia . . . . .	1.62
less weighted average discounts as at 10 October 1968 . . . . .	0.26
	<hr/> 1.36
plus weighted average overseas freights as at 10 October 1968 . . . . .	0.46
Wharfage and other charges as at 10 October 1968 . . . . .	0.07
	<hr/> 1.89
less a deduction for coastal freight . . . . .	0.09
	<hr/> 1.80

To this, the quality differential of 26 cents per barrel is added giving a total of \$2.06 per barrel.

Moonie crude oil on the same basis, for the five-year period will be \$2.15 per barrel f.o.b. Brisbane, since the coastal freight deduction of 9 cents per barrel does not apply.

Barrow Island crude will be the basic \$1.89 per barrel plus a quality differential of 32 cents, giving the total of \$2.21 per barrel f.o.b. Kwinana.

The price structure of any indigenous crude will be subject to any changes in composition and quality that might occur during the course of production.

*Assistance to the gold-mining industry.* Assistance to the gold-mining industry by subsidy was introduced at a time of rising costs in the industry and fixed official world price for gold. Because many producers were faced with the likelihood of closing down, the Government decided to subsidise marginal producers in Australia and the Territories of Papua and New Guinea. Under the *Gold-Mining Industry Assistance Act 1954* a producer, the value of whose gold output exceeded 50 per cent of the total value of his mine output, was eligible for assistance, subject to certain conditions, on the production of gold from 1 July 1954. The assistance scheme has been reviewed on a number of occasions since the Act was originally passed, and some liberalisations have been approved, including increases in the rates of subsidy payable authorised in amendments passed in 1957, 1959 and 1965.

Under the Act as it now stands the subsidy payable to small producers whose annual deliveries do not exceed 500 fine oz is \$6 per fine oz, irrespective of cost of production. For large producers, subject to certain provisions, the rate of subsidy payable is an amount equal to three-quarters of the excess of the average cost of production over \$27 per fine oz, with a maximum amount of subsidy of \$8 per fine oz. A producer whose deliveries during the year exceed 500 fine oz may elect to be treated as a small producer. In this case the subsidy rate payable per fine oz on total deliveries is \$6 reduced by 1c for each fine oz by which deliveries exceed 500 fine oz. The benefit under this provision terminates when deliveries in a year reach 1,100 fine oz. Where a producer receives an amount in excess of the official price of \$31.25 per fine oz as a result of sales on overseas premium markets or otherwise, the subsidy payable is, with effect from 1 July 1968, reduced by seventy-five per cent of the amount of the excess. Prior to 1 July 1968 subsidy was reduced by the full amount of the excess.

Payments under the Act will apply to production until 30 June 1973. The amounts paid to gold producers in the various States and Territories of Australia in each of the years 1965 to 1969 are shown in the table on page 915.

*Assistance to the copper mining industry.* After a Tariff Board investigation, assistance was accorded to the industry in 1958, partly by import duty and partly by bounty. Under the *Copper Bounty Act 1958-1966* bounty was payable, subject to specified conditions, on refined copper sold for use in Australia. The rate of bounty was \$70 per ton when the overseas price, as determined by the Minister for Customs and Excise, was \$580 or less. When the overseas price rose above \$580, the bounty fell by the same extent, so that no bounty was payable when the overseas price was \$650 or more. The Act lapsed on 31 December 1966. The import duty continues in operation, and is imposed on imports of copper when the overseas price falls below \$580 a ton, to the extent of \$1 for each \$1 that the price falls below \$580.

*Assistance to producers of sulphuric acid and iron pyrites.* Following recommendations of the Tariff Board, the *Sulphuric Acid Bounty Act 1954* was extended for a period of five years from 1 July 1960. Arising from these same recommendations, the *Pyrites Bounty Act 1960* was enacted on 15 December 1960 to be operative for a period of four and a half years from 1 January 1961. The Acts provide for bounties to be paid, subject to specified conditions, on sulphuric acid produced from prescribed materials of Australian origin and to producers of iron pyrites. Both of these Acts have now been extended by legislation to 30 June 1970. Payments under the above Acts in each of the years 1965 to 1969 are shown in the table on page 915.

*Payments to producers of phosphate fertilisers.* The *Phosphate Fertilizers Bounty Act 1963-1969* provides for a bounty to be paid on superphosphate and ammoniated phosphate fertilisers manufactured and sold for use in Australia on and after 14 August 1963. An amendment to this Act provides that approved trace elements, compounds or substances, when added to superphosphate, shall be deemed to be superphosphate for purpose of bounty eligibility. The bounty is based on the fertiliser value of superphosphate as measured by its soluble content of phosphorus pentoxide. A standard grade of superphosphate containing 20 per cent, plus or minus 0.5 per cent, soluble content of phosphorus pentoxide qualifies for the full bounty of \$12 per ton. When the phosphorus pentoxide content of the superphosphate is less than 19.5 per cent or above 20.5 per cent, bounty is payable at the rate of \$60 for each ton of contained phosphorus pentoxide. Bounty in respect of ammonium phosphate is payable at the rate of \$60 for each ton of the phosphorus pentoxide content of the ammonium phosphate. In addition to standard grade superphosphate, 'double' and 'triple' superphosphates are produced in Australia and bounty on these products is payable in accordance with the phosphorus pentoxide content. The intention of this Act is to assist consumers of superphos-

phate (primary producers) and to this end the benefits of bounty are required to be passed on to the end user of the bountiable product. The Act is due to expire on 31 October 1971. Payments under the above Act in each of the years 1965 to 1969 are shown in the following table.

**COMMONWEALTH GOVERNMENT PAYMENTS TO THE MINERAL  
INDUSTRY: AUSTRALIA, 1965 TO 1969**

(\$)

Year	Petroleum exploration (a)	Gold mining(b)	Pyrites mining(c)	Sulphuric acid production (d)	Phosphate fertiliser production (e)
1965 . . .	10,412,842	1,984,966	1,113,964	2,138,914	22,604,562
1966 . . .	10,154,169	3,784,241	288,319	1,397,679	25,817,516
1967 . . .	10,326,587	3,858,763	45,714	1,382,485	25,543,785
1968 . . .	13,805,484	2,817,453	..	1,279,260	24,906,817
1969 . . .	14,911,351	1,076,521	..	988,450	31,665,208

(a) *Petroleum Search Subsidy Act 1959-69*. Includes payments in the Territory of Papua and New Guinea: see also the table on page 940. (b) *Gold-Mining Industry Assistance Act 1954-1968* and *Gold Mines Development Assistance Act 1962* (expired 30 June 1965). Includes payments in the Territory of Papua and New Guinea. (c) *Pyrites Bounty Act 1960-1969*. (d) *Sulphuric Acid Bounty Act 1954-1969*. (e) *Phosphate Fertilizers Bounty Act 1963-1969*.

*Bureau of Mineral Resources, Geology and Geophysics.* The functions of the Bureau of Mineral Resources, Geology and Geophysics are to explore, investigate and encourage the development of mineral deposits; to survey and assess the mineral resources of the Commonwealth and its Territories and to initiate and investigate proposals for their development; to interpret the results of completed surveys and recommend ways of remedying or meeting mineral deficiencies and to advise on all aspects of the mineral economy of Australia, including the best utilisation of mineral resources in the national interest; to carry out geological and geophysical surveys and investigations and advise on all aspects of applied geology and geophysics.

The Bureau comprises five branches under the Director: Operations, Mineral Resources, Geological, Geophysical, and Petroleum Exploration. The Operations Branch consists of three sections, Planning and Co-ordination, Publications and Information, and Administrative. It carries out central office functions, including planning and control of programme, assessment of results, co-ordination of activities, liaison, and distribution of information. The Mineral Resources Branch comprises the sections Mineral Economics, Mining Engineering, and Petroleum Technology, and is concerned largely with those aspects of the Bureau's work which involve studies of the mineral industry as a whole, and the preparation of advice and reviews for the Government, industry and the public. The Geological and Geophysical Branches are responsible for the principal field activities of the Bureau, and the operation of observatories, while the Petroleum Exploration Branch is concerned with the administration of the *Petroleum Search Subsidy Act 1959-1969* and is also engaged in the assessment of sedimentary basins in Australia and its Territories. The establishment of the Bureau is 627 officers (at 30 June 1970), of whom 308 are professional. The budget for the financial year 1969-70 was \$21.6 million, of which \$14.3 million was provided for payment under the *Petroleum Search Subsidy Act 1959-1969*.

The Bureau maintains laboratories in Canberra and Darwin which are engaged on geochemical geochronological and petroleum technological studies and basic research into the design and testing of geophysical equipment. The Bureau also maintains a vulcanological observatory at Rabaul and geophysical observatories at Melbourne, Toolangi, Mundaring, Darwin, Port Moresby, Mawson and Wilkes (Antarctica), and Macquarie Island. The geophysical observatories are engaged in magnetic, ionospheric, and seismic investigations and are base stations for field operations.

*Commonwealth Scientific and Industrial Research Organization.* The activities of this body with respect to the mineral industry are discussed on page 917 under Research.

#### State Government assistance

In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

*New South Wales.* The State Mines Department renders scientific, technical and financial assistance to the mining industry. Grants, which are repayable in the event of pay minerals being discovered, are made to cover half the cost of prospecting and drilling operations. Loans may be made to prospectors and miners for the purchase of plant and machinery. A quantity of equipment is also available for hire in several localities. The Department has itself undertaken a programme of contract drilling to investigate the existence of mineral deposits in the State (including the testing and proving of coal resources). Expenditure on financial assistance in 1968-69 amounted to \$637,000 including \$95,000 on the Department's own drilling programme.

*Victoria.* The Mines Department provides loans for prospecting, development, or the purchase of machinery; ore crushing facilities through stamp mills at various parts of the State at nominal rates; diamond, rotary and percussion type drilling; mineral surveys; the provision of small and large scale geological maps of the State; and memoirs and bulletins on specific regional and economic studies published periodically.

Detailed sedimentary basin studies are continuing in the Otway, Gippsland and Murray Basins to elucidate the stratigraphy and structure and evaluate the economic potential. The survey of the State's groundwater resources is now well advanced and the study of the provision of town supplies from groundwater sources is being investigated.

*Queensland.* The Department of Mines provides assistance to mining by way of grants for construction and maintenance of roads in mining areas, repayable advances or subsidies for mine development, hiring of equipment, and assistance to prospectors. The Department maintains a concentration plant for tin ores at Irvinebank, an assay office at Cloncurry, a battery for treatment of gold-bearing ores at Charters Towers, and diamond drilling plants in various parts of the State.

*South Australia.* The Department of Mines provides the following services and facilities to the mineral industry: (i) hire of drilling plant and mining equipment, drilling and testing of mineral deposits, financial assistance in approved cases for mining development, development of sub-surface water supplies for farming, pastoral, irrigation, and mining purposes; (ii) geological examination of mineral deposits, ground water supplies, dam foundation and drainage problems, guidance on mining legislation, and publication and issue of geological bulletins and maps. It also provides, through the Australian Mineral Development Laboratories, facilities for chemical, metallurgical, analytical and assay investigations, testing and treatment of ores and minerals, and petrographic, mineragraphic and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

*Western Australia.* Prospectors receive assistance of either \$15 or \$17.50 a week according to the prospecting locality. North of the 26th parallel and within a defined area south of this lying largely outside the agricultural areas assistance is given to the extent of \$17.50 a week. In the remainder of the State prospectors receive \$15 a week. Provision is also made for the supply of some tools required for prospecting. There are nineteen State batteries operating intermittently throughout the goldfields for the treatment of ore from prospectors and small mine-owners at a nominal charge. A cartage subsidy is also granted to such operators sending gold ore to State batteries for treatment. Provision is made for loans to mine-owners who require assistance to develop mines. The Government also has a drilling scheme, financing mine-owners on a \$1 for \$1 basis.

*Tasmania.* The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or de-watering of shafts, for construction of dams and water races, for testing and proving a deposit of any mining product, for developmental work, and for diamond and other types of drilling. The Department has available for hire percussion and diamond drills for exploration, as well as a complete plant for small shaft sinking and tunnelling. Other assistance is rendered to the industry in the form of geological and engineering advice, through ore-dressing research into metallurgical recoveries, and the selection and design of treatment plant.

*Northern Territory.* To encourage the development of the mining industry the Northern Territory Administration operates two batteries for the treatment of miners' ores. The Tennant Creek battery is currently cyaniding the gold in accumulated tailings while the Mount Wells battery is crushing parcels of tin ores and small quantities of gold, lead and copper ores. The crushing charges are subsidised by government grants. In addition, the Administration provides cartage subsidies and financial advances to encourage miners to carry out mining operations. Assistance is also given to the industry by drilling encouraging prospects. Roads and water supply services are provided and maintained for mines under active development throughout the Territory.

## Research

Research investigations into problems of mining, ore-search, ore-dressing and metallurgy are conducted by Governmental bodies, by universities, by private enterprise, and by combined efforts of these bodies. A summary of their functions follows.

### Australian Atomic Energy Commission

The Australian Atomic Energy Commission conducts research at its laboratories at Lucas Heights in Sydney on the development of nuclear power, including research on nuclear materials and on metals and ceramics used for nuclear power. Research conducted by the Commission is discussed in detail in Chapter 20, Education, Cultural Activities and Research.

### Australian Mineral Development Laboratories

Contract research and technical consulting for the mineral and associated industries is undertaken by The Australian Mineral Development Laboratories (Amdel), at Adelaide. This Organisation is controlled by a council comprising representatives of the mineral industry, the South Australian Government and the Commonwealth Government. Extensive facilities are available in the fields of analytical chemistry, mineralogy and petrology, chemical and metallurgical engineering, computer services/operations research, and materials technology. Both long and short term applied research is carried out and all investigations are conducted on a strictly confidential basis.

### The Baas Becking Geobiological Research Laboratory

In 1965 the Baas Becking Geobiological Research Laboratory was established in the Bureau of Mineral Resources Building in Canberra, under the joint sponsorship of the Commonwealth Scientific and Industrial Research Organization, the Bureau of Mineral Resources, and the Australian Mineral Industries Research Association (*see* Research by private enterprise, page 918). The broad objective of the research work is to investigate the biological and chemical processes associated with the formation of mineral deposits of the stratiform type.

Initial emphasis is being placed on investigations to establish the relationship of biological factors to the natural physico-chemical environment with particular reference to the possible role of these factors in the formation and transformation of sulphide minerals. Investigations have included the response of micro-organisms to heavy metals; biochemistry and physiology of oxidative and reductive sulphur transformations; role of organisms in the concentration of mineral elements; physico-chemistry of low-temperature mineral synthesis; mobility of sulphides under the influence of temperature and pressure and the interaction of mineral types; and biological leaching of low-grade sulphide minerals.

### Bureau of Mineral Resources, Geology and Geophysics

Mineral research by the Bureau of Mineral Resources is concerned with basic problems of mineral emplacement. Special studies are undertaken of: the sedimentary environment of potentially oil-bearing rocks; the genesis of continental and marine phosphate; the fundamental chemistry of metallic ore deposits; the structural, chemical, and stratigraphic contents of ore deposits; and geophysical interpretation by means of model testing.

For details of the functions of the Bureau of Mineral Resources, Geology and Geophysics, *see* page 915.

### Commonwealth Scientific and Industrial Research Organization

Research for the mineral industry by the Commonwealth Scientific and Industrial Research Organization is undertaken mainly in the Divisions of Applied Mineralogy, Mineral Chemistry, and Chemical Engineering. All of these groups have laboratories in Melbourne. In addition, the Division of Applied Mineralogy has laboratories in Perth and Sydney, and the Division of Mineral Chemistry has a laboratory in Sydney.

The research programme of the Division of Applied Mineralogy is concerned mainly with the production and utilisation of natural and synthetic mineral products. Research is undertaken on cement and concrete, industrial refractories, engineering ceramics, clays, mineral-organic complexes, fillers, foundry materials and on the genesis of ores and the geochemistry of some economic minerals. The Division of Mineral Chemistry is undertaking research aimed at a more thorough evaluation of Australian minerals and their better utilisation through chemical, electrochemical and metallurgical processes. It includes studies on mineral exploration techniques, and the processing and utilisation of minerals as well as broad based investigations related to more general aspects of mineral science and technology. The Division is working closely with industry on sulphide minerals, mineral

sands, iron ores, coal and industrial carbons. In the Division of Chemical Engineering, projects of particular interest to the mineral industry includes studies on the dynamics and automatic control of mineral processing operations such as grinding, classifying and flotation, fluidised-bed techniques, high-temperature extraction metallurgy and metal refining.

All C.S.I.R.O. groups taking part in mineral research are in close contact with industry. Several projects are being developed by collaboration between C.S.I.R.O. and Australian firms and a significant proportion of the Organization's mineral research is now carried on with funds provided by industry. A committee set up by the Advisory Council of C.S.I.R.O. is continuing to examine and advise on research needs in the mining and processing industries in the changing environment.

#### **National Coal Research Advisory Committee**

The functions of the National Coal Research Advisory Committee are to review coal research activity in Australia, to recommend priorities for further activities in this area, and to allocate special Commonwealth funds of \$260,000 per year provided for coal research projects as recommended by the committee. This amount is additional to that expended by C.S.I.R.O. and Commonwealth Departments on coal research. The major beneficiary under this scheme is the Australian Coal Industry Research Laboratories; other beneficiaries are the State Electricity Commission of Victoria (for brown coal research) and the Universities. From 1965 to 1969 special coal research funds of \$520,000 annually were available to the committee, comprising the Commonwealth contribution of \$260,000 matching an equivalent total contribution from State Governments and coal producing and consuming industries. Beginning with the financial year 1968-69 the States and industry are independently sponsoring coal research and development according to their own individual requirements.

#### **University Research**

The various universities in Australia carry out research into various aspects of the mineral industry such as geology, ore mineralogy and genesis, mining techniques, mineral processing, extractive metallurgy, and materials and metals technology.

#### **Research by private enterprise**

Most large mining and smelting companies have laboratories dealing with their own individual immediate problems. Private industry has formed the Australian Mineral Industries Research Association, which is composed of fifty members representing a large proportion of the mining, metallurgical and related companies operating in Australia at present. It was set up in 1959, chiefly to represent private industry in the management of the Australian Mineral Development Laboratories, but the Association now finances other research work into geology, mining and ore-dressing at Universities, C.S.I.R.O., and the Australian Mineral Development Laboratories. Expenditure for the year 1968-69 was \$165,819.

In addition, the Association provided \$50,000 to the Australian Mineral Development Laboratories towards the cost of a new building (the first of four such payments) and an advance of \$41,000 to International Technical Services Limited. The latter is a new non-profit consulting company jointly owned by the Association and Battelle Memorial Institute, Columbus, U.S.A. and associated with the Australian Mineral Development Laboratories.

### **International relations**

Because Australia is a large supplier of certain minerals to the rest of the world and because the welfare of the domestic industry depends to a large extent on the maintenance of a high level of exports, international relations are of considerable importance to the industry, and the Commonwealth Government takes an active role in international consultations and discussions relating to minerals. The most important international commitments are discussed below.

#### **International Tin Agreement**

The First International Tin Agreement (of the post-war period) was in operation for five years: from 1 July 1956 to 30 June 1961. This Agreement was subsequently replaced by the Second International Tin Agreement, which came into force provisionally on 1 July 1961 and definitively on 21 February 1962.

This Agreement was for a period of five years and had the following objectives:

- (a) to prevent or alleviate widespread unemployment or under-employment and other serious difficulties likely to arise from maladjustments between the supply and the demand for tin;
- (b) to prevent excessive fluctuations in the price of tin and to achieve a reasonable degree of stability of price;
- (c) to ensure adequate supplies of tin at prices which are fair to consumers and provide a reasonable return to producers; and
- (d) to provide a framework for the consideration of measures to promote the progressively more economic production of tin, while protecting deposits of tin from unnecessary waste or premature abandonment, thus facilitating expansion in world consumption of tin; and to keep under review the long-term need for the development of new deposits of tin.

The Third International Tin Agreement, which came into force provisionally on 1 July 1966 and definitively on 21 March 1967, contains several additional objectives:

- (a) to ensure conditions which will help achieve a dynamic and rising rate of production of tin on the basis of a remunerative return to producers, which will help secure an adequate supply at prices fair to consumers and which will help provide a long-term equilibrium between production and consumption;
- (b) in the event of a serious shortage of supplies of tin occurring or being expected to occur, to take steps to secure an increase in the production of tin and a fair distribution of tin metal at equitable prices.

Although the framework of the Third Agreement is basically that of the Second, objectives have been broadened in line with the principles of the United Nations Conference on Trade and Development (UNCTAD) and, as such, emphasise the need for expansion of export earnings in the developing countries. Thus the emphasis has been shifted from surplus production and export controls inherent in the Second Agreement to one of increased production in the new Agreement.

The Agreement is operated by the International Tin Council, which is made up of the following Governments: Australia, Austria, Belgium, Bolivia, Canada, Czechoslovakia, Democratic Republic of the Congo, Denmark, France, India, Indonesia, Italy, Japan, Korea, Malaysia, Mexico, Netherlands, Federation of Nigeria, Spain, Thailand, Turkey, United Kingdom. Member Governments participate as producing or consuming countries. The producing countries hold a total of 1,000 votes, distributed so that each country receives five initial votes and an additional number corresponding to its percentage as laid down by the Agreement. The consuming countries hold a total of 1,000 votes also distributed so that each country receives five initial votes and an additional number proportionate to tonnages. The allocation of votes in each category is periodically reviewed.

The International Tin Agreement establishes floor and ceiling prices for tin and, by the medium of a buffer stock and remedial trading on the London Metal Exchange, aims at confining the price within these limits. The buffer stock was established with contributions from producing countries, equivalent to 10,000 long tons of metal, wholly made in cash at £stg1,000 per long ton; a further £10 million remains on call from the producer members and a standby-credit facility of £10 million from a consortium of banks. The original buffer stock price range under the Third Agreement was: ceiling £1,400—must sell; £1,300 to £1,400—may sell; £1,200 to £1,300—no action; £1,100 to £1,200—may buy; floor £1,100—must buy. However, following devaluation of sterling, the buffer stock price range was adjusted to the following limits: £1,630—must sell; £1,515 to £1,630—may sell; £1,400 to £1,515—no action; £1,280 to £1,400—may buy; £1,280—must buy.

On 18 September 1968 the International Tin Council declared the period 19 September 1968 to 31 December 1968 to be a period of export control. The total permissible export amount during that period for the six producing members in the agreement, Bolivia, Congo D.R., Indonesia, Malaysia, Nigeria, and Thailand, was 42,950 long tons. The quotas established for the producer members represented a moderate cut, in effect some 4 per cent on reports in the second quarter of 1968. The Council also addressed an invitation to the Australian Government, asking that Australia limit its exports of tin to the same degree and for the same period as the producer members of the Agreement. The Australian Government introduced export controls on tin and tin concentrates as from 6 December 1968. Export restrictions on tin were lifted in early December 1969.

A United Nations Tin Conference under UNCTAD auspices negotiated a Fourth International Tin Agreement in Geneva during April and May 1970. The new Agreement is designed to follow the existing one which will expire on 30 June 1971. The objectives of the Agreement remain basically unchanged. They include maintaining a balance between world production and consumption of tin, preventing excessive fluctuations in the market price and increasing export earnings of producer countries. The basic mechanism of the Agreement remains unchanged, although greater flexibility in buffer stock operations is provided for, especially as regards buying and selling tin in the upper

and lower sections of the price range set by the International Tin Council. The price range will initially be the same as that in force at the end of the present Agreement. The current range, subject to revision by the Council, is £1,260 to £1,605 per metric ton.

#### **International Lead-Zinc Study Group**

With the cessation of stockpile buying of lead and zinc by the United States Government in 1958, world producers were faced with the prospect of a serious imbalance between world supply and demand for these metals. To meet this problem a series of meetings of interested governments was held, at which Australia was represented. These meetings culminated in the formation of the International Lead-Zinc Study Group which was established in January 1960. The Study Group comprises the following Governments: Algeria, Australia, Austria, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Finland, France, the Federal Republic of Germany, Hungary, India, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Peru, Poland, the Republic of South Africa, Spain, Sweden, Tunisia, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia, Zambia. The Group provides opportunities for inter-governmental consultations on international trade in lead and zinc and for studies of the world situation in lead and zinc having regard especially to the desirability of providing continuous accurate information regarding the supply and demand position and its probable development.

### **MINERAL INDUSTRY STATISTICS**

Statistics presented in this chapter refer mainly to mining and quarrying, mineral exploration, and overseas participation in Australian mining industry. Data relating to mineral processing and treatment activities are included where appropriate to present a more complete picture of the place of minerals in the Australian economy.

#### **Mining and quarrying**

##### **Definition**

The mining and quarrying industry is defined for statistical purposes as including all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc., and ore-dressing and elementary smelting of gold and miscellaneous treatment of non-metallic minerals where these operations are carried out in an associated plant at or near the mine. However, establishments primarily engaged in smelting and or refining (including the smelting and refining sections of the large plants operated at Mount Morgan and Mount Isa in Queensland and at Mount Lyell in Tasmania) are excluded from the statistical definition of the mining industry and are classified to the manufacturing industry.

##### **Coverage**

The statistical coverage of establishments engaged in mining is considered to be satisfactory. However, coverage of establishments engaged in the quarrying of construction materials is incomplete in most States. This deficiency is due primarily to the inherent difficulty of obtaining complete lists of quarries (including those operated by government authorities), many of which operate intermittently and in different locations. There is difficulty also in obtaining satisfactory returns from quarries operated in conjunction with some other activity, e.g. roadmaking, brick-works, etc., and quarries operated in conjunction with large construction projects, such as the Snowy Mountains Scheme, are excluded from these statistics. In some States there have been deficiencies also in the collection of data for certain non-metal (excluding fuel) mining industries, mainly because these are outside the fields normally under the administrative control of Mines Departments. Products chiefly affected are clays, loam and silica.

##### **Sources of Statistics**

Mining industry data (such as employment, costs, value of output, etc.) have been obtained annually since 1952 from the Mining and Quarrying Census. This Census is carried out in collaboration with the several Mines Departments and involves the uniform collection of particulars from all establishments employing on the average four or more persons during the period worked by the mine. A representative specimen collection form is included in the bulletin *Non-Rural Primary Industries*, No. 2, 1965-66 and 1966-67. For smaller mines either simplified census returns covering number of persons employed and value of output are collected, or these particulars are compiled from data made available by the Mines Departments. Oil search operations are excluded from the annual census, but the Bureau of Mineral Resources conducts an annual survey of these activities.

Mineral production statistics contained in this chapter consist, in the main, of data from the annual census and official statistics of the Mines Departments of the several States and of the Northern Territory Mines and Water Resources Branch. The particulars shown have been compiled as far as practicable on the standardised basis which has been used in Australia since 1950, and this presentation has involved some re-arrangement of official statistics published by the Mines Departments in some States. These statistics have been supplemented, as necessary, by data obtained from the Statisticians of the several States, the Bureau of Mineral Resources, Geology and Geophysics, the Joint Coal Board and from several other sources.

#### Classification of mining and quarrying industry

The mining and quarrying industry is classified into four major groups, namely metal mining, fuel mining, non-metal mining (excluding fuel), and construction material quarrying. Mining and quarrying establishments are classified to these groups and to sub-divisions of these groups on the basis of the product or products of the establishments. This method of classification is straightforward for those establishments which produce only one product, but for mines and quarries which produce more than one product classification is according to the most important mineral produced in terms of value. Thus a mine producing, say, both tin and tungsten minerals would be classified as a tin mine if tin were the most important product by value, and as a tungsten mine if tungsten were the dominant product. There is, however, one important exemption to this rule in that the mining establishment at Mount Isa is classified to the silver-lead-zinc sector rather than to the copper-gold sector.

For mines and quarries which produce more than one product it is not possible to apportion particulars of operations (such as employment, salaries and wages paid, costs) to the minerals produced. In practice, then, these data are recorded only as a total for each mine, and the mine is classified to an industry sector as outlined above.

Statistics relating to the structure of the industry, employment, production costs, value of additions and replacements to fixed assets, and value of output and production are given below and in the following pages.

#### Number of mines and quarries

The following tables show the number of mines and quarries which operated in each State and Territory in 1968 and in Australia for the years 1964 to 1968.

NUMBER OF MINES AND QUARRIES: STATES AND TERRITORIES, 1968

(a) Included in Other metal. (b) Incomplete. See Coverage, page 920.

## Employment in mining and quarrying

*Persons engaged.* Statistics of persons employed in the mining and quarrying industry are derived mainly from the annual census of that industry. Data on the work force employed in the industry are also obtained from the population censuses of Australia. The population census figure for mining and quarrying includes a number of persons excluded from the mining and quarrying census employment figure, e.g. persons engaged in exploration activities, prospectors, head office employees, etc. The number of persons whose industry statements were classified to 'mining and quarrying' at the population census of 30 June 1966 was 56,343 out of a total of 512,994 for all primary industries, and 4,856,455 in the total work force. For further information see the chapter Employment and Unemployment and 1966 Census Bulletin No. 9.6, *Population, By Industry and Occupational Status, Australia*.

The following two tables are derived from mining census data and show the average numbers engaged in the various mining industries in each State or Territory in 1968 and in Australia for the years 1964 to 1968. The figures show the average number of persons employed during the whole year, including working proprietors.

MINING AND QUARRYING: EMPLOYMENT(a)

*Size classification of mines and quarries.* The following table shows the distribution of the total number of mines into various size groups according to the average number of persons employed during the period worked by each mine in 1968.

## NUMBER OF MINES AND QUARRIES AND PERSONS EMPLOYED, BY AVERAGE NUMBER EMPLOYED: STATES AND TERRITORIES, 1968

Mines and quarries employing on the average(a)—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T. and A.C.T.	Aust.
<b>Less than 4 persons—</b>								
Establishments . . . . .	1,060	356	588	280	176	124	50	2,634
Persons . . . . .	1,942	512	1,008	473	437	208	72	4,652
<b>From 4 to 20 persons—</b>								
Establishments . . . . .	206	152	104	71	66	30	12	641
Persons . . . . .	1,460	1,196	1,009	626	547	211	110	5,159
<b>From 21 to 200 persons—</b>								
Establishments . . . . .	84	30	45	11	29	9	9	217
Persons . . . . .	6,368	2,504	2,497	558	2,463	677	609	15,676
<b>More than 200 persons—</b>								
Establishments . . . . .	31	..	6	2	9	5	1	54
Persons . . . . .	14,155	..	6,546	587	4,281	2,413	442	28,424
<b>Total—</b>								
Establishments . . . . .	1,381	538	743	364	280	168	72	3,546
Persons . . . . .	23,925	4,212	11,060	2,244	7,728	3,509	1,233	53,911

(a) Average during period worked. Includes working proprietors.

*Accidents in mining.* Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States, as varying criteria are used in determining what constitutes injury. In 1968, 42 persons were recorded as killed and 1,129 as injured in mining (excluding quarrying) accidents. Recorded deaths and injuries in that year in black coal mines were 13 and 292, silver-lead-zinc mines 6 and 306, gold mines 10 and 227. In mineral sands mining there was 1 death and 55 injuries reported. Persons killed and injured in the construction material quarrying industry numbered 5 and 109 respectively in 1968.

#### Salaries and wages paid

Salaries and wages paid in the mining and quarrying industries in Australia during each year 1964 to 1968 are shown in the following table. Information regarding rates of wages paid in the mining industry is shown in the chapter Labour, Wages and Prices (page 248) and also in the *Labour Report*.

#### MINING AND QUARRYING: SALARIES AND WAGES PAID<sup>(a)</sup>, AUSTRALIA 1964 TO 1968 (\$'000)

## Value of output and production

The following tables show particulars of value of output on an ex-mine basis (local value of production) and value of production (net value of production) for recent years. *These statistics are on an industry basis and not by product.* A more detailed reference to the value of production of mining and quarrying and other industries together with a brief explanation of terms used will be found in the chapter Miscellaneous.

*Local value of mining and quarrying production.* The following table shows particulars of the local value of production of mining and quarrying for 1968 and earlier years.

Due to the fact that the classification of individual mines to industry is on the basis of the principal mineral produced, the values in the following table for mining industry groups differ slightly in some cases from the totals of the corresponding groups of mine products shown in the table on page 933.

(a) Local value (i.e. value of output at mine or quarry) less cost of power, fuel, light and other materials and stores used; depreciation and maintenance costs have not been deducted. (b) Not available for publication, included in total for Australia. (c) Cost of materials used, etc., exceeds local value of production. (d) Includes other fuel mining. (e) Incomplete. See Coverage, page 920.

**Quantities of principal minerals produced**

In the preparation of Australian mineral commodity production statistics the quantities and values of individual minerals produced are recorded in terms of the form in which they are dispatched from the locality of each mine. For example, in the case of metalliferous mines, the output is recorded as ore if no treatment is undertaken at the mine, or as a concentrate if ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic output data, which are set out in the following tables through to page 929, the contents of metallic minerals are shown in the tables on page 930. Whenever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a 'pay metal' or a 'refiners' prize' when present in the particular mineral. In general, other metallic contents which are not recovered are excluded. Individual mineral products are arranged in four groups corresponding to the major groups of the industry, namely metal mining, fuel mining, non-metal mining (excluding fuel), and construction material quarrying, referred to on page 921. Particulars relating to uranium bearing minerals are excluded.

The following tables show particulars of the quantity of the principal minerals produced during 1968 and earlier years.

# MINE PRODUCTION OF PRINCIPAL METALS: AUSTRALIA

(METALLIC CONTENT OF MINERALS)

1936 TO 1968

# MINE PRODUCTION OF PRINCIPAL METALS AND PRODUCTION OF COAL

(METALLIC CONTENT OF MINERALS)

AUSTRALIA, 1936 to 1968

Graphs showing details of the mine production of principal metals (metallic content) and coal from 1936 to 1968 are included on plates 48 and 49, pages 931 and 932.

#### Local value of minerals produced, 1964 to 1968

Particulars of the values of minerals (mine and quarry products) produced are shown in the following table. The values represent the selling value at the mine or quarry of minerals produced during the years concerned.

Due to the fact that the classification of individual mines to industry is on the basis of the principal mineral produced, the values in the table on page 926 for mining industry groups differ slightly in some cases from totals of the corresponding groups of mine products shown in the table below.

#### LOCAL VALUE OF MINERALS PRODUCED: AUSTRALIA, 1964 TO 1968 (\$'000)

## Overseas participation in Australian mining industry

### Introduction

Any attempt to provide statistical information on the extent of overseas participation in local industry involves difficult problems of statistical concept and measurement. Broadly, there are two ways in which overseas participation may be measured. One is to examine the financial accounts of Australian companies and compare the value of *assets* of companies in which there is significant overseas investment with those of other Australian companies. The other is to examine the *operations* (as expressed in terms of production, wages and salaries, output, etc.) of establishments of Australian

companies in which there is significant overseas investment and compare their operations with those of establishments of other Australian companies. The second method has been adopted for a series of studies in overseas participation in the Australian mining industry.

#### Scope of the statistics

The statistics relate to the operations of establishments employing four or more persons in the mining and quarrying industry as defined for the annual mining and quarrying census except for establishments engaged in construction material quarrying and clay mining, which are excluded.

#### Classification of companies

The extent of overseas participation in the mining industry is measured by the operations of the establishments of companies in which there is direct investment from overseas, as determined by the annual survey of overseas investments. These are defined as follows.

- (i) Companies in Australia in which at least 50 per cent of the ordinary shares (or voting stock) is held by individual shareholders or companies resident in one overseas country, or where 25 per cent or more of the ordinary shares (or voting stock) is held by one company, or a group of companies, incorporated in one overseas country.
- (ii) Branches of companies incorporated overseas and registered in Australia as foreign companies.
- (iii) Wholly and partly owned subsidiaries and sub-subsidiaries, etc., of companies included in (i) and (ii) above.

Investment in ordinary shares or voting stock of Australian companies, including companies in which there is direct investment from overseas, where the proportion of shares held in a single country falls below the percentages specified in (i) above is defined as portfolio investment. Because of the difficulties encountered in determining the proportion of ordinary shares or voting stock of individual Australian companies held by portfolio investors overseas, *the figures for overseas participation in the mining industry exclude participation by way of portfolio investment.*

#### Further information available

In the following tables the degree of overseas participation is expressed in terms of net value of production only. Further details in terms of the value of power, fuel and materials used, local value of production, value of additions and replacements to fixed assets, salaries and wages paid, and average number of persons employed, as well as the value of production, may be found in the mimeographed bulletin *Overseas Participation in Australian Mining Industry, 1968*. The terms 'net . . .' and 'local value of production' are defined in Chapter 30 Miscellaneous.

### OVERSEAS OWNERSHIP AND CONTROL

In analysing the extent of overseas participation in local industry it is usual to distinguish between two aspects, overseas ownership and overseas control.

#### Overseas ownership

Statistics which give a general indication of the degree of overseas ownership in terms of the net value of production of Australian mining establishments are presented in the two following tables. In the compilation of these statistics the data for an establishment of a company in which there is no direct investment from overseas are allocated wholly to Australian ownership. The data relating to an establishment of a company in which there is direct investment from overseas are apportioned to overseas and Australian ownership according to the proportion of the ordinary shares (or voting stock) of the company that is held by the direct overseas investors.

However, an exception has been made to the strict application of the definition of direct overseas investment in the measurement of overseas ownership of the Australian mining industry. This exception is designed to take account of a small number of important cases of portfolio investment where overseas companies participated in a consortium of companies which made the initial decision to develop a major mining project. The participation of these companies in the initial decision for the development of the mining project implies a kind of participation different from that normally associated with portfolio investment and more akin to direct investment. Special arrangements have been made therefore, to include in the measurement of overseas ownership, investment by overseas companies whose participation is represented by 10 per cent or more of the ordinary shares of such projects. This participation is not taken into account in statistics of overseas control. This change has had a minor effect on statistics of overseas ownership of the Australian mining industry for 1966 and earlier years.

**MINING(a): NET VALUE OF PRODUCTION APPORTIONED TO AUSTRALIAN AND DIRECT OVERSEAS OWNERSHIP, BY INDUSTRY, 1966 TO 1968**

**Overseas control**

The statistics in the following tables provide an indication of the relative importance of mining establishments of companies in which there is direct overseas investment. The concept of direct overseas investment is directly related to the concept of overseas control, and the statistics in these tables provide a measure of the net value of production of mining establishments of companies which can be regarded as subject to a degree of overseas control. The statistics have been derived by allocating data relating to each mining establishment wholly to either one or the other of the following categories: (i) establishments of direct overseas investment companies; (ii) other establishments.

The classification of establishments of companies in which 50 per cent of the voting stock is held in one overseas country (or 25 per cent by one overseas company) as subject to a degree of overseas control is, of course, based on a statistical convention. Such a convention is needed because of the lack of specific information as to the arrangements for managerial control of individual companies. The convention adopted for this study (including the actual percentages used) is the one suggested

by the International Monetary Fund for use in the absence of other information. There are avenues of control other than through direct equity interest, e.g. through franchise or patent rights, marketing arrangements, financial commitments, etc. Such arrangements, of course, also typically exist between companies in which there is direct investment and their overseas parent companies and associated companies. Further, ownership of less than 25 per cent of voting stock may, in some cases, be sufficient to achieve effective control of a company's activities, just as in other cases ownership of more than 25 per cent of voting stock may not constitute control. In addition, the relationship between overseas parent companies and their Australian branches and subsidiaries covered by the statistics in the following tables can be one of *potential* rather than *actual* control.

A special problem does exist, however, in the strict application of the definition of direct overseas investment described above to the measurement of overseas control. This occurs where a single overseas company has an equity interest in an Australian company which is 25 per cent or more but less than 50 per cent. In such cases, a single Australian company may have an equity interest which is greater than the equity interest of the direct overseas investment company. To overcome this problem, an examination has been made of all companies engaged in mining in which the direct overseas equity is 25 per cent or more but less than 50 per cent. Where an Australian company holds a greater proportion of the equity than the direct overseas investment company the company is not regarded as subject to a degree of overseas control and is classified to 'other establishments'. However, this departure from the strict application of the definition of direct overseas investment to the measurement of overseas control does not affect the statistics for 1966 and earlier years.

## Mineral exploration (other than for petroleum)

### Definition

Mineral exploration (other than for petroleum) consists of the search for, and/or appraisal of, new ore occurrences and known deposits of minerals (including extensions to deposits being worked) by geological, geophysical, geochemical, and other methods (including drilling). Exploration for water is excluded. The construction of shafts and adits is included if primarily for exploration purposes. Excluded are mine development activities (which include the construction of drives, shafts, winzes, etc.) in underground mines and the preparation of quarrying sites for open-cut extraction (including overburden removal) carried out primarily for the purpose of commencing or extending mining and quarrying operations. Mine development activities (including mines under development) are included in the scope of the annual census of mining and quarrying.

### Sources of statistics

The statistics of exploration for minerals *other than petroleum* are derived from the annual mineral exploration census (excluding petroleum exploration), which is carried out by this Bureau in association with some State Mines Departments.

### Scope of mineral exploration census

The scope of the census comprises the following activities.

(a) *Private exploration on production leases*—relates to exploration carried out on the *production lease* by privately operated mines currently producing or under development for production of minerals other than petroleum. This also includes particulars of exploration within their production leases by business undertakings operated by State government authorities. Mines included in this section of the mineral exploration census are practically the same as those in the annual census of mining and quarrying (see Statistical Bulletin *Mining and Quarrying*, No. 17, 1968 for further details) with the exception of a limited number of itinerant prospectors and small mines for which information was not collected.

(b) *Private exploration on other licensed areas*—relates to exploration carried out on areas covered by exploration licences, authorities to enter, authorities to prospect, and similar licences and authorities issued by State Governments for exploration for minerals other than petroleum.

(c) *Other private exploration*—relates to exploration for minerals other than petroleum, which is not directly connected with areas under lease, licence, etc., including general surveys, aerial surveys, report writing, map preparation and other off-site activities not directly attributable to particular leases or licence areas.

(d) *Exploration by government*—relates to exploration for minerals other than petroleum carried out by—

- (i) Commonwealth Government (Bureau of Mineral Resources, Geology and Geophysics, and Joint Coal Board), and
- (ii) State Mines Departments.

Prior to 1968 the scope of the census was limited to private exploration on lease or licence areas held for production and exploration purposes, and all Government exploration. The scope was broadened for the 1968 census to include other private exploration activity as described in (c) above.

### Expenditure, employment, footage drilled, etc., States and Northern Territory

The following table shows expenditure, employment and footage drilled, etc., on mineral exploration other than for petroleum in each State and the Northern Territory during the years 1965 to 1968.

(a) Expenditure whether charged as working expenses or capitalised. (b) Includes 'Other private exploration', not collected prior to 1968: see text. (c) Bureau of Mineral Resources and Joint Coal Board. (d) Included in expenditure shown above. Comprises amounts paid to drilling contractors, geological consultants, technical advisers, etc., for exploration services. (e) Operator and staff only (includes time spent on report writing and similar off-site activities associated with exploration); excludes contractors and their employees. (f) Geologists, geophysicists, engineers, etc., engaged on exploration work. (g) Drill operators, field hands, etc. (h) 'Sunk or driven' relates to shafts, winzes, etc., sunk and drives, adits, etc., driven.

**Petroleum exploration**

**Source of statistics**

These statistics were collected and compiled by the Bureau of Mineral Resources, Geology and Geophysics, Canberra. Statistical and other information relating to petroleum exploration is published by the Bureau of Mineral Resources in *The Petroleum Newsletter* (issued quarterly), *The Australian Mineral Industry—Annual Review and Expenditures on Petroleum Exploration and Development*, 1965 (B.M.R. Record No. 1966 (205)).

**Scope**

Petroleum exploration consists of the search for, and/or appraisal of, deposits of crude petroleum and/or gas by geological, geophysical, geochemical, and other means, including drilling. Included in the expenditure are the costs of drilling exploratory oil and/or gas wells and the testing of such wells. Also included are the cost of access roads, site construction, permits, licences and similar fees, relevant office buildings and furniture, transportation equipment, storage facilities, plant and equipment, and review work, where these are undertaken primarily for purposes of exploration for deposits of petroleum or natural gas. The cost of drilling developmental oil and/or gas wells and expenditure on production facilities and pipelines, and production costs, etc., are excluded.

## Operations

The following tables show particulars of expenditure, and wells and footage drilled in petroleum exploration in recent years.

### Mineral processing and treatment

The extraction of minerals from ore deposits, as in mining and quarrying, is only part of the wider field of mineral technology. It is only in rare instances that minerals can be used directly in the form in which they are produced by mines, and, much more commonly, minerals must undergo considerable processing and treatment before their full utility and value can be realised. Examples of this processing and treatment are the smelting and refining of metals, the production of coke from coal, the refining of oil, and the treatment of non-metallic minerals as in the production of superphosphate and other chemicals and building materials like bricks and cement. The sectors of the economy which carry out this work are classified for statistical purposes to the manufacturing industry, and particulars relating to those activities which principally involve mineral processing and treatment—i.e. the treatment of non-metalliferous mine and quarry products, the manufacture of mineral oils and chemical fertilisers, the smelting, converting, refining and rolling of iron and steel, the extracting and refining of other metals, and the manufacture of alloys are given in Chapter 22 Manufacturing Industry, pages 714-34.

#### Principal products

The following table shows particulars of the production of certain important manufactured products of mineral origin during the years 1963-64 to 1967-68.

### Overseas trade

#### Exports and imports

Data of imports and exports of minerals and mineral products have been extracted from the official trade statistics compiled in the Commonwealth Bureau of Census and Statistics. Particulars of the quantities and values (\$ f.o.b. port of shipment) of the principal minerals and mineral products exported from and imported into Australia during the years 1966 to 1968 are shown in the following table.

**EXPORTS AND IMPORTS OF PRINCIPAL MINERALS AND MINERAL PRODUCTS  
AUSTRALIA, 1966 TO 1968**

Item	Quantity			Value (\$'000 f.o.b.)			
	1966	1967	1968	1966	1967	1968	
<b>EXPORTS(a)</b>

(a) Excludes gold movements.

## REVIEW OF RECENT DEVELOPMENTS IN THE AUSTRALIAN MINERAL INDUSTRY

Prior to Year Book No. 52 it was customary to include a series of detailed reviews of the principal commodities produced by the Australian mineral industry and recent developments concerning these commodities. However, with the increasing diversification and development of the industry, it has become impractical to continue these reviews in the Year Book and the reader who wishes to obtain information of this kind is referred to *The Australian Mineral Industry—Annual Review* published by the Bureau of Mineral Resources, Geology and Geophysics. That publication contains comprehensive reviews of mineral commodities of importance to the Australian economy, as well as a general review of the industry's performance during each year. Major developments in the industry, particularly during the last year, are reviewed briefly in subsequent parts of this section.

Expansion of the Australian mineral industry was maintained during 1969, with the preliminary value of mineral production increasing by 29 per cent from \$855 million in 1968 to \$1,100 million in 1969. The major reasons for this increase in the value of mineral production were continued expansion of iron ore mining, and the increased production of black coal in New South Wales and Queensland. The total value of mineral exports continued to increase, mainly because of the increase of iron ore and coal shipments to Japan.

### Bauxite

The history of the aluminium industry and recent significant developments in the industry were reviewed in previous issues of the Year Book (No. 51, page 1168 and No. 52, page 1048). The year 1969 was a period of continued growth in the industry both in mining and processing as detailed below.

Bauxite production from deposits at Weipa, Queensland, increased to a rate of 6 million tons in 1968 following completion of a further stage in the development of the mine and associated township, and of ore treatment and loading facilities. It is expected that production will rise to 7 million tons in 1970. Approximately 2.3 million tons from Weipa will be used by the Gladstone, Queensland, alumina refinery, and the requirements of the small refinery at Bell Bay, Tasmania, is estimated as 120,000 tons yearly; the remaining production will be available for export.

Bauxite deposits at Gove, Northern Territory, covering reserves of the order of 250 million tons of ore, are being developed by a consortium of seven Australian and one overseas company. The consortium plans to construct an alumina plant at Gove by mid-1972 with an initial capacity of 500,000 metric tons per annum, increasing to 1,000,000 metric tons annually by mid-1974.

An agreement was signed in Perth in December 1968 with the Western Australian Government for the development of a bauxite/alumina project in the Admiralty Gulf area.

### Alumina

Expansion of the alumina refinery at Gladstone, Queensland, was completed by the end of 1968, increasing the capacity of the refinery to 900,000 tons per annum; the plant will be further expanded to 1,275,000 tons yearly by mid-1971 and to 2,000,000 tons per annum by mid-1972. Plans have also been announced to increase the capacity of the alumina refinery at Kwinana, Western Australia, from 830,000 metric tons per annum to 1,040,000 metric tons by the middle of 1970, and to 1,250,000 metric tons per annum by the end of that year. Bauxite supplies for the Kwinana refinery are obtained from deposits 28 miles away at Jarrahdale, Western Australia, the reserves of which are assessed as 500 million tons.

### Aluminium

Construction of an aluminium smelter with an initial capacity of 30,000 tons per annum at Kurri Kurri near Newcastle, New South Wales, was completed in 1969. Operating capacity is expected to reach 50,000 tons yearly in the latter half of 1970, and the smelter will be expanded to 100,000 tons following the signing of an agreement with Kobe Steel Ltd for the supply of aluminium ingots. An aluminium powder and paste plant, capable of supplying the whole of Australia's needs, was commissioned in 1968 at Bell Bay, Tasmania. The capacity of the smelter at Bell Bay will be increased to 94,000 tons per annum by early 1971. Additional capacity at Port Henry, Victoria, was commissioned in 1969 bringing the smelter's total operating capacity to 90,000 tons yearly. A letter of intent has been received by the Western Australian Government regarding the possible establishment of an aluminium smelter at Kwinana in ten to twelve years.

### Copper

Copper production at Mount Isa will be increased to 150,000 tons yearly by 1974. The expansion programme provides for a new hoisting shaft, extensions to the existing copper smelter and a new concentrator, as well as enlargement of ancillary facilities.

A new copper-gold ore body is being developed near Tennant Creek, Northern Territory. The first stage of development, which will cost \$10 million, will have an installed mining capacity of 400,000 tons of ore per annum. Production is scheduled to commence in 1970-71.

Since the beginning of 1967 the Australian Producers' price has been adjusted regularly to reflect movements in the London Metal Exchange daily settlement price. In the early part of 1970, after reaching a record 73 cents per pound (\$1,685.2 per long ton) in March, the Australian price eased to 61 cents (\$1,366.4) by mid-June.

### Iron

The major development of recent years has been the establishment in Australia of a large scale iron ore export industry based principally on steelmaking requirements in Japan. Exports of iron ore and iron ore pellets in 1969 to Japan and elsewhere were 26.4 million tons valued at \$230 million.

Additional major contracts for the supply of iron ore and iron ore pellets to overseas steel mills were signed in 1969. In mid-1970 contracts signed for the shipment of ore overseas during 1966 to 1992 exceeded 820 million tons valued at \$6,400 million.

At Mount Tom Price, Western Australia, iron ore production capacity is to be expanded from a 1970 level of 17.5 million tons per year to a level of 22.5 million tons per year by the end of 1971. At Paraburdoo, 35 miles south of Mount Tom Price, iron ore deposits are to be developed so that the mine will be capable of producing 5 million tons of ore per year by 1972 and 15 million tons per year by 1974. Port capacity at Dampier, Western Australia, is to be expanded to handle the increased ore production from Mount Tom Price and the new production from Paraburdoo.

Shipments of iron ore from Mount Newman, Western Australia, commenced through Port Hedland in April 1969. Shipments of 12.5 million tons are planned for 1970 and capacity is being further increased to enable ore to be mined and shipped at a rate of 19 million tons per year by April 1971; capacity is expected to exceed 30 million tons per year by 1975.

Annual production from the Mount Goldsworthy, Western Australia, iron ore project is being increased to 6 million tons by 1970 and 8 million tons by 1973. Production at the existing Mount Goldsworthy mine will be increased and deposits at Shay Gap and Kennedy Gap nearby will be developed.

Firm plans are in hand for the construction at Dampier, Western Australia, of a plant to produce metallised agglomerates. Early in 1970 it was announced that letters of intent had been signed for the purchase by Japanese buyers of 6.5 million tons of agglomerates. Delivery is proposed over 10 years from April 1973.

### Lead and zinc

Due to the completion of an expansion programme at Mount Isa, Queensland, the Australian production of lead bullion rose 32 per cent and zinc concentrates 20 per cent in 1969. Production of zinc metal set a new record due to the installation of a new zinc fuming plant at Port Pirie, where metal is recovered from lead slags. It is expected that zinc will also be extracted from the residue dump at Risdon by mid-1971. Plans have been announced for the development of a new mine near Mount Isa, and the expansion of the mine at Rosebery in Tasmania. Major increases in exports of lead and zinc, both metal and concentrates, are therefore expected in the early 1970's.

### Black coal

There has been a significant revival in the Australian black coal industry in recent years as a result of increased exports and increased consumption of black coal in iron and steel production and electricity generation. These increases have more than balanced reduced consumption in some applications due to competition from fuel oil.

The expansion of the export trade has been of major significance. In 1955 exports were about 200,000 tons valued at about \$1.7 million; in 1969 exports were 15.8 million tons valued at \$142.5 million. These increased exports have been almost wholly to Japan for use in the iron and steel industry. As a result of this increased demand, new mines have been opened and others are under development in Queensland and New South Wales, and many established mines are being expanded. Exploration for coal has been stimulated and further rich deposits of coking coal have been located, particularly in Queensland.

### Petroleum

Developments in the last few years were reviewed in previous issues of the Year Book and the following is a summary of developments in 1969 and early 1970.

At the end of 1969, there were five Australian oil fields in production, namely, Moonie and Alton, Queensland; Barrow Island, Western Australia; and Barracouta and Halibut in the Gippsland Shelf area offshore from Victoria. Another major field, Kingfish also in the Gippsland Shelf area, was ready to start developmental drilling in July 1970. In addition, a small amount of oil is being produced from Bennett No. 1 and several other wells in the Roma area in Queensland. In 1969 commercial and domestic use of natural gas began in Brisbane, Melbourne and Adelaide.

In 1969 and early 1970, additional gas discoveries were made at Tirrawarra No. 1, about 25 miles north of Gidgealpa in South Australia, at Roseneath No. 1 in the far south-west of Queensland, at Palm Valley No. 2 and Petrel No. 1 in the Northern Territory, at Pelican No. 1 off the north coast of Tasmania and most recently an undisclosed amount of hydrocarbons in Emperor No. 1 in the Gippsland Shelf area. The provisional figure for footage drilled in petroleum exploration and development in Australia in 1969 was 1,342,274 feet which is a record; the previous highest figure was 1,141,174 feet in 1965. About 701,800 feet (52 per cent) of the 1969 total was attributed to exploration drilling and about 365,900 feet (27 per cent) was for offshore drilling. A preliminary result shows that 260 wells were completed in 1969 of which 101 were exploration wells.

### Nickel

Output from Australia's first major nickel mining operation at Kambalda in Western Australia has grown to more than 25,000 tons of nickel per annum since mining commenced in 1967. Mines at Nepean and Scotia also commenced production in early 1969 and a fourth mine is being developed at Carr Boyd Rocks; all of these mines are located in the vicinity of Kambalda. By late 1970 a refinery at Kwinana, Western Australia, will be producing more than 15,000 tons of nickel metal per annum from concentrates; the remaining concentrates will be exported until further smelting and refining facilities are constructed.

Plans have been drawn for the development of the lateritic nickel deposit at Greenvale in Northern Queensland. Subject to the success of current pilot plant tests, construction of a railway and an ammonia leach treatment plant at Townsville, northern Queensland, is expected to commence in mid-1971. Production of 23,000 tons of nickel oxide sinter per annum could commence during 1974.

### Phosphate

Major deposits of phosphate rock were discovered during 1966 near Duchess and Lady Annie in north-west Queensland. The deposits are large by world standards, and feasibility studies are still in progress. Survey work has finished on a possible railway route between Lady Annie and the Gulf of Carpentaria, 800 miles away. Transport and port facilities will be key factors in determining whether the project is to be undertaken.

## CHAPTER 28

# ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts: the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory.

The information contained in the chapter relates to situations existing and projects contemplated in December 1969, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves. Greater descriptive and historical detail about the various systems is contained in earlier issues of the Year Book.

## INTRODUCTION

### Distribution of population and location of power resources in Australia

The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations. By far the most important source of energy used in the production of electric power in Australia is coal. At 30 June 1969 thermal power equipment represented 68.5 per cent, hydro plant 29.3 per cent, and internal combustion equipment 2.2 per cent of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland. The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 4,000,000 kW by 1975. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

### Electric power generation and distribution

At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety and to define the scope and obligations of the private organisations. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organisations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organisations which undertake reticulation.

In addition to the private, local government and statutory organisations which generate and distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly

produced for such internal consumption is, in any case, a relatively small proportion of the total power produced. The measures taken by authorities to satisfy the demand created by the post-war growth in population and building and by developments in industry and commerce are described in the following pages.

### SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME\*

#### Snowy Mountains Hydro-electric Power Act 1949-1958

In July 1949 the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

#### Snowy Mountains Hydro-electric Scheme

The broad basis of the Snowy scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development (*see* plate 50 opposite). For purposes of both power production and irrigation it is necessary to regulate run-off, and this is achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers for the Snowy-Tumut Development and of the Snowy and Geehi Rivers for the Snowy-Murray Development. A sectional diagram of the scheme appears on plate 51, page 952.

*Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee, and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

Tumut 3 Power Station, the largest station of the scheme (generating capacity 1,500,000 kW) and pumping capacity 10,500 cubic feet per second) is being constructed below Talbingo Reservoir and will discharge into Jounama Pondage on the Tumut River. This pondage will provide a downstream pumping pool and also regulate discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage then enter Blowering Reservoir formed by Blowering Dam. This dam, constructed by the Snowy Mountains Authority as an agent for the State of New South Wales, provides for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority has constructed a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

*Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through

\* *See also* Chapter 24 Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-30.

**SNOWY - TUMUT DEVELOPMENT**

**SNOWY - MURRAY DEVELOPMENT**

932  
PLATE 51

the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development are as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water is returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the snow and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it joins the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme is increased by the Guthega Project, a subsidiary hydro-electric project on the Upper Snowy River above Island Bend with a generating capacity of 60,000 kW.

#### Utilisation of power from scheme

The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilise the potential of the Snowy Mountains Scheme most effectively, the order of development was arranged so that the early stations operated, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeded and as the load increased in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States. Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2:1.

#### Progress of scheme and future programme

The scheme's first power station, Guthega, of 60,000 kW capacity, came into operation in February 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground Power Station in 1962. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May 1958. Tumut Pond Dam, completed in September 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity was concentrated on the Snowy-Murray Development. The first unit of this development, the Eucumbene-Snowy project which comprises Island Bend Dam and the 15-mile Eucumbene-Snowy Tunnel, commenced diverting Snowy River water to storage in Lake Eucumbene in August 1965. Completion of a 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the first of the 1-mile long Pressure Pipelines, and the first two units of the 950,000 kW Murray 1 Power Station in April 1966 allowed the first diversion of the water from the Snowy River to the Murray River in the west. All of the ten turbo-generators were brought into commercial operation with the opening of the Murray 1 Project in July 1967.

Khancoban Dam, designed to regulate power station releases before their discharge into the Murray River, was completed in February 1966. The Murray 2 Project in the base of the open cut excavated in the bank of Khancoban Reservoir downstream of Murray 1 Project was completed in 1969. The four units of Murray 2 Power Station totalling 550,000 kW came into commercial operation in October 1969. The total installed capacity of the scheme has now reached 2,160,000 kW.

Construction is also proceeding on the Jindabyne Project. The earth and rockfill dam was completed in September 1967, and the pumping station and Jindabyne-Island Bend Tunnel came into service in February 1969.

Blowering Dam on the Tumut River came into service in May 1968, and the 80,000 kW Blowering Power Station is expected to begin commercial operation in October 1970 when the stored water in the Blowering Reservoir is to be released for the irrigation season downstream on the Murrumbidgee Irrigation Areas.

For the Tumut 3 Project the construction of Jounama Dam was completed in 1968 so that the storage of water in Blowering Dam could commence. Work is under way on the remaining sections of the Tumut 3 Project, and the six units in the power station are scheduled to be brought into service progressively from 1972 to 1974.

## STATES AND TERRITORIES

### New South Wales

In Year Book No. 39 an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present the following three main Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Electricity Development Act, 1945-1968, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950-1965, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

#### Electricity Commission of New South Wales and electricity supply authorities

The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities. At 30 June 1969 there were 41 retail supply authorities throughout the State, comprising 34 electricity county councils (consisting of groups of shire and/or municipal councils), 2 city and 2 municipal councils, 1 shire council, and 2 private franchise holders. In addition to the Electricity Commission, 2 coal companies supply electricity in bulk to retail supplying authorities. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

In recent years, most electricity distribution areas have been consolidated on a district basis. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal and city areas grouped for electricity supply purposes, and administered by a county council comprising representatives elected by the constituent councils. Of the 225 cities, municipalities and shires in New South Wales, 216 are included in one or other of the thirty-four electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30 June 1969 was supplying 583,776 consumers in the Sydney metropolitan area.

#### The Electricity Authority of New South Wales

The Electricity Authority of New South Wales was constituted under the Electricity Development Act, 1945 and is responsible to the Minister for Local Government. The Act confers broad powers on the Authority to co-ordinate and develop the public electricity supply industry. The functions of the Authority include the promotion of the use of electricity and especially its use for industrial and manufacturing purposes and for primary production. Technical advice is given to retail electricity

supply authorities on various aspects of their activities such as the framing of retail electricity tariffs, public lighting and standardisation of materials and equipment. The Authority acts in an advisory capacity to the Minister for Local Government on electricity distribution matters generally, and may make recommendations concerning the organisation of distribution, the amendment of the law relating to the generation, transmission, distribution and supply of electricity, or on any other matters affecting the electricity distribution industry.

The Authority administers the Rural Electricity Subsidy Scheme under which the rural electrical development of the State has now been virtually completed where the extension of supply is economically feasible, *see page 956*.

The Electricity Development Act contains provisions for the making of regulations relating to most aspects of electrical safety. Regulations now in force cover such matters as consumers' installations, licensing of electricians and electrical contractors, approval of electrical articles, safety of linesmen, and overhead line construction and maintenance. In addition, a number of aspects not governed by legislation are covered by codes of practice or recommended procedures.

In 1964 the Traffic Route Lighting Subsidy Scheme administered by the Authority was introduced. The Scheme has the objective of reducing the incidence of night road accidents on traffic routes traversing built-up areas by the installation of improved lighting. The scheme provides for financial assistance to councils towards the cost of traffic route lighting installations conforming to the appropriate street lighting code of the Standards Association of Australia, which has been adopted by the Authority as the basis of the scheme. To 30 June 1969 subsidy has been approved in respect of lighting on some 358 miles of traffic routes throughout the State.

### Generation and transmission

Of the State's electrical power requirements during the year ended 30 June 1969, 88.1 per cent was generated by coal fired power stations in New South Wales, 0.4 per cent by internal combustion plants, 7.8 per cent by hydro-electric stations (including 6.8 per cent obtained direct from the Snowy Mountains Scheme). Interstate imports accounted for 3.7 per cent of the State's electricity requirements. Whilst the supply of power from the Snowy Mountains Scheme will increase with the expansion of the Scheme, it is expected that coal fired steam power stations (and possible atomic power stations in the future) will continued to supply the greater part of the State's power needs.

*Major generating stations.* At 30 June 1969 the major power stations of the State system of the Electricity Commission of New South Wales and their effective capacities were as follows: *Steam*—Munmorah (Tuggerah Lakes), 1,050,000 kW; Vales Point (Lake Macquarie), 875,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 60,000 kW; Zarra Street (Newcastle), 42,000 kW; Muswellbrook, 30,000 kW; Tamworth, 27,000 kW; Lithgow, 20,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume (near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 35,000 kW. The total effective capacity of the Electricity Commission's system was 4,063,000 kW. The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

*Major transmission network.* The retailing of electricity to 97 per cent of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines, links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30 June 1969 there were in service 1,097 route miles of 330 kV (including 64 miles operating for the time being at 132 kV) and 2,826 miles of 132 kV transmission lines (including 50 miles operating for the time being at 66 kV or lower). There were also in service 2,584 miles of transmission line of 66 kV and lower voltages, and 83 miles of underground cable. The installed transformer capacity at the Commission's 135 sub-stations was 14,957,000 kVA'

*Separate systems and total State installed capacity.* Several small plants which supply isolated towns and villages have not yet been interconnected with the main network. Some local government bodies have undertaken the development of independent power stations. Of these, the more important are: the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 15,000 kW steam power station on the Ashford coalfield. The aggregate effective capacity for the whole of the New South Wales systems and isolated plants was 4,165,540 kW at 30 June 1969 and the number of ultimate consumers at this date was 1,518,177.

### Future development

The major new thermal stations already built and those now being developed on the coalfields will become the main base load supply sources for the State. Munmorah, located between Lakes Munmorah and Budgewoi, Vales Point and Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

The first 500,000 kW generating unit of the Liddell Power Station in the Hunter Valley is scheduled for commissioning in 1971 and the second, third and fourth units in 1972, 1973 and 1974. With a designed capacity of 2,000,000 kW Liddell is the biggest thermal power station yet planned for Australia.

Future projects include the installation of an additional 500,000 kW unit at Wallerawang, scheduled for commissioning in 1975, and two 660,000 kW units at Vales Point, expected to come into operation in 1977.

The development of the 330 kV main system is continuing. New work in hand includes the provision of 330 kV transmission from Liddell direct to Sydney and the construction of major 330 kV transmission centres at Tamworth and Newcastle and later at Armidale. Plans to augment the transmission system during the next five years provide for the construction of 1,200 route miles of 330 kV lines, 1,200 miles of 132 kV overhead lines, and 17 new sub-stations.

### Hydro-electricity

The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains area (*see* Snowy Mountains Hydro-electric Scheme, page 950). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW), Burrinjuck Dam (20,000 kW), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney metropolitan area, and the output of the other stations on the release of water for irrigation. There are, in addition, four smaller hydro-electric installations in operation in various parts of the State.

### Rural electrification

When the Electricity Authority of New South Wales was constituted in 1946 less than one-quarter of New South Wales farms within reasonable reach of public electricity supply systems were being served with electricity. Under a subsidy scheme approved in August 1946, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidised. Originally this limit was \$500 per consumer when averaged over the cost of the whole extension, but the limit was raised to \$800 in December 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of \$800 was not subsidised.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State the subsidy scheme was extended from May 1959 to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of \$1,200–\$1,600.

Between August 1946 and June 1969, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing \$84.6 million to give supply to some 61,215 farming properties and 36,329 other rural consumers and involving 60,326 miles of line. The greater part of this work had been completed at 30 June 1969. At this date the Authority was committed to the payment of \$35,129,258 in subsidies, of which \$23,145,374 had been paid.

Under a special scheme of assistance the Electricity Commission makes payments (\$1,200,000 per annum from 1967–68 to 1971–72) to offset part of the net liability of local supply authorities in respect of rural electrification.

## Victoria

In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

### State Electricity Commission of Victoria

Constituted by the *Electricity Commissioners Act* 1918, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time

Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, provide for the statutory payment of 3 per cent of its revenue to State Consolidated Revenue, and meet depreciation and all other charges on capital funds.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material, and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo.

Since it began operating in 1919 the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves 99 per cent of the population. Victoria's electricity system is based on the utilisation of the extensive brown coal resources of the Latrobe Valley in Gippsland.

Output of brown coal in 1968-69 from the Commission's three open cuts at Yallourn, Morwell and Yallourn North totalled 22,466,000 tons, of which 18,047,000 tons were used in the Commission's power stations. A further 3,998,000 tons of brown coal were used to manufacture 1,471,000 tons of briquettes, of which 296,000 tons were burnt in power stations. The only other fuels used in power generation were relatively small quantities of purchased black coal (11,000 tons) and oil (25,000 tons).

Generation in thermal stations is supplemented by energy from the Commission's hydro stations in the mountainous north-east of the State, and by hydro entitlements from the Snowy Mountains Scheme (one-third of the output after provision of the Commonwealth's needs) and Hume Power Station (half of the output).

#### **Electricity Supply**

At 30 June 1969, the number of ultimate consumers in Victoria was 1,211,000, all served by the Commission except the extreme eastern settlements of Mallacoota (local generation) and Berdoc (supplied from an adjoining area of New South Wales).

The Commission sells electricity retail in all Victorian supply areas except for eleven metropolitan municipalities. These municipalities, retailing electricity under franchises granted before the Commission was established, take bulk supply from the Commission. Bulk supply is also provided to several New South Wales municipalities and irrigation settlements bordering the River Murray.

The Commission's retail consumers numbered over 981,000 at 30 June 1969. Of these some 820,000 were domestic, 73,000 industrial and 87,000 commercial. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches with headquarters located at Geelong, Dandenong, Traralgon, Mildura, Castlemaine, Ballarat, Benalla, Bendigo, Colac and Horsham. At 30 June 1969, there were branch and district supply offices in Melbourne and 100 other cities and towns in Victoria.

Complete electrification of the State has virtually been achieved. By 30 June 1969, over one million homes and nearly 73,000 farms were supplied with electricity. Fewer than 3,000 homes and 1,250 farms in remote and isolated areas are now out of reach of public supply mains.

#### **Electricity production, transmission and distribution**

Electricity generated in the State system or purchased by it totalled 12,868 million kWh in 1968-69, or more than 99 per cent of all Victoria's electricity for public supply. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30 June 1969 was 3,392,000 kW. Power stations are interconnected and feed electricity into a common pool for general supply. The major power station in the interconnected system is the Hazelwood brown coal burning power station near Morwell, which alone generates over 45 per cent of Victoria's electricity. Hazelwood now has seven of its planned eight 200,000 kW generating sets in service. Other power stations in the interconnected system comprise two further base load brown coal burning power stations; Morwell and Yallourn; steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat, and also at Red Cliffs, which has, in addition, some internal combustion plant; and hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston Rivers near Eildon, and at Cairn Curran. All generators for public supply within Victoria

are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system, and a small generator at Mallacoota. The Victorian system is linked with the Snowy Mountains Scheme by a 330 kV transmission line, which also allows the interchange of energy between New South Wales and Victoria. The hydro station at Hume Dam on the River Murray is also linked with the Victorian interconnected system. Output and operating costs of this power station, owned by the Electricity Commission of New South Wales, are shared equally by the Electricity Commissions of Victoria and New South Wales.

The electrical transmission and distribution system in the State supply network at 30 June 1969 comprised nearly 59,000 miles of power-lines, 24 terminal receiving stations, 96 main transmission sub-stations, and more than 59,000 distribution sub-stations. Main transmission is by 500 kV, 330 kV, 220 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnection between the power stations. The 500 kV, 330 kV and 220 kV systems total nearly 1,700 route miles.

#### Future development

Major works in progress are the erection of two large power stations (Hazelwood and Yallourn 'W') burning brown coal on site in the Latrobe Valley.

Hazelwood Power Station, which is nearly completed, is the largest project yet undertaken by the Commission and is designed to have a capacity of 1,600,000 kW in 1971. The first of Hazelwood's eight 200,000 kW turbo-generators was commissioned in October 1964 and another six have been installed at approximately yearly intervals. The last generating set will be in service early in 1971. Power generated at Hazelwood Power Station is transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network.

Yallourn 'W' Power Station is being built about half a mile west of the present Yallourn Power Station. It will have two 350,000 kW turbo-generators, the first to be in service in 1972 and the second in 1973.

When these projects are in service the State's power resources, including Victoria's share of the output of the Snowy Mountains Scheme, will have increased to 4,815,000 kW, 45 per cent above the capacity at June 1969.

## Queensland

In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland, and of the events leading up to the establishment in 1937 of the State Electricity Commission of Queensland. In Year Book No. 53 an account is given of the post-war development and organisation of the electricity supply in Queensland.

Electricity supply in Queensland is governed by the following Acts which are administered by the Commission.

'*The State Electricity Commission Acts, 1937 to 1965.*' These Acts constituted the Commission and define its powers and duties.

'*The Electric Light and Power Acts, 1896 to 1967.*' These Acts relate to the constitution of electric authorities, except the Southern Electric Authority and the Northern Electric Authority, and define their powers and duties and the conditions under which electricity is to be supplied and used.

'*The Regional Electric Authorities Acts, 1945 to 1964.*' These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.

'*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*' These Acts established the Southern Electric Authority and define the powers and responsibilities of the Authority.

'*The Northern Electric Authority of Queensland Acts, 1963 to 1964.*' These Acts established the Northern Electric Authority. They also define its powers and responsibilities.

'*The Electrical Workers and Contractors Acts, 1962 to 1968.*' These Acts provide for the certification of electrical workers and for the licensing of electrical contractors.

#### State Electricity Commission of Queensland

The Commission commenced to function in January 1938. The Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organisation and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and

consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own directly and operate generating stations and transmission lines and to sell electricity in bulk, but up to the present it has not been found necessary or desirable to implement this power.

### Organisation

Regional electrification, with centralised generation and main transmission, is the predominant feature of the organisation of the electricity supply industry in Queensland. The more populous eastern part of the State is served by three major networks.

The southern network embraces the areas of supply of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board, and the Dalby Town Council. Generation and main transmission in this area are the responsibility of the Southern Electric Authority, which sells energy in bulk to the other three Authorities. The Wide Bay-Burnett Board also operates its own base load power station at Howard. The Southern Electric Authority is also responsible for the distribution of electricity to a large rural area outside metropolitan Brisbane.

The central network is within the area of supply of the Capricornia Regional Electricity Board, which is responsible for the generation, main transmission and distribution of electricity.

The northern network covers the areas of supply of the Cairns, Townsville, and Mackay Regional Electricity Boards. Generation and main transmission are the responsibility of the Northern Electricity Authority, and electricity is purchased in bulk for distribution by the three Regional Electricity Boards. In addition, the Cairns Regional Electricity Board operates small internal combustion generating stations at certain isolated centres in its area, and the Townsville Regional Electricity Board supplies the western area of its region by means of a distribution system based on an internal combustion station at Hughenden.

At present there is no interconnection between these three main networks, but work has started on the construction of 275kV transmission lines between central and southern Queensland, to link the two supply systems. West of the three main networks the form of organisation which has been adopted is determined by the stage of electrical development which has been reached. Immediately west of the Capricornia region the Central Western Regional Electricity Board operates with generation centralised at internal combustion stations at Longreach and Barcaldine. Other smaller regions of electricity supply are centred on Roma and Mount Isa. In addition, parts of southern Queensland are supplied by the Tenterfield Municipal Council and the North West County Council of New South Wales. In the remaining parts of Western Queensland there are a number of isolated electricity undertakings operated by Shire Councils.

The organisation of the industry in Queensland is moving progressively towards a greater integration of generating authorities so that the production of electricity can be centred to an increasing extent on larger and more efficient power stations.

### Electricity generation, transmission and distribution

Electricity generated in the State is based primarily on black coal, 89.3 per cent of the total production during 1968-69 being derived from this fuel. Hydro-electric stations, located mainly in North Queensland, provided 9.5 per cent, and the balance of the production was provided from internal combustion and gas turbine stations. The gas turbine stations are located at Rockhampton, Swanbank and Middle Ridge, near Toowoomba and use fuel oil as their primary energy source. Most of the internal combustion stations use oil as fuel but the power station at Roma uses locally produced natural gas and crude oil. Electricity generated in Queensland in power stations during 1968-69 totalled 5,410 million kWh. A further 23 million units were purchased in bulk from other producers of electricity for re-distribution to consumers.

At 30 June 1969 the total generating capacity of all Queensland power stations was 1,634,858 kW comprising 1,405,750 kW of steam plant, 135,208 kW of hydro-electric plant, 38,900 kW of internal combustion plant and 55,000 kW gas turbine plant. The southern electricity network is served by the following power stations: Bulimba 'A' (92,500 kW), Bulimba 'B' (180,000 kW), New Farm (75,000 kW), Tennyson 'A' (120,000 kW), Tennyson 'B' (120,000 kW), Swanbank 'A' (396,000 kW), and Howard (37,500 kW) together with a gas turbine station—Swanbank 'C' (30,000 kW). The central network is served by power stations at Rockhampton (52,500 kW steam and 25,000 kW gas turbine) and at Callide (120,000 kW). In the northern electricity network the principal power stations are at Townsville (37,500 kW), Kareeya (72,000 kW), Barron Gorge (60,000 kW) and Collinsville (60,000 kW). Most of the power stations in the major eastern supply networks of the State are thermal using coal as their primary energy source. The State's two large hydro-electric power stations are in the Cairns region in North Queensland, at Kareeya (72,000 kW) and Barron Gorge (60,000 kW).

Peak load gas turbine stations have been built at Rockhampton (25,000 kW) and Swanbank 'C' (30,000 kW) and the State's largest gas turbine station to date, at Middle Ridge near Toowoomba (60,000 kW) will be commissioned during 1970.

The electrical transmission and distribution systems within the State comprised 44,802 circuit miles of electric lines at 30 June 1969. The main transmission voltages are 132 kV, 110 kV, 66 kV and in certain areas 33 kV. Work has started on the construction of 275 kV transmission lines in southern Queensland and also between Gladstone and Brisbane, the first time transmission lines of such high voltage have been built in Queensland. The electricity supply industry's extensive rural electrification programme has been continued using the single wire earth return system.

At 30 June 1969 the total number of electricity consumers was 547,611 of whom 214,552 were in the Brisbane metropolitan area.

#### **Future development**

Major development of the State's generating capacity will be concentrated on the construction of two major power stations, at Gladstone (1,100,000 kW) and Swanbank 'B' (480,000 kW) the completion of Collinsville 'A' (120,000 kW) and the construction of extensions to Collinsville, known as Collinsville 'B' (120,000 kW). The first of Swanbank 'B's' four 120,000 kW generating sets will be commissioned in 1970 and the station is expected to become fully operative in 1973. The Gladstone power station will comprise four 275,000 kW generating sets, the first of which is expected to be commissioned by 1974. The output of these two power stations will help to meet increasing demands for power over the planned southern and central interconnected systems.

In North Queensland the fourth and final 30,000 kW generating set for Collinsville 'A' is scheduled for commissioning in 1971. This will be followed by a major extension programme, known as Collinsville 'B', which will involve the commissioning of two 60,000 kW sets, and will give Collinsville a total generating capacity of 240,000 kW. The two sets are scheduled for commissioning in 1974 and 1977 respectively.

Investigations are already in hand for the planning of another major power station to follow the Gladstone project, as well as the economic feasibility of further interconnection of the State's electricity supply systems.

### **South Australia**

A general historical survey concerning the electricity supply industry in South Australia is given in Year Book No. 39, page 1186. The survey traces the development of the industry from its formation in South Australia in 1895 until the establishment of the South Australian Electricity Commission in 1943.

#### **Electricity Trust of South Australia**

In 1946 the assets of the Adelaide Electric Supply Co. Ltd were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897-1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organisations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organisations, and give or receive supplies of electricity in bulk.

#### **Capacity and production**

Of the total installed capacity in South Australia at 30 June 1969, the Electricity Trust operated plant with a capacity of 961,000 kW, and is the most important authority supplying electricity in the State. There were approximately 418,000 ultimate consumers of electricity in the State, of whom 401,000 were supplied directly and approximately 11,700 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne 'B' (240,000 kW), Port Augusta Playford 'A' (90,000 kW) and Playford 'B' (240,000 kW), and Torrens Island (360,000 kW).

The Trust operates two smaller power stations, The Mt Gambier station has an installed capacity of 21,800 kW and burns either wood waste or fuel oil. The other station at Port Lincoln has a 5,000 kW steam and a 4,600 kW diesel plant. Both locations are connected with the Trust's interconnected system with 132 kV lines.

No hydro-electric potential exists in South Australia. Steam generating units comprise 98 per cent of installed capacity and the balance is internal combustion equipment.

#### Leigh Creek and other new capacity

Fairly extensive deposits of low grade sub-bituminous coal are obtained at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act, 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30 June 1969, 2,142,538 tons of coal were produced, practically all of which was used by the electricity undertaking at the Port Augusta Playford Power Stations, which use Leigh Creek coal exclusively.

A power station is being constructed on Torrens Island near Adelaide consisting of four 120,000 kW turbo-alternators and associated boilers modified to use natural gas or oil and will be completed by 1971. The No. 3 unit consisting of 120,000 kW turbo-alternator and associated boiler was placed on load for the first time in April 1969.

### Western Australia

For information on the early history of electricity supply in the metropolitan area, *see* Year Book No. 39, page 1189.

#### State Electricity Commission of Western Australia

The State Electricity Commission of Western Australia was established by the *State Electricity Commission Act, 1945*. The Commission, as at present constituted, consists of nine members and is empowered to co-ordinate all power undertakings in the State and to encourage and promote the use of electricity and other power.

#### General pattern of electricity supply

The State Electricity Commission gives central power station supply to the metropolitan area, an area of approximately 30,000 square miles in the South-West and Great Southern Areas, and an area extending eastward from Perth to Koolyanobbing. The policy of extending power supplies to rural holdings is continuing and at 30 June 1969 some 10,984 such consumers were connected. A scheme known as the Northern Areas State Power Scheme is also being developed, and a depot has been established in the Geraldton area where the Commission purchases power in bulk to supply districts north to Northampton and south to Dongara. It also supplies Port Hedland with power which is generated by a diesel station situated in the town.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes.

In Kalgoorlie the large goldmines generate their own power requirements. The Kalgoorlie Town Council operates a 50-cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Councils will continue to operate for some time at least.

The total number of consumers at 30 June 1969 was 249,336, of whom 229,861 were supplied by the Commission.

The Commission has developed its system to provide for the rapid expansion of industry and housing, and generating plant has increased almost ten-fold in the past twenty-three years. The four major power stations in the system are interconnected with the South-West Power Station at Collie, enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is also being undertaken to keep pace with the growth in consumer demand, which is being maintained at a high level. The activities of the interconnected system for the year 1968-69 were as follows: plant capacity, 529,500 kW; maximum load, 475,000 kW; units generated, 1,902 million kWh; fuel used per unit (kWh) generated, 1.36 lb; coal used, 912,782 tons.

#### New projects

Contracts have been let for four 120,000 kW oil-fired units for a new station being built at Kwinana. It is expected that these units will be commissioned in 1970, 1971, 1972 and 1973.

### Tasmania

A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries, including large electro-chemical and metallurgical works with high load factor (in consequence of which the system load factor is also very high—70 per cent), for which energy costs constitute a large proportion of the total cost of production. The continuous power demand of these organisations when plant is in full operation aggregates 390,000 kW. For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

#### Hydro-Electric Commission

In 1929 the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vested in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorised it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The total installed capacity of alternators in the various power stations operating now, under construction, or projected is as follows.

<i>Power stations</i>	<i>Water system</i>	<i>Date of entry into system(a)</i>	<i>kW</i>
Tarraleah . . . .	Derwent . . . .	1938	90,000
Waddamana 'B' . . . .	Great Lake . . . .	1944	48,000
Butlers Gorge . . . .	Derwent . . . .	1951	12,200
Tungatinah . . . .	Nive/Ouse/Little Pine . . . .	1953	125,000
Trevallyn . . . .	South Esk(b) . . . .	1955	80,000
Lake Echo . . . .	Little Pine/Ouse . . . .	1956	32,400
Wayatinah . . . .	Derwent . . . .	1957	38,250
Liapootah . . . .	Derwent . . . .	1960	83,700
Catagunya . . . .	Derwent . . . .	1962	48,000
Poatina . . . .	Great Lake . . . .	1964	250,000
Tods Corner . . . .	Arthurs Lake . . . .	1966	1,600
Meadowbank . . . .	Derwent . . . .	1967	40,000
Cluny . . . .	Derwent . . . .	1967	17,000
Repulse . . . .	Derwent . . . .	1968	28,000
Rowallan . . . .	Mersey-Forth . . . .	1968	10,450
Lemonthyme . . . .	Mersey-Forth . . . .	1969	51,000
Devils Gate . . . .	Mersey-Forth . . . .	1969	60,000
Wilmot . . . .	Mersey-Forth . . . .	1970	30,600
Bell Bay Thermal . . . .	. . . .	1970	120,000
Cethana . . . .	Mersey-Forth . . . .	1970	85,000
Paloona . . . .	Mersey-Forth . . . .	1971	28,000
Fisher . . . .	Mersey-Forth . . . .	1971	43,200
Gordon River, Stage 1 . . . .	Gordon/Serpentine/Huon . . . .	1975	240,000

(a) Actual till 1969; planned dates for subsequent years. (b) Discharge from Poatina enters South Esk via tributaries.

The number of ultimate consumers at 30 June 1969 was 143,551.

#### New capacity

The Hydro-Electric Commission is engaged on a construction programme comprising the Mersey-Forth Power Development, Gordon River Power Development, Stage 1.

The Mersey-Forth Power Development is scheduled to be completed by 1971. The essence of this development is the diversion of the flows of the Mersey and Wilmot Rivers and tributaries into the Forth River and the construction of Forth River dams. These diverted flows will be used for power generation at seven distinct power stations. The Mersey-Forth Project will add a total of 308,250 kW to the system. The first stage of the Gordon River Power Development involves the construction of a dam and a power station with a proposed instalment of 240,000 kW capacity with provision for an increase to 320,000 kW. An oil-fired thermal station with a single 120,000 kW generator was completed at Bell Bay on the River Tamar in 1970.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme. Investigations are continuing into the very considerable resources as yet untouched, principally in the west and south-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 3,000,000 kW to the system.

### Statistical summary

The following table shows statistics for each State and Territory separately and for Australia for the year 1967-68. Statistics of the electricity supply industry for the years 1963-64 to 1967-68 are given in the chapter Manufacturing Industry. Particulars of the Snowy Mountains scheme are included under New South Wales in the following table.

CENTRAL ELECTRIC STATIONS: STATES AND TERRITORIES, 1967-68

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Generating stations—										
Government	No.	28	12	..	13	12	19	5	..	89
Local authority	"	8	3	42	7	35	..	..	..	95
Companies	"	14	1	1	8	42	2	..	..	68
Total stations	"	50	16	43	28	89	21	5	..	252
Installed capacity of generators—										
Steam	'000 kW	3,768	2,292	1,220	797	514	10	47	..	8,647
Hydro	"	1,751	333	135	..	2	915	..	..	3,136
Internal combustion	"	81	20	(a)52	14	158	34	11	..	370
Total capacity	"	5,600	2,644	1,407	811	675	958	58	..	12,153
Persons employed(b)	No.	4,141	3,654	1,893	(g)	1,255	(g)	105	..	12,999
Value of output(c)	\$'000	153,078	101,380	55,347	(g)	31,040	(g)	2,531	..	386,132
Value of production(d)	"	112,955	72,259	28,514	(g)	18,231	(g)	1,320	..	263,018
Electricity generated(e)	million kWh	18,043	11,419	5,189	3,890	2,216	3,773	122	(h)	44,663
Ultimate consumers(f)	No.	1,470,761	1,173,110	528,000	408,000	238,252	139,886	8,556	33,286	3,999,851

(a) Including gas turbine. (b) Average employment in generating stations over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. The generation of electricity within each State takes no account of interchange of electricity between States. Furthermore, Victorian details exclude entitlements to generation from Hume Power Station and the Snowy Mountains Hydro-electric Scheme. (f) Approximate figures supplied by the electricity authority in each State. An 'ultimate consumer' is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organisation supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household. (g) Not available for publication; included in the total for Australia. (h) Not available. Excluded from Australian total.

### Commonwealth Territories

The electricity supply undertakings at Darwin, Katherine, Tennant Creek, and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

#### Australian Capital Territory

The supply authority is the A.C.T. Electricity Authority, which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1 July 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connection to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies. The total number of ultimate consumers at 30 June 1969 was 36,818. During the year 1968-69 the bulk electricity purchased was 459,758,000 kWh and the system maximum demand was 118,300 kW.

#### Northern Territory

At Darwin, supply was established by the Town Council in October 1934, but during April 1937 responsibility for generation and supply was transferred to the Northern Territory Administration. The Stokes Hill Power Station is now equipped with four turbo alternators with a total capacity of 47,000 kW. Old Diesel Power Station with a capacity of approximately 5,000 kW is available as a stand-by. A 66 kV transmission system is used in Darwin area. At Alice Springs the power station is equipped with a diesel generating plant of 8,000 kW total capacity. At Katherine the power station is equipped with a diesel generating plant of 2,700 kW total capacity, the generating plant at Pine Creek has a capacity of 180 kW and at Elliot power is supplied by a small automatic diesel alternator of 90 kW capacity. The total number of ultimate consumers served in the Territory at 30 June 1969 was 9,783.

**Papua and New Guinea**

*Papua and New Guinea Electricity Commission.* Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1 July 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works. The Commission, on its own behalf, operates the public supplies in the main centres of population and, on behalf of the Administration, operates the supply in the minor centres and patrol posts, hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply. It has also regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory.

*Generating facilities.* The Electricity Commission owns and operates diesel and hydro-electric facilities at Goroka, hydro-electric facilities at Port Moresby and diesel facilities at Lae, Madang, Samarai, Wewak, Rabaul and Kavieng, with a total installed capacity of 49,270 kW at 30 June 1969. The Kokopo Station was closed when the new transmission line from Rabaul came into operation in May, 1969.

	<i>Hydro</i> kW	<i>Diesel</i> kW	<i>Total</i> kW
Port Moresby . . . . .	35,500	..	35,500
Lae . . . . .	..	2,700	2,700
Madang . . . . .	..	2,280	2,280
Goroka . . . . .	400	1,000	1,400
Wewak . . . . .	..	2,300	2,300
Rabaul . . . . .	..	4,200	4,200
Kavieng . . . . .	..	450	450
Samarai . . . . .	..	440	440
<b>Total . . . . .</b>	<b>35,900</b>	<b>13,370</b>	<b>49,270</b>

In addition, the Commission purchases bulk power from the hydro-electric power stations of Placer Development Ltd for consumption in the township of Lae. The total substation capacity of all the Commission systems combined amounts to approximately 71,000 kVA divided up in 481 stations. The number of consumers served by the Commission at 30 June 1969 was 14,258. The Commission also maintains the generating plant and distribution systems in all minor centres, acting as an agent of, and from funds provided by, the Administration. In the financial year 1968-69, 127 centres with a total installed capacity of approximately 6,500 kW were supplied with power. The townships of Wau and Bulolo are supplied exclusively with power generated by Placer Development Ltd.

*Future Development.* Work has commenced on the Sirinumu Dam. This will ensure adequate water for the full output of the Rouna 2 Power Station and provide potential for further development of the Laloki River to supply Port Moresby. This is planned for completion by December 1970.

Investigations are proceeding into the future development of the Laloki River and although investigations are not complete it appears that a third power station, near Rouna 1, and a balancing pond at Sogeri will be feasible.

Preliminary investigations of the Vanapa, Angabunga and Musa Rivers are nearing completion with indications that the Musa River will be the best for supply to Port Moresby following completion of the proposed 50,000 kW diesel power station at Baruni.

Officials from the International Bank for Reconstruction and Development visited the Territory between 29 June and 12 July 1970 to appraise the Upper Ramu Hydro-Electric Scheme. Should the Bank decide to finance the project, it is expected that the first stage, estimated to cost \$26 million, will be in operation by 1975. This scheme will supply the main centres of Lae, Madang, Goroka and Mount Hagen and smaller intermediate centres.

Two further hydro-power sources in New Britain have been investigated for future development, the Kapiura River and Lake Hargy. Lake Hargy has not yet been fully investigated and the Kapiura River showed no potential. In view of the uncertainty of future hydro-electric power for New Britain, investigations into other power sources are being carried out. The present power station site at Rabaul is limited and a site for a new power station is being sought.

## CHAPTER 29

### THE TERRITORIES OF AUSTRALIA

The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are: Norfolk Island; the Territory of Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, deemed to form part of the Northern Territory.

Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 22, and 23 of Chapter 1. More detailed statistics and additional descriptive matter are to be found in the Annual Reports of the Administrations of the various Territories and in the *Northern Territory Statistical Summary* and the *Australian Capital Territory Statistical Summary* issued by this Bureau. Statistics for the Northern Territory and the Australian Capital Territory are also included in chapters dealing with particular subjects. The Statistician, Territory of Papua and New Guinea, issues a number of publications containing statistics relative to these two Territories, separate and combined.

Responsibility for the general administration of the Territories of Norfolk Island, Papua, New Guinea, Cocos (Keeling) Islands and Christmas Island is vested with the Commonwealth Department of External Territories; for the Northern Territory (including Ashmore and Cartier Islands) and the Australian Capital Territory with the Department of the Interior; and for Antarctica and Heard and McDonald Islands with the Department of Supply. Matters excepted are defence and civil aviation, and, in the Northern Territory and the Australian Capital Territory, public health, justice, education (excluding Aborigines) and the provision of the basic physical services, which are the responsibility of the Department of Health, the Attorney-General's Department, the Department of Education and Science, and the Department of Works, respectively.

### THE NORTHERN TERRITORY

#### General description

##### Area

Upon the extension of New South Wales westwards to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1 January 1911. The total area is 520,280 square miles.

##### Legislation and administration

On 1 January 1911 the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Year Book No. 15, page 940.

The *Northern Territory (Administration) Act 1910-1969* provides for an Administrator, appointed by the Governor-General, to administer the Territory on behalf of the Commonwealth.

It provides for a Legislative Council for the Northern Territory to make ordinances for the peace, order and good government of the Territory. This Council consists of six official members and eleven elected members. A President of the Council is elected from among the elected members. Money votes may be proposed in the Council only upon recommendation by message of the Administrator.

Ordinances are presented to the Administrator for assent. He is obliged to reserve ordinances relating to certain matters, including Crown lands and Aborigines, for the Governor-General's pleasure. Others he may assent to, withhold assent from, or return to the Legislative Council with recommended amendments. The Governor-General may disallow any ordinance assented to by the Administrator and, in respect of an ordinance reserved for his pleasure, he may assent, withhold assent, withhold assent to part, or recommend to the Administrator any amendments to the laws of the Territory that he considers desirable arising out of his consideration of the ordinance.

The Act also provides for an Administrator's Council to advise the Administrator on any matter referred to it, either by the Administrator, or in accordance with the provisions of any ordinance of the Northern Territory. The Council consists of the Administrator, and two official and three elected members of the Legislative Council.

The Territory elects one member to the House of Representatives.

The Corporation of the City of Darwin, established in 1957, consisting of a Mayor and eight Aldermen elected by adult franchise, provides municipal administration in Darwin. Elsewhere in the Territory municipal services are provided by the Administration. Town management boards representing local interests have been established in Alice Springs, Katherine and Tennant Creek to advise the Administration on local matters.

### Physiography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coastline seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland the country generally is devoid of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the seventeenth or eighteenth parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior system. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### Climate, fauna and flora

There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly all the rainfall occurs in the summer months. Further particulars appear in Year Book No. 6, Page 1116.

The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. A species of ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been reduced by indiscriminate shooting. Buffalo shooting is, however, now strictly controlled by ordinance.

The vegetation is north Australian in type but a number of forms belong to the Malayan and Oceanic regions. The climate and generally poor soils associated with it give rise to tropical savannah vegetation, with the size and volume of woody material present being closely related to rainfall and the quality of the forests decreasing strikingly as one proceeds inland from the northern coastline. In the north, cypress pine which is termite resistant, ironwood, bloodwood and paperbark timbers are cut and milled for local building purposes. Further inland particularly on the Barkly Tableland and parts of the Victoria River district there are better grazing grasses and some shrubs, while the wide belt of sandy plain between the Barkly Tableland and the ranges in the Alice Springs area, carries mainly spinifex grass and low scrub. The Alice Springs ranges and uplands carry chiefly a dwarf acacia scrub known as mulga, spinifex and other sparse grasses. The principal orders represented in the interior are *Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae* and *Utricleae*.

### Population

See also the chapters Population and Vital Statistics.

The estimated population of the Northern Territory at 30 June 1969, including Aborigines, was 36,833 males, 31,209 females, 68,042 persons. The Aboriginal population at the census of 30 June 1966 totalled 10,651 males, 10,468 females, 21,119 persons. While few Aborigines now live outside

settled areas and not all choose to live on reserves, a large area of reserved land totalling 94,196 square miles has been maintained to provide economic resources from which the Aborigines may benefit either directly or from royalty payments.

## Advancement of Aborigines

### Policy

The Commonwealth and State governments have adopted a common policy of assimilation which seeks that all persons of Aboriginal descent will choose to attain a similar manner and standard of living to that of other Australians and live as members of a single Australian community, enjoying the same rights and privileges, accepting the same responsibilities and influenced by the same hopes and loyalties as other Australians.

### Legal status

Under the *Nationality and Citizenship Act* 1948-1966, all Aborigines are British subjects and Australian citizens. Since the commencement of the *Social Welfare Ordinance* 1964 in September 1964, Aborigines in the Northern Territory have been equal at law with all other residents, although some special benefits have been retained for them or have been introduced since then. The Ordinance enables assistance to be given to any person who is socially or economically in need.

### Special schools for Aborigines

While the Department of Education and Science is now responsible for community education in the Northern Territory, special schools and pre-schools for Aboriginal children remain the responsibility of the Welfare Branch of the Administration. These special schools and pre-schools are intended as an interim measure only, policy being that all Aboriginal children should eventually receive their education in the community schools. Following expert inquiries, however, it was decided that schools should be established having a syllabus and school texts which take account of the social and cultural background of the Aborigines. In these schools there is a shift of emphasis from theoretical to practical subjects, but where progress warrants it, the child transfers to the ordinary curriculum leading to the general community schools. A transitional school system has also been established, and one of its main objectives is to provide a bridge between the special schools and the community high schools.

Fifty-eight special schools for Aboriginal children had been established by the middle of 1969. Forty-nine of these were conducted by the Administration, eight by missions and one by the managements of pastoral properties. Government subsidies were provided to the missions and pastoral managements concerned. Twenty-five pre-school centres had also been established. Twenty-one of these were conducted by the Administration and four by the missions.

### Assistance to Aborigines

There are very few Aborigines following a fully nomadic way of life and most choose to live at settlements run by the Government or by religious missions on the Aboriginal reserves which cover a total area of 94,196 square miles. Land within reserves is available for leasing only to Aborigines for pastoral and agricultural purposes. Significant mining ventures have been established within reserves at Groote Eylandt and Gove, and mineral and timber royalties received from activities carried on within reserves are paid into the Aborigines Benefits Trust Fund. This Fund was established in 1952 and the Minister for the Interior may authorise loans or grants from the Fund to Aborigines. In this matter the Minister has the advice of a special Committee which includes five Aboriginal representatives. Moneys in the Fund may be used for a wide variety of purposes which would benefit the Aboriginal people, e.g. to establish business enterprises, to provide community facilities such as Council houses and sporting ovals, and to assist people to purchase houses and furniture. Disbursements from the Fund totalled \$249,250 at 30 June 1970.

An intensive welfare programme to prepare Aborigines for the demands of modern living is being carried out, and twenty Government settlements or welfare centres and thirteen mission stations have been established where Aborigines are assisted to acquire new employment skills and the women receive instruction on home management, etc. Health services (including infant clinics), education, housing, vocational training and employment are provided, and Aborigines are encouraged to take part in the social activities of the community.

Financial and technical assistance is available to Aborigines who wish to develop their own commercial or industrial enterprises. In addition to the Aborigines Benefits Trust Fund, financial assistance is also available from the Capital Fund for Aboriginal Enterprises controlled by the Minister-in-Charge of Aboriginal Affairs.

## Production

See also the chapters dealing with particular subjects.

### Land tenure

Three-sevenths of the land in the Territory is reserved or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described in Year Book No. 48, pages 111-12. The following changes should, however, be noted.

*Leases to Mission Organisations* are now granted under the *Special Purpose Leases Ordinance 1953-1965* for fixed terms or in perpetuity.

*Miscellaneous Leases* are now granted in perpetuity for purposes such as a market garden, plantation, orchard, vineyard, poultry farm, piggery, or the like.

*Darwin Town Area Leases* are granted in perpetuity for business or residential purposes, or both, in the Darwin Town Area.

The chapter Rural Industry of this issue contains statistical information concerning areas occupied under various forms of tenure.

### Agriculture

Commercial agricultural production is confined to grain sorghum, vegetables and small-scale fruit production for local consumption. Townsville stylo seed production has grown considerably and has become an important contributor to the income of many small landholders.

Information concerning scientific surveys (commenced in 1946), conducted by the Commonwealth Scientific and Industrial Research Organization to determine more accurately the potentialities of the Northern Territory, and the resulting establishment of an agricultural research station at Katherine and experimental farms at Katherine and Berrimah (near Darwin), is given in Year Book No. 51, page 101, and in earlier issues. Information is given also on the establishment of rice research stations and investigational work carried out, and on subsequent rice crop commercial scale operations. The appointment by the Minister for Territories in 1959 of an expert committee to carry out investigations relative to the prospect of agriculture in the Territory and subsequent developments are also referred to.

#### NORTHERN TERRITORY: AREA AND PRODUCTION OF CROPS 1964-65 TO 1968-69

Crop	1964-65	1965-66	1966-67	1967-68	1968-69
	AREA(a) (acres)				
Fruit—Bananas . . . . .	28	20	29	(b)	(b)
Pineapples . . . . .	19	12	17	(b)	(b)
Other . . . . .	83	78	87	98	118
<i>Total fruit</i> . . . . .	130	110	133	98	118
Peanuts . . . . .	(b)	16	(b)	12	(b)
Sorghum for grain . . . . .	1,269	1,093	527	(c)	(c)
Vegetables for human consumption . . . . .	150	144	218	199	255
Other crops(d) . . . . .	2,687	2,699	2,747	5,691	6,877
<i>Grand total(a)</i> . . . . .	4,236	4,062	3,625	6,000	7,250
	PRODUCTION				
Fruit—Bananas . . . . . bushels	2,448	1,985	1,684	(e)	(e)
Pineapples . . . . . "	1,142	990	997	(e)	(e)
Peanuts . . . . . cwt	(e)	76	(e)	32	(e)
Sorghum (grain) . . . . . bushels	10,693	12,018	7,533	(e)	(e)

(a) Excludes rice; details are not available for publication. (b) Not available for publication, included in Other crops. (c) Not available for publication, excluded from totals. (d) Principally fodder crops. (e) Not available for publication.

**Pastoral industry**

The pastoral possibilities of certain parts of the Territory were recognised at an early date, and both cattle and sheep raising have been attempted. For various reasons sheep-raising has not been very successful, but the cattle industry has progressed steadily and is continuing to expand. There is substantial potential for further expansion in the higher rainfall area of the Territory through the introduction of improved pastures and the use of superphosphate.

**NORTHERN TERRITORY: LIVESTOCK, JUNE 1965 TO 1969**

30 June—	Horses	Cattle	Sheep	Pigs
1965 . . . .	35,997	1,067,327	9,099	2,182
1966 . . . .	36,719	1,031,715	8,875	2,275
1967 . . . .	37,638	1,097,114	8,319	2,791
1968 . . . .	38,119	1,129,805	8,595	1,999
1969 . . . .	38,989	1,184,835	7,336	2,488

**Mining**

During 1968, the value of output of the mining and quarrying industry in the Territory, excluding uranium mining, particulars of which are not available for publication, was \$23,446,000. The main minerals produced were copper, manganese, iron ore and gold. This represented an increase of 21 per cent on the previous year.

The bulk of the copper and gold produced in the Territory is obtained from underground mines in the Tennant Creek district. A new small rich gold-mine at Juno came into production in 1967. At Warrego, a low grade copper/gold ore body is being developed and production is scheduled to commence in 1972. Plans have been announced to develop another new copper mine in the area, the Gecko mine.

Manganese ore is being produced by open cut methods from extensive deposits at Groote Eylandt in the Gulf of Carpentaria. Production capacity at Groote Eylandt was progressively increased during 1967 with the object of reaching an annual capacity of 400,000 tons. This production supplied all Australian requirements of manganese ore and large tonnages were exported to Japan, Europe and the U.S.A. In 1968 the value of output of manganese ore exceeded that of copper. A further major expansion of manganese ore production is planned.

Production of iron ore at Frances Creek commenced in 1966 and at Mount Bunday in 1967. The output from both of these mines is being exported to Japan. Ore shipments in 1968 from Frances Creek and Mount Bunday totalled 493,000 tons and 143,000 tons respectively.

At Gove, considerable construction activity is in progress as part of a large scale development of extensive bauxite deposits. Under an agreement between the Commonwealth and Nabalco Pty Ltd signed in February 1968 and ratified by ordinance passed by the Northern Territory Legislative Council on 16 May 1968, Nabalco undertook to build an alumina plant with an annual capacity of not less than 500,000 tons by 31 December 1971 in the Northern Territory. Under the terms of a supplemental agreement, signed on 30 May 1969, the equity capital of the project is to be held as to 70 per cent by Swiss Aluminium Australia Pty Ltd, and as to 30 per cent by Gove Alumina Ltd (a consortium of seven Australian companies). Further, the alumina plant is to have an eventual capacity of 1 million tons per annum and is to be built in two stages, of which the first is scheduled for completion by the end of 1971 with a capacity of 500,000 tons per annum. Under this agreement, exports of bauxite will amount to 40 million tons over twenty years.

In September 1968 the Commonwealth Government accepted a joint proposal from two private companies to carry out further exploration and development work on the Woodcutters lead-zinc prospect. Investigation of the project is underway.

Investigations are continuing into possible methods of treating the extensive lead-zinc deposits located in the McArthur River district. Conventional methods are not considered to be suitable for the treatment of these ores.

The search for oil and natural gas in the Territory is continuing. Expenditure on petroleum exploration activity in the Northern Territory for 1968, excluding direct Commonwealth expenditure, totalled \$7.7 million. The main areas of interest are the offshore areas of the Bonaparte Gulf Basin, the Ashmore and Cartier Islands area and in the Amadeus Basin of Central Australia. Natural gas was discovered in the Amadeus Basin in 1964. Combined reserves at Mereenie and Palm Valley near Alice Springs are estimated at 3,000,000 million cubic feet. Petroleum exploration is being carried out in the Northern Territory in permit areas covering some 174,000 square miles, of which approximately two-thirds are off-shore.

**NORTHERN TERRITORY: MINING AND QUARRYING OPERATIONS, 1965 TO 1968**  
(Excluding uranium mining)

	1965	1966	1967	1968 <sup>p</sup>
Number of mines and quarries . . . . .	67	80	74	58
Average number of persons employed during whole year (including working proprietors) . . . . .	688	814	1,006	1,132
Salaries and wages paid <sup>(a)(b)</sup> . . . . . \$'000	2,867	3,361	4,609	5,707
Total fuel, materials, etc., used . . . . . „	2,571	2,212	2,901	4,211
Value of additions and replacements to fixed assets <sup>(a)</sup> . . . . . „	5,677	7,282	5,195	7,756
Value of output (at mine or quarry) . . . . . „	8,289	13,283	19,316	23,446
Value of production <sup>(c)</sup> . . . . . „	5,715	11,070	16,416	19,235

(a) Excludes mines employing less than four persons. (b) Excludes drawings by working proprietors; the amounts are net after deducting value of explosives sold to employees. (c) Value of output less cost of power, fuel and light and other materials and stores used; depreciation and maintenance costs have not been deducted.

### Forestry

A programme of forest improvement and development to conserve existing forest areas and increase timber resources is undertaken by the Forestry Branch of the Northern Territory Administration. Basic forestry research is carried out by the Forestry and Timber Bureau at a Regional Research Station established at Berrimah. The Territory forestry programme includes the regeneration and utilisation of native forests, the establishment of 1,000 acres of softwood plantations (mainly native cypress pine) per year and makes provision for the employment and training of Aborigines in forestry work. Local production of log timber, mainly cypress pine, amounted to 1,026,000 super feet in 1968-69 but this was insufficient to meet local needs and some 5,232,000 super feet of sawn timber was imported from interstate and overseas. During 1967-68 the Government drew the attention of industry to the extensive eucalypt forests in the higher rainfall areas of the Territory and to their likely potential for wood chip export industries. Previously these forests were thought to have little or no commercial potential. If a wood chip export industry is established the Territory could become a net exporter of wood products.

### Fisheries

Following preliminary surveys indicating the existence of valuable prawn resources off the Northern Territory coast, approval was given in 1968 for seven companies to begin prawning operations. A condition of this approval is that shore processing plants must be established by the companies. Three of these companies are joint Australian-Japanese ventures involving the use of foreign vessels and crews for a limited period. The joint ventures are required to establish their processing plants in Darwin; one of these plants commenced operations at the beginning of the 1970 season. Of the four Australian companies one has elected to process in Darwin and the others at Katherine (with a trawler base at the mouth of the Roper River), Groote Eylandt and Gove. Processing plants at Katherine and Groote Eylandt have commenced operating. During a limited establishment period the three Australian companies outside Darwin have been given protection against the establishment of additional processing plants in the areas in which they have elected to operate. Provision has also been made for participation of Aborigines in the industry. During 1969, the first full season of prawning operations, prawns valued at \$4.3 million were exported from the Territory.

The other main fishery in the Territory is the marine fishery based on Barramundi. In addition a small cultured pearl industry has been established.

**NORTHERN TERRITORY: FISHING<sup>(a)</sup> 1964-65 TO 1968-69**

	1964-65	1965-66	1966-67	1967-68	1968-69
<b>Prawning—</b>					
Estimated gross weight of prawn catch . . . . . '000 lb	..	1	1	23	2,375
Gross value of prawns . . . . . \$'000	..	1	1	14	831
<b>Other fisheries—</b>					
Estimated landed weight of fish catch . . . . . '000 lb	290	346	550	557	534
Gross value of fish . . . . . \$'000	55	57	73	92	96
<b>All fisheries—</b>					
Number of boats engaged . . . . .	28	43	60	53	110
Number of men employed . . . . .	69	120	133	123	573

(a) Excluding pearl shell fisheries and pearling.

**Secondary industries**

The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, such as electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Industrial investments by private interests in recent years include plants to manufacture bitumen, clay bricks, concrete bricks, reinforcing steel, concrete products and fencing materials.

**NORTHERN TERRITORY: FACTORIES, 1963-64 TO 1967-68**

	1963-64	1964-65	1965-66	1966-67	1967-68
Number of factories(a) . . . . .	139	174	185	187	188
Average number employed(b)—					
Males . . . . .	978	1,098	1,182	1,308	1,380
Females . . . . .	97	112	112	115	139
<i>Persons employed</i> . . . . .	1,075	1,210	1,294	1,423	1,519
Salaries and wages paid(c)—					
Males . . . . . \$'000	2,628	3,298	3,666	4,146	4,721
Females . . . . . „	142	185	192	203	263
<i>Total salaries and wages paid</i> . . . . . „	2,770	3,483	3,859	4,349	4,983
Value of power, fuel, light, etc. used(d) „	735	865	856	946	1,159
Value of materials used(e) . . . . . „	3,384	4,550	5,497	7,214	7,995
Value of production(f) . . . . . „	4,938	6,654	7,103	7,847	9,680
Value of output(g) . . . . . „	9,057	12,068	13,456	16,007	18,831
Value of land and buildings(h) . . . . . „	4,586	5,668	6,101	6,482	8,150
Value of plant and machinery(h) . . . . . „	6,046	6,103	5,954	6,825	6,696

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used. (b) The aggregate of the average number of persons employed in each factory. Includes working proprietors. Figures represent average employment over the whole year. (c) Excludes drawings by working proprietors. (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant. (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book value at end of year, including estimated value of rented premises and machinery.

**Tourism**

Tourism has become one of the Territory's major industries in recent years. The number of visitors to the Northern Territory in 1964-65 was 33,000, and the value of visitor expenditure was \$6.9 million. In 1968-69 visitors and spending had more than doubled and 70,000 tourists visited the Territory spending \$16 million.

A firm of consultants was commissioned in 1968 to undertake a survey of the tourism potential of Central Australia, and in particular the Ayers Rock Mount Olga National Park. The following reports were presented to the Government in 1969: 'Tourism Plan for Central Australia', 'Ayers Rock Mount Olga National Park Development Plan'. The reports provide useful guidelines for the formulation of a tourism development programme which would encourage more overseas and domestic visitors to the area.

## Trade, transport and communication

## Trade

No comprehensive record is kept of the trade between the States and the Territory. The following table shows the values of the principal commodities imported into and exported from the Northern Territory from or to overseas countries during the years 1964-65 to 1968-69.

**NORTHERN TERRITORY: PRINCIPAL OVERSEAS  
IMPORTS AND EXPORTS, 1964-65 TO 1968-69**  
(\$'000)

## Shipping

Shipping services to Darwin are provided from the eastern States by ships of the Australian National Line and from the west by the Western Australia State Shipping Service. Increasing numbers of oil tankers and overseas general cargo vessels visit Darwin while iron ore carriers continue to load lump and fine ore for Japan. The establishment of a prawning industry has resulted in an increasing number of prawning vessels entering the port. Activity is also increasing as a result of visits by oil rig tenders.

Shipping services to Groote Eylandt involve mainly ore carriers for the export of manganese ore. A regular general cargo service is provided by vessels based in Brisbane. This service also operates to Aboriginal communities on the Gulf of Carpentaria and to Gove where it is supplemented by another service operating from East coast ports. The export of bauxite from Gove has not yet commenced.

Mission and privately owned boats and barges also provide services from Darwin to Aboriginal communities and ports along the coast.

The Australian National Line is replacing its vessels now calling at Darwin with a bulk ore/container vessel which will backload manganese ore from Groote Eylandt to Tasmania.

Developments proposed for the port of Darwin within the next two years will improve the capacity of the port to handle the increase in shipping.

### Air services

At 30 June 1969 there were 118 aerodromes in the Territory, ten of which are maintained by the Commonwealth Department of Civil Aviation. The overseas passenger services using the Darwin international airport are Lufthansa (Sydney to Frankfurt); Qantas/B.O.A.C. (Sydney to London); B.O.A.C. (Sydney to Hong Kong); Union de Transports Aeriens (Paris to Los Angeles via Noumea); and T.A.A. on behalf of Transportes Aereos de Timor (Darwin to Baucau). Regular inland services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett Airlines (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd (from Perth and Derby), MacRobertson-Miller Airways Ltd and Connellan Airways Ltd operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

### Railways

The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of 822 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Maree, a distance of 217 miles, and 3 ft 6 in from Maree to Alice Springs. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft 6 in gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

### Roads

The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Katherine and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. These highways are used for carrying various freights, including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. There are now approximately 12,000 miles of roads in the Territory of which 2,070 miles are sealed.

Work on a programme for reconstruction and development of beef cattle roads was commenced in 1961-62. To June 1969 \$30.2 million has been authorised for the improvement of 1,600 miles including the sealing of 950 miles. Expenditure to 30 June 1969 was \$18.6 million. The transport of cattle by road is expected to increase the number, quality and value of cattle turned off.

### Posts, telegraph, telephones and wireless

Postal communication is maintained by road, rail and air transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering 2,230 miles, runs from Adelaide to Darwin and links Darwin in telegraphic communication with other parts of the world. Trunk telephone lines extend from Adelaide and Townsville to Darwin, providing telephone communication with the capital cities of Australia. These lines also carry interstate telegram and telex traffic and serve the towns along the routes.

Darwin is connected by high frequency radio to Gove Peninsula and to Groote Eylandt. In addition high frequency radio telephone exchanges have been established at Alice Springs and Katherine which provide connections to the telephone network for pastoral, mining, tourist and other organisations throughout the Northern Territory and across the border into Queensland, South Australia and Western Australia. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine and there is a commercial station at Darwin.

## Education

*See also* the chapter Education, Cultural Activities and Research.

### Community schools

Since February 1968 the Commonwealth Minister for Education and Science has been responsible for community education in the Northern Territory. Community schools are operated by the Commonwealth under an agreement with the South Australian Department of Education which provides teachers and curricula and is represented in Darwin by a Director, Northern Territory Schools. At 1 August 1969 there were twenty-six government schools in the Territory, with 8,561 pupils, and five non-government schools, with 1,256 pupils, providing instruction according to the South Australian curriculum. High schools have been established with classes to matriculation level at Darwin and to leaving certificate level at Alice Springs. Area Schools provided classes up to third year high school level at Katherine, Tennant Creek and Batchelor.

All children who live more than 10 miles from a suitable school and board away from home in order to attend school receive an allowance of up to \$370 (basic \$250 plus \$120 on a graduated scale according to family income) per annum plus fares reimbursement. Limited numbers of special Northern Territory secondary and tertiary scholarships supplement the normal Commonwealth scholarship provisions. The secondary scholarship provides a benefit of \$100 per annum. The tertiary award covers the costs of tuition and other compulsory fees. Book allowances ranging from \$16 to \$26 per annum are allowed to secondary students whose parents reside in the Northern Territory. A correspondence supervision allowance of up to \$100 per annum per child may be claimed by parents who employ a governess or domestic help and whose children are enrolled with a correspondence school. The broadcasts, 'School of the Air' supplement the lessons of the South Australian Correspondence School. A conveyance allowance may be claimed by parents who live more than 3 miles from a school or bus run and who transport their children to school daily by private transport. Free text books are supplied to primary school students and, subject to a means test, free exercise books and materials may be approved. Full-time non-salaried tertiary students who do not receive assistance from any other source are entitled to reimbursement of a return air fare per annum at tourist class rates less a deduction of \$10. External students of the University of Queensland are reimbursed the surcharge placed on Northern Territory students subject to satisfactory completion of each term's work.

At 30 June 1969 there were fourteen government pre-school centres in the Territory, with an enrolment of 917 pupils. A number of scholarships are offered each year for the training of pre-school teachers.

### Theoretical training of apprentices

The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

## Finance

Details of receipts and expenditure of the Territory for the years 1964-65 to 1968-69 are shown in the table following. In this table the receipts and expenditure of the Northern Territory have been classified into a National Accounts form. The table covers transactions relating to the Northern Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Northern Territory Government Settlements Canteens, Northern Territory Housing Commission, Northern Territory Housing Loans, and Northern Territory Transport. Details of the financial transactions of the Darwin City Council are also incorporated in the table. Revenue derived by the Commonwealth from income taxes, customs duties, etc. levied in the Northern Territory and expenditure by the Commonwealth in the Northern Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

THE AUSTRALIAN CAPITAL TERRITORY

General description

The Commonwealth Constitution provides that the Seat of Government of the Commonwealth shall be in the State of New South Wales but distant not less than 100 miles from Sydney. After a number of alternative sites were considered, an area of 911 square miles lying approximately 200 miles south-west of Sydney was transferred to the Commonwealth as from 1 January 1911. A further 28 square miles at Jervis Bay were transferred as from 4 September 1915 to serve as a port for the Territory.

The primary responsibility for administering the Australian Capital Territory lies with the Department of the Interior, whose functions include housing, police, and municipal services. Education, public health, justice and the provision of basic physical services, including water supply, sewerage and roads, are the responsibility of the Departments of Education and Science, Health, Attorney-General's, and Works. The National Capital Development Commission has the responsibility for the planning and development of the Canberra city area.

The Australian Capital Territory Advisory Council was established in 1930. It has eight elected members and a representative from each of the Departments of Interior, Works, and Health, and the National Capital Development Commission, as well as an observer from the Department of Education and Science. The Council advises the Minister for the Interior on matters affecting the Australian Capital Territory. Ordinances are submitted in draft form to the Council for advice and comment before being implemented.

At the census of 30 June 1966 the population of the Australian Capital Territory was 96,013, made up of 92,308 in the Canberra metropolitan area and 3,705 in rural areas (including Jervis Bay). The estimated population of the Territory at 30 June 1969 was 62,813 males and 59,192 females, 122,005 persons. *See also* the chapters Population and Vital Statistics.

### National Capital Development Commission

*The National Capital Development Commission Act 1957-60* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1968-69 was the eleventh year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Department of Works and private consultants. Details of the expenditure by the Commission in each year from 1964-65 to 1968-69 are included in the table on page 980. Total expenditure in 1968-69 was \$47.2 million, comprising land development and services \$10.3m, water, sewerage and stormwater trunk services and headworks \$3.3m, housing, flats and other accommodation, \$9.1m, education facilities \$4.2m, roads, bridges and traffic control \$5.6m, city works \$3.5m, Commonwealth offices \$7.7m, national works \$1.7m, and others \$1.8m.

The following major works were completed during 1969 by the Commission and its agents: Melrose High School, Canberra High School (Aranda), Lyneham High School extensions, Page Primary School, Aranda Primary School, Farrer Primary School, Cook Primary School and Macquarie Hostel in Barton.

Works under construction at the beginning of 1970 included the following projects: Campbell Park offices, Civic offices extensions, C.S.I.R.O. headquarters building in Campbell, Russell buildings Nos 10, 11, 14, Scarborough House in Woden town centre, Juliana House in Woden town centre, Government stores and transit depot in Fyshwick, Capital Hill Ring Road, Adelaide Avenue-State Circle Interchange, Belconnen-water pollution control centre, Bendora-Mount Stromlo gravity main extension, Belconnen High School, Higgins Primary School, Waramanga Primary School and Weston Creek 1 Primary School.

### Works and services

#### Housing

Until the period following the 1939-45 War most houses and flats in the Australian Capital Territory were built and rented by the Department of the Interior. More recently, an increasing number of houses and flats have been built by private enterprise, and as a result the proportion of houses and flats in the Australian Capital Territory occupied by tenants of the Department of the Interior has fallen from 79.7 per cent of total occupied houses and flats in 1954 to 58.3 per cent in 1961 and 38.8 per cent in 1966. Although the bulk of rented accommodation is provided by public authorities and will continue thus in the foreseeable future, there has been a considerable increase in the proportion of home ownership in the Australian Capital Territory, since 1954. The proportion of houses and flats owned or being purchased by instalments has risen from 19.5 per cent in 1954 to 29.0 per cent in 1961 and 45.6 per cent in 1966. In June 1966, 38.6 per cent of the total occupied private dwellings in the Canberra City District were owned by the Department of the Interior, and in June 1969, 33.3 per cent. Home building activity in the Woden Valley and Weston Creek, south-west of the former city area and Belconnen, north-west of the former city area, has continued to expand, and at June 1969 there were 7,396 occupied private dwellings in the Woden Valley and Weston Creek area, and 2,264 occupied private dwellings in the Belconnen area. *See also* the chapter Housing and Building.

#### Municipal services

Canberra has been developed as a garden city. More than eleven million trees and many acres of lawns have been planted since 1927. The development of new areas of parkland and the maintenance of existing tree and lawn areas is the responsibility of the Parks and Gardens Branch of the Department of the Interior. Municipal services are also provided by the Department of the Interior.

At 30 June 1969, 31,283 meters were connected to the city water supply, drawn through nine service reservoirs from three storages on the Cotter River with a total capacity of nearly 20,000 million gallons. In 1968-69 some 6,089 million gallons of water were consumed in Canberra, and in addition the system supplied 382 million gallons to Queanbeyan, New South Wales. Treatment works at Weston Creek, Belconnen and Fyshwick dispose of Canberra's sewage. At 30 June 1969, 534 miles of sewers, 9 miles of rising sewerage mains and 573 miles of storm water drains were laid.

#### Department of Works

Apart from the work it carries out for the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1968-69 on all operations amounted to \$11.4 million (\$10.7 million in 1967-68), comprising: building works—housing \$68,782, other building \$4,279,725; engineering works \$1,162,700, repairs and maintenance—building \$2,074,133, engineering \$3,637,696, and purchase of plant \$148,207.

### Production

*See also* the chapters dealing with particular subjects.

#### Lands

Reference has been made in earlier issues of the Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and the chapter Rural Industry of this issue contains statistical information on the subject. (*See also* § 1. Canberra: Fifty Years of Development, page 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910-1965, no Crown lands in the Territory may be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. In general, leases of land in the city area are granted under the *City Area Leases Ordinance* 1936-1969. In special circumstances land may be leased for purposes other than business or residential under the *Leases (Special Purposes) Ordinance* 1925-1953 and for church purposes under the *Church Lands Leases Ordinance* 1924-1966. As considerable areas of Commonwealth owned land in the Territory are not immediately required in connection with the establishment of the City, they have been leased for agricultural or grazing purposes for terms consistent with the anticipated growth of Canberra under the *Leases Ordinance* 1918-1966. Some lands in the Territory, in areas generally remote from the City, remain in private ownership under Freehold Title.

The Commonwealth Territory at Jervis Bay, comprising about 28 square miles, was acquired from New South Wales for the possible provision of port facilities in connection with the Australian Capital Territory. A portion of the area is occupied by the Royal Australian Naval College (H.M.A.S. *Creswell*) and a Royal Australian Navy airfield. Several blocks fronting Sussex Inlet have been leased for guest houses and holiday camps, etc., under the *Leases Ordinance* 1918-1966, and an area of land in the Murray's Beach area has been set aside for possible use as an atomic power station under the control of the Australian Atomic Energy Commission. Apart from picnic and camping areas, experimental planting, afforestation and soil conservation activities, the remainder of the area is being maintained in its natural state.

#### Forestry

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly decorative, but since then a much wider programme has been undertaken. In 1926 a comprehensive review was made of the Territory's potential for forest development, and a programme for the development of commercial forests was approved. Most of the better native forest has since been placed under management, and, following survey and assessment work, forestry operations, including fire-control, have been extended to 100,000 acres of eucalypt forest in the lower Cotter Catchment Area.

Afforestation work has also been undertaken, and softwood plantations (mainly *Pinus radiata*) have been established at Uriarra, Stromlo-Green Hills, Pierce's Creek, Kowen, Tidbinbilla, Jervis Bay and Boboyan. Experimental plots have been established at Jervis Bay and in the Brindabella Ranges, and soil conservation plantings made at various locations throughout the Territory. The total area of softwood plantations within the Australian Capital Territory at 30 June 1970 was 30,729 acres, of which 27,991 acres were *Pinus radiata*, the balance consisting chiefly of *Pinus ponderosa* and *Pinus nigra*, plus 720 acres at Jervis Bay, mainly *Pinus radiata* and *Pinus elliottii*.

Continued thinning operations have improved all Australian Capital Territory forests so that they now yield a wide variety of products. Board-logs and case timber form the bulk of production, but some poles, fencing timber, and pulpwood are now being produced. The yearly output from pine plantations has increased from 2,500 cubic feet in 1930-31 to 1.82 million cubic feet in 1969-70. The 1969-70 output was valued at \$477,000 delivered at mill door Canberra, yielding a net stumpage of \$180,000 to the Commonwealth. The total net stumpage from all Australian Capital Territory plantation sales to date is \$1,922,000.

There was no hardwood log production in 1969-70. Up to 30 June 1970 a total of 25.12 million cubic feet of pine logs had been cut from plantations, while hardwood production from the Australian Capital Territory, including Jervis Bay, remained at 4.3 million cubic feet.

In 1970 the department entered into an agreement to supply 50 million super feet annually of logs of all sizes to a new purchaser, who is required to establish a major plywood factory plus a sawmill with drying and re-manufacturing processes plus facilities to chip small logs and solid residues for use elsewhere. This pioneering integrated venture will result in major changes to the pattern of sale of forest produce in 1972.

#### Agricultural, pastoral and secondary industries

During 1968-69 the production of the more important items of the agricultural and pastoral industry was: wheat 83,674 bushels; wool 2,059,000 lb; whole milk 898,000 gallons; meat (carcass weight), fresh 4,591 tons. The numbers of livestock depastured at 31 March 1969 were: horses 705; cattle 13,845; sheep 245,884.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory.

#### AUSTRALIAN CAPITAL TERRITORY: FACTORIES, 1963-64 TO 1967-68

	1963-64	1964-65	1965-66	1966-67	1967-68
Number of factories(a) . . . . .	170	187	217	238	242
Average number of employed(b)—					
Males . . . . .	2,236	2,634	2,896	2,992	3,007
Females . . . . .	458	593	599	639	709
<i>Persons employed</i> . . . . .	2,694	3,227	3,495	3,631	3,716
Salaries and wages paid(c)—					
Males . . . . . \$'000	5,666	7,854	8,819	9,306	9,968
Females . . . . . "	607	848	1,047	1,177	1,317
<i>Total salaries and wages paid</i> . . . . .	6,273	8,702	9,866	10,483	11,285
Value of power, fuel, etc., used(d) . . . . .	502	644	760	735	830
Value of materials used(e) . . . . .	8,428	11,440	13,349	14,918	16,382
Value of production(f) . . . . .	11,097	14,060	17,418	18,860	19,372
Value of output(g) . . . . .	20,026	26,145	31,528	34,514	36,583
Value of land and buildings(h) . . . . .	11,669	20,583	21,891	22,779	23,410
Value of plant and machinery(h) . . . . .	5,103	9,682	10,134	10,368	10,023

(a) Any factory, workshop or mill in which four or more persons are employed or power other than hand is used. (b) Average over whole year; includes working proprietors. (c) Excludes amounts drawn by working proprietors. (d) Includes water and lubricating oil. (e) Includes also containers, etc., tools replaced and repairs to plant. (f) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (g) Value of goods produced including amounts received for repair work and other work done. (h) Depreciated or book values at end of year including estimated value of rented premises and machinery.

#### Transport and communication

Canberra is connected with the railway system of New South Wales at Queanbeyan by a line 5 miles long. This line was opened for goods traffic on 25 May 1914 and for passenger traffic on 15 October 1923. Direct or linking services operate between Canberra and Sydney and Canberra and Melbourne. Two airlines provide many services daily each way on the Sydney-Canberra-Melbourne route. Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia. The total length of roads in the Territory at 30 June 1969 was: bitumen and concrete, 571 miles; gravel, 242 miles; other formed roads, 36 miles; total, 849 miles. There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system and CTC Channel 7, a commercial station.

## Social

*See also* the chapter Education, Cultural Activities and Research.

### Education

The *Education Ordinance 1937-1966* provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of Education and Science is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides teaching staff. It is reimbursed for expenses incurred.

At 1 August 1969 there were nine government secondary schools in the Australian Capital Territory providing courses proceeding to the Higher School Certificate. Thirty schools provided courses at infants and primary levels, three of these being in rural districts and one in the Jervis Bay area. There were also a school for mentally handicapped children, and a school for physically handicapped children located at Canberra Hospital. In addition, classes for deaf children were located at Ainslie and Mawson primary schools; and classes for mildly mentally handicapped children at Ainslie, Mawson, and Narrabundah primary schools. There is also a therapy clinic for children with speech defects, and a clinic for educational guidance. A further two primary schools and one secondary school are scheduled to commence at the beginning of the 1971 school year. At 1 August 1969 there were 15,303 pupils enrolled in the primary grades of government schools, and 7,559 pupils in secondary forms of government schools.

At 1 August 1969 there were twenty non-government schools in Canberra including six secondary schools which provide courses leading to the Higher School Certificate. At 1 August 1969, 5,381 pupils were enrolled in the primary grades of non-government schools and 3,300 pupils were enrolled in the secondary forms of non-government schools.

Forty-two pre-school centres, including two in the Jervis Bay area and a mobile unit which visits outlying areas of the A.C.T. provide pre-school facilities for approximately 2,750 children between the ages of three and five years. Pre-school education is also provided for deaf children.

The Canberra Technical College, which follows generally the curriculum set by the New South Wales Department of Technical Education, provides trade, post-trade, certificate, and some hobby courses. In 1969 the Technical College provided instruction in one hundred courses in twenty-one different schools of study. Student enrolments in 1969 were 6,105.

The Canberra School of Music provides a Diploma Course and individual study in a range of instruments and voice. At 30 June 1969 enrolments totalled 580.

For information about the Australian National University, refer to the section on universities, on page 644 in Chapter 20, Education, Cultural Activities and Research.

The Canberra College of Advanced Education was established following a decision by the Commonwealth Government in October 1966 to accept the recommendations of a committee of enquiry into the need for a college of advanced education in the Australian Capital Territory. The College is organised into schools and in 1970, courses were offered in the School of Administrative Studies, the School of Applied Science and the School of Liberal Studies. Courses in the School of Teacher Education will commence in 1971. It is envisaged that additional schools will be established as other specialised fields of study are introduced.

### Health

The Canberra Hospital serves the population of Canberra and surrounding districts. At 30 June 1969 it had 611 beds, a visiting medical staff of 148, 27 salaried medical staff, and a nursing staff of 720. For further information about health services in the Australian Capital Territory *see* the Public Health chapter in Year Book No. 53 (pages 549-50) and, for recent administrative changes, in this Year Book (page 431).

### Justice

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force, which at 30 June 1970 numbered 290, including the Commissioner and Superintendent. Of the total, 114 were engaged in the General Duties Branch, including one at Jervis Bay and two caring for the Police Citizens Boys' Club. The Traffic Branch comprised 75 members, including the specialised water police and those involved in accident investigation. There were 32 in the Criminal Investigation Branch, containing a Women Police Section of 5. There were also 57 in the Planning and Research Branch and three in the Special Branch. The Recruitment and Training Branch had a staff of seven.

## Finance

In the following table the receipts and expenditure of the Australian Capital Territory have been classified in a National Accounts form. The table covers transactions relating to the Australian Capital Territory in the Commonwealth Consolidated Revenue Fund and the following trust funds: Australian Capital Territory Forestry, Australian Capital Territory Housing, Australian Capital Territory Transport and Australian Capital Territory Suspense. In addition, details of the financial transactions of the following semi-governmental authorities are also covered: Australian Capital Territory Electricity Authority, Commonwealth Brickworks, National Capital Development Commission, and the Canberra Theatre Trust. Revenue derived by the Commonwealth from income taxes, sales tax, etc., levied in the Australian Capital Territory and expenditure by the Commonwealth in the Australian Capital Territory on such items as defence, civil aviation, railways, etc., and payments to residents from the National Welfare Fund are not included.

(a) Includes movements in cash, investments, etc. (b) Minus sign (-) denotes excess of receipts (from sales) over expenditures on, or purchases of, existing assets, including housing.

## NORFOLK ISLAND

**General description**

Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29°S., longitude 168°E. approximately. Its total area is approximately 14 square miles, the island being about 5 miles long and 3 miles wide. It is 1,035 miles from Sydney and 660 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 45° and 81°F. with a mean of 68°F. The average annual rainfall is 56 inches.

After serving as a penal station from 1788 to 1813 and from 1825 to 1855, Norfolk Island in 1856 became the home of the remaining descendants of the *Bounty* mutineers. The estimated population at 30 June 1969 was 1,377.

**Administration**

In 1856 the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896 it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, it was accepted by the Commonwealth Parliament as a Territory of Australia. It is controlled by the Minister for External Territories through an Administrator. The Norfolk Island Council is established pursuant to the *Norfolk Island Act* 1957-1967 and is constituted in accordance with the provisions of the *Norfolk Island Council Ordinance* 1960-1970. The Council may consider and tender advice to the Administrator on any matter affecting the peace, order and good government of Norfolk Island, and must be consulted on certain legislative and financial matters. The Council comprises the Administrator as *ex officio* chairman and voting member and eight members elected biennially.

**Economic activity**

The major economic activities of the island are the tourist trade, primary production, and Government instrumentalities.

*Primary industries.* The soil on the island is particularly fertile, the climate equable and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties, and production of bean seed, formerly the major export, has declined rapidly since 1962-63.

Fish abound off the island. In the past a number of ventures have been formed to exploit this resource, but they have been short-lived, mainly because of the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. Owing to a marked scarcity of whales after 1961, however, the station was closed down.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts.

*Tourists.* Regular sea and air services to the island are available for those who seek a quiet holiday in surroundings of beauty and historic interest. There are at present, apart from flats and unlicensed guest houses, hotels and licensed guest houses, and further accommodation is being built to meet the steadily increasing number of visitors.

*Employment.* A large proportion of the population derives its income from various aspects of the tourist industry including the operation of hotels and duty-free stores. The Commonwealth Government provides services through staff from the Department of Civil Aviation and Interior (Meteorological Branch) and teachers are seconded by the N.S.W. State Education Department. A number of clerical and other positions are available to islanders in the *Norfolk Island Administration*. Very few people rely for their income entirely on agricultural pursuits.

**Trade, transport and communication**

Imports to Norfolk Island since the 1939-45 War have risen from \$65,000 in 1945-46 to \$2,606,000 in 1968-69. In 1968-69 the major proportion (\$1,628,000) came from Australia, while New Zealand and the Pacific Islands supplied \$354,000. Exports rose from \$18,500 in 1945-46 to \$420,000 in 1960-61, but declined, after whaling ceased in 1962-63 and in 1968-69 amounted to \$294,000. Exports to Australia, the principal market, amounted to \$229,000, while exports to New Zealand and to Pacific Islands amounted to \$54,000. No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are the produce or manufacture of Norfolk Island, shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately six-week intervals from Sydney via Norfolk Island to the New Hebrides and Solomon Islands, and thence back to Brisbane and Sydney. A service linking Sydney and Noumea includes a call at Norfolk Island on the outward voyage about every three weeks. Shipping between the island and New Zealand is infrequent.

A passenger and air freight service between Sydney and Norfolk Island is operated by Qantas Airways Ltd twice a week, and more frequently in peak periods. The service extends to New Zealand under charter to Air New Zealand Ltd.

There are approximately fifty miles of motor road on the island. A substantial section of the population possesses private motor cars, and taxi-cab and bus services are available.

An automatic telephone service is being established. A radio telephone service to Sydney is also being established. A local broadcasting service is operated by the Administration.

#### Education

Education is free and compulsory up to the age of fifteen years. The school, which is conducted by the New South Wales Department of Education, conforms to the Australian standard of public education, ranging from kindergarten to the School Certificate examination. The teachers are provided by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30 June 1969 was 273.

Bursaries are available for pupils who wish to attend a mainland school either to continue their studies beyond the School Certificate level or undertake high school courses not available on the Island. Trainee scholarships are available for pupils who have left school and wish to undertake apprenticeship or similar training away from the Island.

#### Judiciary

The judicial system of Norfolk Island consists of a Supreme Court and a Court of Petty Sessions. The Supreme Court is the highest judicial authority in the Territory and is a superior court of record with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by one judge sitting in Court or, to the extent and in the cases provided by or under ordinance, sitting in Chambers. The jurisdiction of the Court of Petty Sessions is exercised by Chief Magistrate or any three magistrates other than the Chief Magistrate.

#### Finance

The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1964-65 to 1968-69 were as follows.

#### NORFOLK ISLAND: REVENUE AND EXPENDITURE, 1964-65 TO 1968-69 (\$'000)

## PAPUA AND NEW GUINEA

The information under this heading is applicable to both the Territory of Papua and the Trust Territory of New Guinea. For details of the respective Territories *see* pages 1005 (Papua) and 1007 (New Guinea) and following pages. The sections on pages 983-9 have been prepared by the Director of the Commonwealth Bureau of Meteorology.

### General description

#### Geographical position

The Territory of Papua and New Guinea includes the Territory of Papua and the Trust Territory of New Guinea. The total area of approximately 180,000 square miles lies in the equatorial zone between latitudes 2° S. and 12° S. and longitudes 141° E. and 156° E. The Territory of Papua comprises south-east New Guinea and also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The Trust Territory of New Guinea extends from 2° S. to 8° S. and includes north-east New Guinea (also called 'the mainland'), Bismarck Archipelago (New Britain, New Ireland, Lavongai, Admiralty Islands), and Solomon Islands (Bougainville, Buka).

#### Geographical features

There is a high backbone mountain chain extending generally along the centre of the main island with coastal plains which widen in some areas, particularly in the Fly River Basin. The mountains, which are rugged, rise to 15,000 feet above sea level in some areas; the larger islands mostly have mountain backbones, some rising to about 10,000 feet. In many parts the highlands extend to the coast.

### Weather and climate

The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, presents many variations. Generally speaking, the climate is hot and humid, except in the highlands where days are mild to warm and nights are cool. Mean temperatures vary little throughout the year, and there are no winter and summer seasons comparable to those of higher latitude.

The predominant seasonal feature of the Territory is the regular alternation between two major air-streams, the south-east trade winds and north-west monsoon. The 'south-east' season prevails approximately from May to October, and the 'northwest' season persists for a shorter period from about December to early April. Two short spells of calm weather occur between these two seasons.

#### Rainfall

There are great spatial variations in the amount of rainfall received over the Territory of Papua and New Guinea. The variations depend mainly upon the direction and speed of the air streams. These streams are moist, requiring only a small amount of lifting for condensation of water vapour to occur. Topography therefore has a dominating influence on the rainfall distribution.

#### Average annual rainfall

The table on page 985 shows the average annual and monthly rainfall for selected stations in the Territory. It may be seen that the spatial distribution of average annual rainfall varies greatly, being dependent mainly on topography in relation to prevailing winds. The annual averages vary from 39 inches at Port Moresby (township) to 227 inches at Kikori at the head of the Gulf of Papua. There are few rainfall observing stations above 6,000 feet, so that rainfall above that height must generally be estimated. The map on page 989 shows the rainfall distribution over the region for the year 1969.

#### Seasonal distribution of rainfall

Places in Papua such as Port Moresby, where the south-east trade wind does not blow directly onshore, have a dry season during May-October. Places such as Kikori have heavier rainfall during May-October because of the onshore south-east winds. In the Territory of New Guinea, where conditions are more equatorial, rainfall occurs throughout the year, but is heaviest in the November-April period at most places.

#### Variability of rainfall

There are marked variations from year to year in annual rainfall totals throughout the Territory. At Port Moresby (township), for example, in forty-two years of record the annual rainfall has varied from 72 inches to 23 inches; at Daru in fifty-four years of record the annual rainfall has varied from 156 inches to 46 inches; and at Madang in forty years of record the variation has been from 180 inches to 92 inches. The table on page 986 shows the annual rainfall at Port Moresby and Lae for the years 1946 to 1968 inclusive.

**Heavy rainfalls**

Highest twenty-four hour rainfall registrations have included 21.60 inches at Pondo Plantation in New Britain and 17.60 inches at Cape Nelson on the east coast of the main island. Twenty-four hour falls greater than 15 inches have been recorded at a number of other stations in the Papua and New Guinea region. The highest twenty-four hour fall recorded in Australia was 36 inches at Crohamhurst, Queensland. All these registrations were for the restricted twenty-four hour period from 9 a.m. to 9 a.m. Higher falls, possibly approaching 30 inches, have probably occurred in the Territory in unrestricted periods of twenty-four consecutive hours.

**Temperature**

Although the Territory has no summer and winter seasons, it has a wide range in temperature because of elevation differences. For each month the mean daily maximum temperature decreases by about 2° F. and the mean daily minimum temperature by about 4° F. for each 1,000 feet increase in elevation up to 5,000 feet.

A table on page 986 shows temperature and humidity data for five lowland and two highland stations. Mount Hagen, elevation 5,500 feet, is the highest station for which temperature data are available. However, both day and night temperatures continue to decrease with elevation above this level.

**Average seasonal temperature distribution**

In the lowland areas there is a difference in temperature pattern between the areas south of the highlands and those to the north. In the south there is a tendency for temperatures to be lower in the May–October period than in the November–April period (e.g. Samarai). In the north there is little difference throughout the year (e.g. Madang). In the highlands, temperatures are appreciably lower than in the lowlands and are slightly lower in the middle of the year than they are at the beginning of the year (e.g. Goroka). The nights are cold in the highlands throughout the year; the mean daily minimum at Mount Hagen for July is 53.6° F.

**Extreme temperatures**

The highest air temperature recorded at Lae (in twenty years of record) was 101.7° F. and the lowest was 66.3° F.; at Port Moresby (in twenty-four years of record) the highest was 97.4° F. and the lowest was 57.3° F.; at Mount Hagen (in thirteen years of record) the highest was 88.0° F. and the lowest 35.0° F. The mean daily range of temperature is about 15° F. at lowland stations and 20° F. at highland stations up to 5,000 feet elevation.

**Humidity**

Humidity is high generally throughout the year. In the lowlands persistently high humidity in association with high temperatures is responsible for the human discomfort experienced. The average index of mean relative humidity for January and July is shown for selected stations in a table on page 986. This index has been derived from the ratio of the average 9 a.m. vapour pressure to the saturation vapour pressure at the mean temperature. Being thus related to the mean temperature, this value of relative humidity is a good approximation to the daily mean.

In the lowland areas the average index of mean relative humidity (*see* table on page 986) is in the range 75–85 per cent throughout the year. There is little variation in the index from month to month at any station. This is in contrast with northern Australian localities where the south-east winds of the dry season result in low relative humidities. For example, Darwin's average index of mean relative humidity ranges from 81 per cent in February to 62 per cent in July.

In the highland areas up to 6,000 feet elevation the average index of mean relative humidity is within the range 70–80 per cent throughout the year. The lower temperatures experienced on the highlands relative to the lowlands result in conditions being generally more comfortable in the highlands.

**Evaporation**

The only evaporation data available are records for Port Moresby. These show that the mean monthly tank evaporation varies from 5–6 inches per month in the early part of the year to 6–7 inches per month in the latter part of the year. The average annual tank evaporation at Port Moresby over an eleven-year period was 73.59 inches. It is probable that evaporation is less than this value in the higher humidity areas.

**Sunshine and cloud**

Mean daily sunshine hours are recorded for each month at Port Moresby, and the figures show a variation from 6.1 hours per day in February and March to 8.4 hours per day in November. The mean daily amount of sunshine at Port Moresby for the year is 6.9 hours, which is significantly less than Darwin (8.4 hours) but comparable with Brisbane (7.5 hours).

At Port Moresby the mean cloud amount varies from 5.0 eighths per day in June to 6.9 eighths in February; at Lae the variation is from 6.1 eighths in May, June and October to 6.9 eighths in March. The mean daily cloud amounts for the year at Port Moresby and Lae are 5.8 and 6.5 eighths respectively, which are high in comparison with Darwin (3.1).

**Winds**

As mentioned previously the south-east trade winds prevail from May to October and the north-west monsoonal winds prevail from December to March over most of the region. However, the broad-scale wind pattern may be completely masked by the effects of local topography and land and sea breezes. The mean 9 a.m. and 3 p.m. wind speeds and prevailing directions are shown in the tables on pages 987-8 for Port Moresby and Lae.

At Port Moresby the mean winds are stronger during the period May-November than during December-April; for example, the 3 p.m. mean wind for August is 15.4 m.p.h. and for March is 7.6 m.p.h. The winds at 3 p.m. are much stronger than at 9 a.m.; for example, for the year the 3 p.m. mean wind is 11.5 m.p.h. and the 9 a.m. mean wind is 4.1 m.p.h. The prevailing direction of the wind is south-east during May-November and north-north-west to south-west during December-April.

At Lae the winds are mainly lighter than at Port Moresby. In the period May-October the winds at Lae are lighter than in the period November-April. The winds at 3 p.m. are greater than at 9 a.m. except in February. The prevailing direction is north-west at 9 a.m. and south-east at 3 p.m. throughout the year.

**Storms and cyclones**

The Papua and New Guinea region is subject to thunderstorm activity, squall lines and local storms throughout the year. Severe thunderstorms are frequent in the mountainous areas, but also occur in coastal lowlands. The main tropical cyclone belt lies to the south of the region, but occasionally a tropical cyclone affects the region, causing loss of life and property.

**Climatological tables**

The averages and extremes for a number of elements recorded at Port Moresby and Lae are given in the tables on pages 987-8. These tables generally follow the format given for Australian capital cities included in Chapter 2 of this Year Book, the observational data being for available years of record to 1968 inclusive unless otherwise stated. Some elements included in the Australian capital city tables have been omitted from the tables for Port Moresby and Lae because of the inadequacy of observational records.

**TERRITORY OF PAPUA AND NEW GUINEA: AVERAGE MONTHLY AND ANNUAL RAINFALL FOR SELECTED STATIONS(a)**

### Population

Censuses of the non-indigenous population of the Territory of Papua and New Guinea have been taken in conjunction with censuses of the Commonwealth of Australia. For the indigenous population of the Territory of Papua and New Guinea, estimates of size, geographic location, and the broad age distribution of the population were available from the results of the Department of District Administration census (formerly known as the Tax Census). This was conducted over most of the Territory, but was continuous rather than conducted at a common date for all areas covered. No regular pattern of operations was adopted, although once the census had been taken in an area it was in general repeated fairly frequently. Although these estimates were of great value, the limitations of the information on population characteristics and the lack of simultaneous collection for all areas made them insufficient for many purposes. The 1966 census covered both indigenous and non-indigenous population, and thus superseded the traditional census of non-indigenes.

Figures for the non-indigenous population as enumerated at censuses held in conjunction with Commonwealth censuses and estimates of the indigenous population based on the Department of District Administration censuses are set out below.

#### TERRITORY OF PAPUA AND NEW GUINEA: POPULATION AT CENSUSES, 1921 TO 1966

1966 . .	810,153	748,205	1,558,358	..	1,558,358	11,746	8,546	20,292

(a) 1920; figures for 1921 not available. (b) Includes 34,087 indentured labourers, 1,127 native constabulary, 4,823 attending approved mission schools, and 429 patients at Anelaua Leprosarium and Taskul Observation Colony (New Ireland), for which particulars of sex are not available.

The total indigenous population of Papua and New Guinea at the 1966 census was 2,150,317 persons, and the total non-indigenous, 34,669 persons. Estimated totals for 30 June 1969 are 2,312,064 and 43,391 persons respectively. See pages 1005 and 1008 for further details.

The population (indigenous and non-indigenous) of the major towns at the census, June-July 1966, was as follows: Port Moresby, 41,848; Lae, 16,546; Rabaul, 10,561; Wewak, 8,945; Madang, 8,837; Goroka, 4,826; Daru, 3,663; Mount Hagen, 3,315; Bulolo, 2,724; Lorengau, 2,446; Samarai, 2,201; Kavieng, 2,142. A population count held in conjunction with the setting up of a Local Government Electoral Roll in February-April 1970 showed that the population of Port Moresby was 56,206; Lae, 24,339; Madang, 11,151 and Rabaul 20,307.

#### Population Census, 1966

The census was conducted over the period June-July 1966 and covered both indigenous and non-indigenous populations. For census purposes the indigenous population comprised the aboriginal peoples of the Territory of Papua and New Guinea, Australia, New Zealand, and the other islands

of Polynesia, Melanesia, and Micronesia, and all persons descended from these aboriginal peoples to the extent of more than one half. The non-indigenous population comprised all persons not covered by the definition of the indigenous population given above. The Census completely enumerated virtually all the non-indigenous population, together with all the indigenous population located in areas outside rural villages. The rural village population was estimated by means of a representative sample of approximately 10 per cent of rural villages. Consequently the figures published for the population of rural villages are estimated of total figures based on a representative sample, while those published for other areas are totals based on complete enumeration. Totals for a District or Territory as a whole are the sums of these estimated and actual figures.

A short description of the development operations undertaken before the 1966 census and of the actual census operations is given in Year Book No. 53, pages 141–2. A description of Methods and definitions used can be found in *Population Census, 1966—Preliminary Bulletin No. 20: Summary of Population* issued by the Bureau of Statistics, Konedobu, Papua.

For details of selected characteristics of Population Census 1966 see Year Book No. 55, pages 1165–69.

### Administration

The *Papua-New Guinea Provisional Administration Act 1945–1946*, which provided for the transfer back of control from the military authorities to civil authorities after the 1939–45 War, was repealed by the *Papua and New Guinea Act 1949*, which came into force on 1 July 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, a Legislative Council and an Executive Council, one Supreme Court, and one Public Service.

For an outline of the development of the Legislative and Executive (later Administrator's) Councils between 1949 and 1963, see Year Book No. 51, page 117.

In May 1963 the Commonwealth Government passed an amendment to the Papua and New Guinea Act, making provision for a House of Assembly of sixty-four members to replace the Legislative Council. The house then consisted of ten official members appointed by the Governor-General on the advice of the Administrator, forty-four members elected by the people of the Territory on a common roll in forty-four open electorates, and ten non-indigenous persons elected on a common roll in ten special electorates comprising one or more open electorates. The first elections for the House of Assembly were held in February–March 1964, and the inaugural meeting of the new House was convened on 8 June 1964.

The 1963 Act also increased the membership of the Administrator's Council from seven to eleven, seven of whom must be elected members of the House of Assembly.

In October 1966 the Commonwealth Parliament passed a further amendment to the Papua and New Guinea Act, providing for an increase in the membership of the House of Assembly to ninety-four, sixty-nine members representing open electorates, fifteen from regional electorates and ten official members.

The second general election for the House of Assembly was held from 17 February–16 March 1968, and the Second House was convened on 4 June 1968. The Ministerial Nomination Committee in conjunction with the Administrator chose fifteen elected members who were appointed to seven Ministerial Member and eight Assistant Ministerial Member positions.

The *Papua and New Guinea Act 1968* provides for the Administrator's Council to become the Administrator's Executive Council, deciding major matters of Territory policy. In June 1968 it had its first meetings. It consists of the Administrator, the seven Ministerial Members, three official Members, and a twelfth Councillor who is an elected M.H.A. but a non-office holder.

Local government was introduced in 1949 by the Native Village Councils Ordinance which was replaced by the *Local Government Ordinance 1963*. The Administrator may establish by proclamation local government councils with authority in defined areas.

### Judiciary

The courts which exercise jurisdiction within the Territory are: the Supreme Court of the Territory of Papua and New Guinea, District Courts, Local Courts, Children's Courts and Wardens' Courts.

The Supreme Court is the highest judicial authority and has unlimited criminal and civil jurisdiction. Appeals lie from decisions of a single judge to the Full Court of the Supreme Court and, subject to prescribed conditions, from decisions of the Full Court to the High Court of Australia.

District Courts have criminal jurisdiction to try offences punishable by up to 12 months' imprisonment, and to conduct preliminary hearings in respect of offences punishable by more than 12 months' imprisonment. They also exercise civil jurisdiction over claims for amounts up to \$2,000. Local Courts have criminal jurisdiction over summary offences and may impose penalties not greater than a fine of \$100 or six months' imprisonment, plus civil jurisdiction over matters involving up to \$200. Children's Courts have jurisdiction over all offences by persons under the age of 16 years, except the most serious offences, and in affiliation and other child welfare cases. Wardens' Courts exercise jurisdiction over offences against mining laws and civil cases concerning mining or mining lands.

In addition, there is the Land Titles Commission set up under the *Land Titles Commission Ordinance* 1962-1969 to inquire into and determine rights in land, particularly native land. The Commission has the particular function under the *New Guinea Land Titles Restoration Ordinance* 1951-1968 to inquire into and determine claims to interest in land where the official records were lost or destroyed as a result of the Japanese invasion of New Guinea. For the purposes of the latter Ordinance, the Jurisdiction of the Commission is exercised by the Chief Commissioner (who must be qualified to be a judge of the Supreme Court) sitting with two Senior Commissioners.

## Agriculture and animal industry

### Soils

Although many parts of Papua and New Guinea are covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur suitable for growing a variety of crops. Soils on the coastal plains consist mainly of alluvium and podsolised alluvium. The coastal swamp soils, of which there are extensive areas in the delta plains of the Sepik and Fly rivers and intermittently around the coasts and along the lower reaches of other rivers, are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the valley occupied by the Ramu and Markham Rivers.

### Land tenure

The *Land Ordinance* 1962 of the Territory of Papua and New Guinea, which came into operation in 1963, replaced much land legislation previously in force separately in the two Territories. This simplification in legislation was a major step towards applying uniform principles to land tenure throughout the whole of the Territory of Papua and New Guinea. All land in the Territory other than native land or land subject to any estates, rights, titles, or interests in force from time to time is Administration land.

There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas some rights remain in the landholding group, and individuals within the group have limited rights or use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes, the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua and New Guinea is to introduce throughout the Territory a single system of land holding regulated by the central Administration by statute, administered by the Department of Lands of the central Administration and providing for secure individual registered titles after the pattern of the Australian system.

Only the Administration working through the Department of Lands, Surveys and Mines and through the Registrar of Titles may issue and register land titles.

Land subject to native custom remains subject only to native custom until it is taken out of custom either by acquisition by the Administration or by a process, provided for by the *Land (Tenure Conversion) Ordinance* 1963-1968, of conversion of title to an individual registered title. Upon either acquisition or conversion of title, compensation is provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration. Land may not be acquired by the Administration except for prescribed public purposes unless the native owners are willing to sell and the Administration is convinced, through its Department of District Administration, that the land is not required by them, and conversion of title from native custom to individual registered title may take place only if all those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance* 1962-1970 are used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The Commissioners, as opportunity offers, continue investigations into the holding of land under native custom; the results of such investigations are recorded for use in connection with future acquisitions or conversions of title.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

#### Suitable crops

Most tropical crops can be grown in Papua and New Guinea. Those of commercial importance at present are coconuts, cocoa, rubber, coffee, tea, peanuts, pyrethrum and passion fruit. Major developments in the production of oil-palm are under way. This crop is expected to be of future economic significance.

#### Non-indigenous rural production

In 1967-68 there were 1,240 holdings in use by non-indigenous persons, 341 being in Papua and 899 in New Guinea. The total area of these holdings was 1,026,882 acres. 273,835 in Papua and 753,047 in New Guinea. The following tables summarise the information available for principal activities.

### Livestock

Total cattle on non-indigenous holdings at June 1969 was 60,728. Indigenous involvement in the cattle industry is being encouraged. An estimated 4,600 head of cattle were owned by indigenes in 1967-68. Dairy farming is carried out on a small scale near major towns.

A number of British breeds of cattle are represented, but for best results the use of Zebu cross-bred types of cattle is desirable. For dairying the Jersey seems to be the best breed and adapts quite well to tropical conditions.

Central abattoirs controlled by the Administration have been set up at Lae and Port Moresby and there are smaller private slaughterhouses at other centres.

The following table shows the numbers of the various kinds of livestock on non-indigenously occupied holdings in Papua and New Guinea at 30 June 1969.

(a) Only recorded where poultry products are marketed or flocks exceed 100 birds.

### Forestry

Many species of tropical timbers are found in the Territory of Papua and New Guinea, although there is one accessible pure stand of *Klinkii* pine in the Bulolo Valley. This timber is used mainly for the production of plywood and veneer. The Territory forests produce all local timber requirements as well as exports of logs, sawn timber, plywood and veneer. The Administration operates a forestry school at Bulolo to train forestry officers, has established a research institute for forest products at Hohola near Port Moresby as well as regional silvicultural stations and a large herbarium at Lae.

The Administration is making available for public application a number of extensive timber areas estimated to contain a total of about 14,000 million super feet of logs and possibly twice this quantity of pulpwood. It is intended that those areas should form the basis for the development of integrated forest industries, which would be large and economically viable. Feasibility studies have been undertaken by consultants and some interested firms. Subject to negotiation the areas will be

allocated on long-term permits. The Administration has acquired from the indigenous peoples timber rights over 3.8 million acres of forest for industrial development. Reforestation of permanently dedicated land is being undertaken by the administration, the area planted to date being 22,358 acres.

At 30 June 1969, 72 permits and 52 licences were current, the total area of forest involved being 1,339,181 acres. The total number of sawmills was 92 and the total sawn timber produced during 1968-69 was 45.7 million super feet. Total log production was 170 million super feet (true volume) of which 42.6 million was exported.

#### **Fishing**

Over 1,400 different species of fish are to be found in the coastal and inland waters of Papua and New Guinea and many are important food fish. Those of greatest commercial significance are barramundi, tuna, skipjack, crayfish and prawns. Efforts are being made to encourage indigenous fishermen to regard fishing as a source of cash income and not merely as a means of subsistence. This involves the Administration in research and extension work and requires the improvement of refrigeration, transportation and marketing facilities throughout the Territory. In the Highlands there is increasing interest in fish culture in freshwater ponds.

Commercial fishing for prawns by joint venture companies is increasing and a joint venture survey for skipjack on a commercial scale has given promising results.

#### **Indigenous agriculture**

Most of the indigenous inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar cane, cassava, beans, peanuts, rice, cucurbits, and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas it is cut largely from naturally occurring stands. In other parts of the country small areas of sago are grown along stream banks and in swampy patches and are regarded as a reserve in times of poor harvest. In recent years the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, tobacco and maize for their own consumption, and cocoa, coffee, passion fruit and pyrethrum for export. Some small-scale rubber growing is now being undertaken. In coastal areas large quantities of copra are produced. In 1967-68 estimated indigenous production was: copra 38,644 tons, coffee 9,635 tons, cocoa 5,546 tons. In many localities the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48, and earlier issues.

The growing of food is done by both the men and the women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally the felling of forests is done by the men, and carrying the harvested food home to the village is done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of indigenous agriculture for local food supply and improved land use in village gardens as well as for economic production of crops for sale have a high priority in Government policy for the Territory. In recent years the Administration has intensified the programme of agriculture extension work among the indigenes. Indigenous cattle projects are increasing rapidly.

#### **Survey of indigenous agriculture and ancillary surveys, 1961-62**

A survey of the agriculture of indigenes of Papua and New Guinea was carried out in 1961-62 by the Territory Bureau of Statistics in conjunction with the Commonwealth Bureau of Census and Statistics and the Territory Department of Agriculture, Stock and Fisheries. A comprehensive report on the surveys was published by the Territory Statistician in 1963, and reference should be made to this for further information. A summary of the principal results of the survey appears on pages 1104-10 of Year Book No. 52.

(a) Non-indigenous figures refer to year ended 31 March, for 1967 and earlier years. (b) Includes all produce acquired by purchase during the year from sources outside the non-indigenous holdings. Excludes amount consumed by growers.

### Co-operative societies

Co-operatives are under the supervision and guidance of the Division of Co-operative Extension within the Department of Trade and Industry. A Territory-wide Federation of Co-operative Unions and a Co-operative Wholesale Society were established recently. A new co-operative college to be built at Laloki, near Port Moresby, will replace the existing Co-operative Educational Centre.

For the year ended 31 March 1968 primary societies numbered 316, with a membership of 109,175, a total capital of \$2,329,405, and a turnover of \$5,378,418. Secondary organisations numbered 14, with 239 member societies, a total capital of \$666,840, and a turnover of \$1,147,106.

### Indigenous labour

The 1966 population census shows that there were 235,000 persons wholly or mainly engaged in the money-raising work force, 200,000 of these being employed in the private sector.

Minimum wages and conditions of employment for indigenous workers are prescribed under the *Native Employment Ordinance 1958-1968*. In rural areas an employer is required to pay a minimum cash wage to every worker employed by him, and provide the worker, and his accompanying dependants with food, clothing, cooking and eating utensils, towels, soap and other articles, medical

attention, and accommodation. The estimated cost of providing these entitlements, excluding accommodation, is estimated at \$151 a year for a single worker. The value of accommodation varies, but it would be in most cases about \$30 a year.

The legal minimum cash portion of the wage for unskilled rural workers is \$52 a year for the first year of employment, \$58 in the second year and \$65 in the third and subsequent years of continuous employment with the same employer.

In urban areas industrial agreements negotiated between employers and workers' organisations determine the minimum wages payable to workers. Provision is made by legislation for the employer-employee agreements reached to be registered by the Industrial Registrar, and they are then deemed to be judicial awards between the parties, and to have the force of law. Under this system minimum wage rates have been determined for the principal urban centres, and cover an increasing number of workers. In Rabaul, Lae, Madang, Wewak, Samarai-Alotau and Popondetta, the current minimum rate payable as a total cash wage, for unskilled adults or married juniors is \$7 per week; in Mount Hagen, Goroka and Daru the corresponding wage is \$6.50 and in Kavieng \$6 per week.

Other provisions of the awards relate to: Annual leave and sick leave (two weeks' leave on full pay and six days' sick leave per annum); rates of pay for skilled tradesmen (ranging between \$19 and \$27 per week in Lae and between \$17 and \$23 per week in Rabaul depending on the grade of skill and service); rates of pay and conditions of employment of stevedoring workers and ships' crews; and rates of pay and conditions of employment of workers in the timber and sawmilling industries.

There has been a continued expansion of the trade union movement since industrial legislation for the Territory was introduced in March 1963. In December 1969 twenty-six associations with a membership of 17,853 had been registered as industrial organisations of workers under the Industrial Organisations Ordinance.

Provision is made in other legislation for the establishment and maintenance of modern standards of industrial safety and for the payment of compensation for injury or disease arising out of, or in the course of, employment.

An apprenticeship scheme was inaugurated in 1955 and re-organised in 1968. An Apprenticeship Board, comprising representatives of private enterprise and government, advises the Administration on apprenticeship matters. By December 1969 600 apprentices had received trade certificates. The yearly intake into the apprenticeship scheme has been about 350 in each of the last three years.

## Housing

Village housing is constructed to traditional patterns using local materials including bush timber, bamboo, grass, pit-pit and sago palm leaves. Town housing is generally constructed from comparatively expensive imported material including fibrous asbestos cement, aluminium and galvanised iron. The majority of houses are timber framed and made from both locally milled and imported timber.

The rapid growth of urban areas consequent upon increased economic development has created a housing shortage. Major programmes are directed towards reducing this shortage.

During 1969-70 the Administration completed accommodation for 1,355 married and 702 single officers.

The Housing Commission completed its first year of operations in 1968-69 during which it built 279 houses. During 1969-70 the Commission had a further 361 houses and 40 flat units under construction. The Housing Commission has also developed a minimum cost house (approximately \$1,300) and completed 204 of these dwellings during 1969-70.

## Secondary industries

The major manufacturing industries are generally those processing primary products, mainly for export. Examples of these are plywood, coconut oil, copra by-products, desiccated coconut and pyrethrum.

Nevertheless industries catering for the rapidly expanding local market remain numerically predominant. These include the brewing of beer, furniture making and assembly of electrical appliances; the production of cigarettes and twist tobacco, concrete products, glass bottles, drums industrial gases, chemicals, fibreglass products, nails and other wire products, packaging and paper products, paints, metal louvre frames, terrazzo and other building materials; and printing and ship-building.

A wide variety of services has also been established such as engineering workshops, plumbing establishments, motor repairs and electrical services.

(a) Logs and sawn timber. (b) Plywood, veneer and battery veneer. (c) Raw and scrap rubber.

**Shipping**

In 1968-69 shipping entries (overseas and inter-territory vessels) at Territory ports totalled 1,543, and 475,300 tons of cargo were discharged and 233,600 tons were loaded. Corresponding figures for 1967-68 were 1,615, 524,500 and 290,400 respectively.

Regular passenger and freight services operate between Australia and Papua and New Guinea. Vessels trading between Australia and the East also call at Territory ports, and there are services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory.

### Other forms of transport and communication

Scheduled flights provide a network of air transport throughout Papua and New Guinea and regular air services link the Territory with Australia and neighbouring Territories, also with Maniia, Hong Kong, Honiara and Jaipura. There were 406 licensed aerodromes in the whole of Papua and New Guinea at 30 June 1970, and of these 12 were the responsibility of the Department of Civil Aviation, 131 of the Administration, and 263 were privately owned. Much of the internal traffic and freight is carried on a charter basis.

At 30 June 1969 there were 7,374 miles of roads in the Territory of which 2,516 were adequately paved. Total motor vehicle registrations (excluding defence force vehicles) at 31 December 1969 were 29,236.

Telephone services operate between the main centres by radio telephone. This together with telex and telegraph services are operated within the Territory by the Department of Posts and Telegraphs, while overseas traffic is handled by the Overseas Telecommunications Commission. The Australian Broadcasting Commission broadcasts on medium wave and short wave from Port Moresby and Rabaul. The Administration Department of Information and Extension Services operates transmitters at a number of centres, broadcasting programmes in several local languages.

## Education and health

### Education

Education in Papua and New Guinea is provided by the Administration and various mission organisations. The *Education Ordinance 1952-1964* enables the Administration to establish an education advisory board and district education committees, to conduct schools and to grant financial aid for educational purposes. Teachers are recruited from Australia and overseas and some are trained at the Australian School of Pacific Administration, Sydney, and in the Territory by the missions and the Administration.

During the year ended 30 June 1969, 569 schools were maintained by the Administration for 94,000 children. The total number of pupils in the various grades of mission schools was 42,000. There is also a correspondence school. To assist the educational work of the missions the Administration provides expert advice, educational equipment and text books. In addition the sum of \$2,701,544 was distributed among the missions as grants-in-aid during the year ended 30 June 1969.

In February 1969 the Minister for External Territories appointed the Advisory Committee on Education in Papua and New Guinea to advise on any changes it considers desirable in the present relationship between the Department of Education, the voluntary educational agencies and local government councils.

In March 1966 the University of Papua and New Guinea commenced teaching with 57 students undertaking a preliminary year. In 1969 there were 595 degree and diploma students, including 309 Papuans and New Guineans. Students are enrolled for Bachelor degrees in Arts and Education, Law and Science and post-graduate degrees in Masters of Law, Arts and Science and Doctorates of Philosophy in such disciplines as Biology, Chemistry, Education and History.

The Papua and New Guinea Institute of Technology (formerly the Papua and New Guinea Institute of Higher Technical Education) accepted its first undergraduates in 1967, with 31 students undertaking Engineering and Surveying courses. In 1969 there were 141 students (6 expatriates) undertaking courses in civil, electrical and mechanical engineering, surveying and accountancy and business studies.

### Health

The Department of Public Health of the Territory of Papua and New Guinea has the general oversight of all medical and dental services. The Department has the following seven functional divisions: medical services, preventive medicine, medical training, maternal and child health, dental education, administrative services, and mental health. To facilitate administration and co-ordination of the field services of the Department of Public Health, the Territory is divided into four geographical regions: the New Guinea Mainland, Highlands, New Guinea Islands Region and Papua.

(a) The annual grants by the Commonwealth of Australia are made to the Territory of Papua and New Guinea.  
 (b) From 1 July 1968 refunds of revenue have been deducted from gross collections by items. (c) Amount reduced by  
 taxation refunds and refunds of revenue.

### Taxation

The main forms of taxation are income tax and import duties. *Income Tax* was imposed on 1 August 1959 to operate from 1 July 1959. In the case of individuals two different methods of calculating tax payable are used. Tax on taxable incomes has applied since 1 July 1959 and is calculated on a similar basis to that in Australia. The scale of taxation is about 50 per cent of the tax payable on the same taxable income in Australia. Deductions for dependants the taxpayer is maintaining are considerably higher than those allowed in Australia. Tax on chargeable income was introduced to apply from 1 January 1967 and has supplanted a previous *Personal Tax* of \$4 payable by all males eighteen years and over. Chargeable income consists of gross income less expenses directly incurred in earning the income. No deductions are allowable for dependants or any other private expenditure such as medical or education expenses. The tax is a flat rate of 2.025 cents in the \$1 applying on income above \$416 with a maximum of \$20.50. The two methods of calculating tax payable are supplementary, the method applied to any particular taxpayer being the one resulting in the greater amount of tax payable. Companies are taxed on a similar basis to that in Australia, and deductions allowable are generally comparable to those in Australia. From 1 July 1959 to 30 June 1967 the rates on public and private companies differed, public companies being taxed at a flat rate of 20 cents in the \$1 and private companies at 12.5 cents in the \$1 for the first \$10,000 and 17.5 cents in the \$1 for the remainder. From 1 July 1967 a flat rate of 22.5 cents in the \$1 applies to all companies, and from the same date private companies are no longer required to distribute a portion of their income in dividends each year. To encourage industry in the Territory certain companies manufacturing products new to the Territory may be granted complete tax exemption for the first five years of operation under the *Industrial Development (Incentive to Pioneer Industries) Ordinance* 1965. In addition to income taxes the Native Local Government Councils (which are formed voluntarily by the indigenes) are empowered to levy local taxes for the purpose of providing for local services carried out by the councils. These taxes are set off against the taxpayers' personal taxation.

The present *Customs Tariff* provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods, and jewellery, but allows entry duty free or at a low rate of duty of most necessities affecting living and building costs. Under the Customs Tariff, plant, machinery and chemicals to be used mainly for industrial and developmental purposes are generally duty-free. A by-law covers goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July 1959.

Provision is made in the *Australian Customs Tariff (Papua and New Guinea Preference)* 1936 for the free entry into Australia of certain agricultural goods produced in and imported direct from the Territory (see chapter Overseas Transactions). In addition, goods produced or manufactured in the Territory and imported directly into Australia are exempted from primage duty.

### Banking

The banking system in the Territory of Papua and New Guinea is based on Australia's, and provides full trading and savings bank facilities. Four Australian trading banks have branches in the main centres. They are: the Commonwealth Trading Bank of Australia, the Bank of New South Wales, the Australia and New Zealand Bank and the National Bank of Australasia Ltd. Affiliates or subsidiaries of banking institutions operate savings banks in the Territory. Rates of interest for bank deposits and advances are the same as those applying in Australia. A branch of the Reserve Bank of Australia in Port Moresby carries out central bank functions and acts as banker for the Administration and Commonwealth Government Departments in the Territory. The Territory uses the same currency as Australia.

The Banking (Foreign Exchange) Regulations of the Commonwealth of Australia apply to the Territory of Papua and New Guinea. The Regulations are administered by the Reserve Bank of Australia in a way that is consistent with the policy of encouraging overseas investment in Australia and the Territory. All remittances abroad require exchange control approval, though in practice no restrictions are imposed on current transactions and the trading banks have been authorised to deal with the great majority of these transactions as agents of the Reserve Bank.

The Papua and New Guinea Development Bank which opened in July 1967, has as its prime objective the provision of funds to assist individuals and enterprises in developing the Territory. The Bank was established to provide finance where it was not otherwise available on reasonable terms and conditions. Both indigenes and non-indigenes can qualify for advances. When considering applications the Bank is concerned mostly with the borrower's prospects for success rather than his security.

Average weekly deposits of cheque-paying banks in the Territory of Papua and New Guinea for the year 1968-69 were \$38,157,000 and loans, advances, etc., \$23,054,000. Average weekly debits to customers' accounts amounted to \$17,336,000. Savings banks depositors' balances at 30 June 1969 amounted to \$37,185,000, comprising indigenous \$14,955,000 and non-indigenous \$22,230,000, having increased since June 1959 from \$2,380,000 and \$7,546,000 respectively.

## TERRITORY OF PAPUA

### General description

#### Area, etc.

Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 930 miles; towards either end the breadth from north to south is about 320 miles, but about the centre it is considerably narrower. The Territory includes also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland and 1,936 on the islands. The total area is 86,100 square miles, of which 83,325 are on the mainland and 2,775 on the islands. A description of the physical characteristics of the Territory appears in earlier issues of the Year Book (see No. 18, page 633) and in the Administration Annual Reports.

#### Administration

Particulars of the early administration of Papua are given in Year Book No. 19, page 576. The Territory was placed under the authority of the Commonwealth on 1 September 1906 by proclamation issued in pursuance of Letters Patent of 18 March 1902 and was accepted by the Commonwealth by the *Papua Act* 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is under the control of the Commonwealth, but not included within it, and is divided into six administrative districts, Southern Highlands, Western, Gulf, Central, Milne Bay, and Northern.

## Population

#### Indigenous population

Within the major division, Melanesian, into which most indigenous inhabitants of the Territory are classified, a distinction may be made between a Melanesian type and a Papuan type, the former representative of the eastern mainland and the island archipelagos to the east and south-east, and the latter representative of the western third and the interior of the Territory. Some negrito traits have been noted in a few of the inland mountain groups. The indigenous population of the Territory of Papua as recorded in the 1966 census is shown on page 990. The estimated indigenous population for 30 June 1969 was 609,784 persons, comprising Central, 115,059; Gulf, 67,369; Milne Bay, 104,578; Northern, 56,934; Southern Highlands, 200,904; and Western, 64,940.

#### Non-indigenous population

The numbers of non-indigenous population from the 1966 census are given on page 990. Separate figures for Papua and for New Guinea are no longer available. The estimated non-indigenous population at 30 June 1969 for Papua and New Guinea was 43,391.

## Land tenure

The basic principles applying to land tenure in Papua are the same as those applying to the whole of the Territory of Papua and New Guinea described on pages 992-3. At 30 June 1969, of the total area of Papua, 55,102,041 acres, only 1,945,256 acres had been alienated. The distribution of alienated land at 30 June 1969 according to tenure was as follows: held by private non-indigenous inhabitants, freehold 24,280 acres; leasehold 404,833, land tenure conversion (freehold) 4,448 acres; native reserves 67,255 acres; other Administration land, including land reserved for public purposes, 1,444,440 acres. Land held in accordance with native custom may be converted to freehold tenure under the *Land (Tenure Conversion) Ordinance* 1963-1967.

Although a small amount of freehold land exists in Papua, present legislation does not provide for the granting of estates in freehold. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, town subdivision leases, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal, and, in general, leases may be granted for periods of up to ninety-nine years. Rent is based on the unimproved value of the land.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available, and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interest and dealings in alienated land is provided for under the *Real Property Ordinance* 1913-1969, modelled on the Torrens system of land registration.

## Production

### Primary production

The products of the Territory are obtained principally from its agricultural, forestry, mining, and fishing industries. Indigenous subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main indigenous agricultural products are taro, yams, sweet potatoes, bananas, and papaws. Peanuts are becoming of increasing importance in the indigenous diet. Non-indigenous enterprise produces most of the commodities exported. Indigenous, however, produce copra for export, while indigenous enterprise in other fields of agricultural production for export purposes, e.g. cocoa and coffee, is undertaken. The principal agricultural products of Papua for the export trade are copra and rubber. Indigenous production of copra is increasing. The fishing industry is also of increasing importance. Gold, silver, manganese, zinc-lead, and copper ores have been mined in commercial quantities in the past, but current production is limited to gold and silver.

For information on the agricultural and animal industries, *see* pages 992-7 which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined. The following paragraphs relate to forestry, mining, fisheries, and water-power resources in Papua.

### Forestry

A general description of the forestry policy in Papua and New Guinea is given on pages 995-6.

Mixed species of tropical rain forest cover most of Papua, although near Port Moresby there is an area of savannah country. Because of the mixed nature of the timbers in any one area, their utilisation on an economical basis is difficult. Mangroves occur in large areas fringing the Gulf of Papua. Forestry field work is carried out in Papua with a view to assessing the forest resources available and also to survey areas subsequently made available for cutting.

### Mining

Although a large number of minerals have been found in Papua, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, and lignite, current mineral production is not of economic importance. Before the 1939-45 War gold was an important item in Papuan production, but it has since dwindled to insignificance. Large quantities of copper ore were mined and exported up to 1940. A large low grade copper ore body is being investigated in the Star Mountains, near the West Irian border. Extensive deposits of magnetite sands exist along the Gulf of Papua coastline, but these contain the undesirable impurity titanium, and ways of separating this from magnetite are under investigation. The *Mining Ordinance* 1937-1966 and the *Mining Development Ordinance* 1955-1960 control mining in Papua.

Indications of oil have been found at scattered locations over a large area, but commercial quantities have not been discovered. Natural gas has been found in several wells in the Gulf District (including offshore), but its commercial use is not yet economically feasible. At 30 June 1970 twenty-two permits and licences were effective under the provisions of the *Petroleum (Prospecting and Mining) Ordinance* 1951-1968 and the (*Commonwealth*) *Petroleum (Submerged Lands) Act* 1967-1968.

### Fisheries

The fishing industry in Papua is considered to have considerable potential. In 1968–69 the most important export from Papua and New Guinea was 258,395 lb of frozen crayfish tails and prawns from the north coast of Papua, valued at \$268,181. Exports of barramundi to Australia are also important. Two large international firms are operating commercial prawn fishing ventures.

Two cultured pearl farms have recently commenced production of both round and half pearls of high quality.

### Water power

Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that at least 1,850 MW could be developed.

The Rouna No. 1 hydro station on the Laloki River near Port Moresby has a capacity of 5.5 MW. A second hydro station, Rouna No. 2, came into operation in 1967, with an initial installed capacity of 18 MW. Total capacity of this station is now 30 MW.

## TRUST TERRITORY OF NEW GUINEA

### General description

#### Area, etc.

The Trust Territory of New Guinea extends almost from the equator to latitude 8° S., a distance of 400 nautical miles, and from longitude 141° E. to 160° E., a distance of 1,000 nautical miles. The land area is 92,160 square miles, that of the New Guinea mainland being 69,095 square miles and that of adjacent islands, including the two northernmost islands of the Solomon Islands, Buka and Bougainville, and the Bismarck Archipelago, 23,065 square miles. Information regarding physiography and climate will be found in Year Book No. 22, page 613, in the *Official Handbook of the Territory of New Guinea*, and the Administration Annual Reports.

#### Administration

The terms of the League of Nations mandate (1920) of the former German possession of New Guinea are given in Year Book No. 33 (*see* page 264). Particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration are given in Year Book No. 36 and earlier issues, and of events following the outbreak of the Pacific War in Year Book No. 37 and subsequent issues up to No. 48.

Following the 1939–45 War the Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organisation on 13 December 1946. The terms of the Agreement are shown in Year Book No. 39, pages 355–7.

For administrative purposes the Territory is divided into the following twelve districts: East New Britain and West New Britain, comprising New Britain and the adjacent islands; Morobe, Madang, Eastern Highlands, Chimbu (major part), Western Highlands, East Sepik and West Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

## Population

### Indigenous population

The indigenous people of the Territory may in general be grouped with the Melanesians who occupy the greater part of the Western Pacific. They may be divided into two main types—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See* Year Book No. 16, page 670, and *Official Handbook of the Territory of New Guinea*, Part V.)

The indigenous population of the Territory at the Census of 30 June 1966 is shown on page 990. At 30 June 1969 the estimated indigenous population was 1,702,280 persons, comprising Bougainville, 72,661; Eastern Highlands, 223,551; Chimbu, 183,164; Western Highlands, 325,972; Madang, 162,717; Manus, 21,588; Morobe, 235,886; East New Britain, 90,235; West New Britain, 48,454; New Ireland, 48,774; East Sepik, 96,059; and West Sepik, 193,219.

#### Non-indigenous population

The non-indigenous population of the Territory of New Guinea at the 1966 Census is shown on page 990. Separate figures for Papua and for New Guinea are no longer available. The estimated non-indigenous population at 30 June 1969 for Papua and New Guinea was 43,391.

### Land tenure

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua, and grants of estates are restricted to leasehold tenure. In New Guinea, however, the amount of freehold land of earlier origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase, subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at approximately 58,980,077 acres, of which at 30 June 1969 only 1,886,375 acres were alienated. The following was the distribution of alienated land according to tenure at 30 June 1969: held by private non-indigenous inhabitants—freehold, 511,520 acres; leasehold 478,794 acres; native reserves 26,815 acres; other Administration land, including land reserved for public purposes 366,652 acres. Land held in accordance with native custom may be converted to freehold tenure under the *Land (Tenure Conversion) Ordinance 1963–1967*.

Under German law there was a system of registration of titles in a Ground Book, but registration did not necessarily confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in the *Lands Registration Ordinance 1924–1969*. The land registers were lost during the 1939–45 War, but provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance 1951–1968*.

### Production

The products of New Guinea are obtained principally from its agricultural, mining, fishing, and forestry industries. A copra crushing mill near Rabaul, established in 1952, commenced crushing at about 18,000 tons of copra per annum, and its capacity is now about 60,000 tons of copra per annum. Early in 1968 a factory capable of manufacturing 7,000 tons of desiccated coconut a year was established also near Rabaul. At Bulolo a company is producing high quality moisture-proof plywood in a factory with an approximate annual plywood production of 36 million square feet (on a  $\frac{3}{8}$  in basis). Indigenous subsistence agriculture, fishing and hunting produce most of the food requirements of the indigenous population. The main indigenous agricultural products are taro, yams, sweet potatoes, coconuts, bananas, papaws. Non-indigenous enterprise produces most of the commodities exported. Indigenous, however, produce copra for export, and in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and coffee, cocoa, tea, passionfruit and pyrethrum for export. The principal agricultural products of New Guinea for the export trade are copra and coconut oil, cocoa, and coffee, but exports of timber and timber products are substantial and the export of tea is increasing. The fishing industry is based upon the supply of fish to local markets, and the export of small quantities of shell. Prospects for commercial fishing of skipjack are good. Gold is the principal mineral mined. Indigenous are taking an increasing interest in mining for alluvial gold on their own account, and production from this source is continually rising, in contrast to falling European production. Copper and gold production from Bougainville is expected to commence in 1972. This production will greatly exceed the present mineral output.

For information on the agricultural and animal industries, which for the sake of convenience covers the Territories of Papua and New Guinea singly and combined, see pages 992–7. The following paragraphs relate to the timber, and mining industries in the Territory of New Guinea alone.

### Forestry

A general description of the forestry policy in Papua and New Guinea is given on pages 995-6.

### Mining

The production of gold and associated silver is the most important mining activity in New Guinea, although other minerals, such as osmiridium, platinum, copper, iron ore, sulphur, and brown coal, have been discovered. The production of gold in New Guinea since the 1939-45 War has been on a much smaller scale than before the war, decreasing from \$1,410,000 in 1959-60 to \$806,307 in 1968-69. The discovery of extensive low-grade copper deposits on Bougainville has given an impetus to the copper industry in the Territory.

The laws in operation governing mining are the *Mining Ordinance 1928-1966*, the *Mines and Works Regulation Ordinance 1935-1962* and the *Mining Development Ordinance 1955-1960* and the regulations made thereunder.

The *Petroleum (Prospecting and Mining) Ordinance 1951-1968* deals with the issue of permits and the granting of licences and leases for oil exploration. There were two prospecting permits for oil current at June 1970.

### Water power

An approach was made during 1966-67 to the International Bank for Reconstruction and Development with regard to a loan for the Upper Ramu Hydro-electric Scheme, a 75 MW project planned for supplying Lae, Madang, Goroka, Mount Hagen, and intervening areas. Further investigations recommended by the Bank are being carried out.

## HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26 December 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act 1953*. In 1968, the responsibility for the administration of this Act was transferred from the Minister for External Affairs to the Minister for Supply.

In December 1947 an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March 1955 following the establishment of Mawson station on the Antarctic mainland. Australian expeditions have since visited the island from time to time. Heard Island is about twenty-seven miles long and thirteen miles wide. The McDonald Islands are twenty-six miles to the west of Heard Island. They are small, rocky and precipitous.

## AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7 February 1933 placed under Australian authority all the islands and territories other than Terre Adélie situated south of 60° S. latitude and lying between 160° E. longitude and 45° E. longitude. The Order came into force with a Proclamation issued by the Governor-General on 24 August 1936 after the passage of the *Australian Antarctic Territory Acceptance Act 1933*. The boundaries of Terre Adélie were definitively fixed by a French Decree of 1 April 1938 as the islands and territories south of 60° S. latitude lying between 136° E. longitude and 142° E. longitude. The *Australian Antarctic Territory Act 1954* declared that the laws in force in the Australian Capital Territory are, so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory. In 1968, responsibility for the administration of this Act was transferred from the Minister for External Affairs to the Minister for Supply.

On 13 February 1954 the Australian National Antarctic Research Expeditions (ANARE) established a station on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The station was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13 January 1957 at latitude 68° 35' S. and longitude 77° 58' E. The station was named Davis in honour of the late Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. The station was temporarily closed down in January 1965 and reopened in February 1969. In February 1959 the Australian Government accepted from the United States

Government custody of Wilkes Station, which was established by the United States on 16 January 1957 on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 32' E. The station was named in honour of Lieut Charles Wilkes, who commanded the 1838–42 United States expedition to the area. A new station of advanced design, built about 1½ miles south of Wilkes, was opened in February 1969 and named Casey in honour of Lord Casey, who has had a long association with Antarctic Expeditions. Wilkes ceased operations early in April 1969. ANARE have also operated a station, since the 1947–48 Antarctic season, at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

On 1 December 1959 Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, the U.S.S.R., the United Kingdom, and the United States of America. Poland, Czechoslovakia, Denmark and the Netherlands have subsequently acceded to the Treaty. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23 June 1961. Since then the Antarctic Treaty powers have held five consultative meetings under the Treaty, the first at Canberra in July 1961, the second at Buenos Aires in July 1962, the third at Brussels in June 1964, the fourth at Santiago in 1966, and the fifth in Paris in 1968. The sixth is to be held in Tokyo in 1970.

## COCOS (KEELING) ISLANDS

### General description

The Cocos (Keeling) Islands, two separate atolls comprising some twenty-seven small coral islands with a total area of about 5½ square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about six miles from north to south, on which are the aerodrome and most of the European community; Home Island, the headquarters of the Clunies-Ross Estate; Direction Island; South Island; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about fifteen miles to the north of the groups and has no inhabitants.

Main settlements are on West Island and Home Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and the average rainfall is about 67 inches. There are occasional violent storms. The estimated population at 30 June 1969 was 607 (307 males and 300 females).

### History and administration

Summarised particulars of the discovery of the islands and their history up to 1946, when they became a dependency of the Colony of Singapore, are given in Year Book No. 51, page 140, and in earlier issues. On 23 November 1955 the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the Cocos Islands Act 1955 and by the *Cocos (Keeling) Islands Act 1955* of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth, to be known as the Territory of Cocos (Keeling) Islands.

Responsibility for the administration of the Territory rests with the Minister for External Territories. The first Official Representative was appointed on 23 November 1955 to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955–1961* of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955–1966* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955–1966*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

### Transport and communication

There is an international airport at West Island under the control of the Commonwealth Department of Civil Aviation. A three-weekly air service is provided between Perth and the Cocos Islands by Ansett and T.A.A. alternatively. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals. A radio teletype link with Perth is maintained by the Administration. Local postal and telephone services exist, and a non-commercial broadcasting station operates.

## CHRISTMAS ISLAND

Christmas Island is an isolated peak situated in the Indian Ocean in latitude 10° 25' 22" S., longitude 105° 39' 59" E. It is approximately 224 miles south from Java Head at the south entrance to Sunda Strait, 815 miles from Singapore and 1,630 miles from Fremantle. Christmas Island covers an area of about fifty-two square miles. It consists of a central plateau of about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove, where the principal settlement is located and which is also the only known anchorage.

The climate is healthy and pleasant, and the prevailing winds come from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round to between north and west. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

The economy of the Territory is based almost entirely on the mining and extraction of phosphate. Because of the nature of the land there appears little prospect of establishing any other economic activity.

At 30 June 1969 the estimated population was 3,439 (2,236 males and 1,203 females).

### Education

The Christmas Island education system comprises a primary school and a secondary school following the Singapore curriculum, a primary school following an Australian curriculum and a technical training centre. The Singapore curriculum schools provide classes to Form 4 level and scholarships are available for students wishing to proceed to Singapore for education beyond that level.

At 30 June 1969, 515 children were enrolled at primary level and 276 at secondary level. The combined staff establishment consisted of a headmaster, two senior teachers, 25 class teachers and two trainee teachers. The Technical Training Centre was opened in September 1969 with an enrolment of 40 apprentices. It is being conducted by staff seconded from the Western Australian Department of Education and follows the curriculum of that Department. The Australian curriculum primary school had 60 pupils at 30 June 1969. The two teachers are seconded from the Western Australian Department of Education.

### History and administration

Summarised particulars of the history of Christmas Island up to its administration by the United Kingdom as a separate Crown Colony from 1 January 1958, pending transfer to Australia, are given in Year Book No. 51, page 141, and in earlier issues. On 1 October 1958 the island was transferred to the Commonwealth of Australia by the *Christmas Island Act 1958* and is now administered as a Territory under the authority of the Commonwealth. Responsibility for the administration and government of the Territory rests with the Minister for External Territories, and day to day affairs on the island are administered by an Administrator under delegation from the Minister. The laws which were in force on the island at 30 September 1958 were continued as the laws of the Territory after its transfer to Australia.

**Phosphate deposits**

The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission. There are three principal phosphate deposits on the islands, of which the largest is that now being worked at South Point. This field is situated on the 600 feet to 800 feet level and is approximately 12 miles from the drying and shipping plant at Flying Fish Cove. During 1968-69, 1,126,812 tons of phosphate were exported to Australia and New Zealand. In addition 96,877 tons of phosphate dust were exported to Malaysia, Singapore and Australia.

**Transport and communication**

Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Australian ports and New Zealand.

A post office and internal telephone system are operated by the Administration. The latter comprises four automatic exchanges and three small subscriber-attended exchanges. A radio station is used for messages via Perth and Singapore and for communication with ships at sea. A limited broadcasting station commenced operating during 1966-67.

## CHAPTER 30

### MISCELLANEOUS

This chapter comprises statistics and other descriptive information not directly related to the subjects of the preceding chapters, or which it is convenient to assemble in single sections, arranged as follows: Valuation of Australian production; Indexes of farm production; Consumption of foodstuffs and beverages; Retail trade; Interstate trade; Statistical organisation in Australia; Statistical and other official publications of Australia.

#### VALUATION OF AUSTRALIAN PRODUCTION

The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published in the following tables have been compiled by the Statisticians in the various States from the latest and best data available and are on a substantially uniform basis. However, marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationships of local to gross value should be treated with some reserve.

Attention is directed to the fact that the values shown in the tables herein refer only to the production of primary industries and factories, and exclude the building and construction industry, those industrial establishments not classified as factories, and certain agricultural and farmyard produce obtained from areas of less than one acre. As explained in the chapter *Manufacturing Industry*, page 709, factory statistics for 1968–69 were not available in time for inclusion in this issue. On this occasion, therefore, factory production is shown only in the last table in this section, which contains information for previous years.

#### Explanation of terms used

The following is a brief explanation of the terms used.

- (a) *Gross value of production* is the value placed on recorded production at the wholesale price realised at the principal markets. In general, the 'principal markets' are the metropolitan markets in each State. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) *Local value* (i.e. gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) *Net value of production* represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays, and other costs. No deductions have been made for depreciation or certain maintenance costs, as particulars are not available for all States. The net value of production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

For the years shown in the following tables, no allowance for power, power kerosene, petrol, and other oils has been made in New South Wales. In the case of the mining and quarrying industry, however, this allowance has been made in all States. Marketing costs for mining and quarrying and costs of materials used in the process of production in respect of bee-farming, trapping, forestry, and fisheries are not available for all States. Local values have been used for these industries, with consequent understatement in gross value for the mining and quarrying industry and overstatement in net value for the other industries. Because of revisions, some figures differ from corresponding figures in earlier chapters of this Year Book.

## Value of production, Australia

**GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES: AUSTRALIA, 1968-69**  
(\$'000)

<i>Industry</i>	<i>Gross production valued at principal markets</i>	<i>Local value—gross production valued at place of production</i>	<i>Net value of production (without deduction of depreciation or maintenance)</i>

## INDEXES OF FARM PRODUCTION

In the first two tables in this section indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups: Agriculture, Pastoral, Dairying, poultry and bee-farming, and All farming combined (including separate indexes for wheat, wool and milk). In the third table indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown.

**Farm production price indexes**

The farm production price indexes shown in the following table relate to average 'prices' of agricultural, pastoral, dairying, poultry and bee-farming products realised at the principal markets of Australia. The 'price' data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year, and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. 'Prices' for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers the average quantities of the relevant commodities *produced* in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43, page 1050). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average quantities of each product *marketed* during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All farming index of quantities of crops marketed for livestock feeding in Australia.

**FARM PRODUCTION: INDEXES OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA  
1954-55 TO 1968-69**

*(Base: Average of 3 years ended June 1939 = 100)*

Year	Agriculture		Pastoral		Dairying, poultry and bee-farming		All farming	
	Wheat	Total	Wool (shorn and dead)	Total	All milk	Total	Products other than wool	Total
1954-55	319	316	540	489	370	371	355	401
1955-56	319	330	468	451	380	392	373	397

1966-67	366	350	433	496	388	418	425	427
1967-68	397	371	382	457	380	413	429	417
1968-69	337	334	408	488	391	424	424	420

**Indexes of quantum (i.e. value at constant prices) of farm production**

The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base: average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43 page 1051). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All farming index, of quantities of crops fed to livestock in Australia.

**INDEXES OF QUANTUM<sup>(a)</sup> OF FARM PRODUCTION: AUSTRALIA  
1954-55 TO 1968-69**
*(Base: Average of 3 years ended June 1939 = 100)*

1968-69	330	292	199	186	133	143	219	215

<sup>(a)</sup> Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (see text preceding table).

**Farm products for food use: indexes of quantum (i.e. value at constant prices) of production, exports and consumption**

The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas.

**FARM PRODUCTS FOR FOOD USE: INDEXES OF QUANTUM<sup>(a)</sup> OF  
PRODUCTION, EXPORTS AND CONSUMPTION  
AUSTRALIA, 1954-55 TO 1967-68**
*(Base: average of 3 years ended June 1939 = 100)*

Year	Production		Exports		Consumption in Australia	
	Total	Per head of total population	Total	Per head of total population	Total	Per head of total population
1954-55	121	91	117	89	127	96
1955-56	129	95	131	97	131	97
1956-57	123	88	118	85	136	98

1967-68	178	102	194	112	171	98

<sup>(a)</sup> Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

## CONSUMPTION OF FOODSTUFFS AND BEVERAGES

### Quantities consumed

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from the sum of production and imports and allowing for recorded movements in stocks of the respective commodities. While the estimates may be generally accepted as being reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of fish, rabbits and hares and the quantities of certain oils and fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc. which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at 'producer' level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years wastage of foodstuffs has possibly been less than previously because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by production by householders for their own requirements. In most cases broad estimates of non-commercial (householders') production have been made. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. It is felt that the foregoing deficiencies do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been derived by dividing the total apparent consumption of each commodity or commodity group in a given year by the mean population of Australia in the same period.

More detailed information on the consumption of foodstuffs and beverages is contained in the statistical bulletin: *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients*, issued by this Bureau.

The following tables show the average annual consumption during the three-year periods ended 1938-39, 1948-49 and 1958-59, together with the data for each of the years 1966-67, 1967-68 and 1968-69. Because of revisions, figures for some items in the following tables differ from corresponding figures in earlier chapters of this Year Book.

(e) Probably understated owing to lack of complete data. (f) Includes an allowance for edible starch (cornflour). (g) Coffee and coffee products in terms of processed whole or ground pure coffee.

Level of nutrient intake

The next table shows details of the estimated supplies of nutrients available for consumption in Australia during the years 1967-68 to 1968-69 in comparison with the annual averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

ESTIMATED SUPPLY OF NUTRIENTS AVAILABLE FOR CONSUMPTION AUSTRALIA, 1936-37 TO 1968-69 (Per head per day)

Nutrient	Average three years ended—			1967-68		1968-69p
	1938-39	1948-49	1958-59	(a)	(b)	(b)
Kilocalories . . . . .	3,117	3,245	3,297	3,261	3,254	3,364
<b>Protein—</b>						
Animal . . . . . g	58.7	57.4	59.6	62.9	64.2	61.5
Vegetable . . . . . "	30.9	35.3	32.3	31.5	34.3	40.3

(a) Comparable with previous years. (b) Not comparable with previous years. Figures are based on conversion factors calculated from the revised and enlarged edition of 'Tables of Composition of Australian Foods'. (c) Microgrammes.

NOTE.—One international unit of vitamin A activity is equivalent to 0.3 microgrammes of retinol.

**RETAIL TRADE**

The statistics in this section relate to retail establishments throughout Australia and the value of retail sales of goods by these establishments.

Information of this nature was first collected in respect of the year ended 30 June 1948 by a full census of all retail establishments. As this was the first census of its type in Australia, its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods, and a simple commodity dissection, together with a record of the value of certain services provided. This census was followed by a second census of all retail establishments trading during the year ended 30 June 1949.

Further censuses were taken in respect of the years ended 30 June 1953, 1957 and 1962. In these censuses retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups, and questions were asked about stocks of goods on hand, the number of persons engaged in retail activities, and credit sales. In addition, the 1956-57 and 1961-62 censuses included questions relating to purchases, customers' indebtedness and type of organisation.

A census was taken for the year ended 30 June 1969 as part of the Integrated Economic Censuses programme (*see* Chapter 31), but it is anticipated that preliminary results will not become available until early 1971. Major changes were made to concepts and classifications in the Census of 1968-69 to allow standardisation within the Integrated Economic Census framework.

The most recent census for which results are available was taken in respect of the year ended 30 June 1962. In general terms the 1961-62 census covered the retail trading activities of establishments which normally sell goods by retail to the general public from fixed premises (i.e. shops, rooms, kiosks, and yards). Retail activities of wholesalers and manufacturers were included if they sold regularly by retail to the general public. Sales by itinerant vendors (e.g. hawkers, street sellers, etc.) and sales from casual stalls or booths were excluded. Organisations such as clubs and societies making sales to their own members were excluded from the main census collection, but a supplementary collection was made, covering sales by *licensed* clubs.

In general, establishments with retail sales of goods amounting to less than \$1,000 in the census year were not included in the 1961-62 census. However, some 'service' establishments with retail sales of less than \$1,000 but with takings of \$1,000 or more from repairs, meals or hairdressing were included in the main census collection, and details of these establishments are included in tables in Year Book No. 50, page 1244. The types of establishments in this category are boot repairers, repair-only garages, cafes and restaurants, and hairdressers.

In the 1961-62 census particulars of retail sales related principally to sales, to the final consumer, of new and second-hand goods generally used for household and personal purposes. For this reason, sales of building materials, farm and industrial machinery and equipment, earth-moving equipment, etc., were excluded. For the same reason, and also because of difficulties in obtaining reliable and complete reporting, sales of builders' hardware and supplies, business machines and equipment, grain, feed, fertiliser and agricultural supplies, and tractors were excluded from the 1961-62 census. Retail sales of motor vehicles, parts, etc., were included, whether for industrial, commercial, farm, or private use.

During the period between censuses variations in the value of retail sales have been measured by means of quarterly sample surveys. Annual totals derived from these surveys, adjusted to a basis comparable in scope with the 1961-62 census, and some of the results of the 1961-62 census, are included in this section.

Year Book No. 50, pages 1239-45, contains details of the number of retail establishments, the values of retail sales and of retail stocks, and particulars of hairdressing, boot repairing and motor repairing establishments, restaurants, self-service stores and licensed clubs, for each State and Territory, from the results of the 1961-62 census. Major classifications are by commodity groups and type of business. More complete details are set out in published bulletins of the 1961-62 Census of Retail Establishments (*see* page 1028).

**Value of retail sales in each commodity group, Australia**

The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1961-62 and 1966-67 to 1969-70 on a comparable basis throughout. The figures for the year 1961-62 were obtained from the census, whereas figures for the other years shown are estimates based on sample surveys.

VALUE OF RETAIL SALES: COMMODITY GROUPS, AUSTRALIA(a)  
1961-62 AND 1966-67 TO 1969-70  
(\$ million)

Commodity group	1961-62	1966-67	1967-68	1968-69	1969-70
Groceries . . . . .	858.3	1,161.5	1,248.2	1,317.7	1,399.9
Butchers' meat . . . . .	422.3	590.3	615.5	627.7	667.9
Other food(b). . . . .	729.9	946.5	999.6	1,029.2	1,097.9
<i>Total, food and groceries</i> . . . . .	<i>2,010.5</i>	<i>2,698.3</i>	<i>2,863.3</i>	<i>2,974.6</i>	<i>3,165.7</i>
Beer, wine and spirits(c) . . . . .	545.9	743.8	811.0	863.7	936.8
Clothing and drapery . . . . .	900.0	1,172.9	1,246.2	1,304.0	1,384.6
Footwear . . . . .	154.7	197.3	208.9	213.6	229.4
Hardware, china and glassware(d) . . . . .	146.0	175.6	183.4	200.3	221.6
Electrical goods(e) . . . . .	348.0	408.8	445.5	462.0	496.6
Furniture and floor coverings . . . . .	230.1	322.3	355.9	388.7	423.0
Chemists' goods . . . . .	265.8	387.5	416.8	453.3	499.3
Newspapers, books and stationery . . . . .	166.4	235.0	251.9	270.0	292.4
Other goods(f) . . . . .	489.7	701.1	734.7	802.1	867.5
<i>Total (excluding motor vehicles, etc.)</i> . . . . .	<i>5,257.1</i>	<i>7,042.6</i>	<i>7,517.6</i>	<i>7,932.3</i>	<i>8,516.9</i>
Motor vehicles, parts, petrol, etc.(g) . . . . .	1,603.2	2,511.1	2,806.8	3,014.9	3,309.8

(a) Northern Territory and Australian Capital Territory have been excluded from this table because figures for these two Territories for 1968-69 and 1969-70 are not yet available. (b) Includes fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc., but excludes some delivered milk and bread. (c) Excludes sales made by licensed clubs. (d) Excludes basic building materials, builders' hardware and supplies such as tools of trade, paint, etc. (e) Includes radios, television and accessories, musical instruments, domestic refrigerators, etc. (f) Includes tobacco, cigarettes, etc., jewellery, sporting goods, etc., but excludes grain and produce and business machines. (g) Includes new and used motor vehicles, parts, petrol, etc., but excludes tractors, farm machinery and implements, earth-moving equipment, etc.

Total value of retail sales, States

## INTERSTATE TRADE

Prior to the federation of the Australian Colonies (now States) each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the 'bookkeeping' period these records were discontinued as from 13 September 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July 1953.

At the Conference of Statisticians held in January 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities. Complete interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania by the Deputy Commonwealth Statisticians in those States, and incomplete statistics, relating mainly to trade with Western Australia and Tasmania, by the Deputy Commonwealth Statisticians in the remaining States.

## STATISTICAL ORGANISATION IN AUSTRALIA

### Early development of Australian statistics

Statistical organisation in Australia has its origin in the 'Blue Books' which, in the Crown Colony days, were prepared annually for the information of the Colonial Office. Although intended primarily for administrative purposes, these documents were important sources of statistical data, and formed the basis from which later statistical publications were developed. Following the advent of responsible government, the 'Blue Book' was succeeded in all States by 'Statistical Registers' which, however, were still largely summaries of the 'by-product' statistics of government administrative departments.

The growing need for quantitative data concerning the progress of the several young communities of Australia led eventually to the appointment of official Statisticians commissioned to prepare and publish such data. Conferences were held between the Statisticians to allow for the interchange of ideas between States and to provide for uniform State statistics which could be aggregated to Australian totals. Altogether, six conferences were held prior to the formation of the Commonwealth Bureau of Census and Statistics in 1906—in 1861, 1875, 1890, 1900, 1902 and 1903. The holding of these conferences has been continued since the formation of the Commonwealth Bureau, and a representative from New Zealand attended up to 1928.

### Creation of the Commonwealth Bureau of Census and Statistics

Under the provisions of Section 51 of the Commonwealth Constitution, power is conferred on the Commonwealth Parliament 'to make laws for the peace, order, and good government of the Commonwealth with respect to . . .' (*inter alia*) '(XI.) Census and Statistics'. Accordingly the *Census and Statistics Act* 1905 was passed, and in 1906 the Commonwealth Bureau of Census and Statistics was created. A conference of Statisticians in 1906 defined the relations between the Commonwealth and State Bureaux, and in each case the State Statistician became the representative in his own State of the Commonwealth Statistician for the purpose of administering the Commonwealth Act. In addition, each State had its own 'Statistics Act', and although these were not identical for all States, they embodied common principles. The Commonwealth Bureau did not attempt to duplicate the existing State statistical organisations, but endeavoured to use their services whenever possible, undertaking the initial collection of statistics only in fields not covered by the States, or in which efficiency demanded complete centralisation.

### Integration of statistical services

The creation and development of the Commonwealth Bureau of Census and Statistics, the frequent conferences of Commonwealth and State Statisticians, and the close and increasing liaison between officers dealing with the same subjects in the State and Commonwealth fields did much to promote uniformity in official statistics and methods employed in their collection throughout Australia. The complete realisation of this aim could not, however, be achieved with seven separate statistical systems, even with the utmost co-operation of those concerned. This became apparent when economic problems following the 1914-18 War drew attention to deficiencies in Australian statistical data.

The first step towards integration was taken in 1924, when, in response to a proposal by the Prime Minister to the Premiers' Conference that State and Commonwealth Statistical Bureaux be amalgamated, the Tasmanian office was transferred to the Commonwealth. (Other States did not agree to the proposal at that time.) The Tasmanian office has since functioned as a Commonwealth office which also serves State statistical needs.

The varied economic and social problems of the 1920's and 1930's, the 1939-45 War and the post-war boom, and the development during and since the war of a volume of new statistics, imposed a severe strain on the statistical systems and increased the complexities of the several administrations in their efforts to secure and maintain uniformity in statistical collections.

The difficulties of maintaining efficient statistical services were further emphasised during the immediate post-war years when the problems of planning for post-war reconstruction greatly increased the demand for current economic statistics. In 1949, discussions with the Premiers were initiated by the Prime Minister, with the object of integrating the statistical services of the Commonwealth and the States by agreement. Following negotiations, all State Governments accepted the terms of draft agreements to integrate their respective statistical offices with that of the Commonwealth, and effect was given to this by the *Statistics (Arrangements with States) Act 1956*. This legislation, permissive in nature, was designed to enable the Commonwealth to enter into an agreement with any State to effect an amalgamation of Commonwealth and State statistical offices and services. The object of such an agreement was to establish an integrated statistical service, with branches in each State, operated by Commonwealth statistical officers under the immediate direction of a Deputy Commonwealth Statistician who would hold office under both the Commonwealth and State Governments. Both Commonwealth and State were to be adequately served with statistics, and no State would be required to surrender its existing powers in the field of statistics. Integration of the Commonwealth and State statistical services was finally accomplished when the integration arrangement with Victoria came into effect on 15 September 1958.

The relationships which at present obtain between the Bureau and the several State Governments are a reflection of these agreements. Each State has retained its power to collect statistics under State laws, but the Commonwealth provides the staff and the funds, and is responsible for all statistical work required by both Commonwealth and State Governments. Conferences of the Commonwealth and Deputy Commonwealth Statisticians are held annually to discuss current and projected future operations of the Bureau.

Under the system as it now operates, Deputy Commonwealth Statisticians and their staffs provide the principal avenue of contact between State Government agencies and other State users and suppliers of statistical information. For the most part, negotiations with Commonwealth agencies and other national users and suppliers of statistical information are undertaken by the Commonwealth Statistician and his Central Office staff. However, the division of responsibility between the Bureau's Central and State Offices in the matter of relationships with users and suppliers of statistical information is by no means as precise as might be assumed from the above remarks. The statistical services are highly integrated and operate as one unit rather than as seven separate Bureaux. In general, it might be said that moves to develop new statistical series or to modify existing ones for State purposes are normally initiated by Deputy Statisticians, whereas moves to develop new or modified series for national socio-economic policy purposes are usually initiated by the Commonwealth Statistician.

#### Scope of the Commonwealth Bureau of Census and Statistics

The scope of the Commonwealth Bureau of Census and Statistics has continually been widened. Additional requirements in the administrative, industrial, financial and scientific spheres have led to the development of many new statistical collections. All these activities are covered by the Census and Statistics Act, which empowers the Statistician to collect information and contains stringent provisions to ensure that the secrecy of information provided by individual persons and businesses is preserved.

In the Australian centralised official statistical service, it is recognised that there is a danger that official statisticians may become isolated from the thinking of the users of statistics and insensitive to the problems of the firms or individual persons whose responsibility it is to supply statistical information. The dangers inherent in this situation are for the most part obviated by the six State Offices of the Bureau keeping in very close contact with the individual businesses which use statistics and supply statistical information, and special steps are taken to ensure that users have adequate scope for expression of their needs and that requests by the Bureau for information are kept within reasonable and practical limits. The methods towards this end which have been adopted in the Bureau are reflected in its organisational structure. The organisation is on the basis of specialist subject-matter branches, and to each relatively narrow field of socio-economic activity there is a corresponding branch within the Bureau which is responsible for obtaining statistics and providing statistical services. Thus, in the Central Office, there are specialist branches dealing with primary industries; secondary industries; wholesale and retail trade; employment; finance; population and vital statistics; etc. A broadly similar organisational pattern exists in State Offices of the Bureau, although local requirements have naturally given rise to differences in detail.

### Organisation of the Central Office of the Commonwealth Bureau of Census and Statistics

The Central Office of the Bureau is organised functionally into the following branches, listed alphabetically. As shown below, these branches are further sub-divided into specialist subject matter sections.

*Demography and Employment Branch.* Demographic and Social; Employment and Field Survey Operations; Population Research.

*Integration, Classification and Private Finance Branch.* Integration; Classification; Private Finance. *National Accounts and Public Finance Branch.* Public Finance and Taxation; National Income and Expenditure; Inter-industry and Sector Financial Accounts.

*Overseas Transactions Branch.* Balance of Payments; Overseas Trade and Shipping.

*Population Census Branch.* Classification Research; Field Organisation and Mapping; Operations.

*Prices and Labour Branch.* Labour and Retail Prices; Quantum Indexes and Wholesale Prices.

*Production and Distribution Branch.* Internal Trade; Primary Industry; Secondary Industry.

*Sampling and Methodology Branch.* Sampling; Methodology; Special Projects.

*Services Branch.* Establishments and Finance; Publications; Secretariat.

In addition to the above-mentioned branches, the Bureau's *Computer Service Centre* operates the largest computer network in Australia and one of the largest used for statistical purposes in the world. It comprises a Control Data 3600 and two 3300 computers in Canberra, 3300, 3200 and 160-A computers in Sydney and Melbourne, 3200 and 160-A computers in Brisbane and 3200 computers in the remaining State capitals. All installations use a full complement of peripheral devices. Mass storage and interrogation facilities are available at Canberra, Sydney and Melbourne.

At 30 June 1970 the staff of the Bureau numbered 3,421, of whom 639 were university graduates. Of the total staff, 1,355 were employed in the Bureau's Central Office in Canberra. Expenditure for the year 1969-70 amounted to \$17,567,335.

### Relation of the Bureau to other Commonwealth Departments

The Commonwealth Statistician is the co-ordinating authority on all statistical activities in Commonwealth Departments, and where any new statistical field is to be established involving the regular collection of statistics, the Commonwealth Statistician must be consulted to ensure that they are necessary and that they are based on sound statistical methods; furthermore, the Commonwealth Statistician is empowered to make regular inspections of all statistical work undertaken in Departments to ensure that their needs are being met by the most economical means and without duplication of effort.

The Bureau provides methodological and general statistical advice to Commonwealth Departments and instrumentalities from time to time as required. However, for a small number of Departments, which have a continuing need for specialised statistical services, the Bureau provides, from its own staff, the key personnel to serve these needs.

## STATISTICAL AND OTHER OFFICIAL PUBLICATIONS OF AUSTRALIA

The official statistical publications of Australia may be divided bibliographically into two main divisions, namely: (i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only. Commonwealth publications containing statistics may be grouped under two heads, namely: (i) publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers. State publications may similarly be grouped into publications issued by the Deputy Commonwealth Statistician in each State and State Parliamentary and Departmental Reports and Papers. The statistics contained in the second group in each case are in the main incidental to the primary purpose of the particular report or paper.

### Publications issued by the Commonwealth Statistician

#### Principal statistical publications issued to date

The following is a list of the principal statistical publications issued from the Central Office of the Commonwealth Bureau of Census and Statistics since its inauguration. Minor changes in titles have not been referred to. Copies of a number of these publications, particularly earlier issues, are not now available.

*Australian Capital Territory Statistical Summary.* Annually, 1963 to 1970.

*Balance of Payments, half-yearly,* 1946-47 to 1969-70.

*Balance of Payments, Australia.* Statements Nos 1 to 3, 1928-29 to 1951-52.

- Banking and Currency*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1968–69.
- ‡ *Building and Construction*. Bulletin, annually, 1964–65 to 1967–68.
- Causes of Death*. Bulletin, annually, 1963 to 1967.
- Census (1911) Results*. Bulletin. Vols I (Statistician's Report), II and III, with Appendix *Mathematical Theory of Population*.
- Census (1921) Results*. Bulletins, Nos 1 to 26. Parts I to XVI, forming Vol. I, and Parts XVII to XXIX (Part XXVII, Life Tables), forming, with the Statistician's Report, Vol. II.
- Census (1933) Results*. Bulletins, Nos 1 to 25. Parts I to XIV, forming Vol. I, Parts XV to XXVIII, forming Vol. II, and Parts XXIX to XXXVII, forming, with the Statistician's Report and Australian Life Tables, 1932–1934, Vol. III.
- Census (1947) Results*. Bulletins, Nos 1 to 25. Parts I to XVI, forming Vol. I, Parts XVII to XIX, forming Vol. II, and Parts XX to XXVIII, forming with the Statistician's Report and Australian Life Tables, 1946–1948, Vol. III.
- Census (1954) Results*. Bulletins, Nos 1 to 3. Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1953–1955, and the Statistician's Report.
- Census (1961) Results*. Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; and Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1960–1962, and the Statistician's Report.
- Census (1966) Results*. Summarised results for each State and Territory and for Australia have been published in a series of mimeographed bulletins available from the Commonwealth Statistician, and the volumes containing the final figures are being issued progressively (see pages 1037–8).
- \* *Conference of British Commonwealth Statisticians, 1951, Report of Proceedings*.
- \* *Dairying Industry* (formerly *Summary of Dairying Industry*). Statistical Bulletin, monthly and half-yearly; first issue, September 1937.
- Demography*. Bulletin, annually, 1911 to 1966. Commencing 1963, excludes details of causes of death, see *Causes of Death*.
- \* *Digest of Current Economic Statistics*. Monthly from August 1959 onward.
- \* *Export Commodity Classification, Australian*. Annually, 1966–67 to 1969–70 (sectional revisions). *Exports, Australian*. Annually, 1958–59 to 1969–70.
- \* *Factories, Principal Statistics, Summary*. Annually, 1948–49 to 1967–68.
- Finance*, Bulletin, 1907 to 1960–61. Commencing 1955–56, issued in two parts—Part I, Public and Private Finance; Part II, Commonwealth Taxation. Commencing 1961–62, issued as five separate bulletins, see *Banking, Finance (2), Insurance, and Taxation*.
- Finance, Commonwealth*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1969–70.
- Finance, State, Territory and Local Government Authorities', and Government Securities*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1967–68.
- \* *Food Production and the Apparent Consumption of Foodstuffs and Nutrients, Report on*. Statistical Bulletin, half-yearly, 1946–47 to 1947–48; annually, 1948–49 to 1968–69.
- \* *Fruit Growing Industry* (formerly *Summary of Fruit Growing Industry*). Statistical Bulletin, annually, 1944–45 to 1968–69.
- \* *Import Commodity Classification, Australian*. Annually, 1965–66 to 1969–70 (sectional revisions). *Imports, Australian*. Bulletin, annually, 1967–68 and 1969–70.
- Imports Cleared for Home Consumption*. Annually, 1950–51 to 1968–69.
- Insurance and Other Private Finance (other than Banking and Currency)*. Bulletin, annually, 1961–62 and 1962–63 (combined issue) to 1967–68.
- Labour and Industrial Statistics*. Memoranda and Reports, various, to 1922.
- Labour Report*, 1913 to 1967.
- Life Tables, Australian*, 1901–1910. *Australian Joint Life Tables*, 1901–1910.
- Life Tables, Australian*, 1920–1922.

- \**Rural Holdings, Classification by Size and Type of Activity*, 1959-60. Bulletins, Nos 1 to 7.
- Rural Holdings, Classification by Size and Type of Activity*, 1965-66. Bulletins, Nos 1 to 7.
- Rural Holdings, Size Classification of*, 1955-56. Bulletins, Nos 1 to 7.
- Rural Industries*. Bulletin, annually, 1962-63 to 1967-68.
- \**Rural Land Use and Crop Production* (formerly *Summary of Crop Statistics*). Statistical Bulletin, annually, 1943-44 to 1968-69.
- \**Seasonally Adjusted Indicators*. Bulletin, annually, 1967 to 1970.
- Secondary Industries*. Bulletin, annually, 1950-51 to 1962-63 (commencing 1960-61 issued in two parts—Part I, Factory and Building Operations; Part II, Materials Used and Articles Produced in Factories). Commencing 1963-64 issued as separate bulletins, see *Manufacturing Industry*, *Manufacturing Commodities*, and *Building and Construction*.
- Social Insurance*. Report to the Hon. the Minister for Trade and Customs, 1910.
- Social Statistics*. Bulletin, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service*. Report to the Hon. the Minister for Home Affairs, 1910.

*Taxation Assessments, Commonwealth.* Annually, 1961–62 to 1968–69.

*Trade, Overseas.* Bulletin, annually, 1906 to 1968–69.

\**Trade, Overseas.* Preliminary Bulletin, annually, 1952–53 to 1969–70, in two parts—Part 1, Exports; Part 2, Imports. (See also *Exports, Australian; Imports, Australian; and Imports Cleared for Home Consumption.*)

*Transport and Communication.* Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually and 1932 to 1967–68 annually.

§*Value of Production.* Bulletin, annually, 1964–65 and 1967–68.

*Wealth.* The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.

\**Wheat Industry* (formerly *Summary of the Wheat Situation*). Statistical Bulletin, periodically; first issue, July 1936.

\**Wool Production and Utilisation.* Bulletin, annually, 1952–53 to 1968–69.

#### Current or recent statistical publications

The publications listed on the following pages comprise all current or recent publications of the Central Office of the Commonwealth Bureau of Census and Statistics. For further information, including particulars of publications issued by the State offices of the Bureau, see *Publications of the Commonwealth Bureau of Census and Statistics* (Reference 1.8).

The publications listed are grouped into (i) *General publications*, (ii) *other publications*, and (iii) *population census publications*.

*General publications* contain statistics on a wide variety of subjects, including all major topics.

*Other publications* comprise reports, bulletins, statements, surveys, etc., which deal mainly with particular fields or subjects, and are listed alphabetically according to topic. They are of three kinds:

- (i) publications (mainly annual) containing detailed tables of the main statistics collected which constitute the Bureau's permanent detailed printed records;
- (ii) supplementary publications in mimeographed form (triennial, annual, half-yearly, quarterly, and monthly) which advance the statistics contained in (i), provide further detail, or issue new statistics;
- (iii) preliminary reports of special surveys or censuses, such as the Population, Retail Trade and Motor Vehicle Censuses in mimeographed form.

*Population census publications* have been issued in respect of each Commonwealth census taken from 1911 to 1966, namely 1911, 1921, 1933, 1947, 1954, 1961 and 1966. Only the mimeographed publications issued for the 1966 census and a summarised list of the 1966 census volumes are shown in the following pages, but details of publications for earlier censuses are shown on page 1027. The issue of preliminary figures from the 1966 census in mimeographed form is now complete, and the volumes which will contain the final figures are currently being prepared and issued.

Publications of the *Census of retail establishments and other services* and the *Census of motor vehicles* are listed respectively under the headings of **Retail Trade** and **Transport and Communication**.

*Frequency of issue* is indicated as follows:

<i>tri</i> – triennially	<i>m</i> – monthly
<i>a</i> – annually	<i>irr</i> – irregularly
<i>hy</i> – half-yearly	<i>occ</i> – occasionally
<i>q</i> – quarterly	

The *most recent issue* of each annual publication is shown in parentheses.

*Prices.* Those publications for which a charge is made are listed at the end of this Year Book. The prices are shown after the number and year of issue—in order, price excluding postage, and price including postage in Australia.

\* Distributed by the Commonwealth Statistician—for methods of obtaining other publications still in print see back of this volume.

† See pages 1034–5 for 1967–68 series.

‡ Previously included in *Secondary Industries, Part I—Factory and Building Operations*.

§ Previously included in *Non-rural Primary Industries and Value of Production*.

|| Copies available from the Bureau of Mineral Resources, Canberra and the Department of National Development, Melbourne and Sydney.

## 1966 CENSUS OF POPULATION AND HOUSING PUBLICATIONS†

## Mimeographed statements

*Mimeographed statements issued in respect of the 1966 Census are of two kinds:*

- (a) *field count statements, containing preliminary figures compiled by field personnel during the taking of the census; and*
- (b) *bulletins, which contain, in general, preliminary summarised particulars of the detailed information that will eventually be published in the appropriate Parts of final printed Volumes of the Census. They should therefore not be regarded as providing the final detailed analysis available of the topic in question.*

**Information on current or recent Bureau publications**

Further information on current or recent publications of the Commonwealth Bureau of Census and Statistics is contained in *Publications of the Commonwealth Bureau of Census and Statistics, 1970*, available free on request from the Commonwealth Statistician, Canberra. This contains a list of all Bureau publications, a subject index to show the Central Office publications in which information on the various subjects dealt with by the Bureau is to be found, and short descriptions of major Central Office publications. The information on issues in this publication is supplemented in monthly statements.

**Publications issued by the Deputy Commonwealth Statisticians**

A list of the current publications issued by the Deputy Commonwealth Statistician of each State appears in *Publications of the Commonwealth Bureau of Census and Statistics, 1970*, and this information is supplemented also in the monthly statements mentioned above.

**Commonwealth and State Parliamentary and Departmental Reports and Papers**

No comprehensive list of current publications of this nature is available, but the National Library of Australia issues an annual publication *Australian Government Publications*, a list of official publications of the Commonwealth, States and Territories, compiled from records of material received by the Library during the year.

---

\* In the course of preparation.

The Australian Government Publishing Service, Canberra, issues a monthly publication *Australian Government Publications* and at irregular intervals Consolidated Lists. These publications list Commonwealth publications currently becoming available or in stock, showing the titles and prices of Parliamentary Papers, Parliamentary Debates (Hansard), records of Parliamentary proceedings, Acts, Statutory Rules, Ordinances, and departmental bulletins and reports issued annually or irregularly.

Australian Government publications may be obtained through the mail from the Assistant Director, Sales and Distribution, Australian Government Publishing Service, P.O. Box 84, Canberra, A.C.T. 2600, or over the counter from the A.G.P.S. Book Centre, 113-115 London Circuit, Canberra City, A.C.T.; the A.G.P.S. Book Counter, Wentworth Avenue, Kingston, A.C.T.; the A.G.P.S. Book Centre, 347 Swanston Street, Melbourne Victoria; the A.G.P.S. Book Counter, the Foyer, Commonwealth Centre, Chifley Square, N.S.W.; the Commonwealth Sub-Treasury in each State Capital City except Melbourne; or booksellers.

The National Library of Australia issues annually a publication *Australian Books*, a reprint of the 1966 issue of which is included on pages 1231-77 of Year Book No 53. See page 674 of the chapter Education, Cultural Activities and Research for further information concerning the National Library's publicising of Australian publications.

## CHAPTER 31

# AUSTRALIAN INTEGRATED ECONOMIC CENSUSES, 1968-69

### Outline

#### The Meaning of Integration

#### Purposes of Integration

- Aggregation of economic data
- Benchmark data for surveys, etc.
- National accounts
- Comparability of statistics for different levels of unit
- Enterprise statistics
- Provision for extension of economic censuses into other industries
- Steps in integration

#### Standardisation of Census Units

- Types of unit

#### Establishment of Integrated Register of Businesses

- The Integrated Register
- Changes in the establishment concept

#### Standardisation of the Industrial Classification

- The Australian Standard Industrial Classification

#### Standardisation of Data Concepts: Establishment Statistics

- Value added
- Turnover
- Stocks
- Purchases and selected expenses
  - Manufacturing and mining
  - Retail and wholesale trade
- Transfer values
- Employment, salaries and wages
- Rent and leasing expenses
- Fixed capital expenditure
- Value of fixed assets
- Gross margin in retail and wholesale trade

#### Standardisation of Data Concepts: Enterprise Statistics

- Gross product statistics
- Gross product estimates for establishments
- Other enterprise statistics
- Statistics for enterprise groups

### The meaning of integration

For the year ended June 1969 censuses of mining, manufacturing, electricity and gas production and distribution, retail trade and selected services, and wholesale trade were conducted for the first time on an integrated basis.

The manufacturing and mining censuses for 1968-69 were part of the series of regular annual censuses conducted for these industries, but the mining census was being held for the year ended June instead of the calendar year as in the past. Electricity and gas production had previously been included in the manufacturing census; for the year 1968-69 they were treated as a separate census and the scope of the returns was extended to cover distribution as well as production. The retail census had been held every four or five years, the previous retail census being for the year 1961-62.

Wholesale trade had not been the subject of a census before, although there had been an exploratory partial wholesale census for the year 1963-64. In future, censuses of retail and wholesale trade will be held about every five years, the other censuses annually as in the past.

The integration of these censuses meant that for the first time they were being collected on the basis of a common framework of reporting units and data concepts and in accordance with a standard industrial classification. As a result, the statistics for the industries covered by the censuses are provided with no overlapping or gaps in coverage, and in such a way that aggregates for certain important economic data such as value added, employment, salaries and wages, fixed capital expenditure and stocks can be obtained on a consistent basis for all sectors of the economy covered by the censuses.

To make this integration possible, it was necessary to revise all the forms used in previous censuses to bring the items of data to a common basis of definition in all censuses. This revision was made after extensive investigations of business record-keeping practices conducted by the Bureau over a period of years. For most businesses in the scope of the censuses—businesses which operate at one location only—this was the principal change brought about by the integration of the censuses. For businesses operating at more than one location the other principal change was that the census returns for all industries covered were collected through the head offices of the enterprises, each of which was asked to report in a consistent way for each of its establishments covered by the censuses and for the enterprise as a whole.

### Purposes of integration

The integration of the economic censuses was undertaken as a major reorganisation of a large part of the Bureau's work, designed to increase substantially the usefulness and comparability of the kinds of statistics already being collected and published, for purposes of general economic analysis and market research.

#### Aggregation of economic data

The economic censuses of manufacturing, mining and retail trade were introduced originally—many years ago—and subsequently developed, in order to provide statistics for particular industries, with special definitions of units and data adopted to suit the requirements of users interested in statistics of those industries. (The same is true of the annual agricultural and pastoral census—but this is not among the economic censuses integrated in 1968-69.) More recently there has been a growth of interest in statistics describing activity in the economy as a whole—reflected, for example, in the post-war development of employment and earnings statistics, surveys of capital expenditure, stocks and wages and the whole field of national accounts statistics.

For such purposes economic census statistics in the past have had serious limitations despite the fact that they covered a broad area of the whole economy. Because of the special-purpose nature of each of the censuses, there were no common definitions of data, and there was no common system of reporting units, and therefore aggregation of statistics from different censuses was not possible. As no standard industrial classification existed, industry boundaries were not defined in ways which would prevent overlapping or gaps occurring between the industrial sectors covered by the censuses. This was a further reason why aggregation across industry boundaries was not possible. For estimation of the national accounts, therefore, little use was made of the results of the economic censuses, except the agricultural census, and there was much reliance on statistics compiled from income-tax assessments. Employment and earnings statistics for the economy as a whole have been derived mainly from monthly returns of payroll tax-payers.

#### Benchmark data for surveys

For these reasons the economic censuses in the past have provided no basis for designing or adjusting the sample surveys which supply current economic statistics from quarter to quarter, particularly those of capital expenditure and stocks which are important components of the quarterly national income and expenditure estimates. To be accurate, such statistics should be backed periodically by comprehensive benchmark data of the kind normally available only from censuses. The previous censuses of manufacturing, mining and retail trade covered large and important sectors of the whole economy, and they included many of the same broad types of data as those needed for current economic indicators. However, because of the specialised nature of the units and data concepts on which the censuses were designed, and the lack of standard industry boundaries, it was not possible to use the results of these censuses as benchmark data for improving the accuracy of the surveys.

Similarly, the employment statistics derived from the censuses could not be used to improve the accuracy of the monthly employment and quarterly earnings series. The basic benchmark for these series is the population census, but the annual manufacturing and mining censuses, and the periodical retail trade census, were potential sources of data for checking the movements of these series.

The units employed in most of the surveys and for the private sector in the employment and earnings series are payroll-tax payers, broadly consisting of businesses (or the parts of interstate businesses operating in one State) whose payroll amounts to more than \$20,800 a year. The unit employed in the censuses is the establishment. In the manufacturing census prior to 1968-69, this was a unit engaged in manufacturing activity and employing four or more persons or using power (other than manual) in any manufacturing process. Any part of a business (or of a particular location at which a business operated) which met this definition was treated as a manufacturing establishment, and the form required that 'manufacturing activity' should exclude selling and delivery. The value of output was to be reported exclusive of delivery costs, and employment was to exclude sales and delivery staff. The retail census covered the retail trading activities of establishments which normally sold goods to the general public from fixed premises. It omitted any wholesaling, manufacturing or other non-retailing activity carried on at the same location. Many types of repair activity, however, such as repairing of motor vehicles, shoes and watches, were included in the retail census, and were also included in the manufacturing census. The retail trade census also included any retailing activities carried on at locations primarily engaged in other activities such as wholesaling or manufacturing. The establishments from which mining census returns were collected were confined to units engaged in mining activity, including crushing and ore-dressing at or near the mine. All censuses (except the retail trade census, in respect of chain stores) excluded separately located head office staff, while including administrative staff located at the establishment. They also excluded any staff at separately located units providing ancillary services to the establishments, such as delivery fleet depots, research laboratories or storage warehouses.

Thus there were serious obstacles to the reconciliation of statistics from economic censuses on the one hand and the economic surveys and the employment and earnings series on the other, which would have been necessary if the censuses were to provide benchmark data and a sample framework for the surveys, and satisfactory interim data for checking the movements of the employment and earnings series.

#### National Accounts

Like employment statistics and the surveys that have been discussed, the national accounts have to be comprehensive for the whole economy. They run across all industries and, in the industry dissections they provide, all economic activities must find a place. The national accounts are partly based on actual statistics, and partly on estimates. This will probably always be the case, but progress in national accounting requires that the part based on actual statistics should progressively increase. A major step in this direction would have been achieved if consistent and integrated statistics were available, both for censuses and surveys, from businesses themselves. The main broad aggregates required for each industry are gross product (that is, contribution to G.N.P.), wages and salaries, capital expenditure and stocks. The economic censuses were potential sources of this information.

Although it has always been desirable to have consistent figures of this kind as a basis for national accounts estimates, two developments in recent years have made the need urgent. One is the development, in response to strong demand, of quarterly estimates of national income and expenditure. Dependent as they are on the available current figures of wages and salaries, capital expenditure and stocks, the publication of these estimates in Australia has increased the significance of the lack of correspondence between the current survey-based data and the potential benchmark information available in the economic censuses—and between these and the tax-based statistics from which many of the annual estimates of national income and expenditure are derived.

The second development which has enhanced the importance of integrated economic statistics is the strong move in advanced countries towards the development of new types of national accounts: input-output tables, flow-of-funds tables and national balance sheets, and the obvious advantages of being able to present these accounts (together with the national income accounts themselves and the balance of payments) in a single co-ordinated framework. These efforts have led to the appearance of the new proposals by the United Nations Statistical Office for an integrated system of national accounts\* which have now been endorsed by official statisticians throughout the world. To implement proposals of this kind, the relevant national accounting concepts and frameworks must be co-ordinated, but in addition the basic data on which the estimates are based need to be fitted as closely as possible into the specified concepts and frameworks. The best hope for success in this objective is to integrate the conceptual framework in which the statistics are collected as closely as possible with the framework of the national accounts themselves. To give an example from the work being done in Australia at present: input-output tables are being prepared for the year 1962-63, on a conceptual framework consistent with the national income accounts. But many of the conceptual cells in the input-output table can only be filled for each industry by data obtained from the manufacturing and other economic censuses. These are the cells of the table showing what the industry buys from,

\* *A System of National Accounts, Studies in Methods, Series F, No. 2, Rev. 3 (New York, 1968).*

and sells to, other industries and sells to end-users. In effect, these yield new estimates of the gross product of the industry which in present circumstances conflict with the estimates already published in the *Australian National Accounts*, based as these are mainly on tax statistics. To make them agree in future, a common set of concepts and a common set of statistical reporting units are needed for both the economic censuses and the national accounts.

The needs of national accounts statistics here do not conflict with those of the statistics for particular industries. On the contrary, the national accounts can provide the common conceptual basis needed for comparability of data between industries, without restricting the scope for the variation in detail which is necessary in order to provide each industry with its own statistics in the most suitable form. The interest of businesses themselves can be met by this common conceptual approach too, as there is no major conflict between national accounting concepts and the accounting concepts familiar to businesses.

#### Comparability of statistics for different levels of unit

The national accounts illustrate a fact which underlies all economic statistics: that different levels of unit are appropriate for different kinds of statistics. In the case of the national accounts, statistics are required for items such as capital expenditure and stocks in some industry detail, and for items such as wages and salaries in geographical detail as well. To be classifiable in this way, such statistics should be collected and tabulated for a particular stratum of business unit, usually called the establishment. Statistics for national accounting items such as profit and interest receipts and payments, on the other hand, can only be collected and tabulated for a legal-entity type of unit which may be broader than the establishment. Commodity statistics are needed for estimates of input-output transactions, personal consumption expenditure and aggregates at constant prices. For these statistics the unit being tabulated is narrower than the establishment; it is, so to speak, the commodity itself: for example, the tonnage of ice-cream produced, whether made in establishments classified to the ice-cream industry class or not—although the statistics must of course be collected from a business unit. On the other hand, for studies of the sources and uses of capital funds, including overseas investment, the statistics needed are best collected and tabulated for units broader than the legal entity. This type of statistics would relate to business units of ownership and financial control, including groups of legal entities under common ownership and control. Although these examples are drawn from national accounts, there are similar relationships between types of unit and types of statistics in other forms of economic statistics.

This means that comparisons of industry detail cannot be made between statistics corresponding to different levels of unit, even if they are based on a common industry classification, unless something has been done to integrate the units at the various levels. This is one of the most important objectives of the integration of the economic censuses. It requires collecting data in such a way that reconciliation is made between the different levels of detail in each return, or set of returns, collected from each enterprise: commodity sales with establishment sales, establishment sales with enterprise sales, and so on. It also requires the facility to recast statistics collected and published for one level of unit to make them comparable with those for a higher level unit. Salaries and wages, for example, would normally be published for establishments, and the salaries and wages for, say, the basic chemical industry group, would be those paid by all establishments classified to that industry group. If it were desired to compare the salaries and wages of this industry group with its operating surplus, for example, it would be necessary to use the statistics of the salaries and wages paid by all *enterprises* classified to the industry group. For a comparison with capital raisings or overseas investment it would probably be necessary to use the statistics of the salaries and wages paid by all *enterprise groups* classified to basic chemicals. The figure of salaries and wages would be different in each case, because the business unit classified to the industry group is progressively broader at each stage. Being classified on the basis of its main activity, it would tend to include progressively more salaries and wages paid to employees engaged in activities other than basic chemicals, because of the mixed nature of the activities of enterprises and enterprise groups. On the other hand, it would tend to exclude progressively more salaries and wages paid to employees of basic chemical establishment owned by enterprises predominantly operating in other industries.

#### Enterprise statistics

The establishment as used in economic censuses is defined mainly in terms of location, rather than in terms of ownership or management. With the growth of multi-establishment enterprises, especially those cutting across several industry boundaries, there has been increasing interest in statistics about enterprises as economic entities. These are the statistics relevant for comparisons with such things as the financial performance of companies, derived from company accounts or from taxation statistics, and in studies of the competitive position of firms. Size-distributions based on establishments can give only a partial picture of the structure of industries; they have to be supplemented by size-distributions of the enterprises engaged in the industry.

The enterprise statistics needed for these purposes must relate to all forms of business units—unincorporated enterprise as well as companies. For some purposes statistics based on operating legal entities as the unit are needed; other purposes require statistics based on groups of such legal entities operating under common ownership or control.

#### Provision for extension of economic censuses into other industries

The problems referred to earlier which have arisen from the specialised nature of the units and data concepts used in the existing economic censuses are likely to increase with the extension of economic censuses into other industries. A census of wholesale trade could not have been introduced without close attention being paid to its boundaries with manufacturing on the one hand and retail trade on the other. The treatment of the sales branches of manufacturing enterprises had to be determined, and the treatment of wholesaling activity by retailers. Similar problems arise with the planned future introduction of a census of construction. This industry, like wholesale trade, has areas of overlapping with manufacturing which have required special attention in the new standard industrial classification, in order to avoid the possibility of gaps or overlapping.

#### Steps in integration

To meet the purposes of integration, as they have been described, it was therefore necessary to take four major steps, which will ultimately affect most if not all of the economic censuses and surveys conducted by the Bureau:

1. Standardisation of census units: defining business units at standard levels, corresponding to the strata in the business structure for which various types of economic statistics are required and can be collected; devising standard rules for identifying such business units.
2. Establishment of an integrated register of business units: identification of the standard units for all businesses to be covered by economic censuses and surveys, and recording them in a register to be used in the running of the censuses and surveys.
3. Standardisation of the industrial classification: adoption of a common system of classification suitable for all censuses and surveys, to which all the standard business units to be covered would be classified without gaps or duplication.
4. Standardisation of data concepts: defining in common terms the basic items of data for which statistics are required across all industries covered by economic censuses and surveys, to permit comparison and aggregation.

## Standardisation of census units

#### Types of unit

The business units as standardised for purposes of the integrated economic censuses are at three levels:

- the establishment (and associated administrative offices and ancillary units)
- the enterprise, and
- the enterprise group.

The central unit from which statistical information is collected is the *enterprise*, defined broadly as an operating legal entity. Where a number of legal entities operate as a group, owned or controlled by a single company, the enterprise is not the group as a whole, but each individual operating legal entity in the group.

The group of legal entities owned or controlled by a single company is recognised as a separate type of unit—the *enterprise group*. This is to be used not for collection of census returns but subsequently, for aggregation of certain census data. The enterprise group, in addition, may be appropriate as the *collecting unit* for certain types of survey, such as *overseas investment and local capital raisings*, for which the enterprise would be too narrow. The census data aggregated for enterprise groups will provide a body of statistics directly comparable (when classified by industry) with the results of surveys conducted among enterprise groups.

The basic unit for which most data are to be tabulated is the *establishment*, defined in general as a unit covering all the operations carried on under the ownership of one enterprise at a single physical location—such as an individual factory, shop or mine. Enterprises operating more than one establishment report the data for each of their establishments on an establishment return. They report summary data for all their establishments on enterprise returns, together with some additional data for the enterprise as a whole. Enterprises operating only one establishment supply a combined establishment—enterprise return. For small businesses a special short form is used.

*Administrative offices and ancillary units* are units such as head offices, storage premises, transport garages and laboratories serving or administering establishments within the same enterprise and located away from them. They do not supply separate returns. If they administer or serve only one establishment their figures are included in the total for that establishment, in the establishment return. If they administer or serve more than one establishment their figures are included in the enterprise return. To enable geographical details to be published, certain figures for individual administrative offices or ancillary units are separately specified in the establishment and enterprise returns; these figures are confined to employment, wages and salaries and capital expenditure.

*Manufacturers' sales branches* located away from establishments are included among the ancillary units, but only if they are of the kind which do not distribute goods to customers from stocks held by themselves. Any which do distribute from stocks in this way are treated as establishments, to be included in the wholesale census.

The word 'operating', in the definition of the enterprise as an operating legal entity, is intended to exclude the numerous 'paper companies' which may exist as parents, subsidiaries or associates of operating companies for various reasons. In general such non-operating companies are attached in the Bureau's lists to individual related operating companies in the enterprise group, for purposes of identifying the enterprise unit. Holding companies without employees are attached to the principal operating company in the group of companies owned by them.

However, subsidiary companies performing financial services for other companies within the group, such as instalment credit companies or companies operating superannuation funds, are recognised as separate enterprises, even though they might have no separate employees of their own. These belong to a different sector of the national accounts from that of trading companies. They are not in the integrated censuses but are covered in separate inquiries.

Some holding companies without operations of their own perform administrative services for some or all of their subsidiary companies and have staff of their own for this purpose. These companies receive a special abridged enterprise return for 'ancillary enterprises'. This abridged return is used also for property-owning companies in an enterprise group which own property used by more than one other enterprise in the group; such companies may be responsible for the capital expenditure of the group.

Some operating companies are found to have the accounts they use for management purposes inextricably mixed with those of a related operating company; in such cases the two companies are amalgamated for statistical purposes to form one enterprise.

The above description of the types of units used in the integrated economic censuses is necessarily abbreviated. For a more extensive description see *The Australian Standard Industrial Classification (Preliminary Edition), 1969, Vol. 1*.

## Establishment of integrated register of businesses

### The Integrated Register

In order to provide and maintain accurate records of the enterprises and establishments to be covered in economic censuses and surveys it was necessary to set up an *Integrated Register of businesses*. In this register the units of each business corresponding to the three standard levels—establishments (and administrative offices and ancillary units), enterprises and enterprise groups—are identified and numbered in such a way as to record the links between the units at the different levels. The register is recorded on magnetic tapes and provides the means for operating an automated system for addressing and despatching census forms for enterprises and establishments and for handling the subsequent receipt and processing of completed returns.

Much of the information about the parent-subsidiary relationships of companies embodied in the register was originally obtained by means of questionnaires addressed to Group Employers registered with the Commonwealth Taxation Office under the pay-as-you-earn system of income tax deductions. The questionnaires related in addition to the activities carried on at the various locations of the Group Employers, and the results were used together with the lists of establishments used for previous censuses of manufacturing, mining and retail trade, to build up the original integrated register.

The lists recorded in the register are kept up to date by regular checks from a wide variety of sources. In addition to sources used for updating the previous lists of mining, manufacturing and retail establishments (such as factory registrations, lists of retail shops compiled by postmen, etc.) the Bureau collects questionnaires from new Group Employers, and periodically updates the information on larger companies by referring listings produced from the Bureau's current records back to the companies themselves for amendment.

### Changes in the establishment concept

The adoption of a new establishment concept in each of the economic censuses entails an unavoidable break in the continuity of the census statistics, in comparisons with previous years. Special analyses are being made from which it is hoped to derive some estimates of the order of magnitude of the changes, for publication along with the results of the integrated censuses. The main changes in the establishment concept affecting the continuity of statistics can be summarised as follows.

1. In general the establishment in each census now consists of the whole of each physical location, operated by one enterprise, whose main activity is within the scope of the census. There is usually one return only for each establishment, classified to the industry of its main activity. This is in contrast to the previous censuses, in which an establishment could be the part of a location engaged in an activity covered by one of the censuses, and separate returns were required, where practicable, if the activities at the location corresponded to different industries in the same census, or different censuses. From the viewpoint of businesses completing census returns, the new establishment concept requires much less apportionment of data between returns than was necessary in previous censuses. There are still some locations which are divided between different censuses, or between different industries in the same census, and which accordingly supply more than one establishment return each. However such cases are restricted broadly to those where the 'secondary' activity produces a substantial revenue. With some specific exceptions described in *The Australian Standard Industrial Classification, Vol. 1*, no separate return is required for such 'secondary' activity unless the gross receipts from its activity amount to \$1,000,000 or more.

2. A particular effect of the new concept in manufacturing statistics is that establishments in the manufacturing census now include selling and delivery activities at the location, which were formerly excluded from the scope of the factory establishment. On the other hand, the statistics of factory establishments now exclude manufacturing activity carried on as a minor activity of predominantly retail establishments, such as the making up of blinds to customers' orders, dressmaking at frock shops, etc. However, the continuity of the statistics of commodity output will not necessarily be affected by this change. Manufacturing by retailers and wholesalers is reported in the retail and wholesale trade censuses, and commodity detail for this activity is being collected, at least for the larger establishments.

3. The treatment of outlying parts of an establishment has been standardised: if the outlying part is in the same local government area it is merged with the establishment. Thus, a factory which had extended its operations to a neighbouring location for lack of space would include the extension in its return if it was in the same local government area. Similarly, if two locations in the same local government area and industry (for example, used car lots at different addresses) have common employees and combined accounts, they are treated as a single establishment.

4. Administrative offices and ancillary units located away from establishments (apart from some owned by chain stores) were formerly outside the scope of the censuses, although stock at such locations were to be included in the manufacturing and retail trade returns. As previously mentioned, they are now included in the census return of the establishment they serve, or if they serve more than one establishment they are included in the return supplied for the whole enterprise. In either case they appear in the census statistics for the local government area in which they are located, and for the predominant industry of the establishment or establishments they serve. From the viewpoint of businesses supplying returns this treatment is likely to minimise the need for special adjustment and dissection of data in accounting records, and to produce more homogeneous and meaningful statistics of the industry in which the business operates than before. The inclusion of administrative or ancillary activities in a census is no longer dependent on their being carried out at an establishment; instead they are treated as an integral part of the industry's statistics wherever they are located. Nevertheless, some published tables will show certain data separately for administrative offices and ancillary units. This treatment of ancillary units is expected to cause some former manufacturing establishments to become ancillary units: for example, engineering workshops doing maintenance and repair work on the plant and equipment of establishments in the same enterprise, and located away from them. The statistics of those items which are still reported for ancillary units (that is, employment, wages and salaries, and capital expenditure), will be included in the statistics for the industry of the establishments served by the ancillary units, instead of the industry to which the workshops were classified. If the establishments served are outside the scope of the integrated censuses, of course, the workshops will disappear from the scope of the manufacturing census.

5. The establishment concept used for the electricity and gas industries is an exception to the general concept. Because of the nature of their activities, the single operating location is not suitable as a basis for the establishment engaged in producing or distributing electricity or gas. The establishment unit used consists of all locations operated by the enterprise in the one State.

## Standardisation of the industrial classification

### Australian Standard Industrial Classification

The Australian Standard Industrial Classification (ASIC), which is a prerequisite to the integration of the economic censuses and surveys, is described in a publication of the Bureau: *Australian Standard Industrial Classification (Preliminary Edition)*, 1969, Vol. 1. The classification system described in that publication defines the industries for which statistics are collected in the economic censuses, thus permitting the scope of each census to be marked out without any gaps or overlapping between them. It also defines the statistical units (establishments, administrative offices and ancillary units, enterprises, etc.) which are classified by industry, and lays down standard rules for identifying them and coding them to the industries of the classification.

Besides being used in the 1968-69 economic censuses, the ASIC will be used in other economic censuses and surveys, population censuses and surveys, and other statistics (national accounts, etc.) derived from the basic statistics. Data classified according to the ASIC can be converted to conform essentially with the International Standard Industrial Classification. It is proposed to publish summary tables of census results converted in this way, to facilitate international comparisons.

The structure of the ASIC comprises four levels. The broadest of these is the 'Division' level, which relates to wide categories such as 'Manufacturing', 'Wholesale and Retail Trade', and 'Community Services'. The structure may be illustrated by the following example. A factory mainly engaged in making aluminium window frames would be classified to:

<i>Division</i>	C	Manufacturing
<i>Sub-division</i>	31	Fabricated metal products
<i>Group</i>	311	Fabricated structural metal products
<i>Class</i>	3112	Architectural aluminium products

The fundamental concept of the ASIC is that an industry, that is an individual class, or group, etc., in the ASIC, is an entity composed of the establishments, administrative offices and/or ancillary units which have been classified to it.

Each ASIC class is defined in terms of a specified range of economic activities, designated as primary to it. (Manufacturing aluminium window frames, as shown in the above example, is primary to class 3112.) Similarly, each ASIC group is defined in terms of the economic activities designated as primary to the classes within that group, and so on. An establishment which is engaged mainly in economic activities which have been designated as primary to a particular class is classified to that class whether or not that establishment is also engaged in other 'secondary' activities. An administrative office or ancillary unit will be classified to an ASIC class according to the predominant industry of the establishments it administers or serves, while an enterprise will be classified according to the predominant industry of its establishments and ancillary units.

### Standardisation of data concepts: establishment statistics

In previous economic censuses much of the data asked for in one census was broadly similar to data asked for in others. All asked for employment, and the manufacturing and mining censuses asked for value of output and the cost of materials, fuels, etc. used, from which value added could be derived—somewhat similar to the gross margin that could be derived in the retail trade census by subtracting the value of purchases from the value of sales and adjusting for stock changes. Value of stocks was asked for in manufacturing and retail trade censuses, and fixed capital expenditure (in the form of 'additions and replacements' to fixed tangible assets) was asked for in manufacturing and mining censuses.

With integration of the economic censuses it became necessary to seek a common conceptual basis for the items of data of this kind, not merely in order to suit the needs of the Bureau in compiling national accounts estimates or deriving benchmark statistics for monthly or quarterly surveys or employment and earnings series, although these were important reasons for doing so. It was also necessary to find such a common basis in order to enable the returns to be completed more readily and accurately by the enterprises responsible for them. As the enterprise is the basic unit from which statistics are collected in the censuses, the data for the establishment returns had to be capable of being drawn from the records of the enterprise in such a way that they could be reconciled with the corresponding totals for the enterprise as a whole. The establishment returns for a single enterprise with more than one establishment might belong to different economic censuses, but they would need to balance with a single enterprise return for the whole enterprise. This enterprise return is common to all industries and all economic censuses.

The key items of data entering into this reconciliation, and therefore requiring a common conceptual basis, are:

- turnover,
- stocks,
- purchases and selected expenses,
- employment,
- salaries and wages,
- fixed capital expenditure.

These key items also encompass the main benchmark data required for improving the accuracy of quarterly sample surveys and employment and earnings series, and the data needed from establishments for consistent estimating of the main national accounts aggregates.

In order to provide for the inclusion of these key items in all censuses, questions on fixed capital expenditure, wages and salaries, and selected expenses were added to the retail trade census forms, and questions on stocks to the mining census forms.

*A table at the end of this article sets out in skeleton form the content of the establishment forms and the enterprise form for an enterprise with more than one establishment, to illustrate the inter-relationships among the forms and among the data items in the 1968-69 economic censuses. A more detailed discussion of particular data items will be found in the 1968-69 economic census preliminary bulletins to be published early in 1971.*

#### Value added

The fundamental measure of the 'magnitude' or importance of an establishment, in economic censuses, is its value added.\* This measure can be aggregated for all establishments and industries covered by the censuses without duplication and is the concept generally accepted throughout the world as the measure of the relative importance of industries in economic censuses. It means the value added to materials in manufacturing, the value of minerals mined less that of the materials used in mining, and the value added to merchandise in retail and wholesale trading.

In the integrated economic censuses the common measure of value added in all industries is as follows:

value added equals turnover plus increase in stocks minus purchases, transfers in and selected expenses.

'Transfers in' are goods transferred from another establishment of the same enterprise, either for further processing or for sale. ('Transfers out' are included in turnover.) The 'selected expenses', do not include salaries and wages, interest, rent, depreciation, or overhead expenses usually recorded only for the enterprise as a whole. Broadly speaking, therefore, the value added is the source from which establishments derive the surplus to meet salaries and wages, interest, rent, depreciation and overhead expenses of the enterprise (that is, those not specified as 'selected expenses' on establishment forms), and to provide a contribution to the profits of the enterprise.

Value added is the concept corresponding to value of production in manufacturing and mining censuses in the past, although it is derived in a different manner. Value of production was obtained by deducting the cost of materials, fuel, etc., used, from the value of output at the factory or mine. Further points of difference appear below in the detailed explanation of items of turnover and purchases, etc.

#### Turnover

This item includes the components listed below.

Manufacturing, mining, electricity and gas censuses:

- sales of goods produced by the establishment;
- sales of goods not produced by the establishment;
- transfers of goods out to other establishments of the same enterprise;
- bounties and subsidies on production;
- all other operating income (that is, excluding revenue from rent and leasing, interest other than hire purchase interest, dividends, and sales of fixed tangible assets);
- capital work done for own use or for rental or lease.

Retail and wholesale trade censuses:

- sales of goods (owned by the enterprise);
- transfers of goods out to other establishments of the same enterprise (wholesale only);
- selling and purchasing commissions received (wholesale only);
- all other operating income (with the same exclusions as above);
- goods withdrawn from stock for own use (as fixed tangible assets, or for rental or lease).

---

\* See page 1053 below for discussion of the allied concept of gross product.

It will be seen that, despite the differences in the terms used for its components, the concept of turnover is identical in all the integrated economic censuses. In all these censuses, similarly, the details shown in the section of the form for sales of individual commodities are required to agree with one of the items of turnover: sales of goods produced by the establishment, for factories and mines; and sales of goods (owned by the enterprise) for retail and wholesale trade. The commodity details in the manufacturing census now relate to the value of sales instead of the value of output, as formerly, although the output of individual commodities is still asked for in terms of quantities, along with the quantity and value of their sales.

In the case of the mining census, the value of output (valued at or near the mine) will be calculated or estimated, as a supplementary series, and will continue to be published.

### Stocks

The main change to statistics of stocks brought about by the integration of the censuses is due to the use of the new establishment concept: the statistics will relate to total stocks of the establishment, not merely those associated with the main activity covered by the census. Thus manufacturing establishments now include in their returns any stocks of merchanted goods held, and retail establishments include any stocks of materials held for wholesaling or manufacturing. For mining there is a division in the "finished-goods" category between "minerals produced in this establishment" and stocks of "other goods and minerals purchased for resale". This is to enable a reconciliation to be made between the aggregate stocks figures and the commodity details of stocks, production and sales of minerals.

### Purchases and selected expenses

#### *Manufacturing and mining*

(1) The new way of deriving value added (that is, as compared with the previous way of deriving value of production) has required that value of purchases be asked for instead of the value of materials, etc., used. The commodity detail in the manufacturing census form is still in respect of usage of materials, etc., but the total figure is on the basis of purchases.

(2) The value of purchases on the form is supplemented by the value of transfers in from other establishments of the enterprise.

(3) In accordance with the broadened establishment concept, purchases of goods for resale are included as well as purchases of materials for use in manufacturing or mining.

(4) Because sales by manufacturing establishments are now valued at actual sales value, whereas factory value of output as asked for in previous censuses was valued on a "factory-door" basis excluding delivery expenses, some additional expense items are now collected. These are: "outward freight and cartage" and "motor vehicle running expenses". "Sales commission payments" is also included. These three items are among those deducted from turnover in deriving value added.

(5) In the mining census, output was formerly valued at point of sale, with transport costs shown separately, to enable value at mine to be calculated within the Bureau. In the new census the point-of-sale basis is retained for sales, but the transport cost item is replaced by the standard three items included in all censuses: outward freight and cartage, and motor vehicle running expenses. Sales commission payments are also asked for. As in the other censuses, these relate only to payments made outside the enterprise, as any employees of the mining establishment engaged in transport or selling the mine's products (with certain exceptions for major own-account rail and sea transport operations above a certain traffic limit) are treated as part of the mining establishment.

(6) Charges for commission work and subcontract work are specified as separate items of expense.

#### *Retail and wholesale trade*

(1) Because of the extension of the establishment concept, purchases in the retail trade census now include goods purchased for wholesale sale as well as those for retail sale. (Similarly the purchases item in the wholesale trade census includes purchases for retail as well as wholesale sale.)

(2) For the same reason, there are items "purchases of materials for manufacturing" and "charges for commission and subcontract work" in both censuses.

(3) The items "outward freight and cartage", "motor vehicle running expenses" and "sales commission payments" are included for the same reasons as the corresponding items in the manufacturing and mining censuses.

(4) To complete the range of expenses of retail and wholesale establishments in order to enable value added to be derived consistently, there is a "residual" item: "purchases of wrapping and packaging materials, electricity and fuel, repair and maintenance expenses".

**Transfer values**

As mentioned earlier, turnover in all censuses except the retail trade census includes transfers of goods out to other establishments of the same enterprise. (Any transfers between retail establishments are provided for by having purchases reported inclusive of transfers in, and net of transfers out.) Similarly transfers in from other establishments of the same enterprise are included among the items of purchases, etc., deducted in deriving value added. Transfers, both in and out, are confined to transfers of goods. Services provided by one establishment to another in the same enterprise, in general, are not included among transfers (or sales) even if a charge is made. (However, in certain cases described below a commission is imputed to establishments selling or doing manufacturing work, on behalf of other establishments of the enterprise.)

In particular, transport services provided by one establishment to another within the same enterprise are not treated as transfers. Any charges made by the establishment are not to be treated as income, or as freight and cartage by the other establishment. An exception is made only for shipping services within an enterprise, and rail services above a certain minimum ton-mileage, where the transport services are treated as separate establishments of the enterprise (outside the scope of the censuses) but charging the other establishments freight and cartage.

The integrated censuses adopt a new approach to the valuation of transfers. In the previous censuses of manufacturing and mining, transfers out were to be included by implication in the value of output, and valued at selling value excluding delivery costs in the same way as goods sold independently. Transfers in were included in the value of materials used, with no special instruction about valuation. In the integrated censuses, the transfer value sought is the value for which the goods would have been sold to the establishment to which they were transferred if it had been under separate ownership, i.e. commercial value. However, if such a transfer value cannot be given or estimated, alternatives are provided.

In large important cases where the goods cross State or industry boundaries, estimates of commercial transfer values are worked out in consultation with the enterprises concerned. But otherwise actual book values are asked for, with the basis to be indicated (factory cost, cost plus a margin, wholesale selling value, etc.). If no commercial transfer values can be estimated, either by the enterprise or the Bureau, from market information, these book values are adjusted within the Bureau by a conventional method which gives all the establishments concerned a share of any surplus earned by the enterprise, and which provides values consistent for transfers out and the corresponding transfers in.

Some factories keep no book value for transfers (for example, a factory distributing its products through sales branches but keeping only one set of sales and stocks accounts, or a clothing factory supplying cut-out materials to be made up by outlying branch factories). In these cases no transfer value is estimated; the work done by the receiving establishment (whether sales branch or factory) is treated as done on commission for the supplying establishment, and a commission is imputed to it, while the sales and the stocks remain on the supplying establishment's return, which is charged with the amount of imputed commission.

Transfers are restricted to physical transfers of goods, and do not include transfers existing in books of account only. This is consistent with the distinction made between manufacturers' sales branches handling stocks, which are treated as wholesale establishments, and manufacturers' sales branches not handling stocks (such as order-taking offices, or sales representatives' offices), which are treated as ancillary units. Sales between enterprises of an enterprise group are not treated as transfers, even though they may not be at commercial values.

**Employment, salaries and wages**

The main changes made in the employment and wages and salaries part of the forms for 1968-69 were in the direction of simplification. With the new concept of the establishment, for example, it is not necessary for manufacturers to deduct any 'non-manufacturing' employees (such as sales and delivery employees) or their earnings. All employees are to be included, and this includes employment at any ancillary units or administrative offices serving the establishment only—employees likely to be included in the payroll of the establishment in any case. As mentioned earlier, separate geographical detail will be published for units of this type, including those reported on enterprise returns.

**Rent and leasing expenses**

Annual rent paid has been included in the censuses of manufacturing and mining in the past, but the figures were used to estimate the capital value of rented assets, for inclusion in the statistics of the value of fixed assets, and were not published themselves.

In the 1968-69 censuses rent and leasing expenses have been included in the establishment forms for all censuses, and in the enterprise form. It is intended to publish the results, which will be of

particular interest in retail and wholesale trade and in some manufacturing industries. The extension to include leasing expenses reflects interest in the growth of leasing activity.

#### Fixed capital expenditure

Fixed capital expenditure has not appeared on retail trade census forms in the past, and in manufacturing and mining censuses has appeared in the form of 'additions and replacements', an item used in the year-to-year reconciliation of the value of fixed assets. In the design of the integrated census forms the opportunity was taken to ask for fixed capital expenditure in the detail needed for national expenditure estimates and survey benchmarks, and most likely to be of general use as well. It has been impossible in the past, in estimating fixed capital expenditure for national accounts, to reconcile manufacturing censuses with business surveys, or with the statistics obtained from tax sources. Differences in scope, definitions, etc., meant that the estimates could be fitted into the national accounts framework only with a great deal of uncertainty. The integration of the censuses and the surveys should do much to improve the quality of the estimates in future.

The integration of establishment and enterprise returns will make it possible to combine the industry and geographical detail yielded by establishment returns with the desired conceptual basis of 'ownership of assets' which only enterprise returns permit. In other words, the forms have been designed to provide statistics of fixed capital expenditure by enterprises on assets owned by them and located at their establishments.

The general basis of the fixed capital expenditure figures is: purchases of new and secondhand assets *less* sales of secondhand assets. (For establishments of multi-establishment enterprises, purchases include acquisitions by transfer from other establishments of the enterprise and sales include disposal by transfer to such establishments.) On this basis the capital expenditure of an industry will include net acquisition of secondhand assets acquired from other industries. However, it is possible to get a total for fixed capital expenditure on new assets for each industry, as the type-of-transaction breakdown provides for this.

The traditional type-of-asset breakdown was extended to show motor vehicles as a separate class as well as land and buildings, and plant and machinery. In addition, 'land' was included with secondhand assets in the type-of-transaction breakdown, to make sure that it was not included by some in new assets.

An additional dissection of fixed capital expenditure is possible: by type of unit, that is, distinguishing between establishments, on the one hand, and administrative offices and ancillary units on the other.

#### Value of fixed assets

The manufacturing and mining censuses previously included a section on the book value of land and buildings, plant and machinery. This was dropped from the census forms for establishments in 1968-69, but included in the returns for enterprises, including those in retail and wholesale trade, as well as manufacturing and mining (and electricity and gas).

#### Gross margin in retail and wholesale trade

Besides publishing value added in retail and wholesale trade, it is proposed to publish derived statistics of *gross margin* for these censuses, both as an absolute figure and as a percentage of sales. These would make use of specific items of sales and purchases relating to trading transactions, as distinct from manufacturing and other activities secondary to these industries.

Gross margin in retail and wholesale trade would be derived as follows:

sales, transfers out(a) and withdrawals from stock for own use (*less* any sales or transfers out(a) of goods manufactured by the establishment)(b) *plus* increase in stocks *less* purchases of goods for resale and transfers in *equals* gross margin.

There is some approximation in the resulting figure, as the value of stocks in retail and wholesale trade censuses includes stocks held for any manufacturing or other non-trading activity carried on, as well as those held for retail or wholesale trading. Purchases of goods for resale, also, may include some materials purchased for use in repair work. However, this is considered unlikely to distort the figures significantly in the industry classes for which they are published, and certainly will not prevent them from being put to good use by those interested in analysing distribution statistics. It should be noted that gross margins relate only to transactions in 'owned goods', not in goods sold on commission. (As already pointed out, the commodity detail in wholesale trade returns also relates only to owned goods.) To supplement the tables showing gross margins, there will be tables showing average rates of commission earned by establishments in various wholesale trade industries and types of operation.

---

(a) Transfers out in wholesale census only. (b) Owned goods only.

### Standardisation of data concepts: enterprise statistics

The statistics derived for enterprises from the integrated censuses are standardised because a common enterprise form is used for multi-establishment enterprises, whatever the industry in which their establishments operate, and for single-establishment enterprises the special 'enterprise' items were common to all forms.

#### Gross product statistics

Earlier it was said that the new integrated censuses will provide valuable data directly applicable to national accounts estimates. One of the most important items of data of this kind is gross product (measured at market price) and gross product at factor cost. These concepts are related very closely to value added:

Gross product at factor cost = value added *plus* rent and leasing revenue *minus* rent and leasing charges *minus* all other expenses *minus* land tax, rates and payroll tax.

(This concept differs from that at present employed in the Bureau's national accounts publications, in that it includes net rent and leasing revenue. It accords with the new SNA\* concept, and will in due course be adopted in the Australian national accounts.)

Thus, to derive gross product at factor cost the enterprise income item rent and leasing revenue is needed. Rent and leasing expenses are in establishment forms as well as enterprise forms; the reason why they appear there, but not rent and leasing revenue, is that the expenses are directly associated with the establishment itself, while the revenue is frequently a form of investment or property income associated with the whole enterprise rather than any particular establishment. This is not true of revenue derived from the hiring-out of consumer goods by establishments, and the forms provide for this to be reported in 'other income' in the retail establishment returns. Some special action will also be taken about some types of wholesale establishment whose main source of income is leasing revenue.

The additional enterprise expense items needed are 'other expenses', and land tax, rates and payroll tax. These appear on the enterprise forms used in the integrated censuses.

The item 'other expenses' will probably be of some value to users of the enterprise statistics, quite apart from its purpose in the derivation of gross product. It represents an aggregate of overhead 'non-operating' expenses, all payable outside the enterprise, and each enterprise in a particular industry could usefully compare its own figure for this with the total for the industry.

Gross product at market prices can be derived from gross product at factor cost, but not without some estimation of components not directly provided by the integrated economic censuses:

Gross product at market price equals gross product at factor cost *plus* land tax, rates and payroll tax, *plus* sales tax and estimates for other indirect taxes not included in the census forms, *less* subsidies (from establishment returns).

The indirect taxes not included in the census forms are taxes such as stamp duties and motor registration fees.

#### Gross product estimates for establishments

For national accounting purposes it is desirable to have statistics of gross product at factor cost with establishments as the unit of tabulation, as well as the series based on enterprises. This is because the industrial and geographical detail required go beyond what is likely to be possible at the enterprise level. (Gross product by States, for example, is not available without splitting enterprises into smaller units.) To derive statistics of gross product for establishment units it is necessary to adopt conventional rules for spreading the overhead expenses of enterprises not collected on establishment returns.

#### Other enterprise statistics

Statistics which it is expected could be published for enterprises, in suitable tabulations by industry, will include:

- Number of enterprises
- Number of establishments (operated by enterprises in the industry)
- Turnover
- Stocks, opening and closing
- Purchases and selected expenses
- Value added
- All other expenses
- Land tax, rates and payroll tax
- Gross product at factor cost
- Rent and leasing expenses paid

---

\* A System of National Accounts, United Nations Statistical Office, *ibid.*

Rent and leasing revenue  
 Wages and salaries  
 Employer contributions to superannuation schemes  
 Gross operating surplus  
 Interest paid  
 Royalties paid  
 Interest received  
 Royalties received  
 Depreciation  
 Fixed capital expenditure  
 Value of fixed tangible assets  
 Employment

#### Statistics for enterprise groups

The choice of statistics to be published for enterprise groups is being examined. By the nature of the censuses, it will not be possible to derive consolidated statistics of such items as turnover, interest or rent. However, it should be possible to publish a useful body of statistics for enterprise groups, in suitable broad industry groupings, by aggregation of statistics of the enterprises within the scope of the censuses.

#### MAIN ITEMS ON INTEGRATED ECONOMIC CENSUS RETURNS, 1968-69(a) (For enterprises with more than one establishment)

<i>Establishment returns</i>		<i>Enterprise return</i>
<i>Factory, mines, electricity, gas</i>	<i>Retail, wholesale, selected services</i>	
<b>SALES, ETC.</b> Sales of goods produced by this establishment (ex-tax) (b) Sales of goods not produced by this establishment (ex-tax) Subsidies  All other income from outside the enterprise <i>except</i> rents, leasing revenue, interest and dividends Capital work on own account	<b>SALES, ETC.</b> Sales of goods (owned by the enterprise) (ex-tax)(b) (Sales of goods produced in this establishment, included above) Commission received on sales of goods for other enterprises (wholesale only) All other income from outside the enterprise <i>except</i> rents, leasing revenue, interest and dividends Capital goods withdrawn from stock on own account	
Total sales, etc.	Total sales, etc.	Sales, etc.(c)
<b>STOCKS</b> At 30 June 1968 At 30 June 1969	<b>STOCKS</b> At 30 June 1968 At 30 June 1969	<b>STOCKS</b> At 30 June 1968(c) At 30 June 1969(c)

MAIN ITEMS ON INTEGRATED ECONOMIC CENSUS RETURNS, 1968-69(a)—continued

(For enterprises with more than one establishment)

<i>Establishment returns</i>		<i>Enterprise return</i>
<i>Factory, mines, electricity, gas</i>	<i>Retail, wholesale, selected services</i>	
<b>TRANSFERS</b> Transfers of goods out (to other establishments of the enterprise) Transfers of goods in (from other establishments of the enterprise) Rent and leasing charges Depreciation Wages and salaries(e)	<b>TRANSFERS</b> Transfers of goods out (to other establishments of the enterprise) (wholesale only) Transfers of goods in (from other establishments of the enterprise) Rent and leasing charges Depreciation Wages and salaries(e)	Rent and leasing charges(c) Depreciation Wages and salaries(e)(c)
Sales tax	Sales tax	Sales tax
Fixed capital expenditure	Fixed capital expenditure	Fixed capital expenditure
Employment(e)	Employment(e)	Employment(c)(e)
		Land tax, rates and payroll tax Interest payments Royalty payments Employer contributions to super-annuation schemes All other expenses(f)
		Rent and leasing revenue Interest receipts Revenue from royalties
		Value of fixed tangible assets

(a) The outline omits some details. For example stocks are shown by stage of processing in the enterprise return and in the establishment returns for factories, mines, electricity and gas; capital expenditure is shown in all returns by type of asset and distinguishing new and secondhand assets, and purchases and disposals; employment and salaries and wages are broken down by type in establishment returns. However, the reconciliation between establishment and enterprise returns makes use only of the summary totals shown in the last column of the table. (b) To agree with total of sales in detailed commodity part of return. (c) Separate totals for these items are shown in enterprise return for: all establishments in the integrated censuses combined; all administrative offices and ancillary units reported on enterprise returns; all units of the enterprise in industries not covered by the integrated censuses. These three totals add up to the enterprise total. (d) To be compatible with total value of materials, etc., used in detailed commodity part of return (along with transfers in). (e) The return has an additional figure for this item for each separately located administrative office or ancillary unit reported in the return; this is to permit tabulation in fine geographical detail. (f) A single total, including travelling expenses, insurance premiums, accounting and legal costs, postage and telephone charges, office supplies, advertising, bank charges and the like, but not 'provisions'.

## STATISTICAL SUMMARY: AUSTRALIA

In earlier issues of the Year Book, it was the practice to include in the Statistical Summary figures for every tenth year of the period 1861 to 1901, plus the latest year for which data were available. In each subsequent issue the latest year available was substituted for the year immediately preceding it until the next tenth year had been reached, and the earliest year in the series was eliminated as space was needed. In consequence of this system no single issue of the Year Book contained a continuous yearly series.

In this and recent issues of the Year Book, this defect has been remedied in part by the inclusion of a continuous series back to the year 1941, with earlier tenth years back to 1901 (the National Accounts series on page 1066 has been carried back to 1900-01 in single years). In issue No. 39, pages xxviii-xxix, some of the series are shown for every tenth year from 1861 to 1941. There are, however, discrepancies between the original series and the series now published.

It is intended that in future issues of the Year Book, as circumstances permit, the continuous series will be carried further back and that other series will be added, although it will not be possible to carry all of them back to the earlier years.

Breaks in series, preliminary figures, etc. are indicated by the symbols shown on page xiii of this Year Book.

(a) Excludes Northern Territory and Australian Capital Territory before 1 July 1964. (b) Average over whole year; includes working proprietors. (c) Excludes amounts drawn by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel used). (e) Depreciated or book value at end of year, including estimated value of rented premises and machinery. (f) Year ended previous December. (g) Owing to variation in classification, effective comparison is not possible.

(a) At 31 December. Base: year 1954 = 100, weighted average. Excludes rural industry. (b) Base: year 1911 = 100. The index numbers are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946-47, the 'C' Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; and from 1948-49 onwards, the Consumer Price Index. (c) November.

(a) Government and municipal. (b) At end of period. (c) Letters, postcards, letter-cards, newspapers, packets, parcels, and registered articles. (d) All single lines plus one half the number of duplex lines. Until the introduction of duplex services in December 1948, statistics of exchange lines and telephone services were identical. (e) Telegrams despatched to places within Australia and despatched to or received from overseas. (f) Year ended previous December. (g) Year 1923-24. First year licences issued. (h) Tramway passenger journeys only before 1942. (i) Excludes telegrams received from overseas. These particulars are no longer available.

(a) These series relate to gross national product after stock valuation adjustment, at constant prices (see *Australian National Accounts*, *op. cit.* pp 16 and 101). (b) N. G. Butlin, *Australian Domestic Product, Investment and Foreign Borrowing 1861-1938-39*, Cambridge University Press, Cambridge, 1962. Gross domestic product excluding livestock accumulation, approximates conceptually gross national product as defined in the Australian National Accounts. (c) Published by the Commonwealth Statistician. Figures prior to 1948-49 are from *National Income and Expenditure 1955-56* and are not strictly comparable with subsequent figures because of a number of definitional changes and statistical revisions; see pages 18-19, 117-20, *Australian National Accounts 1948-49 to 1961-62*, Commonwealth Bureau of Census and Statistics. (d) *Australian National Accounts 1967-68 and 1968-69*, Commonwealth Bureau of Census and Statistics, and, for the last five years, the Budget Paper *National Income and Expenditure 1969-70*. The figures of \$1,800m for gross national product and \$316m for gross fixed capital expenditure in 1938-39 are based on a reconstruction of earlier estimates, and are approximately consistent with the present Australian National Account series. Mr B. D. Haig ('1938-39 National Income Estimates', *Australian Economic History Review*, Vol. vii, No. 2, September 1967) has adjusted components of gross national expenditure and imports and exports for changes in prices. If the price indexes implied by Mr Haig's estimates are used to revalue at 1938-39 prices gross national product and gross fixed capital expenditure for 1948-49, values of \$2,384m and \$434m, respectively, are obtained. (e) *Australian National Accounts 1967-68*. (f) *Gross National Expenditure at Current and Constant Prices, 1959-60 to 1969-70 and Australian National Accounts 1967-68 and 1968-69* for earlier years. (g) N. G. Butlin, *op. cit.* For a variety of reasons, Professor Butlin's gross domestic capital formation figures given here differ conceptually from those for gross fixed capital expenditure in the Australian National Accounts.

## CHRONOLOGICAL TABLE

### CHIEF EVENTS IN AUSTRALIA SINCE 1955

NOTES. In issues of the Year Book up to No. 48 (*see* No. 48, page 1201) this table covered events back to the establishment of settlement in Australia in 1788. Later issues up to No. 50 (*see* No. 50, page 1289) covered events back to 1945. This issue covers the years 1955 to 1969 and the first half of 1970.

For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

- 1955 First power generated by Snowy Mountains Hydro-electric Authority. Australian population reached 9,000,000. Cocos (Keeling) Islands became Territory under authority of Commonwealth.
- 1956 Amendment to Conciliation and Arbitration Act altered the structure of the arbitration machinery by separating judicial functions from conciliation and arbitration functions.
- 1957 High Court ruled that interstate vehicles could not be compelled to register in New South Wales, but upheld validity of Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads. National Capital Development Commission set up to co-ordinate development of Canberra.
- 1958 Prime Minister officially opened Australia's first nuclear reactor at Lucas Heights, near Sydney. Christmas Island (Indian Ocean) transferred to Australian Administration.
- 1959 Annual Holidays Act, 1944-1958 provided for three weeks' annual holiday for all New South Wales workers. Population reached 10,000,000.
- 1960 Provision made for Social Service benefits to be paid to Australian Aborigines. *Commonwealth Banks Act* 1959 and *Reserve Bank Act* 1959 proclaimed (*see* page 481). National Service training suspended. Commonwealth Government announced special economic measures designed to counter inflationary trend and safeguard overseas funds.
- 1961 Commonwealth *Matrimonial Causes Act* 1959 unifying State Acts became operative (*see* page 446). Oil discovered in south-west Queensland. Australian population census taken. Iron ore deposits estimated at 1,800 million tons discovered at Pilbara (Western Australia).
- 1962 Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines. Work began on standardisation of rail gauge from Kwinana to Kalgoorlie (Western Australia). First production of bauxite ore from Weipa deposits. Aborigines exercised voting rights in Northern Territory for first time.
- 1963 Approval given to agreement for United States to operate a naval communications station at North West Cape, Western Australia. Australian population reached 11,000,000.
- 1964 R.A.N. Destroyer *Voyager* sunk in collision off Jervis Bay with loss of eighty-two lives. New South Wales Government employees granted four weeks' annual leave. Moonie to Brisbane oil pipeline opened and Australia's first commercial oil production started. Northern Territory Legislative Council passed legislation removing discrimination against Aborigines. Commonwealth Government established licensing system for intra-state civil aviation. Australian forces saw action in Malaysia. Resumption of National Service Training and establishment of special Reserve Forces announced (*see* page 89). *National Service Act* 1964 passed. Commonwealth Government allowed export of iron ore to Japan from fields in Western Australia.
- 1965 Full High Court judgment on intra-state airlines case held that intra-state services need to hold both a State licence and a Commonwealth licence. Martin Report on tertiary education tabled in House of Representatives. New steelworks opened at Whyalla (South Australia). Report of Vernon Committee of Economic Enquiry (appointed in 1963) tabled in House of Representatives. First trade agreement between Australia and U.S.S.R. signed in Moscow. Economic sanctions imposed on Rhodesia. Mills Cross radio telescope opened near Hoskinstown (N.S.W.).

- 1966 The New Zealand–Australia Free Trade Agreement came into force. Mr Harold Holt sworn in as Prime Minister. Australia adopted dollar-cent system of decimal currency. Immigration laws amended to provide for relaxation of restrictions on entry of persons of non-European race (see page 151). Member for Australian Capital Territory given full voting rights. Commercial oilfield declared at Barrow Island (W.A.). Australia joined eight other nations in forming Asian and Pacific Co-operation Council (ASPAC). 1966 census taken. Increase of \$2 a week granted in the Basic Wage. Burrinjuck Reservoir only one-third full. President Johnson of United States of America made four-day visit to Australia. Permanent employment of married women by Commonwealth Government proclaimed. Minimum housing and food standards for Aboriginal employees in Northern Territory gazetted. First television programmes interchanged direct between Britain and Australia by means of the orbiting satellite INTELSAT II.
- 1967 Worst bushfires in history of Tasmania caused loss of 51 lives and property damage estimated to be more than \$20 million in Hobart environs and southern Tasmania. Honeysuckle Creek space tracking station for Apollo moon-probe opened. SEACOM communications cable linking Australia with south-east Asia opened. Commonwealth and State Governments reached agreement on off-shore oil and gas legislation. Under new regulations for export of uranium, exporters must find new deposits at least equal in quantity to proposed exports. Referendum in northern New South Wales concerning proposed new State of New England resulted in defeat of proposal. Two Commonwealth referendums held (see page 75). First direct satellite telecast from North America to Australia. *Defence Forces Protection Act 1967* came into operation. H.M.A.S. *Oxley*, first of Australia's new submarines, arrived at new submarine base, H.M.A.S. *Platypus*. 36th Session of International Statistical Institute held in Sydney. *Trade Practices Act 1965–1967* came into force. Announced that Commonwealth Government would establish an Office of Aboriginal Affairs to co-ordinate policy and to provide the machinery necessary for joint consultations with the States. Daylight saving became effective in Tasmania. Announced that Australia's forces in Vietnam would be increased by more than 1,700 in November–December. Drought in Victoria became increasingly severe. Australian Resources Development Bank formed by Australia's Major Trading Banks and Reserve Bank. Government decision not to devalue Australian dollar with pound sterling announced. Australia launched its first satellite at Woomera. Senate select committee recommended that Australia change over to metric system of weights and measures. Commonwealth Conciliation Commission awarded increases of up to \$7.40 in margins to metal trade workers. Lone yachtsman, Alec Rose, reached Australia from England. Prime Minister, Rt Hon. Harold Holt, disappeared while swimming off Portsea, Victoria; Rt Hon. J. McEwen sworn in as Prime Minister.
- 1968 Uniform Commonwealth–State censorship laws came into force. Senator J. G. Gorton elected leader of Liberal Party and sworn in as Prime Minister. Twelve-mile fishing limit around Australia, Nauru, Papua and New Guinea, and Cartier Islands operated from 30 January. Nauru became an independent nation on 31 January. New Victorian stamp duty on receipts. The full bench of the Arbitration Court decided that thirty per cent of wage increases exceeding \$1.60 per week granted to metal trade employees in December 1967 would be deferred until August. Report of the second Royal Commission into loss of H.M.A.S. *Voyager*. Commonwealth Government approved in principle the transfer of the principal seat of the High Court to Canberra. Joint Commonwealth–State off-shore petroleum legislation operated from 1 April. First liver transplant operation in Australia performed in Sydney. Population reached 12,000,000. A direct shipping service between Australia and Chile commenced. Northern Territory member in House of Representatives given full voting rights. Report of United Nations mission to Territory of New Guinea issued by Trusteeship Council. The \$25 million Warringah Expressway opened in Sydney. Vietnam Medal for Australian Armed Forces instituted. The Commonwealth and State Transport Ministers agreed to new safety design standards for motor cars to be adopted by each state and expected to be introduced on all cars first registered from 1 January 1970. Dr H. C. Coombs retired, after nineteen years as Governor of the Reserve Bank or its earlier equivalent, the Commonwealth Bank. It was announced that an interim council, of twelve members, responsible for the planning and construction of the National Art Gallery had been created. The Arbitration Commission ordered that the outstanding 30 per cent of the December 1968 judgment be paid from 21 August. Two pulsars, mysterious radio sources in the Milky Way, discovered by the Mills Cross radio telescope. The National Library of Australia was opened by the Prime Minister. The United States Presidential Unit Citation presented to the 6th Battalion R.A.R. The Victorian National Gallery was officially opened. *Privy Council (Limitation of Appeals) Act 1968*, which makes the High Court of Australia the final court of appeal in all issues involving

- 1968 *-cont* Commonwealth law and jurisdiction, came into operation. Announcement of a five year \$1,000 million development plan for Papua and New Guinea, with the basic aim of developing the territory economically for self-determination. President Park of Korea arrived for a three-day visit. Blowering Dam officially opened. The Arbitration Commission handed down the national wage judgement that the total wage be increased by \$1.35 per week (*see* page 263). The price of Australian produced oil to be cut once the incentive scheme for Australian producers of crude oil had been amended (*see* page 913). An earth-quake devastated the town of Meckering in Western Australia. The first heart transplant in Australia was performed in Sydney. Work commenced on the \$27 million Fairbairn Dam in Queensland. Through late October and early November there were disastrous bushfires in New South Wales around Wollongong and in Blue Mountains. Inaugural meeting of the Australian Minerals Council held. Commonwealth legislation introduced to establish a fund of \$4.65 million to enable Aborigines to set up in business, and to provide a non-repayable grant of \$3.65 million to the States for Aboriginal advancement. Announced that Aborigines will get post-secondary education study grants, commencing in 1969. An Ordinance to prevent the takeover of life insurance companies registered in the Australian Capital Territory became operative. Full award wages for Aborigines employed in the Northern Territory pastoral industry became operative. Gas leak at Marlin oil rig in Bass Strait and eventually sealed by an American expert brought to Australia.
- 1969 *January.* The Prime Minister attended the conference of Commonwealth Prime Ministers in London. The Australian stock exchanges took steps to permit differential voting rights on the shares of listed companies to prevent overseas takeovers. Fifteen died and more than 200 houses were destroyed in disastrous fires in Southern Victoria. Cannon from Captain Cook's ship the *Endeavour* were found in Northern Queensland waters.
- February.* The Sydney-Melbourne express train the *Southern Aurora* collided head-on with a goods train at Violet Town, Victoria, causing loss of life and extensive damage to both trains. The new Bass Strait ferry, the *Australian Trader*, of 8,500 tons, was launched at the State dockyard in Newcastle, N.S.W.
- March.* Australia's first natural gas pipe line from Roma to Brisbane was opened. The Nimmo report on national health insurance scheme tabled in the House of Representatives. Natural gas entered the Melbourne metropolitan system for the first time.
- April.* A receipts tax in Tasmania became operative. The Prime Minister announced that Australia would give Malaysia ten Sabre aircraft and associated support services. Sir Paul Hasluck was sworn in as Governor-General.
- May.* The *Copyright Act* 1968 became operative and at the same time Australia became a party to the Universal Copyright Convention and to the Brussels revision of the Berne Copyright Convention. The Prime Minister visited the United States of America for discussions with the President, Mr Nixon. Mr Bethune, the leader of the Tasmanian Liberal-Centre party coalition, was sworn in as Premier following the elections in which the Labor Party was defeated after thirty-five years in office. Australia-wide stoppages took place over the operation of the penal provisions of the Commonwealth Conciliation and Arbitration Act. The Commonwealth Government decided that Camp Hill would be the site for the new and permanent Parliament House in the National Capital.
- June.* The H.M.A.S. *Melbourne* collided with the destroyer U.S.S. *Evans*, cutting that ship in half, during a SEATO exercise in the South China Sea, with the loss of fifty-seven American seamen. A joint inquiry (United States Navy and Royal Australian Navy) into the collision was held at Subic Bay in the Philippines. Five power (Australia, New Zealand, United Kingdom, Malaysia and Singapore) talks on the future defence of Malaysia and Singapore were held in Canberra. The Arbitration Commission handed down its decision on equal pay for women (*see* page 264). The Governor-General Sir Paul Hasluck officially opened the Mount Newman, Western Australia, iron ore enterprise from which the first shipment of iron ore had been made on 1 April 1969.
- July.* The Commonwealth Public Service Board and union representatives reached agreement on a new salary structure for administrative and clerical officers. Transport Ministers agreed that all new motor vehicles after July 1970 are to be fitted with air pollution control devices. The Commonwealth Statistician announced that the Bureau of Census and Statistics would conduct integrated censuses of manufacturing and mining industry, and retail and wholesale trade during August; for the first time in Australia, all statistical information derived would be based on common concepts, uniform definitions and a standard industrial classification. The Perth to Carnarvon co-axial cable system came into operation carrying telephone circuits and TV relays simultaneously (*see also* November 1969).

1969 *August.* The High Court ruled that the States had no rights or jurisdiction over territorial waters adjacent to their coastline or over the sea-bed. The Duke and Duchess of Kent arrived in Australia for their first visit and to open the third South Pacific Games in Port Moresby. Australian Universities and Colleges of Advanced Education to receive a total of \$910m in the next three years. Warrant Officer R. S. Simpson awarded the V.C. for gallantry in Vietnam, Australia's third award. Australian National Line ship, the freighter *Noongah* sank during a gale off the northern N.S.W. coast with the loss of 21 lives. Announcement of a new defence planning concept of a rolling programme constantly under review for each succeeding five years; \$130 million to be spent in the first year, mainly on support equipment and base facilities. A new Australia-New Zealand defence pact announced, involving standardisation in logistics and planning.

*September.* Victorian vehicle industry employees began a series of stoppages which lasted until 30 November, to support claims for increased wages. The 1969 biennial congress of the Australian Council of Trade Unions attended by 755 delegates. Warrant Officer Keith Payne awarded the V.C. for gallantry in Vietnam. Wiltshire Report on the Colleges of Advanced Education tabled in Parliament. Reports of the Senate Select Committees on Medical and Hospital Costs, and on Air Pollution tabled in the Senate.

*October.* Females who were granted equal pay under awards of the Commonwealth Conciliation and Arbitration Commission as a result of the Equal Pay Cases 1969 (see page 264) had their rates of pay increased to 85 per cent of the corresponding male rate. Bass Strait under-sea oil piped to shore for the first time. National Farmers' Union and the Australian Primary Producers' Union amalgamated to form the Australian Farmers' Federation. Federal elections held and Liberal-Country Party coalition returned with a majority of 7.

*November.* Third Gorton Ministry sworn in. Postmaster-General announced the leasing of 24 voice grade circuits through satellite INTELSAT III and with the aid of the Carnarvon station (see July 1969) the world's first internal continental communications link based on a satellite in stationary orbit became possible. The Lurgi plant at Morwell, Victoria which produced Victoria's gas from brown coal, closed down because of the availability of natural gas from the Bass Strait fields. Construction of the transcontinental standard gauge rail link completed at Broken Hill. The Prime Minister announced new rail construction schemes including the construction of a new standard gauge rail link to Alice Springs.

*December.* The Commonwealth Conciliation and Arbitration Commission's decision in the National Wage Case 1969 increased total award wages by 3 per cent and the minimum wage for adult males by \$3.50 per week (see page 264). State industrial tribunals granted similar increases for employees affected by State awards. The concept of the minimum wage for adult males was adopted for Victorian Wages Board determinations (see page 266). The Australian Expo 70 pavilion in Osaka, Japan officially handed over to the Australian Government by the builders. Mr Albert Monk retired as President of the A.C.T.U. and was succeeded by Mr R. J. Hawke.

1970 *January.* The *Patents Act* 1969 came into effect; it conferred on the Commissioner of Patents, (to power to require an applicant to elect whether he wishes to have his application examined.

*June)* Design rules relating to seat belts, seat belt anchorages and hydraulic brake hose for motor vehicles came into effect. The 14,000 mile England to Australia air race finished at Bankstown, N.S.W.; it commenced in England on 18 December 1969 and marked the 50th Anniversary of the first flight by Sir Ross and Sir Keith Smith and commemorated the Captain Cook Bicentenary year. A freight train departed from Sydney to inaugurate the direct standard gauge railway link to Perth. The United States Vice-President, Mr Spiro Agnew, arrived on a two day visit. A Commonwealth Secondary School Scholarship Scheme for Aborigines beyond school leaving age was announced, providing books and living allowances. A ship wreck discovered off the Western Australian coast was found to be the *Tryal* which ran aground in 1622; it was the earliest recorded wreck off the Australian coast. The cyclone 'Ada' caused severe damage off the northern Queensland coast; many island resorts devastated. H.M.A.S. destroyer *Escort* valued at \$22 million commissioned at Williamstown Naval Dockyard. The Federal Government imposed controls on the export of Australian natural gas.

*February.* Nine men drowned when the oil rig work-boat *Sedco Helen* sank in the Joseph Bonaparte Gulf, 150 miles west of Darwin. The Tullamarine Freeway, connecting the city of Melbourne to the new Tullamarine airport, was opened; costing \$35 million. A large gas strike at Palm Valley (near Alice Springs) in the Northern Territory. The High Court decided that the Victorian and Western Australian stamp tax, receipt tax or turnover tax, was illegal; the Prime Minister announced that legislation would be introduced to enable the Federal

1970 Government to collect the tax on behalf of the States. The *Indian-Pacific* rail passenger service inaugurated. The Commonwealth and State Transport Ministers agreed to the introduction of seven new compulsory safety features on cars between July 1970 and January 1972. (to June) A special Premiers' Conference on Commonwealth-State financial relations held in Canberra. -cont The Prime Minister and the South Australian Premier signed an agreement for construction of a railway (standard gauge) between Port Augusta and Whyalla, S.A. Australia signed the Nuclear Non-Proliferation Treaty.

*March.* Tenders called for the Jervis Bay nuclear power station. The 27th Commonwealth Parliament opened. Captain Cook cannon handed over, one each to New South Wales, Queensland, New Zealand, United Kingdom and the Philadelphia Academy of Natural Science, U.S.A. Builders' labourers in several States began a series of stoppages which lasted until 11 June, for increased rates of pay. Waterside workers stopped work in all States to press for increased wages and improved conditions of work; the stoppages lasted four days. Coal miners in New South Wales began a series of stoppages which continued until August, to press for a 35 hour week. A High Court judgement in Sydney upheld the validity of the Trade Practices Tribunal following a challenge by Tasmanian Breweries Pty Ltd. It was announced that the Federal Government proposed to carry out an \$18 million survey of the Continental shelf and slope to assess the potential resources of off-shore Australia. Queen Elizabeth II, Duke of Edinburgh, Prince Charles and Princess Anne commenced their Royal Visit.

*April.* It was announced that Australia would give Indonesia \$53.8 million in direct aid over the next three years. The Prime Minister announced the setting up of a Joint Committee to investigate the problem of the Crown of Thorns starfish. The *Continental Shelf (Living Natural Resources) Act* 1968 came into effect, implementing Australian sovereignty over the living resources of the Continental Shelf. The partially completed tanker *Amanda Miller*, largest ship ever to be built in Australia, gutted by fire at the Whyalla shipyard in South Australia. Cape Everard, Victoria, renamed Point Hicks, after Lieutenant Hicks who sailed with Captain Cook.

*May.* Queen Elizabeth II opened a new international terminal at the Sydney Airport. Waterside workers obtained increased rates of pay, four weeks annual leave and other improved conditions of work under a new agreement with employers. The Prime Minister announced the appointees and terms of reference for the Royal Commission to investigate oil drilling in the Barrier Reef region. Vietnam Moratorium Day held on 8 May—thousands of people marched in all State capitals as a protest against Australia's participation in the Vietnam war. The Queensland Industrial Conciliation and Arbitration Commission adopted the concept of minimum wage for adult males to operate from 8 May. The Canadian Prime Minister, Mr Trudeau, made a visit to Australia. Employers, trade unions and the Commonwealth Government agreed on new industrial dispute procedures in the Commonwealth industrial sphere. Building workers in a number of States stopped work in support of a claim for long service leave. It was announced that the Bureau of Transport Economics would be established in the Department of Shipping and Transport and that its function would be to analyse the costs and economics of transport in Australia. State elections held in South Australia following the defeat of the Government over the Chowilla and Dartmouth Dam issue; the Labor Party came into office with a majority of 7 and Mr Dunstan was sworn in as Premier. In the Victorian State elections the Liberal Party under Sir Henry Bolte was returned to office.

*June.* The New Zealand Prime Minister made a seven day visit to Australia. The Senate Select Committee Water Pollution report was tabled in the Senate. A \$10 million micro wave radio system linking Western Australia with the eastern States was officially opened. The Commonwealth Parliament approved the setting up of 7 standing committees and 5 estimates committees in the Senate. The *Australian Industry Development Corporation Act* 1970 assented to; it provided for the establishment of a corporation to provide financial assistance to Australian business enterprises. It was announced that weekend gaol sentences for young offenders would be introduced in Queensland. The Senate rejected the Receipts Tax Bill which would have empowered the Commonwealth to collect the tax for State Governments (see February). The *Marginal Dairy Farmers Agreement Act* 1970 came into effect making available to the States up to \$25 million over a four year period to implement marginal dairy farm reconstruction. The Snowy Mountains Engineering Corporation was established, replacing the Snowy Mountains Authority.

## DIARY OF PRINCIPAL ECONOMIC EVENTS, 1969-70

The principal economic events in earlier years were shown in the following issues:

<i>Years</i>	<i>Year Book No.</i>	<i>Pages</i>
1931 to 1938 . . . . .	33 . . . . .	968-77
1939 to 1944 . . . . .	36 . . . . .	1129-41
1945 to 1948 . . . . .	37 . . . . .	1235-45
1949 to 1951 . . . . .	39 . . . . .	1331-40
1952 to 1955 . . . . .	42 . . . . .	1149-60
1956 to 1958 . . . . .	46 . . . . .	1185-92
1958-59 to 1961-62 . . . . .	48 . . . . .	1188-1200
1962-63 . . . . .	49 . . . . .	1253-56
1963-64 . . . . .	50 . . . . .	1283-88
1964-65 . . . . .	51 . . . . .	1269-74
1965-66 . . . . .	52 . . . . .	1185-88
1966-67 . . . . .	53 . . . . .	1279-82
1967-68 . . . . .	54 . . . . .	1253-57
1968-69 . . . . .	55 . . . . .	1243-48

In 1969-70 the Australian economy continued to expand but at a more modest rate than in the previous year. The farm sector suffered a number of setbacks but activity in the capital intensive mining industry continued to rise strongly. Unemployment remained low throughout the year and there was a substantial increase in the level of exports of most commodities. Rising prices, accompanying the strong growth in wages and in demand, became evident in the course of the year and the Government accordingly initiated rises in interest rates. Prices rose at a slower rate than in many other developed countries.

The overall production performance of the economy is summarised in the growth in gross national product measured at constant prices. This rose by 5.5 per cent in 1969-70 compared with an increase of 8.6 per cent in 1968-69. Non-farm gross product, measured at current prices, increased by 13 per cent in 1969-70 compared with an increase of 11 per cent in 1968-69. Gross farm product fell by 8 per cent in 1969-70 compared with a rise of 27 per cent in 1968-69.

Demand for goods and services continued at a high level, particularly for consumer goods. Personal consumption expenditure at constant prices grew more rapidly in 1969-70 than in 1968-69, but the other major components of gross national expenditure—current expenditure on goods and services by public authorities, and public and private gross fixed capital expenditure—grew more slowly in 1969-70, measured at constant prices.

Wages and salaries, and the gross operating surplus of companies and of dwellings owned by persons increased faster in 1969-70 than in 1968-69, while the gross operating surplus of public enterprises increased more slowly. Because of the decline in farm income, the gross operating surplus of unincorporated enterprises showed negligible growth after a significant recovery in 1968-69. The rate of growth in wages, salaries and supplements moved upward for the second successive year, with both employment and average earnings growing faster than in 1968-69. Average earnings, with overtime at a very high level, increased by 9 per cent in 1969-70, the most rapid increase since the early nineteen-fifties. The main sources of the growth in employment were immigration and the movement of married women into the labour force. Net immigration in 1969-70 at 112,564 compared with 126,425 in 1968-69 but the percentage of married women in the labour force continued to increase sharply during 1969-70 reaching 33.5 per cent in May 1970.

The balance of payments on current account in 1969-70 resulted in a deficit of \$830 million, a significant improvement compared with the 1968-69 deficit of \$1,006 million. There was a balance of trade surplus of \$397 million in 1969-70, a notable increase over the surplus of \$14 million in the previous year. Exports of goods (on a balance of payments basis) during the year increased substantially in value and were 24 per cent above the 1968-69 total. Of the major commodities only exports of wool and sheepskins, fruit and sugar declined in value in 1969-70 while there were large increases in the values of exports of meats, cereals, metalliferous ores and scrap, coal and manufactured goods, particularly manufactures of iron and steel, non-ferrous metals and machinery and

transport equipment. The value of imports (on a balance of payments basis) increased at a slower rate (12 per cent) in 1969–70. The improvement of \$383 million in the balance of trade was, however, partly offset by an increase of \$207 million in the deficit on other current account transactions. Payments (net of receipts) in respect of travel, transportation and other services rose by \$35 million in 1969–70; there was an increase of \$142 million in net property income payable overseas; and net transfer payments, private and government, rose by \$30 million.

The deficit of \$830 million on current account in 1969–70 was accompanied by a net apparent capital inflow of \$867 million, resulting in a favourable net monetary movement for the year of \$37 million. There was a noteworthy development in international monetary arrangements during 1969–70 with the introduction, in January, of the International Monetary Fund's Special Drawing Rights (S.D.R.'s) scheme, which is designed to increase international liquidity. Under the initial allocation of S.D.R.'s Australia's official reserve assets were augmented by \$75 million. Including holdings of S.D.R.'s, the value of gold and net foreign assets held by Australian official and banking institutions stood at \$1,638 million at 30 June 1970, an increase of \$124 million over the previous year.

Drought or falling world prices affected much of the farm sector during 1969–70. A glut of wheat in Australia and the rest of the world led to the introduction of wheat quotas in Australia for 1969–70, and subsequently to reduced quotas for 1970–71. A record quantity of wool was produced in 1969–70 but with prices falling, the total value was lower.

The mining industry's expansion had widespread effects on other industries and was the focus of world attention. Discoveries of large mineral reserves continued through 1969–70, contributing to a boom in share prices around the end of 1969. During 1969–70 commercial oil production from the new Bass Strait field commenced and a number of large contracts were signed between Australian and overseas companies for the supply of mineral products. These included large contracts for the supply of liquefied petroleum gas and of iron ore.

Commonwealth–State financial relations were complicated during the year by the High Court ruling on the receipts taxes imposed by State governments. Legal action between the States of Western Australia and Victoria, and companies which had refused to pay the taxes, led to a High Court ruling that some of the taxes were excise duties and so, under the Constitution, could not be imposed by State governments.

Preservation of the environment, particularly against pollution, emerged as a prominent issue which may have significant economic effects in future years. Reports of Senate Select Committees on air and water pollution were tabled, a Royal Commission to investigate oil drilling on the Barrier Reef was set up and it was decided to appoint a Select Committee of the House of Representatives to inquire into the preservation of Australian wildlife. An oil drilling programme at Repulse Bay in Queensland was deferred pending results of the inquiry into possible oil drilling damage to the Barrier Reef.

#### 1969–70

- 1 *July*. Registered companies and residents of the Australian Capital Territory pay stamp duty on share transfers, cheques, promissory notes, hire-purchase and other transactions for the first time. Double tax agreement with Singapore; for Australia commences with year of income, beginning on or after 1 July 1969; for Singapore assessment year 1970, i.e. income derived after 1 January 1969.
- 4 *July*. Special Bonds—Series T issued at par with interest rates ranging from 5.2 to 6 per cent and optional redemption prices ranging from par to 103 per cent at maturity on 1 June 1977.
- 6 *July*. Increased salaries announced for most officers in Armed Forces—salaries of officers of brigadier and major-general rank or equivalent and of chaplains, medical and dental officers under consideration.
- 7 *July*. Salary increase of 9.43 per cent for Commonwealth Service Third Division Officers announced, to operate from 17 July.
- 9 *July*. Postal workers to receive 7–12 per cent pay increase.
- 10 *July*. Commonwealth cash loan opened with yields of 5.4 per cent for 2 years 10 months, 5.8 per cent for 9 years 10 months, 6 per cent for 22 years 3 months and 6 per cent for 36 years. An amount of \$96 million was raised. A conversion offer was made on the same terms as the cash loan for \$325 million maturing 15 July. An amount of \$236 million was converted.
- 31 *July*. The Reserve Bank announced increased bank interest of 5 per cent on fixed deposits; increased overdraft interest rate to 7.75 per cent and an increase in the Statutory Reserve Deposit that trading banks must maintain with the Reserve Bank.

12 *August*. Commonwealth Budget for 1969-70 introduced into House of Representatives. The Budget provided for estimated expenditure of \$6,983.4 million and estimated receipts of \$6,953.5 million in the year 1969-70. Further details of the 1969-70 Budget are set out in the Appendix to this Year Book. In 1968-69 receipts of the Commonwealth were \$6,128.6 million, and expenditure amounted to \$6,513.9 million. The main items of revenue (1967-68 figures shown in parentheses) were: income taxes \$3,418.8 million (\$3,036.7 million); excise duties \$901.0 million (\$853.6 million); sales tax \$494.1 million (\$417.0 million); customs duties \$347.7 million (\$313.7 million); and pay-roll tax \$205.6 million (\$184.4 million). The main items of expenditure were: payments to or for the States \$1,457.2 million (\$1,353.5 million); defence services \$1,164.7 million (\$1,115.4 million); social and health services \$1,162.4 million (\$1,075.0 million); State works and housing programmes \$710.0 million (\$677.0 million); advances for capital purposes \$320.1 million (\$365.0 million); and repatriation services \$284.4 million (\$260.1 million).

Announced that the Commonwealth Government would increase pensions and allowances (Health, Social Services and Repatriation benefits). For details *see* Year Book No. 55, pages 1261-2.

The Post Office declared a trading profit of \$8 million.

20 *August*. Cheese manufacturers asked to restrict their output because of the accumulation of stock.

24 *August*. Agreement on fisheries between Australia and Japan came into operation; specified Japanese fishing activities in Australia's 12-mile fishing zone.

1 *September*. Shipping freight rates between Australia and the east coast of U.S.A. and Canada increased by  $7\frac{1}{2}$  per cent.

4 *September*. 1969-70 South Australian Budget introduced, providing for a deficit of \$2,240,000. It was estimated that revenue would be \$326,021,000 and expenditure \$328,261,000. In 1968-69 revenue amounted to \$298,355,000 and expenditure to \$297,895,000 leaving a surplus of \$460,000.

10 *September*. The first two Australian ships to engage in overseas trading for forty-two years arrived at Australian ports on their maiden voyages.

11 *September*. Commonwealth cash loan opened with yields of 5.4 per cent for 1 year 2 months, 5.5 per cent for 3 years 2 months, 5.8 per cent for 9 years 8 months, 6 per cent for 22 years 1 month and 6 per cent for 35 years 10 months. An amount of \$193 million was raised. A conversion offer was made on the same terms as the cash loan for \$326 million maturing 15 September. An amount of \$246 million was converted.

1969-70 Tasmanian Budget introduced, providing for a deficit of \$1,847,000 before receipt of the completion payment of the special grant. It was estimated that revenue would be \$120,528,000 and expenditure \$122,375,000. In 1968-69 revenue amounted to \$107,845,000 and expenditure to \$111,540,000 leaving a deficit of \$3,695,000 before receipt of the completion payment of the special grant.

16 *September*. 1969-70 Victorian Budget introduced, providing for a deficit of \$20,379,000. It was estimated that revenue would be \$709,300,000 and expenditure \$729,679,000. Railway operating expenses and income were estimated at \$122,621,000 and \$102,202,000 respectively, leaving a loss of \$20,419,000. In 1968-69 total budget revenue amounted to \$664,133,000 and total budget expenditure to \$666,645,000 leaving a deficit of \$2,461,000.

The Prime Minister announced new guidelines on borrowing by overseas companies in Australia.

25 *September*. 1969-70 Queensland Budget introduced, providing for a deficit of \$2,367,000 with estimated revenue and expenditure at \$423,078,000 and \$425,445,000 respectively. In 1968-69 revenue amounted to \$387,866,000 and expenditure to \$388,777,000 leaving a deficit of \$911,000.

26 *September*. The Commonwealth Government announced \$80 million six year loan to Queensland for power station development in the Central Queensland area.

30 *September*. 1969-70 New South Wales Budget introduced, providing for an overall deficit of \$6,758,000 after allowing for the net results of business undertakings. It was estimated that receipts and expenditure, excluding business undertakings, would be \$753,947,000, and \$760,502,000, respectively. In 1968-69 revenue was \$968,509,000 and expenditure \$972,096,000 leaving a deficit of \$3,587,000.

1969-70 Western Australian Budget introduced, providing for a deficit of \$2,410,000. It was estimated that revenue would be \$310,733,000 and expenditure \$313,143,000. In 1968-69 revenue amounted to \$275,081,000 and expenditure to \$276,137,000, leaving a deficit of \$1,056,000.

1 *October*. A conversion offer of Special Bonds Series T was made for \$39 million Special Bonds Series G maturing 1 October. An amount of \$25 million was converted.

- 31 *October*. Commonwealth DM 150 million public loan (\$36 million) opened in Germany, issued at 98 per cent with interest at 7.25 per cent for a period of 15 years to give a yield of 7.48 per cent per annum.
- 3 *November*. Drought Bonds Series 1 issued at par with interest rate of 3 per cent for 6 years 10 months.
- 8 *November*. Hamersley Iron Pty Ltd, announced a new \$1,000 million long term (1972–87) iron ore contract with a group of Japanese steel mills. On 17 *November* it was announced that Japanese interests had also agreed to purchase iron ore costing \$450 million from the Mt Newman project for the period 1970–81.
- 13 *November*. A contract for liquified petroleum gas (more than 500,000 tons per annum by 1973) signed between Esso-Australia and Japanese interests. B.H.P. also contracted on 6 *November* to supply Japanese interests with liquid petroleum gas (\$100 million) over a long period.
- 14 *November*. Alcan Australia Limited's \$35 million aluminium smelter at Kurri Kurri, N.S.W., opened by the Governor-General.
- 17 *November*. B.H.P. announced \$71 million expenditure as part of \$150 million plan to increase steel-making capacity of the Port Kembla plant.
- 1 *December*. The Commonwealth Conciliation and Arbitration Commission increased total award wages by 3 per cent and the minimum wage for adult males by \$3.50 a week from the beginning of the first pay period on or after 19 *December* (see pages 264–8).
- 3 *December*. The Commonwealth Conciliation and Arbitration Commission granted increased salaries to professional engineers, to operate retrospectively from 17 *October*.
- 8 *December*. Announced that \$100 million plus contract had been negotiated for supply of 2.2 million long tons of wheat to People's Republic of China.
- 15 *December*. U.K. to Australia shipping freight rates on general cargo rose by 10 per cent.
- 5 *January*. Announced that Australia had received \$75 million in Special Drawing Rights (S.D.R.'s), its first allocation from the IMF.
- 8 *January*. Overall quota of wheat for the 1970–71 period to be reduced from 357 million bushells to 318 million bushells.
- 12 *January*. Freight train departed from Sydney to inaugurate the first coast-to-coast standard gauge rail link to Perth, built at a cost of \$210 million.
- 3 *February*. Commonwealth cash and conversion loan of 60 million Swiss francs to convert and redeem 60 million Swiss francs maturing 1 *March*. Issued at 99 per cent with interest rate of 6.25 per cent to give a yield over 15 years of 6.35 per cent.
- 5 *February*. Issued price of Commonwealth Treasury Notes was reduced to 98.78 per cent for three-months notes to yield 4.954 per cent per annum to maturity and 97.52 per cent for six-months notes to yield 5.10 per cent per annum to maturity.
- 11 *February*. Commonwealth cash loan opened with yields of 5.6 per cent for 1 year 5 months, 5.75 per cent for 3 years 3 months, 5.9 per cent for 7 years 5 months, 6 per cent for 21 years 8 months and 6 per cent for 35 years 5 months. An amount of \$209 million was raised. A conversion offer was made on the same terms as the cash loan for \$245 million maturing 15 *February*. An amount of \$112 was converted.
- 23 *February*. 'Indian–Pacific' rail passenger service between Sydney and Perth inaugurated.
- 26 *February*. A meeting of the Australian Loan Council was held in Canberra.
- 6 *March*. Reserve Bank announced increases in trading bank overdraft and deposit rates—maximum overdraft rate lifted to 8½ per cent; personal instalment loans to 6½ per cent flat and fixed deposits to 5½ per cent.
- 23 *March*. The first production delivery of Bass Strait crude oil loaded on an Australian flag tanker at Westernport Bay, Victoria.
- 31 *March*. The Commonwealth issued \$250 million Treasury Notes to the Reserve Bank and advanced the proceeds to the Australian Wheat Board to enable the Board to repay an equivalent amount to the Reserve Bank in connection with advances from the Bank to finance the 1968–69 Wheat Pool.
- 1 *April*. Bank housing loan interest rates increased to 6½ per cent on new houses and 6¾ per cent on existing houses.
- 2 *April*. Primary producers to be exempted from 0.5 per cent increase in bank overdraft rates which came into effect in *March*.

- 13 *April*. Issue price of Commonwealth Treasury Notes was reduced to 98.67 per cent for three-month notes to yield 5.407 per cent per annum to maturity and 97.34 per cent per annum for six-month notes to yield 5.48 per cent to maturity.
- 30 *April*. Interest rate on long-term Commonwealth bonds raised to 7 per cent for the first time.
- 1 *May*. Special Bonds Series U issued at par with interest rates ranging from 6.40 to 7 per cent and optional redemption prices ranging from par to 103 per cent at maturity on 1 April 1978.
- It was announced that trans-Tasman freight rates would increase from 5 per cent to 15 per cent.
- Legislation to control packaging of goods—to protect consumers from deceptive packaging—came into force throughout Australia.
- 7 *May*. Commonwealth cash loan opened with yields of 6.5 per cent for 3 years 2 months, 6.8 per cent for 8 years 3 months and 7 per cent for 19 years. An amount of \$49 million was raised.
- 12 *May*. The U.S.A. Government placed a temporary ban on the import of Australian mutton until the general standards of hygiene and inspection improved.
- 1 *June*. A conversion offer of Special Bonds Series U was made for \$42 million Special Bonds Series H maturing 1 June. An amount of \$30 million was converted.
- 2 *June*. Academics awarded a 20 per cent salary increase.
- 10 *June*. Canada banned imports of Australian mutton until inspection problems were overcome.
- 12 *June*. Commonwealth Trading Bank to link with 4 European banking groups to form the Australian European Finance Corporation Ltd.
- 26 *June*. The Australian Loan Council met and approved a borrowing programme for 1970–71 of \$823 million (\$680 million for State works and \$143 million for Commonwealth–State housing.) The Commonwealth would provide an interest-free capital grant of \$200 million towards this programme which should reduce the need for Commonwealth assistance by way of Special loans and would result in lower State Government debt charges than would otherwise have been the case. A borrowing programme of \$400 million was approved for State semi-government and local authorities which borrow more than \$300,000 during the year.
- At the Premiers' Conference, the Commonwealth undertook to make grants to meet the debt charges on \$200 million of State debt in 1970–71 and on an additional \$200 million each year from 1971–72 to 1974–75 so that, from the commencement of 1974–75, the Commonwealth would have taken over the full responsibility for the debt charges on \$1,000 million of existing State debt. The securities included in the debt package carry an average interest rate of 5.5 per cent, compared with the average for all State Government securities on issue at 30 June 1970 of 5.1 per cent. The Commonwealth would also take over responsibility for the States' sinking fund contributions of 0.25 per cent on these securities.
- 30 *June*. Special cash loan of \$355 million, financed from a Commonwealth trust fund, issued to complete State loan programmes for 1969–70. Terms were the same as those for the cash loan which opened 7 May.

## APPENDIX

Some recent information which has come to hand since the various chapters were sent to press is given in summarised form in the following pages, but for later statistics on the subjects dealt with in chapters reference should in general be made to other publications issued by this Bureau, e.g. the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, the *Digest of Current Economic Statistics*, and the various mimeographed statements issued on particular subjects (see Publications issued by the Commonwealth Statistician, pages 1026-38 of the Chapter Miscellaneous)

### CHAPTER 3. GENERAL GOVERNMENT

#### Parliamentary government

Party affiliation is indicated by the use of the following abbreviations.

A.L.P.—Australian Labour Party

C.P.—Australian Country Party

Lib.—Liberal Party of Australia

#### Commonwealth Ministries

The title of the ministerial office of the Rt Hon. W. McMahon, M.P., was changed on 6 November 1970 from Minister for External Affairs to Minister for Foreign Affairs. The title of his department was similarly changed from Department of External Affairs to Department of Foreign Affairs.

#### Commonwealth Parliament

##### THE SENATE

Consequent on the death of the Hon. G. C. McKellar (C.P.) N.S.W., Mr. D. B. Scott (C.P.) was appointed to fill the casual vacancy. Senator Sir Kenneth McColl Anderson created a Knight Bachelor in the Queen's Birthday Honours List.

##### THE HOUSE OF REPRESENTATIVES

Consequent on the death of Mr J. R. Fraser M.P. (A.L.P.) Australian Capital Territory, Mr K. E. Enderby (A.L.P.) was elected to fill the vacancy and similarly Mr A. A. Staley (Lib) was elected to fill the vacancy caused by the death of the Hon. Sir Wilfrid Kent Hughes, K.B.E., M.V.O., M.C., E.D. (Lib.) Chisholm (Vic.)

## SOUTH AUSTRALIA

(From 2 June 1970)

<i>Premier, Treasurer, Minister of Mines and Minister of Development—</i> THE HON. DONALD ALLAN DUNSTAN, Q.C., M.P. (A.L.P.)	<i>Minister of Roads and Transport and Minister of Local Government—</i> THE HON. GEOFFREY THOMAS VIRGO, M.P. (A.L.P.)
<i>Deputy Premier, Minister of Works and Minister of Marine—</i> THE HON. JAMES DESMOND CORCORAN, M.P. (A.L.P.)	<i>Minister of Agriculture and Minister of Forests—</i> THE HON. THOMAS MANNIX CASEY, M.L.C. (A.L.P.)
<i>Chief Secretary and Minister of Health—</i> THE HON. ALBERT JAMES SHARD, M.L.C. (A.L.P.)	<i>Minister of Labour and Industry—</i> THE HON. GLEN RAYMOND BROOMHILL, M.P. (A.L.P.)
<i>Minister of Education—</i> THE HON. HUGH RICHARD HUDSON, M.P. (A.L.P.)	<i>Minister of Lands, Minister of Repatriation and Minister of Irrigation—</i> THE HON. ALFRED FRANCIS KNEEBONE, M.L.C. (A.L.P.)
<i>Attorney-General, Minister of Social Welfare and Minister of Aboriginal Affairs—</i> THE HON. LEONARD JAMES KING, Q.C., M.P. (A.L.P.)	
<i>Leader of the Opposition—</i> THE HON. R. S. HALL, M.P. (Liberal and Country League)	

## CHAPTER 14. PUBLIC HEALTH

## Survey of chronic illnesses, injuries and impairments

In May 1968 a survey, based on the population survey sample (a one per cent sample of households), was conducted in all States except Victoria, in order to obtain estimates of the incidence of chronic illnesses, injuries and impairments in the population, the nature of these conditions and their cause. In addition, the survey obtained information on the effect of these conditions on the activities of those who suffered from them. A similar survey was not conducted in Victoria because a survey of superannuation was already being carried out at that time.

The survey covered persons in all States other than Victoria, with the exception of members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement and certain diplomatic personnel customarily excluded from census and estimated populations.

The meaning of the principal terms used is as follows.

- (i) *Illness* includes injuries and impairments as well as diseases and any other morbid conditions.
- (ii) *Chronic illness*. An illness was considered to be chronic if the respondent claimed to have suffered from it at the time of the interview and had suffered from it for more than six months.
- (iii) *Limiting illness or condition*. A chronic illness was classified as "limiting" if the respondent replied in the affirmative to the question "Are your activities limited in any way as a result of (the chronic condition)?"

For further details, reference should be made to the mimeographed bulletin *Chronic Illnesses, Injuries and Impairments, May 1968* (Reference No. 17.3) Further particulars of the quarterly population survey will be found in Chapter 21, page 694.

(a) Institutionalised persons are inmates of hospitals, convalescent homes, homes for the aged or handicapped, orphanages and penal establishments. For the purposes of the survey, a person was classified as an inmate if he spent the Wednesday night preceding the week in which he was interviewed in one of these institutions. (b) Excludes Victoria, the Northern Territory and the Australian Capital Territory. (c) Number per 1,000 of population, excluding institutionalised persons, in the same group. (d) Eating, bathing, dressing, getting into bed, etc. (e) Aged 5 years and over. (f) For shopping, visiting the doctor, etc. (g) Aged 15 years and over. (h) Males 15 to 64 years; females 15 to 59 years.

NOTE. These categories of limited activities are not mutually exclusive. Some persons are limited in one or more activities while others are limited by a chronic illness but are not in any one of the above categories.

## CHAPTER 19. PUBLIC FINANCE

### COMMONWEALTH FINANCE

### Commonwealth Budget, 1970-71

(see pages 1079 for particulars of 1969-70 Budget)

The 1970-71 Commonwealth Budget provided for an estimated outlay of \$7,915 million (\$7,113 million in 1969-70) and estimated receipts of \$7,920 million (\$7,106 million in 1969-70). The surplus for 1970-71 was thus estimated at \$4 million (the deficit in 1969-70 was \$7 million).

<b>Total</b> . . . . .	<b>974</b>	<b>886</b>
<b>Total Outlay</b> . . . . .	<b>7,113</b>	<b>7,915</b>

The main increases in Budget allocation in 1970-71 over 1969-70 were in the fields of grants to the States (from \$1,620 million to \$2,065 million), of cash benefits to persons (from \$1,598 million to \$1,745 million) and of assistance to industry (from \$191 million to \$272 million). The estimated increases are due mainly to the following additional commitments.

*Payments to the States (grants and net advances)*

An estimated overall increase of \$291 million in payments to the States included increases of \$170 million in financial assistance grants, \$12 million in servicing charges on State debt (as first stage in effecting the formal transfer by July 1974 of \$1,000 million of State debt to the Commonwealth in yearly amounts of \$200 million), an interest free grant of \$200 million to the States for works (thereby reducing repayable advances by \$145 million), \$10 million in advances to States for housing, and \$25 million in Commonwealth Aid Roads grants.

*Cash benefits to persons.*

*Repatriation Benefits (weekly rates).* *War pensions:* Special rate, \$38.00; Intermediate rate, \$28.00; General rate special compensation allowance, \$4.50 to \$6.00; War widows—pension, \$15.50; domestic allowance, \$8.00; War orphans—one parent dead, \$6 for the first child and \$5 for each other child; both parents dead, \$12 for each child. *Service pensions:* single rate, \$15.50; married rate (both pensioners), \$13.75 each (see Chapter 5 Repatriation).

*Social Service Benefits (weekly rates).* Age and Invalid pensions and Sheltered Employment allowances: single rate, \$15.50; married rate (both eligible), \$13.75 each. Widows pensions: Class 'A' \$15.50; Class 'B' and Class 'C' \$13.75. Long-term Sickness Benefits: higher rates become payable after six weeks as follows—\$15.50 for an adult or married minor, and \$10 for a person aged 16 and under 21 years. In addition, supplementary assistance of \$2 (maximum) may be payable. Persons who are in hospital and have no dependants do not qualify for these higher benefits (see Chapter 13 Welfare Services).

*Health Benefits (weekly rates).* Tuberculosis allowances: single person \$18.75; man and wife, \$30.75. Subsidised Medical Services: free health insurance for hospital and medical fund benefits is

provided for family groups, of a least two units, where the family income does not exceed \$42.50 a week. The Commonwealth will also pay two-thirds the cost of the usual insurance rates for these benefits where the family income is between \$42.50 and \$45.50 a week; and one-third of the usual rates where the family income is between \$45.50 and \$48.50 a week (*see* Chapter 14 Public Health).

*Payments to industry.* An estimated increase of \$81 million in the cost of assistance to Australian industry by way of bounties, subsidies and other payments and by way of contribution to promotion and research was largely due to the following increases on 1969-70 expenditures: wheat industry stabilisation, \$31 million; emergency assistance to woolgrowers, \$30 million; and butter and cheese bounty, \$15 million.

## Receipts

RECEIPTS OF COMMONWEALTH BUDGET  
(\$ million)

	1969-70	1970-71 <i>Estimates</i>
Receipts—		
Taxation—		
Indirect taxes . . . . .	2,207	2,492
Income taxes on companies . . . . .	1,197	1,452
Income taxes on persons—P.A.Y.E. . . . .	2,084	2,275
Other . . . . .	771	758
Estate and gift duties . . . . .	80	74
Total . . . . .	6,339	7,050
Other receipts—		
Interest, rent and dividends . . . . .	711	805
Gross income of public enterprises . . . . .	44	53
Net sales of existing assets . . . . .	12	12
Total . . . . .	767	870
Total Receipts . . . . .	7,106	7,920

Of the expected increase of \$814 million in receipts, it was estimated that \$711 million would be derived from increased taxation collections after allowing for proposed changes in rates. Proposed changes in existing taxes and charges included rate reductions in individuals' income tax (of some 10 per cent on taxable incomes up to \$10,000, tapering off to 4.4 per cent at \$20,000, with no reduction on incomes of \$32,000 and above); a higher exemption level for age allowances; increases in companies' income tax (by adding 2.5 cents in the dollar to all rates), in customs and excise duty on petroleum products, tobacco products and on wine (excise duty on wine newly imposed in 1970-71), in sales tax (25 per cent raised to 27.5 per cent), in post office charges and in miscellaneous charges for services relating to air and marine navigation and radio communication.

## LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

**Aboriginal population, 17, 951**

**Aborigines**

Australian, former numbers and distribution of, **23, 687**  
of Australia, **3, 158**

**Administrative government, 12, 924**

**Advisory Council of Science and Industry, 11, 1195**

## GENERAL INDEX\*

This index is preceded by a list of the special articles, etc., which have appeared in previous issues of the Year Book. The illustrations contained in this issue are listed under the various chapters in the Contents (pages vii-xi). *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*
