#### **PREFACE**

South Australian Economic Indicators is a monthly publication which contains the latest available data at the time of preparation for a range of statistical series that have been identified as indicators of economic activity in this State. In a number of cases the figures presented are preliminary and subject to revision in subsequent issues.

Written and graphic commentary have been included for many of the selected series and analysis has been augmented with the calculation of the percentage change from the previous reference period together with the presentation of comparative Australian data.

Time series information has been included to provide a historical perspective on many of the selected indicators. Future issues may be expanded to include further historical data in response to expressed user needs. This product is under continuous review and any suggestions for enhancement will be welcomed.

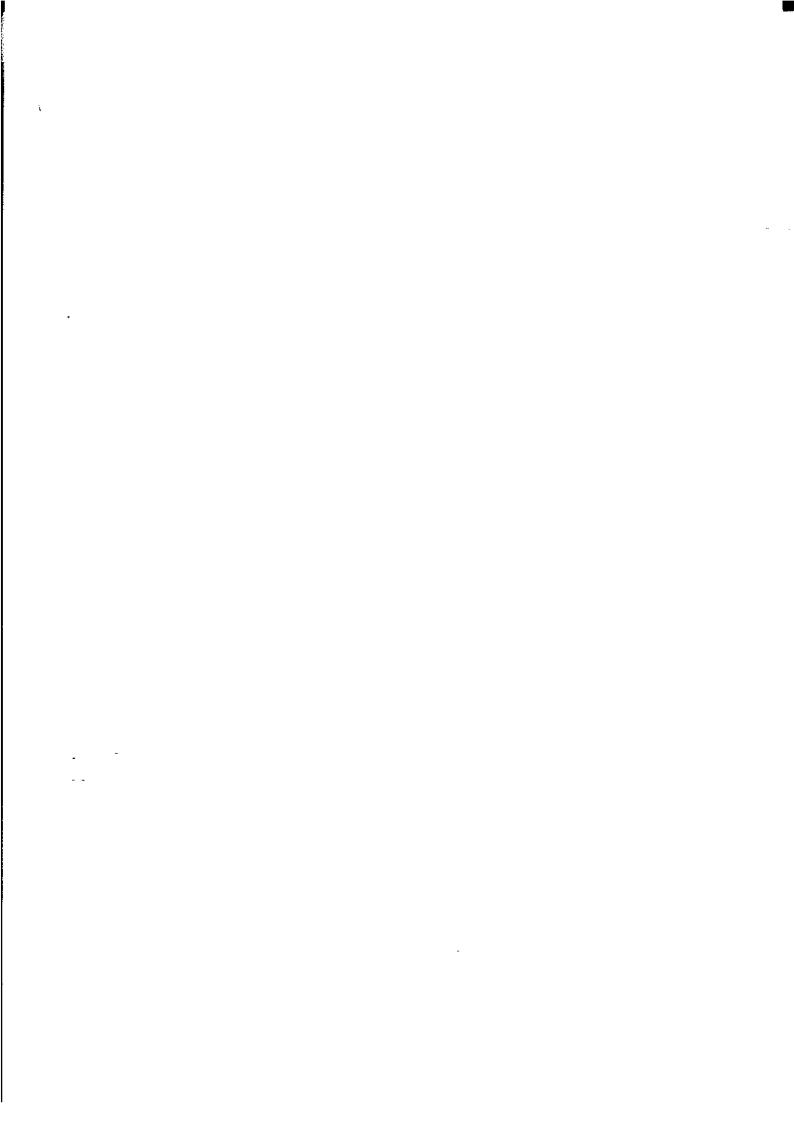

More detailed information on each series, including explanatory and technical notes, can be obtained from other Australian Bureau of Statistics publications or alternative data sources. To assist those seeking further information a source publication for each of the series has been documented in the statistical summary.

This issue includes a special article entitled *State Accounts: Trends in Economic Activity.* Future issues will contain further articles on statistical topics which concentrate on longer term trends or other issues pertinent to the South Australian economy.

If you have any inquiries concerning this publication please contact the editor, Brian Moody, telephone (08) 237–7315. All requests for statistical information should be directed to the ABS Information Service, GPO Box 2272, Adelaide SA 5001, telephone (08) 237 7100.

#### REVIEW

#### Overview

- The June quarter 1995 trend estimate for private new capital expenditure in South Australia was 6.7% below the March quarter estimate.
- The trend estimate for employed persons in South Australia has fallen in September and October 1995 following a general increase between January and August 1995.
- The trend unemployment rate for South Australia has declined gradually over the past twelve months from 10.3% in October 1994 to 9.6% in October 1995.
- The trend estimate for the number of dwelling units approved in South Australia during September 1995 was 1.9% higher than in the previous month, but 40.0% below the September 1994 estimate.
- The September 1995 trend estimate for retail turnover in South Australia was 0.6% higher than that the estimate for the previous month.
- The South Australian trend estimate for new motor vehicle registrations in September 1995 decreased by 1.7% from August. This is the fifth month of trend decline following an eight month period of growth.
- The September trend estimate for total value of housing finance commitments in South Australia was 2.1% higher than the August estimate, but was 1.5% lower than in September 1994.
- Gross State Product (trend estimates in 1989-90 prices) grew by 1.3% in the June quarter 1995 and by 2.1% in 1994-95. This compared with national increases of 0.3% and 2.8% respectively.
- In September 1995 the total value of overseas exports of commodities produced in South Australia was 13.3% lower than in the previous month and 16.8% below the level of September 1994. Merchandise imports into South Australia fell 32.0% from the previous month and were 11.9% lower than in September 1994.

#### State Accounts

**NOTE:** Deficiencies in the data sources used to estimate gross operating surplus for recent quarters may at times lead to the current price estimates of Gross State Product(I) being under or over stated for particular states. Consequently, the measured growth rate for constant price GSP(I) for those states will also be affected.

The constant price series for Gross State Product (GSP) have been labelled as 'experimental'. Users are cautioned that these estimates are derived indirectly by calculating a deflator from the expenditure components. It is emphasised that, at times, movements that can not be fully explained may be introduced into the constant price GSP(I) series through the use of this proxy deflator.

Trend Estimates (Current Prices) The Gross State Product (GSP) trend estimate in current prices for the June quarter 1995 rose 1.5% from the previous quarter to be 4.7% above the estimate for the June quarter 1994.

> Wages, salaries and supplements increased by 0.7% in the June quarter and had risen by 2.3% over the twelve month period, well below the national increase of 7.7%.

> Increases in gross operating surplus exceeded the corresponding national growth rates from the June quarter 1994 following a 2.0% rise in the June quarter 1995. The June quarter 1995 estimate was 7.3% higher than for the same period last year.

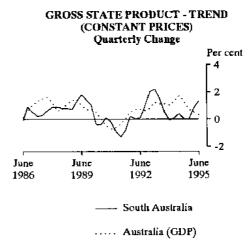

> The rate of growth in indirect taxes less subsidies increased in the June quarter, with a rise of 3.2%, while growth over the year to the June quarter 1995 was 6.4%.

Trend Estimates (Constant Prices)

The trend estimate for South Australian State Final Demand (SFD) in constant 1989-90 prices increased by 0.4% in the June quarter to a level 5.6% above that of the June quarter 1994.

Private final consumption expenditure increased by 1.6% in the June quarter. Private gross fixed capital expenditure on equipment was the major contributor to the decline in private gross fixed capital expenditure of 7.6%. Private expenditure on dwellings fell for the third consecutive quarter.

The increase of 2.7% in public final demand for the June quarter 1995 was the largest increase for several years. Government consumption rose for the first time since June quarter 1994 and contributed 0.5% to the growth in SFD.

The experimental GSP trend estimate in 1989-90 prices, grew by 1.3% in the June quarter 1995, well above the national average of 0.3% for that quarter. However the South Australian increase of 2.1% for the year was below the national figure of 2.8%.

Experimental estimates of real Gross State Income (real GSI) i.e. GSP(I) adjusted for the terms of trade effect, also rose by 1.3% in the June quarter 1995. The terms of trade showed no change.

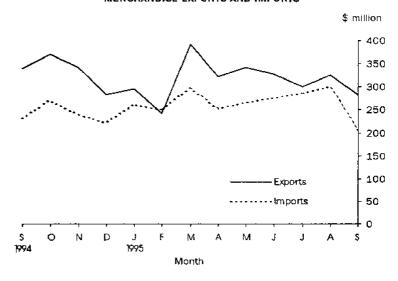

#### **International Accounts**

**Exports** 

In September 1995 the total value of overseas exports of South Australian produced commodities was \$282 million. This compares with a total value of \$325 million in the previous month and \$339 million in September 1994. The average monthly value of exports during 1994-95 was \$319 million. The relatively low September 1995 figure reflected a fall of \$44 million from August in the value of exports to East Asia.

It is not unusual for both exports and imports to fluctuate greatly from month to month, and the decrease in exports to East Asia was inconsistent with recent trends. Exports to East Asia in 1994-95 were 5.4% higher than in the previous year, and more than double the level of five years earlier.

#### **MERCHANDISE EXPORTS AND IMPORTS**

**Imports** 

The value of overseas imports into South Australia (designated as the State of final destination) was \$204 million. This compares with \$300 million in the previous month; \$231 million in September last year; and an average monthly value of \$258 million during 1994-95.

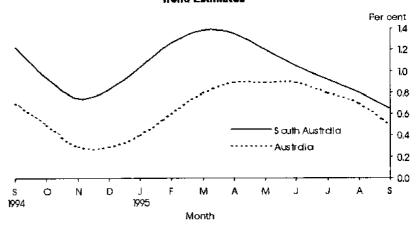

#### **Consumption and Investment**

. Retail Turnover

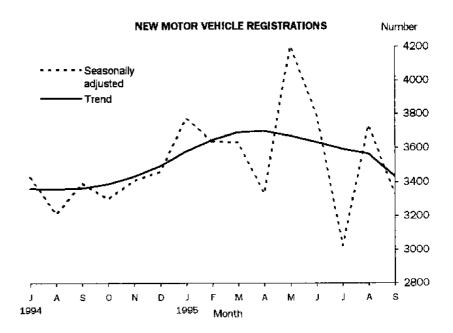

The retail trade trend estimate indicates that monthly retail turnover in South Australia increased by 0.6% in September 1995 compared with an Australian rise of 0.5%. Over the past three months, the trend estimate has increased by \$11.1 million of which \$8.2 million was attributable to the food retailing group, \$2.6 million to the hospitality and services group and \$2.6 million to other retailing. Strong growth in these industry groups has been partly negated by the decline in turnover in the department stores and household good retailing groups.

In seasonally adjusted terms retail trade in September 1995 increased by 0.6% from August 1995. In original terms, South Australian retail turnover was \$747.5 million for September 1995, an increase of 11.5% over September 1994.

**RETAIL TURNOYER** PERCENTAGE CHANGE FROM PREVIOUS MONTH Trend Estimates

New Motor Vehicle Registrations The South Australian provisional trend estimate for new motor vehicle registrations in September 1995 decreased by 1.7% from August. This is the fifth month of trend decline following an eight month period of growth. The seasonally adjusted estimate for September 1995 decreased by 10.9% from August 1995 and 2.0% from September 1994.

In original terms, there were 3,452 new motor vehicles registered in September 1995, a decrease of 12.9% from the previous month and 4.6% from September 1994. For new passenger vehicles only, the leading makes registered in September 1995 were Holden (777 vehicles), Ford (656), Mitsubishi (441), Toyota (355) and Hyundai (159).

Tourist Accommodation

When the June quarter 1995 is compared with the June quarter 1994, caravan capacity available in South Australia increased by 2.2% from 24,136 to 24,657 powered and unpowered sites, on-site vans and cabins. The number of site nights occupied increased by 2.9% from 587,800 to 605,000 and the site occupancy rate rose from 26.9% to 27.1%. Accommodation takings rose by 10.7%, from \$6.4 million to \$7.1, million with the average takings per site increasing from \$11 to \$12.

Private New Capital Expenditure

The trend estimate for private new capital expenditure in South Australia for the June quarter 1995 was 6.7% lower than in the previous quarter. The fall for South Australia went against the national trend, with all other States recording increases and the national estimate rising by 4.2%. The South Australian estimate for the quarter now represents only 5.3% of the national estimate.

Private new capital expenditure in original terms for the June quarter 1995 was \$504 million, an increase of 10.4% over the March quarter. Buildings and structures accounted for \$77 million of this expenditure, and equipment, plant and machinery for \$427 million.

#### Production

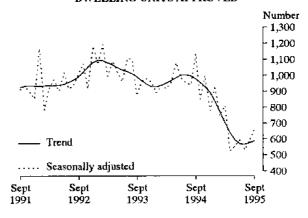

**Dwelling Approvals** 

The trend estimate for the number of dwelling units approved in South Australia during September 1995 was 587, an increase of 1.9% over the previous month, and a decrease of 40.0% from September 1994. The original number of dwelling units approved in September 1995 was 592, a decrease of 11.8% from August 1995.

The national trend estimate for the total number of dwelling units approved in September 1995 (10,659) was 2.0% lower than for August, and 35.1% lower than the September 1994 estimate. In original terms, South Australia represented 5.3% of the total dwelling units approved in Australia during September 1995.

The total number in original terms of dwelling units approved in Australia was 11,068, a decrease of 39.4% from September 1994.

#### DWELLING UNITS APPROVED

**Dwelling Commencements** 

From the Building Activity Survey, it was estimated that 1,767 dwelling units were commenced in South Australia during the June quarter 1995, the lowest for 14 years. The latest figure represented a further fall of 297 dwelling units (14.4%) from the previous quarter and can be compared with a small rise of 1.9% nationally. The latest figure for South Australia was 38.6% below the total for the June quarter 1994 while the national decrease over the twelve month period was 23.1%.

Value of Non-residential Building Approvals Non-residential building approvals for South Australia in September 1995 were valued at \$31.1 million. This was a slight decrease from the previous month and was 6.0% lower than the September 1994 value. In September 1995 South Australia contributed 3.6% to the total value of Australian non-residential building approvals of \$864.7 million.

Value of Total Building Activity

The total value of building work commenced in South Australia during the June quarter 1995 recorded a 37.8% recovery to \$394.7 million from the previous quarter's low of more than 8 years. Recovery was confined to the non-residential sector and was mainly due to two large public sector jobs, one for \$48.0 million and one for \$55.0 million in the offices and educational categories respectively. Compared with the June quarter 1994, the latest figure for South Australia represented a 17.1% increase in building commencements while the corresponding national movement was a 12.3% decrease. However, the State's share of the national total of building commencements in the June quarter was only 6.1%.

The total value of *building work done* during the June quarter 1995 increased by a relatively modest 4.9% from the March quarter to \$333.0 million. This movement compared with an increase of 9.1% nationally and resulted in a fall in this State's share of the total Australian value to 4.8%. Compared with the June quarter 1994, the latest figure for South Australia represented a 6.8% decrease in the value of total building work done, while there was a corresponding 1.4% increase nationally.

After falling for 11 successive quarters, the value of *building work yet to be done* in South Australia rose 23.7% to \$350.9 million at the end of June 1995, in contrast to a national decrease of 1.8%.

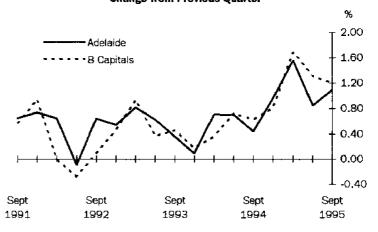

Value of Engineering Construction In the June quarter 1995 engineering construction work done in South Australia increased by 27.9% over the previous quarter to \$201.0 million, resulting in the State's share of the national total increasing slightly to 5.4%.

#### **Prices**

Consumer Price Index

In the September quarter 1995 the all groups Consumer Price Index increased by 1.2% nationally, contributing to an annual increase of 5.1%. For Adelaide, the quarterly movement was 1.1% while the annual increase was 4.5%.

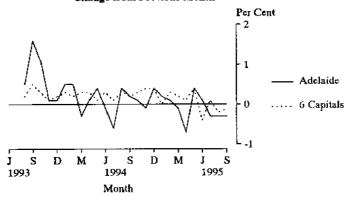

### CONSUMER PRICE INDEX Change from Previous Quarter

House Building Materials

Over the twelve months to September 1995, Adelaide was the only State capital to record a decrease (0.4%) in the Price Index of Materials used in House Building. Hobart recorded the largest increase (4.3%) for the same period, followed by Perth (3.1%) and Sydney (2.1%). The weighted average of the six state capitals rose by 1.5% over the twelve month period. In September 1995, falls in the Price Index from the previous month were recorded in Adelaide (0.3%), Melbourne (0.3%) and Perth (0.1%), with other state capitals recording no change. Nationally, there was a decrease of 0.1% in the Index for the weighted average of the six state capitals.

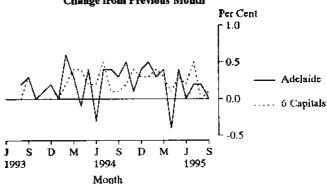

#### MATERIALS USED IN HOUSE BUILDING Change from Previous Month

Non-house Building Materials

Rises ranging from 2.5% (Adelaide) to 3.5% (Hobart) were recorded in the Price Index of Materials Used in Building Other Than House Building over the twelve months to September 1995. The increase in the weighted average of the six state capitals was 2.9%. Changes in September 1995 from the previous month ranged from -0.3% in Perth to 0.3% in Brisbane. No movement in the Index was recorded in Adelaide, while the weighted average of the six state capitals rose by 0.1% in this period.

#### MATERIALS USED IN BUILDING OTHER THAN HOUSE BUILDING Change from Previous Month

House Prices

Between the March and June quarters 1995 the price index of established houses in Adelaide decreased by 0.4%, while project home prices rose by 0.2%. Over the same period, prices of established houses in Australia fell by 0.7% while project home prices increased by 0.6%.

In Adelaide over the twelve month period to the June quarter 1995, there was a price increase of 0.5% for established houses and an increase of 2.0% for project homes. Nationally, prices for established houses rose by 1.4% while the increase for project homes was 1.7%.

#### **Labour Force and Demography**

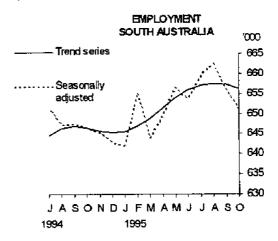

Population

At 31 March 1995 the estimated resident population of South Australia was 1,473,002. This was an increase of 0.12% (1,751) from the December quarter, and 0.32% from the March quarter 1994, well below the national annual growth rate of 1.11%. The low growth rate in this State was mainly attributable to a net outflow of 2,054 persons in interstate migration during the March quarter. This is the highest recorded quarterly interstate migration loss from South Australia.

**Employment** 

The trend estimate of employed persons in South Australia has decreased slightly over the past two months (September and October), following a general increase between January and August 1995. The October 1995 estimate (656,300) was 1.5% higher than the level of 12 months ago.

The national trend estimate of employed persons (8,254,00 in October 1995) has decreased over the past two months, reversing the general growth evident between February 1993 and August 1995. Over the past 12 months, full-time and part-time employment increased by 2.9% and 3.4% cent respectively.

Unemployment

The trend unemployment rate for South Australia has declined gradually over the past twelve months from 10.3% in October 1994 to 9.6% in October 1995. For this same period, the trend unemployment rate for males fell from 10.9% to 10.7%, while the rate for females decreased from 9.7% to 8.3%.

By comparison, the trend estimate of the unemployment rate in Australia (8.5%) was a reversal of the general downward movement evident between January 1993 and June 1995.

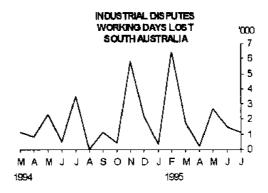

**Overtime** 

The proportion of employees who worked overtime in South Australia in August 1995 was 15.9% compared with 18.5% in August 1994.

Industrial Disputes

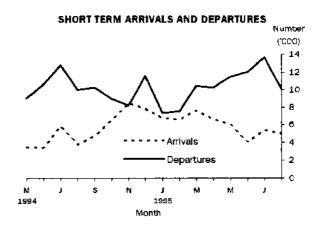

There were 1,100 working days lost through industrial disputes in South Australia during July 1995. At 3.1% of the Australian total (35,900 working days), this was relatively low level of disputation.

In the twelve months to July 1995, 23,300 working days were lost due to industrial disputes in South Australia.

Short-term Overseas Visitor Artivals

There were 5,003 short-term overseas visitor arrivals to South Australia in August 1995. This was a fall of 7.5% from the number of visitors in the previous month but a rise of 33.5% over the number in August 1994.

Short-term Resident Departures The number of short term departures of South Australian residents in August 1995 was 10,075. This was 26.2% less than in July, but 0.9% more than in August 1994.

#### Incomes

Average Weekly Earnings

The trend estimate of average weekly ordinary time earnings of full-time adult employees in South Australia rose from \$614.60 in May 1995 to \$616.50 in August 1995. Male full-time ordinary time earnings increased from \$640.20 in May 1995 to \$641.60 in August 1995, while the comparable level for females increased from \$561.80 to \$562.10.

Between May 1995 and August 1995, the trend estimate of average weekly total earnings of all employees in South Australia decreased from \$516.00 to \$515.30.

Since it is an average of earnings across all employees, changes in average weekly earnings may occur through changes in employment as well as changes in pay levels.

Award Rates of Pay

Over the 12 months to September 1995, the weekly award rates of pay index for full-time employees in South Australia increased by 1.5%.

For full-time adult male employees, the largest annual movement of the index occurred in the recreation, personal and other services industry, with an increase of 2.7%. For full-time adult female employees, the largest annual movement of the index occurred in public administration and defence, with an increase of 2.9%.

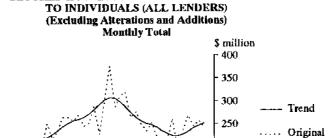

#### **Financial Markets**

Housing Finance

The South Australian September 1995 trend estimate for total value of housing finance commitments (excluding alterations and additions) increased by 2.1% to \$251.2 million from the August estimate, but was 1.5% lower than in September 1994. The national trend estimate was up 1.1% for the month but down by 3.8% compared with the previous September.

State trend estimates are published only for total value of commitments (excluding alterations and additions) and therefore the following commentary on individual categories is based on the original series only.

Total housing finance commitments (original figures including alterations and additions) decreased by 5.3% to \$259.9 million from the previous month, and were 2.3% lower than in September 1994. The refinancing component of \$48.1 million reached 18.5% of total new lending

200 S D M J S D M J S D M J S 1992 1993 1994 1995

SECURED HOUSING FINANCE COMMITMENTS

Finance commitments for construction of dwellings for the past nine months were well below the equivalent months of the past two years with September 1995 14.1% below the August figure. Finance commitments for the purchase of established dwellings, the largest category, were down by 4.3% to \$149.6 million compared with the previous month and down by 11.7% compared with September 1994. Commitments for the purchase of newly erected dwellings decreased by 23.3% to \$14.7 million.

Personal Finance

Personal finance commitments in South Australia decreased by 13.0% to \$182.4 million in September 1995 following the high figures recorded in the previous months. The first nine months of 1995 were high when compared with the corresponding months in 1994.

Total personal finance commitments under fixed loan commitments fell by 7.4% to \$127.2 million in September 1995 following the high August total, and were 5.9% higher than in September 1994. Sales of used motor vehicles and station wagons, the largest category under fixed loan commitments, decreased by 11.9% to \$39.9 million during the month of September, marginally higher than September 1994. Sales of new motor vehicles and station wagons also decreased during the month, down by 15.3% to \$11.3 million, 17.4% lower than September 1994.

Total personal finance commitments under revolving credit commitments decreased to \$55.2 million, but this was the highest September figure over the past decade.

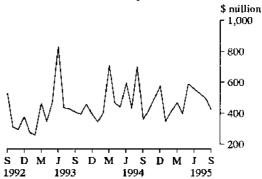

Commercial Finance

South Australian commercial finance commitments decreased by 15.6% to \$421.6 million in September 1995 from the August figure. This was the fourth consecutive monthly fall, but was 16.7% higher than in September 1994.

Commercial finance commitments under fixed loan facilities decreased by 15.6% to \$261.5 million during September but were \$32.1 million above the level of September 1994. Agriculture, forestry, fishing and hunting declined by \$10.7 million following three relatively high months.

Commitments under revolving credit facilities decreased by 15.7% to \$160.0 million in September 1995 from August but were up by 21.3% from September 1994. Agriculture, forestry, fishing and hunting fell for the second consecutive month, following the high July figure. Finance, investment and insurance fell following the high figure recorded in August while commitments for property and business services doubled in value.

Lease Finance

The value of goods under new finance lease commitments in South Australia decreased during September by 9.1% to \$18.2 million compared with the previous month and was 25.5% below September 1994. This was the lowest September figure for a decade and follows the relatively low August figure.

The main falls in new finance lease commitments were for the categories of construction and earth moving equipment, and shop and office furniture, fittings and equipment which declined following high figures in the previous month. Agricultural machinery and equipment increased in September following the low August new lease commitments in this category.

Lease commitments for new motor vehicles and station wagons not subject to depreciation, the largest category, increased by 16.5% to \$6.1 million, 10.6% below September 1994. Used motor vehicles and station wagons not subject to depreciation decreased by 5.4% to \$2.4 million. New motor vehicles subject to depreciation increased by 8.4% to \$1.7 million. Used motor vehicles subject to depreciation fell for the fourth consecutive month.

#### Forward Outlook

Composite Leading Indicator

The Composite Leading Indicator (CLI) is a single time series produced by aggregating eight individual economic indicators, and has been developed by the ABS as an experimental series to supplement existing forms of economic analysis and modelling.

The CH summarises the early signals contained in a selection of economic indicators and is designed to help in the detection of turning points between successive expansions and contractions of economic activity but does not attempt to forecast the level of economic activity.

The main features of the Australian June quarter 1995 data were:

- confirmation of the narrowing in the deviation of GDP(A) from its long-term trend (predicted by the December 1994 CLI);
- a continuation of the downward movement in the CLI evident since the September quarter 1994 peak, and the acceleration in this downward movement (-0.28% in the December quarter 1994, -0.62% in the March quarter 1995 and -0.72% in the June quarter 1995).

The quarterly data are released in more detail in the Australian Economic Indicators (1350.0). The CLI was the topic of the Focus article in the September 1993 edition of South Australian Economic Indicators (1307.4).

Australian Business Expectations Surveys of business expectations have been a feature of the economic intelligence available to decision makers for a number of years. The main output from these surveys has been a qualitative indicator which provides the net proportion of businesses predicting a rise or fall in future business conditions. Further details about these surveys which are conducted quarterly by the ABS are available in Australian Business Expectations (1250.0), the September 1994 edition of Australian Economic Indicators (1350.0) and the May 1994 edition of South Australian Economic Indicators (1307.4).

#### AUSTRALIAN BUSINESS EXPECTATIONS SOUTH AUSTRALIA AND AUSTRALIA SALES OF GOODS AND SERVICES **EXPECTED PERCENTAGE AGGREGATE CHANGE**

	Short_term	ı(a)	Medium tem	n(b)
Reference Period	South Australia	Australia	South Australia	Australia
1994				
June quarter	2,0	1.9	4.1	3.3
September quarter	4.5	2.3	3.2	4.1
December quarter	-0.1	-0,5	2.8	3.3
1995				
March quarter	1.8	1.4	1.1	3.0
June quarter	0.2	1.3	0.8	2,3
September quarter	1.6	2.1	2.4	3.4

<sup>(</sup>a) Short term is the following quarter.

#### Short term

Businesses in South Australia expected a rise of 1.6% in sales in the December quarter compared with the September quarter 1995 while the national expectation was a 2.1% increase.

#### Medium term

Businesses in South Australia anticipated a lower growth in sales (2.4%) than the national expectation of 3.4% for the September quarter 1996 compared with the September quarter 1995.

<sup>(</sup>b) Medium term is the same quarter in the following year.

#### **FOCUS**

#### State Accounts: Trends in Economic Activity

This article was contributed by Trevor Ward, Public Sector Accounts Section, Australian Bureau of Statistics, Adelaide.

#### **Contribution to Australian Production**

The South Australian economy is small by national standards. In 1993-94 it ranked fifth out of eight States and Territories in Gross State Product (GSP) terms and accounted for 7.5% of Gross Domestic Product (GDP). However, when expressed in terms of GSP per head of mean population South Australia's ranking dropped to sixth with only Tasmania and Queensland being lower.

CONTRIBUTION TO AUSTRALIAN PRODUCTION, 1993-94

State/Territory	GSP(I) (\$ million)	Percentage share (%)	Per head of population(\$)
New South Wales	147,288	34.4	24,443
Victoria	112,020	26.1	25,063
Queensland	68,827	16.1	21,799
South Australia	32,177	7.5	21,938
Western Australia	45,356	10.6	26,859
Tasmania	9,098	2.1	19,280
Northern Territory	4,548	1.1	26,674
Australian Capital Territory	9,275	2.2	30,968
Total	428,589	100.0	24,146

GSP per head of population for South Australia has remained fairly constant as a proportion of the Australian total (90.3 % in 1983-84 compared with 90.9% in 1993-94). GSP per head of mean population in South Australia, Queensland and Tasmania has never exceeded the national average.

#### Growth in GSP

Over the period 1984-85 to 1993-94, South Australia's GSP, at average 1989-90 prices, grew at an average annual compound rate of 2.5%, slightly below the national rate of 2.9%. Annual average growth rates varied significantly between the States, with growth strongest in Western Australia, Northern Territory, ACT and Queensland and weakest in Victoria and Tasmania. The growth in the Territories is, however, from a small base.

AVERAGE ANNUAL COMPOUND GROWTH RATES, 1984-85 TO 1993-94 AT AVERAGE 1989-90 PRICES(a)

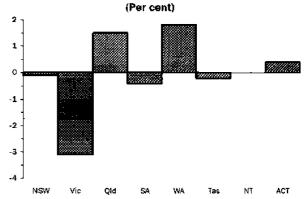

State/Territory	GSP	GSP per head of mean population
New South Wales	2.3	1.5
Victoria	2.1	1.1
Queensland	4.5	2.1
South Australia	2.5	1.7
Western Australia	5.1	3.0
Tasmania	1.3	0.5
Northern Territory	5.1	3.3
Australian Capital Territory	5,0	2.8

(a) Experimental series. Users are cautioned that these estimates are day experimental series. Users are cautioned that these estimates are derived indirectly by calculating a deflator from the expenditure series. It is emphasised that, at times, there may be movements that cannot be fully explained introduced into the constant price GSP(I) series through the use of this proxy deflator.

The northern and western regions of Australia have consistently outperformed the more developed States in the southern and eastern portion of Australia. There are many factors contributing to the poorer performance of the southern and eastern States including:

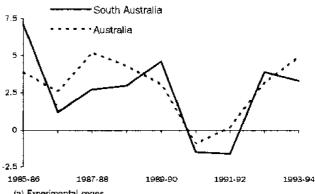

- slower population growths;
- decline in the traditional, labour-intensive manufacturing industries;
- relatively small mining sectors;
- losses in traditional agricultural exports through seasonal and marketing factors; and
- modest growth in the service sector industries.

#### **CHANGE IN STATES' CONTRIBUTION TO GDP** 1983-84 TO 1993-94

Although it is more volatile, movement in South Australia's GSP tends to follow the GDP for the Austra-The South Australian economy lian economy. exhibited the highest growth rate in Australia in 1985-86 but grew more slowly during the period 1986-87 to 1988-89. A further two years of decline followed a high growth rate in 1989-90. Apart from Victoria, the South Australian economy declined more in recession than any other State. An above average recovery in 1992-93 was followed by growth close to the rest of Australia in 1993-94.

#### GROWTH IN GSP AT AVERAGE 1989-90 PRICES(a) Percentage change from Previous Year

(a) Experimental series.

#### Structure of the State Economy

Differences in the industrial composition of State economies can provide insights into the reasons for differences in the economic performance of States.

The structure of the South Australian and Australian economies are broadly similar, although South Australia:

- is more heavily reliant on manufacturing, agriculture, and community services; with
- mining, finance, and electricity, gas and water contributing significantly less to the South Australian economy than the national average.

#### INDUSTRY CONTRIBUTION TO GSP (%)

	South	Australia	Australia		
Industry	1983-84	1993-94	1993-94		
Agriculture, forestry, fishing & hunting	7.3	3.8	3.4		
Mining	3.3	2.3	4.3		
Manufacturing	19.1	18.7	14.8		
Electricity, gas & water	3,6	2.8	3.6		
Construction	7.2	5.8	6.8		
Wholesale & retail trade, accommodation	15.2	15.3	16.4		
Transport, storage & communications	7.6	7.8	7.9		
Finance & insurance, property and business services	6,4	11.4	12.3		
Government administration, education, health & community services	16.8	16.9	15,2		
Culture, recreation, personal and other services	3.4	4.0	3.6		
Ownership of dwellings	7.8	9.1	9.7		
General government	2.4	2.0	2.0		
Total	100.0	100.0	100,0		

Over the decade to 1993-94, the South Australian economy experienced a structural shift from the primary and secondary sectors to the tertiary sector, in particular finance, property and business services.

Primary industries (agriculture and mining) have declined from 10.6% of GSP in 1983-84 to 6.1% in 1993-94. Most of the decline is attributable to agriculture which has fallen from 7.3% to 3.8% of GSP over this period, and is now only marginally higher than the Australian average of 3.4%. The contribution of mining (3.3% in 1983-84) has declined from a peak of 5.3% in 1985-86 to 2.3% in 1993-94. In terms of its contribution to GSP, South Australia's mining sector is approximately one-fifth the size of Queensland and one-eighth the size of Western Australia.

Unlike most other States where there has been a decline in the contribution of manufacturing to GSP (18.1% in 1983-84 to 14.8% in 1993-94 nationally), manufacturing's share of GSP in South Australia has remained fairly constant at approximately 19%. In 1993-94, manufacturing contributed more to GSP than any other industry in South Australia. Of the other States, only Victoria has such a dominant manufacturing sector (18.6% of GSP in 1993-94).

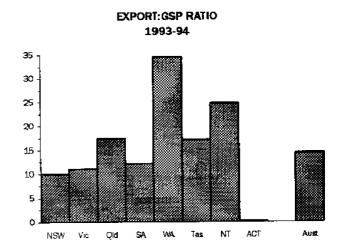

The fastest growing sector of the State economy has been finance, property and business services which has grown from 6.4% of GSP in 1983-84 to 11.4% in 1994-95.

#### **Export Orientation**

A measure of the export orientation of an economy is the exports-to-GDP ratio. (Exports in this article refer to overseas exports only as interstate trade figures are not available for each State.)

South Australia, along with New South Wales, Victoria and the ACT has an inward-looking economy. The most export-orientated economies are the fast-growing economies of Western Australia, Northern Territory, and Queensland. Tasmania also has an export-orientated economy although its economy is slow growing.

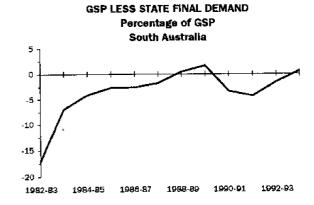

Generally, States with high exports-to-GDP ratios also have relatively large primary sectors.

#### **Gross State Product less State Final Demand**

The difference between GSP and State Final Demand (SFD) is equal to net interstate and international trade in goods and services, increase in stocks plus the statistical discrepancy. Although these items cannot be separately estimated from the available data, net interstate and international trade in goods and services dominate the long-term movements in this series.

The following graph shows the value of this residual as a percentage of GSP over the years 1982-83 to 1993-94. For most of this period South Australia was a net importer with the two year period 1988-89 to 1989-90 and 1993-94 the only years where it was a marginal net exporter.

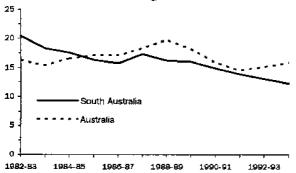

#### **Private Investment**

Major resource developments and differences in the timing of property up-swings and down-swings contribute to differences in investment levels by State.

Private investment in South Australia, as a percentage of GSP, has been consistently lower than the rest of Australia since 1984-85 although the gap has narrowed in some years. From a peak of 20% in 1982-83, private investment as a percentage of GSP has fallen to 12.3% in 1993-94. Dwelling expenditure in 1993-94 grew relatively strongly (up 8.5%) but non-dwelling construction continued to decline to levels experienced during the mid 1980s before the property boom of the late 1980s. Expenditure on equipment has declined in the past two years.

## PRIVATE GROSS FIXED CAPITAL EXPENDITURE Percentage of GSP

#### **Household Income**

GDP per head does not provide a measure of incomes received by residents, because a proportion of incomes generated in the production process may be transferred to other States or overseas (and conversely income may be received from other States or overseas).

Household income, shown in the table below, measures income received by residents (before the deduction of income taxes) from all sources, including

wages and supplements, unincorporated enterprise income, interest, dividends, and personal benefit payments such as pensions, medical benefits and unemployment benefits.

#### HOUSEHOLD INCOME PER HEAD OF MEAN POPULATION 1993-94 (DOLLARS)

State/Territory	Household income (per head of mean population)
New South Wales	19,918
Victoria	19,226
Queensland	17,232
South Australia	17,768
Western Australia	19,022
Tasmania	16,186
Northern Territory	17,672
Australian Capital Territory	25,519
Australia	18,977

Household income per head of population in 1993-94 was highest in ACT and lowest in Tasmania. South Australia now ranks fifth having been overtaken by Western Australia recently.

Differences between States are influenced by a range of factors including:

- average level of wages and salaries per employee;
- proportion of the population in employment;
- age distribution of the population;
- level of dwelling rent (including that imputed to owner occupiers).

#### **Further Reference**

The information in this article has been extracted from the ABS publication, Australian National Accounts State: Accounts, 1993-94 (5220.0).

A further reference is the Bureau of Industry Economics publication, *State Economic Performance*, 1981-82 to 1991-92, Occasional paper 19.

#### **Passenger Transport Cost Index**

The Australian Bureau of Statistics (ABS) was commissioned to develop the Passenger Transport Cost Index, to measure changes in the costs of operating a public transport passenger bus service in Adelaide. The Index will be compiled on a quarterly basis from September 1995, with results available approximately four weeks from the end of the reference quarter. For enquiries, please contact Warren Tabe, ABS, telephone (08) 237 7608.

## Year book 1996

#### Your Complete Reference

The 1996 South Australian Year Book is the State's encyclopaedia – nearly 400 pages of information on natural and social environment, geography, government, population, economy, social conditions, agriculture, manufacturing, commerce, finance, tourism, mining and energy industries.

#### New Features

This edition contains new features on:

- major events that occurred in 1994–95.
- + a regional article on the Fleurieu Peninsula
- cameos on the Cricket Academy, Adelaide Botanic Gardens and Carrick Hill.

For Order Form see the last page of this publication.

#### ABS PUBLICATIONS AND PRODUCTS

Statistics collected by the ABS are generally made available to clients in published form. Some, including those not published, are available in one or more of the following forms: microfiche, magnetic tape, computer printout, CD, floppy disk, photocopy and clerically extracted tabulation.

Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (1101.0). The ABS also issues on Tuesdays and Fridays a Release Advice (1105.0) which lists publications to be released within the next few days. The Catalogue and Publications Advice are available from any ABS Office.

To receive ABS publications on a regular basis contact the ABS Publication Mailing Service on (008) 02 0608.

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS Office.

The ABS Information Consultancy Service has specialist staff to assist and advise clients with

their statistical inquiries. For more detailed information about these services call at the ABS, 55 Currie Street, Adelaide, telephone the Information Officer on (08) 237 7100, or write to Information Service, ABS, GPO Box 2272, Adelaide 5001.

The ABS also provides a Statistical Consultancy Service, for expert assistance in survey, sample and questionnaire design, data collection, processing and analysis, and statistical modelling. For more information contact Gary Niedorfer, telephone (08) 237 7379.
