

CATALOGUE NO. 3101.0 EMBARGOED UNTIL 11.30 A.M. 9 OCTOBER 1995

## AUSTRALIAN DEMOGRAPHIC STATISTICS MARCH QUARTER 1995

NOTE: This issue contains final estimates of resident population of Australia, States and Territories for the financial year 1993–94. Preliminary estimates for September and December 1994 have been revised based on these final 1993–94 estimates.

#### MAIN FEATURES

The estimated resident population of Australia at 31 March 1995 was 18,000,500, an increase of 68,700 in the March quarter and 198,100 since 31 March 1994. The national growth rate during the twelve months to 31 March 1995 was 1.1% compared to 1.0% for the preceding twelve month period.

The increase in population from 17 to 18 million took five years, compared with 3 years 9 months to increase from 16 to 17 million. Natural increase contributed 679,400 (68%) to Australia's eighteenth million compared with net overseas migration of 320,600 (32%). In contrast natural increase contributed 477,900 (48%) and net overseas migration 522,100

(52%) to the seventeenth million. Higher levels of natural increase in Australia since the end of World War II are primarily responsible for much shorter intervals between successive millions, compared with the pre-World War II period. The gap between successive millions has been consistently in the 3 to 6 years range since Australia reached eight million in 1949. However, ABS population projections project that this interval will now increase to around 8 years between successive millions by 2025 due to a projected increase in the numbers of deaths occurring to an ageing population.

## AUSTRALIAN POPULATION GROWTH SINCE EUROPEAN SETTLEMENT, TIME ELAPSED BETWEEN SUCCESSIVE MILLIONS, 1788–1995(a)

Year attained	Population (million)	Interval since previous million attained (years/months)	Year attained	Population (million)	Interval since previous million attained (years/months)

(a) For population estimation purposes, estimates prior to 1961 exclude "full-blood" Aboriginal and Torres Strait Islander people. Estimates for dates earlier than the 1971 Census are based on census counts (actual location) and contain no adjustments for census under-enumeration. Estimates for 1971 and subsequent years are estimated resident populations. (b) From Projections of the Populations of Australia, States and Territories 1993 to 2041 (3222.0) Series A. Series A is used because the assumptions most closely reflect prevailing trends.

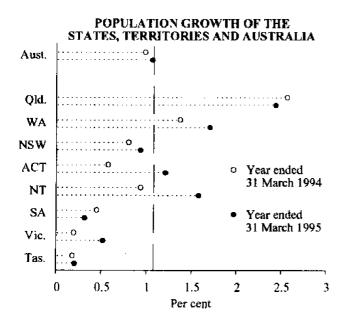

**INQUIRIES** 

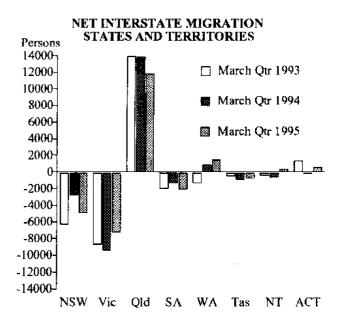

- for further information about statistics in this publication and the availability of related unpublished statistics, contact R. Gogulapati on Canberra (06) 252 7417 or any ABS State office.
- for information about other ABS statistics and services, please refer to the back page of this publication.

In the March quarter the net gain from overseas migration was 32,000, 64% higher than the March quarter 1994 (19,500). This was as a result of a larger increase in permanent and long-term arrivals from 63,500 to 73,300, compared with the increase in departures from 37,800 to 40,800. Natural increase during March quarter was 36,700, much the same as the corresponding quarter in 1994 (36,200).

For the twelve months to 31 March 1995 the population growth rates of Queensland (2.4%), Western Australia (1.7%), Northern Territory (1.6%) and the Australian Capital Territory (1.2%) were higher than the national average of 1.1%. Growth tates below the national average occurred in New South Wales (0.9%), Victoria (0.5%), South Australia (0.3%), and Tasmania (0.2%).

During March quarter 1995 Queensland gained 12,000 persons from net interstate migration, a 15% fall from March 1994 (14,100). Although this is the lowest March quarter gain since 1991 the net gains to Queensland are still historically at a very high level. Western Australia (1,600), Australian Capital Territory (700) and Northern Territory (500) also experienced interstate migration gains. The net loss from Victoria (7,200) was a fall of 23% over the March quarter 1994 (9,400), but still remains at historically high levels. The net interstate migration loss from South Australia during the March quarter 1995 (2,100) was 59% higher than for March quarter 1994 (1,300). This is the highest recorded quarterly interstate migration loss from South Australia. The other States to experience net losses were New South Wales (4,900) and Tasmania (800).

(a) Includes Other Territories' from September quarter 1993 - see paragraphs 1 and 2 of the Explanatory Notes. (b) For dates prior to June 1991, differences between the total increase shown and the sum of the natural increase and net overseas migration arise from retrospective adjustments to population estimates (which are made after each Census) to eliminate any intercensal discrepancy. A description of the intercensal discrepancy is contained in the ABS technical paper (Catalogue no. 3103.0) on the methods and procedures of compilation of population estimates. (c) Final figures for births and deaths are on a year of occurrence rather than year of registration basis, and will therefore differ from Part B of this publication. (d) An adjustment for the effect of persons whose travel intentions changed from short-term to permanent/long-term or vice versa. See paragraph 8 of the Explanatory Notes at the back of this publication. (e) Sum of the net permanent and long-term movement plus category jumping. (f) Increase for the twelve month period up to the end of the quarter.

<sup>(</sup>a) Divorce figures shown refer to dissolutions of marriage only. (b) Many divorces registered in the ACT involve applicants normally resident in areas surrounding the ACT. The ACT rate is therefore not a statistically accurate reflection of the extent of divorce among ACT residents. In 1994, only 39 per cent of ACT divorces granted were to applicants normally resident in the ACT. The corresponding figures for 1989, 1990, 1991, 1992 and 1993 were 39, 35, 37, 38 and 37 respectively.

<sup>(</sup>a) For crude rates, see Tables 14 and 15. (b) For Census years 1947 to 1986 figures are based on Official Life Tables calculated by the Australian Government Actuary. For years after 1986 figures are based on life tables calculated by the ABS. Whereas the annual ABS life tables summarise mortality conditions prevailing for that year, the Actuary's life tables take into account mortality and related conditions for a three-year period (the Census year and the year before and after the census) limiting the effects of short-term fluctuations. (c) Proportion of total live births

#### **EXPLANATORY NOTES**

#### Introduction

This quarterly publication contains estimates of the resident populations of Australia and the States and Territories based on the final results of the Census held on 6 August 1991 (with various adjustments described below in paragraph 5). This publication also contains the latest available statistics of births, deaths (including infant deaths), marriages, divorces and overseas as well as interstate migration. In addition, the publication includes age estimates of the resident population for 1991, 1992, 1993 and 1994. Prior to the September quarter 1993, Jervis Bay Territory is included in estimates for the Australian Capital Territory.

- 2. Following the 1992 amendment to the 'Acts Interpretation Act' to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory level has been created, known as 'Other Territories'. 'Other Territories' include Jervis Bay Territory as well as Christmas Island and the Cocos (Keeling) Islands. Data for 'Other Territories' are included in tables where specifically noted.
- 3. A review of the method of estimating State and Territory populations has identified that there has been underestimation of the Northern Territory population by 1,045 persons in June 1991. No other State or Territory has been affected. A correction for the Northern Territory underestimate has been phased into estimates from September 1991 and is fully incorporated into December 1993 estimates. This phasing in has affected population growth rates. The actual growth rate for the Northern Territory for the year ended 30 June 1994 was 0.92 per cent. Further information is available on request.

#### NOTES AND DEFINITIONS

#### Population and Components of Population Change

- 4. Australia's population estimates for the period since 1971 are compiled according to the place of usual residence of the population. An explanation of the 'place of usual residence' conceptual basis for population estimates is given in *Population Estimates: Concepts. Sources and Methods* (3228.0) issued on 23 June 1995.
- 5. Method of estimation. The estimates of the population of Australia and the States and Territories at the date of the Census of Population and Housing are the adjusted (for under-enumeration) Census Counts, Place of Usual Residence, to which are added the number of Australian residents estimated to have been temporarily overseas at the time of the Census.
- 6. Quarterly estimates of the Australian population are obtained by adding to the population at the beginning of each period components of natural increase (on a usual residence basis) and net overseas migration gain. For the States and Territories, account is also taken of estimated interstate movements involving a change of usual residence. After each Census, estimates for the preceding

intercensal period are provided by incorporating an additional quarterly adjustment (intercensal discrepancy) to ensure that the total intercensal increase agrees with the difference between the estimated resident populations at the two respective census dates.

- 7. Natural increase. Excess of births over deaths by State of Usual Residence.
- Net estimated overseas migration. Figures are based on net permanent and long-term overseas movements (see Overseas Arrivals and Departures section below) with State or Territory 'not stated' allocated pro rata. Short-term movements are excluded. The estimates from July 1976 onwards include an adjustment for the net effect of 'category jumping'. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions from short-term to permanent/long-term or vice versa. For example an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his/her travel category from short-term to long-term. Prior to the December quarter 1989, adjustments for category jumping were only made to final population estimates. These adjustments are now also included in preliminary estimates. For further details see the ABS technical paper, Estimates of Residents Temporarily Overseas, Visitors in Australia and Category Jumping (3104.0), published on 10 March 1983.
- 9. Net estimated interstate migration. Information about internal migration is available from population censuses and from a sample survey of internal movements (conducted at more or less annual intervals to 1987 and resumed in 1991). These sources, however, do not provide the uptodate quarterly estimates of interstate migration required for regular population estimates. The only suitable sources for this purpose are administrative records:
  - (i) Prior to June 1986, quarterly estimates were derived from records of interstate changes of addresses advised to the Department of Social Security in connection with family allowance payments. Family allowance transfer data related to children only, and interstate migration for all ages was based on the expansion of these family allowance data using ratios of adult to child populations. These ratios, calculated for each interstate flow, were based on results from the latest available Census. Data from the Internal Migration Survey were used to constrain the total interstate moves to those revealed by the Survey. Data derived from the ratio expansion method were subject to revision in the light of the more accurate census data. For more information on estimates of interstate migration prior to June 1986 see the ABS occasional paper, Postcensal Interstate Migration Estimates, 1966-1981 which was published in April 1984.

- (ii) Because of difficulties in obtaining adequate coverage of all movements from family allowance transfers, estimates of interstate migration since June 1986 have been derived from unidentified information on interstate changes of address advised to the Health Insurance Commission in the process of administering Medicare. Only Medicare transfers aged 0-14 are used, as most other ages suffer from underregistration of transfers of varying amounts. The method used to expand the 0-14 movers is similar to the previous method, with adult to child expansion ratios based on information from the latest available Census being applied to the Medicare movers data for ages 0-14 for each interstate flow. However, an allowance was introduced for underenumeration of interstate movers in the Census, and for the ageing of the population (which has resulted in increasing adult to child ratios for interstate movers between recent censuses).
- 10. Rates of population growth. These express population change over a period as a proportion (per cent) of the population at the beginning of the period. These rates should be distinguished from crude rates (of births, deaths, marriages and divorces) which are expressed per 1,000 of mean population.
- 11. Mean populations. These are calculated for financial and calendar years to the formula:

mean population = 
$$\frac{a+4b+2c+4d+e}{12}$$

where 'a' is the population at the end of the quarter immediately preceding the twelve month period, and 'b', 'c', 'd' and 'e' are the populations at the end of each of the four succeeding quarters. Mean populations are used in the calculation of crude rates. The weights used in the formulation of the mean annual populations have been derived using a mathematical technique which involves the fitting of two quadratic polynomial functions to a series of points. Further explanation of this procedure is available on request to the ABS.

12. Accuracy of population statistics. It should be noted that while ABS seeks to produce the most accurate estimates of the population possible, the accuracy of the estimates depends on the quality of the source data used. The major sources of potential error are considered to be the census date estimates compiled from the five yearly Census of Population and Housing and estimates of interstate migration based on Medicare transfer data.

#### Births, Deaths, Marriages and Divorces

13. For the compilation of population estimates in Part A, births and deaths by State/Territory of usual residence are used. For preliminary population estimates, births and deaths by quarter of registration are used, but for final estimates year and quarter of occurrence data are used to ensure the accuracy of the single year of age population estimates at ages zero to four. In Part B, the births and deaths data are shown by State/Territory of registration and year/quarter of registration.

- 14. Late registrations. In 1984 there were abnormal delays in the registration process in the New South Wales Registry of Births, Deaths and Marriages. The estimated number of registrations of births which normally would have been expected in NSW in 1984 was 82,392, some 4,000 more than the actual registration of 77,994. This backlog of registrations was made up during 1985, resulting in 87,786 registrations of births, some 4,000 more than would have been expected for the year. Similarly, the estimated number of registrations of deaths which normally would have been expected in NSW in 1984 was 41,089, some 2,000 more than the actual registrations of 39,114. This backlog of registrations was also made up during 1985, resulting in 44,044 registrations of deaths, some 2,000 more than would have been expected for the year. Late registrations in NSW marriages affected 1984, 1985 and 1986. For further information, see ABS publications Births. Australia (3301.0); Deaths, Australia (3302.0) and Marriages and Divorces, Australia (3310.0).
- 15. Live births. A live birth is defined as the delivery of a child, irrespective of the duration of pregnancy, who, after being born, breathes or shows any other evidence of life such as heartbeat.
- 16. Crude birth and death rates. The number of live births or deaths per 1,000 estimated resident population at 30 June. For years prior to 1994, the rates were based on the mean estimated resident population for the calendar year.
- 17. Infant death rate. The number of deaths under the age of twelve months per 1,000 live births registered in the same year.
- 18. Marriages. Under the Australian Marriage Act 1961, marriages may be celebrated by a minister of religion registered as an authorised celebrant, by a district registrar or by other persons authorised by the Attorney General. Notice of the intended marriage must be given to the celebrant at least one calendar month but within 3 calendar months before the marriage. A celebrant must transmit an official certificate of the marriage for registration to a district registrar in the State in which the marriage took place.
- 19. Divorces. The term divorce, as used in this publication, refers to decrees of dissolution of marriage.
- 20. Crude marriage and divorce rates. This is the number of marriages or divorces per 1,000 estimated resident population at 30 June. For years prior to 1994, the rates were based on the mean estimated resident population for the calendar year. (The usefulness of these rates is limited because, in the case of marriages, a large and varying proportion of the population used in the denominator is below the minimum age of marriage or is already married, and, in the case of divorces, a large and varying proportion of the population used in the denominator is unmarried. More refined marriage and divorce rates can be found in the marriage and divorce publications listed under 'Related publications' at the end of this publication).

- 21. Total fertility rate. The sum of agespecific fertility rates (live births at each age of mother per female population of that age). It represents the number of children a woman would bear during her lifetime if she experienced current age-specific fertility rates at each age of her reproductive life.
- 22. Female gross reproduction rate. The sum of female agespecific fertility rates. It represents the number of daughters a woman would bear during her lifetime (assuming she survives to the end of the reproductive period) if she experienced the current female age-specific fertility rates at each age of her reproductive life.
- 23. Female net reproduction rate. This allows for mortality during the child-bearing period. It represents the number of daughters a woman would bear if she was subject to current female age-specific fertility rates and to pre-determined mortality rates.
- 24. Life expectancy refers to the average number of additional years a person of a given age and sex might expect to live if the age-specific death rates of the given period continued throughout his/her lifetime.
- 25. The median duration of marriage at divorce is the duration (in years) which divides the number of marriages dissolved into two halves, one half of these marriages having shorter duration, the other half longer than the duration shown.

#### Overseas Arrivals and Departures

- 26. Persons arriving in or departing from Australia are required to complete prescribed questionnaires in the form of Incoming and Outgoing Passenger cards. These cards provide information to the Department of Immigration and Ethnic Affairs for administrative purposes and serve as the source of statistics of overseas arrivals and departures. In accordance with the Census and Statistics Act 1905, information relating to individuals, individual flights or ships and individual carriers which is contained in these cards or other documents is treated as confidential by the ABS.
- 27. The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are each counted separately). However, the statistics exclude the movements of operational air crew and ships' crew, transit passengers who pass through Australia but are not cleared for entry, and passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages.
- 28. Category of movement. Passengers are classified according to their length of stay (in Australia or overseas) or 'category'. This is primarily determined by the passenger's selection of his or her own category on the passenger card, which is accepted provided it is consistent with other information on the card. There are three main categories permanent, long-term and short-term.
- 29. Permanent movement. Permanent movement comprises arrivals of settlers (i.e. persons who hold

- migrant visas, regardless of stated intended period of stay and New Zealand citizens who indicate an intention to settle) and those who are otherwise eligible to settle (e.g. overseas-born children of Australian citizens) and permanent departures of Australian residents (including former settlers) i.e. those who on departure state they do not intend to return to Australia.
- 30. Long-term movement. Long-term movement is defined as the arrivals of visitors (except those who hold migrant visas see paragraph 29 above) and the temporary departures by Australian residents with the intention to stay, in Australia or abroad respectively, for twelve months or more, together with the departure of visitors and the return of Australian residents who had stayed, in Australia or abroad, for twelve months or more (see also paragraph 32 below).
- 31. Short-term movement. Movements of travellers whose intended or actual period of stay is less than twelve months are classified as short-term except those who on arrival hold migrant visas (see also paragraph 32 below).
- 32. A significant number of travellers (i.e. visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to Australia are therefore classified as shortterm. Accordingly, in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
- 33. Estimation method. Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated and processed. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
- 34. The statistics in this publication have been rounded, to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
- 35. State of residence. State of residence refers to the State regarded by the traveller as the one in which he/she lives or last lived. State of intended residence is derived from the intended address given by settlers, and by Australian residents returning after a journey abroad. Particularly in the case of the former, this information does not necessarily relate to the State in which a traveller will eventually establish a permanent residence.

- 36. Country of birth. The classification of countries in this publication is based on the Australian Standard Classification of Countries for Social Statistics (ASCCSS). For more detailed information refer to the ABS publication Australian Standard Classification of Countries for Social Statistics (1269.0). Political developments in Europe, the Former USSR and Africa have resulted in a number of changes to the ASCCSS, which are detailed in Revisions 1.01, 1.02 and 1.03 of the ASCCSS. Revision 1.03 came into effect for March 1994 data.
- 37. Overseas arrivals and departures statistics by country of birth have certain limitations. For instance, it is not possible to separately identify England, Scotland and Wales ('United Kingdom').

#### Related publications

38. Detailed annual demographic statistics appeared for many years in the annual publication *Demography* which ceased after the issue for 1971. Since then, annual statistics have been contained in the publications listed below.

Births, Australia (3301.0).

Deaths, Australia (3302.0).

Marriages and Divorces, Australia (3310.0).

Migration, Australia (3412.0).

Estimated Resident Population by Sex and Age: States and Territories of Australia (3201.0).

39. Other publications of interest are:

Overseas Arrivals and Departures, Australia (3401.0). A short release of the latest monthly statistics.

Projections of the Populations of Australia, States and Territories 1993 to 2041 (3222.0). Based on preliminary estimated resident population at 30 June 1993, this publication was released in May 1994.

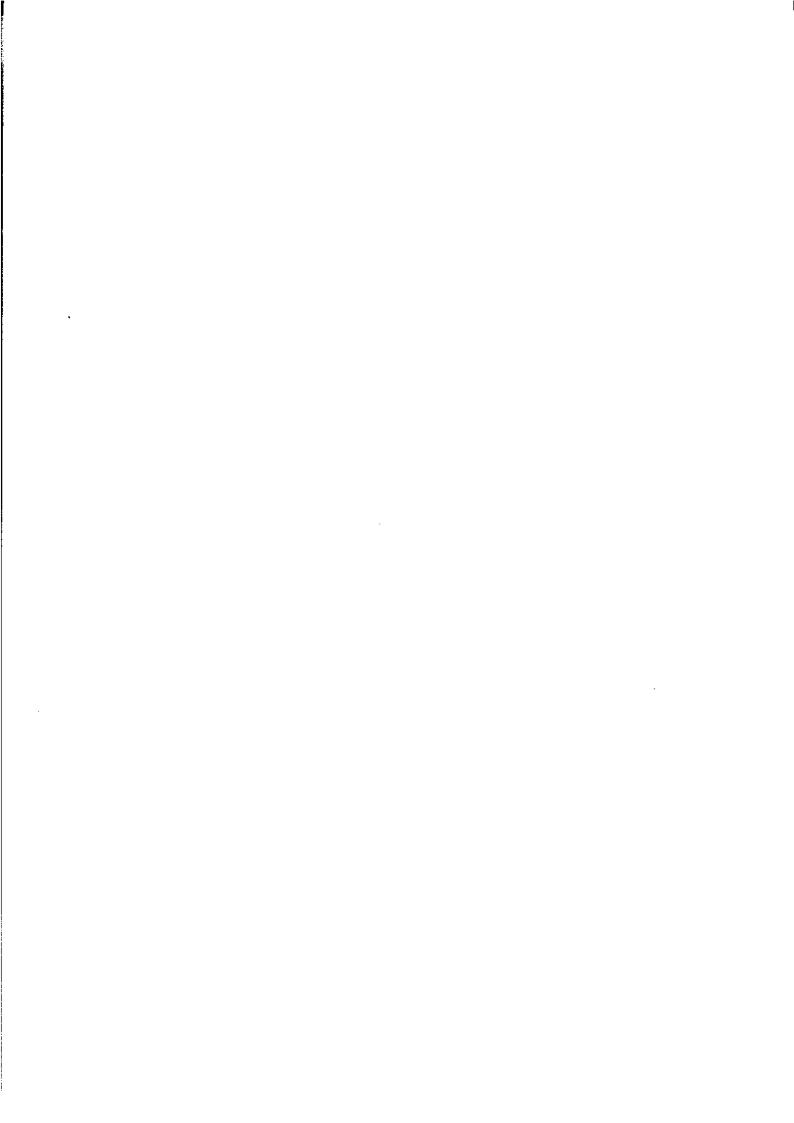

Australian Life Tables, 1990-92, prepared by the Australian Government Actuary and available from the Australian Government Publishing Service bookshops or Mail Order Sales Services.

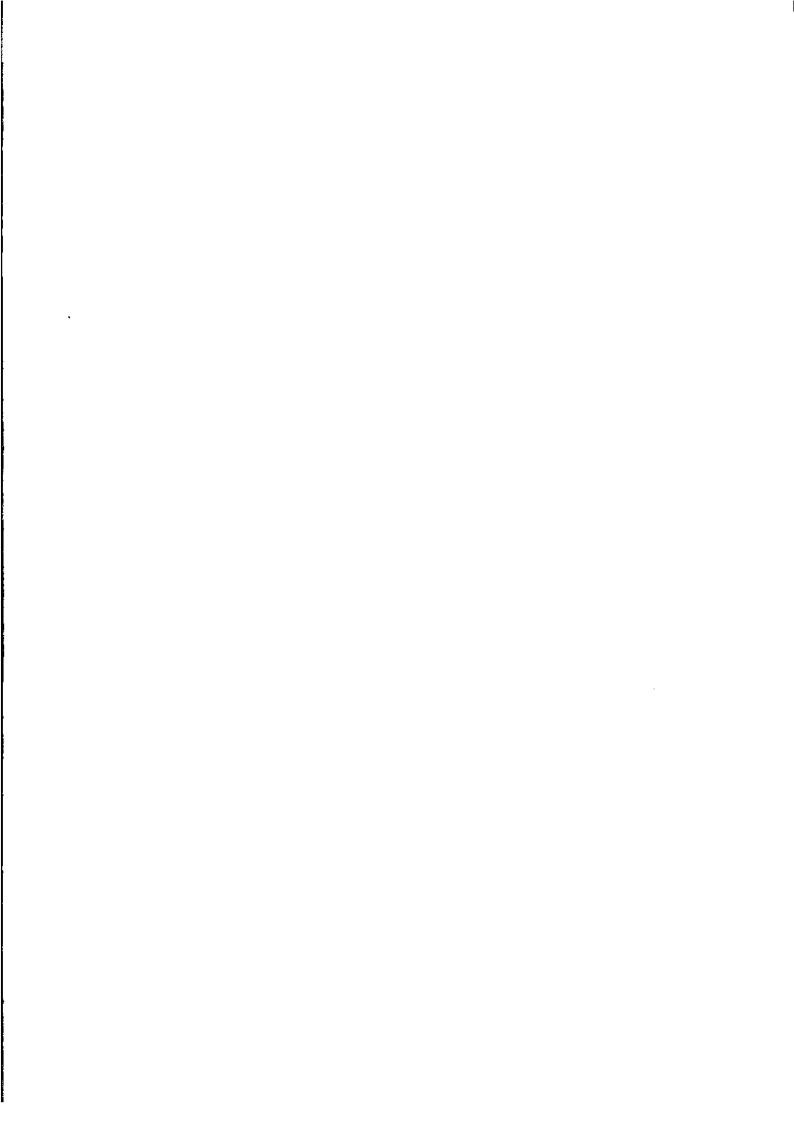

- 40. A compendium of all demographic data for each State is released annually in a state specific publication, *Demography*. The first release contained 1990 data.
- 41. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products. Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.
- 42. Statistics of overseas arrivals and departures and related data are also published regularly by the Department of Immigration and Ethnic Affairs (see that Department's Australian Immigration, Consolidated Statistics) and by the Australian Tourist Commission (on international travel and tourism).

#### Symbols and other usages

- r figures or series revised since previous issue
- p preliminary figure or series subject to revision
- n.a. not available
- n.f.d. not further defined
- n.y.a. not yet available
- . . not applicable
- nil or rounded to zero
- break in continuity of series (where drawn across a column between consecutive figures)
- 43. In this publication population estimates have generally been rounded to the nearest hundred. Neither rounded figures, nor unrounded figures should be assumed to be accurate to the last digit shown.
- 44. Where figures have been rounded, discrepancies may occur between sums of component items and totals.

W. McLennan Australian Statistician

## For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the ABS Catalogue of Publications and Products available at all ABS Offices (see below for contact details).

## Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

#### ABS Products

A large number of ABS products is available from ABS bookshops (see below Bookshop Sales for contact details). The ABS also provides a subscription service — you can telephone the ABS Subscription Service Australia wide toll free on 1800-02-0608.
