AUSTRALIAN DEMOGRAPHY.

PREFACE.

The present issue of the Demography Bulletin, which is the fifty-seventh of the series, furnishes particulars for 1939 and previous years. An abridged summary giving details for States and Territories for 1901, 1906, and 1911 to 1939 is included in Section VIII. of the present issue. Similar tables covering the period 1860 to 1938 may be found in Demography Bulletin No. 56, 1938.

An additional section has been added to the present issue which presents, in summary form, the principal vital statistics of the European and Asiatic populations of Nauru, New Guinea, Norfolk Island and Papua. A table has also been added (*see* page 52) showing the Gross and Net Reproduction Rates for Australia from 1933 to 1939.

In Sections III., Births, and IV., Deaths, the tabulations have been made according to the place of usual residence. The classification of occupations appearing in Sections III., IV. and V. follows the classification used in the Census of England and Wales, 1931, which was adapted to the requirements of the Australian Census of 1933. In Section IV., Deaths, the classification of causes of death is in accordance with the " International List of Causes 1929 " (International Commission, Paris, 1929).

The tables have been re-numbered in the present issue of the Demography but follow the same form as in the previous year.

Population estimates and migration records have been adjusted on the basis of the results of the various censuses, including that of the 30th June, 1933, and all rates have been computed on the amended mean population figures so ascertained.

To facilitate reference to the matter contained in the various sections of the Demography, a detailed alphabetical Index will be found at the end of the volume.

Compilation of the statistics in this Bulletin was completed under the supervision of Dr. Roland Wilson. Thanks are expressed to the various State Departments responsible for the registration of births, deaths, and marriages for the valuable assistance rendered by them in supplying the data for the compilation of the Vital Statistics. Special thanks are due to Mr. E. H. Harry, B.A., B.Com., the officer in charge of the compilation of the Vital Statistics in this Bureau, for the care and attention which he has devoted to the work involved.

Acting Commonwealth Statistician.

(*a*) For rates of increase by migration see Table No. 139. (*b*) The high figure for 1938 is due to unrecorded migration disclosed by the Census of the Australian Capital Territory taken on 30th June, 1938. Revised populations estimates obtained by spreading this amount over the five-year period 1934 to 1938 are shown in Tables Nos. 3–6 on pages 8–13.

(a) Per 1,000 of mean population.

NOTE.—The mean populations shown above for divisions in 1939 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has not been possible to give separate estimates of the migratory population for 1939 in all cases. In Queensland, Western Australia and Tasmania the proportion representing migratory population is absorbed automatically in the divisional totals in the process of computation of the mean population.

(a) Number of births per 1,000 of mean population. (b) The birth rates for the Australian Capital Territory in the table above are based on births which actually occurred in the Australian Capital Territory. Until recently, a large proportion of births, normally applicable to the Territory as the mother's usual place of residence, took place in Queanbeyan, just over the New South Wales border, but with improved hospital facilities in the Territory the movement to outside hospitals rapidly diminished and was actually reversed in 1939. The birth rates for all births applicable to the Territory are as follows:—1925, 20.87; 1926, 22.41; 1927, 21.16; 1928, 23.38; 1929, 23.28; 1930, 22.07; 1931, 21.40; 1932, 20.00; 1933, 19.06; 1934, 17.59; 1935, 19.52; 1936, 17.07; 1937, 21.28; 1938, 18.88; 1939, 20.02. (c) Revised rates based on mean populations adjusted in accordance with the results of Census of 30th June, 1938.

(a) Number of deaths per 1,000 of mean population.

NOTE.—The mean populations shown above for divisions in 1939 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has not been possible to give separate estimates of the migratory population for 1939 in all cases. In Queensland, Western Australia and Tasmania the proportion representing migratory population is absorbed automatically in the divisional totals in the process of computation of the mean population.

(*a*) Number of deaths per annum per 1,000 of mean population. (*b*) Computed by the application to a population of standard age and sex distribution, of the death rates for age groups according to sexes. (For standard population adopted, see *Official Year Book* No. 22, page 962.) The death rates for each State and Territory and for the Commonwealth in 1939 are based on the proportion of population in each age group revealed at the Census of the 30th June, 1933, and the results are, therefore, liable to error on account of the changed age constitution of the population since that date. It has been possible to obtain, from records of migration and of births and deaths in successive years since the Census, a more accurate estimate of the age distribution for the Commonwealth as a whole and the recalculated indexes of mortality for the Commonwealth for 1939 on this basis are as follows:—Males, 9.62; females, 7.86; persons, 8.73.

NOTE.—Comparison of causes of death in the table above with years prior to 1931 should be made with caution owing to changes in classification which occurred in 1931 when the 1929 revision of the International Nomenclature of Causes of Death was adopted in Australia. The connexion between the former classification title numbers and present ones is set out in detail in a footnote to this table in No. 53 and previous issues of the Demography.

Causes in respect of which no deaths occurred have been omitted from this table. A complete classification of causes of death is given with Table No. 77.
