---

## PREFACE.

---

The present issue of the Demography Bulletin, the sixtieth of the series, furnishes particulars for 1942 and previous years.

In the interests of economy, it has been necessary to curtail the amount of information usually presented although every endeavour has been made to retain that which is most useful. Much detail formerly published relating to the 1933 Census has been omitted and the section dealing with migration is not published. Vital statistics for the External Territories are incomplete for 1942 and cannot therefore be included.

Tabulations in Sections III., Births, and IV., Deaths, have been made according to the place of usual residence. The classification of occupations appearing in these sections is the classification used in the Census of England and Wales, 1931, as adapted to the requirements of the Australian Census of 1933, and further amended in 1939. In Section IV., Deaths, the classification of the causes of death is mainly in accordance with the "International List of Causes, 1938" (International Commission, Paris, 1938), with slight modifications to suit Australian conditions.

For the years 1939 to 1942 estimates of population include Australian defence personnel (irrespective of their location) in the States and Territories from which they enlisted. Allied defence personnel, internees sent to Australia from overseas and prisoners of war are excluded from estimates of population. Deaths of Australian defence personnel recorded during the years 1939 to 1942 have all been deducted from the population estimates for the year 1942. Deficiencies in data prevent an accurate distribution over the years affected. Separate estimates of civil population have been made but are not at present available for publication. The deaths as recorded in Section IV. exclude deaths of defence personnel and, therefore, relate to Australian resident civilian population. Death-rates for the years 1939 to 1942 are calculated on that population and are therefore approximate, subject to revision.

To facilitate reference to the subject-matter of the bulletin, a detailed index will be found at the end of the volume.

Thanks are expressed to the various State Government Departments responsible for the registration of births, deaths and marriages for the valuable assistance rendered by them in supplying the data for the compilation of the Vital Statistics. Special thanks are due to Mr. R. J. Linford, B.Com., who has been mainly responsible for the compilation of the Vital Statistics, for the care and attention which he has devoted to the work involved.

S. R. CARVER,  
Acting Commonwealth Statistician.

(a) Number of births per 1,000 of mean population.

(b) Not available.

NOTE.—The mean populations shown above for divisions in 1942 are the respective State Statisticians' estimates and are based on data obtained from various local sources. The results differ from those published prior to 1935 as in earlier years the estimates of population used in the table above were calculated for each division according to the proportions ascertained at the previous Census. Owing to the varying methods adopted in the States, it has not been possible, in all cases, to give separate estimates of the migratory population for 1942.

(a) Number of births per 1,000 of mean population.

(b) Not available.

No. 30.—Gross and Net Reproduction Rates (a): Australia, 1932 to 1942.

Year.	Gross Reproduction Rate.(b)	Net Reproduction Rate.(c)
1932 ..	1.061	0.967
1933 ..	1.052	0.959
1934 ..	1.030	0.939
1935 ..	1.032	0.941
1936 ..	1.060	0.967
1937 ..	1.075	0.981
1938 ..	1.069	0.976
1939 ..	1.080	0.986
1940 ..	1.100	1.004
1941 ..	1.154	1.053
1942 ..	1.156	1.056

(a) The rate for each year is calculated on the basis of births in each year. (b) The "gross" reproduction rate is the estimated average number of female children born to every woman who lives through child-bearing age. (c) The "net" reproduction rate allows for the effects of mortality and is an index of the number of women who, in the next generation, will replace the women of reproductive age in this generation.

NOTE.—The mortality experience used throughout the table above for the calculation of the net reproduction rate is that for the period 1932-1934.

No. 31.—Ex-nuptial Births, 1932 to 1942.
