MAIN FEATURES

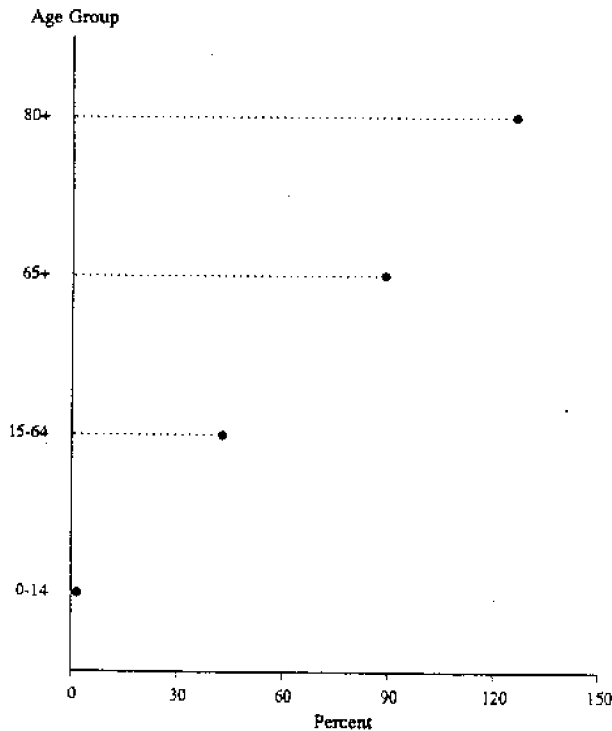

Preliminary estimates of the Australian population by sex and age as at 30 June 1993 show that the population is continuing to age. The median age as at 30 June 1993 was 33.0 years, an increase of 5.5 years since 1971, 1.9 years since 1986 and 0.3 years since 30 June 1992.

Since 1971 there has been little growth (2%) in the number of children (aged less than 15 years) in the population. However, over the same period, the number of persons of working age (15 years to 64 years) has increased by 43 per cent and the number of aged persons (aged 65 years and over) has increased by 89 per cent. Declining mortality and the resulting increase in life expectancy is continuing to have a major impact on the older age groups. There are now 426,300 persons aged 80 years and over in the population compared with 188,800 in 1971, an increase of 126 per cent. There are twice as many females as males in this age group (281,100 compared with 145,200).

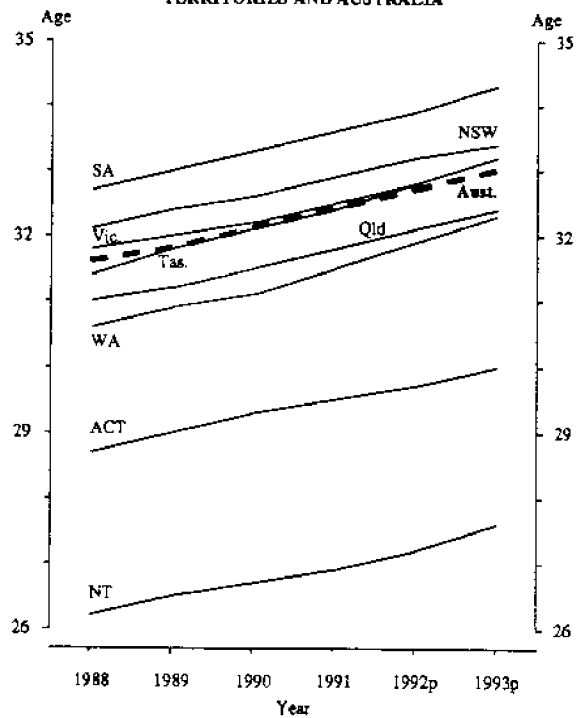

At 30 June 1993, the Northern Territory was the only State or Territory with a median age less than 30 years (27.6 years). South Australia has the highest median age (34.3 years) followed by New South Wales (33.4 years), Victoria and Tasmania (33.2 years), Queensland (32.4 years), Western Australia (32.3 years) and the Australian Capital Territory (30.0 years).

The 'dependency ratio' (persons aged 0-14 years and persons aged 65 and over per 100 population aged 15-64) is continuing to increase (from 49.8 in 1992 to 50.1 in 1993). While the aged dependency ratio has continued to steadily increase (from 17.2 in 1992 to 17.5 in 1993), the decline in the child dependency ratio has slowed. The Northern Territory has the highest child dependency ratio (40.3 persons aged 0-14 years per 100 population aged 15-64) while South Australia has the highest aged dependency ratio (20.3 persons aged 65 and over per 100 population aged 15-64).

(a) Minus sign indicates a decrease. (b) Average annual compound rate of growth.

EXPLANATORY NOTES

Introduction

This publication contains preliminary estimates of the resident populations by sex and age, of the States and Territories of Australia, as at 30 June 1992 and 1993. Mean ages, median ages, sex ratios and dependency ratios for the States, Territories and Australia are also included.

Resident population estimates series

2. Australia's population statistics (for the period from 1971) are compiled according to the place of usual residence of the population.

3. An explanation of the conceptual basis for population estimates is given in the ABS technical paper, *Methods and Procedures in the Compilation of Estimated Resident Population 1981 and in the Construction of the 1971-81 Time Series* (3103.0), issued on 11 March 1983.

Method of estimation

4. The estimates by age of the population of Australia and the States and Territories at the date of the Census are derived from the Census Counts, Place of Usual Residence, by adjusting for underenumeration and adding the number of Australian residents estimated to have been temporarily overseas at the time of the census.

5. Post-censal age distributions are obtained by advancing the estimates to the next age, subtracting deaths and adding births and net estimated interstate and overseas migration. After each census final estimates for the preceding intercensal period are provided by incorporating an additional adjustment (intercensal discrepancy) to ensure that the total intercensal increase at each age agrees with the difference between the estimated resident populations at the two respective census dates.

6. Estimates of overseas migration are based on net permanent and long-term overseas movements as recorded on passenger cards completed by incoming and outgoing travellers, for the Department of Immigration and Ethnic Affairs. Short-term movements are excluded but an adjustment for the net effect of *category jumping* has been included since July 1976. This adjustment is necessary because net permanent and long-term migration figures can be affected by changes in travel intentions, as when an Australian resident departing for a short-term visit overseas (stating that he/she intends to stay abroad for less than 12 months) in fact stays more than 12 months, thereby changing his/her travel category from short-term to long-term. An ABS technical paper, *Estimates of Residents Temporarily Overseas, Visitors in Australia and Category Jumping* (3104.0), was published on 10 March 1983.

7. Information about internal migration is available from population censuses and from a sample survey of internal movements conducted annually. These sources, however, do not provide the up-to-date estimates of interstate migration required for updating post-censal

population estimates. The only suitable sources for this purpose are administrative records:

(i) Prior to June 1986, estimates were derived from records of interstate changes of addresses advised to the Department of Social Security by Family Allowance recipients.

(ii) Because of difficulties in obtaining adequate coverage of all movements from Family Allowance transfers, estimates of interstate migration since June 1986 have been derived from unidentified information on interstate changes of addresses advised to the Health Insurance Commission in the process of administering Medicare. Only Medicare transfers aged 0-14 are used, as most other ages suffer from under-registration of transfers of varying amounts. These are expanded using adult to child expansion ratios based on information from the latest available Census for each interstate flow. An allowance is made for underenumeration of interstate movers in the Census, and for the ageing of the population (which has resulted in increasing adult to child ratios for interstate movers between recent censuses).

Definitions

8. *Sex ratio*. Male population per 100 female population.

9. *Median age*. The age at which half the population is older and half is younger.

10. *Mean age*. The average age of the population.

11. *Dependency ratio*. The ratio of the dependent population (aged 0-14 and 65 and over) per 100 persons of working ages (15-64 years), as defined by the United Nations.

Reliability

12. All estimates of age distributions are shown in units without being rounded. However, accuracy down to the last unit is not claimed and should not be assumed. This is particularly the case for single year age data.

13. Single year age estimates are not shown for persons aged 85 years or older. The reliability of age estimates decreases as older ages are reached. However, estimates for each age up to 99 have been calculated and are available on request.

Related publications

14. Four previous issues of this series containing consolidated data were issued on 23 August 1982 (containing estimates for the years 1971 to 1976), 22 July 1983 (containing estimates for the years 1977 to 1982), 8 December 1987 (containing estimates for the years 1981 to 1987) and 21 July 1993 (containing estimates for the years 1987

to 1992). Other ABS publications which may be of interest to users of this publication include:

Australian Demographic Statistics (3101.0)

Estimated Resident Population by Marital Status, Age and Sex, Australia (3220.0)

Estimated Resident Population by Country of Birth, Age and Sex, Australia (3221.0)

Projections of the Populations of Australia, States and Territories, 1989 to 2031 (3222.0)

Births, Australia (3301.0)

Deaths, Australia (3302.0)

Overseas Arrivals and Departures, Australia (3404.0)

Interstate Migration, Australia (3411.0)

15. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Publications Advice (1105.0)* which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.
