SUMMARY OF FINDINGS

The estimated resident population of the Australian Capital Territory (excluding Jervis Bay Territory) as at 30 June 1994 was 300,900, an increase of 2,700 since June 1993. The A.C.T. growth rate for 1993/94 was 0.9 per cent, compared with a growth rate of 1.5 per cent for the previous financial year.

The lower growth rate in 1993/94 was largely due to decreasing net estimated interstate migration levels (from a net gain of 1,600 persons in 1992/93 to a net loss of 200 persons in 1993/94). Over the same period, net estimated overseas migration and natural increase remained relatively constant.

Population growth varied considerably between subdivisions in 1993/94. Only Outer Canberra (up 2,500 or 52.1%, as a result of the development of the new suburbs of Palmerston, Ngunnawal and Nicholls) and Tuggeranong (up 2,460 or 2.9%) showed positive growth. The population increase in Outer Canberra was approximately the same as for the previous year, while the population growth in Tuggeranong slowed. Belconnen (down 750 or 0.9%), Central Canberra (down 600 or 1.0%), Woden Valley (down 440 or 1.3%) and Weston Creek (down 430 or 1.6%) continued to decline in population.

Suburbs that experienced significant population increases included Palmerston (up 1,500), Gordon (up 1,100), Banks (up 900), Ngunnawal (up 800), Conder (up 400), Melba (up 300) and Nicholls (up 250), while Monash, City, Phillip, Belconnen Town Centre and Kingston all recorded modest increases of 100 persons. There were no significant declines with Kaleen (down 170), Campbell (down 150), Flynn (down 140), Curtin (down 130) and Wanniasa (down 130) recording the largest decreases.

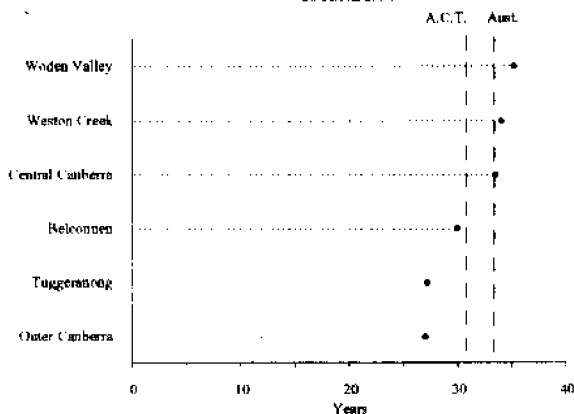

The population of the Australian Capital Territory is continuing to age, following the national trend. The median age as at 30 June 1994 was 30.4 years, an increase of 5.9 years in the last twenty years, 2.6 years in the last ten years and 0.4 years since 30 June 1993. However, the A.C.T. has a much younger population than for Australia as a whole, being 3.0 years lower than the Australian median age of 33.4 years.

The highest median age among the subdivisions was in Woden Valley (35.2 years), followed by Central Canberra (33.5 years), Weston Creek (34.0 years), Belconnen (29.9 years), Tuggeranong (27.2 years) and Outer Canberra (27.0 years). The suburbs with the highest median ages were Campbell (40.2 years), Chapman (40.0 years), Forrest (39.7 years), Deakin (39.6 years), Pearce (39.6 years)

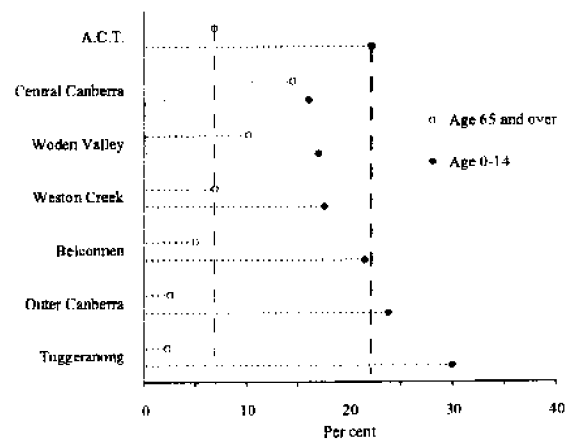

and Yarralumla (39.3 years). Suburbs with the lowest median age included Duntroon (20.4 years) which largely comprises cadets and other military personnel, Acton (20.7 years) which contains a high proportion of university students, City (22.2 years) and Bruce (23.2 years) which includes the Australian Institute of Sport athletes and university students.

1,430 persons aged 85 years and over in the A.C.T. population compared with 290 twenty years ago, a fourfold increase. Together, the suburbs of Narrabundah, Farrer, Red Hill, Ainslie and Curtin accounted for more than 20 per cent of all persons aged 85 years and over in the Australian Capital Territory.

MEDIAN AGE OF ESTIMATED RESIDENT POPULATION
AUSTRALIAN CAPITAL TERRITORY SUBDIVISIONS
30 JUNE 1994

PROPORTION OF POPULATION IN SELECTED AGE GROUPS
30 JUNE 1994

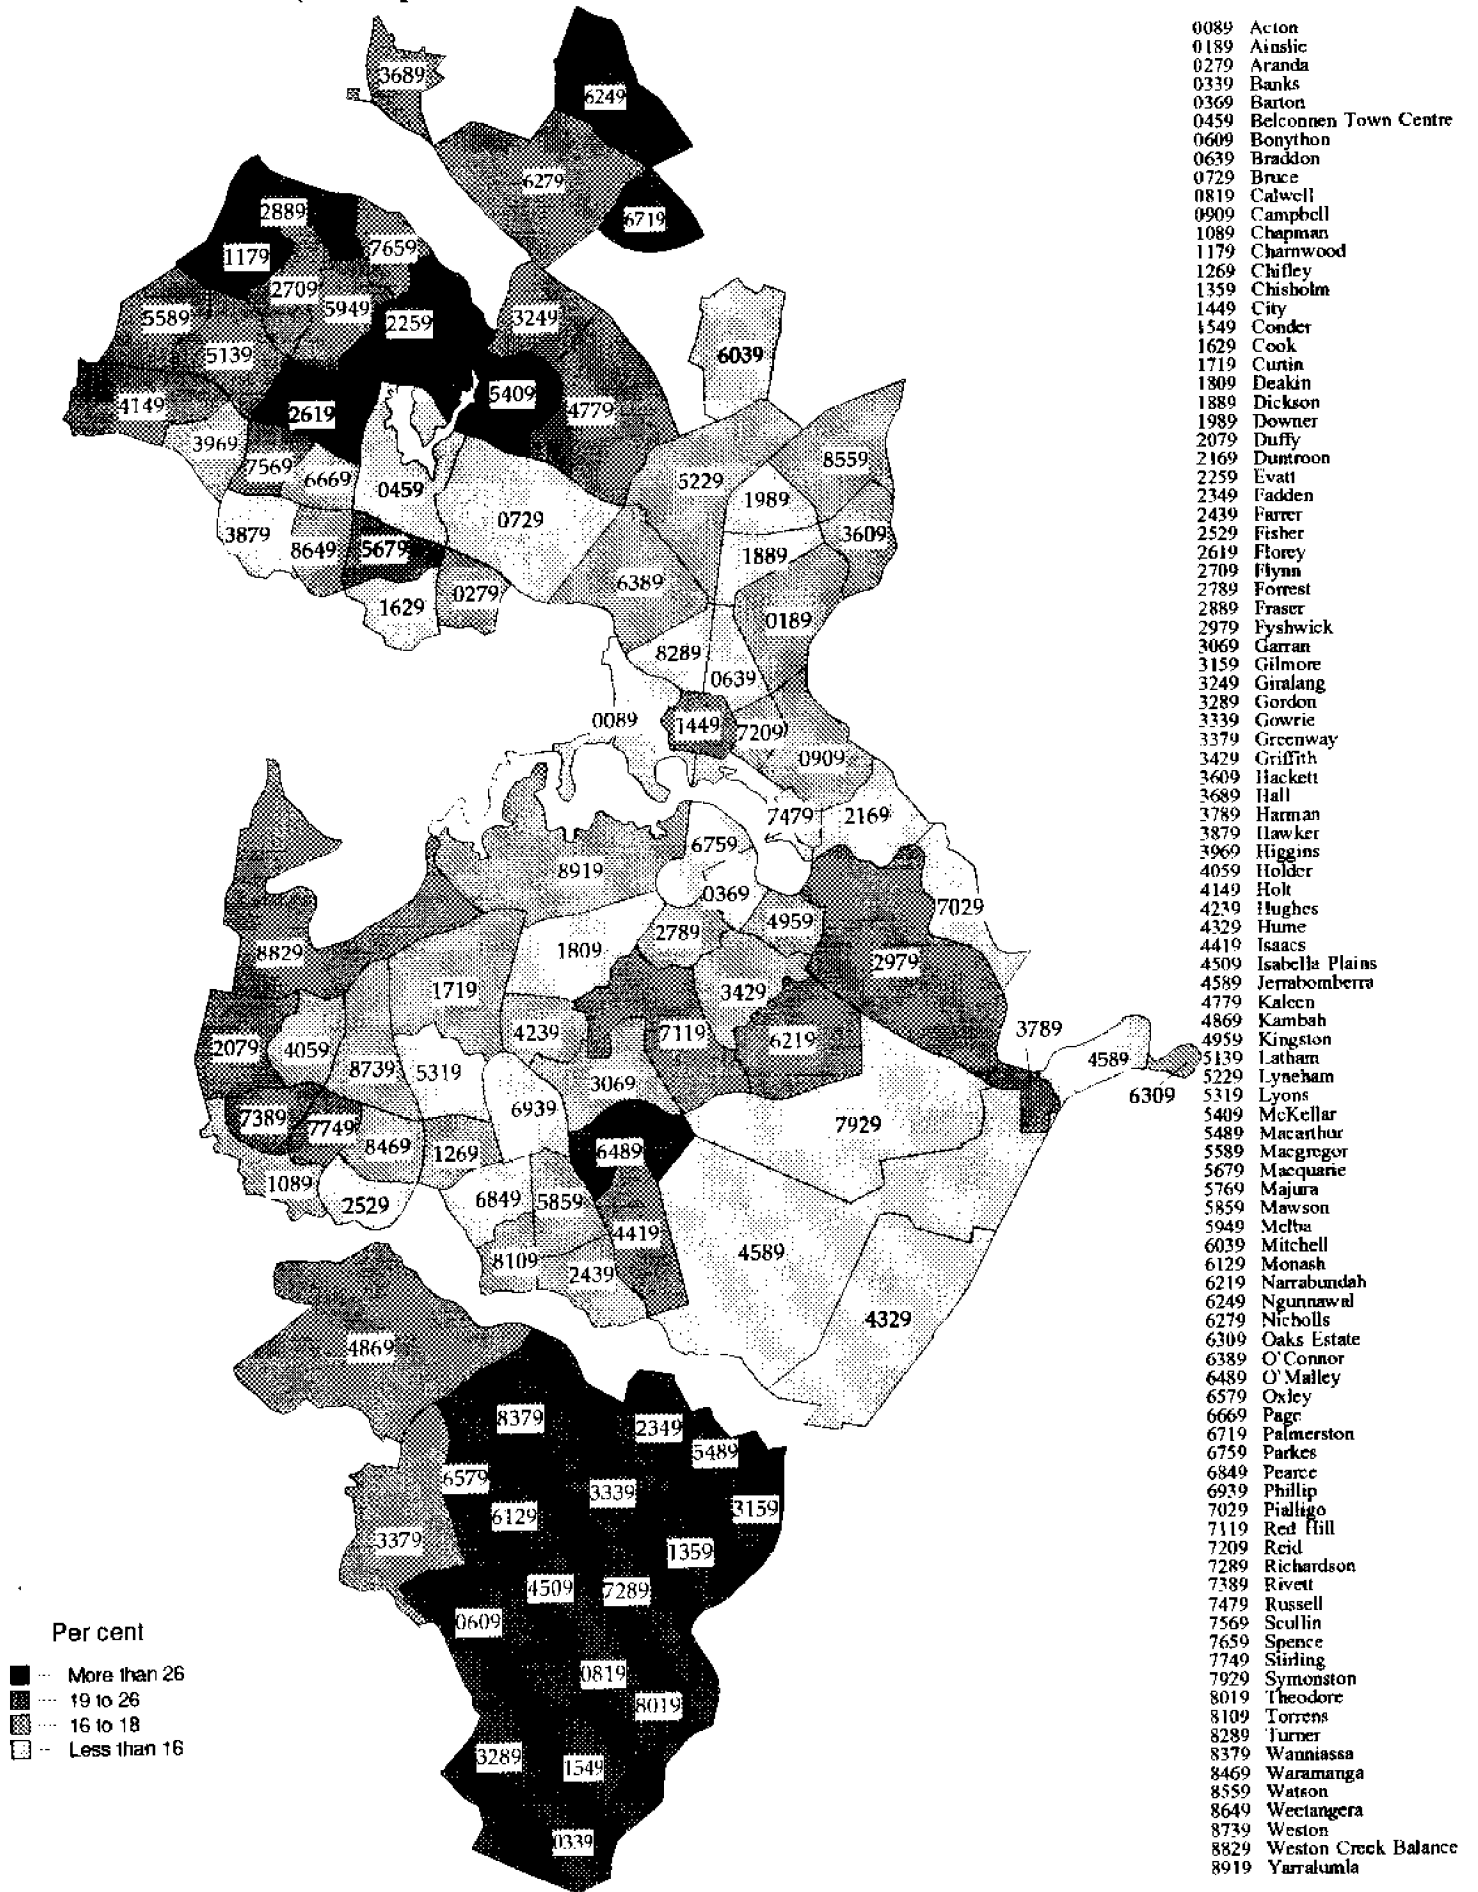

Children aged 0 to 14 years accounted for 22.2 per cent of the population of the A.C.T. as at 30 June 1994 compared with 31.7 per cent twenty years ago. The subdivision with the highest proportion of its population in the 0-14 years age group was Tuggeranong (30.0%), followed by Outer Canberra (23.8%), Belconnen (21.6%), Weston Creek (17.6%), Woden Valley (17.0%) and Central Canberra (16.1%). The suburbs with the highest proportion of children aged 0-14 years, Gilmore (36.1%), Chisholm (35.6%), Theodore (35.2%), Richardson (34.8%) and Macarthur (34.0%), are all in the Tuggeranong subdivision. The suburbs of Acton (1.4%), Barton (7.3%), Belconnen Town Centre (8.6%) and Symonston (9.4%) recorded the lowest proportions of children aged 0 to 14 years.

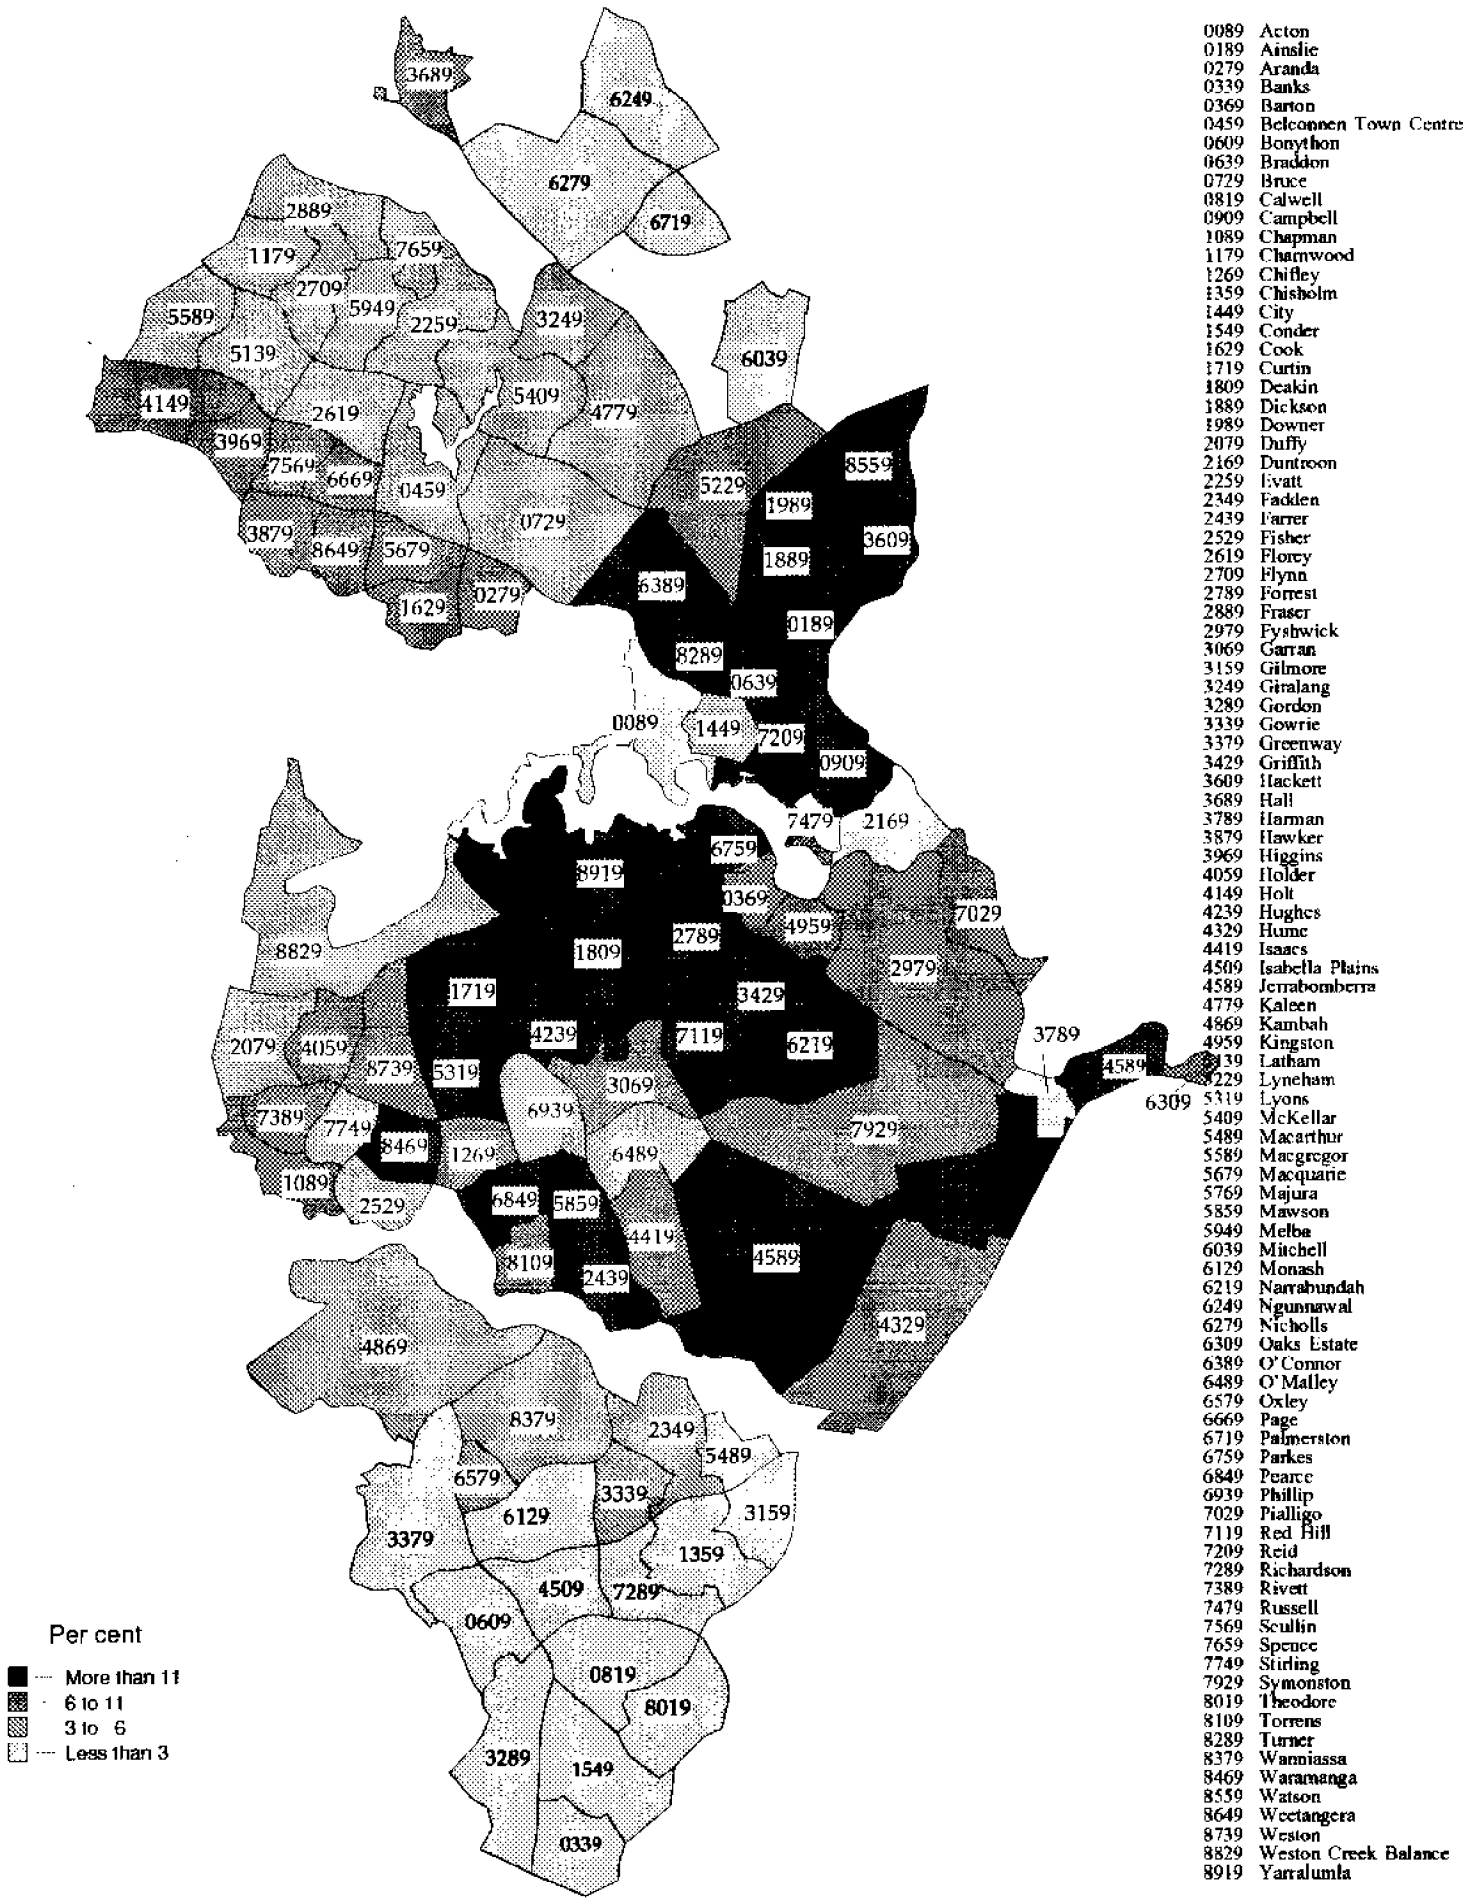

Declining mortality and the resulting increase in life expectancy is continuing to have a major impact on the older age groups. The 65 years and over age group comprised 6.9 per cent of the population of the A.C.T. as at 30 June 1994 compared with 2.9 per cent twenty years ago. Central Canberra had the highest proportion of its population aged 65 years and over (14.6%). Woden Valley had the next highest proportion (10.3%), followed by Weston Creek (7.0%), Belconnen (5.1%), Outer Canberra (2.6%) and Tuggeranong (2.4%). While Central Canberra accounted for only 20 per cent of the total A.C.T. population, the subdivision contained nearly half of A.C.T. residents aged 65 years and over. There are now

Age structures vary considerably across subdivisions. Central Canberra has many more persons aged 20 to 24 years compared with any other age group. This is primarily due to the large number of university students resident in Acton and surrounding suburbs, and military cadets at Duntroon. The subdivision also contains a large group of persons aged in their late 60s and early 70s. These persons mostly reside in the inner city suburbs, and in a band from Narrabundah, through Red Hill, Griffith, Deakin, to Yarralumla. In comparison, Belconnen, Woden Valley and Weston Creek have a proportionally high number of families. The subdivisions of Belconnen and Woden Valley also have substantial numbers of persons aged 20-24 years living in or near their town centres. Belconnen Town Centre (30%), Phillip (22%), Bruce (21%) and Lyons (15%) have very high proportions of persons aged 20-24 years. Of the A.C.T. subdivisions, Tuggeranong and Outer Canberra have the highest proportions of children aged 0-14 years and the lowest proportions of persons aged 65 years and over. Reflecting these high proportions of children, both Tuggeranong and Outer Canberra have large percentages of their population in the 20-34 age group, with Outer Canberra having a higher proportion of younger families than Tuggeranong.

0-14 years, selected SLA's, Canberra, 1994 (as a per cent of all persons)

65 and years and over, selected SLA's, Canberra, 1994 (as a per cent of all persons)

(a) Excluding Jervis Bay

EXPLANATORY NOTES

Introduction

This publication contains estimated resident populations by age and sex for the Statistical Local Areas (SLAs) of the Australian Capital Territory at 30 June 1994. Estimates for the A.C.T. do not include Jervis Bay Territory.

2. Area statistics are classified according to the *Australian Standard Geographical Classification* (1216.0). The SLAs in Canberra equate directly with the suburbs. Details for the adjacent (N.S.W.) Queanbeyan subdivision are not included in this publication. They are published in *Age and Sex Distribution of the Estimated Resident Population of Statistical Local Areas, New South Wales* (3209.1).

Estimated Resident Population

3. The Estimated Resident Population of an area is the estimate of the number of persons who usually reside in that area.

4. An explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics for official population estimates, is contained in the ABS technical paper, *Methods and Procedures in the Compilation of Estimated Resident Population 1981 and in the Construction of the 1971-81 Time Series* (3103.0), issued on 11 March 1983.

Methodology

5. The figures in this publication were obtained by the following demographic cohort method:

(a) Estimates by age and sex in SLAs at 30 June 1991 (based on the 1991 Census) were used as the base for updating.

(b) Estimates of total persons in each SLA at 30 June 1994 are derived from estimates of the number of occupied dwellings and their occupancy ratios. For each suburb the number of occupied private dwellings is estimated by using domestic electricity connections and enumerations of the number of occupied dwellings supplied by A.C.T. Administration. Historical housing occupancy trends derived from census counts are used to estimate occupancy rates for dwellings. These are applied to the number of occupied private dwellings to give an estimated population for each suburb. Births and student numbers are also used as indicators of population size.

(c) The total population growth for each SLA during 1993-94 was then split into natural increase and net migration components. Natural increase was derived for each SLA from birth and death registration statistics for 1993-94. Net migration

was derived for each SLA as the difference between total population growth and natural increase.

(d) Age/sex migration profiles were derived for each SLA from 1986 census data on usual residence one year prior to the census date. Profiles were produced for:

(i) Inter-SLA arrivals – persons residing in the SLA whose usual residence one year ago was in another SLA within Australia.

(ii) Inter-SLA departures – persons whose SLA of usual residence one year ago was that SLA but whose residence at the date of the census was another SLA within Australia.

(iii) SLA overseas arrivals – persons in the SLA whose usual residence one year ago was overseas.

SLA overseas departures profiles were derived using an average for the last three years of overseas departures data by usual residence for the A.C.T., obtained from passenger cards.

(e) Using the migration profiles and the derived net migration component for an SLA, the age/sex distribution of the net migration component was compiled for that SLA. The net migration estimates for all SLAs by age and sex were further adjusted to add to the net migration estimates for the A.C.T. by age and sex which were derived independently from other sources of statistics (Medicare and overseas arrivals and departures statistics). This distribution and data on deaths by age, and births in each SLA were then added (or subtracted) to the 1991 estimates described in (a) above. The totals for each age/sex group were then forced to add to the A.C.T. total for that age/sex group.

Geographic Boundaries

6. The geographic areas used in this publication are defined in the *Australian Standard Geographical Classification, Edition 2.2* (1216.0). The boundaries of SLAs used in determining the population are those in existence at 30 June 1994. The population for previous years have been adjusted where appropriate so that they reflect the population changes for each area had the June 1994 boundaries existed then.

Reliability

7. Although estimates of resident population are shown to the nearest unit, accuracy to this level is not claimed and should not be assumed.

Data on disk

8. Data is available on disk upon request.

10. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia (1101.0)*. The ABS also issues, on Tuesdays and Fridays, a *Release Advice (1105.0)* which lists publications to be released in the next few days. The *Catalogue* and *Release Advice* are available from any ABS office.

Symbols and other usages

- .. not applicable
- nil or rounded to zero
- p preliminary figure subject to revision

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

ABS Products

A large number of ABS products is available from ABS bookshops (see below Bookshop Sales for contact details). The ABS also provides a subscription service – you can telephone the ABS Subscription Service Australia wide toll free on 1800 02 0608.

National Dial-a-Statistic Line
