Regional Population Growth

Australia

NOTES

CHANGES IN THIS ISSUE This special 1996 Census Edition of Regional Population Growth provides the preliminary estimates of resident populations of every Statistical Local Area in Australia at 30 June 1996 based on the results of the 1996 Census of Population and Housing. Estimates of the resident population at 30 June 1991 adjusted to 1996 geographic boundaries, and growth between 1991 and 1996 are also included.

SUMMARY OF FINDINGS Population change

NATIONAL

Between 30 June 1991 and 30 June 1996 Australia's estimated resident population grew by 1.0 million to 18.3 million. The average annual growth rate for the period was 1.2%.

STATE

Between 30 June 1991 and 30 June 1996, population growth occurred in every State and Territory. Queensland recorded the largest increase in population (378,200) and also the highest average annual growth rate of 2.4%, well above the rate for Australia as a whole. The average annual growth rates for the Northern Territory (1.9%), Western Australia (1.5%) and the Australian Capital Territory (1.3%) were also above the Australian rate. Tasmania recorded both the lowest growth for the period (7,800) and the lowest annual percentage growth (0.3%). The average annual growth rates for South Australia (0.4%) and Victoria (0.6%) were also less than 1%.

Queensland, with 18% of Australia's population at 30 June 1996, accounted for 37% of the population growth during 1991-96. In contrast, Victoria, with 25% of Australia's population, contributed only 14% to growth for the period (140,400). Interstate migration was the main factor causing these variations.

CAPITAL CITY/BALANCE OF STATE

About two-thirds of Australia's population growth (655,100) occurred in capital city statistical divisions (SDs). Sydney experienced the largest increase in population (206,500) while Brisbane grew most rapidly (2.3%). The smallest population increase was recorded by Hobart (5,100) while Adelaide had the lowest average annual growth rate (0.4%).

In most States and Territories, balance of State areas grew more slowly than the capital city SD. The exceptions were Queensland and the Northern Territory. The balance of Queensland experienced both the largest population growth (215,600) and the highest average annual growth rate (2.6%), exceeding the rate of growth in any capital city. The population grew very slowly in the balances of Victoria (13,100 or 0.2%), Tasmania (2,700 or 0.2%) and South Australia (6,100 or 0.3%).

SUMMARY OF FINDINGS Local government areas

LARGEST POPULATION CHANGES

POPULATION INCREASES

The Gold Coast was the local government area (LGA) with the greatest increase in population between 1991 and 1996. It grew by 74,200, with an average annual growth rate of 4.8%. It outstripped Brisbane, with the second largest population increase of 55,100, by 19,100. Further, the Gold Coast's average annual growth rate (4.8%) was much higher than Brisbane's (1.4%).

Of the 20 LGAs with largest increases in population, nine were located in Queensland. Apart from Cairns in the far north, all these LGAs were clustered in and around Brisbane and along the Sunshine Coast and Gold Coast. Caboolture, recorded the fifth highest average annual growth rate (7.3%) of any LGA in Australia.

Wanneroo in the northern metropolitan area of Perth experienced the third largest population increase (38,000 or 4.0% average annual growth). Swan, east of Wanneroo, and Rockingham, in south-west Perth also recorded large population increases (16,900 and 17,400 respectively), with Rockingham's average annual growth rate of 6.9% being the tenth highest in Australia.

The pattern of high growth in metropolitan LGAs was repeated in New South Wales and Victoria. Casey in the south-east of Melbourne and Hume in the north of Melbourne grew by 32,000 and 14,300 respectively. The five New South Wales LGAs in the top 20 were located in the outer west and northern fringe of Sydney.

POPULATION DECLINES

Declines in population in LGAs were of a much smaller magnitude than increases. However, the 20 LGAs with the largest declines were more widely distributed across Australia in both metropolitan and country areas.

Almost half the metropolitan LGAs with large declines in population were located in Melbourne. Monash in east Melbourne recorded the largest population loss (5,800) of any LGA.

Adelaide had four of the 20 LGAs with the largest population losses. Elizabeth in north Adelaide recorded the second largest loss of any LGA (3,400 people).

Five of the LGAs with largest declines were communities which have economies dependent on mining or manufacturing — La Trobe (3,300), East Pilbara (3,200), Broken Hill (2,400), Roebourne (2,100) and Mount Isa (2,100). East Pilbara recorded an average annual rate of decline of 7.2%, the highest rate of decline of any LGA in Australia, and means that in 5 years it lost over 30% of its population.

SUMMARY OF FINDINGS Local government areas *continued*

SUMMARY OF FINDINGS Statistical local areas

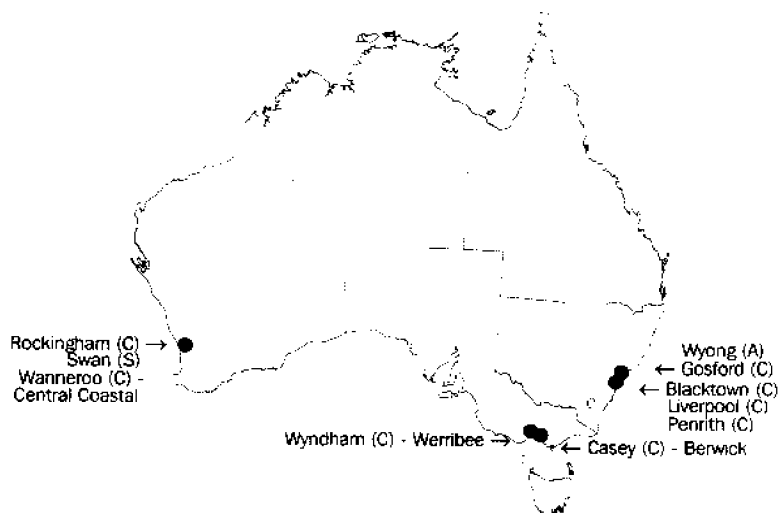

LARGEST INCREASES IN POPULATION

Between 1991 and 1996, 15 out of the 20 statistical local areas (SLAs) exhibiting the largest increases in population were located on the outskirts of Sydney, Melbourne and Perth. In Sydney the greatest increases occurred in the large SLAs located to the west and north of the city, such as Liverpool (C), Blacktown (C), Gosford (C), Wyong (A) and Penrith (C). In Melbourne some of the largest population growth occurred in Casey (C) - Berwick and Casey (C) - Cranbourne in Melbourne's south east with large increases also occurring in two SLAs, Wyndham (C) - Werribee and Brimbank (C) - Keilor, in Melbourne's west. In Perth, four SLAs experienced relatively large increases in population from 1991 to 1996. While Rockingham (C), in Perth's south, exhibited the largest increase, three SLAs to the north of Perth also grew considerably. The four SLAs in the top 20 that were outside the capital cities were located along the coastal fringes of Western Australia and Queensland.

The SLA with the largest growth was Liverpool (C) in the western suburbs of Sydney which grew by 23,100 people or 23% between 1991 and 1996. This represents an average annual growth rate of 4.2%. Blacktown, which is also located in Sydney's west, grew by 10% between 1991 and 1996 (an average annual growth rate of 1.9%). Casey (C) - Berwick, located in south-eastern outer Melbourne also experienced large growth. From a base of 28,100 people in 1991 it grew by 63% to 45,700 people in 1996 (an average annual growth rate of 10.2%).

The distribution of SLAs experiencing the highest percentage growth was quite different from the distribution of those SLAs exhibiting the largest numeric increases. Of the top 20 SLAs, 14 were in Queensland and six of those were located on the Gold Coast. Two relatively new outer Canberra suburbs, Palmerston and Gordon, were in the top three, with almost all of their development occurring after 1991. This was a feature of most of these SLAs which started from relatively small population bases in 1991 and have grown rapidly as a result of high in-migration and/or high natural increase.

SLAS WITH LARGEST INCREASES IN POPULATION—1991-96

INDIVIDUAL SLAS WITH INCREASING POPULATION

LIVERPOOL (C)

From 1991 to 1996, Liverpool (C), located in Sydney's west, experienced the largest increase in population of all SLAs in Australia. In 1991 the estimated resident population for Liverpool (C) was 101,400 but by 1996 this had grown by 23,000 to 124,400, representing an increase of 23% over the five-year period. Within this SLA, population gains occurred in all age groups up to 50–54 years. The highest population gains were among people under 35 years, particularly 0–4 year olds. These gains indicate that young families have contributed to the high growth of this SLA through a combination of migration and births. Between 1991 and 1996 Liverpool (C) exhibited some population loss in the group who were aged 55 years and over, indicating that a proportion of people in this age group have left to retire or to move to smaller houses once their children have left home.

CASEY (C) - BERWICK

Casey (C) - Berwick, located in south-eastern outer Melbourne, experienced the third highest increase in population of all SLAs in Australia and the highest increase of all Victorian SLAs. The estimated resident population of this SLA grew from 28,100 in 1991 to 45,700 in 1996, increasing by 63% over the five-year period. This SLA experienced increases in population in all age groups although the largest increases occurred in the 0–4 and 25–34 year age groups which are also the largest age groups for Casey (C) - Berwick. While families already living within this SLA are having children, much of the growth within the SLA is occurring due to in-migration of young families or young couples.

ROCKINGHAM (C)

Rockingham (C), located to the south-west of Perth, experienced the fourth largest increase in Australia and the largest in Western Australia. Its estimated resident population grew from 44,200 in 1991 to 61,600 in 1996, an increase of 39%. Between 1991 and 1996 all age groups within this SLA experienced increases in population with the exception of those aged 75 years and over. The largest increases occurred in the 0–14 and the 25–39 year age groups. The largest age groups in Rockingham (C) are the 5–9, 0–4 and the 30–34 age groups which comprise 8.7%, 8.6% and 8.4% of the population, respectively. The large gains within these age groups indicate that the migration of young families to Rockingham has played an important role in its growth.

WANNEROO (C) - NORTH WEST

Located north of Perth city, this relatively new residential area had the fifth largest growth rate of any SLA in Australia in 1996, growth of 25% per annum in the five-year period to 1996. In 1991, the estimated resident population was 5,900 which trebled to 17,900 in 1996. Each age group up to the 70–74 years age group grew dramatically in the five-year period to 1996. The loss in population in the 75–84 years age group in 1996 may have been due to both out-migration as well as deaths occurring in these age groups. Interestingly, the number of people aged 85 years and over rose slightly showing that this SLA attracted older people who moved to the area to be with family

SUMMARY OF FINDINGS Statistical local areas *continued*

or enter retirement villages. The major contributors to the expansion were young families migrating to the SLA, reflected in the large numbers in the 25–34 years and 0–9 years age groups. Young married couples who moved to the area are also having babies. In addition, a large number of families with teenage children migrated to the SLA, with the 35–44 years and 10–14 years age groups being the next largest age groups. There were also large numbers of the 20–24 years age group, which includes single people, who moved to the area in the period.

PARKWOOD

The population of Parkwood, a relatively new suburb in the Gold Coast, has quadrupled in the five years to 1996, from 1,800 in 1991 to 7,300 in 1996. This SLA had the fourth highest average annual increase for any SLA in Australia rising by 32% per annum between 1991 and 1996. The population in all age groups contributed to the growth. Like the Wanneroo (C) – North West SLA, Parkwood's growth was mostly attributed to the migration of young families and young married couples bearing children while living in the SLA. This is emphasised by the largest age groups being the 0–9 years and 30–39 years age groups. The migration of couples with teenagers also contributed to the increase. People in the 20–24 years age group, which includes singles and young couples, also moved to the SLA during the period. While there was a slight increase in the number of elderly living in the SLA, due to in-migration and few elderly deaths, those aged 70 years and over only accounted for 1% of the population in 1996.

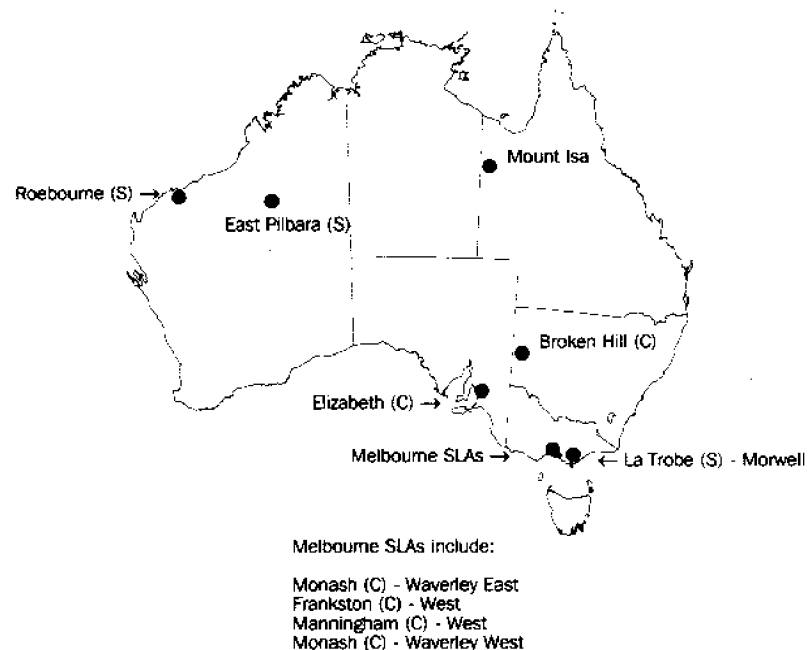

LARGEST DECLINES IN POPULATION

Between 1991 and 1996, 15 out of the 20 SLAs exhibiting the largest declines in population were SLAs located in Victoria and South Australia. Of these, 11 were relatively large SLAs located in the urban areas of Melbourne and Adelaide. In Melbourne the SLAs experiencing the largest population losses were located in an arc along its eastern side, from Frankston (C) - West in the south, through four SLAs in Eastern Middle Melbourne, to Darebin (C) - Preston in Melbourne's north. Outside of Victoria and South Australia, the four SLAs that experienced relatively large population losses were located in the non-metropolitan mining areas of Western Australia, New South Wales (Broken Hill) and Queensland (Mount Isa).

From 1991 to 1996 the SLA experiencing the greatest population loss was Monash (C) - Waverley East which is located in Melbourne's east. This SLA lost 6% of its population from 1991 to 1996, experiencing an average annual rate of decline of 1.2%. The northern Adelaide SLA of Elizabeth (C) experienced a smaller population decline of 3,400 but this represented a loss of 11% of its population in five years with an average annual rate of decline of 2.4%. The East Pilbara (S) SLA in the mining area of northern Western Australia experienced the third largest population decline between 1991 and 1996. This large, sparsely populated SLA lost 31% of its population over the five-year period with a loss of 3,200 people.

SLAs experiencing high percentage declines in population were found in all of the States and Territories and were generally, although not exclusively, located in non-metropolitan areas, while five of the top 20 were located in Queensland. East Pilbara (S) experienced the largest rate of decline, with the Tasmanian SLA, West Coast (M), ranking second due to a loss of 17% of its population between 1991 and 1996. Murweh (S), located in the south-west of Queensland experienced the highest rate of population decline in Queensland. From 1991 to 1996 this small SLA lost 14% of its population.

(b) For SLAs with population greater than 5,000 at 30 June 1996.

INDIVIDUAL SLAS WITH DECLINING POPULATION

MONASH (C) - WAVERLEY EAST

From 1991 to 1996, Monash (C) - Waverley East, which is located in eastern Melbourne, recorded the largest population loss of all the SLAs in Australia. In 1991 the estimated resident population was 64,500 but by 1996 this had fallen by 3,700 to 60,800, a loss of 6%. This loss is associated with its changing age structure. It is likely that between 1991 and 1996 many families within Monash (C) - Waverley East had children who were at an age where they were likely to leave the parental home as this SLA experienced large population losses in the 20-29 year age group. People in this age group are particularly mobile as they leave home to undertake further education or enter the labour force for the first time. Additionally, this SLA lost people who are aged 55 years and over and it is likely that many of these people have retired elsewhere. While out-migration of young adults and retirees appears to account for much of the population loss in Monash (C) - Waverley East, there does appear to be some rejuvenation of this SLA through the in-migration of younger families.

ELIZABETH (C)

Elizabeth (C), located in northern Adelaide, experienced the second largest population loss of all SLAs in Australia. In 1991 the estimated resident population was 29,800 but by 1996 this had fallen by 3,400 to 26,400, representing a loss of 11% of its population. In contrast to Monash (C) - Waverley East, Elizabeth (C) experienced a population decline due to out-migration in all age groups, although losses were particularly large in those age groups representing young families and young adults.

EAST PILBARA (S)

East Pilbara (S), a large geographical SLA in Western Australia, is sparsely populated with only 0.02 people per square kilometre, although most of the population is concentrated near the Tom Price mine. Between 1991 and 1996 the population declined by one-third to 6,900, the third largest decrease for any SLA in Australia. This represented an average annual growth rate of decline of 7%, the greatest percentage decline for all SLAs. During this period, there was a decline in population in all age groups, with the exception of those aged 20-24 years and 85 years and over. Most of the decline occurred among the largest age groups of 25-39 years and 0-9 years in 1991, illustrating movement out of the SLA by younger families. There are very few people aged 55 years and over in the area, indicating that people of this age group chose to retire or seek employment elsewhere. The migration out of this SLA has been linked to changing employment prospects in the mining industry.

WEST COAST (M)

West Coast (M), located in Tasmania, recorded the second largest average annual decrease for any SLA in Australia (4%). The population declined by 17% from 7,700 in 1991 to 6,400 in 1996. This silver, lead and zinc mining area experienced declines in all age groups between 1991 and 1996, similar to that of East Pilbara (S). The greatest declines occurred in the 30-39 and 5-14 years age groups, illustrating the out-migration of families. There was also a substantial loss of those aged 15-19, who either migrated out with their family or separately sought education and employment elsewhere.

SUMMARY OF FINDINGS Statistical local areas *continued*

MURWEH (S)

Murweh (S) is situated in the drought affected area of Queensland's south west. Between 1991 and 1996 there was a loss of 3% per annum in the estimated resident population to 5,000 in 1996, the third largest percentage decline for any SLA in Australia. The population in all age groups declined during the period. There was a substantial loss in the peak 25-39 age group, among whom are parents of children aged 5-14 years. The decline in employment in agriculture and services to agriculture partly explains the movement. Interestingly, there was in-migration of females in the 20-24 year age group but this was offset by a large proportion of males in this age group who migrated out of the SLA. Although there were many people of retirement age leaving the area, nearly 16% of the population in this SLA were aged 55 and over in 1996.

BROKEN HILL

Broken Hill, in far western New South Wales, suffered a population loss of 2,400 during the five-year period to 1996. This represented a decline of 10%, bringing the population to 22,000 in 1996. There were losses in all age groups, although these were highest in the 20-24 years age group, which includes single adults finding employment or education elsewhere. In 1991 the peak age group was 30-34 years and in ageing five years to 35-39 years in 1996, it was still the largest age group in the SLA. Broken Hill has large numbers of parents with young children and people aged 65 years and over.

EXPLANATORY NOTES

INTRODUCTION

- 1** This publication contains estimates of the resident population of the SLAs, States, Territories and Australia and a selection of LGAs. The estimates for 1991 are final. The estimates for 1996 are preliminary.
- 2** SLAs are ranked according to both numerical and average annual growth between 1991 and 1996, allowing this publication to identify, in two ways, areas in Australia with the largest increases and declines in population.
- 3** SLAs with estimated resident population of less than 5,000 in 1996 (less than 10% of Australia's total population) are excluded from the percentage ranking.
- 4** Following the 1992 amendment to the Acts Interpretation Act to include the Indian Ocean Territories of Christmas Island and Cocos (Keeling) Islands as part of geographic Australia, population estimates at dates commencing from July 1993 include estimates for these two Territories. To reflect this change, another category of the State/Territory classification was created, known as Other Territories. Other Territories include Jervis Bay Territory as well as Christmas Island and the Cocos (Keeling) Islands. Data for Other Territories are included in tables where specifically noted. Prior to July 1993, Jervis Bay Territory was included in estimates for the Australian Capital Territory.

ESTIMATED RESIDENT POPULATION

- 5** The estimated resident population of an area is the estimate of the number of persons who usually reside in that area irrespective of where they were on the date of the estimate.
- 6** The estimated resident population of an area at a Census of Population and Housing date is based on the census count (place of actual location) for the area with adjustments made by:
 - excluding all visitors who normally reside elsewhere (i.e. overseas or in another area within Australia);
 - including residents of the area who were counted in another area within Australia;
 - including residents of the area who were temporarily overseas (i.e. for less than 12 months) on census night; and
 - adjusting for census under-enumeration as measured by the post-enumeration survey taking into account differences in under-enumeration by age, sex and geographic location.
- 7** Adjustments were made for births, deaths and net migration for the period 30 June to 6 August (the Census date in both 1991 and 1996) to arrive at estimated resident population figures for 30 June 1991 and 30 June 1996.
- 8** A detailed explanation of the concept of estimated resident population, as adopted by the Australian Bureau of Statistics (ABS) for official population estimates, is contained in the ABS *Information Paper: Population Estimates: Concepts, Sources and Methods* (Cat. no. 3228.0).

STATISTICAL AREAS

- 9** This publication contains data presented according to the Australian Standard Geographical Classification 1996 Edition (ASGC). Under this classification, statistical areas are defined as follows:
 - *Legal Local Government Areas (LGAs)*. These areas are the spatial units which represent the geographical areas of incorporated local government councils and incorporated Community Government Councils (CGCs) where the CGC is of sufficient size and statistical significance. The various types of LGAs are

EXPLANATORY NOTES *continued*

cities (C), areas (A), rural cities (RC), towns (T), shires (S), district councils (DC) and municipalities (M);

- *Statistical Local Areas (SLAs)*. These geographical areas are, in most cases, identical with, or have been formed from a division of, whole LGAs. In other cases, they represent unincorporated areas. In aggregate, SLAs cover the whole of a State or Territory without gaps or overlaps. In some cases legal LGAs overlap statistical subdivision boundaries and therefore comprise two or three SLAs (Part A, Part B and, if necessary, Part C);
- *Statistical Subdivision (SSDs)*. These are of intermediate size, between SLAs and SDs. In aggregate, they cover the whole of Australia without gaps or overlaps. They are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. In the non-urban areas an SSD is characterised by identifiable links between the economic units within the region, under the unifying influence of one or more major towns or cities.
- *Statistical Divisions (SDs)*. These consist of one or more SSDs. The divisions are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region, under the unifying influence of one or more major towns or cities.

10 Further information concerning statistical areas is contained in *Statistical Geography: Volume 1 Australian Standard Geographical Classification (ASGC), 1996 Edition* (Cat. no. 1216.0).

11 For the purposes of this publication, all data refer to bounded areas as defined at 1 July 1996. The 1996 ASGC included LGA boundaries that were gazetted prior to 5 August 1995 (the Census cut-off date) and SLA boundaries notified prior to 30 June 1996. Changes to LGA boundaries that have occurred between 5 August 1995 and 30 June 1996 are documented in the Appendix.

MAPS

12 A complete series of maps showing the areas mentioned in this publication is available in *Statistical Geography: Volume 1 Australian Standard Geographical Classification (ASGC), 1996 Edition* (Cat. no. 1216.0)

ROUNDED FIGURES

13 Population figures over 1,000 in the text of this publication are rounded to the nearest hundred, and figures less than 1,000 are rounded to the nearest 10. While unrounded figures are provided in tables, accuracy to the last digit is not claimed and should not be assumed.

AVERAGE ANNUAL RATE OF GROWTH

14 The average annual rate of population growth, r , is calculated as a percentage using the formula:

where P_{91} is the estimated resident population at 30 June 1991 and P_{96} is the estimated resident population at 30 June 1996.

ELECTRONIC DATA

18 Population estimates for SLAs at 30 June 1991 and 1996 by five year age groups age and sex on 1996 Census boundaries are available electronically. The ABS catalogue number is 2023.0 (KEYDATA). Telephone enquiries should be made initially to Information Services (see the back of this publication for telephone numbers). For further information about related unpublished statistics or data concepts, contact Chris Mason on (06) 252 6522.

APPENDIX Changes to LGAs—5 August 1995 – 30 June 1996

State/LGA name	Nature of change
New South Wales	
Botany (A)	Botany was renamed Botany Bay and proclaimed a City
Coolah (A)	Enlarged by approx 1.57 sq km from Mudgee (A)
Dubbo (C)	Enlarged by six separate areas totalling 1811.88 ha from Narromine (C)
Greater Taree (C)	Enlarged by approx 4.7 ha from Hastings (A)
Gunning (A)	Reduced by approx 3138 sq mtrs to Mulwaree (A)
Hastings (A)	Reduced by approx 4.7 ha to Greater Taree (C)
Leichhardt (A)	Reduced by approx 456 sq mtrs to South Sydney (C)
Mudgee (A)	Reduced by approx 1.57 sq km to Coolah (A)
Mulwaree (A)	Enlarged by approx 3138 sq mtrs from Gunning (C)
Narromine (A)	Reduced by six separate areas totalling 1811.88 ha to Dubbo (C)
Shellharbour (A)	Shellharbour was proclaimed a City
South Sydney (C)	Enlarged by approx 456 sq mtrs from Leichhardt (A)
Victoria	
Ararat (RC)	Enlarged by transfers from Moyne (S) and Southern Grampians (S)
Buloke (S)	Minor boundary adjustments with Northern Grampians (S)
Greater Bendigo (C)	Minor boundary adjustments with Mitchell (S)
Horsham (RC)	Minor boundary adjustments with Southern Grampians (S)
Mitchell (S)	Minor boundary adjustments with Greater Bendigo (C)
Moyne (S)	Enlarged by transfer from Southern Grampians (S)
Northern Grampians (S)	Reduced by approx 3,949 ha to Yarriambiack (S); minor boundary adjustments with Buloke (S)
Southern Grampians (S)	Reduced by transfers to Ararat (RC) and Moyne (S); minor boundary adjustments with Horsnam (RC)
Yarriambiack (S)	Enlarged by approx 3,949 ha to include part of Northern Grampians (S)
South Australia	
Enfield (C)	Reduced by 37.93 ha (involving Walkley Heights) from Enfield (C) - Pt A to Salisbury (C)
Enfield (C)	Amalgamated with Port Adelaide (C) to form Port Adelaide Enfield (C)
Kapunda (DC)	Amalgamated with Light (DC) to form Kapunda and Light (DC)
Light (DC)	Amalgamated with Kapunda (DC) to form Kapunda and Light (DC)
Marion (C)	Enlarged by transfer from Noaralunga (C)
Noaralunga (C)	Reduced by transfer to Marion (C)
Port Adelaide (C)	Amalgamated with Enfield (C) to form Port Adelaide Enfield (C)
Salisbury (C)	Enlarged by 37.93 ha from Enfield (C)
Western Australia	
Canning (C)	Reduced by 296 sq metres from Melville (C)
Melville (C)	Enlarged by 296 sq metres from Canning (C)
Stirling (C)	Reduced by 2,300 sq metres from Vincent (T)
Vincent (T)	Enlarged by 2,300 sq metres from Stirling (C)
