**MAR QTR 1997 KEY POINTS**
**TREND ESTIMATES**

- GDP(A) increased by 0.8% in the March quarter to a level 2.8% higher than in March quarter 1996.
- All three independent measures increased in the March quarter, with GDP(E) and GDP(P) rising 0.7% and 0.8% respectively, and GDP(I) recording slightly higher growth at 1.1%.
- Gross farm product increased by 3.7% in the March quarter, while the average measure of gross non-farm product increased by 0.7%.

**SEASONALLY ADJUSTED ESTIMATES**

- GDP(A) increased by 0.9% in the March quarter to be 2.4% higher than in March quarter 1996.
- All three independent measures recorded similar increases, with GDP(I) up 0.9%, GDP(E) up 0.8% and GDP(P) increasing by 1.1% in the March quarter.
- The major contributors to growth in GDP(E) were private final consumption expenditure (0.6 percentage points), exports (0.6 percentage points) and private gross fixed capital expenditure (0.9 percentage points). A large fall in private non-farm stocks of \$1,290 million following an increase of \$633 million in December quarter, resulted in a negative contribution to growth in GDP of 1.7 percentage points in March quarter 1997.
- The implicit price deflator for GDP increased by 0.3% in the March quarter to a level 1.6% higher than in March quarter 1996.

**INQUIRIES**

- For further information about these and related unpublished statistics, contact Ross Harvey on 06 252 6713 for current price estimates, and Charles Aspden on 06 252 6711 for constant price estimates.

**REVISIONS IN THIS  
ISSUE**

Revisions to percentage changes for major summary aggregates in trend terms are shown in Tables 41 to 43, while revisions to the major summary aggregates in original terms are shown in Tables 44 to 46. Revisions to major aggregates have been relatively small. Revisions to trend estimates for recent quarters are affected by the addition of data for March quarter 1997 as well as revisions to the original estimates. Larger revisions have been made to some component series to reflect the availability of later, more complete survey information.

.....

**CHANGES IN THIS ISSUE**

There are no changes in this issue. However, the methods used to derive constant price estimates of gross product for the finance and insurance industry and associated statistics will be changed from the June quarter 1997 issue of this publication. For further details please refer to the note on page 11.

Dennis Trewin  
Acting Australian Statistician

## MARCH QUARTER SUMMARY COMMENT

### FINAL CONSUMPTION EXPENDITURE

- Private expenditure grew by 0.6% (1.0% seasonally adjusted). There were increases in most categories, but the major contributors to growth were dwelling rent and other services.

### GROSS FIXED CAPITAL EXPENDITURE

- Dwelling construction grew by 2.3% (5.2% seasonally adjusted) in March quarter, while non-dwelling construction rose by 1.5% (11.2% seasonally adjusted). Expenditure on equipment rose by 2.5% (3.1% seasonally adjusted).

### INCREASE IN PRIVATE NON-FARM STOCKS

- Private non-farm stocks showed a fall of \$122 million (\$1,290 million seasonally adjusted) in the March quarter. This is the first fall since March quarter 1993.

### EXPORTS OF GOODS AND SERVICES

- Exports of goods and services increased by 1.6% in the March quarter, with goods growing by 1.8% and services up 0.9%. Rural exports grew by 3.6%, mainly due to strong growth in cereal exports. Non-rural exports grew by 1.0% with falls in exports of gold and metal manufactures partly offsetting strong growth in exports of transport equipment.

### IMPORTS OF GOODS AND SERVICES

- Imports of goods and services increased by 1.9% in the March quarter, with goods increasing by 2.2% and services increasing by 0.8%. Capital goods rose by 3.3% with computer equipment being the major contributor. Intermediate goods rose by 2.1% with parts for ADP equipment being the major contributor. Consumption goods increased by 0.7%.

Comments are based on trend constant price estimates, unless otherwise stated.

## MARCH QUARTER

### SUMMARY COMMENT

#### AGRICULTURE, FORESTRY AND FISHING

- Increased by 3.2% in trend terms and 3.6% in seasonally adjusted terms. Farm gross product contributed 3.8 percentage points to the latter movement, mostly due to strong growth in livestock slaughtering.

#### MANUFACTURING

- Decreased by 0.6% in trend terms and 0.2% in seasonally adjusted terms. Only two out of the nine subdivisions showed positive growth this quarter - Wood and paper product, and Printing, publishing and recorded media.

#### CONSTRUCTION

- Recorded growth of 1.2% in trend terms and 5.4% in seasonally adjusted terms. Increased activity in private house building, non-residential building and non-building construction accounted for the strong growth this quarter.

#### WHOLESALE TRADE

- Increased by 1.3% in trend terms and 2.3% in seasonally adjusted terms. A large increase in sales of cereals was the major contributor to growth.

#### TRANSPORT AND STORAGE

- The trend and seasonally adjusted estimates increased by 1.1% and 0.7% respectively.

Comments are based on trend constant price estimates, unless otherwise stated.

## MARCH QUARTER SUMMARY COMMENT

### WAGES, SALARIES AND SUPPLEMENTS

- Rose 1.4% (1.2% seasonally adjusted).
- The rise reflects an increase of 0.4% in the number of wage and salary earners and a 1.0% increase in average earnings. In seasonally adjusted terms, the number of wage and salary earners declined by 0.1% while average earnings increased by 1.3%.

### GROSS OPERATING SURPLUS

- In the March quarter, the GOS of private corporate trading enterprises increased by 0.6%, following a 0.3% increase in December quarter. In seasonally adjusted terms, GOS decreased by 0.1% in the March quarter, after rising by 2.7% in December quarter 1996.

Comments and graphs are based on trend current price estimates, unless otherwise stated.

### WAGES SHARE OF GDP (AT FACTOR COST)<sup>1</sup>

### PROFIT<sup>2</sup> SHARE OF GDP (AT FACTOR COST)<sup>1</sup>

<sup>1</sup> GDP at factor cost is equal to the sum of wages, salaries and supplements and gross operating surplus (i.e. it equals GDP(I) less net indirect taxes).

<sup>2</sup> GOS of private corporate trading enterprises

## ANALYSES AND COMMENTS

### RELIABILITY OF CONTEMPORARY TREND ESTIMATES

Seasonally adjusted series include both the trend effects and the irregular effects which influence movements in a series. As a result, seasonally adjusted estimates do not necessarily provide a good indication of the underlying behaviour of a series. On the other hand, trend estimates represent the underlying direction of the series, excluding seasonal effects and residual/irregular factors. Trend estimates are calculated by smoothing the seasonally adjusted series using a statistical procedure based on centred Henderson moving averages. The procedure used is designed to minimise distortions in the trend level, turning point shape and timing of turning points.

For the most recent quarters, insufficient data exist to use centred Henderson moving averages to calculate the trend values and so approximations to the Henderson moving averages are used for the latest three quarters. This means that revisions to the trend estimates for the last few quarters are unavoidable, even if none of the original data have been revised. More details about trend estimation are contained in the ABS Information Paper *A Guide to Interpreting Time Series — Monitoring "Trends": An Overview* (1348.0) which was released on 19 April 1993.

Potential revisions to trend estimates can be indicated by showing the effects of particular changes in seasonally adjusted estimates that might occur in the next quarter. The table below shows the trend estimates for the last few quarters and the values to which they would be revised if the notional movements in seasonally adjusted GDP(A) actually occurred in June quarter 1997.

Seasonally adjusted growth of 1.0% is required in June quarter 1997 to maintain the trend growth, in June quarter, of 0.8% currently estimated for March quarter 1997.

#### TREND ESTIMATE — PERCENTAGE CHANGE IN GDP(A)

# ANALYSES AND COMMENTS *(continued)*

.....

## GROWTH RATES IN GDP(A)

The graph below provides a comparison of the quarterly growth rates (percentage changes) in constant price GDP(A) in both seasonally adjusted and trend terms in recent years.

Percentage changes

## HOUSEHOLD SAVING RATIO

The proportion of household disposable income devoted to consumption in the March quarter was 95.9%. The balance, household saving, was 4.1%. Caution should be exercised in interpreting this ratio in recent years, because major components of household income and expenditure may still be subject to significant revisions. The impact of these revisions on the saving ratio can cause changes in the apparent direction of the trend. The following graph presents the household saving ratio derived from trend data (see Explanatory Notes, paragraph 26).

Trend

## ANALYSES AND COMMENTS *(continued)*

.....

### PRIVATE NON-FARM STOCKS TO SALES RATIO

In trend current price terms, the book value of private non-farm stocks decreased by \$68 million (0.1%) in the March quarter, while sales increased by \$1,169 million (1.5%). Consequently, the stocks to sales ratio fell from 0.872 in December quarter to 0.858. The following graph presents the ratio of private non-farm stocks to sales over the last fourteen years (see Explanatory Notes, paragraph 24).

Trend at Current Prices

### IMPORTS TO SALES RATIO

The imports to sales ratio, trended and at current prices, continued to decline, falling from 0.245 in the December quarter to 0.243. The following graph presents the ratio of imports to sales over the last fourteen years (see Explanatory Notes, paragraph 25).

Trend at Current Prices

**TERMS OF TRADE**

In March quarter 1997 the terms of trade index derived from trend estimates (see Explanatory Notes, paragraph 16) rose by 0.6%. A fall of 0.1% in export prices was more than offset by a fall of 0.7% in import prices.

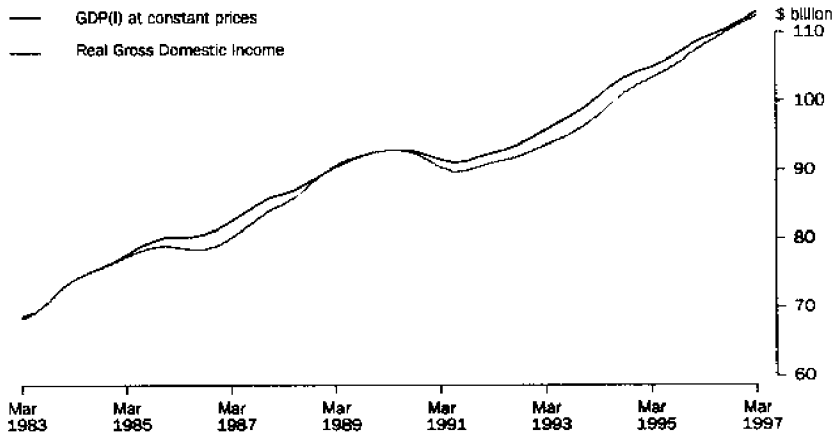

Trend (1989-90 = 100)

**REAL GROSS DOMESTIC INCOME**

GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the Technical Note included in the September quarter 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989-90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income*. The graph below provides a comparison of trend GDP(I) at average 1989-90 prices and real gross domestic income. Trend and seasonally adjusted estimates of real gross domestic income are shown in Tables 68 and 69 respectively.

**Trend**

# ANALYSES AND COMMENTS *(continued)*

## PRIVATE GROSS FIXED CAPITAL EXPENDITURE— NON-DWELLING CONSTRUCTION AND EQUIPMENT

Movements in private gross fixed capital expenditure can often be affected by large second-hand transactions and large one-off purchases. Details of recent transactions in second-hand assets between the private and public sectors, expenditure on new equipment and new work on non-dwelling construction are provided in the table below. Work on the Crown Casino in Melbourne and projects associated with the 2000 Olympics in Sydney boosted the value of new capital expenditure on non-dwelling construction in March quarter 1997.

### CONSTANT PRICE GROSS PRODUCT: FINANCE AND INSURANCE INDUSTRY

The June quarter 1997 issue of this publication will introduce a major improvement in the methods used for estimating constant price gross product for the finance and insurance industry and the imputed bank service charge (IBSC). This change is expected to result in a substantial increase in the growth rates of both these aggregates, particularly over the last six years.

In the Australian national accounts, GDP(P) is derived as the sum of the gross products of each industry *plus* ownership of dwellings *plus* import duties *less* the IBSC. Thus, the upward revisions to the constant price estimates of gross product for finance and insurance will be partially offset by the upward revisions to the IBSC. Nevertheless, the changes are expected to lead to a significant upward revision to the level of GDP(P) in recent periods, although the impact on quarterly growth rates should be quite modest.

As well as changes to GDP(P), there will be somewhat smaller revisions to GDP(E) and GDP(I) as a consequence of carrying through the change of method for estimating GDP(P) to the corresponding components of private final consumption expenditure and exports of goods and services. Series using the new methods are currently being compiled and analysed for inclusion in the next issue of this publication. Comparisons between estimates on the existing and new bases will also be provided in that issue.

At present the constant price estimates for the gross product of the finance and insurance industry are calculated by taking the base year (1989-90) value of the industry's contribution to GDP and extrapolating it using total hours worked. This approach implies that production, in real terms, is proportional to the number of hours worked in the industry, and in effect assumes that labour productivity is constant. The approach does not make allowance for increases in output that may have occurred as a result of changes in capital intensity or improvements in productivity arising from technological, organisational and other changes over time. The assumption of no change in labour productivity also underlies the existing constant price estimates of the IBSC.

The new method to be implemented involves estimating constant price gross output for each of the major activities of the finance and insurance industry. As with most other industries, it is assumed that constant price gross product is a fixed proportion of constant price gross output. This new approach accommodates changes in productivity and is more robust than the present method in that it is not dependent on a single indicator.

Constant price estimates of private final consumption expenditure on financial and insurance services and exports of financial and insurance services are currently derived by deflating the corresponding current price estimates with a combination of relevant elemental indexes from the CPI and input cost deflators derived from wage rate indexes and price indexes relating to intermediate inputs. These deflators will be replaced by implicit price deflators derived from the relevant current and constant price measures of gross output. This change in method will result in changes to the constant price estimates of GDP(E) and, as a consequence, to GDP(I).

## ANALYSES AND COMMENTS *(continued)*

### PRIVATE NON-FARM STOCKS

There was a significant run-down in private non-farm stocks at constant prices in the March quarter 1997 which was mainly attributable to the wholesale and retail industries. The following table shows the industry composition for the increase in private non-farm stocks in seasonally adjusted constant price terms for the last five quarters.

#### INCREASE IN PRIVATE NON-FARM STOCKS AT AVERAGE 1989-90 PRICES—SEASONALLY ADJUSTED

	Mar Qtr 1996	Jun Qtr 1996	Sep Qtr 1996	Dec Qtr 1996	Mar Qtr 1997

Other (including mining)	141	226	232	188	-13
<b>Total</b>	<b>488</b>	<b>845</b>	<b>866</b>	<b>633</b>	<b>-1290</b>

### WAGES, SALARIES AND SUPPLEMENTS

Quarterly movements in wages, salaries and supplements can at times be significantly affected by changes in two of the component series: severance, termination and redundancy payments, and supplements to wages and salaries (i.e. employers' contributions to superannuation and workers' compensation claims). Severance, termination and redundancy payments for recent quarters are shown below (although an estimate for March quarter 1997 is not yet available separately from the total wages and salaries figure) together with estimates for supplements for the last nine quarters. (The estimates can be shown only in original terms because wages, salaries and supplements are seasonally adjusted in total.)

(a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the Explanatory notes.  
(c) ANZSIC divisions B to J and P. See paragraph 22 of the Explanatory notes. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the change in gross product per unit of labour input. See paragraph 21 of the Explanatory notes. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimates are subject to revision when seasonally adjusted data for subsequent quarters become available.

Mar.	120.2	117.4	117.5	117.3	107.4	102.6	103.0	111.9	109.3	114.5	113.9

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to J and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market estimates the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries.

TABLE 50—GROSS DOMESTIC PRODUCT AT AVERAGE 1989-90 PRICES PER UNIT OF LABOUR INPUT  
TREND—continued  
(1989-90 = 100.0)

Note: Annual data derived from original series. (a) Import duties have been added and the imputed bank service charge associated with this sector has been deducted to derive these estimates. (b) ANZSIC divisions A to J and P. See paragraph 21 of the *Explanatory notes*. (c) ANZSIC divisions B to J and P. See paragraph 22 of the *Explanatory notes*. (d) For the non-market industries the methods used to estimate gross product at constant prices do not adequately capture the changes in gross product per unit of labour input. See paragraph 21 of the *Explanatory notes*. Hence the estimates for the market and non-farm market sectors provide more useful indicators of changes in labour productivity than the estimates for all industries. (e) The seasonally adjusted estimates of hours worked have a history of substantial volatility, and so the most recent trend estimate are subject to revision when seasonally adjusted data for subsequent quarters become available.

## EXPLANATORY NOTES

.....

### INTRODUCTION

**1** This publication contains estimates of the components of gross domestic product and national expenditure and supporting tables for the latest quarter, together with comparative estimates for the eight previous quarters and the last four financial years. Seasonally adjusted and trend estimates of the major aggregates and some selected series are also provided for the latest quarter, together with comparative estimates for the twelve previous quarters. The List of Tables, pages 13–14, show the full range of data provided.

### CONCEPTS, SOURCES AND METHODS

**2** These are documented in *Australian National Accounts: Concepts, Sources and Methods* (5216.0). An updated version of the 5216.0 publication, along with other similar ABS publications, is now available on a CD-ROM product, which is entitled *Statistical Concepts Reference Library on CD-ROM* (1361.0). It was released in July 1996.

### ACCURACY OF QUARTERLY ESTIMATES

**3** Estimating for a period of less than one year presents special problems. It is often difficult to adhere strictly to definitions used in annual estimates when deriving quarterly ones. This is particularly the case for the quarterly measure of income, because it is not always possible to match the value of production for a quarter with the cost incurred in that production. Difficulties are also encountered in obtaining detailed data for short periods and in preparing consistent estimates from different sources with different accounting procedures and periods. Furthermore, the quarter-to-quarter growth in seasonally adjusted terms is very sensitive to the timing of recording a transaction. If the recording of a transaction is delayed by one quarter, seasonally adjusted movements will be distorted for three consecutive quarters. All these problems affect the accuracy of the current and constant price estimates and should be taken into account in interpreting the estimates.

### REVISIONS

**4** Most figures are subject to revision as more complete and accurate information becomes available. The revisions are of two types: those made to recent quarters and those made as a consequence of a redistribution across all quarters within a year following revisions to annual totals. Major revisions made this quarter are discussed on page 2.

### TREND ESTIMATES

**5** Given the qualifications regarding the accuracy and reliability of the quarterly national accounts, the Australian Bureau of Statistics (ABS) considers that trend estimates provide the best guide to the underlying movements, and are more suitable than either the seasonally adjusted or original data for most business decisions and policy advice.

**6** A trend estimate is obtained by removing the irregular component from the seasonally adjusted series. For estimates in this publication, it is calculated using a centred 7-term Henderson moving average of the seasonally adjusted series. Estimates for the three most recent quarters cannot be calculated using this centred average method; instead an asymmetric average is used. This can lead to revisions in the trend estimates for the last three quarters when data become available for later quarters, even if none of the original data for earlier quarters has changed.

**7** If a series has a high 'irregular' component, then the trend estimates will be subject to greater revision for the latest few quarters as data become available for subsequent quarters than would otherwise be the case. However, it is important to note that this does not make the trend series inferior to the seasonally adjusted or original series. In fact, in such cases the effect of the irregular component on overall movements is likely to be even more marked in the seasonally adjusted and the original estimates than in the trend series.

.....

TREND ESTIMATES (continued)

**8** For more information about ABS procedures for deriving trend estimates and an analysis of the advantages of using them over alternative techniques for monitoring trends, see *A Guide to Interpreting Time Series — Monitoring 'Trends': an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Two feature articles which have appeared in the ABS monthly publication *Australian Economic Indicators* may also be of interest:

- *Picking Turning Points in the Economy* (April 1991), and
- *Smarter Data Use* (March 1992).

IMPLICIT PRICE DEFLATOR (IPD)

**9** The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted and trend current price estimates by the corresponding constant price estimates. Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. For this reason, quarterly IPDs derived from seasonally adjusted or trend data are preferred to those using original data. The seasonal adjustment process itself is also a possible source of distortion. For further information see Appendix VI of *Australian National Accounts: Concepts, Sources and Methods* (5216.0).

SEASONAL ADJUSTMENT:  
GENERAL METHOD

**10** Data that are affected by seasonal factors are adjusted to remove the effects of these factors. The general methods for doing so are described in Appendix I of *Australian National Accounts: Concepts, Sources and Methods* (5216.0). Three important points should be noted here :

- The methods used in seasonal adjustment do not force the sum of the adjusted estimates for each quarter of a year to equal the original annual total.
- Where constant price estimates have no apparent seasonality in their implicit price deflators, the estimates are adjusted using the corresponding factors for current price estimates.
- Special methods have been used to adjust some components of gross farm product. These concern the adjustment of crop production where production/harvest only occurs in a couple of quarters each year. In these instances, the output for each financial year is distributed equally over the four quarters.

MEASURES OF GDP

**GDP(I)** **11** GDP(I) is the sum of factor incomes, consumption of fixed capital (depreciation) and net indirect taxes. The preferred current price measure of GDP is GDP(I). It is the overall measure which is consistent with subsidiary measures such as national income and the other consolidated tables (such as the national income and outlay account). GDP(I) also provides the base year benchmarks for the constant price estimates of GDP(P). Constant price estimates of GDP(I) are derived by deflating current price estimates of GDP(I) by the implicit price deflator of GDP(E).

**GDP(E)** **12** GDP(E) is the sum of all final expenditures, changes in stocks, and exports less imports. Constant price estimates of GDP(E) are the sum of all these components at average 1989–90 prices.

**GDP(P)** **13** GDP(P) is calculated as the market value of goods and services produced by an industry (i.e. gross output) less the cost of goods and services used in the productive process (i.e. intermediate consumption). Constant price estimates of GDP(P) are the sum of constant price estimates (at average 1989–90 prices) for each industry.

MEASURES OF GDP (continued)

**GDP(A) THE AVERAGE** **14** While the three measures above are identical in concept, they can differ significantly in practice, especially in the short term, because of the different data sources used for each measure. Using the average of the three, GDP(A), smooths out these differences. GDP(A) is considered by the ABS to be the most satisfactory indicator of short-term seasonally adjusted or trend growth (see the Feature Article in the June quarter 1990 issue of *Australian National Accounts: National Income and Expenditure* (5206.0)).

ANALYSIS OF CONTRIBUTIONS TO GROWTH

**15** Tables 6 and 7 present analyses of the contribution provided by each major component to the percentage change in trend and seasonally adjusted estimates of constant price GDP(I). The figures in each table are additive within each quarter, unlike the percentage changes shown in other tables in this publication. The formula used to calculate the contribution of each aggregate to the growth in GDP is:

$$\frac{A(t) - A(t-1)}{GDP(t-1)} \times 100$$

where

A(t) = value of aggregate A in quarter under consideration

A(t-1) = value of aggregate A in preceding quarter

GDP(t-1) = value of GDP in preceding quarter.

TERMS OF TRADE

**16** There are several ways of measuring the terms of trade. In this publication, the following index is used :

$$\frac{\text{Implicit price deflator for exports of goods and services}}{\text{Implicit price deflator for imports of goods and services}} \times 100$$

Estimates of the terms of trade are shown in Tables 11, 12, 18, 19, 68 and 69.

REAL GROSS DOMESTIC INCOME

**17** GDP at constant prices is a measure of the volume of goods and services produced in Australia. If the terms of trade change significantly over the period of comparison, then this measure of real GDP will not accurately reflect the change in real purchasing power of the income generated by domestic production. (See the *Technical Note* included in the September 1993 issue of this publication for a more detailed discussion.) A better measure of the real purchasing power of income generated by domestic production is GDP(I) at average 1989-90 prices adjusted for the terms of trade effect, which is referred to as *real gross domestic income* (or real GDI). The following adjustment is made to GDP(I) at constant prices to obtain an estimate of real GDI:

- exports of goods and services at current prices are deflated by the implicit price deflator for imports of goods and services
- the actual constant price value of exports is then deducted from this value, and
- the resultant terms of trade adjustment is then added to GDP(I) at constant prices to give real GDI presented in Tables 68 and 69.

.....

GROSS PRODUCT PER UNIT  
OF LABOUR INPUT

**18** Indexes of constant price gross product per person employed and per hour worked are commonly referred to as measures of labour productivity. However, it should be noted that these indexes reflect not only the contribution of labour to changes in product per unit of labour, but also the contribution of capital and other factors (such as managerial efficiency, economies of scale, etc.).

**19** When analysing labour productivity indexes it is critical to note that they are subject to the vagaries of the growth (or business) cycle as well as the effects of any measurement error in either output or labour input. Differences in the amplitude and phase of the output and input cycles can result in labour productivity indexes deviating substantially from their longer-term trend. Analytical work undertaken within the ABS suggests that movements in employment and hours worked tend to lag movements in GDP. Over a 20 year period, the lag at turning points in the growth cycle varied between zero and four quarters, with the average being between two and three quarters. The implication is that, in the period of the growth cycle when the growth in output is declining, indexes of labour productivity are likely to decline, particularly if rapid growth in GDP is abruptly ended. Conversely, labour productivity indexes are likely to grow strongly when the economy comes out of a cyclical trough.

**20** A simple way to estimate the underlying trend in labour productivity is to compare the values of a labour productivity index spanning a growth cycle e.g. from the peak of one growth cycle to the peak of another. Note that such estimates rest on the assumption that labour is being utilised to the same degree at each growth cycle peak. Average annual growth rates, over growth cycles, of estimates of gross product per hour worked in the *market* and *non-farm market sectors* are shown in *Australian National Accounts: Multifactor Productivity* (5234.0).

MARKET AND NON-FARM  
MARKET SECTORS

**21** The estimates of gross product at constant prices for six industries: Finance and insurance; Property and business services; Government administration and defence; Education; Health and community services; and Personal and other services are derived either wholly or primarily by using either deflated input cost data or hours worked as indicators of output. As such, the estimates cannot adequately reflect changes in productivity. For the purpose of measuring changes in productivity, it is therefore preferable that these industries be excluded. The constant price product of a group of industries referred to as the *market sector* is defined to be GDP(P) less the above six industries, less Ownership of dwellings (for which capital stock is used as the indicator of output), plus the imputed bank service charge related to the 'non-market' industries.

**22** A second industry group, referred to as the *non-farm market sector*, comprises the market sector less Agriculture, forestry and fishing. Productivity estimates derived for this group are free of the effects caused by the volatility of agricultural production due to changing seasonal conditions.

INDEXES OF EMPLOYMENT AND  
HOURS WORKED

**23** The quarterly employment indexes used to derive the gross product per person employed indexes comprise all labour engaged in the production of goods and services and include not only civilian wage and salary earners but also employers; self-employed persons; persons working one hour or more without pay in a family business or on a farm; and members of the Australian defence forces. For details of how the employment and hours worked estimates are formed, refer to Section 23 of *Australian National Accounts: Concepts Sources and Methods* (5216.0), and also Section 4 of the Information Paper *Australian National Accounts: Introduction of Constant Price Estimates at Average 1989-90 Prices* (5243.0) which describes changes in methods introduced in conjunction with the rebase of constant price estimates to average 1989-90 prices.

PRIVATE NON-FARM STOCKS  
TO SALES RATIO

**24** The ratio is presented in Tables 68 and 69. The denominator of this ratio, in current price terms, is defined as :

- private final consumption expenditure on goods
- *plus* private gross fixed capital expenditure on dwellings, non-dwelling construction and equipment
- *plus* public gross fixed capital expenditure
- *plus* exports of non-rural goods.

IMPORTS TO SALES RATIO

**25** The ratio is merchandise imports (ie total imports of goods) to sales (as defined in paragraph 24 above). This ratio is presented in Tables 68 and 69.

HOUSEHOLD SAVING RATIO

**26** This is the ratio of household saving to household disposable income, where household saving is the difference between household disposable income and private final consumption expenditure. The ratio is a memorandum item in Tables 27 and 28 and is also shown in Table 67.

GDP(A) PER CAPITA

**27** This is the ratio of GDP(A) to an estimate of the resident Australian population. For all but the most recent quarters, the resident population data are drawn from *Australian Demographic Statistics* (3101.0). For the most recent quarters, estimates are made by extrapolating from the latest available data.

DATA ON FLOPPY DISK

**28** All quarterly series in this publication are available in spreadsheet format on floppy disk, *Australian National Accounts: Quarterly Data on Floppy Disk* (5228.0). These data generally run from September quarter 1959. An important exception is GDP(P) and its components which run from September quarter 1974. The cost is currently \$130.00 per release or \$390.00 for an annual subscription. Place your order by ringing (06) 252 6627.

RELATED PUBLICATIONS

**29** In addition to the publications already mentioned, others of interest include :

- *Australian National Accounts: National Income, Expenditure and Product* (5204.0) — annual
- *Australian National Accounts: State Accounts* (5220.0) — annual
- *Australian National Accounts: State Accounts* (5242.0) — quarterly
- *Australian National Accounts: Capital Stock* (5221.0) — annual
- *Australian National Accounts: Financial Accounts* (5232.0) — quarterly
- *Australian National Accounts: Multifactor Productivity* (5234.0) — annual
- *A Guide to the Australian National Accounts* (5235.0)

**30** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

## FOR MORE INFORMATION...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our offices (see below).

### INFORMATION CONSULTANCY SERVICES

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see below).

### ABS PRODUCTS

A large number of ABS products is available from the ABS Bookshops (see below). The ABS also provides a subscription service – you can telephone the ABS Subscription Service Australia wide toll free on 1800 0206 08.

### ELECTRONIC SERVICES

A large range of data is available via on-line services, diskette, magnetic tape, tape cartridge and CD ROM. For more details about our electronic data services, contact any ABS office (see below) or e-mail us at:

- [client.services@abs.gov.au](mailto:client.services@abs.gov.au)
