

#### CATALOGUE NO. 5301.0 EMBARGOED UNTIL 11.30 A.M 29 July 1994

# **BALANCE OF PAYMENTS, AUSTRALIA, JUNE 1994**

#### **MAIN FEATURES**

Estimates of the main balance of payments aggregates for June 1994, the three preceding months and year-to-date are shown below. These estimates are preliminary and subject to revision. Particular care should be taken in interpreting month-to-month movements, as indicated in the note on page 8 on Reliability of Contemporary Trend Estimates and in paragraph 4 of the Explanatory Notes on page 16. Certain items have been estimated using extrapolation techniques until source data become available.

(a) For current account aggregates a minus sign means an increase in a deficit or a reduction in a surplus and a plus sign means a decrease in a deficit or an increase in a surplus. (b) Period averages.

In seasonally adjusted terms, the current account deficit for June fell \$260 million, or 15 per cent, to \$1,439 million.

The decrease in the deficit was caused by:

- a decrease of \$120 million (43 per cent) in the merchandise trade deficit, (merchandise exports fell 2 per cent, while merchandise imports fell 4 per cent);
- a turnaround of \$151 million (from a deficit to a surplus) in the net services balance; and
- a decrease of \$48 million (4 per cent) in the net income deficit.

Partly offsetting these movements in merchandise trade, services and income was a turnaround of \$59 million (from a surplus to a deficit) in the net unrequited transfers balance.

The provisional trend estimate for the June current account deficit was \$1,559 million, up \$55 million, or 4 per cent, on the provisional trend estimate for May.

# 

**INQUIRIES** 

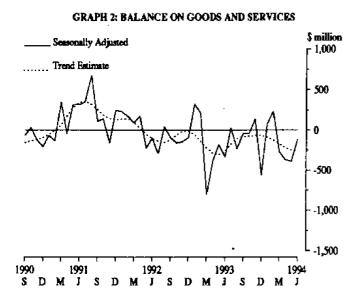

- for further information about these and related unpublished statistics, contact Mr Frank Bingham on Canberra (06) 252 6689 or Ms Marie Flint on Canberra (06) 252 5540, or any ABS State office.
- for information about other ABS statistics and services please refer to the back page of this publication.

#### ANALYSIS OF SELECTED MAJOR AGGREGATES

#### June 1994 compared with May 1994

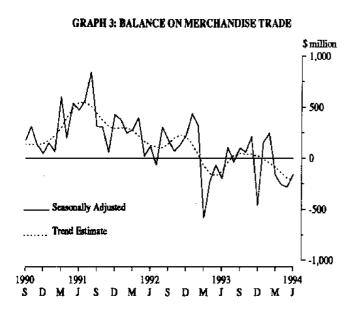

#### Balance on goods and services

The seasonally adjusted balance on goods and services recorded a deficit of \$116 million, a decrease of \$271 million on the deficit recorded in May.

#### Balance on merchandise trade

The seasonally adjusted balance on merchandise trade recorded a deficit of \$160 million, a decrease of \$120 million on the deficit recorded in May.

## Merchandise exports

Seasonally adjusted exports f.o.b. fell \$99 million, or 2 per cent, to \$5,372 million. Rural exports fell \$37 million, or 2 per cent, to \$1,598 million. Non-rural exports fell \$62 million, or 2 per cent, to \$3,774 million.

#### GRAPH 4: MERCHANDISE - EXPORTS F.O.B.

In original terms, exports fell \$518 million, or 9 per cent, to \$5,223 million.

Rural exports, in original terms, fell \$228 million, or 13 per cent, to \$1,541 million. Decreases were recorded in:

- meat, down \$73 million or 19 per cent (due mainly to lower volumes of, and prices for, beef and veal exports);
- wool, down \$71 million or 22 per cent (due mainly to decreased volumes of greasy wool exports);
- "other" rural exports, down \$61 million or 9 per cent;
- cereals, down \$30 million or 10 per cent.

These decreases were partially offset by an increase in sugar, up \$7 million or 8 per cent.

Non-rural exports, in original terms, fell \$290 million, or 7 per cent, to \$3,682 million. The most significant decreases were recorded in:

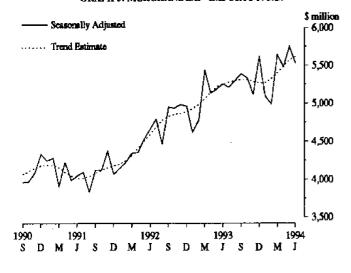

- machinery, down \$189 million or 30 per cent (due mainly to decreased exports of telecommunications equipment);
- coal, coke and briquettes, down \$83 million or 14 per cent (due mainly to decreased volumes of coal exports);
- "other" metals, down \$73 million or 14 per cent (due mainly to decreased exports of iron and steel); and
- transport equipment, down \$53 million or 29 per cent.

These decreases were partially offset by increases in metal ores and minerals, up \$136 million or 23 per cent (due mainly to increased exports of alumina, titanium ores, zinc ores and uranium ores); and gold, up \$63 million or 17 per cent

#### Merchandise imports

Seasonally adjusted imports f.o.b. fell \$219 million, or 4 per cent, to \$5,532 million. Consumption goods fell \$75 million, or 5 per cent, to \$1,502 million. Capital goods fell \$128 million, or 9 per cent, to \$1,274 million. Intermediate and other goods fell \$16 million, or 1 per cent, to \$2,756 million.

#### GRAPH 5: MERCHANDISE - IMPORTS F.O.B.

In original terms, *imports* fell \$414 million, or 7 per cent, to \$5,226 million.

Imports of consumption goods, in original terms, fell \$122 million, or 8 per cent, to \$1,330 million. Decreases were recorded in all groups, with the largest being:

- consumption goods nes, down \$55 million or 13 per cent (with most sub-groups recording decreases); and
- toys, books and leisure goods, down \$23 million or 11 per cent.

Imports of *capital goods*, in original terms, fell \$40 million, or 3 per cent, to \$1,302 million. The largest decreases were recorded in:

- industrial transport equipment nes, down \$47 million or 21 per cent; and
- machinery and industrial equipment, down \$30 million or 5 per cent.

These decreases were partially offset by increases in ADP equipment, up \$32 million or 12 per cent; and telecommunications equipment, up \$7 million or 7 per cent.

Imports of intermediate and other goods, in original terms, fell \$252 million, or 9 per cent, to \$2,594 million. Decreases were recorded in all groups, except organic and inorganic chemicals, which rose \$7 million or 4 per cent. The largest decreases were recorded in:

- processed industrial supplies nes, down \$68 million or 10 per cent;
- fuels and lubricants, down \$41 million or 15 per cent;

- primary industrial supplies nes, down \$28 million or 35 per cent;
- "other" parts for capital goods, down \$26 million or 6 per cent; and
- parts for transport equipment, down \$24 million or 6 per cent.

#### Net services

The seasonally adjusted net services balance turned around \$151 million, from a deficit to a surplus of \$44 million. Services credits rose \$114 million (7 per cent), while services debits fell \$37 million (2 per cent).

#### Net income

The seasonally adjusted net income deficit fell \$48 million, or 4 per cent to \$1,265 million. Income credits fell \$8 million, or 2 per cent, while income debits fell \$56 million or 3 per cent. It should be noted that, in accordance with established methodology, the monthly estimates for transactions of the non-official sector from April 1994 on, are based on extrapolations of quarterly results divided by three. These extrapolations will be replaced by preliminary results from the June quarter 1994 ABS Survey of Foreign Investment when these results become available. Preliminary results should be available in time for incorporation in the July 1994 issue of this publication, scheduled for release on 29 August 1994.

### Net unrequited transfers

The seasonally adjusted net unrequited transfers balance turned around \$59 million, from a surplus to a deficit of \$58 million. Unrequited transfers credits rose \$6 million, or 3 per cent, while unrequited transfers debits rose \$65 million or 30 per cent.

#### Net capital transactions

In original terms, the net capital transactions of the official sector recorded a net outflow of \$2,989 million in June, a turnaround of \$3,036 million on the net inflow recorded in May.

The June estimate consisted of:

- a net outflow of \$2,821 million in general government transactions, a turnaround of \$3,122 million on the net inflow recorded in May; and
- a net outflow of \$168 million in Reserve Bank transactions, down \$86 million on the May outflow.

The change in general government transactions was mainly the result of:

 a turnaround of \$2,889 million, from an inflow to an outflow of \$418 million, in general government borrowing domiciled in Australia; and  a \$186 million increase, to \$2,363 million, in the net outflow from State government borrowing domiciled abroad.

The change in Reserve Bank transactions in June reflected decreased net purchases of official reserve assets during the month, partly offset by a \$14 million turnaround, from a net outflow to a net inflow of \$3 million, in "other" transactions.

#### Exchange rates

During June the \$A appreciated by 0.6 per cent on a trade weighted index basis (using period average exchange rates) against currencies of Australia's major trading partners. The \$A appreciated 1.3 per cent against the \$US and by 0.3 per cent against the Japanese yen.

Comparing rates at the end of June 1994 with those at the end of June 1993, the \$A has appreciated by 7.1 per cent on a trade weighted basis against the currencies of Australia's major trading partners, by 8.5 per cent against the \$US and by 0.9 per cent against the Japanese yen.

#### Financial year 1993-94 compared with 1992-93 -

In original terms, the balance on current account deficit for the financial year 1993-94 was \$15,944 million, up \$607 million, or 4 per cent, on the deficit for 1992-93.

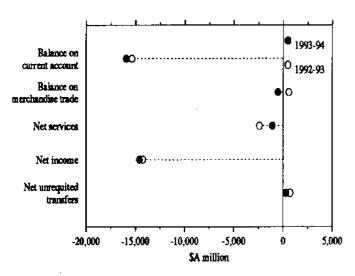

This result was due to:

- a turnaround of \$1,124 million, from a surplus to a deficit, in the balance on merchandise trade;
- an increase of \$335 million (2 per cent) in the net income deficit; and
- a decrease of \$452 million (62 per cent) in the net unrequited transfers surplus.

The movements in merchandise trade, income and unrequited transfers were partly offset by:

 a reduction of \$1,304 million (54 per cent) in the net services deficit.

GRAPH 6: BALANCE OF PAYMENTS AGGREGATES -FINANCIAL YEAR

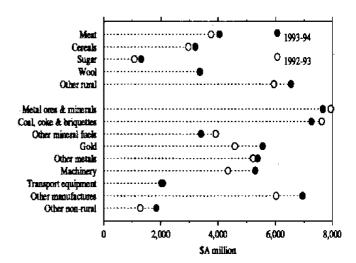

Merchandise exports rose \$3,850 million, or 6 per cent, to \$63,872 million. The largest increases were recorded in:

- gold, up \$971 million (21 per cent);
- machinery, up \$950 million (22 per cent);
- "other" manufactures, up \$926 million (15 per cent);
- "other" rural exports, up \$603 million (10 per cent);
- "other" non-rural exports, up \$560 million (44 per cent); and
- meat, up \$293 million (8 per cent).

Decreases were recorded in "other" mineral fuels, down \$518 million (13 per cent); coal, coke and briquettes, down \$362 million (5 per cent); metal ores and minerals, down \$282 million (4 per cent); and wool, down \$15 million.

GRAPH 7: MERCHANDISE EXPORTS - FINANCIAL YEAR

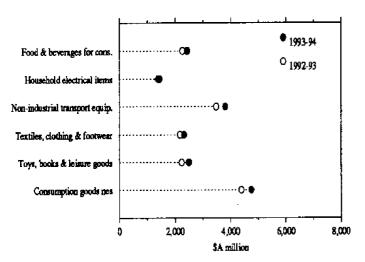

Merchandise imports rose \$4,974 million, or 8 per cent, to \$64,401 million. Consumption goods rose \$1,307 million (8 per cent); capital goods rose \$1,189 million (9 per cent); and intermediate and other goods rose \$2,478 million (8 per cent). Increases were recorded in 22 of the 26 groups, with the largest being:

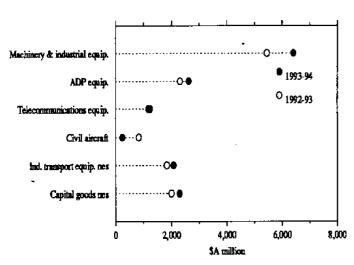

- machinery and industrial equipment, up \$968 million (18 per cent);
- "other" parts for capital goods, up \$805 million (19 per cent);
- processed industrial supplies nes, up \$650 million (9 per cent);
- parts for transport equipment, up \$509 million (14 per cent);
- consumption goods nes, up \$362 million (8 per cent);
- non-industrial transport equipment, up \$322 million (9 per cent);
- ADP equipment, up \$310 million (13 per cent); and
- capital goods nes, up \$294 million (15 per cent).

The most significant decreases were recorded in civil aircraft, down \$587 million (71 per cent); and fuels and lubricants, down \$309 million (9 per cent).

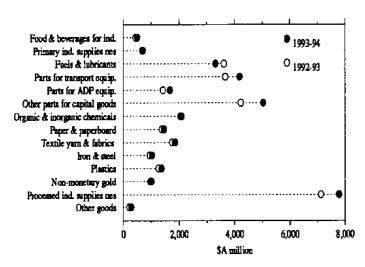

GRAPE 8: MERCHANDISE IMPORTS - CONSUMPTION GOODS FINANCIAL YEAR

GRAPH 9: MERCHANDISE IMPORTS - CAPITAL GOODS FINANCIAL YEAR

GRAPH 10: MERCHANDISE IMPORTS - INTERMEDIATE AND OTHER GOODS FINANCIAL YEAR

The net services deficit fell \$1,304 million, or 54 per cent, to \$1,110 million. Services credits increased by \$2,027 million, or 12 per cent, due to increases of \$1,249 million, or 19 per cent, in travel credits; \$491 million, or 12 per cent, in "other" services credits; \$146 million, or 3 per cent, in "other" transportation credits; and \$141 million, or 11 per cent, in shipment credits. Services debits rose \$723 million, or 4 per cent, due to increases of \$264 million, or 5 per cent, in "other" services debits; \$211 million, or 4 per cent, in travel debits; \$189 million, or 4 per cent, in "other" transportation debits; and \$59 million, or 2 per cent, in shipment debits.

The net income deficit rose \$335 million to \$14,580 million. Income credits rose \$72 million, or 1 per cent, due mainly to an increase in reinvested earnings which was only partly offset by falls in "other" investment income and other property income. Income debits rose \$407 million, due mainly to increases in interest payable on official sector borrowing, reinvested earnings and "other" property income. The increases in these components of income debits were partly offset by a decrease in "other" investment income payable.

The net unrequited transfers surplus fell \$452 million, or 62 per cent, to \$275 million. Unrequited transfers credits fell \$309 million, or 10 per cent, due mainly to a decline in migrants' transfers. Unrequited transfers debits rose \$143 million, or 6 per cent, due mainly to increases in official miscellaneous transfers and pensions.

Official sector capital transactions for the financial year ended June 1994 yielded a net inflow of \$4,675 million, compared with a net inflow of \$15,619 for the previous financial year. Making up the net inflow of official sector transactions were:

- a net inflow of \$5,779 million in general government transactions, down \$5,851 million on the inflow from the previous financial year; and
- a net outflow of \$1,104 million in Reserve Bank transactions, a turnaround of \$5,093 million on the net inflow for the financial year ended June 1993.

The decreased inflow from general government transactions was largely due to State government borrowing domiciled abroad, which fell \$5,853 million, to a net inflow of \$4,282 million; and Commonwealth Government borrowing domiciled abroad, which turned around \$1,483 million, to a net outflow of \$1,102 million. These movements were partly offset by an increase of \$1,510 million in the net inflow from general government borrowing domiciled in Australia. Net purchases of official reserve assets of \$1,055 million, compared with net sales of \$3,950 million for the previous financial year, was the main factor underlying the turnaround in Reserve Bank transactions.

#### **CHANGES IN THIS ISSUE**

#### Introduction

Commencing with this issue of this publication, a number of improvements have been made to the coverage, sources and methods used in estimating *Travel* and *Other Services*. The changes have resulted in higher quality estimates for these items.

#### Changes to Travel Services

Estimates of Travel Services credits are derived using two main sources: information on the number of overseas visitors, published by ABS from data collected on passenger cards by the Department of Immigration and Ethnic Affairs; and information on the expenditure of visitors, collected mainly from the International Visitors Survey (IVS) conducted by the Bureau of Tourism Research (BTR). The expenditure information from the IVS covers goods and services purchased or consumed in Australia by overseas visitors, except where some of that expenditure is pre-paid as part of an inclusive tour package. Inclusive package tour visitors report their total package cost in the IVS, but they are unable to separately identify the various components of expenditure included. Because of this data availability problem, in the past such expenditure has been excluded from ABS estimates of Travel Services credits.

Recent ABS and BTR analysis of the available data has enabled estimates to be produced for the major components of inclusive package tour expenditure, that is, organised tours and food, drink and accommodation. These estimates have now been incorporated into *Travel Services* credits. Undercoverage adjustments have been made for all periods back to 1983-84; prior to this it is considered that undercoverage would have been minimal.

#### Changes to Other Services - Insurance

The estimates of insurance services which are included in Other Services credits and debits were previously compiled using information obtained from the ABS Survey of Foreign Investment (SFI) and the Australian Taxation Office's taxation statistics. Annual estimates for insurance services were compiled as the difference between premiums and "normal" claims. In the case of credits, both premiums and claims were based on SFI data. In the case of debits, estimates of premiums were derived from taxation statistics and estimates of claims were derived by applying a ratio of claims to premiums, calculated from SFI data, to premiums data from taxation statistics.

Commencing with this issue, estimates of insurance services are based primarily on information obtained from the ABS Survey of International Trade in Services (ITSS). This change in data sources reflects a rationalisation of ABS data collection activity on trade in services. From 1989–90, data relating to international insurance transactions were excluded from the SFI and, from 1990–91, collected by the ITSS. Because of the significant improvements in coverage of insurance premiums data from the ITSS and the substantial timelag on data from the Australian Taxation Office, the latter source is no longer used directly in the estimation process. However, it is envisaged that the taxation data will continue to provide a useful coverage check.

The ITSS, like the SFI, collects data relating to general insurance, reinsurance and life insurance premiums and claims, and commissions incurred in arranging/writing insurance business placed with and received from non-residents. There are, however, a number of significant differences between the old and new sources and methods. The more significant differences are outlined below.

#### (a) Statistical Unit

Information from the ITSS is collected and compiled in respect of a lower level statistical unit than the former SFI collection. This has resulted in significantly better coverage and classification of in-scope activity than was achieved by the SFI, which collected and compiled information at the enterprise group level. Consequently, undercoverage adjustments based on data from the ITSS have been made back to 1986-87. Prior to this it is considered that undercoverage would have been minimal.

#### (b) Commissions

In the SFI, claims receivable were collected inclusive of commissions and other expenses receivable. Similarly, claims payable were collected inclusive of commissions and other expenses payable. The ITSS, however, identifies commissions and other expenses receivable and payable separately from claims. This has enabled commissions and other expenses receivable (credits) and payable (debits) to be included in insurance services credits and debits respectively, in accordance with international statistical standards. Previously, commissions and other expenses receivable were netted off against insurance services debits. Similarly, commissions and other expenses payable were netted off against insurance services credits. As a result of this change, the insurance services credit and debit series have been recompiled back to 1968-69, the earliest period for which estimates of insurance services have been produced.

#### (c) Claims Receivable

Because neither the SFI nor the ITSS approach Australian resident policy holders or non-resident insurers, neither survey is a good source of information on gross claims receivable on general insurance provided by non-residents to Australian resident policy holders. As a result, such claims have been significantly under-reported in the past. To address this problem, the ABS has developed a methodology, using information from the Insurance and Superannuation Commission, to estimate gross claims receivable on general insurance placed abroad. These estimates have now been incorporated into insurance services debits and undercoverage adjustments made back to 1976-77. Undercoverage is considered to have been minimal prior to this.

#### **Impact**

As has been outlined above, series affected by these improvements to coverage, sources and methods have either been recompiled on the new basis or adjusted for undercoverage in order to maintain their continuity. The impact of these changes to *Travel* and *Other Services* on the current account deficit is outlined in *Revisions*.

## REVISIONS

Revisions since the last issue of this publication have resulted in minor reductions to the current account deficits for the years 1976-77 to 1982-83; reduced the current account deficits for the last ten years (1983-84 to 1992-93) by \$95 million, \$134 million, \$184 million, \$278 million, \$308 million, \$408 million, \$443 million, \$642 million, \$572 million and \$652 million, respectively; and reduced the deficit for the first eleven months of this financial year by \$656 million.

The main factors contributing to these revisions are:

- the improved coverage of Travel credits, described on page 6. This improvement was the largest contributor to revisions for the period from 1986-87 to 1992-93 and for the first eleven months of 1993-94;
- revisions to Travel credits as a result of the incorporation of the latest available survey data on students' expenditure for 1992-93, provided by the Department of Employment, Education and Training. Data from the survey showed an increase in the number and expenditure of long-term student travellers and this has resulted in revisions to Travel credits for 1992-93 and for the first eleven months of 1993-94;

- the improved sources and methodology used for estimating insurance services, also described on page 6. This improvement was the sole contributor to the revisions for 1976-77 to 1982-83 and the major contributor to the revisions to *Other Services* for 1983-84 to 1992-93 and for the first eleven months of 1993-94;
- changes to Shipment debits for the current year to date resulting from removal of some duplication of payments to non-resident airlines for freight on imports; and
- incorporation of the latest available information on miscellaneous services from the International Trade in Services Survey for September and December quarters 1993 and March quarter 1994. These revisions affected Other Services credits and debits as well as Other Property Income credits and debits (mainly royalties) for the first eleven months of 1993-94.

There are also minor revisions to: merchandise exports for 1992-93; merchandise exports and imports for 1993-94 year to date; and travel debits for 1989-90 to 1992-93 and for the current year to date.

# Release date for July 1994 issue

The expected release date for the July issue of this publication is 29 August 1994.

Any variations which might occur will be notified in the ABS Publications Advice (1105.0) and on DISCOVERY.

The date can be confirmed a few days prior to release by telephoning Canberra (06) 252 6627.

# RELIABILITY OF CONTEMPORARY TREND ESTIMATES

The table below presents trend estimates of the deficit on current account from April 1993 onwards, including provisional trend estimates for the latest three months (April, May and June 1994).

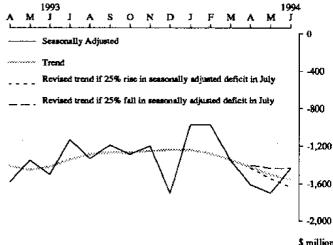

To illustrate the possible impact of future months' observations on the provisional trend estimates for the latest three months, the table also shows the revisions to these trend estimates that would result if the seasonally adjusted estimate of the current account balance next month (July 1994) is 25 per cent higher or lower than this month and if there are no revisions to the current or previous months' estimates. The 25 per cent range has been chosen because in the last decade the average monthly percentage movement, without regard to sign, of the seasonally adjusted current account deficit has been about 25 per cent.

If the deficit were to increase in July by 25 per cent, to \$1,799 million, the provisional trend movement for that month would be 6.7 per cent. The movements in the trend estimates for April, May and June which are provisionally 6.0 per cent, 5.5 per cent and 3.7 per cent respectively, would be revised to 7.3 per cent, 7.4 per cent and 5.9 per cent, respectively. On the other hand, a 25 per cent decline in, the seasonally adjusted deficit next month, to \$1,079

million, would produce a trend movement of 0.5 per cent for July with the movements in the trend estimates for April, May and June revised to 4.0 per cent, 2.2 per cent and -0.2 per cent, respectively.

The graph below illustrates this potential degree of revision at the current end of the trend series.

(a) The centries centy the opposite sign to corresponding entries in Tables 1 and 6. (b) These exchange rates and the trade-weighted index are derived using rates provided by the Reserve Bunk of Australia in respect of each trading day of the reference period. (d) These exchange rates and index numbers are derived by averaging figures for each trading day.

#### EXPLANATORY NOTES

#### Introduction

- 1. This publication contains preliminary estimates of Australia's balance of payments for June 1994, together with revised estimates for previous months. More comprehensive quarterly estimates are available in the March quarter 1994 issue of the quarterly balance of payments publication (5302.0) released on 1 June 1994.
- 2. Descriptions of the underlying concepts and structure of the balance of payments and the sources and methods used in compiling the estimates are presented in *Balance of Payments*, *Australia: Concepts*, *Sources and Methods* (5331.0). The publication also provides item definitions; explanations of seasonal adjustment and trend estimates; and an analysis of the quality of the estimates.

# Accuracy, reliability and volatility

- 3. Care should be exercised in the use and interpretation of estimates in this publication. The sources available for the production of timely and reliable monthly estimates are limited and the initial estimates are made available very quickly. Consequently, the latest estimates in this publication, to a greater extent than estimates in quarterly and annual balance of payments publications, are preliminary and subject to revision as more complete and accurate information becomes available. Certain items are estimated using extrapolation techniques until source data become available. Further, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.
- Particular care should be exercised in interpreting 4. month-to-month movements in original and seasonally adjusted series as short term movements cannot be assumed to The monthly estimates are indicate changes in trend. volatile, being subject to seasonal factors (except where adjusted in Table 2) and large irregular influences. The irregular influences may reflect both random economic events and difficulties of statistical recording. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that the month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted monthly movements with the following frequency:

Balance on current account: 9 in 10 months Merchandise exports f.o.b: 8 in 10 months Merchandise imports f.o.b: 9 in 10 months 5. The impact of the irregular influences upon the seasonally adjusted series is reduced by smoothing, as shown by the trend estimates in Table 2 and the graphs. The trend estimates are generally derived by applying a 13-term Henderson-weighted moving average to the seasonally adjusted series.

#### Seasonal adjustment

- 6. The factors used in seasonally adjusting the monthly balance of payments statistics during 1994 can be obtained, for \$65.00, from Mr Damian Dwyer on Canberra (06) 252 6820.
- 7. The seasonally adjusted statistics in this publication should not be regarded as in any way definitive as results from seasonal adjustment vary according to the method used.

# Available longer term series

8. Estimates for months prior to those shown in this publication are available and can be obtained by contacting Mr Damian Dwyer on Canberra (06) 252 6820. There may be a charge for this information.

#### Related products and services

9. More detailed merchandise exports and merchandise imports data, including dissections by commodity and country of origin, are also available on an international merchandise trade basis for June 1994 and previous months. These data can be obtained by contacting information services on Canberra (06) 252 5400.
