

CHAPTER I.—RETAIL PRICES AND PRICE INDEXES.

§ 1. Collection of Information as to Retail Prices.

The retail prices of the extensive range of commodities and services in common demand (commonly referred to as the "regimen") used in compiling the All Items ("C" Series) Retail Price Index (see list on pages 11-13 hereof) have been ascertained at frequent and regular intervals since 1923 for each of the six capital cities and for 27 of the more important towns of Australia. Comparable information is available for the month of November in each year 1914 to 1922 for each of the six capital cities.

The retail prices of food and groceries in approximately 200 towns throughout Australia were collected as at November of each year from 1913 to 1942 when collection was temporarily suspended as a war-time economy.

Retail prices of food and groceries and average rentals of houses for earlier years extending back to 1901 were collected by this Bureau, and in some cases have been recorded by the Statisticians of various States as far back as 1864.

The methods by which prices used in the "C" Series Retail Price Index are ascertained and the measures adopted to ensure their accuracy and comparability are briefly as follows:—

- (i) Representative and reputable retailers are selected for each city and town covered by the Index and each is required to furnish a return of prices monthly in respect of food and groceries and quarterly in respect of other items. Prices for each item are obtained where practicable from about ten retailers in each of the capital cities, and from about five retailers in each of the provincial towns.
- (ii) These returns are collected under authority of the *Census and Statistics Act 1905-1946* which requires that returns be supplied accurately and promptly and ensures that particulars supplied by individual retailers will not be divulged to competitors or to any other person or Government authority. Penalties are provided against failure to supply returns, against supplying false information and against failure to answer truthfully any question asked by an authorized officer in respect of the contents of the return.
- (iii) The actual collection of returns is carried out by qualified Field Officers of the Commonwealth Bureau of Census and Statistics working under the supervision of the Statisticians of the respective States. These Field Officers have very wide powers of investigation, including entry of premises and inspection of goods, records, etc.
- (iv) The Field Officers not only receive and check returns but visit the retail shops concerned, whenever necessary, to verify returns. In respect of articles of clothing and the like where variation of quality may be considerable Field Officers are equipped with samples of the goods used for price comparisons. In such cases the Field Officers visit every retail informant at each quarterly collection and personally inspect the relevant goods and prices thereof.

- (v) Before each quarterly collection Supervising Field Officers review the standards of the whole of the items for which prices are collected after making extensive inquiries among manufacturers, wholesalers and retailers. These Supervising Field Officers periodically accompany Field Officers at their price collections and check their work. This not only ensures accuracy and assiduity but also that all Field Officers work on uniform lines and that, as far as care and effort can make it possible, prices for identical goods and quality will be recorded at all times and for all places.
- (vi) The list of items in the regimen and the standards thereof are revised from time to time to keep them in harmony with changing conditions. Where such changes become necessary suitable adjustment is made in computing the retail price index to ensure that it reflects changes in price with due precision and that it is not vitiated by the influence of other changes. (*See also* § 9, p. 32 hereof.)
- (vii) Returns of rents for unfurnished houses of four and five rooms are made at the middle of each quarter by a representative number (ranging up to 30) of house agents in each city and town covered by the Index, for brick and wooden houses respectively, classified according to number of rooms. These returns show the weekly rental of a substantial number of individual houses each of which is selected by the Field Officer as suitable for inclusion in a sample designed to measure the quarterly ratio of change in weekly rentals. The aim is to measure variations which may be equivalent, to change in price for a constant standard. The ratio of change is used to vary basic average rentals derived from the Census of 1933 and other records. Although expressed in money terms, the average rentals as published are essentially indexes. As such they do not necessarily indicate the average amount of rental actually paid for all rented houses, and still less do they indicate the rental at which vacant or new houses can be rented.

§ 2. Retail Price Indexes.

1. **General.**—The basic principle of a retail price index is relatively simple. It is to select commodities representative of the field to be covered and to combine their prices at regular intervals in accordance with their relative importance in that field. The aim is to measure the degree of change in prices for the selected field taken as a whole.

In practice the application of this principle over a term of years presents great difficulty by reason of the numerous changes which occur in the type, grade and relative quantities of many of the items commonly used.

A full explanation of the methods adopted and an analysis of problems involved is contained in the Appendix to Labour Report No. 9.

For convenience the group of selected items is called a "regimen", and the quantities consumed per annum of each item used in the Index are called "mass units" or "weights". These terms are used herein. In compiling the Index the price of each item is multiplied by its quantity "weight" and

then by its appropriate population or household "weight". The sum of these products for all items at any given date represents an "aggregate expenditure". The "aggregate expenditures" for successive periods are converted into an index by denoting the aggregate of a selected or "base" period as 1000, and calculating all index-numbers to such base by the proportions which their aggregates bear to that of the base period. (See par. 2, p. 13.)

2. Essential Features.—Apart from clear thinking, common sense and sound arithmetic, the prime essentials in compiling a retail price index are—

- (a) that prices be accurately ascertained at regular intervals for goods of constant grade and quality;
- (b) that the regimen be as representative as possible of the field to be covered;
- (c) that the weights be in approximate proportion to quantities actually used in the selected field.

3. The Regimen.—The regimen must be a selected regimen because it is impossible in practice to ascertain at regular intervals prices of every item of goods and services entering into household expenditure. Even in normal times there is considerable difficulty in ensuring that the selected items are always a true sample. Some items which it would be desirable to include must be excluded because comparative prices cannot be accurately ascertained for them at different times and different places. It is deemed better to limit the regimen of the index to items for which price variations can be ascertained with reasonable accuracy than to distend the regimen by including items for which price comparisons are necessarily inaccurate. Similarly, many items of small aggregate or individual importance are excluded. The regimen of the index therefore is not (as is sometimes erroneously supposed) a basic wage regimen nor yet is it a full list of component items in a standard of living. It does not imply that any particular goods or any selected grades or quantities of these goods should enter into determination of a basic or living wage. In fact the regimen used for the "C" Series Retail Price Index is simply a selected list of items combined in certain proportions for the purpose of measuring price variations. The items are representative of the fields covered, and the proportions approximate to those in average consumption so far as can be ascertained.

The regimen and "weights" used in the "C" Series Index are published in full on pages 11 to 13.

4. Purpose of Retail Price Indexes.—The retail price indexes are designed to measure the extent of changes in price levels only. While they may be used as indicating proportionate variations in cost of a *constant* standard of living, they do not measure the absolute cost of any standard of living, nor the cost of changes in the standard of living. In other words, they measure as nearly as may be the proportionate change in the aggregate cost of specified quantities and qualities of the selected regimen of items included in the index. The regimen is representative of a high proportion of the expenditure of wage-earner households.

5. Effects of War Conditions on Indexes.—Under war-time conditions scarcity of certain types of goods, erratic supply and changes of grade due to standardization created unusual difficulty in obtaining the data necessary

for measuring variations in prices and this difficulty still obtains. In some instances, this has rendered it necessary to substitute new grades, qualities or types of articles for those formerly used as indicators of changes in price. This has been the case more particularly in the clothing, household drapery and household utensils sections of the regimen. Substitutions of similar kind were necessary at times under normal conditions in order to meet changes of fashion and usage. In themselves, such substitutions are not injurious to the index provided the transitional difficulties can be solved as they arise. No change in principle is involved. The index continues to measure, as accurately as may be, price variations, and price variations only. Just as in the pre-war period, application of multipliers (called "grafting factors") serves to neutralize those differences in prices which are solely due to substitution of a new item for one which has ceased to be available or in common use. The net effect of this process is that the price of the old item is taken as typical of price variation in its class up to the time of substitution, and the prices of the new item as typical of such changes in price thereafter.

In normal times, popular usage of items in general consumption changes slowly and the weight of items and groups in the regimen is changed only at long intervals. In war-time scarcity of supplies of some goods, rationing and kindred factors actually produce substantial changes in usage both long term and short term. The "weights" applicable to the items in the regimen, however, have not been changed and continue as in pre-war years. (See § 9 (2) hercof.)

The "C" Series Index, as published, measures the aggregate variation in prices of the regimen of items adopted in peace times in peace-time proportion. This ensures comparability of the index on that specific basis. Its practical significance under war conditions is limited because a single index cannot take into account all changes that occur.

If it were practicable, it would be desirable to compile an additional index to measure variations over the war period, having regard to the fact that the relative consumptions of some items of the regimen have been altered by war conditions, and that the prices of some items not included in the regimen have moved differently from the variations recorded by the "C" Series Index. This would provide an alternative method of comparison presenting another aspect of price movement in war-time.

§ 3. Various Retail Price Indexes.

Two main series of retail price index-numbers are compiled and shown in some detail in the following pages, viz. :—

- (i) the "B" Series Index relating only to food, groceries and housing, continuously available since 1907 ;
- (ii) the "C" Series Index relating to food, groceries, housing, clothing, household drapery and utensils, fuel and light, and other miscellaneous items of household expenditure, continuously available from 1914.

The "B" Series Index comprises only the food, groceries and housing sections of the "C" Series Index. Reference is made on pages 36 to 39 of this Report to the "A" Series Index and the "D" Series Index (no longer compiled), the "Court" Series Index and various other series of retail price index-numbers.

Although considerable space is given herein to the "B" Series Index (see page 28), reference to it should be made only in respect of the movement in prices of food and groceries (groceries, dairy produce and meat) and rent of 4 and 5-roomed houses.

The "C" Series Index in total, subject to consideration of special war-time influences, provides a reliable measure of aggregate variations in retail prices (as well as of group indexes for component sections) of a high percentage of goods and services used in wage-earner households. This index is compiled for:—

- (a) the capital city of each of the six States,
- (b) four other principal towns in each of the six States,
- (c) weighted average of five towns (including capital city) in each of the six States,
- (d) weighted average for the Six Capital Cities combined,
- (e) weighted average for the Thirty Towns (including capital cities),
- (f) separate indexes for Warwick, Port Augusta, Whyalla (commenced September Quarter, 1946) and Canberra.

The "C" Series Index forms the basis of the "Court" Series Index used by the Commonwealth Court of Conciliation and Arbitration for the "cost of living" adjustments of wages prescribed by awards made by the Court. (See §§ 10 and 11 of this Chapter.)

§ 4. Retail Price Levels ("C" Series Index) 1914-1947.

1. **Significant Dates.**—The aggregate indexes for 1914 and 1921 to 1947 for the Thirty Towns are published in summary form on pages 21-23 hereof, while the following table furnishes the relevant index-numbers for the Six Capital Cities as a whole, for certain significant dates since November, 1914—the earliest date for which this index is available.

ALL ITEMS ("C" SERIES) RETAIL PRICE INDEX-NUMBERS.

WEIGHTED AVERAGE OF SIX CAPITAL CITIES.

(Base: 1923-27 = 1,000.)

1914, November	687 (Beginning of War I.)
1918, November	905 (End of War I.)
1920, November	1,166 (Post-War peak)
1922, November	975 (Post-War trough)
- 1929, Year	1,033 (Pre-Depression peak)
1933, Year	804 (Depression trough)
1939, September Quarter	916 (Pre-War II.)
1943, March Quarter	1,123 (Pre-Price Stabilization)
1943, June Quarter	1,143 (War II. peak)
1945, September Quarter	1,126 (End of War II.)
1945, December Quarter	1,129
1946, December Quarter	1,156
1947, December Quarter	1,221

The index reveals a rise of approximately 32 per cent. during the first world war, followed by a further rise of 29 per cent. in the two post-war years (November, 1918, to November, 1920). From November, 1920 to November, 1922, there was a fall of 16 per cent., and the index remained

relatively stable until the onset of the depression in 1929. During the four years of the depression 1929 to 1933 the index fell by 22 per cent., rising thereafter steadily until 1939 when it was nearly 14 per cent. above the level of 1933, and approximately at the level it had occupied at the date of the Armistice of 1918. Between the outbreak of war (September, 1939) and March, 1943, the index rose by approximately 23 per cent. to a level slightly below that reached at the height of the post-war boom in 1920; while at December quarter, 1946, the level was almost identical with that of the 1920 peak period.

Immediately after the outbreak of the war price control was established by the Government under Regulations dated 28th September, 1939, and a national policy of price stabilization was applied as from 12th April, 1943, backed by more stringent price control and price subsidies. The retail price level, as measured by the index, remained relatively steady throughout 1944 and 1945 at the level of March, 1943. This stabilized level was approximately 23 per cent. above that of 1939 and 63 per cent. above the level prevailing at the beginning of the first world war in 1914. Since June quarter, 1946, however, as a result of modified policies in price control, extra production costs have been permitted to pass into prices and the retail price index for the December quarter, 1947, was 33 per cent. higher than that for September quarter, 1939.

An account of price control measures and of price stabilization in Australia was published in the *Official Year Book of the Commonwealth* No. 36, page 404.

2. **The All-Items ("C" Series) Retail Price Index, Six Capital Cities, 1914-1947.**—The movement in the various groups of the index, and in the index as a whole for each year for which it has been compiled is shown in the following table for the six capital cities as a whole :—

The All Items ("C" Series) Retail Price Index and its "Group" Index-Numbers (a) for the Six Capital Cities combined, 1914 to 1947.

(Base of Each Group : Weighted Average of Six Capital Cities, 1923-27 = 1,000.)

§ 5. Increases in Retail Prices since Outbreak of War in 1939.

1. Australia.—The following statement shows for the Six Capitals separately, and as a whole, the percentage increases which have taken place in retail prices of items included in the "C" Series Index from the September quarter 1939, to the December quarter 1947, inclusive. The proportionate increase in the total index for each capital city is shown in the line marked "Total." The column headed "C" Series Index dissects the total percentage rise to show what part of it was due to the rise in prices in each of the four main groups of items. Thus, of the 33.1 per cent. increase for

Sydney, 8.1 was due to food and groceries, 0.1 to house rent, 18.8 to clothing and 6.1 to miscellaneous items. The column headed "Group Index" shows the percentage increase in prices of items in each group considered as a group. Thus, for Sydney, prices in the food and groceries group increased by 22.5 per cent., house rents by 0.6 per cent., prices of clothing by 94.9 per cent. and prices of miscellaneous items by 32.6 per cent. These when weighted and combined in the proportion of the "C" Series Index showed a rise of 33.1 per cent. For the Six Capital Cities as a whole the increase over the period was 33.3 per cent.

All Items ("C" Series) Retail Price Index.
Percentage Increases September Quarter, 1939, to December Quarter, 1947.

Group.	Sydney.		Melbourne.		Brisbane.

Clothing	18.5	87.9	19.7	97.0	19.5	94.0	19.2	96.1
Miscellaneous	5.1	24.1	4.2	21.7	4.1	21.3	5.2	26.6
Total	32.7	32.7	31.5	31.5	34.4	34.4	33.3	33.3

(a) Weighted average.

The foregoing comparisons refer to two points of time (i.e., the months immediately preceding the war and the closing months of 1947), at each of which special temporary factors may have influenced relative price levels. For instance, prices of certain foods (e.g., meat) fluctuate with seasonal conditions. The percentage increases shown do not, therefore, necessarily indicate the degree of increase due solely to causes peculiar to the war and immediate post-war period.

2. **International Comparisons.**—The following table shows the increase during this period in Australia and certain other countries. The increases during the first world war have also been included.

(a) Food, Rent and Miscellaneous Expenditure (Base December Quarter, 1942 = 100). (b) Old Index as varied by New War-time Index Series. Base: 17th June, 1947 = 100. (c) Quarterly indexes appear in preceding issues. (d) New Series.

At various stages during the first world war most of these countries introduced some measures of price control. But at an early stage in the second world war these countries introduced price control measures which became more stringent as the war progressed, culminating in a policy of price stabilization.

Immediately after the outbreak of war in September, 1939, the Government took steps to control prices, and, by proclamations issued from day to day, pegged prices of various commodities at those ruling on 31st August, 1939. The National Security (Prices) Regulations proclaimed on 28th September, 1939, under the authority of the National Security Act, established the basic principles of war-time price control, provided for the appointment of a Commonwealth Prices Commissioner and conferred upon him extensive powers to control the price of goods declared for that purpose by the Minister for Trade and Customs. A brief summary of the development of this control is published in *Official Year Book of the Commonwealth*, No. 36, page 404.

§ 6. Construction of All Items ("C" Series) Retail Price Index.

I. **The Regimen.**—The regimen from which the "C" Series Index is compiled consists of a list of commodities and services which commonly enter into the consumption of the average household in respect of which comparative prices can be ascertained with due precision from time to time and place to place. (See § 2 (3.) and (4.) hereof.) The regimen is divided into the following Groups and Sections:—

Group.	Section.
I. Food and Groceries	{ A.—Groceries. B.—Dairy Produce. C.—Meat.
II. Housing	D.—House Rent.
III. Clothing	{ E.—Clothing—Man. F.—Clothing—Woman. G.—Clothing—Boy (10½ years) H.—Clothing—Girl (7 years) J.—Clothing—Boy (3½ years).
IV. Miscellaneous	{ K.—Household Drapery L.—Household Utensils. M.—Fuel and Light. N.—Other Miscellaneous.

The "C" Series Index includes the whole of the foregoing Groups, but for many purposes indexes are required for individual Groups or Sections. For this reason the following indexes are regularly compiled at the intervals shown, and published in this Report and other publications issued by the Bureau:—

Group. (a)	Content.	Frequency.
I.	Food and Groceries	Monthly
II.	Housing (4 and 5 rooms)(b)	Quarterly
I. and II.	Food, Groceries and Housing (4 and 5 rooms) ("B" Series)	Quarterly
III.	Clothing	Quarterly
IV.	Miscellaneous Household Requirements	Quarterly
I., II., III. and IV.	Food, Groceries, Housing (4 and 5 rooms), Clothing and Miscellaneous ("C" Series)	Quarterly
I.	Food and Groceries ("200 Towns" Series)(c)	Yearly

For convenience of reference several of the indexes mentioned above have been given the "series" designation shown against them. These indexes are dealt with in turn in the following pages.

(a) "Group" or "Sectional" index-numbers in the various tables throughout this Report cannot be compared with each other in order to show the *relative cost* of Food and Groceries, Housing, Clothing or Miscellaneous requirements, since each "Group" or "Section" (or combination thereof) has its own Base = 1,000, viz., the weighted average cost for the Six Capital Cities as a whole during the five-yearly period 1922-27 for that "Group" or "Section". (b) *Rent*.—The rent index-numbers shown in the tables in this Report measure the proportionate rise and fall in the average weekly rentals paid for houses of four and five rooms taking corresponding houses throughout. They are "price" indexes in the strict sense, i.e., they are designed to measure only the "price" element in rent fluctuations. Similarly, "average rents" where shown are indexes of "price" changes in rentals expressed in terms of pence. They are not the average of rents actually paid by all tenants of 4 and 5-roomed houses. It would be inappropriate to include the average of rents actually paid in an index designed to measure price changes only. The average of rents actually paid is ascertained periodically by Census methods—(see also page 2 hereof). (c) Computation suspended as a war-time economy after November, 1942.

The articles and services included in the various regimens now used for the purposes of the indexes referred to are shown in the following table:—

Retail Price Indexes—Regimen.
GROUP I.—FOOD AND GROCERIES.

No.	Item	Unit	"Weight" of Mass Unit (per capita.)	Cost of Items in Regimen as percentage of aggregate cost—Melbourne, Dec. Quarter, 1917. (a)

(a) Mass unit actually applicable, and includes "weight" transferred from similar article now deleted.

(b) Standard mass units. In certain provincial towns where gas and/or electricity are not used the mass units differ from the standard.

(c) A definite basic amount per week is provided for each of these items, and varied in accordance with Resolution 20 of the Conference of Statisticians, 1936.

2. The Mass Units (or "Weights") and Method of Tabulation.—

(i) The "mass units" (or "weights") are multipliers representing the approximate average annual consumption *per head or per household* under normal conditions. The index-numbers are computed on a "total annual aggregative expenditure" basis, i.e., the total annual expenditure from time to time by a *standard population* in respect of the selected regimen of commodities and services commonly entering into household consumption, and of a constant *standard quality*. As a first step, therefore, it is necessary to multiply the price of each item by its "weight" per head or per household as the case may be. Thus, the "weight" of bread is 100 2-lb. loaves per head; of sugar 100 lb. per head; of towels 3 per household; and of housing 52 rent-weeks per household. The result of this initial calculation is designated the "P.MU" aggregate (i.e., Prices x Mass Units).

The sum of the above "P.M.U." results for each Section or Group is then multiplied by its appropriate population or household "weight" to produce the respective annual aggregate expenditures. Thus, Sections A to C (Food and Groceries) would be multiplied by the total population; Section D (Housing) by the total number of households; Sections E to J (Clothing) by the proportion of the total population applicable to each; and Sections K to N (Miscellaneous) by the total number of households.

The combination of the aggregates from the last paragraph gives the "total annual aggregate expenditure" for the whole regimen, from which the "C" Series index-number is derived by applying to 1,000 the ratio which the aggregate for any period bears to the aggregate selected as the base period of the index. In the process of tabulation all prices are converted to pence for these final aggregates.

For tabulating purposes some of these "mass units" are varied when necessary to make up a deficiency or cancel out an excess in the aggregate resulting from a *change in the standard* of any item upon which prices are collected, to ensure that such changes shall not be wrongly recorded by the index as *variations* in prices. The "mass units" published above, however, still continue to show the correct *relative* consumption "weights" actually applicable to the commodities and services in the regimen for the *constant standards* used in the index. See also Sections 2 (3) and 6 (3) of this chapter.

(ii) The five sections into which the clothing group is divided are somewhat arbitrary, but they follow those adopted by the Royal Commission on the Basic Wage (*see p. 101*). The sections for men and women are now regarded as being applicable to persons aged seventeen years and upwards. The section for a boy aged ten and a half years is taken as representative of both sexes from ten to sixteen years; the section for a girl aged seven as representative of both sexes from five to nine years; and the section for the boy aged three and a half years is taken as representative of children aged four years and under.

(iii) In estimating the annual average consumption per head of food and groceries for household purposes, small adjustments in the crude average consumption were made in two ways. Consumption by factories, when the product did not go into household use in Australia, was deducted. On the other hand, the weights given to some foods, such as dried apricots and canned peaches, cover also the consumption of other similar foods. The "weight" of individual food items has not been adjusted to take account of war-time scarcities and rationing. Foods which are unavailable temporarily or intermittently are retained in the index at the latest recorded price.

(iv) Foods of some importance, such as fresh fish, and fresh fruit and vegetables other than potatoes and onions, are not included in the regimen because comparable prices for a standard grade cannot be obtained from time to time or place to place and because of marked seasonal fluctuations in supplies and consumption. The inclusion of such items, therefore, would impair the accuracy of the index. In the original regimen certain omissions were made partly on account of the difficulty of securing comparable prices.

Some cuts of meat, for example, are excluded because they are not uniformly standardized. Mutton is included and not lamb because the latter, in many places, is available only seasonally. However, the appropriate total weight for meat is distributed amongst the cuts included in the regimen. Proprietary lines of breakfast foods are excluded because they are not universally available.

(v) In the case of Food and Groceries (Group I.) the "weights" adopted are, approximately, the annual average consumption per head for household purposes of the various articles during the years 1927 to 1929. The "weights" allotted to articles of clothing and miscellaneous household requirements are based largely on the results of the inquiries of the Royal Commission on the Basic Wage, which reported in 1920 and 1921. After exhaustive inquiries the Commission published a "regimen" for an average working family of five persons, and set out the constituent items in its "Indicator List". This list, so far as it related to the articles in question, was followed substantially in the original compilation of the "C" Series Index and has been adjusted by subsequent investigations of the Bureau to accord with changes in popular usage. The mass units used for fuel and light are based, indirectly, on the findings of the Commission. Until the September quarter of 1936 fixed amounts were used for the miscellaneous items of Section N, but since the date mentioned, provision has been made to vary certain of these amounts periodically, in accordance with ascertained changes.

(vi) The "weights" allotted to the items have not been adjusted to take account of war-time shortages or rationing, and the index therefore measures war-time price changes in relation to a normal (or pre-war) apportionment of household expenditure. (See § 2 (5) and § 9 (2) hereof.)

3. **Relative "Aggregate Expenditure" of Items and Groups.**—In the *base period* of the index (average of the years 1923 to 1927) the relative importance of each of the four main groups, expressed as a percentage of the weighted average "aggregate expenditure" in the Six Capital Cities (from which all relative index-numbers are derived) was—Food and groceries, 38.7 per cent.; house rent, 21.3 per cent.; clothing, 23.0 per cent.; and miscellaneous, 17.0 per cent., as shown in the third column of the following table. Although the "weights" of each item in the regimen are kept virtually constant, the relative "aggregate expenditure" of the various items and groups will, of course, vary from time to time as relative prices change and, in addition, the distribution of relative expenditure as between the groups and sections is varied from time to time for "relative weighting" purposes on the basis of the changing relativities of population and households as disclosed by successive Censuses. This, however, does not affect the level of the Index at the point of change, but alters the degree of variation registered by the various groups or sections of the Index.

The percentage distribution for Melbourne in the *base period* was practically identical with that of the Six Capital Cities as a whole, and has continued to be representative of the relative movement of prices in the capital cities up to the present time. For this and other reasons, therefore, the percentage distribution of the Melbourne "aggregate expenditures" has been published in previous issues of this Report, and these figures for

the December quarter, 1947, are shown in the second column of the table for comparison with those of the *base period* of 1923-27:—

Group	Section.	Percentage of Aggregate Expenditure.	
		1923-27. (Base). Six Capital Cities.	Dec. Qtr., 1947. Melbourne.
I. Food and Groceries	A Groceries ..	17.44	12.04
	B Dairy Produce ..	10.23	9.45
	C Meat ..	10.94	12.53
II. Housing ..	D House Rent— (4 and 5 rooms) ..	21.26	18.33
	E Man ..	8.69	10.13
III. Clothing ..	F Woman ..	9.12	14.96
	G Boy, 10½ years ..	2.89	2.00
	H Girl, 7 years ..	1.36	1.62
	J Boy, 3½ years ..	0.93	0.81
	K Household Drapery	1.08	1.94
	L Household Utensils	0.49	0.65
IV. Miscellaneous	M Fuel and Light ..	4.92	4.32
	N Other Miscellaneous	10.54	11.22
		100.00	100.00

It should be noted, however, that percentage price variations are measured from the "aggregate expenditures" of the *base period* of the index, and the percentages shown in the foregoing table for the *base period* 1923-27, therefore, are the proportionate "weights" applicable to the various groups and sections in measuring such variations in the index as a whole calculated to *this base period*, and *not* the percentage "weights" of any other period, e.g., those shown for the December quarter, 1947—which would only become of significance in the measurement of variations if the latter quarter were adopted as a *new base* for the index.

4. Base Periods of the Indexes.—The base period originally adopted by the Bureau for its retail price indexes was the year 1911. When the collection of the prices of clothing and miscellaneous items was undertaken for the purposes of the "C" Series Index, the month of November, 1914, was adopted as the base period for this series. The desirability of computing retail price indexes to a post-war base was considered by a Conference of Statisticians in 1929, and it was resolved that from 1st January, 1930, the five years 1923-27 should be adopted as the base period. Commencing with Labour Report No. 21 for 1930, therefore, the retail price indexes have been published on this base. The aggregate to which all index-numbers are related is the weighted aggregate cost of the regimen in the six capital cities during the period taken as base expressed as an index-number of 1,000.

Indexes on the earlier bases mentioned will be found in previous issues of the Labour Report, as follows:—

(i) 1911 *Base*.—Food and groceries; rent of all houses; and food, groceries and rent of all houses ("A" Series Index)—Labour Reports Nos. 1 to 15.* Food and groceries; rent of 4 and 5-roomed houses; and food, groceries and rent of 4 and 5-roomed houses ("B" Series Index)—Labour Reports Nos. 16 to 20.

(ii) 1914 *Base*.—Food and groceries; rent of all houses; clothing; miscellaneous; all items of household expenditure (subsequently retrospectively revised to include rents of 4 and 5-roomed houses only)—

* These index-numbers appear in the Appendix to each Labour Report Nos. 16 to 28 and also in the *Quarterly Summary of Australian Statistics* up to No. 155, June, 1938.

Labour Reports Nos. 12 to 16. Food and groceries; rent of 4 and 5-roomed houses; clothing; miscellaneous; all items of household expenditure ("C" Series Index)—Labour Reports Nos. 17 to 20.

The conversion of these indexes from one base to another may be readily effected by multiplying the index-number to be converted by the appropriate factor shown in the following table:—

Group.	1911 to 1914 (a).	1914 (a) to 1911.	1911 to 1923-27.	1923-27 to 1911.	1914 (a) to 1923-27.	1923-27 to 1914 (a).

(a) November.

The results obtained by the method above will, of course, be only approximate, but the error will not be greater than one point in the unit figure.

5. Relative Population Weights for Towns.—Weighted averages for any combination of towns or States may be calculated approximately by multiplying the index-numbers* of the towns or States to be included by their population weights, and dividing the sum of the products by the sum of the multipliers. The population weights used in the computations of these weighted averages for 1934 and succeeding years are as follows:—

Relative Population Weights Used for Different Towns.

New South Wales.		Victoria.		Queensland.		South Australia.		Western Australia.		Tasmania.	
Town.	Weight.	Town.	Weight.	Town.	Weight.	Town.	Weight.	Town.	Weight.	Town.	Weight.
Sydney ..	1235	Melbourne	997	Brisbane	300	Adelaide	513	Perth, etc.	208	Hobart	60
Newcastle	103	Ballarat ..	38	T'woomba	26	Kadina, etc.	11	Kalg'lie, etc	17	Launceston	33
Broken Hill†	27	Bendigo ..	29	Rockham'n	29	Pt. Pirie	12	Northam	5	Burnie ..	4
Goulburn	15	Geelong ..	39	Townsville	26	Mt. Gamb'r	5	Bunbury	5	Devonport	5
Bathurst	10	W'nambool	9	Bundaberg	9	Peterbor'gh	11	Geraldton	3	Queenst'wn	4
Total ..	1392	Total ..	1107	†Total ..	392	Total ..	344	Total ..	240	Total ..	106

† Townsville and Bundaberg were substituted for Charters Towers (7) and Warwick (7) in the "five towns" tabulation in the March Quarter of 1937.

The weights used are based on the 1933 Census results, and represent to the nearest 1,000 the actual population at that date.

The new weights given above produce results which differ only very slightly from those obtained from the weights previously in use. The latter were based upon the 1921 Census results, and were last published in Labour Report, No. 23.

* The official index-numbers are calculated by operating on the "aggregates" of the towns concerned, a procedure which may produce slightly different results from the above.

§ 7. Tabular Statements of Retail Price Index-Numbers.

I. **General.**—The results of inquiries into price movements are available in the following publications:—

(i) *Monthly.*—A mimeographed statement is published each month giving index-numbers for Food and Groceries. The *Monthly Review of Business-Statistics* contains annual, quarterly and monthly index-numbers to the latest available date.

(ii) *Quarterly.*—A mimeographed statement is issued about three weeks after the end of each quarter giving the "C" Series index-numbers for that quarter and immediately preceding quarters in respect of each of the 30 cities and towns originally adopted and for certain other towns, e.g., Canberra, for which "C" Series index-numbers are now compiled. The *Quarterly Summary of Australian Statistics* contains annual, quarterly and monthly index-numbers to the latest available date. This publication also contains the average prices of the items comprising the Food and Groceries regimen, for each month of the last available quarter, in the 30 towns covered, by the investigation. Comparative average rents of 4 and 5-roomed houses in these towns are also shown therein.

(iii) *Annual.*—The Labour Report contains index-numbers over the past five years, and the monthly and quarterly results for the last available year. The average prices for the last year of the items of food and groceries, and average house rents, are also published in this Report. The *Official Year Book* also contains information similar to, but in less detail than that published in the Labour Report.

2. **All Items ("C" Series) Retail Price Index.**—On pages 6-7 hereof is published a table of weighted averages for the six capital cities combined, of "C" Series index-numbers, together with index-numbers for the four main groups of items in the "C" Series Index for each year 1914-1947.

In the pages immediately following are published:—

- (i) the "C" Series index-number for the last quarter of each year 1939 and 1941 to 1947 (page 19) and for the month of November, 1914-1920 (page 20), for each capital city and for the six capital cities combined, and showing also separate indexes for each of the four groups of items;
- (ii) the "C" Series index-numbers for the years 1914, 1921 to 1947 and each quarter during the period September quarter, 1939, to December quarter, 1947, for each of the 30 towns, with the weighted averages for each State, and 30 towns and the six capital cities (pages 21-23);
- (iii) the "C" Series index-numbers for the years 1936 to 1947 and the twelve quarters ended 31st December, 1947, for four additional towns not included in the weighted averages in (ii) above, and showing also separate indexes for each of the four groups of items (page 24);
- (iv) "Group" index-numbers for each of the four groups of items in the "C" Series Index for places mentioned in (ii) above for the years 1914, 1921 and 1939 to 1947 and the four quarters ended 31st December, 1947 (pages 25-27).

3. "B" Series Retail Price Index: Food, Groceries and Rent.—This index measures the prices of food and groceries and the rent of 4 and 5-roomed houses. It was first compiled for the year 1925, and retrospectively for several earlier years. It was designed to replace the "A" Series Index (food, groceries and rent of all houses), which was the original index compiled in 1912. The first of the following tables covers only the six capital cities and gives index-numbers for the two Groups of the régime involved split up into their various Sections, while the second table gives the "B" Series Index split up into its two Groups for each of the 30 towns, the weighted averages of the 5 towns in each State, the six capital cities and the 30 towns. The "B" Series Index (split up into its two Groups) for four additional towns not included in the weighted averages appears on page 24.

Retail Price Index-Numbers(a): Capital Cities—"B" Series.

(Base of each Section: Weighted Average of Six Capital Cities, 1923-27 = 1,000.)

§ 8. Retail Price Index-Numbers, 200 Towns.

To supplement the information collected monthly for the 30 towns specified in the preceding pages, a special investigation into prices in 70 additional towns was undertaken in November, 1913. This investigation was repeated in November, 1914, and again in November, 1915, when the number of additional towns was increased to 120. In November, 1923, the number was further increased to 170. Information in regard to prices obtained in November each year 1923 to 1942 related, therefore, to 200 towns. After 1942, collection of returns of these prices was suspended as a war-time economy. The results of the first investigation were published in Labour Bulletin No. 5 (pp. 26 to 33), and details respecting succeeding investigations are incorporated in the Labour Bulletins and Reports issued subsequently by this Bureau.

In issues of these publications prior to Labour Report No. 28 of 1937, information was given regarding movements in the rents of 4 and 5-roomed houses. While the index-numbers were useful in a general way as a measure of changes in rents in any one town from time to time, there has been an increasing tendency to regard them as an adequate measure of the relative absolute levels of rents in different towns at any given date. In order to prevent such a misuse of the figures, and because of increasing doubts as to the ability of the Bureau, except at prohibitive cost, to ensure that returns of rents from all these towns shall be based on continuously representative samples, it was decided to limit the information collected to the prices of food and groceries. Should any industrial tribunal desire further information on house rentals in any of these towns, the Bureau will be prepared to consider requests for special investigations by its field officers.

§ 9. Changes in the Regimen.

1. **General.**—Since the original compilation of retail price indexes by the Bureau in 1912, the regimens of the several Groups and Sections have undergone some modifications, with the object of improving the indexes as measures of the variations in retail prices in individual towns, as between the many towns covered, and in the weighted average of all towns or the various combinations thereof. These modifications are briefly as follows:—

(i) *Food and Groceries.*—The regimen for food and groceries, originally introduced in 1912, was based upon the relative consumption of the years 1906 to 1910, and the first revision was made in the September quarter of 1932 and was based on the relative consumption of the years 1927 to 1929. The regimen in use up to that date will be found on page 13 of Labour Report No. 23. A second revision took place in the September quarter of 1936, as part of the general revision of the regimen by the Conference of Statisticians of April, 1936. The main features of this revision are referred to in par. 2 below.

(ii) *Housing.*—The housing constituent of the regimen has also been revised. Originally the rentals of all houses from "3 rooms and under" to "8 rooms and over" were tabulated, and they were continuously used in the "A" Series Index (food and rent of all houses) from 1912 to 30th June, 1938, when this series was discontinued. They were also used in the "C" Series Index up to and including the year 1924. From the following year rentals of 4 and 5-roomed houses only were used in the "C" Series Index, and in the same year they were combined with food and groceries to form the "B" Series Index.

Following on the resolutions of the 1936 Conference of Statisticians (see par. 2 below), the rentals of 4 and 5-roomed houses in each of the six capital cities and "second" important town in each of the States (excepting Western Australia) have been determined on a somewhat different basis (for convenience designated the "Census" basis) from that previously used. For the six capital cities, this base was introduced into the indexes at the December quarter, 1936, and for the "second" towns at the March quarter, 1937. The basis adopted was that of the average rents, as disclosed by the 1933 Census, of 4 and 5-roomed houses occupied by fully-employed wage and salary earners in all industrial groups with the exception of "Fishing and Trapping," "Agricultural, Pastoral and Dairying" and "Forestry," brought up to the above-mentioned quarters by applying the percentage variations in rent since the 1933 Census shown for corresponding houses at both periods in the rent rolls of the house-agents. At the same time, these rent rolls were carefully revised after personal inspection of all houses included to ensure a satisfactory "sample" of houses upon which to measure rent variations in future. Thus, the rent levels having been established for the towns in question, the rent rolls ceased to be used for the determination of the average rent from quarter to quarter, and were used only for the purpose of measuring the percentage variations from quarter to quarter by means of corresponding houses in the rolls for the current and the preceding quarter—the percentage variations being applied progressively to the basic averages from the 1933 Census, as explained above. The new standard, so far as the towns in question are concerned, affected the indexes only in respect of the relative levels of rents in the different towns, and in respect of their absolute height.

The "Census" basis not being generally applicable to the circumstances of small provincial towns, on account of the great diversity of average "quality" of houses, the levels, as previously determined from a sample of houses selected by the house agents in accordance with definite standards originally laid down, were continued in the indexes until such time as the rent rolls were completely revised on the basis mentioned above. The revision was completed by the June quarter, 1939, but in the meantime as each town was completed the rent level then reached on the old basis was established as the base to which the percentage variations disclosed by the rent rolls were progressively applied thereafter.

(iii) *Clothing and Miscellaneous.*—The regimen for clothing and miscellaneous household requirements was originally introduced in 1921, and the first revision was made in the March quarter of 1935. Details of the original regimen were never published, but the revised regimen of 1935 appeared in Labour Report No. 26. A second revision took place in the September quarter of 1936, as part of the general revision of the regimen by the Conference of Statisticians of April, 1936. The main features of this revision are referred to in par. 2 below. Some minor alterations have since been made in the regimen.

2. **Revision of 1936.**—The revision of the regimen by the Conference of Statisticians of April, 1936, was of a comprehensive nature. The Resolutions of the Conference are reprinted in Appendix XI. of Labour Report No. 27. This Conference not only recommended extensive revisions of the regimen from which the indexes are compiled, but also considered methods of collection and compilation. As a result of its deliberations, and subsequent discussions by correspondence, many improvements and refinements were introduced.

The changes in the regimen made by this Conference comprised chiefly the elimination or replacement of articles no longer in demand, or which experience had shown to be unsuitable media for the measurement of price variations; the alteration of units of quantity in certain cases to conform with those in most general use; the adjustment of the mass unit allotted to certain articles to bring them into accord with present-day consumption habits; and the re-adjustment of the population and household weights applicable to the several groups and sections of the regimen in accordance with the results of the 1933 Census. Definite grades or qualities were also established for each article in the regimen, to ensure that quotations should be given, as far as possible, for the same article at all times and in all places, and expert field officers were appointed to collect, personally, prices to the standard qualities laid down. Improved methods of collecting and weighting average house rentals were also adopted (see par. 1 (ii) above).

3. Method of Effecting Changes.—Changes of the nature mentioned are commonly made in price indexes without seriously impairing their continuity. In accordance with established principles of procedure in changing the regimen (see Labour Report No. 9, Appendix I, Part II., pars. 14 and 18), the general level of the index is taken as determined by the old regimen for the quarter in which the change is made, and the new regimen is used to measure variations in the price level after that date. The linking up of the index-numbers on the old and the new basis is effected by the usual method of equating the respective weighted aggregate costs of the old and the new regimens in the six capital cities.

There are two methods of effecting this, as follows:—Up to the June quarter, 1942, all such changes were made by equating the new aggregate of the section embodying the changes to the former aggregate. This course was adopted when items were added to or omitted from the regimen, and when a change was made in the standard of any item. From the September quarter, 1942, however, all changes of standard were effected by an appropriate adjustment of the "mass unit" or "weight" so as to preserve the percentage weight which the item carried in the aggregate from time to time, and wherever possible the "weight" of any item dropped from the regimen was transferred to an article of a similar nature which would serve as a more appropriate medium for the measurement of the variations of the article dropped than the remaining items of the section—the "mass units" of which under the former procedure in effect were proportionately increased to carry the aggregate of the item dropped, or reduced to admit a new item added. See also par. 3 on pages 15 and 16.

4. Continuity of Indexes.—While the above involves no break of continuity in the index-numbers for the six capital cities as a whole, upon the basis of which all such changes are effected, slight alterations of the relative positions of individual towns are inevitable on account of the alteration of former standards. The effect, however, is more noticeable in the group index-numbers than in those covering a combination of groups, wherein the losses and gains tend to balance out. Thus, in comparing group index-numbers for individual towns in respect of periods including the dates of change referred to in pars. 1 to 3 above, the following considerations should be kept in mind:—

- (a) *Food and Groceries.*—These index-numbers are substantially comparable throughout the period up to the June quarter of 1936. From and including the September quarter of 1936 the index-numbers for individual towns are comparable with each other, but are not strictly so with those for previous quarters.

(b) *Housing*.—No change was ever made in the method of calculating the rentals of "All Houses", and consequently these index-numbers were comparable throughout the whole period of their existence.* In regard to rentals of houses of 4 and 5 rooms, however, the index-numbers for individual towns are comparable with each other up to the June quarter of 1936. In the September quarter, 1936, a change was made in the methods of averaging and weighting the data from house-agents which gave rise to slight disparities not due to rental fluctuations, and rendered the rent figures for individual towns not strictly comparable with those of former periods. The change, however, thereafter made the index-numbers for any one town more comparable with those of other towns. In the December quarter of 1936 the rent tabulations in the two principal towns of each State were placed on an entirely new basis, which rendered them incomparable individually with average rents of previous periods. This change was also introduced with the object of making the index-numbers for the principal towns more comparable *inter se* in any given quarter (*see par. I (i) above*).

(c) *Clothing and Miscellaneous*.—The index-numbers for individual towns up to and including 1934 are comparable with those for previous periods. Those for 1935, and the March and June quarters of 1936, are comparable for those periods, but not with the index-numbers of former or subsequent periods. From and including the September quarter of 1936 the index-numbers for individual towns are substantially comparable with each other, both from quarter to quarter and from town to town, but for individual towns they are not strictly continuous with those of previous periods.

5. **The Regimen under War Conditions.**—Between the comprehensive revision of 1936 and the outbreak of war in 1939 changes in conditions did not require any appreciable revision of the regimen or mass units of items therein. The adjustments made in 1936 had brought the basis of the index "up-to-date" in the sense that it conformed reasonably closely to normal pre-war usage. Although the effects of the war produced some variations from normal consumption in 1940 and 1941, it was not until 1942 (as explained in § 2 (5) of this Chapter) that fundamental changes began to occur. As there explained, the years 1942, 1943 and 1944 produced temporary changes of a far-reaching character which, if permanent and stable, must have necessitated fundamental re-adjustments in the regimen and mass units of the index. But the resultant changes in the index would have been so extensive as virtually to create a new index which would not have been continuously comparable with the "C" Series Index either as compiled pre-war or as it may be compiled in post-war years. Consideration of the matter led to the conclusions—

- (i) that it was desirable to continue the "C" Series Index substantially on its pre-war regimen in order to ensure continuity of comparison of price movements on a clearly defined basis;
- (ii) that it was impossible to reconstruct the "C" Series Index to take account of recurrent temporary departures from normal consumption.

* The tabulation of the "A" Series Index, for which these rents were used, was discontinued after the issue for June quarter, 1938

§ 10. Retail Price Indexes and Wage Variations.

Two distinct procedures are adopted by the Commonwealth Court of Conciliation and Arbitration in fixing and varying basic or living wages as follows:—

- (i) the Court periodically *fixes* the amount of wage in the light of evidence submitted by parties appearing before it. Such evidence usually covers a wide range of facts as to economic conditions;
- (ii) having determined the amount of basic wage the Court further determines whether or not it shall be subject to automatic adjustment for changes in price level and, if so, by what method such *variation* shall be made. This again is decided in the light of evidence and of representations by the parties concerned.

The "C" Series Index is used by the Court to derive the "Court" series of retail price index-numbers upon which the basic or "needs" portion of the wages prescribed in awards is *varied* automatically for changes in price levels quarterly, half-yearly or yearly. These are commonly referred to as "cost of living adjustments" although in fact they relate only to that part of the *change in cost of living* which is due to variations in prices. The Court itself determines from time to time at public sittings the amount of the basic wage, having regard to evidence submitted in relation to other aspects of "cost of living" and other relevant considerations. In fixing the amount of the basic wage the Court does not have regard to either the regimen used in compiling the retail price index or the cost of such regimen. The regimen of the index would not be suited to such a purpose.

The considerations upon which the basic wage is fixed are set out in successive judgments of the Court and briefly summarized in Chapter III. (§ 3) of this Report. On this matter, reference should be made to the Basic Wage Judgments of the Court, particularly those of 1934, 1937 and 1941,* and to the general statement of principles set out in the judgment on the "Munition Workers' Case" of 1943.† Certain State industrial tribunals use the index-numbers directly for automatic or quasi-automatic adjustment of the rates of wages determined by them as tribunals, while some State tribunals have regard to the index-numbers and other factors in considering what "cost of living" variations they should make in rates of wages.

The use of indexes by industrial authorities for purposes of adjusting rates of wages for changes in price level is a practice of long standing, dating in the case of the Commonwealth Court of Conciliation and Arbitration, for example, back to the year 1913. The tribunals form their own judgment as to the relevance of the indexes to their purposes, and periodically hear the representatives of employers and employees on the issues involved, including questions as to whether the index is satisfactory for the purposes to which it is applied by the tribunal. In such proceedings the Statistician or his officers are called at times as witnesses on questions of fact and technical matters relating to the indexes.

The automatic adjustments in wages prescribed in awards of the Court on the basis of retail price index-numbers are sometimes referred to as "cost of living" adjustments and the index is popularly referred to as a "cost of living index". This at times creates misconceptions as to the nature of the retail price index since the term "cost of living" connotes not only change in cost of living due to changes in prices, but also changes in

* 33 C.A.R., p. 144; 37 C.A.R., p. 583; 44 C.A.R., p. 41.

† 50 C.A.R., p. 191.

cost of living due to changes in standard of living. Beyond that, use of the term "cost of living" index sometimes creates the erroneous impression that the retail price index purports to embrace all that should be included in a desirable standard of living. As pointed out in the opening sections of this chapter, the "C" Series Index is a retail price index of specific meaning.

The following is a brief statement of the indexes used by the Commonwealth Court of Conciliation and Arbitration from time to time:—

(i) "*A*" Series Index.—The "*A*" Series Index covers the items food and groceries and the rent of all houses, with the year 1911 as the base (1,000). This Index was first compiled in 1912, and is available yearly for the six capital cities from 1901 to 1911, and quarterly for 30 important towns of Australia from 1912 to the June quarter of 1938, after which it was discontinued.

The Commonwealth Court of Conciliation and Arbitration adopted this Index in 1913 to determine the *relative* basic wage for towns throughout Australia, and to vary what is popularly known as the "Harvester" Basic Wage of 1907—the wage (42s. per week for Melbourne) declared by Mr. Justice Higgins to be sufficient to meet the "normal needs of the average employee, regarded as a human being, living in a civilized community." For this purpose the base index-number (1,000) of the series was selected by the Court as equivalent to a basic wage of 48s. per week. This Index had very little application after May, 1933, because of the adoption by the Court successively of the "*D*" Series Index at that date, the "*C*" Series Index in May, 1934, and the "Court" Series Index in July, 1937.

(ii) "*B*" Series Index.—The "*B*" Series Index covers the items food and groceries and rent of 4 and 5-roomed houses, with the prices ruling in the years 1923–1927 as the base (1,000), and is actually the food and rent constituent of the "*C*" Series Index described in (iii) below. This index was first compiled in 1925, and is available for the six capital cities for the years 1907 and 1911, and for the month of November of the years 1914 to 1920, and quarterly thereafter for the 30 important towns of Australia. It was designed to replace the "*A*" Series Index but was never used in connexion with the adjustment of wages by Industrial Tribunals. This series appears on pages 28 to 31 of this Report.

(iii) "*C*" Series Index.—The "*C*" Series Index covers food and groceries; rent of 4 and 5-roomed houses; clothing (man, wife and three children); household drapery, household utensils, fuel, lighting and other miscellaneous items, with the prices ruling in the years 1923–1927 as the base (1,000). The regimen is published in full on pages 11 to 13 of this Report.

This Index was constructed as the result of the recommendations of the Royal Commission on the Basic Wage of 1920, and the regimen adopted was substantially that of the "Indicator" Lists of the Commission with periodical adjustments as explained in this chapter. It was first compiled in 1921 and is available for the month of November for the six capital cities for the years 1914 to 1921, quarterly for these cities from June quarter, 1922, and quarterly for the 30 important towns from March quarter, 1925 to date.

The Index was not used in connexion with the variation of wages until its partial adoption by the Commonwealth Court of Conciliation and Arbitration in May, 1933, when that Court introduced the "*D*" Series Index explained on the following page. In its judgment of 17th April, 1934, the Court adopted as from 1st May, 1934, the "*C*" Series Index as the sole basis for the adjustment of the wages declared in the judgment, for which purpose the Court equated a "needs" basic wage of 81s. per week to the base index-number (1923–27 = 1,000) of the series. In its

judgment of 23rd June, 1937, the Court adopted this index as the basis of the "Court" Index (First Series) for the adjustment of the "needs" portion of the Court's new basic wage (see (iv) below).

(iv) *The "Court" Index.*—The "Court" Index was created by the Commonwealth Court of Conciliation and Arbitration in its basic wage judgment of 23rd June, 1937, and operated from 1st July, 1937. Its purpose was to provide a set of index-numbers which would be published by, and under the direct control of, the Court. It was created primarily for the purpose of removing conditions which tended to engender the impression that the Commonwealth Statistician was in some way responsible for the fixation and adjustment of wage-rates. Its introduction has the added advantage of enabling the index-numbers to be specially numbered in the manner most convenient for adjustment purposes, and of enabling the Statistician to change the base of his index-numbers without upsetting the wage and adjustment provisions of the Court's awards. It is based on the Commonwealth Statistician's "C" Series Index, and from 1st December, 1946, is obtained as follows:—The Court in its "Interim" basic wage judgment of 13th December, 1946, decided to equate to the base index-number of the "C" Series Index (1923-27 = 1,000) the "Court" Index (Second Series) index-number 87.0, and as this was the weekly rate in shillings allotted in 1946 by the Court to this base index-number as its "needs" basic wage (see (vi), p. 82), each "C" Series index-point is thus equal to .087s. By the simple process of multiplying any "C" Series index-number by this factor, therefore, the result to the first decimal place (*as it stands*) is the corresponding "Court" (Second Series) index-number, which also expresses in shillings the amount of the "needs" basic wage as fixed by the Court for that index-number—with the proviso that any decimal point of .5 or more shall be regarded as the next higher number of shillings. To this wage is then added the relevant "constant" and other loadings granted by the Court to make up the total basic wage for the awards concerned. In the normal course the Court hears and decides issues raised as to the suitability of the index-numbers for the purposes to which it applies them. The "Court" Index (Second Series) entirely supersedes the "C" Series Index for all wage adjustments decreed by the Court. A set of index-numbers under this series is reproduced in Appendix III. of this Report, while a "Ready Reckoner" for the weekly "needs" basic wage equivalents of "C" Series and "Court" (Second Series) index-numbers is shown at the end of the following section (see page 40).

A full account is given on page 36 of Labour Report No. 34 of the "Court" Index (First Series) on the base 1923-27 = 81.0, which operated from 1st July, 1937. For the purposes of obtaining continuous "price" indexes, however, these may be converted to Second Series (Base = 87.0) by multiplying them by the factor 1.0741, and the Second Series may be converted to First Series by multiplying them by the factor 0.931.

(v) *"D" Series Index.*—The "D" Series Index is a combination of the "A" and "C" Series Indexes, and was introduced by the Commonwealth Court of Conciliation and Arbitration for the adjustment of wages of those employees who were subject to the full 10 per cent. reduction in real wages determined by the Court in January, 1931. It came into operation from 1st May, 1933.

The Index has for its base the "A" Series Index for each town for the December quarter of 1929, which is varied according to the ratio of change indicated by the "C" Series index-number for the whole of 1929 and the corresponding "C" Series index-number of the town for the quarter for

which the adjustment is to be made. It will thus be seen that, whereas the "D" Series Index for each town from the December quarter of 1929 fluctuated in the same way as the "C" Series Index for the same town, the relationship of different towns was that of the "A" Series Index for the December quarter of 1929, slightly modified by the difference in movement between the "A" Series and the "C" Series Indexes for each town since that quarter.

This Index was superseded as from 1st May, 1934, by the judgment of the Court referred to under "C" Series Index. The index-numbers of this series were published in Appendix VIII. of Labour Reports Nos. 24 to 27.

(vi) *Food and Groceries.*—The regimen of food and groceries is a component part of each of the series of retail price index-numbers mentioned above. Details of the regimen will be found on page II. This index was first compiled in 1912 and is available yearly for the six capital cities from 1901 to 1911 and monthly for the 30 important towns of Australia from 1912 to date. An index computed from the prices of food and groceries only was for a time used for the adjustment of old-age and invalid pensions, and also for the adjustment of the wages of members of the North Australian Workers' Union above the 20th parallel. Both these adjustments were later effected by means of the "C" Series Index, but the provisions for the adjustment of pensions were repealed as from 6th April, 1944.

(vii) *The "200 Towns" Series.*—This series was tabulated for the month of November each year in respect of 200 of the more important towns of the Commonwealth. Up to November, 1936, it covered the cost of food and groceries combined with the rent of 4 and of 5-roomed houses respectively, but thereafter the tabulation was limited to food and groceries only. This table has been used mostly in discussions of suitable relative rates for country towns, but the index-numbers have not been directly employed by industrial tribunals in this connexion. The base of this table is the weighted average cost of food and groceries in the six capital cities in 1923-27 = 1,000. This series has been compiled for the month of November since 1913. It was originally confined to 100 towns, but was increased to 150 in 1915, and 200 in 1923. The tabulation of this index was discontinued after November, 1942 as a war-time economy. A reference to these index-numbers will be found on page 32.

§ 11. Scales Used for Automatic Wage Adjustment.

The following table shows the automatic scales of quarterly, half-yearly or yearly adjustment adopted by the Commonwealth Court of Conciliation and Arbitration in its Basic Wage Judgment of 13th December, 1946, for the "needs" portion of its basic wage. The amount of wage shown constitutes the basic wage payable (exclusive of certain "loadings") and designated by the Court the "needs" basic wage. Of the various "loadings" legally regarded as part of a total basic wage* the only one having general application is that popularly referred to as the "prosperity" loading awarded by the Court in 1937. This is a "constant" (un-adjustable) loading, but at different rates according to locality and industry, and is fully described in Chapter III. (§ 3) of this Report. The method followed by the Court was to fix an amount of basic wage after hearing evidence and argument by representatives of employers and employees covering a wide range of relevant factors (primarily relating to "capacity of industry" to pay and general economic conditions), and then to determine an automatic adjustment scale.

* See second paragraph, p. 78.

Automatic Scales for Quarterly, Half-yearly or Yearly Adjustment of "Needs" Basic Wage.*

(As adopted by Commonwealth Court of Conciliation and Arbitration, 13th December, 1946 and operative from 1st December, 1946.)

†Basis—

- (a) "C" Series Index.—Index-number 1,000 (Base 1923-27) = 87s. per week (i.e. = 11.494253), or £227 per annum (£1 = 4.405287).‡
- (b) "Court" Index (Second Series).—"C" Series index-number 1,000 (Base 1923-27) = "Court" Index (Second Series) index-number 87 o. (One "C" Series "point" = .087).

†Formulae for Construction of Tables—

(a) "C" Series.—Let N = number of shillings in wage per week. Then $11.494253 \times (N - .5) + 1$ gives the first, and $11.494253 \times (N + .5)$ gives the second of the pair of numbers in the index-number division for N shillings. Decimal fractions in result to be disregarded.

(b) "Court" Series.—Each "C" Series Index point = .087, and each of the first of the pair of index-number divisions for the "C" Series Index in above table when multiplied by this factor gives to the first decimal place (as it stands) the first of the pair of index-number divisions for the "Court" Index (Second Series)—from which the second of the pair becomes obvious. (NOTE.—All "Court" Series index-numbers must be derived through their corresponding "C" Series index-numbers.)

‡ For general purposes, the Annual Rat. (in £'s) is obtainable by multiplying the Weekly Rate (in Shillings) by 2.608333 (i.e. 52½ weeks) divided by 20 (shillings),—a decimal point of .5 or more being taken to the next higher 1.

* For "Court" (First Series) Equivalents (Base = 81.0) see Labour Report No. 34, p. 38.

Both the amount of wage and the adjustment scale operate only until the Court otherwise determines, and representatives of employers and employees have the right to approach the Court for variation of the wage or for variation of the adjustment scale. Only the "needs" portion of the total basic wage is adjustable.

§ 12. International Comparisons: Retail Price Index-Numbers.

The following tables give index-numbers of retail prices for (i) cost of living, including articles other than food, and (ii) foodstuffs only. For the countries included, the average prices for the year 1937 are taken as base (= 100). The figures, which have been taken chiefly from the *Monthly Bulletin of Statistics* of the Statistical Office of the United Nations, show merely the fluctuations in prices in each country, and are obviously not comparable horizontally from the point of view of absolute relative "costs" as between the various countries included.
