## CHAPTER 8

## INDUSTRIAL RELATIONS

The ABS produces statistics about industrial disputes, trade union membership, and the incidence of awards, determinations and collective agreements which cover some aspects of Australian industrial relations.

## Industrial Disputes

The industrial disputes statistics presented in this chapter are compiled mainly from data obtained from employers (both private and government) and trade unions concerning individual disputes and from reports of government authorities. The statistics relate to disputes which involved stoppages of work involving the equivalent of ten or more working days lost at the establishments where the stoppages occurred.

Working days lost per thousand employees in the twelve months ending December 1989 (190) decreased by 294 per cent compared to 1988 (269) representing the lowest rate since December 1981 when this measure was first introduced on a monthly basis.

There were $1,202,200$ working days lost for disputes during 1989 compared to $1,641,400$ in 1988, a decrease of 26.9 per cent.

Those disputes involved 709,600 employees (both directly and indirectly), a decrease of 7.1 per cent from 1988 $(894,400)$.

## Trade Union Members

Of the $6,101,900$ employees in August 1988, 42 per cent were members of a trade union. This result shows the decline in union membership evident from the November 1976 survey ( $51 \%$ ) and the August 1986 survey estimates (46\%).

The number of female employees increased by 710,500 ( $38 \%$ ) between November 1976 and August 1988, whereas the number who were members of trade unions increased by 124,200 ( $16 \%$ ). For male employees, employment increased by 339,300 ( $11 \%$ ) and the number who were members of trade unions fell by 101,000 (6\%). Approximately 46 per cent of males and 35 per cent of females were trade union members.

While the median age ( 35 years) of employees who were trade union members has not changed since 1976 the proportion of trade union members in all of the age groups has dropped. The proportion for the 15 to 24 years group has dropped from 43 per cent in 1976 to 32 per cent in 1988. The 60 to 64 years group recorded a decrease from 60 per cent in 1976 to 45 per cent in 1988, while the proportion of trade union members in the 65 and over age group fell from 24 per cent in 1976 to 9 per cent in 1988.

In 1988, the level of trade union membership increased with age, from 27 per cent of the 15 to 19 years grouping to peak at 51 per cent of the group aged 55 to 59 years.

The number of employees in the private and public sectors grew by 25 per cent and 3 per cent respectively between May 1982 and August 1988. Over the same period, the number who were members of trade unions increased by 2 per cent for the private sector, and fell by 5 per cent for the public sector. In 1988, some 68 per cent of public sector and 32 per cent of private sector employees were members of a trade union.

While males had a higher level of membership than females overall and in full-time employment, female part-time employees recorded a higher level of membership ( $25 \%$ ) than their male counterparts ( $22 \%$ ). Approximately 46 per cent of full-time and 25 per cent of part-time employees were members of a trade union.

The distribution of weekly earnings from main job shows that both male and female trade union members earn on average, more than persons who are not union members.

The difference in the proportion of trade union members and non-members having superannuation coverage was greatest for employees in the Construction industry with 72 per cent of members and 41 per cent of non-members. The smallest difference ( $1 \%$ ) was recorded for employees in the Wholesale and retail trade industries.

For the various industry divisions the highest rate of union membership was recorded in the Electricity, gas and water industry, 80 per cent of employees belonging to a union. The lowest rate was recorded in the Agriculture, forestry, fishing and hunting industry division with 13 per cent of employees belonging to a union.

## Trade Union Statistics

Data on trade unions are obtained from two sources. Supplementary household surveys were conducted in August 1986 and August 1988 to provide information on the characteristics of trade union members such as their age, occupation, industry of work and earnings. For the annual collection of trade unions, statistics are compiled from questionnaires completed by individual trade unions. The statistics relate to trade union membership and state of operation.

At 30 June 1989, 299 trade unions were identified with a total membership of $3,410,300$ persons (an estimated $54 \%$ of all employees). This compares with 328 trade unions as at 31 December 1979 with a total membership of $2,873,600$ persons (an estimated $56 \%$ of all employees).

Of the 299 trade unions reported for 1989 , 11 had membership of 80,000 or more, accounting for 41.3 per cent of total union membership.

## Incidence of Awards

Statistics of the award coverage of employees were obtained from the Survey of Employee Earnings and Hours conducted in May 1985. Further data on incidence of awards will be available from the 1990 collection.

The occupation group with the highest coverage by awards, determinations and collective agreements was Nurses (males 100.0 per cent and females 99.0 per cent). The lowest coverage, 34.8 per cent was recorded for males in the Administrative, executive and managerial employees group.
