SUMMARY OF FINDINGS

Seasonally Adjusted

In November 1993 there were 2,606,400 employed people in NSW. This was an increase of 7,600 over the number employed in October, and an increase of 85,700 people employed in the twelve months since November 1992.

The overall unemployment rate was 10.8% (11.3% for males and 10.2% for females). The corresponding rates for October 1993 were 11.3%, 11.7% and 10.6% respectively. Over the last six months, the unemployment rate for males in NSW has exceeded the rate in Australia; in November this difference was minimal. The rate for females continued to be lower (10.2% compared with 10.9%).

The number of unemployed people was 316,700 in November 1993. This was 13,100 lower than in October 1993 and 4,200 higher than in November 1992. Males represent 60% of the unemployed compared with 63.6% in November 1992.

The participation rate stood at 61.9% overall, with a rate of 72.4% for males and 51.9% for females.

In November 1993 there were 2,923,100 people in the labour force, a decrease of 5,500 since October 1993, but an increase of 89,900 since November 1992.

UNEMPLOYMENT RATE, NOVEMBER 1993
(Seasonally adjusted)

Trend Series

The number of employed people in NSW was 2,597,500 in November 1993. The trend estimate of employed people has increased each month since March 1993.

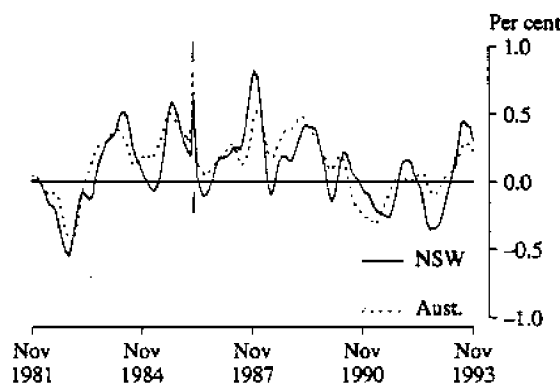

The overall trend unemployment rate was 10.9% in November 1993, as compared to 10.7% in August. The gradual downward trend evident between March and August 1993 has not continued and there has been a slight increase.

The trend estimate of unemployed people in November 1993 was 318,700. This is almost the same as November 1992 (318,500). During the last five months the trend estimate has been increasing.

The trend series participation rate was 61.8% in November 1993, an increase of 0.7 percentage points from August 1993.

The trend estimate of the labour force stood at 2,916,200 in November 1993. This is an increase of 11,100 from October and continues an expansion which has been evident in recent months.

Regions of NSW

Note: Estimates for regions of the State are subject to high sampling variability. Caution should be used when analysing these estimates and their movements. See Technical Notes, page 37.

Sydney

Between August and November 1993 the number of employed people in Sydney Major Statistical Region (MSR) has increased by 2.7% to reach 1,689,300.

In November 1993 the unemployment rate was 9.4%, the same as October 1993 and a decrease of 0.1 percentage points since August 1993. Between August and November 1993 the rate for people aged 15-24 decreased from 15.7% to 14.0%.

In November 1993 unemployment rates within Sydney (MSR) varied between 16.7% in Fairfield-Liverpool Statistical Region (SR) and 4.1% in Northern Beaches (SR). The highest unemployment rate amongst persons aged 15-24 was 23.4% in Fairfield-Liverpool (SR).

Central Western Sydney (SR) continues to record the lowest participation rate at 52.2% and has done so each month since March 1993. The highest level of participation was 70.1% in Northern Beaches (SR).

Balance of NSW

In November 1993 the number of employed people in this area of NSW was 918,000, an increase of 2.0% in the three months since August.

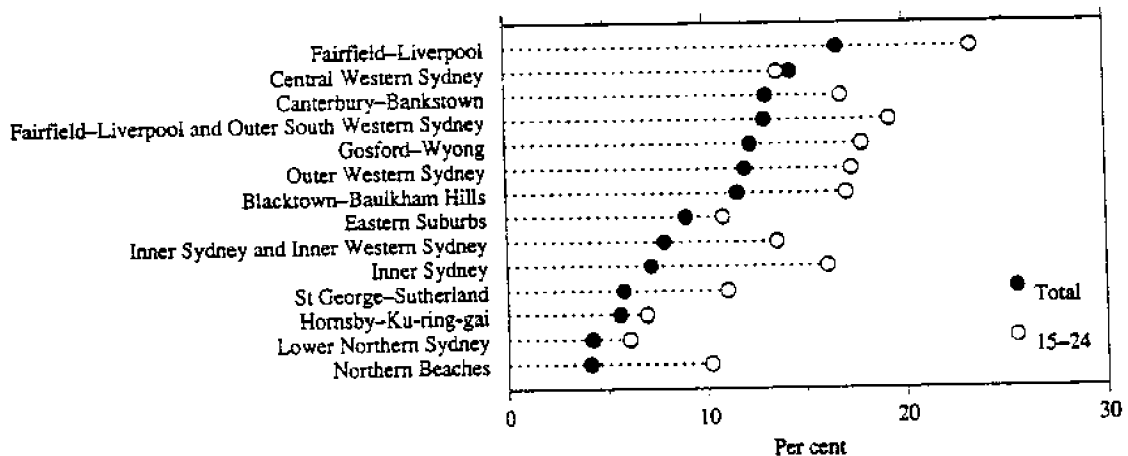

The unemployment rate was 11.4%, a decrease of 0.9 percentage points in the last three months.

Richmond-Tweed and Mid-North Coast (SRs) recorded the highest unemployment rate at 16.9% in November 1993 while Murray-Murrumbidgee (SR) recorded the lowest at 5.8%.

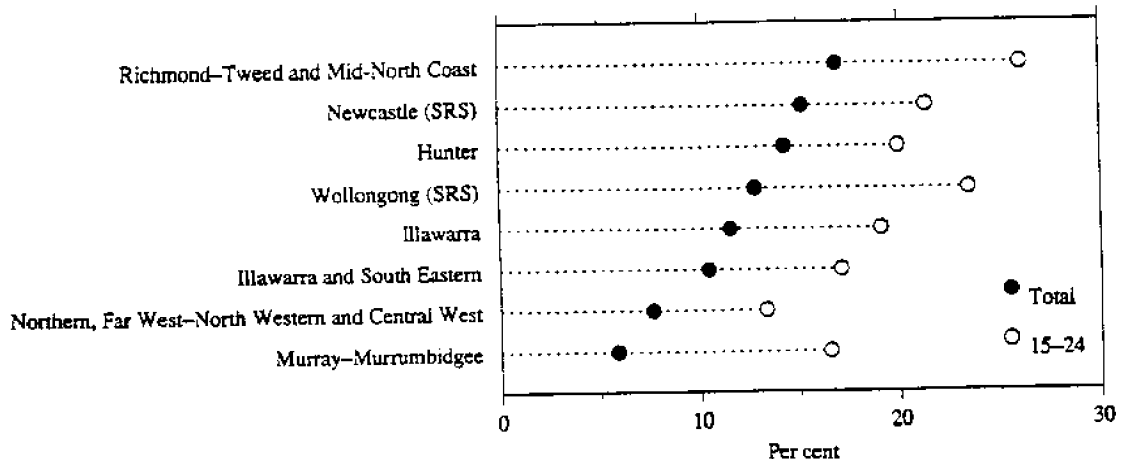

The Balance of NSW (MSR) unemployment rate for 15-24 year olds has fluctuated over the last three months to stand at 18.7% in November 1993. Richmond-Tweed and Mid-North Coast (SRs) also recorded the highest rate amongst 15-24 year olds at 26.1%. Northern, Far West-North Western and Central West (SRs) had the lowest 15-24 unemployment rate of 13.3%.

UNEMPLOYMENT RATE BY AGE, REGIONS OF NSW, NOVEMBER 1993

Sydney (MSR)

Balance of NSW (MSR)

Duration of Unemployment

In November 1993 the long term unemployed (52 weeks and over) represented 42.6% of the total unemployed. This compares with 35.5% in November 1992.

The average duration of unemployment increased from 57.3 weeks in November 1992 to 64.1 weeks in November 1993.

Average duration of unemployment has generally increased with age. In November 1993 there was a variation to this pattern with the average for 20-24 year olds exceeding the average for both 25-34 and 35-44 year olds.

AVERAGE DURATION OF UNEMPLOYMENT, NSW

Age

Between October and November 1993, an increase in the number of people employed was recorded within all age groups except 15-19 and 35-44 year olds. These groups recorded decreases of 1.1% and 0.4% respectively.

In the twelve months between November 1992 and November 1993 those aged 60-64 were the only group which did not record an increase in the number of people employed. This group decreased by 6.6%, while the largest increase in employment was in the 45-54 age group at 6.0%.

The highest rate of unemployment in November 1993 was in the 15-19 age group (19.5%). This is less than August 1993, when the unemployment rate within this group was 21.1% and also less than November 1992 when the rate was 22.7%.

Industry and occupation

In the twelve months to November 1993 increases in the number of people employed have been recorded by most industries, with the only decreases occurring in *Agriculture, forestry, fishing and hunting* (3.0%) and *Manufacturing* (1.8%).

This contrasts with the twelve months between November 1991 and November 1992 when increases were recorded in only four of the twelve industry sub-divisions.

Wholesale and retail trade recorded the largest movement in the number of people employed in the period November 1992 to November 1993, with an increase of 29,400. This follows a decrease of 10,700 in the previous twelve months.

In percentage terms the largest movements were in *Mining* and *Communication* with increases of 38.9% and 21.6% respectively.

Wholesale and retail trade employs the largest number of people in both Sydney (MSR) and Balance of NSW (MSR) (21.6% and 19.3% respectively).

While total employment has increased in both Sydney (MSR) and Balance of NSW (MSR) in the last twelve months, several industries have recorded opposing movements. The number of people employed in *Manufacturing, Transport and storage* and *Finance, property and business services* declined in Sydney (MSR), but rose in Balance of NSW (MSR), while *Community services* increased in Sydney (MSR) and decreased in Balance of NSW (MSR).

Between November 1992 and November 1993 most occupation groups have recorded a rise in the number of people employed. The exceptions were *Professionals* and *Labourers and related workers* with decreases of 3.0% and 2.2% respectively.

In the twelve months to November 1993 the occupation group to record the largest movement was amongst *Plant and machine operators and drivers* with an increase of 12.8%. This follows a decrease of 6.4% in the previous twelve months.

Status of employed people

Between November 1992 and November 1993 there has been a relatively small increase in the number of wage and salary earners, who represent 81.4% of employed males and 87.8% of employed females. There have been substantial increases among employers and the self-employed. The number of self-employed males has increased by 17.5%, while female employers have increased by 15.0% and self-employed by 9.1%.

NOTE

This publication contains estimates of the civilian labour force in NSW derived from the Labour Force Survey component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on page 34.

Care should be taken in the interpretation of month-to-month movements in estimates. During the period September to December 1992 a new sample for the Labour Force Survey was introduced, which has increased the variability of estimates of month-to-month movements. See paragraphs 4-6 of the Explanatory Notes or *Information Paper: Labour Force Survey Sample Design* (6269.0), available from any ABS office.

EXPLANATORY NOTES

Introduction

This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

The population survey

2. This survey consists of the labour force survey (LFS) and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than one-half of one per cent of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

Scope

3. The labour force survey includes all persons aged 15 and over, except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

Survey sample redesign

4. Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.

5. For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place.

Potential effects on labour force survey estimates

6. Implications for estimates produced from the LFS due to sample redesign and its implementation are as follows:

- (a) the sampling error overall increased initially by about seven per cent over the previous level but will decline gradually during the life of the new sample. For State estimates, the initial increase

was about 8 per cent, while for the Territories, there was a decrease of 19 per cent. There were also higher standard errors for movements produced over the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. Overall, these were estimated to be up to 20 per cent higher than the normal standard errors on monthly movements.

- (b) analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in the sample does not change significantly. However, during the transition period, there were twice as many people as usual in the sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

7. For further information, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

Definitions

8. The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.

9. *Employed persons* comprise all civilians aged 15 and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or

- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.
10. Prior to April 1986, unpaid family helpers who worked for 1 to 14 hours were excluded from the category of employed persons.
11. Employed persons can be classified into:
- full-time workers* (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
 - part-time workers* (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).
12. *Unemployed persons* are all those aged 15 and over who were not employed during the reference week, and:
- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
 - were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
 - were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
13. *Actively looking for work* includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service noticeboards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
14. *The unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
15. *The labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.
16. *Long term unemployed* comprises persons unemployed for a period of 52 weeks or more.
17. *Persons not in the labour force* are those who, during the reference week, were not in the categories *employed* or *unemployed* as defined above.
18. *The labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.
19. *Duration of unemployment* is the period from the time the person began looking for work or was stood down to the end of the reference week.
20. *Unemployed persons classified by industry and occupation.* Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
21. *Industry classification.* The classification of industry is in accordance with the Australian Standard Industrial Classification (ASIC) described in *Australian Standard Industrial Classification, Vol. 1 — The Classification* (1201.0)
22. *Occupation classification.* Occupation data are presented in accordance with the *Australian Standard Classification of Occupations (ASCO)* (1221.0 and 1222.0).
23. *Marital status.* In the labour force survey, persons are classified as *married* or *not married*. Persons are classified as *married* if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey
24. *Persons attending school or a tertiary educational institution.* Persons attending school comprise those aged 15 to 19 who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15 to 24 who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.

Statistical areas of New South Wales

25. The regional structure used in tables 16 to 21 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 41–43 and the publications *Regional Statistics, New South Wales* (1304.1) and *Australian Standard Geographical Classification* (1216.0).

Seasonal adjustment and trend estimation

26. Seasonally adjusted and trend estimation series are included in this publication in Table 2. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted

estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

- (a) Employment: 5 in 10 monthly movements
- (b) Unemployment: 7 in 10 monthly movements
- (c) Unemployment rate: 7 in 10 monthly movements
- (d) Participation rate: 9 in 10 monthly movements

27. Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.

Reliability of the estimates

28. Estimates in this publication are subject to sampling and non-sampling errors. The Technical Note on pages 37-40 of this publication gives information on these sources of error.

Related publications

29. Users may also wish to refer to the following related publications which are available from the ABS Bookshop:

Additional data

30. In addition to the labour force survey, the ABS publishes a wide range of supplementary labour market information. For details see page 33 of this publication.

31. The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

TECHNICAL NOTE ON DATA RELIABILITY

Sources of error

There are a number of possible sources of error in sample surveys and these can be classified into two types: *sampling error*; and *non-sampling error*.

Non-sampling errors

2. Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.

3. It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

Sampling errors

4. Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard error of estimates

5. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error (SE)*. There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about nineteen chances in twenty that it is within two standard errors. That is,

there are 19 chances in 20 that the true estimate is in the range—

$$X - 2 \times SE(X) \text{ to } X + 2 \times SE(X)$$

(Where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

6. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. * 3.4) to indicate they are subject to high standard errors and should be used with caution.

Relative standard errors

7. The standard error can also be expressed as a percentage of the estimate and this is known as the *relative standard error (RSE)*. The *RSE* is determined by dividing the standard error of an estimate $SE(X)$ by the estimate X and expressing it as a percentage. That is,

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8. The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

<i>Measure of reliability to be determined</i>	<i>Method</i>
Standard errors of estimates of employed persons.	Determine the <i>SE</i> from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the <i>SE</i> from Table A by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the <i>SE</i> from Table A by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the <i>RSE</i> of the numerator (<i>X</i>) and the denominator (<i>Y</i>) then apply the following formula. $RSE(X/Y) = \sqrt{[RSE(X)]^2 - [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the <i>RSE</i> for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the <i>RSE</i> for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the <i>SE</i> of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

Linear interpolation

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In November 1993, there were 589,400 (X_e) employed persons working part-time in New South Wales. This estimate falls between the values 500,000 (X_l) and 1,000,000 (X_u) in Table A.

2. The standard error of the estimate is determined as follows.

$$\begin{aligned} \text{Firstly, calculate } F &= \frac{X_e - X_l}{X_u - X_l} \\ &= \frac{589,400 - 500,000}{1,000,000 - 500,000} \\ &= 0.18 \end{aligned}$$

3. Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus,

$$\begin{aligned} SE(X_e) &= SE(X_l) + F \times [SE(X_u) - SE(X_l)] \\ &= 8,800 + 0.18 \times [11,300 - 8,800] \\ &= 9,250 \end{aligned}$$

4. Therefore the standard error of the number of employed persons in November 1993 working part-time in New South Wales (589,400) is 9,250.

Windouran (S)

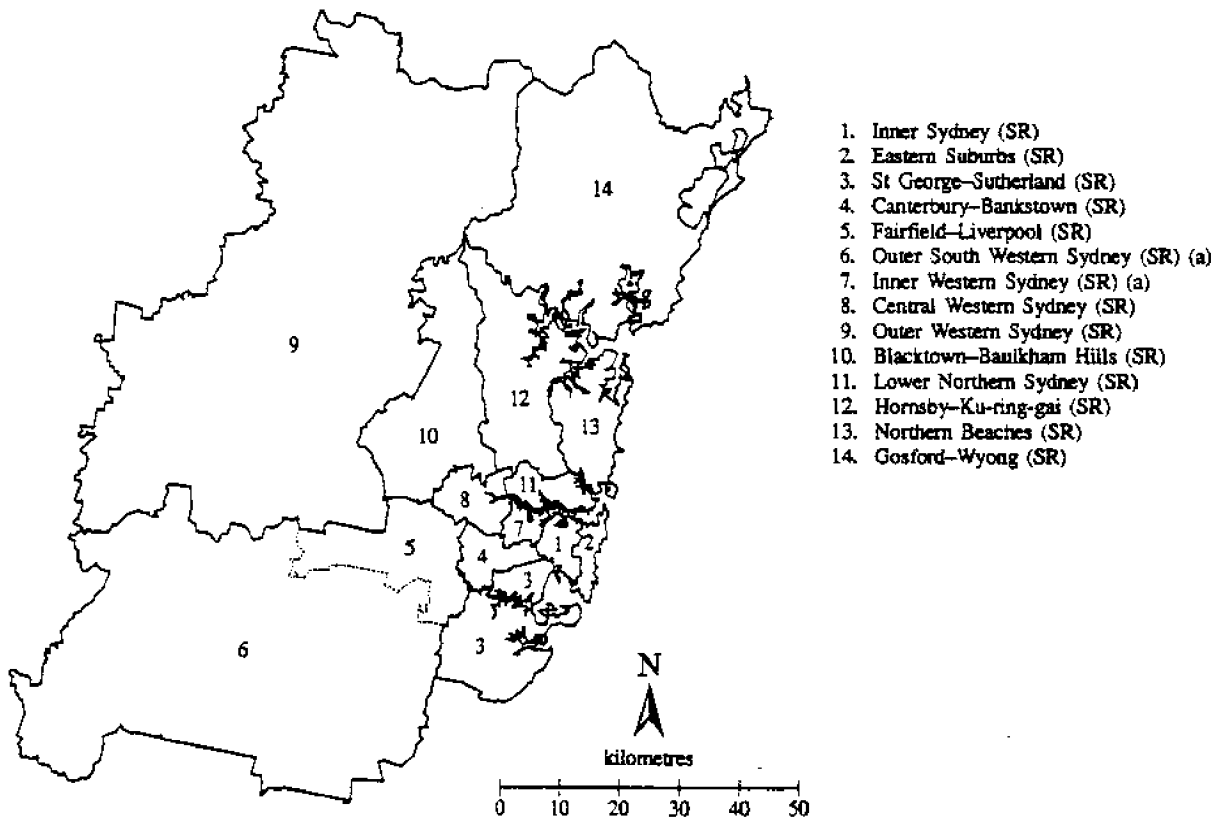

(a) Previously Manly-Warringah (SR). (b) The statistical local areas which comprise Far West (SD)—Broken Hill (C), Central Darling (S), and Unincorporated Far West—are included in Balance of NSW (MSR), but excluded from Northern, Far West-North Western and Central West (SRs).

REGIONS OF NSW

(a) Not published separately. (b) Excludes Far West (SD).

REGIONS OF SYDNEY (MSR)

1. Inner Sydney (SR)
2. Eastern Suburbs (SR)
3. St George-Sutherland (SR)
4. Canterbury-Bankstown (SR)
5. Fairfield-Liverpool (SR)
6. Outer South Western Sydney (SR) (a)
7. Inner Western Sydney (SR) (a)
8. Central Western Sydney (SR)
9. Outer Western Sydney (SR)
10. Blacktown-Baulkham Hills (SR)
11. Lower Northern Sydney (SR)
12. Hornsby-Ku-ring-gai (SR)
13. Northern Beaches (SR)
14. Gosford-Wyong (SR)

(a) Not published separately.

For more information ...

The ABS publishes a wide range of statistics and other information on Australia's economic and social conditions. Details of what is available in various publications and other products can be found in the *ABS Catalogue of Publications and Products* available at all ABS Offices (see below for contact details).

Information Consultancy Service

Information tailored to special needs of clients can be obtained from the Information Consultancy Service available at ABS Offices (see Information Inquiries below for contact details).

National Dial-a-Statistic Line

0055 86 400

This number gives you 24 hour access, 365 days a year for a range of statistics.

Electronic Data Services

A wide range of ABS data are available on electronic media. Selections of most frequently requested statistics are available, updated daily, on DISCOVERY (Key *656#). The ABS PC TELESTATS service delivers major economic indicator main features ready to download into personal computers on the day of release. The PC AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on electronic data services available, contact Information Services in any of the ABS Offices (see Information Inquiries below for contact details).

Bookshops and Subscriptions

There are over 500 titles of various publications available from ABS bookshops in all ABS Offices (see below Bookshop Sales for contact details). The ABS also provides a subscription service through which nominated publications are provided by mail on a regular basis at no additional cost (telephone Publications Subscription Service toll free on 008 02 0608 Australia wide).
