## AVERAGE WEEKKLY EARNINGS, JUNE QUARTER 1968

The figures in the table below are derived from particulars of employment and of wages and salaries recorded on Pay-roll Tax returns, from other direct collections and from estimates of the unrecorded balance. The figures relate to civilians only. Average weekly earnings have been calculated in terms of male units, i.e. total male employees plus 55 per cent of female employees. Thic proportion is derived from the estimated ratio of female to male earnings in Australia. As it was not possible to estimate the ratio of female to male earnings in the several States the same ratio has been used in each State. Because the actual ratio may vary between States precise comparisons between average earnings in different States cannot be made on the basis of the figures shown.

The quarterly figures shown in money terms are affected by seasonal influences. Comparisons as to trend are generally best made by relating compiete years or corresponding periods of incomplete years.

Further particulars of this series are published in the monthly bulletin "Wage Rates and Earnings".

(a) Includes, in addition to wages at award rates, earnings of salaried employees, overtime earnings, over-award and bonus payments, payments made in advance or retrospectively during the period specified, etc. See explanatory notes above. (b) Includes the Australian Cajital Territory. (c) Includes the Northern Territory. (d) Base of each index is year 1953-54=100. The index numbers shown do not give, at any point of time, a comparison of actual earnings in "All industries" and "Manufacturing". There has been no change in the basis of seasonal adjustment of these series. They have not yet been adjusted by the urograms used for other Bureau series, as described in "Seasonally Adjusted Indicators 1968". (e) Indexes for 1965-66 and 1966-67 are based on the average earnings of male wage and salary earners employed in factories as disclosed by the Factory Census. Figures for periods subsequent to June 1967 are interim estimates based on Pay-roll Tax returns and are subject to revision when the 1967-68 Factory Census is tabulated. r-revised.
