SUMMARY OF FINDINGS

INTRODUCTION

The 1995-96 season showed some improvement over the previous year. However, dry conditions continued in Queensland. Grain growing regions had better production totals than previous years, but were still not up to normal. The Darling Downs Statistical Division (SD) experienced a significant increase in production of wheat and a less favourable improvement in grain sorghum production. Prices for meat cattle weakened during the year; the sheep industry experienced a continued downward trend in wool prices. The bright side for the sheep industry was strong prices for fat lambs.

STRUCTURE OF AGRICULTURAL INDUSTRY

The number of establishments with agricultural activity decreased 2.0% from 32,849 at 31 March 1995 to 32,186 at 31 March 1996. This total included 292 establishments classified to ANZSIC other than Sub-division 01 Agriculture, and 523 establishments which were not classified to any industry.

The main industries of agricultural establishments were:

	Number	% of establishments with agricultural activity
Beef cattle farming	11 751	36.5
Sugar cane growing	4 603	14.3

The number of establishments classified to beef cattle farming fell by 2.1% from 11,998 at 31 March 1995 to 11,751 at 31 March 1996. Over the same period, establishments classified to grain-sheep/beef cattle farming increased, from 1,494 to 1,900 (up 27.2%). Establishments classified to cotton growing increased from 419 to 508 (up 21.2%), and the number of establishments classified to sugar cane growing decreased by 1.1% from 4,653 to 4,603 (see table 1).

At 31 March 1996, only 6.8% of establishments with agricultural activity had an estimated value of agricultural operations (EVAO) of \$500,000 or more (see table 5).

At 31 March 1996, 55.7% of establishments classified to beef cattle had an EVAO of between \$5,000 and \$50,000. Beef cattle, sugar cane and cotton accounted for 56.1% of establishments with an EVAO of \$500,000 or more at 31 March 1996. Of the 508 establishments classified to the cotton industry, 66.5% had an EVAO of \$500,000 or more (see table 5).

In terms of area, 232 establishments had an area of 100,000 hectares or more at 31 March 1996; 194 were in the beef cattle farming industry (see table 6).

SUMMARY OF FINDINGS *continued*

LAND MANAGEMENT

At 31 March 1996, establishments with agricultural activity occupied 149.7 million hectares or 85.3% of Queensland's total area. Cereal crops covered 1,586,800 hectares, or 1.1% of the total area covered by establishments with agricultural activity. The area of cereal crops increased by 34.1% from 1994-95 reflecting slightly better conditions (see table 7).

The main method of handling crop stubble in 1995-96 (used on 762,100 hectares) was to plough it into the soil. The next most popular method was to mulch it, a method used on 289,100 hectares. There were 234,800 hectares of stubble removed by grazing, baling or fire harrowing, 126,600 hectares of stubble left intact (crops were sown by direct drilling), while 21,900 hectares of stubble were burnt (see table 8).

A total of 509,844 tree seedlings were planted during the 1995-96 season. Some 41.1% of tree seedlings planted for timber/pulp were planted in the Far North SD and a further 19.1% were planted in the Darling Downs SD (see table 10).

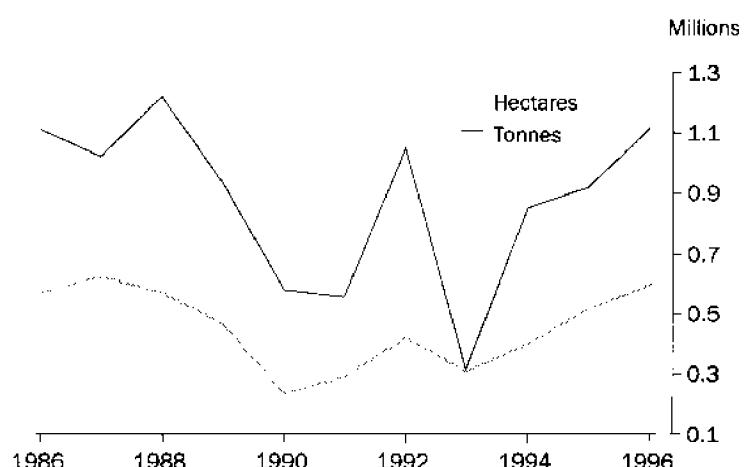

CROPS AND PASTURES

GRAIN SORGHUM

During the year ended 31 March 1996, the area sown to grain sorghum increased to 596,800 hectares (up 14.8%). Production of grain sorghum increased to 1,115,600 tonnes in the year ended 31 March 1996 (up 21.7%), while yield changed little, up from 1.8 to 1.9 tonnes per hectare. Grain sorghum was sown in all SDs except the North West SD. The major contributor in terms of production was the Darling Downs SD which accounted for 65.8% of the State's production (see table 16).

During the year ended 31 March 1996, 7.2% of establishments growing grain sorghum had an area sown of 500 hectares or more. These large establishments accounted for 42.5% of the State's area planted to grain sorghum and 29.8% of the State's production (see table 22).

GRAIN SORGHUM, YEARS ENDED 31 MARCH

SUMMARY OF FINDINGS *continued*

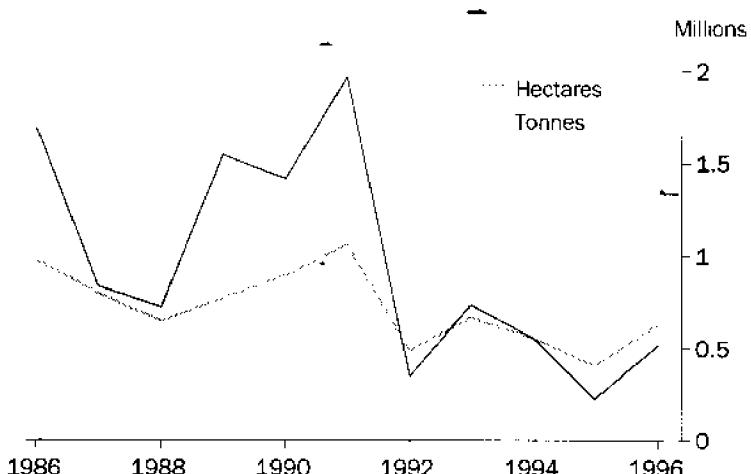

WHEAT

The number of establishments growing wheat increased from 1,706 to 2,677 in the year ended 31 March 1996 (up 56.9%). The production of wheat also increased, to 519,500 tonnes (up 130.8%). The increases in production, area sown and the number of establishments reporting wheat were primarily attributed to the easing of drought conditions in Queensland (see tables 16 and 23). Area sown to wheat was 626,500 hectares.

Wheat was primarily grown in the Darling Downs SD. This SD accounted for 62.4% of total area sown, and 73.2% of total production (see table 16).

In the year ended 31 March 1996, 12.1% of establishments growing wheat had an area sown of 500 hectares or more. These large establishments accounted for 53.3% of the State's area of wheat sown and 45.2% of the State's production (see table 22).

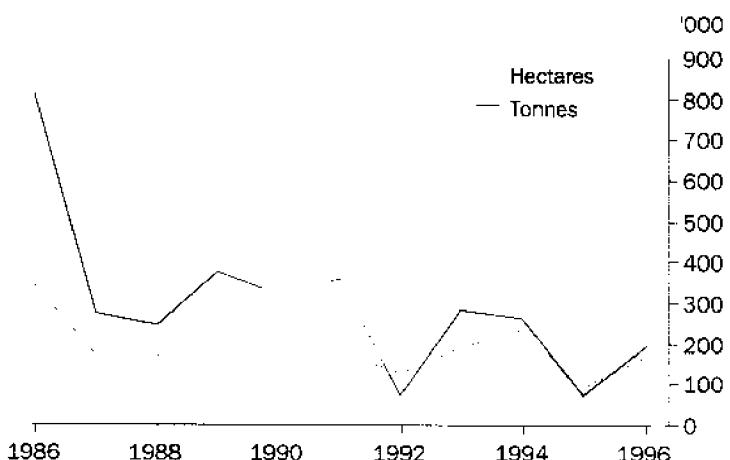

WHEAT, YEARS ENDED 31 MARCH

BARLEY

The area sown to barley increased by 79.5% to 167,800 hectares in the year ended 31 March 1996. Production during the same period increased by 167.9% to 195,000 tonnes, while the yield increased from 0.8 tonnes to 1.2 tonnes per hectare. Barley was primarily grown in the Darling Downs SD which had 85.8% of area sown and 89.5% of production (see table 16).

BARLEY, YEARS ENDED 31 MARCH

SUMMARY OF FINDINGS *continued*

PASTURES FOR HAY

The area of pastures cut for hay (lucerne and other pastures) decreased by 24.6% to 57,000 hectares in the year ended 31 March 1996. Production also decreased, by 11.6% to 308,400 tonnes.

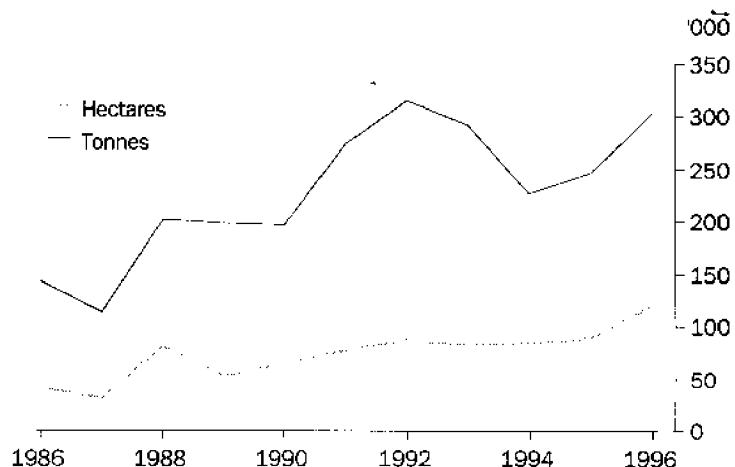

The area and production of lucerne cut for hay remained virtually unchanged in the year ended 31 March 1996 at 183,100 tonnes from 24,500 hectares. The area of other (non-lucerne) pastures for hay decreased by 36.2% to 32,400 hectares and production decreased by 22.0% to 125,300 tonnes (see table 18).

COTTON

The area planted to seed cotton in the 1995-96 season increased by 35.1% to 119,700 hectares. Production of seed cotton rose by 22.9% to 302,800 tonnes; however, yield decreased from 2.8 to 2.5 tonnes per hectare.

Cotton was primarily grown in the Darling Downs SD, with 81,000 hectares sown and a production of 187,400 tonnes. This accounted for 67.7% and 61.9% respectively of the State's total area and production (see table 20).

COTTON PRODUCTION, YEARS ENDED 31 MARCH

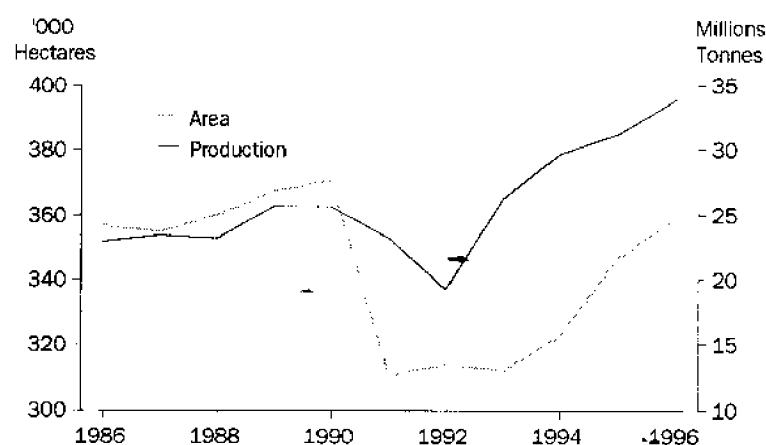

SUMMARY OF FINDINGS *continued*

SUGAR CANE

The area planted to sugar cane increased by 3.4% to 358,500 hectares. In the same period, production increased by 8.8% to 33,897,600 tonnes, with an increase in yield from 89.8 tonnes per hectare to 94.6 tonnes per hectare (see table 20).

The Northern SD and Mackay SD together accounted for 63.5% of the State's total production.

SUGAR CANE, AREA AND PRODUCTION, YEARS ENDED 31 MARCH

SUMMARY OF FINDINGS *continued*

HORTICULTURE

MANDARINS

In the year ended 31 March 1996, the production of mandarins increased by 6.4% to 40,255 tonnes. The total number of trees increased by 5.2%, with the increase occurring in trees six years and over. Mandarins were primarily grown in the Wide Bay-Burnett SD which accounted for 83.9% of the State's production (see table 24).

APPLES

The number of apple trees in the year ended 31 March 1996 increased by 5.4% to 880,617. Production also increased, by 1.7% to 28,361 tonnes. The major apple growing area was the Darling Downs SD which accounted for virtually all apples grown in Queensland (see table 24).

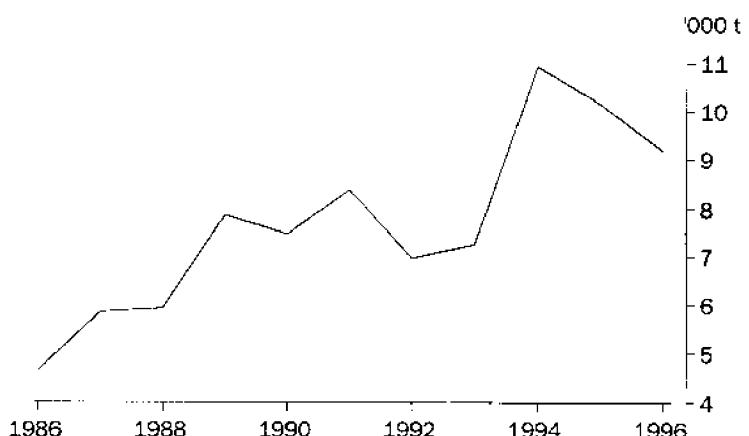

MANGOES

In the year ended 31 March 1996, the production of mangoes decreased by 4.7% to 23,274 tonnes. The total number of mango trees increased by 15.8% to 1,031,591 trees. The major mango growing area was the Northern SD which accounted for 58.1% of the State's production (see table 26).

AVOCADOS

In the year ended 31 March 1996, the total number of avocado trees increased by 7.4% to 389,156 trees. Production of avocados decreased by 11.3% to 9,006 tonnes. The major avocado growing areas were the Moreton and Brisbane SDs, the Far North SD and the Wide Bay-Burnett SD which together accounted for 91.8% of the State's production (see table 26).

AVOCADO PRODUCTION, YEARS ENDED 31 MARCH

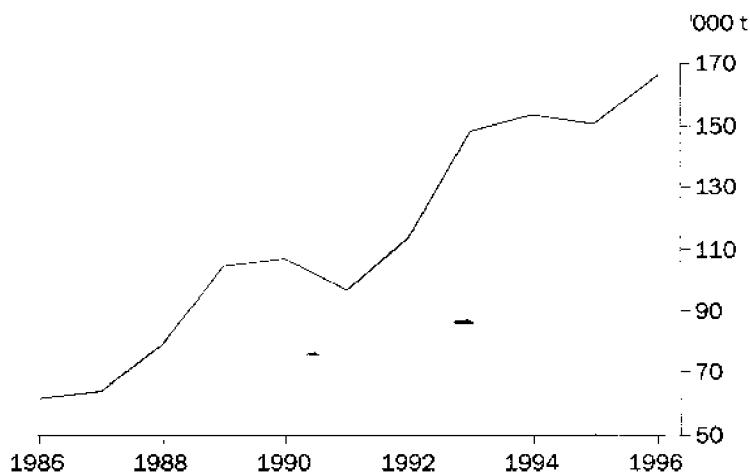

SUMMARY OF FINDINGS *continued*

BANANAS

In the year ended 31 March 1996, the production of bananas increased by 10.2% to 165,640 tonnes. The total area of bearing age also increased, by 7.5% to 5,299 hectares. The Far North SD accounted for 94.8% of Queensland's production (see table 27).

BANANA PRODUCTION, YEARS ENDED 31 MARCH

PINEAPPLES

In the year ended 31 March 1996, the production of pineapples decreased by 7.7% to 127,835 tonnes. The total area of bearing age also decreased, by 12.0% to 2,821 hectares. The Moreton and Brisbane SDs accounted for 61.2% of Queensland's production (see table 27).

PINEAPPLE PRODUCTION, YEARS ENDED 31 MARCH

SUMMARY OF FINDINGS *continued*

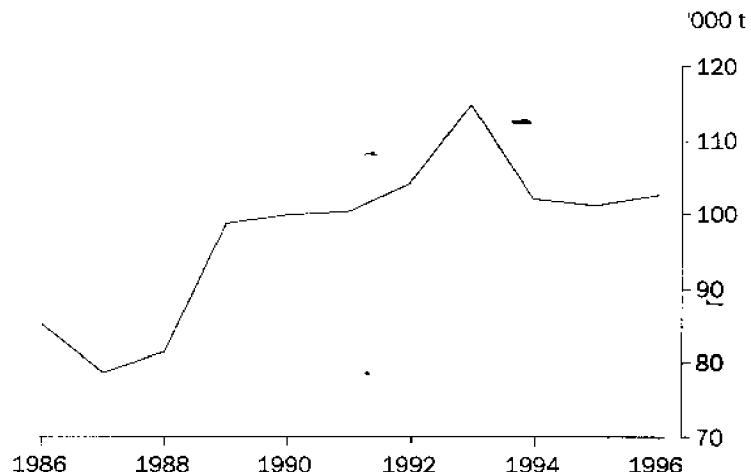

POTATOES

The total area planted to potatoes in the year ended 31 March 1996 decreased by 2.3% to 4,672 hectares; production decreased by 4.7% to 103,845 tonnes. The Moreton and Brisbane SDs accounted for 46.2% of the State's production (see tables 30 and 31).

TOMATOES

The total area planted to tomatoes in the year ended 31 March 1996 decreased by 0.9% to 3,394 hectares. Production increased by 1.3% to 102,643 tonnes, while the average yield increased from 29.6 tonnes per hectare to 30.2 tonnes per hectare (see table 30).

TOMATO PRODUCTION, YEARS ENDED 31 MARCH

SUMMARY OF FINDINGS *continued*

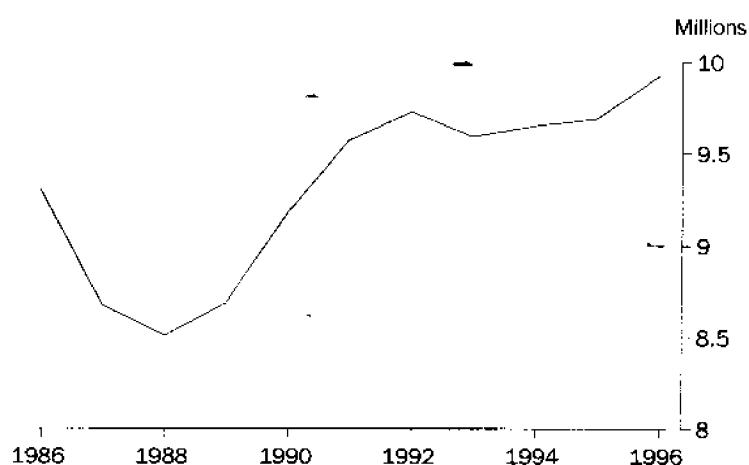

LIVESTOCK AND LIVESTOCK PRODUCTS

MEAT CATTLE

The meat cattle herd was 9,928,300 at 31 March 1996, a 2.5% increase over the previous year. The number of establishments with meat cattle fell by 3.1% to 20,251. The major regions in terms of cattle numbers were the Fitzroy SD, the North West SD and the Darling Downs SD with 16.9%, 15.0% and 14.1% respectively of the State's meat cattle herd (see tables 36 and 37).

At 31 March 1996, 21.6% of all establishments with meat cattle had a herd size of 500 or over and accounted for 79.2% of the number of meat cattle; 23.1% of all establishments had a herd size of under 50 and yet only accounted for 1.2% of the total herd (see table 38).

MEAT CATTLE, AT 31 MARCH

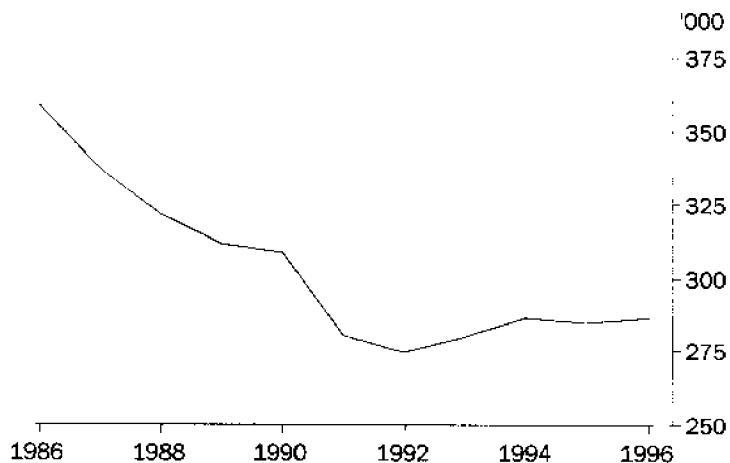

MILK CATTLE

At 31 March 1996, the number of milk cattle was 286,100, an increase of 0.6% from the previous year. The number of establishments with milk cattle rose by 6.2% to 2,282 in the same period (see tables 39 and 40).

At 31 March 1996, 19.5% of all establishments with milk cattle had a herd size of 200 or over. These establishments accounted for 44.7% of the number of milk cattle in Queensland (see table 41).

MILK CATTLE, AT 31 MARCH

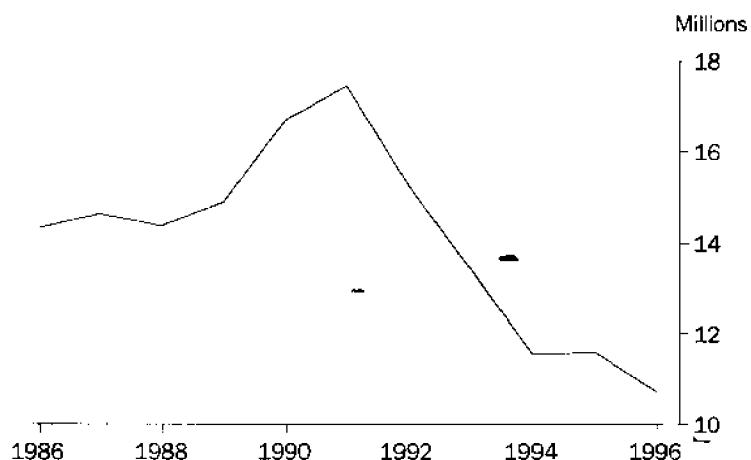

SUMMARY OF FINDINGS *continued*

SHEEP AND LAMBS

The number of establishments with sheep and lambs at 31 March 1996 was 2,770, a decrease of 3.4% from 31 March 1995. Sheep and lambs numbers at 31 March 1996 decreased 7.5% to 10.7 million. The South West SD and the Central West SD together accounted for 76.7% of the State's total number of sheep and lambs (see table 42).

SHEEP AND LAMBS, AT 31 MARCH

PIGS

At 31 March 1996, pigs numbered 603,000, a decrease of 6.3% from the previous year. The number of establishments with pigs stood at 953, a decrease of 8.4% from the previous year. The major SD in terms of pig numbers was Darling Downs which accounted for 50.3% of the State's herd (see table 46).

PIGS, AT 31 MARCH

SUMMARY OF FINDINGS *continued*

VALUE OF AGRICULTURAL COMMODITIES PRODUCED

At the time of publication, preliminary figures only were available for the gross value of agricultural commodities produced for the 1995–96 season.

These figures showed that grain sorghum was the leading cereal crop for grain in terms of value of production (\$301.7m) and accounted for 59.3% of the value of all cereals for grain. The easing of the drought contributed to an increase in the value of the wheat crop for grain, up 140.8% to \$147.1m for the 1995–96 season (see table 21).

Preliminary figures for sugar cane (cut for crushing) showed that the gross value decreased by 1.0% to \$1,145.6m for the 1995–96 season. Sugar cane was the single most valuable crop in Queensland (see table 21).

Preliminary figures showed that bananas remained the leading individual fruit in value terms at \$177.5m, followed by mangoes with a value of production of \$58.0m, and mandarins with \$47.2m (see table 28).

In the 1995–96 season, the major contributor to the gross value of vegetable production was tomatoes with a value of production of \$116.2m, followed by potatoes with \$53.3m. The value of production of tomatoes increased by 13.4% from the previous year, while the value of production of potatoes increased by 12.7% (see table 32).

The gross value of livestock slaughterings decreased by 19.0% to \$1,552.1m for the 1995–96 season. Cattle and calf slaughterings represented 78.3% of this value, followed by pigs and poultry, which represented 10.0% and 9.2% respectively (see table 53).

The value of wool production decreased by 23.3% to \$184.2m for the 1995–96 season. In the same period, the value of milk production increased by 10.0% to \$319.0m, and the value of egg production increased by 37.7% to \$66.1m (see table 53).

(a) Includes an estimate for the value of the increase in livestock.

(b) Excludes an estimate for the value of the increase in livestock.

NOTE: Standard error of change between two successive years is 1.3 times the standard error of the estimate (except for the all industries estimate where it is equal to the standard error of the estimate). Standard error of change between estimates two years apart could be as high as 1.8 times the standard error of the estimate (except for the all industries estimate where it could be 1.5 times the standard error of the estimate).

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains statistics on crops, livestock and livestock products and characteristics of farms; it includes some summary information on the financial performance of agricultural industries and the value of agricultural commodities produced.

SCOPE AND COVERAGE

2 The statistics on crops (including horticulture), livestock numbers, structure of agricultural industries, land management and farm inputs are derived from the annual agricultural census conducted throughout Australia at 31 March, which collects data from establishments with agricultural activity.

3 Establishments which make only a small contribution to overall agricultural production are excluded from the scope of the census. Information is collected from establishments when their estimated value of agricultural operations (EVAO) is above a certain level. These levels have varied in past agricultural censuses, as follows:

- | | |
|----------------------|-----------------------------|
| ■ 1993–94 to present | EVAO \$5,000 and over; |
| ■ 1991–92 to 1992–93 | EVAO \$22,500 and over; |
| ■ 1986–87 to 1990–91 | EVAO \$20,000 and over; and |
| ■ 1982–83 to 1985–86 | EVAO \$2,500 and over. |

4 Table 1 shows the number of agricultural establishments having an EVAO of \$5,000 and over according to the population frame selected for the agricultural census. Once data on these units are collected and processed a small number of them are found to have an EVAO of less than \$5,000. These are shown in the first column in table 5. Some units are found to have an EVAO of zero; these are shown as 'unclassified' in tables 1, 2, 5 and 6.

5 The effect of the lower EVAO cut off of \$5,000 and over from 1993–94 onwards is to include smaller agricultural establishments that have been excluded in previous years. However, because of their small size they are not expected to change greatly the overall commodity totals. Nevertheless, the changes in scope between years mean that care must be taken in comparing census results over time.

6 Information covering commodities such as livestock slaughterings, dairy produce and beekeeping is obtained from separate ABS collections and from organisations such as the Australian Dairy Corporation.

REFERENCE PERIOD

7 Statistics about crops, pastures, vegetables and fruit relate, in general, to the season ended 31 March. Where harvesting was not completed by 31 March 1996 (for example, maize, rice, apples, grapes and late planted potatoes), the production statistics relate to the completed harvest.

EXPLANATORY NOTES *continued*

ESTABLISHMENTS WITH AGRICULTURAL ACTIVITY

8 An establishment with agricultural activity is a single physical location which is used for the production of crops (including fruit and vegetables) and/or for the raising of livestock and the production of livestock products.

INDUSTRY AND SIZE CLASSIFICATION

9 Establishments in the agricultural sector were classified in accordance with the methodology described in the 1993 *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (1292.0).

10 The process of determining the industry class for ANZSIC is the 'step by step' method of classification described in Chapter 4 of the *Australian Standard Industrial Classification* (1201.0). This method requires that the Division code of the unit be determined first. The Subdivision code within the major Division of the unit is then determined, followed by the Group code and finally the Class code of the unit.

11 The Group and Class codes of agricultural units are determined annually by valuing physical crop and livestock information collected in the agricultural census. The valuation procedure allows for the industry classification of individual units to be changed to reflect significant or long term changes in their activities.

12 However, the procedure provides for a dampening or resistance effect to offset instability in allocation to particular classes of the classification which would arise from short-term factors such as floods and drought. To obviate such effects, the valuation procedure takes into account (without double counting) the area of crops sown and numbers of livestock on holdings at a point in time as well as the crops produced and livestock turnoff during the year. The resultant aggregation of these commodity values is termed the estimated value of agricultural operations (EVAO). It should be noted that EVAO is applicable *only for industry coding and size valuation purposes*. It is not an indicator of receipts obtained by units or of the value of agricultural commodities produced by these units.

DEFINITIONS OF TERMS USED

13 The following are definitions of terms used in the tables of this publication:

- *agricultural establishment* is an establishment which is engaged *mainly* in agricultural activities; and
- *establishment with agricultural activity* is a land-based establishment which is engaged in agricultural activity, regardless of the unit's predominant activity.

CROPS, PASTURES AND HORTICULTURE

14 Statistics of areas and production of crops relate, in the main, to crops sown during the year ended 31 March. Statistics of perennial crops relate to the position as at 31 March and the production during the year ended on that date, or of fruit set by that date. For example, particulars of area, production and yield per hectare of wheat in Australia refer to wheat sown during the period from April to September and harvested between October and the following February, i.e. the 1995-96 season relates to the harvesting period October 1995 to February 1996.

EXPLANATORY NOTES *continued*

Statistics of other crops which in some States are harvested after 31 March 1996 (e.g. maize, potatoes, apples and pears) are collected by supplementary census returns and are included in this publication.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

15 The statistics on slaughtering and meat production are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments. Care should be taken when using this information as the figures only relate to slaughtering for human consumption and do not include animals condemned or those killed for boiling down. Also, definitions of livestock categories may differ between States and within States, particularly with regard to calves. More detailed information is published monthly in *Livestock Products, Australia* (7215.0).

WOOL

16 Wool receivals statistics show the amount of taxable wool received by brokers and dealers from wool producers. They exclude wool received by brokers on which wool tax has already been paid by other dealers (private buyers) or brokers. The information shown is on the basis of the State in which the wool has actually been received and does not necessarily reflect the production of wool in that State. These data are published monthly in *Livestock Products, Australia* (7215.0).

17 The wool estimates contained in table 52 are obtained from these major sources:

- (i) A monthly collection of National Council of Wool Selling Brokers of Australia in each State and incorporated in this publication with reference to the twelve months to 30 June. The data are compiled in terms of bales received into stores and converted to wool receivals in tonnes.
- (ii) A monthly ABS collection of other wool brokers and dealers in each State, also incorporated with reference to the twelve months to 30 June. Data are reported in tonnes, or converted to tonnes as required.

MILK

18 These statistics have been collected by the Australian Dairy Corporation (ADC). More detailed information is published monthly in *Livestock Products, Australia*, (7215.0).

POULTRY

19 Poultry slaughtering statistics have been compiled from returns supplied by commercial poultry slaughtering establishments.

BEEKEEPING

20 Beekeepers are included in this collection if they have a minimum EVAO of \$5,000, whether for beekeeping alone or in conjunction with other agricultural activities.

AGRICULTURAL FINANCE SURVEY

21 The financial estimates in this publication have been derived from estimates from the Agricultural Finance Survey (AFS). The survey aims to meet demands of users who require annual financial statistics on a consistent basis across all agricultural industries in each State and Australia.

EXPLANATORY NOTES *continued*

22 More detailed information including an outline of the reliability of the estimates and their standard errors is published in *Agricultural Industries Financial Statistics, Australia* (7507.0).

SCOPE AND COVERAGE OF THE AFS

23 The population of the AFS consisted of all economic units (management units) the principal activity of which resulted in their being classified within Sub-division 01 'Agriculture' of the ANZSIC and which had an EVAO of \$22,500 or more.

VALUE OF AGRICULTURAL COMMODITIES PRODUCED

24 This publication contains summary information on the value of agricultural commodities produced (VACP) compiled annually for all States and Australia. The summary information contains gross values of production for selected agricultural commodities. More detailed information is available in *Value of Agricultural Commodities Produced, Australia* (7503.0).

SCOPE AND COVERAGE OF VACP STATISTICS

25 The statistics are derived by multiplying quantity data by price (or unit value) data. The quantity data are collected in the agricultural censuses and other ABS collections with some information from external sources. All price information is obtained from non-ABS sources.

PRICE AND MARKETING COSTS DATA

26 The method of collection of relevant prices for, and the costs of marketing of agricultural commodities vary considerably between States and between commodities. Where a statutory authority handles marketing of the whole or portion of a product (e.g. Australian Wheat Board, Australian Barley Board) data are usually obtained from this source. Information is also obtained from marketing reports, wholesalers, brokers and auctioneers. For all commodities, values are in respect of production during the year (or season) irrespective of whether or when payments are made. For that portion of production not marketed (e.g. hay grown on farm for own use, milk used in farm household, etc.) estimates are made from the best available information and, in general, are valued on a local value basis.

DEFINITION OF GROSS VALUE

27 Gross value of commodities produced is the value placed on recorded production at the wholesale prices realised in the market place.

OTHER FORMS OF RELEASE

28 The ABS also has more detailed agricultural statistics on microfiche and floppy disk. AgStats on floppy disk offers a wider range of data aggregated at smaller geographic areas than those generally available in printed publications, together with an easy-to-use interrogation facility.

29 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

EXPLANATORY NOTES *continued*

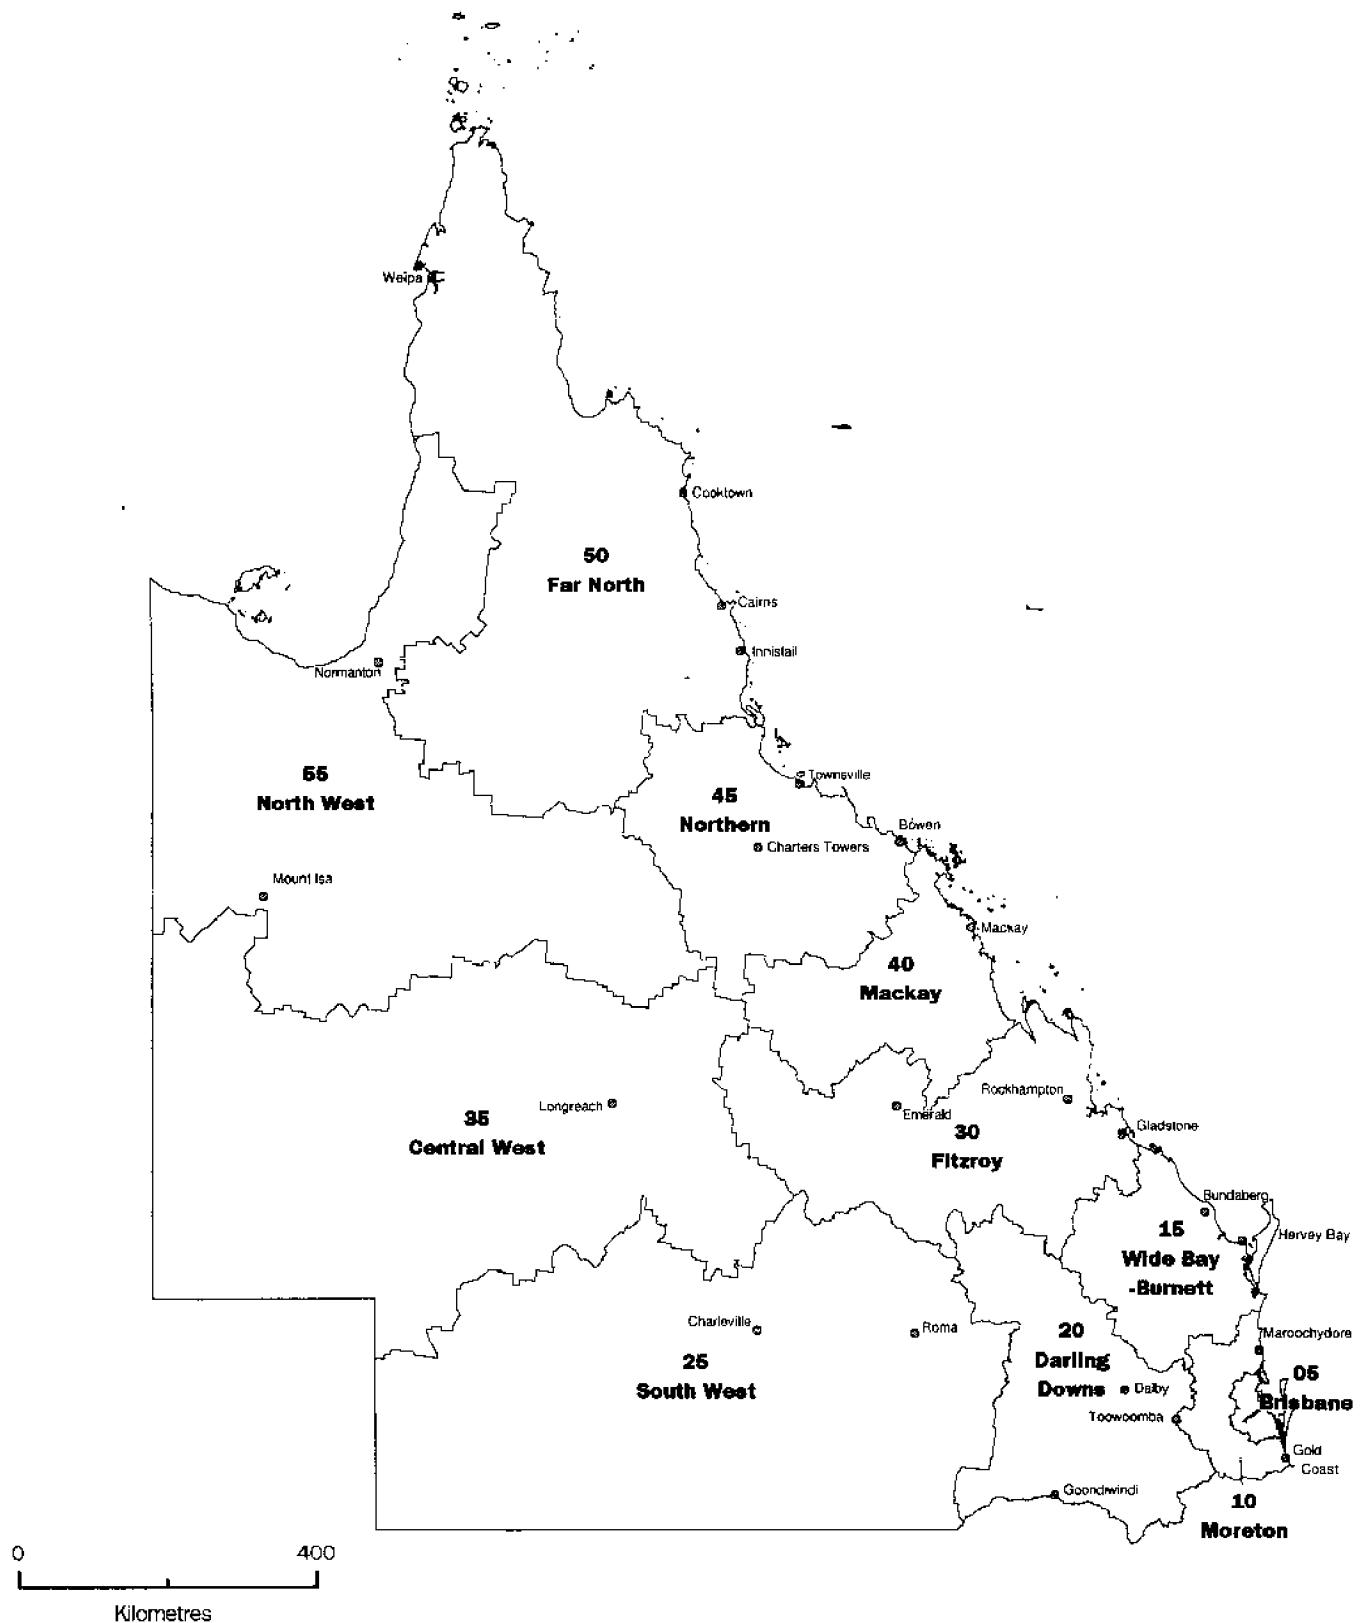

UNPUBLISHED STATISTICS

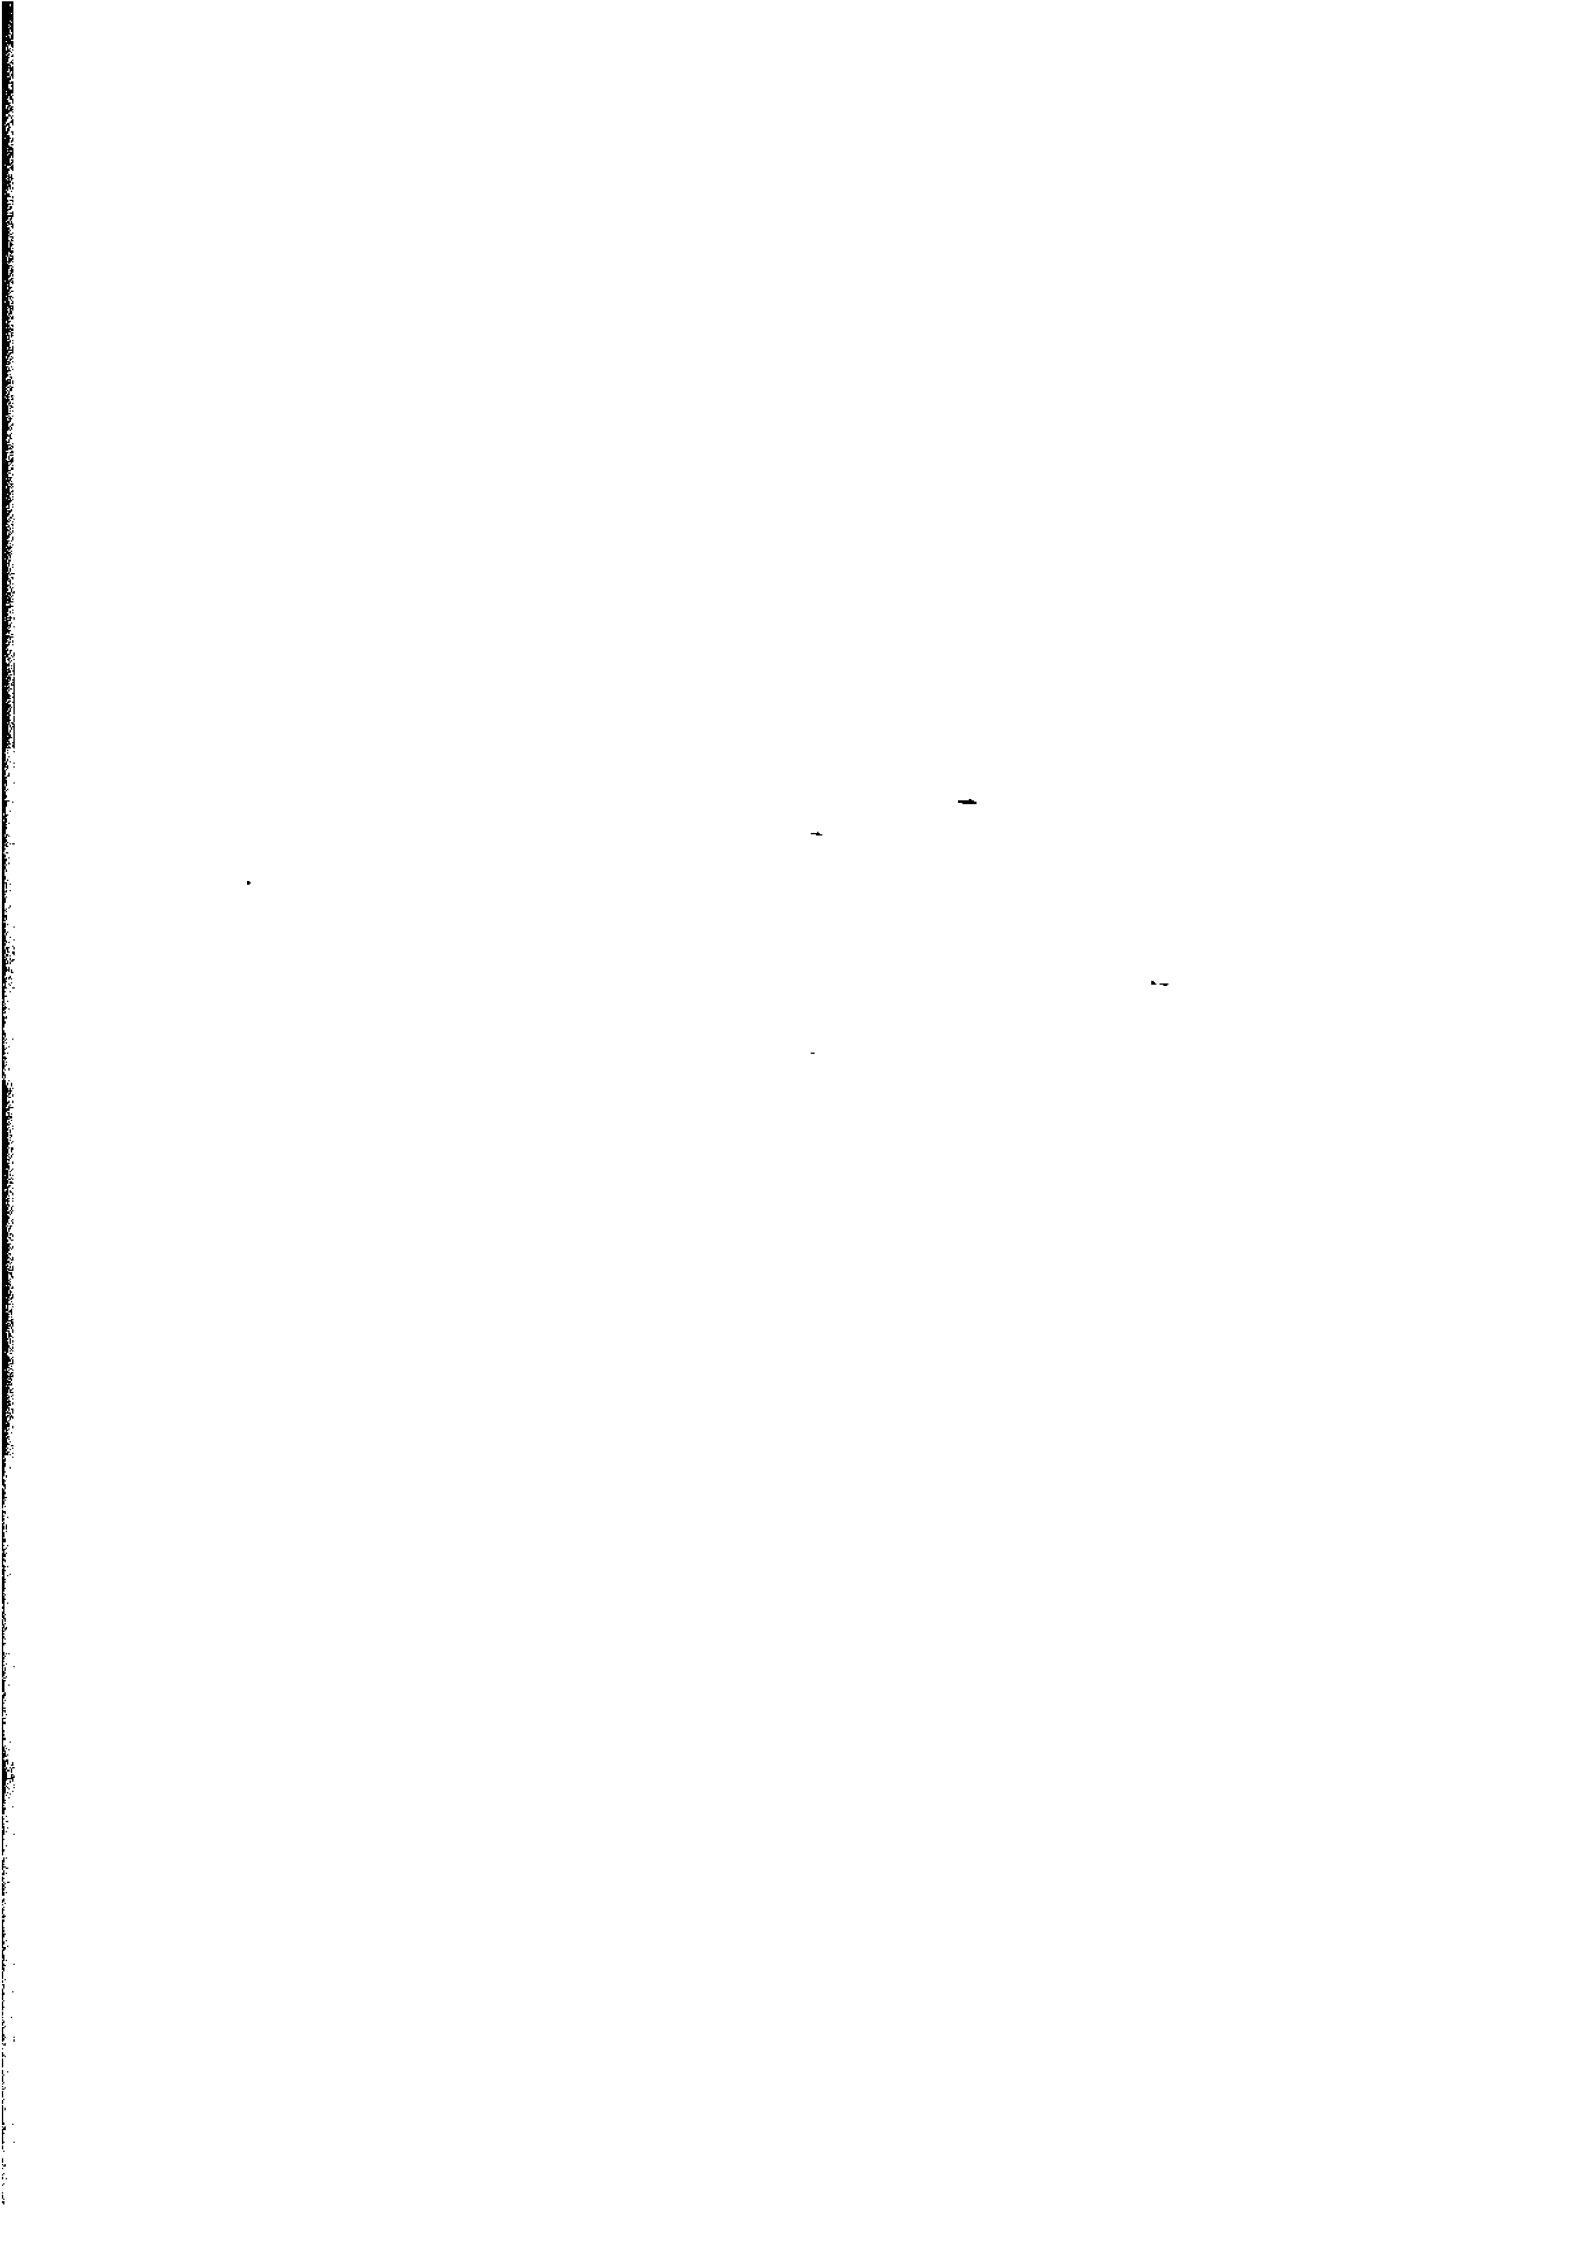

30 As well as the statistics in this and related publications, the ABS may have other unpublished data available. Inquiries should be directed to Darren Sprott on Brisbane (07) 3222 6159.

31 The figures shown in this publication have been revised where necessary and as a consequence may not agree with similar data shown in previous publications.

32 Where the figures have been rounded, discrepancies may occur between sums of the component items and totals.
