

CATALOGUE NO. 7215.0

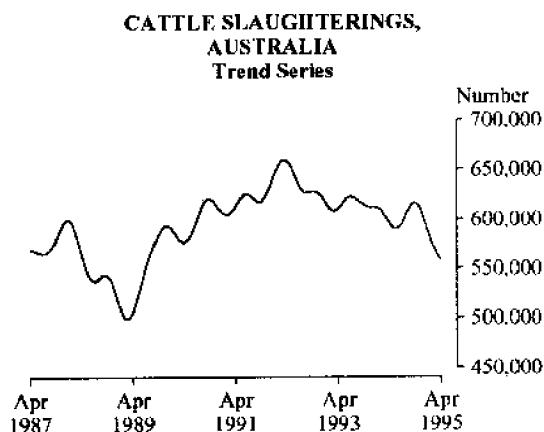

EMBARGOED UNTIL 11.30 A.M. 9 JUNE 1995

LIVESTOCK PRODUCTS, AUSTRALIA APRIL 1995

MAIN FEATURES

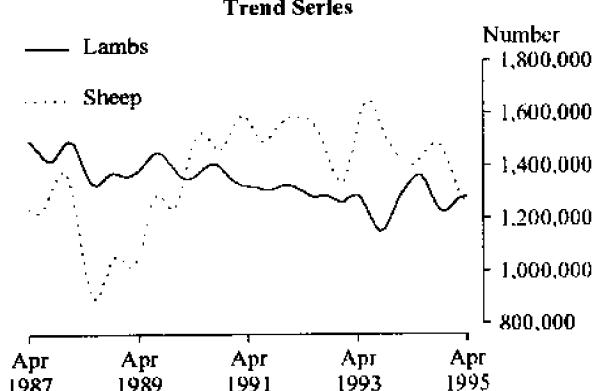

Livestock Slaughterings

The trend estimate for cattle slaughterings fell for the sixth successive month in April 1995, and is now 9.5 per cent below the last peak in October 1994. However, the rate of decline has eased falling 1.3 per cent in April compared with March 1995. The trend estimate for calves fell for the seventh successive month, declining by 17.0 per cent since September 1994.

Sheep slaughterings have fallen 15.1 per cent since September 1994 but the rate of decline weakened in April, falling 1.7 per cent compared with March. The trend estimate for lamb slaughterings in April 1995 is 4.8 per cent above the last trough in November 1994 with growth weakening in recent months.

SHEEP AND LAMB SLAUGHTERINGS, AUSTRALIA Trend Series

Red Meat

The decline in the trend estimate for red meat has eased with a fall of 0.8 per cent in April 1995. Since the last peak in October 1994 it has fallen 7.3 per cent. The trend estimate for beef fell 0.8 per cent in April and has fallen 8.1 per cent since October 1994. Lamb rose 1.2 per cent compared with the previous month, and is 6.9 per cent above the estimate for November 1994. The trend estimate for mutton fell 2.2 per cent in April. Since August 1994 mutton has fallen 17.9 per cent.

Chicken Meat

The trend estimate for chicken meat production rose 1.1 per cent in April 1995. Since December 1994 it has increased 2.8 per cent, but the latest trend estimate is 2.1 per cent below the last peak, which occurred in June 1994.

Whole Milk Intake

The trend estimate for whole milk intake for March 1995 fell for the tenth successive month, having peaked in April and May 1994. Since then it has fallen 8.6 per cent.

Wool Receivals by Brokers and Dealers

The trend estimate for wool receivals by brokers and dealers rose 3.0 per cent in April. This estimate is 12.8 per cent below the March 1994 peak.

Live Exports

The number of live sheep exported in March 1995 fell to 525,400, down by 2.1 per cent compared with February 1995. The unit value (\$33.26) also fell 2.1 per cent and the gross value (\$17.5 million) fell 4.1 per cent.

Live cattle exports in March 1995 rose 15.1 per cent to 32,000, and the gross value rose 5.8 per cent to \$16.8 million compared with February 1995. The unit value (\$525.65) fell 8.1 per cent. Live cattle exports have grown significantly with the number exported, and gross weight and value approximately 60 per cent higher for the 9 months to March compared with the same period the previous year.

(a) Red meat is shown in carcass weight and excludes offal. (b) Trend estimates for the most recent months are subject to revision when data for subsequent months become available. (c) Buffalo meat produced in the Northern Territory is included in Australian totals.

**RELIABILITY OF APRIL TREND ESTIMATES
FOR PRODUCTION OF RED MEAT**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of May.

The table below shows, for red meat production for the six months ended April:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for May of 3% on the April figure;
- trend estimates assuming a decrease in seasonally adjusted data for May of 3% on the April figure.

The percentage change of 3% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 3.28%.

(a) Excludes offal. (b) Factors can be applied to beef, veal, mutton and lamb bone-out figures to derive bone-in carcass weight which, when added to bone-in figures, shows total exports in carcass weight. The factor for beef and veal is 1.5 and for mutton and lamb is 2.0 (Source: Australian Meat and Livestock Corporation). (c) includes buffalo meat. (d) Cured carcass weight of smoked or cooked bacon and ham. Includes stated net weight of packs of canned bacon and ham. (e) Canned weight. Excludes canned bacon and ham. (f) See paragraph 2 of explanatory notes.

(a) Chicken meat is shown in dressed weight of whole birds, pieces and giblets. (b) Excludes Tasmania, the Northern Territory and the Australian Capital Territory.

(c) Trend estimates for the most recent months are subject to revision when data for subsequent months become available.

Note: Some slaughtering and meat production statistics for 'Ducks and Drakes' and 'Other Fowls and Turkeys' are available by contacting the ABS on Canberra 252 5337 or by writing to PO Box 10, Belconnen ACT 2616 (Attention: Agriculture Section).

**RELIABILITY OF APRIL TREND ESTIMATES
FOR CHICKEN MEAT PRODUCTION**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of May.

The table below shows, for chicken meat production for the six months ended April:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for May of 4% on the April figure;
- trend estimates assuming a decrease in seasonally adjusted data for May of 4% on the April figure.

The percentage change of 4% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 4.17%.

(a) Includes white, flavoured, high and low fat milk, uht milk.

**RELIABILITY OF MARCH TREND ESTIMATES
FOR WHOLE MILK INTAKE BY FACTORIES**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of April.

The table below shows, for whole milk intake by factories for the six months ended March:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for April of 2% on the March figure;
- trend estimates assuming a decrease in seasonally adjusted data for April of 2% on the March figure.

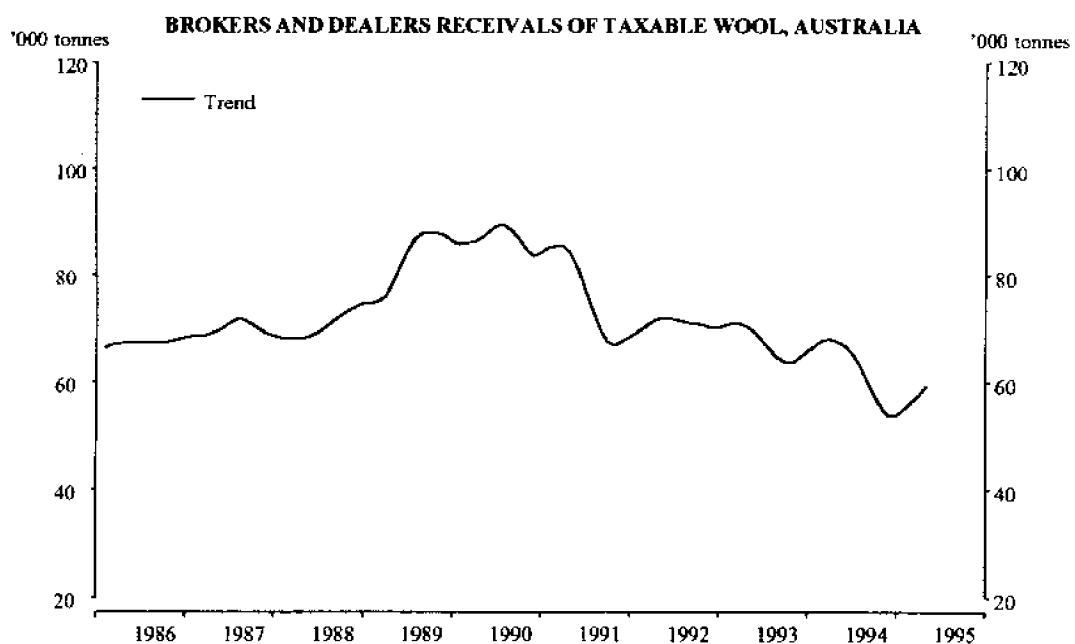

The percentage change of 2% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 1.96%.

(a) Brokers reporting to the National Council of Wool Selling Brokers of Australia (b) Trend estimates for the most recent months are subject to revision when data for the subsequent months become available.

**RELIABILITY OF APRIL TREND ESTIMATES
FOR WOOL RECEIVALS**

Readers should exercise care in the interpretation of trend data as the last six observations, in particular, are likely to be revised with either revisions to the underlying data or the addition of data for the month of May.

The table below shows, for receipts of taxable wool for the six months ended April:

- trend estimates as published;
- trend estimates assuming an increase in seasonally adjusted data for May of 9% on the April figure;
- trend estimates assuming a decrease in seasonally adjusted data for May of 9% on the April figure.

The percentage change of 9% was chosen because the average absolute monthly percentage change in the seasonally adjusted data since the inception of the series has been 9.19%

EXPLANATORY NOTES

Introduction

This publication contains information (preliminary where indicated) on livestock slaughterings, meat production, stocks of frozen meat, exports of live sheep, live cattle, fresh, frozen and processed meat, and whole milk intake by factories, market milk sales by factories and receipts of taxable wool by wool brokers and dealers.

2. Commencing with the June 1992 issue of this publication, the timing basis for compilation of merchandise exports statistics has changed. The change involves compiling export statistics on the basis of goods shipped in any month rather than on the basis of the documentation of goods shipped in that or earlier months. From the June 1992 issue the data from July 1990 has been revised to the new basis.

Livestock slaughterings and meat production

3. The statistics on slaughterings and meat production are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments.

4. Care should be taken when using this information as the figures only relate to slaughterings for human consumption and do not include animals condemned or those killed for boiling down. Since July 1994 the definition of livestock categories between States has been standardised.

5. Poultry slaughterings statistics have been compiled from returns supplied by commercial poultry slaughtering establishments. Producers in the Northern Territory and the Australian Capital Territory and the many very small producers are excluded from the collection; however, the statistics represent a high level of coverage.

Live sheep and cattle exports

6. These tables contain statistics of the number of live sheep and cattle exported, the gross weight, gross value and unit value. Sheep or cattle exported for breeding are excluded.

Milk

7. Tables 9 and 10 contain statistics collected by the Australian Dairy Corporation (ADC) on whole milk intake and market milk sales by factories.

Wool receivals

8. The statistics in Table 11 show the amount of taxable wool received by brokers and dealers from wool producers. It excludes wool received by brokers on which tax has already been paid by other dealers (private buyers) or brokers.

9. The information shown is on the basis of the State in which wool has actually been received and does not necessarily reflect the production of wool in that State.

Seasonal adjustment

10. Details of seasonally adjusted figures for livestock slaughterings, red meat, milk and wool are shown in Tables 1, 2, 9 and 11 respectively. Information on the methods used in seasonally adjusting these series is available on request.

Trend Estimates

11. A trend estimate is obtained by reducing the irregular component from the seasonally adjusted series. It is calculated for estimates in this publication by applying a 13 term Henderson moving average to the seasonally adjusted series. This technique enables trend estimates to be produced for the latest month. Trend estimates for the most recent months are revised as data for subsequent months become available. For further information, see *A Guide to Interpreting Time Series - Monitoring "Trends": an Overview* (1348.0) or contact the Assistant Director, Time Series Analysis on (06) 252 6345.

Related publications
