EXPLANATORY NOTES

Introduction

This publication contains monthly details of the number of new dwelling units reported by approving authorities as having commenced in each legal local government area.

Scope and coverage

2. The statistics were compiled from monthly reports, provided by local and other government authorities, of commencements of new houses and new other residential buildings for which:

- (a) building permits were issued by local government or other government authorities in areas subject to building control by those authorities; and
- (b) contracts were let or day labour work was authorised by Commonwealth, State, semi-government and local government authorities.

3. Major dwelling unit commencements in areas not subject to the normal administrative approval processes (e.g. buildings on remote mine sites) are also included.

4. The number of dwelling units created by alterations and additions to existing buildings and through the construction of new non-residential buildings is not included.

Comparability of statistics

5. Because of the difference in data sources, collection methodologies and timing of notification of commencements, care should be exercised in comparing quarterly data derived from monthly dwelling unit commencement statistics with the quarterly dwelling unit commencement statistics from the Building Activity Survey.

Definitions

6. A *dwelling unit* is defined as a self-contained suite of rooms, including cooking and bathing facilities and intended for long term residential use. Units (whether self-contained or not) within buildings offering institutional care, such as hospitals, or temporary accommodation e.g. motels, hostels and holiday apartments, are not defined as dwelling units.

7. A *residential building* is defined as a building predominantly consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings as follows:

- (a) A *house* is defined as a detached building predominantly used for long term residential purposes and consisting of only one dwelling unit. Thus, detached 'granny flats' and detached dwelling units (such as caretakers' residences) associated with non-residential buildings are defined as houses for the purpose of these statistics.
- (b) An *other residential building* is defined as a building which is predominantly used for long term residential purposes and which contains (or has attached to it) more than one dwelling unit (e.g. includes townhouses, duplexes, apartment buildings etc.).

8. *Commencements*. For the purposes of this statistical series, a dwelling unit is regarded as being commenced on the date when:

- (a) the residential building is first inspected by a local authority or other government authority building inspector or surveyor, whether the work is passed or not; or
- (b) the residential building is determined as commenced by a building inspector or surveyor.

9. *Ownership* of a building is classified as either Public Sector or Private Sector according to the sector of the intended owner of the completed building as evident at the time of approval. Residential buildings being constructed by private sector builders under government housing authority schemes whereby the authority has contracted, or intends to contract, to purchase the buildings on or before completion, are classified as public sector.

Australian Standard Geographical Classification (ASGC)

10. Area statistics are now being classified to the Australian Standard Geographical Classification, 1996 Edition (1216.0), effective from 1 July 1996, and ASGC terminology has been adopted in the presentation of building statistics.

11. The local government area structure has been cross-classified with the statistical division level of the main structure. The use of this cross-classification requires the combination of the Brisbane and Moreton Statistical Divisions, as some local government areas cross the contiguous boundary of these two statistical divisions.

12. Local government areas (LGAs), as defined under the Local Government Act 1936, are spatial units which represent the geographical areas of incorporated local government councils, such as cities (C), towns (T) and shires (S).

13. Statistical divisions, which are groupings of whole or part LGAs, are designed to be relatively homogeneous regions characterised by identifiable social and economic units within the region.

14. Statistical districts have been defined around selected urban areas to provide comparable statistics over a period of time. These districts, which are intended to contain the anticipated urban spread for at least 20 years, are generally defined around urban centres with a population of 25,000 or more outside the capital city SD.

15. From July 1996 the statistics reflect the changes made to the ASGC spatial units. Further details are:
