	November 1999	20 December 1999
ABOUT THIS PUBLICATION	The aim of this publication is to provide users with a range of the latest statistics available at the end of each month of issue. Consequently, the dates and periods shown are not always the same for each table, but are in each case the latest figures available at that time.	
SEASONAL ADJUSTMENT	Seasonal adjustment is a means of removing the estimated effects of normal seasonal variations from economic time series so that the effects of other influences are obvious. Seasonal variations are the systematic (though not necessarily regular) intra-year movements of economic time series. These are often the result of non-economic phenomena, such as climatic changes and regular religious festivals e.g. Christmas and Easter.	
TREND ESTIMATE	Smoothing seasonally adjusted series produces a measure of trend by removing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson weighted moving average to the respective seasonally adjusted series. Readers are reminded that trend estimates are subject to revision as subsequent months' data become available.	
SYMBOLS AND OTHER USAGES	<p>n.a. not available</p> <p>n.e.c. not elsewhere classified</p> <p>n.p. not available for publication but included in totals where applicable</p> <p>n.y.a. not yet available</p> <p>p preliminary—figure or series subject to revision</p> <p>r figure or series revised since previous issue</p> <p>*</p> <p>estimate has a relative standard error greater than 25% and is therefore subject to sampling variability too high for most practical uses</p> <p>.. not applicable</p> <p>— nil or rounded to zero</p>
