FORTHCOMING ISSUES

<i>Issue</i>	<i>Expected release date</i>
June 2002	31 May 2002
July 2002	28 June 2002
August 2002	31 July 2002
September 2002	30 August 2002
October 2002	30 September 2002
November 2002	31 October 2002

IN THIS ISSUE

Where available, the statistics in this issue are presented as time series for the last nine years of annual data, the last nine quarters or 15 months of data. To assist analysis most tables include percentage movements, as well as levels, of series.

Quarterly and monthly data for most series, and annual data for a limited number of series, are available from the ABS for earlier periods than that shown in this publication. Many series can be obtained on electronic media. Inquiries should be directed to the National Information Service on 1300 135 070.

EXTENDED TIME SERIES

For users requiring longer time series, each February issue of *Australian Economic Indicators* contains, for most series, a greater span of annual, quarterly and monthly data.

FEATURE ARTICLE

MEASURING AUSTRALIA'S PROGRESS

INTRODUCTION

Measuring a nation's progress – providing information about whether life is getting better – is one of the most important tasks that a national statistical agency can take on. For almost 100 years, the ABS has been measuring Australia's progress through the multitude of statistics we publish relating to Australia's economy, society and environment. However, for the most part, our statistical publications have tended to focus on each of these three broad areas in isolation.

Recent years have seen growing public interest in the interrelationships between economic, social and environmental aspects of life. There have been, for example, debates about the sustainability of economic growth and a recognition that the environment is neither an inexhaustible source of raw materials nor capable of absorbing an unlimited amount of waste. Similarly, progress relates to social concerns – health, education and crime – and whether and how economic growth benefits those areas.

Around the world a consensus is growing that countries and governments need to develop a more comprehensive view of progress, rather than focussing mainly on economic indicators such as Gross Domestic Product (GDP). In an attempt to address this need, the ABS released a new publication on 4 April 2002 entitled *Measuring Australia's Progress* (Cat. no. 1370.0). This article outlines what is available in the new publication and summarises the headline indicators.

WHAT THE PUBLICATION IS ABOUT

Measuring Australia's Progress is about Australia's progress. It is intended to help Australians address the question, "Has life in our country got better, especially during the past decade?"

Answering the question is far from easy. Indeed there can be no definitive answer, because we all have our own views about what is most important to individual and national life. During 2000 and 2001, the ABS consulted a wide range of experts, organisations and individuals to understand what they saw as the most important dimensions of national progress. *Measuring Australia's Progress* presents indicators relating to some of those dimensions. The ABS hopes that Australians will use these headline indicators to form their own views of how our country is progressing.

PUBLICATION CONTENTS

Measuring Australia's Progress is 138 pages long and is available from ABS bookshops for \$38. The major headings are Indicators of Australia's progress, Measuring progress, How the progress indicators are presented, Dimensions and indicators of progress, Population, Headline indicators and the Supplementary commentaries. There are also appendices which explain the criteria for selecting indicators and other initiatives relating to measuring national progress.

HOW PROGRESS
INDICATORS ARE
PRESENTED

One way of assessing progress is to consider whether Australia is becoming wealthier (or is maintaining or depleting its wealth). Australia has many forms of wealth, some of which can be measured fairly accurately. In its broadest sense, Australia's wealth is made up of various stocks of assets that include:

- human capital embodied in the knowledge, skills and health of individual Australians;
- social capital embodied in the ways we live together;
- natural capital embodied in our land, air, fresh waters, seas, and flora and fauna; and
- produced and financial capital embodied in machinery, houses, buildings and other assets.

The nation has other forms of wealth, but many are less tangible and far harder to measure. While the spiritual, cultural and emotional wealth of the nation are all important, they are not measured in *Measuring Australia's Progress*. Australia's international networks and external alliances are another resource not readily measured.

Some of the headline indicators relate directly to components of Australia's wealth.

- Some aspects of human capital are discussed in the commentaries **Health**, and **Education and training**.
- Some aspects of social capital are discussed under **Social attachment** - and the liability side, as it were, of the social capital balance sheet is partly reflected in **Crime**.
- Natural capital is discussed under **Air, Inland waters, Land, and Biodiversity**.
- Produced and financial capital is discussed under **National wealth**, and **Housing**.

Other aspects of progress are intimately linked to these varieties of wealth. For example, the commentaries **National income**, **Economic disadvantage and inequality**, and **Work** all shed light on how (and how well) Australia's human and other assets are being used. National income that is not consumed immediately constitutes saving and can be used to accumulate produced and financial capital. The income available to less well-off Australian households is discussed under **Economic disadvantage and inequality**.

Greenhouse gases flow into the air, and might, through global warming, affect other aspects of progress. Australians' **Health and Education and training** affect whether they **Work** (and what work they do); work can in turn generate national income.

One can arrange the progress indicators according to the broad variety of Australia's wealth to which they relate. This is, of course, only one of many different ways to display progress indicators.

HOW PROGRESS
INDICATORS ARE
PRESENTED
continued

The publication presents indicators for each of these dimensions. For most dimensions, one headline indicator is chosen. For crime and housing there are two headline indicators. No headline indicator has been chosen for social attachment.

<i>Human capital</i>	<i>Natural capital</i>	<i>Produced and financial capital</i>	<i>Social capital</i>
Health	Biodiversity	National wealth	Crime
Education and training	Land (clearing and degradation)	National income	Social attachment
Work	Water	Economic disadvantage and inequality	
	Air quality	Housing	
	Greenhouse gases		

ASSESSING
PROGRESS

A reader's assessment of whether Australia is, on balance, progressing will depend on the relative importance he or she places on each dimension. For some readers, an improvement in the health and education of Australians might be more important than a decline in our biodiversity. Others might disagree.

The reader's overall assessment might also be based upon the strength of progress or regress in each dimension. Or it might be based on patterns that underlie the national trends — so it might be important to know not just whether health is improving for the Australian population overall, but also whether it is improving for particular groups of Australians (such as Aboriginal and Torres Strait Islander peoples). The commentary on each indicator provides additional information of these kinds.

More generally, a presentation based solely on indicators is of limited use for policy analysis. Indicators should be data sets which enable analysis for sub-populations, whether based on geography or other personal characteristics.

The suite of indicators presented in *Measuring Australia's Progress* suggests progress in some areas of Australian life and regress in others. What follows is a very brief summary of information embodied in the headline indicators. Overall progress, as explained above, should not be assessed by simply counting the numbers of areas getting better and subtracting those getting worse. Some aspects of progress (especially aspects such as national income and national wealth) are more easily encapsulated in a small number of indicators, than are some social and environmental aspects of progress. And some readers will give greater importance to some progress indicators than others.

HUMAN CAPITAL

Three headline indicators are associated with human capital. All three suggest progress during the past decade.

HUMAN CAPITAL
continued

- **Health.** During the past decade, Australians' health improved - children born in 1999 were expected to live three years longer than those born in 1990. Indigenous Australians, however, can still expect to live some 20 years less than other Australians.
- **Education and training.** During the 1990s, the Australian population became more educated - between 1990 and 2000 the proportion of people aged 25-64 years with a vocational or higher education qualification rose from 46% to 50%.
- **Work.** Since the last recession in the early 1990s the unemployment rate has gradually declined, and the unemployment rate in 2001 was 6.7%.

NATURAL CAPITAL

It is difficult to obtain national time series data that encapsulate the changes in Australia's natural capital. Five of the six headline indicators suggest regress during the past decade.

- **Biodiversity** cannot be measured comprehensively, but some experts, such as those on the State of the Environment Committee, believe Australian biodiversity declined during the past decade. This is partly encapsulated in a rise in the numbers of threatened birds and mammals. However, there has been an increase in the effort to protect biodiversity.
- **Land clearance.** In 1999, about 470,000 hectares of native vegetation were cleared, an annual rate some 40% higher than in 1991. Land clearance is one influence thought to be reducing biodiversity.
- **Land degradation.** In 2000, about 5.7 million hectares of land were affected by, or at high risk of developing, dryland salinity, a widespread form of land degradation.
- **Inland waters.** Detailed national time series data are not available. But a variety of partial evidence points to a decline in the quality of some of Australia's waterways. In 2000, about a quarter of Australia's surface water management areas were classed as highly used or overused.
- **Air quality.** Australia's air remains relatively clean by the standards of other developed nations. The available indicators, such as the incidence of fine particle pollution in several cities, suggest that Australian air quality has improved during the past decade, despite increased motor vehicle use.
- **Greenhouse gas** emissions in Australia increased by 17% between 1990 and 1999. Australia has some of the highest per capita emissions in the world, in part because of our heavy reliance on fossil fuel burning and also because of the Australian economy's structure.

PRODUCED AND
FINANCIAL CAPITAL

Four headline indicators are presented. During the past decade, there has been progress in all four dimensions.

- **National wealth,** as measured in Australia's balance sheet, grew during the 1990s. Real wealth per person increased moderately (by almost 1% a year) between 1992 and 2001.

PRODUCED AND
FINANCIAL CAPITAL
continued

- **National income** can be used to fund current consumption of goods and services. Or it can be saved to accumulate wealth. Real income per head grew strongly during the past decade (by 2.5% a year) - appreciably stronger growth than during the preceding twenty years.
- **Economic disadvantage and inequality.** The real income of less well-off Australians (those in the second and third lowest deciles of the income distribution) increased between 1994-95 and 1997-98 by 5%. The incomes of better-off groups increased by a similar amount.
- **Housing.** Australia's housing stock is a component of produced capital. The commentary focuses on two social aspects of housing: housing affordability and houses with insufficient bedrooms. Although not a widespread problem, the proportion of houses with insufficient bedrooms declined during the 1990s. The proportion of households experiencing problems with the affordability of their housing remained much the same over the four years 1994-95 to 1997-98.

SOCIAL CAPITAL

Two aspects of social capital are covered in the headline dimensions.

- **Social attachment** refers to the nature and strength of relationships people have with one another. The publication presents a number of indicators showing how aspects of social attachment in Australia are changing, but none of these is accorded headline status. No assessment is made as to whether these changes signal progress or regress.
- **Crime.** Through the 1990s there was an increase in the prevalence of some of the more common personal and property crimes reported to the police. According to police statistics, for every 100,000 Australians in 2000 there were about 2,300 instances of unlawful entry and 740 victims of assault.

LINKS BETWEEN
DIMENSIONS OF
PROGRESS

Most, if not all, of these dimensions of progress are linked. Changes in one dimension will be associated with changes in many others - sometimes for the better and sometimes for the worse. A few of these links are outlined in each headline commentary.

PLANS FOR THE
FUTURE

The next issue of *Measuring Australia's Progress* is tentatively planned for late 2003. The ABS hopes to build on this first issue to improve the publication in the future, recognising that it will doubtless evolve: important measures of progress may have been omitted, people's views about progress will change, and new data will become available.

FURTHER INFORMATION

Measuring Australia's Progress can be found on the ABS web site, (www.abs.gov.au) under Statistical Products and Services — Main Features — 1370.0. For further information on this topic please contact Ken Tallis on (02) 6252 7290 or e-mail <ken.tallis@abs.gov.au>.

(a) Trend data used instead of seasonally adjusted.

(b) Sales is defined as gross non-farm product plus imports of goods and services less changes in private non-farm inventories.

(c) Corporate gross operating surplus include private corporate trading enterprises plus financial enterprises less imputed bank service charge. GNFPfc = Gross non-farm product at factor cost.

(d) Interest paid component contains original data.

(e) By convention, zero productivity growth is assumed for industries in the non-market sector mainly government and some service industries. Therefore, a better indicator of productivity change is provided by the series showing market sector constant price gross product per hour worked.

**TOTAL PUBLIC SECTOR,
SURPLUS/DEFICIT AS A PERCENTAGE OF GDP**

A negative percentage of GDP represents a general government deficit.
A positive percentage of GDP represents a general government surplus
Source: ABS (Cat. no. 5512.0), Annual data.

Until recently, government finance statistics (GFS) comprised only cash-based statistics for general government (GG). Accrual-based data was previously only collected for public corporations. The first final annual accrual-based government finance statistics are available for 1998–99 and were published in the 1998–99 issue of Government Finance Statistics, Australia (ABS Catalogue No. 5512.0) released on 12 July 2000.

A paper outlining the conceptual changes reflected in the new statistical measures and changes in table formats, *Information Paper: Accrual-Based Government Finance Statistics* (ABS Catalogue No. 5517.0), was released on 13 March 2000.

GFS are now presented in the form of Operating Statements, Cash Flow Statements, Balance Sheets and Statements of Stocks and Flows and the focus is on the new analytical measures described below:

Net Operating Balance(NOB) — the difference between GFS revenues and expenses. This measure reflects the sustainability of government operations;

Net Lending/Borrowing(NLB) — NOB minus the total net acquisition of non-financial assets. It represents the government's call on the financial sector and reflects the economic impact of government operations. A positive result reflects a net lending position and a negative result a net borrowing position.

Net Worth(NW) — the economic measure of 'wealth' is calculated as assets less liabilities for the GG sector and assets less liabilities

and shares and other contributed capital for public corporations (financial and non-financial). Net worth of unlisted corporations will always be zero because owners' equity is the difference between assets and liabilities. For listed corporations net worth will be positive or negative depending upon the difference between the value of shares on the balance sheet and the value of traded shares. As the equity of public corporations held by the GG sector consolidate out at the total public sector level, only equity held external to the public sector will appear.

Change in Net Worth(CNW) — this is the change in NW over two adjacent periods. CNW (due to transactions) is also equivalent to the NOB and excludes the impact of revaluations and other changes in volume of assets and liabilities.

Surplus(+)/Deficit(-) — is a cash-based measure and is calculated as:

Net cash flows from operating activities
plus Net cash flows from investments in non-financial assets
less Distributions paid (public corporations sector only)
less Acquisitions of assets under finance leases and similar arrangements

The new Surplus(+)/Deficit(-) measure, while conceptually comparable to the old Deficit(+)/Surplus(-) measure has undergone a sign change—a surplus is now shown as positive and in practice has been compiled on a different methodological basis to that of previous years, hence resulting in a break in series. The Surplus/Deficit is the cash-based equivalent of Net Lending/Borrowing described above.

- (a) The estimates for goods and services are not necessarily consistent with the corresponding monthly estimates, shown in Tables 2.4 to 2.7 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).
- (b) In addition to the differences outlined in footnote (a), the quarterly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding monthly seasonally adjusted estimates, shown in Table 2.1 obtained from *International Trade in Goods and Services, Australia* (Cat. no. 5368.0) — issued monthly, because of the independent seasonal adjustment of the monthly and quarterly data.

(a) For all time periods, estimates for *Sugar, sugar preparations and honey* are included in *Other non-rural*.(b) The estimates for goods and services are not necessarily consistent with the corresponding quarterly estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0) due to data revisions to the original monthly data not feeding into the quarterly original series until the next quarterly release of *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0).(c) In addition to the differences outlined in footnote (b), the monthly seasonally adjusted estimates for goods and services are not necessarily consistent with the corresponding quarterly seasonally adjusted estimates, shown in Table 2.1 obtained from *Balance of Payments and International Investment Position, Australia* (Cat. no. 5302.0), because of the independent seasonal adjustment of the monthly and quarterly data.Source: *International Trade in Goods and Services, Australia* (Cat. no. 5368.0).

(a) Derived from current price original data. The net international investment position ratios are derived from the net foreign liabilities at the end of the period and GDP for the year ended with that period. Other ratios use only data for the year ended with the period shown.

(b) For the latest reference period, GDP for the year ended with the previous quarter is used.

(a) The exports and imports data presented in this table differ from those in Tables 2.1 to 2.5 because they are recorded on an international trade basis rather than a balance of payments basis and are compiled from a different edition of the data.

(b) The ten member nations of ASEAN are Brunei, Cambodia, Indonesia, Laos, Malaysia Myanmar, Philippines, Singapore, Thailand and Vietnam.

(c) The fifteen Member States of European Union (EU) are Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, and the United Kingdom. Figures for Belgium and Luxembourg are presented as combined totals.

(a) There is a series break between 1985–86 and 1986–87, resulting from a change in survey methodology for engineering construction, introduced from the September quarter 1986. The most significant was the introduction of public sector units into the survey.

(a) All annual data are end of period.

(b) All annual data are annual averages.

(c) All annual data are aggregates.

(d) From the March quarter 1998, the scope of the quarterly Survey of Tourist Accommodation has included licensed hotels, motels and guest houses with facilities and serviced apartments with 15 or more rooms or units. The survey no longer collects data on caravan parks, holiday flats, units and houses or visitor hostels on an ongoing basis.

(a) Original data provided.

(b) The weights used are based on the average share of Australia's imports from the US, Japan, UK and West Germany from 1984–85 to 1987–88. The four countries are the source for about 60 per cent of Australia's imports. Observations are quarterly averages. A rise (fall) implies a deterioration (improvement) in Australian costs and prices relative to our four major trading partners after adjusting for exchange rate changes.

(c) The adjusted CPI index is the ratio of the Australian consumer price index to the weighted geometric average of the exchange rate adjusted consumer price indexes of Australia's four major trading partners.

(d) The adjusted GDP deflator index is the ratio of the GDP deflator for Australia to the weighted geometric average of the exchange rate adjusted GDP deflators of Australia's four major trading partners.

(e) The adjusted unit labour cost index is the ratio of unit labour costs in the non-farm sector of the Australian economy to the weighted geometric average of the exchange rate adjusted unit labour cost indexes estimated for the business sectors of Australia's four major trading partners.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0).

(b) Series is non-seasonal. Original data provided instead of seasonally adjusted and trend data.

(c) For unemployment and participation rates, the changes are given as percentage points.

(a) In April 2001 the ABS implemented a redesigned Labour Force Survey Questionnaire. To ensure continuity revisions have been made to core labour force series. For details refer to *Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire* (Cat. no. 6295.0).

(b) For civilian population aged 15+ seasonally adjusted and trend estimates are not available. Original data provided.

(c) For unemployment and participation rates, the changes are given as percentage points.

- (a) Total population increase is equal to the change in population. Prior to 1992 this is not equal to natural increase (live births less deaths) plus net immigration because of the distribution of the intercensal discrepancy. There is now an intercensal discrepancy for 1986-91.
 (b) Includes Cocos (Keeling) Islands, Christmas Island and Jervis Bay Territory from September quarter 1993.

(a) The indexes in Table 7.4 combine ordinary time and overtime hourly rates and therefore include the effect of any changes in overtime penalty rates but are not affected by changes in penalty payments (which fluctuate depending on the number of hours paid at penalty rates) and allowances (which fluctuate according to how much work is performed under special work conditions e.g. height, dirt and/or heat allowances).

December	831.8	788.5	192.2		94.5	146.4

(a) Average non-farm wages, salaries and supplements per wage and salary earner. Seasonally adjusted data.

(b) Base for index: 1986–87 = 100.0.

(c) Deflated by the Gross National Expenditure deflator.

(d) Non-farm wages, salaries and supplements, plus payroll tax less employment subsidies plus fringe benefits tax per hours worked by non-farm wage and salary earners.

(e) Ratio of derived private non-farm corporate wages, salaries and supplements plus payroll tax less employment subsidies, plus fringe benefits tax paid by the private non-farm corporate sector to derived private non-farm corporate sector gross product at factor cost plus payroll tax less employment subsidies plus fringe benefits tax.

(f) Nominal unit labour costs (see footnote (g)) deflated by the derived implicit price deflator for gross non-farm product.

(g) Ratio of nominal hourly labour costs to average hourly labour productivity (real gross non-farm product per hour worked by all employed persons).

(a) Excludes Commonwealth and State Government and interbank deposits but includes deposits of the non-bank sector with the Reserve Bank.

(b) Currency plus bank deposits (including certificate of deposit with trading banks) of the private non-bank sector.

(c) Borrowings (other than from banks and related corporations) by permanent building societies, credit co-operatives, finance companies, authorised money market dealers, pastoral finance companies, money market corporations, general financiers and cash management trusts; less borrowings by authorised money market dealers from those non-bank intermediaries. Breaks occur from time to time due to changes in number of reporting corporations.

(d) M3 plus borrowing from private sector by non-bank financial intermediaries less the latter's holding of currency and bank deposits.

(e) Holdings of notes and coin by private sector, plus deposits of banks with the Reserve Bank and Reserve Bank Liabilities to the private non-bank sector.

(f) Loans and advances of those financial intermediaries whose deposit liabilities are included in broad money.

(g) Bills outstanding under acceptance and endorsement commitments by banks.

(h) Credit is equal to bank bills outstanding plus loans and advances by financial intermediaries whose liabilities are included in broad money.

(a) Rates are for the last trading day of the reference period.

(b) On January 1, 1999 eleven European Union nations launched the euro, a single currency giving control of interest rate and exchange rate policy to the European Central Bank. The euro was immediately available for electronic financial and business transactions, but euro coins and notes were not issued to the general public until January 2002. The participating nations are Austria, Belgium, Finland, France, Germany, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain. Greece adopted the Euro on 1 January 2001 and Britain, Denmark and Sweden chose not to adopt the euro.

10.13	M1 plus quasi-money index	128

NOTES

1. The statistics for Germany in these tables refer to Germany after unification.

2. Consumer price index (CPI). Due to the many differences in the structure of the housing sector in different countries and in the way that housing is treated in their CPIs, a simple comparison of All items (or headline) CPIs is often inappropriate. To provide a better basis for international comparisons, the Fourteenth International Conference of Labour Statisticians adopted a resolution which called for countries to “provide for dissemination at the international level of an index which excludes shelter, in addition to the all-items index.”

Table 10.8 presents indexes for selected countries on a basis consistent with the above resolution and comparable to the Australian series *All groups excluding housing*. The series in this table are presented on a reference base consistent with that used for publication of the Australian CPI (i.e. 1989–90 = 100.0) and as such are not directly comparable with those for All items published in Table 10.7 (presented on a reference base of 1995 = 100.0).

EXPLANATORY NOTES

Explanatory notes in the form found in other ABS publications are not included in *Australian Economic Indicators*. Readers are directed to the explanatory notes contained in related ABS publications.

INTRODUCTION

Australian Economic Indicators presents a statistical summary of the Australian economy, together with international comparisons of selected economic indicators. Except for the special February issue, it also includes commentaries, articles, technical notes, and the Experimental Composite Leading Indicator. *Australian Economic Indicators* has been developed primarily as a reference document, providing a broad basis for economic analysis and research.

The tables contain mainly ABS data, although data from other sources are included. For ABS sourced data, the publication name and catalogue number are included in the footnotes of the tables. If the data are from other sources, the source organisation's name is included in the footnotes.

MOST RECENT DATA

The statistics shown are the latest available as at 11 April 2002.

RELATED PUBLICATIONS

A list of related publications is included in each chapter under the table of contents. These include publications which are the source of the data in the tables and other related publications.

Other useful sources of detailed information are the 'Concepts, Sources and Methods' and classification publications. These are released irregularly, each relating to a specific publication, collection or standard classification. The publications most relevant to *Australian Economic Indicators* include:

- *Australian and New Zealand Standard Industrial Classification (ANZSIC)* (Cat. no. 1292.0)
- *Classification Manual for Government Financial Statistics, Australia* (Cat. no. 5514.0)
- *Australian National Accounts: Concepts, Sources and Methods* (Cat. no. 5216.0)
- *Balance of Payments, Australia: Concepts, Sources and Methods* (Cat. no. 5331.0)
- *A Guide to Labour Statistics* (Cat. no. 6102.0)
- *The Australian Consumer Price Index: Concepts, Sources and Methods* (Cat. no. 6461.0)

SEASONALLY ADJUSTED AND TREND ESTIMATES

Series in this publication include original, seasonally adjusted and trend series. Special care should always be taken in interpreting data for the most recent months and quarters. Some of the original and all of the seasonally adjusted and trend series are subject to revision.

SEASONALLY ADJUSTED
AND TREND ESTIMATES
continued

It is not uncommon for movements in original time series data and those provided from seasonally adjusted and trend series to differ significantly. Movements in a time series of original data may reflect several factors, including:

- longer-term changes in the item being measured (i.e. trend movements);
- short-term irregular changes;
- regular seasonal influences;
- normal 'trading', 'working' or 'pay' day patterns; and
- systematic holiday effects.

Seasonal adjustment and trend estimates help the user to identify the effect of these influences on the time series. Seasonal adjustment removes the effect of the last three listed influences from the data, leaving only the trend and short-term irregular movements. Trend estimates are then obtained by removing the effects of the short-term irregularities, which in many series can be a major contributor to movements in the original data. By comparing the historical trend series with the seasonally adjusted series, the user can identify the short-term irregularities which have influenced the original series.

Trend estimates produced by the ABS are based on Henderson Moving Averages, and are therefore subject to revision especially for the latest few months or quarters.

The general methods used in the ABS for making seasonal adjustments are described in *Seasonally Adjusted Indicators, Australia 1983* (1308.0). The method used to estimate trends is described in *Information Paper: A Guide to Smoothing Time Series — Estimates of Trend* (Cat. no. 1316.0).

Concurrent seasonal
adjustment and trend
estimates

The ABS has introduced the use of concurrent seasonal adjustment to derive the combined adjustment factors for the Retail Series. This means that data from the current month are used in estimating seasonal and trading day factors for the current and previous months. Concurrent adjustment can result in revisions each month to estimates for earlier periods. However, in most instances, the only noticeable revisions will be to the combined adjustment factors for the current month, the previous month and the same month a year ago. As a result of the concurrent seasonal adjustment the trend estimates are also concurrently estimated.

CHAIN VOLUME
MEASURES

The chain volume measures appearing in this publication are annually-reweighted chain Laspeyres indexes referenced to the current price values in a chosen reference year (i.e. the year when the quarterly chain volume measures sum to the current price annual values). Chain Laspeyres volume measures are compiled by linking together (compounding) movements in volumes, calculated using the average prices of the previous financial year, and applying the compounded movements to the current price

CHAIN VOLUME MEASURES

continued

estimates of the reference year. Quarterly chain volume estimates are benchmarked to annual chain volume estimates, so that the quarterly estimates for a financial year sum to the corresponding annual estimate.

Chain volume measures are not generally additive. In other words, in general, component chain volume measures do not sum to a total in the way original current price components do. In order to minimise the impact of this property, the ABS uses the latest base year as the reference year (i.e. the year prior to the latest complete financial year). By adopting this approach, non-additivity does not exist for the quarters following the reference year (currently 1997–98) and is relatively small for the quarters in the reference year and the quarters immediately preceding it. The latest base year and the reference year will be advanced one year with the release of the June quarter Australian National Accounts (*Australian Economic Indicators*, October issue). A change in reference year changes levels but not growth rates, although some revision to recent growth rates can be expected because of the introduction of a more recent base year (and revisions to the current price estimates underlying the chain volume measures).

OTHER USAGES

Columns in bold in the tables indicate a total. Columns usually sum from the left, with the total appearing on the right. A major exception is the balance of payments and international investment position data in Chapter 2. These data sum from the right with the total appearing on the left — in keeping with the international standard for these statistics. Some tables include sub-total columns and columns which need to be subtracted to obtain the total. Where this is not clear a footnote explains the relationship between the columns.

Columns in italics indicate that seasonally adjusted or trend estimates are not available for that column, and original data are provided instead.

Yearly periods shown as, e.g. 1998–1999, refer to the fiscal year ended 30 June 1999.

Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage changes may not be exactly comparable to tabulated source series due to rounding of the source series, the percentage change series or both.

METRIC PREFIXES

Deca (da) = ten
Hecto (h) = hundred
Kilo (k) = thousand
Mega (M) = million
Giga (G) = thousand million
Tera (T) = million million

Appendix
