PREFACE

The primary geographical classification used by the Australian Bureau of Statistics (ABS) to disseminate statistical data for the 2006 Census of Population and Housing is the Australian Standard Geographical Classification (ASGC) 2006. However, the ABS will also release data for a number of geographic areas that are outside the scope of the ASGC. These are called Census Geographic Areas.

This publication provides an essential reference for understanding and interpreting the geographical context for ABS statistics published on the Census Geographic Areas.

The Census Geographic Areas described in this publication include: Commonwealth and State Electoral Divisions, Postal Areas, State Suburbs, Place of Work Areas and the Australian Indigenous Geographical Classification (AIGC). With the exception of the Place of Work Areas, all the geographic areas are based upon aggregations of the ASGC 2006 Census Collection Districts (CDs). This publication describes the concepts underlying each of the Census Geographic Areas and lists their codes and labels.

The date of effect of the Census Geographic Areas described in this publication is 8 August, 2006.

This publication is part of a three volume set of statistical geography publications relating to the 2006 Census of Population and Housing. The other two volumes are Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC) (Cat. no. 1216.0) and Statistical Geography Volume 3 Australian Standard Geographical Classification (ASGC) Urban Centres/Localities (Cat. no. 2909.0).

Any enquiries regarding the Census Geographic Areas, or suggestions for improvement, can be made by contacting the Assistant Director (Geography Section) on telephone 02 6252 6434, facsimile 02 6252 8666, e-mail geography@abs.gov.au or by writing to Locked Bag 10, Belconnen, ACT 2616.

For details of other 2006 Census Geographic Products and Services, please refer to the 2006 Directory of Census Statistics (Cat. no. 2910.0). Alternatively, please contact the ABS National Information and Referral Service on telephone 1300 135 070, facsimile 1300 135 211 or e-mail client.services@abs.gov.au.

CHAPTER 1 INTRODUCTION

PURPOSE

The main purpose of the Australian Standard Geographical Classification (ASGC) and the Census Geographic Area Classifications is to provide a framework for the collection and dissemination of geographically classified statistics. This publication briefly describes all of these classifications but provides details only on the Census Geographic Areas.

Full details of the ASGC structures are provided in *Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0) and *Statistical Geography Volume 3 Australian Standard Geographical Classification (ASGC) Urban Centres/Localities* (Cat. no. 2909.0).

ASGC

The ASGC is the primary geographical classification used by the ABS. It provides a common framework of statistical geography in both census and non-census years thereby enabling the production of statistics which are comparable and can be spatially integrated. It is a hierarchical classification system consisting of seven interrelated structures each designed to serve a specific purpose. The spatial units of some structures (the Main, Statistical Region, Section of State and Remoteness) aggregate to cover the whole of Australia, while the remaining structures (the Local Government Area, Statistical District and Urban Centre and Locality) cover only a part of Australia.

SPATIAL UNITS OF THE ASGC

The spatial units of the ASGC are as follows:

- Census Collection District (CD);
- Statistical Local Area (SLA);
- Statistical Subdivision (SSD);
- Statistical Division (SD);
- State and Territory (S/T);
- Australia;
- Statistical District (S Dist);
- Local Government Area (LGA);
- Statistical Region Sector (SRS);
- Statistical Region (SR);
- Major Statistical Region (MSR);
- Urban Centre/Locality (UC/L);
- Section(s) of State (SOS); and
- Remoteness Area (RA).

CENSUS GEOGRAPHIC AREAS

The Census Geographic Areas described in this publication have been created so that census data may be made available for commonly used geographic areas other than those found in the ASGC. Census Geographic Areas are defined only in a census year. All Census Geographic Areas, with the exception of the Place of Work areas, are formed by an aggregation of whole CDs. The CD is the smallest spatial unit of the ASGC and is also only defined in a census year.

For the 2006 Census, the Census Geographic Areas are comprised of six separate classifications and spatial units as follows:

- Commonwealth Electoral Division (CED);
- State Electoral Division (SED);
- Postal Area (POA);
- State Suburb (SSC);

SUMMARY TABLES

The following table summarises the various ASGC structures and their component spatial units.

TABLE 1, SUMMARY OF ASGC STRUCTURES

| <i>ASGC Structure</i> | <i>Hierarchical Levels</i> | <i>Component Spatial Units</i> | <i>Covers whole of Australia?</i> |
|-----------------------|--------------------------------|--|---|
| Local Government Area | 4 | CD,SLA,LGA,S/T(a) | No |
| Statistical District | 4 | CD,SLA,SSD,S Dist(b) | No |
| Main | 5 | CD,SLA,SSD,SD,S/T | Yes |
| Statistical Region | 6 | CD,SLA,SRS,SR,MSR,S/T | Yes |
| Section of State | 3 | CD,SOS,S/T | Yes |
| Remoteness | 3 | CD,RA,S/T | Yes |
| Urban Centre/Locality | 2 | CD,UC/L(c) | No |

- (a) Only that part of the S/T which comes under the responsibility of an incorporated Local Government Council. (See Chapter 3 p. 19).
- (b) Areas covered by S Dist only
- (c) Areas covered by UC/L only

The following table summarises the number of ASGC spatial units and Census Geographic Areas.

| ILOC | Indigenous Location(j)(k) | 236 | 61 | 161 | 62 | 145 | 29 | 146 | 3 | 4 | 846 |
| MISCELLANEOUS CDS (EFFECTIVE 1 JULY 2006) | | | | | | | | | | | |
| | Water CDs | 54 | 5 | 3 | 3 | 7 | 1 | 11 | 11 | — | 95 |
| | Nil CDs | 5 | 62 | 62 | 17 | 194 | 2 | 34 | 7 | — | 383 |
| | Off-Shore CDs | 1 | 1 | 1 | 1 | 1 | 1 | 1 | — | — | 7 |
| | Migratory CDs | 1 | 1 | 1 | 1 | 1 | 1 | 1 | — | — | 7 |
| | Shipping CDs | 10 | 8 | 15 | 10 | 16 | 10 | 5 | — | 3 | 77 |

— nil or rounded to zero (including null cells)

- (a) Other Territories (OT) includes the territories of Cocos (Keeling) Islands, Christmas Island and Jervis Bay.
- (b) For each state and the NT and OT, a code for Off-Shore, Shipping and Migratory CDs have been included.
- (c) Includes the LGA 9399 Unincorporated State/Territory for each State/Territory.
- (d) Statistical Districts can cross State/Territory borders. For the purposes of the above table, Statistical Districts that cross State/Territory borders are counted in each State/Territory (NSW 3, Vic 1, Qld 1, ACT 1), but are counted only once in the Australia total.
- (e) These Geographic Areas are derived on a 'best fit' basis of CDs to externally determined boundaries. They are often referred to as CD Derived Areas.
- (f) The ACT Electoral Division of Fraser includes Jervis Bay and is counted in ACT and OT. The NT Electoral Division of Lingiari includes Christmas Island and Cocos (Keeling) Islands and is counted in NT and OT. Each is counted only once in the Australia total.

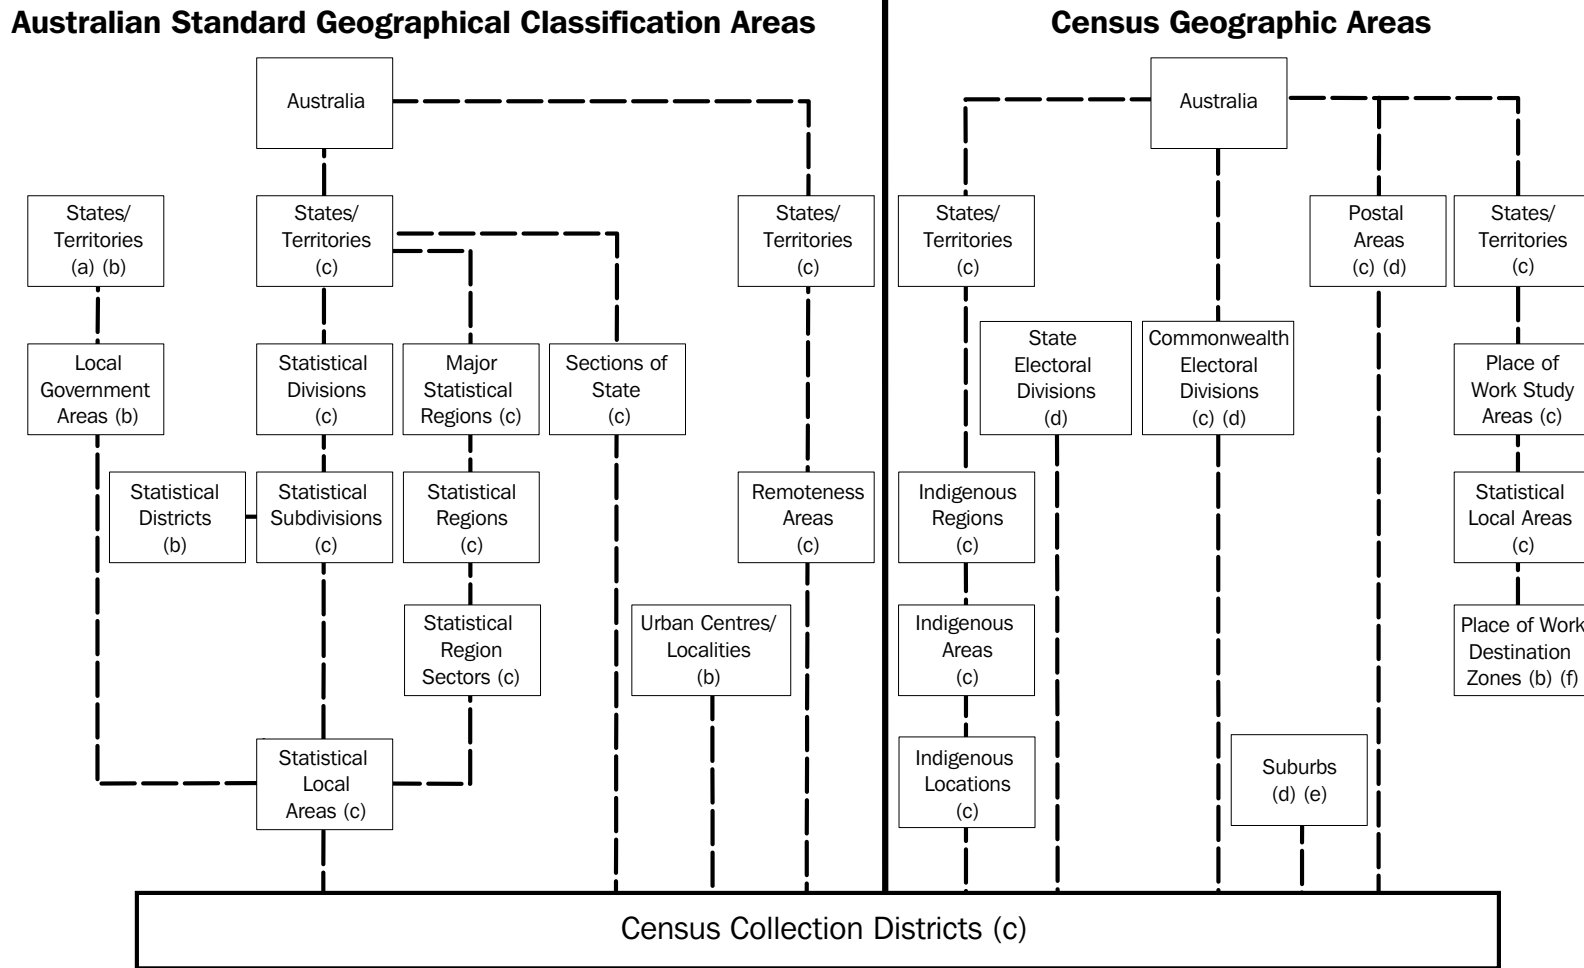

- (g) State Suburb counts include an 'unclassified' suburb that occurs in each State/Territory where suburb boundaries do not cover the whole state. It also includes Off-shore, Shipping and Migratory CDs.

- (h) Includes the ABS assigned 'dump' postal area for each state (x999), 2699 for the ACT, and 0899 for the NT. Postal Area boundaries may cross State/Territory borders and can be counted more than once in individual State/Territory figures but only once in the Australia total.
- (i) The Indigenous Region, 01 'Queanbeyan', crosses State/Territory borders and as such is counted in NSW and OT. It is counted once only in the Australia total.
- (j) For each State, the NT and the OT a code for Off-Shore, Shipping and Migratory CDs has been included.
- (k) Jervis Bay Territory is incorporated in a NSW Indigenous Area and Indigenous Location. This Indigenous Area and Indigenous Location are counted in OT as well as in NSW. They are counted only once in the Australia total.

Note: n.a. Counts not available at time of release.

Source: 2006 Census fact set

The diagram below shows how the Census Geographic Areas relate to each other and to the ASGC.

Note: (a) Incorporated areas only. (b) Cover part of Australia only. (c) Cover all of Australia. (d) Approximations created by aggregating Collection Districts (CDs). (e) Only available for specific areas within specified States/Territories. (f) Destination Zones do not concord with CDs, but they do aggregate to Statistical Local Areas.

PRINCIPLES OF THE CENSUS GEOGRAPHIC AREA CLASSIFICATIONS

Census Geographic Areas are constructed so that they fulfil practical user needs for spatial statistics while also conforming to general classification principles.

Classification principles

Census Geographic Areas are constructed according to the basic classification principles that members within one class are of the same type, classes are uniquely defined so as to be mutually exclusive and, in total, the members in each class cover the entire class.

As a result, the geographical spatial units of each of the Census Geographic Areas are:

- of the same type, delimited by well-defined criteria;
- defined by aggregation of whole CDs (except for Place of Work);
- uniquely identified by codes and referenced by names (except Postal Areas);
- mutually exclusive; and
- in aggregate cover the whole area to which that hierarchy applies.

Boundary formation

The Census Geographic Areas are designed for the provision of Census data for areas which are not appropriate for inclusion in the ASGC but which have particular significance for some groups of data users. Place of Work and the AIGC are defined to facilitate the use of work-related transport data and Indigenous statistics respectively. The remaining Census Geographic Areas are approximations of administrative areas defined by an organisation other than the ABS. For example, CEDs are an approximation of the Electoral Divisions defined by the Australian Electoral Commission and POAs are an approximation of the postcodes defined by Australia Post. The Census Geographic Area is an approximation for use with census data but the original area as defined by AEC or Australia Post, etc, remains the official definition.

The CD is the smallest building block which serves the classification structures of both the ASGC and the Census Geographic Areas (see diagram 1, Chapter 1). Thus, Census Geographic Areas which approximate official administrative areas are created by allocating whole CDs to a particular official administrative area. A CD can only be assigned to one area in each Census Geographic Area classification. Thus, when CDs are completely contained within an official administrative area, they are allocated to the corresponding Census Geographic Area. However, when a CD shares area with more than one official administrative area, a decision must be made as to which area the CD should be allocated. This allocation is made on the basis of the administrative area which contains the majority of the CD's population. This means the ABS representation of the official administrative area will not match the exact size and shape of the official unit. The term used to describe the resulting ABS defined area is 'CD derived'. Once the spatial units have been derived, it is possible to provide census data for them by aggregating data for their component CDs.

User needs

The official administrative areas which are approximated in the Census Geographic Areas are chosen on the basis of demonstrated demand for statistics for these areas. However, other geographic areas not included in the Census Geographic Areas or the ASGC may be accommodated through customised services available for census data.

CHAPTER 2 COMMONWEALTH ELECTORAL DIVISIONS

GENERAL DESCRIPTION

An Australian Electoral Commission (AEC) Electoral Division is an area legally prescribed for the purpose of returning one member to the House of Representatives, Australia's Federal Lower House of Parliament. The derived Census Geographic Areas which approximate these official areas are known as Commonwealth Electoral Divisions (CEDs). The boundaries and census statistics produced for CEDs are CD derived (based on the method described in Chapter 1).

As a result of the expected timing of a federal election soon after the scheduled release of 2006 Census data, two CED classifications have been defined for the 2006 Census. The AEC's electoral division boundaries come into effect after a federal election and are current until the next election. On Census night (8 August 2006), the electoral division boundaries in effect were those dating from the previous federal election held on 9 October 2004. The CD derived CED boundaries for that election are called CED 2004. The next federal election must be held between 4 August 2007, and 19 January 2008 and new electoral boundaries will take effect from then. The CD derived CEDs for that election are called CED 2007.

The AEC's website www.aec.gov.au provides a reference source for federal election dates.

For the 2006 Census, 159 CEDs are defined to cover the whole of geographic Australia for both CED 2004 and CED 2007. CEDs do not generally cross State/Territory borders but there are two exceptions. Jervis Bay Territory is included in the Australian Capital Territory electorate of Fraser and the territories of Christmas Island and Cocos (Keeling) Islands are included in the Northern Territory electorate of Lingjari. CED boundaries are generally different to State Electoral Divisions (SEDs).

CED names and codes

CED names are the same as those allocated by the Australian Electoral Commission. The coding conventions for CEDs are as follows:

- CEDs are sorted by name and then allocated a two-digit code starting from 01 that is unique within each State/Territory. Unique Australia-wide identification of CEDs requires a three-digit code comprising S/T code (digit 1) and CED code (digits 2-3); and
- the CED code 99 is reserved for those States/Territories that have Off-Shore, Shipping and Migratory CDs. CDs allocated to this code are not part of any official Electoral Division. They are provided as a balancing item for census statistics obtained for CEDs.

Example:

3 01 Blair

3 02 Bonner

3 03 Bowman

3 04 Brisbane

3 05 Capricornia

3 06 Dawson

...

CHAPTER 2 COMMONWEALTH ELECTORAL DIVISIONS *continued*

CED names and codes
continued

3 99 Not Applicable

CEDs are renumbered after each census so the codes used for the 2001 Census may not necessarily match those used for the 2006 Census.

Please see Appendix 1 for a full listing of CED codes and names.

Maintenance

CEDs are only defined in the census year. Thus, any boundary changes that occur in official electoral boundaries after those represented in CED 2007 will not be reflected until after the next census. However, CD based concordances will be produced as redistributions of AEC electoral boundaries become effective.

CHAPTER 3 STATE ELECTORAL DIVISIONS

GENERAL DESCRIPTION

A state electoral district is an area legally prescribed for the purpose of returning one or more members to the State or Territory Lower Houses of Parliament. The derived Census Geographic Areas which approximate these official areas are known as State Electoral Divisions (SEDs). The boundaries and census statistics produced for SEDs are CD derived (based on the method described in Chapter 1). Boundaries are based upon the state electoral districts current on Census Night 8 August 2006. The exception is Victoria, where boundaries effective for their state election held on 25 November, 2006 were used because of the proximity of the dates.

For the 2006 Census, 435 SEDs are defined to cover the whole of geographic Australia (excluding external territories of Jervis Bay, Christmas Island and the Cocos (Keeling) Islands). SEDs do not cross State/Territory borders.

SED names and codes

SED names are the same as those allocated by the Electoral Commission in each State/Territory. All SEDs are sorted by name and then allocated a four-digit code. Unique Australia-wide identification of SEDs requires a five-digit code comprising S/T code (digit 1) and SED code (digits 2–5).

The SED code 9999 is reserved for those States/Territories that have Off-Shore, Shipping and Migratory CDs. CDs allocated this code are not part of any official Electoral Division.

Some States and Territories have differing electoral arrangements. A summary of these differences and how they affect the SED classification is provided below:

NSW

New South Wales has two Houses of Parliament but only the Legislative Assembly (Lower House) electoral districts are represented in the SED classification since the Legislative Council (upper House) is a single constituency. SEDs are sorted by Lower House district name and then allocated a state identifier (digit 1) and a code starting from 0001 (digits 2-5).

Example:

1 0001 Albury

1 0002 Auburn

VIC

In Victoria, the Legislative Council (Upper House) regions are obtained by amalgamating the Legislative Assembly (Lower House) electoral districts. The SED classification provides information on both of these houses. The code comprises a state identifier (digit 1), a Lower House code (digits 2-3) and an Upper House code (digits 4-5). Upper House region names are recorded in brackets after the Lower House district names.

Example:

2 0106 Albert Park (Southern Metropolitan)

2 0214 Altona (Melbourne West)

SED names and codes
continued

QLD

Queensland has only one House of Parliament (the Legislative Assembly) with each member representing an electoral district. These districts are equivalent to divisions in this classification. SEDs are sorted by name then allocated a state identifier (digit 1) and a code starting from 0001 (digits 2-5).

Example:

3 0001 Albert

3 0002 Algester

SA

Like New South Wales, in South Australia, there are two Houses of Parliament but only the House of Assembly (Lower House) electoral districts are represented in the SED classification since the Legislative Council (Upper House) is a single constituency. SEDs are sorted by Lower House name then allocated a state identifier (digit 1) and a code starting from 0001 (digits 2-5).

Example:

4 0001 Adelaide

4 0002 Ashford

WA

In Western Australia, Legislative Council (Upper House) regions are obtained by amalgamating the Legislative Assembly (Lower House) electoral districts. The SED classification provides information on both of these houses. The five-digit code comprises a state identifier (digit 1), a Lower House code (digits 2-3) and an Upper House code (digits 4-5). Upper House region names are recorded in brackets after the Lower House district names.

Example:

5 0106 Albany (South West)

5 0205 Alfred Cove (South Metropolitan)

*SED names and codes
continued*

TAS

In Tasmania there are two Houses of Parliament, the House of Assembly (Lower House) and the Legislative Council (Upper House). The Upper House divisions do not aggregate to or from the Lower House divisions. Information on both Houses is provided by the SED classification. The code comprises a state identifier (digit 1) and a Lower House code (digits 2–3) and an Upper House code (digits 4–5). Tasmanian Upper House names are recorded in brackets after Lower House names. Because Upper House divisions do not aggregate from the Lower House divisions there is more than one code covering a Lower House division, ie. one for each overlapping House division.

Example:

6 0302 Denison (Derwent)

6 0303 Denison (Elwick)

6 0308 Denison (Nelson)

6 0314 Denison (Wellington)

6 0402 Franklin (Derwent)

6 0404 Franklin (Huon)

NT

In the Northern Territory there is only one House of Parliament, the Legislative Assembly, the electorates for which are equivalent to the divisions in the SED classification. SEDs are sorted by name, then allocated a state identifier (digit 1), then a code starting from 0001 (digits 2–5).

Example:

7 0001 Arafura

7 0002 Araluen

ACT

The Australian Capital Territory has only one House of Parliament, the Legislative Assembly, the electorates for which are equivalent to the divisions in the SED classification. SEDs are sorted by name and then allocated state identifier (digit 1), then a code starting from 0001 (digits 2–5).

Example:

8 0001 Brindabella

8 0002 Ginninderra

OT

There are no State Electoral Divisions for the Other Territories.

Please see Appendix 2 for a full listing of SED codes and names.

Maintenance

SEDs are only defined in the census year. Thus, any boundary changes that occur in official electoral boundaries will not be reflected until the next census. However, CD based concordances will be produced as redistributions of State Electoral boundaries become effective.

CHAPTER 4 POSTAL AREAS

GENERAL DESCRIPTION

A Postal Area (POA) is created by allocating whole CDs to Australia Post postcodes using the methods described in Chapter 1. Thus, census data is correct for the POA but the POA only approximates the area covered by the postcode.

Allocations have been determined using the best available information on postcode boundaries. Unfortunately, official maps of postcode boundaries have not been updated since the early 1990s and none of the more recent digital interpretations have been endorsed by Australia Post. Therefore, users should be aware of the limitations of the POA classification.

Some Australia Post postcodes are not included in the POA classification. For example, in some cases there is no CD which can be allocated to a particular Australia Post postcode. This occurs in two cases:

- where a CD covers two or more whole postcodes, the CD can only be allocated to one; or
- where more than one CD partially covers a postcode but all the CDs are allocated to other postcodes with which they also share area.

For the 2006 Census, 2515 POAs are defined to cover the whole of geographic Australia. POAs may cross State/Territory borders and where this happens, standard census products will provide data for the whole POA.

POA codes

POAs are not allocated names since there is no standardised name available for Australia Post postcodes. The coding conventions are as follows:

- each POA code is the same as the corresponding four-digit Australia Post postcode; and
- a POA code ending in 999 is reserved for those States/Territories that have Off-Shore, Shipping and Migratory CDs.

Example:

3 000

3 002

3 003

3 004

...

3 999 (Vic. Off-Shore, Shipping & Migratory)

Some postcodes cross State/Territory borders and POA boundaries reflect this. The postcodes that do cross State/Territory borders are listed below and in Appendix 3 they are listed twice, once for each relevant state.

NSW POA 2406 crosses into Qld

NSW POAs 2618 and 2620 cross into ACT

NSW POA 2540 crosses into OT (Jervis Bay Territory)

Vic POAs 3585 and 3644 cross into NSW

CHAPTER 4 POSTAL AREAS *continued*

POA codes continued

Qld POA 4385 crosses into NSW

Qld POA 4825 crosses into NT

WA POA 6743 crosses into NT

NT 0872 crosses into SA and WA

ACT POA 2611 crosses into NSW

Australia Post postcodes have changed since the 2001 Census and therefore those used in the POA listing for the 2006 Census may not necessarily match those used for the 2001 Census.

Please see Appendix 3, for a full listing of POA codes.

Australia Post postcodes which are not street delivery areas are not represented in the POA Classification. These include post office boxes, mail back competitions, large volume receivers and specialist delivery postcodes. These postcodes have not been represented in the POA Classification because they are only valid for postal addresses and are not a valid location for population data. Appendix 4 lists those Australia Post postcodes which are street delivery areas but which are not represented in the POA Classification.

Maintenance

Australia Post postcodes and boundaries change over time but POAs are only defined in the census year. Thus, any boundary changes that occur in official postcode boundaries will not be reflected until the next census.

CHAPTER 5 STATE SUBURBS

GENERAL DESCRIPTION

A State Suburb (SSC) is formed by allocating CDs using the methods described in Chapter 1, to localities gazetted by the Geographic Place Name authority in each State/Territory. For the 2006 Census, SSCs are available for the following areas:

New South Wales

- Sydney and surrounds (11003–12095)
- Central Coast and surrounds (13006–13466)
- Newcastle and surrounds (14006–14511)
- Wollongong and surrounds (15006–15291)
- Other New South Wales (16003–19577)
- Unclassified New South Wales (19999)
- The whole of New South Wales is covered by SSCs.

Victoria

- Melbourne and surrounds (21003–21747)
- Geelong and surrounds (22006–22146)
- Ballarat and surrounds (23006–23116)
- Bendigo and surrounds (24006–24131)
- Other Victoria (25003–27113)
- Unclassified Victoria (29999)
- The whole of Victoria is covered by SSCs.

Queensland

- Brisbane and surrounds (31003–31603)
- Gold Coast and surrounds (32006–32246)
- Sunshine Coast and surrounds (33006–33231)
- Townsville and surrounds (34006–34176)
- Other Queensland (35003–38067)
- Unclassified Queensland (39999)
- The whole of Queensland is covered by SSCs.

South Australia

- Adelaide and surrounds (41006–42916)
- Other South Australia (43006–45466)
- Unclassified South Australia (49999)
- A significant area of the north and west of the state is not defined by gazetted locality boundaries and are therefore included as Unclassified SA (49999).

Western Australia

- Perth and surrounds (51006–52591)
- Other Western Australia (53006–56171)
- Unclassified Western Australia (59999)
- The whole of Western Australia is covered by SSCs.

CHAPTER 5 STATE SUBURBS *continued*

GENERAL DESCRIPTION

continued

Tasmania

- Hobart and surrounds (61006–61361)
- Launceston and surrounds (62006–62131)
- Devonport and surrounds (63006–63036)
- Burnie and surrounds (64006–64086)
- Other Tasmania (65006–66406)
- Unclassified Tasmania (69999)
- The whole of Tasmania is covered by SSCs.

Northern Territory

- Darwin and surrounds (71006–71166)
- Palmerston and surrounds (72006–72056)
- Other Northern Territory (73006–73121)
- Unclassified Northern Territory (79999)
- The majority of the land area outside of Darwin and Palmerston is not defined by gazetted locality boundaries and are therefore included as Unclassified NT (79999).

Australian Capital Territory

- Canberra and surrounds (81006–81511)
- Unclassified Australian Capital Territory (89999)
- The area outside Canberra and surrounds is not defined by gazetted locality boundaries and are therefore included as Unclassified ACT (89999).

Other Territories

- Unclassified Other Territories (99999)
- Gazetted localities boundaries for Other Territories are not defined.

For the 2006 Census, 8464 SSCs are defined including one 'unclassified' suburb that occurs in every State/Territory. Between 2001 and 2006 there were significant changes to both the number and the boundary definition of gazetted localities within each State/Territory. To aid in comparing between 2001 and 2006 SSCs, a minor number of SSCs have been split. SSCs do not cross State/Territory borders.

SSC names and codes

SSC names are based on the most recent gazetted locality boundaries current at the time of a census. The coding conventions for SSCs are as follows:

- SSCs are sorted by name and then allocated a unique four-digit code;
- codes are allocated within regions within each State/Territory (eg. Sydney, Wollongong);
- unique Australia-wide identification of SSCs requires a five-digit code comprising S/T code (digit 1) and SSC code (digits 2–5); and
- the SSC code 9999 is reserved for those CDs in each State/Territory that are not classified as part of any SSC.

CHAPTER 5 STATE SUBURBS *continued*

*SSC names and codes
continued*

Example:

5 1006 Alexander Heights

5 1011 Alfred Cove

5 1016 Alkimos

5 1021 Anketell

...

5 9999 Unclassified WA

SSCs have been renumbered since the last census so the codes used for the 2001 Census will not necessarily match those used for the 2006 Census. It should also be noted that the coverage of SSCs has increased significantly since the 2001 Census.

Please see Appendix 5 for a full listing of SSC codes and labels.

Maintenance

Suburbs will change over time but the SSC classification will not be updated until the 2011 Census.

CHAPTER 6 AUSTRALIAN INDIGENOUS GEOGRAPHICAL CLASSIFICATION

GENERAL DESCRIPTION

The Australian Indigenous Geographical Classification (AIGC) aims to provide a geographical standard for the publication of statistics about the Indigenous population of Australia.

The first edition of this classification was produced for the 1996 Census. The classification comprises four levels of geographic units in a single hierarchy, the smallest unit being the Census Collection District (CD). CDs aggregate to form Indigenous Locations (ILOCs), which in turn aggregate to form Indigenous Areas (IAREs). Indigenous Areas aggregate to Indigenous Regions (IREGs). At each level of the hierarchical structure, the component spatial units collectively cover the whole of geographic Australia without gaps or overlaps.

IREGs don't cross State/Territory borders, except in the case of the IREG of Queanbeyan which crosses the borders of New South Wales and Jervis Bay Territory (Other Territories).

Statistics from the 2006 Census are available for all levels of the classification.

The three Indigenous Geographic units are described below. For a detailed description of CDs, please refer to Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC) (Cat. no. 1216.0).

INDIGENOUS REGIONS

General Description

The Australian Government uses 30 Indigenous Coordination Centres (ICC) and the Torres Strait Regional Authority (TSRA) to manage the delivery of a range of services to Aboriginal and Torres Strait Islander peoples across Australia. For census purposes, the ABS defines Indigenous Regions (IREG) based on ICC and TSRA areas. Some ICC Regions are split into two IREGs.

IREGs cover in aggregate, the whole of Australia without gaps or overlaps. IREGs have replaced ATSI Regions used to disseminate Indigenous data from the 1996 and 2001 censuses. IREGs are comprised of several Indigenous Areas.

For completeness, an additional IREG has been created for each state and the Northern Territory for people in Off-Shore, Shipping and Migratory CDs.

IREG names and codes

For the 2006 Census, 45 IREGs are defined to cover the whole of geographic Australia. This includes those CDs classified as Off-Shore, Shipping and Migratory and named "Indigenous Region not stated" for each state, the NT and OT.

The IREG names used in the classification are the same as those determined for the official area by the relevant legislation. Each IREG is allocated a two-digit code starting from 01. The IREG first digit code 9 is reserved for the "Indigenous Region not stated" in each state/territory, except ACT, as follows:

91 NSW Indigenous Region not stated

92 Vic. Indigenous Region not stated

93 QLD Indigenous Region not stated

94 SA Indigenous Region not stated

CHAPTER 6 AUSTRALIAN INDIGENOUS GEOGRAPHICAL CLASSIFICATION *continued*

IREG names and codes continued

95 WA Indigenous Region not stated

96 Tas. Indigenous Region not stated

98 NT Indigenous Region not stated

99 OT Indigenous Region not stated

The IREG codes are unique throughout Australia.

Example:

33 Apatula

34 Nhulunbuy

35 Tennant Creek

36 Darwin

98 NT Indigenous Region not stated

INDIGENOUS AREAS

General Description

An IARE is a medium sized spatial unit which enables the production of detailed census statistics relating to Indigenous people while maintaining the confidentiality of individuals. They generally include a minimum of around 300 Indigenous people and comprise one or more Indigenous Locations. Generally Indigenous Areas align with local government boundaries taking into account the Aboriginal and Torres Strait Islander population distribution.

IARE names and codes

For the 2006 Census, 542 IAREs are defined. The IARE name allocated by the ABS is based upon a distinctive name for the area which the boundary encompasses. Equivalent ASGC names are used where the area concords exactly.

The code structure for the IAREs is a three-digit code allocated to each IARE within an IREG. IARE codes must be preceded with the two digit IREG code to be unique within the classification.

The IARE count includes those IAREs comprising CDs classified as Off-Shore, Shipping and Migratory and named "Off-Shore Areas & Migratory" for each state, the NT and OT. These are coded as follows:

91001 NSW Off-Shore Areas & Migratory

92001 Vic. Off-Shore Areas & Migratory

93001 QLD Off-Shore Areas & Migratory

94001 SA Off-Shore Areas & Migratory

95001 WA Off-Shore Areas & Migratory

96001 Tas. Off-Shore Areas & Migratory

98001 NT Off-Shore Areas & Migratory

99005 OT Off-Shore Areas & Migratory

CHAPTER 6 AUSTRALIAN INDIGENOUS GEOGRAPHICAL CLASSIFICATION *continued*

IARE names and codes continued

Example:

16 001 Cardwell (S)

16 003 Hinchinbrook (S)

16 005 Palm Island (S)

...

25 001 Port Hedland (T)

25 003 Karratha

25 005 Roebourne (S) excl. Karratha

INDIGENOUS LOCATIONS

General Description

An ILOC is an area designed to allow the production of summary census statistics, in particular those relating to Indigenous people while maintaining the confidentiality of individuals. Generally, an ILOC includes at least 100 Indigenous people and can comprise one or more CDs.

ILOC names and codes

The ILOC name allocated by the ABS is based upon a distinctive name for the area which the boundary encompasses. Equivalent ASGC names are used where the area concurs exactly. The code structure consists of two-digit codes being allocated to each ILOC in an IARE beginning at 01. ILOC codes must include the IARE and IREG code to be fully unique within the classification.

For the 2006 Census, 846 ILOCs are defined. Eight ILOCs are defined for Off-Shore, Shipping and Migratory CDs, one in each state, the NT and OT. These are coded as follows:

9100101 NSW Off-Shore Areas & Migratory

9200101 Vic. Off-Shore Areas & Migratory

9300101 QLD Off-Shore Areas & Migratory

9400101 SA Off-Shore Areas & Migratory

9500101 WA Off-Shore Areas & Migratory

9600101 Tas. Off-Shore Areas & Migratory

9800101 NT Off-Shore Areas & Migratory

9900501 OT Off-Shore Areas & Migratory

Example:

25011 07 Newman

25011 09 Punmu

25011 11 Kunawarriji

25011 13 Parngurr

25011 15 Kiwirrkurra

CHAPTER 6 AUSTRALIAN INDIGENOUS GEOGRAPHICAL CLASSIFICATION *continued*

ILOC names and codes
continued

25011 17 East Pilbara Rem.

Please see Appendix 6 for a full listing of IREG, IARE and ILOC codes and labels.

Maintenance

For this edition of the Australian Indigenous Geographical Classification, the IREGs, IAREs and ILOCs were redesigned reflecting changes in Commonwealth Indigenous administrative arrangements. The AIGC is only defined in the census year.

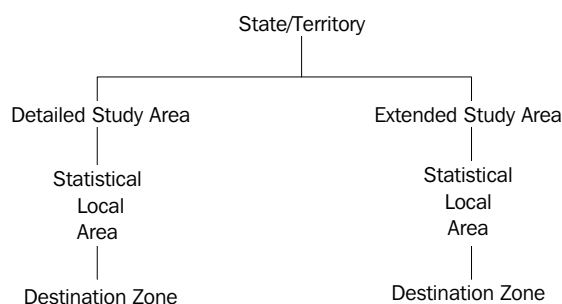

CHAPTER 7 PLACE OF WORK

GENERAL DESCRIPTION

Place of Work data provides information about where people work rather than where they reside. The address of each employed person's workplace in the week prior to Census Night is coded to a Destination Zone using an index provided by the State Transport Authorities. In conjunction with Place of Usual Residence Data, this information can be used by State Transport Authorities to assist with planning transport systems in their State or Territory. This is why the data is commonly referred to as "journey to work" data.

Place of Work data has been produced from the Census of Population and Housing since 1971. The geographical areas are redefined each census to take into account changes and growth that occur over time in States and Territories. As a result, the data is not comparable across censuses. For the 2001 Census, the geographic scope was widened to include the whole of geographic Australia. Thus, the applicable population for Place of Work data has increased to allow a more comprehensive view of work-related transport patterns across Australia.

Place of Work Destination Zones do not align with Collection District boundaries but do aggregate to Statistical Local Areas as used in Census output/products. Each Statistical Local Area is assigned to either a Place of Work Detailed Study Area or Place of Work Extended Study Area. This has been determined by State Transport Authorities and relates to specific geographic zones across a state/territory.

To assist ABS clients in understanding Place of Work data, listings of Statistical Local Areas and the Place of Work Study Areas they incorporate, are available from the ABS National Information and Referral Service. However, the Place of Work Study Area boundaries are determined by State Transport Authorities and clients who would like to obtain these boundaries in digital or mapped form should contact the Transport Authority in the relevant State or Territory (see Appendix 7 for a list of contacts).

CHAPTER 7 PLACE OF WORK *continued*

Place of Work Names and Codes

The Place of Work Destination Zone code comprises 10 digits, combining the State code as the first digit; the second digit is either a 1 for Detailed Study Area or a 2 for Extended Study Area; then followed by the 4 digit Statistical Local Area code; then a four digit Destination Zone. This allows a hierarchy structure to be built for output purposes.

Example:

1 State/Territory

- 11 NSW Place of Work Study area Precinct - Detailed Study Area
 - 110150 Statistical Local Area - Ashfield
 - 1101500192 Destination Zone
 - 1101500193 Destination Zone
 - 1101500194 Destination Zone
 - 1101500195 Destination Zone
 - 1101500196 Destination Zone
 - 12 NSW Place of Work Study Area Precinct - Detailed Study Area
 - 120050 Statistical Local Area - Albury
 - 1200508001 Destination Zone
 - 1200508002 Destination Zone
 - 1200508000 Destination Zone

A unique Designation Zone code 9990, e.g. 1294999990 NSW No Fixed Address, was allocated for employed persons who had No Fixed Address.

Maintenance

Place of Work Study Area Precincts are defined for each census to accommodate changes that occur in each State or Territory. The next set of areas will be defined at the time of the 2011 census.
