PREFACE

The Australian Standard Geographical Classification (ASGC) is used by the Australian Bureau of Statistics (ABS) for the collection and dissemination of geographically classified statistics. Urban Centres and Localities (UC/Ls) are geographic areas defined in the ASGC under a classification structure called the UC/L Structure.

This is the last part of a three volume set of statistical geography publications relating to the 2001 Census of Population and Housing. The other two volumes are *Statistical Geography: Volume 1 — Australian Standard Geographical Classification (ASGC)* (cat. no. 1216.0) and *Statistical Geography: Volume 2 — Census Geographic Areas Australia* (cat. no. 2905.0).

This publication lists UC/Ls defined using place of enumeration population counts from the 2001 Census of Population and Housing. It provides summary details about their delimitation and is one component of the set of essential references for understanding and interpreting the geographical context of ABS statistics published for them.

The UC/L Structure is only defined for census years and was last defined in the ASGC 1996 Edition and will next be defined in 2006.

The date of effect of the UC/Ls described in this publication is Census night, 7 August 2001.

Any inquiries regarding UC/Ls, or the ASGC, can be made by contacting the Assistant Director, Area Classification, on telephone Canberra 02 6252 5888, facsimile 02 6252 8666, email <geography@abs.gov.au> or by writing to Locked Bag 10, Belconnen, ACT 2616.

CHAPTER 1

ASGC URBAN CENTRE/LOCALITY STRUCTURE

The Australian Standard Geographical Classification (ASGC) is used by the Australian Bureau of Statistics (ABS) for the collection and dissemination of geographically classified statistics. These are statistics with a ‘where’ dimension. The ASGC is a hierarchical classification system, consisting of seven interrelated structures, each designed to serve a specific purpose.

This chapter provides a summary of the ASGC Urban Centre/Locality (UC/L) Structure, while the full background of the ASGC and its structures are described in *Statistical Geography: Volume 1 — Australian Standard Geographical Classification* (ASGC) (cat. no. 1216.0).

PURPOSE

The UC/L Structure groups Census Collection Districts (CDs) together to form defined areas according to specific population and land use criteria. Population counts (place of enumeration) from the latest Census of Population and Housing are used to define the UC/L Structure which means this classification structure is only defined at times of census. The resulting areas are known as Urban Centres or Localities.

The UC/L Structure is used for the production of standard ABS statistical outputs from Population Censuses such as *Selected Social and Housing Characteristics for Urban Centres and Localities* (cat. nos 2016.0–7), CDATA2001 (cat. nos 2019.0.30.001–8.30.001) and *Community Profiles* (cat. nos 2020.0–9).

The UC/L Structure is a separate structure within the ASGC as:

- the boundaries do not generally coincide with spatial units of the other structures; and
- its total area covers only part of Australia.

THE STRUCTURE

The UC/L Structure comprises in ascending hierarchical order: CDs—Urban Centres/Localities (UC/Ls).

A full description of these spatial units and their delimitation criteria may be found in *Statistical Geography: Volume 1 — Australian Standard Geographical Classification* (ASGC) (cat. no. 1216.0), Chapter 6.

In broad terms, an Urban Centre is a population cluster of 1,000 or more people while a Locality is a population cluster of between 200 and 999 people. For statistical purposes, people living in Urban Centres are classified as urban while those in Localities are classified as rural.

Each Urban Centre/Locality has a clearly defined boundary and comprises one or more whole CDs. Urban Centres/Localities are redefined at each Population Census.

CDs within this structure are confined to those within defined Urban Centre and Locality boundaries. As a consequence, UC/Ls aggregate to cover only part of a state/territory (S/T) and thus the structure covers part of Australia only.

THE STRUCTURE *continued*

UC/L name and code

UC/Ls may be bisected by a S/T boundary. Where this occurs each portion of the UC/L is separately identified and is included in the UC/L Structure for the relevant S/T. For example, the Urban Centre of Albury-Wodonga is partly in New South Wales and partly in Victoria. One part is shown under New South Wales and the other under Victoria.

UC/Ls are identified by a five-digit code which is only unique within each S/T. Use of UC/L codes in conjunction with S/T codes, is necessary before these codes become unique across Australia.

The codes 00000 and 99999 are reserved as Rural Balance and Off-Shore and Migratory codes, respectively, for the S/Ts NSW, Vic., Qld, SA, WA, Tas. and NT.

The code 99999 is not applicable for the ACT or the OT as off-shore, shipping & migratory CDs are not defined for those Territories.

Where UC/Ls cross S/T boundaries, the separate portions of the UC/L are uniquely identified and reported in their relevant S/T.

Example:

S/T	Code UC/L	Name
1	00800	Albury-Wodonga (Albury Part)
2	00400	Albury-Wodonga (Wodonga Part)

Table The Urban Centres and Localities determined following the 2001 Census are listed at Chapter 2. Example:

S/T	Code UC/L	Name
1		NEW SOUTH WALES
	00200	Aberdeen
	00400	Adaminaby (L)

In this table, Urban Centre and Locality names are listed alphabetically and UC/L codes are arranged in ascending numerical order within each S/T. The suffix (L) is shown after Locality names to distinguish Localities from Urban Centres.

The following table summarises the number of UC/Ls in each S/T.

1

COUNTS FOR 2001 URBAN CENTRES/LOCALITIES (UC/Ls)

Spatial unit	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Other Territories	Aust.
UC/L	514	335	356	162	174	101	62	2	3	1 709

Note: Where a UC/L is bisected by a S/T boundary, each portion of the UC/L is separately identified and counted in the relevant S/T.

CHAPTER 2

URBAN CENTRE/LOCALITY LISTS

This chapter presents the codes and names of all Urban Centres and Localities (UC/Ls) which were defined from the 2001 Census of Population and Housing. They are effective at the time of the Census, 7 August 2001.

Urban Centre and Locality names are listed alphabetically and UC/L codes are arranged in ascending numerical order within each S/T. The suffix (L) is shown after Locality names to distinguish Localities from Urban Centres.

Where a UC/L crosses a S/T boundary, the separate portions of the UC/L are uniquely identified and reported in their relevant S/T. For 2001, these UC/Ls are:

- Albury-Wodonga
- Barham-Koondrook
- Canberra-Queanbeyan
- Corowa-Wahgunyah
- Echuca-Moama
- Gold Coast-Tweed Heads
- Yarrawonga-Mulwala
