......

INTRODUCTION

This publication provides a comprehensive range of statistics on young people aged 12–25 years in the Northern Territory, using data from the 1996 Census of Population and Housing. The report is one of a series produced for each Australian State and Territory, jointly published by the National Youth Affairs Research Scheme (NYARS) and the Australian Bureau of Statistics (ABS). NYARS was established in 1985 as a cooperative funding arrangement between the Commonwealth and State and Territory Governments to facilitate nationally based research into current social, political and economic factors affecting young people. NYARS is administered under the auspices of Youth Ministers through a working group of the Ministerial Council on Education, Employment, Training and Youth Affairs. Research undertaken assists in the formulation, implementation and assessment of policy by Commonwealth, State and Territory Ministers for Youth.

A similar series, using 1991 Census data, was jointly published by the ABS and NYARS during 1992 and 1993.

The publication features summary tables of selected characteristics of young people at national and local government area levels. More detailed information is presented in five subject-based chapters: population, cultural diversity, living arrangements, education and working life.

Within these broad subject headings, the publication also considers young people in the context of age, sex, and cultural diversity. Comparative data from the 1986 and 1991 Censuses are also included in some tables to provide a time dimension.

CHAPTER 1 SELECTED CHARACTERISTICS

NATIONAL SUMMARY—MAIN FINDINGS

On census night 1996, 3,636,900 12–25 year-olds were counted in Australia, representing over one-fifth (21%) of Australians of all ages.

In New South Wales, the most populous State, they numbered 1,201,800, representing one-third of Australia's young people. The Australian Capital Territory had the highest proportion of young people (24%).

Young males outnumbered young females in all States and Territories. Nationally, there were 48,800 more 12–25 year-old males than females.

Cultural diversity

Almost 3% (99,500) of Australia's young people were of Indigenous origin. In the Northern Territory, people who reported that they were of Indigenous origin comprised almost one-third (32%) of all 12–25 year-olds, but in Victoria, they made up fewer than 1% of young people.

Just over 14% of young people in Australia had been born overseas. For 5%, their country of birth had been one of the main English-speaking countries (Canada, Ireland, New Zealand, South Africa, the United Kingdom, and the United States of America). The other 9% had been born in other countries.

A higher proportion of young people (15%) spoke languages other than English. More than 28% of the Northern Territory's 12–25 year-olds, and 20% of young people in Victoria, reported speaking a language other than English at home.

Living arrangements

Over 42% of young people in Australia were living with their parents as dependent children—either children aged 15 years or under, or dependent students aged 15–24 years. Another 20% lived with their parents as non-dependent children.

Almost one-quarter (24%) of young people had formed families or partnerships, or were living independently, alone or in group households.

Education

Over 87% of Australian 12–17 year-olds, and almost 30% of 18–25 year-olds, were attending schools or other educational institutions. The highest levels of educational participation were reported in the Australian Capital Territory (92% of 12–17 year-olds, and 43% of 18–25 year-olds), and the lowest, in the Northern Territory—75% and 14% respectively.

New South Wales had the highest proportion (32%) of any State or Territory of young people (18-25 years) with post-school qualifications. Nationally, the proportion was 29%.

Working life

Almost one-half (48%) of Australian 15–19 year-olds, and 78% of 20–25 year-olds, were in the labour force, that is, they were employed, or looking for work.

Among young people aged 15–19 years, the highest proportion (23%) were working part-time, compared with 14% in full-time work. For 20–25 year-olds, these positions were reversed—47% were working full-time, and 19% part-time.

Unemployment

Unemployment rates among young people were at 19% for 15–19 year-olds, and 13% for 20–25 year-olds.

An alternative measure of unemployment levels is the percentage of unemployed in the whole age group. In 1996, this proportion was 9% for 15–19 year-olds, and 10% for 20–25 year-olds. This measure is particularly useful for young people, as it takes into account the number of people not participating in the labour force because of their education commitments.

Income

The median weekly income for 15–25 year-olds in 1996 was \$181. The highest median incomes were reported in the Northern Territory (\$193), Queensland and Western Australia (both \$192).

CHAPTER 2

POPULATION

MAIN FINDINGS

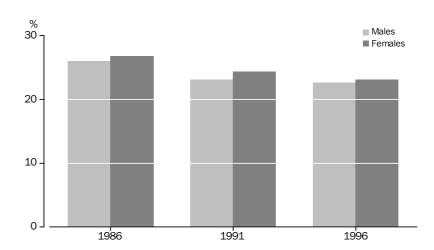

In the Northern Territory on census night (6 August 1996), 43,212 young people aged 12–25 years were counted. They constituted 23% of all people counted.

1986 to 1996

Between 1986 and 1996, the Northern Territory's census count increased by 24% (36,053) to 189,365. The number of young people increased by 7% (2,801) over the same period.

As a result, young people in the Northern Territory represent a declining proportion of the total, falling from 26% in 1986 to 24% in 1991, and then to 23% in 1996. This trend can be expected to continue, since the proportion aged 0–11 years has also declined, from 22% in 1986 to 21% in 1996.

YOUNG PEOPLE, Proportion of All Persons

Sex and age

There were slightly more males than females in the 12–25 years age group (22,240 compared with 20,972). The Northern Territory was the only State or Territory where males outnumbered females (by 7,673) among all people counted.

Geographic distribution

In 1996, the highest numbers of young people were in the Darwin City (15,965) and Central NT (9,073) Statistical Subdivisions. The highest concentrations of young people were in the Bathurst-Melville and Daly Statistical Subdivisions, where they represented 31% and 28% of all persons respectively (although small in numbers—625 and 1,038 respectively).

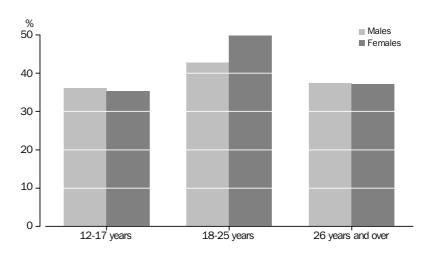

Movement

Young people in the Northern Territory were more mobile than older people. Over 42% of 12–25 year-olds reported living at a different address than five years previously, compared with 37% of older people. A similar pattern was evident for residential movement within the previous twelve months, with 26% of young people and only 18% of older people being at a different address.

Most 12–25 year-olds who had moved within the previous five years had moved within the Territory (53%). This figure was low, compared with other States and Territories (from 56% in the Australian Capital Territory, to 91% in Victoria).

Young females were more likely to have moved than young males. Over 44% of young females reported living at a different address from five years ago, compared with 40% of young males. For the older population, 37% of both males and females were living at a different address from five years ago.

PEOPLE WHO HAD A DIFFERENT ADDRESS FIVE YEARS PREVIOUSLY

CHAPTER 3

CULTURAL DIVERSITY

MAIN FINDINGS

Indigenous people

In the 1996 Census, 32% (13,975) of 12–25 year-olds in the Northern Territory reported that they were of Indigenous origin. This proportion was the highest of any of the States and Territories. The comparative national figure was under 3%.

In comparison, Indigenous people comprised 36% of all 0–11 year-olds, and 17% of those aged 26 years and over. This reflects the younger age structure of Indigenous people, relative to non-Indigenous people.

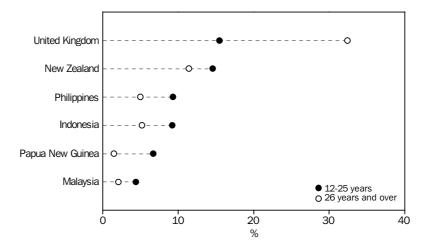

Overseas-born

More than 9% (3,966) of young people in the Northern Territory were born overseas. This proportion was well below that for Australia as a whole (14%). More than twice the proportion (23%) of older Northern Territorians had been born overseas.

Countries of birth

For young people who had been born overseas, the leading countries of birth were the United Kingdom (16%), New Zealand (15%), Philippines (9%) and Indonesia (9%). Almost one-third (32%) of older people born overseas were from the United Kingdom, and 11% were born in New Zealand.

OVERSEAS-BORN, Leading Countries of Birth

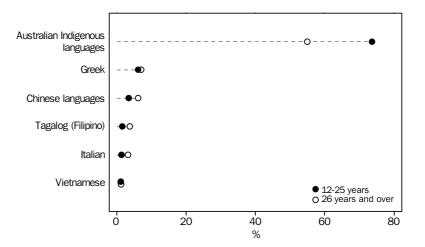

Birthplace of parents

Almost 22% (7,917) of Australian-born young people had at least one parent who had been born overseas, compared with 16% of those aged 26 years and over. For 11% of 12–25 year-olds born in Australia, at least one parent had been born in a non-main English-speaking country.

Languages spoken at home

More than 28% (12,281) of young people in the Northern Territory reported that they spoke a language other than English at home. Of these young people, almost three-quarters (74%) spoke an Australian Indigenous language. Another 6% spoke Greek, and 4% spoke a Chinese language. Among older people, the most common languages spoken at home other than English were Australian Indigenous languages (55%).

Proficiency in English

Fewer than 65% of young people in the Northern Territory reported that they spoke English only. Another 29% spoke a language other than English at home, and 24% reported speaking English well or very well.

Among older people (aged 26 years and over), 21% spoke a language other than English at home, and 16% reported that they spoke English well or very well.

CHAPTER 4

LIVING ARRANGEMENTS

MAIN FINDINGS

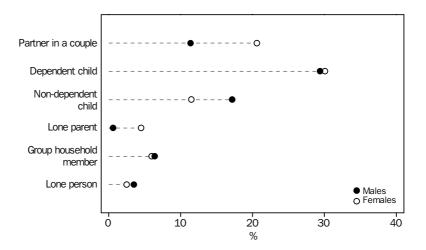

Marital status

The majority (60%) of young people aged 15–25 years in the Northern Territory were not married, 11% reported being in a registered marriage and 9% in a de facto marriage. Among Indigenous young people, 19% reported being in a registered marriage, and 4% in a de facto marriage.

Living arrangements

Fewer than 30% of 12–25 year-olds in the Northern Territory were living with their parents as dependent children. Another 17% of young males, and 11% of young females, were living as non-dependent children with their parents. Young women were more than twice as likely as young men to have moved from the family home, forming partnerships and their own families (25% compared with 12% of young men).

YOUNG PEOPLE—Living Arrangements

Among non-Indigenous young people, 24% of young women and 11% of young men had formed partnerships and families of their own. Approximately one-third (33%) were living as dependent children with their parents. Another 9% were living in group households.

Relatively high proportions of Indigenous young people (30% of females and 16% of males) had formed partnerships, or their own families. Almost 27% lived with their parents as dependent children, and 18% were living as non-dependent children. A high proportion (14%) were living in family households as other related individuals.

Type of dwelling

About 8% of 12–25 year-olds in the Northern Territory had spent census night in a non-private dwelling. Large numbers of these young people were staying in staff quarters (1,195), hotels, motels or guest houses (803), or in boarding schools or residential colleges (781). Another 610 young people reported having no usual address.

Type of tenure

Only 28% of young people occupied dwellings which were owned or being purchased, compared with over 40% of people aged 26 years and over.

Almost one-half (48%) of young people were living in rented dwellings, compared with 37% of older people (aged 26 years and over). Among Indigenous young people the proportion living in rented dwellings was 58%, compared with 46% of non-Indigenous people.

⁽a) Includes persons who did not state whether or not they were of Indigenous origin.

⁽b) Includes dwellings which were occupied rent free, or under a life tenure scheme.

⁽c) Comprises non-private dwellings, and migratory or off-shore collection districts.

CHAPTER 5

EDUCATION

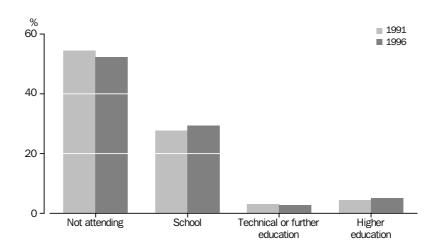

MAIN FINDINGS

Attendance at educational institutions

Just over 38% (16,433) of all 12–25 year-olds in the Northern Territory were attending an educational institution in 1996, up from 36% in 1991. Attendance was higher among young females (40%) than young males (37%).

In 1996, a higher proportion of 12–25 year-olds were attending schools (29%) than at the time of the 1991 Census (28%). Attendance at technical or further education institutions (3%), and higher educational institutions (5%) remained at similar levels to those in 1991.

ATTENDANCE AT EDUCATIONAL INSTITUTIONS, 12-25 years

Education participation rates were highest for the younger age groups. Schooling is compulsory to the age of 15 years in the Northern Territory, so almost all (89%) of those in the 12–14 years age group reported that they were still at school, and two-thirds (66% or 5,844) were attending government schools. Among 15–17 year-olds, educational participation was lower (59%), with 55% at school and 3% attending a technical or further education institution.

Education participation continued to decline with age, with 23% of 18–19 year-olds and (22%) of 20–25 year-olds remaining in education.

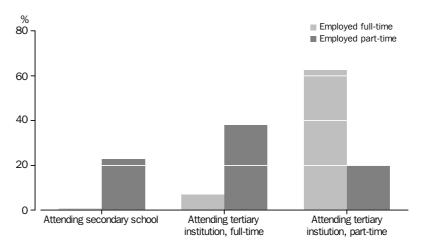

Indigenous people

About one-third (32%) of Indigenous youth aged 12–25 years were attending an educational institution in 1996. However, most of the participation was in the younger age groups, with 84% of 12–14 year-olds and 39% of 15–17 year-olds in education. Just 12% of 20-25 year-olds remained in education.

Education and labour force status

Many young people attending educational institutions were also employed. Among 15–25 year-olds who were still at school or attending a tertiary or other institution full-time in 1996, 31% were employed (27% of males and 34% of females). In 1991, 18% of 15–25 year-olds were working part-time or seeking part-time work.

Full-time secondary and tertiary students most commonly worked part-time (27%), and 3% worked full-time. Employment among part-time tertiary students was more likely to be full-time. In 1996, 62% of these students were employed full-time.

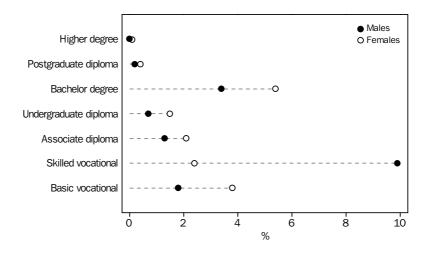

Qualifications

Between 1991 and 1996, the proportion of 15–25 year-olds with post-secondary qualifications increased from 16% to 17%, and from 32% to 34% among older people.

Young Territorians were also more highly qualified in 1996 than five years earlier. Among young people who held post-school qualifications, those with a bachelor degree or higher increased from 19% to 28%. Skilled vocational qualifications were the most common qualifications held by 15–25 year-old males (10%), followed by bachelor degrees (3%). For young females, the most commonly held qualifications were bachelor degrees (5%), and basic vocational qualifications (4%).

HIGHEST QUALIFICATION, 15-25 years

CHAPTER

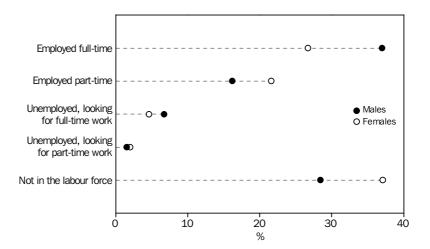

6

WORKING LIFE

MAIN FINDINGS

Labour force status

In 1996, 20,578 of the Northern Territory's 15–25 year-olds were in the labour force, that is, they were either employed or looking for work. They made up 23% of the total labour force (89,603 people). The majority (88%) of these young people were employed.

Participation rates

The labour force participation rate for young people in the Northern Territory in 1996 was 60%. Participation among Indigenous young people was 38%, and among non-Indigenous young people it was 76%.

In 1996, fewer young women were in the labour force than young men (56% compared with 63%).

Full-time work

The proportion of young people employed in full-time work fell slightly between 1991 and 1996, from 33% to 32%. This decrease was experienced by both young women and men. Over the same period the proportion of people aged 26 years and over who were employed full-time remained at 43%.

Part-time work

The proportions of both young and older people employed in part-time work have increased. Between 1991 and 1996, the proportion of young Territorians who were employed part-time increased from 15% to 19%. The increase for older people was slightly lower (from 14% to 16%). Of employed young women, 43% were employed part-time compared with 29% of young men.

Unemployment

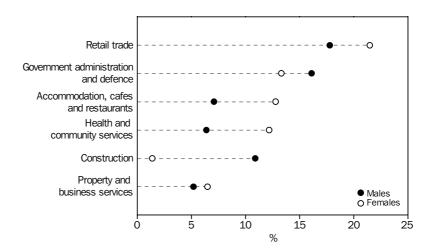

The unemployment rate for young people in the Northern Territory was 12%—that is, 12% of 15–25 year-olds in the labour force reported that they were looking for work.

Another measure of unemployment among young people, which takes account of the varying labour force participation between age groups, is the proportion of the total population in the age group who were unemployed. In the Northern Territory in 1996, this figure was 7% for all 15–25 year-olds. The proportion was 6% for those aged 15–17 years, 10% for 18–19 year-olds, 8% for 20–24 year-olds, and 6% for 25 year-olds.

Industry

In 1996, almost 20% (3,515) of employed young people worked in the Retail trade industry, another 15% were in Government administration and defence, and 10% worked in Accommodation, cafes and restaurants. Government administration and defence was the largest employer of people aged 26 years and over (15%) followed by Health and community services (12%).

EMPLOYED YOUNG PEOPLE, Leading Industries of Employment

Occupation

In 1996, young people were most commonly employed as Intermediate clerical, sales and service workers (20% or 3,613). The largest proportion (19%) of older people were employed as Professionals.

For young males, the most common occupations were Tradespersons and related workers (26%); Labourers and related workers (23%); and Intermediate production and transport workers (11%). For young females, 32% were employed as Intermediate clerical, sales and service workers, 21% as Elementary clerical, sales and service workers, and 12% as Professionals.

Income

The highest proportion (12%) of young people reported receiving no individual weekly income, 10% had incomes of \$120–\$159, and 9% had incomes of \$300–\$399.

There were proportionally more young females at lower income levels than young males. More than 67% of young females reported weekly incomes of less than \$400, compared with 58% of young males. A partial explanation for this is females's greater participation in part-time work.

EXPLANATORY NOTES

ABOUT THIS PUBLICATION

1 This publication presents detailed information on young people (aged 12–25 years) in the Northern Territory, using data from the 1996 Census of Population and Housing. Some data from the 1986 and 1991 Censuses are also included for comparative purposes.

SCOPE AND COVERAGE

- **2** The 1996 Census of Population and Housing was held on 6 August 1996. The first Census was held in 1911 and since 1961 a Census has been taken every five years, a frequency which is specified in the *Census and Statistics Act 1905*. The objective of the Census is to measure accurately the number and key characteristics of people in Australia on census night, and the dwellings in which they live.
- **3** The Census aims to count every person who spends census night in Australia. This includes Australian residents in Antarctica and people in the Territories of Jervis Bay, Cocos (Keeling) Islands and Christmas Island. The other Australian External Territories, Norfolk Island and minor islands such as Heard and McDonald Islands, are outside the scope of the Australian Census. The only people who spend census night in Australia but are excluded from the Census are foreign diplomats and their families.
- **4** The Census includes people on vessels in or between Australian ports, on board long-distance trains, buses or aircraft and on oil or gas rigs off the Australian coast. People entering Australia before midnight on census night are counted while people leaving an Australian port for an overseas destination before midnight on census night are not. Visitors to Australia are included regardless of how long they have been in the country or how long they plan to stay. However, for people who intend to be in Australia less than six months only basic demographic data are available, and they have been excluded from all tables in this publication. The Census includes people camping out and the homeless.
- **5** All private dwellings, except diplomatic dwellings, are included in the Census, whether occupied or unoccupied. Caravans in caravan parks, manufactured homes in manufactured home estates and self-care units in accommodation for the retired or aged are counted only if occupied. Occupied non-private dwellings, such as hospitals, prisons, and hotels are also included.
- **6** Details about the 1996 Census content, collection operations, confidentiality and privacy protection, processing and evaluation activities are contained in *1996 Census Nature and Content* (Cat. no. 2008.0).

ABS POPULATION ESTIMATES

7 This publication contains population counts based on where people were counted on census night, which may not have been where they usually lived. The Census can also provide person counts based on place of usual residence at the geographic level of Statistical Local Area.

ABS POPULATION ESTIMATES continued

- **8** Official ABS population estimates (estimated resident population) are also separately available from the ABS. The estimates are based on census counts which have been adjusted to:
- include people who were in Australia on census night but were missed in the Census:
- include Australian residents who were temporarily overseas on census night (these people were not within scope of the Census); and
- exclude overseas visitors counted in the Census who were not usual residents of Australia.
- **9** The adjusted census count is updated quarterly using demographic statistics. These are statistics on births, deaths, and overseas and internal migration.
- **10** ABS population estimates are published in *Australian Demographic Statistics* (Cat. no. 3101.0), produced quarterly, and in *Population by Age and Sex, Australian States and Territories* (Cat. no. 3201.0) produced annually.
- **11** The ABS also provides projections (based on different assumptions as to future fertility, mortality and migration) of the resident population of Australia, States and Territories. These projections are published every two years in *Population Projections* (Cat. no. 3222.0).

DATA LIMITATIONS

- **12** Census data are subject to a number of inaccuracies resulting from errors by respondents or mistakes in collection or processing. Whilst many of these are corrected by careful processing procedures, some still remain. The effect of the remaining errors is generally slight, although it may be more important for small groups in the population. The main kinds of error to keep in mind are:
- Partial non-response: In some cases where an answer is not provided to a question an answer is imputed (often from other information on the form). In other cases a 'Not stated' code is allocated.
- Processing error: While such errors can occur in any processing system, quality management is used continuously to improve the quality of processed data, and to identify and correct data of unacceptable quality.
- Random adjustment: Table cells containing small values are randomly
 adjusted or suppressed to avoid releasing information about particular
 individuals, families or households. The effects of these adjustments are
 statistically insignificant.
- *Respondent error*: Because processing procedures cannot detect or repair all errors made by people in completing the forms, some remain in final data.
- Undercount: Although the Census aims to count each person, there are some people who are missed and others are counted more than once. The data in this publication are not adjusted for the net undercount.
- **13** Further information on data quality is provided progressively in *Census Update* and in *1996 Census Data Quality Working Papers*.

OVERSEAS VISITORS

14 Census data for overseas visitors (who intended to be in Australia for less than six months) are restricted to age, sex and marital status. In this publication overseas visitors do not contribute to any tables.

LABOUR FORCE STATISTICS

- **15** The labour force statistics collected from the Census are valuable in providing data for small groups of the population. They are not to be confused with the statistics from the monthly Labour Force Survey, which are only available at State, Territory, capital city and regional level.
- **16** Census figures differ from the survey figures because of differences in scope, questionnaire design and collection procedures. For more information refer to Census Working Paper 94/1: 1991 Census Data Quality—Labour Force Statistics.
- **17** Official monthly labour force statistics are published in *Labour Force*, *Australia* (Cat. no. 6203.0), produced monthly.

CALCULATION OF PROPORTIONS

18 When calculating the proportion of the population with a particular characteristic, 'Not stated' responses are included in the denominator. For example, in the Main Findings for chapter 3, the proportion of young people (12–25 year-olds) who had been born overseas was calculated by dividing the number of 12–25 year-olds who stated they had been born overseas by the total number of 12–25 year-olds (including those who did not report any country of birth details) and expressing the result as a percentage.

CALCULATION OF MEDIANS

- **19** A median is a measure of central tendency. It is a mid-value which divides a population distribution into two, with half the observations falling below it and half above. Unlike averages (means), medians are not usually skewed by extreme observations.
- **20** There are several issues to be aware of:
- The categories 'Income not stated', 'Overseas Visitor', and 'Not applicable' are not included in the calculation of median individual income.
- If a median falls into a category that has a text only label then the median is set to zero. This is relevant to the calculation of median individual income, as the income classification includes categories 'Nil income' and 'Negative income'.
- If the median is calculated on a classification containing an open-ended range and the median falls within that range, the median is set to the number in the label. For example, in the calculation of median individual income, if the median falls in the last range \$1,500 or more, \$1,500 is allocated as the median.

CENSUS PRODUCTS AND SERVICES

21 There is a wide range of products and services developed from the 1996 Census of Population and Housing, details of which are listed in brief below. For more detailed information on the 1996 Census range of products and services, please refer to the *Directory of Census Statistics* (Cat. no. 2910.0), or call our Client Services Officers in your State or Territory (refer to the telephone numbers listed on the back page of this publication). Information is also available on the Internet, at http://www.abs.gov.au

.. not applicable

— nil or rounded to zero

Where figures have been rounded, discrepancies may occur between the sums of component items and totals.

GLOSSARY

General descriptions of terms and concepts used in this publication are provided below. Tables are also footnoted where applicable for additional clarity. Detailed definitions of classifications and concepts are available in the *Census Dictionary*, 1996 (Cat. no. 2901.0).

Couple family

A family based on two persons who are in a registered or de facto marriage and who are usually resident in the same household. The family may include any number of dependants, non-dependants and/or other related individuals. As it is not necessary for a parent-child relationship to be formed, a couple family can consist of a couple without children.

Dependent child

An individual who is either a child aged less than 15 years or a dependent student. To be regarded as a child the individual can have no partner or child of his/her own usually resident in the same household.

A dependent child must be attached to a nominal parent with whom he or she usually resides. This parent must be over 15 years of age.

Dependent student

A natural, adopted, step or foster child who is 15–24 years of age and who attends an educational institution as a full-time student, and who has no partner or child of his or her own usually resident in the same household.

Boarders and lodgers living with a family are automatically excluded from all family coding once they are 15 years or older unless some familial relationship is also present. The family relationship then takes precedence over the fact they are boarders or lodgers.

Dwelling

A building or structure in which people live. This can be a building, such as a house; part of a building, such as a flat; or it can be a caravan or tent, humpy or park bench. Houses under construction, derelict houses, vacant tents, or converted garages are not counted in the Census.

There are private and non-private dwellings.

A *private dwelling* is normally a house, flat, part of a house, or even a room; but can also be a house attached to, or rooms above, shops or offices; an occupied caravan or unit in a caravan park or craft in a marina; an occupied dwelling in a manufactured home estate; an occupied self-care unit in accommodation for the retired or aged; a houseboat; or tent if it is standing on its own block of land.

An occupied caravan situated on a residential allotment is also classed as a private dwelling. Private dwellings can be either occupied or unoccupied.

Non-private dwellings are those dwellings not included above, which provide a communal or transitory type of accommodation. These dwellings include hotels, motels, guest houses, prisons, religious and charitable institutions, defence establishments, hospitals and other communal dwellings. Only occupied non-private dwellings are included in the Census.

Employed

Persons aged 15 years and over who, during the week prior to census night, worked for payment or profit; who had a job from which they were on leave or otherwise temporarily absent; were on strike or stood down temporarily; or worked as unpaid helpers in a family business.

Family

Two or more persons, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering, and who are usually resident in the same household.

Non-related persons living in the same household are not counted as family members (unless under 15 years of age).

Geographic areas

The tables in this publication are at the levels of Local Government Area, Statistical Division and State/Territory, as defined by the 1996 Census edition of the Australian Standard Geographical Classification (ASGC).

Statistical Local Area (SLA): These areas consist of one or more whole Census Collection Districts and cover, in aggregate, the whole of Australia without gaps or overlaps.

SLAs correspond in many cases to Local Government Areas (LGAs). The main exceptions are:

- where the boundaries of one or more Statistical Subdivisions (SSDs) cut across an LGA, the LGA is split into two or more parts, each of which forms a separate SLA;
- where a particular LGA is substantially different from other LGAs in terms of size and economic significance, or in terms of user needs for statistics, the LGA may be split into two or more SLAs;
- where an area is unincorporated (i.e. not part of an LGA) an SLA is created.

Local Government Area (LGA): LGAs are spatial units which represent the whole undivided geographic area of responsibility of either:

- an incorporated local government council; or
- an incorporated community government council (CGC) where the CGC is of sufficient size and statistical significance.

LGAs cover only part of Australia. The major areas not covered by LGAs are the large northern parts of South Australia, most of the Northern Territory, and all of the Australian Capital Territory and Other Territories. For the 1996 Census, LGA boundaries are as defined on 5 August 1995 and included in the 1996 edition of ASGC (effective 1 July 1996).

Statistical Subdivision (SSD): These areas are defined as socially and economically homogeneous regions characterised by identifiable links between the inhabitants. They consist of one or more SLAs and cover, in aggregate, the whole of Australia without gaps or overlaps.

Statistical Division (SD): These areas consist of one or more SSDs and cover, in aggregate, the whole of Australia without gaps or overlaps. They do not cross State or Territory boundaries. However, the three Territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands together form the single SD of Other Territories. Capital city SDs are predominantly urban in character and the boundaries are delineated to contain the anticipated urban development of the capital cities (and associated urban centres) for a period of at least 20 years.

SDs outside the capital city are designed to be relatively homogeneous regions characterised by identifiable social and economic links between the inhabitants and the economic units in the region, under the unifying influence of one or more major towns or cities.

Geographic areas continued

State/Territory: States and Territories consist of one or more SDs and are the largest type of spatial unit in the ASGC. The six Australian States and five Territories which are part of geographic Australia and included in the 1996 ASGC are New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, Northern Territory, the Australian Capital Territory, Jervis Bay Territory and the external Territories of Christmas Island and Cocos (Keeling) Islands.

The LGA and SSD boundaries shown in this publication (see the map on page 79) are those applying at the time of the 1996 Census. Where necessary, 1986 and 1991 statistics in this publication have been recalculated to conform to the 1996 boundaries. Further information on geographic classifications is contained in *Statistical Geography: Volume 1 – Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0).

Household

A group of people who usually reside in the same private dwelling.

Income

People aged 15 years or more are asked to state their usual gross weekly income, which is the income before tax, superannuation, health insurance, or other deductions are made. Gross income includes family allowance, family allowance supplement, pensions, unemployment benefits, student allowances, maintenance (child support), superannuation, wages, overtime, dividends, rents received, interest received, business or farm income (less operation expenses) and workers' compensation received.

Indigenous language

Data on individual Indigenous languages are available for the first time in the 1996 Census. Data were collected on some 50 languages Australia-wide. Other languages were coded to general Indigenous language categories.

Indigenous origin

A person is defined to be of Indigenous origin if he or she identified themselves as being of Aboriginal and/or Torres Strait Islander origin.

Industry (of employment)

This describes the industries in which employed people (aged 15 years and over) work, and is coded to the *Australian and New Zealand Standard Industrial Classification (ANZSIC)*, 1993 (Cat. no. 1292.0).

Labour force

The labour force is made up of employed and unemployed people aged 15 years and over.

Labour force status

Identifies whether a person is employed, unemployed or not in the labour force for people aged 15 years and over.

Language

People are asked whether they speak a language other than English at home, and if so, to specify that language. Where people speak more than one other language, they are asked to report the language spoken most often.

Living arrangements

This classification is derived from information about the family type and the relationships that exist in the family/household, between the family/household reference person, and each other member of the family/household.

Main English-speaking countries

These countries have been defined as 'English-speaking' on the basis of whether Australia has received significant numbers of migrants from them who are likely to speak English. Therefore, the countries regarded as the main English-speaking countries have been the countries of the United Kingdom and Ireland, and the predominantly Anglo-Celtic countries which arose from large-scale British settlement: Australia, Canada, Ireland, New Zealand, South Africa, the United Kingdom and the United States of America. All other countries were classified as non-main English-speaking.

Not in the labour force Persons who were not employed or unemployed as defined above. This category

includes people who were retired, pensioners and people engaged in home

duties.

Occupation (of main job) Occupation describes the main job held by employed people (aged 15 years and

over) during the week prior to census night, and is coded using the ASCO — Australian Standard Classification of Occupations, Second Edition, 1997

(Cat. no. 1220.0).

One parent family Consists of a person who has no spouse or partner usually present in the

household, but who forms a parent-child relationship with at least one dependent or non-dependent child usually resident in the household.

Overseas-born Overseas-born people are those who stated that they were born in a country

other than Australia, those born at sea, and those whose responses were classed

as 'Inadequately described' or 'Not elsewhere classified'.

Post-school qualifications In all censuses since 1966, people aged 15 years and over have been asked to

describe their post-school qualifications which have been coded according to ABS

Classification of Qualifications (ABSCQ), 1993 (Cat. no. 1262.0).

Social marital status
The relationship status of an individual with reference to another person who is

usually resident in the household. A marriage exists when two people live together as husband and wife, or partners, regardless of whether the marriage is formalised through registration. Individuals are, therefore, regarded as married if they are in a de facto marriage or if they are living with the person to whom they

are registered as married.

Where information about same-sex couples is volunteered, the individuals are

classified as partners in a de facto marriage.

The term 'Not married', as used in this classification, refers to a person who is not living with another person in either a registered or de facto marriage. This

includes persons who live alone, or with other family members, and those in

shared accommodation.

Unemployed Persons aged 15 years and over who, during the week prior to census night, did

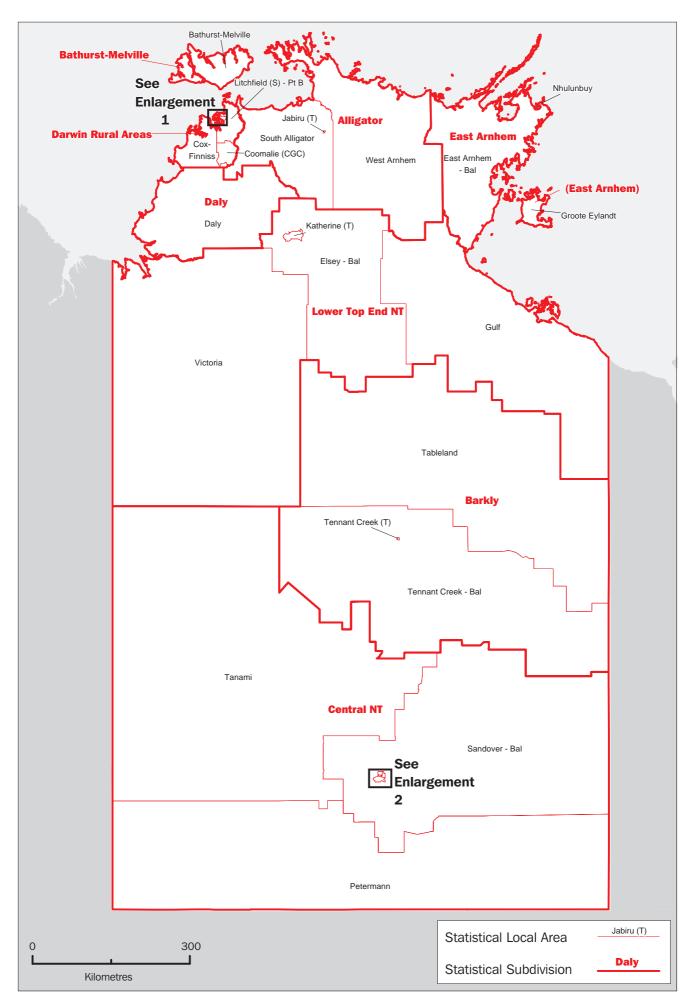

not have a job but were actively looking for work (either full-time or part-time)

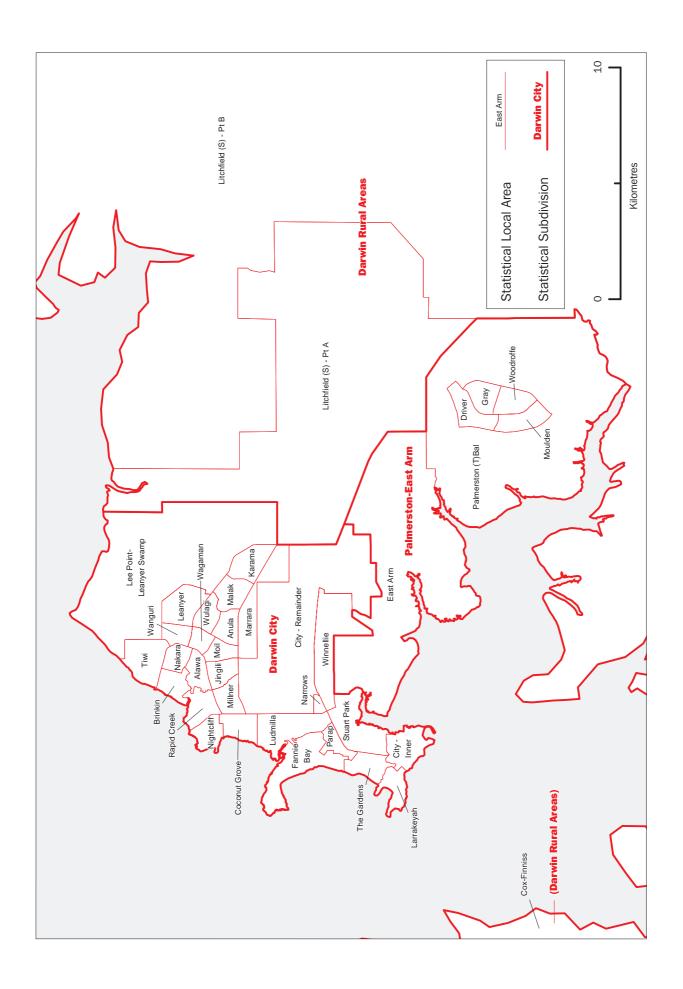

and were available to start work.

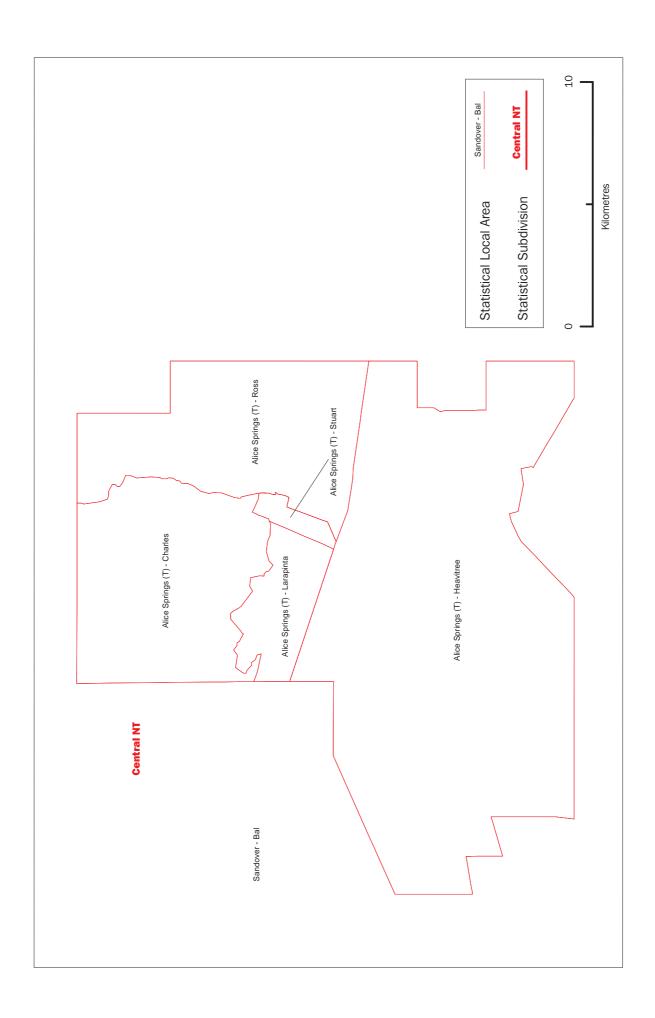

Unemployment rate The number of unemployed people expressed as a percentage of the labour

force.
