KEY POINTS

SUMMARY

- Total credit market outstanding of the domestic non-financial sectors at 30 June 2013 was \$4,593.0b, a decrease of \$4.1b from the previous quarter. Demand for credit during the quarter was \$43.9b and valuation decreases were \$48.0b.
- Demand for credit increased by \$4.6b from the previous quarter, driven by other private non-financial corporations (up \$8.6b), state and local general government (up \$5.8b), and household (up \$5.2b). This was offset by a decreased demand for credit by national general government (down \$12.8b).

NON-FINANCIAL CORPORATIONS

- Other private non-financial corporations raised a net \$23.5b, through loan borrowings of \$15.1b, issuances of shares of \$8.2b and issuances of bonds of \$3.8b.

GENERAL GOVERNMENT

- National general government repaid a net \$6.7b during the quarter driven by redemptions of one name paper of \$11.5b. This was partially offset by issuances of bonds \$4.6b. State and local general government raised \$7.5b during the quarter primarily through loans of \$7.1b.

HOUSEHOLDS

- Households raised a net \$22.2b primarily through loans of \$22.8b during the June quarter 2013, up \$5.3b from the March quarter 2013 estimate of \$17.5b.

CHANGES TO THIS ISSUE

- Following ongoing quality assurance work a number of data quality issues have been identified with table 37 – National capital accounts by sector and subsector. This table will be unavailable until further notice. However, capital accounts by sector will continue to be published as part of table 22 – flow of funds matrix.

SIGNIFICANT EVENTS

- During the June quarter 2013, the investment activity of a national public non financial corporation unit has been confidentialised to maintain the anonymity of the unit. As a consequence of suppressing estimates directly impacted, it has been necessary to consequentially suppress other series in the affected tables to preserve confidentiality.
- In the September quarter 2013 issue of *Financial Accounts*, two new tables will be published. The first table is a quarterly balance sheet for the household sector. The second table contains analytical measures of income, consumption, saving and wealth for the household sector. Both tables are quarterly counterparts to annual tables already published in *Australian System of National Accounts* (cat no 5204.0). These new tables will be available in electronic format only, and will not appear in the PDF.
- The September quarter 2013 publication will also include revisions to previously published aggregated back to June quarter 1988 as part quality assurance work undertaken through reviews of compilation of the published estimates and through data providers to the ABS. This is the first time the timeseries has been revised back to June 1988 since the implementation of 2008 SNA in September quarter 2009.
- The Central bank, banks, securitisers, long term loans and placements market and bond market tables include estimates for internally securitised paper. Please refer to ABS treatment of internally securitised paper released with the March 2012 issue of the publication for the treatment of these securities.

REVISIONS IN THIS ISSUE

- There have been revisions back to September 2007 to previously published aggregates. This is due to quality assurance work undertaken through reviews of compilation of the published estimates and through data providers to the ABS Survey of Financial Information, ABS Survey of International Investment and APRA administrative data sets.

EXPLANATORY NOTES

INTRODUCTION

1 The *Australian Financial Accounts* (ABS Cat. No. 5232.0) contains financial profiles of each subsector of the economy and the market for each conventional financial instrument. There are also tables showing inter-sectoral financial transactions and measures of sectoral financial surpluses and deficits.

2 Financial accounts of various types – which are also called flow of funds statistics – are published by many *Organisation for Economic Cooperation and Development* (OECD) countries, including the United States of America (from 1945), the United Kingdom (from 1952) and Canada (from 1962). In Australia, the Reserve Bank produced annual flow of funds accounts for the reference years 1953–54 to 1988–89. The final edition of these was published in the Reserve Bank Bulletin, November 1989. The Australian Bureau of Statistics (ABS) published quarterly estimates commencing with experimental estimates of inter-sectoral financial transactions for the March and June quarters 1989. From the June 1998 reference quarter, the financial accounts dataset was produced according to a revised international standard, the System of National Accounts, 1993 (SNA93) and from the September 2009 quarter, *Australian National Accounts, Financial Accounts* (cat. no. 5232.0) has been produced according to the *System of National Accounts, 2008* (SNA08) edition.

CONCEPTS, SOURCES AND METHODS

3 There are significant revisions to standards and classifications between the SNA93 version and the SNA08 version of the Australian Financial Accounts (see Information Paper: *Product changes to Financial Accounts following revisions to international standards*, 2009 (cat. no. 5232.0.55.003)). The dataset prior to September 2009 has been converted to the SNA08 basis and backcast to June quarter 1988 (stocks data) and September quarter 1988 (transactions data). In addition to SNA08, the concepts employed include elements drawn from the classifications used in the International Monetary Fund's (IMF) sixth edition of the Balance of Payments Manual (BPM6), the IMF's Government Finance Statistics Manual 2001, and the IMF's Manual on Monetary and Financial Statistics 2001.

4 *Australian National Accounts: Concepts, Sources and Methods* (cat. no. 5216.0) provides detailed descriptions of the concepts, data sources and methodologies used in compiling the Australian national accounts, including the financial accounts, on an SNA93 basis. More detailed explanations can be obtained from the contact on the front cover of this publication. An updated version (SNA08) is due out in 2012.

STOCK AND FLOW CONCEPTS

5 Tables 1 to 21 and 23 to 33 present balance sheet data at market prices at the end of each calendar quarter. Balance sheet data are also known as stock, level or position data. These tables also now show net inter-sectoral financial transactions during the quarters. These are flow data. In this publication, the net transactions or flows are defined as active dealing in a financial instrument.

THE CLASSIFICATION OF INSTITUTIONAL SECTORS AND SUBSECTORS

6 The institutional sectors are based on the *Standard Economic Sector Classifications of Australia, 2008* (cat.no. 1218.0) and are the same as the sectors used in national income and expenditure accounts.

7 The basic unit that is classified by sector is the institutional unit, which is defined as an economic entity that is capable, in its own right, of owning assets, incurring liabilities and engaging in economic activities and transactions with other entities.

SOURCES OF DATA

8 Most of the financial data in this publication are derived from statistical surveys conducted by the ABS and from information collected by the Australian Prudential Regulation Authority (APRA). Some other data sources are used, particularly for valuation adjustments.

EXPLANATORY NOTES *continued*

SOURCES OF DATA *continued*

9 The quarterly sectoral capital accounts in the flow of funds matrices are prepared using a variety of indicators to dissect annual estimates based on survey data. Some of the indicators used are known to be of poor quality; these are footnoted in tables to note the quality concerns and should be used with caution.

COMPILATION METHODS

10 The levels (stock) tables are prepared by gathering together balance sheet information from various sources and selecting the better estimates. A choice is often possible because different data sources provide alternative or counterpart measures of the same item. For example, borrowing by state owned non-financial corporations will be reported by the state central borrowing authorities or Treasuries as assets and by the non-financial corporations as liabilities. The subsector aggregates derived from these data do not agree because the ABS does not survey all state owned non-financial corporations. In this case, the data from the central borrowing authorities and Treasuries are therefore used to estimate both the asset and liability aspects of these borrowings.

11 In some cases, transactions data are directly collected. In other cases transactions must be derived from the difference in consecutive levels. These net financial transactions are derived by taking the difference between closing and opening levels of balance sheet items and, where possible, eliminating changes on the balance sheet caused by valuation effects such as exchange rate movements.

ACCOUNTING BASIS

12 SNA08 states explicitly that the national accounts should record transactions on an accrual basis (as opposed to a cash or 'due for payment' basis), to reflect the time when economic value is transferred rather than when cash relating to the transaction is paid or falls due for payment. For practical reasons complete implementation of accrual accounting throughout the national accounts is not yet possible. Some areas where accrual accounting has not been adopted include:

- accrual of household income tax; and
- accrual of certain employee entitlements, including recreation and long service leave.

13 In these statistics tradeable securities, which include shares listed on the Australian Stock Exchange (ASX) and debt securities traded on organised markets, are valued at market prices.

14 Other securities are assigned estimated market values. For example, equity not listed on ASX is valued on the basis of value of total assets of the enterprise in question less the value of any repayable liabilities.

15 Deposits, loans and other accounts payable/receivable are recorded at their face value.

16 Net equity of pension funds in life office reserves are valued on the basis of market value of total assets (including non financial assets) of the funds less any repayable liabilities.
