Selling prices	1.3	n.p.	1.3
Profit	7.2	n.p.	5.8
Employment	-0.1	n.p.	-0.6

.

KEY POINTS

SHORT-TERM

TREND

• In trend terms, businesses continue to expect increases in Operating income, Selling prices and Profit, with a slight decrease expected in Employment. All four indicators continue to show signs of slowing.

SEASONALLY ADJUSTED

 In seasonally adjusted terms, businesses expect increases in all indicators except Employment, Inventories and Wages, which are expected to decrease slightly.

MEDIUM-TERM

TREND

In trend terms, businesses continue to expect increases in Operating income, Selling
prices and Profit. A slight decrease is expected in Employment, a continuation of
recent slowing in this series.

ORIGINAL

• In the year to the June quarter 2001, businesses expect increases in Operating income (1.5%), Selling prices (1.3%) and Profit (5.8%), while a decrease of 0.6% is expected in Employment.

N O T E S

FORTHCOMING ISSUES	ISSUE (Quarter)	RELEASE DATE
	December 2000	22 September 2000
	March 2001	5 January 2001
	• • • • • • • • • • • • • • • • • • • •	
CHANGES IN THIS ISSUE	This issue no longer includes the Technical adjustment of business expectations series. December quarter 1999, March quarter 2000	The Technical Note was included in the
GOODS AND SERVICES TAX (GST)	The GST is excluded from all data items. He reform, e.g. the purchase of computer equip relevant data items.	1.1.6

ABS \cdot AUSTRALIAN BUSINESS EXPECTATIONS \cdot 5250.0 \cdot September Quarter 2000 3

OPERATING INCOME

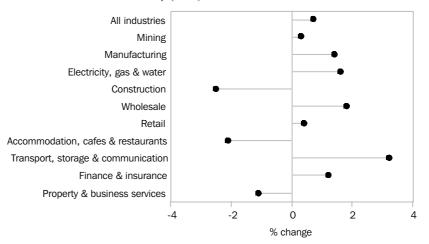

TIME SERIES

In original terms, businesses expect Operating income to increase by 0.8% in the September quarter 2000. However, small businesses expect a decrease of 0.7%, while medium and large businesses expect increases of 3.0% and 2.0% respectively. The estimate for small businesses is the lowest since the commencement of the series in the December quarter 1993, while the estimate for medium businesses is the highest.

MAIN INDUSTRY COMPARISON

Most industries, with the exception of Construction, Accommodation, cafes & restaurants and Property & business services, are expecting Operating income to increase in the September quarter 2000. The largest increase is expected in the Transport, storage & communication industry (3.3%), while the largest decrease is expected in the Construction industry (2.5%).

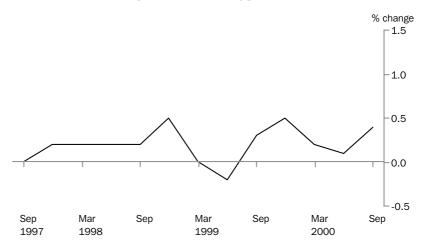

.

.

SELLING PRICES

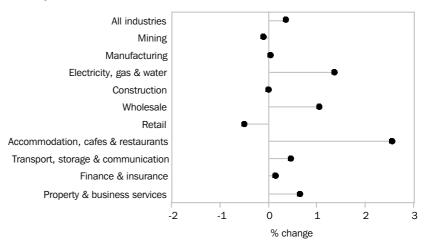

TIME SERIES

In original terms, Selling prices are expected to rise by 0.4% in the September quarter 2000. Expectations of increased selling prices occur across all business sizes, with small, medium and large businesses expecting increases of 0.4%, 0.9% and 0.2% respectively. It should be noted that expectations for Selling prices exclude the GST.

MAIN INDUSTRY COMPARISON

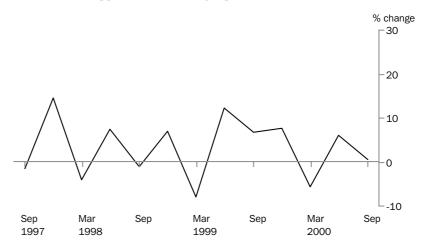

With the exception of the Mining, Construction and Retail industries, all industries are expecting Selling prices to increase in the September quarter 2000. The largest increase is expected in the Accommodation, cafes & restaurants industry (2.6%), while the Construction industry is expecting no change. The Retail industry is expecting a decrease of 0.5%.

PROFITS

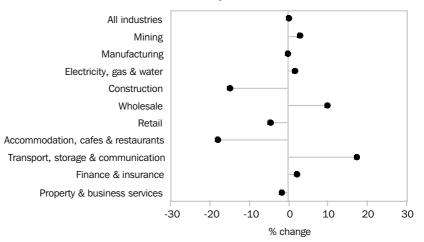

TIME SERIES

In original terms, Profit is expected to increase slightly, by 0.6%, in the September quarter 2000. Increases in Profit are expected by medium (19.2%) and large businesses (13.4%). Small businesses expect Profit to fall by 7.4%, where continued uncertainty about tax reform appears to be effecting expectations.

MAIN INDUSTRY COMPARISON

Industries are evenly split between expecting Profit to increase or decrease in the September quarter 2000. The largest increase (17.9%) is expected in the Transport, storage & communication industry, while the largest decrease (17.8%) is expected in the Accommodation, cafes & communication industry.

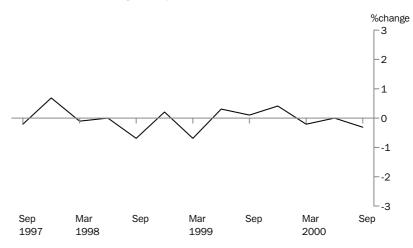

.

.

EMPLOYMENT

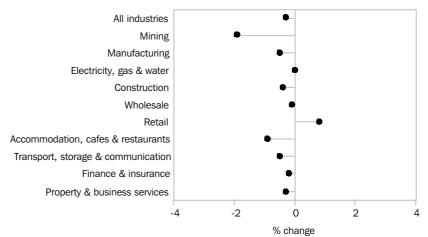

TIME SERIES

In original terms, full-time equivalent Employment is expected to decrease by 0.3% in the September quarter 2000. Expectations of decreased levels of employment occur across all industry sizes, with small, medium and large businesses expecting decreases of 0.5%, 0.1% and 0.1% respectively.

MAIN INDUSTRY COMPARISON

Most industries are expecting decreases in full-time equivalent Employment in the September quarter 2000. The largest decrease is expected in the Mining industry (1.9%), while slight increases, of 0.1% and 0.9% respectively, are expected in the Electricity, gas & water and Retail industries.

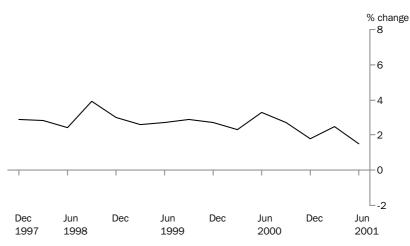

.

7

OPERATING INCOME

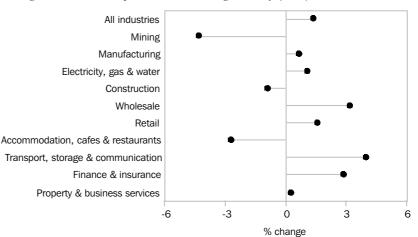

TIME SERIES

In original terms, Operating income is expected to increase by 1.5% in the medium-term to the June quarter 2001. This is the lowest expected increase since the commencement of the series in the September quarter 1994. The largest increase in Operating income is expected by large businesses (3.2%), followed by medium businesses (1.6%) and small businesses (0.2%).

MAIN INDUSTRY COMPARISON

Most industries are expecting Operating income to increase in the medium-term. The largest increase is expected in the Transport, storage & communication industry (4.1%), while the largest decrease is expected in the Mining industry (4.3%).

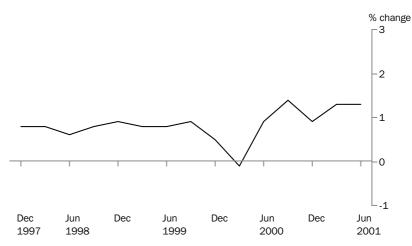

.

.

SELLING PRICES

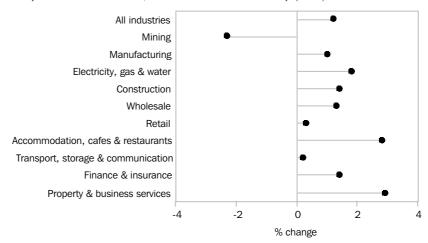

TIME SERIES

In original terms, Selling prices are expected to rise by 1.3% in the medium-term. The expected increases are similar across all business sizes, with small businesses expecting an increase of 1.3%, medium businesses expecting an increase of 1.2% and large businesses expecting an increase of 1.4%. It should be noted that expectations for Selling prices exclude the GST.

MAIN INDUSTRY COMPARISON

With the exception of the Mining industry, which expects Selling prices to fall by 2.3%, all industries are expecting increases in Selling prices in the medium-term. The largest increase is expected in the Property & business services industry (3.0%), closely followed by the Accommodation, cafes & restaurants industry (2.9%).

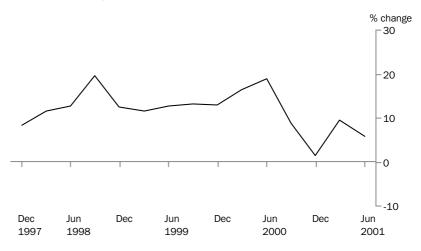

.

PROFITS

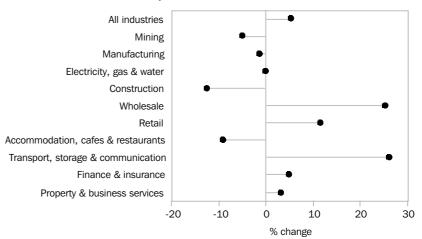

TIME SERIES

In original terms, Profit is expected to increase by 5.8% in the medium-term. Large businesses appear to be the most optimistic, with Profit expected to increase by 27.5%, while medium businesses expect Profit to increase by 10.5%. Small businesses expect Profit to decrease by 2.9%.

MAIN INDUSTRY COMPARISON

As for the short-term, industries are evenly split between expecting Profit to increase or decrease in the medium-term. The largest increase (26.5%) is expected in the Transport, storage & communication industry, while the largest decrease (12.4%) is expected in the Construction industry.

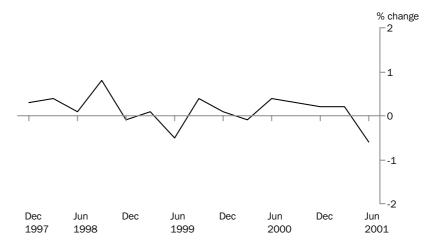

.

.

EMPLOYMENT

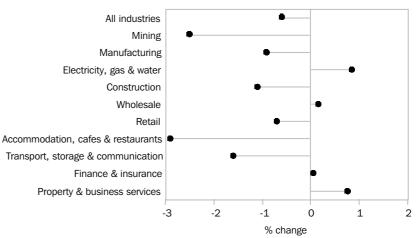

TIME SERIES

In original terms, full-time equivalent Employment is expected to decrease by 0.6% in the medium-term. The expectations of all businesses sizes are similar, with small, medium and large businesses expecting decreases of 0.8%, 0.4% and 0.5% respectively.

MAIN INDUSTRY COMPARISON

Most industries are expecting full-time equivalent Employment to decrease in the medium-term. The largest decrease (2.9%) is expected in the Accommodation, cafes & restaurants industry, while the largest increase is expected in the Electricity, gas & water industry (0.9%).

INTRODUCTION

1 This publication contains estimates of future economic activity based on the business expectations of senior executives, managers and proprietors of businesses operating in Australia. The estimates have been compiled from data collected by the Australian Bureau of Statistics (ABS) in its quarterly survey of business expectations.

2 This survey commenced with short term expectations for the December quarter 1993 and medium term expectations for the September quarter 1994. This quarter's publication contains estimates of the expected change between the June quarter 2000 and the September quarter 2000 and the June quarter 2001.

3 The seasonal adjustment of these series has been reviewed. For this issue, the original, seasonally adjusted and trend series are the published indicators for short-term business expectations, with the trend providing an indication of the underlying direction of the series. The volatility of the medium-term seasonally adjusted series is such that the original and trend series will continue to be the published indicators, with the trend providing an indication of the underlying direction of the series. Seasonally adjusted estimates are provided on page 12, with an explanation in paragraphs 28 to 32 of the Explanatory Notes. Trend estimates are provided on pages 12 and 20, with an explanation in paragraph 33 of the Explanatory Notes.

4 The survey is conducted by mail each quarter. This quarter's survey was collected during May and June 2000.

5 It is based on a stratified random sample of approximately 4,500 businesses selected from the ABS annual Economic Activity Survey (EAS). EAS in turn derives its survey population from the ABS central register of business units.

6 The sample is stratified by industry, sector (private and government business) and size of business (measured by number of employees). Within each stratum businesses are sampled randomly, with each business in a stratum having the same probability of selection.

7 The sample is supplemented by a further sample of businesses which have been added to the ABS business register since the original EAS sample was selected. This ensures that the expectations of relatively new businesses are taken into account in the overall estimates.

8 The statistics in this publication relate to employing businesses in all industries and sectors of the Australian economy except:

- agriculture, forestry and fishing;
- general government.

9 Data related to intended sheep matings are collected annually by the ABS and published in catalogue 7111.0 and 7113.0 publications from the Agricultural Commodity Survey.

10 The Australian Bureau of Agricultural and Resource Economics (ABARE) publishes its forecasts for specific commodities and for the Agriculture industry generally, as part of the annual Outlook conference in February each year. ABARE updates these forecasts in its quarterly publication *Australian Commodities—Forecasts and Issues*.

CLASSIFICATION

SCOPE OF THE SURVEY

11 Each statistical unit selected in the survey is classified to an industry according to the Australian and New Zealand Standard Industrial Classification (ANZSIC).

BUSINESS SIZE 12 Data presented in this publication is classified by three business sizes : small (less than 20 employees, except for manufacturers where it is less than 100);medium (20 to 99 employees, except for manufacturers where it is 100 to 599 employees); and large (100 or more employees, except for manufacturers where it is 600 or more employees). PROPORTION OF BUSINESSES SELECTED BY SIZE WITHIN AUSTRALIA Medium Small Large All husinesses % % % % Manufacturing 53.6 19.4 27.1 100.0 Other industries 22.6 63.3 14.1 100.0 All industries 23.5 61.5 15.1100.0 STATISTICAL UNIT 13 The statistical unit used in the survey of business expectations is the management unit. The management unit is the highest level accounting unit within a business for which sub-annual accounts are maintained, having regard for industry homogeneity. **14** In nearly all cases the management unit coincides with the legal entity owning the business (i.e. company, partnership, trust, sole proprietor, etc.). **15** In the case of large diversified businesses, however, there may be more than one management unit, each coinciding with a 'division' or 'line of business'. BUSINESS PERFORMANCE **16** The survey uses a set of well recognised economic trading indicators in INDICATORS measuring future trading activity. These indicators are: Operating income, selling prices, operating expenses, employment, etc. See Glossary for details. 17 The survey asks for full-time equivalent paid persons working. This is not a usual definition of employment as used by the ABS. It would be incorrect to assume a direct comparison with labour force statistics or other ABS employment statistics for instance. SIMPLE AND WEIGHTED NET **18** The simple net balance for a selected indicator is estimated by subtracting the BALANCE percentage of respondents predicting a 'fall' from the percentage of respondents expecting a 'rise'. **19** The net balance is a *qualitative* statistic best suited to indicating the sentiment of businesses about future business conditions, and measures the net proportion of businesses predicting a rise or fall in future business conditions. **20** The weighted net balance is estimated by weighting the surveyed direction of change for each unit by its benchmark level response for the equivalent variable in the EAS. **21** Weighting the responses enables larger businesses to have an influence upon the net balance proportional to the level of their expenditure, employment size,

ABS • AUSTRALIAN BUSINESS EXPECTATIONS • 5250.0 • SEPTEMBER QUARTER 2000 29

etc. Movements in the weighted net balance indicate the net proportion of business activity predicting a rise or fall in future business conditions.

EXPECTED AGGREGATE CHANGE	22 The expected aggregate change measures the forecasted percentage change in the level of a particular indicator. It is estimated by weighting the expected percentage change reported by respondents to the survey by their proportion of aggregate sales, expenditure, employment, etc. in the economy as measured from the benchmark estimate in the EAS.
	23 The weighted aggregate estimate of a particular indicator, combined with an estimated level, can be used to quantify its expected future movement.
COMPARISON OF RESULTS	24 The weighted net balance and expected aggregate change are complementary measures which, in combination, give a broad indication of future business conditions. It is possible to obtain estimates in opposite directions for the net balance and weighted aggregate change estimates.
	25 The weighted net balance provide a <i>qualitative</i> measure of the proportion of businesses predicting the direction of change in future business conditions. The

businesses predicting the direction of change in future business conditions. The expected aggregate change, however, provides a *quantitative* measure predicting the magnitude of change in a selected variable.

26 A comparison of the various expectations measures is provided in the following table:

COMPARISON OF THREE MEASURES OF BUSINESS EXPECTATIONS

	Simple net balance	Weighted net balance	Weighted aggregate	
	%	%	%	
Operating income Wage costs Employment	6.9 16.8	8.1 10.0	0.8 -0.1	
Full time equivalent	0.5	3.0	-0.3	

27 For the September quarter 2000 a simple net balance of 0.5% of businesses expect a rise in employment. The rise in the employment weighted net balance of 3.0% indicates that the businesses expecting a rise in employment tend to be larger than those expecting a fall.

SEASONAL ADJUSTMENT

28 The quarterly business expectations series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation.

29 Seasonal adjustment may be carried out by various methods and the results may vary slightly depending on the procedure adopted. Accordingly, seasonally adjusted statistics are in fact only indicative and should not be regarded as in any way definitive. In interpreting seasonally adjusted data it is important to therefore bear in mind the methods by which they have been derived and the limitations to which the methods used are subject.

30 At least once each year the seasonally adjusted series are revised to take account of the latest available data. The most recent reanalysis takes into account short-term expectations collected up to and including the December quarter 1999, and medium-term expectations collected up to and including the September quarter 2000. Data for subsequent periods are seasonally adjusted on the basis of extrapolation of historical patterns. The nature of the seasonal adjustment process

SEASONAL ADJUSTMENT	is such that the magnitude of	of some rev	isions resulting from reanalysis may be					
continued	quite significant, especially for data for more recent quarters. Care should be							
	exercised when interpreting quarter to quarter movements in the seasonally							
	adjusted series in the public							
	31 It should be noted that	the season:	ally adjusted figures necessarily reflect the					
	sampling and other errors to		. ,					
			methods used, together with selected					
	measures of volatility for the	ese series, a	ire available upon request.					
TREND ESTIMATES	33 The trend estimates are	e derived by	applying a 7–term Henderson moving					
	average to the published an	d unpublisł	hed seasonally adjusted series. The 7–term					
	Henderson average (like all	Henderson	averages) is symmetric, but as the end of a					
	time series is approached, a	symmetric	forms of the average are applied. Unlike the					
		•	rson moving average, the weights employed					
			ticular characteristics of individual series.

	Wage costs	-0.1	1.2					
		•••••	• • • • • • • • • • • • • • • • • • • •					

.

NON-SAMPLING ERROR	37 All other inaccuracies are referred to collectively as non-sampling error. The major areas of concern are: non-response; mis-reporting of data by respondents; and deficiency in the central register of economic units.
	38 Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires and efficient editing and operating procedures.
	39 The expected aggregate change is designed to reflect business expectations for each business performance indicator, as accurately as possible. However, while the estimates should be appropriate measures of business climate, the expectations may not predict actual movements accurately. Businesses may be too optimistic or pessimistic in their predictions at different times.
	40 In addition, actual movements would be partly comprised of activity of relatively recently formed businesses, and businesses which are formed during the expectations reference period which are not immediately represented in BES because they would not have been included on the ABS central register of economic units. Allowance is made in other ABS series for coverage deficiencies relating to newly formed businesses but no allowance for this is made in BES. This is important for some variables, where the contribution of new businesses to growth in that variable is relatively substantial (e.g. employment, capital expenditure or inventories).
BENCHMARKS	41 Benchmark (or base level) information is obtained from the ABS annual Economic Activity Survey (EAS). It is used to weight individual business responses by their relative contribution to each business performance indicator. This enables percentage responses from different businesses to be aggregated.
	42 In June each year a new sample is selected from units surveyed by EAS in the previous financial year. New benchmarks are introduced for the survey conducted in August each year. The benchmark data become increasingly out of date as they are used in the surveys conducted in November, February and May. In certain cases, the benchmark data may not accurately reflect the current activity of a business. It is currently not possible to measure the extent of any such inaccuracies.
	43 Results from the EAS are published in <i>Business Operations and Industry Performance</i> (Cat. no. 8140.0).
SYMBOLS AND OTHER USACES	n n not available for publication but included in totals where applicable

 SYMBOLS AND OTHER USAGES
 n.p.
 not available for publication but included in totals where applicable, unless otherwise indicated.

.....

GLOSSARY

Capital expenditure	The expected change in the value of capital expenditure in new tangible assets.
Goods and Services Tax	The Goods and Services Tax (GST) is excluded from all data items. However, the cost of complying with tax reform, e.g. the purchase of computer equipment or software, is included in the relevant data items.
Inventories	The expected change in the book value of inventories between the end of the collection quarter and the end of the reference periods.
Non-wage labour expenses	The expected change in the total amount of employment related expenses not paid directly to employees.
	Some of these expenses are payroll tax, worker's compensation and superannuation.
Operating income	The expected change in operating income derived from the sale of goods or the provision of services by a business in terms of value.
	Financial institutions report on the expected change in gross interest income plus fees and commissions.
	Non-profit or charitable organisations report on the expected change in fees received for services, donations from the public and government grants and subsidies.
Other operating expenses	The expected change in the total amount of all expenses which are not classified as labour expenses.
	Some of these expenses are overheads, advertising, raw materials and packaging and handling.
Paid persons working	The expected change in the number of paid persons working. Where part time or casual employees are involved employers are requested to convert to a full-time equivalent. It should be noted that most other ABS series which provide data on paid persons working do not use a full-time equivalent measure.
Profit	Profit is a derived item based on the present trading performance of a business and the expected changes to the level of sales of goods and services and the sum of all expense items.
	The difference between the new benchmarks for the <i>sales of goods and services</i> and the sum of all expenses items (the sum of <i>total wage expense, non-wage labour expense and all other operating expenses</i>) as determined by the responses received, the Economic Activity Survey benchmarks for those items and an indicator of present trading performance (cost/income ratio) are used to determine the expected change for profit for the reference periods.
	Because of reporting difficulties experienced with the cost/income ratios, caution should be exercised in interpreting profit expectations.
Reference periods	There are two reference periods surveyed each quarter:
	 Short-term (if the current quarter is June 2000, then the quarter being surveyed is September 2000); and Medium-term (if the current quarter is June 2000, then the quarter being surveyed is June 2001).

GLOSSARY

Selling prices	The expected change in the unit price of goods sold or services provided by the business. Where a business sells a range of products or services a representative product or service is used.
	Financial institutions report on interest rates, services and commissions charged.
	The benchmark for weighting the selling prices response is derived from associating selling prices with total expenses.
State information	State information has been derived for businesses in the survey which operate in more than one State.
	This has been achieved by
	 applying a weight (the proportion of a business' economic activity undertaken in each State) to the benchmarks for that business to arrive at potentially eight different benchmarks for each business performance indicator; and applying the overall percentage change in the business performance indicators obtained from the survey to each of the State benchmarks for each business performance indicator.
Total operating expenses	This is a derived estimate from the weighted response for the total of wage, non-wage labour and all other expenses.
Total wage expenses	The expected change in the total amount of direct wage and salaries paid to employees.

UNPUBLISHED DATA

AVAILABLE DATA	The amount of data collected from the Survey of Business Expectations is much greater than the data contained in this publication.
	Subject to the ABS provisions for maintaining the confidentiality of respondents and their information, more detailed information by industry and size of business may be made available on request.
SIZE OF BUSINESS	The size of business is based on employment. Additional data can be estimated for the following size ranges:
	 less than 20 employees; 20 to 99 employees; 100 to 599 employees;
	 600 or more employees; small (less than 20 employees except for manufacturers, where it is less than 100 employees);
	 medium (20 to 99 employees except for manufacturers, where it is 100 to 599 employees); and
	 large (100 or more employees except for manufacturers, where it is 600 or more employees).
INDUSTRY	Industry is classified according to ANZSIC and is available at the 1 and 2 digit level. Additional data is available for:
	15 industries categorised at the one digit ANZSIC level;47 industries categorised at the two digit ANZSIC level; anduser defined industry groups such as 'service industries'.
STATE INFORMATION	State information has been derived from the business activity conducted by business in each State. Where sufficient information is available to provide satisfactory estimates, data may be made available at the same level of detail as that for Australia. State information is subject to a greater degree of variance than the Australia data.
NET BALANCE	A weighted net balance for industries and size of business can be produced as a special data service.
MORE INFORMATION	For more information please contact the officer named at the front of this publication or write to:
	Business Expectations Survey Australian Bureau of Statistics PO Box 10
	Belconnen ACT 2616.
