| Participation rate (\%) | 63.6 | 63.5 | -0.1 |

## Seasonally Adjusted

Employed persons ('000) $9452.3 \quad 9532.9 \quad 80.6$
Unemployed persons ('000) $\quad 626.9 \quad 586.9 \quad-40.1$
$\begin{array}{lllll}\text { Unemployment rate (\%) } & 6.2 & 5.8 & -0.4 & \text { pts }\end{array}$
$\begin{array}{lllll}\text { Participation rate (\%) } & 63.4 & 63.5 & 0.2 & \text { pts }\end{array}$

## KEY POINTS

## TREND ESTIMATES

- EMPLOYMENT decreased to 9,496,100.
- UNEMPLOYMENT decreased to 608,300.
- UNEMPLOYMENT RATE decreased marginally to 6.0\%.
- PARTICIPATION RATE decreased to $63.5 \%$.

## SEASONALLY ADJUSTED ESTIMATES

- EMPLOYMENT increased by 80,600 to 9,532,900. Full-time employment increased by 63,500 to $6,821,400$ and part-time employment increased by 17,100 to $2,711,500$.
- UNEMPLOYMENT decreased by 40,100 to 586,900. The number of persons looking for full-time work decreased by 26,500 to 439,400 and the number of persons looking for part-time work decreased by 13,600 to 147,400 .
- UNEMPLOYMENT RATE decreased by 0.4 percentage points to $5.8 \%$. Both the male and female rates also decreased by 0.4 percentage points to $5.7 \%$ and $6.0 \%$ respectively. NSW 5.4\% (6.4\% last month), Vic 5.5\% (5.7\%), Qld 6.6\% (6.8\%), SA 5.8\% (6.0\%), WA $6.0 \%$ (6.2\%), Tas $6.9 \%$ (6.7\%).
- PARTICIPATION RATE increased by 0.2 percentage points to $63.5 \%$.

11 March 2004

In October 2003, the ABS will begin the progressive implementation of computer assisted interviewing (CAI) into the Labour Force Survey (LFS). LFS interviewers currently record survey responses by hand onto a paper questionnaire; under CAI, interviewers will record responses directly onto an electronic questionnaire in a laptop computer. Most other ABS household surveys currently use CAI.

Over the last two years, the ABS has been developing and testing a CAI version of the current LFS questionnaire and associated systems and procedures. The CAI version has been designed to replicate the current questionnaire and procedures as closely as possible. This has been done to minimise the chance of any impact on labour force series from the change to CAI.

In October 2003, approximately $10 \%$ of LFS interviews will be conducted using CAI. The proportion of interviews conducted using CAI will remain at 10\% until January 2004. Subject to the results of impact studies, it is intended to increase the use of CAI to $40 \%$ of interviews in February 2004, then to $70 \%$ in April 2004, and finally to $100 \%$ in May 2004.

The impact studies will involve extensive analysis of survey data each month, and are expected to confirm that the change in method is not having a significant impact on survey estimates.

Users will be informed of the progress of CAI implementation, including the results of impact studies, through updates in this publication.

For further information please contact Craig Blair on (02) 62526525.

Australian Statistician

EMPLOYED PERSONS

UNEMPLOYED PERSONS

UNEMPLOYMENT RATE

The trend estimate of employed persons generally rose from a low of 7,634,000 in January 1993 to 9,129,300 in September 2000. The trend then fell slightly to 9,112,900 in December 2000, before rising to 9,540,200 in March 2003. The trend has since fallen to stand at 9, 496,100 in August 2003.

The trend estimate of unemployed persons fell rapidly from 920,600 in September 1993 to 728,100 in July 1995 . The trend then rose to 771,800 in February 1997, before falling to 590,900 in September 2000. After rising to 675,900 in October 2001, the trend has generally fallen to stand at 608,300 in August 2003.

The trend unemployment rate fell rapidly from 10.7\% in August 1993 to 8.1\% in July 1995. The trend then rose slowly until February 1997, before falling to $6.1 \%$ in September 2000. The trend rate then rose to $6.9 \%$ in September 2001, before falling to $6.1 \%$ in October 2002. Since then, the trend has remained relatively stable, and stands at $6.0 \%$ in August 2003.

## STATES TREND ESTIMATES

## UNEMPLOYMENT RATE

NEW SOUTH WALES

VICTORIA

QUEENSLAND

The trend estimate of the unemployment rate for New South Wales fell steadily from $10.7 \%$ in February 1993 to $7.4 \%$ in November 1995. The trend then rose gradually, reaching $7.7 \%$ in April 1997, before falling to $5.3 \%$ in September 2000. The trend rate then rose to $6.3 \%$ in October 2001, before generally falling to stand at $5.9 \%$ in August 2003

The trend estimate of the unemployment rate for Victoria decreased from a peak of $12.1 \%$ in August 1993 to $8.2 \%$ in June 1996. The trend then rose until November 1996, before falling steadily to $5.8 \%$ in October 2000. The trend then rose to $6.5 \%$ in November 2001, before decreasing to $5.8 \%$ in August 2003 .

The trend estimate of the unemployment rate for Queensland decreased from a peak of $10.5 \%$ in September 1993 to $8.3 \%$ in December 1994. The trend then rose to $9.5 \%$ in February 1997, before generally falling to $7.3 \%$ in August 2000. After rising to $8.6 \%$ in May 2001, the trend rate has fallen to stand at $6.7 \%$ in August 2003.

## STATES TREND ESTIMATES continued

SOUTH AUSTRALIA

WESTERN AUSTRALIA

The trend estimate of the unemployment rate for South Australia declined from $11.2 \%$ in February 1993 to $8.9 \%$ in June 1996. The trend then rose slowly to $9.8 \%$ in July 1998. Apart from a small increase in early 2001, the trend rate has generally fallen for the last five years, and stands at $6.0 \%$ in August 2003.

The trend estimate of the unemployment rate for Western Australia fell to $7.0 \%$ in July 1995. The trend then rose slightly to $7.5 \%$ in July 1996 before generally falling to $5.9 \%$ in July 2000. The trend then rose sharply to $7.3 \%$ in June 2001 , before falling to stand at 6.0\% in August 2003.

The trend estimate of the unemployment rate for Tasmania fell from a peak of $12.5 \%$ in August 1993 to $9.1 \%$ in September 1995. After rising to 10.8\% in October 1997, the trend generally fell to $8.7 \%$ in September 1999. The trend estimate remained relatively steady until early 2003, then decreased sharply to stand at 7.0\% in August 2003.

(a) Trend estimates for February 2003 to July 2003 have been revised. Estimates for the most recent three months may be subject to significant revisions as data for later months become available.

## EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

TREND REVISIONS
Each time new seasonally adjusted estimates become available, trend estimates are revised (see paragraphs 19 and 20 of Explanatory Notes).

The examples in the tables below show two illustrative scenarios and the consequent revisions to previous trend estimates of employment and the unemployment rate.
(1) The September seasonally adjusted estimate is higher than the August estimate by: $0.30 \%$ for employment $1.90 \%$ for the unemployment rate
(2) The September seasonally adjusted estimate is lower than the August estimate by: $0.30 \%$ for employment $1.90 \%$ for the unemployment rate

The percentage changes of $0.30 \%$ and $1.90 \%$ were chosen because they represent the average absolute monthly percentage changes in employment and the unemployment rate respectively.

EMPLOYMENT

UNEMPLOYMENT RATE

INTRODUCTION<br>CONCEPTS, SOURCES AND METHODS

MONTHLY POPULATION SURVEY

SCOPE OF SURVEY

COVERAGE

1 This publication contains estimates of the civilian labour force derived from the Labour Force Survey component of the Monthly Population Survey. More detailed estimates are released one week after this publication in various electronic formats - see Labour Force, Australia, Detailed - Electronic Delivery (cat. no. 6291.0.55.001).

2 The conceptual framework used in Australia's Labour Force Survey aligns closely with the standards and guidelines set out in Resolutions of the International Conference of Labour Statisticians. Descriptions of the underlying concepts and structure of Australia's labour force statistics, and the sources and methods used in compiling the estimates, are presented in Labour Statistics: Concepts, Sources and Methods (cat. no. 6102.0) which is also available on the ABS web site [http://www.abs.gov.au](http://www.abs.gov.au) (About Statistics-Concepts and Classifications).

3 The population survey is based on a multi-stage area sample of private dwellings (currently about 30,000 houses, flats, etc.) and a list sample of non-private dwellings (hotels, motels, etc.), and covers about $0.45 \%$ of the population of Australia. The information is obtained from the occupants of selected dwellings by specially trained interviewers. The information obtained relates to the week before the interview (i.e. the reference week).
4 Households selected for the Labour Force Survey are interviewed each month for 8 months, with one eighth of the sample being replaced each month. The first interview is conducted face-to-face. Subsequent interviews are conducted by telephone (if acceptable to the respondent).

5 The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. Each year, to deal with operational difficulties involved with collecting and processing the Labour Force Survey around the Christmas and New Year holiday period, interviews for December start four weeks after November interviews start, and January interviews start five weeks after December interviews start. As a result, January interviewing may commence as early as the 8th or as late as the 14th, depending on the year. Occasionally, circumstances that present significant operational difficulties for survey collection can result in a change to the normal pattern for the start of interviewing.

6 Estimates from the Labour Force Survey are published first in this publication 31 days after the commencement of interviews for that month, with the exception of estimates for each December which are published 38 days after the commencement of interviews.

7 The Labour Force Survey includes all persons aged 15 and over except members of the permanent defence forces, certain diplomatic personnel of overseas governments customarily excluded from census and estimated population counts, overseas residents in Australia, and members of non-Australian defence forces (and their dependants) stationed in Australia.

8 In the Labour Force Survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are necessarily a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the survey is considered to be negligible.

9 Labour Force Survey estimates are calculated in such a way as to add up to independent estimates of the civilian population aged 15 and over (population benchmarks). From February 1999, labour force estimates have been compiled using benchmarks based on the results of the 1996 Census of Population and Housing. Small revisions were made to many of the historical estimates from January 1995 to January 1999. The ABS expects to introduce new benchmarks, based on the 2001 Census, in February 2004.

10 From April 1986, the definition of employed persons was changed to include persons who worked without pay between 1 and 14 hours per week in a family business or on a farm (i.e. contributing family workers). For further information, see paragraphs 36 and 37 of the Explanatory Notes to the February 1987 issue of Labour Force, Australia (cat. no. 6203.0).

11 The ABS introduced telephone interviewing into the Labour Force Survey in August 1996. Implementation was phased in for each new sample group from August 1996 to February 1997. During the period of implementation, the new method produced different estimates than would have been obtained under the old methodology. The effect dissipated over the final months of implementation and was no longer discernible from February 1997. The estimates for February 1997 and onwards are directly comparable to estimates for periods prior to August 1996. For further details, see the feature article in the June 1997 issue of Labour Force, Australia (cat. no. 6203.0).
12 From April 2001 the Labour Force Survey has been conducted using a redesigned questionnaire containing additional data items and some minor definitional changes. Core labour force series were revised for the period April 1986 to March 2001 to ensure continuity. For further details, see Information Paper: Implementing the Redesigned Labour Force Survey Questionnaire (cat. no. 6295.0) and Information Paper: Questionnaires Used in the Labour Force Survey (cat. no. 6232.0).

13 The Labour Force Survey sample was last reselected using information collected in the 2001 Census of Population and Housing.
14 The bulk of the new sample was phased in over the period November 2002 to June 2003, with one eighth of this portion of the sample being introduced every month. The remainder of the sample (about $18 \%$ of the total), which covers less settled areas of Australia and non-private dwellings was rotated in full for New South Wales, Victoria, Tasmania, Northern Territory and Australian Capital Territory in November 2002, and for Queensland, South Australia and Western Australia in December 2002. Such a pattern of implementation means that any changes to labour force estimates due to differences between the two samples, or any other influences, were spread over the eight months.

15 For further details, see Information Paper: Labour Force Survey Sample Design (cat. no. 6269.0).

SEASONAL ADJUSTMENT AND
TREND ESTIMATION

16 Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error.
Sampling error occurs because a sample, rather than the entire population, is surveyed. One measure of the likely difference resulting from not including all dwellings in the survey is given by the standard error. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included in the survey, and about nineteen chances in twenty that the difference will be less than two standard errors. Standard errors of estimates for the latest month and of estimates of movements since the previous month are shown on pages 31 and 32. Standard errors of other estimates and other movements may be determined by using information in the Technical Notes in Labour Force, Australia (cat. no. 6203.0).
Non sampling error arises from inaccuracies in collecting, recording and processing the data. Every effort is made to minimise reporting error by the careful design of questionnaires, intensive training and supervision of interviewers, and efficient data processing procedures.

17 Seasonally adjusted series are published in Tables 2,5 and 12 to 17. Seasonal factors are reviewed annually to take account of each additional year's original data. The results of the latest review were used to compile the seasonally adjusted and trend estimates given in this publication. Information about the last annual review of seasonal factors was published in a feature article in the February 2003 issue of Labour Force, Australia (cat no. 6203.0).

18 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:

Employment: 6 in 10 monthly movements
Unemployment: 8 in 10 monthly movements
Unemployment rate: 7 in 10 monthly movements Participation rate: 9 in 10 monthly movements.

19 The smoothing of seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series, and creates trend estimates. These trend estimates are derived by applying a 13 -term Henderson-weighted moving average to all months except the last six. The last six monthly trend estimates are obtained by applying surrogates of the Henderson average to the seasonally adjusted series. Trend series are used to analyse the underlying behaviour of the series over time. These are published in tables 3,6 and 12 to 19 .

20 While this smoothing technique enables estimates to be produced for the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller, and after three months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

EFFECTS OF ROUNDING

SYMBOLS AND OTHER USAGES

21 Trend estimates are published for the Northern Territory in table 18 and for the Australian Capital Territory in table 19. Unadjusted series for the two territories have shown, historically, a high degree of variability, which can lead to considerable revisions to the seasonally adjusted estimates after each annual seasonal factor re-analysis. Seasonally adjusted estimates are not currently published for the two Territories. The most recent six months trend estimates are subject to revision. For the three most recent months, the revision may be relatively large. Inferences about trends drawn from smoothed seasonally adjusted (trend) estimates for months earlier than the latest three months are unlikely to be affected by month to month revisions. They may be affected by revision resulting from the annual re-analysis of seasonal factors.

22 For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

23 Users may also wish to refer to Australian Labour Market Statistics (cat. no. 6105.0). This publication contains additional tables and a detailed list of related publications. For further information about this publication, please contact the Assistant Director, Labour Market Statistics on (02) 62526079.

24 ABS Information about the labour market can be found on the Labour theme page on the ABS web site <http:// www.abs.gov.au> (Themes-People, Labour), or from ABS Bookshops.

25 Current publications and other products released by the ABS are listed in the Catalogue of Publications and Products (cat. no. 1101.0). The Catalogue is available from any ABS office or the ABS web site [http://www.abs.gov.au](http://www.abs.gov.au) (Products and Services). The ABS also issues a daily Release Advice on the web site (Information on Releases) which details products to be released in the week ahead.

26 As well as the statistics included in this and related publications, the ABS may have other relevant data available. Inquiries should be made to Craig Blair on (02) 62526525 or to any ABS office.

27 Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

28 Estimates of movement shown in this publication are obtained by taking the difference of unrounded estimates. The movement estimate is then rounded to one decimal place. Therefore where a discrepancy occurs between the reported movement and the difference of the rounded estimates, the reported movement will be more accurate.

## STANDARD ERRORS

STANDARD ERRORS

LEVEL ESTIMATES

The estimates in this publication are based on information gained from the occupants of a sample survey of dwellings. Because the entire population is not surveyed, the published estimates are subject to sampling error. The most common way of quantifying such sampling error is to calculate the standard error for the published estimate or statistic.

To illustrate, let us say the published level estimate for employed persons aged 15 to 19 is 700,000 . The calculated standard error in this case is 9,800 . The standard error is then used to interpret the level estimate of 700,000 . For instance, the standard error of 9,800 indicates that:

- There are approximately two chances in three that the real value falls within the range 690,200 to $709,800(700,000+$ or $-9,800)$
- There are approximately nineteen chances in twenty that the real value falls within the range 680,400 to $719,600(700,000+$ or $-19,600)$.
The real value in this case is the result we would obtain if we could enumerate the total population.

The following table shows the standard errors for this month's level estimates.

## STANDARD ERRORS continued

movement estimates
The following example illustrates how to use the standard error to interpret a movement estimate. Let us say that one month the published level estimate for females employed part time in Australia is $1,890,000$; the next month the published level estimate is $1,900,000$. The calculated standard error for the movement estimate is 10,300 . The standard error is then used to interpret the published movement estimate of 10,000 . For instance, the standard error of 10,300 indicates that:

- There are approximately two chances in three that the real movement between the two months falls within the range -300 to $20,300(10,000+$ or $-10,300)$
- There are approximately nineteen chances in twenty that the real movement falls within the range $-10,600$ to $30,600(10,000+$ or $-20,600)$.

The following table shows the standard errors for this month's movement estimates.

## GLOSSARY

## Actively looking for work

Attending school
Attending tertiary educational institution full time

Civilian population aged 15
years and over

Employed

Full-time workers

Labour force
Labour force status

Not in the labour force
Participation rate

Part-time workers Employed persons who usually worked less than 35 hours a week (in all jobs) and either did so during the reference week, or were not at work in the reference week.

Seasonally adjusted series
A time series of estimates with the estimated effects of normal seasonal variation removed. See Explanatory Notes 17 and 18 for more detail.

Trend series A smoothed seasonally adjusted series of estimates. See Explanatory Notes 19 to 21 for more detail.

## Unemployed

## Unemployed looking for full-time work

## Unemployed looking for

 part-time workUnemployment rate

Unemployment to population ratio

Persons aged 15 years and over who were not employed during the reference week, and:

- had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week and:
- were available for work in the reference week; or
- were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the job had been available then.

Unemployed persons who:

- actively looked for full-time work and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new full-time job.

Unemployed persons who:

- actively looked for part-time work only and were available for work in the reference week; or
- actively looked for work and were not available for work in the reference week because they were waiting to start a new part-time job.

For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

For any group, the number of unemployed persons expressed as a percentage of the civilian population in the same group.
