 02 6252 6251, or any ABS office shown on the back cover of this publication.

## SEPTEMBER QTR KEY FIGURES

ESTABLISHED HOUSE PRICES	% change Jun Qtr 98 to Sep Qtr 98	% change Sep Qtr 97 to Sep Qtr 98
Weighted average of eight capital cities	0.0	6.7
Sydney	-0.9	7.8
Melbourne	0.8	12.4
Brisbane	1.0	3.4
Adelaide	-0.5	3.0
Perth	0.9	2.9
Hobart	-0.8	0.2
Darwin	-2.4	-5.2
Canberra	0.2	1.3

## SEPTEMBER QTR KEY POINTS

## ESTABLISHED HOUSE PRICES

## QUARTERLY CHANGES

- No movement was recorded in the price index of established houses in Australia between the June and September quarters 1998.
- The price rises in Brisbane (+1.0%), Perth (+0.9%), Melbourne (+0.8%) and Canberra (+0.2%) offset falls in Darwin (-2.4%), Sydney (-0.9%), Hobart (-0.8%) and Adelaide (-0.5%).
- This was the first quarter since the March quarter 1996 in which established house prices in Australia have not risen.

## ANNUAL CHANGES

- Over the year to September quarter 1998, the established house price index rose 6.7%.
- The price increases in Melbourne (+12.4%), Sydney (+7.8%), Brisbane (+3.4%), Adelaide (+3.0%), Perth (+2.9%), Canberra (+1.3%) and Hobart (+0.2%) more than offset a fall in Darwin (-5.2%).

## NOTES

FORTH	COMING	ISSUES	

December 1998 4 March 1999
March 1999 3 June 1999

## CHANGES IN THIS ISSUE

The fixed weighted housing investment deflator series for private capital expenditure (houses), shown in Tables 5 and 6 of this publication, has been replaced with the annually-reweighted chain Laspeyres price index for private capital expenditure (houses). See paragraph 13 of the Explanatory Notes.

W. McLennan Australian Statistician

## EXPLANATORY NOTES

#### INTRODUCTION

- 1 This publication provides estimates of changes in house prices for each of the eight capital cities of Australia. The information is presented in the form of price indexes constructed separately for Established Houses and for Project Homes (see below for definitions). It is calculated on the reference base 1989-90 = 100.0 for the eight capital cities. The capital city indexes measure price movements over time in each city individually. They do not measure differences in price levels between cities.
- 2 The index for Project Homes is compiled by the ABS for use in calculating the House purchase component of the Consumer Price Index (CPI). The index for Established Houses, while not contributing to the CPI, is compiled and published along with the Project Homes index in recognition of the widespread interest in information specifically relating to housing.
- **3** To assist in the analysis of housing price movements at the national level, Australian series have also been compiled and are presented in tables 5 and 6 along with series for prices of building materials and private housing investment (from the Australian National Accounts). For information on the derivation of series in these tables see paragraph 13.

#### DEFINITIONS

ESTABLISHED HOUSES 4 Detached residential dwellings on their own block of land regardless of age (i.e. including new houses sold as a house/land package as well as second-hand houses). Price changes therefore relate to changes in the total price of dwelling and land.

#### PROJECT HOMES

**5** Dwellings available for construction on a client's block of land. Price changes therefore relate only to the price of the dwelling (excluding land).

#### PRICE INDEXES

- **6** A price index is concerned with measuring pure price change—that is, it is concerned with isolating and measuring that element of price change which is not brought about by any change to either the quantity or the quality of the goods or services for which the index is required.
- 7 The techniques used to construct a price index for project homes are similar to those used for most other goods. A representative sample of project home models is selected in each city, prices obtained each quarter and the price movements for each model weighted together. Constant quality is preserved by calculating price movements on a matched sample basis (i.e. the price movements between adjacent quarters are based on the same models in each quarter). If the specification of an individual model changes substantially or a price is unable to be obtained then that model is excluded from the calculation of price movement. Adjustments are made to raw prices to compensate for any minor changes in specifications.
- 8 The construction of a price index for established houses, on the other hand, poses a number of problems. First, in addition to the physical characteristics of a dwelling (such as outer-wall construction, total overall size and number of rooms) its geographical location is a significant component of quality. Second, the only price data available relates to sales that have actually taken place during each quarter. Movements in the average price derived from total sales data in each period would not provide a measure of pure price change as the measure would be influenced by compositional changes (i.e. the prices from one period to the next would relate to houses of different quality).

## EXPLANATORY NOTES

PRICE INDEXES continued

- **9** In order to minimise the effects of compositional change on these indexes, the raw sales price data is stratified by geographic area and physical characteristics of dwelling. The overall movement in the index is calculated by weighting together the price movements in individual strata. To reduce costs, this procedure is carried out for a sample of Local Government Areas in each city.
- **10** Price information for project homes is obtained at the end of each quarter from a sample of project home builders in each city. Sale prices of established houses are obtained from real estate organisations and government agencies and relate to actual sales transacted during the quarter.

LIMITATIONS OF HOUSE PRICE INDEXES

- **11** The reliability of each index is largely dependent upon the availability of sufficient pricing information each quarter. While not a problem for project homes, difficulties are sometimes encountered when compiling the indexes for established houses as the number of price observations available across the range of dwelling types depends on market activity in each quarter.
- **12** The series most affected by limited market scope is the Darwin established house price index. Rather than suppress publication, the series is included here because it is believed that the long term trend is reliable. However, because of limitations in the reliability of individual quarter to quarter movements users are advised to exercise due caution when analysing such movements.

NATIONAL HOUSE PRICE AND OTHER INDEXES

**13** These series are presented to facilitate analysis of price movements at a national level. Although coverage is not, in all cases, strictly national, this is not believed to significantly impair their usefulness. The derivation or source of each series is as follows:

Established houses: This series is derived by weighting together the indexes for each of the eight capital cities according to the value of secured finance commitments to individuals in each of the States and Territories for the purchase of newly erected and established houses in 1985–86 until June quarter 1996, and thereafter commitments in 1994–95. The source of weighting information is unpublished data from the ABS survey of Housing Finance for Owner Occupation.

*Project homes*: This series is derived by weighting together the indexes for each of the eight capital cities according to the value of secured finance commitments to individuals in each of the States and Territories for the construction of houses in 1985–86 until June quarter 1996, and thereafter commitments in 1994–95. The source of weighting information is unpublished data from the ABS survey of Housing Finance for Owner Occupation.

Although the capital city price indexes for project homes are used to measure price change for the CPI House purchase expenditure class, price movements exhibited in the respective series at the national level are not directly comparable. The weighting pattern used in the CPI House purchase index differs from that described above for the project homes index. The CPI weights relate to the net acquisition of dwellings (excluding land) by private households in each of the eight capital cities (i.e. they include dwellings acquired from the government and business sectors, alterations and additions to existing dwellings and are capital city specific).

*Materials used in house building*: The series included here is that published for the weighted average of the six State capital cities in *Price Index of Materials Used in House Building, Six State Capital Cities* (6408.0).

## EXPLANATORY NOTES

NATIONAL HOUSE PRICE AND OTHER INDEXES continued

Private Housing Investment: This series is the annually-reweighted chain Laspeyres price index for private capital expenditure (houses), as used (but not separately published) in Australian National Accounts: National Income, Expenditure and Product (5206.0), referenced to 1989–90 = 100.0.

ANALYSIS OF CHANGES IN INDEX NUMBERS

- **14** The indexes presented in this publication are calculated on a quarterly basis with a reference base of 1989-90 = 100.0. In compiling these indexes quarterly, the objective is to measure the change between average price levels during one quarter and average price levels during the next quarter.
- **15** Index numbers are also presented for financial years where the index numbers for financial years are simple (arithmetic) averages of the quarterly index numbers. Index numbers for calendar years may be derived in the same way.
- **16** Movements in indexes from one period to another can be expressed either as changes in *index points* or as percentage changes. The following example illustrates the method of calculating index points changes and percentage changes between any two periods:

Established houses: Sydney index numbers —

September Quarter 1998 133.2 (see Table 1) less June Quarter 1998 134.4 (see Table 1) Change in index points: -1.2

Percentage change = 
$$\frac{-1.2}{134.4}$$
 x 100 = -0.9%

- **17** In this publication, percentage changes are calculated to illustrate three different kinds of movements in index numbers:
  - movements between consecutive financial years (change between average price levels during one financial year and average price levels during the next financial year)
  - movements between corresponding quarters of consecutive years
  - movements between consecutive quarters.

RELATED PUBLICATIONS

- **18** Users may also wish to refer to the following publications which are available on request:
  - Consumer Price Index (6401.0)—issued quarterly
  - Housing Finance for Owner Occupation, Australia (5609.0)—issued monthly
  - Price Index of Materials Used in House Building, Six State Capital Cities (6408.0)—issued quarterly
  - Australian National Accounts: National Income, Expenditure and Product (5206.0)—issued quarterly
  - Building Approvals, Australia (8731.0)—issued monthly
- Building Activity, Australia (8752.0)—issued quarterly.
- **19** Current publications issued by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.
