NOTES

ABOUT THIS PUBLICATION

This publication contains final estimates for the main commodities collected in the 2010–11 Agricultural Census. Included are statistics on land use, industry activity, crop and horticultural area and production, and livestock numbers.

Data at sub-state geographies such as Murray Darling Basin (MDB), Natural Resource Management (NRM) region, Statistical Division (SD), Statistical Local Area (SLA), Statistical Area 4 (SA4), Statistical Area 2 (SA2), River Basin and Drainage Division geographical levels will be released as separate datacubes attached to this publication in August 2012.

Additional content, attached to this publication as data cubes, includes: detailed commodity data and land use and management data for all states, territories and Australia.

The estimates in this publication are based on the Australian and New Zealand Standard Industrial Classification (ANZSIC) 2006 edition, which was adopted for the first time in 2005–06.

Further data from the 2010–11 Agricultural Census collection has been released in *Water Use on Australian Farms* (cat. no. 4618.0) and *Value of Agricultural Commodities Produced* (cat. no. 7503.0).

CHANGES IN THIS ISSUE

The Agricultural Census produces more detailed data on agricultural commodities and livestock breakdowns in comparison to the Agricultural Resource Management Survey (ARMS). For further details refer to the Explanatory Notes.

SUMMARY OF FINDINGS LAND USE

LAND USE

Area of farms in Australia increased in 2010-11, by 3% to 409.7 million hectares, in contrast to the declining trend of the previous five years. Increases in farm area were recorded in Queensland, South Australia, Tasmania and the Australian Capital Territory, whereas the remaining states and territories recorded a fall in area.

The area planted to crops in Australia rose by 24% in 2010-11 to 32.1 million hectares. All states recorded an increase in the area planted to crops, with the largest increase reported in New South Wales, where cropping area increased by 2.3 million hectares (or 33%) to 9.2 million hectares. Proportionally, the largest increase was in the Northern Territory, where the cropping area increased by over 400% to 37,000 hectares.

Approximately 53% of Australia's total land area was used for agriculture. On a state basis, Tasmania had the smallest proportion of farm land (24% of state area) while the highest was in Queensland (81% of state area).

AREA OF AUSTRALIAN FARMS, 2000-01—2010-11

BUSINESSES WITH AGRICULTURAL ACTIVITY

Tables 2 to 4 of this publication categorise businesses with agricultural activity into the industry that represents the business' main activity, using the Australian and New Zealand Industrial Classification (ANZSIC), 2006 edition. Where a business' agricultural activity is not the main activity, it has been included in *all other industries*. Table 2 presents the information by state and territory, Table 3 by Estimated Value of Agricultural Operations (EVAO) size ranges and Table 4 presents the information by area of holding ranges.

In 2010-11, the Agricultural Census revealed that the number of businesses undertaking agricultural activity had risen to a total of 135,447 businesses, a 1% increase compared with 2009-10.

Beef cattle farming remained the largest industry class in 2010-11, comprising 32% of businesses classified to the agriculture industry.

Notable movements in 2010-11 were an increase in the number of businesses with agricultural activity in citrus fruit growing, up by 23% to 1,125 businesses, and a 25% increase in apple and pear growing, up to 683 businesses.

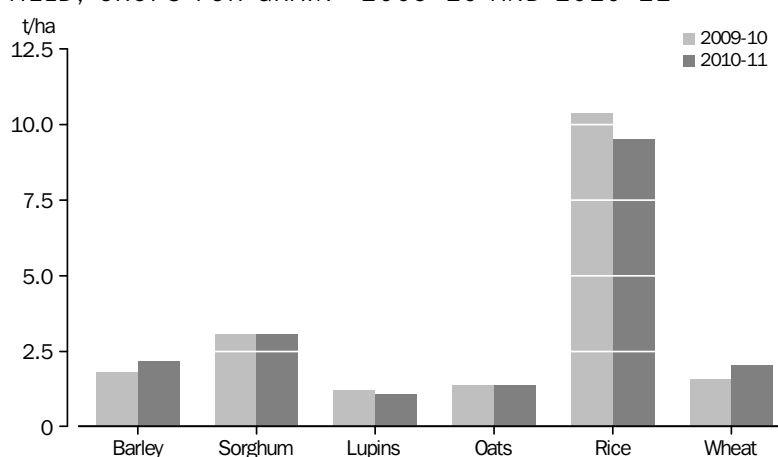

There was also a large percentage increase in the number of businesses with their main agricultural activity in rice and cotton farming, increasing by 175% and 109% respectively.

SUMMARY OF FINDINGS CROPS

OVERVIEW

Production increased for a number of broadacre crops in 2010-11, in particular cotton lint, rice, grain sorghum, wheat and canola. Despite major flooding throughout Queensland and northern New South Wales, rainfall was positive for summer crop development and boosted yields; however excessive rain affected some crops in low lying areas, notably cotton. Yields were generally good across most broadacre crops; however quality of grain was affected in some states as a result of rainfall during harvest. In 2010-11, parts of Western Australia reported the driest conditions on record, which resulted in decreases across all broadacre crops except grain sorghum.

YIELD, CROPS FOR GRAIN—2009-10 AND 2010-11

CROPS FOR GRAIN

Barley

The total area sown to barley in 2010-11 decreased by 17% to 3.7 million hectares, whereas national barley production increased by 2% to 8 million tonnes. Production of barley increased in all states except Western Australia, down by 39% to 1.5 million tonnes. New South Wales recorded the highest production of barley (2.2 million tonnes), which was a 77% increase from the previous year. South Australia and Victoria also recorded high production levels, with 2.1 million tonnes and 1.9 million tonnes respectively.

Grain sorghum

The total area sown to sorghum for grain in 2010-11 was 633,000 hectares. This was an increase of 27% from 2009-10. Queensland's area planted to grain sorghum was the highest with 435,000 hectares, an increase of 30% from the previous year. Queensland also recorded the highest production of sorghum (1.2 million tonnes), with an increase of 28%. Queensland's sorghum production made up 61% of the national total of 1.9 million tonnes. New South Wales also recorded a notable increase in production of 29% to 748,000 tonnes.

Lupins

There was a 9% increase in the total area sown to lupins in 2010-11, with 756,000 hectares sown. The states with the largest area planted to lupins were Western Australia (522,000 hectares) and New South Wales (128,000 hectares). Likewise, Western Australia and New South Wales produced the largest amount of lupins, with 398,000 tonnes and 252,000 tonnes respectively. Production decreased nationally by 2% to 808,000 tonnes.

SUMMARY OF FINDINGS CROPS *continued*

Oats

In 2010-11, both the area sown and the production level of oats decreased by 3%. The total area sown to oats for grain was 826,000 hectares and the total production was 1.1 million tonnes. New South Wales and Western Australia were states with the largest area planted to oats, sowing 321,000 hectares and 255,000 hectares respectively. New South Wales also recorded the highest level of production with 469,000 tonnes, which was an increase of 122%. Several states showed a decrease in production in 2010-11, namely Western Australia (down by 43%), Victoria (down by 21%) and South Australia (down by 14%).

Rice

In 2010-11, the total area sown to rice quadrupled to 76,000 hectares compared with the previous year, due to increased availability of water for irrigation. Similarly, production increased by 268% to 723,000 tonnes.

New South Wales planted the majority of rice (75,000 hectares), 99% of the national total.

Wheat

In 2010-11, the total area sown to wheat decreased by 3% to 13.5 million hectares. The states with the largest area planted to wheat were Western Australia (4.6 million hectares), New South Wales (3.8 million hectares) and South Australia (2.3 million hectares). Production of wheat for grain in 2010-11 was 27.4 million tonnes, which was an increase of 26% from the previous year. Wheat production increased across all states except Western Australia (down by 38%), with the most substantial increases seen in New South Wales (up by 96%), South Australia (up by 49%) and Victoria (up by 47%). The highest level of wheat production was recorded by New South Wales, with 10.4 million tonnes.

OTHER CROPS

Canola

The total area planted to canola in 2010-11 increased by 23% to 2.1 million hectares. Similarly, national canola production increased by 24% to 2.4 million tonnes. Production of canola increased in most states, particularly New South Wales with an increase of 186% to 805,000 tonnes. Western Australia produced the second highest canola crop with 715,000 tonnes; however this was a decrease of 31% from the previous year. The states with the largest area planted to canola were Western Australia (1.1 million hectares), New South Wales (479,000 hectares) and Victoria (323,000 hectares).

Sugar cane

The total area planted to sugar cane for crushing decreased by 21% to 308,000 hectares in 2010-11. Similarly, national production of sugar cane cut for crushing decreased by 19% to 25.2 million tonnes. Total sugar cane production in Queensland decreased by 20% to 23.6 million tonnes, while New South Wales production decreased by 18% to 1.6 million tonnes.

Cotton

In 2010-11, the total area planted to cotton tripled to 588,000 hectares. The states with the largest area planted to cotton were New South Wales with 330,000 hectares (up by 203%) and Queensland with 259,000 hectares (up by 195%). National production of cotton lint increased by 140% to 844,000 tonnes. Queensland and New South Wales reported increases in their cotton lint production, with 150% to 497,000 tonnes and 133% to 346,000 tonnes respectively.

SUMMARY OF FINDINGS HORTICULTURE

FRUIT

YIELD, FRUIT AND NUTS—2009-10 and 2010-11

(a) Yield is calculated on number of trees and bearing age.

Citrus

In 2010-11 production of oranges totalled 291,000 tonnes. The decrease of 26% from 2009-10 reflected consistent production decreases in South Australia (down by 30%), New South Wales (down by 27%) and Victoria (down by 22%). In contrast, the total number of bearing trees rose by 10% to 7.5 million nationally, evidenced by a substantial increase in Western Australia (up by 61%) to 265,000 trees.

The total number of bearing mandarin trees increased nationally in 2010-11 by 27% to 1.8 million trees. Production of mandarins also increased by 8% to 98,000 tonnes. A large decrease in production in New South Wales (down by 20%) was offset by increases in Queensland (up by 12% to 70,000 tonnes), Victoria (up by 24% to 4,000 tonnes) and Western Australia (up by 11% to over 2,000 tonnes).

Pome

Australia's total apple production increased by 13% from 2009-10 to 300,000 tonnes. This was largely influenced by the substantial increase of bearing trees in New South Wales (up by 27%) and South Australia (up by 54%), resulting in increased production, up by 58% and 37% respectively. Production in Western Australia and Tasmania fell by 22% and 13% respectively. Victoria produced the largest apple crop in Australia with over 129,000 tonnes in 2010-11.

The trend of increasing production of pome fruits in Australia was also exhibited by pear production, with a 30% increase in 2010-11 from the previous year, to 123,000 tonnes. The main contributors to this large increase in production were New South Wales (up by 63%), South Australia (up by 41%) and Victoria (up by 34%). The number of pear bearing trees also increased notably in New South Wales and Victoria, rising by 26% and 17% respectively. Victoria produced the largest pear crop with over 109,000 tonnes.

Other fruit and nuts

Mango production decreased nationally by 17% in 2010-11 to 37,000 tonnes, driven by a significant decrease in production numbers in New South Wales and Queensland. Queensland's production, affected by flooding, rainfall and Cyclone Yasi, fell by 34% to 19,000 tonnes and New South Wales's mango production fell by 81% to 83 tonnes. Queensland and Northern Territory (15,000 tonnes) continued to be the main contributing states for mango production.

*Other fruit and nuts
continued*

Australia's banana production totalled 203,000 tonnes in 2010-11, which was a decrease of 33% from 2009-10. This decrease was largely due to the destruction caused by Cyclone Yasi, which struck in early 2011. The damage caused by this cyclone contributed to the decrease of 48% in Northern Territory's banana production and 35% in Queensland's banana production. The total bearing area for bananas fell by 3% to 11,000 hectares.

Macadamia production decreased by 9% in 2010-11 despite an increase in the number of trees. The national decrease was largely due to adverse seasonal conditions causing decreased production in New South Wales (down by 14% to 16,000 tonnes) and Western Australia (down by 50% to 35 tonnes), and only a 1% increase in Queensland to 13,000 tonnes.

In 2010-11, the total bearing area of strawberries increased by 60% to over 2,000 hectares, owing to a 137% increase in bearing area in Victoria, where 40% of Australia's strawberries were produced. Strawberry production increased by 5% to 31,000 tonnes. Falls of 23% in New South Wales and 15% in Queensland were more than offset by a 62% rise in Western Australia's strawberry production.

**VEGETABLES FOR HUMAN
CONSUMPTION**

Carrots

National production of carrots in 2010-11 decreased by 16% from 2009-10 to 225,000 tonnes. This is directly correlated with the area sown for carrots in 2010-11, which also decreased by 16% from the previous year to 5,000 hectares. The states with the highest carrot production were Western Australia (65,000 tonnes) and Tasmania (54,000 tonnes). The majority of the carrot producing states displayed a decrease in production levels, with New South Wales (down by 53%) and Queensland (down by 44%) being the most notable.

Mushrooms

Mushroom production totalled 50,000 tonnes in 2010-11, a rise of 20% from the previous year. The largest increases were in Victoria up 20% to 18,000 tonnes, and New South Wales, also up 20% to 18,000 tonnes offsetting a decrease in mushroom production in South Australia of 21%, down to just under 3,000 tonnes. Nationally, the area planted to mushrooms increased by 16% up to 1.6 million square meters.

Onions

The total area sown to onions in 2010-11 was 6,000 hectares. This was an increase of 15% from the previous year. Onions were mainly grown in South Australia (2,000 hectares), Tasmania (2,000 hectares) and Queensland (1,000 hectares). Production of onions in 2010-11 totalled 331,000 tonnes. In South Australia, production was 130,000 tonnes, a 45% increase from the previous year. Tasmania produced the second largest crop of onions with 93,000 tonnes. Onion production in Queensland rose by 26% to 37,000 tonnes.

Potatoes

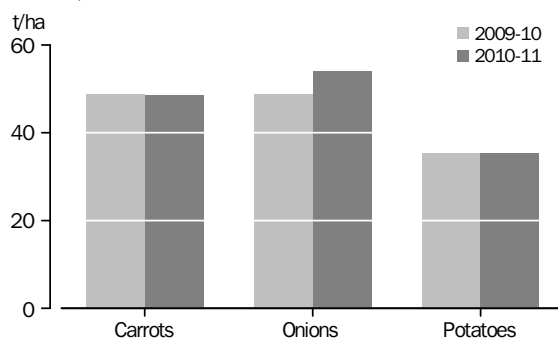

The total production for potatoes in 2010-11 was 1.1 million tonnes. This was a decrease of 12% from 2009-10.

The national decline was contributed to by Tasmania (252,000 tonnes) down by 24%, New South Wales (111,000 tonnes) down by 16%, Victoria (237,000 tonnes) down by 14% and Queensland (88,000 tonnes) down by 8%. The total area sown to potatoes in 2010-11 was 32,000 hectares, which was a decrease of 12% from the previous year. South Australia and Victoria were large growing areas for potatoes at 9,000 hectares and 8,000 hectares respectively.

Tomatoes

National production of tomatoes in 2010-11 fell by more than one third to 302,000 tonnes due mainly to heavy rain and flooding in Victoria and New South Wales. Production declined by 69% in Victoria to 88,000 tonnes and by 14% in New South Wales to 47,000 tonnes. The national area planted to tomatoes rose by 7% to over 8,000 hectares.

YIELD, VEGETABLES—2009-10 AND 2010-11

SUMMARY OF FINDINGS LIVESTOCK

LIVESTOCK

Dairy cattle

As at 30 June 2011, the number of dairy cattle increased by 1% to 2.6 million head nationally. Tasmania showed the largest percentage increase in dairy cattle numbers, with an increase of 16% to 223,000 head. Victoria continued to report the highest number of dairy cattle (1.6 million head), which was 62% of the national herd. New South Wales recorded a 6% decrease of dairy cattle compared with 2009-10.

Meat Cattle

Meat cattle recorded on agricultural holdings at 30 June 2011 totalled 25.9 million head, an increase of 8% since 2009-10. Meat cattle accounted for 91% of the cattle herd in Australia. Notable increases in meat cattle numbers were recorded in Queensland, by up 11% to 12.5 million, Victoria, up by 14% to 2.4 million and South Australia, up by 23% to 1.1 million.

Sheep and lambing

Sheep and lamb numbers increased by 7% from 68.1 million head on 30 June 2010 to 73.1 million head at 30 June 2011. All states recorded an increase in sheep numbers, except Western Australia, down by 5% to 14.0 million head. The largest increases in sheep numbers were recorded by South Australia, up by 22% to 11.0 million head and Tasmania, up by 18% to 2.3 million head. New South Wales recorded the highest number of sheep with 26.8 million head. During 2010-11, the number of lambs marked in Australia was reported as 33.3 million, which was an increase of 4% from the previous year.

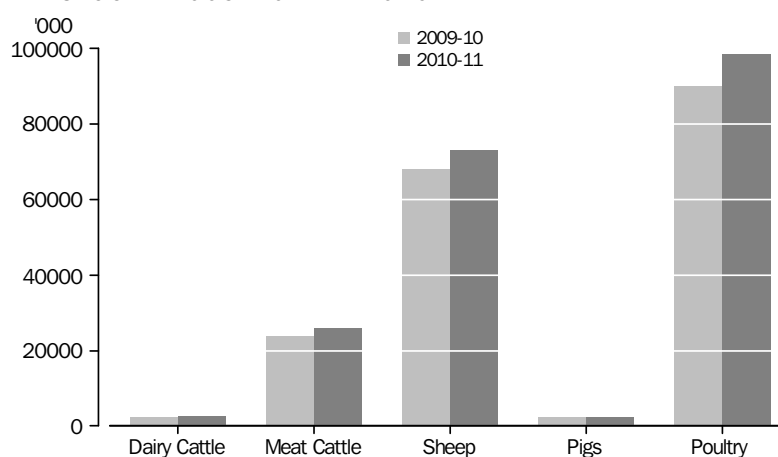

Pigs

Total pig numbers recorded on 30 June 2011 in Australia remained steady at 2.3 million head. Notable increases in pig numbers were recorded in Western Australia (up by 23% to 269,000 head), Queensland (up by 10% to 639,000 head), and Tasmania (up by 16% to 13,000 head). However these were offset by a drop in New South Wales of 99,000 (or 17% to 486,000 head).

Chickens

The total number of chickens for egg production on holdings as at 30 June 2011 increased by 12% to 13.1 million, reversing the previous four year trend of decline. Meat chicken numbers increased nationally by 9% to 77.6 million, with New South Wales recording the highest number of meat chickens (29.6 million chickens), 38% of the national total.

^ estimate has a relative standard error of 10% to less than 25% and should be used with caution

- (a) Excludes crops harvested for hay and seed, and pastures and grasses.
- (b) Total area of agricultural businesses with an EVAO of \$5,000 or more.
- (c) Non-agricultural land is the difference between agricultural land as reported in the Agricultural Census, Agricultural Survey or ARMS and the total land area of the state/territory. It comprises conserved land, forestry, urban and unused land such as vacant Crown land, commercially unused land on Aboriginal and other Crown reserves and waste land, ephemeral lakes and mangrove swamps, as well as establishments not included in the scope of the Agricultural Census.
- (d) Total area of Australia includes Jervis Bay.

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains final estimates for the main commodities collected in the 2010–11 Agricultural Census. Included are statistics on land use, industry activity, crop and horticultural area and production, and livestock numbers.

2 Data at sub-state geographies such as Murray Darling Basin (MDB), Natural Resource Management (NRM) region, Statistical Division (SD), Statistical Local Area (SLA), Statistical Area 4 (SA4), Statistical Area 2 (SA2), River Basin and Drainage Division geographical levels will be released as separate datacubes attached to this publication in August 2012.

GENERAL

3 The Agricultural Census is conducted once every five years, with the Agricultural Resource Management Survey (ARMS) and the Agricultural Survey (AS) conducted in alternate years between Censuses. The main objective of the Agricultural Census is to provide benchmark information on the agriculture sector for small geographic areas. The 2010-11 Agricultural Census provides estimates for a range of agricultural commodity items, including broadacre cropping, horticultural production, livestock and land preparation. Care should be taken when comparing estimates over time as not all categories directly align between years. For example, a greater range of commodity items was collected for the 2010-11 Agricultural Census in comparison to the previous 2009-10 ARMS. Commodity information for the 2009-10 ARMS year is included where possible.

4 Agricultural water use data collected as part of the 2010–11 Agricultural Census will be released in *Water Use on Australian Farms* (cat. no. 4618.0). Data related to the gross and local values of production of major agricultural commodities for all states will be released in *Value of Agricultural Commodities Produced, Australia* (cat. no. 7503.0).

5 Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

CROPS, PASTURES AND HORTICULTURE

6 Statistics on area and production of crops relate, in the main, to crops sown during the year ended 30 June. Statistics of perennial crops relate to the position at 30 June and the production during the year ended on that date, or fruit set by that date.

LIVESTOCK SLAUGHTERING AND LIVESTOCK PRODUCTS

7 Livestock slaughtering and livestock products, including milk and wool data, and poultry slaughtering are no longer included in this publication. Further information can be found in the publication *Livestock Products, Australia* (cat. no. 7215.0).

INDUSTRY CLASSIFICATION

8 The industry classification used in this publication is the 2006 version of the Australian and New Zealand Standard Industrial Classification (ANZSIC). Prior to the 2005–06 issue of this publication, estimates were based on the ANZSIC 1993 edition. ANZSIC 2006 was developed to provide a more contemporary industrial classification system taking into account issues such as changes in the structure and composition of the economy, changing user demands and compatibility with major international classification standards. For more information, please refer to *Australian and New Zealand Standard Industrial Classification (ANZSIC), 2006* (cat. no. 1292.0).

STATISTICAL UNITS USED

9 Since 2005–06, the ABS has used an economic statistics units model on the ABS' Business Register (ABSBR) to describe the characteristics of businesses and the structural relationships between related businesses. The units model is used within large and diverse business groups to define reporting units that can provide data to the ABS at a suitable level. The ABSBR is based on the Australian Business Register (ABR) which is administered and maintained by the Australian Taxation Office (ATO).

10 Respondents to the 2010–11 Agricultural Census were businesses undertaking agricultural activity drawn from the ABS Business Register.

EXPLANATORY NOTES *continued*

SCOPE AND COVERAGE

11 The scope of the 2010–11 Agricultural Census included all businesses undertaking agricultural activity recorded on the ABS Business Register (ABSBR) above a minimum size cut-off of \$5,000.

12 The measure of size was based on the ABS' Estimated Value of Agricultural Operations (EVAO) or a derived value based on Business Activity Statement (BAS) turnover if EVAO was not available.

13 While the ABSBR does not include all agricultural businesses in Australia, it provides improved coverage from the former ABS maintained Agricultural Survey frame, as most businesses and organisations in Australia need to obtain an Australian Business Number (ABN) from the ABR for their business operations. The ABR based register is also more up-to-date as it excludes agricultural businesses with cancelled ABNs and incorporates regularly updated information on agricultural businesses from the ABR and ATO.

14 For the 2010–11 Agricultural Census, a response rate of 88% was achieved from an in-scope population of approximately 165,000 agricultural businesses. This was the first agricultural collection to use an e-form, and the e-form achieved a take up rate of 11%.

RELIABILITY OF ESTIMATES (SAMPLE ERROR)

15 The estimates in this publication are based on information obtained from the agricultural businesses that responded to the Agricultural Census. However, since not all of the businesses that were selected provided data, the estimates are subject to sampling variability; that is, they may differ from the figures that would have been produced if all businesses had provided data. One measure of the likely difference is given by the standard error (SE) which indicates the extent to which an estimate might vary by chance because only a sample was taken or had responded. There are about two chances in three that a 'sample' estimate will differ by less than one SE from the figure that would have been obtained if all businesses had responded, and about nineteen chances in twenty that the difference will be less than two SEs.

16 In this publication, 'sampling' variability of the estimates is measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers.

17 Most published national estimates have RSEs less than 5%. For some states with limited production of certain commodities, RSEs are greater than 10%. Estimates that have an estimated RSE between 10% and 25% are annotated with the symbol '^'. These estimates should be used with caution as they are subject to sampling variability too high for some purposes. Estimates with an RSE between 25% and 50% are annotated with the symbol '*', indicating that the estimate should be used with caution as it is subject to sampling variability too high for most practical purposes. Estimates with an RSE greater than 50% are annotated with the symbol '**' indicating that the sampling variability causes the estimates to be considered too unreliable for general use. Separate indication of the RSEs of all estimates is available on request.

18 A table with RSEs for selected commodities follows:
