INTRODUCTION

This publication presents statistics on livestock slaughterings and meat production. These statistics are based on a monthly collection from abattoirs and other major slaughtering establishments. More detailed information on this series can be obtained by referring to the Australian Bureau of Statistics (ABS) quarterly publication, *Livestock Products, Australia* (cat. no. 7215.0).

Additional time series spreadsheets containing state/territory and national data are available from the Downloads tab for this publication. These spreadsheets contain original, seasonally adjusted and trend estimates for slaughtering and meat production for bulls, bullocks and steers, cows and heifers, cattle (excluding calves), calves, sheep, lambs and pigs.

The ABS welcomes any comments from readers regarding the usefulness, range and quality of the statistics presented in this publication. Comments can be forwarded to: The Environment and Agriculture Business Statistics Centre, Australian Bureau of Statistics, GPO Box 66, Hobart TAS 7001. Alternatively, email <a href="mailto:<a href="

MAIN FEATURES

LIVESTOCK

- In May 2010, the trend estimate for cattle slaughterings continued to increase, up 1% from April 2010 to 640 thousand.
- The trend estimate for sheep slaughterings continued to fall in May 2010, down to 518 thousand, a decrease of 44% from May 2009.
- The trend estimate for lamb slaughterings is down 10% from May 2009.
- Pig slaughterings in May 2010 remained steady at 384 thousand.

LIVESTOCK SLAUGHTERED, Australia-May 2010

MEAT

- In May 2010, the trend estimate for beef production rose 1% from April 2010, to 175 thousand tonnes.
- The trend estimate for mutton production continues to decline, falling 40% from May 2009 to 12 thousand tonnes.
- In May 2010 lamb production decreased 5% from May 2009.
- Pig meat production remained stable in May 2010 at 28 thousand tonnes.

MEAT PRODUCED, Australia—May 2010

	Original	Seasonally Adjusted	Trend
	t	t	t
Beef	189 578	176 918	175 340
Veal	3 481	3 616	3 608
Mutton	10 707	11 841	11 561
Lamb	36 856	35 243	34 423
Pig meat	29 974	28 464	28 196

EXPLANATORY NOTES

INTRODUCTION

- **1** This publication contains information on livestock slaughterings and meat production.
- **2** The statistics on slaughterings for red meat production are based on a monthly collection from abattoirs and other major slaughtering establishments and include estimates of animals slaughtered on farms and by country butchers and other small slaughtering establishments.
- **3** Red meat is shown in carcass weight and excludes offal.
- **4** Care should be taken when using this information as the figures only relate to slaughterings for human consumption and do not include animals condemned, slaughtered for pet food or those killed for boiling down.
- **5** The figures in this publication have been rounded. As a result, discrepancies may occur between sums of the component items and totals.

SEASONAL ADJUSTMENT

- **6** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences can be more clearly recognised.
- **7** In the seasonal adjustment of the livestock estimates, account has been taken of both normal seasonal factors and 'trading day' effects, where significant. Seasonal adjustment does not remove from the series the effect of irregular influences (e.g. abnormal weather, industrial disputes).
- **8** As for the seasonally adjusted state components, the state component trend estimates have been produced independently and therefore may not add up to the Australian group totals.
- **9** In this publication, the seasonally adjusted estimates are produced by the concurrent seasonal adjustment method which takes account of the latest available original estimates. This method improves the estimation of seasonal factors and, therefore, the seasonally adjusted and trend estimates for the current and previous months. As a result of this improvement, revisions to the seasonally adjusted and trend estimates will be observed for recent periods. A more detailed review is conducted annually.
- **10** For further information, see *Time Series Analysis Frequently Asked Questions*, 2003 (cat. no. 1346.0.55.002).
- **11** From September 2007, improved methods of producing seasonally adjusted estimates, focused on the application of Autoregressive Integrated Moving Average (ARIMA) modelling techniques, were implemented. The ARIMA modelling technique can be used to extend original estimates beyond the end of a time series.
- **12** For further information on ARIMA modelling, see the feature article '*Use of ARIMA modelling to reduce revisions*' in Australian Economic Indicators, Oct 2004 (cat. no. 1350.0).

TREND ESTIMATES

- **13** A trend estimate is obtained by reducing the irregular component from the seasonally adjusted series. For monthly data, trend estimates are derived by applying a 13-term Henderson moving average to the seasonally adjusted series. Revisions of trend estimates will occur with revisions to the original data and re-estimation of seasonal factors.
- **14** For further information, see *Information Paper: A Guide to Interpreting Time Series Monitoring Trends, 2003* (cat. no. 1349.0).

RELATED PUBLICATIONS

15 Current publications and other products released by the ABS are listed under the Statistics and Topics @ a Glance pages on the ABS website http://www.abs.gov.au. The ABS also issues a daily Release Advice on the website which details products to be released in the week ahead.

EXPLANATORY NOTES continued

RELATED PUBLICATIONS continued

- **16** Other ABS publications containing livestock data include:
 - Agricultural Commodities, Australia (cat. no. 7121.0)
 - Agricultural Commodities: Small Area Data, Australia (cat. no. 7125.0)
 - Livestock Products, Australia (cat. no. 7215.0)
 - Value of Agricultural Commodities Produced, Australia (cat. no. 7503.0)

GENERAL ACKNOWLEDGMENT

17 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated. Without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the *Census and Statistics Act 1905*.
