## NOTES

ABOUT THIS PUBLICATION

## ABOUT THE SURVEYS

COMMENTS ON THIS PUBLICATION

This publication presents statistics on the use of Information Technology (IT) by farms in Australia. The data were obtained from questions included in the 1998-99 Agricultural Commodity Survey and from a supplementary survey of farms with Internet access. Some comparisons have been included with data collected in the 1997-98 Agricultural Commodity Survey. Preliminary results from the 1998-99 Agricultural Commodity Survey were published on 23 December 1999 in Use of Information Technology on Farms, Australia, 1998-99, Preliminary (Cat. no. 8134.0).

The statistics in this publication relate to farms in scope of the Agricultural Commodity Survey, i.e. farms with an estimated value of agricultural operations (EVAO) of \$5,000 or more. The 1998-99 Agricultural Commodity Survey sampled approximately $25 \%$ of the farming establishments operating in Australia in March 1999 and included information technology questions on farm use of a computer and the Internet as at March 1999. The supplementary 1998-99 Agriculture Internet Use Survey was forwarded to farm establishments which had indicated in the 1998-99 Agricultural Commodity Survey that they were using the Internet. The supplementary survey included questions on place and frequency of Internet access, cost of Internet access, services accessed via the Internet and purchases of goods and services via the Internet.

The ABS welcomes comments and suggestions on data items for inclusion in future surveys. Please contact the Director, Science and Technology Statistics Section, Australian Bureau of Statistics, PO Box 10, Belconnen ACT 2616, or phone Canberra 0262525019.

## MAIN FINDINGS

AUSTRALIA

STATE/TERRITORY

STATISTICAL DIVISION

SIZE OF FARM

FARM INDUSTRY

PLACE AND FREQUENCY OF ACCESS

Almost half (49\%) of 147,181 Australian farms, with an estimated value of agricultural operations of $\$ 5,000$ or more, owned or used a computer at March 1999. This was a $27 \%$ increase over the number of farms using a computer at March 1998. There were substantially fewer farms using the Internet at March 1999 (18\%). However, this represented a 65\% increase in the number of farms using the Internet since March 1998.

Of all the States and Territories at March 1999, the Northern Territory and the Australian Capital Territory had the highest proportion of farms for both computer use ( $65 \%$ and $64 \%$ respectively) and Internet use ( $31 \%$ and $26 \%$ respectively). Of the States, Western Australia had the highest proportion of farms using a computer (59\%) and Tasmania had the highest proportion of farms using the Internet (22\%). Queensland had the lowest proportion for both computer use (45\%) and Internet use (16\%).

Of the non-capital city Statistical Divisions, Kimberley in Western Australia had the highest proportion of farms which used a computer (67\%) at March 1999. Gippsland in Victoria and Wide Bay-Burnett in Queensland had the lowest proportion of farms using a computer (both $37 \%$ ). For Internet use, Northern Territory-Balance (30\%) and Kimberley (29\%) had the highest proportion of farms using the Internet. The lowest Internet use was recorded in Pilbara in Western Australia (5\%) and Gippsland (11\%).

The proportion of farms with a computer and the Internet generally increased with size as measured by the level of EVAO (estimated value of agricultural operations) for Australia and for each of the States. Computer use for Australia increased from 39\% to $84 \%$ and Internet use increased from $14 \%$ to $42 \%$ when comparing farms with an EVAO of less than $\$ 25,000$ to those with an EVAO of $\$ 1$ million or more.

Cotton growing and Plant nurseries had the highest proportion of farms using both a computer ( $76 \%$ and $71 \%$ respectively) and the Internet (both $36 \%$ ). Beef cattle farming had the lowest proportion of farms for both computer use (38\%) and Internet use (12\%).

Of the farms using the Internet, $81 \%$ accessed only from home,
$4 \%$ accessed at home and elsewhere, and $15 \%$ accessed away from home only. Most of the farms accessed the Internet 2 to 6 times per week (46\%) or once a week or less (30\%). Only $24 \%$ of farms accessed the Internet daily.

Most of the farms had Internet costs in the range of \$101-\$250 (37\%) over the year to March 1999. Around $24 \%$ had costs in the range of $\$ 251-\$ 500$ and $23 \%$ had Internet costs of $\$ 100$ or less over the year. Only $10 \%$ of farms recorded costs over $\$ 500$.

Just under 4\% of Australian farms shopped on the Internet during the year to March 1999. Computer software/equipment (41\%) and books/magazines (36\%) were the most popular types of purchase/order by Internet shopping farms. Purchase/order of farm machinery, materials, livestock, etc were made by only $20 \%$ of farm Internet shoppers. Around $24 \%$ of the farm Internet shoppers spent over $\$ 1,000$ in the year to March 1999. Around 71\% of farm Internet shoppers paid for their purchases/orders online.

## FARM USE OF COMPUTERS AND THE INTERNET

REGIONAL USE OF COMPUTERS

At the end of March 1999, an estimated $49 \%$ (or 72,615 ) of the 147,181 farms in Australia owned or used a computer. This represents a $27 \%$ increase over the number of farms using a computer at March 1998.

The Northern Territory (65\%), the Australian Capital Territory (64\%) and Western Australia (59\%) had the highest proportion of farms using a computer at March 1999. Queensland (45\%) and the three States of New South Wales, Victoria and Tasmania (all with 49\%) had the lowest proportion of farms using a computer.

FARMS USING A COMPUTER, BY STATE/TERRITORY

Over the year to March 1999, the largest increase in the number of farms using a computer occurred in Tasmania (up 36\% over March 1998) and Victoria (up 34\%).

|  | March 1998 |  | March 1999 |  |
| ---: | ---: | ---: | ---: | ---: |

[^1]Highest SDs The Statistical Divisions in each State (outside the capital city Statistical Divisions) with the highest proportion of farms using a computer were:

- Murray (57\%) and IIlawarra (55\%) in New South Wales;
- Mallee (58\%) and Ovens-Murray (56\%) in Victoria;
- Mackay (58\%) and Fitzroy (50\%) in Queensland;
- Eyre (57\%), Yorke and Lower North (55\%) in South Australia;
- Kimberley (67\%) and Upper Great Southern (65\%) in Western Australia; and
- Northern (50\%) in Tasmania.

Lowest SDs The Statistical Divisions in each State (outside the capital city Statistical Divisions) with the lowest proportion of farms using a computer were:

- Mid-North Coast and Richmond-Tweed (both $41 \%$ ) in New South Wales;
- Gippsland (37\%) and Central Highlands (43\%) in Victoria;
- Wide Bay-Burnett (37\%), Moreton and Northern (both 41\%) in Queensland;
- Murray Lands and South East (both 51\%) in South Australia;
- South West (50\%) and Lower Great Southern (55\%) in Western Australia; and
- Southern (47\%) in Tasmania.

FARMS USING A COMPUTER, BY STATISTICAL DIVISION-MARCH 1999

For identification of individual Statistical Divisions, please see the reference map at the back of this publication.

REGIONAL USE OF THE INTERNET

At the end of March 1999, an estimated $18 \%$ (or 25,927 ) of the 147,181 farms in Australia used the Internet. This represents a 65\% increase over the number of farms using the Internet at March 1998.

The Northern Territory (31\%) and the Australian Capital Territory (26\%) had the highest proportion of farms using the Internet at March 1999. Queensland (16\%) and Victoria (17\%) had the lowest proportion of farms using the Internet.

FARMS USING THE INTERNET BY STATE/TERRITORY

Over the year to March 1999, the largest increase in the number of farms using the Internet occurred in Western Australia (up 78\% over March 1998) and Tasmania (up 76\%).

2
FARMS USING THE INTERNET, BY STATE/TERRITORY

|  | March 1998 |  |  |

| Australia | 15680 | 10.8 | 25927 | 17.6 | 65.4 |

(a) Percentages are of all farms.
(b) Percentages are of farms using the Internet.

Highest SDs The Statistical Divisions in each State (outside the capital city Statistical Divisions) with the highest proportion of farms using the Internet were:

- Illawarra (27\%) and Hunter (22\%) in New South Wales;
- Mallee (26\%) and Goulburn (17\%) in Victoria;
- Mackay (23\%) and Central West (20\%) in Queensland;
- Outer Adelaide and Murray Lands (both 21\%) in South Australia;
- Kimberley (29\%) and Upper Great Southern (20\%) in Western Australia; and
- Southern (24\%) in Tasmania.

Lowest SDs The Statistical Divisions in each State (outside the capital city Statistical Divisions) with the lowest proportion of farms using the Internet were:

- Mid-North Coast (15\%), Northern and Murrumbidgee (both 17\%) in New South Wales;
- Gippsland (11\%) and Barwon (12\%) in Victoria;
- Wide Bay-Burnett (13\%), Fitzroy and Darling Downs (both 14\%) in Queensland;
- Eyre (16\%) and South East (17\%) in South Australia;
- Pilbara (5\%), South West, South Eastern and Midlands (all 16\%) in Western Australia; and
- Northern and Mersey-Lyall (both 21\%) in Tasmania.

Computer use At March 1999, the farm industries which had the highest proportion of farms using a computer were Cotton growing (76\%), Plant nurseries (71\%), Poultry farming for meat (67\%) and Livestock farming n.e.c. (66\%). The farm industries which had the lowest proportion of farms using a computer were Beef cattle farming (38\%), Sugar cane growing (42\%), Sheep farming (44\%) and Vegetable growing (45\%).

Internet use The farm industries which had the highest proportion of farms using the Internet at March 1999 were Cotton growing and Plant nurseries (both $36 \%$ ) and Livestock farming n.e.c. (32\%). The farm industries which had the lowest proportion of farms using the Internet were Beef cattle farming (12\%) and Dairy cattle farming and Sheep farming (both 14\%).

[^2](b) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

There was some variation in the proportion of farms using a computer and the Internet in the broad farm industry groupings across States at March 1999 as shown in table 5.

Computer use On the use of a computer the details were:

- Horticulture and fruit growing (Australia 57\%)—the highest was Victoria (65\%) and the lowest was New South Wales (52\%);
- Grain, sheep and beef cattle farming (Australia 47\%)-the highest was Western Australia (59\%) and the lowest was Queensland (40\%);
- Dairy cattle farming (Australia 51\%) - the highest was Western Australia (57\%) and the lowest was Queensland (41\%);
- Poultry farming (Australia 65\%) - the highest was Victoria (73\%) and the lowest was South Australia (56\%);
- Other livestock farming (Australia 56\%) - the highest was Queensland (61\%) and the lowest was Tasmania (47\%); and
- Other crop growing (Australia 49\%) - the highest was New South Wales (63\%) and the lowest was Western Australia (34\%).

Internet use On the use of the Internet, there was a similar pattern to that for computer use. The details were:

- Horticulture and fruit growing (Australia 26\%)—the highest was Victoria (31\%) and the lowest was New South Wales (23\%);
- Grain, sheep and beef cattle farming (Australia 15\%)-the highest was Tasmania (18\%) and the lowest was Queensland (12\%);
- Dairy cattle farming (Australia 14\%)-the highest was Tasmania (20\%) and the lowest was Queensland (12\%);
- Poultry farming (Australia 26\%) - the highest was Victoria (36\%) and the lowest was New South Wales (18\%);
- Other livestock farming (Australia 25\%) -the highest was Victoria (31\%) and the Iowest was South Australia (21\%); and
- Other crop growing (Australia 19\%) - the highest was New South Wales (30\%) and the lowest was Queensland (16\%).

(a) Percentages are of all farms.
(b) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

USE OF INFORMATION TECHNOLOGY BY SIZE OF FARM

There was a strong relationship between farm size and the use of information technology, with the proportion of farms with a computer and the Internet generally increasing with the level of EVAO.

Computer use For all farms in Australia at March 1999, use of a computer was highest for the largest farm size of $\$ 1 \mathrm{~m}$ or more ( $84 \%$ ) and lowest for the smallest farm size of less than $\$ 25,000$ (39\%). There was little variation in the pattern of computer use for farms with an EVAO up to $\$ 99,999$ (from 39\% to 41\%). However, for farms with an EVAO above \$100,000, computer use rose substantially in line with a higher EVAO (from 47\% to $84 \%$ ).

Internet use The pattern for farm use of the Internet was similar. For all farms in Australia, use of the Internet was highest for the largest farm size of $\$ 1 \mathrm{~m}$ or more (42\%) and lowest for farms of size \$50,000-\$99,999 (14\%). There was little variation in the pattern of Internet use for farms with an EVAO up to $\$ 149,999$ (from $14 \%$ to $16 \%$ ). However, for farms with an EVAO above $\$ 150,000$, Internet use rose substantially in line with a higher EVAO (from $18 \%$ to $42 \%$ ).

(a) Percentages are of all farms.

Place of access Of the 25,927 farms (or farm households) accessing the Internet at March 1999, $81 \%$ accessed it only from home, $4 \%$ accessed it from home and elsewhere, and $15 \%$ accessed the Internet away from home only. Features included:

- South Australia and Queensland (both with 87\%) had the highest proportion of farms accessing the Internet from home. Australian Capital Territory (27\%) and Tasmania (21\%) had the highest proportion of farms accessing the Internet away from home only.
- Farms with an EVAO in the range of \$100,000-\$149,999 (92\%) had the highest proportion of farms with home access. Farms with an EVAO of less than $\$ 50,000$ had the highest proportion of farms accessing the Internet away from home only.
- Dairy cattle farming (92\%) had the highest proportion of farms with home access. Other livestock farming (28\%) had the highest proportion of farms accessing the Internet away from home only.

(a) Proportions are of place of Internet access.
(b) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

Frequency of access Of farms which access the Internet, only $24 \%$ accessed it daily with $46 \%$ accessing it 2 to 6 times per week and $30 \%$ once a week or less. Features included:

- The Australian Capital Territory had the highest daily access (47\%) and was significantly higher than for other States and the Northern Territory (23\% to 25\%).
- Farms of EVAO size $\$ 1$ million or more had the highest proportion of daily access (31\%) and farms of size \$250,000-\$499,999 had the lowest proportion of daily access (19\%).
- Poultry farming had the highest proportion of farms with daily access (31\%). Other crop growing farms predominantly accessed the Internet 2 to 6 times per week (49\%) as did Dairy cattle farming (48\%), Grain, sheep and beef cattle farming (47\%) and Horticulture and fruit growing (45\%).

(a) Proportions are of frequency of access.
(b) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

Farms with Internet access provided information on the cost of Internet access for the year ending March 1999. These costs included payments to Internet Service Providers and the costs of telephone calls to connect and use the service.

Of farms accessing the Internet, $23 \%$ indicated that their Internet costs were $\$ 100$ or less in the year to March 1999, $37 \%$ had costs in the range \$101-\$250, $24 \%$ had costs in the range $\$ 251-\$ 500$, and $10 \%$ had costs over $\$ 500$. Features included:

- Western Australia (22\%) and Queensland (12\%) recorded the highest proportion of farms with the greatest Internet access costs of $\$ 501$ or more. Northern Territory and South Australia (both with 29\%) had the highest proportion of farms with costs of $\$ 100$ or less. The Australian Capital Territory (39\%) had the highest proportion of farms with costs in the range $\$ 251-\$ 500$.
- The greatest Internet access cost of $\$ 501$ or more was most recorded by farms with EVAO of $\$ 1 \mathrm{~m}$ or more ( $15 \%$ ) and EVAO of \$500,000-\$999,999 (14\%).
- Horticulture and fruit growing (27\%) and Poultry farming (26\%) had the greatest proportion of farms with Internet costs of $\$ 100$ or less. Dairy cattle farming (46\%) and Other crop growing (45\%) had the highest proportion of farms with costs in the range $\$ 101-\$ 250$. Other livestock farming (30\%) had the highest proportion of farms with costs in the range $\$ 251-\$ 500$.

| Total | 22.7 | 36.7 | 23.7 | 10.4 | 6.5 |

(a) Proportions are of cost of access.
(b) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

Around $4 \%$ of all Australian farms (or 5,608 farms) shopped on the Internet at sometime during the year to March 1999. This means that around $22 \%$ of the farms which had Internet access actually used the Internet to shop. The Australian Capital Territory (14\%) had the highest proportion of all farms that had shopped on the Internet. Northern Territory farms ( $6 \%$ ) were the next highest with the farms in the States ranging from $3 \%$ to $4 \%$.

Size of farm The proportion of farms which shopped on the Internet was highest for the largest farm size of $\$ 1 \mathrm{~m}$ or more ( $8 \%$ ) and lowest for farms of size $\$ 50,000-\$ 99,999(2 \%)$. Around $5 \%$ of farms with an EVAO of less than $\$ 25,000$ shopped on the Internet. This was around double that for farms with an EVAO of between $\$ 25,000$ and $\$ 249,999$ where only $2 \%$ to $3 \%$ of farms had Internet shopping. The higher proportion of farms in the lowest EVAO range may be due to non-agricultural influences. However, for farms with an EVAO above $\$ 250,000$, the proportion of farms undertaking Internet shopping rose in line with a higher EVAO (from $4 \%$ to $8 \%$ ).

FARM INTERNETSHOPPING, AUSTRALLIA

Farm industry The broad farm industry groupings which had the highest proportion of farms that had shopped on the Internet were Horticulture and fruit growing and Other livestock (both 6\%). The farm industries which had the lowest proportion of farms with Internet shopping were Dairy cattle farming and Grain, sheep and beef cattle farming (both 3\%).

|  | Total number of farms | Number of farms using the Internet | Number of farms Internet shopping | Internet shopping farms as a percentage of farms using the Internet | Internet shopping farms as a percentage of total farms |

(a) Relates to establishments with an EVAO of $\$ 5,000$ or more but which are classified to a non-Agriculture ANZSIC class.

Features of the purchases/orders made by Internet shopping farms in the 12 months to March 1999 included:

- Computer software/equipment (41\% of farm Internet shoppers) and books/magazines (36\% of farm Internet shoppers) were the most popular types of purchase/order.
- Purchase/order of farm machinery, materials, livestock, etc. were made by $20 \%$ of farm Internet shoppers.
- Entertainment/tickets to entertainment events and Clothing/shoes/sporting equipment (both with 9\% of farm Internet shoppers) were the least frequent purchase/order.
- Around 24\% of farm Internet shoppers spent over \$1,000 over the year.
- Around $71 \%$ of farm Internet shoppers paid for their purchases/orders online.

Paid online for goods and services(b) ..... 70.5
Type of goods/services purchased/ordered(c)
Music e.g. CDs ..... 12.5
Books/magazines ..... 36.1
Computer software/equipment ..... 41.2
Clothing/shoes/sporting equipment ..... 9.2
Travel and holidays including accommodation ..... 19.6
Entertainment /tickets to entertainment events ..... *8.9
Farm machinery, materials, livestock etc. ..... 19.5
Other ..... 24.7
(a) Proportions relate to farm purchases/orders via the Internet in the 12 months to March 1999.
(b) Farms which purchased and paid for goods/services via the Internet.
(c) Proportions add to greater than 100\%, as farms could provide more than one selection.

## EXPLANATORY NOTES

INTRODUCTION

AGRICULTURAL COMMODITY SURVEY

AGRICULTURE INTERNET USE SURVEY

GEOGRAPHICAL, INDUSTRY AND SIZE CLASSIFICATIONS

1 This publication presents final results on farm use of computers and the Internet at March 1999. The data were obtained from the 1998-99 Agricultural Commodity Survey and the 1998-99 Agriculture Internet Use Survey. Some comparable data from the 1997-98 Agricultural Commodity Survey have been included.

2 The scope of the Agricultural Commodity Survey is establishments undertaking agricultural activity having an estimated value of agricultural operations (EVAO) of $\$ 5,000$ or more. Farms with a smaller EVAO were excluded, being considered more akin to hobby farms than farm businesses. The concept of an establishment is the same as that used by the ABS for all industry statistics collections. Generally, the establishment is the smallest accounting unit of business controlling its productive activities and maintaining a specified range of detailed data.

3 The 1998-99 survey sampled approximately $25 \%$ of the farming establishments operating in Australia at the end of March 1999. The information technology questions included in the 1998-99 Agricultural Commodity Survey covered use of a computer and the Internet at March 1999.

4 A supplementary survey of approximately $3.5 \%$ of farming establishments which had Internet access at March 1999 was also conducted. The questions included in the 1998-99 Agriculture Internet Use Survey covered place and frequency of Internet access, cost of Internet access, services accessed via the Internet and purchases of goods and services via the Internet.

5 The data contained in tables in this publication have, where appropriate, been classified on a geographical, farm industry and farm size basis by classifying farm establishments:

- to Statistical Divisions (SD) within States and Territories, as set out in the Australian Standard Geographical Classification (ASGC) (Cat. no. 1216.0),
- to industry according to the methodology described in Australia and New Zealand Standard Industrial Classification (ANZSIC) (Cat. no. 1292.0), and
- to EVAO ranges according to the estimated value of agricultural operations (or activity) undertaken by an establishment.

6 Because the survey covers establishments with an EVAO of $\$ 5,000$ or more, it includes establishments whose primary activity is not farming activity. These establishments are classified to a non-agriculture ANZSIC class and details for these are shown separately in the farm industry tables as 'Other'.

7 The estimates in this publication are subject to sampling and non-sampling error.

8 The estimates in this publication are based on information obtained from a sample of establishments in the surveyed population.
Consequently, the estimates are subject to sampling variability, that is, they may differ from the figures that would have been obtained if all units had been included in the survey. One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of units was included.

9 There are about two chances in three that a sample estimate will differ by less than one SE from the figure that would have been obtained if a census had been conducted, and approximately 19 chances in 20 that the difference will be less than two SEs.

10 Sampling variability can be measured by the relative standard error (RSE) which is obtained by expressing the SE as a percentage of the estimate to which it refers. The RSE is a useful measure in that it provides an immediate indication of the percentage standard errors likely to have occurred due to sampling, and this avoids the need to refer also to the size of the estimate.

11 The following table provides RSEs for a selection of the Australian estimates presented in this publication.

RELATIVE STANDARD ERRORS FOR SELECTED INDICATORS

|  | Farms using a <br> computer | Farms using <br> the Internet | Farms with <br> Internet <br> Shopping |
| :--- | :--- | ---: | ---: |
| State | 1.9 | 3.9 | 13.1 |

| Other |  |  |  |

ACCURACY OF DATA continued

ABS PUBLICATIONS

AVAILABILITY OF
UNPUBLISHED STATISTICS

12 As an example of the above, the estimate of the proportion of farms in New South Wales with Internet access at March 1999 is $18.7 \%$ (or 8,231 farms) and the RSE on this estimate is $3.9 \%$, giving a SE of $0.7 \%$ (or 321 farms). Therefore, there would be two chances in three that, if all units had been included in the survey, a proportion in the range of $18.0 \%$ to $19.4 \%$ ( 7,910 to 8,552 farms) would have been obtained, and 19 chances in 20 (i.e. a confidence interval of $95 \%$ ) that the proportion would have been within the range of $17.3 \%$ to $20.1 \%$ ( 7,589 to 8,873 farms).

13 Errors other than those due to sampling may occur because of deficiencies in the register of units from which the sample was selected, non-response, and imperfections in reporting by respondents. Inaccuracies of this kind are referred to as non-sampling errors and they may occur in any collection, whether it be a census or a sample. Every effort has been made to reduce non-sampling error to a minimum by careful design and testing of questionnaires, efficient operating procedures and systems, and appropriate methodology.

14 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated; without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the Census and Statistics Act 1905.

15 The most recent issue of other ABS publications on the use and production of information technology and telecommunication goods and services in Australia are listed below:
