## JULY KEY POINTS

## TREND ESTIMATES

- The trend estimate for total dwellings approved rose $0.4 \%$ in July 2002. This is the sixth consecutive monthly rise, with the rate of growth slowing in recent months.
- The trend estimate for private sector houses approved rose $0.8 \%$ in July 2002, following a $0.8 \%$ rise in June.
- The trend estimate for other dwellings approved fell $0.5 \%$ in July 2002, following a $0.5 \%$ rise in June.

## SEASONALLY ADJUSTED ESTIMATES

- The seasonally adjusted estimate for total dwellings approved fell $2.5 \%$ to 14,260 in July 2002.
- The seasonally adjusted estimate for private sector houses approved fell $0.5 \%$ to 10,081 in July 2002, following a 3.4\% rise in June.
- The seasonally adjusted estimate for other dwellings approved fell $8.5 \%$ to 3,989 in July 2002. This is the third consecutive monthly fall.
- For further information about these and related statistics, contact Andrea Woods on 088237 7350, or the National Information and Referral Service on 1300135070.

REVISIONS THIS MONTH

## SYMBOLS AND OTHER <br> USAGES

ISSUE
August 2002
September 2002
October 2002

RELEASE DATE
1 October 2002
31 October 2002
3 December 2002

Adjustments have been made in this issue to the calculation of seasonally adjusted estimates for the State/Territories in Tables 7-10 and Tables 15-16, to improve coherence between State/Territory estimates and the Australian total estimate. As a result of this change to the seasonally adjusted process, seasonally adjusted and trend estimates for the States/Territories have been revised up to and including June 2002. This type of seasonal adjustment will continue to be performed in future issues.

Quarterly chain volume data incorporate a new base year, 2000-2001, which has resulted in revisions to growth rates, small in most cases, for the latest year. The reference year has been advanced to 2000-2001, which has resulted in revisions to levels, but not growth rates for all periods (see paragraph 23 of the Explanatory Notes).

A special article 'Building Activity in Sydney and Melbourne' is included in this issue (see page 36).

Revisions have been made to total dwelling units in this issue.

## VALUE OF BUILDING APPROVED

VALUE OF TOTAL BUILDING
The trend estimate of the value of total building approved has fallen in the last three months, following nineteen months of growth. The trend estimate fell by $1.5 \%$ in July 2002.

VALUE OF RESIDENTIAL BUILDING
The trend estimate of the value of residential building approved fell $0.5 \%$ in July 2002, following sixth months of growth.

VALUE OF NON-RESIDENTIAL
The trend estimate of the value of non-residential building approved fell $4.0 \%$ in July 2002. This is the sixth consecutive monthly fall, following sixth months of growth.

## VALUE OF BUILDING APPROVED

## CHAIN VOLUME MEASURES

JUNE QTR 2002

2001-2002 FINANCIAL YEAR

Trend estimates for the value of building approved in the June Quarter 2001 in chain volume measures are summarised below. (See Table 14).

TREND ESTIMATES

|  | Jun Qtr 2002 | Mar Qtr 2002 to Jun Qtr 2002 | $\begin{aligned} & \text { Jun Qtr } 2001 \text { to } \\ & \text { Jun Qtr } 2002 \end{aligned}$ |
| :---: | :---: | :---: | :---: |
|  | \$m | \% change | \% change |
| New residential building | 6091.5 | 1.9 | 23.6 |
| Alterations and additions to residential buildings | 986.5 | 2.0 | 11.3 |
| Non-residential building | 3263.4 | -1.6 | 0.8 |
| Total building | 10325.6 | 0.6 | 14.1 |

The total value of building approved in chain volume terms rose by $26.4 \%$ to $\$ 40,861.7$ million in 2001-2002 compared to 2000-2001. This was due to a large rise ( $48.1 \%$ ) in the value of new residential building.

ANNUAL MOVEMENT: ORIGINAL SERIES

|  | 2001-2002 | $\begin{aligned} & \text { 1998-1999 to } \\ & \text { 1999-2000 } \end{aligned}$ | $\begin{aligned} & \text { 1999-2000 to } \\ & \text { 2000-2001 } \end{aligned}$ | $\begin{aligned} & \text { 2000-2001 to } \\ & 2001-2002 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |
|  | \$m | \% change | \% change | \% change |
| New residential building | 23943.4 | 16.2 | -33.2 | 48.1 |
| Alterations and additions to residential buildings | 3850.1 | 14.1 | -18.3 | 17.2 |
| Non-residential building | 13068.3 | -6.0 | 5.1 | 1.4 |
| Total building | 40861.7 | 7.6 | -19.3 | 26.4 |

## D W ELLING UNITS APPROVED: State Trends

## NEW SOUTH WALES

VICTORIA

## QUEENSLAND

## SOUTH AUSTRALIA

WESTERN AUSTRALIA

The trend estimate for total dwelling units approved in New South Wales has fallen in the last three months, following three months of growth.

The trend estimate for total dwelling units approved in Victoria has risen for the last five months, following five months of decline.

The trend estimate for total dwelling units approved in Queensland has been flat over the last four months.

The trend estimate of total dwelling units approved in South Australia has fallen in the last five months, following seventeen months of growth.

The trend estimate of total dwelling untis approved in Western Australia has risen in the last four months, following six months of decline.

# EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES 

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

## TREND REVISIONS

Generally, the greater the volatility of the original series, the larger the size of the revisions to trend estimates. Analysis of the building approval original series has shown that they can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates: that the August seasonally adjusted estimate is higher than the July estimate by $4 \%$ for the number of private sector houses approved and $12 \%$ for other dwelling units approved; and that the August seasonally adjusted estimate is lower than the July estimate by $4 \%$ for the number of private sector houses approved and $12 \%$ for other dwelling units approved. These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

## EXPLANATORYNOTES

SCOPE AND COVERAGE

1 This publication presents monthly details of building work approved.
2 Statistics of building work approved are compiled from:

- permits issued by local government authorities and other principal certifying authorities;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building approvals in areas not subject to normal administrative approval e.g. building on remote mine sites.

3 The scope of the survey comprises the following:

- construction of new buildings;
- alterations and additions to existing buildings;
- approved non-structural renovation and refurbishment work;
- approved installation of integral building fixtures.

4 Excluded from the statistics is construction activity not defined as building (e.g. roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (cat. no. 8762.0).

5 From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more;
- approved alterations and additions to residential building valued at $\$ 10,000$ or more;
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

6 Statistics on the value of building work approved are derived by aggregating the estimated 'value of building work when completed' as reported on building approval documents provided to local councils or other building approval authorities. Conceptually these value data should exclude the value of land and landscaping but include site preparation costs. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', they can differ significantly from the completed value of the building as final costs and contracts have not been established before council approval is sought and gained.

7 The ABS generally accepts values provided by approving bodies. Every effort is made to ensure data are provided on a consistent basis, however, there may be instances where value reported does not reflect the building completion value. For example, the reported value for most project homes is the contract price, which may include the cost of site preparation and landscaping. In other cases where a builder is contracted to construct a dwelling based on the owner's plans, the value may only be the builder's costs. Some councils do not use the value on approval documents, instead deriving a value based on floor area and type of structure.

8 From July 2000, value data includes the Goods and Services Tax (GST) for residential and non-residential building approvals. The ABS has consulted with councils and other approving authorities to ensure that approval values are reported inclusive of the GST. Where it was identified by a council or other approving authority that approvals submitted from its jurisdiction were on a GST-exclusive basis, the ABS made adjustments to the data to ensure that values were consistent with other data collected and were inclusive of GST.

## EXPLANATORYNOTES

9 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

10 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations and additions' and 'conversions'). These classifications are often used in conjunction with each other in this publication and are defined in the Glossary.

11 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the specific building, not to the function of the group as a whole.

12 An example is the treatment of building work approved for a factory complex. For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories. An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.
13 In the case of a large multi-function building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function. Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

14 The Type of Work classification refers to the building activity carried out. Conversion jobs are shown separately in tables 5, 6, 12 and 15. However, in other tables they are included within existing categories, as follows: in tables 1 and 2 they are included in the appropriate Type of Building category, and in tables 3, 4 and 14 they are included in the 'Alterations and additions to residential buildings' category.

15 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised.

16 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

17 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities).

## EXPLANATORYNOTES

18 The State/Territory series have been seasonally adjusted independently. However, a further adjustment has been made to these series to provide coherence between the State/Territory estimates and the Australian total estimates.

19 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

20 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For the quarterly chain volume measures (table 14), the trend estimates are derived by applying a 7 -term Henderson-weighted moving average to all quarters of the respective seasonally adjusted series except the last three quarters. Trend series are created for these last three quarters by applying surrogates of the Henderson moving average seasonally adjusted series. For further information, see Information Paper: A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (cat. no. 1348.0) or contact the Assistant Director, Time Series Analysis on Canberra 0262526076.

21 While the smoothing techniques described in paragraph 20 enable trend estimates to be produced for the latest few periods, they do result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend.

22 The ABS considered whether the introduction of the GST would cause a break in the trend series between June and July 2000 for building and construction value data. The ABS concluded that the data were unlikely to experience a significant one-off impact between June and July because values inclusive of GST had been gradually included in the series over that period. Therefore the trend value series was continued to be published as in the past. Users should, however, be cautious when analysing the most recent trend estimates as these are subject to revisions as new monthly data becomes available.

23 The chain volume measures appearing in this publication are annually reweighted chain Laspeyres indexes referenced to current price values in a chosen reference year. The reference year is updated annually in the July issue of this publication. While current price estimates reflect both price and volume changes, chain volume estimates measure changes in value after the direct effects of price changes have been eliminated and hence only reflect volume changes. The direct impact of the GST is a price change, and hence is removed from chain volume estimates. Further information on the nature and concepts of chain volume measures is contained in the ABS publication Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts (cat. no. 5248.0).

## EXPLANATORYNOTES

AUSTRALIAN STANDARD
GEOGRAPHICAL CLASSIFICATION
(ASGC)

ABS DATA AVAILABLE ON REQUEST

RELATED PUBLICATIONS

24 Area statistics are now being classified to the Australian Standard Geographical Classification (ASGC), 2002 Edition (cat. no 1216.0), effective from July 2001. Building work approved before July 2002 was classified according to the current edition of the ASGC at that time, and is presented in this publication unrevised, in the original geographical area that applied at the time of approval. From July 2001, the Statistical Division of Darwin includes Litchfield Shire, previously in the Statistical Division of Northern Territory Balance.

25 As well as the statistics included in this and related publications, the ABS may have other relevant data available on request. Inquiries should be made to the National Information and Referral Service on 1300135070.

26 Users may also wish to refer to the following publications:

- Building Activity, Australia, cat. no. 8752.0-8752.7
- Building Activity, Australia: Dwelling Unit Commencements, cat. no. 8750.0
- Building Approvals, cat. no. 8731.1-8731.7
- Construction Work Done, Australia, Preliminary, cat. no. 8755.0
- Engineering Construction Activity, Australia, cat. no. 8762.0
- House Price Indexes: Eight Capital Cities, cat. no. 6416.0
- Housing Finance for Owner Occupation, Australia, cat. no. 5609.0
- Producer Price Indexes, Australia, cat. no. 6427.0

27 While building approvals value series are shown inclusive of GST, this is different to building activity - Building Activity, Australia (cat. no. 8752.0) and Construction Work Done, Australia, Preliminary (cat. no 8755.0) - in which residential work will be published inclusive of GST and non-residential work exclusive of GST. In the Engineering Construction Survey - Engineering Construction Activity, Australia (cat. no. 8762.0) all values will exclude GST.

28 When figures have been rounded, discrepancies may occur between sums of the component items and totals.

## Alterations and additions

Alterations and additions to residential buildings

Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.

Alterations and additions carried out on existing residential buildings, which may result in the creation of new dwelling units. See also Explanatory Notes paragraph 14.

Building A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.

## Conversion

Building activity which converts a non-residential building to a residential building, e.g. conversion of a warehouse to residential apartments. Conversion is considered to be a special type of alteration, and these jobs have been separately identified as such from the July 1996 reference month, though they have only appeared separately in this publication from the January 1998 issue. Prior to that issue, conversions were published as part of the 'Conversions, etc.' category or included elsewhere within a table. See also Explanatory Notes paragraph 14.

Dwelling unit A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (e.g. hospitals) or temporary accommodation (e.g. motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals. Dwelling units can be created in one of four ways: through new work to create a residential building; through alteration/addition work to an existing residential building; through either new or alteration/addition work on non-residential building or through conversion of a non-residential building to a residential building.

Educational

## Entertainment and

 recreationalFactories
Flats, units or apartments

Health
Hotels, motels and other short term accommodation

## House

Miscellaneous
Includes paper mills, oil refinery buildings, brickworks and powerhouses.
Dwellings not having their own private grounds and usually sharing a common entrance, foyer or stairwell.

Includes hospitals, nursing homes, surgeries, clinics and medical centres.
Includes hostels, boarding houses, guest houses, and holiday apartment buildings.

A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (e.g. caretaker's residences) associated with a non-residential building are defined as houses.
Includes justice and defence buildings, welfare and charitable homes, prisons and reformatories, maintenance camps, farming and livestock buildings, veterinary clinics, child-minding centres, police stations and public toilets.

Building activity which will result in the creation of a building which previously did not exist.

Building activity which will result in the creation of a residential building other than a house, which previously did not exist.

Building activity which will result in the creation of any residential building (house or other residential) which previously did not exist.

A non-residential building is primarily intended for purposes other than long term residential purposes. Note that, on occasions, one or more dwelling units may be created through non-residential building activity. Prior to the January 1998 issue of this publication, they have been included in the 'Conversions, etc.' column in tables showing dwelling units approved. They are now identified separately (e.g. see table 5). However, the value of these dwelling units cannot be separated out from that of the non-residential building which they are part of, therefore the value associated with these remain in the appropriate Non-residential category.

Includes banks, post offices and council chambers.
Includes warehouses, service stations, transport depots and terminals, electricity substation buildings, telephone exchanges, broadcasting and film studios.

Includes all dwellings other than houses. They can be created by: the creation of new other residential buildings (e.g. flats); alteration/addition work to an existing residential building; either new or alteration/addition work on a non-residential building; conversion of a non-residential building to a residential building creating more than one dwelling unit.

An other residential building is a building other than a house primarily used for long-term residential purposes. An other residential building contains more than one dwelling unit. Other residential buildings are coded to the following categories: semi-detached, row or terrace house or townhouse with one storey; semi-detached, row or terrace house or townhouse with two or more storeys; flat, unit or apartment in a building of one or two storeys; flat, unit or apartment in a building of three storeys; flat, unit or apartment in a building of four or more storeys; flat, unit or apartment attached to a house; other/number of storeys unknown. The latter two categories are included with the semi-detached, row or terrace house or townhouse with one storey category in table 13 of this publication.

Includes convents, churches, temples, mosques, monasteries and noviciates.

A residential building is a building consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings.

Dwellings having their own private grounds with no other dwellings above or below.

Includes retail shops, restaurants, taverns and shopping arcades.

## BUILDING ACTIVITY IN SYDNEY AND MELBOURNE

INTRODUCTION
This article provides a comparison of building activity for Sydney and Melbourne Statistical Divisions from 1993-94 to 2000-01. The data were obtained from the quarterly Building Activity Survey.

In both cities, the proportion of new houses completed has decreased in favour of other residential dwellings (e.g. semi-detached buildings, flats, units, apartments). In Sydney the proportion of houses to total dwelling units completed has dropped to below $50 \%$, and in Melbourne the proportion has fallen to about $70 \%$.

## houses and other residential dwellings

The table below shows that the proportion of houses to total dwelling units is greater in Melbourne than Sydney, but the trend is declining for both capital cities. Sydney recorded a decrease in the proportion of houses built from $52.2 \%$ in 1993-94 to $44.9 \%$ in 2000-01 whereas Melbourne decreased from $86.5 \%$ to $70.8 \%$, with much of the decrease occurring in 1996-97.

Overall, the number of dwelling units completed has been slightly higher in Sydney than Melbourne in recent years. However, the number of houses built is significantly higher in Melbourne, whereas the number of other residential dwellings is much greater in Sydney.

| 1999-00 | 22411 | 74.9 | 7520 | 25.1 | 29931 |
| 2000-01 | 20591 | 70.8 | 8497 | 29.2 | 29088 |

## BUILDING ACTIVITY IN SYDNEY AND MELBOURNE continued

The trend away from houses to other residential dwellings is expected to continue in the next few years, as evidenced by approvals and commencement data since 2000-01.

## OTHER RESIDENTIAL DWELLINGS—NUMBER OF STOREYS

There has been a clear trend towards flats, units or apartments in buildings of four or more storeys. The table below shows that this category has trended strongly upwards in Sydney from $5.1 \%$ of all dwelling units completed in 1993-94 to $26.5 \%$ in 2000-01, whereas in Melbourne there has been a more gradual increase from $2.0 \%$ to $11.4 \%$.

Over the same period, both semi-detached buildings of one storey, and flats, units or apartments of one or two storeys, have trended downwards in Sydney, but there are no strong trends for these categories in Melbourne.

The trend towards other residential dwellings in buildings of four or more storeys is expected to continue in the next few years as evidenced by approvals and commencements data since 2000-01.

OTHER RESIDENTIAL AS PERCENTAGE OF TOTAL RESIDENTIAL DWELLINGS COMPLETED

The following graph shows that the average value of new houses completed in current prices has gradually increased in both capital cities. Despite a slight drop in value in 1996-97, the average value of a new house has steadily risen for Sydney from $\$ 115,105$ in 1993-94 to $\$ 174,071$ in 2000-01. In Melbourne the average value has increased from \$94,797 to \$151,909.

AVERAGE VALUE PER NEW HOUSE COMPLETED, By capital city

The graph below presents the average value of new houses completed in chain volume terms. The chain volume estimates measure the change in value after the direct effects of price changes have been eliminated. As with the original value, Sydney has been above Melbourne but figures have remained relatively stable for both cities from 1998-99.

AVERAGE VALUE PER NEW HOUSE COMPLETED, Chain volume terms(a), By capital city

(a) Chain volume measures, reference year 1999-00.

## BUILDING ACTIVITY IN SYDNEY AND MELBOURNE continued

## VALUE OF NON-RESIDENTIAL BUILDING

The total value for non-residential buildings completed has been greater in Sydney than Melbourne.

In Sydney the value of non-residential building rose strongly from 1996-97 to 1999-00 with a drop in 2000-01. Melbourne's value has steadily grown from 1994-95.

The main categories of building contributing to these movements are hotels, entertainment/recreation and offices. These are highlighted below.

## VALUE OF HOTELS ETC.

Despite a slight drop in 1998-99, the value of hotels etc. generally rose in Sydney from 1995-96. Values for Melbourne have tended to fluctuate over the period.

## VALUE OF OFFICES

Large fluctuations in values for entertainment and recreational buildings have occurred for both capital cities. Sydney's activity increased from 1996-97 to 1999-00, which coincided with the lead up to the Olympic Games. Melbourne's activity peaked in 1997-98.

Both Sydney and Melbourne had significant declines in the value of office buildings completed in 1994-95. In Sydney, activity began to pick up in 1998-99, whereas in Melbourne it remained relatively flat.
