|  |  |  |  |
| SEASONALLY ADJUSTED |  | \% change <br> Jun 1998 to | \% change <br> Jul 1997 to |
|  | Jul 1998 | Jul 1998 | Jul 1998 |
| Dwelling units approved |  |  |  |
| Private sector houses | 2203 | -8.2 | 17.2 |
| Total dwelling units | 2982 | -6.3 | 20.3 |

## JULY KEY POINTS

## TREND ESTIMATES

- Despite falling marginally for the second consecutve month, the trend for the total number of dwelling units approved is still $18.0 \%$ above the level of a year ago.
- The trend for private sector houses has fallen for the third consecutive month to be $4.3 \%$ below the estimate for April although this is still $20.6 \%$ above the level of a year ago.

## SEASONALLYADJUSTEDESTIMATES

- The seasonally adjusted estimate for private sector houses fell for the third consecutive month to be $17.4 \%$ below the estimate for April.

## ORIGINALESTIMATES

- In July the number of dwelling units approved in original terms was 3,063 with houses accounting for 2,391 and other dwelling units 672 .
- The value of non-residential building approved in July was $\$ 196.7$ million. The major contributors to this category were Shops with $\$ 49.4$ million and Other business premises with $\$ 34.0$ million.
- There were 6 building jobs valued at $\$ 5$ million and over and 42 jobs valued between $\$ 1$ million and $\$ 5$ million.

## NOTES

## VALUEOFBUILDING APPROVED

VALUE OF TOTAL BUILDING
The movement in the trend estimate has been relatively flat since the beginning of 1998 following a sustained period of growth since mid 1996.

VALUE OF RESIDENTIAL BUILDING Following a period of consistent growth since mid 1996, the trend for this series has flattened.

VALUE OF NON-RESIDENTIAL BUILDING

The trend has risen for the second consecutive month following 6 months of decline from late 1997.

## VALUE OF BUILDING APPROVED

## AVERAGE 1989-90 PRICES

JUNE QUARTER 1998

1997-98 FINANCIAL YEAR

Changes in the original series for the value of building approved in the June Quarter 1998 at average 1989-90 prices are summarised below.

## ORIGINAL SERIES

| Mar Qtr 1998 to <br> Jun Qtr 1998 | Jun Qtr 1997 to <br> Jun Qtr 1998 |
| :--- | :--- |
| \% change | \% change |
| 15.8 | 29.6 |
| 15.4 | 12.9 |
| 32.3 | -3.1 |
| 22.1 | 12.1 |

The value of total buildings in average $1989-90$ prices has increased by $22.1 \%$ in the June quarter and follows a $20.5 \%$ decrease in the March quarter.

The annual movements in the value of building approved, at average $1989-90$ prices, appear in the table below. The table shows the annual movements for the past three financial years in original terms.

|  | ANNUAL MOVEMENT: ORIGINAL SERIES |  |  |
| :--- | :--- | :--- | :--- |
|  | 1994-95 to | $1995-96$ to | $1996-97$ to |
|  | $1995-96$ | $1996-97$ | $1997-98$ |
|  | \% change | \% change | \% change |
|  | -21.6 | 25.7 | 33.9 |
| New residential building |  |  |  |
| Alterations and additions to <br> residential buildings | -15.2 | 22.8 | 17.1 |
| Non-residential building | 21.8 | 13.5 | 3.5 |
| Total building | -3.0 | 19.1 | 17.2 |

The value of total buildings in average 1989-90 prices has grown strongly over the last 2 financial years to be $39.6 \%$ higher than at the end of 1995-96. In the past year strongest growth has occurred in new residential building (33.9\%).

## EFFECT OF NEW SEASONALLY ADJUSTED ESTIMATES ON TREND ESTIMATES

Readers should exercise care when interpreting trend estimates. The last six trend estimates, in particular, are likely to be revised when new seasonally adjusted estimates become available.

## TREND REVISIONS

Generally, the greater the volatility of the original series, the larger the size of the revisions to trend estimates. Analysis of the building approval original series has shown that they can be revised substantially. As a result, some months can elapse before turning points in the trend series are reliably identified.

The graphs and tables which follow present the effect of two possible scenarios on the previous trend estimates: that the August seasonally adjusted estimate is higher than the July estimate by $5 \%$ for the number of private sector houses approved and $8 \%$ for total dwelling units approved; and that the August seasonally adjusted estimate is lower than the July estimate by $5 \%$ for the number of private sector houses approved and $8 \%$ for total dwelling units approved. These percentages were chosen because they represent the average absolute monthly percentage change for these series over the last ten years.

(a) Includes conversions and dwelling units approved as part of alterations and additions or the construction of non-residential building.
(b) Refer to Explanatory Notes paragraph 12.

## EXPLANATORYNOTES

## SCOPE

1 This publication presents monthly details of building work approved

2 Statistics of building work approved are compiled from:

- permits issued by local government authorities;
- contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities;
- major building activity in areas not subject to normal administrative approval e.g. building on remote mine sites;
- permits issued by licensed private building surveyors. The last category reflects implementation of the 1993 Buildings Act by the Victorian Government from the 1 July 1994.

3 The scope of the survey comprises the following activities:

- construction of new buildings
- alterations and additions to existing buildings
- approved non-structural renovation and refurbishment work
- approved installation of integral building fixtures

From July 1990, the statistics include:

- all approved new residential building valued at $\$ 10,000$ or more
- approved alterations and additions to residential building valued at $\$ 10,000$ or more
- all approved non-residential building jobs valued at $\$ 50,000$ or more.

Excluded from the statistics is:

- construction activity not defined as building (e.g. construction of roads, bridges, railways, earthworks, etc.). Statistics for this activity can be found in Engineering Construction Activity, Australia (8762.0).

4 Value data are derived by aggregation of the estimated value of building work when completed as reported on approval documents. Such value data excludes the value of land and landscaping but includes site preparation. These estimates are usually a reliable indicator of the completed value of 'houses'. However, for 'other residential buildings' and 'non-residential buildings', these estimates can differ significantly from the completed value of the building.

5 Building ownership is classified as either public or private sector and is based on the sector of intended owner of the completed building at the time of approval. Residential buildings constructed by private sector builders under government housing authority schemes are classified as public sector when the authority has contracted, or intends to contract, to purchase the building on or before completion.

6 Building approvals are classified both by the Type of Building (e.g. 'house', 'factory') and by the Type of Work involved (e.g. 'new', 'alterations' and 'additions'). These classifications are often used in conjunction with each other to describe building approvals in this publication.

7 The Type of Building classification refers to the intended major function of a building. A building which is ancillary to other buildings or forms a part of a group of related buildings is classified to the function of the building, not to the function of the group as a whole.

BUILDING CLASSIFICATIONS continued

8 An example is the treatment of building work approved for a factory complex For instance, a detached administration building would be classified to Offices, a detached cafeteria building to Shops, while the factory buildings would be classified to Factories.

9 An exception to this rule is the treatment of group accommodation buildings. For example, a student accommodation building on a university campus would be classified to Education.

10 In the case of a large multi-function building, i.e. a single large physical building which, at the time of approval is intended to have more than one purpose (e.g. a hotel/shops/casino project), the ABS endeavours to split the approval details according to each main function.

11 Where this is not possible because separate details cannot be obtained, the building is classified to the predominant function of the building on the basis of the function which represents the highest proportion of the total value of the project.

12 The Type of Work classification refers to the building activity carried out: New; Alterations and additions; or Conversion. See the Glossary for definitions of these terms. Prior to the April 1998 issue of this publication, Conversions were published as part of a category called 'Conversions, etc.'. From the April 1998 issue onwards, Conversion jobs are shown separately in tables 5 and 6 . However, in other tables they are included within existing categories, as follows: in tables 1, 2, 11 and 12 they are included in the appropriate Type of Building category, and in tables 3, 4,11 and 12 they are included in the 'Alterations and additions to residential buildings' category.

13 Seasonal adjustment is a means of removing the estimated effects of seasonal variation from the series so that the effects of other influences can be more clearly recognised

14 In the seasonal adjustment of series, account has been taken of both normal seasonal factors and 'trading day' effects arising from the varying numbers of Sundays, Mondays, Tuesdays, etc. in the month. Adjustment has also been made for the influence of Easter which may affect the March and April estimates differently.

15 Seasonal adjustment does not remove from the series the effect of irregular or non-seasonal influences (e.g. the approval of large projects or a change in the administrative arrangements of approving authorities).

16 Some of the component series have been seasonally adjusted independently. Therefore, the adjusted components may not add to the adjusted totals.

17 As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional year's data. The timing of this review may vary and when appropriate will be notified in the 'Data Notes' section of this publication.

18 Smoothing seasonally adjusted series reduces the impact of the irregular component of the seasonally adjusted series and creates trend estimates. For monthly series, these trend estimates are derived by applying a 13-term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the last six months. Trend series are created for the last six months by applying surrogates of the Henderson moving average to the seasonally adjusted series. For further information, see A Guide to Interpreting Time Series-Monitoring 'Trends': an Overview (1348.0) or contact the Assistant Director, Time Series Analysis on (02) 62526345.

## EXPLANATORYNOTES

| TREND ESTIMATES continued | 19 While the smoothing techniques described in paragraph 18 enables trend estimates to be produced for the latest few periods, it does result in revisions to the trend estimates as new data becomes available. Generally, revisions become smaller over time and, after three months, usually have a negligible impact on the series. Revisions to the original data and re-analysis of seasonal factors may also lead to revisions to the trend. |
| :---: | :---: |
| CONSTANT PRICE ESTIMATES | 20 Constant price estimates measure changes in value after the direct effects of price changes have been eliminated. The deflators used to revalue the current price estimates are derived from the same price data underlying the deflators compiled for the dwelling and non-dwelling construction components of the national accounts aggregate 'Gross fixed capital expenditure'. <br> 21 Estimates at constant prices are subject to a number of approximations and assumptions. For more information on the nature and concepts of constant price estimates, see Chapter 4 of Australian National Accounts: Concepts, Sources and Methods (5216.0). Monthly value data at constant prices are not available. |
| AUSTRALIAN STANDARD | 22 Area statistics are now being classified to the Australian Standard Geographic |
| GEOGRAPHIC CLASSIFICATION (ASGC) | Classification, 1998 Edition (1216.0), effective from 1 July 1998, and ASGC terminology has been adopted in the presentation of building statistics. <br> 23 Some Statistical Districts straddle State/Territory boundaries (e.g. the Gold Coast - Tweed Statistical District lies partly in Queensland and partly in New South Wales). |
| UNPUBLISHED DATA | 24 The ABS can also make available certain building approvals data which are not published. Where the data cannot be provided by telephone, it can be provided via fax, photocopy, computer printout, floppy disk and email. A charge may be made for providing unpublished data in these forms. |

## Alterations and additions

Alterations and additions to residential buildings

## Building

Conversion

Dwelling unit

## Entertainment and

 recreationalFactories

Flats, units or apartments

Health

Hotels, motels and other short term accommodation

Building activity carried out on existing buildings. Includes adding to or diminishing floor area, altering the structural design of a building and affixing rigid components which are integral to the functioning of the building.

Alterations and additions carried out on existing residential buildings, which may result in the creation of new dwelling units. See also Explanatory Notes paragraph 12 .

A building is a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design is the provision for regular access by persons in order to satisfy its intended use.

Building activity which converts a non-residential building to a residential building, e.g. conversion of a warehouse to residential apartments. Conversion is considered to be a special type of alteration, and these jobs have been separately identified as such from the July 1996 reference month, though they have only appeared separately in this publication from the April 1998 issue. Prior to that issue, conversions were published as part of the 'Conversions, etc.' category or included elsewhere within a table. Prior to July 1996, Table 5 includes the number of Conversions in the 'Alterations and additions to residential buildings' category while Table 6 includes the value of Conversions in the 'Alterations and additions to residential buildings, creating dwellings' category. See also Explanatory Notes paragraph 12.

A dwelling unit is a self-contained suite of rooms, including cooking and bathing facilities and intended for long-term residential use. Regardless of whether they are self-contained or not, units within buildings offering institutional care (e.g. hospitals) or temporary accommodation (e.g. motels, hostels and holiday apartments) are not defined as dwelling units. Such units are included in the appropriate category of non-residential building approvals. Dwelling units can be created in one of four ways: through new work to create a residential building; through alteration/addition work to an existing residential building; through either new or alteration/addition work on non-residential building or through conversion of a non-residential building to a residential building.

Includes schools, colleges, kindergartens, libraries, museums and universities.
Includes clubs, cinemas, sport and recreation centres.

Includes paper mills, oil refinery buildings, brickworks and powerhouses.
Dwellings not having their own private grounds and usually sharing a common entrance, foyer or stairwell.

Includes hospitals, nursing homes, surgeries, clinics and medical centres.

Includes hostels, boarding houses, guest houses, and holiday apartment buildings.

House A house is a detached building primarily used for long term residential purposes. It consists of one dwelling unit. For instance, detached 'granny flats' and detached dwelling units (e.g. caretakers residences) associated with a non-residential building are defined as houses.

## Miscellaneous <br> New building work

## New other residential

 buildingsNew residential

Non-residential building
