Work done		
By private sector		
For private sector	1 686.9	-6.3
For public sector	1 068.2	-6.7
Total by private sector	2 755.1	-6.5
By public sector	1 778.5	-7.2
Total for public sector(b)	2 846.7	-7.0
Total engineering construction	4 533.6	-6.8

(a) Chain volume measures, reference year 1998-99.

(b) Includes work done by the private sector for the public sector and work done by the public sector.

JUNE QTR KEY POINTS

A new survey methodology was introduced from the September quarter 1999 and historical data has been adjusted - see notes on page 2.

SEASONALLY ADJUSTED, VOLUME TERMS

- The total value of engineering construction work done fell by 6.8% from the March quarter to \$4,533.6 million, following a fall of 3.0% in the previous quarter.
- Work done for the private sector was down 6.3% and has fallen for the fourth successive quarter. Work done for the public sector was down 7.0%.

SEASONALLY ADJUSTED, CURRENT PRICES

- The total value of work done in the June quarter 2000 fell by 5.4% from the March quarter to \$4,765.1 million.
- Work done for the private sector was down 5.0% and for the public sector was down 5.7%.

ORIGINAL ESTIMATES

- The value of work commenced in the June quarter fell by 21.6% from the March quarter to \$4,594.9 million.
- The value of work done rose by 9.2% to \$5,213.2 million, mainly due to work done by the public sector which was up 19.1%. The private sector was up 2.7%.
- The value of work yet to be done fell by 12.0% to \$6,729.3 million.

- For further information about these and related statistics, contact Alan Plekys on Adelaide 08 8237 7672, or the National Information Service on 1300 135 070.

DATA NOTES

ABS statistical series are being impacted to varying degrees as a result of The New Tax System (TNTS), introduced in Australia from 1 July 2000. TNTS included the removal of Wholesale Sales Tax (WST) and the introduction of a Goods and Services Tax (GST), and as a result, a wide range of ABS data series will reflect significant immediate and subsequent impacts.

Future issues of this publication will publish estimates of engineering construction on a GST exclusive basis. As the majority of construction material used were exempt from Wholesale Sales Tax, the introduction of the GST is expected to have little direct effect on the estimates of engineering construction.

.....

SIGNIFICANT REVISIONS THIS QUARTER

The Engineering Construction Survey introduced an improved methodology from the September quarter 1999. Data obtained using the new methodology was first published in the December quarter 1999 issue and adjustments were made to all data back to the September quarter 1997.

For more details of the new methodology and the method of adjustment applied to previous estimates, refer to Explanatory Notes paragraphs 8 and 9 and to the December quarter 1999 issue.

Further adjustments have been made in this issue for all quarters from March 2000 back to September 1998 as a result of additional improvements to estimation methods. These adjustments, while having raised the value of work done by varying amounts (eg March 2000 quarter by 8.3%, December 1999 quarter by 7.6%), have not changed the relative movements of the estimates between quarters or the overall composition of the components.

In addition, a new base year, 1998-99, has been introduced into the chain volume estimates which has resulted in revisions to quarterly growth rates, small in most cases, in subsequent periods. Also, the reference year has been advanced to 1998-99, which has resulted in revisions to levels, but not growth rates, for all periods.

Improvements have also been made to the price indexes used to derive volume estimates in engineering construction, resulting in revisions to the growth rates.

EXPLANATORY NOTES

INTRODUCTION

- 1** This publication contains estimates of engineering construction activity in Australia by both public and private sector organisations. The estimates were compiled from the Engineering Construction Survey (ECS).
- 2** These estimates together with results from the ABS Building Activity Surveys provide a complete quarterly picture of building and construction activity in Australia.

SCOPE AND COVERAGE OF THE SURVEY

- 3** The ECS aims to measure the value of all engineering construction work undertaken in Australia. The scope of the survey includes all management units recorded on the ABS central register of businesses and classified to the construction industry and all other units known to be undertaking engineering construction work (from trade journals, newspapers, etc.).
- 4** The cost of land and the value of building construction is excluded from the scope of the survey. Where projects include elements of both building and engineering construction (for example, electricity generation, heavy industrial plant) every effort is taken to exclude the building component from these statistics.
- 5** Repair and maintenance activity is excluded from the survey as are the value of any transfers of existing assets, the value of installed machinery and equipment not integral to the structure and the expenses for relocation of utility services.
- 6** A contract for the installation of machinery and equipment which is an integral part of a construction project is included in the statistics.

RELATIONSHIP WITH NATIONAL ACCOUNTS

- 7** Data on the value of work done on the construction of new residential buildings, alterations and additions to residential buildings, private sector non-residential buildings (from *Building Activity, Australia*, Cat. no. 8752.0) and the value of engineering construction activity (from the Engineering Construction Survey) are the major source data which are used to compile the national accounts estimates for private gross fixed capital formation on dwellings, and other buildings and structures. However, there are some adjustments to the survey data which are made in the process of compiling these national account series. Allowances are made for the value of building activity which is out of scope of the Building Activity Survey and the Engineering Construction Survey. Such activity includes work done on projects which fall below the size cut-offs used for the Building Activity Survey and also the value of work done which is undertaken without obtaining a building permit, either because such a permit is not required or because the requisite permit is not obtained. The national accounts estimates also make allowances for purchases (less sales) of buildings and other structures from (to) the public sector.

NEW SURVEY METHODOLOGY

- 8** A review of the survey was undertaken in 1999 and as a result, a new survey methodology was introduced as from the September quarter 1999. Under the previous methodology, population frames and samples had been revised annually. In the new methodology, the frames and samples are revised each quarter. The aim is to improve the quality of the survey estimates by selecting a sample from a more up to date survey population. Frame compilation and maintenance processes were also brought in line with current best practice.
- 9** Data obtained using the new methodology was first published in the December quarter 1999. Adjustments were made to all data back to the September quarter 1997. Further adjustments have been made in this issue for all quarters from March 2000 back to September 1998 as a result of additional improvements to estimation methods. For more details of the impact of the new methodology and the method of adjustment applied to previous estimates, refer to Explanatory Notes paragraphs 8 to 13 in the December quarter 1999 issue.

EXPLANATORY NOTES

RELIABILITY OF THE ESTIMATES

10 Since the figures for private sector and public sector organisations are derived from information obtained from a sample of organisations they are subject to sampling error; that is, they may differ from the figures that would have been obtained if information for all organisations for the relevant period had been included in the survey. A measure of the likely difference is given by the relative standard error of each estimate. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all units had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Approximate relative standard errors of the estimates are shown in tables 21, 22 and 23.

11 An example of the use of standard errors is as follows. If the total value of work done during the quarter is \$2,500m and the associated standard error is 0.5% then there are about two chances in three that the value which would have been derived if there had been a complete collection would have been within the range \$2,488m to \$2,513m and about nineteen chances in twenty that the value would have been within the range \$2,475m to \$2,525m.

12 The imprecision due to sampling variability, which is measured by the relative standard error, should not be confused with inaccuracies that may occur because of inadequacies in the source of information, imperfections in reporting by respondents, and errors made in the coding and processing of data. Inaccuracies of this kind are referred to as non-sampling error, and may occur in any enumeration whether it be a full count or only a sample. Every effort is made to reduce the non-sampling error to a minimum by the careful design of questionnaires, efforts to obtain responses for all selected organisations, and efficient operating procedures.

13 Caution is advised in respect of the value of work commenced (and consequently, the value of work yet to be done) reported by the public sector. It is known that data reported for value of work commenced are a combination of the following: annual works budget estimates which are reported as commencements in the September quarter (and in some cases may subsequently be undertaken by the private sector); genuine commencements as defined in the Glossary, and reported quarterly; commencements being reported as equal to the value of work done for the quarter; commencements of major stages in the case of long-term projects.

SEASONAL ADJUSTMENT

14 Seasonally adjusted statistics for engineering construction activity are shown in tables 1 and 2. As happens with all seasonally adjusted series, the seasonal factors are reviewed annually to take account of each additional years data. The results of the latest review are included in this issue. Information regarding the methods used in seasonally adjusting the series, is available on request.

15 Since seasonally adjusted statistics reflect both irregular and trend movements, an upward or downward movement in a seasonally adjusted series does not necessarily indicate a change of trend. Particular care should therefore be taken in interpreting individual quarter to quarter movements.

EXPLANATORY NOTES

CHAIN VOLUME MEASURES

16 Chain volume estimates of the value of work done are presented in original and seasonally adjusted terms in Table 1.

17 While current price estimates of the value of work done reflect both price and volume changes, chain volume estimates measure changes in value after the direct effects of price changes have been eliminated and therefore only reflect volume changes. The deflators used to revalue the current price estimates in this publication are derived from the same price data underlying the deflators compiled for the new engineering construction component of the national accounts aggregate 'Gross fixed capital formation'.

18 The chain volume measures of work done appearing in this publication are annually reweighted chain Laspeyres indexes referenced to current price values in a chosen reference year (currently 1998–99). The reference year is updated annually in the June quarter publication. Quarterly chain volume data in this issue incorporate a new base year, 1998–99, which has resulted in revisions to growth rates, small in most cases, for the last few years. In addition, the reference year has been advanced to 1998–99, which has resulted in revisions to levels, but not growth rates, for all periods. Each year's data in the value of work done series are based on the prices of the previous year, except for the quarters of the latest incomplete year (i.e. for the 2000–01 financial year) which are based upon the current reference year (i.e. 1998–99). Comparability with previous years is achieved by linking (or chaining) the series together to form a continuous time series. Further information on the nature and concepts of chain volume measures is contained in the ABS *Information Paper: Introduction of Chain Volume Measures in the Australian National Accounts*, (Cat. no. 5248.0).

19 The factors used to seasonally adjust the chain volume measures are identical to those used to adjust the corresponding current price series.

ACKNOWLEDGEMENT

20 ABS publications draw extensively on information provided freely by individuals, businesses, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence as required by the Census and Statistics Act 1905.

RELATED PUBLICATIONS

21 Users may also wish to refer to the following building and construction publications and special products which are available on request.

- *Building Approvals, Australia* (Cat. no. 8731.0) issued monthly
- *Building Activity, Australia: Dwelling Unit Commencements, Preliminary* (Cat. no. 8750.0) issued quarterly
- *Building Activity, Australia* (Cat. no. 8752.0) issued quarterly
- *Building Activity, Australia: Building Work Done, Preliminary* (Cat. no. 8755.0) issued quarterly

22 Current publications produced by the ABS are listed in the Catalogue of Publications and Products, Australia (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a Release Advice (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office.

SYMBOLS AND OTHER USAGES

— nil or rounded to zero

G L O S S A R Y

Type of construction In this collection each project is classified to a category of construction without regard to end use. For example, a project involving coal handling equipment at an electricity generating plant is included under Heavy industry Oil, gas, coal and other minerals and not under Electricity generation, transmission and distribution. Where a project involves more than one category of construction the project is included under the category which accounts for the major part of the contract in terms of value.

Type of construction is divided into a number of categories as defined below.

Roads, highways and subdivisions. Includes parking areas; cycle paths; airport runways; pedestrian and vehicle overpasses; traffic lights; roundabouts; associated road drainage works; street and highway lighting; road resurfacing, kerbing and guttering, road tunnels.

Bridges. Includes those for the support of roads, railways, causeways and elevated highways.

Railways. Includes tracklaying; overhead power lines and signals; platforms; tramways; tunnels for underground railways; fuel hoppers.

Harbours. Includes boat and yacht basins; breakwaters; retaining walls; docks and piers; terminals; wharves; dredging works; marinas.

Water storage and supply. Includes dams; weirs; reservoirs; embankments for water diversion; water pipelines; mains and treatment plants; flood prevention and erosion; aqueducts; water conduits; systems conveying water to residences, commercial and industrial establishments.

Sewerage and drainage. Includes sanitary and storm sewers; sewage treatment plants; stormwater drains; drainage systems.

Electricity generation, transmission and distribution. Includes power stations; substations; hydroelectric generating plants; associated work i.e. towers; chimneys; transmission and distribution lines.

Pipelines. Includes oil and gas pipelines; urban supply mains for gas; pipelines for refined petroleum products, chemicals, foodstuffs, etc.

Recreation. Includes golf courses; playing fields; racecourses; stadiums; swimming pools; landscaping; park construction.

Telecommunications. Includes radio, television, microwave and radar transmission towers; telephone and telegraph lines and underground cables; coaxial cables.

Heavy industry. Oil, gas, coal and other minerals. Includes construction of production, storage and distribution facilities; refineries; pumping stations; construction of mines;

Other heavy industry. Includes construction of chemical plants; blast furnaces; steel mills; other industrial processing plants; ovens.

Ownership Projects are classified as private sector or public sector according to the expected ownership of the project at the time of completion.

GLOSSARY

Sector	<p>The public sector includes Commonwealth Departments and Authorities, State Departments and Authorities, Local Government Authorities, Water, Sewerage and Electricity Authorities and Semi-government Authorities e.g. public hospitals. This publication contains separate estimates for:</p> <ul style="list-style-type: none">Commonwealth Government;State and Territory Government; andLocal Government. <p>All remaining organisations are classified as private sector.</p>
Value of work commenced	<p>A project is regarded as having commenced when the site works begin. However, some public sector authorities are unable to report on this basis. In such cases, the authorities report the value of their annual works budget as a commencement in September quarter each year.</p>
Value of work yet to be done	<p>The value of outstanding work for the project at the end of the period. Rise and fall and other cost variations can lead to increases or decreases in the value of work yet to be done.</p>
Value of work done	<p>For the private sector consists of the value of work done on prime contracts, plus speculative contracts, plus work done on own account. For the public sector it is defined as work done by the organisation's own workforce.</p>

FOR MORE INFORMATION...

- INTERNET** www.abs.gov.au the ABS web site is the best place to start for access to summary data from our latest publications, information about the ABS, advice about upcoming releases, our catalogue, and Australia Now—a statistical profile.
- LIBRARY** A range of ABS publications is available from public and tertiary libraries Australia-wide. Contact your nearest library to determine whether it has the ABS statistics you require, or visit our web site for a list of libraries.
- CPI INFOLINE** For current and historical Consumer Price Index data, call 1902 981 074 (call cost 77c per minute).
- DIAL-A-STATISTIC** For the latest figures for National Accounts, Balance of Payments, Labour Force, Average Weekly Earnings, Estimated Resident Population and the Consumer Price Index call 1900 986 400 (call cost 77c per minute).

INFORMATION SERVICE

Data which have been published and can be provided within five minutes are free of charge. Our information consultants can also help you to access the full range of ABS information—ABS user-pays services can be tailored to your needs, time frame and budget. Publications may be purchased. Specialists are on hand to help you with analytical or methodological advice.
