#### PART 5.—INTERCHANGE.

761. The weights and measures used in Victoria are in every respect weights and measures. similar to those in use in the United Kingdom.

762. In converting the weights and measures of foreign countries Foreign into their English equivalents, which is often necessary in the progress measures of this work, the operation is performed by using the scale adopted by the Imperial Board of Trade, which is as follows :---

FOREIGN WEIGHTS AND MEASURES, WITH THEIR ENGLISH EQUIVALENTS.

Countries.	Foreign Weights and Measures.	English Equivalents.
Austria - Hungary, Bel- gium, France, Ger- many, Holland, Italy, Norway, Portugal, Roumania, Spain, Swe- den, and Switzerland	KilomètreSquare kilomètreAreAreHectareCubic mètreMètreMètreKilogrammeQuintal métriqueCentnerJTonneau (coal)Hectolitre (liquid measure)	<ul> <li>·621 of a mile</li> <li>·386 of a square mile</li> <li>·0247 of an acre</li> <li>2·47 acres</li> <li>1·308 cubic yard</li> <li>1·094 yard or 3·28 feet</li> <li>2·204 lbs. avoirdupois</li> <li>220·4 lbs. ,,</li> <li>2,204 lbs. ,,</li> <li>2.204 lbs. ,,</li> </ul>
	,, (cereals, &c.) Ts <sup>c</sup> un Ch <sup>c</sup> ih	2.75 Imperial bushels 1.41 inch 1.175 foot 11.75 feet

#### FOREIGN WEIGHTS AND MEASURES, WITH THEIR ENGLISH EQUIVALENTS—continued.

Imports and exports classified. 763. The returns of imports and exports, as given in the following pages, are arranged according to a system of classification recommended by the Statistical Conference of representatives of the Australasian Colonies held in Tasmania in 1875,\* the principle kept in view being that articles of a like nature should be classed together, and the form adopted that then employed in the tabulation of the Victorian Census Return of Occupations, means thus being thereby afforded of making calculations in respect to the number of persons in the colony working at the various trades in connexion with which articles are manufactured similar to those imported into and exported from the colony. The year under review is the nineteenth in which this mode of classification has

been used in Victoria. It has met with the approval of eminent statisticians in Europe and elsewhere, but up to the present time has only been adopted by one of the other colonies represented at the Conference.

Mode of valuing imports and In the case of the imports, goods on which ad valorem duties are exports. 764. The Customs valuations are made upon the following principle.

> \* See Report of Conference, with introductory letter by the Government Statist of Victoria (Parliamentary Paper, No 11, Session 1875), page 6, paragraph 16; page 9, resolution 6; and page 12, Appendix A; also Victorian Year-Book, 1875, paragraphs 96 to 99, and footnotes.

payable are by law appraised at their fair market value in the principal markets of the country whence they were exported, with 10 per cent. added.\* Valuations of other imported goods may be practically said to be their cost price on landing, *i.e.*, their invoice values with the addition of freight and charges. In the case of the exports, the values returned are presumed to be the actual values in the local markets at the time of shipment. Declarations have to be made of the values of all imports; but in respect to exports such declarations are only required upon goods exported for drawback, or upon those on which an export duty is payable. In the case of both imports and exports, however, the values are carefully checked by officers of the Customs Department, and returned to the merchants for amendment if found incorrect.

765. In the following table the rates of import duty† are given, also Table of imports and the amount collected in connexion with each article. The quantities of exports. the various articles are also given where possible, as well as the values and, in addition, the excess of imports over exports, or the contrary, of each article.

766. The table of imports and exports is preceded by the following Classificasummary of the headings adopted for the classification of articles; also index of by an alphabetical index, which will still further facilitate the discovery of the position of any article :---

imports and exports.

NOTE.—The value of the overland exports included in this table was £795,370. Exports for drawback, valued at £399,742, are also included.

,

Imports, exports, and trade. 767. In 1893 the total declared value of the imports having been  $\pounds 13,283,814$  and that of the exports  $\pounds 13,308,551$ , the excess of exports over imports was  $\pounds 24,737$ , and the whole value of external trade was  $\pounds 26,592,365$ .

Imports and exports last two years.

768. The value of imports was lower in 1893 than in 1892 by  $\pounds 3,890,731$ , or by 23 per cent.; and the value of exports was lower than in that year by  $\pounds 905,995$ , or by 6 per cent. The value of the total trade was thus lower than in the previous year by  $\pounds 4,796,726$ .

Imports and exports latest and former years. 769. In 1893 the value of imports was below that in any other year since 1871; the value of exports, although higher than in the years 1890, 1889, 1887, and 1886, was lower than that in any of the other years since 1870 with one exception.\*

Imports and exports per head, 1884-1893.

770. In the year under review the value per head of imports was lower by £3 8s. 5d. and the value per head of exports was lower by 17s. 1d. than in 1892. The following table shows the value of imports and exports per head in each of the ten years ended with 1893:—

			Value per Head of the Population † of

IMPORTS AND EXPORTS PER HEAD, 1884 TO 1893.

454

Imports and exports per head, 1893 and former years. 771. It will be observed that in 1893 the value of imports per head was very much lower than in any of the other years named, also that the value of exports per head in 1893 was lower than in any of those years except 1887.

\* For value of imports and exports in each year, see Statistical Summary of Victoria (first folding sheet to be published later on).

For the estimated mean population used in making these calculations, see table of Breadstuffs Available for Consumption in Part "Production," post.

772. The total value and value per head of imports and exports are Imports and given in the following table for the different Australasian Colonies, the returns being for each of the five years ended with 1892 :---

Imports. Exports. Colony. Year. Value Value Total Value. NOTE.—For the imports and exports of the different colonies during 1893, see General Summary of Australasian Statistics (third folding sheet of this work); also Appendix B post.

Gross imports and exports of colonies.

773. In 1892 the imports were below the average in all the colonies except Western Australia and New Zealand, but the exports were above the average in all the colonies except New South Wales, South Australia, and Tasmania. The imports in Western Australia and New Zealand, and the exports in Queensland and Western Australia, were of greater value in the last than in any of the previous years named. In only two colonies—viz., Western Australia and New Zealand—did the imports show an increase as compared with the previous year; and in only two—viz., Queensland and Western Australia—did an increase take place in the exports.

Imports and exports of colonies per head. 774. Per head of the population the imports in 1892 were below the average in all the colonies except Western Australia and New Zealand, and the exports were below the average in all the colonies except Queensland and New Zealand. In Victoria, New South Wales, Queensland, and Tasmania the imports per head, and in New South Wales and Tasmania the exports per head, were lower in 1892 than in any previous year named; but in all other cases both the imports

and exports per head were higher in one or more of the other years named than in 1892. In all the colonies except New Zealand the imports per head in 1892 were lower than those in 1891, whilst the exports per head in that year were also lower than in the previous one in all except Queensland and Western Australia.

Order of colonies in respect to imports and exports. 775. The total value of exports was much higher in New South Wales than in Victoria in each of the five years ended with 1892, but this was the case in regard to the total value of imports in only the last

two of those years; whilst in all the years the value of both imports and exports in the former colony was higher than in any other Australasian The following is the order of the colonies in regard to the Colony. total value of imports and exports in 1892 and in the five years 1888 to 1892 :---

ORDER OF COLONIES IN REFERENCE TO TOTAL VALUE OF IMPORTS.

Order in 1892.

1. New South Wales.

- 2. Victoria.
- 3. South Australia.
- 4. New Zealand.
- 5. Queensland.
- 6. Tasmania.
- 7. Western Australia.

Order in a Series of Five Years.

- 1. New South Wales.
- 2. Victoria.
- 3. South Australia.
- 4. New Zealand.
- 5. Queensland.
- 6. Tasmania.
- 7. Western Australia.

ORDER OF COLONIES IN REFERENCE TO TOTAL VALUE OF EXPORTS.

Order in 1892.

- 1. New South Wales.
- 2. Victoria.
- 3. New Zealand.
- 4. Queensland.
- 5. South Australia.
- 6. Tasmania.
- 7. Western Australia.

Order in a Series of Five Years.

- 1. New South Wales.
- 2. Victoria.
- 3. New Zealand.
- 4. South Australia.
- 5. Queensland.
- 6. Tasmania.
- 7. Western Australia.

776. In regard to the comparison of the trade of New South New South Wales with that of Victoria, it should be pointed out that the passing Victorian returns of imports and exports are each year largely swelled by the value of wool brought to Melbourne from the neighbouring colonies for convenience of shipment. It should be borne in mind, however, that a large proportion of this belongs to Victorian capitalists.

777. The value of imports per head in 1892 was greatest in Western Order of Australia and next in South Australia, but that of exports per head respect to was greatest in South Australia; whilst Victoria stood fourth in regard and exports to the former and sixth in regard to the latter. Over a series of years South Australia was at the head of the list in regard to the value per head of both imports and exports, Victoria occupying exactly the same positions as in 1892, whilst New South Wales stood third and second respectively. New Zealand stood fifth in regard to the imports per head in 1892, but was at the bottom of the list over a series of years; whilst, in regard to the exports per head, Tasmania was at the bottom Over a series of years Queensland and of the list in both cases. New Zealand occupy a somewhat higher position, and Western Australia and Victoria a lower one, in the export than in the import list. The following lists show the order of the colonies in regard to the imports

Wales wool through Victoria.

colonies in

imports

per head.

and the exports per head during the year 1892, and in the whole period of five years :---

ORDER OF COLONIES IN REFERENCE TO VALUE OF IMPORTS PER HEAD.

779. In regard to the Australian continent, also in regard to that Australian continent combined with Tasmania and New Zealand, it will be observed that the imports showed a considerable contraction in 1892, as compared with previous years, but that the exports were higher than in any previous year named in the table except 1891; also that in continental Australia the imports per head in the same year were lower by £3 9s. 5d., and the exports per head by 17s. 4d., than the average of five years, whilst in continental and insular Australia combined the imports per head were lower by  $\pounds 2$  14s. 10d., and the exports per head by 14s. 2d., than the average of the same period.

780. It must be borne in mind that in the last table the total Interimports and exports of each colony are dealt with; therefore the trade the colonies carry on with each other is included, as well as that with places outside the Australasian group. Hence the same merchandise may form part of the imports and exports of several colonies. In the following table the extent of the intercolonial trade is shown separately from that carried on with extra-Australasian countries for each of the colonies during 1892 :---

colonial and oxternal trade of Australasian Colonies.

INTERCOLONIAL AND EXTERNAL TRADE OF AUSTRALASIAN Colonies, 1892.

781. In the case the import trade		th the othe				Proportion of inter- colonial a external trade of Austral- asian Colonies.

and Aus-

tralasian trade in

more than half the export trade in the case of Queensland and Tasmania, but in all the other Australasian Colonies more than half the imports are from, and more than half the exports are to, countries outside of Australasia. In regard to the proportions of trade with countries outside of Australasia, Victoria stands second in the case of both imports and exports, New Zealand alone being above it. In New Zealand the proportion of intercolonial trade is but small (about 15 per cent.), and consequently that of external trade is large as compared with the other colonies. The following are the proportions of intercolonial and external trade in the different colonies, which are arranged in the order of the latter :--

PROPORTIONS OF INTERCOLONIAL AND EXTERNAL TRADE IN AUSTRALASIAN COLONIES, 1892.

	Proportion from	of Imports n—		Proportion of Exports to—		
Colony.	Other Australasian Colonies. Colonies. Colonies.		Colony.	Other Australasian Colonies.	Countries outside of Australasia	
New Zealand Victoria New South Wales Queensland Western Australia South Australia Tasmania	per cent. $16 \cdot 02$ $41 \cdot 32$ $44 \cdot 29$ $45 \cdot 83$ $48 \cdot 87$ $54 \cdot 97$ $62 \cdot 48$	per cent. 83.98 58.68 55.71 54.17 51.13 45.03 37.52	New Zealand Victoria Western Australia New South Wales South Australia Queensland Tasmania	per cent. $14 \cdot 34$ $28 \cdot 07$ $35 \cdot 63$ $40 \cdot 58$ $46 \cdot 95$ $54 \cdot 26$ $76 \cdot 55$	per cent. $85 \cdot 66$ $71 \cdot 93$ $64 \cdot 37$ $59 \cdot 42$ $53 \cdot 05$ $45 \cdot 74$ $23 \cdot 45$	

Proportions of intercolonial and external trade in Australasia. 54.88 per cent. was with outside countries; and of the export trade

40.48 per cent. was between colony and colony, and 59.52 per cent. was with outside countries. For the continent and the two insular colonies in combination, similar proportions are respectively 42.17 and 57.83 per cent. and 37.40 and 62.60 per cent.

Intercolonial trade per head in Australasian Colonies. 783. Per head of the population, South Australia, as regards imports, and Queensland as regards exports, have a larger intercolonial trade than any of the other colonies, followed by Western Australia

in the case of the former and South Australia in that of the latter. Victoria stands fifth in regard to the proportion of intercolonial imports, and sixth in regard to that of intercolonial exports, per head. The following are the proportions in the different colonies :---

## VALUE OF INTERCOLONIAL TRADE IN EACH AUSTRALASIAN COLONY PER HEAD OF POPULATION, 1892.

Intercolonial Imports per 2	Head.		Intercolonial Exports per Head.
	$\pounds$ s.	d.	$\pounds$ s. d.
1. South Australia	12 9	6	1. Queensland 11 19 4
2. Western Australia	12 2	10	2. South Australia 11 6 9
3. New South Wales	7 15	10	3. New South Wales 7 11 0
4. Tasmania	62	5	4. Tasmania 6 14 11

6. Queensland	4 16	7	6. Victoria 3 8 8
7. New Zealand	1 14	8	7. New Zealand 2 2 7

784. The value per head of intercolonial imports was  $\pounds 7$  6s. 11d. in Inter-Australia as a whole, and £6 7s. 8d. in Australasia as a whole; and the value per head of intercolonial exports was  $\pounds 6$  19s. 7d. in Australia as a whole, and £6 3s. 7d. in Australasia as a whole.

colonial trade of Australasia per head.

785. In regard to the trade with countries outside of Australasia, External trade per head of Australthe value per head of imports was greatest in Western Australia, and asian of exports in South Australia; Victoria standing fifth in the case of Colonies. the former and sixth in that of the latter. The following are the proportions for each colony :---

VALUE OF EXTERNAL TRADE IN EACH AUSTRALASIAN COLONY PER HEAD OF POPULATION, 1892.

External Imports per Head.

External Exports per Head.

	$\pounds$ s. d.		$\pounds$ s. d.
1. Western Australia	$12 \ 14 \ 2$	1. South Australia	$12 \ 16 \ 2$
2. South Australia	10 4 5	2. New Zealand	$12 \ 14 \ 5$
3. New South Wales	9160	3. New South Wales	11 1 1
4. New Zealand	9 1 7	4. Western Australia	10 2 11
5. Victoria	8 13 4	5. Queensland	10 1 9
6. Queensland	5 14 3	6. Victoria	8 15 10
7. Tasmania	3 13 6	7. Tasmania	2 1 4

786. The values per head in 1892 of imports from countries outside External trade of of Australasia to the colonies on the Australian continent was Australia per head.

£8 18s. 9d., and the value per head of exports from those colonies to such countries was £10 5s. 2d.

External trade of Australasia per head. 787. To the whole of Australasia, the value per head of goods imported from countries beyond its limits was in the proportion of £8 15s. 2d., and the value per head of goods exported to such countries was £10 6s. 10d. If federation of the Australasian Colonies had become a fact, these figures would be held to represent the value per head of the general imports and exports of Australasia during 1892, instead of £15 2s. 10d. and £16 10s. 5d., as given in a previous table,\* the reason being that the colonies would then be considered as one country, and consequently the intercolonial imports and exports would not be included with the general trade, but, if returned at all, would be simply set down under the head of "coastwise traffic."

Overvaluation of imports and exports in some colonies.

788. With reference to the returns of imports, it may be remarked that there is strong reason to believe the values are considerably overstated in some, if not all, the colonies. This probably arises from the fact that the price set down in the merchant's invoice is that upon which the Customs valuation is based, whereas the invoice price, on the basis of which sales are effected in the colony, is often purposely entered much above the actual value. It is believed that the exports are also over-valued, especially so far as the article wool is concerned, but that the total is not affected to the same extent as that of the imports. It may be remarked that, from the indefinite manner in which many articles are returned in the various colonies, e.g., cotton, linen, silk, or woollen "manufactures;" "haberdashery and millinery," "drapery," &c.; also from the fact of the number of packages being often given instead of the number, weight, or measurement of the articles, considerable difficulties lie in the way of arriving at accurate conclusions.†

External trade of British dominions.

789. The following table shows the imports and exports during 1892 of the United Kingdom and its various dependencies throughout the world. The figures have been taken from recent official documents,

\* See table following paragraph 778, ante.

† See Victorian Year-Book, 1885-6, paragraph 760.

and the calculations have been made in the office of the Government Statist, Melbourne :---

External trade of British possessions, 1883-92.

790. On comparing the totals in this table with the corresponding ones for the previous year, a decrease is observed in the total value of the imports of Great Britain and her dependencies to the extent of twenty-four and two-fifth millions sterling, or about  $3\frac{3}{5}$  per cent., and a decrease in the value of the exports of twenty and two-fifth millions sterling, or  $3\frac{3}{5}$  per cent. The decrease in the import trade was made up of a decrease of eleven and three-fifth millions—or about  $2\frac{3}{5}$  per

<sup>\*</sup> See footnote (\*) on preceding page.

<sup>†</sup> Including intercolonial trade. Exclusive of that trade, the total value of imports is £34,515,910, or £8 15s. 2d. per head; and the total value of exports is £40,767,273, or £10 6s, 10d. per head. For imports and exports of the different Australasian Colonies, see tables following paragraphs 771 and 780, ante.

cent.---in that of the United Kingdom, and one of about twelve and threequarter millions—or  $5\frac{1}{5}$  per cent.—in the imports of other British Possessions; whilst the decrease in the export trade was nearly twenty and a half millions—or  $3\frac{3}{5}$  per cent.,—made up of a decrease of seventeen and a half millions—or about  $5\frac{3}{5}$  per cent.—in that of the United Kingdom, and one of three millions-or about 1 per cent.-in that of her various possessions. From a comparison of the figures in the following table, it appears that, although the value of the total trade of the British Dominions has increased considerably since 1886, when it was extremely low, a marked depreciation again took place in 1892 :---

IMPORTS AND EXPORTS OF THE UNITED KINGDOM AND OTHER BRITISH POSSESSIONS, 1883 TO 1892 (000'S OMITTED).

NOTE.—In the cases of the Argentine Confederation, Chile, Paraguay, and Uruguay the official values are given, which are said to be 25 per cent. below the real values. \* Imports for home consumption only. † Exports of home produce only. † Exports of home produce only.

Including bullion and specie.
These calculations are based upon the population of Russia in Europe, exclusive of Finland.
Figures for 1891.
Figures for 1890.

794. By comparing the figures in this with those in a previous Trade in table\* it will be at once seen that the imports and exports of the United Kingdom, even exclusive of bullion and specie, represent a much higher value than those of any other country in the world, and that those of Germany and France come next in this respect; then follow in succession, according to their total trade, the United States, Belgium, Holland, and India, which are the only other countries possessing a larger trade with countries outside their borders than the Australasian Colonies taken collectively, where such trade, including that between the colonies, is larger by 13 millions than in Austria-Hungary, by 35 millions than in Italy, and by 36 millions than in Including her intercolonial trade, the external commerce of Russia. Victoriat is much larger than that of Roumania, Japan, Mexico, Egypt, and Portugal, is about equal to that of Denmark, Turkey, and Chile, but is not so extensive as that of Brazil, Switzerland, Spain, Sweden and Norway, China, or Argentine Republic.

795. The trade of the United Kingdom,\* as expressed by the value Trade per of imports and exports per head of the population, is larger than that of any foreign country named except Holland, Belgium, and Switzer- compared. With the exception of Tasmania the trade of every one of the land. Australasian Colonies, † as similarly expressed (including that they carry on with each other), is much larger than that of the United Kingdom, or any foreign country except Holland and Belgium; whilst that of South Australia is larger than that of any other country, and that of New South Wales and Western Australia larger than that of any country except Holland.

798. It should be pointed out that the returns of articles set down Decrease of as produced or manufactured in Victoria are not reliable, there being no other evidence as to the origin of such articles than the statements of the shippers, which, it is known, are sometimes made very loosely. The figures, however, may be looked upon as affording some indication of the condition of the external trade in local products, comparing one year with another. It will be seen that, according to the figures, the

<sup>\*</sup> Articles partly or wholly made up of imported materials have been considered by the Customs authorities as Victorian products; for example, imported gold, minted, and then re-exported, would be entered as the produce of the colony.

total value of exports of local productions showed a considerable improvement in 1891 on the exceptionally low values which prevailed in the previous six years; but, owing to a fall in values, especially in the case of wool, as well as to a decrease in the volume of the articles exported, this improvement was not sustained in 1892 and 1893. The value per head, moreover, of the exports of home products, and their proportion to the total exports, which were much above the average in 1891, fell again to a low level in 1893, the amount per head in this year being the lowest with one exception in the last ten years, and the proportion to the total exports the lowest with four exceptions.

799. The following are the values of goods entered as the produce Exports of victorian or manufacture of Victoria during each of the years forming the products, 1887 to 1887 to 1893. articles being given :---

NOTE.—The border traffic is included in all the years.

Increase or decrease of exports of articles of home produce.

800. It has been already stated that in 1893, as compared with 1892, the decrease in the total exports amounted in value to close on £906,000, which is more than accounted for by a falling-off amounting to nearly  $\pm 1,117,000$  in the value of exports of home produce or The falling-off in the exports of such products was manufactures. spread over 31 articles, the total value of the decrease of which was set down as £2,309,616; but as against this there was an increase in the exports of 27 articles, amounting in all to an increased value of £1,192,734, so that the net decrease in the value of exports of home produce was as stated. The chief decrease was in exports of wool (amounting to as much as £1,714,000), wheat and flour (£219,241), live stock (£195,496), preserved meats (£37,275), leather (£36,412), hay and chaff (£25,860), and machinery (£17,274). The chief

<sup>\*</sup> Including all articles partly or wholly made up of imported materials. † It is believed a portiou of the wool and gold was produced outside Victoria. For a more reliable estimate of the production of these staples, see Part "Production," post.

articles of home produce of which the exports increased were gold bullion and specie ( $\pounds 702,231$ ), butter and cheese ( $\pounds 219,116$ ), skins ( $\pounds 90,022$ ), tallow ( $\pounds 60,107$ ), and oatmeal and grain other than wheat ( $\pounds 33,698$ ). The following table gives the names of the articles and the amount of increase or falling-off in the exports of each article:—

\* Including Northern Territory.

802. According to its total value and its value per head, the home Exports of produce exported in 1892 was lower than in 1891 in all the colonies duce, 1891 and 1892. except Queensland and Western Australia-the greatest decrease per head being in South Australia and New South Wales. At the same time the proportion of exports of home produce to the total exports was higher in 1892 than in 1891 in Queensland, Western Australia, and Tasmania; it was about the same in New Zealand, but was slightly lower in the other colonies. It should be mentioned that the same circumstance which makes the returns of Victorian home produce exported not reliable, as has been already stated,\* must also operate against the truthfulness of the returns of the other colonies; consequently, some caution should be exercised in drawing deductions from the figures.

803. New South Wales being a coal-producing country, and being, Order of moreover, from the extent of her territory, able to raise a very large quantity of wool and other pastoral produce, which is only partially duce. counterbalanced by the larger quantities of grain and gold produced in Victoria, the value of home products exported from the former has of late years been in excess of that from the latter. This was the case in all the years shown; the difference in favour of New South Wales being about  $\pounds7,000,000$  in each of the three years ended with 1890, as much as £8,000,000 in 1891, and about £6,300,000 in 1892. Victoria is, however, in advance of every Australasian Colony except New South Wales in regard to the value of home produce exported. The following is the order in which the colonies stood in this respect according to the returns of 1892 :---

ORDER OF COLONIES IN REFERENCE TO TOTAL VALUE OF EXPORTS

respect to exports of home pro-

OF HOME PRODUCE, 1892.

- 1. New South Wales.
- 2. Victoria.
- 3. New Zealand.
- 4. Queensland.

- 5. South Australia.
- 6. Tasmania.
- 7. Western Australia.

804. In respect to the value of exports of domestic produce per order of colonies in head of the population in 1892, Tasmania stood lowest on the list, respect to exports of home pro-Victoria being immediately above it. At the top of the list stood duce per head.

\* See paragraph 798 ante.

 $2 \mathrm{K}$ 

Queensland, Western Australia and New South Wales standing next. The following was the order of the colonies in this particular:—

ORDER OF COLONIES IN REFERENCE TO VALUE PER HEAD OF EXPORTS OF HOME PRODUCE, 1892.

Queensland.
 Western Australia.
 New South Wales.

4. New Zealand.

5. South Australia.

- 6. Victoria.
- 7. Tasmania.

Order of colonies in respect to proportion of home products to total exports. 805. In Victoria during the same year the value of articles of domestic produce bore a slightly lower proportion to that of the total exports than in New South Wales, but in both colonies a much smaller proportion than in any other colony except South Australia. It is probable, however, that the proportion in Victoria would have been larger but for the total exports being so much swelled by the exportation of wool produced in the adjacent colonies and imported over the frontiers. The colonies in this respect stood in the following order in 1892 :—

ORDER OF COLONIES IN REFERENCE TO PROPORTION OF EXPORTS OF HOME PRODUCE TO TOTAL EXPORTS, 1892.

1. Tasmania.	5. New South Wales.
2. Western Australia.	6. Victoria.
3. Queensland.	7. South Australia.
4. New Zealand.	

Exports of Australasian produce. 806. The aggregate value of the exports of home produce from all the Australasian Colonies amounted in 1892 to £53,095,727, or  $81\frac{1}{2}$  per cent. of the total exports, as compared with £58,351,423, or  $80\frac{2}{5}$  per cent. of the total exports in 1891. During the last fifteen years the exports of home produce have varied from 33 millions in 1879 to over 58 millions in 1891; and the proportion to the total exports has ranged from 79 to 85 per cent.

Trade with various countries, 1893. 807. In 1893, according to value, over 41 per cent. of the Victorian imports were from, and 56 per cent. of the Victorian exports were to, the United Kingdom. About 44 per cent. of the former, and 27 per cent. of the latter, were conveyed between Victoria and the neighbouring colonies, chiefly New South Wales. In regard to British possessions out of Australia, the imports therefrom and the exports thereto amounted to about 5 and 3 per cent. respectively of the totals; whilst in regard to foreign countries the imports therefrom amounted to about 10 per cent., and the exports thereto to about 14 per cent., of the totals. The value of the imports from and the exports to the principal British and foreign countries, and the percentage of such

values to the total imports and exports, are given in the following table :---

VICTORIAN IMPORTS FROM AND EXPORTS TO DIFFERENT COUNTRIES, 1893.

808. Comparing the value of imports in 1893 with that in 1892, a Increase or decrease of about  $1\frac{1}{3}$  million is shown in the value of those from  $\frac{1}{3}$  million is shown in the value of those from  $\frac{1}{3}$  more decrease of the United Kingdom alone. The imports from the other Australasian Colonies show a net decrease of £1,215,068, there having been a decrease in those from New South Wales, South Australia, and New Zealand, but an increase in those from Western Australia, Queensland, and Tasmania; whilst there was a net decrease of £367,212 in those from Mauritius, Hong Kong, India, Canada, and other British  $2 \times 2$ 

possessions. As regards Foreign countries, there was a reduced import trade in every case save one, the Philippine Islands. The largest decreases were £267,457 in the case of Java, £233,476 in that of the United States, £207,425 in that of Germany, and £104,350 in that of Sweden and Norway; whilst the net decrease from Foreign countries as a whole was £963,096. The following table shows the value of goods imported from each country in the last two years, and the increase or falling-off of such value in the last year :—

Imports from other colonies in colonies more than she exported thereto in all the years named except excess of exports 1883, but that the excess of imports in 1893 was smaller than in any thereto. previous year since 1886, which was the first year in which the preponderance of exports became very noticeable. The figures in the last two columns show the net excess in favour of imports during the eleven years to have amounted to £27,728,379, or an average of nearly  $\pounds 2,521,000$  per annum.

816. It will be observed that Victoria imported from the other

#### 480

\* Exclusive of Fiji.

817. In 1893,  $78\frac{1}{2}$  per cent. of the imports were landed, and 87 per Imports and exports at cent. of the exports were shipped, at the port of Melbourne. Something less than a fifth of the imports entered the colony at the Murray ports, but only about a nineteenth of the exports was sent away therefrom. The chief of these ports are Echuca and Wodonga, at which about  $10\frac{1}{2}$  and  $5\frac{1}{4}$  per cent. respectively of the total imports were landed. The only important port of shipment in Victoria, except Melbourne, is Geelong, from which, in 1893, nearly  $6\frac{3}{4}$  per cent. of the total exports were sent away. The following table gives the names of the various ports, and the value and percentage of the goods imported and exported at each during the year :—

IMPORTS OF PRINCIPAL ARTICLES, 1883, 1888, AND 1893continued.

819. Of all the articles named in the table the most important, Eleven chief according to the values in 1893, are wool-including that brought import,

articles of

overland from New South Wales-gold (inclusive of specie), cottons, sugar, live stock, woollens, coal, tea, iron and steel, hides, skins and pelts, and paper, in the order named, the values of which varied in 1893 from £2,553,000 for wool to £220,200 for paper. The aggregate value of these eleven items amounted in 1893 to over £8,526,000, or to nearly two-thirds the total value of all the articles imported. It may be mentioned that the value in 1883 of all these articles was  $\pounds 8,698,700$ , in 1888 £11,627,600, and in 1892 £9,502,300, so that the value in 1893 was much lower than in the earlier years named.

\* Including the value of wool imported into Victoria across the Murray.

Imports of three periods compared.

820. The total imports show a reduced value in 1893 as compared with 1888 of £10,688,000, and as compared with 1883 of £4,460,000; while the imports of the articles named in the table fell off by £9,528,000 and £3,619,000 respectively. All but nine of the 66 articles show considerably lower values at the last than at either of the former periods, the more noticeable of which are books and stationery, musical instruments, watches and jewellery, machinery, articles used in or connected with the building trade—such as building materials, furniture, timber and woodenware, iron and steel, nails, screws, and other metal manufactures (including hardware and ironmongery); all articles, except linens, embraced under the head of Textile Fabrics and Dress (Orders 15 to 20), which fell off by 34 per cent. as compared with 1883, and by 51 per cent. as compared with 1888; grain other than wheat (chiefly oats and rice); fish, fruit, tea, coffee, and sugar-which fell off by 45 per cent. and 40 per cent. as compared with 1883 and 1888 respectively; alcoholic beverages and tobacco, which fell off by 54 per cent. and 65 per cent. respectively; live stock, which fell off by 48 per cent. and 77 per cent.; leather, earthenware, glass, glassware, &c., and oilmen's stores. The articles which show an increase as compared with the two former periods are butter and cheese, wheat, hides, &c., and gold bullion and specie. The articles which showed lower values in 1893 than in 1888, but higher ones than in 1883 are linens, wool, paper, and coal-the latter owing partly to the development of Victorian coal measures, but chiefly to a depreciation in price of over 30 per cent., having fallen off by onethird since 1888. The imports of wool in 1893 show an increase of  $\pm 510,000$  as compared with 1883, but a decrease of  $\pm 150,000$  as compared with 1888; those of coal an increase of £43,000, but a decrease of £200,000, and paper an increase of £17,000, but a decrease of  $\pm 145,000$  as compared with the two periods respectively; whilst those of gold (including specie) show an increase over both periods of  $\pounds 1,270,000$  and  $\pounds 1,090,000$  respectively. On the other hand, the imports of articles included under Textile Fabrics and Dress fell off by as much as  $\pounds 1,120,000$  as compared with 1883, and by no less than  $\pounds 2,300,000$  as compared with 1888; sugar, tea, and coffee by  $\pounds 890,000$ and £710,000 respectively; timber by £552,000 and £1,266,000; intoxicants and tobacco by £525,000 and £857,000; but such decreases

. .

are so numerous and important that the principal of them are shown in the subjoined list, the amounts being given in round numbers :----

Eleven chief articles of export, 1893. 822. It appears from this table that the chief articles of Victorian export are wool—of which the value in 1893 was  $\pounds 5,104,000$ , and gold (inclusive of specie) valued at  $\pounds 2,851,200$ —which two articles alone contributed 60 per cent. to the total value of exports of all articles; next in order in 1893 were breadstuffs,  $\pounds 1,067,583$ , and butter and cheese,  $\pounds 578,300$ ; then hides and skins, live stock, tea, tallow, leather, hay and chaff, and sugar, in the order named—the values of

<sup>\*</sup> Including wool from across the Murray, which is also included in the returns of imports ante.

which varied in 1893 between £392,000 and £111,000. It will be noticed, however, that, of these, sugar (excepting so far as the process of refining is concerned) and tea are not produced in Victoria, but are merely re-exports. The value of the eleven articles just named amounted in 1893 to £11,211,022, or 84 per cent. of the total exports, and the balance of  $\pounds 2,097,529$  is distributed over all other heads.

823. The value of the total exports in 1893 was lower by Exports of £545,000 than that in 1888, and by £3,090,000 than in 1883. The periods exported articles which showed a higher value in 1893 than at either of the previous periods were butter and cheese, fresh and preserved meats, grain of all kinds, wine, horns and hoofs, and skins and pelts. The articles which showed a higher value in 1893 than in 1888, but a lower one than in 1883, were books, stationery, leather, tallow, oil, antimony ore, and manufactures of metals (undefined). The articles exported in 1893 which showed a higher value than in 1883, but a lower one than in 1888, were flour and biscuit, hides, soap, and silver specie. All the other exported articles, 31 in number, or exactly three-fifths of those named in the table, showed a lower value in 1893 than at either of the previous quinquennial periods. Of these gold (inclusive of specie) fell off by  $\pounds 1,065,000$  as compared with 1883, and by £839,000 as compared with 1888; wool by about £951,000 and £67,000 respectively; live stock by £533,000 and £135,000; apparel and slops by  $\pounds 224,000$  and  $\pounds 84,000$ ; sugar by  $\pounds 156,000$  and  $\pounds 32,000$ ; potatoes by  $\pounds 73,000$  and  $\pounds 56,000$ ; and boots by  $\pounds 45,000$ and  $\pounds 25,000$ . But breadstuffs (wheat and flour) showed a substantial increase of £416,000 as compared with 1883, and £130,000 as compared with 1888; skins, &c., of  $\pm 263,000$  and  $\pm 194,000$ ; wine of  $\pm 27,000$ and £10,000; whilst, owing to the stimulus afforded by Government bonuses, the export of butter and cheese rose from less than  $\pm 120,000$ in 1883, and less than £70,000 in 1888, to nearly £580,000 in 1893. Moreover, although meats of all kinds and leather &c. fell off by £26,000 and £170,000 respectively as compared with the former, they increased by £71,000 and £19,000 respectively as compared with the latter year.

compared.

824. The foregoing tables deal with values only, but owing to the Trade index numbers. great fall in prices of recent years these would be incomplete without some reference to quantities. Various devices have been framed to indicate the rise and fall in the volume, as apart from the value of the trade in various commodities, as well as to indicate the variation of prices, and perhaps the most convenient and satisfactory of these is

the use of "index numbers."\* Three index numbers have been introduced, one for value, one for volume (or quantity), and one for By means of the index of value it is possible to compare the price. recorded value of the trade of any year with a particular one (say 1883), which may be taken as a standard, the total value of the trade in that year being represented by 1,000. As the total trade in 1883 was £16,398,863, therefore, this is taken to represent an index value of 1,000; whilst the trade of other years is made to correspond proportionately with this index number; and each article likewise in any year has an index number having the same ratio to the total index for that year as the value of the exports of such article has to the value of the total exports. The index of value is also taken in the standard year as the index of volume, and for any other year it is found by simply dividing the index of value by the index of price. The index of price for any article is assumed to be 1.00 (or 100) for the standard year, and this is proportionally increased or diminished in any other year, according to the variation in price; thus, if the price fell one-half, the index number would be .50, and if it rose one-half it would be 1.50. In order to ascertain the index numbers for the total import or export trade of various years it is necessary to enter into minute details as to the index numbers of the leading individual articles of import and export, which form the bulk of the trade, and as this involves laborious calculations, the inquiry on this occasion has been restricted to the export trade for the years 1883, 1888, and 1893. The details of the examination will be found in an appendix at the end of this work, and so in the following paragraphs only the leading results will be dealt with.

Basis of index numbers. 825. To make the subject quite clear, the basis of the index numbers used in the following tables is as follows :—

Index of Value ...  $\pounds 16,400,000$  (*i.e.*, Value of Exports, 1883) = 1,000.

,, Price ... Prices, 1883 = 1.00.+

", Volume = Index of Value  $\div$  Index of Price.

Conditions affecting the reliability of the method. 826. In the system of index numbers certain assumptions are necessarily made, which may in some degree impair its value from an accurate scientific point of view, but which, it is believed, will not materially affect the results—at all events in brief intervals of time. First, it is assumed that the quantities and values are correctly returned; second, that the quantities returned are fairly representative of the true volume; and third, that the quality of the articles (detailed as far as possible) does not vary. Apart from the question of the reliability of the quantities and uniformity of the qualities returned, it is indeed true

<sup>\*</sup> For application of this method to the trade of the United Kingdom, see paper by Mr. S. Bourne on "Variations in the volume and value of exports and imports of the United Kingdom in recent years," in *Journal of the Royal Statistical Society of London* for September, 1889, page 407, et seq. † For convenience, however, the decimal point will be omitted in the tables.

that the quality of articles-for example, woollen cloth, and such simple products as greasy wool, leather, and wheat-does often vary in different years, and that a certain number of yards (the unit in such cases) of cloth may contain, as has been pointed out by critics, more or less by weight of wool, cotton, or other fabric at one period than at another,\* and such possibilities must not be altogether overlooked. With a view, however, to minimize as far as possible the effect of such discrepancies, the individual articles have been subdivided as far as the records would allow. Thus, it has not been deemed sufficient to take "sugar" as an individual article without analyzing it into the various kinds of sugar enumerated—such as "cane, refined," "cane, unrefined," "beet refined," &c. "Wool" also has been separated into "greasy," "washed," and "scoured," &c., &c.; but, of course, there must be a narrow limit to such subdivision, which is consequently imperfect.

827. Grouping the exports under five main heads, commencing with Index gold-the price of which must, as the standard of value, always remain exports constant, with the result that its index of value is always equal to its index of volume, and its index of price always 100-the following have been ascertained to be the index numbers for the respective years in each group :---

numbers of arranged in five groups.

\* Then, again, it is held that, in the case of "Wool," the "bale" is a better representative of quantity than "lbs." (which is the unit adopted in Victorian Customs returns), for although bales of wool may vary considerably as regards weight, in consequence of the dirt contained (which occupies but small compass), yet there will be little variation in the weight of pure wool (as ascertained after washing) in different bales.

† Chief exports only. Not only raw products, but products which have undergone some slight process of manufacture are included, eg., salted and tinned meats, leather, &c., under pastoral products; and cheese, flour, jams, &c., under agricultural products.

+ Owing to some large and extraordinary fluctuations in the prices of live stock, according to the Customs returns, which probably did not actually occur, the index numbers in this line are not considered reliable, but if the doubtful items (horses, cattle, sheep) are omitted, the totals of the other pastoral products would probably be fairly representative of the class. The index numbers of pastoral products (exclusive of the live stock referred to) are as follow:—Value, 421, 350, 36?; Volume, 421, 424, 557; Price, 82, 66

Increase in volume, but decrease in value of export tradé.

828. It will be observed that, except in the case of gold and "all other articles," there has been a marked increase at each period in the volume of exports, more especially in agricultural (which rose over 50 per cent.) and pastoral products; but, owing to the prices having fallen 33 per cent. since 1883, the value of the trade has actually diminished, except in the case of agricultural products, which increased by 38 per cent. It will also be noticed that in 1888, as compared with 1883, prices of exported commodities fell off by from 18 to 23 per cent., and in 1893 by from 31 to 36 per cent. It must be borne in mind, however, that this great depreciation relates, for the most part, to wholesale prices, and to raw materials. To what extent retail prices, or prices paid by the consumer, have fallen is still an open question, although it is certain they have not fallen in the same degree, in consequence of the price of labour, which is largely involved in the manufacture of crude materials into articles of consumption and in their final distribution, having either not fallen at all, or fallen only in a slight degreetemporary fluctuations being disregarded.

Index numexported.

829. The following table shows the index numbers for the same bers of prin-cipalarticles three periods of all the principal articles exported :---

#### INDEX NUMBERS OF PRINCIPAL ARTICLES EXPORTED, 1883, 1888, AND 1893—continued.

830. In the absence of the index prices of imports it is impossible Price level of imports and to state for Victoria to what extent the fall in the prices of exported exports compared. commodities has been compensated by a fall in those of imported articles, but it will perhaps not be far wrong to assume the index of prices for British exports from the United Kingdom as fairly representative of Victorian imports, and these, placed side by side with the index numbers already given, are as follow:----

PRICE	LEVEL	FOR	IMPORTS	AND	EXPORTS	Сомп	PARED.
			Of V	ictorian	Exports.		British Exports ictorian Imports).
1883	* *4	•••	• • •	100	•••	•••	100
1888		•••	•••	81	₽ €4	•••	87
1893				69			89*

831. From these figures it appears that whilst the colony receives Fall in prices of experts 31 per cent. less for its products, it has to pay only 11 per cent. less far greater than those than formerly for the products of the United Kingdom imported. of imports. This result, however, is subject to verification, for it is just possible that British exports as a whole, which include such articles as coal, may not be fairly representative of British imports into Victoria. 832. In thirty-seven out of the fifty-seven years ended with 1893, Excess of imports the value of imports to Victoria exceeded that of exports therefrom, exports, but in the other twenty years the value of exports was the greater. &c., 1837 to 1893. The following is a statement of the amounts by which the imports exceeded the exports in these years in which the excess was in favour of the former, and the amounts by which the exports exceeded the

Balance of trade in fifty-seven years. 833. It will be observed that in the fifty-seven years of which mention is made in the table the imports exceeded the exports by  $\pm 84,100,000$ , or an average of about a million and a half per annum; which excess, it should be mentioned, would be added to if the value of the British and foreign built ships placed on the register of Victoria were included with the imports; but diminished if freight, which is included in the value of imports, were also added to the exports. Moreover, profits received on investments in the neighbouring colonies are included in the imports, although they may not be traceable in the returns.

Years in which imports exceeded exports or vice versd. 834. The year 1893 was the first since 1880, and the second since 1872, in which there was an excess of exports over imports. In all the other years since 1872 there was a large excess of imports over

exports, culminating in 1888 and 1889, in both of which years it exceeded £10,000,000 sterling. The excess of exports over imports was greatest in 1852, next in 1868, next in 1871, next in 1855, next in 1880. In connexion with the large excess of imports in the nine years ended with 1892, it will be remembered that new Government and Corporation loans \* of over £2,113,000 were raised in London in 1884, of £899,000 in 1885, £2,500,000 in 1886, £3,368,000 in 1887, £2,120,000 in 1888, £3,718,000 in 1889, £4,555,000 in 1890, £2,865,000 in 1891, and £3,350,000 in 1892; it must also be borne in mind that numerous private loans were floated, and very large amounts of other capital were remitted for investment in Victoria as well as in the neighbouring colonies. These sums must either gradually find their way into the imports, or act as a temporary check on the exports by restricting the export of gold, &c., which would otherwise naturally leave our shores; in like manner the annual interest payable on these sums must find its way into the exports. Then, again, it is known that large sums have been received by the colony in the shape of dividends from the Broken Hill silver mines and other investments in the neighbouring colonies, which amounts, being clear profit, have, as a matter of course, not to be counterbalanced, as is usually the case, by a corresponding export.

835. Experience has shown that the large importations of several Necessity for restricting years past, and especially of the three years ended with 1890, which imports and promoting have considerably exceeded the exports of the same years, were not exports. warranted by the legitimate requirements of the colony; and as much of the excess referred to represents borrowed money, on which, as well as on amounts previously borrowed, interest has to be met, it has been felt that, if the colony is to pay its way without recourse to further borrowing, and to recover prosperity upon a sound basis it will be necessary to increase the exports of home produce and to diminish the imports until there is a substantial excess of exports, as is now the case in several of the other colonies. With this object in view, it has been the policy of the Government to stimulate production by throwing open large portions of the mallee country and affording facilities for agricultural settlement in that and in other districts; by offering bonuses for the manufacture and exportation of certain agricultural and dairy products; by boring for gold, coal, and other minerals; by voting large amounts for prospecting operations; and by giving free "miners' rights" and free railway passes as well as small sums of money to persons desirous of trying their fortune upon the gold-fields.

\* Exclusive of portions required for redemption of loans falling due. See table following paragraph 391 ante.

Excess of imports, tralasian Colonies.

836. In 1892 the imports exceeded the exports in Victoria, &c., in Aus- Western Australia, and Tasmania, but the reverse was the case in the other colonies. The imports were in excess of the exports in Victoria and Tasmania in each of the last eleven years, also in Western Australia, with one exception; in New South Wales, with three exceptions; in Queensland, with five exceptions; but in New Zealand the exports were in excess of the imports in six, and in South Australia in eight, The following table shows the amounts by of the last eleven years. which the imports exceeded the exports, or the contrary, in the different colonies during the eleven years ended with 1892, and the net result for each colony over the whole period :---

\* Excess of exports over imports. † Net figures.

Colonies in which imports exceed exports, and contrary. 837. It will be observed that during the eleven years to which the table relates goods to the value of 64 millions sterling were received by Victoria, more than 21 millions by New South Wales, nearly 3 millions by Tasmania, and  $1\frac{4}{5}$  millions by Western Australia, in excess of the values of the goods sent away; whilst on the other hand the value of the exports exceeded that of the imports by over  $10\frac{1}{2}$  millions sterling in New Zealand, by  $5\frac{1}{2}$  millions in Queensland, and by over  $1\frac{2}{3}$  millions in South Australia.

Imports in excess of exports, &c., in Australia and Australasia. 838. During the period alluded to it will be found that the Australian continent, taken as a whole, received goods to the value of 80 millions, or with Tasmania, of 83 millions more than it exported, which amount, by deducting the excess of exports over imports in New Zealand, is reduced to something above  $72\frac{1}{3}$  millions for the whole of Australasia.

Effects of borrowings on imports and exports. 839. In regard to this large balance of imports, it will be borne in mind that the colonies borrow largely from London; thus the Government debt of Australasia, which at the end of 1892 amounted to over 198\* millions sterling, nearly all represents English capital. As a set-off against this, however, an annual return has to be made, as interest which averages about 4 per cent. This item alone would be represented in the annual exports at the present time by a value of about  $\pounds7,900,000$  annually. No reliable information is available respecting the amount of private borrowings, but it is known they are extensive.

Excess of imports in United Kingdom. 840. The imports of the United Kingdom have always largely exceeded the exports, and, in the twenty years ended with 1892, this excess amounted in the aggregate to no less than 2,117 millions sterling, $\dagger$  or an average of 106 millions per annum. This balance, however, would be reduced to only 1,123 millions if certain corrections were made by the deduction for freight from imports, and by the addition to the exports for the value of ships built for foreigners, and the cost of ships victualling, and stores and coals for the use of steamers. In 1892 the total excess of imports over exports was 135 millions, which would be reduced by the corrections named to 79 millions. $\dagger$  In the twenty years ended with 1875, seventeen years previously, the total excess of imports was 1,200 millions. In all these cases bullion and specie are included. $\ddagger$ 

† See the paper of Mr. Stephen Bourne, F.S.S., Journal of the Statistical Society, Vol. LVI., Part II., pp. 188 and 192. London: Stanford, Charing Cross, S.W. 1893.

t For this reason the excess of imports over exports, as here shown, differs from figures derived from subtracting the one from the other, as given in table following paragraph 789. See first fournote to that table.

<sup>\*</sup> This shows an increase, as compared with 1884, of 72 millions. By the end of 1893 the debt had increased to  $204\frac{1}{2}$  millions.

841. The following are the British possessions in which in 1892 British possessions the imports exceeded the exports, and the contrary:---in which imports

BRITISH POSSESSIONS IN WHICH IMPORTS EXCEEDED EXPORTS, AND THE CONTRARY, IN 1892.

Imports exceed	ed Exports in—	Exports exceede	d Imports in—
United Kingdom,	Bermudas,	India,	Turk's Island,
Gibraltar,	Honduras,	Protected Malay	St. Lucia,
Malta,	Bahamas,	States,	St. Vincent,

St. Helena,		Gambia,	Fiji,
Canada, ·		Newfoundland,	Falkland Islands.
		British Guiana,	

842. Taking the British dominions as a whole, the imports in 1892 Excess of exceeded the exports in the same year by about 106 millions sterling; if, however, the United Kingdom be omitted, the exports will be found to have exceeded the imports by over 29 millions sterling. It should be mentioned that, in making up these figures, bullion and specie are included in nearly all cases.

imports over exports in British dominions.

imports

ports in

countries.

843. During 1892, the imports of all the European countries Excess of respecting which particulars are given in a previous table,\* with the over exexceptions of Austria-Hungary and Russia, exceeded the exports; but foreign in Japan, Egypt, Argentine Confederation, Brazil, Mexico, United States, and Uruguay the exports preponderated. The aggregate imports of foreign countries exceeded the exports by over 70 millions sterling, or by nearly 6 per cent. As the excess of imports over exports of British dominions was 103 millions, as just stated, it would appear that in the countries of the world, taken as a whole, the value of goods imported exceeded that of those exported by 173 millions.

844. The following table shows the value of goods transhipped in Tranship-Victorian ports without being landed during the ten years ended with to 1893.

497

exceed

exports, &c.

These goods are not included in the list of imports and exports. 1893. It will be noticed, as is also the case with the imports, there has been a considerable falling-off since 1891 :---

TRANSHIPMENTS IN VICTORIAN PORTS, 1884 TO 1893.

847. The Customs revenue was smaller in 1893 than in 1892 by nearly £430,000. The receipts from import duties alone fell off by nearly £571,000, in addition to which there was a decrease of £10,600 in those from wharfage and harbor rates, and £3,000 under the head of tonnage, as well as smaller decreases under the heads of licences and fees. On the other hand there was an increase of £105,000 under the head of excise duties on beer, consequent on its having been in force for only four months in the preceding year, £6,000 in that on spirits, and £3,000 in that on tobacco, besides lesser increases under fines and

forfeitures, and miscellaneous; whilst the primage duty, from which over £43,000 was realized in  $5\frac{1}{3}$  months, was altogether a new impost.\* It should be stated that numerous alterations were made in the Tariff during 1892, which were fully detailed in the table following paragraph 766, and in an appendix at the end of the second volume of the issue of

\* The excise duty on beer was imposed on 1st September, 1892, and the primage duty on 20th July, 1893.

this work for 1893. The following are the amounts received under the different heads in the years referred to :---

GROSS CUSTOMS REVENUE, 1892 AND 1893.

NOTE.—Drawbacks and repayments have not been deducted from the above figures; they amounted to  $\pm 105,278$  in 1892, and  $\pm 121,875$  in 1893.

Taxation on imports.

848. The import duties received in 1892 amounted to 13.0 per cent., and in 1893 to 12.5 per cent. of the total value of imports. Comparing the imports subject to duty, however, the proportion in 1893 was as high as 38.6 per cent.§

Pilotage

849. The pilotage rates, payable to the Marine Board, amounted in 1892 to  $\pm 27,324$ , and in 1893 to  $\pm 23,086$ . These rates, although collected by the Customs, are not included in the Customs revenue.

rates.

\* The excise duty on beer was imposed on 1st September, 1892, and the primage duty on 20th July, 1893.

 $\dagger$  Including the proportion of wharfage rates received from the Melbourne Harbor Trust, amounting to £30,311 in 1892, and £20,575 in 1893.

‡ Including licences to sell and manufacture tobacco, returning £1,435 in 1892, and £1,542 in 1893.

§ See also paragraph 284 ante. The particulars of the imports were as follows:—Free goods,  $\pounds 8,975,534$ ; subject to duty,  $\pounds 4,308,280$ , of which  $\pounds 2,335,933$  was the value of goods on which duty was paid during the year, and  $\pounds 1,972,347$  the value of goods warehoused.

850. The following is a statement of the total revenue and revenue Revenue from per head received from the import and excise duty on spirits, wine, and spirits, wine, and beer. beer, at various periods during the last 27 years:-

REVENUE FROM SPIRITS, WINE, AND BEER,\* 1866 TO 1893.

							<b> </b>	

NOTE.—In 1892-3 the duty on imported spirits was 15s. per gallon; on wine, 15s. for sparkling and 12s. for other kinds; on beer, 1s. 6d. per gallon; and on spirits distilled in Victoria, from 11s. to 13s. per gallon, and beer, 2d. or 3d. per gallon, according to the material from which made. All these rates have been considerably advanced since 1891-2, with the exception of the newly imposed beer duty.

851. The total amount received during the  $27\frac{1}{2}$  years ended with Total and 1892-3 was £17,776,054, or an annual average of 15s. 3d. per head of It will be noticed that the average amounts per head the population. have fallen from 16s. 11d. in the five years 1866-70 to 14s. 10d. in the ten years 1881-91; also that the amount received per head in 1892-3, viz., 11s. 4d., was exceptionally low, notwithstanding the increased rates of duty, being 4s. 1d. per head lower than in 1891-2, and 3s. 6d. below the average of the ten years ended with 1891.

average receipts from spirits, wine, and beer.

852. The system of allowing drawbacks on the re-export of im- Drawbacks.

ported goods on which duty has been paid was first introduced in 1872. Such re-exports are included in the returns of general exports. From 1872 to the end of 1893, the total amount of duty repaid as drawback amounted to  $\pm 1,987,952$ . In 1893 the value of the goods was  $\pm 106,798$ less than in 1892, and £369,279 less than in 1891; but the amount paid

\* Exclusive of receipts for publicans' and other licences for the sale of fermented or spirituous liquors. These amount to about £110,000 per annum, nearly three-fourths of which is paid over to the municipalities. The revenue from spirits, wine, and beer, in 1893-4, was £576,038. For amounts in each year from 1865, see Victorian Year-Book 1890-91, Vol. II., page 87.

as drawback, however, though smaller by £22,194 than in 1891, was larger by £4,466 than in 1892. The following are the figures for the last five years :---

Year	•	Value of Goods Exported for Drawback.	Amount Paid as Drawback.

\* For particulars of the number and tonnage of vessels entered and cleared for each year since 1836, see first folding sheet of this work.

Nationality of vessels. 856. Of the vessels inwards and outwards during 1893, 76 per cent., embracing 52 per cent. of the tonnage, were colonial; 19 per cent., embracing 38 per cent. of the tonnage, were British; and 5 per cent., embracing 10 per cent. of the tonnage, were foreign. Of the crews entering and leaving Victorian ports in that year 52 per cent. were attached to colonial, 38 per cent. to British, and 10 per cent. to foreign vessels. The following are the figures from which these proportions have been derived:—

NATIONALITY OF	VESSELS	ENTERED	AND	CLEARED,	1893.	

Nationality.			Vessels Entered	đ.		Vessels Cleared	i. ·
		Number.	Tons.	Men.	Number.	Tons.	Men.

Crews, and proportion to tonnage. in Colonial, British and Foreign vessels during the last five years.

With reference to the comparatively smaller number of hands in British and Foreign than in Colonial vessels, it will be remembered that, whilst most of the Colonial vessels are steamers, a larger proportion of British and Foreign vessels are sailing vessels; and as steamers must have one crew to attend to the engines and another to look after the sails and cargo, they necessarily carry more hands in the aggregate than sailing vessels :--

r-		·	1889.	1890.	1891.	1892.	1893.
Colonial v	vessels	had 1 man t	o 25 tons	25 tons	$25  \mathrm{tons}$	$23\frac{1}{2}$ tons	$24\frac{1}{4}$ tons

VESSELS WITH CARGOES AND IN BALLAST, 1893.

Vessels at each port. 862. In the same year 85 per cent. of the vessels inwards, embracing 96 per cent. of the tonnage, were entered at Melbourne, and 83 per cent. of the vessels outwards, embracing 93 per cent. of the tonnage, were cleared at the same port. Next to Melbourne, the largest number of vessels was entered and cleared at Mildura and Echuca —both on the River Murray—but the largest amount of tonnage was that of vessels entered and cleared at Geelong. The following table shows the number and tonnage of vessels entered and cleared at each port in Victoria during the year:—

SHIPPING AT EACH PORT, 1893.

SHIPPING IN AUSTRALASIAN COLONIES.

#### 507

865. It will be noticed that in only three colonies, viz., Western shipping in Australia, Tasmania, and New Zealand was the tonnage of vessels colonies in 1892 and inwards and outwards higher in the last than in any other year named. former years. At the same time, owing to the larger size of the vessels now employed

\* For later information, and information respecting other years, see Appendix B and third folding sheet to this work.

2 M 2

in the Australian trade, the number of vessels in 1892, trading to every one of the colonies was exceeded in one or more of the previous years shown.

Order of colonies in respect to shipping.

866. The vessels trading to New South Wales exceed those to Victoria, both in number and aggregate tonnage, but, with this exception, Victoria is in advance of all the Australasian Colonies. The excess in favour of New South Wales is chiefly owing to the large amount of shipping engaged in the coal trade of that colony, and it would be still greater were it not that the mail and many other large steamers trading between Australia and Europe make Sydney the terminus of their route, and consequently are entered and cleared only once in New South Wales, whereas most of them are entered twiceviz., on their outward and homeward voyage-in Victoria, South Australia, and Western Australia. The following is the order in which the colonies stand in regard to the number and tonnage of vessels trading to and from their ports in the last year named in the table :---

ORDER OF COLONIES IN REFERENCE TO NUMBER OF VESSELS ENTERED AND CLEARED, 1892.

1. New South Wales.	5. New Zealand.
2. Victoria.	6. Queensland.
3. South Australia.	7. Western Australia.
4. Tasmania.	

ORDER OF COLONIES IN REFERENCE TO TONNAGE OF VESSELS ENTERED AND CLEARED, 1892.

1. New South Wales.

5. Tasmania.

- 6. Western Australia.
- 3. South Australia.

4. New Zealand.

2. Victoria.

- 7. Queensland.

Shipping in Australia and Australasia.

867. The number and tonnage of the vessels entered at and cleared from the ports of the colonies situated upon the Australian Continent taken as a whole, and of those colonies with the addition of Tasmania and New Zealand, are given in the following table for each of the four years 1889 to 1892 :---

SHIPPING\* IN AUSTRALIA AND AUSTRALASIA.

			Vessels Entered a	and Cleared in—	
Year.		Aus	tralia.		h Tasmania and Zealand.
		Number.	Tons.	Number.	Tons.
1889	••••	16,533	13,885,526	19,737	15,993,658

1892	* • •	14,492	14,745,507	17,512	17,213,970

\* Including vessels engaged in the intercolonial trade, but not those engaged in the coasting trade of any particular colony. The figures for 1893 will be published in Appendix B to this work.

868. An increase in the aggregate tonnage of the vessels trading Increase in to the Australasian Colonies is usually observable from year to year; but in 1892, both as regards the Australian Continent and that continent combined with Tasmania and New Zealand, it was somewhat smaller than in 1891, but larger than in any of the other years named. The number of vessels in 1892, however, was exceeded in all the previous years except 1890.

869. The following is the tonnage of vessels entered at and cleared Shipping in British posfrom British possessions throughout the world in the year 1892. The sessions. information is derived entirely from official documents :---

870. The tonnage of vessels trading to Victoria exceeds that to shipping compared any British possession outside the United Kingdom, Gibraltar, Malta, with that of other India, Ceylon, the Straits Settlements, Hong Kong, Cape of Good British possessions. Hope, New South Wales, and Canada. Excluding the United Kingdom, the tonnage to Australasia far exceeds that of any other British possession, being more than half as much again as that to Canada or Hong Kong, and nearly twice as much as that to India.

<sup>\*</sup> The coasting trade, not included, amounts to nearly 90,000,000 tons.

<sup>†</sup> Including vessels engaged in the intercolonial trade. For figures relating to each Australasian colony, see table following paragraph 864 ante.

Shipping in foreign countries

871. In the next table a statement is given of the tonnage of vessels trading to the principal foreign countries, by means of which and the previous table it will be seen that in the United States, France, Spain, Germany, and Austria the tonnage is greater than in The information has been derived from the most reliable Australasia. sources available :---

875. The licences issued in 1893 to lighters numbered 82, and to Lighters and boats. The former were to be employed in the conveyance of boats 536. goods, and the latter for ferry, passenger, and other purposes.

876. In 1893 the Melbourne Harbor Trust<sup>†</sup> possessed thirteen Dredges. dredges, having an aggregate lifting capacity of 4,600 tons per hour under ordinary circumstances, but varying according to the character of the material dredged, whether silt, sand, clay, rotten rock, &c. Of

\* Figures kindly furnished by the Marine Underwriters' Association of Victoria Limited. A table showing the number of vessels owned in various countries was published in the Victorian Year-Book, 1890-91, Vol. II., paragraph 105.

† For particulars relating to the constitution of the Trust, and of the works proposed to be carried out, see edition of this work for 1890-91, Vol. II., paragraphs 108 to 110. For revenue and expenditure of the Trust and loans raised, see tables following paragraphs 296 and 385 in Vol. I.

the above dredges, four are centre-ladder, three end-cutting, three sidecutting, and three grab dredges or silt cranes. One of the principal is a hopper dredge, and this vessel can, when required, take her own dredging to sea. One side-cutting dredge which was added to the Trust's plant in 1891 will lift 400 tons per hour. This dredge was built by the Melbourne Coal, Shipping, and Engineering Company Limited, at a cost of £31,280.

Silt raised.

877. The total quantity of dredgings actually raised in 1893 amounted to 1,523,141 cubic yards, viz., 497,545 cubic yards from the Bay, and 1,025,596 cubic yards from the River. Since the establishment of the Trust the River dredgings have amounted to 13,115,360 cubic yards, and the Bay dredgings to 9,585,701 cubic yards, making a total of 22,701,061 cubic yards. Of the dredgings, 13,066,873 cubic yards were deposited at sea, and 9,634,188 cubic yards were landed for roads and reclamation works. The average cost of dredging in 1893 was 2.56d. per cubic yard.

Postal returns. 878. The number of post offices in Victoria in 1893 was 1,733, as compared with 1,766 in the previous year. The number of letters, packets, and newspapers which passed through them have not been returned since 1890, but for that year they were as follow :—

Letters per head. 879. The letters despatched and received in 1890 were in the proportion of 56 to each head of the population of that year.

Dead letters, &c.

880. The dead and irregularly-posted letters, &c., numbered, in 1892, 462,168,; and in 1893, 511,714. In the former year they contained notes, cheques, cash, &c., to the value of £8,297, and in the latter of £8,257. In 1892, 7,598 letters, and in 1893, 2,176, were without addresses or were imperfectly addressed. Cash, cheques &c., to the value of £896 in 1892, and nearly £1,000 in 1893, were enclosed in envelopes without correspondence. Fifty-seven letters in 1892, and 113 in 1893, bore obliterated or defaced stamps. Under the provisions of the Post Office Act, 961 letters relating to racing sweeps, fortune telling, &c., were intercepted and returned to the senders in

\* Including 1,530,180 post cards.

1893. The non-delivery of 4,470 letters was reported in 1893, and of these 2,063 were traced. Eight persons, of whom seven were Post Office employés, were criminally proceeded against in 1893 for stealing letters, and six offenders were convicted and sentenced. Besides letters, numerous packets and newspapers were dealt with at the Dead Letter Office during the last two years.

881. The dead and irregularly posted letters were dealt with as Disposal of dead follow in the two years :--

The Victorian share of the postage for British, Colonial, and Foreign Parcel Posts for 1893 was £1,674, and the duty collected and paid to the Customs Department was £3,477 †:---

#### THE INLAND PARCEL POST.

A decrease of business of about  $5\frac{1}{2}$  per cent. took place in the year 1893. The number of Inland Parcels posted was 178,645, and the postage paid on them amounted to £6,924, as against 188,302 parcels and £9,076 for postage for the year 1892.

#### INTERCOLONIAL PARCEL POSTS.

A Parcel Post Exchange has now been established with all the colonies; that with New South Wales, however, having commenced only from the 1st October, 1893. Parcels to these colonies are limited to 11 lbs. weight. The number of intercolonial parcels received in 1893 was 5,620, and the number despatched 14,402. The charges for Intercolonial Parcel Post are 8d. for 1 lb. or under, and 6d. for each additional lb. up to limit of weight.

#### THE BRITISH AND FOREIGN PARCEL POSTS.

In 1893 the total number of parcels received was 11,809, and the number despatched was 5,257, or 17,066 in all, as compared with a total of 19,153 parcels in 1892. The charge between Victoria and the United Kingdom is now 1s. 6d. for a 2-lb. parcel and 9d. for each extra lb.

883. Prior to 1890 the postal returns of the various Australasian Postal Colonies were not compiled on a uniform basis. In the following table, for the year 1892, however, the figures are fairly comparable;

\* Number subsequently given as 462,168.

<sup>†</sup> Including £169 from packets and letters, the Customs examination of which has been performed by the Parcel Post Branch since 1st October, 1893. the numbers posted in the colony (counted once) being added to those received from abroad :----

POSTAL RETURNS OF AUSTRALASIAN COLONIES, 1892.\*

Post offices per square mile in Australasian Colonies.

884. It will be observed that the post offices in Victoria exceeded those in New South Wales by 343, or about a fourth; the business done cannot be compared, as the Victorian Post Office has not been able to keep any account thereof since 1890. So far as the establishment of post offices is concerned, Victoria appears to afford much greater facilities to correspondents than any other colony in the group. This is made plain by the following figures :---

Victoria has a post office to every 50 square miles.

Tasmania	,,	"	76	"
New Zealand	••	<b>?</b> ?	83	22
New South Wales		,,	217	,,
Queensland	>>	"	703	>>
South Australia	<b>7</b> )	))	1,416	22
Western Australia	,,	"	5,191	"

Order of colonies in respect to correspondence per head.

885. Excluding Victoria, the figures for which are not available, the following is the position of the colonies in respect to the number of letters and newspapers per head :---

ORDER OF THE COLONIES IN REFERENCE TO PROPORTION OF LETTERS

514

#### AND NEWSPAPERS TO THE POPULATION.

Order according to Letters per Head.

- 1. Western Australia.
- 2. New South Wales.
- 3. South Australia.
- 4. New Zealand.
- 5. Tasmania.
- 6. Queensland.

Order according to Newspapers per Head.

- 1. Western Australia.
- 2. New South Wales.
- 3. Tasmania.
- 4. Queensland.
- 5. South Australia.
- 6. New Zealand.

Correspondence per head in Victoria, 1890.

886. In 1890, that being the last year in which an account was kept of the business done in the Victorian Post Office, the proportion

\* For later information, see Appendix B post. † The figures (except those representing the number of post offices) are for 1890, those for 1891 and 1892 not having been furnished.

of letters per head was higher than in any of the other Australasian Colonies except Western Australia, but the proportion of newspapers per head was lower than in any except New Zealand.

887. The following are the postal returns of the United Kingdom Postal for the year 1892-3\*:--United Kingdom

POSTAL RETURNS OF THE UNITED KINGDOM, 1892-3.<sup>†</sup>

Ocean mail services. 516

890. The following information respecting the various lines conveying mails between Australia and Europe has been supplied for this work by the Deputy Postmaster-General of Victoria :—

- (a) The weekly service conducted, since the 1st February, 1888, by means of alternate fortnightly trips made by vessels of the Peninsular and Oriental and Orient Companies respectively between Adelaide and Italy. These companies are subsidized to the extent of £170,000 per annum, towards which £95,000 is contributed by the Imperial Government, and the balance by Victoria, New South Wales, Queensland, South Australia, Tasmania, and Western Australia according to population, the amount payable by Victoria in 1894-5 being £25,928. The contracts will continue until the 31st January, 1895.
- (b) The monthly service viâ Torres Straits, carried out between Queensland and Great Britain by the British-India Company, which receives a subsidy of £19,800 per annum from Queensland. The existing contract will expire in February, 1895. The company has the option of carrying immigrants for £16 per head.
- (c) The monthly service between Sydney and San Francisco, undertaken by the Union Steam-ship Company of "New Zealand between Sydney and Honolulu, and between Honolulu and San Francisco by a local company. The existing annual contract will expire on the 31st October, 1894. The amount payable by New South Wales as subsidy to this company for 1894 was £4,000, and by New Zealand about £25,500; but the net cost in 1893 to the former colony was only £2,050, and to the latter £7,929.
- (d) The monthly service carried out by the Messageries Maritimes Company, subsidized by the French Government; the vessels of the company running between Marseilles and New Caledonia by way of the principal Australian ports.
- (e) În addition to the foregoing, a four-weekly service, subsidized by the German Government, runs between Brindisi and Australia.

Subsid**y** payable by each colony. 891. The subsidy to the Peninsular and Oriental and Orient Companies is paid by the different colonies according to the terms of the contract.\* All the Australasian Colonies now contribute except New Zealand. Fiji joined in the contribution from the 1st October, 1890, the proportion paid by it (about £47 annually) being divided amongst the other contributing colonies. Omitting Fiji, the amounts of subsidy due for the two years ended 31st January, 1895, by each contributing colony are as follow:—

FEDERAL MAIL SUBSIDY PAYABLE BY EACH COLONY, 1893 AND 1894.

Calan

\* For an account of the terms of the mail contract, see Victorian Year-Book, 1889-90, Vol. II., paragraph 276 et seq.

892. The average time and the fastest time occupied in the trans- Time occupied mission of letters from Australia to London, and vice versâ, by means by mail services. of various routes, during 1893, were as follow:---

TIME OCCUPIED BY MAILS BETWEEN ENGLAND AND AUSTRALIA, 1893.

· · · · · · · · · · · · · · · · · · ·	London to	Australia.	Australia to London.		
Service.	Average Time.	Quickest Time.	Average Time.	Quickest Time.	
	dys. hrs.	dys. hrs.	dys. hrs.	dys. hrs.	
Melbourne, viâ Brindisi and Ceylon (P. and O. steamers)	$31  14rac{2}{3}$	27 13	$33 2\frac{2}{3}$	$31  14\frac{2}{3}$	
Melbourne, viâ Brindisi or Naples (Orient steamers)	$32\ 21\frac{1}{3}$	31 13	$32  20rac{1}{3}$	$30 l_{6}^{1}$	
Melbourne, $vi\hat{a}$ Marseilles (French steamers)	31 0	30 0	$30  4\frac{2}{3}$	$28  3\frac{1}{3}$	
Sydney, viâ San Francisco (Pacific steamers)	$38  3\frac{9}{13}$	•••	$38  3\frac{9}{13}$	<b>₹</b> ♦.4	
Melbourne (German contract steamers)	<b>33</b> 0	•••	37 0	•••	

893. It will be remarked that the mails en route to Australia were, Comparaon the average, delivered in quicker time by the P. and O. than by the of Orient Orient steamers, and those en route to London were, on the average, delivered in quicker time by the latter than by the former. The quickest time occupied in the conveyance of mails to Melbourne in 1893 was by a P. and O. steamer, in 27 days 13 hours, and the quickest time to London was by an Orient steamer, in 30 days  $1\frac{1}{6}$  hours.

894. On comparing the times of delivery of Victorian mails by the Time occupied P. and O. steamers with those in the previous year, it appears that in 1892 and 1893 comtheir conveyance from London the average was shorter by 42 hours. pared. but to London longer by 22 hours 44 minutes in 1893 than in 1892; whilst the average time occupied in the delivery of mails carried by the Orient steamers was longer between London and Melbourne by  $12\frac{1}{4}$ hours, and between Melbourne and London by  $11\frac{1}{3}$  hours in 1893 than in 1892.

tive speed and P. & O. mails.

895. According to arrangements under the present Australian mail Contract time of contract the time allowed for conveying letters from Melbourne to mail steamers. London averages 35 days  $15\frac{1}{2}$  hours, and the time allowed from London to Melbourne averages 35 days  $19\frac{1}{2}$  hours. The following is

a statement of the times allowed each way for the two lines of mail steamers :---

TIME ALLOWED FOR MAILS BETWEEN LONDON AND MELBOURNE.

	Time Al	lowed.

NOTE. - Since 1887 Victoria and several of the other colonies have become parties to a joint contract; previously Victoria had a separate contract on her own account.

\* Including amount chargeable to non-contributing colonies, viz., ±382 in 1892 and £972 in 1893.

897. The four-weekly service in the last complete year of its Diminished existence (1879) cost Victoria somewhat less than £13,000; the tract mail fortnightly service cost at first only about £20,000, but eventually about £30,000 per annum. The existing weekly service was in 1890 not only self-supporting, but carried on at a profit of nearly  $\pounds 4,000$ ; but the general reduction in the postal rates to the United Kingdom and other countries outside Australasia has had the effect of again creating a deficit, amounting in 1892 to something over £7,000, and in 1893 to about £6,770.

898. The net cost to Victoria in 1893 of the minor mail services Net cost of (viz., those viâ San Francisco, the Canadian, and the Torres Straits) was services. £690, which added to the net cost of the Federal Service (£6,768, as shown in the last table) makes a total net cost for all the ocean mail services of £7,458. The net cost for the last two years and for 1887 and 1883 was distributed as follows over the various mail services. No allowance has been made, on account of inland postage, for the cost of conveyance within the colony, and sorting, &c., of foreign mails:--

REVENUE RECEIVED BY THE POST OFFICE, 1892 AND 1893.

Government correspon-dence, &c., transmitted free.

900. It should be pointed out that no credit was taken by the Victorian Post Office for the value of Government correspondence, on which postage was not charged. In 1893 the value of Government telegrams transmitted was £4,707; and the amount which would have been derived from official correspondence, if charged for, was some years ago estimated at about £60,000. This information has not been furnished for any late year.

Increase in letter postage rate.

901. On the 1st January, 1890, the rate of letter postage in Victoria was reduced from 2d. to 1d., but on the 12th September, 1892, the rate was again raised to 2d., it being provided, however, that the Act under which the increase was legalized should only remain in force until the 30th June, 1894. This has been further extended (Act 57 Vict. No. 1326) to 30th June, 1897.

Postal expenditure.

902. In 1893 the total ordinary expenditure of the Post and Telegraph Department amounted to  $\pounds 614,922,$  whilst the capital expenditure returned for the same year-which, however, is known to be understated—was set down as  $\pounds 27,889$ . The ordinary expenditure, which shows a decrease of  $\pounds 40,798$  over the corresponding amount in the previous year, includes all the annual charges-paid either by the Postal Department itself or by other Government Departments-in

\* Including the colony's share of the Intercolonial, British, and Foreign Parcels Post. † The amounts in this line are collected by the Post Office, but a considerable proportion of the stamps sold are used for other than postal purposes, *e.g.*, stamp duty, fees for registration, electoral purposes, &c. Collections in the Registrar-General's Department, formerly paid in stamps, but now taken in cash, are not included. See also table following paragraph 270 ante. For numbers of stamps issued, see table following paragraph 904 post.

t Net figures. § For estimated proportion of expenditure on account of the Telegraph Branch only, see paragraph 921 post.

connexion with the maintenance of the Postal and Telegraphic services, with the exception of rent, or interest on capital expended on works and buildings. The ordinary and the capital expenditure in 1892 and 1893 were made up of the following items :---

903. The amount paid by the Postal Department in 1893 for the Cost of conveyance of Inland Mails was £119,461, of which £61,928 was paid service. to the Victorian Railways. The number of miles travelled with mails during the year was 4,194,632 by road, and 4,437,930 by rail, or 8,632,562 in all. Whence it follows the average cost per mile of conveying mails by either road or rail was slightly over  $3\frac{1}{4}d$ . The total

inland mail

521

length of the inland mail service is about 19,860 miles, of which 60 miles is the length of new services opened in 1893.

904. Since the 1st January, 1884, only one kind of stamp has been Stamps used for the payment of postage, fees, and duty, also-since the 1st July, 1884—for telegrams. An accurate account is kept of the value of paid telegrams transmitted; but in other respects it is impossible to

† Net figures.

I Chiefly cost of construction, but repairs also included. S Expenditure defrayed by Public Works Department. The amounts which relate to the financial years are incomplete, as the post offices often form part of buildings erected for general public purposes.

<sup>\*</sup> Figures furnished by the Government Printer.

say what proportion is actually used for each of the other purposes indicated. On ordinary occasions some idea might be formed of the general tendency of the various branches of the stamp revenue from year to year by arranging the stamps issued from the General Post Office, with their value, according to their denomination and the purposes for which they were probably required; but in 1893 no correct indication could be obtained, owing to the increase of the inland rate of postage to 2d. on the 12th September, 1893, the increased rates and number of stamp duties imposed on the 12th December, 1893, and the general depression in business prevailing. Notwithstanding the increased rates referred to, the value of stamps issued fell off by over £2,300 in 1893 as compared with 1892; whilst the revenue from stamps used for postal purposes and receipts increased by about 11 per cent., and after allowing for stamps used for telegrams-the value of which is known to have fallen off by nearly 9 per cent.\*-the revenue from stamps required for duty and fees decreased by over 17 per cent. The following are the numbers and nominal values of postal and duty stamps issued from the General Post Office in the last two years :---

STAMPS ISSUED, 1892 AND 1893.

522

Commission on sale of stamps. 905. The value of commission paid in stamps to bank managers and licensed vendors of duty stamps (or those they replace) was  $\pounds 7,821$  in 1892, and  $\pounds 7,504$  in 1893.

\* See table following paragraph 899 ante.
† Including wrappers and stamped envelopes.

906. Particulars of the finances of the Postal Department of New Deficit in South Wales are found in the Report of the Postmaster-General of Department of New that colony for 1893, but on this occasion the expenditure of the South Wales. different Branches of the Department-Postal, Money Order, and Telegraphic-is not separately stated. The result on the year's working of the whole Department is a deficit of £167,592, exclusive of interest on cost of construction of telegraph lines and on cost of buildings owned by the Government, which would increase the deficit to £230,946, as compared with £179,668 in 1892. In comparing with Victoria, it should be borne in mind that Government correspondence and telegrams were charged for in New South Wales, but not in Victoria.\* The following are the figures :---

908. Money order offices in Victoria in connexion with the Post Money orders. Office had been established in 451 places up to the end of 1893.

\* It has been decided that Government Departments in Victoria should also pay cash for telegrams

from 1st January, 1895. † In addition to ordinary receipts and expenditure, the interest derived from investment of Savings Bank Deposits amounted to £112,349; whilst the interest credited to depositors amounted to £99,566, there being an excess of receipts under this head of £12,783. ‡ Net after deducting £24,000 for stamps used as duty stamps, and £20,906, stamps repurchased from

public, &c.

§ Exclusive of furniture and repairs and additions to buildings.

2 n 2

Besides the issue and payment of money orders at these places, such orders are issued in favour of Victoria, and Victorian orders are paid not only in Great Britain and Ireland and the various Australasian Colonies, but in most of the other principal countries of the world. The following is a comparative statement of the business in the last two years :--

Year.			Number of Money Order	Money Ord	ders Issued.	Money Or	ders Paid.

In	crease	•••	5	1,852	88,987	28,643	130,706

MONEY ORDERS,\* 1892 AND 1893.

Rates of commission on money orders.

909. The commission on money orders is sixpence for sums not exceeding £5 to places in Victoria, and for sums not exceeding £2 to places in the other Australasian Colonies; whilst an extra 6d. is charged for every additional £5 in the former, and for every additional £3 and £2 alternately in the latter case. To the United Kingdom and most other countries outside of Australasia the scale is as follows:—Not exceeding £2, one shilling; from £2 to £5, two shillings and sixpence; from £5 to £7, three shillings and sixpence; from £7 to £10, five shillings. Money orders may be made payable by telegraph either in the colony or to any of the other Australasian Colonies (except New Zealand) on payment, in addition to the above rates, for a message of ten† words. Money orders are granted for sums not exceeding £20 to any of the Australasian Colonies, China, India, Italy, or the United States, and for sums not exceeding £10 to other countries.

Money remitted to United

Kingdom

and from neigh-

bouring colonies. 910. The number and value of money orders issued in favour of the United Kingdom have always been much greater than the number and value of those received therefrom; but the reverse has been the case with orders between Victoria and the neighbouring colonies. The net amount remitted to the United Kingdom by this means in 1893 was less than a fourth of that in 1888, and little more than two-fifths of that in 1883, whilst the net amount received from the neighbouring colonies, although more than twice as large as that in 1888, was less by nearly a third than that in 1883. The following table shows

\* Exclusive of postal notes, for which see paragraphs 916 and 917 post. † Six words in the case of Victoria.

the net transactions with the United Kingdom and the neighbouring colonies during 1893 and the first year of the two previous quinquennia :---

MONEY ORDERS.-NET TRANSACTIONS WITH UNITED KINGDOM AND NEIGHBOURING COLONIES, 1883, 1888, AND 1893.

Year.		those receive	nt to, in excess of ed from, the Kingdom.	excess of tho	eceived from, in se sent to, the ng Colonies.
		Number.	Amount.	Number.	Amount.
			£		£
1883	•••	15,633	51,192	39,333	128,184
<b>18</b> 8 <b>8</b>	•••	26,475	87,742	11,641	40,969
1893	•••	9,586	20,988	29,241	98,382

911. In New South Wales the money orders issued in 1893 Money numbered 530,546, and were of a total value of £1,615,885; those paid numbered 523,747, and were of a total value of  $\pounds 1,556,238$ . Comparing these figures with those of Victoria, it appears that in the same year the money orders issued and paid in New South Wales exceeded those in this colony by 90 per cent. in number and by 81 per cent. in value. It should be pointed out, however, that if in Victoria postal notes were included with money orders, the number would be more than trebled and the value increased by nearly onethird.

912. The average value of money orders (exclusive of postal notes) Average value of issued in Victoria was £2 16s. 6d. in 1892 and £3 2s. 9d. in 1893. money orders. The average value of those issued in New South Wales was £3 7s. 5d. in 1892 and £3 Os. 11d. 1893, the latter being 1s. 10d. below the average value of those in Victoria during the same year.

913. The money orders issued in each division of the United Money orders in Kingdom in 1892 were of the following number and amount:---United Kingdom.

MONEY ORDERS\* IN THE UNITED KINGDOM, 1892.

				ł	

\* Exclusive of money orders issued in the United Kingdom for payment abroad, which numbered 402,421, of the value of £1,101,384.

#### Victorian Year-Book, 1894.

Average value of orders in Kingdom.

914. The average value of each money order issued during 1892 in England was £2 15s. 9d., in Scotland £2 10s. 7d., and in Ireland £2 10s. 1d., or in the United Kingdom £2 14s. 10d. By reference to a previous paragraph,\* it will be found that during 1892 the average value of money orders issued exceeded by 1s. 8d. in Victoria and by 12s. 7d. in New South Wales the average value of those issued in the United Kingdom.

Proportion of money orders to opulation.

915. To every 100 of the population 23 money orders were issued in Victoria during 1893, which proportion is the same as that in the three previous years. To every 100 of the population, 44 money orders were issued in New South Wales in 1893, whilst in 1891, 25 were issued in England, 25 in Scotland, and 12 in Ireland.

Postal notes.

916. Postal notes were first issued in Victoria on the 1st January, 1885. These notes are of various amounts up to a maximum of £1; and the poundage therefor varies from  $\frac{1}{2}d$ . for notes of the value of 1s. or 1s. 6d. to 3d. for notes of from 10s. to 20s.<sup>†</sup> Victorian postal notes are payable at all money order offices in New South Wales, Queensland, South Australia, and Tasmania, and postal notes issued in the latter colonies are payable in Victoria, a further charge being paid by the payee equal to the commission first paid. The total number of notes paid in 1893 (including intercolonial notes issued and paid) was 687,641, valued at £291,117; showing an increase of nearly 100,000 in the number and £50,000 in the value, or of about one-sixth as compared with 1892.<sup>‡</sup> The following were the numbers and amounts of Victorian and intercolonial notes paid in the last two years :---

POSTAL NOTES, 1892 AND 1893.

VICTORIAN POSTAL NOTES, 1893.

918. Telegraphic communication exists in Victoria between 779 Electric telegraphs. stations (including 385 railway telegraph stations) within her borders. Her lines are connected besides with the lines of New South Wales, and, by means of them, with Queensland and the submarine cable to New Zealand; also with the lines of South Australia, and, by their means, with Western Australia, the Eastern Archipelago, Asia, Europe, and America; also with a submarine cable to Tasmania. Over twofifths of the line and more than one-third of the wire are worked in connexion with the Government railways, but are for the most part also available for the use of the public; the remainder are under the Postal and Telegraph Department. In 1893, as compared with the previous year, the number of stations decreased by 39 and the miles of line in operation by 7. The following are the particulars for the two years:—

Under the control of the		Number of	Miles open.

NOTE.—The numbers received from abroad are not included.

\* Including 105 telephone stations and 63 telegraph and telephone stations. † Of this extent, about 3,900 miles are available for the use of the public. † Including five cablegrams sent by the cable recently laid to New Caledonia. § Net figures.

920. The actual revenue derived from telegrams in 1893 was Telegraph revenue. exceeded by that in 1892 by £10,326, the amounts in the two years being as follow :--\*

TELEGRAPH REVENUE, 1892 AND 1893.

1892 1893	•••	•••	•••	•••	•••	£116,066 105,740
		Decrease	•••		•••	£10,326

921. For the financial year ended 30th June, 1890, it was estimated Telegraph by the postal authorities that the sum which should be fairly charged expenditure to the Telegraph Branch of the Department, exclusive of the cost of construction of telegraph lines, the cable subsidies, and the interest on the capital cost of works and buildings, was £184,923. Deducting from this amount the revenue for the year, viz., £131,013, a net deficiency is shown of £53,910.† The deficiency would be increased to £68,465 if the amount paid on account of cable subsidies were added. There is no later information.

922. The following table shows the number of miles of electric Telegraphs in Australtelegraph open, with their proportion to area and population, in each asian Colonies. of the Australasian Colonies at the end of 1893 :---

ELECTRIC TELEGRAPHS IN AUSTRALASIAN COLONIES, 1893.

revenue and compared.

529

NOTE - Including railway telegraphs in all the colonies except New Zealand; but telephone lines and wires are excluded, except in the case of New South Wales.

\* For particulars of the telegraph charges in Victoria, see Victorian Year-Book, 1890-91, Vol. II., paragraph 166.

† See Report of the Post Office and Telegraph Department for 1890, page 38. ‡ Including 366 miles of submarine cable.

§ Cables (about 226 miles) not included.

#### Victorian Year-Book, 1894.

Order of colonies in respect to length of telegraphs. 530

923. The following is the order in which the respective colonies stood at the end of 1893 in regard to the number of miles of electric telegraph line open in each :---

ORDER OF COLONIES IN REFERENCE TO LENGTH OF TELEGRAPH LINE OPEN. 1893.

	LINE OF HIGH TOOOT	، ران
1. New South Wales.	4. South Australia.	6. Western Australia.
2. Queensland.	5. New Zealand.	7. Tasmania.
3. Victoria.		

Order of colonies in respect to ratio of telegraphs to area and population.

924. In proportion to area, Victoria had, in 1893, a somewhat smaller extent of telegraph line than Tasmania, but a much larger extent than any other colony; in proportion to population, however, Victoria was at the bottom of the list. The order of the colonies in regard to the proportion of telegraph line to area is almost the reverse of that to population, as will be observed by the following lists :---

ORDER OF COLONIES IN REFERENCE TO RATIO OF TELEGRAPH LINE TO AREA AND POPULATION, 1893.

Proportion to Area.

- 1. Tasmania.
- 2. Victoria.
- 3. New Zealand.
- 4. New South Wales.
- 5. Queensland.
- 6. South Australia.
- 7. Western Australia.

Proportion to Population.

- 1. Western Australia.
- 2. Queensland.
- 3. South Australia.
- 4. Tasmania.
- 5. New South Wales.
- 6. New Zealand.
- 7. Victoria.

925. In addition to the telegraph wire the following lengths of Telephone wire in telephone wire were in use in 1893 in the five colonies named :--Colonies. Victoria 9,926 miles, New Zealand 3,811 miles, South Australia 2,188 miles, Western Australia 677 miles, and Tasmania 489 miles. In New South Wales telephone is not distinguished from telegraph wire, and in Queensland it is not returned. The telephone exchanges in Victoria had 2,308 subscribers, in New South Wales 2,842, in Queensland 717, in South Australia 1,061, in Western Australia 234, in Tasmania 668, and in New Zealand 4,244.

Messages in Australasian Colonies.

Australasian

> 926. From the following figures, which show the extent to which electric telegraphy is made use of in the various colonies, it would

appear that in 1893 most messages were transmitted\* in Victoria, the next largest number in New South Wales, and the next in New Zealand :---

TELEGRAPH MESSAGES\* IN AUSTRALASIAN COLONIES, 1893.

Nu	nber of Messages transmitted.		Nu	mber of Messages transmitted.
Victoria New South Wales New Zealand Queensland South Australia	2,375,358 2,069,691	Western Austra Tasmania Total	lia 	283,592 207,591 9,027,066

927. According to returns presented to the Intercolonial Postal Cost of conand Telegraphic Conference of 1892, the following was the cost of construction of telegraphs in the colonies named, also the revenue telegraphs. derived therefrom. As, however, few, if any, of the colonies keep a regular capital account, and the Postal and Telegraph Departments are generally carried on in the same buildings and under the same management, it is probable the cost is based in part on estimates, and cannot implicitly be relied on. The cost of buildings and instruments is, moreover, probably not included in the amount, except in the case of South Australia, and, perhaps, New South Wales :---

COST OF CONSTRUCTION AND REVENUE OF TELEGRAPHS IN THE AUSTRALASIAN COLONIES, 1891.

	Miles	open.	Cost of Con	struction.	Revenue.

struction

and revenue of Ausralasian

NOTE - The above figures relate solely to lines under the control of the Postal and Telegraph Departments, and are therefore exclusive of those managed by the Railway Department. Telephone line and wire are not included in the figures for Victoria or New Zealand, but are included in those of the other colonies. The averages were computed in the office of the Government Statist of Victoria.

\* Exclusive of messages received from other colonies or countries. The figures for South Australia include only her own proportion of the international traffic; if the whole were included, it would increase the number of messages for that colony to 747,563-the messages passing through the colony in both directions being taken into account.

† These figures relate to the year 1890.

‡ Exclusive of the value of Government telegrams (£26,071 in 1890).

## Victorian Year-Book, 1894.

Telegrams to and from Europe and other countries. 928. During 1893 the number of telegrams which passed from Victoria to countries outside Australasia was 15,195, at a cost to senders of £72,265; and the number received from such countries was 14,621, at a cost to senders of £57,174. Taking the Australasian Colonies as a whole, the number of foreign telegrams transmitted was 45,536, at a cost to senders of £165,071; and the number received was 45,564, at a cost of £151,580. Comparing 1893 with the previous year, the number of foreign telegrams transmitted increased by  $3\frac{1}{2}$  per cent., and the value by 26 per cent.; and the number received by 3 per cent., and the value by 16 per cent. The following are the numbers transmitted from and received in each colony in 1893, the increase in that year being also shown :—

Reduced Cable rates to Europe, &c. 929. In accordance with an agreement entered into with the Eastern Extension Australasia and China Telegraph Co. (Limited), the charge for ordinary telegrams from South Australia to Europe was reduced on the 1st May, 1891, from 9s. 4d. to 4s. per word, but was increased on the 1st January, 1893, to 4s. 9d.;\* similar reductions being made to other countries, on condition that one moiety of the deficiency, arising from the reduction in the joint revenue—equal to

<sup>\*</sup> The extra 9d. was distributed thus-7d. to cable company and 2d. to South Australia.

three-fourths of the whole receipts-of the company and the Cis-Indian Administration below that of 1889, should be paid by the contracting colonies, which at first embraced all the Australasian Colonies except Queensland and New Zealand, but the latter colonies have since also joined in the guarantee. The joint revenue in 1889 being  $\pounds 237,736$ , the deficiency at the latest reduced rate, without any increase of traffic, would amount to about £112,000, of which £56,000 would be borne by the company, and a like amount by the five colonies referred to in proportion to population. It was also agreed that any deficiency in the revenue of South Australia arising from the reduction in the rate over her lines from 1s. 2d. to 7d.—which without any increase of traffic would amount to about £15,000-should be defrayed by the contracting colonies in proportion to their population. The result of the third twelve months' business under the reduced rates showed a deficiency in the joint revenue above referred to of £12,382, of which £6,191 was payable by the contracting colonies; and a deficiency in the South Australian revenue of about  $\pm 822$ , or a subsidy of  $\pm 13,204$  in all—of which  $\pm 2,346$  was payable by Victoria. The loss would have been much greater but for the abnormal traffic arising from the financial crisis in 1893.

930. A telegram from Melbourne to London has to travel along Course of a telegram to 13,695 miles of wire, of which 2,704 miles, or about a fifth of the London. whole distance, is in Australia.\* At the same time, Australia receives 7d. out of every 4s. 9d. per word, or about an eighth of the amount paid for telegrams transmitted.

931. Including the guarantees just referred to, the following are Telegraph

the particulars of telegraph subsidies payable annually by Victoria:-

£

ELECTRIC TELEGRAPHS IN EACH CONTINENT.

Telegraphs of the world. 935. According to Mr. McCarty<sup>†</sup> (with a correction of the figures for Australasia), the length of telegraph lines in 1891-2 throughout the principal countries of the world was 940,960 miles and that of telegraph wire was 2,601,863 miles. It will be observed that the former, being for a later date, exceeds the total length of line given in the table by 157,600 miles.

Telephones.

936. Including aerial and underground cables, there were 1,287 miles of telephone line and 9,926 miles of telephone wire in the colony at the end of 1893. Some of these lines, however, are exclusively used by the Railway Department and are not available for public use, the wires being, where possible, carried on the same poles as telegraph wires. The telephone wires erected by the Postal Department are carried along 510 miles of special poles, and are for the most part connected with the telephone exchanges. The length of lines and wire, and the number of instruments in use, under the control of each Department are shown in the following table :---

Telephones, 1893.

		Miles of	Sets of Telephones	
Under the control of—	Lines (poles and cables).	Wire.	in use.	
Postal Department Railway Department	•••	<b>62</b> 0‡ 667	<b>9,070</b> 856	3,516 710
Total	•••	1,287	9,926	4,226

\* Page 1061. The lengths have been reduced from kilometres to miles, on the assumption that a kilometre is equal to 621 of a mile.

† Annual Statistician, San Francisco, 1893, page 393.

‡ Consisting of 509<sup>‡</sup> miles of poles, 100<sup>‡</sup> of aerial cable, and 10 of underground cable.

937. Until September, 1887, the telephone exchanges in Victoria Telephone exchange. were worked by a private company, but in that month the business, together with buildings and plant, was purchased by the Government. The price paid was £40,000, but a considerable amount had to be expended to place the exchanges in thorough repair. There are now twelve telephone exchanges in the colony. The receipts for 1893, inclusive of £3,330 from private lines, &c., amounted to £39,197; the total number of subscribers, exclusive of 207 who used private lines, at the end of the year was 2,308, and the amount of subscriptions payable during the year was £33,378. At present only subscribers are supposed to use the lines. Four public telephone offices have been establishedthe first having been opened on the 1st July, 1891. The number of subscribers at the various exchanges in the colony at the end of each of the last three years, together with the amount of subscriptions payable each year, was as follows\*:---

RAILWAYS.-LENGTH, COST, ETC.-continued.

940. From the 1st February, 1884, to the end of 1891, when the Transfer of railway Victorian railways were under the management and control of Commissioners, those officers supervised the construction as well as the working of the lines; but on the 1st January, 1892, the duty of construction was transferred to the Board of Land and Works under the provisions of the *Railways Act* 1891,¶ together with the officers and other persons employed in the Engineer-in-Chief's branch of the Railway Department.

\* Exclusive of rolling-stock, cost of Melbourne station, and general construction. See footnote (§) infra.

† Including junction station, Alphington, about £50,000.

‡ Including expenditure on works, &c., between Prince's-bridge station (Melbourne) and Windsor, not yet apportioned, amounting to £248,627.

§ The total cost of the railways opened to the 30th June, 1893, was £37,865,436, viz., £29,738,659 as shown above, £5,132,958 on rolling-stock, £1,312,488 on the Melbourne and North Melbourne stations, £1,267,381 on general construction (such as sheds, workshops, machinery, &c.), and £413,950 cost of floating loans. To the 30th June, 1894, the total cost was (inclusive of cost of floating loans, £563,861) £38,312,424. See paragraphs 956 and 957 post.

|| Exclusive of the Dookie and Katamatite Tramway, taken over from the Yarrawonga Shire Council, by which it was constructed and worked, the Railway Department to maintain and work it experimentally for one year. In addition to the Government lines of railway, a line 5 miles in length has been constructed between Rosstown and Elsternwick, suburbs of Melbourne. This line has not yet been worked.

¶ 55 Vict. No. 1250.

## Victorian Year-Book, 1894.

Railways in progress.

#### RAILWAYS IN PROGRESS, 30TH JUNE, 1893.

NOTE – The expenditure on lines in progress was £10,378.

Railways authorized but not

942. The only lines authorized, but not commenced, on the 30th commenced. June, 1893, were the Frankston Cemetery line, three-quarters of a mile in length; Nathalia to Picola,  $6\frac{3}{4}$  miles; and Heidelberg to Eltham

 $8\frac{1}{2}$  miles. The expenditure to 30th June, 1894, on the survey of these lines was £508.

Rollingstock.

943. According to the following table a small increase took place in 1893 as compared with the previous year in nearly all descriptions The increased expenditure on rolling-stock was of rolling-stock. £87,230 :---

ROLLING-STOCK, 1892 AND 1893.

944. By the following statement of the number of miles open and Miles open and travelled. the number of train miles travelled, and of the passengers and goods

carried, during the financial years 1891-2 and 1892-3, it is shown that although an increase of nearly 4 per cent. took place in the mileage open, the passenger traffic decreased by 16 per cent. and the goods traffic by 6 per cent. At the same time, by reason of economy exercised, the decrease in the train mileage was 9 per cent.:--

RAILWAYS.—MILES OPEN AND TRAVELLED, AND PASSENGERS AND GOODS CARRIED, 1891-2 AND 1892-3.\*

Total	55

\* During the year 1893-4 the train mileage was 10,145,307; the passengers carried numbered 40,880,378; and the quantity of goods and live stock carried was 2,455,811 tons.

† In order to compute the number of passengers, the single tickets sold have been added to 720 for each yearly, 360 for each half-yearly, 180 for each quarterly, and 60 for each monthly, 2 for each return, and 1 for each single ticket issued to adults and youths; and half these proportions for tickets issued to boys and girls. Tickets available for two or more systems, however, are reckoned twice or oftener, accordingly; the addition made in 1892-3 for travelling over more than one system being 11,924,291. No addition has been made for free passes.

The extent open is exclusive of the Dookie to Katamatite Tramway, 17 miles, taken over on the 22nd November, 1892, from the Yarrawonga Shire Council, by whom it was constructed and worked, the Railway Department undertaking to maintain and work it experimentally for one year.

§ The extent open is exclusive of Dookie to Katamatite Tramway, 17 miles, but the train mileage and traffic is included. (See last footnote.)

RAILWAYS.—RECEIPTS AND WORKING EXPENSES, 1891-2 AND 1892-3.\*

Increase in railway income.

947. It will be observed that, whilst the average extent of lines open for traffic in 1892-3 was nearly 4 per cent. above that in 1891-2, the net income increased by £118,674, for, although the receipts fell off by £169,174, the expenditure was reduced by £287,848. The principal falling-off in the receipts occurred in the passenger traffic, whilst the only increase (£6,700) appeared under the item "Rents," owing to the extension of the policy of leasing unoccupied railway lands.

Proportion of working expenses  $\bar{t}o$ receipts.

948. The proportion of working expenses to receipts was only 63 per cent. in 1892-3 as compared with 69 per cent. in 1891-2, 70 per cent in 1890-91, 68 per cent. in 1889-90,  $62\frac{1}{2}$  per cent. in 1888-9, an average of  $60\frac{4}{5}$  per cent. during the previous five years, and of 55 per cent. during the five years ended with 1882. Thus a considerable reduction has been effected in the proportion as compared with the three preceding years, when the percentage was unduly augmented in consequence of the rapid extension of new and consequently unremunerative lines of railway, and of the reduction of passengers' fares and merchandise rates some years previously, when the net revenue was found to be more than sufficient to meet the interest on the railway loans.

949. Considerable economy in the expenditure of the Railway Economy effected in expenditure Department was effected in 1892-3, by amalgamation of officeswhich was still proceeding at the end of that year; by a net reduction in the staff by retirement, dismissal, death, or transfer

> \* During the year 1893-4, the Railway receipts amounted to  $\pounds 2,726,159$ , and the working expenses to  $\pounds 1,635,419$ . The net income was thus  $\pounds 1,090,740$ ; and the proportion of working expenses to receipts. 59<sup>.</sup>99 per cent.

> † This amount is made up of parcels, &c., £97,859 (£105,101); horses, carriages, and dogs, £17,409 (£20,938); mails, £63,037 (£63,452); rents, £54,716 (£47,980); miscellaneous, £14,966 (£20,001). The figures for the preceding year are in parentheses.

to another Department of 471 permanent employés-(besides large numbers of casual and other hands not under the provisions of the Railways Act); by a reduction of the working time of workmen, labourers, and others to five and a half days (of eight hours each) per week since the 8th August, 1892; by the reduction of train mileage (which in 1891-2 resulted in a saving of £10,000); by the substitution of cattle-pits for gates at upwards of 200 level crossings, thus resulting in a saving of wages; by the operations in the workshops having been confined as far as possible to necessary repairs, construction of new rolling-stock on a large scale having been abandoned for a time; and by a considerable reduction in the cost of maintenance of the permanent way and works, on which the net expenditure (i.e., after deducting sums credited for sale of old material), fell from £412,336, £146 per mile open, or 8.38d. per train mile in 1891-2, to £327,959, £112\* per mile open, or 7.31d.\* per train mile in 1892-3. With a view to greater economy and efficiency in haulage power-which it is believed could be effected, both by the cutting down and improvement of grades, and by adapting the locomotives to the traffic-a start was made with two motors for light traffic, originally introduced with the Rowan car, which have been in constant use with great success on two suburban lines, whilst three more, for use on light country lines, were constructed during the year. In regard to the economies in the Locomotive Branch, however, the Commissioners state that the scheme for re-organization and retrenchment in this branch has, as yet, only in a slight degree been carried out, but it is expected to result in large economies without impairing efficiency. The following are a few of the principal items saved during the year by reason of economy and retrenchment :---

REDUCED EXPENDITURE 1892-3 AS COMPARED WITH 1891-2. Saving. Locomotive charges, owing to reduced train mileage, reduction in working hours, &c. £87,120 • • •

Maintenance of permanent way, &c. 84,400Substitution of kerosene for gas ... 12,000 ... ...

950. The two Mallee lines opened in the year under review Light lines constructed. (viz.:-Warracknabeal to Beulah, and Donald to Birchip) were constructed at a cost (exclusive of rolling-stock) of only  $\pounds 1,625$ <sup>†</sup> and £1,496† per mile respectively, as compared with £3,464—the lowest cost for any line previously constructed, and an average for

\* These proportions, however, would have been increased to £120, and 73d. respectively, only for the exceptionally large credits during the year, which went in reduction of the expenditure. In 1890-91, the proportions were as high as £162 and 8:39d. † According to the latest report, these averages are given as £2,265 and £2,127 respectively.

#### Victorian Year-Book, 1894.

all lines of over £10,000 per mile. These lines, moreover, are being worked without platforms at stations, and with a minimum of siding accommodation; whilst the booking is done in the train, which is under the thorough surveillance of the guard. Large economies have resulted from the adoption of the system, which is to be extended wherever practicable.

Use of Victorian coal. 951. In reference to Victorian coal, which is now largely used for railway purposes, the Commissioners report that experiments are being conducted with a view to fix a fair price for it commensurate with its value. The rate of carriage for this coal has been reduced from 1d. per ton per mile—the rate charged for all other coal—to  $\frac{3}{4}$ d., of which the consignee pays  $\frac{1}{2}$ d., the difference of  $\frac{1}{4}$ d. being recouped to the Department by the Government. The reduced rate of  $\frac{3}{4}$ d., however, has been found unremunerative, and a further subsidy is sought by the Department to cover loss.

Road competition.

952. A large amount of undue competition on roads by teamsters has sprung up, ascribed to the fact that labour, horses, and feed are cheap, and that there has been little or no employment for many carriers. In the Northern and North-western Districts, however, where the competition is most active, the goods revenue of the Department has also increased; and it is thought that, with a slight re-adjustment of rates, the traffic will be restored.

Earnings and expenses per míle,

953. The following table shows the average extent of Government railways open, the gross earnings and expenses, and the net profits per mile open, in each of the last twenty years :---

EARNINGS AND EXPENSES OF RAILWAYS PER MILE OPEN, 1873-4 to 1892-3.

Year.		Average Number of Miles Open.	Gross Earnings per Mile.	Expenses per Mile.	Net Profits per Mile.	
				£	£	£

1892–3	•••	2,933	998	631	367

EARNINGS AND EXPENSES OF RAILWAYS PER MILE OPEN, 1873-4 то 1892-3\*—continued.

954. It will be observed that in 1873-4, when only 400 miles were Decrease of net profits open, the net profits averaged over £1,100 per mile, but they fell off, per mile. as the lines were extended, to £611 in 1878, when 1,000 miles were open. Between this year and 1888-9, the profits ranged between £500 and  $\pounds 600$  per mile, with one exception; but in 1889-90 they fell below  $\pounds 500$  per mile, and in the last three years below  $\pounds 400$ . The maximum profits since 1878, amounting to rather over £600 per mile, were reached in 1881 and 1885–6. The smallest profits realized were in 1891–2, and the next in 1892-3, the falling being attributable partly to the rapid extension of railways, and partly to commercial and financial depression.

955. The total amount borrowed by the Government for railway Railway debt. construction to the end of June, 1892, inclusive of the debentures of the late Melbourne and Hobson's Bay Railway Company, but exclusive of loans paid off from the consolidated revenue, viz.:--£344,200 prior to 1892-3, was £35,806,977, of which £1,024,038 was raised during the year 1892-3. Whilst, however, the gross proceeds exceeded the nominal amount by  $\pounds 477,952$ , on the other hand the expense of floating the loans amounted to £891,902,‡ and thus the net amount available for railway construction was only  $\pounds 35,393,027$ .

956. In addition to the amount derived from loans, certain other Capital account of sums, amounting in the aggregate to £3,147,940, have also been made railways. available for railway construction, viz., £2,803,740 derived from the alienation of Crown lands, and £344,200 from the consolidated revenue towards repayment of loans. The total expenditure on the

\* During the year 1893-4, the average number of miles open was 2,983; the gross earnings averaged £914 per mile; the expenses per mile £549; and the net profit per mile £366. † Including expenses of the Windsor accident.

Including £12,193 increase of debt on conversion of debentures into stock at a lower rate of interest.

construction of railways had amounted at the end of June, 1893, to £37,876,322, and at the same period the balance at credit of the capital account was £1,078,595. The following is a statement of that account to date :---

CAPITAL ACCOUNT OF VICTORIAN RAILWAYS TO 30TH JUNE, 1893.

Net income and cost of railways compared.

957. The first two items of expenditure in the above statement, amounting to £37,865,436, represent the capital cost of the lines open for traffic at the end of the year 1892-3, whilst the mean for the year may be set down at  $\pounds 37,590,400$ . The net income of the Victorian railways in 1892–3 has already been stated  $\ddagger$  to have been £1,075,657. A short calculation based upon these two amounts will show that the railways in that year made a return upon their capital cost of 2.841 per cent., equal to  $\pounds 2$  16s. 10d. per  $\pounds 100$ , as compared with a proportion of 2.619 per cent., or of £2 12s. 4d. per £100, in 1891-2; of 2.886 per cent., or £2 17s. 9d. per £100, in 1890-91; and of 3.234, or £3 4s. 8d. per £100, in 1889–90.§ On the 30th June, 1893, the nominal rate of interest payable on the borrowed capital averaged 4.01 per cent., which, with expenses of paying interest, would be increased to about 4.08 per cent. At the end of 1883 the average rate was as high as 5 per cent., but owing to the redemption of 6 per cent. debentures and the issue during subsequent years of 4 and  $3\frac{1}{2}$  per cent. debentures in

<sup>\*</sup> See footnote (†) on page 124 ante.
† Includes net cost—less net premiums—of floating the loans, £413,950; and cost Melbourne station, £1,275,253. See also footnote (§) on page 541 ante. For cost of rolling-stock only, see paragraph 943 ante.
‡ See table following paragraph 946 ante.
§ During the year 1893-4, the net income, which amounted to £1,090,700, was equivalent to 2864 per cent. on the mean capital cost (£38,088,900) of the lines opened for traffic.
|| See table on page 202 ante.

lieu thereof, a reduction of £180,195,\* upon a total of £527,833, was effected in the annual interest payable.

958. The following is a statement of the proportion which the net Proportion earnings of the railways have borne to their capital cost during each of to capital the last twelve financial years :---

PROPORTION OF EARNINGS TO COST OF RAILWAYS, 1881 TO 1893.<sup>±</sup>

959. The late Melbourne and Hobson's Bay Company's railways, Purchase by formerly consisting of  $6\frac{3}{4}$  miles of single and  $9\frac{3}{4}$  miles of double line— of private railways. or  $16\frac{1}{2}$  miles in all—between Melbourne and the principal suburbs on the south side of the Yarra, were purchased by the Government on the 1st July, 1878. For the first twelve months after the purchase they were worked by the company for the State, but have since been under immediate Government control. The lines are now double throughout. The cost to the 30th June, 1893, including rolling-stock, was  $\pounds 2,244,854$ . This amount includes expenditure on rolling-stock in course of construction, also £248,627 for additions and improvements to the permanent way, portion of which is properly chargeable to other lines.

960. Hobson's Bay Railway debentures of the value of £311,400, Rates of including £30,000§ on 1st July, 1892, have been redeemed since the debentures lines were purchased by the Government. The debentures now outstanding, bearing 5 per cent. interest, represent a total value of £153,900.

961. Dating from the period at which the Hobson's Bay lines Hobson's were purchased by the State, there had been, until the end of 1883, a before and after large falling-off in the net income derivable therefrom, whilst in one purchase. year (1882) the working expenses actually exceeded the receipts by

interest on of purchased railways.

nearly £72,000. After the railways were placed under the control of Commissioners there was a marked improvement, and in at least four of the last eight financial years the percentage of the proportion of net gain (after payment of interest) to capital cost was apparently even higher than it was before the railways were purchased from the com-In the year 1892-3 the net gain was about £10,118, being pany. equivalent to nearly  $\frac{1}{2}$  per cent. upon the capital, which proportion was considerably lower than in all except 1887-8-when an accident

\* Excluding interest on £276,100 paid off out of revenue.
† For a comparison of the net earnings with the interest paid, see page 108 ante.
‡ Figures for 1893-4 are given in footnote (§) on previous page
§ Of this, however, £1,000 has not yet been actually paid away.

occurred—of the eight preceding years, although higher than in any other previous year since the purchase of the lines. In the years 1885-6 to 1890-91 the gain resulting from the working of these lines varied from £50,000 to over £120,000 per annum, and this helped to cover the loss on non-paying country lines; but in 1892-3 the contribution from this source fell to £10,000. The following table has been designed with the object of giving a comparative view of the profits or losses on working these lines before and since their purchase, and shows for each year their capital cost and the interest payable thereon, the net income and its percentage on the capital cost, also the amount and percentage of gain or loss on the working of the lines :—

HOBSON'S BAY LINES BEFORE AND AFTER PURCHASE BY THE STATE.

NOTE - The lines were purchased by the State on the 1st July, 1878.

\* The figures in this column represent the capital cost about the middle of the year or period named. On the 30th June, 1892, the capital cost was  $\pounds 2,230,572$ , and on the 30th June, 1893,  $\pounds 2,244,854$ , as stated in paragraph 959 *ante*.

† Rate during periods of six months doubled for purposes of comparison with whole years.

t These amounts have been calculated by charging interest upon the whole capital at the same rate as the average of that payable upon the debenture capital.

§ The minus sign (-) indicates that the working expenses exceeded the receipts.

[] Small net increase accounted for by the Windsor accident, on account of which £128,988 was paid as compensation during the year.

962. It will be observed that since their purchase by the State Profit and there has been an actual loss on the lines during six of the years shown, but a gain in the remaining nine years. During the most recent financial year the net income was equivalent to  $4\frac{3}{4}$  per cent. per annum on the capital cost, which was nearly  $\frac{1}{2}$  per cent. higher than the average rate at which the capital was borrowed; whilst the net amount gained, after providing for interest, was £10,118. The falling-off in the net revenue, as compared with the previous year, was about £23,400, as compared with 1890-91, £40,000, as compared with 1889-90, £67,700, and as compared with 1888-9, £106,100, which is partly to be attributed to the competition of cable tramsworked by a private company-which were largely extended during the two years ended with 1889-90, and partly to the general depression prevailing.

963. The figures in the fifth column (net income) show that, Gain on during the fifteen years between the purchase of the lines and the end of June, 1893, the receipts exceeded the working expenses by £1,338,522; and the figures in the last column but one show that there was a net gain upon working the lines in the same period amounting, after paying interest on capital, to £136,295.

964. The falling-off in the net income of the Hobson's Bay lines Compensation for during the years 1881, 1882, 1883, and 1887-8 was largely due to the railway accidents. heavy compensation it was necessary to pay to sufferers from accidents which occurred thereon during the years 1881, 1882, and 1886-7. During the last fourteen and a half years the amount of compensation so paid was no less than £512,973, equal to about 8 per cent. of the gross receipts, and was almost twice as much as on all the other lines of the colony put together.

working Hobson's Bay lines in 15 years.

Bay lines.

551

965. The revenue returned in 1892-3 in proportion to the cost of Return on capital cost construction (including rolling-stock) was  $4\frac{3}{4}$  per cent. on the Hobson's of each railway Bay lines,  $4\frac{1}{3}$  per cent. on those of the North-Eastern system (which system. carries the Sydney traffic), and about 3 per cent. on those of the Northern and Western systems, but on the lines of the Eastern system there was a slight excess of working expenses over revenue. Excepting in the case of the Hobson's Bay lines, where there has been a continuous fallingoff since 1888-9, these proportions compare favorably with those in the two preceding years, but are somewhat lower than in 1888-9 and

1889-90, except on the Northern system, on which the proportion was higher in 1892-3 than in any year since 1887-8. The following are the results obtained on the working of the various systems during the five financial years ended with 1892-3, as calculated in the office of the Government Statist, Melbourne:----

PERCENTAGE OF NET REVENUE TO CAPITAL COST OF EACH RAILWAY SYSTEM, 1888-9 TO 1892-3.

Gross 1893-4.

966. According to a statement distributed to members of the expenditure Legislative Assembly in November, 1894, the aggregate income from of railways, 1853 to the State railthe State railways from the earliest time to the 30th June, 1894, was  $49\frac{1}{2}$  millions sterling, and the net income, after paying working expenses, nearly 20 millions; but, after allowing for interest paid on borrowed capital, there was a net deficiency of over  $7\frac{1}{2}$  millions sterling. The expenditure on construction during the whole period was close on  $37\frac{3}{4}$ millions, of which over  $2\frac{3}{4}$  millions was derived from the sale of land. The following is a summary of the figures given in the statement referred to :---

RAILWAYS IN AUSTRALASIAN COLONIES—continued.

NOTE – Private lines are included with Government lines in this table. The following are the lengths of private lines so included:  $-84\frac{1}{2}$  miles in New South Wales, 18 miles in South Australia, 453 miles in Western Australia, 55 miles in Tasmania, and 150 miles in New Zealand. Tramways are not included. For miles of railway open in each colony in 1893, see Summary of Australasian Statistics (third folding sheet), also Appendix B post.

Gauges of lines in Australasia.

968. All Victorian lines are constructed upon a gauge of 5ft. 3in., which is also the national gauge in South Australia, but has not been adhered to in that colony, as 1,319 out of 1,824 miles have been constructed upon a 3ft. 6in. gauge. In New South Wales a 4ft. 8<sup>1</sup>/<sub>2</sub>in. gauge has been adopted, but the private line of railway between Moama and Deniliquin, which is connected with the Victorian line from Sandhurst to Echuca, has been constructed upon a 5ft. 3in. gauge. In Queensland, Western Australia, Tasmania, and New Zealand all the railways have been constructed upon a gauge of 3ft. 6in.

Order of colonies in respect to length of railways.

969. During twelve years Victoria added 1,704 miles to the length of her lines of railway, as compared with 1,420 by New South Wales, 1,687 by Queensland, 1,157 by South Australia, and 778 by New Zealand. In 1892 the lines of Victoria extended over 633 miles more than those of New South Wales, and 583 miles more than those of Queensland. The following is the order in which the respective colonies stood in 1892, in regard to the length of their lines of railway :----

ORDER OF COLONIES IN REFERENCE TO LENGTH OF RAILWAYS.

- 1. Victoria.
- 2. Queensland.
- 3. New South Wales.
- 4. New Zealand.

- 5. South Australia.
- 6. Western Australia.
- 7. Tasmania.

\*See footnote (\*) on preceding page.

970. In regard to the extent of railways open in proportion to Order of area, Victoria was much in advance of the other colonies; but, in proportion to population, she occupied the lowest position but one on area and the list. The following is the order of the colonies in 1892 in these respects :---

ORDER OF COLONIES IN REFERENCE TO THE PROPORTION OF LENGTH OF RAILWAYS.

To Area.

- 1. Victoria.
- 2. New Zealand.
- 3. Tasmania.
- 4. New South Wales.
- 5. Queensland.
- 6. South Australia.
- 7. Western Australia.

To Population.

- 1. Western Australia.
- 2. Queensland.
- 3. South Australia,
- 4. New Zealand.
- 5. Tasmania.
- 6. Victoria.
- 7. New South Wales.

971. The progress of railway extension on the continent of Railways in Australia and Aus-Australia, and on that continent with the addition of Tasmania and tralasia. New Zealand, between 1870 and 1892, is shown in the following table. It will be observed that the length, in 1892, in Australia was more than ten times, and in Australasia more than thirteen times, as great as it was at the commencement of the period :---

#### RAILWAYS IN AUSTRALIA AND AUSTRALASIA.

					Miles of Railway Open.*				
		Year.			Continent of Australia.	Australia, with Tasmania and New Zealand.

975. The first Standing Committee on Railways stated in their victorian report that, under present conditions, the gross earnings of railways in Victoria must be equal to at least 10 per cent. of their capital cost to pay working expenses and interest. Such a result was not realized in 1891–2, a calculation based on the figures in the table showing that the gross earnings of Victorian railways in that year were equivalent to only 8.35 per cent. of their capital cost.

railways unremunerative in 1891-2.

976. Some engineers contend that the first cost of a railway should Actual and theoretical not exceed ten times its annual gross receipts, the latter being tralasian cost of Ausrailways. termed its "theoretical cost." The following figures show that in all the Australasian colonies, except South Australia and Western Australia, the theoretical cost was greatly exceeded by the actual cost. This, however, is to be expected in new and thinly peopled countries,

557

\* The figures for Western Australia and Tasmania are for the year ended 31st December, 1892; for New Zealand for the year ended 31st March, 1893; and those for the other colonies for the year ended 30th June, 1892. For later information respecting the railways in the various colonies, see Appendix B pOst.

and upon recently constructed lines where the railway traffic is not yet fully developed :---

ACTUAL AND THEORETICAL COST OF RAILWAYS IN THE AUSTRALASIAN COLONIES.

Cost per mile of railways in each colony. 977. The average cost of Government railways per mile ranges from £15,246 in New South Wales, and £12,762 in Victoria, to £4,620 in Western Australia. These comparisons are defective, owing to the differences in gauge and the proportion of double lines not being taken into account. It is estimated that the cost in Victoria is equivalent to about £10,900 per mile of single line on a 3ft. 6in. gauge. The following are the figures for each colony :—

CAPITAL COST PER MILE OF GOVERNMENT RAILWAYS IN EACH AUSTRALASIAN COLONY, 1892.<sup>‡</sup>

Railway receipts and working expenses per train mile, 1892.

981. The receipts per train mile ranged from 47d. in Tasmania to 94d. in New Zealand, but was as high as 117d. in the Northern Territory, the proportion being 63d. in Victoria, and averaging 73d. for the whole of Australasia. On the other hand the working expenses varied from 38d. in South Australia to 59d. in New Zealand, but was as high as 90d. in the Northern Territory, the proportion for Victoria being 43d., or somewhat lower than the average for Australasia, viz., 47d. Although the cost of coal in Victoria was so much higher than in New South Wales, the expenses per train mile were 1s. lower in the former than in the latter colony. The following are the averages for the different colonies:—

988. It will be observed that there were in Victoria 19,500 Railway passengers per mile open, or more than twice as many as in New in Aus-South Wales, and a still larger proportion than in the other colonies, Colonies. where there were 3,000 or less; whilst there were nearly 5 passengers per train mile in Victoria, or nearly twice as many as in New South Wales, and about  $2\frac{1}{2}$  times as many as in any other colony. This preponderance of passenger traffic in Victoria is largely due to the exceptionally large suburban traffic of its metropolis, which amounts Even the tramway traffic to one-half of that of the whole colony. will not account for the difference between Victoria and New South Wales, for  $36\frac{2}{5}$  million passengers were carried on tramways during the year in the former, as compared with only  $25\frac{1}{4}$  millions in the latter In New South Wales, however, there is, besides, an extensive colony. traffic in omnibuses and steamboats, of which no returns are available.

tralasian

989. In proportion to the mileage open, the tonnage of goods and Goods traffic in Auslive stock carried in Victoria was much less than in New South Wales, tralasian Colonies. but larger than in the other colonies; in proportion to the train mileage New Zealand and New South Wales carried much more, and South Australia rather less, goods than Victoria. In the Australasian Colonies, as a whole, the average weight carried was 1,055 tons per mile open, and nearly  $7\frac{3}{5}$  cwt. per train mile.

\*These figures have been compiled on a uniform basis. See Victorian Year-Book, 1890-91, Vol. II., page 475. No allowance has been made for free passes issued, nor have 571,300 free journeys made by school children in New Zealand been included; whilst the figures for South Australia are also exclusive of journeys on yearly and half-yearly contract tickets available for all lines. From the Victorian figures 14,328,061-added for journeys on single tickets over more than one system-have been deducted. For later figures, see Appendix B post. † Exclusive of live stock.

#### Victorian Year-Book, 1894.

Receipts per ton on Australasian and European railways. 990. The Victorian railways received on the average about 11s. 1d. in 1892-3, and about 11s. 2d. in 1891-2, per ton of goods and live stock carried. According to the following figures, these tonnage rates are lower than those prevailing in South Australia or Russia, but higher than those prevailing in any of the other undermentioned countries. It should be borne in mind, however, that the distances travelled with goods in the various countries, which have an important bearing on the subject, are not taken into account. In reference to the high position of South Australia, it may be mentioned that more than one-half of the goods traffic of that colony is with the rich Broken Hill silver mines :--

Railways in United Kingdom.

991. In 1892 the length of lines open in Ireland and Scotland together was 3,885 miles less than the length open on the Australian continent; whilst the length open in England and Wales was 1,763 miles greater than that upon the Australian continent, combined with Tasmania and New Zealand. Taking the United Kingdom as a whole the working expenses were in the proportion of 56 per cent. of the receipts; whilst the net receipts amounted to 3.85 per cent. of the capital cost. The following are the railway statistics of the United Kingdom for that year:--

RAILWAYS IN THE UNITED KINGDOM, 1892.

RAILWAYS IN FOREIGN COUNTRIES.

994. The length of railways in the United States on the 31st Railways in the United the United December, 1892,\* was 175,223 miles, of which 4,429 miles were con-States. structed within the last twelve months. To the close of their respective financial years in 1892, the total mileage constructed by companies was 171,866, of which the cost of construction and equipment was £1,953,190,418, or an average of £11,384 per mile. The gross earnings during the year amounted to £251,098,338, the working expenses to £176,381,980, and the net earnings to £74,716,358. The proportion of working expenses to gross receipts was 70.40 per cent.; whilst 25 per cent. of the gross receipts were from passengers, 68 per cent. from goods, and 7 per cent. from other sources. The gross earnings per mile were  $\pounds 1,455$ , and the net earnings  $\pounds 431$ . The average distance per passenger was 24 miles, and the average hauls per ton 112.7 miles. The proportion of net earnings to capital cost was 3.825 per cent.; whilst the interest and dividends payable on the capital stock, bonds, and debt averaged only  $\pm 3.01$  per cent.<sup>+</sup>

995. The following was the number of miles of railway open Railways of the world, the world at the end of decennial or quinquennial periods, 1830 to 1892. from 1830 to 1885,‡ and for the latest years; also the average annual increase between each period named and the preceding one :---

RAILWAYS OF THE WORLD, 1830 TO 1891-2.

\* According to McCarty's Annual Statistician the number of miles open in 1892 was 210,645, of which 42,242 miles were of side tracks.

† See Weekly Official Intelligence, 19th August, 1893, page 86. ‡ The figures for 1885 and previous years have been derived from L'Almanach de Gotha, 1887, and those for subsequent years from McCarty's Annual Statistician. When the length was given in kilometres it has been reduced to English miles on the assumption that a kilometre is equivalent to 621 of a mile.

Tramways.

996. By the Melbourne Tramway and Omnibus Company's Act 1883 (47 Vict. No. 765), passed on the 12th October, 1883, the company was authorized to construct tramways in the streets of Melbourne and suburbs, unless the twelve municipalities interested,\* who had the prior right, elected to do so. All the municipalities, however, decided to exercise the powers conferred upon them, and, the necessary notice to the company having been given, a Tramways Trust was formed, as provided by the Act. This body, which consists of seven delegates from the Melbourne City Council, and one from each of the other eleven municipalities, received full power to construct tramways, and to borrow money for that purpose, secured on the municipal property and revenues and on the tramways themselves. The Trust was required by the above-mentioned Act, as modified by the amending Acts (51 Vict. No. 952 and 56 Vict. No. 1278), to complete the tramways by the 31st December, 1893, and to grant a 32 years' lease of the tramways to the company, dating from the 1st July, 1884 (when the liability for interest commenced), and expiring on the 1st July, 1916. The company, on its part, is required to find all the rolling-stock, to keep the tramways and adjoining road, a total width of 17 feet, in complete repair; to hand back the lines in thorough order to the Trust at the expiration of the lease, and to pay to the Trust the annual interest on the moneys borrowed, not exceeding 5 per cent.; also to contribute annually a certain varying percentage on the sums borrowed, so as to form a sinking fund towards the ultimate extinction of the The expenses of the Trust to the 31st December, 1893, are to loans. be defrayed out of the loan; after that period by the company to an amount not exceeding £1,000 per annum, and the remainder by the municipalities; and the liability on account of loans is by Act 48 Vict. No. 788 made a joint and several charge on the properties and revenues of the several municipalities. The total amount the Trust is empowered to borrow is £1,650,000, which has been raised in London by means of debentures bearing interest at  $4\frac{1}{2}$  per cent.<sup>†</sup> The premiums received amounted to £55,794, making a total of £1,705,794. The whole of this was expended by the 31st December, 1893, when all outlay from loan monies ceased in accordance with Act No. 1278. The

† For further information respecting the Tramways Trust loans, see paragraph 388 ante.

<sup>\*</sup> Their names are as follow:-The cities of Melbourne, Prahran, Richmond, Fitzroy, Collingwood, South Melbourne, Hawthorn, and St. Kilda; the towns of North Melbourne, Brunswick, and Port Melbourne; and the borough of Kew.

following particulars have been kindly furnished by Mr. T. Hamilton, secretary to the Tramways Trust\* :---

The total length of tramways authorized and constructed to the 31st December, 1893, amounts to 47 miles 4 furlongs, of which 43 miles 6 furlongs are worked by cables and stationary steam-engines, and the remaining 3 miles 6 furlongs by horses.

The cable lines form one of the largest systems of this description of tramway in the world, and the method of construction adopted combined all the best features and latest improvements of lines constructed both in America and Europe.

A uniform fare of 3d. is authorized to be charged on the tramway lines, except on the section between the Spencer-street and Prince's-bridge Railway Stations, viâ Flinders-street, on which the fare is 1d. But the company is required to run, upon all lines open for traffic, every morning between the hours of 6 and 7, and every evening between the hours of 5.30 and 6.30 (Sundays and public holidays excepted), two or more carriages for workmen at a fare of  $1\frac{1}{2}d$ . per journey.<sup>†</sup> All fares will be, by Act No. 765 section 26, subject to revision by Parliament after the lapse of ten years from the date of the first 20 miles of tramway being opened for traffic, viz., on the 31st December, 1897.

The extent of lines completed to the 31st December, 1893, and the dates at which the respective lengths were opened for traffic, were as follow :---

LENGTH OF TRAM LINES AND DATES OF OPENING.

997. From information furnished by the secretary of the Melbourne Tramway Tramway and Omnibus Company, it appears that the number of and passengers carried on tramways during the year 1893-4 was about 35 millions, or fewer than in any previous year since 1888; whilst the total receipts amounted to nearly £360,000, or slightly lower than

\* For a description of the method of constructing the tramways and working them, see issue of this work for 1890-91, vol. II., page 163.

† Tickets available for all the lines are now issued at the price of 2s. 9d. per dozen (23d. each); and tickets available for Melbourne proper only are issued at the price of 1s. for eight (13d. each).

in 1888, and considerably lower than in any of the intervening years. Although the tram mileage has also been largely reduced, it was higher in 1894 than in any year prior to 1891. The number of persons employed by the company is about 1,400. The following are the traffic returns for the last nine years, placed side by side with figures showing the average length open :—

TRAFFIC OF MELBOURNE TRAMWAYS, 1885-6 TO 1893-4.

NOTE.—The first line was opened for traffic on the 11th November, 1885. The following rates of wages are paid by the Company;—First-class, Gripmen, 40s.; Conductors, 38s. per week. Second-class, an average of seven-eighths of these amounts, except on special occasions when the men do more work and often earn first-class rates.

Tramway accidents. 998. During the first eighteen months the Melbourne street tramways were open, viz., from December, 1885, to June, 1887, 30 tramway accidents were recorded, resulting in the death of 7 persons, and the more or less serious injury of 23 others. In 1888 the number of persons fatally injured was also seven, whilst there were three in 1889, ten in 1890, five in 1891, three in 1892, and seven in 1893. Six of the last-named number were passed over by tram cars, and one fell off a car. No information has been furnished respecting non-fatal cases.

Other suburban tramways.

999. Besides the lines of the Melbourne Tramway and Omnibus Company, there is a cable tramway,  $2\frac{1}{4}$  miles in length, between Clifton Hill and Preston; a horse tramway, 7 miles in length, between Sandringham and Cheltenham; a horse tramway,  $1\frac{1}{2}$  mile in length, between Brunswick and Coburg; and an electric tramway, 4 miles in length, between Box Hill and Doncaster. All these lines are the property of, and are worked by, limited liability companies. On the Beaumaris tramway the number of miles run in 1893-4 was about 31,300, being equivalent to 2,236 round trips, the total receipts were £1,369, and the working expenses about £1,245. The cost of construction and equipment of this tramway was £18,983.

\* For ten months only.
† For nine months only.

and the second secon

1000. The number of vehicles licensed in Melbourne, and for a Licensed distance of 8 miles beyond the corporate limits, in 1893, was 1,858 Melbourne. for the conveyance of passengers, of which 735 were tramcars and dummies; whilst the number of drivers licensed for the conveyance of goods was 1,116. The following are the particulars :---

1001. The following table contains a statement of the average rates wages. of wages paid in respect to engagements made in Melbourne in 1893. It has been compiled from statements obtained from the best authorities, and is believed to be fairly representative of a state of affairs which must always be subject to some fluctuations. Throughout Victoria, the recognized working day for artisans and general labourers is eight hours:—

PRICES IN MELBOURNE, 1893—continued.

Price of gold.

1003. The price of gold in 1893 ranged from £3 to £4 3s. 6d. per oz. Its purity, and consequently its value, varies in different districts. In the last quarter of 1893 the lowest price quoted (£3 per oz.) was in Dark River subdivision of the Beechworth district, and the highest prices quoted (£4 3s. 6d. per oz.) were in the Southern and Buninyong subdivisions of the Ballarat district, and in the Tarrangower subdivision of the Castlemaine district. Taking the colony as a whole, the average price may be set down at £4 per oz.

1004. The returns of live stock imported overland, made by the Imports of live stock inspectors of stock, always differ more or less from those of the officers overland. of the Customs. In 1893, the latter showed larger numbers of horses and cattle, but smaller numbers of sheep and pigs. The following are the imports of these descriptions of stock, according to the returns of both authorities :---

Ім	PORTS	OF	LIVE	STOCK	OVER	LAND,	1893.		
			Horses.	-	Cattle.		Sheep.		Pigs.
According to ret stock inspector	s		•		,		584,045		1,374
According to ret Customs	urns of	the	1,652	•••	43,749	•••	577,944	•••	1,064

1005. According to the Customs returns, the value of live stock Value of and duties on imported overland in 1893 was £417,846.\* The rates of duty payable live stock overland. on the importation of stock, which have been in force since the 6th June, 1892, are as follow :---

RATES OF IMPORT DUTY ON LIVE STOCK, 1893.
