PARLIAMENT HOUSE BY NIGHT

Until 1904 the two Houses of Parliament in Perth were accommodated in separate buildings in the City. The foundation stone for the new Parliament House on the western outskirts of the city block was laid on 31 July 1902 and the first stage of the building was completed for a session which commenced on 28 July 1904.

The first steps towards completion were made in 1956 and on 23 March 1964 the completed building was opened by the then Governor, Major-General Sir Douglas Kendrew.

Prominent in the foreground are the fountains which were added subsequently.

PREFACE

This is the fifteenth issue of the new series of the *Western Australian Year Book*. The old series, originally published for the year 1886 and discontinued in 1905, developed from the Blue Books of the Colonial Office, London, which contained the earlier statistical records of Western Australia.

The Year Book provides a general description of Western Australia and includes authoritative information on almost every aspect of life in the State. Together with chapters on social and economic progress, the Year Book includes information on government, geography and climate, vegetation and fauna. Considerable use is made of statistical tables to supplement the descriptive text and where appropriate, maps are also included for illustrative purposes. Each chapter contains the latest information available at the time of manuscript preparation. More recent information is given, in some cases, in the *Appendix*.

To offset, in part, steeply rising costs of production of the Year Book, it has been necessary, regrettably, to omit graphs and all illustrations other than the frontispiece.

Because of the time required for editing and printing the Year Book, later data on a particular topic will often be available in mimeographed publications or on request to the appropriate section of this Office. More detailed statistics on matters treated generally in the Year Book are available in the several publications comprising *Statistics of Western Australia*. The reader is referred to the complete list of publications of the Western Australian Office which is provided at the back of this Book.

The reader's attention is drawn to the information service and library facilities provided by this Office, where all the publications of the Australian Bureau of Statistics are available for reference. Businessmen, manufacturers, primary producers, government authorities, students and the public generally are invited to make full use of these services.

I express my appreciation to the many government officials and others for their part in the preparation of material for this Year Book. Special thanks are due to the Editor of Publications (Mr J. E. Gowdy, B.Ec. (Hons.)), other officers of the Bureau and the Government Printer and his staff for their contribution to the Year Book project.

W. M. BARTLETT
Deputy Commonwealth Statistician
and
Government Statistician

1 November 1976.

SYNOPSIS

CHAPTER I—DISCOVERY, COLONISATION AND EARLY SETTLEMENT

	<i>Page</i>		<i>Page</i>
Discovery	1	Colonisation and Early Settlement	11

CHAPTER II—PHYSICAL FEATURES, CLIMATE, FLORA AND FAUNA

PART 1—PHYSICAL FEATURES AND GEOLOGY

General	19
Physical Features—	
The Great Plateau	20
The Coastal Plains	22
Geology—	
The Precambrian Basement	22
The Sedimentary Basins	26
The Superficial Deposits	32
Conclusion	34
The Mineral Deposits	34
Current Geological Investigations	35
Seismicity of Western Australia	36
Hydrocarbon Exploration on the North-West Shelf	37
Further Sources of Information	39

PART 2—CLIMATE AND METEOROLOGY

General	41
Pressure Systems	41
Rainfall	42
Temperature	48
Thunderstorms	52
Evaporation	54
Growing Season	54
Metropolitan Climate	54
Snow	56
Interstate Comparisons	56

PART 3—VEGETATION

(With an Account on the Grasses)

General	57
Formations and Alliances	58
Botanical Provinces and Districts	60
The Grasses	69
Further Sources of Information	72

PART 4—FAUNA

Distribution—

Terrestrial Vertebrates	75
Coastal Marine Fauna	77
Fauna of Inland Waters	77

Composition of the Fauna—

Mammals	78
Birds	82
Reptiles	86
Amphibia	87
Freshwater Fishes	87
Marine Fishes	88
Echinodermata	90
Mollusca	91
Corals	92
Crustacea	92
Spiders	93
Insects	93

Conservation of the Fauna

Further Sources of Information	96
--------------------------------	----

PART 5—ENTOMOLOGY

(With Particular Reference to Agriculture)

General	99
Class Insecta (Insects)	99
Class Arachnida (Spiders, Mites, Ticks, etc.)	105
Further Sources of Information	105

PART 6—NATURAL REGIONS 107

CHAPTER III—CONSTITUTION AND GOVERNMENT

General	110
Outline of Constitutional Development	110
Vice-Regal Representation	111
The Federal Parliament	111
The Senate	112
The House of Representatives	113
The State Parliament	113
The Legislative Council	115
The Legislative Assembly	118
Elections, Electors on Roll and Votes Recorded—	
The Federal Parliament	119
The State Parliament	120

Legislation during 1974	121
Government Administration	124
History of the Forests Department	125
State Emblems	127
The Judicature	127
Overseas Representation in Western Australia	128
State Representation Overseas and in other States	128
The Local Government System—	
General	129
Local Government Districts	129
Constitution and Electoral Provisions	130
Functions of Local Authorities	131
Financial Provisions	131

CHAPTER IV—POPULATION AND VITAL STATISTICS

	<i>Page</i>		<i>Page</i>
PART 1—POPULATION		PART 2—BIRTHS, DEATHS AND MARRIAGES	
General	134	The Registration System	153
The Census—		Births—	
General	134	Numbers	154
Scope	135	Birth Rates	156
Aborigines	135	Gross and Net Reproduction Rates	157
Recorded Population	135	Deaths—	
Masculinity	136	Numbers	157
Age Composition	136	Death Rates	158
Birthplace	138	Causes of Death	159
Nationality	138	Infant Mortality	162
Religion	139	Causes of Infant Deaths	163
Marital Status	139	Stillbirths	164
Intercensal Increases	140	Age-specific Death Rates	164
Geographical Distribution	141	Australian Life Tables	166
Population Density	147	Marriages—	
Aboriginal Population	148	Numbers	167
Estimates of Population	150	Age at Marriage	167
		Marriage Rates	168
		Religious and Civil Marriages	169
		Divorce	169

CHAPTER V—SOCIAL CONDITIONS

PART 1—EDUCATION	
Primary, Secondary and Technical Education—	
General	172
School Enrolments	172
The Education Department—	
General	174
Primary and Secondary Schools	174
Primary and Secondary Curriculum	176
Radio, Television and Film Aids	176
Student Counselling and Vocational Guidance	176
Special Schools and Classes	176
Correspondence Tuition	176
Education of Aborigines	177
Agricultural Education	177
Technical Education	177
Non-Government Schools	179
Teacher Education	180

Page 151

Population Estimates

The mean population for year ended 30 June 1975 should read males 568,287, females 545,257, persons 1,113,544.

The mean population for year ended 31 December 1974 should read males 561,290, females 537,381, persons 1,098,671.

CONVERSION TO METRIC UNITS OF MEASUREMENT

The object of the *Metric Conversion Act 1970*, as stated in section 5, is 'to bring about progressively the use of the metric system of measurement in Australia as the sole system of measurement of physical quantities'. Accordingly, quantity data originally expressed in imperial units in this publication are now (as far as possible) expressed in metric units of measurement. The factors which have been used in converting figures from imperial units to metric units (and the abbreviations used for the metric units) are shown below. In each case, the imperial unit is *multiplied* by the factor given.

<i>Imperial unit</i>	<i>Conversion factor</i>	<i>Metric unit</i>	
acre	0.404686	hectare	(ha)
cubic yard	0.764555	cubic metre	(cu m)
fine ounce	0.0311035	kilogram	(kg)
gallon	4.54609	litre	(l)
gallon	0.00454609	cubic metre	(cu m)
hundredweight	50.802345	kilogram	(kg)
inch	25.4	millimetre	(mm)
lb	0.45359237	kilogram	(kg)
mile	1.609344	kilometre	(km)
miles per hour	1.609344	kilometres per hour	(km/h)
ounce	28.349523	gram	(g)
proof gallon	2.5958	litre alcohol	(l al)
square foot	0.092903	square metre	(sq m)
square mile	2.589996	square kilometre	(sq km)
super. foot	0.002359714	cubic metre	(cu m)
therm	105.506	megajoule	(MJ)
ton	1.016047	tonne	(t)

CITATION OF ACTS

Acts of the Australian Parliament are cited in *italics* with the relevant years shown in roman type, e.g. *Conciliation and Arbitration Act 1904-1975*.

Acts of the Western Australian Parliament are cited in *italics* throughout, with a comma preceding the date, e.g. *Local Government Act Amendment Act, 1975*.

ROUNDING OF FIGURES

Many of the figures appearing in the tables have been rounded (to thousands or, in some cases, millions), without making those adjustments which would be needed to make the rounded figures add to the rounded total. It is for this reason that figures do not always add to the totals shown in the tables.

Percentages appearing in the tables have been corrected to the first (or second) place of decimals without making those adjustments which would be necessary to make the percentages so expressed add to precisely 100.

AREA AND COASTLINE OF AUSTRALIA

The area of the States and Territories and the length of the coastline of Australia were determined in 1973 by the Division of National Mapping of the Department of National Resources by manually digitising these features from the 1:250,000 map series of Australia. Consequently, only features of measurable size at this scale were considered. About 60,000 points were digitised at an approximate spacing of 0.5 kilometres and these points were joined by chords as the basis for calculation of areas and coastline lengths by computer.

The approximate high water mark coastline was digitised and included all bays, ports and estuaries which are open to the sea. In these cases, the shoreline was assumed to be where the seaward boundary of the title of ownership would be. Rivers were considered along similar lines but the decisions were rather more subjective, the digitised line being across the river where it appeared to take its true form. In mangroves, the shoreline was assumed to be on the landward side.

Areas and lengths of coastline determined by the foregoing methods are given in the following table. The Division of National Mapping is also progressively revising areas of local government authorities but has not yet completed this work. For this reason, areas given for statistical divisions, as in the tables on pages 148 and 552, do not add to the total area shown for the State.

State or Territory	Present area	Percentage of total area	Length of coastline (a)
	sq km		kilometres
New South Wales	801,600	10.43	1,900
Victoria	227,600	2.96	1,800
Queensland	1,727,200	22.48	7,400
South Australia	984,000	12.81	3,700
Western Australia	2,525,500	32.87	12,500
Tasmania	67,800	0.88	3,200
Northern Territory....	1,346,200	17.52	6,200
Australian Capital Territory	2,400	0.03	(b)
AUSTRALIA	7,682,300	100.00	36,800

(a) These measurements are broadly on a 'direct' basis but, even so, they must be regarded as approximate only. (b) Australian Capital Territory, Jervis Bay area included in New South Wales.

STATISTICAL DIVISIONS

Statistical divisions referred to in the text in various Chapters of the Year Book, in the note on page 552, and the lists on pages 553 and 554 with accompanying maps are as they existed at 31 December 1975.

The statistical divisions (and their component local government areas) were revised with effect from 1 January 1976. Details of the boundaries and the names of the new statistical divisions are obtainable from the Western Australian Office of the Australian Bureau of Statistics. Maps showing the new statistical divisions are available on request.

CHAPTER I—DISCOVERY, COLONISATION AND EARLY SETTLEMENT

DISCOVERY ⁽¹⁾

Terra Australis Incognita, or *Magellanica*, the unknown Southern Continent, or Great Southern Land of ancient geographers and explorers, is said to have been first discovered by the Portuguese between the years 1511 and 1529, when some vessels belonging to that nation, engaged in the exploration of the Indian Seas, driven out of their course by currents or stress of weather, accidentally drifted on to the Australian coast. The authenticity of this account is, however, doubted.

In 1567 Alvaro de Mendana sailed from Callao, in Peru, in search of the Continent believed to exist in the Southern Seas, but the only result of the expedition was the discovery of the Solomon Islands.

In 1595 Mendana again left Peru in charge of an expedition equipped for the purpose of colonising the Solomon Islands, previously discovered, and chanced on the Marquesas and Santa Cruz Islands. He died on one of the latter, the expedition returning to Peru.

The spirit of enterprise displayed by the Portuguese served, however, to encourage the Dutch East India Company, with their already established factories in Java and other parts of the Indian Archipelago, to researches in the direction of Australia. Their first object was New Guinea, where it was rumoured that gold was found. Frederick de Houtman, Governor of Amboyna (in the Moluccas), organised an expedition in 1605. Under his instructions the Dutch yacht 'Duyfken' (*Little Dove*), Commander Willem Jansz, supercargo Jan Lodewijkszoon Rosingeyn, sailed from Bantam on 18 November of that year, whence, after receiving further instructions from Jan Willemsz Verschoor, the company's President, she sailed to explore the island of New Guinea. During March in the following year she coasted along that portion of *Terra Australis* lying in the Gulf of Carpentaria to the south-west of Cape York, as far as Cape 'Keer Weer', or 'Turn Back', her commander mistaking it for the west side of New Guinea, and thus, unconsciously, making the first authenticated discovery of the long sought-for Southern Continent. These seem to be all the particulars available as to the results of this expedition, and even they are doubtful, as the journal of Captain Jansz unfortunately appears to have been lost.⁽²⁾

On 21 December 1605, Pedro Fernandez de Quiros, who had been pilot under Mendana and Luiz Vaz de Torres, left Callao with three Spanish vessels in search of the supposed *Tierra Austral*, and amongst others discovered one of the islands now called the New Hebrides, to which, supposing it to be the object of their search, they gave the name of *Australia del Espiritu Santo*. Torres, in the 'Almirante', on 11 June 1606, found himself separated from de Quiros and, ascertaining that the newly discovered land was only an island, continued his search westward, passing, also unconsciously, in sight of the sought-for continent, through the Straits that now bear his name.

In 1611 certain ships going from the Netherlands to India, after doubling the Cape, followed another route than that usually adopted: they ran on an eastern course, in about 36° southern latitude, for a considerable time, and then tried to navigate to Java on a northerly course. The commander, the subsequent Governor General Hendrik Brouwer, wrote to the Directors of the East India Company concerning 'this fairway' in highly

⁽¹⁾ Reprinted, with minor editing, from the *Western Australian Official Year Book*, 1905 (Old Series). See also footnote to page 11.

⁽²⁾ Dr W. G. C. Byvanck, the Chief Librarian of the Royal Library at The Hague, who kindly furnished authentic information with regard to the early Dutch voyages to Western Australia, quotes De Jonge, 'Rise of the Dutch Dominion in East India', iii., 42-4, and Lants, also P. A. Leupe, 'Voyages of the Dutch to New Holland' (in his 'Treatise on the Naval Exploits of the Dutch'). Professor Dr J. E. Heeres, of Leiden, in an abstract of valuable notes kindly made available for publication in the Year Book, gives a similar account.

laudatory terms, as preferable to the usual course by Madagascar, which offered many dangers and objections. The new route was thenceforth prescribed to the Company's ships. As early as 1618 and 1620 the Company urged upon the Governor General of India the importance of following up the discoveries in the region of 'The Southland'. Jan Pieterszoon Coen, who was then directing the affairs of the Company in India, gave instructions, on 29 September 1622, for the ships 'Haring' (*Herring*) and 'Hazewind' (*Greyhound*) to sail, 'destined for the further discovery of the Southland'. The commanders were 'specially to inquire what minerals, such as gold, silver, tin, iron, lead, and copper, what precious stones, pearls, vegetables, animals, and fruit these lands' produced; and the countries discovered were 'to be taken possession of'. Jan Carstensz was to be in command. The ships, however, for some reason did not sail on their ordained expedition. The enterprise of the Company probably found its boldest expression in that eminent navigator, Van Diemen; but in his time the Directors of the Company began to slacken in their zeal for exploration, finding the expenses too great; and gradually the idea of further colonial expansion was abandoned, thus leaving Australia to be colonised by others. At the close of the 17th century Nicolaas Corneliszoon Witsen, Burgomaster of Amsterdam and General Director of the East India Company, with a special view to the enlargement of geographical knowledge, took a diligent part in the preparations for the voyage of skipper de Vlaming. A few years later he bitterly complained of the indifference of many of his countrymen in those days, who did not 'care about curious learning from India', but 'money only'. As Professor Heeres says: 'The times of Van Diemen had failed to return; the spirit by which he was imbued no longer presided over the debates on colonial matters.'⁽³⁾

In 1616 Dirk Hartogs (Hartochsz), in command of the Dutch vessel 'Eendragt', or 'Eendracht' (*Concord*), supercargo Cornelis Buysero, outward bound from Holland to the Indies, entered Shark Bay, and gave his name to the island upon the western side of the Bay. The name 'Dor Eylandt', or 'Dorre Eylandt' (*Barren Island*) was then, or subsequently, given to the largest island at the entrance of the Bay. A tin plate nailed to a post erected at the north end of Dirk Hartogs Island remained for many years a memento of his visit. His countryman, Willem de Vlaming, who visited the island in 1697, relates that he found the plate on 4 February of that year and, taking it away with him, entrusted it to the Governor General at Batavia, who forwarded it to the Board of Seventeen Directors of the Dutch East India Company in Holland, the President of which was, at that time, Burgomaster Nicolaas Witsen. Vlaming gave a rendering of the inscription, which, translated from the Dutch, runs as follows:

'ANNO 1616, the 25th of October.—Arrived here the ship "Eendracht", of Amsterdam; the first merchant Gillis Miebaïs of Liege. Dirck Hartogs, of Amsterdam, Captain. 27th Do.—Sailed for Bantam.'

On the lower part, cut with a knife, were to be read in Dutch the words:

'The Under Merchant Jan Steyn, Upper Steersman, Pieter Ledoecker of Bil. A° 1616.'

Such, at least, was the wording of the duplicate plate which he caused to be substituted for the one removed.⁽⁴⁾ The original plate of Dirk Hartogs was discovered in 1902 by Mr J. F. L. De Balbian Verster, in the 'Rijks-Museum' (State Museum) at Amsterdam, and it was then seen that the latter part of the inscription thereon reads as follows:

'The Under Merchant Jan Stins, Upper Steersman, Pieter Dockes of Bil. A° 1616.'

Vlaming's inscription was seen by Captain Hamelin, of the French exploring vessel 'Naturaliste', in 1801; but the plate had disappeared in January 1822, when King caused a careful search to be made for it. This disappearance can be accounted for by a statement made by de Freycinet to the effect that he had removed it and deposited it for safe keeping in the Museum of the French Institute, which fact is referred to in the minutes of the Society, dated 23 March 1821. In spite, however, of this statement, a careful search subsequently at the turn of the century made by the Secretary⁽⁵⁾ of the Institute failed to discover its

⁽³⁾ 'The Part borne by the Dutch in the Discovery of Australia, 1606-1765', by Professor J. E. Heeres, LL.D. ⁽⁴⁾ Dr Byvanck refers to Major's 'Introduction' to 'Early Voyages to *Terra Australis*', p. 32. ⁽⁵⁾ Dr Alfred Grandidier, who has kindly revised the portions of this historical abstract, referring to the French voyages.

whereabouts. [The plate was located by chance in 1940 and is now held by the Fremantle Branch of The Western Australian Museum—Ed.]

Dirk Hartogs examined the coastline between south latitude 26°30' and 23°, and called the intervening country 'Eendracht's Land'.

On 11 May 1618, the ship 'Zeewolf' (*Seawolf*), from the Netherlands to India, supercargo Pieter Dirkszoon, skipper Haevik Claeszoon Van Hillegom, sighted land in southern latitude 21°20', about 'a thousand miles' (German sea miles) east of Africa.

In July of the same year a Dutch vessel called 'Mauritius', supercargo Willem Jansz, skipper Lenaert Jacobsz, touched near North West Cape, and discovered the 'Willemsrivier' (probably the Ashburton), in lat. 21°45' south.

In 1619 a fleet of eleven vessels, under the command of Frederik de Houtman, in the ship 'Dordrecht', discovered, on 29 July of that year, a reef lying off this coast, to which the name of 'Frederik Houtman's Abrolhos' was given.⁽⁶⁾ It consists of a cluster of rocky islets and outlying reefs about forty-five miles to the west and north-west of Champion Bay. The term Abrolhos is a contraction of the Portuguese words 'abri vossos olhos', meaning in English 'Open your eyes', and was applied by the Portuguese to outlying coastal dangers. On board one of the ships of Houtman's fleet, the 'Amsterdam', was Jacob D'edel, the first merchant (supercargo), and it was after him that the district between Shark Bay and Champion Bay was named 'Edel's Land'.

In 1622 the Dutch vessel 'Leeuwin' (*Lioness*) rounded the Cape at the south-west corner of the continent which now bears her name, and examined the shore as far as what subsequently became known as King George III Sound; this portion of the continent being subsequently known as Leeuwin's or Lyon's Land.

On 5 July 1622, a boat arrived at Batavia with ten men, forming part of the crew of an English ship named the 'Trial', and on 8 July her pinnace arrived with thirty-six men. They stated that they had lost and abandoned their ship with ninety-seven men and the cargo on certain rocks situated in latitude 20°10' south, in the longitude of the western extremity of Java. These rocks were near a number of broken islands lying very far apart. They said that they had met with this accident through following the course of the Dutch ships. The yacht 'Hazewind' was selected to discover those lands, but never started. It is probable that the shipwrecked English sailors were considerably out in their statement as to the longitude of the 'Trial' or 'Tryal' rocks, which have since been located on the south-western part of the Monte Bello Reef, extending three or four miles north and south, the central and largest rock lying north, distant 5¼ miles, from the north extreme of Barrow Island.

On 22 July 1622, the Dutch ship 'tWapen van Hoorn' (*The Arms of Hoorn*), having sailed from the Texel on 22 December 1621, arrived at Batavia, and reported that she had been in extreme peril near Eendrachtsland.

On 21 July 1623, the Dutch ship 'Leyden', skipper Klaas Hermansz, sighted Eendrachtsland. This same ship, under the command of Daniel Janssen Cock, sighted 'The Southland', on 28 April 1626.

On 16 November 1623, the yacht 'Tortelduyff' (*Turtledove*) sailed from the Texel and, during her voyage to Batavia, where she arrived on 21 June 1624, probably discovered and named the Turtledove Shoal.

In January of the same year, 1623, an expedition under Jan Carstensz, from Amboyna, in the vessels 'Pera' and 'Arnhem', discovered Arnhem Land (Aarnems land). The skipper of the 'Arnhem', Dirck Melisz, having been killed in an attack by natives, the second mate of the 'Pera', Willem Joosten Van Coolsteerdt, was appointed as his successor. 'In this discovery were found everywhere shallow water and barren coasts; islands altogether thinly populated by divers cruel, poor, and brutal natives, and of very little use to the company.' This exploration was, in April 1636, continued by Gerrit Thomaszoon Pool, who was also murdered by natives at the same spot, and Pieter Pieterszoon, in the yachts 'Klyn Amsterdam' and 'Wezel'.

⁽⁶⁾ Dr Byvanck refers to Major's 'Introduction', p. 86, and the strictures on the passage given by P. A. Leupe, 'Treatise on the Naval Exploits of the Dutch', vol. xxvii. 1, sec. 2, p. 32.

On 16 January 1627, according to De Hondt, or 26 January to Thevenot's chart, the 'Gulde Zeepaerd' (*Golden Sea Horse*), skipper Francois Thyssen, having on board Pieter Nuyts, afterwards Ambassador to the Court of Japan, and subsequently Governor of Formosa, sighted the south coast of 'The Great South Land' near the present Cape Leeuwin, and made a close examination of the southern coastline for 1,000 miles, to Nuyts' Reef. Nuyts gave the name of Nuyts Land to the country lying round what is now known as the Great Australian Bight. It was on this voyage also that the islands St Francois and St Peter in Nuyts Archipelago, off the coast of South Australia, were named.

On 22 July 1627, the Governor General of Dutch India, Jan Pieterszoon Coen, sailed from Table Bay with the ships 'Galias', 'Utrecht' and 'Texel'. The 'Galias', having broken her rudder in a gale on the night of 10 August, parted company from the other ships, and on 5 September was nearly wrecked on the coast of Eendrachtstland.

On 17 September of the same year the ship 'tWapen Van Hoorn', supercargo J. Van Roosenbergh, sighted Eendrachtstland, near Dirk Hartogs Roadstead. Fresh observations were made during each of these voyages, and the coast consequently became more accurately defined on the map.

In 1628 an expedition was equipped in Holland, bound for the East Indies. It had originally been intended that the fleet should consist of eleven vessels, but three of them, being ready to sail before the others, left Texel on 28 October, under the command of Commodore Francis Pelsart. The 'Batavia', Pelsart's ship, driven out of her course during a severe storm, was separated from the other two and having lost her reckoning, struck, on the night of 4 June 1629, on one of the islands of Houtman's Abrolhos, becoming a total wreck. The greater part of the crew and passengers, however, safely reached the shore. After vainly searching for water on the adjacent islands and the mainland opposite, Pelsart, with eight men, eventually made his way in one of the vessel's boats to Batavia, where he arrived on 5 July; here he obtained the use of a frigate called the 'Sardam', in which he returned to rescue the remainder of the castaways. On his arrival he found that during his absence a portion of the crew, under the supercargo, Jerome Cornelis, had mutinied and massacred the greater number of the passengers, intending to seize any vessel that might chance to come near the islands, and then turn pirates. Pelsart, being forewarned of this intention by some of those who had escaped from the mutineers to another island, easily captured the ringleaders, who were promptly tried and as quickly executed, two of their number being marooned on the mainland near Champion Bay. On 28 October 1629, the chief part of the silver treasure having been recovered from the wrecked vessel, the 'Sardam', with the survivors on board, sailed for Batavia. Pelsart's Journal mentions the so-called 'Jacob Remessens', 'Remens', or 'Rommer' River, in latitude 22°17'. As the modern maps show no river of any size at that point, it may perhaps be surmised that Exmouth Gulf was mistaken for the mouth of a river. It is evident that the name 'Jacob Remessens Rivier' had been given in or before 1628.

In the same year, 1628, Captain Gerrit Fredericsz de Wit, of the homeward bound 'Vianen', ran aground off the land which is now comprised in the North-West and Kimberley Districts, and sailing along the coast for about fifty miles, gave his name to that part of Australia.

In 1629 the west coast of Australia was touched at by Dutch vessels in the neighbourhood of Dirk Hartogs Roadstead.

In 1632 the Trials were passed by Dutch ships on the outward voyage, but no fresh information of importance was gained.

In 1635, on 25 May, the ship 'Amsterdam', under Commander Wollebrand Geleynszoon de Jongh, and skipper Pieter Dirksz, sighted the 'Southland' in the neighbourhood of Shark Bay.

In 1644 Abel Janszoon Tasman, the celebrated Dutch explorer, and Franz Jacobszoon Visscher, with the yachts 'Limmen', 'Zeemeuw' (*Sea-mew*) and 'De Brak' (*The Hound*) during a second expedition in these seas, examined the country which was afterwards called Tasman Land, to that bordering on the extreme north-western coast line of the continent, from Arnhem Land, or what is now the Northern Territory, to Exmouth Gulf,

in latitude 22°S. in this State. This comprised the country previously discovered, and named by de Wit, as well as part of Eendracht's Land—namely, the present districts of Kimberley and the North-West. Tasman appears to have landed in Carnot Bay and also in what was subsequently called Roebuck Bay, and on some of the islands in Dampier's Archipelago. He gave the name of *Nova Hollandia* or *New Holland* to the western half of the continent of Australia. The name New Holland was applied by the Dutch only to the parts of the continent lying westward of a meridian line, passing through Arnhem Land on the north and near the isles of St Francis and St Peter to the south. All that to the eastward, including the shores of the Gulf of Carpentaria, still remained as *Terra Australis*. This appears from a chart published by Thevenot in 1663; which, he says, 'was originally taken from that done in inlaid work upon the pavement of the new Stadt-House at Amsterdam'.

In the present State of Western Australia are included all the lands on the south, west, and north-west coasts then known to the Dutch as 'The Great Known South Land', as distinguished from 'The Unknown Land', which comprised the remainder of the continent.

An exploratory voyage to the west coast of New Holland was made in 1648 by the ship 'Leeuwerik' (*Lark*), commanded by Jan Janszoon Zeeuw.

In 1656, on 28 April, the 'De Vergulde Draeck' (*The Gilt Dragon*), commanded by Pieter Albertsz, which had left Texel on 4 October 1655, was wrecked at night on a reef on the west coast in latitude 30°40', and 118 lives were lost. Leaving sixty-eight of the survivors of the wreck behind on the mainland to protect, if possible, the treasure (78,600 guilders) and merchandise, which comprised the cargo of the vessel, one of the ship's boats made for Batavia, which it duly reached; and the vessels 'Witte Valck' (*White Falcon*) and 'Goede Hoop' (*Good Hope*) were at once despatched to the rescue of the castaways and the property, unfortunately, however, without success.

In 1657 a further search made by the 'Vinck' (*Finch*), while on a voyage from the Cape to Batavia, also proved fruitless.

In 1658, on 1 January, the vessels 'Waekende Boey' (*The Watch Buoy*), commanded by Samuel Volckertszoon, and the 'Emeloort', Captain Aucke Pieterzoon Jonck, left Batavia on a similar errand, which was equally abortive. Improved charts of the west coast of Australia were, however, the result of this expedition. During the search, one of the boats of the 'Waekende Boey', being accidentally separated from her during bad weather, was thought by those on board to have been lost, and was consequently abandoned; part of its crew, however, after almost incredible sufferings from exposure, hunger, and thirst, managed to reach Java in safety.

In the same year the ship 'Elburg', commanded by Jacob Pieterzoon Peereboom, brought in further reports about the south-west coast, or 'Land van de Leeuwin', where she had been at anchor 'in latitude 33°14' south under a projecting point', probably in Geographe Bay, and where some of her crew had been ashore.

In February 1678, the ship 'De Vliegende Zwaan' (*The Flying Swan*), commanded by Jan Van der Wall, coasted the north-west of Australia on her voyage from Ternate to Batavia.

In 1688, on 5 January, the first Englishman landed on the coast of Western Australia, in the person of William Dampier, who, by the publication of further authentic information regarding 'New Holland', supplemented the accounts of Tasman's discoveries made in 1642-3, which had already been made known, in 1671 in the diary kept by the surgeon of Tasman's vessel, and subsequently in Tasman's own notes in 1674. Dampier appears to have left Brazil as supercargo in a small vessel called the 'Cygnet', commanded by a friend of his named Swan, and intended for the trade with South America; the crew, however, mutinied and became buccaneers, and eventually Captain Swan and about forty of those who remained faithful to him were abandoned to their fate on one of the Philippine Islands. Dampier remained in the vessel which, after her extended voyage, appears to have required overhauling. Their occupation rendering an unfrequented spot desirable for the purpose, the buccaneers steered for the coast of New Holland, and on 4 January

1688, anchored in a bay in the north-western corner of King Sound, in the present West Kimberley District, now known as Cygnet Bay, where they beached the vessel and executed the necessary repairs. During their stay here (and they did not leave until 12 March) Dampier, who does not seem to have found the society of the buccaneers or their mode of life congenial, made a careful exploration of the surrounding country. He succeeded in leaving the vessel at the Nicobar Islands, from which he reached Sumatra in a canoe, and eventually, after many adventures, arrived in England. It has been pointed out as a singular circumstance that Cygnet Bay, where the 'Cygnet' was beached in 1688, was the one spot out of the whole Western Australian coast subsequently selected by the W.A.S.N. Co.'s steamers for scraping and cleaning their bottoms; and it certainly seems strange, unless the place was previously known, that the 'Cygnet' should accidentally have hit upon the one place on the whole coast best suited for the purpose.

In 1696 Commander Willem de Vlaming, in a vessel called the 'Geelvinck' (*Yellow Bunting*), convoying two other vessels, the 'Nyptangh' (*Pincher*), commanded by Captain Gerrit Collaert, and 'Weseltje' (*Weazel*), under Commander Cornelis de Vlaming, son of the leader of the expedition, was ordered by the Dutch East India Company to carefully examine the western coast of New Holland for traces of a vessel named the 'Ridderschap Van Holland' (*Chamber of Knights of Holland*), which had left Holland for the Dutch colonies two years previously (1694) (?) and had never reached its destination. On the morning of Christmas Day, 1696, land was sighted, and on 29 December the ships anchored off the island of Rottnest, which the next day they explored, giving it the name 'Rottenest' from the abundance of rats' (wallabies) nests found upon it. On the morning of 5 January, Vlaming landed on the mainland, probably somewhere about what is now called Cottesloe Beach, with a party of eighty-six men, fully armed, and marching eastwards, came to what is described as 'a large basin of brackish water, which we afterwards found was a river'. On the banks of this they found a hut 'of a worse description than that of a Hottentot', also footprints and other evidences of the inhabitants, of whom, however, they were unable to catch a glimpse. On the following day the party divided into three, and went in different directions—one north, one south, and the third four miles further east. On 9 January the ships were brought in and anchored close off the mouth of the river, which Vlaming himself is said to have explored for a distance of fourteen or sixteen leagues. It is mentioned that he caught some smelts, while on the surface of the water were seen numerous black swans. Of this hitherto unknown prodigy, the fabulous black swan, Juvenal's '*Rara avis in terris nigroque simillima cygno*', Vlaming captured several specimens, three of which were taken alive to Batavia. The river was named by Vlaming the Swan River (*Swaenerevier*), and on 13 January, having, as it is reported, found 'neither good country nor seen anything worthy of note', the expedition proceeded slowly northwards, examining the shore carefully with the boats for traces of the lost ship, and occasionally landing and making short excursions inland. On 4 February Shark Bay was reached and carefully explored. The tin plate of Dirk Hartogs was discovered and, leaving a somewhat similar memorial of their own visit, the ships, on 12 February, proceeded as far as North West Cape, from which, on 21 February, they steered a direct course to Batavia. Burgomaster Nicolaas Witsen complained that Vlaming, being addicted to drink, did not make such a thorough exploration of the country as he was instructed to do.

In 1699 Dampier—who, since his arrival in England, had published accounts of his previous adventures and discoveries in New Holland—was sent by William III in the 'Roebuck', under an Admiralty Commission, to make further explorations on the north-west coast of that country, and to solve, if possible, the question as to whether it was a continent or, as was then generally supposed, only a succession of islands. On 1 August 1699, he entered and named Shark Bay and here he spent eight days in a fruitless search for water. Frequent further attempts for a like purpose, as he proceeded slowly northward up the coast, were also of no avail, and only once was water obtained in a sufficient quantity to replenish his supply. So greatly disgusted was he with the extreme sterility and waterless aspect of the coastal country—he never appears to have explored any distance inland—that he abandoned the object of his mission and proceeded straight to New Guinea. His

(?) Leupe, p. 360.

unfavourable comments on the barren appearance of the land and its wretched poverty-stricken inhabitants—whom he described as ‘the miserablest people in the world’—militated strongly against further investigation being made, and from that time to 1770—when Cook, landing at Botany Bay, discovered and took possession of the more fertile regions of the eastern coast—Australian exploration, so far at all events as England was concerned, appears to have been neglected. During this voyage Dampier discovered and roughly charted the Dampier Archipelago, and added much to the knowledge of the habits and customs of the Aborigines and the natural history of the country. He described the kangaroo as ‘a strange creature like a racoon, which used only its hind legs, and, instead of walking, advanced by great bounds or leaps, of twelve or fifteen feet at a time’.

In March 1705, a small Dutch exploring squadron of three vessels, the ‘Vossenbosch’ (*Foxwood*) under Maarten Van Delft, ‘De Wayer’ (*The Fan*) under Andries Rooseboom of Hamburg, and ‘Nieuw Holland’ under Pieter Hendrikszoon of Hamburg, left Timor to explore the north-western coast of New Holland, and an improved chart of Tasman’s explorations was made.

In 1711 a Dutch vessel named the ‘Zuytdorp’ (*The South Village*) is said to have been wrecked on the Abrolhos Islands.

In 1727, on 9 June, a Dutch vessel, commanded by Jan Steyns, supercargo, Jan Nebens, the ‘Zeewyck’, so named after a small fishing village in Holland, was wrecked on a reef off the Houtman Abrolhos, near the island to which, in 1840, Captain Stokes gave the name of Gun Island, from the fact of his finding a small brass three-pounder gun on it, with other relics of the wrecked vessel. Leaving the island on 26 March 1728, the remainder of the crew of the ‘Zeewyck’, eighty-two in all, taking with them ten chests of treasure valued at 315,836 florins, reached Batavia in safety, on 21 April, in a small boat built out of fragments of the wreck. A boat previously despatched in charge of the upper steersman, Pieter Langeweg, with a crew of eleven, was never heard of again. Numerous relics of the wreck have since been discovered, including pieces of ordnance, cannon balls, clay pipes, broken gin bottles, tumblers, wine glasses, iron lamps, snuff-box etc. and several silver and copper coins bearing date 1720 and 1722.

Later in the eighteenth century, *inter aliu* in 1755 and 1765, the west coast of Australia was again visited by Dutch ships, but the information gained by these visits is unimportant.

On 18 March 1772, Captain de St Alouarn, in the flute ‘Le Gros Ventre’, anchored off Cape Leeuwin. After him the St Alouarn Islands were named by d’Entrecasteaux, in December 1792.

In 1791, on 1 April, Captain George Vancouver, who had previously served as a midshipman under Cook, left Falmouth in H.M.S. ‘Discovery’, accompanied by Captain Broughton, in H.M.S. ‘Chatham’, on his way to north-west America. On 26 September he arrived at Lyon’s Land, off Chatham Island, situated close to the mainland off Point Nuyts, about one hundred miles south-east from Cape Leeuwin. Making a careful survey of the coast as he proceeded eastward, on the night of 28 September he anchored in a sound, to which he gave the name of King George the Third Sound. Landing on 29 September, the birthday of the then Princess Royal, after whom the inner harbour was named, he formally took possession of the country from the land seen north-westward of Cape Chatham, so far as he might explore its coasts. Here he remained until 11 October, being especially minute in his survey and examination of its outer harbour, and the adjacent country. Before leaving he deposited on Point Possession a bottle containing a parchment record of his visit, and a similar one on Seal Island. Continuing his voyage, adverse weather greatly interfered with his exploration of the coast which, at Termination Island, he eventually quitted for America. Archibald Menzies was naturalist to the expedition.

In 1792 a French expedition of two vessels, one ‘La Recherche’, commanded by Antoine Raymond Joseph de Bruni Chevalier d’Entrecasteaux, and the other called ‘L’Esperance’, Captain Huon de Kermadec, appeared on the south-western coast, looking for traces of Count Jean Francois La Perouse who, early in 1788, had left Sydney with the vessels ‘Boussole’ and ‘Astrolabe’, the latter commanded by Captain de Lange, and whose fate remained a mystery for nearly forty years, until 1825, when Captain Peter Dillon, of H.M.S. ‘Research’, discovered remnants of the wrecks on Vanikoro, or Matli-

koro, an island to the north-west of the New Hebrides, being the southernmost of the Santa Cruz group. D'Entrecasteaux died on board his ship 'La Recherche' on 20 July 1793. Monsieur Labillardiere was naturalist to the expedition.

In 1800, on 27 August, Chr. Dixon, ship 'Elligood', was in Oyster Harbour, King George Sound. He probably removed Vancouver's bottle and record memorandum from Seal Island.

In 1801, on 18 July, Captain Matthew Flinders left Spithead in the 'Investigator', the old 'Xenophon', a sloop of 334 tons. He reached, on 6 November, what he denominated Cape Leeuwin, as being the south-western and most projecting 'part of Leeuwin's Land', and commencing from there to King George III Sound, where he arrived on 9 December, he explored the intermediate coast, charted Princess Royal Harbour, established friendly relations with the Aboriginal inhabitants, and subsequently carefully examined the whole of the southern coast of the continent as far as Bass Straits. On board the 'Investigator' was Robert Brown, the well-known naturalist; also William Westall, the famous painter; whilst John Franklin, who afterwards became Governor of Van Diemen's Land, and finally ended his career as the celebrated, but unfortunate, Arctic explorer, was one of her junior lieutenants. Flinders' search for Vancouver's record bottles was unsuccessful, but he discovered on the east side of Oyster Harbour a garden and a piece of sheet copper inscribed 'August 27, 1800. Chr. Dixon—ship Elligood'. He also placed a record bottle on Seal Island. He left the Sound on the morning of 5 January 1802. Flinders readopted the original name of the continent *Terra Australis*, 'to include New South Wales, New Holland, and the adjacent isles, including that of Van Diemen'.

In the British Patent to the first governor of New South Wales a meridian nearly corresponding to the ancient line of separation between *New Holland* and *Terra Australis* was made the western limit of that colony, and was fixed at 135°E. longitude, 'from which the British Territory extends eastwards to the islands of the Pacific or Great Ocean: its northern limit is at Cape Yorke; and the extremity of the southern Van Diemen's Land is its opposite boundary'. In 1814, upon Captain Flinders' suggestion, the continent received its name of Australia, 'as being', as he said, 'more agreeable to the ear, and an assimilation to the names of the other great portions of the earth'.

In 1801-3 an exploration of the Western Australian coast was made by a French expedition of three vessels—the 'Geographe', commanded by Commodore Nicolas Baudin; the 'Naturaliste', by Captain Hamelin; and a small vessel of thirty tons, called the 'Casuarina', under Lieutenant Louis Claude Desaulses de Freycinet. After a brief preliminary visit they proceeded to Timor; then returning southward, they anchored off the mouth of the Swan River (Riviere des Cygnes) which, between 17 and 22 June 1801, they explored, probably to a short distance beyond the junction of the Helena River, intending to trace the source of the main stream. The leader, M. Heirisson (an *Enseigne de vaisseau*), was however, reluctantly obliged to abandon the latter object, owing to their provisions running short. The name of one of their party being Moreau, the name Moreau Inlet was given to the Canning River, and that of their leader to the Heirisson Islands, on which the present Perth Causeway is constructed, where they first caught sight of the black swans. They appear to have climbed Mount Eliza, and described the view obtained from there as particularly striking and beautiful. The change of soil about the present site of Guildford was noticed, and its fertility favourably commented upon. Eating, as previously Vlaming's men had also done, of the zamia nut, which they described as a fruit like a chestnut, some of them did not fail to experience the sickness which it subsequently causes. At the point where they abandoned their upstream journey, a distance, so it is stated, of about twenty leagues from its mouth, the river is described as being narrow, and only about seven or eight feet deep, the water being still salt. The vessels engaged on this expedition examined, so far as possible, the whole of the Western Australian coast, made a survey of Princess Royal Harbour, and took especially minute notes of the coast and land in the vicinity of the Swan River, and at Rottneest Island, where they landed, and of the salt lakes which they called *Etangs Douvailedaily*, whilst the species of wallaby they found there received the name of *peramele a long nez*. Further, they explored Shark Bay and also some of the islands about Admiralty Gulf. M. Leschenault, the celebrated

botanist, after whom the Leschenault Estuary, near Bunbury, and Cape Leschenault, near the Moore River, were called, was attached to this expedition, as was also M. Francois Peron, the zoologist, from whom Point Peron, south of Fremantle, received its name, whilst M. Bailly was the mineralogist. According to Captain King, 'Peron and Lesueur in Baudin's voyage extended their inquiries chiefly among the branches of zoological research; but in that expedition each department of Natural History had its separate collector, and the names of Leschenault, de la Tour, Riedle, Depuch, and Bailly will not be forgotten'.

In 1818, Louis de Freycinet, this time as captain of the 'Uranie', was again exploring off the western and north-western coasts. A minute geographical survey of Shark Bay, called by the French 'la baie des Chiens Marins', was this time completed by M. Duperrey. An account of this voyage is given by Gaudichaud, the botanist, in his 'Voyage Botanique autour du monde'.

In 1818-22, Lieutenant Phillip Parker King, in the first place in the colonial cutter 'Mermaid', eighty-four tons, and secondly in the brig 'Bathurst', 170 tons, both vessels having been specially purchased for the purpose in Sydney, carried out a careful survey of the greater part of the western coast from King George III Sound to Cambridge Gulf, and continuing along the northern coast. King's instructions from the Admiralty were to explore the yet undiscovered coast of New Holland and to complete, if possible, its circumnavigation, also to examine minutely all gulfs and openings in the northern coast for any river on that part likely to lead to an interior navigation of the continent. Mr Allan Cunningham was the botanical collector of the party, and one of the two masters' mates was Mr John Septimus Roe, afterwards the first Surveyor General of the Swan River Colony. King's charts and sailing directions still formed the basis of those in use a century later. He died a Rear Admiral in 1855.

In 1820, the 'San Antonio' (Captain Hemmans), an American trading brig, visited King George Sound, probably in search of water, sometime in the month of December.

In June 1825, the French vessels 'Thetis' and 'Esperance', commanded respectively by De Bougainville and du Camper, were cruising about the southern coast. As it was at that time strongly suspected that France, recognising the maritime strength derived from the possession of suitable colonies, desired to found a settlement in Australia, Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, acting under instructions from the Earl of Bathurst, (to whom, however, in his despatch of 10 October 1826, he reported unfavourably on King George Sound and Shark Bay for settlement, offering the opinion that the French would find it difficult to maintain themselves on so barren a coast) sent Major Lockyer, of the 57th Regiment, with a detachment of the 39th Regiment, and a party of convicts, numbering all told about eighty, to found settlements at Western Port and the Sound. The expedition, consisting of H.M.S. 'Fly' (commanded by Captain F. A. Wetherall) and the Colonial Government brigs 'Amity' (commanded by Lieutenant Festing) and 'Dragon', sailed from Sydney on 9 November 1826. The 'Amity' reached King George Sound on 25 December and the proposed settlement was established.

The troops and convicts stationed at King George Sound were, however, about four years afterwards withdrawn by order of the Home Government and the settlement was annexed to that on the Swan River by proclamation dated 7 March 1831.

In 1826, Captain James Stirling, R.N., when commanding H.M. frigate 'Success', was ordered to New South Wales on a special service in connection with the removal of the penal settlement from Melville Island on the north coast, which the monsoon prevented him from at once undertaking. He pointed out to Governor Darling the advantages of Swan River for settlement, and was consequently authorised in the meantime to explore that part of Western Australia which King, on the ground that it had already been visited by the French, had omitted from his survey. On 17 January 1827, having on board Mr Charles Fraser, the Colonial Botanist of New South Wales, he sailed from Sydney with a view to make up the French survey deficiencies and to examine the country in the vicinity of the Swan River. The result of his mission was detailed in a report⁽⁶⁾ forwarded by Captain Stirling to His Excellency General Darling on 18 April 1827.

(6) The 'Narrative of Operations' from the report is shown in the *Appendix* of the 1974 Year Book.

Both Captain Stirling and Mr Fraser evidently were greatly impressed with the capabilities of the newly examined country, the latter making the following entry in his journal:

‘ In delivering my opinion on the whole of the lands seen on the banks of the Swan, I hesitate not in pronouncing it superior to any I have seen in New South Wales, Eastward of the Blue Mountains, not only in its local situation, but in the many existing advantages which it holds out to settlers, viz.:

- 1st. The evident superiority of the soil.
- 2nd. The facility with which settlers can bring their farms into a state of culture from the open state of the country, the trees not averaging more than ten to the acre.
- 3rd. The great advantage of fresh-water springs of the best quality, and consequent permanent humidity of the soil—two advantages not existing Eastward of the Blue Mountains.
- 4th. The advantage of water carriage to their own doors, and the non-existence of impediments to land carriage.’

The favourable report made by Captain Stirling, backed up by the glowing description given by Mr Fraser, induced General Darling to recommend the Home Government to at once establish a settlement.

To Captain James Stirling, who appears to have conveyed the recommendation in person to England, the charge of organising the expedition was entrusted by the English Government.

No commission was at that time issued to Captain Stirling as Lieutenant-Governor of Western Australia, who instead received a letter of appointment, bearing date 30 December 1828; the earliest commission issued to him was that appointing him to be Governor and Commander-in-Chief, which was dated 4 March 1831. The reason for the adoption of this course is explained in the despatch⁽⁹⁾ from Secretary Sir George Murray, addressed to him on the same date as the first letter of appointment, and instructing him as to the course to be followed in the formation of the then proposed settlement.

In 1829, on 2 May, Captain Chas. H. Fremantle, of H.M.S. ‘ Challenger ’, who, under instructions from the Admiralty, had been despatched from the Cape of Good Hope on 20 March of that year by Commodore Schomberg, of the Indian Squadron, for the purpose, anchored off the mouth of the Swan River and, hoisting the British flag on the south head, took formal possession in the name of His Majesty King George IV of ‘ all that part of New Holland which is not included within the territory of New South Wales ’.

Exactly one month later, on 2 June, the hired transport ‘ Parmelia ’, 443 tons, J. H. Luscombe, commander, arrived in Cockburn Sound, having on board Lieutenant-Governor Stirling, his family and other intended settlers, numbering in all sixty-nine. Six days later, on 8 June, her consort H.M.S. ‘ Sulphur ’, arrived with a detachment (Light Company No. 2) of the 63rd Regiment, consisting of three subalterns, 1 staff officer, 2 sergeants, 3 corporals, 1 bugler and 46 men, under the command of Captain F. C. Irwin. Having left a party of about half its strength to protect the stores, settlers, etc. on Garden Island, the remainder of the force, on 17 June, disembarked, and encamped on the north bank of the Swan, subsequently named Rous Head, relieving the party of seamen and marines from the ‘ Challenger ’, which had been left to protect the British flag planted there by Captain Fremantle during the preceding month. With the landing of the immigrants from the ‘ Parmelia ’, the history of Western Australia, as a British Colony, begins.

An interesting account of the arrival of the first settlers was contained in a despatch sent by Captain Fremantle to the Admiralty, from Trincomalee, on 8 October 1829.⁽¹⁰⁾

The names which were originally given to the most prominent features on the western coast are still in most instances retained and serve to perpetuate the memory of many of the earliest explorers, their vessels, and the principal officers of their crews.

COLONISATION AND EARLY SETTLEMENT ⁽¹⁾

Directly the intention of the Imperial Government to establish the Swan River Settlement became known, a proposal was, on 4 November 1828, made by a syndicate consisting of the following gentlemen—Mr Thomas Peel, Sir Francis Vincent, Bart., Mr Edward W. H. Schenley and Colonel T. Potter Macqueen, M.P., to send out and settle in the neighbourhood of the Swan River 10,000 of His Majesty's subjects from England, Ireland and Scotland and to find them in provisions and every other necessity usually allowed to emigrants; also to bring to the settlement 1,000 head of horned stock and to arrange for three small vessels to subsequently run between Sydney and Swan River, as occasion might require; the undertaking to be completed within four years. In payment of their expenses, estimated at £30 per head of the emigrants brought over, they expressed their willingness to take free grants of land, at a valuation of 1s 6d per acre, and they further promised to provide proper surveyors for the purpose of locating to every male not less than 200 acres of land from the quantity they were to receive. The object of the proposed settlement was stated in the following words:

‘It is well known that the soil of Swan River, from its moist state, is better adapted to the cultivation of tobacco and cotton than any other part of Australia. Both of these articles are intended to be cultivated upon a large scale; as also sugar and flax, with various important articles of drugs for which the climate is peculiarly adapted to their growth.

The undersigned are satisfied, that should they succeed in sending home to the mother country that produce which at this moment the Government are indebted to powers which it would be their policy to suppress, were they in condition so to do, they will have forwarded not alone the views of His Majesty's Government, but effected a national good which neither time nor circumstances can erase from the annals of British history.

Their grazing operations will go very extensively into the rearing of horses for the East India Trade, with the most important establishment of large herds of cattle and swine, for the purpose of supplying His Majesty's or other shipping with salt provisions, as the proximity of salt mines, of the best description, holds out a great inducement towards its success.’

Owing to the delay which occurred in the Colonial Office in coming to a mutually satisfactory arrangement as regards the terms upon which the immense free grant of land asked for was to be made, three members of the syndicate withdrew from it, leaving only Mr Thomas Peel who, on 28 January 1829, again addressed the Colonial Office, stating that he was desirous of carrying on and completing the project by himself on the terms contained in a letter from the Colonial Office to the syndicate as originally composed, dated 6 December 1828, which read as follows:

‘I am directed by Secretary Sir George Murray to acquaint you, in answer to your memorial dated the 14th of last month, that the terms upon which the free grants of land will be made in the proposed settlement of Western Australia are those contained in the paper, a copy of which I enclose. His Majesty's Government, however, are desirous that the experiment should not be made, in the first instance, upon a very large scale, on account of the extensive distress which would be occasioned by a failure in any of the objects expected from the undertakings; and they therefore consider it their duty to limit the grant which you request to a

⁽¹⁾ Reprinted, with minor editing, from the *Western Australian Official Year Book*, 1905 (Old Series). To preserve the historical nature of the text and maintain the verbatim reproduction of the excerpts of letters or reports quoted, references to imperial measures have been retained rather than insert the current metric equivalent. Similarly, monetary amounts appear in their original form in preference to existing decimal currency. Current equivalents in metric measures and decimal currency are shown on pages xii and 297, respectively.

maximum of one million of acres. Half a million of these will be allotted to you as soon as possible after the arrival of the first vessel taken out by you, which may contain not less than four hundred persons of both sexes, in the proportions of not less than five female to six male settlers; and if you shall have covered this grant by investments, in accordance with the enclosed terms, before the expiration of the year 1840 the remaining half-million will be allotted to you by degrees, as fresh importations of settlers and capital shall be made, in accordance with the terms already mentioned. But in order that you may suffer no ultimate loss by any reasonable retardation of your investments, His Majesty's Government intend that the allowance of forty acres for every £3 invested shall not be reduced on your second half-million of acres, although your claim to such second half-million may not arise before the expiration of next year, which is the period limited to other settlers applying for free grants. But they will reserve your claim at the original rate of 1s 6d per acre until the expiration of the year 1840, after which time no part of your grant will be held binding upon which the whole required sum of 1s 6d per every acre shall not have been actually invested. A convenient allotment of land will be reserved for the town and harbour, for public buildings, and for the accommodation of future settlers; and a priority of choice to the extent of one hundred thousand acres will be allowed to Captain Stirling, whose surveys and reports of the coast have led to the formation of the settlement. The remaining land will be chosen by the settlers in the order of their arrival; those who arrive together drawing lots for the priority of choice.'

The enclosure was a copy of the old terms of settlement on the Swan River, worded as follows:

'Although it is the intention of His Majesty's Government to form a settlement on the western coast of Australia, the Government do not intend to incur any expense in conveying settlers, or in supplying them with necessaries after their arrival.

Such persons, however, as may be prepared to proceed to that country, at their own cost, before the end of the year 1829, in parties comprehending a proportion of not less than five female to six male settlers, will receive grants of land in fee simple (free of quit rent) proportioned to the capital which they may invest upon public or private objects in the Colony to the satisfaction of His Majesty's Government at home, certified by the Superintendent or officer administering the Colonial Government, at the rate of forty acres for every sum of £3 so invested, provided they give previous security; first, that all supplies sent to the Colony, whether of provisions, stores, or other articles which may be purchased by the capitalists there, or which shall have been sent out for the use of them or their parties on the requisition of the Secretary of State, if not paid for on delivery in the Colony, shall be paid for at home, each capitalist being to be held liable in his proportion, and, secondly, that in the event of the establishment being broken up by the Governor or Superintendent, all persons desirous of returning to the British Islands shall be conveyed to their own home at the expense of the capitalists by whom they may have been taken out. The passages of labouring persons, whether paid for by themselves or others, and whether they be male or female, provided the proportion of the sexes before mentioned be preserved, will be considered as an investment of capital, entitling the party by whom any such payment may have been made to an allowance of land at the rate of £15, that is, of two hundred acres of land for the passage of every such labouring person over and above any other investment of capital.

Any land thus granted which shall not have been brought into cultivation or otherwise improved or reclaimed from its wild state, to the satisfaction of Government, within twenty-one years from the date of the grant, shall, at the end of the twenty-one years, revert absolutely to the Crown.

All these conditions with respect to free grants of land, and all contracts of labouring persons and others, who shall have bound themselves for a stipulated term of service, will be strictly maintained.

It is not intended that any convicts, or other description of prisoners, be sent to this new settlement.

The government will be administered by Captain Stirling, of the Royal Navy, as Civil Superintendent of the Settlement; and a Bill, in the nature of a civil charter, will be submitted to Parliament in the commencement of its next session.' (Dated 5 December 1828.)

It is worthy of note that, when shortly after new regulations were drawn up, only ten years were allowed under these for bringing land into cultivation.

Invested capital, according to the regulations, was to comprise:

1. Stock of every description;
2. All implements of husbandry and other articles applicable to the purposes of the productive industry, or necessary for the establishment of the settler on the land where he is to be located;
3. The amount of any half-pay or pension received from Government.

Under the word 'persons', it was distinctly understood no children under ten years of age were to be included.

Selection licences were granted to settlers on proof of value of property imported, but the fee simple could not be obtained until proof was given that the sum of 1s 6d per acre had been expended in the cultivation of the land or in other solid improvements.

All land granted was to be within three years cultivated or otherwise improved, or reclaimed from its wild state, to a fair proportion of at least one-fourth, or the owners would be liable to the payment of 6d per acre into the public chest; and should the land, at the end of a further seven years, still remain in an unimproved state, it was then to revert absolutely to the Crown.

After the year 1830 fresh conditions were to be made as to the disposal of land.

The tempting offer made by the Home Government of grants of land, large and small, in proportion to the amount of property introduced, attracted many holders of capital, the consequence being that extensive tracts of the best land were granted to purely speculative persons.

As regards Mr Thomas Peel, it remains to be stated that he failed to carry out the greater portion of his contract, the very first emigrants whom he brought out giving him endless trouble by desertion and otherwise, so that years passed in litigation and vain efforts at settlement. Finally he made a formal application to the Governor, on 25 September 1834, for a grant of land of 250,000 acres on conditions of general improvement. In compliance with this request he was granted, on 25 November following, the fee simple of the land subsequently known as Cockburn Sound Location No. 16, 'in consideration of certain location duties performed to the satisfaction of Governor Stirling'.

The first vessels to sail for the Swan River Settlement were H.M.S. 'Sulphur', having on board a detachment of the 63rd regiment of Light Infantry, and the hired transport 'Parmelia', which carried the emigrants and the principal part of their belongings. Leaving England on 13 or 14 February, they arrived in the Colony on 8 June and 2 June 1829, respectively.

Closely following the 'Sulphur' and 'Parmelia', a number of vessels arrived, rapidly adding to the little band of settlers and introducing the livestock necessary for colonisation. [A list of these vessels with brief details of their cargoes and number of passengers carried was given in the *Appendix* of the 1975 Year Book—Ed.]

The following is a list of the passengers who embarked on board the 'Parmelia'.

(a) Drowned in Table Bay (Cape of Good Hope), on 25 April 1829.

Reporting on the progress of the Colony, in a despatch dated 20 January 1830, Sir James Stirling mentions that two townsites had been laid out, one to be named Perth and the other Fremantle; and that the country extending between the sea and the mountains fifty miles southward from Perth had been thrown open for location.

As regards the composition of the population of the early settlement, he complains that, whilst 'amongst the heads of families there is a great majority of highly respectable and independent persons, there is in the working class a great variety', some having been carefully selected, but the greater part being the outcasts of parishes recommended to their employers by parish officers and possessing habits of the loosest description, the natural consequence being great inconvenience to their masters and endless trouble to the authorities. He had, therefore, been obliged to appoint a magistracy and a body of constables to maintain order, since which drunkenness and similar evils had been less frequent.

Another source of trouble was that many of the settlers were persons entirely unprepared for the hardships inseparable from initial colonisation, whose consequent disappointment and discouragement had created and spread a feeling of depression and general despondency amongst their fellows. From this depression the active and stout-hearted were gradually recovering and there was no reason to take a gloomy view of the future;

but it would be necessary to contradict the reports of 'certain individuals who have seen only the sea beach, and have stated broadly that there is no good soil' to be found in the Colony.

The climate, it is said, was proving 'favourable to health in an uncommon degree'.

Amongst other items of interest, it is mentioned that a decent place of worship had been erected, owing principally to the energy of the Venerable Archdeacon Scott, a visitor to the Colony.

It was proposed to establish towns on the Murray River, on Cockburn Sound and on the Swan, at the site of the present town of Guildford.

Commenting on the stock and the prospects of the settlement in this direction, it is stated that 'the country as it is will certainly sustain a considerable number' of cattle, horses and sheep, 'as there is both food and water at the present season (January), the driest and worst of the year'. Attention is also drawn to the fact that the class of stock introduced was particularly good.

The rivers and coasts abounded in fish and offered facilities for fish-curing and the establishment of a whale fishery, as 'the coast is visited between the months of May and November by a multitude of whales'. The boat-building industry was being vigorously pursued and already forty boats had been built for transport purposes on the river. A statement in the report, which reads curiously at the present time, is that workmen had not been able to work between the hours of 10 a.m. and 3 p.m. during the months of December and January, on account of the heat.

The following interesting statistical information is added:

Since 1 June 1829, twenty-five ships had arrived and there were then 850 persons resident and 440 non-residents in the settlement. The value of the capital, etc. introduced, for which land was claimed, amounted to £41,550; land had already been allotted to the extent of 525,000 acres, the locations actually effected numbering thirty-nine; and, finally, there were in the settlement horned cattle to the number of 204, horses 57, sheep 1,096 and hogs 106.

In a further despatch of 18 October 1830, it is stated that 'the progress of the settlement, although not unopposed by many adverse circumstances, had been as rapid as could have been expected or desired', as 'a greater increase would have probably been disadvantageous to the welfare of the settlement whilst struggling in its infancy'. Unfortunately, 'although no doubt existed as to the salubrity of the climate and country, much sickness had been experienced and deaths in consequence had been very numerous'. These, however, are attributed to 'circumstances of a temporary nature attendant on the commencement of a colony'.

Exploration of the country and coast had been carried on as far as means available had admitted.

The natives in general had been harmless, except in two cases, one being in Perth, where, in May 1830, an affray occurred which led to the military being called out; whilst in the Murray district they had been so repeatedly troublesome—in one instance a young man having been murdered at the entrance of the Murray River—that a military guard had to be placed there.

Up to 31 December 1830, there had arrived in the Colony as nearly as can be reckoned, without counting the detachment of troops and their families in the 'Sulphur', 'Norfolk' and 'James Paterson', about 1,767 persons, with stock as follows: horses 101, cattle 583, sheep 7,981, pigs 66, goats 36 and a variety of poultry, including turkeys, ducks, geese, fowls and pigeons, and also a few dogs.

The value of the property introduced upon which land was claimed between 1 September 1829 and 30 June 1830, amounted to £73,260 8s 3½d, equal, at 1s 6d per acre, to 976,805 acres of freehold land, whilst miscellaneous property inapplicable to the improvement of land had been imported to the value of £21,021 2s 7d, making a total value of £94,281 10s 10½d.

To show how rapidly and prodigally all the best land was taken up, a late arrival wrote, on 12 November 1830, just five months after the first settlement of the Colony: 'The only land available for present purposes is on and near the banks of the rivers (*viz.*, the Swan and Canning). All this is now allotted on both sides of each river, almost to their source'; and, writing again on 8 December in the same year, he said 'All the lands up the Swan and Canning have been long since granted, but some of the grantees have left the Colony, and their lands may be resumed by the Government if not occupied at the expiration of the year.'

There being no made roads, and the bush tracks consisting solely of dry, heavy sand, water carriage was the one means of transport for produce and the only way to obtain land, in an accessible position, suitable for farming purposes, was for the recent arrival to take over a portion of a block already granted, guaranteeing to the owner to perform sufficient location duties on the part taken to secure the whole grant, when the remainder of the property in all probability was left permanently unimproved.

Many of the early arrivals were persons totally unqualified for a settler's life, especially as the pioneers of a new settlement.

Arriving also as they did during the most inclement season of the year, exposed to the elements and utterly unaccustomed to encounter the hardships and privations incident to their new life, in most cases totally ignorant of agriculture and unused to poverty and isolation, there is little wonder that the first reports which reached their friends in England were of a gloomy and discouraging description.

Numerous persons, indeed, left the Colony in disgust, but retained possession of the immense tracts of land granted to them; so that those who arrived afterwards were unable to obtain land in favourable localities and the population was in this way thinly scattered over a wide area, the best of the land being unprofitably locked up.

Gradually, also, it was discovered that the expectations entertained as to the fertility of the soil had been far too sanguine; food became scarce and pastoral and agricultural operations languished from want of capital to stock and till the lands. Sheep and cattle went blind or dropped dead in a mysterious way, from eating a (at that time unknown) poison plant and at last it became apparent that the infant settlement could only with great difficulty support itself independently of extraneous aid. On the top of all this came serious troubles with the natives—life was threatened, houses were robbed, crops rooted up and stock speared; and the abandonment of the Colony was at one time seriously contemplated.

But the settlers as a body struggled manfully on, maintaining (to quote Governor Stirling's despatch to Sir George Murray, G.C.B., the then Secretary of State for the Colonies), 'a cheerful confidence in the qualities of the country and a general belief in its future prosperity'.

A few years later, in a despatch of 29 August 1836, a suggestion is made that experiments on a limited scale should be encouraged in the northern parts of the Colony in the production of cotton and sugar, through the instrumentality of Bengalese or Chinese labour, the success of which, it is stated, would mean that 'Great Britain might render herself in a short time independent of the United States and other foreign slave-holding countries for her supply of cotton, the regular importation of which, at low prices, has become indispensably necessary to the daily support of a large portion of her population'.

With such an abundant extent of country applicable and available for the production of sugar, cotton and other inter-tropical products and possessing from its geographical position the advantage of being readily able to secure the class and mass of labour required, it is argued that, given only the transport facilities for obtaining the necessary supplies and labour, with the aid of skill, capital and the benefit of British protection, the sugar or cotton grower, if once successfully established, might defy competition even with those countries which still employed slave labour and, possibly, by thus rendering slavery unprofitable, eventually assist towards its extinction.

The condition of the Colony about that time is graphically described (Despatch No. 218 of 15 October 1837) in a statistical report forwarded to the Colonial Office, which

contained full particulars concerning its geography and other natural characteristics, a brief census of its population and much other useful and interesting information.

The discovery of copper ore by Captain King in the vicinity of Camden Bay is mentioned as being not unlikely to lead to other important mineralogical discoveries.

Governor Stirling's opinion of the capabilities of the soil, based upon personal observation and experience, is neither over sanguine nor yet wholly unfavourable and is perhaps best given in his own words:

'The surface of the country generally is covered with those substances which are technically called earths, in contradistinction to soils. Of the latter, as far at least as relates to those of a vegetable origin, a very small portion exists, and that only on moist grounds. The extreme drought of the climate and the summer conflagrations appear to prevent the growth of succulent plants, as well as any great accumulation of soil from decayed vegetation. But although the country is not remarkable for richness of soil, it is favourable in other respects to farming purposes. In its natural state there is scarcely any part which does not produce some description of plant, and its defects appear to be of that class which art, aided by climate, will be enabled hereafter to overcome Upon a general view of that portion of the territory which has fallen within my own knowledge, I am under the necessity of saying that a very large portion of its surface, extending probably to three-fifths of the whole, is poor and comparatively unprofitable, and unlikely to be cultivated, or to yield any return except in timber, until a dense population and low wages, aided by abundance of cattle, bring it into use.

The best districts at present known are those on the Avon, the Hotham, the Williams, Arthur, Beaufort, and South-East River, together with the portions of country adjacent to the Swan, the Murray, the Harvey, Brunswick, Preston, Capel, and Vasse.

It is to be remembered, however, that these remarks apply only to the very small part of this vast country which has been as yet explored, and that in the progress of settlement circumstances are continually arising to give value to lands, which, while wages are high and roads wanting, are not of the slightest value.'

He again calls attention to the possibilities of the northern parts of the Colony for sugar and cotton growing, but points out that 'Experiments in these branches of industry are, however, beyond the means of the numbers of the colonists at present', adding that he ventured to anticipate 'that the estimation of the Colony in the eyes of the public will be gradually enhanced the longer this peculiarity in its natural qualifications is considered and examined.'

The following are some of the more important particulars which are further contained in the report:

The number of town allotments granted in Perth to 30 June 1837 was 422; that of suburban allotments, 15; miles of fencing completed, 35, valued at £5,600; the number of houses built, about 350, valued at £30,000; the value of suburban improvements was estimated at £4,000, that of gardens at £2,000, of mills at £3,000 and of public works at £15,000. A similar valuation of Fremantle public and private property amounted to a total of £28,000. The aggregate of the corresponding amounts for Guildford, Albany, Augusta, Kelmscott, York, Peel Town, Busselton and Kings Town, together with Perth and Fremantle, was about £93,000. The population of Perth numbered 590, that of Fremantle 387, of Swan River District 524, of Canning River District 41, York 65, Plantagenet 170, Murray 17, Augusta 32 and Vasse 21; in addition to these there were the military who, with their womenfolk and children, numbered 185; the total population therefore numbered 2,032. Of the non-military population, 506 were married and 1,341 single. The total of 2,032 comprised 914 males over fourteen years of age, 368 males under fourteen years, 430 females over fourteen and 320 females under fourteen. The total population in 1832

had been 1,510 and the increase was mostly due to the excess of births over deaths. The deaths during the preceding twelve months had been at the rate of 1 in 200. Of the adult male population no less than 449 were engaged in agricultural pursuits. At the end of 1836 there had been about 1,380 acres under wheat, the total land in crop being about 2,100 acres. Sheep numbered 8,528, horned cattle 829, horses 216, pigs 819 and goats 1,286. The wheat produced during the year amounted to 22,104 bushels. The estimated value of improvements on rural grants was £75,000. The total number of acres granted to 30 June 1837 was 1,524,004. The exports during the year amounted to £6,720, of which £2,400 represented wool and £3,200 oil, mostly probably the product of the whale fishery. The total wealth of the Colony was estimated at £360,000, producing, with the labour of the community, after deducting its subsistence, a clear annual accumulation of capital to the extent of £72,000. The revenue of the Colony for the year was £4,586. As regards labour, the wages for general labourers were about 5s per day, but artificers earned from 8s to 10s. Labour was still scarce and, although the Colony was self-supporting and money seemed to be abundant, the apparent wheat-growing, wine-growing, and fruit-growing capabilities of the soil could not as yet be taken advantage of to any great extent, on account of the difficulty experienced in obtaining suitable workmen. That money was abundant was proved by the fact that a joint-stock bank which had been recently established, discounting bills at 12½ per cent per annum and allowing depositors an interest of 5 per cent, was principally working with deposits to the value of £4,000 and had so far only had occasion to call up £1,250 of its nominal capital of £10,000. The public expenditure for the year ended March 1837 had been £10,753, whilst the payments in connection with the troops, provisions, etc. amounted to £11,022. It was foreseen that considerable expenditure would be necessary in the near future, there being as yet practically no made roads. Perth and Fremantle town lots were then sold at the rate of £5 per acre. In 1832 the sale of rural Crown land had come into operation and in 1834 this had been made applicable to town allotments. During the first three years of the settlement, property in livestock, implements, provisions, apparel, furniture, etc. had been imported to the value of about £120,000. Since then, it was estimated, such importation had been increased by about £100,000, whilst the probable value of re-exported property was £20,000. The total outlay of the Crown to 31 March 1837, on behalf of the Swan River Settlement, had been £145,167. It was adduced as proof of a fairly satisfactory moral condition of the population that, during the eight years of the Colony's existence, not a single sentence of death had been required to be passed. As a further indication of progress it was mentioned that, in addition to the *Government Gazette*, two newspapers were in existence—one, the *Perth Gazette*, having already existed some years, whilst the other, the *Swan River Guardian*, had been established in 1836, 'as the friend of the people and the corrector of abuses'.

For a time the Colony continued to progress steadily, if slowly. Its development was once more, however, retarded by the discovery of the rich goldfields of Victoria, and again it seemed probable that it would be entirely deserted. Happily, however, for the Swan River Settlement, the goldfields of the eastern Colonies subsequently ceased to possess the extraordinary fascination they formerly did and Western Australia, at the turn of the century, with extensive goldfields of her own, her vast area of agricultural and pastoral lands, her timber, and numerous other undeveloped resources, offered an attractive prospect for the capitalist or the industrious and thrifty immigrant.⁽¹⁾

CHAPTER II—PHYSICAL FEATURES, CLIMATE, FLORA AND FAUNA

Part 1—Physical Features and Geology

Contributed by

*Rex T. Prider, B.Sc., Ph.D., F.G.S., M.Aust.I.M.M.
(former Professor of Geology, University of Western Australia)*

The development of any country depends on its natural resources and the industry of its people, and there can be few more important investigations for any country than those dealing with the productive capacity of its territory. Natural resources—be they power, mineral, or soil resources—are dependent entirely on the climate, physical features and geology. Looking at the pattern of development of Western Australia we see that for nearly seventy years after the foundation of the Swan River Colony in 1829 agricultural production barely kept pace with the requirements of the small population. The discovery of gold in the 1890s, however, led to a period of rapid expansion and Western Australia became one of the major gold-producing areas of the world, and with this increase in mining production there was a corresponding expansion of the agricultural and pastoral industries. We are now experiencing an expansion of our secondary industries. Today, with the realisation of the base metal mineral potential of Western Australia—the proven deposits of iron ore, nickel, bauxite, black sands, oil and natural gas and the high probability of further discoveries—we are in another period of unprecedented development. Mineral discoveries of the past decade in Western Australia stimulated the mining industry not only in Western Australia but throughout the whole of Australia. The Western Australian mineral discoveries of the late 1960s were accompanied by a corresponding increase in our secondary industries and the opening up of formerly sparsely populated areas, particularly in the Pilbara. Western Australia has, to date, been deficient in power resources, but this deficiency will probably be remedied by the discovery of large natural gas reserves near the southern margin of the North-West Shelf. In each of these phases of development we can see the dominating influence of the geological environment so that geology, from being relatively unknown and the Cinderella of the sciences, has now become known to all.

The nature of the rocks underlying any region is one of the major factors controlling topography, soil, and mineral resources. The latter is self-evident. The soil, on which we are so dependent, was formed by the weathering of the underlying rocks and many of its characters are due to the parent rock material. Much research has been carried out into trace element deficiencies in soils and the application of the new knowledge has produced astounding results as far as land utilisation is concerned. At first sight it would seem fantastic to think of the underlying rocks being in any way responsible for malnutrition of stock, but when it is demonstrated that the malnutrition is due to the lack of some minor element in the fodder which is due to its deficiency in the soil, a deficiency which, in its turn, is due to the absence or relative absence of such elements from the parent rocks from which the soil was derived, the significance of the geological environment becomes evident. Topography which is important in connection with land utilisation, water conservation, power (hydro-electric) resources, and in affecting climate, soil erosion, coastal erosion, transport routes, harbours, and so on is also dependent to a great extent on the nature and structure of the underlying rocks.

It is appropriate therefore that we should consider here the physical features and geology of Western Australia since they, together with the climate, are the primary controls of our soil, mineral, water and power resources, on which our existence and future development are entirely dependent.

PHYSICAL FEATURES

In the broadest way this State can be divided into two physical regions: (i) a tableland (the *Great Plateau*) in various stages of dissection occupying the whole of the interior of the State; (ii) a low-lying narrow strip (the *Coastal Plains*) running almost continuously along the coast from near Albany to Broome. A third physical region, the *Scarplands*, separating the Coastal Plains from the Great Plateau, may be distinguished. This, although only a narrow belt, is a significant one in the southern part of the State because of its importance in connection with the water conservation schemes on which the metropolitan area, the mining fields in the vicinity of Kalgoorlie, the intervening agricultural and pastoral districts, the irrigation areas on the coastal plains south of Perth, and more recently the wheat belt along the Great Southern Railway, are dependent.

The Great Plateau

The Great Plateau which occupies more than 90 per cent of the area of the State varies considerably in elevation. In its highest parts (in the north-west) it attains a height of approximately 1,200 metres above sea-level. The greater part is, however, below the 600-metre contour and its average elevation is of the order of 300 to 450 metres above sea-level. Although there is this considerable variation in level the changes are so gradual that the plateau character of the country is not obscured and for the most part it may be regarded as having a vast, gently undulating surface. Occasional hills (monadnocks, which are remnants of a previous cycle of erosion) rise above the general surface of the plateau.

The Great Plateau may be conveniently subdivided into an area of exterior drainage (where there are definite rivers which flow to the sea), an area of interior drainage (where such water as flows passes into inland basins), and two areas of no surface drainage but which, if they had drainage, would belong to the exterior drainage system. The area of exterior drainage can be marked out by connecting the source of the streams which flow to the sea and if this is done it will be seen that the width of the exterior drainage belt varies considerably. Thus in the Kimberley and North-West Divisions some of the rivers are hundreds of kilometres long, but in the south-west part of the State many of them are comparatively short. The areas of no surface drainage are in the north of the North-West Division along the Eighty Mile Beach from the mouth of the De Grey River to the north of Broome, and on the Nullarbor Plain in the south-eastern corner of the State. The remainder of the country forms the interior drainage area.

In the area of exterior drainage the dominant feature of the extreme south-west and the northern part of the plateau is a reticulate pattern of rather deeply-incised water-courses. In the southern part of the State these deeply-incised watercourses where they pass from the plateau to the coastal plains are of great significance (as has already been mentioned) in connection with water supply schemes. Elsewhere in the State the marginal portion of the Plateau is drained by rivers that flow to the sea only at times of exceptional rainfall and, speaking in the most general way, have courses at right angles to the coast.

The area of interior drainage is arid and practically riverless. Small creeks run from the higher parts of the country but they either disappear on the extensive flats or reach the shallow basins which are termed salt or 'dry' lakes, the term 'dry' being used since these so-called lakes are free from water except after fairly heavy or long-continued rain. These 'lakes' are generally elongated, narrow, and often winding salt-encrusted flats arranged in long, more or less connected streams. After heavy rain they are covered with a thin layer of water and, after unusually heavy rain, water has been known to flow southwards from one to another of the 'lakes' of a string, except towards the western margin of the plateau where the drainage is to the west. It is evident that these elongated 'lakes' are the remnants of an old river system developed during a more humid period. The salt lakes are of some economic significance since, on the evaporation of the water, common salt and other substances such as gypsum are deposited on the floor of the lake. The gypsum, which crystallises earlier than the common salt, is generally blown from the damp surface of the dried-up lake and deposited as dunes of 'seed gypsum' on the

leeward (eastern) side of the lake. These dunes are utilised, for example at Lake Seabrook north of Yellowdine, as a source of gypsum for plasters. Common salt, which separates later, forms a crust on the floor of the lake when it has been completely dried up and such salt deposits are exploited, for example at Lake Lefroy near Widgiemooltha. In a few of the Western Australian salt lakes, such as Lake Campion, significant deposits of alunitic clay (a potential source of potash) have been discovered. More important potash deposits occur in some coastal lakes, such as Lake MacLeod, north of Carnarvon.

Over a large portion of the interior drainage part of the Great Plateau there are extensive sand-plain soils overlying a hard laterite ('ironstone') layer, which is of the order of up to four and a half metres in thickness, below which lies an intensely weathered zone from which most of the nutrient elements so important for plant growth have been leached. These more recent geological formations will be discussed in the section of this Part dealing with geology, but we may note here the significance of this lateritic profile (sandy soils near the surface, 'ironstone' about a metre below, and completely kaolinised rocks still deeper) so far as soil fertility is concerned. This lateritic profile is the result of long-continued weathering processes which have resulted in almost complete leaching of the valuable nutrients and as a result soils developed in any part of this profile are generally very poor in character. It is only where erosion has cut through the lateritic profile and still younger soils have been formed by weathering of the underlying rocks that the better soils are found. Recent studies of trace element deficiencies indicate, however, that much can be done with these 'light' soils by the addition of small quantities of suitable trace elements such as copper and molybdenum.

The areas of no surface drainage include the Eucla Division and portions of the Eastern Division of the State. This area is occupied largely by horizontal or nearly horizontal limestones of the Nullarbor Plain and the drainage here is sub-surface in character by subterranean streams through caverns in the limestone. The Nullarbor Plain is an extensive monotonously level plain standing about 180 metres above sea-level. The Western Australian part of the Nullarbor Plain is bordered to the south by a narrow coastal plain but further east, at the head of the Great Australian Bight, in South Australia, this coastal plain is absent and the southern edge of the Plain is truncated by cliffs which rise almost sheer for sixty to 120 metres above sea-level.

The hills of the Great Plateau are of two kinds, ridged and table-topped. In the southern half of the State the ridged hills, a few of which rise as much as 450 metres above their surroundings, are generally elongated in a NNW. direction, reflecting in their trend the structure of the underlying rocks. The table-topped hills are seldom more than sixty metres above the general level. They are capped with a sub-horizontal layer of laterite ('ironstone') and bounded by low cliffs, in many places undercut, which are known in Western Australia as 'breakaways'. The table-topped hills are relics of erosion of a former laterite-covered peneplain (the *Darling Peneplain*) which was uplifted in Pliocene times to form the Darling Plateau and has subsequently been subjected to erosion under semi-arid conditions. The ridged hills on the other hand are elongated monadnocks which, being cored by resistant rocks such as jasper bars, withstood erosion and so rise above the general level of the remnants of the laterite-covered Darling Plateau.

The Great Plateau slopes down very gradually to the south and west. The downward slope to the south is interrupted by a narrow broken chain of rugged hills, the Stirling and Mount Barren Ranges which rise to heights of from 300 to 1,100 metres above sea-level. The western margin of the Plateau is, in the south, formed by the 'Darling Range' which, being merely the dissected margin of the Plateau, is much better called the *Darling Scarp*. This Darling Scarp is clearly defined between latitudes 31° 30' S. and 33° 30' S., *i.e.* between Moora and Donnybrook, but it is difficult to recognise farther north or south. In the Kimberley Division the mountain ranges are the relics of erosion between the deeply-incised rivers and in this region the highlands of the Plateau terminate abruptly along a steep, deeply-indented coastline.

The Coastal Plains

Bordering the Great Plateau are the Coastal Plains which vary in width. The *Swan Coastal Plain* which extends from the neighbourhood of Perth to near Busselton averages about twenty-four kilometres in width and is divisible into the following belts: a narrow band of moving sand dunes along the coast; a zone, averaging five or six kilometres wide, of sandy limestone which rises in places to heights of thirty to sixty metres above sea-level; a zone five or six kilometres wide of loose sand fixed by vegetation; and, abutting against the Scarp which forms the western margin of the Plateau, a zone of clayey soils of about the same width. A strip of low plain extends along the coast at intervals as far north as King Sound and coastal plains of some width occur near Port Hedland and Exmouth Gulf. A narrow plain fronts the cliffs of the Great Australian Bight for some distance and also occurs in other places along the south coast.

The coastline of Western Australia, some 12,500 kilometres in length, is broken by capes between Wyndham and Broome, between Port Hedland and Shark Bay, and between Cape Naturaliste and Israelite Bay. The intervening parts are comparatively featureless.

It has only been possible here to briefly outline the principal physical features of Western Australia and for a fuller description of the physiography of this State the reader should consult J. T. Jutson's 'Physiography (Geomorphology) of Western Australia' (*Geol. Surv. West. Aust. Bull.* 95).

GEOLOGY

More than two-thirds of Western Australia is occupied by the ancient Australian Precambrian Shield which is composed of a complex of igneous, metamorphic and sedimentary rocks formed more than 600 million years ago. Most of our mineral deposits of economic importance, except coal, oil, natural gas and water and superficial deposits such as lateritic iron ore and bauxite deposits and black sand and other alluvial accumulations, occur in these Precambrian rocks. The remainder of the State is occupied by sedimentary basins in which Palaeozoic and later sediments are developed. It is in these younger sedimentary basins that artesian water, coal, oil and natural gas are likely to occur. Finally there are the still younger superficial deposits—laterites, salt-lake deposits, and soils on which much of the economy of this country depends. It will be convenient therefore, in outlining the geology of the State, to consider it under the three main headings:

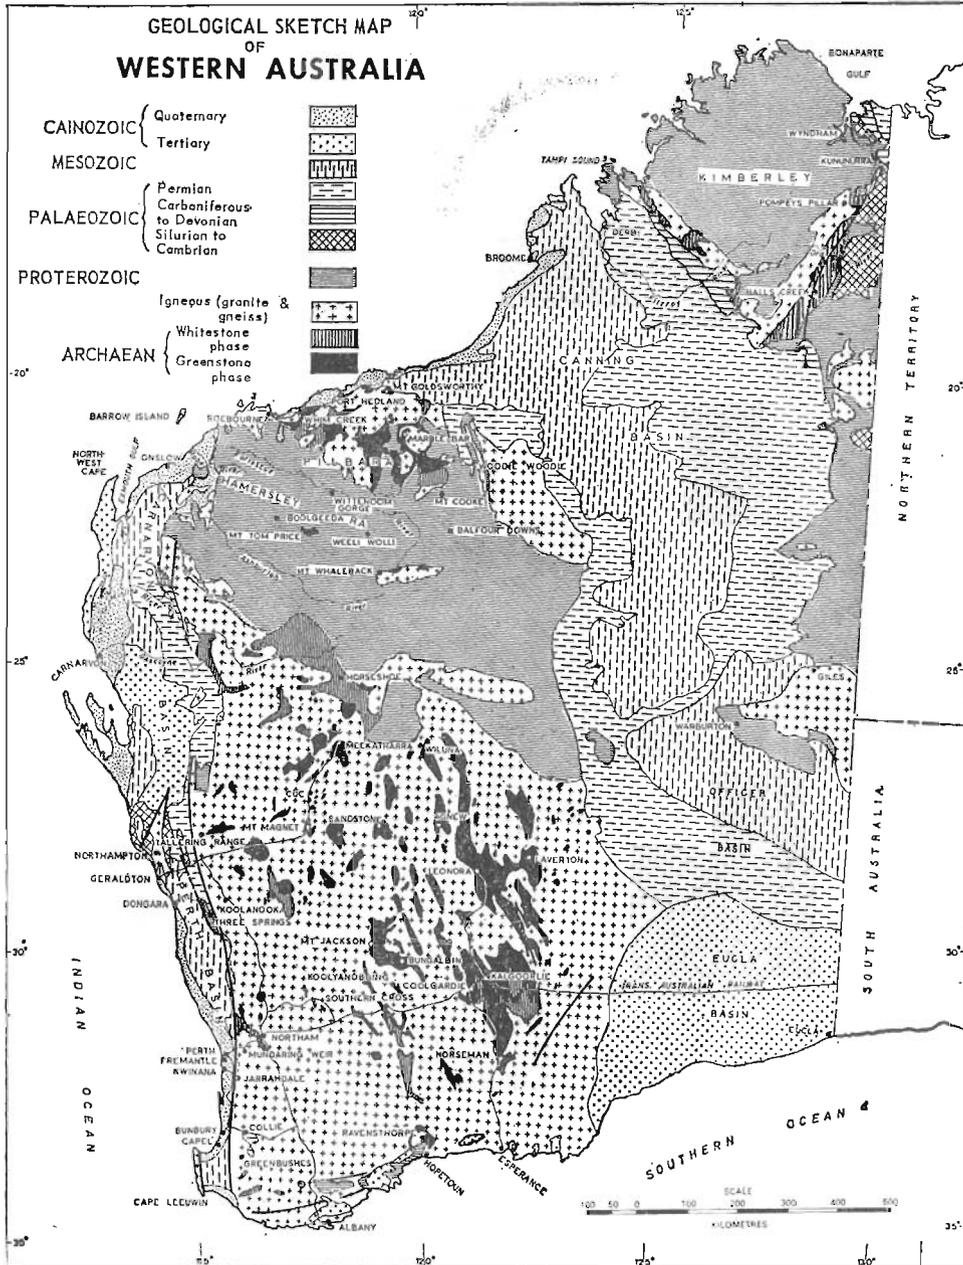

- (a) The Precambrian basement;
- (b) The sedimentary basins;
- (c) The superficial deposits.

The distribution of the solid rocks (omitting superficial deposits) is shown in the accompanying map (see page 23).

The Precambrian Basement

This includes the Archaean and Proterozoic rocks. The Archaean is a complex of crystalline igneous and metamorphic rocks, dominantly granites and gneisses with minor amounts of schistose metamorphosed acid and basic volcanics and sedimentary formations. In places, particularly in the North-West and Kimberley Divisions, this Archaean complex is overlain unconformably by sedimentary and volcanic rocks of Proterozoic age which do not exhibit the extensive metamorphism so characteristic of the older Archaean complex. The time-boundary between the younger Precambrian (Proterozoic) and older Precambrian (Archaean) is approximately 2,200 million years ago. Within the different areas occupied by the Precambrian rocks the same generalised sequence can be distinguished.

In the Kimberley the oldest rocks are metamorphosed igneous and sedimentary rocks intruded by granite and carrying in places auriferous and base metal ore deposits, and these are overlain by un-metamorphosed sediments with basic igneous intrusives. The Precambrian age of all these rocks is evidenced by the fact that in the East Kimberley they are overlain by sedimentary rocks containing fossils of Cambrian age. This is the only area in

GEOLOGICAL MAP OF WESTERN AUSTRALIA

(from Clarke, Prider and Teichert, 'Elements of Geology for Western Australian Students', by courtesy of University of Western Australia Press)

Western Australia where the Precambrian age of the rocks of this crystalline complex can definitely be proved on stratigraphical evidence alone. In the southern part of the State we find a similar sequence of crystalline schists with intrusive granites and by lithological correlation (which is not a very sound method) we assume that they are Precambrian although they cannot actually be traced through from the Kimberley. We do know that in the Carnarvon Basin these gneisses, schists and granites are older than the Devonian, which unconformably overlies them, and in the Perth Basin they are older than the Permian. During recent years the Precambrian age of these rocks has been confirmed by actual age determinations based on the decay of radioactive elements which occur in them. This work indicates that the bulk of the massive granitic intrusions of the southern part of the State and in the Pilbara crystallised from a molten state some 2,700 million years ago. Some, however, such as those in the vicinity of Albany and along the south coast, are much younger, being emplaced approximately 1,100 million years ago.

The Precambrian sequence in the North-West Division appears to be the most complete that is present in Western Australia and, from oldest to youngest, is as follows.

The *Warrawoona Succession*, which consists mainly of greenstones and green schists which were, prior to the intense folding and metamorphism to which they were subjected after deposition, basaltic lavas and tuffs with interbedded chemically deposited secondary rocks (jaspilites or banded iron formations) in the upper part of the sequence. These jaspilites have been the protores of important iron-ore deposits such as those of Mount Goldsworthy. The Warrawoona Succession is overlain by a succession (the *Mosquito Creek Succession*) of sedimentary rocks which have also been intensely folded and metamorphosed to various types of platy-structured schists, slates and quartzites. Both the Warrawoona and Mosquito Creek Successions are invaded by granitic igneous rocks emplaced approximately 2,700 million years ago and both carry auriferous ore-bodies possibly genetically related to the intrusive granites. End-stage products of these granites are the very coarse-grained pegmatites which are important carriers of tantalum (in tantalite), beryllium (in beryl), lithium (in spodumene and lepidolite), and tin (in cassiterite). All of these rocks in the North-West Division—the Warrawoona and Mosquito Creek Successions and the granites intrusive into them—are therefore of Archaean age and have been called the *Pilbara System*. Still younger sedimentary rocks such as conglomerates, sandstones, shales and banded iron formations with interbedded basic igneous rocks, were deposited unconformably on the highly-folded, granite-intruded Pilbara System. This thick succession consists of a number of distinct groups. The three lower groups (the *Fortescue*, *Hamersley* and *Wyloo Groups*) are of Lower Proterozoic age as the youngest (the Wyloo Group) is intruded by granite aged approximately 1,700 million years. The two upper groups (the *Breshnahan* and *Bangemall Groups*) are of Middle and Upper Proterozoic age, respectively. Of these Proterozoic rocks the Hamersley Group is most important economically since most of the iron-ore deposits of the Hamersley and Ophthalmia Ranges occur within, or have been derived from, the thick jaspilites (banded iron formations) within this group. Except in occasional narrow belts marginal to the Archaean blocks, the Proterozoic rocks have not suffered the intense folding that affected the older rocks and consequently they are generally flat-dipping to horizontally bedded un-metamorphosed sediments. Such sediments cover very extensive areas in the north-west (see Geological Map of Western Australia on page 23) and they are similar in many respects to the flat-dipping Proterozoic sediments which cover the plateau country of the north Kimberley. The final episode in the Precambrian history of the north-west was the intrusion of dolerite dykes and sills into all of the earlier rocks.

Coming to the southern half of the State we find a similar sequence to that in the north-west. In the part of the Precambrian Shield extending south of latitude 26° S. the oldest rocks that are recognised are the greenstones of the various gold-mining fields which occur in comparatively narrow belts elongated in a general NNW. direction (see map, page 23). These greenstones, which are for the most part metamorphosed basaltic lavas, contain interbedded ultrabasic lavas and jaspilites and are overlain by metamorphosed sedimentary rocks (generally referred to as whitestones). This System of rocks is the *Kalgoorlie-Yilgarn System*. From the mining point of view it is most important since

the auriferous ore deposits of the main mining fields are confined to it, as are the known nickel deposits. It also contains, in the jaspilites, important iron-ore deposits such as those of Koolyanobbing in the Yilgarn. It appears to be the equivalent of the Pilbara System of the north-west. After the formation of the Kalgoorlie-Yilgarn rocks they were intensely compressed into tightly closed folds with NNW.-trending axes. During this period of intense earth-movement approximately 2,900 million years ago granite magma concordantly intruded these older rocks or alkaline solutions permeated them, converting them into granitic gneisses which occupy the bulk of the southern half of Western Australia. Subsequently, at about 2,700 million years ago, granite magma was again intruded as in the north-west, so the Kalgoorlie-Yilgarn System in the southern half (the Yilgarn Block) of the State appears to be the equivalent of the Pilbara System of the Pilbara Block. This completes the Archaean sequence. The Proterozoic is represented by a narrow strip of slightly altered, steeply-dipping sedimentary rocks along the Darling Scarp, flat-dipping sediments on top of the older crystalline rocks of the western part of the Yilgarn Block as at Watheroo, Yandanooka and the Billeranga Hills near Morawa, and the metasedimentary rocks of the east-west Stirling and Mount Barren Ranges along the south coast. Proterozoic igneous activity is represented by Early Proterozoic layered complexes and Late Proterozoic basic dykes. The former, aged 2,420 million years, take the form of basic-ultrabasic layered complexes, such as the large east-west dykes of the Norseman-Laverton greenstone belt which have some prospects for the occurrence of nickel and chrome deposits. The latter are dolerite dykes which, like those in the north-west, intruded all of the Precambrian rocks about 550 million years ago. They occur throughout the Precambrian Shield but are most abundant near its western margin where some are quarried and crushed for road metal.

Putting together the information available throughout the State, we conclude that the oldest rocks found in Western Australia belong to the older part of the Archaean Era. It is a great succession of rocks, generally much metamorphosed, which is called the Kalgoorlie-Yilgarn System in the southern part of the State and the Pilbara System in the north-west region. In the early part of Kalgoorlie-Yilgarn (Pilbaran) times there was much volcanic activity which took the form of eruptions of ultrabasic, basic and intermediate lavas, tuffs, and breccias. Many of the basic lavas, as judged from the pillow structures they contain, were submarine extrusions. These volcanic rocks were penetrated, shortly after their extrusion, by intrusions from the same magma; similar events must be occurring now in the interior of great volcanic masses like Etna or Hawaii. In later Kalgoorlie-Yilgarn times, the dominant process was sedimentation, so that the earlier volcanic rocks, with the minor associated bands of sediment, became overlain by a great thickness of sandy and clayey sediments. These sediments must have been derived from some land mass composed of rocks of pre-Kalgoorlie-Yilgarn age but this, possibly the oldest of all rock assemblages, has apparently not yet been found in Australia or any other part of the World.

After the accumulation of these older Archaean lavas and sediments came a period of intense earth-movement during which the rocks were, in most places, closely folded and regionally metamorphosed. The folding was accompanied by widespread granitic intrusions, some of which consolidated into primary gneisses whereas others soaked into the pre-existing rocks, penetrating them along bedding planes, joints, and other fractures, and so forming hybrid granitic gneisses by granitisation.

Where they were not affected by this First Granite Invasion, the volcanic rocks of the Kalgoorlie-Yilgarn and Pilbara Systems were regionally metamorphosed, in some places very strongly into dark-coloured schists, in others only very slightly. Similarly, the sedimentary rocks of the Kalgoorlie-Yilgarn and Pilbara Systems, where they have escaped the first granite invasion, *i.e.* have not been granitised, are in some places but slightly regionally metamorphosed, in others they are converted into various types of schist and quartzite.

All the Archaean rocks described above were invaded by the 'Younger' Granite, which, unlike the 'Older' Granite, formed well-defined intrusions many of which are stocks, though smaller offshoots from the same magma, in the form of 'porphyry dykes',

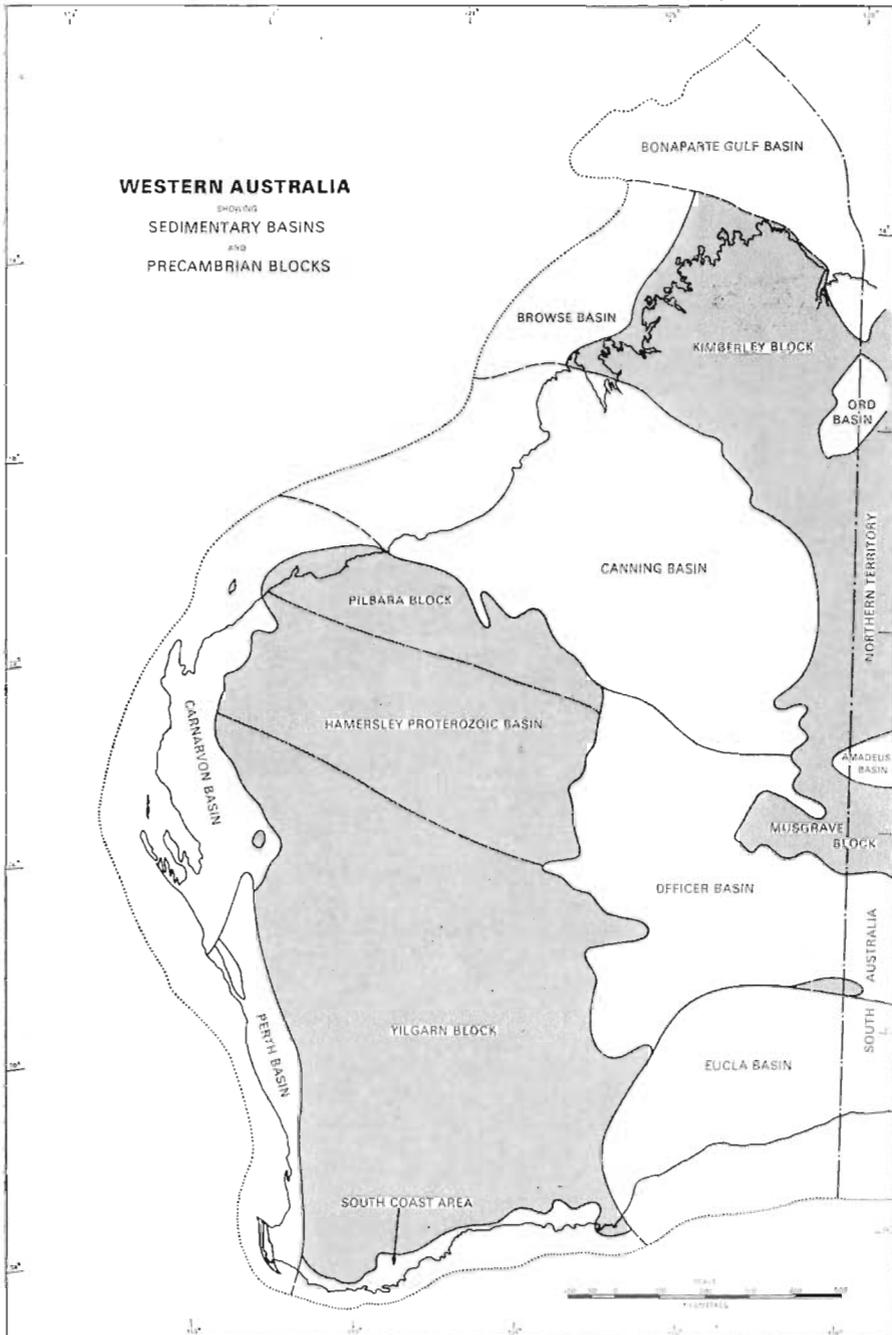

occur at nearly every mining centre. These events occurred after the folding but before Proterozoic times. Any of the Archaean rocks in Western Australia may contain ore-bodies yielding gold and other minerals of economic value. It seems likely that many of these ore-deposits were formed at the time of the Second Granite Invasion which, from radioactive age determination studies, occurred about 2,700 million years ago. Important iron-ore deposits occur in the Archaean rocks at many localities, for example at Mount Goldsworthy in the Pilbara, Talling Peak in the Yalgoo Goldfield, and Koolyanobbing, Bungalbin and many other localities in the North Yilgarn. These are all banded ironstone deposits which are interbedded with the basaltic lavas and sedimentary rocks of early Archaean age. In many places there are important manganese deposits associated with these banded iron formations. A rich nickel deposit discovered in ultrabasic Archaean rocks at Kambalda near Kalgoorlie in 1966, has now become an important source of nickel. Base metal ore deposits, such as nickel, cobalt and chromium, are generally associated with ultrabasic igneous rocks. Ultrabasic rocks are intrusive into or interbedded with the older Archaean volcanic and metasedimentary rocks of the Kalgoorlie-Yilgarn System in the country between Norseman and Laverton and, following the discovery of important nickel deposits at Kambalda and Scotia in the vicinity of Kalgoorlie and Mount Windarra near Laverton, these areas are being carefully examined to assess their prospects for nickel and other base metal deposits.

Finally, in Proterozoic times we had the deposition, under shallow-water conditions, of conglomerates, sandstones, shales and banded iron formations and another period of volcanic activity yielding basaltic lava flows. Other than in a few narrow belts these rocks have not suffered the intense earth movements which affected the older rocks, and so are practically un-metamorphosed. Important blue asbestos deposits in these rocks have been exploited at Wittenoom Gorge in the Hamersley Range of the West Pilbara. The asbestos deposits occur in banded ironstone formations which also contain large iron-ore deposits. The well-known iron-ore deposits of Cockatoo and Koolan Islands in Yampi Sound, which have been exploited since 1951, are metasedimentary deposits of Late Proterozoic age. Although the Proterozoic rocks cover extensive areas in the northern parts of the State they have largely been stripped off the southern half by erosion. The final episode in the Precambrian history of this State was the widespread intrusion of dolerite dykes approximately 550 million years ago. Small lead and copper deposits are closely associated with these dolerite intrusions in the Northampton Mining Field, where the discovery of a lead deposit at Geraldine in 1848 led, in 1852, to the first metal mining operations in Western Australia.

The Sedimentary Basins

There are five major post-Proterozoic sedimentary basins in Western Australia and the adjoining continental shelf as shown in the accompanying map—the *Bonaparte Gulf Basin* in the north-east part of the Kimberley Division extending into the Northern Territory, the *Canning Basin* of the west Kimberley, the *Carnarvon Basin* of the north-west, the *Perth Basin* extending from lat. 29° S. to lat. 33° S. and the *Eucla Basin* occupied by the Nullarbor Plain. All of these basins have offshore extensions as shown in the map on page 27. Large areas of the Central Division are covered by sediments of the *Amadeus Basin* of Central Australia and the shallow *Officer Basin*. In addition to these major basins there are smaller basins such as that at Collie and scattered areas where sediments, which are dominantly lacustrine in nature, have been deposited. In these sedimentary areas we find sediments ranging from Lower Palaeozoic to Pleistocene in age. These sediments of Palaeozoic and later age are, as a rule, less disturbed than those of Precambrian times and many are abundantly fossiliferous. Therefore, there is a sure means of correlating formations even in widely separated places, and so our knowledge of the history of these sedimentary areas is more detailed than in the much altered, highly folded, unfossiliferous Precambrian rocks of the basement.

Apart from the superficial deposits the economic significance of these basins is confined to their possibilities for the occurrence of artesian water, coal, oil and natural gas. A prime requisite for the occurrence of artesian and sub-artesian water is the occurrence

POST-PROTEROZOIC SEDIMENTARY BASINS AND PRECAMBRIAN BLOCKS OF WESTERN AUSTRALIA
(PRECAMBRIAN AREAS STIPPLED)

of interbedded strata of varying porosity and permeability. These conditions are met in a number of the sedimentary basins in Western Australia and the development of the pastoral industry in the arid or semi-arid parts of these basins has been largely dependent on the occurrence of artesian water. In the metropolitan area, artesian bores are an important source of water supplies. Coal deposits are also confined to areas of sedimentary rocks and occur in the Permian rocks of two of the minor basins, namely the *Collie* and the *Irwin River Basins*, and in the Lower Jurassic sediments of the Perth Basin (at Eneabba, where a seam thirty metres thick has been found at a depth of 1,800 metres in a borehole sunk in search for oil, and is indicated in shallow shot-holes in the Hill River area). Up to 1966 the coal deposits of the lacustrine Permian beds of the Collie Basin constituted the only power source in Western Australia, since oil of commercial significance had only then been proved and the gently undulating topography combined with low rainfall make the hydro-electric resources insignificant. So far as oil is concerned the first occurrence of flow oil in Australia was encountered in Rough Range Bore No. 1, in the Carnarvon Basin, late in 1953. This discovery of flow oil resulted in an increase in the rate of geological exploration of all the major sedimentary basins. The results of extensive geological mapping, geophysical surveys and exploratory drilling for oil have to date been rather disappointing. However, a commercial field was proved at Barrow Island off the north-west coast in 1966. Other oil occurrences have been located at various localities in the Perth Basin, e.g. in the vicinity of Dongara and this indicates the presence of suitable source material and conditions for oil formation and preservation. Moreover, oil search drilling operations have located some widely-spaced important finds of natural gas at Dongara and Gingin in the Perth Basin, and North Rankin and Goodwyn in the offshore part of the southern Canning Basin. The Dongara gasfield is now being exploited for the metropolitan area of Perth and the industrial areas further south. The possibilities of locating other commercial oilfields and gasfields in the Carnarvon, Canning and Perth Basins are by no means exhausted and the search is being actively continued both on land and offshore in the continental shelf area.

A detailed description of the sedimentary formations of different ages, from the Cambrian to the Recent, in the various sedimentary basins has been set down in 'The Stratigraphy of Western Australia' (*Journal Geological Society of Australia*, volume 4, part 2, pp. 1-161, 1958) and 'The Geology of Western Australia' (*Geol. Surv. West. Aust.* Mem. No. 2, 1975). It is proposed here merely to indicate the main features of the various basins.

The *Bonaparte Gulf Basin*, in the east Kimberley, extends into the Northern Territory and offshore below the Timor Sea. As already mentioned, this and the nearby Ord Basin are the only basins in Western Australia where rocks of proved Cambrian age are exposed. On Western Australian territory the Cambrian rocks extend as a narrow belt along the interstate border between lat. 16° 15' S. and lat. 18° 30' S., reaching westward from the border for twenty-four to 120 kilometres. The Cambrian consists of basalts at the base of the sequence, overlain by Middle Cambrian fossiliferous limestones, shales and sandstones. There is a small development of sandstones which are considered to be of Lower Ordovician age, following which there is a big time gap and the next youngest formations are sandstones and limestones of Upper Devonian and Lower Carboniferous age. Upper Carboniferous and Lower Permian formations are absent, the next marine transgression being in the Middle Permian when a thick sequence of conglomerates, sandstones, and limestones was deposited. The only other sedimentary rocks in this basin are freshwater sediments (siltstones, marls and cherts containing freshwater fossils) of late Tertiary age.

The *Canning Basin* (formerly named the Desert Artesian Basin), in the west Kimberley, extends from the coast between Derby and the De Grey River in a south-easterly direction almost to the 128° meridian. The north-east or Fitzroy part of this basin consists of a comparatively narrow and shallow section (the Lennard Shelf) flanking the Precambrian land mass to the north, and a deep trough (the Fitzroy Trough) estimated, from aeromagnetic geophysical surveys, to contain a thickness of the order of 6,000 metres of sedimentary strata ranging in age from Ordovician to Triassic. It was in this area

that bores seeking oil were first drilled in Western Australia, following the discovery in 1919 of traces of oil in a water bore on Gogo Station. The larger Canning Desert portion, the South Canning Basin, is covered by a relatively thin Mesozoic and Permian sequence, but geophysical work followed by some deep drilling has indicated that there are deep depressions in this area, the deepest of which is the Kidson Sub-basin, which has a basement approximately 6,000 metres below the surface.

The oldest Palaeozoic sediments in the Fitzroy portion of the basin are richly fossiliferous limestones of Ordovician age outcropping near Price's Creek. These are overlain by Devonian reef limestones, sandstones and conglomerates, followed by Carboniferous sandy limestones. These in turn are followed by a thick Permian sequence of sandstones (of marine glacial origin deposited from floating ice), fossiliferous calcareous shales and limestones, and Upper Permian fossiliferous ferruginous siltstones and sandstones. All of these formations dip gently in a general south-westerly direction towards the centre of the basin but these regional dips are interrupted by local folding. Shale and sandstone beds of Triassic age occur in the Fitzroy Trough section of the basin. The youngest rocks in this area are igneous extrusive lava flows and intrusive sheets, dykes, and volcanic necks which have been found intruding all rocks of the sequence from the Precambrian granitic basement to the youngest sediments (Triassic) present. These igneous rocks, from direct geological evidence, are of post-Triassic age, and radioactive age determinations made in 1959 indicate that they were intruded 180 million years ago (*i.e.* in Jurassic times). This is one of the two areas in the whole of Western Australia where post-Cambrian igneous activity is known. It is interesting to note the occurrence of a small lead deposit in Devonian limestone at Narlarla in the Napier Range. This is the *only* primary metallic ore deposit of post-Proterozoic age known in Western Australia and it may be genetically related to the Jurassic igneous activity or may have been deposited from sea water by organisms during Devonian times.

In the Canning Desert section of the basin the Palaeozoic rocks are not well exposed and the greater part of this portion of the basin (where not obscured by superficial unconsolidated sands) is occupied by Mesozoic sediments ranging in age from Lower Jurassic to Lower Cretaceous. The deep depressions in the floor of the South Canning Basin are filled with Palaeozoic sediments as proved by the first deep oil test well (Kidson No. 1) which was abandoned at 4,431 metres in Lower Ordovician limestone. There is no evidence in the entire basin of any marine transgression after Lower Cretaceous times.

The basin extends some 320 kilometres offshore to the coral islands of the Rowley Shoals where some wells have been sunk in the search for oil. Drilling in search of oil and gas was commenced in 1967 with Ashmore Reef Well, but there were no discoveries in the first ten wells drilled until 1971, when Scott Reef No. 1, approximately 400 kilometres north-west of Derby proved to be a major gas/condensate discovery. Subsequently, up to the present, there have been a number of major gas/condensate/oil strikes, mainly in the south-western end of the offshore Canning Basin north of the producing oil field of Barrow Island. The existence of commercial natural gas fields has now been proved, and exploratory work is continuing, directed towards discovery of further gasfields and oilfields.

The *Carnarvon Basin* (formerly called the North-West Artesian Basin) has been the most intensively studied of the major sedimentary basins in Western Australia. It extends along the west coast from Onslow near the mouth of the Ashburton River as far south as the mouth of the Murchison River, the maximum width of the basin being 200 kilometres at the latitude of Carnarvon. In this basin the eastern portion up to eighty kilometres wide is occupied by a thick sequence of marine Palaeozoic sedimentary rocks ranging in age from Middle Devonian to Upper middle Permian, all of which have a westerly regional dip. The estimated maximum thicknesses of the Palaeozoic strata are:

Permian	4,015 metres
Carboniferous	765 metres
Devonian	1,560 metres

This Palaeozoic sequence which consists of fossiliferous Devonian limestones and sandstones, Carboniferous limestones and Permian marine glacial beds, limestones,

sandstones, and shales, is almost entirely marine in origin. In the Carnarvon Basin we have the only wholly marine Permian sequence in Australia, and without doubt *one of the thickest marine Permian sequences in the world.*

No rocks of Silurian age were known from the western half of the Australian continent until 1957 when a bore sunk by West Australian Petroleum Pty. Ltd. at Dirk Hartog Island in Shark Bay encountered limestones of Silurian age underlain by sandstones which are now correlated with the reddish sandstones which outcrop in the lower reaches of the Murchison River.

To the west the Permian rocks are unconformably overlain by Cretaceous sandstones, shales, marls and limestones attaining a total thickness of 600 metres. It is the basal formation, the *Birdrong Sandstone*, of the Cretaceous sequence that is the oil sand encountered in Rough Range Bore No. 1. Another Cretaceous formation, the Windalia Formation, is one of the important oil reservoirs of the Barrow Island Oilfield. The Cretaceous rocks outcrop in a north-south belt averaging eighty kilometres wide between the Palaeozoic and Precambrian rocks on the east and the Tertiary limestones to the west. The only other Mesozoic formation exposed at the surface in this basin is a Jurassic sandstone eight metres thick. However, a deep well (Cape Range No. 2) drilled in search of oil at Exmouth Gulf, after passing through the base of the Cretaceous at 1,130 metres, entered the Lower Jurassic which extended to the depth of 4,624 metres at which the bore was discontinued, thus proving a thickness of at least 3,494 metres of Lower Jurassic strata in this area. It is apparent that there is a marked thickening of the Mesozoic formations from east to west in this area. The westernmost belt of the Carnarvon Basin is occupied by Tertiary strata, mainly limestones, which are well exposed in the Rough and Cape Ranges of the Exmouth Gulf area. These limestones, which range from Lower Miocene to Pliocene in age, total 365 metres in thickness and are discontinuously overlain by Pleistocene and Recent beds approximately 135 metres thick. Marine Tertiary sediments which are so well developed along the western margin of the basin extend as a thin discontinuous formation unconformably over the Permian beds of the eastern part of the basin, indicating that in Upper Eocene times the sea transgressed practically the whole of the Carnarvon Basin.

The sedimentary rocks of the Carnarvon Basin were affected by earth movements at various times. Even the youngest of the Tertiary rocks have been thrown into gentle folds which are significant so far as the search for oil is concerned because, in addition to having suitable conditions for the formation and preservation of oil, suitable structures are necessary for its concentration into local areas (oil 'pools'). So far as structure is concerned, the general picture of the Carnarvon Basin is the gentle westerly regional dip of the Palaeozoic sediments of the eastern half of the basin and the gentle dome and basin folding of the western half.

The *Perth Basin* (formerly called the Coastal Plain Artesian Basin) is a narrow elongated basin on the western border of Western Australia extending from Geraldton in the north to Cape Leeuwin in the south. At Geraldton it is forty-eight kilometres wide and is flanked both to the west and east by Precambrian crystalline rocks (mainly gneisses). The maximum width of the basin is approximately eighty kilometres at Watheroo and it narrows again to the south being approximately forty-eight kilometres wide in the sunken land between Busselton and Augusta. At this southern end it is again flanked both to the east and west by Precambrian rocks. The surface of the basin is mostly covered by Recent sands but occasional outcrops of rocks as old as the Permian occur in places. The only evidence available regarding the structure, thickness and age of the sediments in the basin is that provided by geophysical surveys, some deep bores sunk in the search for oil and a number of water bores up to 730 metres deep in the metropolitan area. Gravity surveys indicate that there is a very considerable thickness of sediments, perhaps exceeding 9,000 metres, and it is probable that in this basin we have a complete succession from the Younger Proterozoic (*Cardup Group*), which outcrops along the Darling Scarp, to the Recent sands. Other than the Proterozoic of the Darling Scarp, the oldest sediments exposed are the gently folded Permian marine sediments of the *Eradu* and *Irwin River Basins* at the north end of the main basin. The Permian sediments of the Irwin River area have a total thickness of 1,200

metres and vary from marine glacial beds at the base (as in the Carnarvon and Canning Basins) through fossiliferous marine shales and limestones to lacustrine sandy sediments with coal seams in the upper part of the sequence. Marine and continental Jurassic limestones and sandstones outcrop east of Geraldton and Jurassic beds, overlain by Cretaceous chalks and greensands, occur near Gingin and Dandaragan. In the southern part of the Perth Basin the oldest rocks exposed (if we except the Permian of the separate minor *Collie Basin* which is situated well to the east of the Darling Scarp in a glacially-gouged trough) are the Cretaceous *Donnybrook Sandstones*.

In the vicinity of Perth, artesian bores to a maximum depth of 730 metres expose a sequence varying from Jurassic sandstone at depth, through Cretaceous and Paleocene shales. The *King's Park Shale* of Paleocene (older Tertiary) age is overlain by Pleistocene aeolian sandstones of the *Coastal Limestone Formation*, the base of which is approximately thirty metres below sea-level. There is therefore a big gap in the succession here between the Paleocene and Pleistocene. Many boreholes have been sunk in the north-central part of the basin in the course of oil search operations. Boreholes near the coast (at Jurien Bay and Beagle Ridge) struck Precambrian crystalline basement rocks at comparatively shallow depths of 1,024 metres and 1,481 metres. The sediments thicken further inland, as evidenced by the increasing depth to the Precambrian basement in Cadda No. 1 (2,744 metres), Woolmulla No. 1 (2,810 metres) and Arrowsmith No. 1 (3,420 metres). Very thick sedimentary sequences have been disclosed by Eneabba Bore No. 1 (which bottomed in Lower Triassic at 4,179 metres) and Gingin No. 1 (in Lower Jurassic at 4,544 metres). Some deep wells have been drilled to the south of Perth, namely Pinjarra No. 1 which bottomed in Upper Triassic sandstone at 4,572 metres; in the far south (near the south coast), Sue No. 1 which encountered Precambrian granulites at 3,054 metres; near Perth, Cockburn No. 1 which was abandoned at 3,054 metres in Lower Jurassic sandstone; Whicher No. 1, near Busselton, which reached a depth of 4,653 metres in Permian sandstone before being abandoned; and Blackwood No. 1, abandoned at 3,334 metres in Permian sediments. The first offshore well in the Perth Basin (Quinns No. 1), spudded in on 10 October 1968 at a location approximately thirty-two kilometres north of Rottnest Island, was drilled to a depth of 2,209 metres without finding hydrocarbons. Some oil was found in a second offshore well (Gage Roads No. 1), drilled to a depth of 3,660 metres, approximately fourteen kilometres north-west of Rottnest Island.

Oil search operations in the Perth Basin have led to the discovery of significant oil and gas in the vicinity of Dongara near the northern end of the Basin and gas at Gingin, about eighty kilometres north of Perth. These discoveries, now proved as gasfields, are supplying natural gas to the metropolitan area and industrial areas south as far as Pinjarra. The other materials of economic significance in the Basin are coal, artesian water, limestone from the Pleistocene Coastal Limestone which is used as a source of lime and as building stone ('Cottesloe Stone'), and sand for building material. In addition, the Coastal Limestone contains picturesque caves of tourist attraction such as those of Yanhep, Yallingup and Margaret River.

The only evidence of igneous activity in the Basin is the Cretaceous basalt of the sunkland between Bunbury and Cape Gosselin on the south coast.

Very little is known about the structure of this basin. It is bounded to the east by a large fault or monoclinial fold. The evidence available indicates that the main structural character of the deeper part is a regional dip to the east (of 15° to 20°) traversed by north-south trending faults with down-throws to the west. There is an unconformity (Upper Jurassic to Lower Cretaceous) at a depth of approximately 600 metres above which the Cretaceous and Tertiary sediments are almost horizontal.

The *Eucla Basin* occupying the Nullarbor Plain, in the south-eastern corner of the State is occupied at the surface by marine fossiliferous Middle Tertiary (Miocene) limestones with a marginal belt of Lower Tertiary (Eocene) limestones. The Tertiary rocks lie on sandstones and shales of probable Cretaceous age, which in turn overlie the Precambrian crystalline rocks. Little is known of the details of the stratigraphy and structure of the Eucla Basin since the beds are very flat-lying and have only been penetrated by water bores in a few places such as Madura near the coast and Loongana on the Trans-Australian

Railway. The Madura bore is artesian but bores along the Trans-Australian Railway have only yielded sub-artesian water (*i.e.* the water will rise under pressure only part of the way to the surface). The oil prospects of this basin are poor because of the comparatively small thickness (600 metres) of the sediments and the absence of suitable folded structures to form oil traps.

The Collie Coal Basin. Of the minor basins and isolated occurrences of post-Proterozoic sediments, Collie, since it is the only operating coalfield in Western Australia, is the only one which will be considered here. It is situated approximately 160 kilometres SSE. from Perth, and has an area of about 260 square kilometres. Actually it is made up of two basins separated by a sub-surface granitic ridge. It is composed of sandstones and shales with interbedded coal seams and is surrounded by Precambrian rocks. The coal measures, of Permian age, are of the order of 600 metres in thickness of which approximately forty metres is coal. The actual contact between the Permian coal measures and the Precambrian granitic basement has nowhere been seen at the surface but has been encountered in deep drill holes in various parts of the Basin. Such drill holes reveal that Permian mudstone containing granite pebbles lies on an ice-planed surface of the Precambrian granitic rocks. This suggests that the Collie Basin, formerly considered to be a block of the Permian downfaulted into the Precambrian basement, is actually a glacially-gouged trough formed by terrestrial glaciation in the Permian and since filled with Permian lacustrine sediments. Coal occurs at three horizons and the seams, which average two metres in thickness, persist over fairly long distances. From the associated plant fossils these coal measures appear to be comparable in age with those of the upper part of the Permian sequence at the Irwin River near the northern end of the Perth Basin. There is another similar basin, containing Permian coal measures, the *Wilga Basin*, of about fifty square kilometres extent, approximately thirty-two kilometres SSE. of Collie. There may be other small glacially-gouged Permian basins in the southern part of the State, which are yet unknown.

The Superficial Deposits

Over a great part of the State fresh rock outcrops are comparatively sparse. Most of the country is covered by highly-weathered rocks, laterite, drift sand, soils, and, in the salt lake country, by thin evaporite deposits.

Laterite. In the southern half of the State the remnants of the Darling Plateau are covered by a thin layer up to three to five metres thick of a reddish-brown rock composed of spherical pebbles tightly or loosely cemented together by a lighter-coloured earthy matrix. This material in its poorly consolidated state is popularly referred to as 'iron-stone gravel' and when strongly cemented as 'ironstone'. This rock, called laterite, although it covers large areas, is purely superficial and wells or bores sunk in it pass within about a metre into highly weathered country rock which may extend down for distances up to thirty metres before encountering fresh unweathered rock. This laterite crust and the underlying highly weathered country rock were developed on a gently undulating surface during a period of warmer, more humid, climatic conditions. These tropical conditions probably existed in Late Tertiary (Pliocene) times when a great part of Western Australia had been reduced by long-continued erosion to a peneplain lying close to sea-level, or soon after, when this peneplain had been uplifted to form the *Darling Plateau*. This uplift, judged by the elevation of the laterite-capped hills and the occurrence of fossiliferous marine Eocene sediments 270 metres above sea-level at Norseman, was of the order of 300 metres. On the Great Plateau, remnants of this Darling Plateau are evidenced by the table-topped hills so characteristic of much of the Plateau country. The significance of the laterite profile and the soils developed from the laterite and associated weathered rocks has already been mentioned. Economically, the laterite is important for road-making materials and in a few places (such as Wundowie) as an iron ore. The main constituents of the laterite are the insoluble products of intense rock weathering—iron oxide, alumina and silica. In many places the alumina content is sufficiently high to call them bauxite. Bauxites are the main source of aluminium, and the bauxitic

laterites of the Jarrahdale area in the Darling Range near Perth are being exploited as aluminium ore.

The mid-Tertiary land surface of the southern half of Western Australia on which the laterite profile was developed at a time when this country was subjected to a tropical climate extends into the northern part of the State. In the Hamersley Iron Province of the North-West Division this old land surface truncated the Lower Proterozoic banded iron formations of the Hamersley Group. At and below this old land surface, (the *Hamersley Surface*) which can be traced without tectonic break from sea-level to elevations of 1,200 metres, there was a secondary concentration of the iron of the Lower Proterozoic rocks resulting in extensive rich iron-ore deposits which make this area one of the richest iron provinces in the World.

In the far south-west of the State sub-surface hard pan formations consisting of ferruginous sandstone are a potential source of low-grade iron ore.

Soils and drift sands. Western Australia, an area of 2,525,500 square kilometres extending from lat. 13° 44' S. to lat. 35° 08' S., although having little variety in its broad physical features, has very considerable variation in climates from the tropical areas of summer rainfall in the north through a central and inland province of low rainfall to the temperate areas of winter rainfall in the south. Moreover, throughout this enormous area there is very considerable variation in the nature of the country rocks. The nature of the soils developed is dependent on these two factors—climate and parent rock—so it will be apparent that there will be very considerable variation in the soils over this extensive area. L. J. H. Teakle has recognised the following major soil zones of Western Australia:

1. Grey, yellow and red podsolised, or leached, soils of the temperate sclerophyll forests.
2. Red-brown earths of the eucalyptus-acacia woodlands.
3. Grey and brown calcareous, solonised soils of the low rainfall eucalyptus woodlands—(' mallee ' soil zone of Prescott).
4. Red and brown acidic soils of the acacia semi-desert scrub—mulga, etc.
5. Brown acidic soils of the spinifex semi-desert steppes of the north-west.
6. Pinkish-brown calcareous soils of the Nullarbor Plain desert shrub steppes.
7. Pinkish-brown calcareous soils of the acacia semi-desert scrub, mallee and salt bush-blue bush zone.
8. Brown soils of the tropical woodlands, savannahs and grasslands.
9. Red sands of the central desert sandhills—spinifex with desert acacias, desert gums and mallees (*Eucalyptus spp.*).

Each of these major soil zones may be subdivided into one or more soil regions and the reader is referred to a paper 'A Regional Classification of the Soils of Western Australia', by L. J. H. Teakle (*Jour. Roy. Soc. West. Aust. XXIV*, pp. 123-95) for details concerning the soil characteristics of these various zones and regions.

There are considerable areas of Western Australia covered by drift sand which may be in the form of parallel red sand dunes or, in the southern part of the State, extensive sandy plains. The latter have been generally considered to be residual from the weathering of granite. These sand plains are often underlain by lateritic material and they probably represent the leached zone of the laterite profile. The youngest of the drift sand deposits are the coastal sand dunes.

Coastal sand deposits are of considerable economic importance. At various places along the south and west coasts there are beach sand deposits in which there is a natural concentration of heavy minerals such as zircon, monazite, xenotime, rutile and ilmenite. Such deposits are at present being exploited at Capel and Bunbury for their ilmenite content, which is valuable because of its low chrome content. The other heavy minerals such as zircon, monazite and xenotime are also being exported overseas. Similar deposits have been discovered at Eneabba (approximately thirty-two kilometres inland at 240 kilometres north of Perth)—deposits which have been evaluated and are now being exploited.

Salt lake deposits. These, together with the coastal sand deposits, represent the youngest of the geological formations developed—indeed they are in course of formation at the present time. They are evaporite deposits resulting from the evaporation of lake waters in the areas of internal drainage. Soluble salts produced by rock weathering are leached out by rain and running water and transported by streams to these lakes. During the long dry summers most of these lakes dry up and the soluble salts are deposited, yielding accumulations of gypsum and common salt. In a few of these inland lakes hydrated potassium aluminium sulphate (alunite), which is a valuable source of potash for fertilisers, has been formed but its actual mode of formation has not yet been satisfactorily explained.

Valuable potash reserves occur at Lake MacLeod, north of Carnarvon. This 2,700-square kilometre coastal lake contains brines rich in potash salts (which are the last salts to crystallise on the evaporation of sea water) saturating the mud of the lake floor. These deposits, which are Australia's only domestic source of potash, recently came into production.

Solar salt (sodium chloride) is at present being produced at several localities in the north-west, such as Port Hedland, Exmouth Gulf and Shark Bay, where a combination of low-lying flat topography and shallow marine embayments (such as Useless Loop in Shark Bay) with hot dry climate resulting in high evaporation are the ideal conditions for crystallisation of sea water salts. The production of such solar salt amounted to almost 4 million tonnes in 1973-74. In localities such as Shark Bay, where the waters are abnormally saline, other rocks—limestones—are in course of formation. The Shark Bay area has proved a very fruitful area for research on the formation of various limestones and the information being derived from the study of these presently forming rocks has helped in the interpretation of the significance of such deposits which formed in past geological times.

Conclusion

From the foregoing summary of the geology of Western Australia we see that, although nowhere do we find the complete geological succession, somewhere in the State there are deposits representative of every Period. The geological history of Western Australia begins with the basaltic igneous activity of the Early Archaean some 3,000 million years ago, followed by sedimentation, intense mountain building activity and associated granitisation and granite intrusions. In post-Archaean times there is a record of sedimentation throughout all the main geological periods. Igneous activity ceased in the Lower Palaeozoic and only re-occurred during the late Mesozoic, yielding the basaltic lavas of the far south-west and the volcanic rocks of the west Kimberley. By mid-Tertiary times much of Western Australia had been reduced by denudation to a gently undulating peneplain land surface on which, under tropical climatic conditions, there was an extensive development of laterite which in places constitutes valuable bauxite and iron-ore deposits. Geological processes are continuing and at the present day rocks and soils are still in the process of formation.

A more complete description of the geology of Western Australia is contained in 'The Geology of Western Australia' (*Geol. Surv. West Aust. Mem. No. 2, 1975*).

The Mineral Deposits

In the foregoing pages mention has been made in various places of the mineral deposits on which the development of Western Australia has been so dependent. These deposits are directly related to the geology—the nature of the rocks and their structural relationships—of the areas in which they occur. One would not, for example, look for coal, oil or natural gas in the crystalline Precambrian Shield, nor for gold or nickel deposits in the sedimentary basins that have been described. Moreover, in spite of the fact that the nickel deposits occur in Older Precambrian rocks, not all of these rocks are potential hosts for nickel deposits—they are only likely to occur in the ultrabasic rocks which constitute a very small fraction of 1 per cent of the Older Precambrian rocks.

The following tabulated statement summarises the sequence of events represented in the geological history of Western Australia and the mineral deposits associated with each. This table, read in conjunction with a geological map of any area, will indicate the economically important deposits which could possibly occur in that particular geological environment.

GEOLOGICAL EVENTS AND MINERAL DEPOSITS IN WESTERN AUSTRALIA

Era	Main geological events	Economic mineral deposits
CAINOZOIC	15. Weathering and erosion (Present day)	Beach sand deposits, salt, gypsum, sands and clays, peat, alluvial deposits (gold, tin, etc.)
	14. Sedimentation (Pleistocene and Recent)	Ilmenite and other black sand minerals, limestone
	13. Peneplanation (mid-Tertiary) and laterite formation	Bauxite Iron and manganese ores Alluvial tin and gold Clays
	12. Sedimentation (older-Tertiary)	Artesian water
MESOZOIC	11. Sedimentation (with basalt outflows in Cretaceous)	Artesian water Oil and gas Coal Basalt for aggregate stone
PALAEOZOIC	10. Sedimentation, earth movements, periods of erosion	Coal Oil and gas
PROTEROZOIC	9. Basic igneous intrusions	Road metal (blue metal) Lead, zinc and copper
	8. Sedimentation and minor granitic magma intrusions	Iron ore (of Yampi Sound)
	7. Chemical sediments (banded iron formations)	Iron ore and blue asbestos (in Hamersley Basin)
ARCHAEOAN	6. Pegmatite and quartz vein formation from end-stages of granitic intrusions	Tin, tantalum, tungsten, beryllium, lithium minerals Gold and silver in early Archaean country rocks (1 and 2)
	5. Intrusion of granitic magma (2,700 million years ago)	Aggregate and building stone
	4. Granitisation—conversion of all pre-existing rocks into granitic rocks Contemporaneous with intense folding, fracturing and metamorphism of pre-existing rocks	Aggregate and building stone
	3. Intrusion of basic magma forming stratiform layered basic/ultrabasic igneous complexes	Nickel, copper and chromium in ultrabasic rocks
	2. Sedimentation with minor periods of volcanic activity	Iron ore
1. Eruption of submarine basaltic lavas and chemical deposition of banded ferruginous cherts	Iron ore	

Current Geological Investigations in Western Australia

While much is known about the geology and mineral resources of Western Australia, there is still much to be learned. The foregoing summary account of the geology of Western Australia is based on work carried out in the past, which has increased in tempo during the last decade because of the discovery of important oil, gas and metal-bearing mineral deposits.

At present, geological work in Western Australia is being carried out by the following bodies.

1. The Geological Survey Branch of the Department of Mines of Western Australia, which is engaged in regional geological mapping, special investigations of varied character concerned with groundwater resources, mineral deposits, and engineering geology problems, and problems arising daily, which require geological advice to the public. The major results of the Geological Survey's operations are published annually in the Annual Report of the Department of Mines of Western Australia, in Bulletins issued at irregular intervals and in four-mile scale geological maps with explanatory notes, which are also issued at irregular intervals.
2. The Geology Department of the University of Western Australia. Research projects are undertaken by members of staff and research students, varying from mapping and petrological-mineralogical projects concerned with the Precambrian rocks which make up the greater part of the State and their associated ore deposits, through petrological and palaeontological work on rocks from the various sedimentary basins, to studies of present-day marine sedimentation. The results of such investigations are published in various scientific periodicals, both in Australia and overseas.
3. Oil exploration companies. Such companies have carried out geological and geophysical surveys of the various sedimentary basins and some offshore areas, and are presently engaged in deep-drilling programmes. Attention is now being given to drilling in the offshore continental shelf areas of the Canning and Perth Basins.
4. Mineral exploration companies. Following the discovery of important nickel deposits at Kambalda and Scotia near Kalgoorlie, and, subsequently, at Mount Windarra near Laverton, and other localities, many Australian and overseas exploration companies became engaged in base metal exploration, particularly in the Norseman to Laverton belt of Precambrian greenstones.

The continued efforts of these institutions and exploration companies are adding much to our knowledge of the geology of the western third of the Australian continent.

Seismicity of Western Australia

It had been generally considered that Western Australia was a stable block free of seismic activity in the form of earthquakes but this idea was shattered by the occurrence, on 14 October 1968, of a major earthquake centred near Meckering, 135 kilometres inland from Perth. This earthquake completely wrecked the town and most farm houses in the vicinity; alarmed numerous residents of Perth; caused minor damage to many buildings in the Perth Metropolitan Area; was felt within a radius of about 640 kilometres; and made people realise that Western Australia was not as stable as was previously thought. Other earthquakes, such as the Meeberrie earthquake of 29 April 1941 (the most severe earthquake yet recorded on the Australian continent), have tended to pass without much notice since they either occurred in less densely populated areas or were of low intensity. Records show (according to Everingham in a report of the Bureau of Mineral Resources, Geology and Geophysics, *Seismicity of Western Australia*) that there were forty-seven Western Australian earthquakes of local magnitude greater than 3.5 (Richter scale) recorded in the period August 1959 to June 1965, and 210 less intense earthquakes during the same period.

Most of the recorded minor earthquakes have originated in the Yandanooka-Cape Riche belt of country about 480 kilometres long by forty-eight kilometres wide, which lies just within the western margin of the crystalline Precambrian Shield. Indeed, all except five of the 210 recorded minor earthquakes of the period 1959 to 1965 originated in this narrow belt which is parallel to the regional geological structure of the older Precambrian rocks of the southern half of Western Australia. It was in this belt, at Meckering, that the severe earthquake of 14 October 1968 had its origin.

The major fault structure of Western Australia is the Darling Fault which forms the western margin of the Precambrian Shield and the eastern margin of the Perth Basin. It extends meridionally from the south coast for some 965 kilometres. It is considered that the total west block downward movement on this fault has been of the order of 9,000 metres to 12,000 metres. In spite of the fact that there is a major negative gravity anomaly over the Perth Basin causing this region to be isostatically unbalanced, no earthquakes have been recorded which originated on this fault—indeed there is no geological evidence of any movement on the Darling Fault for at least 1 million years. The October 1968 movement on the Meckering Fault indicates that the Precambrian Shield is in a state of compression and would support a hypothesis that the Darling Fault, instead of being a westerly-dipping structure with downthrow to the west as commonly thought, is more probably an easterly-dipping compression structure with the east (continental) block thrust up over the Perth Basin. This would explain the observed stability of the Perth Basin which should, according to the gravity measurements, be a very unstable area. Instead of rising, as it should because of the major negative gravity anomaly, it is being held down by the overthrust continental block.

As has been indicated, the Meckering earthquake has drawn attention to the possibility of earthquake occurrence in south Western Australia and for the necessity to consider this factor when designing large structures. Calculations have been made from records during the period 1960 to 1969 to give an approximate idea of the order of earthquake frequency in the south-west corner of the State. These have indicated that an earthquake of magnitude greater than 6.5 would occur once every fifty years, and one of magnitude greater than 5.5 every ten years, but these figures are thought to be pessimistic because records kept since 1840 suggest a lower average frequency and the data used for these calculations are swamped by the foreshocks and aftershocks of the Meckering earthquake.

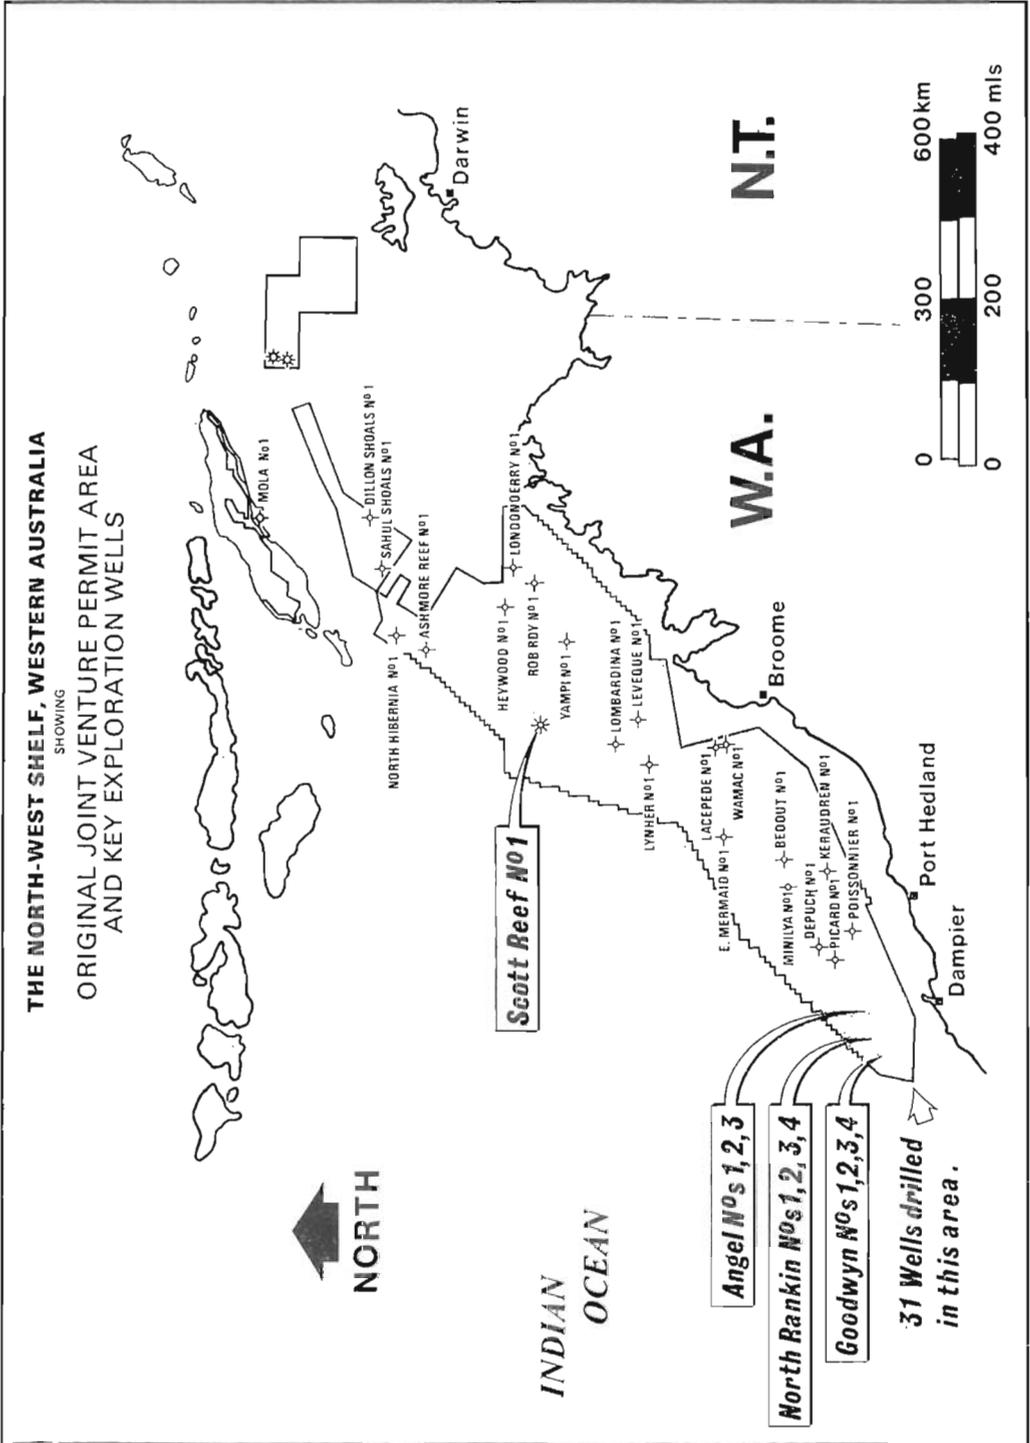

Hydrocarbon Exploration on the North-West Shelf ⁽¹⁾

During the period from 1971 to the present time, discoveries of oil, gas and condensate on the continental margin off north-west Australia have focussed attention on an area that could in the future prove a major hydrocarbon-producing province. The discoveries are a result of some thirteen years of intensive exploration by the North-West Shelf Joint Venture, whose regional exploration permit areas are shown on the accompanying map. These initial permits covered an area in excess of 400,000 square kilometres and extended from near the fifty-metre isobath to approximately the 1,000-metre isobath. During 1975 the expiry of the first permit term leases has led to the relinquishment of approximately 65 per cent of this area. The North-West Shelf Joint Venture companies (Woodside-Burmah Oil N.L., Shell Development (Australia) Pty. Ltd., BP Petroleum Development Australia Pty. Ltd., and California Asiatic Oil Company) have to date (December 1975) acquired over 120,000 kilometres of seismic coverage and drilled fifty-six wells (forty-eight exploration and eight appraisal).

The Joint Venture's operations have had to be carried out within an environment which is entirely offshore, geographically remote and often climatically hostile. The broad continental shelf, up to 400 kilometres wide, lying along the north-west Australian coast is characterised by relatively deep water almost throughout its extent. Coral reefs and shoals are present towards the outer limit of the shelf, forming either small islands or shallows which are sometimes extensive in area. The water around these reefs and shallows, however, usually deepens extremely rapidly to at least 300 metres in all directions. Drilling operations to date have been generally limited to maximum water depths of 180 metres, but one well, East Mermaid No. 1 located on the outer Rowley Shelf, was drilled in a water depth of about 390 metres.

The adjacent onshore area is sparsely populated and geographically remote which has caused considerable logistic problems, not only involving transportation from the shore base to the offshore rigs, but also from shore base to the main operational headquarters in Perth. Broome, with its good harbour and central location with respect to the concession area, was selected as the main operational supply base. Other centres such as

(1) Contributed by D. E. Powell, Chief Geologist, Bocal Pty. Ltd., Perth.

Dampier, Roebourne and Port Hedland are used for helicopter operations, dependent on the current location of the drilling rigs. Remote islands are often used for helicopter refueling stations and navigation control facilities.

Climatically the main problems occur during the cyclone season, between December and March. On the average, two major cyclones a year occur, but particularly severe cyclonic conditions were experienced during early 1973, causing equipment damage and delays to the drilling operations which, in total, cost over \$5 million.

Geologically the area as a whole comprises a number of Permian to Recent epicontinental basins lying offshore from the Australian craton, and extending westwards across a series of marginal plateaux to the base of the continental slope. Deposition has been initially controlled by large-scale block faulting resulting from major rifting on a continental scale which commenced in the late Palaeozoic and continued into the early Cretaceous. This faulting has also been a major factor in providing structural traps in which hydrocarbons have been able to accumulate.

Of the forty-eight exploratory wells completed by the Joint Venture to the end of 1975, some thirteen wells have recovered oil and/or gas in varying quantities, with three of the latter—North Rankin, Goodwyn and Angel—possibly representing commercial discoveries. All three are located in the Dampier Sub-basin, which represents the northern extension of the Carnarvon Basin, and is also the area where most of the smaller oil and gas discoveries are located.

In two of the main fields (North Rankin and Goodwyn) the reservoir comprises thick fluvio-deltaic Upper Triassic to Lower Jurassic sands contained within a tilted horst block fault trap and sealed regionally by unconformable Lower Cretaceous claystones. North Rankin is the largest discovery, with estimated recoverable reserves of about 348 billion cubic metres of gas in place together with condensate in the ratio of twenty-eight barrels per 28,000 cubic metres of gas, thus making it a giant accumulation by world standards. In the third main field, namely Angel, the gas/condensate is contained within sandstones of Upper Jurassic age. To the south, in the Barrow Sub-basin, West Australian Petroleum Pty. Ltd. (WAPET) have produced oil for several years at Barrow Island, with the main production being obtained from Cretaceous sands. The same company has also found an apparently substantial gas/condensate accumulation at West Tryal Rocks, trapped in Triassic sands similar to those which provide the main hydrocarbon reservoirs at North Rankin and Goodwyn.

Although the Browse Basin has been less extensively explored than the Dampier Sub-basin, due mainly to excessive water depths, Scott Reef No. 1 drilled near the outer basin margin was another gas/condensate discovery. Additional drilling is required to evaluate its full potential.

Drilling in lease areas renewed for a second permit term has already commenced with the completion of Tidepole No. 1, located south of the Goodwyn Field. This well has proved to be another oil/gas/condensate discovery and its tested flow rate of 3,317 barrels of oil per day is the highest recorded to date in Australia as a whole. The general trend during the second permit term will be to explore in deeper water areas which will require more sophisticated and expensive drilling equipment than that generally used in the past.

Additionally it is hoped that development of the existing discoveries will soon get under way and feasibility and marketing studies to this end are presently being undertaken.

Chapter II—continued

Part 2—Climate and Meteorology ⁽¹⁾

(Contributed by the Western Australian Regional Office of the Bureau of Meteorology)

Western Australia is the largest State in the Commonwealth, extending from latitude 13° 44' S. to 35° 08' S., and from longitude 113° 09' E. to 129° E. It stretches a distance of about 2,400 kilometres in a north-south direction and about 1,600 kilometres west-east. A little more than one-third of the State lies within the tropics, while the remainder extends southward to the temperate zone.

Because of its large size and its latitudinal position, Western Australia has entirely different climates in its northern and southern parts, while in the central regions there is a gradual change from the tropical climate of the north to the typical Mediterranean climate of the south.

Most of the State is a plateau between 300 and 600 metres above mean sea-level and there are no outstanding mountain ranges. Where the edge of the plateau forms the Darling Range along the southern part of the west coast, it exerts a marked influence on the rainfall, causing a rapid increase from the coastal plain to the higher land. Elsewhere the effect of topography is less marked and its main influence is seen in the general decrease of rainfall with increasing distance from the coast.

PRESSURE SYSTEMS

Weather during the year is controlled largely by the movement of the anticyclonic belt (high pressure systems with anti-clockwise winds), which lies in an east-west direction across the continent for about six months of the year.

In winter this system moves northward, bringing clear skies with fine sunny days and easterly winds to the tropics. With this northward movement, westerly winds on the southern side of the anticyclones extend over the southern part of the State, bringing with them cool cloudy weather and rain. In mid-winter the northern fringe of the 'Roaring Forties' extends to Western Australia and there are frequent westerly gales in the south coastal belt.

These westerly winds are maintained by a series of depressions (low pressure systems with clockwise winds), which move eastward well south of the Western Australian coast, and others which originate in the Indian Ocean and move south-eastward past Cape Leeuwin. The extent to which westerlies affect the State depends largely on the intensity and the position of these depressions.

Towards the end of winter the anticyclonic belt moves southward, and the westerlies are confined more to the lower south-west and the south coastal districts. By summer the anticyclonic belt has moved so far south that its axis is off the south coast and easterly winds prevail over most of the State.

During this summer period the midday sun is at a high elevation in the tropics and the continual heating leads to the development of a monsoonal depression over this region. Wind circulation round this system causes easterlies on its southern or inland side, but in the coastal districts north-east from Onslow, and in parts of the Kimberley, westerlies prevail. Winds in both the north and the south of the State are then in the opposite direction to those prevailing during the winter.

As the sun moves northward again the anticyclonic belt follows it. The monsoonal depression over the tropics dissipates and westerlies again gradually extend northward to the southern part of the State.

(1) See *Appendix* for reference to additional information in earlier issues of the Year Book.

During the northern 'Wet' season (from about December to March), occasional cyclones, known locally as 'willy willys', bring strong winds and rain to the tropics. They originate generally in the Timor Sea or off the north-west coast and often move first in a south-westerly direction parallel to the coast and later in a south-easterly direction.

They frequently move inland between Broome and Onslow but occasionally travel further westward before curving to the south-east and moving inland over the west coast. Others fade out at sea without ever crossing the coast. Those that move inland usually commence to dissipate soon after crossing the coast, but occasionally they move right across the State, passing into the Southern Ocean and moving off towards Tasmania.

These storms are often extremely violent and have on occasions almost completely wrecked towns on the north-west coast, while a cyclone which struck a pearling fleet off the Eighty Mile Beach in 1887 caused the loss of twenty-two vessels and 140 lives.

However, despite the damage which they cause, the storms are of great benefit to the pastoral regions on account of the heavy and widespread rain which generally accompanies them. The heaviest fall ever recorded in one day in Western Australia, 747 millimetres, was received at Whim Creek from a cyclone in 1898.

RAINFALL

The moist rain-bearing winds in this State are in general from a westerly direction. The easterlies, having come from the dry inland parts of Australia, usually bring fine weather and clear skies.

Because of this the highest rainfall occurs in the winter months in the south of the State, and in the summer months in the north. In between these areas there is a gradual change from one rainfall regime to the other.

From the map on page 46, which shows the wettest six-monthly period of the year, it can be seen that the summer rainfall area extends southward from the Kimberley to the Trans-Australian Railway, where there is a rapid change to the winter rainfall regime of the south coast. However, the difference between summer and winter totals decreases southward, and the southern part of this region is one of almost uniform average rainfall.

Proceeding northward from the winter rainfall area of the south-west of the State, the wet period occurs earlier during the year. Across a belt Carnarvon-Menzies-Eucla, there is a more rapid change, and this belt divides the winter rainfall area from that which receives most of its rain in the first six months of the year. Further north, the change is more gradual but continuous and in the Kimberley most of the year's rainfall is received in the summer months which, in the southern parts of the State, are the driest of the year.

The mean annual rainfall for Western Australia is shown on the map on page 47.

The following table shows the average rainfall and number of wet days, the highest and lowest monthly totals, and the highest daily fall for various centres.

THUNDERSTORMS

Thunderstorms are most frequent along the Kimberley coast where they occur during the 'Wet' season but are practically unknown in the 'Dry'. In the remainder of the tropics they occur over roughly the same period but the season is a little shorter and the storms less frequent.

In most of the State south from the tropics thunderstorms are most frequent in the summer months but in the south-west they are more uniformly distributed and in many places in coastal districts they are most frequent in winter.

The winter storms are often accompanied by hail which, however, is usually not heavy enough to cause any damage. Hail accompanying summer storms can be much heavier, and occasionally damages ripening crops in the wheat belt. Both winter and summer thunderstorms may be accompanied by severe squalls, but these are infrequent.

EVAPORATION

Except in the lower south-west, evaporation from a free water surface exceeds the annual rainfall, and in a large proportion of the State it is more than ten times greater than the rainfall.

It is least in the winter months, amounting in July to less than twenty-five millimetres in the far south-west, and to about 200 millimetres in the northern tropics. In January, when evaporation is highest, it totals about 130 millimetres on the far south coast and reaches 350 millimetres in the East Gascoyne and North-Eastern Meteorological Districts. Further north, evaporation is reduced by the moister air over the tropics at this time of the year.

The map on page 53 shows average annual evaporation throughout the State.

GROWING SEASON

Less moisture is required to sustain plant life when evaporation is low than when it is high, and the minimum amount required can be related to evaporation from a free water surface.

That part of the year during which rainfall is greater than this minimum amount (the 'effective rainfall'), may be taken as the *growing season*. The map on page 55 shows the length of this season in the agricultural area of the State. It is based on average monthly rainfall and effective rainfall, the latter being calculated from the formula $P = 0.54 \times E^{0.7}$ (after Prescott), where P is effective rainfall and E is evaporation (both in millimetres per month).

METROPOLITAN CLIMATE

Perth has more sunshine and a greater number of clear days during the year than any other State capital city. It also has the wettest winter, the driest summer, and is the windiest of the capital cities. The highest temperature on record for Perth is 44.6°C (8 February 1933) and the lowest 1.2°C (7 July 1916).

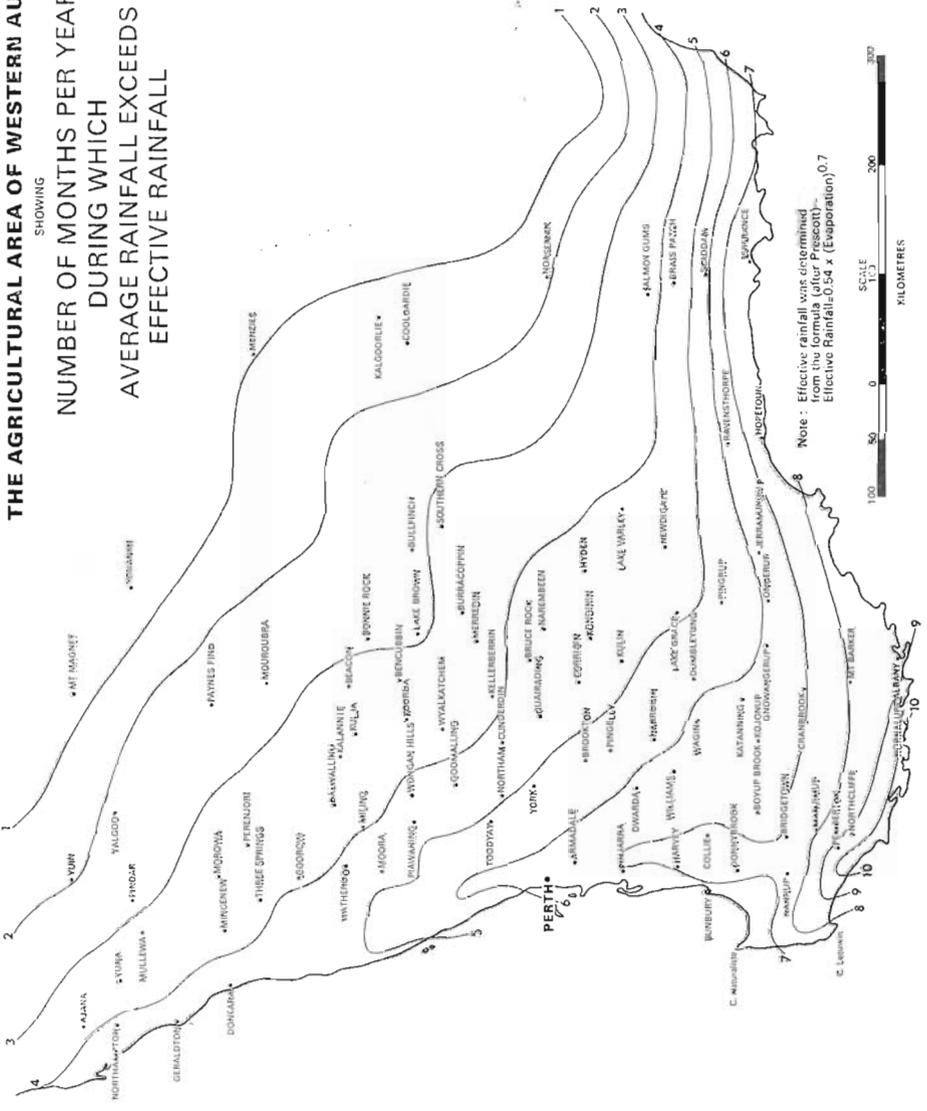

CLIMATOLOGICAL DATA—PERTH BUREAU OF METEOROLOGY

(For other data relating to Temperature and Rainfall see preceding tables)

Month	Wind				Temperature				Relative humidity (Saturation = 100%)		Sunshine	Cloud (proportion of sky covered)	Evaporation

(a) Standard 30 years' normal (1911-1940). (b) Recorded on 8 March 1903 and 16 March 1967. (c) Recorded on 8 September 1952 and 6 September 1956.

THE AGRICULTURAL AREA OF WESTERN AUSTRALIA
 SHOWING
NUMBER OF MONTHS PER YEAR
DURING WHICH
AVERAGE RAINFALL EXCEEDS
EFFECTIVE RAINFALL

Note : Effective rainfall was determined from the formula (after Prescott) —
 Effective Rainfall = $0.54 \times (\text{Evaporation})^{0.7}$

SNOW

Snow has been known to fall as far north as Wongan Hills, but it is only in the southern districts that it occasionally lies on the ground. It is seen on top of the Stirling Range for a short time nearly every winter, but elsewhere is very infrequent and of negligible importance.

INTERSTATE COMPARISONS

In general, humidity and rainfall are lower in Western Australia than in corresponding places in eastern Australia. The following table shows average rainfall, mean humidity and temperature for groups of reporting stations at approximately the same latitude. The stations have been selected in such a way that, in each pair, one is on the west coast and the other on the east coast or, where a pair relates to inland stations, each station is situated at about the same distance from the coast. The group appearing last in the table has been included to provide a comparison between observations at Albany, the most southerly town in Western Australia, and those at places elsewhere in Australia at about the same latitude. The height above mean sea-level is also given for each station.

INTERSTATE COMPARISONS—RAINFALL, HUMIDITY, TEMPERATURE

Chapter II—continued

Part 3—The Vegetation of Western Australia⁽¹⁾

With an Account on the Grasses

Contributed by T. E. H. Aplin

(Western Australian Herbarium, Department of Agriculture)

The flora of Western Australia consists of about 6,500 flowering plants (angiosperms), 15 cycads and conifers (gymnosperms) and 50 ferns. The families of flowering plants which characterise the flora are also widespread throughout Australia, e.g. Myrtaceae, Proteaceae and Leguminosae. The Stylidiaceae, Goodeniaceae and Epacridaceae, which are poorly represented outside Australia, are well developed in Western Australia. The five families which are endemic to Western Australia are entirely restricted to the South-West Province. These are the Cephalotaceae, Eremosynaceae, Emblingiaceae, Ecdeiocoleaceae and Anarthriaceae. Other large groups of plants (below the level of family) which are almost wholly endemic to this State are the *Chloanthoideae* (Verbenaceae), *Prostantheroideae* (Lamiaceae), *Persoonieae* and *Banksieae* (Proteaceae) and *Epacrideae* (Epacridaceae). The *Chamelaucoideae* (Myrtaceae), although not strictly endemic, has a high percentage of species restricted to Western Australia.

The State of Western Australia occupies about one-third of the continental land-mass of Australia and lies south of the equator between latitudes 13° and 35°. One-third of the State lies within the tropics, while the remainder extends into the temperate zone. Climatologically, Western Australia shows a marked variation from a predominantly summer rainfall pattern in the north to a characteristically Mediterranean-type winter rainfall pattern in the south. Between these two rainfall systems is a large region whose climate is characterised by the extreme variability of the rainfall both annually and seasonally.⁽²⁾ The vegetation of Western Australia, in general terms, is determined by these varying climatic patterns, although local changes in geology, soils, topography and drainage may affect the structure and/or the floristic composition of plant communities. The delineation of the present day vegetation also reflects the past tectonic and climatic history of the Australian continent.

The development of the so-called pan-Australian mesophytic flora, which include the tropical broad-leaved genera *Cinnamomum* and *Tristania*, the more temperate genera *Dacrydium*, *Podocarpus*, *Araucaria*, *Nothofagus* and *Phyllocladus* and the typically Australian genera *Eucalyptus*, *Casuarina*, *Callitris* and *Banksia*, began in the early Tertiary era. It is generally accepted that in the Palaeozoic era the Australian continent was united with the continents of Africa, Antarctica, India and South America in a once common land-mass known as Gondwanaland. During this period these continents had a common flora as exemplified by the *Glossopteris* elements. In the late Neocomian period (Early Cretaceous), rifting between India (with Africa and South America) and Australia (with Antarctica) was initiated. In Eocene times (Early to Mid-Tertiary), sea-floor spreading between Australia and Antarctica commenced and for the first time the southern coasts were warmed by the entering Indian Ocean. The Australian continental block was thus isolated at about the time the pan-Australian flora began to develop. The northward drift of the continent brought the Australian block into contact with the Asian block in the middle Miocene period (Late Tertiary), and allowed the entry of a different flora, the 'Indo-Malayan' flora.

The degree of endemism and diversification in the south-western flora, which had its origin in pre-Miocene times, was brought about largely by the isolation caused by the

⁽¹⁾ See *Appendix* for reference to additional information in earlier issues of the Year Book.

⁽²⁾ See Part 2 of Chapter II—*Climate and Meteorology*.

late Eocene and Miocene seas which inundated the Nullarbor Shelf. Another factor that contributed to the diversification of the flora was the lateritisation that occurred in the Tertiary period, with the subsequent dissection of the lateritic landscape causing fragmentation of a once continuous flora.

Plant taxonomists and morphologists cannot entirely agree, among themselves, on the evolutionary relationships of plants. However, certain floral and morphological characters are considered to be primitive or to have developed at a very early stage in the evolution of plants. Primitive floral characters are seen in 27 relict genera in Western Australia (17 in the South-West Province, 12 in the Ereman Province and 16 in the Northern Province). They include *Cycas*, *Macrozamia*, *Callitris*, *Casuarina*, *Hibbertia*, *Emblingia*, *Codonocarpus*, *Persoonia*, *Clematis* and *Pandanus*. Relict species which have retained primitive morphological characters number 234 for the State. A large proportion of these are found in the South-West Province. One hundred and nine species are present in the Stirling botanical district. Many endemic genera are represented, e.g. *Isopogon*, *Adenanthos*, *Stirlingia*, *Synaphea* and *Franklandia* (Proteaceae) and *Andersonia*, *Sphenotoma*, *Cosmelia*, *Lysinema*, *Coleanthera* and *Conostephium* (Epacridaceae). *Thysanotus* (Liliaceae) and *Stylidium* (Stylidiaceae) which, although not strictly endemic to, are most richly represented in the State.

Formations and Alliances

The classification of vegetation involves the grouping of similar structural units and the grouping or classification of the floristic components present in all strata of plant communities that form part of the vegetation.

In a survey of major plant communities of Australia and Papua New Guinea for the Conservation of Terrestrial Communities Section of the International Biological Programme (I.B.P./C.T.) a structural classification scheme was devised. This scheme, produced by Australian plant ecologists and freed from previous conceptions of the Australian Vegetation, was considered to be easy to understand and to use in the field in Australia. The classification of plant communities involved a simple two-dimensional table using the variables height/life form of the tallest stratum, and the projective foliage cover of the tallest stratum. Major structural formations recorded in Australia are summarised in the following table and further divisions based on height classes and projective foliage cover can be instituted. The nature of the understorey provides logical subdivisions to the formations.

PLANT COMMUNITIES—MAJOR STRUCTURAL FORMATIONS

Life-form and height of tallest stratum	Projective foliage cover of tallest stratum, as per cent	Description
Trees over 30 m	70-100 30-70 10-30 under 10	High closed forest High open forest High woodland High open woodland
Trees 10-30 m	70-100 30-70 10-30 under 10	Closed forest Open forest Woodland Open woodland
Trees under 10 m	70-100 30-70 10-30 under 10	Low closed forest Low open forest Low woodland Low open woodland
Shrubs over 2 m	70-100 30-70 10-30 under 10	Closed scrub Open scrub High shrubland High open shrubland

PLANT COMMUNITIES—MAJOR STRUCTURAL FORMATIONS—*continued*

Life-form and height of tallest stratum	Projective foliage cover of tallest stratum, as per cent	Description
Shrubs 1–2 m	70–100 30–70 10–30 under 10	Closed heath Open heath Shrubland Open shrubland
Shrubs under 1 m	70–100 30–70 10–30 under 10	Low closed heath Low open heath Low shrubland Low open shrubland
Herbs	70–100 30–70 10–30	Closed herbland, closed tussock grassland, closed sedgeland, etc. Herbland, tussock grassland, sedgeland, etc. Open herbland, open tussock grassland, open sedgeland, etc.
Hummock grasses	10–30 under 10	Hummock grassland Open hummock grassland

To include floristic detail, the following three categories are often used to define subdivisions within a structural formation.

1. *Alliance*—A series of climax plant communities which have (i) the same structural characteristics, (ii) related species as dominants in the uppermost stratum, and (iii) possibly the same or related species in the understorey.
2. *Association*—A series of climax plant communities which have (i) the same structural characteristics, (ii) the same species as dominants in the uppermost stratum, and (iii) possibly different floristic composition in the understorey.
3. *Society*—A series of climax plant communities which have (i) the same structural characteristics, (ii) the same species as dominants in the uppermost stratum, and (iii) the same species prominent in the lower strata.

High open forest and high woodland are represented by *Eucalyptus diversicolor* (Karri), *E. marginata-E. calophylla* (Jarrah-Marri) and *E. gomphocephala* (Tuart) alliances, all in the South-West Province.

The forest formations are represented by *E. marginata-E. calophylla* and *Agonis flexuosa* (West Australian Peppermint) alliances in the South-West Province; and by *E. tetradonta-E. miniata* (Darwin Stringybark-Woolly Butt), *E. tectifica-E. grandifolia* (Grey Box-Cabbage Gum) alliances in the Northern Province. Woodland and open woodland formations are represented by *E. loxophleba* (York Gum), *E. wandoo* (Wandoo), *E. salmonophloia* (Salmon Gum), *E. occidentalis* (Swamp Yate), *E. astringens* (Brown Mallet), *E. cornuta* (Yate), *E. rudis-Melaleuca* spp. (Flooded Gum-Paper Bark) and *Casuarina obesa* (Swamp Sheoak) alliances in the South-West Province; by *E. torquata-E. lesouefii* (Coral Gum-Goldfields Blackbutt), *E. dundasii* (Dundas Blackbutt) and *E. transcidentalis-E. flocktoniae* (Morrell-Merri) alliances in the Eremaean; and by *E. camaldulensis* (River Red Gum), *E. tectifica-E. grandifolia*, *E. tetradonta-E. miniata*, *E. latifolia* (Round-leaf Bloodwood), *E. papuana* (Ghost Gum), *E. polycarpa-E. apodophylla* (Long-fruited Bloodwood-White Bark), *E. microtheca* (Coolabah) and by *Terminalia* spp., *Melaleuca* spp. and *Adansonia gregorii* (Baobab) alliances in the Northern Province.

The low forest formations are represented by *Melaleuca lanceolata-Callitris preissii* (Rottneest Teatree-Rottneest Cypress Pine), *E. platypus-E. spathulata-E. annulata* (Moort-Swamp Mallet-Open-fruited Mallee), *Agonis juniperina* (Warren River Cedar), *Banksia*

menziesii-*B. attenuata*-*Casuarina fraserana*-*E. tottiana* (Menzies Banksia-Slender Banksia-Fraser's Sheoak-Coastal Blackbutt), *E. falcata*, and *B. prionotes* (Acorn Banksia) alliances in the South-West Province. Low woodland and low open woodlands are represented by *E. erythrocorys* (Illyarrie), *Casuarina huegeliana* (Rock Sheoak) and *Banksia* spp. alliances in the South-West Province; by *E. brevifolia* (Snappy Gum), *E. pruinosa* (Silver-leaf Box), *E. dichromophloia* (Red-barked Bloodwood), *E. argillacea* (Kimberley Grey Box), *E. microtheca*, *Grevillea striata* (Beefwood), *Lysiphillum cunninghamii* (Bauhinia) and *Melaleuca* spp. (Paper Bark) alliances in the Northern Province; and by *E. gongylocarpa* (Desert Gum), *E. kingsmillii* (Kingsmill's Mallee), *E. leucophloia* (Micum), *Casuarina decaisneana* (Desert Sheoak) and *Acacia sowdenii* (Myall) alliances in the Ereman Province.

The scrub formations are represented in the South-West Province by *Acacia rostellifera*-*A. cyclops*-*A. cochlearis*, *Agonis* spp., *Pultenaea reticulata*, *Melaleuca huegelii*, *M. globifera*, *E. foecunda* (White Mallee), *Acacia* spp.-*Casuarina* spp.-*Melaleuca* spp. (Woodjil-Tamar-Broombush) and mixed Proteaceae-Myrtaceae alliances; and by *Melaleuca thyoides*, *Melaleuca uncinata* and *Acacia aneura* (Mulga) alliances in the Ereman Province. High shrubland formation include *Actinostrobos arenarius* (Sandplain Cypress Pine), *Banksia ashbyi*-*B. sceptrum*, *B. baxteri*, *B. speciosa* (Showy Banksia), *E. redunca*-*E. uncinata* (Black Marlock-Hook-leaf Mallee), *E. tetragona* (Tallerack), *Grevillea erio-stachya*-*G. didymobotrya*-*G. leucopteris* and *B. hookerana*-*Xylomelum angustifolium* (Banksia-Sandplain Woody Pear) alliances; and by *Acacia* spp.-*Cassia* spp.-*Eremophila* spp., *E. kingsmillii*, *E. youngiana* (Large-fruited Mallee), *A. victoriae*, *A. pyrifolia*, *A. pachycarpa*-*Grevillea wickhamii*, *Acacia lysiphloia*-*Acacia* spp., and *A. aneura* alliances in the Ereman Province.

Heath and low heath formations are restricted to the South-West Province and are made of mixed communities in which the families Proteaceae, Myrtaceae, Epacridaceae, Xanthorrhoeaceae and Leguminosae are well represented. The genera *Dryandra*, *Banksia*, *Hakea*, *Casuarina*, *Xanthorrhoeae* (Blackboy or grass tree), *Leptospermum*, *Kunzea* and *Melaleuca* usually dominate the heath communities. Shrubland and low shrubland formations are dominated by chenopodiaceous shrubs. The most important alliances are *Maireana sedifolia* (Blue Bush), *Atriplex* spp. (Saltbush) and *Arthrocnemum* spp. (Samphire), which are well represented in the Ereman Province.

The hummock grasslands are dominated by species of *Triodia* and *Plectrachne*. These genera, commonly called Spinifex, grow outwards leaving the centre senescent or dead. This formation is found in the Ereman Province. Tussock grasslands are dominated by species of *Astrelba* (Mitchell Grass), *Bothriochloa-Chrysopogon* (Blue Grass-Ribbon Grass), *Iseilema* (Flinders Grass) and by *Themeda* (Kangaroo Grass) alliances with *Sehima* (White Grass), *Heteropogon* (Spear Grass), *Cymbopogon* (Scent Grass), *Sorghum* (Wild Sorghum) and *Aristida* (Three-awn Grass) usually seen only under woodland formations. Fringing grasslands include *Coelorhachis*, *Arundinella* (Reed Grass) and *Imperata* (Blady Grass). These formations are restricted to the Northern Province. Sedgeland are represented in the South-West Province by communities in which the families Juncaceae, Cyperaceae, Restionaceae and Anarthriaceae are prominent.

Other plant communities, recorded in edaphic complexes, include coastal dune vegetation, halophytic communities, swamp communities, lithic complexes and aquatic complexes. Each of these complexes may be unimportant in terms of area, but are of significance in providing the habitat for particularly interesting plants, e.g. *Cephalotus*, *Byblis*, *Drosera*, etc.

Botanical Provinces and Districts

The vegetation of Western Australia has been sub-divided into three Botanical Provinces. The areas that these provinces occupy, is determined largely by climatic pattern. Within each province are smaller regions, known as Botanical Districts, in which the structure and floristics of the vegetation are determined partly by climate and partly by geology and soils. The boundaries of these provinces and districts are shown on the map on page 65.

The *Northern Province*, or Tropical Zone, is characterised by a dry monsoonal climate. The rainfall received in the summer months ranges from less than 500 mm to over 1,250 mm per annum. The annual mean maximum temperature is over 30°C. The evaporation rate ranges from 2,000-2,500 mm per annum.

The vegetation formations consist of grassy *Eucalyptus* open forests and woodlands. The major components are 'Australian' elements, with 'Indo-Malayan' elements as minor components. The latter are usually found in special habitats such as streamlines or scarps. Some important 'Indo-Malayan' genera are *Ficus* (Moraceae), *Barringtonia* (Lecythidaceae) and *Terminalia* (Combretaceae).

The *Hann* botanical district, commonly referred to as the Kimberley Plateau, consists of a series of sandstone, shale, quartzite and volcanic rocks of Lower Proterozoic age. The topography varies from a rolling to hill landscape to a very rugged dissected plateau. Saline mud flats are present along estuaries.

On the volcanic rocks and shales, on gently undulating to hilly topography, the woodland and open woodland formations consist mainly of *E. tectifica*-*E. grandifolia* alliance. The *E. tectifica* sub-alliance is restricted to the volcanic soils while the *E. grandifolia* sub-alliance is developed on the shales and sandstones. *E. latifolia* and *E. papuana* alliances characterise the flats and levee soils. These alliances and sub-alliances include a number of plant associations. Each association is characterised by one or more *Eucalyptus* species. The understorey layers consist of a sparse low tree or high shrubland layer and a dense to moderately dense grassland layer. Small tree genera include *Cochlospermum*, *Terminalia*, *Atalaya* and *Erythrophleum*. Grass genera include *Bothriochloa*, *Sehima*, *Chrysopogon*, *Sorghum*, *Heteropogon* and *Themeda*.

On the sandstone and quartzite rocks, ranges and hogbacks, the woodland, open woodland and low open woodland formations are mainly made up of *E. tetradonta*-*E. miniata* alliance. In this alliance, which is characterised by *Eucalyptus* species, the *E. tetradonta* sub-alliance is found mainly in the northern high-rainfall region while the *E. phoenicea*-*E. ferruginea* (Gnainggar-Rusty Bloodwood) sub-alliance is its southern lower-rainfall counterpart. *Callitris intratropica* (Northern Cypress Pine) forms pure stands on deep red sands. The *E. dichromophloia* sub-alliance is found on skeletal sands in rugged sandstone areas. The small tree/shrub layer in the *E. tetradonta*-*E. miniata* alliance includes the genera *Petalostigma*, *Grevillea*, *Gardenia*, *Persoonia*, *Buchanania*, *Ventilago*, *Planchonia*, *Eugenia*, *Brachychiton*, *Terminalia*, *Acacia*, *Jacksonia* and *Melaleuca*. The grass storey is dominated by *Plectrachne pungens*, together with *Sorghum* and *Aristida*. Flats and levees usually carry a *E. polycarpa*-*E. apodophylla* alliance, while the very steep scarps carry a *Brachychiton* spp.-*Terminalia* spp.-*E. confertiflora* variable woodland.

Other alliances and associations found in the *Hann* botanical district are *Terminalia* spp.-*Bothriochloa* spp. woodland and grassland communities, on soils of heavy texture; *E. brevifolia*, *E. argillacea* and *Melaleuca viridiflora* associations on podsolics, over shales and sandstones; fringing communities of *E. camaldulensis* and *Terminalia* spp.-*Ficus* spp.-*Melaleuca* spp.; and mangrove communities on the estuarine mud flats. Closed mixed forests of 'Indo-Malayan' elements such as *Calophyllum*, *Ficus*, *Carallia*, *Barringtonia*, *Nauclea*, *Randia* and *Myristica* and *Melaleuca leucadendron* (Cadjaput) fringe gullies, while semi-deciduous vine thickets with lianes such as *Aristolochia*, *Capparis*, *Cansjera*, *Adenia* and *Canavalia* occur in small pockets.

The *Ord* botanical district, known as the Ord-Victoria region, extends into the Northern Territory. There are three distinct sub-regions in the Western Australian portion, the Cambridge Gulf lowlands, the Ord River basin and the Halls Creek ridges. The geology ranges from Quaternary alluvia, through Permian, Devonian-Carboniferous and Cambrian-Ordovician sediments to Proterozoic and Archaean metamorphic rocks.

The alluvial flood plains of the Ord River system carry a tall grass formation including the genera *Bothriochloa*, *Astrebula*, *Chrysopogon*, *Sorghum* and *Ophiurus*. Frontage woodlands carry a *E. papuana* alliance. *E. tetradonta*-*E. miniata* alliance occurs mainly on lateritic areas or on acid rocks. *E. tectifica*-*E. grandifolia* alliance occurs more commonly on soils formed on basic rocks, or shales and limestones. Low open woodlands of *E. pruinosa*

association are the low-rainfall counterparts of the *E. tectifera* woodlands and occur on soils derived from basic rocks. *E. brevifolia* association is generally seen on skeletal soils on acid rocks, and also on many other soils. Low open woodlands of *Terminalia* spp. alliance occur on cracking clay soils formed on volcanics and limestone. Tussock grasslands with *Astrebula*, *Bothriochloa*, *Chrysopogon* and *Panicum* occur on high-level plains of Tertiary alluvia. The rugged hilly country of the Halls Creek ridges carries *E. brevifolia* and *E. pruinosa* low open woodland associations over *Triodia intermedia*. The gently undulating plains with calcareous soils carry arid short grass communities of *Enneapogon* (Bottle Washers), *Aristida* and *Sporobolus*. These areas have suffered severe wind and gully erosion and have in recent years been resown to the alien *Cenchrus ciliaris* (Buffel Grass). Low open woodlands of *E. argillacea* are present on red soils on basic rocks (limestone dolomites and volcanics).

The Fitzroy botanical district, sometimes known as Fitzroyland, is a region in which a great thickness of gently folded sedimentary rock, of Palaeozoic and Mesozoic age, overlies a Precambrian basement of crystalline rock. The basement outcrops along the north and east of the basin.

The up-land regions consist of low hills and stoney plains with granite domes, gneiss hills, schist ridges and gently sloping sandy plateaux. The vegetation formations consist of low open woodland formations of *Eucalyptus* species with a hummock grassland ground layer. The main alliance of *E. brevifolia* is represented by a number of associations. One noteworthy association is *Grevillea pyramidalis*. The hummock grassland layer consists of the genera *Triodia* and *Plectrachne* in almost pure stands of species. A short grass ground storey with *Enneapogon* and *Aristida* may be seen on the interfluves and hill-foot slopes to the south-east. The drainage floors usually carry low open woodland formations of *E. dichromophloia* and *E. tectifera* alliances. The grass layer includes the genera *Chrysopogon*, *Sehniina*, *Sorghum* and *Bothriochloa*.

Rocky limestone areas and shallow calcareous soils are characterised by *Triodia wiseana* hummock grassland. The *Adansonia gregorii* open woodland association is largely restricted to rugged limestone country, although *A. gregorii* may be found associated with other species, e.g. with *E. dichromophloia* and *E. perfoliata* (Twinleaf Bloodwood) on granite tors or domes to the north. *E. dichromophloia*, *Grevillea striata* and *Lysiphyllum cunninghamii* low open woodland alliances occur on the outcrop plains over the gently folded sandstone, shale and limestone. These may be linearly oriented along strike lines and associated with *Acacia*, *Atalaya*, *Ventilago* and *Dolichandrone*. Cracking clay plains on the sedimentary rocks carry tussock grasslands of *Astrebula*, *Bothriochloa* and *Chrysopogon*. The tributary alluvial plains of the Fitzroy River consist mainly of *Grevillea striata* and *Lysiphyllum cunninghamii* low woodland with *Triodia* and *Chrysopogon*. The stable and active flood-plains carry *Astrebula* and *Chrysopogon-Bothriochloa* tussock grasslands, with *Acacia suberosa* as an important associate, and *E. papuana* and *E. microtheca* woodland alliances. Lining the main channels are *E. camaldulensis-Terminalia platyphylla* fringing communities. Coastal flats have fringing mangrove forests. Open grasslands of *Xerochloa* spp. occur on the margins of saline influence.

The Dampier botanical district consists of extensive sand plains. Surface drainage is lacking in most areas. The dominant layer in the vegetation is composed of *Acacia*, the more important species being *A. tumida*, *A. eriopoda*, *A. pachycarpa*, *A. holosericea* and *A. monticola*. *E. dichromophloia* and *E. zygophylla* make up the tallest stratum of the low woodland formation containing these *Acacia* species. Other tree genera include *Gyrocarpus*, *Atalaya*, *Hakea*, *Grevillea*, *Lysiphyllum*, *Persoonia* and *Erythrophleum*, with the occasional *Adansonia*. In the high rainfall area, a woodland formation of *E. miniata* alliance is present. This alliance also has a strong layer of *Acacia* shrubs. In this district *E. tetradonta* is not associated with *E. miniata* as it is in the Hann and Ord botanical districts. The grass ground storey is predominantly *Plectrachne pungens-Chrysopogon* spp. Shallow valleys, pans and depressions, which may be up to five kilometres wide, carry woodlands of *E. polycarpa*, *E. tectifera*, *E. microtheca* and *Melaleuca* spp. alliances, with various tall grasses. The saline coastal flats carry *Sporobolus virginicus* and *Arthrocnemum* spp. communities.

The *Ereman Province*, which lies between the predominantly summer and predominantly winter rainfall patterns of the north and the south-west, respectively, is intermediate in character. The rainfall, which over most of the province is less than 400 mm per annum, is received either from extensions of summer rainfall southward or from northern extensions of the southern winter systems. The vegetation of the province varies from woodland, high shrubland, low shrubland to hummock grassland. Eleven botanical districts have been broadly recognised, seven of them in the desert area.

The *Fortescue* botanical district, usually placed in the Northern Province, consists of the Pilbara block. This district is intermediate in character between the Northern and the Ereman Provinces. It consists of granite plains to the north and west, rising gently inland to a capping of basalt in the Chichester Range and beyond this to the dolomite and jaspilite of the Hamersley Range. The vegetation of the narrow coastal strip carries grasslands of *Eragrostis* and *Eriachne* and low open shrublands of *Acacia translucens*-*A. inaequilatera* alliance. *Acacia pyrifolia* high open shrubland alliance is present on granite and basalt soils. The *Acacia* alliances have a strongly developed *Triodia pungens* hummock grassland ground layer. The high shrubland *A. aneura* alliance is found along the major valleys and southern flanks of the Hamersley Range. A sparse shrub layer and a short grass ground flora composed of *Eragrostis* (Love Grass), *Eriachne* (Wanderrie Grass) and *Aristida* characterise these communities. On the Proterozoic rocks of the Hamersley Range the characteristic vegetation is a low open woodland formation, with *E. leucophloia* alliance. The hummock grassland ground layer is composed of *Triodia wiseana*.

The *Ashburton* and the *Austin* botanical districts are separated by the prevailing rainfall patterns. The former, with its rainfall more likely to occur in summer, and the latter, with its rainfall more likely to occur in winter, both carry extensive high shrubland formations of *A. aneura* alliance but, whereas the northern alliance is associated more with grass genera such as *Aristida*, *Eragrostis*, *Eriachne*, *Panicum*, *Brachiaria*, *Triodia* and *Setaria*, the southern alliance is associated more with genera such as *Danthonia*, *Eremophila*, *Maireana*, *Bassia*, *Helipterum*, *Cephalopterum*, *Velleia*, *Swainsona* and other herbaceous annuals. The *A. aneura* alliance consists of a number of sub-alliances and associations. These include the *A. aneura*-*Eremophila leucophylla*, *A. aneura*-*E. fraseri*, *A. aneura*-*A. tetragonophylla*, *A. aneura*-*A. craspedocarpa*, *A. aneura*-*A. sclerosperma*, *A. aneura*-*A. linophylla*, *A. aneura*-*Callitris huegelii*, *A. xiphophylla*-*A. grasbyi* and *A. sclerosperma*-*A. ramulosa* sub-alliances. The latter two are prominent in the Carnarvon Basin. *E. kingsmillii* is also associated with *A. aneura*, and with a hummock grassland ground layer. *Maireana pyramidata* is associated with *A. aneura* on saline alluvial plains. Other woody genera that are prominent in the *A. aneura* alliance are *Hakea*, *Grevillea*, *Atriplex*, *Frankenia*, *Plagianthus*, *Heterodendron* and *Brachychiton*. The upper margins and floors of pans and salt lakes in the Austin district carry an *Arthrocnemum* spp. alliance. Fringing these flats are *Melaleuca uncinata* communities. The drainage channels are fringed by *E. camaldulensis* and *E. microtheca* alliances.

The Canning, Mueller, Keartland, Carnegie, Giles and Helms botanical districts comprise what was once called the Carnegie botanical district. These make up the desert region of Western Australia.

The *Canning* and *Mueller* districts contain extensive areas of high shrubland with several species of *Acacia* dominating. Scattered trees of *Eucalyptus* sp. (Desert Bloodwood) are present on the dunes. *Owenia reticulata* (Desert Walnut) is the principal low tree species in the north-western sector. *E. pachyphylla* and *E. odontocarpa* are prominent in the north-eastern sector, while woodlands of *Casuarina decaisneana* are also of local importance there, in the interdunes. The ground layer of hummock grassland include *Triodia* and *Plectrachne*. *Grevillea wickhamii* and *Acacia monticola* are dominant on stoney rises. Low trees of *E. pruinosa*, *E. brevifolia*, *E. setosa* and *E. microtheca* occur at a very low density.

The *Keartland* district has a noticeable abundance of *Thrytomene maisoneuvii* and other Myrtaceae in the high shrubland formation. The Desert Bloodwood is present on the dunes, together with *Plectrachne schinzii*. *A. aneura* is of local importance, on small hills

and mesas, with *Triodia pungens*. Hills of igneous rocks are covered with *Plectrachne melvillei*.

The Carnegie district carries extensive areas of *A. aneura*, with *Danthonia* and seasonal ephemerals. On the rises of the lateritic plains hummock grasslands of *Triodia basedowii* and high shrublands with *E. kingsmillii* merge in with the *A. aneura* which tend to thin out. Desert Bloodwood, *Casuarina decaisneana*, and *E. microtheca* become more local in distribution, while *Plectrachne schinzii* is increasingly replaced by *Thryptomene maissonuevii* southwards.

The Giles district consists of ranges with sandhill country between them, somewhat similar to the Carnegie district. *Casuarina decaisneana* groves are very common in sandhill country between the ranges. *Triodia basedowii* and *Plectrachne schinzii* provide ground cover. On the ranges the high shrubland is made up predominantly of *Acacia* spp. including *A. aneura*, with *Eremophila*, *Hakea*, *Grevillea* and *Eucalyptus* as co-dominants in some areas. *Callitris columellaris* is locally dominant. *Triodia basedowii* and *Plectrachne melvillei* form the hummock grassland ground layer. The *A. aneura* alliance, prominent on basalt soils, has a ground flora of seasonal ephemerals and scattered *Eremophila* and *Cassia*.

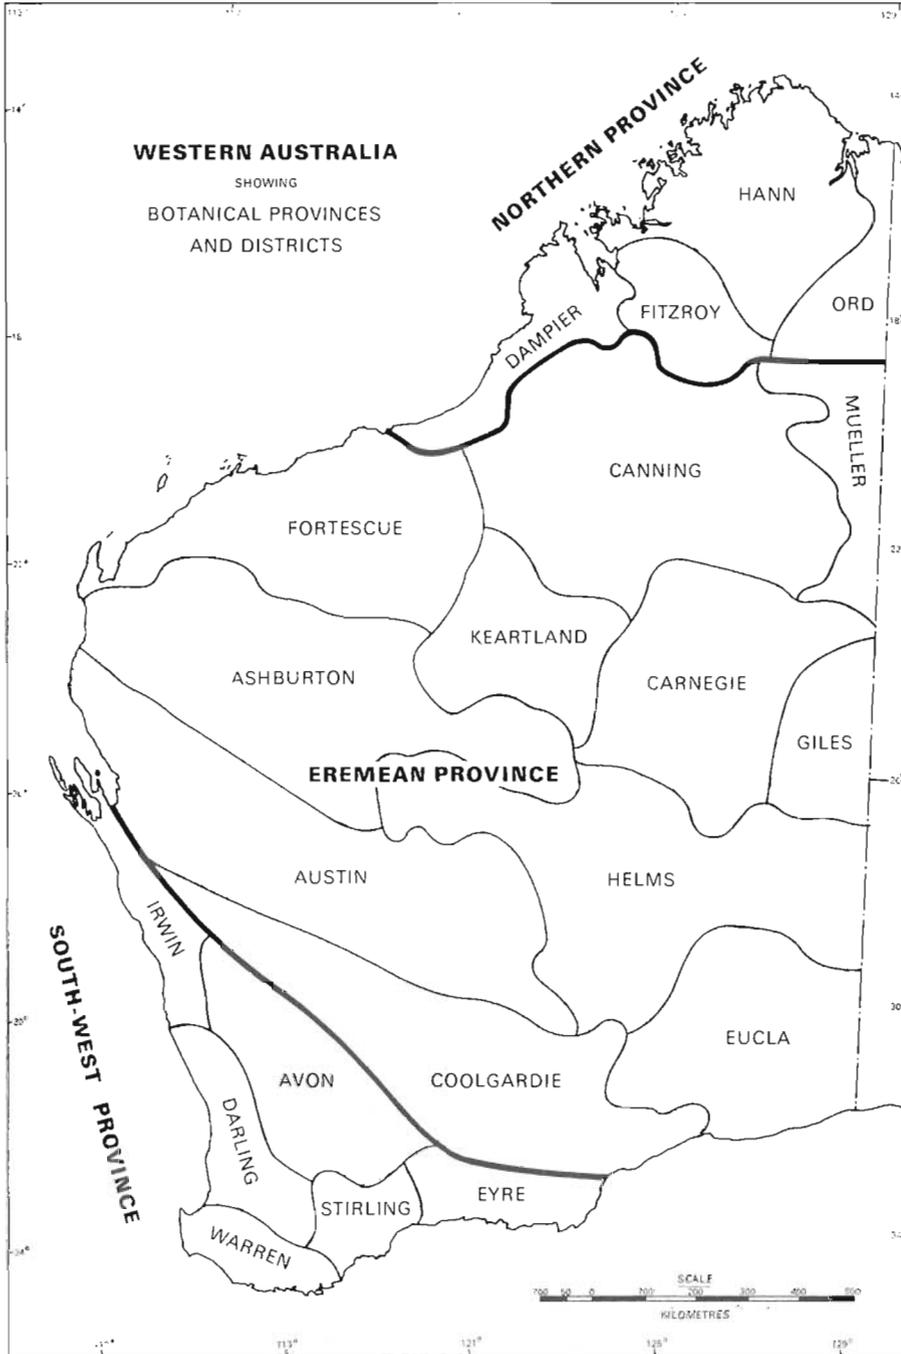

The Helms district contains extensive areas of *A. aneura* alliance. A high shrubland formation characterised by *E. youngiana* alliance is also well developed. Associated with the shrubland community are other tall shrubs such as *Hakea*, *Acacia*, *Melaleuca*, *Grevillea* and other *Eucalyptus* species. Patches of open woodland of *E. gongylocarpa* are restricted apparently to areas where the sand is deeper. The hummock grass associated with *E. youngiana* and *E. gongylocarpa* is *Triodia basedowii*.

The Eucla botanical district, commonly referred to as the Nullarbor Plain, is dominated by a low shrubland formation of *Maireana sedifolia*. *Atriplex*, *Stipa* and seasonal ephemerals are well represented. Towards the margin a low open woodland of *Acacia sowdenii* alliance, with a shrubland understorey of *Maireana* and *Atriplex*, becomes more and more evident. Along the coastal strip low woodlands of *Eucalyptus* spp. and *A. sowdenii* alliances are to be seen on the ridges and flats, respectively.

The Coolgardie botanical district marks the transition from the South-West Province to the Eremean Province, from the Eucalyptus zone to the Acacia zone. In this district a high degree of variability occurs within Eucalyptus and Acacia. It is thought that this variability may have been due to climatic oscillations known to have occurred since the Pleistocene period, thus making many of the 'species' of recent origin. The vegetation is a mosaic of woodland and shrubland formations. The woodland formations include *E. salmonophloia*, *E. transcontinentalis*-*E. flocktoniae*, *E. torquata*-*E. lesouefii*, *E. dundasii*-*E. longicornis* and *E. brockwayi* alliances. Shrubland formations include *Grevillea eriostachya*-*G. didymobotrya*-*G. excelsior*, *Eucalyptus foecunda*, *E. eremophila* and other mallee or shrub eucalypts, *Acacia* spp.-*Casuarina* spp.-*Melaleuca* spp. and *Acacia aneura* alliances. Salt lakes and salt pans are associated with halophytic communities of *Arthrocnemum* and *Atriplex* alliances.

The South-West Province, which receives its rainfall in winter and has a warm to cool temperate climate, has a high degree of endemism in its flora. The degree of endemism is most powerfully expressed in the cusps of its triangular-crescentic area particularly in the high shrubland and heath formations found to the north of the Hill River and to the east of the Fitzgerald River. Large areas of this province have been altered greatly by man and contain a high proportion of the naturalised alien species recorded in the State.

The Warren botanical district, which occupies the extreme south-western corner of Western Australia, has an annual rainfall in excess of 1,000 mm. The main vegetation formations are the high open forest, on granite soils represented by *E. diversicolor* alliance; open forest, on lateritic soils represented by *E. marginata*-*E. calophylla* alliance; low forest and scrub of *Agonis flexuosa* on extensive coastal dunes; also on sand dunes, heaths, with *Jacksonia horrida*-*Acacia decipiens*; and sedgelands of *Evandra aristata*-*Anarthria* spp. in waterlogged areas. Seasonally flooded areas may also carry a *Melaleuca preissiana* low for-

est alliance. Small patches of *E. cornuta* woodland are to be seen on dune sands, and more extensively to the north-east. *E. wandoo* woodlands occur along the north-eastern boundary of this district. Other species associated with the alliances include *E. jacksonii* and *E. guilfoylei* with *Banksia grandis*, *B. littoralis*, *Casuarina decussata*, *Agonis flexuosa* and *A. juniperina* as understorey trees and a dense high shrub layer of *Trymalium*, *Chorilaena*, *Hovea elliptica*, *Acacia pentadenia*, *Albizia* and *Pteridium*, (in *E. diversicolor* alliance) and *E. patens*, *E. megacarpa* and *E. rudis* with *Banksia grandis*, *B. littoralis*, *Casuarina fraserana*, *Persoonia longifolia*, *P. elliptica*, *Nuytsia floribunda* and *Xylomelum occidentale* as understorey trees and a low shrub heathlike groundlayer (in *E. marginata-E. calophylla* alliance).

The Darling botanical district, which occupies the south-west coastal region, has a rainfall in excess of 625 mm. There are two major sub-divisions to the district, the Perth basin, overlying sedimentary rocks of Cretaceous to Quaternary age and the Archaean Shield.

In the Perth basin the narrow strip of Recent or Pleistocene sand dunes carry scrub or low forests of *Agonis flexuosa* alliance at the southern edge, with *Acacia rostellifera-A. cyclops-A. cochlearis* alliance and sand dune complex over most of its length. Inland and parallel to the coastal dune system is a narrow belt of coastal limestone hills, the natural habitat of the *E. gomphocephala* woodland alliance. This alliance has an understorey tree layer of *Banksia grandis* and *Agonis flexuosa*, with a sparse shrub layer. The greater part of the Perth basin is mantled with aeolian sands. The northern sector carries a low forest formation of *Banksia menziesii-B. attenuata-Casuarina fraserana-E. todtiana* alliance, with a heath understorey, and smaller areas of *B. prionotes* alliance; the southern part is dominated by a *E. marginata-E. calophylla* open forest or woodland alliance, with a heath understorey, and smaller areas of *Banksia* low forest. Poorly drained swampy areas carry *Casuarina obesa* low forest alliance; *Actinostrobus pyramidalis* (Swamp Cypress Pine) is of local significance. Swamp and fen formations are made up of complex communities of sedgeland. Watercourses in the district are fringed by a *E. rudis-Melaleuca* spp. alliance.

The Archaean Shield in the Darling district is a laterite capped plateau dissected by young streams to form steep sided valleys. An open forest formation of *E. marginata-E. calophylla* alliance characterises the lateritic erosional and deep depositional surfaces, with *E. wandoo* alliance restricted to the heavier pediment soils. The understorey layers of the *E. marginata-E. calophylla* alliance resemble those in the same alliance in the Warren district. The *E. wandoo* understorey layer has a more open character. This alliance, which in its most highly developed state fringes the eastern boundary of this district, is more widely distributed in the Avon botanical district.

The Irwin botanical district, for the most part, overlies sedimentary rocks from Silurian to Quaternary age, with smaller areas of Precambrian metamorphics. This district contains one of the two floristically important cusps of the South-West Province. At the northern extremity, the Irwin district consists of red and yellow sands underlain by Mesozoic sediments. The high shrubland formation is made up of *Acacia linophylla-A. brachystachya*, *Grevillea eriostachya-G. didymobotrya-G. leucopteris*, *Eucalyptus eudesmoides* (Mallalie) and *E. oldfieldii* (Oldfield's Mallee) alliances. Low woodlands of *Banksia ashbyi-B. sceptrum* and *B. prionotes* occur on deep sands. Heath and low heath formations of Proteaceae, Myrtaceae, and Leguminosae occur in areas where the sand is shallow or where a lateritic crust is present. These formations vary considerably in floristic composition.

On the metamorphic rocks, the vegetation on residual flat tops and plateau surfaces carry low forests of *B. prionotes* alliance with heath on the lateritic surfaces. A woodland formation of *E. loxophleba* alliance dominates the loamy valley soils, now extensively used for farming. This alliance is associated with a high shrub layer of *Acacia acuminata* (Raspberry Jam) and a herbaceous ground layer composed of *Stipa*, *Neurachne* and seasonal ephemerals. *E. salmonophloia* alliance is significant only in the eastern part of the district.

The vegetation of the coastal dune system is an extension of the Darling district. The limestone hills in the Irwin district carry low woodlands of *E. erythrocorys*. Poorly drained

areas and small lakes carry or are fringed by *Casuarina obesa* and *E. rudis*-*Melaleuca* spp. alliances.

The central to southern portions of the Irwin district are characterised by the so-called 'sand plains'. These carry low woodlands of *Banksia menziesii*-*B. attenuata*-*E. todtiana* and *B. prionotes* alliances particularly on the deeper sands. *E. lanepolei* (Salmon White Gum) and *E. accedens* (Powder Bark Wandoo) are of local significance, on heavy clay soils. In areas of deep dissection, the valleys carry woodlands of *E. wandoo* and *E. calophylla* alliances. Heath and low heath formations cover most of the elevated regions. The heath communities vary in composition, depending upon the depth of sand and the presence of laterite, and some may eventually develop into high shrubland communities with long-term fire protection. Proteaceae, Myrtaceae and Leguminosae are dominant components, while on laterite hills *Xanthorrhoea reflexa* and *Dryandra* spp. become very conspicuous. *Banksia hookerana* alliance is locally significant north of the Arrowsmith River. High shrubland communities with *Grevillea eriostachya*-*G. didymobotrya*-*G. eriostachya*, *Lambertia multiflorus* (Native Honeysuckle) and *Actinostrobos arenarius* alliances are also significant in the sandplain region.

The Avon botanical district, which covers most of the so-called wheat belt, is now for the most part cleared, of native vegetation, for farming.

On the eastern edge of the Darling district, on the low hilly to hilly terrain, with hard acidic yellow mottled soils, the pediments of early erosional cycles, the woodland formation consists of *E. wandoo* alliance. *E. marginata*-*E. calophylla* alliance occur on soils which tend more to ironstone gravels with a sandy matrix. The *E. wandoo* alliance is associated with *E. accedens*, and with *E. astringens* which commonly occur on lateritic breakaways. In the southern portion *E. gardneri* (Blue Mallet) and *E. falcata* (White Mallet) are more commonly seen on the breakaways, while *E. cornuta* woodland alliance replaces the *E. wandoo* woodland alliance. The *E. wandoo* woodland has a very open low shrub layer. Poisonous plants of the genera *Gastrolobium* and *Oxylobium* are commonly seen in this woodland formation. On granite outcrops, a vegetation complex reflects the succession of colonisation by algae and lichen to shrublands with *Leptospermum* and eventually to climax communities of woodland of *Casuarina huegeliana* alliance, which occur on sandy or gritty soils over one metre in depth.

On the hard neutral red soils of the river valley systems, which represent further erosional cycles, the woodland formation is represented by the *E. loxophleba* alliance, with *Acacia acuminata* as its main associate. *A. acuminata* tends to merge with the *E. wandoo* alliance, particularly as the soils become sandy or gritty. In the southern portion *E. occidentalis* alliance replaces the *E. loxophleba* alliance. *E. occidentalis* woodlands occur also on the clay soils of swamps or seasonal shallow lakes.

Extensive areas of *E. salmonophloia* woodland alliance are found in the hard alkaline yellow soils further to the east, on valley plains and terraces. *E. salmonophloia* woodland has an open mixed low shrub understorey with *Maireana* and *Atriplex* dominating in more saline soils. Other trees associated with this alliance are *E. salubris* (Gimlet), *E. longicornis* (Red Morrell) and *E. melanoxylon* (Black Morrell).

Forming a mosaic with the woodland formations are the low woodland and shrubland formations developed on the plateau areas, on sandy yellow earths containing ironstone gravel and over mottled or pallid-zoned clays. The *B. prionotes* woodland alliance and *Acacia* spp.-*Casuarina* spp.-*Melaleuca* spp. and *Grevillea eriostachya*-*G. didymobotrya*-*G. leucopteris* shrubland alliances occur on yellow sand. *Dryandra* spp. and mixed Myrtaceae, Proteaceae, Leguminosae and Epacridaceae heath alliances occur on laterite or shallow sand over laterite. Other shrubland formations include *E. eremophila* (Horned Mallee), *E. oldfieldii* (Oldfield's Mallee), *E. drummondii* (Drummond's Gum), *E. pyriformis* (Pearfruit Mallee) and other mallee or shrub eucalypt alliances. *E. macrocarpa* (Mottlecah) shrubland occurs on deep sand.

The salt lakes, remnants of once extensive river systems, carry *Casuarina obesa* and *Melaleuca* spp. low woodland alliances on the fringes with low shrubland formations of

Arthrocnemum spp. alliance in the old watercourses. *E. sargentii* (Salt River Mallet) and *E. kondininensis* (Stocking Tree) grow on saline soils.

The *Stirling* botanical district, which includes the Stirling and Mount Barren Ranges, together with the Eyre district form the second of the two floristically important cusps of the South-West Province.

The Stirling district, which lies at the edge of the Archaean Shield where it abuts into the Proterozoic metamorphics of the Albany-Esperance block, consists largely of sediments of middle and late Eocene age, at one time mantled by a lateritic crust, which is represented in the present landscape by narrow ironstone gravel ridges and erosional scarps along the northern edge.

The Stirling and Mount Barren Ranges which rise abruptly out of an otherwise predominantly undulating landscape are composed of hard Proterozoic metasedimentary rocks. The ranges carry closed heath and scrub formations of mixed Myrtaceae, Proteaceae, Leguminosae and Epacridaceae alliance. They are noted for their diversity in the flora and their conspicuous endemic or near endemic species. Woodlands of *E. marginata*-*E. calophylla*, *E. wandoo* and *E. cornuta* occur on the lower slopes and valleys of the Stirling Range.

Over a large area of the Stirling district, the vegetation is made up of high shrubland formations with shrub or mallee eucalypts dominating. *E. tetragona*, *E. redunca*-*E. uncinata*, *E. gardneri*-*E. nutans* and *E. eremophila*-*E. oleosa* alliances form a mosaic over the area, the former on the undulating upper slopes and rises nearer the coast. Patches of mixed heath and low heath of Proteaceae, Myrtaceae and Leguminosae are present. The heath vegetation merges into and forms the understorey of the high shrubland communities. Low forests of *E. platypus*-*E. gardneri*-*E. falcata* alliance occur locally on scarp slopes.

Woodland formations of *E. occidentalis*, *E. loxophleba* and *E. salmonophloia* alliances occur along drainage lines and loamy slopes and flats. The former alliance is favoured by higher rainfall and winter wet sites and is often seen on or around clay pans. Salt lakes are covered by or fringed by low shrubland formations of *Arthrocnemum* spp. and *Atriplex* spp. alliances. A scrub formation of *Melaleuca* spp. alliance may also be present.

The littoral fringe of the coastal plain is made up of a chain of granite bosses with drift sand between them. *Acacia rostellifera*-*A. cyclops*-*A. cochlearis* and *Agonis flexuosa* scrub alliances are present with the sand dune and granite lithic complexes. *Banksia baxteri* and *B. attenuata*, as well as *Lambertia inermis* (Chittick), are dominant on the drift sand, inland, with *E. marginata* and *E. cornuta*, the latter restricted to interdunal flats.

The *Eyre* botanical district, which is virtually a continuation of the Stirling district is covered for the most part with shrubland formations. *E. tetragona* alliance gives way to *Banksia speciosa*-*Lambertia inermis* and *Nuytsia floribunda* as the soils become sandier, while inland *E. eremophila*-*E. oleosa* and *E. redunca*-*E. uncinata*-*E. forrestiana* alliances occur over extensive areas. *E. redunca*-*E. uncinata* occur also on broad valley slopes. To the east *E. tetragona* is replaced by *E. incrassata*, while a *E. cooperana* (Many-flowered Mallee) alliance is found on limestone soils at the extreme southern end of the Nullarbor Plain, near the Russell Ranges.

Open heath of mixed Proteaceae, Myrtaceae and Leguminosae alliance forms mosaics with high shrubland communities and provides the understorey layer for the latter. The Russell Ranges, which are similar to the Stirling and Mount Barren Ranges, carry a heath and scrub formation.

The coastal granite bosses and intervening drift sand carry the usual sand dune and granite lithic complexes. Scrub is made up of *E. platypus* var. *heterophylla*-*E. angulosa* and *A. cyclops*. Coastal swamps carry a *Melaleuca* spp. alliance. Inland granite rocks carry a lithic complex.

The principal woodland alliance is *E. occidentalis*, along water courses and associated with clay pans. *Arthrocnemum* spp. alliance is found in and around salt lakes.

The naturalised flora of Western Australia which now make up so much of the landscape of the South-West Province is composed of elements from many parts of the world. These plants have in some instances been deliberately introduced, others have been intro-

duced by accident. Some species have been introduced on more than one occasion and several variants may be present. The more successful species originate from areas of similar climate, and in the absence of disease and insect attack, which in their native habitat would keep them in check, are able to disseminate at an alarming rate. South Africa and the Mediterranean Region provide most of the successful alien species found in the South-West Province.

Grasses of importance are represented by the genera *Bromus* (Brome Grass), *Lolium* (Rye Grass), *Hordeum* (Barley Grass), *Avena* (Oats), *Aira* (Silver Grass), *Briza* (Blowfly Grass), *Poa* (Winter Grass) and *Vulpia* (Silver Grass) from Southern Europe, and *Eragrostis* (Love Grass), *Ehrharta* (Veldt Grass) and *Rhynchelytrum* (Red Top) from South Africa. Pasture legumes from southern Europe include *Trifolium* (Clover), *Medicago* (Medic, Lucerne), *Lupinus* (Lupin), *Ornithopus* (Serradella), *Vicia* (Vetch) and *Lotus* (Birdsfoot Trefoil). *Psoralea pinnata* (African Scurf Pea) from South Africa is a shrubby weed.

The weed flora of Western Australia is composed largely of alien species. Very few native species have become weeds in this State. The ubiquitous composite *Cryptostemma calendula* (Cape Weed) originates from South Africa, as do *Arctotheca*, *Berkheya*, *Osteospermum*, *Gorteria*, *Cotula* and *Ursinia*. Naturalised European composites include *Carthamus* (Saffron Thistle), *Hypochoeris* (Flat Weed), *Carduus* (Slender Thistle), *Inula* (Stinkwort), *Lactuca* (Lettuce), *Erigeron* (Fleabane), *Centaurea* (Cockspur Thistle) and *Cirsium* (Spear Thistle). The Brassicaceae, significant as crop weeds, comprise *Raphanus* (Radish), *Brassica* (Turnip), *Rapistrum* (Turnip Weed) and *Sinapis* (Charlock). *Carrichtera annua* (Ward's Weed) is widely naturalised in the Eucla district. All these are of European origin. The South African Iridaceae are represented by genera such as *Homeria* (Cape Tulip), *Watsonia*, *Gladiolus*, *Moraea*, *Ixia* and *Sparaxis* and were introduced in the first instance as garden subjects. *Echium* (Paterson's Curse) (Boraginaceae) was another garden introduction, while *Rubus* (Blackberry) (Rosaceae), a woody species, was introduced for its fruit. *Oxalis* (Sour sob) (Oxalidaceae), from South Africa, is common in vineyards and orchards, while the family Polygonaceae is represented by *Rumex* (Dock) and *Emex* (Double Gee), weeds of wide habitat. The latter, introduced as a spinach from South Africa, is now extremely widely distributed in the South-West and Ereman Provinces. Also widely distributed but more localised in occurrence is *Argemone* (Mexican Poppy) (Papaveraceae), with origins in North America. *Prosopis* (Mesquite) (Mimosaceae) and *Parkinsonia* (Ceasalpiniaceae) from the Americas, and *Calotropis* (Asclepiadaceae) from Africa, are weedy shrubs or small trees naturalised in the tropics.

In addition to the naturalised alien species which now exceed 600 in number, there are hundreds of species of plants under cultivation in Western Australia. These include field crops (cereal, legumes and oil seeds), horticultural plants (fruit, vegetables and garden subjects) and forest trees. Other species are being deliberately introduced for particular purposes, e.g. the reclamation of waste land and saline areas.

As Man's activities further impinge upon the natural ecosystems and as more and more alien plants become naturalised in this State, so will the effect of these plants species be more widely felt in the natural environment. It is essential to have information on the biology of alien species so that proper management measures can be applied to maintain harmony within our natural ecosystems.

The Grasses

The grasses are an extremely important and very varied group of plants. They are of considerable economic value for carbohydrate and, through the livestock industry, protein production, for the maintenance of wildlife, and for protecting soil and water resources. Certain species of grass are used as indicator plants for assessing soil conditions of ecosystems and the ecological status of plant communities.

Among the many grasses cultivated for food are *Triticum aestivum* (Wheat), *Avena sativa* (Oats), *Hordeum vulgare* (Barley), *Secale cereale* (Rye), *Oryza sativa* (Rice), *Zea mays* (Maize) and *Saccharum officinarum* (Sugar cane). A large proportion of grass species are acceptable fodder plants for livestock production. Leafy plants are generally preferred to stemmy plants, or to plants which have a high proportion of fibre in the leaves and stem.

Some species of grasses are cultivated for their essential oil content *e.g.* *Cymbopogon* spp. (Citronella Grass), some for fibre production, while others are grown as ornamentals, as lawn grasses or for holding the soil. Some grasses are reputedly medicinal, others are known to be poisonous. Some are used for providing shelter while others are capable of causing serious mechanical injury or are economically significant as weeds.

The vegetative and reproductive shoots in grasses present an amazing diversity of shapes, sizes, textures and so on. The grass plant consists basically of a vertical hollow stem or number of stems, borne on its roots, and strengthened at intervals by transverse septa known as nodes. The leaf-blades extend from sheaths which encircle the stem and which arise at the nodes alternately and along one vertical plane (distichous arrangement). A small lobe or outgrowth known as an auricle may or may not be present at the base of the leaf-blade, while at the junction of the leaf-blade and the sheath, on the inner surface, is a structure called a ligule. Grasses may be annual or perennial plants. The reproductive shoot or inflorescence bears one or more spikelets, which may be arranged variously in the inflorescence. Each spikelet is made up of a series of scales, arranged along an axis or rachilla, in the axils of which are the flowers. The outermost scales or bracts are the glumes. Enclosed in these are the flower-bearing bracts termed the lemma (outer bract) and palea (inner bract). The reduced flower, or floret, consists of the gynaecium (pistil and contents), androecium (stamens) and lodicules (small scales, two to three in number). Fertilisation leads to the production of the caryopsis or grain. 'Bulblets' due to proliferation is seen in certain species. Grass fruits and seeds may be dispersed by wind, water or by special devices such as barbs, hooks, awns and needle-like points.

The *Poaceae* (Gramineae) Grass family, is divided into three sub-families based on the morphology of the spikelet, the inflorescence and the vegetative parts.

The *Panicoideae* have spikelets two-flowered, falling entire at maturity, usually with the upper floret bisexual and the lower floret male or barren. It includes a number of genera which are more typically found in the Northern Province and warmer Eremean Province, *e.g.* *Digitaria*, *Brachiaria*, *Paspalidium*, *Paraneurachne*, *Panicum*, *Setaria*, *Penisetum*, *Xerochloa*, *Rottboellia*, *Ophiuros*, *Imperata*, *Eulalia*, *Dichanthium*, *Bothriochloa*, *Sehima*, *Heteropogon*, *Sorghum*, *Chrysopogon*, *Schizachyrium*, *Cymbopogon*, *Iseilema*, *Chionachne* and the introduced *Cenchrus*. Genera which extend their range into the more temperate South-West Province include *Spinifex*, *Neurachne*, *Thyridolepis* and *Themeda*. The *Panicoideae* is a large tropical and subtropical group with origins possibly in the East Africa—Malagasy region. Regions of maximum abundance are southern Asia and northern Brazil.

The *Pooideae* (or *Festucoideae*) have spikelets one to many-flowered, breaking up at maturity above the more or less persistent glumes, or, if falling entire, not two-flowered, with the lower floret male or barren. It includes a number of genera which are more typically found in the South-West Province and the more temperate part of the Eremean Province, *e.g.* *Microlaena*, *Tetrarrhena*, *Amphibromus*, *Danthonia*, *Puccinellia*, *Poa*, *Diplopogon*, *Stipa* and naturalised aliens such as *Phalaris*, *Ehrharta*, *Avena*, *Aira*, *Holcus*, *Pentaschistis*, *Briza*, *Puccinellia*, *Bromus*, *Dactylis*, *Poa*, *Vulpia*, *Festuca*, *Ammophila*, *Lolium* and *Hordeum*. Genera which extend their range into or are found mainly in the Northern Province include *Oryza*, *Eriachne*, *Triodia*, *Plectrachne*, *Eragrostis*, *Sporobolus*, *Astrebla*, *Dactyloctenium*, *Brachyachne*, *Cynodon* and *Chloris*. The *Pooideae* appears to have spread widely throughout the world, although particular tribes, sub-tribes and genera have a more restricted distribution, *e.g.* seven genera are restricted to Australia. It is tentatively concluded that the centre of origin of this sub-family is the African continent.

The *Bambusoideae*, the bamboos, are arborescent grasses with spikelets essentially similar to those of the *Pooideae*. However, the inflorescence in the latter form panicles and not the series of dense nodal clusters of spikelets on a leafless axis seen in the bamboos. The *Bambusoideae* is not represented in the Western Australian flora. It is found in tropical and subtropical regions of the world. The region of greatest abundance is southern Asia, although a great species diversity is seen in certain genera in South America.

The value placed upon species of grasses for providing ground cover or for providing useful forage depends upon the climatic and edaphic conditions of the pasture lands.

Species of *Triodia* and *Plectrachne* are usually regarded as being of low forage value but because of their ground cover attributes are rated highly in the particularly harsh situations where they occur. These two genera, commonly referred to as 'spinifex', are more typically found in arid and semi-arid regions of Australia and are of considerable importance to the pastoral industry. They show a close affinity one to the other, the chief difference being the relatively longer glumes and the much deeper lobing in the lemmas of *Plectrachne*. Both genera form hummocks which may be up to six metres in diameter and 1.8 metres high. In some species the centre of the hummock dies and the mature plants form annuli. Projecting pungent-pointed leaves, which are highly lignified and grooved on the under-surface, may or may not have a resiniferous sheath, characteristic of the so-called 'Gummy Spinifex'. Burning of arid hummock grasslands (Spinifex) encourages regrowth of spinifex and other herbage palatable to livestock.

In the Northern Province the more desirable species of grasses on black soil plains are *Astrelba* spp. (Mitchell Grass), *Chrysopogon fallax* (Ribbon Grass), *Dichanthium* spp. (Blue Grass or Bundle-bundle) and *Themeda* spp. (Kangaroo Grass). On Curly Spinifex and Soft Spinifex pasturelands these are *Plectrachne pungens* (Curly Spinifex), *Triodia pungens* (Soft Spinifex) and Ribbon Grass. On levee banks they include Ribbon Grass, Blue Grass, *Sehima nervosum* (White Grass) and the introduced *Cenchrus ciliaris* (Buffel Grass) and *C. setigerus* (Birdwood Grass). Desirable fringing grasses include *Coelorhachis rottboelioides*, *Arundinella nepalensis* (Reed Grass), *Imperata cylindrica* (Blady Grass) and *Ophiuros exaltatus*. On rocky limestone soils *Triodia wiseana* (Limestone Spinifex) is of value while in skeletal soils *Triodia intermedia* (Lobed Spinifex), Curly Spinifex, Soft Spinifex and Ribbon Grass are desirable species. Desirable species in drainage floors, swales and plains include Ribbon Grass, White Grass and Curly Spinifex, while on saline soils these are *Xerochloa* spp. (Rice Grass), *Sporobolus virginicus* (Saltwater Couch) and *Diplachne fusca*. Grasses of value on basalt soils include *Chrysopogon fallax* and *C. latifolius* (Ribbon Grass), Wheat Grass, Kangaroo Grass, Curly Spinifex and Soft Spinifex. Grasses that are of lesser value in the various pasture lands of the Northern Province include *Iseilema* spp. (Flinders Grass), *Brachyachne convergens* (Summer Couch), *Dactyloctenium radulans* (Button Grass), *Heteropogon contortus* (Black Spear Grass), *Sorghum* spp. (Annual Sorghum), *Eriachne* spp. (Wire Grass), *Eragrostis* spp. (Love Grass), *Panicum* spp. (Panic) and *Sporobolus australasicus* (Fairy Grass), while undesirable grasses consist mainly of *Aristida* spp. (Three-awned Spear Grass). Grasses that are grown or offer prospects for growing as crops in the Northern Province include *Sorghum vulgare* (Grain Sorghum), Rice, Sugar Cane and Citronella Grass.

In the Ereman Province the composition of grasslands shows a transition from the predominantly summer rainfall area in the north to the more typical winter rainfall area in the south. Grasses of value in the northern part include *Eragrostis setifolia* (Plain Grass), *E. eriopoda* (Woollybutt Grass), Mitchell Grass, Ribbon Grass, Buffel Grass, Soft Spinifex, Lobed Spinifex, Limestone Spinifex and other species of *Triodia* such as *T. lanigera*, *T. longiceps* and *T. angusta*. In the more arid regions *T. basedowii* and *Plectrachne melvillei* are of importance while on the west coast and islands *T. plurinervata* is of significance. In the southern portion the more valuable grasses include *Eriachne flaccida* (Claypan Grass), *Thyridolepis mitchelliana* (Soft Wanderrie Grass), *Danthonia bipartita* (Broad-leaved Wanderrie Grass), *D. caespitosa* (Wallaby Grass), *Amphipogon* spp. (Grey-beard Grass), *Stipa* spp. (Spear Grass), *Triodia scariosa*, *T. concinna* and *Plectrachne* spp. Grasses of lesser value include Three-awned Spear Grass, Button Grass, *Eriachne aristidea* (False Wanderrie Grass), *E. helmsii* (Buck Wanderrie Grass), *Eragrostis xerophila* (Wire Wanderrie Grass), *E. lanipes* (Creeping Wanderrie Grass) and *Aristida contorta* (Wind Grass).

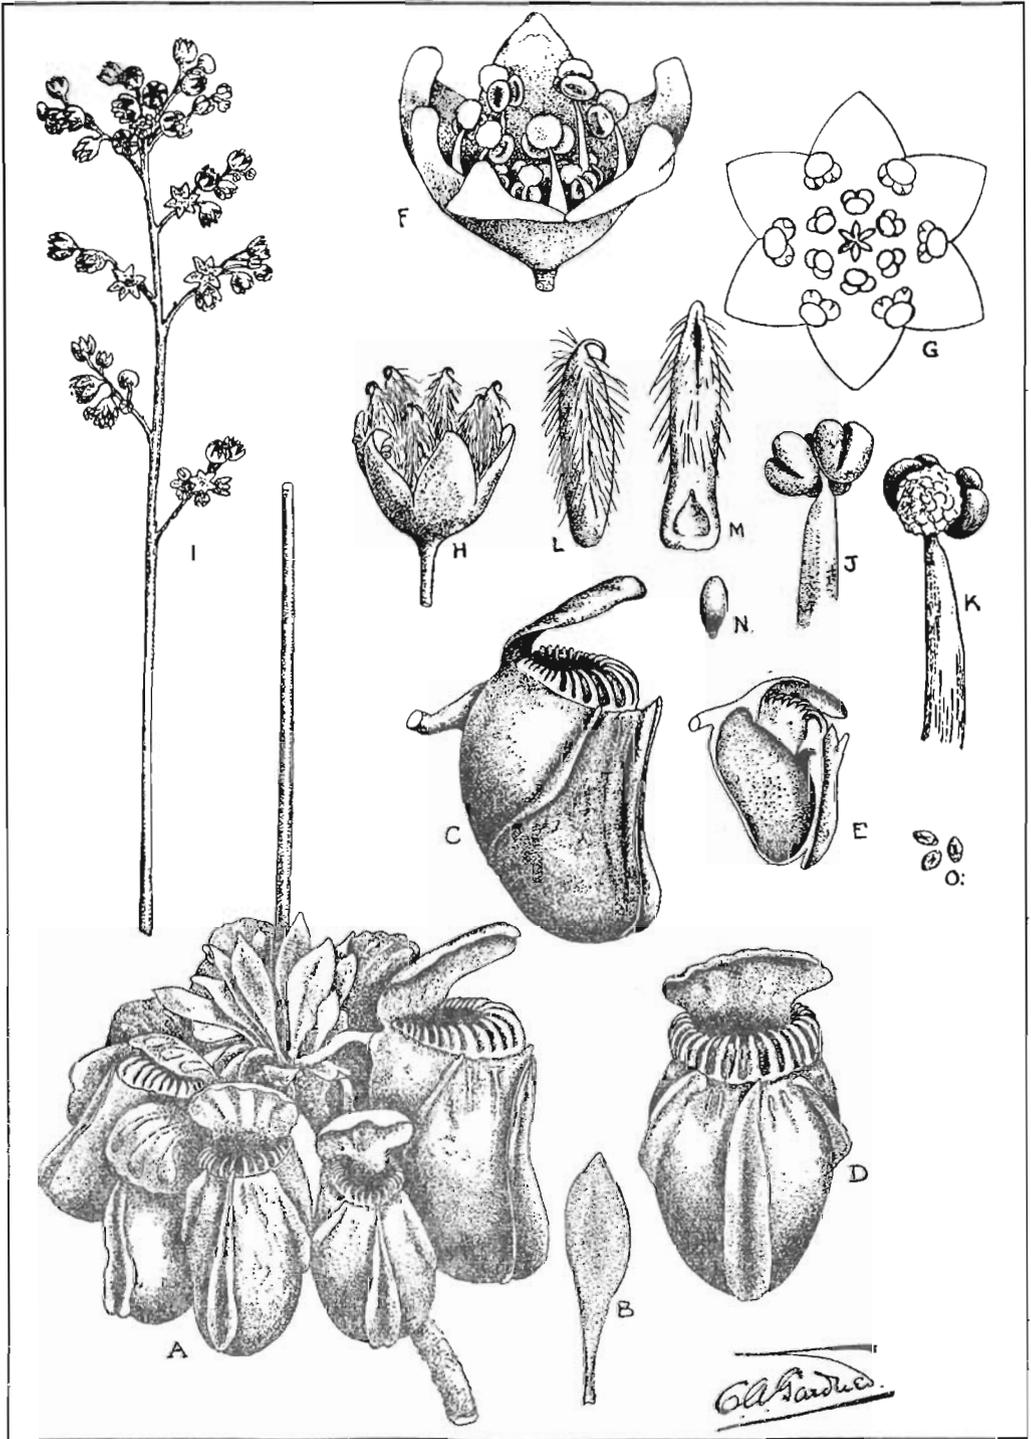

Most of the significant areas in the South-West Province that were dominated by native grasslands have disappeared with clearing. Some noteworthy native grasses in this Province are *Neurachne alopecuroidea* (Foxtail Mulga Grass), *Stipa* spp. (Spear Grass), *Danthonia* spp. (Wallaby Grass), *Poa* spp. (Poa), *Microlaena stipoides* (Weeping Grass), *Tetrarrhena laevis* (Forest Rice Grass), *Themeda australis* (Kangaroo Grass) and *Festuca scirpoidea*. Sown pastures in the South-West Province range from a Mediterranean annual pasture

type to a Temperate perennial pasture type. Annual pastures are based on sown legumes such as *Trifolium subterraneum* (Subterranean Clover), other *Trifolium* spp., *Medicago* spp. and *Lupinus* spp. Grass species such as *Lolium rigidum* (Wimmera Rye Grass) and *Bromus mollis* (Soft Brome) are sometimes sown in with the legumes. Other naturalised annual species in these pastures include *Bromus diandrus* (Rippgut Brome), *B. rubens* (Red Brome), *Vulpia* spp. (Silver Grass), *Hordeum leporinum* (Barley Grass), *H. hystrix* (Sea Barley Grass), *Aira* spp. (Silvery Hair Grass), *Ehrharta longiflora* (Annual Veldt Grass), *Briza maxima* (Blowfly Grass) and *B. minor* (Shivery Grass). In more specialised situations introduced grasses such as *Ehrharta calycina* (Perennial Veldt Grass), *Eragrostis curvula* (African Love Grass), *Rhychelytrum repens* (Natal Redtop), *Hyparrhenia hirta* (Thatch Grass), *Pennisetum macrourum* (African Feather Grass), and *Lagurus ovatus* (Haire's Tail Grass) are of significance. *Lolium perenne* (Perennial Rye Grass) is the principal sown species in perennial pastures. Other components of perennial pastures include *Phalaris tuberosa* (Toowoomba Canary Grass), *Pennisetum clandestinum* (Kikuyu Grass), *Paspalum dilatatum* (Paspalum), *Dactylis glomerata* (Cocksfoot) and *Holcus lanatus* (Yorkshire Fog). Useful sand-binding grasses include *Ammophila arenaria* (Marram Grass), *Ehrharta villosa* (Pyp Grass), *Secale cereale* (Rye) and the native *Spinifex longifolius* and *S. hirsutus*. On saline soils *Puccinellia ciliata* (Puccinellia), *Paspalum vaginatum* (Seashore Paspalum) and *Sporobolus virginicus* (Saltwater Couch) are of value. Lawn grasses that are commonly cultivated in Western Australia are *Cynodon dactylon* (Couch), *Stenotaphrum dimidiatum* (Buffalo Grass), *Digitaria didactyla* (Queensland Blue Couch), Seashore Paspalum and Kikuyu Grass. Species of grasses grown as crops in the South-West Province are Wheat, Oats, Barley, and to a lesser extent Grain Sorghum and Rye (see Chapter VIII, Part 1).

DISTRIBUTION

Terrestrial Vertebrates

An observer who looks carefully at the fauna of a large land mass like the Australian continent will soon discover that its animals are not distributed uniformly throughout it. He will find that groups of species which are characteristic of some places are missing from others. This is because the distribution of animals results both from their response to the physical (*i.e.* ecological) conditions of their environment (and these are not uniform from place to place), and from their past histories. For example, the presence of routes along which a species could have moved in the past, and of barriers which would have made its movement from one place to another impossible, decide whether any species could have reached a particular locality by today. But whether it has persisted there until today depends upon local conditions having been suitable for it.

The relationship between the distribution of a species and the character of its environment may be demonstrated dramatically and most easily by comparing the distribution of animals with that of climate, and in particular with its components of temperature, rainfall and the time of the year at which rain falls. In Western Australia many species lie within one or other of the boundaries of two rather different climatic regions. These are the south-west with its regular and plentiful rainfall during cold winters, and the Kimberley with regular, plentiful rainfall during hot summers. The remainder of the State receives intermittent and unreliable rainfall in quantities which vary widely; some parts of this area (*e.g.* the Pilbara) receive their small amount of rain principally in the summer and other parts (*e.g.* the Nullarbor) in the winter.

An analysis of most of the Western Australian groups of vertebrate animals shows that they can be referred to three faunal assemblages characteristic of these climatic regions. These assemblages are called *faunas* and have been named by zoogeographers *Bassian* which, in this State, is the fauna characteristic of the south-west; *Torresian* which, in this State, is characteristic of the Kimberley; and *Eyrean* which is the fauna which occupies the land between. While the composition of a fauna is, generally speaking, characteristic of the area in which it occurs, the occurrence of a particular species in a fauna does not mean that it will not be found in another because each of the faunas has several elements which are sufficiently wide in their requirements for them to occur as 'foreigners' in the faunas of neighbouring regions. Examples of these are the species with predominantly Torresian populations (and apparently histories of origin) which are found today in the otherwise Eyrean fauna of the Pilbara district of the north-west; and various Eyrean species which occur in the Bassian fauna of the south-west.

Among the birds the sharpest faunal break is between the Torresian fauna of the Kimberley division and the Eyrean fauna of the Pilbara. The Kimberley is the headquarters in Western Australia of the Scrub Fowl (*Megapodius freycinet*), the Fruit Pigeons (Ptilinopinae), Lorikeets (*Trichoglossus* and *Psitteuteles*), the White Cockatoo (*Cacatua galerita*) and most of the Grass Finches. The Torresian species which penetrate further southwards include the Brolga (normally only to Onslow), White-breasted Wood Swallow (to Shark Bay), and the Brown Honeyeater (right through to the south-west).

Among mammals there seem to be a few truly Torresian species in Western Australia. Examples would be the Fruit Bats or Flying Foxes (*Pteropus* and *Macroglossus*), the Little Rock Wallaby (*Peradorcas concinna*), the Jungle or River Wallaby (*Macropus agilis*) and the Antelope Kangaroo (*Macropus antilopinus*). On the whole most of the mammal species which occur in the Kimberley seem to be characteristic of that part of the Eyrean fauna inhabiting the country which receives intermittent rainfall during the summer.

Even among birds, the boundary between the majority of the Eyrean species and the bulk of the Bassian species is less well defined than that which separates Eyrean and Torresian faunas as there is a good deal of overlapping. For example, the line which separates the woodland eucalypts and the mulga, the so-called 'mulga-eucalypt line', is the extreme limit of most Bassian species, though many do not range inland beyond a line connecting Geraldton, Moora, Northam and the Stirling Range. The mulga-eucalypt line separates, to quote an example, the main distributions of the Grey Kangaroo (Bassian) and the Red Kangaroo (Eyrean). This line is the northern limit of other well known Bassian species such as the Red Wattle Bird.

The south-west of the State has representatives of many well known Bassian species also found in south-eastern Australia. These include among birds, the Brush Bronzewing, White-tailed Black Cockatoo, Western Rosella, Scarlet Robin, Yellow Robin, Southern Emu-Wren, Silvereve, White-naped Honeyeater, Western Spinebill, New Holland Honeyeater and Red-eared Firetail. Among mammals there are the Pigmy Possum, the Wambenger, the Grey Kangaroo, the Tammar Wallaby, the Brush Possum and various dunnarts (marsupial mice, *Sminthopsis*). Among frogs there are various *Crinia* and *Heleioporus inornatus* and *australiacus*; and fishes such as *Galaxias* and *Nannoperca*. However, there has been an extensive intermingling of Eyrean and Bassian elements in the south-west on a scale not paralleled in south-eastern Australia. In the south-west we have a blend of faunas in the sclerophyll forests which, though essentially Bassian in character, contain such Eyrean intrusives as the Purple-crowned Lorikeet, the Twentyeight Parrot, the Rufous Tree-creeper, the Western Warbler, the Banded Blue Wren and the Red-tipped Diamond-bird.

It must be recognised also that the distribution of animals that we see today may be a very recent pattern, and subject to continual fluctuation. Studies of fossil pollen in the south-west suggest there have been fluctuations in the relative abundance of jarrah, marri and karri trees over the last few thousand years. Even more marked fluctuations in vegetation may have been produced by climatic changes accompanying glaciation and deglaciation in high latitudes and altitudes over the past 2 million years. Marked changes in vegetation would usually be accompanied by changes in fauna. We know that the Marsupial Wolf or Tiger (*Thylacinus*), the Koala (*Phascolarctos*) and other marsupials, some of them now extinct throughout their ranges in Australia, once lived in the south-west, and it is possible that climatic changes were responsible for their vanishing from that area of Western Australia.

Climatic alterations, on a minor scale, are constantly going on. In the past half-century, or longer, there has been a considerable change in northern Europe, Asia and America, an amelioration in some parts and a drying-up in others, with widespread effects on the distribution of animals. Something similar appears to have been taking place in Western Australia. Many dry-country bird species, of the Eyrean faunal assemblage, have made notable extensions of range into the south-west corner. These include the Galah, Little Corella, Budgerygah, Smoker Parrot, Crested Pigeon, Black-faced Woodswallow, Crested Bell-bird, Blue-and-white Wren, Black-throated Butcher-bird and Little Crow. The records of local naturalists, who keep district lists of local birds and mammals over a period of years, are very useful sources of data for plotting these changes. Frequent Museum surveys will provide more positive information.

In some cases distribution changes due to natural causes may be masked or modified through the alterations of habitat due to settlement. These habitat changes act to the detriment of woodland birds but favour open-country species (like pipits and plovers).

Coastal Marine Fauna⁽¹⁾

The nature of the coastal waters varies from the warm mangrove-lined mud flats of the north to the clean sandy bays and cool crystal-clear waters of the south. The types of coastal marine habitats depend on the range of tide, the exposure to oceanic swells, the sediments carried off the land by wind or river and some local biological activities such as reef coral or algal building. There is a gradual change in water temperature, salinity and other physical characteristics of the sea as one moves along the long Western Australian coastline of 12,500 kilometres; these changes reflect the nature of the adjacent water mass modified by local effects such as occur in large and small embayments, near river mouths or behind protecting headlands. The coastal waters may be divided into the following broad zones:

1. North: from the Western Australian-Northern Territory border to Cape Leveque with very broken coastline, a high tidal range, high runoff from well vegetated hinterland and no exposure to heavy oceanic swell.
2. North-north-west: from Cape Leveque to Cape Keraudren with eighty miles of low beach, a high tidal range, little regular runoff from desert sands which are blown into the sea by the 'South-East Trades'.
3. North-west: from Cape Keraudren to North West Cape with an indented coastline, moderate tidal range, irregular runoff from some mountains and desert sands.
4. West-north-west: from North West Cape to Kalbarri with some high cliffs, a deep embayment (Shark Bay), moderate tidal range, irregular low runoff from little vegetated desert hinterland and exposure to the south-west oceanic swell. A barrier coral reef, unique in Western Australia, runs southward from North West Cape for nearly 160 kilometres.
5. West-south-west: from Kalbarri to Cape Naturaliste with fairly smooth low white sandy coastline and some limestone headlands; rainfall moderate with little runoff from coastal sands, water clear; tidal range low, offshore coastal reefs give some protection to the coast from the south-west swell.
6. South-west: from Cape Naturaliste to Israelite Bay with broken headland and surf beach formations, high south-west swell exposure, low tidal range, many inlets and low-volume river discharges.
7. South-east: from Israelite Bay to the Western Australian-South Australian border with smooth coastal outline of beaches and some cliffs, modified exposure to south-west swell, low tidal range and low rainfall runoff.

Certain coastal marine areas are special in the sense that they represent either a transition (*i.e.* rapid change of character) between two adjacent zones or possess unique features found in such combinations nowhere else on the coast. Examples of such special places are the coastal waters in the Broome to Derby region, around North West Cape, in Exmouth Gulf, in Shark Bay, the Perth metropolitan beaches (including Cockburn Sound), around Cape Naturaliste and around Cape Leeuwin.

The islands and reefs off the coast are also regarded as special because of their marine faunal peculiarities; for example, the Houtman Abrolhos, the Monte Bellos, the Rowley Shoals, the North West Cape Barrier Reef and the Recherche Archipelago.

The marine fauna of the north coast is distinct from that of the south coast although a few species do occur in both regions. The northern fauna is regarded as part of the Indo-West Pacific fauna, and the southern fauna of Western Australia as part of the southern Australian fauna. Some species of both these faunas extend and overlap along the west coast and there are several species which are endemic to this region only. One of these is the Western Australian commercial rock lobster *Panulirus cygnus* and another is the Western Australian commercial jewfish *Glaucosoma hebraicum*.

Fauna of Inland Waters⁽²⁾

The inland waters are of many types and possess very varied faunas. They may be divided into four main ecological groupings: (1) the rivers of the Kimberley Division;

(¹) Written in collaboration with Dr R. W. George. (²) Written in collaboration with Dr E. P. Hodgkin.

(2) the river systems of the north-west from the De Grey to the Murchison; (3) the streams, swamps, and lakes of the south-west corner; and (4) the temporary waters of the dry inland represented by two widely different habitats, (i) freshwater claypans and soaks (including man-made dams) and (ii) the salt lakes.

Marked seasonality characterises river flow in the Kimberley Division because of the alternation of regular summer rain with winter drought. The river pools and many isolated springs support an extensive fauna of fish, insects, molluscs and other animals, many of which show close affinities with the aquatic fauna of Asia and the Indo-Malay Archipelago.

The rivers of the north-west from the De Grey to the Murchison flow only intermittently, and between times of flood the fauna must survive in widely separated spring-fed pools in river beds. These pools, like those at Millstream Station on the Fortescue River, are often of striking beauty. Their fauna is relatively sparse as compared with the richer assemblages in the Kimberley rivers, the most conspicuous elements being a few fish species and a freshwater tortoise (*Chelodina steindachneri*) which is confined to the region.

The permanent hill streams of the south-west have a diverse arthropod fauna. Most of these are insects but, in addition, there are several species of freshwater crayfish in slower-running parts—Marron (*Cherax tenuimanus*) occur in permanent streams of deep water; Jilgie (*C. quinquecarinatus*) in shallow permanent water; Koonac (*C. preissi*) make burrows in the mud of swamps. A species of a closely related group, the so-called 'land-crabs' (*Engaewa*), has been recently discovered in the swamps of the south-west. The freshwater mussel *Westralunio carteri* is confined to the streams of the south-west. Most rivers stagnate and may become saline in summer; they are reduced to chains of large or small pools to which the fauna is restricted. The small transparent prawn *Palaemonetes* is often abundant in these pools. Shallow permanent lakes and swamps near the coast also have a fairly varied insect fauna, among which certain species of dragonflies are particularly abundant; at times there are enormous numbers of *Daphnia* and related small crustaceans.

The inland freshwater claypans are characterised by an interesting ephemeral fauna, mainly of phyllopod Crustacea. The most conspicuous is the large shield shrimp (*Triops australiensis*) but a variety of fairy shrimps (Anostraca and Conchostraca) occur also. The eggs of these creatures survive for years in the dried mud and development is rapid when the claypans fill after occasional rains.

The most conspicuous animals in the waters of the salt lakes are the brine shrimps (*Artemia* and *Parartemia*), which at times build up to such high population densities as to attract large flocks of Banded Stilts, which breed only in certain of the inland salt lakes. The Salt Lake Snails *Coxiella* reach their greatest diversity and abundance in the south-west saline lakes.

THE COMPOSITION OF THE FAUNA

The fauna of Western Australia includes representatives of all major phyla of the Animal Kingdom and individuals range in size from the Blue Whale (*Balaenoptera musculus*), the largest mammal that has ever lived, to minute single-celled protozoa which cannot be seen without a microscope. No estimate can be made of the number of species, and probably the number of species of insects alone out-numbers all the rest by a comfortable margin. Here we have not attempted to describe all phyla. The vertebrates are given fairly full treatment because they are obvious and familiar animals to most of us. The insects (mostly those of economic importance) are dealt with in Part 5 of this Chapter, and the remaining phyla are treated in a few paragraphs which confine themselves to groups of interest.

THE VERTEBRATE FAUNA

Mammals

Unlike the birds and reptiles, wild mammals are not frequently seen in most parts of Western Australia. This is because most of the species are small and secretive and appear

only at night. However, there are exceptions and, as any traveller in inland and northern parts of the State can attest, kangaroos of one species or another can often be seen in large numbers during daylight hours.

Most species of mammals have distinct ecological preferences which allow them to be categorised into one or other of the three main faunal groups which are described earlier in this Part under the heading *Distribution*. For example, in the kangaroo family, the Tammar Wallaby (*Macropus eugenii*), the Quokka (*Setonix brachyurus*), and the Brush Wallaby (*Macropus irma*) are found only in the south-west or on certain isolated islands off the coast. Of these, the Brush Wallaby is closely related to the South Australian Toolache Wallaby (*Macropus greyi*) and the Tammar to the Flinders Island Wallaby and the now extinct St Peter Island Wallaby of South Australia. The most familiar kangaroo of the dry country with unreliable rainfall is the Red Kangaroo or Marloo (*Megaleia rufa*), while in the summer-rainfall country of the Kimberley Division we find such species as the Jungle Kangaroo or River Wallaby (*Macropus agilis*), the Little Rock Wallaby (*Peradorcas concinna*) and the Northern Nail-tailed Wallaby or Karrabul (*Onychogale unguifera*). In addition to the species which sort out in this convenient way, there are others which are widely distributed and in fact occur as members of all three faunal assemblages. The most familiar members of the family which do this are the Euro or Biggada (*Macropus robustus*), the Boodie (*Bettongia lesueur*), and the Rock Wallaby (*Petrogale penicillata*). Of these, the Euro may still be found anywhere in suitable local habitats from the Kimberley to the south-west and inland across the South Australian border. At one time this was true also of the Boodie and the Rock Wallaby which, however, are today unfortunately absent from much of their former range.

So far, only the kangaroos have been mentioned but, in fact, representatives of all three major divisions of the mammals (*i.e.* monotremes, marsupials and placentals) occur in the State.

The egg-laying monotremes are represented by the Echidna (*Tachyglossus aculeata*), sometimes called Spiny Anteater or Porcupine. This curious and completely inoffensive animal is not uncommon in the country around Perth and it even appears on occasions in densely-settled suburban areas. In drier districts, its diggings, made in its search for insects, are familiar around rocky hills and breakaways.

Marsupials, or pouched mammals, occur in great variety in Western Australia. The kangaroos and wallabies, already mentioned, are the herbivorous members of the group. These animals are the Australian evolutionary equivalent of the antelopes, deer, and horses of the other continents and there is often an extraordinary similarity in structure between members of the kangaroo family and these other herbivores. These similarities extend even to such details as the physiology and shape of the stomach and other organs of digestion. The reproductive systems of marsupials and their physiology have also long been of great interest to biologists because they differ from those of other animals. For example, it is now known that in the Quokka, and some other wallabies, the adults mate again immediately after the birth of the 'joey'. The embryo which is the product of this second mating does not develop immediately but is held in a dormant state in the female system. However, if the first young joey is lost from the pouch, this dormant embryo immediately begins to develop and a second joey is produced after a minimum period of time.

In Western Australia the kangaroos and wallabies are all terrestrial (there are no tree kangaroos), and even their arboreal relatives, the phalangerids, are few in number compared with other parts of Australia. The Brush Possums, the Pigmy Possums and the Ring-tails have Western Australian representatives, but the Koalas and the striped Possums are absent, and of the four species of flying possums of eastern Australia only one (*Petaurus breviceps*) occurs in Western Australia and that only in the Kimberley Division. Although the species of possums in Western Australia are few in number, there are some unique forms which are of great interest. One of these is the rare Scaly-tailed Possum (*Wyulda*) of the Kimberley; unlike other Australian possums this animal has a hairless scaly tail and only twelve specimens of it are known. There is also the curious and rarely-seen

Honey Possum (*Tarsipes*) of the south-west. Wombats are known to have occurred in Western Australia around the turn of the century and were thought to be extinct until a small colony was rediscovered in 1965 near Caiguna in the Eucla Division.

Although the large carnivorous marsupials no longer live in the State, the smaller representatives of this group are still fairly common. There are two separate species of native-cats, a southern species (*Dasyurus geoffroii*) and a northern one (*Dasyurus hallucatus*), as well as many species of smaller carnivorous and insectivorous forms. One of the smaller members of this family, the Dibbler (*Antechinus apicalis*), one of our least-known marsupials and last recorded in 1884, was rediscovered during 1967 at Cheyne Beach near Mount Manypeaks on the south coast.

The remaining group of marsupials is that commonly called the bandicoot family. One of these, the Pig-footed Bandicoot (*Chaeropus ecaudatus*) is probably the State's rarest mammal, but it once occurred in the Nullarbor region where its remains have recently been discovered in caves and two living specimens of it were collected by John Gilbert in 1841 some miles to the north-east of Northam. No confirmed record has been made of the species in Western Australia since then. On the other hand another species of bandicoot, the Quenda, or Short-nosed Bandicoot (*Isoodon obesulus*), is one of the commonest of marsupials. Its scratchings are common in country gardens and the little animal is often run over and found dead on roads. It lives largely on insects and, being nocturnal, it is seldom seen but it is nevertheless very common in many areas in the south-west.

The third main group of mammals is that of the higher mammals or placentals. Animals of this group occur in Western Australia in addition to the marsupials and the monotremes, and it always comes as something of a surprise to visitors (who generally have a strong preconception of Australia as a land in which all but introduced mammals and the Dingo are pouched mammals and monotremes) to learn that there are many species of Western Australian native placental mammals. In fact, if the seals, whales, and Dugong which occur around our coasts be counted, the species of native placental mammals outnumber the marsupial and monotreme species.

The composition of the mammal fauna is shown in the following table.

Kinds of wild mammals	Number of species occurring in Western Australia (a)	Kinds of wild mammals	Number of species occurring in Western Australia (a)
Monotremes	1	Introduced placentals—	
Marsupials	60	Rodents	5
Native placentals—		Land carnivores	2
Bats	23	Ungulates (Horses, Deer, Camels, etc.)	9
Rodents	24	Rabbits	1 17
Marine mammals:			
Seals (b)	2		
Dugong	1		
Whales	22		
Land carnivores—Dingo	1 73	TOTAL, ALL SPECIES	151
	—		—

(a) Total numbers of species are from *A Guide to the Native Mammals of Australia* by W. D. L. Ride. (b) Only resident seals are counted. Antarctic seals are occasionally 'shipwrecked' on southern coasts but these are clearly stragglers into the area.

Within Western Australia the best-established groups of native placental mammals, *i.e.* the bats and rodents, are distributed in much the same ecological manner as are the marsupials; some are dry country forms like *Leggadina hermannsburgensis*, the small mouse which builds mounds of pebbles on stony ridges⁽³⁾, others are predominantly animals of the wet tropics like the majority of the Fruit-bats or Flying Foxes (*Pteropus*

⁽³⁾ It is suspected that these may be dew-traps.

and *Macroglossus*), while yet others are confined to the country of reliable winter rainfall in the south-west, e.g. the Southern Bush-rat (*Rattus fuscipes*). These native placental mammals are of great zoological interest because some of them, and in particular the native rats and mice, have been here for many millions of years and closely parallel (in adaptation to our stringent ecological conditions) their relatives in similar places in other lands. Thus, we have hopping-mice (*Notomys*), like miniature kangaroos, which are very similar in appearance and habits to the jumping-mice (*Zapodidae*) of the American and Eurasian dry-lands, and the jerboas (*Dipodidae*) of Africa; but it must be emphasised that the jumping specialisations of our own hopping-mice have evolved quite independently within Australia.

Some of our native placental mammals are economically important. Until 1963 a shore-based Western Australian fishery at Carnarvon depended upon the migrating groups of Humpback Whales (*Megaptera novaengliae*) which move along the western coast between their feeding grounds in Antarctic waters and their breeding places in the tropics. Unfortunately, immoderate exploitation of the stocks (especially the breeding stock) had so reduced the population that it was in danger of extermination and the shore-based fishery collapsed. Another whale fishery, at Albany, is dependent upon Sperm Whales (*Physeter catodon*). The catching of Southern Fur-seals (*Arctocephalus doriferus*), formerly lucrative, is now no longer permitted. The Dugong (*Dugong dugon*) was once an important source of food for the natives of the coastline from Shark Bay to the Northern Territory. The Dingo (*Canis familiaris dingo*) has probably not been in Australia for as long as the other native mammals, and may well have entered with the Australoid people who were ancestral to our present Aborigines. In some parts of the State the Dingo is a major problem to the pastoral industry because of its attacks on livestock.

The preceding table also shows that there is a large number of introduced species as well as native mammals. These are now a part of the wild mammal fauna of Western Australia and all are placentals. Some of these species are also agricultural and pastoral pests and they have become so well entrenched in the environment that there is no doubt that any discussion of the mammalian fauna of the State must take them into account and mention should be made of some of them here. Red Deer (*Cervus elephas*) occur spasmodically in the south-west around Pinjarra, Waroona and Harvey. Camels (*Camelus dromedarius*) occur in large numbers and are distributed through the Eastern Goldfields up through the Pilbara and into the Kimberley. They have been declared vermin around Laverton, Nullagine, Port Hedland and Halls Creek. Donkeys (*Equus asinus*) have a distribution very much like that of the camel and also occur generally throughout the Kimberley. Wild goats (*Capra hircus*) are ubiquitous in dry country but are mainly concentrated in the Murchison and the north-west. A small herd of Black-buck (*Antelope cervicapra*) occurs near Geraldton. Rabbits (*Oryctolagus cuniculus*) are widespread in Western Australia but are only of economic significance south of the Murchison. They are by no means the problem that they used to be, due largely to programmes of intensive rabbit extermination. Foxes (*Vulpes vulpes*), declared vermin, are also widespread but do not commonly occur north of the De Grey River, having only been reported spasmodically from the Kimberley Division. The domestic cat run wild (*Felis catus*) occurs commonly in the bush and is an efficient predator on native fauna. It became feral in the early days of settlement and soon spread throughout the Colony. The naturalist Keartland while a member of the Calvert Scientific Exploring Expedition in 1896, recorded that 'in the desert of north-west Australia' he saw a tabby cat at least 400 miles [644 kilometres] from the nearest house. Earlier still the ornithologist Tom Carter writing in 1887 from the Carnarvon district spoke of 'the domestic cat, which is found quite wild and of a large size all through the colony'.

Examination of the composition of the older mammal fauna of Western Australia, i.e. monotremes, marsupials, bats and native rodents, as set out in the following table, reveals that only one-eighth of all species recorded from the State today appear to occur only in Western Australia. The south-west contains by far the greatest number of endemic species.

ENDEMISM OF NATIVE MAMMALS TO WESTERN AUSTRALIA
(excluding marine mammals)

Group	All endemic and non-endemic species	Number of endemic species—			
		Total endemics	Endemics north of Fitzroy River	Endemics of South-West Land Division	Endemics of remainder of State
Monotremes	1
Native cats	23	5	1	2	2
Marsupial moles	1
Bandicoots	7
Possums	8	2	1	1
Wombats	1
Kangaroos and Wallabies	20	4	3	1
Rats	24	3	2	1
Bats	23
Dingo	1
Totals	109	14	2	8	4

Birds

The bird fauna of Western Australia consists of a selection of the species occurring in eastern Australia, with only a very minor development of endemic forms. All of these latter, except one (the Western Australian King Parrot, *Purpureicephalus spurius*), have a close and obvious affinity to other Australian forms. The quantitative relationship of the Western Australian bird fauna to that of Australia as a whole is indicated in the following table, which has been prepared on an ecological basis.

	Number of breeding species		Number of non-breeding visiting migratory species	
	Western Australia	Australia	Western Australia	Australia
Land birds	307	499	6	8
Inland water birds	51	52	33	42
Sea birds	25	38	33	55
Total	383	589	72	105

Representatives of most of the families and genera of Australian birds occur in this State. Notable absentees include the Cassowary (*Casuarus casuarus*), Brush Turkey (*Alectura lathami*), several of the fruit-pigeons, the Crimson Rosella (*Platycercus elegans*), Lyre-bird (*Menura novaehollandiae*), several honeyeaters including the Regent (*Zanthomiza phrygia*), Apostle-bird (*Struthidea cinerea*), Cat-birds (*Ailuroedus*), Satin Bower-bird (*Ptilonorhynchus violaceus*) and Rifle-birds (*Ptiloris*).

Space is insufficient to detail all the forms occurring in Western Australia. Mention may be made only of some distinctive species and groups which are common and widely distributed.

The Emu (*Dromaius novaehollandiae*) is still numerous all over the State and is occasionally encountered in the Darling Range near Perth. Australia's only breeding species of penguin, the Fairy Penguin (*Eudyptula minor*), nests on islands off the southern and south-western coasts as far north as Carnac near Fremantle. The Mallee-fowl or Gnow (*Leipoa ocellata*) is still plentiful and, after a period of decline during which its disappearance was feared, it is now increasing in abundance. All of the widespread

species of Australian quails occur but owing probably to the scarcity of natural grasses in the south are not individually very numerous. Among the pigeons two species have shown notable recoveries in population strength. After a long period of scarcity the Common Bronzewing (*Phaps chalcoptera*) began a cycle of increase about 1936 and is still very abundant. The rare Flock Pigeon (*Histriophaps histrionica*) of the more arid country of the north-west and the far north has declined all over Australia and had not been recorded in this State since 1927 until 1958 when considerable flocks were observed in the Hamersley Range and the Fortescue River country. It has also reappeared in parts of the Kimberley Division.

A very distinctive member of the rail family is the Black-tailed Native Hen or Gallinule (*Tribonyx ventralis*). It is a creature of the drier country but is subject to violent fluctuations in numbers, when it is liable to invade the south-west in great strength. A famous occasion was in May 1833 when it overran the settlers' fields and gardens around Perth and did considerable damage to the crops. Similar irruptions took place in 1853, 1886, 1897 and 1919. Later invasions, such as those in 1952 and 1964, have been on a much more modest scale. Of the three Australian grebes the most plentiful is the Hoary-headed Grebe (*Podiceps poliocephalus*) which assembles in the winter in big flocks on the southern estuaries, including that of the Swan River.

In the petrel group there are five breeding species in local waters. The most numerous is one of the mutton-birds, the Wedge-tailed Shearwater (*Puffinus pacificus*) which nests on most islands between Carnac in the south and Sable Island, in the Dampier Archipelago, in the north. A second mutton-bird, the Fleshy-footed Shearwater (*P. carneipes*) nests between Cape Leeuwin and the Archipelago of the Recherche; it is a migratory species and in the winter months migrates to the north-western sector of the Indian Ocean. A similar trans-equatorial migrant is the White-faced Storm-petrel (*Pelagodroma marina*), a diminutive form rarely observed at sea. It nests often in vast aggregations on islands off the south coast and as far north as the Abrolhos. All of these species nest in the spring and summer months. The remaining two breed in the winter. The Great-winged Petrel (*Pterodroma macroptera*) shares the nesting islands off the south coast with the Fleshy-footed Shearwater in a sort of 'Box and Cox' relationship. The black and white Little Shearwater (*Puffinus assimilis*) has a wider nesting range, from the Recherche to as far north as the Abrolhos; in former times it nested at Parrakeet Island off Rottnest Island. In the winter months some twenty-two species of southern-breeding petrels visit local seas. They vary in size from the little Wilson Storm-petrel (*Oceanites oceanicus*), barely larger than a swallow, to the great Wandering Albatross (*Diomedea exulans*). The Wilson Storm-petrel 'winters' all along the Western Australian coast to the tropics and is a familiar sight around fishing boats in Shark Bay. The most common of the albatrosses is the Yellow-nosed Albatross (*Diomedea chlororhynchos*) and may be seen as far north as Point Cloates. The most familiar of these visitors is the dusky Giant Petrel (*Macronectes giganteus*). Ringing experiments have demonstrated that the birds seen here are first-year individuals making circumpolar flights round the Southern Hemisphere; marked birds found in the south-west had been ringed a few months previously in their nests at Heard Island, Macquarie Island, and islands in the South Orkneys in the South Atlantic.

All of the five species of Australian cormorants or shags occur locally. Despite complaints of their depredations on commercially important fish, investigations have cleared the birds of blame, though one species, the Black Cormorant (*Phalacrocorax carbo*), specifically identical with the Cormorant of Europe, does occasionally include edible fish in its diet. One marine species, the Pied Cormorant (*P. varius*), which enters the Swan River estuary and Peel Inlet, is mainly responsible for the guano deposits on the coastal islands. Deposits at Shark Bay were commercially exploited in the last century and at one stage, in 1850, a detachment of troops was stationed at The Quoin Bluff, Dirk Hartog Island, to ensure the collection of royalties. Pelicans in Western Australia, unlike those in eastern Australia, breed only on coastal islands and not on inland waters. Until recently the nearest breeding place to Perth, and presumably the origin of most of the Swan River Pelicans, was Pelican Island, Shark Bay. However, since 1962 a breeding colony has become established at Peel Inlet, Mandurah.

Fourteen species of terns are recorded for the southern parts of the State and three more for the Kimberley Division. Three of the seventeen are migrants from the Northern Hemisphere and ringed individuals of the European Common Tern (*Sterna hirundo*) and the Arctic Tern (*S. macrura*), marked in northern Europe, have been recovered near Fremantle. These birds must have reached our coast via the Cape of Good Hope. The Silver Gull (*Larus novaehollandiae*) is noteworthy for having two breeding seasons in the southern part of the State. On the islands at Safety Bay, for example, there is an egg-laying peak in the autumn and another in the spring.

The numerous Order of wading or shore-birds (sandpipers, dotterels, and plovers) includes a few locally-breeding species but the majority are migrants from the Northern Hemisphere, where they breed in the tundra zone of northern Asia. Though they frequent ocean beaches and estuaries, as well as swamps and lakes, they are listed in the category of 'inland water birds' in the table on page 82. Some twenty-five species of these birds, commonly called 'snipe' (though the true Snipe of eastern Australia, *Gallinago hardwickii*, does not occur in this State) migrate to Western Australia. In addition there are sixteen species of this Order which breed in Australia. One of them, the Red-capped Dotterel (*Charadrius alexandrinus*), is virtually identical with the rare Kentish Plover of England. Here it is very common and nests at Pelican Point on the Swan River. Another local breeder is the remarkable Banded Stilt or Rottnest Snipe (*Cladorhynchus leucocephalus*) which is an attractive inhabitant of the salt lakes of Rottnest Island. However, it nests only on the inland salt lakes. The nesting habits remained long unknown until colonies were discovered at Lake Grace and Lake King in 1930.

The Australian Bustard ('Wild Turkey', *Eupodotis australis*) is a magnificent bird which has been largely exterminated by shooters over much of south-eastern Australia and in the developed south-west of this State. It is not uncommon in sparsely-settled areas and individuals occasionally appear on the open coastal country quite near Perth. It has recently been demonstrated by ringing that the Straw-necked Ibis (*Threskionis spinicollis*) ranges between south-western Australia and northern and eastern Australia. Fledglings marked in the nests at Muchea have later been taken in the North-West, the Kimberley Division, Arnhem Land and near Orange (New South Wales).

The Brolga (*Grus rubicunda*) is a northern bird normally found as far south as Onslow, but some individuals may wander into the outer parts of the south-west as occurred in 1952. In the heron family a new bird has been added to the State list—the Cattle Egret (*Bubulcus ibis*), which appears to have colonised northern Australia from Indonesia and has now spread over much of eastern and Western Australia.

There are eighteen species of swans and ducks occurring in the State, one of the most remarkable, perhaps, being the Cape Barren Goose, which is now restricted to the islands of the Recherche Archipelago. Recent leg-ringing experiments have shown that the common and widespread Grey Teal (*Anas gibberifrons*) wanders indiscriminately all over Australia, its movements being influenced by availability of surface waters.

Though the Black Swan (*Cygnus atratus*) occurs all over Australia, and in fact is more plentiful in some of the other States, historical reasons give it a peculiar association with Western Australia. The bird was first recorded by Europeans in this State, by Antonie Caen, skipper of the Dutch ship 'Banda' in July 1636 off the north-west coast. The first specimens were captured on the Swan River by Willem de Vlaming in January 1697 and taken alive to Batavia, whence they astonished the scientific world. Vlaming named the river after them, and the first colonisation in 1829 was known as the Swan River Settlement. The bird became the emblem of the Colony and State, with the motto, *Cygnus insignis*. The birds do not, and probably never did, occur in the broadwaters of the Swan River estuary, but in the shallows at Lucky Bay and above Heirisson Island. During the 1890s the authorities imported birds from elsewhere in the State, and even from Victoria, and set them free, pinioned, in Perth Water, where they were an attraction in Mounts Bay when the old men's home was located near there.

The State is also well provided with hawks and eagles, twenty-four species being found within its limits. Most are harmless economically and the few that do take chickens and lambs are not serious depredators, though there is controversy on the role of the

Wedge-tailed Eagle (*Aquila audax*) which is, however, classified by the Agriculture Protection Board as vermin in certain districts in the central and north-west portions of the State.

There are not as many species of the parrot group in Western Australia as there are in eastern Australia but one species, the Western Australian King Parrot or Red-capped Parrot (*Purpureicephalus spurius*), is restricted to the south-west and has no near relatives elsewhere. The Twentyeight Parrot is a form of the Port Lincoln Parrot (*Barnardius zonarius*) and is common almost everywhere, being regularly present in King's Park, a natural reserve adjacent to the City of Perth.

The Kookaburra (*Dacelo gigas*), so common in the forests of the south-west, is not a Western Australian native but was introduced from eastern Australia by the Acclimatisation Board during January 1897. A similar species, however, the Blue-winged Kookaburra (*D. leachii*) occurs in the north, as far south as the Wooramel River. The Rainbow-bird (*Merops ornatus*) in the south is a strict migrant, arriving regularly in the first week in October. Local birds migrate to the north of the State, the wintering area being from the Gascoyne River northward, but some individuals cross the Timor Sea to the Indonesian islands. There are eleven cuckoo species in our area, the commonest being the Pallid Cuckoo (*Cuculus pallidus*) whose plaintive insistent note is heard soon after the winter rains set in.

In the great group of passerines, or song-birds (Order Passeriformes), the most celebrated is the Noisy Scrub-bird (*Atrichornis clamosus*), a primitive almost-flightless bird which until recently was believed to be the only Australian bird which had become extinct since white settlement. The last specimen was collected by the ornithologist A. J. Campbell at Torbay in 1889, but late in 1961 a surviving population was discovered at Two Peoples Bay east of Albany. Space is insufficient to deal in any detail with other members of this large Order. Throughout the State there are 172 species, of which 95 occur in the southern, settled parts and at least 33 are found in King's Park. A distinctive robin, the White-breasted Robin (*Eopsaltria georgiana*), occurs in the south-west. It is a relative of the yellow robins and is found in the dense coastal and forest thickets from Geraldton southward and east to Albany and the Porongurups. The Western Warbler (*Gerygone fusca*) is a sweet-voiced songster which may be heard in the street trees of Perth, the only Australian capital city in which it lives; in the other States the bird is an inland species. Another distinction of the Perth metropolitan area is that four species of blue-wren, a greater number of species than in the environs of any other capital city, have been noted there. One species, the Red-winged Wren (*Malurus elegans*), which used to live near the city, disappeared when Herdsman Lake was drained. The remaining species are the Splendid Wren (*Malurus splendens*), occasionally still seen in the University grounds; the Blue-and-white Wren (*Malurus leuconotus*) in the coastal dune scrubs, and the Causeway and Pelican Point samphire flats; and the Variegated Wren (*Malurus lamberti*) in the dune thickets. Honeyeaters are numerous, the largest, the Red Wattle-bird (*Anthochaera carunculata*), being a familiar bird in metropolitan streets and gardens. Most of the grassfinches are restricted to the Kimberley Division, where ten species are found. However, one of them, the widespread Zebra Finch (*Taeniopygia castanotis*), nests as near to Perth as Northam and York. Two bower-birds occur in the State. The Great Bowerbird (*Chlamydera nuchalis*) is confined to the Kimberley Division, but the Spotted Bowerbird (*C. maculata*) is found in the north-west and ranges south to the East Murchison country and Malcolm in the Eastern Goldfields.

In contrast with all other Australian States there are very few species of exotic birds established in Western Australia. (The same is true of the Northern Territory.) In the towns of the south-west two turtledoves are plentiful, the Indian (*Streptopelia chinensis*) and the Senegal (*S. senegalensis*). The Goldfinch (*Carduelis carduelis*), an escapee from aviaries, breeds freely in the Perth metropolitan area and around Albany. Recently another cage-bird escapee, the Red-browed Finch (*Aegintha temporalis*), an eastern Australian species, has established itself east of Kalamunda in the Darling Range near Perth. The Indian or Ceylon Crow (*Corvus splendens*) repeatedly arrives at Fremantle on ships from the Orient but the vigilance of officers of the Department of Agriculture and port officials

has led to the successful eradication of the unwanted immigrants. The House Sparrow (*Passer domesticus*) has been similarly kept at bay at Fremantle. This species did, however, make a temporary colonisation, from South Australia, in the vicinity of Eucla and Mundrabilla in 1917-18 but it failed to make any headway and disappeared from there.

Reptiles

In Western Australia the reptiles are represented by three major zoological groups or Orders. These are the Chelonia (four marine species of turtles and six of freshwater tortoises), Crocodylia (two of crocodiles) and the Squamata (sixty-two species of snakes and 159 of lizards).

The freshwater tortoises of Western Australia, like those of the rest of the continent, belong to the ancient group of side-necked tortoises. In most other parts of the world tortoises retract their heads straight backwards bending their necks in a vertical S-shaped curve. Australian tortoises, and certain others from South America, bend their necks sideways; this is believed to be an ancient character. Although the species of Western Australian tortoises are few, they are of great interest and their distributions are far from well understood. This is especially true of the species inhabiting the Kimberley. Freshwater tortoises do not seem to fall into simple faunal zone classifications. The common long-necked tortoise of the south-west, *Chelodina oblonga*, is closely related to the long-necked tortoise of the Kimberley Division, *Chelodina rugosa*. However, neither of the short-necked tortoises of the Kimberley Division, *Emydura australis* and *Elseya dentata*, is represented in the south-west. The river systems from the Irwin, in the Northern Agricultural Division to the De Grey in the northern Pilbara, have their own tortoise (*Chelodina steindachneri*), while a highly specialised short-necked tortoise (*Pseudemydura umbrina*) is apparently confined to a few square kilometres of winter swamps between Upper Swan and Bullsbrook to the north of Perth. Because of its vulnerability to extinction this last species is rigidly protected.

Marine chelonians also occur in large numbers around the coasts. The Green Turtle (*Chelonia mydas*), the species which is used for soup making, comes ashore to lay its eggs on the northern beaches. Attempts have been made in the past to exploit this species commercially but it is now protected. However, a non-profit organisation has been granted a licence on behalf of a group of Aborigines in the Kimberley region to take a specified number of eggs and day-old hatchlings. These will be raised by the Aborigines at a commercial turtle farm at One Arm Point, north of Broome. A certain proportion will be liberated so that the wild stock will not be depleted.

Snakes and lizards are common and widespread throughout the State, and in numbers of obvious individuals they are probably surpassed among the vertebrates only by the birds. In the south-west, Bobtails (*Trachysaurus rugosus*) can often be seen crossing the roads at most times of the year, while the walker among coastal sand dunes on warm days cannot avoid noticing innumerable small dragon-lizards which move away from in front of him. In the southern part of the State the largest lizard which is at all common is the Goanna (*Varanus gouldi*). These are frequently between 0.9 and 1.2 metres in length. In northern areas the Perentie (*Varanus giganteus*) exceeds it in size. A few species are confined to the south-west and of these the most interesting are Mueller's Snake (*Rhinophlocephalus bicolor*), the Little Brown Snake (*Elapognathus minor*), the Black-Striped Snake (*Vermicella calonota*) and the Slender Snake Lizard (*Pletholax gracilis*) which is also one of our rarest species of lizard. An Eyrean species which never ceases to surprise the visitor is the terrible-looking Mountain Devil (*Moloch horridus*). This lizard is actually one of the most gentle and harmless of animals and lives exclusively on ants.

The snake fauna of the State is diverse and, like that of other parts of Australia, contains many venomous species, the best known being the Tiger Snake (*Notechis scutatus*), the Dugite (*Demansia affinis*), the Gwardar (*D. nuchalis*), the Death Adders (*Acanthophis antarcticus* and *A. pyrrhus*) and the Mulga Snake (*Pseudechis australis*).

The snakes and lizards are well described in Glauert's *Handbook of the Snakes of Western Australia* and *Handbook of the Lizards of Western Australia* (see bibliography at the end of this Part).

Because of the great distance of the Kimberley Division from centres of scientific research, insufficient is known of its snakes and lizards. As in the case of some of the smaller mammals, some endemic species of lizards have been described, but until much more scientific collecting and research has been done it will not be possible to evaluate such apparently-unique species. Some Kimberley species of lizard, e.g. the Frilled Lizard (*Chlamydosaurus kingi*), through being commonly illustrated in journals because of their bizarre appearance, have become familiar to the public.

Amphibia⁽⁴⁾

Unlike the other continents Australia has no newts or salamanders (Urodela) or worm-like gymnophionans (Apoda). However, frogs (Anura) are abundant.

The frogs of Western Australia fall into the same grouping (Bassian, Eyrean and Torresian) which was mentioned in the section on mammals. However, they lack the diversity of genera and species shown by other groups and only ten genera with about thirty species are known from south of the Tropic of Capricorn. Of these, two genera, *Metacrinia* and *Myobatrachus*, each with one species, are restricted to the south-west. Most of the other kinds of frogs are distinct from, but related to, species found elsewhere in Australia.

Since most of Western Australia is exceedingly dry it is of interest to note that frogs are common in these arid regions. Those species of *Heleioporus* which occupy marginal desert habitats overcome drought conditions by burrowing into the damp sub-soil. However, the arid-country species of *Neobatrachus* frequent clay soil where deep burrows are impossible and water can be lost. These species show no special capacity to endure greater water loss than *Heleioporus* species, but they do display an exceptional capacity for rapid replacement of water when water is present, as for example after thunderstorms. The water-holding frog, *Cyclorana platycephalus*, is found in inland and northern parts of the State. All 'desert' species retain an aquatic larval life, but this is much shorter than that of species in the well-watered parts of the State. The only species lacking aquatic larval development occur in the wetter south-west; these are *Myobatrachus gouldii*, *Metacrinia nichollsi* and *Crinia rosea*. *Myobatrachus gouldii* is the only species which exhibits any strong dietary preference and eats only termites (Isoptera).

Freshwater Fishes

The truly freshwater fish fauna of the southern part of the State is, by eastern Australian standards, an impoverished one and the species, with the exception of the freshwater catfish ('cobbler'), are diminutive in size. Most of the species are representatives of eastern Australian genera, such as the Pigmy Perch (*Nannoperca vittata*), Mountain Trout (*Galaxias truttaceus*), Black-striped Minnow (*G. pusillus*), and the Native Minnow (*G. occidentalis*). Others are more distinctive, with no near relatives in eastern Australia, such as the Nightfish (*Bostockia porosa*), the King River Perchlet (*Nannatherina balstoni*) and the newly-described scaled galaxiid (*Lepidogalaxias salamandroides*). There are several gobies (*Glossogobius suppositus* and *Lizagobius olorum*) and hardyheads (including *Atherinosoma edelensis*, *A. rockinghamensis*, *A. elongata* and *Craterocephalus cuneiceps*). A lamprey (*Geotria australis*) ascends the rivers to breed and has been recorded north to the Swan River system, but is more abundant in the streams emptying on the south coast. An eel (*Anguilla australis*) has been recorded from the south-west but it is not known whether it is native to the area or has been introduced.

The north-western rivers have a richer fish fauna. The most widespread species is the Spangled Perch (*Therapon unicolor*), a useful food fish which occurs in all rivers south to the Murchison. A large catfish (*Arius australis*) reaching 2.3 kg in weight, occurs in the systems south to the Fortescue. The Rainbow Fish (*Melanotaenia*), popular with aquarists occurs in the river systems of the Pilbara and the Kimberley. The remarkable Blind Gudgeon (*Milyeringa veritas*) and blind eel (*Anommatophasma candidum*) occur in wells and subterranean channels in the North West Cape area. The Kimberley Division has

(4) Written in collaboration with Prof. A. R. Main.

an even larger series of freshwater fishes. These include a catfish (*Neosilurus brevidorsalis*), various Bony Bream (*Nematolosa*), various perch-like fishes (*Therapon*), Gudgeons (*Carassiops*) and two freshwater saw-fishes (*Pristis clavata* and *Pristiopsis leichhardtii*). There is also a freshwater eel (*Anguilla bicolor*) in these far northern waters.

Marine Fishes⁽⁶⁾

The marine fish fauna of Western Australia is probably richer in species than that of any other Australian State. This is because the fishes of the northern part of the State's very long coastline belong to the rich tropical Indo-Pacific fauna, while its southern fauna is a temperate one which includes many elements peculiar to Australian waters. The most up-to-date list of the species of Western Australian fishes, published in 1948, enumerates 740 species, but since that time collecting has revealed about 300 more. Even so, this figure is still far short of the total number which, it is suspected, will eventually be found to be in the neighbourhood of 2,000.

From this it can be seen that there is much to be learnt about fishes of Western Australia but it is probable that only a few of these species are confined to Western Australian waters. At present it seems that most of the fish occurring in the tropical part of the State are widely distributed, and species often range throughout the whole of the tropical Indian and Pacific Oceans, while the species which are found along the south coast usually occur also in the waters of South Australia, Victoria, Tasmania and southern New South Wales.

Between Cape Leeuwin and Shark Bay both northern and southern elements are found, the tropical element dominating as far south as the Houtman Abrolhos.

In addition to the widely-distributed tropical and southern elements, there are a number of species, between thirty and forty, which seem to be peculiar to Western Australia. It is necessary to be cautious here for two reasons. Firstly, because the Indo-Pacific fish fauna is, as a whole, poorly known and some fishes, at present only recorded from Western Australia, may actually have wider ranges. Secondly, our classification of fishes is still imperfect so that fishes which we regard as endemic to Western Australia may be known from some other region, but under different names. On the other hand there can be no doubt that at least a proportion of these species which we now believe to be endemic will prove to be confined to Western Australian waters.

In the following very incomplete review, a number of the more important and interesting families and species are listed.

Of the major groups, the Elasmobranchii (sharks and rays) are richly represented, with nearly eighty species, of which the most familiar are the Port Jackson Shark (*Heterodontus portusjacksoni*), the Carpet Shark or Wobbegong (*Orectolobus maculatus*) and the shark known locally as the Swan River Whaler (*Carcharhinus leucas*), which can be caught in the Swan River as far upstream as the Garratt Road Bridge. It occurs during the summer months and one non-fatal attack in the Swan River has been attributed to this species. The Port Jackson Shark, the Carpet Shark and the Swan River Whaler are regarded as harmless to man; of the dangerous species, the Tiger, the Whaler and the White Pointer are perhaps the best known. Four fatalities from shark attack have been recorded for Western Australia (in 1803, 1923, 1925 and 1967) and a few people are known to have been maimed. It may be said, however, that in Western Australia the danger of shark attack is low.

Most major families of bony fishes are represented, but only a number of the more interesting or familiar species can be mentioned here.

There are about ten species of true herring (Clupeidae), one of which, the Pilchard (*Sardinops neopilchardus*) will in future probably become of economic importance. The rather similar-looking *Amblygaster postera* seems to be confined to Western Australia. The State is particularly rich in sea-horses and pipe fishes, there being some twenty-five species. The most familiar of these is perhaps the leafy sea-horse (*Phyllopteryx foliatus*)

⁽⁶⁾ Contributed by Dr G. F. Mees.

which is often found on the beaches after storms. The so-called Sand Shark or Rat Fish (*Gonorhynchus greyi*), a peculiar fish and the sole representative of its family, deserves mention; it is fairly common off sandy coasts of the south-west. Though eels are represented by several families and over twenty species, only three are common in the south-west; the Snake Eel (*Ophisurus serpens*), a slender golden brown eel inhabiting sandy estuaries, which is often taken for a snake and referred to as the water snake; Woodward's Eel (*Gymnothorax woodwardi*), found on rocky shores, yellowish green with a network of grey lines; and the Conger Eel (*Conger wilsoni*), which normally is dark brown in colour.

Garfishes (Hemiramphidae) are common. Of their relatives the Long Toms (Belontiidae), only *Belone ciconia* is common in the south-west, the others being more tropical in distribution, though one of the northern species, *Belone hians*, has been found as far south as Rottneest Island.

Silversides and hardyheads (Atherinidae) are well represented and so are mullets (Mugilidae). Some representatives of these groups have been mentioned in the preceding section, which deals with freshwater fishes.

The family Serranidae, known as gropers, rock cod, etc. are represented by nearly thirty species. The best known is the North-west Grouper (*Epinephelus tauvina*) which attains a length of more than two metres. Most species have a very wide, mainly tropical, distribution, but *Epinephelus rankini* is only known from a restricted area round Onslow and must be looked upon as endemic to Western Australia. In temperate waters the preceding family is more or less replaced by the related Hypoplectrodonidae.

Some small families, like the Australian Salmon (Arripidae), Whiting (Sillaginidae) and Snappers (Sparidae) are of great economic importance, though there are only a few species. On the other hand the Skipjacks (Carangidae) are one of the largest families of the State and comprise some thirty species. Another group which are also called Snappers (Lutjanidae) is prominent in the tropical part of the State. These are often referred to as North-west Snappers and should not be confused with the southern Snapper (*Chrysophrys unicolor*) which belongs to the Sparidae.

Coral fishes (Chaetodontidae) are richly represented, mainly along reefs in the tropics, but a number of species come down to the Houtman Abrolhos, and some even near to Perth. Most species have a very wide distribution in the Indo-Pacific, but one, *Chaetodon assarius*, has not been found outside Western Australia.

The Mackerel family (Scombridae), which includes mackerel, Spanish mackerel, tuna, bonito and albacore, is important both in tropical and temperate waters. The related marlins and swordfishes, well known to sporting fishermen, also occur in these waters.

Flatfishes (Heterosomata) occur in a great variety of species, and the same can be said of Parrotfishes and Wrasses (Scaridae and Labridae). All these groups are as yet very insufficiently known.

The stargazers and stonelifters are sluggish bottom fishes that deserve mention because of their unusual shape. One, *Ichthyoscopus barbatus*, occurs off the south-west coast and also in South Australia, and is regularly caught by anglers. Another species, *Ichthyoscopus insperatus*, a common fish of the north-west coast from Broome to Shark Bay, seems to be confined to Western Australia. The dragonets (Callionymidae), of which nine species have been recorded, are smaller, but their pretty appearance attracts attention, and one species, *Dactylopus dactylopus*, widely distributed in the Indo-Pacific, is regularly found off sandy beaches as far south as Rockingham.

Blennies (Blenniidae), weedfish (Clinidae), and gobies (Gobiidae) are small fishes of which there are many species; blennies are most plentiful in rockpools and on reefs in the tropics, while gobies are also found on sandy bottoms.

There are some twenty species of scorpion fishes known from the State, the most familiar of which are *Scorpaena sumptuosa* in the south, and the small *Scorpaena bynoensis* in the north; the first-mentioned species is also interesting in that, though it has been known for almost a century, it has never been recorded from outside Western Australia.

Of the closely-related Synancejidae, the feared stone fish, three species are known from the State, one of which, *Erosa daruma*, is apparently restricted to the north-west and is known from but two specimens. A related species occurs in Queensland and Japan.

Flatheads (Platycephalidae) are common in the temperate part of the State.

An interesting family is that of the angler fishes or toad fishes (Antennariidae). Their curious shape with the leg-like pectoral fins always excites attention. There are about a dozen species, two of which are endemic to the State. One of these is *Echinophryne glauerti* which is occasionally found washed up on City Beach.

Leatherjackets (Monacanthidae) are a large group distinguished by the rough leathery skin and a single large erectile spine on the nape. Some species, like *Chaetoderma penicilligera*, are common and of attractive appearance.

Of the blowfish family, the common Blowie (*Tetraodon (Spheroides) pleurogramma*) needs special mention; it is extremely plentiful off the coast at Fremantle and in the Swan River estuary. It is poisonous to eat and is greatly disliked by anglers who find that it greedily takes their bait. Fishes of this family contain a poisonous substance called tetraodontoxin and the celebrated navigator Captain James Cook was very ill after eating a blowfish in the course of a voyage in the Pacific in 1774. Boxfishes (Ostraciontidae) and porcupine fishes (Diodontidae) are related groups, each represented by a number of species.

Further information about the commercial fishes in Western Australian waters is given in the Fisheries section of Chapter VIII, Part 1—*Primary Production* where the principal species of edible fish are listed together with the quantities of each species caught. The section also contains additional information relating to whaling (see *Mammals* earlier in this Part).

THE INVERTEBRATE FAUNA(*)

The invertebrate fauna of Western Australia is large and varied, as one would expect in a third of a continent which extends from temperate to tropical zones and includes both coastal and desert areas. Rather than spread our descriptions too thinly over this enormous field we have restricted ourselves to a brief summary of the position in relation to a few selected groups in which work is being actively carried out.

Several invertebrate species are commercially exploited here, the most important being the marine crayfish or rock lobster (*Panulirus cygnus*) which supports an extensive export fishery. Others commercially important include several species of octopus, cuttlefish and squid, the Blue Swimming Crab ('Blue Manna', *Portunus pelagicus*), several species of prawns, two species of scallops (*Amusium balloti* and *Pecten modestus*), and three species of abalone. Pearl-shell was fairly extensively fished along the north-west coast but this fishery has now declined, the small quantity of pearl-shell now taken being used in the developing pearl-culture industry.

A summary of the terrestrial and freshwater invertebrate fauna and their ecology is given in Main's *Guide for Naturalists* (1968).

Echinodermata

The echinoderms of Western Australia have been shown by Clark (1946) to be derived from the tropical fauna to the north. About half of the species of northern Australia are widely distributed in the Indo-West Pacific region while the remainder are endemic to Australia. As one passes southward the proportion of endemic species rises until on the south-western coast nearly nine-tenths of the echinoderms are endemic to the region.

All five groups of echinoderms, feather stars (Crinioidea), sea stars (Asteroidea), brittle stars (Ophiuroidea), sea urchins (Echinoidea), and sea cucumbers (Holothuroidea) are well represented. Eighty-five species of sea stars and fifty-five species of sea urchins are recorded from Western Australia including the continental shelf. The other groups have smaller numbers of species.

(*) Written with assistance from Drs R. W. George, E. P. Hodgkin, Barbara Y. Main and B. R. Wilson, Mr G. W. Kendrick and Mrs L. Marsh.

On the rocky and sandy shores of the south-west about twenty species of sea stars are common in shallow water. One of the most abundant is *Coscinasterias calamaria* which is widely distributed in the Southern Hemisphere. Sea urchins are represented by about twelve common species; on rocky shores the most abundant of these is *Heliocidaris erythrogramma* which has a southern Australian distribution.

There is abundant echinoderm fauna in Cockburn Sound, between Garden Island and the mainland south of Fremantle, where a variety of habitats supports twenty-five species of sea stars, ten of sea urchins and many brittle stars, feather stars and sea cucumbers. Mud eating species such as the sea star *Stellaster inspinus* and heart urchin *Echinocardium cordatum* are common in the deep basin of the Sound while several tropical species including the sea stars *Euretaster insignis* and *Echinaster varicolor* and the sea cucumber *Pentacta quadrangularis* are found in the reef and coral areas of the eastern shelf of the Sound. On the south coast, King George Sound has long been known as a rich collecting ground for echinoderms, but the fauna of other bays and inlets is much less well known.

Little is known of the echinoderm fauna of the northern coasts, and almost all that we do know comes from the publications of H. L. Clark (see bibliography at the end of this Part) who collected extensively in the Broome area and made smaller collections in other places. Near Broome, a wide variety of echinoderms was collected in his dredges and along the shore. In more recent years new collections have been made in the region but the specimens have not yet been studied.

The Crown of Thorns Starfish (*Acanthaster planci*) which feeds on living corals and has been responsible for extensive damage to coral reefs in other regions is known to occur off the north-west coast, but there are no records of plague populations. Specimens have been reported from Admiralty Gulf, Barrow Island, and the North West Cape area. In 1971 a fairly large population was discovered in the Dampier Archipelago; this is now being monitored and studied by a team from The Western Australian Museum, supported by a grant from the Commonwealth and Queensland Advisory Committee on Research into the Crown of Thorns Starfish.

Mollusca

The molluscan fauna of the Western Australian coastline has not been recently catalogued, but from the area within fifty-six kilometres of Fremantle 270 species of bivalves (Pelecypoda), and univalves (Gastropoda) are recorded. The smaller groups, chitons (Amphineura), octopus and cuttlefish (Cephalopoda) and tusk shells (Scaphopoda) are also represented.

Molluscs dominate the intertidal rocks of the west coast, especially chitons, periwinkles, and limpets; the limpets range from the very large *Patellanax laticostata* to the small *Notoacmea onychitis*. On the north-western coast, rock oysters (*Crassostrea tuberculata*) and barnacles are dominant intertidally. The oysters are fished for food on a small scale in places where extensive beds are uncovered at low tide.

Bivalves occur mainly on sandy and muddy bottoms such as those of Cockburn Sound and King George Sound, and along the north-western coast. They are less plentiful on the unstable sandy shores of the open western coast. The Golden-lipped Pearl-shell (*Pinctada maxima*) is the basis of a flourishing pearl-culture industry in the north of the State. This species is favoured because of the quality of the pearls produced and because of the speed with which the nacre or mother-of-pearl is laid down on the 'seeds'. Using techniques developed by the Japanese these seeds are inserted into the pearl-shell's flesh to produce spherical pearls, or between the flesh and the shell to produce half-pearls. The small pearl-shell which is so abundant in Shark Bay belongs to the species *Pinctada albina* which is widely distributed in the Indian and Pacific Oceans. It was formerly gathered for the natural pearls which, though small, are of a fine colour and texture.

An abalone fishery has been established in temperate waters. On the lower west coast the small Roe's or Western Black-lip abalone (*Haliotis roei*) is gathered. Along the southern coast east of Cape Leeuwin the larger Green-lip (*Schismotis laevigata*) and the Brown-lip abalone (*Haliotis conicopora*) are taken.

Many species of cowrie shells occur on the rocky shores of the north-west coast while a few species such as *Zoila friendii* and *Austrocypraea reevei* are confined to the south-western corner of the State. The north-west coast also has many endemic species of volute shells such as *Volutoconus hargreavesi*, *Amoria macandrewi* and *Amoria praetexta*.

Of the gastropods without visible shells two species are conspicuous in the fauna of the Fremantle area. One is the large sea-hare (*Aplysia gigantea*) with a small internal shell; it may be cast up on the beaches in large numbers after winter storms. The other is a nudibranch, with no shell at all, the colourful *Glossodoris westraliensis*, well known to visitors to Rottnest Island.

The non-marine molluscan fauna (terrestrial and aquatic) is not diverse. Conspicuous in the south-west are species of the pulmonate genus *Bothriembryon*, which are adapted to a wide variety of habitats from cool temperate rain forest to arid steppe. In the Kimberley, north-west, and arid regions generally the snail family Camaenidae predominates. Throughout the State there are also many other smaller and inconspicuous terrestrial snails and a small number of aquatic snails and bivalves.

Corals

In Western Australia the wide continental shelf off the north of the State has coral platform reefs, islands and several very large true atolls, the fauna of which is still largely unknown.

Coral growth is restricted on much of the north and north-west coast by turbidity due to the outflow of rivers, muddy shoreline and the large tidal range.

Fringing and barrier reefs with rich coral growth occur in the relatively clear water of offshore islands such as the outer islands of the Dampier Archipelago where thirty-six genera of reef building corals are so far known.

From North West Cape a barrier reef extends southwards for nearly 160 kilometres. It lies between 800 metres and five kilometres off the coast with deep water off its outer edge and a shallow lagoon inshore. There is a rich and luxuriant growth of corals along the outer edge and dense thickets of staghorn corals (*Acropora* spp.) in the lagoon.

The most southerly true coral reefs in the State are found at the Houtman Abrolhos which lie near the edge of the continental shelf off Geraldton in latitude 28-29°S. *Acropora*, one of the most important reef builders, flourishes at the Abrolhos, where the minimum sea temperature seldom falls below 19°C, but does not occur further south except in Pleistocene fossil beds at Rottnest Island.

A number of reef corals extend their range into the south-west of the State, sometimes forming massive colonies. At Rottnest Island *Pocillopora damicornis* makes attractive pink clumps in reef pools and large colonies form a reef-like structure at Parker Point. In the Fremantle region, including Rottnest Island and Cockburn Sound, thirteen genera of reef corals are found. They are particularly well developed in parts of Cockburn Sound despite minimum water temperatures sometimes falling below 14°C.

The coral fauna is attenuated southwards with six genera in Geographe Bay and two species extending along the south coast east of Albany. One of these, *Plesiastrea urvillei* occurs right along the south coast of Australia but does not range north of Geraldton on the west coast.

Crustacea

The most important commercial species of crustacean in Western Australian marine waters is the Western Rock Lobster or 'Cray', *Panulirus cygnus*. It occurs from North West Cape in the north to Hamelin Bay in the south. In the tropics five additional species of *Panulirus* occur; these are collectively referred to as 'Green Crays' (*Panulirus versicolor*, *P. ornatus*, *P. homarus*, *P. penicillatus* and *P. polyphagus*). On the southern coast occurs *Jasus novaehollandiae*, which is the commercial species of rock lobster (crayfish) in south-eastern Australia, but it is not of economic importance in this State.

Two species of Shovel-nosed Lobsters are sometimes taken in prawn trawls. *Thenus orientalis*, the Moreton Bay Bug, occurs in Exmouth Gulf and further north. *Ibacus peronii*, the Balmain Bug, lives in sandy silt along our south coast. Both species are

good eating. Offshore beyond the 180-metre depth limit of the Western Rock Lobster, lives a large spiny crab *Hypothalassia armata* which may develop into a commercial proposition.

The Swan River Prawn or School Prawn (*Metapenaeus dalli*) is taken by amateur and professional fishermen in the west coast estuaries by small hand-hauled nets. In the northern gulfs and bays larger prawns of the genus *Penaeus* and *Metapenaeus* are sought by large commercial prawn trawls for export. The present main centres are at Shark Bay, Exmouth Gulf and Nickol Bay and exploration of waters around the Kimberley Region is continuing. The main species are the Western King Prawn (*P. latisulcatus*), the Brown Tiger Prawn (*P. esculentus*) and the Banana Prawn (*P. merguensis*).

The Blue Swimming Crab (*Portunus pelagicus*), plentiful in the summer in the estuaries of the Swan River and at Mandurah, is one of the common commercial crabs of Australia.

Two common species of crab are the Rock Crab (*Leptograpsus variegatus*) and the Ghost Crab (*Ocyropode convexa*). The Rock Crab scrambles among rocks and jetty piles of the west and south coasts, whereas the Ghost Crab digs spiral burrows at the edge of the beach and is endemic to the west coast.

Of the many other species of non-commercial crustaceans some groups have been recently monographed by scientific workers. These are the swimming crabs, mantis shrimps and pebble crabs.

Crustacea are also common in inland waters (see *Fauna of Inland Waters* earlier in this Part).

Spiders

Like most other invertebrate groups, the spiders are represented by a large number of genera and species and it is not possible at this stage to give an accurate picture of the relationships of the Western Australian fauna to the rest of Australia. Early work on the Western Australian spiders was restricted to the description and naming of species. Research now is centred on investigations of the biology of various species and the special adaptations of endemic forms to the particular conditions of the Western Australian environment. The most interesting of the spiders, when viewed from this aspect, are the burrowing groups, including primarily the Mygalomorphae ('trapdoor' spiders) and the Lycosidae (Wolf spiders). Some of these forms show special adaptations to semi-arid environments, to reduced food supply, and to flash-flooding, such adaptations being paralleled in many taxonomically unrelated genera. It is also of interest that some families, which in other parts of the world and in the wet forests of Australia are primarily web weavers and litter dwellers, are burrowers in the arid parts of Western Australia (and also in other dry parts of Australia). Such forms are essentially nocturnal and escape the unfavourable conditions of the day by remaining in their burrows and some species seal their burrows during the summer period.

Insects

The more important insect species occurring in Western Australia (particularly those of economic significance) are dealt with in Part 5 of this Chapter.

CONSERVATION OF THE FAUNA

In recent years the need to conserve the Western Australian fauna has received considerable publicity—this need has certainly never been greater than it is at present. In this State where new land has been brought into production for agriculture and the pastoral industry at a rate of approximately 405,000 hectares a year, and where the ever-increasing tempo of industrialisation and mining activity is obvious to all through its effect in increased population, the position of the native fauna is serious. This is because human introductions such as sheep and cattle, as well as the more direct effect of the plough and the scrub roller, are radically changing the environment, and also because an increase in human population has meant a higher level of utilisation of wild stocks such as ducks

(which form a basis for sport), kangaroos (which form a basis for a lucrative trade in pet meat and hides), and rock lobsters (which support the most valuable single Australian fishery).

From the early days of settlement in Western Australia, legal provisions were in existence under which land could be reserved but, in early years it was not realised that the preservation of habitat is basic to conservation and that protection of individuals against killing is of insignificant value except in specialised cases (see below). In the early days, protection was afforded to some game animals, such as kangaroos, to prevent them from being shot out, but it was not until land development became widespread in the south-west that the first real attempt was made to set aside a large permanent native fauna and flora reserve. This was in 1894 when 64,750 hectares were gazetted between Pinjarra, North Dandalup and the Bannister. Unfortunately, this reserve later became alienated.

From this early attempt at habitat conservation has grown a very conscious need for extensive reserves carefully sited and selected in order to provide security for a representative sample of all the major habitats throughout the State. In 1959, a committee of the Australian Academy of Science produced such a plan for Western Australia and this plan has provided in subsequent years the basis for a policy of land acquisition for this purpose by the two major bodies who control land for conservation, *i.e.* the National Parks Board and The Western Australian Wild Life Authority.

Outside the reserves, fauna gains its protection through the Fauna Conservation Act. This Act replaced an earlier Game Act of 1912-1913 which had the rather different primary purpose of providing some measure of protection for those species of native fauna shot or hunted for sport. Under the Fauna Conservation Act, all native vertebrate terrestrial fauna, except those species declared vermin or declared otherwise unprotected, are protected against being taken, hunted, or confined. Owing to the very complex relationship between many species and their environment, such protective legislation has only a very limited long-term conservative effect in areas of closer settlement or intensive agriculture. On the other hand, in pastoral and forest areas, and in unalienated Crown land not in fauna reserves, the legislation is much more valuable. The most important achievement of such protective legislation, however, is that it makes people conscious of the need to protect our native fauna and it is very likely that this educational function is its main justification except:

- (i) where animals occur on small islands or restricted places on the mainland in such numbers or in massed concentrations that they are vulnerable to destruction by man. Local examples are the Noisy Scrub-bird at Two Peoples Bay near Albany, sea birds in nesting concentrations on small islands, and island populations of mammals such as the Quokka on Rottnest or the various wallabies on Bernier and Dorre Islands in Shark Bay.
- (ii) where they are killed in the mass for commercial purposes, *e.g.* Humpback Whales, Fur Seals, Kangaroos;
- (iii) where they are killed for sport, *e.g.* the Bustard (Plains Turkey), ducks;
- (iv) where they are taken in very large numbers for zoos, circuses, or aviculture, *e.g.* finches and parrots.

In addition to its protective role, the Fauna Conservation Act establishes The Western Australian Wild Life Authority which is responsible for:

- (i) the initiation of conservation-oriented research in relation to the fauna;
- (ii) the acquisition, control, planning and management of an adequate system of sanctuaries (*i.e.* land reserved partly or entirely for the purpose of fauna conservation) including the preparation and implementation of working plans for each area; and
- (iii) advising the Minister for Fisheries and Wildlife in relation to fauna conservation generally.

In Western Australia today the only terrestrial native fauna subject to any marked degree of human predation are ducks, eagles, emus, kangaroos of three species (the Grey, the Red, and the Euro) and the dingo. Excepting for certain vermin species on which a bonus is payable, figures for the total annual number killed are not available and until they are, and details of population size and rate of stock recruitment are known, it will not be possible to say whether these species are in serious danger. At present, only the crudest methods (*i.e.* of observing abundance and then subjectively comparing this with previous experience) can be used to say whether it is necessary to apply protection to prevent a serious decline in numbers.

By contrast, the position of the marine fauna is very different. There, intensive work has been done on whale, fish and invertebrate stocks in past years. There has been some cause for alarm in connection with an apparently depleting rock lobster stock, but conservative measures have been developed, and there are very good grounds for belief that these have been successful. The great reduction of the population of Humpback Whales due to over-predation is a matter of considerable shame—it illustrates well the dilemma of an industry which is faced with the alternative of a low level of fishing over an indefinite period, or a highly lucrative but short period of exploitation as though the stock were not capable of regeneration (a procedure akin to a mining operation). In the case of the whaling industry in Western Australia the position was complicated by the fact that the stock was hunted both by the shore-based Western Australian fishery and by the international pelagic fleets operating in the Antarctic.

At present, our greatest need is information upon which to base proper conservative measures. Protective legislation, no matter how effective it is in protecting individuals, must not be regarded as effective in conservation unless measures to protect the environment are also taken. As a result, the authors believe that the stages of work most urgent at present to conserve the Western Australian fauna are as follows:

- (i) To complete the reservations of lands designated in the report of the Western Australian Sub-committee of the Australian Academy of Science.
- (ii) Recognising that these areas are designated upon the best available information as to habitat type, but not upon actual surveys of the fauna, the authors believe that the areas must now be given thorough biological surveys to ensure that populations of all Western Australian species of animals and plants are contained within them; and also to estimate, as far as possible, the sizes of the populations which they contain.
- (iii) To get under way an increased amount of long-term work on the biology of species which are suspected to be vulnerable. Through this work their particular requirements will be discovered and an endeavour can then be made to ensure that the reserves contain these requirements.
- (iv) To insist on proper monitoring for any annual crop taken from vermin or other species subject to human predation so that these populations can be maintained at the level consistent with the State's particular requirements, and yet to avoid their extermination.

In Western Australia, land development has not yet gone too far for the State to preserve a representative section of its fauna and flora for all time. The keys to this are habitat conservation, reserve management, and education in conservation thinking. Through these means, it will also be able to ensure that as much wild life as possible remains in altered environments as well. Indeed, if roadside verges, small township reserves and timber lots on farms are preserved, a surprisingly large number of native creatures will survive. The importance of these minor habitats, often regarded condescendingly by professional biologists who focus their attention on big reservations, cannot be sufficiently stressed. It is in these areas that the ordinary people and tourists gain an acquaintance with the native fauna and flora. Here man and animals will contrive to co-exist in intimate association with each other and so help to reinforce a popular sentiment for conservation.

Further data on conservation will be found in publications listed on page 98.

Chapter II—continued

Part 5—Entomology in Western Australia

With Particular Reference to Agriculture

(Contributed by the Entomology Branch, Department of Agriculture)

The entomological field in Western Australia is so vast and the number of active workers on the subject so few that much still remains to be learned about the insects found in this State. A wide range of environmental conditions exists, from the tropical north to the temperate south, and the geographical isolation of the State has allowed the development of numerous endemic forms. As may be expected, the insect fauna of the Kimberley Division shows closer affinities with that of North Queensland than with the lower half of the State. The central desert, which reaches the coast to the south along the Great Australian Bight and to the north along the Eighty Mile Beach, forms an effective barrier discernible in the distribution of flora, mammals, insects and birds.

Owing to the limitations of space no attempt has been made to cover all the various insect orders which occur in the State, but the economic importance of various groups and their influence on major agricultural industries have been outlined, and some of the more outstanding forms of general interest have been mentioned.

CLASS INSECTA (Insects)

Order Collembola (Springtails)

The springtails include the lucerne flea (*Sminthurus viridis*) which was introduced into this State from eastern Australia in about 1910. It has spread to almost all the clover-growing areas in the south-west and is a very serious pasture pest. Partial control is exercised by the predatory bdellid mite (*Bdellodes lapidaria*).

Order Odonata (Dragonflies and Damselflies)

These insects are predatory in both the immature and adult stages and are usually regarded as beneficial creatures. However, they sometimes injure vegetable seedlings by ovipositing into furrow-irrigated crops. This has occurred mainly at Carnarvon where surface water is scarce and where irrigated plants are presumably mistaken for aquatic vegetation.

In order to survive in the diverse climatic conditions which exist in Western Australia, some members of the dragonfly group have developed the ability to breed in highly saline waters and to take advantage of ephemeral inland pools.

Orders Orthoptera, Mantodea, Blattodea, Phasmatodea (Grasshoppers, Locusts, Mantids, Cockroaches, etc.)

The grasshoppers and locusts are represented by a large number of different species. The most important pest form is the small plague grasshopper (*Austroicetes cruciata*). The normal habitat of this species lies roughly between the 200 millimetre and the 400 millimetre isohyets. For breeding it favours hard, bare soil and as extensive areas once utilised for wheat growing have now reverted to grazing, these uncultivated tracts periodically give rise to serious grasshopper swarms, which menace the adjacent wheat lands. The Australian

plague locust (*Chortoicetes terminifera*), so troublesome in other States, occurs in Western Australia but rarely as a plague species. In the Kimberley the yellow-winged locust (*Gastromargus musicus*), the migratory locust (*Locusta migratoria*) and the spur-throated locust (*Austracris guttulosa*) assume plague proportions, but in the southern agricultural districts they occur in the solitary phase only. The mantids (Mantidae) are represented by many different species. Their well-developed fore-limbs are admirably adapted for catching prey and, like their foliage-feeding relatives the phasmatids or leaf insects (Phasmatidae), their colouring harmonises remarkably with the sticks and leaves on which they rest. The cockroach fauna includes a large number of native species as well as several introduced forms. The commonest pest species is the cosmopolitan American cockroach (*Periplaneta americana*). Some large and quite colourful forms occur in the inland regions with the genus *Polyzosteria* well represented.

Order Isoptera (Termites)

The so-called white ant is a serious pest in all parts of the State. Earth-dwelling types occur mainly, and among the most important species may be cited the giant termite (*Mastotermes darwiniensis*) of the north and the widely distributed subterranean termite (*Coptotermes acinaciformis*). The large mounds of the spinifex termite (*Nasutitermes triodiae*) are characteristic of certain landscapes in the pastoral areas. Heavy annual losses are caused by termite damage and the use of such chemicals as dieldrin, aldrin, chlordane and creosote is recommended for the protection of timber structures.

Order Phthiraptera (Lice)

Indigenous species occur on birds and native mammals, and various introduced forms infest domestic poultry, horses, cattle and sheep.

Order Thysanoptera (Thrips)

This order is represented locally by a large number of native species as well as several introduced forms. The most serious native species is the plague thrips (*Thrips imaginis*) which may swarm in apple blossoms and seriously affect the crop setting.

Thrips tabaci, often called the onion thrips, is a carrier for the plant disease spotted wilt. Severe damage to tomato plants may result from this virus.

Order Hemiptera (Bugs, Aphids, Scale Insects)

This group contains a large number of pest species, many of them introduced. A serious vegetable pest is the green vegetable bug (*Nezara viridula*) which is partially controlled by an introduced wasp parasite, *Trissolcus basalis*. The native Rutherglen bug (*Nysius vinitor*) may at times swarm on vegetables and fruit trees, but seems less serious in this State than on the other side of the continent. The crusader bug (*Mictis profana*), so named because of the light-coloured St Andrew's cross on the back of the adult, feeds normally on acacias and other native plants, but it frequently invades cultivated areas and it may be troublesome to young citrus. The apple dimpling bug (*Campylomma livida*) is a native species which sometimes causes severe malformation of apples by feeding upon the very small developing fruit.

One native aphid (*Anomalaphis comperei*) has been recorded. The only two districts from which it has so far been collected are Albany and Karridale where it has been found infesting native peppermint (*Agonis flexuosa*). A point of interest about these occurrences is that the aphids were associated with a heavy Argentine ant infestation in the area. Since the removal of the ants no further aphids have been discovered.

Numerous introduced species occur as pests on vegetables, garden plants and fruit trees, e.g. *Myzus persicae* (peaches, potatoes, rape, etc.), *Toxoptera aurantii* (citrus), *Brevicoryne brassicae* (cabbages, cauliflowers, rape, etc.) and *Eriosoma lanigerum* (woolly aphid of apples). The cowpea aphid (*Aphis craccivora*) which carries a virus disease of subterranean clover known as 'stunt' has also been found attacking lupins.

Of the native coccids the gall-forming members of the genus *Apiomorpha* are among the most remarkable. The woody galls in which the female insects pass their days vary from minute structures to woody knobs the size of an apple. From an economic point of view, however, the various introduced scale insects demand most attention. Included in the list of pest species are the following:

- San José scale (*Quadraspidiotus perniciosus*), which is a serious pest of apples.
- Red scale (*Aonidiella aurantii*), which is found mainly on citrus but with a wide host range.
- Brown olive scale (*Saissetia oleae*), which is found attacking citrus, stone fruits and garden shrubs.
- White wax scale (*Gascardia destructor*), which is mainly a pest of citrus but also attacks many cultivated shrubs.
- Soft brown scale (*Coccus hesperidum*), which has a wide host range but is of greatest importance on citrus.
- Grass-crown mealybug (*Antonina graminis*), which is a widespread and troublesome pest causing damage to lawns particularly in warm parts of the State.

Order Coleoptera (Beetles)

This order is the dominant one among existing insects and is represented in Western Australia by many and varied forms. The carnivorous ground beetles (Carabidae) are widely distributed, one of the best-known species being the green carab beetle (*Calosoma schayeri*). The tiger beetles, of the sub-family Cicindelinae, are of interest not only because of the metallic colouration seen in many forms but because of their association with the inland salt-lakes. The larvae are subterranean and may be collected by digging on the lake margins.

The ladybirds (Coccinellidae) comprise a group of considerable economic importance and in addition to native species the State contains a number specially introduced to combat various scale insects and aphids. Among the best known of the introduced species are the mealybug ladybird (*Cryptolaemus montrouzieri*) and the common ladybird (*Leis conformis*). The larvae of *Cryptolaemus* are covered with a whitish material which makes the insect superficially resemble the mealybugs upon which it feeds. *Leis conformis*, in conjunction with the wasp parasite *Aphelinus mali*, plays an important role in combating the woolly aphid of apple trees. Destructive leaf-eating ladybirds belonging to the genus *Henosepilachna* were once found only in the northern parts of the State where they attack vegetables, especially pumpkins and melons. In 1956, specimens of *Henosepilachna* were collected in Perth. Since then they have become established in several suburban areas, but how the introduction occurred is not known.

The jewel beetles (Buprestidae) contain some of the most colourful beetles to be found anywhere in the world. Western Australia is particularly rich in species and at times the beetles may be found in large numbers on flowering mallee and sandplain flora. One of the most attractive is the metallic green *Stigmodera gratiosa*, and one of the largest is *Julodimorpha bakewelli*, measuring approximately seventy millimetres in length. Although the beetle larvae are wood borers, closely resembling the 'bardee' in appearance and habits, they are of little economic importance.

The cockchafers or scarabs (Scarabaeidae) are represented by a great diversity of forms. Several species may swarm on to flowering fruit trees and roses in the early summer and are popularly known as spring beetles. The bronze-coloured *Colymbomorpha lineata* is a common pest of apple trees during the blooming period and the saddle-backed beetle (*Phyllotocus ustulatus*) sometimes visits citrus blossoms in large numbers. An introduced species commonly known as the African black beetle (*Heteronychus arator*) has gained a firm footing in the State and is a troublesome pest of lawns and turf. It is also growing in importance as a pasture and vegetable pest. A native species of *Colpochilodes* has caused spasmodic damage to cereal crops and clover pastures in the southern portions of the State.

The longicorn beetles (Cerambycidae) are a group of wood-boring insects represented by a number of different species. They are often blamed for the death of forest eucalypts, although investigations have shown that heavy beetle infestations are usually secondary

and that healthy trees are seldom seriously affected by the beetles. The larval stage of this group is the so-called 'bardee', at one time prized by the Aborigines as food. They are not a pest of structural timber as they do not attack seasoned material.

The leaf beetles (Chrysomelidae) may superficially resemble ladybirds in general appearance as some of them are rounded and quite brightly coloured. Two species have been introduced into the State for the purpose of combating St John's Wort, a troublesome weed in some districts. *Chrysomela gemellata* and *C. hyperici* were originally introduced into Australia from the South of France and liberated in Victoria with very satisfactory results. The local colonies were obtained from the latter source and have become established in several districts. In some situations a reduction in St John's Wort can be attributed definitely to beetle activity, but in many areas the picture is obscure due to the extensive use of chemical sprays.

Common pest species in eastern Australia are the pumpkin beetles (*Aulacophora hilaris* and *Rhaphidopalpa palmerstoni*). These beetles are found in the north of the State but do not extend into the cooler latitudes.

The weevils (Curculionidae) are a very specialised group characterised by the presence of a rostrum or 'snout' which bears the mouth and antennae. The genus *Leptopius* contains a number of large greyish weevils, many of which breed in association with acacias. One of the best-known members of the family is the red-legged weevil (*Catasarcus asphaltinus*) which feeds on eucalypt foliage and may disfigure young street trees. The almost world-wide rice weevil (*Sitophilus oryzae*) is our principal pest of stored grain, but the granary weevil (*S. granarius*) also occurs. Two common orchard pests are the introduced apple weevil (*Otiiorhynchus cribricollis*) and Fuller's rose weevil (*Pantomorus cervinus*). Two other pest species of weevil which appear to have been introduced recently into this State are the sitona weevil (*Sitona humeralis*), a pest of legumes, and the garden weevil (*Phlyctinus callosus*).

Order Neuroptera (Lacewings)

This order contains a number of useful insects, for many of the neuropterous larvae feed upon scale insects and other pests. The family Myrmeleontidae has a number of large, rather dragonfly-like species, the larval stages of which build conical sand pits and are commonly known as ant lions. Amongst the most remarkable of the local lacewings are two members of the family Nemopteridae in which the hind wings are greatly modified. In the genus *Croce* they are long and thread-like and in the spoonwinged lacewing (*Chasmoptera hutti*) they are spoon-shaped or paddle-shaped.

Order Diptera (Flies, Mosquitoes, etc.)

This group contains a vast number of species, many of which are of major economic importance.

The mosquitoes are well represented, the commonest species being the brown house mosquito (*Culex fatigans*) and the yellow-fever or dengue mosquito (*Aedes aegypti*). The latter species is the carrier for dengue fever in the northern portion of the State. The anophelines are represented by the widely distributed *Anopheles annulipes* and several much rarer forms. *A. annulipes*, together with *Aedes alboannulatus*, have played an important part in the spread of the rabbit virus *Myxomatosis*.

Of the introduced flies, those causing most trouble are the Australian sheep blowfly (*Lucilia cuprina*) and the Mediterranean fruit fly (*Ceratitis capitata*). The buffalo fly (*Haematobia exigua*) is a serious stock pest in the Kimberley Division of the State, but so far has not become established in the cattle areas of the south. It is believed to have originally reached Australia on buffaloes introduced from Asia.

The common house fly (*Musca domestica*) is widespread as is also the native bush fly (*Musca vetustissima*).

Insecticides such as DDT, dieldrin and the various organic phosphates gave outstanding control of various fly pests for several years. The widespread development of resistance in both house fly and blowfly populations has greatly complicated the matter,

however, and drawn attention to the importance of preventive measures, such as sanitation in the case of house flies, and the Mules operation and crutching in the case of the sheep blowfly.

The March flies (Tabanidae) are well represented but, although their blood-sucking habits render them annoying, both to livestock and humans, they are not a serious pest.

Of the many useful flies may be mentioned the blowfly-like tachinids which parasitise caterpillars, grasshoppers and other pests and the bee flies (Bombyliidae) which parasitise the eggs of other insects. The maggots of the bombyliid fly (*Cryptomorpha flaviscutellaris*) are commonly found in the egg pods of the small plague grasshopper (*Austroicetes cruciata*).

Order Siphonaptera (Fleas)

A number of introduced as well as native fleas occur in this State. The rabbit stickfast flea (*Echidnophaga myrmecobii*), found originally on native mammals, is a very common parasite of rabbits in the drier parts of the State. The poultry stickfast flea (*E. gallinacea*) closely resembles the former species but is mainly a pest of poultry and domestic animals. The oriental rat flea (*Xenopsylla cheopis*), the human flea (*Pulex irritans*) and the cat and dog fleas (*Ctenocephalides felis* and *C. canis*) are among the most important introduced species.

Order Lepidoptera (Moths, Butterflies, etc.)

The primitive swift moths (Hepialidae) are represented locally by a number of very beautiful forms. The larvae are wood borers but do not occur in sufficient numbers to constitute a serious forestry pest. Several large and striking members of the genus *Aenetus* occur in the lower south-west.

A group of small native moths of the family Pyralidae, sub-family Crambinae and commonly known as pasture webworm moths (*Hednota pedionoma*, *H. crypsichroa*, etc.) are serious pests of cereal crops (excepting oats) and grass pastures. Depredations are controlled by planting on clean fallow, but the recent trend towards ley farming has greatly favoured these pests.

A family of considerable interest to the orchardist is the Tortricidae, in which group are included the codling moth (*Cydia pomonella*) and the oriental fruit moth (*C. molesta*). Outbreaks of codling moth have occurred on a number of occasions but drastic eradication measures have so far prevented this major apple pest from becoming permanently established and have given Western Australia the distinction of being the only large apple-producing country where the moth is not a major problem. The oriental fruit moth has not recurred since eradication measures were taken against an outbreak in the Bickley Valley in 1952.

One of the best-represented families is the Noctuidae which contains several important pests. Included under this heading are the native budworm (or climbing cutworm) and the cotton bollworm (*Heliothis punctigera* and *H. armigera*), the cluster caterpillar (*Spodoptera litura*), the rough bollworm (*Earias huegeli*), the brown cutworm (*Agrotis munda*) and the southern armyworm (*Persectania ewingii*). The first four species are serious pests in the cotton areas of the north. The fruit-sucking moth (*Othreis materna*) also belongs to this group and causes heavy losses in citrus fruit grown around pastoral homesteads in the Kimberley and the north-west. In almost all cases where moths and butterflies are regarded as pests it is only the caterpillar stage which is destructive. The fruit-sucking moth, however, has a rasp-like proboscis capable of piercing orange and citrus skins and then sucking up the juice. Fortunately the creatures do not normally range to the citrus areas of the south-west.

One of the most remarkable members of the family Agaristidae is the whistling moth (*Hecatesia thyridion*). The male of this species is active just at sunset and makes a loud clicking noise during its fast circling flight.

Other common moth pests are the cabbage moth (*Plutella xylostella*), the potato moth (*Phthorimaea operculella*) and the apple looper moth (*Chloroclystis laticostata*).

The beautiful dryandra moth (*Carthaea saturnioides*) with its large eye spots on the wings superficially resembles the emperor moths. Its range is restricted to south-west Australia and the creature is much prized by collectors.

The butterfly fauna of the State lacks many large and showy forms. Some of the northern species such as *Hypolimnas bolina nerina* are quite colourful but the State has nothing to compare with the conspicuous and beautiful species found in the tropics of eastern Australia.

The blues (Lycaenidae) are well represented and the association of many larvae with ant nests renders the group a particularly interesting one.

The skippers (Hesperiidae) are relatively drab-coloured butterflies with strong powers of flight. Over twenty species are recorded from the State and some forms are endemic to the south-west.

Only one butterfly is of economic importance and that is the introduced cabbage white butterfly (*Pieris rapae*) which reached this State in 1943. It attacks cabbages, cauliflowers and related plants as well as one or two other strong-tasting herbs such as watercress. The butterfly belongs to the whites, or Pieridae, which group contains a number of native species. Several members of this family, including the introduced cabbage white, display extraordinary powers of flight and the native caper white (*Anaphaeis java teutonia*) has been observed to carry out mass migrations of remarkable proportions on the eastern side of the continent.

A rather showy butterfly which appears to have become established here recently, at least around the Perth area, is the wanderer or monarch (*Danaus plexippus plexippus*). This large orange and black butterfly has apparently reached Western Australia from the other States. The colourful larvae feed on certain noxious weeds such as the introduced narrow-leaf cotton-bush (*Asclepias fruticosa*).

Order Hymenoptera (Bees, Wasps, Ants)

The wood wasps and Sirex wasps (Siricidae) include several pests which have been established in New Zealand and Tasmanian pine forests. Imported timber has been fumigated from time to time following the location of infested material.

The sawflies (Tenthredinidae) are represented locally by a number of native forms. The larvae of the genus *Perga* may often be seen in caterpillar-like clusters amongst the foliage of eucalypts. An introduced sawfly, the pear and cherry slug (*Caliroa cerasi*), is a common pest on pear and plum trees. The smaller parasitic wasps (ichneumonids, chalcids and their allies) are well represented and play an important role in combating many insect pests. Some attack insect eggs while others parasitise caterpillars, aphids and scale insects, so that without their aid the problem of pest control would be even more difficult than at present.

The ant fauna (Formicidae) of the State is extremely varied. One of the best-known native species is the meat ant (*Iridomyrmex purpureus*) which often nests on gravel paths and roadsides. Among the most remarkable of the local ants may be listed *Camponotus inflatus*, the honey-pot ant of the interior, and *Myrmecia regularis* of the karri forest area which has the frog *Metacrinia nichollsi* as a tolerated guest in its nest. The honey-pot ant derives its name from the fact that certain individuals in the nest store honey until their abdomens become inflated to the size of grapes. This honey is then regurgitated to other ants as required. These ants were once prized by the natives as a food delicacy.

Two important introduced ant pests are the Argentine ant (*Iridomyrmex humilis*) and the Singapore ant (*Monomorium destructor*). The Argentine ant was once widespread in the metropolitan area, Albany and Bunbury, with several other country outbreaks. The insect has been reduced in recent years, however, as a result of a large-scale control campaign. The scheme involved the spraying of all infested areas, with government-controlled labour, and a restriction on the movement of goods likely to spread the pest. Since the commencement of the campaign in 1954 some 24,460 hectares have been treated at a cost of approximately \$2 million.

The social wasps (Vespidae) were once known only from the northern portion of the State. About 1949, however, colonies of *Polistes variabilis* were located in various parts

of the Perth suburban area and they have now extended to some of the orcharding districts in the Darling Range. How the introduction occurred is not known.

The burrowing wasps, including the sand wasps (Pompilidae), the flower wasps (Scoliidae) and solitary ants (Mutillidae) are well represented. The mutillids are, of course, not true ants but the wingless females bear a superficial resemblance to ants which is further accentuated by their ability to inflict a painful sting. The flower wasps are particularly numerous and winged males carrying wingless females are common around flowering plants in the early summer. Of the solitary ants the black and white *Ephutomorpha cribricollis* is the best known. Most of the wasps mentioned are beneficial, for they store caterpillars and other insects in mud nests and underground burrows to serve as food for the wasp grubs.

The majority of native bees are solitary forms although some, like the Colletidae, often choose a common site for nest burrowing and hundreds of tunnels may be located close to one another.

The leaf-cutting bees (Megachilidae) often attract notice from their habit of cutting circular pieces from rose leaves and other foliage for use in nest construction.

The only native social bees belong to the genus *Trigona* which does not occur in the southern portions of the State.

CLASS ARACHNIDA (Spiders, Mites, Ticks, etc.)

Creatures grouped under the above heading are, of course, not true insects and will be dealt with only very briefly. Several forms are of considerable economic importance, as for example the cattle tick (*Boophilus microplus*) and the fowl tick (*Argas persicus*). The cattle tick is confined to the Kimberley Division and its range corresponds roughly with that of the buffalo fly. The ornate kangaroo tick (*Amblyomma triguttatum*) is a common species. It is occasionally collected as an accidental parasite on domestic animals and man.

The most serious mite pest is the red-legged earth mite (*Halotydeus destructor*) which is very destructive to young legumes and other seedlings. It may be particularly troublesome on subterranean clover pastures. Other mites of importance to orchardists and market gardeners are the spider mites (Tetranychidae) which include such cosmopolitan species as the two-spotted mite (*Tetranychus urticae*) and the bryobia mite (*Bryobia rubrioculus*).

Spiders constitute a large group, most of which are useful on account of their insectivorous habits, although bites from some of the larger species may produce painful after-effects. The most dangerous local spider is the red-backed spider (*Latrodectus mactans hasselti*). This species, whose bite may even prove fatal, is easily recognised by the conspicuous red streak down the centre of the abdomen.

Scorpions of various kinds are widely distributed over the State and the larger ones may be able to inflict a painful sting. There is one record of a baby dying at Pemberton from the effects of scorpion venom but no other reports of serious after-effects are available and, generally speaking, the group is of little local importance.

FURTHER SOURCES OF INFORMATION

The difficulties confronting anyone trying to review in a few pages the entomological fauna of such a large State as Western Australia will be better appreciated if it is remembered that in the *Western Australian Year-Book* for 1898-99 the late A. M. Lea expressed the opinion that there were about 30,000 species of insects indigenous to this State. Many additions have been made in the last seventy-five years and one is faced with the problem of deciding which creatures warrant special mention and which must be excluded for lack of space. The general reader interested in consulting other short reviews of the local insect fauna is referred to A. M. Lea's article in the 1898-99 Year Book under the title of 'The Insects of Western Australia'; in the Year Book for 1900-01 the late H. M. Giles wrote 'A Glimpse of Western Australian Entomology'.

Two short summaries have also appeared in conjunction with science conferences in this State. The *Handbook and Review* published for the 1926 meeting of the Australasian Association for the Advancement of Science contained an article by L. J. Newman and the *Handbook* for the 1947 meeting of the Australian and New Zealand Association for the Advancement of Science printed a short summary of the local insects by L. Glauert.

Readers interested in more technical summaries are referred to Professor G. E. Nicholl's 'The Composition and Biographical Relation of the Fauna of Western Australia' (*A.N.Z.A.A.S.*, Vol. XXI, 1933, p. 93), the relevant volumes of *Die Fauna Sudwest-Australiens* by Michaelsen and Hartmeyer, 1907-1930, and the report of the Swedish expedition under Dr E. Mjoberg.

More detailed information relating to the forms of economic importance will be found in the publications of the Western Australian Department of Agriculture.

Chapter II—continued
Part 6—Natural Regions

*Contributed by Rex T. Prider, B.Sc., Ph.D., F.G.S., M. Aust.I.M.M.
 (former Professor of Geology, University of Western Australia)*

The physical features, geology, climate, flora and fauna of Western Australia have been outlined earlier in this Chapter and the subdivision of the State into 'natural regions' may now be considered. A Natural Region is one clearly marked off from neighbouring regions by topographical, geological, climatic, or biological conditions, or by combinations of these, so that, as far as Man's activities are concerned, they have different economic possibilities.

CHARACTERISTICS OF THE NATURAL REGIONS OF WESTERN AUSTRALIA

The subdivision of Western Australia into Natural Regions (see map on page 107) has been described by E. de C. Clarke in *Jour. Roy. Soc. West. Aust.*, vol. XII, pp. 117-32. A summary of the characteristics of these different Natural Regions (reprinted by courtesy of the University of Western Australia Press from Clarke, Pridier and Teichert: *Elements of Geology for Western Australian Students*) is given below.

NATURAL REGION	TOPOGRAPHY	GEOLOGY	RAINFALL	WATER SUPPLY (a)	VEGETATION, ETC.
ANTRIM (<i>geographic</i>)	Tableland	Cambrian sediments and lavas	Summer, monsoonal, 500 to 1,000 millimetres	Catchments, wells and artesian	Grassland and savannah
NORTH KIMBERLEY (<i>geographic</i>)	Dissected stony tableland	Younger Precambrian	Summer, monsoonal, 750 millimetres or more	Streams, springs, catchments	Luxuriant in valleys, sparse on tableland
FITZROY (<i>chief river</i>)	Very wide valleys and low hills	Palaeozoic (largely Permian)	Summer, monsoonal, 500 to 750 millimetres	Catchments and artesian	Grassland and savannah
CANNING (<i>A. W. Canning, surveyor and explorer</i>)	Sand ridges and table-top hills	Palaeozoic and Mesozoic	Summer, 375 millimetres or less	Springs, pools, artesian water? (undeveloped)	'Spinifex' (species of <i>Triodia</i>) and desert shrubs
CARNEGIE (<i>David Carnegie, explorer</i>)	Sand ridges and table-top hills	Mesozoic, Palaeozoic and Younger Precambrian	Variable and unreliable, probably about 125 millimetres	Catchments	'Spinifex' and desert shrubs
WARBURTON (<i>Warburton Range</i>)	Hills (some over 900 metres) separated by sandy country	Older Precambrian	Variable and unreliable, perhaps about 125 millimetres. Probably better than Carnegie Region owing to high hills	Catchments, some springs	'Mulga' (species of <i>Acacia</i>) and 'Spinifex'
NORTH-WEST (<i>common usage</i>)	Rugged hills. Rivers in well-defined valleys	Younger and Older Precambrian. Many economic minerals	Variable, unreliable, 375 millimetres or less	Wells, pools	'Spinifex', few shrubs and trees
MURCHISON (<i>common usage</i>)	Ridge hills and breakaways. Rivers in shallow beds. Salt 'lakes'	Older Precambrian. Economic minerals especially gold and nickel	Summer or winter, unreliable, 250 millimetres or less	Wells (potable groundwater)	'Mulga'. Eucalypts scarce except along rivers

KALGOORLIE ... (chief town)	Less hilly than Murchison. Salt 'lakes'. No defined water-courses except salt lake system	Older Precambrian. Economic minerals especially gold and nickel	Mainly winter, unreliable, 250 millimetres or less	Catchments. Ground water too salty for use	Eucalypt forest, especially Salmon Gum (<i>E. salmonophloia</i>), Gimlet (<i>E. salubris</i>) and Red Morrel (<i>E. longicornis</i>)
WHEAT BELT ... (common usage)	Same as Kalgoorlie Region	Older Precambrian, but few 'greenstones'	Winter, reliable, 250 to 500 millimetres	Similar to Kalgoorlie Region, but ground water potable in many places; therefore wells frequent	Eucalypt forest—Salmon Gum, Gimlet, and Morrel
JARRAH ... (chief timber)	More dissected than Wheat Belt Region, especially near Darling Scarp	Like Wheat Belt Region but there is an extensive cuirass of laterite	Winter, reliable, 625 to 1,000 millimetres	Streams and springs	Forest of Jarrah (<i>E. marginata</i>), Wandoo (<i>E. Wandoo</i>), Karri (<i>E. diversicolor</i>) and Marri (<i>E. calophylla</i>)
CARNARVON ... (chief town)	Elevated plain with table-top hills	Palaeozoic, Mesozoic, Tertiary and later	Summer or winter, very unreliable, about 250 millimetres	Artesian in many places. Catchments, pools	Sparse scrub in north, denser in south
GREENOUGH ... (river)	Sandstone tableland	Mesozoic and older	Winter, 375 to 500 millimetres	Springs, wells and catchments	Scrub
PERTH ... (chief town)	Coastal plain	Mesozoic and later	Winter, reliable, 500 to 875 millimetres	Springs, wells, artesian	Scrub, swamp and forest
STIRLING ... (prominent range)	Undulating tableland with abrupt ranges	Siliceous Tertiary sediments with inliers of Younger and Older Precambrian	Winter, 375 millimetres or less	Catchments. Stream water generally too salty for use	Heath and swamp
NULLARBOR ... (geographic)	Tableland, no hills	Calcareous Tertiary sediments	Winter, 250 millimetres or less	Catchments. Sub-artesian	Poor grassland

(a) 'Wells' refers to those that draw on ground water, but are not artesian. 'Catchments' refers to water collected on the surface—naturally in gnamma holes, artificially by conserving the run-off. 'Pools' refers to pools in watercourses and includes rock holes.

CHAPTER III—CONSTITUTION AND GOVERNMENT

Western Australia is one of the six federated sovereign States which, together with the Northern Territory and the Australian Capital Territory, constitute the Commonwealth of Australia. Thus, in addition to having its own Parliament and executive government, it is represented in the federal legislature. As well as government at the Federal and State levels, there is a third system, that of local government, which functions through City Councils, Town Councils and Shire Councils.

OUTLINE OF CONSTITUTIONAL DEVELOPMENT

A Legislative Council was established in Western Australia shortly after its foundation as a Crown Colony and sat for the first time in February 1832. The Council was non-elective and consisted of the Governor and four senior officials. In 1839, membership was increased to nine when the Governor nominated four unofficial members. Additional appointments were made from time to time until the dissolution of the nominee Legislative Council in 1870 with the inauguration of representative government as provided for in the Australian Colonies Government Act of 1850. This Act, which enabled the establishment of representative governments in other Australian Colonies, withheld the privilege from Western Australia until such time as the Colony should be able to defray all costs of government from its own revenues, and it was not until 1870 that it was felt that Western Australia was able to satisfy this condition. The new Legislative Council, elections for which took place in October of that year, consisted of twelve elected members, three nominees and three officials. The number of members of the Council was increased in 1874 to 21, of whom 14 were elected, in 1882 to 24, of whom 16 were elected and in 1886 to 26, comprising 17 elected members, 5 nominees and 4 officials.

Following the passage by the Legislative Council of a Constitution Act in 1889 and subsequent representations made in London by delegates sent from the Colony, responsible government was granted to Western Australia by an Imperial Act assented to on 15 August 1890. Provision was made for the establishment of a Parliament of two Houses, to be known as the 'Legislative Council' and the 'Legislative Assembly', to replace the old Council. Proclamation of responsible government was made in Perth on 21 October 1890 and election of the thirty members of the Legislative Assembly took place in November and December. The fifteen members of the Legislative Council were nominated by the Governor, as provided in the Constitution Act, and the Parliament was officially opened on 30 December 1890. The Constitution Act of 1889, while prescribing a Council which was originally nominative, contained a provision that, after the expiration of six years or on the population of the Colony reaching 60,000, the Council should become fully elective. The required population was attained in 1893 and an amendment to the Act in that year enabled the election of twenty-one members to the Legislative Council, and at the same time increased the Legislative Assembly to thirty-three members. By an amendment of 1899, membership of the Legislative Council was raised to thirty and of the Legislative Assembly to fifty. Provision was made for the Legislative Assembly to be increased to fifty-one members by the *Constitution Acts Amendment Act (No. 2), 1965*. The increase in numbers, however, did not become effective until the State general election in 1968.

On 1 January 1901, Western Australia and the five other Australian Colonies were federated under the name of the 'Commonwealth of Australia', authority for the union having been given by the Commonwealth of Australia Constitution Act which was passed by the British Parliament in 1900. By a provision of the Constitution Act the constituent parts of the Commonwealth previously designated 'Colonies' became known as 'States'. Under the Constitution, powers are divided between the Parliaments of the

Commonwealth and of the States by conferring power in respect of specific subjects on the Commonwealth either exclusively or jointly with the States, leaving the remaining powers to the States.

Procedure in both Federal and State Parliaments is based on British practice. The legislatures consist of the Sovereign, represented by the Governor-General of Australia or the Governor of the State, and the elected members. In the field of executive government the British 'Cabinet' system has also been adopted. The members of the Cabinets must hold seats in the legislature as elected members. The Cabinet is responsible to the Parliament and continues in office only while holding the confidence of the Parliament. All Cabinet Ministers are members of the Executive Council, the supreme group of advisers to the Crown, and the Cabinet thus provides the executive government of the Commonwealth or the State. The Executive Council is presided over by the Governor-General of Australia or the Governor of the State and at its meetings, which are formal and official in character, the decisions of the Cabinet are given legal form, appointments are made, resignations accepted, proclamations issued and regulations approved.

VICE-REGAL REPRESENTATION

The Governor-General of Australia

Under the Commonwealth Constitution, ultimate executive power is vested in the Crown and is exercised by the Governor-General as the direct representative of the Sovereign. Appointment to the office is made by the Crown after consultation with the Prime Minister of the Commonwealth. The present Governor-General is His Excellency Sir John Robert Kerr, G.C.M.G., K.St.J., who was sworn in on 11 July 1974. During the absence from Australia of the Governor-General it is usual for the senior among the State Governors to be appointed Administrator.

The Governor of Western Australia

The Governor of Western Australia is the personal representative of the Sovereign in the State and exercises the powers of the Crown in State matters. He is the titular head of the Government and performs the official and ceremonial functions attaching to the Crown. The present Governor of Western Australia, His Excellency Air Chief Marshal Sir Wallace Kyle, G.C.B., C.B.E., D.S.O., D.F.C., was sworn in on 24 November 1975. In the event of the Governor's absence from Western Australia the Lieutenant-Governor of the State is appointed Administrator. If there is no Lieutenant-Governor it is customary for the Chief Justice of Western Australia to be appointed Administrator. The present Lieutenant-Governor, Commodore Sir James Maxwell Ramsay, C.B.E., D.S.C., was sworn in on 30 July 1974 and since that date has performed the functions of Administrator of the State during absences of the Governor.

The last Governor of Western Australia as a Colony was Lieutenant-Colonel Sir Gerard Smith, K.C.M.G., whose term of office expired on 29 June 1900 and the first Governor of the State was Captain Sir Arthur Lawley, K.C.M.G., who was sworn in on 1 May 1901. The names and dates of assumption of office of Governors, Lieutenant-Governors and Administrators from the foundation of the Colony to 1974 were shown in the previous issue of the Year Book.

THE FEDERAL PARLIAMENT

The legislative power of the Commonwealth is vested in a Federal Parliament which consists of Her Majesty the Queen (represented by the Governor-General), a Senate and a House of Representatives. Subject to the Constitution, the Federal Parliament is empowered to make laws concerning, among other things, defence, external affairs, customs and excise, trade and commerce with other countries and among the States, taxation, borrowing of money on public credit, currency and coinage, banking, insurance, navigation, fisheries, quarantine, posts and telegraphs, census and statistics, immigration, naturalisation and aliens, copyrights and trade marks, bankruptcy, marriage, divorce and

matrimonial causes, social services, and conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State. The Constitution provides that, when a law of a State is inconsistent with a law of the Commonwealth, the Commonwealth law shall prevail and the State law shall, to the extent of the inconsistency, be invalid.

The qualifications necessary for membership of the Federal Parliament and for voting at federal elections are described in the *Official Year Book of Australia*. Under the provisions of the *Commonwealth Electoral Act 1973*, which was proclaimed operative from 21 March 1973, the age qualification for enrolment, voting and candidature for federal parliamentary elections was lowered from twenty-one years to eighteen years.

The payment of allowances to Senators and Members of the House of Representatives is provided for in the Constitution and a superannuation scheme is established under the provisions of the *Parliamentary Retiring Allowances Act 1948-1973*.

The Senate

The Senate consisted originally of thirty-six members, six Senators being returned from each State. The Parliament is authorised by the Constitution to increase or decrease the number of members. The growth of the population since Federation having been such as to warrant a considerable enlargement of the Parliament, a Representation Act was passed in 1948 to provide for increased membership by raising from six to ten the number of Senators from each State. At the same time the alternative system of counting of votes in elections for the Senate was altered by the Commonwealth Electoral Act to one of proportional representation, a summarised description of which is given in the *Official Year Book of the Commonwealth of Australia*, No. 38, pages 82-3.

Members are elected on the basis of adult suffrage by the people of the State which they represent. As provided by the *Commonwealth Electoral Act 1918-1975*, enrolment as an elector is compulsory for all qualified persons except those who are aboriginal natives of Australia. Aborigines, although entitled to enrol, are not required to do so. Voting is compulsory for all enrolled persons in terms of an amendment of 1924 which operated for the first time at elections held on 14 November 1925. The term of office of a Senator is normally six years and commences on the first day of July following his election. One-half of the members retire at the end of every third year and are eligible for re-election.

Following the simultaneous dissolution of the Senate and the House of Representatives by a Proclamation made on 11 April 1974 by the Governor-General of Australia, general elections for the Federal Parliament were held on 18 May 1974.

Further elections were held on 13 December 1975 for, by a Proclamation dated 11 November 1975, the two Houses of the Federal Parliament were again dissolved simultaneously by the Governor-General. The following table shows the Western Australian membership of the Senate as a result of the election of 13 December 1975.

WESTERN AUSTRALIAN MEMBERS OF THE SENATE

Due to retire on 30 June 1978 (a)		Due to retire on 30 June 1981 (a)	
Name	Political party	Name	Political party
Chaney, F. M.	Lib.	Durack, P. D.	Lib.
Coleman, Ruth N.	A.L.P.	McIntosh, G. D.	A.L.P.
Drake-Brockman, Hon. T. C., D.F.C.	N.C.P.	Sim, J. P.	Lib.
Thomas, A. M.	Lib.	Wheeldon, Hon. J. M.	A.L.P.
Walsh, P. A.	A.L.P.	Withers, R. G.	Lib.

(a) For an explanation of the date of retirement following a dissolution of the Senate, refer section 13 of the Constitution of the Commonwealth of Australia.

A.L.P. = Australian Labor Party. N.C.P. = National Country Party of Australia.
Lib. = Liberal Party of Australia.

The House of Representatives

State membership of the House of Representatives is on a population basis with the proviso that each State shall have at least five members. The Constitution provides further that the number of members of the House of Representatives shall be, as nearly as practicable, double the number of Senators. With the enlargement of the Senate from thirty-six to sixty members, the membership of the House of Representatives was increased, from the date of the 1949 elections, from seventy-four to 121, not including a member for the Australian Capital Territory, which achieved representation for the first time at this election, and a member for the Northern Territory, which had been represented since 1922.

Western Australia's population growth had been such as to necessitate an increase in representation from five to eight, and this number was raised to nine in 1955 as a result of a redistribution following the Census of 30 June 1954. At the same time, the total number of members of the House of Representatives was increased to 122, excluding the two members for the internal Territories.

Consequent upon the population changes disclosed by the 1966 Census, a redistribution of the State electoral division boundaries was carried out in 1968 and the following representation in the House of Representatives became effective as from the general election held on 25 October 1969: New South Wales 45, Victoria 34, Queensland 18, South Australia 12, Western Australia 9, and Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 122 to 123.

A redistribution of Western Australian electoral division boundaries was carried out in 1973, as a result of the population changes disclosed by the 1971 Census, and the State gained an additional seat in the House of Representatives. The tenth seat was named Tangney after Dame Dorothy Tangney, a former Labour senator for Western Australia. Representation of the Australian Capital Territory in the House was increased from one to two by the *Australian Capital Territory Representation (House of Representatives) Act 1973* and consequently the total number of members was raised to 127.

Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years, by the people of the electorate which they represent. As provided by the *Commonwealth Electoral Act 1918-1975*, enrolment as an elector is compulsory for all qualified persons except those who are aboriginal natives of Australia. Aborigines, although entitled to enrol, are not required to do so. Voting is on the preferential system and is compulsory for all enrolled persons in terms of an amendment of 1924 which operated for the first time at elections held on 14 November 1925.

Elections for the House of Representatives were held on 18 May 1974 and 13 December 1975, following the double dissolutions of both Houses of Parliament referred to on page 112. The next table shows the Western Australian membership of the House of Representatives as a result of the election of 13 December 1975.

WESTERN AUSTRALIAN MEMBERS OF THE HOUSE OF REPRESENTATIVES

A.L.P. = Australian Labor Party.

Lib. = Liberal Party of Australia.

THE STATE PARLIAMENT

The Crown, represented by the Governor, and the Parliament, comprising a Legislative Council and a Legislative Assembly, constitute the legislature of Western Australia.

Executive government is based, as in the case of the Commonwealth and in other States, on the system which evolved in Great Britain in the eighteenth century and which is generally known as the 'Cabinet' system. The Cabinet consists of Ministers of the Crown chosen for the Ministry from members of Parliament belonging to the political party, or coalition of parties, which is in the majority in the Legislative Assembly. The Constitution requires that at least one of the Ministers be selected from members of the Legislative Council. In Western Australia, as in the other Australian States, the office of principal Minister is designated 'Premier'.

Since 1890, when responsible government was granted to Western Australia, there have been twenty-five separate Ministries as shown in the following table. No organised political party existed in the Colony until the formation of a Labour party in the 1890s. A Labour Ministry assumed office in 1904. As no previous Ministry had a specific party designation, the table has been annotated accordingly.

MINISTRIES FROM 1890

Name of Premier	Political party	Date of assumption of office	Duration			
			Years	Months	Days	
Forrest	(a)	1890—29 December	10	1	17	
Throssell		1901—15 February	...	3	12	
Leake		27 May	...	5	25	
Morgans		21 November	...	1	2	
Leake		23 December	...	6	8	
James		1902—1 July	...	2	1	9
Daglish		Labour	1904—10 August	1	...	15
Rason		Liberal	1905—25 August	...	8	12
Moore		Liberal	1906—7 May	4	4	9
Wilson		Liberal	1910—16 September	1	...	21
Scaddan	Labour	1911—7 October	4	9	20	
Wilson	Liberal	1916—27 July	...	11	1	
Lefroy	Liberal	1917—28 June	1	9	20	
Colebatch	Liberal	1919—17 April	...	1	...	
Mitchell	Nat. and C.P. (coalition)	17 May	4	10	30	
Collier	Labour	1924—16 April	6	...	8	
Mitchell	Nat. and C.P. (coalition)	1930—24 April	3	
Collier	Labour	1933—24 April	3	3	27	
Wilcock	Labour	1936—20 August	8	11	11	
Wise	Labour	1945—31 July	1	8	1	
McLarty	L.C.L. and C.P. (coalition)	1947—1 April	5	10	22	
Hawke	Labour	1953—23 February	6	1	10	
Brand	L.C.L. and C.P. (coalition)	1959—2 April	11	11	1	
Tonkin	Labor	1971—3 March	3	1	5	
Court	Lib. and C.P. (coalition)	1974—8 April	Still in office (b)			

C.P. = Country Party (c). L.C.L. = Liberal and Country League (d). Nat. = Nationalist.

(a) No specific party designation. (b) At 31 December 1975. (c) The name of the Party was changed to the *National Country Party of Australia (W.A.) Inc.* on 5 May 1975. (d) The name of the Party was changed to *The Liberal Party of Australia (Western Australian Division) Incorporated* on 15 July 1968.

The Constitution Act of 1889 provided for a Ministry of five members. This number was increased to six by an amendment to the Act in 1896, to eight by another amendment in 1927, and to ten by the *Acts Amendment (Increase in Number of Ministers of the Crown) Act, 1950*. The Ministry was increased to twelve members under the provisions of the *Constitution Acts Amendment Act, 1965*. The names of the Ministers and the portfolios held by them at 5 June 1975 are shown in the next table. As authorised by the *Constitution Acts Amendment Act (No. 4), 1975*, which was assented to on 20 November 1975, the number of Ministers was further increased to thirteen.

The right to vote at parliamentary elections was extended to women by the *Constitution Acts Amendment Act, 1899* and membership of either House was provided for by the *Parliament (Qualification of Women) Act, 1920*. The first woman member of any Australian Parliament was Mrs Edith Dircksey Cowan, O.B.E., who was elected to the Legis-

lative Assembly in March 1921 as member for West Perth. Mrs A. F. G. (later Dame Florence) Cardell-Oliver, M.L.A. for Subiaco, became the first woman Cabinet Minister in Australia when she joined the McLarty Ministry in 1947.

Payment of members was introduced in 1900 by a Payment of Members Act and a superannuation fund is established under the *Parliamentary Superannuation Act, 1970-1971*. The latter Act replaces the *Parliamentary Superannuation Act, 1948-1968* which came into operation on 1 January 1949.

THE MINISTRY FROM 5 JUNE 1975 (a) (c)

Name of Minister	Title of office
Hon. Sir Charles Walter Michael Court, O.B.E., M.L.A.	Premier, Treasurer, and Minister Co-ordinating Economic and Regional Development (b)
Hon. Desmond Henry O'Neil, M.L.A.	Deputy Premier, Minister for Works, Water Supplies, and the North-West
Hon. Neil McNeill, B.Sc. (Agric.), M.L.C.	Minister for Justice, Chief Secretary, and Leader of the Government in the Legislative Council
Hon. Richard Charles Old, M.L.A.	Minister for Agriculture
Hon. Raymond James O'Connor, M.L.A.	Minister for Transport, Police and Traffic
Hon. Graham Charles MacKinnon, M.L.C.	Minister for Education, Cultural Affairs, and Recreation
Hon. William Leonard Grayden, M.L.A.	Minister for Labour and Industry, Consumer Affairs, and Immigration
Hon. Andrew Mensaros, M.L.A.	Minister for Industrial Development, Mines, and Fuel and Energy
Hon. Edgar Cyril Rushton, M.L.A.	Minister for Local Government, and Urban Development and Town Planning
Hon. Keith Alan Ridge, M.L.A.	Minister for Lands, Forests, and Tourism
Hon. Norman Eric Baxter, M.L.C.	Minister for Health, and Community Welfare
Hon. Peter Vernon Jones, M.L.A.	Minister for Housing, Conservation and the Environment, and Fisheries and Wildlife

(a) The Ministry formed on 8 April 1974 when the Liberal-Country Party took office after the general elections of 30 March 1974 was reconstituted as shown above, with effect from 5 June 1975. (b) The principal executive office of government was redesignated Premier, Treasurer, Minister Co-ordinating Economic and Regional Development, and Minister for Federal Affairs on 18 June 1975. (c) See also *Appendix*.

The Legislative Council

The Legislative Council consists of thirty members, each of the fifteen electoral provinces into which the State is divided being represented by two members. Election is for a term of six years and one-half of the members retire every three years.

The qualifications of a candidate for election to the Legislative Council are that he or she shall be at least eighteen years of age, shall have resided in Western Australia for a minimum of one year, be a natural-born or naturalised British subject, and be enrolled or qualified for enrolment, as an elector. No person may hold office as a Member of the Legislative Council and a Member of the Legislative Assembly at the same time. A judge of the Supreme Court, the Sheriff of Western Australia, an undischarged bankrupt, a debtor against whose estate there is a subsisting order in bankruptcy, or a person who has been attainted or convicted of treason or felony may not be elected to the Legislative Council. The qualifications for election as a member of the Legislative Council are thus identical with those necessary for election as a member of the Legislative Assembly. The qualifying age for a candidate for election to either House was reduced from twenty-one years of age to eighteen years of age under the provisions of the *Constitution Acts Amendment Act, 1973* which was proclaimed operative from 1 January 1974.

The *Electoral Act, 1907-1973* requires that to qualify for enrolment as an elector a person shall be at least eighteen years of age, be a natural-born or naturalised British subject, shall have lived in the Commonwealth of Australia for six months continuously, and shall have lived in Western Australia for three months continuously and in the district for which he claims enrolment for a continuous period of one month immediately preceding the date of his claim. The qualifying age for enrolment as an elector for both the Legislative Council and the Legislative Assembly was reduced from twenty-one years of

age to eighteen years of age under the provisions of the *Electoral Act Amendment Act (No. 2), 1970*. The Act operated for the first time at the conjoint election for the Legislative Council and the Legislative Assembly held on 20 February 1971. A person is disqualified from enrolment if he is of unsound mind, has been attainted of treason, has been convicted and is serving sentence for any offence punishable by imprisonment for one year or longer, is the holder of a temporary entry permit for the purposes of the *Migration Act 1958-1973 (Commonwealth)* or is a prohibited immigrant under that Act. Enrolment is compulsory under the *Electoral Act Amendment Act, 1964* for all qualified persons except those who are aboriginal natives of Australia. Aborigines, although entitled to enrol, are not required to do so. Voting at elections is on the preferential system and, as provided by the foregoing Act, is compulsory for all enrolled persons.

Under the *Electoral Districts Act, 1947-1965*, the State is divided into a Metropolitan Area, consisting of five electoral provinces, an Agricultural, Mining and Pastoral Area with eight provinces, and a North-West-Murchison-Eyre Area with two provinces. The names and boundaries of these fifteen electoral provinces, together with those of the fifty-one component electoral districts, were given in the 1969 issue of the Year Book. Changes in these boundaries were found necessary following an examination of the rolls prepared for the election of 20 February 1971 and, by proclamation dated 1 September 1971, Electoral Commissioners appointed under the Act were directed to wholly or partially redivide the State into electoral districts and electoral provinces in the manner provided by the Act.

The proposals of the Commissioners were published in an issue of the *Government Gazette of Western Australia* dated 21 January 1972. After considering objections submitted, the Commissioners made their final report on 1 June 1972. This report, together with maps showing the final recommendations of the Commissioners for the division of the State into electoral districts and for the adjustment of the boundaries of the electoral provinces, was published in the *Government Gazette of Western Australia* dated 14 June 1972. The electoral districts, as finally determined, contained within each province are listed below. Details of a subsequent division of the State into fifty-five electoral districts and the adjustment of the boundaries of electoral provinces appear in the *Appendix*.

SUMMARY

Australian Labor Party (A.L.P.)	22
Country Party (C.P.) (b)	6
The Liberal Party of Australia (Western Australian Division) Incorporated (Lib.)	23

(a) The Hon. Sir David Brand resigned on 21 August 1975. His seat was taken by Mr R. J. Tubby (Lib.) who was elected at a by-election held on 1 November 1975 to fill the vacancy.
 (b) The name of the Party was changed to the *National Country Party of Australia (W.A.) Inc.* on 5 May 1975.

There are fifty-one members of the Legislative Assembly, each member representing one of the fifty-one electoral districts into which the State is divided for the purpose. Members are elected for the duration of the Parliament, which is limited to three years.

A candidate for election must have resided in Western Australia for twelve months, be at least eighteen years of age, be a natural-born or naturalised British subject, and be enrolled or qualified for enrolment, as an elector at Legislative Assembly elections. No person is qualified to be a Member of the Legislative Assembly if he is a Member of the Legislative Council, a Judge of the Supreme Court, the Sheriff of Western Australia, an undischarged bankrupt, a debtor against whose estate there is a subsisting order in bankruptcy, or has been attainted or convicted of treason or felony.

The qualifications and disqualifications applying to enrolment as an elector of the Legislative Assembly are the same as those prescribed for electors of the Legislative Council and enumerated in the preceding section *The Legislative Council*. As provided by the *Electoral Amendment Act, 1919* enrolment is compulsory for all qualified persons except those who are aboriginal natives of Australia. Aborigines, although entitled to enrol, are not required to do so. Voting at elections is on the preferential system and is compulsory for all enrolled persons as provided by the *Electoral Act Amendment Act, 1936*.

ELECTIONS, ELECTORS ON ROLL AND VOTES RECORDED

The Federal Parliament

General elections for the Federal Parliament were held on 13 December 1975. The Liberal-National Country Party coalition, led by the Honourable J. M. Fraser, was elected to office with a majority of fifty-five seats in the House of Representatives.

Liberal-National Country Party coalition representation in the Senate as a result of the elections was increased from thirty to thirty-five.

(a) As defined in the *Electoral Districts Act, 1947-1965*. (b) Uncontested. (c) Not available. (d) Proportion of votes recorded to electors on roll in contested electoral provinces (Legislative Council) or contested electoral districts (Legislative Assembly). (e) Proportion of informal votes to total votes recorded.

The State Parliament

At the conjoint election for the Legislative Council and the Legislative Assembly held on 30 March 1974, the Liberal Party-Country Party alliance, led by the Honourable Sir Charles Court, O.B.E., was elected to office with a majority in the Legislative Assembly of seven seats.

The table on page 120 shows the number of electors enrolled in each Province and in each District in 1974. The numbers of formal and informal votes recorded throughout the State at the election are also shown.

It will be seen from the table that the number of electors enrolled in each District in the Metropolitan Area was approximately twice the number in each District in the Agricultural, Mining and Pastoral Area. This is accounted for by a requirement of the *Electoral Districts Act, 1947-1965* that the Electoral Commissioners, in determining the quota of electors for each District, should reckon every two electors in the Metropolitan Area as one elector, at the same time giving full representation to each elector in the Agricultural, Mining and Pastoral Area. The number of Districts in the North-West-Murchison-Eyre Area was fixed by the Act at four.

LEGISLATION DURING 1974

During the first session of the twenty-eighth Parliament, which lasted from 25 July to 29 November 1974, the Western Australian legislature enacted eighty-eight Public Statutes, and, in addition, dealt with two Bills which were introduced but not passed.

The titles and a brief summary of the Acts passed by the State Parliament during 1974 (*i.e.* those enacted during the period specified in the previous paragraph) are given below. The full text of the legislation enacted is contained in the volumes of *The Acts of the Parliament of Western Australia*, to which reference should be made if further details are required.

ACTS PASSED DURING 1974

No. of Act	Short title and summary
23	Acts Amendment (Judicial Salaries and Pensions) Act. Amends subsection 1 of section 5 of the <i>Judges' Salaries and Pensions Act, 1950-1973</i> and subsection 1 of section 12 of the <i>District Court of Western Australia Act, 1969-1972</i> .
58	Acts Amendment (Road Traffic) Act. Amends The Criminal Code; the <i>Coroners Act, 1920-1960</i> ; the <i>Motor Vehicle Dealers Act, 1973</i> ; the <i>Motor Vehicle Drivers Instructors Act, 1963-1973</i> and the <i>Motor Vehicle (Third Party Insurance) Act, 1943-1973</i> .
82	Agricultural Products Act Amendment Act. Amends sections 2, 3, 4 and 8, and adds section 2A to the <i>Agricultural Products Act, 1929-1968</i> .
32	Alcohol and Drug Authority Act. Establishes the Western Australian Alcohol and Drug Authority. Provides for the treatment, management, care and rehabilitation of persons suffering from the excess consumption or use of intoxicating liquors or drugs. Promotes and subsidises research into prevention and treatment of alcohol and drug abuse.
34	Alumina Refinery Agreement Act Amendment Act. Amends the <i>Alumina Refinery Agreement Act, 1961-1972</i> by approving the fifth supplementary agreement between the State and Alcoa of Australia (W.A.) Limited.
88	Appropriation Act (Consolidated Revenue Fund).
86	Appropriation Act (General Loan Fund).
38	Art Gallery Act Amendment Act. Adds section 20A to the <i>Art Gallery Act, 1959-1968</i> .
71	Assistance to Decentralised Industry Act. Enables financial assistance to be granted in respect of businesses carried on at decentralised locations in the State.
80	Beef Industry Committee Act. Establishes the Beef Industry Committee for the purpose of declaration of minimum prices at which beef may be bought or sold.
64	Bulk Handling Act Amendment Act. Adds sections 34A, 34B, 34C and 34D and amends section 51 of the <i>Bulk Handling Act, 1967-1973</i> .
37	Commonwealth Places (Administration of Laws) Act Amendment Act. Repeals section 15 of the <i>Commonwealth Places (Administration of Laws) Act, 1970-1971</i> .
30	Constitution Acts Amendment Act. Amends Schedule IV of the <i>Constitution Acts Amendment Act, 1899-1973</i> .
10	Constitutional Convention Act. Continues the status of former delegates to the Australian Constitutional Convention during a specified period. Makes various other provisions relating to delegates.

ACTS PASSED DURING 1974—*continued*

No. of Act	Short title and summary
33	Convicted Inebriates' Rehabilitation Act Amendment Act. Amends sections 3, 8, 10-12 and repeals and re-enacts sections 6 and 7 of the <i>Convicted Inebriates' Rehabilitation Act, 1963</i> .
78	Country Areas Water Supply Act Amendment Act. Amends section 65 of the <i>Country Areas Water Supply Act, 1947-1973</i> .
50	Dampier Solar Salt Industry Agreement Act Amendment Act. Amends the <i>Dampier Solar Salt Industry Agreement Act, 1967</i> by ratifying a variation agreement between the State and Dampier Salt Limited.
13	Daylight Saving Act. Promotes the earlier use of daylight in a certain period. Repeals the <i>Daylight Saving Act, 1946</i> and provides for a referendum on the question.
79	Death Duty Assessment Act Amendment Act. Amends sections 3, 10 and 26 of the <i>Death Duty Assessment Act, 1973</i> .
36	Distressed Persons Relief Trust Act Amendment Act. Amends subsection 2 of section 4 of the <i>Distressed Persons Relief Trust Act, 1973</i> .
24	Dongara-Eneabba Railway Act. Authorises the construction of a railway from Dongara to Eneabba, being a total distance of approximately eighty-seven kilometres.
61	Education Act Amendment Act. Amends sections 3, 11, 12 and 13 of the <i>Education Act, 1928-1973</i> .
18	Evidence Act Amendment Act. Amends the <i>Evidence Act, 1906-1971</i> and makes further provision with respect to the taking of evidence by or for courts or persons acting judicially.
15	Explosives and Dangerous Goods Act Amendment Act. Amends the <i>Explosives and Dangerous Goods Act, 1961-1967</i> .
51	Factories and Shops Act Amendment Act. Repeals section 15 and adds sections 18A and 92A to the <i>Factories and Shops Act, 1963-1972</i> .
72	Fisheries Act Amendment Act. Amends the <i>Fisheries Act, 1905-1973</i> .
77	Forests Act Amendment Act. Amends the <i>Forests Act, 1918-1972</i> by adding Part IVA in relation to the control and eradication of forest diseases.
22	Fuel, Energy and Power Resources Act Amendment Act. Amends the <i>Fuel, Energy and Power Resources Act, 1972</i> and makes provision for the securing of present and future sources of fuel, energy and power for the protection of the community in cases of emergency.
5	Hire-Purchase Act Amendment Act. Repeals and re-enacts section 2 of the <i>Hire-Purchase Act Amendment Act, 1973</i> . Amends sections 23E, 23K, 23N and 40A of the <i>Hire-Purchase Act, 1959-1973</i> .
35	Housing Agreement (Commonwealth and State) Act Amendment Act. Amends the <i>Housing Agreement (Commonwealth and State) Act, 1973</i> by approving a supplemental agreement between the Commonwealth and the State of Western Australia.
39	Indecent Publications Act Amendment Act. Amends the <i>Indecent Publications Act, 1902-1973</i> .
19	Junior Farmers' Movement Act Amendment Act. Amends the <i>Junior Farmers' Movement Act, 1955-1958</i> to change the name of the movement.
49	Lake Lefroy Salt Industry Agreement Act Amendment Act. Amends the <i>Lake Lefroy Salt Industry Agreement Act, 1969</i> by approving a variation agreement between the State and Lefroy Salt Pty. Ltd.
55	Land Agents Act Amendment Act. Amends section 3 and the First Schedule to the <i>Land Agents Act, 1921-1973</i> .
29	Library Board of Western Australia Act Amendment Act. Amends the <i>Library Board of Western Australia Act, 1951-1965</i> . Provides for the custody and management of the State archives.
44	Liquor Act Amendment Act. Amends the Fourth Schedule to the <i>Liquor Act, 1970-1973</i> .
87	Loan Act. Authorises the raising of \$60,450,000 by loan for the construction of certain public works and other purposes.
65	Local Government Act Amendment Act. Amends the <i>Local Government Act, 1960-1973</i> .
74	Machinery Safety Act. Repeals the <i>Inspection of Machinery Act, 1921-1969</i> . Provides for the safe design, construction, installation and operation of machinery, for the inspection of machinery and the conditions under which it is used, and for the safety of persons.
28	Main Roads Act Amendment Act. Amends section 32, repeals section 33A and substitutes a Second Schedule to the <i>Main Roads Act, 1930-1972</i> .
26	Marketing of Potatoes Act Amendment Act. Amends the <i>Marketing of Potatoes Act, 1946-1973</i> .
12	Metropolitan Region Town Planning Scheme Act Amendment Act. Amends section 33 of the <i>Metropolitan Region Town Planning Scheme Act, 1959-1973</i> .
63	Mines Regulation Act Amendment Act. Amends the <i>Mines Regulation Act, 1946-1972</i> .
27	Ministers of the Crown (Statutory Designations) and Acts Amendment Act. Facilitates the alteration of the style and title of Ministers of the Crown. Amends the <i>Interpretation Act, 1918-1972</i> ; the <i>Traffic Act, 1919-1973</i> ; the <i>Local Government Act, 1960-1973</i> ; the <i>State Electricity Commission Act, 1945-1973</i> ; the <i>Public Works Act, 1902-1973</i> and the <i>Main Roads Act, 1930-1972</i> .

ACTS PASSED DURING 1974—*continued*

No. of Act	Short title and summary
53	Money Lenders Act Amendment Act. Amends sections 3 and 11A, repeals section 20A and adds section 22 to the <i>Money Lenders Act, 1912-1970</i> .
81	Nickel (Agnew) Agreement Act. Ratifies an Agreement between the State of Western Australia and Western Selcast (Pty) Limited and Mount Isa Mines Limited with respect to the mining and treatment of certain nickel ore reserves.
16	Nickel Refinery (Western Mining Corporation Limited) Agreement Act Amendment Act. Amends section 2, adds section 3B and a Third Schedule to the <i>Nickel Refinery (Western Mining Corporation Limited) Agreement Act, 1968-1970</i> by approving the second supplemental agreement between the State and Western Mining Corporation Limited.
7	Official Prosecutions (Defendants' Costs) Act Amendment Act. Amends section 6 of the <i>Official Prosecutions (Defendants' Costs) Act, 1973</i> .
68	Painters' Registration Act Amendment Act. Amends the <i>Painters' Registration Act, 1961-1970</i> .
2	Pay-roll Tax Act Amendment Act. Amends section 4 of the <i>Pay-roll Tax Act, 1971-1973</i> .
42	Perth Mint Act Amendment Act. Amends section 20 of the <i>Perth Mint Act, 1970</i> .
57	Phosphate Co-Operative (W.A.) Ltd. Act. Makes provisions relating to certain affairs of Phosphate Co-Operative (W.A.) Ltd.
3	Plant Diseases Act Amendment Act. Amends sections 4 and 12C and adds a Schedule of charges to the <i>Plant Diseases Act, 1914-1973</i> .
41	Police Act Amendment Act. Amends sections 65, 90A and 94E, and adds section 50AA to the <i>Police Act, 1892-1972</i> .
62	Pre-School Education Act Amendment Act. Amends sections 3 and 11 of the <i>Pre-School Education Act, 1973</i> .
43	Public Authorities (Contributions) Act. Requires the State Electricity Commission of Western Australia, the Metropolitan Water Supply, Sewerage, and Drainage Board and the Fremantle Port Authority to make annual contributions to Consolidated Revenue.
25	Railways Discontinuance and Land Revestment Act. Authorises the discontinuance of certain railways and revests in Her Majesty specified railway land.
17	Registration of Deeds Ordinance Amendment Act. Amends the <i>Registration of Deeds Ordinance, 1856</i> . Repeals 9 Edward VII 32 Act No. 36 of 1909 and re-enacts it as a section of the principal Act.
60	Reserves Act. Alters the purpose of certain reserves.
48	Rights in Water and Irrigation Act Amendment Act. Amends sections 1 and 10 of the <i>Rights in Water and Irrigation Act, 1914-1973</i> . Makes further provision to control the discharge of effluent into waters.
59	Road Traffic Act. Repeals the Traffic Act, 1919-1974. Establishes the Road Traffic Authority and consolidates and amends the law relating to road traffic.
52	Rural and Industries Bank Act Amendment Act. Amends section 36 of the <i>Rural and Industries Bank Act, 1944-1969</i> .
45	Rural and Industries Bank Act Amendment Act (No. 2). Amends section 50 and adds section 96A to the <i>Rural and Industries Bank Act, 1944-1969</i> .
70	Sale of Land Act Amendment Act. Amends section 3 and adds section 19A, 19B, 19C and 19D to the <i>Sale of Land Act, 1970-1973</i> .
75	Shearers' Accommodation Act Amendment Act. Amends the <i>Shearers' Accommodation Act, 1912-1972</i> .
76	Skeleton Weed (Eradication Fund) Act. Establishes the Skeleton Weed Eradication Fund for the eradication of, and the prevention of the spread of, skeleton weed and for the payment of compensation to owners of grain, seed or crop destroyed during the course of eradication or prevention of spread.
69	Small Claims Tribunals Act. Provides for the constitution of Small Claims Tribunals, defines the jurisdiction of the tribunals and the functions and powers of their members.
40	Soil Conservation Act Amendment Act. Amends sections 4, 9, 11 and the Schedule and adds section 7A to the <i>Soil Conservation Act, 1945-1973</i> .
9	Stamp Act Amendment Act. Amends sections 4, 31, 52, 112I and the Second Schedule and adds section 50A to the <i>Stamp Act, 1921-1973</i> .
46	Stamp Act Amendment Act (No. 2). Amends sections 52, 54, 58 and the Second Schedule to the <i>Stamp Act, 1921-1974</i> .
20	State Housing Act Amendment Act. Amends subsection 1 of section 6 of the <i>State Housing Act, 1946-1973</i> .
54	Stock Diseases (Regulations) Act Amendment Act. Adds section 12A to the <i>Stock Diseases (Regulations) Act, 1968-1969</i> .
47	Superannuation and Family Benefits Act Amendment Act. Amends sections 25, 35, 37, 49 and 60A of the <i>Superannuation and Family Benefits Act, 1938-1973</i> .
1	Supply Act. Grants supply of \$350 million for the year 1974-75.
56	Supreme Court Act Amendment Act. Amends sections 30 and 167 of the <i>Supreme Court Act, 1935-1971</i> . Repeals and re-enacts section 130 of the Act.

ACTS PASSED DURING 1974—*continued*

No. of Act	Short title and summary
21	Teacher Education Act Amendment Act. Amends sections 3, 10 and 72 of the <i>Teacher Education Act, 1972</i> . Repeals and re-enacts section 55 of the Act.
83	Teacher Education Act Amendment Act (No. 2). Amends sections 38 and 85 of the <i>Teacher Education Act, 1972-1974</i> .
84	The Perpetual Executors, Trustees and Agency Company (W.A.) Limited Act Amendment Act. Repeals and re-enacts section 16 and amends sections 21A and 21B of <i>The Perpetual Executors, Trustees and Agency Company (W.A.) Limited Act, 1922-1969</i> .
85	The West Australian Trustee Executor and Agency Company Limited Act Amendment Act. Repeals and re-enacts section 16 and amends sections 21A and 21B of <i>The West Australian Trustee Executor and Agency Company Limited Act, 1893-1969</i> .
14	Town Planning and Development Act Amendment Act. Amends sections 4, 23 and 28 of the <i>Town Planning and Development Act, 1928-1973</i> .
8	Traffic Act Amendment Act. Amends the <i>Traffic Act, 1919-1973</i> .
11	War Service Land Settlement Scheme Act Amendment Act. Amends section 6 of the <i>War Service Land Settlement Scheme Act, 1954-1972</i> .
4	Weights and Measures Act Amendment Act. Amends sections 21 and 29 of the <i>Weights and Measures Act, 1915-1973</i> . Repeals section 20 and deletes Schedule D from the Act.
31	Western Australian Institute of Technology Act Amendment Act. Amends the <i>Western Australian Institute of Technology Act, 1966-1971</i> .
67	Wheat Delivery Quotas Act Amendment Act. Amends the <i>Wheat Delivery Quotas Act, 1969-1973</i> .
66	Wheat Industry Stabilization Act. Makes provisions relating to the marketing of wheat and the stabilisation of the wheat industry. Repeals the <i>Wheat Industry Stabilization Act, 1968</i> ; the <i>Wheat Industry Stabilization Act Amendment Act, 1969</i> and the <i>Wheat Industry Stabilization Act Amendment Act, 1973</i> .
6	Wheat Marketing Act Amendment and Continuance Act. Amends sections 42, 43 and the Schedule to the <i>Wheat Marketing Act, 1947-1969</i> .
73	Wundowie Charcoal Iron Industry Sale Agreement Act. Ratifies an Agreement between the State and Agnew Clough Limited and Mt. Dempster Mining Pty. Ltd. providing for the sale of the undertakings and business maintained and carried on on behalf of the State at Wundowie. Amends the <i>Wood Distillation and Charcoal Iron and Steel Industry Act, 1943-1972</i> .

GOVERNMENT ADMINISTRATION

State Government

The Public Service of Western Australia operates under the provisions of the *Public Service Act, 1904-1975* and consists of a number of departments established in accordance with the regulations made under the Act. The departments are Aboriginal Affairs Planning Authority, Agriculture, Audit, Chief Secretary's, Community Welfare, Crown Law, Education, Electoral, Conservation and Environment, Fisheries and Wildlife, Forests, Industrial Development, Labour and Industry, Lands and Surveys, Local Government, Medical and Health Services, Mental Health Services, Metropolitan Water Supply, Sewerage and Drainage Board, Mines, Police, Premier's, Public Health, Public Service Board, Public Works, Road Traffic Authority, State Government Insurance Office, State Housing Commission, State Taxation, Tourism, Town Planning, Treasury and the Workers' Compensation Board.

Other parts of the State Service normally referred to as Statutory Authorities or Instrumentalities, function under separate Acts although they very largely follow the conditions prescribed in the Public Service Act.

Establishment, abolition or reorganisation of departments are subject to the approval of the Governor.

A brief summary of the functions of each of the departments and principal Statutory Authorities established at 31 December 1971 was given in the 1972 issue of the Year Book.

Australian Government

A comprehensive guide to the organisation and functions of the Australian Government is given in the *Australian Government Directory*, including an outline of the activities of each Department of State together with similar information concerning Boards, Com-

mittees, Councils, Commissions and other Instrumentalities. A list of Australian Government Departments, the principal matters dealt with by each Department, and details of the statutes administered by the relevant Federal Minister are published from time to time in the *Australian Government Gazette* as, for example, in the issue dated 1 July 1975.

HISTORY OF STATE GOVERNMENT DEPARTMENTS

A short but reasonably comprehensive history of State Government Departments was commenced in the 1971 issue of the Year Book. The following article, the sixth in the series, presents the historical development of the Forests Department which had its origins in the Woods and Forests Department created within the Lands Department in 1896. Departments dealt with in previous articles were the Public Works Department, the Education Department, the Police Department, the Premier's Department and the Department of Tourism.

FORESTS DEPARTMENT

Formation

Although timber was one of the first exports from Western Australia and sandalwood production financed agricultural settlement in much of the wheat belt, the formation of a department responsible for forest management was not given much priority by early State administrators.

A *Woods and Forests Department* was created within the Lands Department in 1896, but the untimely death of the first Conservator of Forests caused a reduction of its activity to that of revenue collection until a new Conservator was appointed in 1916.

Mr C. E. Lane-Poole, the new Conservator, gave priority to the preparation of a Forests Act, which received Royal assent in January 1919, and the Forests Department came into being. The immediate tasks of the new department were to:

- (i) secure control of wasteful hewing of timber on Crown lands;
- (ii) introduce selective logging into forests held by powerful concessionaires;
- (iii) co-ordinate the classification and dedication of permanent forests;
- (iv) introduce a system of protection from fire.

The classification of over 1 million hectares was completed by 1921, but there were only 61,380 hectares of dedicated State Forest by 1927, owing partly to government pre-occupation with post-war land settlement. This initial area is of particular interest in that it included approximately 1,400 hectares of repurchased tuart forest near Busselton.

By 1930, a target of 1,200,000 hectares had almost been achieved and although it included much prime quality forest, there were substantial areas of valuable forest still remaining as Crown lands. Additional areas of State Forest were added as rapidly as fieldwork permitted and, at June 1974, the total area of State Forest was 1,829,634 hectares.

Mr Lane-Poole resigned in 1921 and later became Director General of the Forestry and Timber Bureau. The next Conservator was Mr S. L. Kessell, whose appointment was delayed until January 1923 pending the report of the Royal Commission on Forestry which was appointed on 18 January 1922. There have been five other appointments since Kessell, an appointment being for renewable terms of seven years or until retirement or resignation.

Administrative Structure

The Forests Act provides for the appointment of graduate foresters to all principal operational roles, many of which are decentralised within the main forest zone. In addition to professional foresters, the Department has conducted a number of in-service training schools for technical staff. The first, which opened in 1921, was at Ludlow and the current training involves one year at Mount Lawley Technical School followed by a year at Dwellupup forest cadet school.

The forest zone is divided into geographical units known as Divisions and there is a professional officer-in-charge for each, together with supporting field staff. Divisions are grouped into two operational regions, while specialist functions of protection, engineering, extension services and research are grouped under Chiefs of Divisions.

In addition to the Conservator there is a Deputy Conservator and an Assistant Conservator. The clerical staff are directed by the Secretary of the Department, while the mapping and drafting group has a Chief Draftsman.

Forest Diseases

The jarrah forests are one of the world's largest discrete areas of a single major forest species. This feature has silvicultural and sawmilling advantages, but creates problems with respect to disease. A root-rotting, soil-borne fungus, *Phytophthora cinnamomi*, which is believed to have been introduced to Western Australia many years ago, is able to kill a large number of native plant species, including jarrah. The fungus is known in many other parts of the world, but has reached alarming proportions in this State where it threatens to decimate the jarrah forest ecosystem. Forest disease risk areas and hygienic logging methods have been established to restrict the spread of the disease from physical movement of infected soil.

Forest Protection

The long, hot and dry summers of the forest zone have made fire control a vital part of forest management.

Fire control policy has alternated between the use of fire as a management tool and the attempted total exclusion of fire. A systematic programme of fuel reduction by prescribed burning has been standard practice since the early 1950s.

Aerial ignition methods and mathematical burning guides are used to apply the results of intensive fire behaviour research. Methods used maximise the use of suitable burning conditions while keeping unit costs within bounds. The Forests Department leads the world in these techniques, as evidenced by the regular visits of foreign fire control personnel.

Outside the Forest Zone

In addition to the silviculture, management and protection of forests in the high-rainfall areas of the south-west, the Department has a small but important commitment in low-rainfall and other farming areas.

Tree nurseries at Hamel (near Waroona) and Narrogin raise tree seedlings of many native and exotic species for sale to the farmer at cost. The turnover varies with the affluence of the farming community, but annual sales frequently exceed 150,000 plants.

Ever since gold was discovered at Kalgoorlie and Coolgardie, the remarkable trees of the goldfields have been used for fuel and structural purposes—a use which continues right to this day. The need to control production, to administer the sandalwood industry and to produce seed from outstanding Eucalypts for distribution throughout the world, has fully justified maintenance of staff at Kalgoorlie.

Tree plots (arboreta) have been established since 1949 to demonstrate the value of trees for shade, shelter and amenity purposes in farming districts. Fifty-six plots have been established—from Yuna, some 500 kilometres north of Perth, to Boxwood Hills, near the southern coast. Results of this work have been used in the preparation of pamphlets issued to farmers and local government and as the basis for information provided by staff to public inquiries, both within Australia and abroad.

Environmental Factors

The Forests Act is directed primarily towards control of the use and regeneration of forests for conventional timber production. The silvicultural techniques used have been shown to conserve most of the long-term environmental characteristics of the forests, but much more attention has been paid to these other forest values in recent years.

Nearly all Western Australian watersheds are also dedicated as State Forest and all endemic flora and fauna are protected within them.

Since the late 1960s, consideration of broad environmental issues has modified or expanded the scope of research programmes.

The complex interaction of logging, protective burning cycles, floristic composition, faunal habitat and water quality, are the subjects of ever-widening research. The many scientific and sociological attributes of such studies have also helped to develop inter-disciplinary investigation and interdepartmental co-operation at all levels.

The problems of forest disease and the loss of forest through other agencies, such as mining and the construction of roads, power lines and reservoirs, have necessitated the re-location of logging operations and a long-term reduction of hardwood log yield.

Since 1969, much effort has been concentrated on research into the effects of a marri woodchip export project, which will be subject to intensive monitoring of environmental effects and will permit effective regeneration of mixed karri-marri forest.

Plantation Pines

Pine plantations have been established progressively since 1922 and have reached a total area of some 40,000 hectares. The yield from these plantations will increase dramatically in the next five years and by the mid-1980s will significantly offset the declining hardwood yield.

Apart from the divisional offices at Narrogin, Kalgoorlie and the south-west towns of Dwellingup, Harvey, Collie, Busselton, Nannup, Kirup, Walpole, Pemberton and Manjimup, the Department has a research and fire control centre in Como and its Head Office in the main building of the Rural and Industries Bank, Perth.

STATE EMBLEMS

A description of the Western Australian Coat of Arms and the Floral Emblem of the State (Mangles' Kangaroo Paw) appeared on pages vi and vii of the Western Australian Year Book, 1971.

By proclamation in the *Government Gazette of Western Australia* Nos. 76 and 77 dated 2 October 1973, the Numbat (or Banded Anteater) and the Black Swan were declared to be, respectively, the animal emblem and the bird emblem of the State of Western Australia. Descriptive text and illustrations of these two emblems were included in the 1974 issue of the Year Book.

THE JUDICATURE

The two major factors in the development of the Australian legal system have been its British origin and the Commonwealth Constitution of 1900. This statute, an Act of the Imperial Parliament in London, limited the legislative power of State Parliaments in some respects and created a federal legislature. Since 1942, however, the Imperial Parliament can legislate for Australia only at Australia's request. The sources of Australian law of today are, therefore, found in Commonwealth and State legislation, in some Imperial legislation, and in the common law. Independence of the judiciary is an essential part of the Australian legal system.

Listed below are members of the Western Australian judiciary at 31 December 1975.

Supreme Court of Western Australia

Chief Justice	The Honourable Sir Lawrence Jackson, K.C.M.G.
Senior Puisne Judge	The Honourable F. T. P. Burt
Puisne Judges	The Honourable J. M. Lavan The Honourable J. L. C. Wickham The Honourable A. R. A. Wallace The Honourable R. E. Jones

The District Court of Western Australia

Chairman of Judges	His Honour Judge S. H. Good
Judges	His Honour Judge W. P. Pidgeon His Honour Judge D. C. Heenan His Honour Judge A. E. Kay His Honour Judge F. Ackland His Honour Judge V. J. A. O'Connor

Particulars of these and other Western Australian courts, and Commonwealth courts appear in Chapter V, Part 6 and Chapter X, Part 1.

OVERSEAS REPRESENTATION IN WESTERN AUSTRALIA

At 31 December 1975 there were twenty-one countries represented in Western Australia by a consular agent, vice-consul, consul, or consul-general, as follows.

- Austria—R. Holmes, Honorary Consul, 21 Howard Street, Perth 6000.
- Belgium—S. Drake-Brockman, Honorary Consul, N.C.R. House, 231 Adelaide Terrace, Perth 6000.
- Britain—C. E. Dymond, C.B.E., Consul-General, Prudential Building, 95 St George's Terrace, Perth 6000.
- Denmark—J. C. Garnsworthy, Honorary Consul, 25 Henry Street, Fremantle 6160.
- Finland—R. C. Mattiske, Honorary Consul, Hale House, 1152 Hay Street, West Perth 6005.
- France—Miss M. P. Ryan, Honorary Consular Agent, 569 Wellington Street, Perth 6000.
- Germany, Federal Republic of—P. R. Adams, Honorary Consul, 524 Hay Street, Perth 6000.
- Greece—E. P. Doukas, Consul, St George's Court, 16 St George's Terrace, Perth 6000.
- Guatemala—P. Smetana, Honorary Consul, 28 Warralong Crescent, Mount Lawley 6050.
- Indonesia—W. W. G. Meecham, Honorary Consul, Suite 2, Grain Pool Building, Cnr St George's Terrace and King Street, Perth 6000.
- Italy—L. Pallotta, Consul, 18 Walker Avenue, West Perth 6005.
- Japan—M. Kataoka, Consul-General, 36 King's Park Road, West Perth 6005.
- Netherlands—M. N. B. Grace, Honorary Consul, 111 St George's Terrace, Perth 6000.
- New Zealand—R. M. Burrows, M.B.E., Consul, St George's Court, 16 St George's Terrace, Perth 6000.
- Norway—E. A. M. Wright, Honorary Consul, 193 Stirling Highway, Claremont 6010.
- Philippines—G. V. Mummery, Honorary Consul-General, 451 Murray Street, Perth 6000.
- Portugal—Consul (vacant), Mt Newman House, 200 St George's Terrace, Perth 6000.
- Sweden—H. Morgan, Honorary Consul, Market House, 849-51 Wellington Street, Perth 6000.
- Switzerland—R. H. Abplanalp, Honorary Vice-Consul, 29 Marie Way, Kalamunda 6076.
- United States of America—R. C. Foulon, Consul, Scottish Amicable Building, 246 St George's Terrace, Perth 6000.
- Yugoslavia—R. Sarenac, Consul, 24 Colin Street, West Perth 6005.

In addition, the Grand Duchy of Luxembourg is represented in Western Australia by the Consul for Belgium in respect of Trade. Other interests are in the charge of the Netherlands consular representative. Liechtenstein is represented by the Vice-Consul for Switzerland.

STATE REPRESENTATION OVERSEAS AND IN OTHER STATES

Western Australia has been represented in the United Kingdom by an Agent General since 1892, the first appointment to the post being that of Sir Malcolm Fraser. An Office is maintained at Western Australia House, 115 Strand, London, W.C.2. Its functions include the representation of all government departments which have business in Britain

and Europe, the purchase of government stores and equipment, the attraction of migrants, the encouragement of overseas private investment in Western Australia, and the provision of various types of assistance to visitors from Western Australia. In addition, the Office acts as agent for the State Treasury and as a receiving agency for The Rural and Industries Bank of Western Australia. Western Australia's European Public Relations Office also operates from Western Australia House. The Agent General for Western Australia, Mr J. A. Richards, is the personal representative in Britain of the State Premier.

The State is also represented in Japan, an Office being maintained by the Western Australian Government at Sankaido Building, 9-13 Akasaka, 1-CHOME, Minato-Ku 107, Tokyo.

Branches of the Western Australian Department of Tourism have been established in New South Wales at 92 Pitt Street, Sydney, in Victoria at 2 Royal Arcade, Melbourne, and in South Australia at 108 King William Street, Adelaide.

THE LOCAL GOVERNMENT SYSTEM

The function of local government in Western Australia is performed by a number of Councils (or, in special circumstances, by Commissioners appointed by the Governor) exercising powers conferred by the Parliament of the State. Each of the Councils consists of members elected by a local community and is responsible for the provision of many of the services necessary for the organisation and welfare of the community which it represents.

As early as 1838 an Act providing a measure of local government was passed and under its provisions the management and control of the town of Perth was vested in a body of trustees. The first elected Town Trust was constituted at Perth in 1842 under an Act of 1841 for the 'Improvement of Towns in Western Australia'. The Trust was dissolved in 1858 and replaced by a City Council, the town of Perth having been constituted a city when it became the seat of a Bishop in 1856.

Legislation was enacted in 1871 establishing Municipalities and Road Boards throughout the Colony. The existing Statute regulating the operations of the local authorities is the *Local Government Act, 1960-1975*, which is administered through a Department of Local Government by the Minister for Local Government. This Act consolidates the law relating to local government in Western Australia, and by its provisions the Municipal Corporations Act, the Road Districts Act and a number of other, less important, Acts were repealed. The legislation came into operation on 1 July 1961 and from that date new designations were applied to many local government districts, bodies and offices. Former Municipalities, other than cities, became known as 'Towns' and Road Districts were renamed 'Shires'. Municipalities which already had city status remained 'Cities'. The executive body in each local government district became a 'Council', City Councils and Town Councils being presided over by a Mayor, and Shire Councils by a President. The chief non-elective executive office of a City or a Town is that of 'Town Clerk' and of a Shire, that of 'Shire Clerk'.

At 31 December 1975 there were 7 Cities, 14 Towns and 117 Shires in Western Australia.

Local Government Districts

The only unincorporated area in mainland Western Australia is King's Park, a public reserve of about 403 hectares in Perth, all other land being incorporated within the district of a City, Town or Shire.

On presentation of a petition signed by a prescribed minimum number of ratepayers, the number varying with the subject matter, the Governor may by Order constitute any part of the State as a Town; constitute any unincorporated area as a Shire; constitute as a new Shire any part of an existing Shire; divide a Shire into two or more Shires; sever portion of a district and annex the portion to an adjoining district, or constitute the portion as a new Town or Shire; annex to a district any adjacent unincorporated areas; divide a district into wards; or abolish a district and dissolve the local governing authority. Before

any major change can be made in the boundary of a municipal district, the ratepayers of the district concerned have the right to demand that a poll be held on the question. If the result of any such poll does not favour the change then it cannot be put into effect.

The Act establishes a Local Government Boundaries Commission of three members, one being an officer of the Department of Local Government, who is Chairman of the Commission. The other members must be persons having experience in local government and nominated by associations of local government authorities. The Minister may refer to the Commission any question concerning the constitution or alteration of the constitution of local government districts. Every case where authorities are unable to agree on a matter of amalgamation or severance of territory must be referred to the Commission.

On the petition of the local authority concerned, the Governor may by Order declare to be a City any district which satisfies certain specified requirements. These requirements are that, during the three years immediately preceding the declaration, it shall have maintained a population of not less than 30,000 persons if situated in the metropolitan area as declared for the purposes of the Act, or not less than 20,000 persons if situated outside that area; and have maintained a gross revenue of \$200,000 for each of the three years. In addition the district must be clearly distinguishable as a centre of population having a distinct civic centre with adequate halls and cultural facilities, and must have sufficient residential, commercial and industrial centres to justify its declaration as a separate city. The seven Cities in Western Australia are all situated in the Perth Statistical Division and five of them had been granted city status before the requirements imposed by the present legislation became operative. These five Cities are Perth (proclaimed in 1856), Fremantle (1929), Subiaco (1952), Nedlands (1959), and South Perth (1959). The Town of Melville was declared a city on 3 May 1968 and the Shire of Perth was redesignated the City of Stirling with effect from 24 January 1971, having satisfied the requirements for city status provided by the Local Government Act.

The boundaries of local government districts as they existed at 31 December 1975 are delineated on the maps of the State immediately preceding the *Index* and the names and designations as at that date are given in accompanying lists.

Constitution and Electoral Provisions

The provisions of the Local Government Act relating to the composition of a City Council or a Town Council require that, in addition to the Mayor, there shall be, where the population is less than 1,000, six councillors; where the population is between 1,000 and 5,000, nine councillors; and if the population exceeds 5,000, twelve councillors if the district is not divided into wards but, where the district is divided into wards, three councillors for each ward. It is provided that a Shire Council shall consist of not less than five nor more than thirteen members, including the President.

Two methods of election to the office of Mayor or of President are prescribed. In the case of a City or Town, election is usually by a poll of the electors enrolled for the district. The President of a Shire is usually elected by the councillors from among their own number. It is provided, however, that a City or Town may adopt the system of election of the Mayor by the councillors, and that a Shire may conduct a poll of its electors for election to the office of President. The question of the adoption of the alternative system must, in all cases, be determined by submission to a poll of the electors, after delivery to the Mayor or the President of a resolution of a majority of the councillors or a petition signed by one-tenth of the electors, or by fifty electors, whichever is the greater. If not less than 15 per cent of eligible electors vote at the poll and a majority of the valid votes cast are in favour of the proposed alteration, the Governor shall order its adoption.

The Act constitutes the office of Deputy Mayor, in the case of a City or a Town, and of Deputy President in the case of a Shire, and requires that the Council shall elect one of the councillors to the office.

Provision is made for local government elections to be held on the fourth Saturday in May of each year but in specified circumstances the Governor may, by proclamation, appoint a Saturday in May, earlier than the fourth Saturday, to be the election date.

Membership of a Council is elective in all cases, the qualified electors being adult natural-born or naturalised British subjects who own or occupy rateable land in the district. The preferential system of voting is used and representation is generally on the basis of wards into which the district may be divided. Plural voting applies, an elector being entitled, in accordance with the rateable value of the property owned or occupied by him, to a number of votes which may not, however, exceed four in elections for Mayor or President, or two in elections for councillor. Voting is not compulsory. The Act contains provisions enabling nominees of corporations owning land in a district to vote at local government elections and to be elected to membership of the Council. Subject to disqualification on certain specified grounds, all adult persons who are natural-born or naturalised British subjects owning or occupying rateable land within the district are eligible for election to the Council of the district whether as Mayor, President or councillor, provided that in the case of occupiers their names appear on the Council's electoral roll.

The term of office of a Mayor or a President is two years if elected by the electors of the district, or one year if elected by the council. Councillors are elected for a term of three years, as near as practicable to one-third of their number retiring each year. On the expiration of their term of office all members, including the Mayor and the President, are eligible for re-election if not subject to any of the disqualifications contained in the Act.

It is provided that, if in a particular district there should at any time be no Council or insufficient councillors to form a quorum, a Commissioner may be appointed to exercise all the powers of the local authority.

Functions of Local Authorities

The functions and powers of local authorities are extremely diverse in character. They are prescribed in detail in the Local Government Act and some of the more important of them are referred to in later Chapters of the Year Book. For example, reference to local government activity in the fields of road construction and maintenance will be found in Chapter VI, Part 1 and Chapter IX, Part 3; the provision of parks, gardens and recreation grounds in Chapter V, Part 2; libraries in Chapter V, Part 2; public transport facilities in Chapter IX, Part 3; water supplies in Chapter VII, Part 2; town planning and building control in Chapter V, Part 4; and the licensing of vehicles in Chapter IX, Part 3. Among the many other powers of local authorities are those relating to hospitals and nursing services, kindergartens, hostels for school children, community centres, dental clinics, infant and maternal health centres, day nurseries, jetties, swimming baths, swimming pools, sanitation and disposal of refuse, fire prevention, eradication of noxious weeds and vermin, electricity generation, aerodromes, abattoirs, quarries, pounds and cemeteries. Under the provisions of the Health Act local authorities are responsible for certain aspects of health administration.

The operations of any local government authority may be subject to investigation by a person appointed by the Governor or the Minister and having, for the purposes of the inquiry, the powers of a Royal Commission.

Financial Provisions

Financial powers of local authorities, although derived mainly from the Local Government Act, are also provided by other statutes, including the Health Act, the Vermin Act, the Fire Brigades Act, the Cemeteries Act, the Library Board of Western Australia Act and the Noxious Weeds Act. Government grants, particularly for road works, are another important item in local government finance.

Before the commencement of the Local Government Act on 1 July 1961, a number of rates, in addition to those authorised by local government legislation, were imposed as separate levies. These included health, sanitary and sewerage rates, water rates and vermin rates, as well as rates relating to fire brigades, cemeteries, libraries and the control of Argentine ants and noxious weeds. Under the provisions of the Local Government Act, the local authorities may include these separate levies in the general rate provided for in the Act.

The general rate for any year is determined, subject to certain statutory limits, by dividing the sum required to make up the difference between anticipated expenditure and estimated revenue from sources other than rates for that year by the total value of rateable property in the district. In assessing this value, every local authority must adopt valuations made by the State Taxation Department, by the water supply authority for the district, or by a qualified valuer (or valuers) appointed by the Council. The Act provides for the constitution of Valuation Appeal Courts, to which appeals may be made on matters concerning valuations of property and liability for rates as assessed by the Council.

Valuations may be on the basis of either 'unimproved value' or 'annual value'. The unimproved value generally represents the price which the rated land might be expected to realise if sold on the open market and, as the term implies, excludes any improvements. The annual value is an estimate of the annual rental value of the property including improvements, but with a prescribed deduction to cover rates, repairs, insurance and other related expenditure. Generally, City Councils and Town Councils are required to assess the general rate on the basis of annual value, and Shire Councils on unimproved value. It is provided, however, that any Council may, under certain specified conditions, adopt the alternative basis. Although in general a Council is required to levy a rate which is uniform throughout its district, it may differentiate in rating by charging a higher rate in a specified area where expenditure, including loan interest and repayments, is incurred in providing special services for the benefit of that area.

Local authorities are authorised to raise loans for works and undertakings and for the liquidation of existing loan debts. Borrowing by means of a special bank overdraft is permissible, with the consent of the Minister, for the installation of sewerage connections or septic tanks and, with the approval of the Governor, for other works or undertakings. Money may also be borrowed by the sale of debentures, repayment being either by the system of reducible principal or by means of a sinking fund. Payments to debenture holders are made at prescribed intervals. Under the system of reducible principal, the local authority undertakes to pay both principal and interest by fixed instalments. Where redemption is by means of a sinking fund, the local authority is required to establish and maintain the necessary fund at the State Treasury. Interest on the loan is normally paid half-yearly and the full amount of the loan is repaid at maturity.

The extent of loan raisings for works and undertakings is controlled by a provision which, except with the specific approval of the Governor, imposes a limit on the borrowings of an authority. The total amount of loans for which a Council may be indebted at any one time is a sum equal to ten times the amount obtained by subtracting from the average of the ordinary revenue of the authority during the preceding two years the average, for the same period, of its annual expenditure on the servicing of loans. The legislation allows that balances standing to the credit of sinking funds for loan repayment, as well as amounts actually repaid, may be deemed to be repayments for the purposes of calculating net total debt. In the case of borrowings to liquidate existing loans, it is provided that the money raised shall not exceed the outstanding balance of the loan.

Before a loan may be raised by the issue of debentures, approval of the borrowing must be obtained from the State Treasury and the local authority must then publish in a newspaper and in the *Government Gazette of Western Australia* a notification of its intention to borrow money, including a statement of the amount of the proposed loan, its purpose and other relevant matters. Except in the case of a loan to liquidate an existing loan debt, the ratepayers of the district may demand that the proposition be submitted to a poll. If less than 15 per cent of the ratepayers vote at the poll, the raising of the loan is approved. Where not less than 15 per cent of ratepayers vote and the majority are against the loan, or the number of votes against the loan is equal to the number of those in favour, the raising of the loan is forbidden.

Certain of the works and undertakings for which loan moneys may be used are specified in the Local Government Act. They include the construction of streets, roads and bridges, sewers, drains and water works; the erection or purchase of electric lighting plant, gas works and stone quarries; the provision of hostels for school children, libraries and other

recreational facilities; the construction of civic and other buildings; and the purchase of land, materials and equipment. Where a particular work or undertaking is not specified in the Act the Governor may approve of it as a project for which money may be borrowed.

The financial transactions of local government authorities are subject to annual audit either by an auditor (or auditors) appointed by the Council or by a government inspector appointed by the Minister. To qualify for the office of auditor, a person must be a member of a specified institute or society of accountants and be registered as an auditor under the Companies Act. Appointment is for a term not exceeding two years, at the end of which time the holder of the office is eligible for reappointment.

The financial year for all Councils ends on 30 June.

Details of the revenue and expenditure of local authorities during the five-year period ending with the financial year 1973-74 are given in the section *Local Government Finance* in Chapter VI, Part 1.

Information in greater detail and particulars relating to the financial operations of individual local authorities are given in the annual publication *Statistics of Western Australia—Local Government*, issued by the Western Australian Office of the Bureau.

CHAPTER IV—POPULATION AND VITAL STATISTICS

Part 1—Population

NOTE. Population censuses prior to the Commonwealth Census of 1911 were undertaken by the Governments of the several Australian Colonies. In the Western Australian census it was the practice to exclude full-blood Aborigines from the tabulations. Aborigines have been enumerated as completely as possible at all censuses since the establishment of the Commonwealth, but those having more than one-half Aboriginal blood (see reference 'Aborigines' on page 135) were excluded from published census results in accordance with the requirements of section 127 of the Australian Constitution. This section was repealed with effect from 10 August 1967, and official population statistics for dates and periods subsequent to the 1966 Census include Aborigines. It has been possible to compile some data from the 1966 Census on the basis of total population (i.e. including Aborigines), and particulars have been incorporated, as appropriate, in the tables on the following pages.

The State of Western Australia, although comprising almost one-third of the total area of Australia, contains only about one-twelfth of the population.

At the end of 1829, the year of establishment of the Colony, there were 1,000 persons in Western Australia. Progress in the early years was slow, and in 1849 the population was still less than 5,000. Transportation of convicts, begun in the following year, resulted in some acceleration, but it was not until the discovery of gold in the Kimberley in 1885 and the rich finds at Coolgardie in 1892 and at Kalgoorlie in 1893 that any marked increase took place. This development was so rapid that, in the last decade of the century, the population was almost quadrupled, from 48,500 at the end of 1890 to 180,000 in 1900, representing an average annual rate of increase of 14·01 per cent. The rate of growth in those years has never been approached in the present century, as will be seen from the table on page 152, but the average annual rate of increase of Western Australia's population from the beginning of the century to the end of 1974, 2·55 per cent, has been higher than that of any other State and of Australia as a whole (1·73 per cent).

THE CENSUS

The first systematic census of the Colony of Western Australia was taken in 1848, since when there have been fifteen enumerations, at the dates shown in the table on page 135. The Census of 1881 was the first taken simultaneously in all the Australian Colonies and formed part of the first simultaneous census of the British Empire.

The first census of the Commonwealth of Australia conducted under the authority of the *Census and Statistics Act* 1905 was taken in 1911. The Act provided that a census should be taken in that year 'and in every tenth year thereafter'. In 1930 this provision was amended by the addition of the words 'or at such other time as is prescribed'. The depressed economic conditions of 1931 caused the postponement of the third Australian census to 1933, and because of war conditions the fourth Australian census was not taken until 1947. Consideration was then given to holding future censuses in the series of years originally provided for by the Act. However, it was thought that the interval from 1947 to 1951 was too short, and it was therefore decided to take the fifth census in 1954, at the mid-point of the period from 1947 to 1961. The sixth census was held in 1961. Owing to the administrative demand for more frequent counts of the population, censuses were taken in 1966, 1971 and 1976.

Scope of the Census

The Australian census is conducted on a *de facto* basis, *i.e.* it records the population actually in Australia, persons being enumerated at the place where they spent the night of the census, and the population so recorded being credited to that place whether or not it is the usual place of residence.

The census covers the population of Australia and the dwellings in which it lives. The only persons excluded from the census tabulations are diplomatic representatives of overseas countries and their families and staffs having diplomatic immunity in accordance with international practice. Prior to the Census of 30 June 1971 full-blood Australian Aborigines were also excluded (see the following section *Aborigines*).

The term 'dwelling', as defined in the Census and Statistics Act, means 'a building, erection, or tenement, whether permanent or temporary, which is wholly or partly used for the purpose of human habitation and includes any ship or other vessel in any port of the Commonwealth or in any inland waters thereof, or any ship or vessel on a passage between any two Commonwealth ports'.

Tables dealing with dwellings recorded at the census will be found in Chapter V, Part 4.

Aborigines. Before an amendment to the Australian Constitution in 1967, it was provided by section 127 that 'in reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted'. This provision was deleted following a referendum held on 27 May 1967 which resulted in a large majority of votes in favour of its repeal. The enabling Act, the *Constitution Alteration (Aboriginals)* 1967, came into operation on 10 August 1967.

With regard to the original provision, Commonwealth legal authorities were of the opinion that persons of the half-blood were not 'aboriginal natives' within the meaning of the Constitution, and *a fortiori* that persons of less than half Aboriginal blood were not Aboriginal natives. Accordingly, only persons having Aboriginal blood to a degree greater than one-half were excluded from the census tabulations. Dwellings occupied solely by full-blood Aborigines so defined were similarly excluded.

Tables relating to the Aboriginal population appear on pages 149-50.

Recorded Population

The population recorded in Western Australia at each census from 1848, its relation to the Australian population, and the masculinity are shown in the following table.

POPULATION AT EACH CENSUS DATE—1848-1976 (a)
WESTERN AUSTRALIA AND AUSTRALIA

Date of census	Western Australia			Australia	Western Australia	
	Males	Females	Persons	Persons (b)	Proportion of Australia (per cent)	Masculinity (c)
1848—10 October	2,818	1,804	4,622	326,500	1.42	156.21
1854—30 September	7,779	3,964	11,743	671,500	1.75	196.24
1859—31 December	9,522	5,315	14,837	1,097,000	1.35	179.15
1870—31 March	15,375	9,410	24,785	1,606,000	1.54	163.39
1881—3 April	17,062	12,646	29,708	2,250,194	1.32	134.92
1891—5 April	29,807	19,975	49,782	3,177,823	1.57	149.22
1901—31 March	112,875	71,249	184,124	3,773,801	4.88	158.42
1911—3 April	161,565	120,549	282,114	4,455,005	6.33	134.02
1921—4 April	177,278	155,454	332,732	5,435,734	6.12	114.04
1933—30 June	233,937	204,915	438,852	6,629,839	6.62	114.16
1947—30 June	258,076	244,404	502,480	7,579,358	6.63	105.59
1954—30 June	330,358	309,413	639,771	8,986,530	7.12	106.77
1961—30 June	375,452	361,177	736,629	10,508,186	7.01	103.95
1966—30 June (a)	432,569	415,531	848,100	11,599,498	7.31	104.10
1971—30 June (a)	529,066	501,403	1,030,469	12,755,638	8.08	105.52
1976—30 June (a)	(d)	(d)	(d)	(d)	(d)	(d)

(a) Figures for 30 June 1961 and earlier exclude full-blood Aborigines (see NOTE on page 134); those for 1966 and later refer to total population (*i.e.* including Aborigines). (b) Figures for dates prior to 3 April 1881 are estimates. (c) Number of males to each 100 females. (d) See Appendix.

Characteristics of the Population

Masculinity. The sharp rise in masculinity between the Census of 1848 and the three succeeding enumerations, as shown in the preceding table, was doubtless a result of the transportation of convicts which began in 1850 and continued until 1868. During this period a total of 9,668 convicts, all of whom were males, were brought to the Colony. The high levels of masculinity disclosed by the Censuses of 1891 and 1901 may be attributed to the influx of a predominantly male population following the gold discoveries of 1885 and later years.

The masculinity of Western Australia's population has continued to be high. At 30 June 1971, it stood at 105·52 and was higher than in any other State and significantly higher than the Australian figure of 101·10.

Age. The following table shows the numbers and proportions of the population of Western Australia in selected age groups at each census from 1947 to 1971. The age groups have been chosen as representing, in a general sense, such sectors as the pre-school population, children of school age, minors, women of child-bearing age, the economically active population, and those beyond normal working age.

POPULATION IN SELECTED AGE GROUPS (a)—CENSUSES, 1947 TO 1971

Age last birthday (years)	Number in each age group (b)					Per cent of total

(b) Recorded ages adjusted by the distribution of ages 'not stated'.

Birthplace; Nationality. The category 'British' nationality, as used in this table, comprises all persons who, by virtue of Australian legislation relating to nationality and citizenship, were deemed to be British subjects. It includes Australian citizens and citizens of other countries as specified in the legislation. Persons of Irish nationality are also included.

n.a. denotes 'not applicable'.

(a) See NOTE on page 134. (b) Minus sign (—) denotes decrease. (c) See letterpress immediately preceding table. (d) The figures shown for 1971 include persons whose nationality was not stated. At the 1966 Census, in the small number of cases where nationality was not stated, allocation of a selected nationality was made in accordance with other information on the census schedule (usually birthplace).

Religion; Marital Status. The Census and Statistics Act provides that there shall be no penalty for failure to answer the question on religion, and a statement to this effect is contained in the census schedule.

(a) See NOTE on page 134. (b) Minus sign (—) denotes decrease. (c) As stated in individual census schedules. (d) Not available; included in Other (including Christian undefined). (e) Not applicable; see footnote (d). (f) Legally or otherwise.

Occupational Status; Industry; Occupation. Classifications of the population according to occupational status, industry, and occupation, as recorded at the Census of 30 June 1971, will be found in Chapter X.

INTERCENSAL INCREASES

The following table shows the population of Western Australia at each census from 1891 to 1971, and the intercensal gains or losses by natural increase and by migration. It also shows the average annual gains or losses in each intercensal period.

POPULATION—ANALYSIS OF INTERCENSAL INCREASES, 1891-1971

Period (a)	Population at beginning of period	Natural increase (b)		Net migration (c)		Total increase		Population at end of period
		Total	Annual average	Total	Annual average	Number	Annual average	
1891-1901 (10 years)	49,782	15,901	1,590	118,441	11,844	134,342	13,434	184,124

GEOGRAPHICAL DISTRIBUTION

Urban, Rural and Migratory Population

At the 1971 Census a boundary was defined for each population cluster of 1,000 or more persons. These clusters are named 'urban centres' and the population enumerated in them is classified as urban for statistical purposes.

In determining the boundary of an urban centre with a population of 25,000 or more, all contiguous census collectors' districts which were found to have a minimum population density of 500 per square mile (*i.e.* approximately 193 persons per square kilometre) at the census were included. Some areas of lower density were classified as urban in accordance with certain other specified criteria. The term *Major urban* is applied to those centres which had a population of 100,000 or more, and supersedes the term *Metropolitan* as used at previous censuses. Urban Perth is the only such centre in Western Australia.

Around each urban centre with a population of at least 100,000 a further boundary was defined to contain the anticipated development of the urban centre and associated smaller urban centres for a period of at least twenty years. This boundary delimits an area which is now, or is expected to be, in close social and economic contact with the urban centre. It is a fixed boundary, as distinct from the boundary of the urban centre which moves from census to census as urbanisation proceeds. In Western Australia, the area within this fixed boundary is described as the Perth Statistical Division (see maps immediately preceding the *Index*).

Urban Perth at 30 June 1971 comprised the Cities of Fremantle, Nedlands, Perth, South Perth, and Subiaco; the Towns of Claremont, Cottesloe, East Fremantle, and Mosman Park; the Shires of Bassendean and Peppermint Grove; parts of the Cities of Melville and Stirling, parts of the Towns of Canning and Cockburn, and parts of the Shires of Armadale-Kelmscott, Bayswater, Belmont, Gosnells, Kalamunda, Mundaring, Swan, and Wanneroo. It covered an approximate area of 528 square kilometres, compared with 383 square kilometres (designated Perth Metropolitan Area) at 30 June 1966. The area of the Perth Statistical Division was 5,368 square kilometres.

In delimiting urban centres with a population of less than 25,000 persons all continuous urban growth is included (which, in small urban centres, would not necessarily occur if the density criterion were applied), together with any close but non-contiguous development which could be clearly regarded as part of the centre.

A full description of the criteria adopted in the delimitation of urban centres appears in the *Official Year Book of Australia*: No. 60, 1974 (pages 140-1) published by the Australian Statistician, Canberra.

Rural population represents persons enumerated in the area not included in urban centres. The term *Migratory* refers to persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

The following tables show, for 1966 and 1971, a division of the population of each State and Territory into *Major urban*, *Other urban*, *Rural* and *Migratory*. The classification *Major urban* represents the population of the urban centres of Sydney (2,725,064 at 30 June 1971), Newcastle (255,162) and Wollongong (188,679), as well as part of Canberra (15,434), in New South Wales; Melbourne (2,394,117) and Geelong (115,181) in Victoria; Brisbane (818,423) in Queensland; Adelaide (809,482) in South Australia; Perth (641,800) in Western Australia; Hobart (129,928) in Tasmania; and part of Canberra (140,864) in the Australian Capital Territory.

In the intercensal period each of the States and Territories showed an increase in urban population, and all except the Northern Territory experienced a decline in rural population. In Australia as a whole, urban population increased by 1,296,448 (13.48 per cent) and rural population fell by 137,833 (7.02 per cent).

Population of Urban Centres and Bounded Localities

Population clusters where 1,000 or more persons were enumerated at the 1971 Census are designated 'urban centres' and are marked (U) in the following table. The other areas shown are described as 'bounded localities'. In delimiting urban Perth special

criteria were applied (see page 141). For areas other than urban Perth, boundaries were determined by examination of the most recent available aerial photographs in order to identify as closely as possible the periphery of the built-up area. Those centres which had a population of more than 200 persons at the 1971 Census are included in the table.

n.a. denotes 'not available' or 'not applicable'.

(a) Figures relate to total population, i.e. including Aborigines. (b) Minus sign (—) denotes decrease. (c) Described as Medina-Calista at the 1966 Census. (d) Comprises population of urban centres of Rockingham-Safety Bay and Kwinana Industrial as delimited at the 1966 Census; incorporated into urban Rockingham at the 1971 Census.

Population in Statistical Divisions

Western Australia is divided into a number of municipal districts for the purposes of local government administration. These districts, of which there were 140 at 30 June 1971, are used as the basis of presentation of data derived not only from the Census of Population and Housing but also from many of the regular statistical collections. Information presented in this way is valuable when considering activities in particular local government areas but is often more detailed than is required for a broader geographical assessment. For this reason, the municipal districts are combined into statistical divisions which provide significant areas for the publication of statistics in a convenient and readily appreciable summary form. The statistical divisions and their component local government areas are shown on the maps immediately preceding the *Index*.

In 1929, when statistics were first presented according to statistical divisions, Western Australia was divided into seven such areas. At the 1971 Census there were ten statistical divisions, and these have been used as the basis of compilation of the particulars in the following tables. The figures shown refer to the areas contained within the boundaries of the several divisions as they existed at the Census of 30 June 1971.

(a) Figures relate to total population (i.e. including Aborigines); those shown for 30 June 1961 and earlier exclude full-blood Aborigines (see NOTE on page 134). (b) At censuses prior to 1954, the pearling fleet based on Broome was classified to Migratory (see letterpress on page 141). The estimated population involved was 2,500 in 1911; 1,500 in 1921; 800 in 1933; and 200 in 1947. From 1954, pearling crews have been included in the population of Broome.

n.a. denotes 'not applicable'.

(a) Figures relate to total population, i.e. including Aborigines. (b) Minus sign (—) denotes decrease. (c) Excess of births registered over deaths registered. (d) See note (c) to previous table.

The population of the Perth Statistical Division at the Census of 30 June 1971 was 703,199, or 68·2 per cent of the State total, compared with 559,298 (65·9 per cent) five years earlier, an increase of 143,901 persons or 25·7 per cent. The State's natural increase between the Censuses was 64,454 of which the Perth Statistical Division contributed 37,507. In addition, this division experienced a net gain by migration of 106,394. The larger towns of the Agricultural and South-West Statistical Divisions also showed substantial population increases, the greatest being those of Geraldton (3,261 persons; or 26·7 per cent), Bunbury (2,312; 15·0 per cent) and Albany (1,661; 14·5 per cent).

The total population in the area outside the Perth Statistical Division rose by 38,890 or 13·6 per cent. The natural increase recorded in the area was 26,947, so that there was a gain of 11,943 persons by migration. Of the total increase of 38,890 persons, the Pilbara Division accounted for more than half with a population gain of 20,078 and showed the greatest proportional increase, 225·4 per cent. Other divisions showing an increase were Eastern Goldfields, 7,707 (22·0 per cent) ; South-West, 4,364 (6·0 per cent) ; Northern Agricultural, 3,987 (10·3 per cent) ; Central, 2,800 (60·6 per cent) ; North-West, 2,738 (30·3 per cent) ; Kimberley, 1,902 (15·0 per cent) ; and Southern Agricultural, 473 (1·1 per cent). The Central Agricultural Division experienced a decline in population with a loss of 5,159 persons, or 8·8 per cent.

The Eastern Goldfields, Central and Pilbara Statistical Divisions together comprised an area of 1,653,673 square kilometres (or almost two-thirds of the State) and had a population of only 79,174 persons at the Census of 30 June 1971. A low rainfall renders much of it virtually uninhabitable and desert or near-desert conditions prevail over some 900,000 square kilometres which includes much of the eastern and northern parts of the area and extends into the southern portion of the Kimberley Statistical Division. Almost no part of this desert area has an annual rainfall greater than 250 millimetres and a considerable proportion has much less. Of the total population of 79,174 persons recorded in the three divisions at the Census, nearly four-fifths were enumerated in the urban centres of Kalgoorlie-Boulder (20,865), Port Hedland (7,229), Esperance (4,874), Kambalda (4,224), Newman (3,906), Dampier (3,585), Tom Price (3,426), Paraburdoo (2,977), Karratha (1,838), Norseman (1,789), Roebourne (1,515) and Goldsworthy (1,020), and the townships of Meekatharra (927), Southern Cross (895), Mount Magnet (636), Coolgardie (624), Leonora (594), Wittenoom Gorge (422), Marble Bar (394), Koolyanobbing (306), Cue (287) and Ravensthorpe (225).

Population of South-West Land Division

The South-West Land Division, as defined in the *Land Act, 1933-1972*, often has particular importance in matters of legislation and administration. Its boundaries are almost coincident with those of the area formed by the aggregation of the Perth Statistical Division and the South-West, Southern Agricultural, Central Agricultural and Northern Agricultural Statistical Divisions. It embraces an area of 254,610 square kilometres, a little more than one-tenth of the whole State (2,525,500 square kilometres), and had a population of 922,700 persons at the 1971 Census, equivalent to 89·5 per cent of the State total, compared with 774,800 (91·4 per cent) in 1966.

Population North of 26° S. Latitude

For administrative and other purposes, the portion of the State lying north of the 26th parallel of latitude frequently has special significance. This area, which embraces part of the Central Statistical Division, almost all of the North-West Statistical Division, and the whole of the Pilbara and Kimberley Statistical Divisions, is 1,371,367 square kilometres in extent and is therefore somewhat greater in area than half the entire State. It had a population of 31,053 persons at the 1966 Census and 58,616 in 1971. Of this total, almost three-quarters were enumerated in the ports and other coastal settlements of Port Hedland (7,229), Carnarvon (4,242), Dampier (3,585), Exmouth (2,670), Derby (2,538), Broome (2,049), Karratha (1,838), Roebourne (1,515), Wyndham (1,515), Onslow (349), Shark Bay (323), and Lake MacLeod (299), the iron ore mining centres of Newman (3,906), Tom Price (3,426), Paraburdoo (2,977) and Goldsworthy (1,020), the Ord River agricultural settlement at Kununurra (1,240), and the townships of Halls Creek (678), Wittenoom Gorge (422) and Marble Bar (394).

POPULATION DENSITY

Urban Perth (see letterpress *Urban, Rural and Migratory Population* on page 141) is the most densely populated part of the State. At the Census of 30 June 1971 it had a population of 641,800 persons and an area of approximately 528 square kilometres, representing a density of about 1,215 persons per square kilometre. Among the statistical divisions,

Perth with a population of 703,199 and 5,368 square kilometres in area showed the highest density, 131 persons per square kilometre. The Central Statistical Division was the most sparsely populated with an area of 564,644 square kilometres (more than one-fifth of the entire State) and a Census population of only 7,420 persons, equivalent to an average of one person to every seventy-five square kilometres.

(a) See page xiv. (b) Refers to persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

Western Australia had a population density at the 1971 Census of only 0·41 persons per square kilometre, compared with an average of 1·66 for Australia as a whole. Victoria was the most densely populated State, having an average of 15·64 persons per square kilometre.

AREA, POPULATION AND DENSITY—STATES AND TERRITORIES: CENSUS, 30 JUNE 1971

(a) See page xiv.

ABORIGINAL POPULATION

Reference is made on pages 134 and 135 to the exclusion of *full-blood* Aborigines from the tabulations of census data prior to 1971. Aborigines have, however, been enumerated at all censuses of the Commonwealth, although the degree of coverage and information obtained have varied substantially since 1911. Since the Census taken in 1933, the adequacy of the particulars obtained has improved progressively, as a result of an increasing number of Aborigines coming into contact with more populated areas.

At the 1971 Census the question relating to a person's race differed from that asked at previous censuses, and the figures shown in the tables in this section cannot be compared with those published in the Year Book for 1973 and earlier issues.

In 1971 the aim was to ascertain the race with which the respondent identified himself, by asking him to state his racial origin and, if of mixed origin, to indicate the one to which he considered himself to belong. The 1971 Census data concerning Aboriginal population therefore refer to persons who described themselves as being of *Aboriginal origin*.

The information shown in the following tables has been selected from a bulletin *The Aboriginal Population* published by the Australian Statistician, Canberra. The bulletin contains statistics dealing with a range of characteristics of the Aboriginal population in each State and Territory and in Australia as a whole at the 1971 Census.

Details of the distribution of the Aboriginal population between urban and rural areas at the 1971 Census are given in the following table.

ABORIGINAL POPULATION (a)—URBAN, RURAL AND MIGRATORY (b)
WESTERN AUSTRALIA AND AUSTRALIA: CENSUS, 30 JUNE 1971

Classification	Western Australia				Australia

(a) Persons described as being of *Aboriginal origin*.

ESTIMATES OF POPULATION

For dates other than those of the periodic census of population, estimates are based on records of births and deaths and of movements of population interstate and overseas. Estimates of the population of Australia and of each of the States and Territories are prepared by the Australian Statistician as at 31 March, 30 June, 30 September and 31 December in each year. Because the available records of interstate movement are incomplete, these intercensal estimates as they apply to States and Territories are approximate and are revised when the results of the next succeeding census become known.

Mean Population

It is often useful to relate a given characteristic to population in order to express it in *per capita* terms or as 'per head of population'. In some cases it is appropriate to relate a characteristic to the population as at a specified date as, for example, savings bank balances per head of population at 30 June, or motor vehicles per head of population at 31 December.

Where events, as for instance births or deaths, are taking place continuously throughout a period, it is obviously not appropriate to relate these events to the population as at a specific date. It is necessary, therefore, to devise a measure which takes account of the change in population which occurs continuously throughout any period. This measure is known as the *mean population*.

As stated earlier, estimates of population are prepared as at the end of each quarter of the year. The mean population of a quarter might be taken to be the average, or arithmetic mean, of the populations at the beginning and the end of the quarter. If a

represents the population at the beginning of a year and b , c , d and e the populations at the end of the first, second, third and fourth quarters, respectively, these quarterly means would then be $\frac{1}{2}(a + b)$ for the first quarter, $\frac{1}{2}(b + c)$ for the second, $\frac{1}{2}(c + d)$ for the third and $\frac{1}{2}(d + e)$ for the fourth quarter. The mean population for the year might then be taken as the arithmetic mean of the four quarterly average populations, or

$$\frac{1}{4}\{\frac{1}{2}(a + b) + \frac{1}{2}(b + c) + \frac{1}{2}(c + d) + \frac{1}{2}(d + e)\}$$

which may be more simply expressed as $\frac{1}{12}(a + 2b + 2c + 2d + e)$. This method of deriving mean population had been in use in Western Australia prior to its general adoption by the 1903 Conference of Australian Statisticians. It was later superseded by the more precise measure

$$\frac{1}{12}(a + 4b + 2c + 4d + e)$$

which is now commonly used in Australian statistics. In order to establish uniformity with current practice, estimates of mean population for 1901 and later years were revised, where necessary, by the application of this formula.

The estimated mean population of Western Australia is shown in the next table for each financial and calendar year in the period from 1 January 1970 to 30 June 1975.

Population Estimates

As a result of the repeal, with effect from 10 August 1967, of section 127 of the Australian Constitution, to which reference is made on page 135, current population estimates no longer exclude full-blood Aborigines. Estimates for earlier dates and periods back to the Census of 30 June 1961 have also been prepared on the basis of *total* population (*i.e.* including Aborigines). The final results of the 1966 Census, inclusive of all persons enumerated, were taken into account in the preparation of these estimates.

The following table shows estimates of the population of Western Australia and the elements of population increase during the period from 1 January 1970 to 30 June 1975. Figures for dates and periods subsequent to 30 June 1971 are subject to revision in accordance with the results of the next census.

POPULATION ESTIMATES

Year	Population at end of year			Increase during year			Mean population		
	Males	Females	Persons	Natural increase (a)	Estimated net migration (b)	Total increase	Males	Females	Persons

Five years ended 31 December 1974	141,730	14·51	2·75

(a) Estimates for 1960 and earlier exclude full-blood Aborigines; those shown for 1970 and later refer to *total* population, *i.e.* including Aborigines. (b) Decennial increases during the period 1830–1970; annual increases from 1970 to 1974.

Chapter IV—continued

Part 2—Births, Deaths and Marriages

NOTE. Reference is made on page 135 to the repeal, with effect from 10 August 1967, of section 127 of the Australian Constitution. As a consequence of this repeal, all vital statistics, which previously excluded births, deaths and marriages of full-blood Aborigines, now include events among the total population. Statistics for 1966 and later years have been compiled on this basis.

A line drawn across a column in a table between two consecutive figures, indicates a break in continuity in the series. Figures above the line exclude full-blood Aborigines; those below the line refer to events among the total population, i.e. including Aborigines.

THE REGISTRATION SYSTEM

Compulsory registration of births, deaths and marriages in Western Australia was originally provided for by legislation of the year 1841. The Statutes currently in force are the *Registration of Births, Deaths and Marriages Act, 1961-1975* (State) and the *Marriage Act 1961-1973* (Commonwealth). For administrative purposes, the State is divided into twenty-seven Registry Districts, each having a District Registrar. Particulars of births, deaths and marriages reported to the District Registrars are sent to the Registrar-General at Perth, where a central registry office has been maintained since 1841. Local registers are kept at each district office.

Births are required to be registered within sixty days of the event, and must be notified by the father, the mother or the occupier of the premises where the birth took place. Special provisions and penalties apply to notification and registration after the expiration of the sixty-day period.

A stillbirth is required to be registered both as a birth and a death. From 1 January 1968 the term 'stillbirth', for registration purposes, refers to a child, not born alive, of at least twenty weeks' gestation, or with a birthweight of at least 400 grams. Previously it was restricted to cases where the gestation period was at least twenty-eight weeks.

Deaths are required to be registered within fourteen days. Notification must be given by the person who disposes of the body or by the occupier of the premises where the death occurred. As in the case of births, special provisions and penalties exist for the late registration of a death.

Marriages may be celebrated by persons authorised as celebrants under the provisions of the *Marriage Act 1961-1973* (Commonwealth). These may be ministers of religion, District Registrars, or other authorised persons. Celebrants other than District Registrars are required to lodge a marriage certificate with the District Registrar for registration within fourteen days of the celebration of a marriage. A penalty fee is provided for registrations after fourteen days from the date of marriage.

Statistics of births, deaths and marriages are prepared from the registration documents.

The following table shows, for the years 1970 to 1974, the number of births and deaths registered in Western Australia, classified according to statistical divisions. The figures do not necessarily represent the number of such events which actually occurred in a particular statistical division during each year, since births are allocated to the usual place of residence of the mother and deaths to the usual place of residence of the deceased. Further, the statistics are compiled according to date of registration and not date of occurrence.

Crude Birth Rates. The crude birth rate in any period may be defined as the number of live births occurring during the period for every thousand of the mean population.

The average annual rates for each five-year period in the fifty years from 1921 to 1970 and the rates for single years from 1965 to 1974, for Western Australia and Australia as a whole, are shown in the following table.

CRUDE BIRTH RATES (a)
WESTERN AUSTRALIA AND AUSTRALIA

Period	Average annual rate (b)		Year	Annual rate (b)	
	Western Australia	Australia		Western Australia	Australia
1921-25	22.85	23.86	1965	19.85	19.65
1926-30	21.54	20.98			
1931-35	18.36	16.94	1966	20.25	19.28
1936-40	19.16	17.52	1967	20.48	19.42
1941-45	21.72	20.28	1968	21.34	20.04
			1969	21.72	20.38
1946-50	25.24	23.39			
1951-55	25.37	22.86	1970	21.74	20.55
1956-60	24.20	22.59	1971	23.50	21.62
1961-65	21.71	21.34	1972	20.99	20.39
			1973	19.12	18.81
1966-70	21.14	19.95	1974	18.39	18.33

(a) See NOTE on page 153. (b) Rates for years prior to 1971 are based on final census results; those for 1971 and later are subject to revision after the next census.

In each year of the period under review, Western Australia's crude birth rate has been higher than that of Australia with the exception of the early 1920s.

In Western Australia, the rate showed a marked and almost continuous decrease from the beginning of the century to the depression of thirty years later when the unprecedentedly low rate of 17.64 was recorded in 1934. In the following years a fairly consistent increase was evident until 1952 when the rate reached 25.66, its highest level since 1917. The rate then declined and in 1965 was 19.85, the lowest since 1940. It increased in each succeeding year until 1971 when the rate was 23.50, the highest recorded since 1959. It fell in each of the next three years and in 1974 was 18.39, the lowest rate recorded since 1935.

Age-specific Birth Rates. As a measure of fertility, the crude birth rate has the advantage of simplicity in calculation. The data necessary for its computation are usually readily available from published statistics, and it is therefore useful in comparing the fertility of the populations of States and countries for which no additional data are available. However, it is of limited use, since it does not take into account the important factors of age and sex composition of the population. Age-specific birth rates, which do have regard to these factors, therefore provide a better measure of fertility. Age-specific birth rates represent the number of births to women of specified ages per thousand women of those particular ages, and thus take cognisance of the variations in fertility experienced by women at the successive stages of their child-bearing life.

AGE-SPECIFIC BIRTH RATES (a)—WESTERN AUSTRALIA

Year	Age group (years)						
	15-19	20-24	25-29	30-34	35-39	40-44	45-49
1947	32.63	187.14	206.24	146.72	84.97	28.63	2.06
1954	42.74	231.09	217.77	135.74	71.71	23.61	1.52
1961	47.07	246.94	231.92	127.38	61.82	20.55	1.17
1966	53.81	203.08	197.12	102.12	45.68	13.27	1.38
1971	63.33	204.90	203.58	101.91	41.96	9.89	0.73

(a) Number of live births registered per 1,000 women in each age group. Rates are based on census results and exclude particulars of full-blood Aborigines prior to 1966 (see NOTE on page 153).

For purposes of comparison with Western Australian experience, age-specific birth rates for Australia as a whole are given in the following table.

AGE-SPECIFIC BIRTH RATES (a)—AUSTRALIA

Year	Age group (years)						
	15-19	20-24	25-29	30-34	35-39	40-44	45-49
1947	32.06	166.18	186.60	129.99	75.02	23.52	1.81
1954	39.19	197.13	194.02	121.76	64.43	20.16	1.47
1961	47.35	225.81	221.21	131.11	63.38	19.17	1.41
1966	49.26	172.81	183.29	105.28	50.60	14.28	1.09
1971	55.17	180.92	195.39	102.26	44.90	11.42	0.78

(a) Number of live births registered per 1,000 women in each age group. Rates are based on census results and exclude particulars of full-blood Aborigines prior to 1966 (see NOTE on page 153).

Gross and Net Reproduction Rates. The gross reproduction rate is derived from fertility rates representing the number of *female* births to women of specified ages per thousand women of those particular ages. It provides a measure of the number of female children who would be born, on the average, to every woman assuming that she lives through the whole of the child-bearing period and that the basic fertility rates remain unaltered throughout.

The gross reproduction rate assumes that all females survive to the end of their child-bearing capacity. A more accurate measure, which takes into account the effect of mortality among women during this period is the net reproduction rate. This rate represents the average number of female children who would be born to women during their lifetime if they were subject in each succeeding year of life to the fertility and mortality rates on which the calculation is based. The net reproduction rate is a measure of the number of women who, in the next generation, will replace the women of reproductive age in the current generation. It provides a useful indication of likely future population trends. A rate remaining stationary at unity indicates an ultimately static population. If a rate greater than unity is maintained, an ultimate increase of population will result, while a continuing rate less than unity will lead to an ultimate decline.

GROSS AND NET REPRODUCTION RATES (a)
WESTERN AUSTRALIA AND AUSTRALIA

Year	Gross reproduction rate		Net reproduction rate	
	Western Australia	Australia	Western Australia	Australia
1947	1.683	1.494	(b) 1.595	(b) 1.416
1954	1.772	1.559	(c) 1.704	(c) 1.499
1961	1.785	1.728	(d) 1.730	(d) 1.672
1966	1.486	1.401	(e) 1.441	(e) 1.357
1971	1.516	1.441	(e) 1.470	(e) 1.397

(a) Rates are based on census results and exclude particulars of full-blood Aborigines prior to 1966 (see NOTE on page 153). (b) Based on 1946-48 mortality experience. (c) Based on 1953-55 mortality experience. (d) Based on 1960-62 mortality experience. (e) Based on 1965-67 mortality experience.

DEATHS

Statistics of deaths in each of the five years 1970 to 1974 in the Perth Statistical Division, the rest of the State, and in Western Australia as a whole appear in the following table.

BIRTHS, DEATHS AND MARRIAGES

DEATHS REGISTERED

Year	Deaths (a)			Infant deaths (b)		
	Males	Females	Persons	Males	Females	Persons
PERTH STATISTICAL DIVISION						
1970	3,006	2,339	5,345	140	111	251
1971	3,151	2,440	5,591	154	115	269
1972	2,951	2,367	5,318	109	79	188
1973	3,184	2,457	5,641	129	84	213
1974	3,158	2,427	5,585	92	82	174
OTHER DIVISIONS						
1970	1,386	812	2,198	109	99	208
1971	1,385	830	2,215	111	84	195
1972	1,366	757	2,123	98	62	160
1973	1,402	802	2,204	112	69	181
1974	1,392	801	2,193	83	70	153
WESTERN AUSTRALIA						
1970	4,392	3,151	7,543	249	210	459
1971	4,536	3,270	7,806	265	199	464
1972	4,317	3,124	7,441	207	141	348
1973	4,586	3,259	7,845	241	153	394
1974	4,550	3,228	7,778	175	152	327

(a) Including infant deaths.

(b) Deaths occurring in the first year of life.

Crude Death Rates. The crude death rate is perhaps the most common measure of mortality, and is derived by relating the deaths occurring in a period to the mean population for that period. It is usually expressed as number of deaths per thousand of mean population.

The rates for Western Australia and for Australia in the period 1921 to 1974 are compared in the following table.

CRUDE DEATH RATES (a)
WESTERN AUSTRALIA AND AUSTRALIA

Period	Average annual rate (b)		Year	Annual rate (b)	
	Western Australia	Australia		Western Australia	Australia
1921-25	9.17	9.52	1965	7.70	8.79
1926-30	8.91	9.26			
1931-35	8.83	9.00	1966	8.13	9.01
1936-40 (c)	9.22	9.63	1967	7.71	8.70
1941-45 (c)	9.86	9.96	1968	8.16	9.11
			1969	7.69	8.68
1946-50 (c)	9.23	9.74	1970	7.59	9.02
1951-55	8.49	9.25			
1956-60	7.90	8.78	1971	7.57	8.66
1961-65	7.78	8.75	1972	7.04	8.45
			1973	7.31	8.42
1966-70	7.84	8.90	1974	7.08	8.66

(a) See NOTE on page 153. (b) Rates for years prior to 1971 are based on final census results; those for 1971 and later are subject to revision after the next census. (c) Excludes deaths of members of defence forces from September 1939 to June 1947.

In the early years of the century, the Western Australian rate was higher than that for Australia as a whole, but fell below the Australian average in 1909. Since that time, the rate for Western Australia has, with very few exceptions, remained lower than that for Australia.

Western Australia's crude death rate for the year 1902 was 13·79 per thousand of the mean population but by 1931 it had fallen to 8·51. After that year, the rate increased until it reached 10·65 in 1942. Then there was a general decline until 1963 when the rate was 7·68. The rate for 1972 was 7·04 per thousand of mean population, the lowest ever recorded in Western Australia. The rate for 1974 was 7·08.

Standardised Death Rates. The crude death rate expresses simply the number of deaths occurring in a population during any period as a proportion of the mean population for that period. Although this rate is useful as a measure of the absolute level of mortality, its value is necessarily restricted when comparing the mortality in different communities in the same period, or in one community at different times.

The effect on the crude death rate of the presence in a community of a high proportion of young people or of aged people, or of a high or low masculinity, will be readily appreciated. To devise an adequate measure of comparative mortality, it is therefore necessary to select a 'standard' population to which the varying mortality experiences may be referred. A standard population compiled by the International Statistical Institute, based upon the age and sex distribution of the population of nineteen European countries at their censuses nearest to the year 1900, has been used as the basis of the standardised death rates for Western Australia and Australia given in the next paragraph. The rate is computed by applying to each sex and age group in the standard population, the death rates actually recorded in the corresponding groups of the State and Australian populations. The sum of these results represents the number of deaths which would have occurred in the standard population if it had been exposed to the same risks of mortality. The standardised death rate is derived by expressing this number in terms of 'per thousand of the standard population'.

For the Census years 1921, 1933, 1947, 1954, 1961 and 1966 the standardised death rates for Western Australia were 11·88, 8·74, 7·28, 6·71, 6·02 and 6·25, and the corresponding rates for Australia as a whole were 10·58, 8·62, 7·34, 6·90, 6·27 and 6·53. These rates have been compiled on a basis which excludes full-blood Aborigines; see *NOTE* on page 153. The rates for 1971, calculated on the basis of total population (*i.e.* including Aborigines), were 6·16 for Western Australia and 6·32 for Australia.

Causes of Death. Statistics of causes of death provide important numerical facts by which to evaluate the varying health conditions and needs of different countries. In order to enable valid international comparisons, it is necessary that each country present its statistics of causes of death in a uniform manner. The first classification of causes of death to be adopted internationally was that compiled by Dr J. Bertillon at the request of the International Statistical Institute meeting in Vienna in 1891. Subsequently this classification was periodically revised by the Institute in collaboration with the League of Nations Health Organization. More recently, revisions have been carried out by a Committee of the World Health Organization.

PRINCIPAL CAUSES OF DEATH, 1974

International number	Cause of death (a) (b)	Males	Females	Persons	Per cent of all deaths	Rate (c)

(a) Classified in accordance with the *International Statistical Classification of Diseases, Injuries, and Causes of Death* (Eighth Revision), operative from 1 January 1968. (b) Defined, in part, as the disease or injury which initiated the train of morbid events leading directly to death. (c) Per 100,000 of mean population.

The figures in the previous table have been compiled on the basis of the *International Statistical Classification of Diseases, Injuries, and Causes of Death* (Eighth Revision, 1965), operative from 1 January 1968. The term 'cause of death', as used in this table and elsewhere in this Part, means '(a) the disease or injury which initiated the train of morbid events leading directly to death, or (b) the circumstances of the accident or violence which produced the fatal injury'.

The principal causes of death in age groups and the number and proportion (per cent) of total deaths from specified causes are shown in the following table.

PRINCIPAL CAUSES OF DEATH—AGE GROUPS, 1974

International number	Age group and cause of death (a)	Deaths from specified cause			
		In age group		At all ages	
		Number	Per cent	Number	Per cent (b)
	Under 1 year	327	100.0
000-136	Infective and parasitic diseases	15	4.6	65	23.1
480-486	Pneumonia	9	2.8	138	6.5

n.e.c. denotes 'not elsewhere classified'.

(a) Classified in accordance with the *International Statistical Classification of Diseases, Injuries and Causes of Death* (Eighth Revision), operative from 1 January 1968. (b) Deaths in the specified age group as a percentage of total deaths for a particular cause. (c) Including neoplasms of lymphatic and haematopoietic tissue.

Infant Deaths. The term 'infant death' refers to a death which occurs before the completion of the first year of life. In the following table, infant deaths registered in Western Australia during each of the five years to 1974 are classified according to age at death.

INFANT MORTALITY—AGES AT DEATH

Year	Days					Total under 28 days	Months			Total under 1 year
	Under 1	1-6	7-13	14-20	21-27		Under 3	3-5	6-11

1974	116	71	20	4	7	218	42	31	36	327

Infant Mortality Rates. The infant mortality rate expresses the relationship between deaths of infants and the live births occurring in a period, and is stated in terms of number of deaths under one year of age per thousand live births.

The rates for Western Australia and for Australia in the period 1921 to 1974 are shown in the following table.

INFANT MORTALITY RATES (a)
WESTERN AUSTRALIA AND AUSTRALIA

Period	Average annual rate		Year	Annual rate	
	Western Australia	Australia		Western Australia	Australia
1921-25	59.14	57.88	1965	21.68	18.47
1926-30	49.27	51.99	1966	19.95	18.73
1931-35	40.81	41.27		1967	17.42
1936-40	39.70	38.81	1968	20.37	17.78
1941-45	33.30	34.97	1969	21.83	17.92
1946-50	28.15	26.98		1970	21.23
1951-55	24.41	23.34	1971	19.14	17.29
1956-60	21.42	21.05	1972	15.69	16.72
1961-65	20.73	19.42	1973	19.21	16.49
1966-70	20.25	18.10	1974	16.18	16.14

(a) See NOTE on page 153.

In the first decade of the century, the average annual rate (106.07) in Western Australia was considerably above the Australian average of 86.83, and was the highest of any State. Since then both the Western Australian and the Australian rates have shown a remarkable decrease. In the five years ended 1974, Western Australia's average annual rate was 18.32 compared with the Australian rate of 16.92. The Western Australian rate of 15.69 in 1972 was the lowest ever recorded in this State and was lower than the rate in any other State except Victoria.

Causes of Infant Deaths. The causes of infant deaths registered during the year 1974 are set out in the following table.

INFANT MORTALITY—CAUSES OF DEATH, 1974

International number	Cause of death (a)	Males	Females	Persons
	Causes mainly of prenatal and natal origin—			
740-759	Congenital anomalies	40	34	74
760-769	Attributed to conditions of the mother—			
762	Toxaemia of pregnancy	1	3	4
764-768	Difficult labour	8	5	13
769	Other complications of pregnancy and childbirth	21	18	39
	Other	3	5	8
770	Conditions of placenta	6	4	10
771	Conditions of umbilical cord	1	1	2
774, 775	Haemolytic disease of newborn	1	1	2
776	Anoxic and hypoxic conditions, n.e.c.	22	15	37
777	Immaturity, unqualified	11	10	21
	Other	4	4	8
	Total	117	100	217
	Causes mainly of postnatal origin—			
000-009	Intestinal infectious diseases	3	7	10
038	Septicaemia	1	1	2
320, 036	Meningitis and meningococcal infection	8	3	11
480-486	Pneumonia	2	7	9
911	Inhalation or ingestion of food causing obstruction or suffocation	1	1	2
	Other	44	35	79
	Total	58	52	110
	All causes	175	152	327

n.e.c. denotes 'not elsewhere classified'.

(a) Classified in accordance with the *International Statistical Classification of Diseases, Injuries, and Causes of Death* (Eighth Revision), operative from 1 January 1968.

Stillbirths. The infant mortality rate discussed above is that most commonly used, and takes no account of stillbirths. It is informative, however, to examine the occurrence of stillbirths in comparison with infant deaths, as in the next table, which deals with the experience of the five years 1970 to 1974.

STILLBIRTHS AND INFANT DEATHS
NUMBERS AND MASCULINITY

Year	Stillbirths				Deaths under 1 year of age			
	Males	Females	Persons	Masculinity (a)	Males	Females	Persons	Masculinity (a)
1970	166	129	295	128.7	249	210	459	118.6
1971	155	143	298	108.4	265	199	464	133.2
1972	134	124	258	108.1	207	141	348	146.8
1973	136	134	270	101.5	241	153	394	157.5
1974	156	118	274	132.2	175	152	327	115.1

(a) Number of males to each 100 females.

The relationship between stillbirths and infant deaths during the same period is further examined in the following table, which shows the numbers of stillbirths and of infant deaths at various ages. The rates shown represent the number of stillbirths, or of infant deaths, per thousand of total births (*i.e.* including stillbirths). The average annual rate for the five-year period ended 1974 was 30.8.

STILLBIRTHS AND INFANT DEATHS
NUMBERS AND RATES

Year	Stillbirths	Infant Deaths			Stillbirths and infant deaths
		Under 7 days	Under 28 days	Under 1 year	
NUMBER					
1970	295	272	315	459	754
1971	298	271	305	464	762
1972	258	206	231	348	606
1973	270	226	264	394	664
1974	274	187	218	327	601
RATE (a)					
1970	13.5	12.4	14.4	20.9	34.4
1971	12.1	11.0	12.4	18.9	31.1
1972	11.5	9.2	10.3	15.5	27.0
1973	13.0	10.9	12.7	19.0	32.0
1974	13.4	9.1	10.6	16.0	29.3

(a) Rate per 1,000 of total births (*i.e.* including stillbirths).

Age-specific Death Rates. The age-specific death rate expresses the number of deaths at specified ages in terms of the population at those particular ages. In the following table, which shows age-specific death rates for Western Australia, the average annual rates for each period relate to deaths in the three years surrounding the date of a Population Census. For census dates see table on page 135.

AGE-SPECIFIC DEATH RATES (a) (b)

90 and over								

(a) Average annual number of deaths at the specified ages during each three-year period per 1,000 of population in the corresponding age group at the relevant census. Figures for 1960-62 and earlier exclude particulars of full-blood Aborigines (see NOTE on page 153); those for 1965-67 and later relate to total population, i.e. including Aborigines. (b) For age Under 1, figures for 1960-62 and later represent infant deaths per 1,000 live births registered.

Australian Life Tables. It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Australian Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881 to 1890, 1891 to 1900, and 1901 to 1910. At the Census of 1921, Life Tables were prepared by the Australian Statistician from the recorded census population and the deaths in the three years 1920 to 1922. Tables based on data derived from later censuses have been compiled by the Commonwealth Actuary.

The expectation of life of males and females at various ages as revealed by these investigations is shown in the following table.

EXPECTATION OF LIFE (a)—AUSTRALIA: 1881-90 TO 1965-67
(Years)

Age last birthday (years)	1881-90	1891-1900	1901-10	1920-22	1932-34	1946-48	1953-55	1960-62	1965-67

(a) Figures for years prior to 1965-67 refer to population exclusive of full-blood Aborigines; see letterpress *Aborigines* on page 135.

MARRIAGES

The number of marriages registered in Western Australia in each of the ten years 1965 to 1974 is shown in the following table. Marriages celebrated by ministers of religion are distinguished from those celebrated by civil officers, and the proportions of the total number of marriages which were celebrated by each category of celebrant are also shown.

MARRIAGES REGISTERED (a)

Year	Marriages celebrated by—		All marriages	Proportion celebrated by—	
	Ministers of religion	Civil officers		Ministers of religion	Civil officers
1965	5,506	942	6,448	per cent 85.39	per cent 14.61
1966	5,996	1,006	7,002	85.63	14.37
1967	6,289	1,141	7,430	84.64	15.36
1968	6,810	1,276	8,086	84.22	15.78
1969	7,463	1,530	8,993	82.99	17.01
1970	7,473	1,754	9,227	80.99	19.01
1971	7,478	1,904	9,382	79.71	20.29
1972	7,230	1,890	9,120	79.28	20.72
1973	7,075	2,027	9,102	77.73	22.27
1974	7,137	2,158	9,295	76.78	23.22

(a) See NOTE on page 153.

Age at Marriage. The relative ages of bridegrooms and brides who married in Western Australia in 1974 are shown in the following table.

RELATIVE AGES OF BRIDEGROOMS AND BRIDES, 1974

Age of bridegroom (years)	Total bridegrooms	Age of bride (years)							
		Under 15	15-19	20-24	25-29	30-34	35-39	40-44	45 and over
Under 20	706	...	602	98	5	1	...

Marriage Rates. The average annual marriage rates per thousand of mean population for Western Australia and for Australia in each five-year period from 1921 to 1970, as well as the rates for each of the years from 1965 to 1974, are shown in the following table.

MARRIAGE RATES (a)
WESTERN AUSTRALIA AND AUSTRALIA

Period	Average annual rate (b)		Year	Annual rate (b)	
	Western Australia	Australia		Western Australia	Australia
1921-25	7.27	8.04	1965	7.91	8.25
1926-30	7.80	7.52			
1931-35	7.58	7.16	1966	8.25	8.28
1936-40	9.49	9.35	1967	8.44	8.47
1941-45	9.74	9.94	1968	8.83	8.85
			1969	9.41	9.16
1946-50	10.01	9.77			
1951-55	8.44	8.29	1970	9.28	9.26
1956-60	7.36	7.50	1971	9.09	9.20
1961-65	7.43	7.63	1972	8.63	8.78
			1973	8.49	8.56
1966-70	8.87	8.81	1974	8.46	8.27

(a) See NOTE on page 153. (b) Rates for years prior to 1971 are based on final census results; those for 1971 and later are subject to revision after the next census.

Religious and Civil Marriages. *The Marriage Act 1961-1973* (Commonwealth) provides that marriages may be celebrated either by ministers of religion registered for the purpose with the Registrar of Ministers of Religion in each State or Territory or by certain civil officers, usually District Registrars.

The following table, which relates to marriages registered in Western Australia during the period 1970 to 1974, shows the numbers and proportions celebrated by ministers of the principal religious denominations and by civil officers.

RELIGIOUS AND CIVIL MARRIAGES

Category of authorised celebrant	1970	1971	1972	1973	1974	
					Number	Per cent of total
Registered ministers of recognised religious denominations (a)—						
Church of England in Australia	2,778	2,700	2,589	2,435	2,381	25.61

Civil officers	19.0	20.3	20.7	22.3	23.22

(a) Under authority of the Marriage Act made under the Marriage Act.

(b) Includes denominations grouped under this heading in the proclamation

DIVORCE

The *Family Law Act 1975* (Commonwealth), which came into operation on 5 January 1976, repeals the Matrimonial Causes Act and makes new provisions relating to divorce. It also establishes the Family Court of Australia. Further details of the Family Law Act appear in the *Appendix*.

The Matrimonial Causes Act provided uniform grounds throughout Australia for the termination of marriage. Grounds for dissolution of marriage (*i.e.* divorce) included adultery, desertion for not less than two years, separation for not less than five years, cruelty, drunkenness, and failure to comply with maintenance orders. Grounds for nullity of marriage included bigamy and incapacity to consummate the marriage.

The Act enabled decrees to be granted by a Court for dissolution of marriage, nullity of marriage, judicial separation, and restitution of conjugal rights. Orders could also be made for the custody and welfare of children, maintenance, the settlement of property, and damages for adultery.

A decree for dissolution of marriage and nullity of voidable marriage was in the first instance a decree *nisi*. The decree automatically became absolute at the expiration of three months, unless rescinded in the meantime, or appeal proceedings had been instituted; or there were children of the marriage under the age of sixteen years, in which case the court had to be satisfied that appropriate arrangements had been made for their welfare before the decree became absolute. The parties could not remarry until a decree *nisi* had become absolute. A decree of judicial separation was available on most of the grounds available for divorce.

In the following table particulars are given of the duration of marriage, *i.e.* the interval between marriage and the time of dissolution, for marriages dissolved during the five years 1970 to 1974.

DISSOLUTIONS OF MARRIAGE—DURATION OF MARRIAGE

Year of dissolution of marriage	Marriages dissolved after a duration of—								Total marriages dissolved
	Under 5 years	5-9 years	10-14 years	15-19 years	20-24 years	25-29 years	30-34 years	35 years and over	
1970	106	247	167	116	120	81	32	20	889
1971	120	304	199	153	161	74	30	23	1,064
1972	130	376	234	181	161	103	38	20	1,243
1973	165	430	285	200	151	105	62	26	1,424
1974	176	561	378	234	176	139	60	37	1,761

The following table shows, for the year 1974, the number of marriages dissolved classified according to duration of marriage and the number of children of the marriage.

DISSOLUTIONS OF MARRIAGE—DURATION OF MARRIAGE AND NUMBER OF CHILDREN OF THE MARRIAGE (a), 1974

Duration of marriage (years)	Marriages dissolved with—							Total marriages dissolved	Total number of children
	No children	1 child	2 children	3 children	4 children	5 children	6 or more children		
0-4	115	48	10	2	1	176	78
5-9	191	171	163	31	4	1	...	561	611
10-14	46	67	137	94	27	5	2	378	770

CHAPTER V—SOCIAL CONDITIONS

Part 1—Education

PRIMARY, SECONDARY AND TECHNICAL EDUCATION

In Western Australia, education at primary and secondary levels is provided at government schools administered and staffed by the Education Department and at non-government schools, most of which are conducted by the principal religious bodies. Reference to the Technical Education Division of the Education Department will be found on pages 177-9.

Primary and Secondary School Enrolments

The following tables give a classification according to age of pupils enrolled at government and non-government schools on 1 August in the years shown.

GOVERNMENT AND NON-GOVERNMENT SCHOOLS PUPILS CLASSIFIED ACCORDING TO AGE

Age last birthday (a) (years)	Government schools (b)					Non-government schools (c)				
	1970	1971	1972	1973	1974	1970	1971	1972	1973	1974
Under 6	6,675	6,951	6,998	7,071	7,712	1,379	1,371	1,376	1,364	1,508

Total	174,024	179,889	183,539	185,220	188,914	41,558	41,681	41,910	42,203	42,788

(a) At 1 August. Children may commence school at the beginning of the year in which they attain the age of 6 years. Except in special circumstances, attendance is compulsory from the age of 6 years and upward to the end of the year in which the child attains the age of 15 years.

(b) Includes Special Schools and Classes; see letterpress on page 176. Excludes Technical Schools and Colleges; see table on page 178. Excludes also part-time students enrolled in the Western Australian Correspondence School.

(c) Excludes children attending kindergarten schools or pre-school education centres and children in kindergarten (pre-school) grades at other schools; see pages 179-80.

For footnotes, see previous table.

School censuses are conducted annually at or about the beginning of August in all States and the internal Territories of Australia. The Western Australian Correspondence School (see letterpress on page 176), special schools and classes (see letterpress on page 176), schools in institutional homes, hospitals and similar establishments, and pre-school education centres are included in the census. Institutions such as business colleges and coaching establishments are excluded.

In the following table pupils enrolled in primary grades at 1 August 1974 are classified according to grade and age. The figures exclude particulars of children attending pre-school education centres and children in pre-school grades at other schools. Reference to pre-school education centres will be found on pages 179-80.

(b) Excludes part-time students enrolled in the Western Australian Correspondence School.

THE EDUCATION DEPARTMENT

The Education Department is responsible for the organisation and management of the State Government's education programme and is controlled by a Director-General of Education responsible to the Minister for Education. The administrative structure of the Department provides for four Divisions. The Divisions, each of which is in the charge of a Director, are those of Primary Education, Secondary Education, Technical Education, and Special Services. Special Branches attached to particular Divisions are concerned with such activities as physical education (including swimming instruction), music, drama, art and crafts, visual education, publications, guidance, library services, curriculum development, planning, buildings, and educational research. In addition there is provision for a number of other services which are concerned with particular aspects of the education and welfare of school children, such as the Nature Advisory Service, and the School Medical and Dental Services conducted in collaboration with the Department of Public Health.

Primary and Secondary Schools

Instruction in the primary school is given in seven years. In addition, a year of free, voluntary pre-primary education for children of the age of five years is being progressively introduced into government primary schools. A child who makes normal progress completes the course at the age of twelve years and may then enter high school. A Senior

High School provides tuition in five years of secondary study leading to the Tertiary Admissions Examination, which is the final examination in Western Australian secondary schools and is normally taken at the age of seventeen years. A High School gives instruction in the first three years of the secondary school curriculum. A District High School is one which provides primary schooling and the first three years of secondary schooling. At some centres where there is no high school, post-primary subjects are taught at the primary school.

The Education Act provides for a Board of Secondary Education for the purposes of approving courses of study and the certification of student achievement in secondary education in Western Australia.

The Achievement Certificate describes the achievement of a student in the first three years of secondary schooling and is issued at the end of the third year, or earlier if the student leaves school before completing the third year. Each full year's achievement is recorded.

The Board of Secondary Education Leaving Certificate is issued to students at the end of the fifth year. Certification is based on the results of the Tertiary Admissions Examination and school assessment.

The following table shows the number of schools staffed and controlled by the Education Department, the number of teachers employed, and the number of pupils classified according to grade of education, for each of the years 1970 to 1974.

The figures shown under the heading 'On special duties' represent teachers engaged in activities associated with the Division of Special Services and the Special Branches of the Department.

(a) Excluding persons teaching part-time.
Australian Correspondence School.

(b) Excludes part-time students enrolled in the Western

Primary and Secondary Curriculum

In primary schools the subjects taught are English, mathematics, social studies, elementary science, physical education, handicrafts, music and art. The teaching of elementary science aims at a better understanding of the child's physical environment. The course is adapted to the conditions of the particular neighbourhood, and so varies between town and country areas. In musical expression, choral singing receives most attention, although school orchestras are being developed in some primary and high schools. Advisory teachers, under the direction of specialist superintendents, assist teachers in the fields of handicrafts, physical education, art, music, speech, drama and elementary science.

At the post-primary level, every student is required to take instruction in English, mathematics, science, and social studies, as well as one or more subjects chosen from a range of optional subjects.

Education in the government schools is secular in character but periods are set aside during which representatives of various religious denominations attend to give religious instruction. In addition, instruction in scripture stories is given by class teachers.

Radio, Television and Film Aids

Extensive use is made of radio and films, most schools having radio receivers and many being equipped also with film projectors and sound-reproduction systems. The use of television is increasing, particularly in secondary schools, as an aid in the teaching of mathematics, science, literature, social studies and languages. The Australian Broadcasting Commission co-operates with the Education Department in providing suitable radio and television programmes and Parents and Citizens' Associations assist in supplying the necessary equipment. The Audio-Visual Education Branch of the Department provides a wide variety of audio-visual aids.

Student Counselling and Vocational Guidance

Guidance officers of the Division of Special Services are available to discuss with parents the most suitable courses of study for their children and vocational guidance is given to pupils leaving high school. In addition, cases of handicapped or educationally retarded children are investigated and appropriate courses of education recommended.

Special Schools and Classes

The Division of Special Services provides a variety of assistance for physically and mentally handicapped children. A Kindergarten and Infant School for Deaf Children is maintained, as well as a Deaf School for older pupils. Special classes are organised for the blind and for the mentally handicapped, and instruction is given to patients at the Princess Margaret Hospital for Children and at other hospitals. The Department co-operates with welfare organisations, such as the Spastic Welfare Association and the Slow Learning Children's Group, by making teachers and support staff available to them.

Correspondence Tuition

The Western Australian Correspondence School provides tuition by correspondence for children living in remote areas or unable to attend school for other reasons. The service extends also to post-primary students in the smaller country schools, to sick and invalid children, and to some adults in country areas. Adults enrol mainly in order to meet the training requirements for some occupations, or to improve their general education. At 1 August 1974, full-time students enrolled in the Correspondence School comprised 384 primary and ninety-two secondary students.

Schools of the Air are conducted through the radio network of the Royal Flying Doctor Service from bases at Carnarvon, Derby, Kalgoorlie, Meekatharra and Port Hedland to supplement tuition provided by the Correspondence School.

Education of Aborigines

Aboriginal and part-Aboriginal children are admitted to ordinary schools and are educated under the same conditions as other children. For schools with a preponderance of Aborigines, special attention is directed to the framing of courses of study suited to the vocational needs of the older Aboriginal pupils. In August 1974 there were 7,185 Aboriginal and part-Aboriginal children at government primary schools and high schools and 1,338 at non-government schools.

Instruction for adult Aborigines is available under the Adult Aboriginal Education programme conducted by the Technical Education Division (see page 179).

Agricultural Education

Agricultural education is provided at certain high schools. Residential accommodation is available at the Narrogin Agricultural Senior High School, the Harvey Agricultural High School and the Agricultural District High Schools at Cunderdin and Denmark. Day instruction is provided by high schools at Esperance, Kojonup, Manjimup, Margaret River and Mount Barker. Preference is given to the sons of farmers but other suitably qualified boys, with the capacity for farm work, are admitted. The curriculum is designed as a continuation of general education to standards equivalent to those of other types of schools but with appropriate vocational emphasis. The aim is to produce young men capable of becoming leaders in rural communities as well as being successful farmers with an appreciation of the value of scientific methods in agriculture. Each school providing agricultural instruction has agricultural land attached to it.

Diploma and certificate courses in various aspects of agriculture are provided by the Technical Education Division by means of class tuition, or by correspondence through the Technical Extension Service.

In addition to the activities of the Education Department in the field of agricultural education, facilities are also provided by Muresk Agricultural College, a department of The Western Australian Institute of Technology (see letterpress on pages 181-5).

Technical Education

The Technical Education Division of the Education Department offers technician-level courses, apprenticeship and pre-apprenticeship training, general studies programmes (including courses for students preparing for public and other external examinations), and adult education (including classes designed as leisure-type studies).

The Technical Education Division provides instruction in ten 'areas of study', namely Agriculture; Apprenticeships and Post-apprenticeship Courses; Art; Building and Architecture; Engineering (including Aeronautical); General Studies; Health and Psychology; Home Economics; Management, Business and Commercial Studies; and Mathematics and Science.

Institutions under the control of the Technical Education Division at 31 December 1974 comprised six technical colleges (Fremantle, Leederville, Mount Lawley, Perth, Wembley, and the Technical Extension Service), eight technical schools (Albany, Balga, Bentley, Bunbury, Carlisle, Claremont, Eastern Goldfields and Midland), nine technical centres with full-time officers in charge, and eighty-three technical centres with part-time officers in charge. The Division has a Counselling Service which is available to advise students in selecting a course, to assist them in their studies, and to provide consultant services to industry and commerce on staff selection and training.

Technician-level studies are usually designed as diploma or certificate courses, for which the minimum entry requirement is the satisfactory completion of three years of secondary education or its accepted equivalent. Although these courses were originally on the basis of part-time study, some of them are now also available by full-time study, and other part-time courses at these levels are being progressively redesigned on a full-time, or partially full-time, basis. This means that an increasing number of subjects in these courses are becoming available to part-time students who can obtain day release

from their employers to attend classes. Diploma and certificate courses are conducted, wholly or partly, at technical colleges and schools, and subjects in the early stages of a number of courses are also available at some technical education centres.

Details of teaching positions and student enrolments in the five years 1970 to 1974 are given in the next table.

TECHNICAL EDUCATION

Total	70,255	69,505	74,226	83,079	86,591

(a) Includes Technical Extension Service. (b) At 31 December. (c) At 1 July. A teacher may occupy teaching positions at more than one institution; the number of individual teachers is not available. (d) A student is counted once for each course undertaken during the year. (e) Adult Aboriginal Education Centres, Counselling Service, and teachers in administrative positions. Youth Education Classes are excluded from figures for 1974 but are included in those for earlier years. (f) Estimated. A few small centres were unable to provide separate figures for males and females.

Programmes of study are available for students wishing to undertake examinations organised by other examining bodies such as The Royal Society of Health and a number of Australian Government and State Government Departments.

Vocational courses, including apprenticeship training, may be taken at colleges and schools close to Perth, at the Albany, Bunbury and Eastern Goldfields Technical Schools and at the Geraldton Technical Education Centre. In addition, there are many courses and subjects which help students to develop useful and interesting leisure-time activities.

The Technical Education Division has a number of evening technical centres in the metropolitan area and in country towns. These centres, which are located in government school buildings, offer those subjects for which there is sufficient local demand and for which suitable facilities and staff are available. The subjects provided fall into the categories of general education, including Public Examination and pre-diploma subjects, accounting, business studies and commercial subjects, and leisure-type activities.

The Technical Extension Service, through its correspondence courses, caters for a wide range of instruction for students who are unable to attend formal classes because of remoteness or individual limitations such as physical disability. In larger country centres, correspondence instruction is supplemented by the provision of study groups which students may attend for one period a week to do their correspondence work in the local school under the supervision of a teacher who is able to assist in interpretation of material and in the presentation of answers. The technical aspects of this instruction are the responsibility of specialist tutors employed in the Service.

The Technical Education Division collaborates with two Australian Government authorities, the Department of Immigration and Ethnic Affairs and the Department of Education, in providing courses in the English language for adult migrants. The Division conducts an Adult Aboriginal Education programme which, although designed mainly to develop literacy, also conducts classes in community obligations, home skills, employment skills and leisure-time activities.

NON-GOVERNMENT SCHOOLS

The non-government schools, which are conducted mainly by religious organisations, provide education from pre-school level to the end of the secondary school course, equivalent to the final year in the government high schools. The curriculum at the primary and secondary levels is substantially the same as that in the government schools.

Pre-school Education

KINDERGARTEN SCHOOLS AND PRE-SCHOOL CENTRES (a)

Particulars	At 1 August—

Total	10,587	12,064	13,679	15,484	16,470

(a) Figures for dates prior to 1 August 1973 refer to kindergarten schools; those for 1 August 1973 and later refer to pre-school centres. (b) Primary schools with pre-school (kindergarten) grades are excluded.

The *Pre-School (Education and Child Care) Act, 1973-1975*, which came into operation on 1 July 1973, establishes the Western Australian Pre-School Board. The Act authorises the dissolution of the Kindergarten Association of Western Australia, Incorporated, and the transfer to the Board of its property, rights, obligations, and liabilities. The Act provides that every person conducting a pre-school centre shall hold a permit issued by the Minister for Education, and that every authorised pre-school centre shall be subject to inspection by an officer of the Education Department.

(a) For additional information see previous table. (b) Excluding persons on leave without pay and persons teaching part-time. (c) Figures for dates prior to 1 August 1974 have been revised to exclude untrained staff. * Revised.

TEACHER EDUCATION

The *Teacher Education Act, 1972-1974*, which came into operation on 12 January 1973, establishes the Western Australian Teacher Education Authority, with the responsibility of providing teacher education, formerly a function of the Education Department. The Authority consists of a Council and constituent colleges. There are five such colleges,

all of which are in the Perth metropolitan area. They are situated at Churchlands, Claremont, Graylands, Mount Lawley and Nedlands. The college at Nedlands is for the training of secondary school teachers.

Among the principal objects of the Authority are the co-ordination and improvement of teacher education, and the development of autonomy in each college both academically and in the control of its finances.

The basic course of teacher education is of three years' duration. The minimum requirement for entry to a course at any of the constituent colleges is satisfactory performance at the Tertiary Admissions Examination or a pass at equivalent interstate or overseas examinations. Selected students may take extended courses of from three to six years' duration in special fields of study to obtain University degrees and/or other qualifications. There is also a one-year course open to University graduates and to associates of The Western Australian Institute of Technology.

At 30 June 1975 the total student enrolment was 5,729, comprising Churchlands 1,108, Claremont 891, Graylands 486, Mount Lawley 1,187, and Nedlands 2,057.

TEACHERS COLLEGES

Particulars	1970	1971	1972	1973	1974
Number of—					
Full-time lecturers (a)	154	187	223	277	334
Students enrolled (a)—					
Departmental (b)—					
Primary course	1,285	1,468	1,835	2,116	2,269
Secondary course	1,205	1,313	1,489	1,677	1,610

Private (b)	13	24	54	9	75
Total	728	798	992	1,021	1,163

(a) At 1 August. (b) 'Departmental' students are those who have entered into an agreement to serve with the Education Department for a specified period after completion of the course; 'private' students are those who have not entered into such an agreement. (c) The increase in enrolments in 1974 is attributable largely to the introduction of the Tertiary Education Assistance Scheme (see page 195).

THE WESTERN AUSTRALIAN INSTITUTE OF TECHNOLOGY

The Western Australian Institute of Technology is a college of advanced education, established in terms of the *Western Australian Institute of Technology Act, 1966-1974* as an autonomous body under the control of a governing council. The main functions of the Institute, as set out in the Act, are to provide facilities for higher specialised instruction and to advance training in the various branches of technology and science; to aid the advancement, development and practical application to industry of science or any techniques; and to encourage and provide facilities for the development and improvement of tertiary education whether on a full or part-time basis to meet the needs of the community.

Buildings for the Institute were commenced in 1963 on a site of about 109 hectares at Bentley, approximately eleven kilometres from the Perth city centre, and the initial group of buildings was officially opened on 17 August 1966. The administration and associated buildings were officially opened on 11 October 1968.

The Institute conducts regular courses leading to a degree, an associateship or a diploma. The courses vary in duration, requiring either three years or four years of full-time study or the part-time equivalent. (In the case of Architecture the three-year full-time course is followed by two years' part-time study while in approved employment.) The normal entrance requirement is that a student shall have attained an aggregate of scaled marks exceeding a determined minimum in the Tertiary Admissions Examination. The aggregate is calculated on the basis of scaled marks gained in five subjects, one of which must be English or English Literature. Other avenues for admission include selection on the basis

of school assessment, certain qualifications obtained through the Technical Education Division, or other qualifications equivalent to Tertiary Admission Examination standards. Special provisions exist by means of a Mature Age Scheme for admitting those over the age of twenty-one years who do not meet the normal entrance requirements.

In 1975, the teaching work of the Institute was organised under eight Schools. The fields of study within each School for both undergraduate and postgraduate courses are listed below. Options within disciplines are shown in brackets.

SCHOOL OF APPLIED SCIENCE

Undergraduate: Agriculture, Biology, Chemistry, Geophysics, Mathematics, Physics, Radiography (Diagnostic, Therapeutic)

Postgraduate: Chemistry, Computing, Physics

SCHOOL OF THE ARTS AND DESIGN

Undergraduate: Architecture, Art, Art Teaching, Design (Graphic Design, Film and Television, Applied Design/Crafts, Industrial Design), English (Australian Studies, Creative Writing, Film and Television, Journalism, Literature, Theatre Arts, Writing), Fine Art, Industrial Arts, Quantity Surveying, Town and Regional Planning

SCHOOL OF BUSINESS AND ADMINISTRATION

Undergraduate: Accounting, Business, Business Law, Information Processing, Management Studies, Secretarial Administration, Valuation

Postgraduate: Accounting (Cost and Management Accounting, Public Accounting, Data Processing, Government Accounting); Administration (Business Administration, Educational Administration, Government Administration); Business (Accounting, Business Administration, Educational Administration, Public Administration), Educational Administration

SCHOOL OF ENGINEERING AND SURVEYING

Undergraduate: Civil Engineering, Electrical Engineering (Electrical, Electronic, Communication), Mechanical Engineering, Surveying

Postgraduate: Chemical Engineering, Surveying

SCHOOL OF HEALTH SCIENCES

Undergraduate: Chiropody, Dental Therapy, Environmental Health, Medical Technology, Nursing, Nutrition and Food Science, Occupational Therapy, Pharmacy, Physiotherapy, Speech and Hearing Science

Postgraduate: Dietetics, Manipulative Therapy, Pharmacy

SCHOOL OF MINING AND MINERAL TECHNOLOGY

Undergraduate: Accounting, Business, Civil Engineering, Electrical Engineering (Electrical, Electronic, Communication), Applied Geology, Mechanical Engineering, Metallurgy (Extractive Metallurgy, Physical Metallurgy), Mining Engineering, Mining Geology, Mining Technology (Mine Surveying, Mine Ventilation)

Postgraduate: Extractive Metallurgy

SCHOOL OF SOCIAL SCIENCES

Undergraduate: Asian Studies and Language Studies (Indonesian, Japanese, Linguistics, East Asia Studies, South-east Asia Studies), Home Economics, Library Studies, Psychology, Social Sciences (Anthropology, Economics, Geography, History, Politics, Sociology), Social Work

Postgraduate: Counselling Psychology, Library Studies

SCHOOL OF TEACHER EDUCATION

Undergraduate: Education (Early Childhood, Primary, Secondary), Teaching (Early Childhood, Primary, Secondary)

Postgraduate: Education (Early Childhood, Primary, Secondary), Leadership in Early Childhood Education

The Institute has a Department of External Studies. Tuition is available in some of the courses leading to a degree, an associateship or a diploma.

The Institute offered degrees for the first time in 1973. These were available in Applied Chemistry, Applied Physics, Business (with options in Accounting, Management and Secretarial Administration), Pharmacy, Social Science and Surveying. By 1973 Graduate Diploma courses had been established in Accounting, Administration, Applied Physics, Chemical Engineering, Chemistry, Counselling Psychology, Library Studies, Pharmacy and Surveying.

In 1974 the degree programme was expanded to include courses in Applied Science (Mathematics, Biology and Social Work), Medical Technology, Physiotherapy, and Arts (Social Sciences) with further options in Applied Chemistry and Physics. In addition, Graduate Diplomas were established in Dietetics and Manipulative Therapy, and a Master's degree was offered in Physics.

The process of obtaining accreditation for degree and diploma programmes was continued in 1975. Ten courses were accredited at varying levels, namely, a Graduate Diploma in Administration, a Bachelor's degree and an Associate Diploma in English, a Bachelor's degree in Occupational Therapy, an additional Law 'stream' in the existing Bachelor of Business course, a Diploma in Diagnostic and Therapeutic Radiography, a Bachelor's degree in Library Studies, a Bachelor's degree and a Graduate Diploma in Education, and a Diploma of Teaching.

On 1 January 1969 the Institute took over the administration and academic control of the Royal Perth Hospital School of Occupational Therapy, the School of Physiotherapy, the School of Mines of Western Australia and Muresk Agricultural College.

The Kindergarten Teachers College, formerly under the control and management of the Kindergarten Association of Western Australia, Incorporated, became incorporated with the Institute on 1 July 1973. It is the inaugural member of a School of Teacher Education which commenced teaching operations in 1975.

The Dental Therapy Unit at West Perth was also incorporated in 1973.

The College of Nursing, Australia (Western Australian Branch) passed to the control of the Institute from 1 July 1974.

School of Mines of Western Australia

The School of Mines of Western Australia was established at Coolgardie in 1902 and was transferred to Kalgoorlie in the following year. Control of the School of Mines, formerly part of the Department of Mines, passed to The Western Australian Institute of Technology in January 1969 and now forms the nucleus of the School of Mining and Mineral Technology established in 1975. The number of students enrolled in 1975 was 265.

Undergraduate courses are available in Accounting, Business, Engineering (Civil, Electrical, Mechanical, Mining), Metallurgy (extractive), Mine Surveying, and Mining Geology. These courses extend over three or four years of full-time study or the part-time equivalent. A diploma course in Mining Technology extending over two years of full-time study, or the part-time equivalent, is also provided.

Through the Kalgoorlie Metallurgical Laboratory, the School undertakes metallurgical investigations as well as assays for gold or for other metals. Free assays and mineral determinations are made available for *bona fide* prospectors.

The School has a geological museum which is open to the public and contains rocks and minerals from many parts of Australia and elsewhere.

Muresk Agricultural College

Muresk Agricultural College, situated about thirteen kilometres south of Northam in the Avon valley, was established by the Department of Agriculture in 1926. Control of the College was transferred to The Western Australian Institute of Technology from the Department of Agriculture in January 1969.

The College course, which is at tertiary level, leads to a Diploma in Agriculture. It is of two years' duration and is fully residential. The course is designed to give a sound scientific, technical and managerial training suitable for those wishing to become farm owners or managers, or to work in industries servicing agriculture. The subjects studied are Plant Sciences and Husbandry, Animal Sciences and Husbandry, Agricultural Engineering, Farm Management, Soil Science, Humanities and Practical Farm Work. Instruction is given by means of lectures, assignments, laboratory and workshop practical work, demonstrations, tutorials, day tours to farms and research stations, extended tours into the agricultural areas, and practical farming on the College estate.

The estate of some 900 hectares is devoted to mixed farming and provides the students with an opportunity to gain a considerable amount of practical experience by observation, demonstration and actual participation in a wide variety of farming activities. Use is made of the College facilities for various research projects. High quality stock from the College's herds and flocks is available to Western Australian farmers.

From time to time short courses are held at the College. These include in-service training schools for personnel of the Department of Agriculture and for field and service staff of agricultural firms.

The number of students enrolled at the College in 1975 was 148.

Finance

(a) The Australian Government assumed full financial responsibility for tertiary education with effect from 1 January 1974 and tuition fees were abolished. State Government grants shown for 1974 represent amounts outstanding from the previous year or grants made for specific purposes such as research. (b) Income received specifically for new buildings, major alterations and additions to buildings, installation of services, purchase of land and buildings and major equipment. (c) Excludes fees collected on behalf of student organisations.

Teachers, Students, and Awards Conferred

The following table gives particulars of teaching staff in each of the years 1970 to 1974. The number of associateships, diplomas and degrees conferred is also shown.

(a) Figures prior to 1973 are at 30 June; those for 1973 and later are at 30 April. (b) Expressed on the basis of full-time staff equivalents. (c) A student is counted once for each course undertaken during the year. Figures are at 30 April except those shown for 1971, which are at 23 December. (d) Degrees were first awarded in 1973. Those shown for earlier years have been conferred retrospectively and are also included as associateships in figures shown above. (e) Excludes awards granted initially as associateships and subsequently accorded degree status. * Revised.

THE UNIVERSITY OF WESTERN AUSTRALIA

University education first became available in Western Australia in 1898, with the formation of the Extension Committee of the University of Adelaide by which facilities were provided for external studies in courses for degrees in Arts and Science. The first step towards the establishment of a university in Western Australia was taken in 1904, when a University Endowment Act providing for the incorporation of a trust to administer funds for the purpose was passed by the State Parliament. Following a favourable report made by a Royal Commission under the chairmanship of Dr (later Sir Winthrop) J. W. Hackett, the University was established by the University of Western Australia Act of 1911. Teaching began in 1913 in subjects related to the Faculties of Arts, Science and Engineering. Additional Faculties established since that time are those of Law (1927), Agriculture (1936), Dental Science (1946), Education (1947), Economics (1954), Medicine (1956) and Architecture (1966). The Faculty of Economics was reconstituted as the Faculty of Economics and Commerce in 1961.

Matriculation Requirements

A candidate for matriculation is required to take subjects at the Tertiary Admissions Examinations (see page 198) selected in accordance with the Matriculation Regulations, and to obtain an aggregate of marks not less than a minimum determined by the University. The marks included in the aggregate of a full-time student must have been obtained in a single year, while those included in the aggregate of a part-time student must have been obtained during a period of not more than three consecutive years.

Matriculant status may be granted to an applicant who has satisfied the examination requirements of another university in Australia, New Zealand or the United Kingdom, or of any other university recognised by the University of Western Australia, qualifying him for matriculation.

The regulations also provide that a person over the age of twenty-one years who has not qualified for matriculation may be admitted provisionally to a degree course if he is able to demonstrate that, by reason of his education, aptitude or intelligence, there is a reasonable prospect of his being able to assimilate and benefit from the course. Some faculties use the Mature Age Examination (which, for admission in 1977, will probably consist of English or English Literature and one other subject in the Tertiary Admissions Examination), while other faculties accept other evidence.

Degrees

Degrees are granted in the Faculties of Agriculture, Architecture, Arts, Dental Science, Economics and Commerce, Education, Engineering, Law, Medicine and Science.

Courses for the pass degrees of Bachelor of Arts, Bachelor of Economics, Bachelor of Commerce, Bachelor of Physical Education and Bachelor of Science extend over a period of not less than three years; pass and honours courses for the degrees of Bachelor of Music, Bachelor of Education, Bachelor of Engineering, Bachelor of Science in Agriculture and Bachelor of Science Education, over not less than four years; and those for the degrees of Bachelor of Dental Science and Bachelor of Architecture, over not less than five years. The course for the degree of Bachelor of Jurisprudence extends over a period of not less than three years, following successful completion of the first year of a course in any other faculty, and that for the degree of Bachelor of Laws over a period of not less than one further year. Honours degree courses in Arts, Commerce, Economics, Education, Music, Physical Education and Science are usually of four years' duration. The course in the Faculty of Medicine for the degrees of Bachelor of Medicine and Bachelor of Surgery extends over six years. This course may be interrupted to permit selected students to take a one-year course for the honours degree of Bachelor of Medical Science. The course for the degree of Bachelor of Psychology occupies not less than one year after completion of three years of a course for the degree of Bachelor of Arts or Bachelor of Science. The course for the postgraduate degree of Bachelor of Social Work extends over a period of not less than two years after successful completion of a first degree course.

Other degrees conferred by the University are those of Master of Arts and Doctor of Letters, Master of Music and Doctor of Music, Master of Psychology, Master of Laws and Doctor of Laws, Master of Education, Master of Economics, Master of Commerce, Master of Science and Doctor of Science, Master of Science Education, Master of Engineering Science, Master of Engineering and Doctor of Engineering, Master of Science in Agriculture and Doctor of Science in Agriculture, Master of Dental Science and Doctor of Dental Science, Master of Surgery and Doctor of Medicine, Master of Architecture, Master of Building Science and Master of Social Work. The degree of Doctor of Philosophy is given for research in all faculties.

Diplomas

There are two postgraduate courses leading to a diploma. These are the Diploma in Education and the Diploma in Computation. The Diploma in Social Work (see table on page 189) is no longer awarded. The course for the Diploma in Numerical Analysis and Automatic Computing was reorganised in 1969 and the name of the award changed to Diploma in Computation.

University Government

The original Act provided that the Senate and Convocation should constitute the governing authority with power to make statutes for 'the management, good government and discipline of the University'.

The Senate consists of twenty-five members, of whom six are appointed by the Governor, six are elected by Convocation, four are elected by the full-time teaching staff, two are elected by students, three are *ex officio* members (the Vice-Chancellor of the University, the Director-General of Education and the President of the Guild of Undergraduates), and four are co-opted members. Convocation consists of graduates of the University and such other persons as are eligible for membership under the provisions of the University of Western Australia Act.

Since an amendment to the Act in 1944 the Senate alone has been the governing authority and is responsible, subject to the Act and the statutes, for the entire control and management of the University. Statutes approved by the Senate are submitted to Convocation for its consideration, and although Convocation may suggest amendments the Senate is not bound to accept them. The Act requires that statutes shall be submitted to the Governor for approval, after which they have the force of law.

The Chancellor is the titular head of the University. He is elected annually by the Senate from among its members and presides over its meetings. The Vice-Chancellor is the chief executive officer of the University and is appointed by the Senate for a period not exceeding ten years, at the end of which term he is eligible for reappointment. At meetings of Convocation the chairman is the Warden who is elected annually by Convocation from among its members.

The Guild of Undergraduates is constituted under the Act as an association of undergraduates 'for furthering of their common interests, and shall be the recognised means of communication between the undergraduates and the governing authority of the University'. The government of the student body is vested in the Guild Council, to which members are elected in accordance with regulations made by the Guild.

Student Fees, Allowances and Scholarships

The Royal Commission appointed to inquire into the establishment of a University recommended that teaching should be free and suggested that 'if fees are found to be necessary, they should be on the lowest possible scale'. This policy was adopted and tuition fees were not charged, except in the case of a limited number of students, until 1962 when fees were introduced to assist in meeting the increasing costs of operation resulting from a rapidly growing student enrolment and to enable the University to take full advantage of financial aid available under Commonwealth legislation (see page 194). The Australian Government assumed full financial responsibility for tertiary education with effect from 1 January 1974 and tuition fees were abolished. However, students are still

required to pay Guild of Undergraduates and faculty society subscriptions, membership being compulsory for students enrolled in a course for a bachelor's degree or a diploma, or for one or more units of study.

Financial assistance is given to students by the Australian Government under the Tertiary Education Assistance Scheme and by means of postgraduate awards, to which reference is made on page 196. In addition, the University makes awards, from its own funds, of research studentships for postgraduate study which are competed for by students holding no other award and having an Honours degree of second class (Division A), or higher, standard. Hackett Scholarships, tenable at the University of Western Australia or in special circumstances at other recognised institutions in Australia, are open to graduates of the University. Graduates may also apply for Hackett Studentships which, in addition to other financial benefits, may carry a travel grant where the Student elects to study overseas or in another State. Some large private industrial concerns also make annual awards for study at postgraduate level.

Finance

The following table relates to the income and expenditure of the University of Western Australia in each year from 1970 to 1974. Information in greater detail is available in the publication *University Statistics: Part 3—Finance*, issued annually by the Australian Statistician, Canberra.

UNIVERSITY OF WESTERN AUSTRALIA—FINANCE (a)
(\$'000)

Particulars	1970	1971	1972	1973	1974
INCOME					
Income for specific capital purposes (b)—					
Australian Government grants	1,659	714	1,920	1,618	1,770
State Government grants	475	1,463	2,393	179	704
Total	2,134	2,177	4,313	1,797	2,474
Income for other purposes—					
Australian Government grants	4,242	4,885	5,428	8,286	23,586
State Government grants	4,784	6,024	5,863	7,771	272
Donations and endowments	1,068	1,103	1,390	1,993	1,483
Student fees (c)	2,145	2,293	3,618	3,556	28
Other	1,023	1,091	612	890	1,924
Total	13,262	15,396	16,911	22,496	27,293

Libraries	663	829	998	1,275	1,686
Buildings, premises, grounds	2,653	3,207	6,237	3,909	5,281
Sundry auxiliary expenditure	1,034	1,381	809	1,903	1,059
TOTAL EXPENDITURE	14,353	17,227	20,536	23,179	28,300

(a) Figures for 1972 and subsequent years are not strictly comparable with those for earlier years due to some changes in definition and classification. Comparability is further affected as a result of the Australian Government's assuming full financial responsibility for tertiary education and abolishing student fees with effect from 1 January 1974. State Government grants and student fees shown for 1974 represent amounts outstanding from the previous year or grants made for specific purposes such as research. (b) Income received specifically for new buildings, major alterations and additions to buildings, installation of services, purchase of land and buildings and major equipment. (c) Excludes fees collected on behalf of student organisations; see also footnote (a).

Staff, Students, Degrees Conferred and Diplomas Granted

The following table gives particulars of teaching staff and students in each of the years from 1970 to 1974. The numbers of degrees conferred and diplomas granted during each of these years are also shown. Information in greater detail is available from the

publications *University Statistics: Part 1—Students and Degrees Conferred* and *Part 2—Staff and Libraries*, which are issued annually by the Australian Statistician, Canberra.

(a) At 30 April. (b) Figures for part-time staff have been converted to a full-time equivalent. However, as the basis for conversion was changed in 1973, figures for that year are not comparable with those for earlier years. For 1973, the basis for conversion was 250 hours per annum for lecturers, 700 hours per annum for tutors and demonstrators and 35 hours per week for all other staff. In earlier years the basis for conversion was 100 hours per annum for all teaching staff, 30 hours per week for maintenance and cleaning staff and 35 hours per week for all other staff. (c) Excluding honorary degrees. (d) See page 187.

Colleges and Hall of Residence

There are five residential colleges within the University. For men students, Saint George's College is conducted by the Church of England and Kingswood College by the Methodist Church. Saint Catherine's College is an undenominational college for women students. Saint Columba College, a joint foundation of the Congregational and Presbyterian Churches, and Saint Thomas More College, conducted by the Roman Catholic Church, take both men and women students.

Currie Hall is an undenominational hall of residence for men and women students.

Tuition

In addition to the normal lectures and tutorials for full-time students, courses for part-time students are offered in the Faculties of Arts, Education, and Economics and Commerce. Certain subjects may be taken at institutions affiliated with the University. These are The Western Australian Institute of Technology, the Secondary Teachers College, Claremont Teachers College, Graylands Teachers College and Mount Lawley Teachers College.

Research

More than \$3 million was spent on research at the University during 1975. This sum comprised funds provided by the Australian Government through the Universities Commission, grants from agencies such as the Australian Research Grants Committee and the National Health and Medical Research Council, and bequests and benefactions from private industry and members of the public. Of the total figure, over \$1 million was applied to general support of research activities and \$2 million to particular research projects financed by outside agencies. Salaries of staff engaged in research and the overheads involved are not included in these figures.

For the most part the research undertaken is 'pure' research, that is, research aimed simply at deepening and broadening man's knowledge of himself and his world. This is a legitimate and important university activity in its own right but it can also lead to significant practical applications. This was confirmed by the development at the University of a picture transmission system and a visual display system, both of which are expected to have a number of important applications. These inventions were developed from fundamental research into human visual perception in the University's Department of Psychology.

Research during 1975 resulted in the publication of eight books, nine University journals of a scholarly or literary nature and more than 750 publications by staff members on the results or trends of their research.

More detailed information on research activities appears in the University's annual *Research Report*.

Extension Service

The Adult Education and Extension Committee was established by the Senate of the University in 1968 as a result of the reorganisation of the former Adult Education Board which had been created by the University in 1928. In 1972 the Committee was renamed the Extension Committee and more emphasis is now placed on University extension activities. The policies of the Committee are implemented by the Director of the Extension Service. The headquarters of the organisation are at the University.

The Extension Service is responsible for general courses for adults at university level, for postgraduate and refresher courses and for certain cultural activities. It works in close liaison with university departments and faculties and with professional organisations in the community. The Extension Service also conducts conferences, symposia, seminars and residential schools, and members of its staff are involved during the summer months in work connected with the annual Festival of Perth.

Classes are conducted at the University, and various other activities are arranged in both the metropolitan and country areas. These are generally non-vocational in character. An annual Summer School is also held at the University.

MURDOCH UNIVERSITY

Murdoch University is established under the provisions of the *Murdoch University Act, 1973*, which came into operation on 1 July 1973. The University is named in honour of the distinguished Australian essayist and biographer, Sir Walter Murdoch (1874-1970), foundation Professor of English at the University of Western Australia (1912-1939) and later Chancellor (1943-1948). A ceremony to mark the inauguration of the University was held on 17 September 1974, the centenary of his birth.

Admissions. The first nineteen postgraduate students were accepted in 1974 and some 600 undergraduate and forty postgraduate students were accepted in 1975. A further 600 students were admitted in 1976. The University has a flexible policy concerning admissions. In determining the eligibility of a prospective student, consideration is given to information obtained from school reports, the results of selection tests, interviews with applicants, and examination results. There are no special entrance examination requirements. Passes in particular subjects at any specific level are not required as a prerequisite for admission. However, in some courses, particularly in the physical and biological sciences and in mathematics, some prior knowledge of certain subjects is considered necessary. 'Make-up' courses are provided in some fields for students requiring them.

Schools of Study. The University is organised on the basis of schools of study which have both academic and administrative responsibilities. The following initial schools have been established: Education; Environmental and Life Sciences; Human Communication; Mathematical and Physical Sciences; Social Inquiry; and Veterinary Studies.

Programmes of Study. Undergraduate programmes being offered in 1976 are in Biology, Chemistry, Chinese Studies, Communication Studies, Economics, Education, Environmental Science, History, Human Development, Mathematics, Mineral Science, Peace and Conflict Studies, Physics, Population and World Resources, South-east Asian Studies, Teacher Education, Veterinary Studies, World Literature and Literary Theory.

Undergraduates proceeding to a degree must participate in one of three 'trunk' courses: Perception, Symbol and Myth; World in Transition; Energy and Life Systems. In addition to a trunk course, students are given the opportunity to explore areas outside their specific interests. Students are not required to settle the selection of their degree programmes until the end of their first year.

Awards. Studies in appropriate programmes will lead to pass or honours degrees in Arts, Education, Science, and Veterinary Medicine and Surgery.

The higher degrees offered by the University are the research degrees of Master of Philosophy and Doctor of Philosophy. Course-work Masters' degrees will be offered in 1977.

Courses for the degree of bachelor are of the following duration: for the ordinary degree of Bachelor of Arts or Bachelor of Science three years, and for the corresponding honours degree four years; for Bachelor of Education four years; and for Bachelor of Veterinary Medicine and Surgery five years.

The University also offers two one-year diploma programmes for graduates, one in Mineral Science and the other in Education.

External Studies. Special provision has been made for external students, and a substantial and innovative programme of external studies is being developed. External tuition is the responsibility of staff of the schools of study, but the external studies programme as a whole is co-ordinated by a Director of External Studies.

Beginning in 1975 with a small pilot scheme, Murdoch University in 1976 assumed full administrative responsibility for all university external studies in Western Australia. The external studies programmes are equally available to residents in the Perth metropolitan area and to those living outside Perth.

Research. A number of research projects were brought to Murdoch University from other institutions by senior staff, and work continued during 1975.

In addition to moneys from the University's recurrent budget, finance for research amounting to \$200,452 was received in 1975 from various government authorities and private organisations. Included in projects financed by the Australian Research Grants Committee were work on the chemistry of ions in solution aimed at use in the processing of copper, nickel, lead and zinc; continuing work on trace element nutrition of the Western Australian sand plain flora; work on the regulation of the development of mammalian embryos prior to implantation; and work towards an anthology of Chinese verse.

The Mineral Chemistry Research Unit at Murdoch University was established in 1974 by means of three-year grants from the Government of Western Australia and a private mining company to permit the continuance of research into minerals processing commenced under a member of the Murdoch University staff while at the Australian National University, Canberra.

In November 1975 Murdoch University signed an agreement between a company wholly owned by the Australian National University, and a major American chemical engineering firm to develop inventions related to new methods of extracting, refining and recycling copper. The methods were discovered by scientists working in the Mineral Chemistry Research Unit, following initial discoveries in 1972 by the same group when they were at the Research School of Chemistry of the Australian National University.

University Government. The governing body of the University is the Senate. It consists of twenty-three members, comprising the Chancellor, the Vice-Chancellor, the Director-General of Education, the President of the Student's Guild, three members of the academic staff, two students elected by the students, four members appointed by the Governor, two Members of Parliament nominated by the Premier and the Leader of the Opposition, two persons who are not Members of Parliament nominated by the Premier and the Leader of the Opposition, three persons elected by Convocation, and three co-opted members. The Murdoch University Act provides that the Senate shall establish an Academic Council, its principal functions being 'the discussion and submission to the Senate of opinions and recommendations on academic policy, academic development, the admission of students, instruction, studies and examinations, research, the admission to degrees, the discipline of the University and any other matters which in the opinion of the Academic Council are relevant to the objects of this Act'.

Development of Site. The University site comprises 242 hectares of undulating land south of the Swan River about thirteen kilometres from the Perth city centre and eight kilometres from Fremantle. An area of approximately 175 hectares was formerly part of the Somerville Pine Plantation and was given to Murdoch University by the University of Western Australia.

The major buildings to be erected during the first triennium are the first stage of the Veterinary School and four main buildings which are grouped around an open court in an elevated position in the northern part of the site. These buildings comprise the Library and Lecture Block, the East Academic Building (physical sciences), the West Academic Building (humanities), and the Student and Staff Amenities Building. Eight hectares have been grassed for playing fields in the south-west part of the site, and thirty-two hectares in the south-east are being developed as a veterinary farm and holding area.

STATE GOVERNMENT EXPENDITURE ON EDUCATION

The following table shows the amounts expended on education from State Government funds during the five-year period ended 30 June 1974.

Payments from the Consolidated Revenue Fund relate to recurrent expenditure on such items as departmental administration, teachers' salaries, transport of school children, scholarships and allowances, maintenance of buildings, assistance to non-government schools, and grants to the University of Western Australia.

STATE GOVERNMENT EXPENDITURE ON EDUCATION
(S'000)

Classification	1969-70	1970-71	1971-72	1972-73	1973-74

Education of aborigines	2
Total	13,796	14,032	14,274	16,113	15,235

* Revised.

Expenditure from the General Loan Fund is principally on capital works which include buildings at The Western Australian Institute of Technology, primary schools, high schools and technical schools. Purchases of furniture and equipment are also included.

Financial Assistance for Schools and Students

The State Government provides financial aid to non-government schools by means of a direct annual grant in respect of each pupil enrolled. The value of the grant is twenty-three per cent of an amount estimated to be the average cost of educating a pupil in government schools, less the assessed value of goods and services supplied or paid for by the Minister for Education in relation to a pupil. Separate rates apply to primary and secondary schools.

Subsidies are provided to non-government schools for the installation of swimming pools, and assistance is given by way of reimbursement of interest paid, up to a prescribed maximum rate, on moneys borrowed for expenditure on new residential accommodation and classrooms.

The State Government introduced, from the beginning of the 1976 school year, a living-away-from-home allowance to supplement the isolated children's allowance (see letterpress on page 196) paid by the Australian Government. The allowance of up to \$150 per annum ensures a minimum payment of \$500 per annum for a child who is obliged to live away from home to attend school.

Text books are issued free of charge to primary school children. An annual text book subsidy of \$5 is paid in respect of each student in the first, second and third year of secondary education, \$25 in the fourth year and \$15 in the fifth year.

All these forms of assistance to students are granted without the application of a means test.

AUSTRALIAN GOVERNMENT ASSISTANCE FOR EDUCATION

Although education is primarily the responsibility of the States, the Australian Government provides moneys for the financing of educational institutions and the assistance of students.

Finance for Institutions

Grants to the States for education began with contributions towards the recurrent expenditures of universities in 1951-52. Since that year, the Australian Government has increased its commitments to include: capital expenditures of universities (from 1957-58); capital grants for technical education and science laboratories (from 1964-65); colleges of advanced education (from 1965-66); teachers colleges (from 1967-68); pre-school teachers colleges (from 1968-69); secondary school libraries (from 1968-69); recurrent grants for non-government schools (from 1969-70); child migrant education (from 1969-70); educational research (from 1970-71); capital grants for government schools (from 1971-72); recurrent grants for government schools (from 1973-74); capital grants for non-government schools (from 1973-74); pre-schools (from 1973-74); and recurrent grants for technical education (from 1973-74). Some account of the legislation authorising payment of grants by the Australian Government appears in *Western Australian Year Book*, No. 12—1973 (pages 182-4) and earlier issues. Details of amounts paid by the Australian Government in respect of Western Australia during the five-year period ended 30 June 1975 are given in the following table.

AUSTRALIAN GOVERNMENT ASSISTANCE FOR EDUCATION
WESTERN AUSTRALIA

(a) Including teachers colleges.

An offer by the Australian Government to assume full financial responsibility for tertiary education from 1 January 1974 was accepted by the States at the Premiers' Conference in June 1973. (At the same time it was agreed that appropriate offsets would be made in the general purpose funds provided by the Australian Government to the States.)

Until December 1973, the Australian Government continued to make grants to the States for universities, colleges of advanced education, teachers colleges and pre-school teachers colleges on the basis of the existing 'matching' arrangements with the States. These arrangements provided for grants for recurrent expenditure to be made by the Australian Government on the basis of \$1 for each \$1.85 of State grants and student fees combined. Grants for capital expenditure were made on a \$1 for \$1 basis with moneys spent by the States for this purpose.

The inclusion of teachers colleges and pre-school teachers colleges in the arrangements for other tertiary institutions resulted from a decision that assistance would be provided to these colleges from 1 July 1973 on the same basis as to universities and colleges of advanced education. Previously, assistance had been granted for teachers colleges and pre-school teachers colleges under the States Grants (Teachers Colleges) Acts of 1967 and 1970 and the States Grants (Pre-school Teachers Colleges) Act 1968-1972. Grants under these Acts

were provided to the States for constructional work and equipping of teachers colleges and to expand the capacity of pre-school teachers colleges. Grants for teachers colleges under these arrangements ceased on 30 June 1973 and those for pre-school teachers colleges at the end of 1973.

Assistance for Students

Concurrently with the Australian Government's assuming full financial responsibility for tertiary education with effect from 1 January 1974, tuition and related fees in universities, colleges of advanced education, teachers colleges and technical colleges were abolished.

Tertiary Education Assistance Scheme. A new system of tertiary allowances authorised in terms of the *Student Assistance Act* 1973 came into operation at the beginning of 1974 to replace the University Scholarship, Advanced Education Scholarship, and Technical Scholarship Schemes (see *Western Australian Year Book*, No. 12—1973, page 182). Under this system full-time Australian students enrolled in an approved course at a university, college of advanced education, teachers college, technical college or agricultural college may apply for a living allowance subject to a means test. The maximum rates payable are \$1,000 per annum for students living at home and \$1,600 per annum for students living away from home. Dependants' allowances are also payable.

Students who qualify for the payment of a living allowance are entitled to two other types of benefit, an incidentals allowance and a fares allowance. The incidentals allowance is designed to assist students in meeting the cost of fees such as student representative council, union and sports fees. Eligible students attending universities receive an incidentals allowance of \$100 per annum, those at colleges of advanced education \$70 per annum and technical college students \$30 per annum. The fares allowance entitles students living away from the normal place of residence in order to undertake a course of study to be reimbursed for the cost of three return journeys per annum between their homes and the institution at which they are enrolled.

Aboriginal Study Grants Scheme. The Aboriginal Study Grants Scheme provides assistance to Aboriginal students who have left school and are undertaking further education such as business college courses, courses in creative arts and culture, and courses in domestic crafts, as well as more formal tertiary and post-secondary courses. The allowances payable under the Scheme are \$32 per week for students under eighteen years of age, \$38·50 for those aged between eighteen and twenty years, and \$45 for students who are over twenty-one years of age, or are married, or have dependants. Allowances for dependants, text books and equipment, travel, clothing and other items are also payable. Part-time students receive an allowance to meet expenses associated with their course and for those students who undertake their courses by correspondence, assistance with travel and accommodation costs at residential schools is also provided. For both full-time and part-time students, all compulsory fees are met.

Aboriginal Overseas Study Awards Scheme. The Aboriginal Overseas Study Awards Scheme was introduced in 1975 to enable leaders or potential leaders of the Aboriginal community who already have considerable experience in their occupational or professional fields to add to their skills and experience by means of short-term programmes of study, observation and discussion overseas. Allowances payable are: a fares allowance; a basic living allowance up to a maximum of \$90 per fortnight depending on the age of the award holder and whether there are any dependants; a dependants' allowance of \$24 per fortnight for the first dependant and \$12 per fortnight for each additional dependant; an overseas travelling allowance appropriate to the living costs in the place of study; an equipment allowance up to a maximum of \$150; and a fees allowance to meet all compulsory fees for approved courses.

Postgraduate Awards. Holders of postgraduate awards are paid allowances to assist them to study for higher degrees at universities or colleges of advanced education. Allowances payable are a living allowance of \$3,250 per annum; an establishment allowance of

\$75 for an unmarried student or \$150 for a married student; a thesis allowance of \$150 for a Master's thesis or \$250 for a Ph.D. thesis; and an incidentals allowance of \$100 per annum for award holders at universities and \$70 per annum for those at colleges of advanced education, to assist in meeting the cost of fees such as student representative council, union and sports fees. Dependants' allowances are also payable.

Postgraduate Studies in Social Work. Thirty awards were made available in 1975 under a scheme intended to increase the pool of well-qualified people suitable for appointment to teaching positions in social welfare education at universities, colleges of advanced education and technical colleges. Applications were sought from experienced social workers, lecturers and teachers in social welfare education and some young graduates wishing to undertake Master's or Ph.D. studies in social work on a full-time basis. Award holders who were previously in employment continue to receive their salary and employers are reimbursed. Award holders who are new graduates receive similar benefits to those provided under the Postgraduate Awards Scheme.

Secondary Education. The Secondary Allowances Scheme assists families with limited financial resources to maintain children at school for the final two years of secondary education. Benefits are subject to a means test. The maximum value of the allowance is \$450 per annum.

The Adult Secondary Education Assistance Scheme was introduced at the beginning of 1975 and provides benefits comparable to those available under the Tertiary Education Assistance Scheme to adult students undertaking full-time studies in the final year of secondary schooling.

Aboriginal Secondary Grants Scheme. The Aboriginal Secondary Grants Scheme provides financial assistance to encourage Aboriginal children to remain at school beyond the normal school leaving age. The Scheme includes all Aboriginal children attending secondary schools and classes, as well as those attending primary school who are aged fourteen years or over. Benefits include either assistance with boarding costs up to a maximum of \$975 per annum or a living allowance, and a contribution towards fees and expenditure on books, uniforms and other items.

Migrant Children. The *Immigration (Education) Act* 1971-1973 provides for special instruction to assist migrant children who have English language difficulties to achieve a sufficient command of English to enable them to participate fully in normal classes. Funds are provided to government and non-government school authorities to purchase special language teaching equipment, to pay the salaries of special teachers and to provide portable or demountable classrooms.

Soldiers' Children Education Scheme. The *Repatriation Act* 1920-1975 provides assistance for the education and training of children of ex-servicemen who have died as a result of war service, or are either totally and permanently incapacitated or blind. The allowances paid cover expenditure on fees, books, equipment, fares and other items.

Isolated Children. A scheme of allowances was introduced from the beginning of the 1973 school year to assist in the education of children who, because of their geographic isolation, are without reasonable daily access to a government school providing courses at the appropriate level. Benefits payable in respect of children living away from home to attend school comprise: a boarding allowance of \$350 per annum free of means test; a further amount of \$350 per annum subject to a means test and actual boarding costs; and, in cases of particular hardship, a special supplementary allowance up to a maximum to \$450 per annum for a secondary scholar and \$300 per annum for a primary scholar. For isolated children who study at home by correspondence there is an allowance free of means test. The allowance comprises a basic grant of \$200 per annum with provision for reimbursement of up to \$150 per annum for expenditure on certain specified items. Assistance is also made available where a family, in preference to boarding the children away from home,

sets up a second home to enable the children to attend school on a daily basis. The maximum value of this assistance is normally \$1,050 per annum but additional amounts may be paid in special cases.

THE WESTERN AUSTRALIAN TERTIARY EDUCATION COMMISSION

A Committee was appointed by the Western Australian Government in August 1966 to investigate the future needs of Western Australia in relation to tertiary education, the institutions necessary to meet those needs, the appropriate form of control and government of tertiary institutions, and the future role and development of these institutions. The Committee published its recommendations in September 1967.

As a result of these recommendations a Tertiary Education Commission was formed in February 1969 as a standing advisory commission. Subsequently the *Western Australian Tertiary Education Commission Act, 1970*, which came into operation on 23 April 1971, established the Commission as a statutory corporate body.

The *Western Australian Tertiary Education Commission Act, 1970-1972* provides that the Commission shall consist of ten members, comprising a Chairman appointed by the Governor on the recommendation of the Minister; the Director-General of Education; the Under Treasurer of the State; the chief executive officers of the University of Western Australia, Murdoch University, The Western Australian Institute of Technology, and the Western Australian Teacher Education Authority; and three persons appointed by the Governor on the recommendation of the Minister.

The principal functions of the Commission are to promote, develop and co-ordinate tertiary education, having regard to the needs of the State and the financial and other resources available to it; to consider and make recommendations on the future development of tertiary education institutions (including the acquisition and reservation of sites), the levels of financial support requested by such institutions, the terms and conditions of appointment and employment of staff, the fees to be charged by each institution, and proposals for the establishment of new tertiary education courses; to co-ordinate the criteria for entrance to tertiary education institutions; and to determine the minimum requirements for new academic awards.

The Act also provides that the Commission shall confer and collaborate on matters relevant to tertiary education with Australian Government and State Government Departments, the Universities Commission, the Commission on Advanced Education and other governmental bodies and instrumentalities.

In 1975 the Western Australian Government established a Committee to advise the Minister for Education on the future development of post-secondary education in the State and to review the role and functions of the Tertiary Education Commission.

Tertiary Admissions Examination Committee. The Tertiary Admissions Examination Committee, established by the Western Australian Tertiary Education Commission, comprises members nominated by government and non-government schools, the Education Department and tertiary educational institutions. The Committee administers the Tertiary Admissions Examination, which replaced the Leaving Examination, abolished at the end of 1974.

The Tertiary Admissions Examination is used for admission purposes by the University of Western Australia, Murdoch University, The Western Australian Institute of Technology and the constituent colleges of the Western Australian Teacher Education Authority. The examination is based on syllabuses in approved subjects. Joint Syllabus Committees have been established by the Board of Secondary Education (see page 175) and the Tertiary Admissions Examination Committee for each subject area designed to be accepted both for Board of Secondary Education certification and for examination for tertiary admission.

Chapter V—continued

Part 2—Arts, Science and Recreation

PUBLIC LIBRARIES

The Library Board of Western Australia

The Library Board of Western Australia is constituted under the provisions of the *Library Board of Western Australia Act, 1951-1974*. It was set up as an independent statutory authority in 1952.

The Board consists of twelve members. The Director-General of Education is an *ex officio* member. The remaining eleven members are appointed by the Governor, five being nominated by the Minister and the other six selected by the Minister. Of these six members, one represents the Library Association of Australia, Western Australian Branch, and the other five represent local government interests throughout the State.

The Board's main responsibilities are to advise the Minister and local authorities on matters of general policy relating to libraries and to administer the funds made available by Parliament for the State library and information service.

(a) At 30 June.

The State library service comprises: The State Reference Library of Western Australia, which includes the State archives; the Central Music Library; the State Bibliographical Centre; and local public libraries throughout the State. These units are co-ordinated by

the Board to provide an integrated and comprehensive library and information service throughout the State.

The State Reference Library of Western Australia

The origins of the State Reference Library date from 1886 when the Government resolved to establish a library to mark the Golden Jubilee of Queen Victoria. In 1911 this library became the Public Library of Western Australia and is now The State Reference Library of Western Australia.

The library's resources and service are of a high standard and two-thirds of the stock has been acquired in the last eighteen years.

The State Reference Library differs from other libraries in that its function is not principally to supply books but to provide information in answer to inquiries. It handles over a hundred serious or research inquiries per day, and for this purpose is divided into five specialised subject units arranged in three Divisions, each of which has staff experienced in the subject matter concerned.

The West Australian History Division, more commonly known as the Battye Library covers all aspects of the history and development of Western Australia. It has a very large collection of historical documents and papers, including the State archives (see below). It also has the latest information on State developments. It receives the *Government Gazette of Western Australia* on the day of issue, all Royal Commission and similar reports on the day that they are tabled in Parliament, proposed amendments to town planning schemes as soon as they are issued, and all current Western Australian publications received under copyright.

The Commerce and Technology Division provides the business community, the home hobbyist or the tradesman with the latest technical information and also makes available older material of research value and general works intended for the non-specialist. It comprises the Library of Business, Science and Technology and the Information Centre. The Centre is intended to provide immediate answers to questions, mainly in the commercial field. It has telephone directories, business directories, gazetteers, newspapers and similar material from many parts of the world.

The Humanities Division covers a wide field in the arts and social sciences, and includes comprehensive sets of the official publications of the Australian Government, State Governments, and selected overseas governments.

The State Reference Library is equipped with microfilm, microfiche, photocopy and tape-recording apparatus. Photocopies of material are available to the extent permitted by the *Copyright Act 1968* (Commonwealth), on payment of an appropriate fee.

In addition to providing reference facilities in the metropolitan area, the service of the Library extends throughout the State, through the agency of a local public library whenever possible, or by correspondence direct to country inquirers not in contact with a local library.

The State Archives. Under legislation passed in 1974 the Board has responsibility for the control and custody of all State archives. These include the records not only of the Government but also of all local authorities and all other bodies established under statute. So long as they are in current use they remain the responsibility of the department or body concerned, but when they cease to be in current use they become the responsibility of the Board and their destruction is prohibited without the approval of the Board. The State archives form part of the West Australian History Division and are available for public use in the Battye Library.

The Central Music Library

The Central Music Library, situated in the State Reference Library building, is the principal music library of the State. It offers a full reference service in the field of music, and scores are available on loan. Facilities are also available for listening to musical recordings. Books and journals dealing with electronic and similar aspects of music are held in the Library of Business, Science and Technology.

The State Bibliographical Centre

The function of the State Bibliographical Centre is to encourage and facilitate co-operation between all libraries in Western Australia, so that the total resources in the State may be made as widely available as possible to all library users.

The Centre operates the Request and Information Service provided by the Board for all public libraries, organises inter-library loans for, or between, any other approved libraries in the State or elsewhere, and offers bibliographical assistance to any library and to users of the State Reference Library. For these purposes it is equipped with catalogues of the whole stock of the Library Board and with union catalogues of both books and journals in some 200 other libraries ranging from those of the University of Western Australia to highly specialised collections held by private concerns or government departments. It also has a large range of published bibliographies from many parts of the world. The Centre is connected by telex to all major libraries of the world.

Local Public Libraries

The books in all public libraries in the State are supplied by the Board and remain its property. Books are supplied on a minimum basis of 1·1 volumes per head of the population served by the library concerned. It is the intention of the Board to raise this ratio to 1·25, and this has been achieved in about half the libraries in the State. At least one-quarter of the books in each library are withdrawn each year and replaced by a corresponding number of other volumes.

Any non-fiction book in the State-wide stock is available at any public library if requested by a reader. A printed catalogue of the entire stock is supplied free to every library each year. In the metropolitan area the Board provides a delivery van service to libraries.

Prior to dispatch, all books supplied to public libraries are fully catalogued and prepared for use by the Board, which also maintains central stock and location records.

As far as possible, selection of books for each library is carried out by the local librarian but the Board's staff makes the selection for those libraries which are unable to do so.

The Board is not responsible for the provision of local premises nor the employment of local staff, which are provided by the local authority concerned. However, professional advice on library design is available to architects and local authorities.

Of the 138 local authorities in Western Australia, all but eight have established one or more public libraries or are in process of doing so.

THE WESTERN AUSTRALIAN MUSEUM

The Western Australian Museum has developed from two earlier collections. One of these, the museum of the Swan River Mechanics' Institute, was founded by public subscription in 1860, and the other, the Geological Museum at Fremantle, was started in 1881. In 1889 the contents of the Geological Museum were moved to the former Perth Gaol (which is still part of the Western Australian Museum) and a Curator was appointed in 1891. In the following year the museum of the Swan River Mechanics' Institute was purchased, and the collections combined to form the Public Museum which, in 1897, became known as the Western Australian Museum.

Under the provisions of the *Museum Act, 1969-1973*, The Western Australian Museum is governed by seven Trustees appointed by the Governor. The staff of 154 includes a Director, a Deputy Director, two Divisional Heads and forty-six professional staff (including fourteen curators), and is grouped functionally within Divisions of Human Studies and Natural Science, service departments and an administrative unit.

The headquarters of The Western Australian Museum and its principal display galleries are situated in Perth. A branch containing maritime and historical displays was established at Fremantle in 1970. It is governed by a Committee of Management appointed by the Minister responsible for the Museum Act.

A further branch, the Albany Residency Museum, was opened at Albany on 29 September 1975. This represents a major step forward in decentralisation of museum

facilities. The Albany branch contains displays relating to exploration, early settlement and the environment of the region.

The work of the Museum is concerned mainly with natural sciences and human studies. Emphasis in both display and research is on the fauna and the human population, past and present, of Western Australia. There is an extensive scientific library which also houses the library of the Royal Society of Western Australia. Research within the Division of Natural Sciences is related specifically to marine fauna, mammals, birds, reptiles, insects and fossils of the State. The Division of Human Studies is concerned with Aboriginal archaeology and rock art, prehistoric archaeology, Aboriginal material culture, colonial history, maritime history, underwater archaeology, industrial and agrarian technology, and arms and armour.

The *Museum Act, 1969-1973* allows the Trustees to assist in establishing and maintaining municipal museums. The Museum's role is mainly to assist by making available the expertise of its own staff in advising on the maintenance of collections, restoration of objects and on museum design, and by depositing objects for display in recognised museums.

The Museum is an active educational instrument. Members of the scientific staff lecture in University Extension programmes and in the University departments. Children's centres, staffed by Museum teachers provided by the Education Department, are open during school holidays at Perth and Fremantle. Children voluntarily participate in quizzes and other exercises designed for vacation activities. Regular classes for primary schools are held during school terms at both museums, and special visits are made by children from schools not included in the regular series.

In connection with its work of education, research and conservation, the Museum is often called upon to act in an advisory capacity to government departments. In particular, senior staff serve on committees formed for the purpose of protection of the heritage, the environment and wildlife. The Museum is assisted in certain fields by Honorary Museum Associates, some of whom serve on Advisory Committees.

Under the provisions of the *Aboriginal Heritage Act, 1972* the Museum is responsible for administering the work of the Aboriginal Cultural Material Committee. The Act requires that the Registrar of Aboriginal Sites, the principal executive officer of the Committee, shall be a member of the staff of the Museum. The main function of the Committee is to evaluate, record and preserve Aboriginal sites and specific traditional Aboriginal artefacts within Western Australia.

(c) Including attendances of school children.

The *Maritime Archaeology Act, 1973* vests in the Museum historic ships wrecked before 1900. Five vessels from the 17th and 18th centuries, and twenty-one vessels from the 19th century are specified in schedules to the Act, and a further twelve sites have been declared maritime archaeology sites. In general, the Act makes provision for the preservation of any other ship abandoned, wrecked or stranded before 1900 and lying in territorial waters of the State, and of relics carried by, derived from, or associated with, any ship before 1900.

Under the provisions of the *Museum Act, 1969-1973* all meteorites are declared to be the property of the Crown and are vested in the Museum.

THE WESTERN AUSTRALIAN ART GALLERY

The Western Australian Art Gallery is under the control of a Board of five members appointed by the Governor under the provisions of the *Art Gallery Act, 1959-1974*.

The Gallery occupies part of a building shared with the Museum. The lower gallery is used mainly for lectures, art films and the display of interstate and overseas exhibitions. Works from the permanent collection are exhibited in the upper gallery, while the print room is used to house and exhibit the collection of prints and drawings. Both displays are changed regularly. Important pieces of sculpture are on permanent display in both galleries and in an exterior courtyard designed for this purpose. Aboriginal grave and tribal posts, carvings and paintings are on permanent display in the upper gallery.

At 30 June 1975 the area available for display was 850 square metres, and for storage 550 square metres.

(a) At 30 June.

(b) Medallions and coins transferred to The Western Australian Museum.

The Gallery has extended its services throughout the metropolitan area and country districts. Branch gallery facilities exist at the Cultural Centre at Derby where an exhibition of paintings from the permanent collection is displayed and changed each year. Reproductions of paintings are circulated by means of its loan service to various public institutions, and touring exhibitions from the permanent collection are taken to country districts at regular intervals.

These activities are supplemented by publications of various kinds, which are distributed to schools and other institutions or direct to the public. Reproductions of some works in the collection are also available.

The Art Gallery operates a general information service which is widely used, and tours of the Gallery are conducted for organised groups of adults, students and school-children. Children's art classes, which are supervised by the Gallery's education officers, are held during school holidays.

Members of the professional staff are called upon to judge exhibitions, give public lectures, and sit on various planning and advisory committees.

THE WESTERN AUSTRALIAN ARTS COUNCIL

The Western Australian Arts Council was established by the *Western Australian Arts Council Act, 1973*, operative from 1 December 1973. The Council took over the functions of the Western Australian Arts Advisory Board. In terms of the Act, 'it shall be the general duty of the Council to encourage, foster, and promote the practice and appreciation of the arts in Western Australia'. The Council may make grants, pay subsidies or furnish advances to local authorities, organisations or persons engaged in activities consistent with this duty. Subject to the provisions of the Act, the Council may 'generally do whatever it considers necessary or expedient in order to stimulate artistic or cultural activity'.

Funds available to the Council to enable it to exercise its functions include amounts appropriated by the State Parliament or made available by the Australian Government, amounts borrowed by the Council under the provisions of the Act, and moneys which may be advanced by the Treasurer.

The Council is affiliated with the Arts Council of Australia (Federal Division).

STATE GOVERNMENT OBSERVATORY

The Perth Observatory was originally established, near King's Park, in 1896; the present buildings, near Bickley in the Darling Range, were officially opened on 30 September 1966.

The astronomical instruments at the Observatory are a photographic refractor of thirty-three centimetres aperture combined with a guiding telescope of twenty-five centimetres aperture, the Hamburg Observatory's nineteen-centimetre meridian transit telescope, the Lowell sixty-centimetre reflector, and a forty-centimetre reflector constructed by the Physics Department of the University of Western Australia.

The photographic refractor is used for investigations of stellar motions based on measurements of old (1900-1920) and recent photographs; for the recovery of minor planets which have been unobserved for several years; for positional observations of comets, which are used in investigations of comet orbits; and for securing photographs, to a faint magnitude limit, of significant areas of the southern sky, which may be used in the future in determinations of stellar motions.

From late in 1967 to the end of 1971, a team of astronomers from the Hamburg (West Germany) Observatory carried out a programme of observations of the positions of reference stars in the southern hemisphere. Their automated meridian transit telescope is now on indefinite loan to the Perth Observatory, whose staff are continuing with programmes in this field, which is basic to all work in positional astronomy. The current programme is designed, through international collaboration, to extend the fundamental catalogue of star positions.

The sixty-centimetre reflecting telescope was installed at the beginning of April 1971. It is used mainly for observation in the International Planetary Patrol Program, which is financed by the National Aeronautics and Space Administration of the United States of America and conducted by the Lowell Observatory, of Flagstaff, Arizona, U.S.A. This programme involves the photography, with identical cameras at three observatories, well distributed in longitude, of the planets Mars, Jupiter and, occasionally, Venus. Each planet is photographed, through four standard colour filters, systematically throughout

the period during which it is available. The purpose of this programme is to set up an extensive library of photographs for the study of temporal variations in the atmospheres and surface features of these planets.

The telescope is also equipped with a photo-electric photometer, which was used during 1973 to record a series of mutual occultations and eclipses between the four major satellites of Jupiter. Since 1974, when the Planetary Patrol observations were reduced in scale, the telescope has been used in investigations of the variations in brightness of stars, planets, satellites and of asteroids. At the beginning of 1975 during the close approach of Eros, UBV photometry and variation of its brightness were recorded.

Due to overlapping with the photographic Planetary Patrol programme the photometer has been adapted to the forty-centimetre University of Western Australia telescope in order to allow participation of the Perth Observatory in the campaign for observation of the minor planets Ceres and Psyche during their current apparition 1975-76.

The Observatory maintains the time service for the State, and provides an astronomical information service for educational and general interest inquiries. It is open to visitors daily, except Saturdays, at 3 p.m.

STATE GOVERNMENT CHEMICAL LABORATORIES

In 1922 the various chemical services of the State Government were amalgamated to form the Government Chemical Laboratories, primarily for the performance of chemical work required by government departments. In addition, the Laboratories serve government instrumentalities and semi-government authorities and undertake some chemical work for the general public. The activities of the Laboratories are organised under seven Divisions, the separate functions of which are described briefly in the following summary.

The *Agriculture Division* does analytical work, on soils, for basic research, the effect of fertilisers, cultivation methods and crop rotation; on plants, as fodders for livestock and also to assess the nutritional requirements of plants with particular reference to the use of fertilisers and the correction of trace element deficiencies; on fertilisers and manures generally; and on animal tissues for diagnostic purposes. Samples of many kinds are analysed to determine the effects of pollution on agricultural and native plants and on stock, and to determine the level of potential pollutants in raw materials and finished products.

The *Engineering Chemistry Division* is concerned mainly with research into the utilisation of the State's natural resources, particularly fuel and mineral resources. Investigations are carried out on specific technological problems at the request of government departments, industry, or individual sponsors, or are initiated from within the Division. Facilities are available for physical and chemical testing of coals and other fuels and for experimental work on most aspects of fuel utilisation, ore dressing, chemical engineering and metallurgical processing. Technical advice is also given on these topics.

The *Food, Drugs and Toxicology Division* deals with chemical analyses in the fields of food, drugs, pesticides, toxicology, industrial hygiene and general analytical chemistry. Examinations are performed to ensure conformity to standards of quality prescribed by legislation, as well as analyses for traces of pesticide residues and other contaminants. A major portion of the work comprises toxicological examinations concerning deaths from drugs or poisons, analysis of blood for alcohol level, and some forensic work to assist criminal investigations. Industrial hygiene analyses and field investigations of working conditions and potential health hazards are also performed.

The *Industrial Chemistry Division* provides, for Government, industry and the public generally, a source of technical information and advice on matters relating to industry and its products. It also advises on the potential of new methods or improvements in existing processes, and undertakes related experimental investigations.

The *Kalgoorlie Metallurgical Laboratory* carries out research in mineral beneficiation and ore treatment for mining companies and prospectors. Assays and mineral analyses are done in the course of this work and also on separate samples.

The *Mineral Division* is basically concerned with studying and recording the mineralogy of the State. This is done by physical and chemical examination of mineral and rock specimens obtained from departmental and other sources and by the maintenance of a reference collection of minerals from most known occurrences within Western Australia. A service to government authorities (particularly other branches of the Department of Mines) is maintained by examination of samples and provision of advice on mineralogy and inorganic chemistry generally. In some circumstances this service is extended to the mining industry, prospectors and the general public.

The *Water Division* analyses waters from all parts of the State for Government and the public and makes recommendations on their suitability for specific purposes. Most of the work is done on behalf of the Metropolitan Water Supply, Sewerage, and Drainage Board and the Public Works Department, to ensure that water supplies under their control comply with the accepted standards of water for human consumption. The Division also investigates problems associated with water distribution and industrial use, including cooling and heating waters and liquid wastes where corrosion, scaling or pollution are involved and, in addition, carries out surveys of industrial effluents and the pollution of river and ocean waters.

Details of the operations of the Government Chemical Laboratories are published in the Annual Report of the Director.

COMMONWEALTH SCIENTIFIC AND INDUSTRIAL RESEARCH ORGANIZATION

Two Divisions of the Commonwealth Scientific and Industrial Research Organization (CSIRO), namely the Division of Land Resources Management and the Division of Mineralogy, have their headquarters in Perth. In addition several other CSIRO Divisions have laboratories in Western Australia. While most of the research is relevant to agriculture and industry in this State, much of it is also applicable to other areas of Australia.

Division of Land Resources Management. The Division of Land Resources Management is developing principles for managing Australia's land resources in a way that is consistent both with efficient productivity and the conservation of those resources. This involves consideration of the environmental implications of land use in pastoral, agricultural, forested, and near-urban areas.

The Division has a national responsibility, and research programmes are being developed to investigate a number of resource management situations throughout Australia. The Division has branch laboratories at Alice Springs (Northern Territory), and Deniliquin (New South Wales)

Research on water supply and land use in the Darling Range and elsewhere in the south-west of Western Australia is one of the Division's main programmes. Practices which will increase total evapotranspiration from farmlands and so reduce water and salt movement into streams are being developed and tested. The primary objective is to attack the salinity problem on farms so as to reclaim salt land and reduce stream salinity.

Forested lands, which surround many of Australia's major cities, supply not only timber but also vital domestic and industrial water supplies, recreational opportunities and animal habitats. The Division is investigating the management of forested lands in relation to the multiple demands placed on them.

Australia's rangelands (the arid and semi-arid grazing lands) constitute a large area of low rainfall and include major parts of five mainland States. Some vegetation types are badly degraded, others less so. Low rainfall is the overriding restriction, and maintenance or restoration of stability and productivity is the principal objective of the Division's work rather than increased production.

The general field of resource management principles and practice represents a new programme for the Division, and it demands that the traditional scientific disciplines be accompanied by social, economic and political evaluations. Communication of inform-

ation to decision makers, and resolution of conflict in the field of multiple resource use are two areas which are receiving particular attention.

One of the Division's most recently developed programmes concerns ecosystem assessment, or the measuring and recording of ecosystem variables. When dealing with land resources, it is necessary to have regular and accurate measurements of the condition, abundance and possible trends of change in status of various resource components. Application of the principles of physics and electronics and communications engineering will be investigated, involving imagery from ground, aircraft and satellite vehicles, on-site data logging equipment, and radio telemetry.

Division of Forest Research. This Division is represented in the State by a Regional Station now located at Kelmscott, with a staff of eleven members. Since its inception at Dwellingup in 1949 the station work has centred on jarrah dieback disease, its ecology, rate of spread and soil microbial relationships, and the susceptibility of native and introduced species to infection and the extent of damage caused to them.

Division of Entomology. A long-term study of the ecology and population dynamics of two serious pasture pests, the red-legged earth mite and the lucerne flea, was commenced in 1952. The work has led to an understanding of the process involved in regulating numbers and has revealed the likely occurrence of agents for biological control. Two useful predatory mites were discovered in Europe and North Africa, and are now established in Western Australia. Detailed taxonomic studies of the families Bdellidae and Anystidae, to which these mites belong and of the host family Sminthuridae are in progress.

Jarrah is a most important source of timber in Western Australia. The foliage of this tree is attacked by the jarrah leaf miner, the larvae of a small moth. The extent and intensity of this infestation seems to have increased in recent years, and in 1967 a detailed ecological study was commenced. Special attention is being paid to the possible effects on the environment of various silvicultural methods, including controlled burning and its influence on the natural control of the leaf miner by parasites and predators.

A programme of research into the pest insects of pome fruit orchards was started in 1968. The programme is designed to gather data for comparison with results obtained in eastern Australian orchards, and to provide a detailed understanding of the life system of San José scale. In unsprayed orchards San José scale is kept at a low level of abundance by a series of parasites and predators, and under such conditions does not damage trees.

A study of the ecology of the light brown apple moth has commenced. A survey in 1975 will provide information throughout the State on the species of light brown apple moths damaging fruit.

In 1969-70 a large-scale field test of a granulosus virus of potato tuber moth was carried out in the lower south-west. The test was successful and the study has been expanded to give data relating to the epidemiology of the virus, the ecology of potato tuber moth, and the role and status of other pests of potatoes. In the test area the virus has become well established and flares up from time to time, depending on the density of potato tuber moth larvae and population stresses.

Division of Mathematics and Statistics. The Division of Mathematics and Statistics is concerned with the mathematical analysis of scientific problems and the application of statistical methods to areas of interest in the applied and biological sciences. Its officers also act in an advisory capacity to other research workers in the State on matters relating to mathematical methods, as well as the design of experiments and the analysis and interpretation of statistical data.

Division of Computing Research. The Division of Computing Research provides a computing service for research workers in other Divisions. Computing equipment consists of a node computer connected to a Cyber 76 computer in Canberra by means of a telephone line leased from the Australian Telecommunications Commission. The node computer provides a remote batch service and an interactive service for six consoles.

Division of Mineralogy. The Division of Mineralogy is concerned with research bearing on the discovery and definition of Australian mineral resources. Its work deals mainly with the chemical and physical nature of geological processes of mineral formation and alteration.

Under two main programmes, mineralisation and exploration, studies are in progress on processes of ore genesis, particularly with respect to nickel sulphide ores, on supergene alteration of these ores, on the geochemical and petrological evidence for defining areas of differing crustal development in the Archaean of Western Australia, and on improving techniques and interpretation of surface geochemical exploration in deeply-weathered arid terrain.

Division of Wildlife Research. The Division of Wildlife Research has a research group at Helena Valley, working on the higher vertebrates (more particularly mammals and birds). Investigations cover not only species of economic importance but also native fauna generally.

Studies of the ecology of the Emu, the White-tailed Black Cockatoo, the Noisy Scrub-bird, and the Galah are proceeding. Factors controlling breeding seasons of birds under Western Australian conditions are also being investigated.

Division of Fisheries and Oceanography. The Division of Fisheries and Oceanography has a research group in Western Australia undertaking research on the western rock lobster. The project includes studies of population ecology, physiology and behaviour, and of the water circulation responsible for larval drift and survival. This latter work is carried out from a research vessel forty-four metres in length. Some research is also being done on Australian salmon (in conjunction with the Western Australian Department of Fisheries and Wildlife). The Division is building its own regional laboratory for the rock lobster project and any further projects undertaken in Western Australia. Pending completion of this building, it is sharing facilities at the Western Australian Marine Research Laboratories.

Division of Food Research. The Meat Research Laboratory of the Division of Food Research has an extension officer located in the laboratories of the Western Australian Department of Agriculture at South Perth. He is a member of the Meat Laboratory's Industry Section which is responsible for service, investigation, liaison and extension work in meatworks and meat processing establishments, to ensure that the results of investigations by the Commonwealth Scientific and Industrial Research Organization are made known and to encourage their application by the meat industry. The extension officer services processing plants in Western Australia and the Northern Territory and gives a limited extension liaison service to other food processing industries.

Division of Animal Health. The Melbourne Laboratory of the Division of Animal Health has set up a branch laboratory in the Institute of Agriculture at the University of Western Australia to investigate reproductive losses in sheep in Western Australia, with particular reference to pathological aspects of clover disease and possible infectious causes of infertility.

Division of Tropical Agronomy. Since 1 July 1974 the Division of Tropical Agronomy has been responsible for the operation of the Kimberley Research Station which is situated near Kununurra on the banks of the Ord River in the far north of Western Australia. The Station was operated jointly by CSIRO and the Western Australian Department of Agriculture during the period 1945-1974.

The main priorities in the Station's research are establishing the fertiliser requirements for crops on the Ord irrigation area and for pastures on dry-land areas of the region; breeding better tropical varieties of grain sorghum (the yields of existing varieties have been disappointingly low in northern Australia); evaluating a large number of grain legume introductions, especially soya bean, for their grain yields and protein and oil contents; measuring yields of potential fibre crops, particularly Kenaf; increasing rice yields by

fertiliser treatments and selection of adapted strains; improving beef cattle production from irrigated pastures based mainly on the tree legume *Leucaena*; and finding legumes that can be used to improve dry-land pastures in the Kimberley region.

Division of Applied Geomechanics. Many of the new buildings in Perth are, or will be, founded on reinforced concrete rafts. Due to the soil conditions and the uncertain effects of earthquake shocks on foundations, adequate design data are often not available. The Division of Applied Geomechanics has therefore undertaken a project to provide data on the performance of the rafts for several large buildings in the city area.

An investigation of the performance of the raft foundations of the Australian Mutual Provident Society building, the Reserve Bank building, and the Commercial and National Bank buildings in the St Martin's City Centre has been continuing for several years.

Observations of total settlement and deflected shape of the rafts, settlement within soil layers beneath the rafts, and contact pressures at the soil-raft interface have indicated that the raft-soil interaction is similar to a loaded plate or a layered elastic medium of finite depth. A computer programme for analysing this behaviour, which is called FOCALS (Foundation On Cross Anisotropic Layered System), has been developed and released for use by consulting engineers through various computing networks.

As part of the investigation into soil-structure interaction, the behaviour of piled foundations is being studied at the headquarters building of the Criminal Investigation Branch, Perth.

The above work has provided data for the development of improved structural design techniques having regard to soil-structure interaction. These were presented at a Symposium on Raft Foundations held in Perth in November 1975. The Symposium was convened by the Division and the Western Australia Group of the Australian Geomechanics Society.

DEPARTMENT OF AGRICULTURE

Reference to the scientific work of the Department of Agriculture appears in the section *The Department of Agriculture* in Chapter VIII, Part 1—*Primary Production*, and also in Chapter VII, Parts 1 and 2.

BOTANIC GARDEN

The Botanic Garden was established in The King's Park in 1962 and is under the control of the King's Park Board (see following section *Public Parks and Reserves*). The Botanic Garden is the counterpart of The Western Australian Museum in the botanical field and complements the State Herbarium by maintaining collections of living plants for scientific and educational purposes. Its official objects are to foster public interest in the conservation and cultivation of the Western Australian flora; to contribute to public education in this field; to become a centre for botanical and horticultural research in the flora of Western Australia; and to provide a major tourist attraction.

The Garden, which was officially opened in October 1965, extends over thirty-four hectares, made up of the Western Australian collection (seventeen hectares), Californian, South African and Mediterranean collections (three hectares), and an arboretum of native trees (fourteen hectares). The indigenous flora of the State is represented in the Western Australian collection by approximately 1,200 species. Trees grown as specimens in the arboretum are mainly those which are native to the southern half of the State.

Parties from the Botanic Garden are regularly in the field for the collection of propagating material. Special attention is devoted to the preservation of rare species or species threatened with extinction. Seed of native plants collected is distributed from surplus stocks to botanical institutions throughout the world. A seed list, which normally offers from 1,000 to 1,300 species, is published annually, and more than 10,000 packets of seed are distributed each year.

Experimental work in propagation of native plants is carried out and a Wildflower Exhibition is held in the Park each spring. Lectures are given by members of the staff to interested societies and to students engaged in related courses of study. The public may also, by arrangement, consult members of the staff. Facilities are provided for the employment and training of students enrolled in the three-year course for the Certificate in Horticulture, which is conducted by the Technical Education Division of the Education Department.

PUBLIC PARKS AND RESERVES

It is within the power of the Governor to dispose of, in any manner which serves the public interest, lands which are vested in the Crown and, in terms of this authority, Crown land is frequently reserved by order of the Governor for a variety of public purposes. Some of this land is reserved for public recreation and amusement, national and other public parks, or flora and fauna sanctuaries and the reserves are controlled by statutory bodies, the more important of which are dealt with in this section.

The *National Parks Board of Western Australia* controlled forty-three National Parks and a number of other reserves at 30 June 1975, totalling in all about 2·27 million hectares in area. Flora and fauna are protected and firearms prohibited in all National Parks and Reserves controlled by the Board. Picnic, recreational, camping and caravan facilities are available in certain parks and reserves.

NATIONAL PARKS BOARD OF WESTERN AUSTRALIA
PARKS AND RESERVES VESTED IN THE BOARD AT 30 JUNE 1975

National Park or Reserve	Area	National Park or Reserve	Area
	hectares		hectares
Alexander Morrison	8,501	Lesmurdie Falls.....	56
Araluen-Canning Dam Reserve	20	Matilda Bay Reserve	23
Avon Valley	4,430	Moore River	17,380
Badgingarra	10,285	Nambung	17,332
Cape Arid	259,808	Nowergup Lake Fauna Sanctuary	117
Cape Le Grand	28,000	Neerabup	1,125
Cape Range	50,581	Penguin Island Reserve	13
Charles Gardner Flora Reserve	583	Porongurup	2,359
Chichester Range	150,609	Porongurup Range Reserve (a)	61
Cowaramup	879	Scott	1,376
Drovers Cave	2,681	Serpentine	635
Drysdale River (a)	424,344	Sir James Mitchell	1,087
East Perth Cemetery Reserve	5	Stirling Range	115,684
Fitzgerald River	242,727	Stokes	10,667
Frank Hann	49,877	Tathra	4,323
Geikie Gorge	3,136	Torndirrup	3,906
Geekabee Hill Flora Reserve	4	Tunnel Creek (a)	92
Gooseberry Hill	33	Walpole-Nornalup	17,986
Greenmount	56	Walyunga	1,790
Haddleton Flora Reserve	713	Watheroo	34,920
Hamelin Bay (a)	1,334	William Bay	1,879
Hamersley Range	590,206	Windjana Gorge	2,134
Hassell	1,279	Wolf Creek Meteorite Crater Reserve	1,460
John Forrest	1,577	Yalgorup	10,661
Kalamunda	372	Yallingup (a)	1,885
Kalbarri	186,623	Yanchep	2,790
Leeuwin	1,101	Yanchep Flora Reserves	178
Total area of National Parks and Reserves (b)		2,271,683	

(a) Not officially named at 30 June 1975.

(b) Excludes a number of small reserves, totalling 19 hectares, not listed above.

The *King's Park Board* administers an area of almost 403 hectares close to the centre of Perth. Part of this area was dedicated in 1872 'for the purpose of a public park and recreation ground' and was enlarged in 1890. Beautification commenced in 1896 under

the presidency of Sir John Forrest, and the name was changed in 1901 from Perth Park to The King's Park in honour of the accession of King Edward VII. In addition to its original function as park and recreation ground, The King's Park has over the years gradually developed two other important functions, as a National Shrine and as a Botanical Reserve. In the former case it houses the State's most important monuments and commemorative features of a military and historical nature. A memorial to the South African war was built in 1901, and the State War Memorial to the fallen of both world wars was erected on a commanding position on Mount Eliza in 1929 and extended in 1952. 'Honour Avenues' of trees dedicated to individual fallen servicemen were planted in 1919 and later, and another avenue commemorates the State Centenary of 1929. There are smaller memorials erected by individual regiments or other military units, and a number of monuments to important historical personages.

The concept of the botanical reserve grew from the fact that four-fifths of the Park's area remained undeveloped under a natural bushland which contained many native wildflowers. Increasing urbanisation and the loss of natural sites in and close to Perth made the retention of this bushland area a matter of scientific and aesthetic value. This function was strengthened from 1962 onwards by the establishment in the Park of a botanic garden and arboretum of thirty-four hectares for the cultivation and display of Western Australian native plants. (See preceding section *Botanic Garden*.)

Recent developments have continued to contribute to the Park's aesthetic and recreational functions. A fully-equipped modern restaurant was erected in 1956, close to such features as a floral clock, a wishing well, a giant karri log and an observation platform. There are several public barbecue sites and many kilometres of pedestrian paths and tracks. The original twenty hectares of lawns and shrubberies have been materially extended by the Botanic Garden development. Four new lawns have been added within the Garden, one of which encircles a landscaped water garden with four pools, two cascades and a waterfall, one pool featuring an illuminated fountain dedicated to the pioneer women of the State. A picnic lawn, refreshment kiosk, and children's nature playground have been established around an artificial lake at the western end of the park and linked to older-developed areas by a mile-long vista leading to a viewing tower.

The *Zoological Gardens Board* administers the Zoological Gardens at South Perth, an area of eighteen hectares of animal enclosures, cages, lawns and gardens. The Zoological Gardens were established in October 1898 for the collection and display of mammals, birds, reptiles and fish from all parts of the world, but specialising in Australian, and particularly Western Australian, fauna. The Zoo is open to the public every day of the year. During the year ended 30 June 1975, 92 species of mammals, 298 species of birds and 40 species of reptiles were exhibited. In this period 397,388 people paid for admission and, in addition, 3,617 disadvantaged children and adults were admitted free.

The *Rottnest Island Board* administers as a tourist and holiday resort a reserve comprising almost the whole of Rottnest Island, which is situated about eighteen kilometres west of Fremantle. The settlement at Thomson Bay contains 160 cottages and bungalows to let, a hotel, lodge, camping areas and all services. Recreational facilities include a golf course, tennis courts, bowling green and a riding school. The coastline is ringed by a road system with access to the various swimming and fishing areas. There is a land-backed wharf and three jetties in Thomson Bay and jetties at Geordie Bay and Green Island. Special features of the island include the marsupial known as the Quokka and the Rottnest Island Daisy. The island is served daily by air and sea transport. Visitors to the island in 1974-75 totalled 209,000.

Caves Reserves. Extensive limestone caves have been discovered at several places in the south-west part of the State. Some of them, between Cape Naturaliste and Cape Leeuwin and at Yanchep, have been developed for public inspection and certain areas of the surrounding land have been reserved, notably at Yanchep, Yallingup, Margaret River and Augusta.

Local Government Reserves. Many local authorities hold land for recreational purposes, the areas having been either Crown land vested in the Council, acquired by way of purchase, or received under private bequest. Included in these local government reserves are areas required to be surrendered to the Crown by private owners, when subdividing land into residential lots in order to provide recreation areas for the holders of lots in the subdivision. The reserves are frequently developed as public parks or to provide facilities for sports or camping.

The *Youth, Community Recreation and National Fitness Council of Western Australia* functions under the provisions of the *Youth, Community Recreation and National Fitness Act, 1972* which became operative on 28 February 1973.

The Council includes in its operations the activities formerly engaged in by the State National Fitness Council and the Youth Council of Western Australia.

In terms of the Act, the purpose of the Council is 'to promote co-operation between and to assist organisations concerned with youth service, community recreation and physical and cultural fitness'.

Funds are made available chiefly by the State Government and the Australian Government, and the Council is authorised to make grants to community groups for the establishment of training courses for coaches, leaders, officials and administrators; for the purchase of items of equipment; for special development projects; and for capital works.

The Council has appointed officers to local government authorities to promote greater community involvement in all forms of leisure activity. These officers assist in the planning of new recreation facilities and provide an information exchange service to ensure maximum use of existing facilities.

Camps which provide low cost accommodation and recreation facilities for youth, sporting, recreational organisations and family groups are fully operative at Point Peron, on the coast south of Fremantle, at Bickley, east of Perth in the Darling Range, at Guildford near Perth Airport, and at Wellington Mills near Collie. A major recreational project is under development at Sorrento, north of Perth and a new camp is being developed at Myalup near Harvey.

The Council is also involved in the annual Fitness Australia campaign to promote physical fitness in the community, the Vacation Play Centres Scheme for primary school children, the Duke of Edinburgh's Award Scheme and conducts courses in leadership and sports coaching.

Chapter V—continued

**Part 3—Health Services, Hospitals, and Care
of the Aged and Disabled**

HEALTH SERVICES

The Australian Government and State Government health authorities, together with Boards of Health under local government administration, co-operate in maintaining health services and in the prevention and control of infectious diseases in Western Australia.

Australian Government Services

The National Health Services provided under the National Health Act are controlled partly by the Department of Health and partly by the Department of Social Security. Each of these Departments is administered, subject to the control of the relevant minister, by a Director-General. There is also, in each State, a Director who is responsible to the Director-General. The administration of the Quarantine Act is another function of the Department of Health.

National Health Services. National Health Services financed from the National Welfare Fund, to which reference is made on page 243, include hospital and nursing home benefits; medical benefits; pharmaceutical benefits; handicapped children's benefits; domiciliary nursing care benefits; and the payment of tuberculosis allowances and other forms of assistance in tuberculosis control. (For rates and conditions applying to payment of these benefits see letterpress *National Health Services* on pages 252-6.) Additional expenditure from the National Welfare Fund in relation to health services includes the cost of district health laboratory services, the free supply of certain prophylactic materials and biological products (*e.g.* poliomyelitis vaccine), the supply and maintenance of hearing aids for persons aged up to twenty-one years and for eligible pensioners and their dependants, subsidies to various voluntary organisations conducting home-nursing services that are assisted by the State Governments or local government authorities, the supply of artificially produced radio-active isotopes to private medical practitioners and hospitals for medical treatment purposes, and expenses in connection with the blood fractionation plant of the Commonwealth Serum Laboratories.

Quarantine. The *Quarantine Act* 1908-1973 provides for the quarantine of humans, animals and plants. Human quarantine is concerned primarily with the procedures necessary to exclude quarantinable diseases, namely smallpox, plague, cholera, yellow fever, typhus fever, leprosy, and such other diseases as may be declared under the Quarantine Act. Animal quarantine regulates the importation of animals and animal products from overseas, and plant quarantine the importation of all plants and plant products, with the object of excluding plant diseases, insect pests and weeds. In respect of interstate movements of animals and plants, the Quarantine Act becomes operative only when it is considered that Australian Government action is necessary for the protection of any State or States, and in general the control of interstate movements of animals and plants is the responsibility of State Governments.

State Government Services

The principal Statute relating to the provision and regulation of health services in Western Australia is the *Health Act, 1911-1975*, which is administered, subject to the control of the Minister, by a Commissioner of Public Health. The Act is comprehensive in scope and confers on the Commissioner the powers necessary for the prevention and control of infectious diseases; the enforcement of sanitation, building and pure foods standards; the control of nuisances and offensive trades; the regulation of the sale of

pesticides and the manufacture of therapeutic substances; and the registration of private hospitals and the licensing of maternity homes. Other Acts under Public Health administration are the Anatomy Act, the Clean Air Act, the Cremation Act, the Noise Abatement Act, the Poisons Act and the Radiation Safety Act.

The Department of Public Health maintains a pathology laboratory service which provides diagnostic medical laboratory services to government non-teaching hospitals, charitable institutions and such general practitioners as elect to use it. It also shares with the Department of Medicine of the University of Western Australia much of the diagnostic medical laboratory of the Perth Medical Centre. A range of reference laboratories is available, some of which serve the whole of Western Australia. A public health epidemiological service is provided for the State; nutritional, health and other surveys are undertaken; and forensic pathology work is done for the Police Department and Crown Law Department.

The Health Education Council is established as a statutory body under the provisions of the *Health Education Council Act, 1958-1975*. The Council conducts publicity campaigns and public lectures on matters affecting public health, including home accidents, handling of poisons, poliomyelitis and diphtheria immunisation and the control of flies and mosquitoes.

The Cancer Council of Western Australia is constituted under the provisions of the *Cancer Council of Western Australia Act, 1958-1964* as a statutory body with the functions of co-ordinating, promoting and subsidising research into the cause, diagnosis, prevention and treatment of cancer.

The Western Australian Government subsidises the cost of dental care for pensioners and persons on low incomes who are treated at the Perth Dental Hospital and at clinics in some major country centres. Co-operating dental practitioners assist the subsidy programme in other areas.

Infectious Diseases

The *Health Act, 1911-1975* provides for the compulsory notification of infectious diseases and for the application of preventive measures. For the purposes of the Act, infectious diseases are those which are specified in the Act, as well as any other diseases which may, from time to time, be declared. The occupier of premises where such a disease occurs is required to notify the local authority forthwith. The medical practitioner who attends a person suffering from an infectious disease must, on the day on which he becomes aware of the nature of the disease, notify the occupier and also the local authority and the Commissioner of Public Health.

On the appearance of any epidemic, endemic or contagious disease, the local authority is required to notify the Commissioner immediately and to report periodically on the disease. The Act provides for the disinfection and cleansing of premises and for the disinfection and destruction of bedding, clothing or other articles which have been exposed to infection. The Commissioner may require any person suspected to be suffering from, or to be a carrier of, an infectious disease to submit to medical examination.

NOTIFIABLE DISEASES (a)—NUMBER OF CASES NOTIFIED (b)

Disease	1970	1971	1972	1973	1974
Brucellosis	2	1	...	1	2
Diphtheria	2	1	2	5	...
Infectious hepatitis	166	291	163	165	247
Leprosy (c)	28	25	10	13	17
Leptospirosis	2	3	1
Paratyphoid fever	...	1	...	1	...
Poliomyelitis	4
Tetanus	...	4
Tuberculosis	148	143	155	146	137
Typhoid fever	1	1	2	...	1
Typhus (all forms)	1

(a) See letterpress immediately following table. (b) Figures exclude cases where the original diagnosis was subsequently disproved. No cases of cholera, plague, smallpox or yellow fever were notified during the period. (c) Aborigines account for practically all of these cases.

The previous table shows, for Western Australia, the number of cases notified during the years 1970 to 1974 for those diseases notifiable in all, or nearly all, States and Territories of Australia. In May 1965 the National Health and Medical Research Council at its Fifty-ninth Session proposed a basic list of diseases to be notifiable in each State and Territory and this table is based upon that proposal. The table does not include all diseases which are notifiable in Western Australia.

Leprosy and trachoma are endemic among the Aborigines of the Kimberley Division in the far north of the State, and cases are, with few exceptions, confined to the Aboriginal population. The Department of Public Health and the Northern Territory Medical Service co-operate in the control of these diseases.

The Commissioner of Public Health may compel any person believed to be suffering from venereal disease to undergo examination by a medical practitioner. Any person who is aware or suspects that he is suffering from venereal disease is required to consult a medical practitioner and, if found to be infected, must continue treatment until a certificate of cure is issued. Free treatment is available at public hospitals. In 1974, 2,032 cases of gonorrhoea and 462 of syphilis were notified to the Department.

A joint campaign of tuberculosis control is conducted by the Australian Government and the State Governments. Under the provisions of the *Tuberculosis Act 1948-1973*, the Australian Government reimburses the State for capital expenditure incurred after 1 July 1948, and for net maintenance expenditure in excess of that of the base year 1947-48. In addition, the Australian Government pays allowances to tuberculosis sufferers and their dependants, as set out in Part 5 of this Chapter. Western Australia, like the other States, carries out the actual work of diagnosis and treatment.

Special Health Services for Children

In addition to measures provided for immunisation against poliomyelitis, diphtheria and other infectious diseases, Child Health Services and School Health and Dental Services assist in maintaining the general health of children in Western Australia.

Child Health Centres have been established throughout the State to advise mothers concerning the care of infants and pre-school children. Expectant mothers are also assisted and country mothers who are unable to attend a Centre may receive advice by letter under a Correspondence Nursing Scheme. It is estimated that 90 per cent of infants in the State are taken to a Centre at least once in the first year of life. Child Health Sisters also visit remote areas of the State and interview mothers who are normally dependent on advice given by correspondence.

CHILD HEALTH CENTRES

(a) Year ended 30 June.

(b) At 31 December.

(c) Not available.

The School Health Services provide for a complete medical examination of each child during the first year at school. Subsequent screening for visual and hearing defects is carried out on two further occasions during school life. In addition medical assessment for physical, mental or learning handicap is available on the request of either teacher, guidance officer, or parent. Parents are notified of any defects detected during such examinations and advised to seek attention through their family doctor when necessary. Visual and hearing defects are the conditions most frequently reported. Similar services are available for pre-school centres, kindergartens and day care centres. It is also intended, under a scheme at present being developed in conjunction with the Education Department, to station a nurse at a school or a group of schools to screen children for impediments to learning as well as to provide counselling and first-aid services.

Preventive dentistry centres, staffed by school dental therapists trained at the Public Health Department's School of Dental Therapy, are progressively being established throughout the State. Dental therapists, under the direction of dental officers, also provide free dental care for children under fifteen years of age, and in country areas not served by private practitioners school dental officers provide a service for adults as well as for children.

Royal Flying Doctor Service of Australia

The Royal Flying Doctor Service of Australia is a non-profit organisation financed by grants from the Australian and State Governments and by private donations. The principal function of the Service is to provide aerial medical services for residents in remote areas. Isolated townships, mining centres and sheep and cattle stations are usually equipped with two-way radio sets and, by this means, are linked with bases where doctors are available for radio consultation in the event of sickness or accident. In serious cases a doctor flies to the patient, who may then be flown to hospital for treatment. The Service provides, through the Australian Department of Health, standard medical chests with directions for the use of the drugs and medical supplies which they contain.

The radio network of the Royal Flying Doctor Service is regularly used in the work of Schools of the Air conducted by the Education Department, and also for the transmission and receipt of telegrams. In addition, it may be used, as the need arises, in connection with flood relief, in searching for lost parties and in co-ordinating movements of livestock.

The following table gives particulars of the operations of the Western Australian Section of the Service during the five years ended June 1975.

ROYAL FLYING DOCTOR SERVICE OF AUSTRALIA
OPERATIONS OF WESTERN AUSTRALIAN SECTION

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75

(a) Not comparable with figures shown for 1970-71 owing to inclusion of some services (e.g. immunisation) previously excluded.

HOSPITALS OTHER THAN MENTAL HOSPITALS

Australian Government Hospitals

The Repatriation General Hospital at Hollywood and the Edward Millen Hospital at Victoria Park provide free treatment for certain recipients of pensions payable under the Repatriation Act (see pages 250-2) and for their dependants. Free treatment is also available to some other categories of former members of the defence forces and their dependants.

State Government and Government-assisted Hospitals

The *Hospitals Act, 1927-1975* is administered, subject to the direction of the Minister for Health, by the Medical Department. For administrative purposes, a hospital under the direct control of the Medical Department is classified as 'departmental' and is financed from State funds. A hospital classified as a 'Board' hospital has its own board of management and is subsidised by the State Government.

The principal government and government-assisted hospitals are the Royal Perth Hospital, Fremantle Hospital, Sir Charles Gairdner Hospital, King Edward Memorial Hospital for Women, Princess Margaret Hospital for Children, the Home of Peace for the Chronic Sick, the Perth Dental Hospital, and Mount Henry Hospital and Sunset Hospital for long-term patients.

Departmental and Board hospitals collect fees from patients able to pay for treatment, and receive hospital benefit payments provided by the Australian Government under Part V of the *National Health Act 1953-1975* (see letterpress *Hospital and Nursing Home Benefits* on pages 252-3), but are financed mainly from State Government funds. Details of the activities of departmental and Board hospitals during the five years ended 30 June 1974 are given in the following table.

(a) Includes particulars of the Perth Dental Hospital, and Mount Henry Hospital and Sunset Hospital for long-term patients. (b) Maintenance of equipment, furnishings and minor repairs. (c) At 30 June. (d) At 31 July.

As previously indicated, the control of tuberculosis is chiefly a State Government activity, supported by Australian Government subsidies and carried out under the direction of the Commissioner of Public Health. The principal institution for the treatment of tuberculosis is the Sir Charles Gairdner Hospital at Hollywood.

Leprosy, which is confined almost entirely to the far north of the State, is treated at a leprosarium at Derby in the Kimberley Division.

Private Hospitals and Nursing Homes

In addition to the government hospitals there are a number of private general and maternity hospitals, which are registered and inspected by the Department of Public Health. The principal private hospitals are those established by religious bodies in the metropolitan area and the main country towns. These include the Hospitals of Saint John of God at Subiaco, Rivervale, Bunbury, Geraldton and Kalgoorlie; Saint Anne's, Mount Lawley; Bethesda Hospital, Claremont and Saint Joseph's Hospital, Bicton.

Private hospitals collect fees from patients and receive hospital benefit payments provided by the Australian Government under Part V of the *National Health Act* 1953-1975. At 31 August 1975 there were 115 private hospitals and nursing homes in Western Australia approved for payment of hospital benefits and nursing home benefits under the Act. These hospitals and homes had a total bed capacity of 5,563 at that date.

MENTAL HEALTH SERVICES

The *Mental Health Act, 1962-1973*, which consolidates and amends the law relating to the treatment of mental disorders, came into operation on 1 July 1966. The Mental Health Services established under the Act are administered, subject to the control of the Minister for Health, by the Director of Mental Health Services. The Director must be a psychiatrist and is appointed by the Governor. Institutions authorised by the Act include hospitals for the treatment of mental illness, reception homes, out-patient and child guidance clinics, day hospitals, training centres, geriatric centres, hostels, and sheltered workshop units.

The Act provides for the admission of patients to hospitals approved for the purpose, either on referral by a medical practitioner or by order of a Justice of the Peace supported by the referral of a medical practitioner. A person so received into a hospital must be examined within seventy-two hours by the superintendent or another psychiatrist, and admission as a patient is dependent upon the result of the examination. Unless found to be in need of treatment, the person is required to leave the hospital. Special provisions exist for the detention for observation or treatment of persons admitted by order of a court or from a prison. The Act also provides for voluntary admissions. A person not less than eighteen years of age may be granted admission on his own request. Younger persons may be admitted on the application of a parent or guardian.

Except in the case of a person admitted by order of a court or from a prison, a patient may be released on leave or discharged by the hospital superintendent. A Board of Visitors or the Supreme Court of Western Australia may also, after due consideration, order the release of a patient. Where application for the discharge of a voluntary patient is made either by the patient himself or, in the case of a patient under the age of eighteen years, by the parent or guardian at whose request the patient was admitted, he must be discharged within seventy-two hours.

Establishments designated as approved hospitals within the meaning of the Act are Graylands Hospital, Swanbourne Hospital, Lemnos Hospital and Heathcote Hospital. Out-patient clinics are conducted at the Graylands and Swanbourne Hospitals.

Other establishments include the Whitby Falls Hostel, Greenplace Hostel, the Community Development Centre, the Community Psychiatric Division, the Havelock Out-patient Clinic, the Bentley Out-patient Clinic, the Fremantle Out-patient Clinic, the Geraldton Out-patient Clinic, the Kalgoorlie Out-patient Clinic, the Port Hedland Out-patient Clinic, the Balga Out-patient Clinic, the Rockingham Out-patient Clinic, the Mildred Creak Centre for Autistic Children, the Child Guidance Clinic and the Stubbs Terrace Hospital for children, the Irrabeena Referral Centre, the Industrial Rehabilitation Unit and the sheltered workshop at North Fremantle.

There are also the Pyrtton Training Centre for the intellectually handicapped at Eden Hill; the Nathaniel Harper Homes at Bassendean and Guildford; Mental Deficiency Division hostels at Armadale, Bassendean, Bayswater, Belmont, Claremont, Dianella, Nedlands, Rivervale, Scarborough and Subiaco; and the Elwyn Morey Pre-school Centre at Dianella.

The following table shows particulars concerning the mental health service units operated by the Mental Health Services authority during the year ended 30 June 1974.

MENTAL HEALTH SERVICES—YEAR ENDED 30 JUNE 1974

The Australian Government is empowered by the *Mental Health and Related Services Assistance Act 1973* to provide financial assistance to States, local governing bodies and voluntary organisations in respect of services or facilities in relation to mental illness, mental disability, alcoholism and drug dependence. The Act came into operation on 27 November 1973 and replaces the *States Grants (Mental Health Institutions) Act 1964-1970* which expired on 30 June 1973.

CARE OF AGED AND DISABLED PERSONS

Part 5 of this Chapter gives particulars of pensions, allowances and some other benefits available to aged and disabled persons under the provisions of the Social Services Act, the Repatriation Act, the National Health Act and the Tuberculosis Act. Forms of assistance extended to such persons by other Commonwealth Acts are dealt with below.

Aged or Disabled Persons Homes Act

The *Aged or Disabled Persons Homes Act 1954-1974* incorporates the *Aged Persons Homes Act 1954-1973* and extends its provisions to include disabled persons. The purpose of the legislation is to enable the Australian Government to give financial assistance to religious, charitable and other organisations in providing accommodation for the aged or disabled. The Act is administered, subject to any directions of the Minister, by the Director-General of Social Security.

For the purposes of the Act, the term 'aged person' means a man aged sixty-five years or over or a woman aged sixty years or over and includes the spouse of the aged person; 'disabled person' means a person who has attained the age of sixteen years and who is permanently blind or permanently incapacitated for work. Grants are made to organisations 'to encourage and assist the provision of suitable homes for eligible persons, and in particular homes at which eligible persons may reside in conditions approaching as nearly as possible normal domestic life . . .'. The legislation authorises grants to eligible organisations to be applied towards the cost of erecting or purchasing approved homes to be used permanently for the accommodation of aged or disabled persons. To be eligible for assistance an organisation must be one which is carried on otherwise than for the purpose

of profit or gain to its individual members, and may be a religious, charitable or benevolent organisation, an organisation of former members of the defence forces, an organisation approved by the Governor-General, or a local governing body. An organisation conducted or controlled by the Australian Government or a State Government is not eligible for assistance.

When the original Act commenced on 16 December 1954 the grant was made on the basis of \$1 for each \$1 raised by the organisation excluding borrowed money and money received from a governmental body. An amending Act, effective from 22 October 1957, increased the Government's contribution to \$2 for each \$1 raised by the organisation. In terms of the *Aged or Disabled Persons Homes Act 1974*, which came into operation on 3 December 1974, the Government's contribution is increased to \$4. Grants are made from moneys appropriated by the Parliament from the Consolidated Revenue Fund.

Details of the number and value of grants and of persons accommodated in each of the five years ended 30 June 1975 are given in the following table.

AGED PERSONS HOMES GRANTS—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Grants approved (a)—					
Number	25	31	30	25	32

Nursing	205	161	41	89	96
Total persons	766	657	462	652	790
Amount	\$'000 3,335	\$'000 3,001	\$'000 2,576	\$'000 3,480	\$'000 7,431

(a) A supplementary grant may be approved in a year subsequent to the year when the original grant was approved. In this table each supplementary grant has been included in the year in which the additional amount was actually approved.

Personal Care Subsidy. An amendment to the *Aged Persons Homes Act* operative from 10 October 1969 provided for payment of a Personal Care Subsidy to approved homes. Homes eligible for the subsidy are those where residents are provided with all meals and where staff is employed to assist residents who need help with bathing, dressing, personal laundry and the cleaning of their rooms, and those who need help with medication.

The *Aged or Disabled Persons Homes Act 1954-1974* authorises the payment of subsidy at the rate of \$15 per week in respect of each person residing in approved premises who has attained the age of eighty years or is receiving approved personal care services. Payments are made from the National Welfare Fund (see table on page 277).

PERSONAL CARE SUBSIDY—WESTERN AUSTRALIA

(a) At 30 June.

Aged Persons Hostels Act

The *Aged Persons Hostels Act 1972-1974* is administered, subject to any directions of the Minister, by the Director-General of Social Security. The Act authorises the Australian Government to assist in the provision of additional hostel-type accommodation for aged persons by making grants to organisations which satisfy certain conditions related to

existing accommodation. The first grants in respect of organisations in Western Australia were approved during the year ended 30 June 1974.

**AGED PERSONS HOSTELS GRANTS—

Furnishing grants	5,000	25,500
Total	161,000	1,340,590

Homeless Persons Assistance Act

The *Homeless Persons Assistance Act* 1974, which came into operation on 13 December 1974, authorises the Australian Government to make grants to charitable and other organisations providing temporary accommodation and personal services for the homeless. Grants may be made in respect of the acquisition of land, buildings and furniture; the rent of premises; the salaries of social welfare workers (including social workers, welfare officers, psychologists and occupational therapists); and the provision of meals.

The following table gives particulars of grants made to organisations in Western Australia in the period to 30 June 1975.

**HOMELESS PERSONS ASSISTANCE GRANTS—
WESTERN AUSTRALIA**

Particulars	1974-75 (a)
	\$
Building projects	9,660
Rent of premises	2,730
Furniture and equipment	20,301
Staff salaries
Food and accommodation	11,550
Meals for non-residents	2,418
Total	46,659

(a) Part year only.

Delivered Meals Subsidy Act

The *Delivered Meals Subsidy Act* 1970-1974 is administered, subject to any directions of the Minister, by the Director-General of Social Security. Its purpose is to enable help to be given to approved organisations to establish, maintain, expand and improve services for the delivery of meals to aged and invalid persons. To qualify for approval, an organisation must conduct a regular service delivering meals wholly or mainly to aged or invalid persons in their homes.

The Act authorises payment of subsidy at the rate of 25 cents per meal, which is increased to 30 cents if the meal includes fresh fruit or fruit juice. Payments are made from the National Welfare Fund (see table on page 277).

Handicapped Persons Assistance Act

The *Handicapped Persons Assistance Act* 1974, which repeals the *Handicapped Children (Assistance) Act* 1970-1973 and parts of the *Sheltered Employment (Assistance) Act* 1967-1973, consolidates and extends the Australian Government's programmes of assistance to voluntary organisations concerned with the welfare of handicapped persons. The main

provisions of the repealed legislation are continued and expanded by the provisions of the Handicapped Persons Assistance Act. The Act is administered, subject to any directions of the Minister, by the Director-General of Social Security.

The Act provides that grants may be made to eligible organisations which are deemed by the Minister to provide 'prescribed services' for disabled persons. Prescribed services which may be approved for the purposes of the Act include training, activity therapy, sheltered employment, residential accommodation, holiday accommodation, recreational facilities and rehabilitational facilities. Assistance may be provided towards meeting the cost of purchase or construction of premises to provide the prescribed services. The Act allows the payment of subsidy in respect of residential accommodation to be extended to include accommodation for disabled persons capable of engaging in normal employment. Subsidies may also be approved to help meet expenditure on building maintenance, rental of premises, equipment, and the salaries of certain staff involved in providing prescribed services. The Act also authorises the payment to organisations of a training fee for each person who, after being employed for six months or longer in a sheltered workshop, has spent at least twelve months in normal employment.

The handicapped children's benefit, formerly payable in terms of the National Health Act, is continued under the provisions of the *Handicapped Persons Assistance Act 1974*. A handicapped child is defined as a person under sixteen years of age who is suffering from a physical or mental disability. An eligible organisation which provides approved residential accommodation for handicapped children is entitled to receive benefit in respect of each such child at the rate of \$3·50 for each day, commencing with 1 January 1975, on which accommodation is provided for the child.

The following table shows the number and amount of grants approved during the year ended 30 June 1975.

HANDICAPPED PERSONS ASSISTANCE GRANTS—
WESTERN AUSTRALIA

Particulars	1974-75

Sheltered Employment Allowances

Sheltered employment allowances, which were introduced in terms of the *Social Services Act 1967*, enable invalid pensioners and certain other disabled persons to earn an income from sheltered employment and at the same time to be eligible to receive a special allowance which, in the case of an invalid pensioner, replaces the pension.

Other Forms of Assistance

Under the *States Grants (Home Care) Act 1969-1973* the Australian Government shares with a State on a \$2 for \$1 basis the cost of approved housekeeping or other domestic services provided wholly or mainly for aged persons in their homes. It also shares with a State the cost of providing approved senior citizens' centres, on a \$2 for \$1 basis up to a maximum of two-thirds of the capital cost of the centres, as well as paying two-thirds of the salary of a welfare officer engaged in the co-ordination of home care services and associated with a senior citizens' centre. Grants to Western Australia were first made in the year 1970-71.

HOME CARE SERVICES GRANTS—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
	\$	\$	\$	\$	\$
Amount of grants paid for—					
Home care services	3,500	10,000	12,500	22,500	115,981
Senior citizens' centres	30,244	67,252	123,148	28,206
Welfare officers	5,475	15,182	14,865
Total	3,500	40,244	85,227	160,830	159,052

The *States Grants (Paramedical Services) Act* 1969 authorises the Australian Government to share with a State on a \$1 for \$1 basis the cost of approved paramedical services, such as chiropody, occupational therapy, physiotherapy and speech therapy, provided wholly or mainly for aged persons in their homes. Payments are made from the Consolidated Revenue Fund and the maximum annual expenditure authorised by the Act is \$250,000, of which \$19,000 is payable to Western Australia. In the period to 30 June 1975, no grant had been made to Western Australia.

The *States Grants (Dwellings for Aged Pensioners) Act* 1969 authorised the Australian Government to share with a State on a \$1 for \$1 basis the cost of providing self-contained dwellings at reasonable rentals for certain recipients of an age pension payable under the Social Services Act or a service pension under the Repatriation Act. The Act enabled expenditure by the Australian Government, during the five-year period to 30 June 1974, of an amount of \$25 million, Western Australia's share being \$1.75 million. Grants were financed from the Consolidated Revenue Fund. Payments to Western Australia comprised \$700,000 in 1970-71, \$224,555 in 1971-72, \$518,815 in 1972-73 and \$306,630 in 1973-74. The *States Grants (Dwellings for Pensioners) Act* 1974 authorises the continuation of the scheme for a period of three years from 1 July 1974 and extends its provisions to include certain additional classes of pensioner. The Act enables the expenditure from the Consolidated Revenue Fund of the sum of \$30 million, of which \$2.1 million is allocated to Western Australia. The grant received by Western Australia during 1974-75 amounted to \$198,000.

Chapter V—continued

Part 4—Housing and Building

HOUSING AND THE CENSUS

NOTE. Before an amendment to the Australian Constitution in 1967, dwellings occupied solely by full-blood Aborigines were excluded from published tables relating to the Census of Population and Housing (see letterpress Aborigines on page 135). As a result of this amendment, such dwellings are included in the statistics derived from the Census of 30 June 1971, which therefore relate to all dwellings. It has been possible to compile some data from the 1966 Census on this basis and particulars have been incorporated, as appropriate, in the tables on the following pages.

The definitions given below are relevant when considering data derived from the Census of Population and Housing.

OCCUPIED DWELLING. For the purpose of the Census of Population and Housing an occupied dwelling is any habitation occupied on census night by a household group living together as a domestic unit, and may comprise the whole of a building or only part of it. The term has therefore a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution.

UNOCCUPIED PRIVATE DWELLING. An unoccupied private dwelling is defined as a structure built specifically for private living purposes and capable of being lived in, though unoccupied at the time of the census. The term includes vacant dwellings available for sale or renting; dwellings such as week-enders or holiday homes which were not occupied on census night; dwellings normally occupied but whose occupants were temporarily absent on the night of the census; newly-completed dwellings whose owners or tenants had not entered into occupation on census night; and dwellings described as 'to be demolished', 'condemned', 'exhibition home', etc. The total number of unoccupied dwellings does not, therefore, represent the number of vacant houses and flats available for sale or renting.

PRIVATE DWELLINGS comprise the following classes:

PRIVATE HOUSE, which includes separate houses; semi-detached houses; attached houses; terrace houses; and villa units.

SELF-CONTAINED FLAT. A self-contained flat is part of a house or other building which can be completely closed off and which has its own cooking and bathing facilities. Home units are included in this class.

OTHER FLAT is part of a house, flat or other premises which is not self-contained.

OTHER PRIVATE DWELLINGS include sheds, tents, garages, caravans, houseboats, etc. occupied on a permanent or semi-permanent basis.

Dwellings at Censuses from 1901

The following table shows the numbers of occupied and unoccupied dwellings recorded in Western Australia at each census from 1901 to 1971. It should be noted that the number of unoccupied dwellings shown for censuses prior to 1971 include both private and non-private dwellings, while those for the 1971 Census refer to private dwellings only.

DWELLINGS—CENSUSES, 1901 TO 1971 (a)

Census date	Occupied dwellings				Unoccupied dwellings
	Private		Non-private	Total	
	Number	Average number of inmates			
1901—31 March	(b) 46,436	(c) 3.35	2,070	48,506	2,263
1911— 3 April	(d) 66,553	(e) 3.68	2,317	68,870	3,158
1921— 4 April	70,185	4.11	3,363	73,548	3,274
1933—30 June	100,441	3.95	3,137	103,578	4,029
1947—30 June	122,078	3.73	2,689	124,767	2,606
1954—30 June	159,496	3.64	3,327	162,823	6,614
1961—30 June	191,616	3.59	2,701	194,317	13,705
1966—30 June	222,416	3.53	3,285	225,701	17,965
1971—30 June	284,359	3.38	(f) 2,486	286,845	(g) 28,274

(a) Figures for censuses prior to 1966 exclude dwellings occupied solely by full-blood Aborigines; those for 1966 and 1971 relate to all dwellings (see NOTE on page 223). (b) Comprises 17,702 dwellings of calico, canvas, and hessian, with an average of 2.10 inmates, and 28,734 other dwellings with an average of 4.12 inmates. (c) See note (b). (d) Comprises 14,216 dwellings of calico, canvas, and hessian, with an average of 1.93 inmates, and 52,337 other dwellings with an average of 4.16 inmates. (e) See note (d). (f) For further details see next table. (g) Unoccupied private dwellings only.

Class of Dwelling

The following table shows the number of occupied dwellings in Western Australia according to class of dwelling at the Census of 30 June 1971. Private houses constituted 87.8 per cent of all occupied private dwellings in 1971 compared with 90.4 per cent in 1966. The proportion of self-contained flats to total occupied private dwellings increased from 6.33 per cent in 1966 to 8.96 per cent in 1971.

DWELLINGS ACCORDING TO CLASS—CENSUS, 30 JUNE 1971

n.a. denotes 'not available'.

The following table gives particulars of the numbers of occupied dwellings at the Censuses of 1966 and 1971, together with the total numbers of persons enumerated. Of the total of 1,026,734 persons enumerated in private and non-private dwellings at the Census of 30 June 1971, 86·2 per cent were in private houses, 5·28 per cent in self-contained flats, 2·28 per cent in other private dwellings, and 6·28 per cent in non-private dwellings. The corresponding percentages in 1966 were 87·5, 3·54, 2·12 and 6·80.

Between the Censuses of 1966 and 1971, the numbers of occupied dwellings in the State increased by 27·1 per cent. Private houses showed an increase of 48,531 or 24·1 per cent and self-contained flats an increase of 11,392 or 80·9 per cent.

n.a. denotes 'not available'.

^(a) Minus sign (—) denotes decrease. ^(b) Comprises persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

Number of Inmates

Details of the number of inmates in private houses and self-contained flats at the Census of 30 June 1971 are given in the next table.

At the 1971 Census, 87·1 per cent of occupied private houses in Western Australia had less than six inmates, and 88·8 per cent of occupied self-contained flats had less than four inmates.

The average number of inmates was 3·54 for private houses compared with 2·13 for self-contained flats.

Number of Rooms

A comparison of the number of rooms in private houses and self-contained flats at the Censuses of 1966 and 1971 is made in the following table.

Occupied private houses containing five rooms were the most numerous group in Western Australia at both the 1966 and 1971 Censuses, comprising respectively 42.8 per cent and 45.5 per cent of the total. Among occupied self-contained flats, those comprising three rooms predominated at each of the censuses and represented 35.8 per cent of the total in 1971 and 34.3 per cent in 1966.

**OCCUPIED PRIVATE HOUSES AND SELF-CONTAINED FLATS
NUMBER OF ROOMS: CENSUSES, 1966 AND 1971**

(a) Includes kitchen and permanently enclosed sleep-out, but does not include bathroom, toilet, pantry, laundry, storeroom, hall, or room used only for business purposes.

Material of Outer Walls

Brick predominated as the material of outer walls of occupied private dwellings in Western Australia at both the 1966 and 1971 Censuses, representing 44.4 per cent of private houses and 78.6 per cent of self-contained flats in 1966, and 53.1 per cent and 89.5 per cent in 1971. Fibro-cement was next in importance, being used in 30.5 per cent of private houses in 1966 and 22.8 per cent in 1971. The proportion of private houses with outer walls of timber rose from 13.1 per cent in 1966 to 13.6 per cent in 1971.

In 1971, 67.9 per cent of private houses in the Perth Statistical Division had outer walls of brick whereas in other divisions the proportion was 18.0 per cent, the predominant material outside the Perth Statistical Division being fibro-cement with 42.4 per cent.

Nature of Occupancy

The nature of occupancy of private houses and self-contained flats at the Censuses of 1966 and 1971 is compared in the following table.

At the 1971 Census, nature of occupancy was stated in respect of 245,758 occupied private houses and 24,845 occupied self-contained flats. Of the houses, 70·0 per cent were stated to be occupied by owners including purchasers by instalments, 8·60 per cent by tenants of government authorities, and 17·9 per cent by other tenants. The corresponding percentages for flats were 12·2, 11·0, and 74·5.

(a) Including purchaser by instalments.

(b) Including caretaker.

Facilities

At the 1971 Census the question on gas and electricity facilities was answered in respect of 281,843 occupied private dwellings in Western Australia. Of this total, 0·34 per cent had gas only, 59·7 per cent had electricity only, 39·3 per cent had both gas and electricity, and 0·66 per cent had neither gas nor electricity. There were 216,063 dwellings with a television set, equivalent to 76·0 per cent of all occupied dwellings. At the 1966 Census, 150,687 occupied private dwellings, equivalent to 70·0 per cent of the total, were stated to have a television set.

The following table gives detailed particulars of facilities in relation to occupied private houses and self-contained flats at the Censuses of 1966 and 1971.

(a) At the 1966 Census, householders were asked to state 'the number of Motor Vehicles (excluding Motor Cycles and Scooters) used by members of this household that were garaged or parked at or near this dwelling for the night of Thursday, 30th June'. At the 1971 Census, they were asked: 'How many motor vehicles owned or driven by members of your household were garaged or parked at or near this dwelling for the night of Wednesday 30 June 1971? Exclude motor cycles, scooters, tractors. Include company vehicles kept at home.'

Number of Bedrooms

The question concerning number of bedrooms was included in the census schedule in 1971 for the first time. The question was answered in respect of 281,114 occupied private dwellings in Western Australia. Of this number, 6,792 (including one-room apartments and bed-sitting rooms), equivalent to 2.42 per cent, were classified as having no bedroom, 7.26 per cent had one bedroom, 24.2 per cent had two bedrooms, 52.0 per cent had three, 12.0 per cent had four, and 2.12 per cent had five or more bedrooms.

Details for private houses and self-contained flats are given in the following table.

**OCCUPIED PRIVATE HOUSES AND SELF-CONTAINED FLATS
NUMBER OF BEDROOMS (a): CENSUS, 30 JUNE 1971**

Number of bedrooms (a)	Private house			Self-contained flat		
	Perth Statistical Division	Other divisions	Total	Perth Statistical Division	Other divisions	Total
0 (b)	578	386	964	1,729	73	1,802

(a) Includes permanently enclosed sleep-out.

(b) Includes one-room apartment and bed-sitting room.

Method of Sewage Disposal

The question concerning method of sewage disposal was included in the census schedule in 1971 for the first time. Of the total of 284,359 occupied private dwellings in Western Australia, 101,468 (35.7 per cent) had a flush toilet connected to a public sewer; 170,455 (59.9 per cent) had a flush toilet connected to an individual system, such as septic tank; 4,198 (1.48 per cent) were serviced by sanitary pan collection; and 8,238 (2.90 per cent) were classified to the category 'Other and not stated'.

**OCCUPIED PRIVATE HOUSES AND SELF-CONTAINED FLATS

Total	175,747	73,947	249,694	23,380	2,093	25,473

Unoccupied Dwellings

For dwellings not occupied on the night of the census, collectors were required to determine as many particulars as possible and, where the information was available, to enter on the census schedule the reason why the dwelling was unoccupied. That this information could not be ascertained in a high proportion of cases is evident from the numbers shown in the following table in the category 'Other and not stated', equivalent to 38.2 per cent of all unoccupied private dwellings in 1966 and 17.3 per cent in 1971.

UNOCCUPIED PRIVATE DWELLINGS—CENSUSES, 1966 AND 1971

Geographical Distribution of Dwellings

Statistical Divisions. The following tables show the numbers and proportions of occupied dwellings in each of the statistical divisions of Western Australia at each census from 1911 to 1971, and a dissection according to class of dwelling at the Census of 1971. (The statistical divisions and their component local government areas are shown on the maps immediately preceding the *Index*.)

Between the Censuses of 1966 and 1971 the number of occupied dwellings in Western Australia rose by 27.1 per cent. The number in the Perth Statistical Division increased by 30.9 per cent, compared with an increase of 18.6 per cent in the rest of the State. Other divisions showing an increase were Pilbara, 328 per cent; North-West, 62.0 per cent; Kimberley, 42.1 per cent; Eastern Goldfields, 23.3 per cent; Central, 22.5 per cent; Northern Agricultural, 17.3 per cent; South-West, 13.6 per cent; and Southern Agricultural, 7.30 per cent. A decrease of 1.37 per cent was recorded in the Central Agricultural Division.

GOVERNMENT AND GOVERNMENT-SPONSORED HOUSING

The State Housing Commission

The State Housing Commission was established in January 1947 under the State Housing Act of 1946 to replace the Workers' Homes Board which had been created in 1912 to 'erect and dispose of workers' dwellings, and to make advances to people of limited means to provide homes for themselves'. The Act confers on the Commission the legal authority formerly vested in the Board and has as its objects 'the improvement of existing housing conditions' and 'the provision of adequate and suitable housing accommodation for persons of limited means and certain other persons not otherwise adequately housed'. The legislation is comprehensive in scope, providing for the erection of homes for workers, the making of advances to workers for the purchase of homes, the erection of homes for letting on a weekly rental basis, the acquisition and development of land, the clearing of slums, the erection of hostels and the planning of community facilities.

The Commission consists of seven members of whom one must be the person occupying the office of General Manager of the Commission, one an officer of the State Public Service, one a representative of the building trades unions, one a registered builder (or a person qualified to be so registered), one a woman, one a discharged member of the Forces, and one a person with a wide knowledge of and experience in housing conditions in the State. The functions of the Commission include the State-wide provision of low-cost housing for purchase or rental by families of low and moderate income, under the authority of the State Housing Act and of the Housing Agreement Act (Commonwealth) which, on 1 July 1973, replaced the States Grants (Housing) Act (Commonwealth); the administration of the Building Societies Act and the Housing Loan Guarantee Act; and the construction and maintenance of dwellings on behalf of the Government Employees' Housing Authority. Tables showing the operations of the Commission are shown on page 235.

State Housing Act. Under the authority of the *State Housing Act, 1946-1975*, the State Housing Commission uses funds provided by the State Government to build dwellings for sale and to lend money for home building. Eligibility for assistance is restricted to persons with income below a prescribed amount, which varies according to changes in industrial awards affecting the earnings of a tradesman, but outside the Perth metropolitan region the Minister may allow assistance to a family having a higher income. Loans of up to \$9,000 (or more, in some cases) may be made on a minimum deposit of \$200 including the ingoing fees (or less, at the discretion of the Commission), the maximum period of repayment being forty-five years. The rate of interest (31 December 1975) is 5½ per cent per annum reducible on a monthly basis.

Various forms of assistance have been granted to encourage home ownership, including loans secured by mortgage, advances made under contract of sale, advances for acquiring

homes under leasehold conditions, second mortgage loans and loans for the completion of partly-built dwellings.

Commonwealth and State Housing Agreements. The final draft of an agreement on housing between the Australian Government and State Governments was prepared at the Conference of Premiers in August 1945 and was later ratified by Commonwealth and State legislation. The Commonwealth and State Housing Agreement Act, passed by the State Parliament in 1945, enabled Western Australia to participate in the Agreement, the purpose of which was to provide homes quickly, primarily for persons at the lower income levels, by standardisation of design and erection in large groups. The Agreement provided a broad basis of collaboration between the Commonwealth and the State with the Commonwealth providing advances of money, general direction on policy and co-ordination of effort and the State undertaking the actual site acquisition and planning, the construction of the dwellings, the selection of tenants and the detailed administrative work.

Further details of the 1945 Agreement are given on page 203 of the *Western Australian Year Book*, No. 8—1969 and in earlier issues.

With the expiry of the 1945 Agreement, the Commonwealth Parliament in 1956 passed the Housing Agreement Act providing 'financial assistance to the States for the purpose of housing' for a period of five years ending on 30 June 1961. The complementary State legislation authorising the State Government to enter into the Agreement was the Commonwealth and State Housing Agreement Act of 1956.

The 1956 Agreement required that, for the first two years of its operation, at least 20 per cent of the money allocated to the State was to be advanced to building societies and other approved institutions for lending to private persons for the building or purchase of homes, the proportion to be increased to not less than 30 per cent during the remainder of the period. The balance of the allocation was to be used by the State for the erection of houses for either rental or sale. The Commonwealth was entitled to specify that of this balance a portion not exceeding 5 per cent in any one year should be set aside for the erection of houses for serving members of the defence forces. The Commonwealth provided supplementary advances to the State equal to the amounts set aside for this purpose.

On the introduction of the 1956 Agreement, the State Housing Commission adopted the policy of offering for sale before occupancy one-half of the total number of houses built, the remainder being made available on a rental basis. The proportion was subsequently varied several times.

Under the provisions of Commonwealth and State legislation passed in 1961 the period of operation of the Commonwealth and State Housing Agreement was extended for a further five years to 30 June 1966. The 1961 Agreement incorporated all the main features of the earlier arrangement, with only minor modifications.

In terms of the *Housing Agreement Act 1966* (Commonwealth) and the *Commonwealth and State Housing Agreement Act, 1966* (State) the operation of the Agreement, with minor amendments, was extended until 30 June 1971 and it has not been renewed.

Although Agreements subsequent to that of 1945, and which were effective until 30 June 1971, made no provision for rebates to tenants unable to pay the full rental, the State Government continued the system during the period.

New arrangements were introduced from 1 July 1971 under the authority of the *States Grants (Housing) Act 1971*, which considerably altered the principles of the previous Agreements.

Under this legislation the States continued to determine the amount from their annual Loan Council borrowing programmes to be allocated to housing. Instead, however, of this amount being advanced to the States at a concessional rate of interest (as was the case under previous Agreements), the Commonwealth was to make cash grants of \$2.75 million a year payable for thirty years in respect of each year's housing programme over the period 1971-72 to 1975-76.

Certain conditions attached to payment of the grants which were to be shared among the States in proportions specified in the Act. Western Australia's share was 11.4 per

cent or \$313,500 per annum over the period nominated, which became the years 1971-72 and 1972-73 in terms of the *States Grants (Housing) Act* 1971-1973. This Act continues the provision for payment of a rental assistance grant to help the States meet the cost to them of reducing the rents of housing authority dwellings for families considered to have insufficient means to pay the rents ordinarily required by the authority. The grant of \$1.25 million is payable to the States in each of the five years 1971-72 to 1975-76, a total of \$6.25 million. Payment is in specified proportions, Western Australia's share being 11.5 per cent or \$143,750 per annum.

Housing Agreement Act. The *Housing Agreement Act* 1973, as amended by the *Housing Agreement Act* 1974, provides for new arrangements to operate for a period of five years from 1 July 1973. The 1973-1974 Housing Agreement is similar to the former Commonwealth and State Housing Agreement but with additional restraints.

The amounts payable to the States each year are not specified within the new legislation but are to be determined after an annual application by the States to the Australian Government. After consultations with the State Ministers the Australian Government determines the amounts payable to the States for the provision of welfare housing and allocations for advances to terminating building societies or co-operative housing societies, or other approved lending authorities of the State.

In terms of the *Housing Agreement Act* 1973 the Australian Government will advance funds to the States for the provision of welfare housing at an interest rate of 4 per cent.

From this low interest-bearing money not less than 85 per cent of all family accommodation provided must be for families that satisfy certain needs criteria. For a family which includes two children the main breadwinner would need to be earning not more than 85 per cent of gross average weekly earnings per employed male unit in the State, or in Australia, as a State may elect. The Act also defines needs criteria applicable to aged pensioner couples and single aged pensioners.

The new agreement has a proposed life of five years, 1973-74 to 1977-78. For the year 1974-75 Western Australia was allocated \$35.44 million, of which \$16.87 million was to be allocated to terminating building societies and approved State lending authorities. Western Australia was allocated \$17.72 million for the period of six months which commenced on 1 July 1975.

A separate agreement between the Australian Government and the States has been entered into covering the provision of housing for serving members of the armed forces. Under this agreement the Commonwealth provides, by way of repayable advances, all the funds required and the States are not required to set aside part of their housing allocation for this purpose.

States Grants (Dwellings for Pensioners) Act. Under the provisions of the *States Grants (Dwellings for Aged Pensioners) Act* 1969, which expired on 30 June 1974, the Commonwealth made available to the States a grant totalling \$25 million over a period of five years for the construction of self-contained dwellings for single aged pensioners. Western Australia received a total of \$1.75 million over the period and under this scheme the Commission built 28 units in 1969-70, 76 units in 1970-71, 12 units in 1971-72, 106 in 1972-73, and 59 in 1973-74.

The scheme was renewed and eligibility conditions widened to include invalid pensioners, Class B widow pensioners and service pensioners, in addition to aged pensioners, under the provisions of the *States Grants (Dwellings for Pensioners) Act* 1974. The Australian Government will advance interest-free non-repayable grants to the States totalling \$30 million over the three years 1 July 1974 to 30 June 1977. The Act provides that Western Australia will receive annual payments of \$700,000 during the period. Under the renewed scheme the Commission built sixteen units in 1974-75.

Other Functions. The State Housing Commission conducts certain other housing schemes and has completed, or is currently engaged on, other specific projects on behalf of the State Government. Under a 'Departmental Homes' scheme, which commenced in 1952-53, 2,515 houses were built in the period to 30 June 1975 for Government Departments

and semi-government authorities. A Government Employees' Housing Scheme was introduced in 1958-59 and, up to 30 June 1975, had provided 808 rental houses in country areas. (See also the section *Government Employees' Housing Authority* on page 236.) The Commission has also undertaken the erection of flats for occupation by widows and by aged women pensioners, as well as cottage flats for aged married couples. Design and supervisory services have been made available free of cost to several private charitable organisations which are developing pensioner housing schemes financed jointly by these organisations and the Australian Government under the *Aged Persons Homes Act 1954-1973* (Commonwealth). The Commission has also been made responsible from time to time for special housing schemes for industry or major developmental projects.

Operations of The State Housing Commission

In this section, a summary of the activities of The State Housing Commission is given. The first table below shows the number of housing units completed by the Commission in various categories during each year from 1970-71 to 1974-75. It also shows the numbers of housing units in connection with which the Commission provided design and supervisory services free of cost to private charitable organisations.

THE STATE HOUSING COMMISSION—DWELLINGS CONSTRUCTION

Category	1970-71	1971-72	1972-73	1973-74	1974-75
Housing units (a) completed—

Government Employees' Housing Authority

The Government Employees' Housing Authority is established under the provisions of the *Government Employees' Housing Act, 1964-1973* to provide adequate and suitable housing accommodation for employees of State Government Departments to which the Act applies.

The Authority is empowered to enter into an agreement with the State Housing Commission whereby the Commission shall act as its agent upon such terms as may be mutually agreed upon by the Authority and the Commission.

Industrial and Commercial Employees' Housing Authority

The Industrial and Commercial Employees' Housing Authority is established under the provisions of the *Industrial and Commercial Employees' Housing Act, 1973* with power to raise funds to provide adequate and suitable housing accommodation for essential industrial or commercial employees outside of the metropolitan region.

The Authority is empowered to enter into arrangements and agreements with the State Housing Commission upon such terms as may be mutually agreed upon by the Authority and the Commission.

Defence Service Homes

Under the *Defence Service Homes Act 1918-1975* the Australian Government provides assistance in acquiring a home to persons who satisfy the eligibility conditions set out in the Act. Persons eligible for assistance include (a) members of the Australian Forces and nursing services enlisted or appointed for or employed on active service outside Australia or on a ship of war during the first and second World Wars, or who served in the war-like operations in Korea or Malaya, or who have served on 'special service' as defined in the *Repatriation (Special Overseas Service) Act 1962-1974* (e.g. South Vietnam), (b) Regular Servicemen who, on or after 7 December 1972, complete three years effective full-time service, and (c) National Servicemen who, on or after 7 December 1972, complete the period of service for which they were engaged. The categories of eligible persons also include the widow of an eligible person and, in certain circumstances, the widowed mother of a deceased eligible person, members of the mercantile marine service, and persons who, on or after 3 December 1939, complete service outside Australia as representatives of an approved welfare organisation.

The maximum amount of loan is \$15,000 and the rate of interest 3.75 per cent for amounts up to and including \$12,000. Where the advance exceeds \$12,000, the rate of interest charged on the excess (up to the maximum of \$3,000) is 7.25 per cent.

The Australian Housing Corporation is responsible for the administration of the Defence Services Homes Scheme in Western Australia in terms of the *Australian Housing Corporation Act 1975*.

A summary of the operations in Western Australia of the Defence Service Homes Scheme for the five years 1970-71 to 1974-75 is given in the following table. The number of homes provided in 1974-75 was the highest annual total over the previous decade.

DEFENCE SERVICE HOMES SCHEME—OPERATIONS IN WESTERN AUSTRALIA

Year	Homes provided during year				Total homes provided from inception to end of year	Annual expenditure	Instalments paid	Loans repaid
	By erection	By purchase	By discharge of mortgage	Total				
	No.	No.	No.	No.	No.	\$'000	\$'000	No.

1974-75	225	763	257	1,245	31,943	15,251	9,287	701

State Housing Death Benefit Scheme Act. The *State Housing Death Benefit Scheme Act, 1965-1975* establishes, with effect from 20 February 1965, a scheme to provide benefits for the families of purchasers of dwellings who die leaving unpaid the whole or part of a liability to the State Housing Commission under a contract of sale or mortgage. The benefit is applied to the credit of the deceased purchaser's account, and the instalments payable during the unexpired term of the loan are reduced accordingly.

From the inception of the scheme in 1965-66 to 30 June 1975, 269 claims have been admitted and a total of \$226,507 paid in the form of assistance to purchasers.

Additional details of the scheme are given on page 204 of the *Western Australian Year Book*, No. 8—1969 and in earlier issues.

Housing Loan Guarantee Act

The purposes of the *Housing Loan Guarantee Act, 1957-1973* are to encourage, through provisions for guarantees and indemnities, the building and the purchasing of new houses. Under this Act, the Government provides guarantees to lenders of funds to building societies and other approved financial organisations making advances to persons desiring to purchase or build their own home on low deposits.

The maximum rate of interest which an approved institution may charge on a loan to a borrower is 10 $\frac{3}{4}$ per cent (31 December 1975). Loans may be made up to 70 per cent of the value of the house and land or a specified sum, whichever is the lesser amount. In respect of the metropolitan region, the maximum loan permitted is \$19,000, and outside the metropolitan region but south of the 26th parallel it is \$20,000. For a new house situated north of the 26th parallel and in the North-West or Eastern Land Divisions, the maximum loan is \$38,000 and in the Kimberley Land Division, \$39,000.

Complementary action has been taken by the Commonwealth in establishing the Housing Loans Insurance Corporation to foster high-ratio loans (see following section).

Housing Loans Insurance Scheme

The Housing Loans Insurance Corporation was established by the *Housing Loans Insurance Act 1965-1973* (Commonwealth) to insure approved lenders against losses arising from the making of housing loans. The Corporation consists of a chairman (who is also managing director) and a deputy chairman, both being full-time members, and three part-time members, all of whom are appointed by the Governor-General. The main purpose of the Corporation is to assist people to obtain, as a single loan and at a reasonable rate of interest, the money they need and can afford to borrow to obtain a home suited to their requirements.

For a loan to acquire a house or a home unit, the maximum amount insurable is \$40,000 and the maximum ratio of the loan amount to valuation of the property is 95 per cent. The maximum period of repayment for an insurable loan to acquire a house is forty years and for a loan to purchase a home unit, thirty-five years.

The Corporation charges a single premium at the outset of the loan. The premium rate depends on the ratio of the loan amount to property valuation—a premium of 1.4

per cent is charged where the loan represents 94 per cent or more of valuation but, for loans of less than 94 per cent of valuation, the premium rate reduces progressively to a minimum of 0.25 per cent for loans below a ratio of 76 per cent.

The Housing Loans Insurance Corporation insures loans that are made for a wide range of purposes in addition to the purchase or construction of a dwelling. The other purposes include alterations, extensions or improvements to a dwelling, and the provision of roads, kerbing and footpaths. Loans may only be insured for approved lenders who are appointed by the Corporation from within approved classes of lenders specified by the Minister for Repatriation. The approved classes include banks, permanent building societies, co-operative housing societies, friendly societies, life and general insurance companies, mortgage management companies, trustee companies, credit unions, solicitors' superannuation and provident funds, and religious, charitable and benevolent bodies. The Housing Loans Insurance Corporation commenced its insurance operations in November 1965 and to 30 June 1975 had insured loans in Western Australia amounting to \$388 million (net). Details of the operations of the Corporation for the five years ended 1974-75 are given in the following table.

HOUSING LOANS INSURANCE CORPORATION
LOANS INSURED IN WESTERN AUSTRALIA

Purpose of loan	1970-71		1971-72		1972-73		1973-74		1974-75

Homes Savings Grants

The *Homes Savings Grant Act 1964-1975* (Commonwealth), which came into operation on 28 May 1964, is designed to 'assist young married persons, and young widowed and divorced persons with dependent children, to purchase or build their own homes'. The Act is administered, subject to any directions of the Minister, by the Secretary to the Department of Environment, Housing and Community Development.

The Act provides for the payment to eligible persons of a grant of \$1 for every \$3 saved for a home by one or both of the marriage partners. The grant takes the form of a gift free of tax and is payable in respect of a house, a home unit or a flat. The maximum benefit is \$750 payable on savings of \$2,250 which must be 'acceptable' savings within the meaning of the Act.

To qualify for the grant a person must be married or a widowed or divorced person with one or more dependent children; must have lived and saved in Australia for at least three years or was an Australian citizen throughout that period; must have entered into a contract to buy a home or to have a home built, or have begun to build a home; must be under thirty-six years of age at the date of marriage and at the date of entering into a contract to buy or build the home or at the date on which building began; must not have already received a grant and must not be, nor previously have been, married to a person who has received a grant during the marriage. An undischarged bankrupt or a person serving a term of imprisonment may not receive a grant.

The grant is not payable in respect of a home where the cost, including the cost of land, exceeds \$22,500.

Grants are financed from the National Welfare Fund and the first payments were made during the year ended 30 June 1965. Expenditure on grants in Western Australia amounted to \$2,202,767 in 1973-74 and \$1,492,968 in 1974-75.

CONTROL OF BUILDING

Each of the local government authorities as constituted under the provisions of the *Local Government Act, 1960-1975* has power to exercise general control over the erection of buildings in its own district. The powers of local government authorities to control building derive from the Town Planning and Development Act and the Local Government Act.

The *Town Planning and Development Act, 1928-1975* gives local authorities the right to make by-laws covering such aspects of town planning as the purchase or reservation of land for thoroughfares, the density of dwelling accommodation per hectare, the classification of areas for residential, commercial, industrial and recreational use, the prescription of building standards, and the general planning of new subdivisions. Town planning measures proposed by a local authority are subject to the approval of the Minister for Town Planning, who has the advice of a Town Planning Commissioner and a Town Planning Board.

The *Local Government Act, 1960-1975* contains provisions for the control of building which are compatible with those exercised under the Town Planning and Development Act but are in a more detailed form. The Uniform Building By-laws have been applied to most local government areas, and the erection of all buildings must be carried out in compliance with these by-laws. The Local Government Act provides that no new building or the alteration of an existing building may be begun before the plans have been approved by the local authority. The Governor may by Order, at the request of a local authority, suspend the operation of this provision in its district. Generally, in remote parts of the State prior approval of plans is required only in the case of building in town-site areas. Where any local authority refuses to approve plans, the Act provides that an appeal may be made to the Minister for Local Government, who has the power to modify or reverse the decision of the local authority. The decision of the Minister is final and not subject to appeal. Other appeals or matters in dispute in relation to the control of building may be determined only by two referees, one of whom is appointed by the Governor and the other by the local authority concerned.

BUILDING OPERATIONS

Since the end of the second World War, the Australian Statisticians have undertaken a quarterly collection of statistics of building operations. The first of these collections in Western Australia related to the quarter ended 30 September 1945.

Statistics of various series for Western Australia *ab initio* appeared in Part XII of the *Statistical Register of Western Australia* for 1965-66. Current data are given in the quarterly statement *Building Operations* and in the annual publication *Statistics of Western Australia—Building and Housing*.

The survey covers the activities of building contractors who undertake the construction of new buildings; the building operations of Australian Government, State Government, semi-government and local government authorities; and work performed by owner-builders.

The statistics in this section relate only to the erection of buildings as distinct from the construction of railways, bridges, earthworks, etc.

The following table shows the number of houses and other dwellings completed, according to ownership, in each of the five years 1970-71 to 1974-75.

A building is classified as 'private' or 'government' according to ownership at date of commencement. Thus 'government' includes buildings erected for Australian Government, State Government, semi-government and local government authorities, either by contractors or by day labour, whether these buildings are for their own use or for rental or

sale after completion. Houses erected for particular persons under government-sponsored home building schemes or with government financial assistance are classified as 'private'.

NUMBER OF HOUSES AND OTHER DWELLINGS COMPLETED—OWNERSHIP

Year	Private (a)			Government (a)			Total		
	Houses	Other dwellings	Total dwellings	Houses	Other dwellings	Total dwellings	Houses	Other dwellings	Total dwellings
1970-71	9,648	3,608	13,256	2,273	1,405	3,678	11,921	5,013	16,934
1971-72	11,167	992	12,159	2,120	603	2,723	13,287	1,595	14,882
1972-73	11,723	770	12,493	2,057	150	2,207	13,780	920	14,700
1973-74 (b)	11,416	2,729	14,145	1,279	835	2,114	12,695	3,564	16,259
1974-75	10,396	2,860	13,256	847	477	1,324	11,243	3,337	14,580

(a) See letterpress immediately preceding table. (b) From July 1973 'houses' and 'flats' have been reclassified to 'houses' and 'other dwellings'; see letterpress immediately preceding the next table.

In the following table the value of building completed, classified according to the function each building is intended to serve, is shown for the period 1970-71 to 1974-75. The values shown for each class of building exclude the value of land and represent the estimated value of the building on completion. From July 1973 dwellings have been classified according to the sub-groups 'houses' and 'other dwellings', replacing the previous categories 'houses' and 'flats'. Under the new classification, a 'house' refers only to a single, self-contained, detached dwelling unit occupying a separate titled block of land, while 'other dwellings' includes flats and other multi-unit dwelling types previously classified to houses (e.g. duplex or triplex houses, town houses, terrace houses, etc.). Separate 'house' and 'other dwelling' statistics are not comparable therefore to the separate 'house' and 'flat' statistics shown prior to July 1973. 'Total dwellings' statistics are directly comparable to 'total houses and flats' shown previously.

VALUE OF BUILDING COMPLETED—CLASS OF BUILDING (a)
(\$'000)

Class of building	1970-71	1971-72	1972-73	1973-74 (b)	1974-75

TOTAL, ALL BUILDING	365,012	331,440	324,013	351,164	412,020

(a) See letterpress immediately preceding table. (b) From July 1973 'houses' and 'flats' have been reclassified to 'houses' and 'other dwellings'; see letterpress immediately preceding table.

As an indication of the distribution of building activity throughout the State, the number of houses completed in each statistical division during 1970-71 to 1974-75 is shown in the next table.

NUMBER OF HOUSES COMPLETED IN STATISTICAL DIVISIONS

Statistical division	1970-71	1971-72	1972-73	1973-74 (a)	1974-75
Perth Statistical Division	7,805	9,670	11,453	9,970	8,037
Other divisions—					
South-West	948	1,032	753	861	895
Southern Agricultural	314	196	237	318	321
Central Agricultural	179	148	135	214	292
Northern Agricultural	500	455	446	541	529
Eastern Goldfields	467	356	303	382	340
Central	296	15	12	33	23
North-West	174	290	} (b) 359	280	756
Pilbara	1,152	1,070		96	50
Kimberley	86	55	82		
Total	4,116	3,617	2,327	2,725	3,206
WESTERN AUSTRALIA	11,921	13,287	13,780	12,695	11,243

(a) From July 1973 'houses' and 'flats' have been reclassified to 'houses' and 'other dwellings'; see letterpress preceding previous table. (b) Extensive boundary changes between the North-West and Pilbara Statistical Divisions resulting from reallocation of local government area boundaries have necessitated the amalgamation of these divisions for publication purposes after 30 June 1972.

A further measure of building activity is that of 'value of work done' which is the estimated value of work actually carried out on buildings during the period. For any building, the sum of these values obtained during its construction equals the value of the building on completion. The figures in the following table include estimates for the value of work done on owner-built houses.

VALUE OF WORK DONE ON BUILDING
(\$'000)

(a) From July 1973 'houses' and 'flats' have been reclassified to 'houses' and 'other dwellings'; see letterpress on page 240.

Employment in Building

Details of building employment are given in the following table. The figures shown relate to persons working on the jobs of contractors who undertake the erection of new buildings and on the jobs of government authorities which erect new buildings on their own account. They include persons actually engaged on alterations, additions, repairs, and maintenance when these jobs are undertaken by such contractors and authorities. The figures also include the number of persons working on new private buildings (other than houses) erected without the services of a contractor responsible for the whole job.

Informants are asked to supply details of all persons employed on their jobs *on a specified day*, including working principals, men working as or for sub-contractors, and men temporarily laid off on account of weather. Because of the intermittent employment of

various types of sub-contractors on any particular job, it is sometimes difficult for informants to provide precise particulars of the number of sub-contractors and sub-contractor employees working on their jobs on the specified day. This factor may cause some understatement in the figures shown in the table. In other cases, because of frequent movement between jobs of some types of tradesmen (such as electricians) who may work on several jobs on the one day, some duplication may occur.

The figures *exclude* persons working on owner-built houses, and employees of building firms which undertake only alterations, additions, repairs, and maintenance.

EMPLOYMENT IN BUILDING (a)

DWELLINGS COMPLETED IN AUSTRALIA

The following table shows the numbers of new houses and new other dwellings completed in each of the Australian States and Territories during the year 1974-75. In Western Australia the number of new houses and new other dwellings completed per thousand of mean population was 12·84 compared with 10·26 in the rest of Australia and 10·47 in Australia as a whole.

NEW HOUSES AND NEW OTHER DWELLINGS COMPLETED
AUSTRALIAN STATES AND TERRITORIES: 1974-75

State or Territory	New houses	New other dwellings (a)	Total new dwellings (a)		
			Total number completed	Proportion of Australian total (per cent)	Per thousand of mean population
New South Wales	26,254	18,626	44,880	31·83	9·38

(a) Individual living units.

Chapter V—continued

Part 5—Social Benefits, Pensions and Welfare Services

NOTE. The conditions relating to payment of the several benefits dealt with in this Part are described *as they existed at 1 January 1976*. Rates of benefit, where quoted in textual matter, are those which were current at that date. Subsequent variations in rates and conditions are summarised in the *Appendix*. The information given is intended to serve only as a general guide to the main provisions relating to social security and repatriation benefits and national health services provided by the Australian Government and relief payments made by the State Government.

The Australian Government's social security programme is designed to provide protection against economic hardship caused by events such as loss of earnings by reason of age, invalidity, sickness or unemployment, or the death or the absence of a supporting male as a result of desertion or long-term separation. Another aim of the system is to help parents with the expenses associated with the bearing and rearing of children. It is designed also to compensate ex-servicemen for disabilities caused by war service and to assist the dependants of those who died as a result of war service.

This assistance may take the form of (a) financial aid to or for institutions, organisations or authorities (see pages 218-22) or (b) regular cash payments to or on behalf of individuals, which may be either selective benefits (*i.e.* subject to a means test) such as age and invalid pensions and widows' pensions, or universal benefits (*i.e.* free of means test) such as maternity allowances and child endowment. In addition, there is provision for a wide range of welfare services for people with special needs (*e.g.* invalids and other persons may be trained so that they can re-enter paid employment).

The Social Services Act provides for pensions and other benefits dealt with on pages 244-50; the Repatriation Act, for war pensions, service pensions, and allowances (see pages 250-2); and the Tuberculosis Act, for allowances to sufferers from tuberculosis as well as assistance to the States in a national campaign against the disease (see pages 255 and 256). Health services such as medical, hospital and pharmaceutical benefits are authorised by the National Health Act and the Health Insurance Act (see pages 252-5).

Pensions and other benefits provided under the Social Services Act and health services provided under the National Health Act are financed from the National Welfare Fund. Other payments from the fund include allowances to sufferers from tuberculosis and reimbursement to the States of maintenance expenditure in connection with the diagnosis, treatment and control of tuberculosis. The fund receives each year by transfer from the Consolidated Revenue Fund an amount equal to the payments made. Other income of the National Welfare Fund is derived from interest on investments. Details of expenditure in Western Australia since the fund was established in 1943 are given in the *Statistical Summary from 1829* following Chapter X.

War pensions, service pensions, and allowances provided under the Repatriation Act and services provided under the Health Insurance Act are financed from the Consolidated Revenue Fund.

The State Government makes certain payments for the relief of women and others in necessitous circumstances which in most cases supplement benefits provided by the Australian Government (see letterpress *State Relief Payments* on pages 256-7).

Rates of Benefit

The following table shows the maximum weekly rates applying to age and invalid pensions, sheltered employment allowances, widows' pensions, supporting mothers' benefits, and unemployment and sickness benefits. The rates shown apply also to service pensions (see page 252).

MAXIMUM WEEKLY RATES OF BENEFIT
(\$)

Pension, benefit or allowance	Rate current at—				
	30 April 1974	31 August 1974	30 November 1974	31 May 1975	30 November 1975
Single (i.e. unmarried) rate	26·00	31·00	31·00	36·00	(a) 38·75
Married rate (combined)	45·50	51·50	51·50	60·00	64·50
Each dependent child, including student child (b)	5·00	5·00	5·50	7·00	7·50
Guardian's (or mother's) allowance (c)—					
Where there is a child aged under 6 years or an invalid child requiring full-time care	6·00	6·00	6·00	6·00	6·00
Other cases	4·00	4·00	4·00	4·00	4·00
Supplementary assistance (d)	4·00	4·00	5·00	5·00	5·00

(a) In the case of unemployment and sickness benefits (see page 246), increased rate applicable only to beneficiaries aged 18 years and over. (b) See letterpress *Student Children* on page 249. (c) Guardian's allowance payable to unmarried pensioner recipient of sheltered employment allowance having the care of one or more dependent children, including student children. Mother's allowance payable to Class A widow pensioner or recipient of supporting mother's benefit. (d) Payable where pensioner or beneficiary is wholly or substantially dependent on the pension or benefit and is paying rent or lodging charges.

Amount paid during year (b)—					
Age pensions	48,979	49,107	64,896	83,580	118,492
Invalid pensions		8,267	11,292	14,431	20,320
Total	48,979	57,374	76,188	98,011	138,812

(a) Includes allowances and supplementary assistance. (b) Includes amounts paid to benevolent homes for maintenance of pensioners and to pensioner inmates of these homes. Includes also allowances and supplementary assistance.

Age Pensions. Age pensions are payable, subject to residence qualification, to women aged sixty years or more and men aged sixty-five years or more. A period of ten years' continuous residence in Australia is usually necessary. There is a means test on income and property which does not, however, apply to persons aged seventy years or more. The means test was abolished in September 1973 in respect of persons aged seventy-five years or more, and in May 1975 for those aged seventy to seventy-four years.

Wife's pension, subject to a means test, is payable to an age pensioner's wife who does not qualify for an age pension, invalid pension or service pension in her own right.

Additional payments are made to pensioners with dependent children. These additional payments are subject to a means test. Supplementary assistance is payable, subject to a special means test, to pensioners who are required to pay rent or lodging charges. On the death of one of a married pensioner couple, the surviving member may become entitled to receive, for up to six fortnightly instalments, the equivalent of the two pensions that would have been paid if the spouse had not died.

Invalid Pensions. Invalid pensions are payable to persons aged not less than sixteen years who, while resident in Australia, become either permanently incapacitated for work to the extent of at least 85 per cent or permanently blind. Pensions are subject to a means test on income and property, except in the case of those who are permanently blind. No qualifying period of residence in Australia is necessary unless the incapacity occurred outside Australia, in which case the residence qualification is the same as that for an age pension.

A wife's pension is payable to the wife of an invalid pensioner if she is not eligible for age pension, invalid pension or service pension in her own right. Invalid pensioners are eligible for the same additional payments as age pensioners and the rates of benefit are the same.

Sheltered Employment Allowances

Sheltered employment allowances are payable to disabled persons who are qualified to receive an invalid pension or who would become so qualified if they ceased to be provided with sheltered employment. The allowance is subject to the same means test as that which applies to the invalid pension, and the rates of benefit are the same.

Details of sheltered employment allowances for the five years ended 1974-75 are given in the following table.

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Number of (a)—					
Workshops paying allowances	5	6	7	8	11
Employees receiving allowances	106	134	176	232	432
	\$'000	\$'000	\$'000	\$'000	\$'000
Expenditure on allowances	74	96	170	265	575

(a) At 30 June.

Funeral Benefits

A funeral benefit up to a maximum of \$20 is payable to any person liable for the funeral costs of an age or invalid pensioner. A higher benefit, up to a maximum of \$40, is payable to an age, invalid or widow pensioner liable for the funeral costs of a spouse, a child, or of another such pensioner.

Widows' Pensions and Allowances

Pensions are payable to widows, subject to a means test on income and property. No period of residence is necessary if a woman and her husband were residing permanently in Australia when she became a widow. In other cases, five years' continuous residence immediately preceding lodgment of claim is necessary but this requirement is waived in the case of a woman widowed overseas who returns to Australia, provided she had resided continuously in Australia for ten years at any time.

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Number of pensions current at 30 June—					
Class A pensioners	3,050	3,368	4,088	4,683	4,930
Class B pensioners	3,328	3,417	3,851	4,067	4,493
Class C pensioners	14	10	9	13	19
Total	6,392	6,795	7,948	8,763	9,442
	\$	\$	\$	\$	\$
Average weekly pension at 30 June (a)	19.03	22.44	27.62	29.43	37.59
	\$'000	\$'000	\$'000	\$'000	\$'000
Amount paid during year (a)	6,172	7,180	10,064	13,409	18,459

(a) Includes allowances and supplementary assistance.

There are three classes of widow pensioners: Class A—a widow with one or more dependent children in her care; Class B—a widow without dependent children who is at least fifty years of age, or is not less than forty-five years of age when her Class A pension ceases because she no longer has a dependent child in her care; and Class C—a widow without dependent children who is in necessitous circumstances at the time of her husband's death or within twenty-six weeks thereafter. For all classes, the term 'widow' includes a woman who was the common-law wife of a man for at least three years immediately before his death. For Classes A and B, the term includes a wife who has been deserted for six months, a divorcee, a woman whose husband has been imprisoned for six months, or a woman whose husband is in a mental hospital.

Widow pensioners are eligible for supplementary assistance, additional payments for dependent children, and mother's allowance (in place of guardian's allowance) at the same rates and subject to the same conditions as age and invalid pensioners.

Supporting Mother's Benefit and Allowances

The supporting mother's benefit is designed to assist unmarried mothers and mothers who are deserted *de facto* wives, *de facto* wives of prisoners, or separated wives. The benefit is paid at the same rate and subject to similar conditions as the Class A widow's pension. Payment commences six months after the birth of a child or the date of separation. (During this period a claimant may be eligible to receive State Government assistance; see the section *State Relief Payments* on pages 256-7).

Unemployment, Sickness and Special Benefits

Unemployment and sickness benefits are available, subject to a means test on income, to persons who have suffered loss of income because they are unemployed or are temporarily incapacitated for work. There is a waiting period of seven days before benefits are paid. (During this period a claimant may be eligible to receive State Government assistance; see the section *State Relief Payments* on pages 256-7.)

A special benefit may be paid to a person ineligible for a pension or for an unemployment or sickness benefit, if he is unable to earn a sufficient livelihood for himself and his dependants and is suffering hardship.

UNEMPLOYMENT, SICKNESS AND SPECIAL BENEFITS—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75

Total (a)	1,699	4,297	8,372	8,314	24,944

(a) Excludes special benefits to migrants in accommodation centres.

To be eligible for unemployment or sickness benefit, a person must be at least sixteen years of age and under sixty, in the case of a female, or under sixty-five, in the case of a male. The claimant must also have lived in Australia for at least a year immediately before applying for benefit, or have the intention of remaining in Australia permanently.

The rates of benefit are the same as for age and invalid pensions. A beneficiary with a dependent child or children is eligible for an additional benefit for each dependent child. After having received benefit for six consecutive weeks, a sickness beneficiary is also eligible, subject to a special means test, to receive supplementary assistance if paying rent or lodging charges. This assistance is not payable to a beneficiary who is in hospital and who has no dependants.

Rehabilitation Service

The Rehabilitation Service is designed to restore disabled persons as fully as possible to physical, mental, social and vocational usefulness. Treatment and training are provided free to persons in the following categories if there is a reasonable prospect of their engaging in gainful employment: invalid pensioners; recipients of unemployment, sickness, or special benefit; servicemen who are disabled at time of discharge but are ineligible for rehabilitation assistance from the Department of Repatriation and Compensation; persons receiving a tuberculosis allowance; persons who become disabled while working for the Australian Government and who are covered by the Compensation (Australian Government Employees) Act; and boys and girls of fourteen to fifteen years of age who would otherwise be likely to qualify for an invalid pension at the age of sixteen years. A person not included in one of these categories is eligible for rehabilitation if the costs involved are paid by or on behalf of the disabled person.

REHABILITATION SERVICE—WESTERN AUSTRALIA

Expenditure	\$'000 55	\$'000 54	\$'000 37	\$'000 72	\$'000 56

(a) Included in scheme from July 1973 (see page 246).

The Training Scheme for Widow Pensioners was introduced on 27 September 1968 to provide vocational training for Class A and Class B widow pensioners. From July 1973 it was extended to include recipients of supporting mother's benefit (see page 246). With the introduction on 1 October 1974 of the National Employment and Training System, to which reference is made in the final section of Chapter X, Part 2—*Employment*, arrangements were made for the absorption of the Scheme into the new System.

Maternity Allowance

Maternity allowance is payable, as a lump sum, to mothers on the birth of children. There is no means test. A woman is entitled to the allowance if she resides, or intends to reside, in Australia permanently and gives birth to a child in Australia or on board a ship travelling to Australia. Special conditions apply to a woman who is not a British subject and does not intend to reside in Australia permanently.

MATERNITY ALLOWANCES—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Number of claims paid—					
Single births: amount of allowance—					
\$30	9,190	9,152	8,111	7,658	8,243
\$32	10,828	10,585	10,606	10,111	10,579
\$35	3,179	2,882	2,550	1,939	1,868
Multiple births: amount of allowance—					
Twins—					
\$40	66	64	70	62	77
\$42	103	117	114	102	106
\$45	50	39	30	31	28
Triplets—					
\$50	1	...	2
\$52	1	2	1	...	3
\$55	1	1
Total number of claims paid	23,417	22,842	21,484	19,903	20,906
Amount paid	\$'000 743	\$'000 724	\$'000 680	\$'000 626	\$'000 659

The allowance is \$30 where there are no other children under sixteen years of age, \$32 where the mother has one or two other children under sixteen years of age, or \$35 where she has three or more other such children. The amount payable is increased by \$10 for each additional child of a multiple birth.

Child Endowment

Child endowment is payable, free of means test, to persons having the care of children under sixteen years of age or student children. Endowment for the first child under sixteen years of age is at the rate of fifty cents per week, for the second child \$1 per week, and for the third child \$2 per week. For each subsequent child the endowment increases progressively by twenty-five cents, so that the weekly rate payable for the fourth child is \$2.25, for the fifth child \$2.50, and so on. Endowment is payable to a person having the care of a student child (or children) aged sixteen years but under twenty-one years who is receiving full-time education at a school, college or university and is not in employment or engaged in work on his own account. Endowment is at the rate of \$1.50 per week for each such child.

Endowment is usually paid to the mother and to be eligible for endowment she must reside, or intend to reside, permanently in Australia and have the care of one or more children. Special conditions apply if the person does not intend to reside permanently in Australia.

An approved institution is qualified to receive \$1.50 per week in respect of each student child and \$2 per week for each other child in its care.

Details of child endowment in Western Australia in respect of the five years 1970-71 to 1974-75 are given in the table on page 249.

CHILD ENDOWMENT—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Endowed families at 30 June—					
Number of claims in force in respect of—					
Children under 16 years of age	147,507	153,600	156,774	156,901	162,198
Student children	12,316	14,039	16,088	15,963	16,767
Number of endowed children—					
Children under 16 years of age	329,671	338,855	342,055	339,031	345,272
Student children	13,449	15,390	17,790	17,490	18,797
Average number of endowed children per claim—					
Children under 16 years of age	2.24	2.21	2.18	2.16	2.13
Student children	1.09	1.10	1.10	1.10	1.12
Approved institutions at 30 June—					
Number of endowed child inmates—					
Children under 16 years of age	4,177	4,600	4,714	4,373	4,430
Student children	288	62	31	95	127
Total number of endowed children at 30 June—					
In families	343,120	354,245	359,845	356,521	364,069
In institutions	4,465	4,662	4,745	4,468	4,557
Total	347,585	358,907	364,590	360,989	368,626
Amount paid during year (a) (b)	\$'000 16,423	\$'000 18,188	\$'000 (c) 21,407	\$'000 19,009	\$'000 19,084

(a) Includes payments to institutions. (b) A number of endowments are paid every 12 weeks. During two years in every three, there are four such payments each year, and five in the third year. (c) Expenditure in this year includes five 12-weekly payments; see footnote (b).

Handicapped Child's Allowance

The handicapped child's allowance is payable at the rate of \$10 per week to parents or guardians in respect of a child aged under sixteen years who is cared for at home and who, because of the severity of the handicap, is in need of constant care and attention,

Double Orphan's Pension

Conditions relating to payment of double orphan's pension are generally similar to those applying to child endowment. For the purposes of the Social Services Act a double orphan is a child aged under sixteen years, or a student child aged sixteen but under twenty-one years, both of whose parents are dead or one of whose parents is dead and the whereabouts of the other unknown. The benefit extends also to a child whose only surviving parent is serving a prison sentence of not less than ten years or is a patient in a mental hospital or similar institution and is likely to remain so for an indefinite period. The pension, which is additional to child endowment, is paid at the rate of \$11 per week and is not subject to a means test. It may be paid to a person, institution or authority and is to be applied to the maintenance, training and advancement of the child. The pension is not payable in the case of a child in respect of whom a war orphan's pension is being paid in terms of the Repatriation Act.

Student Children

The *Social Services Act 1973*, which came into operation on 16 March 1973, defines a student child as being a person who is wholly or substantially dependent on a pensioner or beneficiary and who ' (a) has attained the age of sixteen years; (b) is receiving full-time education at a school, college or university; and (c) is not in receipt of an invalid pension '. Payments on account of student children which, prior to the operation of the Act, ceased when the student reached the age of twenty-one years were thus extended without limitation in respect of age. This extension of benefit applies to student children of age, invalid and widow pensioners, of recipients of supporting mother's benefit, and of unemployment and sickness beneficiaries. However, the age limit of twenty-one years continues to apply to the payment of child endowment on account of student children.

Payment of Benefits outside Australia

Reciprocal arrangements in respect of payment of age and invalid pensions, widows' pensions, unemployment and sickness benefits and child endowment have been in force between the Governments of Australia and New Zealand since 1 July 1949 and between Australia and the United Kingdom since 7 January 1954.

The *Social Services Act (No. 3) 1972* provided for the continued payment of a pension, subject to certain conditions, if a pensioner left Australia to reside in any other country with which appropriate reciprocal arrangements had been made. The *Social Services Act (No. 2) 1973*, which came into operation on 8 May 1973, repeals this provision and enables age and invalid pensions (including wives' pensions) and widows' pensions, which were granted in Australia, to continue to be paid in any country where the pensioner may choose to live. In terms of the *Social Services Act (No. 3) 1973*, a woman receiving supporting mother's benefit may continue to be paid the benefit outside Australia so long as she remains a supporting mother.

BENEFITS PAYABLE UNDER REPATRIATION ACT

War Pensions and Allowances

In general, war pensions and associated benefits are payable to an ex-serviceman and/or his dependants where the ex-serviceman has died or been incapacitated as a result of service in the 1914-1918 War, the 1939-1945 War, or certain subsequent operations of a war-like nature. In addition, members of the Regular Defence Force who have had at least three years' service terminating on or after 7 December 1972 (or a lesser period if discharged on medical grounds) may also be eligible for repatriation pensions if the incapacity or death resulted from that service. Dependants of deceased servicemen may also qualify for benefit.

For ex-servicemen, basic eligibility varies according to the nature of service. Broadly, for those with 'active service', incapacity or death resulting from any occurrence during war service may be accepted. The criterion applying to 'home service' is more restricted, in that incapacity or death must have arisen out of, be attributable to, or have been aggravated by, that service.

Pensions in the categories available to ex-servicemen and their dependants (see below) are also payable to eligible members of the Regular Defence Force and their dependants.

Pensions for Ex-servicemen. Pensions are paid to eligible ex-servicemen in three main categories: the Special Rate (known as the T.P.I.) pension, payable to an ex-serviceman who, as a result of war service, is blind, or is totally and permanently incapacitated so that he is unable to earn more than a negligible percentage of a living wage; the Intermediate Rate, payable to an ex-serviceman who, because of the severity of his incapacity accepted as related to war service, can work only part-time or intermittently and, in consequence, cannot earn a living wage; and the General Rate, payable to an ex-serviceman who has an incapacity accepted as related to war service but is not, because of that incapacity, prevented from being able to work full-time. General Rate pensions payable range from 10 per cent to 100 per cent of the maximum rate, according to the assessed degree of incapacity.

Pensions for Dependants. War pensions are also paid to the wives of incapacitated ex-servicemen and to dependent children. Such persons are paid at rates varying with the assessed degree of the particular ex-serviceman's incapacity. When the death of an ex-serviceman has been accepted as related to his war service, his widow qualifies for the war widow's rate of pension and for associated benefits, while his children receive pensions at 'orphan' rates and other benefits. If an ex-serviceman's death has not been accepted as related to war service, but at the time of death he was receiving, or is later adjudged to have been eligible to receive, a pension at the Special Rate (or one of certain other rates) his dependants qualify for pensions as if his death had been accepted as due to war service.

Allowances. Several allowances are provided to supplement war pensions. These allowances vary according to the type or severity of disablement and the special needs of the pensioner. They include attendant's allowance, sustenance allowance, recreation transport allowance and domestic allowance.

An education allowance is paid in respect of children of special rate pensioners and children of ex-servicemen who died as a result of war service.

Attendant's allowance is paid at either of two rates to certain classes of severely disabled ex-servicemen, including the war-blinded, the paralysed and some double amputees. Sustenance allowance is payable at either of two rates to an ex-serviceman who is prevented from following his usual occupation because he is undergoing medical treatment. The lower rate is paid where out-patient treatment is received for a period not exceeding twenty-eight days, and the sum of sustenance allowance and any war pension being paid is equal to the General (100 per cent) Rate war pension. The higher rate is equal to, or sufficient to bring any war pension payable up to, the Special (T.P.I.) Rate, and is payable in respect of in-patient treatment for disablement accepted as related to war service, or convalescence immediately following that treatment or out-patient treatment for a continuous period in excess of twenty-eight days. Recreation transport allowance may be paid at either of two rates for recreation purposes to certain classes of seriously disabled ex-servicemen. Domestic allowance is payable to a war widow in addition to her pension if she has attained the age of fifty years, or is permanently unemployable, or has a dependent child who is under the age of sixteen years or is undertaking approved full-time education or training and is not receiving an adequate living wage.

Amount paid to pensions during year (c)	\$'000 13,140	\$'000 14,413	\$'000 15,462	\$'000 17,363	\$'000 21,845

(a) Including pensions in respect of ex-servicewomen. (b) Pensions payable under Seamen's War Pensions and Allowances Act and 'Act of grace' pensions. (c) Includes widows' allowances.

Service Pensions and Allowances

Service pension is payable, subject to a means test similar to that applied to age and invalid pensions, to an ex-serviceman who served in a theatre of war and who has attained the age of sixty years or is permanently unemployable. It is payable to an ex-service-woman who served in a theatre of war or embarked for service abroad and has attained the age of fifty-five years or is permanently unemployable. It may also be paid to an ex-serviceman or woman suffering from pulmonary tuberculosis, irrespective of the area of service.

A service pension is therefore a broad equivalent of an age or invalid pension. The advantages to the recipient are the availability of pension five years earlier and access to a wide range of medical treatment services in the repatriation system. Service pensioners are eligible for the same range of pensions and allowances as age pensioners and the rates of benefit are the same.

The means test applying to service pensions was abolished in 1973 in respect of persons aged seventy-five years or more, and in 1975 for those aged seventy to seventy-four years.

SERVICE PENSIONS (a)—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Number of pensions current at 30 June—

(a) Including pensions in respect of ex-servicewomen.

(b) 'Act of grace' pensions.

Student Children

Prior to amendments made to the Repatriation Act in 1973, benefits and allowances payable in respect of student children, *i.e.* dependent persons receiving full-time education at a school, college or university, ceased when the student reached the age of twenty-one years. Under the provisions of the *Repatriation Act 1973* and the *Repatriation Act (No. 2) 1973*, payment continues until the student ceases his studies or the parent or other person on whom he is dependent ceases to be eligible for a pension.

Payment of Benefits outside Australia

The *Repatriation Act (No. 2) 1973*, which came into operation on 8 May 1973, authorises the payment of a service pension in any country in which the pensioner may choose to live. This provision had previously applied only to war pensions.

NATIONAL HEALTH SERVICES

National health services are provided in terms of the *National Health Act 1953-1975* and, from 1 July 1975, the *Health Insurance Act 1973-1975*. Benefits authorised by the National Health Act are paid from the National Welfare Fund, to which reference is made in Chapter VI, Part 1—*Public Finance*. Expenditure under the Health Insurance Act is a charge on the Consolidated Revenue Fund.

The Health Insurance Act establishes a scheme, known as 'Medibank', which provides universal medical benefits, as well as treatment free to the patient in standard wards of public hospitals or as an out-patient of such hospitals.

Hospital and Nursing Home Benefits

The payment of hospital benefits is authorised partly by the National Health Act and partly by the Health Insurance Act. Nursing home benefits are paid under the provisions of the National Health Act.

Benefits are payable only in respect of treatment received in approved hospitals and approved nursing homes. For the purposes of the National Health Act, premises which provide medical treatment, care and accommodation for sick persons are approved either as hospitals or as nursing homes depending mainly on their clinical standards and the type of patients accommodated.

The Health Insurance Act provides for the payment of \$16 in respect of each approved bed in a private hospital for each day on which the bed is occupied by an eligible person who is an in-patient.

The National Health Act provides for the payment of a benefit of \$2 per day for a hospital in-patient who is insured with a registered private health insurance fund against the cost of hospital treatment. An amount of eighty cents per day is paid direct to the hospital for patients who are not contributors to an insurance fund. A benefit of \$2 per day is payable direct to hospitals in respect of patients, whether insured or uninsured, provided that no charge is made by the hospital.

A benefit of \$3·50 per day is paid for all qualified patients in approved nursing homes, whether the patient is insured or not. A supplementary benefit of \$3 per day is payable for those patients in approved nursing homes who need and receive intensive nursing home care.

An additional nursing home benefit, subject to a statutory maximum, is payable by the Australian Government in respect of eligible pensioners and their dependants. The rate of benefit varies as between States, the maximum rate payable in Western Australia being \$4·20 per day. Registered health insurance funds may pay the additional benefit at the same rate in respect of their members.

The following table shows the amounts of benefit paid in Western Australia during each financial year from 1970-71 to 1974-75, and the number and membership of registered benefit organisations at 30 June in each year. It should be noted that the total number of persons covered by hospital benefit schemes is considerably higher than the number of members shown, as many members contribute on account of dependants as well as for themselves.

HOSPITAL AND NURSING HOME BENEFITS—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Registered organisations—					
Number at 30 June	7	7	7	6	5
Membership at 30 June	349,359	360,321	367,214	379,950	372,577
Amount of benefits paid during year—					
National Welfare Fund payments (a)—					
Hospital patients	\$'000 5,606	\$'000 7,804	\$'000 9,685	\$'000 9,786	\$'000 11,093
Nursing home patients	4,650	6,688	9,378	11,436	13,803
Total	10,256	14,492	19,063	21,222	24,896
Health insurance fund payments (b)	10,922	17,594	22,221	22,319	30,668

(a) For details see table on pages 277-8. (b) Includes reimbursements paid by Australian Government in relation to special account deficits and subsidised health benefits.

A 'special account' system provides an assured rate of hospital fund benefits to contributors who would otherwise be excluded from fund benefits on account of organisations' rules covering pre-existing ailments, chronic illnesses and maximum fund benefit. One condition of payment is that the treatment in respect of which the fund benefit is paid is given in an approved hospital, although fund benefit is also payable in certain circumstances in respect of treatment given in approved nursing homes. If the payments from special accounts exceed the contributions credited to the account, the amount of the deficit is reimbursed by the Australian Government.

Australian residents who receive hospital treatment in recognised hospitals in overseas countries, while temporarily absent from Australia, are eligible to receive the government and fund benefits to which they would be entitled if the service were rendered in Australia.

Domiciliary Nursing Care Benefit

Domiciliary nursing care benefit is paid at the rate of \$2 per day to assist in meeting the cost of home nursing for aged persons who are chronically ill and are being cared for in the private home of a relative or other approved person. The benefit applies to a patient who has attained the age of sixty-five years, has a continuing need for nursing care, and is receiving such care given by or under the supervision of a registered nurse.

Handicapped Children's Benefit

Reference is made on page 241 of *Western Australian Year Book*, No. 13—1974 to handicapped children's benefits which were provided in terms of the National Health Act prior to 1 January 1975. From that date, benefit at the rate of \$3.50 per day became payable under the provisions of the *Handicapped Persons Assistance Act 1974* (see page 220).

Medical Benefits

The *Health Insurance Act 1973-1975*, which came into operation on 1 July 1975, provides universal benefits in relation to medical services rendered by private medical practitioners to patients not in hospital and to private patients in public or private hospitals. The Act contains a schedule which specifies fees in respect of a comprehensive range of medical services. The amount of the benefit is at least 85 per cent of the specified fee, and in no case does the cost to the patient exceed \$5 for any single medical service for which the specified fee is charged. Contributors to registered private health insurance funds may recover the amount by which the benefit falls short of the specified fee.

Australian residents who, while temporarily absent from Australia, receive medical attention by registered medical practitioners are eligible for the benefits to which they would be entitled if the service were rendered in Australia.

The following table shows the number of medical services rendered in Western Australia to members of medical benefit organisations and their dependants during each financial year from 1970-71 to 1974-75. The number of organisations and their membership at 30 June in each year are also shown. It should be noted that the total number of persons covered by medical benefit schemes is considerably higher than the number of contributors, as many members subscribe for benefits on account of dependants as well as for themselves.

MEDICAL BENEFITS—WESTERN AUSTRALIA

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Registered organisations—					
Number at 30 June	8	8	8	7	6
Membership at 30 June	344,380	358,476	366,824	380,673	368,883
Number of medical services received during year—	'000	'000	'000	'000	'000
General practitioner services	1,886	2,136	2,276	2,265	2,329
Other	1,311	1,678	1,733	1,787	2,056
Total	3,197	3,814	4,009	4,052	4,385
Amount of benefits paid during year—	\$'000	\$'000	\$'000	\$'000	\$'000
National Welfare Fund payments (a)	9,782	13,800	15,957	16,478	19,437
Health insurance fund payments (b)	5,746	7,130	7,814	8,783	13,354

(a) For details see table on pages 277-8. (b) Includes reimbursements paid by Australian Government in relation to special account deficits and subsidised health benefits.

Pharmaceutical Benefits

All persons receiving treatment by a registered medical practitioner are entitled to receive benefits through approved pharmaceutical chemists or, in certain circumstances, medical practitioners. Eligible pensioners and their dependants receive benefits free of charge. A fee not exceeding seventy-five cents is payable for each item dispensed in respect

of families whose weekly income does not exceed a specified amount; persons in receipt of unemployment, sickness or special benefits; and migrants during the first two months after their arrival in Australia. Other persons receive benefits for a fee not exceeding \$1.50 for each item. In addition, benefits are made available through approved hospitals and, by special arrangements, to persons living in isolated areas and persons who cannot be conveniently or efficiently supplied in accordance with the general provisions of the National Health Act.

The drugs and medicinal preparations available as pharmaceutical benefits are determined by the Minister on the advice of the Pharmaceutical Benefits Advisory Committee.

Free Milk for School Children

Under the provisions of the *States Grants (Milk for School Children) Act 1950*, milk was distributed free to school children throughout Australia, with the object of improving their diet. The Australian Government reimbursed the States for the cost of supplying one-third of a pint of milk each day of the school year to children under thirteen years of age, and also contributed one-half of the cost of related capital and incidental expenditure incurred by the States in the administration of the scheme. From the beginning of the 1974 school year the scheme was modified and the general distribution of milk discontinued.

Tuberculosis Medical Services and Allowances

Under the provisions of the *Tuberculosis Act 1948-1973* the Australian Government reimburses the States for all capital expenditure on buildings, furnishings, equipment and plant for the diagnosis, treatment and control of tuberculosis. It also reimburses the States for net maintenance expenditure on the diagnosis, treatment and control of tuberculosis in excess of that incurred during the base year 1947-48.

Provision is made in the Act for allowances to be paid to sufferers from tuberculosis and their dependants. There is a means test which does not, however, apply to persons aged seventy years and over. The allowances are determined by the Director-General of Health, subject to the direction of the Minister. The rates payable at 1 January in each year from 1972 to 1976 are shown in the next table. In certain circumstances, additional benefits may be paid in the form of a mother's or guardian's allowance or supplementary assistance.

NATIONAL HEALTH SERVICE PAYMENTS

Benefit or allowance	At 1 January—				
	1972	1973	1974	1975	1976
Hospital benefits (per day)—	\$	\$	\$	\$	\$
Insured patient (a)	2.00	2.00	2.00	2.00	2.00

Sufferer without spouse but with dependent child or children	25.25	28.00	29.50	35.00	42.75
Sufferer without dependants—					
While undergoing approved domiciliary treatment	20.50	23.25	24.75	34.25	42.00
While undergoing free hospital treatment	17.25	20.00	21.50	31.00	38.75
Payments in respect of dependent children (g)—					
Each child	4.50	4.50	4.50	5.00	7.50

(a) Member of an approved hospital insurance organisation. (b) Benefit payable in respect of each non-pensioner patient, whether insured or uninsured, provided that no hospital fee is charged. (c) Benefit payable on account of a pensioner enrolled in the Pensioner Medical Service who is a patient in a public hospital and for whom no fees are charged. (d) Introduced 1 January 1973. Rate of benefit varies as between States; the amount shown is the maximum rate payable in Western Australia. (e) Introduced 1 March 1973. (f) Payable under provisions of *Handicapped Persons Assistance Act 1974* (see page 220). (g) In addition to child endowment.

Summary of Rates, 1972 to 1976

The preceding table shows the daily amounts of hospital and nursing home benefits, domiciliary nursing care benefit and handicapped children's benefit being paid at 1 January of the years 1972 to 1976. The maximum weekly rates of tuberculosis allowances at each date are also shown.

Miscellaneous Health Services

Other expenditure by the Australian Government on health services includes the cost of district health laboratory services, the free supply of certain prophylactic materials and biological products (e.g. poliomyelitis vaccine), the supply and maintenance of hearing aids for children and pensioners, subsidies to various voluntary organisations conducting home-nursing services that are assisted by the State Governments or local government authorities, the supply of artificially produced radio-active isotopes to private medical practitioners and hospitals for medical treatment purposes, and expenses in connection with the blood fractionation plant of the Commonwealth Serum Laboratories.

DEPARTMENT FOR COMMUNITY WELFARE, WESTERN AUSTRALIA

The *Community Welfare Act, 1972*, which came into operation on 1 July 1972, establishes the Department for Community Welfare. The *Child Welfare Act Amendment Act (No. 2), 1972* abolishes the former Child Welfare Department and transfers its functions to the Department for Community Welfare. The *Aboriginal Affairs Planning Authority Act, 1972* repeals the *Native Welfare Act, 1963*. The welfare functions of the former Department of Native Welfare were transferred to the Department for Community Welfare with effect from 1 July 1972.

The functions of the Department for Community Welfare, as defined in the *Community Welfare Act, 1972*, are: ' (a) to promote individual and family welfare in the community; (b) to prevent the disruption of the welfare of individuals and families in the community, and to mitigate the effects of any disruption; (c) to co-ordinate, assist and encourage the provision of social welfare services to the community, and for that purpose to confer and collaborate with other bodies and instrumentalities who offer, or may offer, a social welfare service; (d) to conduct, promote and encourage research into the problems of community welfare; (e) to conduct, promote and encourage programmes of training or rehabilitation, or which are otherwise of a nature that is concerned with the advancement of the welfare of particular individuals or groups in the community who are disadvantaged; (f) to consider and initiate, or to assist in, the provision and development of new or additional welfare services, whether of a general or specific nature, for individuals or groups within the community who are needy or disadvantaged; (g) to encourage the development of the greatest possible degree of service and administration at the local level, and to emphasise the value of preventive measures; (h) to provide assistance, where the Minister considers it to be necessary, when the welfare of any individual, family or group is threatened or in jeopardy; (i) to provide and, where appropriate, to manage facilities, which may include land, buildings and specialized appliances, for specific purposes consistent with the objects of this Act; (j) generally, to administer and give effect to the provisions of this Act and to carry out such other functions as may be prescribed, or as the Minister may direct.'

The Acts administered by the Director of the Department for Community Welfare, subject to any direction of the Minister, are the *Community Welfare Act*, the *Child Welfare Act*, the *Welfare and Assistance Act*, the *Adoption of Children Act*, and the *Guardianship of Children Act*.

STATE RELIEF PAYMENTS

Under the provisions of the *Welfare and Assistance Act, 1961*, the State Government, through the Department for Community Welfare, extends financial assistance to indigent persons not immediately eligible for benefits paid by the Australian Government under its social security programme. These relief payments are made primarily to ensure that

dependent children do not suffer hardship from the indigence of parents or guardians. Those assisted include deserted wives, unmarried mothers, families where the husband is unable to provide adequate support because of sickness, unemployment, age or imprisonment, and other special cases.

The rates of benefit payable by the State Government appear in the table on page 260. State monetary assistance to a woman not receiving a pension or other benefit from the Australian Government may be increased by \$2 per week if she has a child aged under six years or an invalid child aged under sixteen years. She may be eligible for an additional allowance up to a maximum of \$5 per week if paying rent or lodging charges.

Other aid provided by the State for persons in need includes free travel for country people requiring medical treatment in the metropolitan area and a contribution towards the cost of school requisites for children of women receiving financial assistance. In certain circumstances, the burial of indigent persons is arranged at State expense.

Deserted wives and unmarried mothers applying to the Department for assistance are given advice concerning the legal redress available to them and it is usual for application to be made to a Summary Relief Court or a Children's Court for an order requiring the husband or the father to provide maintenance. Court orders are enforceable throughout Australia and in certain overseas countries.

Under the *States Grants (Deserted Wives) Act* 1968 the Australian Government shares on a \$1 for \$1 basis with the States the cost of helping certain mothers of families without a breadwinner where the mother is ineligible for a Class A widow's pension or the supporting mother's benefit (see page 246). The main groups of mothers assisted are deserted wives, wives of prisoners, and unmarried mothers. Assistance is provided during the first six months after the birth of a child or the date of separation. After the first six months, a woman may qualify for either a Class A widow's pension or a supporting mother's benefit.

The grant by the Australian Government to a State is equal to half the cost of the approved assistance paid by the State to each eligible person but may not exceed half the amount that would have been payable to such a person under the Social Services Act had she been eligible for a Class A widow's pension.

FAMILIES GRANTED STATE GOVERNMENT FINANCIAL ASSISTANCE (a)

(a) Figures for years prior to 1972-73 refer to the Child Welfare Department, and those for 1972-73 and later to the Department for Community Welfare; see letterpress *Department for Community Welfare* on page 256.

CHILD WELFARE

Under the provisions of the *Child Welfare Act, 1947-1972* the State Government, through the Department for Community Welfare, is responsible for the care of State wards and children placed under supervision or released on probation by Children's Courts. For the purposes of the Act, a child is defined as 'any boy or girl under the age of eighteen years'. Institutions caring for children are subject to supervision by the Department, as also are foster-mothers who have in their care children under six years of age and who are required under the Act to be licensed for this purpose. Among other functions of the Department

are the arranging of legal adoptions and the licensing of children employed in street trading and in public entertainment. A provision of the Child Welfare Act vests in the Department the right to decide which institution or what form of treatment is appropriate to the needs of a child committed by a Children's Court to the care of the Department for treatment, discipline and training.

Children's Courts are established at Perth and at other centres throughout the State and have jurisdiction in all cases where children under eighteen years of age are involved whether as offenders or as being neglected or destitute. The Courts also have jurisdiction to deal with adults committing certain specified offences against children. The public may be excluded from Court hearings and names of juvenile offenders are withheld from publication unless with the express authority of the Court. Adults charged with certain indictable offences against children may forgo the right to trial by jury and agree to be dealt with summarily by Children's Courts. This power to exercise summary jurisdiction is designed to eliminate as far as possible the necessity for children to appear in open courts as witnesses in cases dealing with sex offences. A Children's Court may commit such offenders for sentence by the Supreme Court of Western Australia or The District Court of Western Australia.

Children guilty of minor offences may be cautioned, fined, bound over, placed on probation, or the charge may be dismissed without a conviction being recorded. A Court may declare a child to be neglected or destitute and may order the child to be committed to the care of the Department for Community Welfare or released on probation. Children found guilty of offences punishable by imprisonment may be committed to the care of the Department, released on security given by parents, or released on probation under the supervision of the Department. Those guilty of less serious or first offences are generally placed in the care of their parents or suitable guardians under appropriate supervision by officers of the Department for Community Welfare.

Departmental Expenditure. The following table gives details of annual expenditure of the Department for Community Welfare during the three-year period ended 30 June 1975.

DEPARTMENTAL EXPENDITURE
(\$'000)

Nature of expenditure	1972-73	1973-74	1974-75
Administration	1,140	1,346	1,644
Field services	1,778	2,427	3,280
Departmental institutions	2,862	3,546	4,987
Maintenance of children	1,469	2,178	2,457
Adoption of children	82	142	145
Financial assistance (a)	2,431	1,400	1,590
Unemployment relief	67	66	156
Community Welfare assistance	829	795	1,072
Reserves (Aboriginal housing)	194	261	394
Total expenditure	10,852	12,162	15,726
Total revenue	490	588	991
Net expenditure	10,363	11,574	14,734

(a) Assistance to women with dependent children and to the infirm.

Supervision of Children. A child committed to the care of the Department for Community Welfare or to the custody of the Director of the Department for Community Welfare becomes a ward of the Department. A ward may be placed in an institution, boarded out with a relative or other approved person, paroled or placed in suitable employment. The Director of the Department for Community Welfare has authority to place wards of working age in employment or apprenticeship. The *Immigration (Guardianship of Children) Act 1946-1973* (Commonwealth) provides that the Minister for Immigration shall be the guardian of migrant children under the age of twenty-one years who are not in the care of a parent or other relative. In Western Australia this function is exercised, under delegation, by the Director of the Department for Community Welfare.

Maintenance of Children. The Department for Community Welfare makes payments at the rates shown in the table on page 260 to foster-parents and institutions having State wards in their care. The British Government pays \$2·50 per week for each British migrant child in an institution or boarded out and the State Government pays an additional amount of \$1·50 per week where the child is unaccompanied. A further grant of \$1 per week for each child maintained is paid to the institutions by the State Lotteries Commission. Where an institution refuses assistance from the Commission on religious or moral grounds the State Government may grant an equivalent allowance to the institution for each ward maintained. All institutions and foster-parents having the care of children receive Commonwealth child endowment payments.

Parents or step-parents are required to contribute towards the maintenance of wards in institutions or boarded out.

Day Care Centres. Any person who provides day-to-day care of children under the age of six years must have a licence issued by the Department for Community Welfare in accordance with regulations which specify standards relating to premises, furnishings, equipment, staffing and the general conduct of centres. An advisory service is provided by the Department to assist those wishing to establish centres, and to ensure that the regulations are observed and that good standards of child care are maintained.

The Australian Government, under the provisions of the *Child Care Act 1972*, provides financial assistance to certain non-profit organisations for the establishment and operation of child care centres primarily for the children of working or sick parents or of parents who for other reasons are unable to care for them during the day. Capital grants are payable to eligible organisations for the purchase, erection, extension or alteration of buildings (including land cost) for use as a child care centre. Recurrent grants are payable to encourage the employment of qualified staff and to enable the centres to offer reduced fees in respect of children from families in financial need. The Act also provides for grants to be made available to suitable bodies for research and evaluation of matters relating to child care.

Adoption of Children. All children eligible for adoption in Western Australia come under the guardianship of the Director of the Department for Community Welfare. A person wishing to adopt a child may apply direct to the Department or through a solicitor. Each applicant must be assessed by the Department for suitability, and an order for the legalisation of an adoption must be obtained from a Judge of the Supreme Court of Western Australia.

Institutions. The State Government subsidises homes for children in Western Australia. Most of these institutions are conducted by religious organisations. All institutions having the care of wards (including migrant children) or private children under six years of age are subject to the supervision of the Department for Community Welfare.

CHILDREN IN DEPARTMENTAL INSTITUTIONS (a)

Institution	At 30 June—				
	1971	1972	1973	1974	1975
Bridgewater Care and Assessment Centre, Applecross	27	44	81	60	61
Hillston Farm School, Stoneville	64	62	50	81	81

Riverbank, Caversham	40	44	36	45	36
Total	250	296	293	323	296

(a) See letterpress *Department for Community Welfare* on page 256.

Departmental institutions provide short-term accommodation for children in need of care and children awaiting proceedings in Children's Courts; assessment facilities for children coming into the care of the Department; treatment centres in the nature of re-

formatories; and hostel accommodation. Children aged from three years to eighteen years are provided for. Wards under three years of age requiring short-term care are placed by arrangement at Ngal-a Mothercraft Home and Training Centre, South Perth.

Employment of Children. The *Child Welfare Act, 1947-1972* provides that children may not engage in street trading except under licence granted by the Department for Community Welfare. The issue of licences is restricted to boys aged twelve years and over and it is an offence to employ an unlicensed child. Most of the licences issued are for the sale of newspapers.

The Act provides further that children under the age of sixteen years may not take part in any form of public entertainment for profit or reward unless under licence, except in the case of an occasional entertainment for the benefit of a school or charitable or patriotic object. Most of these licences are issued for concerts arranged by dancing teachers and other tutors.

SUMMARY OF RELIEF AND WELFARE PAYMENTS

The following table shows the maximum weekly rates of allowances and benefits paid in terms of the Welfare and Assistance Act and the Child Welfare Act.

STATE GOVERNMENT RELIEF AND WELFARE PAYMENTS (a)
MAXIMUM WEEKLY RATES
(\$)

Allowance or benefit	Rate current at—				
	30 April 1974	31 August 1974	30 November 1974	31 May 1975	30 November 1975
Woman not receiving Australian Government assistance	26.00	31.00	31.00	36.00	36.00
Additional payments in respect of dependent children—					
First child	9.00	9.00	9.50	11.00	11.00
Second and each subsequent child	5.00	5.00	5.50	7.00	7.00
Supplementary allowances—					
Child aged under 6 years or invalid child aged under 16 years	2.00	2.00	2.00	2.00	2.00
Rent allowance	4.00	4.00	5.00	5.00	5.00
Unemployment and sickness benefits (b)—					
Married person	8.25	8.25	8.25	8.25	8.25
Dependent spouse	3.00	3.00	3.00	3.00	3.00
Each dependent child up to and including the seventh	1.50	1.50	1.50	1.50	1.50
Wards of the State—					
Foster children in families—					
Each child	13.00	13.00	14.00	14.00	17.00
Additional payment for each high school child (c)	1.00	1.00	2.00	2.00	3.00
In institutions—					
Each child	12.50	12.50	13.50	13.50	17.00
Additional payment for each high school child (d)			3.50	3.50	3.00
Allowance for each high school child (d) (e)—					
At first year level			0.50	0.50	1.50
At second year level			1.00	1.00	1.50
At third year level			1.50	1.50	1.50
At fourth and fifth year levels			2.00	2.00	2.00
Foster child (f) in institution or private home	8.50	8.50	10.00	10.00	15.00

(a) Payments made in terms of the Welfare and Assistance Act and the Child Welfare Act. (b) Paid only in respect of the first week of unemployment or sickness, during which period benefits are not payable under the Social Services Act (Commonwealth). (c) Before October 1974, paid only in respect of children aged 15 years or over. (d) Payable from October 1974. (e) Applies to all wards, whether accommodated in institutions or living as foster children in families. (f) Foster child not being a ward of the State.

Chapter V—continued

Part 6—Law, Order and Public Safety

The law in force in Western Australia is contained in The Statutes of Western Australia, comprising legislation passed by the Western Australian Parliament and certain Imperial Acts which have been adopted, and in the Commonwealth Acts in so far as they apply to Western Australia. Under the Constitution of the Commonwealth of Australia, 'when a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid'.

The Legal Profession

The Barristers' Board, constituted under the *Legal Practitioners Act, 1893-1973*, comprises the Attorney-General as chairman; the Solicitor-General; all Queen's Counsel residing and practising in the State; persons who retire from an office of Judge of the Supreme Court of Western Australia and are resident in the State; and seven practitioners of at least three years' standing and practice in the State, elected annually by the practitioners on the roll of the Supreme Court residing and practising in the State.

The Board has the power to regulate and control the examination and admission of articulated clerks, and the examination of all candidates for admission as practitioners. The certificate of the Board is necessary before any person may be admitted to practice. An applicant for admission having qualifications acquired outside Western Australia must satisfy the Board that he possesses qualifications substantially equivalent to those required for the admission of persons who qualify in Western Australia.

The Crown Law Department

The Crown Law Department is administered, subject to the control of the Minister, by the Under Secretary for Law. The Department is responsible for the Supreme Court Central Office, the District Court Registry, Court Offices throughout the State (except Children's Courts), the Crown Solicitor's Office, the Office of Titles, the Public Trust Office, the Corporate Affairs Office, and the Probation and Parole Service. The Department, in addition to administering the Acts which come under the portfolio of the Minister, conducts Crown legal business and, when required, acts for and advises all other State Government Departments and instrumentalities.

Law Reform Commission of Western Australia

The Law Reform Commission of Western Australia was established by the *Law Reform Commission Act, 1972* which came into force on 19 January 1973. It succeeded the Law Reform Committee which had been in existence since 1968. The Commission has three members: a legal practitioner in practice on his own account; a member of the Law School of the University of Western Australia; and a legal officer of the Crown Law Department.

The Commission examines proposals for review of aspects of the law referred to it by the Attorney-General. It may also submit to him proposals for review. The Commission usually issues a working paper discussing the issues involved and invites comments from interested persons.

Reports submitted by the Commission are presented to the Parliament. During the year ended 30 June 1975 the Commission submitted reports on: special constables; tenancy bonds; mortgage brokers; and contractors' liens.

Parliamentary Commissioner for Administrative Investigations

The *Parliamentary Commissioner Act, 1971*, which came into operation on 12 May 1972, provides for the appointment of a Parliamentary Commissioner for Administrative Investigations with the powers of a Royal Commission as specified in the *Royal Commissions Act, 1968*. The first Commissioner was appointed on 24 April 1972.

The Commissioner is empowered to investigate administrative actions taken by or on behalf of certain government authorities. The Act applies to all Departments of the Public Service, excluding officers of the establishment of the Governor and of the Agent General for Western Australia (London), to all local government authorities, and to other specified authorities. It does not apply to the Supreme Court of Western Australia, The District Court of Western Australia, other courts of law in the State, a Judge of the Supreme Court or of the District Court, a commissioner of any court, a stipendiary magistrate, a coroner, the Auditor-General, the Parliamentary Privileges Act, or any decision of the Cabinet or of a Minister of the Crown.

LAW COURTS

The principal courts operating in Western Australia are the High Court of Australia, the Supreme Court of Western Australia, The District Court of Western Australia, the Magistrates' and Coroners' Courts, the Summary Relief Court and the Licensing Court of Western Australia. In Chapter X, Part I, reference is made to the Australian Industrial Court, the Australian Conciliation and Arbitration Commission, the Western Australian Industrial Appeal Court, and The Western Australian Industrial Commission.

High Court of Australia

The High Court of Australia is the Federal Supreme Court and its powers are defined in the Commonwealth of Australia Constitution Act and in the *Judiciary Act 1903-1973*. The High Court consists of a Chief Justice and six other Justices. Sittings are held in the capital city of each State as occasion may require. The High Court exercises both original and appellate jurisdiction, acting as a court of appeal for Australia.

An appeal may lie from a judgment of the High Court of Australia to the Judicial Committee of the Privy Council in London. However, the *Privy Council (Limitation of Appeals) Act 1968-1973* (Commonwealth) limits the matters which may be the subject of special leave of appeal from a decision of the High Court. The Act provides, in part, that leave of appeal 'may be asked only in a matter in which the decision of the High Court was a decision that (a) was given on appeal from a decision of the Supreme Court of a State given otherwise than in the exercise of federal jurisdiction; and (b) did not involve the application or interpretation' of the Australian Constitution, or of a Commonwealth law (including any ordinance, rule, regulation or by-law made under such a law).

Supreme Court of Western Australia

The Supreme Court of Western Australia, as constituted under the *Supreme Court Act, 1935-1975*, consists of a Chief Justice and such other Judges, not exceeding six in number, as may from time to time be appointed. The jurisdiction of the Court in both civil and criminal matters is exercised by a single Judge, sitting alone or with a jury, unless it is provided that an action must be brought before a Full Court. Criminal cases are heard before a jury. Criminal sittings of the Supreme Court are held at Perth each month from February to December, and also in January if the Chief Justice so directs. Civil sittings and Full Court sittings are held at times fixed by the Court from year to year. There are regular sittings at Albany, Bunbury, Geraldton and Kalgoorlie, and at other country centres as required.

Any two or more Judges together comprise a Full Court except that when sitting as a court of criminal appeal there must be an uneven number of Judges. Appeals are heard against judgments of the Supreme Court and the District Court as well as against decisions of the magistrates in lower courts.

Appeal from a judgment of the Supreme Court of Western Australia lies to the High Court of Australia, subject to the provisions of the *Judiciary Act 1903-1973* (Commonwealth), and may also be made direct to the Privy Council.

The District Court of Western Australia

The District Court of Western Australia is constituted under the provisions of the *District Court of Western Australia Act, 1969-1975* and consists of a Chairman of Judges and such other Judges as may from time to time be appointed. The Act, which came into operation on 1 April 1970, repeals the *Courts of Session Act, 1921*. The jurisdiction of the Court is exercised by a Judge sitting alone or with a jury. Criminal cases must be heard before a Judge and jury. Criminal sittings of the District Court are held at Perth each month from February to December, five times a year at Albany, Bunbury, Geraldton and Kalgoorlie, and at five other centres when required. Civil sittings are held concurrently with criminal sittings in Perth, and immediately following the criminal sittings at other centres except at Bunbury where special civil sittings are held four times a year.

Civil jurisdiction exists broadly up to a maximum of \$10,000, and criminal jurisdiction in respect of indictable offences except those for which the maximum penalty exceeds fourteen years' imprisonment.

Appeals from a District Court Judge lie, in the civil jurisdiction, to the Full Court of the Supreme Court and, in the criminal jurisdiction, to the Court of Criminal Appeal.

Magistrates' and Coroners' Courts

In addition to their usual functions, magistrates act as coroners and mining wardens where required. Two or more Justices of the Peace sitting together in petty sessions may deal with cases which could be decided by a magistrate sitting alone.

COURTS OF PETTY SESSIONS. Courts of Petty Sessions, which are established in terms of the *Justices Act, 1902-1975*, are held at centres of population throughout the State. Minor offences are dealt with summarily, but a person charged with an indictable offence may be committed to a higher court for trial or sentence if there is sufficient evidence to justify this course.

CHILDREN'S COURTS. The *Child Welfare Act, 1947-1975* provides for the establishment of Children's Courts, and the appointment of special magistrates, to deal with offenders under the age of eighteen years and to hear certain specified cases of offences against children. Certain cases of offences concerning children may be remanded for hearing or committed for sentence before the Supreme Court. The public may be excluded from Children's Court hearings and names of juvenile offenders are withheld from publication unless with the express authority of the Court. Children's Courts operate in Perth, and at other centres as required. Further reference to Children's Courts appears in the section *Child Welfare* in Part 5 of this Chapter.

SUMMARY RELIEF COURT. The Summary Relief Court is established under the provisions of the *Married Persons and Children (Summary Relief) Act, 1965-1975* and is empowered to make orders providing for separation, payment of maintenance, legal custody of a child and access to a child.

LOCAL COURTS. Local Courts, which are established in terms of the *Local Courts Act, 1904-1975*, are held throughout the State to determine minor civil issues, largely the recovery of small debts. Jurisdiction is limited in most cases to claims not exceeding \$1,000.

CORONERS' COURTS. The powers of coroners are derived from the *Coroners Act, 1920-1974*. Coroners' Courts may be held to inquire into the circumstances of sudden or unnatural deaths or the cause and origin of fires. A coroner may charge a person with a major offence and commit him for trial at a higher court.

Licensing Court of Western Australia

The Licensing Court of Western Australia is established under the provisions of the *Liquor Act, 1970-1974*. The Court comprises three members, including a chairman,

appointed by the Governor. Except as otherwise provided by the Act, the Court may be constituted, and its jurisdiction may be exercised, by any two members. The Court has exclusive jurisdiction to hear and determine all applications under the Liquor Act in respect of licences, provisional certificates and permits relating to the sale, supply and consumption of liquor. Appeal against a direction, determination or order of the Court lies to the Supreme Court, but only where the appeal involves a question of law.

COURT PROCEEDINGS

Higher Courts

The term *Higher Courts*, as used in the tables on pages 265 and 267, refers to courts presided over by a Judge. The general jurisdiction of the higher courts includes appeals from the lower courts, cases of crime committed from lower courts, and civil cases. Under the *Bankruptcy Act 1966-1975* (Commonwealth) the Supreme Court of Western Australia is invested with jurisdiction in bankruptcy, and under the *Matrimonial Causes Act 1959-1973* (Commonwealth) and the *Family Law Act 1975* (Commonwealth) with jurisdiction in divorce and related matters.

Civil Proceedings

Particulars of civil cases dealt with by the courts in the five years ended 31 December 1974 are shown in the following table.

CIVIL PROCEEDINGS

Particulars	1970	1971	1972	1973	1974

CONVICTIONS IN COURTS

Number of Convictions

It is important to bear in mind when considering the particulars shown in the tables on pages 265-7 that the figures relate to the *number of convictions* recorded and not to the *number of persons* convicted. Thus, where a person is convicted on more than one count each conviction so recorded has been included in the statistics.

HIGHER COURTS AND MAGISTRATES' COURTS—NUMBER OF CONVICTIONS

Class of offence	1970	1971	1972	1973	1974
HIGHER COURTS					
Offences against the person—

(a) Including Children's Courts letterpress on page 267.

(b) Excludes minor traffic offences not subject to court process; see

Convictions of Juveniles

The term *juvenile*, as used in relation to the statistics given in this Part, means a person under the age of eighteen years. Convictions of juvenile offenders are included in the figures shown in the table on page 265 and are given separately in the tables below and on page 267.

The following table shows the number of convictions of juvenile offenders in Children's Courts in Western Australia during the five-year period ended 31 December 1974. A classification according to age of offender is given in the succeeding table.

OFFENCES BY JUVENILES—NUMBER OF CONVICTIONS (a)

(a) Included in figures shown under *Magistrates' courts*.

Regulations under the Traffic Act (now repealed) allowed fines to be imposed without court action for minor traffic offences. These provisions are continued under the *Road Traffic Act, 1974-1975*. Similar provisions apply under parking facilities legislation and municipal by-laws. These minor offences (which are, of course, excluded from the tables relating to court convictions) numbered 154,307 in 1970, 176,994 in 1971, 200,723 in 1972, 211,913 in 1973 and 271,266 in 1974.

LIQUOR LICENCES

The following table shows the number of liquor licences of the several types in force in Western Australia under the provisions of the *Liquor Act, 1970-1974*.

LIQUOR LICENCES IN FORCE

Type of licence (a)	At 30 June—				
	1971	1972	1973	1974	1975
Hotel	463	467	469	471	459

Theatre	1	1	3	3	4
Vignerons
Total	1,163	1,214	1,267	1,331	1,386

(a) As described in the *Liquor Act, 1970-1974*.

By a provision of the *Government Railways Act, 1904-1975*, The Western Australian Government Railways Commission is authorised to lease railways premises for the sale of refreshments, subject to the provisions of the *Liquor Act, 1970-1974*.

A licence applying to premises at Perth International Airport is issued in terms of the *Airports (Business Concessions) Act 1959-1973* (Commonwealth).

POLICE

The Western Australian Police Force comprises eight main branches under the direction of the Commissioner of Police. The Commissioner is appointed by the Governor under the provisions of the *Police Act, 1892-1975* and is responsible to the Minister for Police.

For the administration of the Uniformed Branch, the State is divided into three metropolitan districts, two metropolitan divisions and eight country districts, each under the direction of a commissioned officer. At 30 June 1975 there were, in addition to the Uniformed Branch and the Women Police, a number of specialised branches, including the Criminal Investigation Branch, the Liquor and Gaming Branch, the Firearms and Inquiries Branch, the Traffic Branch, the Prosecuting Branch, and the Public Relations and Lecturing Branch.

The following table shows the numbers and classification of members of the Western Australian Police Force at 30 June of each year from 1971 to 1975.

POLICE FORCE—NUMBER AND CLASSIFICATION (a)

Date and classification	Branch and number of officers							
	Uniformed Branch	Women Police	Criminal Investigation Branch	Liquor and Gaming Branch	Firearms and Inquiries Branch	Traffic Branch	Other Branches	Total (a)
At 30 June—								
1971	1,051	35	151	25	12	299	39	1,612
1972	1,128	38	169	34	12	255	46	1,682
1973	1,228	38	181	36	12	253	55	1,803
1974	*1,307	37	189	37	12	*284	114	1,980
1975—								
Superintendent	11	2	1	1	2	1	18
Senior Inspector	11	1	3	5	20
Inspector	13	1	4	3	21
Sergeant	264	3	82	6	4	69	55	483
Constable	1,021	34	121	35	11	310	100	1,632
Total	1,320	38	210	42	16	387	161	2,174

(a) In addition to the numbers shown there were, at each date prior to 30 June 1975, a Commissioner of Police, a Deputy Commissioner, an Assistant Commissioner, and a Chief Superintendent; at 30 June 1975 there were a Commissioner of Police, a Senior Assistant Commissioner, three Assistant Commissioners, and a Chief Superintendent. *Revised.

The Uniformed Branch comprises the main body of the Police Force and is responsible for the routine maintenance of law and order throughout the State. Where required, officers of the Branch act as Clerks of Courts and perform special duties for other government authorities.

The Women Police are employed mainly in police duties concerning women and children. Policewomen are stationed at Perth, Fremantle, Midland, Albany, Bunbury, Geraldton, Kalgoorlie and Northam.

The Criminal Investigation Branch is centred in Perth, with several sub-branches in the metropolitan area and the principal country towns. The Branch is primarily concerned with the investigation of serious crimes and the apprehension of offenders.

The Communications and Scientific Branch is responsible for the police radio-communications network and for matters relating to fingerprints, photography, criminal records, ballistics bomb disposal, handwriting and document examination, and various technical and scientific aids to investigation.

The Liquor and Gaming Branch is concerned mainly with the enforcement of the liquor laws and laws for the suppression of vice and gaming.

The Firearms and Inquiries Branch is responsible for the licensing of firearms throughout the State. It also makes inquiries concerning the suitability of applicants for licences to operate as land agents, auctioneers, money-lenders, inquiry agents, employment brokers, and debt collectors.

The functions of the Traffic Branch have been described in earlier issues of the Year Book. These functions were transferred, with effect from June 1975, to the Road Traffic

Authority established under the provisions of the *Road Traffic Act, 1974*. Reference to the Road Traffic Authority will be found in Chapter IX—Part 3 under the heading *Vehicle Registration, Licences and Traffic Control*.

The Prosecuting Branch conducts police prosecutions in Courts of Petty Sessions in the metropolitan area, at Kalgoorlie and, when required, at other centres.

The Public Relations and Lecturing Branch is responsible for maintaining a satisfactory relationship with the public and the news media, and for co-operation with the civil emergency services. Lectures are given to children and students from kindergarten to tertiary education level and also to minor offenders against the traffic and liquor laws.

Police and Citizens' Youth Clubs are established by the Police Department to provide recreational facilities for young people and to give them an appreciation of civic responsibilities.

PRISONS

Under the provisions of the *Prisons Act, 1903-1971*, the Director of the Department of Corrections is responsible, subject to the control of the Minister, for the administration of prisons in Western Australia. In addition to prison establishments under the control of the Department of Corrections, there are some police gaols administered jointly by the Department of Corrections and the Police Department.

The principal institution is Fremantle Prison and there are regional prisons at Albany, Broome, Geraldton, Kalgoorlie and Wyndham. Barton's Mill Prison, Brunswick Junction Prison, Bunbury Rehabilitation Centre, Karnet Rehabilitation Centre, Pardelup Prison Farm and Wooroloo Training Centre are minimum security institutions. Bandyup Women's Training Centre, situated at Middle Swan about twelve miles from Perth, is a medium security institution. A Work Release Hostel in West Perth was proclaimed a prison on 23 August 1974.

The following table shows the number of receivals for penal imprisonment in gaols in Western Australia during each of the five years to 30 June 1974. It is important to note that the figures relate to *receivals* and not to *distinct persons*, i.e. a prisoner has been counted once for each time he or she was received.

PENAL IMPRISONMENT—NUMBER OF RECEIVALS (a)

Institution	Year ended 30 June—									
	1970		1971		1972		1973		1974

GRAND TOTAL	5,458	899	6,396	1,157	7,393	1,328	6,913	1,239	5,742	1,052

(a) Excludes imprisonment for debt and receivals of persons on remand. (b) Includes figures for Barton's Mill Prison, Bunbury Rehabilitation Centre (opened 5 February 1971), Karnet Rehabilitation Centre, Pardelup Prison Farm and, for 1969-70, Wooroloo Training Centre (opened 5 March 1970). (c) Opened 13 March 1970. (d) Opened 19 April 1972; replaced Karnet Inebriates Section as a receivals centre. (e) See footnote (d). (f) See footnote (b).

Fremantle Prison is divided into separate sections for prisoners on remand or awaiting trial, juvenile prisoners, and other sentenced prisoners. There are workshops where prisoners are employed in bootmaking, carpentry, printing, tailoring, tinsmithing and

welding, making cement products, and in arts and crafts work. Prisoners can also qualify as cooks and bakers. A school is conducted by teachers supplied by the Education Department, and tuition by correspondence is also available. The section at Fremantle Prison which was occupied by female prisoners before their transfer to Bandyup Women's Training Centre is now used as an assessment centre.

Farming is carried on at Pardelup Prison Farm and Karnet Rehabilitation Centre, and inmates receive instruction in animal husbandry, market gardening, and the operation and maintenance of farm machinery. Karnet Rehabilitation Centre is a dual-purpose institution with accommodation in two dormitory blocks, one of which houses committed inebriates. The other block provides for selected inmates, mainly first offenders, for whom accommodation has been increased by the erection of single cabins adjacent to the dormitory block. Bunbury Rehabilitation Centre receives inmates who have been selected at the Fremantle Prison assessment centre for educational courses and vocational training. Brunswick Junction Prison is used for short-term offenders from the south-west of the State. Short-term offenders from the metropolitan area are sent to the Wooroloo Training Centre. The Work Release Hostel at West Perth is used to accommodate selected prisoners who are granted leave to engage in employment during the latter part of their terms of imprisonment.

A regional prison was opened at Wyndham on 5 March 1975 and the police gaol closed. The Byford Inebriates Centre was transferred, with effect from 1 June 1975, to the control of the Western Australian Alcohol and Drug Authority established under the *Alcohol and Drug Authority Act, 1974*. The use of Barton's Mill Prison was temporarily discontinued from 31 October 1975.

Police gaols are established in Perth and at other centres. They are used for the detention of short-sentence prisoners and prisoners awaiting trial. In addition, provision is made for holding prisoners for short periods at police stations throughout the State.

The following table shows the number of prisoners, excluding trial and remand prisoners and debtors, in gaols in Western Australia at 30 June in each year from 1970 to 1974.

PROBATION AND PAROLE SERVICE

The Probation and Parole Service, a branch of the Crown Law Department, is constituted under the provisions of the *Offenders Probation and Parole Act, 1963-1971*.

The Act establishes a Parole Board of five members, comprising a Judge of the Supreme Court as chairman, the Director of the Department of Corrections as an *ex-officio* member, and three members appointed by the Governor. On occasions when a female offender is being dealt with by the Board, two of the appointed members must be females.

Probation officers supervise offenders placed on probation by the courts. A court may also request a pre-sentence report on any convicted person as an aid in determining the appropriate penalty. These reports are prepared by probation officers.

The Act requires that where a person is sentenced to imprisonment for twelve months or longer the court shall, unless special circumstances make it inappropriate, fix a minimum term during which the convicted person is not eligible to be released. The court is given discretionary power to fix a minimum term where the sentence is for less than twelve months. Provision is made for remission of up to three days per month on the minimum term, as a reward for good conduct or industry. Where no minimum term has been fixed, remission of up to 25 per cent of the sentence may be allowed for diligence and good conduct.

The Parole Board is empowered to release on parole a prisoner who has served a minimum term fixed by a court, or a prisoner being detained at the Governor's pleasure.

The Governor may, on the recommendation of the Parole Board, direct the release on parole of a prisoner sentenced to imprisonment for life, a prisoner undergoing a sentence of imprisonment for life commuted from a sentence of death, or an unconvicted person held in custody during the Governor's pleasure following acquittal because of unsoundness of mind. The Parole Board is required to submit to the Minister, at prescribed intervals, a report and a recommendation concerning such prisoners.

Parole officers establish contact with prospective parolees during their imprisonment, prepare a case history of each prisoner for the information of the Parole Board, and supervise paroled persons during the parole period.

The following table gives particulars of the operations of the Probation and Parole Service during the five-year period ended 30 June 1975.

PROBATION AND PAROLE SERVICE

PUBLIC SAFETY

National Safety Council

The National Safety Council of Western Australia was founded in January 1946 following discussions among office bearers and senior officials of the Royal Automobile

Club of Western Australia and police and education authorities about the creation of an organisation for the prevention of accidents.

Although the Council has been primarily concerned with road traffic safety and training courses associated with it, a Home Safety Division was established in 1963 and a Water Safety Division in 1965 and these also conduct a wide range of practical training courses. An Industrial Safety Division was also formed but now operates as a separate organisation although it is affiliated with the Council.

The National Safety Council of Western Australia is the State member division of the National Safety Council of Australia and is also represented on the Federal Publicity Advisory Committee on Education in Road Safety.

The Council aims at the prevention of accidents by the co-ordination of the efforts of relevant organisations and by an educational programme in accident prevention techniques. It pursues its objectives through the voluntary service of executive members, the financial support of the Government, and the staff and facilities of the Safety Instructional Centre at Mount Lawley. This Centre, situated on about seven and one-quarter hectares of land close to Perth, comprises a complete road system and a comprehensive office complex including a projection theatre and lecture rooms.

Fire Protection

Western Australian Fire Brigades Board. The *Fire Brigades Act, 1942-1975* constitutes the Western Australian Fire Brigades Board of ten members. The Board comprises two members appointed by the Governor, one of whom is president of the Board; three members elected by the insurance companies carrying on business in the State; one member elected by the Council of the City of Perth; three members elected by other local government authorities; and one member elected by the registered volunteer fire brigades. The general duties of the Board are to take, superintend and enforce all necessary steps for the prevention and extinguishing of fires and the protection of life and property from fire, and the control of all fire brigade premises and of all fire brigades.

1974-75	2,311	4,309	55	171	640	46	6	547	8,085

(a) As defined in the Fire Brigades Act.

Sixteen permanent and two volunteer brigades operate in the metropolitan fire district centred on the City of Perth. Permanent brigade personnel serve with volunteer brigade personnel in five large country centres, and volunteer brigades provide town fire protection at seventy-five other centres. At 30 June 1975, the Board had 725 employees and there were 1,874 volunteer brigade officers and firemen.

Bush Fires Board. The Bush Fires Board, which is constituted under the *Bush Fires Act, 1954-1973*, consists of thirteen members appointed by the Governor on the recommendation of the Minister. It comprises the Under Secretary for Lands as chairman; six persons nominated by the Country Shire Councils' Association of W.A.; and one person nominated by each of the following: the Minister for Forests, the Minister for Agriculture, The Western Australian Government Railways Commission, the Fire and Accident Underwriters' Association of Western Australia, the Commissioner of Police, and the Associated Sawmillers and Timber Merchants of Western Australia. The principal functions of the Board are to administer the Bush Fires Act; to report to the Minister on methods of preventing or extinguishing bush fires; to recommend the prohibited burning times to be declared for the whole or any part of the State for any yearly period; to carry out such fire prevention measures as it considers necessary; to carry out research in connection with fire prevention and control; to conduct publicity campaigns for the purpose of improving fire prevention measures; and to provide training facilities for volunteers.

The Board operates through its staff of liaison officers based in country centres. These officers promote fire protection by the exercise of co-ordination, liaison and advisory functions.

Protective fire-breaks are compulsory throughout the agricultural areas and bush fire brigades carry out programmes of protective burning.

At 30 June 1975 there were 962 registered bush fire brigades with 4,822 officers. In addition, there were 2,601 bush fire control officers.

CHAPTER VI—FINANCE

Part 1—Public Finance

FEDERAL-STATE FINANCIAL RELATIONS

The Financial Agreement of 1927

Under the terms of the Financial Agreement, the Australian Government took over from the States their public debts existing at 30 June 1927 and assumed responsibility for all future loan raisings by the Australian and State Governments. The Australian Government also agreed to contribute annually for a period of fifty-eight years from 1 July 1927 an amount of \$15,169,824 towards the interest payable on the States' debts, Western Australia's share of this amount being \$946,864.

Sinking Funds established by the Financial Agreement between the Australian Government and the States are designed to redeem the States' debts as follows: (a) debt existing at 30 June 1927, in a period of fifty-eight years thereafter; (b) debt incurred after 30 June 1927 (except debt for the purpose of redemptions or conversions or the financing of revenue deficits), in a period of fifty-three years from the date of creation of the debt; (c) debt incurred to finance revenue deficits for the years 1929-30 to 1934-35, in a period of thirty-nine years from 30 June 1944; and (d) debt incurred to finance other revenue deficits, in a period of approximately seventeen years from the date of its creation.

These Sinking Funds are under the control of the National Debt Commission. Receipts of the Funds consist mainly of contributions from the Consolidated Revenue Funds of the Australian and State Governments. The Australian Government and the States make annual contributions towards the redemption of debt existing at 30 June 1927 and debt created since that date, with the exception of debt incurred to finance revenue deficits.

Contributions made by the Australian Government and the States in respect of the States' debts are not accumulated but must be applied by the National Debt Commission, whenever expedient, to the redemption and repurchase of loan securities. Under the provisions of the Financial Agreement, repurchased or redeemed securities must be cancelled, and the debts of the States are reduced accordingly.

More detailed reference to the Financial Agreement of 1927 appears in *Western Australian Year Book*, No. 13—1974 (page 263) and earlier issues.

The Australian Loan Council

The Australian Loan Council was established by the Financial Agreement Act of 1928 to co-ordinate the public borrowings of the Australian and State Governments. The Council has as its Chairman the Prime Minister of Australia, or a Minister nominated by him, and the other members are the Premiers of the States or, in the absence of a Premier, a Minister nominated by him. The Commonwealth and each State submits to the Council a programme of its desired loan raisings during each financial year, including the amount of any revenue deficit to be funded. The Australian Government's borrowings for defence purposes are expressly excluded from its submissions to the Council. If the Council decides that the total amount of the loan programme for a year cannot be borrowed at reasonable rates and conditions, it decides the amount to be borrowed during the year, and may by unanimous decision allocate this amount between the Commonwealth and the States. Where the members fail to arrive at a unanimous decision the Commonwealth is entitled to a maximum of one-fifth of the total sum to be borrowed. Of the balance, each State is entitled to an amount in the proportion which its net loan expenditure during the preceding five years bears to the aggregate for all the States.

Grants to the States

Debt Charges Assistance. The *States Grants (Debt Charges Assistance) Act* 1970 provides Commonwealth financial assistance to the States in connection with interest and sinking fund contributions payable in terms of the Financial Agreement. The assistance is in the form of an annual grant to meet charges on \$200 million of the States' debts in each year from 1970-71 to 1974-75. The grants amount in total to \$172.6 million in respect of \$1,000 million of existing debt. Western Australia's share (\$1.11 million in 1970-71, \$2.21 million in 1971-72, \$3.32 million in 1972-73, \$4.42 million in 1973-74, and \$5.53 million in 1974-75) amounts to \$16.6 million in respect of \$96.1 million of debt. It was agreed at a Premiers' Conference in June 1970 that the \$1,000 million of States' debts to which the Act relates would be formally transferred from the States to the Australian Government in June 1975.

The Grants Commission. Section 96 of the Commonwealth Constitution provides that the States may be granted financial assistance. In 1933 the Commonwealth Parliament passed the Commonwealth Grants Commission Act establishing a Commission to inquire into and report on applications made by States for grants of financial aid.

In each year from 1934-35, in respect of which the Commission made its first recommendation, Western Australia received a Special Grant until it ceased to be a claimant State from and including the year 1968-69, in accordance with an agreement made between the Commonwealth and the State at a Premiers' Conference in June 1968. Following this agreement the Commonwealth was authorised by the *States Grants Act* 1968 to pay to Western Australia an amount of \$15.5 million in each of the years 1968-69 and 1969-70, in addition to the Financial Assistance Grant (see below), as a substitute for any Special Grant that might have been recommended by the Commission for those years. For subsequent years, additional grants on a reducing basis were provided by the *States Grants Act* 1970 (\$12.5 million for 1970-71), and the *States Grants Act (No. 2)* 1971 (\$9.5 million for 1971-72, \$6.5 million for 1972-73, \$3.5 million for 1973-74, and \$0.5 million for 1974-75). The *States Grants Act* 1973 repeals the *States Grants Act (No. 2)* 1971 and authorises an additional grant of \$6.5 million for each of the years 1973-74 and 1974-75 in place of the amounts prescribed for those years in the repealed legislation.

The *Grants Commission Act* 1973-1975, which repeals the *Commonwealth Grants Commission Act* 1933 and later amendments, continues the principle of making special assistance available to a State for its own purposes and, in addition, authorises the provision of assistance to a State for local government purposes. Grants to Western Australia, for distribution among local government authorities as recommended by the Grants Commission, amounted to \$4.96 million for the year 1974-75 and \$7.52 million for 1975-76.

Other Grants. As well as the Special Grants paid to some States on the recommendation of the Grants Commission, annual Financial Assistance Grants are made by the Australian Government to every State. Special revenue assistance has been provided in some years in addition to the Special Grants and Financial Assistance Grants. Details of payments made to Western Australia are shown in the next table under the heading *General Purpose Grants*.

Other Financial Assistance

As well as providing general financial assistance to the States by means of grants, the Australian Government allocates to them funds for specific purposes, as shown in the following table which gives details of payments made to Western Australia during the five-year period ended 30 June 1975. Social service benefits, national health benefits and homes savings grants are paid from the National Welfare Fund (see table on page 277). In addition, financial assistance for housing and war service land settlement is provided from Loan Fund. Further information on financial assistance for housing is given in Chapter V, Part 4. Reference to war service land settlement appears in Chapter VII, Part 1.

National Welfare Fund

The National Welfare Fund was established in 1943 by the National Welfare Fund Act passed by the Commonwealth Parliament in that year. The purpose of the fund is to provide for the payment of social service benefits, health benefits and homes savings grants. The fund receives each year by transfer from the Consolidated Revenue Fund an amount equal to the payments made. Further reference to the fund will be found on page 243.

(a) For conditions and rates applying to payment of social service benefits, health benefits, and other forms of assistance, see Chapter V. (b) A number of endowments are paid every twelve weeks. During two years in every three, there are four such payments each year, and five in the third year. (c) Less than \$500. (d) Payable from 10 October 1969. (e) Payable from 15 April 1970. (f) Introduced 3 July 1973. (g) Introduced 9 October 1973. (h) Introduced 1 July 1970; benefit payable in respect of each non-pensioner patient, whether insured or uninsured, provided that no hospital fee is charged. (i) Introduced 1 January 1970; available to persons receiving unemployment, sickness or special benefit; to families with income below a specified minimum; and to migrants during the first two months in Australia. (j) From 1 January 1973, classified as State nursing homes and Participating nursing homes. (k) Introduced 1 March 1973; payable in respect of persons aged 65 years and over who need and receive nursing care at home. (l) In addition to the items shown there are some services, the expenditure on which is not allocable among States. In 1973-74 the cost of these services, for Australia as a whole, was \$4.39 million, comprising the supply of blood products \$1.32 million, radio-active isotopes \$1.61 million, hearing aids for school children and pensioners \$0.90 million, poliomyelitis vaccine \$0.15 million, and other vaccines \$0.41 million. (m) See footnote (l).

AUSTRALIAN GOVERNMENT AND STATE GOVERNMENT TAXATION

Australian Government Taxation

The taxes levied in Western Australia by the Australian Government are listed in the table on page 280 which shows the net amounts collected in the five years to 1973-74.

Income Tax. Income tax is by far the most important source of Commonwealth revenue from taxation and accounted for 68.7 per cent of all Commonwealth taxation collections in 1973-74. The tax is levied on the incomes of individuals, companies, partnerships and trusts, and superannuation funds. When considering the figures shown in the tables on the next page the following definitions are relevant.

Assessable income includes all income (other than *exempt income*) derived directly or indirectly from sources in Australia, and in the case of a taxpayer resident in Australia it includes income from sources outside Australia. (The principal items of *exempt income* are war and service pensions; age and invalid pensions, child endowment, and other payments made in terms of the Social Services Act and the Tuberculosis Act; income from gold mining and some other mining operations; and income received from a scholarship, bursary or other educational allowance.)

Net income comprises assessable income less deductions for expenses incurred in gaining assessable income.

Taxable income is the amount remaining after deducting from assessable income all allowable deductions, which include special deductions and rebates and, in the case of an individual, concessional deductions. Concessional deductions may be claimed in respect

of dependants, housekeepers, education expenses, medical expenses, funeral expenses, life insurance premiums, and payments to superannuation funds and medical and hospital benefits funds.

(a) Details of the purposes and rates applicable to the main forms of Australian Government taxation are given in *Official Year Book of Australia*: No. 60—1974 on pages 301-5 (customs duties), 587-94 (income tax), and 597-603 (other taxation). (b) The amounts shown have been adjusted by offsetting remissions under special circumstances of income tax, customs duties and sales tax. (c) Includes payments in the nature of income tax from public authorities. (d) Tax levied in respect of dividends and interest deemed paid or payable to persons not residing in Australia. (e) Discontinued as Australian Government tax September 1971; from that date collected by State Government (see *State Taxation* below).

It is important to note that, although the figures shown in the preceding table represent the amounts of taxes actually collected in Western Australia, they do not necessarily indicate the amounts contributed by the people of the State, as moneys may be collected in one State in respect of goods consumed or assessments made in other States. Further, administrative arrangements for the collection of certain taxes are such that a large proportion of the revenue (or, as in the case of wheat tax, the whole of the revenue) is brought to account in a State other than Western Australia.

State Taxation

The net amounts collected in Western Australia in the form of State Government taxation in each year from 1969-70 to 1973-74 are shown in the table on page 286. Information concerning rates of tax and the relevant legislation is given below.

STAMP DUTIES. The *Stamp Act, 1921-1974* imposes stamp duties and prescribes the rates applying to a great number of transactions relating to a wide range of property, commodities and services (see table on page 285).

PAY-ROLL TAX. Pay-roll tax, which was formerly levied by the Australian Government (see above table), has been collected by the States since September 1971. In Western Australia the enabling legislation comprises the *Pay-roll Tax Assessment Act, 1971-1975* and the *Pay-roll Tax Act, 1971-1974*. The tax is payable by each employer, with certain specified exceptions, on all wages and salaries paid in excess of \$1,733.33 per month (\$20,800 per annum). The rate of tax prescribed by the *Pay-roll Tax Act, 1971-1974* is: 3½ per cent of the taxable wages paid or payable during or before the month of August 1973; 4½ per cent of the taxable wages paid or payable after August 1973 but during or before August 1974; and 5 per cent from September 1974.

ESTATE DUTY (PROBATE AND SUCCESSION DUTIES). The *Death Duty Act, 1973* imposes duties on the estates of deceased persons and specifies the rates of duty. Conditions relating to the imposition, assessment, and collection of duties are contained in the *Death Duty Assessment Act, 1973-1974*. Differential rates of duty and amounts of exemption apply according to distinct categories of beneficiary. The following table shows the amounts of duty payable from 1 January 1974 on estates of persons dying on or after that date, classified according to the final balance of the estate.

**ESTATE DUTY—AMOUNTS PAYABLE FROM 1 JANUARY 1974
CLASSIFIED ACCORDING TO VALUE OF ESTATE**

Final balance of estate	Where deceased was domiciled in Western Australia at time of death			Where deceased was not domiciled in Western Australia at time of death
	Gross amount payable where estate passes to—			
	Widow, widower, children, etc. (a)	Brothers, sisters, or parents, (b)	Any other person (c)	
\$ 200	\$ Nil	\$ Nil	\$ Nil	\$ Nil
1,000	Nil	Nil	Nil	100
1,500	Nil	Nil	Nil	153
3,000	Nil	90	120	312
5,000	Nil	250	300	540

500,000	125,000	150,000	160,000	160,000

(a) Widow, widower, children, grandchildren, other issue, or dependent parents of the deceased person. (b) Includes brothers or sisters of the half blood or by step or adoptive relationship, and parents other than dependent parents. (c) Or any body corporate or unincorporate.

LAND TAX. The *Land Tax Assessment Act, 1907-1973* authorises a tax, with certain specified exemptions, on every owner of land, and the rates of tax are prescribed by the *Land Tax Act, 1948-1969*. The following table shows the rates of tax and the amounts of tax payable, in respect of the assessment year 1973-74, on improved land and unimproved land of the values specified.

**LAND TAX—RATES OF TAX AND AMOUNTS PAYABLE
ASSESSMENT YEAR 1973-74**

120,000	upwards	1,555	2·4	4,037·50	5·25

BOOKMAKERS BETTING TAX. The *Bookmakers Betting Tax Act, 1954-1970* provides for a tax on money paid or promised as the consideration for bets made by or on behalf of bookmakers. Rates of tax are prescribed as a proportion of the turnover of a racing year (1 August to 31 July). In respect of turnover of the year ended 31 July 1975 the rates applying to on-course transactions were 2 per cent of amounts up to \$100,000 and 2½ per cent of the remainder. For off-course transactions the rate was 2¼ per cent of amounts up to \$50,000, the rate payable on each additional \$50,000 of turnover increasing by ½ per cent up to \$300,000; on turnover exceeding \$300,000 the rate was 3½ per cent.

TOTALISATOR AGENCY BOARD BETTING TAX. The *Totalisator Agency Board Betting Tax Act, 1960-1973* imposes a tax on all moneys paid to the Board in respect of bets made through or with the Board. The rate of tax payable at 30 June 1975 was 6 per cent.

TOTALISATOR DUTY. The *Totalisator Duty Act, 1905-1973* authorises the payment of duty on the takings of totalisators operated by horse-racing clubs and prescribes the rates to be paid. Differential rates apply to totalisators operated within a radius of forty kilometres from the General Post Office, Perth and those situated outside this area. In 1974-75, the principal rates of duty payable in respect of totalisators in the former area were 9 per cent of the gross takings from win and place transactions and 5 per cent of the gross takings from wagering transactions known as 'jack pots', 'quinellas' and 'doubles'; for totalisators outside that area, the rate was 5 per cent for all transactions.

TOTALISATOR LICENCES. The *Totalisator Regulation Act, 1911-1973* provides for the licensing of totalisators operated by horse-racing clubs. Licence fees are prescribed by regulation and are payable annually in respect of the calendar year. For the year 1975 the fee payable was \$2 for each \$2,000 (or part of \$2,000) passing through the totalisator.

BETTING INVESTMENT TAX. The *Betting Investment Tax Act, 1959-1966* imposed a tax on each bet made by a bookmaker in registered premises and on each bet made through or with the Totalisator Agency Board. The amount of tax payable at 31 December 1970 was three cents on each such bet. (The Betting Investment Tax Act was repealed, with effect from 1 January 1971, by the *Betting Investment Tax Act Repeal Act, 1970*.)

LIQUOR LICENCES. Licences and permits authorising the holder to sell or supply fermented and spirituous liquors are granted under the provisions of the *Liquor Act, 1970-1974*. The Act prescribes the fees payable in respect of liquor licences and permits. The several types of licence for which the Act provides are shown in the table *Liquor Licences in Force* on page 267. Annual licence fees, except in the case of a vigneron's licence, are assessed as a proportion of the gross amount paid for liquor purchased for licensed premises or, in the case of a wholesale spirit merchant's licence and a brewer's licence, the gross amount received for liquor sold. The proportion prescribed by the Act is 8 per cent for a tavern licence or a store licence and 7 per cent for other licences. An additional annual fee of \$60 is payable in respect of a wholesale spirit merchant's licence and a brewer's licence. The annual fee payable for a vigneron's licence is \$20.

MOTOR VEHICLE REGISTRATION FEES. The *Road Traffic Act, 1974-1975* provides for the registration of vehicles and prescribes the licence fees to be paid in respect of the several classes of vehicles required to be registered. Fees are based on a combination of power unit and tare weight (except for motor cycles, in respect of which the fee is related to engine capacity). For example, the annual licence fee for a motor car with an engine other than a rotary type is eighty-three cents per power unit and an additional eighty-three cents for each fifty-one kilograms of the tare weight. The annual licence fee for a motor cycle is \$7 where the engine capacity is 250 cubic centimetres or less, and \$9 where the engine capacity is more than 250 cubic centimetres. A recording fee of \$4 is payable for the grant or renewal of any licence for a vehicle, and a fee of \$3 for the transfer of any licence.

MOTOR VEHICLE DRIVERS' LICENCES. The *Road Traffic Act, 1974-1975* authorises the issue of drivers' licences to persons of a minimum age of seventeen years, specifies other conditions to be satisfied, and prescribes the fees to be paid on application for, and issue or

renewal of, a licence. The fee payable on application is \$4, and on issue or on renewal, for each period of twelve months, \$5 (or \$1 in the case of a licence to drive a passenger vehicle).

MOTOR VEHICLE THIRD PARTY INSURANCE SURCHARGE. The *Motor Vehicle (Third Party Insurance Surcharge) Act, 1962-1973* imposes a surcharge on premiums paid in respect of policies of insurance with The Motor Vehicle Insurance Trust. At 31 December 1975 the rate of the surcharge was \$5 per annum.

TAXI CONTROL BOARD LICENCES. The *Taxi-cars (Co-ordination and Control) Act, 1963-1975*, under which the Taxi Control Board is constituted, requires that taxi-cars operating in the Metropolitan Traffic Area and other areas as declared shall be licensed, and prescribes maximum fees payable. At 31 December 1975 these fees were \$50 on the issue or annual renewal of a licence where the licence is issued for unrestricted operations in the metropolitan area or, in any other cases, \$30. For the transfer of a licence the fee was \$10.

TRANSPORT COMMISSION LICENCES. The *Transport Commission Act, 1966-1975* provides for the licensing of public vehicles in the categories of omnibus, commercial goods vehicle, trailer or semi-trailer, and aircraft, as well as ships engaged in the coasting trade. Licence fees are as determined from time to time by the Commissioner of Transport, subject to certain maximum charges prescribed by the Act. In the case of an omnibus for example, the fee may not exceed 6 per cent of the gross earnings, or \$10 per annum for each unit of the maximum number of passengers which it is licensed to carry, the basis of assessment being that considered by the Commissioner to be the more appropriate.

ROAD MAINTENANCE CONTRIBUTION. The *Road Maintenance (Contribution) Act, 1965-1972* imposes a charge on the operations, subject to specified exemptions of any commercial goods vehicle having a load capacity of more than 8·13 tonnes. At 31 December 1975 the rate of the charge was 0·17 cents per tonne-kilometre calculated on the basis of the tare weight plus two-fifths of the load capacity. The Act provides that, in specified circumstances, the charge may be levied on vehicles having a load capacity of 8·13 tonnes or less.

METROPOLITAN REGION IMPROVEMENT TAX. The *Metropolitan Region Improvement Tax Act, 1959-1966* authorises a tax, with certain specified exemptions, on every owner of land within the Metropolitan Planning Region. (The Region is coterminous with the Perth Statistical Division; see maps preceding the *Index*.) The rate of tax payable for the assessment year ended 30 June 1975 was one-quarter of a cent for every dollar of the unimproved value of all land chargeable with the tax.

VERMIN RATE. The *Vermin Act, 1918-1973*, in addition to prescribing levies imposed for the purposes of local Vermin Boards, authorises a special vermin rate, the revenue from which is used by the Agriculture Protection Board for the control or eradication of animals, birds and insects declared to be vermin within the meaning of the Act. Subject to certain exemptions, every holding of an area of more than five acres is rateable. The rate, as prescribed by the Act, may not exceed two and one-half cents in the dollar of the unimproved capital value in the case of land held under pastoral lease, or five-twelfths of a cent in the dollar in the case of other holdings. For the assessment year 1969-70, the rate was two cents in the dollar on pastoral leases and 0·14 of a cent in the dollar on other holdings. (The *Vermin Act Amendment Act, 1970* suspends imposition of the rate with effect from 30 June 1970.)

NOXIOUS WEEDS RATE. The *Noxious Weeds Act, 1950-1973* contains provisions relating to noxious weeds which are generally similar to those of the Vermin Act in relation to declared vermin. The maximum rate as prescribed by the Act is, in the case of a pastoral lease, one and one-quarter cents and, in the case of other land, five twenty-fourths of a cent in the dollar of the unimproved value of the holding. In 1969-70 the rate was not levied in respect of pastoral land. The rate payable on other land was 0·07 of a cent in the dollar. (The noxious weeds rate was abolished, with effect from 1 July 1970, by the *Noxious Weeds Act Amendment Act, 1970*.)

FRUIT FLY ERADICATION. The *Plant Diseases Act, 1914-1974* provides for the compulsory registration of orchards and the payment of registration fees to be credited to a fund to finance the control, prevention, and eradication of the fruit fly pest. In accordance with regulations gazetted on 30 June 1972 a fee of twenty cents is payable on registration of an orchard having an area of less than one acre. This fee is levied once only. An annual fee at the rate of fifty cents per acre or part of an acre is payable in respect of an orchard of one acre or more, except that the maximum annual fee is \$6 in the case of a vineyard the fruit of which is used only for the manufacture of wine.

STATE GOVERNMENT FINANCE

Moneys collected and expended by the State Government are dealt with through accounts based on funds of three types, the Consolidated Revenue Fund, the General Loan Fund and Trust Funds. The transactions of these Funds are summarised in the Public Accounts prepared each year by the Treasurer and in the Financial Statement presented to the Parliament by the Treasurer in introducing the annual budget.

Public finance statistics published by the States are limited generally to dissections of the revenue, loan and debt transactions of State Governments and local government authorities. However, work has been proceeding in recent years on the development of a new system of public authority finance statistics with the aim of providing data on the financial transactions of all public authorities. This information is required by government departments and many other users for economic analysis and social inquiries, and for a wide variety of other purposes.

Although comprehensive statistics compiled on the new basis have not yet been published for the several States, a limited analysis is available in the printed bulletin *Public Authority Finance, 1969-70* issued March 1972 by the Australian Statistician, Canberra. More recent figures are contained in the mimeographed release *Public Authority Finance: State and Local Authorities, 1973-74* published February 1976 by the Australian Statistician.

Consolidated Revenue Fund

All State revenues, apart from those which are credited to trust or special accounts, are paid into the Consolidated Revenue Fund. Disbursements from the Fund are authorised by the Parliament, each year under an Appropriation Act, or under Special Acts subject to periodical review. Among the permanent appropriations by Special Acts are such items as the salaries of the Governor of Western Australia, the Judges of the Supreme Court and Members of Parliament, interest charges on the public debt, contributions to the Public Debt Sinking Fund, payments to the State Superannuation Fund and the annual subsidy to the University of Western Australia.

The principal sources of revenue, as shown in the table on page 285, are the grants and other financial assistance received from the Australian Government; the income of public utilities; taxation; departmental revenues from reimbursements, fees and services; and territorial revenues.

Payments made to the State of Western Australia by the Australian Government during each of the years from 1970-71 to 1974-75 appear in the table on page 276. Not all of these moneys are paid to the State Consolidated Revenue Fund, as some of them are provided for specific purposes and are paid to trust or other accounts.

Territorial revenues are those derived from royalties, sales of Crown land, and the issue of leases, licences and permits in connection with land, mining and timber. Reference to the several types of tenure in these categories will be found in Chapter VII, Part 1—*Land Tenure and Settlement*.

There has been a considerable increase in recent years in revenue from mining royalties, due principally to greatly accelerated exploitation of iron ore and nickel deposits and the commencement of oil drilling on a commercial scale. Reference to these developments will be found in Chapter VIII, Part 2—*Mining*. Collections of royalties on all minerals

amounted to \$15.7 million in 1969-70, \$22.3 million in 1970-71, \$25.2 million in 1971-72, \$27.7 million in 1972-73, and \$33.6 million in 1973-74. Total revenue from this source in 1974-75 was \$39.4 million, comprising \$35.7 million from iron ore, \$1.23 million from nickel, \$1.22 million from crude petroleum, \$0.50 million from bauxite, \$0.28 million from natural gas, \$0.23 million from salt, and \$0.21 million from all other minerals.

GRAND TOTAL	318,189	367,252	423,999	473,840	567,683

(a) Less than \$500. (b) For further details, see table *State Government Taxation—Net Amounts Collected* on page 286. (c) See table on page 276. (d) Includes payments in place of a Special Grant: 1969-70, \$15.5 million; 1970-71, \$12.5 million; 1971-72, \$9.5 million; 1972-73, \$6.5 million; 1973-74, \$6.5 million (see letterpress *The Grants Commission* on page 275).

The amounts shown in the following table are grouped according to the nature of the tax rather than the method of collection. Thus stamp duties on betting tickets and revenue from bookmakers' licences and totalisator licences are included under the heading 'Racing' and not under 'Stamp duties' or 'Licences'. Figures for some types of licences and other fees representing net collections paid to the Consolidated Revenue Fund are not included under taxation revenue (gross) in the table on page 285, earnings from them being credited to departmental revenue. Items dealt with in this way include drivers' licences and fees as shown in the first part of the table, as well as licences relating to firearms; factories and shops; fishing, pearling and game; and marine collectors. Other moneys paid to departmental revenue are fees collected under the provisions of the Companies Act and the Business Names Act. Net tax collected by the State rose from \$72,991 in 1969-70 to \$143,354 in 1973-74.

STATE GOVERNMENT TAXATION—NET AMOUNTS COLLECTED (a)
(\$'000)

Nature of tax	1969-70	1970-71	1971-72	1972-73	1973-74

Total	20,385	21,168	21,705	21,270	23,190
GRAND TOTAL	72,991	70,874	98,264	114,889	143,354

(a) For rates and conditions applying to the several taxes, see pages 280-4. (b) On 1 October 1971 the State Government commenced collection of pay-roll tax on wages paid or payable by employers after 31 August 1971; pay-roll tax had previously been levied by the Australian Government. (c) Tax abolished with effect from 1 January 1971. (d) See *Letterpress Finance for Roads*, Chapter IX, Part 3. (e) Includes amounts collected by local government authorities and paid to the Main Roads Trust Account, as required by the *Traffic Act Amendment Act (No. 2), 1969*. (f) Includes revenue from Taxi Control Board Licences and Transport Commission Licences. (g) Vermin rate suspended with effect from 30 June 1970; amount shown represents arrears. (h) Noxious weeds rate abolished with effect from 1 July 1970; amount shown represents arrears. (i) Includes fees collected under the Plant Diseases Act; see *letterpress Fruit Fly Eradication* on page 284.

The next table is designed to show (in respect of the Consolidated Revenue Fund only) the gross and net cost of each activity of Government irrespective of the Department or Departments administering these activities. In cases where an activity is such that it involves more than one function, each of its components has been included in that activity which is considered to be the most appropriate. For example, in classifying expenditure attributable to child welfare, the custody and care of delinquent children is included under 'Law, order and public safety' and the education of children in institutions under 'Education', only the balance being assigned to the item 'Welfare'.

The amount shown as revenue under the heading 'General administration and services, not elsewhere included' is almost two-thirds of the total. The item includes receipts from the Australian Government and taxation collected by the State amounting in all to \$298.4 million in 1972-73 and \$362.1 million in 1973-74.

By a provision of the *State Government Insurance Office Act, 1938-1965* the State Government Insurance Office is required to pay each year to the Treasury the equivalent of the amount of State taxes on profits or income that any insurance company, other than a life insurance company, would be liable to pay. The amounts shown as revenue under 'Banking and insurance' include \$477,963 in 1972-73 and \$373,663 in 1973-74 in relation to such payments. The expenditure under the heading of 'Banking and insurance' comprises mainly reimbursements from the Treasury to The Rural and Industries Bank of Western Australia of administration expenses incurred in the conduct of its Government Agency Department. These recoups were \$95,754 in 1972-73 and \$78,425 in 1973-74.

CONSOLIDATED REVENUE FUND
REVENUE AND EXPENDITURE CLASSIFIED ACCORDING TO ACTIVITY

Total	473,840	477,330	(a) 3,490	567,683	573,414	(b) 5,731

(a) Published Budget deficit, \$3,489,510.

(b) Published Budget deficit, \$5,731,000.

The particulars shown in the following table and in the table on page 285 are an abridged form of the presentation given in the Public Accounts. It is, of course, possible to present the figures of income and expenditure of the Consolidated Revenue Fund on other bases for particular purposes. One such grouping is a dissection according to activity as in the preceding table. The classification used has been summarised for the purposes of this table from a more detailed statement appearing in *Statistics of Western Australia—Finance* issued annually by the Western Australian Office of the Bureau.

General Loan Fund and Public Debt

General Loan Fund. The first Loan Act in Western Australia was assented to in 1872 and gave authority for the raising of a loan for public works, mainly in connection with harbours and rivers, for the purchase of the Perth-Fremantle telegraph line and for railway surveys in the Champion Bay district. A General Loan Fund was established by

the Loans Consolidation Act of 1896 which provided for the merging in the Fund of all loan balances unexpended at 30 June 1896, and since that time the proceeds of each new loan have been paid to the credit of the General Loan Fund.

Details of gross expenditure from the General Loan Fund for particular purposes of government, during the five-year period ended 30 June 1974, are given in the following table.

Where an activity is such that it involves more than one function, each of its components has been included in that function which is considered to be the most appropriate. For example, in classifying expenditure attributable to the development of agriculture, the expenditure on Muresk Agricultural College is included under *Education*, only the more general items being assigned to 'agriculture', which is included in *Development and conservation of natural resources and assistance to industry*.

GENERAL LOAN FUND
GROSS EXPENDITURE CLASSIFIED ACCORDING TO PURPOSE
(\$'000)

Purpose	1969-70	1970-71	1971-72	1972-73	1973-74
Legislation	60	342	118	5	...

Transport and communication	14,223	13,145	11,913	10,532	12,524
Power, fuel and light	4,567	28	3,666	4,104	3,467
Housing	3,601	5,786	24,275	15,614	4,950
Miscellaneous	427	1,475	3,116	2,318	1,022
Total	70,170	72,400	92,330	95,488	87,019

(a) Less than \$500.

Expenditure on *Education* during 1973-74 amounted to \$15.2 million. Of this total, \$14.2 million was spent on primary and secondary education, \$0.76 million on technical education and \$0.13 million on teacher training.

Expenditure on *Public health* (\$16.0 million) was mainly for the provision of new hospitals and extensions to existing hospitals.

The principal items of expenditure included under the heading *Development and conservation of natural resources and assistance to industry* related to water supply, sewerage and town drainage (\$25.4 million), secondary industries (\$0.93 million) and forestry (\$1.7 million). An account of progress in the field of water conservation and supply is given in Chapter VII, Part 2.

The item *Transport and communication* (\$12.5 million) comprised \$9.97 million spent on railways and \$2.56 million on harbours.

Expenditure on *Power, fuel and light* consisted mainly of advances to The State Electricity Commission, the activities of which are described in Chapter VIII, Part 3.

Expenditure attributed to *Housing* was principally the provision of additional capital to The State Housing Commission for the erection of houses, land acquisition and development, and assistance to home builders. This expenditure, which relates only to the General Loan Fund, does not, of course, include moneys applied to the Commission's purposes from Commonwealth loans under the Commonwealth-State Housing Agreement. Reference to the Agreement and to the work of The State Housing Commission will be found in Chapter V, Part 4.

The following table shows the amounts of loan raisings and redemptions by or on behalf of the State Government during the five-year period ended 30 June 1974. Figures shown exclude particulars of loans raised independently by public corporations and local government authorities.

LOAN RAISINGS AND REDEMPTIONS

Public Debt. Western Australia's gross public debt at 30 June 1974, was \$1,074 million, compared with \$840 million at 30 June 1969, representing an increase of \$234 million during the five years. Total raisings in the financial years 1969-70 to 1973-74 amounted to \$296 million and the value of securities repurchased and redeemed in Australia, London, New York, Canada and the Netherlands by the National Debt Commission was \$62.5 million.

The next table presents a summary of public debt transactions in each year of the period between 30 June 1969 and 30 June 1974.

Reference is made on page 274 to the Sinking Funds established by the Financial Agreement of 1927 designed to redeem the public debts of the States. Transactions of the National Debt Sinking Fund in respect of the public debt of Western Australia during the five-year period ended 30 June 1974 are shown in the second table on page 291.

(a) At net cost including exchange.

Trust Funds

Trust funds are divided into three groups, governmental, private, and those which deal with moneys advanced by the Australian Government for specific purposes. A detailed list of trust fund transactions is published quarterly in the *Statement of the Receipts and Disbursements of Western Australia*. The following table contains a summary of the more important items selected from this list and shows the balance of each trust fund at 30 June 1974.

LOCAL GOVERNMENT FINANCE

The financial powers of local government authorities in Western Australia are derived principally from the *Local Government Act, 1960-1975*, the main provisions of which are outlined in Chapter III—*Constitution and Government*.

General Revenue and Expenditure

The following table gives a summary of the revenue of local government authorities during the five years 1969-70 to 1973-74.

SUMMARY OF LOCAL GOVERNMENT REVENUE (a) (\$'000)

Source of revenue	1969-70	1970-71	1971-72	1972-73	1973-74
Taxation—					
Rates	22,530	25,630	30,368	33,624	38,241
Licences and fees	521	522	580	707	1,130
Total	23,051	26,152	30,948	34,331	39,371
Public works and services—					
Income from property and plant—					
Parks, gardens and other recreational facilities	1,784	1,883	2,602	2,627	2,943
Halls and other buildings	1,005	1,607	1,485	1,777	4,124
Vehicles and plant	1,252	1,547	1,529	1,783	3,657
Land sales	2,319	3,299	2,517	2,001	1,006
Other property	2,016	1,192	1,192	1,198	5,335
Contributions for road construction, etc. (b)	4,640	5,430	5,287	6,314	3,551
Sanitation charges (including garbage services) (c)	1,629	1,978	2,475	3,062	4,250
Other works and services	1,550	2,190	2,528	2,811	
Total	16,195	19,126	19,615	21,573	24,866
Government grants and reimbursements—					
Roads (d)	15,761	16,908	18,128	18,874	21,386
Unemployment relief			1,074	3,915	480
Recreational facilities (e)	333	797	1,095	618	326
Other	250	395	725	862	1,905
Total	16,344	18,100	21,022	24,269	24,097
Loan raisings	14,018	15,901	14,805	18,685	21,345
Business undertakings	3,660	4,089	4,101	3,458	3,288
Other revenue—					
Fines and penalties	783	838	879	975	1,139
Interest	737	1,043	1,185	1,268	1,992
Other	1,808	1,866	1,896	1,897	4,903
Total	3,327	3,747	3,960	4,141	8,034
GRAND TOTAL	76,595	87,115	94,451	106,457	121,000

(a) Including loan receipts. (b) Includes reimbursements from various government instrumentalities for road construction and repair. Excludes grants and reimbursements from the Main Roads Department, which are included in 'Government grants and reimbursements—Roads' shown below. (c) Excludes revenue received where the charge is incorporated in the general (municipal) rate. (d) Includes grants and reimbursements from the Main Roads Department; see also footnote (b). (e) Includes grants from the Department of Tourism.

SUMMARY OF LOCAL GOVERNMENT EXPENDITURE (a) (\$'000)

Nature of expenditure	1969-70	1970-71	1971-72	1972-73	1973-74

(a) Including loan expenditure. (b) Excludes debt services of electricity undertakings. (c) From 1972-73, expenditure on street cleaning included in *Sanitary and garbage services*. (d) See footnote (c). (e) Includes contributions to Regional Traffic Councils. (f) Contributions required under the Fire Brigades Act.

Loan Transactions

Under the provisions of the local government legislation, local government authorities are constituted as corporate bodies and are authorised to raise loans for works and undertakings and for the liquidation of existing loan debts. The conditions imposed by the *Local Government Act, 1960-1975* in relation to loan raisings, the levying of loan rates, the expenditure of loan moneys and the repayment of loans are summarised on pages 131-2 under the heading *Financial Provisions*.

Loans are raised mainly from banks, insurance companies and superannuation funds. The State Government exercises a measure of supervision over the loan transactions of local government authorities and, where a loan is repayable in full at maturity, maintains the necessary sinking fund at the Treasury.

Loan receipts and expenditure of local government authorities in each financial year from 1969-70 to 1973-74 are included in the general revenue and expenditure tables shown above.

The following table shows the aggregate local government loan debt outstanding at 30 June of each year during the period from 1970 to 1974. At 30 June 1974, local government loan debt amounted to \$114,819,000.

PENSION AND SUPERANNUATION SCHEMES

The Western Australian Government and many local government authorities and public corporations have established pension and superannuation schemes for eligible employees and their dependants, to which both employers and employees contribute. These schemes are operated either through separately constituted funds or through life insurance offices.

The *Superannuation and Family Benefits Act, 1938-1975* applies to employees of State Government Departments and some other public authorities. The Act establishes The Superannuation Fund and a Provident Account under the management of a Superannuation Board. Contributions made by the State are paid from the Consolidated Revenue Fund.

The *Superannuation, Sick, Death, Insurance, Guarantee and Endowment (Local Government Bodies' Employees) Funds Act, 1947-1975* enables local government authorities to establish funds to provide benefits for their employees. Contributions made by an authority are paid from its ordinary revenue.

In the next table, particulars are given of pension and superannuation schemes established by the State Government, local government authorities, public corporations, the University of Western Australia, Murdoch University, and The Western Australian Institute of Technology. Separate details are shown for schemes operated through separately constituted funds and for those operated through life insurance offices. The numbers of contributors at 30 June 1974 were 24,786 and 4,405, respectively.

Chapter VI—continued
Part 2—Private Finance

CURRENCY

The power to legislate with respect to currency, coinage and legal tender and the issue of paper money is vested by the Constitution in the Commonwealth Parliament. This power was originally exercised by the Commonwealth Government under the Coinage Act of 1909 and the Australian Notes Act of 1910. These Acts and later amendments were superseded by the *Reserve Bank Act* 1965 and the *Currency Act* 1965 when a decimal currency system was adopted in Australia with effect from 14 February 1966.

Prior to 14 February 1966 the Australian currency was based on the system then in use in the United Kingdom, and therefore had as its unit the pound (£) divided into twenty shillings (s.) each of twelve pence (d.). The *Currency Act* 1965, which replaced the *Coinage Act* 1909-1947, provides for the adoption of a monetary unit known as the 'dollar', equivalent in value to ten shillings in the currency previously in use. The dollar is divided into 100 minor units, or 'cents'. Coins are in the denominations of 50 cents, 20 cents, 10 cents, 5 cents, 2 cents and 1 cent. The *Reserve Bank Act* 1965 authorises the issue of notes in the denominations of one dollar, 2, 5, 10, 20 and 50 dollars, or in any other denomination that the Treasurer determines. Notes currently issued are in the denominations of 1, 2, 5, 10, 20 and 50 dollars.

Australian notes are legal tender in Australia to any amount, coins of the denominations of 5, 10, 20 and 50 cents for amounts not exceeding five dollars, and two-cent and one-cent coins for amounts up to and including 20 cents.

Rates of Exchange

The following table shows the average telegraphic transfer selling rates of exchange for Sydney (New South Wales) on a selection of overseas countries. The figures appearing in the table, which are averages of daily quotations, are based generally on rates quoted by the Commonwealth Trading Bank of Australia.

OVERSEAS EXCHANGE RATES—AVERAGE TELEGRAPHIC TRANSFER SELLING RATES
 SYDNEY ON OVERSEAS COUNTRIES: JUNE 1975

Country	Currency	Number to \$A1	Country	Currency	Number to \$A1
Austria	Schillings	21·94	New Zealand	Dollars	1·016
Belgium (a)—			Norway	Kroner	6·51
Financial rate	Francs	47·98	Noumea	Francs	96·66

Japan	Yen	389·13	United States of America	Dollars	1·3355
Netherlands	Guilders	3·195			

(a) The 'convertible' rate applies to trade transactions accompanied by documentation; in respect of other transactions the 'financial' rate applies. (b) Rate of exchange used in converting import values to Australian currency for the purpose of calculating customs duty.

BANKING

The banking system in Western Australia comprises the Commonwealth banking institutions, The Rural and Industries Bank of Western Australia and the private trading banks, summary details of which are given below.

Commonwealth Banking Institutions

Prior to the operation of the Reserve Bank Act and the Commonwealth Banks Act, passed by the Commonwealth Parliament in 1959, the Commonwealth banking institutions were the Commonwealth Bank, the Commonwealth Trading Bank and the Commonwealth Savings Bank. The Commonwealth Bank, in addition to performing the functions of a central bank, controlled the Australian note issue through a Note Issue Department and also provided special banking facilities through the Rural Credits Department, the Mortgage Bank Department and the Industrial Finance Department. The policy of the Banks was determined by a Commonwealth Bank Board.

The *Reserve Bank Act 1959* repealed the Commonwealth Bank Acts, the first of which was passed in 1911, and established the Reserve Bank of Australia under the control of a Reserve Bank Board. The Reserve Bank was constituted as the central bank and took over the Note Issue Department and the Rural Credits Department of the former Commonwealth Bank. The function of the Rural Credits Department is to make available to statutory authorities or co-operative associations of primary producers advances to assist the marketing or processing of primary products.

The *Commonwealth Banks Act 1959* constituted the Commonwealth Banking Corporation, which came into being on 14 January 1960 as the authority responsible for the operations of the Trading Bank, the Savings Bank and a new Development Bank. The Development Bank was formed basically from the Mortgage Bank Department and the Industrial Finance Department of the Commonwealth Bank, to provide finance and advice to persons to assist them in primary production or in the establishment or development of industrial undertakings, particularly small enterprises.

The Rural and Industries Bank of Western Australia

The Rural and Industries Bank of Western Australia was established by the State Government under the Rural and Industries Bank Act of 1944 to replace the former Agricultural Bank of Western Australia. The Bank consists of a Rural Department and a Government Agency Department, and management is vested in five Commissioners. The Rural Department provides general banking services and, since 1956, has also conducted savings bank business through a Savings Bank Division.

Trading Banks

At 30 June 1975 the trading banks conducting business in Western Australia comprised the Commonwealth Trading Bank of Australia, The Rural and Industries Bank of Western Australia (Rural Department), the Australia and New Zealand Banking Group Limited, The Bank of Adelaide, the Bank of New South Wales, the Banque Nationale de Paris, The Commercial Bank of Australia Limited, The Commercial Banking Company of Sydney Limited and The National Bank of Australasia Limited.

The operations of trading banks are governed by the *Banking Act 1959-1974* (Commonwealth) which places them under a degree of control by the central bank, the Reserve Bank of Australia.

The following table shows the averages of total amounts on deposit with the trading banks and of their outstanding advances during each of the years 1970-71 to 1974-75. The figures relate to Western Australian business only and represent the annual average of amounts as at the close of business each Wednesday. The information is prepared from returns furnished under the requirements of the *Banking Act 1959-1974* by all trading banks except The Rural and Industries Bank of Western Australia, which supplies information by special arrangement.

TOTAL, ALL TRADING BANKS	486	139	414,757	535,742	950,496	725,088

(a) At 30 June. (b) Averages based on amounts at close of business each Wednesday. (c) Excludes loans to authorised dealers in the short-term money market.

In July 1975 the outstanding advances of the trading banks, excluding The Rural and Industries Bank of Western Australia and the Banque Nationale de Paris, amounted in total to \$518.1 million. Business advances represented \$361.8 million, personal advances \$147.6 million, advances to non-profit organisations \$6.5 million, and to public authorities other than the Australian Government and the State Government \$2.0 million. Business advances were mainly for rural industry (\$100.6 million), for retail and wholesale trade (\$75.8 million) and for mining (\$45.1 million). Of the personal advances, loans for the building or purchasing of homes accounted for \$38.9 million.

The following table contains particulars of the average weekly debits to customers' accounts in each year from 1970-71 to 1974-75 and in each quarter of those years. The figures represent the total of all cheques drawn by customers of all trading banks and, in addition, the Rural Credits Department of the Reserve Bank of Australia and the Commonwealth Development Bank of Australia. Debits to Australian Government and State Government accounts at city branches are excluded as they are subject to abnormal influences. The figures are derived by averaging the debits made during weeks ended on Wednesdays during the several periods shown.

TRADING BANKS

Average for year	291.4	304.2	334.4	405.4	463.1

(a) Excludes debits to Australian Government and State Government accounts at city branches; see letterpress immediately preceding table.

Bank Charges. In October 1962 the trading banks discontinued the interstate exchange rates previously charged and instituted a system of charges on current accounts. The charges, comprising three separate elements, are calculated quarterly and debited as one composite item. In addition to a basic maintenance fee, there is a ledger activity fee, and a collection fee on cheques deposited in excess of twenty per quarter. Rebates are allowable on ledger activity fees where credit balances are maintained at the level of \$1,000 or more throughout the quarterly period.

Savings Banks

At 31 December 1975, savings banks operating in Western Australia comprised the Commonwealth Savings Bank of Australia, The Rural and Industries Bank of Western Australia (Savings Bank Division), the Australia and New Zealand Savings Bank Limited, The Bank of Adelaide Savings Bank Limited, the Bank of New South Wales Savings Bank Limited, The Commercial Savings Bank of Australia Limited, the C.B.C. Savings Bank Limited and The National Bank Savings Bank Limited.

Individual depositors may not operate on their savings bank accounts by cheque, but cheque accounts are generally available to non-profit organisations such as friendly, co-operative and charitable societies. Interest is paid on deposits with savings banks and no charge is made for the keeping of accounts. A school savings bank service is provided and its operations, except for the number of accounts open at the end of each year, are included in the figures shown in the following table which shows savings bank transactions for the five years ended 1974-75.

SAVINGS BANK TRANSACTIONS

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Deposits (a) \$'000	781,226	893,458	1,058,068	1,317,384	1,625,973
Withdrawals (a) \$'000	763,788	864,129	981,107	1,265,823	1,565,650
Excess of deposits over withdrawals \$'000	17,438	29,329	76,961	51,561	60,323
Interest added to accounts \$'000	15,295	17,518	19,716	25,281	34,123
Accounts open at end of year (b) No.	1,153,420	1,205,448	1,250,576	1,327,699	1,401,485
Depositors' balances at end of year—					
Total \$'000	464,611	511,457	608,133	684,974	779,427
Average per operative account \$	402·8	424·3	486·3	515·9	556·1
Average per head of population \$	451	486	569	632	694

(a) Includes inter-branch transfers but excludes transfers from and to other States.
(i.e. accounts of less than \$2 which have not been operated on for more than two years).

(b) Excluding inoperative accounts

The following table, which relates to Western Australian business only, shows the number of branches and agencies of each of the savings banks at 30 June 1975. The amount of depositors' balances held by each bank at the end of June 1975 is also shown. This information, together with similar particulars for each of the other Australian States, is published monthly in the *Australian Government Gazette*, and is prepared from returns furnished under the requirements of the *Banking Act 1959-1974* by all savings banks except The Rural and Industries Bank of Western Australia (Savings Bank Division), which supplies information by special arrangement.

SAVINGS BANKS—BRANCHES, AGENCIES AND DEPOSITS
JUNE 1975

Bank	Number of branches (a)	Number of agencies (a)	Depositors' balances (b)
			\$'000
Commonwealth Savings Bank of Australia	92	659	329,705
The Rural and Industries Bank of Western Australia (Savings Bank Division)	73	406	161,707
Other savings banks—			
Australia and New Zealand Savings Bank Limited	74	459	71,785
The Bank of Adelaide Savings Bank Limited	2	6	1,619
Bank of New South Wales Savings Bank Limited	126	380	129,084
The Commercial Savings Bank of Australia Limited	43	38	25,015
C.B.C. Savings Bank Limited	10	5	3,944
The National Bank Savings Bank Limited	80	85	56,568
Total, Other savings banks	335	973	288,015
TOTAL, ALL SAVINGS BANKS	500	2,038	779,427

(a) At 30 June. (b) Particulars for the Commonwealth Savings Bank and The Rural and Industries Bank of Western Australia (Savings Bank Division) relate to 30 June, and those for other savings banks to the last Wednesday in June.

In December 1969 approval was given by the Reserve Bank of Australia to a proposal for the establishment of a new type of savings bank account on which interest could be paid at rates almost 1 per cent above the general deposit rate paid at that time by most savings banks. The holder of such an account is required to give three months' notice before a withdrawal may be made. The account must also have, at all times, a minimum balance of \$500 and transactions are in minimum amounts of \$100. The maximum rate of interest payable on these 'investment' accounts at 30 June 1975 was 9·00 per cent per annum.

Bank Interest Rates

The following table shows bank interest rates current at 30 June 1975, the dates from which they became operative, and the rates which were applicable prior to those dates, for both loans and deposits.

BANK INTEREST RATES AT 30 JUNE 1975

Particulars	Rate per annum	Date from which operative	Previous rate per annum
	per cent		per cent
LENDING RATES			
Trading banks—			
Overdraft—			
Less than \$50,000 (a)	11.50	1974— 9 July	9.50
\$50,000 and over	(b)	1973—17 September	(b)
Unsecured personal loans (a) (c)	8.25	1974— 9 July	7.25
Commonwealth Development Bank of Australia—			
Rural loans (d)	10.50	9 July	8.50
Industrial loans (d)	11.00	1975—14 March	11.50
Reserve Bank of Australia, Rural Credits Department	9.50-10.00	1974—15 July	7.00-7.25
Savings banks—			
Housing loans to individuals (e)	8.75-10.00	1975— April	9.25-10.00
Other loans—			
Less than \$50,000 (a)	11.50	1974— 9 July	9.50
\$50,000 and over	(b)	1973— 1 October	(b)

DEPOSIT RATES

Trading banks—			
Fixed deposits of less than \$50,000—			
3 months and less than 6 months	8.00-9.00	1975— March	8.50-9.00
6 months and less than 2 years	8.25-9.50	May	8.50-9.50
2 years and less than 4 years	8.00-9.50	April	8.75-9.50
Fixed deposits of \$50,000 and over (a) (b)—			
30 days to 4 years	10.00	1974— 9 July	8.00
Certificates of deposit of \$50,000 and over (b)—			
3 months to 4 years	(f)	1973—17 September	6.50
Savings banks—			
Ordinary accounts (g)—			
\$4,000 and under	3.75-6.25	1975— April	3.75-6.50
Over \$4,000	5.00-6.25	April	6.00-6.50
Investment accounts (h)	8.00-9.00	March	9.00

(a) Maximum rate. (b) Actual rates are a matter for negotiation between banks and their customers. (c) Flat rate. (d) Basic rate. (e) Range of rates predominantly charged. (f) Not subject to maximum rate. (g) The lower rate shown has predominated in the case of most banks. (h) Subject to special notice and minimum balance requirements (see previous page).

INSURANCE

General Insurance

General insurance is available to the public in Western Australia from a number of companies and, in some fields, from the State Government Insurance Office. There is also a Motor Vehicle Insurance Trust whose activities are confined to motor vehicle third party insurance.

The *Insurance Act 1973* (Commonwealth) establishes a comprehensive system of supervision of general insurance business throughout Australia. The Act prescribes minimum standards of financial soundness and authorises the investigation of any insurer who fails to meet the required standards or who appears to be likely to fall below those standards. The Act provides for the appointment of an Insurance Commissioner who is responsible, subject to any directions of the Treasurer, for the administration of the legislation.

During 1974-75, there were 120 companies operating in Western Australia. The majority of these were 'tariff' offices, being members of the Fire and Accident Underwriters' Association and issuing the standard policies of the Association at uniform premium rates. The remainder were 'non-tariff' companies effecting insurances at competitive rates and reinsuring direct with Lloyd's or other underwriters.

The State Government Insurance Office covers fire, marine and general insurance risks for State Government instrumentalities and semi-government and local government authorities. It also conducts some classes of insurance business for the general public, the principal transactions being employers' liability (workers' compensation) and com-

prehensive motor vehicle insurance. By authority of amendments to the State Government Insurance Office Act in 1954 and 1958 the Office engages in personal accident insurance in respect of school children and students under a policy which indemnifies the parent or guardian against the cost of medical and surgical treatment and funeral and other expenses.

The following table gives details of general insurance transactions during each of the years from 1970-71 to 1974-75. It contains only selected items of statistics and is therefore not suitable for the construction of a 'Profit and Loss' statement or 'Revenue Account'. The amounts shown as 'Premiums' represent the full amount receivable in respect of policies issued or renewed during the year, less stamp duty, returns, rebates and bonuses paid or credited to policy holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from 'earned premium income' appropriate to the year. The amounts shown as 'Claims' include provision for outstanding claims and represent claims or losses incurred during the year. Salvage and other amounts recoverable have been deducted. The transactions of The Motor Vehicle Insurance Trust are included and they are also shown separately in the table on page 305. The figures shown under the heading of 'Contributions to fire brigades' represent payments made to the Western Australian Fire Brigades Board for the operation and maintenance of fire brigades, as required by the Fire Brigades Act.

Other underwriting expenses	n.a.	n.a.	n.a.	n.a.	760

n.a. denotes 'not available'.

(a) Includes transactions of The Motor Vehicle Insurance Trust (see table on page 305) and the State Government Insurance office. (b) Figures for years prior to 1974-75 relate to hailstone only. (c) Excludes workers' compensation insurance in the coal mining industry.

Life Insurance

Life insurance business throughout Australia is regulated by the *Life Insurance Act 1945-1973* (Commonwealth), which requires companies to be registered by the Life Insurance Commissioner appointed under the Act. The purpose of the Act, which supersedes State legislation, is to place life insurance business on a uniform basis throughout the Commonwealth and to afford protection to policy holders.

At 30 June 1975, there were thirty-nine life insurance companies or societies operating in Western Australia. In terms of total sums insured, life insurance policies relate predominantly to ordinary endowment or whole-of-life insurance and superannuation, although an appreciable volume of industrial business is also undertaken.

Details of policies, sums insured and annual premiums for each class of business are given in the following table for the years 1970-71 to 1974-75.

LIFE INSURANCE

Year	New policies issued			Policies discontinued or reduced			Policies, etc. existing at end of year		
	Policies	Sum insured	Annual premiums	Policies	Sum Insured	Annual premiums	Policies	Sum insured	Annual premiums
	Number	\$'000	\$'000	Number	\$'000	\$'000	Number	\$'000	\$'000

(a) Increase due mainly to conversion of a superannuation scheme from individual policies to a blanket policy.

Motor Vehicle Third Party Insurance

Third party insurance in connection with motor vehicle accidents became compulsory on 1 July 1944 under the provisions of the Motor Vehicle (Third Party Insurance) Act of 1943. The Motor Vehicle Insurance Trust was established by an amendment to the Act in 1948 and comprises the general manager of the State Government Insurance Office, three members nominated by the Fire and Accident Underwriters' Association of Western Australia, and one nominee of those participating approved insuring organisations which are not members of the Association.

The Trust administers a Motor Vehicle Insurance Fund in which approved insurers participate. Premiums received from motor vehicle third party insurance and revenue from other sources constitute annual 'pools' and, after payment of claims and other

expenses appropriate to each pool, the resulting profit or loss is shared by the participating insurers, which include the State Government Insurance Office. These shares cannot be finally determined until the last claim is paid and it is usually several years before a pool has satisfied all the claims attributable to it. For this reason, the figures given in the following table are subject to progressive revision as the business of each pool approaches finality.

THE MOTOR VEHICLE INSURANCE TRUST
(S'000)

Revenue and expenditure	Pool (a) for the year—				
	1970-71	1971-72	1972-73	1973-74	1974-75

(a) See accompanying letterpress *Motor Vehicle Third Party Insurance*. Figures are revised to 30 June 1975. (b) Inclusive of \$4.61 million unearned premiums. (c) Includes estimate for claims outstanding. (d) Includes an allowance for claims not notified.

Health Insurance Organisations

Voluntary health insurance is offered by a number of organisations which provide one or more types of benefit covering such items as hospitals and medical fees, funeral expenses and sick pay to or on behalf of contributing members and their dependants. They include societies registered under the *Friendly Societies Act, 1894-1975* and other organisations registered under the *National Health Act 1953-1975* (Commonwealth).

Benefits are available in a wide range to meet the cost, either wholly or in part, of such services as treatment by a general or specialist medical practitioner (including surgical operations and obstetrical attention), X-ray, cardiographic and pathological examinations, physiotherapy, dental treatment, hospital care, home nursing and ambulance transport. Members of friendly societies may contribute also for the supply of medicines and some societies maintain endowment assurance funds and supplementary death benefit funds.

The following tables give details, for the years 1970-71 to 1974-75, of the membership and the financial activities of friendly societies registered under the Friendly Societies Act. 'Benefit' members are those who contribute to the Sick and Funeral Fund of a society and 'other' members are principally those who pay only for medical and hospital benefits. Total membership of registered societies at the end of 1974-75 stood at 80,788 and the balance of funds amounted to \$5,451,000.

CO-OPERATIVE SOCIETIES

Co-operative societies are divided into three classes, namely (i) those engaged in the manufacture and marketing of primary products and trade requirements, (ii) those engaged in retailing general household requirements, and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as producers' co-operative societies and the second as consumers' co-operative societies. Co-operative societies in Western Australia are registered under the provisions of the *Companies (Co-operative) Act, 1943-1959* or the *Co-operative and Provident Societies Act, 1903-1973*.

(a) The financial years shown do not relate to a uniform accounting period, the actual period varying according to the financial year adopted by individual societies. (b) Figures for the year 1973-74 are not comparable with those for other years because they include an accounting period of 23 months in respect of 1 society which changed its year of record.

REGISTERED BUILDING SOCIETIES

Building societies in Western Australia are registered under the provisions of the *Building Societies Act, 1920-1970* primarily for the purpose of raising funds to assist members by granting loans, secured on mortgage, to build or acquire homes. They also provide a means of investment for shareholder members, trustee funds and other depositors. The funds of the societies may be in the form of payment for fully-paid shares, subscriptions for contributing shares, money placed on deposit, or negotiated loans. Another important source of revenue became available to the societies in 1956-57 when, under the *Housing Agreement Act 1956* (Commonwealth), it was provided that moneys should be allocated to approved institutions from Australian Government funds advanced to the States for housing. The current legislation, the *Housing Agreement Act 1973* (Commonwealth), as amended by the *Housing Agreement Act 1974*, provides financial assistance to the States during the five-year period ending 30 June 1978. The Act requires that, of the total amount advanced to a State in any year, not less than 20 per cent nor more than 30 per cent (which may, however, be exceeded in certain specified circumstances) shall be made available to building societies and some other institutions for the provision of loans to assist borrowers to build or purchase homes for themselves and their families.

The Building Societies Act provides for the constitution of a Building Societies Advisory Committee of five members, comprising the Registrar of Building Societies as chairman, the President of the State branch of the Commonwealth Institute of Valuers, two persons who are qualified and experienced in building society management and practice, and an officer of the State Public Service nominated by the Minister.

The functions of the Committee, as set out in the Act, are to make recommendations and submit proposals to the Minister with respect to regulations and model rules to be made under the Act; any action to be taken for promoting, encouraging and assisting in the formation of societies; improving the methods of operation of societies; charges which societies may make on and require to be paid by their members, other than share subscriptions and repayment of advances; the financing of societies in their operations and the protecting of the finances of societies; promoting the building of dwelling-houses by co-operative effort; determining and specifying the minimum standards of construction of dwelling-houses and other buildings to be accepted before advances can be made; and such other matters as the Minister refers to the Committee from time to time, or as may be prescribed.

(a) The financial years shown do not relate to a uniform accounting period, the actual period varying according to the financial year adopted by individual societies. (b) Figures for 1972-73 and 1973-74 have been revised since previous issue. (c) Excludes all interest payments. (d) Excludes loans in process and advances approved but not yet paid. (e) Includes inter-society loans. (f) Advances on mortgages are partly on a gross basis; a net figure may be derived by subtracting the liability item 'share subscriptions'.

INSTALMENT CREDIT FOR RETAIL SALES

The statistics in the following tables cover all types of instalment credit schemes which relate primarily to the financing of retail sales of goods in which repayment is made by regular predetermined instalments. Types of schemes covered include hire purchase, time payment, budget account and personal loans which relate primarily to the financing of retail sales of goods. In these statistics the term 'retail sales' relates to retail sales by retail establishments coming within the scope of the Censuses of Retail Establishments conducted periodically by the Australian Statistician, Canberra (see Chapter IX, Part 2).

Credit schemes which do not involve repayment by regular predetermined instalments, lay-bys, and all credit transactions which relate mainly to the financing of 'producer' type goods such as plant, machinery and motor vehicles which would normally be used for commercial purposes are outside the scope of these statistics. In addition the instalment credit transactions of businesses covered by these statistics which relate primarily to the financing of sales of land, buildings, property improvements, travel and services such as repair and maintenance work, and schemes involving rental or leasing are not included.

A comprehensive account of the scope of these statistics, definitions relating thereto and changes over time are given in the July-September 1973 issue of the bulletin *Instalment Credit for Retail Sales* published by the Australian Statistician, Canberra. A new series involving revised concepts was introduced from 1 July 1973.

In the following tables, statistics of type of business have been classified according to 'finance companies' and 'other businesses'. A definition of the former term is given in the section *Finance Companies* on page 310. Most of the businesses included in the category 'other businesses' are those operating retail establishments which come within the scope of the Census of Retail Establishments and which provide instalment credit for

retail sales of consumer commodities. The remaining businesses comprise unincorporated finance businesses, and businesses other than wholesalers and manufacturers, whose financing activities would generally be regarded as ancillary to some other function.

Details of balances outstanding at 30 June 1974 and 1975, according to type of business, are given in the next table.

INSTALMENT CREDIT FOR RETAIL SALES
BALANCES OUTSTANDING (a)
(\$ million)

At 30 June—	Type of business		
	Finance companies	Other businesses	Total
1974	161.4	16.1	177.6
1975	160.6	14.9	175.5

(a) Includes hiring charges, interest and insurance.

In interpreting movements in outstanding balances, it should be noted that these movements are determined not only by new amounts financed and cash collections under existing agreements, but also by other liquidations of balances such as rebates allowed for early payouts and bad debts written off.

The amount financed in respect of instalment credit for retail sales of household and personal goods, and vehicles, according to type of credit and type of business during 1973-74 and 1974-75 is shown in the next two tables.

INSTALMENT CREDIT FOR RETAIL SALES—AMOUNT FINANCED
HOUSEHOLD AND PERSONAL GOODS

1973-74	26.9	58.7	6.5	92.1	2.9	2.8	0.8	6.6	98.7
1974-75	28.3	37.2	6.7	72.1	3.5	1.9	0.9	6.3	78.5

(a) Includes new and used motor cycles, boats, caravans, trailers, motor parts and accessories.

FINANCE COMPANIES

Information relating to the lending operations of finance companies in Western Australia is given in the following tables. A comprehensive account of the scope of the statistics, definitions, and more complete details of the transactions of finance companies are given

in the annual bulletin *Finance Companies Transactions* and the monthly statement *Finance Companies*, published by the Australian Statistician, Canberra. Details of breaks in continuity of the series, indicated by a line drawn across a column between two consecutive figures, are given in the annual bulletin for the year 1973-74.

For the purpose of these statistics, finance companies are defined as companies which are engaged mainly in providing to the general public (businesses as well as persons in their private capacity) credit facilities of the following types: hire purchase and other instalment credit for retail sales; wholesale finance; other consumer and commercial loans; factoring; leasing of business equipment and plant; and bill of exchange transactions. The finance companies covered in these statistics, in so far as they provide credit for retail sales, are also included in the statistics shown in the preceding section *Instalment Credit for Retail Sales*.

Amount Financed. The following table shows the amount financed, according to type of agreement, *i.e.* instalment credit for retail sales, wholesale finance, personal loans, other consumer and commercial loans, in Western Australia for the years 1970-71 to 1974-75.

FINANCE COMPANIES
AMOUNT FINANCED: TYPE OF AGREEMENT
(\$ million)

Year	Instalment credit for retail sales	Wholesale finance	Personal loans	Other consumer and commercial loans	Total

1973-74	47.2	90.6
1974-75	36.3	98.4

BANKRUPTCY

Under the provisions of the *Bankruptcy Act 1966-1975* (Commonwealth), which is administered by the Attorney-General, the State of Western Australia is a proclaimed Bankruptcy District and the Supreme Court of Western Australia has federal jurisdiction in bankruptcy matters. There is a Registrar in Bankruptcy whose duties include the holding of public sittings for the examination of bankrupts, the examination of witnesses, the issuing of bankruptcy notices and creditors' petitions, and such other duties as are specified in the Act or delegated to him by the Court. Another bankruptcy officer is the Official Receiver, who acts under the general authority and direction of the Court and whose duties relate to the conduct of the debtor and to the realisation and administration of his estate.

An order for the sequestration of an estate may result from a petition by either the debtor or the creditors. In cases where it appears certain that the assets of a deceased estate will be insufficient to meet the debts, the executor or a creditor may petition to have the estate administered in bankruptcy.

Compositions, deeds of assignment and deeds of arrangement are provided for in the Act. A debtor may call a meeting of his creditors and either compound with them to pay a certain sum in the \$ as full settlement of his debts or enter into a deed of arrangement allowing him a specified time in which to pay. On the other hand, his creditors may require him to execute a deed of assignment, by which control of his affairs passes to a trustee registered under the Act, or to file a petition in bankruptcy.

Reference to bankruptcy also appears in Chapter V, Part 6—*Law, Order and Public Safety* on page 264.

The following table relates to bankruptcy proceedings during each of the years from 1970-71 to 1974-75.

BANKRUPTCY PROCEEDINGS

Year	Sequestration orders (a)				Compositions and assignments without sequestration (b)		
	On petition of—		Assets (\$'000)	Liabilities (\$'000)	Number	Assets (\$'000)	Liabilities (\$'000)
	Creditors	Debtors					
1970-71	3	289	637	2,322	98	2,483	2,702
1971-72	21	387	1,300	3,478	110	2,839	3,806
1972-73	18	346	3,498	3,693	108	2,017	3,381
1973-74	25	275	921	3,288	69	1,177	1,642
1974-75	22	314	1,508	7,627	71	1,092	2,264

(a) Includes orders for administration of deceased persons' estates.

(b) Includes deeds of arrangement.

PUBLIC TRUST OFFICE

The *Public Trustee Act, 1941-1975* establishes the Public Trust Office administered by the Public Trustee.

The principal functions of the Public Trustee are the administration of the estates of deceased persons, including intestate estates; the management of the affairs of certain persons rendered incapable by mental illness or other infirmity; and the receipt of moneys under the control or order of the Supreme Court of Western Australia, to be invested and used for the maintenance, education or other benefit of the persons entitled thereto. The Public Trustee receives from the Workers' Compensation Board funds to be held in trust for investment and to be paid out at the direction of the Board. He may also act in the capacity of agent in cases of need.

OFFICE OF TITLES

The Office of Titles is established under the provisions of the *Transfer of Land Act, 1893-1972*. The Act provides for the appointment of a Commissioner of Titles, a Deputy Commissioner of Titles and a Registrar of Titles. The principal functions of the Office are the registration and recording of all instruments and dealings affecting privately-owned land or land alienated from the Crown, the certification and issue of titles to land, and the maintenance of a register of legal ownership.

The number of documents accepted for registration during the year ended 30 June 1975 was 138,720, a decrease of 9.58 per cent from the number in 1973-74.

(a) Companies incorporated in Western Australia. (b) A company incorporated outside Western Australia is required to register as a 'foreign' company if carrying on business in Western Australia. (c) Year ended 30 June.

LOTTERIES AND BETTING

Lotteries

The Lotteries Commission was established under the provisions of the *Lotteries (Control) Act, 1932*. The legislation currently in force is the *Lotteries (Control) Act, 1954-1972*. The Commission, as constituted by the Act, consists of four members appointed by the Minister. The principal functions of the Commission are to conduct lotteries in Western Australia to raise money for charitable purposes, and to control lotteries conducted by other persons.

The Act requires that all prizes distributed in lotteries conducted by the Commission shall be cash prizes. It is further provided that the total expenses of conducting lotteries in any year, including commission payable on ticket sales and the remuneration of members of the Commission, shall not exceed 25 per cent of the gross amount received from the sale of tickets.

The Commission is required to pay 20 per cent of all moneys received in respect of lotteries that it conducts into a special account, which is kept at the Treasury in terms of the *Hospital Fund Act, 1930-1937*. Moneys remaining to the credit of the Commission after

meeting all outgoings authorised by the Act may, with the consent of the Minister, be applied to any approved charitable purpose or in the purchase, improvement or maintenance of lands and buildings for the purposes of the Act.

LOTTERIES COMMISSION—NUMBER OF CONSULTATIONS AND TICKET SALES

Betting

The *Betting Control Act, 1954-1972* and the *Totalisator Agency Board Betting Act, 1960-1973* provide for the regulation and control of betting and bookmaking on horse racing and greyhound racing in Western Australia.

The Betting Control Act authorises the Totalisator Agency Board to issue licences enabling the holder to carry on the business of bookmaking on a race-course or at registered premises, and betting by or with a person not so licensed is unlawful.

The Totalisator Agency Board Betting Act gives the Totalisator Agency Board authority to regulate and control off-course betting on totalisators through the Board and betting with the Board. The Board consists of eight members, one of whom is the General Manager of the Board. The other seven members are appointed by the Governor and comprise a chairman nominated by the Minister, three persons nominated by The Western Australian Turf Club, and three persons nominated by the Western Australian Trotting Association.

The application of the Act is confined to areas declared by proclamation to be 'totalisator agency regions'. The first agency established by the Board was opened on 18 March 1961. At 31 July 1975 there were 170 agencies in operation.

The Board derives its principal revenues from commission on bets and from a duty of $1\frac{1}{2}$ per cent on the gross takings of every totalisator, as provided by the *Totalisator Duty Act, 1905-1973*. The Board may also borrow money, subject to the approval of the Treasurer. The Totalisator Agency Betting Board Act requires that the Board shall pay to The Western Australian Turf Club, the Western Australian Trotting Association and the Greyhound Racing Control Board the funds remaining after meeting all taxes and other specified items of expenditure.

Details of taxes, licence fees and duties payable in connection with horse racing are shown on page 282 and the amounts collected during the five-year period ended 30 June 1974 appear in the table *State Government Taxation—Net Amounts Collected* on page 286.

The following table shows the amounts invested on totalisators on race-courses and through agencies of the Totalisator Agency Board, and amounts invested with licensed bookmakers, during the five-year period ended 30 June 1975.

THE STOCK EXCHANGE OF PERTH LIMITED

The Stock Exchange of Perth commenced operations in 1889, and conducted business at a number of locations before moving in December 1968 to its present quarters at Exchange House. These premises were designed and constructed to provide adequate space

for total post trading which was introduced in July 1967, replacing the call system in which brokers made bids from their desks as stocks were called by a member of the Exchange staff.

The Stock Exchange of Perth was registered as a limited company under the provisions of the Companies Act on 30 June 1971. At that date there were thirty-five members of the Exchange, and at 30 June 1975 there were thirty-two members.

The following table gives details of turnover during the five-year period ended 30 June 1975. A revised system of sales recording was introduced in 1970-71 to include both on and off-room sales, and comparable figures for earlier years are not available.

CHAPTER VII

LAND TENURE AND SETTLEMENT, WATER SUPPLY AND SEWERAGE

Part 1—Land Tenure and Settlement

An outline of the origin and development of the land tenure system in Western Australia from the early years of settlement is given in Chapter VII of the *Official Year Book of Western Australia*, Nos. 1 and 2 (New Series).

The growth of land settlement in relation to particular agricultural and pastoral activities is dealt with in the relevant sections of Chapter VIII and in the *Statistical Summary from 1829* appearing after Chapter X.

LEGISLATION AND ADMINISTRATION

By the Land Act of 1898, earlier legislation relating to the sale, occupation and management of Crown lands was consolidated and amended. Under a series of Agricultural Lands Purchase Acts which were passed between 1896 and 1904 and consolidated by the *Agricultural Lands Purchase Act, 1909*, provision was made for the repurchase by the Crown of land suitable for closer settlement. The principal criteria applied in the purchase of such land were suitability for wheat or mixed farming and proximity to transport, especially the railways.

The operation of subsequent legislation has not greatly changed the pattern of land development which was created by the *Land Act, 1898* and the *Agricultural Lands Purchase Act, 1909*. The *Land Act, 1933-1972* is now the basic statute controlling the leasing and disposal of Crown land. Closer settlement legislation relates predominantly to schemes for the benefit of returned war-service personnel. Crown land is also leased under the *Mining Act, 1904-1973*, the *Petroleum Act, 1967-1972* and the *Forests Act, 1918-1974*, but no alienations are made under these Acts. In most freehold or leasehold titles of a residential, agricultural or pastoral nature the mineral rights, petroleum rights and, in many instances, the timber rights are reserved to the Crown.

The Department of Lands and Surveys is responsible for the leasing and alienation of Crown land, except where mining and forestry tenures are involved, and is under the control of the Minister for Lands. In certain instances, advisory or partly-executive boards have been created to assist in administration. These include the Land Board, which deals with general applications for land, and the Pastoral Appraisalment Board.

Permits and leases for mining purposes are issued by the Department of Mines and those for forestry and timber milling by the Forests Department.

METHODS OF LAND ALIENATION

The principal methods of alienation provided for in the *Land Act, 1933-1972* are conditional purchase, public auction, private tender, selection under Part VIII which supersedes the Agricultural Lands Purchase Act, endowment (including free Crown grants) and reservation for public purposes. In addition to these normal methods of alienation there is provision in the Land Act for the release of land under special circumstances, where particular developmental projects are envisaged. In such cases any agreement must be ratified by the State Parliament.

Conditional Purchase

Titles secured by this method originally take the form of conditional purchase leases, on the satisfactory conclusion of which Crown grants may be obtained. The Act provides that a person shall not be competent to acquire, either as lessee or transferee, an area of land exceeding in the aggregate 5,000 acres (2,023 hectares); but on the recommendation of the Minister and with the approval of the Governor, it shall be competent for a person to acquire an area of land in one or more parcels exceeding 5,000 acres (2,023 hectares), but not in any event exceeding 10,000 acres (4,046 hectares), in any case where the Minister is satisfied that a holding requires an area greater than 5,000 acres (2,023 hectares) in order to be of a standard deemed by the Minister an economic farm unit. The Governor may reduce the maximum area that may be acquired in prescribed localities. The minimum purchase price of land acquired by conditional purchase is twenty cents per acre (forty-nine cents per hectare) and the purchaser must pay the costs of survey as well as the value of any improvement. He must progressively clear, cultivate and sow to pasture or crop, areas of land which must aggregate 50 per cent of the total area of the land at the end of the eleventh year. In addition, the purchaser is required to fence in at least the cleared and cultivated land during the first five years and the whole of the land within ten years.

The maximum period allowed for completion of purchase under an ordinary conditional purchase lease ranges from twenty-five to thirty years, with a possible extension of ten years in certain cases. There is, however, provision for conditional purchase by means of accelerated payments under which a 10 per cent deposit is lodged and the balance of the purchase price paid in four quarterly instalments. The improvement conditions for accelerated-payment leases require that the land shall be fenced within three years of the commencement of the lease and that improvements, equal in value to the purchase money, shall be effected within seven years. Unlike the ordinary conditional purchase lease, which cannot be converted to a Crown grant until the expiry of at least five years from the date of commencement, an accelerated-payments type of lease can be converted to a Crown grant at any time after the conditions have been met. Residential conditions, requiring that the lessee or a near relative shall reside on the property within two years from commencement of the lease and make it his habitual residence during at least six months of each year for the following three years, apply to ordinary conditional purchase leases but are not obligatory under accelerated-payment leases. Restrictions on transfers are imposed in each case.

Sale by Public Auction

The general conditions governing the sale to the public by auction of town or suburban land are set out in Part IV of the Land Act. Lands may be offered for sale by order of the Minister at such times and places as he may think fit, and notice of forthcoming sales must be published in the *Government Gazette of Western Australia* and in a newspaper. Ten per cent of the purchase money must be paid at the time of the sale and the balance in four equal quarterly instalments. The purchaser may be required to erect a residence or business premises within the specified period, or to fence the land on the surveyed boundaries within two years after the sale. Town or suburban land acquired at auction by instalment purchase is regarded as being held on licence until general requirements such as fencing and other prescribed improvements have been met, after which a grant in fee simple may be issued. In some instances special additional conditions may be imposed. In certain circumstances the Governor may dispense with the requirements as to sale of town and suburban lands by public auction and may approve of any such lands being offered for sale in fee simple or for leasing.

Sale by Private Tender

Sales by private tender, which are also called negotiated cash sales, are comparatively rare and usually relate to unwanted War Service Land Settlement farms and to areas set apart as special settlement lands.

Endowment of Land and Reservation for Public Purposes

No disposal of Crown land by way of endowment is now made. However, it is within the power of the Governor to dispose of, in any manner which serves the public interest, lands which are vested in the Crown. Crown land is frequently reserved by order of the Governor for a variety of public purposes and where alienation is ultimately required for certain of such purposes the necessary land is granted in fee simple in trust for the purpose of the reserve. Grounds for reservation include: the general requirements of the Government (*e.g.* public works and buildings; conservation of water, timber and indigenous flora and fauna; housing; public health and social welfare); the benefit of the Aboriginal inhabitants; local government needs for such purposes as the provision of town halls and other buildings, public utilities, social amenities, sports grounds and cemeteries; sites for churches, hospitals and other institutions; sites for clubs and club premises; mining and quarrying purposes; public parks; and the provision of camping and watering places for travellers and stock. Reserves may be of class 'A', which by proclamation of the Governor are reservations that must remain dedicated to the purpose declared in their proclamation until by Act of Parliament it is otherwise enacted, or classes 'B' and 'C', which are terminable by the Governor on notice in the *Government Gazette of Western Australia*. In the case of class 'B', however, the Land Act provides that in the event of cancellation, a special report by the Minister shall be presented to Parliament setting forth the reasons for such cancellation and the purpose to which it is intended to devote the land. Common uses of class 'A' reserves are for public recreation or amusement and for major public buildings. All reserves under Part III of the Act that are not proclaimed as class 'A' are classified as either 'B' or 'C'.

The Land Act provides that, when any reserve is not immediately required for the purpose for which it was made, the Governor may grant a lease for a period not exceeding ten years at such rents and subject to such conditions as he may think fit. Land reserved for parks or recreation grounds may be leased for the depasturing of stock even though the land is being used for the purpose for which it is reserved.

Other methods of alienation comprise mainly reservations of land for housing projects.

State Forests and Timber Reserves

In addition to the foregoing types of alienation, special provision is made in the *Forests Act, 1918-1974*, for the Governor, by Order in Council, to dedicate Crown land as a State Forest or to reserve Crown Land as a Timber Reserve. While the reservation of a Timber Reserve may be revoked in whole or in part by the Governor in Council, the dedication of a State Forest may not be revoked except with the consent of both Houses of Parliament. The use of such Forests and Reserves comes within the administration of the Conservator of Forests.

METHODS OF LEASING

Brief reference was made on page 317 to the work of the Department of Lands and Surveys, the Department of Mines and the Forests Department in granting leases of Crown lands in Western Australia. The activities of each Department in this field are now described in greater detail.

Department of Lands and Surveys

Approximately 99 per cent of the Crown land held under lease is covered by tenures granted by the Department of Lands and Surveys under the Land Act, and consists mainly of pastoral leases, special leases, leases of reserves and leases of residential lots. In addition, areas of perpetually-leased farming land have been made available to ex-servicemen under War Service Land Settlement Acts.

Pastoral Leases. The *Land Act, 1933-1972* provides that the maximum area held under pastoral lease by one person, or by two or more persons jointly, or by any association of persons incorporated shall not exceed one million acres (404,686 hectares), and that no

person shall become beneficially interested in leases of pastoral land to an extent whereby the aggregate area of pastoral land in which such person is beneficially interested would exceed one million acres (404,686 hectares). Where an area of pastoral land is worked in association with another area as one separate and distinct station, the maximum area which may be so worked is one million acres (404,686 hectares). The minimum requirement for the grant of a pastoral lease is that the land shall, in the opinion of the Pastoral Appraisal Board, be capable when fully developed of carrying not less than 6,000 sheep or not less than 1,200 head of cattle.

Pastoral leases are granted for a term expiring on 30 June 2015, and the annual rent payable is determined by the Minister for Lands acting on the advice of the Pastoral Appraisal Board. Rents are subject to reassessment at statutory intervals. A lessee may, at any time not less than five years nor more than six years after the date on which a reassessment of rent became effective, apply to the Minister to have the rent reviewed by the Board. Provision is made for total or partial relief from payment of rent in respect of any year during which, by drought, cyclone or flood, a lessee suffers serious loss of stock, or wool production is adversely affected.

The holder of a pastoral lease is required to effect improvements of a specified nature and in accordance with a plan approved by the Minister on the advice of the Board. The amount spent on improvements each year must be at least two and a half times the annual rent, and expenditure at this rate must continue until the improvements proposed in the plan have been carried out. A lease is liable to forfeiture if the land is not stocked or kept stocked with such number of sheep or cattle, or both sheep and cattle, as the Board considers appropriate having regard to circumstances such as seasonal conditions affecting the land and the period since the commencement of the lease. Other conditions attaching to pastoral leases provide safeguards against the deterioration of land due to excessive grazing and to the unauthorised ring-barking of trees.

Special Leases. Section 116 of the Land Act specifies a variety of industrial and other purposes for which the Governor may grant special leases of Crown land. The yearly rental must be not less than \$4 and the period of the lease must not exceed twenty-one years. It is further provided that, in all cases where the intended period of leasing exceeds ten years, prior notice must be inserted in the *Government Gazette of Western Australia*. Section 116 is modified in certain cases by provisions contained in special Acts to enable the granting of leases for varying terms and conditions for specific projects.

Leases of Reserves. As stated earlier in this Chapter in the section *Methods of Land Alienation* the Governor may grant a lease of any reserved land which is not immediately required for the purpose intended at the time of reservation, but the period of the lease may not exceed ten years. By a further provision of the Land Act, no lease for a term exceeding one year shall be granted unless applications are called by notice in the *Government Gazette of Western Australia*. With the consent of the Governor, such land may be sub-leased. When land is reserved for parks or for recreation or amusement, if the land is not placed under the control or management of any person, the Governor may, even though the land is being used for the purpose for which it is reserved, grant a lease or licence for one year for the purpose of depasturing stock. The Governor may insert in the lease or licence such conditions as he may think fit to ensure that the land is available for the purpose for which it is reserved and he may renew any lease or licence for a further period of one year.

Leases of Residential Lots. The Governor may lease any town or suburban lands on such terms as he may think fit, under section 117 of the Land Act. In earlier years, leases of town and suburban lands were offered at public auction and, in most cases, such lessees may apply to purchase the fee simple of the land.

Perpetual Leases were authorised under the War Service Land Settlement legislation, which provided that ex-servicemen who had been allotted farms under this joint Commonwealth-State scheme and who met the requirements of the appropriate agreement might enjoy perpetual leases. The lessee, on payment of such purchase price for the

fee simple as was fixed by the Minister, might obtain the freehold of the property after the expiration of ten years from the commencement of the term of the perpetual lease or after such shorter period as the Commonwealth and the State determined or might determine where special circumstances existed.

Department of Mines

Under the provisions of the *Mining Act, 1904-1973*, various special tenures, of which gold-mining leases, mineral leases and coal-mining leases are the most important, are granted by the Governor in connection with the mining of gold, coal and other minerals. The Act contains provisions relating to the payment of fees, rents and royalties. The Governor may exempt any person or class of persons from the payment of royalties.

Oil exploration permits and production licences are granted by the Minister for Mines under the provisions of the *Petroleum Act, 1967-1972* and as the Designated Authority under the provisions of the *Petroleum (Submerged Lands) Act, 1967-1970*, with authority to charge fees, rents and royalties.

Gold-mining Leases. As well as conveying a right to mine for gold to any depth, a gold-mining lease permits the construction of all necessary buildings and plant within the area which it defines. Where, in the opinion of the Minister, land is likely to contain alluvial gold, it is normally exempt from lease. However, a lease not exceeding 48 acres (19·4 hectares) in area may be granted if the Minister is satisfied that the land, having already been worked for alluvial gold has been abandoned, or is suitable for leasing on account of its great depth or excessive wetness, or on account of the costliness of the appliances required for its development. A lease not exceeding 24 acres (9·7 hectares) may also be granted if the Minister considers for any sufficient reason that such land ought not to be exempt from lease. In all other instances the maximum area for a lease is 24 acres (9·7 hectares). Leases must, where practicable, be rectangular with the length not exceeding twice the width.

The term of any gold-mining lease may not exceed twenty-one years, but has a right of renewal for a further twenty-one years. Its labour conditions provide that for the first year it must be manned by at least two men and for the remainder of its term by at least two men, or one man for every 6 acres (2·4 hectares), whichever is the greater. Subject to certain adjustments of these labour conditions, a person may hold two or more adjoining leases as an amalgamated group, provided that the group does not total more than 96 acres (38·8 hectares) and that the length along the line of reef or lode does not exceed 66 chains (1,328 metres). The Minister has discretion, in certain circumstances, to permit the amalgamation of leases which would result in an aggregate area exceeding 96 acres (38·8 hectares) but the length of reef or lode still may not exceed 66 chains (1,328 metres). A rent of fifty cents per acre (·4047 hectares) is charged during the first year and \$2 per acre during the following years. The grant of a gold-mining lease conveys an exclusive right to mine for gold or other minerals within the bounds of the lease, but excludes rights in respect of petroleum.

Mineral Leases. Mineral leases authorise the holders to mine for a specified mineral or combination of minerals to any depth within the confines of the lease and convey the same construction rights as a gold-mining lease. The term of any mineral lease shall not exceed twenty-one years, but shall have a right of renewal for a further twenty-one years. Except under special conditions, including the payment of royalty, as set out in the Act, land held under a mineral lease may not be mined for gold. Land which is proved to the satisfaction of the Minister to consist of payable alluvial ground is normally exempted from lease. However, a lease not exceeding 96 acres (38·8 hectares) in area may be granted if the Minister is satisfied that the land, having already been worked as alluvial ground, has been abandoned, or is suitable for leasing on account of its great depth, excessive wetness, or on account of the costliness of the appliances required for its development. A lease not exceeding 300 acres (121·4 hectares) may also be granted if the Minister considers for any sufficient reason that such land ought not to be exempt from lease. In all other cases a mineral lease may not exceed 300 acres (121·4 hectares)

and, where practicable, must be rectangular and the length shall not exceed twice the width. The labour conditions provide that a mineral lease must be manned by at least two men for the first twelve months and thereafter by at least one man for every 6 acres (2.4 hectares) or fraction thereof, with a minimum of two men. An annual rent of \$2 per acre (.4047 hectares) is charged. Adjoining leases may, by application to the Minister, be amalgamated but the total area may not exceed 600 acres (242.8 hectares).

Coal-mining Leases. Individual leases for coal mining have a maximum area of 320 acres (129.5 hectares). The term of any coal-mining lease may not exceed twenty-one years, but has a right of renewal for a further twenty-one years. Such leases must be efficiently worked during the first twelve months by at least one man, during the next twelve months by at least two men, and during each succeeding year of the lease by at least three men, for every 60 acres (24.3 hectares) or part thereof contained in the lease. The yearly rent of coal-mining leases is five cents per acre (.4047 hectares) and a royalty of 2.5 cents per ton (1.02 tonnes) is payable on all coal raised during the first ten years of the lease, rising to five cents per ton during the remainder of the term. The *Mining Act, 1904-1973* provides for certain royalty rebates on newly-discovered coal deposits while the Mining Regulations contain special provisions regarding development of the deposits in the Collie district, the only area where coal is being mined in the State.

Other Mining Tenements

Mineral Claims. An area not exceeding 300 acres (121.4 hectares) may be applied for as a mineral claim, but the length must not exceed twice the width. The rent for a mineral claim is calculated at the rate of fifty cents per annum per acre (.4047 hectares). Working conditions require that not less than three men shall be continuously employed for every 100 acres (40.5 hectares) or fraction thereof.

Dredging Claims. Application may be made for dredging claims for gold or minerals in lakes, swamps, marshes, or rivers and the land adjacent thereto, or on the foreshore of, and land under, the ocean. The maximum area of a dredging claim shall not exceed 300 acres (121.4 hectares). Except in the case of river claims, where there is no restriction on width, the minimum width at right angles to the bank or shore edge shall not be less than 15 chains (302 metres). A river claim shall not exceed 6 miles (9.7 kilometres) in length. Working conditions require that not less than three men shall be continuously employed on the claim for every 100 acres (40.5 hectares) or part thereof. In the case of dredging claims that have been amalgamated, provision is made for the continuous employment of machinery and equipment in lieu of employing men.

Temporary Reserves. To encourage mining exploration, provision is made for the creation by the Minister of temporary reserves of Crown land and the Minister may also authorise any person to temporarily occupy such reserve on any terms that he thinks fit.

The acceptable maximum area which may be applied for in any one temporary reserve application is—for gold with or without other minerals—121.4 hectares; for iron ore—129.5 square kilometres; for other minerals—200 square kilometres.

The shape of the area shall be as near as practicable to a rectangle with the length not exceeding twice the breadth.

The annual fee required with each application is—for gold with or without other minerals—\$50; for coal only—\$500 plus \$5 per square kilometre (or part thereof); for other minerals—\$1,000 plus \$10 per square kilometre (or part thereof).

Full details of the proposed exploration expenditure and programme, and methods to be used are required before any application for the creation of a temporary reserve can be considered by the Minister. The lowest acceptable annual expenditure commitment on each temporary reserve is—for gold with or without other minerals—\$3,000; for coal only—\$100 per square kilometre (minimum \$10,000 if the area is less than 100 square kilometres); for other minerals—\$200 per square kilometre (minimum \$20,000 if the area is less than 100 square kilometres).

The initial term of any right of occupancy granted is twelve months. Applications for renewal of such occupancy right are not considered unless lodged at least fourteen days prior to the expiry date of any current right of occupancy and accompanied by the requisite annual fee and full details of the proposed exploration programme and expenditure.

In the event of any mineral being found by the holder of an occupancy right granted over a temporary reserve, the holder is required, during the currency of the occupancy right, to peg and apply for mining tenements, before productive mining is commenced.

Tenures under Special Acts. Because of the amount of finance involved in large-scale development of iron ore, bauxite, nickel, salt and various other mineral deposits the Government has made special agreements with various companies for the working of such deposits. The agreements are ratified by an Act of Parliament and mineral rights are granted to the lessee to carry out large-scale development and mining operations, subject to the varying obligations including the payment of royalties.

Tenures under provisions of the Petroleum Act, 1967-1972. This Act came into operation on 5 September 1969 and governs the exploration of and exploitation of the petroleum resources within Western Australia. It is basically similar to the *Petroleum (Submerged Lands) Act, 1967-1970*, the principal tenures available being Permits and Licences.

A permit grants to the holder petroleum exploration rights over an area of up to 200 contiguous blocks (a block is a graticular section being five minutes of arc of latitude by five minutes of arc of longitude) which is valid for a term of five years and renewable for terms of five years over progressively reduced areas. Initially, areas are made available for application as exploration permits by advertisement in the *Government Gazette of Western Australia*. If several applications are received for a particular area, each is evaluated on its individual merits and a decision as to the grant of a permit is made accordingly. Applicants are required to submit details of their proposed exploration work and expenditure for the initial term, together with particulars of their technical qualifications and financial resources. An application fee of \$1,000 is payable. The successful applicant is required to enter into a \$5,000 security for due compliance with the conditions of the permit and observance of the provisions of the Act. Annual rental is payable, calculated at \$5 per block, with \$100 being the minimum rental payable.

Upon the discovery of petroleum within a permit, a 'location' of up to nine blocks including the discovery block is declared. The establishment of a location is a means of setting aside and identifying a specific number of blocks from which a Production Licence can be selected.

The holder of a permit has two years from the date the location is declared in which to apply for a Production Licence. This period may be extended for a further two years at the discretion of the Minister for Mines.

There is a specific requirement that the licensee shall carry out approved works within the licence area to the value of not less than \$100,000 per block per year. This figure may be offset in subsequent years by the value of petroleum produced in the preceding year. The term of a licence is for twenty-one years with renewal provisions. Annual rental is calculated at \$3,000 per block and a security of \$50,000 may be required.

Tenures under provisions of the Petroleum (Submerged Lands) Act, 1967-1970. This Act, which came into operation on 1 April 1968, governs the exploration for and exploitation of the petroleum resources of submerged lands adjacent to the Western Australian coast comprising the Continental Shelf and the sea-bed and subsoil beneath territorial waters and is administered by the Minister for Mines as the Designated Authority for and on behalf of the State and the Commonwealth. The principal tenures available under the Act are Permits and Licences.

A permit grants to the holder, petroleum exploration rights over an area of up to 400 contiguous blocks (a block is a graticular section being five minutes of arc of latitude by five minutes of arc of longitude) which is valid for a term of six years and renewable

for terms of five years over progressively reduced areas. Initially, areas are made available for application as exploration permits by advertisement in the *Government Gazette of Western Australia*. If several applications are received for a particular area, each is evaluated on its individual merits and a decision as to the grant of a permit is made accordingly. Applicants are required to submit details of their proposed exploration work and expenditure for the initial term, together with particulars of their technical qualifications and financial resources. An application fee of \$1,000 is payable. The successful applicant is required to enter into a \$5,000 security for due compliance with the conditions of the permit and observance of the provisions of the Act. Annual rental is payable, calculated at \$5 per block, with \$100 being the minimum rental payable.

Upon the discovery of petroleum within a permit a 'location' of up to nine blocks including the discovery block is declared. The establishment of a location is a means of setting aside and identifying a specific number of blocks from which a Production Licence can be selected.

The holder of a permit has two years from the date the location is declared in which to apply for a Production Licence. This period may be extended for a further two years at the discretion of the Designated Authority.

There is a specific requirement that the licensee shall carry out approved works within the licence area to the value of not less than \$100,000 per block per year. This figure may be offset in subsequent years by the value of petroleum produced in the preceding year. The term of a licence is for twenty-one years with renewal provisions. Annual rental is calculated at \$3,000 per block and a security of \$50,000 may be required.

Miscellaneous mining tenures. The leases and licences detailed above are those which are fundamental to mining development but there are several additional tenures which are issued in order to assist the processes of mineral extraction and treatment. These incidental tenures include rights to conserve and convey water, and to store machinery.

Forests Department

While not designated as leases, certain of the tenures issued under the *Forests Act, 1918-1974*, such as Sawmilling Permits and Mill Site Permits, are similar in effect.

Sawmilling Permits. A Sawmilling Permit entitles the holder to sole cutting rights in respect of certain classes of timber within a defined area and for a specified period. The cutting programme to be followed by the permit holder must be of such a nature that the forest resources of the area are used to the best advantage and that provision is made for forest regeneration. In consequence, cutting within the permit area is controlled by the Forests Department under a system of defined 'coupes', each of which is cut over and closed in turn. Each sawmilling permit holder is required to pay royalty on the quantity of timber delivered to the mill, and to supply the Forests Department with details of the logs taken and the timber cut therefrom.

Sawmilling permits are of major importance because of the capital outlay involved and the area is usually selected so as to give a cutting life of about thirty years. However, the usual practice is to grant the permits for a term of one year, subject to annual renewals. The royalty payable is determined by the sale of cutting rights by auction or by tender, the minimum royalty having first been established by the Forests Department.

Sawmill Site Permits. It is obligatory upon all holders of Sawmilling Permits to erect an efficient sawmill within a short period after the granting of the permit. The sawmill may be erected outside the sawmilling permit area. If, however, a mill is to be established on Crown land, a Sawmill Site Permit must first be obtained. An area may be leased to the sawmilling permit holder by the Conservator of Forests for this purpose and the annual rental is \$17 for every 5 hectares or part thereof. The holder of a Sawmill Site Permit is responsible for the buildings erected and must, if required, submit plans of all such buildings to the Conservator of Forests for his approval.

Other leases, licences and permits. A number of other leases, licences and permits are issued by the Forests Department, one of which, the Forest Produce Licence, authorises

the licensee to collect various types of forest products other than millable timber. Important examples of this form of licence are those granted on the goldfields and in the wheat belt for the cutting of mining and farm timber and firewood and there are special regulations controlling the collection of sandalwood. Provided forestry interests are not prejudiced, the Department also issues Forest Leases, which confer grazing, agricultural or similar rights over forest areas for any term not exceeding twenty years.

Permits are granted for apiary sites of an area not exceeding 1.25 hectares. They are issued to persons who are actively engaged in bee keeping and who have at least twenty-five hives of bees in the State. A permit may not be issued for an apiary site on Crown land if it is within 3.2 kilometres of a site already granted to another apiarist, and not more than four permits may be held for every fifty hives of bees owned.

LAND CLASSIFICATION

Large-scale as well as detailed soil survey measures have been developed progressively in Western Australia since the early days of settlement. Soil mapping of Crown lands in Western Australia has always been carried out as a function of the Department of Lands and Surveys. In the early years of land settlement the staff surveyors, when marking blocks, submitted classifications and commented generally on the probable yield and carrying capacity of the land, as a guide to pricing.

Modern survey techniques enable much use to be made of photogrammetric methods in the mapping and presentation of the soil survey, particularly in definition of vegetation and topographical detail such as rivers, creeks, swamps, hills, valleys, features such as rock outcrops and sand drifts, and the general contours of the land. Much topographical detail is available from the State mapping activities and this information is always used in conjunction with the field work of the soil survey.

The soils are graded into eight categories, to facilitate pricing procedure, due regard being given to the agricultural potential as determined by analysis and experimentation by the Department of Agriculture. This enables release of land in such a manner that each unit is adequate if developed on economic methods. At the same time, the soil maps assist in the overall planning for provision and extension of services such as roads, water and power supplies, townsites and all the services essential to regional development. Pastoral potential appraisements are presented with more emphasis on the grazing potential of natural vegetation in order to assess estimated carrying capacities, rather than detailed soil types.

In addition to the soil and pastoral mapping surveys which are carried out under the direction of the Surveyor General, similar methods are used by other Government Authorities and private organisations, for forestry assessment, classification and control, and for geological mapping.

It has been estimated by the Surveyor General that, of the State's total area of 2,525,500 square kilometres about 11 per cent is represented by the agricultural areas, 52 per cent by the pastoral regions and the remaining 37 per cent by practically unoccupied areas of the interior. Soil mapping investigations have enabled a broad assessment of the total area and a detailed assessment of the bulk of the agricultural areas and pastoral regions.

OCCUPATION OF LAND

The following table shows, for a selection of years during the period from 1900 to 1974, the areas of land absolutely alienated or in process of alienation and of Crown land held under certain types of lease or licence. For the years 1900, 1910 and 1920 the basis of classification according to Department has been made to conform to current practice in the issue of leases and licences. For example, tenures relating to forests, which were originally issued by the Department of Lands and Surveys and later by the Department of Mines, have been shown for those years under the heading of Forests Department.

For 1930 and later years the figures are as recorded by the Departments concerned. The types of tenure included under the several departmental headings are indicated in the footnotes to the table.

LAND ALIENATED AND LAND HELD UNDER LEASE
(*000 hectares)

At 31 December—	Area absolutely alienated	Area in process of alienation	Area of leases or licences in force on Crown land and issued (a) by—			
			Department of Lands and Surveys		Department of Mines (c)	Forests Department (d)
			Pastoral leases	Other leases (b)		
1900	1,401	1,278	34,977	4	34	345
1910	1,835	5,551	67,203	224	43	522
1920	3,623	5,958	104,420	999	42	664
1930	5,937	8,610	90,693	358	34	539
1940	7,408	5,602	82,875	843	38	954
1950	8,727	4,788	(e) 79,212	1,400	41	1,448
1960	11,158	5,185	88,301	2,685	37	1,617
1970	13,929	5,832	98,982	2,548	49	1,377
1971	14,104	5,441	99,466	2,579	54	1,359
1972	14,300	5,232	99,515	2,407	58	1,238
1973	14,603	4,936	98,975	2,495	86	1,155
1974	14,873	4,620	97,411	2,592	93	1,313

(a) See letterpress preceding table. (b) Comprises special leases, leases of reserves, leases of residential lots and perpetual leases. (c) Comprises gold-mining leases, mineral leases and miners' homestead leases. (d) Predominantly sawmilling permits. Includes permits for cutting wandoo for tannin extraction, but excludes permits and licences for cutting timber and firewood in Goldfields areas. (e) Apparent decrease in area due mainly to revision in the records of the Department of Lands and Surveys.

Land which is shown as 'absolutely alienated' consists mainly of farming areas, acquired originally as conditional purchase leases and subsequently alienated under Crown grant. While held under lease prior to alienation they account for most of the land shown as 'in process of alienation'. These two sets of figures taken together consequently give a broad indication of the increased use of land for agricultural purposes during the period under review. Similarly, variations in the area occupied as sheep and cattle stations may be gauged by reference to the area of pastoral leases issued by the Department of Lands and Surveys.

The passing of the Homesteads Act in 1893 and of a comprehensive Land Act in 1898 provided the basis for a rapid increase in the settlement of agricultural land. Under the Homesteads Act, any man over the age of eighteen years who did not already own an area of 100 acres (40.5 hectares) or more in this State could apply for a free homestead farm of 160 acres (64.7 hectares), on condition that he resided on his land during at least six months of each of the first five years and carried out prescribed improvements. With a lower minimum age of sixteen years, a similar provision is contained in the *Land Act, 1933-1972*, and this provision, operating in conjunction with the conditional purchase lease system, has also been a factor in the increase in land settlement, particularly in the wheat-growing areas.

About 1905 the Department of Lands and Surveys, by implementing a system of survey and subdivision before selection, partially checked the indiscriminate selection of land by inexperienced farmers. A further stabilising influence on agricultural development was the introduction in 1909 of a system of grading Crown lands into classes, First, Second and Third according to suitability for farming.

The movement of population from the goldfields to the wheat belt contributed to the increase in the area of land in process of alienation from 1,277,512 hectares in 1900 to 5,550,573 in 1910. The ultimate alienation of about one-third of this land by Crown

grant is reflected in the greatly increased figures for 'absolutely alienated' land in 1920. Settlement of the wheat belt developed rapidly during and after the period 1910 to 1920, in spite of serious droughts which occurred in 1911 and 1914. Although the increased totals at 31 December 1930 were principally due to this development, they resulted in part from the acquisition during the previous ten years of farmland, mainly for dairying, in the south-west of the State under the Group Settlement Scheme. These holdings were individually much smaller than those in the wheat-growing districts, because of the type of farming and the heavy clearing costs, but the numbers involved made the total area taken up under the Scheme of some significance.

Pastoral leases, which comprise the greatest proportion of Crown land held under lease or licence, increased threefold between 1900 and 1920. The area actually held under pastoral lease conditions represents approximately one-third of the whole State. The aggregate area of gold-mining leases, mineral leases and miners' homestead leases, appearing in the table under the heading of Department of Mines, shows comparatively little variation since 1900. However, in recent years very large areas have been included in tenures issued under the provisions of the *Petroleum Act, 1967-1972* and in temporary reserves under the *Mining Act, 1904-1973*.

From 1930 the demand for land for agricultural purposes declined considerably, the principal reason being the lower farm commodity prices which prevailed for several years prior to the second World War. After 1945, however, the demand for land again increased, stimulated by the sharp rise in export prices, notably of wheat and wool, and later by the War Service Land Settlement Scheme. The area conditionally alienated in any one year reached a post-war peak of 691,161 hectares in 1953. During the next decade the area fluctuated between 285,657 hectares in 1956 and 499,591 hectares in 1962. The area then declined and by 1972 the area conditionally alienated was only 4,176 hectares, owing to restrictions imposed on the release of Crown land by conditional purchase. A slight recovery occurred in 1973 and 1974 when the area increased to 23,626 hectares and 55,810 hectares, respectively.

The following table gives details of areas of land for which applications were approved, during each of the years 1970 to 1974, by the Department of Lands and Surveys for conditional alienation or allocation under lease or licence. The figures shown for any year do not necessarily represent land allotted for the first time, as they may include land previously held under any of the several forms of land tenure.

CROWN LANDS—AREA OF ALLOCATIONS
APPROVED BY DEPARTMENT OF LANDS AND SURVEYS (a)
(Hectares)

Particulars	1970	1971	1972	1973	1974
Conditional alienation—					
Conditional purchase	151,268	63,155	2,825	16,679	51,638
Agricultural land purchases	185	315	133	166	1,981
Town and suburban lots	602	1,259	1,218	6,781	2,191
Miscellaneous (b)					
Total	152,055	64,729	4,176	23,626	55,810
Leases and licences—					
Pastoral leases and licences	3,717,152	1,885,277	631,340	560,967	252,427
Special leases	30,806	44,217	41,187	163,860	44,225
Miscellaneous leases (c)	17,642	5,772	9,763	2,154	233,924
Total	3,765,600	1,935,266	682,290	726,981	530,576

(a) See letterpress immediately preceding table. (b) Comprises free homestead farms and reserves.
(c) Comprises perpetual leases, leases of reserves and leases of town and suburban lots.

GOVERNMENT LAND SETTLEMENT SCHEMES

Although, generally, the method of land alienation and settlement in the agricultural areas of Western Australia has been by independent applications by individual settlers for conditional purchase leases, there has also been a series of government land settlement

schemes. The more important of these are the Soldiers' Settlement Scheme following the 1914-18 war, the Group Settlement Scheme introduced in 1921, the War Service Land Settlement Scheme which was initiated in 1945 and other lesser schemes for the settlement of civilians.

Soldiers' Settlement Scheme

The Soldiers' Settlement Scheme was introduced after the first World War and was financed partly by the United Kingdom Government, which arranged free passages for ex-service personnel and their families, and partly by the Commonwealth and State Governments of Australia. Under joint financial responsibility for the scheme the Commonwealth Government was to provide loan moneys to an average of \$1,000 per settler as working capital for such essentials as initial improvements, implements and seed. Later this was increased to \$1,250 and a further average loan of \$750 towards the cost of land brought the Commonwealth commitment to \$2,000 per settler. The State Agricultural Bank provided all extra funds for operations in Western Australia.

By 1940, when operations under the scheme virtually came to an end, 5,213 soldier settlers had been assisted in Western Australia and advances totalling \$13,475,386 had been made. The ultimate cost of the scheme was greater than had been anticipated and the extension of settlement, which was one of its purposes, was frustrated to some degree by the war-caused disabilities of the settlers. Much of the land taken up eventually either reverted to the Crown or was acquired by other settlers.

Group Settlement Scheme

The Group Settlement Scheme was introduced in 1921, but its major development resulted from the passage of the Empire Settlement Act of 1922 by the British Parliament. The main purposes of the Act were to relieve the considerable degree of unemployment prevailing in Britain and to expand land settlement in the Dominions. Agreements were consequently negotiated between the Governments concerned and in the case of the Western Australian scheme it was agreed to establish 6,000 holdings in various 'Groups' in the south-western portion of the State, with the farmers in each 'Group' forming a loosely-knit community. The settlers were to be assisted British immigrants and dairying and pig raising were to be the main activities. As in the Soldiers' Settlement Scheme, the expenditure involved was shared by the British, Commonwealth and State Governments.

The scheme did not develop to the extent originally planned, the maximum number of holdings settled at any one time being 2,442. By amalgamation of properties and abandonments, this number became reduced to 1,700 and in 1942, just over twenty years after the scheme was launched, 530 of the holdings were unoccupied and available for resettlement while little more than one-quarter of the 202,343 hectares initially taken up had been brought into production. Nevertheless, the scheme had an important influence on the settlement and development of several parts of the extreme south-western portion of the State.

War Service Land Settlement Scheme

Proposals for a scheme to settle discharged members of the Forces on the land were agreed to at a conference of Commonwealth and State Ministers held at Canberra in August 1945. Legislative authority for the scheme was later given by the *War Service Land Settlement Agreements Act 1945* (Commonwealth) and the *War Service Land Settlement Agreement Act, 1945* (State). Commonwealth moneys were made available by means of a series of Loan (War Service Land Settlement) Acts and the *States Grants (War Service Land Settlement) Act 1952-1953* (Commonwealth). State Government funds were allocated by annual parliamentary appropriation. In terms of the Agreement Acts, the Commonwealth assumed responsibility for policy decisions and the general supervision of the Scheme. The State Government was required to bear the cost of State administration of the Scheme and to make a capital contribution in respect of each

holding equal to two-fifths of the excess of the total cost involved in acquiring, developing and improving the holding over the sum of the valuations of land and improvements. The Commonwealth Government agreed to meet other costs of the Scheme.

Those benefited were ex-members of the Forces who served in the second World War, the Korean War and the operations in Malaya. Guidance and technical advice were made available to settlers through the extension services of the Department of Agriculture.

In the early years of the Scheme, certain privately-owned properties were purchased for resettlement, but suitable areas of Crown land were later acquired and developed. Land chosen was closely examined as to accessibility, climate, types of soils, water supply, productive capacity, and the possibilities of development, improvement and subdivision. In order to ensure, as far as possible, the success of each individual venture, care was taken to assess the suitability of both the applicant and the land selected for the type of farming contemplated. The policy was to prepare the holdings by clearing, fencing and other improvements before occupation by applicants.

Although holdings were originally available only on perpetual lease, legislation passed by the State Parliament in 1951 enabled War Service Land Settlement lessees to purchase the fee simple in the land after having held the lease for not less than ten years. By a provision of the *War Service Land Settlement Scheme Act Amendment Act, 1960* freehold could subsequently be obtained after such shorter period than ten years as the Commonwealth and the State might determine where special circumstances existed.

The final allotment of farms in Western Australia was made in October 1962, and when the last ex-servicemen to be assisted under the Scheme entered into occupation early in 1963 the total number of farms accepted and occupied by ex-servicemen in this State was 1,280. Activities in respect to the Scheme were officially terminated on 31 August 1966, when the main developmental work was completed.

Other Schemes of Settlement

The 3,500 Farms Scheme in Western Australia was one of the projects proposed to be undertaken under an agreement in 1925 between the British and Australian Governments, whereby \$68 million was to be made available for joint developmental projects during the following ten years. The Commonwealth Government set up a Development and Migration Commission to examine the suitability of any suggested projects. The Commission ultimately reported adversely on the 3,500 Farms Scheme and it was abandoned, but not before some expenditure had been incurred on the preparatory work of surveys and public works. In fact, the \$68 million agreement itself lapsed before any significant results by way of additional farms had been achieved in Western Australia.

Chapter VII—continued

Part 2—Water Supply and Sewerage

The principal water supply and sewerage systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage, and Drainage Board and the Public Works Department.

The Metropolitan Water Supply, Sewerage, and Drainage Board is constituted under the provisions of the *Metropolitan Water Supply, Sewerage, and Drainage Act, 1909-1975*. It came into being on 1 July 1964 and replaced the former Metropolitan Water Supply, Sewerage and Drainage Department as the authority responsible, subject to the Minister, for the general administration of the Act. The Board consists of seven members appointed by the Governor. One member is appointed Chairman on the nomination of the Governor and the remaining members comprise the General Manager of the Board; a qualified engineer; the Under-Treasurer or an officer of the Treasury nominated by him; and three representatives of ratepayers of municipal districts within the Metropolitan Water, Sewerage and Drainage Area. This area of approximately 3,430 square kilometres constitutes the territory under the Board's administration. It embraces Perth and the metropolitan area southward to Warnbro Beach and Serpentine, northward to Gingin Brook and Herne Hill and eastward to Swan View-Sawyers Valley, Kalamunda, Bickley and Carmel, and also incorporates approximately 2,100 square kilometres of the water catchment areas of the Canning, Serpentine, North Dandalup and South Dandalup Rivers and streams of the Darling Range.

The Public Works Department controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as 136 local water supplies. It also provides water for irrigation purposes in the four South-West Irrigation Districts (Waroona, Harvey, Collie River and Preston Valley), the Camballin Irrigation District and the Ord Irrigation District. In addition, the Carnarvon and Gascoyne Groundwater Supply Scheme supplying ninety-five growers in the Carnarvon Non-Artesian Area is being operated.

Three independent town schemes are controlled by local Water Boards in country areas under the *Water Boards Act, 1904-1973* and some local authorities supply water under the provisions of the *Local Government Act, 1960-1975*. Private companies engaged in mining in the north-west of the State provide their own water supply for mining operations, power supply and domestic use. Individual water supplies serve railways, timber mill towns, isolated mines, pastoral properties, stock routes and agricultural areas, mainly from dams, tanks, wells and bores.

The principal water storages in Western Australia are shown in the next table. Supplies for the metropolitan area and environs are drawn almost entirely from Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, Victoria Reservoir, North Dandalup Pipehead Dam, South Dandalup Reservoir and underground water from the shallow unconfined aquifers of the Gngangara sand beds. Mundaring Weir, which is the source for the Goldfields and Agricultural Water Supply, is linked to Kalgoorlie by pipeline and serves the more populous parts of the Eastern Goldfields as well as certain towns and farming areas north and south of the main pipeline. As occasion arises Mundaring Weir supplies to or draws from the Metropolitan Water Supply. Stirling Dam, with a supplementary catchment at Harvey Weir, serves part of the irrigation area of the south-west. Drakesbrook Dam, Samson Brook Dam, Logue Brook Dam, Waroona Dam and Glen Mervyn Dam are also used for this purpose. Wellington Dam, on the Collie River, has been enlarged to meet not only the needs of the southern parts of the irrigation area but also of towns and farmlands included in the Great Southern Towns Water Supply.

The storage capacities of the principal dams and reservoirs at 30 June 1975 were as shown below.

DAMS AND RESERVOIRS—STORAGE CAPACITY (a)
(⁰000 cubic metres)

Dam or reservoir	Storage capacity	Dam or reservoir	Storage capacity
Canning Reservoir	93,420	Samson Brook Dam	9,165
Churchman Brook Reservoir	2,182	Serpentine Pipehead Reservoir	3,864
Drakesbrook Dam	2,288	Serpentine Reservoir	(e) 184,882
Fitzroy Dam	4,650	17-Mile Dam (f)	5,489
Glen Mervyn Dam	1,491	South Dandalup Reservoir	208,211
Harvey Weir	(b) 8,106	Stirling Dam	56,933
Kununurra Diversion Dam (c)	98,679	Victoria Reservoir	859
Logue Brook Dam	24,321	Waroona Dam	14,954
Mundaring Weir	77,127	Wellington Dam	185,482
North Dandalup Pipehead Dam	(d)	Wungong Brook Diversion Weir	(d)
Ord River Dam (Lake Argyle)	5,723,000		

(a) At 30 June 1975. (b) Excludes flashboard storage. (c) Bandicoot Bar Dam or Ord River Diversion Dam. (d) Diversion weir only. (e) Radial gates were extended by 0.61 metres during 1974-75 increasing the storage capacity by some 7.5 million cubic metres. (f) On Uralla Creek, an anabranch of the Fitzroy River.

METROPOLITAN WATER SUPPLY

The sources of the metropolitan water supply are South Dandalup Reservoir, Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, Victoria Reservoir, North Dandalup Pipehead Dam and underground water from the shallow unconfined aquifers of the Gnangara sand beds north of Perth. The supply from these sources is supplemented as necessary from a pipeline link with Mundaring Weir and from a number of artesian bores. Underground water used to augment hills supplies amounted to 21,156,700 cubic metres in 1974-75 and represented 11.7 per cent of the total output from all sources, compared with 17,235,700 cubic metres and 9.9 per cent during 1973-74.

METROPOLITAN WATER SUPPLY—QUANTITIES OF WATER DRAWN (a)
(⁰000 cubic metres)

Source	1970-71	1971-72	1972-73	1973-74	1974-75
Canning Reservoir	43,723	40,000	38,946	40,899	53,362
Churchman Brook Reservoir	4,661	3,132	1,741	5,001	4,679
Mundaring Weir	1,431	1,588	2,337	6,280	6,450
North Dandalup Pipehead Dam (b)	2,436	13,298	11,270	17,077	12,215
Serpentine Reservoir (c)	71,665	69,297	81,206	72,620	65,674
South Dandalup Reservoir (d)				2,450	10,043
Victoria Reservoir	3,791	2,045	2,604	2,861	3,130
Wungong Brook Diversion Weir	10,114	10,425	9,008	9,657	6,139
Metropolitan bores (e)	12,018	16,178	17,696	17,236	21,157
Total	149,839	155,963	164,807	174,080	182,849

(a) Including supplies to railways and shipping. (b) Commenced operating December 1970. (c) Includes water drawn from Serpentine Pipehead Reservoir. (d) Drawing of water commenced February 1974. (e) Includes shallow underground water.

Victoria Reservoir, which was completed in 1891 with a capacity of 859,000 cubic metres, was the first of the existing water conservation projects to be completed in the Darling Range. In 1921 a 104,500 cubic metre reservoir, which is no longer used for water supply, was constructed at Bickley Brook to replace a pipehead dam, and in 1928 one with a capacity of 2,182,000 cubic metres was completed at Churchman Brook. During the same period pipehead dams were built across the upper course of the Canning River and its tributary, Wungong Brook, preliminary to the construction of Canning Reservoir, which was begun in 1933 and completed in 1940. Canning Reservoir has a storage capacity of 93,420,000 cubic metres retained by a concrete wall 66 metres high and 468 metres long at the crest. Serpentine Pipehead Reservoir was completed in 1957 and Serpentine Reservoir, commenced in 1957, was completed in 1961. Serpentine Reservoir is constructed of rolled earth fill and the embankment rises 52 metres above the stream bed, the length at the crest being 424 metres. Its capacity, which is slightly less than that of Wellington Dam

on the Collie River, is 184,882,000 cubic metres. Supplies to the metropolitan system are augmented by the North Dandalup Pipehead Dam which is the first stage of the Dandalup Rivers Scheme and was completed in December 1970. The major storage component of the scheme, the 208,211,000 cubic metre capacity South Dandalup Dam, was completed in late 1973 and at the end of the 1975 winter a total of 130,300,000 cubic metres of water was stored.

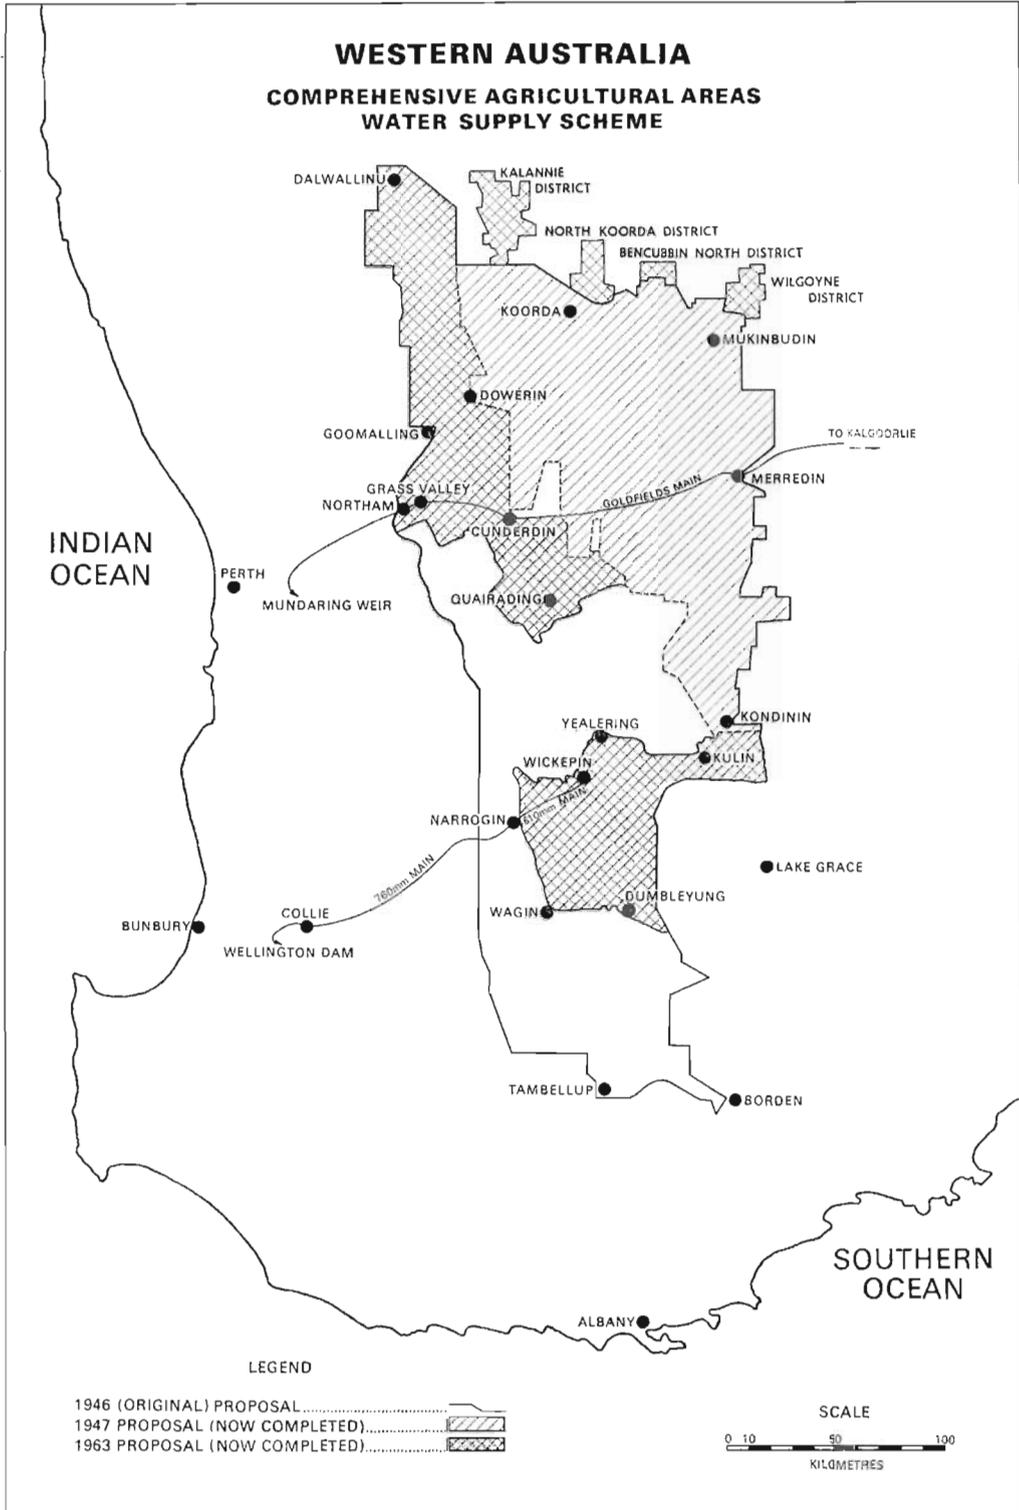

Water from storages in the Darling Range is conveyed to the metropolitan area by the Canning Tunnel, which was commissioned on 17 January 1975, and large trunk mains. It is then distributed by feeder, distribution and reticulation mains, either directly from the trunk main or from large storage service reservoirs at Mount Yokine, Mount Eliza, Bold Park, Mount Hawthorn, Richmond, Melville, Buckland Hill, Hamilton Hill, Thompson Lake, Greenmount, Mirrabooka and Whitfords and from summit tanks and water towers situated at high points throughout the area supplied. The Canning Tunnel is an important addition to the trunk main system and is designed to cope with the maximum flow requirement envisaged from Canning Dam to Roleystone. In addition, underground water from the shallow unconfined aquifers of the Gngangara sand beds, after treatment at the Mirrabooka Water Treatment Plant, is pumped to the Mirrabooka Reservoir for distribution into the northern supply system. The plant is capable of producing 58,000 cubic metres of clear water daily; this was increased to 103,000 cubic metres daily when the new treatment plant at Gwelup was commissioned in May 1975. To meet the peak demand during the summer months, supplies from these sources are supplemented from a system of artesian bores which can provide a daily maximum of 95,500 cubic metres. At 30 June 1975 the number of consumer services was 239,426. The previous table shows the quantities of water which were drawn from the various sources during each of the five years ended 30 June 1971 to 1975.

COUNTRY WATER SUPPLIES

Supplies controlled by the Public Works Department

Since 1947 enlargement and extension of the Goldfields and Agricultural Water Supply and the development of the Great Southern Towns Water Supply have been carried out mainly in accordance with a project known as the Modified Comprehensive Scheme. A proposal for a comprehensive water supply scheme was first submitted by the State Government to the Australian Government in January 1946 when applying for financial assistance in its construction. The initial plan was intended to supply water to towns and farms in an area of 4.7 million hectares in mixed farming (cereal and sheep) districts of Western Australia, as well as to increase the supply to the Eastern Goldfields. A committee appointed by the Australian Government to consider the State's submission reported that certain areas within the scheme had a higher priority than others. As a result, the project was greatly reduced in scope and a modified scheme, to embrace 1.7 million hectares, was agreed to by both Governments and adopted in October 1947. The extent of the scheme as originally proposed, and as modified, is shown on the map on page 333. A description of the boundary of the modified scheme is contained in a schedule to the *Agricultural Areas, Great Southern Towns, and Goldfields Water Supply Act, 1947* (State), which gave parliamentary approval of the undertaking. Commonwealth financial aid was provided by means of the *Western Australia Grant (Water Supply) Act 1948* (Commonwealth) and later amendments, which authorised reimbursement to the State of one-half of its expenditure on the scheme, up to a maximum grant of \$10 million.

The modified scheme was completed in 1961, the total expenditure amounting to \$20.6 million. A request made by the State Government in 1960 for a grant equal to half the cost of extending the scheme virtually to the boundary as first proposed in 1946 was rejected by the Australian Government. Following this rejection the State Government embarked on a necessarily limited programme financed from its own loan moneys, the policy being to restrict extensions to supply certain towns within the original area and farm lands adjacent to pipelines. A further request was made by the State Government in 1963 for a grant of \$10.5 million payable over a seven-year period and representing one-half of the estimated cost of proposed extensions which would increase by 1.5 million

hectares the area served by the scheme. The Australian Government agreed to provide assistance in the form of an interest-bearing loan up to a maximum of \$10.5 million, advances to be made during a period of eight years commencing with the financial year 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965* (Commonwealth). The map on page 333 shows the additional areas reticulated under the 1963 proposals.

Goldfields and Agricultural Water Supply

The original purpose of this undertaking, which was formerly known as the Goldfields Water Supply was to supply water for the Coolgardie and the Kalgoorlie-Boulder areas. To provide conservation, the Helena River was dammed near Mundaring, and on completion of the reservoir in 1902 it had a capacity of 21 million cubic metres. The increasing demand for water in the area served made it necessary to augment supplies. This was achieved by raising the wall 9.8 metres to a height of 40.2 metres and when the work was completed in 1951 the enlarged capacity of the reservoir was 68.9 million cubic metres. The capacity has since been further increased to 77.1 million cubic metres by the erection of adjustable steel crest gates 1.2 metres in height. In 1972 the Lower Helena Pipehead Dam, some eight kilometres below Mundaring Weir, was brought into operation, water being pumped from this source to augment the supply from this reservoir. The main pipeline between Mundaring and Kalgoorlie is 554 kilometres long. It is for the most part 762 millimetre diameter steel but has 1,219 millimetre, 1,067 millimetre and 914 millimetre pipe in the western portion with some duplication of the 762 and 914 millimetre pipe. The pipeline is equipped with seventeen pump stations. The maximum pumping capacity from Mundaring Weir is 123,000 cubic metres per day. The total capacity of all receiving, regulating, standby and service tanks (including four standby reservoirs at Kalgoorlie with a combined capacity of 336,000 cubic metres) is 1.2 million cubic metres.

At 30 June 1975 the Goldfields and Agricultural Water Supply was serving 112 towns and water was being reticulated to farms in an area of 2.65 million hectares.

GOLDFIELDS AND AGRICULTURAL WATER SUPPLY

Year	Number of services (a)	Length of water mains (kilometres) (a)	Consumption (a) ('000 cubic metres)						Total
			Domestic	Commercial	Industrial (including railways)	Mining	Farms and market gardens	Other	
1969-70	25,742	6,869	5,725	1,119	1,080	3,651	3,635	1,448	16,660
1970-71	26,046	7,303	5,563	737	958	3,693	3,761	1,295	16,008
1971-72	26,670	7,329	6,009	1,533	863	3,389	4,173	1,693	17,660
1972-73	27,002	7,883	6,928	809	1,245	3,918	4,746	1,677	19,323
1973-74	27,451	7,999	6,238	758	232	3,699	4,012	1,372	16,311

(a) Figures include amounts consumed from local supplies at Waddouring-Barbalin-Knungajin, Bruce Rock, Narembeen and Kondinin.

Extensions to country towns and agricultural areas have been made from several points along the main pipeline. Norseman is connected by an extension southward from Coolgardie. A branch from this main supplies the nickel mining town of Kambalda. From a point west of Merredin water is taken northward to supplement local schemes at Waddouring-Barbalin-Knungajin. Other extensions north and south of the main pipeline provide water for a number of towns and surrounding districts, including Toodyay, Goomalling, York, Beverley and Bullfinch. A pipeline southward from Merredin to serve Bruce Rock, Narembeen, Kondinin and surrounding districts and Kulin and surrounding districts is linked to an extension south from Doodlakine and taken westward to supply Corrigin. A main south from Cunderdin serves Quairading and the intermediate farmlands. Areas north-west of Burracoppin are served by an extension northward from a point east of Merredin, and districts north of Kellerberrin by a pipeline connecting Kellerberrin to the Waddouring-Barbalin-Knungajin system already mentioned. Water is taken northward from Cunderdin through Minnivale to a point near

Kokardine. Extensions westward, eastward and northward from this pipeline serve a number of towns and localities, including Dowerin, Wyalkatchem, Yelbeni, Koorda, Kalannie, Pithara, Ballidu, Dalwallinu and Wongan Hills, and surrounding farm lands. An extension northward from the main pipeline serves Koolyanobbing, where iron ore is mined.

Great Southern Towns Water Supply

The Great Southern Towns Water Supply serves towns on the Great Southern Railway from Brookton to Katanning, as well as a number of other towns. Water is drawn from Wellington Dam which also supplies the Collie River Irrigation District. Work on raising the wall of the dam to give it a holding capacity of some 185 million cubic metres was completed in 1960. Water is taken through Narrogin to Wickepin by means of a main pipeline 171 kilometres long. In addition to the pumping installation at the dam site, there are stations at a point forty-five kilometres east of the dam and at Narrogin. From Narrogin, pipelines extend sixty-four kilometres northward to Brookton, ninety-five kilometres southward to Katanning and eastward to Wickepin and Kulin. Branch lines from this latter line extend northwards to take in the towns of Yealering, Bullaring, Kondinin, Corrigin, Babakin and Ardath and southwards to Dumbleyung, Moulyinning, Dudinin, Harris Smith and Lake Grace. A branch westward from Katanning serves the town of Kojonup and a second branch extends south-eastward through Broomehill to Gnowangerup. A pipeline eighteen kilometres long supplies water to a power station constructed for the State Energy Commission at Muja, south-eastward from Collie.

At 30 June 1975 the Great Southern Towns Water Supply was serving thirty-two towns and an area comprising 607,000 hectares of farmland. Details of the number of services, length of water mains and consumption for the years 1969-70 to 1973-74 are given in the following table.

GREAT SOUTHERN TOWNS WATER SUPPLY

Year	Number of services	Length of water mains (kilometres)	Consumption ('000 cubic metres)					Total
			Domestic	Commercial	Industrial (including railways)	Farms and market gardens	Other (a)	
1969-70	9,584	1,110	2,090	237	1,325	270	483	4,405
1970-71	10,006	1,246	2,017	228	797	401	382	3,825
1971-72	10,202	1,559	2,147	221	732	495	482	4,077
1972-73	10,580	1,860	2,395	294	896	805	645	5,034
1973-74	12,124	1,795	2,274	251	2,151	682	453	5,811

(a) Excludes mining, for which no services were provided by the Public Works Department.

Supplies to other Country Towns

One hundred and thirty-six towns and localities are supplied with water from stream flow, dams, tanks, wells and bores, the schemes being administered under the provisions of the *Country Areas Water Supply Act, 1947-1974*. The following table gives, for these local schemes, the number of services, length of water mains and consumption for the years 1969-70 to 1973-74.

PUBLIC WORKS DEPARTMENT: LOCAL SCHEMES

Year	Number of services	Length of water mains (kilometres)	Consumption ('000 cubic metres)					Total	
			Domestic	Commercial	Industrial (including railways)	Mining and shipping	Farms and market gardens		Other
1969-70	30,182	1,630	8,860	2,108	1,603	117	268	1,771	14,728
1970-71	32,642	1,811	10,166	2,412	2,122	225	216	1,934	17,075
1971-72	33,677	1,862	13,264	3,360	2,063	155	130	2,468	21,440
1972-73	36,232	2,005	15,635	3,519	5,086	265	560	2,751	27,818
1973-74	39,150	3,048	14,089	3,355	2,193	5,170	278	2,918	28,003

The Public Works Department is also responsible for the provision and maintenance of tanks and wells as a source of cartage water for a number of small communities in gold mining and agricultural areas.

Other Country Water Supplies

As well as the schemes controlled by the Public Works Department, there are three local Water Boards operating under the *Water Boards Act, 1904-1973* which also draw supplies from stream flow, dams, tanks, wells and bores. In addition, some local authorities exercise powers under the *Local Government Act, 1960-1975* to supply water within their boundaries. There are still, however, a large number of individual farms and pastoral stations which are not connected to public schemes and are therefore obliged to provide their own supplies. The Forests Department and sawmilling companies operate schemes to supply water to their mill towns. In a number of ports and mining towns in the north-west of the State, mining companies are responsible for the provision of their own water supplies, and while the principal source of supply is underground reserves, desalination of sea water is also being used.

Railways of the Australian Government and State Government make independent provision for supplies of water for their own purposes, although additional quantities are consumed by the railways from other sources, such as those controlled by the Public Works Department and the Metropolitan Water Supply, Sewerage, and Drainage Board.

UNDERGROUND WATER

Considerable use is made of groundwater by individual farmers, pastoralists, market gardeners, etc. and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of it is too saline for irrigation or even stock. Both pressure waters and non-pressure waters are used to supply or augment the supplies of numerous towns, including such major centres as Perth, Albany, Bunbury, Busselton, Carnarvon, Dampier, Esperance, Exmouth, Geraldton and Port Hedland, and the list is growing.

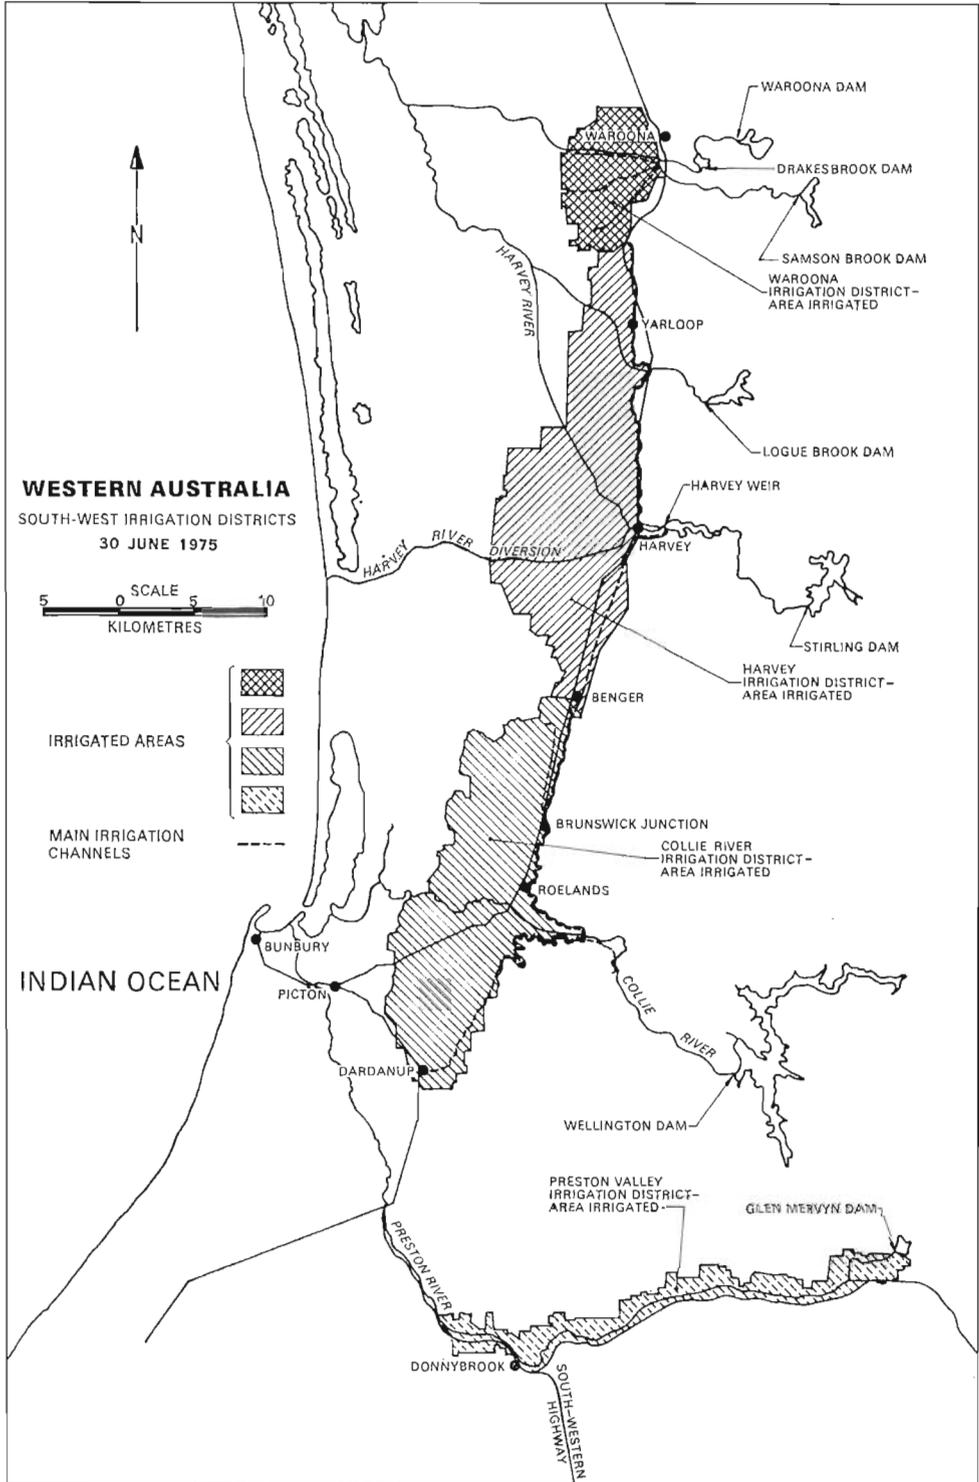

Industries also are using groundwater in substantial quantities, particularly in the processing of titanium, iron, and alumina. Recent mineral discoveries in several areas have given rise to very large demands for water, the search for which has had to be intensified. Marked advances in the knowledge of aquifers and quality of water in the main sedimentary basins have been made as a result of extensive geological surveys and exploratory drilling by the Geological Survey (a branch of the Department of Mines), several oil companies, and developmental drilling by the Public Works Department, and the Metropolitan Water Supply, Sewerage, and Drainage Board.

The Public Works Department and the Metropolitan Water Supply, Sewerage, and Drainage Board are responsible for all developmental works. The Geological Survey is responsible for all exploratory works, as well as for investigating and assessing the State's groundwater resources, and advising local government authorities, private industry and individuals on groundwater problems.

SOUTH-WEST IRRIGATION SCHEMES

Irrigation schemes have been established by the State Government on the coastal plain south of Perth in the Waroona, Harvey, Collie River and Preston Valley Irrigation Districts between Waroona and Donnybrook, the water being channelled from dams in the adjacent Darling Range. The areas irrigated and main irrigation channels in each Irrigation District at 30 June 1975 are shown on the accompanying map, together with the relevant dams.

Specialist advice on irrigation farming methods is available through the Department of Agriculture and the properties are watered on a rotational plan, according to the 'Zone', or section of the District, within which the farms are situated.

The Harvey Irrigation District, opened in 1916, was the first large-scale project. Harvey Weir, with a capacity of 2·36 million cubic metres on completion, was constructed as the source of water supply and the service initially provided was for 1,215 hectares of land for citrus growing.

The success of dairying and stock raising and to a lesser extent vegetable growing, which have replaced citrus culture, has led to gradual but substantial extensions of the south-west irrigation area. The damming of Drakes Brook in 1931 and Samson Brook in 1941 provided a storage capacity of 10·37 million cubic metres which, by alterations to Samson Brook Dam in 1960, has been increased to 11·45 million cubic metres and is used for the irrigation of 1,570 rated hectares in the Waroona Irrigation District. In 1966 a third storage to serve the Waroona District, known as Waroona Dam, was completed on Drakes Brook about five kilometres up-stream from the existing Drakesbrook Dam. Its capacity is 14·95 million cubic metres. In 1931 the capacity of Harvey Weir was enlarged to 9·13 million cubic metres (including flashboard storage) and in 1948 Stirling Dam, with an original capacity of 54·83 million cubic metres (increased to 56·93 million cubic metres by alterations in 1958), was completed further up-stream on the Harvey River. These works enabled the Harvey Irrigation District to be extended northward to link with the Waroona District. Logue Brook Dam, with a capacity of 24·32 million cubic metres, was completed in 1963 and provides additional supplies for the Harvey Irrigation District, the rated area of which is 5,581 hectares.

During 1969 construction of the Glen Mervyn Dam on a tributary of the Preston River near Mumbballup was completed. Water from this dam is made available each summer for controlled release into the Preston River when the natural stream flow is insufficient for the irrigation of orchards downstream from Donnybrook.

Concurrently with developments in the Harvey and Waroona Irrigation Districts, action was taken to conserve water for the Collie River Irrigation District and Wellington Dam on the Collie River was completed in 1933. In view of its importance, not only to irrigation projects but also to the Great Southern Towns Water Supply, the wall of this reservoir has been raised and when work was completed in 1960 its capacity of 36·37 million cubic metres was increased to 185·48 million cubic metres. It serves an area of 4,851 rated hectares in the Collie River Irrigation District, which extends from Brunswick Junction to Dardanup.

Details of irrigation in each district in the years 1973-74 and 1974-75 are given in the following table. Similar information relating to northern irrigation schemes embracing the Ord and Camballin Irrigation Districts appears on page 341.

IRRIGATION: SOUTH-WEST SCHEMES

Particulars	Irrigation district								Total	
	Waroona		Harvey		Collie River		Preston Valley		1973-74	1974-75

n.a. denotes 'not available' or 'not applicable'.

(a) Area watered multiplied by number of waterings. Figures shown represent the sum of hectare waterings for individual holdings in each district. (b) Total hectare waterings divided by total area watered. (c) Excludes flashboard storage in 1973-74, but includes storage retained by flashboards in 1974-75.

NORTHERN IRRIGATION SCHEMES

Although not yet comparable in size with the south-west undertakings, the irrigation areas at Carnarvon and on the Ord and Fitzroy Rivers in the northern portion of the State are of increasing significance.

Carnarvon. During the past forty years a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. It produces over half of the bananas consumed in Western Australia and is a major supplier to the Perth market of out-of-season vegetables. This centre, was in 1974-75, the largest producer in the State of water melons, tomatoes, pumpkins, cucumbers and capsicums and the second largest producer of French and runner beans. Carnarvon also exports beans, cucumbers and pumpkins to the eastern States.

Agricultural development has been made possible only by irrigation, as the rainfall is extremely variable and averages little more than 230 millimetres per annum. Each holding has its own irrigation plant and, wherever possible, the pumping unit is installed on a bank of the Gascoyne River. Usually the river bed is exposed, as surface flow does not occur regularly each year. Concrete-lined wells have been sunk into the river sands and the water obtained is pumped either to storage tanks or direct to the plantation feeder channels, from which it is distributed among the plants by furrows. Because of the limitations of supply from the river sands, the State Government has instituted controls over the quantity of water pumped by growers and has commenced to develop up-river sources under the Carnarvon and Gascoyne Groundwater Supply Scheme. The Scheme at present is delivering supplementary water by pipeline to seventy plantations. A tropical research station is maintained at Carnarvon by the Department of Agriculture. To the early activities of this research station may be credited much of the success of the Carnarvon plantations, notably in the field of plant selection and pest control, and experimental work is being continued.

Ord River. The Ord River in the Kimberley Division traverses a tropical area which receives monsoonal rains of irregular incidence and quantity, varying from an annual mean of 510 millimetres in the south to 760 millimetres in the north. Investigations at the Kimberley Research Station, established in 1945 and operated by the Department of Agriculture in conjunction with the Commonwealth Scientific and Industrial Research Organization, have shown that the climate and soil conditions are favourable for the cultivation of sorghum, sugar-cane, rice, cotton, safflower and various oil seeds. Following these investigations the State Government, with Australian Government financial assistance, embarked on a project to provide water supplies for irrigation in the area.

The Ord Irrigation Project provides for the development of 72,000 hectares of land agriculturally and topographically suitable for irrigation. The project comprises four stages: the first was the construction of a diversion dam to supply water for an area of 12,140 hectares and the second, the building of a main storage dam with a capacity of 5,723 million cubic metres. The other stages are the progressive development of the whole 72,000 hectares and the construction of a hydro-electric power station.

The diversion dam, situated at Bandicoot Bar about 105 kilometres by road south-east of Wyndham and forty-eight kilometres downstream from where the Ord River Dam now stands, was officially opened on 20 July 1963. The capacity of the diversion dam is 98.7 million cubic metres and irrigation from the dam commenced in April 1963. It has been renamed the Kununurra Diversion Dam and its storage is now named Lake Kununurra.

There are thirty farms included in the first stage of the project and each has an approximate area of 270 hectares. Prior to 1975 cotton was the main crop. However, owing mainly to high off-farm costs, high costs of insecticides and a decrease in the return for cotton no commercial crops were planted in 1975. Drastically lower meat prices also led to reduced areas of grain sorghum and fodder crops being grown for fattening of cattle. Commercial-scale trial crops of peanuts and rice were grown during the 'wet' season and pilot processing plants established. Various farmers received government assistance to grow experimental crops of rice, peanuts, wheat, oats, barley, maize and

safflower during the 1975 'dry' season. The prospects for a sugar industry in the area are being investigated and a detailed feasibility study has been commenced by a major Australian sugar company using the expertise of various bodies in the Queensland sugar industry.

An area of 970 hectares, originally a pilot farm developed by a private company to conduct farm-scale trials under an agreement with the State Government, later became the company's property under the agreement. Large quantities of grain sorghum have been grown on this property by the company for cattle fattening in feed lots.

The diversion dam was recognised by the Australian Government in August 1959 as an approved project within the meaning of the *Western Australia Grant (Northern Development) Act 1958-1959* (Commonwealth). This legislation provided for payment by the Australian Government to the State Government of a non-repayable grant of \$10 million for development of the part of the State north of 20°S. latitude. Of this grant \$8.2 million was spent on the diversion dam. In February 1963 a further approach was made to the Australian Government requesting an amount of \$3.3 million for the completion of channels and drains required to develop the whole of the 12,140 hectares included in the first stage of the project. The request was approved in August 1963 and moneys made available by way of grant in terms of the *Western Australia (Northern Development) Agreement Act 1963*.

In November 1967, the Australian Government approved the plan for the second phase of the Ord River Irrigation Scheme and agreed to provide financial assistance to the State for the works involved. Agreement as to the terms and conditions for financing the second phase of the scheme was announced in March 1968. In terms of the *Western Australia Agreement (Ord River Irrigation) Act 1968* the Australian Government agreed to provide financial assistance to the State in an amount equivalent to expenditure on the works, up to a maximum of \$48.18 million. The assistance took the form of a non-repayable grant for the construction of the main Ord dam (\$21.80 million) and an interest-bearing loan for the associated irrigation and drainage facilities.

The Ord River Dam was constructed over three dry seasons, 1969 to 1971, and was officially opened on 30 June 1972. A pump station and irrigation supply facilities to bring 2,020 hectares of new irrigation farmland into production on Packsaddle Plain was completed in December 1970. An extension of the scheme covering 770 hectares on Ivanhoe Plain was completed in December 1974.

Fitzroy River. The Camballin irrigation area is situated on the Liveringa flood plain, 105 kilometres south-east of Derby. Irrigation water from the Fitzroy River is diverted by means of a weir with a capacity of 4.7 million cubic metres into Uralla Creek, an anabranch, for twenty-seven kilometres to another dam with a storage of 5.5 million cubic metres constructed on Uralla Creek. Later it will be necessary to construct a storage dam on the upper reaches of the Fitzroy River for the large-scale developments envisaged for this area.

An irrigated farm area of 2,600 hectares has been developed and grain sorghum produced in conjunction with various fodder crops for feeding cattle. The operating company has established a feed lot capable of handling a maximum of 7,500 head of cattle at one time. An economic downturn in the beef industry resulted in little activity during 1975.

Dunham River. In addition to the government irrigation undertakings mentioned above, a private scheme has been established in the Dunham River valley south of its confluence with the Ord River. An agreement between the Government of Western Australia and Goddard of Australia Pty. Ltd., subsequently ratified by the *Irrigation (Dunham River) Agreement Act, 1968*, authorises the company to construct a dam on Arthur Creek, a tributary of the Dunham River, to irrigate the pilot area. The company, in terms of the agreement, is required to subdivide the pilot area into not more than ten holdings each containing an area of approximately 400 hectares, of which some 240 hectares will be irrigated. By early 1972 construction of the Arthur Creek Dam had been completed

and the irrigation system was serving seven 400-hectare farm units which are being progressively developed.

If the company demonstrates to the Government that it is both practical and economically sound to develop the pilot area for agricultural purposes by way of closer settlement in holdings of about 400 hectares, the company will be authorised to proceed with phase 2 of the plan—the construction of a dam on the Dunham River and a suitable water distribution system. The additional area involved in the second phase of the scheme amounts to approximately 13,750 hectares.

IRRIGATION: ORD AND CABBALLIN DISTRICTS

Particulars	Irrigation district				Total	
	Ord		Camballin		1973-74	1974-75
	1973-74	1974-75	1973-74	1974-75		
Area watered hectares	5,198	3,373	1,360	809	6,558	4,182
Hectare waterings (a)	25,101	12,817	3,360	n.a.	28,461	n.a.
Average number of waterings (b)	4.8	3.8	2.5	n.a.	3.6	n.a.
Total water gauged at entry to district '000 cu m	49,929	40,758	5,422	9,224	55,351	49,982
Dam capacity "	5,821,649	5,821,649	(c) 11,639	(c) 11,639	5,833,288	5,833,288
Length of channels " km	116	116	32	32	148	148

n.a. denotes 'not available'.

(a) Area watered multiplied by number of waterings. Figures shown represent the sum of hectare waterings for individual holdings in each district. (b) Total hectare waterings divided by total area watered. (c) Includes 1.5 million cubic metres of natural storage.

WATER RESOURCES INVESTIGATION AND MEASUREMENT

Work on the investigation and measurement of the water resources of Western Australia, both surface and underground, has been accelerated in recent years partly owing to the activities of the Australian Water Resources Council, which was established by joint action of the Australian Government and State Government in 1962. The Council comprises Australian Government and State Government Ministers primarily responsible for water resources.

The primary objective of the Council is the provision of a comprehensive assessment on a continuing basis of Australia's water resources, and the extension of measurement and research so as to provide a sound basis for the planning of future development.

In terms of its main objective, the Council in 1964 recommended, and the Australian Government and State Governments agreed, that there should be an accelerated programme of establishment of stream gauging stations and investigation of underground water. Financial assistance to the States was rendered by the Australian Government under the *States Grants (Water Resources) Act 1964*, subject to certain qualifying expenditure by each State. Under various States Grants (Water Resources Measurement) Acts, financial assistance to the States has continued and has been extended to 30 June 1976.

The total expenditure by the Western Australian Government on water resources measurement, including grants received from the Australian Government, is given in the following table. In general, expenditure has increased steadily each year over the past decade to a peak of \$3,340,620 in 1974-75.

EXPENDITURE ON WATER RESOURCES MEASUREMENT (a)
(\$)

Year	Surface water	Underground water
1970-71	521,695	753,471
1971-72	655,494	812,841
1972-73	669,701	1,090,194
1973-74	1,065,915	1,559,624
1974-75	1,371,777	1,968,843

(a) Including Australian Government grants.

Surface Water

To enable rivers and streams to be utilised efficiently, the quantity and quality of water flowing in many rivers and streams throughout Western Australia are being measured. These vary from comparatively small streams, to relatively large rivers such as the Ord River in the Kimberley.

The number of stream-gauging stations in operation is increasing each year and at 30 June 1975 totalled 258, compared with 237 at 30 June 1974. All stations are under the control of the Public Works Department.

The distribution of the gauging stations in the various drainage divisions is as follows:

South-West Coast Division (Esperance to the Hill River)	171
Indian Ocean Division (Arrowsmith River to the De Grey River)	48
Timor Sea Division (Broome to the Ord River)	39
Total	258

Underground Water

To locate and measure the quantity and quality of underground water available to supply the ever-growing needs of town water supplies, industries, farmers, pastoralists, etc. a considerable amount of investigation, including drilling, is in progress in Western Australia. The work is being carried out by the Department of Mines, the Public Works Department, and the Metropolitan Water Supply, Sewerage, and Drainage Board, with the Department of Mines assuming the major responsibility for hydro-geological work.

Underground water exploration projects in course during 1974-75 included major investigations of shallow aquifers north of Perth, which may provide large quantities of water to augment Perth's water supply, and the proving of additional water supplies for Carnarvon irrigation. Other investigations designed to locate underground water to provide or augment the water supplies for Albany, Donnybrook, Eneabba, Geraldton, Halls Creek, Leeman, Mount Magnet, Northampton, Port Hedland, Quindalup, Three Springs and the West Pilbara Water Supply were also carried out during the year.

SEWERAGE SCHEMES

Metropolitan Sewerage

There are three major sewerage systems and eight smaller systems administered by the Metropolitan Water Supply, Sewerage, and Drainage Board within the metropolitan area.

Sewage from the major systems either gravitates or is pumped through the pipe systems to treatment works at Subiaco, Swanbourne and Woodman Point. After treatment the effluent is discharged into the Indian Ocean, some distance from the coast under a substantial depth of water.

The eight smaller systems are served by treatment plants at Canning Vale, Gosnells, Westfield, Beenyup, Kwinana, Eden Hill, Kelmscott and Forrestfield, the treated effluent being disposed of in sandy soil in the vicinity of the plant sites.

METROPOLITAN SEWERAGE SYSTEMS

At 30 June—		Services	Population served	Length of sewers
		number	persons	kilometres
1971	81,940	313,059	1,828
1972	87,318	334,608	1,991
1973	93,402	353,700	2,158
1974	99,698	380,000	2,432
1975	111,300	420,000	2,635

Country Towns Sewerage

At 30 June 1975 thirty-three towns outside the metropolitan area had sewerage schemes which were constructed pursuant to the *Country Towns Sewerage Act, 1948-1973*. In addition, a further nine schemes have been provided by local government authorities and ten as private development in mining areas by certain mining companies.

Some expansion in local authority construction can be anticipated as a result of a State subsidy scheme designed to assist local government authorities in developing this service. The first grants to local authorities under the scheme were made available in 1971-72.

The following table shows the number of towns seweraged, the area seweraged and the number of services controlled by the Public Works Department at 30 June for each of the years 1971 to 1975. Details of the individual towns serviced are given in the succeeding table.

COUNTRY SEWERAGE SYSTEMS

At 30 June—	Number of towns seweraged	Area seweraged	Length of sewers	Services
	number	hectares	kilometres	number
1971	25	2,508	369	10,178
1972	26	2,866	377	11,141
1973	30	3,140	385	11,989

(a) Commenced after 30 June 1974.

CHAPTER VIII—PRODUCTION

In this Chapter 'production' denotes those economic activities with output in the form of 'goods' or 'commodities' which will be marketed as raw materials, fuels, semi-processed articles or finished products. This definition excludes building and construction activity which is covered in Chapter V, Part 4.

The Chapter is divided into three Parts which deal with the major sectors of production as follows:

- Part 1 Agriculture, Forestry, Fishing and Hunting
- Part 2 Mining
- Part 3 Manufacturing and Electricity and Gas.

The subdivision of the Chapter into Parts 1, 2 and 3 is based on 'industry divisions' in the Australian Standard Industrial Classification (ASIC), and also reflects the current stage of development of economic statistics whereby information presented in Part 2 and Part 3 comes mainly from a system of integrated economic censuses based on ASIC, whereas statistics in Part 1 have yet to be included in this system. A brief description of ASIC and the system of integrated economic censuses is given below.

Australian Standard Industrial Classification (ASIC)

In 1969 the Australian Bureau of Statistics issued the 'Australian Standard Industrial Classification (Preliminary Edition)', or 'ASIC', which sets out a classification of all economic activities grouped into four levels of 'industry' in which the activities are primarily carried out. At the broadest level of the classification, economic activities are grouped into the following 'industry divisions':

- Division A Agriculture, Forestry, Fishing and Hunting
- B Mining
- C Manufacturing
- D Electricity, Gas and Water
- E Construction
- F Wholesale and Retail Trade
- G Transport and Storage
- H Communication
- I Finance, Insurance, Real Estate and Business Services
- J Public Administration and Defence
- K Community Services
- L Entertainment, Recreation, Restaurants, Hotels and Personal Services.

Each industry division is further divided into industry sub-divisions, groups and classes. An example from the Manufacturing division is given below:

Industry Division	: C	Manufacturing
Industry Sub-division	: 28	Glass, Clay and Other Non-Metallic Mineral Products
Industry Group	: 281	Glass and Glass Products
Industry Class	: 2811	Plate and Sheet Glass

Economic units are classified to industry division, sub-division, group and class, in that order, based on the predominant activities among all the activities carried out by the unit concerned. The basic economic unit is the *establishment* which generally represents the total operations under one ownership at one physical location (e.g. a farm, a shop, a factory, a mine). In some cases (e.g. electricity and gas production and distribution) the location constraint is relaxed to cover the total operations under one ownership in one State. Some separately-located units which exist primarily to provide services to other

establishments under the same ownership (*e.g.* separately-located administrative offices, laboratories, warehouses, manufacturers' sales offices not holding stocks, etc.) are regarded as *ancillary units* and are classified to the industry of the establishments served rather than to an industry based on the activity performed. If all the activities of all establishments and ancillary units under the same ownership are considered together the unit is described as the *enterprise*, or all the operations of a single entity in Australia. The final unit in the hierarchy is the *enterprise group* which is the group of legal entities owned or controlled by a single legal entity (*e.g.* a parent company and its subsidiaries as defined in the Companies Act).

Integrated Economic Censuses

In 1968-69 the Australian Bureau of Statistics commenced a programme of integrated economic censuses which would replace or add to the range of existing censuses developed independently over many years. By employing standard definitions of data items as described below and by using the standard definitions of units and methods of classification set out in ASIC, the programme was designed to remove many inconsistencies, gaps and overlaps between existing censuses and thereby permit comparisons of data across broad sectors of economic activity.

Statistics published from the integrated economic censuses are mainly *establishment statistics* or statistics resulting from the aggregation of data for individual establishments and ancillary units. In this Chapter most of the statistics in Parts 2 and 3 are establishment statistics from integrated censuses and data for the standard items can be regarded as comparable between the two Parts. However, the sectors of production covered by Part 1 of this Chapter have not yet been included in the system of integrated economic censuses and consequently the statistics in Part 1 are not strictly comparable with those in Parts 2 and 3.

Enterprise Statistics

Since an enterprise is defined as a single legal entity, the use of the enterprise as the unit of aggregation provides statistics which are often of more value than establishment statistics in considering questions related to management and ownership. The statistics which result from the aggregation of enterprise data are different from establishment statistics since, for enterprises comprised of establishments operating in different industries, the industry classification of the enterprise depends on the respective contributions of each establishment to the value added of the enterprise. For example, an enterprise operating a mine and a factory contributes to both mining and manufacturing in establishment statistics whereas, in enterprise statistics, it is classified wholly to either mining or manufacturing depending on which establishment has the greater value added.

The concept of an enterprise has no geographical limits other than the requirement that only operations within Australia are included. For this reason enterprise statistics generally relate only to Australia as a whole and are not dissected into State components. Where published, such statistics show the number of enterprises in each ASIC industry class together with data for the standard set of establishment items described below, plus additional items collected only at the enterprise level such as rent and leasing revenue, land tax, rates and pay-roll tax, employer contributions to superannuation schemes, depreciation, interest and royalties (paid and received) and other expenses.

Standard Data Items in Integrated Censuses

A necessary part of the system of integrated economic censuses was the adoption of common definitions for data items common to all censuses. Listed below are the definitions of the standard data items appearing in tables in Parts 2 and 3 of this Chapter and referred to in Part 2 of Chapter IX—*Internal Trade*.

Number of Establishments. The number of establishments as defined above operating at 30 June of each year. Numbers of separately-located administrative offices and ancillary units serving the establishments are not included.

Persons Employed. Working proprietors and employees on the pay-roll including those working at separately-located administrative offices and ancillary units.

Wages and Salaries. The wages and salaries of all employees including those at separately-located administrative offices and ancillary units. Amounts drawn by working proprietors are not included.

Turnover. Sales (exclusive of excise and sales tax) of goods, whether produced in the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus bounties and subsidies on production, plus all other operating revenue (such as commission, repair and service revenue), plus capital work done for own use, or for rental or lease. Rent, leasing receipts, interest, royalties and receipts from the sale of fixed tangible assets are excluded.

Stocks. All the stocks of materials, fuels, etc. and finished goods and work-in-progress of the establishment, whether located at the establishments or elsewhere in Australia.

Purchases, Transfers In and Selected Expenses. Purchases of materials, fuel, power, stores, containers, etc. plus transfers in of goods from other establishments of the same enterprise, plus charges for commission and sub-contract work, repair and maintenance expenses, outward freight and cartage, motor vehicle running expenses and sales commission payments.

Value Added. Turnover, plus increase (or less decrease) in the value of stocks, less purchases, transfers in and selected expenses.

Rent and Leasing Expenses. Outlay on rent and leasing of buildings, vehicles, machinery, plant and equipment.

Fixed Capital Expenditure. Outlay on new and secondhand fixed tangible assets, less disposals, including expenditure on establishments not yet in operation.

Part 1—Primary Production

LAND UTILISATION ON RURAL HOLDINGS

In 1974-75 there were 20,500 rural holdings in the State, comprising 116 million hectares of land or almost 46 per cent of the total area of Western Australia.

Of the total area of rural holdings, 3·8 million hectares were used for crops and 7·8 million hectares were under sown pasture. The balance consists mainly of uncleared land, most of which is pastoral leases held by sheep and cattle stations, but also includes cleared land used for grazing or was resting during the season, fallowed areas, newly cleared land and small areas of lucerne.

Land development in the post-war period was stimulated by generally favourable prices for agricultural and pastoral commodities. Special concessions to primary producers under the provisions of the taxation legislation also contributed to the increased capital investment in primary industry. This development, undertaken principally by established farmers and by the War Service Land Settlement Board, was aided by the introduction of modern mechanical methods of land clearing. As a result, the area of land used for crops increased from 1·4 million hectares in 1946-47 to more than 4·1 million

hectares in 1973-74. This was the largest area of crops recorded in Western Australia. In 1974-75 the area used for crops decreased slightly to 3.8 million hectares. The area under sown pastures expanded from 0.8 million hectares in 1946-47 to more than 7.8 million hectares in 1974-75.

Details of land utilisation in the five years to 1974-75 are given in the next table together with the number of active rural holdings.

LAND UTILISATION

Season	Active rural holdings (number)	Land use during the season (hectares)				Total area of holdings (hectares)
		Used for crops	Under sown pastures (a)	Lucerne (all purposes)	Balance of holdings	
1970-71	22,592	(b) 3,831,429	6,982,551	(c)	103,755,457	114,569,436
1971-72	21,997	3,751,233	6,809,377	14,819	103,895,864	114,471,293
1972-73	21,128	3,855,196	6,769,099	16,460	103,320,345	113,961,100
1973-74	20,608	4,133,095	6,939,501	16,687	103,563,970	114,653,253
1974-75	20,500	3,757,626	7,837,053	13,164	103,992,848	115,600,691

(a) Collected and published under the term 'established pasture' prior to 1971-72. (b) Includes areas of sown pastures and of lucerne cut for hay or harvested for seed. (c) Included in land used for crops.

The following table shows a classification of rural holdings according to size of holding for 1974-75. For the State as a whole the largest group of holdings is in the size range 1,000 to 1,999 hectares and the 4,265 holdings concerned represent 21 per cent of the total number of holdings in the State.

The next largest group is holdings in the range 750 to 999 hectares and the 1,787 holdings in this category account for almost 9 per cent of the total. Nearly 16 per cent of all holdings are under twenty hectares in size.

CLASSIFICATION OF RURAL HOLDINGS
ACCORDING TO SIZE OF HOLDING: SEASON 1974-75

Area of holdings	In agricultural areas (a)		In pastoral areas (b)		Whole State	
	Number of holdings	Area	Number of holdings	Area	Number of holdings	Area
hectares		hectares		hectares		hectares
1 to 4	4	1,607	30	88	1,637	4,169
5 to 9	9	797	61	424	858	5,794
10 to 19	19	712	41	530	753	10,307
20 to 29	29	356	20	430	376	8,795
30 to 39	39	278	5	167	283	9,741
40 to 49	49	430	4	168	434	18,558
50 to 74	74	645	1	71	646	39,947
75 to 99	99	523	2	153	525	45,176
100 to 124	124	536	1	108	537	60,357
125 to 149	149	405	1	132	406	55,576
150 to 199	199	702	1	183	703	122,182
200 to 249	249	688	5	1,130	693	154,261
250 to 299	299	459	6	1,571	465	127,804
300 to 399	399	810	5	1,740	815	283,663
400 to 499	499	819	6	2,734	825	365,325
500 to 749	749	1,476	5	2,998	1,481	922,900
750 to 999	999	1,783	4	3,487	1,787	1,551,101
1,000 to 1,999	1,999	4,234	11	14,670	4,265	6,095,896
2,000 to 2,999	2,999	1,391	1,391	3,348,018
3,000 to 3,999	3,999	576	2	6,923	578	1,989,428
4,000 to 4,999	4,999	249	2	8,189	251	1,102,146
5,000 to 9,999	9,999	243	4	30,600	247	1,576,605
10,000 to 19,999	19,999	38	8	106,729	46	602,101
20,000 to 29,999	29,999	6	8	217,835	14	360,886
30,000 to 49,999	49,999	9	17	704,184	26	1,058,627
50,000 and over	25	433	90,480,180	458	95,681,328
Total	19,817	683	91,585,424	20,500	115,600,691

(a) The agricultural areas comprise the Perth, South-West, Southern Agricultural, Central Agricultural and Northern Agricultural Statistical Divisions and the Shires of Dundas, Esperance, Ravensthorpe and Yilgarn. (b) The pastoral areas comprise the Kimberley, North-West, Pilbara and Central Statistical Divisions and the Shires of Boulder, Coolgardie, Laverton, Leonora and Menzies.

In the next table details of rural land utilisation according to statistical division are given for 1974-75. The greatest number of active rural holdings was in the Central Agricultural Division which also had the largest area under crop.

LAND UTILISATION IN EACH STATISTICAL DIVISION: 1974-75

Statistical division	Active rural holdings (number)	Land use during the season (hectares)				Total area of holdings (hectares)
		Used for crops (a)	Under sown pastures	Lucerne (all purposes)	Other	
Perth	3,323	8,252	82,030	359	64,191	154,832

(a) Excludes areas of sown pastures and of lucerne cut for hay or harvested for seed.

MACHINERY

The following table shows the principal items of machinery on rural holdings at 31 March in each of the years from 1971 to 1975. Items marked not available are, in general, collected only periodically.

MACHINERY ON RURAL HOLDINGS

Type	At 31 March—				
	1971	1972	1973	1974	1975
Rotary hoes—					
Self-contained power unit	1,518	1,728	1,756	1,728	1,589
Tractor-mounted and trailing types	1,616	2,149	2,159	2,331	2,236
Seeding and fertilising machines—					
Grain drills—					
Combine type	14,043	13,687	13,847	13,876	13,912
Other types	3,406	3,404	3,145	2,966	2,813
Fertiliser distributors and broadcasters—					
Rotary	9,315	9,367	9,378	9,422	9,423
Direct drop	668	722	730	721	676
Total	9,983	10,089	10,108	10,143	10,099
Harvesting machines—					
Grain and seed harvesters (b)—					
Tractor drawn	9,018	8,556	8,026	7,782	7,520
Self-propelled	1,727	1,906	2,079	2,319	2,494
Total	10,745	10,462	10,105	10,101	10,014
Agricultural mowers—					
Reciprocating (cutter bar) types—					
Power driven (incl. power take-off)	6,776	(a)	(a)	(a)	(a)
Ground driven	275	(a)	(a)	(a)	(a)
Rotary types (including slashers and toppers)	2,792	(a)	(a)	(a)	(a)
Hay rakes—Side-delivery	5,208	(a)	(a)	(a)	(a)
Other hay and agricultural rakes (including buck, dump and root)	3,293	(a)	(a)	(a)	(a)
Pick-up balers	4,329	4,570	4,674	4,792	4,738

Potato diggers	476	(a)	(a)	(a)	(a)
Tractors—					
Wheeled	31,917	31,809	31,970	32,381	32,681
Crawler	3,741	3,631	3,549	3,497	3,439
Total	35,658	35,440	35,519	35,878	36,120
Miscellaneous machines—					
Hammer mills (including roughage mills)	2,524	(a)	(a)	(a)	(a)
Milking machine units	(a)	8,401	8,529	(a)	(a)
Shearing machine stands	(a)	25,399	(a)	(a)	25,244

(a) Not available. (b) Includes headers and strippers; excludes reapers, binders and specialised clover seed harvesters.

VALUE OF PRODUCTION

For primary production the *gross value* is based on the wholesale price realised 'at the principal market'. Where primary products are consumed at the place of production or where they become raw material for secondary industry within the State, these points of consumption are taken as the 'principal market'. *Net value* represents the return to the producer after the cost of all goods consumed in the process of production and the costs of marketing the product have been deducted from the gross value. It is consequently the sum available for payment of wages, interest, rent, depreciation, other overhead costs and for the producer's own income.

The traditional industry dissection of 'Agriculture', 'Pastoral', 'Dairying', 'Poultry farming' and 'Bee keeping' is no longer compiled and has been contracted to the one industry 'Agriculture' as from 1974-75. Within Agriculture, Gross and Local Values of commodities are now presented in the groupings 'Crops', 'Livestock Slaughtering and Other Disposals' and 'Livestock Products'.

Net values of production of the various primary industries excluding mining during the five years ended 1974-75 are given in the following table. A useful comparison of the relative importance of the individual primary industries is provided by the five-yearly averages quoted, as they tend to lessen the effect on the statistics of unusual seasonal or other conditions occurring in particular years. However, in making such comparisons particular account should be taken of price fluctuations for major commodities in each industry over the period (such as wool) and, from 1969-70, the implementation of the Wheat Delivery Quotas Plan. An outline of the Plan is given on pages 357-8.

The net value of production in 1974-75 showed a decrease of 21 per cent over 1973-74 resulting mainly from decreases in the value of wheat and slaughtering of cattle, sheep and lambs.

NET VALUE OF RECORDED PRIMARY PRODUCTION
(Excluding Mining)

Industry	1970-71	1971-72	1972-73	1973-74	1974-75	Average of five years
VALUE (\$'000)						
Agriculture	298,066	319,307	432,801	818,955	632,066	500,239

Hunting	0.18	0.18	0.40	0.19	0.19	0.22
Total	100.00	100.00	100.00	100.00	100.00	100.00

Details of the turnover and value added by mining establishments in the State appear on page 399 in Part 2 of this Chapter.

The following table shows the gross and net values of production of the various primary industries in 1974-75. The '*local value*' which is quoted is the value at the source of production and is obtained by deducting marketing costs from the gross value. Marketing costs comprise freight, cost of containers, commission, and other charges incurred in marketing. Gross values provide a reliable measure of the value of production of any particular item or industry but net value of primary production should be used when comparing or combining values for primary industries with those for secondary industry.

PRIMARY INDUSTRIES—VALUE OF PRODUCTION: 1974-75
(Excluding Mining)
(\$'000)

Industry	GROSS VALUE (based on principal market prices)	Marketing costs	LOCAL VALUE (as at source of production)	Cost of goods consumed in process of production	NET VALUE
Agriculture	835,885	81,655	754,230	122,164	632,066
Forestry	19,995	1,577	18,418	(a)	18,418
Fishing, pearling and whaling	35,130	345	34,785	1,619	33,166
Hunting	1,657	365	1,292	(a)	1,292
Total	892,667	83,942	808,725	123,783	684,942

(a) Not available.

Gross values of the principal items are shown in the next table for each of the years 1970-71 to 1974-75.

Wheat was the most important item in 1974-75 with a gross value of \$352.6 million, followed by wool with \$218.5 million. Forestry contributed almost \$20 million, fishing \$27.0 million and hunting \$1.7 million.

(a) Includes beans for processing. (b) Value of seedlings, cut flowers, bulbs, trees, etc. produced.
(c) Includes Australian Government subsidy. (d) The 1970-71 figure includes an estimate for non-commercial production.

SUMMARY OF AUSTRALIAN STATISTICS

The following table contains a selection of the principal statistics of primary production in each of the Australian States for 1973-74. The figures shown for Australia include those for the Northern Territory and the Australian Capital Territory except where indicated otherwise.

The gross value of primary production (excluding mining) for Australia as a whole in 1973-74 amounted to \$6,652.9 million, of which Western Australia contributed \$1,064.4 million or 16.0 per cent of the total. The major contributor was New South Wales with \$1,975.7 million or 29.7 per cent.

The total number of rural holdings in Australia amounted to 240,570, representing an area of 499,466,000 hectares. Rural holdings in Queensland occupied the largest area (154,506,000 hectares), followed by Western Australia (114,653,000 hectares).

(a) Includes Northern Territory and Australian Capital Territory except where indicated; see footnote (c). (b) Excludes details of an area in Tasmania not available for publication. (c) Incomplete. Excludes Northern Territory and/or Australian Capital Territory. (d) Incomplete. Excludes freshwater crayfish and crabs in Victoria. (e) Excludes details of rock lobster for Queensland.

SEASONAL CALENDAR

The following calendar is intended to show the main periods when principal agricultural and pastoral activities are carried out in Western Australia. Operations are generally confined to the periods shown but are subject to variation according to such factors as geographical location within the State, the variety of seed sown (or trees and vines planted) and exceptional seasonal conditions.

SEASONAL CALENDAR

Item	Period	
	Sowing or planting	Harvesting
Pastures—		
Clovers	April to June	December to April
Medics	April to June	December to April
Grain—		
Wheat	May to mid-July	November to January
Oats	May and June	December and December
Barley	May to July	November and December
Rye	May and June	November and December
Sweet Lupins	April to June	November to January
Hay—		
Wheaten	May and June	October and November
Oaten	April to June	October and November
Cotton	November to February	June to October
Linseed	May to July	December and January
Vegetables—		
Beans, Runner—		
Carnarvon area	March to September	May to November
Perth Division	August to March	November to June
Green Peas—		
For processing	May to September	October to December
Fresh	May to September	August to December
Potatoes—		
Early planting—		
Perth and South-West	June and July	October to December
Mid-season planting—		
Perth, South-West and Southern Agricultural	July to November	November to March
Late planting—		
South-West and Southern Agricultural	November to February	February to June
Onions	March to November	September to April
Tomatoes—		
Carnarvon and Geraldton areas	February to August	May to December
Other areas	June to February	October to June
Fruit—		
Apples	June to August	February to May
Apricots	June and July	December and January
Bananas	September to March	July to June
Lemons	July and August	July to June
Mandarins	July and August	May to September
Nectarines	June and July	January and February
Olives	July and August	March and April
Oranges, Navel	July and August	May to September
Oranges, Valencia	July and August	August to February
Peaches	June and July	December to March
Pears	June and July	February and March
Plums	June and July	December to March
Grapes—		
For table use	July to September	January to May
For wine making	July to September	February to April
For drying	July to September	February
Shearing and lambing—		
Shearing—		
Pastoral areas	March to August	
Agricultural areas	February to November	
Lambing—		
Pastoral areas	April to July	
Agricultural areas	April to September	

BUSHEL WEIGHTS

The production of fruit and certain other commodities is generally recorded in bushels. While the weight of a bushel varies according to the nature of the product, it is also subject to considerable variation on account of such factors as method of packing and size and variety within each kind of product. The average bushel equivalent weights set out on the next page may be used to convert production to kilograms.

BUSHEL WEIGHTS

Product	Weight per bushel	Product	Weight per bushel	Product	Weight per bushel
Apples	19	Lemons	22	Passion fruit	15
Apricots	22	Loquats	20	Peaches	20
Bananas	25	Mandarins	22	Pears	20
Cherries	22	Nectarines	23	Plums	26
Figs	20	Olives	25	Quinces	19
Grapefruit	19	Oranges	22	Tomatoes	20

AGRICULTURE

Wheat

Although wheat has been grown from the earliest years of settlement, cultivation was confined to limited areas as late as 1890 when, of a total area of approximately 14,000 hectares, about one-third was located in the Toodyay-Northam area of the Avon Valley, about one-quarter in the Geraldton-Greenough district and a similar area in the York-Beverley region, with lesser areas at Williams and at places in what is now the South-West Statistical Division. During the 1890s, however, substantial development took place as a result of extensions to the Great Southern and Eastern Railways and the completion of the line from Midland Junction to Walkaway, and by 1910 wheat farming was being carried out in widespread areas in the southern part of the State and as far east as the Merredin district, an area with an average annual rainfall of only 330 millimetres. An outstanding factor in this development was the introduction and increasing use of phosphate fertiliser (superphosphate) to correct the widespread phosphorous deficiency of the wheat belt soils of Western Australia.

The decline in gold production which began in 1904 reduced employment in mining and caused people in increasing numbers to take up agricultural land. This contributed to a spectacular growth in wheat farming and 702,000 hectares were sown to wheat for grain in 1915 compared with 79,000 hectares ten years earlier. The first World War caused a serious reduction in area sown but recovery was fairly rapid from 1920, and by 1925 the area sown for grain had risen to more than 850,000 hectares.

Following the war, a policy of expanding land settlement was resumed. A soldiers' settlement scheme was initiated and a large-scale programme of assisted immigration, with financial aid provided by the British, Australian and State Governments, was inaugurated. With adequate finance available, greater technical efficiency and a buoyant market for wheat, the area sown for grain increased threefold between 1920 and 1930. Among the technical advances contributing to the increase were the introduction of tractors and the development by the Department of Agriculture of early-maturing and drought and disease resistant wheat varieties.

Because of the relatively low yield per hectare, mechanisation was of great significance in the growth of wheat farming in Western Australia, but other aspects of the industry received early consideration and experimental farms were established by the Department of Agriculture in areas where particular difficulties were encountered. As a result, special wheat strains have been developed and farming techniques improved. An extensive programme of soil research and classification has been carried out by the Department and has revealed several mineral deficiencies which it has been possible to correct by the addition of trace elements, notably copper and zinc, to standard fertilisers. Experiments have also been made on methods of soil conservation in those areas which are subject to wind or water erosion, and some success has been achieved by the planting of certain grasses and fodder crops and by contour ploughing and the use of contour banks.

In 1930, an area of 1,601,000 hectares was sown for grain and produced a previously unsurpassed total harvest of 1,456,000 tonnes, which was not exceeded until 1958. Low prices subsequently caused a decline in area sown to 1,028,000 hectares in 1935, but by 1938 the total had risen to 1,381,000 hectares for a yield of 1,003,000 tonnes. The sowing of

wheat for grain was reduced during the second World War to one-half of the pre-war level, only 613,000 hectares being sown in 1944. In the immediate post-war years it steadily increased and by 1950 had risen to 1,289,000 hectares. Over the next six years it declined slightly, the smallest area sown in that period being 1,119,000 hectares in 1956. Significant increases occurred in each of the following three years and in 1959 the area sown was 1,505,000 hectares. Except in 1946 and 1969, when the average yield per hectare was only 0.66 tonnes, seasonal conditions in the post-war years have generally been favourable and good yields have been maintained. In 1955 a record average yield to that date of 1.24 tonnes was obtained from 1,169,000 hectares, the total production being 1,449,000 tonnes or only 7,000 tonnes less than the 1930 harvest which was produced from an area 431,000 hectares greater in extent. Between 1956 and 1967, areas and production followed a generally increasing trend and by 1968, the area of land sown to wheat for grain had increased to 3.0 million hectares from which a harvest of 3.1 million tonnes was obtained for an average yield of 1.04 tonnes per hectare. With the introduction of the Wheat Delivery Quotas Plan in 1969 (see page 357) the area sown to wheat decreased by over 900,000 hectares between 1968-69 and 1971-72. The downward trend was arrested in 1972-73 when quotas were raised and 2.4 million hectares were sown. The area sown further increased to 3.0 million hectares in 1973-74 from which a State record harvest of 4.2 million tonnes was obtained at an average yield of 1.41 tonnes per hectare. In 1974-75, 2.8 million hectares were sown from which 3.3 million tonnes were harvested.

WHEAT FOR GRAIN—AREA AND PRODUCTION

Season	Area sown	Production		
		Total	Average yield per hectare	Gross value
1900-01	hectares 29,947	tonnes 21,092	tonnes 0.70	\$ 309,862

1973-74	2,139,973	11,232	2,155,810
1974-75	3,241,895	19,281	3,269,081

(a) Ships' stores are excluded from figures for 1959-60 and subsequent years.

Most of Western Australia's wheat production is exported as grain and flour and in the preceding table the fluctuations which have occurred in exports since 1910 are shown, together with figures giving the estimated total wheat equivalent. The United Kingdom has been the most consistent purchaser of the State's wheat, but since 1961-62 the People's Republic of China and Japan have been the most important customers and in 1969-70 their purchases together accounted for 78 per cent of the State's total wheat exports. However, in 1974-75 their combined purchases were only 36 per cent of the State's total exports even though Japan was the most important customer with purchases amounting to 636,343 tonnes. In 1974-75 other principal buyers, in order of importance, were Pakistan and the Arab Republic of Egypt. In the same year principal customers for flour were Mauritius, Saudi Arabia, Sri Lanka, the Union of Arab Emirates and Oman. Further details of exports appear in Chapter IX, Part 1.

Bulk Handling of Wheat. The rapid increase in the production and export of wheat between 1910 and 1920 caused problems of transport and storage, and proposals for the bulk handling of the grain led to the formation of a company for this purpose in 1920. This original undertaking was wound up before commencing operations because the technical difficulties then appeared too great and the saving in handling costs problematical. In the early 1930s depressed wheat prices once again stimulated the search for cheaper methods of storage and transportation of grain. Experiments were carried out in the Wyalkatchem area during the 1931-32 season which essentially involved the adaptation of existing bagged wheat storages and bagged wheat mobile elevators to handle wheat in bulk.

The experiment proved successful and the Bulk Handling Act of 1935 gave a growers' co-operative the right of operating, under franchise, a bulk handling system. The co-operative company was Co-operative Bulk Handling Limited which had been formed in 1933, the initial capital being subscribed by two existing co-operatives, The Westralian Farmers and The Grain Pool. In founding Co-operative Bulk Handling Limited these two organisations had provided that as soon as the system was established and the initial liability repaid, ownership and control would be passed to the users of the system.

With its present toll system of operation Co-operative Bulk Handling Limited essentially conforms to the Rochdale principles of co-operation. The grower delivering grain to the Company pays a toll on each tonne delivered. For the first \$2 of toll, he receives one ordinary share in the company, which must be returned to the company if he ceases to deliver grain. For the remainder of his tolls he receives a debenture repayable in full over a ten-year cycle. The tolls are used for capital expenditure and for the repayment of previous tolls summarised into debentures. The toll system thus creates a revolving capital fund subscribed by the growers actually using the system, and in turn achieves perpetual and complete user-ownership. Each user of the system receives a share but only one share. He cannot accumulate any additional shares and thus has only one vote.

By 1943 the original construction programme had been completed and all debts repaid. At this time the decision was made to hand the system over to the growers to enable them to control and direct future expansions for their own benefit.

To the outbreak of the second World War and beyond, the company continued its policy of expansion and modernisation. Services to off-line receival points were begun in the 1940-41 season and in 1951 growers of oats and barley requested that the co-operative include these grains in its system. Since then the company has stored and transported up to six grain types in many varieties and grades. Laboratory and sampling techniques have been extended, ensuring high quality control and a continued effort to meet marketing requirements. In addition Co-operative Bulk Handling Limited provided and operates transfer depots for handling grain from narrow gauge to standard gauge railway wagons at Merredin, Midland and Northam. The depots are concrete vertical silo systems and between them handle all the grain destined for shipment through the Fremantle terminal which handles something more than half the total receivals.

In the 1960s, Co-operative Bulk Handling Limited commenced a modernisation programme of its country receival points. Original receival points were conceived in the era of horse-drawn transport and were spaced about eleven kilometres apart. Motor transport

and better roads meant that a thirty-two-kilometre spacing would be adequate, while the mechanisation of farming and the improvement of farming techniques indicated a large size of storage was required. The modernisation programme has involved the progressive replacement of the older bins, permanent roofed bulkheads and open bulkheads with horizontal storages built of either concrete or steel and equipped with integrated handling machinery, or provision for such machinery to be installed at a later date.

In addition to country receival points storage and transport, Co-operative Bulk Handling Limited provided and operates terminal depots for bulk wheat shipments at Albany, Bunbury, Esperance, Fremantle and Geraldton. The first stage of a modern deep-draught bulk loading terminal at Kwinana has been completed for the co-operative. This involved the construction of an initial horizontal storage unit of 381,700 cubic metres capacity and wheat receivals commenced on 1 December 1969. Construction of the second stage of the terminal has commenced and is scheduled for completion in 1976. This second stage involves the building of a 144-vertical cell storage block, a second horizontal storage unit, a jetty to carry a shiploading gallery, and various connecting galleries. The second horizontal storage unit of 318,100 cubic metres capacity has been completed, while the rest of the second stage is well advanced. The total cost of the second stage is estimated at \$60 million and on completion the Kwinana terminal will have a capacity of 1,154,400 cubic metres and be capable of loading at a rate of 5,000 tonnes an hour.

At 31 December 1975, storage capacity in the country was 6,804,358 cubic metres and at the ports 2,324,600 cubic metres. The initial storage constructed in 1931 provided for 23,276 cubic metres. The largest seasonal production that Co-operative Bulk Handling Limited has handled was 6,364,463 cubic metres of all grains in the 1973-74 season. By contrast, in the initial season the system handled 46,000 cubic metres.

Marketing of Wheat. The Australian Wheat Board is the sole authority for the marketing of wheat within Australia and of wheat and flour for export. The Board derives its authority from Wheat Industry Stabilization Plans established under joint Commonwealth and State legislation and continued in existence under provisions of the *Wheat Industry Stabilization Act 1974* (Commonwealth) which applied to the season commencing on 1 October 1974, and applies for each of the next six succeeding seasons. However, it should be noted that the stabilization provisions of the legislation are restricted to five seasons ending on 30 September 1979. The *Wheat Industry Stabilization Act 1974* repealed earlier Acts of 1968, 1970 and 1973.

Different principles are introduced with the new stabilization plan insofar as a stabilization price now replaces the guaranteed price of the old plan, and is to be adjusted to reflect trends in world wheat prices over a period of years. For the 1974-75 season (the first year of the new plan) the stabilization price was fixed at \$73.49 per tonne. The level of government assistance to the wheat industry or payments by growers to the Wheat Prices Stabilization Fund will be influenced both upwards and downwards by changes in world marketing conditions affecting prices, and not, as formerly, by movement in Australian production costs. The stabilization price for the 1974-75 season will be subject to adjustment for each season for the next four years in accordance with a formula which provides for a variation in the stabilization price, from one season to the next, of one quarter of the difference, in Australian money values, between:

- (a) the average export price for the season as determined (this is calculated when all wheat in a pool for the season has been sold/shipped); and
- (b) the amount obtained by adding together one-half of the average export price of the season immediately preceding the current season and one-half of the stabilization price for that immediately preceding season.

Unlike the old guaranteed price in the stabilization plan recently ended, which applied to a maximum export quantity of 200 million bushels (5,443,108 tonnes) each season, the stabilization price under the new plan will apply to all wheat exported in a season.

Home Consumption Price of Wheat. The legislation provides that the basic class of wheat to be marketed by the Board is 'Australian Standard White' which is defined as wheat other than wheat classified by or on behalf of the Board as 'Prime Hard', 'Hard', 'Durum' or 'Biscuit wheat', or as having a quality defect.

For the year commencing 1 December 1974 or any of the four succeeding years the Australian Minister for Primary Industry is required by the *Wheat Industry Stabilization Act 1974*, after consultation with the appropriate Minister in each State, to fix a price per tonne for wholesale sales in Australia by the Board for each year of Australian Standard White wheat in bulk, free on rail at a port of export. The Australian Parliament's powers in relation to pricing only apply in a Federal Territory and the corresponding Western Australian legislation provides that the price shall be that which 'would be applicable under the Commonwealth Act if the contract were made in the Australian Capital Territory'.

The *Wheat Industry Stabilization Act 1974* (Commonwealth) requires the Australian Minister for Primary Industry to fix the price in respect of a year in the above-mentioned five-year period by—

- (a) taking as a basis an amount of \$70·41 per tonne;
- (b) making such increase or decrease, if any, in that price as he considers appropriate by reason of increases or decreases that have occurred since 1 December 1973 in prices, wages or rates of charges (including rates of interest) payable in connexion with—
 - (i) the carrying on of operations wholly or partly for the purposes of the production of wheat; or
 - (ii) the transport, handling or storage of wheat; and
- (c) adding such amount as, after consultation with the Board, he considers to be necessary to be included in the price per tonne of all wheat sold by the Board in that year for use or consumption in Australia for the purpose of enabling the Board to meet the costs of shipment of wheat by the Board to the State of Tasmania.'

Higher or lower prices for wheat, other than Australian Standard White will apply on the domestic market by reason of difference in quality.

The home consumption price for the 1974-75 season was \$83·40 per tonne.

Wheat Standards. The Western Australian Wheat Standards Committee establishes standards for Australian Standard White (W.A.) wheat and Australian Hard (W.A.) wheat. The procedure approved for determining these standards of wheat provides for samples being drawn progressively at each country receival point and port of shipment during the harvest period. After all samples are assembled they are sorted into zones of origin (Geraldton, Fremantle, Bunbury, Albany and Esperance), the zones being fixed in relation to each siding's natural port terminal. Each zone is then taken separately, the samples from the sidings in the zone being bulked together and thoroughly mixed and it is from these mixtures that each zone's contribution to the main bulk sample for the State is drawn.

Zone contributions are then bulked together and thoroughly mixed, after which ten weighings are taken on a Schopper one-litre scale chondrometer and from the average of those weighings the standards for the season are declared. Subsequently, the wheat is subjected to mechanical and quality tests.

Official standard samples are widely distributed to commercial interests and appropriate Government Departments and instrumentalities both locally and overseas, as being representative of the wheat of the particular season which is on offer to the world grain markets.

Wheat Delivery Quotas Plan. The Australian Wheat Growers' Federation put forward proposals, in March 1969, for the allotment of quotas on deliveries of wheat to the Australian Wheat Board. The Federation's proposals were mainly designed to bring marketable supplies of wheat more into line with available outlets, following the record Australian

and State harvests in 1968-69. The proposals, which first became effective for the 1969-70 harvest, established for Western Australia a quota of 2·3 million tonnes for deliveries of wheat for that season.

State Governments have the responsibility of implementing the quota plan within the States and separate enabling legislation has been enacted in each State. Particulars of the statutory provisions relating to the establishment in Western Australia of a quota scheme with respect to the delivery and marketing of wheat, are contained in the *Wheat Delivery Quotas Act, 1969-1974*.

The States are responsible for determining the method of allocation of individual quotas within their respective boundaries. In Western Australia, the *Wheat Delivery Quotas Act, 1969-1974* provides for the establishment of a Wheat Quotas Committee, consisting of three members appointed by the Minister for Agriculture. Subject to the direction of the Minister, the Committee is empowered under the Act to determine individual quotas for growers, but quotas may be reviewed by the Minister at any time.

The allocation in this State of individual quotas for 'established farms' for the season 1969-70 was made on the basis of the average for the farm of the best five deliveries made in the seven seasons from 1962-63 to 1968-69. Separate provisions applied to wheat growers on 'recently acquired farms' and 'new land farms'.

The allocation of quotas was not regarded as satisfactory by many in the industry and an independent Committee of Enquiry was formed to investigate the basis of allocation and to arrive at a more equitable distribution.

In an endeavour to alleviate various anomalies, a revised method of allocating the total State quota of 2·4 million tonnes was adopted for the 1970-71 season.

Further modifications to the method of allocation were made for the 1971-72 season and again for 1972-73. The State's wheat quotas for these two years were 2·1 and 2·6 million tonnes, respectively.

For the season 1973-74 the State's allocation was set at 3·1 million tonnes. However, complementary State and Commonwealth legislation provided that the Australian Wheat Board 'may have regard to the possibility that the Australian wheat quota originally determined for that season, may be increased by a quantity not exceeding 544,311 tonnes'.

All wheat accepted as 'quota wheat' is the subject of normal Australian Wheat Board payments within the framework of the Wheat Industry Stabilization Act.

For the 1974-75 season, a similar situation existed and the State's allocation was again set at 3·1 million tonnes. There was also a special pool of 2 million tonnes, which could be allocated by the Australian Minister for Primary Industry, should the deliveries in any State exceed their quota.

The 1975-76 season was declared a non-quota season by the Australian Minister for Primary Industry and consequently there was no restriction whatsoever on the quantity of wheat which a grower might deliver. However, the State Minister for Agriculture approved a recommendation to maintain a base quota (for possible use in subsequent seasons) for individual properties in the following manner. To 80 per cent of a property's base quota, as shown on the Registration Certificate (issued in October 1975 to all growers who applied) was to be added 20 per cent of deliveries made to Co-operative Bulk Handling Limited up to 31 May 1976. The resultant figure then would become the property's base quota for the 1976-77 season. Twenty per cent of deliveries made in the 1975-76 season from a property which had not previously established a base quota would be taken as the base quota for that property in the 1976-77 season.

Size Classification of Wheat Farms. In 1965-66, of the 22,853 rural holdings of all types in the State, wheat for grain was grown on 9,267 or 40·6 per cent of the total. For 1968-69, the percentage decreased slightly to 40·1 per cent. In 1973-74 wheat for grain was grown on 8,211 or 39·8 per cent of the 20,608 rural holdings of all types in the State. Of the 8,211 holdings, a total of 1,422 were in the size range 500 to 999 hectares, with a total area of 973,166 hectares.

In the next table, holdings growing wheat for grain in 1974-75, and the total area sown to wheat for grain are classified in size groups of the area sown. Of the 20,500 rural holdings of all types in the State, wheat for grain was grown on 7,899. Holdings growing between 1 and 399 hectares of wheat for grain accounted for almost 68 per cent of the holdings but only 32 per cent of the total area, whereas holdings growing 400 or more hectares accounted for only 32 per cent of holdings but 67 per cent of the total area sown to wheat for grain.

HOLDINGS GROWING WHEAT FOR GRAIN
CLASSIFIED ACCORDING TO AREA SOWN
SEASON 1974-75

Area of wheat for grain	Number of holdings	Total area sown to wheat for grain
hectares		hectares
1 to 9	163	814
10 to 19	124	1,763
20 to 29	185	4,287
30 to 39	137	4,553
40 to 49	217	9,221
50 to 74	386	23,840
75 to 99	387	33,099
100 to 149	798	97,015
150 to 199	705	120,077
200 to 249	868	193,819
250 to 299	478	131,924
300 to 399	906	308,208
400 to 499	869	383,041
500 to 999	1,269	893,980
1,000 to 1,499	276	331,623
1,500 and over	131	272,619
Total	7,899	2,809,883

Oats

Although oats have been grown in Western Australia since the early development of wheat farming, cultivation was somewhat limited until stimulated by the introduction of large-scale sheep raising in the agricultural areas, when their high nutritional worth as stock feed made them a very valuable crop. The area sown to oats for grain increased from 78,301 hectares in 1920 to 111,238 in 1930, to 173,682 in 1940, to 237,025 in 1950 and 538,153 in 1960. It then remained reasonably static until 1972 when the area sown to oats fell to 296,666 hectares. A slight recovery was recorded in 1973 when 324,890 hectares were sown but in 1974-75, the area sown again decreased, amounting to only 262,347 hectares.

In addition to their importance as local stock feed, oats are exported in substantial quantities. In 1974-75 the total sold overseas was 117,392 tonnes, the principal buyers being Japan, Italy, the Federal Republic of Germany, Malaysia and the United Kingdom. Exports to other Australian States are negligible.

Although growers are free to market oats in any way they wish, in practice a large proportion of all sales, whether for export or the local market, is effected through the Western Australian State Voluntary Oats Pool, which is conducted by The Grain Pool of W.A. under the control of the Minister for Agriculture. Co-operative Bulk Handling Limited as the Pool's licensed receiver, handles all oats marketed through the Pool.

OATS FOR GRAIN—AREA AND PRODUCTION

Season	Area	Production		
		Total	Average yield per hectare	Gross value
	hectares	tonnes	tonnes	\$
1970-71	519,558	519,939	1.00	18,100,046
1971-72	453,885	413,902	0.91	10,255,815
1972-73	296,666	212,001	0.71	5,793,261
1973-74	324,890	383,107	1.18	25,252,625
1974-75	262,347	249,526	0.95	18,044,683

Barley

Barley grows well on the lighter soils of the wheat belt and is also successful as a first crop on newly-developed land. With the introduction of wheat delivery quotas and because barley was a suitable alternative crop, the area of barley sown for grain in 1971-72 increased to 911,318 hectares from 223,714 hectares in 1968-69. From 1972-73 the area sown to barley has decreased, particularly of the six-row variety.

Details of area and production of barley for grain for the five years ended 1974-75 are given in the next table.

BARLEY FOR GRAIN—AREA AND PRODUCTION

Season	Two-row				Six-row			
	Area	Production			Area	Production		
		Total	Average yield per hectare	Gross value		Total	Average yield per hectare	Gross value
	hectares	tonnes	tonnes	\$	hectares	tonnes	tonnes	\$
1970-71	315,859	416,120	1.32	20,681,812	316,234	353,212	1.12	13,511,703
1971-72	570,333	678,068	1.19	26,898,012	340,985	322,305	0.95	12,325,100
1972-73	528,392	477,854	0.90	22,414,040	215,756	162,502	0.75	7,109,199
1973-74	377,254	481,948	1.28	37,522,393	132,581	144,260	1.09	10,527,195
1974-75	305,463	251,931	0.82	25,857,060	81,535	77,125	0.95	7,964,457

Both 'two-row' and 'six-row' barley are grown and, while a large amount of the grain produced is retained on farms for stock feed, the bulk of the crop is now exported. In 1974-75 the quantity exported overseas was 392,510 tonnes, the principal buyers being Japan and Taiwan. For many years sales of 'two-row' barley were mainly to local maltsters. However, since 1968-69 exports of 'two-row' barley have become increasingly important. Most 'six-row' barley sold continues to be marketed overseas.

Until 1975-76 the marketing of barley, both for export and for local consumption, was controlled by The Western Australian Barley Marketing Board, Co-operative Bulk Handling Limited acting as the Board's licensed receiver. Since November 1975, with the passing of the *Grain Marketing Act, 1975* The Grain Pool of W.A. has taken over the functions of The Western Australian Barley Marketing Board, which has disbanded following the repeal of the Marketing of Barley Act in 1975.

Lupins

The large-scale growing of lupins for processing has been undertaken in Western Australia since 1971-72, mainly in the areas from Geraldton to Watheroo and from Bridgetown to Kojonup, although in later years, with the development of new strains, growing has spread into drier parts of the wheat belt. The area grown has increased from 26,628 hectares in 1971-72 to 118,607 hectares in 1974-75. Production during this period has increased from 21,511 tonnes to 77,151 tonnes. The following table shows details of area, production and gross value from 1971-72 to 1974-75.

LUPINS FOR PROCESSING OR FEED—AREA AND PRODUCTION

Season	Area	Production		
		Total	Average yield per hectare	Gross value
	hectares	tonnes	tonnes	\$

1974-75	118,607	77,151	0.65	6,435,041

Prior to 1974-75, marketing of lupins for processing was conducted through a voluntary pool operated by The Grain Pool of W.A. In that year the Western Australian Seed Board took over the marketing through a compulsory pool, with the Grain Pool acting as managing and selling agents and Co-operative Bulk Handling Limited acting as receiving agents. Since November 1975, under the provisions of the *Grain Marketing Act, 1975* the Western Australian Seed Board has been disbanded and marketing of lupins (except receival) is now entirely the responsibility of The Grain Pool of W.A.

Other Grains

Considerable interest has been shown in rape seed production in recent years. Among the factors which encouraged expansion in area sown were the effect of wheat delivery quotas and the relatively favourable export prospects for oilseeds and their oils and meals. In 1973-74 and 1974-75 the area sown to rape fell dramatically due to problems encountered by the spread of Black Leg disease in crops. Production is expected to increase when disease-resistant strains become available. Grain sorghum and rye are grown, but only in small quantities.

The following table shows area and production of rape seed for the five years 1970-71 to 1974-75.

Season	Area	Production		
		Total	Average yield per hectare	Gross value
	hectares	tonnes	tonnes	\$

* Revised.

Crop Varieties

Responsibility for advising the Minister for Agriculture on the growing and marketing of the most suitable types of wheat, coarse grain and seeds lies with two bodies—the State Wheat Advisory Committee and the State Coarse Grains and Seeds Advisory Committee. These two committees, which have similar functions are constituted with the aims of improving the grain quality in Western Australia and the issuing annually of a list of recommended varieties as a guide to farmers in Western Australia. Membership of the two committees covers a wide range of interests, including producers, processors, bulk handling and storage authorities, exporters and research institutions. Secretarial and technical functions are undertaken by the Department of Agriculture.

In preparing lists of recommended varieties the committees take into account such factors as average yields per hectare from variety trials carried out by the Department of Agriculture on research stations and farmers' properties and analyses of grain and flour undertaken in Department of Agriculture laboratories and by the Bread Research Institute in Sydney.

Wheat Varieties. Of 2,830,412 hectares sown to wheat in 1974-75, whether for grain, hay or green fodder, 1,787,150 or 63.1 per cent were sown to Gamenya. The next most popular variety of wheat, in terms of area sown, was Falcon with 320,924 hectares or 11.3 per cent of the total. The only other variety with more than 100,000 hectares sown was Insignia with 136,866 hectares or 4.8 per cent. Further details of the areas sown to individual varieties of wheat appear in the publication *Statistics of Western Australia—Agriculture, Forestry, Fishing and Hunting* issued by this Office.

A summary for the five years ended 1974-75, of areas sown to varieties of wheat is given in the next table.

AREAS SOWN TO INDIVIDUAL VARIETIES OF WHEAT (a)

(a) For grain, hay and green fodder.

Hay

Large quantities of pasture hay are cut from clover and grass pastures, production in 1974-75 being 287,156 tonnes from 89,143 hectares. The principal cereal hay crop is oats and 160,415 tonnes of oaten hay were cut in 1974-75 from 52,880 hectares. Wheat is the only other cereal crop which is used extensively for this purpose and in 1974-75 the production was 40,948 tonnes from 15,477 hectares. Barley, vetches, lucerne, rye and rape are also used for hay making but they are of minor importance only.

HAY—AREA AND PRODUCTION

(a) Mainly barley, vetch, lucerne, rye and rape hay.

Pastures

The first established pastures in the State were cultivated to provide grazing for dairy cattle but, with the rapid increase in the number of sheep carried on wheat farms, by far the greater area is now located in the wheat-growing districts.

Subterranean clover was one of the first pasture species sown in these districts and it is still the most important, although other clovers, medics and a variety of grasses including Wimmera rye grass and perennial rye grasses are also grown extensively. The present practice in the higher-rainfall areas is to sow a mixture of two or more species, selected for their suitability to the type of soil and rainfall, to give a legume grass pasture.

From 0.8 million hectares in 1945-46, the area under sown pasture has increased remarkably to 7.8 million hectares in 1974-75. The top-dressing of pastures with superphosphate has developed to such an extent that this treatment is now general practice.

Western Australia is in a particularly good position to produce seed of annual legumes and grasses on a large scale and during the last few years has produced at least one-third of the total Australian crop.

In the last decade considerable areas of new land have been cleared, much of it along the south coast where the growing season is six or seven months. It has been found that if heavier seed and fertiliser applications are used, good subterranean clover seed crops can be grown in the first year on this new land. Similarly, in more inland districts

good yields of barrel medic can be obtained on suitable soil types. The paddocks generally being used are large, open and only gently undulating, and are thus suitable for the operation of modern harvesting machines. Very little, if any, rain falls in the summer months and this ensures ideal harvesting conditions.

The development of suction harvesting machines in recent years has enabled this potential to be exploited. Suction harvesters are now used to harvest most of the more important small-seeded legume crops (subterranean clover, barrel medic and rose clover).

Seed certification schemes are operated by the Department of Agriculture for the main species of pasture seed. These schemes ensure that buyers are in a position to obtain good quality seed of the strain they require free from weed seeds. Certification schemes have assisted greatly in marketing and in allowing the development of a sound export trade.

There is an important export trade in subterranean clover seed and in 1974-75 the total exported was 314,475 kilograms, over 81 per cent of which went to other Australian States.

Details of area and production of pasture seed for the five years 1970-71 to 1974-75 are given in the next table.

PASTURE SEED HARVESTED

Season	Principal pasture seed								Total pasture seed Area harvested

(a) Separate details of lupins for pasture seed not available prior to 1971-72.

Green Feed

Large areas of oats are grown for use as green feed for stock. Among other crops which are cultivated for this purpose, but to a far lesser extent, are barley, wheat, field peas, rye and forage sorghum. The total area of crops used for green feed was 75,481 hectares in 1974-75.

GREEN FEED—AREA GRAZED OR CUT
(Hectares)

Season	Oats	Barley	Wheat	Field peas	Forage sorghum	Rye	Other (a)	Total

(a) Mainly vetches, millet, grain sorghum and maize.

Cotton

The first commercial crop of cotton was grown at Kununurra in 1962-63 on land irrigated from the Ord River Diversion Dam at Bandicoot Bar. A cotton ginnery to process the seed cotton was installed at Kununurra in 1963 and a second ginnery commenced operations in May 1967.

Under the *Raw Cotton Bounty Act* 1963-1969, the Australian Government paid a bounty on raw cotton of grade higher than 'strict good ordinary' and with a staple length of not less than seven-eighths of an inch which was produced in Australia. Bounty was payable under the Act up to and including the year which commenced on 1 March 1971. Subsequently, the State Government supported the Ord cotton growers with

payments of up to six cents per kilogram of lint depending upon staple length and grade. Financial assistance to cotton growers was revised for the 1974 crop for which the State Government guaranteed growers a cotton price equal to the minimum cost of production.

However, owing to high off-farm costs, high costs of insecticides and a decrease in the return for cotton, no commercial cotton crop was planted in 1975.

COTTON—AREA AND PRODUCTION

Season	Area	Production of seed cotton		
		Total	Average yield per hectare	Gross value

1973-74	3,591	9,197	2.56	1,965,581
1974-75	3,642	6,603	1.81	1,752,066

Potatoes

The cultivation of potatoes, the State's principal vegetable crop, is confined largely to the higher-rainfall areas of the south-west. Winter crops are planted during June and early July on the frost-free hillsides and drained flats of the coastal areas between Waroona and Donnybrook and on the market garden land in the Perth Statistical Division. Mid-season plantings are made from the middle of July to November on summer-moist areas or on sprinkler-irrigated land in the Shires of Manjimup, Busselton, Albany and Waroona and in market gardens in the Perth Statistical Division. Late crops are planted between mid-November and the end of February in all districts growing early and mid-season crops, other than the Perth Statistical Division.

The average yield of potatoes per hectare in Western Australia is consistently very much greater than that for Australia as a whole, and in 1974-75 comparative yields were 26.09 tonnes and 19.6 tonnes per hectare. This is due mainly to the favourable climatic conditions in Western Australia and the increasing use of sprinkler irrigation. Delaware, the principal variety grown in the State, gives high yields under a wide range of growing conditions. There is a substantial export surplus, the bulk of which usually goes to the other Australian States with smaller consignments being sent overseas, principally to Singapore.

Potato production in Western Australia is controlled, under the provisions of the *Marketing of Potatoes Act, 1946-1974*, by the Western Australian Potato Marketing Board, which is the sole marketing authority for potatoes produced in the State. The object of this provision is to ensure adequate supplies for local consumption and effective marketing of crops.

POTATOES—AREA AND PRODUCTION

Season	Area	Production

1974-75	2,356	61,479	26.09	8,094,586

Onions

The production of onions is confined largely to the metropolitan and adjacent areas, Spearwood being the main centre. In these districts onions are usually grown on light sandy soils and yields of up to 50 tonnes per hectare are obtained. An increase in area occurred during each season from 1958-59 to 1962-63 when 206 hectares were planted. The

area planted then declined steadily over the next three years, with a slight recovery occurring in 1966-67. In 1974-75 157 hectares were planted for a production of 6,236 tonnes.

Onions are imported annually into Western Australia during the winter but a surplus is produced locally during summer months and is exported, in the main, to overseas markets, the most important being Singapore.

* Revised.

Tomatoes

The main centres of production of tomatoes are at Carnarvon and Geraldton and in the districts around Perth. At Carnarvon and Geraldton, because of the warm winter climate, growers are able to produce early crops and take advantage of the high prices ruling on the Melbourne market during the winter and spring. They also supply substantial quantities to the Perth market and there is a consistent export trade with Christmas Island (Indian Ocean) and Singapore.

Supplies to the Perth market from December to June are grown in and near the metropolitan area, principally in the Shire of Wanneroo. Tomatoes are also grown in a number of districts in the South-West and Southern Agricultural Divisions.

The total area under tomatoes reached a peak of 629 hectares in 1944-45 but the average yield per hectare in that year was low and total production was only 755,898 half-bushel cases. Since then, although the area has declined, yields per hectare have improved and production in 1974-75 was 708,548 half-bushel cases from 212 hectares, an average yield of 3,342 half-bushel cases per hectare.

* Revised.

Other Vegetables

In addition to the cultivation of potatoes, onions and tomatoes, previously mentioned, many other vegetables are produced, the bulk of them in or near the metropolitan area where growers benefit not only from proximity to the principal market but also from an abundant supply of water at relatively shallow depths. Small quantities are also produced in many country districts. An important early crop of beans is grown at Carnarvon and transported by road to Perth. Part of this crop is then railed or air-freighted to Adelaide.

Details of the area and production of the principal vegetables other than potatoes, onions and tomatoes for the years 1970-71 to 1974-75 are given in the next three tables.

Orchards

Fruit production is largely confined to the temperate regions between Gingin to the north of Perth and Albany on the south coast. The cool, wet winters and warm, dry summers of this area permit the successful cultivation of a wide variety of fruits. In the southern and south-western sections, apples, pears and stone fruits are grown extensively while in the districts around Perth the principal crops are apples, stone fruits, citrus fruits and grapes. Outside this main fruit-growing area, banana plantations have been established at Carnarvon in the north-west.

The following table shows details of production of the principal groups of orchard fruit during the years 1970-71 to 1974-75.

FRUIT (a)—AREA AND GROSS VALUE OF PRODUCTION

(a) Excludes grapes. (b) Comprises bearing and non-bearing trees and plants. (c) Apples, pears and quinces. (d) Principally oranges, mandarins, lemons and grapefruit. (e) Plums, peaches, apricots, nectarines and cherries. (f) Bananas, loquats, figs, passion fruit, almonds and other minor fruits.

Apples

Apples, which are the principal fruit crop, account for more than half the total orchard area. Manjimup, Donnybrook and Bridgetown (based on number of bearing and non-bearing trees) are the most important centres but other districts in the south-west and in the Darling Range near Perth produce large quantities. In 1974-75 the total number of bearing trees was 908,210 which produced 2,730,724 bushels, the principal varieties being Granny Smith, Jonathan, Yates, Delicious and Cleopatra.

APPLES—NUMBER OF TREES AND PRODUCTION

Season	Number of trees		Production		
	Bearing	Non-bearing	Total	Average yield per bearing tree	Gross value
			bushels	bushels	\$
1970-71	1,035,728	228,566	3,155,624	3.0	9,167,390
1971-72	1,042,653	205,801	2,750,076	2.6	7,771,602
1972-73	988,636	182,604	2,959,741	3.0	8,214,255
1973-74	933,751	153,286	2,764,948	3.0	8,387,903
1974-75	908,210	133,871	2,730,724	3.0	11,890,338

There is a valuable export trade and overseas shipments generally exceed well over 1 million bushels annually, with 1.2 million bushels being exported in 1974-75. The United Kingdom is the most important market, followed by Singapore, the Netherlands, Saudi Arabia and Malaysia.

Pears

Pears are usually grown in conjunction with apples but the number of trees planted and the quantity produced are much less, the total number of bearing trees in 1974-75 being 63,067 and the production 241,516 bushels. The bulk of the crop is consumed locally but significant quantities are exported, principally to Singapore and Iran.

PEARS—NUMBER OF TREES AND PRODUCTION

Season	Number of trees		Production		
	Bearing	Non-bearing	Total	Average yield per bearing tree	Gross value
			bushels	bushels	\$
1970-71	69,135	14,414	177,488	2.6	823,390

1973-74	63,428	19,845	201,307	3.2	1,034,232
1974-75	63,067	26,485	241,516	3.8	1,158,773

Citrus Fruit

While the Shire of Chittering is the chief citrus fruit producer, there are other important areas near Perth in the Shires of Kalamunda, Swan, Armadale-Kelmscott, the Town of Gosnells and the Shire of Harvey (in order according to number of trees bearing and non-bearing). Although oranges are by far the most important crop, substantial quantities of lemons, mandarins, and grapefruit are also produced.

Production is largely for local consumption but there is some export trade, mainly with Singapore, Mauritius, Christmas Island (Indian Ocean) and Malaysia.

ORANGES AND MANDARINS—NUMBER OF TREES AND PRODUCTION

Season	Oranges				Mandarins			
	Number of trees		Production		Number of trees		Production	
	Bearing	Non-bearing	Quantity	Gross value	Bearing	Non-bearing	Quantity	Gross value

			112,986	369,930			19,210	60,852

(a) Includes limes.

Stone Fruits

Plums, peaches, apricots, nectarines and cherries are grown in the hills districts in the Darling Range near Perth, in the Swan Valley and in many districts in the south-west. The total number of stone fruit trees (bearing and non-bearing) in 1974-75 was 177,438, comprising 80,286 plum trees, 64,018 peach trees, 15,926 apricot trees, 9,001 nectarine trees and 8,207 cherry trees. The bulk of the stone fruit crop is consumed locally but shipments of plums are sent overseas, mainly to Singapore, Malaysia and Hong Kong.

PLUMS AND PEACHES—NUMBER OF TREES AND PRODUCTION

Season	Plums and prunes				Peaches			
	Number of trees		Production		Number of trees		Production	
	Bearing	Non-bearing	Quantity	Gross value	Bearing	Non-bearing	Quantity	Gross value

Bananas

Production of bananas is confined almost entirely to a narrow strip of land along the Gascoyne River at Carnarvon. The plantations are dependent on water pumped from bores which tap a subterranean flow in the sands of the usually dry river bed. As a surface flow in the river channel results only from heavy rains, which do not occur every year, a problem is presented in the falling-off of water supplies and in the increase in the salt content of the underground water during long dry periods. These conditions and also periodic damage from cyclones cause fluctuations in the area of the plantations and in production.

The crop is transported by road to Perth and sold locally in competition with bananas imported from other Australian States.

In the following table, details are given of the area and production of bananas for the period 1970-71 to 1974-75. In the ten years ended 1974-75, peak production was reached in 1969-70 with a total crop of 255,177 bushels. Production in 1970-71, however, was the lowest recorded over the decade.

BANANAS—AREA AND PRODUCTION

Season	Area		Production		
	Plants of bearing age	Young plants not bearing	Total	Average yield per hectare (α)	Gross value
	hectares	hectares	bushels	bushels	\$
1970-71	130	33	64,671	497	367,084
1971-72	140	28	222,728	1,591	1,432,800
1972-73	153	28	199,842	1,306	1,746,901
1973-74	163	40	229,242	*1,406	1,479,049
1974-75	168	18	225,177	1,340	1,733,493

(α) Calculated on the area of bearing plants only. * Revised.

Vineyards

Almost two-thirds of the State's 2,602 hectares of grape vines are in the Shire of Swan, other historically important centres being Chittering, Wanneroo, Toodyay and Gosnells. In recent years significant areas of vines have been planted at Gingin, Margaret River and Frankland and wines produced have shown considerable promise, winning major awards around Australia.

In the dried vine fruit industry, currants are the main item of production and a high proportion of the crop is exported. In 1974-75, just over 98 per cent of exports went to other Australian States, mainly Victoria, the remainder being purchased primarily by Malaysia and Singapore.

Table grapes are grown for the local market and for export overseas, mainly to Singapore and Indonesia. The production of beverage wines has exceeded 2.8 million litres for the past ten years, reaching a record production of over 3.8 million litres in 1968-69. Most of the wine produced is for local consumption although small amounts are exported to the other Australian States and overseas.

GRAPES—AREA AND PRODUCTION

Season	Area		Grapes used for wine making and table use		Dried vine fruits		Wine production	
	Vines of bearing age	Young vines not bearing	Quantity	Gross value	Quantity	Gross value	Beverage (a)	Distillation
	hectares	hectares	tonnes	\$'000	tonnes	\$'000	litres	litres
1970-71	2,435	279	8,212	1,021	1,542	437	3,511,782	1,029,358
1971-72	2,392	333	7,328	862	1,270	376	3,266,247	520,609
1972-73	2,220	346	7,236	808	972	438	2,998,232	864,734
1973-74	2,104	373	7,349	990	1,062	607	3,151,631	718,942
1974-75	2,276	326	8,552	1,309	1,198	763	3,608,297	654,963

(a) Includes spirit produced from distillation wine and used in fortification.

Nurseries

Commercial nurseries are concentrated in the Perth Statistical Division, Kalamunda and Wanneroo being the principal centres. Most nursery production is in the form of potted shrubs, ornamental trees and cut flowers for domestic use but large numbers of fruit trees are produced for planting in orchards.

NURSERIES (a)—AREA AND VALUE OF SALES (b)

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Area	105 hectares	144	134	159	141
Sales (year ended 31 March)	\$ 1,467,063	1,836,029	2,274,121	3,098,770	3,975,030

(a) Excludes non-commercial nurseries and for 1974-75, those with total sales of nursery products less than \$500.

(b) Value at the holding, after deducting costs incurred in marketing.

Artificial Fertilisers

Soils in Western Australia are acutely deficient in phosphate, and regular applications of phosphatic fertiliser are required for crop and pasture growth. Newly cleared land may require applications of up to 230 kilograms of superphosphate per hectare for satisfactory crop yields, but annual applications can be reduced as the phosphate content of the soil is improved through the residual effect of the added fertiliser. On established land, applications of 100 kilograms to 120 kilograms of superphosphate per hectare are commonly used in wheat growing. In 1974-75, mainly as a result of the proposed suspension of manufacturing bounty payments, superphosphate usage dropped by almost 12 per cent on crops and 11 per cent on pastures, compared with 1973-74.

Nitrogen deficiencies also exist in some areas. Legume pastures have assisted greatly in building up nitrogen in the soil and in some situations appreciable increases in yield may be achieved by applying forms of concentrated nitrogenous fertiliser.

The following table shows details of superphosphate and other artificial fertilisers used on crops and pastures during the years 1970-71 to 1974-75.

ARTIFICIAL FERTILISER USED ON RURAL HOLDINGS

Season	Crops					Pastures				
	Area fertilised	Quantity used				Area fertilised	Quantity used			
		Super-phosphate (a)	Other artificial fertilisers	Total	Average per hectare		Super-phosphate (a)	Other artificial fertilisers	Total	Average per hectare
	hectares	tonnes	tonnes	tonnes	tonnes	hectares	tonnes	tonnes	tonnes	tonnes
1970-71	3,822,127	460,826	82,290	543,115	0.14	5,033,433	678,453	28,471	706,923	0.14

(a) Includes superphosphate with trace elements.

PASTORAL PRODUCTION

Throughout this section, where mention is made of the 'pastoral areas' the portion of the State referred to comprises the Kimberley, Pilbara, North-West and Central Statistical Divisions together with the Shires of Boulder, Coolgardie, Laverton, Leonora and Menzies, which form part of the Eastern Goldfields Division. The balance of the State, referred to as the 'agricultural areas', comprises the Perth, South-West, Southern Agricultural, Central Agricultural and Northern Agricultural Divisions together with the Shires of Dundas, Esperance, Ravensthorpe and Yilgarn in the Eastern Goldfields Division.

In the early days of settlement, pastoral activities in Western Australia were confined largely to what are now the agricultural areas and were usually associated with the cultivation of crops. However, beginning with Captain George Grey's visit in 1838 to the area known as the West Kimberley, explorers increasingly drew attention to the pastoral possibilities of large sections of the present Kimberley, Pilbara, North-West and Central Statistical Divisions.

In 1857 and 1858, F. T. Gregory noted the existence of good pastoral country in the Murchison and the Gascoyne districts and in the course of a journey further to the north in 1861 he discovered the Ashburton, Fortescue, De Grey and Oakover Rivers. His reports of good grazing lands in the area led to the establishment of sheep stations by pastoralists from the south, the first of such ventures, in 1863, being in the De Grey district of what is now the Pilbara Statistical Division. Graziers were also turning their attention to the south-east and in the 1870s pastoral lands were being taken up in the coastal areas to the south of the Nullarbor Plain. Another development in the extension of pastoral activity began with Alexander Forrest's journey through the Kimberley in 1879 and his favourable reports on the suitability of the country for grazing. Leases along the Fitzroy and the Ord Rivers were stocked not only with livestock shipped from the south and from the other Australian Colonies but also with cattle brought overland to the area, principally from Queensland and New South Wales, by remarkable feats of droving.

Pastoral production, comprising the production of wool and meat, in 1974-75 contributed over 35 per cent of the total gross value of Western Australian rural primary production.

Sheep

The following table shows the total numbers of sheep, and their distribution between the agricultural and pastoral areas, in each year from 1956 to 1975.

SHEEP NUMBERS AND DISTRIBUTION

At 31 March—	In agricultural areas		In pastoral areas		State total
	Number	Proportion of State total (per cent)	Number	Proportion of State total (per cent)	
1956	10,976,121	77.7	3,152,047	22.3	14,128,168
1957	11,845,409	79.6	3,041,140	20.4	14,886,549
1958	12,704,210	80.8	3,019,753	19.2	15,723,963

1962	14,951,185	81.6	3,362,694	18.4	18,313,879
1963	15,403,902	82.3	3,323,222	17.7	18,727,124
1964	16,608,300	82.4	3,556,568	17.6	20,164,868
1965	18,670,759	83.4	3,721,075	16.6	22,391,834
1966	20,695,040	84.7	3,731,768	15.3	24,426,808
1967	23,525,280	86.0	3,845,106	14.0	27,370,386
1968	26,406,575	87.6	3,754,302	12.4	30,160,877
1969	28,888,450	87.8	4,012,708	12.2	32,901,158
1970	29,844,044	88.7	3,789,913	11.3	33,633,957
1971	31,129,804	89.7	3,579,044	10.3	34,708,848
1972	31,049,873	90.2	3,355,125	9.8	34,404,998
1973	27,777,077	89.8	3,142,103	10.2	30,919,180
1974	29,423,820	90.7	3,027,253	9.3	32,451,073
1975	31,472,640	91.3	3,003,697	8.7	34,476,337

The present distribution of sheep in the State is the result of two opposite trends operating over many years. In the pastoral, or station areas where the industry is based on long-term pastoral leases, severe droughts led to a decline in the number of sheep, although some recovery has taken place in recent years. In the agricultural, or farming areas, however, the sheep population has steadily risen. Factors contributing to this rise, particularly since the war, have been the increasing use of subterranean clover in the wheat belt, the provision in many areas of more assured water supplies, a taxation policy which, by the provision of special concessions to primary producers, has encouraged farmers to clear and develop new land, the War Service Land Settlement Scheme which developed new areas and the stimulating effect of buoyant wool prices in the post-war period.

The overall result has been a marked upward trend in sheep numbers since the war, and at 31 March 1975, the State total was 34·5 million, compared with 9·77 million at the same date in 1946. Numbers in the agricultural areas increased from 7 million, or 72 per cent of the State total, to 31·5 million or over 91 per cent. They also increased in the pastoral areas from 2·74 million to 3·00 million, but as a percentage of the State total this represents a decline from 28 per cent to less than 9 per cent.

SHEEP FLOCKS AT 31 MARCH 1975
CLASSIFIED ACCORDING TO SIZE OF FLOCK

Size of flock (numbers)	Number of—	
	Flocks	Sheep
1— 99	997	36,068
100— 499	1,073	295,187
500— 999	1,193	905,948
1,000— 1,499	1,332	1,648,133
1,500— 1,999	1,440	2,518,344
2,000— 2,999	2,263	5,574,295
3,000— 3,999	1,589	5,472,882
4,000— 4,999	870	3,863,346
5,000— 5,999	523	2,838,567
6,000— 6,999	322	2,077,957
7,000— 7,999	230	1,715,779
8,000— 8,999	145	1,228,214
9,000— 9,999	116	1,089,720
10,000—14,999	223	2,659,463
15,000—19,999	64	1,091,845
20,000—49,999	51	1,260,321
50,000 and over	2	200,268
Total	12,433	34,476,337

In the preceding table, sheep flocks at 31 March 1975 are classified according to the size of flock. Of the 20,500 holdings of all types, sheep were carried on 12,433. Holdings carrying between 1,000 and 3,999 sheep accounted for 53 per cent of the flocks and 44 per cent of the total number of sheep. Those with less than 1,000 sheep accounted for 24 per cent and 4 per cent, respectively, and those with more than 3,999 accounted for 20 per cent and 52 per cent, respectively.

An analysis of collected data relating to breeds of sheep as at 31 March 1974 showed that Merinos accounted for 93 per cent of the total. Corriedales, Polwarths and British breeds, the most important of which are Border Leicester, Dorset Horn, South Down, Suffolk and Romney Marsh, comprised 4 per cent and the remaining 3 per cent was made up of Crossbreds, including Merino Comebacks. With low wool prices operating during the ten years prior to the war, some farmers turned to the production of fat lamb carcasses for export, mainly to the United Kingdom. The industry which developed as a result was based on the use of Corriedale and British breeds of rams, which in 1974 comprised about 14 per cent of the rams in the State. As a result of the high wool prices during the Korean war the 'fat lamb' industry declined sharply in 1950-51 and 1951-52 but recovered in 1952-53. The recovery in the industry was maintained for some years and exports of lamb fluctuated between 1,850 tonnes in 1953-54 and 5,219 tonnes in 1960-61. Increased lamb production in the United Kingdom and variable market prices then led

to a sharp decline in the export of lamb, the total falling to 936 tonnes in 1967-68. A recovery occurred in 1968-69 when 4,161 tonnes were exported but the amount then declined. However exports of lamb again recovered and in 1974-75 totalled 9,667 tonnes.

The following table shows the numbers of each breed of sheep in the State at 31 March 1974.

BREEDS OF SHEEP (a)

Breed	At 31 March 1974			
	Rams (one year and over)	Other sheep	Total	Number of holdings with rams (b)
Merino	374,740	29,962,279	30,337,019	9,543
Other recognised breeds—				
Border Leicester	8,525	306,981	315,506	663
Cheviot	95	775	870	19
Corriedale	11,607	496,671	508,278	533
Dorset Horn	12,933	95,515	108,448	1,192
English Leicester	238	366	604	11
Poll Dorset	3,988	23,252	27,240	237
Polwarth	2,343	123,621	125,964	154
Romney Marsh	792	10,012	10,804	84
Ryeland	422	698	1,120	40
Shropshire	153	522	675	8
South Down	12,399	76,202	88,601	917
South Suffolk	964	4,059	5,023	90
Suffolk	4,707	37,718	42,425	729
Other	579	23,636	24,215	61
Total, Other recognised breeds	59,745	1,200,028	1,259,773	(e)
Merino Comeback (c)	900	251,362	252,262	53
Crossbreds (d) and other mixed breeds	1,245	600,774	602,019	158
GRAND TOTAL	436,630	32,014,443	32,451,073	11,126

(a) Statistics collected triennially. (b) Components do not add to total because more than one breed of ram may be reported by any one holding. (c) Finer than half-breeds. (d) Half-breeds or coarser. (e) Not available; see footnote (b).

Wool

Total wool production in 1974-75 amounted to 179,975 tonnes, compared with 93,909 tonnes ten years earlier. Shorn wool in 1974-75 accounted for 172,093 tonnes. It was shorn from 37.9 million sheep and lambs, the average weight of wool shorn being 4.5 kg, compared with 4.0 kg in the previous season. The balance of the 1974-75 production comprised 566 tonnes of dead and fellmongered wool, and 7,317 tonnes of wool exported on skins.

During the war years wool was compulsorily acquired by the Australian Government in accordance with an agreement with the United Kingdom. The scheme was administered by the Central Wool Committee and the price paid was determined by a system of appraisalment which, however, operated within limits agreed upon by the two Governments. During this period large stocks of wool were accumulated and after the war an organisation was formed with the object of selling this surplus with the least possible disturbance to ruling prices. Government control of wool ceased after the war and wool auctions operated by members of the National Council of Wool Selling Brokers of Australia were resumed in Perth in 1946. These sales are attended by Australian and overseas buyers who bid for individual lots. Some wool is auctioned at sales conducted independently of the National Council and a significant portion of the clip is purchased on farms by wool dealers who buy direct from producers. In September 1957, auctions were held at Albany for the first time. Sales in Perth were discontinued in 1960 and the selling centre was transferred to Fremantle.

The Australian Wool Board, constituted under the *Wool Industry Act 1962-1970*, came into being in 1963 and replaced the Australian Wool Bureau which was established by the *Wool Use Promotion Act 1953*. The function of the Board was to promote the use of wool

and wool products in Australia and other countries and to inquire into methods of marketing wool and any other matters connected with marketing of wool. A subsidiary of the Board, the Australian Wool Testing Authority was responsible for the provision of a testing service for wool and wool products. In 1967 the Wool Board recommended the establishment of an authority to enforce standards of clip preparation, to conduct a price averaging plan and, in conjunction with wool selling brokers, to conduct a system of supply management involving chiefly wools in the price averaging plan. These proposals, with some amendments, were accepted by the Australian Wool Industry Conference and the Federal Government and on 1 July 1970 The Australian Wool Marketing Corporation Pty. Ltd. (a non-statutory body) began operations.

In November 1970 the Australian Wool Commission Act established the Australian Wool Commission which was empowered to take over the functions of The Australian Wool Marketing Corporation Pty. Ltd. The Commission was required to operate a flexible reserve price scheme for wool sold at auction and to perform other functions aimed at improving the marketing of Australian wool.

Following a submission by the Australian Wool Industry Conference and a report by a Government committee the Australian Wool Corporation was established by the *Wool Industry Act 1972*. This Act repealed both the *Wool Industry Act 1962-1970* and the *Australian Wool Commission Act 1970* and vested all rights, property and assets of the Australian Wool Board and the Australian Wool Commission in the Australian Wool Corporation. The Corporation came into operation on 1 January 1973 and took over the functions of both the Australian Wool Board and the Australian Wool Commission which ceased to operate on that date. The functions of the Corporation relate to wool marketing, wool use promotion, wool testing, wool research and the management of wool stores.

The number of sheep and lambs shorn, the average weight of wool shorn per sheep or lamb, and production of wool for five years to 30 June 1975 are given in the following table.

SHEEP SHORN AND WOOL PRODUCTION

Year	Sheep shorn			Average weight of wool shorn	Wool production (in the grease)			
	Sheep	Lambs	Total		Shorn	Dead and fell-mongered	Exported on skins	Total
	'000	'000	'000	kg	tonnes	tonnes	tonnes	tonnes
1970-71	30,277	6,857	37,134	4.1	151,121	687	7,159	158,967
1971-72	30,838	7,277	38,115	4.4	168,850	1,369	7,943	178,162
1972-73	28,201	*5,445	33,645	4.1	138,201	2,448	7,868	148,517
1973-74	28,945	6,818	35,763	4.0	142,100	1,047	6,292	149,439
1974-75	30,348	7,644	37,992	4.5	172,093	566	7,317	179,975

* Revised

The next table shows the gross value of wool production for the five years 1970-71 to 1974-75. The total value of \$259,389,000 shown for 1973-74 was the highest recorded over the preceding decade.

GROSS VALUES OF WOOL PRODUCTION
(\$'000)

Year	Shorn wool	Dead wool and fell-mongered wool	Wool exported on skins	Total
1970-71	91,854	156	2,501	94,510
1971-72	134,715	422	2,132	137,269
1972-73	222,186	2,855	6,518	231,559
1973-74	250,352	1,361	7,676	259,389
1974-75	218,351	508	6,039	224,898

The number of sheep and lambs shorn, wool clip and average weight of wool shorn in each statistical division for 1974-75 are given in the following table.

SHEEP AND LAMBS SHORN AND WOOL CLIP IN STATISTICAL DIVISIONS
YEAR ENDED 31 MARCH 1975

Statistical division	Sheep and lambs shorn	Wool clip	Average weight of wool shorn		
			Sheep	Lambs	Total
	number	kg	kg	kg	kg
Perth Statistical Division	95,150	379,925	4.5	1.4	4.0
Other divisions—					
South-West	1,532,838	6,282,584	4.7	1.4	4.1
Southern Agricultural	11,127,183	51,089,902	5.4	1.5	4.6
Central Agricultural	11,641,775	53,229,086	5.5	1.4	4.6
Northern Agricultural	7,583,554	33,150,916	5.1	1.4	4.4
Eastern Goldfields	2,598,847	12,705,280	5.7	1.7	4.9
Central	978,447	4,650,876	5.3	1.6	4.8
North-West and Pilbara	1,628,421	6,968,240	4.7	1.4	4.3
Kimberley	33,196	136,191	4.3	1.8	4.1
Total	37,124,261	168,213,075	5.3	1.4	4.5
WESTERN AUSTRALIA	37,219,411	168,593,000	5.3	1.4	4.5

Although the greater proportion of the wool clip is exported in the grease, scouring or degreasing is done in the State and degreased wool is an appreciable item in the external wool trade. During 1974-75 exports of greasy and degreased wool were 102,621 tonnes and 11,448 tonnes, respectively. The most important buyers of greasy wool were Japan, the Union of Soviet Socialist Republics, France, the Federal Republic of Germany, Italy, India, the Netherlands and Belgium-Luxembourg. Principal purchasers of degreased wool were the Union of Soviet Socialist Republics, the Federal Republic of Germany, United Kingdom, United States of America, Japan and Italy. Further details of exports of greasy and degreased wool, both interstate and overseas, are given in Chapter IX, Part 1—*External Trade*.

Cattle

Cattle are classified according to the two main purposes of 'meat production' and 'milk production', irrespective of breed.

The table below shows the numbers of cattle for meat production kept on rural holdings at 31 March 1971 to 1975. The table on page 378 details, for the same period, the numbers kept for milk production. Cattle numbers in each State and Territory at 31 March 1975 are given in the third table on page 380.

In 1975 the Kimberley Statistical Division carried 702,309 head of cattle for meat production, or 29.6 per cent of the State total. Other pastoral areas carried 159,974 head and agricultural areas 1,513,514.

The cattle which were originally shipped or driven overland from the other Australian Colonies to start the industry in the northern pastoral areas were predominantly shorthorn breeds, and these still form the great bulk of all cattle kept for meat production in those areas. Carcass weights, however, have been increased by importing better-type bulls, by improving watering facilities on the cattle stations and by the replacement of droving by the transport of the animals from stations to abattoirs in large road trucks.

Killing and freezing works operate at the ports of Wyndham, Broome and Derby and consignments of frozen and chilled beef from these centres go mainly to overseas destinations. Some of it is sent south for consumption in the metropolitan area and live cattle are also shipped from northern ports to be slaughtered for the metropolitan market. By far the greater proportion of beef consumed in the southern part of the State, however, is supplied from the agricultural areas, some of it being from stock culled from dairy herds.

The following table shows the numbers and proportions of cattle for meat production in agricultural areas and in pastoral areas at 31 March 1971 to 1975. The agricultural areas have become an increasingly important source of meat production in recent years, and now contain more than 63 per cent of the cattle kept for this purpose.

CATTLE FOR MEAT PRODUCTION—NUMBERS AND DISTRIBUTION

Particulars	At 31 March—				
	1971	1972	1973	1974	1975
Number of head—					
In agricultural areas	861,297	1,048,830	1,211,110	1,338,617	1,513,514
In pastoral areas	741,334	751,271	792,642	814,830	862,283
Total	1,602,631	1,800,101	2,003,752	2,153,447	2,375,797
	per cent	per cent	per cent	per cent	per cent
Proportion of total—					
In agricultural areas	53.7	58.3	60.4	62.2	63.7
In pastoral areas	46.3	41.7	39.6	37.8	36.3

In the table that follows, herds of cattle kept for meat production are classified according to size of herd and location. In the agricultural areas, holdings with less than 200 cattle for meat production accounted for 79 per cent of the herds, but only 36 per cent of total cattle for meat production in those areas. Within this group, holdings with less than thirty cattle for meat production represented 26 per cent of the holdings but only 2 per cent of the total cattle for meat production. In the pastoral areas, holdings with more than 4,999 cattle for meat production accounted for only 15 per cent of the herds in those areas but over 76 per cent of the total number of cattle at that date.

The table on page 377 gives details of slaughterings in abattoirs, butcheries and on stations and farms. A table showing particulars of pigs slaughtered and pigmeat produced appears on page 380.

CATTLE FOR MEAT PRODUCTION AT 31 MARCH 1975
CLASSIFIED ACCORDING TO SIZE OF HERD AND LOCATION

Size of herd (numbers)	In agricultural areas (a)		In pastoral areas (b)		Whole State	
	Number of—		Number of—		Number of—	
	Herds	Cattle	Herds	Cattle	Herds	Cattle
1- 29	2,740	33,646	26	390	2,766	34,036
30- 49	1,136	44,509	18	677	1,154	45,186
50- 69	986	58,136	10	579	996	58,715
70- 99	1,212	101,193	23	1,928	1,235	103,121
100- 149	1,334	161,912	23	2,851	1,357	164,763
150- 199	829	143,337	9	1,508	838	144,845
200- 299	974	236,253	32	8,211	1,006	244,464
300- 399	488	167,460	16	5,588	504	173,048
400- 499	271	120,977	15	6,400	286	127,377
500- 699	241	141,309	30	18,016	271	159,325
700- 999	132	110,506	18	15,217	150	125,723
1,000- 1,499	62	74,887	19	23,222	81	98,109
1,500- 1,999	14	23,434	15	26,742	29	50,176
2,000- 4,999	18	48,967	30	94,498	48	143,465
5,000- 9,999	2	14,427	22	161,544	24	175,971
10,000 and over	2	32,561	30	494,912	32	527,473
Total	10,441	1,513,514	336	862,283	10,777	2,375,797

(a) The agricultural areas comprise the Perth, South-West, Southern Agricultural, Central Agricultural and Northern Agricultural Statistical Divisions and the Shires of Dundas, Esperance, Ravensthorpe and Yilgarn. (b) The pastoral areas comprise the Kimberley, North-West, Pilbara and Central Statistical Divisions and the Shires of Boulder, Coolgardie, Laverton, Leonora and Menzies.

Slaughtering

Beef from cattle slaughtered at Wyndham, Broome and Derby in the Kimberley Division is principally for export. The local market for meat is supplied mainly from abattoirs at Midland, Fremantle, Waroona, Harvey, Bunbury, Albany, Geraldton,

Woorloo, Katanning and Kalgoorlie but most of these establishments also slaughter for the export trade. Small establishments operating in country towns also contribute substantially to total production, and most stations and many farms slaughter sufficient for all or part of their own requirements.

LIVESTOCK SLAUGHTERED AND MEAT PRODUCED

Year	Livestock slaughtered (a)								Meat produced (b)	
	Sheep		Lambs		Cattle		Calves		Mutton and lamb	Beef and veal
	Number	Gross value (c)	Number	Gross value (c)	Number	Gross value (c)	Number	Gross value (c)		
1970-71	'000	\$'000	'000	\$'000	'000	\$'000	'000	\$'000	tonnes	tonnes
1970-71	3,005	8,350	1,486	6,837	342	37,344	8	429	78,643	64,334
1971-72	4,219	10,318	1,898	7,463	386	42,431	5	314	105,119	77,291
1972-73	4,351	27,520	1,320	9,202	465	54,466	15	814	92,918	90,052
1973-74	2,620	30,718	1,189	13,909	479	65,164	10	644	66,157	94,106
1974-75	3,037	17,212	1,330	11,115	527	39,518	15	574	76,018	106,117

(a) Mainly slaughterings for human consumption but also includes quantities condemned and small numbers of livestock slaughtered for boiling down. Details of pigs slaughtered and production of pigmeat are shown on page 380. (b) Dressed carcass weight; excludes condemned carcasses and offal. (c) Value 'on hoof' at principal market.

DAIRYING

Compared with the wheat, wool and meat producing industries, dairying as a major well-organised rural activity is of fairly recent origin. Its growth was retarded initially by the difficulty of clearing heavily-timbered country in the south-west and the need for special methods of pasture establishment, but these problems have been progressively overcome and dairying is now a significant feature of primary production, although only limited development has taken place in recent years.

Until the establishment of the first butter factory at Busselton in 1898, dairy farming in Western Australia was essentially for the production of whole milk, although small quantities of farm butter were marketed. As more factories commenced processing, the industry steadily developed and its growth was further stimulated by the establishment of irrigation areas, the first at Harvey in 1916, and by the introduction of the Group Settlement Scheme in 1921. Another important factor in increasing production was the successful establishment of subterranean clover which resulted in a marked improvement in pastures.

The industry has been assisted by the extensive experimental work carried out by the Department of Agriculture and the advisory service which it provides on all aspects of dairy farming.

Price instability has been one of the major difficulties of the industry and in 1926 the 'Paterson Plan', which was a voluntary scheme of price stabilisation, was introduced. It met with considerable success but weaknesses finally became apparent and it was abandoned in 1934 in favour of the Dairy Products Marketing Regulation Act passed by the State Parliament. On 1 April 1946, Western Australia entered the voluntary butter price equalisation scheme, operated since 1936 by the Commonwealth Dairy Produce Equalisation Committee Limited, and in January 1947 the State extended its participation to include cheese. The Committee, which comprises certain members of the State Dairy Products Boards and other persons representing the industry, enters into agreements with manufacturers to secure to them equal rates from sales of butter and also of cheese, and for this purpose may fix basic prices at which these products sold in Australia or abroad are to be taken into account. The effect is that local and export trade are distributed among manufacturers in equitable proportions. The Committee fixes basic prices and equalises returns to factories through an Equalisation Fund. In addition, subsidies provided by the Australian Government are distributed by the Committee, through factories to dairy farmers, by payments on butter and cheese manufactured. The fifth

five-year stabilisation plan, which came into operation on 1 July 1972, provides a minimum bounty of \$27 million annually for the Australian industry. The actual amount of the assistance provided by the Australian Government each year is determined at the commencement of the year in the light of the needs of the industry and taking into account action by the States in the adoption of an effective scheme to control production. The average subsidy rates per tonne in 1974-75 were \$43.21 on butter and \$20.84 on cheese.

From 1942 until 30 June 1948, and again from 1 July 1949 to 30 June 1952, a subsidy was paid by the Australian Government on milk supplied for the manufacture of processed milk products. By means of the *Processed Milk Products Bounty Act 1962*, the Australian Government provided for payment of a maximum amount of \$700,000 as a bounty on exports of processed milk products during the year ended 30 June 1963. For the purpose of the Act, processed milk products are goods containing butterfat and produced from cow's milk, but excluding butter, cheese and certain other specified goods. By later amendments to the Act, bounty was continued up to a maximum of \$1,000,000 in respect of exports during 1963-64 and of \$800,000 on those for 1964-65. Subsequent amendments extend the operations of the Act until 30 June 1977, the maximum amount of bounty payable each year being maintained at \$800,000.

The following table shows the numbers of cattle kept for milk production on rural holdings at 31 March 1971 to 1975.

CATTLE FOR MILK PRODUCTION

Particulars	At 31 March—				
	1971	1972	1973	1974	1975
	number	number	number	number	number
Bulls of dairy breeds used or intended for service—					
Aged one year and over	2,627	2,580	2,689	2,489	2,367
Calves (aged under one year)	1,357	989	937	925	831
Total	3,984	3,569	3,626	3,414	3,198
Cattle used or intended for production of—					
Milk or cream for sale—					
Cows—In milk and dry	96,438	96,532	96,896	94,941	91,079
Heifers—Aged one year and over	38,841	35,706	37,175	38,664	37,277
Heifer calves—Aged under one year	32,956	33,516	35,139	33,696	30,924
Milk or cream for use on rural holdings—					
House cows and heifers	6,499	5,885	5,823	5,898	5,737
Total	174,734	171,639	175,033	173,199	165,017
Total cattle for milk production	178,718	175,208	178,659	176,613	168,215

CATTLE FOR MILK PRODUCTION AT 31 MARCH 1975
CLASSIFIED ACCORDING TO SIZE OF HERD

Size of herd (numbers)	Number of herds	Total cattle
1- 9	2,990	6,212
10- 19	106	1,408
20- 29	52	1,227
30- 39	41	1,409
40- 49	56	2,442
50- 59	41	2,220
60- 69	49	3,115
70- 79	47	3,481
80- 89	61	5,135
90- 99	65	6,123
100-124	149	16,665
125-149	113	15,448
150-174	100	16,116
175-199	57	10,581
200-249	119	26,647
250 and over	143	49,986
Total	4,189	168,215

In the table above, the number of holdings carrying cattle for milk production at 31 March 1975 are classified by the size of the herds. More than 71 per cent of the herds contained less than ten cattle for milk production. However, these accounted for less than 4 per cent of the total number of such cattle. Holdings carrying 100 or more cattle for milk production accounted for only 16 per cent of herds but 81 per cent of the total cattle for milk production at that date.

The quantity and gross value of whole milk produced in each of the years 1970-71 to 1974-75 are given in the following table.

WHOLE MILK PRODUCTION (a)

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Quantity '000 litres	255,839	254,682	242,060	*241,157	245,895
Gross value (b) ... \$'000	17,766	17,862	18,482	19,627	20,458

(a) Year ended 30 June. Includes milk used for processing into butter, cheese and condensery products. Details of butter production appear in Part 3 of this Chapter. (b) Includes subsidy paid by the Australian Government. * Revised.

Pig Raising

For many years the rearing of pigs has been carried on in conjunction with the production of butterfat as cream, thus providing a practical means of using the skim milk obtained. This is now on the decline, however, owing to the current trend for whole milk to be supplied in bulk by the dairy farmers direct to processing plants. In the main, pigs are now raised on grain-growing holdings and, in 1974, 83 per cent of pigs in the State were in the wheat belt. There are also a number of farmers in the districts around Perth who specialise in pig raising and in fattening for market pigs obtained from country areas.

The principal breeds in Western Australia are the Berkshire, Large White and Landrace and crosses of these breeds. Pigs are reared for bacon and ham as well as pork and, although the greater proportion of production is consumed locally, there is some export trade, mainly to other Australian States. In 1974-75 a total of 2,114,694 kg of pork was shipped interstate and 168,294 kg overseas, mainly to the Union of Arab Emirates, Bahrain, Hong Kong, Kuwait and Oman.

In the following table, pig herds at 31 March 1975 are classified according to the size of the herd. Holdings carrying less than fifty pigs accounted for 54 per cent of the total herds but only 14 per cent of the total number of pigs. Herds containing between fifty and 499 pigs accounted for slightly more than 45 per cent of herds and 68 per cent of total pigs while those with more than 500 pigs accounted for less than 2 per cent of herds but 17 per cent of pigs.

PIG HERDS AT 31 MARCH 1975
CLASSIFIED ACCORDING TO SIZE OF HERD

Size of herd (numbers)	Number of herds	Total pigs
1- 9	413	1,993
10- 19	380	5,386
20- 29	356	8,672
30- 39	290	10,001
40- 49	262	11,661
50- 69	379	22,236
70- 99	364	30,069
100- 149	321	38,739
150- 199	173	30,033
200- 299	110	26,666
300- 499	87	32,833
500- 699	18	10,403
700- 999	10	8,187
1,000 and over	16	27,218
Total	3,179	264,157

In the table below, the numbers of pigs on rural holdings at 31 March are shown for each of the years 1971 to 1975. The number of pigs at 31 March 1975 was 264,157, compared with 343,623 at 31 March 1974, a decrease of 23 per cent.

PIG NUMBERS

At 31 March—	Boars	Breeding sows	Other pigs (a)		Total
			Under six months	Six months and over	
1971	4,440	41,925	166,697	64,439	277,501
1972	6,213	62,616	269,887	88,345	427,061
1973	5,969	58,476	285,562	126,309	476,316
1974	4,634	41,703	207,279	90,007	343,623
1975	4,175	37,243	222,739		264,157

(a) Includes baconers, porkers, suckers, weaners and slips, for which separate age details were not collected in 1975.

The next table shows the numbers and gross value of pigs slaughtered in each of the years 1970-71 to 1974-75, together with the quantity of meat produced. Factory production of bacon and ham is also shown. The amount produced in 1973-74 was the highest recorded over the preceding decade, a gradual increase occurring each year over the period. A slight decrease was recorded, however, in 1974-75.

PIGS SLAUGHTERED (a) AND MEAT PRODUCED

Year	Pigs slaughtered		Pigmeat produced (c)	Bacon and ham produced (d)
	Number	Gross value (b)		
		\$'000	tonnes	tonnes
1970-71	317,906	8,612	16,734	4,863
1971-72	368,574	10,051	19,962	5,116
1972-73	541,702	14,726	30,359	*5,211
1973-74	499,797	19,023	28,270	5,367
1974-75	391,304	16,936	22,078	5,279

(a) Comprises slaughterings in abattoirs, butcheries and on stations and farms.
 (b) Value 'on hoof' at principal market or at factory door. (c) Dressed carcass weight; excludes condemned carcasses and offal but includes quantities used to produce bacon and ham. (d) Factory production. * Revised.

LIVESTOCK IN AUSTRALIA

The following table gives details of livestock numbers in each State and Territory of Australia at 31 March 1975.

LIVESTOCK NUMBERS AT 31 MARCH 1975—AUSTRALIA ('000)

State or Territory	Sheep	Cattle				Pigs
		Bulls (1 year and over) used or intended for service	For production of milk or cream	Mainly for meat production	Total	
New South Wales	54,985	152	627	8,159	8,938	727
Victoria	26,411	122	1,916	4,155	6,192	383
Queensland	13,908	203	505	10,170	10,879	400
South Australia	17,618	40	211	1,618	1,868	349
Western Australia	34,476	52	165	2,327	2,544	264
Tasmania	4,136	17	223	681	921	64
Northern Territory	1	36	1,409	1,445	7
Australian Capital Territory	117	(a)	1	16	18	(a)
AUSTRALIA	151,653	620	3,649	28,536	32,806	2,195

(a) Less than 500.

POULTRY FARMING

Poultry farming in Western Australia is now mainly a specialist industry and a large proportion of the egg production is on holdings which carry sufficient birds to make the activity the sole or predominant source of income. Most of the commercial poultry farms are situated in the Perth Statistical Division, within a fifty-kilometre radius of Perth, but birds are also kept for commercial production on orchards, dairy farms and wheat farms throughout the agricultural areas.

On specialist poultry farms modern developments in breeding, sexing and nutrition have resulted in considerably higher egg production per bird. Egg-producing birds are largely first-cross hens, bred mainly from White Leghorn cocks and Australorp hens. Production of poultry meat has increased considerably in recent years. It is now predominantly a specialised industry using strains of birds which have been developed specifically for meat production.

Under the *Marketing of Eggs Act, 1945-1975*, all producers in the South-West Land Division are required to market their eggs either through the Western Australian Egg Marketing Board or under the permit system which is administered by the Board. The principal purpose of this legislation is to ensure satisfactory disposal of eggs, including that surplus over local requirements which is consistently produced and which must be sold overseas at prices which usually do not offer a reasonable return to the producer. In order to provide a fund with which to equalise returns from local and export sales the Board, prior to 1 July 1965, made a charge on all eggs sold locally. This charge was subsequently replaced by a levy imposed by Commonwealth legislation which came into operation on 1 July 1965.

The *Poultry Industry Levy Act 1965-1966* provides for the imposition throughout Australia of a levy on hens not less than six months old kept for commercial purposes. Special exemptions are made in respect of 'broiler breeder hens', being hens used to produce chickens for table purposes. The levy, which does not apply to flocks of fewer than twenty-one hens, nor to the first twenty hens in any flock, is payable fortnightly and may not exceed \$1 annually per bird. In June 1975 the levy stood at 4c per fortnight for each hen.

Under the *Poultry Industry Levy Collection Act 1965-1966* the authority responsible for the collection of the levy in this State is the Western Australian Egg Marketing Board. The *Poultry Industry Assistance Act 1965-1966* establishes a Poultry Industry Trust Fund for the receipt of the amount of the levy and other moneys. The Act provides for payment from the Fund to a State, by way of financial assistance, of such amounts as the Federal Minister may determine upon the recommendation of The Council of Egg Marketing Authorities of Australia.

Although the Australian Government levy replaces the egg equalisation levies formerly imposed by the several State authorities for the purpose of equalising returns from local markets and export sales, the State authorities continue to make charges necessary to defray the costs of handling, grading and marketing of eggs.

In 1974-75 Hong Kong and Kuwait were the most important overseas markets for eggs in the shell. Overseas exports of eggs in liquid form (including frozen pulp) in 1974-75 were valued at \$86,547.

Details of poultry numbers, eggs sold and poultry slaughtered for table purposes over the five years ended 31 March 1975 are given in the next two tables.

POULTRY NUMBERS

At 31 March—					Fowls	Ducks	Turkeys
1971	3,591,548	34,679	28,575
1972	3,517,749	46,359	7,190
1973	3,657,104	55,411	6,547
1974	4,311,827	38,217	5,021
1975	3,884,171	31,189	2,819

**EGG PRODUCTION AND POULTRY SLAUGHTERED (a)
FOR TABLE PURPOSES**

Year ended 31 March—	Egg production (b)		Poultry slaughtered for table purposes (c)	
	Quantity	Gross value	Dressed weight	Gross value
	'000 dozen	\$'000	tonnes	\$'000
1971	13,749	6,724	12,923	7,584
1972	17,302	7,990	14,642	7,986
1973	14,919	7,251	14,274	7,719
1974	13,938	7,949	17,243	10,655
1975	16,973	12,032	17,714	12,428

(a) Excludes non-commercial production. (b) Figures shown were supplied by the Western Australian Egg Marketing Board. (c) Year ended 30 June.

BEE KEEPING

Commercial producers of honey in Western Australia may be divided into three categories. There are a comparatively small number of specialist apiarists, engaged solely or mainly in honey production, who operate on a large scale and transport their hives from district to district. There are also some substantial producers who are engaged in agricultural activities and use their farms as a central site from which they may transport their hives to other areas as necessary. Finally there are the many farmers and orchardists who keep a few hives and produce honey as a minor supplementary activity.

BEE KEEPERS, BEEHIVES AND HONEY PRODUCTION (a)—1974-75

Classification of hives (a)	Bee keepers (b)		Productive beehives (c)		Honey production	
	Number	Proportion of total (per cent)	Number	Proportion of total (per cent)	Quantity	Proportion of total (per cent)
					kg	
40-99	44	30.99	2,132	6.31	89,054	3.52
100-199	24	16.90	2,562	7.58	135,024	5.34
200-299	21	14.79	4,232	12.52	233,951	9.26
300-499	30	21.13	10,068	29.79	850,263	33.65
500-799	19	13.38	9,450	27.96	822,804	32.56
800 and over	4	2.82	5,350	15.83	395,954	15.67
Total	142	100.00	33,794	100.00	2,527,050	100.00

(a) Excludes details of bee keepers with less than 40 hives. (b) At 30 June 1975. (c) Represents the number of hives at 30 June 1975 from which honey was taken during the year and excludes hives kept for production but from which no honey was taken, nuclei, pollination hives, etc.

BEEHIVES AND PRODUCTION OF HONEY AND BEES-WAX (a)

Year	Beehives (b)		Honey production		Bees-wax production	
	Productive (c)	Unproduc- tive (d)	Quantity	Gross value	Quantity	Gross value
	number	number	tonnes	\$'000	tonnes	\$'000
1970-71	31,552	8,223	(e) 1,358	263	23	29
1971-72	31,679	6,742	2,738	677	38	43
1972-73	32,737	4,155	2,198	988	30	36
1973-74	32,098	4,414	2,389	1,266	35	62
1974-75	33,794	4,883	2,527	935	36	65

(a) Excludes particulars of bee keepers with less than 40 hives. (b) Number at 30 June. (c) Hives from which honey was taken during the year. (d) Includes hives kept for production but from which no honey was taken during the year, nuclei, pollination hives, etc. (e) Lowest recorded since 1954-55.

In previous issues of the publication, the statistics on bee keeping were compiled from information supplied annually by bee keepers with five or more hives. However, for 1974-75, the statistics have been compiled from data from bee keepers with forty or more hives. Details for the years 1970-71 to 1973-74 have been adjusted to the new basis which

will be continued in future years. Consequently, statistics shown in the tables above are not directly comparable with those shown in previous issues. In 1974-75 the number of bee keepers operating between five and thirty-nine hives was 160. These bee keepers operated 1,581 (or 4 per cent) of all productive hives and accounted for 33,123 kilograms of honey production and 716 kilograms of bees-wax production. These amounts represented 1 per cent of value of honey produced and 1 per cent of value of bees-wax produced.

In 1974-75 exports of honey totalled 1,312 tonnes, the export value being \$882,029. The principal buyers were the United Kingdom, which purchased 615 tonnes; the United States of America, 239 tonnes; and Singapore, 121 tonnes.

THE DEPARTMENT OF AGRICULTURE

Brief references have been made earlier in this Part to the important services rendered to rural producers by the Department of Agriculture. The Department is the branch of the State Government Service responsible for bringing scientific advice to farmers and pastoralists, for carrying out research into a wide range of technical problems and for administering Acts of Parliament dealing with agricultural and pastoral matters. Its activities can be classified under the four headings: investigation or research; advisory, now more commonly called 'extension' functions; provision of certain services for the assistance of the man on the land; and regulatory work which consists of carrying out the provisions of some of the laws relating to agriculture.

The operations of the Department are organised into Divisions and Sections or Branches, the heads of which are responsible to the Director of Agriculture. The Divisions are Animal (including sections for animal production, stock inspection, brands and apiculture, the Poultry Branch and the Animal Health Laboratories), Wheat and Sheep (including plant breeding, cereal testing and inspection services, the Sheep and Wool Branch and the Cereal Products and Fleece Testing Laboratories), Dairying (including dairy cattle husbandry, agronomy, dairy products supervision and the Dairy Technology Laboratory), Horticulture (including floriculture, fruit, viticulture and vegetables, and plant quarantine and fruit fly inspection services), Soils (including the Soil Conservation, Irrigation and Drainage, Rangeland Management, and Soil Research and Survey Branches), Plant Research (dealing with plant nutrition, crop and pasture agronomy, horticultural research, and including the Plant Pathology Branch and the Seed and Weed Agronomy Sections), and Administration which includes the Rural Economics and Marketing, and Information Sections, the Botany and Entomology Branches, and the Library. Close liaison is also maintained with the Agriculture Protection Board.

Sections of government administration known as Departments of Agriculture usually originated in the demands of farmers for government assistance in coping with their technical problems. The Western Australian Department of Agriculture had its origin in a Bureau of Agriculture which was formed in 1894. In 1898 the Department of Agriculture was established and absorbed the staff of the Bureau. Up to this time, some seventy years after the first settlement, agriculture in Western Australia had made little progress. The area of cleared arable land was less than 1 per cent of the present area. Superphosphate had not been used on Western Australian farms and wheat varieties suitable for the drier districts to the east of Northam were not then available. There was little comprehension of the many problems associated with land development and not much public appreciation of the part that science might play in solving them.

The Department's responsibilities and activities have been expanded with the development of agriculture. For the first quarter of a century of its existence, expansion and consolidation of farming in the wheat belt overshadowed other activities. That was only natural as the wheat area expanded from 30,000 hectares in 1900 to more than 1.6 million hectares in 1930—a period when the State's development was almost synonymous with wheat belt expansion. By 1974 the area sown to wheat was almost 3.0 million hectares, with over 366,000 hectares of oats, nearly 403,000 hectares of barley and over 118,000 hectares of grain lupins. Within the livestock industries, sheep numbers had reached 34.5 million, cattle numbers 2.5 million and pig numbers 264,000, increasing from 9.9 million sheep, 813,000 cattle and 101,000 pigs in 1930.

State Farms and Research Stations

Perhaps the most important work in the Department's first ten or fifteen years was that concerned with the establishment of experiment farms, or 'State farms' as they were at first called. The first of these had its origin in plots which were established at Hamel in 1896. Valuable work was carried on at this centre for nearly twenty years in connection with the growing of potatoes, fruit, cereals, hops, fodder crops and pasture, and some success was achieved with wheat breeding.

Government farms were opened at Narrogin in 1901 and Nabawa, forty kilometres north of Geraldton, in 1902. In 1907 a farm at Nangeenan, near Merredin, was taken over from the Lands Department and is now the Merredin Research Station. In the same year a farm was established in the south-west at Brunswick in order to provide object lessons in dairying, as it was felt that there were great possibilities of expanding the dairying industry. After functioning for several years this farm was closed and the land was subsequently used for closer settlement purposes.

In 1911 a change was made in the policy of the government farms in the wheat belt and their character changed from 'experimental' to 'experiment' farms and ultimately to 'research stations'. Instead of being conducted mainly with the object of producing revenue they were to be used primarily for collecting information concerning local conditions that would be of value to the district. In addition, wheat, oats and barley were bred and pure pedigree seed produced. It would be difficult to over-estimate the subsequent value of the farms in this new role, which is still an important function although the emphasis has now changed to complex experiments which are of value to the study of farms as economic units. In later years more research stations were established and they now number twenty-two.

Research stations at Nabawa, Badgingarra, Wongan Hills, Merredin, Beverley, Mount Barker, Newdegate, Salmon Gums and Esperance deal with agriculture in the cereal-growing and sheep-raising districts and stations at Bramley (though dealing mainly with beef cattle), Denmark and Wokalup serve the dairying districts. Vegetable research stations are situated at Medina and Manjimup, a pig research unit has been established at the Medina station and beef cattle research is taking place at the Northam Research Station. The poultry industry is served by a station at Herdsman Lake. A viticultural research station has been established at Upper Swan and a horticultural research station at Stoneville in the Darling Range to the east of Perth.

Research stations in the north of the State are located near Fitzroy Crossing, Port Hedland, Carnarvon and Kununurra. The Fitzroy Pastoral Research Station in West Kimberley studies problems of the beef cattle industry while at Abydos, near Port Hedland, regeneration of overgrazed pastoral country and a study of sheep breeding problems are the main concerns. At the Gascoyne Research Station at Carnarvon, problems of growing tropical fruits and winter vegetables, and pastoral problems in the area are being investigated. At Kununurra, experimental work with irrigated crops for tropical areas is undertaken.

A great deal of rangeland regeneration research is also being carried out on the Ord River Regeneration Project area along the Ord River.

Advisory Services

Extension work is perhaps the Department's most important function and has exercised a powerful influence in publicising and accelerating the adoption of better farming methods. It is difficult to assess the results of any educational undertaking in terms of money, but the desirability of having a well-informed farming community, receptive to new ideas, is obvious. Although the best method of taking advice to farmers is for the technical officer to visit farms for discussion with the farmer on his own property, this is unfortunately not always possible as an officer may have between 500 and 1,000 farms in his district. Individual visits often have to be restricted to cases where a specific request has been made or where some urgent action is required.

Extension officers support the formation of farmers' organisations and attend meetings and field days where talks are given to groups of farmers. Many such meetings are held on the Department's research stations but field experiments and demonstrations on farmers'

properties also provide venues for extension. Major problems such as farm management, taxation and fertilisers are commonly discussed, along with current difficulties with husbandry practices. Besides such personal contacts, many of the Department's twenty-four district advisory offices send direct-mail materials to farmers in their areas.

Mass media play an important role in extension and about 150 radio broadcasts are given by departmental officers each year. A weekly Press service is also provided and regular publications include the quarterly *Journal of Agriculture* which is distributed to some 8,000 farmers, the quarterly *Dairy Notes* which reaches all the State's dairy farmers, and a *Rangeland Bulletin* for the State's pastoralists. Recent additions to these services include *Technotes* (a technical advisory service), *Farmnotes* and *Market Information Service*. Television is also used and twenty programmes were prepared for televising in the south-west during 1974-75.

Advisory work is not concentrated in a single Division but is serviced by most Divisions and Branches/Sections of the Department. Apart from specialist services available from the Department's Head Office at South Perth, advice relevant to country areas is available from officers stationed at district offices at Bridgetown, Busselton, Carnarvon, Denmark, Derby, Esperance, Geraldton, Harvey, Jerramungup, Kalgoorlie, Katanning, Kelmscott, Kununurra, Lake Grace, Manjimup, Meekatharra, Merredin, Midland, Moora, Narrogin, Northam and Three Springs. A recent organisational alteration has been the decentralisation of some services, such as diagnostic tests, to larger offices at Albany and Bunbury.

Research Activities

In the field of investigation and research, problems which have been dealt with would comprise a lengthy list and only a few of the more important can be mentioned here. The value to the State of cereal-breeding activities is well known. Cereal varieties produced by the Department have increased the income of farmers by many millions of dollars over the years in which they have been grown. The introduction of new plant species and varieties, the evaluation of their suitability for local conditions and the determination of rotations for improving yields and maintaining soil fertility are important features of the work in cereal-growing districts. Noteworthy in 1975, for example, was the release of the new high-yielding oat variety, known as 'West'.

Research into plant diseases and deficiencies forms another important section of the Department's investigational work. Considerable success has been achieved in the recognition and remedying of deficiencies of trace elements in soils, notably of copper, zinc and molybdenum. As a result of this work, fertilisers containing trace elements have been applied in recent years to extensive areas of the State's farming land. These investigations, together with allied work on superphosphate and sulphur and the establishment of subterranean clover pastures, constitute the technical factors which have made possible the rapid post-war expansion of light land development.

In the pastoral areas of the north-west the sheep-carrying capacity of large tracts of country has been seriously reduced by drought and overgrazing. Recent work by officers of the Department has shown that much of this country can be reclaimed by adopting systems of grazing management different from those employed in the past.

Nutritional disorders and diseases of farm animals cause considerable loss to farmers and pastoralists. Some of the Department's most notable successes have been achieved when dealing with problems in this field, which include enzootic ataxia, enterotoxaemia, toxic paralysis, clover disease in sheep, copper and cobalt deficiencies in cattle, contagious pleuro-pneumonia, Kimberley horse disease, plant poisoning of stock and infertility in dairy cows. Problems of sheep infertility, lupinosis, brucellosis in beef herds, mastitis in dairy cows and rye grass toxicity in cattle and sheep are among major problems at present under investigation.

A soil conservation service was established in the Department in 1947 and since then much information on the incidence and nature of erosion has been collected. Many farmers have developed farm plans and management systems to avoid erosion, and considerable attention has also been given to overcoming the salt-land problem in some areas.

Although the main emphasis has been on soil and water conservation in agricultural areas, an increasing amount of research is being carried out concerning the wider aspects of environmental protection, often in co-operation with other Government Departments. Examples include coastal and river protection, studying and reducing the impact of industrial and urban development, and examining possible consequences of activities such as the wood chip industry and the mining of mineral sands. A great deal of attention is also being given to the maintenance of good rangeland condition in pastoral areas, as well as to the regeneration of large areas of land which have suffered erosion following drought or years of overstocking.

Lupin growing and the production of sheep meat for Middle East markets are two highly successful agricultural enterprises with which the Department has been closely associated in recent years. New varieties of sweet lupins bred by the Department have helped expand the area sown to lupins from 26,628 hectares in 1971-72 to almost 120,000 hectares in 1974-75. Research is also establishing lupins as a source of protein in feeds manufactured for the poultry, pig, sheep and cattle industries. Live sheep exports to Middle East countries have similarly risen, from 235,259 in 1970-71 to 876,470 in 1974-75. Here the Department has been involved with developing management and breeding systems aimed at satisfying the new market requirements, advising on feeding and accommodation during shipping, and discussing market requirements with importers.

Another success has been the steady development of grape growing and wine production in southern areas of the State. Some 220 hectares have now been planted in the Cowaramup and Mount Barker-Frankland areas. White wines produced from the new areas have already gained top awards in open competition in Australia and red wines are showing good potential.

Agriculture Protection

For the control, prevention and eradication of vermin and noxious weeds, there is an Agriculture Protection Board which operates in collaboration with the Department of Agriculture. The Board which was established in 1951 following recommendations by a Royal Commission, is constituted under the provisions of the *Agriculture Protection Board Act, 1950-1970*. It comprises the Director of Agriculture as Chairman, the Chief Executive Officer as Deputy Chairman, an officer of the State Treasury, two representatives of the agricultural industry, one representative of the pastoral industry, and five representatives of local government authorities.

The income of the Board consists of appropriations from the Consolidated Revenue Fund and other moneys as prescribed by the *Agriculture Protection Board Act*.

For the purposes of the *Agriculture Protection Board Act*, the term 'noxious weeds' means those plants which are so proclaimed or declared under the *Noxious Weeds Act, 1950-1973*. 'Vermin' means any animal, bird or insect proclaimed to be vermin as provided by the *Vermin Act, 1918-1973*, and includes rabbits, foxes, dingoes, sparrows, emus, starlings and grasshoppers.

The Board formulates policies for the control, prevention and eradication of vermin and noxious weeds, advises on methods, directs and assists in general operations, provides services to help local government authorities and landholders in destruction work and conducts scientific research and investigations for the improvement of control techniques and policies. Control work extends to Crown lands, including reserves, for the benefit of adjoining landholders.

Improvements in the control of both noxious weeds and vermin have resulted from the activities of the Agriculture Protection Board and there have been some notable successes, including a great reduction in rabbit numbers effected by the use of myxomatosis virus and by organised drives for their destruction, mainly by warren destruction and poisoning. One of the Board's major programmes at present concerns the eradication of skeleton weed infestations recently discovered at isolated locations in the agricultural areas. The reported annual cost of this weed to cereal growers in other States is more than \$30 million, and the Agriculture Protection Board and farmers are conducting regular searches of all infested and neighbouring areas to ensure that this most serious weed does not become permanently established in Western Australia.

Other Services

The Department operates certain services which assist the producer to increase his efficiency. Probably the best known is the production of pure pedigree varieties of seed wheat, oats and barley. These are of value to the cereal grower, who is able to obtain his requirements at moderate cost. Sponsoring and supervising the production of approved lines of seed, notably potatoes and beans, has led to the wide use of these specialised lines with a resulting increased yield, and certification of pure lines of pasture seed gives farmers a guarantee of quality in the seed they buy. Assistance to dairy farmers to form herd-testing units, thus enabling them to gauge the performance of their herds, is another service of similar nature. Assistance and technical advice is given to farmers concerned with the installation of irrigation schemes and the preparation of land for irrigation. A superphosphate prediction service has also been developed to help farmers decide the best rates of application of superphosphate for their crops and pastures, based on previous fertiliser history, local environmental factors and the farmers' financial situation. The service will use the 'Decide' method of superphosphate prediction, developed in co-operation with the Commonwealth Scientific and Industrial Research Organization.

Administration of Acts

The Department of Agriculture is responsible for administering some fifty Acts concerning a wide range of subjects. Some of the more important relate to animal and plant disease and insect pests, industry trust funds, soil conservation, vermin control, marketing of agricultural products and registration of feeding stuffs, fertilisers and stock brands.

ARTIFICIAL BREEDING BOARD

The Artificial Breeding Board, established in December 1966, under the provisions of the *Artificial Breeding Board Act, 1965*, consists of a chairman, vice-chairman and three other members including a veterinary surgeon.

The Artificial Breeding Board Act charges the Board with the responsibility of promoting and developing artificial breeding practices and services. This began when the Board took over the artificial insemination services established by the Department of Agriculture in 1956.

At the present time (1976), daily service sub-centres in the State's southern dairy areas operate 362 days per year. Seasonal sub-centre and group programmes also make services readily available around the State. A delivery service maintained at monthly intervals on five separate routes ensures supplies to the various sub-centres and to hundreds of farmers and graziers who now utilise the Board's service to employ artificial insemination techniques on their own property.

Semen stocks maintained at the Board's Administration and Distribution Centre located at Harvey originate from all parts of the world. Extensive in-store stocks provide breeders with a selective range of sires in each breed.

Artificial breeding is increasingly recognised as a reliable means of expanding genetic selection. Breeder management and enthusiasm coupled with technical efficiency have achieved very good results, which are reflected in a non-return rate of 75.3 per cent for 1974.

FARM MANAGEMENT SERVICE LABORATORY

The University of Western Australia, by resolution of the Senate, approved the establishment of the Farm Management Service Laboratory within the University in 1966. The aims of the Laboratory are to develop concepts and services in management accounting, computer planning and animal breeding which are specially suited to the needs of farmers; to make these developments available to farmers; and to use information processed by the Laboratory for teaching and research at the University of Western Australia.

The Laboratory hires its own staff and computer time, and pays its own operating expenses. Fees are charged to cover costs, though initially the Laboratory drew on

capital grants made to it by various firms and institutions through the John Thomson Agricultural Economics Centre at the Institute of Agriculture.

Services provided by the Laboratory include computer techniques for planning farm business and solving farm problems. A set of programmes has been developed to enable farmers to breed at least cost for maximum genetic improvement of economically important traits in sheep flocks and pig and beef herds.

HUNTING

Although hunting has been carried on from the first years of settlement, it has never been an important industry. In 1974-75 the recorded gross value was \$1,657,000 but reliable and complete information is difficult to obtain and this amount could therefore be deficient.

Kangaroos have been destroyed in great numbers from the earliest days, the principal reason for the organised destruction being the damage done to pastures and fencing. As early as 1849 the export of kangaroo skins for the year was no less than 12,387. The export of kangaroo products was banned by the Australian Government in 1973 but some skins are used in local factories while kangaroo meat is used as pet food.

The earliest recorded export of rabbit skins relates to the year 1900 and the meat and skins of these animals have been a source of income to trappers ever since. In an attempt to reduce the damage done to crops and pastures, various methods of control have been adopted and since the second World War an intensive campaign, using myxomatosis virus, poisons and warren ripping, has met with considerable success. As a result, the quantity of rabbit meat produced and the number of skins exported and treated locally have declined greatly and are now insignificant.

Wild goats are slaughtered and the meat is exported.

The skins of animals other than marsupials and rabbits, together with exports of Western Australian fauna, are taken into account in the value of the hunting industry (see tables on page 350) but these are not significant.

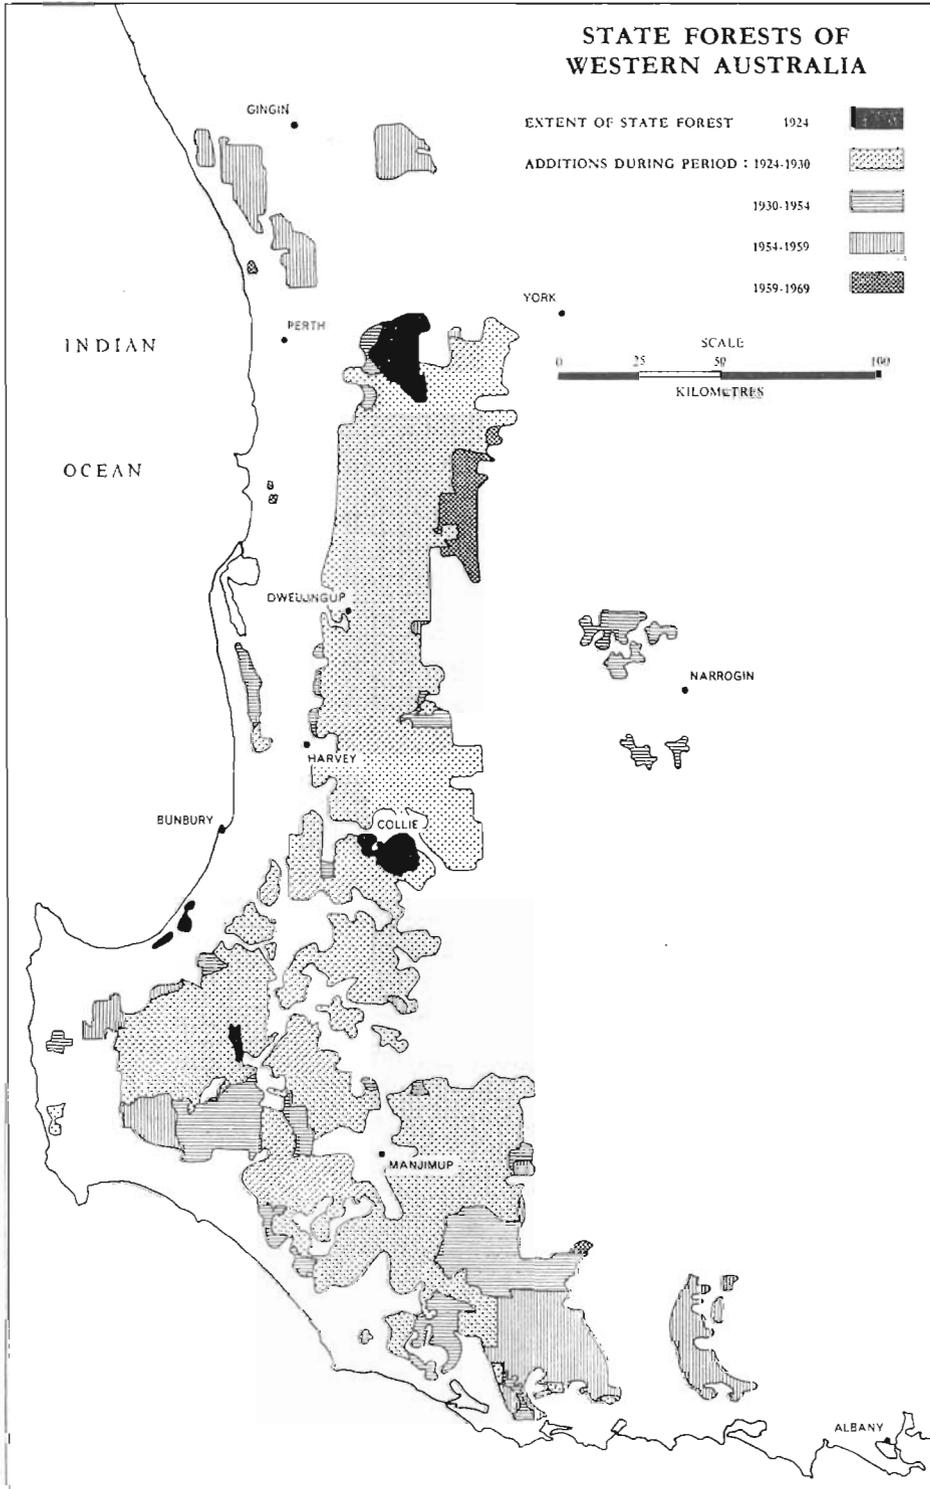

FORESTRY

The Prime Indigenous Forests

Although the prime indigenous forests of Western Australia cover only a small percentage of the area of the State, they are of considerable economic importance. This is not only on account of the durability, strength and general-purpose nature of their hardwood timbers, but also because of their occurrence in the water catchment areas in the high-rainfall and closely-populated section of the State. Being easy to regenerate after cutting, they form a natural and effective protection against soil erosion and provide for the increasing public demand for forest recreation. More than 1.8 million hectares have been permanently dedicated as State Forests and approximately 122,400 hectares of forest land are held as Timber Reserves under the Forests Act and the Land Act.

Jarrah (*Eucalyptus marginata*) is the State's principal timber and the prime forest covers over 1.2 million hectares of the State Forests. Karri (*E. diversicolor*) is next in importance and is distributed over some 323,700 hectares but only about 20 per cent of it is in pure stands. Wandoo (*E. wandoo*) accounts for a smaller portion of the dedicated area and Tuart (*E. gomphocephala*), another valuable timber, has a restricted area of about 2,400 hectares. Blackbutt (*E. patens*) occurs in patches throughout the jarrah and karri forests and is an important milling timber with properties and uses similar to jarrah. Marri (*E. calophylla*), the most widespread of the commercial eucalypts, has been widely used as a pole timber and, to a limited extent, for building scantling. Of greatest importance, however, is the use of marri as principal raw material for an export wood chip industry based on the Manjimup region.

Other eucalypts and many trees of different genera occur within the prime forest belt but they are not of major economic importance. The main distribution of the prime forests, which are practically confined to the south-western portion of the State, is shown on the accompanying map.

The Inland Forests

Beyond the area of prime forest is an inland sclerophyllous woodland, within which are a number of eucalypts (both tree and mallee form), as well as several types of *Acacia*, such as the wattles and mulgas, tea tree (*Melaleuca spp.*) and casuarinas. Sandalwood (*Santalum spicatum*), indigenous to the wheat belt and semi-arid areas of the State, is still exported to Asian countries but is now obtained only from the semi-arid regions.

While none of the inland woodland can be classed as suitable for sawmilling in the ordinary sense, it forms an important source of timber for mining and agricultural purposes. During recent years, soil conservation in the regions of low rainfall has received increasing attention and the importance of controlling clearing, grazing and firewood cutting has been recognised. The Forests Department maintains a staff to exercise these controls and to advise on tree planting. Work is proceeding with demarcation of areas representing important inland ecotypes for which long-term conservation proposals have been prepared.

Forestry Administration

Scientific forestry was given considerable impetus in Western Australia with the passing of the Forests Act in 1918. Extensive cutting over the previous fifty years had seriously depleted the State's timber resources and adequate provision had not been made for protection and regeneration. Under the Act, however, wide powers are conferred on the Forests Department, which is granted nine-tenths of the net annual government revenue from forestry sources. The sum received, together with various other grants, is used for regeneration, fire control and associated purposes.

The forests are now managed on a long-range working plan to ensure continuity of the industry, trees being approved for cutting and marked accordingly by trained foresters, who work under the direction of the Conservator of Forests and closely control both the indigenous forest and the mallet and pine plantations. The future productivity of the forests is also safeguarded by ensuring that cutting is carried out in such a way as to protect immature growth and to encourage natural regeneration, which is a very important feature of the Department's policy.

Brown Mallet (*Eucalyptus astringens*), the bark of which has a high tannin content, once covered large areas in the wandoo forest belt but was practically exterminated by clearing for farms and by excessive exploitation. Regenerated areas and plantations of mallet now total 7,735 hectares and it is unlikely that this total area will increase.

Plantation methods are being employed to grow pines, principally *Pinus pinaster* and *Pinus radiata*, as the State has no indigenous softwoods of commercial significance. Financial assistance granted by the Australian Government in terms of the *Softwood Forestry Agreements Act 1967* has enabled the State to increase its planting rate to an average 2,400 hectares per annum. It was hoped to lift the rate to 3,200 hectares a year but lack of finance has prevented this. Further financial assistance has been granted by the Australian Government under the *Softwood Forestry Agreements Act 1972* to cover a second five-year programme of softwood planting over the period ending 30 June 1976. Thirteen plantations, with a planted area (including trial plots) of 37,010 hectares have been established to 31 December 1974, and it is planned to provide at least 120,000 hectares by the turn of the century. Much of the land selected for pine planting is of limited value for agriculture but when used for pines it constitutes a valuable long-term investment, with the prospective development of industries for the manufacture of paper, wallboard and similar products.

Because of the hot, dry summers experienced in most of the areas covered by State Forests, there is a considerable risk of damage by fire and intensive precautions are taken by the Department to minimise this danger. Radio-equipped spotter aircraft and key look-out towers provide surveillance of the critical forest areas during prescribed burning periods and during summer. An area of 366,611 hectares was burnt by prescription in 1975 and 79 per cent of this burning was carried out by dropping incendiaries from a low-flying aircraft. Restrictions are placed on all burning operations by farmers and other

persons when the fire hazard is high and at such times warnings are issued emphasising the danger. All staff and employees of the Department are available and trained to fill roles in either direct fire fighting or technical support. Fire suppression is planned on the basis of rapid attack with adequate crews for achieving early control.

In association with the system of cutting control, various royalties, licence and permit fees are collected as part of the Consolidated Revenue of the State.

The protection of native flora is also vested with the Forests Department which administers the *Native Flora Protection Act, 1935-1938*. The main provision of the Act is the authority given to the Governor of Western Australia to declare by proclamation that any or all wildflowers or native plants are protected in any specified part of the State.

Penalties are provided under the Act for picking protected wildflowers or plants or for selling or offering them for sale. The Act, however, empowers the Minister for Forests to issue licences to pick protected wildflowers or native plants for scientific or other purposes approved by the Minister.

Prior to 1963, only certain wildflowers and native plants were declared protected in various parts of the State. However, owing to extensive land-clearing operations and the consequent rapid decline in areas of wildflowers, it was decided in 1963 to issue a proclamation protecting all wildflowers and native plants on all Crown lands, State Forests, lands reserved for public purposes, and every road within the South-West and Eucla Land Divisions and on all flora and fauna reserves throughout the rest of the State. Further proclamations have since been issued protecting specific wildflowers and plants throughout Western Australia.

Policing of the Act is carried out by officers of the Forests Department and Honorary Inspectors appointed under the *Native Flora Protection Act, 1935-1938*. Notices prohibiting the picking of wildflowers are supplied by the Forests Department to Shire Councils for erection on road verges.

Principal Forest Products

Sawn timber from jarrah and karri is the principal form of forest production, but there has been a rapid increase in the local use of logs for plywood manufacture during recent years. Karri and locally-grown pine logs are used for this purpose, together with imported logs. Small-size thinnings from coastal plantations of *Pinus pinaster*, supplemented by some *Pinus radiata* thinnings from southern plantations and waste cores and off-cuts from plywood peeling, are used in the manufacture of particle board. This is becoming an increasingly important product and the volume of chipwood logs used in 1974-75 was 49,918 cubic metres.

In addition to these major products, the State's forest wealth includes sandalwood for export, firewood for general purposes, and various seeds and plants for propagation both in Australia and abroad. Wandoo and jarrah are used as a source of charcoal for the high-grade charcoal pig-iron produced at Wundowie. The karri, wandoo, marri and some inland species are important nectar producers for apiarists, who move their bees to various forest sites in following the nectar flow.

The following table gives details of sawn and round timber production from 1970-71 to 1974-75. Production of sawn timber has fluctuated over the ten years to 1974-75, reaching a maximum of 499,618 cubic metres in 1967-68, with a minimum of 395,930 cubic metres in 1974-75. In the same period the output of round timber, which consists mainly of mining timber, piles, poles, fencing posts and rails, ranged between a maximum of 89,431 cubic metres in 1968-69 and a minimum in 1971-72 of 43,776 cubic metres.

TIMBER PRODUCTION (a)

Particulars	1970-71	1971-72	1972-73	1973-74	1974-75
Timber—Sawn cubic metres	448,976	406,995	404,956	407,577	395,930
Timber—Round cubic metres	51,202	43,776	45,107	50,566	53,961

(a) From local logs and includes railway sleepers and plywood veneers.

Sawmilling is dealt with in greater detail under *Manufacturing* in Part 3 of this Chapter (page 414).

In 1974-75 exports of railway sleepers totalled 43,954 cubic metres, of which 5,833 went to other Australian States and 38,121 to overseas markets, mainly the United Kingdom. In the same year 47,348 cubic metres of other rough, sawn or dressed timber were exported to other Australian States, and 17,818 shipped overseas, the principal markets being Japan, New Zealand and the United Kingdom.

FISHERIES (INCLUDING WHALING AND PEARLING)

The fishing industry in Western Australia consists of three distinct activities, the catching of edible species, whaling and pearl-shell production. In addition, pearl culture has been successfully established in the North-West.

General Fisheries

Since the end of the second World War, rock lobsters have become the most important item of production of that section of the industry which is concerned with the catching of edible species. Prior to the war there was a small local market for fresh rock lobsters, but in 1941 production was stimulated by canning for the armed forces. Although canning continued until 1950, it had become far less important by 1947 than another development, the freezing of rock lobster tails for export, mainly to the United States of America. The overseas demand, which developed rapidly in post-war years, gave great impetus to the industry and the take increased greatly after 1947 to a record production of 9,990 tonnes in 1967-68 valued at \$16.9 million. The catch for 1973-74 decreased to 6,767 tonnes, the value for which was \$17.9 million. The highest value of catch ever recorded was \$22.2 million in 1971-72. Overseas and interstate exports of rock lobster tails in 1973-74 totalled 2,656 tonnes with an f.o.b. value of \$18.5 million, while the figures for 1974-75 were 3,328 tonnes and \$25.3 million, respectively.

The most important commercial species of rock lobsters in Western Australian waters is *Panulirus longipes cygnus*, which is fished off the south-west coast between Murchison River and Bunbury. The principal localities around which rock lobsters are caught are Houtman Abrolhos, Geraldton, Dongara, Beagle Island, Green Head, Jurien Bay, Cervantes, Lancelin, Ledge Point and Fremantle. The industry is protected from overfishing by such measures as the declaration of closed seasons; the proclamation of fishing zones; the prohibition of the taking of lobsters of less than a prescribed size or of female rock lobsters having berry (*i.e.* eggs) attached; requiring that every rock lobster pot shall have an escape gap of specified dimensions; the granting only in special circumstances of new licences for boats for rock lobster-fishing; and limiting the number of pots that a boat may carry or use at any one time. The catch is processed either on specially equipped freezer boats or at shore stations licensed under the *Fisheries Act, 1905-1975* as processing establishments.

The large catches of Australian salmon (*Arripis trutta*), which school in the bays on the south and lower south-western coasts, yield a large proportion of the production of inshore and beach fishing and are used almost exclusively for canning. The remainder of the catch from this type of fishing comprises chiefly tailor (*Pomatomus saltator*), sea herring or ruff (*Arripis georgianus*), western sand whiting (*Sillago schomburgki*), sea mullet (*Mugil cephalus*) and trevally or skipjack (*Usacaranx georgianus*). This is sold mainly as wet fish on the local market, but large quantities of sea herring are canned and there are some exports, principally of whiting, to other Australian States.

The coastal waters northward from the mouth of the Murchison River to North West Cape and Exmouth Gulf are the source of several species of commercial importance. Snapper (*Chrysophrys unicolor*) are caught between the Murchison River and North West Cape, during the northern schooling season from May to August. Cod and Spanish mackerel, though in smaller quantities, are also caught between the Murchison River and North West Cape. At Shark Bay a prawn-fishing industry has been successfully established, the catch being processed at Carnarvon. The species caught are the western

king prawn (*Penaeus latisulcatus*) and the brown tiger prawn (*P. esculentus*). A prawn fishery has also been established at Exmouth Gulf, the principal species caught being the brown tiger prawn and the western king prawn. Quantities of endeavour prawn (*Metapenaeus endeavouri*) and banana prawn (*P. merguensis*) are also caught. The catch is processed at Learmonth and on freezer boats. As a conservation measure the number of fishing boats licensed to operate has been limited to thirty-two at Shark Bay and twenty-two at Exmouth Gulf. From a catch of 108 tonnes in 1961-62, the State production of prawns has increased significantly and in 1973-74 was 3,101 tonnes. Production is expected to increase still further due to the establishment of commercial prawn fishing in the Nickol Bay area, near Roebourne, and because of promising experimental trawling being carried out in other areas along the north coast.

The first fishing grounds to be exploited were the estuaries and rivers and, although they are not now as important as other grounds, they still provide substantial quantities of fish of a fairly wide variety. The principal species are cobbler (*Cnidogobius macrocephalus*) and yellow-eye mullet (*Aldrichetta forsteri*), most of which are caught in Peel Inlet and the Harvey and Swan estuaries. Other species include garfish (*Hemirhamphus australis*), Perth herring (*Fluvialosa vlaminghi*), sea mullet, tailor, sand whiting, King George whiting (*Sillaginodes punctatus*), and pilchard (*Sardinops neopilchardus*). Crabs (*Portunus pelagicus*), green-tail prawns (*Metapenaeus dalli*) and western king prawns are also caught commercially in these waters. Investigations are being carried out to determine the commercial potential of tuna stocks off the north-west coast.

FISH, CRUSTACEANS AND MOLLUSCS: CATCH AND VALUE (a)

Species—Common name	Quantity (b) (tonnes)			Value (c) (\$'000)		
	1971-72	1972-73	1973-74	1971-72	1972-73	1973-74

(a) Excludes aquatic reptiles, details of which are not available for publication.
value paid to fishermen. * Revised.

(b) Live (whole) weight. (c) Gross

There are no indigenous inland or freshwater fish of commercial value. A relatively large crustacean, the marron (*Cherax tenuimanus*), occurs in the streams of the lower south-west and some success has been achieved in stocking farm dams with this species. Proposals to farm artificially-reared stocks are being investigated. Brown trout, rainbow trout and English perch have been introduced into the streams of the southern districts.

The Western Australian Department of Fisheries and Wildlife, in association with the Commonwealth Scientific and Industrial Research Organization and other State and Commonwealth authorities, is undertaking research on rock lobsters, prawns, whiting, scallops, abalone, tuna and Australian salmon in Western Australian marine waters. These organisations are also involved in research into problems relating to estuaries and freshwaters, including examination of the effects of dredging and damming, the introduction of trout and marron into dams and freshwater streams, the pollution of inland lakes, and the tourist and recreational potential of the estuaries and freshwaters of the State. A special group of Fisheries Department officers is investigating the potential for commercial exploitation of selected species of fish from areas which, to date, have not been commercially exploited.

A marine research centre has been built at Waterman, about twenty-two kilometres north of Fremantle, for the Department of Fisheries and Wildlife. It incorporates eleven separate laboratories and a large aquarium with circulating water, for experiments and studies mainly on rock lobster. Fisheries research workers from the Department of Fisheries and Wildlife, the Commonwealth Scientific and Industrial Research Organization and the University of Western Australia share accommodation at the centre.

A summary of the principal statistics of the fishing industry is given in the following tables.

GENERAL FISHERIES

At 31 December—	Boats licensed	Value of boats and equipment	Fishermen licensed (a)	Year	Production			
					Rock lobsters		Other fish (b)	
					Quantity (c)	Value	Quantity (d)	Value
	number	\$'000	number		tonnes	\$'000	tonnes	\$'000
1969	1,450	18,243	3,005	1969-70	6,956	12,115	5,712	1,019
1970	1,456	19,460	2,895	1970-71	8,102	18,040	5,597	1,200
1971	1,508	20,060	3,169	1971-72	8,316	22,184	6,054	*1,442

FISH, CRUSTACEANS AND MOLLUSCS: CATCH BY METHOD, 1973-74
(Tonnes)

Particulars	Haul net and beach seining	Hand lining (a)	Trawling	Pot fishing for rock lobsters	Other methods	Total
Fish	3,909	118	10	2,947	6,983
Crabs	53	57	110
Prawns	5	3,095	(b)	3,101
Rock lobsters	1	6,760	5	6,767
Molluscs	13	28	287	328
Total	3,980	118	3,123	6,770	3,167	17,289

(a) Snapper only. Catch of other species by hand lining is included in 'Other methods'. (b) Less than 500 kilograms.

Whaling

Whaling has been conducted along the Western Australian coast from the first years of settlement and whale oil and whale bone were among the earliest exports from the Colony. Activity since then has fluctuated widely and at times ceased altogether. The

latest large-scale revival of the industry began in 1949, when a station at Point Cloates on the north-west coast was reopened after a lapse of more than twenty years. A treatment plant was established by the Australian Whaling Commission at Babbage Island, near Carnarvon, in 1951 and a plant at Frenchman Bay near Albany was enlarged in the following year. In 1956, the company operating from Point Cloates purchased the Australian Whaling Commission's station at Babbage Island and transferred its activities to that base.

During the 1963 season the two whaling companies operating in Western Australia took only eighty-seven humpback whales, compared with a quota of 550 allocated under the procedure laid down by the International Whaling Commission. At a meeting held in London in July 1963 the Commission decided that more stringent measures should be adopted to prevent further depletion of numbers. Accordingly it imposed a total ban on the taking of humpback whales for an indefinite period in all waters of the Southern Hemisphere. The company operating from Carnarvon, which relied mainly on the taking of humpbacks, ceased whaling activities at its Carnarvon base in August 1963.

Before the 1962 season the whales taken were predominantly humpbacks. The only station now operating is at Frenchman Bay where sperm whaling has been carried on since 1955.

The figures in the following table have been derived from information provided by the Fisheries Branch of the Australian Department of Primary Industry. Since 1963, more whales were taken in 1974 than in any other year but the highest production of oil occurred in 1971.

WHALING

Particulars	1970	1971	1972	1973	1974
Sperm whales taken No.	799	860	953	971	1,079
Oil produced (a).... tonnes	5,366	6,166	5,865	5,492	5,826

(a) 1 tonne = 6 barrels (approximately).

Pearl-shell Fishing and Pearl Culture

Pearl and pearl-shell fishing has been a valuable industry for many years, the main centre being Broome. The pearls obtained were once an important feature of production but the success of the industry now depends almost entirely on the shell produced and the price obtainable for it. Activities were suspended following the outbreak of war with Japan, when valuable luggers and equipment were lost. After the war recovery of the industry was slow because of a shortage of suitable boats and the difficulty in obtaining experienced divers. In 1953 the rate of progress improved when the services of trained Japanese divers again became available. By 1957 production of shell had reached the pre-war level of about 1,000 tonnes but due to the depressed state of the market it fell to 765 tonnes in 1958. Except for a slight recovery in 1960, production declined in each year from 1959 until 1964, when 140 tonnes of shell were raised. Due to the increased demand for shell for pearl culture, production has increased slightly since then.

In 1956 a licence was granted to a company to culture pearls at Kuri Bay in Brecknock Harbour, 209 kilometres north-east of Derby and the initial harvest of pearls was gathered in 1957. Licences have since been issued to two other companies and pearl culture farms have been successfully established in Samson Inlet, Hiro Bay and Mura Bay and in King Sound and at Port Smith, south of Broome.

An article by Dr D. A. Hancock, Chief Research Officer of the Western Australian Department of Fisheries and Wildlife, describing the process of pearl culture at Kuri Bay appeared in the *Western Australian Year Book*, No. 13—1974.

Chapter VIII—continued

Part 2—Mining

DESCRIPTION OF MINING IN WESTERN AUSTRALIA

Although the discovery of gold was of particular significance in the early development of the Western Australian economy, renewed importance of the mining industry in the State began mainly with the considerable expansion associated with iron ore and other minerals which occurred in the late 1960s. This recent growth in importance of the industry is demonstrated by the fact that in 1973-74, value added (see definition on page 346) by mining establishments in Western Australia was \$494 million, or 158 per cent more than in 1968-69 when value added data first became available. The 1973-74 figure was not much less than value added by manufacturing establishments in the State, many of which (e.g. mineral processing plants) are associated directly with the mining industry. Value added by mining establishments in Western Australia in 1973-74 was \$455 per head of mean population, compared with the national average of \$150.

The location of the major operating mining projects in Western Australia at the end of December 1974 was shown in a map on page 408 of the previous issue of the Year Book. The text below describes the development of the mining industry in the State including references to current projects.

The first major developments followed the discovery of *gold* in the Kimberley region of the far north of the State in 1885, although gold had been found in various places previously and other minerals had also been discovered, including copper and lead in the Northampton district, north of Geraldton, and coal at the Irwin River, south of the same town. The Kimberley gold find was followed by extensive prospecting activity resulting in gold strikes between 1887 and 1891 in the Yilgarn, Pilbara, Ashburton and Murchison districts. Rich discoveries in 1892 at Coolgardie and in 1893 at nearby Kalgoorlie were followed by development of the famous 'Golden Mile' between Kalgoorlie and Boulder which became one of the major gold producing areas of the world and remains as the principal source of gold both in the State and in Australia.

Although gold production declined after the exhaustion of surface deposits and the peak production of 64,222,000 grams in 1903, gold mining remained as the major component of the Western Australian mining industry for many years. Output dropped during the depression of the late 1920s, then rose to 37,767,000 grams in 1939. Production fell again during the Second World War and then recovered to 27,210,000 grams in 1958. From 1954 the industry has benefited from subsidy payments from the Australian Government paid under the Gold-Mining Industry Assistance Act but since 1963 production has declined and in 1973-74 was 7,173,000 grams.

The more recent history of mineral development in Western Australia has seen the importance of gold relegated by the opening up of major iron ore deposits in the north-west of the State and the introduction of important new industries based on nickel, petroleum, bauxite and mineral sands.

Iron ore in the form of hematite has been mined at Cockatoo Island, in Yampi Sound in the north of the State, since 1951 and limonitic ore was mined at Wundowie in the Darling Range east of Perth for some years from 1948. It was not until the early 1960s, however, following the Australian Government's decision to modify its embargo on overseas exports of iron ore, which had been in force since 1938, that widespread interest in developing the State's iron ore resources occurred. The ensuing activity has resulted in iron ore becoming the major Western Australian mineral with production of 82,404,000 tonnes containing 51,947,000 tonnes of iron, valued at almost \$393 million in 1973-74.

The State's measured, indicated and inferred iron ore reserves with an iron content of more than 55 per cent were assessed by the State Department of Mines as 26,800 million tonnes at September 1974. The deposits occur mainly in the Pilbara, in the north-west of the State, where major production commenced in 1966 and has expanded ever since. All of the production from this area is exported as ore, pellets or fines, mainly to Japan. Ore from Mount Goldsworthy and Shay Gap, east of Port Hedland, is railed to a deep-water port at Finucane Island, just off Port Hedland. Output from Mount Tom Price and Paraburdoo, in the Hamersley Range area south-west of Port Hedland, is railed to Dampier where some of it is pelletised. From Mount Whaleback in the Ophthalmia Range near Newman, ore is railed to Port Hedland. Limonitic ore from Pannawonica in the Robe River valley is railed to Cape Lambert where it is shipped as pellets or fines.

Iron ore is also mined at Koolyanobbing, some 450 kilometres east of Perth, where production commenced in 1950. This ore is used mainly for pig-iron production at Kwinana and Wundowie. The first shipment of ore from the deposits on Koolan Island, adjacent to Cockatoo Island in Yampi Sound, was made in January 1965. Iron ore has also been shipped through Geraldton from a deposit at Koolanooka Hills, near Morawa, to the east of the port.

Nickel was discovered in 1966 at Kambalda to the south of Kalgoorlie and since then there has been rapid expansion in the nickel industry accompanied by a very high level of exploration activity. At the end of 1975 mines were operating at Kambalda, Scotia, Nepean, Spargoville, Redross and Mount Windarra, which are all in an area within 250 kilometres of Kalgoorlie. Nickel concentrates are exported from Esperance or processed in a smelter at Hampton, near Kalgoorlie, and a refinery at Kwinana for subsequent export in processed form. Production of concentrates was 323,142 tonnes, containing 42,247 tonnes of nickel in 1973-74.

In May 1966 Barrow Island, about 100 kilometres north-east of Onslow, was declared a commercial oilfield. The first shipment of *crude oil* from this field was made on 25 April 1967. Production in 1973-74 was 14,417,000 barrels valued at almost \$29 million. In July 1970 a *natural gas* field at Dongara, about 100 kilometres south-east of Geraldton, was declared commercially viable and subsequently a 410-kilometre underground pipeline was constructed to supply gas to domestic and industrial users in Perth and heavy industry in Kwinana and Pinjarra. This supply commenced on 1 December 1971. Production of natural gas in 1973-74 (including a small amount produced at Barrow Island) was 801 million cubic metres.

Bauxite deposits at Jarrahdale in the Darling Range near Perth were first mined in 1959, and in 1963 the mine began supplying ore to an alumina refinery at Kwinana. Mining commenced further south in the Darling Range in 1972 to supply a new refinery near Pinjarra which began operations in April 1972. Bauxite production from both areas amounted to 6,278,000 tonnes in 1973-74.

Ilmenite, leucoxene, rutile, zircon, monazite and xenotime concentrates are being produced from *mineral sands* mined near Capel and treated there and nearby at Bunbury. The ilmenite content is of particular importance because it is virtually chrome-free and little difficulty is experienced in producing a concentrate of high quality. Production of ilmenite concentrates commenced in 1956, when recorded production was 3,346 tonnes. During both 1974 and 1975, various operators commenced mining and treatment of mineral sands in the Eneabba-Jurien Bay area north of Perth. Some treatment is also carried out at Geraldton. Production of ilmenite concentrates in 1973-74 was 661,000 tonnes, valued at \$7.88 million while the value of all mineral sands amounted to \$12.4 million.

The only commercial production of *coal* in Western Australia occurs at Collie in the south-west of the State. The coal is sub-bituminous and there are substantial reserves in the area which have been deep-mined since the 1890s. Surface mining was introduced in 1943, and in 1973-74 production from surface and underground mines totalled 1,197,000 tonnes valued at \$7.24 million. Recent large increases in the price of imported petroleum have resulted in a growth in the demand for coal and, during the latter half of 1974, output of coal increased considerably.

In 1968 large-scale production of *common salt* (sodium chloride) commenced at Lake Lefroy near Kambalda and subsequently production of salt by the solar evaporation of sea water began at Port Hedland, Lake MacLeod near Carnarvon, Useless Loop in Shark Bay and at Dampier. Most of the salt produced is exported. Production in 1973-74 was 3,879,000 tonnes valued at \$12·8 million. *Gypsum* is also extracted in certain areas associated with salt production.

Among other minerals produced in Western Australia are *tin* and *tantalite* which were discovered at Greenbushes, in the south-west, in 1888. Production of 1,092 tonnes of tin concentrate valued at \$3·24 million was recorded in 1973-74. *Talc* is produced from deposits at Three Springs, south-east of Geraldton, and at Mount Seabrook near the upper Murchison River in the mid-north. Production in 1973-74 totalled 46,884 tonnes. Other recent developments include the opening up of a *marble* industry in the Wyloo locality in the north-west and extraction of potash associated with solar salt production at Lake MacLeod. *Copper*, *lead* and *manganese* have been mined in significant quantities in the past but activity has declined in recent years. *Silver* in Western Australia is produced only as a by-product of other minerals, mainly gold.

The quarrying of *construction materials* in Western Australia is an important part of the mining industry. However, materials such as sand and gravel, which are in very plentiful supply, are not included in mining statistics because of difficulties in compiling reliable data. In 1973-74 the value of recorded production of building and monumental stone (mainly limestone, granite and sandstone), crushed and broken stone (used mainly for roads, concrete and rail ballast) and crushed and broken limestone, was \$13·3 million. A further 1,373,000 tonnes of *limestone* valued at \$2·95 million was produced for other purposes, including agriculture, cement making, glass making, lime burning and iron ore pelletising.

MINING STATISTICS

In the Australian Standard Industrial Classification, 'mining' is used in the broad sense to include the extraction of minerals occurring naturally as solids such as coal and ores, liquids such as crude petroleum, or gases such as natural gas, by such processes as underground mining, open-cut extraction, quarrying, operating of wells or evaporation pans, dredging or recovering from ore dumps or tailings. Establishments engaged mainly in dressing or beneficiating ores or other minerals by crushing, milling, screening, washing, flotation, other (including chemical) beneficiation processes and natural gas absorption and purifying are included. Excluded are establishments engaged mainly in the refining or smelting of ores (other than the preliminary smelting of gold), iron ore pelletising and in the manufacture of such products of mineral origin as coke, cement or fertilisers.

Mining statistics presented in the following tables are derived from the integrated economic censuses of mining described in the introduction to this Chapter. Definitions of the items in these tables appear on pages 345-6. It should be noted that the tables relate only to mining establishments (*i.e.* establishments at which mine development has commenced) and exclude mining leases at which only exploration is being carried out. The statistics, however, cover all exploration which continues on leases on which development or production has commenced. Separate details of exploration expenditure both on and off production leases are given in tables on pages 406, 407 and 408.

The next two tables provide details of the major variables by industry sub-division for 1973-74, and comparative data for all mining establishments for each of the five years to 1973-74.

The year-by-year increases in most of the items reflect the continuous expansion of the iron ore industry during the period under review and, to a lesser extent, growth of nickel and bauxite mining. The markedly higher levels of capital expenditure in 1970-71 and 1971-72 coincide with high levels of development on major iron ore mining projects which were completed in 1972-73. Over the five years, although the number of mining establishments remained fairly constant, employment grew from 9,265 to 13,045 and value added increased from \$287 million to \$494 million.

* Revised.

The relative importance of metallic mineral mining in Western Australia compared to Australia is clearly illustrated in the table that follows. This table also reflects the greater importance of coal and petroleum mining in some other States compared with Western Australia. The relatively low contribution by construction materials in Western Australia, by comparison with Australia, is partly the result of sand and gravel not being included in the Western Australian figures.

**MINING ESTABLISHMENTS—PERSONS EMPLOYED AND VALUE ADDED BY INDUSTRY

(a) Australian Standard Industrial Classification.

The table that follows sets out a five-year summary of Western Australian mining, with comparative data for Australia. These comparisons indicate that Western Australian mining establishments are generally larger than those in the rest of Australia, and output per worker is generally higher, due mainly to the comparative magnitude and capital-intensive nature of the mining projects in Western Australia.

(a) Not available for publication; value included in 'Other'. (b) Includes bentonite. (c) Value based on price per barrel published by Ampol Petroleum Limited. (d) Values include amounts realised by the Gold Producers' Association Ltd. on sales of Western Australian gold, and Commonwealth net subsidy paid to gold producers. (e) Comprises limestone for agriculture, cement making, flux, glass making, lime burning and iron ore pelletising. (f) Includes those minerals for which values are not available for publication.

The previous table, which sets out details of quantity and value of mineral production, provides a further illustration of the importance of iron ore in Western Australia. Iron ore surpassed gold as the mineral with the highest annual value of production in 1966 and, since 1967, has accounted for more than half the annual value of minerals produced in this State. The table also shows the increasing value of gold bullion, despite decreasing production. This has resulted from significant increases in the overseas price of gold in the last three years. A decline in production of nickel concentrates in 1971-72 and 1972-73 was more than offset by the higher grade of the concentrates in those years. Total nickel content of concentrates has increased over the three years shown in the following table.

FOREIGN PARTICIPATION STATISTICS

Any attempt to provide statistical information on the extent of foreign participation in Australian industry involves problems of concept and measurement. Broadly, there are two approaches to measurement of foreign participation. One is to compare the value of assets of Australian enterprises in which there is significant foreign investment with that of other Australian enterprises. The other is to compare the operations (as expressed in terms of value added, turnover, wages and salaries, etc.) of establishments of Australian enterprises in which there is significant foreign investment with those of the establishments of other Australian enterprises. The second method is the one that has been adopted for a series of studies into foreign participation in the Australian mining industry which were conducted annually between 1963 and 1968. A new series commenced in respect of the year 1971-72 and it is hoped to extend this progressively to all other key sectors of the Australian economy. The statistics are based on data compiled in the Census of Mining Establishments conducted for a fiscal year and on ownership and control characteristics as at 30 June of the same fiscal year obtained from the Survey of Overseas Investment. In order to determine the extent of ownership based on shareholdings necessary in these studies, the widely accepted convention of multiplying ownership links has been adopted. For example, if a shareholder owns 60 per cent of the ordinary shares of enterprise 'A', and enterprise 'A' owns 70 per cent of the ordinary shares of enterprise 'B', the first shareholder is said to own, indirectly, 42 per cent of the ordinary shares in enterprise 'B'.

In analysing the extent of foreign participation in Australian industry it is usual to distinguish between the two aspects of ownership and control.

Ownership

Foreign ownership means that non-residents of Australia have an ownership interest in an enterprise operating in Australia. Ownership characteristics are based on information about ordinary shares (or voting stock) collected in the Survey of Overseas Investment; preference shares which do not carry a general voting entitlement are excluded from consideration. The term 'ordinary shares' is also used in these studies to cover an equivalent type of ownership interest in unincorporated enterprises.

For many reasons it has not proved practicable to measure the extent of foreign ownership by comparing some measure of the value of shares (*e.g.* paid-up value, market value, etc.) owned by foreigners, or the value of dividends received by them, with the corresponding figures for Australian residents. Instead, the extent of foreign ownership is calculated by apportioning separately to Australian and foreign ownership details of value added, employment, etc. for each mining establishment on the basis of the percentage of the number of ordinary shares of the enterprise operating that mining establishment that are held by Australian and foreign owners, respectively. When no foreign ownership of an enterprise is identified, the data for mining establishments of that enterprise are classified wholly to Australian ownership. In calculating foreign ownership of enterprises in Australia, account is taken of foreign investment in enterprises operating mining establishments, made through the larger identified Australian nominees.

The apportionment of data on the operations of mining establishments does not imply that part of the value added, employment, etc. of the individual establishment is actually owned by foreigners. It simply represents a measure of the extent of foreign ownership and is obtained by separately weighting the degree of Australian and foreign ownership of each enterprise by the activity variables for the mining establishments those enterprises operate, and aggregating the results of those calculations. The table below shows, for Western Australia and Australia, the percentage of the major variables recorded in the 1971-72 and 1972-73 Censuses of Mining Establishments attributable to foreign ownership and Australian ownership, respectively.

MINING ESTABLISHMENT STATISTICS APPORTIONED TO FOREIGN OWNERSHIP AND AUSTRALIAN OWNERSHIP—WESTERN AUSTRALIA AND AUSTRALIA
(Per cent)

Control

Generally, an enterprise is regarded as being foreign controlled if there is evidence that foreigners, acting singly or in a coalition, can determine the key policy decisions of the enterprise. Control can be measured (among other ways) by considering the number of ordinary shares held or the number of voting rights held. However, due to the obvious difficulties of compiling data on the distribution of voting rights, only the ownership of ordinary shares has been used in establishing the degree of foreign control. Other evidence of apparent control such as contractual agreements, licensing arrangements, market power, legislation, etc. have been ignored because of the impossibility of systematically aggregating these factors on a consistent basis and of quantifying some of them.

STATISTICS OF MINING ESTABLISHMENTS OF FOREIGN CONTROLLED ENTERPRISES AND AUSTRALIAN CONTROLLED ENTERPRISES—WESTERN AUSTRALIA AND AUSTRALIA (Per cent)

Particulars	Establishments at 30 June	Value added	Purchases, transfers in, and selected expenses (a)	Turnover	Fixed capital expenditure (b)	Wages and salaries	Persons employed at 30 June (c)

(a) Adjusted for changes in stocks.

(b) Outlay on fixed tangible assets less disposals.

(c) Includes working proprietors.

Mining establishments are generally classified, in these studies, as being 'foreign controlled' if, for the enterprise operating the mining establishment:

- (a) that enterprise has been incorporated in Australia and
 - (i) 25 per cent or more of its ordinary shares is held by one individual, an enterprise or a group of related enterprises in the one foreign country, or
 - (ii) 50 per cent or more of its ordinary shares is held by individuals resident in the one foreign country;
- (b) that enterprise is a branch in Australia of an enterprise incorporated in a foreign country;
- (c) that enterprise is a subsidiary (as defined in the relevant companies legislation) of enterprises included in (a) or (b) above.

The foreign investors (including incorporated enterprises) who hold the shares as described in (a) and (b) above are regarded as direct foreign investors.

It should be noted that if an Australian controlled enterprise or resident individual owned a holding of ordinary shares larger than that of the major direct foreign investor the establishment would be classed as 'Australian controlled'. However, if the holdings were equal, the establishment would be classed as 'foreign controlled'.

It is recognised that the classification of control based on the ownership of 25 per cent of the ordinary shares is based on a statistical convention and that effective control (both Australian and foreign) may sometimes be obtained by a less than 25 per cent holding. However, it should be noted that the qualifying level of 25 per cent adopted for these studies is conservative by international standards. Furthermore, data for those mining establishments classified as 'foreign controlled' have been allocated wholly to the foreign category while data for establishments classified as 'Australian controlled' have been allocated wholly to the Australian category. The table above shows, for Western Australia and Australia, the percentage of the major variables recorded in the 1971-72 and 1972-73 Censuses of Mining Establishments attributable to establishments of foreign controlled and Australian controlled enterprises, respectively.

The definitions and explanations of foreign participation statistics given in this section are necessarily condensed. Readers requiring information in greater detail are referred to the mimeographed bulletin *Foreign Ownership and Control of the Mining Industry* (Ref. No. 10.42) published by the Australian Statistician, Canberra.

EXPLORATION FOR MINERALS

Mineral Exploration (other than for Petroleum)

The data in this section have been derived from the annual Mineral Exploration Census (excluding Petroleum Exploration) which is carried out by the Australian Bureau of Statistics. The first census was conducted in respect of the year 1965 and for further information and statistics in greater detail, the reader is referred to the mimeographed publication *Mineral Exploration* (Ref. No. 10.41) issued by the Australian Statistician, Canberra.

For the purposes of the census, mineral exploration consists of the search for and/or appraisal of new ore occurrences and known deposits of minerals (including extensions to deposits being worked) by geological, geophysical, geochemical, and other methods (including drilling). Exploration for water is excluded. The construction of shafts and adits is included if primarily for exploration purposes. Excluded are mine development activities (which include the construction of drives, shafts, winzes, etc.) in underground mines and the preparation of quarrying sites for open-cut extraction (including overburden removal) carried out primarily for the purpose of commencing or extending mining and quarrying operations.

Mineral exploration, which covers a major portion of the State, is concerned chiefly with exploration for iron, nickel, copper, gold, lead, tin, bauxite, mineral sands, uranium and coal, apart from petroleum (see following section).

From 1965, expenditure on private exploration in Western Australia rose from \$3,948,000 to a peak of \$86,082,000 in 1970-71. This peak came as the culmination of a period of activity which was sparked by the discovery of nickel at Kambalda in 1966 and saw a significant increase in expenditure on mineral exploration. From a value of just over \$10 million in 1967, the figure rose by over 700 per cent to more than \$86 million in a matter of three and one-half years. Since then, however, a general decline in the level of private expenditure has occurred and successive decreases were recorded in 1971-72 and 1972-73. Total private exploration expenditure of \$53,713,000 in 1973-74 represented a slight increase compared to 1972-73. Expenditure on drilling fluctuated similarly, declining from \$21,507,000 in 1970-71 to \$12,407,000 in 1972-73, then rising slightly to \$13,202,000 in 1973-74. The amount of drilling done, however, continued to decline in 1973-74.

In the tables that follow, details are given of private and State Government exploration in Western Australia over the period 1969-70 to 1973-74.

**MINERAL EXPLORATION (OTHER THAN FOR PETROLEUM)
EXPENDITURE AND DRILLING—1973-74**

(a) Includes exploration by the Western Australian Department of Mines.

The two tables that follow show details of private exploration classified by the type of mineral sought and by the size of the enterprise group involved in the exploration. From the first table it can be seen that nearly all mineral exploration activity in 1973-74 (apart from petroleum exploration) was directed to seeking metallic minerals. Figures for earlier years are not available.

The most notable feature of the second table is the growing predominance of the larger enterprise groups in mineral exploration. Expenditure on exploration by enterprise groups spending in excess of 1 million dollars increased from 47.1 per cent of total expenditure in the State in 1972-73 to 63.9 per cent of the total in 1973-74. During the same period, these enterprise groups accounted for only 3.40 per cent and 5.71 per cent, respectively, of the actual number of enterprise groups engaged in mineral exploration.

PRIVATE MINERAL EXPLORATION (OTHER THAN
FOR PETROLEUM): EXPENDITURE BY TYPE OF
MINERAL SOUGHT—1973-74

Type of mineral sought	On production leases	On other areas	Total private exploration
	\$'000	\$'000	\$'000
Mineral sands	225	3,470	3,695
Uranium	3,094	3,094
Other metallic minerals	6,147	39,380	45,527
Coal	(a)	(a)	(a)
Construction materials	(a)	(a)	(a)
Other non-metallic minerals	(a)	(a)	751
Total, all minerals	6,792	46,921	53,713

(a) Not available for publication.

PRIVATE MINERAL EXPLORATION (OTHER THAN FOR PETROLEUM)
ENTERPRISE GROUPS CLASSIFIED BY SIZE OF EXPENDITURE

Size of total expenditure of enterprise groups (a) on mineral exploration	Expenditure						Enterprise groups	
	On production leases		On other areas		Total exploration		No.	Per cent
	\$'000	Per cent	\$'000	Per cent	\$'000	Per cent		
1973-74								
\$25,000 and under	54	0.1	699	1.3	752	1.4	115	54.8
\$25,001 to \$50,000	70	0.1	519	1.0	589	1.1	15	7.1
\$50,001 to \$100,000	185	0.3	646	1.2	831	1.6	13	6.2
\$100,001 to \$250,000	299	0.6	4,702	8.8	5,001	9.3	30	14.3
\$250,001 to \$500,000	413	0.8	3,529	6.6	3,942	7.3	12	5.7
\$500,001 to \$1,000,000	788	1.5	7,493	14.0	8,282	15.4	13	6.2
Over \$1,000,000	4,983	9.3	29,333	54.6	34,316	63.9	12	5.7
Total, 1973-74	6,792	12.7	46,921	87.4	53,713	100.0	210	100.0
1972-73								
\$25,000 and under	7	0.0	953	1.9	960	1.9	158	53.7
\$25,001 to \$50,000	82	0.2	897	1.8	978	1.9	27	9.2
\$50,001 to \$100,000	282	0.6	1,787	3.5	2,069	4.1	29	9.9
\$100,001 to \$250,000	911	1.8	4,561	8.9	5,472	10.7	32	10.9
\$250,001 to \$500,000	832	1.6	5,786	11.3	6,619	13.0	21	7.1
\$500,001 to \$1,000,000	802	1.6	10,166	19.9	10,968	21.5	17	5.8
Over \$1,000,000	3,523	6.9	20,530	40.2	24,053	47.1	10	3.4
Total, 1972-73	6,438	12.6	44,682	87.4	51,120	100.0	294	100.0

(a) For the purposes of this table, the total exploration activities of an enterprise group (i.e. a group of companies which are related in terms of the Companies Act) are considered to relate to a single unit, irrespective of the number of returns completed or the number of types of activity in which it engaged.

Petroleum Exploration

Petroleum exploration is defined as consisting of the search for, and/or appraisal of, deposits of crude oil and/or gas by geological, geophysical, geochemical and other means, including drilling. Included in the expenditure are the costs of drilling exploratory oil and/or gas wells and the testing of such wells. Also included are the costs of access roads, site construction, permits, licences and similar fees, relevant office buildings and furniture, transportation equipment, storage facilities, plant and equipment and review work if primarily for the purposes of exploration for deposits of crude oil or natural gas. Details of drilling developmental oil and/or gas wells and expenditure on production facilities, and pipelines, and production costs, etc. are excluded.

An extensive programme of oil exploration using modern geophysical and drilling techniques commenced in 1952 and resulted in the discovery of flow oil in the Exmouth Gulf area of the Carnarvon Basin in 1953. The discovery proved to be of non-commercial

significance, but it stimulated further exploration for oil in Western Australia. A large area of the State has now been scientifically examined and geophysical and geological surveys are still being carried out. Discoveries of crude oil and/or gas have been made at Barrow Island and Yardarino (1964), at Gingin (1965), at Dongara (1966), at Pascoe Island (1967) and at Mondarra (1968).

In recent years, exploration off the coast of Western Australia has resulted in the discovery of considerable reserves of natural gas over an area of the north-west continental shelf, north of 21° latitude. Further details on this exploration appear in Chapter II, Part 1 (pages 28-31).

Information on petroleum exploration expenditure and on drilling in Western Australia for the five years 1970 to 1974 is given in the tables below. These figures have been compiled from data published by the Bureau of Mineral Resources, Geology and Geophysics.

PRIVATE PETROLEUM EXPLORATION
EXPENDITURE AND SOURCE OF FUNDS
(S'000)

Particulars	1970	1971	1972	1973	1974
Private expenditure (a)—					
Geological	801	1,408	727	399	855

(a) This classification not available prior to 1973.

Chapter VIII—continued

Part 3—Manufacturing

Manufacturing in Western Australia does not have the relative importance to manufacturing in Australia which applies to the State's mining industry (see page 396). Nevertheless, value added (see definition on page 346) by manufacturing establishments in Western Australia in 1973-74 was \$658 million, or \$164 million more than value added by the State's mining establishments. This value added, however, was only 5.0 per cent of all value added by manufacturing establishments in Australia and was \$607 per head of mean population compared with the national average of \$991.

Owing to the inclusion of manufacturing in the system of integrated economic censuses in 1968-69 (see page 345), it is not possible to compare the statistics in this Part with manufacturing statistics for years prior to 1968-69. The statistics up to 1967-68, however, which are available in the Statistical Summary following Chapter X and in earlier issues of the Year Book, provide a consistent historical record back to the year 1900. At that time 632 factories employing 11,166 persons were recorded, compared with 5,404 factories in 1967-68, employing 67,335 persons.

Up to the early 1950s, manufacturing in Western Australia had grown steadily with some surge in growth during each of the World Wars and a pronounced down-turn during the depression of the early 1930s. Most of the factories were small and medium-sized establishments supplying the small local market and carrying out some processing of the State's primary products for export. The long-established industries such as slaughtering, dairy products processing, brewing, baking, wool scouring, sawmilling, printing, building materials production and the various types of metal fabrication and engineering remain as important components of manufacturing in the State.

Heavy industry and large-scale operations have been a more recent development, although it could be said that heavy industry commenced with the establishment in 1948 of the State Government's wood distillation, charcoal, iron and steel plant at Wundowie, east of Perth in the Shire of Northam. Perhaps the most significant change, however, came when the basis for an integrated industrial complex was established with the opening in 1954 of a large oil refinery at Kwinana, on Cockburn Sound south of Perth. This was followed soon after by a steel rolling mill and later by a series of large plants which have made Kwinana the State's major industrial centre. The interrelated complex of metals, fuels and chemicals plants is served by a fine harbour, a standard gauge railway line linked with mining centres and the other States, and a pipeline from the natural gasfields north of Perth.

The major part of the more recent development of heavy industry in Western Australia has been associated with mineral development (see Part 2 of this Chapter). Three of the plants in the Kwinana complex are directly concerned with metals processing. A blast furnace, which began operating in 1968, uses iron ore from Koolyanobbing, some 480 kilometres to the east. An alumina refinery, which commenced operations in 1964, processes bauxite mined in the Darling Range and railed about forty-eight kilometres from a crushing plant at Jarrahdale. A nickel refinery, which commenced operations in 1970, processes nickel concentrates and matte transported from Kambalda and Kalgoorlie. Major mineral-processing plants outside Kwinana include two plants pelletising iron ore fines in the north-west of the State, one at Dampier and the other at Cape Lambert, which commenced operations in 1968 and 1972, respectively. A nickel smelter, to produce nickel matte from concentrates, commenced operations at Kalgoorlie in 1973 and another

alumina refinery, at Pinjarra, began operating in 1972. A plant at Australind, near Bunbury, which extracts titanium dioxide from ilmenite mined in the surrounding districts, has been in operation since 1963.

Besides providing for heavy industry directly associated with minerals processing, the mining developments of recent years have also given impetus to other manufacturing activity, particularly to industries associated with the provision of capital equipment and other manufactured goods for the major mining projects.

MANUFACTURING STATISTICS

In the Australian Standard Industrial Classification (see page 344) manufacturing is used in the broad sense to relate to the physical or chemical transformation of materials or components into new products. Certain activities, however, which do not fit easily into this definition are included or excluded from manufacturing according to other criteria. Activities which are *included* as manufacturing are grading, testing, filtering, cooling and bulk handling of milk; cotton ginning; publishing, electrotyping, signwriting and book-binding; installation of lifts and escalators; repair activity usually associated with manufacturing (e.g. engine reconditioning, repair of industrial machinery, ship repair and major repair of aircraft and railway rolling stock); and blending, assembly, bottling and repacking except where otherwise stated. Activities which are *excluded* from manufacturing are washing, packing and dehydrating of fresh fruit; sun-drying of fruit; cleaning, filleting or freezing of fish; pulping of eggs; bottling of wine and spirits; repacking of flour, cereal food products and dried fruits; blending or repacking of tea; the making or installation of curtains; custom tailoring and dressmaking; boot and shoe repairs; hewing or rough-shaping of railway sleepers, posts, etc. in the forests; installation of joinery and erection of prefabricated wooden buildings; screening, crushing, dressing or other rudimentary treatment of minerals and construction materials; purification of natural gas; blending of lubricating oils and greases; glazing; motor vehicle repair (except engine reconditioning); repair of household appliances, sporting and photographic equipment, watches, clocks and jewellery, etc.; repair of tractors, and farm and construction machinery; and installation of structural steel, air-conditioning and heating equipment, industrial furnaces or shop fittings.

Production and distribution of electricity and gas are not regarded as manufacturing in the Australian Standard Industrial Classification (ASIC) but are included in a separate Industry Division (Division D: Electricity, Gas and Water). Further details of electricity and gas appear on pages 415-17.

The following tables summarise the results for Western Australia of the Census of Manufacturing Establishments conducted in 1968-69 and each subsequent year with the exception of 1970-71, for which year no manufacturing census was conducted. Definitions of the data items used are contained in the introduction to this Chapter on pages 345-6. While the statistics that follow relate mainly to ASIC Industry Sub-divisions, most data items presented are also available at Industry Group and Industry Class levels.

MANUFACTURING ESTABLISHMENTS—SUMMARY OF OPERATIONS (a)

Item	Unit	1968-69	1969-70	1971-72	1972-73	1973-74
Number of establishments operating at 30 June	No.	2,585	2,705	2,727	2,814	2,818
Persons employed (including working proprietors)— average over whole year—						
Males	No.	49,011	50,963	52,049	51,734	54,402
Females	No.	10,842	11,634	12,168	12,340	13,482
Total	No.	59,853	62,597	64,217	64,074	67,884
Wages and salaries	\$'000	183,168	208,410	255,879	275,455	346,942

Stocks—						
Opening	\$'000	119,817	134,775	160,033	164,330	190,532
Closing	\$'000	133,185	152,994	169,400	183,180	223,638
Purchases, transfers in, and selected expenses	\$'000	571,450	631,999	777,460	893,674	1,115,724
Value added	\$'000	361,473	414,999	472,013	501,034	658,412
Fixed capital expenditure	\$'000	88,722	126,057	171,517	94,361	86,995

(a) A manufacturing census was not conducted for the year ended 30 June 1971.

The previous table indicates a steady growth in the operations of manufacturing establishments in Western Australia over the six years commencing 1968-69, including a 9 per cent growth in the number of establishments, a 13 per cent increase in average employment, a 89 per cent increase in turnover and a 82 per cent increase in value added. The only decreases in this period were a 0.2 per cent drop in average employment from 1971-72 to 1972-73 and a 49 per cent decrease in fixed capital expenditure from 1971-72 to 1973-74.

The census results for 1973-74 are presented at industry sub-division level in the table below. The decrease in fixed capital expenditure noted above was widely spread over the industry sub-divisions, but the major decreases in 1973-74 occurred in Sub-divisions 21 and 29. Increases in turnover and value added were recorded in all sub-divisions during 1973-74.

MANUFACTURING ESTABLISHMENTS
SUMMARY OF OPERATIONS ACCORDING TO INDUSTRY SUB-DIVISION, 1973-74

Industry sub-division		Number of establishments operating at 30 June	Persons employed (average over whole year) (a)			Wages and salaries

(a) Includes working proprietors.

(b) Australian Standard Industrial Classification.

Census results in greater detail are given in the mimeographed publication *Manufacturing Establishments—Summary of Operations by Industry Class: Western Australia, 1973-74* issued by the Western Australian Office of the Bureau.

The following table presents data for Western Australia and Australia by industry sub-division and enables comparisons to be made of the contributions to employment and value added by the various industry sub-divisions. In this State, Sub-division 21-22: Food, beverages and tobacco continues to be the largest in terms of both average employment and value added and, similarly, Sub-division 23: Textiles continues to be the smallest, although it, too, showed growth in 1973-74 along with most other industry sub-divisions.

(a) Includes working proprietors.

(b) Australian Standard Industrial Classification.

The relationship between manufacturing in this State and manufacturing in Australia over recent years may be seen from the data in the following table. Western Australia is not a major manufacturing State and although, in recent years, there has been continuous development and expansion in this sector in Western Australia, the rate of expansion and development is only marginally greater than the rate for Australia as a whole.

**MANUFACTURING ESTABLISHMENTS—WESTERN AUSTRALIA AND AUSTRALIA

(a) A manufacturing census was not conducted for the year ended June 1971.

(b) Includes working proprietors.

* Revised.

Most of the manufacturing establishments in Western Australia are located in the Perth Statistical Division (see map preceding the *Index*). The table below shows that in 1973-74 this Division had 80 per cent of the State's manufacturing establishments with 84 per cent of value added in all manufacturing establishments. While manufacturing is carried out in most local government areas within the Perth Statistical Division, major concentrations of establishments are found in certain localities. The large industrial complex at Kwinana has already been mentioned (see page 409). The City of Perth, however, had the largest number of establishments of all local government areas in the Division at 30 June 1974 including a brewery, a cement works, a variety of food and clothing factories and several printing and publishing establishments. Factories in the

City of Perth are located mainly in and around the city centre and south of the Swan River. The City of Fremantle contains a major industrial area at O'Connor, east of the city centre, as well as a number of major factories in the North Fremantle and South Fremantle localities. Major industrial areas with a wide range of products are located at Osborne Park in the City of Stirling and at Welshpool in the Town of Canning. The localities of Coogee and Spearwood in the Town of Cockburn have a number of the larger factories, including wool scouring and meat products establishments. The Midland locality in the Shire of Swan contains two large Government factories, an abattoir and the railway workshops, which contribute significantly to employment in the area. Other local government areas with large manufacturing establishments are the Shires of Belmont, Bayswater and Bassendean and the City of Subiaco.

Measured in terms of employment (average over whole year), the most important concentrations of manufacturing activity outside the Perth Statistical Division were in the Town of Bunbury and the Shires of Manjimup and Harvey in the South-West Statistical Division, the Town of Albany in the Southern Agricultural Statistical Division and the Shire of Roebourne in the North-West and Pilbara Statistical Divisions.

n.e.i. denotes 'not elsewhere included'.

(a) Includes stairs, staircases, railings, gates other than wire, balustrades, ornamental metal work, etc. (b) Only value of sales and transfers out is collected. (c) Basic building and paving blocks for walls, partitions, foundations, flooring, paths, etc. and decorative blocks and similar fancy blocks. (d) Excludes footwear wholly of rubber. (e) Wheeled or with provision for fitting of wheels. (f) Not available for publication. (g) Includes atta flour. (h) Includes prefabricated wooden furniture but excludes in-built furniture. (i) Excludes electric hoists and hydraulic hoists for trucks. (j) Excludes solar absorber units. (k) Includes ice cream combined with other confections including those aerated milk-based confections which contain 10 per cent or more butterfat. (l) Includes homogenised but excludes flavoured and standardised milk. (m) Includes architectural, decorative and industrial paints. Excludes water paints in powder form. (n) Includes cornices, vents, mouldings, etc. and non-fibrous flat sheets. (o) Includes preserved timber. (p) Steel and non-ferrous (including chain, wire, link mesh, fencing wire, crimped fabric and fine wire mesh).

The previous table shows the principal products of manufacturing activity in the State. Owing to the confidentiality provisions of the *Census and Statistics Act 1905-1973*, data for some important commodities including petroleum products, refined nickel, pig iron, beer and superphosphate are not available for publication.

ELECTRICITY AND GAS PRODUCTION AND DISTRIBUTION IN WESTERN AUSTRALIA

On 1 July 1975 the Government of Western Australia combined the State Electricity Commission and the Fuel and Power Commission to form a new organisation known as The State Energy Commission of Western Australia under the provisions of the *Acts Amendment (State Energy Commission) Act, 1975*. The new organisation has responsibilities which include all those appropriate to each of the separate organisations with mandates extending through the whole range of energy-related matters in this State.

Prior to the formation of the State Energy Commission the production and distribution of electricity and gas was the sole responsibility of The State Electricity Commission of Western Australia, established in 1946.

Electricity

Before the establishment of the State Electricity Commission, electricity was generated and distributed by a large number of independent authorities operating numerous power stations, while a government-owned steam power station at East Perth supplied much of what was then the metropolitan area. Small units, of similar type but privately owned, operated in the major mining centres of Collie and Kalgoorlie. With other minor exceptions, all country areas were dependent on internal combustion equipment from which the local operating authorities supplied either alternating or direct current at various voltages.

Since 1946 numerous districts and towns have been connected to the Commission's grid system and many small independent power stations from which supply was previously drawn have been closed. The Commission also owns and operates diesel power stations at Port Hedland, Halls Creek, Roebourne, Kununurra, Esperance and Onslow. Small systems too remote to be connected to the grid system or supplied from the Commission-owned diesel stations, and still controlled by local government authorities, are being absorbed in a leasing arrangement whereby the local distribution system and generating plant is operated by the Commission under an arrangement known as the Country Towns' Assistance Scheme. Under the scheme the Commission undertakes to operate, maintain, replace or upgrade plant and supply equipment as necessary. The benefits of the scheme, which include bulk purchase of fuel and lubricants, rationalisation of spare parts requirements for generation and distribution, centralised billing and administration, the availability of plant from the Commission's pool and the Commission's technical expertise, have enabled tariffs in country areas to be reduced so that the price of all metered units of electricity throughout the State is now uniform. At the present time there are twenty-six country towns supplied under the provisions of the Country Towns' Assistance Scheme.

The Commission supplies most of the electricity sold throughout Western Australia and all electricity sold in the metropolitan area. In addition, significant amounts are generated by large mining and minerals processing enterprises for their own use. The Commission operates coal-burning power stations at East Perth (55 MW), South Fremantle (100 MW), Bunbury (120 MW), Muja (240 MW), and an oil-burning and gas-burning power station at Kwinana currently capable of producing 500 MW from four oil-burning units (4 x 120 MW) and a 20 MW gas turbine. A further 400 MW (2 x 200 MW units) is expected to be available from oil-burning and coal-burning units at Kwinana in 1977. Muja Power Station is currently being extended to house a further two 200 MW units which are expected to be in operation in 1980 and 1981, respectively. A small hydro-electric station of 2 MW capacity is situated near Collie at Wellington Dam, and at Geraldton in the mid-west a 20 MW gas turbine is also connected into the grid system.

The main interconnections within the grid system are two 132,000 volt transmission lines from the Bunbury Power Station, two 132,000 volt lines from the Muja Power Station and two 132,000 volt lines in the metropolitan area. An additional 132,000 volt line connects the Muja Power Station to Bunbury Power Station. Two 330,000 volt transmission lines connecting Kwinana with the metropolitan area were recently completed and will be energised early in 1976, when the first of the 200 MW units at Kwinana Power Station is commissioned. A further two 330,000 volt transmission lines connecting Muja with the metropolitan area are in the planning stage. Transmission lines of 132,000 volt or 66,000 volt connect major outlying centres such as Merredin, Geraldton and Albany to the grid system.

In December 1959, an amendment to the then State Electricity Commission Act was passed to enable consumers to contribute towards the extension of mains beyond the distance which can be supplied economically by the Commission. At 30 June 1975 over 14,000 consumers had been connected in country and metropolitan areas under the Contributory Extension Scheme.

Gas

Town gas production in Western Australia ceased in December 1972 with the conversion of town gas appliances to burn natural gas from the gasfields in the region of Dongara, to the south of Geraldton. These natural gasfields are relatively small but are estimated to have sufficient reserves to supply the domestic market and a limited industrial market until the mid 1980s. Prospects of additional gas from the Perth sedimentary basin or the discoveries in the North-West shelf area are expected to supplement the Dongara supplies and provide for increased demand.

The State Energy Commission supplies natural gas to much of the metropolitan area and to the towns of Pinjarra and North Pinjarra some eighty-five kilometres to the south of the capital. The total length of mains installed for the distribution of natural gas was 2,634 kilometres and the maximum daily output was 11.74 million MJ in the year ended 30 June 1975. Both figures apply to the State Energy Commission's supply area.

Simulated natural gas is now being produced and supplied in the Bunbury area and tempered liquid petroleum gas is supplied to the Albany area, by the State Energy Commission. The Fremantle Gas and Coke Company Limited, a private gas supply company, supplies natural gas to customers within its franchise area which extends eight kilometres from the centre of Fremantle.

The State Energy Commission maintains an advisory service to assist its customers in such things as the selection and economical operation of both gas and electric appliances.

ELECTRICITY AND GAS STATISTICS

The electricity and gas industries, which are not included with manufacturing in the Australian Standard Industrial Classification, are the subject of a separate census which was conducted for the years 1968-69, 1969-70 and 1971-72 but is to be carried out only periodically in future. Results of the 1968-69 and 1969-70 Censuses of Electricity and Gas Establishments were presented on page 411 of the 1973 Year Book, and results of the 1971-72 census appear in the table below.

ELECTRICITY AND GAS ESTABLISHMENTS—SUMMARY OF OPERATIONS: 1971-72

Number of establishments operating at 30 June	Persons employed (average over whole year) (a)			Wages and salaries	Turnover	Stocks		Purchases, transfers in and selected expenses	Value added
	Males	Females	Total			Opening	Closing		
48	4,275	331	4,606	\$'000 22,907	\$'000 82,347	\$'000 7,517	\$'000 7,838	\$'000 22,927	\$'000 59,740

(a) Includes working proprietors.

Production of electricity and gas in Western Australia over the five years ended 1974-75 is shown in the following table. Electricity generated by Government establishments has increased steadily over the period from 2,446 to 3,570 million kilowatt hours.

PRODUCTION OF ELECTRICITY AND GAS

Item	Unit	1970-71	1971-72	1972-73	1973-74	1974-75
Electricity generated—Government	million kWh	2,446	2,671	2,968	3,300	3,570
Other	"	(a)	(a)	(a)	(a)	(a)
Gas available for issue through mains (b)	million MJ	1,242	11,745	31,680	30,188	30,699

(a) Not available for publication.

(b) Includes natural gas from October 1971.

CHAPTER IX—TRADE, TRANSPORT AND COMMUNICATION

Part 1—External Trade

Overseas trade statistics are compiled from information contained in documents prepared by importers and exporters or their agents in accordance with the Customs Act. Particulars of Western Australia's overseas trade, as presented in this Part, have been derived from data supplied by the Australian Bureau of Statistics, Canberra. A comprehensive account of the statistics, definitions and details of trade between Australia and overseas countries is given in the annual bulletin *Overseas Trade* and other publications issued by the Australian Statistician, Canberra.

Statistics of Western Australia's trade with other Australian States are compiled by the Western Australian Office from information contained in documents collected under authority of the *Census and Statistics Act 1905-1973* from importers, exporters and other persons concerned with the distribution of goods.

Classification of Commodities

Overseas imports and exports are classified according to the Australian Import and Export Commodity Classifications of some 6,000 import items and 2,000 export items. These classifications are based on the *United Nations Standard International Trade Classification, Revised*, which is closely related to the Brussels Tariff Nomenclature used in the Australian Customs Tariff (see page 432). The Standard International Trade Classification consists of 10 broad commodity categories designated 'Sections' and comprising 56 commodity 'Divisions' which are further divided into 177 commodity 'Groups'. The structure of the classification serves to provide a summary of data relating to 1,312 basic items of international trade. The numbers and names of Sections and Divisions appear in the list on page 420.

Interstate imports and exports are classified according to Interstate Trade Commodity Classifications which are based on the Australian Commodity Classifications. The basic items of the Australian classifications are compressed or expanded according to their significance in Western Australia's trade. The Interstate Trade Commodity Classifications comprise some 900 items of import and 330 items of export within the structure of commodity Sections, Divisions and Groups of the Standard International Trade Classification.

Valuation of Items of Trade

All values in overseas trade statistics are determined on a 'free on board (f.o.b.) port of shipment' basis. This means that all charges (in particular the cost of freight and insurance) incurred after the goods have been exported from the port of shipment are excluded. Only transport and service charges incurred, or usually incurred, prior to export are included in the determination of trade values.

The procedure adopted to value overseas imports and exports is as follows.

Imports. The recorded value of goods imported is the 'value for duty' as laid down for Customs purposes, *i.e.* the sum of:

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export.

In the case of goods consigned for sale in Australia the value for duty shall be the amount which would be the value for duty if the goods were, at the date of exportation, sold to an Australian importer instead of being consigned for sale in Australia.

'Current domestic value' is defined as 'the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country'.

Exports. The recorded value of goods exported includes the cost of the outside packages and is determined as follows.

- (a) Goods sold to overseas buyers before export are valued at the Australian f.o.b. port of shipment equivalent of the actual price at which the goods were sold.
- (b) Goods shipped on consignment are valued at the Australian f.o.b. port of shipment equivalent of the price paid for similar goods of Australian origin in the principal markets of the country to which they are dispatched for sale.

The basis of valuation for exports to other Australian States is f.o.b., or its equivalent, at the point of final shipment.

Statistics of imports from other Australian States are recorded in terms of landed cost.

SUMMARY OF TRADE

Statistics of Western Australia's external trade are presented in the following series of tables. Particulars relate, in all cases, to the year ended 30 June. The figures shown for exports do not include ships' stores, details of which are given in the table on page 431.

VALUE OF INTERSTATE AND OVERSEAS TRADE OF WESTERN AUSTRALIA
(\$'000)

Direction of trade	1969-70	1970-71	1971-72	1972-73	1973-74

Exports over Imports	8,392	13,931	300,239	303,995

DIRECTION OF TRADE

The term *Country of Origin*, as used in recording the statistics of overseas trade, means the country of production; *Country of Destination* means the country to which goods were consigned at the time of export. In compiling statistics of Western Australia's interstate imports and exports, goods are classified according to the State or Territory from which or to which they were consigned.

During the period 1971-72 to 1973-74 (see table on page 421) the value of imports from other Australian States accounted for 74.1 per cent of the total value of imports. Exports to overseas countries represented 87.7 per cent of the total value of exports. Overseas imports during the period were valued at \$879 million, the principal countries of origin being the United Kingdom (17.2 per cent of the total), Japan (16.4 per cent), and the United States of America (15.1 per cent). The value of overseas exports amounted to \$3,516 million and the principal countries of destination were Japan (49.1 per cent), the United States of America (7.63 per cent), and the United Kingdom (5.53 per cent).

SUMMARY OF STATISTICAL CLASSIFICATION OF IMPORTS AND EXPORTS

Section number	Division number	Section and division headings	Section number	Division number	Section and division headings
0		FOOD AND LIVE ANIMALS			CHEMICALS—<i>continued</i>
	00	Live animals		55	Essential oils and perfume materials, toilet, polishing and cleansing preparations
	01	Meat and meat preparations			Fertilisers, manufactured
	02	Dairy products and eggs		56	Explosives and pyrotechnic products
	03	Fish and fish preparations		57	Plastic materials, regenerated cellulose and artificial resins
	04	Cereals and cereal preparations		58	Chemical materials and products, n.e.i.
	05	Fruit and vegetables			
	06	Sugar, sugar preparations and honey		59	
	07	Coffee, tea, cocoa, spices and manufactures thereof			
	08	Feeding-stuff for animals (excluding unmilled cereals)	6		MANUFACTURED GOODS CLASSIFIED CHIEFLY BY MATERIAL
	09	Miscellaneous preparations chiefly for food		61	Leather, leather manufactures, n.e.i., and dressed fur skins
1		BEVERAGES AND TOBACCO		62	Rubber manufactures, n.e.i.
	11	Beverages		63	Wood and cork manufactures (except furniture)
	12	Tobacco and tobacco manufactures		64	Paper, paperboard and manufactures thereof
2		CRUDE MATERIALS, IN-EDIBLE, EXCEPT FUELS		65	Textile yarn, fabrics, made-up articles and related products
	21	Hides, skins and fur skins, undressed		66	Non-metallic mineral manufactures, n.e.i.
	22	Oil-seeds, oil nuts and oil kernels		67	Iron and steel
	23	Crude rubber (including synthetic and reclaimed)		68	Non-ferrous metals
	24	Wood, timber and cork		69	Manufactures of metal, n.e.i.
	25	Pulp and waste paper			
	26	Textile fibres and their waste	7		MACHINERY AND TRANSPORT EQUIPMENT
	27	Crude fertilisers and crude minerals (except coal, petroleum and precious stones)		71	Machinery (except electric)
	28	Metalliferous ores and metal scrap		72	Electric machinery, apparatus and appliances
	29	Crude animal and vegetable materials, n.e.i.		73	Transport equipment
3		MINERAL FUELS, LUBRICANTS AND RELATED MATERIALS	8		MISCELLANEOUS MANUFACTURED ARTICLES
	32	Coal, coke and briquettes		81	Sanitary, plumbing, heating and lighting fixtures and fittings
	33	Petroleum and petroleum products		82	Furniture
	34	Petroleum gases and other gaseous hydrocarbons		83	Travel goods, handbags and similar articles
4		ANIMAL AND VEGETABLE OILS AND FATS		84	Clothing and clothing accessories; articles of knitted or crocheted fabric
	41	Animal oils and fats		85	Footwear, gaiters, and similar articles and parts therefor
	42	Fixed vegetable oils and fats		86	Professional, scientific and controlling instruments; photographic and optical goods, watches and clocks
	43	Animal and vegetable oils and fats, processed, and waxes of animal or vegetable origin		89	Miscellaneous manufactured articles, n.e.i.
5		CHEMICALS			
	51	Chemical elements and compounds	9A		COMMODITIES AND TRANSACTIONS OF MERCHANDISE TRADE, NOT ELSEWHERE CLASSIFIED
	52	Mineral tar and crude chemicals from coal, petroleum and natural gas			
	53	Dyeing, tanning and colouring materials	9B		COMMODITIES AND TRANSACTIONS NOT INCLUDED IN MERCHANDISE TRADE
	54	Medicinal and pharmaceutical products

	TOTAL	197,299	1,414,968	1,612,267	100·00	100·00	100·00

(a) Less than 0·005 per cent. (b) Less than \$500. (c) Includes edible offals, poultry, rabbits and goat and kangaroo meats. (d) Includes some interstate details for 1972-73. (e) Principally pig-iron, cast iron, basic shapes and sections. (f) Excludes overseas exports of beneficiated ilmenite which are not available for publication; included in *All other commodities*. (g) See footnote (f).

In the table below, details are given of the value of the principal items exported to other Australian States and Territories.

Quarterly statistics of Western Australia's trade with other Australian States and with overseas countries are published in the *Quarterly Statistical Abstract*. Annual statistics, in greater detail, appear in the publications *Statistics of Western Australia—Trade (Overseas)* and *Statistics of Western Australia—Trade (Interstate and Overseas)*. These publications are compiled and issued by the Western Australian Office of the Australian Bureau of Statistics.

VALUE OF PRINCIPAL EXPORTS TO AUSTRALIAN STATES—SELECTED COMMODITIES (\$'000)

(a) See page 426 for total values of overseas exports of the several commodities shown.

offals, poultry, poultry livers, rabbits, and goat and kangaroo meat.

which are not available for publication.

(b) Comprises pigmeat, edible

(c) Excludes overseas exports of beneficiated ilmenite

AVERAGE EXPORT VALUES

The following table shows the annual average export values, during the five years ended 30 June 1974, of a number of Western Australia's principal export commodities. The figures are based on *total* exports (interstate and overseas) and represent the value f.o.b., or its equivalent, at the point of final shipment.

ANNUAL AVERAGE EXPORT VALUES OF SPECIFIED COMMODITIES
(\$)

Description	Unit	1969-70	1970-71	1971-72	1972-73	1973-74
Apples, fresh	kg	0.20	0.18	0.18	0.18	0.19

Wool—						
Greasy (including slip)	kg	0.98	0.75	0.75	1.50	2.15
Degreased (washed, scoured, etc.)	..	1.36	0.92	0.83	1.57	2.45

(a) Figures include meal and flour of wheat and maslin.

(c) The average values shown relate to overseas exports only.

(e) See footnote (d).

(b) Excludes values of overseas exports of beneficiated ilmenite.

(d) Some interstate details for 1972-73 are included in 1973-74.

(f) Excluding plywood and veneers.

SHIPS' STORES

The following table shows the quantity and value of ships' stores loaded on board vessels at Western Australian ports during the years 1971-72 to 1973-74. The value of ships' stores is excluded from all tables appearing elsewhere in this Part.

EXPORTS IN THE FORM OF SHIPS' STORES (a)

Description	Unit	1971-72		1972-73		1973-74	
		Quantity	Value	Quantity	Value	Quantity	Value
Beverages, alcoholic	'000 litres	908	\$'000 252	608	\$'000 178	1,009	\$'000 244
Foodstuffs—							
Fresh, chilled or frozen—							
Eggs in shell	'000 dozen	161	106	89	58	68	49
Fish	tonne	82	145	74	117	120	163

All other foodstuffs	509	..	687	..	894
Fuel for ships and aircraft—							
Coal	tonne	66	2
Other (bunker oil, etc.)	'000 litres	840,148	17,548	665,568	13,115	749,751	23,295
Lubricants	575	..	566	..	799
All other ships' stores	2,262	..	1,949	..	2,365
Total	n.a.	n.a.	22,477	n.a.	17,542	n.a.	29,224

n.a. denotes 'not applicable'.

(a) Includes interstate ships' stores valued at \$1,250,360 in 1971-72, \$1,355,247 in 1972-73 and \$1,836,920 in 1973-74. Where the value of overseas ships' stores recorded in any one entry is less than \$250, the stores concerned are not allocated according to commodity, but are included in the item *All other ships' stores*.

OVERSEAS IMPORTS AND EXPORTS

The following table shows the total value of Australia's overseas imports and exports, together with the proportion handled at Western Australian ports, during each of the years 1964-65 to 1973-74.

OVERSEAS TRADE OF AUSTRALIA—TOTAL VALUE AND PROPORTION HANDLED AT WESTERN AUSTRALIAN PORTS

Year	Value of Australian trade (\$'000)			Proportion handled at Western Australian ports (per cent)		
	Imports	Exports	Total	Imports	Exports	Total
1964-65	2,904,703	2,651,449	5,556,152	5.29	9.17	7.14
1965-66	2,939,492	2,720,953	5,660,445	5.98	11.55	8.66
1966-67	3,045,341	3,024,158	6,069,499	5.23	13.93	9.57
1967-68	3,264,473	3,044,675	6,309,148	6.34	15.61	10.81
1968-69	3,468,505	3,374,263	6,842,768	5.87	16.19	10.96
1969-70	3,881,227	4,137,222	8,018,449	6.24	16.32	11.44
1970-71	4,150,028	4,375,757	8,525,785	6.71	19.71	13.38
1971-72	4,008,365	4,896,381	8,904,746	7.07	19.33	13.81

1973-74	6,085,004	6,894,500	12,979,504	6.06	20.52	13.74

CUSTOMS AND EXCISE

The Customs Tariff

The first Commonwealth Customs Tariff was introduced on 8 October 1901, from which date uniform duties came into effect throughout Australia. The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to imports from certain countries. Duties are imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

The Australian Customs Tariff currently in use was introduced on 1 July 1965. The nomenclature used in the Tariff is that of the Convention on Nomenclature for the Classification of Goods in Customs Tariffs, an international agreement signed at Brussels on 15 December 1950. The system of naming established by the Convention has come to be known as the 'Brussels Nomenclature'.

The particulars appearing in the tables in this section have been extracted from the bulletin *Overseas Trade* published annually by the Australian Statistician, Canberra. The bulletin contains details showing, for each State and Territory, a dissection of customs revenue according to Customs Tariff Division, and excise revenue according to Excise Tariff Item and rate of duty.

CUSTOMS AND EXCISE—GROSS COLLECTIONS IN WESTERN AUSTRALIA (a)
(\$'000)

Tariff	1969-70	1970-71	1971-72	1972-73	1973-74
Customs duty (a)	24,649	32,262	30,072	25,714	30,612
Excise duty—					
Petroleum products	26,743	34,372	41,997	44,405	60,085
Spirits, potable	1,252	1,300	1,473	1,592	2,321
Tobacco, cigars, cigarettes, etc.	17,258	20,536	22,939	25,720	33,307
Other (b)	31,384	32,770	35,473	34,336	42,483
Total, excise (a) (b)	76,637	88,978	101,883	106,054	138,197
GRAND TOTAL (b)	101,286	121,240	131,955	131,768	168,809

(a) For net collections see page 280. (b) Includes excise on beer, playing cards and matches, details of which are not available for publication.

The following table shows the rates of excise duty applying to certain commodities during the year 1973-74, the quantities of goods excised in Western Australia and Australia at those rates, and the gross amounts of revenue collected. For a more detailed analysis, including particulars for each State and Territory, the reader is referred to the annual bulletin *Overseas Trade* to which reference is made earlier in this section.

The figures shown in the table refer to amounts collected in Western Australia. It is important to note that excise duty levied on a particular commodity may have been paid in a State other than that in which it is consumed. For this reason the amounts shown for Western Australia do not necessarily represent the duty paid in respect of Western Australian consumption.

EXCISE DUTY—GROSS COLLECTIONS CLASSIFIED ACCORDING TO COMMODITY
WESTERN AUSTRALIA AND AUSTRALIA: 1973-74

Commodity	Unit of quantity	Rate of duty per unit of quantity	Western Australia		Australia

(e) Includes supplies to Australian Government on which excise duty was paid. (f) Includes excise duty paid on beer, playing cards and matches; see footnote (a).

Chapter IX—continued

Part 2—Internal Trade

CENSUSES OF WHOLESALE, RETAIL AND SELECTED SERVICE ESTABLISHMENTS

The Australian Standard Industrial Classification, or 'ASIC', which is described on pages 344-5, includes internal trade in Division F, 'Wholesale and Retail Trade'. Wholesale trade is described in ASIC as the re-sale (as agent or principal) of new or used goods to retailers or other wholesalers, or to institutional, government, professional or business users. Retail trade is described as the re-sale of new or used goods to final consumers for personal or household consumption.

Statistics of internal trade in Western Australia are now derived mainly from the programme of integrated economic censuses which was introduced in 1968-69 and is described in more detail on page 345.

CENSUS OF WHOLESALE ESTABLISHMENTS

The first Census of Wholesale Establishments was conducted in 1968-69 and detailed statistics for Western Australia were published in the bulletin *Economic Censuses 1968-69: Wholesale Establishments (Final), Western Australia*. Bulletins relating to each of the other States and Territories and Australia as a whole were also published. The data items were classified variously to each industry class within Sub-division 46-47 'Wholesale Trade' of ASIC; to broad types of operation (*i.e.* primary produce dealers or agents, wholesale merchants, manufacturers' sales branches holding stocks, commission agents or brokers, petroleum distributors, or repairers and lessors of machinery and equipment; to area (*i.e.* local government area and statistical division) and to size of establishment, based on wholesale sales.

The table below shows details for the major variables collected in the Census of Wholesale Establishments, 1968-69, classified by industry class.

WHOLESALE ESTABLISHMENTS
DETAILS OF OPERATIONS BY INDUSTRY CLASS: 1968-69 (a)

Industry class	Number of establishments operating at 30 June 1969	Persons employed (b)	Wages and salaries (c)	Turnover	Stocks at 30 June 1969	Purchases, transfers in and selected expenses	Value added	Wholesale sales

(a) See letterpress immediately preceding table. (b) At the end of June 1969; includes working proprietors. (c) Excludes amounts drawn by working proprietors. (d) Outlay on fixed tangible assets less disposals.

Commodity Statistics

Details of wholesale (and retail) sales of groups of commodities were collected in the 1968-69 Integrated Economic Censuses. The next table shows wholesale sales made by wholesale and retail and selected service establishments which operated during 1968-69. Data for wholesale sales are not free of duplication, in that they may include, for example, sales of the same goods from wholesaler to wholesaler and wholesaler to retailer, respectively. Wholesale sales on commission by agents are not included in the table.

Total wholesale sales on own account for Australia as a whole amounted to \$15,196.9 million.

Australian Summary

As mentioned on page 434, detailed results of the first Census of Wholesale Establishments conducted in 1968-69 were published for Australia as a whole and for each of the other States and Territories. A summary of the operations of wholesale establishments in Australia, as revealed by the census, follows.

The number of wholesale establishments operating in Australia during 1968-69 totalled 34,613. Persons employed and wages and salaries paid amounted to 358,129 and

\$1,043.3 million, respectively. Turnover in 1968-69 was \$15,885.0 million and purchases, transfers in and selected expenses \$13,522.4 million. Value added totalled \$2,758.8 million. Sales or purchases on commission amounted to \$7,005.7 million, stocks at 30 June 1969 \$2,339.2 million and fixed capital expenditure \$189.6 million.

CENSUSES OF RETAIL AND SELECTED SERVICE ESTABLISHMENTS

Five retail censuses had been conducted prior to the inclusion of a Census of Retail and Selected Service Establishments in the system of integrated economic censuses in 1968-69. These earlier censuses related to the years 1947-48, 1948-49, 1952-53, 1956-57 and 1961-62 and covered (i) the retail trading activities of all establishments selling to the general public from fixed premises such as shops, rooms, kiosks and yards and (ii) the service activities of establishments such as motor repair workshops, hairdressers, boot repairers, cafes and restaurants. Licensed clubs and laundries and dry cleaners were included in collections supplementary to retail censuses from 1952-53 onwards and motion picture theatres were included in collections supplementary to the 1956-57 and 1961-62 Retail Censuses. Statistics from these censuses were published in bulletins for each State and Territory and for Australia as a whole. The censuses were also used to provide a framework for conducting quarterly sample surveys of retail sales (see page 440).

The 1968-69 Census of Retail and Selected Service Establishments included all establishments in Sub-division 48: 'Retail Trade' of ASIC and establishments from selected industry classes in Division L: 'Entertainment, Recreation, Restaurants, Hotels and Personal Services'. The selected industry classes were 9113 Motion Picture Theatres; 9211 Cafes and Restaurants; 9212 Licensed Hotels, Motels and Wine Saloons; 9221 Licensed Bowling Clubs; 9222 Licensed Golf Clubs; 9223 Licensed Clubs n.e.c.; 9310 Laundry and Dry Cleaning Services; 9321 Men's Hairdressing; and 9322 Women's Hairdressing and Beauty Salons.

Since the 1968-69 Census was based on definitions from the ASIC it differed from previous censuses in that it was restricted to establishments primarily engaged in retailing or the selected services and excluded the retailing or service activities of other types of establishments (e.g. wholesalers, manufacturers). The use of ASIC also involved another change in that all the activities of each establishment included in the census were measured, including non-retail or non-service activities, whereas in previous censuses only the retail or service activities were included. For example, for a retail establishment also engaged in wholesaling, all employees were included in the 1968-69 Census whereas in previous censuses the employees engaged in wholesaling would have been excluded.

A further retail census also based on ASIC principles was conducted for the year 1973-74.

The 1973-74 Retail Census differed from the previous censuses in scope, coverage and data content. It was conducted primarily to provide the basic data needed to enable a new sample of retail establishments to be selected for the quarterly Survey of Retail Establishments (see page 440) following the 1973-74 Retail Census. For this reason, bread and milk vendors, footwear repairers, motion picture theatres and laundries and dry cleaners were excluded from the 1973-74 Retail Census although they were included in the scope of the previous census taken in 1968-69. Similarly, questions relating to purchasers, stocks, capital expenditure, etc. which were included on the 1968-69 Census forms were not included on the 1973-74 Census forms.

In the 1968-69 Census, where ownership of an establishment changed hands during the census year and separate returns were received from the current and previous proprietors, both returns were included in the census. In the 1973-74 Retail Census, however, establishments which operated for part of the census year were included in the census only if they had operated for at least two months of the census year and were still operating at 30 June 1974.

Detailed results for each census have been published for each State and Territory and for Australia as a whole. Results of the 1968-69 Census were published in *Economic Censuses: 1968-69, Retail Establishments and Selected Service Establishments* in four parts as follows: *Details of Operations by Industry Class and Area, Industry and Commodity*

Details for Statistical Retail Areas, Industry and Commodity Details by Size of Establishment, and Commodity Sales. Results of the 1973-74 Census were published in *Census of Retail Establishments and Selected Service Establishments, Final Bulletin, 1973-74.*

The next retail census will be undertaken for the year ended 30 June 1980 and will provide data similar to that published for 1968-69.

The following table shows final figures by industry class for the major variables collected in the Census of Retail and Selected Service Establishments, 1973-74. Direct comparisons with figures from previous retail censuses and from retail surveys are not possible owing to changes in scope, coverage and items of data.

RETAIL ESTABLISHMENTS AND SELECTED SERVICE ESTABLISHMENTS
DETAILS OF OPERATIONS BY INDUSTRY CLASS: WESTERN AUSTRALIA, 1973-74 (a)

Industry Class	Number of establishments operating at 30 June 1974	Persons employed (b)	Wages and salaries (c)	Retail sales	Wholesale sales	Other operating revenue	Turnover

Commodity Statistics

Details of retail sales of groups of commodities were collected in the 1973-74 Census of Retail Establishments and Selected Service Establishments. Retail sales were defined

as the sale to final consumers of new or used goods of a type used mainly for household and personal purposes. Sales by retailers of commodities such as basic building materials, builders' hardware and builders' supplies, timber, commercial refrigerators and freezers, agricultural tractors, farm machinery and implements, construction and earthmoving equipment, grain, feed, fertilisers and agricultural supplies, and business machines and equipment, were treated as wholesale sales since the goods are of a type used mainly for commercial purposes.

The table below shows retail sales made by retail and selected service establishments which were in operation at 30 June 1974. Details of retail sales obtained from the 1973-74 Census differ from those recorded in the quarterly Survey of Retail Establishments (see following section) and from previous censuses due to variations in scope and coverage. Direct comparisons with figures from previous censuses and from retail surveys are therefore not possible.

RETAIL ESTABLISHMENTS AND SELECTED SERVICE ESTABLISHMENTS, 1973-74
NUMBER OF ESTABLISHMENTS AND VALUE OF RETAIL SALES BY COMMODITY ITEM

Commodity item	Number of establishments at 30 June 1974 (a)	Value of retail sales (a)	Commodity item	Number of establishments at 30 June 1974 (a)	Value of retail sales (a)
Groceries, other food items, etc.—		\$'000			\$'000
Groceries	2,528	191,268	Domestic refrigerators and freezers, washing machines, stoves, household heating appliances and other household appliances (incl. bottled liquefied petroleum gas)	615	47,162
Fresh meat	983	68,142	Furniture and floor coverings—		
Confectionery, ice cream, soft drinks, etc.	4,091	42,576	Furniture, mattresses, blinds, etc. (incl. installation and repairs)	411	37,930
Other food (b)	2,911	76,703	Floor coverings, carpets, lino, etc. (incl. laying of floor coverings)	393	26,658
Beer, wine and spirits, cigarettes, etc.—			Miscellaneous—		
Beer, wine and spirits	1,214	146,529	Cosmetics, perfumes, toilet preparations	1,640	24,099
Cigarettes and other tobacco products	4,860	45,155	Prescriptions and patent medicines and therapeutic appliances	699	29,713
Fabrics, clothing and footwear—			Books, stationery, newspapers, etc.	1,440	32,693
Clothing and drapery	1,680	170,499	Goods not included above (d)	2,253	49,335
Footwear	734	26,346	Motor vehicles, petrol, boats, caravans, etc. (e)—		
Hardware—			New motor vehicles, new and used motor cycles, boats and caravans	449	199,777
Domestic hardware, china, glassware, jewellery, watches and clocks (incl. garden equipment) (c)	1,309	42,638	Used motor vehicles	476	130,297
Household appliances—			New and used parts and accessories, petrol, oils, tyres, batteries, etc.	1,864	145,351
Radios, radiograms, tape recorders, television sets and accessories, musical instruments, records, sheet music, etc.	669	35,241	Total retail sales	(f)	1,568,112

(a) See letterpress immediately preceding table. (b) Includes fresh fruit and vegetables, bread, cakes and pastries, fish (fresh or cooked), chips, hamburgers and cooked chicken. (c) Excludes basic building materials, builders' hardware and supplies such as tools of trade, paint, etc. See letterpress *Commodity Statistics* preceding table. (d) Includes photographic equipment and supplies, sporting goods, bicycles, toys, antiques, disposal and second-hand goods, cut flowers, garden seeds, shrubs, travel goods and brief cases, etc. (e) Excludes tractors, farm machinery and implements, earthmoving equipment, etc. See letterpress *Commodity Statistics* preceding table. (f) Many establishments showed takings in more than one commodity item. Accordingly, the sum of the number of establishments showing sales for individual items will exceed the total number of retail and selected service establishments reporting retail sales.

SURVEY OF RETAIL ESTABLISHMENTS

During the periods between retail censuses, quarterly estimates of the value of retail sales by commodity groupings are derived from a representative sample of retailers throughout Australia. The sample is drawn from the population of retail establishments enumerated in the censuses which is maintained by the addition of new businesses and the deletion of businesses which cease trading. Estimates up to and including September quarter 1972 were obtained from a sample based on the 1961-62 Census of Retail Establishments, whereas estimates for December quarter 1972 were the first to be obtained from a sample based on the 1968-69 Census of Retail and Selected Service Establishments. Estimates for the September quarter 1975 and later were obtained from a sample based on the 1973-74 Census.

The changes introduced in the 1968-69 Census, described in the section *Censuses of Retail and Selected Service Establishments* above, also altered the basis of the sample estimates so that estimates from December quarter 1972 are not comparable with previous estimates. In addition, changes in the content of the commodity groups for which estimates are made also occurred. The nature of these changes was such that it was not possible to compile a continuous series of retail sales by commodity groups by linking the series based on the 1968-69 Census with the series based on the 1961-62 Census. However, an estimate of total retail sales (excluding motor vehicles, parts, petrol, etc.) was made on the new basis for the five quarters back to September quarter 1971 to provide some indication of the effect of the change on total retail sales.

The table below shows estimates of retail sales by commodity group for the years 1970-71, 1971-72, 1973-74 and 1974-75. Commodity estimates are not available for the year 1972-73 owing to the break in series in December quarter 1972. The link of the old and new series for total retail sales (excluding motor vehicles, parts, petrol, etc.) provided for the year 1971-72 indicates the approximate magnitude of the break in continuity. Figures for retail sales of motor vehicles, parts, petrol, etc. are not now collected.

RETAIL SALES—COMMODITY GROUPS
(\$ million)

Commodity group	Year (a)				
	1970-71	1971-72	1972-73	1973-74 (b)	1974-75 (b)
Groceries	136.3	152.1		212.2	248.1
Butchers' meat	56.4	59.0		73.8	73.3
Other food (c)	106.0	113.1		122.5	136.6
Beer, wine and spirits	102.6	107.3		152.3	180.7
Clothing, drapery, etc.	115.3	123.1		174.1	205.8
Footwear	18.6	18.9	n.a.	28.2	32.6
Hardware, china and glassware (d)	19.3	21.3		44.6	55.6
Electrical goods and musical instruments	46.9	52.5		87.8	118.2
Furniture, floor coverings, mattresses	37.7	41.0		63.1	73.4
Chemists' goods	41.1	44.7		51.6	62.7
Newspapers, books, stationery	22.7	24.1		32.5	40.2
Other goods (e)	75.3	79.8		94.4	119.0
Total—old series	778.2	836.9	n.a.	n.a.	n.a.
new series	n.a.	878.7 (b)	965.8 (b)	1,137.1 (b)	1,346.2 (b)
New and used motor vehicles, parts, petrol, etc.	348.0	354.3	n.a.	527.7	n.a.

n.a. denotes 'not available'.

(a) Series based on 1961-62 Census except where otherwise indicated. (b) Series based on 1968-69 Census. (c) Includes fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc. (d) Excludes basic building materials, builders' hardware and supplies, such as tools of trade, paint, etc. (e) Includes tobacco, cigarettes, sporting goods, etc. but excludes grain and produce and business machines.

Further information regarding the quarterly estimates of retail sales, together with comparable data for each State and Australia are published by the Australian Statistician in the mimeograph *Retail Sale of Goods* (Reference No. 11.4). Preliminary monthly estimates of total retail sales in Australia (excluding motor vehicles, parts, petrol, etc.), based on a sub-sample of the establishments used to provide the quarterly estimates, appear in *Retail Sales of Goods (Provisional)* (Reference No. 11.6).

CENSUS OF TOURIST ACCOMMODATION ESTABLISHMENTS

A Census of Tourist Accommodation covering aspects such as the amount, type, and geographical location of tourist accommodation available throughout Australia was conducted for the year ended 30 June 1974.

Tourist accommodation establishments, for the purpose of this census, have been defined as: (i) hotels, motels and guest houses, which provide short-term (*i.e.* for periods of less than two months) accommodation available to the general public and which provide breakfast; (ii) caravan parks and holiday flats which provide short-term accommodation available to the general public.

The census covered, in general, tourist accommodation establishments which were in operation at 30 June 1974 but excluded those establishments at which the number of guest rooms usually occupied by short-term guests was less than 40 per cent of the total number of guest rooms usually occupied and, also, establishments which have provision for tourist accommodation but which had nil takings from accommodation for the census period. Details for holiday flats were collected for the State of Queensland only.

Establishments included in the census were classified to a type of establishment dependent on the method of operation and the facilities available at the establishment. The establishments were classified as follows.

Licensed hotel—an establishment which provides tourist accommodation and is licensed to operate a public bar.

Licensed motel—an establishment which provides tourist accommodation and, in general, provides bath or shower and toilet in most guest rooms as well as vehicle parking for guests and is licensed to serve liquor with meals.

Unlicensed motel—an establishment which provides tourist accommodation and which provides bath or shower and toilet in most guest rooms as well as vehicle parking for guests but is not licensed to serve liquor. It should be noted that this category included establishments which had a licensed restaurant located at the establishment but which was leased to and operated by a separate enterprise.

Private hotel or guest house—an establishment which provides tourist accommodation but which does not provide both vehicle parking for guests and facilities (*i.e.* bath or shower and toilet) in most guest rooms and which is not licensed to serve liquor.

Caravan park—an establishment which provides tourist accommodation and is registered as a caravan park with a local government authority. Where an enterprise operated both a caravan park and a motel at the same location, separate details were collected for each and they were treated as two establishments.

Detailed information on the Census of Tourist Accommodation is available from the publication *Census of Tourist Accommodation Establishments, Western Australia, 1973-74* which includes items of data by type and size of establishment and by local government area and statistical division.

Following the Census of Tourist Accommodation the Australian Bureau of Statistics has introduced a series of quarterly Tourist Accommodation Surveys, commencing with the September quarter 1975. These surveys will be conducted on a continuing basis for approximately two years to identify trends and seasonal patterns in the tourist industry on an area basis.

The previous table shows details for Western Australia of the major variables collected in the Census of Tourist Accommodation Establishments, 1973-74 classified by type of establishment.

Chapter IX—continued

Part 3—Transport

Western Australia's main transport systems are based generally on Perth, the capital, and on Fremantle, the principal port. Subsidiary systems are centred on a number of outports north and south of Fremantle and on some inland towns.

The railway system extends from Fremantle, Perth and Midland for hundreds of kilometres into the mining, agricultural, pastoral and forest areas in the southern half of the State. There is also a well-developed road system in this area, and the coastal towns in the north-west and the north are connected by road with the south and with the pastoral and mining areas of the hinterland. International flights operate through the airport at Perth, which is also the centre of a comprehensive network of airline services to towns in Western Australia and to the capital cities of other States.

In recent years important mineral developments in the north-west have led to the provision of deep-water port facilities and the construction of railways and roads connecting them with the extensive iron ore deposits now being exploited.

The following table shows distances by road, rail, sea and air between Perth and selected towns and localities in Western Australia.

DISTANCES BETWEEN PERTH AND SELECTED TOWNS AND LOCALITIES
IN WESTERN AUSTRALIA

Town or locality	Road (*)	Rail (*)	Sea (a)	Air (b) (*)	Town or locality	Road (*)	Rail (*)	Air (b) (*)

SHIPPING

Western Australia's sea-borne trade is conducted through the Port of Fremantle and a number of outports. Of these, Geraldton, Bunbury, Busselton (see reference on page 448), Albany and Esperance are situated in the more highly developed south-western and southern part of the State. The less closely-settled areas of the north-west and the north are served by ports and other landing points at Useless Loop (Shark Bay), Carnarvon, Cape Cuvier, Exmouth, Onslow (see reference on page 448), Barrow Island, Dampier, Port Walcott (Cape Lambert and Point Samson), Port Hedland, Broome, Derby, Yampi and Wyndham.

The following table shows the number of entrances and the net tonnage of vessels entering each port during the years 1971-72 to 1973-74. The figures exclude particulars of naval vessels; yachts and other craft used for pleasure; foreign fishing vessels that neither load nor discharge cargo; fishing vessels registered in Australia; vessels engaged in geographic, seismic or oceanographic surveys; offshore oil-drilling rigs and vessels servicing them; and vessels of 200 registered net tons and under.

The importance of mineral developments in the north-west of the State is evident in the volume of shipping entered at each port. In 1973-74, the net tonnage for Port Hedland exceeded the figure for the Port of Fremantle for the second successive year.

The net tonnage of a vessel, expressed in tons of 100 cubic feet, represents the volume of enclosed space that can be used for cargo and passengers.

SHIPPING—ENTRANCES OF VESSELS

Cargo is now recorded on returns either in terms of tonnes or of cubic metres depending on the basis on which freight is charged. In the following table the statistics for cargo recorded in tonnes are shown separately from cargo recorded in cubic metres. The aggregates for weight and measure cargo are not added to a figure for total cargo because they are unlike quantities and comparisons of total cargo between ports, trade routes or periods of time could be affected by variations in the cargo mix and in the basis on which freight is charged.

Details of overseas, interstate and intrastate cargo discharged and shipped at each port during 1973-74 are shown in the next table.

CARGO DISCHARGED AND SHIPPED AT EACH PORT: 1973-74

(b) Includes Cape Cuvier and Useless Loop.

(c) Includes Cape Lambert and Point Samson.

Apart from general cargo, overseas and interstate consignments discharged were principally petroleum products, rock phosphate, iron and steel products, coke, caustic soda, limestone and sulphur. Outward cargoes, with the exception of refined petroleum products and steel products shipped from the Port of Fremantle (Outer Harbour), consisted largely of primary products, including minerals. Cargo shipped from Esperance comprised mainly cereal grains, nickel ore and salt and from Albany cereal grains, wool and whale oil. From Bunbury the principal cargoes shipped were mineral sands, cereal grains,

fruit and timber. Iron ore and cereal grains were the main items shipped from Geraldton. In the northern part of the State, Dampier, Port Hedland, Port Walcott and Yampi are the major ports for the shipment of iron ore. The buoyed sea terminal at Barrow Island provides facilities for the loading of crude petroleum. From other ports in the area, cargo shipped consisted mainly of cotton, cotton seed, meat, and minerals, including salt and gypsum.

The Western Australian Coastal Shipping Commission was established in 1965 to carry on the services formerly maintained by the State Shipping Service. The Commission's ships operate along the north-west and northern coasts, calling regularly at ports between Fremantle and Darwin (Northern Territory). Besides general cargo, the freight discharged at north-west and northern ports consists mainly of refined petroleum products, building and construction materials, refrigerated cargo, vehicles, fresh water, drilling equipment and materials, and livestock. Cargoes carried south to Fremantle are mainly primary products, such as cotton, meat, livestock, wool, crude petroleum and minerals.

(a) Buoyed sea terminal.

(b) Includes Cape Cuvier and Useless Loop.

(c) Includes Cape Lambert and Point Samson.

In the previous table vessels entered at and cleared from each Western Australian port during 1973-74 are classified according to the direction of the voyage on which each vessel was engaged. 'Direction' is determined by reference to the port of commencement of the inward voyage or the port of termination of the outward voyage.

Administration of Ports

The State Government, through the Harbour and Light Department, controls the ports at Broome, Carnarvon, Derby, Onslow, Port Walcott (Cape Lambert and Point Samson) and Wyndham. The ports at Albany, Bunbury, Esperance, Fremantle, Geraldton and Port Hedland are controlled by separately-constituted authorities established by Act of Parliament. Private operators control the ports (or landing points) at Barrow Island, Cape Cuvier, Dampier, Exmouth, Useless Loop and Yampi.

In terms of a proclamation made under the provisions of the *Shipping and Pilotage Act, 1967*, Busselton ceased to be a port for the purposes of the Act with effect from 1 September 1972. The port of Onslow ceased commercial shipping operations with effect from 1 March 1973.

Description of Principal Ports

A brief description of the principal ports, at 30 June 1975, is given below. Reference to previous articles on ports appears in the *Appendix*.

Albany. The Port of Albany (35°S. latitude) is the most southerly port in Western Australia and comprises the waters of Princess Royal Harbour and King George Sound. The effect of tidal movements is negligible and as there is little trouble from fog or storm it is an all-weather port. It embraces an area of 11,800 hectares having an abundance of natural deep water and affording excellent protection to shipping and shore works. Access to Princess Royal Harbour from King George Sound is by means of a channel of 10·1 metres minimum depth and 152 metres wide. Wharfage consists of five berths situated on the northern side of the harbour. A timber jetty, adjacent to the entrance channel, provides two berths, one of which is 244 metres in length with a depth alongside of 10·1 metres, and the other 183 metres in length with a depth alongside of 7·6 metres. The remaining berths consist of three land-backed berths with a continuous length of 609 metres and a depth alongside of 10·1 metres at No. 1 and No. 2 berths and a depth alongside of eleven metres at No. 3 berth.

Bunbury. The port of Bunbury (33°S. latitude) is situated in Koombana Bay, 104 nautical miles south of Fremantle. It is an all-weather port with a tidal rise and fall of 0·8 metres influenced by weather conditions. The deepest permissible loaded draft, 8·7 metres, is subject to a small increase at the Harbour Master's discretion. Wharf berth accommodation totals 1,465 metres consisting of six jetty berths, each 183 metres in length, and two land-backed berths each 184 metres in length. A conveyor with a capacity of 860 tonnes per hour is used for loading mineral sands and a bulk grain loading facility has a capacity of some 300 tonnes per hour. The cargo transit shed has a cool storage capacity of 2,300 cubic metres.

Esperance. The port of Esperance (33°S. latitude) is situated in Esperance Bay on the south coast of Western Australia. The port has two land-backed berths of concrete and steel construction. Together, they provide a continuous structure 457 metres long, dredged to a depth alongside of 11·1 metres, with a land area backing of approximately forty-seven hectares. A timber jetty situated approximately two kilometres north of the harbour is maintained for the discharge of petroleum products. It is 873 metres long with a depth alongside of 9·6 metres.

The approach channel to the land-backed berths is 244 metres wide and is dredged to a depth of 11·1 metres. The deepest permissible loading draft is 10·4 metres. Two privately-owned ship loaders are available; one with a loading capacity rate of 860 tonnes per hour, handles salt and bulk grains, the latter product being drawn from a 133,000 tonne capacity storage terminal. The other conveyor, which has a capacity of some 200 tonnes per hour, is used for the loading of nickel concentrates.

Fremantle. The port of Fremantle (32°S. latitude) is the principal port of Western Australia. It is an all-weather port, virtually tideless and little troubled by storm or fog. The port provides modern facilities for the handling of ships, passengers and cargo and is connected to the road and rail systems of Western Australia and Australia generally. It has an area of 46,600 hectares and comprises an Inner Harbour and an Outer Harbour.

The Inner Harbour is constructed within the mouth of the Swan River, about nineteen kilometres from Perth. It is protected by two breakwaters, one 1,474 metres in length and the other 620 metres. The harbour is approached through a short entrance channel dredged to a depth of eleven metres at low water. It encloses seventy-six hectares of water dredged throughout to eleven metres at low water and is the centre of the general cargo trade of the port. There are twenty land-backed berths, with a total quayside of about 4,000 metres. Transit sheds occupy an area of 56,800 square metres and large paved areas are provided for the open storage of cargo. Conveyor facilities with a maximum loading rate of 1,620 tonnes per hour serve a bulk grain terminal of 250,000 tonnes capacity.

The Outer Harbour has 18,900 hectares of deep water and is protected from the west by islands and reefs. It embraces three main anchorages of depths up to nineteen metres. Gage Roads, the most northerly of these anchorages, serves as an approach to the Inner Harbour. Owen Anchorage is centrally situated between Success and Parmelia Banks. The only operating commercial berth in this anchorage is Woodman Point Jetty, which is used exclusively for handling explosives. The largest and most protected of the anchorages, Cockburn Sound, lies to the south and serves the Kwinana industrial area.

There are five jetties in Cockburn Sound. Four of these are owned and operated by private companies concerned with specialised cargoes. They comprise an oil refinery jetty, two jetties to serve a blast furnace and a steel-rolling mill, and a jetty for the export of refined alumina and the import of caustic soda. The fifth jetty is a common-user facility built by the Fremantle Port Authority.

All Inner Harbour berths are equipped to supply bunker fuel direct to ships from privately-owned storage tanks close to the port and an oil lighter is available to service ships berthed in the Inner Harbour or anchored in the Outer Harbour. Ships can also take on bunker fuel oil at the oil refinery jetty in the Outer Harbour.

Geraldton. The port of Geraldton (28°S. latitude) is situated in Champion Bay on the west coast, 215 nautical miles in a north-westerly direction from Fremantle. The outer harbour, which is 10·7 metres deep, provides a good holding anchorage and the inner harbour, enclosed by a breakwater, affords ample protection for shipping and shore works. The depth of the inner harbour is 9·8 metres, but the rock base of the entrance channel restricts the loaded draught of vessels to 8·7 metres. The port has four concrete-decked land-backed berths with a continuous length of 682 metres and a dredged maximum depth of 9·8 metres. The cargo transit shed has a floor area of 2,230 square metres and extensive paved areas are available for open storage of cargo. Bulk grain-loading facilities with a capacity of 810 tonnes per hour serve a terminal of 150,000 tonnes capacity. A conveyor system used for loading minerals has a rated capacity of 1,220 tonnes per hour.

Port Hedland. Port Hedland (20°S. latitude) is situated on the north-west coast of Western Australia, 957 nautical miles from Fremantle. Access to the harbour is by means of a dredged channel approximately thirteen kilometres in length, 11·8 metres minimum depth and 183 metres wide. The channel, subject to tidal movements, is navigable by vessels drawing up to 15·8 metres. Wharf facilities service six berths. Three privately-owned berths with a total length of 1,039 metres and a depth alongside ranging from 14·8 metres to 17·3 metres are served by three shiploaders, two of them each having a capacity of 6,100 tonnes of iron ore per hour and the third a capacity of 4,570 tonnes per hour. Of the three remaining berths, one is 129 metres in length with a depth alongside of 5·7 metres. Another is 183 metres in length with a depth alongside of 11·2 metres. It is served by a privately-operated salt-loading facility with a capacity of 1,520 tonnes per hour. The sixth berth, a land-backed general cargo berth 213 metres long with a depth alongside of 11·2 metres, was completed in 1974.

RAILWAYS

Railways open for general and passenger traffic in the southern part of the State are operated by the Western Australian Government Railways Commission. The system is linked with railways of other States by the Australian Government Trans-Australian Railway between Kalgoorlie in Western Australia and Port Pirie in South Australia. There are, in addition, private railways for the haulage of iron ore in the northern part of the State and timber in the south-west.

Origin and Development

The first railway in the Colony, built in 1871 from Busselton into the nearby forest, was a private line constructed for the transport of timber. By the end of 1900, the Colony had a railway system for general and passenger traffic which comprised 2,181 kilometres of government line and 446 kilometres of privately-owned line. The State Government system reached a maximum of 7,051 kilometres in 1940 but this figure was reduced, particularly during the 1960s, by the closure of certain non-paying lines. A summary of the development of railways in Western Australia appeared in the *Western Australian Year Book*, No. 7—1968 and earlier issues.

At 30 June 1975 there were 6,806 kilometres of railway open for general and passenger traffic in Western Australia. Of this total, 6,075 kilometres were owned by the State Government and operated by the Western Australian Government Railways Commission, and 731 kilometres were owned by the Australian Government and operated by the Australian National Railways. At the same date private railways used for the transport of iron ore were those between Newman and Port Hedland (425 kilometres), Shay Gap and Port Hedland (180 kilometres), Paraburdoo and Dampier (385 kilometres), and Pannawonica and Cape Lambert (190 kilometres).

The Western Australian Government Railways Commission

The *Government Railways Act, 1904-1975* constitutes a Commission, in the person of the Commissioner of Railways, who is responsible, subject to the Minister, for the administration of the Act.

Financial procedure for the Western Australian Government Railways Commission is basically the same as for other Departments. Receipts are paid into the Consolidated Revenue Fund, and finance for its operations and the servicing of debt is provided from the Fund by statutory appropriations. Loan moneys, for the construction and improvement of permanent way, for the purchase of traction units and rolling stock and for other capital outlay, are advanced by the Parliament from the General Loan Fund. The loan liability of the Western Australian Government Railways Commission to the Treasury was \$177,474,648 at 30 June 1975, the net increase during 1974-75 being \$5,707,144.

(a) Includes financial transactions in relation to road services. (b) Including Stores Funds.
(c) Excludes route kilometres of 1,067 mm gauge line which parallels the 1,435 mm gauge line. (d) Revenue and non-revenue train kilometres. (e) Responsibility for the financial and policy direction of the suburban railways passed to the Metropolitan (Perth) Passenger Transport Trust from 1 July 1974. (f) Departmental freight comprises mainly oil, ballast, timber and rails. * Revised. † Actual deficits after adjustment of \$107,536 in 1973-74 and \$33,498 in 1974-75 resulting from revaluations of Australian currency.

In addition to its railway services, the Commission operates an extensive system of road services for the carriage of passengers, mail and freight. A map showing the routes operated by the road services appeared in the 1967 issue of the Year Book.

Suburban railway passenger services are operated by the Commission on behalf of and at the direction of the Metropolitan (Perth) Passenger Transport Trust under the provisions of the *Metropolitan (Perth) Passenger Transport Trust Act Amendment Act, 1973* which came into operation by proclamation on 22 March 1974. The Commissioner of Railways, as provided by the Act, is an *ex-officio* member of the Trust.

Administrative and operational control of suburban railway passenger services remains with the Commissioner of Railways but, as from 1 July 1974, the Trust accepted responsibility for finance and policy direction in terms of the 1973 legislation.

Iron Ore Railways

In recent years the exploitation of extensive inland deposits of iron ore in Western Australia has necessitated the construction of a number of railways for the transport of ore from the mines to the coast. Conditions applying to the construction and operation of these railways are incorporated in agreements made between the State Government and mining companies and ratified by Act of Parliament.

The following summary relates to railways in use for the transport of iron ore at 30 June 1975. The quantity of ore carried on these railways was 45.5 million tonnes in 1971, 52.9 million tonnes in 1972, 73.1 million tonnes in 1973, 85.3 million tonnes in 1974 and 86.0 million tonnes in 1975. At 30 June 1975 there were 103 locomotives and 4,538 ore wagons in service.

RAILWAYS USED FOR TRANSPORT OF IRON ORE

Railway	Enabling Act	Length (route kilometres)	Gauge	Date operative (a)
Shay Gap-Port Hedland (b)	No. 97 of 1964 (c)	*180	1,435 mm	1966—23 May
Paraburdoo-Dampier (b)	No. 24 of 1963 (d)	*385	1,435 mm	1966—1 July

(f) *Railways (Standard Gauge) Construction Act, 1961.* See also letterpress on pages 454-5. (g) *Iron Ore (Mount Newman) Agreement Act, 1964.* (h) *Iron Ore (Cleveland-Cliffs) Agreement Act, 1964.* * Revised.

Australian National Railways

The Australian National Railways comprise four separate systems. These are the Trans-Australian Railway, operating partly in Western Australia and partly in South Australia; the Central Australia Railway, partly in South Australia and partly in the Northern Territory; the North Australia Railway, wholly in the Northern Territory; and the Australian Capital Territory Railway.

Construction of the Trans-Australian Railway was begun at Port Augusta, the original South Australian terminus of the line, in 1912 and work was completed in 1917. Of the total length of 1,783 kilometres between Kalgoorlie and Port Pirie (South Australia), 731 kilometres are in Western Australia. Although statistical details of activities on each of the four systems are available, it is not possible to give separate particulars of the operations in Western Australia of the Trans-Australian Railway. Some statistics relating to the Australian National Railways are shown in the next table.

Operations of Government Railways in Australia

The following table gives a summary of operations during the year ended 30 June 1974 on each of the railway systems owned by the State and Australian Governments.

GOVERNMENT RAILWAYS IN AUSTRALIA—SUMMARY OF OPERATIONS, 1973-74

Railway system of—	Route kilometres at 30 June	Revenue train kilometres run	Passenger-journeys	Goods and livestock carried	Gross earnings	Average number of employees (a)
State Governments—		'000	'000	'000 tonnes	\$'000	
New South Wales	9,755	58,255	198,944	32,651	262,691	41,290
Victoria	6,657	33,345	114,648	11,370	115,613	25,243
Queensland	9,472	28,542	33,723	25,401	149,844	22,489
South Australia	3,884	10,313	13,597	6,607	39,531	7,558
Western Australia	6,192	12,617	11,748	14,839	78,480	9,568
Tasmania	851	2,154	693	1,828	7,674	2,013
Australian Government—						
Trans-Australian	1,857	4,216	185	1,388	26,191	2,235
Central Australia	1,219	1,426	23	1,768	7,415	1,370
North Australia	511	293	...	803	3,302	364
Australian Capital Territory	8	31	55	311	309	38
Australia	40,406	151,192	373,618	96,966	691,050	112,168

(a) Excluding construction staff except for Victoria and Western Australia where construction staff are included.

It will be noted that particulars of route kilometres shown for the New South Wales, Victorian and South Australian systems differ from the details given for those States in the table in the next section *Railway Gauges*, which is compiled according to the State or Territory in which the several lengths of line are situated. The Victorian and South Australian systems include lines extending into New South Wales, the aggregate length of such lines in New South Wales being 375 kilometres.

Railway Gauges

The following table shows route kilometres of government railways of each gauge in each of the Australian States and Territories at 30 June 1974.

GOVERNMENT RAILWAYS IN EACH STATE AND TERRITORY OF AUSTRALIA
ROUTE KILOMETRES OPEN AT 30 JUNE 1974

State or Territory	Route kilometres of gauge—					Total route kilometres
	1,600 mm	1,435 mm	1,067 mm	762 mm	610 mm

Western Australia	...	805	(d) 5,387	6,192
Tasmania	851	851

GOVERNMENT RAILWAYS IN EACH STATE AND TERRITORY OF AUSTRALIA
ROUTE KILOMETRES OPEN AT 30 JUNE 1974—*continued*

State or Territory	Route kilometres of gauge—					Total route kilometres
	1,600 mm	1,435 mm	1,067 mm	762 mm	610 mm	
Australian Government systems in—						
South Australia	1,477	591	2,068
Western Australia	730	730
Northern Territory	789	789
Australian Capital Territory	8	8
Total route kilometres...	8,845	13,607	17,892	14	48	40,406

(a) Part of the Victorian railway system. (b) Includes 47 kilometres of 1,435 mm gauge line from Broken Hill to Cockburn owned and operated by the South Australian Government Railways. (c) Excludes 325 kilometres of 1,600 mm gauge line which almost parallels the 1,435 mm gauge line between Melbourne and the Murray River. (d) Excludes 127 kilometres of 1,435 mm/1,067 mm dual gauge line which is included in the 1,435 mm gauge line.

Except where otherwise indicated, the figures shown relate to lines owned by the several State railway authorities.

Standardisation of gauges on main trunk routes throughout Australia and on some other lines has been the subject of inquiries by the Australian Government and of agreements between the Commonwealth and some States. The principle of standardisation was accepted at a Premiers' Conference in August 1945 following an investigation instituted by the Australian Government in March 1944 and the submission of a favourable report in March 1945. The use of the 1,435 mm gauge was recommended for adoption in a unification plan, one of the projects in which was to be the construction of a line from the Port of Fremantle through Perth to Kalgoorlie. Approval was given to the making of a survey for a route, and field work began in October 1945. The work was continued until December 1947, when it was abandoned pending agreement between the Governments of the Commonwealth and the State on the provision of finance for the unification scheme. In the years immediately following the second World War it became apparent that considerable expenditure would be necessary on the rehabilitation of the Western Australian Government Railways. The urgency and the magnitude of this undertaking were such that all the Department's available resources of money, labour and materials were absorbed in the programme and, in these circumstances, works associated with the unification plan could not be contemplated but, where possible, works connected with the restoration of the 1,067 mm system were so designed as to make provision for later conversion to the standard gauge.

In March 1956, a committee consisting of members of the Federal Parliament was appointed to re-examine the matter of standardisation. Among its recommendations, submitted in October 1956, was the provision of the standard gauge line between Fremantle and Kalgoorlie, but no immediate action was taken to carry out this work.

During the 1960 session, the Western Australian Parliament passed the Broken Hill Proprietary Company's Integrated Steel Works Agreement Act ratifying an agreement between the Government and the Company relating to the establishment of an integrated iron and steel industry at Kwinana on the coast south of Fremantle. The Act made the operation of the agreement contingent upon the passage of legislation by the State and Commonwealth Parliaments to provide for the financing, construction and completion before 31 December 1968 of a standard gauge railway between the works site at Kwinana and the terminus of the Trans-Australian Railway at Kalgoorlie. Accordingly the Commonwealth Parliament passed the *Railway Agreement (Western Australia) Act 1961* extending to the State financial assistance for the project. The State Parliament approved this agreement by the *Railway Standardisation Agreement Act, 1961* and gave authority for the construction of the railway by means of the *Railways (Standard Gauge) Construction Act, 1961*. Work on route surveys was begun in 1961 and the construction of earthworks commenced on 5 November 1962. Basic planning and all major surveys required for the project were completed during 1965. The 1,067 mm portion of the dual

gauge route between Midland and Northam along the Avon River valley was commissioned for general and passenger traffic on 13 February 1966. In October of the same year, haulage of grain on the standard gauge railway commenced between Merredin and the Port of Fremantle and the first train load of iron ore from Koolyanobbing to Kwinana was hauled in April 1967. The standard gauge line from Kwinana to Kalgoorlie was linked with the Trans-Australian Railway to Port Pirie (South Australia) on 3 August 1968, enabling 'through' freight services to commence in November 1968.

In 1962, the opening of a new 1,435 mm gauge railway between Melbourne (Victoria) and Albury, on the border between Victoria and New South Wales, completed the standard gauge link between Melbourne and South Brisbane (Queensland). Late in 1969 work was completed on the last stage of a standard gauge connection between Sydney (New South Wales) and Perth and Fremantle, through Broken Hill (New South Wales), Port Pirie (South Australia) and Kalgoorlie. The length of this route is 3,961 kilometres (Sydney to Perth). Regular services for freight began in January 1970, and for passengers in March 1970. The passenger service has been named 'The Indian-Pacific' after the oceans it links.

ROADS AND ROAD TRAFFIC

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities, comprising City Councils, Town Councils and Shire Councils.

Under the provisions of the Main Roads Act, the Main Roads Department was established in 1930 to replace the Main Roads Board originally constituted as a central road authority in 1926. The Department operates under the *Main Roads Act, 1930-1975* and is administered by a Commissioner of Main Roads responsible to the Minister for Works. The Act makes provision for public roads in the categories of 'main' roads 'controlled-access' roads and 'developmental' roads. An additional category, that of 'important secondary' roads, is used by the Department in determining its works programme.

Main roads are those which provide communication between a large producing area, either actual or potential, and its market or nearest port or railway station; between two or more such areas; between large centres of population; or between the capital city and a large producing area or a large centre of population. Controlled-access roads are those which do not permit direct access from abutting property and may be entered or departed from only at certain selected road connections located at points which are considered to serve best the traffic for which the controlled-access road was designed. Developmental roads are those which serve to develop an area or to increase its development. Important secondary roads are those which, though originally classified as developmental, have come to be used consistently by through traffic and therefore warrant a special allocation of funds by the Main Roads Department. The Act provides that, on the recommendation of the Commissioner, any road may be proclaimed a main road and any main road may cease to be a main road.

The construction and maintenance of main roads and controlled-access roads are the responsibility of the Main Roads Department. The Department also makes substantial financial provision for the construction and maintenance of important secondary roads and for the construction of developmental roads. The construction and maintenance of strategic roads and roads of access to Commonwealth property is undertaken by the Department for the Australian Government.

Within its own district, each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

The following table, derived from data provided by the Main Roads Department, shows the length of public roads open for vehicular traffic at 30 June 1975, classified according to statistical division (see map of Western Australia preceding the *Index*). Included in the total are 12,798 kilometres of main roads, 49 kilometres of controlled-access roads and 8,251 kilometres of important secondary roads.

ROADS OPEN FOR VEHICULAR TRAFFIC AT 30 JUNE 1975
CLASSIFIED ACCORDING TO STATISTICAL DIVISION
(Kilometres)

Statistical division	Formed roads				Unformed roads (b)	Grand total
	Sealed or primed	Gravel surface	Formed only (a)	Total

WESTERN AUSTRALIA	30,666	31,252	45,267	107,185	54,469	161,654

(a) Comprises roads, mainly of natural surfaces, formed but not metalled or otherwise prepared.
(b) Roads, unprepared except for certain clearing, used for vehicular traffic.

Vehicle Registration, Licences and Traffic Control

Prior to 1973, the registration of motor vehicles under the provisions of the *Traffic Act, 1919-1974* was shared between the Police Department and local government authorities. The Police Department was responsible for the issuing of motor drivers' licences throughout the State.

With the passage of the *Acts Amendment (Road Safety and Traffic) Act, 1973*, responsibility for motor drivers' licences passed to a new organisation, the Department of Motor Vehicles, which also controlled the registration of vehicles except in those local government areas where registration functions had not been voluntarily relinquished to the Department.

The *Road Traffic Act, 1974*, which came into operation on 1 June 1975, repealed the *Traffic Act, 1919-1974*, consolidated and amended the law relating to road traffic and established the Road Traffic Authority. The Department of Motor Vehicles was abolished from the same date and its functions were taken over by the Authority. Registration of motor vehicles is presently the responsibility of the Road Traffic Authority but at 31 December 1975 seventy-six local authorities continued to act as agents of the Authority.

Persons who have not previously held a driver's licence under the Act are issued with a probationary licence, the period of probation being three years. At the end of this period the probationary licence becomes an ordinary licence. Persons who have previously held a licence in a place outside the State are issued with an ordinary licence provided that the previous licence had been held for a period of three years.

The Act provides that the Road Traffic Authority may suspend or cancel a driver's licence under certain conditions, one of them being the number or nature of the convictions under the Act or its Regulations.

Traffic control in general (except for certain powers in relation to the parking of vehicles) has been assumed progressively by the Road Traffic Authority and at 31 December 1975 only a small number of local authorities retained traffic control.

A more detailed account of events preceding the creation of the Road Traffic Authority appears in the *Western Australian Year Book*, No. 14—1975.

The Authority comprises seven members, namely the Commissioner of Main Roads; the Commissioner of Police; the Director General of Transport (or their respective deputies); three persons appointed by the Governor to represent, respectively, the Local Government Association of Western Australia, the Country Shire Councils' Association of W.A., and the Country Town Councils' Association and the permanent head of the Authority appointed under and subject to the *Public Service Act, 1904-1975*.

In addition to vehicle registration and the licensing of drivers of motor vehicles, the Authority is charged with responsibility for the collection and analysis of road traffic statistics and the undertaking of research into the causes and prevention of road accidents. In discharging its functions under the Act, the Authority is required, *inter alia*, to maintain a comprehensive knowledge of significant developments in traffic administration and research projects conducted elsewhere and to achieve the most efficient use of resources by eliminating duplication of work performed by any other body or authority, whether established within the State or elsewhere.

Section 231 of the *Local Government Act, 1960-1975* authorises local authorities to make by-laws in relation to the parking of vehicles and, in the case of the Perth City Council, certain powers in this regard are granted in terms of the *City of Perth Parking Facilities Act, 1956-1970*.

The following table shows the number of motor vehicles, classified according to type, on register in the Perth Statistical Division (see map preceding the *Index*) and in the whole of Western Australia from 1965 to 1974. Vehicles owned by the Australian Government are not licensed under the Traffic Act but are included in the figures. The table also gives the estimated number of vehicles per 1,000 of population and the number of persons per vehicle.

MOTOR VEHICLES ON REGISTER (a) AND RATIO TO POPULATION

At 31 December—	Motor cars and station wagons (^{'000})	Light and heavy commercials, omnibuses (^{'000})	Motor cycles and scooters (^{'000})	Total (^{'000})	Estimated number of vehicles per 1,000 of population		Estimated number of persons per vehicle

(a) Excluding tractors, trailers, caravans, and plant and equipment such as bulldozers, road graders and rollers, and mobile cranes. (b) Includes Australian Government-owned vehicles (other than those of the defence services) listed with the Commonwealth Motor Vehicle Registry, Canberra. At 31 December 1974 there were in Western Australia 3,159 such vehicles comprising 410 motor cars, 621 station wagons, 677 light commercials, 1,158 heavy commercials, 41 omnibuses and 252 motor cycles.

Finance for Roads

The principal source of revenue for road works in Western Australia is in the form of Australian Government financial assistance authorised by a series of Acts, the first of which, the Main Roads Development Act, was passed in 1923. The legislation currently in operation for the provision of grants to the States for or in connection with roads are the *Roads Grants Act 1974*, the *National Roads Act 1974* and the *Transport (Planning and Research) Act 1974*. The schedules of payments authorised by the first two Acts mentioned were amended by the *Appropriation Act (No. 4) 1974-75* which provided additional grants amounting to \$30 million for the year 1974-75.

The *Roads Grants Act 1974*, supplemented by the *Appropriation Act (No. 4) 1974-75*, provide grants to the States for approved expenditures on certain classes of roads, and on minor traffic engineering and road safety improvements. The Acts authorise grants of \$720.8 million for the three-year period from 1 July 1974 to 30 June 1977. Western Australia's share of these moneys amounts to \$116.5 million comprising \$57.8 million for the construction of urban arterial roads, \$28.0 million for the construction and maintenance of rural local roads, \$24.6 million for the construction of rural arterial roads and developmental roads, \$2.6 million for the construction of urban local roads and \$3.6 million for minor traffic engineering and road safety improvements. Payment of moneys provided by the *Roads Grants Act 1974* is contingent on a State's expenditure on roads from its own resources. To qualify for the full amount of the grant Western Australia's 'quota' to be spent on road works during the period to which the Act relates amounts to \$85.8 million.

The *National Roads Act 1974*, together with the *Appropriation Act (No. 4) 1974-75*, provide for the allocation of grants to the States to meet the cost of approved construction and maintenance of national highways, export roads and major commercial roads. The Acts authorise grants of \$409.2 million to be made available during the period from 1 July 1974 to 30 June 1977. Of this amount, \$36.3 million is allocated to Western Australia comprising \$26.8 million for the construction of national highways; \$6.7 million for the maintenance of national highways; and \$2.9 million for the construction and maintenance of export roads and major commercial roads.

The *Transport (Planning and Research) Act 1974* authorises the Australian Government to grant an amount of \$26 million as financial assistance to the States for approved projects of research or planning in connection with transport during the three-year period from 1 July 1974 to 30 June 1977. The amount of the grants must not exceed two-thirds of the cost of each project. Of the \$26 million, \$11 million was not allocated among the States with the object of imparting some flexibility and allowing projects to be judged on their own merits. Western Australia's share of the balance of \$15 million is \$1.4 million.

The *Road Traffic Act, 1974-1975*, which replaced the *Traffic Act, 1919-1974*, and the *Main Roads Act, 1930-1975* provide for a system of receipt and disbursement of moneys to be spent on roads. Other Western Australian Acts which provide revenue for road purposes are the *Road Maintenance (Contribution) Act, 1965-1972* (see page 283) and the *Transport Commission Act, 1966-1975* (see pages 283 and 465).

The *Road Traffic Act, 1974-1975* requires that there shall be paid to the Main Roads Trust Account, maintained under the Main Roads Act, all fees received for the issue, renewal and transfer of motor vehicle licences (other than recording fees) and for the issue of excess load permits. In addition, one-half of the fees received on the issue or renewal of drivers' licences are paid to the Account.

The *Main Roads Act, 1930-1975* provides that there shall be paid to the Main Roads Trust Account moneys received from the Australian Government as financial assistance in relation to roads; amounts payable under the provisions of the Traffic Act or any other Act; moneys appropriated by the Parliament; and payments by local government authorities in respect of permanent works and the maintenance of main roads and developmental roads. Moneys standing to the credit of the Account are used to meet expenditure by the Commissioner of Main Roads on the administration of the Act and the construction of roads and associated works, and to provide funds to local government authorities for roads and road works.

The *Main Roads Act Amendment Act, 1974* established a system of grants to local government authorities for each of the three financial years during the period ending 30 June 1977. The Act allocates each local government authority to one of four zones and provides for payment, subject to matching expenditure conditions, of a base grant to each local government authority for road construction and maintenance, and for payments of additional grants for approved programmes. The conditions relating to matching expenditures and additional grants varies for each zone. The total amount available to local government authorities in each year is \$14.0 million. In addition, a provision of the *Main Roads Act Amendment Act, 1975* empowers the Commissioner of Main Roads to borrow money for the purpose of road construction and associated activities, subject to the approval of the Minister.

Grants payable from the Main Roads Trust Account constitute the principal revenue available to local government authorities for road construction and maintenance. Other moneys may be provided from the ordinary revenue of a local authority or from loans raised for road purposes.

Beef Cattle Roads. In addition to grants made under the Commonwealth Aid Roads legislation, the Australian Government provided financial assistance, during the six-year period ended 30 June 1967, in terms of a series of Western Australia Grant (Beef Cattle Roads) Acts, the first of which was passed in 1961. The aim of this assistance was to improve the standard of roads used for the transport of beef cattle in the Kimberley. During the period of the programme almost \$17 million was spent, the State Government matching Commonwealth contributions on a dollar for dollar basis. An extension of Commonwealth financial assistance was authorised by the *States Grants (Beef Cattle Roads) Act 1968*. The Act provided a contribution of \$9.5 million as Western Australia's share of funds for a further programme of construction during a period of seven years ended 30 June 1974. The grants were again conditional upon equal expenditure by the State.

ROAD PASSENGER TRANSPORT SERVICES

Details of the operations of government and municipal omnibus services in Western Australia during the five years ended 30 June 1974 are given in the following table.

OMNIBUS SERVICES (a)

Year	Route kilometres operated (b)	Omnibuses at end of year	Omnibus kilometres run '000	Passenger-journeys '000	Employees at end of year	Operating revenues (c) \$'000	Operating expenses \$'000	Depreciation \$'000	Interest \$'000

1973-74	30	15	831	694	17	173	177	19

(a) Excludes tourist services. (b) Excludes school bus routes. (c) Passenger fares and subsidies only. (d) For passenger ferry operations, see page 463. (e) Includes operations of trolley-buses until 29 August 1969 when the service was discontinued.

Motor omnibus services (as well as a passenger ferry service) in the metropolitan area are operated by the Metropolitan (Perth) Passenger Transport Trust, constituted under the *Metropolitan (Perth) Passenger Transport Trust Act, 1957-1973*. For the purposes of the Act, the metropolitan area is defined by a proclamation of 6 June 1973 as being 'all the land within a circle having a radius of 50 kilometres from the Perth Town Hall' and in addition, an area bounded by the South-Western Highway and the ocean, extending southward to an east-west line 1.6 kilometres south of the town of Pinjarra. The trolley-bus services formerly operated by the Trust were discontinued on 29 August 1969.

Road transport of passengers outside the metropolitan area is provided by the railways road services (see page 451), which cover long-distance routes between Perth and country centres and by The Eastern Goldfields Transport Board, which serves the Kalgoorlie-Boulder urban area under an agreement with the Kalgoorlie and Boulder local government authorities. In addition, at 30 June 1974 thirty-seven private operators, employing 232 buses, were licensed to provide tourist, town, area and charter services.

In certain country areas, children are taken to and from school by motor bus at government expense. In 1973-74 the cost to the Government of school transport services was \$4,171,084. The number of omnibuses engaged was 697. They travelled a daily total of 77,365 kilometres and carried 21,359 children daily.

MOTOR VEHICLE USAGE

The most recent information on the usage of motor vehicles was that obtained by means of a sample survey conducted throughout Australia by the Australian Bureau of Statistics in relation to the twelve months ended 30 September 1971.

The sample for the whole survey comprised approximately 51,000 vehicles and some 800 bus fleets. Excluding buses, approximately 80 per cent of the sampled vehicles were trucks and other commercial types, this preponderance being necessitated by the diversity of the truck sector.

Because the survey results are based on a sample, representing some 5.1 million vehicles on register at 30 September 1971, they are subject to sampling variability when compared with results which would have been obtained from a complete census of all registered motor vehicles using the same questionnaires and procedures.

In Western Australia, the survey disclosed an average annual distance travelled of 16,900 kilometres for all vehicles, except buses. Buses averaged 33,500 kilometres, cars and station wagons 16,400, while articulated trucks with carrying capacity of sixteen tonnes and over averaged 70,800 kilometres.

Detailed information appears in the publication *Survey of Motor Vehicle Usage, twelve months ended 30 September 1971 (preliminary)*, reference number 14.4 published by the Australian Statistician, Canberra.

ROAD TRAFFIC ACCIDENTS

Statistics of road traffic accidents are prepared from information concerning accidents in public thoroughfares, as reported to officers of the Road Traffic Authority in the areas controlled by the Authority and, outside those areas, to traffic inspectors employed by local government authorities and/or police officers. Accidents involving casualties are those which result in the death of any person within a period of thirty days after the accident, or in which any person suffers bodily injury to an extent requiring surgical or medical treatment.

The following table shows, for each year during the period 1970 to 1974, the number of accidents involving casualties which occurred in Western Australia and in Australia.

The number of persons injured per 10,000 motor vehicles on register was higher in Australia as a whole than in Western Australia for each of the years shown.

The total number of persons killed in road traffic accidents in Australia in 1974 was 3,572, with 334 of the fatalities occurring in Western Australia.

ROAD TRAFFIC ACCIDENTS INVOLVING CASUALTIES
WESTERN AUSTRALIA AND AUSTRALIA

Particulars	1970	1971	1972	1973	1974

Per 100,000 of mean population (b)	731	712	691	723	683

(a) Based on final results of the census of motor vehicles on register at 30 September 1971. (b) Based on final results of the Population Census of 30 June 1971.

In the next table road traffic accident casualties which occurred in Western Australia during the five years ended 31 December 1974 are classified according to type of road user. The figures shown in the category 'Other' refer to such persons as bystanders, train drivers, riders of horses and drivers of animal-drawn vehicles. The number of pedestrians killed in the State in 1974 amounted to sixty-five or over 19 per cent of the total fatalities.

ROAD TRAFFIC ACCIDENTS
CASUALTIES ACCORDING TO TYPE OF ROAD USER

Type of road user	1970	1971	1972	1973	1974
PERSONS KILLED					
Drivers of motor vehicles	137	136	129	145	119

Total	7,373	7,328	6,751	7,377	6,277

(a) Includes riders of motor scooters.

The following table gives a classification of casualties according to the ages of persons killed and persons injured during each year of the period from 1970 to 1974.

ROAD TRAFFIC ACCIDENTS—CASUALTIES CLASSIFIED ACCORDING TO AGE

Year	Age last birthday (years)										Total
	0-4	5-6	7-16	17-20	21-29	30-39	40-49	50-59	60 and over	Not stated	
PERSONS KILLED											
1970	14	3	31	58	76	34	41	42	52	351
1971	10	6	34	52	72	33	29	34	62	332
1972	18	6	33	61	89	30	36	21	45	1	340
1973	11	4	31	61	78	44	41	30	58	358
1974	11	1	28	78	71	35	27	31	52	334
PERSONS INJURED											
1970	238	117	815	1,624	1,524	765	697	480	479	634	7,373
1971	246	116	826	1,619	1,594	785	668	470	481	523	7,328
1972	257	117	724	1,460	1,453	681	563	436	451	609	6,751
1973	239	113	746	1,656	1,552	801	598	456	471	745	7,377
1974	205	91	630	1,333	1,479	695	507	391	446	500	6,277

Road traffic accidents during the years ended 31 December 1973 and 1974 are classified in the next table according to nature of accident and type of vehicle involved. It should be noted that, as accidents (and casualties) may involve more than one type of vehicle and, in such cases, are classified to each type involved, it is not appropriate to derive totals by adding the figures shown in the second part of the table.

ROAD TRAFFIC ACCIDENTS
NATURE OF ACCIDENT AND TYPE OF VEHICLE INVOLVED

Nature of accident and type of vehicle involved	1973				1974

(a) Excludes parked vehicles.

(b) See letterpress immediately preceding table.

(c) Includes unidentified vehicles.

For additional information on road traffic accidents in this State, the reader is referred to the mimeographed bulletin *Road Traffic Accidents involving Casualties* issued quarterly and annually by the Western Australian Office of the Australian Bureau of Statistics or to the printed publication *Statistics of Western Australia—Transport and Communication*.

PASSENGER FERRY SERVICE

The Metropolitan (Perth) Passenger Transport Trust operates a passenger ferry service across the Swan River from Perth to South Perth and makes boats available for charter. Particulars of private charter excursions, other than those which relate to operating revenues and expenses, are excluded from the figures in the following table.

PASSENGER FERRY SERVICE

Year	Ferries at end of year	Kilometres run (a)	Passenger-journeys (a)	Employees at end of year	Operating revenues	Operating expenses	Depreciation	Interest
1970-71	5	36,036	357,372	9	\$ 74,393	\$ 66,468	\$ 3,188	\$ 6,276

(a) Excludes private charter operations.

AIR TRANSPORT

The supervision and control of civil air transport throughout Australia is the responsibility of the Federal Department of Transport. Its regulatory functions include the licensing of air crew, engineering staff, airlines, charter and aerial work operators, flying schools and aerodromes; and the establishment and operation of air traffic control procedures. The Federal Minister for Transport has the responsibility for the approval of fares and freight rates. The Department is responsible for the conduct of search and rescue operations; the provision and maintenance of government aerodromes, aeronautical communication systems and radio navigational aids; and the specification of required meteorological services. It also co-operates with the State Transport Commission which has a statutory licensing function in respect of air transport facilities within the State.

An extensive system of regular air services operates in Western Australia for the transport of passengers, freight and mail. The International Airport, twelve road kilometres from central Perth, is used by:

- (i) six international operators providing regular jet service to and from Africa, Europe, the Middle East, India, Indonesia, Malaysia, Singapore, Hong Kong and Japan;
- (ii) two interstate operators providing up to eight jet services per day between Perth and other Australian capital cities;
- (iii) one operator based in Perth providing frequent jet services to eleven other towns in Western Australia and to three towns in the Northern Territory and turbo-prop feeder services from another seventeen ports to the jet routes; and
- (iv) commuter operators connecting Perth with fourteen country centres.

Other commuter services connect seven townships with ports on jet routes.

During the past ten years the average annual passenger traffic growth at Perth Airport has exceeded 14 per cent.

In addition to the aircraft capacity provided by airline and commuter operators there is a large fleet of light aircraft available for charter work and all kinds of aerial work

including aerial surveys, spotting, aerial agriculture, etc. This fleet which includes executive twin-jet type aircraft and helicopters numbered 240 in November 1975 when there were another 311 private (non-commercial) aircraft based in Western Australia.

Perth Airport is equipped with modern electronic and electrical navigation and approach aids to enable operations in periods of low visibility, and thirteen airports in the State have been equipped with visual approach slope indicator lighting systems to permit regular jet operations at those ports. There are ten communication and flight service centres and three air traffic control establishments at various ports throughout Western Australia.

In November 1975 the Australian Government owned and maintained twenty-two aerodromes in Western Australia and there were thirty-nine licensed aerodromes owned privately or by local authorities. Strips suitable for use by light aircraft and scattered throughout the State were estimated to exceed 500 in number. The Royal Flying Doctor Service, which has occasion to operate to and from many of those strips, has a number of bases in Western Australia and details of its activities are given in Chapter V, Part 3.

Airport Operations. The following table, compiled from information published by the Federal Department of Transport, Air Transport Group, provides a summary of operations at principal airports in Western Australia during each of the years 1972 to 1974. The figures refer only to regular public transport operations on scheduled services by licensed airlines and do not include charter and commuter services, details of which are not available. Commuter service is a term used to describe regular flights by charter firms with small aircraft operating to fixed and published timetables.

(a) Accidents involving civil aircraft which resulted in death or serious injury. Excludes parachutists killed on contact with earth after an uninterrupted fall. Excludes accidents outside Australia involving aircraft on the Australian register.

TRANSPORT CO-ORDINATION

State Transport Co-ordination Act

The *State Transport Co-ordination Act, 1966*, which came into operation on 19 June 1967, repeals the *State Transport Co-ordination Act, 1933-1961*. The Act provides for the appointment of a Director General of Transport, a Transport Advisory Council and a Transport Users' Board.

The duties of the Director General are to recommend to the Minister transport policy or changes in transport policy and measures for achieving policy objectives and the co-ordination of the various forms of transport service; to implement such policies and measures; to provide for research in transport planning and operation and in the economics of every form of transport; to co-ordinate capital works programmes for public transport services; to inquire into existing transport services; to recommend the provision of road transport services; to examine and report on any proposal for the construction of a new railway; to recommend the closure or partial suspension of any transport service, including a railway; and to advise the Minister on the administration of specified Acts relating to transport.

The Transport Advisory Council comprises the Director General of Transport (as Chairman), the Commissioner of Railways, the Commissioner of Main Roads, the Commissioner of Transport, the Chairman of the Metropolitan (Perth) Passenger Transport Trust, the Chairman of the Western Australian Coastal Shipping Commission, a representative of the West Australian Road Transport Association, and a representative of operators of regular air transport services. The duties of the Council are to formulate proposals in respect of, and make recommendations on, any matter referred to it by the Minister or the Director General of Transport, or that it may bring forward of its own motion.

The Transport Users' Board consists of the Director General of Transport (as Chairman) and four persons appointed by the Governor on the nomination of the Minister. These four members must be persons who, in the opinion of the Minister, are capable of assessing the financial and economic effect on transport users of any proposed or existing transport policy, two of them being persons particularly versed in the transport needs of rural industries. The Transport Users' Board is charged with the duty of considering and, where it so resolves, of making recommendations on, any matter affecting a transport service operating in the State, or concerning the lack or inadequacy of a transport service.

Transport Commission Act

The *Transport Commission Act, 1966-1975* provides for the appointment of a Commissioner of Transport. Under the direction of the Minister, the Commissioner is required to call tenders for the provision of road transport where, in the opinion of the Minister, the requirements of a district are not adequately served by any form of transport; to administer and direct the payment of such subsidies with respect to the provision of transport as may be authorised pursuant to the Act; and to consider and determine all applications for licences in respect of public vehicles. In regard to such licences the Commissioner may specify any particular conditions concerning the granting or holding

of a licence, and may determine, in respect of any particular licence or group of licences, the conditions that shall be imposed on the granting and holding of such licences.

The public vehicles licensed by the Commissioner are omnibuses (other than those operated by the Metropolitan (Perth) Passenger Transport Trust), commercial goods vehicles, and aircraft.

In the licensing of omnibuses the Commissioner is empowered to prescribe the routes to be operated, the stopping places at which passengers may be picked up or set down, the fares to be charged, the timetables to be observed and the maximum number of passengers to be carried at any one time on any vehicle. The Commissioner may impose such other conditions as he thinks proper in the public interest.

All commercial goods vehicles operating on public roads are required to be licensed, except those which operate solely in the area within a radius of thirty-five kilometres from the General Post Office, Perth, or within a radius of thirty-five kilometres from the owner's place of business (or, where such place of business is situated more than sixty-five kilometres from the General Post Office, Perth, within a radius of forty kilometres). Exemptions from licensing provisions also apply to vehicles used for the transport of specified types of goods, mainly primary produce including forest products, minerals and livestock, or for the transport of goods within particular areas or between particular points.

Aircraft licences issued by the Commissioner relate to regular services and charter flights. Aircraft exempted from the licensing provisions of the Act are those operated solely in connection with the Royal Flying Doctor Service or in the course of aerial spraying, crop dusting, seed sowing, fertiliser distribution, photography, geophysical surveying, dingo baiting or whale or fish spotting.

The *Road and Air Transport Commission Act Amendment Act, 1970* widens the scope of the original Act to include control of the operations of ships engaged in the coasting trade. Under the provisions of the 1970 legislation, ships other than those operated by the Western Australian Coastal Shipping Commission may not engage in the coasting trade unless authorised to do so by a licence or permit granted by the Commissioner of Transport.

Financial transactions are recorded in a Transport Commission Fund account as required by the Act. The principal revenues of the Fund are receipts from licence and permit fees and amounts received from the Treasury for distribution in the form of subsidy to transport operators and others in certain areas. The expenditure from the Fund includes amounts necessary to meet administration costs, disbursements to the Main Roads Department and to local government authorities for the maintenance and improvement of roads, moneys required to be held in trust for the provision and maintenance of landing grounds, and the payment of subsidies. Subsidies are paid principally on the cartage of grain and fertilisers, but also on the air transport of perishable goods to remote parts of the State and on travel, mainly by air, by students normally resident in those areas.

Taxi-cars (Co-ordination and Control) Act

The *Taxi-cars (Co-ordination and Control) Act, 1963-1975* constitutes a Taxi Control Board of seven members to provide for the co-ordination and control of taxi-cars and the registration and conduct of taxi-car drivers in the Metropolitan Traffic Area and such other areas as may be declared. The Act provides that the Board shall consist of the Commissioner of Transport (as Chairman); a representative appointed, from time to time, by the Road Traffic Authority; and five persons, appointed by the Governor, comprising one to represent the interests of local authorities, chosen from a panel of names that is obtained by each local authority submitting the name of one person; one nominated by the W.A. Taxi Operators' Association; one taxi-car owner and one full-time taxi-car driver, each of whom shall be elected by taxi-car owners and operators; and one nominated by the Metropolitan (Perth) Passenger Transport Trust.

The principal functions of the Board are the formulation of schemes for the co-ordination and control of taxis; the determination of the number and kind of taxis to be licensed;

the issue of licences; the determination of fares and other charges; the supervision of the operation of taxis and the regulation of stands; the registration of, and the control of the conduct and dress of, drivers; and the enforcement of regulations made under the Act.

It is provided that the number of taxis that may be licensed to operate within the metropolitan area shall not at any time exceed one for every 800 of the population of the area.

The Act establishes a Taxi Control Fund for the receipt of fees payable on the issue, renewal or transfer of licences. The expenses of the administration of the Act are paid from the Fund.

Chapter IX—continued

Part 4—Communication

POSTS, TELEGRAPHS AND TELEPHONES

The first postmasters in the Colony of Western Australia were appointed at Perth and Fremantle in 1830 and a Postal Department was established by the Colonial Government in 1834. Telegraphic communication, between Perth and Fremantle, was inaugurated in 1869 by means of a private line, which was purchased by the Government in 1871. A telephone exchange system, installed and operated by the Government, was opened at Perth in 1887.

In 1901, following the federation of the Australian Colonies, the post, telegraph and telephone services of the State Governments were transferred to the Commonwealth Government. The Post and Telegraph Act of 1901 placed the services under the control of a Commonwealth Minister to be known as the Postmaster-General. The *Postal Services Act 1975*, *Telecommunications Act 1975*, and *Postal and Telecommunications Commissions (Transitional Provisions) Act 1975* established two statutory authorities, the Australian Postal Commission and the Australian Telecommunications Commission to control, respectively, from 1 July 1975, the postal and telecommunications services previously provided by the Postmaster-General's Department. As the figures shown in the following tables relate to periods up to 30 June 1975, they therefore refer only to operations of the Postmaster-General's Department.

The following table shows the number of persons employed by the Postmaster-General's Department in Western Australia, and the number of post offices throughout the State at 30 June in each year from 1971 to 1975. Full-time employees are those directly under the control of the Department. The remainder, shown as 'Other employees', provide services, which may or may not occupy their full time, under contract or in return for payments appropriate to work performed. 'Non-official' post offices are conducted by persons who are not members of the Australian Public Service, and are frequently operated in conjunction with some other business activity.

POSTMASTER-GENERAL'S DEPARTMENT
NUMBERS OF EMPLOYEES AND OFFICES—WESTERN AUSTRALIA

Particulars	At 30 June—				
	1971	1972	1973	1974	1975
Full-time employees—					
Permanent officers	6,400	6,777	7,353	7,744	8,176

Total	9,167	9,307	9,628	10,010	10,027
Other employees—					
Non-official postmasters and staff	444	435	431	418	406
Telephone office-keepers	161	143	139	124	54
Mail contractors (a)	338	297	261	312	300
Part-time employees	391	371	408	416	473
Total	1,334	1,246	1,239	1,270	1,233
Total, Employees	10,501	10,553	10,867	11,280	11,260
Post offices—					
Official	163	161	161	160	161
Non-official	431	422	421	407	391
Total	594	583	582	567	552

(a) Includes persons employed by contractors to drive vehicles on mail runs.

The total number of employees of the Postmaster-General's Department for Australia as a whole at 30 June 1975 was 136,377. At the same date there were 6,068 official and non-official post offices.

Figures relating to the cash receipts and expenditure of the Department in Western Australia during each of the financial years 1970-71 to 1974-75 are given in the following table. They represent actual collections and payments in each year, as shown by records kept for Treasury purposes. Some additional items of departmental revenue and expenditure are not apportioned to States and therefore do not appear in the table. As the figures shown relate to actual collections and payments made, they do not represent the net results of the Department's operations for the year.

**POSTMASTER-GENERAL'S DEPARTMENT
CASH RECEIPTS AND EXPENDITURE—WESTERN AUSTRALIA
(\$'000)**

Other	2,931	3,084	2,827	3,173	4,184
Parcels (b)	137	150	168	177	176
Registered articles (c)	65	75	77	83	97

(a) Excludes matter received from other Australian States. (b) Includes registered, cash on delivery and duty parcels. (c) Excludes registered parcels; see footnote (b).

Telegraphs and Telephones

The next two tables relate to telegraph and telephone services in Western Australia in each financial year from 1970-71 to 1974-75. Telegrams can be lodged at any post office, telephone office or from any public telephone equipped for multi-coin operation. In addition, telegrams can be despatched from any subscriber's telephone or teleprinter exchange (telex) equipment. The number of telegraph offices in the State and of telegrams transmitted from Western Australia during the years 1970-71 to 1974-75 are set out below.

Telephone services comprise ordinary exchange services (*i.e.* those which provide direct access to the exchange system by means of exclusive use of an exchange line), duplex services, party-line services, private branch exchange services and public telephones. The numbers shown as 'Telephone instruments in service' relate to those through which direct access to the exchange system may be obtained.

At 30 June 1975, the pair length of conductors in telegraph and telephone cables in Western Australia was 2,327,927 kilometres. The pair length of aerial wires was 79,397 kilometres and the length of pole routes was 24,852. There were 9,069 tube kilometres of coaxial cable.

The teleprinter exchange service (telex) was introduced in Perth in December 1956. This service enables a subscriber's teleprinter to be connected with that of any other subscriber in the local network or networks in other States. Details of the number of services and internal calls for the five years ended 30 June 1975 appear on page 471.

TELEGRAPHS

(a) Includes Post Office official traffic.

RADIOCOMMUNICATION

The Overseas Telecommunications Commission (Australia) is the authority responsible for the operation of telecommunication services between Australia and other countries, with ships at sea and to and between Australia's external Territories.

The Commission was established under the provisions of the *Overseas Telecommunications Act 1946* which implemented a recommendation of the 1945 Commonwealth Telecommunications Conference for national ownership of the external telecommunication services of the British Commonwealth countries concerned. In 1966 the Commonwealth countries completed a review of the machinery for their collaboration in telecommunications and, as a result, the Commonwealth Telecommunications Organisation was established. The purpose of this body is to promote the efficient exploitation and development of the Commonwealth external telecommunications system.

A number of countries, including Australia, agreed in 1964 to establish a global commercial communications satellite system and Australia, represented by the Commission, is a member of the management body of the sixty-nine nation International Telecommunications Satellite Consortium (INTELSAT).

The Commission operates three 'standard' earth stations (at Carnarvon in Western Australia, Ceduna in South Australia and Moree in New South Wales) which can communicate via satellite with stations in other countries. The standard station at Carnarvon was brought into service on 1 October 1969, enabling a non-standard earth station at Carnarvon to be released for the full-time performance of telemetry, tracking and command functions for the INTELSAT organisation.

The transmission facilities used by the Commission in its external operations are submarine cables, satellites and high frequency radio. It operates a coastal radio service and, in association with the Post Office within Australia and with communication carriers in other Commonwealth and foreign countries, provides public message telegram, telephone, telex, photo-telegram, leased circuit and television services to most countries and places throughout the world.

The coastal radio service provides, as its principal function, essential maritime communications, including distress signals, navigation warnings, air-sea rescue service and radio-medical service messages, meteorological messages and time signals, as well as naval traffic as required. It provides also, by radiotelegraph and radiotelephone, commercial

communications with ships at sea and, by radiotelephone, message communication with small vessels. Western Australian coastal radio stations are located at Perth, Broome, Carnarvon, Esperance and Geraldton.

The licensing of civil radiocommunication stations and the transmission of radio messages within Australia are the responsibility of the Australian Telecommunications Commission. The Royal Flying Doctor Service of Australia, to which reference is made in Part 3 of Chapter V, provides general telegraph facilities in remote areas through its extensive radio network.

At 30 June 1975 there were 221,934 civil radiocommunication stations authorised throughout Australia. They comprised 5,559 fixed stations, 18,694 land stations, 190,833 mobile stations, 6,838 amateur stations and 10 space services.

The numbers of each type of radiocommunication station authorised to operate in Western Australia at 30 June 1975 are given in the next table. The following definitions are relevant in considering the figures shown in the table. *Fixed Stations*—Stations established at fixed locations for communication with other stations similarly established. *Outposts*—Stations established in outback areas for communication with control stations such as those of the Royal Flying Doctor Service. *Land Stations*—Stations established at fixed locations for communication with mobile stations. *Coast Stations*—Land stations for communication with ocean-going vessels. *Mobile Stations*—Equipment installed in aircraft (aeronautical), motor vehicles (land mobile services), harbour vessels (harbour mobile services) and ocean-going vessels (ship), and mobile equipment of organisations such as the Royal Flying Doctor Service. *Radiodetermination Stations*—Stations employed for the determination of position, or the obtaining of information relating to position, by means of the propagation of radio waves. *Space Services*—Radiocommunication services, between earth stations and space stations, between space stations or between earth stations when signals are re-transmitted by space stations, or transmitted by reflection from objects in space, excluding reflection or scattering by the ionosphere or within the earth's atmosphere.

CIVIL RADIOCOMMUNICATION STATIONS AUTHORISED AT 30 JUNE 1975

Repeater	39	GRAND TOTAL	25,600

BROADCASTING AND TELEVISION

Broadcasting and television services throughout Australia are controlled by the Australian Broadcasting Control Board under the direction of the Minister for Post and Telecommunications. The Board is constituted under a provision of the *Broadcasting and Television Act 1942-1975*, which places under its general control the National Broadcasting Service, the National Television Service, the Commercial Broadcasting Service and the Commercial Television Service. Other relevant Acts are the *Broadcasting Stations Licence Fees Act 1964-1973*, the *Television Stations Licence Fees Act 1964-1966* and the *Parliamentary Proceedings Broadcasting Act 1946-1974*. Under the last-mentioned Act, the Australian Broadcasting Commission is obliged to broadcast the proceedings of the Senate or the House of Representatives as determined by a Parliamentary Joint Committee.

The principal functions of the Australian Broadcasting Control Board, which consists of three full-time and two part-time members, are to ensure that services by broadcasting stations and television stations are in accordance with approved plans, that stations are

operated in accordance with appropriate technical standards, and that adequate and comprehensive programmes are provided by commercial broadcasting and television stations. Subject to the approval of the Minister and of the Treasurer, the Board may give financial and other assistance to commercial broadcasting stations for the purpose of ensuring that programmes of adequate extent, standard and variety are provided in the areas which they serve. The Board is required to hold public inquiries into applications for licences for commercial broadcasting and television stations in areas for which the Minister proposes to grant licences. It is also the responsibility of the Board to determine, subject to any direction of the Minister, the situation, operating power and operating frequencies of broadcasting and television stations.

The Australian Broadcasting Commission, which is constituted under the *Broadcasting and Television Act 1942-1975*, controls the activities of, and provides programmes for, the National Broadcasting Service and the National Television Service which use transmitters operated by the Australian Telecommunications Commission. The operations of the Australian Broadcasting Commission are financed by appropriations made by the Australian Parliament.

The income of licensees of commercial broadcasting and television stations is derived from advertisements and other forms of publicity.

Commercial broadcasting stations are operated under licences granted and renewed by the Minister for Post and Telecommunications after taking into consideration any recommendations which have been made by the Australian Broadcasting Control Board. The initial period of a licence is five years and renewals are granted for a period of one year.

Commercial television stations are also operated under licences granted and renewed by the Minister for Post and Telecommunications. The initial grant of a licence is for a period of five years and thereafter the licence is renewable annually.

Broadcasting and Television Stations

In 1923, the first radio broadcasting station commenced operations in Australia and, in the following year, station 6WF (Western Farmers) opened in Perth. The following table shows details of stations operating in Western Australia at 30 June 1975. At that date there were eighteen national and fourteen commercial broadcasting stations in the State.

BROADCASTING STATIONS AT 30 JUNE 1975

Perth	VLW	(b)	133				

(a) To the nearest quarter hour. (b) The station operates two transmitters, of 10,000 and 50,000 watts. Frequencies are varied as required to obtain optimum results.

Television commenced in Australia on 16 September 1956 when station TCN, Sydney began regular transmission. By 30 June 1975 the number of stations in operation had increased to a total of 132, comprising eighty-four national stations and forty-eight commercial stations.

The first television station in Western Australia commenced full-scale transmission in Perth on 16 October 1959 and, at 30 June 1975, three metropolitan and eighteen country television stations were operating in the State. Details are shown in the following table, in which particulars are given of both national and commercial stations.

TELEVISION STATIONS AT 30 JUNE 1975

Call sign and channel	Area served	Location of transmitter	Hours of service per week (a)	Date of commencement of operations (b)
NATIONAL STATIONS				
ABW-2	Perth	Bickley	88½	7 May 1960
ABAW-2	Southern Agricultural	Mount Barker	88½	6 June 1966
ABCW-4	Central Agricultural	Mawson Trig	88½	28 March 1966
ABCMW-8	Morawa	Billerranga Hills	88½	8 March 1975
ABCNW-7	Camarvon	Carnarvon	88½	30 June 1972

COMMERCIAL STATIONS				
STW-9	Perth	Bickley	100½	12 June 1965
TVW-7	Perth	Bickley	101½	16 October 1959
BTW-3	Bunbury	Mount Lennard	40½	10 March 1967
GSW-9	Southern Agricultural	Mount Barker	40½	23 August 1968
VEW-8	Kalgoorlie	Kalgoorlie	39	18 June 1971

(a) To nearest quarter hour.

(b) Date on which full-scale transmission began.

Television transmissions by means of either a translator station or a repeater station are provided to some areas of the State not served by the stations shown in the above table. Translator stations are low-powered stations which receive signals from a parent station or another translator station and re-transmit those signals on a different frequency channel. They serve mainly isolated areas where there is not satisfactory reception from high-powered stations. Repeater stations are stations of low operating power designed to transmit only programmes recorded on magnetic tape.

At 30 June 1975 six translator stations were in operation in Western Australia—at Kambalda, receiving signals from national station ABKW-6 and commercial station VEW-8 Kalgoorlie, at Albany, receiving signals from national station ABAW-2 and commercial station GSW-9, and at Katanning and Wagin receiving signals from the

parent station ABW-2 Perth. At the same date television repeater stations were operating at Cockatoo Island, Koolan Island, Mount Nameless, Newman, Paraburdoo and Tom Price. Low-power national television stations are planned for Newman and Wittenoom. Commercial translator stations have been approved for Katanning and Wagin and national translator stations for Goldsworthy, Manjimup, Merredin, Mullewa, Narrogin, Pannawonica, Paraburdoo, Pemberton, Shay Gap, Tom Price and Wongan Hills.

Receiving Licences

Until an amendment to the legislation in 1974, broadcast listeners', television viewers', and combined receiving licences were issued at post offices in accordance with the provisions of the *Broadcasting and Television Act 1942-1973*. A person who had both broadcast and television receivers at the one address was required to take out a combined receiving licence, provision for which was introduced by legislation effective from 1 April 1965.

Provisions in the Act requiring the licensing of domestic broadcast and television receivers were repealed by the *Broadcasting and Television Act 1974*, with effect from 18 September 1974.

Analysis of Programmes

The particulars shown in the following tables have been taken from the Report of the Australian Broadcasting Control Board for the year ended 30 June 1975. Regular surveys are conducted by the Board in order to measure the nature and range of programmes available to the public.

Broadcasting. The analysis of broadcasting programmes for Australia as a whole, as shown in the following table, is based on the combined figures from two surveys conducted by the Board in October 1974 and March 1975. In each case programmes of stations in State capital cities were monitored on a sampling basis for one minute in each ten minutes of transmission between 6.00 a.m. and 10.30 p.m. for a full week.

In order to present a complete picture of programmes available, the survey includes the programmes of two representative national stations, and five commercial provincial stations.

BROADCASTING STATIONS—ANALYSIS OF PROGRAMMES
ALL STATIONS: AUSTRALIA
(Per cent)

Programme category	Metropolitan national	Metropolitan commercial	All metropolitan stations	Provincial commercial
Entertainment—				
Light and popular music	21.7	55.4	44.8	61.0

(a) Serious music and opera; readings of prose and poetry; literary and art criticism. (b) Includes such topics as aspects of science; other countries and peoples; agriculture and other industries. (c) Includes programmes dealing with cooking; house and garden; hobbies; care of pets; health and physical fitness. (d) Programmes designed as an aid to formal teaching; kindergarten sessions.

Television. The analysis of television programmes for the year 1974-75, as shown in the following table, is based on a complete coverage of programmes televised by commercial stations and a sample station of the national network. Details of commercial television programmes are derived from data supplied regularly by each station to the Board and details of national television programmes are obtained from information supplied by the Australian Broadcasting Commission. For the purpose of the table the programmes analysed are those of all metropolitan commercial stations, seventeen country commercial stations, and, in the case of the National Service, those of ABV-2 Melbourne. These are considered to be reasonably representative of the commercial and national television services.

Colour television was introduced officially into Australia on 1 March 1975. Limited transmissions of programmes in colour had been permitted, however, by the Australian Broadcasting Control Board for several months previously.

(a) Excludes time occupied by advertisements. A survey in 1975 showed that, for Melbourne stations, advertisements occupied 16.8 per cent of the total time.

CHAPTER X—INDUSTRIAL CONDITIONS, EMPLOYMENT AND PRICES

Part 1—Industrial Conditions

INDUSTRIAL AUTHORITIES

Federal Authorities

A Commonwealth Court of Conciliation and Arbitration was established under the provisions of the *Commonwealth Conciliation and Arbitration Act 1904*. By an amendment made to the Conciliation and Arbitration Act in 1956 the Commonwealth arbitration system was reorganised by the creation of two separate authorities to deal with matters formerly within the sole jurisdiction of the Court. The amendment had the effect of allocating to a Commonwealth Industrial Court the judicial functions, and to a Commonwealth Conciliation and Arbitration Commission the arbitral functions, previously carried out by the Commonwealth Court of Conciliation and Arbitration.

Under the provisions of the *Conciliation and Arbitration Act 1973* the name of the Commonwealth Industrial Court was changed to Australian Industrial Court, and that of the Commonwealth Conciliation and Arbitration Commission to Australian Conciliation and Arbitration Commission, with effect from 13 November 1973.

Australian Industrial Court. The Australian Industrial Court, as constituted by the *Conciliation and Arbitration Act 1904-1976*, comprises a Chief Judge and not more than eleven other Judges. The Act provides that, except in respect of certain specified matters, the jurisdiction of the Court shall be exercised by not less than three Judges. A single Judge may refer a question of law for the opinion of the Court constituted by not less than three Judges. The Australian Conciliation and Arbitration Commission may also refer a question of law for the opinion of the Court. Appeal from a judgment of the Australian Industrial Court may, in certain circumstances, be made to the High Court of Australia, but only when the High Court grants leave to appeal.

Australian Conciliation and Arbitration Commission. The Australian Conciliation and Arbitration Commission, according to the provisions of the *Conciliation and Arbitration Act 1904-1976*, comprises a President and such numbers of Deputy Presidents and of Commissioners 'as are necessary from time to time'. The President and the Deputy Presidents are described as 'Presidential Members' of the Commission. The powers of the Commission include the prevention or settlement, by conciliation or arbitration, of industrial disputes which extend beyond the limits of any one State, but the Commission is authorised to conciliate or arbitrate in respect of any dispute or industrial matter associated with Australian Government undertakings or projects. A Full Bench of the Commission consists of not less than three members, including at least two Presidential Members. The power to make awards or certify agreements making provision for, or altering, standard hours, rates of wages (including a minimum wage), annual leave or long service leave is exercisable only by a Full Bench, except where the provision or alteration gives effect to matters, or is in accordance with principles, determined by a Full Bench. The Principal Registry of the Commission is in Melbourne, Victoria, and there is a Deputy Industrial Registrar in each State.

Western Australian Authorities

A Court of Arbitration was established in Western Australia in 1901 under the provisions of the *Industrial Conciliation and Arbitration Act, 1900*. The Court comprised a President, a representative of associations of employers and a representative of associations

of workers. The Court of Arbitration was replaced, with effect from 1 February 1964, by the Western Australian Industrial Appeal Court and The Western Australian Industrial Commission, authorities constituted in terms of the *Industrial Arbitration Act, 1912-1975*.

Western Australian Industrial Appeal Court. The Western Australian Industrial Appeal Court consists of three Judges, one of whom is President of the Court. The President and the other members are nominated by the Chief Justice of Western Australia. Certain of the functions, powers and jurisdiction conferred on the Court may be exercised by any member, on the nomination of the President, sitting or acting alone. An appeal lies to the Court from any decision of the Western Australian Industrial Commission or the Commission in Court Session, but only on the ground that such decision is erroneous in law or is in excess of jurisdiction.

The Western Australian Industrial Commission. The Western Australian Industrial Commission consists of a Chief Industrial Commissioner and 'such number of other Commissioners as may, from time to time, be necessary'. At 30 June 1976, the Commission comprised a Chief Industrial Commissioner and six other Commissioners. The Act provides that a Commissioner sitting or acting alone constitutes the Commission and may exercise all the powers and jurisdiction of the Commission.

The Commission is empowered to inquire into any industrial matter or industrial dispute in any industry and to make orders or awards fixing the prices for work done by and the rates of wages payable to workers; fixing the number of hours and the times to be worked in order to entitle those workers to the wages so fixed; limiting the hours of piece workers; fixing the rates for overtime, work on holidays, shift work, week-end work and other special work, including allowances as compensation for overtime; determining any industrial matter; and declaring what deduction may be made from the prices or wages of workers for board or residence or board and residence provided for workers and for any customary provisions or payments in kind conceded to such workers.

The Commission in Court Session is constituted by not less than three Commissioners sitting or acting together. Appeals from decisions of a single Commissioner are heard and determined by the Commission in Court Session. Such appeals are restricted to the evidence and matters raised in the proceedings before the single Commissioner.

The *Industrial Arbitration Act Amendment Act, 1973* provides that a Commissioner shall appoint as mediator a person nominated by the parties to an industrial dispute when so requested by the parties, and subject to the nominated person's acceptance of the appointment.

THE WESTERN AUSTRALIAN INDUSTRIAL COMMISSION

Particulars	At 30 June—				
	1971	1972	1973	1974	1975
Awards in force	389	396	395	396	393
Industrial agreements in force	116	134	142	146	150

Unions of employers—					
Number	13	13	13	13	14
Membership	1,864	1,908	1,777	1,745	2,181

Western Australian Coal Industry Tribunal. The Western Australian Coal Industry Tribunal, as constituted under the *Mining Act, 1904-1973*, consists of five members appointed by the Governor. One member is chairman of the Tribunal, and there are two members representing employees, and two representing employers. The Tribunal has power to consider and determine industrial disputes, not extending beyond the limits of the State, and other matters relating to the coal-mining industry.

EMPLOYER ORGANISATIONS

The first employers' organisation in Western Australia was the West Australian Chamber of Commerce which was founded in 1853 and was replaced by the Fremantle Chamber of Commerce in 1873. The Perth Chamber of Commerce (Incorporated) was founded in 1890. Other Chambers of Commerce operate in various parts of the State.

The West Australian Chamber of Manufactures (Incorporated) commenced in 1890, but disbanded and was formed again in 1899. The Western Australian Employers' Federation (Incorporated) was founded in 1913 to handle labour relations for all private industry throughout the State. On 1 October 1975, the two bodies amalgamated under the name of The Confederation of Western Australian Industry (Incorporated), with 8,200 individual members and 106 member associations. The Confederation is controlled by a Board of Management elected by a Manufacturing Industry Council and a Labour Relations Council.

The Confederation represents employers in all aspects of the negotiation of industrial awards and agreements, in the settlement of industrial disputes, including arbitration, and in direct relationships with the trade unions. It is affiliated with the Australian Council of Employers' Federations and is a member of the Central Industrial Secretariat of the Federations and Chambers of Manufactures of each State. Through the Australian Council it has overseas affiliation with the International Organisation of Employers. The Manufacturing Industry Council is affiliated with the Associated Chambers of Manufactures of Australia.

EMPLOYEE ORGANISATIONS

The trade unions in Western Australia cover all forms of occupations from the unskilled to the professional worker. The great majority of union organisations are national in character with State branches registered with both the Federal and State industrial authorities.

Major organisations are the Trades and Labor Council of Western Australia, the State branches of the Australian Council of Salaried and Professional Associations, the Australian Public Service Federation, and the Council of Australian Government Employee Organisations. These four groups cover most of the wage and salary earners employed in the private and governmental sectors of industry and commerce.

The Trades and Labor Council of Western Australia, which is the State branch of the Australian Council of Trade Unions (A.C.T.U.), has provincial councils at Albany, Geraldton, Kalgoorlie and Port Hedland. At 30 June 1975 it had affiliated with it seventy State resident unions having a membership of 110,581.

The Trades and Labor Council, representing the largest group of wage and salary earners, frequently acts on behalf of employees in matters before the Western Australian industrial authorities such as wages, hours, holidays, long service leave, and other associated matters of a standard or uniform nature.

TRADE UNIONS—NUMBER AND MEMBERSHIP

Date	Number of unions	Number of members ('000)			Proportion of total wage and salary earners (a) (per cent)		
		Males	Females	Persons	Males	Females	Persons
End of December—							
1970	155	127.0	41.6	168.6	53	36	48
1971	154	133.5	44.8	178.3	55	37	49
1972	151	135.7	49.1	184.8	57	39	51
1973	154	142.6	54.8	197.4	58	41	52
1974	151	153.0	63.4	216.4	61	46	55

(a) Approximate; see accompanying letterpress on page 480.

The previous table gives particulars of the number of trade unions in Western Australia and the number of members at the end of December of the years 1970 to 1974. The

table also shows the estimated percentage of trade union members to total wage and salary earners in employment. The percentages should be regarded as giving only a broad indication of the extent of union membership among wage and salary earners because they are based on estimates of *employed* wage and salary earners that are subject to revision. The degree of unemployment among reported union members would affect the percentages for a particular year and comparisons between years.

APPRENTICESHIP

The first registration of an apprentice in Western Australia was made on 25 May 1903 to the trade of book binding. At 31 December 1974 the total number of apprentices registered in this State was 10,622 in a wide variety of trades as given in the table that follows.

Apprenticeships in this State are provided for by, and are subject to, awards of The Western Australian Industrial Commission and registered industrial agreements. The Western Australian Industrial Commission functions by authority of the *Industrial Arbitration Act, 1912-1975*.

In the following table, the total number of apprentices registered in this State at 31 December is given for each of the years 1972 to 1974.

APPRENTICESHIP—NUMBER OF EFFECTIVE REGISTRATIONS

Trade	At 31 December—			Trade	At 31 December—		
	1972	1973	1974		1972	1973	1974

At 31 December 1972, 45 per cent of all registrations effective were for a term of less than five years. The corresponding proportion at the end of 1973 was 53 per cent and at the end of 1974, 61 per cent.

The following table shows the number of new registrations effected during each of the three years 1972 to 1974. As in the previous table, details are given separately for

registrations under State awards and Federal awards and in respect of Australian Government Departments.

APPRENTICESHIP—REGISTRATIONS TO VARIOUS TRADES

By definition, an apprentice is a person of either sex not less than fourteen years of age who is apprenticed to learn or to be taught any industry, trade, craft or calling to which the Apprenticeship Regulations apply. All industrial aspects of apprenticeship are within the jurisdiction of the Commission and the Technical Education Division of the Education Department provides the technical training as prescribed by the various awards of the Commission and by industrial agreements.

The Western Australian Apprenticeship Advisory Council, which comprises two representatives each from employers, employees and the State Government, with the Under Secretary for Labour and Industry as Chairman, advises the Minister for Labour and Industry, the Minister for Education and the Commission on matters of policy in respect of apprenticeship.

The Council assigns to Apprenticeship Advisory Boards such matters of an advisory nature relating to its trade or group of trades as considered necessary. Recommendations made to the Council from a Board may, after consideration and approval by the Council, be submitted to the Commission or to the Director-General of Education with a view to their implementation. The Boards consist of representatives from employers and employees, together with a representative from the Technical Education Division of the Education Department. The assistant Industrial Registrar of The Western Australian Industrial Commission is currently Chairman of all Apprenticeship Advisory Boards.

Technical school attendance is compulsory when the Technical Education Division has suitable classes available in schools within a nineteen-kilometre radius of the apprentice's home. Block release training applies in the following trades: carpentry and joinery, bricklaying, painting, vehicle body building, panel beating, and spray painting. In other

cases day release training is prescribed. In the building and vehicle building trades compulsory attendance for intensive training is prescribed for country apprentices and correspondence lessons are available in most other trades, in conjunction with voluntary intensive training courses.

Pre-apprenticeship courses are available in the automotive, bricklaying, cabinetmaking, woodmachining, carpentry and joinery, dental technician, plumbing, and radio and television trades. On satisfactorily completing such a course the apprentice is eligible for a three-year term of apprenticeship.

Federal awards are of much less significance than State awards in apprenticeship matters in Western Australia. The total numbers of apprentices employed in this State at 31 December 1974 under the provisions of the *Conciliation and Arbitration Act 1904-1976* (Commonwealth) and the *Public Service Act 1922-1975* (Commonwealth) were 208 and 122, respectively. Section 52 of the Conciliation and Arbitration Act enables the Australian Conciliation and Arbitration Commission to issue awards covering the rates of pay and conditions of employment of apprentices. A number of such awards provide that Statutes or Regulations relating to apprenticeships in force in the State in which the apprentice is employed shall apply, except where they are inconsistent with the terms of the award. As a result, the Industrial Registrar of The Western Australian Industrial Commission registers agreements involving apprentices and, on the completion of the term of apprenticeship, issues a Final Certificate, provided the apprentice has met the statutory requirements of the State in respect of examinations conducted by The Western Australian Industrial Commission and the Technical Education Division of the Education Department.

INCIDENCE OF INDUSTRIAL AWARDS

The next table indicates the approximate proportions of Western Australian employees covered by awards, determinations and registered industrial agreements under Federal and State jurisdiction. The proportions not so covered (including those working under unregistered industrial agreements) are also shown. The figures summarise part of the data obtained from surveys of the Australian wage structure in April 1954, May 1963, May 1968 and May 1974.

PROPORTION OF EMPLOYEES AFFECTED BY AWARDS, ETC. (a)
(Per cent)

Survey	Males				Females				Persons			
	Employees affected by awards, etc.		Other employees	Total	Employees affected by awards, etc.		Other employees	Total	Employees affected by awards, etc.		Other employees	Total
	Federal	State			Federal	State			Federal	State		
April 1954	12.5	77.1	10.4	100.0	18.7	71.8	9.5	100.0	13.9	75.9	10.2	100.0
May 1963	13.3	76.5	10.2	100.0	14.8	74.4	10.8	100.0	13.6	76.0	10.4	100.0
May 1968	16.9	70.7	12.4	100.0	15.7	76.1	8.2	100.0	16.6	72.1	11.3	100.0
May 1974	18.8	64.1	17.1	100.0	14.5	76.0	9.6	100.0	17.4	68.0	14.7	100.0

(a) Awards or determinations of, and collective agreements registered with, Federal or State industrial authorities.

The estimates shown in the table were derived from returns collected from:

- (i) a stratified random sample of most private employers subject to pay-roll tax;
- (ii) all public hospitals and marketing boards;
- (iii) all Australian Government and State Government departments and semi-government authorities; and
- (iv) a stratified random sample of local government bodies.

Because of coverage difficulties, certain employees were excluded from the surveys. For further information relating to the survey of May 1974 and for statistics in greater detail, the reader is referred to the mimeographed publication *Incidence of Industrial*

Awards, Determinations and Collective Agreements, May 1974, published by the Australian Statistician, Canberra.

For a number of reasons, the results of the four surveys are not strictly comparable, and the statistics presented in the previous table should therefore be regarded as providing only a broad indication of trends.

The term 'awards, etc.' as used in the table means awards or determinations of, and agreements registered with, Federal or State industrial authorities. Changes in the proportions of employees reported as affected by Federal awards and by State awards reflect changes in industry and occupational structure, including the creation of new industries; changes in the coverage of individual Federal and State awards; and the creation of new awards relating to employees not previously affected by awards.

INDUSTRIAL DISPUTES

Statistics of industrial disputes are compiled by the Australian Statistician from data obtained from the following sources: direct collections from employers and trade unions concerning individual disputes; reports from government departments and authorities; reports of State and Federal industrial authorities; and information contained in trade journals, employer and trade union publications, and newspaper reports.

INDUSTRIAL DISPUTES (a)

Year	Number of disputes	Number of workers involved			Number of working days lost	Estimated loss in wages
		Directly	Indirectly (b)	Total		
1970	125	'000	'000	'000	'000	\$'000
1971	132	44.4	2.1	46.5	141.1	1,963.3
1972	105	30.8	5.0	35.8	69.4	1,166.4
1973	160	24.2	4.1	28.3	94.6	1,677.2
1974	257	35.3	2.3	37.6	117.3	2,422.3
		186.1	2.0	188.1	256.9	5,827.7

(a) Excludes disputes involving cessation of work of less than 10 man-days. (b) Persons thrown out of work at the establishments where the stoppages occurred, but not themselves parties to the dispute.

INDUSTRIAL DISPUTES (a)—ACCORDING TO INDUSTRY: 1974

Industry (b)	Number of disputes	Number of workers involved			Number of working days lost	Estimated loss in wages
		Directly	Indirectly (c)	Total		
Agriculture, forestry, fishing and hunting		'000	'000	'000	'000
Mining—
Coal mining		0.5	0.5	10.5
Other mining	118	39.7	1.1	40.8	60.5	1,699.1
Manufacturing—					
Food, beverages and tobacco	6	8.7	0.1	8.9	13.3	246.6
Paper and paper products, printing and publishing	3	2.3	0.1	2.5	2.3	49.9

Other manufacturing	7	10.9	0.1	11.0	12.2	252.0
Electricity, gas and water	4	6.4	6.4	6.3	126.9
Construction	35	31.6	0.2	31.7	45.2	1,094.4
Transport and storage; communication—					
Road transport; other transport and storage; communication	6	12.5	12.5	20.1	408.8
Railway transport; air transport	3	5.1	0.4	5.5	6.1	97.9
Water transport—					
Stevedoring services	26	13.8	13.8	12.7	250.8
Water transport (except stevedoring services)	17	1.1	(d)	1.2	1.6	40.6
Other industries	14	19.5	19.6	33.1	636.8
Total	257	186.1	2.0	188.1	256.9	5,827.7

(a) Excludes disputes involving cessation of work of less than 10 man-days. (b) The statistics in this table are compiled on the basis of the *Australian Standard Industrial Classification* (see page 344). (c) Persons thrown out of work at the establishments where the stoppages occurred, but not themselves parties to the dispute. (d) Less than 50.

In the two previous tables details of industrial disputes in Western Australia during the years 1970 to 1974 are given, together with an analysis, according to industry group, of disputes which were in progress in 1974. The statistics exclude disputes involving stoppages of work of less than ten man-days in the establishment where the stoppage occurred. Effects on other establishments resulting from lack of materials, disruption of transport services, power cuts, etc. are not measured by these statistics.

Particulars of all disputes in progress during the year are included in the annual figures, whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of 'the number of disputes' and 'workers involved' in disputes which commenced in any year, and were still in progress during the following year, are included in the figures for both years.

Particulars of some stoppages (e.g. those involving a large number of establishments) may be estimated and the statistics therefore should be regarded as giving a broad measure of the extent of stoppages of work (as defined).

INDUSTRIAL DISPUTES (a) ACCORDING TO DURATION—1974

Duration (working days)	Mining	Manufacturing	Construction	Stevedoring	Other industries	All industries
NUMBER OF DISPUTES (a)						
Up to 1 day	49	10	12	15	19	105

40 days and over	125.0	125.0
Total	1,709.6	1,461.8	1,094.4	250.8	1,311.1	5,827.7

(a) Excludes disputes involving cessation of work of less than 10 man-days. (b) Includes workers indirectly involved, i.e. persons thrown out of work at the establishments where the stoppages occurred, but not themselves parties to the dispute. (c) Less than 50.

WAGES AND EARNINGS

The Basic Wage

Commonwealth Basic Wage. The *Western Australian Year Book*, No. 7—1968 and earlier issues contain an account of the development of the Commonwealth basic wage from its inception until it was abandoned in 1967. In a unanimous judgment given on 5 June 1967 the Commonwealth Conciliation and Arbitration Commission (see page 477) announced 'the elimination of basic wages and margins and the introduction of total wages'. An increase of \$1 per week was awarded to all adult employees and the judgment stated that 'total wages will be arrived at by adding an amount of \$1 per week to the weekly award wages of all adult males and females . . .' and further, that the Commission had 'on this occasion deliberately awarded the same increase to adult females and adult males'. The increase was declared to become operative from the beginning of the first pay-period commencing on or after 1 July 1967.

A table showing Commonwealth basic wage rates at 31 December of each year from 1923 to 1966 is given in the *Statistical Summary from 1829* appearing in the *Western Australian Year Book*, No. 9—1970 and earlier issues.

State Basic Wage. Reference is made in the *Western Australian Year Book*, No. 7—1968 and earlier issues to the work of the former Court of Arbitration in the field of wage determination from the declaration of the first State basic wage in 1926.

The Western Australian Industrial Commission came into operation on 1 February 1964, replacing the Court of Arbitration as the authority responsible for the State basic wage determinations in Western Australia. The *Industrial Arbitration Act, 1912-1975* requires that such determinations shall be made by the Commission in Court Session. The Commission so constituted made its first adjustment to the basic wage on 27 April 1964, when it prescribed increased rates to apply on and from that date. As a result of this decision, the weekly rates payable to adult males became £15 4s. 2d. (\$30·42) in the Metropolitan Area, £15 2s. 7d. (\$30·26) in the South-West Land Division, and £14 16s. 8d. (\$29·67) in Goldfields Areas and other parts of the State. (For purposes of the basic wage, the 'Metropolitan Area' was the area comprised within a radius of fifteen miles [twenty-four kilometres] from the General Post Office, Perth; the 'South-West Land Division' was the area so described in the Land Act, but excluding the 'Metropolitan Area'; and 'Goldfields Areas and other parts of the State' comprised the area outside the South-West Land Division. Reference to the South-West Land Division will be found on page 147.)

On 15 June 1964 the Trades and Labor Council of Western Australia, acting on behalf of registered unions, addressed to the Commission a request for an inquiry into the basic wage. A preliminary hearing was held on 3 July to consider questions of procedure, representation and related matters. The general inquiry began before the Commission in Court Session on 22 July and was completed on 14 August. Representatives of the unions and of the Western Australian Employers' Federation (Incorporated) made extensive submissions and the Crown Counsel, on behalf of the State Government, intervened in the public interest, as authorised under section 68 of the Industrial Arbitration Act. Judgment was given on 22 September. The Commission was unanimous in its conclusion that one basic wage should apply to the whole State, but was divided as to the amount of the wage. The majority view was that a weekly wage of £15 8s. (\$30·80) should be declared as appropriate to adult male workers, and an order was issued accordingly prescribing this amount for males and an amount of £11 11s. (\$23·10) for females, the rates to operate on and from 22 September 1964 and to apply uniformly throughout the State.

The *Industrial Arbitration Act Amendment Act, 1966*, which came into operation on 23 December 1966, provided that the rates which were current immediately prior to the date of commencement of the Act should remain unaltered until exceeded by the basic wage for the six capital cities as declared by the Commonwealth Conciliation and Arbitration Commission, and that subsequent alterations should be made in accordance with variations of that wage. (At 23 December 1966 the State basic wage for adult males was

\$33·50 per week and for adult females, \$25·13 per week. The corresponding Commonwealth basic wage rates for the six capital cities at the same date were \$32·80 and \$24·60.)

Reference is made in the preceding section *Commonwealth Basic Wage* to the decision given by the Commonwealth Conciliation and Arbitration Commission on 5 June 1967 when it announced the elimination of basic wages and margins from its awards, and the introduction of total wages to operate from the beginning of the first pay-period commencing on or after 1 July 1967. This decision provided also that total wages for adult males and adult females were to be increased by \$1 per week from the same date. Following this decision a number of unions in Western Australia applied to The Western Australian Industrial Commission seeking an increase of \$1 per week in margins for adult males and adult females, with proportionate increases for junior workers and apprentices. The Commission delivered its judgment on 27 June 1967. The terms of this decision were that the minimum weekly wage payable to adult male workers under certain awards be increased from \$36·55 to \$37·55; 'that the wage rates for adult workers not in receipt of the "minimum wage" be increased by 60 cents per week; and that other wage rates be adjusted as if the basic wage for males and the basic wage for females had been increased by that amount'. These increases were declared to operate from the beginning of the first pay-period commencing on or after 1 July 1967.

A further increase of \$1·35 per week for adult males and adult females was granted by the Commission in October 1968 to operate from the beginning of the first pay-period commencing on or after 25 October 1968.

The *Industrial Arbitration Act Amendment Act, 1968*, operative from 22 November 1968, restores to The Western Australian Industrial Commission the power to declare a basic wage, which had been removed by the amending Act of 1966. The 1968 amendment provides that the Commission in Court Session may at any time and from time to time, by order, '(a) determine and declare a basic wage for male workers; (b) determine and declare a basic wage for female workers; and (c) vary any basic wage for the time being in force, and any such basic wage so determined and declared or so varied shall be for all purposes, the basic wage for male workers or female workers throughout the State'.

The Act defines the term 'basic wage' as 'that wage or that part of a wage which in the opinion of the Commission, is just and reasonable for a worker to whom it applies, without regard to the circumstances pertaining to the work upon which, or the industry in which, such worker is employed'. In determining a basic wage the Commission is required by the Act to take into consideration the amount that it considers sufficient to enable the average worker to whom that basic wage shall apply to live in reasonable comfort. Although the Commission must also consider the economic capacity of industry, it may not reduce the wage to a level below that required for the maintenance of this standard of 'reasonable comfort'.

The Act prescribed basic wage rates of \$35·45 per week for adult male workers and \$27·08 per week for adult female workers, to apply on and from the date of commencement of the Act (22 November 1968). These amounts comprise the sum of the basic weekly wage rates of \$33·50 for males and \$25·13 for females, operative from 24 October 1966 (before the Commission's power to determine basic wages was removed by the 1966 amendment to the Act), and the subsequent increases of 60 cents per week granted in June 1967 and \$1·35 per week in October 1968.

The Commission is required to review the basic wage, or any variation of the wage, not later than twelve months from the date on which the wage (or variation) came into operation. It is provided by the Act that any variation shall take effect 'only after the expiration of such twelve months, unless in the opinion of the Commission there are special reasons existing in the circumstances of any particular case and it is just and equitable to otherwise determine'.

On 21 November 1969, following the annual review required under the Act, the Commission increased the basic wage for adult males by \$1 per week and for adult females by 80 cents per week, with effect from the beginning of the first pay-period commencing on or after 24 November 1969.

On 3 August 1970, The Western Australian Industrial Commission began hearing an application by the Trades and Labor Council of Western Australia for an increase in the basic wage to \$48·35 per week for adult males and \$37·00 per week for adult females. The Council's claim was later amended to seek a basic wage of \$61·61 for males and \$47·12 for females, representing increases of \$25·16 and \$19·24 on the rates then current. The hearing of submissions and replies was completed on 7 September and the Commission announced its decision on 19 October.

As a result of the decision the basic wage for adult males became \$38·45 per week and for adult females \$29·40 per week, the new rates to operate from 26 October 1970.

The Commission also announced its intention 'to prescribe in such awards and industrial agreements as it appears proper so to do, a minimum wage for adult males of \$49·00 per week', operative from 26 October 1970.

Further, the Commission stated its intention 'to invite applications to include in such awards and industrial agreements as it may appear proper and appropriate so to do, a provision which will ensure to each employee a minimum payment 10 per cent in excess of the sum of the basic wage and margin prescribed for his particular class of work'.

The following table shows variations, from 22 September 1964, in the State basic wage rates payable to adult male and female workers employed under State industrial awards or registered agreements, or in accordance with the provisions of the Factories and Shops Act.

A similar table showing variations in the rates during the period from 29 January 1951 appears in *Statistics of Western Australia—Labour and Prices*. A table showing rates applying at 31 December of each year from 1926 is given in the *Statistical Summary from 1829* following this Chapter.

STATE BASIC WAGE—ADULT WEEKLY RATES
(\$)

Act, 1968.

(b) Rates prescribed under the provisions of the *Industrial Arbitration Act Amendment*

Equal Pay for Male and Female Workers

State Awards. It is provided in Part X of the *Industrial Arbitration Act, 1912-1975* that, where The Western Australian Industrial Commission 'is satisfied that male and female workers are performing work of the same or a like nature and of equal value, the same rates of wages shall . . . be fixed irrespective of the sex of the workers'.

Federal Awards. Two benches of the Commonwealth Conciliation and Arbitration Commission sat jointly from 25 February to 22 May 1969 to take evidence and hear argument on trade union claims for equal pay between the sexes. Both benches reached a common conclusion and on 19 June 1969 published their decision and reasons for their decision. The Commission stated it was prepared to implement the principle of equal pay for equal work by introducing into Federal awards and determinations the principles contained in State Acts on equal pay. It decided that no increases should be granted to adult females without an examination of the work done and that implementation of equal pay should be spread over a period.

On 15 December 1972 the Commonwealth Conciliation and Arbitration Commission, in its decision in the National Wage and Equal Pay Cases 1972, outlined the principle of

'equal pay for work of equal value' to be applied to all Federal awards and determinations. The Commission stated that the principle meant the fixation of award rates of pay for both adult and junior females by a consideration of the work performed irrespective of the sex of the worker, and that the eventual outcome should be a single award rate for an occupational group or classification payable to both male and female employees.

Minimum Wage Rates

The basic wage, as the term implies, establishes a 'base' to which additions may be made to provide rates actually payable in certain industries and occupations and in particular areas. Minimum rates, incorporating these additional payments, may be prescribed by awards of The Western Australian Industrial Commission, or may be negotiated by industrial agreement. These agreements are registered with the Commission and are binding upon the parties. The additions made to the basic wage rate take the form of 'margins' and 'loadings'. Margins are amounts awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness and other like factors. Loadings are amounts awarded for various kinds of disabilities associated with the performance of work, or to meet particular circumstances. They include payments such as industry loadings and other general loadings prescribed in awards, determinations or agreements for the occupation concerned.

Awards of the Australian Conciliation and Arbitration Commission take cognisance of particular features or circumstances such as those mentioned above but no longer contain identifiable components in the form of basic wage, margins, and loadings (see letterpress *Commonwealth Basic Wage* on page 485).

In its decision of 8 July 1966 in the Basic Wage, Margins and Total Wages Cases of 1966, the Commonwealth Conciliation and Arbitration Commission announced that it intended to grant relief to low-wage earners by inserting a provision in awards prescribing a minimum wage. The provisions inserted in the awards state that no adult male employee shall be paid at less than the prescribed minimum rates as ordinary rates of pay in respect of the ordinary hours of work prescribed in the award. The minimum weekly wage rates prescribed were the appropriate basic wages plus \$3.75 per week. As a result of this decision the minimum weekly wage as prescribed in Federal awards for adult male workers in Perth became \$36.55, with effect from the beginning of the first pay-period commencing on or after 11 July 1966.

In its decision in the National Wage Case 1974, the Australian Conciliation and Arbitration Commission, in prescribing a minimum wage for adult females, also made provision for parity between the minimum wage for adult males and adult females to be achieved in three stages: 85 per cent of the male minimum wage to be paid to adult females from the beginning of the first pay-period commencing on or after 23 May 1974; 90 per cent from the beginning of the pay-period in which 30 September 1974 falls; and 100 per cent from the beginning of the pay-period in which 30 June 1975 occurs. The minimum weekly wage payable to adult males was increased from \$60.10 to \$68.10 with effect from the beginning of the first pay-period commencing on or after 23 May 1974. The minimum weekly wage payable to adult females from that date was therefore \$57.90 (i.e. $0.85 \times \$68.10$).

Reference is made on pages 486 and 487 to minimum wage rates prescribed under awards of The Western Australian Industrial Commission. In terms of orders operative from 31 May 1974, the Commission introduced a minimum wage of \$57.90 per week for adult females employed under specified awards and agreements.

The following table shows variations in the minimum weekly wage rates applicable to adult workers under Federal and State awards. Between July 1966 and May 1976, the minimum weekly wage rate prescribed in Federal awards for adult male workers in Perth increased from \$36.55 to \$96.00

Further information relating to minimum weekly wage rates in other Australian States appears in the publication *Wage Rates and Earnings* issued monthly by the Australian Statistician, Canberra.

(a) Rates operative from beginning of first pay-period commencing on or after the date shown. (b) Rates operative from beginning of first pay-period commencing on or after the date shown, except as indicated in footnotes (c) and (d). (c) Rate payable from beginning of pay-period in which 30 September 1974 occurred. (d) Rate payable from beginning of pay-period in which 30 June 1975 occurred.

The statistics shown in the following table, which refers to Western Australian experience, relate generally to wages and hours prescribed in awards or determinations of the Federal and State industrial authorities or in agreements registered with them.

The minimum wage rates and index numbers shown in the table embrace a representative range of occupations and are based on the occupation and industry structures in Australia in 1954. The weekly wage rates given in the table, and used in the compilation of the indexes, represent the lowest rates payable for a full week's work (excluding overtime), as prescribed in representative industrial awards, determinations and agreements. The hourly wage rates are obtained by relating the weekly wage rates and the weekly hours of work prescribed in awards, etc. The rural industries are excluded from the table, because of coverage difficulties.

Because the indexes are designed to measure movements in prescribed minimum rates of 'wages' as distinct from 'salaries', those awards, determinations and agreements which relate solely or mainly to salary-earners are excluded.

* Revised.

The wage rates shown should not be regarded as actual current averages, but as indexes expressed in money terms, indicative of trends.

A more detailed description of the minimum wage rates index and more extensive tables are published by the Australian Statistician, Canberra in the monthly bulletin *Wage Rates and Earnings*.

A table showing minimum rates of wages payable in a selection of occupations in Western Australia at 30 June 1974 appears in *Statistics of Western Australia—Labour and Prices: 1974* (pages 5-9).

Average Weekly Earnings

Statistics of average weekly earnings are derived from information concerning employment and wages and salaries as recorded on pay-roll tax returns, from other direct collections, and from estimates of the unrecorded balance. The figures relate to civilians only.

Particulars of wages and salaries paid are not available separately for males and females from these sources. Average weekly earnings have therefore been calculated for each State in terms of male units, *i.e.* total male employees plus a proportion of female employees, the proportion being determined by the estimated ratio of female to male average earnings.

The figures used in calculating the averages shown in the following table comprise: award and over-award wages and salaries; earnings of employees not covered by awards; overtime earnings; bonuses and allowances; commissions; directors' fees; and payments made retrospectively or in advance during the years specified. Earnings of part-time as well as full-time employees, and of juniors as well as adults, are included. *It is important to bear in mind that the figures relate to the whole civilian wage and salary earner field and therefore comprise payments to all grades of employees from junior workers to persons at the highest levels of executive and administrative activity.*

(a) Figures not available separately for years prior to 1974-75; included in those shown for Australia.
* Revised.

(b) See footnote (a).

Quarterly figures corresponding to those shown in the above table are published by the Australian Statistician in the bulletins *Average Weekly Earnings* and *Wage Rates and Earnings*, in the *Monthly Review of Business Statistics* and in the *Quarterly Summary of Australian Statistics*.

SURVEYS OF EARNINGS AND HOURS

Sample surveys in respect of most private employers subject to pay-roll tax (*i.e.* those paying more than \$400 per week in wages and salaries at the time of the survey) have been conducted as at the last pay-period in October during recent years.

In addition to obtaining data for the calculation of average weekly earnings, average weekly hours paid for, and average hourly earnings, the surveys obtain information on overtime and ordinary-time earnings and hours for full-time employees (other than managerial, etc. staff).

The results of the surveys are based on returns from stratified random samples of private employers subject to pay-roll tax. Employees in rural industry and in private domestic service are excluded because most employers in these industries are not subject to pay-roll tax. Also excluded from the surveys are employees of religious, benevolent and other similar organisations exempt from pay-roll tax. The survey in respect of October 1972 included government employees for the first time.

Definitions of the terms used in the following tables may be found in the publication *Earnings and Hours of Employees, October 1974*, published by the Australian Statistician, Canberra.

The two following tables refer to the results for Western Australia.

**AVERAGE EARNINGS AND HOURS (a)—PRIVATE EMPLOYMENT

HOURS OF WORK AND LEAVE PROVISIONS

Standard Hours of Work. In the fixation of weekly wage rates most industrial tribunals prescribe the number of hours constituting a full week's work for the wages specified.

Following applications for the introduction of a working week of forty hours, in place of the existing general standard of forty-four hours, the Commonwealth Court of Conciliation and Arbitration began hearing evidence in October 1945. In its judgment given on 8 September 1947 the Court granted the reduction to forty hours from the beginning of the first pay-period commencing in January 1948. On 6 November 1947 the Western Australian Court of Arbitration approved that, on application, provision for a working week of forty hours could be incorporated in awards of the Court with effect from 1 January 1948.

The forty-hour week has operated in Australia generally from 1 January 1948 (in New South Wales from 1 July 1947). However, the number of hours constituting a full week's work (excluding overtime) differs between occupations and/or between States. The weighted average standard hours of work (excluding overtime) prescribed in awards, determinations and agreements for a full working week, in respect of adult male workers in all industry groups except rural, and shipping and stevedoring, at 31 July 1975 were: New South Wales, 39·77; Victoria, 39·96; Queensland, 39·88; South Australia, 39·95; Western Australia, 39·83; Tasmania, 39·91; Australia, 39·86. Corresponding figures for adult female workers at 31 July 1975 were: New South Wales, 39·53; Victoria, 39·81; Queensland, 39·70; South Australia, 39·77; Western Australia, 39·78; Tasmania, 39·63; Australia, 39·67.

Annual Leave and Public Holidays. On 18 April 1963 the Commonwealth Conciliation and Arbitration Commission gave a judgment which had the effect of granting a general increase from two weeks to three weeks in the period of paid annual leave for employees covered by Federal awards.

In December 1971, the Commission announced its findings on claims for (i) an increase from three weeks to four weeks in the standard period of annual leave, (ii) a bonus of an extra week's pay to employees on annual leave, and (iii) an increase in the award amount of weekly payment when on annual leave. The first two claims were rejected and a decision on the third claim was deferred until after the hearing of the National Wage Cases 1971-72. On 7 June 1972 the Commission gave its decision on this claim. It decided that, in general, payments for annual leave should include over-award payments for ordinary hours of work, shift-work premiums, service grants and certain allowances, in addition to normal award rates of pay. For those awards under which the application was made in this case, the date of operation was set as 1 November 1972.

As from 1 January 1973 employees of the Australian Government and the State Government were granted four weeks' annual leave.

Following a general inquiry concerning annual leave and public holidays, the Western Australian Court of Arbitration in June 1963 adopted three weeks as the new standard for the normal period of annual leave in State awards, with four weeks for seven-day shift workers. Existing awards and agreements which already provided annual leave in excess of this standard were to be examined separately to ascertain whether special circumstances existed to justify leave greater than the normal standard.

In the inquiry the State Government sought a reduction in the number of public holidays and a review of other conditions where these were more favourable than the Court's standard. Private employers opposed any increase in annual leave but, alternatively, submitted that, if there was to be an increase, then the new standard should be two weeks and four days per annum or the number of public holidays in each year should be reduced by one. Both these submissions were rejected and the standard number of public holidays was retained at ten with the provision that, where an award provided for more than ten public holidays a year, that award, unless the union consented to a reduction to ten, would be excluded from the order amending the annual leave provisions until it was established that special circumstances justified the continuance of the greater number of holidays.

In November, 1963 the Court refused an application by employers for the right to split the annual leave into two parts, since it decided to follow the decision of most other State tribunals and allow the additional leave in conformity with conditions similar to

those prescribed by the Commonwealth Conciliation and Arbitration Commission. The right to split the leave would be allowed by the Court only in exceptional circumstances, unless all the parties concerned agreed to the inclusion of such a provision.

Long Service Leave. The *Long Service Leave Act, 1958-1973* (State) confers entitlement to long service leave with pay on employees for whom such leave is not otherwise provided. Entitlement accrues only in relation to continuous service with one employer, but continuity of service is not affected by the transfer of a business from one employer to another. Leave of thirteen weeks on ordinary pay is granted in respect of the first fifteen years of service. For each subsequent ten years the entitlement is eight and two-thirds weeks, with *pro rata* conditions applying in the case of death or termination of employment for any reason other than serious misconduct. An employee who has completed at least ten years' service but less than fifteen years is entitled to *pro rata* leave, on the basis of thirteen weeks for fifteen years, if his employment is terminated by death; by the employer for any reason other than serious misconduct; or by the employee on account of sickness, injury, or domestic or other pressing necessity. An employee forfeits his right to long service leave if he engages in alternative employment for reward during the period of leave.

The *Long Service Leave Act Amendment Act, 1973*, which came into operation on 1 March 1974, provides that the 'standard' period of thirteen weeks' leave after fifteen years' service may be varied as the result of an agreement between the Western Australian Employers' Federation (Incorporated) and the Trades and Labor Council of Western Australia or by a determination of the Western Australian Industrial Commission in Court Session.

WORKERS' COMPENSATION

The *Workers' Compensation Act, 1912-1975* (State) provides compensation to workers in Western Australia for injuries suffered in the course of their employment, for death resulting from such injuries, and for disabilities due to specified industrial diseases associated with their employment. The provisions of the Act do not extend to employees of the Australian Government, for whom compensation is provided by the *Compensation (Australian Government Employees) Act 1971-1974*.

Every employer, other than a self insurer, is required to effect insurance with an approved insurer for the full amount of the liability to pay compensation under the Act to all workers in his employment.

The Act establishes a Workers' Compensation Board of three members, including a chairman, appointed by the Governor. The Chairman, who has the status of Judge, must be a legal practitioner of not less than eight years' practice and standing. Of the remaining members, one is nominated by the Western Australian Employers' Federation (Incorporated), and one by the Trades and Labor Council of Western Australia. The Board has exclusive jurisdiction to inquire into, hear, and determine all questions and matters arising under the Act, and its actions and decisions are final, except that where any question of law arises in any proceedings before the Board, it may state a case for the decision of the Full Court of the Supreme Court.

The amounts of payments, allowances and benefits under the Act are calculated by reference to a 'prescribed amount' as defined in section 5 of the Act. The prescribed amount is the sum ascertained by multiplying by 208 the estimate, as published each year by the Australian Statistician, of the average weekly earnings per employed male unit for the June quarter in Western Australia. In the following paragraphs the amounts shown are those which were in operation at 1 July 1975, the prescribed amount at that date being \$32,490.

Where total incapacity for work results from the injury the weekly payment is an amount equal to the weekly earnings computed as being the amount of the ordinary wage or salary (including any over-award payment) which the worker would have received for the ordinary hours he would have worked had he not been incapacitated as a result of

the injury. In the case of partial incapacity the weekly payment is the amount by which the weekly earnings so computed exceed the weekly amount which the worker is earning or is able to earn in some suitable employment or business after the accident.

The total liability of the employer in respect of weekly payments is limited to \$32,490. Additional compensation is payable up to a maximum of 10 per cent of the prescribed amount, *i.e.* \$3,249·00 (or more, if the Board finds that, in particular circumstances, this amount is inadequate) for expenses incurred in respect of first aid and ambulance services, medicines, medical or surgical attendance, hospital treatment and the like. In the event of the death of the worker, funeral expenses are compensable up to a maximum of \$250.

The Act provides for compensation in the form of a lump-sum payment, up to a maximum of \$32,490, in respect of specified injuries resulting in such disabilities as loss of sight, hearing or mental powers, or loss of a limb or limbs. Lump-sum payments are made only by election of the injured worker, after which all right to weekly payments ceases.

Where death results from the injury and the worker leaves any dependants who were wholly dependent on his earnings, the maximum amount of compensation is 85 per cent of the prescribed amount, *i.e.* \$27,616·50, together with an additional weekly payment of \$7·50 in respect of each dependent child or step-child. It is provided that if a worker leaves a widow, a mother, or a child or step-child wholly dependent on his earnings, the minimum payment shall be 25 per cent of the prescribed amount, *i.e.* \$8,122·50. If a worker dies leaving no dependants, reasonable expenses in connection with medical attendance and burial are payable to the person by whom the expenses were properly incurred.

Disability or death caused by certain specified industrial diseases due to the nature of a worker's employment is compensable at the same rates and under the same conditions as those applying in the case of injury.

INDUSTRIAL ACCIDENTS

Statistics of industrial accidents in Western Australia are compiled on two bases, namely (i) those which resulted in absence from work for one day or more, and (ii) those which resulted in absence from work for one week or more. This allows comparison to be made with information relating to other States or countries, which publish statistics compiled variously on one or other of these bases.

The statistics contained in the following tables are derived from details of claims for workers' compensation paid by insurers and self-insurers. They relate to claims *reported to have been closed* during the year ended 30 June 1975.

The figures do not represent all industrial accidents which actually occurred during the year because: (i) they refer to claims closed; (ii) in the case of non-fatal accidents, they include only those which resulted in absence from work for one day or more (or one week or more); (iii) only accidents coming within the scope of the *Workers' Compensation Act, 1912-1975* are included in the statistics, which therefore exclude industrial accidents resulting in the death of, or injury to, self-employed persons and persons employed by the Australian Government. (Compensation for Australian Government employees is provided by the *Compensation (Australian Government Employees) Act 1971-1974*); and (iv) the statistics include only accidents occurring at work site or in the course of the worker's normal duties and do not therefore include 'journey' cases, *i.e.* death of, or injury to, an employee while travelling between his place of residence and the place of employment. During the year ended 30 June 1975, 552 claims were reported closed in respect of 'journey' cases resulting in absence from work for one day or more, the total time lost being 2,754·6 weeks and the cost of claims, \$297,561. In respect of 'journey' cases resulting in absence from work for one week or more, 356 cases were reported closed. The total time lost was 2,659·6 weeks and the cost of claims was \$281,904.

The statistics relate only to accidents, and particulars of cases of industrial disease are therefore excluded.

For the purpose of these statistics, each claim is treated as a separate industrial accident and data are prepared from details of claims reported closed during the year under review

(in this instance, the year ended 30 June 1975). In respect of reopened claims, the additional time lost and additional costs are included in the tables but, to avoid duplication, such cases have been excluded from the numbers of accidents shown. Reopened claims reported closed in 1974-75 numbered 1,861 and represented 6,229 weeks' time lost.

INDUSTRIAL ACCIDENTS—1974-75

Particulars	Accidents resulting in absence from work for—					
	One day or more			One week or more

Total	30	353	18,413	100.0	11,046	85,698

n.e.i. denotes 'not elsewhere included'.

(a) See definitions immediately preceding table on page 496. (b) Production, supply and maintenance. (c) Less than \$500.

The following definitions should be borne in mind when considering the data shown in the tables. *Cost of claims* means the *total* amount of payments made (principally in the form of compensation for loss of wages, and for medical and hospital expenses, and lump sum settlements) in respect of claims reported closed during the year. The figures do not therefore necessarily represent amounts actually paid in the year under review. *Time lost* means the *total* time lost (*i.e.* from date of injury) in respect of claims reported closed during the year. The term is therefore not necessarily restricted to time lost during the year under review, since the accident may have occurred in an earlier year.

NON-FATAL ACCIDENTS—DURATION OF TIME LOST (a): 1974-75

Duration of time lost	Males		Females		Persons		
	Number	Time lost (weeks)	Number	Time lost (weeks)	Number	Time lost	
						Weeks	Per cent of total
1 day but under 1 week	12,707	6,382	1,185	613	13,892	6,995	7.5
1 week but under 2 weeks	8,041	10,314	902	1,143	8,943	11,457	12.4
2 weeks but under 4 weeks	4,580	11,967	473	1,219	5,053	13,185	14.2
4 weeks but under 6 weeks	1,541	7,264	159	751	1,700	8,015	8.6
6 weeks but under 8 weeks	786	5,308	65	442	851	5,750	6.2
8 weeks but under 13 weeks	849	8,453	80	775	929	9,228	10.0
13 weeks but under 26 weeks	522	9,099	69	1,222	591	10,321	11.1
26 weeks but under 52 weeks	178	6,470	27	1,017	205	7,486	8.1
52 weeks but under 104 weeks	76	5,399	21	1,442	97	6,841	7.4
104 weeks but under 156 weeks	22	2,600	3	369	25	2,969	3.2
156 weeks or more	17	3,809	2	408	19	4,218	4.6
Total—One day or more	29,319	77,064	2,986	9,400	32,305	86,464	93.3
Reopened claims (b)	5,714	515	6,229	6.7
Total	29,319	82,778	2,986	9,915	32,305	92,693	100.0

(a) See definition immediately preceding table. (b) Additional time lost which cannot be allocated to appropriate groups. The number of reopened claims reported was 1,861.

Statistics in greater detail, as well as analyses according to additional characteristics, are available in the publications, *Industrial Accidents (Series A)*, which relates to accidents resulting in death or absence from work for one day or more, and *Industrial Accidents (Series B)*, relating to accidents resulting in death or absence from work for one week or more. These publications, which are in mimeograph form, are issued annually by the Western Australian Office of the Australian Bureau of Statistics.

Chapter X—continued

Part 2—Employment

NOTE. In addition to the employment data appearing in this Part, references to the numbers of persons engaged in particular activities are to be found elsewhere in the Year Book. In Chapter V, for example, Part 1 shows numbers engaged in teaching, Part 3 contains details of hospital staffs, and employment in building appears in Part 4. In Chapter VIII, Part 1 gives employment in fishing, Part 2 provides information on employment at mines, and Part 3 includes tables relating wholly, or in part, to employment in factories. Chapter IX, Part 2 gives numbers employed in Wholesale, Retail and Selected Service Establishments, and Part 3 shows numbers engaged in various types of transport undertakings.

Reference is made on page 135 to the repeal, with effect from 10 August 1967, of section 127 of the Australian Constitution. As a consequence of this repeal, particulars derived from the 1971 Census refer to total population (i.e. including Aborigines). Persons having Aboriginal blood to a degree greater than one-half had previously been excluded from census tabulations in accordance with the requirements of the section now repealed.

The most detailed and comprehensive statistics of employment of the population are those which are derived from the periodic Population Census. Among the most useful of the tabulations based on these enumerations are those which classify the population according to occupational status, industry, and occupation.

THE LABOUR FORCE

The term *labour force*, as used in the 1971 Census tabulations, replaces the term *work force* previously used. The labour force comprises persons aged fifteen years and over who were in one of the following categories: those who worked for payment or profit at any time during the week preceding the census enumeration; those who had a job from which they were temporarily absent; those who were temporarily laid off without pay for the whole of the week; and those who did not work, did not have a job and were actively looking for work.

Persons helping but not receiving wages or salary who usually worked less than fifteen hours per week are excluded from the labour force. Bonded trainees (including trainee teachers) and cadets engaged in full-time study at educational institutions are also excluded, even though the institution is conducted by their employer.

The unemployed members of the labour force are those persons who did no work during the week preceding the census enumeration and either looked for work (having no job) or were temporarily laid off from a job.

The approach adopted at the 1971 Census in determining the labour force conforms closely to the recommendations of the Eighth International Conference of Labour Statisticians held at Geneva in 1954 and to the approach used at the 1966 Census. Accordingly, any labour force activity, however little, during the week preceding the enumeration results in the person being counted in the labour force. Thus many persons whose main activity is not a labour force one (e.g. housewife, full-time student) are drawn into the labour force by virtue of part-time or occasional labour force activity in that week. On the other hand, the definition excludes persons who may frequently or usually participate in the labour force but who, during that week, happened to have withdrawn from the labour force.

The comprehensive tables resulting from the 1971 Census include detailed analyses of the labour force according to such characteristics as age, marital status, birthplace, occupational status, industry and occupation. Only some of these tables, in condensed form, have been included in this Chapter. The reader requiring greater detail is referred to the census bulletins published by the Australian Statistician, Canberra.

Population classified according to Occupational Status

TOTAL IN LABOUR FORCE	55,591	67,821	97,873	87,370	70,417	42,467	8,843	430,382

(a) Comprises the categories *Permanently separated* and *Divorced*.

Classification according to Industry

For census purposes, industry may be defined as the *branch of productive activity, business or service carried out by the establishment in which a person is employed*. It is concerned with the activity of persons, firms or businesses considered as a group producing the same commodity, performing the same process or providing the same service. All persons engaged in any such branch of economic activity are classified industrially as belonging to that particular branch irrespective of their personal occupation within the industry. Examples are: *Mining*, which includes, in addition to miners and prospectors, such persons as laboratory technicians, transport workers and office staff employed by mining companies; *Water Transport*, which covers staff members of shipping companies and agencies, as well as ships' crews; and professional activities such as law and architecture which include not only qualified practitioners but also persons employed by them as, for example, receptionists, law clerks and draftsmen.

Classification according to industry at the 1971 Census has been made on the basis of the 1969 preliminary edition of the *Australian Standard Industrial Classification*, prepared by the Australian Statistician, Canberra. For the Population Census an 'undefined' category was added to certain Divisions of the classification to facilitate the coding of imprecise or generalised descriptions of industrial activities on the census schedules. The classification divides the labour force into thirteen Divisions which are in turn divided into Sub-Divisions, Groups and Classes.

In the table below, the employed population is classified according to occupational status within each of the thirteen industry divisions. The table on page 501 gives a classification according to industry divisions and the principal sub-divisions, and a geographical distribution according to the main industry divisions appears on page 502.

EMPLOYED POPULATION—OCCUPATIONAL STATUS AND INDUSTRY
CENSUS, 30 JUNE 1971

(a) Includes Sport and recreation and Personal services. (b) Comprises Electricity, gas and water; Finance, insurance, real estate and business services; Public administration and defence; and Non-classifiable establishments. (c) Includes Houtman Abrolhos (unincorporated). (d) Comprises persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

Classification according to Occupation

Occupation is defined as the nature of the work which a person performs, and implies *personal* performance. It may be based on the material treated, the process carried out or the type of service rendered by an *individual* worker. Thus the occupation of a person is the kind of work that he or she personally performs, as distinct from industry, which is defined as the *branch of productive activity, business or service carried out by the establishment in which a person is employed* and is not concerned with the nature of personal performance.

The Classification of Occupations used in the tabulation of the 1971 Census data has been adapted from and closely adheres to the principles embodied in the International Standard Classification of Occupations issued by the International Labour Office, Geneva, 1958 and as revised in 1968. The International Standard Classification of Occupations was prepared after extensive discussions and research by world experts in this field to provide an adequate classification framework for countries interested in occupational classification and, at the same time, provide a basis for international comparison of occupational data obtained mainly from Censuses of Population. The Australian Classification of Occupations contains 11 Major Groups, 72 Minor Groups and 367 Occupation Codes. In accordance with the International Standard Classification, occupations have been grouped according to the general similarity of the characteristics of the work which they entail.

Complete descriptions of Major Groups, Minor Groups and Codes, together with a list of occupation titles included under each heading, are contained in the *Classification and Classified List of Occupations—Revised: June 1971*, published by the Australian Statistician, Canberra.

EMPLOYED POPULATION—OCCUPATIONS: CENSUS, 30 JUNE 1971

Major and minor group	Males	Females	Persons
Professional, technical and related workers—			
Architects, engineers and surveyors, professional	1,166	6	1,172

Labour Force Survey

Estimates of the civilian labour force are prepared each quarter by the Australian Statistician. They are based on the results of the population survey, which is carried out on a sample basis throughout Australia in February, May, August and November each year. Selected private dwellings (houses, flats, etc.) and other dwellings (hotels, motels, etc.) are visited in the course of each survey. Information is obtained by means of personal interviews carried out by specially trained enumerators. The results of the survey are published by the Australian Statistician in the quarterly and annual releases entitled *The Labour Force* and in the annual *Labour Report*. Until the issue in May 1975 of *The Labour Force, November 1974*, which gave details for each State and Territory, all published figures related to Australia *as a whole*, and particulars for individual States were not available.

ESTIMATES OF EMPLOYMENT

In addition to employment data provided by the census and the labour force survey, there are available monthly estimates of the number of wage and salary earners in civilian employment. The prime purpose of this series is to measure, as nearly as possible with available data, *current monthly trends* in employment in the defined field.

The estimates, except those relating to government employment (see page 507), are based on comprehensive data referred to as 'benchmarks', derived for the purpose from the Population Census of 30 June 1971. Month-to-month changes shown by current returns are linked to the benchmark data to derive the monthly estimates. The figures used for this purpose are obtained from three main sources: (i) current pay-roll tax returns, which are lodged by all employers paying more than \$800 per week in wages, other than those specifically exempted under the pay-roll tax legislation; (ii) current returns from government bodies; and (iii) some other current returns of employment (*e.g.* for hospitals). The balance, *i.e.* unrecorded private employment, is estimated.

The figures relate only to civilian wage and salary earners, not to the total labour force. They therefore exclude employers, self-employed persons, unpaid helpers and members of the defence forces. Employees in agriculture and in private domestic service are not included in the estimates because the available data are inadequate.

As the results of each successive population census become available it is the practice to derive from them new benchmarks for the monthly employment series, and to revise the published estimates for all periods subsequent to the date of the previous census. Benchmarks for June 1971 were established by analysing data from the 1971 Census and other relevant sources such as special returns from government bodies and economic censuses and surveys.

The industry classification used is the Australian Standard Industrial Classification, which is described in the publication *Australian Standard Industrial Classification* (Preliminary Edition), 1969, Volume 1, issued by the Australian Statistician, Canberra. This industry classification is not directly comparable with those adopted for population censuses before 1971 and used in previously published estimates of civilian employment.

The estimated monthly changes are derived mainly from returns from employers relating to establishments or enterprises, while the benchmark figures were derived from particulars recorded for individuals on population census schedules, which do not in all cases provide sufficiently precise information to allow accurate coding of industry. Industry dissections of the census totals of wage and salary earners were therefore adjusted to make them consistent as far as possible with industry coding at the establishment level.

Current data supplied by reporting enterprises or establishments generally refer to persons on the pay-roll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' pay-rolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

For the period from June 1966 to June 1971 detailed industry figures for each State and Australia, and the government employment series, were published by the Australian Statistician, Canberra in two special bulletins *Employed Wage and Salary Earners* (Reference No. 6.23) issued on 24 April 1970 and 11 January 1972. Estimates according to industry which appear in those bulletins are not directly comparable with those shown on page 506, but it is expected that in due course a revised series will be published for the period from June 1966 to May 1971, classified according to the Australian Standard Industrial Classification. However, it may not be possible to provide as much industry detail as for June 1971 and subsequent periods. It is not practicable to derive comparable estimates for periods prior to June 1966.

Employment according to Industry

The table on page 506 shows the number of wage and salary earners in civilian employment in Western Australia in various industry divisions and sub-divisions. The figures

appearing against the item 'Other' under the heading 'Community services' comprise employees in the industry sub-divisions *Welfare and charitable services and religious institutions* and *Other community services* including police and prisons. Between June 1971 and June 1975 the number of wage and salary earners in civilian employment in Western Australia rose from 345,200 to 381,000.

Government Employment

Employees of government and semi-government authorities are included in the figures shown in the table on page 506. Estimates of the numbers employed by Australian Government, State Government, and local government authorities are available separately. They include not only those engaged in administrative activities but also employees on services such as railways, road transport, air transport, shipping, education, health, hospitals and institutions, migrant hostels, banks, post office, broadcasting and television, police, factories, electricity generation and supply, water conservation, irrigation, road and bridge construction, harbour works and other public works. In the following table, government employment so defined is shown for the months of June and December in the period from June 1971 to June 1975.

(a) Included in the figures shown in the table on page 506. Estimates revised since previous issue. (b) Includes employees of semi-government authorities. (c) Excludes a small number of employees engaged in agriculture.

UNEMPLOYMENT

A full count of unemployed persons in Western Australia is available only from population censuses. For the purpose of the Census of 30 June 1971, unemployed members of the labour force were those persons who did no work during the week preceding the census enumeration and either looked for work (having no job) or were temporarily laid off from a job. The number of persons recorded in this category in Western Australia was 8,652 (5,361 males and 3,291 females), equivalent to 2.01 per cent of the labour force. Numbers of males and females unemployed in each of the Australian States and Territories and Australia as a whole are given in the table on page 498.

Department of Employment and Industrial Relations

Monthly figures are compiled by the Department of Employment and Industrial Relations from the operations of its Commonwealth Employment Service. These data provide indicators of movement in the level of unemployment and the number of unfilled vacancies.

The department makes a count of the number of persons, registered with the Employment Service for employment on the Friday nearest to the end of the month, who claimed at the time of registering that they were not employed and who were seeking full-time employment. Included in the figures are persons who have been referred to employers but whose employment was still unconfirmed, and those who had recently obtained employment without notifying the department. Also available from the Department of Employment and Industrial Relations is the number of vacancies, registered by employers, which were recorded as unfilled at the end of the month.

The following table gives a classification, according to occupational group, of unemployed persons and unfilled vacancies in Western Australia at the end of June of the years 1973 to 1975. The figures are taken from the *Monthly Review of the Employment*

Situation, which is published by the Department of Employment and Industrial Relations and contains similar statistics, together with additional information, for each of the Australian States and for Australia as a whole.

The numbers of unemployed persons shown in the table for June 1974 and June 1975 are not strictly comparable with those for June 1973, due to a change in definition of 'school leaver' which became effective from July 1973. School leavers are now defined as comprising all persons aged under twenty-one years who, at the time of registering with the Commonwealth Employment Service, had ceased full-time primary or secondary education within the preceding six months. Previously, school leavers comprised all persons aged under twenty-one years who, at the time of registering with the Commonwealth Employment Service, either (a) had ceased full-time primary or secondary education within the preceding three months, or (b) were still at school but had notified the Commonwealth Employment Service that they would leave school before the end of the school year if a full-time job were available. The effect of the change in definition was to reduce from 289 to 185 the number of school leavers registered for employment in Western Australia at the end of July 1973, and to reduce the total number of registered persons at the same date from 8,060 to 7,956.

UNEMPLOYED PERSONS AND UNFILLED VACANCIES CLASSIFIED ACCORDING TO OCCUPATIONAL GROUP

Occupational group	At end of June (a)—								
	1973			1974 (b)			1975 (b)

Service occupations (f)	76	294	370	82	270	352	65	182	247
Total	2,272	1,030	3,302	2,397	905	3,302	1,832	514	2,346

(a) At the Friday nearest to the end of June. (b) See letterpress immediately preceding table. (c) Persons who claimed when registering with the Commonwealth Employment Service that they were not employed and who were seeking full-time employment. Includes those referred to employers but whose employment was still unconfirmed, and those who had recently obtained employment without notifying the Commonwealth Employment Service. Includes also persons receiving unemployment benefit. (d) Includes persons seeking apprenticeships, cadetships and other forms of training. (e) Includes skilled workers in mining and in the following trades: stone, glass, chemicals, leather, rubber, clothing, textiles, footwear, food, drink, tobacco, wood, furnishing, paper and printing. (f) Includes hairdressers; private domestic, hotel and guest-house workers; caretakers and cleaners; and protective service occupations. (g) Includes apprenticeships, cadetships and other forms of training.

Applications for unemployment benefit are received by the Department of Employment and Industrial Relations acting on behalf of the Department of Social Security. Persons seeking unemployment benefit must register with the Commonwealth Employment Service (see below), which is responsible for certifying that suitable employment is not available before benefits can be paid. Statistics of the number of persons receiving unemployment benefits are given on page 246.

COMMONWEALTH EMPLOYMENT SERVICE

The Commonwealth Employment Service is established under the provisions of the *Re-establishment and Employment Act 1945-1973*. The main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications, and to assist employers seeking labour to obtain employees best suited to the kinds of work being offered.

Specialised facilities are provided for young people, including training and the payment of living-away-from-home allowances for apprentices; persons with physical and mental handicaps; former members of the defence forces; Aborigines; rural workers; and persons with professional and technical qualifications. Vocational guidance is provided without charge by a staff of qualified psychologists. Guidance is available to any person, but is provided particularly for young people, ex-servicemen and the physically handicapped. A Career Reference Centre has been established in Perth to enable students to obtain information on courses and provide them with the opportunity of investigating at leisure their career choices. The Centre provides information in a more extensive manner than is possible in an employment interview or when a visit is made to a school.

The Commonwealth Employment Service administers the National Employment and Training System which came into operation on 1 October 1974. The system provides subsidised training in the form of full-time, part-time and in-plant courses covering a wide range of occupations and industries. Correspondence courses are also available. Provision is made for the payment to trainees of living allowances, reimbursements of expenditure on fees, books and equipment, and certain other benefits. Employers who provide properly supervised training are eligible for a subsidy from the Australian Government. The primary consideration under the National Employment and Training System is to direct assistance to those who are experiencing employment difficulties.

The Commonwealth Employment Service is responsible for placing in employment migrant workers sponsored by the Australian Government under migration schemes. This function includes arranging for them to move to their initial employment and for their admission, if necessary, to Australian Government migrant hostels.

In association with placement activities, regular surveys of the labour market are carried out, and detailed information is supplied to interested Australian Government and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability, industrial training and employment opportunities in various occupations and areas and on other matters concerning employment.

In Western Australia at 1 January 1976, the Commonwealth Employment Service operated eight offices in Perth and suburbs, and there were offices at Albany, Bunbury, Collie (part-time), Esperance, Geraldton, Kalgoorlie, Kwinana, Manjimup, Merredin, Northam and Port Hedland.

The Commonwealth Employment Service has a Professional Employment Office in Perth, which deals with the placement of the more highly qualified executive and professional applicants. Experts for overseas service under technical aid programmes are recruited by the Service.

Chapter X—continued

Part 3—Prices

RETAIL PRICES AND PRICE INDEXES

Prices of a limited range of commodities are recorded in the Blue Books of Western Australia from the early years of settlement. Retail prices of food and groceries and average rentals of houses for years extending back to 1901 have been collected by the Australian Statistician, but it was not until 1911 that a systematic collection of retail price statistics was begun. These statistics were used to compile the 'A' Series Index, which covered food, groceries and house rents and was first compiled in 1912 with the year 1911 as base = 1,000. Four other indexes covering a wider range of commodities and services were compiled by the Australian Statistician at different times before the current Consumer Price Index was introduced in 1960 (retrospectively to the September quarter of 1948).

Retail price indexes aim to measure the changes which occur in the general level of prices in a selected field. The basic principle of a price index is to select commodities and services representative of the field to be covered, and to combine their prices at regular intervals by the use of 'weights' which represent the relative importance of the several commodities and services in the selected field taken as a whole.

The items and standards priced are revised from time to time to keep them in harmony with changing conditions. Before each quarterly collection the standards of all items are reviewed after extensive inquiries among manufacturers, wholesalers and retailers. Where changes in the items or standards priced become necessary, suitable adjustments are made in compiling price series to ensure that they reflect only changes in prices for representative goods of constant quality and not differences in prices of differing standards.

Information concerning retail price indexes and their development in Australia is given in the *Official Year Book of Australia* and the *Labour Report*, published by the Australian Statistician, Canberra.

The Consumer Price Index. The purpose of the Consumer Price Index is to measure quarterly variations in retail prices of goods and services representing a high proportion of the expenditures of wage-earner households. The weighting pattern relates to estimated aggregates of household expenditures and not to estimated expenditures of an 'average' or individual household of specified size, type, or mode of living.

The index covers a wide range of commodities and services arranged in five major groups, comprising Food; Clothing and Drapery; Housing; Household Supplies and Equipment; and Miscellaneous. With certain exceptions, the weights for individual items comprising these groups are derived from estimates of average household consumption or expenditure for the community as a whole.

The Consumer Price Index is designed essentially to measure the proportionate change in prices as combined in the individual groups, and more particularly, the total of the groups. Consumer (retail) price indexes are sometimes loosely called 'cost of living indexes' and are thought to measure changes in the 'cost of living'. While they may be used as indicating proportional variations in cost of a constant standard of living, they do not measure the absolute cost of any standard of living, nor the absolute cost of changes in the standard of living. The change in prices of goods and services is nevertheless a very important part of the change in the cost of living and this part is measured by consumer (retail) price indexes.

The incidence and frequency of changes in the pattern of household expenditure since 1950 have been such as to make it necessary to construct not one but a series of new indexes introducing additional items and changes in weighting patterns at short intervals. The Consumer Price Index therefore consists of a sequence of short-term retail price indexes linked to form one continuous series. At times of linking, the weighting pattern is altered and new items which have become significant in household expenditure are introduced. In each period between links the items and weighting remained unchanged. The most recent link (the eighth in the series) was made as at the September quarter of 1974 in which, as a result of the abolition of radio and television licences with effect from 18 September 1974, the item 'radio and television licences' was deleted from the Consumer Price Index. The weighting of the index has been derived from analyses of data from the Census of Population and Housing, the Census of Retail Establishments, the Motor Vehicle Usage Survey, from recent statistics and estimates of production, consumption, etc., and from several special purpose sample surveys. Weights of all items have been reviewed and are now broadly based on the estimated pattern of consumption in 1971-72. Further information is contained in the mimeographed release *Consumer Price Index* issued by the Australian Statistician, Canberra.

The Consumer Price Index is compiled for each of the six State capital cities and for Canberra. The separate city indexes measure price movements within each city individually. They enable comparisons to be drawn between cities as to differences in the degree of price movement, but not as to differences in the price level.

In tables dealing with the Consumer Price Index, the figures appearing after the decimal point have little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding off the figures to the nearest whole number.

Details of movements in the Consumer Price Index are published quarterly by the Australian Statistician, Canberra for the five groups individually and for all groups combined. In addition, index numbers for the Food Group and its component sub-groups are issued monthly in the publication *Consumer Price Index—Monthly Food Group Index Numbers*.

CONSUMER PRICE INDEX
(Base of each Index: Year 1966-67 = 100·0)

Retail Price Index Numbers, 1901 to 1975. The index numbers shown in the following table are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the 'A' Series Retail Price Index; from 1914 to 1946-47, the 'C' Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and 'C' Series Index excluding Rent; from 1948-49 onwards, the Consumer Price Index.

RETAIL PRICE INDEX NUMBERS, 1901 TO 1974
SIX STATE CAPITAL CITIES COMBINED
(Base: Year 1911 = 100)

Year	Index number	Year	Index number	Year	Index number

n.a. denotes 'not available'.

(a) Bread, ordinary white, delivered, 2 lb loaf prior to 1975. (b) Flour, plain, 2 lb pkt prior to 1974. (c) Flour, self-raising, 2 lb pkt prior to 1974. (d) Rice, 1 lb pkt prior to 1973. (e) Breakfast cereal, corn based, 453g pkt prior to December 1975. (f) Biscuits, dry, 8 oz pkt prior to 1975. (g) Peaches, 29 oz prior to 1975. (h) Pears, 29 oz prior to 1975. (i) Butter, 454g prior to 1975. (j) Cheese, processed, 227g pkt prior to 1975. (k) Eggs, 24 oz prior to 1972. (l) Milk, fresh, two 1-pint bottles prior to 1975. (m) Bacon, rashers, pre-packed, ½ lb pkt prior to 1975. (n) Sugar, 4 lb pkt prior to 1973. (o) Jam, 1½ lb can prior to 1975. (p) T-bone, with fillet; without fillet prior to June quarter 1972.

WHOLESALE PRICE INDEXES OF MATERIALS USED IN BUILDING

House Building. The Wholesale Price Index of Materials used in House Building is compiled by the Australian Statistician and was first published in November 1970 (retrospectively to July 1966). Index numbers are produced monthly for each State capital city and for the six State capital cities combined.

The index measures changes in prices of selected materials used in the construction of houses. Its composition is in accordance with the usage of materials in actual houses which were selected as representative for the purpose. The index does not purport to represent buildings of any kind other than houses. The house building construction types included are those which use brick, brick veneer, timber, or asbestos-cement sheeting as the principal material for the outer walls. In all cases the selection of materials was based on local usage. The index includes some fifty items which are combined in eleven groups in addition to the 'All groups' index. Some items carry the weight of similar items not directly priced. They are described in terms of fixed specifications with the aim of recording price changes for representative materials of constant quality.

The reference base of the index is the year 1966-67 = 100.0, the same as that used for the Wholesale Price Index of Materials used in Building other than House Building (see below). The index is a fixed-weights index and is calculated by the method known as 'the weighted arithmetic mean of price relatives'. The items and weights were derived from reported values of each material used in selected representative houses constructed in or about the year 1968-69 in each State capital city. The selection took account, within the four major construction types, of a range of characteristics of these houses, e.g. internal partitions, windows, roofing, etc., as well as whether such things as paths and fences were included in the job.

Data obtained in each State capital city were used to construct for that city its own list of items and its individual weighting pattern. The weighting pattern derived for the weighted average of the six State capital cities is an aggregation of the individual city patterns, the weight given to each item being proportional to its estimated importance in materials usage in houses of the specified types completed in the six capital cities in 1968-69. In that year the four major construction types (*i.e.* brick, brick veneer, timber, asbestos-cement sheeting) constituted more than 99 per cent of all house building (in the six State capital cities) for which indexes have been prepared.

Price series used in the index relate to specified standards of each commodity and are obtained in all State capital cities from representative suppliers of materials used in house building. In the main they are collected as at the mid-point of the month to which the index refers.

The index has been compiled for each month from July 1966 and for the financial years from 1966-67. Figures are published to one decimal place to avoid distortions that would occur in rounding off the index numbers to the nearest whole number.

(a) Weighted average.

The separate city indexes measure price movements in each State capital city individually. They enable comparisons to be drawn between capitals as to differences in degree of price movement from period to period, but not as to differences in price level.

Further information concerning the method of compiling the index, as well as detailed group index numbers for each State capital city, is given in the annual *Labour Report* and the monthly publication, *Wholesale Price Indexes—Price Index of Materials used in House Building*, both of which are issued by the Australian Statistician, Canberra.

WHOLESALE PRICE INDEX OF MATERIALS USED IN HOUSE BUILDING
'ALL GROUPS' INDEX NUMBERS

(Base of each Index: Year 1966-67 = 100·0)

NOTE. The separate city indexes measure price movements within each city individually. They enable comparisons to be drawn between cities as to differences in degree of price movement, but not as to differences in price level.

Other Building. The Wholesale Price Index of Materials used in Building other than House Building is compiled by the Australian Statistician and was first published in April 1969 (retrospectively to July 1966). Index numbers are produced monthly for each State capital city and for the six State capital cities combined.

The index measures changes in prices of selected materials used in the construction of buildings other than houses and 'low-rise' flats (in general, those up to three storeys). Its composition is in accordance with the materials usage in actual building projects which were selected as representative for the purpose. The building 'use-types' (e.g. office building, factory, etc.) directly represented are 'high-rise' flats (in general, those of more than three storeys); offices; factories; health buildings (*i.e.* hospitals, nurses' quarters, clinics, etc.); education buildings (*i.e.* schools, universities, kindergartens, etc.); and commercial premises including hotels, hostels, etc., shops, and other business premises. The index includes seventy-two items, which are combined in eleven groups as shown in the next table.

Although the selected materials (or many of them) are also used in house (and low-rise flat) building, in building repair, maintenance and alteration work, and in 'engineering construction' work (e.g. projects such as roads, dams, bridges and the like), the weighting pattern of the index, being designed for the specific purpose mentioned earlier, is not applicable to these other activities of the Construction industry. In addition, since the weights are based on an average materials usage over the stated range of building use-types, the index is not necessarily applicable to any specific building or any of the separate use-types.

The reference base of the index is the year 1966-67 = 100·0. The index is a fixed-weights index and is calculated by the method known as 'the weighted arithmetic mean of price relatives'. The items and weights were derived from reported values of each material used in selected representative buildings constructed in or about the year 1966-67. The selection took account of building use-type and construction characteristics (e.g. type of frame, wall, floor, etc.) within use-types.

A single weighting pattern, relating to the whole of Australia, is applied (with minor exceptions) to local price measures in calculating indexes for each State capital city. The index for the six State capital cities combined is a weighted average of individual city indexes. The relative weighting of the capitals is in proportion to the estimated value on completion of building other than house building in the separate States during the three years ended June 1967.

Price series used in the index relate to specified standards of each commodity and are obtained in all State capital cities from representative suppliers of materials used in building. In the main they are collected as at the mid-point of the month to which the index refers.

The index has been compiled for each month from July 1966 and for the financial years from 1966-67. Figures are published to one decimal place to avoid distortions that would occur in rounding off the index numbers to the nearest whole number.

The separate city indexes measure price movements in each State capital city individually. They enable comparisons to be drawn between capitals as to differences in degree of price movement from period to period, but not as to differences in price level.

**WHOLESALE PRICE INDEX OF MATERIALS USED IN BUILDING
OTHER THAN HOUSE BUILDING—GROUP INDEX NUMBERS**
(Base of each Index: Year 1966-67 = 100·0)

Year	Concrete mix, cement, sand, etc.	Cement pro- ducts	Bricks, stone, etc.	Timber, board and joinery	Steel and iron pro- ducts	Alu- min- ium pro- ducts	Other metal pro- ducts	Plumb- ing fix- tures	Miscel- laneous materi- als	Electri- cal instal- lation materi- als (a)	Mechan- ical servi- ces com- ponents (b)	All groups

Further information concerning the method of compiling the index, as well as detailed group index numbers for each State capital city, is given in the annual *Labour Report*

and the monthly publication, *Wholesale Price Indexes—Price Index of Materials used in Building other than House Building*, both of which are issued by the Australian Statistician, Canberra.

OTHER PRICE INDEXES

In addition to the price indexes already described, the Australian Statistician compiles indexes relating to prices of electrical installation materials, metallic materials, and selected export commodities. Data are published in the monthly releases *Wholesale Price Indexes—Price Index of Electrical Installation Materials*, *Wholesale Price Indexes—Price Indexes of Metallic Materials*, and *Export Price Index*. Further reference to these indexes will be found in the *Official Year Book of Australia* and the *Labour Report*, published by the Australian Statistician, Canberra.

In July 1975, a new price index was introduced by the Australian Statistician in the monthly bulletin *Wholesale Price Indexes—Price Index of Materials used in Manufacturing Industry*. It constitutes a further step in the publication of a range of price indexes of materials used by important and defined sectors of the Australian economy.

STATISTICAL SUMMARY FROM 1829

In the next twenty-one pages, a historical summary of some of the more important statistics relating to Western Australia is shown. This is intended to present a general picture of the development of the State, with details being given (wherever they are available) for the year 1829, for every tenth year in the period 1830-1910, and for each single year from 1920. Figures for the periods 1901-1909 and 1911-1919 have been omitted from the tables in several instances owing to insufficient space. In these cases, the figures are available, if required, from the *Western Australian Year Book*, No. 7—1968 and earlier issues, and the *Statistical Register of Western Australia*.

ESTIMATED POPULATION, NATURAL INCREASE AND MIGRATION (a)

NOTE. A line drawn across a column indicates a break in continuity in the series. Figures above the line exclude full-blood Aborigines; those below the line refer to total population, i.e. including Aborigines. See also NOTE on page 134.

(a) Estimates for years prior to 1971 are based on final census results; those for 1971 and later years are subject to revision after the 1976 census. (b) Excess of births over deaths, including deaths of defence personnel, whether in Australia or overseas, between September 1939 and June 1947. (c) Interstate and overseas. (d) Minus sign (—) denotes decrease. (e) The rates represent total increase in population during the year expressed as a proportion per cent of the population at the end of the previous year. (f) At 31 December. (g) Not available.

VITAL STATISTICS

(a) Rates for years prior to 1971 are based on final census results; those for 1971 and later years are subject to revision after the 1976 census.

(b) Excludes deaths of defence personnel, whether in Australia or overseas, between September 1939 and June 1947.

(c) Excess of Live births registered over Deaths registered; see also note (b).

(d) Deaths under 1 year of age; included in Deaths registered.

(e) Per 1,000 live births.

(f) Not available.

(a) From 1900, year ended 30 June. Sinking fund at 31 March from 1900 to 1928. (b) From 1928 includes expenditure from Loan Suspense Account. (c) Total amount for the years 1877 to 1881. (d) Total amount for the years 1872 to 1881. (e) Not available. (f) Includes expenditure prior to 1890. (g) Reduction due to operation of Financial Agreement Act of 1928. (h) Less than \$500.

NATIONAL WELFARE FUND: EXPENDITURE IN WESTERN AUSTRALIA FROM INCEPTION

NOTE. The National Welfare Fund was established, with effect from 1 July 1943, in terms of the *National Welfare Fund Act 1943*. During the first two years of operation, only maternity allowances and funeral benefits were paid from the Fund. Expenditure on these items in Western Australia was \$341,014 in 1943-44 (maternity allowances \$322,710, funeral benefits \$18,304) and \$374,302 in 1944-45 (maternity allowances \$348,164, funeral benefits \$26,138). Under the provisions of the *National Welfare Fund Act 1945*, effective from 1 July 1945, expenditure on age pensions (introduced in 1909), invalid pensions (1910), widows' pensions (1942), and child endowment (1941) became a charge on the Fund. Unemployment, sickness, and special benefits came into operation on 1 July 1945. Hospital benefit was first paid in 1945-46 (in respect of public hospitals from 1 January 1946, and private hospitals from 18 February 1946).

The principal expenditures from the Fund are shown separately in the table below. Details of all payments during the five-year period ended 30 June 1974 are shown in the table on pages 277-8.

(a) A number of endowments are paid every twelve weeks. Although in most years there are four such payments, there are some years in which five payments are made. (b) Comprises amounts paid to individuals in the form of allowances and to the State Government as reimbursements for expenditure incurred in the provision and maintenance of facilities. (c) Excludes some relatively minor expenditure not allocable among States. In 1974-75 such costs, for Australia as a whole, amounted to \$6.63 million and comprised \$1.63 million for the supply of blood products; radio-active isotopes, \$2.44 million; hearing aids for school children and pensioners, \$1.72 million; poliomyelitis vaccine, \$0.27 million; and other vaccines, \$0.57 million. (d) See footnote (c). (e) Includes expenditure of \$857,000 covering the operating deficits of certain nursing homes.

n.a. denotes 'not applicable'.

(a) Number at 30 June. (b) Figures for dates prior to 30 June 1957 exclude pensioners in benevolent homes. (c) During 1939-40 all invalid pensions in force were specially reviewed, and at 30 June 1940 all those pensioners who had become qualified for age pension by reason of age and residence were transferred to the age pensioner category. (d) Endowed children in institutions are excluded from figures shown for dates prior to 30 June 1957; at that date there were 3,347 such children. (e) From the commencement of the child endowment scheme on 1 July 1941 until 20 June 1950, endowment was not paid in respect of the first or only child of a family. (f) Persons aged 16 and under 21 years who are receiving full-time education at a school, college or university and are not in employment or engaged in work on their own account. (g) Average of number of persons on benefit at end of each week. (h) Includes pensions paid to incapacitated ex-servicemen and to the dependants of incapacitated or deceased ex-servicemen; particulars of ex-servicemen are included where relevant. (i) Comprises pensions paid to ex-servicemen and ex-servicewomen, and their dependants.

(a) From 1900, year ended 30 June. (b) From 1915, year ended 30 June. (c) From 1967 excludes vessels of 200 net tons and under. (d) Open for general and passenger traffic. (e) From 1942 includes operations of Railway Road Services, which began in November 1941. (f) From 1900 to 1964 includes 446 kilometres of line open for general and passenger traffic. (g) Decrease due to proclamations of closure issued by authority of the *Railways (Cue-Big Bell and other Railways) Discontinuance Act, 1960*. (h) Increase due to the transfer of all government-operated timber railways to private control. (i) Decrease due to transfer of Midland Railway Company to Western Australian Government Railways and to closure of timber and mining railways. (j) Increase due to opening of Goldsworthy-Port Hedland, Tom Price-Dampier and Westmine-Tilley iron ore railways. (k) Increase due to opening of Newman-Port Hedland iron ore railway. (l) Increase due to opening of Pannawonica-Cape Lambert iron ore railway and extensions to Goldsworthy and Tom Price railways. (m) Decrease due to closure of Westmine-Tilley iron ore railway and timber railways. * Revised.

n.a. denotes 'not applicable' or 'not available'.

(a) Year ended 30 June. (b) From 1929, at 30 June; for earlier years, at various dates. For years before 1946, excludes Australian Government-owned vehicles; from 1946, includes Australian Government-owned vehicles other than those of defence services. From 1956, new series based on the results of the periodic census of motor vehicles. (c) From 1920, year ended 30 June. (d) From 1959, includes station wagons previously included with commercial vehicles. (e) Including motor scooters. (f) From June 1956, includes station wagons previously included with commercial vehicles. (g) Less than \$500. (h) Figures for motor vehicles on register are based on final results of the census of motor vehicles on register at 30 September 1971.

(a) From 1920, year ended 30 June. (b) Excludes plywood and veneers and small quantities of timber for which details are not recorded. For the years 1910 to 1921, figures are approximate. (c) Figures for the years 1950 to 1952 represent overseas exports only and exclude small consignments to other Australian States. Those for 1953 to 1960 include small consignments of cooked whole rock lobsters to other Australian States. (d) From 1973, figures represent overseas exports only. (e) Principally pig-iron, cast iron and basic shapes and sections of iron and steel. (f) Less than 500 cu m. (g) Less than \$500. (h) Precise information not available, but it is known that the value of exports was about \$500,000.

(a) From 1915, year ended 30 June. (b) Gold sold abroad before consignment is not recorded as an export until actually shipped. (c) Includes silver-lead and silver-lead-zinc ores and concentrates. (d) From 1973, figures exclude interstate exports of lead ores and concentrates. (e) Includes additional premiums on sales of industrial gold. (f) Less than \$500. (g) Less than 500 tonnes. (h) Less than 500 kg. (i) From 1972, overseas details are not available for publication. For 1972, 1973 and 1974, interstate details are nil. (j) Excludes overseas exports of beneficiated ilmenite. (k) Overseas details are not available for publication. Interstate details are less than 500.

(a) From 1907 to 1946 at 30 June; for earlier years and from 1947 at 31 December. (b) Comprised allocations by Lands Department and certain leases and licences issued by Mines and Forests Departments. Apparent decrease in 1950 due mainly to revisions in records of Lands Department. (c) At 31 December for 1941 and earlier years; from 1942, the figures shown relate to 31 March in the following year. (d) Comprised shorn, dead and fellmongered wool. Excludes wool exported on skins. For 1947 and earlier, year ended 31 December; figures shown for 1948 to 1964 are for the year ended 31 March in the following year. From 1965 figures relate to the year ended 30 June in the following year. (e) Figures for 1949 and 1951 to 1955 exclude distributions of profits under the 1939-1945 War-time Wool Disposals Plan aggregating \$13,869,934. Separate State figures are not available for distributions made from 1956 to 1958 when payments were virtually complete. (f) Less than 500. (g) Not available.

(a) See footnote (a) on preceding page. (b) Comprises gold refined at the Mint and gold contained in gold-bearing materials exported. (c) From 1969 figures relate to year ended 30 June. (d) Includes amounts distributed by the Gold Producers' Association Ltd. from premiums on sales of Western Australian gold and net subsidy payments by the Commonwealth Government, under the Gold Mining Industry Assistance Act 1954-1972. (e) From 1915 figures relate to year ended 30 June. (f) Prior to 1940 averages generally are based on exports of the previous season's wheat; from 1940 they relate to exports during the year ended 30 June. (g) Not available. (h) Not available at time of publication.

VALUE OF PRIMARY PRODUCTION

(a) Figures generally are for the season or financial period ending in the following year. (b) Represents the estimated value of recorded production based on wholesale prices realised at the principal market. (c) In addition the following amounts were paid as interim distribution of profits under the 1939-1945 War-time Wool Disposals Plan: in 1949, \$3,629,478; in 1951, \$3,629,478; in 1952, \$2,325,324; in 1953, \$368,104; in 1954, \$2,120,460; and in 1955, \$1,797,090. Separate State figures are not available for distributions made from 1956 to 1958 when payments were virtually complete. (d) Includes pearling and whaling. (e) Net value of production is derived by deducting from the gross value all marketing costs and the cost of certain goods (seeds, fertiliser, pickling, sprays, dips, fodder, fuel and oil, etc.) used in the process of production. (f) Separate details not available. (g) Not available. (h) From 1974 this dissection has been contracted to the single industry 'Agriculture'.

(a) Prior to 1968-69 a factory was defined for statistical purposes as any establishment engaged in the processes of manufacturing, assembling, treating or repairing and in which 4 or more persons were employed during any period of the year, or power other than manual was used. For 1968-69 and later, direct comparisons of statistics of number of factories, persons employed, wages and salaries, output and net production with those for earlier years are not possible (for details see page 409). (b) For 1924 and earlier, year ended 31 December; from 1927, year ended 30 June. See also note (l). (c) Average over whole year including working proprietors. Prior to 1926-27 includes fallers and haulers employed by sawmills. (d) Figures for 1929-30 and later years exclude amounts drawn by working proprietors. (e) Selling value 'at the factory'. (f) Value added in course of manufacture, representing sum available for payment of wages, rent, depreciation, other sundry expenses and for interest and profit. (g) For years prior to 1964-65, figures include all types of standard size bricks. Prior to 1925-26, they also include firebricks and blocks. From 1964-65 figures represent clay bricks only (all sizes). (h) Prior to 1968-69, figures also include hewn timber. (i) For 1917 and earlier years, includes butter made on farms. (j) Source: 1933-34 to 1967-68, annual manufacturing census; 1968-69 to 1970-71, Commonwealth Dairy Produce Equalisation Committee Limited; from 1971-72, Western Australian Department of Agriculture. (k) Not available. (l) Eighteen months ended 30 June. (m) A census of manufacturing establishments was not conducted in respect of the year ended 30 June 1971.

(a) Excludes disputes involving cessation of work of less than 10 man-days. Details of the number of disputes and workers involved in disputes which commenced in any year and were still in progress during the following year are included in the figures for both years. (b) At 31 December. (c) End of December. Base: weighted average wage rate for Australia, 1954 = 100. (d) Payment commenced 1 July 1945. (e) Includes workers indirectly involved, i.e. those thrown out of work at an establishment where a stoppage occurred but not themselves parties to the dispute. (f) The rates shown for 1964 and later apply uniformly throughout the State. (g) Excludes workers in rural industry. (h) Year ended 30 June; average number of persons on benefit at end of each week. (i) The first State basic wage operated from the beginning of the first pay-period commencing on or after 1 July 1926. (j) Not available. (k) Special loading of 60 cents a week added to award rates for adult males and adult females operative from the beginning of the first pay-period commencing on or after 1 July 1967. Loading increased to \$1.95 operative from the beginning of the first pay-period commencing on or after 25 October 1968 until 22 November 1968 when loading was absorbed in basic wage. (l) Preliminary; subject to revision. * Revised.

CONSUMER PRICE INDEX (a)
(Base of each Index: Year 1966-67 = 100)

(a) The index numbers shown are so designed as to measure periodically the movement in retail prices of the specified group of items in each capital city individually. They do not provide a measure of differences in absolute price level as between capital cities, nor of comparative costs of the groups of items. (b) Weighted average.

n.a. denotes 'not applicable'.

(a) Proportion of Western Australia to Australia. (b) Preliminary. (c) In civilian employment. Excludes defence forces and employees in agriculture and private domestic service, and trainee teachers. (d) In terms of greasy wool. Comprises shorn wool, dead wool, fellmongered wool and wool exported on skins. (e) Dressed carcass weight. Excludes offal. (f) See definitions on pages 345-6. (g) Mine production as reported to Department of Mines. (h) As reported to Department of Mines. (i) See letterpress on page 409. Excludes electricity and gas establishments. (j) Series not comparable with that published in 1974 issue and earlier. Figures now exclude motor vehicles, etc. (k) Excludes details of Australian Capital Territory and Northern Territory. (l) See footnote (k).

APPENDIX

CHAPTER I—DISCOVERY, COLONISATION AND EARLY SETTLEMENT

page 10

Captain Fremantle's Report of Arrival of First Settlers ⁽¹⁾

The following account of the arrival of the first settlers was contained in a despatch sent by Captain Fremantle to the Admiralty, from Trincomalee, on 8 October 1829.

'The "Challenger" arrived and anchored off Garden Island (late Isle Bûache of the French) on 25 April 1829 and, on the 27th, proceeded through the passage into Cockburn Sound, which is most rocky and intricate, in consequence of which she struck on a sunken rock; but I do not anticipate that she has received any damage, as she came off immediately, and makes no water. On the 28th she was secured in the Sound, and possession was immediately taken of Garden Island; fresh water was found by digging wells in the sand, and firewood in great abundance, the Island being covered with a small kind of pine, and fit for no other use.

The weather being unsettled and boisterous, it was not till 2 May that I could land at the Swan River, distant $9\frac{1}{2}$ miles from Cockburn Sound. On that day formal possession was taken of the whole of the west coast of New Holland in the name of His Britannic Majesty, and the Union Jack was hoisted on the south head of the river.

On 6 May a party of twenty-five men, under the command of Lieutenant John Henry, was landed in a little bay close to the mouth of the river, to the southward of it, being the only landing place in that neighbourhood where boats could go to with security, the bar at the entrance of the river generally being impassable; the crew of the "Challenger" were employed refitting and watering the ship.

On 1 June a merchant ship was reported in the offing, and on the 2nd she was seen standing into Gage Roads. She proved to be the "Parmelia", merchant ship, hired by Government, having on board Captain Stirling, R.N., appointed Lieutenant-Governor of the new settlement at Swan River, and other gentlemen, with their families, holding situations in the Colony. In running into Cockburn Sound she grounded on the bank between Pulo Carnac (or Isle Bartollet of the French) and Woodman's Point on the mainland, and it was not until the next morning, with all the exertions of this ship's crew and boats, that she was extricated from her perilous situation, after she had received much damage; she was subsequently brought near the "Challenger" and secured in Cockburn Sound. His Excellency the Lieutenant-Governor having determined to make his first landing on Garden Island, in consequence of the commencement of the winter season, the weather being generally boisterous, rainy, and unsettled, and the communication with the mainland very uncertain, he requested that I would render him all the assistance of the "Challenger's" crew in clearing parts of the island, building houses for himself and the rest of the colonists, and clear the transport as soon as a storehouse could be erected for the reception of the Government stores. I immediately employed every means in my power to forward his wishes, and the "Challenger's" crew were employed in any way the Lieutenant-Governor wished, for the benefit of the Colony.

On 8 June His Majesty's ship "Sulphur" anchored in Cockburn Sound, with a detachment of troops on board for Swan River. On the 17th they were disembarked, and part of them sent to relieve the marines and seamen of this ship at the mouth of the river, the weather being so boisterous as to prevent their landing on the mainland sooner. By the end of the month, having completed all the storehouses and landed most of the cargo from the "Parmelia", His Majesty's ship was prepared for sea to join the Commander-in-Chief in India, in compliance with orders received by His Majesty's ship "Sulphur" to

that effect, when I received an application from the master of the "Parmelia", as also a requisition from the Lieutenant-Governor, to heave down and make good the defects of that ship, as she had received much damage and could not pursue her voyage, and if this ship was to leave the anchorage without rendering her the assistance required, the "Parmelia" would be abandoned. I therefore considered it my duty, after ordering a survey to be held on her, to detain His Majesty's ship in Cockburn Sound, and to put her in a state to pursue her voyage, an account of which has been delivered to Rear-Admiral Sir Edward Owen; and it was not till 28 August that the "Challenger" was enabled to leave Swan River. On leaving the Colony I have to state that two ships have arrived from England with settlers, and one from the Cape of Good Hope with cattle; many others were expected. The Lieutenant-Governor had fixed on a site for a town about 12 miles up the Swan River, on the right bank, just below the islands, where he intended removing to immediately with the whole of the party landed on Garden Island. The town is to be called Perth; there is also another town to be built at the mouth of the river for the convenience of the shipping in Gage Roads, near the spot where the party from the ship first established themselves. The number of settlers arrived from England, including women and children, were about 150, making the whole party now at Swan River amount to nearly 300 persons; they had upwards of twelve month's provisions, and were perfectly healthy. The soil of the sea coast was generally sandy, but on arriving at the fresh water in the Swan and Canning rivers, the banks were rich, and the soil capable of producing anything.

I cannot conclude without making some remarks on the anchorage in Cockburn Sound, which we had a good opportunity of trying, having remained there for the three winter months in the greatest security, and I consider it to be a safe and good harbour, capable of containing any number of ships; unfortunately the passage in is intricate, and requires to be well buoyed. At present it cannot be approached without the greatest caution, and ought not to be attempted except in the finest weather.

Gage Roads is open to four points, which makes it at present a doubtful anchorage during the winter months; but for nine months ships may ride there with safety, and the approach is perfectly easy, as there are no dangers to the northward of Rottneest Island to the mouth of the Swan River.'

CHAPTER III—CONSTITUTION AND GOVERNMENT

pages 114, 115

The State Parliament

As authorised by the *Constitution Acts Amendment Act (No. 4), 1975* the number of Ministers in the State Cabinet was increased from twelve to thirteen. The additional Minister, Mr I. G. Medcalf, M.L.C., was sworn in on 22 December 1975 as Attorney-General, and Minister for Federal Affairs. The Premier, Sir Charles Court, had previously relinquished the portfolio of Federal Affairs and his designation as a consequence became Premier, Treasurer, and Minister Co-ordinating Economic and Regional Development.

pages 115, 116, 119

Legislative Council and Legislative Assembly

The *Constitution Acts Amendment Act (No. 2), 1975* provides that 'until the twenty-first day of May, nineteen hundred and seventy-seven, the State shall be divided into fifteen Electoral Provinces under the provisions of the Electoral Districts Act, 1947 and shall return in all thirty members to serve in the Legislative Council. On and after the twenty-first day of May, nineteen hundred and seventy-seven the State shall be divided into sixteen Electoral Provinces under the provisions of the Electoral Districts Act, 1947 and shall return in all thirty-two members to serve in the Legislative Council.'

The Act also provides that 'the State shall be divided into (a) fifty-one Electoral Districts until the dissolution of that House [the Legislative Assembly—Ed.] or the expiry thereof by effluxion of time first occurring after the thirty-first day of December, nineteen hundred and seventy-six; and (b) fifty-five Electoral Districts thereafter, under the provisions of the Electoral Districts Act, 1947, each returning one member to serve in the Legislative Assembly.'

The increase in the number of members of the Legislative Council and the Legislative Assembly to thirty-two and fifty-five, respectively, will consequently come into effect at the next State elections due to be held early in 1977.

Details of the final recommendations of the Commissioners appointed under the Electoral Districts Act to effect the division of the State into sixteen Electoral Provinces and fifty-five Electoral Districts were promulgated in the *Government Gazette of Western Australia* dated 9 June 1976. A summary is given below.

The Judicature

Mr P. F. Brinsden was appointed a Judge of the Supreme Court of Western Australia as from 27 January 1976.

page 128

Overseas Representation in Western Australia

In the period 31 December 1975 to 31 October 1976 the following changes in consular representatives in Western Australia took place.

Britain—Mr A. F. R. Harvey, O.B.E. was appointed to the vacant position of Consul-General following the retirement of Mr C. E. Dymond, C.B.E. on 15 October 1976.

Germany, Federal Republic of—Mr R. Mueller, Vice-Consul, succeeded the Honorary Consul, Mr P. R. Adams.

United States of America—Mr C. T. Mayfield succeeded Mr R. C. Foulon as Consul.

CHAPTER IV—POPULATION AND VITAL STATISTICS

PART 1—POPULATION

page 135

Population in Local Government Areas

The following table presents preliminary statistics of the population as recorded at the Census of Population and Housing, 30 June 1976, for each local government area in Western Australia. The statistics have been compiled following a preliminary examination of census forms and are subject to revision. Corresponding 1971 Census statistics are shown for comparison.

In Western Australia, local government areas are designated Cities, Towns, or Shires. In the table, Cities are marked (C) and Towns (T), all other local government areas being Shires. The names and designations used are those which were current at 30 June 1976. Where the boundary of a local government area has changed since 1971 the population totals have been estimated on 1976 boundaries.

(a) Minus sign (—) denotes decrease. (b) Refers to persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

PART 2—BIRTHS, DEATHS AND MARRIAGES

page 169

Divorce

In Western Australia, jurisdiction relating to the *Family Law Act 1975* (Commonwealth) is vested in the Family Court of Western Australia constituted by the *Family Court Act, 1975* (State).

The Family Law Act provides that an application by a party to a marriage for a decree of dissolution of the marriage shall be based on the ground that the marriage has broken down irretrievably. A decree of dissolution is made if, and only if, the Court is satisfied that the parties separated and thereafter lived separately and apart for a continuous period of not less than twelve months immediately preceding the date of the filing of the application for dissolution of marriage, provided that the Court is satisfied that there is no reasonable likelihood of cohabitation being resumed.

The Family Court of Western Australia which commenced operation on 1 June 1976 also exercises jurisdiction in matters concerning the adoption of children, and the guardianship, custody or maintenance of children.

CHAPTER V—SOCIAL CONDITIONS**PART 5—SOCIAL BENEFITS, PENSIONS AND WELFARE SERVICES**

pages 244-52, 260

Social Services and Repatriation Benefits

The *Social Services Amendment Act 1976* and the *Repatriation Acts Amendment Act 1976* provided for increases in certain pensions, benefits and allowances to come into operation during May 1976. The increases applied to age and invalid pensions, service pensions, sheltered employment allowances, widows' pensions, war widows' pensions, supporting mothers' benefits, unemployment, sickness and special benefits and pensions for ex-servicemen. No increase was paid to unemployment and sickness beneficiaries under eighteen years of age. The weekly rate of payment of pensions for ex-servicemen was increased from \$74·10 to \$78·85 for the Special (T.P.I.) Rate, from \$51·05 to \$54·30 for the Intermediate Rate and from \$28·00 to \$29·80 for the maximum rate of the General Rate pension. Payments for certain amputations and/or loss of vision were increased from a maximum rate of \$46·10 to \$49·05 and the sustenance allowance was increased from \$74·10 to \$78·85 for the higher rate and from \$28·00 to \$29·80 for the lower rate. The maximum weekly rate for all other pensions and benefits and for the sheltered employment allowance was increased from \$38·75 to \$41·25 in the case of a single person and from \$64·50 to \$68·50 in the case of a married couple.

Family Allowances

The *Social Services Act Amendment Act (No. 2) 1976* amended the provisions relating to family allowances (formerly known as child endowment), increasing the rate of endowment for each child by bringing full-time students into account on the same basis as children under sixteen years of age in the assessment of the total family allowance payable and by increasing from twenty-one years to twenty-five years the age at which payment ceases to be made for a student. The rates effective from 15 June 1976 are \$3·50 per week for the first child, \$5·00 per week for the second child, \$6·00 per week for each of the third and fourth children and \$7·00 per week for the fifth and each subsequent child.

State Relief Payments

The weekly rate of benefit payable by the State Government to a woman not receiving Australian Government assistance was increased from \$36 to \$41·25, the additional payment in respect of a dependent first child was increased from \$11·00 to \$11·50 and the additional payment in respect of the second and each subsequent child was increased from \$7·00 to \$7·50. The increase was effective from May 1976.

**LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED
IN PREVIOUS ISSUES (a)**

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in an abbreviated form only, in the present issue. Owing to considerations of space, the deletions are necessary to make room for new material and the list will be revised each year to provide readers with a cumulative index of special articles or topics. In cases where an article was published in more than one previous issue, the reference to its last appearance only is given, as earlier references can be traced back in the List of Special Articles in the 1969 or 1970 Year Book.

NOTE ON STATISTICAL DIVISIONS

Western Australia is divided into a number of municipal districts for the purposes of local government administration. At 31 December 1975 there were 138 such districts, which are used as the basis of presentation of data derived not only from the population census but also from many of the regular statistical collections. Information presented in this way is valuable when considering activities in particular local government areas but is often more detailed than is required for a broader geographical assessment. For this reason, the municipal districts are combined into statistical divisions which provide significant areas for the publication of statistics in a convenient and readily appreciable summary form.

The partition of the Australian States into statistical divisions originated from a resolution of a conference of 1928 between the Federal Health Council of Australia and the Statisticians of the Commonwealth and the States concerning the need for the delineation of areas appropriate for the purposes of statistical tabulation. They first became operative in 1929 after consultation between the Australian Statistician, the Statisticians of the States in collaboration with the State health authorities, and the Commonwealth Department of Health. Although statistical divisions were devised initially for use in the compilation and presentation of vital statistics, the advantages of extending the system to other fields of statistical investigation were recognised at once and it soon came to have general application in cases where consideration of geographic areas was relevant.

The statistical divisions of Western Australia and their component local government areas at 31 December 1975 are listed on the following pages and are shown on the accompanying maps. The population of each division as recorded at each of the five population censuses to 1971 is shown in the following table. The areas of the divisions at 30 June 1975 are also given. As the formation of the Shires of East Pilbara and West Pilbara, with effect from 27 May 1972, altered the common boundary between the former North-West and Pilbara Statistical Divisions, separate figures for these divisions are not now available. Consequently, on page 553 the component local government areas have been listed alphabetically under the single heading 'North-West and Pilbara Statistical Divisions'.

STATISTICAL DIVISIONS—POPULATION (a) AND AREA

Statistical division (b)	Population at Census of 30 June—					Area at 30 June 1975 (c)
	1947	1954	1961	1966	1971

WHOLE STATE	502,480	639,771	736,629	848,100	1,030,469	2,525,500

(a) Figures for 30 June 1961 and earlier exclude full-blood Aborigines; those for 1966 and 1971 refer to total population (i.e. including Aborigines). See NOTE on page 134. (b) See page xv. (c) See page xiv. (d) See letterpress immediately preceding table. (e) Refers to persons (both passengers and crew) who, at midnight on census night, were enumerated on board ships in Western Australian ports, or ships which had left an Australian port before census night for a next port of call in Western Australia. It includes also those who were enumerated on long-distance trains, motor coaches or aircraft.

(a) Includes statistics for individual local government areas.

(†) New issue.

NOTE. In addition to the preceding publications, a number of bulletins which deal exclusively with this State are produced by the Australian Statistician, Canberra, who also issues many publications which contain particulars for Western Australia as a component of Australian totals. A complete list of all publications currently issued by the Central and the various State Offices of this Bureau appears in 'Publications of the Australian Bureau of Statistics' issued by the Australian Statistician, copies of which are available free of charge from the Western Australian Office at the address shown on page 577.
