2.—POPULATION.

79. The estimated population of Victoria at the end of 1897* was Population, 1897. as follows :---

ESTIMA	TED PO	PULATIC	on, 31s1	r Dece	MBER,	1897.
Males			• • •	•••	•••	595,409
Females	•••		• • •	• • •		580,839
		Total	•••		•••	1,176,248

Mode of forming population estimate.

80. This estimate shows an increase during the year of 1,304resulting from an increase of 1,878 in the number of females, less a decrease of 574 in the number of males. The figures have been derived from the numbers returned at the census, brought on to the end of 1897 by means of the numbers expressing the excess of births over deaths and of arrivals over departures which took place since the census day. The official record of births, deaths, and arrivals have been taken as they stand; but, the record of departure being known to be defective, an allowance has been made for those unrecorded, which are estimated to have amounted to 49,019-viz., 38,179 males and 10,840 females—since the census. These numbers have accordingly been deducted from the totals. Had no such deductions been made the apparent population at the end of 1897 would have been 1,225,267—viz., 633,588 males and 591,679 females.

Municipal estimate of population.

81. A partial check upon the periodical estimates of population is afforded by means of returns obtained from the municipal authorities, who at the time of making their valuations ought to ascertain the number of persons living upon each property rated. This is not always done correctly; and, besides, in some municipalities the properties are not visited each year for the purpose of rating, in which case the numbers are not counted, but estimates, more or less wide of the truth, are made by the municipal authorities. The aggregate population obtained by means of the municipal returns is thus not so accurate as it might be were due care exercised in every municipality. The sum of the returns for 1897 was 1,148,885,† which, with an allowance to bring it on to the end of the year and for districts not situated within the limits of any municipality, would give a total of 1,152,300, or about 73,000 less than the apparent population,‡ or 24,000 less than the reduced estimate adopted. Some uncertainty must always prevail in regard to estimates of population owing to the absence of any machinery at present for taking account of overland migration. 82. The mean population of the year 1897 may be estimated as Mean population, 1897. follows :--

		• • •	• • •	• • •	593,180
	• • •	* • •	•••		579,610
•	•••	· -			

71 1005

* At the end of 1898, the estimated population was 1,175,460. The estimated population of Victoria at the end of each year will be found in the Statistical Summary of Victoria (first folding sheet), to this work.

† The returns for 1897 refer on the average to about the beginning of November.

t Or that obtained from the records without allowance for defective returns.

83. According to the records of births and deaths and of immi-Apparent grants and emigrants, the apparent increase of population in 1897 was population 9730—viz 5896 males and 3834 females. This resulted from an in 1897 9,730-viz., 5,896 males and 3,834 females. This resulted from an increase of 16,184, consisting of 7,479 males and 8,705 females, by excess of births over deaths; less a decrease of 6,454, consisting of 1,583 males and 4,871 females, by excess of departures over arrivals.

84. The figures showing the apparent increase of population are Increase of useful for comparing the results of one year with those of another, but 1890 to 1897. they are not to be relied upon for individual years, being usually higher than the actual numbers, as was made abundantly manifest by the results of the last census. The reason of this is that the number of persons who leave the colony by sea without being recorded is greater than that of the infants whose births are not registered. This causes a constant loss in the account of population, unrecognised at the time, which can only be counterbalanced by a surplus of arrivals over departures overland—a circumstance which of late years has occurred but rarely. The figures for the last eight years are subjoined :---

APPARENT INCREASE OF POPULATION.*

1890	• • •		35,523	1894	•••		12,979
1891	•••		29,150	1895	•••	• • •	10,383
1892			15,717	1896	•••	•••	1,917
1893	•••	•••	13,631	1897	•••	•••	9,730

85. A great diminution in the apparent increase of population is small shown by the figures of all the years since 1891, more especially in the since 1891. last two years, but it is satisfactory to find so large an increase in 1897 over the unprecedented low increase of 1896.

86. As practically all the deaths are registered, but some of the Increase by births escape registration, the apparent increase by the surplus of the to 1897. latter over the former is always somewhat below the truth. As, however, it is probable that the proportion of unregistered births is tolerably constant from year to year, and is not very large in any year, the figures are useful. The excess of births over deaths have fallen off steadily since 1892, when it was at a maximum—the decrease between 1892 and 1897 being almost 5,800, or over 26 per cent. The following are the numbers in the last eight years :---

59

APPARENT INCREASE BY EXCESS OF BIRTHS OVER DEATHS.[†]

1890	•• <i>•</i>	* • •	19,566	1894	•••		18,828
1891	•••	• • •	19,874	1895	•••		18,070
1892			21,980	1896	• • •	•••	16,464
1893	***		20 044	1897	• • •	•••	16,184

* The estimated actual, as distinguished from the apparent, increase of population in any year may be obtained by taking the difference between the figures of population at the end of the year in question and the one preceding it as given in the first folding sheet to this work.

† The number of births and deaths in each year will be found in the Statistical Summary of Victoria (first folding sheet), to this work.

87. The increase by excess of recorded arrivals over recorded immigra-tion, 1890 to departures reached its maximum in the Exhibition year (1888), which 1897. was also a period of great apparent prosperity. Since then there has been a continuous falling-off, until in the years 1892 to 1897, the known departures exceeded the known arrivals annually by numbers varying from 5,849 to 7,687, except in 1896 when the number was as high as 14,547. Such a circumstance has only twice previously occurred since 1843, viz., in 1861 and 1862, when the departures exceeded the arrivals by about 9,000 and 370 respectively. The figures for the eight years 1890 to 1897 are as follow:----

APPARENT INCREASE BY EXCESS OF ARRIVALS OVER DEPARTURES.*

1890	* • •	•••	15,957	1894			— 5,84 9†

* The number of recorded arrivals and departures by sea in each year will be found in the Statistical Summary of Victoria (first folding sheet), to this work.

t The minus sign (-) indicates that the departures exceeded the arrivals by the number against which it is placed.

‡ Aborigines are included in the case of Victoria and New South Wales, but it is understood they are omitted in that of the other colonies. In 1891, 565 Aborigines were enumerated in Victoria and 8,280 in New South Wales. For estimated populations of the respective colonies for each year since 1872, see Summary of Australasian Statistics (third folding sheet), to be published later on.

§ The population of New Zealand is exclusive of Maoris, who numbered 39,854-viz., 21,673 males and 18,181 females—in 1896.

89. The subjoined figures show the estimated percentage of increase Order of of the population of each colony during the $6\frac{3}{4}$ years which have elapsed since the census of 1891 was taken, the colonies being arranged in order increase of population.

5. New South Wales ... 86.57

92. The Chinese living in Victoria numbered only 2,341 in 1854; Chinese in but, owing to the attraction of the gold-fields, they rapidly increased, ^{Victoria,} 1854 to 1891 until in 1857 there were 25,424. Since that year the number has fallen, at first slowly to 24,732 in 1861, and then rapidly from decade to decade until there were only 9,371 left in 1891. Of these only 607 were females. All were not pure Mongolians—417, or nearly 5 per cent., of the males, and as many as 471, or 78 per cent., of the females, in 1891 being half-castes.[†]

* For areas of the colonies, see paragraph 3 ante.

† For an account of the legislation respecting Chinese which has taken place since 1854, see Victorian Year-Book, 1890-91, Vol. I., paragraph 379.

Chinese in Australasian Colonies, 1861 to 1891.

93. The Chinese appear to be diminishing in numbers, not only in Victoria, but in all the colonies except New South Wales, Western Australia, and Tasmania. 'Taking the colonies as a whole, however, the numbers appear to remain stationary at about 43,000. The following is a statement of the number of Chinese in each of the Australasian Colonies, according to the return of the last four decennial censuses :--

CHINESE IN THE AUSTRALASIAN COLONIES, 1861 TO 1891.

Colony.		1861.	1871.	1881.	1891.

Grand total	••••	•••	•••	43,706	42,521

All of Chinese race not born in China.

94. In all the colonies some of the persons born in China were not of the Chinese race, whilst, on the other hand, some members of the Chinese race were born elsewhere than in China. It is believed that the numbers in the table are exclusive of the former, but inclusive of the latter, in the case of every colony except South Australia, in which all those set down in the census schedules as born in China, but no others, have been taken to be Chinese.

Chinese

95. In 1891 there were only 605 Chinese females in Victoria, 601 females and in New South Wales, and 204 in all the other colonies combined. The numbers in 1891 also include 888 half-castes-of whom 471 were females-in Victoria; 867-of whom 445 were females-in New South Wales; and 117-of whom 55 were females-in Tasmania; whilst 50 were included in Queensland who were born in Australia of Chinese In the case of South Australia, all persons born in China parents.

(including those of European extraction) were regarded as Chinese, but the number of Chinese or of half-castes born elsewhere were not separately enumerated.

Aborigines in Victoria, 1891.

96. At the census of 1891 only 565 Aborigines-viz., 240 males and 325 females-were enumerated in Victoria. It is tolerably certain, however, that there are more in the colony than are shown by the In consequence of the nomadic habits of this race, some figures. have probably been missed by the sub-enumerators; and it is, moreover, possible that the latter sometimes failed to comply with the instruction to note the fact of the person being an Aboriginal by marking the letter "A" after the birthplace entry on the census schedule, and in consequence the fact might possibly pass unrecorded. The Central

Board for the Protection of the Aborigines states that it has information of the existence of 731 Aborigines in the colony. Of the Aborigines enumerated only 317-viz., 192 males and 125 females-were pure The remainder—numbering 248—viz., 133 males and 115 blacks. females—had a cross of European blood in their veins.

97. The following figures show the number of Aborigines enumerated Aborigines in Australor believed to exist in each Australasian Colony in 1891 :---

ABORIGINES IN THE AUSTRALASIAN COLONIES, 1891.

98. In most, if not in all, of the Australasian Colonies the enumeration Enumeraof the Aborigines was incomplete. It has been already stated that in Aborigines Victoria, whilst only 565 (including half-castes) were enumerated, 731 are believed to be in existence. In Queensland no attempt was made to enumerate or estimate the number of Aborigines, therefore the number returned in 1881-which is believed to understate the truth-has In South Australia the Aborigines were not regularly been repeated. enumerated, the figures given being derived from estimates made by the census collectors. In Western Australia only civilized Aborigines were In the numbers given for that colony, 575-viz., 293 enumerated. males and 282 females—are half-castes. In Tasmania there are no longer any Aborigines of unmixed race, the last male having died in 1869 and the last female in 1876. There are, however, a few half-With the Maoris of New Zealand, 40 Morioris-viz., 26 males castes. and 14 females—are included. These are the last surviving Aboriginal inhabitants of the Chatham Islands, which are a group lying about 360 miles to the east of New Zealand, in latitude 43° 50' S., longitude 177° E., and form a dependency of that colony.

incomplete.

* Including 248 half-castes, viz., 133 males and 115 females.

† Including 3,183 half-castes, viz., 1,663 males and 1,520 females.

‡ No provision was made in 1891 to enumerate, or form an estimate of the numbers of, Aborigines in Queensland. The numbers for 1881-partly counted and partly estimated - have therefore been repeated.

§ Partly estimated.

|| Civilized Aborigines only; 575 half-castes, viz., 293 males and 282 females, are included.

¶ These are half-castes. No Aborigines of unmixed race remain on the island of Tasmania.

** Including 40 aboriginal inhabitants of the Chatham Islands (Morioris), viz., 26 males and 14 females.

E

Urban and rural population. 99. In the following table the area of Victoria is divided into three districts, the first being the metropolitan (Greater Melbourne), extending in all directions for a distance of 10 miles from the centre of the city^{*}; the second, the extra-metropolitan towns, including the total space embraced in cities, towns, and boroughs (present or former) outside the limits of Greater Melbourne; and the third, the extra urban or rural, including the remaining portions of the colony. In each of these districts the population is shown as at the end of 1897, as well as the average population during that year, also the ratio of the population of each district to that of the whole colony, and the number of persons to the square mile :—

	Estimated	· · · ·			
Distric ts .	Area in Square Miles.	Total.	Proportions per Cent.	Persons to the Sq. Mile.	Mean Population, 1897.
Towns { Metropolitan Extra-Metropolitan†	256 376	458,610 197,170	38·99 16·76	1,791 524	454,852 197,110

102. The density of the population of each of the component parts Density of of Greater Melbourne is shown in the third figure-column of the table. It will be noticed that the most thickly peopled municipalities are Fitzroy and North Melbourne, with about 32 persons to the acre; then Collingwood, with over 28; Richmond, with 23; Prahran and South Melbourne, with over 15; and Melbourne City, with nearly 12 persons to the acre. In explanation of the fact that some of the suburbs are more densely populated than the city, it will be remembered that large numbers of people, who come to the latter on business daily, have their residences in the former, and would therefore be enumerated there. It should also be borne in mind that in some of the municipalities

metropoli-tan population.

65

* Exclusive of water, which covers an area of 33,402 acres. † Area of city of Melbourne revise 1, an 1 1,116 a gres of the West Melbourne Swamp, taken from the city of Footscray on the 7th March. 1894, added.

Including the Benevolent Asylum.
 Including 653 acres situated outside the 10-mile radius.

Census figures.

In making this calculation, persons in ships were excluded from the total population.

E 2

extensive parks, gardens, and other public reserves exist, so that the population is really living in closer proximity than the figures indicate. Melbourne City contains 1,723 acres of such reserves; Kew, 634 acres; South Melbourne, 482 acres; Williamstown, 446 acres; Flemington and Kensington, 307 acres; St. Kilda, 250 acres; Richmond, 190 acres; Brighton, 167 acres; Port Melbourne, 80 acres; Essendon, 65 acres; Footscray, 46 acres; Fitzroy, 41 acres; Collingwood, 39 acres; and there are smaller reserves in some of the other municipalities. If the reserves be excluded, the persons to the acre in the places named would be as follow:—Fitzroy, 33·3; Collingwood, 29·2; Richmond, 26·6; Melbourne City, 16·2; South Melbourne, 19·1; Flemington and Kensington, 13·2; St. Kilda, 10·8; Williamstown, 5·6; Footscray, 6·5; Port Melbourne, 4·8; Essendon, 3·8; Brighton, 3·6; and Kew, 2·9.

Decrease of population since 1891. 103. The growth of the population of Greater Melbourne in the ten years ended with 1891 was at the rate of nearly 21,000 per annum; but, according to the figures furnished by the municipal authorities, the population had fallen off by 32,286 between the date of the census (5th April, 1891) and the end of 1897. Adding to this the excess of births over deaths which occurred in the same period, viz., 48,422, it will be found that the district has—apart from deaths—suffered a total loss of population during the period of about 80,700. The following table shows the sub-districts in which the population increased and those in which it diminished in the period named, also the amount of increase or decrease which took place in each sub-district :—

INCREASE OR DECREASE OF POPULATION IN SUB-DISTRICTS OF GREATER MELBOURNE.

POPULATION OF AUSTRALASIAN CAPITAL CITIES, 1897.

105. According to the estimates made, an increase will be observed increase of in the population of all the capitals except Melbourne. The increase was relatively greatest in Perth, where the population nearly quadrupled itself; next in Wellington, where it increased by one-third; next in Hobart, and next in Adelaide.

106. It will, moreover, be noticed that the inhabitants of Greater Density of Sydney and Wellington appear to dwell in much closer contiguity than in capital those of any of the other metropolitan cities except Perth; whilst in cities. Adelaide and Hobart there is less than one person to the acre. It should be pointed out, however, that the metropolitan area in each colony is determined somewhat arbitrarily, and that few colonies agree as to the basis; thus, Melbourne and Adelaide include all within a 10-mile radius, whilst the area taken for Sydney is little more than half that for either of those cities. Omitting the sparsely-populated outskirts (remainder of district) of Greater Melbourne, which embrace more than half the area but contain only 13,800 persons, so as to reduce it to somewhat the same size as Sydney, the proportion per acre would be 5.65 persons

population since census

in Melbourne, or considerably higher than in Sydney.

107. Next to the municipalities embraced under the head of Greater Population of chief Melbourne, the most important towns in Victoria are-Ballarat, comextraprising three municipalities; Bendigo, two; Geelong, three; Warr- metropoli-tan towns. metropolinambool, one; Castlemaine, two; and Stawell, one. The enumerated populations of these, with their immediate suburbs, according to the

* At the end of 1898, the estimated populations were as follow:-Melbourne, 469,882; Sydney, 426,950; Adelaide, 147,616; Hobart, 40,450; and Wellington, 47,207.

† Decrease.

POPULATION OF SIX EXTRA-METROPOLITAN TOWNS, 1891, 1896, AND 1897.

Population of principal towns of Australasia.

108. Victoria contains not only the most populous capital city in Australasia, but the three most populous provincial towns on the Australian continent, viz., Ballarat, Bendigo, and Geelong. Launceston, the second largest town in Tasmania, however, has a slightly larger population than Geelong; whilst three provincial towns in New Zealand, viz., Auckland, Christchurch, and Dunedin, have not only more inhabitants than Wellington itself, but even more than in Ballarat. The following is a list of the principal towns in the Australasian Colonies, with their populations in 1897, or the latest available year :--

114. The figures afford evidence of the existence in 1891 of Victorian 782,606 Victorians by birth, viz., 393,036 males and 389,570 females. There were doubtless also some living in the United Kingdom and other countries outside of Australasia, but of these there are no means of estimating the numbers. Between 1881 and 1891, the increase of known natives of Victoria since 1881 had been 243,501, viz., 123,119 males and 120,382 females; and between 1891 and 1897 there has probably been a further increase of at least 160,000, making a total in 1897 of about 943,000.

115. The next table contains a statement of the estimated number Religions, of persons of different religions in Victoria about the middle of 1897, the proportions which those of each religion bear to the total population being taken as identical with those obtaining at the last census:---

(Exclusive of Aborigines.)

118. From the figures given in the last two tables, it may be ascer- component tained that Episcopalians (Church of England) form three-fourths of the Protestants in Western Australia; about two-thirds in New South Wales and Tasmania; and about one-half in Victoria, Queensland, and New Zealand; but only one-third in South Australia. The last-named colony is especially strong in Methodists and "Other Protestants" (chiefly Lutherans, Baptists, and Independents, in the order shown), who form about 30 and 26 per cent. respectively of the Protestant population; whilst New Zealand has by far the largest proportion of Presbyterians, who there form 28 per cent. of the Protestants. In Victoria, Presbyterians and Methodists form about one-fifth of the Protestant population, the proportion of the former being far larger than in any other colony except New Zealand, and that of the latter than in any colony except South Australia; whilst the members of both these religions are numerically half as strong again in Victoria as

parts of the Protestant section.

in New South Wales.

119. The proportions in the table are those of the Protestants Colonies and Roman Catholics to the sum of the two bodies combined; and it Roman should be pointed out that the proportions would be somewhat lower if Catholics were most were most calculated to the whole population of specified beliefs, which, in addition numerous. to the two bodies named, contain Jews, Buddhists, &c., and other non-Christian sects, as well as persons of No Denomination, No Religion, In proportion to the total of the two combined bodies, Protestants åс. were most numerous in New Zealand, South Australia, Tasmania, and Victoria in the order named, these being the only colonies in which they exceeded 75 per cent. of the whole; whilst Roman Catholics were

most numerous in Western Australia, next in New South Wales, and next in Queensland, these being the only colonies in which they exceeded 25 per cent. of the whole.

Proportious of Protestants and

120. Relatively to their combined numbers, Protestants gained slightly and Roman Catholics lost slightly between the censuses of Catholics in Australasia. 1881 and 1891, both on the Australian Continent and on that continent combined with Tasmania and New Zealand. This is shown by the following figures :---

RELATIVE PROPORTIONS OF PROTESTANTS AND ROMAN CATHOLICS IN

AUSTRALIA AND AUSTRALASIA, 1881 AND 1891.

Ages, 1897.

121. In the following table an estimate is given of the number of males and females living in Victoria at each quinquennial age-period about the middle of 1897. This estimate has been based upon the ages at which the persons returned at the census of 1891 must have arrived at that period, an allowance being made for the ages of those who have been born, have died, have arrived in, or have left the colony since the census was taken. The calculation was made in single years, and the numbers have been grouped in quinquennial periods for the purpose of this table.

123. In 1891, according to the ages of its inhabitants, Western Relative strength of Australia had the strongest population in proportion to its numbers of populations of Australany of the Australasian Colonies, Victoria in this respect standing asian Colonies. By the following table, which shows the proportions living second.

at the supporting and dependent ages, the relative strength of the population of each colony, as existing in 1891, will be at once recognised :---

EFFECTIVE STRENGTH OF THE POPULATIONS OF AUSTRALASIAN COLONIES, 1891—BOTH SEXES.

		Numbers in every 10,000 Persons living.				
Colony.	At Supporting	At Dependent Ages.				
		Ages (15 to 65 Years).	Under 15 Years.	65 Years and upwards.		
1. Western Australia		6,303	3,400	297		
2. Victoria		6,190	3,465	345		
3. Queensland		6,124	3,723	153		
4. New South Wales		5,912	3,836	252		
5. New Zealand	• • •	5,774	3,996	2 30		
5. South Australia		5,730	3,938	332		
7. Tasmania	• • •	5,632	3,909	459		

(Exclusive of Aborigines.)

Effective strength of population in various countries. 124. The following are the proportions of persons of both sexes at the sustaining and dependent periods of life in England, Ireland, Scotland, and the Cape of Good Hope in 1891, and in the United States in 1880:—

EFFECTIVE STRENGTH OF THE POPULATIONS OF VARIOUS COUNTRIES-BOTH SEXES.

		Numbers in every 10,000 Persons living.				
Country.	Census Year.	At Supporting	At Depend	ent Ages.		
		Ages (15 to 65 Years).	Under 15 Years.	65 Years and upwards.		
1. Ireland	1891	6,110	3,251	639		
2. England	1891	6,020	3,507	473		
3. Scotland	1891	5,937	3,558	505		
L. United States	1880	5,846	3,810	344		
5. Cape of Good Hope	1891	5,394	4,318	288		

76

125. The figures in the last two tables show that relatively to the Strength in colonies and total numbers in each country the populations of Ireland, England, and countries Scotland were stronger than those of New South Wales, New Zealand, compared. South Australia, or Tasmania, although not so strong as those of Victoria, Queensland, or Western Australia. New South Wales, however, had a relatively stronger population than the United States or the Cape of Good Hope, whilst New Zealand, South Australia, and Tasmania had each a relatively stronger population than the latter. 126. It will be observed that the proportion of children was largest Order of countries in in the Cape of Good Hope, and smallest in Ireland, but that those proportions countries almost change places in regard to the proportion of old people. at strong and weak ages.

The following is the order in which the Australasian Colonies and the countries named stand in these respects, also in regard to the proportion of persons at the effective period of life :---

ORDER OF AUSTRALASIAN COLONIES AND OTHER COUNTRIES IN REFERENCE TO PROPORTIONS OF PERSONS AT EFFECTIVE AND DEPENDENT AGES.

Middle Age, 15 to 65 Years (Strong Period).	Childhood, under 15 Years (Weak Period).	Old Age, 65 Years and upwards (Weak Period).
1. Western Australia.	1. Cape of Good Hope.	1. Ireland.
2. Victoria.	2. New Zealand.	2. Scotland.
3. Queensland.	3. South Australia.	3. England.
4. Ireland.	4. Tasmania.	4. Tasmania.
5. England.	5. New South Wales.	5. Victoria.
6. Scotland.	6. United States.	6. United States.
7. New South Wales.	7. Queensland.	7. South Australia.
8. United States.	8. Scotland.	8. Western Australia.
9. New Zealand.	9. England.	9. Cape of Good Hope.
10. South Australia.	10. Victoria.	10. New South Wales.
11. Tasmania.	11. Western Australia.	11. New Zealand.
12. Cape of Good Hope.	12. Ireland.	12. Queensland.

127. Victoria, it will be noticed, had, relatively to its numbers, a strong and stronger population than any of the other countries named except weak in Victoria Western Australia. With the exception of Western Australia and Ireland, it is, however, at the bottom of the list in regard to the proportion of old people, the only countries above it are Tasmania and the three divisions of the United Kingdom.

128. According to the figures, women at the reproductive period of Women at life (15 to 45 years) in Victoria were not only more numerous, but furnished a higher proportion to the total number of females living than they did in any of the other Australasian Colonies. At the census of 1881, South Australia was at the head of the list, and Victoria second. The former had, in 1891, dropped to the fifth place, whilst Victoria had risen to the highest. The following are the numbers and proportions for each colony :—

WOMEN AT THE REPRODUCTIVE PERIOD OF LIFE (15 TO 45 YEARS)

77

MIXED SEXES.

131. In proportion to population, dealers and workers in textile Occupations fabrics and dress (groups 6 and 15), dealers in food and drink (group 7), dealers in animal and vegetable substances (group 8), dealers and workers in minerals and metals (groups 9 and 18), dealers in fuel and light (group 10), persons engaged in mercantile pursuits (group

^{*} In South Australia the Chinese are excluded as well as the Aborigines. † See footnote to table on page 48 ante.

11), workers in buildings, railways, and roads (group 20), and persons of independent means (group 23) were more numerous, whilst persons engaged in agricultural and pastoral pursuits (group 22) were less numerous in Victoria than in any other colony named.

Occupations in New South Wales.

132. New South Wales, as compared with the other colonies, had the largest proportion of persons ministering to religion, charity, and science (group 2), dealers in art and mechanic productions (group 5), and workers in fuel, light, and energy (group 19).

Occupations in Queensland.

133. In Queensland, the proportion of labourers (group 21) was higher, whilst that of persons of independent means (group 23), was lower than in any other colony.

Occupations in South Australia. 134. The proportion of persons engaged in storage (group 12), and of persons (chiefly women and children) performing domestic duties or being educated (group 24), was higher in South Australia than in any of the other colonies; whilst in the same colony the proportions of persons ministering to religion, charity, and science (group 2), of dealers in money and real property, and in art and mechanic productions (groups 4 and 5), of workers in animal and vegetable substances (group 17), of workers in buildings, railways, roads, and earthworks (group 20), and of paupers and prisoners (group 25), were lower than in any of the other colonies.

Occupations in Western Australia.

135. The proportions which were higher in Western Australia than in any of the other colonies were those of persons ministering to Government, law, and order (group 1), board and lodging house keepers and servants (group 3), carriers (group 13), workers in art and mechanic productions (group 14), workers in animal and vegetable substances (group 17), and persons engaged in agricultural and pastoral pursuits (group 22); whilst the proportions which were lower than in the other colonies were those of workers and dealers in textile fabrics and dress (groups 6 and 15), workers and dealers in food and drink (groups 7 and 16), dealers in minerals and metals (group 9), workers and dealers in fuel and light (groups 10 and 19), and persons (chiefly women and children) performing domestic duties, or being educated (group 24).

Occupations in Tasmania.

^s 136. The proportions in Tasmania of dealers in money and real property (group 4), and of paupers and prisoners (group 25), were higher; whilst those of persons engaged in mercantile pursuits (group 11), of persons engaged in storage (group 12), of carriers (group 13), of workers in art and mechanic productions (group 14), of dealers in animal and vegetable substances (group 8), and of labourers (group 21) were lower than in any of the other colonies.

Occupations in New Zealand. 137. In New Zealand, the proportions which were higher than in any of the other colonies were those of workers in food and drink (group 16); whilst the proportions which were lower than in the other colonies were those of persons ministering to Government, law, and order (group 1), board and lodging house keepers and servants (group 3), dealers in money and real property (group 4), and workers in minerals and metals (group 18).

138. The number of breadwinners and the number of dependents in Breadeach of the colonies named are given in the following table, the sexes being distinguished. It is worthy of note that over one-fifth of the female population in Victoria are breadwinners, about 18 per cent. in Queensland and Tasmania, and from 15 to 16 per cent. in the other colonies :---

winners and dependents in Australasian Colonies.

BREADWINNERS AND DEPENDENTS IN THE AUSTRALASIAN COLONIES, 1891.

(Exclusive of Aborigines and of those whose occupations were not returned.)

Colony.		Males.		Fem	ales.	Total.	
		Bread- winners.	Depend- ents.	Bread- winners.	Depend- ents.	Bread- winners.	Depend- ents.

F 2

Order of the colonies in regard to proportion of unemployed. 141. The unemployed referred to are those willing to work if able to find suitable occupation, and are included amongst the breadwinners in the preceding table. If these be compared with the total number of breadwinners in the colonies named, it will be found that the highest proportion of unemployed was in New South Wales, Victoria standing second, and Western Australia, South Australia, and Tasmania third, fourth, and fifth. The following are the proportions in the five colonies :—

BRITISH DOMINIONS.—AREA AND POPULATION—continued.

NOTE.—If Protectorates and "Spheres of Influence" be included, the area of British Dominions (according to the *Statesman's Year-Book*) would be increased to 11,371,391 square miles, and the popula-tion to 383,883,685 persons. The most important of these protectorates are in Africa, embracing terri-tories known as British Central Africa, East Africa, Niger Territories, Oil Rivers Protectorate; South Africa and Zanzibar having an area of about 2,120,000 square miles, and a population of about 35,000,000.

Australasia compared with other British

143. The Australasian Colonies occupy about one-third, and Victoria rather less than a hundredth, of the whole area of the possessions. British dominions. The Australasian Colonies contain about an eightieth, and Victoria contains about a three-hundredth, of the population of the whole British Empire. The area of Australasia is somewhat smaller than that of Canada, which is the largest British possession; and the population of Canada exceeds that of Australasia by three-fourths of a million persons. The population of Victoria is exceeded by that of no British dependency out of Australia, except India, the Feudatory Native States, Canada, Ceylon, the Cape of Good Hope, the Gold Coast, and Basutoland.

Foreign countries, area and population.

144. The next table gives the area and population of foreign countries, including all which are of importance. The information has been drawn from authentic sources, and it is brought down to the latest available dates :----

FOREIGN COUNTRIES.-AREA AND POPULATION.§

Countries, with Dependencies.	Estimated Area in Square Miles.	Year of Census or Estimate.	Ascertained or Estimated Population.	Persons to the Square Mile.
EUROPEAN. Austria-Hungary Belgium	263,476 11,370	1890 1893	$42,766,204 \\ 6,069,321$	162 534

* The area includes inhabited islands only, which number from 70 to 80; inclusive of uninhabited islands, the area is estimated to be 7,740 square miles. Of the population at the census of 1891, 108,019 were Fijians; 2,036 Europeans; 1,076 half-castes; 2,267 Polynesians; 7,468 Asiatics (chiefly natives of British India); and others, 314.

+ For areas of the various colonies, see paragraph 3 ante.

Exclusive of Aborigines, except 565 in Victoria and 8,280 in New South Wales.

§ The figures of population in this table have been taken principally from the Statesman's Year-Book, 1898.

|| Including the formally annexed provinces of Bosnia, Herzegovina, and Novi-bazar, which contain an area of 23,262 square miles, with a population in 1888 of 1,407,000.

* Authorities differ considerably as to the area of Egypt. Thus the State-Major-General of Egypt estimates the total area (not including the territories of the Soudan still occupied) as 394,240 square miles. L'Almanach de Gotha gives the area as 27,687 square kilomètres (or about 10,690 square miles). The area above given is that published by the Imperial Board of Trade. † The estimates of population of Morocco vary from two and a half millions to nine and a half

millions.

‡ The wandering Aboriginal population is estimated to amount to 600,000.

S Not including wild Indians to the number of 50,000.
Including wild Indians, estimated at 220,000.

Nine-tenths of the population are negroes, and the rest principally mulattoes. Not including wild Indians to the number of 40,000 in Nicaragua, and 350,000 in Peru.

tt Exclusive of about 60,000 semi-civilized and 70,000 wild Indians.

^{‡‡} Including Alaska territory, which contains an area of 577,390 square miles, and a population of 37,000. Indians to the number of 249,273 are also included.
§§ Of the population given 31,019 were natives, 8,485 half-castes, 21,616 Chinese, 24,407 Japanese, 455 Polynesians, 3,086 Americans, 2,250 British, 1,432 Germans, 378 Norwegians, 101 French, and 600 other foreigners.

British dominions compared with foreign countries. 145. According to the last two tables, the British Empire covers an area somewhat larger than European and Asiatic Russia combined, more than four times as large as Russia in Europe, more than twice as large as the Chinese Empire, and over two and a half times as large as the United States ; while its population is equal to seven-eighths of that of the Chinese Empire, is nearly three times as large as that of the Russian Empire, is five times as large as that of France and its possessions, is five and a half times as large as that of the United States, and seven times as large as that of Germany. Moreover, the area of the British dominions is about seventy-six times, and the population thereof more than ten times, as large as the area and population respectively of the United Kingdom itself.

Density of population in various countries. 146. The most densely populated independent country in the world appears to be Belgium, the next Egypt, and the next England and Wales—the first containing five hundred and thirty-four, the second five hundred and thirty-one, and the third five hundred and twenty-five persons to the square mile. Holland comes next with three hundred and fifty-six; then China, which, according to the latest estimate, contains, even without its dependencies, over a fourth of the total population of the world, with two hundred and eighty-nine persons to the square mile; Japan with two hundred and eighty-nine; Italy next, with two hundred and eighty-four : followed in close succession by Germany, Luxemburg, France, Switzerland, Austria-Hungary, and Denmark. Scotland and Ireland, which are of equal density, are a little less densely populated than Denmark.

Proportions of sexes in various countries. 147. In most European countries, females are more numerous than males, the only exceptions in the following list being Russia, Italy, Servia, Roumania, Greece, and Bosnia. British India and the Asiatic portion of the Russian Empire, Corea, Japan, Canada, the United States, most of the South American Republics, the Cape of Good Hope, and the Australasian Colonies also contain more males than females :—

THE WORLD .- ESTIMATES OF AREA AND POPULATION.

NOTE.-These estimates have been taken from the Statesman's Year-Book, 1892. Estimate A is by Mr. E. G. Ravenstein, F.R.G.S. Estimate B is from Die Bevölkerung der Erde.

149. Mr. Ravenstein estimates that the increase of the population Increase in of the world and its various divisions during the ten years ended with 1890 was at the following rate :--Europe, 8.7 per cent.; Asia, 6 per cent.; Africa, 10 per cent.; North America, 20 per cent.; South America, 15 per cent.; Australasia, 30 per cent.; the World, 8 per cent.

the world's population, 1880-1890.

150. Comparing the totals in the table those in the lowest line of Proportion of countries the table at page 87, ante, it appears that more than four-fifths of the named to earth's surface, and 97 per cent. of its population, are included in the world. countries named.

* Beyond the north limit of cereals.

† Polar islands only.
† During the period intervening between the censuses of 1881 and 1891 the annual rate of increase in Australasia was 38 per cent.

Proportion of British dominions, &c., to world.

151. It appears, moreover, that British dominions cover more than a sixth of the earth's surface, and contain about a fourth of its population; that the Australasian Colonies cover a little over a seventeenth of its surface, but contain only about a three hundred and fiftieth of its population; and that Victoria does not cover much more than a six-hundredth part of its surface, and contains nearly a thirteen-hundredth of its population.

Available land of the world.

Mining population, 1897.

152. It has been estimated that of the land of the earth, exclusive of the polar regions, 61 per cent. is fit for agriculture, 30 per cent. consists of steppes and mountains, a considerable portion being probably fit for pastoral purposes, and 9 per cent. is desert.

153. When the census of 1891 was taken, the number of gold miners in Victoria was found to be 21,206 as against 35,189 returned ten years previously. The estimate of gold miners made by the Department of Mines for the end of 1897 was 32,820, or 11,614 more Of the number in 1897 than the number returned at the census. 15,181 were engaged in alluvial and 17,639 in quartz mining, and about 2,200 of the whole were Chinese. It is probable that in the Departmental estimate referred to some men were considered as miners who would return themselves at the census as engineers, blacksmiths, carpenters, &c.; whilst some selectors who were in the habit of dividing their time between mining and farming would return themselves as farmers. The Departmental estimates for the last five years are subjoined :---

			1893.	1894.	1895.	1896.	1897.
Alluvial Quartz	•••	•••	11,847 13,672	13,019 14,837	$14,421 \\ 15,476$	$15,450 \\ 16,673$	15,181 17,639
Totals	5	••••	25,519	27,856	29,897	32,123	32,820

European and Chinese miners.

154. According to the same estimate, the Europeans engaged in quartz mining at the end of 1897 exceeded those engaged in alluvial mining by 2,458, the numbers being 17,639 and 15,181 respectively. The Chinese seldom practise quartz mining; the estimated numbers engaged in that industry being only 40 as against 2,160 engaged in alluvial mining.

155. In the six years-1892 to 1897-the recorded departures by Immigration and emigra-tion, 1892-7. sea exceeded the recorded arrivals by sea*; the excess of the former having varied from 5,849 in 1894 to 14,547 in 1896, and averaged nearly 8,000 per annum during the whole period.† Such a circumstance had not occurred for 30 years previously. The numbers of

† In 1898 the excess was only 3,789.

^{*} All the figures relating to arrivals in the colony, and departures therefrom, contain statements of those who come and go by sea only. No attempt is made to keep an account of those who cross the frontier from and to the adjacent colonies. It has already been mentioned that the number of persons departing by sea is habitually understated. The number of immigrants and emigrants recorded in each year will be found in the Statistical Summary of Victoria (first folding sheet), to this work.

arrivals and departures in the years referred to, with the excess of the latter over the former, were as follow:----

Y	lear.		Immigrants.	Emigrants.	Excess of Emigrants
1892		•••	62,951	69,214	6,263
1893		•••	74,047	80,460	6,413
1894	•••	•••	84,261	90,110	5,849
1895	•••		81,199	88,886	7,687
1896	•••		84,872	99,419	14,547
1897	•••	•••	90,847	97,301	6,454
			478,177		47,213

Recorded Immigration and Emigration, 1892 to 1897.

156. In all the years shown in the table, the departures exceeded years in the arrivals; but only thrice previously did such an event occur since the first settlement of the colony, viz., in 1843, 1861, and 1862. In the first of these, the excess was 736, and in the second 8,986, and in the third 367.

157. The immigration authorities do not note the exact ages of Adults and the persons arriving and departing, but classify them as adults, or those from 12 years of age upwards; as children, or those between the age of 1 year and 12 years; and as infants, or those under 1 year. The following table shows the excess of recorded departures over arrivals under each of those heads who came and went during each of the five years ended with 1897 :---

Excess of Departures over Arrivals of Adults, Children, AND INFANTS, 1893 TO 1897.

Adu Year.		ults.	Children.		Infants.		Total.			
_ • • • • •		Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Total.
1893	•••	2,634	2,058	714	450	249	308	3,597	2,816	6,413

which departures exceeded arrivals.

children arriving and departing.

158. It will be noticed that during the five years, the colony lost Emigration of adult about 18,500 adult males, 15,000 adult females, and 8,000 children and males. falling-off. It is satisfactory to find, however, that in 1897 the emigration infants. of adult males had almost ceased, whereas the emigration of 4,000 adult females, and 2,300 children-large proportions as compared with earlier years-seems to indicate that the wives and children left behind are departing to join their husbands in Western Australia and elsewhere.

Gain by immigration from various countries, and vice versa.

159. The Victorian returns as to the origin of immigrants and destination of emigrants are defective, inasmuch as they are inflated on both sides of the account by the inclusion of persons who have no intention of settling (even temporarily) in the colony, but merely pass through Victorian ports en route to other colonies or countries. Hence an apparent gain in the movements of population as (say) between this colony and New South Wales conveys in reality little or no information. since the destination of such persons may really be (say) Western Australia, in which case they would be included (and their identity lost) as emigrants to that colony. Hence only general conclusions can be drawn from the returns. For example, the net emigration to Western Australia. according to Victorian returns, may be regarded, not as the emigration from Victoria alone (as one would suppose), but from the whole of Eastern Australasia, since most emigrants therefrom pass through Melbourne en route for the Western colony. Taking the returns as they stand, however, they show, during the last four years, a balance in favour of immigrants of 24,768 from New South Wales and Queensland, of 5,127 from Tasmania, and of 1,073 from foreign ports; but a balance in favour of emigration of 54,342 to South and Western Australia (chiefly the latter colony), of 4,860 to New Zealand and the South Seas, of 5,015 to South Africa, and of 1,288 to the United Kingdom. Most of those coming from New South Wales and Tasmania, however, did not stay in Victoria, but in all probability went to Western Australia, and are included in the 54,000 emigrants who are recorded as having proceeded to the latter colony. The net result of the recorded immigration and emigration by sea between Victoria and the neighbouring colonies, the United Kingdom, and foreign countries during each of the eleven years ended with 1897, is shown in the following table for what it is worth :---

NET IMMIGRATION FROM DIFFERENT COUNTRIES, 1887 TO 1897.

* Where the minus sign (-) occurs it indicates that emigration was in excess of immigration by the number against which it is placed. Particulars as to the arrivals and the departures will be found in the *Statistical Register*.

160. It should also be borne in mind that, so far as migration Defects in by the sea-board is concerned, to which the table alone refers, the migration returns. returns inwards are fairly correct, whereas those outwards invariably understate the truth, and chiefly for this reason the latest enumeration of the population, taken in connexion with the registrations of births and deaths, revealed the fact that, in the intercensal period ended with 1891, the actual gain by immigration was only 168,000, as against 183,000 shown by the records of arrivals and departures.

161. In the twelve years 1871 to 1882, 5,547 immigrants from the state-United Kingdom had free or partially free passages granted them to assisted immigra-Victoria. Of these, 3,212, or 58 per cent., arrived in the first year, and tion. 5,168, or 93 per cent., in the first three years of the period alluded to. The number then declined rapidly from year to year, and since 1873 only 379 such immigrants have arrived. Of these only 5, all females, came in 1880, not one in 1881, and only 2 in 1882. Since 1882 no free or assisted immigrants have been introduced by the State.

162. In only two of the colonies—viz., New South Wales and state-Western Australia—has any State assistance been granted to immigrants during the last five years, and this only to a very limited extent. The following are the numbers so assisted during that period :---

assisted immigra tion in Australasian Colonies.

	Year.	New South Wales.	Western Australia.	Total, Australasia
1000		 	100	
1893		 120	186	206
1894		 67	199	266
1895		 37	144	181
1896		 17	136	153
1897		 35	180	215

STATE-ASSISTED IMMIGRATION IN AUSTRALASIAN COLONIES,

NOTE. - For number of State-assisted immigrants, not only in Victoria but also in the neighbouring colonies, since 1850, see issue of this work for 1892, Vol. II., page 463.

163. The Chinese immigrants included in the returns of 1897 num- Chinese bered 762, all but 2 of whom were males, or 53 more than in 1896, immigra-tion, 1897. and 193 more than in 1895. The number of Chinese emigrants during 1897 was 435, viz., 431 males and 4 females, as compared with 500

males and 12 females in 1896.

164. Of the Chinese who arrived in 1897, 60 came from New Chinese, where from South Wales and Queensland, 21 from South and Western Australia, and where 169 from Tasmania, 12 from New Zealand, 8 from the United Kingdom, and 492 from foreign ports. Of those who left, 27 went to New South Wales and Queensland, 113 to South and Western Australia, 2 to Tasmania, and 293 returned to China.

165. In the last eleven years the Chinese population apparently Arrivals and departures increased by 874. In the first year of that period there was an excess of Chinese, 1887 to 1897. of arrivals over departures of 1,147, but in the five subsequent years there was an excess of departures amounting to 1,538, since which

time the arrivals have each year been somewhat in excess, as will be seen by the following figures :----

	Year.		Arrivals of Chinese.	Departures of Chinese.	Excess of Arrivals (+). Excess of Departures (-).
1887	• • •		2,049	902	+1,147

ARRIVALS AND DEPARTURES OF CHINESE.BY SEA, 1887 TO 1897.

Defective record of departures of Chinese. 166. It may be remarked that it is probable the returns of the departures of Chinese are defective, as the census of 1891 showed smaller numbers of Chinese by 2,751 than that of 1881, whilst the returns of departures and deaths of Chinese during the intercensal period showed that they exceeded the arrivals by only 874.

Immigration and emigration in Australasian Colonies, 1897.

167. The following table shows the recorded arrivals in and departures from each Australasian Colony by sea, and the excess of the former over the latter during the year 1897; the sexes of those who came and who went away being also distinguished. In the returns all persons arriving from and departing for the neighbouring colonies are included, as well as those from and for distant countries :---

RECORDED IMMIGRATION AND EMIGRATION (BY SEA) OF THE AUSTRALASIAN COLONIES, 1897.

NOTE.—The minus (-) sign indicates that the emigrants exceeded the immigrants by the number to which it is prefixed.

169. The sum of the figures in the above table would give, if the Net immi-, records were accurate, the total immigration of the Australasian colonies gration into Australasia. from countries out of Australasia; but, unfortunately, the results are in excess of the truth—to what extent it is difficult to say—owing to a large proportion of the departures not being recorded. The results are, however, given for what they may be worth :---

RECORDED NET IMMIGRATION INTO THE AUSTRALASIAN COLONIES, 1893 то 1897.

1897

170. The chief feeders to the rapidly-growing population of Western Immigration Australia are the eastern colonies of Australasia. Of the 108,000 into Western Australia. immigrants who settled in that colony during the last eight years nearly two-thirds came from Victoria, New South Wales, Queensland, Tasmania, and New Zealand. The net immigration into Western Australia was comparatively unimportant prior to 1894, in which year it jumped up to 16,000, and then rapidly increased to a maximum of 36,000 in 1896, which was, however, a most exceptional year in this respect. The following table shows the net immigration into Western

32,515

Immigrants to various countries. 171. The following statement of the number of immigrants arriving in various countries in each year from 1890 to 1897 has been taken —except that for Australasia, which is derived from colonial returns from the abstracts of the Statistical Department of the Board of Trade, England :—

IMMIGRANTS ENTERING VARIOUS COUNTRIES, 1890 TO 1897.

* These figures represent the net emigration from V(ctoria to Western and South Australia (as shown in the table following paragraph 159, *ante*), which may be regarded as the emigration from Eastern Australasia, since the majority of them are either from, or pass through, Victoria. The emigration from South Australia is not taken into account.

† According to Western Australian returns.

‡ Recorded excess of total immigrants over total emigrants. The numbers are, however, in excess of the truth, as many of the departures are not recorded.

§ Citizens of the United States returning from abroad, and aliens not intending to remain in the country, are excluded.

172. The numbers of emigrants of the respective nationalities departing from various European countries for places out of Europe during each year from 1890 to 1897 are given in the following table. They indicate that in 1897 more Italians than British emigrated from their respective countries; but that the British emigrants were more numerous than the emigrants from all the other countries combined, if Italy be excepted. The figures have been taken partly from the returns of the British Board of Trade and partly from a Report on Emigration for 1897 by the Director-General of Statistics for Italy:--

		r	Fotal	•••	•••	•••	$87,321\frac{1}{2}$

176. The estimated area of Victoria is 87,884 square miles. It Proportion to total thus appears that all but about a one hundred and sixtieth part of this area of Victoria. area is included within the limits of municipal districts.

NOTE.-In cases where an asterisk (*) occurs the area or constitution of the shire was altered since last publication, as follows :---

In 1894 the following new shires were constituted :- South Gippsland, being portion of the Shire of Alberton, on 13th February; Mirboo, being portions of the Shires of Narracan and Woorayl, on 3rd April; Wycheproof, being portion of Shire of St. Arnaud, on 23rd April. On 29th May, 1894, a portion of the unmunicipalized districts, formerly the Borough of Wood's Point. was annexed to the Shire of Howqua. In 1895 the following new shires were constituted:--Wirmbirchip, out of portion of Shire of St. Arnaud, on 26th March; Violet Town, out of portions of Shires of Benalla and Euroa, on 9th April; Heytesbury, out of portion of Shire of Hamiden, on 28th May; Charlion, out of portions of Shires of Gordon, Korong, and St. Arnaud, on 28th May. In 1896 (19th May) the new Shire of Karkarooc was created out of portion of the Shire of Borung. In 1897 the following alterations took place in areas of shires:--Borung increased by 79 square miles, and Wimmera correspondingly reduced, on 2nd April; Dimboola reduced by 397 square miles, and Karkarooc by 130, whilst Wycheproof was increased by 506 on 31st May; Merriang increased by 4 square miles, and Whittlesea reduced to a like extent, on same date. Since 31st December, 1897, the areas of the following shires have been altered, the areas at the end of 1898 being shown:--Donald, 475 square miles; Fern Tree Gully, 121; Healesville, 283; Howqua, 806; Lilydale, 179; Phillip Island, 258; Poowong and Jeetho, 222; Upper Yarra, 444; Wycheproof, 1,162 square miles. of the unmunicipalized districts, formerly the Borough of Wood's Point. was annexed to the Shire of square miles.

In a few instances the total value of rateable property has not been supplied, and in these cases an estimate has been made from the annual value.

† Including uninhabited, not distinguished.

‡ In the case of 6,013 dwellings returned for 1897-8 the uninhabited were not distinguished.

Population of municipalities. 104

177. The population of the two kinds of districts, as estimated by the municipal authorities, was as follows about the end of 1897 :---

	Рори	JLAJ	TION OF	MUNIC	IPALITIES,	1897	•
Cities	, towns,	and	boroughs	•••	* * 1	•••	588,269
Shires		• • •	•••	•••	• • •	•••	560,616
			Total	•••	•••		1,148,885

Population outside municipalities. 178. According to the census of 1891, the shore residents living outside municipalities numbered only 91, whilst persons in ships and vessels numbered 2,439, or 2,530 in all. If this number be added to the municipal estimate of population, the total would be 1,151,415, or 24,833 less than the estimated population at the end of the year, already stated to have been 1,176,248. The municipal estimate is made up about August, or four months before the other one, still the difference between the two estimates is wider than it would be if both had been correct. There is no doubt sufficient pains are not taken in some municipalities to secure a correct return of the population.

Ratepayers in municipalities. 179. The ratepayers in the two kinds of municipal districts, including female ratepayers, numbered as follow, in 1897. Each ratepayer is not necessarily a distinct individual, as ratepayers having property in more than one municipality, or in more than one ward or riding of the same municipality, are entered on the municipal roll for each property:—

RATEPAYERS IN MUNICIPALITIES, 1897.*

Inhabited dwelliogs in municipalities. 180. The following is a statement of the number of inhabited dwellings in the two kinds of municipal districts as returned about the end of 1897—a deduction being made for uninhabited houses being included in a few shires :—

DWELLINGS J	in 1	IUNICIPALITIES,	1897.
-------------	------	-----------------	-------

Cities, towns,	, and be	oroughs	•••	•••	• • •	132,806
Shires	•••	•••	• • •	•••	• • •	116,170
		Total	•••	•••	•••	248,976†

181. According to the census of 1891, the inhabited dwellings in Increase since 1891. the colony numbered 224,021. All of these except 26 were situated in municipal districts, hence there has been an increase in the last $6\frac{3}{4}$ years of nearly 25,000 in the number of such dwellings. 182. The area contained in shires is about $\overline{2}55$ times that in cities, Area, population, &c., towns, and boroughs; but the population in the latter exceeds that in shires in the former by about a twentieth, and the dwellings in the latter and boroughs exceed those in the former by about a seventh. compared.

> * Including both male and female ratepayers; also ratepayers whose rates are in arrear. For number of freehold ratepayers and others, together with annual values at which rated; also for the number of female ratepayers, see issue of this work for 1881-2, paragraphs 158 and 159.

> † In addition, there was about 7,400 dwellings in cities, towns, and boroughs and 4,740 in shires, returned as uninhabited.

183. The following is the number of cities, towns, and boroughs, Amount of and the number of shires, in which rates were struck in each of the municipalities. last five years at the amounts set down in the first column:---

RATINGS* IN MUNICIPALITIES, 1894 TO 1898.

184. It will be observed that, not one municipality during the last five High and low ratings. years was rated at the lowest amount allowed by law, viz., 6d. in the $\pounds 1$; also, that in 1898 four municipalities levied rates up to the full amount allowed by law, viz., 2s. 6d. in the £1.

185. Of the cities, towns, and boroughs, 26 per cent. in 1894, 28 Municipalities rated at 1s. in the per cent. in 1895, 24 per cent. in 1896, 28 per cent. in 1897, and 21 £1. per cent. in 1898, were rated at 1s. in the £1; of the shires, 90 per cent. in 1894, 85 per cent. in 1895, 84 per cent. in 1896, 85 per cent. in 1897, and 85 per cent. in 1898, were rated at that amount.

186. In 1894, 3; in 1895, 2; in 1896, 1897, and 1898, 3 of Municipalities rated the municipal districts were rated at less than 1s. in the £1. In under and 1894, 54; in 1895, 61; in 1896, 65; in 1897, 62; and in 1898, 66 $_{\text{the }\pounds 1.}^{\text{over 1s. in}}$ of the municipal districts were rated at over that amount.

187. The number of properties in cities, towns, and boroughs, and Classification in shires, in every fifth year from 1874 to 1890, and in each year since difference of proper-1890, arranged in groups according to their rateable values, will be found in the following table. It will be noticed that there has been an almost uninterrupted increase in the total number of properties and

* Including general and special rates.

in the number rated at under ± 50 ; but a marked decrease occurred in the numbers rated at higher amounts in 1897 as compared with 1890 or 1891, when they were at a maximum, although they are even now more numerous than in 1884 or previous years :—

NOTE.—Similar particulars for each of the fifteen years ended with 1888 are given in the Victorian Year-Book, 1892, and previous issues.

* A rateable property for the purposes of this return has recently been thus defined :—All contiguous pieces or parcels of land occupied by the same person or persons must be reckoned as only one property; but every house constitutes a separate property together with all land attached thereto.

•

188. During the last four years there was an increase of nearly Increase in 10,000 in the number of properties rated, of which nearly 3,000 took 4 and 23 place in cities, towns, and boroughs, and about 7,000 in shires; but such increase was confined to properties of less than £50 annual rating —there having been a decrease in those rated at higher amounts. In the 23 years ended with 1897, the total increase in the number of properties was 184,409, of which 81,379 were in cities, towns, and boroughs, and 103,030 in shires.

189. A return was laid before the Legislative Council in October, Classification 1898,* purporting to show the number of ratepayers in Victoria whose properties are valued for rating at various amounts under £20 per annum, and the whole number over £20. The total number of ratepayers according to the return was 360,254, exclusive of six shires and one town which did not supply the information in time. As, however, the total number of ratepayers returned by municipalities is, according to paragraph 179, *ante*, only 319,008, the figures in this return most probably relate to properties rated, which by the last table number 375,451, and not to ratepayers. Increasing the numbers according to the return propertionally so as to arrive at the total for all districts, the following are the number of rateable properties at different ratings under £50, and the whole number over £50, which will supplement the information contained in the preceding table :—

CLASSIFICATION OF PROPERTIES, DISTINGUISHING VARIOUS RATINGS BELOW £50 PER ANNUM, 1897-8.

190. The total value of properties, as returned by the municipalities, Total values and dealt with in various portions of this section, is not to be relied on as showing the actual value, or as a basis of comparison between different municipalities, owing to there being no general rule or practice as to the computation of total from annual values. As will be seen from the table following paragraph 173, *ante*, the total value of rateable property in Melbourne is returned as only 10 times the annual value; in the case of Ballarat, 15 times; of Ballarat East, 10 times; Fitzroy, 20 times; Port Melbourne, 12 times; Northcote, 24 times, &c. This may not, however, affect materially the value of the returns for comparative purposes between different years.

* Parliamentary Paper C. 2, Session 1898.

Victorian Year-Book, 1895-8.

Total value of rateable property.

191. The following table gives the total value* (or value in fee simple)—as estimated by the municipalities—of rateable property in cities, towns, and boroughs, and in shires, during the same periods as given in the case of the number of properties, arranged in groups according to the value of the properties of which the amounts are made In 1897, as compared with 1896, an increase occurred in the value up. of properties rated in cities, towns, and boroughs under all the heads, except those valued at from £100 to £200, in which a slight decrease occurred; and an increase in shires under the heads relating to properties valued at between £100 and £200, and £200 and upwards, but a small decrease under those relating to properties rated at lower The valuation on the whole showed an increase of about amounts. $\pounds 2,800,000$, made up of an increase of about $\pounds 2,600,000$ in urban, and of £200,000 in country, properties:---

CLASSIFICATION OF TOTAL VALUE OF RATEABLE PROPERTY, 1874 то 1897—continued.

NOTE.-See note at foot of table following paragraph 187, ante.

192. It will be noticed that 46 per cent. of the total* valuation in Relative 1897 was in small properties rated at an annual value of under £50; valuation of property 16 per cent. in those rated at between £50 and £100; 12 per cent. in under those rated at between £100 and £200; and 26 per cent. in those at ratings. £200 and upwards. In cities, towns, and boroughs a somewhat larger proportion of the total value was in properties rated at under £50, and at over £200, than in shires; but the reverse was the case in regard to properties rated at between £50 and £100, and at between £100 and £200.

different

193. The annual value of rateable property is arranged in similar Annual value of groups in the next table. In 1897 there was a very slight decrease on rateable the previous year in both urban and rural properties-amounting alto- property. gether to less than $\pm 50,000 :=$

NOTE.-See note at foot of table following paragraph 187, ante.

Increase in annual value of property. 194. During the 23 years ended with 1897 the total increase in the annual valuation of rateable property has amounted to $\pm 4,350,058$, viz., to $\pm 1,912,863$ in cities, towns, and boroughs, and to $\pm 2,437,195$ in shires.

Depreciation

195. Consequent on the intense land speculation which culminated in

in value of real estate since the inflation of 1888, the value* of real estate rose rapidly to an inflated value—reaching a maximum in 1891, when, according to municipal valuations, rateable property in Victoria was worth £203,000,000 sterling. After that year, however, the value fell rapidly to a minimum of £167,000,000 in 1895, since which a gradual improvement has taken place—the value having risen to £171,000,000 in 1897. Comparing 1897 with 1891, there was thus a fall in the total value of real estate in the colony of about £32,000,000, or nearly 16 per cent., being especially marked in the case of properties rated at various amounts at from £50 upwards, the value of which depreciated by from 22 to 25 per cent., whereas those

* See paragraph 190, ante.

rated at under £50 depreciated in value by only 5 per cent. Moreover, the depreciation was mainly confined to urban property, which showed a fall of about £23,000,000, or 25 per cent., as against £9,000,000, or only 8 per cent., in rural property; whilst the only instance where an actual increase occurred was in properties rated at under £50 per annum in shires, which showed a rise of $2\frac{1}{4}$ per cent. The depreciation in the annual value of property was considerably greater than in the total value—amounting to about £3,300,000, or nearly 25 per cent., in the whole colony; $\pm 2,400,000$, or 33 per cent., in the case of cities, towns, and boroughs, and $\pounds 1,000,000$, or 15 per cent., in the case of shires. The relative decreases in the total, and in the annual, value of properties rated at various amounts in both kinds of municipalities are set forth in the following table :---

DECREASE IN THE RELATIVE VALUE* OF RATEABLE PROPERTY, 1891 to 1897.

	Decrease par cent. in—								
Properties Rated Annually at—	То	tal Value.*	Annual Value.						
	Cities, Towns, and Boroughs.	Shires.	Total.	Cities, Towns, and Boroughs.	Shires.	Total			
Under £50	13.0	- 2.3†	4.9	22:3	5.8	14.8			
£50 to £100	45.3	9.0	24.8	51.1	16.2	33·9			
£100 to £200	37.2	13.6	23.9	43.9	20.5	32 [.] 4			
E200 and upwards	25.9	19.1	22.0	33.78	25.6	29.7			
Total	25.2	8.1	15:8	33.2	15•4	24.7			

196. It is, however, satisfactory to find, notwithstanding the deprecia- substantial tion just referred to, that the value* of real estate shows a substantial improvement as compared with the period just before the mania of speculation broke out, or say in 1884. In 1897, as compared with that year, the total valuation of all rateable property increased by $\pounds 67,000,000$, or by 65 per cent.; that in cities, &c., by $\pounds 27,000,000$, or by $65\frac{1}{2}$ per cent.; and that in shires by £40,000,000, or by $64\frac{3}{4}$ per cent.; whilst the annual value rose by $\pounds 2,200,000$, or by 28 per cent. -that in cities by £900,000, or by 24 per cent., and that in shires by ±1,300,000, or by 31 per cent. The proportionate increase in the total value in cities, towns, and boroughs, varied from 15 per cent. in the case of properties valued at between £50 to £100, to 112 per cent. in the case of those valued at $\pounds 200$ or upwards; and in shires from 35 per cent. in the case of those valued at ± 200 or upwards, to 92 per cent. in those valued at £100 to £200. In regard to the annual value, a decrease occurred in only one instance, viz., in properties rated at between ± 50 and ± 100 in shires, whereas there was an increase in other cases varying from 6 per cent. in the case of properties valued at £100 to £200, to 59 per cent. in the case of those rated at £200 and upwards,

increase in value of real estate since 1884.

* See paragraph 190, ante.

† Increase.

and in shires an increase varying from 7 per cent. in the case of properties valued at ± 200 or upwards, to 53 per cent. in the case of those valued at between ± 100 and ± 200 . These results will be found in the subjoined table :—

INCREASE IN THE RELATIVE VALUE OF RATEABLE PROPERTY, 1884 TO 1897.

	Increase per cent. in-									
Properties Rated Annually at—	Tot	al Value.*		Annual Value.						
	Cities, Towns, and Boroughs.	Shires.	Total.	Cities, Towns, and Borougbs.	Shires.	Total.

Increase in number and value of properties rated in 23 years.

197. The following table shows the total increase, and the increase under each group in the number of properties, and in their total and annual values, during the twenty-three years intervening between 1874 and the end of 1897, the increase in cities, towns, and boroughs being added to that in shires. The increase in the value of rateable properties is no doubt partly due to the greater extent and number of properties rated, as well as to the improvements made :---

INCREASE IN NUMBER AND VALUE* OF RATEABLE PROPERTIES, 1874 TO 1897.

Rateable Values.	Increase durin	Increase during Twenty-three Years in the

112

Largest increase in small properties. 198. By far the greatest increase in the number of properties, amounting to eleven-twelfths of the whole increase, was in properties rated at less than ± 50 ; moreover, the largest increase in the total and in the annual value of properties, amounting in each case to about half the total gain, was in properties of that rating. The next largest

^{*} See paragraph 190, ante. † Decrease.

increase in the value of properties was in those rated at £200 and upwards, which, in the case of both the total* and the annual value amounted to about a fourth of the whole increase.

199. In Victoria, a foreigner, even if naturalized, is not eligible to Naturalizabecome a member of the Executive Council, but, with this exception, the highest offices of the State are open to naturalized persons of foreign as well as of British birth; and, without becoming naturalized, alien friends resident in the colony may acquire real and personal property and may convey, devise, and bequeath it in the same manner as if they had been British subjects by birth. Alien women married to British subjects thereby become naturalized; but to become a member or elector of either House of Parliament it is necessary for a foreigner to take out letters of naturalization, to procure which, in accordance with the provisions of the Aliens Act 1890 (54 Vict. No. 1063), he must present a memorial to the Governor, stating his name, age, birthplace, residence, occupation, period of residence in the colony, and his desire to settle therein, which memorial must be accompanied by a certificate from a magistrate of identification and good character. Should letters be granted, the applicant, prior to issue, must take an oath of allegiance to the Sovereign of the United Kingdom of Great Britain and Ireland. In order to qualify a foreigner to become a member of the Upper House, it is necessary he should have been naturalized for at least ten years; or to become a member of the Lower House, he must have been naturalized for at least five years, for at least two of which he must have been resident in Victoria. The following table shows the native countries of those who obtained letters of naturalization during the twenty-three years ended with 1893, and in each of the last four years :---

Victorian Year-Book, 1895-8.

Naturaliza- ' tion of Chinese. 200. The tendency of the Chinese to become naturalized greatly increased soon after the passing of the *Chinese Act* 1881 (45 Vict. No. 723), which provided that all Chinese who are not naturalized or natural-born subjects of Her Majesty should, on entering the colony, be subject to an immigration tax,* and should be disfranchised as regards both municipal and parliamentary elections. The result of the passing of this measure was that, whereas no more than 91 Chinese took out letters of naturalization during the eleven years ended with 1881, such letters were taken out by as many as 317 in 1882, 593 in 1883, 601 in 1884, and 1,178 in 1885; but after 1885, the Government, in view of the increasing number of Chinese applying for naturalization papers, determined to issue no more "unless a sufficient reason was assigned," with the effect that only 173 were issued in 1886, 16 in 1887, and not one since.

* This tax has since been abolished, other means having been taken to limit the influx of Chinese. See Victorian Year-Book, 1890-91, Vol. I., paragraph 379.
