**INTERIM RETAIL PRICE INDEX - JUNE QUARTER, 1959**

- Variations in retail prices as measured by the Interim Retail Price Index for the six State capital cities of Australia are shown herein.
- This Interim Retail Price Index, instituted in March, 1954 with post-war weights and components, is published quarterly and is described in "Labour Report" No. 45 (1957).
- Seasonal fluctuations in prices of potatoes and onions materially affect the movement of the Aggregate All Groups Index. An All Groups Index which excludes potatoes and onions is shown herein in comparison with that calculated in the customary manner.
- An analysis for each capital city of the approximate effect of price movements of potatoes and onions is shown hereunder and similar information for the weighted average of the six capital cities can be derived from Table 3 on page 4.

6. The observations in these Statistical Bulletins are made, as is customary, to assist public understanding of the trends in retail prices within the definition of the respective indexes.

7. Tribunals and other authorities concerned with wage adjustment and other purposes decide in the light of their own requirements what price index (if any) is relevant to their purposes and how it shall be applied. The Statistician's function is to supply indexes and information thereon as required by those authorities. The Statistician expresses no view as to the merits or demerits of the use of price indexes in this connexion.

(a) Figures appearing after the decimal point in the tables herein possess little significance for general statistical purposes. They are inserted to avoid the minor distortions that would occur in rounding off the figures to the nearest whole number.

Indexes in columns "A" exclude, and those in columns "B" include, potatoes and onions. See paragraphs 3 and 4 on page 1 of this Bulletin.

(a) Figures appearing after the decimal point in the tables herein possess little significance for general statistical purposes. They are inserted to avoid the minor distortions that would occur in rounding off the figures to the nearest whole number. (b) Weighted average. (c) See paragraphs 3 and 4 on page 1 of this Bulletin.

10. The above indexes measure price movements for each city individually and the difference in degree of price movement in respective cities over the periods shown. But they do not provide a comparison of absolute retail price levels in any city with the retail price levels of any other city.

11. The Interim Retail Price Index was first published and described in S.S.265 on 24th March, 1954. It has been compiled for the years 1950-51 to 1958-59 and for each quarter from September quarter, 1952. The list of items covered by the index is representative of a high proportion of expenditure of wage earner households. The group weights and the item weights of the Interim Index relate broadly to the consumption pattern of 1950-53. Those of the "C" Series Index relate to the pre-war pattern.

12. The list of items in the Interim Index is more comprehensive than that of the "C" Series Index and some of the principal food weights and group weights differ substantially from those used in the "C" Series Index. A comparison of group weights and of the list of items in the respective indexes is shown on pages 9 - 12 of the annual "Labour Report" No. 45 (1957).

13. At times appreciable disparities appear in the movement of the respective indexes for individual cities from quarter to quarter. The Interim Index, being based on recent weights and an extended list of items, is the more representative measure of quarterly retail price variations.

14. The following table shows the Interim Index for the six capital cities combined (with the year 1952-53 as base = 100) in comparison with "C" Series Index numbers converted arithmetically to the same base year. In view of the fluctuations in prices of potatoes and onions (see page 1 of this Bulletin) this table shows index numbers for both series including and excluding these two commodities.

(a) See note to Table 1 herein.

Indexes in columns "A" exclude, and those in columns "B" include, the effects of price changes of potatoes and onions. See paragraphs 3 and 4 on page 1 of this Bulletin.

15. The rental component used in these retail price indexes has been continued on the basis described on pages 2 and 10 of "Labour Report" No. 41 (1952). Analysis of data of the Census of 1954 and recent surveys shows that in all cities, the numbers of houses privately rented have diminished substantially and that rents of the residual houses (alone) are no longer sufficiently representative as the housing component of the retail price indexes. The housing component is under consideration.
