CHANGES IN THIS ISSUE

Revisions

Table 41 summarises revisions, in original current price terms, since the last issue of this publication, for the last three years and six quarters.

Incorporation of the latest available survey and administrative data has resulted in revisions to the current account back to September quarter 2001, decreasing the 2001-02 current account deficit by \$195m. The financial account and international investment position have been revised back to September quarter 2001, increasing Australia's net IIP liability as at 30 September 2002 by \$3.5b.

Trend estimates

Trend estimates of capital goods debits have been modified to exclude the effect of the abnormally high level of imports of civil aircraft in the December quarter 2002. This modification flows through to trend estimates of goods debits, net goods, the balance on goods and services, the balance on current account and the terms of trade.

BALANCE OF PAYMENTS

CURRENT ACCOUNT

The trend estimate of the balance on current account was a deficit of \$10,165m in the December quarter 2002, an increase of \$1,572m (18%) on the previous quarter's deficit. The main contributors to the increase in the deficit were goods imports, which rose \$891m, goods exports, which fell \$230m, income debits, which rose \$167m, and income credits, which fell \$153m.

In seasonally adjusted terms, the current account deficit rose \$3,305m to \$11,577m in the December quarter 2002. The net deficit on goods rose \$2,657m (113%) to \$5,001m. The net services deficit rose \$55m to \$488m. The net deficit on income rose \$490m to \$5,963m.

GOODS AND SERVICES

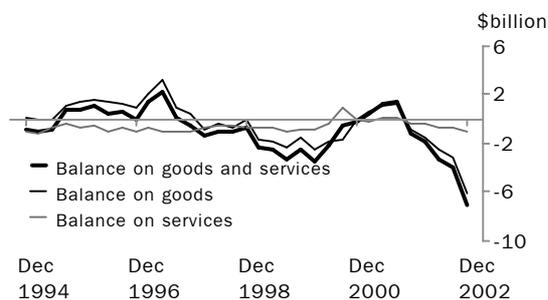

The trend estimate of the balance on goods and services at current prices was a deficit of \$4,230m, an increase of \$1,202m (40%) on the September quarter 2002 deficit of \$3,028m.

In seasonally adjusted current price terms, the balance on goods and services was a deficit of \$5,489m. The deficit on goods was \$5,001m, an increase of \$2,657m on the deficit of \$2,344m in September quarter 2002 driven by higher goods imports, up \$2,456m, and lower goods exports, down \$201m. Goods imports recorded increases in capital goods, up \$1,162m (16%), intermediate and other merchandise goods, up \$782m (6%), other goods, up \$367m (31%), and consumption goods, up \$145m (1%). The fall in goods credits resulted from decreased exports of rural goods, down \$121m (2%), non-rural goods, down \$44m, and other goods, down \$36m (2%).

In seasonally adjusted volume terms, the deficit on goods and services was \$7,009m, an increase of \$3,050m (77%) on the \$3,959m deficit recorded for September quarter 2002. The goods deficit rose \$2,792 (87%) to \$6,003m as goods credits fell \$170m and goods debits rose \$2,622m (8%). The net services balance was a deficit of \$1,006m, a \$258m increase on the September quarter 2002 deficit of \$748m.

The increase of \$3,050m in the deficit on goods and services in volume terms could be expected to make a contribution to growth of -1.7 percentage points in the December quarter 2002 volume measure of GDP, assuming no significant revision to the GDP chain volume estimate for the September quarter 2002.

GOODS CREDITS

The goods credits trend estimate continued to fall in the December quarter 2002 and, at \$29,580m, was \$1,618m (5%) lower than the June quarter 2001 peak of \$31,198m.

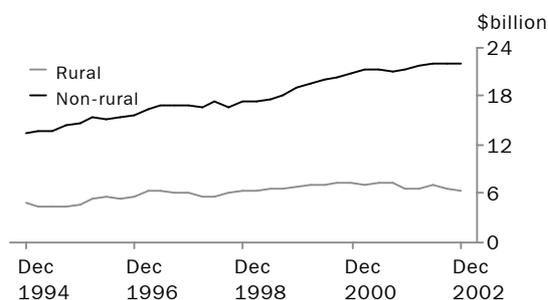

Seasonally adjusted, goods credits were \$29,629m, down \$201m on the September quarter 2002 and \$2,307m (7%) lower than the June quarter 2001 peak of \$31,936m.

Rural goods (seasonally adjusted, current prices) fell to \$6,756m, down \$121m (2%) on the September quarter 2002. The largest decrease was in cereal grains and cereal preparations, down \$283m (22%), due to lower exports of wheat, down \$196m (20%), with a volume decrease of 31% partly offset by a price increase of 13%. The decreases were partly offset by higher exports of meat and meat preparations, up \$110m (8%), driven by increased volumes of 7% and price increases of 2%, and by wool and sheepskins, up \$109m (11%), with volumes down 2% and prices up 14%.

Non-rural goods (seasonally adjusted, current prices) fell \$44m to \$20,844m. The largest decreases were in other non-rural, down \$199m (9%), with volumes down 12% and prices up 3%, and in other mineral fuels, down \$194m (7%), with volumes down 6% and prices down 1%. Largely offsetting these decreases were increases in transport equipment, up \$286m (18%), with volumes up 19% and prices down 1% (due to exports of road vehicles, up \$467m in original terms) and an increase in metals (excluding gold), up \$128m (6%), with volumes up 8% and prices down 2%.

Other goods credits (seasonally adjusted, current prices) fell \$36m (2%) to \$2,029m.

BALANCE OF PAYMENTS

In original terms, the balance on current account was a deficit of \$32.7b for the calendar year 2002, an increase of \$16.0b (95%), on the deficit recorded for 2001.

The increase in the current account deficit was largely due to a turnaround of \$13.2b in net goods, from a surplus of \$3.6b in 2001 to a deficit of \$9.5b in 2002. Net services recorded a deficit of \$1.4b in the calendar year 2002, an increase of \$0.7b on the deficit recorded for 2001.

In 2002, the net income deficit increased \$1.9b, with a \$0.9b decrease in income credits and a \$1.1b increase in income debits. The biggest contribution to the decrease in income credits was a decrease in income on Australia's direct investment abroad, while the increase in income debits was due to rising income on direct investment in Australia.

In original terms, the balance on the financial account recorded a net inflow of \$32.0b in 2002, an increase of \$18.7b (141%) on the net inflow for 2001. The increased inflow resulted from:

- a turnaround of \$27.4b in net direct investment, from an outflow of \$13.1b to an inflow of \$14.3b, where the outflow on direct investment abroad fell \$9.5b and the inflow on direct investment in Australia rose \$17.9b;

These increases were partially offset by exchange rate decreases of \$12.4b, reflecting the appreciation of the \$A over the year. Net equity liabilities increased by \$11.0b (22.8%), attributable to net transactions of -\$11.3b, price effects of \$11.5b, exchange rate variations of \$10.5b and other changes of \$0.3b.

EXPLANATORY NOTES

INTRODUCTION

1 This publication presents comprehensive details of Australia's international accounts: its balance of payments and international investment position statistics.

2 The conceptual framework used in Australia's balance of payments and international investment position statistics is based on the Fifth Edition of the International Monetary Fund's *Balance of Payments Manual* (BPM5, 1993). Descriptions of the underlying concepts and structure of the balance of payments and international investment position, and the sources, methods and terms used in compiling the estimates are presented in *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (5331.0), which was released on 22 September, 1998.

SIGN CONVENTION

3 In keeping with balance of payments conventions, credit entries are shown without sign and debit items are shown as negative entries. However, references to debit items in Key points and analysis and comments are made without regard to sign.

4 International investment position statistics follow the balance of payments sign convention. For foreign liabilities, position data and any transaction increase or other flow increase in liabilities is shown without sign. A negative sign for transactions and other flows in liabilities denotes a fall in liabilities. For foreign assets, position data and any transaction increase or other flow increase in assets is shown with a negative sign. Transactions and other flows in assets shown without sign denote a decrease in assets.

5 Movements over time are expressed as percentage changes. A minus sign means a decrease in credit entries, a decrease in debit entries, a decrease in a surplus or an increase in a deficit. The absence of a sign means an increase in credit entries, an increase in debit entries, an increase in a surplus or a decrease in a deficit.

ACCURACY AND RELIABILITY

6 The transactions recorded in the balance of payments are of many different kinds, and therefore the compilation of balance of payments and international investment position estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness.

7 Care should be exercised in the use and interpretation of estimates in this publication. The latest estimates are *preliminary and subject to revision* as more accurate data come to hand. Also, the more detailed estimates may be less accurate in relative terms than broader items and aggregates of which they form components.

SEASONAL ADJUSTMENT

8 The quarterly current account series in this publication are affected to some extent by seasonal influences and it is useful to recognise and take account of this element of variation.

9 The seasonally adjusted statistics in this publication should not be regarded as in any way definitive as recent estimates are subject to revision for several years, and results from seasonal adjustment vary according to the method used.

10 The factors used in seasonally adjusting the current account series can be obtained from Balance of Payments Section on Canberra 02 6252 6255. There is a charge for this service.

EXPLANATORY NOTES

TREND ESTIMATES

11 The trend estimates are derived by applying a 7-term Henderson moving average to the seasonally adjusted series. The 7-term Henderson average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. While the asymmetric weights enable trend estimates for recent quarters to be produced, it does result in revisions to the estimates for the most recent three quarters as additional observations become available. There may also be revisions because of changes in the original data and as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring ‘Trends’, an Overview* (1348.0) or contact Time Series Analysis Section on Canberra 02 6252 6076.

CHAIN VOLUME MEASURES

12 To enable analysis of the movement of goods and services in ‘real’ terms, estimates of chain volume measures are compiled and published each quarter. Chain volume measures are derived by deflating the original current price series by specially compiled measures of price change. The reference year for chain volume measures is the year prior to the latest complete financial year incorporated in this issue. The reference year is updated with the release of each June quarter issue of this publication. Prior to the reference year chain volume measures are non-additive, in that the component chain volume measures of an aggregate will not add through to the chain volume measure of the total aggregate. For further information on chain volume measures refer to the ABS publication *Information Paper: Australian National Accounts, Introduction of Chain Volume and Price Indexes* (5248.0), which was released on 19 March, 1998.

INDEXES

IMPLICIT PRICE DEFLATOR (IPD)

13 The quarterly implicit price deflators (IPDs) are derived by dividing seasonally adjusted current price estimates by the corresponding chain volume measures. Movements in IPDs can be greatly affected by changes in the physical composition of the aggregates and their components. The quarterly IPDs derived from seasonally adjusted data are preferred to those using original data because the seasonal adjustment process removes some of the seasonal changes in the composition of this series. However, the seasonal adjustment process itself is also a possible source of distortion.

TERMS OF TRADE

14 There are several ways of measuring the terms of trade. In this publication, the following index is used:

$$\frac{\text{Implicit price deflator for the credit item}}{\text{Implicit price deflator for the debit item}} \times 100$$

Quarterly estimates of the terms of trade shown in table 6 of this publication are derived from seasonally adjusted data.

CHAIN LASPEYRES

15 The chain Laspeyres indexes are derived by combining individual component prices with weights which reflect the average relative importance of the components in the previous year. These are then indexed to the relevant reference year. For all periods since the latest reference year, reference year weights are used.

DIRECT INVESTMENT ADJUSTMENT

16 Direct investment adjustments are required in tables 28 and 29 to adjust total foreign assets and liabilities to the net basis for recording foreign investment in Australia (FIA) and Australian investment abroad (AIA). For both FIA and AIA, the adjustment is symmetrical and includes claims of Australian direct investment enterprises on direct investors abroad plus liabilities of Australian direct investors to direct investment enterprises abroad.

EXPLANATORY NOTES

FOREIGN DEBT

17 Foreign debt transactions, levels and interest income (as recorded in tables 34 to 37) between direct investors and direct investment enterprises are recorded on a gross basis for assets and liabilities. The direct investment adjustment is not applied in these tables.

18 In table 37 'currency' refers to the currency in which assets or liabilities are likely to be repaid, while 'residual maturity' refers to the time remaining until an asset or liability is due to be fully repaid. Reserve assets are not allocated by currency. All reserve assets are allocated to the repayment category 'less than or equal to 90 days' although a range of maturities may be involved.

INDUSTRY DATA

19 The industry categories shown are based on the *Australian and New Zealand Standard Industrial Classification (ANZSIC)*, 1993 (1292.0). Industry statistics should be treated with some caution as they do not necessarily reflect the industry of the end use of the funds. First, the statistical unit (that is, the unit of observation and classification) generally consists of all enterprises in an enterprise group within a single resident institutional sector. The industry of this statistical unit, which may cover a broad range of activities, is determined on the basis of the predominant activity of the unit as a whole which may be quite different from the industry in which funds are used. Second, financial enterprises such as trading and merchant banks, may borrow funds as principals and then on-lend to clients in other industries.

COMMODITY BREAKDOWNS OF GENERAL MERCHANDISE

20 Commodity breakdowns of general merchandise credits are provided in table 8 (at current prices), 10 (chain volume measures), 12 (at current prices, seasonally adjusted) and 14 (chain volume measures, seasonally adjusted). The groupings shown are based on the third revision of the United Nations Standard International Trade Classification (SITC Rev 3). For further details see table 6.6 in *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods* (5331.0).

21 Commodity breakdowns of general merchandise debits are provided in table 9 (at current prices), 11 (chain volume measures), 13 (at current prices, seasonally adjusted), and 15 (chain volume measures, seasonally adjusted). The three broad end-use categories—*Consumption goods*, *Capital goods* and *Intermediate and other merchandise goods*—are based on United Nations' Classification of Broad Economic Categories (BEC), but differ from the BEC to the extent that intermediate goods are combined with other merchandise goods. These broad end-use categories are further divided into a total of 25 SITC Rev 3-based commodity groupings, which have also been aligned to the BEC.

22 Table 6.7 in 5331.0 provides details of the classification used for goods debits. Most of the 25 SITC Rev 3-based commodity groups are further sub-divided into a total of 106 commodity sub-groups. Although the information at this level is not published, it is available as a special data service, see paragraph 25.

23 For more information on the commodity classification of general merchandise debits and a detailed concordance between balance of payments general merchandise debits end-use categories, commodity groups, BEC and SITC Rev 3, refer to the *ABS Information Paper: Change to Commodity Classification of Merchandise Imports in Balance of Payments Publications* (5344.0).

- 26** Detailed quarterly general merchandise chain volume measures can be obtained by contacting the ABS on Canberra 02 6252 6716. These series are based on international trade statistics (i.e. they are not adjusted to a balance of payments basis) and relate to selected divisions and sections of the SITC Rev 3. Quarterly tables showing components of services can also be obtained from the ABS on Canberra 02 6252 6716. These tables provide original and seasonally adjusted current price and chain volume measures, corresponding to the series shown (in original current price terms) in tables 20 and 21 of this publication. Both sets of measures are working estimates only and may not always be completely consistent with published measures.
- GLOSSARY **27** A glossary of terms that are either new with the ABS implementation of BPM5 in the balance of payments and international investment position, or which represent a significantly different concept from an existing but similarly named concept, is provided on pages 88 and 89 of *Information Paper: Upgraded Balance of Payments and International Investment Position Statistics* (5365.0).
