KEY POINTS

BALANCE ON GOODS AND SERVICES

FIGURES

- In trend terms, the *balance on goods and services* was a deficit of \$1,548m in August 2014, an increase of \$74m (5%) on the deficit in July 2014.
- In seasonally adjusted terms, the *balance on goods and services* was a deficit of \$787m in August 2014, a decrease of \$288m (27%) on the deficit in July 2014.

CREDITS (EXPORTS OF GOODS AND SERVICES)

 In seasonally adjusted terms, goods and services credits fell \$413m (2%) to \$26,372m. Non-monetary gold fell \$252m (21%), rural goods fell \$142m (4%) and non-rural goods fell \$17m. Net exports of goods under merchanting remained steady at \$8m. Services credits fell \$1m.

DEBITS (IMPORTS OF GOODS AND SERVICES)

In seasonally adjusted terms, goods and services debits fell \$701m (3%) to \$27,159m.
 Intermediate and other merchandise goods fell \$878m (9%), consumption goods
 fell \$65m (1%) and non-monetary gold fell \$25m (10%). Capital goods rose \$294m (6%).
 Services debits fell \$27m.

INQUIRIES

REVISIONS

REVISIONS

On an international merchandise trade basis, historical revisions have been applied to incorporate:

- the amended correspondence between the Australian Harmonized Export Commodity Classification (AHECC) and the Standard International Trade Classification Revision 4 (SITC Rev. 4), applied back to January 2007
- the amended correspondence between the Combined Australian Customs Tariff Nomenclature and Statistical Classification (Customs Tariff) and the Standard International Trade Classification Revision 4 (SITC Rev. 4), applied back to January 2007
- the reclassification of selected exports data from merchandise to non-merchandise trade, applied back to January 2012
- the reclassification of selected imports data from merchandise to non-merchandise trade, applied back to August 2010.

On a balance of payments basis, historical revisions have been applied to:

- goods credits and debits back to August 2010
- services credits and debits back to July 2010.

Table 17 summarises revisions to goods and services on a balance of payments basis, in original current price terms, since the last issue of this publication. In original terms, for the last four financial years, the revisions have:

- increased the surplus on goods and services for 2010–11 by \$682m
- decreased the deficit on goods and services for 2011–12 by \$1,167m
- decreased the deficit on goods and services for 2012–13 by \$1,317m
- increased the deficit on goods and services for 2013–14 by \$557m.

CHANGES IN THIS ISSUE

CHANGES IN THIS ISSUE From this issue there is a label change to the country formerly known as Cape Verde: Change to country label Country New label Cabo Verde Cape Verde This change impacts time series spreadsheet tables 14a, 14b, 36a-36j and 37a-37i of this publication. Detailed export and import statistics available on request are also affected. This change only applies to the label and does not impact the composition of the country data. Change to port label From this issue there is a label change to the port formerly known as All Ports-Cape Verde: Port New label All Ports-Cape Verde All Ports–Cabo Verde This change impacts on detailed export and import statistics available on request. This change only applies to the label and does not impact the composition of port data. Correspondence between From this issue minor amendments to the concordance between the Australian AHECC and SITC Rev. 4 Harmonized Export Commodity Classification (AHECC) and the Standard International Trade Classification Revision 4 (SITC Rev. 4) have been implemented. These changes impact on table 12 and time series spreadsheet tables 12a and 12b of this publication. These changes are described in Information Paper: Revision to correspondences to AHECC and Customs Tariff (cat. no. 5368.0.55.021) released on 23 June 2014. Correspondence between From this issue minor amendments to the concordance between the Combined Customs Tariff and SITC Australian Customs Tariff Nomenclature and Statistical Classification (Customs Tariff) Rev. 4 and the Standard International Trade Classification Revision 4 (SITC Rev. 4) have been implemented. These changes impact on table 13 and time series spreadsheet tables 13a, 13b and 34 of this publication. These changes are described in Information Paper: Revision to correspondences to AHECC and Customs Tariff (cat. no. 5368.0.55.021) released on 23 June 2014. Improvements to the low From this issue additional data sources are used to derive the low value threshold value threshold adjustment to goods debits estimates. The improvement of this adjustment has resulted adjustment in revisions back to July 2011. The Technical note included on page 45 of this publication describes the changes to the data sources and methodology used for calculating the low value threshold adjustment, as well as the impact on the goods debits series.

CHANGES IN THIS ISSUE continued

the monthly processing cycle and assesses the appropriateness of any prior corrections.

Annual seasonalThe seasonally adjusted and trend estimates of goods and services on a balance ofre-analysispayments basis have been revised as a result of the annual seasonal re-analysis. Thisre-analysis reviews the seasonal and trading day factors in more detail than is possible in

VALUE ADJUSTMENTS

VALUE ADJUSTMENTS	International merchandise trade exports data presented in tables 12–15 of this publication are based on information provided by exporters to the <i>Australian Customs and Border Protection Service</i> (Customs and Border Protection). At the time of initial reporting to Customs and Border Protection, quantity and unit price information may be estimated for commodities such as iron ore and coal. Final quantity and/or unit price information provided to Customs and Border Protection. When additional information on quantity and/or unit price for these commodities is available, the ABS may adjust the balance of payments series in current price, original terms to reflect actual transaction values.
	In most instances, transfer of ownership occurs when goods cross the customs frontier. In certain circumstances the ownership of large value capital expenditure items can occur prior to the items crossing the customs frontier. The ABS may adjust the relevant balance of payments series to record the timing when transfer of ownership was effected.
Goods credits	 Iron ore and coal (in original terms) a negative \$1,030m adjustment has been applied to metal ores and minerals in the balance of payments series for August 2014. All previous adjustments have been removed. a negative \$80m adjustment has been applied to coal, coke and briquettes in the balance of payments series for August 2014. The previous negative \$60m adjustment applied to July 2014 remains.
Goods debits	 Capital expenditure (in original terms) capital goods n.e.s. includes an estimate of expenditure on capital goods that have changed ownership but have not yet crossed the customs frontier.

TIME SERIES DATA

TIME SERIES DATA	Tables 1 to 16 of this publication are available free on the ABS website < <i>www.abs.gov.au</i> > from the 'Downloads' tab of this issue with longer time series. A number of these tables present more detailed breakdowns than included in the publication. A number of additional tables are available free on the ABS website.
Tables with more detailed	11a Services credits: Original – Quarter ¹

TIME SERIES DATA continued

TRADE IN SERVICES DATA CUBES	Trade in services data cubes are usually updated on an annual basis. Calendar year (cat. no. 5368.0.55.004) statistics are updated following the March issue of this publication and financial year (cat. no. 5368.0.55.003) statistics are updated following the September issue of this publication.
	The following tables were included in the calendar and financial year data cubes:
	1 International trade in services, credits, state by year
	2 International trade in services, credits, year by state
	3 International trade in services, debits, state by year
	4 International trade in services, debits, year by state
	5 International trade in services, credits, year by country and service
	6 International trade in services, credits, service by year and by country
	7 International trade in services, debits, year by country and service
	8 International trade in services, debits, service by year and by country
	9 International trade in services, credits, year by country and travel service
	10 International trade in services, debits, year by country and travel service
	11 International trade in services, credits, education related travel, by educational sector, by type of expenditure by year.

ANALYSIS AND COMMENTS

BALANCE ON GOODS AND SERVICES	In trend terms, the balance on goods and services was a deficit of \$1,548m in August 2014, an increase of \$74m (5%) on the deficit in July 2014.
	In seasonally adjusted terms, the balance on goods and services was a deficit of \$787m in August 2014, a decrease of \$288m (27%) on the deficit in July 2014.
EXPORTS OF GOODS AND SERVICES	Between July and August 2014, the trend estimate of goods and services credits fell \$195m (1%) to \$26,110m.
	In seasonally adjusted terms, goods and services credits fell \$413m (2%) to \$26,372m. Non–monetary gold fell \$252m (21%), rural goods fell \$142m (4%) and non–rural goods fell \$17m. Net exports of goods under merchanting remained steady at \$8m. Services credits fell \$1m.
Exports of goods	GOODS CREDITS

RURAL GOODS

In trend terms, exports of rural goods fell \$3m to \$3,253m.

In seasonally adjusted terms, exports of rural goods fell \$142m (4%) to \$3,231m.

The main components contributing to the fall in seasonally adjusted estimates were:

- other rural, down \$91m (6%)
- cereal grains and cereal preparations, down \$84m (12%).

Partly offsetting these falls was wool and sheepskins, up 23m (10%).

NON-RURAL GOODS

In trend terms, exports of non-rural goods fell \$190m (1%) to \$16,927m.

In seasonally adjusted terms, exports of non-rural goods fell \$17m to \$17,303m.

The main component contributing to the fall in seasonally adjusted estimates was other mineral fuels, down \$226m (9%).

Partly offsetting this fall were:

- coal, coke and briquettes, up \$114m (4%)
- other non-rural (incl. sugar and beverages), up \$72m (9%).

For price and volume details, see the Selected commodities section on page 14.

Exports of goods continued NET EXPORTS OF GOODS UNDER MERCHANTING

In trend terms, net exports of goods under merchanting remained steady at \$8m.

In seasonally adjusted terms, net exports of goods under merchanting also remained steady at \$8m.

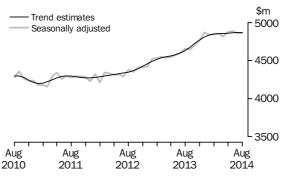

NON-MONETARY GOLD

In trend terms, exports of non-monetary gold fell \$5m to \$1,051m.

In original and seasonally adjusted terms, exports of non-monetary gold fell \$252m (21%) to \$970m.

Exports of services

SERVICES CREDITS

In trend terms, services credits rose \$3m to \$4,871m.

In seasonally adjusted terms, services credits fell \$1m to \$4,860m. The main component contributing to the fall in services credits was travel, down \$12m.

Partly offsetting this fall was other services, up \$9m (1%).

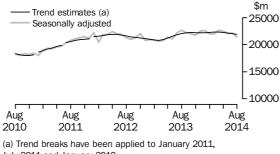

In seasonally adjusted terms, tourism related services credits fell \$8m to \$3,132m.

IMPORTS OF GOODS ANDBetween July and August 2014, the trend estimate of goods and services debitsSERVICESfell \$122m to \$27,657m.

In seasonally adjusted terms, goods and services debits fell \$701m (3%) to \$27,159m. Intermediate and other merchandise goods fell \$878m (9%), consumption goods fell \$65m (1%) and non-monetary gold fell \$25m (10%). Capital goods rose \$294m (6%). Services debits fell \$27m.

GOODS DEBITS

July 2011 and January 2012.

Imports of goods continued

CONSUMPTION GOODS

In trend terms, imports of consumption goods fell \$14m to \$6,803m.

In seasonally adjusted terms, imports of consumption goods fell \$65m (1%) to \$6,778m.

The main component contributing to the fall in seasonally adjusted estimates was textiles, clothing and footwear, down \$66m (6%).

CAPITAL GOODS

In trend terms, imports of capital goods fell \$7m to \$5,138m.

In seasonally adjusted terms, imports of capital goods rose \$294m (6%) to \$5,238m.

The main components contributing to the rise in seasonally adjusted estimates were:

- civil aircraft and confidentialised items, up \$251m (40%)
- capital goods n.e.s., up \$71m (10%).

Partly offsetting these rises was machinery and industrial equipment, down \$123m (7%).

INTERMEDIATE AND OTHER MERCHANDISE GOODS

In trend terms, imports of intermediate and other merchandise goods fell \$68m (1%) to \$9,695m.

In seasonally adjusted terms, imports of intermediate and other merchandise goods fell \$878m (9%) to \$9,175m.

The main components contributing to the fall in seasonally adjusted estimates were:

- fuels and lubricants, down \$744m (20%)
- parts for transport equipment, down \$182m (19%).

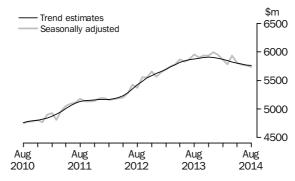

NON-MONETARY GOLD

In trend terms, imports of non-monetary gold fell \$22m (8%) to \$262m.

In original and seasonally adjusted terms, imports of non-monetary gold fell \$25m (10%) to \$230m.

Imports of services

SERVICES DEBITS

In trend terms, services debits fell \$10m to \$5,760m.

In seasonally adjusted terms, services debits fell \$27m to \$5,738m.

The main components contributing to the fall in seasonally adjusted estimates were:

- travel, down \$27m (1%)
- transport, down \$10m (1%).

Partly offsetting these falls was maintenance and repair services n.i.e., up \$18m (86%).

In seasonally adjusted terms, tourism related services debits fell \$38m (1%) to \$2,968m.

p preliminary figure or series subject to revision

(a) Data in this table are on a revised international merchandise trade basis and exclude value adjustments applied to balance of payments series.

On an international merchandise trade basis, in original terms (noting the footnote in the above table), between July and August 2014 the largest movements recorded for the following selected commodities were:

Iron ore lump rose \$39m (3%), with quantities up 2% and unit values up 2%. Exports to China (excluding SARs and Taiwan) rose \$63m (7%), with quantities up 2% and unit values up 5%.

Partly offsetting this rise was exports to Japan, down \$42m (16%), with quantities down 10% and unit values down 7%.

Iron ore fines rose \$1,054m (26%), with quantities up 4% and unit values up 20%. Exports to China (excluding SARs and Taiwan) rose \$1,234m (38%), with quantities up 9% and unit values up 26%.

Partly offsetting this rise was exports to Japan, down \$173m (37%), with quantities down 33% and unit values down 6%.

ANALYSIS AND COMMENTS continued

Selected commodities continued

Hard coking coal rose \$170m (16%), with quantities up 14% and unit values up 2%. Exports to:

- China (excluding SARs and Taiwan) rose \$101m (52%), with quantities up 47% and unit values up 4%
- Japan rose \$56m (28%), with quantities up 28%.

Semi–soft coal rose \$7m (1%), with quantities up 3% and unit values down 1%. Exports to China (excluding SARs and Taiwan) rose \$61m (68%), with quantities up 67% and unit values up 1%.

Partly offsetting this rise were exports to:

- Brazil, down \$18m (73%), with quantities down 72% and unit values down 1%
- Taiwan, down \$17m (33%), with quantities down 28% and unit values down 7%
- the Republic of Korea, down \$13m (18%), with quantities down 18% and unit values up 1%.

Thermal coal fell \$8m (1%), with quantities up 1% and unit values down 2%. Exports to:

- China (excluding SARs and Taiwan) fell \$38m (14%), with quantities down 9% and unit values down 5%
- Malaysia fell \$25m (37%), with quantities down 41% and unit values up 6%.

Partly offsetting these falls was exports to India, up \$55m (200%), with quantities up 206% and unit values down 2%.

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural.

(b) From July 1971 to June 2005, only a length–of–month adjustment has been applied to this component. From July 2005, this component is seasonally adjusted using seasonal factors derived from a monthly volume series.

(c) In using these seasonally adjusted series, care should be exercised because of the difficulties associated with reliably estimating the seasonal pattern.

(d) This component is not seasonally adjusted.

(a) For sign conventions, see paragraph 15 of the Explanatory Notes.

.

(b) From July 2008, commodities subject to a 'no commodity details' or 'no value details' restriction are included in Civil aircraft and confidentialised items. For earlier periods, commodities subject to a 'no commodity details' or 'no value details' restriction are included in Other merchandise goods.

(c) This component is not seasonally adjusted.

(d) In using these seasonally adjusted series, care should be exercised because of the difficulties associated with reliably estimating the seasonal pattern.

(e) From July 1981, this component is not seasonally adjusted.

— nil or rounded to zero (including null cells)

(a) This table is presented consistent with BPM6 sign conventions. This means for the balance on goods and services a negative revision indicates a decrease in a surplus or an increase in a deficit. For debits a negative revision indicates an increase in debits while a positive revision indicates a decrease in debits.

EXPLANATORY NOTES

INTRODUCTION

1 This publication presents preliminary estimates of Australia's international trade in goods and services on a balance of payments basis (tables 1–11 and 17) and merchandise import and export statistics on an international merchandise trade basis (tables 12–15). In addition, table 16 Exchange rates and trade–weighted indexes (TWI) are derived by using exchange rates and indexes provided by the Reserve Bank of Australia (RBA). As of December 2011 the RBA has changed the methodology for compiling the TWI to include both merchandise and services trade, rather than merchandise trade only. This takes advantage of country–level services trade data that have been published by the Australian Bureau of Statistics (ABS).

2 Merchandise trade statistics on an international merchandise trade basis are compiled from information submitted by exporters and importers or their agents to the *Australian Customs and Border Protection Service* (Customs and Border Protection). Adjustments for coverage, timing and valuation are made to international merchandise trade data to convert them to a balance of payments basis. The services data are sourced from the quarterly Survey of International Trade in Services and a range of administrative data and indicator series.

3 More comprehensive quarterly estimates of Australia's trade in goods and services, together with comprehensive details of Australia's balance of payments are included in the quarterly publication, *Balance of Payments and International Investment Position, Australia* (cat. no. 5302.0). Detailed monthly statistics on merchandise trade are available in time series spreadsheets on the ABS website or by subscription to tailored services. More information on the *International Trade in Services by Country, by State and by Detailed Services Category* are available on a financial year basis (cat. no. 5368.0.55.003) following the September issue of this publication and calendar year basis (cat. no. 5368.0.55.004) following the March issue of this publication.

CONCEPTS, SOURCES AND4The conceptual framework used in compiling Australia's merchandise trade statistics
can be found in International Merchandise Trade, Australia: Concepts, Sources and
Methods, 2001 (cat. no. 5489.0).

5 The conceptual framework used in compiling Australia's balance of payments statistics is based on the International Monetary Fund's *Balance of Payments and International Investment Position Manual, Sixth Edition* (BPM6). Descriptions of the underlying concepts and structure of the balance of payments and the sources, methods and terms used in compiling estimates are presented in the publication *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods, 1998* (cat. no. 5331.0). This version reflects the international standards prior to BPM6 and is currently being revised. The first part of the revised document was released on 8 March 2011, featuring only the Goods Account. Other components will be released as they become available. Further information on the key changes introduced with BPM6 can be found in the *Information paper: Implementation of new international statistical standards in the ABS National and International Accounts, September 2009* (cat. no. 5310.0.55.002).

6 To bring merchandise trade statistics on an international merchandise trade basis to a balance of payments basis, timing adjustments are made to ensure that the transaction is recorded in the period in which ownership changed, rather than in the period in which the transaction was recorded by Customs and Border Protection or the period in which the goods arrived in/departed from an Australian port. Adjustments are also made to account for the change of ownership of goods not included in merchandise trade statistics. Chapter 6 of the *Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods, 1998* (cat. no. 5331.0) provides more detail on the relationship between statistics on an international merchandise trade basis and on a balance of payments basis.

CONCEPTS, SOURCES AND METHODS <i>continued</i>	7 International merchandise trade exports data presented for recent months in tables 12–15 of this publication are based on information initially reported by exporters to Customs and Border Protection. At the time of initial reporting to Customs and Border Protection the final prices may not be known for some commodities. Therefore, the information recorded for recent months for commodities like iron ore and coal can include a variety of prices including previous or current contract prices and the prevailing spot prices. Newly negotiated contract prices may not be fully reflected in the data first reported to Customs and Border Protection, and to compensate for this, the balance of payments series may reflect adjusted price levels.
	8 The Concepts, Sources and Methods publications and information papers are available to download for free from the ABS website. Select <i>Statistics</i> , then select <i>By Catalogue Number</i> , and then the catalogue numbers as above.
CLASSIFICATIONS	 9 The merchandise trade data on an international merchandise trade basis are presented using the following commodity classifications: the Harmonized System 2012 (available on request) the Standard International Trade Classification Revision 4 (SITC Rev. 4) the Classification by Broad Economic Categories (BEC) the industry classification: Australian and New Zealand Standard Industrial Classification, 2006 (ANZSIC 06) from July 2005.
	 10 The balance of payments 'goods and services' series are presented according to three classifications with the goods classifications derived from SITC Rev. 4 and BEC. The classifications are: a for goods: a the Balance of Payments Commodities for Exports (BoPCE) b the Balance of Payments Broad Economic Categories (BoPBEC) for Imports a for services: b the Extended Balance of Payments Services Classification (EBOPS).
ACCURACY, RELIABILITY AND REVISIONS	11 While every effort is made to ensure the accuracy and reliability of estimates, most series are subject to revision as more complete and accurate information becomes available. Care should be exercised in the use and interpretation of estimates in this publication. The transactions occurring in international trade in goods and services are of many different kinds, and therefore the compilation of trade estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness. For further information on the monthly services series, see paragraph 25.
	12 The revisions are applied differently for merchandise trade and balance of payments series. Each month, merchandise trade data are revised for the previous six months to incorporate latest available data.
	13 For the balance of payments 'goods and services' series, in original terms, revisions in the July, October, January or April issues are limited to significant new and revised data from survey sources that have become available since the previous issue. This is to ensure the monthly series align with the comparable series in the most recent issue of the <i>Balance of Payments and International Investment Position, Australia</i> (cat. no. 5302.0). In the September issue revisions can be applied to the four previous financial years. In other issues revisions can be applied to the previous and current financial years to incorporate the latest available survey and administrative data.
	14 In seasonally adjusted and trend terms, revisions may occur at any time point but tend to focus on the most recent estimates. Please also refer to paragraphs 17 and 18 (seasonal adjustment), and 19 (trend estimates) below.

SIGN CONVENTION		sho	In keeping with BPM6 conventions, balance of payments basis credit entries are wn with an implied positive sign and debit items are shown as negative entries. For stics on an international merchandise trade basis, both imports and exports are
		sho	wn without sign. References to balance of payments debit items in Key Figures, Key
		Poir	nts, and Analysis and Comments are made without regard to sign. The calculation of
		perc	centage changes on balance of payments debit items are made without regard to sign.
		Perc	centage change is not applicable if there is a change from surplus to deficit or vice
	vers	a.	
	SEASONALLY ADJUSTED AND	16	The estimates of international trade in goods and services on a balance of payments

TREND ESTIMATES

16 The estimates of international trade in goods and services on a balance of payments basis are seasonally adjusted, however the merchandise exports and imports statistics on an international merchandise trade basis are not. Monthly original estimates are volatile, being subject to calendar–related and large irregular influences. Seasonally adjusted estimates are derived by estimating and removing from the original series systematic calendar related effects, such as seasonal (e.g. Christmas), trading day and moving holiday (e.g. Easter) influences. Seasonal adjustment does not aim to remove the irregular or non–seasonal influences which may be present in any particular month. These irregular influences may reflect both random economic events and difficulties of statistical recording.

17 The seasonally adjusted statistics in this publication use the concurrent seasonal adjustment technique and Autoregressive Integrated Moving Average (ARIMA) modelling to estimate factors for the current and previous months. Under concurrent seasonal adjustment, the estimates of seasonal factors are fine tuned as new or revised original estimates become available each period. The seasonally adjusted estimates are subject to revisions at each reference month as the estimates of seasonal factors are improved.

18 ARIMA modelling relies on the characteristics of the series being analysed to project future period data. ARIMA modelling is used on a case–by–case basis where it results in reduced revisions to seasonally adjusted series when subsequent data becomes available. The projected values are temporary, intermediate values, that are only used internally to improve the estimation of the seasonal factors. The projected data do not affect the original estimates and are discarded at the end of the seasonal adjustment process. The ARIMA model is assessed as part of the annual review of each August issue of this publication with the majority of directly seasonally adjusted trade in goods and services time series using an ARIMA model.

19 The month–to–month movements of the seasonally adjusted estimates may not be reliable indicators of underlying behaviour because they include irregular or non–seasonal movements. Trend estimates reduce the effect of these movements as they are derived by applying a 13–term Henderson moving average to the seasonally adjusted series. The 13–term Henderson moving average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. While the asymmetric weights enable trend estimates for recent months to be produced, it does result in revisions to the estimates for the most recent six months as additional observations become available. Revisions to trend estimates can also occur because of revisions to the original data and as a result of the re–estimation of the seasonal factors. Trend estimates should be used with caution, especially around the time of unusual influences, until these have been appropriately taken into account.

20 Information papers and articles on time series methods are available on the ABS website:

 for seasonal adjustment methods, see Information Paper: An Introductory Course on Time Series Analysis, Jan 2005 (cat. no. 1346.0.55.001) and Time Series Analysis Frequently Asked Questions, 2003 (cat. no. 1346.0.55.002)

SEASONALLY ADJUSTED AND TREND ESTIMATES continued	 for ARIMA modelling, see <i>Feature article: Use of ARIMA modelling to reduce revisions</i> in the October 2004 issue of <i>Australian Economic Indicators</i> (cat. no. 1350.0) for trend estimates methods, see <i>Information Paper: A Guide to Interpreting Time Series – Monitoring Trends</i> (cat. no. 1349.0) alternatively contact the Assistant Director, Time Series Analysis on (02) 6252 6345 or e-mail: <i>time.series.analysis@abs.gov.au</i>. The <i>ABS Privacy Policy</i> outlines how the ABS will handle any personal information that you provide to us. A copy of this policy is available on the ABS website through the 'Privacy' link.
ECONOMIC TERRITORY	 21 In accordance with BPM6 definitions, Australia's economic territory, on a balance of payments basis, is the area under the effective control of the Australian government. It includes the land area, airspace, territorial waters, including jurisdiction over fishing rights and rights to fuels and minerals. Australian economic territory also includes territorial enclaves in the rest of the world. These are clearly demarcated areas of land, located in other countries and which are owned or rented by the Australian government for diplomatic, military, scientific or other purposes. Specifically, the economic territory of Australia consists of: Geographic Australia which includes Cocos (Keeling) Islands and Christmas Island; Norfolk Island; Australian Antarctic Territory; Heard Island and McDonald Islands; Coral Sea Islands; Australia's territorial enclaves overseas; and the Joint Petroleum Development Area (joint territory between Australia and Timor-Leste). 22 Because of administrative complexities and measurement difficulties, Norfolk Island
	transactions with the rest of the world will not always be captured in all relevant balance of payments statistics. Most of the transactions involving Norfolk Island are not material to Australia's trade performance and not capturing these transactions will not distort these statistics. However, any significant transactions will be identified and included in the relevant statistics.
COMMODITY BREAKDOWN OF GOODS	23 For details of the classifications used to present goods exports (credits) and imports (debits) on a balance of payments basis, see tables 6.6 and 6.7, respectively, in <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Metbods</i> (cat. no. 5331.0).
	24 The international merchandise trade statistics shown in tables 12 and 13 are classified by the Standard International Trade Classification (SITC). Imports and exports of goods at a more detailed level are available from the time series spreadsheets on the ABS website. All data from July 2005 are presented according to SITC Rev. 4 and data prior to July 2005 are presented according to SITC Rev. 3. For details refer to the 'Classifications and Standards Update' in the July 2008 issue of this publication.
MONTHLY SERVICES SERIES	25 Monthly indicators for many of the services components that are only surveyed quarterly are not available. Monthly estimates for the freight and other transportation components of services credits in table 9 are derived by dividing the quarterly estimate by three. Freight debits are derived directly from imports data for the reference month as a difference between total merchandise Cost, Insurance and Freight (CIF) and Free On

MONTHLY SERVICES SERIES continued

CONFIDENTIALITY OF MERCHANDISE TRADE STATISTICS are derived by extrapolating the last quarter's data by an average of movements for the same quarter over the previous three years, and then dividing the estimate by three.

26 The release of statistics for certain merchandise trade commodities is restricted in order to prevent the identification of the activities of an individual business, where this is requested by the business concerned. These restrictions do not affect the total value of exports and imports, but they can affect statistics at the country, state and commodity levels, and other details only available on request such as Australian ports. For information on the confidentiality restrictions applied to the merchandise trade statistics in this publication, refer to the current issue of *International Merchandise Trade: Confidential Commodities List (CCL)* (cat. no. 5372.0.55.001).

27 Exports data that have the confidentiality restrictions 'No commodity details' or 'No value details' are now aggregated into a single confidential commodity code. For data prior to June 2013, these data are added back into the appropriate state total and country total (i.e. these totals show the correct level of trade). From June 2013 these confidential data are not added back. Instead the confidential data are published as 'No country details' in the country totals and 'State of origin not available' or 'State not available for publication' in the state totals. Therefore, country and state totals from June 2013 may not represent the actual amount of trade in each country/state but only the trade in commodities without a 'No commodity details' or 'No value details' restriction.

28 Imports data that have the confidentiality restrictions 'No commodity details' or 'No value details' are aggregated into a single confidential commodity code. For data prior to September 2008, these data are added back into the appropriate state total and country total (i.e. these totals show the correct level of trade). From September 2008 these confidential data are not added back. Instead the confidential data are published as 'No country details' in the country totals and 'State of destination not available' or 'State not available for publication' in the state totals. Therefore, country and state totals from September 2008 may not represent the actual amount of trade in each country/state but only the trade in commodities without a 'No commodity details' or 'No value details' restriction.

TOURISM RELATED SERVICES 29 The tourism related services memorandum items provide timely indicators of the movements in tourism related activities, not an absolute measure of the level of these activities. The tourism related indicator has been derived by combining total travel services (business, education–related and other personal travel) and passenger transportation services (which includes agency fees and commissions for air transport).

SERVICES BY STATE AND BY**30** Annual services data by state, by country and detailed services are released twice
yearly. Calendar year data are usually released following the March issue of this
publication and financial year data are usually released following the September issue.
Refer to Trade in Services data cubes under time series data for details.

31 Services credits are classified by the state of provision, while services debits are classified by the state of consumption. The state allocations for transportation, travel, postal and courier, and telecommunication services are based on a number of indicators including merchandise trade statistics by state, overseas passenger arrivals and departures by state of clearance and data provided by the *Department of Immigration and Border Protection*. The allocation for other services (about 25% of all trade in services) is primarily based on the location of the business reporting the information, which serves as a proxy for the state of provision/consumption of that service. The data should be used with care but are considered suitable for analysis over time.

SERVICES BY STATE AND BY PARTNER COUNTRY continued	32 A comprehensive explanation of the data sources used and the methodology applied in the compilation of partner country statistics is provided in Chapter 17 of <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods</i> (cat. no. 5331.0). Approximately 5% of total services credits and debits are either confidential, or unable to be allocated to individual countries.	
ABS DATA AVAILABLE	33 More detailed balance of payments and international merchandise trade data, including forward seasonal factors are available as time series spreadsheets or data cube from the ABS website. Merchandise trade data by commodity, country and state that are not on the ABS website may be available on request. Inquiries should be made to the National Information and Referral Service as shown on the back of this publication.	
RELATED PRODUCTS AND PUBLICATIONS	 34 Users may also wish to refer to the following publications which can be downloaded free of charge from the ABS website by using the 'Statistics' tab and selecting the relevant catalogue number: <i>Balance of Payments and International Investment Position, Australia</i> (cat. no. 5302.0) – issued quarterly <i>Balance of Payments – Goods and Services, Preliminary Quarterly Estimates</i> (cat. no. 5302.0.55.004) – issued quarterly <i>International Merchandise Imports, Australia</i> (cat. no. 5439.0) – issued monthly <i>International Merchandise Imports, Australia</i> (cat. no. 6457.0) – issued quarterly <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Metbods</i> (cat. no. 5331.0) <i>Information Paper: Quality of Australian Balance of Payments Statistics</i> (cat. no. 5449.0) <i>International Merchandise Trade, Australia: Concepts, Sources and Metbods</i> (cat. no. 5361.0) <i>International Merchandise Trade, Australia: Concepts, Sources and Metbods</i> (cat. no. 5469.0) <i>A Guide to Australian Balance of Payments and International Investment Position Statistics</i> (cat. no. 5362.0.55.001). 35 Current publications and other products released by the ABS are available from the 'Statistics' tab on the ABS website. The ABS also issues a daily <i>Release Advice</i> on the website which details products to be released in the week ahead. A<i>foreign trade</i> theme page and a <i>balance of payments</i> theme page are available on the ABS website. Select <i>Topics @ a Glance - Economy - Foreign Trade</i> or <i>Balance of Payments</i>. This page provides direct links to all foreign trade and balance of payments related data and publications, recent changes and forthcoming events, links to relevant websites and a range of other information about the Australian International Accounts. 	
ROUNDING	36 Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage movements are calculated from data at the level of precision presented in this publication (i.e. \$m) except for international merchandise trade tables.

TECHNICAL NOTE LOW VALUE THRESHOLD UPDATE

INTRODUCTION	1 In the August 2013 issue of <i>International Trade in Goods and Services, Australia</i> (cat. no. 5368.0) a coverage adjustment was introduced to include all imports of goods under the Low Value Threshold (LVT) in the balance of payments good debits estimates. The <i>Technical Note – Low Value Threshold</i> was released in the publication to detail the methodology for calculating the adjustment. Since the <i>Technical Note – Low Value Threshold</i> was published, three additional data sources have become available: 2011–12 financial year value data for imports lodged with a self assessed clearance; a quarterly quantities series for imports under the LVT via parcel post; and a monthly value series for imports lodged with a self assessed clearance. This technical note details changes to the methodology published in August 2013 arising from the incorporation of these three additional data sources and the revised estimates for imports under the LVT resulting from these changes.
BACKGROUND	 2 There are three channels through which goods can be imported into Australia: Full Import Declaration (FID) – This refers to goods that are imported with a full <i>Australian Customs and Border Protection Service</i> (Customs and Border Protection) declaration. Imports with a FID valued over \$1,000 are included in international merchandise trade and balance of payments statistics. Imports with a FID valued under \$1,000 are excluded from international merchandise trade statistics, but are included in balance of payments statistics via a coverage adjustment. Self Assessed Clearance (SAC) – This refers to goods that are imported either as air or sea cargo where a SAC declaration is completed rather than a FID. SAC declarations are only completed for imports less than \$1,000 and therefore imports with a SAC are not included in international merchandise trade statistics. On a balance of payments basis, imports with a SAC declaration were included in estimates from July 1998 in the August 2013 issue of this publication. Parcel Post – Imports via the international postal network valued over \$1,000 require a FID to be lodged, and are included in international merchandise trade and balance of payments statistics. Imports valued under \$1,000 are currently exempt from having to submit a FID or SAC declaration and consequently imports via this channel are not included in international merchandise trade statistics. On a balance of payments basis, imports under the LVT via parcel post were included in estimates from July 1998 in the August 2013 issue of this publication. Prior to November 2005 the LVT was set at \$250 for air and sea cargo and \$1,000 for
	postal items. In November 2005 the LVT for air and sea cargo was raised to $$1,000$.
CHANGES TO METHODOLOGY	 4 In the <i>Technical Note – Low Value Threshold</i>, published in the August 2013 issue of this publication, the methodology for the calculation of the LVT adjustment was detailed for two time periods. The first time period, prior to March quarter 2006, remains unchanged from the original methodology. The second time period, from March quarter 2006 onwards, has been modified to incorporate the additional financial year of SAC value data and the following additional ongoing data sources: quarterly parcel post quantities from September quarter 2011 monthly value data for imports lodged with a SAC from January 2012. 5 The modifications to the original methodology to incorporate each of the additional data sources are detailed below.
ADDITIONAL FINANCIAL YEAR OF SAC VALUE DATA	6 Between September quarter 2011 and December quarter 2011 additional SAC value data for 2011–12 financial year has been included.

QUARTERLY PARCEL POST QUANTITIES	7 From September quarter 2011, the new parcel post quantities series replaces the previously modelled quantities series. The methodology for calculating the average value series remains the same as detailed in the <i>Technical Note – Low Value Threshold</i> , published in the August 2013 issue of this publication.
MONTHLY SAC VALUE DATA	8 From January 2012, monthly value data for imports lodged with a SAC has replaced the previously modelled estimates.
PRO-RATION OF QUARTERLY SERIES TO MONTHLY AND ALLOCATION TO COMMODITY CATEGORIES	9 Quarterly estimates, from September quarter 1998 to December quarter 2011, continue to be pro–rated to a monthly basis using the methodology as described in the <i>Technical Note – Low Value Threshold</i> , published in the August 2013 issue of this publication. From March quarter 2012 onwards, SAC value data is available on a monthly basis and is not required to be pro–rated. Parcel post estimates continue to be pro–rated from a quarterly to a monthly basis using monthly SAC quantities. Estimates continue to be allocated to individual <i>Balance of Payments Broad Economic Category</i> (BoPBEC) components using the methodology described in the <i>Technical Note – Low Value Threshold</i> , published in the August 2013 issue of this publication.

UPDATED ESTIMATES**10** Due to the incorporation of additional data sources and resultant changes in
methodology, LVT estimates have been revised back to September quarter 2011. The
value of the SAC and parcel post LVT adjustment was revised from \$7.5b to \$6.7b in
2013–14. Annual estimates from 1998–99 to 2013–14 are shown in Figure 1.

FIGURE 1 - LOW VALUE ADJUSTMENT BY FINANCIAL YEAR

11 The estimates presented here are made using a range of assumptions. More reliable sources of data may become available in the future to replace these assumptions and improve the quality of the estimates.

12 There is a comparable LVT for the reporting of exports to Customs and Border Protection, which is currently \$2,000. There are no reliable sources of information to enable estimation of trade not recorded on an export declaration and it is expected to be much less significant.

13 The ABS is also investigating methods to estimate the value of intangible products consumed by Australian households. These include services that are delivered online by non–residents, such as e–books, films, music, software, online newspaper and magazine subscriptions and gambling services.

14 The *Information Paper: Measurement of Online Retail Trade in Macroeconomic Statistics, 2013* (cat. no. 8501.0.55.007) was released on 19 August 2013 and explains where online retail trade is currently included in ABS macroeconomic statistics and describes enhancements to improve measurement and coverage of online retail trade activity in both retail trade statistics and the wider macroeconomic accounts.
