PRICES ADJUSTMENT

International merchandise trade exports data (on a recorded trade basis) presented in tables 12–15 of this publication are based on information provided by exporters to the Australian Customs and Border Protection Service (Customs and Border Protection). At the time of initial reporting to Customs and Border Protection the final prices may not be known for some commodities. New contract prices that have been recently negotiated, or are still being negotiated, for commodities like iron ore and coal may not be fully reflected in the Customs and Border Protection source data. Final prices are updated progressively in recorded trade data as exporters revise the information provided to Customs and Border Protection. It is not yet known how the recent move from annual to quarterly contracts for some exporters will impact on the reporting of information.

Balance of payments data in this publication have been adjusted for June and July 2010 to take into account additional information on the unit price of iron ore and coal exports. The adjustments for metal ores and minerals are \$218m in June and \$200m in July. The adjustments for coal, coke and briquettes are \$345m in June and \$145m in July.

In the unadjusted recorded trade series, the unit price of metal ores and minerals decreased 6% between June and July 2010. In the equivalent adjusted balance of payments series, the unit price of metal ores and minerals decreased 3%.

In the unadjusted recorded trade series, the unit price of coal, coke and briquettes decreased 11% between June and July 2010. In the equivalent adjusted balance of payments series, the unit price of coal, coke and briquettes decreased 5%.

TIME SERIES DATA

TIME SERIES DATA	Tables 1 to 16 of this publication are available free on the ABS website <www.abs.gov.au> from the Downloads tab of this issue with longer time series. A number of these tables present more detailed breakdowns than included in the publication and a number of additional tables are also available free on the ABS website.</www.abs.gov.au>
Tables with more detailed breakdowns:	11a Services credits: Original - Quarter ¹ 11b Services debits: Original - Quarter ¹

TIME SERIES DATA continued

TRADE IN SERVICES DATA CUBES	Trade in Services data cubes are usually updated on an annual basis. Calendar year (cat. no. 5368.0.55.004) statistics are updated in May and financial year (cat. no. 5368.0.55.003) statistics are updated in December.
	The following tables were included in the calendar year data cubes:
	1 International trade in services, credits, state by year
	2 International trade in services, credits, year by state
	3 International trade in services, debits, state by year
	4 International trade in services, debits, year by state
	5 International trade in services, credits, year by country and service
	6 International trade in services, credits, service by year and by country
	7 International trade in services, debits, year by country and service
	8 International trade in services, debits, service by year and by country
	9 International trade in services, credits, year by country and travel service
	10 International trade in services, debits, year by country and travel service
	11 International trade in services, credits, education related travel, by educational sector, by type of expenditure by year.

ANALYSIS AND COMMENTS

BALANCE ON GOODS AND SERVICES	The trend estimate of the balance on goods and services was a surplus of \$2,361m in July 2010, an increase of \$163m on the revised surplus in June 2010.
	In seasonally adjusted terms, the balance on goods and services was a surplus of \$1,888m in July 2010, a decrease of \$1,550m on the revised surplus in June 2010.
EXPORTS OF GOODS AND SERVICES	Between June 2010 and July 2010 the trend estimate of goods and services credits rose \$497m (2%) to \$25,836m.
	In seasonally adjusted terms, goods and services credits fell \$1,191m (4%) to \$25,395m. Non–rural goods fell \$1,076m (6%) and non–monetary gold fell \$219m (15%). Rural goods rose \$113m (5%). Services credits fell \$15m.
Exports of goods	GOODS CREDITS

⁽a) Trend breaks of \$2,725m to April 2008 and \$2,200m to April 2010 have been applied.

RURAL GOODS

In trend terms, exports of rural goods rose \$81m (3%) to \$2,482m.

In seasonally adjusted terms, exports of rural goods rose \$113m (5%) to \$2,580m.

The components contributing to the rise in the seasonally adjusted estimates were:

- cereal grains and cereal preparations, up \$97m (22%)
- other rural, up \$29m (3%).

NON-RURAL GOODS

In trend terms, exports of non-rural goods rose \$394m (2%) to \$17,510m.

In seasonally adjusted terms, exports of non-rural goods fell \$1,076m (6%) to \$17,220m.

The main components contributing to the fall in the seasonally adjusted estimates were:

- coal, coke and briquettes, down \$704m (16%) on both volumes and prices
- metal ores and minerals, down \$499m (7%) on both volumes and prices.

Partly offsetting these decreases were the following components:

- other non-rural (incl. sugar and beverages), up \$139m (14%)
- metals (excl. non-monetary gold), up \$79m (8%).

For price and volume details, see the Selected commodities table on page 11.

Exports of goods continued NET EXPORTS OF GOODS UNDER MERCHANTING

In trend terms, net exports of goods under merchanting rose \$2m (8%) to \$28m.

In seasonally adjusted terms, net exports of goods under merchanting rose (26%) to 29m.

NON-MONETARY GOLD

In trend terms, exports of non-monetary gold rose \$26m (2%) to \$1,497m.

In seasonally adjusted terms, non-monetary gold fell \$219m (15%) to \$1,241m.

Exports of services

SERVICES CREDITS

(a) A trend break of \$106m has been applied to January 2008.

In trend terms, services credits fell \$7m to \$4,318m.

In seasonally adjusted terms, services credits fell \$15m to \$4,324m.

The only component contributing to the decrease in the seasonally adjusted estimates was travel services, down \$33m (1%).

In seasonally adjusted terms, tourism related services credits fell \$30m (1%) to \$2,929m.

ANALYSIS AND COMMENTS continued

IMPORTS OF GOODS AND SERVICES

Between June 2010 and July 2010 the trend estimate of goods and services debits rose \$335m (1%) to \$23,475m.

In seasonally adjusted terms, goods and services debits rose \$359m (2%) to \$23,507m. Intermediate and other merchandise goods rose \$698m (9%) and capital goods rose \$4m. Non–monetary gold fell \$269m (44%) and consumption goods fell \$64m (1%). Services debits fell \$9m.

Imports of goods GOODS DEBITS

(a) Trend breaks of $167 \mathrm{m}$ to October 2008 and April 2010 have been applied.

CONSUMPTION GOODS

In trend terms, imports of consumption goods rose \$44m (1%) to \$5,568m.

In seasonally adjusted terms, imports of consumption goods fell \$64m (1%) to \$5,513m.

The main components contributing to the fall in the seasonally adjusted estimates were:

- non-industrial transport equipment, down \$43m (3%)
- toys, books and leisure goods, down \$23m (6%).

CAPITAL GOODS

In trend terms, imports of capital goods rose \$66m (2%) to \$4,257m.

In seasonally adjusted terms, imports of capital goods rose \$4m to \$4,197m.

The components contributing to the rise in the seasonally adjusted estimates were:

- ADP equipment, up \$59m (8%)
- telecommunications equipment, up \$36m (7%).

Partly offsetting these increases were the following components:

- capital goods n.e.s., down \$41m (9%)
- machinery and industrial equipment, down \$32m (2%).

Imports of goods continued INTERMEDIATE AND OTHER MERCHANDISE GOODS

In trend terms, imports of intermediate and other merchandise goods rose \$225m (3%) to \$8,297m.

In seasonally adjusted terms, imports of intermediate and other merchandise goods rose \$698m (9%) to \$8,732m.

The main components contributing to the rise in the seasonally adjusted estimates were:

- other merchandise goods, up \$477m. The Department of Defence imported six Super Hornets
- organic and inorganic chemicals, up \$68m (18%)
- other parts for capital goods, up \$58m (5%).

Partly offsetting these increases was the fuels and lubricants component, down \$80m (3%).

NON-MONETARY GOLD

In trend terms, imports of non-monetary gold fell \$29m (4%) to \$628m.

In seasonally adjusted terms, non-monetary gold fell \$269m (44%) to \$348m.

Imports of services

SERVICES DEBITS

In trend terms, services debits rose \$28m (1%) to \$4,724m.

In seasonally adjusted terms, services debits fell \$9m to \$4,718m.

The components contributing to the fall in the seasonally adjusted estimates were:

- transport services, down \$16m (1%)
- travel services, down \$6m.

Partly offsetting these decreases was an increase in the other services component, up \$8m (1%).

In seasonally adjusted terms, tourism related services debits fell \$14m (1%) to \$2,451m.

(a) For all time periods, estimates for sugar, sugar preparations and honey are included in Other non-rural. (c) In using these seasonally adjusted series, care should be exercised because of the difficulties associated with reliably estimating the seasonal pattern.

(b) Only a length–of–month adjustment has been applied to this component.

(d) This component is not seasonally adjusted.

.

.

(a) For sign conventions, see paragraph 15 of the Explanatory Notes.

(b) Caution should be used when interpreting recent trend estimates as they may be affected by unusual economic factors. For more details on trend estimates, please see paragraph 19 of the explanatory notes. (c) From July 2008, commodities subject to a 'no commodity details' or 'no value details' restriction are included in Civil aircraft and confidentialised items, and for earlier periods are included in Other merchandise goods.

(d) An estimated trend correction of \$167m has been applied to Capital goods n.e.s. and related aggregates in April 2010. This trend break will be reassessed in a future issue.

(a) This table is presented consistent with BPM6 sign conventions. This means for the balance on goods and services a negative revision indicates a decrease in a surplus or an increase in a deficit. For debits a negative revision indicates an increase in debits while a positive revision indicates a decrease in debits.

EXPLANATORY NOTES

.

INTRODUCTION	 This publication presents preliminary estimates of Australia's international trade in goods and services on a balance of payments basis (Tables 1–11 and 17) and merchandise import and export statistics on a recorded trade basis (Tables 12–15). In addition, Table 16 Exchange rates and trade–weighted indexes are derived by using exchange rates and indexes provided by the Reserve Bank. Merchandise trade statistics on a recorded trade basis are compiled from information we private the part of th
	submitted by exporters and importers or their agents to the Australian Customs and Border Protection Service (Customs and Border Protection). Adjustments for coverage, timing and valuation are made to recorded trade data to convert them to a balance of payments basis. The services data are sourced from the quarterly Survey of International Trade in Services and a range of administrative data and indicator series.
	3 More comprehensive quarterly estimates of Australia's trade in goods and services, together with comprehensive details of Australia's balance of payments are included in the quarterly publication, <i>Balance of Payments and International Investment Position, Australia</i> (cat. no. 5302.0). Detailed monthly statistics on merchandise trade are available in Time Series Spreadsheets on the ABS website or by subscription to tailored services. More information on the <i>International Trade in Services by country, by state and by detailed services category</i> are available on a financial year basis (cat. no. 5368.0.55.003) with the September issue of this publication.
CONCEPTS, SOURCES AND METHODS	4 The conceptual framework used in compiling Australia's merchandise trade statistics can be found in <i>International Merchandise Trade, Australia: Concepts, Sources and Methods, 2001</i> (cat. no. 5489.0).
	5 The conceptual framework used in compiling Australia's balance of payments statistics is based on the <i>International Monetary Fund's Balance of Payments and International Investment Position Manual Sixth Edition</i> (BPM6). Descriptions of the underlying concepts and structure of the balance of payments and the sources, methods and terms used in compiling the estimates are presented in <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods</i> , 1998 (cat. no. 5331.0). The current version of this document reflects the international standards prior to BPM6. A revised Concepts, Sources and Methods publication is scheduled for release in late 2010. The <i>Information paper: Implementation of new international statistical standards in the ABS National and International Accounts, September 2009</i> (cat. no. 5310.0.55.002) describes the key changes introduced with BPM6.
	6 To bring merchandise trade statistics on a recorded trade basis to a balance of payments basis, timing adjustments are made to ensure that the transaction is recorded in the period in which ownership changed, rather than in the period in which the transaction was recorded by Customs and Border Protection or the period in which the goods arrived in/departed from an Australian port. Adjustments are also made to account for the change of ownership of goods not included in merchandise trade statistics. Chapter 6 of cat. no. 5331.0 provides more detail on the relationship between statistics on international merchandise trade on a recorded trade basis and on a balance of payments basis.

.

.

7 Recorded trade exports data presented for recent months in tables 12–15 of this publication are based on information initially reported by exporters to Customs and Border Protection. At the time of initial reporting to Customs and Border Protection the final prices may not be known for some commodities. Therefore, the information recorded for recent months for commodities like iron ore and coal can include a variety of prices including previous or current contract prices and the prevailing spot prices. Newly negotiated contract prices may not be fully reflected in the data first reported to

CONCEPTS, SOURCES AND METHODS continued	Customs and Border Protection, and to compensate for this, the Balance of Payments series may reflect adjusted price levels.
	8 The Concepts, Sources and Methods publications and information papers are available to download for free from the ABS website. Select <i>Statistics</i> , then select <i>By Catalogue Number</i> , and then the catalogue numbers as above.
CLASSIFICATIONS	 9 The merchandise trade data on a recorded trade basis are presented using the following commodity classifications: the Harmonised System 2007 (available on request) the Standard International Trade Classification (SITC Revision 4) the Classification by Broad Economic Categories (BEC) the industry classification: Australian and New Zealand Standard Industrial Classification, 2006 (ANZSIC 06) from July 2005.
	 10 The Balance of Payments Goods and Services series are presented according to three classifications with the goods classifications derived from SITC Revision 4 and BEC. The classifications are: a for goods: a the Balance of Payments Commodities for Exports (BoPCE) b the Balance of Payments Broad Economic Categories for Imports (BoPBEC) a for services: b the Extended Balance of Payments Services Classification (EBOPS).
ACCURACY, RELIABILITY AND REVISIONS	11 While every effort is made to ensure the accuracy and reliability of estimates, most series are subject to revision as more complete and accurate information becomes available. Care should be exercised in the use and interpretation of estimates in this publication. The transactions occurring in international trade in goods and services are of many different kinds, and therefore the compilation of trade estimates entails the use of a very wide range of statistical data of varying degrees of accuracy and timeliness. For further information on the monthly services series, see paragraph 25.
	12 The revisions are applied differently for merchandise trade and Balance of Payments series. Each month, merchandise trade data are revised for the previous six months to incorporate latest available data.
	13 For the Balance of Payments Goods and Services series, in original terms, no revisions are applied in the July, October, January or April issues. This is to ensure the monthly series align with the comparable series in the quarterly publication. In the September issue revisions can be applied to the four previous financial years. In other issues revisions can be applied to the previous and current financial years to incorporate the latest available survey and administrative data.
	14 In seasonally adjusted and trend terms, revisions may occur at any time point but tend to focus on the most recent estimates. Please also refer to paragraphs 17 (seasonal adjustment) and 19 (trend estimates) below.
SIGN CONVENTION	15 In keeping with BPM6 conventions, balance of payments basis credit entries are shown with an implied positive sign and debit items are shown as negative entries. For statistics on a recorded trade basis, both imports and exports are shown without sign. The calculation of percentage changes on balance of payments debit items are made without regard to sign. References to balance of payments debit items in Key Figures, Key Points, and Analysis and Comments are also made without regard to sign.
SEASONALLY ADJUSTED AND TREND ESTIMATES	16 The estimates of international trade in goods and services on a balance of payments basis are seasonally adjusted, however the merchandise exports and imports statistics on a recorded trade basis are not. Monthly original estimates are volatile, being subject to calendar–related and large irregular influences. Seasonally adjusted estimates are derived

SEASONALLY ADJUSTED AND TREND ESTIMATES continued

by estimating and removing from the original series systematic calendar related effects, such as seasonal (e.g. Christmas), trading day and moving holiday (e.g. Easter) influences. Seasonal adjustment does not aim to remove the irregular or non–seasonal influences which may be present in any particular month. These irregular influences may reflect both random economic events and difficulties of statistical recording.

17 The seasonally adjusted statistics in this publication use the concurrent seasonal adjustment technique and Autoregressive Integrated Moving Average (ARIMA) modelling to estimate factors for the current and previous months. Under concurrent seasonal adjustment, the estimates of seasonal factors are fine tuned as new or revised original estimates become available each period. The seasonally adjusted estimates are subject to revisions at each reference month as the estimates of seasonal factors are improved.

18 ARIMA modelling relies on the characteristics of the series being analysed to project future period data. ARIMA modelling is used on a case–by–case basis where it results in reduced revisions to seasonally adjusted series when subsequent data become available. The projected values are temporary, intermediate values, that are only used internally to improve the estimation of the seasonal factors. The projected data do not affect the original estimates and are discarded at the end of the seasonal adjustment process. The ARIMA model is assessed as part of the annual review and, following the 2009 annual review, 40 of the 45 directly seasonally adjusted trade in goods and services time series use an ARIMA model.

19 The month–to–month movements of the seasonally adjusted estimates may not be reliable indicators of underlying behaviour because they include irregular or non–seasonal movements. Trend estimates reduce the effect of these movements as they are derived by applying a 13–term Henderson moving average to the seasonally adjusted series. The 13–term Henderson moving average (like all Henderson averages) is symmetric, but as the end of a time series is approached, asymmetric forms of the average are applied. While the asymmetric weights enable trend estimates for recent months to be produced, it does result in revisions to the estimates for the most recent six months as additional observations become available. Revisions to trend estimates can also occur because of revisions to the original data and as a result of the re–estimation of the seasonal factors. Trend estimates should be used with caution, especially around the time of unusual influences, until these have been appropriately taken into account.

20 Information papers and articles on time series methods are available on the ABS website:

- for seasonal adjustment methods, see *Information Paper: An Introductory Course* on *Time Series Analysis, Jan 2005* (cat. no. 1346.0.55.001) and *Time Series Analysis Frequently Asked Questions, 2003* (cat. no. 1346.0.55.002)
- for ARIMA modelling, see *Feature article: Use of ARIMA modelling to reduce revisions* in the October 2004 issue of *Australian Economic Indicators* (cat. no. 1350.0)
- for trend estimates methods, see Information Paper: A Guide to Interpreting Time Series – Monitoring Trends (cat. no. 1349.0)
- alternatively contact the Assistant Director, Time Series Analysis on (02) 6252 6345 or e-mail <time.series.analysis@abs.gov.au>.

ECONOMIC TERRITORY

21 In accordance with BPM6 definitions, Australia's economic territory, on a balance of payments basis, is the area under the effective control of the Australian government. It includes the land area, airspace, territorial waters, including jurisdiction over fishing rights and rights to fuels and minerals. Australian economic territory also includes territorial enclaves in the rest of the world. These are clearly demarcated areas of land, located in other countries and which are owned or rented by the Australian government

ECONOMIC TERRITORY continued	 for diplomatic, military, scientific or other purposes. Specifically, the economic territory of Australia consists of: Geographic Australia which includes Cocos (Keeling) Islands and Christmas Island; Norfolk Island; Australian Antarctic Territory; Heard Island and McDonald Islands; Territory of Ashmore Reef and Cartier Island; Coral Sea Islands; Australia's territorial enclaves overseas; and the Joint Petroleum Development Area (joint territory between Australia and East Timor (Timor–Leste)).
	22 Because of administrative complexities and measurement difficulties, Norfolk Island transactions with the rest of the world will not always be captured in all relevant Balance of Payments statistics. Most of the transactions involving Norfolk Island are not material to Australia's trade performance and not capturing these transactions will not distort these statistics. However, any significant transactions will be identified and included in the relevant statistics.
COMMODITY BREAKDOWN OF GOODS	23 For details of the classifications used to present goods exports (credits) and imports (debits) on a balance of payments basis, see tables 6.6 and 6.7, respectively, in <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods</i> , 1998 (cat. no. 5331.0).
	24 The recorded trade statistics shown in tables 12 and 13 are classified by the Standard International Trade Classification (SITC). Imports and exports of goods at a more detailed level are available from the Time Series spreadsheets on the ABS website. All data from July 2005 are presented according to SITC Rev 4 and data prior to July 2005 are presented according to SITC Rev 3. For details refer to the 'Classifications and Standards Update' in the July 2008 issue of this publication.
MONTHLY SERVICES SERIES	25 Monthly indicators for many of the services components that are only surveyed quarterly are not available. Monthly estimates for the freight and other transportation components of services credits in table 9 are derived by dividing the quarterly estimate by three. Freight debits are derived directly from imports data for the reference month as a difference between total merchandise cost, insurance and freight (CIF) and free on board (FOB), adjusted to reflect timing and processing adjustments. For freight credits and other transportation credits and debits, estimates are derived by extrapolating the last quarter's data by an average of movements for the same quarter over the three previous years, and then dividing the estimate by three. Similarly other services estimates are derived by extrapolating the last quarter's data by an average of movements for the same quarter over the three same quarter over the previous three years, and then dividing the estimate by three.
CONFIDENTIALITY OF MERCHANDISE TRADE STATISTICS	26 The release of statistics for certain merchandise trade commodities is restricted in order to prevent the identification of the activities of an individual business, where this is requested by the business concerned. These restrictions do not affect the total value of exports and imports, but they can affect statistics at the country, state and commodity levels. Imports data that have the confidentiality restrictions 'No commodity details' or 'No value details' are aggregated into a single confidential commodity code. For data prior to September 2008, these data are added back into the appropriate state total and country total (i.e. these totals show the correct level of trade). From September 2008 these confidential data are not added back. Instead the confidential data are published as 'No country details' in the country totals and 'State not available for publication' in the state totals. Therefore, country and state totals from September 2008 may not represent the actual amount of trade in each country/state but only the trade in commodities without a 'No commodity details' or 'No value details' restriction. For information on the

CONFIDENTIALITY OF MERCHANDISE TRADE STATISTICS continued	confidentiality restrictions applied to the merchandise trade statistics in this publication, refer to the current issue of <i>International merchandise trade: Confidential Commodities List (CCL)</i> (cat. no. 5372.0.55.001).					
TOURISM RELATED SERVICES	27 The tourism related services memorandum items provide timely indicators of the movements in tourism related activities, not an absolute measure of the level of these activities. The tourism related indicator has been derived by combining total travel services (business, education–related and other personal travel) and passenger transportation services (which includes agency fees and commissions for air transport).					
SERVICES BY STATE AND BY PARTNER COUNTRY	28 Annual services data by state, by country and detailed services are released twice yearly. Calendar year data are usually released with the March issue of this publication and financial year data are usually released with the September issue. Refer to Time series data for details.					
	29 Services credits are classified by the state of provision, while services debits are classified by the state of consumption. The state allocations for transportation, travel, postal and courier, and telecommunication services are based on a number of indicators including merchandise trade statistics by state, overseas passenger arrivals and departures by state of clearance and data provided by the Department of Immigration and Citizenship. The allocation for other services (about 25% of all trade in services) is primarily based on the location of the business reporting the information, which serves as a proxy for the state of provision/consumption of that service. The data should be used with care but are considered suitable for analysis over time.					
	30 A comprehensive explanation of the data sources used and the methodology applied in the compilation of partner country statistics is provided in Chapter 17 of <i>Balance of Payments and International Investment Position, Australia – Concepts, Sources and Methods</i> (cat. no. 5331.0). Approximately 7% of total services credits and 5% of total services debits for both 2007–08 and 2008–09 were either confidential, or unable to be allocated to individual countries.					
ABS DATA AVAILABLE	31 More detailed balance of payments and recorded merchandise trade data, including forward seasonal factors are available as time series spreadsheets or data cubes from the ABS website. Merchandise trade data by commodity, country and state that are not on the ABS website may be available on request. Inquiries should be made to the National Information and Referral Service as shown on the back of this publication.					
RELATED PRODUCTS AND PUBLICATIONS	 32 Users may also wish to refer to the following publications which can be downloaded free of charge from the ABS website by using the 'Statistics' tab and selecting the relevant catalogue number: <i>Balance of Payments and International Investment Position, Australia</i> (cat. no. 5302.0) – issued quarterly <i>International Merchandise Imports, Australia</i> (cat. no. 5439.0) – issued monthly <i>International Trade Price Indexes, Australia</i> (cat. no. 6457.0) – issued quarterly <i>Balance of Payments and International Investment Position, Australia: Concepts, Sources and Methods</i> (cat. no. 5331.0) <i>Information Paper: Quality of Australian Balance of Payments Statistics</i> (cat. no. 5342.0) <i>International Merchandise Trade, Australia: Concepts, Sources and Methods</i> (cat. no. 5489.0) <i>A Guide to Australian Balance of Payments and International Investment Position Statistics</i> (cat. no. 5362.0.55.001). 					

RELATED PRODUCTS AND PUBLICATIONS continued	33 Current publications and other products released by the ABS are available from the Statistics tab on the ABS website. The ABS also issues a daily <i>Release Advice</i> on the website which details products to be released in the week ahead. A <i>foreign trade theme page</i> and a <i>balance of payments theme page</i> are available on the ABS website. Select <i>Topics</i> @ <i>a Glance – Economy – Foreign Trade</i> or <i>Balance of Payments</i> . This page provides direct links to all foreign trade and balance of payments related data and publications, recent changes and forthcoming events, links to relevant websites and a range of other information about the Australian International Accounts.
ROUNDING	34 Where figures have been rounded, discrepancies may occur between sums of the component items and totals. Percentage movements are calculated from data at the level of precision presented in this publication (i.e. \$m) except for international merchandise trade tables.
