## PREFACE

ABOUT THIS PUBLICATION

ABOUT THIS SURVEY

GENERAL ACKNOWLEDGMENT

This publication presents information about the weekly earnings of employees. Data from this survey is used to examine the distribution of employee earnings cross classified by a range of personal characteristics such as age, sex and family type, and by characteristics of employment such as full-time and part-time status, permanent and casual status and size of employing establishment.

Statistics in this publication were obtained from the Australian Bureau of Statistics (ABS) survey, Weekly Earnings of Employees (Distribution).

The Weekly Earnings of Employees (Distribution) Survey was conducted throughout Australia in August 1997 as a supplement to the ABS monthly Labour Force Survey. The survey has been conducted annually since 1975 except for 1996.

Data was collected from persons who were employees in their main job. This survey collected details about occupation, industry and earnings. Other information available includes details about standard benefits provided by employers, trade union membership and superannuation coverage.

ABS publications draw extensively on information provided freely by individuals, business, governments and other organisations. Their continued cooperation is very much appreciated: without it, the wide range of statistics published by the ABS would not be available. Information received by the ABS is treated in strict confidence by the Census and Statistics Act 1905.
W. McLennan

Australian Statistician

## SUMMARY OF FINDINGS

WEEKLY EARNINGS OF FULL-TIME AND PART-TIME WORKERS (IN ALL JOBS)

There were 6,972,100 employees aged 15 years and over in August 1997.~ Some $\mathbf{7 4 \%}$ were full-time workers and $26 \%$ were part-time workers. Mean weekly earnings of both full-time and part-time workers increased between August 1995 and August 1997.1 Mean weekly earnings of full-time workers increased $12 \%$, from $\$ 630$ in August 1995 to $\$ 703$ in August 1997. Mean weekly earnings for part-time workers increased $9 \%$, from $\$ 231$ to $\$ 252$ over the same period.

Mean weekly earnings for full-time and part-time workers have been increasing since the late 1980s, however the rate of the increase has fluctuated, reflecting in part rises and falls in the economic cycle. For full-time workers the percentage increase was $10 \%$ between August 1989 and July 1991, 10\% between July 1991 and August 1993, and 7\% between August 1993 and August 1995. For part-time workers the percentage increases were $11 \%, 10 \%$ and $2 \%$.

INCREASE IN MEAN WEEKLY EARNINGS

Differences in mean weekly earnings across States and Territories

In August 1997, full-time workers who were residents of the Australian Capital Territory had the highest mean weekly earnings of the States and Territories at $\$ 804$, while Tasmania recorded the lowest at $\$ 625$. Over the period 1988-97, mean weekly earnings in the Northern Territory increased the least (on average $4 \%$ per year), while the highest increase (on average 5\% per year) was recorded in New South Wales.

[^0]Of the 6,972,100 employees in August 1997 almost three-quarters $(5,055,800)$ were full-time employees in their main job. Just over half (55\%) of female employees and the majority of male employees (87\%) worked full-time in their main job. Mean weekly earnings of full-time employees were $\$ 752$ for males and $\$ 606$ for females, while median weekly earnings were $\$ 605$ and $\$ 533$ respectively. The distribution of earnings for full-time employees shows relatively more females than males in lower and middle income groups. This situation is reversed in higher income groups.

The proportion of female full-time employees whose weekly earnings were less than $\$ 320$ was $7 \%, 55 \%$ were in the range $\$ 320-\$ 639,25 \%$ in the range $\$ 640-\$ 959$ and $7 \%$ had weekly earnings over $\$ 960$. In comparison for male full-time employees the proportions of weekly earnings in these ranges were $6 \%, 41 \%, 29 \%$ and $18 \%$.

WEEKLY EARNINGS, FULL-TIME EMPLOYEES

Mean weekly earnings for the 504,000 male part-time employees were $\$ 254$ and for the $1,412,400$ female part-time employees they were $\$ 264$. The median weekly earnings were $\$ 170$ and $\$ 228$ respectively.

The proportions of male and female part-time employees were roughly similar across earnings groups with the largest differential in the lowest earnings group. The proportion of females whose weekly earnings were less than $\$ 160$ was $32 \%, 32 \%$ were in the range $\$ 160-\$ 320,21 \%$ in the range $\$ 320-\$ 480$ and $11 \%$ had weekly earnings over $\$ 480$. In comparison the proportions of male weekly earnings in these ranges were $44 \%, 26 \%, 16 \%$ and $11 \%$.

Permanent and casual employees

The majority of full-time employees were in permanent employment in August 1997 (89\%) while the majority of part-time employees were in casual employment (66\%). Permanent employees had higher mean weekly earnings than casual employees in both full-time ( $\$ 713$ compared to $\$ 613$ ) and part-time work ( $\$ 345$ compared to $\$ 218$ ).

Males had higher mean weekly earnings than females in permanent full-time employment ( $\$ 764$ compared to $\$ 616$ ) but were lower in permanent part-time employment (\$322 compared to $\$ 349$ ). Casual male employees earned more than females in both full-time ( $\$ 656$ compared to $\$ 510$ ) and part-time work ( $\$ 240$ compared to $\$ 206$ ).

Public and private sector
There was a decrease of $8 \%(135,400)$ in the number of public sector employees in the two years ending August 1997, while the number of private sector employees rose by $4 \%(225,400)$.

Public sector employees had higher mean weekly earnings than employees in the private sector for both full-time ( $\$ 769$ compared to $\$ 681$ ) and part-time work ( $\$ 334$ compared to $\$ 247$ ). In the two years to August 1997 public sector mean weekly earnings for full-time employees increased at similiar rates to those in the private sector ( $13 \%$ compared to $\mathbf{1 2 \%}$ ). However, mean weekly earnings for part-time employees grew at a higher rate in the private sector $\mathbf{( 1 2 \%}$ compared to $9 \%$ in the public sector).

There were relatively more private sector employees in lower earnings groups, than public sector employees. The proportion of private sector employees whose weekly earnings were less than $\$ 320$ was 25\%, 41\% were in the range $\$ 320-\$ 639,18 \%$ in the range $\$ 640-\$ 959$ and $10 \%$ had weekly earnings over $\$ 960$. In comparison the proportions of public sector employees whose weekly earnings in these ranges were $12 \%, 37 \%$, $33 \%$ and $14 \%$.

Males had higher mean weekly earnings than females across all age groups for both full-time and part-time work. Mean weekly earnings generally rose with age, peaking at $\$ 677$ for employees aged $45-54$ years then falling to $\$ 425$ for employees aged 65 and over. Employees with the lowest mean weekly earnings were aged 15-19 years (\$191), mainly due to the higher proportions of part-time employees (65\%).

Some $24 \%$ of employees $(1,661,600$ ) were born outside Australia. Of these, $44 \%$ were born in main English speaking countries. Mean weekly earnings for persons born in Australia were $\$ 672$ for males and $\$ 442$ for females while for those born outside Australia mean weekly earnings were $\$ 728$ for males and $\$ 482$ for females. For persons born in main English speaking countries, mean weekly earnings were $\$ 831$ for males and $\$ 517$ for females. This compared to mean weekly earnings of persons from other than main English speaking countries, of $\$ 651$ for males and $\$ 454$ for females.

Industry Full-time employees in Agriculture, forestry and fishing, Accommodation, cafes and restaurants and Retail recorded the lowest mean weekly earnings in the main job ( $\$ 488, \$ 527$ and $\$ 532$ respectively). The highest level of mean weekly earnings for full-time employees were recorded in Mining ( $\$ 1,163$ ), followed by Electricity, gas and water supply (\$836).

MEAN WEEKLY EARNINGS, FULL-TIME EMPLOYEES, SELECTED INDUSTRIES

Occupation The lowest mean weekly earnings for full-time and part-time employees were recorded for Labourers and related workers (\$521 for full-time employees and $\$ 219$ for part-time employees) and Elementary clerical, sales and service workers (\$522 and \$171). The highest mean weekly earnings for both full-time and part-time employees were recorded by Managers and administrators ( $\$ 1,057$ by full-time employees and $\$ 412$ by part-time employees), followed by Professionals (\$884 and \$407).

Employment benefits in main job

In August 1997, $98 \%$ of the $\mathbf{5 , 0 5 5 , 8 0 0}$ full-time employees received one or more standard employment benefits in their main job - $95 \%$ received superannuation, $88 \%$ received sick leave, $88 \%$ received holiday leave and $\mathbf{7 6 \%}$ received long service leave. In comparison, $73 \%$ of the $\mathbf{1 , 9 1 6 , 4 0 0}$ part-time employees received one or more standard employment benefits.

Proportionally more public sector employees received standard benefits than private sector employees. Of the $1,542,200$ public sector employees, $95 \%$ received superannuation, $87 \%$ received holiday leave, $88 \%$ received sick leave and $85 \%$ received long service leave. In comparison, of the $5,430,000$ private sector employees, the proportions were $86 \%, 69 \%$, $68 \%$ and $57 \%$, respectively.

Employees at larger workplaces received more standard benefits. The proportion of employees receiving one or more benefits was $83 \%$ where size of location was less than 10 employees, $89 \%$ where there were 10 to 19 employees, $93 \%$ where there were 20 to 99 employees and 97\% where there were 100 or more employees.

By industry, Electricity, gas and water (100\%) had the highest proportion of persons in receipt of standard benefits, followed closely by Finance and insurance (99\%). Retail (78\%) and Accommodation, cafes and restaurants (79\%) had the lowest proportion of people receiving benefits.

Trade union membership In August 1997, 30\% (2,110,300) of employees were members of a trade union, a fall of 2 percentage points from August 1995. The number of full-time employees who reported that they were a member of a trade union fell from 36\% $(1,854,000)$ in August 1995, to $34 \%(1,702,100)$ in August 1997.

In comparison, the number of part-time employees who reported that they were a member of a trade union rose from 397,800 in August 1995 to 408,300 in August 1997. However, this increase did not match the rate of growth of part-time employees over the year. The corresponding proportion of employees who were members of a trade union actually fell from $22 \%$ to $21 \%$.

The proportion of public sector employees who reported that they were members of a trade union (55\%), was more than double the number of private sector employees who reported that they were members of a trade union (23\%). By industry, trade union membership was highest in Electricity, gas and water industry (66\%) and the Communication services industry (60\%). Employees in Agriculture, forestry and fishing reported the lowest trade union membership (7\%).

[^8]INTRODUCTION

SCOPE

COVERAGE

RELIABILITY OF THE ESTIMATES

1 This survey was conducted as a supplement to the monthly Labour Force Survey (LFS). Respondents to the LFS who fell within the scope of the supplementary survey were asked further questions.

2 For further information about the LFS, see Labour Force, Australia (Cat. no. 6203.0). This publication contains information about survey design, sample redesign, scope, coverage and population benchmarks relevant to the LFS, which also apply to supplementary surveys. It also contains definitions of demographic and labour force characteristics, and information about telephone interviewing which are relevant to both the LFS and supplementary surveys.

3 In addition to the information about weekly earnings of employees, this publication also presents information about standard employment benefits and trade union membership.

4 In addition to those already excluded from the LFS, students at boarding schools, patients in hospitals, residents of homes (e.g. retirement homes, homes for the handicapped), and inmates of prisons are further excluded from all supplementary surveys.

5 Also out of scope were some 76,000 persons living in remote and sparsely settled parts of Australia. The exclusion of these persons has only a minor impact on aggregate estimates for individual States and Territories.

6 This survey was restricted to employees aged 15 or more unless they worked solely for payment in kind in their main job.

7 The estimates in this publication relate to persons covered by the survey in August 1997. In the LFS, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection in the survey. See Labour Force, Australta (Cat. no. 6203.0).

8 Estimates in this publication are subject to sampling and non-sampling errors:

- Sampling error is the difference between the published estimate and the value that would have been produced if all dwellings had been included in the survey. For further information on sampling error, refer to the Technical Notes.
- Non-sampling errors are inaccuracies that occur because of imperfections in reporting by respondents and interviewers, and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient processing procedures.

## SEASONAL FACTORS

CHANGES IN
CLASSIFICATION

NOTES ON ESTIMATES

COMPARABILITY OF TIME SERIES

9 The estimates refer to information collected in the survey month and, due to seasonal factors, may not be representative of other months of the year.

10 From August 1996, occupation data are classified according to the second edition of the Australian Standard Classification of Occupations (ASCO). For more detailed information, see the Information Paper: ASCO - Australian Standard Classification of Occupations (Cat. no. 1221.0). A concordance between the new and the old versions of ASCO is not yet available.

11 In August 1997 there were 50,400 persons for whom sector of main job could not be determined. These persons were included in the private sector for the purpose of this publication.

12 In August 1997, persons refusing to answer questions about their weekly earnings represented 402,000 in the population. These persons have been classified to the 'could not be determined' category in this publication.

13 Care should be taken when using estimates of mean weekly earnings. Employees refusing to answer questions about their earnings are excluded from estimates of mean weekly earnings. These employees have demographic and employment characteristics which differ on average from the rest of the employee population. It is likely that the exclusion of these persons has resulted in a slight downward bias on mean weekly earnings estimates.

14 Revisions are made to population benchmarks for the LFS after each five-yearly Census of Population and Housing. The last such revision was made in February 1994 to take account of the results of the 1991 Census of Population and Housing. Estimates from supplementary surveys conducted after February 1994 are therefore based on revised population benchmarks.

15 Supplementary surveys are not always conducted on the full LFS sample. Apart from scope exclusions, such as those listed on the previous page, since August 1994, the sample available for supplementary surveys has been restricted to seven-eighths of the LFS sample. Since it was introduced, this survey has been conducted on various proportional samples and therefore sampling error associated with previous surveys may vary from sampling error for this survey, which was conducted on a seven-eighths sample.

16 In August 1990, persons aged 70 and over were excluded from this supplementary survey, restricting the age of respondents to 15-69 years. The scope of surveys since 1991 and surveys run prior to August 1990 include all persons aged 70 years and over.

COMPARABILITY OF TIME SERIES continued

COMPARABILITY WITH MONTHLY LABOUR FORCE SURVEY STATISTICS

COMPARABILITY WITH AVERAGE WEEKLY EARNINGS, STATES AND AUSTRALIA (6302.0)

17 Care should be taken when comparing the movements in mean weekly earnings that include the July 1991 and August 1997 surveys. The usual period between surveys is 12 months, however in 1991 the elapsed time was 11 months (August 1990 to July 1991) and 13 months (July 1991 to August 1992) while in 1997 the elapsed time was 2 years (August 1995 to August 1997).

18 Due to differences in the scope and sample size of this supplementary survey and that of the LFS, the estimation procedure may lead to small variations between labour force estimates from this survey and those from the LFS.

19 The survey was conducted primarily to obtain statistics on the distribution of earnings of employees classified by characteristics such as marital status, sex, age and whether the earnings came from the main job or a second job. Caution should be exercised when comparing the means (averages) in these tables with estimates of average weekly earnings included in the quarterly publication Average Weekly Earnings, States and Australia (Cat. no. 6302.0) which are compiled from a survey of employers. There are important differences in the scope and methodology of the two surveys.

20 The quarterly Survey of Average Weekly Earnings excludes employees in the industries of Agriculture, Forestry and Fishing (Australian and New Zealand Standard Industrial Classification (ANZSIC) Division A) and Private Households Employing Staff (ANZSIC Subdivision 97) both of which are included in this household survey. Data from the quarterly Survey of Average Weekly Earnings are collected from employers who fill in a mailed questionnaire giving details of their employees' weekly earnings. For this household survey, respondents are either interviewed personally at their dwelling or another adult member of their household responds on their behalf.

21 The methodology used in this household survey is associated with sources of non-sample error not found in surveys of employers (and vice versa) which may also explain some of the differences between the results of the two surveys.

22 Similar surveys have been conducted annually since August 1975, except in 1991 when the survey was conducted in July and in 1996 when the survey was not collected. Results have been given in previous issues of this publication Weekly Earnings of Employees (Distribution), Australia (Cat. no. 6310.0) or the standard data service Weekly Earnings of Employees (Distribution), Australia (Cat. no. 6310.0.40.001).

23 Other publications which may be of interest include:

- Average Weekly Earnings, States and Australia (Cat. no. 6302.0)
- Career Experience, Australia (Cat. no. 6254.0)
- Employment Benefits, Australia (Cat. no. 6334.0.40.001) discontinued
- Multiple Jobbolding, Australia (Cat. no. 6216.0)
- Persons Employed at Home, Australia (Cat. no. 6275.0)
- Superannuation, Australia (Cat. no. 6319.0)
- Trade Union Members, Australia (Cat. no. 6325.0)
- Working Arrangements, Australia (Cat. no. 6342.0).

24 Current publications produced by the ABS are listed in the Catalogue of Publications and Products (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a Release Advice (Cat. no. 1105.0) which lists publications to be released in the next few days. The Catalogue and Release Advice are available from any ABS office or from the ABS Information Service on the World Wide Web, http://www.abs.gov.au.

25 The ABS plans to conduct this survey again in August 1998.

## TECHNICAL NOTES

INTRODUCTION

CALCULATION OF STANDARD ERROR

1 Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings, they are subject to sampling variability, that is, they may differ from those that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one SE from the number that would have been obtained if all dwellings had been included, and about 19 chances in 20 that the difference will be less than two SEs. Another measure of the likely difference is the relative standard error (RSE), which is obtained by expressing the SE as a percentage of the estimate.

2 Space does not allow for the separate indication of the SEs of all estimates in this publication. Since they are averages based on calculations for a limited number of past surveys over a wide range of labour force characteristics these numbers will not give a precise measure of the SE of a particular estimate but they will provide an indication of its magnitude.

3 An example of the calculation and the use of SEs in relation to estimates of persons is as follows. Table 5 shows the estimated number of female part-time employees in main job in Australia was $\mathbf{1 , 4 1 2 , 4 0 0}$. Since this estimate is between $1,000,000$ and $2,000,000$ table T1 shows that the SE for Australia will lie between 13,400 and 17,350 and can be approximated by interpolation as $\mathbf{1 5 , 0 0 0}$ (rounded to the nearest 100 ). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range $1,397,400$ to $1,427,400$ and about 19 chances in 20 that the value will fall within the range $1,382,400$ to $\mathbf{1 , 4 4 2 , 4 0 0}$. This example is illustrated in the diagram below:

Published estimate
'000

2 chances in 3 that the true value is in the range

19 chances in 20 that the true value is in this range

CALCULATION OF STANDARD ERROR continued

Average and medians

4 As can be seen from the SE table, the smaller the estimate, the higher is the RSE. Very small estimates are thus subject to such high SEs (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In these tables, only estimates with RSEs less than $25 \%$ are considered sufficiently reliable for most purposes. However, estimates with larger RSEs have been included and are preceded by an asterisk (e.g. *3.4) to indicate they are subject to high SEs and should be used with caution.

Proportions and percentages

5 The RSEs of estimates of mean and median weekly earnings are obtained by first finding the RSE of the estimate of the total number of persons contributing to the estimate (see table T2) and then multiplying the number so obtained by the following relevant factors:

Average duration of time spent looking for work: 0.9 Median duration of time spent looking for work: 1.0

6 Consider median weekly earnings of female part-time employees in main job were $\$ 228$, with an estimate of $1,412,400$ female part-time employees. The SE can be approximated by interpolation as $\mathbf{1 5 , 0 0 0}$ which is $1.1 \%$ as a RSE. The factor of 1.0 (see paragraph 5) is applied to the RSE of $1.1 \%$ to obtain $1.1 \%$. Therefore the SE for median weekly earnings of female part-time employees in main job is $1.1 \%$ of $\$ 228$, i.e. about $\$ 2.50$. So there are two chances in three that the median weekly earnings is between $\$ 225.50$ and $\$ 230.50$, and about 19 chances in 20 that it is between $\$ 223.00$ and $\$ 233.00$.

7 Proportions and percentages formed from the ratio of two estimates are also subject to sampling errors. The size of the error depends on the accuracy of both the numerator and the denominator. A formula to approximate the RSE of a proportion is given below:

$$
\operatorname{RSE}(x / y)=\sqrt{[\operatorname{RSE}(x)]^{2}-[\operatorname{RSE}(y)]^{2}}
$$

8 Considering the example from paragraph 3 above, the $1,412,400$ female part-time employees in the main job, represent $45.0 \%$ of the $3,134,400$ female employees. The SE of $3,134,400$ is approximately 19,846 so the RSE is $0.6 \%$. The RSE for $1,412,400$ is $1.1 \%$. Applying the above formula, the RSE of the proportion is $\sqrt{(1.1)^{2}-(0.6)^{2}}$ or $0.9 \%$, giving a SE for the proportion (45.0\%) of 0.4 percentage point. Therefore, there are about two chances in three that the proportion of female part-time employees was between $44.6 \%$ and $45.4 \%$ and 19 chances in 20 that the proportion is within the range 44.2\% to 45.8\%.

Differences 9 Published estimates may also be used to calculate the difference between two survey estimates (of numbers or percentages). Such an estimate is subject to sampling error. The sampling error of the difference between two estimates depends on their SEs and the relationship (correlation) between them. An approximate SE of the difference between two estimates ( $x-y$ ) may be calculated by the following formula:

$$
\operatorname{SE}(x-y)=\sqrt{\left[\operatorname{SE}(x)^{2}+[\operatorname{SE}(y)]^{2}\right.}
$$

10 While this formula will only be exact for differences between separate and uncorrelated characteristics or subpopulations, it is expected to provide a good approximation for all differences likely to be of interest in this publication.

11 The imprecision due to sampling variability, which is measured by the SE , should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

12 Standard errors contained in table T1 are applicable to all estimates from this survey. The levels at which averages and medians have a RSE of $25 \%$ are shown in table T2.

## GLOSSARY

Casual employees in main job

Dependants

Employees who were not entitled to either patd boliday leave or stck leave.

All family members under 15 years of age; all sons or daughters aged 15-19 years attending school or aged 15-24 years attending a tertiary educational institution full time, except those classified as husbands, wives or lone parents.

Employees Employed persons aged 15 years and over who worked in their main job for an employer for wages or salary or in their own business (either with or without employees), if that business was a limited liability company. Persons who are paid solely by payment in kind are excluded.

Family Two or more related persons (comprises relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- sons or daughters of any age, if not married and with no children of their own present;
- other relatives if not accompanied by a spouse, sons or daughters, or parents of their own; or
- any children under 15 years of age who do not have a parent present.

Further details on the determination of family relationships are given in Labour Force, Australia (Cat. no. 6203.0).

Full-time employees in
All employees for whom 'full time' was the response to the question 'Is your main job full time or part time?'

Full-time workers Employees who usually worked a total of 35 hours or more a week in all jobs and others who usually work less than 35 hours a week but worked 35 hours or more during the reference week.

Hours paid for in main job
The number of hours for which employees were paid not necessarily the number of hours actually worked during the reference week (e.g. an employee on paid leave for the week was asked to report the number of hours for which they were paid).

Hours worked The number of hours actually worked during the reference week.
Industry Classified using the Australian and New Zealand Standard Industrial Classification (ANZSIC), 1993 (Cat. no. 1292.0). In this publication, industry relates to the main job and is shown at the ANZSIC Division level.
$\left.\begin{array}{rl}\begin{array}{rl}\text { Main English speaking } \\ \text { countries }\end{array} & \begin{array}{l}\text { Comprises the United Kingdom, Ireland, Canada, South Africa, the } \\ \text { United States of America and New Zealand. }\end{array} \\ \text { Mean weekly earnings } & \text { The job in which most hours were usually worked. } \\ \text { Median weekly earnings } & \begin{array}{l}\text { The amount which divides the distribution of employees into two equal } \\ \text { number of employees in that group. } \\ \text { groups, one having earnings above and the other below that amount. }\end{array} \\ \text { Member of a trade union } & \begin{array}{l}\text { Employees with membership in a trade union in conjunction with their } \\ \text { current job. }\end{array} \\ \text { Multiple jobholder } & \begin{array}{ll}\text { Employed persons who, during the reference week: }\end{array} \\ & \text { - } \begin{array}{rl}\text { worked in a second job or held a second job from which they were } \\ \text { absent because of holidays, sickness or any other reason; and }\end{array} \\ & \text { - were an employee in at least one of their jobs. }\end{array}\right\}$

Weekly earnings Amount of 'last total pay' from wage and salary jobs prior to the interview (i.e. before taxation and other deductions had been made). For persons paid other than weekly, earnings were converted to a weekly equivalent. No adjustment was made for any back payment of wage increases or prepayment of leave, etc.

## POPULATIONS AND DATA ITEMS AVAILABLE FROM THIS SURVEY

## POPULATIONS

## POPULATION 1: Employees

POPULATION 2: Employees who worked full time in their main job
POPULATION 3: Employees who were full-time workers
POPULATION 4: Employees who worked full time in their main job and were born overseas
POPULATION 5: Employees who worked as an employee in the reference week in their second job.

## We've got the answers ... we just can't fit them all into this publication!

Is there more information you would like about this topic or other supplementary survey topics?

The good news is that the information is available. In fact, we have volumes of detailed information that cannot be placed into the publications but can provide you with more information on the area of interest to you.

## Meeting your needs with customised approach

Detailed information from every supplementary survey is available that's where we can help. Contact one of our consultants to discuss your needs; after all, it's free. They will provide you with the best possible option to solve your data requests in a written quote, clearly setting out all the costs and time frames.

We can supply you with your requested information in a variety of formats to best suit your needs:

- printed tables
- spreadsheets in a range of formats compatible with your software package
- via E-mail
- floppy disk

## Tailored to your specifications

We can mix and match from our extensive data holdings to give a complete statistical picture for your policy, planning, research and commercial analysis needs.

Take a look at the list of populations and data items on the previous pages. They contain a comprehensive list of the variables available that you may be interested in for this supplementary survey. These data items can be cross-classified to your exact requirements, offering you the best cost effective solution. The cost will depend on what you selected and their degree of detail. Payment for this information may be made by credit card or by invoice.

## More information is available

Contact Kirrilie Horswill on Canberra (02) 62526503 to talk about any inquiries you may have about the information from this survey or to order your special data requirements.

For information about wider range of ABS data, see contact details on the back of the cover.

## SUPPLEMENTARY SURVEYS

The supplementary and special surveys collect data on particular aspects of the labour force. The following is an historical list of supplementary and special labour force surveys. The data is available in publication form, by subscription or on request. It may be possible to order unpublished data on the following supplementary and special surveys by contacting the ABS.
