KEY POINTS

- The trend estimate for short-term visitor arrivals to Australia increased for the sixth consecutive month during May 1999.
- There was an increase of 42% in the number of short-term resident departures to Thailand in the ten months July 1998 to April 1999.
- During the ten months to April 1999 the net gain of permananet and long-term arrivals over permananet and long-term departures amounted to 86,900 persons, 16% higher than the corresponding period in 1998 (74,700).
- Net overseas migration is an important component of population growth. In 1997–98, preliminary net overseas migration was 106,200 persons and contributed 47% to Australia's population growth. (For more information see special article on page 4).

TREND REVISIONS	Each time new seasonally adjusted estimates short-term arrivals and departures are revised	
	Notes).	r (see paragraph to or the explanatory
	The examples in the graphs below show two	illustrative scenarios and the consequent
	revisions to previous trend estimates of visito	or arrivals and resident departures.
	1 The seasonally adjusted estimate for:	
	June visitor arrivals is 2.96% higher than May	
	May resident departures is 4.05% higher than	April
	2 The seasonally adjusted estimate for:	
	June visitor arrivals is 2.96% lower than May	
	May resident departure is 4.05% lower than A	pril
	VISITOR ARRIVALS	RESIDENT DEPARTURES

The percentage changes of 2.96% and 4.05% were chosen because they represent the average absolute monthly percentage changes between months for visitor arrivals and resident departures respectively over the last four years.

W. McLennan Australian Statistician

. . .

SHORT-TERM MOVEMENTS

VISITOR ARRIVALS	There were an estimated 300,400 short-term visitor arrivals to Australia during May 1999 bringing the total number of visitor arrivals for the eleven months July 1998 to May 1999 to 3,973,200, 1.5% higher than the number of overseas visitors arriving between July 1997 and May 1998 (3,915,800).
	The major source countries of visitor arrivals to Australia during the eleven months to May 1999 were Japan (17% of all visitor arrivals), New Zealand (16%), the United Kingdom (12%), the United States of America (9%) and Singapore (5%). Compared to the corresponding period ending May 1998, the number of visitor arrivals from the United Kingdom (up by 9%), the United States of America (up by 10%) and New Zealand (up by 4%) increased. Malaysia was the only Asian country in the top ten source countries to record an increase in arrivals (up by 2%). China (up by 13%), Thailand (up by 32%) and the Philippines (up by 2%) were the only other Asian countries to record an increase in arrivals, but remain out of the top ten source countries. Japanese visitor arrivals were down 9%, while Korea and Indonesia had the largest declines of the top ten source countries with declines of 37% and 16% respectively.
RESIDENT DEPARTURES	There were 244,300 short-term departures of Australian residents in April 1999, bringing the total for the ten months July 1998 to April 1999 to 2,637,100 an increase of 6% on the corresponding period the previous year (2,476,800). The main destinations of Australian residents departing from July 1998 to April 1999 were New Zealand (16%), Indonesia (11%) the United States of America and the United Kingdom (both 10%) and Hong Kong (5%).
	During the ten months July 1998 to April 1999: 417,500 Australian residents mainly visited New Zealand, an increase of 13% compared to the ten months July 1997 to April 1998; 301,700 residents mainly visited Indonesia, an increase of 10%; 263,500 residents mainly visited the United States of America, a decrease of 8%; 235,800 residents mainly visited the United Kingdom, a decrease of 5%; 120,600 residents mainly visited Hong Kong, a decrease of less than 1%; and 117,200 residents mainly visited Thailand, an increase of 42%.
MAIN REASON FOR JOURNEY	Over half (55%) of all short-term visitors to Australia during the ten months July 1998 to April 1999 stated on arrival that they had come here for a holiday (2,010,600). A further 20% stated that they were visiting friends/relatives (749,400), 10% were on business trips (364,100), while 4% (131,200) arrived for educational purposes and 3% (98,400) arrived for a convention or conference.
MAIN STATE OF STAY	Overseas visitors departing Australia between July 1998 and April 1999 stated that they had spent most of their time in either New South Wales (42%), Queensland (28%), Victoria (15%) or Western Australia (10%). Compared to the corresponding period ending April 1998, Queensland (down less than 1%) was the only State to show a decrease in the number of visitors. Victoria showed the larges increase of 7%, followed by New South Wales and Western Australia (both up by 3%). (See Appendix 2 for Northern Territory data quality issues).

PERMANENT AND LONG-TERM MOVEMENT

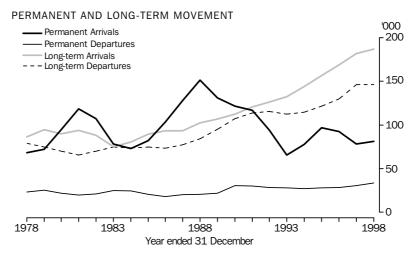

NET OVERSEAS MIGRATION

Net overseas migration consists of permanent and long-term movement to and from Australia and an adjustment for category jumping. Category jumpers are persons who change their travel intentions from short-term to permanent/long-term or vice versa. Net overseas migration has been a significant component of population growth in Australia. However, its contribution to population growth has fluctuated widely while the other component of growth, natural increase, has been relatively steady. In 1997–98, preliminary net overseas migration was 106,200 persons and contributed 47% to Australia's population growth.

COMPONENTS OF POPULATION GROWTH

COMPONENTS OF NET PERMANENT The number of permanent arrivals has fluctuated widely over the last twenty years, AND LONG-TERM MOVEMENTS mainly in response to the levels set by the government in the Migration Program. The movements of New Zealand citizens are not constrained by this program. The highest levels were reached in 1981 and 1988. The pattern of permanent departures tends to mirror that of arrivals, although at substantially lower levels and with a time lag of about two years. In 1998 there were 81,100 permanent arrivals and 33,400 permanent

Long-term arrivals and departures were relatively steady from 1978 until the mid 1980s. Since then these have increased substantially. Long-term departures for the most part mirror arrivals with a two to three year time lag. In 1998 there were 187,300 arrivals and 146,200 departures.

PERMANENT AND LONG-TERM MOVEMENT

PERMANENT ARRIVALS

Twenty years ago, one in four permanent arrivals had been born in the United Kingdom and Ireland, and very few people came from Asian countries. A clear change is evident in more recent years, with the largest group of permanent arrivals being people born in New Zealand, accounting for one in five permanent arrivals in 1998. Throughout the 1990s, 40% of permanent migrants have been people born in Asian countries.

MAIN SOURCE COUNTRIES OF PERMANENT ARRIVALS

1978		1988		1998	
Country of birth	%	Country of birth	%	Country of birth	%
United Kingdom and Ireland	26.0	United Kingdom and Ireland	19.0	New Zealand	20.0
New Zealand	13.0	New Zealand	16.0	United Kingdom and Ireland	12.0
South Africa	4.0	Philippines	7.0	China	6.0
Malaysia	3.0	Hong Kong	5.0	South Africa	6.0
Yugoslavia	2.0	Malaysia	5.0	Philippines	4.0
Lebanon	2.0	Viet Nam	4.0	Hong Kong	3.0

PERMANENT DEPARTURESPeople emigrate from Australia for social and economic reasons. Some former settlers
leave shortly after arrival, while others return to their birthplace after retirement. About
two-thirds of permanent departures are overseas-born and of these, about 85% return to
their country of birth. The number of Australian-born permanent departures reached its
highest level ever in 1998 (14,900). The most popular destinations were the United
Kingdom and Ireland, New Zealand and the United States of America.

LONG-TERM ARRIVALS In 1978 long-term arrivals accounted for 56% of permanent and long-term arrivals. By 1998, this had increased to 70% (187,300). Since the mid 1980s, there has been a substantial increase in long-term visitor arrivals resulting from the opening of the Australian education institutions for international students. In 1998, 48% of long-term visitor arrivals came for education. Three-quarters of these students came from the Asian regions. Other main reasons for long-term visitor arrivals to Australia in 1998 were employment (16%) and business (11%). The United Kingdom was the main source country for long-term visitor arrivals in these two categories.

LONG-TERM DEPARTURESLong-term departures from Australia have increased by 87% (from 78,200 to 146,200)
over the past twenty years. It is possible that many residents are departing long-term
due to the increasing globalisation of the labour market. In 1998 one-third (27,100) of
Australian residents stated that their reason for departure was employment, compared
to 20% in 1978 and 23% in 1988. Other main reasons for residents departing long-term
in 1998 were holidays, 23%, and visiting friends and relatives, 12%.

For information on migration see Migration, Australia, 1997–98 (Cat. No. 3412.0).

 people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural Affairs (DIMA) serve as a source for statistics of overseas arrivals and departures. 3 As from July 1998, DIMA has revised incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards will no longer be compulsory and answers to these questions will no longer be checked by Customs officers. The question on marital status has been deleted. Data o marital status is derived from visa applications (only for certain visa classe and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'Previous country of residence' which is imputed for Australian and New Zealand citizens. For more information set the May 1998 issue of this publication. 4 The preliminary estimates of visitor arrivals by country of residence (see Table 6, page 9) are based on data from DIMA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates will be revised in the next issue of this publication. 5 The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commening and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, such as 'boat people' and the 1999 intake of Kosovo refugees. 	INTRODUCTION	1 This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).

For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic

STATE AND TERRITORY CLASSIFICATION	 8 Following the 1992 amendment to the <i>Acts Interpretation Act</i> to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.
ESTIMATION METHOD	9 Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
	10 Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.
	11 The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
CORRECTIONS AND IMPUTATIONS	12 The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-sampling errors appears in Appendix 2.
	13 Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.

SEASONAL ADJUSTMENT AND TREND ESTIMATES **14** Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

15 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

16 The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

17 While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends', an Overview* (Cat. no. 1348.0).

18 Users of these statistics may also wish to refer to the following ABS publications:

- Australian Demographic Statistics (Cat. no. 3101.0)—issued quarterly
- *Migration, Australia* (Cat. no. 3412.0)—issued annually
- Tourism Indicators, Australia (Cat. no. 8634.0)—issued quarterly.

19 Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.

20 Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

ADDITIONAL STATISTICS AVAILABLE	21 As well as the statistics included in this and related publications, other

GLOSSARY

.

Australian resident	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
Category of movement	 Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main <i>categories of movement</i>: permanent movements long-term movements.
	A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Country of residence	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
Intended length of stay	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.
Long-term arrivals	 Long-term arrivals comprise: overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and Australian residents returning after an absence of 12 months or more overseas.
Long-term departures	 Long-term departures comprise: Australian residents who intend to stay abroad for 12 months or more (but not permanently); and overseas visitors departing who stayed 12 months or more in Australia.
Main destination	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

GLOSSARY

• • • • • • • • • • • • • • • • • •

Main reason for journey	On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to <i>main reason for jouney</i> have been published using the following categories: convention/conference business visiting friends/relatives holiday employment education other
	In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.
Main State/Territory of stay	Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.
Overseas Arrivals and Departures (OAD)	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).
Permanent arrivals	 Permanent arrivals (settlers) comprise: travellers who hold migrant visas (regardless of stated intended period of stay); New Zealand citizens who indicate an intention to settle; and those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens). This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.
Short-term arrivals	 Short-term arrivals comprise: overseas visitors whose intended stay in Australia is less than 12 months; and Australian residents returning after an absence of less than 12 months overseas.
Short-term departures	 Short-term departures comprise: Australian residents who intend to stay abroad for less than 12 months; and overseas visitors departing who stayed less than 12 months in Australia.

.....

RELIABILITY OF ESTIMATES

1 Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.

2 The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.

3 It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

		ERM RE OR ARRIVAL RALIAN RESIDENTS	· · · · · · · · · · -	OR DEPARTURE	TOTAL ARRIVALS DEPARTU	
Estimated	Ctow dowd	Relative	Chandand	Relative	Chan da ud	Relative
number of persons	Standard error	standard error	Standard error	standard error	Standard error	standard error
persons	enor	enor	enor	enor	enor	enor
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

4 An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.

5 The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

RELIABILITY OF ESTIMATES continued **6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

7 An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 (1.4 x 190), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

correct and complete	9.	

(a) See paragraphs 3 and 4 of the Explanatory Notes for more detail.

Revised cards used from March 1999.

Apart from the 1,242,107 movements processed during April 1999, an additional 1,207 arrivals and 597 departures were also processed which had insufficient information to impute a category of movement. These records were excluded from further processing and are not included in the published estimates or the non-response rates in the following table.

.

NON-RESPONSE RATES PRIOR TO IMPUTATION April 1999(a)

OAD variables	Incoming Variables %	Outgoing Variables %
	• • • • • • • • • •	••••
Citizenship (Nationality)	0.23	0.23
Country of birth	0.00	0.00
Age (Date of birth)	0.00	0.00

Arrival/departure date	0.00	0.00
Whether intend to live in Australia for next 12 months	1.44	

(a) Non-response rates are unweighted.

(c) Not available for short-term movements.

(b) Not available for Australia or New Zealand

INTENDED LENGTH OF STAY / TIME AWAY FROM AUSTRALIA

Non-response rates are available for these data items from November 1998. For data prior to November 1998, imputation carried out as part of processing by the Department of Immigration and Multicultural Affairs (DIMA) has prevented reliable estimation of non-response rates for these two data items.

APPENDIX 2 — DATA QUALITY ISSUES

MAIN REASON FOR JOURNEY	Before the introduction of the redesigned passenger card in July 1998, 5% of short-term visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not Stated'. This percentage rose to 14% for July, 16% in August and 29% in September 1998 as a result of processing problems. These problems have now been addressed by DIMA, with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998.		
	this publication) referencing these three n were calculated by estimating the number past trends for each country of citizenship	ation, published figures (Table 3 and Table 9 in nonths have been revised. The revised data of persons responding 'Other / Not Stated' using and proportionally allocating any persons in d' total amongst the remaining categories.'Not from February 1999 onwards.	
STATE IN WHICH MOST TIME WAS SPENT	For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMA caused an overstatement of the Northern Territory as the main Sta of stay with a corresponding understatement for the remaining States and Territories. These numbers have returned in November 1998 to levels more comparable with previo years, with DIMA indicating that they have instigated data quality procedures to address this issue.		
	From the January 1999 issue of this publication, published figures (Table 8 in this publication) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main State of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining States and Territories.		
SEPTEMBER 1998 PROCESSING	A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.		
DATA IMPUTATIONS	Data are imputed for certain variables when no responses are recorded on the respecti passenger cards. These variables and the information used to impute for them are liste in the table below.		
	• • • • • • • • • • • • • • • • • • • •		
	DATA ITEM	IMPUTATION	
	••••••	• • • • • • • • • • • • • • • • • • • •	
	Category of travel	Includes references to citizenship (Australia, New Zealand, Other), corresponding migration visa, intended length of stay and whether intend to live in Australia for next 12 months	
	Intended length of stay Country of residence	10 days Country of departure, if it also matches country of	
		citizenship	
	State lived / in which most time was spent	State of clearance
