#### POINTS **KEY**

- 3.6 million short-term visitors arrived in Australia during the first 10 months of 1999, 7% higher than for the same period last year. The trend estimate increased for the 12th consecutive month during October 1999.
- Short-term resident departures reached 2.4 million for the nine months to September 1999, a 3% increase on the corresponding period for 1998.
- During the nine months to September the net gain of permanent and long-term arrivals over permanent and long-term departures was 79,100 persons, 15% higher than for the same period ending September 1998 (68,700).
- Over the past 20 years the number of long-term visitor arrivals to Australia has continued to increase. In 1999 the largest source of long-term visitors was people born in the United Kingdom. (For more information see special article on page 4).

# ANALYSES AND COMMENTS

# SHORT-TERM MOVEMENTS

VISITOR ARRIVALS	There were an estimated 393,000 short-term visitor arrivals to Australia during October 1999 bringing the total number of visitor arrivals for the ten months to October to 3,578,100, 7% higher than the number of overseas visitors arriving for the equivalent period to October 1998 (3,341,700).
	The major source countries of visitor arrivals to Australia for the ten months to October 1999 were New Zealand (17% of all arrivals), Japan (16%), the United Kingdom (11%), the United States of America (9%) and Singapore (5%). Compared to the corresponding period ending October 1998, there was an increase in the number of visitor arrivals from the United Kingdom (up by 17%), the United States of America (up by 11%) and New Zealand (up by 3%). Japan and Taiwan were the only source countries in the top ten to record a decline in visitor arrivals, falling by 7% and 1% respectively. All other Asian countries in the top ten source countries recorded an increase in arrivals, with arrivals from Korea up by 67%, Malaysia up by 26%, and Singapore up by 6%.
RESIDENT DEPARTURES	There were 330,700 short-term departures of Australian residents in September 1999, bringing the total for the nine months to September 1999 to 2,394,400, an increase of 3% on the nine months to September 1998 (2,318,500). The main destinations of Australian residents during the nine months to September 1999 were New Zealand (14%), Indonesia (8%), the United States of America (11%) , the United Kingdom (11%) and Singapore (5%).
	During the nine months to September 1999;
	345,700 Australian residents mainly visited New Zealand, an increase of 4%;
	252,800 mainly visited the United States of America, an increase of 6%;
	242,300 mainly visited the United Kingdom, a decrease of 6%;
	235,700 mainly visited Indonesia, a decrease of 6%;
	109,300 mainly visited Singapore, an increase of 21%; and
	96,300 mainly visited Hong Kong, a decrease of 6%.
MAIN REASON FOR JOURNEY	Over half (56%) of all short-term visitors to Australia during the nine months to September 1999 stated on arrival that they had come here mainly for a holiday (1,772,200). A further 18% stated that they were visiting friends and relatives (583,200), 10% were on business trips (331,800), while 4% (129,600) arrived for educational purposes and 3% (80,000) arrived for a convention or conference.
MAIN STATE OF STAY	Overseas visitors departing Australia during the nine months to September 1999 stated that they had spent most of their time in New South Wales (42%), Queensland (29%), Victoria (14%) or Western Australia (10%). Compared to the nine months to September 1998, all of these States recorded higher visitor numbers, although the proportionate distribution of visitors across the States remained unchanged. (See Appendix 2 for Northern Territory data quality issues).

.....

### LONG-TERM VISITOR ARRIVALS TO AUSTRALIA

Over the past 20 years the number of long-term visitor arrivals to Australia has continued to increase. In 1978–79 around 34,000 long-term visitors arrived in Australia, representing 36% of all long-term arrivals. The balance were Australian residents returning long-term. By 1998–99 this number had increased to nearly 120,000 persons or 64% of all long-term arrivals. Long-term visitor arrivals are overseas visitors who intend to stay in Australia for 12 months or more (but not permanently). (See Glossary for *Category of movement*).

COUNTRY OF BIRTHThe top ten source countries that provided visitor arrivals to Australia in 1978–79<br/>accounted for 82% of all long-term visitor arrivals compared with 66% in 1998–99. Over<br/>this period the top ten source countries have changed. Countries such as Canada and<br/>Germany, who were in the top ten in 1978–79, have been replaced by increased<br/>numbers of long-term visitors from Asian countries; their proportion has increased from<br/>20% in 1978–79 to 52% in 1998–99.

Australia is receiving far fewer long-term visitors from New Zealand than it once did. In the first 10 years from 1978–79 the proportion more than halved, from 46% to 20% in 1988–89. By 1998–99 the proportion of visitors who were New Zealand-born had fallen to around 7%.

#### REASON FOR VISITING

Long-term visitors who came to Australia 20 years ago stated employment (34%) as the main reason for visiting, compared to 18% in 1998–99. The mid 1980s drive by Australian education institutions to encourage international students to study in Australia has lead to a substantial increase in the number of long-term visitor arrivals. In 1998–99 the most common reason for visiting Australia long-term was education, comprising 45% of all long-term visitor arrivals. Twenty years ago this proportion was only 16%. Of the visitors currently stating education as their main reason for visiting Australia four out of five long-term visitors were from Asian countries.

(a) Based on 1998–99 ranking.

AGE AND INTENDED LENGTH OF STAY The median age of long-term visitors to Australia in 1978–79 was 23.2 years and the median duration of intended stay was 2.5 years. By 1998–99 the median age had risen to 25.0 years and the median duration of stay had fallen marginally to 2.4 years. Of the top ten source countries the oldest long-term visitors in 1978–79 were from China with a median age of 33.2 years and a median duration of stay of 2.5 years. The youngest visitors were from Malaysia (20.2 years) and they intended to stay for a longer period (3.3 years). In 1978–79 for both China and Malaysia-born visitors, education was the main reason for visiting Australia (32% and 88%, respectively). However, for China-born, employment was also an important reason(31%).

Twenty years later long-term visitors born in the United States of America had the oldest median age at 35.0 years and a median duration of intended stay of around 2.5 years. The youngest visitors were from Indonesia and Hong Kong at 20.8 years. Visitors from Indonesia stayed a median of 2.4 years and visitors from Hong Kong 2.6 years. In 1998–99 for United States of America-born visitors, business was the main reason for visiting Australia (33%). For both Indonesia and Hong Kong-born visitors, education was the main reason stated (88% and 90%, respectively).

STATE OF INTENDED ADDRESS Over the past twenty years New South Wales has consistently been the most popular intended destination for long-term visitors to Australia. The proportion visiting New South Wales was 41% in 1978–79, rising to 44% in 1998–99. Over this period the States have maintained their proportion of long-term visitors. However, the intended destinations for some source countries have changed. For example, twenty years ago 62% of visitors from Japan reported New South Wales as their intended destination with only 2% going to Queensland. By 1998–99, 47% still chose New South Wales but Queensland's proportion of Japan-born visitors had risen to 22%.

(a) Figures for short-term movement are based on a sample and are subject to sampling error. See paragraphs 9 and 10 of the Explanatory Notes for more detail. (b) See paragraphs 6 and 7 of the Explanatory Notes for more detail. (c) Includes not stated. (d) Data for September quarter 1998 has been revised. See Appendix 2 for more detail. (e) Includes 'Exhibition' from July 1998.

<b>1</b> This publication contains statistics of persons arriving in, and departing from, Australia, together with the major characteristics of travellers. More detailed statistics can be made available on request (see paragraph 21).
<b>2</b> Persons arriving in, or departing from, Australia provide information in the form of incoming and outgoing passenger cards (see Appendix 1). Incoming persons also provide information in visa applications, apart from people travelling as Australian and New Zealand citizens. These and other information available to the Department of Immigration and Multicultural Affairs (DIMA) serve as a source for statistics of overseas arrivals and departures.
<b>3</b> As from July 1998, DIMA has revised incoming and outgoing passenger cards and associated procedures as well as computer systems. Following these changes, some questions on the passenger cards will no longer be compulsory and answers to these questions will no longer be checked by Customs officers. The question on marital status has been deleted. Data on marital status is derived from visa applications (only for certain visa classes) and is therefore not available for Australian or New Zealand citizens. The changes also affect the data for 'Previous country of residence' which is imputed for Australian and New Zealand citizens. For more information see the May 1998 issue of this publication.
<b>4</b> The preliminary estimates of visitor arrivals by country of residence (see Table 6, page 9) are based on data from DIMA's Travel and Immigration Processing System (TRIPS). The TRIPS system produces a limited range of data, including country of citizenship, which is used by ABS to produce preliminary estimates by country of usual residence. These preliminary estimates will be revised in the next issue of this publication, when final data is available. For more information see pages 3 and 4 of the June 1997 and the September 1998 issues of this publication.
<b>5</b> The statistics in this publication relate to the number of movements of travellers rather than the number of travellers (i.e. multiple movements of individual persons during a given reference period are each counted separately). The statistics exclude the movements of operational air and ships' crew, of transit passengers who pass through Australia but are not cleared for entry, and of passengers on pleasure cruises commencing and finishing in Australia aboard ships not then engaged on regular voyages. Similarly, these statistics exclude those persons not travelling under standard visa conditions, such as 'boat people' and the 1999 intake of Kosovo refugees.
<b>6</b> The classification of countries in this publication is the <i>Australian Standard Classification of Countries for Social Statistics</i> (ASCCSS). For more detailed information refer to the ABS publication <i>Australian Standard Classification of Countries for Social Statistics</i> (Cat. no. 1269.0).
<b>7</b> The statistics on country of birth, citizenship, residence or main destination have certain limitations because of reporting on passenger cards. For instance, United Kingdom includes England, Scotland and Wales. Similarly Korea includes both the Republic of Korea and the Democratic People's Republic of Korea.

STATE AND TERRITORY CLASSIFICATION	<b>8</b> Following the 1992 amendment to the <i>Acts Interpretation Act</i> to include the Indian Ocean Territories of Christmas Island and the Cocos (Keeling) Islands as part of geographic Australia, population estimates commencing with the September quarter 1993 include estimates for these two territories. To reflect this change, another category of the State/Territory classification has been created, known as Other Territories. Other Territories includes Jervis Bay Territory, Christmas Island and the Cocos (Keeling) Islands.
ESTIMATION METHOD	<b>9</b> Overseas arrival and departure statistics are derived from a combination of full enumeration and sampling. All permanent movements and all movements with a duration of stay of one year or more are fully enumerated. All movements with a duration of stay of less than one year are sampled. Statistics relating to these movements are therefore estimates which may differ from statistics which would have been obtained if details of all these movements had been processed.
	<b>10</b> Since January 1997 variable sample skips have been used in the selection of records to be sampled. Separate skips are applied for each country of citizenship and the skips may vary for each processing month. Over a year about 3.5% of all short term movements are selected for sampling.
	<b>11</b> The statistics in this publication have been rounded to the nearest 100 for short-term movements and to the nearest 10 for permanent and long-term movements. In tables showing both short-term and permanent and long-term movements the total movements have been rounded to the nearest 100. The sums of the components may, due to rounding, not add exactly to totals.
CORRECTIONS AND IMPUTATIONS	<b>12</b> The imprecision due to sampling errors should not be confused with errors arising from imperfections in reporting, which may occur in any data collection, whether sampled or not. Every effort is made to minimise such errors, both through careful design of the passenger cards and through checks on the information once it is received. During the edit process some items are corrected where they conflict with other known information. Missing replies to certain items such as age and country of birth are also imputed by reference to other related items. Information on non-sampling errors appears in Appendix 2.
	<b>13</b> Errors of this kind differ from discrepancies arising from the fact that certain information reflects the travellers' intentions at the time the passenger cards were completed. These intentions are, of course, subject to change. Particularly affected is the distinction between permanent and temporary movement and in the latter case, length of intended stay, country in which most time will be spent and main reason for journey.

SEASONAL ADJUSTMENT AND TREND ESTIMATES

RELATED PUBLICATIONS

**14** Original and seasonally adjusted short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. In the seasonally adjusted series, account has been taken of normal seasonal factors and trading day effects (arising from the varying numbers of Sundays, Mondays, Tuesdays etc. in the month) and the effect of movement in the date of Easter which may, in successive years, affect figures for different months.

**15** Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series may be more clearly recognised. Seasonal adjustment procedures do not aim to remove the irregular or non-seasonal influences which may be present in any particular month, such as the effect of major sporting and cultural events, changes in airfares and the fluctuation of \$A relative to other currencies. Irregular influences that are highly volatile can make it difficult to interpret the movement of the series even after adjustment for seasonal variation.

**16** The trend estimates for short-term overseas visitor arrivals and short-term Australian resident departures are shown in Tables 1 and 2 respectively. These trend estimates are derived by applying a 13–term Henderson-weighted moving average to all months of the respective seasonally adjusted series except the first and last six months. Trend series are created for the last six months by applying surrogates of the Henderson weighted moving average to the seasonally adjusted series.

**17** While this technique enables smoothed data for the latest period to be produced, it does result in revisions to the smoothed series, principally of recent months, as additional observations become available. There may also be revisions as a result of the re-estimation of the seasonal factors. For further information, see *A Guide to Interpreting Time Series—Monitoring 'Trends', an Overview* (Cat. no. 1348.0).

**18** Users of these statistics may also wish to refer to the following ABS publications:

- Australian Demographic Statistics (Cat. no. 3101.0)—issued quarterly
- Migration, Australia (Cat. no. 3412.0)—issued annually
- Tourism Indicators, Australia (Cat. no. 8634.0)—issued quarterly.

**19** Related statistics are also published by the Department of Immigration and Multicultural Affairs, the Department of Transport and Regional Services and the Bureau of Tourism Research.

**20** Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (Cat. no. 1101.0). The ABS also issues, on Tuesdays and Fridays, a *Release Advice* (Cat. no. 1105.0) which lists publications to be released in the next few days. Both are available from any ABS office or the ABS website.

# GLOSSARY

. . . . . . . . . . .

Australian resident	Australian residence is self-defined as reported by travellers when completing Incoming and Outgoing Passenger Cards.
Category of movement	Overseas Arrivals and Departures are classified according to length of stay (in Australia or overseas), recorded in months and days by travellers on passenger cards. There are three main <i>categories of movement</i> : <ul> <li>permanent movements</li> </ul>
	<ul><li>long-term movements</li><li>short-term movements.</li></ul>
	A significant number of travellers (i.e. overseas visitors to Australia on arrival and Australian residents going abroad) state exactly 12 months or one year as their intended period of stay. Many of them stay for less than that period and on their departure from, or return to, Australia are therefore classified as short-term. Accordingly in an attempt to maintain consistency between arrivals and departures, movements of travellers who report their actual or intended period of stay as being one year exactly are randomly allocated to long-term or short-term, in proportion to the number of movements of travellers who report their actual length of stay as up to one month more, or one month less, than one year.
Country of residence	Country of residence refers to the country in which travellers regard themselves as living or as last having lived.
Intended length of stay	On arrival in Australia, all overseas visitors are asked to state their 'Intended length of stay in Australia'. On departure from Australia, all Australian residents are asked to state their 'Intended length of stay abroad'.
Long-term arrivals	Long-term arrivals comprise:
	<ul> <li>overseas visitors who intend to stay in Australia for 12 months or more (but not permanently); and</li> <li>Australian residents returning after an absence of 12 months or more overseas.</li> </ul>
Long-term departures	<ul> <li>Long-term departures comprise:</li> <li>Australian residents who intend to stay abroad for 12 months or more (but not permanently); and</li> <li>overseas visitors departing who stayed 12 months or more in Australia.</li> </ul>
Main destination	Australian residents travelling overseas are asked on departure for the name of the country in which they intend to spend most time.

# GLOSSARY

. . . . . . . . . . . . . . . .

Main reason for journey	On arrival in, or departure from, Australia all overseas visitors and Australian residents are asked to state their purpose of journey. From September 1994, all statistics relating to <i>main reason for journey</i> have been published using the following categories:						
	<ul> <li>convention/conference</li> <li>business</li> <li>visiting friends/relatives</li> <li>holiday</li> <li>employment</li> <li>education</li> <li>other</li> </ul>						
	In tabulations of data collected before September 1994, the 'Other' category includes 'In transit' and the 'Holiday' category includes both 'Student vacation' and 'Accompanying business visitor'.						
Main State/Territory of stay	Overseas visitors are asked on departure for the name of the State or Territory in which they spent the most time.						
Overseas Arrivals and Departures (OAD)	Overseas Arrivals and Departures refer to the arrival or departure of Australian residents or overseas visitors, through Australian airports (or sea ports), which have been recorded on Incoming or Outgoing Passenger Cards. Statistics on Overseas Arrivals and Departures relate to the number of movements of travellers rather than the number of travellers (i.e. the multiple movements of individual persons during a given reference period are all counted).						
Permanent arrivals	<ul> <li>Permanent arrivals (settlers) comprise:</li> <li>travellers who hold migrant visas (regardless of stated intended period of stay);</li> <li>New Zealand citizens who indicate an intention to settle; and</li> <li>those who are otherwise eligible to settle (e.g. overseas born children of Australian citizens).</li> </ul>						
	This definition of settlers is used by the Department of Immigration and Multicultural Affairs. Prior to 1985 the definition of settlers used by the ABS was the stated intention of the traveller only. Numerically the effect of the change in definition is insignificant. The change was made to avoid the confusion caused by minor differences between data on settlers published separately by the ABS and the Department of Immigration and Multicultural Affairs.						
Permanent departures	Permanent departures are Australian residents (including former settlers) who on departure state that they intend to settle permanently in another country.						
Short-term arrivals	<ul> <li>Short-term arrivals comprise:</li> <li>overseas visitors whose intended stay in Australia is less than 12 months; and</li> <li>Australian residents returning after an absence of less than 12 months overseas.</li> </ul>						
Short-term departures	<ul> <li>Short-term departures comprise:</li> <li>Australian residents who intend to stay abroad for less than 12 months; and</li> <li>overseas visitors departing who stayed less than 12 months in Australia.</li> </ul>						

.....

### STANDARD ERRORS

# RELIABILITY OF ESTIMATES

**1** Estimates based on a sample are subject to sampling variability i.e. they may differ from those that would be obtained from full enumeration.

**2** The sampling error associated with any estimate can be estimated from the sample results and one measure so derived is the standard error. Given an estimate and the standard error on that estimate, there are about two chances in three that the sample estimate will differ by less than one standard error from the figure that would have been obtained from full enumeration, and about nineteen chances in twenty that the difference will be less than two standard errors. The relative standard error is the standard error on the estimate expressed as a percentage of the estimate.

**3** It would be impractical to publish estimates of standard errors for all figures in individual tables. However, the following tables of standard errors and relative standard errors give an indication of the magnitude of the sampling error associated with any estimate of a particular size for short-term and total movement.

#### APPROXIMATE STANDARD ERRORS ON ESTIMATES FOR STRATIFIED SAMPLE

		ERM RE OR ARRIVAL RALIAN RESIDENTS		OR DEPARTURE	TOTAL ARRIVALS DEPARTUI	
Estimated		Relative		Relative		Relative
number of	Standard	standard	Standard	standard	Standard	standard
persons	error	error	error	error	error	error
	no.	%	no.	%	no.	%
10 000	550	6	490	5	550	6
5 000	450	9	330	7	410	8
2 000	280	14	230	11	250	13
1 000	200	20	150	15	170	17
750	180	24	140	19	150	20
500	130	26	110	22	125	25
400	120	30	100	25	115	29
300	110	36	84	28	97	32
200	90	45	70	35	80	40
100	63	63	49	49	56	56

**4** An example of the use of this table is as follows. If the estimate of the number of Australian resident departures for short-term visits abroad is 500, then the standard error on this estimate is 130 i.e. there are two chances in three that the actual number of Australian resident departures for short-term visits abroad will lie between 370 and 630 and nineteen chances in twenty that it will lie between 240 and 760.

**5** The larger the size of an estimate the smaller the relative standard error. For any estimate of greater than 10,000 the relative standard error will be less than 6%.

### STANDARD ERRORS

RELIABILITY OF ESTIMATES continued **6** The estimate of the difference between an estimate in two different periods or between different estimates from the same period is also subject to sampling error. The standard error on the difference between any two estimates which are subject to sampling error can be approximated by using the larger standard error of the estimates inflated by a factor of 1.4.

**7** An example of the use of this procedure is as follows. Assume the estimates of the number of arrivals to Australia from Taiwan during January 1994 and January 1995 are 1,500 and 750 respectively. The difference between the 1994 and 1995 figures is 750 and the standard errors on these estimates are approximately 190 and 140. The standard error on the difference is approximately 266 ( $1.4 \times 190$ ), and there are nineteen chances in twenty that the estimate of the difference between the two years will lie between 218 and 1,282.

	(a) Non-response rates are unweighted.	Not available for	short-term moveme	nto	
			short-term moverne	nts.	
	(b) Not available for Australia or New Zealand				
DURATION OF STAY	From July 1998 the Department of Immigrati	on and Multic	ultural Affairs (I	DIMA) are able	
	to determine the actual length of stay for dep	arting oversea	is visotors and a	rriving	
	Australian residents which was previosly colle			-	
	stay supplied on the arrival or departure card				
	resulted in a change in data distribution with	the number o	f passengers sta	ying for one	
	year exactly declining significantly.				
INTENDED LENGTH OF STAY /	Non-response rates are available for these da	ta items from i	November 1008	For data prior	
TIME AWAY FROM AUSTRALIA	*			*	
TIME AWAT TROM AUSTRALIA	to November 1998, imputation carried out as part of processing by the Department of				
	Immigration and Multicultural Affairs (DIMA) has prevented reliable estimation of				
	non-response rates for these two data items.				
MAIN DEASON FOR JOURNEY		1.	T 1 1000 50/	6 1	
MAIN REASON FOR JOURNEY	Before the introduction of the redesigned passenger card in July 1998, 5% of short-term				
	visitor arrivals, on average, were recorded as having a reason for journey of 'Other' or 'Not				
	Stated'. This percentage rose to 14% for July	, 16% in Augus	st and 29% in Se	ptember 1998	
	as a result of processing problems. These pro-	oblems have n	ow been addre	ssed by DIMA,	
				•	
	with the percentage of 'Other' and 'Not Stated' dropping in October 1998 to 8% and 7% in November 1998. From the January 1999 issue of this publication, published figures (Table 3 and Table 9 in				
				and Table 9 in	
this publication) referencing these three months have been revised. The revised date were calculated by estimating the number of persons responding 'Other / Not State using past trends for each country of citizenship and proportionally allocating any p			evised data		
	in excess of the estimated 'Other / Not Stated			categories.'Not	
	Stated' rates are now separately available from	n February 199	99 onwards.		

NON-RESPONSE RATES PRIOR TO IMPUTATION SEPTEMBER 1999(a)

# APPENDIX 2 — DATA QUALITY IS SUES

STATE IN WHICH MOST TIME WAS SPENT	For the months of August 1998, September 1998 and October 1998, data entry problems experienced by DIMA caused an overstatement of the Northern Territory as the main State of stay with a corresponding understatement for the remaining States and Territories. These numbers have returned in November 1998 to levels more comparable with previous years, with DIMA indicating that they have instigated data quality procedures to address this issue.			
	From the January 1999 issue of this publication, published figures (Table 8 in this publication) referencing these months have been revised. The revised data were calculated by estimating the number of persons indicating the Northern Territory as their main State of stay using past trends and proportionally allocating any persons in excess of these estimates amongst the remaining States and Territories.			
LONG-TERM MIGRATION	Long-term migration for departing overseas visitors and arriving Australian residents has fallen markedly between 1997/98 and 1998/99. Investigation into the possible cause(s) is continuing. However it may be associated with the revised procedures introduced in July 1998 for obtaining information on travellers and/or the Asian economic crisis.			
SEPTEMBER 1998 PROCESSING	A problem was experienced in the processing of OAD data for movement dates between 6 September 1998 and 16 September 1998, following the introduction of changes to DIMA's input processing system. This problem may affect in the order of 10% of all September records used in estimation and result in incorrect details for citizenship, date of birth, sex and country of birth.			
DATA IMPUTATIONS	Data are imputed for certain variables when no responses are recorded on the re passenger cards. These variables and the information used to impute for them a in the table below.			
	DATA ITEM	IMPUTATION		
	Category of travel	Includes references to citizenship (Australia, New Zealand, Other), corresponding migration visa, intended length of stay and whether intend to live in Australia for next 12 months		
	Intended length of stay Country of residence	10 days Country of departure, if it also matches country of		
	State lived / in which most time was spent	citizenship State of clearance
