ABS • STANDARD AUSTRALIAN CLASSIFICATION OF COUNTRIES • 1269.0 • 1998   iii

The Standard Australian Classification of Countries (SACC) has been developed by the Australian Bureau of Statistics (ABS) for use in the collection, storage and dissemination of all Australian statistical data classified by country. It provides a single classificatory framework for both population and economic statistics.

The SACC replaces the *Australian Standard Classification of Countries for Social Statistics (ASCCSS)* (Cat. no. 1269.0) published in September 1990. The development of the SACC resulted from the need to update the existing classification, to incorporate various revision documents issued since 1990, to include groups and entities used in economic statistics, and to address world political changes, such as the breakup of the former USSR.

The ABS has produced this classification in line with its commitment to develop and promote the use of standard classifications, frameworks and definitions to help ensure the compatibility and comparability of data derived from different statistical systems.

As it is the policy of the ABS and Statistics New Zealand (SNZ) to harmonise classifications wherever possible, SNZ was closely consulted during the development of the SACC. The assistance of the many other organisations and individuals who provided information and advice during the development of the classification is also gratefully acknowledged.

The SACC will be maintained by the ABS and updated as necessary.

INTRODUCTION ....

The Standard Australian Classification of Countries (SACC) is the Australian statistical standard for statistics classified by country. It replaces and forms the second edition of the *Australian Standard Classification of Countries for Social Statistics (ASCCSS)* (Cat. no. 1269.0) published by the Australian Bureau of Statistics (ABS) in September 1990. The SACC is a classification of countries essentially based on the concept of geographic proximity. In its main structure it groups neighbouring countries into progressively broader geographic areas on the basis of their similarity in terms of social, cultural, economic and political characteristics. The classification also provides standard alternative groups of countries associated for economic or political purposes.

The title of the SACC reflects its suitability for use in a wider range of applications than its precursor, the ASCCSS. The SACC is intended for use in the collection, storage and dissemination of all Australian statistical data classified by country. In the field of population statistics, the classification is intended for use whenever demographic, labour and social statistics are classified by country. For example, the classification should be used when collecting, aggregating and disseminating data relating to personal characteristics such as birthplace, country of residence, country of origin, etc. It is not intended for classifying correlative variables such as the language spoken by individuals or the ethnicity of individuals.

In the field of economic statistics, for instance, balance of payments, international trade, and international investment position statistics, the SACC can be used to collect, aggregate and disseminate data by country. For most of these data, the geographically based classification structure would not often be used, and the alternative country groupings based on economic and political considerations would be the principal basis for presenting groupings of countries.

The identification of country units in the classification, and the way in which they are grouped, do not imply the expression of any opinion on the part of the ABS concerning the legal status of any country, territory, or area, or concerning the delimitation of its frontiers or boundaries.

The ABS will use the SACC in its own statistical work and will promote its use by other government agencies, private organisations, community groups, and individuals, where appropriate. The SACC is an Australian statistical standard and should be used for the production and dissemination of all official Australian statistics classified by country. The SACC is available in electronic form: *Standard Australian Classification of Countries (SACC) — on Floppy Disk* (Cat. no. 1269.0.15.001), and can be obtained by referring to the information on the back page of this publication.

OVERVIEW *continued*

From time to time world political change will result in a need to make amendments to this classification document. The ABS will monitor the need for change and issue formal revisions to the SACC in a timely fashion. In order that the classification document remains a standard, users are urged to implement changes to their systems only as the ABS issues the revision documents. Because the SACC includes a number of standard country groupings based on the member countries of formal associations, such as the Association of South East Asian Nations (ASEAN), and because the membership of these groups changes regularly, revision notices are likely to be needed more frequently for the SACC than was the case with the ASCCSS. Revisions to the membership of these associations and organisations of countries will not affect users of the main geographically based classification structure.

REVIEW OF THE ASCCSS

Since its publication in 1990, the ASCCSS has been widely accepted and is regarded as serving its purposes well. However, a second edition was required for a number of reasons.

Three revision notices had been issued since the publication of the ASCCSS. These revisions needed to be consolidated within a single classification document for ease, consistency, and accuracy of use. It had become apparent to the ABS that not all users were aware of the revisions and were, therefore, using a non-standard structure.

The political changes arising from the breakup of the former USSR and the former Yugoslavia needed to be dealt with in a more fundamental way than the expedient methods used in the revision documents. For instance, the breakup of the former USSR was dealt with, in the short term, by changing the name of the classification group in which the former Soviet Republics were identified, in order to reflect their changed political status. A more appropriate classification of these new countries based on their geographic location and social, economic and cultural characteristics was required.

The ABS has also taken the opportunity arising from the need to deal with political change in eastern Europe to make a number of other changes to the main structure of the classification. The changes improve the statistical balance of the classification and make it more useful for the analysis of data. These benefits outweigh the relatively small impact the changes may have on data continuity.

In developing the main structure of the SACC, no change has been made to the underlying principles employed in developing the ASCCSS. The definition of the base-level units (countries), the scope of the classification, the three-level hierarchic structure, the classification criteria and their application, and the code scheme are all based on the principles used in the ASCCSS. The alternative groupings provided to extend the usefulness of the classification are based on different criteria than those used for the main geographically based structure.

REVIEW OF THE ASCCSS *continued*

Because of its geographic basis, the ASCCSS was not intended for classifying economic statistics by country. Although the individual countries in the SACC are identified in economic statistics, where significant, the geographic basis of the SACC remains less relevant for the presentation of economic statistics than for population statistics. For most economic statistics, the alternative political and economic groupings in the SACC will be used. The main structure of the SACC can, however, be adopted in some economic statistics, such as international merchandise trade.

In some instances, there is a need in economic statistics to use broader geographic groupings than provided in the SACC to give a geographic perspective while protecting the confidentiality of reported information. To cater for such cases, broader continental classification elements, such as Africa not elsewhere classified, are provided in Appendix 1 and can be used to derive continental aggregates. These are generally in line with international statistical practice and facilitate international comparison.

The SACC was developed by means of extensive research of Australian and overseas literature in the field of interest, use of principles and techniques relating to the development of statistical classifications, analysis of data relating to the birthplace profile of Australia (primarily data from the 1996 Census of Population and Housing), and by consideration of the requirements for the classification of statistics by country. This work was supported by information and advice from other government departments, such as the Department of Immigration and Multicultural Affairs and the Department of Foreign Affairs and Trade, academics and other experts, and organisations that are significant producers or users of country data.

RELATIONSHIP OF THE SACC TO THE NZSCC

It is the policy of the ABS and Statistics New Zealand (SNZ) to harmonise, where possible, our approach to collecting statistics. Statistical harmonisation includes using joint or closely related classifications wherever possible. As a result, since 1995 SNZ have used a country classification, New Zealand Standard Classification of Countries (NZSCC), based on the ASCCSS. During the development of the SACC, the ABS and SNZ have been in close consultation. Although there are some differences in the ethnic make-up and statistical requirements in the two countries, it has been agreed that the SACC and the second edition of the NZSCC will be as close to each other as is practical.

The differences between the SACC and the NZSCC are summarised below:

- SNZ considers the Ross Dependency to be part of New Zealand for statistical purposes. Category 1201: New Zealand therefore includes the Ross Dependency in the NZSCC but not in the SACC. The Ross Dependency is allocated the code 1607 (in Minor Group 16: Antarctica) in the SACC. This difference is considered to have little statistical significance.

- The NZSCC has only one third-level unit in the Minor Group Antarctica, 1601: Antarctica. The SACC separately identifies the seven individual Antarctic territories including the Ross Dependency. As a result of this divergent practice, the code 1601 represents Antarctica in the NZSCC and Adélie Land (France) in the SACC. The codes 1602–1607 are not used in the NZSCC. This difference is considered to have little statistical significance.

- The SACC splits the Major Group North-East Asia into two Minor Groups: Chinese Asia (includes Mongolia), and Japan and the Koreas. In the NZSCC the Major Group North-East Asia contains a single minor group. This difference results in a number of different country codes between the two classifications.

- The two classifications contain the following differences in country names:

NZSCC	SACC
Vatican City State	Holy See
Russia	Russian Federation
Gaza Strip/Palestine/West Bank	Gaza Strip and West Bank
Myanmar	Burma (Myanmar)
China, People's Republic of	China (excludes SARs and Taiwan Province)
Hong Kong (Special Administrative Region)	Hong Kong (SAR of China)
Korea, Democratic People's Republic of	Korea, Democratic People's Republic of (North)
Korea, Republic of	Korea, Republic of (South)
Kyrgyzstan	Kyrgyz Republic

RELATIONSHIP OF THE SACC TO
THE UNITED NATIONS STANDARD
COUNTRY OR AREA CODES

The United Nations (UN) geographical classification of the countries of the world is published in the document: *Standard Country or Area Codes for Statistical Use*, UN Statistical Paper, Series M No. 49, Rev 4, 1997. As the aggregation of countries in the UN classification is done on a strictly continental basis, the groupings do not always meet the requirements of Australian users. The main geographically based structure of the SACC has been developed giving emphasis to social, cultural, economic and political criteria and to groupings that are relevant to Australia's multicultural society. The resultant classification is more useful than the UN classification for the collection, dissemination and analysis of country based information in Australia. However, the units and groupings of the two classifications are broadly compatible and it is possible to concord data based on the SACC to the UN classification for the purposes of international comparison (see Appendix 8 for the concordance between the SACC and UN classification).

DEFINITION OF COUNTRY

Although most people have an intuitive understanding of what constitutes a country, precise definition of the concept is difficult given the differing levels of sovereignty and independence of many of the world's countries. The term *countries* appears in the classification title and is used throughout this document to describe the base-level units (that is, the categories at the most detailed level of the classification), even though not all of the units classified are fully independent countries. The base-level units of the classification include:

■ fully independent countries (sovereign nation states);

■ administrative subdivisions of the United Kingdom: England, Scotland, Wales and Northern Ireland. (The United Kingdom is represented at the second (minor group) level of the classification);

■ external territories and dependencies of independent countries. These units are discrete geographic areas with varying degrees of political and economic autonomy. In general, they are physically isolated from the country to which they are dependent, for example, Falkland Islands, Martinique;

■ units which are recognised geographic areas, the ownership or control of which is in dispute, for example, Gaza Strip and West Bank; and

■ residual categories (not elsewhere classified (nec) categories) comprised of geographic areas which are not separately identified in the classification and which are not part of one of the separately identified base-level units. For example, Polynesia (excludes Hawaii), nec, which contains a number of minor islands which are not part of any of the separately identified country units of the Minor Group Polynesia (excludes Hawaii).

DEFINITION OF COUNTRY *continued*

A number of supplementary codes are also itemised in the classification document (see Appendix 1). These codes, which are used to represent country-like entities and to process inadequately described responses in statistical collections, are not part of the main classification structure and are therefore not country level units in the classification. These codes are explained more fully below (see Supplementary Codes).

In economic statistics, it is often necessary to present within one view of the data, information about countries and information that does not have a country dimension. The SACC therefore includes a number of categories which do not equate to individual countries. These categories include such entities as Reserve Bank Gold and International Institutions. Other categories are also required where country information is applicable but not available. For instance, debt issues in international capital markets are allocated the supplementary code 0718: International Capital Markets. In some cases, residual categories such as Africa, not elsewhere classified, are used in economic statistics to combine, within broad continental groupings, confidential country information, information about insignificant economic relationships, and information that is not sufficiently defined for country attribution but which can be allocated to a continent. All the above residual categories necessary for economic statistics purposes have been assigned unique four-digit codes and are listed in Appendix 1. They are not categories of the main classification structure.

The scope of the SACC is all countries currently existing in the world as defined above. Because the number of countries can easily be accommodated in the main structure without the classification becoming unwieldy, the vast majority of countries are separately identified even though many of them are statistically insignificant in the Australian context. In a small number of instances geographic areas have not been separately identified but have been included in residual (not elsewhere classified) categories. Most of these entities have no permanent civilian population and are not significant in terms of social or economic statistics. This comprehensive coverage makes the classification useful for a wide range of applications and increases its longevity.

CLASSIFICATION CRITERIA AND THEIR APPLICATION

Classification criteria are the principles by which categories are aggregated to form broader categories in a classification structure. Three classification criteria are used in the SACC to form the categories of the main classification structure:

- the geographic proximity of countries (the basic criterion);

- the similarity of countries in terms of social, cultural, economic and political characteristics; and

- the desirability that groups of countries lie within a single geographic continent (conventionally defined).

CLASSIFICATION CRITERIA AND THEIR
APPLICATION *continued*

Geographic proximity is the basic criterion used to group countries in the SACC. In its most fundamental sense, geographic proximity means countries being contiguous, that is, sharing a common border. In the main classification structure, geographically contiguous countries are added together so that a group of countries is formed. Although not all countries in the resultant group are contiguous, they form a continuous mass without any country not included in the group intervening. Geographic proximity can therefore describe countries that are contiguous, or countries that are linked one to the other to form a continuous unbroken landmass. Such countries may be described as neighbouring countries. It should be noted that the intervention of international bodies of water between countries is not considered to impede this principle. Thus the Caspian Sea lying between the countries of the Caucasus and the countries of Central Asia does not preclude these countries being regarded as neighbouring or geographically proximate countries even though there is a large area of water between them.

Similarity in terms of social and cultural characteristics is based primarily on religion(s) practised and language(s) spoken in a group of countries. However, other factors such as historical links, similarity of national aspirations, and even factors such as type of food, or similarity of art, serve as indicators of cultural and social similarity.

The lowest level of the classification consists of separately identified countries as described above (see Definition of Country). Neighbouring countries are combined to form the minor groups of the main classification structure on the basis of their similarity in terms of social, cultural, economic and political characteristics. In a very few instances this principle of combining neighbouring countries is not strictly adhered to because the interests of practicality and usefulness are better served by a more stringent application of the second criterion. For instance, Spain and Portugal are included in a group with other similar southern European countries even though the southern part of France lies between Spain and Italy. As well as being geographically proximate, the countries of minor groups must all lie within a single geographic continent. Although the countries in a minor group category are not necessarily identical in respect of any particular characteristic, the groups formed are relatively homogeneous in terms of the set of classification criteria.

CLASSIFICATION CRITERIA AND THEIR
APPLICATION *continued*

While geographic proximity is the principal criterion employed in grouping countries, in instances where a country could fit into more than one minor group on the basis of its geographic location, its placement in the classification is made primarily on the basis of its characteristics and those of its neighbours. For instance, on the basis of location, Mexico could be included in either a group of countries comprising Northern America or a group of countries comprising Central America. It is included in Central America because it is more similar in terms of social, cultural, economic and political characteristics to countries such as Honduras and Guatemala than to the United States and Canada. Where a country could fit equally into more than one minor group on the basis of all the classification criteria, it is classified on the basis of factors such as practicality, usefulness, and statistical balance between groups (see Design Constraints). For instance, on the basis of the classification criteria, Italy would fit comfortably in either Western Europe or Southern Europe. It is included in Southern Europe on the basis of the aforementioned factors.

At the first and most general level of the main classification structure, major groups are formed by aggregating geographically proximate minor groups. The aggregation of minor groups was undertaken, as far as possible, so that the major groups formed consist of minor groups which have a degree of similarity in terms of social, cultural, economic and political characteristics. This creates distinct and geographically coherent groups comprised of countries which are, generally speaking, similar in terms of their characteristics. In principle, major groups are formed so that they lie entirely within a single geographic continent. This is not the case in two instances. The Major Group North Africa and the Middle East lies across the boundary separating the continents of Africa and Asia, and the Major Group Americas includes the continents of North and South America.

The countries of North Africa are included in a major group with the Middle East because they are socially and culturally similar to many Arabian countries. To include them in a group with Sub-Saharan countries from which they are geographically, environmentally and culturally removed would not be in harmony with the principles of the classification or useful for social and population statistics. In many economic statistics, however, the continental classification of Africa and Asia is appropriate and is adopted as an output view of the data.

The classification criteria and the way they have been applied has produced a main classification structure that can be described in conventional terms: countries grouped to form minor groups on the basis of geographic proximity and similarity in terms of cultural, social, economic and political characteristics; and minor groups aggregated to form major groups on the basis of geographic proximity and a degree of similarity in terms of their characteristics.

CLASSIFICATION CRITERIA AND THEIR
APPLICATION *continued*

The SACC also includes a number of alternative groupings which are not based on the criteria used to form the groups of the main geographically based classification structure. The alternative groupings are, in the main, conventional, internationally recognised associations or organisations of member countries or economies which serve economic and political purposes. For example, the SACC includes the following groupings of countries: Asia-Pacific Economic Co-operation (APEC), ASEAN, European Union (EU), etc. (see Alternative Country Groupings).

DESIGN CONSTRAINTS

The theoretical and conceptual considerations for developing the main structure of the classification were applied in conjunction with other considerations such as the feasibility of the classification for collecting data from both statistical and administrative collections, the ease of implementing the classification in statistical and administrative systems, the analytical usefulness of data collected within the framework of the classification, and the structural and statistical balance of the classification.

An important consideration in developing any classification for statistical purposes is to achieve a structure that is physically and statistically balanced. This is necessary to allow the classification to fulfil its functions in a way that is useful and practical for presenting and analysing statistical data, especially from sample surveys.

Physical balance is achieved by developing a classification that has manageable and roughly similar numbers of sub-categories within each category at a particular level. The desire to achieve this result is, of course, tempered by the need to accurately reflect the real world.

Statistical balance means that no major or minor group should represent an inordinate number of observations (say, country of birth responses), and that each major and minor group should represent significant numbers of observations. Thus, a classification used for the dissemination of statistics should not have categories at the same level in its hierarchy which are too disparate in their population size. This allows the classification to be used effectively for the cross-tabulation of aggregate data and the dissemination of data from sample surveys. An important use of the SACC is to classify birthplace data. Birthplace data from the 1996 Census of Population and Housing were used to test and modify the structure of the SACC on the basis of statistical balance.

Application of the classification criteria in a straightforward manner generally led to a harmonious and symmetrical main classification structure. However, considerations of practicality, usefulness and statistical balance were also used in developing the structure in certain areas, such as in splitting Europe into two major groups (one in the first edition, ASCCSS), and in combining the two American continents to form one major group (two in the first edition, ASCCSS). The consideration of these additional factors did not impinge on correct application of the classification criteria.

MAJOR CHANGES FROM THE ASCCSS

Political change in eastern Europe (particularly the breakup of the former USSR) has allowed a more stringent application of the classification criteria in Europe and surrounding areas such as the Middle East and parts of Asia. In particular, all countries can now be classified to the area of the world in which they are actually located. This, in concert with the advice of users and experts, improvements in statistical balance, and efforts to improve the practicality and usefulness of the classification has resulted in the changes to the ASCCSS detailed in the main classification structure of the SACC.

The changes can be summarised as follows:

- The Australian States are no longer separately identified allowing Australia and its external territories to be consolidated in a single Minor Group: Australia (includes External Territories). The States have been allocated unique four-digit codes which are included in the list of supplementary codes (see Supplementary Codes and Appendix 1).

- Europe has been split into two Major Groups: North-West Europe, and Southern and Eastern Europe. This division has been undertaken on the grounds of a more rigorous application of the classification criteria, practicality and usefulness, and improved statistical balance. An authorised standard output option to recreate Europe is provided (it is not part of the main classification structure) (see Authorised Standard Output Options, and Alternative Country Groupings).

- The ASCCSS Minor Group United Kingdom and Ireland has been split into two SACC minor groups, within the Major Group North-West Europe, to allow for the separate identification of the United Kingdom (at the minor group level). Ireland becomes a single country minor group. The Channel Islands and the Isle of Man, though not technically part of the United Kingdom, have been included along with England, Scotland, Wales, and Northern Ireland in the Minor Group United Kingdom, for reasons of practicality and to satisfy (most) users.

- The new European countries created from former Soviet Republics (Moldova, Belarus, Estonia, Latvia, Lithuania, Russian Federation and Ukraine) have been included in the Major Group Southern and Eastern Europe. All these countries are included in the Minor Group Eastern Europe with the exception of Moldova which is included in the Minor Group South Eastern Europe. The Russian Federation has been included in Europe, although much of it is geographically in Asia, because it is functionally a European country. European Russia contains a majority of the population and contains the seat of political and economic power.

- The ASCCSS Major Group The Middle East and North Africa has been renamed North Africa and the Middle East in the SACC.

MAJOR CHANGES FROM THE ASCCSS
continued

- The new countries created from former Soviet Central Asian Republics (Kazakhstan, Kyrgyz Republic, Tajikistan, Turkmenistan and Uzbekistan) have been included in the Minor Group Central Asia within the Major Group Southern and Central Asia. The minor group also includes the new Caucasus countries (Armenia, Azerbaijan and Georgia) and Afghanistan. The Major Group Southern and Central Asia also includes the Minor Group Southern Asia which was a major group in the ASCCSS. Afghanistan has been moved from Southern Asia in the ASCCSS to Central Asia in the SACC.

- The countries of South-East Asia have been split into two Minor Groups: Mainland South-East Asia and Maritime South-East Asia, because this is a region of countries of particular interest to Australia.

- The countries of North-East Asia have been split into two Minor Groups: Chinese Asia (includes Mongolia) and Japan and the Koreas. The creation of a discrete group of Chinese countries is useful for a number of purposes.

- The two ASCCSS Major Groups Northern America and South America, Central America and the Caribbean have been combined to form a single SACC Major Group: Americas.

- Some minor changes to the names of countries have been made to conform to current naming conventions.

Concordances

Continuity of data (the preservation of statistical time series) was noted as an important issue by many users consulted during the development of the SACC. The ABS acknowledges the importance of the continuation of time series for long-term analysis, continuity of policy making, etc. However, the need to update and improve the classification structure is imperative despite the potential for disrupting time series. In the interests of data comparability, the ABS urges users and providers of country data to collect, classify and disseminate data using the SACC from the time of its implementation. It is acknowledged that there will be many circumstances where users need to convert data to the old ASCCSS basis. Similarly, users may wish to convert historical data to the SACC. To facilitate this process, concordances between the main structures of the two editions are provided in Appendixes 2 and 3. Because, in most cases, the base-level units of the classification (countries) retain a one-to-one relationship between the ASCCSS and the SACC, the concordances are straightforward. The concordances itemise the code linkages between the countries, detail the links between the major groups and the minor groups, and indicate the movement of particular countries between groups in the two structures.

To further assist users to minimise the impact of the new classification on data continuity, the ABS has provided a number of authorised standard output groupings of countries for areas such as Europe, the former USSR, etc. (see Authorised Standard Output Options, and Alternative Country Groupings).

MAIN CLASSIFICATION STRUCTURE

The SACC has a three-level hierarchical structure.

The third, and most detailed level, of the main classification structure consists of the base units which are countries as described above (see Definition of Country). The classification consists of 244 third-level units including five 'not elsewhere classified' categories which contain entities that are not listed separately in the classification (see Reserved Codes for Residual Categories).

The second level of the main classification structure comprises 27 minor groups, which are groups of neighbouring countries similar in terms of social, cultural, economic and political characteristics. Each minor group lies wholly within the boundaries of a geographic continent. On average minor groups contain 9 countries, with individual minor groups containing between 1 and 27 countries.

The first, and most general, level of the main classification structure comprises nine major groups which are formed by aggregating geographically proximate minor groups and, therefore, comprise countries which are broadly similar in terms of social, cultural, economic and political characteristics. Each major group lies wholly within the bounds of a single geographic continent (with two exceptions: North Africa and the Middle East, and Americas). On average, major groups contain three minor groups, with individual major groups containing between two and six minor groups.

The SACC also includes a set of alternative standard groupings of countries based on economic and political criteria to facilitate its use in an extended range of applications. The alternative groupings are, in the main, conventional, internationally recognised associations or organisations of member countries or economies which serve economic and political purposes. These groupings are not part of the main structure (see Use of the SACC for Economic Statistics, and Alternative Country Groupings). A number of authorised standard output options (such as the former USSR) which are not part of the main structure, are provided as output options to facilitate time series maintenance (see Authorised Standard Output Options).

USE OF THE SACC FOR ECONOMIC STATISTICS

At the time the ASCCSS was developed, it was decided not to develop a single classification of countries that would be suitable for collecting and classifying both population and economic statistics. This decision was made because the criteria for grouping countries for economic statistics are often different from those required by users of population statistics.

However, consistency between country statistics for population and economic statistics is achieved by the inclusion of the following elements in the SACC:

■ a standard set of country entities and country names;

USE OF THE SACC FOR ECONOMIC
STATISTICS *continued*

- a set of standard alternative groupings of countries based on economic and political requirements. Such groupings include ASEAN, EU, Organisation for Economic Co-operation and Development (OECD), Organisation of Petroleum Exporting Countries (OPEC), etc. The alternative groupings are, in the main, conventional, internationally recognised associations or organisations of member countries or economies which serve economic and political purposes (see Alternative Standard Country Groupings for the full list of standard alternative groups and their composition);

- a supplementary list of categories that do not relate to countries, such as international institutions; ships stores; residual categories, for example, Africa, not elsewhere classified; and specific economic phenomena, such as debt issues in international capital markets, where the country dimension cannot be determined (see Appendix 1 for the full list of entities);

- the use in economic statistics of geographic aggregations that can be concorded to the major and minor groups of the SACC main structure; and

- a set of standard codes (main structure codes and supplementary codes) that can be concorded to the codes used in the reporting and storage of economic data.

Consolidating both the standard geographically based classification and alternative standard country groups within a single classification document will add consistency to the collection, classification and output of country data across all applications. Producers of statistics will be able to present information in the most analytically useful form and the comparability of data across collections and fields of interest will thus be enhanced.

Although the groups relating to associations of member countries will be used mainly for the presentation of economic statistics, such as the value of exports to ASEAN countries, they can also be used for social statistics, to provide information such as the number of immigrants from ASEAN countries or the number of students from ASEAN countries studying in Australia. The geographically based main classification structure can be used to present economic statistics, where appropriate.

STANDARD CODE SCHEME

In the main classification structure, a single-digit code represents each major group. For example, the code 1 represents the Major Group Oceania and Antarctica, the code 2 represents the Major Group North-West Europe, etc.

STANDARD CODE SCHEME *continued*

In the main classification structure, a two-digit code represents each minor group. The first digit is the code of the major group in which that minor group is included. For example, the code 13 represents the Minor Group Melanesia which is included within Oceania and Antarctica, the code 24 represents the Minor Group Northern Europe which is included within North-West Europe, etc. Minor groups are numbered sequentially within major groups. For example, the codes of the minor groups included within Oceania and Antarctica are numbered 11, 12, 13, etc.

In the main classification structure, a four-digit code represents each country. The first two digits are the code of the minor group in which that country is included. For example, the code 1301 represents the country New Caledonia which is included within Melanesia, the code 2401 represents the country Denmark which is included within Northern Europe, etc. Countries are numbered sequentially within minor groups. For example, the codes of the countries included within Melanesia are numbered 1301, 1302, 1303, etc.

It should be noted that countries are not allocated codes ending with the digits '0' or '9'. These are special purpose codes used to denote residual (not elsewhere classified) categories in the case of '9', and supplementary (not further defined) codes in the case of '0'.

The following example demonstrates the code scheme for the countries included within the Minor Group Southern Europe which is one of three minor groups of the Major Group Southern and Eastern Europe.

3   SOUTHERN AND EASTERN EUROPE

    31   Southern Europe
        3101   Andorra
        3102   Gibraltar
        3103   Holy See
        3104   Italy
        3105   Malta
        3106   Portugal
        3107   San Marino
        3108   Spain

The countries are listed in alphabetical order within minor groups. However, this ordering of units is more expedient than necessary and it is not considered that the addition of any new units, which could disrupt the alphabetical order, will affect the usefulness of the classification.

Because of political change in the world, it may be necessary from time to time to add countries to, or delete countries from, the classification. If a country needs to be added to the classification, it will be allocated the next available four-digit code of the minor group to which it is being added.

If a country ceases to exist as a separate entity, and is, consequently, deleted from the classification, its code will not be re-allocated to another country as this would complicate the storage of time series data. If it is necessary to move a country from one minor group to another, it will be allocated the next available code of the minor group to which it is moved. Its previous code will not be re-allocated.

STANDARD CODE SCHEME *continued*

The SACC code scheme is devised so that any future changes to the classification structure can be easily accommodated. However, in order that the classification remain a standard, users should not make changes to the structure. Users should contact the ABS and identify any apparent problems they encounter in the course of implementation, data collection or data analysis.

It should be noted that the structural changes between the SACC and the previous standard country classification (ASCCSS) have resulted in code changes for most countries and country groupings. Concordances providing a link between the SACC and the ASCCSS codes are provided in Appendixes 2 and 3.

The alternative standard country groupings (country groupings which are not part of the main classification structure) have been allocated codes commencing with '06'. For instance, APEC has been allocated code 0601, ASEAN 0602, etc. (see Supplementary Codes and Appendix 1). The member countries of each of the alternative groups retain the code they are allocated in the main classification structure. For example, the following codes are used for APEC and its members:

0601 Asia-Pacific Economic Co-operation (APEC)

1101	Australia
5201	Brunei Darussalam
8102	Canada
8204	Chile
6101	China (excludes SARs and Taiwan Province)
6102	Hong Kong (SAR of China)
5202	Indonesia
6201	Japan
6203	Korea, Republic of (South)
5203	Malaysia
8306	Mexico
1201	New Zealand
1302	Papua New Guinea
5204	Philippines
5205	Singapore
6105	Taiwan (Province of China)
5104	Thailand
8104	United States of America

RESERVED CODES FOR RESIDUAL CATEGORIES

In each minor group of the main structure a four-digit code, consisting of the two digits of the minor group followed by the two digits '99', is reserved as a residual or 'not elsewhere classified' (nec) category. Any geographic area within the region described by a minor group, which is not separately identified in the classification, and not part of one of the separately identified countries, can be included in the residual or 'nec' category.

RESERVED CODES FOR RESIDUAL
CATEGORIES *continued*

Because of the comprehensive coverage of the SACC, it has been
necessary to create residual categories in five instances only:

> 1199 Australian External Territories, nec
> 1599 Polynesia (excludes Hawaii), nec
> 4199 North Africa, nec
> 8299 South America, nec
> 9299 Southern and East Africa, nec

These five categories have, therefore, been separately identified as
base-level units in the classification (the geographic entities included in
these categories can be found in the numerical coding index for
population statistics). It should be noted that residual categories are part
of the main structure of the SACC and should not be used merely to
'dump' responses containing insufficient data to code to a separately
identified category of the classification (see Supplementary Codes).

Provision exists in the code structure for the creation of additional residual
categories should they become necessary. For instance, it may become
necessary to identify a particular geographic area (a minor island, coral
atoll, etc.) not considered as part of one of the identified base-level units
of the classification. In order that the SACC remains a standard, users
should not create residual categories without consulting the ABS. If users
consider that an additional residual category is required they should
contact the ABS which will make the required changes and issue a revision
to the classification.

SUPPLEMENTARY CODES

Supplementary codes are used to represent country-like entities and
groups of countries (alternative standard country groupings and
authorised standard output options) which are not part of the main SACC
structure, and to process inadequate data in statistical collections. The
codes are of five types:

- codes commencing with '000' (supplementary codes for
  inadequate data);

- codes commencing with '06' (supplementary codes for economic
  and other country groups);

- codes commencing with '07' (supplementary codes for economic
  and other entities);

- codes commencing with '09' (supplementary codes for former
  countries and other geographic entities); and

- codes ending with '00' or '000' (supplementary codes for the
  main classification structure).

Supplementary codes for
inadequate data

Four-digit codes commencing with '000' are supplementary codes
included for operational purposes to facilitate the coding of survey
responses and other data which present particular problems in that they
cannot be allocated a country, minor group or major group code. For
instance, '0000' is used to code inadequately described survey responses,
'0003' to code not stated responses, etc.

Supplementary codes for
inadequate data *continued*

It should be noted that these supplementary codes are not part of the main classification structure. They exist for operational reasons only, and no data would be coded to them if sufficiently detailed information were obtained in all instances (see Appendix 1 for a full list of supplementary codes for inadequate data) .

Supplementary codes for
economic and other country
groups

The SACC is intended to provide a single framework for classifying all statistical and administrative data by country for both population and economic statistics. Because the geographically based country groupings of the main structure are not always ideal for the presentation of economic data, alternative groupings have been included in the classification document to meet specific output needs. These country groupings are of two types:

■ A set of standard country groupings based on economic and political requirements and comprising associations or organisations of formally recognised member countries, such as the APEC, OECD, etc. (see Alternative Standard Country Groupings).

■ A set of authorised standard output options, such as the former USSR, provided for time series purposes or other data output needs (see Authorised Standard Output Options).

These groupings have been allocated unique four-digit codes (beginning with '06') for processing purposes. For example, ASEAN is allocated code 0602, OECD is allocated code 0605, the former USSR is allocated 0613, etc. (see Appendix 1 for a full list of these supplementary codes).

Supplementary codes for
economic and other entities

In some instances, the collection and aggregation of data for economic statistics (such as international trade and international investment position statistics) require data to be coded to entities that do not equate directly to a single country, or to countries at all. Such entities have been assigned unique four-digit codes beginning with '07'. For example, 'Belgium and Luxembourg' is allocated code 0704, Reserve Bank Gold is allocated code 0741, etc. It should be noted that although these supplementary codes are not part of the main classification structure, they should be considered when aggregating and presenting data for both the main structure and the alternative groupings (see Appendix 1 for a full list of these supplementary codes).

Supplementary codes for
former countries and other
geographic entities

Four-digit codes commencing with '09' are supplementary codes designed to code responses relating to entities which are now defunct as a result of recent political change but which are still regarded as useful for statistical purposes, and entities which are no longer separately identified in the revised main classification structure. These codes have two purposes:

■ to facilitate precise coding and thus preserve data that would be lost or coded to a broader category of the classification; and

■ to assist in the reconstruction of entities no longer separately identified in the classification, such as the former USSR, for time series purposes.

Supplementary codes for former countries and other geographic entities *continued*

For example, the codes 0901–0909 have been assigned to the Australian States and territories to facilitate coding in statistical or administrative collections that require data coded to the State level rather than directly to Australia. Conversely, the code 0912 is used to code responses relating to the former USSR that cannot be coded to one of the newly independent countries which were its former constituents. In some instances, the '09' codes are used to code responses that would otherwise be dumped as inadequately described. For example, the response 'Europe' is coded to 0911: 'Europe, not further defined' rather than to code 0000: 'Inadequately Described'. In some instances the '09' codes provide a more precise alternative than the supplementary codes relating to the main structure. For example, responses relating to the former Yugoslavia (which cannot be coded to its constituent countries) are coded to 0913: 'Former Yugoslavia, not further defined' rather than to code 3200: 'South Eastern Europe, not further defined'. It should be noted that these supplementary codes are not part of the main classification structure (see Appendix 1 for a full list of these supplementary codes).

Supplementary codes for the main classification structure

Four-digit codes ending with two or three zeros are described as 'not further defined' (nfd) codes. These codes are used to code responses to a survey or administrative question requiring a country response (such as country of birth) which cannot be coded to the most detailed (country) level of the main classification but which can be coded to a higher level of the classification structure.

For example, responses relating to geographic areas which cannot be identified as lying within the boundaries of a country separately identified in the classification, but which lie wholly within the boundaries of one of the classification's minor groups, are coded to that minor group. Such responses are allocated a 'not further defined' code consisting of the two-digit code of the minor group followed by '00'. For instance, the response 'Great Britain' does not contain sufficient information to be coded to a country category, but it can be coded to Minor Group 21: United Kingdom which includes all countries considered to be part of Great Britain. It is, thus, allocated the code 2100: United Kingdom, nfd.

Similarly, responses relating to geographic areas which cannot be identified as lying within the boundaries of a country separately identified in the classification, or one of the classification's minor groups, but which lie wholly within the boundaries of a major group, are coded to that major group. Such responses are allocated a 'not further defined' code consisting of the one-digit code of the major group followed by '000'. For instance, the response 'South Pacific Islands' does not contain sufficient information to be coded to any particular country category or to any particular minor group, but it can be coded to Major Group 1: Oceania and Antarctica, which includes all countries of the South Pacific. It is thus allocated the code 1000: Oceania and Antarctica, nfd.

Supplementary codes for the
main classification structure
continued

Thus, input data which can only be coded at the major or minor group levels of the classification can be processed within a collection coded at the four-digit country level of the classification. This allows the coding process to be as precise as the input data quality allows, preserving data that would otherwise be lost as uncodable or dumped to an inadequately described category. It should be noted that these supplementary codes are not part of the main classification structure (see Appendix 1 for a full list of these supplementary codes).

CODING INDEX

Information provided in statistical and administrative collections does not always comprise the exact words used as the official names of classification categories in the SACC. A coding index is therefore necessary to act as a link between individual responses or items of information and the classification categories, enabling data to be coded accurately and quickly to the appropriate category in the classification.

The coding index for population statistics has been developed to assist in the implementation and use of the classification and should be used when coding responses to questions relating to country of birth, country of origin, etc., or information from other sources that relates to countries. The coding index has been devised by reference to relevant documents such as atlases, gazetteers, guides to countries, and most importantly, by analysis of ABS data collected over many years. It is thus based on information actually obtained in ABS statistical collections. The coding index provided in the ASCCSS has been refined and updated for the SACC following its use in the 1996 Census. It contains a comprehensive list of the most probable responses to questions relating to country and their correct classification codes. It also assists in the accurate and timely allocation of country codes for data originating from other sources (see Appendixes 4 and 5 for the population statistics coding index in alphabetical and numerical order).

A coding index specifically designed to assist in the allocation of country codes to economic data is also included in the SACC. This index has been developed for the following reasons:

■ A number of geographic entities required in the collection of economic data have been allocated supplementary codes not used when coding the same entity for population statistics. For instance, Christmas Island is allocated the supplementary code 0706 for international trade statistics, but is allocated the main classification structure code 1101 (Australia) for population statistics such as country of birth.

CODING INDEX *continued*

- A number of geographic entities required in the collection of economic data consist of two or three countries combined. These entities are allocated supplementary codes not used in population statistics where the main classification structure codes of the individual countries are used. For instance, data relating to 'Belgium and Luxembourg' are allocated the supplementary code 0704 for international trade statistics. For birthplace statistics responses are allocated either the code 2302 (Belgium) or 2306 (Luxembourg). A single index containing all this information would be confusing and create the potential for error.

- A number of non-geographic entities which are needed for the collection of economic data have been allocated supplementary codes which are not required for population statistics. For instance, 0718: International Capital Markets is needed for balance of payments statistics.

- Many of the entities included in the population statistics index which relate to the idiosyncratic responses of individuals are not required when coding economic statistics by country. This 'clutter' has been removed from the economic statistics coding indexes.

The coding index for economic statistics thus consists of the following entities:

- the standard set of countries and country groupings included in the main classification structure;

- the economic supplementary codes for inadequate data;

- the supplementary codes for economic and political country groupings;

- the supplementary codes for economic and other entities; and

- the supplementary codes for the main classification structure.

Of course, users are able to use whichever index best suits their purposes, and refer to the other index as required. For instance, in some administrative settings the smaller economic index may be useful for coding social data, while economic data may sometimes emanate from sources where information is not always provided using the standard names of countries.

In order to distinguish actual categories of the main classification structure from other entities included in the coding indexes, the classification categories (major groups, minor groups and countries) have been presented in the population statistics index in bold text. (See Appendixes 4 to 7 for coding indexes in both alphabetical and numerical order).

Coding rules

The following rules relate to the coding of information provided by individuals when asked questions about their country of birth, country of origin, etc. The principles used can be applied to information about countries, regions, areas, etc. emanating from other sources which need to be allocated a country code. The rules can be applied to either the economic statistics or population statistics index.

When coding responses in statistical or administrative collections for population and social statistics, responses which match exactly with an entry in the coding index are assigned the code allocated to that index entry. When responses do not match exactly with an index entry the following rules should be followed. (Some of the examples used do, in fact, appear in the coding index, but are given for illustrative purposes.)

Responses which relate directly to a country category but which contain information additional to that included in the coding index are allocated the code of that country category. Such instances include responses consisting of a full or formal country name (for example, Syrian Arab Republic is coded to Syria), or responses containing a geographic qualifier such as east or west (for example, South of England is coded to England).

Responses which relate directly to a country category but which consist of alternative spellings (for example, Tadzhikistan for Tajikistan), abbreviations (for example, Aust. for Australia), acronyms (for example, FRY for the Federal Republic of Yugoslavia), or foreign language names (for example, Ceska Republika for the Czech Republic) are allocated the code of that country category. Similarly, slang or idiosyncratic responses (for example, Aussie or Oz for Australia) are allocated the code of the country category to which they directly relate.

If a response consists of an archaic or historical name (for example, Persia for Iran) it is necessary to determine the current country or geographic area to which the response relates and allocate the appropriate code: country; minor group, nfd; major group, nfd; or Inadequately Described. It should be noted that special supplementary codes have been assigned to the recently defunct political entities of eastern Europe (former USSR, former Czechoslovakia, etc.) and these codes should be used rather than the standard supplementary codes.

Responses which cannot be identified as relating directly to a separately identified country in the classification are assigned a residual category code or a supplementary nfd code as described above (see Reserved Codes for Residual Categories, and Supplementary Codes for the Main Classification Structure). Responses which do not contain sufficient information to be coded to any category of the classification are assigned the appropriate inadequately described code.

Coding rules *continued*

Changes in national boundaries create coding difficulties. In order to maintain consistency of coding in all applications it is preferable that each country response be coded according to national boundaries existing at the time of the data collection. Therefore, all responses relating to a country which currently exists, but which has undergone boundary changes at some time in the past, are coded to the named country. For example, all persons who give their country of birth as 'Poland' are coded to Poland, even though the boundaries of Poland may have changed since they were born and they may have in fact been born in a place that is now in Germany. Birthplace responses which relate to particular cities or regions which are now in one country, but which may have been in another country at the time of birth, should be coded to the country the city or region is in at the time of collection of the data. For example, the response 'Danzig' should be coded to Poland not to Germany and it is included as such in the coding index.

Responses relating to countries which have changed name, without changing boundaries, are coded to the latest name in the classification. Thus the response 'Upper Volta' is coded to 'Burkina Faso'.

LINKS TO ISO CODES

In the interests of compatibility and comparability, and to reinforce the SACC as an Australian statistical standard, the ABS urges the use of the standard four-digit classification codes wherever possible. However, it is acknowledged that in certain circumstances a three-digit code is relevant for dissemination to support international comparison purposes, or is more expedient because of collection, processing and data storage constraints, or because data are provided on administrative records with a three-digit code. In such circumstances the ABS recommends use of the three-digit numeric International Organization for Standardization (ISO) codes published in: *Codes for the Representation of Names of Countries and their Subdivisions*, ISO 3166–1:1997. To assist users, these codes are included in the SACC with a mapping to the standard four-digit codes. This mapping of SACC to ISO codes is presented in the coding indexes, and thus has been done for coding index entries as well as the actual categories of the classification to facilitate the use of ISO codes in statistical systems (see Appendixes 4 to 7). The ISO codes have been included in the SACC by permission of Standards Australia who act on behalf of the ISO in Australia.

In circumstances where standard SACC codes cannot be used, and the ISO codes are used instead, the ABS urges that data be produced and presented within the framework of the SACC (main classification structure or alternative standard country groupings).

LINKS TO ISO CODES *continued*

In some data collections, particularly those relating to international trade, telecommunications and transport statistics, data are often coded using alpha characters. This is because of the possibility for establishing a visual association between a country name and its corresponding code. In the ISO code list, two-character and three-character alpha codes are used to establish this link between the code and the name of the country in English. For example, the two-character and three-character codes for Australia are AU and AUS. These codes are included in the SACC coding indexes with a mapping to the standard four-digit codes. It should be noted that for most statistical purposes numeric codes are regarded as being more useful and conventional than alpha codes. Alpha codes should be avoided unless there is an established reason for using them.

The UN *Standard Country or Area Codes for Statistical Use* uses the same codes as those issued by the ISO for its country units. It is possible to re-aggregate the SACC units to the groupings of the UN classification for the purposes of international comparison and this is facilitated by the use of ISO codes (see Appendix 8 for the concordance between the SACC and UN classification).

A number of supplementary codes are used in the SACC to process inadequate data, economic and political groupings, and economic and other entities not equating directly to countries. These supplementary categories, which are not included in the ABS standard set of country units, together with the SACC categories at the first and second level of the structure, have been assigned ISO codes not used by the ISO for the recognised country units.

In some instances, the UN has allocated codes to entities which are not separately identified in the SACC, but are subsumed under another country unit. For instance, East Timor is listed separately and allocated unique codes in the ISO listing. However, successive Australian Governments have accorded de jure recognition of Indonesia's sovereignty over East Timor. The Department of Foreign Affairs and Trade has informed the ABS that the Australian Government considers East Timor to be part of Indonesia and that it should not be categorised as a distinct or separate country unit. East Timor is, therefore, represented by the ASCCSS and ISO codes for Indonesia in the SACC.

EDITING SPECIFICATIONS

Because some country data are assigned supplementary codes rather than the codes of particular country categories, it is important that in verifying input codes, manipulating data, aggregating data to higher level categories and deriving output items and tables, the full range of valid codes are included in all specifications. For applications using the main classification structure, the valid range of codes comprises the following:

- all the codes included in the main classification structure;

- all the codes included in the list: Supplementary Codes for the Main Classification Structure (see Appendix 1);

- codes 0901–0909 are in the valid code range for country unit 1101: Australia, when data are coded at the Australian State level (see Appendix 1);

EDITING SPECIFICATIONS *continued*

- code 0913: former Yugoslavia, nfd, is in the valid code range for Minor Group 32, South Eastern Europe (see Appendix 1); and

- code 0914: Czechoslovakia, nfd, is in the valid code range for Minor Group 33, Eastern Europe (see Appendix 1).

Other supplementary codes in the list Supplementary Codes for Former Countries and Other Geographic Entities, do not fall in the valid code range for any of the categories of the standard classification. They are provided to assist users to form a number of authorised standard output options (Europe, the former USSR, East Asia, etc.) or to preserve data that would otherwise be lost. When deriving output items for the main classification structure, data coded to these supplementary codes are included in the data for 0000: Inadequately Described.

STORAGE AND PRESENTATION OF DATA

Regardless of the level of aggregation envisaged for the dissemination of statistics for particular collections, data should be captured and stored at the most detailed level of the classification possible. This allows the greatest flexibility for the output of statistics, enables more detailed and complex analysis, facilitates comparisons with previous data using different classifications and preserves information so as to provide maximum flexibility for future use of the data.

However, because of collection and confidentiality constraints, it may not be possible to collect, store or output data at the lower levels of the classification in all instances. The use of a standard classification framework will nevertheless enhance data comparability even though it may not always be possible to disseminate data at the most detailed level.

The hierarchical structure of the classification allows users the flexibility to output statistics at the level of the classification which best suits their particular purposes. Data can be presented at major group level, minor group level, the base or country level, or for the alternative standard groups. If necessary, significant countries within a minor group can be presented separately while the remaining countries within the minor group are aggregated. The same principle can be adopted to highlight significant minor groups within a major group.

It should be noted that countries from different minor groups should not be added together to form an aggregation not included in the classification framework (main structure or alternative standard country groupings) as this corrupts the application of the classification criteria and has repercussions on comparability and compatibility with data created by use of the standard. Similarly, minor groups from different major groups should not be added together. In instances where significant countries within a minor group are presented separately while the remaining countries within the minor group are aggregated the group of countries so aggregated should be labelled 'Other', or 'Other Minor Group name'. To invent a label for the 'Other' group is to imply it is a standard grouping of the classification. Similarly, aggregated minor groups within a major group are labelled 'Other'.

AUTHORISED STANDARD OUTPUT OPTIONS

An exception to the above argument to present data in a standard fashion using the main structure or the alternative standard country groupings is made in a number of instances to allow the continuation of time series and to enhance the usefulness of the classification in certain areas. The following output groupings of countries are provided as standard output options. For the content of these groups see Alternative Country Groupings.

Europe

In some circumstances there will be a need to present statistics for Europe as a whole rather than for the individual Major Groups, North-West Europe, and Southern and Eastern Europe.

Europe and the former USSR

This entity was a major group in the first edition (ASCCSS) and is provided for time series purposes.

The former USSR

This entity was a minor group in the first edition (ASCCSS) and is provided for time series purposes.

East Asia

ABS experience indicates that many users often wish to disseminate statistics under the broad heading 'Asia', or to refer to 'Asia' or use the adjective 'Asian' in thematic discussion, reports, etc. The terms 'Asia' or 'Asian' are frequently used in Australia in a manner which refers only to the countries of North-East Asia and South-East Asia. The ABS acknowledges that such an output grouping is useful for Australian statistics and social reporting and has therefore provided a grouping of culturally 'Asian' countries comprising an aggregation of SACC Major Groups South-East Asia and North-East Asia. The name for this output grouping, 'East Asia', is commonly used to describe this group of Asian countries.

SHORT NAMES FOR PUBLICATION

The country names used in the classification correspond, in the main, to the short form country names given in the UN *Terminology Bulletin No. 347: Country Names*. In a few instances the country name is accompanied by extra information to precisely define the unit it represents, for example, 'China (excludes SARs and Taiwan Province)'.

Some of the names of the country units and groupings employed in the classification are too long for use in all circumstances, for example, in table stubs. To cater for these circumstances a list of short names for countries and SACC groupings is provided using both 15-character and 30-character labels (see Appendix 9).

MAJOR GROUPS

1   **OCEANIA AND ANTARCTICA**

2   **NORTH-WEST EUROPE**

3   **SOUTHERN AND EASTERN EUROPE**

4   **NORTH AFRICA AND THE MIDDLE EAST**

5   **SOUTH-EAST ASIA**

6   **NORTH-EAST ASIA**

7   **SOUTHERN AND CENTRAL ASIA**

8   **AMERICAS**

9   **SUB-SAHARAN AFRICA**

MAJOR GROUPS AND MINOR GROUPS

1   OCEANIA AND ANTARCTICA

    11   Australia (includes External Territories)
    12   New Zealand
    13   Melanesia
    14   Micronesia
    15   Polynesia (excludes Hawaii)
    16   Antarctica

2   NORTH-WEST EUROPE

    21   United Kingdom
    22   Ireland
    23   Western Europe
    24   Northern Europe

3   SOUTHERN AND EASTERN EUROPE

    31   Southern Europe
    32   South Eastern Europe
    33   Eastern Europe

4   NORTH AFRICA AND THE MIDDLE EAST

    41   North Africa
    42   Middle East

5   SOUTH-EAST ASIA

    51   Mainland South-East Asia
    52   Maritime South-East Asia

6   NORTH-EAST ASIA

    61   Chinese Asia (includes Mongolia)
    62   Japan and the Koreas

7   SOUTHERN AND CENTRAL ASIA

    71   Southern Asia
    72   Central Asia

8   AMERICAS

    81   Northern America
    82   South America
    83   Central America
    84   Caribbean

9   SUB-SAHARAN AFRICA

    91   Central and West Africa
    92   Southern and East Africa

MAJOR GROUPS, MINOR GROUPS AND COUNTRIES

1   **OCEANIA AND ANTARCTICA**

       11   **Australia (includes External Territories)**

           1101   Australia
           1102   Norfolk Island
           1199   Australian External Territories, nec

       12   **New Zealand**

           1201   New Zealand

       13   **Melanesia**

           1301   New Caledonia
           1302   Papua New Guinea
           1303   Solomon Islands
           1304   Vanuatu

       14   **Micronesia**

           1401   Guam
           1402   Kiribati
           1403   Marshall Islands
           1404   Micronesia, Federated States of
           1405   Nauru
           1406   Northern Mariana Islands
           1407   Palau

       15   **Polynesia (excludes Hawaii)**

           1501   Cook Islands
           1502   Fiji
           1503   French Polynesia
           1504   Niue
           1505   Samoa
           1506   Samoa, American
           1507   Tokelau
           1508   Tonga
           1511   Tuvalu
           1512   Wallis and Futuna
           1599   Polynesia (excludes Hawaii), nec

       16   **Antarctica**

           1601   Adélie Land (France)
           1602   Argentinian Antarctic Territory
           1603   Australian Antarctic Territory
           1604   British Antarctic Territory
           1605   Chilean Antarctic Territory
           1606   Queen Maud Land (Norway)
           1607   Ross Dependency (New Zealand)

2   NORTH-WEST EUROPE

    21   United Kingdom

        2101   Channel Islands
        2102   England
        2103   Isle of Man
        2104   Northern Ireland
        2105   Scotland
        2106   Wales

    22   Ireland

        2201   Ireland

    23   Western Europe

        2301   Austria
        2302   Belgium
        2303   France
        2304   Germany
        2305   Liechtenstein
        2306   Luxembourg
        2307   Monaco
        2308   Netherlands
        2311   Switzerland

    24   Northern Europe

        2401   Denmark
        2402   Faeroe Islands
        2403   Finland
        2404   Greenland
        2405   Iceland
        2406   Norway
        2407   Sweden

3   SOUTHERN AND EASTERN EUROPE

    31   Southern Europe

        3101   Andorra
        3102   Gibraltar
        3103   Holy See
        3104   Italy
        3105   Malta
        3106   Portugal
        3107   San Marino
        3108   Spain

    32   South Eastern Europe

        3201   Albania
        3202   Bosnia and Herzegovina
        3203   Bulgaria
        3204   Croatia
        3205   Cyprus
        3206   Former Yugoslav Republic of Macedonia (FYROM)
        3207   Greece
        3208   Moldova
        3211   Romania
        3212   Slovenia
        3213   Yugoslavia, Federal Republic of

    33   Eastern Europe

        3301   Belarus
        3302   Czech Republic
        3303   Estonia
        3304   Hungary
        3305   Latvia
        3306   Lithuania
        3307   Poland
        3308   Russian Federation
        3311   Slovakia
        3312   Ukraine

4   NORTH AFRICA AND THE MIDDLE EAST

41   North Africa

4101   Algeria
4102   Egypt
4103   Libya
4104   Morocco
4105   Sudan
4106   Tunisia
4107   Western Sahara
4199   North Africa, nec

42   Middle East

4201   Bahrain
4202   Gaza Strip and West Bank
4203   Iran
4204   Iraq
4205   Israel
4206   Jordan
4207   Kuwait
4208   Lebanon
4211   Oman
4212   Qatar
4213   Saudi Arabia
4214   Syria
4215   Turkey
4216   United Arab Emirates
4217   Yemen

5   SOUTH-EAST ASIA

51   Mainland South-East Asia

5101   Burma (Myanmar)
5102   Cambodia
5103   Laos
5104   Thailand
5105   Viet Nam

52   Maritime South-East Asia

5201   Brunei Darussalam
5202   Indonesia
5203   Malaysia
5204   Philippines
5205   Singapore

6   NORTH-EAST ASIA

61   Chinese Asia (includes Mongolia)

6101   China (excludes SARs and Taiwan Province)
6102   Hong Kong (SAR of China)
6103   Macau
6104   Mongolia
6105   Taiwan (Province of China)

62   Japan and the Koreas

6201   Japan
6202   Korea, Democratic People's Republic of (North)
6203   Korea, Republic of (South)

7   SOUTHERN AND CENTRAL ASIA

71   Southern Asia

7101   Bangladesh
7102   Bhutan
7103   India
7104   Maldives
7105   Nepal
7106   Pakistan
7107   Sri Lanka

72   Central Asia

7201   Afghanistan
7202   Armenia
7203   Azerbaijan
7204   Georgia
7205   Kazakhstan
7206   Kyrgyz Republic
7207   Tajikistan
7208   Turkmenistan
7211   Uzbekistan

8   AMERICAS

    81   Northern America

        8101   Bermuda
        8102   Canada
        8103   St Pierre and Miquelon
        8104   United States of America

    82   South America

        8201   Argentina
        8202   Bolivia
        8203   Brazil
        8204   Chile
        8205   Colombia
        8206   Ecuador
        8207   Falkland Islands
        8208   French Guiana
        8211   Guyana
        8212   Paraguay
        8213   Peru
        8214   Suriname
        8215   Uruguay
        8216   Venezuela
        8299   South America, nec

    83   Central America

        8301   Belize
        8302   Costa Rica
        8303   El Salvador
        8304   Guatemala
        8305   Honduras
        8306   Mexico
        8307   Nicaragua
        8308   Panama

    84   Caribbean

        8401   Anguilla
        8402   Antigua and Barbuda
        8403   Aruba
        8404   Bahamas
        8405   Barbados
        8406   Cayman Islands
        8407   Cuba
        8408   Dominica
        8411   Dominican Republic
        8412   Grenada
        8413   Guadeloupe
        8414   Haiti
        8415   Jamaica
        8416   Martinique
        8417   Montserrat
        8418   Netherlands Antilles
        8421   Puerto Rico
        8422   St Kitts and Nevis
        8423   St Lucia
        8424   St Vincent and the Grenadines
        8425   Trinidad and Tobago
        8426   Turks and Caicos Islands
        8427   Virgin Islands, British
        8428   Virgin Islands, United States

9   SUB-SAHARAN AFRICA

    91   Central and West Africa

        9231   Zambia
        9232   Zimbabwe
        9299   Southern and East Africa, nec

ALTERNATIVE COUNTRY GROUPINGS

The SACC is intended to provide a single framework for classifying all statistical and administrative data by country for both population and economic statistics. Because the geographically based country groupings of the main structure are not always ideal for the presentation of data, alternative groupings have been included in the classification document to meet specific output needs. These country groupings are of two types:

- a set of standard country groupings based on economic and political requirements and comprising associations or organisations of formally recognised member countries; and
- a set of authorised standard output options for time series purposes or other data output needs.

Alternative Standard Country Groupings

0601   ASIA-PACIFIC ECONOMIC CO-OPERATION (APEC)

1101	Australia
5201	Brunei Darussalam
8102	Canada
8204	Chile
6101	China (excludes SARs and Taiwan Province)
6102	Hong Kong (SAR of China)
5202	Indonesia
6201	Japan
6203	Korea, Republic of (South)
5203	Malaysia
8306	Mexico
1201	New Zealand
1302	Papua New Guinea
5204	Philippines
5205	Singapore
6105	Taiwan (Province of China)
5104	Thailand
8104	United States of America

0602   ASSOCIATION OF SOUTH EAST ASIAN NATIONS (ASEAN)

5201	Brunei Darussalam
5202	Indonesia
5203	Malaysia
5204	Philippines
5205	Singapore
5104	Thailand
5105	Vietnam

0603   EUROPEAN ECONOMIC AREA (EEA)

2301	Austria
2302	Belgium
2401	Denmark
2403	Finland
2303	France
2304	Germany
3207	Greece
2405	Iceland
2201	Ireland
3104	Italy
2305	Liechtenstein
2306	Luxembourg
2308	Netherlands
2406	Norway
3106	Portugal
3108	Spain
2407	Sweden
2311	Switzerland
2100	United Kingdom

0604   EUROPEAN UNION (EU)

2301	Austria
2302	Belgium
2401	Denmark
2403	Finland
2303	France
2304	Germany
3207	Greece
2201	Ireland
3104	Italy
2306	Luxembourg
2308	Netherlands
3106	Portugal
3108	Spain
2407	Sweden
2100	United Kingdom

0605   ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT (OECD)

1101	Australia
2301	Austria
2302	Belgium
8102	Canada
3302	Czech Republic
2401	Denmark
2403	Finland
2303	France
2304	Germany
3207	Greece
3304	Hungary
2405	Iceland
2201	Ireland
3104	Italy
6201	Japan
6203	Korea, Republic of (South)
2306	Luxembourg
8306	Mexico
2308	Netherlands
1201	New Zealand
2406	Norway
3307	Poland
3106	Portugal
3108	Spain
2407	Sweden
2311	Switzerland
4215	Turkey
2100	United Kingdom
8104	United States of America

0606   ORGANISATION OF PETROLEUM EXPORTING COUNTRIES (OPEC)

4101	Algeria
8206	Ecuador
9113	Gabon
5202	Indonesia
4203	Iran
4204	Iraq
4207	Kuwait
4103	Libya
9124	Nigeria
4212	Qatar
4213	Saudi Arabia
4216	United Arab Emirates
8216	Venezuela

0607   SOUTH PACIFIC REGIONAL TRADE AND ECONOMIC CO-OPERATION AGREEMENT (SPARTECA)

1101	Australia
1501	Cook Islands
1502	Fiji
1402	Kiribati
1403	Marshall Islands
1404	Micronesia, Federated States of
1405	Nauru
1201	New Zealand
1504	Niue
1302	Papua New Guinea
1505	Samoa
1303	Solomon Islands
1508	Tonga
1511	Tuvalu
1304	Vanuatu

0608   THE COMMONWEATLH

8402	Antigua and Barbuda
1101	Australia
8404	Bahamas
7101	Bangladesh
8405	Barbados
8301	Belize
9202	Botswana
5201	Brunei Darussalam
9103	Cameroon
8102	Canada
3205	Cyprus
8408	Dominica
9114	Gambia
9115	Ghana
8412	Grenada
8211	Guyana
7103	India
8415	Jamaica
9208	Kenya
1402	Kiribati
9211	Lesotho
9213	Malawi
5203	Malaysia
7104	Maldives
3105	Malta
9214	Mauritius
9216	Mozambique
9217	Namibia
1405	Nauru

0608 THE COMMONWEALTH *continued*

1201	New Zealand
9124	Nigeria
7106	Pakistan
1302	Papua New Guinea
8422	St Kitts and Nevis
8423	St Lucia
8424	St Vincent and the Grenadines
1505	Samoa
9223	Seychelles
9127	Sierra Leone
5205	Singapore
1303	Solomon Islands
9225	South Africa
7107	Sri Lanka
9226	Swaziland
9227	Tanzania
1508	Tonga
8425	Trinidad and Tobago
1511	Tuvalu
9228	Uganda
2100	United Kingdom
1304	Vanuatu
9231	Zambia
9232	Zimbabwe

Authorised Standard Output Options

The following output groupings of countries are provided to allow the continuation of time series
and to enhance the usefulness of the SACC. The full range of codes required to derive data for these
groupings are listed (standard classification codes and supplementary codes).

0611   EUROPE

0911 Europe, nfd

0913 Former Yugoslavia, nfd

0914 Former Czechoslovakia, nfd

2000-2499 (All countries and supplementary codes included in North-West
Europe)

3000-3399 (All countries and supplementary codes included in Southern and
Eastern Europe)

0612   EUROPE AND THE FORMER USSR

0911 Europe, nfd

0912 Former USSR, nfd

0913 Former Yugoslavia, nfd

0914 Former Czechoslovakia, nfd

2000-2499 (All countries and supplementary codes included in North-West
Europe)

3000-3399 (All countries and supplementary codes included in Southern and
Eastern Europe)

7202 Armenia

7203 Azerbaijan

7204 Georgia

7205 Kazakhstan

7206 Kyrgyz Republic

7207 Tajikistan

7208 Turkmenistan

7211 Uzbekistan

0613   FORMER USSR

0912 Former USSR, nfd

3208 Moldova

3301 Belarus

3303 Estonia

3305 Latvia

3306 Lithuania

3308 Russian Federation

3312 Ukraine

7202 Armenia

7203 Azerbaijan

7204 Georgia

7205 Kazakhstan

7206 Kyrgyz Republic

7207 Tajikistan

7208 Turkmenistan

7211 Uzbekistan

0615   EAST ASIA

0916 East Asia, nfd

5000-5299 (All countries and supplementary codes included in South-East Asia)

6000-6299 (All countries and supplementary codes included in North-East Asia)

Appendix 1

Supplementary Codes

SUPPLEMENTARY CODES

Supplementary codes are used to represent country-like entities and groups of countries (alternative standard country groupings and authorised standard output options) which are not part of the main SACC structure, and to process inadequate data in statistical collections. The codes are of five types:

- codes commencing with '000' (supplementary codes for inadequate data);
- codes commencing with '06' (supplementary codes for economic and other country groups);
- codes commencing with '07' (supplementary codes for economic and other entities);
- codes commencing with '09' (supplementary codes for former countries and other geographic entities); and
- codes ending with '00' or '000' (supplementary codes for the main classification structure).

A fuller explanation of supplementary codes and their application is provided in the Supplementary Codes section of the Introduction.

SUPPLEMENTARY CODES FOR INADEQUATE DATA

0000	Inadequately Described
0001	At Sea
0002	Not Elsewhere Classified
0003	Not Stated
0004	Unknown (for use in economic statistics: the destination or origin of the goods is unknown)
0005	Unidentified (for use in economic statistics: the country reported on import/export documentation is not recognised)

SUPPLEMENTARY CODES FOR ECONOMIC AND OTHER COUNTRY GROUPS

0601	Asia-Pacific Economic Co-operation (APEC)
0602	Association of South East Asian Nations (ASEAN)
0603	European Economic Area (EEA)
0604	European Union (EU)
0605	Organisation for Economic Co-operation and Development (OECD)
0606	Organisation of Petroleum Exporting Countries (OPEC)
0607	South Pacific Regional Trade and Economic Co-operation Agreement (SPARTECA)
0608	The Commonwealth
0611	Europe
0612	Europe and the former USSR
0613	Former USSR
0614	Asia
0615	East Asia
0616	Africa

SUPPLEMENTARY CODES FOR ECONOMIC AND OTHER ENTITIES

0701	Africa, nec
0702	Americas, nec
0703	Asia, nec
0704	Belgium and Luxembourg
0705	Central America and the Caribbean (excludes Mexico)
0706	Christmas Island
0707	Cocos (Keeling) Islands
0708	Country Conf. Alumina (a secondary (International Trade specific) confidentiality restriction for exports of alumina to specific countries)
0711	Denmark (includes Greenland and Faeroe Islands)
0712	Eurodollar Market
0713	Europe, nec
0714	Falkland Islands (includes South Georgia and South Sandwich Islands)
0715	France (includes Andorra and Monaco)
0716	French Antilles (Guadeloupe and Martinique)
0717	French Southern and Antarctic Territories
0718	International Capital Markets
0721	International Institutions
0722	International Waters (goods placed in the ocean outside any territorial waters or exclusive economic zone)
0723	Italy (includes Holy See and San Marino)
0724	Johnston and Sand Islands
0725	Midway Islands
0726	Morocco (includes places under Spanish sovereignty)
0727	No Country Details (overseas country detail for exports not available due to a confidentiality restriction)
0728	Oceania, nec
0731	Other ASEAN
0732	Other Asia, nec (excludes ASEAN)
0733	Other EU
0734	Other Europe
0735	Other Europe (excludes EU and OECD)
0736	Other OECD
0737	Other OECD in Europe
0738	Pitcairn Island
0741	Reserve Bank Gold (gold, held by the Reserve Bank of Australia as part of reserve assets, that cannot be allocated by country)
0742	Ships' and Aircraft Stores (stores, including fuel, loaded onto foreign registered ships and aircraft)
0743	Switzerland (includes Liechtenstein)
0744	United States Miscellaneous Islands
0745	Wake Island
0746	Unallocated
0747	Zone of Coop A-Timor Gap (economic cooperation zone in the Timor Gap administered jointly by Australia and Indonesia)

SUPPLEMENTARY CODES FOR FORMER COUNTRIES AND OTHER GEOGRAPHIC ENTITIES

0901	New South Wales
0902	Victoria
0903	Queensland
0904	South Australia
0905	Western Australia
0906	Tasmania
0907	Northern Territory
0908	Australian Capital Territory
0909	Other Territories (Ninth State)
0911	Europe, nfd
0912	Former USSR, nfd
0913	Former Yugoslavia, nfd
0914	Czechoslovakia, nfd
0915	Kurdistan, nfd
0916	East Asia, nfd
0917	Asia, nfd
0918	Africa, nfd

SUPPLEMENTARY CODES FOR THE MAIN CLASSIFICATION STRUCTURE

1000   Oceania and Antarctica, nfd

    1100   Australia (includes External Territories), nfd

    1300   Melanesia, nfd

    1400   Micronesia, nfd

    1500   Polynesia (excludes Hawaii), nfd

    1600   Antarctica, nfd

2000   North-West Europe, nfd

    2100   United Kingdom, nfd

    2300   Western Europe, nfd

    2400   Northern Europe, nfd

3000   Southern and Eastern Europe, nfd

    3100   Southern Europe, nfd

    3200   South Eastern Europe, nfd

    3300   Eastern Europe, nfd

4000   North Africa and the Middle East, nfd

    4100   North Africa, nfd

    4200   Middle East, nfd

5000   South-East Asia, nfd

    5100   Mainland South-East Asia, nfd

    5200   Maritime South-East Asia, nfd

6000   North-East Asia, nfd

    6100   Chinese Asia (includes Mongolia), nfd

    6200   Japan and the Koreas, nfd

7000   Southern and Central Asia, nfd

    7100   Southern Asia, nfd

    7200   Central Asia, nfd

8000   Americas, nfd

    8100   Northern America, nfd

    8200   South America, nfd

    8300   Central America, nfd

    8400   Caribbean, nfd

9000   Sub-Saharan Africa, nfd

    9100   Central and West Africa, nfd

    9200   Southern and East Africa, nfd

Appendix 2

Concordance
SACC to ASCCSS

In the interests of data comparability, the ABS urges users and providers of country data to collect, classify and disseminate data using the SACC from the time of its implementation. However, it is acknowledged that there will be circumstances where users need to convert data to the old ASCCSS basis. Similarly, users may wish to convert historical data to the SACC. To facilitate this process, concordances between the two classification structures are provided below: Concordance SACC to ASCCSS and Concordance ASCCSS to SACC. The concordances are reasonably straightforward because, in most cases, the base-level units of the classifications (countries) retain a one-to-one relationship. The concordances itemise the code linkages between the countries, detail the links between the major groups and the minor groups, and indicate the movement of particular countries between groups in the two structures.

In some instances, there is not a direct relationship between country groupings within the two structures. For instance, the SACC Minor Group South Eastern Europe is composed of some of the countries from the ASCCSS Minor Groups Southern Europe, Eastern Europe, and the Former USSR and the Baltic States. Therefore, South Eastern Europe (SACC) is linked to part of Southern Europe, part of Eastern Europe, and part of the former USSR and the Baltic States. Such partial linkages, at both the major group and minor group levels, are indicated by including the word 'part' after the name of the country group involved. This convention is used in both concordances.

SACC		ASCCSS	
1	**OCEANIA AND ANTARCTICA**	**1**	**OCEANIA AND ANTARCTICA**
11	**Australia (includes External Territories)**	**11**	**Australia**
		12	**Australian External Territories**

Coding Index for Population Statistics

Alphabetical Order

Information provided in statistical and administrative collections does not always comprise the exact words used as the official names of classification categories in the SACC. A coding index is therefore necessary to act as a link between individual responses or items of information and the classification categories, enabling data to be coded accurately and quickly to the appropriate category in the classification. The coding index contains a comprehensive list of the most probable responses to questions relating to country and their correct classification codes. In order to distinguish substantive categories of the main classification structure from other entities included in the coding index, the classification categories (major groups, minor groups and countries) have been presented in the index in bold text. A fuller explanation of the coding indexes can be found in the Coding Index section of the Introduction. An explanation of the ISO codes can be found in the Links to ISO Codes section of the Introduction. ISO codes have been included by permission of Standards Australia who act on behalf of the ISO in Australia.

Appendix 6

Coding Index for Economic Statistics

Alphabetical Order

A coding index is often necessary to act as a link between items of information and the classification categories, enabling data to be coded accurately and quickly to the appropriate category in the classification. Many of the entities included in the preceding population statistics coding index relate to the idiosyncratic responses of individuals and are not required when coding economic statistics by country. This 'clutter' has been removed from the economic statistics coding index. A number of entities not needed for population statistics, but necessary when coding economic data, have been added to the index. The shorter economic statistics index may also be more suitable when coding population statistics in small-scale coding applications. A number of entities in this index were not included in the ASCCSS. They have been indicated by N/A (Not Applicable) in the ASCCSS Code column. A fuller explanation of the coding indexes can be found in the Coding Index section of the Introduction. An explanation of the ISO codes can be found in the Links to ISO Codes section of the Introduction. ISO codes have been included by permission of Standards Australia who act on behalf of the ISO in Australia.

Appendix 8

**Concordance
SACC to UN Standard Country
or Area Codes for Statistical Use**

The main geographically based structure of the SACC has been developed giving emphasis to social, cultural, economic and political criteria and to groupings that are relevant to Australia's multicultural society. It is therefore more useful than the UN Standard Country or Area Codes for the collection, dissemination and analysis of country based information in Australia. However, it will sometimes be necessary to convert Australian data to the same basis as the UN classification to enable international comparisons. The concordance below is provided for this purpose.

In some instances, there is not a direct relationship between country groups in the two structures. For instance, the SACC Minor Group Central Asia is composed of some of the countries from the UN groups South-central Asia and Western Asia. Central Asia (SACC) is therefore linked to part of South-central Asia and part of Western Asia. Such partial linkages, at the group level, are indicated by including the word 'part' after the name of the country group involved. For partial linkages, the grouping involving the most linked countries is listed first and countries belonging to this group appear without the name of the group in brackets. Countries belonging to other groupings in the partial linkage appear with the name of their group in brackets.

Short Names for Publication

15-Character and

30-Character Names

SHORT NAMES FOR PUBLICATION

Some of the names of the country units and groupings used in the SACC are too long for use in all circumstances, e.g. as table headings. To cater for these circumstances a list of standard short names has been developed. This list comprises country and group titles shortened to a maximum field length of 15 and 30 characters.

When shortening names to fit into the selected field width, a number of procedures were followed to make the process as consistent as possible, e.g. removing descriptive material, use of acronyms, replacing 'and' with a slash, etc.

A further explanation of standard short names is provided in the Short Names for Publication section of the Introduction.

NAME	15-CHARACTER	30-CHARACTER
Adélie Land (France)	Adélie Land	Adélie Land (France)
Afghanistan	Afghanistan	Afghanistan
Albania	Albania	Albania
Algeria	Algeria	Algeria
Americas	Americas	Americas
Andorra	Andorra	Andorra
