## CHAPTER XXII.

## AGRICULTURAL PRODUCTION.

NOTE.—Values of Australian oversea trade shown throughout this chapter are expressed as £A. f.o.b. port of shipment, except where otherwise indicated. The term "Short Ton" is used to denote a ton of 2,000 lb.

For greater detail on the subjects dealt with in this chapter, see the annual bulletins *Primary Industries, Part I.—Rural Industries* and *Part II.—Non-Rural Industries and Value of Production* published by this Bureau. For advance information on these subjects, the following mimeograph statistical bulletins should be consulted—*Rural Land Use and Crop Statistics* (annual), *Value of Production and Indexes of Price and Quantum of Farm Production* (annual), *Wheat Industry* (usually two per year), *Fruit Growing Industry* (annual), *Tractors on Rural Holdings* (annual), and *New Tractors: Receipts, Sales and Stocks* and *New Agricultural Machinery Statistics* (quarterly). The annual mimeograph *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia* contains details of the production, distribution and apparent consumption of foodstuffs obtained from the agricultural industry.

## § 1. Introductory.

In general, statistics in this chapter relating to agricultural production are derived from "census" returns supplied by approximately 250,000 farmers who utilize one acre or more of land for agricultural or pastoral purposes, and the latest figures available are those for the year 1960–61. The returns are collected on a substantially uniform basis in all States at 31st March, each year, and relate to areas sown and crops produced in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources, these are used in conjunction with the "census" returns. The statistics published in this chapter are therefore shown in "agricultural" years. For most purposes, there will be little error involved in considering them as applying to years ending on 30th June.

## § 2. Progress of Agriculture.

1. *Early Records.*—In an "Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797", Governor Hunter gives the acreage of crops as follows:—Wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres.

The following details of crops were collected in 1808:—Wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

A brief reference to the attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Official Year Book. (See No. 22, p. 670.)

By the year 1850, the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales, and 169,000 acres in Tasmania. At the end of 1850, the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres.

The gold discoveries of 1851 and subsequent years had at first a very disturbing effect on agricultural progress, the area of crops declining from 491,000 acres in 1850 to 458,000 acres in 1854. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres.

2. **Progress of Cultivation.**—The following table shows the area of crops in each of the States and Territories of Australia at decennial intervals since 1860–61 and during each of the ten seasons 1951–52 to 1960–61. On page 911 there is a graph showing the area of crops in Australia from 1900–01 onward.

(a) Not available.

The progress of agriculture was practically uninterrupted from 1860–61 to 1915–16, when, as the result of a special effort to raise wheat during the 1914–18 War, 18.5 million acres were cultivated in Australia. There was a temporary setback in later war years, but after the termination of hostilities the area continued to expand and rose steadily to the record area of 25.2 million acres in 1930–31. Thereafter, the slump in wheat prices seriously depressed the agricultural industry and the area of crops receded to just under 20 million acres in 1935–36.

By 1938–39, the industry had recovered from the depression and the total area under cultivation reached the high level of 23.5 million acres. Thereafter, as a result of war-time man-power shortages and shipping difficulties, the area declined to less than 16 million acres in 1943–44. After 1943–44, production gradually increased again until, in 1947–48, 22.3 million acres were sown to crops. This upward trend was reversed after 1948–49, largely because, as a result of the high prices of wool, many primary producers transferred from agricultural to pastoral production. Since 1951–52, when the area sown was 20.0 million acres, the area under wheat has increased steadily, except for 1956–57 when excessively wet conditions in the eastern States caused a drop in the area sown. Since that year, the area of crops has shown an upward trend in each year, reaching a record level of 29.6 million acres in 1960–61. As the area under wheat in Australia constitutes a large proportion of the total area cropped (45 per cent. during the five years ended 1960–61), fluctuations in the latter follow broadly the same pattern as changes in wheat areas.

3. **Area under Sown Pastures.**—In all States, there are considerable areas of grasses, mainly sown on land from which scrub has been cleared or on land which it is desired to rest from cultivation. These areas have expanded from about 5.3 million acres in 1929–30 to about 36.3 million acres in 1960–61.

4. **Australian Agricultural Council.**—Arising out of a conference of Commonwealth and State Ministers on agricultural and marketing matters, held at Canberra in December, 1934, a permanent organization known as the Australian Agricultural Council was formed. The Council consists of the Commonwealth Ministers for Primary Industry and Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are:— (i) the promotion of the welfare and development of agricultural industries generally; (ii) exchange of information on agricultural production and marketing; (iii) the improvement

of the quality of agricultural products and the maintenance of high grade standards; (iv) to ensure, as far as possible, balance between production and available markets; and (v) organized marketing, etc.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council, to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

### § 3. Distribution, Production and Value of Crops.

1. Area of Crops in States and Territories.—The following table shows the areas in the several States, the Northern Territory and the Australian Capital Territory of each of the crops for the season 1960–61.

4. **Size Classification of Principal Crops.**—A special series of tabulations relating to rural holdings in Australia was compiled for 1959-60 and will be published in full detail in a series of bulletins, *Classification of Rural Holdings by Size and Type of Activity, 1959-1960*. Tables in these bulletins will show a classification by area of holding and area of crop for wheat, oats and barley. Classifications of holdings according to major crops grown and livestock carried, and type of activity will also be shown.

5. **Weights and Measures.**—Details of the weights and measures used in recording production of agricultural commodities appear in the introduction to the bulletin *Primary Industries—Part I.—Rural Industries*.

6. **Production of Crops in States and Territories.**—The following table shows production of crops in the various States and Territories for the season 1960-61.

(a) Includes amounts paid as bounty, relief, etc.

(b) Incomplete, excludes Northern Territory.

(c) Includes payments by the Commonwealth Government of £3,022,000 in 1959-60 and £8,884,000 in 1960-61.

(d) Incomplete, excludes Western Australia.

10. Value of Production and Indexes of Price and Quantum of Production.—(i) *Gross and Net Values*, 1960-61. Values of agricultural production for each State are shown for 1960-61 in the following table. A more detailed reference to the value of production of agriculture and other industries in Australia as well as a brief explanation of the terms used will be found in Chapter XXX.—Miscellaneous.

In computing the net value of production, no deduction has been made for the cost of maintenance of farm buildings and fences, nor for the depreciation of farm plant; consequently, the figures are overstated to that extent.

## GROSS, FARM AND NET VALUES OF AGRICULTURAL PRODUCTION, 1960-61.

(£'000.)

(a) No deduction has been made for depreciation and maintenance.

(b) No allowance has been made for costs of power, power kerosene, petrol and other oils.

(ii) *Net Values, 1956-57 to 1960-61.* In the following table, the net value of agricultural production and the net value per head of population are shown by States for the years 1956-57 to 1960-61.

**NET VALUE OF AGRICULTURAL PRODUCTION.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
NET VALUE.(a) (£'000.)									
1956-57	48,425	63,802	60,127	49,688	24,640	7,978	58	143	254,861
1957-58	44,754	64,971	62,898	32,318	27,338	12,050	52	149	244,530
1958-59	82,472	73,661	68,716	50,571	42,746	10,496	59	222	328,943
1959-60	78,518	68,912	65,357	24,246	44,044	10,645	79	150	291,951
1960-61	98,171	104,031	73,471	58,323	46,708	10,939	80	138	391,861

**NET VALUE PER HEAD OF POPULATION. (£)**

1956-57	13.5	24.3	43.1	57.7	36.2	24.6	2.9	3.9	26.7
1957-58	12.2	24.2	44.2	36.5	39.4	36.3	2.4	3.8	25.1
1958-59	22.1	26.8	47.4	55.7	60.6	31.0	2.6	5.1	33.1
1959-60	20.7	24.4	44.2	26.0	61.4	30.9	3.2	3.0	28.7
1960-61	25.4	36.0	48.8	60.9	64.0	31.3	3.1	2.5	37.7

(a) No deduction has been made for depreciation and maintenance.

(iii) *Indexes of Quantum and Price of Agricultural Production.* Indexes of quantum and price of agricultural production are shown in the following table. The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average "prices" of farm products realized at the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. Further details on weights used, etc., are to be found in Chapter XXX.—Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF AGRICULTURAL PRODUCTION.**

(Base : Average 3 years ended June, 1939 = 100.)

Particulars.	1956-57.	1957-58.	1958-59.	1959-60.	1960-61.
<b>Quantum Produced—</b>

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (1936-37 to 1938-39).

**§ 4. Wheat.**

1. *Royal Commission on the Wheat Industry.*—A Royal Commission was appointed in January, 1934, to inquire into and report upon the economic condition of the industries of growing, handling and marketing wheat, and the manufacturing, distributing and selling of flour and bread. A searching inquiry was made by the Commission and the results of its investigations were submitted in a series of five reports. The first and second reports covered the wheat-growing industry, the third that of baking, the fourth the flour-milling industry, while the fifth, completed in February, 1936, dealt with the history of the Commission's investigations and traversed the principal recommendations submitted.

2. Licensing of Areas Sown to Wheat, and Acreages Sown.—Details of the operations of the Wheat Stabilization Board in licensing wheat grown during the seasons 1941–42 to 1948–49 will be found in Official Year Book No. 38, pages 940–41. The Board ceased to function on 31st December, 1948.

3. Legislation relating to Wheat Industry.—(i) *Stabilized Marketing*. A detailed survey of legislation relating to stabilization of the wheat industry, including controls exercised during the 1914–18 and 1939–45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, is given in the Appendix to Official Year Book No. 37, pages 1295–99.

(ii) *The Australian Wheat Board*. The Australian Wheat Board was constituted in September, 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of, wheat or wheat products, manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations.

The Board was reconstituted for five years, with similar powers, under the Commonwealth Wheat Stabilization Act 1948, to administer the stabilization plan. The new Board commenced to function on 18th December, 1948. The Board has been continued in existence by the Commonwealth Wheat Industry Stabilization Acts of 1954 and 1958 for the purpose of administering the second and third five-year stabilization plans.

(iii) *Wheat Stabilization Plans*. (a) 1947–48 to 1952–53. Details of the Wheat Stabilization Plan which operated during the seasons 1947–48 to 1952–53 inclusive were published in Official Year Book No. 40, pages 841 and 842, and previous issues.

(b) 1953–54 to 1957–58. Details of the plan which operated during the seasons 1953–54 to 1957–58 inclusive were published in Official Year Book No. 44, page 861, and previous issues.

(c) 1958–59 to 1962–63. Following negotiations during 1958, a new wheat industry stabilization plan was enacted by the Commonwealth and the States towards the end of that year. The new plan follows the lines of the two earlier ones. Details of the plan are as follows.

- (i) *Period of the Plan*. The plan will operate for five years. It will commence with the 1958–59 wheat crop and will end with the marketing of the 1962–63 crop.
- (ii) *Commonwealth Guarantee*. The Commonwealth will guarantee a return of 14s. 6d. a bushel to growers on up to 100 million bushels of wheat exported from the crop in the first year of the plan. The guaranteed return of 14s. 6d. is based on the findings of the recent survey of the economic structure of the wheat industry conducted by the Bureau of Agricultural Economics. It will be adjusted in each of the following years of the plan on up to 100 million bushels in accordance with the movements in costs based on a cost index established from the survey. The first two five-year Wheat Stabilization Plans each guaranteed a similar quantity of 100 million bushels exported.
- (iii) *Australian Wheat Board*. The Australian Wheat Board will be maintained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.
- (iv) *Stabilization Fund*.
  - (a) *Export Tax*. A tax will be collected on wheat exported which will be equivalent to the excess of the returns from export sales over the guaranteed return. However, the maximum rate of export tax will be 1s. 6d. a bushel.
  - (b) *Size of Fund*. The ceiling of the Stabilization Fund is established at £20 million; any excess beyond this figure will be returned to growers on the "first-in-first-out" principle.
  - (c) *Balance in Present Wheat Stabilization Fund*. The balance remaining in the Fund at the termination of the present plan will be carried forward to the new plan as the nucleus of a new stabilization fund.
  - (d) *Use of the Stabilization Fund*. When the average export realizations fall below the guaranteed return, the deficiency will be made up first by drawing upon the stabilization fund in respect of up to 100 million bushels of wheat from each crop. When the fund is exhausted, the Commonwealth will meet its obligations under the guarantee.

- (v) *Home Consumption Price.* The home consumption base price for 1958–59, the first year of the plan, was established as 14s. 6d. a bushel, bulk basis, f.o.r. ports plus 2d. a bushel loading to cover the cost of transporting wheat to Tasmania as outlined in (vi) below. There is provision in the plan for annual adjustments in the following years in accordance with the guaranteed price as outlined in (ii) above.
- (vi) *Freight on Wheat to Tasmania.* Provision is made for a loading on the price of all wheat sold for consumption in Australia to the extent necessary to cover the cost of transporting wheat from the mainland to Tasmania in each season of the plan.
- (vii) *Premium on Western Australian Wheat.* A premium will be paid from export realizations on wheat grown in Western Australia and exported from that State in recognition of the natural freight advantage enjoyed by Western Australia owing to its proximity to the principal oversea markets for wheat. The premium will be 3d. a bushel.

By agreement between the parties concerned, the Australian Wheat Growers' Federation, the States and the Commonwealth, a poll of growers as to acceptance of the plan was not considered necessary. The earlier plans had been approved by polls of growers.

The cost of production of wheat, which for the first season of the plan, 1958–59, was fixed at 14s. 6d. a bushel by the legislation, rose to 14s. 10d. a bushel for the 1959–60 season and to 15s. 2d. a bushel for the 1960–61 season. The guaranteed price for the seasons 1959–60 and 1960–61 was therefore 14s. 10d. and 15s. 2d. a bushel respectively, while the home consumption price, in each case including a loading of 2d. a bushel to cover costs of shipment of wheat to Tasmania, became 15s. and 15s. 4d. a bushel respectively. For the 1961–62 season, the guaranteed price is 15s. 9d. a bushel and the home consumption price is 15s. 10d. a bushel, which includes a loading of 1d. a bushel to cover cost of shipment of wheat to Tasmania.

(iv) *Wheat Industry Research.* In 1957, the Commonwealth Parliament passed legislation providing for a levy of a farthing a bushel on wheat handled by the Australian Wheat Board. This money, contributed by the growers, is to be spent by the Wheat Research Committees set up in the wheat-growing States. These Committees, which consist of representatives of wheatgrowers, universities and State Departments of Agriculture, also received a total of £284,000 under the provisions of the Wheat Acquisition (Undistributed Moneys) Act 1958.

The Commonwealth Government has undertaken to supply additional funds for research (with a maximum of £1 for £1 against the growers' contribution) and has set up the Wheat Industry Research Council to make recommendations on the appropriate expenditure of the Commonwealth contribution.

The Council at its inaugural meeting in February, 1958, considered that possible avenues of research would include the breeding of better varieties, cereal chemistry, soil fertility, mechanization, the industry's cost structure and marketing problems.

The Council and the State Committees have incurred an estimated expenditure of £933,507 up to the end of June, 1961, including grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, Universities and Agricultural Colleges.

4. Marketing of Wheat.—(i) *Wheat Acquired and Disposed of.* (a) *Wheat Acquired.* Particulars of wheat acquired by the Australian Wheat Board from the 1956–57 to 1960–61 harvests are shown in the following table.

AUSTRALIAN WHEAT BOARD : WHEAT ACQUIRED, 1956-57 TO 1960-61.  
(‘000 Bushels.)

(f) Subject to additional £8,024,000 (of which the Commonwealth Government provided £3,022,000) withdrawn from the Wheat Prices Stabilization Fund and payment of £187,000 to Wheat Industry Research Fund. (g) Subject to additional £8,884,000 provided by the Commonwealth Government and payment of £261,000 to the Wheat Industry Research Fund.

NOTE.—Details of earlier pools will be found in previous issues of the Year Book.

(iii) *Advances to Growers.* Each year the size of the first advance to growers is announced by the Minister for Primary Industry before the commencement of the season. Additional payments are made as sufficient funds become available to the Board from sales realizations. Details of advances made to wheat growers in respect of the various pools are published in the Statistical Bulletin: *The Wheat Industry, Australia*, last issued in April, 1962.

(iv) *Stabilization Fund.* Particulars of the most recent legislative provisions for this fund are given in para. 3 (iii) on page 903.

In accordance with the provisions of the second Stabilization Plan, amounts of £9,160,000 and £1,589,000 were paid into the Stabilization Fund from the export charge on exports from the 1953-54 and 1956-57 crops. There were withdrawals from the Fund in respect of the years 1954-55, 1955-56 and 1957-58 amounting to £189,000, £1,010,000 and £397,000 respectively. The balance of the Fund, including interest from its investment amounting to over £10 million, was carried forward as the nucleus of the Fund for the third Stabilization Plan commencing with the 1958-59 season.

Under the third Stabilization Plan an amount of £6,532,000 (7.88d. per bushel) has been withdrawn from the Fund to raise export realizations from the 1958–59 harvest. The balance of the Fund with accrued interest, together amounting to £5,002,000, was withdrawn to raise export realizations from the 1959–60 harvest. In addition, an amount of £3,022,000 was contributed by the Commonwealth Government in accordance with the guarantee. In March, 1962, the Commonwealth Government contributed £8,884,000 to meet the export guarantee, the Fund being exhausted.

5. **International Wheat Agreements.**—Details of the first and second International Wheat Agreements operative from 1st August, 1949, to 31st July, 1953, and from 1st August, 1953, to 31st July, 1956, respectively, were published in Official Year Book No. 42 (*see* pp. 840–1) and previous issues. Details of the third International Wheat Agreement, which covered the period from 1st August, 1956, to 31st July, 1959, were published in Official Year Book No. 43 (*see* p. 836).

Following ratification by the required number of wheat exporting and importing countries, a fourth International Wheat Agreement came into force on 1st August, 1959. The Agreement covers the three-year period from 1st August, 1959, to 31st July, 1962.

The new Agreement, negotiated at an international conference convened by the United Nations, continues the basic arrangements covered by previous Agreements, together with some important variations. The Agreement seeks to obtain an element of stability in world wheat marketing by providing that a significant proportion of wheat entering international trade will be bought and sold at prices within a prescribed range. The member exporting countries compete to supply at prices within the agreed price range, which is from 190 cents (Canadian currency) or about 15s. 6d. Australian to 150 cents or about 12s. 3d. a bushel. These prices are used in the following manner:—Maximum price is based on the price of Canada's No. 1 Northern Manitoba wheat in bulk in store at Fort William/Port Arthur, and the minimum price shall be each exporter's f.o.b. price's equivalent to the c.i.f. price in the United Kingdom of the minimum price of Canada's No. 1 Northern Manitoba wheat in bulk in store Fort William/Port Arthur, using currently prevailing transportation costs and exchange rates.

Member importing countries have undertaken to buy each year from member exporting countries a stated percentage of their total commercial requirements at prices within the agreed range instead of a fixed quota as under previous Agreements.

The new Agreement empowers the International Wheat Council to make an annual review of the world wheat situation, including the international implication of national policies in respect to wheat production, stocks and marketing, and the disposal of wheat surpluses on non-commercial terms.

Provision has also been made for a right of appeal against excessive discounts from the minimum price on the basis of differences in quality between the basic wheat—Canada's No. 1 Manitoba Northern Wheat—and the wheat supplied by the other member importing countries.

The provision in the previous Agreements by which the individual exporting countries had separate guaranteed quantities that they would call upon the member importing countries to buy at the minimum price has not been retained.

Member countries of the fourth International Wheat Agreement are:—

Exporters—Argentina, Australia, Canada, France, Italy, Mexico, Spain, Sweden and the United States of America.

Importers—Austria, Belgium and Luxembourg, Brazil, Costa Rica, Cuba, Dominican Republic, El Salvador, Federal Republic of Germany, Greece, Guatemala, Haiti, Honduras Republic, Iceland, India, Indonesia, Ireland, Israel, Japan, Korea, The Netherlands, New Zealand, Norway, Panama, Peru, The Philippines, Portugal, Federation of Rhodesia and Nyasaland, Saudi Arabia, Switzerland, Republic of South Africa, United Arab Republic, United Kingdom, Vatican City, and Venezuela.

6. **Wheat Farms.**—(i) *Number.* Particulars of the number of farms growing 20 acres and upwards of wheat for grain during each of the years 1956–57 to 1960–61, are shown in the following table. It should be noted that a farm worked on the share system or as a partnership is included as one holding only.

**NUMBER OF FARMS GROWING 20 ACRES AND UPWARDS OF WHEAT FOR GRAIN.**

7. **Area, Production and Yield per Acre.**—(i) *Area.* Wheat is the principal crop grown in Australia, and its progress since 1860-61 has been almost continuous, although the area shown has been at a lower level during the past decade. Prominent features in its early development were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

The area, production and yield per acre of wheat for grain in each State are shown below for the years 1956-57 to 1960-61 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

(a) 60 lb. per bushel.

A graph showing the area sown to wheat for grain in Australia since 1900-1 appears on page 912 while a map showing the distribution of areas growing wheat for grain throughout Australia in 1954-55 appeared on page 833 of Official Year Book No. 43. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39 and 1947-48 appeared respectively in Official Year Books No. 22, page 695, No. 34, page 451 and No. 39, pages 977-8.

(ii) *Production.* Apart from the variations in the area sown, the size of the wheat harvest in Australia is largely determined by the nature of the season, resulting in considerable year-to-year fluctuations in production.

The main wheat-producing States of Australia are New South Wales, Victoria, South Australia and Western Australia. Queensland production normally approaches local demands, but Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits. Normally the production of wheat greatly exceeds Australian requirements, and a large proportion of the crop is exported.

Production of wheat in 1960-61 was a record at 273,716,000 bushels. This was 75,215,000 bushels greater than production in 1959-60 and 53,600,000 bushels greater than the previous record of 220,116,000 bushels achieved in 1947-48. Record production levels of 67,587,000 bushels and 63,900,000 bushels were recorded in Victoria and Western Australia respectively, and all States except Queensland and Tasmania showed substantial increases over production in 1959-60. The most notable increase occurred in South Australia, where production in 1960-61 was nearly four times the 1959-60 figure of 11,929,000 bushels.

(iii) *Yield per Acre.* Short-term variations in yield per acre are due chiefly to seasonal influences. High yields per acre for Australia for single seasons since 1901 were obtained in 1920-21, 16.1 bushels; in 1942-43, 16.8 bushels; in 1949-50, 17.8 bushels; in 1952-53, 19.1 bushels; in 1953-54, 18.4 bushels; in 1955-56, 19.2 bushels; in 1958-59, 20.7 bushels (a record); in 1959-60, 16.3 bushels; and in 1960-61, 20.4 bushels.

(iv) *Decennial Averages, 1861-70 to 1951-60.* The following table shows the average area, production and yield per acre for decennial periods since 1861.

## WHEAT FOR GRAIN: AVERAGE AREA AND PRODUCTION, AUSTRALIA.

Period.	Area.		Production.		Yield per Acre.

1951-60 .. ..	10,164	173,622			17.1

8. **Varieties of Wheat Sown.**—(i) *General.* The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845–1905) did invaluable work in pioneering this field and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown during each season is restricted to about 45.

(ii) *States, 1960–61.* The principal varieties of wheat sown and the percentage of each to the total area sown in the five main producing States during 1960–61 were as follows:—New South Wales, Glenwari (20.4), Bencubbin (10.1), Gabo (9.0); Victoria, Insignia (49.0), Pinnacle (21.5), Olympic (14.2); Queensland, Festival (43.2), Spica (24.7); South Australia, Insignia (23.3), Gabo (20.9), Dirk (14.6); and Western Australia, Gabo (37.7), Insignia (15.3), Bungulla (11.5). A detailed table of wheat varieties sown in these five States appears in the annual bulletin *Primary Industries—Part I.—Rural Industries.*

9. **F.A.Q. Standard of Wheat.**—Samples of wheat are obtained each year from the different wheat districts, and mixed to give a representative sample of the whole crop in each State. From this representative sample the “f.a.q.” (fair average quality) weight for each State is determined by the use of the Schopper 1-litre scale chondrometer. This standard is used as a basis for sales of each crop and it varies from year to year and from State to State. Until the 1957–58 season, the Chambers of Commerce in each of the four main wheat-producing States determined the f.a.q. standard for each season’s crop. Commencing with the 1958–59 season, however, the f.a.q. standard has been determined by State committees comprising representatives of the Australian Wheat Board, the silo authorities, the growers and the State Departments of Agriculture. “F.a.q.” is an Australian term, and the method of selling differs from that of other countries, which sell according to sample, or (as in Canada) according to grades, which are fixed and do not vary from year to year.

The f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States for the 1960–61 season’s crop was as follows:—New South Wales, North, 64 lb., South and West, 62 lb.; Victoria, 64½ lb.; South Australia, semi-hard, 64 lb., soft, 64½ lb.; and Western Australia, 64 lb.

10. **Price of Wheat.**—(i) *Home Consumption.* The price charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed was as follows:—Year ended 30th November, 1958, 14s. 4d.; 1959, 14s. 8d.; 1960, 15s. 0d.; 1961, 15s. 4d.; and 1962, 15s. 10d. These prices include an amount used to meet freight charges incurred on wheat shipped to Tasmania (2d. from 1958 to 1961; and 1d. in 1962). The figure quoted for 1958 does not apply to New South Wales and Queensland, where, because of the necessity of meeting the extra cost of importing wheat from Canada and Western Australia, the prices during the greater part of the year were 18s. 4½d. and 16s. 9½d. respectively.

(ii) *Export Wheat Prices—Australian Wheat Board’s Basic Selling Price.* The Wheat Board’s monthly basic export selling prices for f.a.q. bulk wheat f.o.b. basis, both for wheat sold under the International Wheat Agreement and for “free” wheat sold on the open market, fell in the following ranges:—Season ended 31st July, 1958, 13s. 10½d. to 14s. 11d.; 1959, 13s. 4d. to 14s. 6½d.; 1960, 13s. 3d. to 13s. 6d.; 1961, 13s. 5d. to 13s. 9d.; and 1962, 13s. 10d. to 14s. 10½d. Actual selling prices have been lower than the basic prices in some cases, particularly where other exporting countries enjoy a geographical freight advantage.

The maximum and minimum prices fixed under the 1956 International Wheat Agreement are expressed in terms of “Canadian currency per bushel, at the parity of the Canadian dollar determined for the purposes of the International Monetary Fund for No. 1 Manitoba Northern wheat in bulk in store Fort William/Port Arthur.” The maximum price was set at 200 cents a bushel and the minimum at 150 cents for f.a.q. wheat. Under the current 1959 Agreement operative from 1st August, 1959 (see paragraph 5, p. 906), the agreed price range is between 190 cents and 150 cents. Directly converted into Australian currency these limits are approximately 15s. 6d. and 12s. 3d. a bushel respectively.

Details of export wheat prices in previous years, including those received for wheat sold under the terms of the 1949–1953 International Wheat Agreement, are given in Official Year Book No. 40, pages 849–50, and Statistical Bulletin: *The Wheat Industry, Australia*, No. 95 of April, 1959, and in previous issues of these publications.

11. **Value of the Wheat Crop.**—The estimated gross value of the wheat crop in each State and in Australia during the season 1960–61 and the value per acre are shown below

## WHEAT FOR GRAIN: VALUE OF CROPS (a), 1960-61.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000	59,432	48,244	7,735	34,000	46,145	103	19	195,678
Value per Acre £	14.6	18.1	11.2	17.3	11.5	14.7	19.0	14.6

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of £8,884,000 by the Commonwealth Government.

12. Production and Disposal of Wheat in Australia.—In the following table, details are given of the production of wheat and its disposal during each of the years ended 30th November, 1957 to 1961. The particulars for local consumption are based on sales made by the Australian Wheat Board, whilst those relating to exports represent actual shipments. (For particulars of production and yield from 1900-01 see graph, p. 912.)

(a) In terms of wheat. (b) Includes allowance for unrecorded movements in stocks, gain or loss in out-turn, etc.

NOTE.—One short ton of flour is taken to be equivalent to 46.3 bushels of wheat.

13. Imports of Wheat.—Owing to drought conditions in 1957-58, wheat supplies, particularly in New South Wales, were insufficient for local requirements. As a result, 1,136,000 bushels were imported from Canada during March, April and May, 1958, and a further 349,000 bushels in July, 1958. No wheat has been imported since this period.

Wheat and flour have been imported in substantial quantities on only two previous occasions since 1900; in 1902-3 the wheat harvest was only 12,378,000 bushels, and wheat and flour representing 12,468,000 bushels of wheat were imported, while an equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season.

14. Exports of Wheat and Flour.—(NOTE: Statistics in this paragraph relate to years ended 30th June.) (i) *Quantities.* The following table shows particulars of the exports of wheat and flour and the total of both, in terms of wheat, for each of the years 1956-57 to 1960-61.

(a) Held by the Australian Wheat Board at mills, sidings, ports and depots.

NOTE.—One short ton of flour is taken to be equivalent to 46.3 bushels of wheat.

16. **Bulk Handling and Storage of Wheat in Australia.**—(i) *Description and Development of the Bulk Handling System.* A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954–8 of Official Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, and, in more recent years, other States have also introduced bulk systems.

(ii) *Bulk Handling and Storage in the States.* Particulars of the operation of the bulk handling and storage systems and projected extensions in the States concerned are set out below.

(a) *New South Wales.* Bulk handling facilities are operated by the Grain Elevators Board of New South Wales. The capacity of storages in the country for the 1961–62 season totalled 63,570,000 bushels and comprised 182 elevators (27,250,000 bushels), 13 horizontal type concrete and steel storages (3,230,000 bushels), 4 sub-terminals (16,500,000 bushels), 78 bulkheads (7,890,000 bushels) and 12 bulk depots (8,700,000 bushels). In addition, port terminal facilities provided storage for 4,200,000 bushels at Newcastle and 7,500,000 bushels at Sydney, making a total capacity of 75,270,000 bushels for the State.

(b) *Victoria.* In the 1961–62 season the Victorian Grain Elevators Board operated bulk storages at 205 country stations having a total capacity of 29,565,000 bushels. The facilities consist of vertical silos (some steel but mostly concrete, some of which have steel annexes), horizontal Behlen sheds, and temporary horizontal bulkheads with a capacity of 2,151,000 bushels, as part of the total of 29,565,000 bushels.

In addition to the above, the bulk terminal at Geelong has a capacity of 22,250,000 bushels, including two horizontal sheds, each of 9,000,000 bushels, while sub-terminal storages at Dunolly, Murtoa and Warracknabeal can hold up to 22,400,000 bushels.

(c) *Queensland.* Bulk storages in this State are controlled and operated by the State Wheat Board. The capacity in the country for the 1961–62 season totalled 5,818,000 bushels. This total is composed of 12 silos (3,250,000 bushels) and 22 bulkheads (2,568,000 bushels).

The terminal bulk storage at Pinkenba commenced receiving wheat in July, 1959, with a storage capacity of 1,300,000 bushels.

(d) *South Australia.* Since the formation of the South Australian Co-operative Bulk Handling Ltd. in 1955, steady progress has been maintained in the expansion of the system.

The present capacity of bulk storages is 18,810,000 bushels—comprising 1,030,000 bushels at Ardrossan; 1,600,000 at Wallaroo; 1,320,000 at Port Lincoln; 820,000 at Thevenard; and 14,040,000 in country areas.

For the 1961–62 season, 24,317,000 bushels of wheat were received in bulk at 38 installations in country areas in addition to the terminals at Ardrossan, Wallaroo, Port Lincoln and Thevenard.

A new terminal is in course of construction at Port Pirie with a capacity of 1,100,000 bushels. Terminal extensions are in course of construction at Wallaroo (800,000 bushels), Port Lincoln (800,000 bushels) and Ardrossan (660,000 bushels). In addition to the above, the company is building 16 country silos with an overall capacity of 3,640,000 bushels. This will raise the total capacity of the company's silos for the 1962–63 season to 25,810,000 bushels.

(e) *Western Australia.* The bulk handling system is operated by Co-operative Bulk Handling Ltd., which is a company controlled by growers. The whole of the marketable harvest is received in bulk. There were, in 1961–62, 295 sidings equipped with bulk handling facilities. Four of these sidings now have concrete storages.

The system of storage at country stations in Western Australia comprises fixed installations of galvanized iron bins and iron and timber horizontal bulkheads. In addition, a type of temporary roofed bulkhead consisting of timber and iron is used. This latter type of storage can be transferred to suit operational requirements, and therefore lends flexibility to the system. Terminal installations comprise concrete silos and timber and iron horizontal bulkheads. Plans are in hand to increase the number of vertical concrete cell type storages at the main ports.

The total storage capacity for the 1961–62 season was 105,094,000 bushels, comprising 80,574,000 bushels in the country and 24,520,000 bushels at ports, including 1,000,000 bushel capacity scheduled for completion during 1962.

(f) *Tasmania.* In order to meet the change to bulk handling of wheat in the mainland exporting States, the Tasmanian Government has constructed grain elevators at Hobart, Launceston and Devonport, each with a capacity of 320,000 bushels, for storage of bulk wheat shipments from the mainland.

17. *World Area and Production of Wheat.*—The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from the statistics published by the Foreign Agricultural Service of the United States Department of Agriculture. Years shown refer to years of harvest in the Northern Hemisphere. Harvests of the Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow; thus, the crop harvested in the Northern Hemisphere in 1960 is combined with preliminary forecasts for the Southern Hemisphere harvests, which will begin late in 1960 and end early in 1961.

(a) Figures refer to harvested areas as far as possible. For Australia, area sown is shown.  
 (b) Estimated totals, which in the case of production are rounded to millions, include allowances for any missing data for countries shown and for other producing countries not shown. (c) Estimated.  
 (d) Not available.

18. **Principal Exporting and Importing Countries.**—The following table shows the quantities of wheat traded by the chief exporting and importing countries for the years 1958–59 to 1960–61, based on statistics recently published by the Food and Agriculture Organization of the United Nations.

While Australia's production of wheat averages less than 3 per cent. of the world's total, its exports account for a much higher proportion of the total quantities shipped. In 1960–61, for example, Australia's share of world wheat exports amounted to 12.9 per cent.

**WHEAT (INCLUDING FLOUR IN TERMS OF WHEAT): PRINCIPAL EXPORTING  
AND IMPORTING COUNTRIES.**

(a) Preliminary. (b) Unofficial estimate. (c) Total exports do not necessarily agree with total imports because of the time lag between shipments and arrivals, and because export data in official trade returns do not always indicate final destinations. (d) Less than .05 of the unit shown.

NOTE.—One short ton (2,000 lb.) of flour is taken to be equivalent to 46.3 bushels of wheat.

Estimates of exports to, and imports from, the U.S.S.R. and Mainland China (and Poland for 1958-59 only) in the table above are based entirely on available trade returns of the trading partners outside the Sino-Soviet bloc. No account is taken of trade within this bloc owing to the incomplete nature of the data.

## § 5. Oats.

1. Area, Production and Yield per Acre.—Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1960-61 accounted for 45 per cent., oats grown for grain represented only 12 per cent. of the area of all crops. The area, production and yield per acre of oats in each State are shown below for the years 1956-57 to 1960-61 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

## OATS FOR GRAIN : AREA, PRODUCTION AND YIELD PER ACRE.

1959-60 ..	19.6	18.9	18.4	5.0	15.8	23.2	24.8	15.5
1960-61 ..	23.5	24.7	15.0	22.4	16.4	17.0	21.9	20.9

(a) Less than 500 acres.

(b) 40 lb. per bushel.

(c) Less than 500 bushels.

Graphs showing the area sown to oats, and production of oats appear on pages 911 and 913 respectively.

In 1958-59, extremely favourable seasonal conditions for all cereal crops were experienced, and production of oats reached an all-time high at 86,905,000 bushels, the previous record being 56,487,000 bushels in 1955-56. Production was again at a near record level in 1960-61 when 76,107,000 bushels were harvested.

The average yield of 20.9 bushels an acre in 1960-61 was only just below the yield of 21.9 bushels an acre in 1958-59, the highest yield in recent years. The previous highest yield in recent years was 19.3 bushels an acre in the 1947-48 season, which was the highest since 1920-21. The yield per acre recorded in the abnormally dry season 1944-45, 4.4 bushels, was the lowest ever recorded for Australia.

2. **Price of Oats.**—The average wholesale price in the Melbourne market for oats of good milling quality was 7s. 1½d. a bushel in 1960–61, compared with 7s. 9d. in 1959–60.

3. **Value of Oat Crop.**—The estimated gross value of the oat crop in each State for the 1960–61 season and the value per acre were as follows.

OATS : VALUE OF CROP, 1960-61.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000	9,034	6,479	146	2,809	6,875	189	3	25,535
Value per acre.. £	9.9	7.8	7.7	5.5	5.2	8.2	3.0	7.0

4. **Exports.**—The production of oats in Australia is sufficient to allow for a regular export trade. The quantities and values of oats exported from Australia during the years 1956–57 to 1960–61 are shown below.

OATS : EXPORTS, AUSTRALIA.

Particulars.	1956–57.	1957–58.	1958–59.	1959–60.	1960–61.
Quantity .. .. '000 bus.	8,165	2,296	17,557	11,969	19,005
Value .. .. £'000	2,972	1,064	6,512	5,031	6,854

In 1960–61, the principal countries of destination were the Federal Republic of Germany (6,352,000 bushels), Republic of China (Mainland) (3,596,000 bushels), the Netherlands (3,390,000 bushels), Italy (3,281,000 bushels) and the United Kingdom (1,787,000 bushels). Imports of oats into Australia are not recorded separately.

5. **Oatmeal, etc.**—In 1960–61, the production of oatmeal was 15,868 tons for porridge and 15,677 tons for other purposes. This was equivalent to about 3,500,000 bushels of oats.

6. **World Production.**—The world's production of oats for the year 1960, according to figures released by the United States Department of Agriculture, amounted to 4,000 million bushels, harvested from 110.6 million acres, representing an average yield of 36.2 bushels per acre. This compared with an estimated production in the previous year of 3,725 million bushels from an area of 111.2 million acres and an average yield of 33.5 bushels an acre.

§ 6. Maize.

1. **States Growing Maize.**—Maize is grown for grain chiefly in Queensland and New South Wales, the area so cropped in these States during the 1960–61 season being 181,651 acres, or 98 per cent. of the total for Australia. In all States except South Australia, the crop is grown to some extent for green fodder, particularly in connexion with the dairying industry.

2. **Area, Production and Yield per Acre.**—Although maize for grain is grown extensively in other countries, the area sown to maize for grain in Australia has averaged only 182,549 acres during the five years ended 1960–61. The area in 1960–61 was 184,642 acres, a slight decrease only on the previous year, but considerably less than the comparatively large areas of 414,914 and 400,544 acres sown in 1910–11 and 1927–28 respectively.

There has been a considerable increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialized industry of growing hybrid strains for seed.

The area, production and yield per acre of maize for grain in each State for the years 1956-57 to 1960-61 compared with the averages for the three three-year periods ended 1938-39, 1948-49 and 1958-59 are given in the following table. Separate details for hybrid and other varieties are shown for New South Wales, Victoria and Queensland for 1960-61.

(a) Not available for publication. (b) Incomplete. See footnotes to individual States. (c) 56 lb. per bushel. (d) Less than 500 bushels.

The average yield for Australia for the five-year period ended 1960-61 was 33.7 bushels per acre. Among principal producing countries during 1960, the United States of America averaged 53.0 bushels per acre and Italy 46.2 bushels.

3. Price of Maize.—The average wholesale price of maize in the Melbourne market in 1960-61 was 20s. 4½d. a bushel compared with 16s. 1d. in 1959-60.

4. Value of Crop.—The estimated gross value of the crop in each State for the 1960-61 season and the value per acre were as follows.

**MAIZE FOR GRAIN: VALUE OF CROP, 1960-61.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Aust.
Aggregate value ..	£'000	1,976	137	3,151	..	(a)	5,264
Value per acre ..	£	40.1	45.9	23.8	..	1.3	28.5

(a) Less than £500.

5. Exports of Maize and Maize Products.—Details of exports of maize for the five years ended 1960-61 are shown below.

MAIZE : EXPORTS, AUSTRALIA.

Particulars.		1956-57.	1957-58.	1958-59.	1959-60.	1960-61.
Quantity ..	'000 bus.	32	48	15	22	3
Value ..	£'000	26	30	10	15	3

Imports of maize into Australia are not recorded separately.

Exports of cornflour, which prior to the 1939-45 War were very small, increased considerably during the war years, the principal country of destination being New Zealand. In 1960-61, however, only 129,700 lb., valued at £2,652, were exported. It should be noted that these figures include some quantities of "cornflour" made from wheat. Imports of cornflour into Australia are not recorded separately.

6. World Production.—According to preliminary figures released by the United States Department of Agriculture, world production of maize in the year 1960 amounted to 8,200 million bushels, harvested from 268 million acres, giving an average yield per acre of 30.6 bushels. This compared with production in the previous year of 7,940 million bushels from 269 million acres, and an average of 30.4 bushels per acre.

The United States of America is the most important maize-producing country in the world and during the three years ended 1960 the area sown to maize in that country averaged 80 million acres or 30 per cent. of the world total. During the same period, production averaged 4.145 million bushels or about 51 per cent. of the world total. These figures are not strictly comparable with those for other countries included in the above-mentioned world totals, as the area and an estimate of grain equivalent of maize used as green fodder are included.

A graph showing the production of maize in Australia appears on page 913.

§ 7. Barley.

1. Area, Production and Yield per Acre.—The area sown to barley for grain expanded considerably during the ten years preceding the 1939-45 War—from 383,000 acres in 1930-31 to 836,000 acres in 1939-40. This increase was followed by a decline to 443,000 acres in 1943-44, but the area sown has increased in succeeding years and in 1960-61 reached the record level of 2,830,000 acres. Victoria was originally the principal barley-growing State, but since 1913-14 its place has been taken by South Australia which accounted for 55 per cent. of the Australian acreage in 1960-61. There has been a substantial increase in the acreage sown in most States in recent years, particularly in Western Australia and Queensland. Small areas of barley are sown for hay, and larger quantities are sown for green forage, but these are not included in this section. The production of barley for grain in Australia in 1960-61 was a record at 67,970,000 bushels. The previous highest recorded production occurred in 1958-59 when 62,976,000 bushels were produced. The area, production and yield per acre of barley for grain in the several States for the years 1956-57 to 1960-61, compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

(a) Less than 500 acres.

(b) 50 lb. per bushel.

(c) Less than 500 bushels.

For Australia (excluding Tasmania), 82 per cent. of the area of barley for grain in 1960-61 was sown with 2-row barley, while the remainder consisted of 6-row varieties. The proportion, however, varied considerably in the several States. The utilization of barley during the season ended November, 1961, was as follows:—exports, 41,583,000 bushels; malting and distilling, 9,017,000 bushels; pearl barley, 178,000 bushels; seed and stock feed, 14,300,000 bushels.

The following table sets out the acreage and production of 2- and 6- row barley in Australia during the seasons 1956-57 to 1960-61 and the averages for the three years ended 1938-39, 1948-49 and 1958-59.

(a) 50 lb. per bushel.

(b) Excludes Tasmania.

A graph showing the production of barley appears on page 913.

2. **Australian Barley Board.**—Following the outbreak of war in 1939, the Australian Barley Board, representative of the whole industry, was formed, and the Commonwealth Government acceded to its request to acquire the entire 1939–40 barley crop, which was placed under the control of the Board. A pool was established, from which proceeds were distributed with appropriate margins for different grades of barley. The Board was responsible for the marketing and storage of barley, and, like the Australian Wheat Board, appointed licensed receivers to receive grain on its behalf.

Following the decision of the Commonwealth Government not to acquire barley in the smaller producing States after 1941–42, the pooling of barley in Queensland reverted to the control of the Queensland Barley Board (originally established in 1930), and in Western Australia a State Barley Board was established to control marketing.

The Commonwealth Government ceased to acquire barley altogether after the 1947–48 crop, and the Victorian and South Australian Governments formed a joint board under the same name as the former Commonwealth board to market the 1948–49 and subsequent crops of the two States. Details for the seasons from 1955–56 to 1960–61 are shown in the table below.

**AUSTRALIAN BARLEY BOARD : BARLEY RECEIVED, SOLD, ETC.**

Pool.	Quantity Received.	Quantity Sold.(a)	Total Advances made per Bushel on 2-row No. 1 Grade less freight.		Total Net Payments to Growers.
			s.	d.	
	'000 bushels.	'000 bushels.			£
No. 17 (1955–56 Crop) .. ..	29,357	29,454	10	3.441	12,990,173

„ 21 (1959–60 „) .. ..	11,773	11,797	10	0.51	4,904,172
„ 22 (1960–61 „) .. ..	44,624	44,624	(b) 8	6	15,267,359

(a) Includes surplus in out-turn except for No. 22 Pool, for which this surplus has not yet been determined. (b) As at 31st December, 1961. At that date, it was estimated that the amount still to be paid to growers was 8.418d. per bushel.

3. **Prices.**—The average wholesale price for 2-row English malting barley in the Melbourne market during 1960–61 was 14s. 11d. compared with 14s. 7d. in 1959–60.

4. **Value of Barley Crop.**—The estimated gross value of the barley crop in each State for the 1960–61 season and the value per acre are shown in the following table.

**BARLEY FOR GRAIN : VALUE OF CROP, 1960-61.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	Australia.
Aggregate value .. £'000	2,884	3,317	2,170	18,989	3,465	247	31,072
Value per acre .. £	15.3	10.7	9.9	12.2	6.4	15.4	11.0

5. **Exports.**—Exports of barley during the five years ended 1960–61 averaged 27,368,000 bushels. South Australia was the principal exporting State, while the Republic of China (Mainland), Italy, the Netherlands and the United Kingdom were the principal countries to which barley was shipped. Particulars of Australian exports for the years 1956–57 to 1960–61 are shown in the following table.

**BARLEY : EXPORTS, AUSTRALIA.**

Particulars.	1956–57.	1957–58.	1958–59.	1959–60.	1960–61.
Quantity .. .. '000 bus.	26,501	21,501	29,924	25,013	33,900
Value .. .. £'000	12,745	9,474	16,898	11,541	14,329

Imports of barley into Australia are not recorded separately.

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1960-61 amounting to 215,128 lb., valued at £10,982, consigned mainly to Malaya.

6. Malt.—(i) *Production.* Details of the quantity of grain used and the production of barley malt in the years 1956-57 to 1960-61 are given in the following table.

**BARLEY MALT : GRAIN USED AND MALT PRODUCED, AUSTRALIA.**

Particulars.	1956-57.	1957-58.	1958-59.	1959-60.	1960-61.
Grain used . . '000 bus. <i>a</i>	7,855	8,494	8,198	8,539	9,020
Malt produced . . '000 bus. <i>b</i>	7,895	8,197	8,108	8,435	9,015

(a) 50 lb. per bushel.      (b) 40 lb. per bushel.

(ii) *Exports.* Since 1952-53, the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports amounting to 1,103,927 bushels (value £1,046,693) and 2,055,445 bushels (value £1,985,109) were recorded in 1959-60 and 1960-61 respectively.

7. *World Production.*—In comparison with the barley production of other countries, that of Australia is extremely small. The main producers in 1960 were the United States of America, France, and Canada. China is also normally a major producer, but details for 1960 are not available. Australian production in that year was approximately two per cent. of the world total.

According to estimates made by the United States Department of Agriculture, world production of barley in the year 1960 amounted to 3,410 million bushels harvested from 135.9 million acres, equivalent to a yield per acre of 25.1 bushels. This compared with the production of 3 290 million bushels in the previous year from 136.5 million acres, and a yield per acre of 24.1 bushels.

### § 8. Rice.

The principal rice-growing areas of the world are confined almost entirely to Asia although limited quantities are grown in other countries. In Australia, rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Area until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

The area sown in New South Wales in 1960-61 was 46,117 acres, which was 4,360 acres below the 1956-57 record of 50,477 acres. Production in 1960-61 amounted to 6,001,066 bushels, which was 730,987 bushels less than the amount produced in 1959-60.

A graph showing the production of rice appears on page 913.

The bulk of Australia's exports of rice in 1960-61 was shipped to Papua and New Guinea, the Pacific Islands and the United Kingdom.

Details relating to area, production and exports for the years 1956-57 to 1960-61 are shown in the following table.

**RICE : AREA, PRODUCTION AND EXPORTS, AUSTRALIA.(a)**

Season.	No. of Holdings Growing Rice.(b)	Area.	Production (Paddy Rice).			Average Yield (Paddy) per Acre.	Exports.(d)	
			Quantity.	Gross Value. (c)			Un-cleaned.	Cleaned.
			Acres.	'000 Bushels. (e)	£'000.	Bushels. (e)	Cwt.	Cwt.
1956-57 .. ..	652	50,477	4,262	3,069	84.4	177,123	408,634	
1957-58 .. ..	743	46,774	5,658	4,045	121.0	211,426	430,928	
1958-59 .. ..	775	47,054	6,619	4,731	140.7	182,583	704,381	
1959-60 .. ..	848	48,950	6,732	4,450	137.5	265,640	1,055,841	
1960-61 .. ..	787	46,117	6,001	4,125	130.1	359,441	876,216	

(a) Until recently rice-growing in Australia has been practically confined to New South Wales with very small acreages only being sown in Queensland and Western Australia. Production commenced in the Northern Territory in 1956-57 but details, which are confidential, are not included in the table. (b) Twenty acres or more in area. (c) Excludes the value of straw. (d) Imports into Australia are not recorded separately. (e) 42 lb. per bushel.

Experimental rice growing is continuing in the Humpty Doo area of the Northern Territory.

**§ 9. Sorghum for Grain.**

The growing of sorghum for grain on an extensive scale is a comparatively recent development in Australia. No details of the area and production of this cereal are available prior to 1939-40, but the output was of little importance. The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghum and so far development has been restricted mainly to these areas, and more particularly to Queensland which accounts for the greater portion of the area sown. The grain produced is fed to livestock and has become an important source for supplementing other coarse grains for the feeding of livestock. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). Particulars of the area and production of sorghum grown for grain are given in the following table.

**GRAIN SORGHUM : AREA, PRODUCTION AND YIELD PER ACRE, AUSTRALIA.**

(a) 60 lb. per bushel.

(b) Includes small areas sown and quantities produced in other States.

## § 10. Potatoes.

1. **Area, Production and Yield per Acre.**—Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. Until 1958–59, Tasmania came next in order of acreage sown, although production exceeded that of Victoria in some of the war years. Since 1958–59, however, New South Wales, which had previously occupied third position, has supplanted Tasmania as the second most important State in area sown. In 1960–61, owing to adverse conditions during the growing season together with a decline in area sown, production in Tasmania was for the first time exceeded also by that in Queensland, South Australia and West Australia.

The area sown, production and yield per acre of potatoes in each State during the years 1956–57 to 1960–61 and the averages for the three-year periods ended 1938–39, 1948–49 and 1958–59 are shown hereunder.

1959–60 ..	4.28	5.00	4.18	8.33	8.04	6.31	5.37	5.34
1960–61 ..	4.64	4.68	4.95	7.83	6.84	3.59	1.02	4.91

(a) Includes Northern Territory.

After the outbreak of war in the Pacific in December, 1941, the area sown to potatoes increased rapidly and reached a maximum of 241,803 acres in 1944-45. Areas sown in subsequent seasons have been considerably less, and the figure for 1960-61 was 91,805 acres.

The average yield in Australia for 1960-61 was 4.91 tons per acre, which was considerably less than the yield of 5.34 tons obtained the previous season.

2. **Gross Value of Potato Crop.**—The estimated gross value of the potato crop of each State for the 1960-61 season and the value per acre are shown in the following table.

POTATOES : VALUE OF CROP, 1960-61.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000	3,066	9,343	1,886	1,596	1,709	1,764	1	19,365
Value per acre £	167	242	157	306	257	162	41	211

3. **Consumption.**—The annual consumption of potatoes in Australia during each of the three years 1958-59 to 1960-61 amounted to 511,934 tons, 523,671 tons and 401,838 tons respectively, or 115.2 lb., 115.4 lb. and 86.6 lb. respectively per head of population. These figures exclude the quantities used for seed, which averaged about 48,700 tons annually over this period.

4. **Marketing.**—Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948 with the completion of sales of the 1947-48 crop.

Potato Marketing Boards were subsequently established in all States under separate State legislation. The life of the Queensland Board was not extended when its term ended in 1954, and the New South Wales Board was voted out by growers in 1956. As the Victorian Board does not acquire the State crop, potato marketing is now conducted chiefly on an open marketing system.

5. **Exports.**—Prior to the 1939-45 War, small quantities of potatoes were exported, principally to the Pacific Islands and Papua. After the war, the export trade expanded considerably. It reached a peak of 37,570 tons in 1952-53, but then fell sharply. Details showing exports for the years 1956-57 to 1960-61 are given in the following table.

POTATOES : EXPORTS, AUSTRALIA.

Particulars.	1956-57.	1957-58.	1958-59.	1959-60.	1960-61.
Quantity .. .. tons	3,958	7,410	4,489	4,748	5,219
Value .. .. £'000	263	227	152	134	195

Imports of potatoes into Australia in 1960-61 amounted to 1,619 tons, valued at £47,601, coming solely from New Zealand.

## § 11. Onions.

1. **Area, Production and Yield per Acre.**—Up to and including 1959-60, Australia's onion supply came chiefly from Victoria. However, in 1960-61, production in Queensland exceeded that of Victoria by nearly 5,000 tons. Most of Queensland's onion production is grown in the Lockyer Valley, and consists mainly of brown varieties. The Victorian crop consists almost entirely of brown onions, and the bulk of the crop is grown in a small section of the Western Division of the State, where soil conditions have been found to be particularly suitable for onion growing on a commercial scale. Details of the area, production and yield per acre are given in the following table for the years 1956-57 to 1960-61 together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

## ONIONS : AREA, PRODUCTION AND AVERAGE YIELD.

1958-59 ..	5.58	7.17	3.98	8.83	12.70	4.62	8.15	6.22
1959-60 ..	5.25	6.96	4.14	8.80	12.32	4.66	3.25	6.10
1960-61 ..	6.31	4.60	5.62	9.05	12.52	4.83	8.00	5.90

2. **Gross Value of Onion Crop.**—The estimated gross value of the onion crop and the value per acre are shown in the following table for the 1960-61 season.

## ONIONS : VALUE OF CROP, 1960-61.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000	103	750	537	230	192	18	3	1,833
Value per acre £	165	212	143	350	413	305	300	201

3. **Consumption.**—The annual consumption of onions in Australia averaged 56,700 tons or 12.5 lb. per head of population during the three years ended 1960-61. These figures exclude an estimated wastage which averaged 2,500 tons per annum.

4. **Exports.**—Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. In 1960-61, exports amounted to 2,453 tons, valued at £88,668, and were shipped mainly to Singapore and New Caledonia. The quantity of exports in 1959-60 was 1,124 tons, valued at £70,052. Imports of onions amounted to 2,061 tons, valued at £72,195 in 1959-60, and 2,809 tons, valued at £91,214 in 1960-61.

## § 12. Hay.

1. General.—(i) *Area and Production.* As already stated, the chief crop in Australia, in terms of area, is wheat grown for grain. Up to and including 1946-47, hay was next, but in more recent years it has dropped in relative importance. In 1960-61, the areas sown to green fodder, and oats for grain, were larger than that sown to hay.

In 1960-61, the hay area represented 10.0 per cent. of the total area cropped. A graph showing the area sown to hay crops since 1900-01 appears on page 911. In most European countries, hay consists almost entirely of meadow and other grasses, but in Australia a very large proportion consists of oats, lucerne and wheat. The area, production and yield per acre of hay of all kinds in the several States during the years 1956-57 to 1960-61 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below.

(a) Includes small amounts grown in the Northern Territory.

For a number of reasons, particularly the variations in the relative prices of grain and hay and whether the season is favourable or not for a grain crop, the area of hay is apt to fluctuate considerably. The area under hay in Australia during the season 1915-16, 3,598,000 acres, was the largest on record, while the area recorded in 1958-59, 3,018,000 acres, was the largest since 1938-39. The area in 1960-61 was 2,973,000 acres while production in that year, at 5,079,000 tons, was the highest since 1915-16.

A graph showing the production of hay appears on page 913.

(ii) *Varieties Grown.* Information regarding areas cut for hay in 1960-61 is given in the following table.

**HAY : AREA OF VARIOUS KINDS GROWN, 1960-61.**  
(Acres.)

State.	Wheaten.	Oaten.	Lucerne.	Other.	Total.
New South Wales .. ..	101,002	98,059	207,844	343,297	750,202
Victoria .. ..	36,430	180,224	84,061	985,531	1,286,246

For all States and the Territories combined, the proportions of the areas sown to the principal kinds of hay in 1960-61 were 20.0 per cent. for oaten, 13.1 per cent. for lucerne, 8.3 per cent. for wheaten, and 58.6 per cent. for other hay.

2. **Value of Hay Crop.**—The following table shows the estimated gross value, and the value per acre, of the hay crop of the several States for the 1960-61 season.

**HAY : VALUE OF CROP, 1960-61.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Aust.
Aggregate value £'000	13,179	22,018	3,651	4,622	3,607	3,008	85	(a)50,181
Value per acre £	17.6	17.1	43.3	11.8	12.7	17.6	21.6	16.9

(a) Includes £11,000 in the Northern Territory.

3. **Farm Stocks of Hay.**—Particulars of stocks of hay held on farms at 31st March in each year 1957 to 1961 are given in the table below.

**STOCKS OF HAY HELD ON FARMS.**  
(Tons.)

31st March—	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	A.C.T.	Australia.
1957 ..	775,464	2,008,678	156,599	555,681	222,941	296,257	7,617	4,023,237
1958 ..	553,691	1,643,876	89,897	384,143	211,069	256,199	3,492	3,142,367
1959 ..	1,463,334	2,464,050	166,657	679,003	290,988	311,825	9,323	5,385,180
1960 ..	1,535,252	1,766,857	203,675	304,227	292,086	255,471	10,778	4,368,346
1961 ..	1,704,486	2,640,249	155,209	648,267	258,859	327,696	12,338	5,747,104

4. **Exports.**—Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for oversea trade, and consequently does not figure largely among the exports of Australia. During 1960-61, exports amounting to 2,001 tons, valued at £43,011 were made principally to Singapore, the Federation of Malaya and Hong Kong. There were no imports of hay in 1960-61.

### § 13. Green Fodder.

1. **Nature and Extent.**—Considerable areas are devoted to the growing of green fodder, mainly in connexion with the dairying industry. In the 1960-61 season, green fodder ranked second to wheat in area of crops throughout Australia. A graph showing the area sown to green fodder appears on page 911. The areas recorded in respect of green fodder include areas of crops cut for feeding to live-stock as green fodder, or ensilage, together with areas fed off to stock as green forage. Included with the latter are areas which may have been sown with the intention of harvesting for grain, but which, owing to adverse conditions, showed no promise of producing grain or even hay and were fed off to live-stock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities

of barley, sorghum, maize, rye and sugar cane are also used in this way. In 1960-61, the area under green fodder (4,407,561 acres) consisted of oats (1,868,320 acres), lucerne (1,590,794 acres), wheat (208,373 acres), barley (163,488 acres), sorghum (155,509 acres), maize (40,536 acres), rye (29,919 acres), sugar cane (2,801 acres) and other crops (347,821 acres). Particulars concerning the area of green fodder in the several States during each of the years 1956-57 to 1960-61 are given in the following table.

GREEN FODDER : AREA.  
(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Austr.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
1956-57 ..	813,642	333,115	640,316	657,967	752,072	48,435	2	77	1,246,321
1957-58 ..	993,039	465,009	714,048	748,089	770,739	54,094	4	1,03	1,746,034
1958-59 ..	1,238,314	319,150	638,667	550,366	769,199	61,322	273	66	1,577,958
1959-60 ..	1,578,759	422,237	725,155	595,713	708,793	62,229	240	96	1,094,094
1960-61 ..	1,691,408	430,920	874,702	743,538	606,039	59,563	144	1,24	1,407,561

2. Value of Green Fodder Crops.—The value of these crops is variously estimated in the several States, but the Australian total, excluding Western Australia, may be taken as approximately £7,600,000 for the 1959-60 season and £9,600,000 for the 1960-61 season.

### § 14. Sugar Cane.

1. Area.—Sugar cane growing appears to have commenced in Australia in or about 1862, and is confined, on a commercial basis, to New South Wales and Queensland. In recent years, sugar cane has been grown experimentally in Western Australia. A brief outline of the development of the industry was included in earlier issues of the Official Year Book (see No. 38 page 985). The area of sugar cane in Australia for the seasons 1956-57 to 1960-61 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

SUGAR CANE : AREA.(a)  
(Acres.)

Season.	New South Wales.			Queensland.			Australia.			Total.
	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	Area crushed.	Area of stand-over and newly-planted cane.	Area cut for plants.	
Average for three years ended—										
1938-39	10,468	10,366	(b)	247,632	89,690	(b)	258,100	100,056	(b)	(b)

1958-59	11,094	9,462	619	360,709	110,786	12,596	371,803	120,248	13,215	505,266
Year—										
1956-57	9,182	9,419	522	360,932	106,734	12,450	370,114	116,153	12,972	499,239
1957-58	10,734	9,241	720	364,985	107,424	12,946	375,719	116,665	13,666	506,050
1958-59	13,368	9,727	616	356,210	118,200	12,391	369,578	127,927	13,007	510,512
1959-60	14,248	10,510	392	299,732	151,114	11,039	313,980	161,624	11,431	487,035
1960-61	13,657	11,385	568	327,246	110,704	11,574	340,903	122,089	12,142	475,134

(a) Excludes areas cut for green fodder.

(b) Not available.

2. Productive and Unproductive Cane.—The areas shown in the preceding table do not include the small acreage cut for green fodder, which in 1960-61 amounted to 2,801 acres. The whole area planted is not cut for crushing during any one season there being always a considerable amount of young and "stand-over" cane as well as a small quantity required for plants. Thus the season in which the highest acreage is recorded may not show the greatest area of cane cut for crushing.

3. Production of Cane and Sugar.—For Queensland, statistics of the production of sugar cane are not available for seasons prior to 1897-98. In that season, the total for Australia was 1,073,883 tons, compared with 9,165,573 tons in the 1960-61 season. The record production of 10,212,593 tons was achieved in 1958-59.

In the following table, production data relating to cane and raw sugar are shown for the seasons 1956-57 to 1960-61 and averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

**SUGAR CANE : PRODUCTION OF CANE AND SUGAR.**  
(Tons.)

Season.	New South Wales.		Queensland.		Australia.	
	Cane.	Sugar.(a)	Cane.	Sugar.(a)	Cane.	Sugar.(a)
Average for three years ended—						
1938-39 .. ..	324,531	43,419	5,215,217	760,994	5,539,748	804,413
1948-49 .. ..	283,613	35,444	4,767,291	700,053	5,050,904	735,497
1958-59 .. ..	356,324	43,881	9,221,497	1,260,564	9,577,821	1,304,445
Year—						
1956-57 .. ..	294,087	35,918	8,978,081	1,171,879	9,272,168	1,207,797
1957-58 .. ..	303,086	36,854	8,945,617	1,256,271	9,248,703	1,293,125
1958-59 .. ..	471,798	58,870	9,740,795	1,353,543	10,212,593	1,412,413
1959-60 .. ..	574,527	70,677	8,427,731	1,217,803	9,002,258	1,288,480
1960-61 .. ..	480,147	62,978	8,685,426	1,319,633	9,165,573	1,382,611

(a) Raw sugar at 94 net titre.

The production of raw sugar (at 94 net titre) in Australia in 1960-61 amounted to 1,382,611 tons manufactured from 9,165,573 tons of cane.

The number of separate holdings growing 5 acres or more of cane was 7,195 in 1960-61.

4. Average Production of Cane Sugar.—Owing to climatic variations, comparison between the average yields of cane per productive acre in Queensland and New South Wales cannot be made accurately except on an annual basis. In New South Wales, the crop matures in from 20 to 24 months, whereas in Queensland a period of from 12 to 14 months is sufficient. The average yields of cane and sugar per acre for the years 1956-57 to 1960-61 and for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

**SUGAR CANE AND SUGAR : YIELD PER ACRE.**  
(Tons.)

Season	New South Wales.			Queensland.			Australia.		
	Cane per acre Crushed.	Sugar per acre Crushed.	Cane to each ton of Sugar.	Cane per acre Crushed.	Sugar per acre Crushed.	Cane to each ton of Sugar.	Cane per acre Crushed.	Sugar per acre Crushed.	Cane to each ton of Sugar.

1959-60.. ..	40.32	4.96	8.13	28.12	4.06	6.92	28.67	4.10	6.99
1960-61.. ..	35.16	4.61	7.62	26.54	4.03	6.58	26.89	4.06	6.63

5. Quality of Cane.—The quantity of cane required to produce a ton of sugar varies with the variety planted, the district, and the season. In 1960-61, a yield of 4.06 tons of sugar per acre was obtained. This was only slightly less than the record yield of 4.10 tons in 1959-60.

The Bureau of Sugar Experiment Stations in Queensland renders useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilizers, lime, etc., and by producing and distributing improved varieties of cane.

6. **Production and Utilization.**—Details of the production and utilization of sugar for the years 1956–57 to 1960–61 are shown below. It should be noted that the details of sugar production refer to the annual periods shown, without regard to the season in which the sugar was produced. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

**SUGAR : PRODUCTION AND UTILIZATION, AUSTRALIA.**

Year.	Changes in Stocks.	Pro-duction (Raw).	Exports. (a)	Miscel-laneous Uses.(b)	Consumption in Australia.(a)	
					Total.	Per Head.
	'000 tons.	'000 tons.	'000 tons.	'000 tons.	'000 tons.	lb.
1956–57 .. ..	+21.1	1,217.7	698.7	20.0	477.9	112.3
1957–58 .. ..	–21.1	1,222.2	733.8	29.4	480.1	110.3
1958–59 .. ..	+10.3	1,353.4	827.4	18.4	497.3	111.9
1959–60 .. ..	+25.9	1,270.6	725.2	18.6	500.9	110.3
1960–61 .. ..	–13.4	1,324.8	815.6	22.0	500.6	107.9

(a) Includes sugar content of manufactured products exported. (b) Includes industrial uses, refining, losses and quantities used in processed food (e.g., canned fruit, jams, etc.), golden syrup and treacle.

7. **Consumption in Factories.**—The quantity of refined sugar used in factories in 1960–61 amounted to 307,120 tons compared with 293,822 tons in 1959–60 and 274,575 tons in 1958–59. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1960–61, consumption by factories engaged in the production of jams, jellies and preserved fruit amounted to 83,497 tons, by those producing confectionery, ice cream, etc., to 66,029 tons, by breweries to 44,944 tons and by factories producing aerated waters, cordials, etc. to 47,947 tons.

8. **Control of Cane Production in Queensland.**—Agreements between the Commonwealth and Queensland Governments have fixed the wholesale price of sugar and sugar products from time to time. Details of prices are shown in para. 14 of this section (*see* page 937).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and a uniform price paid to mills.

Sugar production barely met local requirements in 1923, but increased rapidly until 1925 when approximately 44 per cent. of the production was exported. Steps were taken by the Government to restrict planting of new areas and production was fairly stable until 1929. In that year, the pool was reorganized and mills received the full pool price for sugar up to the amount of their previous maximum production, further output being acquired at export prices.

Between 1929 and 1939, production rose by more than 70 per cent. despite the restrictions above-mentioned and the fact that export prices were generally less than half the pool price.

In 1939, following the International Sugar Agreement, which limited exports, the Queensland Government limited the pool (mill peaks) to 737,000 tons in respect of Queensland production. Mill quotas were allotted on the understanding that mills would allot quotas to individual growers. Mill peaks have been raised since 1939, following the negotiation of the Commonwealth Countries Sugar Marketing Agreement of 1949, which allowed the Queensland Government to initiate a planned expansion of the industry. In 1960 and 1961, peaks were 1,214,600 tons and 1,220,100 tons respectively.

9. **Sugar Agreement in Australia—Embargo on Imports, etc.**—Reference was made in Official Year Book No. 37, pages 940–41, to the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar consumed in Australia. The current agreement, which was for a five-year period ended 31st August, 1961, was extended to 31st May, 1962. The Commonwealth Government, on 28th November, 1960, appointed a Committee of Enquiry to investigate all facets of the sugar and canned fruits industries. Although the Committee presented its report towards the end of 1961, at the end of February, 1962, it was still under consideration by the Commonwealth and Queensland Governments and it has not yet been published.

10. **International Sugar Agreement.**—The International Sugar Agreement of 1937 was superseded by the International Sugar Agreement of 1953 which came into force on 1st January, 1954. Details of the 1937 Agreement were given in Official Year Book No. 40, pages 881 and 882, and previous issues.

The 1953 agreement, which was amended by protocol from 1st January, 1957, was for the five-year period ended 31st December, 1958.

In October, 1958, a new agreement was negotiated at a conference held in Geneva under the auspices of the United Nations. The new agreement, which follows the lines of the 1953 agreement, is for five years commencing 1st January, 1959, with provision for a review during the third year. It is designed to assure supplies of sugar to importing countries and markets for sugar to exporting countries at equitable and stable prices, to facilitate a steady increase in the consumption of sugar and a corresponding increase in the supply of sugar, and, in general, to further international co-operation in connexion with world sugar problems. Basic export quotas of exporting countries are established and provision is made for adjustment of quotas according to fluctuations in the world sugar price. A number of price levels are stipulated at which the International Sugar Council may or must take action. The Council has considerable discretion to adjust quotas during the quota year.

Under the 1953 agreement, the British Commonwealth, as a whole, was granted an export quota of 2,375,000 tons rising to 2,500,000 tons in 1958. Under the 1958 agreement, the quota remains at 2,500,000 tons for 1959 but is increased by 75,000 tons to 2,575,000 tons in 1960 and 1961. This quota is not subject to the fluctuations mentioned above. The allocation of the total quota among exporting members of the British Commonwealth is a matter for internal arrangement by those countries and territories themselves. Australia's quota for 1960 and 1961 was approximately 651,000 tons.

The quota and price provisions cover only the first three years to 31st December, 1961. A conference in Geneva in 1961 failed to reach agreement on quota provisions for 1962 and 1963. The conference adjourned with a resolution that it be reconvened if circumstances for an agreement on quotas become favourable. In any event, consideration is to be given in the second half of 1963 to convening an international conference to prepare a new agreement in place of the current agreement which expires at the end of 1963.

The principal practical effect of the adjournment of the 1961 conference is that former export limitations on participating exporting countries, including Australia, do not apply until such time as agreement on this question is again reached at a resumed session of that conference, or at a newly convened conference.

Details of the marketing arrangements for Australian sugar are given in paragraph 15 below.

11. **Net Return for Sugar Crop.**—Details of the disposal of the crop, net value of exports and the average price realized during each of the years 1956–57 to 1960–61 are shown in the following table.

**RAW SUGAR(a): NET RETURNS, AUSTRALIA.**

Year.	Proportion Exported. (b)	Net Value of Exports per Ton. (b)	Average Price per Ton for Whole Crop.	Estimated Value of Crop.
	Per cent.	£ s. d.	£ s. d.	£'000.
1956–57 .. ..	56.01	41 6 5	46 14 3	56,403
1957–58 .. ..	57.44	45 16 8	49 7 6	63,829
1958–59 .. ..	60.53	39 8 2	45 9 11	64,263
1959–60 .. ..	55.42	40 6 2	47 9 11	61,131
1960–61 .. ..	59.53	39 19 6	49 2 1	67,869

(a) 94 net titre.

(b) As supplied by the Queensland Sugar Board.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated represent the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but including concessions to the fruit industry and other rebates which in 1960–61 amounted to £980,274. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent. and 30 per cent. respectively.

12. Exports of Sugar.—Particulars of the exports of cane sugar (raw and refined) for each year from 1956–57 to 1960–61 are as follows.

## SUGAR : EXPORTS, AUSTRALIA.

Particulars.	1956-57.	1957-58.	1958-59.	1959-60.	1960-61.
Quantity .. .. tons	675,282	707,806	802,971	701,319	796,528
Value .. .. £'000	28,780	34,996	32,163	26,671	35,073

13. Sugar By-products.—Large quantities of molasses are produced as a by-product in the sugar mills. Details for a series of years of the quantities produced and the amounts used for distilling, fuel, manure and other purposes will be found in Chapter VI.—Manufacturing Industry.

Other by-products include industrial chemicals and building boards. These boards are made from the residue of crushed fibre after removal of the sugar content from sugar cane and possess high insulating and sound-absorbing properties which make them particularly suitable for use in walls and ceilings.

14. Sugar Prices.—The prices of sugar in Australia, from 1953 to 1960 in the case of raw sugar, and from 1952 to 1962 in the case of refined sugar (as determined under the Sugar Agreement in Australia—see para. 9 above), are shown in the following table.

## SUGAR : PRICES IN AUSTRALIA.

Year.	Raw Sugar, 94 Net Titre.			Refined Sugar.		
	Average Return per Ton Received by Millers and Growers for—			Date of Determination.	Wholesale Price to Retailer per Ton.	Retail Price, Capital Cities per lb.
	Home Consumption.	Exports.(a)	Whole Crop. (a)			
	£ s. d.	£ s. d.	£ s. d.		£ s. d.	d.
1953 ..	47 18 6	38 13 9	42 10 8	13. 10. 52 to 13. 5. 56	73 16 11	9
1954 ..	47 1 0	37 8 0	41 6 11	14. 5. 56 to 15. 5. 60	82 1 0	10
1955 ..	46 18 0	38 11 6	42 9 0	16. 5. 60 to 31. 5. 62	90 5 2	11
1956 ..	53 11 6	41 6 5	46 14 3			
1957 ..	54 3 0	45 16 8	49 7 6			
1958 ..	54 15 0	39 8 2	45 9 11			
1959 ..	56 8 6	40 6 2	47 9 11			
1960 ..	60 10 6	39 18 8	49 2 1			

(a) Includes "Excess" Sugar.

15. Marketing Arrangements.—From 1939 to 1952, the British Ministry of Food purchased Australia's surplus raw sugar at prices negotiated annually and varying from £stg.11 5s. in 1939 to £stg.38 10s. a ton in 1952 including tariff preference (for prices in other years see earlier issues of the Year Book).

On 1st January, 1953, the British Commonwealth Sugar Agreement became effective. This agreement, which has been extended to 1969, provides for Australia to export a maximum of 600,000 tons per annum, subject to annual review. Of the 600,000 tons, 315,000 tons is purchased by the United Kingdom Government at an annually negotiated price and the balance is sold at world market prices plus tariff preferences where applicable. The negotiated prices for 1960 and 1961 were £stg.44 8s. 10d. and £stg. 45 2s. In 1960 and 1961, Australia had an additional quota of 51,000 tons as her share of the increased allocation to Commonwealth exporters under the current International Sugar Agreement. This tonnage was not to receive the benefit of tariff preferences. Export limitations under the International Sugar Agreement are not applicable to 1962 and 1963 (see para. 10).

The Sugar Bill introduced into the House of Commons on 5th July, 1955, provided for the reversion of dealings in sugar in the United Kingdom to a trader to trader basis as from 1st January, 1957. However, under the bill, a Sugar Board was created which is responsible for the purchase of the negotiated price sugar which the United Kingdom Government has contracted to take under the British Commonwealth Sugar Agreement.

16. **Fruit Industry Sugar Concession Committee and Sugar Rebates.**—The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the sugar industry.

Until 15th May, 1960, a rebate of £2 4s. per ton of refined sugar used in processing approved fruit products was paid to Australian manufacturers, provided they bought the fresh fruit at prices not lower than those declared by the Committee as reasonable. This was increased to £5 per ton from 16th May, 1960.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for Australian sugar than the price for which the cheapest imported sugar could be landed duty free in Australia.

Under the Supplementary Sugar Agreement for 1956–1961, the Queensland Government contributes to the fund £264,000 annually and also reimburses the Committee for the actual expenditure on export sugar rebates. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for scientific research for the purpose of increasing the yield per acre of Australian fruit.

17. **Bulk Handling of Sugar.**—The conversion of the Australian sugar industry to bulk handling and mechanized loading and unloading of raw sugar is well advanced. About 80 per cent. of raw sugar in Australia is now handled in bulk without being bagged at any stage.

Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, and at Mourilyan in 1960.

Bulk receiving facilities are in operation at all Australian refineries.

## § 15. Vineyards.

1. **Progress of Cultivation.**—(i) *Area of Vineyards.* Since the early days of Australian settlement, the expansion of the cultivation of vines has been most rapid in Victoria and South Australia, the area under vineyards in the 1960–61 season in these two States comprising 78 per cent. of the total area of vineyards. Grapes are grown in Australia for wine-making, table use and drying. The total area of vines in the several States during each of the years 1956–57 to 1960–61 and the averages for the three-year periods ended 1938–39, 1948–49 and 1958–59 are shown in the following table.

VINEYARDS : AREA.  
(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Aust.(a)
Average for three years ended—						
1938–39 .. ..	16,824	42,071	2,670	57,185	6,197	124,947
1948–49 .. ..	16,482	44,114	3,099	58,971	9,965	132,631

Drying .. ..	7,306	36,693	..	10,636	3,722	58,357
<i>Total</i> .. ..	<i>16,988</i>	<i>44,649</i>	<i>3,110</i>	<i>56,897</i>	<i>8,864</i>	<i>130,508</i>

(a) Excludes particulars for Northern Territory and Australian Capital Territory.

NOTE.—There are no vineyards in Tasmania.

(ii) *Wine Production, Bounties, etc.* The total production of wine (beverage and distillation) in Australia has shown a marked increase in recent years, rising from 14.3 million gallons in 1938-39 to 33.8 million gallons in 1960-61. In the same period, consumption of beverage wine in Australia has increased from 4.5 million gallons (0.7 gallons per head of population) to 11.7 million gallons (1.12 gallons per head of population). For many years prior to the 1939-45 War, a bounty was paid from the Wine Export Encouragement Account on wine shipped overseas under the provisions of the Wine Export Bounty Act 1930. Details of the bounty, payment of which was discontinued in 1947, may be found in Official Year Book No. 39, page 992.

The quantity of wine produced in the several States during the 1956-57 to 1960-61 seasons, together with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59, are shown in the following table.

**WINE : PRODUCTION.(a)**  
(<sup>'000</sup> Gallons.)

Season.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Australia.
<b>Average for three years ended—</b>

1960-61 .. ..	4,903	3,021	32	25,061	776	33,793

(a) Net factory and farm production of beverage and distillation wine excluding the liquid gallowage of spirits added in wine fortifying.

(iii) *Wine Research Trust Fund.* Details of this fund are given in Official Year Book, No. 47, page 927.

2. Imports and Exports of Wine.—(i) *Imports.* Imports for 1960-61 amounted to 98,004 gallons valued at £205,286 compared with 60,029 gallons valued at £130,265 in the previous year.

During 1960-61, Italy supplied 31,566 gallons valued at £39,203, France supplied 26,620 gallons valued at £89,195, and the Federal Republic of Germany supplied 8,293 gallons valued at £25,453.

(ii) *Exports.* Exports in 1960-61 totalled 1,897,337 gallons, of which the United Kingdom received 1,361,815 gallons, Canada 348,529 gallons, New Zealand 66,293 gallons and other countries 120,700 gallons.

Exports for the five years ended 1960-61 are shown in the following table.

**WINE : EXPORTS FROM AUSTRALIA.**

Year.	Quantity (Gallons).			Value (£).		
	Sparkling.	Other.	Total.	Sparkling.	Other.	Total.
1956-57 .. ..	6,701	1,743,648	1,750,349	23,737	1,108,314	1,132,051
1957-58 .. ..	4,872	1,484,656	1,489,528	18,194	978,616	996,810
1958-59 .. ..	5,203	1,742,046	1,747,249	10,989	1,141,036	1,152,025
1959-60 .. ..	6,480	1,738,867	1,745,347	19,898	1,245,755	1,265,653
1960-61 .. ..	11,529	1,885,808	1,897,337	30,461	1,274,210	1,304,671

3. **Overseas Marketing of Wine.**—(i) *The Wine Overseas Marketing Act 1929–1961.* This Act was introduced to place the overseas marketing of surplus wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London, the Board maintains an office and an Australian Wine Centre, which is both a retail outlet for Australian wines and brandy and as a medium for promoting interest in these products.

(ii) *The Wine Grapes Charges Act 1929–1957.* This Act provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to defray the administrative and other expenses of the Board, and provision is made for such exemptions from the levy as the Board may recommend.

4. **Other Viticultural Products.**—(i) *Table Grapes.* Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 7 per cent. of the productive area of vines in 1960–61. The quantities of table grapes produced during the season 1960–61 in each State are shown in § 3 of this chapter. (See p. 899.)

(ii) *Raisins and Currants.* The quantities of raisins (including sultanas and lexias) and currants dried during each of the seasons 1956–57 to 1960–61 and the averages for the three-year periods ended 1938–39, 1948–49 and 1958–59 are shown in the following table.

RAISINS(a) AND CURRANTS : PRODUCTION.  
(Tons.)

(a) Including sultanas and lexias.

5. **Production and Disposal of Dried Vine Fruit.**—As the production of dried vine fruit is far in excess of Australia's requirements, considerable quantities are available for export. Total production during the 1960–61 season amounted to 81,672 tons, while exports for the 12 months ended December, 1961, were 60,968 tons, leaving an estimated 20,704 tons available for Australian consumption from that season's production. Australian consumption includes amounts delivered to biscuit manufacturers, bakeries, etc., as well as retail sales for household consumption.

The following table shows the oversea exports of raisins and currants during each of the years 1956-57 to 1960-61.

RAISINS AND CURRANTS(a) : EXPORTS, AUSTRALIA.

Year.	Raisins.		Currants.		Total Raisins and Currants.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	Tons.	£'000.	Tons.	£'000.	Tons.	£'000.
1956-57.. ..	38,496	5,377	6,521	831	45,017	6,208
1957-58.. ..	52,297	8,019	7,398	938	59,695	8,957
1958-59.. ..	68,245	11,215	7,585	1,051	75,830	12,266
1959-60.. ..	45,634	7,726	4,540	637	50,174	8,363
1960-61.. ..	48,805	7,133	7,838	1,032	56,643	8,165

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian raisins and currants are the United Kingdom, Canada and New Zealand, the quantities exported thereto in 1960-61 being 27,657 tons, 18,726 tons and 4,486 tons respectively.

6. Oversea Marketing of Dried Fruits.—(i) *The Dried Fruits Export Control Act 1924-1953.* This Act was passed to organize oversea marketing of Australian dried vine fruits. The Dried Fruits Control Board, consisting of growers' representatives, members with commercial experience in marketing dried fruits and a Government representative, controls the sale and distribution of dried fruit exports, recommends the licensing of exporters and contributes to dried vine fruits publicity activity overseas.

In conjunction with its London agency, the Board has improved dried fruit marketing overseas by its system of appraisalment, regulation of shipments and advertising.

(ii) *Dried Fruits Export Charges Act 1924-1929.* This Act provides for a levy on exports of dried fruits to defray costs and expenses incurred by the Board. Provision is made for exemption from the levy upon recommendation by the Board.

(iii) *Post-war Contracts.* For details of the agreements which were negotiated between the Governments of the United Kingdom and Australia during the period 1946-1953, see Official Year Book No. 40, page 888. From 1st December, 1953, exports have been made on a trader to trader basis.

§ 16. Orchards and Fruit Gardens.

1. Area.—The largest area of orchards and fruit-gardens prior to the 1939-45 War was 281,899 acres which was attained in 1933-34. Since then, the acreage has varied but has not fallen below 260,000 acres. It reached 290,000 acres in 1947-48 but declined somewhat in subsequent years, rising again to 289,000 acres in 1959-60 and 1960-61.

ORCHARDS AND FRUIT-GARDENS : AREA.

(Acres.)

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

2. **Varieties of Crops.**—The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics, to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales, citrus fruits (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges and apricots. In Queensland, apples, pineapples, bananas, oranges, mandarins, peaches and plums are the varieties most largely cultivated. In South Australia, in addition to oranges, apples, peaches, apricots and pears, almonds and olives are grown extensively. In Western Australia, apples, oranges, plums and pears are the chief varieties. In Tasmania, apples occupy over three-quarters of the fruit-growing area, but small fruits, such as currants, raspberries and gooseberries, are grown extensively, the balance of the area being mainly taken up with pears and apricots. The following table shows the acreage—bearing and non-bearing—of the principal kinds of fruit, and the quantities produced in the 1960–61 season.

### ORCHARDS AND FRUIT-GARDENS, 1960-61.

4. Production of Jams and Jellies and Preserved Fruit.—In Australia, considerable quantities of fruit are used in the production of jams and jellies and for preserving. During 1960-61, output of jams, conserves, fruit spreads, etc., amounted to 83,080,000 lb. while output of preserved fruit amounted to 307,866,000 lb. Of the latter figure, pears accounted for 121,991,000 lb., peaches 78,664,000 lb. and pineapples 36,057,000 lb.

The recorded consumption of fruit in factories for all purposes, including that used for juice and cordial manufacture and for drying, was 228,990 tons in 1960-61.

5. Consumption of Fruit and Fruit Products.—Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1960-61 are shown in Chapter XXX.—Miscellaneous, of this Year Book.

6. Imports and Exports of Fruit.—(i) *General.* The imports of fresh fruit into Australia are negligible, while those of dried fruit consist mainly of dates.

A considerable export trade in both fresh and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1960-61 amounted to £10,368,594 and £9,097,485 respectively. Apples constitute the bulk of the fresh fruit exported, although exports of pears and citrus fruit are considerable.

(ii) *Fresh Fruit.* Particulars of the Australian export trade in fresh and frozen fruit for each of the years 1956-57 to 1960-61 are shown in the following table.

## FRESH AND FROZEN FRUIT : EXPORTS, AUSTRALIA.

Year.	Apples.		Pears.		Citrus.		Total.(a)	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	'000 bus.	£'000.	'000 bus.	£'000.	'000 bus.	£'000.	'000 bus.	£'000.
1956-57	3,969	5,582	1,020	1,731	613	926	5,670	8,585
1957-58	5,892	9,076	1,448	2,755	572	882	7,961	13,062
1958-59	4,948	6,625	1,100	1,783	415	664	6,559	9,413
1959-60	4,889	6,123	1,328	1,970	589	918	6,876	9,294
1960-61	5,729	7,321	1,235	2,080	419	664	7,454	10,369

(a) Total, including exports of all other fresh and frozen fruit.

(iii) *Dried Tree Fruit.* The quantity and value of oversea imports and exports of dried fruit, other than raisins and currants, for the years 1956-57 to 1960-61 are shown below. Normally, the bulk of the imports consists of dates obtained almost entirely from Iraq.

**DRIED TREE FRUIT(a): IMPORTS AND EXPORTS, AUSTRALIA.**

Year.	Imports.(b)		Exports.	
	Quantity.	Value	Quantity.	Value.
	'000 lb.	£'000.	'000 lb.	£'000.
1956-57 .. .. .	7,052	158	2,887	378
1957-58 .. .. .	8,683	209	1,366	186
1958-59 .. .. .	8,411	203	3,352	482
1959-60 .. .. .	10,791	310	6,221	703
1960-61 .. .. .	9,178	303	8,237	932

(a) Excludes raisins and currants referred to separately under Vineyards (see p. 940). (b) Dates and figs only.

(iv) *Jams and Jellies.* Exports of jams and jellies reached large proportions immediately following the 1939-45 War and in 1946-47 amounted to 65,434,000 lb., compared with the average for the five years ended 1938-39 of 7,118,000 lb. Since 1949-50, when exports totalled 65,229,000 lb., there has been a marked decline and in 1960-61 exports amounted to only 6,331,099 lb., valued at £493,264. Imports of jams and jellies are negligible.

(v) *Preserved Fruit.* The total value of fruit preserved in tins or other airtight containers, or pulped, imported into Australia during 1960-61 was £140,460. Large quantities of fruit preserved in tins or other airtight containers are normally exported from Australia, the quantity recorded in 1960-61 being 151,983,474 lb. valued at £9,773,004. Exports in 1960-61 were principally made up of pears (84,424,293 lb.), peaches (35,574,901 lb.), pineapples (12,742,638 lb.) and apricots (5,661,493 lb.). In addition, the exports of pulped fruits during 1960-61 amounted to 2,912,189 lb. valued at £243,155.

7. *Marketing of Apples and Pears.*—(i) *Apple and Pear Organization Act 1938-1960.* This Act provides for the establishment of an Australian Apple and Pear Board comprising representatives of growers, exporters, employees and the Commonwealth Government. A representative in London has also been appointed by the Board.

The function of the Board is the organization and control of exports of fresh apples and pears, and it has the power to regulate shipments, determine export quotas, allocate consignments from each State and recommend the licensing of exporters. The Board contributes to apple and pear publicity activities overseas.

(ii) *Apple and Pear Export Charges Act 1938-1960.* This Act provides for an export levy to meet the expenses of the Board.

(iii) *Apple and Pear Acquisition.* Exports of apples and pears were seriously curtailed during the war and the 1940 to 1948 crops were acquired and marketed under National Security and Defence Regulations. Details of the acquisition scheme will be found on pages 1003 and 1004 of Official Year Book No. 38 and in earlier issues.

8. *Marketing of Canned Fruit.*—(i) *The Canned Fruits Export Control Act 1926-1959.* This legislation was introduced with the object of organizing the oversea marketing of canned fruit. The Australian Canned Fruits Board, comprising members representing the Commonwealth Government, canners of apricots, peaches, pears, pineapples and fruit salad, and a representative of the growers of canning apricots, peaches and pears, was appointed to organize the oversea marketing of canned fruit and also to recommend the licensing of exporters. The Board establishes terms and conditions of sale overseas and contributes to oversea publicity connected with the canned fruit industry. It also maintains an office in London.

The system of marketing adopted by the Board has resulted in the satisfactory disposal of the exportable surplus of canned fruits.

(ii) *The Canned Fruits Export Charges Act 1926-1956.* This Act provides for a levy on exports to meet the Board's expenses. Provision has been made for certain exemptions when recommended by the Board.

(iii) *The Australian Canned Fruit Sales Promotion Committee.* This Committee was established in 1959 to promote the sale of canned deciduous fruits on the home market and

overseas. The operations of the Committee are financed by a levy on fruit accepted by the canneries for the production of canned fruit. The Committee comprises representatives of growers and processors of canning fruit and a representative of the Commonwealth Government.

### § 17. Vegetables for Human Consumption.

1. Area and Production of Fresh Vegetables.—Details of the areas planted and production of individual kinds of vegetables, excluding potatoes and onions referred to in §§ 10 and 11 of this chapter, are shown below for the seasons 1958–59 to 1960–61.

#### FRESH VEGETABLES(a) FOR HUMAN CONSUMPTION: AUSTRALIA.

Vegetable.	1958–59.		1959–60.		1960–61.

<b>Total .. ..</b>	<b>152,864</b>	<b>..</b>	<b>147,326</b>	<b>..</b>	<b>154,764</b>	<b>..</b>

(a) Excludes potatoes and onions. (b) Incomplete, excludes New South Wales. (c) Incomplete, excludes New South Wales and Tasmania.

2. Production of Processed Vegetables.—Total production of canned vegetables in 1960–61 amounted to 98,987,000 lb., which was considerably higher than pre-war production, but only 83 per cent. of the peak war-time production of 119,149,000 lb. recorded in 1944–45. The principal canned vegetables produced in 1960–61 were green peas (including mint-pro peas) 25,715,000 lb., green beans 5,190,000 lb., baked beans (including pork and beans) 25,096,000 lb., asparagus 7,401,000 lb., beetroot 10,305,000 lb., and mushrooms 5,319,000 lb.

The production of dehydrated vegetables, which was initiated by the Commonwealth Government during the 1939–45 War, rose to a maximum of 22,000,000 lb. in 1945–46, but in 1960–61 it was only 706,000 lb. Production of potato crisps, chips and flakes, which has increased substantially in recent years, amounted to 9,290,000 lb. in 1960–61.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957–58, when 13,846,000 lb. of frozen vegetables were produced, made up primarily of 10,131,000 lb. of peas and 2,540,000 lb. of beans. In 1960–61, production had risen to 21,046,000 lb., of which 13,141,000 lb. were peas and 4,915,000 lb. were beans.

3. Imports and Exports of Vegetables.—The quantity and value of oversea exports of pulse and fresh vegetables during 1960–61 were respectively:—pulse, 5,013 tons, £284,422; onions, 2,543 tons, £88,668; potatoes, 5,219 tons, £194,667; other vegetables, 2,491 tons, £230,301. Imports of pulse amounted to 7,437 tons, valued at £517,958, while imports of fresh vegetables in total were 8,256 tons, valued at £993,033.

In 1960–61, exports of vegetables preserved in liquid consisted of:—Asparagus, 517,420 lb. (£75,409); Beans (including baked), 108,570 lb. (£7,285); Peas, 108,735 lb. (£9,499); Tomatoes, 112,089 lb. (£7,629); Other Vegetables, 573,360 lb. (£64,884).

4. Consumption of Vegetables.—Details of the estimated consumption of vegetables for a series of years ending 1960–61 are shown in Chapter XXX.—Miscellaneous, of this Year Book.

## § 18. Tobacco.

1. *States, Area and Production.*—Tobacco has been grown in Australia for a considerable number of years. As early as the season 1888–89, the area of this crop amounted to 6,641 acres, of which 4,833 were in New South Wales, 1,685 in Victoria and 123 in Queensland. Thereafter, the industry fluctuated for many years, reaching a peak in 1932–33 when 26,272 acres were planted. After the 1939–45 War the area fell to below 4,000 acres, but it has increased again largely as a result of the beneficial effect of improved varieties and techniques on average yields and of the protection to Australian growers given by the tariff (*see also* (vi) Tobacco Factories, p. 947).

In 1960–61, the area planted was 29,213 acres. This exceeded the previous highest post-war level of 19,654 acres, reached in 1959–60, by 9,559 acres, or 49 per cent. The production of dried leaf in 1960–61 at 29,862,000 lb. was also a record.

In the following table, particulars of the area and production of tobacco are given by States for each of the seasons 1956–57 to 1960–61, together with averages for the three-year periods ended 1938–39, 1948–49 and 1958–59.

## TOBACCO : AREA AND PRODUCTION.

1960–61 ..	3,538	9,728	15,308	..	(d) 1,288	..	..	(d)29,862

(a) Less than half an acre. (b) Less than 500 lb. (c) Includes 289,000 lb. of unsold leaf. (d) Includes 655,000 lb. of unsold leaf.

2. *The Tobacco Industry.*—(i) *Marketing.* In the early days, purchase of the leaf at the farms was the usual practice, but towards the end of the 1930's the auction system was introduced by arrangement between the growers' associations and the manufacturers.

On 9th May, 1941, the Australian Tobacco Board was constituted under the National Security (Australian Tobacco Leaf) Regulations for the purpose of facilitating and regulating the marketing of Australian grown tobacco leaf. All leaf was under the control of the Board, the growers being paid on the valuation as appraised by the Board. The Board ceased to function on 24th September, 1948, and subsequent crops have been marketed at open auction in the respective States. Queensland has had its own Tobacco Leaf Marketing Board since 1948. Growers in New South Wales voluntarily submit their leaf to the Queensland Board for sale at auction. Leaf from Victoria is sold at auction in Melbourne for the Victorian Tobacco Growers' Association. In Western Australia, the leaf is sold in Perth for the Western Australian Tobacco Growers' Association (Inc.).

(ii) *Central Tobacco Advisory Committee.* The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems.

The Committee was reconstituted by the Agricultural Council during 1952-53. The terms of reference of this committee are given in Official Year Book No. 47, page 935.

A Sub-Committee on curing was formed in 1960 to investigate new curing methods. A grant of up to £10,000 was made available for initial investigations which include down-draught curing, the conversion of conventional kilns to down-draught and bulk curing. In 1961, a Research Sub-Committee was established to review annually scientific programmes and finance in relation to the Tobacco Industry Trust Account and make recommendations to the Central Tobacco Advisory Committee.

(iii) *Industry Inquiries.* The tobacco industry has been the subject of a number of investigations during the past 30 years. The Tariff Board inquired into the industry in 1923, 1926, 1931 and 1940 and reports were issued in respect of the last three inquiries.

(iv) *Commonwealth Grants.* Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30th June, 1953, are given in Official Year Book No. 40, pages 895, 896 and in previous issues.

(v) *Research and Investigations.* The Commonwealth Scientific and Industrial Research Organization has been investigating many fundamental problems connected with tobacco culture. One of the major achievements of this organization was the development in the mid-1930's of a technique to control blue mould in the seed bed. State Departments of Agriculture are also carrying out investigations over a wide range of problems, being concerned mainly with variety trials, irrigation, disease and pest control, crop rotation and cultural practices. The New South Wales Department of Agriculture has developed a commercial blue mould resistant hybrid.

In 1955, the Central Tobacco Advisory Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme were estimated at £168,000, of which the Commonwealth Government and tobacco manufacturers each agreed to contribute half. Annual contributions are made to the fund by the Commonwealth and State Governments, tobacco growers and manufacturers. A Tobacco Industry Trust Account was established to receive these contributions. This programme commenced in 1956.

During the first five years of the operation of the Trust Account, £818,376 was paid to State and Commonwealth departments. The allocation for 1961-62 is £289,081.

(vi) *Tobacco Factories.* Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. These percentages rose from 3 per cent. for cigarettes and 5 per cent. for tobacco in November, 1946, to 35 per cent. and 32 per cent. respectively from 1st July, 1961. The percentages to apply from 1st July, 1962, are 43 per cent. and 40 per cent. respectively. In 1960-61, the quantity of cured leaf used in tobacco factories in Australia amounted to 52.4 million lb., of which 14.7 million lb. was of local origin. The balance was imported, chiefly from the United States of America and Rhodesia.

3. *Oversea Trade.*—Imports of tobacco and manufactures thereof into Australia during 1960-61 were valued at £13.4 million, including 35.7 million lb. of unmanufactured tobacco valued at £11.7 million. Exports of tobacco and tobacco manufactures during 1960-61 were valued at £415,355.

## § 19. Hops.

Hop-growing in Australia is practically confined to Tasmania and some of the cooler districts of Victoria, the total area for 1960-61 being 1,903 acres, of which 1,447 acres were in Tasmania, and 456 acres in Victoria. A small area was also under hops in Western Australia, but the details are not available for publication. The Tasmanian area in 1901-02 was 599 acres while in the decade to 1960-61, it has ranged between 1,332 acres and 1,447 acres. On the other hand, the cultivation of hops was much more extensive in Victoria during the latter part of the last century. For example, in 1883-84, 1,758 acres were cultivated, compared with an average of 450 acres in the five years ended 1960-61.

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table, details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1956-57 to 1960-61. Exports of hops are not recorded separately, but are negligible.

## HOPS : PRODUCTION AND DISPOSAL, AUSTRALIA.

Year.	Production.		Imports.	Net Available Supplies. (a)	Quantity used in Breweries.
	Quantity.	Gross Value.			
	Cwt.	£'000.	Cwt.	Cwt.	Cwt.

1960-61 .. .. .	33,099	1,179	991	34,090	40,015

(a) Disregards movements in stocks.

## § 20. Flax.

1. **Flax for Fibre.**—During the 1914-18 and 1939-45 Wars, there was an acute shortage of flax fibre and the expansion of production was encouraged by the Commonwealth Government, the area sown reaching a maximum of more than 61,000 acres in 1944-45.

In recent years, the growing of flax for fibre has been confined to Victoria, South Australia and Western Australia, although none has been produced in South Australia since 1957-58. In Victoria and South Australia (until production ceased in 1957-58), production has been directed and controlled by the Flax Commission, which took over the Commonwealth flax undertakings from the Flax Production Committee on 1st November, 1954. In Western Australia, the industry is carried on by a co-operative company.

In November, 1957, the Government approved a three-year extension of bounty assistance to flax producers and decided that the Commonwealth should withdraw from flax fibre production. One important factor which influenced the Government in making this decision was the view expressed by the defence authorities that the industry no longer has the same defence significance as it had when the Flax Commission was first established.

In accordance with the decision, growing of flax under contract to the Flax Commission was discontinued in 1959, all of the Commonwealth mills ceasing to operate before the end of the year.

Details of the area under flax and the production of straw are given in the following table.

## FLAX FOR FIBRE : AREA AND PRODUCTION.

Season.	Victoria.	S. Aust.	W. Aust.	Australia.

2. **Flax for Linseed.**—Prior to 1948-49, the growing of flax for linseed oil had not been developed extensively in Australia. Since then, however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. Development of the industry proceeded rapidly until 1951-52 when 53,741 acres were sown. In 1952-53, there was a decline in the acreage and a further decline in 1953-54 when 6,343 acres only were sown. In more recent years, the

area has been between ninety and one hundred thousand acres, with the exception of 1958-59 when 37,225 acres were sown. Production in 1960-61, at 13,564 tons, was about half that of the record year, 1959-60.

The question of assistance to the industry was investigated by the Commonwealth Tariff Board in 1953 and their conclusions are contained in their Report on *Linseed and Linseed Products* dated 23rd October, 1953.

Details of the area and production of flax for linseed are shown in the following table for the seasons 1956-57 to 1960-61.

#### FLAX FOR LINSEED : AREA AND PRODUCTION.

#### § 21. Peanuts.

The production in Australia of peanuts, or groundnuts, is mainly confined to Queensland, although small quantities are grown in New South Wales, Western Australia and the Northern Territory. Details of the area and production are given in the table below.

#### PEANUTS : AREA AND PRODUCTION.

Season.	Area (Acres).				Production (Cwt.).			
	N.S.W.	Q'land.	N.T.	Aust.(a)	N.S.W.	Q'land.	N.T.	Aust.(a)
1956-57 .. ..	419	25,017	208	25,644	4,674	173,522	339	178,535
1957-58 .. ..	686	34,739	156	35,581	8,014	366,518	302	374,834
1958-59 .. ..	867	59,279	211	60,357	11,623	621,687	2,412	635,722
1959-60 .. ..	837	41,547	388	42,772	10,639	360,314	4,306	375,259
1960-61 .. ..	788	41,659	335	42,782	9,578	446,215	1,215	457,008

(a) Excludes Western Australia for which details are not available for publication.

The gross value of the 1960-61 crop (excluding the small crop in Western Australia) was £2,089,000, which was approximately £307,000 more than in 1959-60.

In earlier years, considerable quantities of peanut kernels were imported, chiefly from India, for the extraction of oil. These imports were suspended from 1946 to 1949, but have since been resumed on an increasing scale. Total supplies available for consumption in Australia in 1960-61 were 484,720 cwt. (shell equivalent), after allowing for an increase in stocks held by the Peanut Marketing Board of 78,000 cwt. Supplies were made up of 510,340 cwt. from Australian production received into store by the Board and 52,380 cwt. imported.

#### § 22. Cotton.

1. General.—The production of cotton in Australia has been, until recently, restricted to Queensland, where cultivation began in 1860. Cotton has, however, been grown experimentally in some other States in recent years, for example, along the Murray River in New South Wales and Victoria, at Narrabri in New South Wales and in the Kimberleys in

Western Australia. The first commercial crop grown outside Queensland was harvested at Robinvale in Victoria in the 1960 season. Details of this production are not, however, available for publication.

Australia produces only a small part of its requirements of raw cotton, the balance being obtained chiefly from the United States of America and Mexico. Since the 1939-45 War, efforts have been directed towards increasing Australian production by an extension of area, the introduction of irrigation methods and payment of bounties. These have met with some measure of success, although production has not reached the 1939-40 level of 17,550,000 lb. of seed cotton. Cotton spinning and weaving industries are referred to in Chapter VI.—Manufacturing Industry.

The Raw Cotton Bounty Act 1940 provided an extension, until 31st December, 1946, of assistance previously granted by way of bounty. The Act was amended in August, 1946, to provide a guaranteed net average return to cotton-growers of 15d. per lb. of raw cotton for five years from 1st January, 1947. It was superseded by the Cotton Bounty Act 1951, which guaranteed a net average return of 9½d. per lb. of seed cotton for five years from 1st January, 1951. The 1951 Act was amended in 1952 to provide for a guaranteed return of 14d. per lb. of seed cotton for the 1953 crop, and for variation by regulation of the guaranteed return, in succeeding seasons, with a minimum of 9½d. per lb. The Act, as amended in 1952, 1955 and 1957, was extended in 1958 to cover production up to 31st December, 1963. The guaranteed return has remained at 14d. per lb. of seed cotton since the 1953 season.

2. **Area and Production.**—In the five seasons 1956-57 to 1960-61, the area sown and quantity of unginned cotton produced have increased more than threefold. The yield in the same period has risen by 25 per cent. Production is mainly confined to Queensland, although small quantities are also grown in New South Wales, Victoria and Western Australia.

The area under cultivation and the production in Australia for the years 1956-57 to 1960-61 are shown hereunder.

**COTTON: AREA AND PRODUCTION, AUSTRALIA.(a)**

Season.	Area Sown.	Production of Cotton.			Average Yield per Acre Sown.	
		Unginned.		Ginned.(b)	Unginned.	Ginned.

### § 23. Financial Assistance to Primary Producers.

NOTE.—See also Chapter XXI.—Public Finance, page 834.

Direct financial assistance to primary producers by the Commonwealth Government takes the form of bounties, subsidies and other financial assistance. Brief details of some of the more important payments are given below.

(i) *Cotton Bounty.* The Cotton Bounty Act provides for payment of a bounty on seed cotton of a grade higher than "strict good ordinary" delivered to a ginnery and processed at the ginnery into raw cotton for sale for use in Australia. The present rate of bounty is designed to give growers an average return of 14d. per lb. The total payment in 1959–60 was £214,456 and in 1960–61 it was £373,487.

(ii) *Dairy Products Bounty.* Under the provisions of the Dairy Industry Act 1952, a subsidy was paid to dairymen to ensure them a return based upon the estimated cost of production for a specified quantity equal to local consumption plus twenty per cent. The Dairy Industry Act 1957 provided for continuation of the scheme for a further five years. A new feature, however, was that any subsidy made available under the scheme would be determined before the commencement of each season and would be on the basis of a fixed amount in any dairying year. In 1961–62, total payments amounted to £13,500,000, the same as in each of the previous five years.

(iii) *Flax Fibre Bounty.* The period covered by the bounty terminated on 31st October, 1960. (See Official Year Book No. 47, p. 939, and previous issues, for details of, and payments under, the bounty.)

Other forms of financial assistance to primary producers include payments for Cattle Tick Control, the Dairy Industry Extension Grant, Flood, Drought and Bush Fire Relief, Food Production, Expansion of Agricultural Advisory Services and Assistance to the Tobacco Industry.

### § 24. Fertilizers.

1. *General.*—In the early days of settlement in Australia, scientific cultivation was little understood. It was common, as in other new countries, for the land to be cropped continuously to a degree of exhaustion. This practice is very much less in evidence now than in the early days of Australian agricultural development. Under the guidance of the State Departments of Agriculture and the relevant Commonwealth authorities, such as the Bureau of Agricultural Economics and the Commonwealth Scientific and Industrial Research Organization, scientific farming is now much more widely practised. The importance of fallowing, crop rotation, and the application of suitable fertilizers in adequate quantities is now appreciated by farmers. The introduction of the modern seed-drill, acting also as a fertilizer-distributor, has greatly facilitated the use of artificial manures and much land formerly regarded as useless for cultivation has now been made productive. With the rapid increase in the area of sown pastures, particularly since the 1939–45 War, large quantities of artificial fertilizers have been used. Fertilizer is generally applied at the time of sowing, and periodical (usually annual) top-dressings are carried out afterwards to keep the pastures in good condition. In addition, increasing areas of native pastures have been top-dressed in recent years. In 1960–61, pastures accounted for nearly 60 per cent. of both the total area fertilized and the total quantity of fertilizers used. The application of fertilizers from aircraft, particularly to pastures, has become a feature of modern farm technique, and has enabled the artificial fertilization of some areas which would not be readily accessible to ground machinery. Details of the area treated and quantity of fertilizer used by both aerial and ground methods of application in total are shown in para. 3, below, while further details on aerial top-dressing are given in § 25.

In order to protect the users of artificial fertilizers, legislation has been passed in each of the States regulating the sale and prohibiting the adulteration of fertilizers. A list of these Acts and their main features are given in Official Year Book No. 12, page 378.

2. *Imports and Exports.*—The Australian output of prepared fertilizers is derived chiefly from imported rock phosphate and is sufficient for local requirements.

The chief sources of Australia's supplies of rock phosphate are Nauru, Christmas Island (Indian Ocean) and the Gilbert and Ellice Islands. Sodium nitrate is obtained chiefly from Chile.

An extensive deposit of rock phosphate has recently been discovered in the Northern Territory, although no plans have yet been announced with regard to its development on a commercial basis.

The imports of artificial fertilizers during the five years ended 1960-61 are shown in the following table.

**ARTIFICIAL FERTILIZERS : IMPORTS INTO AUSTRALIA.**

Fertilizer.		1956-57.	1957-58.	1958-59.	1959-60.	1960-61.

	£'000	4,338	5,208	5,605	4,811	5,953

(a) Less than £500.

Exports of fertilizers (practically all of which were manufactured locally) amounted to 15,400 tons valued at £295,000 in 1960-61 compared with 20,900 tons valued at £313,000 in 1959-60.

3. Quantities Used Locally.—Information regarding the area treated with artificial fertilizers and the quantity of artificial fertilizers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1960-61 season is given in the following table. Details of the area fertilized with natural manure (stableyard, etc.) are no longer collected.

**AREA FERTILIZED AND QUANTITY OF ARTIFICIAL FERTILIZERS USED, 1960-61.**

State or Territory.	Area Fertilized ('000 Acres).			Fertilizers Used (Tons).

4. **Local Production.**—Complete information regarding local production of fertilizers not available. The number of firms engaged in the manufacture of chemical fertilizers in Australia for the year 1960–61 was 44, made up as follows:—New South Wales, 12; Victoria, 6; Queensland, 4; South Australia, 9; Western Australia, 6; and Tasmania, 7. The production of superphosphate in Australia during 1960–61 amounted to 2,531,000 tons.

### § 25. Aerial Agriculture.

During recent years, an increasing use has been made of aircraft for top dressing and seeding (principally of pastures) and for spraying and dusting of crops and pastures. During the year ended 31st March, 1961, the total area treated by aircraft was 6,239,524 acres—5,031,081 acres were top-dressed and/or seeded, 1,173,682 acres were sprayed or dusted with insecticides, fungicides or herbicides, and 35,451 acres were baited for rabbit destruction. For 1956–57 (the first year for which data are available), the total area treated was 1,465,959 acres which represents about 24 per cent. of the area covered in 1960–61. The following table shows details of area treated and materials used for each State for the year ended 31st March, 1961. The information was collected by the Department of Civil Aviation.

#### AERIAL AGRICULTURE : OPERATIONS DURING 1960–61.

 (d) Includes 35,451 acres baited for rabbit destruction. See footnotes (b) and (c)

### § 26. Ensilage.

1. **Government Assistance.**—The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connexion with the design of the silos and the cutting and packing of the ensilage.

2. **Quantity Made and Stocks Held on Farms.**—Information regarding production and farm stocks of ensilage for the years ended 31st March, 1958 to 1961, are given in the following table.

## ENSILAGE : PRODUCTION AND FARM STOCKS.

(a) Not available.

The drought of 1902-3 drew increased attention to the value of stocks of ensilage, and in the following seasons there was an increase both in the number of holdings on which ensilage was made and in the quantity produced. The accumulated stocks proved of great value during the 1914 drought. In recent years, there has been an increasing tendency to produce more ensilage. From 117,000 tons in 1950-51, the quantity produced rose fairly uniformly to 464,000 tons in 1956-57 and subsequently to a record level of 830,000 tons in 1958-59. Output in 1959-60 declined to 685,000 tons from the previous year but subsequently rose to a new record level of 835,000 tons in 1960-61.

## § 27. Agricultural Colleges and Experimental Farms.

Agricultural colleges have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agriculture and livestock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree, they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying, etc., according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are primarily concerned with agricultural research and experimentation, each farm concentrating on problems specific to the district in which it is located. The results of the work undertaken are passed on to farmers at field days, which are held at regular intervals, through publication in various agricultural or scientific journals and through the agricultural extension services of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations in many parts of Australia, and sometimes undertakes research jointly with the appropriate State authorities. It also has regional laboratories in several States, conducting research into agronomic and livestock problems as they occur in each particular region (see also Chapter XV.—Education and Research). The State Departments of Agriculture study problems of particular significance within their own boundaries. In addition, the universities carry out valuable work on their experimental farms.

## § 28. Tractors on Rural Holdings.

The growth of mechanization in agriculture is indicated by the increase in the number of tractors on rural holdings from 41,943 in 1939 to 253,515 in 1961. The annual increase in numbers reached its peak in 1951-52 when over 20,000 additional tractors were enumerated on holdings. The rate of increase has declined in more recent years and over the last five years averaged only about 10,000 per annum.

The table below sets out the number of wheel and crawler type tractors by States for the five years ended 1961.

## TRACTORS ON RURAL HOLDINGS.

(a) Separate details for wheel and crawler tractors are not available for 1961.

## § 29. Number and Area of Rural Holdings and Employment Thereon.

1. **Number and Area.**—A holding in Australia has been defined by statisticians on a more or less uniform basis and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics, a holding may be defined as land of one acre or more in extent, used in the production of agricultural produce, the raising of livestock or the products of livestock.

There are considerable fluctuations from time to time in the numbers of very small holdings and it is very difficult to determine in some cases whether or not they are rural holdings within the definition.

In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also occasionally occupied.

The following table shows the recorded number and area of the holdings in each State for the seasons 1956-57 to 1960-61.

## RURAL HOLDINGS : NUMBER AND AREA.

Season.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

2. **Special Tabulation Relating to Rural Holdings—Classification by Size and Type of Activity.** Some of the information obtained from the 1959-60 Agricultural and Pastoral Census was classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops and numbers of livestock). In addition, all holdings were classified according to type of activity. Tables showing this information and an outline of methods used will be published in a series of bulletins, *Classification of Rural Holdings by Size and Type of Activity*, 1959-60. Similar information on size classification was published in a series of bulletins for the year 1955-56.

3. **Employment on Rural Holdings.**—The following table shows, for each State, the recorded number of males working on rural holdings as at 31st March, 1961. Additional particulars relating to the number of males employed in agriculture are available up to 1941-42 in Official Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

## MALES(a) ENGAGED ON RURAL HOLDINGS AT 31st MARCH, 1961.

Particulars.	N.S.W.	Vic.	Qld.	S.A.	W.A.	Tas.	N.T.(b)	A.C.T.	Aust.
<i>Permanent—</i>

(a) Australian totals for 1959, 1960 and 1961 are not available. (b) Excludes Northern Territory.

4. Salaries and Wages Paid to Employees on Rural Holdings.—Particulars of salaries and wages paid to employees (including amounts paid to contractors) working full-time on rural holdings have been collected uniformly in all States from 1949–50. Details are set out below for the year 1960–61. Data for New South Wales and Victoria, and hence Australia, are not available. Similar information for Australia as a whole is, however, given for the years 1953–54 to 1957–58.

RURAL HOLDINGS : SALARIES AND WAGES(a) PAID TO EMPLOYEES, 1960-61. (£'000.)
