## PREFACE

By the Constitution of the Commonwealth of Australia, the Parliament of the Commonwealth is empowered, subject to the Constitution, "to make laws for the peace, order, and good government of the Commonwealth, with respect to . . . . . Census and statistics." In the exercise of the power so conferred, a Census and Statistics Act was passed in 1905, and in the year following the Commonwealth Bureau of Census and Statistics was created. The first Official Year Book was published early in 1908. The publication here presented is the fiftieth Official Year Book issued under the authority of the Commonwealth Government.

The Synopsis on pp. xi to xxix following shows the general arrangement of the work. The special index (preceding the General Index) provided at the end of the volume, together with certain references given in the various chapters, will assist in tracing in previous issues special articles and other more or less important miscellaneous matter which, in order to conserve space, have been omitted or abbreviated in the present volume. Where, in the General Index, more than one reference to a subject is given, the chief reference (or references) has been specially indicated wherever possible.

Among the new matter included and existing matter revised or rearranged in this volume the following items may be especially mentioned.

Chapter II. Climate and Meteorology. New maps added showing Annual Rainfall and Average Annual Thunder-days (pp. 42 and 44).

Chapter XII. Employment and Unemployment (pp. 401-30). New chapter, including data relating to industry, occupation, etc. formerly included in the chapter Population, together with a new section dealing with the work force survey (pp. 417-24) and a revised and enlarged section relating to wage and salary earners in employment, formerly included in the chapter Labour, Wages and Prices.

Chapter XV. Transport and Communication. Special section summarizing the results of the Census of Motor Vehicles of 31st December, 1962 (pp. 590-4).

Chapter XVII. Public Justice (pp. 643-53). Revised chapter arrangement which groups particulars according to the nature of the proceedings rather than the type of court.

Chapter XIX. Education, Cultural Activities and Research. Statistics on schools and universities advanced an additional year (to 1963) (pp. 711-18 and 730-7). and new matter on grades of school pupils (pp. 715-8).

Chapter XXI. Private Finance. Revised and enlarged section relating to Savings Banks (pp. 854-64).

Chapter XXIX. International Relations (pp. 1217-26). Revised chapter.

Chapter XXX. Miscellaneous. Results of 30th June, 1962, Census of Retail Establishments and other Services (pp. 1239-45).

National Accounts. New matter (pp. 1253-82).

The material in the Year Book has been carefully checked throughout, but I shall be grateful to those who will be kind enough to point out defects or make suggestions.

## PREFACE

The statistics contained in the majority of the chapters of this volume relate to the years ended June or December, 1963, and the Appendix contains a selection of the more significant data which have become available since the chapters were prepared. As with previous Year Books, the contents of this issue have already been published in separate Parts as the successive chapters or groups of chapters were printed.

More detailed statistics on subjects dealt with in the Year Book are available in the various annual printed reports published by this Bureau. The more recent statistics published by the Bureau are contained in the *Digest of Current Economic Statistics* (monthly), the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and in other publications issued monthly, quarterly, half-yearly, or yearly. These publications are listed in § 7, Statistical Publications of Australia, Chapter XXX. Miscellaneous, and the last pages of this volume contain a list of current and recent printed publications, showing issue numbers, dates and prices.

The Deputy Commonwealth Statisticians in New South Wales, Victoria, Queensland and Western Australia publish Official Year Books concerning their respective States, and the Deputy Commonwealth Statisticians of all States issue a number of printed and mimeographed publications. These are listed on pages 1163-5 of the 1962 issue of this Year Book, and, together with publications of the central Bureau, in *Publications of the Commonwealth Bureau of Census and Statistics* issued by this Bureau.

My thanks are tendered to the Deputy Commonwealth Statistician in each State, who has collected and compiled the data on which a great part of the information given in the Year Book is based. Thanks are also tendered to the responsible officers of the various Commonwealth and State Departments, and to others who have kindly, and often at considerable trouble, supplied information.

I also desire to express my keen appreciation of the valuable work performed by Mr. J. M. Jones, B.A., Editor of Publications, Mr. E. H. Harry, B.A., B.Com., and Mr. C. W. F. Johns, B.Com., Dip. Pub. Ad., Assistant Editors and the other officers of the Publications Division, and of the services rendered by the officers in charge of the several Branches of the Commonwealth Bureau of Census and Statistics upon whom has devolved the duty of revising the chapters relative to their respective Branches, and by the Government Printer and his staff in printing this Year Book and in assisting and advising throughout its preparation.

K. M. ARCHER,  
Commonwealth Statistician

# SYNOPSIS

## CHAPTER I. DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA

	PAGE		PAGE
§ 1. Early Knowledge and Discovery of Australia		§ 4. The Establishment of the Commonwealth of Australia	
1. Terra Australis .. .. .	1	1. General .. .. .	5
2. Discovery of Australia .. .. .	1	2. Transfer of the Northern Territory to the Commonwealth .. .. .	5
3. Discoveries by the English .. .. .	2	3. Transfer of the Australian Capital Territory to the Commonwealth .. .. .	5
§ 2. The Annexation of Australia		4. Present Composition of the Commonwealth .. .. .	5
1. Annexation of the Eastern Part of Australia, 1770 .. .. .	2	§ 5. The Constitution of the Commonwealth	
2. Original Extent of New South Wales .. .. .	2	1. Commonwealth Constitution Act .. .. .	6
3. Extension of New South Wales Westward, 1825 .. .. .	3	2. The Royal Proclamation .. .. .	23
4. Annexation of Western Australia, 1827 .. .. .	3	§ 6. The External Territories of Australia	
§ 3. The Creation of the Several Colonies		1. Transfer of Norfolk Island .. .. .	23
1. New South Wales .. .. .	3	2. Transfer of British New Guinea or Papua .. .. .	23
2. Tasmania .. .. .	4	3. Territory of New Guinea .. .. .	23
3. Western Australia .. .. .	4	4. Nauru .. .. .	24
4. South Australia .. .. .	4	5. Australian Antarctic Territory .. .. .	24
5. New Zealand .. .. .	4	6. Territory of Heard and McDonald Islands .. .. .	24
6. Victoria .. .. .	4	7. Territory of Cocos (Keeling) Islands .. .. .	24
7. Queensland .. .. .	4	8. Territory of Christmas Island .. .. .	24

## CHAPTER II. PHYSIOGRAPHY

§ 1. General Description of Australia		§ 2. Climate and Meteorology of Australia— <i>continued</i>	
1. Geographical Position .. .. .	25	4. Evaporation .. .. .	47
2. Area of Australia compared with Areas of other Countries .. .. .	25	5. Rainfall .. .. .	47
3. Areas of States and Territories, Coastal Configuration and Standard Times .. .. .	27	6. Remarkable Falls of Rain .. .. .	50
4. Geographical Features of Australia .. .. .	27	7. Snowfall .. .. .	52
§ 2. Climate and Meteorology of Australia		8. Hail .. .. .	52
1. Introductory .. .. .	29	9. Droughts .. .. .	52
2. Temperature .. .. .	30	10. Wind .. .. .	52
3. Humidity .. .. .	47	11. Climatological Tables .. .. .	53
		12. Rainfall and Temperatures, Various Cities .. .. .	62
		13. Thunder Days .. .. .	62

## CHAPTER III. GENERAL GOVERNMENT

§ 1. Scheme of Parliamentary Government		§ 2. Parliaments and Elections— <i>continued</i>	
1. General .. .. .	63	7. The Parliament of Western Australia .. .. .	71
2. The Sovereign .. .. .	63	8. " " " Tasmania .. .. .	72
3. Powers and Functions of the Governor-General and of the State Governors .. .. .	63	§ 3. Administration and Legislation	
4. The Cabinet and Executive Government .. .. .	64	1. The Commonwealth Parliaments .. .. .	72
5. Number and Salary of Members of the Legislatures, Australian Parliaments .. .. .	65	2. Governors-General and Commonwealth Ministries .. .. .	73
6. Enactments of the Parliaments .. .. .	66	3. Governors and State Ministers .. .. .	76
§ 2. Parliaments and Elections		4. Leaders of the Opposition, Commonwealth and State Parliaments .. .. .	78
1. Commonwealth .. .. .	66	5. The Course of Legislation .. .. .	78
2. State Elections .. .. .	69	6. Legislation during 1963 .. .. .	78
3. The Parliament of New South Wales .. .. .	69	§ 4. Commonwealth Government Departments	
4. " " " Victoria .. .. .	70	1. General .. .. .	83
5. " " " Queensland .. .. .	70	2. The Department of Housing .. .. .	83
6. " " " South Australia .. .. .	71	§ 5. Cost of Parliamentary Government .. .. .	83

## CHAPTER IV. LAND TENURE AND SETTLEMENT

§ 1. Disposal of Crown Lands		§ 3. Alienation and Occupation of Crown Lands	
1. Land Legislation and Tenures .. .. .	85	1. General .. .. .	89
2. Forms of Land Tenure .. .. .	85	2-9. States and Territories .. .. .	89-92
§ 2. Closer Settlement and War Service Settlement		10. Summary .. .. .	93
1. Closer Settlement .. .. .	87	§ 4. Advances to Settlers	
2. Settlement of Returned Service Personnel .. .. .	87	1. General .. .. .	93
		2-8. States and Northern Territory .. .. .	93-96

## CHAPTER V. THE TERRITORIES OF AUSTRALIA

	PAGE		PAGE
<b>THE NORTHERN TERRITORY</b>		<b>PAPUA AND NEW GUINEA—continued</b>	
§ 1. Area and Population	97	§ 4. Native Labour .. .. .	119

## CHAPTER XXIII. RURAL INDUSTRY

## INTRODUCTION—RURAL ACTIVITY

§ 1. Number and Area of Rural Holdings	
1. Number and Area ..	985
2. Classification by Size and Type of Activity ..	986
§ 2. Employment on Rural Holdings	
1. Persons Engaged ..	986
2. Salaries and Wages Paid ..	987
3. Persons Residing Permanently on Holdings ..	988
§ 3. Technical Aspects of Rural Industry	
1. Farm Machinery on Rural Holdings ..	988
2. Fertilizers ..	990
3. Aerial Agriculture ..	992
4. Pasture Improvement ..	993
5. Soil Conservation ..	993

## AGRICULTURAL PRODUCTION

§ 1. Progress, Assistance and Control	
1. Early Development ..	993
2. Progress of Cultivation ..	994
3. Control and Assistance by Governmental Authorities ..	994
§ 2. Distribution, Production and Value of Crops	
1. Distribution ..	996
2. Production ..	998
3. Value of Agricultural Production ..	999
4. Indexes of Quantum and Price of Agricultural Production ..	1001
§ 3. Cereal Crops	
1. Wheat ..	1002
2. Oats ..	1018
3. Barley ..	1020
4. Sorghum for Grain ..	1023
5. Maize for Grain ..	1023
6. Rice ..	1025

AGRICULTURAL PRODUCTION—*continued*

§ 4. Fodder Crops	
1. Hay ..	1026
2. Green Fodder ..	1027
3. Ensilage ..	1028
§ 5. Industrial Crops	
1. Sugar Cane ..	1029
2. Peanuts ..	1033
3. Hops ..	1034
4. Flax ..	1034
5. Cotton ..	1035
6. Tobacco ..	1036
§ 6. Vegetables for Human Consumption	
1. Area Production and Trade ..	1038
2. Potatoes ..	1039
3. Onions ..	1041
§ 7. Fruit and Vineyards	
1. Fruit ..	1042
2. Vineyards ..	1045

## PASTORAL PRODUCTION

§ 1. Introduction	
1. Livestock Numbers ..	1051
2. Carrying Capacity of Pastoral Holdings ..	1051
3. Size Classification of Cattle Herds and Sheep Flocks ..	1051
4. Value of Pastoral Production ..	1051
5. Indexes of Quantum and Price of Pastoral Production ..	1052
§ 2. Sheep	
1. Distribution throughout Australia ..	1053
2. Numbers of Sheep on Rural Holdings ..	1054
3. Classification of Sheep According to Age, Sex and Breed ..	1054
4. Imports and Exports of Sheep ..	1055
5. Comparison with other Countries ..	1055

§ 1. Source of Statistics ..	1097
§ 2. Forestry in Australia	
1. Objects of Forestry ..	1097
2. General Account of Forests and Timbers ..	1098
3. Forested Areas ..	1100
4. Forest Administration and Research ..	1102
5. Fire Protection ..	1104
§ 3. Employment in Forestry	
1. Persons Engaged in Forestry Activities ..	1105
2. Employment by Forestry Departments ..	1105
3. Employment in Milling Operations ..	1106

§ 4. Forest Production	
1. Forest Products ..	1106
2. Value of Production ..	1107
§ 5. Timber and Timber Products	
1. Mill Production of Timber ..	1108
2. Veneers, Plywood, etc. ..	1109
3. Manufactured Boards ..	1110
4. Wood Pulp and Paper ..	1110
§ 6. Oversea Trade in Forest Products, Timber and Timber Products	
1. Imports ..	1111
2. Exports ..	1112

## CHAPTER XXV. FISHERIES

§ 1. Resources Development and National Aspects	
1. Natural Resources ..	1113
2. Development of Fisheries in Australia ..	1114
3. Government Administration of the Fishing Industry ..	1115
4. Research ..	1116
§ 2. Collection and Presentation of Statistics ..	1116
§ 3. The Fishing Industry	
1. Persons Engaged in Fisheries ..	1117

§ 3. The Fishing Industry— <i>continued</i>	
2. General Fisheries ..	1117
3. Pearls, Pearl-shell and Trochus-shell ..	1122
4. Whaling ..	1123
5. Value of Production ..	1125
§ 4. Consumption of Fish ..	1127
§ 5. Oversea Trade in Products of Fishing and Whaling	
1. Edible Products ..	1127
2. Pearls ..	1129
3. Unmanufactured Shells ..	1129
4. Marine Animal Oils ..	1129

## CHAPTER XXVI. MINERAL INDUSTRY

§ 1. Introduction	
1. Occurrences of Minerals ..	1131
2. Mineral Concentrates ..	1132
3. Government Aid to Mining, and Mineral Control ..	1132
§ 2. The Mineral Industry	
1. Sources and Scope of Statistics ..	1136
2. Presentation of Mineral Statistics ..	1136
3. Number of Mines and Quarries ..	1137

§ 2. The Mineral Industry— <i>continued</i>	
4. Employment in Mining and Quarrying ..	1138
5. Production Costs in Mining and Quarrying ..	1140
6. Value of Additions and Replacements to Fixed Assets in Mining and Quarrying ..	1142
7. Mineral Production ..	1142

**SYMBOLS AND OTHER FORMS OF USAGE IN THIS YEAR BOOK**

The following symbols, where shown in columns of figures, mean—

- n.a. —not available.
- . . —nil or less than half the final digit shown, or not applicable.
- p —preliminary—figure or series subject to revision.
- r —figure or series revised since previous issue.
- n.e.i.—not elsewhere included.
- n.e.c.—not elsewhere classified.
- n.s. —not stated.

A blank space in a column of figures means that the figure concerned is not yet available.

Yearly periods shown as, e.g., 1963, refer to the year ended 31st December, 1963; those shown as, e.g., 1962-63, refer to the year ended 30th June, 1963. Other yearly periods are specifically indicated.

Unless otherwise indicated, the British system of weights and measures is used.

Values are expressed in £ Australian, shown with or without the letter A., unless another currency is specifically stated.

# OFFICIAL YEAR BOOK

OF THE

## COMMONWEALTH OF AUSTRALIA

### CHAPTER I

#### DISCOVERY, COLONIZATION AND FEDERATION OF AUSTRALIA

##### § 1. Early Knowledge and Discovery of Australia

NOTE.—The following paragraphs contain only a bare outline of the more important facts relating to the early history of Australian discovery. A more detailed summary of these facts may be found in Official Year Book No. 39 (*see p. 1*) and earlier issues.

1. *Terra Australis*.—There was, apparently, an early Chaldean tradition as to the existence of an Austral land to the south of India, and rumours to that effect found their way in the course of time to Europe. References to this *Terra Australis* are found in the works of Ælianus (A.D. 205–234), Manilius (probably a contemporary of Augustus or Tiberius Caesar), and Ptolemy (A.D. 107–161). Evidence pointing to knowledge of such a land appeared in maps and manuscripts of the Middle Ages and the fourteenth and fifteenth centuries, but there is no definite evidence connecting this so-called *Terra Australis* with Australia.

Reference by Marco Polo (1254–1324) to a land called Locac and several indications on maps and globes in the fifteenth and sixteenth centuries have been assumed to relate to Australia, but little weight can now be attached to these suppositions. Cornelius Wytfliet's map of 1597, however, indicates roughly the eastern and western coasts of Australia, as well as the Gulf of Carpentaria, although the oft-quoted passage in his *Descriptionis Ptolemaicæ Augmentum* describing the *Australis Terra* has been considered to have had its origin in the voyages through the Straits of Magellan and the discovery of Tierra del Fuego rather than that of Australia.

2. *Discovery of Australia*.—(i) *The Spaniards*. Disregarding the suggestion, for which there is no evidence, that the Arabs had come to Australia long before the Portuguese, the Spaniards, or the Dutch, and apart from the possibility that the Portuguese may have discovered part of the Australian coast before 1542, the coastal exploration of Australia may be taken as having begun with the Spaniards and the Dutch.

In 1606, the Spaniard Quiros, on reaching the island that has retained the name of Espiritu Santo (the largest island of the New Hebrides group), thought he had discovered the great land of the south, and therefore named the group *La Australia del Espiritu Santo*. After leaving the New Hebrides, Quiros sailed eastward, but Torres, his second-in-command, took a westerly course and passed through the strait that now bears his name. In all probability, he sighted the Australian continent, but no mention of it is made in his records. This voyage marks the close of Spanish activity in the work of discovery in the South Seas.

(ii) *The Dutch*. The Dutch discovered Australia when the Dutch East India Company sent the *Duyfken* from Bantam, Java, to explore the island of New Guinea. During March, 1606, the *Duyfken* coasted along the southern shores of New Guinea and followed the west coast of Cape York peninsula as far as Cape Keer-Weer (Turn Again).

During the following thirty years, there were nine visits of Dutch navigators to Australian waters; by 1636, through their efforts, the coast of Australia from Cape York westward around to the Great Australian Bight had been discovered.

In 1642, Abel Janszoon Tasman set out from Batavia to ascertain the extent of the great southern continent. He named Van Diemen's Land, imagining it to be part of Australia proper, and sailing north-easterly discovered New Zealand and returned to Batavia. In his second voyage, in 1644, Tasman visited the northern coast of Australia, sailing round the Gulf of Carpentaria and along the north-west coast as far south as the tropic of Capricorn. This voyage of Tasman's may be said to have ended the period of Dutch discoveries, although there were subsequent visits by the Dutch to Australia (de Vlamingh in 1696 and Van Delft in 1705).

3. Discoveries by the English.—In the meantime, the English had made their first appearance on the Australian coast in 1688, when the north-westerly shores were visited by William Dampier, as supercargo of the *Cygnets*, a trading vessel whose crew had turned buccaneers. In 1699, he again visited Australia, in command of H.M.S. *Roebuck*, and on his return to England published an account in which a description is given of trees, flowers, birds and reptiles observed, and of encounters with natives.

At the end of the seventeenth century, it was uncertain whether Tasmania and New Zealand were parts of Australia, or whether they were separated from it but themselves formed part of a great Antarctic Continent. Lieutenant (later Captain) James Cook's first voyage, though primarily undertaken for the purpose of observing the transit of Venus from Tahiti, had also the objective of ascertaining whether the unexplored part of the southern hemisphere was only an immense mass of water or contained another continent. In command of H.M.S. *Endeavour*, a barque of 370 tons burden carrying about 85 persons, and accompanied by Sir Joseph Banks the botanist, Dr. Solander the naturalist, Green the astronomer, draughtsmen and servants, Cook, after observing the transit of Venus at Tahiti, turned toward New Zealand, sighting that land on 7th October, 1769, in the neighbourhood of Poverty Bay. Circumnavigating the North and South Islands, he proved that New Zealand was connected neither with the supposed Antarctic Continent nor with Australia, and took formal possession thereof in the name of the British Crown. On 20th April, 1770, at 6 a.m., Cook sighted the Australian mainland at a place he called Point Hicks, naming it after his first-lieutenant, who first saw it. Coasting northwards, Botany Bay was discovered on 29th April, 1770. The *Endeavour* dropped anchor and Cook landed on the same day. Cook sailed along the coast in a northerly direction for nearly 1,300 miles until 11th June, 1770, when the *Endeavour* was seriously damaged by striking a coral reef in the vicinity of Trinity Bay. Repairs occupied nearly two months, and the *Endeavour* then again set her course to the north, sailing through Torres Strait and anchoring in the Downs on 13th July, 1771. In 1772, Cook was put in command of the ships *Resolution* and *Adventure*, with a view to ascertaining whether a great southern continent existed. Having satisfied himself that, even if it did, it lay so far to the south as to be useless for trade and settlement, he returned to England in 1774. Cook's last voyage was undertaken in 1776, and he met his death on 14th February, 1779, by which date practically the whole coast of Australia had been explored. The only remaining discovery of importance was the existence of a channel between Tasmania and Australia. This was made by Bass and Flinders in 1798.

## § 2. The Annexation of Australia

1. Annexation of the Eastern Part of Australia, 1770.—Although representatives of the nations mentioned in the previous section landed or claimed to have landed on the shores of Australia on various occasions during the sixteenth and seventeenth centuries, it was not until 23rd August, 1770, that the history of Australia was brought into definite political connexion with Western civilization. It was on that date that Captain Cook took possession "of the whole eastern coast, from latitude 38° S. to this place, latitude 10½° S., in right of His Majesty King George the Third". Cook, however, proclaimed British sovereignty over only what are now the eastern parts of New South Wales and Queensland, and formal possession, on behalf of the British Crown, of the whole of the eastern part of the Australian continent and Tasmania was not taken until 26th January, 1788. It was on this last date that Captain Phillip's commission, first issued to him on 12th October, 1786, and amplified on 2nd April, 1787, was read to the people whom he had brought with him in the "First Fleet".

A full historical account of the period referred to may be found in the *Historical Records of New South Wales*, Vol. I., parts 1 and 2.

2. Original Extent of New South Wales.—The commission appointed Phillip "Captain-General and Governor-in-Chief in and over our territory called New South Wales, extending from the Northern Cape or extremity of the coast called Cape York, in the latitude of ten degrees thirty-seven minutes south, to the southern extremity of the said territory of New South Wales or South Cape, in the latitude of forty-three degrees thirty-nine minutes south and of all the country inland westward as far as the one hundred and thirty-fifth degree of east longitude reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean within the latitudes aforesaid of ten degrees thirty-seven minutes south and forty-three degrees thirty-nine minutes south".

Although Captain Cook had taken possession of the North Island of New Zealand in November, 1769, and of the South Island in January, 1770, it is doubtful whether, at the time when Captain Phillip's commission was drawn up, New Zealand was considered as one of the "islands adjacent in the Pacific Ocean". The fact that under the Supreme

Court Act (Imperial) of 1823, British residents in New Zealand were brought under the jurisdiction of the Court at Sydney, and that in 1839 there was a proposal on the part of the British Government to appoint a consul in New Zealand, would leave this an open question, as nothing more than extra-territorial jurisdiction may have been intended. Various hoistings of flags notwithstanding, New Zealand does not appear to have become British territory unequivocally until 1840. In that year, on 29th January, Captain Hobson arrived at the Bay of Islands. On the following day, he read his commission, which extended the boundaries of the Colony of New South Wales so as to embrace and comprehend the islands of New Zealand. On 5th February, the Treaty of Waitangi, made with the native chiefs, was signed. Finally, on 21st May, British sovereignty over the islands of New Zealand was explicitly proclaimed.

3. **Extension of New South Wales Westward, 1825.**—On 17th February, 1824, Earl Bathurst notified Sir Thomas Brisbane that he had recommended to His Majesty the dispatch of a ship of war to the north-west coast of New Holland for the purpose of taking possession of the coast between the western coast of Bathurst Island and the eastern side of Coburg Peninsula. Captain James J. Gordon Bremer of H.M.S. *Tamar*, who was selected for the purpose, took possession on 20th September, 1824, of the coast from the 135th to the 129th degree of east longitude. On 16th July, 1825, the whole territory between those boundaries was described in Darling's commission as being within the boundaries of New South Wales, thus increasing its area by 518,134 square miles, and making it, including New Zealand and excluding Tasmania, 2,076,308 square miles, or also excluding New Zealand, 1,972,446 square miles.

4. **Annexation of Western Australia, 1827.**—An expedition under Major Lockyer, sent by Lieutenant-General Sir Ralph Darling, then Governor of New South Wales, to found a settlement at King George Sound, sailed from Sydney on 9th November, 1826, landed at the Sound on 26th December following, and on 21st January, 1827, hoisted the British flag. Captain Stirling, in command of H.M.S. *Success*, arrived at Sydney a few weeks after the departure of the expedition to King George Sound. He obtained the Governor's permission to visit Swan River with a view to seizing a position on the western coast and reporting upon its suitability as a place of settlement. Captain Stirling left Sydney on 17th January, 1827, and on his return in the following April submitted a glowing report on what he described as a "rich and romantic country", urging its occupation for the purpose of settlement. He left for England in July, 1827, continuing his advocacy—notwithstanding much discouragement—with unabated enthusiasm. He was at last successful, the result being due mainly to the formation of an association of prospective settlers having capital at their disposal. He was appointed Lieutenant-Governor and with a party of settlers arrived at Garden Island, near the Swan River, in the ship *Parmelia* in June, 1829. On the 2nd of the preceding month, Captain Fremantle, in command of H.M.S. *Challenge*, arrived and hoisted the British flag on the south head of Swan River, again asserting possession of "all that part of New Holland which is not included within the territory of New South Wales". Thus, before the middle of 1829, the whole territory now known as the Commonwealth of Australia had been constituted a dependency of the United Kingdom.

### § 3. The Creation of the Several Colonies

1. **New South Wales.**—In Governor Phillip's commission of 1786, the mainland of Australia was divided by the 135th meridian of east longitude into two parts. The earliest colonists believed that the present State of Tasmania was actually joined to the mainland, and it was not until 1798 that the contrary was known. In that year, Bass and Flinders proved that it was an island by sailing through Bass Strait. The territory of New South Wales, as originally constituted, and of New Zealand, which may be included although Cook's annexation was not properly given effect to until 1840, consisted of 1,584,389 square miles. A further area of 518,134 square miles was added in 1825, when the western boundary was extended to the 129th east meridian. The territory was subsequently reduced by the separation of various areas to form the other colonies, and at the time of the establishment of the Commonwealth the area of New South Wales was 310,372 square miles.

Lord Howe Island, which is a dependency of New South Wales and for political purposes is included in one of the electorates of Sydney, is situated in latitude 31° 30' south, longitude 159° 5' east, about 436 miles north-east of Sydney, and has an area of 3,220 acres. The climate is mild and the rainfall abundant, but on account of the rocky formation of its surface only about 300 acres are suitable for cultivation, most of which are devoted to the production of *Kentia* palm seed. The land belongs to the Crown and

is occupied rent-free on sufferance. Discovered in 1788, the Island was first settled by a small party of Maoris in 1853; afterwards a colony was settled from Sydney. A Board of Control at Sydney manages the affairs of the Island and supervises the palm seed industry. The population was 249 at the Census of 30th June, 1961.

2. **Tasmania.**—In 1825, Van Diemen's Land, as Tasmania was then called, was politically separated from New South Wales, being constituted a separate colony on 14th June of that year. The area of the colony was 26,215 square miles. The name of the colony was officially changed to Tasmania in 1856, when responsible government was established.

Macquarie Island, about 1,000 miles south-east of Hobart, together with a few rocky islets nearby, has been a dependency of Tasmania since the nineteenth century. In December, 1911, five members of the Australasian Antarctic Expedition landed on the island and remained there until 1915. On 3rd March, 1948, another party was landed to man a new station which has since been maintained as a scientific base. The island is about 21 miles long and two miles wide.

3. **Western Australia.**—The territory westward of the 129th meridian, comprising 975,920 square miles, was constituted a colony under the name of Western Australia in June, 1829. It was always distinct and independent of New South Wales, except for the settlement on King George Sound (*see* p. 3), which remained under the jurisdiction of New South Wales until 1831.

4. **South Australia.**—On 15th August, 1834, the Act 4 and 5 William IV., cap. 95, was passed, creating South Australia a "province", and settlement took place towards the end of the year 1836. The first Governor, Captain Hindmarsh, R.N., arrived at Holdfast Bay on 28th December, 1836, and on the same day the new colony was officially proclaimed. The new colony embraced 309,850 square miles of territory, lying south of the 26th parallel of south latitude and between the 141st and 132nd meridians of east longitude. On 10th December, 1861, by authority of the Imperial Act 24 and 25 Vict., cap. 44, the western boundary of South Australia was extended to coincide with the eastern boundary of Western Australia, namely, the 129th east meridian. The area of the extension was approximately 70,220 square miles. Nearly two years later, on 6th July, 1863, the Northern Territory, comprising 523,620 square miles, was brought under the jurisdiction of South Australia, which thereupon controlled an area of 903,690 square miles. The Territory was transferred to the Commonwealth on 1st January, 1911 (*see* p. 5).

5. **New Zealand.**—New Zealand, nominally annexed by Captain Cook and formally declared by proclamation in 1840 as a dependency of New South Wales by letters patent of 16th November of that year, was constituted a separate colony under the powers of the Act 3 and 4 Vict., cap. 62, of 7th August, 1840. Proclamation of the separation was made on 3rd May, 1841. The area of the colony was 103,862 square miles.

6. **Victoria.**—In 1851, what was known as the "Port Phillip District" of New South Wales was constituted the colony of Victoria, "bounded on the north and north-west by a straight line drawn from Cape Howe to the nearest source of the River Murray and thence by the course of that river to the eastern boundary of the colony of South Australia". The area of the new colony was 87,884 square miles, and its separate existence took effect from 1st July, 1851, upon the issuing of the writs for the first election of elective members of the Legislative Council.

7. **Queensland.**—The northern squatting districts of Moreton, Darling Downs, Burnett, Wide Bay, Maranoa, Leichhardt and Port Curtis, together with the reputed county of Stanley, were granted an independent administration and formed into a distinct colony under the name of Queensland by letters patent dated 6th June, 1859, although separation from New South Wales was not completed until 10th December of the same year, upon the assumption of office of the first Governor. The territory comprised in the new colony was "so much of the colony of New South Wales as lies northwards of a line commencing on the sea-coast at Point Danger in latitude about 28° 8' south, running westward along the Macpherson and Dividing Ranges and the Dumaresq River to the Macintyre River, thence downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members, and appurtenances in the Pacific Ocean". The area of the colony thus constituted was 554,300 square miles. By letters patent dated 13th March, 1861, forwarded by the Colonial Secretary to the Governor of Queensland on 12th April, 1862, the area of Queensland was increased by the annexation of "so much of the colony of New South Wales as lies to the northward of the 26th parallel

of south latitude, and between the 141st and 138th meridians of east longitude, together with all and every the adjacent islands, their members, and appurtenances, in the Gulf of Carpentaria." With this addition, the area of Queensland became 670,500 square miles. Following a thorough revision of the area of each Local Government Area of Queensland, based on the most recent maps available, the Surveyor-General, in 1958, determined the area of Queensland as 667,000 square miles—a reduction of 3,500 square miles from the area previously determined.

#### § 4. The Establishment of the Commonwealth of Australia

1. **General.**—On 1st January, 1901, the colonies mentioned, with the exception of New Zealand, were federated under the name of the "Commonwealth of Australia," the designation of "Colonies"—except in the case of the Northern Territory, to which the designation "Territory" is applied—being at the same time changed to that of "States".

2. **Transfer of the Northern Territory to the Commonwealth.**—On 7th December, 1907, the Commonwealth and the State of South Australia entered into an agreement for the transfer of the Northern Territory to the Commonwealth, subject to approval by the Parliaments of the Commonwealth and the State. This approval was given by the South Australian Parliament under *The Northern Territory Surrender Act 1907* (assented to on 14th May, 1908) and by the Commonwealth Parliament under the *Northern Territory Acceptance Act 1910* (assented to on 16th November, 1910). The Territory was formally transferred to the Commonwealth on 1st January, 1911, and became the Northern Territory of Australia.

By Imperial Order in Council, dated 23rd July, 1931, Ashmore Islands, known as Middle, East and West Islands, and Cartier Island, situated in the Indian Ocean off the north-west coast of Australia, were placed under the authority of the Commonwealth. The islands were accepted by the Commonwealth in the *Ashmore and Cartier Islands Acceptance Act 1933*, under the name of the Territory of Ashmore and Cartier Islands, on 10th May, 1934. The Act authorized the Governor of Western Australia to make ordinances having the force of law in and in relation to the Territory. An amendment to the Act in July, 1938, annexed the islands to the Northern Territory, whose laws, ordinances and regulations, wherever applicable, thereupon applied.

3. **Transfer of the Australian Capital Territory to the Commonwealth.**—On 18th October, 1909, the Commonwealth and the State of New South Wales entered into an agreement for the surrender to and acceptance by the Commonwealth of an area of 911 square miles as the Seat of Government of the Commonwealth. In December, 1909, Acts were passed by the Commonwealth and New South Wales Parliaments approving the agreement, and on 5th December, 1910, a proclamation was issued vesting the Territory in the Commonwealth on and from 1st January, 1911. By the *Jervis Bay Territory Acceptance Act 1915*, an area of 28 square miles at Jervis Bay, surrendered by New South Wales according to an agreement made in 1913, was accepted by the Commonwealth, and was transferred as from 4th September, 1915.

4. **Present Composition of the Commonwealth.**—Following the revision of the area of Queensland, as mentioned in § 3 above, the total area of the Commonwealth of Australia has been determined as 2,971,081 square miles. The dates of creation and the areas of its component States and Territories are shown below.

THE COMMONWEALTH OF AUSTRALIA: AREA, ETC., OF COMPONENT STATES AND TERRITORIES

State or Territory	Year of formation into separate Colony or Territory	Present area in square miles	State or Territory	Year of formation into separate Colony or Territory	Present area in square miles
New South Wales	1786	309,433	Northern Territory	1863	523,620
Victoria ..	1851	87,884	Australian Capital Territory ..	1911	939
Queensland ..	1859	667,000			
South Australia ..	1834	380,070			
Western Australia	1829	975,920	Commonwealth of Australia ..	..	2,971,081
Tasmania ..	1825	26,215			

### § 5. The Constitution of the Commonwealth

NOTE.—Information regarding the development of the Constitutions of the various Colonies (now States), together with a brief history of the Federal movement in Australia, was embodied in this Chapter in issues of the Official Year Book up to and including No. 22.

1. **Commonwealth Constitution Act.**—*The Commonwealth of Australia Constitution Act*, 63 and 64 Vict., Chapter 12, namely: “An Act to constitute the Commonwealth of Australia”, as amended by the *Constitution Alteration (Senate Elections)* 1906, the *Constitution Alteration (State Debts)* 1909, the *Constitution Alteration (State Debts)* 1928, and the *Constitution Alteration (Social Services)* 1946, is given *in extenso* hereunder, and the text contains all the alterations of the Constitution which have been made up to and including 31st December, 1963.

#### THE COMMONWEALTH OF AUSTRALIA CONSTITUTION ACT, 63 & 64 VICT., CHAPTER 12.

*An Act to constitute the Commonwealth of Australia. (9th July, 1900.)*

WHEREAS the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, humbly relying on the blessing of Almighty God, have agreed to unite in one indissoluble Federal Commonwealth under the Crown of the United Kingdom of Great Britain and Ireland, and under the Constitution hereby established:

And whereas it is expedient to provide for the admission into the Commonwealth of other Australian Colonies and possessions of the Queen:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

1. This Act may be cited as the Commonwealth of Australia Constitution Act.
2. The provisions of this Act referring to the Queen shall extend to Her Majesty's heirs and successors in the sovereignty of the United Kingdom.
3. It shall be lawful for the Queen, with the advice of the Privy Council, to declare by proclamation that, on and after a day therein appointed, not being later than one year after the passing of this Act, the people of New South Wales, Victoria, South Australia, Queensland, and Tasmania, and also, if Her Majesty is satisfied that the people of Western Australia have agreed thereto, of Western Australia, shall be united in a Federal Commonwealth under the name of the Commonwealth of Australia. But the Queen may, at any time after the proclamation, appoint a Governor-General for the Commonwealth.
4. The Commonwealth shall be established, and the Constitution of the Commonwealth shall take effect, on and after the day so appointed. But the Parliaments of the several colonies may at any time after the passing of this Act make any such laws, to come into operation on the day so appointed, as they might have made if the Constitution had taken effect at the passing of this Act.
5. This Act, and all laws made by the Parliament of the Commonwealth under the Constitution, shall be binding on the courts, judges, and people of every State and of every part of the Commonwealth, notwithstanding anything in the laws of any State; and the laws of the Commonwealth shall be in force on all British ships, the Queen's ships of war excepted, whose first port of clearance and whose port of destination are in the Commonwealth.

6. “The Commonwealth” shall mean the Commonwealth of Australia as established under this Act.

“The States” shall mean such of the colonies of New South Wales, New Zealand, Queensland, Tasmania, Victoria, Western Australia, and South Australia, including the northern territory of South Australia, as for the time being are parts of the Commonwealth, and such colonies or territories as may be admitted into or established by the Commonwealth as States; and each of such parts of the Commonwealth shall be called “a State.”

“Original States” shall mean such States as are parts of the Commonwealth at its establishment.

7. The Federal Council of Australasia Act, 1885, is hereby repealed, but so as not to affect any laws passed by the Federal Council of Australasia and in force at the establishment of the Commonwealth.

Any such law may be repealed as to any State by the Parliament of the Commonwealth, or as to any colony not being a State by the Parliament thereof.

8. After the passing of this Act the Colonial Boundaries Act, 1895, shall not apply to any colony which becomes a State of the Commonwealth; but the Commonwealth shall be taken to be a self-governing colony for the purposes of that Act.

9. The Constitution of the Commonwealth shall be as follows:—

THE CONSTITUTION.

This Constitution is divided as follows:—

- Chapter I.—The Parliament:
  - Part I.—General:
  - Part II.—The Senate:
  - Part III.—The House of Representatives:
  - Part IV.—Both Houses of the Parliament:
  - Part V.—Powers of the Parliament:
- Chapter II.—The Executive Government:
- Chapter III.—The Judicature:
- Chapter IV.—Finance and Trade:
- Chapter V.—The States:
- Chapter VI.—New States:
- Chapter VII.—Miscellaneous:
- Chapter VIII.—Alteration of the Constitution.
- The Schedule.

CHAPTER I.—THE PARLIAMENT.

PART I.—GENERAL.

1. The legislative power of the Commonwealth shall be vested in a Federal Parliament, which shall consist of the Queen, a Senate, and a House of Representatives, and which is hereinafter called “ The Parliament ”, or “ The Parliament of the Commonwealth ”.

2. A Governor-General appointed by the Queen shall be Her Majesty’s representative in the Commonwealth, and shall have and may exercise in the Commonwealth during the Queen’s pleasure, but subject to this Constitution, such powers and functions of the Queen as Her Majesty may be pleased to assign to him.

3. There shall be payable to the Queen out of the Consolidated Revenue Fund of the Commonwealth, for the salary of the Governor-General, an annual sum which, until the Parliament otherwise provides, shall be ten thousand pounds.

The salary of a Governor-General shall not be altered during his continuance in office.

4. The provisions of this Constitution relating to the Governor-General extend and apply to the Governor-General for the time being, or such person as the Queen may appoint to administer the Government of the Commonwealth; but no such person shall be entitled to receive any salary from the Commonwealth in respect of any other office during his administration of the Government of the Commonwealth.

5. The Governor-General may appoint such times for holding the sessions of the Parliament as he thinks fit, and may also from time to time, by Proclamation or otherwise prorogue the Parliament, and may in like manner dissolve the House of Representatives.

After any general election the Parliament shall be summoned to meet not later than thirty days after the day appointed for the return of the writs.

The Parliament shall be summoned to meet not later than six months after the establishment of the Commonwealth.

6. There shall be a session of the Parliament once at least in every year, so that twelve months shall not intervene between the last sitting of the Parliament in one session and its first sitting in the next session.

## PART II.—THE SENATE.

7. The Senate shall be composed of senators for each State, directly chosen by the people of the State, voting, until the Parliament otherwise provides, as one electorate.

But until the Parliament of the Commonwealth otherwise provides, the Parliament of the State of Queensland, if that State be an Original State, may make laws dividing the State into divisions and determining the number of senators to be chosen for each division, and in the absence of such provision the State shall be one electorate.

Until the Parliament otherwise provides there shall be six senators for each Original State.\* The Parliament may make laws increasing or diminishing the number of senators for each State, but so that equal representation of the several Original States shall be maintained and that no Original State shall have less than six senators.

The senators shall be chosen for a term of six years, and the names of the senators chosen for each State shall be certified by the Governor to the Governor-General.

8. The qualification of electors of senators shall be in each State that which is prescribed by this Constitution, or by the Parliament, as the qualification for electors of members of the House of Representatives; but in the choosing of senators each elector shall vote only once.

9. The Parliament of the Commonwealth may make laws prescribing the method of choosing senators, but so that the method shall be uniform for all the States. Subject to any such law, the Parliament of each State may make laws prescribing the method of choosing the senators for that State.

The Parliament of a State may make laws for determining the times and places of elections of senators for the State.

10. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State, for the time being, relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections of senators for the State.

11. The Senate may proceed to the despatch of business, notwithstanding the failure of any State to provide for its representation in the Senate.

12. The Governor of any State may cause writs to be issued for elections of senators for the State. In case of the dissolution of the Senate the writs shall be issued within ten days from the proclamation of such dissolution.

13. As soon as may be after the Senate first meets, and after each first meeting of the Senate following a dissolution thereof, the Senate shall divide the senators chosen for each State into two classes, as nearly equal in number as practicable; and the places of the senators of the first class shall become vacant at the expiration of [the third year] *three years*,† and the places of those of the second class at the expiration of [the sixth year] *six years*,† from the beginning of their term of service; and afterwards the places of senators shall become vacant at the expiration of six years from the beginning of their term of service.

The election to fill vacant places shall be made [in the year at the expiration of which] *within one year before*† the places are to become vacant.

For the purposes of this section the term of service of a senator shall be taken to begin on the first day of [January] *July*† following the day of his election, except in the cases of the first election and of the election next after any dissolution of the Senate, when it shall be taken to begin on the first day of [January] *July*† preceding the day of his election.

14. Whenever the number of senators for a State is increased or diminished, the Parliament of the Commonwealth may make such provision for the vacating of the places of senators for the State as it deems necessary to maintain regularity in the rotation.

15. If the place of a senator becomes vacant before the expiration of his term of service, the Houses of Parliament of the State for which he was chosen shall, sitting and voting together, choose a person to hold the place until the expiration of the term, or until the election of a successor as hereinafter provided, whichever first happens. But if the Houses of Parliament of the State are not in session at the time when the vacancy is notified,

\* The Parliament has otherwise provided, by means of the *Representation Act 1948*, that the number of senators shall be ten for each State from the first meeting of Parliament after the first dissolution of the House of Representatives occurring after the commencement of the Act (18th May, 1948).

† As amended by Section 2 of the *Constitution Alteration (Senate Elections) 1906*. The words in square brackets have been repealed; amendments are shown in italics.

the Governor of the State, with the advice of the Executive Council thereof, may appoint a person to hold the place until the expiration of fourteen days after the beginning of the next session of the Parliament of the State, or until the election of a successor, whichever first happens.

At the next general election of members of the House of Representatives, or at the next election of senators for the State, whichever first happens, a successor shall, if the term has not then expired, be chosen to hold the place from the date of his election until the expiration of the term.

The name of any senator so chosen or appointed shall be certified by the Governor of the State to the Governor-General.

16. The qualifications of a senator shall be the same as those of a member of the House of Representatives.

17. The Senate shall, before proceeding to the despatch of any other business, choose a senator to be the President of the Senate; and as often as the office of President becomes vacant the Senate shall again choose a senator to be the President.

The President shall cease to hold his office if he ceases to be a senator. He may be removed from office by a vote of the Senate, or he may resign his office or his seat by writing addressed to the Governor-General.

18. Before or during any absence of the President, the Senate may choose a senator to perform his duties in his absence.

19. A senator may, by writing addressed to the President, or to the Governor-General if there is no President or if the President is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

20. The place of a senator shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the Senate, fails to attend the Senate.

21. Whenever a vacancy happens in the Senate, the President, or if there is no President or if the President is absent from the Commonwealth the Governor-General, shall notify the same to the Governor of the State in the representation of which the vacancy has happened.

22. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the senators shall be necessary to constitute a meeting of the Senate for the exercise of its powers.

23. Questions arising in the Senate shall be determined by a majority of votes, and each senator shall have one vote. The President shall in all cases be entitled to a vote; and when the votes are equal the question shall pass in the negative.

### PART III.—THE HOUSE OF REPRESENTATIVES.

24. The House of Representatives shall be composed of members directly chosen by the people of the Commonwealth, and the number of such members shall be, as nearly as practicable, twice the number of the senators.

The number of members chosen in the several States shall be in proportion to the respective numbers of their people, and shall, until the Parliament otherwise provides, be determined, whenever necessary, in the following manner:—

- (i) A quota shall be ascertained by dividing the number of the people of the Commonwealth, as shown by the latest statistics of the Commonwealth, by twice the number of the senators;
- (ii) The number of members to be chosen in each State shall be determined by dividing the number of the people of the State, as shown by the latest statistics of the Commonwealth, by the quota; and if on such division there is a remainder greater than one-half of the quota, one more member shall be chosen in the State.

But notwithstanding anything in this section five members at least shall be chosen in each Original State.

25. For the purposes of the last section, if by the law of any State all persons of any race are disqualified from voting at elections for the more numerous House of the Parliament of the State, then, in reckoning the number of the people of the State or of the Commonwealth, persons of that race resident in that State shall not be counted.

26. Notwithstanding anything in section twenty-four, the number of members to be chosen in each State at the first election shall be as follows:—

New South Wales ..	23	South Australia ..	6
Victoria ..	20	Tasmania ..	5
Queensland ..	8		

Provided that if Western Australia is an Original State, the numbers shall be as follows:—

New South Wales ..	26	South Australia ..	7
Victoria ..	23	Western Australia ..	5
Queensland ..	9	Tasmania ..	5

27. Subject to this Constitution, the Parliament may make laws for increasing or diminishing the number of the members of the House of Representatives.

28. Every House of Representatives shall continue for three years from the first meeting of the House, and no longer, but may be sooner dissolved by the Governor-General.

29. Until the Parliament of the Commonwealth otherwise provides, the Parliament of any State may make laws for determining the divisions in each State for which members of the House of Representatives may be chosen, and the number of members to be chosen for each division. A division shall not be formed out of parts of different States.

In the absence of other provision, each State shall be one electorate.

30. Until the Parliament otherwise provides, the qualification of electors of members of the House of Representatives shall be in each State that which is prescribed by the law of the State as the qualification of electors of the more numerous House of Parliament of the State; but in the choosing of members each elector shall vote only once.\*

31. Until the Parliament otherwise provides, but subject to this Constitution, the laws in force in each State for the time being relating to elections for the more numerous House of the Parliament of the State shall, as nearly as practicable, apply to elections in the State of members of the House of Representatives.

32. The Governor-General in Council may cause writs to be issued for general elections of members of the House of Representatives.

After the first general election, the writs shall be issued within ten days from the expiry of a House of Representatives or from the proclamation of a dissolution thereof.

33. Whenever a vacancy happens in the House of Representatives, the Speaker shall issue his writ for the election of a new member, or if there is no Speaker or if he is absent from the Commonwealth the Governor-General in Council may issue the writ.

34. Until the Parliament otherwise provides, the qualifications of a member of the House of Representatives shall be as follows:—

- (i) He must be of the full age of twenty-one years, and must be an elector entitled to vote at the election of members of the House of Representatives, or a person qualified to become such elector, and must have been for three years at the least a resident within the limits of the Commonwealth as existing at the time when he is chosen:
- (ii) He must be a subject of the Queen, either natural-born or for at least five years naturalized under a law of the United Kingdom, or of a Colony which has become or becomes a State, or of the Commonwealth, or of a State.†

35. The House of Representatives shall, before proceeding to the despatch of any other business, choose a member to be the Speaker of the House, and as often as the office of Speaker becomes vacant the House shall again choose a member to be the Speaker.

The Speaker shall cease to hold his office if he ceases to be a member. He may be removed from office by a vote of the House, or he may resign his office or his seat by writing addressed to the Governor-General.

36. Before or during any absence of the Speaker, the House of Representatives may choose a member to perform his duties in his absence.

\* The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1962*, Sections 39 and 39A (repealing an earlier provision made by the *Commonwealth Franchise Act 1902*). For present qualifications see Chapter III. General Government.

† The Parliament has otherwise provided, by means of the *Commonwealth Electoral Act 1918-1962*, Section 69. For present qualifications see Chapter III. General Government.

37. A member may by writing addressed to the Speaker, or to the Governor-General if there is no Speaker or if the Speaker is absent from the Commonwealth, resign his place, which thereupon shall become vacant.

38. The place of a member shall become vacant if for two consecutive months of any session of the Parliament he, without the permission of the House, fails to attend the House.

39. Until the Parliament otherwise provides, the presence of at least one-third of the whole number of the members of the House of Representatives shall be necessary to constitute a meeting of the House for the exercise of its powers.

40. Questions arising in the House of Representatives shall be determined by a majority of votes other than that of the Speaker. The Speaker shall not vote unless the numbers are equal, and then he shall have a casting vote.

#### PART IV.—BOTH HOUSES OF THE PARLIAMENT.

41. No adult person who has or acquires a right to vote at elections for the more numerous House of the Parliament of a State shall, while the right continues, be prevented by any law of the Commonwealth from voting at elections for either House of the Parliament of the Commonwealth.

42. Every senator and every member of the House of Representatives shall before taking his seat make and subscribe before the Governor-General, or some person authorized by him, an oath or affirmation of allegiance in the form set forth in the schedule to this Constitution.

43. A member of either House of the Parliament shall be incapable of being chosen or of sitting as a member of the other House.

44. Any person who—

- (i) Is under any acknowledgment of allegiance, obedience, or adherence to a foreign power, or is a subject or a citizen or entitled to the rights or privileges of a subject or a citizen of a foreign power: or
- (ii) Is attainted of treason, or has been convicted and is under sentence, or subject to be sentenced, for any offence punishable under the law of the Commonwealth or of a State by imprisonment for one year or longer: or
- (iii) Is an undischarged bankrupt or insolvent: or
- (iv) Holds any office of profit under the Crown, or any pension payable during the pleasure of the Crown out of any of the revenues of the Commonwealth: or
- (v) Has any direct or indirect pecuniary interest in any agreement with the Public Service of the Commonwealth otherwise than as a member and in common with the other members of an incorporated company consisting of more than twenty-five persons:

shall be incapable of being chosen or of sitting as a senator or a member of the House of Representatives.

But sub-section iv. does not apply to the office of any of the Queen's Ministers of State for the Commonwealth, or of any of the Queen's Ministers for a State, or to the receipt of pay, half-pay, or a pension by any person as an officer or member of the Queen's navy or army, or to the receipt of pay as an officer or member of the naval or military forces of the Commonwealth by any person whose services are not wholly employed by the Commonwealth.

45. If a senator or member of the House of Representatives—

- (i) Becomes subject to any of the disabilities mentioned in the last preceding section: or
- (ii) Takes the benefit, whether by assignment, composition, or otherwise, of any law relating to bankrupt or insolvent debtors: or
- (iii) Directly or indirectly takes or agrees to take any fee or honorarium for services rendered to the Commonwealth, or for services rendered in the Parliament to any person or State:

his place shall thereupon become vacant.

46. Until the Parliament otherwise provides, any person declared by this Constitution to be incapable of sitting as a senator or as a member of the House of Representatives shall, for every day on which he so sits, be liable to pay the sum of one hundred pounds to any person who sues for it in any court of competent jurisdiction.

47. Until the Parliament otherwise provides, any question respecting the qualification of a senator or of a member of the House of Representatives, or respecting a vacancy in either House of the Parliament, and any question of a disputed election to either House shall be determined by the House in which the question arises.

48. Until the Parliament otherwise provides, each senator and each member of the House of Representatives shall receive an allowance of four hundred pounds a year, to be reckoned from the day on which he takes his seat.\*

49. The powers, privileges, and immunities of the Senate and of the House of Representatives, and of the members and the committees of each House, shall be such as are declared by the Parliament, and until declared shall be those of the Commons House of Parliament of the United Kingdom, and of its members and committees, at the establishment of the Commonwealth.

50. Each House of the Parliament may make rules and orders with respect to—

- (i) The mode in which its powers, privileges, and immunities may be exercised and upheld;
- (ii) The order and conduct of its business and proceedings either separately or jointly with the other House.

#### PART V.—POWERS OF THE PARLIAMENT.†

51. The Parliament shall, subject to this Constitution, have power to make laws for the peace, order, and good government of the Commonwealth with respect to—

- (i) Trade and commerce with other countries, and among the States:
- (ii) Taxation; but so as not to discriminate between States or parts of States:
- (iii) Bounties on the production or export of goods, but so that such bounties shall be uniform throughout the Commonwealth:
- (iv) Borrowing money on the public credit of the Commonwealth:
- (v) Postal, telegraphic, telephonic, and other like services:
- (vi) The naval and military defence of the Commonwealth and of the several States, and the control of the forces to execute and maintain the laws of the Commonwealth:
- (vii) Lighthouses, lightships, beacons and buoys:
- (viii) Astronomical and meteorological observations:
- (ix) Quarantine:
- (x) Fisheries in Australian waters beyond territorial limits:
- (xi) Census and statistics:
- (xii) Currency, coinage, and legal tender:
- (xiii) Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money:
- (xiv) Insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned:
- (xv) Weights and measures:
- (xvi) Bills of exchange and promissory notes:
- (xvii) Bankruptcy and insolvency:
- (xviii) Copyrights, patents of inventions and designs, and trade marks:
- (xix) Naturalization and aliens:
- (xx) Foreign corporations, and trading or financial corporations formed within the limits of the Commonwealth:
- (xxi) Marriage:

\* The Parliamentary allowance has been varied from time to time (*see pp. 69 and 70 of Official Year Book No. 42*). In 1959, it was increased to £2,750, while additional allowances of £1,500 and £3,250, respectively, were granted to the Leaders of the Opposition in the Senate and the House of Representatives, and an additional allowance of £750 to the Leader in the House of Representatives (other than the Leader of the Opposition) of a recognized political party which has not less than ten members in the House of Representatives and of which no member is a Minister.

† Particulars of proposed laws which were submitted to referendums are referred to in the List of Special Articles at the end of this volume.

- (xxii) Divorce and matrimonial causes; and in relation thereto, parental rights, and the custody and guardianship of infants:
  - (xxiii) Invalid and old-age pensions:
  - (xxiiiA) *\*The provision of maternity allowances, widows' pensions, child endowment, unemployment, pharmaceutical, sickness and hospital benefits, medical and dental services (but not so as to authorize any form of civil conscription), benefits to students and family allowances:*
  - (xxiv) The service and execution throughout the Commonwealth of the civil and criminal process and the judgments of the courts of the States:
  - (xxv) The recognition throughout the Commonwealth of the laws, the public Acts and records, and the judicial proceedings of the States:
  - (xxvi) The people of any race, other than the aboriginal race in any State, for whom it is deemed necessary to make special laws:
  - (xxvii) Immigration and emigration:
  - (xxviii) The influx of criminals:
  - (xxix) External affairs:
  - (xxx) The relations of the Commonwealth with the islands of the Pacific:
  - (xxxi) The acquisition of property on just terms from any State or person for any purpose in respect of which the Parliament has power to make laws:
  - (xxxii) The control of railways with respect to transport for the naval and military purposes of the Commonwealth:
  - (xxxiii) The acquisition, with the consent of a State, of any railways of the State on terms arranged between the Commonwealth and the State:
  - (xxxiv) Railway construction and extension in any State with the consent of that State:
  - (xxxv) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State:
  - (xxxvi) Matters in respect of which this Constitution makes provision until the Parliament otherwise provides:
  - (xxxvii) Matters referred to the Parliament of the Commonwealth by the Parliament or Parliaments of any State or States, but so that the law shall extend only to States by whose Parliaments the matter is referred, or which afterwards adopt the law:
  - (xxxviii) The exercise within the Commonwealth, at the request or with the concurrence of the Parliaments of all the States directly concerned, of any power which can at the establishment of this Constitution be exercised only by the Parliament of the United Kingdom or by the Federal Council of Australasia:
  - (xxxix) Matters incidental to the execution of any power vested by this Constitution in the Parliament or in either House thereof, or in the Government of the Commonwealth, or in the Federal Judicature, or in any department or officer of the Commonwealth.
52. The Parliament shall, subject to this Constitution, have exclusive power to make laws for the peace, order, and good government of the Commonwealth with respect to—
- (i) The seat of Government of the Commonwealth, and all places acquired by the Commonwealth for public purposes:
  - (ii) Matters relating to any department of the public service the control of which is by this Constitution transferred to the Executive Government of the Commonwealth:
  - (iii) Other matters declared by this Constitution to be within the exclusive power of the Parliament.

53. Proposed laws appropriating revenue or moneys, or imposing taxation, shall not originate in the Senate. But a proposed law shall not be taken to appropriate revenue or moneys, or to impose taxation, by reason only of its containing provisions for the imposition or appropriation of fines or other pecuniary penalties, or for the demand or payment or appropriation of fees for licences, or fees for services under the proposed law.

---

\* Under Section 2 of the *Constitution Alteration (Social Services)* 1946, the Constitution was amended by the insertion of this paragraph.

The Senate may not amend proposed laws imposing taxation, or proposed laws appropriating revenue or moneys for the ordinary annual services of the Government.

The Senate may not amend any proposed law so as to increase any proposed charge or burden on the people.

The Senate may at any stage return to the House of Representatives any proposed law which the Senate may not amend, requesting, by message, the omission or amendment of any items or provisions therein. And the House of Representatives may, if it thinks fit, make any of such omissions or amendments, with or without modifications.

Except as provided in this section, the Senate shall have equal power with the House of Representatives in respect of all proposed laws.

54. The proposed law which appropriates revenue or moneys for the ordinary annual services of the Government shall deal only with such appropriation.

55. Laws imposing taxation shall deal only with the imposition of taxation, and any provision therein dealing with any other matter shall be of no effect.

Laws imposing taxation, except laws imposing duties of customs or of excise, shall deal with one subject of taxation only; but laws imposing duties of customs shall deal with duties of customs only, and laws imposing duties of excise shall deal with duties of excise only.

56. A vote, resolution, or proposed law for the appropriation of revenue or moneys shall not be passed unless the purpose of the appropriation has in the same session been recommended by message of the Governor-General to the House in which the proposal originated.

57. If the House of Representatives passes any proposed law, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, and if after an interval of three months the House of Representatives, in the same or the next session, again passes the proposed law with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may dissolve the Senate and the House of Representatives simultaneously. But such dissolution shall not take place within six months before the date of the expiry of the House of Representatives by effluxion of time.

If after such dissolution the House of Representatives again passes the proposed law, with or without any amendments which have been made, suggested, or agreed to by the Senate, and the Senate rejects or fails to pass it, or passes it with amendments to which the House of Representatives will not agree, the Governor-General may convene a joint sitting of the members of the Senate and of the House of Representatives.

The members present at the joint sitting may deliberate and shall vote together upon the proposed law as last proposed by the House of Representatives, and upon amendments, if any, which have been made therein by one House and not agreed to by the other, and any such amendments which are affirmed by an absolute majority of the total number of the members of the Senate and House of Representatives shall be taken to have been carried, and if the proposed law, with the amendments, if any, so carried is affirmed by an absolute majority of the total number of members of the Senate and House of Representatives, it shall be taken to have been duly passed by both Houses of the Parliament, and shall be presented to the Governor-General for the Queen's assent.

58. When a proposed law passed by both Houses of the Parliament is presented to the Governor-General for the Queen's assent, he shall declare, according to his discretion, but subject to this Constitution, that he assents in the Queen's name, or that he withholds assent, or that he reserves the law for the Queen's pleasure.

The Governor-General may return to the House in which it originated any proposed law so presented to him, and may transmit therewith any amendments which he may recommend, and the Houses may deal with the recommendation.

59. The Queen may disallow any law within one year from the Governor-General's assent, and such disallowance on being made known by the Governor-General by speech or message to each of the Houses of the Parliament, or by Proclamation, shall annul the law from the day when the disallowance is so made known.

60. A proposed law reserved for the Queen's pleasure shall not have any force unless and until within two years from the day on which it was presented to the Governor-General for the Queen's assent the Governor-General makes known, by speech or message to each of the Houses of the Parliament, or by Proclamation, that it has received the Queen's assent.

CHAPTER II.—THE EXECUTIVE GOVERNMENT.

61. The executive power of the Commonwealth is vested in the Queen and is exercisable by the Governor-General as the Queen's representative, and extends to the execution and maintenance of this Constitution, and of the laws of the Commonwealth.

62. There shall be a Federal Executive Council to advise the Governor-General in the government of the Commonwealth, and the members of the Council shall be chosen and summoned by the Governor-General and sworn as Executive Councillors, and shall hold office during his pleasure.

63. The provisions of this Constitution referring to the Governor-General in Council shall be construed as referring to the Governor-General acting with the advice of the Federal Executive Council.

64. The Governor-General may appoint officers to administer such departments of State of the Commonwealth as the Governor-General in Council may establish.

Such officers shall hold office during the pleasure of the Governor-General. They shall be members of the Federal Executive Council, and shall be the Queen's Ministers of State for the Commonwealth.

After the first general election no Minister of State shall hold office for a longer period than three months unless he is or becomes a senator or a member of the House of Representatives.

65. Until the Parliament otherwise provides, the Ministers of State shall not exceed seven in number, and shall hold such offices as the Parliament prescribes, or, in the absence of provision, as the Governor-General directs.\*

66. There shall be payable to the Queen, out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of the Ministers of State, an annual sum which until the Parliament otherwise provides, shall not exceed twelve thousand pounds a year.\*

67. Until the Parliament otherwise provides, the appointment and removal of all other officers of the Executive Government of the Commonwealth shall be vested in the Governor-General in Council, unless the appointment is delegated by the Governor-General in Council or by a law of the Commonwealth to some other authority.

68. The command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General as the Queen's representative.

69. On a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments of the public service in each State shall become transferred to the Commonwealth:—

Posts, telegraphs, and telephones:		Lighthouses, lightships, beacons, and buoys:
Naval and military defence:		Quarantine.

But the Departments of customs and of excise in each State shall become transferred to the Commonwealth on its establishment.

70. In respect of matters which, under this Constitution, pass to the Executive Government of the Commonwealth, all powers and functions which at the establishment of the Commonwealth are vested in the Governor of a Colony, or in the Governor of a Colony with the advice of his Executive Council, or in any authority of a Colony, shall vest in the Governor-General, or in the Governor-General in Council, or in the authority exercising similar powers under the Commonwealth, as the case requires.

\* \* The number of Ministers of State has been increased from time to time and has been 25 since 1964. The annual appropriation for Ministers' salaries has been correspondingly increased and has been £73,350 since 1964.

## CHAPTER III.—THE JUDICATURE.

71. The judicial power of the Commonwealth shall be vested in a Federal Supreme Court, to be called the High Court of Australia, and in such other federal courts as the Parliament creates, and in such other courts as it invests with federal jurisdiction. The High Court shall consist of a Chief Justice, and so many other Justices, not less than two, as the Parliament prescribes.\*

72. The Justices of the High Court and of the other Courts created by the Parliament—

- (i) Shall be appointed by the Governor-General in Council:
- (ii) Shall not be removed except by the Governor-General in Council, on an address from both Houses of the Parliament in the same session, praying for such removal on the ground of proved misbehaviour or incapacity:
- (iii) Shall receive such remuneration as the Parliament may fix; but the remuneration shall not be diminished during their continuance in office.\*

73. The High Court shall have jurisdiction, with such exceptions and subject to such regulations as the Parliament prescribes, to hear and determine appeals from all judgments, decrees, orders, and sentences—

- (i) Of any Justice or Justices exercising the original jurisdiction of the High Court:
  - (ii) Of any other federal court, or court exercising federal jurisdiction; or of the Supreme Court of any State, or of any other court of any State from which at the establishment of the Commonwealth an appeal lies to the Queen in Council:
  - (iii) Of the Inter-State Commission, but as to questions of law only:
- and the judgment of the High Court in all such cases shall be final and conclusive.

But no exception or regulation prescribed by the Parliament shall prevent the High Court from hearing and determining any appeal from the Supreme Court of a State in any matter in which at the establishment of the Commonwealth an appeal lies from such Supreme Court to the Queen in Council.

Until the Parliament otherwise provides, the conditions of and restrictions on appeals to the Queen in Council from the Supreme Courts of the several States shall be applicable to appeals from them to the High Court.

74. No appeal shall be permitted to the Queen in Council from a decision of the High Court upon any question, howsoever arising, as to the limits *inter se* of the Constitutional powers of the Commonwealth and those of any State or States, or as to the limits *inter se* of the Constitutional powers of any two or more States, unless the High Court shall certify that the question is one which ought to be determined by Her Majesty in Council.

The High Court may so certify if satisfied that for any special reason the certificate should be granted, and thereupon an appeal shall lie to Her Majesty in Council on the question without further leave.

Except as provided in this section, this Constitution shall not impair any right which the Queen may be pleased to exercise by virtue of Her Royal prerogative to grant special leave of appeal from the High Court to Her Majesty in Council. The Parliament may make laws limiting the matters in which such leave may be asked, but proposed laws containing any such limitation shall be reserved by the Governor-General for Her Majesty's pleasure.

75. In all matters—

- (i) Arising under any treaty:
- (ii) Affecting consuls or other representatives of other countries:
- (iii) In which the Commonwealth, or a person suing or being sued on behalf of the Commonwealth, is a party:
- (iv) Between States, or between residents of different States, or between a State and a resident of another State:
- (v) In which a writ of Mandamus or prohibition or an injunction is sought against an officer of the Commonwealth:

the High Court shall have original jurisdiction.

\* The *Judiciary Act* 1903 provided for a Chief Justice and two other Justices, increased by subsequent amendments to six. The *Judiciary Act* 1903 also provided for the payment of a salary of £3,500 a year to the Chief Justice and of £3,000 a year to each other Justice, increased by subsequent amendments to £10,000 and £8,500 a year, respectively.

76. The Parliament may make laws conferring original jurisdiction on the High Court in any matter—

- (i) Arising under this Constitution, or involving its interpretation:
- (ii) Arising under any laws made by the Parliament:
- (iii) Of Admiralty and maritime jurisdiction:
- (iv) Relating to the same subject-matter claimed under the laws of different States.

77. With respect to any of the matters mentioned in the last two sections the Parliament may make laws—

- (i) Defining the jurisdiction of any federal court other than the High Court:
- (ii) Defining the extent to which the jurisdiction of any federal court shall be exclusive of that which belongs to or is invested in the courts of the States:
- (iii) Investing any court of a State with federal jurisdiction.

78. The Parliament may make laws conferring rights to proceed against the Commonwealth or a State in respect of matters within the limits of the judicial power.

79. The federal jurisdiction of any court may be exercised by such number of judges as the Parliament prescribes.

80. The trial on indictment of any offence against any law of the Commonwealth shall be by jury, and every such trial shall be held in the State where the offence was committed, and if the offence was not committed within any State the trial shall be held at such place or places as the Parliament prescribes.

---

#### CHAPTER IV.—FINANCE AND TRADE.

81. All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution.

82. The costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund shall form the first charge thereon; and the revenue of the Commonwealth shall in the first instance be applied to the payment of the expenditure of the Commonwealth.

83. No money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law.

But until the expiration of one month after the first meeting of the Parliament the Governor-General in Council may draw from the Treasury and expend such moneys as may be necessary for the maintenance of any department transferred to the Commonwealth and for the holding of the first elections for the Parliament.

84. When any department of the public service of a State becomes transferred to the Commonwealth, all officers of the department shall become subject to the control of the Executive Government of the Commonwealth.

Any such officer who is not retained in the service of the Commonwealth shall, unless he is appointed to some other office of equal emolument in the public service of the State, be entitled to receive from the State any pension, gratuity, or other compensation, payable under the law of the State on the abolition of his office.

Any such officer who is retained in the service of the Commonwealth shall preserve all his existing and accruing rights, and shall be entitled to retire from office at the time, and on the pension or retiring allowance, which would be permitted by the law of the State if his service with the Commonwealth were a continuation of his service with the State. Such pension or retiring allowance shall be paid to him by the Commonwealth; but the State shall pay to the Commonwealth a part thereof, to be calculated on the proportion which his term of service with the State bears to his whole term of service, and for the purpose of the calculation his salary shall be taken to be that paid to him by the State at the time of the transfer.

Any officer who is, at the establishment of the Commonwealth, in the public service of a State, and who is, by consent of the Governor of the State with the advice of the Executive Council thereof, transferred to the public service of the Commonwealth, shall have the same rights as if he had been an officer of a department transferred to the Commonwealth and were retained in the service of the Commonwealth.

85. When any department of the public service of a State is transferred to the Commonwealth—

- (i) All property of the State of any kind, used exclusively in connexion with the department, shall become vested in the Commonwealth; but, in the case of the departments controlling customs and excise and bounties, for such time only as the Governor-General in Council may declare to be necessary;
- (ii) The Commonwealth may acquire any property of the State, of any kind used, but not exclusively used in connexion with the department; the value thereof shall, if no agreement can be made, be ascertained in, as nearly as may be, the manner in which the value of land, or of an interest in land, taken by the State for public purposes is ascertained under the law of the State in force at the establishment of the Commonwealth;
- (iii) The Commonwealth shall compensate the State for the value of any property passing to the Commonwealth under this section; if no agreement can be made as to the mode of compensation, it shall be determined under laws to be made by the Parliament;
- (iv) The Commonwealth shall, at the date of the transfer, assume the current obligations of the State in respect of the department transferred.

86. On the establishment of the Commonwealth, the collection and control of duties of customs and of excise, and the control of the payment of bounties, shall pass to the Executive Government of the Commonwealth.

87. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, of the net revenue of the Commonwealth from duties of customs and of excise not more than one-fourth shall be applied annually by the Commonwealth towards its expenditure.

The balance shall, in accordance with this Constitution, be paid to the several States, or applied towards the payment of interest on debts of the several States taken over by the Commonwealth.

88. Uniform duties of customs shall be imposed within two years after the establishment of the Commonwealth.

89. Until the imposition of uniform duties of customs—

- (i) The Commonwealth shall credit to each State the revenues collected therein by the Commonwealth.
- (ii) The Commonwealth shall debit to each State—
  - (a) The expenditure therein of the Commonwealth incurred solely for the maintenance or continuance, as at the time of transfer, of any department transferred from the State to the Commonwealth;
  - (b) The proportion of the State, according to the number of its people, in the other expenditure of the Commonwealth.
- (iii) The Commonwealth shall pay to each State month by month the balance (if any) in favour of the State.

90. On the imposition of uniform duties of customs the power of the Parliament to impose duties of customs and of excise, and to grant bounties on the production or export of goods, shall become exclusive.

On the imposition of uniform duties of customs all laws of the several States imposing duties of customs or of excise, or offering bounties on the production or export of goods, shall cease to have effect, but any grant of or agreement for any such bounty lawfully made by or under the authority of the Government of any State shall be taken to be good if made before the thirtieth day of June, one thousand eight hundred and ninety-eight, and not otherwise.

91. Nothing in this Constitution prohibits a State from granting any aid to or bounty on mining for gold, silver, or other metals, nor from granting, with the consent of both Houses of the Parliament of the Commonwealth expressed by resolution, any aid to or bounty on the production or export of goods.

92. On the imposition of uniform duties of customs, trade, commerce, and intercourse among the States, whether by means of internal carriage or ocean navigation, shall be absolutely free.

But notwithstanding anything in this Constitution, goods imported before the imposition of uniform duties of customs into any State, or into any Colony which, whilst the goods remain therein, becomes a State, shall, on thence passing into another State within two

years after the imposition of such duties, be liable to any duty chargeable on the importation of such goods into the Commonwealth, less any duty paid in respect of the goods on their importation.

93. During the first five years after the imposition of uniform duties of customs, and thereafter until the Parliament otherwise provides—

- (i) The duties of customs chargeable on goods imported into a State and afterwards passing into another State for consumption, and the duties of excise paid on goods produced or manufactured in a State and afterwards passing into another State for consumption, shall be taken to have been collected not in the former but in the latter State:
- (ii) Subject to the last sub-section, the Commonwealth shall credit revenue, debit expenditure, and pay balances to the several States as prescribed for the period preceding the imposition of uniform duties of customs.

94. After five years from the imposition of uniform duties of customs, the Parliament may provide, on such basis as it deems fair, for the monthly payment to the several States of all surplus revenue of the Commonwealth.

95. Notwithstanding anything in this Constitution, the Parliament of the State of Western Australia, if that State be an Original State, may, during the first five years after the imposition of uniform duties of customs, impose duties of customs on goods passing into that State and not originally imported from beyond the limits of the Commonwealth; and such duties shall be collected by the Commonwealth.

But any duty so imposed on any goods shall not exceed during the first of such years the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and shall not exceed during the second, third, fourth, and fifth of such years respectively, four-fifths, three-fifths, two-fifths, and one-fifth of such latter duty, and all duties imposed under this section shall cease at the expiration of the fifth year after the imposition of uniform duties.

If at any time during the five years the duty on any goods under this section is higher than the duty imposed by the Commonwealth on the importation of the like goods, then such higher duty shall be collected on the goods when imported into Western Australia from beyond the limits of the Commonwealth.

96. During a period of ten years after the establishment of the Commonwealth and thereafter until the Parliament otherwise provides, the Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit.

97. Until the Parliament otherwise provides, the laws in force in any Colony which has become or becomes a State with respect to the receipt of revenue and the expenditure of money on account of the Government of the Colony, and the review and audit of such receipt and expenditure, shall apply to the receipt of revenue and the expenditure of money on account of the Commonwealth in the State in the same manner as if the Commonwealth, or the Government or an officer of the Commonwealth, were mentioned whenever the Colony, or the Government or an officer of the Colony, is mentioned.

98. The power of the Parliament to make laws with respect to trade and commerce extends to navigation and shipping, and to railways the property of any State.

99. The Commonwealth shall not, by any law or regulation of trade, commerce, or revenue, give preference to one State or any part thereof over another State or any part thereof.

100. The Commonwealth shall not, by any law or regulation of trade or commerce, abridge the right of a State or of the residents therein to the reasonable use of the waters of rivers for conservation or irrigation.

101. There shall be an Inter-State Commission, with such powers of adjudication and administration as the Parliament deems necessary for the execution and maintenance, within the Commonwealth, of the provisions of this Constitution relating to trade and commerce, and of all laws made thereunder.

102. The Parliament may by any law with respect to trade or commerce forbid, as to railways, any preference or discrimination by any State, or by any authority constituted under a State, if such preference or discrimination is undue and unreasonable, or unjust to any State; due regard being had to the financial responsibilities incurred by any State in connexion with the construction and maintenance of its railways. But no preference or discrimination shall, within the meaning of this section, be taken to be undue and unreasonable, or unjust to any State, unless so adjudged by the Inter-State Commission.

## 103. The members of the Inter-State Commission—

- (i) Shall be appointed by the Governor-General in Council;
- (ii) Shall hold office for seven years, but may be removed within that time by the Governor-General in Council, on an address from both Houses of the Parliament in the same session praying for such removal on the ground of proved misbehaviour or incapacity;
- (iii) Shall receive such remuneration as the Parliament may fix; but such remuneration shall not be diminished during their continuance in office.

104. Nothing in this Constitution shall render unlawful any rate for the carriage of goods upon a railway, the property of a State, if the rate is deemed by the Inter-State Commission to be necessary for the development of the territory of the State, and if the rate applies equally to goods within the State and to goods passing into the State from other States.

105. The Parliament may take over from the States their public debts [as existing at the establishment of the Commonwealth],\* or a proportion thereof according to the respective numbers of their people as shown by the latest statistics of the Commonwealth, and may convert, renew, or consolidate such debts, or any part thereof; and the States shall indemnify the Commonwealth in respect of the debts taken over, and thereafter the interest payable in respect of the debts shall be deducted and retained from the portions of the surplus revenue of the Commonwealth payable to the several States, or if such surplus is insufficient, or if there is no surplus, then the deficiency or the whole amount shall be paid by the several States.

105A.† (1.) *The Commonwealth may make agreements with the States with respect to the public debts of the States, including—*

- (a) *the taking over of such debts by the Commonwealth;*
- (b) *the management of such debts;*
- (c) *the payment of interest and the provision and management of sinking funds in respect of such debts;*
- (d) *the consolidation, renewal, conversion, and redemption of such debts;*
- (e) *the indemnification of the Commonwealth by the States in respect of debts taken over by the Commonwealth; and*
- (f) *the borrowing of money by the States or by the Commonwealth, or by the Commonwealth for the States.*

(2.) *The Parliament may make laws for validating any such agreement made before the commencement of this section.*

(3.) *The Parliament may make laws for the carrying out by the parties thereto of any such agreement.*

(4.) *Any such agreement may be varied or rescinded by the parties thereto.*

(5.) *Every such agreement and any such variation thereof shall be binding upon the Commonwealth and the States parties thereto notwithstanding anything contained in this Constitution or the Constitution of the several States or in any law of the Parliament of the Commonwealth or of any State.*

(6.) *The powers conferred by this section shall not be construed as being limited in any way to the provisions of section one hundred and five of this Constitution.*

#### CHAPTER V.—THE STATES.

106. The Constitution of each State of the Commonwealth shall, subject to this Constitution, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State, as the case may be, until altered in accordance with the Constitution of the State.

107. Every power of the Parliament of a Colony which has become or becomes a State, shall, unless it is by this Constitution exclusively vested in the Parliament of the Commonwealth or withdrawn from the Parliament of the State, continue as at the establishment of the Commonwealth, or as at the admission or establishment of the State as the case may be.

\* Under Section 2 of the *Constitution Alteration (State Debts) 1909*, the words in square brackets were omitted.

† Under Section 2 of the *Constitution Alteration (State Debts) 1928*, the Constitution was amended by the insertion of this section.

108. Every law in force in a Colony which has become or becomes a State, and relating to any matter within the powers of the Parliament of the Commonwealth, shall, subject to this Constitution, continue in force in the State: and, until provision is made in that behalf by the Parliament of the Commonwealth, the Parliament of the State shall have such powers of alteration and of repeal in respect of any such law as the Parliament of the Colony had until the Colony became a State.

109. When a law of a State is inconsistent with a law of the Commonwealth, the latter shall prevail, and the former shall, to the extent of the inconsistency, be invalid.

110. The provisions of this Constitution relating to the Governor of a State extend and apply to the Governor for the time being of the State, or other chief executive officer or administrator of the government of the State.

111. The Parliament of a State may surrender any part of the State to the Commonwealth; and upon such surrender, and the acceptance thereof by the Commonwealth, such part of the State shall become subject to the exclusive jurisdiction of the Commonwealth.

112. After uniform duties of customs have been imposed, a State may levy on imports or exports, or on goods passing into or out of the State, such charges as may be necessary for executing the inspection laws of the State; but the net produce of all charges so levied shall be for the use of the Commonwealth; and any such inspection laws may be annulled by the Parliament of the Commonwealth.

113. All fermented, distilled, or other intoxicating liquids passing into any State or remaining therein for use, consumption, sale, or storage, shall be subject to the laws of the State as if such liquids had been produced in the State.

114. A State shall not, without the consent of the Parliament of the Commonwealth, raise or maintain any naval or military force, or impose any tax on property of any kind belonging to the Commonwealth, nor shall the Commonwealth impose any tax on property of any kind belonging to a State.

115. A State shall not coin money, nor make anything but gold and silver coin a legal tender in payment of debts.

116. The Commonwealth shall not make any law for establishing any religion, or for imposing any religious observance, or for prohibiting the free exercise of any religion, and no religious test shall be required as a qualification for any office or public trust under the Commonwealth.

117. A subject of the Queen, resident in any State, shall not be subject in any other State to any disability or discrimination which would not be equally applicable to him if he were a subject of the Queen resident in such other State.

118. Full faith and credit shall be given, throughout the Commonwealth, to the laws, the public Acts and records, and the judicial proceedings of every State.

119. The Commonwealth shall protect every State against invasion and, on the application of the Executive Government of the State, against domestic violence.

120. Every State shall make provision for the detention in its prisons of persons accused or convicted of offences against the laws of the Commonwealth, and for the punishment of persons convicted of such offences, and the Parliament of the Commonwealth may make laws to give effect to this provision.

---

#### CHAPTER VI.—NEW STATES.

121. The Parliament may admit to the Commonwealth or establish new States, and may upon such admission or establishment make or impose such terms and conditions, including the extent of representation in either House of the Parliament, as it thinks fit.

122. The Parliament may make laws for the government of any territory surrendered by any State to and accepted by the Commonwealth, or of any territory placed by the Queen under the authority of and accepted by the Commonwealth, or otherwise acquired by the Commonwealth, and may allow the representation of such territory in either House of the Parliament to the extent and on the terms which it thinks fit.

123. The Parliament of the Commonwealth may, with the consent of the Parliament of a State, and the approval of the majority of the electors of the State voting upon the question, increase, diminish, or otherwise alter the limits of the State, upon such terms and conditions as may be agreed on, and may, with the like consent, make provision respecting the effect and operation of any increase or diminution or alteration of territory in relation to any State affected.

124. A new State may be formed by separation of territory from a State, but only with the consent of the Parliament thereof, and a new State may be formed by the union of two or more States or parts of States, but only with the consent of the Parliaments of the States affected.

---

CHAPTER VII.—MISCELLANEOUS.

125. The seat of Government of the Commonwealth shall be determined by the Parliament, and shall be within territory which shall have been granted to or acquired by the Commonwealth, and shall be vested in and belong to the Commonwealth, and shall be in the State of New South Wales, and be distant not less than one hundred miles from Sydney.

Such territory shall contain an area of not less than one hundred square miles, and such portion thereof as shall consist of Crown lands shall be granted to the Commonwealth without any payment therefor.

The Parliament shall sit at Melbourne until it meet at the Seat of Government.

126. The Queen may authorize the Governor-General to appoint any person, or any persons jointly or severally, to be his deputy or deputies within any part of the Commonwealth, and in that capacity to exercise during the pleasure of the Governor-General such powers and functions of the Governor-General as he thinks fit to assign to such deputy or deputies, subject to any limitations expressed or directions given by the Queen; but the appointment of such deputy or deputies shall not affect the exercise by the Governor-General himself of any power or function.

127. In reckoning the numbers of the people of the Commonwealth, or of a State or other part of the Commonwealth, aboriginal natives shall not be counted.

---

CHAPTER VIII.—ALTERATION OF THE CONSTITUTION.

128. This Constitution shall not be altered except in the following manner:—

The proposed law for the alteration thereof must be passed by an absolute majority of each House of the Parliament, and not less than two nor more than six months after its passage through both Houses the proposed law shall be submitted in each State to the electors qualified to vote for the election of members of the House of Representatives.

But if either House passes any such proposed law by an absolute majority, and the other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, and if after an interval of three months the first-mentioned House in the same or the next session again passes the proposed law by an absolute majority with or without any amendment which has been made or agreed to by the other House, and such other House rejects or fails to pass it or passes it with any amendment to which the first-mentioned House will not agree, the Governor-General may submit the proposed law as last proposed by the first-mentioned House, and either with or without any amendments subsequently agreed to by both Houses, to the electors in each State qualified to vote for the election of the House of Representatives.

When a proposed law is submitted to the electors the vote shall be taken in such manner as the Parliament prescribes. But until the qualification of electors of members of the House of Representatives becomes uniform throughout the Commonwealth, only one-half the electors voting for and against the proposed law shall be counted in any State in which adult suffrage prevails.

And if in a majority of the States a majority of the electors voting approve the proposed law, and if a majority of all the electors voting also approve the proposed law, it shall be presented to the Governor-General for the Queen's assent.

No alteration diminishing the proportionate representation of any State in either House of the Parliament, or the minimum number of representatives of a State in the House of Representatives, or increasing, diminishing, or otherwise altering the limits of the State, or in any manner affecting the provisions of the Constitution in relation thereto, shall become law unless the majority of the electors voting in that State approve the proposed law.

## SCHEDULE.

## OATH.

I, *A.B.*, do swear that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law. So HELP ME GOD!

## AFFIRMATION.

I, *A.B.*, do solemnly and sincerely affirm and declare that I will be faithful and bear true allegiance to Her Majesty Queen Victoria, Her heirs and successors according to law.

(NOTE.—*The name of the King or Queen of the United Kingdom of Great Britain and Ireland for the time being is to be substituted from time to time.*)

2. **The Royal Proclamation.**—The preceding Act received the Royal assent on 9th July, 1900. This made it lawful to declare that the people of Australia should be united in a Federal Commonwealth. This proclamation, made on 17th September, 1900, constituted the Commonwealth as from 1st January, 1901; it read as follows.

## BY THE QUEEN.

## A PROCLAMATION.

(Signed) VICTORIA R.

WHEREAS by an Act of Parliament passed in the Sixty-third and Sixty-fourth Years of Our Reign, intituled "An Act to constitute the Commonwealth of *Australia*," it is enacted that it shall be lawful for the Queen, with the advice of the Privy Council, to declare by Proclamation, that, on and after a day therein appointed, not being later than One year after the passing of this Act, the people of *New South Wales, Victoria, South Australia, Queensland, and Tasmania*, and also, if Her Majesty is satisfied that the people of *Western Australia* have agreed thereto, of *Western Australia*, shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

And whereas We are satisfied that the people of *Western Australia* have agreed thereto accordingly.

We therefore, by and with the advice of Our Privy Council, have thought fit to issue this Our Royal Proclamation, and We do hereby declare that on and after the First day of *January* One thousand nine hundred and one, the people of *New South Wales, Victoria, South Australia, Queensland, Tasmania, and Western Australia* shall be united in a Federal Commonwealth under the name of the Commonwealth of *Australia*.

Given at Our Court at *Balmoral* this Seventeenth day of *September*, in the Year of Our Lord One thousand nine hundred, and in the Sixty-fourth Year of Our Reign.

GOD SAVE THE QUEEN.

## § 6. The External Territories of Australia

1. **Transfer of Norfolk Island.**—In 1856, Norfolk Island was created a distinct and separate settlement under the jurisdiction of New South Wales. Later, in 1896, it was made a dependency under the Governor of that colony, and finally by the passage of the *Norfolk Island Act* 1913 it was accepted as a Territory of the Commonwealth of Australia. The island is situated in latitude 29° 3' 3" S., longitude 167° 57' 5" E., and comprises an area of 8,528 acres.

2. **Transfer of British New Guinea or Papua.**—Under the administration of the Commonwealth, but not included in it, is British New Guinea or Papua, finally annexed by the British Government in 1884. This Territory was for a number of years administered by the Queensland Government, but was transferred to the Commonwealth by proclamation on 1st September, 1906, under the authority of the *Papua Act* 1905. The area of Papua is about 90,540 square miles.

3. **Territory of New Guinea.**—In 1919, it was agreed by the Principal Allied and Associated Powers that a mandate should be conferred on Australia for the government of the former German territories and islands situated in latitude between the Equator

and 8° S., and in longitude between 141° E. and 159° 25' E. The mandate was issued by the League of Nations on 17th December, 1920. The Governor-General of the Commonwealth was authorized to accept the mandate by the *New Guinea Act 1920*, which also declared the area to be a Territory under the authority of the Commonwealth by the name of the Territory of New Guinea. The Territory comprises about 93,000 square miles, and the administration under the mandate dated from 9th May, 1921. New Guinea is now administered under a Trusteeship Agreement with the United Nations, approved on 13th December, 1946.

4. **Nauru.**—In 1919, the Governments of the United Kingdom, Australia and New Zealand entered into an agreement to make provision for the exercise of the mandate conferred on the British Empire for the administration of the island of Nauru, and for the mining of the phosphate deposits thereon. The island is situated in latitude 0° 32' S., and longitude 166° 55' E. and comprises about 5,263 acres. The agreement provided that the administration of the island should be vested in an administrator, the first appointment to be made by the Commonwealth Government, and thereafter in such manner as the three Governments decided. The agreement was approved by the Commonwealth Parliament in the *Nauru Island Agreement Act 1919*, and a supplementary agreement of 30th May, 1923, which gave the Government immediately responsible for the administration greater powers of control over the Administrator, was approved in 1932. So far, the administrators have been appointed by the Commonwealth Government. The administration under the mandate operated from 17th December, 1920, to 1st November, 1947, since when Nauru has been administered under a Trusteeship Agreement with the United Nations.

5. **Australian Antarctic Territory.**—An Imperial Order in Council of 7th February, 1933, placed under Australian authority "all the islands and territories other than Adelie Land which are situated south of the 60th degree of South Latitude and lying between the 160th degree of East Longitude and the 45th degree of East Longitude."

The Order came into force with a proclamation issued by the Governor-General on 24th August, 1936, after the passing of the *Australian Antarctic Territory Acceptance Act 1933* by the Commonwealth Parliament. The boundaries of Adelie Land were definitely fixed by a decree of 1st April, 1938, as latitude 60° S., longitude 135° E. and longitude 142° E.

6. **Territory of Heard and McDonald Islands.**—Heard and McDonald Islands, about 2,500 miles south-west of Fremantle, were transferred from United Kingdom to Australian control as from 26th December, 1947.

7. **Territory of Cocos (Keeling) Islands.**—*The Cocos (Keeling) Islands Act 1955* provided for the acceptance of the Cocos Islands, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia and was parallel to an Act of the United Kingdom Parliament transferring authority over the islands to the Commonwealth. Consequent on the passing of these Acts, Her Majesty, by Order in Council, specified 23rd November, 1955, as the date of transfer. From that date, the islands came under Australian administration and an Official Representative of Australia was appointed to take charge of the local administration of the islands.

8. **Territory of Christmas Island.**—*The Christmas Island Act 1958* provided for the acceptance of Christmas Island, in the Indian Ocean, as a Territory under the authority of the Commonwealth of Australia. Complementary legislation having been passed by the Parliament of the United Kingdom, the island was transferred to the Australian administration on 1st October, 1958, and an Official Representative was appointed to administer the Territory.

## CHAPTER II

### PHYSIOGRAPHY

#### § 1. General Description of Australia

1. *Geographical Position.*—(i) *General.* The Australian Commonwealth, which includes the island continent of Australia proper and the island of Tasmania, is situated in the Southern Hemisphere, and comprises an area of 2,971,081 square miles, the mainland alone containing 2,944,866 square miles. Bounded on the west and east by the Indian and Pacific Oceans respectively, it lies between longitudes 113° 9' E. and 153° 39' E., while its northern and southern limits are the parallels of latitude 10° 41' S. and 43° 39' S., or, excluding Tasmania, 39° 8' S. On its north are the Timor and Arafura Seas and Torres Strait, on its south the Southern Ocean. The extreme points are Steep Point on the west, Cape Byron on the east, Cape York on the north, and South-East Cape or, if Tasmania be excluded, Wilson's Promontory, on the south.

(ii) *Tropical and Temperate Regions.* Of the total area of Australia, nearly 39 per cent. lies within the tropics. Taking the latitude of the Tropic of Capricorn as 23° 30' S., the areas within the tropical and temperate zones are approximately as follows.

#### AUSTRALIA: AREAS OF TROPICAL AND TEMPERATE REGIONS

(Square miles)

Area	N.S.W. (a)	Vic.	Qld	S. Aust.	W. Aust.	Tas.	N. Terr.	Total
Within tropical zone ..			360,642		364,000		426,320	1,150,962
,, temperate zone ..	310,372	87,884	306,358	380,070	611,920	26,215	97,300	1,820,119
Total Area ..	310,372	87,884	667,000	380,070	975,920	26,215	523,620	2,971,081

(a) Includes Australian Capital Territory (939 square miles).

Fifty-four per cent. of Queensland lies within the tropical zone and 46 per cent. in the temperate zone; 37 per cent. of Western Australia is tropical and 63 per cent. temperate; while 81 per cent. of the Northern Territory is tropical and 19 per cent. temperate. All of the remaining States lie within the temperate zone. The tropical part of Australia thus comprises about 39 per cent. of the whole of the continent.

2. *Area of Australia compared with Areas of other Countries.*—The area of Australia is almost as great as that of the United States of America excluding Alaska, four-fifths of that of Canada, more than half as large again as Europe excluding the U.S.S.R., and about 25 times that of Great Britain and Ireland. The areas of Australia and of certain other countries are shown in the table on the following page.

AREA OF AUSTRALIA AND OF OTHER COUNTRIES, *circa* 1961

('000 square miles)

Libya .. .. .	679	Papua .. .. .	91
Chad .. .. .	496	Other .. .. .	42
		<b>Total .. .. .</b>	<b>3,301</b>

(a) Excludes U.S.S.R., shown below. (b) Egypt only. Syria seceded September, 1961.  
(c) Excludes State of Hawaii, which is included in Other Oceania. (d) Australian Trust Territory.  
Western New Guinea (West Irian) is included in Other Asia.

The areas shown in the table are obtained from the *Demographic Yearbook*, 1962, published by the Statistical Office of the United Nations, and the countries have been arranged in accordance with the continental groups used therein.

3. Areas of States and Territories, Coastal Configuration and Standard Times.—As already stated, Australia consists of six States and the Northern Territory and Australian Capital Territory. Particulars of areas, coastline and standard times are shown in the following table.

**AUSTRALIA: AREAS OF STATES AND TERRITORIES, COASTLINE AND STANDARD TIMES**

State or Territory	Area	Percentage of total area	Coastline	Area per mile of coastline	Standard times	
					Meridian selected	Ahead of G.M.T.
	Sq. miles		Miles	Sq. miles		Hours
New South Wales ..	309,433	10.42	(a) 700	(a) 443	150° E.	10
Victoria ..	87,884	2.96	680	129	150° E.	10

Tasmania ..	26,215	0.88	900	29	150° E.	10
<b>Australia</b> ..	<b>2,971,081</b>	<b>100.00</b>	<b>12,210</b>	<b>243</b>	..	..

(a) Includes Australian Capital Territory.

There are few striking features in the configuration of the coast; the most remarkable indentations are the Gulf of Carpentaria on the north and the Great Australian Bight on the south. The Cape York Peninsula on the extreme north is the only other remarkable feature in the outline. In Official Year Book No. 1, an enumeration was given of the features of the coastline of Australia.

Prior to 1895, the official time adopted in the several colonies was for most purposes the mean solar time of the capital city of each. In 1894 and 1895, after several conferences had been held, legislation was enacted by each of the colonies whereby the mean solar times of the meridians of east longitude 120° (Western Australia), 135° (South Australia and Northern Territory) and 150° (Queensland, New South Wales, Victoria and Tasmania) were adopted. In 1898, however, the South Australian legislature amended its earlier provision and adopted the mean solar time of the meridian 142° 30' E. longitude as the standard time for that colony (and the Northern Territory). For further information on this subject, see Official Year Book No. 39, page 65.

4. Geographical Features of Australia.—(i) *General*. The following description is only a broad summary of the main physical characteristics of the Australian continent. For greater detail concerning particular geographical elements, earlier issues of the Official Year Book should be consulted. The list of special articles, etc., at the end of this volume indicates the nature of the information available and its position in the various issues.

(ii) *Orography of Australia*. (a) *General Description of the Surface*. Owing to the absence of any very high mountain chains and to the great depression in the centre of Australia, the average elevation of the Australian continent above the level of the surrounding oceans is less than that of any of the other continents. Three-quarters of the land-mass lies between the 600 and 1,500 feet contours in the form of a huge plateau.

A section through the continent from east to west, at the point of its greatest breadth, shows first a narrow belt of coastal plain. This plain, extending north and south along the whole eastern coast, is well watered by rivers. It is of variable width, seldom more than sixty or seventy miles, and occasionally only a few miles, the average being roughly about forty to fifty miles. Bordering this plain is the Great Dividing Range, which extends from the north of Queensland to the south of New South Wales and thence sweeps westward through Victoria. This range, which rises, often abruptly, from the plain, frequently presents bold escarpments on its eastern face, but the descent on its western slopes is gradual, until, in the country to the north of Spencer's Gulf, the plain is not above sea-level and occasionally even below it. Thence there is another almost imperceptible rise until the mountain ranges of Western Australia are reached, and beyond these lies another coastal plain.

The great central plain or plateau is the most distinctive feature of the Australian continent and the peculiarities of Australia's climate can probably be largely ascribed thereto.

(b) *Mountain Systems.* The main mountain feature of Australia is the Great Dividing Range, which runs along the whole eastern coast of the continent and can be traced over the islands of Torres Strait to New Guinea, while in the south one branch sweeps westwards towards the boundary of Victoria and South Australia, and the other, the main branch, terminates in Tasmania.

This mountain system is at no place more than 250 miles from the eastern coastline, and it approaches to less than 30 miles. On the whole, it is much closer to the coast in both New South Wales and Victoria than it is in Queensland, the corresponding average distances being about 70, 65 and 130 miles respectively. There is no connexion between the mountains of the eastern and other States of Australia.

The mountains of Australia are relatively low. Thus, in Queensland, the Great Dividing Range reaches a height above sea-level of less than 5,500 feet, the highest peak being Mount Bartle Frere. Mount Kosciusko, in New South Wales, is only about 7,300 feet, and Mount Bogong, in Victoria, about 6,500 feet high. In South Australia and Western Australia, heights of three to five thousand feet are attained. In Tasmania, the greatest height is only a little more than 5,300 feet. The fact that there are no high mountains in Australia is also of considerable importance in considering the climate of Australia.

It is probable that at one time Tasmania was connected with the mainland. As the Great Dividing Range can, in the north, be traced from Cape York across Torres Strait to New Guinea, so its main axis can be followed across the shallow waters of Bass Strait and its islands from Wilson's Promontory to Tasmania, which may be said to be completely occupied by ramifications of the chain. The central part of the island is occupied by an elevated plateau, roughly triangular in shape, and presenting bold fronts to the east, west and north. This does not extend in any direction more than about 60 miles. The plateau rests upon a more extensive tableland, the contour of which closely follows the coastline, and occasionally broadens out into low-lying tracts not much above sea-level. The extreme south of the island is rugged in character.

(iii) *Hydrology of Australia.* (a) *Rainfall.* On the whole, Australia is a country with a limited rainfall. This is immediately evident on studying its river systems, its lakes, and its artesian areas. Its one large river system is that of the Murray and Darling Rivers, of which the former stream is the larger and more important. Many of the rivers of the interior run only after heavy rains. Depending almost entirely on rainfall, a consequence of the absence of high mountains, they drain large areas with widely varying relation between rainfall and flow. Thus it has been estimated that not more than 10 per cent. of the rainfall on the catchment area of the Darling River above Bourke (New South Wales) discharges itself past that town. The rate of fall is often very slight.

(b) *Rivers.* The rivers of Australia may be divided into two major classes, those of the coastal plains with moderate rates of fall and those of the central plains with very slight fall. Of the former, not many are navigable for any distance from their mouths, and bars make many of them difficult of access or inaccessible from the sea.

The two longest rivers of the northern part of the eastern coast are the Burdekin, discharging into Upstart Bay, with a catchment area of 53,500 square miles, and the Fitzroy, which reaches the sea at Keppel Bay and drains about 55,600 square miles.

The Hunter is the largest coastal river of New South Wales, draining about 11,000 square miles before it reaches the sea at Newcastle. The Murray River, with its great tributary the Darling, drains a considerable part of Queensland, the major part of New

South Wales and a large part of Victoria. It debouches into the arm of the sea known as Lake Alexandrina, on the eastern side of the South Australian coast. The total length of the Murray is about 1,600 miles, 400 being in South Australia and 1,200 constituting the boundary between New South Wales and Victoria. The total length of the Murray-Darling from the source of the Darling to the mouth of the Murray is about 2,300 miles. In good seasons, the river is navigable for a considerable proportion of its length.

The rivers of the north-west coast of Australia (Western Australia) are of considerable size, e.g. the Murchison, Gascoyne, Ashburton, Fortesque, De Grey, Fitzroy, Drysdale and Ord. So also are those in the Northern Territory, e.g. the Victoria and Daly. The former of these, estimated to drain 90,000 square miles, is said to be navigable for 50 miles.

The rivers on the Queensland side of the Gulf of Carpentaria, such as the Gregory, Leichhardt, Cloncurry, Gilbert and Mitchell, are also of considerable size.

Owing to the small amount of fall of many of the interior rivers, they may flood hundreds of miles of country in wet seasons, while in dry seasons they form a mere succession of waterholes or are entirely dry. It is this fact that explains the apparently conflicting reports of the early explorers, one regarding the interior as an inland sea, and another as a desert.

The rivers of Tasmania have short and rapid courses, as might be expected from the configuration of the country.

(c) *Lakes.* The "lakes" of Australia may be divided into three classes—true permanent lakes; lakes which, being very shallow, become mere morasses in dry seasons or even dry up and finally present a cracked surface of salt and dry mud; and lakes which are really inlets of the ocean, opening out into a lake-like expanse.

The second class is the only one which seems to demand special mention. These are a characteristic of the great central plain of Australia. Some of them, such as Lakes Torrens, Gairdner, Eyre and Frome, are of considerable extent.

(d) *Artesian Areas.* A considerable tract of the plain country of New South Wales and Queensland carries a water-bearing stratum, usually at a great depth. A large number of artesian bores have been put down, from which there is a considerable flow. These are of great value and render usable large areas which otherwise would be difficult to occupy even for pastoral purposes.

For further information on this subject, see Chapter VIII. Water Conservation and Irrigation.

## § 2. Climate and Meteorology of Australia

NOTE.—This Section has been prepared by the Director of the Commonwealth Bureau of Meteorology, and the various States and Territories have been arranged in the standard order adopted by that Bureau.

1. *Introductory.*—Previous issues of the Official Year Book, notably No. 3, pages 79–83, and No. 4, pages 84 and 87, contained outlines of the history of Australian meteorology and the creation and organization of the Commonwealth Bureau of Meteorology. Year Book No. 38, pages 30–2, contained paragraphs devoted to (a) Organization of the Meteorological Service; (b) Meteorological Publications; (c) Equipment; and (d) Meteorological Divisions.\* In this issue, some material which appeared in previous issues has been deleted or condensed. For fuller information, reference should be made to Year Book No. 49, pages 29–52.

By reason of its insular geographical position and the absence of striking physical features, whether in marine gulfs or in important mountains, Australia is, on the whole, less subject to extremes of weather than are regions of similar area in other parts of the globe, and latitude for latitude Australia is generally more temperate.

The average elevation of the surface of the land is low, probably close to 900 feet above the sea. The altitudes range up to a little more than 7,300 feet; hence the Australian climate displays a great many features, from the characteristically tropical to what is essentially alpine, a fact indicated in some measure by the name Australian Alps given to the southern portion of the Great Dividing Range.

\* For details of the Meteorological Divisions of Australia see Year Book No. 22, pages 41–2.

On the coast, more particularly the tropical sections, the rainfall is often abundant and the atmosphere moist, but in some portions of the interior it is very limited and the atmosphere dry. The distribution of forest, therefore, with its climatic influence, is very uneven. In the interior, in places, there are fine belts of trees, but there are also large areas which are treeless, and here the air is hot and parching in summer. Again, on the coast, even so far south as latitude 35°, the vegetation is tropical in its luxuriance, and to some extent also in character.

2. Temperature.—(i) *Effective Temperature*. When a meteorologist speaks of temperature, he means the temperature of the air indicated by a thermometer sheltered from precipitation, from direct rays of the sun and from radiation of heat from the ground and neighbouring objects, yet freely exposed to the circulation of the air. In other words, he means temperature measured under conditions standardized as nearly as possible in a Stevenson Screen, the standard housing for meteorological thermometers.

This shade temperature as measured by a "dry bulb" thermometer shows only the actual temperature experienced by dry inorganic substances, not the *sensible* temperatures felt by organic bodies. In the case of human beings, *sensible* temperature is affected by the rate of conduction of heat to or from the body by moving air and also by the rate of cooling due to evaporation from the skin and respiratory passages. The wind and humidity therefore determine the *sensible* temperature.

The humidity (relative humidity) is determined from the readings of the dry and wet bulb thermometers. However, with increasing interest in human comfort in tropical climates, another term, *effective* temperature, has come into use. It may be defined as "the temperature of a still, saturated atmosphere which would on the average produce the same feeling of warmth or cold as the atmosphere in question".\*

The 80° F. isotherm is confined to a very narrow tract of country extending from the north-west coast of Western Australia through the Northern Rivers section of the Northern Territory to the seaboard area around the Gulf of Carpentaria. The 75° F. isotherm extends, broadly, from Onslow on the north-west coast of Western Australia to Tennant Creek, to Boulia, to the southern part of Cape York Peninsula, thence southward along the Queensland coast to Townsville, following in a general way the coastline of northern Australia but from 100 to 300 miles inland.

From investigations which have established "comfort zones"† bounded by limits of effective temperature within which people feel comfortable, American research workers have determined the following figures.‡

#### COMFORT ZONES: EFFECTIVE TEMPERATURES

Season	No subjects feel comfortable below—	Fifty per cent. of subjects feel comfortable between—	No subjects feel comfortable above—
Winter.. ..	60° F.	63° and 71° F.	74° F.
Summer .. ..	64° F.	66° and 75° F.	79° F.

Investigations made in Australia § in which the atmospheric vapour pressure was used as a measure of comfort, have shown that the limits of comfort range from 0.2 to 0.5 inch of vapour pressure.

(ii) *Seasons*. The Australian seasons are:—Summer, December to February; autumn, March to May; winter, June to August; spring, September to November. In most parts of Australia, January is the hottest month, but in Tasmania and southern Victoria, February is the hottest; in the tropical north, probably because the cooling "monsoon" rains occur in late summer, December is the hottest month, and at Darwin, November.

\* Houghton, F. C., Teague, W. W. and Miller, W. E. (1926) Amer. Soc. Heat. Vent. Engns.  
 † Yaglou, C. P. (1926) J. Industr. Hyg. ‡ Yaglou, C. P. (1927) Ibid. § Barkley, H. Zones of Relative Physical Comfort in Australia, Met. Bull. 20, 1934.

On a rainfall basis, in the tropical north, the year is divisible into "wet" and "dry" seasons, but on the basis of temperatures and physical comfort the "dry" season can be further sub-divided into two parts—"cool dry" and "warm dusty".\*

(a) "*Cool dry*" Season. From May to August. The average maximum temperature ranges from 80° to 85° F., the relative humidity is low and in inland areas cold nights are experienced when the temperature drops to 40° F. The skies generally are cloudless, but in about one year in three during June or July one to two inches of rain fall.

(b) "*Warm dusty*" Season. From the end of August, temperatures rise and reach a maximum in October or the beginning of November. Temperatures of over 120° F. have been recorded.

(c) "*Wet*" Season. After the first of the heavy storms, the maximum temperatures fall but still remain high with high relative humidity. At Wyndham during January, 1944, the minimum temperature did not drop below 75° F. for fourteen consecutive days. A maximum of over 100° F. was recorded on each rainless day.

In central and northern Australia, during the hottest months, the average temperatures range from 80° to 85° F., whereas in southern Australia they vary from 65° to 70° F. (see maps pp. 33-4).

Throughout Australia, the coldest month is July, when only a very narrow strip of the northern sea-board has an average temperature as high as 75° F. Over the southern half of the continent, July temperatures range from 55° to 45° F. at elevations below 1,500 feet and fall as low as 35° on the Australian Alps (see maps pp. 35-6). Here the temperature seldom, if ever, reaches 100° F. even in the hottest of seasons. Hotham Heights (6,100 feet above mean sea level) recorded the highest maximum of 82.0° F. on 20th January, 1935. In winter, readings slightly below 0° F. are occasionally recorded on the extreme heights.

Tasmania, as a whole, enjoys a moderate and equable range of temperature throughout the year, although occasionally hot winds may cause the temperature to rise to 100° F. in the eastern part of the State.

(iii) *Comparisons with other Countries.* In respect of Australian temperatures generally, the fact that the mean annual isotherm for 70° F. extends in South America and South Africa as far south as latitude 33° S., while in Australia it reaches only as far south as latitude 28° S., shows that, on the whole, Australia has, latitude for latitude, a more temperate climate than other places in the Southern Hemisphere.

The comparison is even more favourable when the Northern Hemisphere is included, for in the United States of America the 70° F. isotherm extends in several of the western States as far north as latitude 41° N. In Europe, the same isotherm reaches almost to the southern shores of Spain, passing afterwards, however, along the northern shores of Africa till it reaches the Red Sea, when it bends northward along the eastern shore of the Mediterranean till it reaches Syria. In Asia, nearly the whole of the land area south of latitude 40° N. has a mean annual temperature higher than 70° F.

The extreme range of temperature is less than 100° F. over practically the whole of Australia, that figure being only slightly exceeded at a very few places; it is mostly 70° to 90° F. over inland areas, and somewhat less on the coast. In parts of Asia and North America, the extreme range exceeds 130° and 150° F. in some localities.

Along the northern shores of Australia, the temperatures are very equable. At Darwin, for example, the difference in the means for the hottest and coldest month is only 8.5° F., and the extreme readings, or the highest maximum on record and the lowest minimum, show a difference of only about 50° F.

The highest temperature recorded in Australia was 127.5° F. at Cloncurry on 16th January, 1889. The world's highest (136° F.) was recorded at Azizia (Tripoli) on 13th August, 1922. The lowest temperature ever recorded in Australia was -8° F. at Charlotte Pass on 14th July, 1945, and again on 22nd August, 1947, as contrasted with the lowest recorded temperature in other temperate zones, where readings of -50° F. and lower have been registered at places in northern Europe, with an extreme of -67° F. at Ust' Shchugor (Russia); while in Siberian Asia, readings have been lower than -60° F. at a number of stations, the lowest being -90° F. at Oimyekon and Verkhoyansk, and in North America -76° F. has been recorded at Tanana (Alaska) and -74° F. at Watson Lake (Canada).

\* Maze, W. H. Austn. Geog., June, 1945. Settlement in E. Kimberleys.

In the polar regions, minimum readings of lower than  $-100^{\circ}$  F. have been registered in Antarctica, the lowest being  $-125.3^{\circ}$  F. on 25th August, 1958, and  $-126.9^{\circ}$  F. on 24th August, 1960, both at Vostok.

The mean temperatures and the range from the extreme maximum to the extreme minimum temperatures (in whole degrees) of the capital cities of Australia, and a comparison with those of the main cities of some other countries are presented in tabular form in Official Year Book No. 38, page 42.

(iv) *Hottest Parts of Australia.* In the interior of Australia, and during exceptionally dry summers, the temperature occasionally reaches or exceeds  $120^{\circ}$  F. in the shade. The hottest area of the continent is situated in the northern part of Western Australia about the Marble Bar and Nullagine goldfields, where the maximum shade temperature during the summer sometimes exceeds  $100^{\circ}$  F. continuously for days and weeks. The longest recorded period was 160 days from 31st October, 1923, to 7th April, 1924.

The area affected and the period of duration of the longest heat waves in Australia are shown in the map and diagram on page 37.

(v) *Tabulated Data for Selected Climatological Stations in Australia.* Tables showing normal mean temperature, extreme temperatures and normal rainfall for each month for selected climatological stations in each State and the Northern Territory appear in Official Year Book No. 40, pages 16-23, and similar data for other selected stations in the Commonwealth in Year Book No. 39, pages 41-48. Pages 54-61 of this issue contain this information in respect of Canberra, Darwin and the six State capitals.

(vi) *Frosts.\** The Observer's Handbook of the Meteorological Office, London, gives the following definition:—"Injury to the tissues of growing plants is not caused until the temperature has fallen considerably below the freezing point of water ( $32^{\circ}$  F.) and a 'ground frost' is regarded as having occurred when the thermometer on the grass has fallen to  $30.4^{\circ}$  F. or below".

In Australia, this definition is adopted for stations equipped with terrestrial minimum thermometers. However, these are few in number, so although many rainfall observers record "hoar frost" when seen, for statistical purposes a screen temperature of  $36^{\circ}$  F. is taken as indicating light frosts at ground level. For heavy frosts, a screen temperature of  $32^{\circ}$  F. is taken.

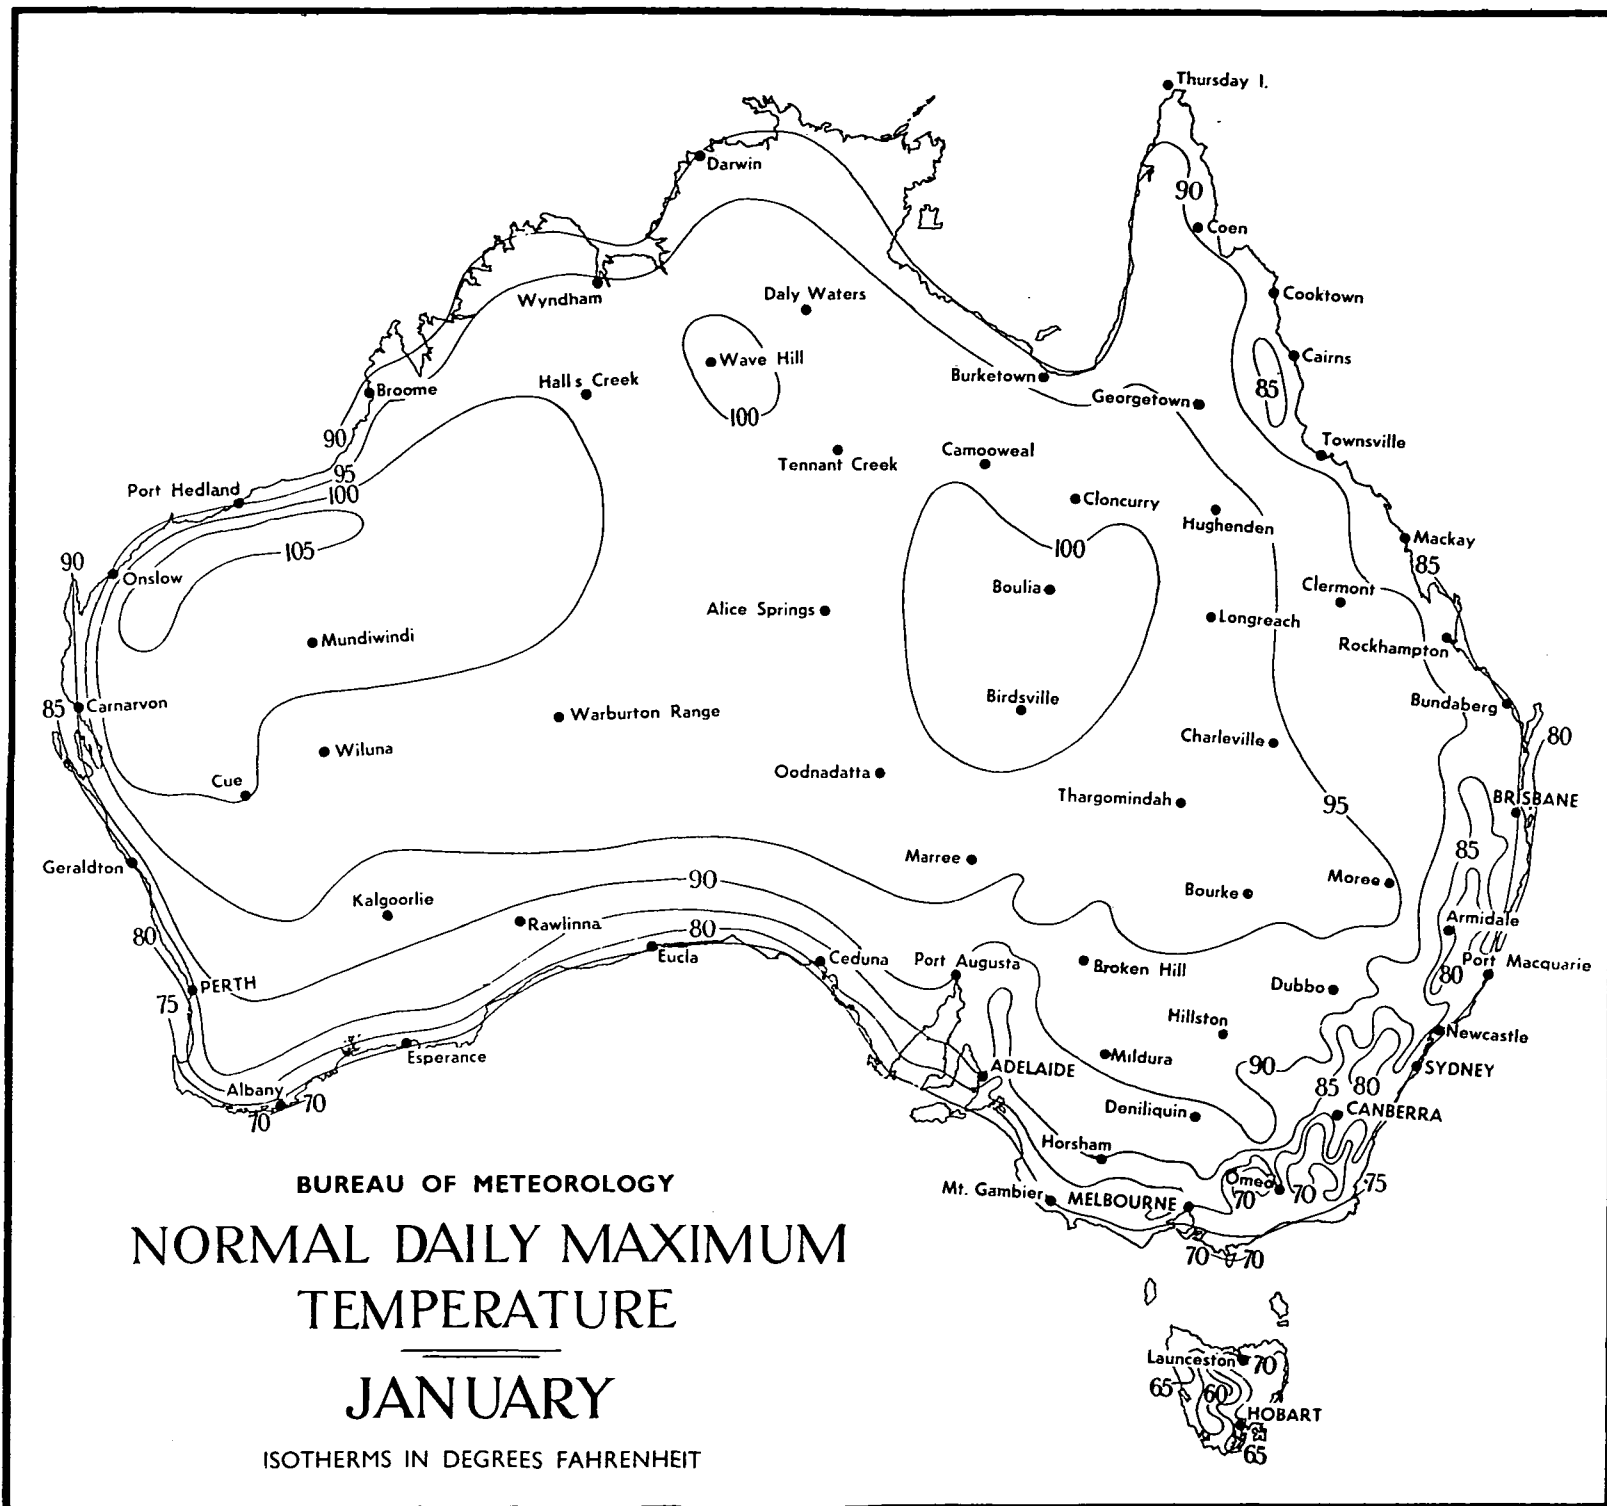

In America, a "killing" frost is defined as a frost "that is generally destructive of vegetation". A "black frost" is the phenomenon arising out of a combination of low temperature and low humidity causing rupturing of plant cells by expansion when freezing of the water which they contain takes place, though frost crystals are not formed on the ground.

The parts of Australia most subject to low temperature are the eastern highlands from about Omeo in Victoria northward to Cambooya and Bybera in Queensland. Most stations in this region experience more than ten nights a month with readings of  $32^{\circ}$  F. or under for three to five months of the year. In Tasmania, districts on the Central Plateau are subject to such conditions for three to six months of the year. Minimum temperatures of  $32^{\circ}$  F. are comparatively infrequent in Western Australia except in parts of the south and south-west. In South Australia, the Yongala district is much more subject to such temperatures than other parts of the State. Much of the south-east of Queensland has a higher frequency of such readings than South Australia. Generally speaking, the frequency is controlled by altitude, latitude and, to a lesser degree, by proximity to the sea.

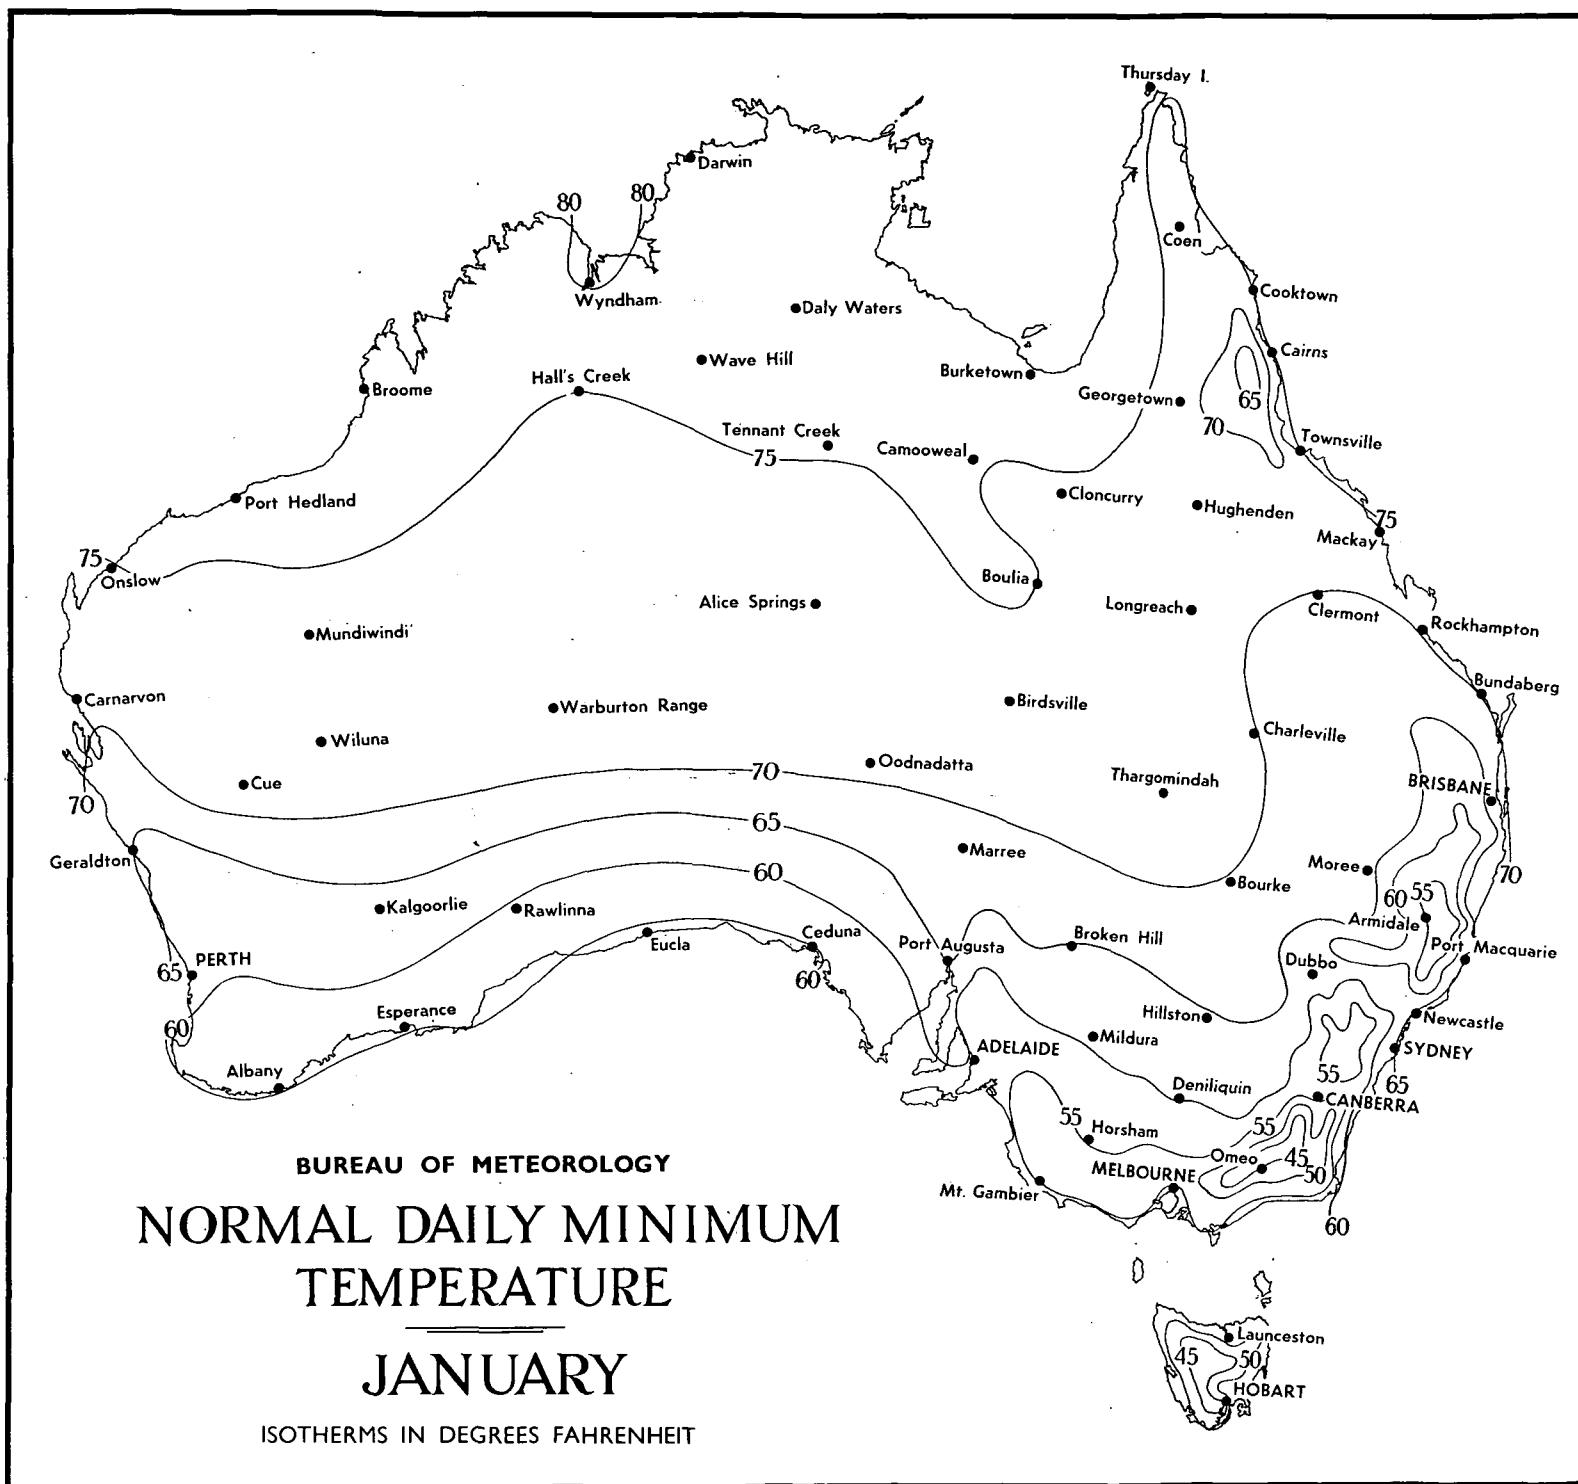

Frosts may occur within a few miles of the coastline over the whole continent, except in the Northern Territory and a considerable part of northern Queensland. Regions subject to frost in all months of the year comprise portions of the tablelands of New South Wales, the Eastern Highlands and parts of the Central Divide and Western district in Victoria, practically the whole of Tasmania, and a small area in the south-west of Western Australia.

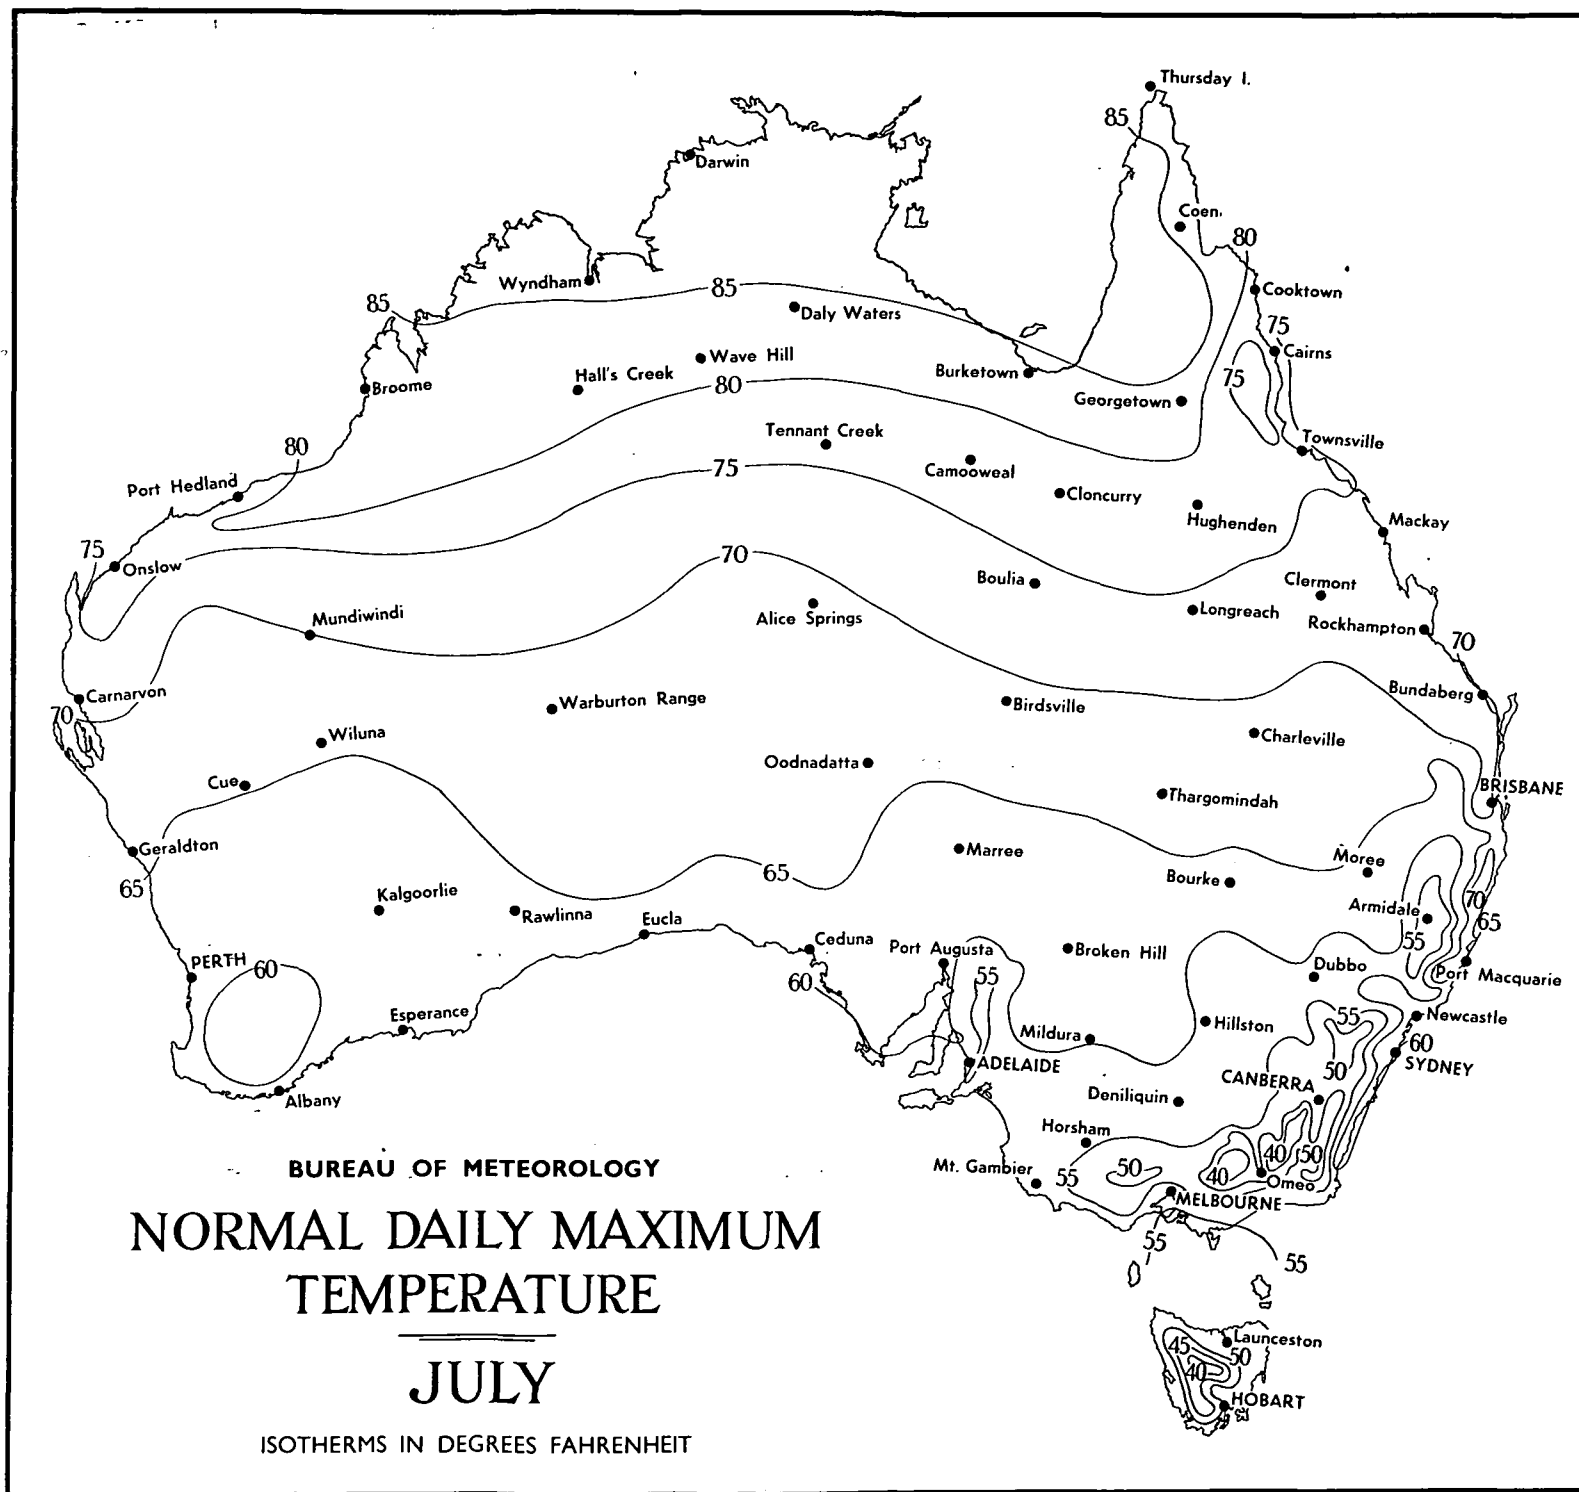

A map showing the average annual number of frost-free days (i.e. days on which the temperature does not fall below  $36^{\circ}$  F.) appears on page 39.

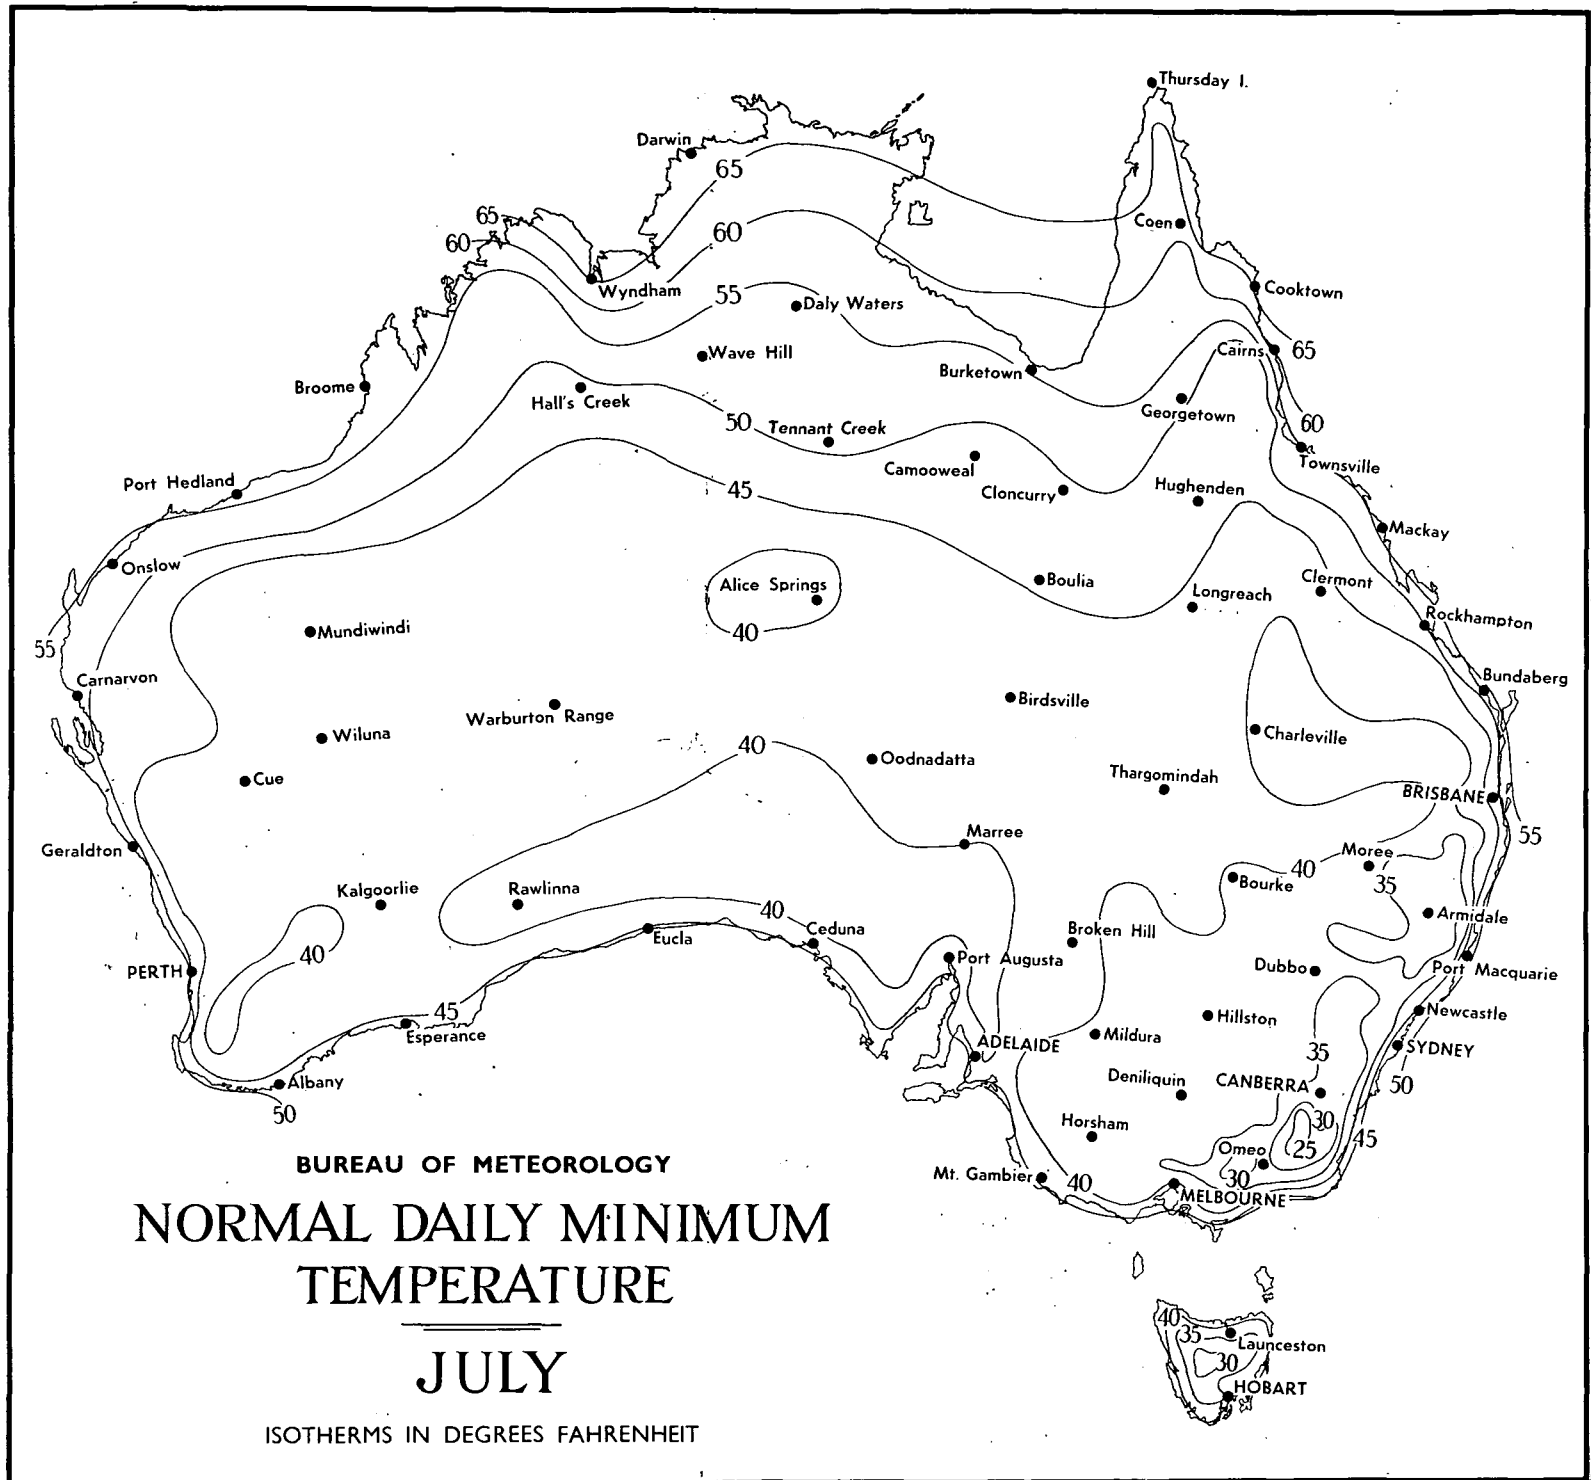

\* See also Foley, J. C. Frost in the Australian Region (Bull. 32, 1945).

BUREAU OF METEOROLOGY.

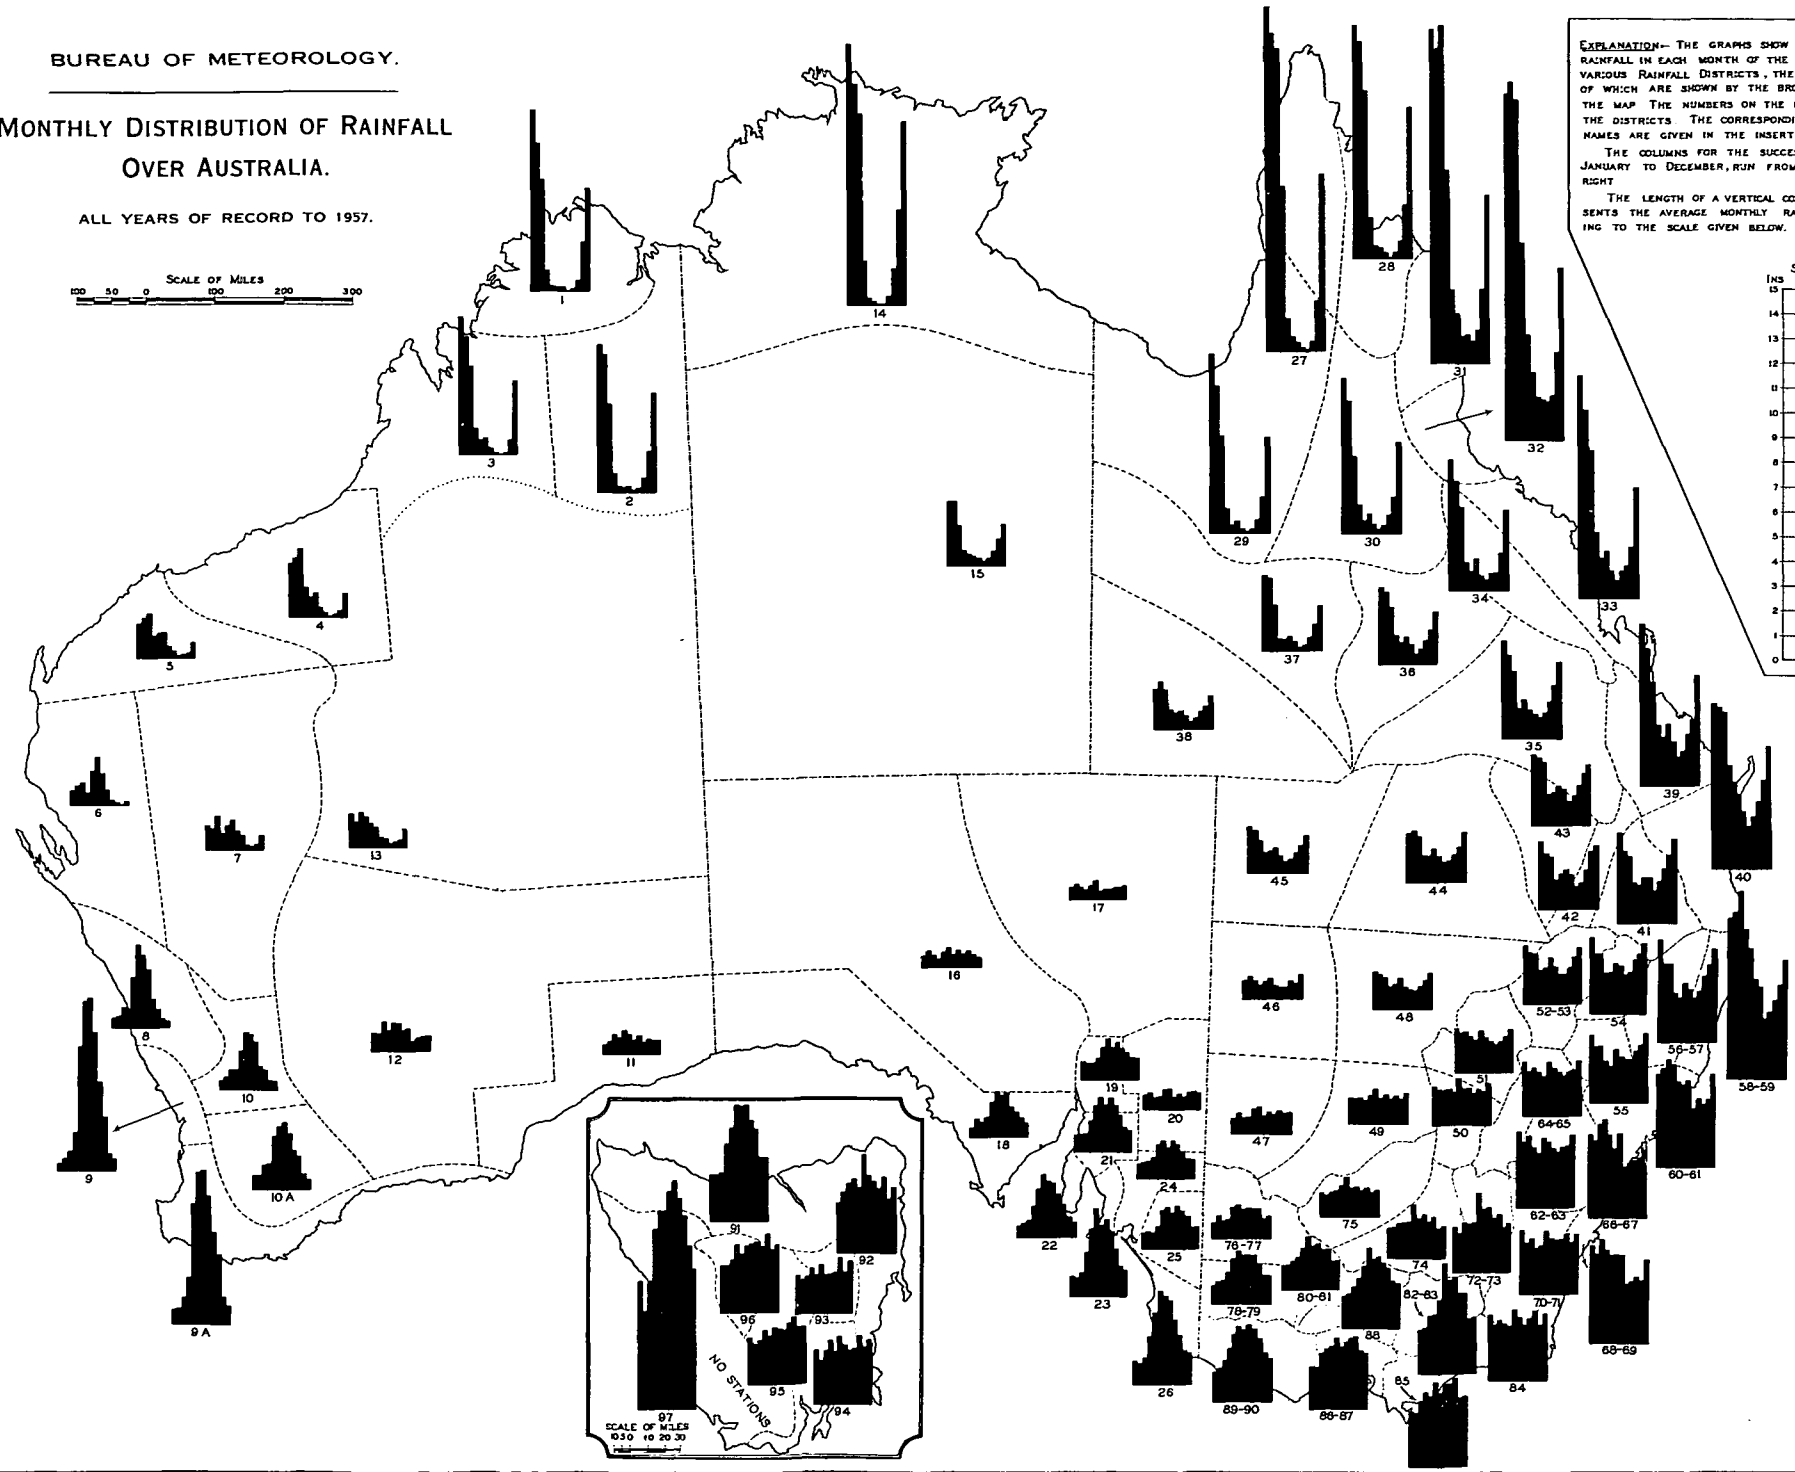

# MONTHLY DISTRIBUTION OF RAINFALL OVER AUSTRALIA.

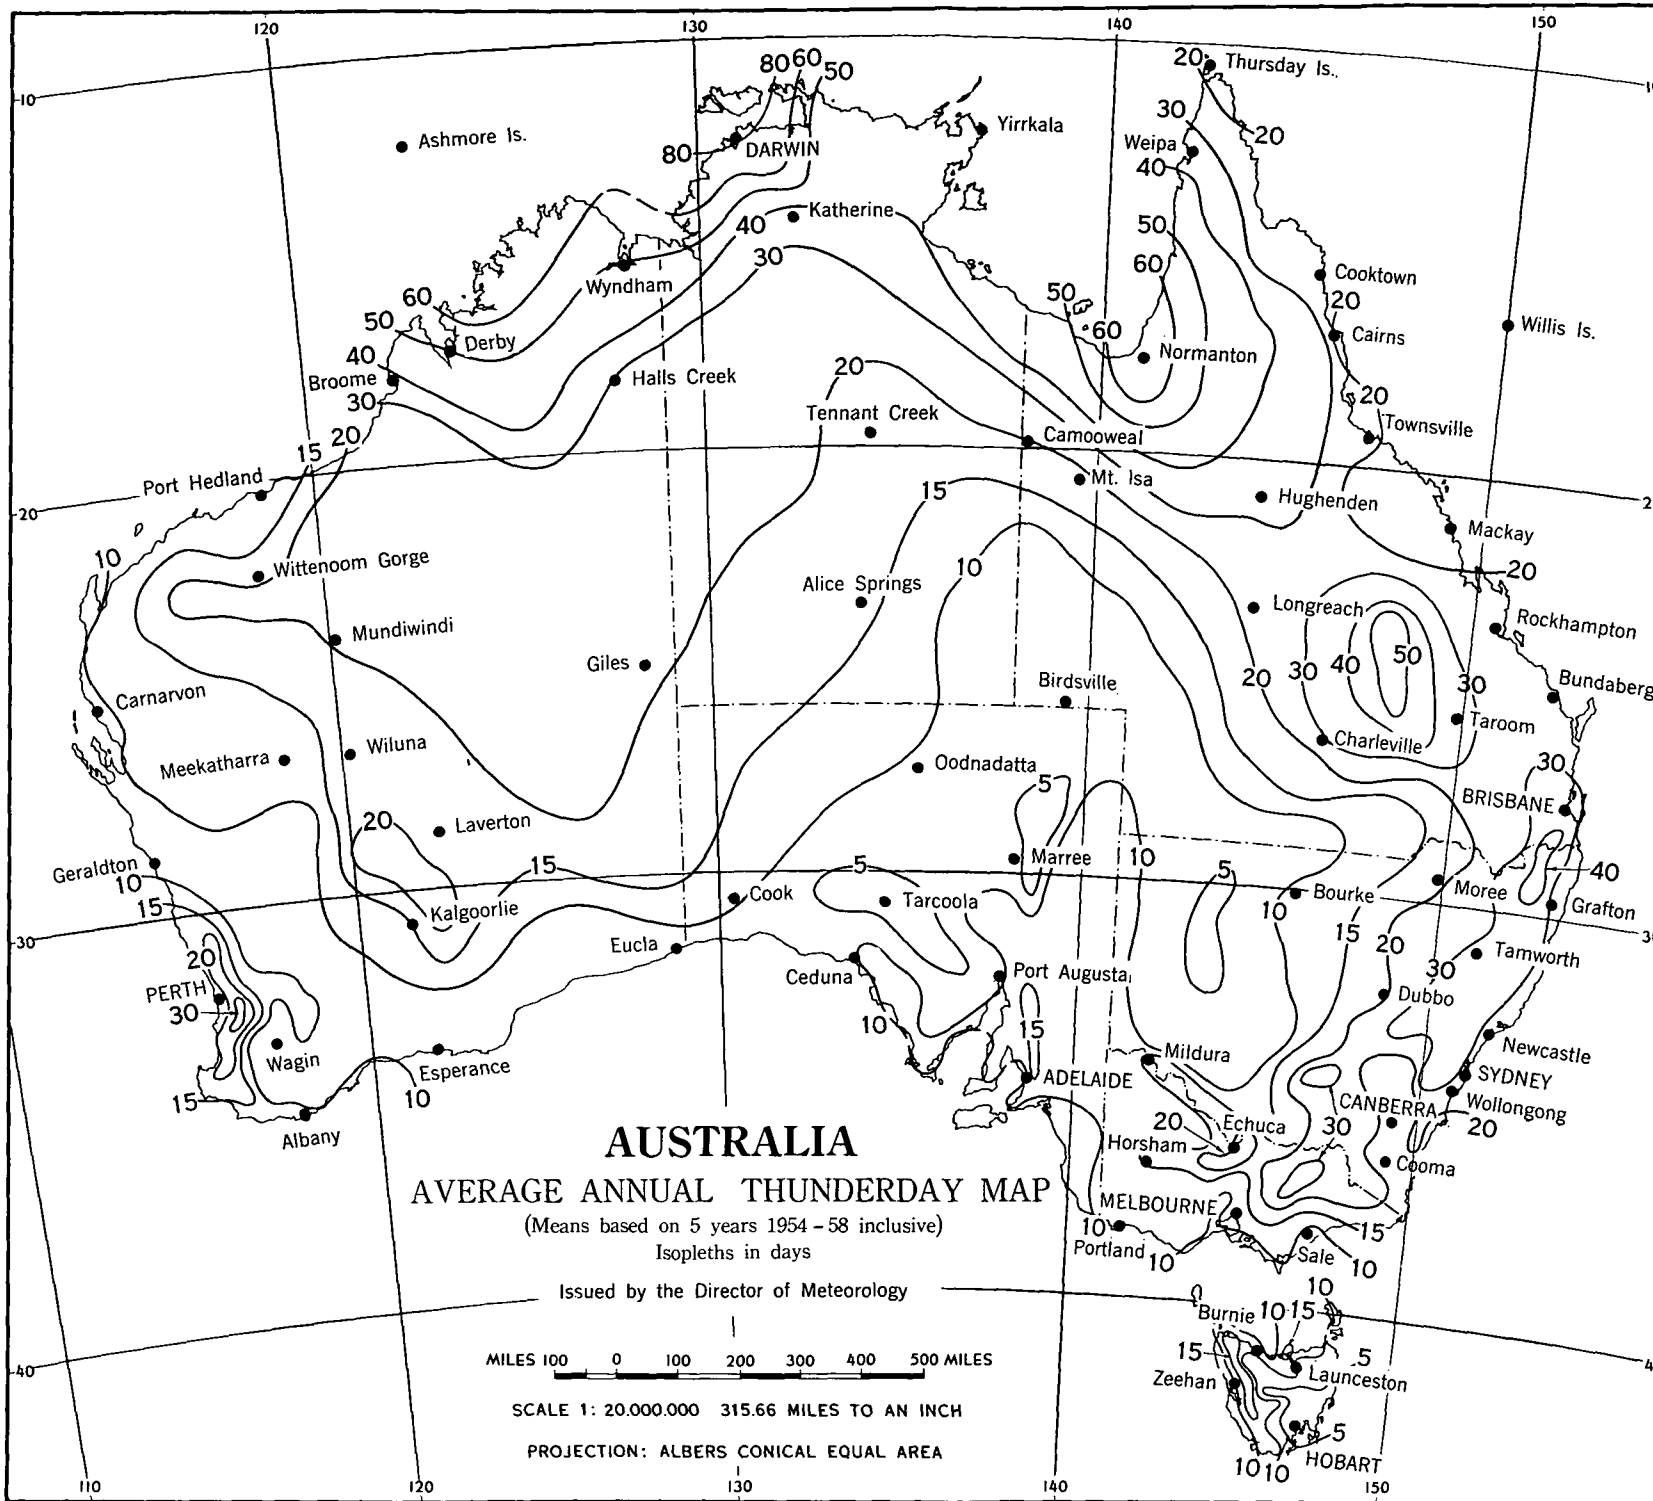

ALL YEARS OF RECORD TO 1957.

EXPLANATION— THE GRAPHS SHOW THE AVERAGE RAINFALL IN EACH MONTH OF THE YEAR IN THE VARIOUS RAINFALL DISTRICTS, THE BOUNDARIES OF WHICH ARE SHOWN BY THE BROKEN LINES ON THE MAP. THE NUMBERS ON THE MAP REFER TO THE DISTRICTS. THE CORRESPONDING DISTRICT NAMES ARE GIVEN IN THE INSERT ON PAGE 89. THE COLUMNS FOR THE SUCCESSIVE MONTHS, JANUARY TO DECEMBER, RUN FROM LEFT TO RIGHT.

THE LENGTH OF A VERTICAL COLUMN REPRESENTS THE AVERAGE MONTHLY RAINFALL ACCORDING TO THE SCALE GIVEN BELOW.

Over most of the interior of the continent, and on the highlands in Queensland as far north as the Atherton Plateau, frosts appear in April and end in September, but they are infrequent in these months. Minimum temperatures of 32° F. are experienced in most of the sub-tropical interior in June and July.

3. Humidity.—After temperature, humidity is the most important element of climate as regards its effects on human comfort, rainfall supply and conservation and related problems.

“ Vapour pressure ” is the pressure exerted by the water vapour in the atmosphere. At any given temperature there is a definite upper limit to the amount of water that can exist as vapour in the atmosphere. When this limit is reached, the air is said to be saturated and the pressure of the water vapour is equal to the “ saturation vapour pressure ”.

In this publication, the humidity of the air has been expressed by the relative humidity, which is the quotient of the vapour pressure divided by the saturation vapour pressure and multiplied by one hundred. The mean 9 a.m. relative humidity, as well as its highest and lowest recorded mean values at 9 a.m., are shown in the tables of climatological data for the capital cities (*see para. 11*). The mean monthly vapour pressure has also been added to these tables.

Further references to humidity will be found in the section on effective temperature (*see p. 30*).

4. Evaporation.—(i) *General*. The rate and quantity of evaporation in any territory are influenced by the prevailing temperature, and by atmospheric humidity, pressure and wind movement. In Australia, the question is of great importance, since in its drier regions water has often to be conserved in tanks and dams. The magnitude of the economic loss by evaporation will be appreciated from the map reproduced herein (*see p. 40*).

(ii) *Comments on Map of Average Annual Evaporation*. The map of average annual evaporation in Australia (*see p. 40*) has been compiled on the basis of records obtained from a number of evaporimeters supplemented by estimates derived from records of saturation deficit by applying the Waite Institute factor of 263.\*

5. Rainfall.—(i) *General*. The rainfall of any region is determined mainly by the direction and route of the prevailing winds, by the varying temperatures of the earth's surface over which they blow, and by its geographical features.

Australia lies within the zones of the south-east trades and prevailing westerly winds. The southern limit of the south-east trades strikes the eastern shores at about 30° south latitude, and the heaviest rains of the Australian continent, with very few exceptions, are precipitated along the Pacific slopes to the north of that latitude, the varying quantities being more or less regulated by the differences in elevation of the shores and of the chain of mountains from the New South Wales northern border to Thursday Island, upon which the rain-laden winds blow. The converse effect is exemplified on the north-west coast of Western Australia, where the prevailing winds, blowing from the interior of the continent instead of from the ocean, result in the lightest coastal rain in Australia.

The westerly winds which skirt the southern shores are responsible for the reliable generally light to moderate rains enjoyed by the south-western portion of Western Australia, the agricultural areas of South Australia, a great part of Victoria, and the whole of Tasmania.

(ii) *Distribution of Rainfall*. The average annual rainfall map of Australia (*see p. 41*) shows that the heaviest yearly falls occur on the north coast of Queensland (up to more than 160 inches) and in western Tasmania (up to 140 inches), while from 50 to over 60 inches are received on parts of the eastern seaboard from Jervis Bay to the northern part of Cape York Peninsula, also around Darwin, on the West Kimberley coast, near Cape Leeuwin, about the Australian Alps in eastern Victoria and south-eastern New South Wales, and on the north-eastern highlands in Tasmania. A great part of the

\* Prescott J. A. “ Atmospheric Saturation Deficit in Australia ” (*Trans. Royal Society, S. A. Vol. LV., 1931*).

interior of the continent, stretching from the far west of New South Wales and the south-west of Queensland to the vicinity of Shark Bay in Western Australia, has a very low average rainfall of less than 10 inches a year. Between these two regions of heavy and very low rainfall are the extensive areas which experience useful to good rains, and in the southern and eastern parts of which are found the best country and most of the population and primary production.

The map showing mean monthly distribution of rainfall over Australia (*see* p. 43) gives, in graphic form, information on the amount and occurrence of rain, while the map on page 42 shows the distribution for 1962.

(iii) *Wettest and Driest Regions.* The wettest known part of Australia is on the north-east coast of Queensland, between Port Douglas and Cardwell, where Tully on the Tully River has an average annual rainfall of about 175 inches, and Harvey Creek on the northern coast-line about 167 inches. In addition, three stations situated on, or adjacent to, the Johnstone and Russell Rivers have an average annual rainfall of between 139 and 163 inches. The maximum and minimum annual amounts there, in inches, are:—Tully, 310.92 in 1950 and 104.98 in 1943, a range of 205.94 inches; Deeral, 287.18 in 1945 and 94.65 in 1951, a range of 192.53 inches; Harvey Creek, 254.77 in 1921 and 80.47 in 1902, a range of 174.30 inches; Goondi, 241.53 in 1894 and 67.88 in 1915, a range of 173.65 inches; Innisfail, 232.06 in 1950 and 69.87 in 1902, a range of 162.19 inches.

On five occasions, more than 200 inches have been recorded in a year at Goondi, the last of these being in 1950, when 204.97 inches were registered.

In 34 years of record to 1960, Tully has exceeded 200 inches on eleven occasions, and in 29 complete years of record, Harvey Creek has exceeded this figure four times.

In Tasmania, the wettest part is in the West Coast mountain region, the average annual rainfall at Lake Margaret being about 145 inches, with a maximum of 177.30 inches in 1948.

The driest known part of the continent is an area of approximately 180,000 square miles surrounding Lake Eyre in South Australia, where the annual average rainfall is between 4 and 6 inches and where the aggregates rarely exceed 10 inches in twelve months. Records at stations have at times been interrupted, but of the places in this region, the area with the lowest means is immediately to the east of the lake, where a number of stations with long records have averages of less than 5 inches, the lowest being 4.13 inches at Troudaninna over 42 years, followed by 4.28 inches at Mulka (39 years).

Troudaninna in the period 1893 to 1936 had only one year in which the total exceeded 9 inches (11.07 inches in 1894). There have been protracted periods when the average has been even less than 3 inches. From 1895 to 1903, Troudaninna received the following annual totals:—2.78, 0.99, 5.71, 3.04, 3.18, 2.83, 1.80, 1.11, 4.87, an average of 2.92 inches. From 1918 to 1929, the average was only 2.65 inches, and in this period the average from December, 1924, to November, 1929, was only 1.70 inches.

Since 1918, Mulka has only twice exceeded 10 inches for the annual total (11.72 inches in 1920 and 13.56 in 1955), and on 17 occasions in 39 years the annual total has been less than 3 inches. In one particular period from October, 1926, to September, 1930, the average was only 1.26 inches (505 points in 48 months). At Kanowana, however, an even lower four-year average of 1.12 inches was recorded between 1896 and 1899, with yearly totals of 43, 225, 87 and 94 points, while the smallest yearly total was recorded at Mungeranie in 1888 when only 39 points were recorded over five days.

The average number of days of rain a month in this region is only 1 or 2. Cordillo Downs has an average of 6.36 inches over 13 days a year, while Murnpeowie (4.71 inches) and Edwards Creek (5.56 inches) average 14 days.

No part of the earth, so far as is known, is absolutely rainless, and although at Arica, in northern Chile, the rainfall over a period of 15 years was nil, a further two years in which there were three measurable showers made the "average" for 17 years 0.02 inches.

(iv) *Quantities and Distribution of Rainfall.* The general distribution is best seen from the rainfall map on page 41, which shows the areas subject to average annual rainfalls lying between certain limits. The proportions of the total area of each State and of Australia as a whole enjoying varying quantities of rainfall determined from the latest available information are shown in the following table.

**AVERAGE ANNUAL RAINFALL: AREA DISTRIBUTION**  
(Per Cent.)

Average annual rainfall	W. Aust.	N. Terr.	S. Aust.	Q'land	N.S.W. (a)	Vic.	Tas. (b)	Total
Under 10 inches ..	58.0	24.7	82.8	13.0	19.7	Nil	Nil	39.0

7. **Snowfall.**—Light snow has been known to fall occasionally as far north as latitude 31° S., and from the western to the eastern shores of the continent. During exceptional seasons, it has fallen simultaneously over two-thirds of New South Wales, and has extended at times along the whole of the Great Dividing Range, from its southern extremity in Victoria as far north as Toowoomba in Queensland. During the winter, for several months, snow covers the ground to a great extent on the Australian Alps, where the temperature falls below 0° F. during the night. In the ravines around Mt. Kosciusko and similar localities, the snow does not entirely disappear after a severe winter.

8. **Hail.**—Hail falls most frequently along the southern shores of the continent in the winter, and over eastern Australia during the summer months. The size of the hailstones generally increases with distance from the coast. A summer rarely passes without some station experiencing a fall of stones exceeding in size an ordinary hen egg, and many riddled sheets of light-gauge galvanized iron bear evidence of the weight and penetrating power of the stones.

The hailstones occur most frequently when the barometric readings indicate a flat and unstable condition of pressure. Tornadoes or tornadic tendencies are almost invariably accompanied by hail, and on the east coast the clouds from which the stones fall are frequently of a remarkable sepia-coloured tint.

9. **Droughts.**—A special article dealing with droughts was included in Year Book No. 45, pages 51–6. Fuller information is available in a Bureau of Meteorology publication *Droughts in Australia* by J. C. Foley (Bulletin 43, 1957).

10. **Wind.**—(i) *Trade Winds.* The two distinctive wind currents in Australia are, as previously stated, the south-east trade and the “prevailing” westerly winds. As the belt of the earth’s atmosphere in which they blow apparently follows the sun’s ecliptic path north and south of the equator, so the area of the continent affected by these winds varies at different seasons of the year. During the summer months, the anticyclonic belt travels in high latitudes, thereby bringing the south-east trade winds as far south as 30° south latitude. The “prevailing” westerly winds retreat a considerable distance to the south of Australia, and are less in evidence in the hot months. When the sun passes to the north of the equator, the south-east trade winds follow it, and for the greater part of the winter operate only to the north of the tropics. The westerly winds come into lower latitudes during the same period of the year. They sweep across the southern areas of the continent from Cape Leeuwin to Cape Howe, and during some seasons are remarkably persistent and strong, occasionally penetrating to almost tropical latitudes.

(ii) *North-west Monsoon.* As the belt of south-east trade winds retreats southward during the summer, it is replaced in the north and north-west of Australia first by a sequence of light variable winds and then by the north-west monsoon. In Australia, the north-west monsoon has not the persistence or regularity of the Indian south-west monsoon, but is sufficiently characteristic for the summer in the north of Australia to be called the “North-west Season”. In central and eastern Queensland, the north-west monsoon in the summer has comparatively little effect, and the trade winds, though weakened, are still dominant winds. With the movement of the sun northward in the autumn, the north-west monsoon is replaced first by light variable winds and then by the trade winds.

Further particulars of Australian wind conditions and meteorology will be found in Official Year Book No. 38, pages 58–62. Reference should also be made to the wind rose diagrams on pages 45 and 46.

(iii) *Cyclones and Storms.* The “elements” in Australia are ordinarily peaceful, and while destructive cyclones have visited various parts, more especially coastal areas, such visitations are rare, and may be properly described as erratic.

During the winter months, the southern shores of the continent are subject to deep depressions of the southern low-pressure belt. They are felt most severely over the south-western parts of Western Australia, to the south-east of South Australia, in Bass Strait, along the coastline of Victoria, and on the west coast of Tasmania. Apparently the more violent wind pressures from these disturbances are experienced in their northern half, or in that part of them which has a north-westerly to a south-westerly circulation.

The north-east coast of Queensland is occasionally visited by hurricanes from the north-east tropics. During the first four months of the year, these hurricanes appear to have their origin in the neighbourhood of the South Pacific Islands, their path being a parabolic curve first to the south-west and finally towards the south-east.

Very severe cyclones, locally known as “willy willies”, are peculiar to the north-west coast of Western Australia from the months of November to April, inclusive. They usually originate over the ocean to the north or north-west of Australia, and travel in a south-westerly direction with continually increasing force, displaying their greatest energy near Cossack and Onslow, between latitudes 20° and 22° South. The winds in these storms, like those from the north-east tropics, are very violent and destructive. The greatest velocities are usually to be found in the south-eastern quadrant of the cyclones, with north-east to east winds. After leaving the north-west coast, these storms either travel southwards, following the coast-line, or cross the continent to the Great Australian Bight. When they take the latter course, their track is marked by torrential rains, as much as 29.41 inches, for example, being recorded in 24 hours at Whim Creek from one such occurrence. Falls of 10 inches and over have frequently been recorded in the northern interior of Western Australia from similar storms.

Some further notes on severe cyclones and on “southerly bursters”, a characteristic feature of the eastern part of Australia, appeared in early issues of the Official Year Book (see No. 6, pp. 85–6), and a special article dealing with “Australian Hurricanes and Related Storms” appeared in Official Year Book No. 16, pages 80–4.

Depressions vary considerably in their isobaric forms, intensity and other characteristics. Some bring rain in variable quantities, some heat and others mainly wind. A common type in southern Australia is the “^” shaped trough with an abrupt “backing” of the wind or “line squall” as it passes. The cold front is most frequently found through the centre of the “trough”, because it is along this line, and extending into the upper levels of the atmosphere, that the demarcation of different air masses is so well defined. The best rains in inland Australia occur when extensive masses of warm moist tropical air move into the interior, and are forced to rise by convergence of flow or by impact with a cold air stream.

The speed of low pressure systems is very variable, but in general in southern latitudes the movement is of the order of 500 to 700 miles a day.

11. *Climatological Tables.*—The averages and extremes for a number of climatological elements, which have been determined from long series of observations at the Australian capitals up to and including the year 1962, are given on the following eight pages.

NOTE.—The following points apply throughout.

- (a) Where records are available, mean or average values have been calculated on a standard period of 30 years from 1911 to 1940.
- (b) Extreme values have been extracted from all available years of actual record, but the number of years quoted does not include intervening periods when observations were temporarily discontinued.

12. **Rainfall and Temperatures, Various Cities.**—Official Year Book No. 34, page 28, shows rainfall and temperature, and No. 38, page 42, temperature, for various important cities throughout the world and for the Australian capitals.

13. **Thunder Days.**—A new map has been included in this issue (*see* p. 44) which shows the average annual days of thunder experienced in the different areas of Australia.

Additional information on this subject and other items treated in this chapter may be obtained from the Commonwealth Bureau of Meteorology, Carlton, Victoria.

## CHAPTER III

### GENERAL GOVERNMENT

#### § 1. Scheme of Parliamentary Government

1. **General.**—Under Section 1 of the Commonwealth of Australia Constitution, the legislative power of the Commonwealth is vested in the Parliament of the Commonwealth, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State, there is a State Governor who is the representative of the Sovereign for the State and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office and by the instructions which inform in detail of the manner in which his duties are to be fulfilled. The Legislature in each State was bi-cameral until 1922, when the Queensland Upper House was abolished and the Parliament became uni-cameral. In the bi-cameral Parliaments, the Upper House is known in the Commonwealth Parliament as the Senate, and in the State Parliaments as the Legislative Council, while the Lower House is known in the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly. In Queensland, the Legislative Assembly constitutes the legislature. The legislative powers of the Parliaments are delimited by the Commonwealth and State Constitutions. The Assembly, which is the larger House, is, in all cases, elective, the franchise extending to adult British subjects with certain residential qualifications. The Council in each of the States other than New South Wales is elected by the people of the State concerned, the constituencies being differently arranged and, in general, some property or special qualification for the electorate being required. In Victoria, however, under the *Legislative Council Reform Act 1950*, adult suffrage was adopted for Legislative Council elections. In the case of New South Wales, the Council is elected by the members of both Houses of Parliament at a simultaneous sitting. In the Federal Parliament, the qualifications for the franchise are identical for both Houses, extending to adult British subjects who have lived in Australia for six months continuously.

2. **The Sovereign.**—(i) *Accession of Queen Elizabeth II.* On 7th February, 1952, the Governor-General and members of the Federal Executive Council proclaimed Princess Elizabeth Queen Elizabeth the Second, Queen of this Realm and of all Her other Realms and Territories, Head of the Commonwealth, Defender of the Faith, Supreme Liege Lady in and over the Commonwealth of Australia. The coronation of Her Majesty in Westminster Abbey took place on 2nd June, 1953.

(ii) *Royal Style and Titles Act 1953.* Following a conference of Prime Ministers and other representatives of the British Commonwealth in London in December, 1952, the passing of the *Royal Style and Titles Act 1953* gave Parliament's assent to the adoption by the Queen, for use in relation to the Commonwealth of Australia and its Territories, of the following Royal Style and Titles:—"Elizabeth the Second, by the Grace of God of the United Kingdom, Australia and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith."

3. **Powers and Functions of the Governor-General and of the State Governors.**—(i) *Governor-General of the Commonwealth.* As the Queen's representative in Australia, the Governor-General exercises certain prerogative powers and functions assigned to him by the Queen. Other powers and functions are conferred on the Governor-General by the Constitution. Powers which have been so assigned or conferred include, among others, the power to grant pardons and to remit fines for offences against the laws of the Commonwealth; to appoint certain officers in the Diplomatic or Consular Service of the Commonwealth; to appoint times for holding the sessions of the Parliament, prorogue Parliament and dissolve the House of Representatives; to cause writs to be issued for general elections of members of the House of Representatives; to assent in the Queen's name to a proposed law passed by both Houses of the Parliament or withhold assent, or to reserve the law for the Queen's pleasure, or to return the proposed law to the House in which it originated and transmit therewith any amendments which he may recommend; to exercise the executive power of the Commonwealth; to choose and summon Executive Councilors, who hold office during his pleasure; to appoint Ministers of State for the Commonwealth. In addition, the command in chief of the naval and military forces of the Commonwealth is vested in the Governor-General, as the Queen's representative.

Most Acts of the Commonwealth Parliament provide that the Governor-General may make regulations to give effect to the Act. The Governor-General may also be authorized by statute to issue proclamations—for example, to declare an Act in force or a state of things to exist, e.g. the existence of an epidemic. He has been given power by statute to legislate for certain Territories of the Commonwealth.

Under the conventions of responsible government obtaining in British Commonwealth countries, the Governor-General's functions are exercised generally on the advice of Ministers of State.

(ii) *Governors of the States.* The Queen is represented in each of the States by a Governor, the office having been constituted by Letters Patent under the Great Seal of the United Kingdom of various dates.

The Governors of the States exercise prerogative powers conferred on them by these Letters Patent, their Commissions of appointment, and the Governor's Instructions given them under the Royal Sign Manual and Signet or other instrument as specified in the Letters Patent. In addition, they have been invested with various statutory functions, either under the State Constitutions, conferred by Imperial Act, or by Act of the Parliament of the State.

A Governor of a State assents in the Queen's name to Bills passed by the Parliament of the State, except those reserved for the Royal assent. The latter include certain classes of Bills which are regulated by the Constitution Acts and by the Governor's Instructions. He administers the prerogative of mercy by the reprieve or pardon of criminal offenders within his jurisdiction, and may remit fines and penalties due to the Crown.

In the performance of his functions generally, particularly those conferred by Statute, the Governor of a State acts on the advice of Ministers of State for the State.

(iii) *Holders of Office.* For the names of the Governors-General since the inception of the Commonwealth and the present State Governors, see § 3, page 73.

4. **The Cabinet and Executive Government.**—(i) *General.* Both in the Commonwealth and in the States, executive government is based on the system which was evolved in Britain in the 18th century, and which is generally known as "Cabinet" or "responsible" government. Its essence is that the head of the State (Her Majesty the Queen, and her representative, the Governor-General or Governor) should perform governmental acts on the advice of her Ministers; that she should choose her principal Ministers of State from members of Parliament belonging to the party, or coalition of parties, commanding a majority in the popular House; that the Ministry so chosen should be collectively responsible to that House for the government of the country; and that the Ministry should resign if it ceases to command a majority there.

The Cabinet system operates chiefly by means of constitutional conventions, customs, or understandings, and through institutions that do not form part of the legal structure of the government at all. The constitutions of the Commonwealth and the States make fuller legal provision for the Cabinet system than the British Constitution does—for example, by requiring that Ministers shall either be, or within a prescribed period become, members of the Legislature. In general, however, the legal structure of the executive government remains the same as it was before the establishment of the Cabinet system.

The executive power of the Commonwealth is exercisable by the Governor-General, and that of the States by the Governor. In each case, he is advised by an Executive Council, which, however, meets only for certain formal purposes, as explained below. The whole policy of a Ministry is, in practice, determined by some or all of the Ministers of State, meeting without the Governor-General or Governor under the chairmanship of the Prime Minister or Premier. This group of Ministers is known as the Cabinet.

(ii) *The Cabinet.* This body does not form part of the legal mechanism of government. Its meetings are private and deliberative. The actual Ministers of the day alone are present, no records of the meetings are made public, and the decisions taken have, in themselves, no legal effect. In Australia, until January, 1956, all Ministers were members of the Cabinet. Since then, however, although in the States all Ministers are members of the Cabinet, the Commonwealth ministry is made up of twelve senior Ministers, who constitute the Cabinet, and other Ministers\* of non-Cabinet rank who attend meetings of the Cabinet only when required, as, for example, when the business of the Cabinet concerns their departments. As Ministers are the leaders of the party or parties commanding a majority in the popular House, the Cabinet substantially controls, in ordinary circumstances, not only the general legislative programme of Parliament, but the whole course of Parliamentary proceedings. In effect, though not in form, the Cabinet, by reason of the fact that all Ministers are

\* Thirteen, as from 4th March, 1964.

members of the Executive Council, is also the dominant element in the executive government of the country. Even in summoning, proroguing or dissolving Parliament, the Governor-General or Governor is usually guided by the advice tendered him by the Cabinet, through the Prime Minister or Premier, though legally the discretion is vested in the Governor-General or Governor himself.

(iii) *The Executive Council.* This body is usually presided over by the Governor-General or Governor, the members thereof holding office during his pleasure. All Ministers of State must be members of the Executive Council. In the Commonwealth, and also in the States of Victoria and Tasmania, Ministers remain members of the Executive Council on leaving office, but are not summoned to attend its meetings, for it is an essential feature of the Cabinet system that attendance should be limited to the Ministers of the day. The meetings of the Executive Council are formal and official in character, and a record of proceedings is kept by the Secretary or Clerk. At Executive Council meetings, the decisions of the Cabinet are (where necessary) given legal form, appointments made, resignations accepted, proclamations issued, and regulations and the like approved.

(iv) *The Appointment of Ministers.* Legally, Ministers hold office during the pleasure of the Governor-General or Governor. In practice, however, the discretion of the Queen's representative in the choice of Ministers is limited by the conventions on which the Cabinet system rests. When a Ministry resigns, the Crown's custom is to send for the leader of the party which commands, or is likely to be able to command, a majority in the popular House, and to commission him, as Prime Minister or Premier, to "form a Ministry"—that is, to nominate other persons to be appointed as Ministers of State and to serve as his colleagues in the Cabinet.

(v) *Ministers in Upper and Lower Houses.* The following table shows the number of Ministers with seats in the Upper or Lower Houses of each Parliament in December, 1963.

AUSTRALIAN PARLIAMENTS: MINISTERS IN UPPER OR LOWER HOUSES, DECEMBER, 1963

Ministers with seats in—	C'wealth (a)	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Total
The Upper House ..	5	2	4	(b)	3	2	1	17
The Lower House ..	17	14	10	13	5	8	8	75
<b>Total ..</b>	<b>22</b>	<b>16</b>	<b>14</b>	<b>13</b>	<b>8</b>	<b>10</b>	<b>9</b>	<b>92</b>

(a) By the *Ministers of State Act 1964*, the number of Ministers was increased to 25, of whom 5 were senators, as from 4th March, 1964.

(b) Abolished in 1922.

For the names of the occupants of ministerial office in each of the Parliaments of Australia in March, 1964, see § 3 of this chapter, pages 75–8. Subsequent changes will be found in the Appendix to this volume.

(vi) *Numbers and Salaries of Commonwealth Ministers.* Under sections 65 and 66, respectively, of the Constitution of the Commonwealth, the number of Ministers of State was not to exceed seven, and the annual sum payable for their salaries was not to exceed £12,000, each provision to operate, however, "until the Parliament otherwise provides".

Subsequently, the number and salaries have been increased from time to time, and from 1964 the annual sum payable for salaries has been fixed at £73,350 and the number of Ministers at 25. An additional ministerial allowance of £3,500 a year has been payable to the Prime Minister since 1952, and at the same time an additional ministerial allowance of £1,000 a year was granted to each other Minister. This latter figure was increased, in 1959, to £1,500 a year for senior Ministers and £1,250 a year for junior Ministers.

All amounts payable in the foregoing paragraphs are in addition to amounts payable as Parliamentary allowances (see para. 5 following).

5. *Number and Salary of Members of the Legislatures, Australian Parliaments, December, 1963.*—The following table shows the number and annual salary of members in each of the legislative chambers in December, 1963.

**AUSTRALIAN PARLIAMENTS: MEMBERS AND ANNUAL SALARIES,  
31st DECEMBER, 1963**

Members in—	C'wealth	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Total
<b>NUMBER OF MEMBERS</b>								
Upper House ..	60	60	34	(a)	20	30	19	223
Lower House ..	124	94	66	78	39	50	35	486
<b>Total ..</b>	<b>184</b>	<b>154</b>	<b>100</b>	<b>78</b>	<b>59</b>	<b>80</b>	<b>54</b>	<b>709</b>
<b>ANNUAL SALARY (£)</b>								
Upper House ..	(b)2,750	750	(c)2,000	(a)	(d)2,500	(e)2,520	(f)1,850	..
Lower House ..	(b)2,750	(g)2,650	(c)2,000	(h)2,501	(d)2,500	(e)2,520	(f)1,850	..

(a) Abolished in 1922. (b) Plus expense allowances—Senators, £800; Members of the House of Representatives, city electorates, £850, country electorates, £1,050. Certain additional allowances are also provided for holders of parliamentary offices, etc. (c) Plus allowance of £550 for metropolitan, £730 for urban, £850 for inner country and £950 for outer country electorates. (d) Plus allowance of £600 where electorate is less than 50 miles from Adelaide or if a Minister; £800 if more than 50 miles, £950 if more than 200 miles. (e) Plus expense reimbursement ranging from £600 for a Metropolitan member to £950 for a North Province member. (f) Plus allowance according to area of electorate and distance from the capital varying from £250 to £575 in the case of the Legislative Council, and from £725 to £875 in the case of the House of Assembly. (g) Plus allowance varying from £730 to £1,050 according to location of electorate. (h) Plus individual electoral allowances varying between £325 and £1,175. In April, 1964, salaries were raised to £2,650 and electoral allowances to from £600 to £1,525, payable as from 1st July, 1963.

6. **Enactments of the Parliaments.**—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution. In the States other than South Australia and Tasmania, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council (except in Queensland) and Legislative Assembly. In South Australia and Tasmania, laws are expressed to be enacted in the name of the Governor of the State, with the advice and consent of the Parliament in the case of South Australia, and of the Legislative Council and House of Assembly in the case of Tasmania. Generally, assent to Bills passed by the legislatures is given by the Governor-General or State Governor acting on behalf of, and in the name of, the Sovereign. In certain special cases, Bills are reserved for the Royal assent. The Parliaments of the States are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States, in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitutions. Where a law of a State is inconsistent with a law of the Commonwealth, the latter prevails, and the former is, to the extent of the inconsistency, invalid.

## § 2. Parliaments and Elections

1. **Commonwealth.**—(i) *The Parliament of the Commonwealth of Australia.* A special article describing the Commonwealth Parliament, its functions and procedure, prepared by the Clerk of the Senate and the Clerk of the House of Representatives, appears in Official Year Book No. 49, pages 65–71.

(ii) *Qualifications for Membership and for Franchise—Commonwealth Parliament.* Qualifications necessary for membership of either House of the Commonwealth Parliament are possessed by any British subject, twenty-one years of age or over, who has resided in the Commonwealth for at least three years and who is, or is qualified to become, an elector of the Commonwealth. Qualifications for Commonwealth franchise are possessed by any

British subject, not under twenty-one years of age and not disentitled on other grounds, who has lived in Australia for six months continuously. Residence in a subdivision for a period of one month prior to enrolment is necessary to enable a qualified person to enrol. Enrolment and voting are compulsory except that the compulsory enrolment provisions do not relate to an Aboriginal native of Australia. A member of the Defence Forces on service outside Australia who is a British subject not less than 21 years of age and has lived in Australia for six months continuously is entitled to vote at Commonwealth elections, whether enrolled or not.

The principal reasons for disqualification of persons otherwise eligible as members of either Commonwealth House are:—membership of the other House, allegiance to a foreign power, being attainted of treason, being convicted and under sentence for any offence punishable by imprisonment for one year or longer, being an undischarged bankrupt or insolvent, holding office of profit under the Crown (with certain exceptions), or having pecuniary interest in any agreement with the public service of the Commonwealth except as a member of an incorporated company of more than 25 persons. Persons of unsound mind, attainted of treason, convicted and under sentence for any offence punishable by imprisonment for one year or longer, or persons who are holders of temporary entry permits under the *Migration Act 1958* or are prohibited immigrants under that Act, are excluded from the franchise. In the main, these or similar grounds for disqualification apply also to State Parliament membership and franchise.

(iii) *Commonwealth Parliaments and Elections.* From the establishment of the Commonwealth until 1949, the Senate consisted of 36 members, six being returned by each of the original federating States. The Constitution empowers Parliament to increase or decrease the size of the Parliament, and, as the population of the Commonwealth had more than doubled since its inception, the Parliament passed the *Representation Act 1948* which provided that there shall be ten Senators from each State instead of six, increasing the total to 60 Senators, thus enlarging both Houses of Parliament and providing a representation ratio nearer to the proportion which existed at Federation.

In accordance with the Constitution, the total number of members of the House of Representatives must be as nearly as practicable double that of the Senate. Consequently, in terms of the Constitution and the Representation Act, from the date of the 1949 elections the number of members in the House of Representatives was increased from 74 to 121 (excluding the members for the internal Territories). As the States are represented in the House of Representatives on a population basis, the numbers were increased as follows:—New South Wales—from 28 to 47; Victoria—from 20 to 33; Queensland—from 10 to 18; South Australia—from 6 to 10; and Western Australia—from 5 to 8. Tasmania's representation remained at 5 and the total was increased from 74 to 121. The increase in the number of members of Parliament necessitated a redistribution of seats and a redetermination of electoral boundaries. This was carried out by Distribution Commissioners in each State on a quota basis, but taking into account community or diversity of interest, means of communication, physical features, existing boundaries of divisions and subdivisions, and State electoral boundaries.

The population as disclosed by the Census taken on 30th June, 1954, necessitated a further alteration in representation in the House of Representatives in respect of New South Wales, South Australia, and Western Australia. Representation as from the general election for the House of Representatives on 10th December, 1955, is New South Wales 46, Victoria 33, Queensland 18, South Australia 11, Western Australia 9, Tasmania 5, the total number of members (excluding the members for the internal Territories) being increased from 121 to 122. A redistribution of the States into electoral divisions was effected by Distribution Commissioners appointed for each State.

The population as disclosed by the Census taken on 30th June, 1961, revealed that, under the provisions of the Representation Act, New South Wales, Queensland, and Western Australia would each lose one member in the House of Representatives, while Victoria would gain a member. The Distribution Commissioners' reports were duly laid before both Houses of Parliament, but the Government decided not to proceed with the proposals. The Government has announced that it will amend the Representation Act to ensure that no State will lose a member at a future redistribution.

Since the general election of 1922, the Northern Territory has been represented by one member in the House of Representatives. The *Australian Capital Territory Representation Act 1948* gave similar representation to the Australian Capital Territory as from the elections of 1949. The members for the Territories may join in the debates but are not entitled to vote, except on any proposed law which relates solely to the respective

Territories, on a motion for the disallowance of any ordinance of the Territory or on any amendment to such motion, or on a motion for the disallowance of a regulation under an ordinance. The Commonwealth Parliament, however, when providing for a Legislative Council for the Northern Territory in 1947, relinquished the power to disallow ordinances for that Territory. As from the date of establishment of the Legislative Council, power to disallow ordinances was vested in the Governor-General in Council. In certain cases, ordinances passed must be reserved for the pleasure of the Governor-General.

The Constitution provides for a minimum of five members for each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. At elections for Senators, the whole State constitutes the electorate. For the purpose of elections for the House of Representatives, the State is divided into single electorates corresponding in number with the number of members to which the State is entitled. Further information regarding the Senate and the House of Representatives is given in earlier issues of the Official Year Book.

There have been twenty-four complete Parliaments since Federation. Until 1927, the Parliament met in Melbourne; it now meets in Canberra, the first meeting at Parliament House, Canberra, being opened by the late King George VI., then Duke of York, on 9th May, 1927.

The *Commonwealth Electoral Act* 1948, introduced with the *Representation Act* 1948 to enlarge the Commonwealth Parliament (see p. 67), changed the system of scrutiny and counting of votes in Senate elections from the alternative vote to that of proportional representation. For a description of the system, see Year Book No. 38, pages 82-3. The system of voting for both the Senate and the House of Representatives is preferential.

The twenty-fourth Parliament opened on 20th February, 1962, and was dissolved on 1st November, 1963. Elections for the House of Representatives were held on 30th November, 1963. An election was also held on the same date to fill a single casual vacancy in the Senate for the State of Queensland. Particulars of electors and voting are given in the following table. For particulars of electors enrolled and of electors who voted in the several States and Territories at previous Commonwealth elections, see issue No. 48 and earlier Year Books.

#### COMMONWEALTH ELECTIONS, 30th NOVEMBER, 1963

Particulars	Electors enrolled			Electors who voted			Percentage of electors who voted		
	Males	Females	Total	Males	Females	Total	Males	Females	Total
Senate(a) ..	425,900	429,573	855,473	406,051	409,697	815,748	95.34	95.37	95.36
House of Representatives—									
New South Wales	1,078,611	1,137,272	2,215,883	1,030,944	1,080,081	2,111,025	95.58	94.97	95.27
Victoria ..	792,959	826,036	1,618,995	764,163	795,173	1,559,336	96.37	96.26	96.32
Queensland ..	425,900	429,573	855,473	406,051	409,697	815,748	95.34	95.37	95.36
South Australia	265,926	275,610	541,536	257,289	265,846	523,135	96.75	96.46	96.60
Western Australia ..	200,559	201,924	402,483	190,106	193,607	383,713	94.79	95.88	95.34
Tasmania ..	94,140	96,407	190,547	90,457	92,563	183,020	96.09	96.01	96.05

Australia(b)	2,876,442	2,984,493	5,860,935	2,755,995	2,853,415	5,609,410	95.81	95.61	95.71

(a) Queensland only. (b) Excludes Northern Territory. Total enrolment in the Territory, where there was no contest, was 14,906.

The state of the parties in each House at the end of 1963 was:—*Senate*—Liberal Party, 25; Country Party, 6; Australian Labour Party, 27; Australian Democratic Labour Party, 1; Independent, 1. *House of Representatives*—Liberal Party, 52; Country Party, 20; Australian Labour Party, 52 (including Northern Territory and Australian Capital Territory members with restricted voting rights).

The twenty-fifth Parliament opened on 25th February, 1964.

(iv) *Commonwealth Referendums*. According to Section 128 of the Constitution, any proposed law for the alteration of the Constitution, in addition to being passed by an absolute majority of each House of Parliament, must be submitted to a referendum of the electors

in each State, and must be approved also by a majority of the States and of the electors who voted, before it can be presented for Royal Assent. So far, 24 proposals have been submitted to referendums and the consent of the electors has been received in four cases only, the first in relation to the election of Senators in 1906, the second and third in respect of State Debts—one in 1910 and the other in 1928—and the fourth in respect of Social Services in 1946. Details of the various referendums and the voting thereon were given in previous issues of the Year Book (*see* List of Special Articles preceding General Index to this volume), and a brief summary was given in Official Year Book No. 41 (pp. 67–70).

2. *State Elections.*—(i) *Upper Houses.* The following table shows particulars of the voting at the most recent elections for the Upper Houses or Legislative Councils in the States of Victoria, South Australia, Western Australia and Tasmania. In New South Wales, members of the Legislative Council are elected at simultaneous sittings of the members of both Houses, in Queensland there has been no Legislative Council since 1922, and in Tasmania three members of the Council are elected annually (but four in each sixth year) and the Council cannot be dissolved as a whole.

STATE UPPER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled—whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Fe-males	Total	Males	Fe-males	Total	Males	Fe-males	Total
Victoria ..	1961	758,029	796,827	1,554,856	717,755	750,107	1,467,862	94.69	94.14	94.41
South Australia ..	1962	(a)	(a)	1,182,118	(a)	(a)	98,786	(a)	(a)	83.56
Western Australia	1962	611,785	49,354	617,212	31,707	14,307	46,014	42.11	40.71	41.66
Tasmania ..	1963	(b)9,998	10,038	20,036	8,691	8,679	17,370	86.93	86.46	86.69

(a) Not available. (b) Total electors enrolled in contested divisions.

(ii) *Lower Houses.* The following table shows particulars of the voting at the most recent election for the Lower House in each State.

STATE LOWER HOUSE ELECTIONS

State	Year of latest election	Electors enrolled—whole State			Contested electorates					
					Electors who voted			Percentage of electors who voted		
		Males	Fe-males	Total	Males	Fe-males	Total	Males	Fe-males	Total
New South Wales	1962	1,060,658	1,113,110	2,173,768	960,514	996,894	1,957,408	94.38	93.52	93.94
Victoria ..	1961	758,029	796,827	1,554,856	717,755	750,107	1,467,862	94.69	94.14	94.41
Queensland ..	1963	416,507	422,816	839,323	388,773	394,261	783,034	94.53	94.06	94.29
South Australia ..	1962	(a)	(a)	644,497	(a)	(a)	417,462	(a)	(a)	93.98

Tasmania ..	1959	89,034	91,310	180,344	85,120	85,439	170,559	95.60	93.57	94.57

(a) Not available. (b) Total electors in contested districts.

Official Year Book No. 49 and earlier issues contain particulars of the voting at elections for both Upper and Lower State Houses in years prior to those shown above.

3. *The Parliament of New South Wales.*—The two Houses of Parliament are the Legislative Council (or Upper House) and the Legislative Assembly (or Lower House).

The Legislative Council consists of 60 members. At elections held every third year a group of 15 members is elected for 12 years. The electoral body comprises the members, for the time being, of the two Houses of Parliament, who record their votes by secret ballot at simultaneous sittings of both Houses. Casual vacancies are filled by a like election. Any man or woman who is entitled to vote at the election of members of the Legislative

Assembly, and has been resident for at least three years in the Commonwealth of Australia, is eligible for election as a member of the Legislative Council. A proposal to abolish the Legislative Council was defeated at a referendum held on 29th April, 1961.

The Legislative Assembly, which is the more important House, consists of 94 members elected on a system of universal adult suffrage, by secret ballot, for a maximum period of three years. Adult British subjects, men and women, are qualified for enrolment as electors when they have resided in the Commonwealth for a period of six months, in the State for three months, and in any subdivision of an electoral district for one month preceding the date of claim for enrolment. Any person qualified to vote at any State election is eligible to be elected to the Legislative Assembly. Casual vacancies may be filled at by-elections.

Persons are disqualified either as parliamentary members or voters for reasons generally the same as those outlined on page 67.

Since the introduction of responsible government in New South Wales, there have been 39 complete Parliaments, the first of which opened on 22nd May, 1856, and was dissolved on 19th December, 1857, while the thirty-ninth was dissolved on 5th February, 1962. The fortieth Parliament opened on 10th April, 1962.

The Legislative Assembly elections of 1920, 1922, and 1925 were contested on the principle of proportional representation, but a reversion to the system of single seats and preferential voting was made at all later appeals to the people. The principle of one elector one vote was adopted in 1894, and that of compulsory enrolment in 1921. Compulsory voting was introduced at the 1930 election. The franchise was extended to women by the *Women's Franchise Act* 1902, and was exercised by them for the first time in 1904.

**4. The Parliament of Victoria.**—Both of the Victorian legislative Chambers are elective bodies, but there is a considerable difference in the number of members of each House, and there was also, until the *Legislative Council Reform Act* 1950, a difference in the qualifications necessary for members and electors. The number of members in the Upper House is 34, two members being returned for each of the 17 provinces, and in the Lower House, 66, one member being returned for each electorate. In the Legislative Council, the tenure of the seat is for six years, except that one-half of the members who are elected for provinces at any general election for the Council are entitled to hold their seats for a period of only three years, one member for each of the 17 provinces retiring every third year. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years.

Qualifications for membership of the Legislative Council are possessed by any adult natural-born subject of the Queen, or by any adult naturalized for five years and resident in Victoria for two years. Entitlement for enrolment as an elector is extended to every adult natural-born or naturalized subject who has resided in Australia for at least six months continuously and in Victoria for at least three months and in any subdivision for at least one month immediately preceding the date of claim for enrolment. These qualifications for membership and electors apply also in respect of the Legislative Assembly. Reasons for disqualification follow the general pattern for Australia (*see* p. 67).

Since the introduction of responsible government in Victoria, there have been forty-one complete Parliaments, the first of which opened on 21st November, 1856, and closed on 9th August, 1859, while the forty-first was dissolved on 1st June, 1961. The forty-second Parliament was opened on 1st August, 1961.

Single voting is observed in elections held for either House, plural voting having been abolished for the Legislative Assembly in 1899 and for the Legislative Council in 1937. A preferential system of voting (*see* Official Year Book No. 6, p. 1182) was adopted for the first time in Victoria at the Assembly election held in November, 1911. The franchise was extended to women by the *Adult Suffrage Act* 1908, while voting at elections was made compulsory for the Legislative Assembly in 1926 and for the Legislative Council in 1935.

**5. The Parliament of Queensland.**—The Legislative Council in Queensland was abolished in 1922. The Legislative Assembly is composed of 78 members, each elected for a period of three years and each representing an electoral district. The State is divided into three zones—metropolitan, provincial cities and country, having 28, 12 and 38 electoral districts respectively. Prior to 1960 there were 75 members and electorates.

With certain exceptions, any person qualified to be enrolled for any electoral district is qualified for election to the Legislative Assembly. Any person not under the age of twenty-one years who is a natural-born or naturalized British subject with continuous residence within Australia for six months, and in an electoral district for three months prior to making

a claim for enrolment, is qualified to enrol as an elector unless disentitled on racial or other grounds. The classes of persons not qualified to be elected are similar to those for other Australian Parliaments (see p. 67), but in Queensland, ministers of religion are not qualified for election.

Since the establishment of responsible government in Queensland, there have been 36 complete Parliaments, the last of which was dissolved on 19th April, 1963. The House met for the first time on 22nd May, 1860, and the Governor delivered the Opening Address on 29th May, 1860. The thirty-seventh Parliament was opened on 20th August, 1963.

The election of 1907 was the first State election in Queensland at which women voted, the right being conferred under the *Elections Acts Amendment Act* 1905. At the elections held in May, 1915, the principle of compulsory voting was introduced for the first time in Australia. A system of contingent or optional preferential voting operated for many years, but, in 1942, this was abolished and that of election of the candidate obtaining the highest number of votes in the electorate adopted. As from the 1963 election, the method of election was changed to preferential voting.

6. **The Parliament of South Australia.**—In this State there is a Legislative Council composed of 20 members and a House of Assembly with 39 members, both Chambers being elective. For the Legislative Council the State is divided into five districts each returning four members. The term of office is six years, two members for each district retiring at the end of every three years. Thirty-nine districts return one member each to the House of Assembly. The maximum duration of the House of Assembly is three years.

Any person who is at least 30 years of age, is a British subject or legally made a denizen of the State and who has resided in the State for at least three years is qualified for membership of the Legislative Council. Qualifications for the Council franchise are that a person is at least 21 years of age, a British subject, an inhabitant of the State with residence for at least six months prior to the registration of the electoral claim, and that he or she has had certain war service, or possesses property qualifications relating to ownership, leaseholding, or inhabitant occupancy. Any person qualified and entitled to be registered as an elector for the House of Assembly is qualified and entitled for election as a member of that House. Qualifications for enrolment as an elector for the House of Assembly are that a person is at least 21 years of age, is a British subject, and has lived continuously in Australia for at least six months, in the State for three months and in an Assembly subdivision for one month immediately preceding the date of claim for enrolment. Provisions in the Constitution for disqualification from membership or from the franchise in respect of either House follow the usual pattern for Australia (see p. 67); in addition, ministers of religion are disqualified from membership of either House.

Since the inauguration of responsible government in South Australia, there have been 36 complete Parliaments, the first of which was opened on 22nd April, 1857. The thirty-sixth Parliament closed on 28th February, 1962, and the thirty-seventh was opened on 12th April, 1962.

South Australia was the first of the States to grant women's suffrage (under the *Constitution Amendment Act* 1894), the franchise being exercised by women for the first time at the Legislative Assembly election on 25th April, 1896. Compulsory voting for the House of Assembly was first adopted at the 1944 election. A system of preferential voting is in operation.

7. **The Parliament of Western Australia.**—In this State, both Chambers are elective. For the Legislative Council, there are 30 members, each of the ten provinces returning three members. One member for each province retires at the end of every two years. At each biennial election, the member elected holds office for a term of six years, and automatically retires at the end of that period. The Legislative Assembly is composed of 50 members, one member being returned by each electoral district. Members of the Legislative Assembly are elected for the duration of the Parliament, normally three years.

Qualifications required for membership of the Legislative Council are the age of at least 30 years, residence in Western Australia for a minimum of two years, being a natural-born or naturalized British subject and being enrolled, or qualified for enrolment, as an elector at Legislative Assembly elections. Qualifications required for Council franchise are the age of at least 21 years, residence in Western Australia for a minimum of six months, being a natural-born or naturalized British subject, and possessing certain property qualifications relating to freehold, leasehold, or householder occupancy; Aboriginal natives of Australia who satisfy these requirements are entitled to enrolment as electors. Qualifications required for membership of the Legislative Assembly are the age of at least 21 years, residence in

Western Australia for a minimum of twelve months, being a natural-born or naturalized British subject and being enrolled, or qualified for enrolment, as an elector at Legislative Assembly elections. Qualifications required for the franchise are the age of at least 21 years, residence in Western Australia for a minimum of six months and in the electoral district for which enrolment is claimed for a continuous period of three months, and being a natural-born or naturalized British subject. Aboriginal natives of Australia may, but in general are not required to, enrol. Persons may be disqualified as members or voters for reasons similar to those for other Australian Parliaments (*see p. 67*).

Since the establishment of responsible government in Western Australia, there have been 23 complete Parliaments, the first of which was opened on 30th December, 1890. The twenty-third Parliament dissolved on 31st January, 1962, and the twenty-fourth was opened on 26th July, 1962. A preferential system of voting is in use in Western Australia.

Woman's suffrage was granted by the *Constitution Acts Amendment Act 1899*. The first woman member to be elected to an Australian Parliament was returned at the 1921 election in this State. Voting for the Legislative Assembly was made compulsory in December, 1936, the first elections for which the provision was in force being those held on 18th March, 1939.

**8. The Parliament of Tasmania.**—In Tasmania, there are two legislative Chambers, the Legislative Council and the House of Assembly, both bodies being elective. In accordance with the *Constitution Act 1946*, the Council now consists of nineteen members, elected for six years and returned from nineteen divisions. Three members retire annually (except in the 1953 elections and in each sixth successive year thereafter, when four retire) and the Council cannot be dissolved as a whole. There are five House of Assembly divisions, corresponding to the Commonwealth electoral divisions, each returning seven members elected under a system of proportional representation which first came into force at the 1909 elections. By the *Constitution Act 1936*, the life of the Assembly was extended from three to five years.

Persons qualified for election to the Legislative Council must be at least 25 years of age and qualified to vote as Council electors, have been resident in Tasmania for a period of five years at any one time or at least two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for at least five years. An elector for the Council must be at least 21 years of age, a natural-born or naturalized subject and resident in Tasmania for a period of twelve months, with certain freehold or occupancy property qualifications, or the spouse of a person qualified to vote as the owner or occupier of property, or with certain academic, professional, defence force, or war service qualifications. For the House of Assembly, members must be at least 21 years of age, have been resident in Tasmania for a period of five years at any one time or for a period of two years immediately preceding the election, and be natural-born subjects of the Queen or naturalized for a period of five years. Electors must be at least 21 years of age, natural-born or naturalized subjects and resident in Tasmania for a period of six months continuously. Reasons for disqualification of members or voters are similar to those for other Australian Parliaments (*see p. 67*).

The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been 32 complete Parliaments since the inauguration of responsible government, the thirty-second having been dissolved on 9th April, 1959. The thirty-third Parliament was opened on 2nd June, 1959.

The suffrage was granted to women under the *Constitution Amendment Act 1903* and compulsory voting for both Houses came into force on the passing of the *Electoral Act* in 1928. The system of voting is, for the Council, by single transferable vote, and for the Assembly, proportional representation by single transferable vote.

### § 3. Administration and Legislation

**1. The Commonwealth Parliaments.**—The first Parliament of the Commonwealth was convened by proclamation dated 29th April, 1901, by His Excellency the Marquis of Linlithgow, then Earl of Hopetoun, Governor-General. It was opened on 9th May, 1901, by H.R.H. the Duke of Cornwall and York, who had been sent to Australia for that purpose by His Majesty the King. The Rt. Hon. Sir Edmund Barton, G.C.M.G., K.C., was Prime Minister.

The following table shows the number and duration of Parliaments since federation.

## COMMONWEALTH PARLIAMENTS

Number of Parliament	Date of opening	Date of dissolution
First .. .. .	9th May, 1901 .. ..	23rd November, 1903
Second .. .. .	2nd March, 1904 .. ..	5th November, 1906
Third .. .. .	20th February, 1907 .. ..	19th February, 1910
Fourth .. .. .	1st July, 1910 .. ..	23rd April, 1913
Fifth .. .. .	9th July, 1913 .. ..	30th July, 1914(a)
Sixth .. .. .	8th October, 1914 .. ..	26th March, 1917
Seventh .. .. .	14th June, 1917 .. ..	3rd November, 1919
Eighth .. .. .	26th February, 1920 .. ..	6th November, 1922
Ninth .. .. .	28th February, 1923 .. ..	3rd October, 1925
Tenth .. .. .	13th January, 1926 .. ..	9th October, 1928
Eleventh .. .. .	9th February, 1929 .. ..	16th September, 1929
Twelfth .. .. .	20th November, 1929 .. ..	27th November, 1931
Thirteenth .. .. .	17th February, 1932 .. ..	7th August, 1934
Fourteenth .. .. .	23rd October, 1934 .. ..	21st September, 1937
Fifteenth .. .. .	30th November, 1937 .. ..	27th August, 1940
Sixteenth .. .. .	20th November, 1940 .. ..	7th July, 1943
Seventeenth .. .. .	23rd September, 1943 .. ..	16th August, 1946
Eighteenth .. .. .	6th November, 1946 .. ..	31st October, 1949
Nineteenth .. .. .	22nd February, 1950 .. ..	19th March, 1951(a)
Twentieth .. .. .	12th June, 1951 .. ..	21st April, 1954
Twenty-first .. .. .	4th August, 1954 .. ..	4th November, 1955
Twenty-second .. .. .	15th February, 1956 .. ..	14th October, 1958
Twenty-third .. .. .	17th February, 1959 .. ..	2nd November, 1961
Twenty-fourth .. .. .	20th February, 1962 .. ..	1st November, 1963
Twenty-fifth .. .. .	25th February, 1964 .. ..	

(a) A dissolution of both the Senate and the House of Representatives was granted by the Governor-General, acting on the advice of the Cabinet and under section 57 of the Constitution.

2. **Governors-General and Commonwealth Ministries.**—(i) *Governors-General.* The following statement shows the names of the Governors-General since the inception of the Commonwealth.

## GOVERNORS-GENERAL

- Rt. Hon. JOHN ADRIAN LOUIS, EARL OF HOPETOUN (afterwards MARQUIS OF LINLITHGOW), P.C., K.T., G.C.M.G., G.C.V.O. From 1st January, 1901, to 9th January, 1903.
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 17th July, 1902, to 9th January, 1903, (Acting).
- Rt. Hon. HALLAM, BARON TENNYSON, P.C., G.C.M.G. From 9th January, 1903, to 21st January, 1904.
- Rt. Hon. HENRY STAFFORD, BARON NORTHCOTE, P.C., G.C.M.G., G.C.I.E., C.B. From 21st January, 1904, to 9th September, 1908.
- Rt. Hon. WILLIAM HUMBLE, EARL OF DUDLEY, P.C., G.C.B., G.C.M.G., G.C.V.O. From 9th September, 1908, to 31st July, 1911.
- Rt. Hon. THOMAS, BARON DENMAN, P.C., G.C.M.G., K.C.V.O. From 31st July, 1911, to 18th May, 1914.
- Rt. Hon. SIR RONALD CRAUFURD MUNRO FERGUSON (afterwards VISCOUNT NOVAR OF RAITH), G.C.M.G. From 18th May, 1914, to 6th October, 1920.
- Rt. Hon. HENRY WILLIAM, BARON FORSTER OF LEFE, P.C., G.C.M.G. From 6th October, 1920, to 8th October, 1925.
- Rt. Hon. JOHN LAWRENCE, BARON STONEHAVEN, P.C., G.C.M.G., D.S.O. From 8th October, 1925, to 22nd January, 1931.
- Rt. Hon. SIR ISAAC ALFRED ISAACS, P.C., G.C.B., G.C.M.G., K.C. From 22nd January, 1931, to 23rd January, 1936.
- General the Rt. Hon. ALEXANDER GORE ARKWRIGHT, BARON GOWRIE, V.C., P.C., G.C.M.G., C.B., D.S.O., K.G.St.J. From 23rd January, 1936, to 30th January, 1945.
- His Royal Highness PRINCE HENRY WILLIAM FREDERICK ALBERT, DUKE OF GLOUCESTER, EARL OF ULSTER AND BARON CULLODEN, K.G., K.T., K.P., P.C., G.C.B., G.C.M.G., G.C.V.O., General in the Army, Air Chief Marshal in the Royal Air Force, One of His Majesty's Personal Aides-de-Camp. From 30th January, 1945 to 11th March, 1947.
- Rt. Hon. SIR WILLIAM JOHN MCKELL, G.C.M.G., Q.C. From 11th March, 1947, to 8th May, 1953.
- Field-Marshal Sir WILLIAM JOSEPH SLIM (afterwards VISCOUNT SLIM OF YARRALUMLA), K.G., G.C.B., G.C.M.G., G.C.V.O., G.B.E., D.S.O., M.C., K.St.J. From 8th May, 1953, to 2nd February, 1960.
- Rt. Hon. WILLIAM SHEPHERD, VISCOUNT DUNROSSIL, P.C., G.C.M.G., M.C., K.St.J. Q.C. From 2nd February, 1960, to 3rd February, 1961.
- Rt. Hon. WILLIAM PHILIP, VISCOUNT DE L'ISLE, V.C., P.C., G.C.M.G., G.C.V.O., K.St.J. From 3rd August, 1961.

(ii) *Administrators.* In addition to the holders of the office of Governor-General listed above, certain persons have, from time to time, been appointed as Administrator of the Government of the Commonwealth during the absence from Australia or illness of the Governor-General. The following is a list of such appointments.

	Term of office
Rt. Hon. Frederic John Napier, Baron Chelmsford, K.C.M.G.	21st December, 1909, to 27th January, 1910
Lieut.-Colonel the Rt. Hon. Arthur Herbert Tennyson, Baron Somers, K.C.M.G., D.S.O., M.C.	3rd October, 1930, to 22nd January, 1931
Captain the Rt. Hon. William Charles Arcedeckne Vanneck, Baron Huntingfield, K.C.M.G., K.St.J.	29th March, 1938, to 24th September, 1938
Major-General Sir Winston Joseph Dugan, G.C.M.G., C.B., D.S.O.	5th September, 1944, to 30th January, 1945; 18th January, 1947, to 11th March, 1947
General* Sir John Northcott, K.C.M.G., C.B., M.V.O.†	19th July, 1951, to 14th December, 1951; 30th July, 1956, to 22nd October, 1956

THE HON. A. C. ATKINS, M.H.A.	

4. **Leaders of the Opposition, Commonwealth and State Parliaments.**—The Leader of the Opposition plays an important part in the Party system of government which operates in the Australian Parliaments. The following list gives the names of the holders of this position in each of the Parliaments in March, 1964.

Leader of the Opposition, Commonwealth and State Parliaments—

*Commonwealth*—The Hon. A. A. Calwell, M.P.

*New South Wales*—R. W. Askin, M.L.A.

*Victoria*—The Hon. C. P. Stoneham, M.P.

*Queensland*—J. E. Duggan, M.L.A.

*South Australia*—F. H. Walsh, M.P.

*Western Australia*—The Hon. A. R. G. Hawke, M.L.A.

*Tasmania*—The Hon. W. A. Bethune, M.H.A.

5. **The Course of Legislation.**—The actual legislation by the Commonwealth Parliament during 1963 is indicated in alphabetical order in *The Acts of the Parliament of the Commonwealth of Australia passed during the year 1963 in the Second Session of the Twenty-fourth Parliament of the Commonwealth, with Appendix, Tables and Index.*

A chronological table of Acts passed from 1901 to 1963 showing how they are affected by subsequent legislation or lapse of time is also given, and, further, a table of Commonwealth legislation passed from 1901 to 1963 in relation to the several provisions of the Constitution is furnished in the same volume. Reference should be made to these for complete information.

6. **Legislation during 1963.**—The Acts passed by the Commonwealth Parliament during the year 1963 are listed hereunder. In most cases the title of the Act indicates the general scope of the Act, but in some instances brief explanatory notes have been added. Appropriate chapters of this Year Book should be referred to for further information which may be available there.

The total enactments of the Commonwealth Parliament for a number of years at fairly even intervals since 1901 show a general increase. Seventeen Acts were passed in 1901, 36 in 1914, 38 in 1927, 87 in 1939, and 103 in 1963.

*Commonwealth Legislation passed during 1963.*

*Acts Interpretation Act 1963* (No. 19) defined the method of presentation of papers to Parliament and amended sections of the *Acts Interpretation Act 1901-1957* dealing with the disallowance of regulations by Parliament.

*Air Accidents (Commonwealth Liability) Act 1963* (No. 74) provided for payments up to £7,500 to dependants of persons killed or injured in air accidents when travelling as passengers on Commonwealth business or at Commonwealth expense.

*Air Navigation Act 1963* (No. 8) approved the ratification of a protocol amending the Chicago Convention of the International Civil Aviation Organization in respect of provisions for holding extraordinary meetings of the Assembly of the Organization.

*Air Navigation (Charges) Act 1963* (No. 97) increased charges payable by aircraft for the use of aerodrome facilities.

*Appropriation Act (No. 2) 1962-63* (No. 13); *Appropriation Act 1963-64* (No. 59).

*Appropriation (Works and Services) Act (No. 2) 1962-63* (No. 14); *Appropriation (Works and Services) Act 1963-64* (No. 60).

*Australian Antarctic Territory Act 1963* (No. 20).\*

*Australian National University Act 1963* (No. 9) empowered the Australian National University to make astronomical and meteorological observations in any part of the Commonwealth.

*Blowering Water Storage Works Agreement 1963* (No. 95) approved the agreement between the Commonwealth and the State of New South Wales for the construction of water storage works on the Tumut River at Blowering (see Chapter VIII, Water Conservation and Irrigation).

*Broadcasting and Television Act 1963* (No. 82) amended the *Broadcasting and Television Act 1942-1962* to provide for the licensing of television translator stations.

*Canned Fruit Excise Act 1963* (No. 92) provided the machinery arrangements to enable the Department of Customs and Excise to collect an excise duty on canned fruit (see also *Excise Tariff (No. 2) 1963* (No. 91), p. 80).

*Canned Fruits Export Charges Act 1963* (No. 90).

*Canned Fruits Export Marketing Act 1963* (No. 89) repealed the *Canned Fruits Export Control Act 1926-1938* and reconstituted the Australian Canned Fruits Board with additional members and extended powers. It provided, also, for the collection of a levy on the production of canned deciduous fruit sold on the domestic market to provide funds to be administered by the Board for assistance to the industry in the marketing of canned fruit. (Associated legislation is Acts 90 and 92 above and 91, p. 80.)

*Chowilla Reservoir Agreement Act 1963* (No. 100) approved the agreement between the Commonwealth and the State of New South Wales with respect to the construction of a reservoir at Chowilla (see Chapter VIII, Water Conservation and Irrigation).

*Christmas Island Act 1963* (No. 21); *Cocos (Keeling) Islands Act 1963* (No. 22).\*

*Commonwealth Banks Act 1963* (No. 57) provided for the payment of an additional £5,000,000 towards the capital of the Commonwealth Development Bank.

*Commonwealth Inscribed Stock Act 1963* (No. 18) amended the *Commonwealth Inscribed Stock Act 1911-1946* to enable subscribers to special bonds and treasury notes to have their securities inscribed and to increase to £600 the amount of a deceased person's stock transmittable without probate.

*Copper Bounty Act 1963* (No. 93) extended the operation of the *Copper Bounty Act 1958-1960* for a period of two years from January, 1964.

---

\* These Acts make provision in respect of Territory legislation similar to that made by the *Acts Interpretation Act 1963* in respect of Commonwealth Acts.

- Copyright Act 1963* (No. 7) amended the *Copyright Act 1912–1950* in respect of the procedure governing submissions in cases of voluntary arbitration in disputes concerning the public performance of literary, dramatic, musical or other works.
- Crimes (Aircraft) Act 1963* (No. 64) provided that where a crime is committed on an aircraft engaged in a flight between two States or Territories the relevant law of the Australian Capital Territory shall apply, and provided penalties for the taking over or destruction of aircraft or endangering the safety of aircraft.
- Currency Act 1963* (No. 67) repealed the *Coinage Act 1909–1947* and established the dollar as the monetary unit of Australia. It provided conversion tables from pence to cents, for legal tender and arrangements for the introduction of the decimal currency system (see Chapter XXI. Private Finance).
- Customs Act 1963* (No. 48); *Customs Tariff 1963* (No. 10); *Customs Tariff (No. 2) 1963* (No. 37); *Customs Tariff (No. 3) 1963* (No. 42); *Customs Tariff (Canada Preference) 1963* (No. 11); *Customs Tariff (Canada Preference) (No. 2) 1963* (No. 38); *Customs Tariff (Federation of Rhodesia and Nyasaland Preference) 1963* (No. 40); *Customs Tariff (New Zealand Preference) (No. 1) 1963* (No. 12); *Customs Tariff (New Zealand Preference) (No. 2) 1963* (No. 43); *Customs Tariff Validation Act 1963* (No. 94).
- Dairy Produce Export Control Act 1963* (No. 79) provided for the appointment of a deputy chairman of the board in lieu of the member formally appointed to administer the research and promotion programmes.
- Dairy Produce Research and Sales Promotion Act 1963* (No. 80) amended the principal Act consequent upon the amendment of the Dairy Produce Export Control Act.
- Defence Forces Retirement Benefits Act 1963* (No. 103) provided for changes in benefits under the Defence Forces Retirement Benefits Act similar to those made to the Superannuation Act by the *Superannuation Act 1963* (No. 102) (see p. 82).
- Defence (Visiting Forces) Act 1963* (No. 81) repealed the *Defence (Visiting Forces) Act 1939* and laid down new procedure governing the general topic of criminal and civil jurisdiction in Australia in relation to the visiting forces of other countries.
- Disabled Persons Accommodation Act 1963* (No. 63) provided for assistance by the Commonwealth towards the erection or purchase by organizations of buildings for the accommodation of disabled persons.
- Estate Duty Assessment Act 1963* (No. 72) exempted from estate duty the property of certain persons who were in Australia for purposes connected with projects of the United States Government, and raised the general exemption level from £5,000 to £10,000.
- Evidence Act 1963* (No. 28) simplified the proof in courts of law of the making and contents of tariff and other proposals for financial imposts made in a House of the Parliament.
- Excise Act 1963* (No. 49); *Excise Tariff 1963* (No. 41).
- Excise Tariff (No. 2) 1963* (No. 91) provided for the imposition of duties of Excise on certain canned fruit (see also *Canned Fruit Excise Act 1963* (No. 92), p. 79).
- Gift Duty Assessment Act 1963* (No. 73) exempted from duty gifts made by certain persons who were in Australia for purposes connected with projects of the United States Government.
- Heard Island and McDonald Islands Act 1963* (No. 23).\*
- Income Tax and Social Services Contribution Act 1963* (No. 70); *Income Tax and Social Services Contribution Assessment Act 1963* (No. 34); *Income Tax and Social Services Contribution Assessment Act (No. 2) 1963* (No. 69); *Income Tax (International Agreements) Act 1963* (No. 71).

---

\* This Act makes provision in respect of Territory legislation similar to that made by the *Acts Interpretation Act 1963* in respect of Commonwealth Acts.

- Insurance Act 1963* (No. 17) required insurers to maintain deposits with the Treasurer as security for the meeting of the liabilities of the insurer under policies issued by him.
- International Development Association Act 1963* (No. 51).\*
- International Development Association (Additional Contribution) Act 1963* (No. 66) approved a contribution to the extent of \$19,800,000 to the International Development Association.
- International Finance Corporation Act 1963* (No. 52); *International Monetary Agreements Act 1963* (No. 53).\*
- International Organizations (Privileges and Immunities) Act 1963* (No. 50) widened the scope of the previous Acts governing the granting of privileges and immunities in Australia to international organizations and to persons connected with the activities of those organizations, defined the limits of such privileges, and covered all international organizations in the one Act.
- Loan Act 1963* (No. 65) authorized the raising and expending of moneys up to £62,500,000 for defence purposes.
- Loan (Australian National Airlines Commission) Act 1963* (No. 31) approved an agreement between the Commonwealth and the Morgan Guaranty Trust Company of New York for the raising of a loan of \$11,000,000 to be lent to the Australian National Airlines Commission.
- Loan (Housing) Act 1963* (No. 6) authorized the raising and expending of moneys up to £2,700,000 for housing purposes; *Loan (Housing) Act (No. 2) 1963* (No. 56) authorized the raising and expending of moneys up to £49,850,000 for housing purposes.
- Loan (Qantas Empire Airways Limited) Act 1963* (No. 32) approved an agreement between the Commonwealth and the Morgan Guaranty Trust Company of New York for the raising of a loan of \$9,000,000 to be lent to Qantas Empire Airways Limited.
- Loan (War Service Land Settlement) Act 1963* (No. 55) authorized the raising and expending of moneys up to £4,225,000 for financial assistance to the States of South Australia, Western Australia, and Tasmania in connexion with War Service Land Settlement.
- Menindee Lakes Storage Agreement Act 1963* (No. 99) ratified and approved an agreement between the Commonwealth and the States of New South Wales, Victoria, and South Australia with respect to the storage of the waters of the Darling River at Menindee.
- National Health Act 1963* (No. 77) removed certain restrictions on special account contributors to hospital benefits organizations.
- Norfolk Island Act 1963* (No. 101) amended the *Norfolk Island Act 1957* by providing for the appointment of a deputy administrator and additional judges, and amended the functions of the Norfolk Island Council (see para. 2, p. 113).
- Overseas Telecommunications Act 1963* (No. 85) authorized the Overseas Telecommunications Commission (Australia) to establish and maintain cable and wireless telecommunication systems between Australia and Nauru and between Australia and other countries under any agreement to which the Australian Government is a party
- Papua and New Guinea Act 1963* (No. 27) changed the name of the Legislative Council to the House of Assembly and raised the membership to 64, comprising 10 official members, 44 members elected from a common roll in single member constituencies, and 10 non-indigenous elected members. It also increased the term of the legislature from three years to four years.
- Parliamentary Papers Act 1963* (No. 29) provided that a document delivered to the Clerk of a House of the Parliament and recorded in the Votes and Proceedings shall be deemed to have been laid before the House.
- Pay-roll Tax Assessment Act 1963* (No. 33).

---

\* These Acts are consequential on the *International Organizations (Privileges and Immunities) Act 1963* and provide for the deletion of provisions authorizing the conferring of privileges and immunities by regulation.

- Phosphate Fertilizers Bounty Act* 1963 (No. 78) provided for the payment of bounty on the production of superphosphate and ammonium phosphate.
- Processed Milk Products Bounty Act* 1963 (No. 16) extended the period for payment of bounty on processed milk products for one year to 30th June, 1964, and made available £500,000 for payment of bounties during 1963-64.
- Public Works Committee Act* 1963 (No. 15).
- Raw Cotton Bounty Act* 1963 (No. 86) provided for the payment of bounty on certain raw cotton sold for use in Australia and for other purposes.
- Repatriation Act* 1963 (No. 47) provided for increased rates of pension and allowances paid to incapacitated ex-members of the forces and their dependants (see Chapter XXVIII. Repatriation).
- River Murray Waters Act* 1963 (No. 98) ratified and approved an agreement for the further variation of the agreement entered into between the Commonwealth and the States of New South Wales, Victoria, and South Australia respecting the River Murray and other waters, mainly consequential on the construction of the Chowilla Reservoir.
- Sales Tax Assessment (No. 5) Act* 1963 (No. 45); *Sales Tax (Exemptions and Classifications Act* 1963 (No. 44).
- Seat of Government (Administration) Act* 1963 (No. 24).\*
- Service and Execution of Process Act* 1963 (No. 35) made provision for the enforcement in one State of fines imposed by a court of summary jurisdiction in another State.
- Snowy Mountains Hydro-electric Authority Act* 1963 (No. 96) extended the term of office of the Commissioner of the Snowy Mountains Hydro-electric Authority for a period of three years to 1967.
- Social Services Act* 1963 (No. 46) provided for increased pensions and allowances to pensioners and their dependants (see Chapter XVI. Welfare Services).
- States Grants (Additional Assistance) Act* 1963 (No. 4); *States Grants (Additional Assistance) Act (No. 2)* 1963 (No. 36); *States Grants (Special Assistance) Act* 1963 (No. 76); *States Grants (Universities) Act* 1963 (No. 5); *States Grants (Universities) Act (No. 2)* 1963 (No. 75).
- Stevedoring Industry Act* 1963 (No. 58) suspended the making of declarations of port stoppages where one-third of the registered waterside workers in the port were involved in an unauthorized stoppage and provided that entitlement to attendance money should not be affected by suspensions before the commencement of the Act.
- Submarine Cables and Pipelines Protection Act* 1963 (No. 61) ratified articles 27, 28 and 29 of the Geneva Convention on the High Seas by providing penalties for the breaking or injuring of submarine cables or pipelines, imposing liability for the cost of repairing the break or injury, and indemnifying owners of ships for losses of anchors or gear sacrificed to avoid injury to submarine cables or pipelines.
- Superannuation Act* 1963 (No. 102) provided for increased Commonwealth contribution to existing pensioners, increased entitlement to pensions, and authorized certain changes in investment of funds by the Superannuation Board.
- Supply Act* 1963-64 (No. 25); *Supply (Works and Services) Act* 1963-64 (No. 26).
- United States Naval Communication Station Agreement Act* 1963 (No. 30) approved an agreement between the Government of the Commonwealth and the Government of the United States of America relating to the establishment of a United States Naval Communication Station in Australia.
- Universities (Financial Assistance) Act* 1963 (No. 68) provided for the grant of financial assistance to the States in connexion with Universities (see Chapter XIX. Education, Cultural Activities and Research).

---

\* This Act makes provision in respect of Territory legislation similar to that made by the *Acts Interpretation Act* 1963 in respect of Commonwealth Acts.

*Vinyl Resin Bounty Act* 1963 (No. 88) provided for the payment of bounty on the production of vinyl resins used or sold for use in Australia.

*Western Australia (Northern Development) Agreement Act* 1963 (No. 87) approved an agreement between the Commonwealth and the State of Western Australia for the expenditure of £3,500,000 on the further development of the northern part of that State.

*Wheat Export Charge Act* 1963 (No. 84) and *Wheat Industry Stabilization Act* 1963 (No. 83) gave effect to the Wheat Industry Stabilization Plan 1963-64 to 1967-68 (see Chapter XXIII. Rural Industry).

*Wine Overseas Marketing Act* 1963 (No. 62).

*Wool Tax Act* (No. 1) 1963 (No. 2); *Wool Tax Act* (No. 2) 1963 (No. 3); *Wool Tax Assessment Act* 1963 (No. 1).

*World Health Organization Act* 1963 (No. 54).\*

#### § 4. Commonwealth Government Departments

1. **General.**—In Year Book No. 49, a list appears of the Commonwealth Government Departments, giving particulars for each Department of the principal matters dealt with and the Acts administered by the Minister concerned as at the end of 1962.

2. **The Department of Housing.**—When the eighth Menzies Ministry was constituted in December, 1963, it was announced that a new department would be created to administer housing. This decision was implemented under the Administrative Arrangements Order issued on 17th January, 1964, and the Department of Housing commenced operations immediately thereafter.

The Minister for Housing administers the following Acts, which were formerly administered by the Minister for National Development: *Commonwealth and State Housing Agreement Act* 1945-1955; *Commonwealth and State Housing Agreement Act* 1955; *Housing Agreement Act* 1956; *Housing Agreement Act* 1961; *Re-establishment and Employment Act* 1945-1962, Part VIII, Division 1 of Part XI, insofar as it extends Part VIII, Part XII to the extent to which it applies or may be applied in relation to the foregoing; *States Grants (Imported Houses) Act* 1950; *War Service Homes Act* 1918-1962; *War Service Homes Agreement Act* 1932; *War Service Homes (South Australia) Agreement Act* 1934.

The principal matters dealt with by the Department of Housing are the administration of the Commonwealth-State Housing Agreement and the War Service Homes Act. It is intended that the Department of Housing will, subject to the passage of the necessary legislation by Parliament, administer the proposed Home Savings Grant scheme and the scheme to insure certain housing loans.

#### § 5. Cost of Parliamentary Government

The tables in this section are intended to show, in broad groups, the expenditure incurred in the operation of the Parliamentary system in Australia, comprising the Governor-General and Governors, the Ministries, the Upper and Lower Houses of Parliament, and electoral activities; they do not attempt to cover the expenditure on Commonwealth and State administration generally. Only broad groups are shown, but even these are not entirely comparable because of differences in accounting procedures and in the presentation of accounts. A very large part of the expenditure under the head of Governor-General or Governor represents official services entirely outside the Governor's personal interest, carried out at the request of the Government.

---

\* This Act is consequential on the *International Organizations (Privileges and Immunities) Act* 1963 and provides for the deletion of provisions authorizing the conferring of privileges and immunities by regulation.

The following statement shows this expenditure for the Commonwealth and for each State for the year ended 30th June, 1963.

## CHAPTER IV LAND TENURE AND SETTLEMENT

### § 1. Disposal of Crown Lands

1. **Land Legislation and Tenures.**—Descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure, have appeared in earlier issues of the Year Book (*see* List of Special Articles, etc., preceding General Index to this volume).

The land legislation in force in the several States may be classified broadly under five major types of land enactments, namely, Crown Lands Acts, Closer Settlement Acts, Mining Acts, Returned Service Personnel Settlement Acts, and Advances to Settlers Acts, but within the groupings there is, of course, a wide variety of individual Acts. In the two internal Territories, the legislation relating to lands is embodied in various Ordinances.

In each of the States, there is a Lands Department under the direction of a Minister who is charged generally with the administration of the Acts relating to the alienation, occupation and management of Crown Lands. In the Northern Territory, the Administrator, under the control of the Minister for Territories, is charged with the general administration of the Lands Ordinance and of Crown lands in the Northern Territory. In the Australian Capital Territory, the administration of the Leases Ordinances is in the hands of the Minister for the Interior.

In each of the States, there is also a Mines Department which is empowered under the several Acts relating to mining to grant leases and licences of Crown lands for mining and allied purposes. In the Northern Territory, there are several ordinances relative to mining.

As with land legislation, land tenures may be classified under broad headings; these indicate the nature of the tenure and comprise:—Free Grants and Reservations, Unconditional Purchases of Freehold, Conditional Purchases of Freehold, Leases and Licences under Land Acts, Closer Settlement, Leases and Licences under Mining Acts, and Settlement of Returned Service Personnel.

The following sections contain figures showing the extent of the different tenures in the several States and Territories, together with some general descriptive matter. Information in greater detail was provided in Year Book No. 48 and previous issues.

2. **Forms of Land Tenure.**—(i) *Free Grants and Reservations.* Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and or permanent reservation of Crown lands for public purposes. In the Northern Territory, any Crown lands not subject to any right of, or contract for, purchase, may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act* 1910, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

The following table shows the total areas reserved in each State (except Tasmania) and in the Northern Territory, and the grand totals, at the end of the years 1958 to 1962.

**AREAS RESERVED**  
(‘000 Acres)

Year	N.S.W. (a)	Victoria (b)	Old (b)	S. Aust. (a)	W. Aust. (a)	Nor. Terr. (a)	Total (c)
1958.. ..	21,118	8,621	24,884	22,740	58,310	47,985	183,658

1962.. ..	15,883	8,783	25,126	22,743	68,672	59,595	200,802

(a) At 30th June.  
not available.

(b) At 31st December.

(c) Excludes Tasmania, for which details are

Details of the purposes for which areas at the end of 1962, as shown above, were reserved are given hereunder.

*New South Wales.* For travelling stock, 5,026,598 acres; forest reserves, 1,535,018 acres; water and camping reserves, 781,479 acres; mining reserves, 1,044,220 acres; for recreation and parks, 686,846 acres; other reserves, 6,808,951 acres; total, 15,883,112 acres.

*Victoria.* For roads, 1,700,729 acres; water reserves, 316,072 acres; agricultural colleges, 8,434 acres; forest and timber reserves, 5,728,549 acres; mallee reserves, 410,000 acres; other reserves, 619,350 acres; total, 8,783,134 acres.

*Queensland.* Timber reserves, 2,984,339 acres; for State forests and national parks, 6,145,433 acres; Aboriginal reserves, 6,543,408 acres; for streets, surveyed roads and stock routes, 3,874,883 acres; general reserves, 5,577,460 acres; total, 25,125,523 acres.

*South Australia.* Total area of surveyed roads, railways and other reserves, 22,742,963 acres, including 18,828,514 acres set apart as Aboriginal reserves.

*Western Australia.* For State forests, 4,347,956 acres; timber reserves, 1,785,246 acres; other reserves, 62,538,582 acres; total, 68,671,784 acres.

*Northern Territory.* For Aboriginal, defence and public requirements, 59,595,000 acres.

(ii) *Conditional and Unconditional Purchases of Freehold.* Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Official Year Book No. 48, pp. 91-2), and conditional purchases of various types may also be made. In the Northern Territory, only 0.1 per cent. of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory, about 18 per cent. of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

(iii) *Leases and Licences. (a) General.* Well over half the area of the States of New South Wales and South Australia and of the two Territories and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; and in Tasmania only one-tenth is leased or licensed, while about half the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

(b) *Land Acts and Ordinances.* The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples:—grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and conditional purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 90-2.

The following table shows the areas held under lease or licence other than mining and forestry in the States, the total under lease or licence for the Territories, and the grand totals, at the end of the years 1958 to 1962.

#### AREAS OCCUPIED UNDER LEASE OR LICENCE OTHER THAN MINING AND FORESTRY

('000 Acres)

Year	N.S.W. (a)	Vic.	Q'land	S. Aust. (a)	W. Aust. (a)	Tas. (a)	N.T. (a) (b)	A.C.T. (a) (b)	Total

(a) Year ended 30th June.

(b) Leases and licences for all purposes.

(c) *Mining Acts and Ordinances.* In addition to the lands held under lease or licence under land legislation, there are also areas occupied under mining Acts for the purpose of prospecting or mining for gold and other minerals. Details of the various types of mining lease and licence are given in Year Book No. 48, pp. 94-5.

Areas occupied in the States at the end of the years 1958 to 1962 are shown in the following table.

**AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES**  
(\*000 Acres)

Year	N.S.W. (a)	Victoria	Q'land (b)	S. Aust. (a) (b)	W. Aust. (c)	Tasmania (b)	N. Terr.	Total (d)
1958 ..	386	43	650	796	164	37	27	2,103
1959 ..	399	40	(e) 2,102	784	164	46	25	3,560

1962 ..	492	55	2,168	5,364	166	44	38	8,327

(a) Year ended 30th June. (b) Excludes lands held under miners' rights and dredging claims.  
(c) Excludes holdings under miners' rights. (d) Excludes Australian Capital Territory, included in previous table. (e) Increase due to inclusion of 1,452,800 acres special bauxite lease granted in 1959.

(d) *Oil Prospecting or Exploring.* The following table shows for each year from 1958 to 1962 the areas occupied in each State under authorities to prospect or explore for petroleum. The legislation relating to the search for petroleum differs from State to State, and the terminology of, and the conditions applying to, the forms of authorization differ accordingly. The figures below relate to the exploratory stage of operations.

**AREAS OCCUPIED UNDER AUTHORITIES TO PROSPECT OR EXPLORE  
FOR PETROLEUM**  
(\*000 Acres)

Year	N.S.W. (a)	Victoria	Q'land	S. Aust. (a)	W. Aust.	Tasmania	N. Terr.	Total

(a) Year ended 30th June.

(b) Not available.

(c) Excludes Northern Territory.

## § 2. Closer Settlement and War Service Settlement

1. *Closer Settlement.*—Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Official Year Book up to No. 22 (see No. 22, pp. 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Official Year Book No. 48 contains particulars as at 30th June, 1960 of the areas and costs for those States for which separate information is available (see p. 96).

2. *Settlement of Returned Service Personnel, 1939-45 War and Korea-Malaya Operations.*—(i) *General.* The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects

of the Scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the Scheme, to find their own finance for the acquisition and development of properties. In 1954, Queensland abandoned the Scheme and made available for general settlement all unallotted lands held under it.

Detailed information about the agreements and the methods of operation and administration of the Scheme are contained in earlier Year Books (*see List of Special Articles, etc., preceding General Index to this volume.*)

(ii) *Summary of Operations to 30th June, 1963.* The following table shows the operations of the War Service Land Settlement Scheme in each State up to 30th June, 1963.

### WAR SERVICE LAND SETTLEMENT

SUMMARY TO 30TH JUNE, 1963

State	Land acquired	Farms allotted		Farms in course of development		Other
		No.	Acres	No.	Acres	
New South Wales ..	9,094,021	3,047	9,094,021	..	..	..
Victoria ..	1,181,599	3,048	1,181,599	..	..	..
Queensland ..	398,524	470	218,640	..	..	(a) 179,884
South Australia ..	755,873	1,013	668,672	11	11,000	(b) 76,201
Western Australia ..	c2,053,972	1,003	1,907,801	..	..	(b) 146,171
Tasmania ..	447,624	523	421,000	56	25,000	(b) 1,624
<b>Total ..</b>	<b>13,931,613</b>	<b>9,104</b>	<b>13,491,733</b>	<b>67</b>	<b>36,000</b>	<b>403,880</b>

(a) War Service Land Settlement was discontinued in 1954, and unallotted lands were made available for general settlement. (b) Will be surveyed on completion of projects under development. Western Australia had large tracts of virgin land developed under the scheme. (c) Figures adjusted following survey. Other land originally approved, but no longer required, has been disposed of outside the Scheme.

(iii) *Expenditure.* The following table shows a dissection of the Commonwealth expenditure on War Service Land Settlement to 30th June, 1963.

### WAR SERVICE LAND SETTLEMENT (1939-45 WAR AND KOREA-MALAYA OPERATIONS): COMMONWEALTH EXPENDITURE TO 30th JUNE, 1963

(£'000)

Advances to States	N.S.W.	Vic.	Qld	S. Aust.	W. Aust.	Tas.	Total
For acquisition of land ..	..	..	..	3,425	3,559	2,519	9,503

For operation and maintenance of irrigation projects ..	..	..	..	942	16	3	961
Loss on advances ..	94	4	335	37	163	20	653
Cost of administration of credit facilities ..	..	..	..	415	757	177	1,349
<b>Total ..</b>	<b>8,937</b>	<b>14,453</b>	<b>650</b>	<b>32,636</b>	<b>46,301</b>	<b>24,070</b>	<b>127,047</b>

(iv) *Loans and Allowances (Agricultural Occupations) Scheme.* Full details of the measures taken for the re-establishment of ex-servicemen in rural occupations were given in an earlier Year Book (*see* List of Special Articles, etc., preceding General Index to this volume). These measures provide for a scheme of loans and allowances to assist ex-servicemen in establishing themselves in agricultural occupations.

The loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or discharge of a mortgage, bill of sale, etc. At 30th June, 1963, 14,307 loans had been approved and advances amounting to £10,176,531 had been made.

The allowances are payable only in respect of the period during which the income derived from the occupation by the ex-serviceman concerned is considered inadequate. At 30th June, 1963, 16,114 applications for allowances had been made, and the total amount paid in allowances was £2,276,597.

Official Year Book No. 48 contains details of the applications received and approved and the amounts involved for the individual States and Territories to 30th June, 1961 (*see* p. 98). There has been little subsequent change.

(v) *War Service Land Settlement Division—Total Expenditure.* The following table shows details of the total expenditure on various projects by the War Service Land Settlement Division from the commencement of operations to 30th June, 1963.

**COMMONWEALTH WAR SERVICE LAND SETTLEMENT DIVISION:  
EXPENDITURE TO 30th JUNE, 1963  
(£'000)**

<b>Total .. ..</b>	<b>14,888</b>	<b>17,217</b>	<b>2,178</b>	<b>34,067</b>	<b>49,364</b>	<b>24,745</b>	<b>f142,477</b>	<b>(g)43,796</b>	<b>98,681</b>

(a) Excludes interest, rent, and rates. £7,247,000. (b) Includes expenditure on new loans of moneys repaid by borrowers. (c) Includes Northern Territory, £10,000, and New Guinea, £7,000. (d) Excludes interest, £1,449,000. (e) Includes New Guinea, £1,000. (f) Includes Northern Territory, £10,000, and New Guinea, £8,000. (g) Excludes interest, rent, and rates, £8,696,000.

### § 3. Alienation and Occupation of Crown Lands

1. *General.*—The figures in the previous parts of this chapter show separate particulars of various forms of land settlement. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory, and in the Australian Capital Territory, during 1962. A summary for each State and Territory and for Australia as a whole is also included. Particulars for each year from 1952 to 1962 appear in the bulletin *Primary Industries* No. 56, Part I.—*Rural Industries*, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases, lands which are permanently reserved from alienation are occupied under leases or licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

2. *New South Wales.*—The total area of New South Wales is 198,037,120 acres, of which 28.7 per cent. had been alienated at 30th June, 1962; 4.8 per cent. was in process of alienation; 57.4 per cent. was held under leases and licences; and the remaining 9.1 per cent. was unoccupied, or held by the Crown.

**ALIENATION AND OCCUPATION OF CROWN LANDS: NEW SOUTH WALES**  
30th JUNE, 1962  
(Acres)

Particulars	Area	Particulars	Area
1. Alienated .. .. .	56,799,666	3. Held under leases and licences— Homestead selections and grants Alienable leases, long-term and perpetual .. .. .	1,690,032 24,524,610

		4. Area unoccupied(b) .. .. .	81,218,578
2. In process of alienation .. .. .	479,051	5. Total Area of State .. .. .	243,244,800

(a) Mining leases and licences have also been issued over an area comprising 204,724,491 acres.  
(b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

6. Western Australia.—The total area of Western Australia is 624,588,800 acres, of which, at 30th June, 1962, 4.5 per cent. was alienated; 2.1 per cent. was in process of alienation; and 38.4 per cent. was occupied under leases and licences issued either by the Lands, Mines or Forests Departments. The balance of 55.0 per cent. was unoccupied.

**ALIENATION AND OCCUPATION OF CROWN LANDS: WESTERN AUSTRALIA**

(i) Issued by Lands Department—		Short-term leases ..	1,128
Islands .. .. .	80,909	(ii) Issued by Mines Department ..	44,514
Ordinary leased land ..	949,730	<i>Total</i> .. .. .	1,763,381
Land leased for timber ..	626,425	4. Area occupied by the Crown or unoccupied .. .. .	8,401,121
Closer settlement ..	17,242	5. Total Area of State .. .. .	16,778,000

8. Northern Territory.—The area of the Northern Territory is 335,116,800 acres, of which, at 30th June, 1962, only 0.1 per cent. was alienated; 52.0 per cent. was held under leases and licences; 17.8 per cent. was reserved for Aboriginal, defence and public requirements; and the remaining 30.1 per cent. was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30th June, 1962:—alienated, 333,045 acres; leased—pastoral leases, 152,479,094 acres; other leases, licences and mission stations, 21,623,149 acres; total leased, 174,102,243 acres; reserved for Aboriginal, defence and public requirements, 59,594,723 acres; unoccupied and unreserved, 101,086,789 acres; total, 335,116,800 acres.

9. Australian Capital Territory.—Alienated land of the Territory at the end of 1962 comprised 11.0 per cent. of the total area; land in process of alienation 6.8 per cent.; land held under lease and licence, including city tenures, 56.9 per cent.; land otherwise occupied and unoccupied 25.3 per cent.

The following are the particulars of land areas in the Australian Capital Territory at the end of 1962:—alienated 65,857 acres; in process of alienation 41,224 acres; leased—grazing, agricultural, etc., leases, 274,291 acres; grazing licences, 11,100 acres; otherwise occupied, including city area leases, 49,771 acres; total leased, 335,162 acres; unoccupied, 140,686 acres; total, 582,929 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,929 acres.

10. Summary.—The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1962.

ALIENATION AND OCCUPATION OF CROWN LANDS, 1962

State or Territory	Private lands				Crown lands				Total area '000 acres
	Alienated		In process of alienation		Leased or licensed		Other (a)

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30th June. (c) At 31st December. (d) Includes Jervis Bay area.

§ 4. Advances to Settlers

1. General.—A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Year Book (see List of Special Articles, etc., preceding General Index to this issue).

The summaries of loans and advances under State authorities in the following paragraphs are compiled from returns supplied by the various State government lending agencies in the several States. They include transactions in lands acquired under closer and soldier settlement schemes, but exclude balances owing on former Crown lands sold on the conditional purchase, etc., system. Advances made by general banking institutions in the course of their ordinary business are not included. For information on such advances see Chapter XXI. Private Finance.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of re-appraisements of land values and the writing down of debts. In general, they include both principal and interest outstanding.

A summary for Western Australia is not included, as practically the only governmental funds being made available are Commonwealth (see § 2, p. 88).

In New South Wales and Victoria, expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland, no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States, this expenditure is provided for by the Commonwealth, and particulars are included in § 2, page 88.

Loans (Agricultural Occupations) under the *Commonwealth Re-establishment and Employment Act 1945* and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

2. New South Wales.—The following table shows particulars respecting advances, etc., under State authorities to 30th June, 1962.

## ADVANCES TO SETTLERS, ETC.: NEW SOUTH WALES

(a) Includes transferred liability, £28,861.

6. Western Australia.—The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1st October, 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate in similar manner to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown in § 2, page 88.

7. *Tasmania*.—The following table shows particulars of advances under State authorities to 30th June, 1962. Although advances made for the purchase of land for closer and soldier land settlement are not regarded as outstanding advances by the Department of Agriculture, the figures have been included in the table for comparative purposes; the areas so purchased have been leased on 99-year terms with an option of purchase which the leaseholder may exercise at any time.

8. *Northern Territory*.—During the year 1961-62, fifteen advances totalling £22,051 were approved and advances made totalled £23,976. At 30th June, 1962, the balance outstanding from 110 settlers, including interest, was £182,147.

## CHAPTER V

### THE TERRITORIES OF AUSTRALIA

**NOTE.**—The internal Territories of Australia are the Northern Territory and the Australian Capital Territory. External Territories under the control of Australia are:—Norfolk Island; Papua (formerly British New Guinea); the Territory of New Guinea (under Trusteeship Agreement with the United Nations); Nauru (under Trusteeship Agreement with the United Nations); the Territory of Heard and McDonald Islands; the Australian Antarctic Territory; the Territory of Cocos (Keeling) Islands; and the Territory of Christmas Island. There is also the Territory of Ashmore and Cartier Islands, to which the laws, ordinances and regulations of the Northern Territory, of which it is deemed to form part, apply wherever applicable. Information on all except Ashmore and Cartier Islands is contained in the following pages, and details of the acquisition of all the Territories will be found on pages 5, 23 and 24 of Chapter I.

A summary of the results of the Population Census of 30th June, 1961, for each of the external Territories of Norfolk Island, Papua, New Guinea, Nauru, Cocos (Keeling) Islands and Christmas Island is given on pages 164–78 of Year Book No. 49. Corresponding information for the internal Territories is contained in Chapter IX. Population.

#### THE NORTHERN TERRITORY

##### § 1. Area and Population

**1. Area.**—Upon the extension of New South Wales westward to the 129th east meridian in 1825, the Northern Territory was incorporated in that colony, but in 1863 it was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911. The total area is 523,620 square miles.

**2. Population.**—(i) *Population, excluding Full-blood Aborigines.* At the Census of 30th June, 1961, the population of the Territory, excluding full-blood Aborigines, was 16,206 males, 10,889 females, 27,095 persons. Corresponding figures at the Census of 30th June, 1954, were 10,288, 6,181 and 16,469 respectively.

The European population of the Territory increased slowly from 670 at the Census of 1881 to 3,767 in 1918. By 1921, it had decreased to 2,458, and in 1933 was still only 3,306. It had risen to 9,116 at the Census of 1947, to 14,031 at the Census of 1954 and to 23,599 at the Census of 1961.

(ii) *The Aborigines.* For particulars relating to the Aboriginal population, see Chapter IX. Population. All Aborigines, by virtue of the *Nationality and Citizenship Act* 1948–1960, are British subjects and Australian citizens. Northern Territory Aborigines are not subject to special legislation, but the special welfare needs of individuals are met by the *Welfare Ordinance* 1953–1963 (see § 9 below, p. 104). Reserves for Aborigines comprise an area of 93,390 square miles.

##### § 2. Legislation and Administration

On 1st January, 1911, the Territory was transferred from South Australia to the Commonwealth. The terms were outlined in Official Year Book No. 15, page 940. For particulars of the administration up to the *Northern Territory (Administration) Act* 1931, by which it was, for the second time, placed in the hands of an Administrator, see Official Year Book No. 38 and earlier issues.

The *Northern Territory (Administration) Act* 1910–1962 provides for the constitution of a Legislative Council consisting of the Administrator as President, six official members, three nominated non-official members and eight elected members. The Council makes ordinances for the Territory, which must be submitted to the Administrator for assent. The Administrator may or may not assent to them, or he may reserve them for the Governor-General. The Governor-General may disallow any ordinance assented to by the

Administrator within six months from the date of assent, and the operation of ordinances relating to certain matters, including Crown lands and Aboriginal affairs, is dependent on his approval. Money votes may be proposed in the Council only by the Administrator himself, or by his permission or direction.

The Territory elects a member to the House of Representatives, who has the right to take part in debates, but may vote only on matters that relate solely to the Northern Territory.

### § 3. Physiography

The Territory is within the torrid zone, with the exception of a strip about 180 miles wide which lies south of the Tropic of Capricorn.

The low flat coast-line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl and laterite form the occasional cliffy headlands. The sea frontage of more than 1,000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries. The only practicable deep-water port, however, is Darwin.

Inland, the country generally is destitute of conspicuous landmarks. From the coast, there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea and those that form the scanty supply for the interior systems. Towards the centre of the continent, the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### § 4. Climate, Fauna and Flora

1. **The Seasons.**—There are two main climatic divisions, the wet season, November to April, and the dry season, May to October, with uniform and regular changes of weather. Nearly the whole of the rainfall occurs in the summer months. Further particulars appear in Official Year Book No. 6, page 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the Territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous) and frogs abound. There are many varieties of fresh-water fish and littoral *Mollusca*. Butterflies and beetles are strongly represented. The termite is a pest which is capable of serious damage to wooden buildings unless special preventive measures are taken. A species of the ant builds anthills which sometimes attain great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Some types of native fauna are protected. Buffalo formerly existed in large herds, but their number has been reduced by indiscriminate shooting. Buffalo shooting is, however, now controlled by Ordinance.

3. **Flora.**—The vegetation is north Australian in type, but a number of the forms belong to the Malayan and Oceanic regions. In the coastal regions, tropical vegetation grows luxuriantly to the water's edge. In the north, cypress pine, bloodwood and paper-bark timbers are now cut and milled for local building purposes. Cypress pine is resistant to termites. On the wide expanses of plain country in the interior, there is little vegetation, the principal orders represented being:—*Euphorbiaceae*, *Compositae*, *Convolvulaceae*, *Rubiaceae*, *Goodeniaceae*, *Leguminosae*, *Utricaceae*.

### § 5. Production

1. **Agriculture.**—Up to the present, agriculture has made little progress in the Territory, although rice, peanuts, tobacco, grain sorghum, bananas, pineapples, citrus fruits, cashew nuts, mangoes, papaws, vegetables, fodder plants and improved pastures can be grown in certain areas. At the present time, commercial agricultural production is practically confined to vegetables and small-scale fruit production (mainly pineapple and citrus) for local consumption. A small industry is being developed in Townsville lucerne seed production and in the production of hay.

In 1946, the Commonwealth Scientific and Industrial Research Organization commenced scientific surveys to determine more accurately the potentialities of the Territory. Surveys have been completed of the Katherine-Darwin, Barkly Tableland, Victoria River, and Alice Springs Regions. The survey of the Katherine-Darwin Region indicated that further investigations into agricultural possibilities were warranted. As a result, the C.S.I.R.O. established an agricultural research station at Katherine to investigate the possibilities of dry farming in a land system covering an area of about 7,000 square miles in the Katherine-Daly River basin. The research work at this station was sufficiently encouraging in respect of the production of peanuts, grain sorghum, and pastures to warrant investigations into the application of the findings on a commercial scale. To further the investigations, the Commonwealth Government approved of the establishment by the Northern Territory Administration, in 1952, of an experimental farm at Katherine for the purpose of carrying out trials with these crops to determine the requirements for farming them on a commercial scale. In 1956, the Administration established an experimental farm at Berrimah, near Darwin. Investigations into fruit and vegetable growing and pasture production are being carried out under both dry land and irrigated conditions.

The survey of the Katherine-Darwin Region also indicated various soil types in other parts of the Region on which agricultural production tests would be worthwhile. Trials on soil types are carried out by agricultural field officers of the Administration in various areas of the Territory considered potentially suitable for agriculture.

Prospects for rice growing were indicated by the survey, and in 1952, the Administration established rice research stations at Humpty Doo and at a location known as Sixty Mile, on the Stuart Highway, 60 miles from Darwin. Since the 1959-60 season, rice research work on the sub-coastal plains has been carried out in the Territory by the C.S.I.R.O. at its Coastal Plains Research Station at Middle Point, near Humpty Doo. The Administration carries out rice investigational work outside the coastal plains at the Upper Adelaide River Agricultural Experiment Station. At the rice research stations, it has been demonstrated that rice can be grown in the Territory, but that the main problems are adequate water control and drainage, determination of cultivation techniques in the soil conditions, and the production of suitable rice varieties. Territory Rice Limited, a firm with Australian and American capital, carried out commercial scale operations near Humpty Doo from the 1954-55 season until the 1959-60 season. Under arrangements with the company, four former employees grew rice crops in the 1960-61, 1961-62 and 1962-63 seasons.

On 25th July, 1959, the Minister for Territories appointed an expert committee to investigate the prospects of promoting agricultural settlement in the Northern Territory on an economic basis and the major factors to be considered in shaping an agricultural policy for the Territory, including the areas best suited to agricultural settlement; the crops most likely to prove economic: the relationship of agriculture to the expansion of the pastoral industry: the availability of land and the distribution and tenure of land; credit and other forms of assistance to primary producers; marketing opportunities; research and agricultural extension work; and water use and conservation. The committee has presented its report, and some of its recommendations have been accepted and implemented, while others are under consideration.

A scientific liaison conference, convened jointly by the C.S.I.R.O. and the Northern Territory Administration, was held in Darwin during February, 1961. This conference was attended by various Commonwealth departments, universities, and the Australian Meat Board. Fifty-eight papers were presented to the conference, and all aspects of rural and pastoral activities in the Territory were covered.

Early in 1964, three pilot farms commenced operations in the Marrakai area, two being mixed farms based on rice growing and cattle fattening, and one on cattle fattening on native and improved pastures.

**2. Pastoral Industry.**—The pastoral possibilities of certain parts of the Territory were recognized at an early date, and both cattle and sheep raising have been attempted. For various reasons, sheep-raising has not been very successful, but the cattle industry has progressed steadily and is continuing to expand.

Cattle exported during 1962-63 numbered 124,616—82,919 to Queensland, 29,231 to South Australia, 4,796 to Western Australia and 7,670 to Hong Kong. Other livestock exports included 1,002 horses and 91 buffaloes. Imports of livestock were—bulls, 1,332; other cattle, 7,028; horses, 61; sheep, 5,360; pigs, 6; and poultry, 17,136.

The estimated numbers of livestock in the Territory at 30th June, 1959 to 1963, are given in the following table.

NORTHERN TERRITORY: LIVESTOCK

At 30th June—	Horses	Cattle	Sheep	Pigs	Goats	Mules
1959 .. ..	38,882	1,099,014	18,731	3,802	9,126	200
1960 .. ..	38,340	1,110,520	14,960	4,400	9,440	318
1961 .. ..	40,054	1,154,656	16,089	2,845	5,958	367
1962 .. ..	40,809	1,063,528	10,388	2,762	4,949	195
1963 .. ..	38,191	1,086,627	9,469	1,842	4,275	168

3. **Hides and Skins.**—The numbers of hides and skins exported from the Territory during 1962–63 were as follows: sheep, 2,868; crocodile, 12,746; cattle, 5,072; and buffalo 811.

4. **Mining.**—During 1962, the value of output of the mining industry in the Territory, excluding uranium mining, was £2,524,000.

The mining of copper ores and concentrates is the most important in terms of value of output, and accounts for more than two-thirds of the Territory's total recorded production. Prior to 1956, gold minerals, first mined in 1869, accounted for most of the value of output, but from 1956 onwards gold production has remained relatively constant while copper production has increased considerably. The bulk of the copper and gold is won at Tennant Creek, where, in 1958, the government battery was re-opened to encourage gold mining by smaller operators.

Although some overseas contracts held by uranium producers have recently terminated, the Moline mine operated by a private company and the Rum Jungle mine operated on behalf of the Commonwealth continue to produce, the uranium product from the latter mine being stockpiled at present. Prospecting and survey programmes are being continued by the Commonwealth Bureau of Mineral Resources. An important incidental outcome of this work was the discovery during 1962 of a large deposit of rock phosphate near Castlemaine Hill.

Production of mica and wolfram concentrates, both of which were important in the past, is now negligible. Increasing interest is being shown in tin mining, and production is expanding.

Plans are now being put into operation to work large bauxite deposits at Gove Peninsula.

The following table shows the value of output of the mining industry in the Territory for the years 1958 to 1962. Particulars of the value of output from quarries are not included.

NORTHERN TERRITORY: VALUE OF OUTPUT<sup>(a)</sup> OF THE MINING INDUSTRY  
(EXCLUDING URANIUM)  
(£'000)

Year	Copper ore and concentrate	Gold (b)	Manganese ore	Mica	Other	Total, all minerals
1958 .. ..	1,286	895	70	47	16	2,314
1959 .. ..	1,455	901	37	45	33	2,471
1960 .. ..	2,080	881	41	17	54	3,073
1961 .. ..	2,063	895	1	1	27	2,987
1962 .. ..	1,632	842	2	..	48	2,524

(a) Selling value at point of sale of mine products less transport costs from mine to point of sale..

(b) Ore, concentrate, bullion, alluvial gold, etc.

5. **Forestry.**—In August, 1958, the Commonwealth Government approved a six-year programme of forestry improvement and development to preserve existing forest areas and increase possible timber resources. The programme is being carried out by the Forestry and Timber Bureau. Experimental work in reforestation is being carried out in small plantation areas. Cypress pine appears the most promising species for large-scale commercial plantings. Local production of log timber, mainly cypress pine, amounted to 1,028,067 super. feet in 1962–63, but this was insufficient to meet local requirements, and about 2,350,000 super. feet of timber was imported from the States and overseas.

6. **Pearl Fisheries.**—In 1884, mother-of-pearl-shell was discovered in the harbour of Port Darwin. Since that time, the areas fished have extended to the various banks to seaward and coastwise along the Northern Territory coast. Figures for production and value of shell for the seasons ended January, 1959 to 1963, are shown in the following table.

NORTHERN TERRITORY: PEARL FISHING(a)

Season ended January—	Boats engaged	Pearl-shell taken	
		Quantity ('000 lb.)	Value (£'000)
1959.. .. .	5	314	57
1960.. .. .	5	188	36
1961.. .. .	5	222	45
1962.. .. .	3	147	29
1963.. .. .	2	114	20

(a) Excludes operations of Queensland and Japanese pearlers operating in Northern Territory waters.

Competition from plastic materials has reduced the price being paid for pearl-shell to a low level, and pearling has declined in recent years. Experimental work is being conducted on pearl culture operations in territorial waters, and it is hoped that a new industry will be established to replace the old pearling industry.

7. **Secondary Industries.**—The secondary industries that have so far been established in the Territory have been largely the service industries normally associated with a developing area, for example, home building, electrical repairs, printing, motor and marine engineering, plumbing, welding, joinery, sheet metal work, and blue metal crushing. Major industrial investments by private interests in recent years include two breweries and a factory for the manufacture of milk products, ice cream, and aerated waters. The total number of factories (i.e., establishments in which four or more persons are employed or where power—other than manual—is used in any manufacturing process) in 1962–63 was 141; the average number of employees, 967; the value of production (value added), £2,246,000; and the value of output, £3,964,000.

## § 6. Land Tenure

Almost half the land in the Territory is reserved or unoccupied and unreserved, the remainder, apart from a very small proportion alienated, being held under various forms of lease or licence, which are described in Official Year Book No. 48, pages 111–12, and in more detail in Official Year Book No. 39, pages 329–30. Chapter IV. Land Tenure and Settlement of this issue contains up-to-date statistical information concerning areas occupied under various forms of tenure.

## § 7. Trade, Transport and Communication

1. **Trade.**—No record is kept of the trade between the States and the Territory. The following table shows the values of the total direct overseas trade into and from the Northern Territory during the years 1958–59 to 1962–63.

## NORTHERN TERRITORY: OVERSEA TRADE

(£ )

Year	Imports	Exports
1958-59 .. .. .	1,058,998	360,682
1959-60 .. .. .	1,484,791	551,199
1960-61 .. .. .	1,206,246	435,069
1961-62 .. .. .	2,084,216	611,722
1962-63 .. .. .	1,192,321	544,462

2. **Shipping.**—Shipping services to Darwin are provided from the eastern States at intervals of about four weeks by ships of the Australian National Line, and from Western Australia by three to four ships a month of the Western Australian State Shipping Service. Oversea tankers visit Darwin approximately ten times annually with supplies of aircraft fuel and other petroleum products. Other oversea vessels call at irregular intervals. During 1962-63, approximately 140,000 tons of merchandise were discharged at Darwin. A vessel operated from Thursday Island serves settlements on the Gulf of Carpentaria, and some mission-owned boats carry cargo from Darwin to mission stations and government settlements along the coast.

3. **Air Services.**—At 30th June, 1963, there were 13 government aerodromes and 114 licensed aerodromes in the Territory. The oversea passenger services using the Darwin international airport are Air India; Qantas/B.O.A.C. (Sydney to London); B.O.A.C. (Sydney to Hong Kong); and K.L.M. (Sydney to Amsterdam). Qantas also conducts a freight service from Sydney to London. Regular inland services to Darwin, with, in some cases, intermediate stops at Territory centres, are operated by Trans-Australia Airlines and Ansett-A.N.A. (from Adelaide, Melbourne, Sydney and Brisbane), and MacRobertson-Miller Airways Ltd. (from Perth and Derby). MacRobertson-Miller Airways Ltd., and Connellan Airways Ltd. operate a network of air services throughout the Territory, the latter company's base being at Alice Springs. The Royal Flying Doctor Service also operates aircraft, while charter services can be secured at Darwin and Alice Springs.

4. **Railways.**—The Commonwealth Railways Commissioner operates the Central Australia Railway from Port Augusta in South Australia to Alice Springs over a distance of more than 750 miles, of which about 200 are in the Northern Territory. The line is standard gauge from Port Augusta to Maree, a distance of 217 miles, and 3 ft. 6 in. from Maree to Alice Springs. The Commissioner also operates the North Australia Railway between Darwin and Birdum on a 3 ft. 6 in. gauge over a distance of 317 miles. The two inland terminals, Alice Springs and Birdum, are about 630 miles apart and are connected by road transport along the Stuart Highway. Larrimah, on the highway and 6 miles north of Birdum, is the point of trans-shipment for passengers and goods and is, at present, the effective terminal. A road-rail freight service operates between Adelaide and Darwin via Alice Springs.

5. **Roads.**—The Stuart Highway, 954 miles long, connects Alice Springs with Darwin and runs via Larrimah and Tennant Creek. The Barkly Highway, 403 miles long, connects Mount Isa (Queensland) with Tennant Creek and joins the Stuart Highway some 16 miles north of Tennant Creek. These highways are used for carrying various freights including cattle, particularly to and from the railheads at Alice Springs, Larrimah and Mount Isa. The routes are used also for overland tourists and travellers from the southern States to Darwin. With the further development of the pastoral and mining industries in the Territory, road trains are now being used on both highways for the export of cattle and ore. Both roads have good water bores and communications. There are now approximately 10,700 miles of road in the Territory of which 1,430 miles are sealed.

Work on a programme for reconstruction of beef cattle roads, estimated to cost £4,570,000 over a period of three to four years, commenced in 1961-62. Expenditure to 30th June, 1963, was £1,534,953. The transport of cattle by road is expected to increase the number and value of cattle turned off.

6. Posts, Telegraphs, Telephones and Wireless.—Postal communication is maintained by road, rail and air transport between Darwin and the capital cities of Australia. In addition, vessels belonging to the Western Australian State Shipping Service provide a regular service between Fremantle and Darwin. Inland, the northern part of the Territory receives its mail via Darwin or by means of the aerial services, and the southern districts are served via Adelaide.

The overland telegraph line, covering a length of 2,230 miles, runs from Adelaide to Darwin, and links Darwin in telegraphic communication with other parts of the world.

Long-distance telephone communication is established between Darwin and the capital cities of Australia, and oversea telephone communication through Sydney or Perth is also available.

Regional national broadcasting stations are situated at Darwin, Alice Springs, Tennant Creek and Katherine. and there is a commercial station at Darwin. The majority of homesteads on pastoral leases are equipped with radio transceivers operated under licence from the Postmaster-General's Department. These stations are in daily communication with Flying Doctor bases situated at Alice Springs (Northern Territory), Wyndham (Western Australia), Broken Hill (New South Wales), and Cloncurry (Queensland), and are used for transmission of radio-telegrams and other communications.

## § 8. Education

1. European.—Schools for European and part-European children in the Territory are conducted for the Commonwealth, on an agreed basis of reimbursement, by the South Australian Department of Education, which is represented in Darwin by an Assistant Supervisor of Education, Northern Territory Schools.

At 30th June, 1961, there were 19 government schools in the Territory, with 3,592 pupils, and three private schools, with 838 pupils, providing instruction according to the South Australian curriculum. High schools with classes up to the Leaving Certificate level have been established at both Alice Springs and Darwin.

All children who live more than 10 miles from an established school receive an allowance of up to £140 (£80 plus £60 on a graduated scale according to family income) per annum plus fare concessions if they board away from home in order to attend school. Twelve exhibitions on the results of the Intermediate Certificate are available annually, and carry benefits up to £50. An allowance of £100 (plus up to £100 on a graduated scale according to family income) with return fares once a year, is payable to Leaving Honours students.

Approximately 148 children receive correspondence education under the South Australian Correspondence School system. The radio session "School of the Air" supplements normal correspondence instruction for certain children in isolated areas.

Sixteen pre-school centres are in operation in the Territory, three of which are on Government settlements, the staff of all except one being officers of the Northern Territory Administration. A number of scholarships are offered each year for Territory girls to qualify as pre-school teachers.

2. Special Aboriginal Schools.—The social, cultural, and educational background of the Aborigines has made necessary the establishment of special schools for them. It is envisaged that this necessity will ultimately pass. As from the beginning of the 1956 school year, control of these schools passed from the Commonwealth Office of Education to the Welfare Branch of the Administration. Seventeen schools have so far been established. A special syllabus and series of readers have been prepared for use in these schools. Free mid-day meals, milk, and school clothes are supplied to the pupils. In addition to the seventeen Administration schools, sixteen schools for Aboriginal children are conducted by missions with the aid of Government subsidies. Also, five schools aided by Government subsidies have been established on pastoral properties, and the establishment of others along similar lines is planned. Three pre-school centres are operated by the Administration for Aboriginal children.

3. **Theoretical Training of Apprentices.**—The recognition that technical school training is an extension of workshop training has led to the introduction of day-time classes which apprentices attend without loss of pay. Apprentices are directed by the Apprentices Board to undertake correspondence courses conducted by the Technical Correspondence School of the South Australian Education Department and the Sydney Technical College, these courses covering the work prescribed for the various trades in South Australia and New South Wales.

### § 9. Aboriginal Welfare

The Commonwealth and State Governments have adopted a common policy of assimilation for the Aborigines. This means that all Aborigines and part-Aborigines may attain the same manner of living as other Australians and live as members of a single Australian community, enjoying the same rights and privileges, accepting the same responsibilities, observing the same customs and influenced by the same beliefs, hopes and loyalties as other Australians. In the Northern Territory, Aborigines, as such, are not subject to special conditions, but the *Welfare Ordinance* 1953–1963 provides that any person, regardless of race, may be declared a ward if by any reason of his manner of living, his inability without assistance to manage his own affairs, his standard of social habits and behaviour, and his personal associations, he stands in need of the special care and assistance the Ordinance provides. An intensive welfare programme to prepare Aboriginal wards for the demands of modern living is being carried out, and 13 Government settlements and 14 mission stations have been established, where Aborigines are encouraged to adopt a settled way of life, and health services, particularly child welfare services, education, housing, vocational training and employment are provided. Aborigines are also encouraged to take part in the social activities of the community.

### § 10. Finance

Details of revenue and expenditure of the Territory for the years 1958–59 to 1962–63 are shown below. The information given covers the transactions of the Commonwealth Consolidated Revenue Fund relating to the Northern Territory. Transactions of the North Australia Railway, formerly included, are now excluded from this table.

## THE AUSTRALIAN CAPITAL TERRITORY

NOTE.—A special article *Canberra: Fifty Years of Development*, prepared by the National Capital Development Commission, is included on pages 122–32 of Official Year Book No. 49.

## § 1. Population, Works and Services

1. **Population.**—From 1911 until 1921, the population of the Australian Capital Territory remained at about 2,000 persons. In 1922, it commenced to rise, and by 1927 was nearing 6,000. The following year, with the transfer of departments from Melbourne, it passed 8,000.

Little growth was made thereafter until the later 'thirties, and at the outbreak of the 1939–45 War the population had reached just under 13,000 persons. During the war, growth was again slow, and at the Census of 30th June, 1947, the population was 16,905 persons. Subsequently, the population showed steady increases and at the Census of 30th June, 1954, it was 30,315 persons. With further transfers of departments from Melbourne, the population reached 58,828 persons (including 527 in Jervis Bay) at the Census of 30th June, 1961. At 1st July, 1963, the population was 73,453, made up of 70,775 in Canberra City and 2,678 in rural areas (including 601 at Jervis Bay).

2. **Progress of Works.**—(i) *National Capital Development Commission.* The *National Capital Development Commission Act 1957–1960* provides for a Commission to undertake and carry out the planning, development and construction of the City of Canberra as the National Capital of the Commonwealth. The year 1962–63 was the fifth year of the Commission's operations. Construction work was carried out by means of agency arrangements with the Department of Works and private consultants.

Details of expenditure by the Commission in each year from 1958–59 to 1962–63 are included in the table on page 110.

(ii) *Department of Works.* Apart from the work it carries out for the National Capital Development Commission, the Department of Works acts as design and supervision agent for other Commonwealth departments and instrumentalities. Total expenditure during 1962–63 on all operations amounted to £5,125,084 (£4,122,928 in 1961–62), comprising:—Building Works—Housing, £55,913, Other Building, £3,117,061; Engineering Works, £172,915; Repairs and Maintenance—Building, £759,641, Engineering, £836,127; Purchase of Plant, £183,427.

(iii) *Major Works.* The following major works were completed during 1963. *National Capital Development Commission.* Law Courts of the Australian Capital Territory; Schools of Engineering and Building, Canberra Technical College; Chemistry Building, Mathematics Building, Geology Building and School of General Studies Library, Australian National University; Commonwealth Avenue Bridge; Scrivener Dam; Dickson High School; primary schools at Watson, Narrabundah, and Hughes; Lawley House extensions; 144 flats at O'Connor; and lake margins and roads.

*Department of Works.* New Government Printing Office; Nurses' Home, Canberra Community Hospital; Deakin Telephone Exchange; and Manuka Post Office.

Works under construction at the beginning of 1964 included the following projects. *National Capital Development Commission.* Further buildings in the Defence Office Group at Russell, and at the Canberra Technical College; Administration Building and Zoology Building, Australian National University; Australian National Mint; Civic Auditorium; Commonwealth Avenue Offices; Bureau of Mineral Resources Building; foreshore improvements, Lake Burley Griffin; Campbell High School; Curtin Primary School; Watson Infants' School; Anzac Parade; Bachelor Flats (106 units); new reservoir at Hackett; and Hackett Primary School.

*Department of Works.* A.B.C. Studios, Dickson; and additions and alterations to Canberra Community Hospital.

(iv) *Roads and Water Supply.* The total length of roads in the Territory at 30th June, 1963 was:—bitumen and concrete—352 miles; gravel—169 miles; and other formed roads—64 miles; total—585 miles.

At 30th June, 1963, 15,690 homes were connected to the city water supply, drawn through nine service reservoirs from two storages on the Cotter River with a total capacity of nearly 3,500 million gallons. A third storage dam site is currently being investigated.

Treatment works at Weston Creek dispose of Canberra sewage. At 30th June, 1963, 243 miles of sewers were laid.

(v) *Housing Development.* To provide for additional home development three new suburbs are being opened in Yarralumla Creek Valley, south-west of the existing city area. The first of these, Hughes, is well advanced and 247 homes were completed by the end of 1963. In all parts of Canberra 1,857 houses and 229 flats were completed during 1963.

3. *Transport and Communication.*—Canberra is connected with the railway system of New South Wales at Queanbeyan by a line  $4\frac{1}{2}$  miles long. This line was opened for goods traffic on 25th May, 1914, and for passenger traffic on 15th October, 1923. Direct or linking services operate between Canberra and Sydney and Canberra and Melbourne.

Two airlines provide several services daily each way on the Sydney—Canberra—Melbourne route.

Regular motor-coach services link Canberra with towns in New South Wales, Victoria and South Australia.

There are three radio broadcasting stations in the Territory, 2CY and 2CN of the national broadcasting system, and 2CA, a commercial station, and two television stations, ABC Channel 3 of the national broadcasting system, and CTC Channel 7, a commercial station.

4. *Education, Health and Justice.*—The *Education Ordinance 1937–1959* provides for the compulsory attendance at school of children between the ages of six and fifteen years. The Commonwealth Department of the Interior is primarily responsible for the education of children in the Australian Capital Territory. By agreement, however, the New South Wales Department of Education arranges the teaching programme in accordance with its own curriculum and provides the teaching staff. It is reimbursed for expenses incurred.

At 31st December, 1963, there were three public secondary schools in Canberra providing courses to the Leaving Certificate standard—Canberra High School, Telopea Park High School, and Lyneham High School, and two which will annually extend their courses, reaching the Leaving Certificate standard by 1964 and 1965 respectively—Narrabundah High School and Dickson High School. Seventeen schools provided courses for children in infants and primary classes, including two in the Jervis Bay area and three in rural districts. There were also a school for mentally handicapped children; a therapy clinic for children suffering from speech defects; a clinic for educational guidance; and a class for deaf children.

At the same date, there were sixteen private schools in Canberra. Of these, St. Edmund's Christian Brothers' College, the Catholic Girls' High School, the Canberra Grammar School (Boys), and the Canberra Church of England Girls' Grammar School provide courses leading to the Leaving Certificate Examination. A fifth private secondary school, Daramalan College, will annually extend its courses to reach Leaving Certificate standard in 1966.

Twenty-four pre-school centres, including two occasional care centres and a mobile unit which visits outlying areas, provide pre-school facilities for approximately 1,900 children between the ages of three and five years.

The Canberra Technical College, which follows the curriculum set by the New South Wales Technical Education Department, provides trades courses for apprentices; vocational (non-trades) courses including accountancy, women's handicrafts, and sheep and wool courses; hobbies courses including ceramics, dressmaking, art, woodwork and motor maintenance; and courses for Commonwealth authorities. In addition, the Technical College undertakes the trade testing of migrants seeking to enter skilled trades.

An area of about 250 acres has been set aside at Acton for the Australian National University. Provision has been made for the University to establish such research schools as may be thought desirable, including a School of Medical Research, and Research Schools of Physical Sciences, Social Sciences and Pacific Studies. Provision for undergraduate studies and some post-graduate study is made by the School of General Studies.

Further reference to education in the Australian Capital Territory appears in Chapter XIX. Education, Cultural Activities and Research.

The Canberra Community Hospital serves the population of Canberra and surrounding districts. At 30th June, 1962, it had 318 beds, an honorary medical staff of 80, six salaried medical staff, and a nursing staff of 287. Extensions are being made to the hospital to enable it to cope better with the needs of Canberra's growing population. For further information see Chapter XVIII. Public Health.

The Australian Capital Territory has a Supreme Court and a Court of Petty Sessions. There is an Australian Capital Territory Police Force, which at the end of 1961–62 numbered 101, including two policewomen.

## § 2. Production

1. **Lands.**—Reference has been made in previous issues of the Official Year Book to the general conditions of land tenure in the Territory and to the area of alienated and leased land, and Chapter IV. Land Tenure and Settlement of this issue contains statistical information on the subject. (See also § 1. Canberra, Fifty Years of Development, p. 123 of Year Book No. 49.)

Under the *Seat of Government (Administration) Act* 1910, Crown lands in the Territory may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act. Leases of land in the city area are granted under the *City Area Leases Ordinance* 1936–1961, and leases of other lands under the *Leases Ordinance* 1918–1958. Land is also leased for various purposes in the city area under the *Church Lands Leases Ordinance* 1924–1932 and the *Leases (Special Purposes) Ordinance* 1925–1943, while one lease under the *Church of England Lands Ordinance* 1926 has been granted for church purposes. As considerable portions of the Territory lands are not immediately required in connexion with the establishment of the city, large areas have been leased for agricultural or grazing purposes.

The Commonwealth acquired from the State of New South Wales sovereign rights over the area comprising about 28 square miles of land and water at Jervis Bay for possible use as a port in connexion with the Australian Capital Territory. The Royal Australian Naval College is situated in this area. Some 5,000 acres of land in the area, mostly of little value agriculturally, are used for grazing purposes. The natural forest is being utilized for the production of hardwood building material and the area treated is being reforested with softwoods on an experimental basis.

2. **Forestry.**—A considerable amount of reforestation work has been undertaken, and plantations (mainly *Pinus radiata*) have been established at Uriarra, Mount Stromlo, Pierce's Creek, Green Hills and Kowen. Experimental plots have been established in the Brindabella mountains, and soil conservation areas at various locations throughout the Territory.

The total area of softwood plantations at 30th June, 1963, was 26,289 acres, of which 23,942 acres were *Pinus radiata*, the balance consisting of other softwood species, chiefly *Pinus ponderosa* and *Pinus nigra*, and 273 acres of experimental planting at Jervis Bay, mainly *Pinus radiata* and *Pinus elliottii*.

Forestry operations in the Territory were begun on Mount Stromlo in 1915. Plantings up to 1925 were chiefly on decorative lines, but since then a much wider programme has been undertaken. Sawmill timber is now being obtained, mainly from thinning operations. The yearly output of pine logs has increased from 2,500 cubic feet in 1930–31 to about one million cubic feet at the present time, the total amount cut to date being about 16.4 million cubic feet. The present output consists of approximately 40 per cent. logs yielding building material, 49 per cent. case-making material, and 11 per cent. cordwood and pulpwood.

In 1926, a comprehensive review was undertaken of the Territory's potentialities for forest development. The existing forest area has been placed under management and a considerable amount of survey and assessment work has been completed, resulting in the extension of operations, including fire protection, to 100,000 acres of hardwood forests in the Cotter catchment area. Hardwood log production during 1963 was 113,691 cubic feet, the greater part being cut in Jervis Bay and used in New South Wales. The total amount of hardwood cut from Australian Capital Territory forests to date is about 3,967,691 cubic feet and only small quantities now remain unexploited.

3. **Production.**—During 1962–63, the production of the more important items of the agricultural and pastoral industry was—wheat, 70,413 bushels; wool, 2,343,000 lb.; whole milk, 1,116,000 gallons; meat (carcass weight, fresh), 3,694 tons. The numbers of livestock depastured at 31st March, 1963, were—horses, 653; cattle, 14,155; sheep, 279,206; and pigs, 92.

As in the Northern Territory, the secondary industries established in the Australian Capital Territory are largely the service industries associated with the growth of the Territory. For the year 1961–62, factories (i.e. establishments in which four or more persons are employed or where power—other than manual—is used in any manufacturing process) numbered 140, the average number of employees was 2,232; the value of production (value added) was £3,768,000; and the value of output, £6,592,000.

## § 3. Finance

Details of revenue and expenditure for the years 1958-59 to 1962-63 as recorded in the Commonwealth Consolidated Revenue Fund are given in the following table. Particulars of railways operations, formerly included, have now been excluded from this table.

**AUSTRALIAN CAPITAL TERRITORY: REVENUE AND EXPENDITURE**

## NORFOLK ISLAND

1. **General.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29° 3' 30" S., longitude 167° 57' 5" E. Its total area is 8,528 acres, the island being about 5 miles long and 3 miles wide. It is 930 miles distant from Sydney and 660 miles from Auckland. The length of the coast line is 20 miles, and its form that of an irregular ellipse. Except for a portion on the south side and the landing place at Cascade on the northern side, almost inaccessible cliffs rise from the water's edge. The climate is equable, the temperature ranging between 49° and 85° F. with a mean of 68° F. The average annual rainfall is 53 inches.

Having served as a penal station from 1788 to 1813 and from 1826 to 1855, Norfolk Island in 1856 became the home of the remaining descendants of the *Bounty* mutineers. At the Census of 30th June, 1961, the population was 844, consisting of 421 males and 423 females. Total population at 30th June, 1962, was 877.

2. **Administration.**—In 1856, the island was created a distinct and separate settlement under the jurisdiction of New South Wales. In 1896, it was made a dependency under the Governor of that Colony, and finally, by the passage of the *Norfolk Island Act* 1913, it was accepted by the Commonwealth Parliament as a territory of Australia. It is controlled by the Minister for Territories through an Administrator. The *Norfolk Island Act* 1957 provided for a local government body, the Norfolk Island Council, which replaced the former advisory council, retaining its advisory functions, but in addition having a certain autonomy in local government matters on the island. The Council did not in fact exercise its local government powers, and at its request the Act was again amended in 1963 to make it once more a purely advisory body. The amendment provided, however, for fuller consultation with the Council in the administration of the Territory, particularly in regard to the raising and spending of revenues. At the end of 1963, the amendment had not been brought into operation pending the making of the Ordinances needed to give full effect to its provisions.

3. **Economic Activity.**—The major economic activities of the island are primary production, the tourist trade and Government instrumentalities.

(i) **Primary Industries.** The soil on the island is particularly fertile, the climate equable, and the rainfall fairly evenly distributed except for a pronounced dry period in November. This enables a wide range of temperate and semi-tropical products to be cultivated. However, the island's comparative isolation presents trading difficulties.

Bean seed is the main export industry. Export figures for the five years to 1961–62 were 3,299, 2,568, 1,342, 1,319, and 2,184 bushels. However, wide fluctuations in prices, as in recent years, react unfavourably against the industry. The conditions on Norfolk Island also favour the production of other types of seed. Some hides and wool are also exported.

Fish abound off the island. In the past, a number of ventures have been formed to exploit this resource. They have been short-lived owing, for the most part, to the lack of a sheltered harbour. A modern whaling station was started on the island in 1955, and production commenced during the second half of 1956. The quota of 150 humpback whales in 1956, 120 in 1957 and in 1958, 150 in 1959, and 170 in 1960 and 1961, was caught and processed at the station. However, owing to a marked scarcity of whales, only four were caught in 1962, and the station has been closed down.

An active forestry programme is being carried out to increase the resources of Norfolk Island pine and to introduce suitable types of eucalypts. Logs suitable for the manufacture of plywood are exported in limited quantities to Australia.

(ii) **Tourists.** The unique history and unusual beauty of the island have always attracted a number of tourists. Before the 1939–45 War, the only means of transport to the island was by ship, but the building of the aerodrome in 1943 made the island far more accessible for tourists and the number of tourists has increased steadily during recent years. There are at present two licensed residential hotels and five guest houses; additional accommodation is being planned.

(iii) *Government Instrumentalities.* A large proportion of the population is employed by Commonwealth Government instrumentalities, namely:—Department of Civil Aviation, Norfolk Island Administration, Overseas Telecommunications Commission, and Department of the Interior (Meteorological Branch). The bulk of the finance for the operation of these instrumentalities is supplied by the Commonwealth Government and this greatly increases the income of the island.

4. *Trade, Transport and Communication.*—Imports to Norfolk Island since the 1939–45 War have risen from £32,402 in 1945–46 to £484,563 in 1962–63. In 1962–63, the major proportion (£320,381 or 66 per cent.) came from Australia, while New Zealand and Pacific Islands supplied £12,696 or 2.6 per cent. Exports rose from £9,024 in 1945–46 to £210,182 in 1960–61, but declined to £93,672 in 1962–63, when the whaling industry ceased operations. Australia was the principal market, exports thereto amounting to £75,364 in 1962–63, while exports to New Zealand and to Pacific Islands amounted to £17,786.

No duties are chargeable on goods imported into Australia from Norfolk Island if the goods are the produce or manufacture of Norfolk Island, shipped direct to Australia, and not goods which if manufactured or produced in Australia would be subject to excise duty.

A shipping service to the island is maintained at approximately seven-week intervals, from Sydney via Norfolk Island to the New Hebrides, Solomon Islands and other island groups and thence back to Sydney, while other vessels plying between Sydney and Noumea call at Norfolk Island about every three weeks. Shipping between the island and New Zealand is infrequent.

A fortnightly passenger and air freight service between Sydney and Norfolk Island, maintained by Qantas Empire Airways Ltd., extends to New Zealand under charter to Tasman Empire Airways Ltd.

There are approximately 50 miles of usable road on the island. As a substantial section of the population possesses private motor cars, and taxi-cab and bus services are available, transport is almost exclusively by motor vehicle.

5. *Education.*—Education is free and compulsory up to the age of fifteen years. The school conforms to the Australian standard of public education, ranging from kindergarten to the intermediate certificate, with a two years' super-primary course of instruction in cultural subjects and in woodwork, needlework, leatherwork, basketry and hat-making. The teachers are provided by the New South Wales Education Department, but they are paid by the Norfolk Island Administration. The number of scholars enrolled at 30th June, 1962, was 67.

6. *Judiciary.*—The judicial system of the Territory was reconstituted by the *Norfolk Island Act 1957* which was proclaimed in the Territory on 7th April, 1960. There is now a *Supreme Court of Norfolk Island* and a *Court of Petty Sessions*, which replaced the *Court of Norfolk Island* in its full and limited jurisdictions. The Supreme Court is the highest judicial authority in the Territory with original criminal and civil jurisdiction. The jurisdiction of this Court is exercised by a judge sitting in Court to the extent provided by the *Supreme Court Ordinance 1960* or any other Ordinance or by rules of Court, and in all matters of practice and procedure by a judge sitting in Chambers. The jurisdiction of the *Court of Petty Sessions* is exercised by a Chief Magistrate or any three Magistrates other than the Chief Magistrate. This Court has jurisdiction to hear and determine in a summary manner, under the provisions of the *Court of Petty Sessions Ordinance 1960*, cases arising under a law in force in the Territory where, under the law, an offence is punishable by summary conviction, a person is made liable to a penalty or punishment or to pay a sum of money for any offence, and no other provision is made for the trial of the person committing the offence, or jurisdiction is conferred upon a Court of Petty Sessions. The Court can also hear and determine civil claims in respect of a sum or matter or issue that does not exceed, or the value of which does not exceed, £200. There is right of appeal to the Supreme Court from the Court of Petty Sessions, and, in certain circumstances, a right of appeal to the High Court of Australia from judgments of the Supreme Court.

7. *Finance.*—The revenue of the Territory, together with an annual grant from the Commonwealth Government for administrative expenses, is paid to the credit of the Norfolk Island Trust Fund, and advances for administrative and developmental expenses are drawn from the account. The principal items of revenue and expenditure for the five years 1958–59 to 1962–63 were as follows.

**PAPUA AND NEW GUINEA**

NOTE.—The information under this heading is applicable to both the Territory of Papua and the Trust Territory of New Guinea. For details of the respective Territories see pages 122 (Papua) and 127 (New Guinea) and following pages.

**§ 1. Administration**

The *Papua-New Guinea Provisional Administration Act 1945-1946*, which provided for the transfer back of control from the military authorities to civil authorities after the 1939-45 War, was repealed by the *Papua and New Guinea Act 1949* which came into force on 1st July, 1949. The latter Act approved the placing of the Territory of New Guinea under the International Trusteeship system and provided for an Administrative Union of the Territory of Papua and the Territory of New Guinea with one Administrator, one Supreme Court and one Public Service.

Provision was made for an Executive Council of not less than nine officers of the Territory, to be appointed by the Governor-General, and a Legislative Council consisting of twenty-nine members:—the Administrator; sixteen officers of the Territory (to be known as official members); three non-official members possessing such qualifications as are provided by Ordinance and elected, as provided by Ordinance, by electors of the Territory; three non-official members representing the interests of the Christian missions in the Territory; three non-official native members; and three other non-official members.

The Legislative Council was inaugurated on 26th November, 1951, by His Excellency Sir John Northcott, while Administrator of Australia.

In October, 1960, the Commonwealth Parliament passed amendments to the Papua and New Guinea Act to change the composition of the Legislative Council, the new Council consisting of 37 members, namely:—the Administrator; 14 official members (to be either indigenous or non-indigenous); 12 elected members (six elected by the native people); and 10 nominated members, of whom at least five will be indigenes. The Executive Council was replaced by the Administrator's Council, consisting of the Administrator and six persons, appointed from the Legislative Council by the Minister for Territories, on the recommendation of the Administrator.

In May, 1963, the Commonwealth Government passed a further amendment to the Act, which made provision for a House of Assembly to replace the Legislative Council. The House now consists of 64 members—10 official members appointed by the Governor-General on the advice of the Administrator; 44 members elected by the people of the Territory on a common roll in 44 open electorates; and 10 non-indigenous persons elected on a common roll in 10 special electorates comprising one or more open electorates.

The first elections for the House of Assembly were held in February-March, 1964.

The 1963 Act also provides for membership of the Administrator's Council to be increased from 7 to 11, seven of whom must be elected members of the House of Assembly.

## § 2. Judiciary

The courts which exercise jurisdiction within the Territory are:—

- (i) The Supreme Court of the Territory of Papua and New Guinea;
- (ii) Courts of Petty Sessions (Papua), District Courts (New Guinea);
- (iii) Courts for Native Matters (Papua), Courts for Native Affairs (New Guinea); and
- (iv) Warden's Courts.

The Supreme Court is the highest judicial authority in the Territory and has unlimited criminal and civil jurisdiction. Courts of Petty Sessions and District Courts have criminal jurisdiction over the less serious offences which are punishable on summary conviction, but have no jurisdiction to try treason crimes, misdemeanours and other indictable offences. They also exercise a limited civil jurisdiction. The jurisdiction of the Courts for Native Matters and Native Affairs covers offences by indigenous inhabitants against the Native Administration Regulations, and civil actions of any kind other than matters relating to the ownership of land or water if all parties are indigenes. The Administrator has power to establish, in respect of each gold field or mineral field, warden's courts with jurisdiction over civil cases respecting mining or mining lands held under the *Mining Ordinance 1937-1959* and offences against the mining laws of the Territory.

In addition, there are the Native Land Commission set up under the *Native Land Registration Ordinance 1952* and the Commissioner of Titles appointed under the *New Guinea Land Titles Restoration Ordinance 1951-1955*, whose function is to inquire into and determine what land in the Territory is the rightful and hereditary property of persons or communities by customary right; and the persons or communities by whom, and the shares in which, that land is owned.

## § 3. Agriculture and Animal Industry

1. **Soils.**—Although a large part of Papua and New Guinea is covered by skeletal soils unsuitable for agriculture, there are extensive areas in all districts where fertile soils occur, suitable for growing a wide range of crops. Most of the agriculture of the Territory up to the present has been on soils on the coastal plains, which, apart from the swamp soils, consist mainly of alluvium and podsolized alluvium. So far, these have been mostly under coconut plantations, although other crops such as rubber and cocoa have also been grown. The swamp soils, of which there are extensive areas in the delta plains and other parts of the Gulf of Papua and in smaller areas, are found intermittently around the coasts and along the lower reaches of the rivers, and are in general quite unsuited to any form of agricultural development.

Volcanic soils probably offer the greatest prospects for development. They are found mostly on the central plateau and southern foothills of the main island, but there are also areas in New Britain (particularly in the Gazelle and Willaumez Peninsulas), Bougainville and New Ireland, as well as in numbers of smaller islands. Other rich soils are the alluvials of the river valleys. The largest single area of this type is in the trough occupied by the Ramul and Markham Rivers.

2. **Climate.**—The climate, particularly the rainfall, over so wide an area as Papua and New Guinea, with its numerous islands and varying elevations, naturally presents many variations. Generally speaking, the climate is moist and tropical, except at high altitudes. There are only small differences in both daily and seasonal extremes. The Territory has no winter and summer, and no great variation in day-length over the year. The two seasons which are experienced are generally described as the "south-east" and the "north-west", corresponding with the periods of the year when the south-east trade winds and the north-west monsoons direct the main Territory air-flow. The south-east season prevails approximately from May to October, the trade winds attaining maximum velocities during July and August. The north-west monsoon operates over a considerably shorter period, from the end of December to about March. During the periods between these seasons, November and early December, and about March to April, there are two short spells of calm weather.

Rainfall varies considerably, from an average annual rainfall of 245 inches at Gasmata in New Britain and 231 inches at Kikori in Papua, to about 88 inches at Wewak in New Guinea and 40 inches at Port Moresby.

Although the Territory has no summer and winter, it has a wide temperature range, due to differences in altitude, varying from an absolute highest temperature of about 100° F. along the coast to freezing point on its highest peak, Mt. Wilhelm (15,400 ft.).

Humidity in the Territory is very high throughout the year. Some coastal stations register an average relative humidity of more than 90 per cent. Humidities below 60 per cent. are rare at coastal stations, average figures varying from 80 per cent. at 9 a.m. to 65 per cent. at noon and 75 per cent. at 3 p.m. Humidity in mid-mountain forests appears to be higher than in the lowlands, while in the mossy forests there are periods when the whole belt is saturated.

3. **Land Tenure.**—There is considerable variation throughout the Territory in the nature of customary ownership of land. In most areas, some rights remain in the landholding group, and individuals within the group have limited rights of use, either for life or for a shorter period. Thus the normal system by which the rights of ownership in land use are acquired is by birth to a landholding group. Transfer of rights between individuals by sale and purchase appears to have been unusual in the past, but this practice is now an established custom in some localities and appears to be increasing. Inheritance may be based on either patrilineal or matrilineal descent, or both. In parts of the Territory, however, there is a tendency for the whole inheritance system to change, particularly in communities where it is based on matrilineal descent. Following a close study of the problems in relation to land holdings by indigenes, the Government has laid down the following broad principles of policy.

The ultimate and long-term objective in Papua and New Guinea is to introduce throughout the Territory a single system of land holding regulated by the central Government by statute, administered by the Department of Lands of the central Government, and providing for secure individual registered titles after the pattern of the Australian system.

Only the central Government (i.e., the Administration working through the Department of Lands and the Registrar of Titles) may issue and register land titles.

Land subject to native custom remains subject to native custom only until it is taken out of custom either by acquisition by the Administration or by a process, to be provided for by Ordinance of the Territory, of conversion of title to an individual registered title.

Upon either acquisition or conversion of title, compensation is to be provided in respect of extinction of rights under native custom.

Land held under native custom may not be acquired outside of native custom by other than the Administration.

For the time being, land may not be acquired by the Administration unless the native owners are willing to sell and in the opinion of the Administration the land is not required by them; and conversion of title from native custom to individual registered title may take place only if the majority of those interested in the land under native custom consent to conversion and the method of conversion.

The services of Commissioners under the *Land Titles Commission Ordinance 1962*, which came into operation on 23rd May, 1963, are to be used, as a first priority, on investigations into claims by the Administration that land is ownerless and may therefore be declared administration land, on investigation into the ownership under native custom of land proposed to be acquired by the Administration, on settlement of disputes about the ownership of land held under native custom, and, when legislative provision has been made, on investigations into the rights held under native custom in land proposed to be converted to individual registered title. The aim is that all the time of the Commissioners should be taken up with this work. To the extent that at any time it is not, the Commissioners should continue investigations into the holding of land under native custom; the results of such investigations are to be recorded for use in connexion with future acquisitions or conversions of title, but are no longer to be registered.

The legislation and administrative steps necessary to put the remainder of this policy into effect are well advanced.

4. **Suitable Crops.**—The crops which can be grown in Papua and New Guinea include coconuts, rubber, tea, coffee, cocoa, fibres, rice, pepper, tobacco, peanuts, kapok, cassava, ginger, cinchona, nutmeg, vanilla, tropical fruits and vegetables, sago and tung oil, but of these, the only crops of any commercial importance are coconuts, cocoa, rubber, coffee, peanuts and passion fruit.

5. **Plantation Agriculture.**—*Coconuts.* Territory coconut plantations suffered severely from damage and neglect during the 1939–45 War. Rehabilitation was rapid, however, and in 1961–62 about 680 plantations, together with native coconut stands, produced 112,349 tons of copra and exported 74,839 tons valued at £4,610,423. In addition, 19,625 tons of coconut oil, valued at £1,969,389, and about 11,506 tons of copra oilcake and meal, valued at £260,474, were exported in 1961–62. A copra crushing mill was established at Rabaul in 1952. Native stands produce about 25 per cent. of the copra exported.

*Rubber.* Exports of rubber have increased from 1,952 tons, valued at £802,177, in 1950–51 to 4,682 tons, valued at £1,210,722, in 1961–62.

*Cocoa.* Exports of cocoa beans increased from 317 tons, valued at £92,181, in 1950–51 to 10,015 tons, valued at £1,982,563, in 1961–62. Nearly 50 per cent. of the exports go to Australia. At present, native growers produce about 25 per cent. of the cocoa production in the Territory.

*Coffee.* Exports of coffee rose from 33 tons, valued at £8,359, in 1950–51, to 3,444 tons, valued at £1,557,306, in 1961–62. Of the 20,300 acres planted to coffee in the Territory, about 60 per cent. is in native-owned groves and the rest grown by Europeans in plantations. More than half of the Territory coffee production is marketed in Australia.

6. **Native Agriculture.**—Most of the indigenous inhabitants of Papua and New Guinea are agriculturalists producing fruit and vegetables for their own consumption. The crops grown vary according to environment and altitude, and include yams, taro and sweet potatoes, coconuts, bananas, papaws, maize, sugar-cane, cassava, beans, peanuts, rice, cucurbits and tobacco. Sago is the staple food in the extensive semi-inundated areas which occur along the lower valleys of the major rivers. In these areas, it is cut largely from naturally occurring stands. In other parts of the country, small areas of sago are grown along stream banks and in swampy patches, and are regarded as a reserve in times of poor harvest. In recent years, the indigenes have taken up the production of introduced crops such as peanuts, rice, cucurbits, and maize for their own consumption and cocoa and coffee for export. Some small-scale rubber growing is now being undertaken. In coconut areas, large quantities of copra are produced. In 1961–62, native production of copra was 28,879 tons, and that of cocoa and coffee 2,167 tons and 1,489 tons respectively. In many localities, the indigenes follow a farming system known as bush fallowing rotation, which is described in Year Book No. 48 and previous issues.

The growing of food is done by both the men and women. The division of work is usually clearly defined within the village itself, but this division is not necessarily the same in all areas. Generally it is found that felling the forests is always done by the men, and carrying the harvested food home to the village is nearly always done by the women. Other work, however, such as cultivating, planting and weeding may be done by either men or women according to the customs of the particular village or area.

The advancement of native agriculture for local food supply and improved land use in village gardens, as well as for economic production of crops for sale, have a high priority in Government policy for the Territory. A five-year (1962-63 to 1966-67) programme for intensification of agricultural work among the indigenous inhabitants of the Territory is being implemented.

7. **Animal Industry.**—Livestock in the Territory as at 31st March, 1963, included cattle, sheep, goats and pigs, approximate figures for each species being:—cattle, 27,120; sheep, 334; goats, 2,525; and pigs, 5,015. Other livestock includes horses, mules and poultry. These figures represent European-owned livestock only; native-owned livestock consists almost entirely of pigs and poultry.

A number of British breeds of cattle are represented in Territory herds. For dairying, Jersey and Australian Illawarra Shorthorns are most popular; Black Polled, Polled and Horned Shorthorns, and Red Polled cattle are raised for meat production. Under good management these breeds have done well in the Territory. There are a small number of Romney Marsh sheep at Nondugl in the highlands of New Guinea.

A central abattoir controlled by the Administration is under construction at Lae to provide slaughtering facilities for beef producers in the Wau-Bulolo Area, the Markham and Ramu Valleys, and part of the Eastern Highlands District. At first, provision will be made only for immediate needs, but the design and layout will make it possible to expand the abattoir to handle smallgoods manufacture, snap freezing, and canning as the need develops.

8. **Co-operative Societies.**—Co-operatives are under the supervision and guidance of a Registry of Co-operatives within the Department of Trade and Industry, and trained staff are stationed in districts throughout the Territory. Societies fall into two main categories, primary and secondary. The primary consist of marketing and consumer retailing bodies dealing directly with individual members. A society which combines both these activities is termed a dual purpose primary. Secondary organization is represented by associations of societies, formed to achieve an amalgamation of purchasing power in retail consumer store operation and marketing volume in relation to agricultural production, and to concentrate capital to facilitate the purchase of large assets such as shipping, land transport, agricultural machinery, etc.

For the year ended 31st March, 1963, primary societies numbered 271, with a membership of 85,458, a total capital of £618,215, and a turnover of £1,143,887. Secondary organizations numbered 13, with 226 member societies, a total capital of £295,082, and a turnover of £565,851.

#### § 4. Native Labour

Most of the indigenous inhabitants are farmers who are comparatively free of economic or other pressures forcing them into wage employment. At 31st March, 1963, approximately 77,000 indigenous persons were engaged in wage employment, 56,000 of these being employed by private enterprise.

The basic legislation governing terms and conditions of employment is the *Native Employment Ordinance* 1958-1963 which prescribes the minimum wages and hours of work for indigenous workers and the standards of accommodation, food, clothing and other issues, which must be provided by an employer. Wages vary from the legal minimum cash wage of £19 10s. a year plus accommodation and prescribed issues of food, clothing and other articles, up to £850 a year and above for more highly skilled workers. Industrial agreements provide an all-cash minimum wage of £3 a week for the majority of unskilled workers in the towns of Port Moresby, Rabaul, Lae and Madang. Modern standards of industrial safety are prescribed by legislation, and provision is made under the *Workers' Compensation Ordinance* 1958-1961 for compensation in the case of injury or death.

Workers may be employed as agreement workers, entering into an agreement to work with an employer for a specified period of time, or as casual workers without an agreement or any time limitation on their employment. Casual workers who have reached a certain level of advancement may be employed as advanced workers on an all cash wage anywhere in the Territory.

Legislation providing for the right of association of persons for industrial purposes and establishing industrial relations machinery for the Territory came into operation in March, 1963. Workers' associations with a membership of about 2,500 have been formed in Port Moresby, Rabaul, Lae and Madang.

A local apprenticeship scheme was inaugurated in 1955. An Apprenticeship Board, comprising representatives of private enterprise and government, advises the Administrator on apprenticeship matters, the standard of practical work is at Australian level and the standard of theoretical work is being raised steadily to this level. A total of 139 apprentices have already received trade certificates and over 350 are currently being trained.

A separate Department of Labour was created in 1961 to enable labour matters to be handled as far as possible by one specialist organization. The Department handles matters relating to industrial organizations, industrial relations, industrial safety and workers' compensation, and carries out industrial services, labour inspections and research and training in industrial fields.

### § 5. Secondary Industries

Secondary industries which have been established in the Territory are most frequently of the type associated with the elementary processing for export of local products such as copra, rubber, cocoa, coffee, passion-fruit and timber on or near the plantations. There has been a gradual growth in the manufacture of more highly processed products, and industries already established include a paint factory, cigarette factory, twist tobacco factories, a copra crushing mill, a plywood factory, bakeries, biscuit factories, soft drink factories and breweries. Large service industries already well established include air, sea, and land transport services, and the building industry, which is serviced by sawmilling, joinery, furniture and metal industries, concrete products manufactures, brickworks, etc.

A wide variety of maintenance facilities is also available to service the various Territory industries, including engineering workshops, slipways, etc.

The following table shows details of factory operations for the year ended 30th June, 1962.

#### TERRITORY OF PAPUA AND NEW GUINEA: FACTORY OPERATIONS, 1961-62

Particulars	Class of industry				
	Industrial metals, machines and conveyances	Food, drink and tobacco	Sawmills, plywood and joinery	Other industries (a)	Total
Number of factories .. ..	122	39	83	34	278
Employees—					
Non-indigenous .. ..	604	103	354	157	1,218
Indigenous .. ..	1,034	766	2,215	521	4,536
<i>Total</i> .. ..	<i>1,638</i>	<i>869</i>	<i>2,569</i>	<i>678</i>	<i>5,754</i>
	£'000	£'000	£'000	£'000	£'000
Salaries and wages paid .. ..	915	221	732	353	2,221
Value of output .. ..	2,505	1,637	3,288	3,497	10,927
power, fuel and light, etc. . .	40	61	88	202	391
materials and fuel used .. ..	1,071	897	1,561	2,444	5,973
production(b) .. ..	1,434	740	1,727	1,053	4,954

(a) Includes coconut oil processing, tyre retreading, paint manufacture, printing, powerhouses, etc.

(b) Value added.

## § 6. Finance

1. General.—The following table shows particulars of the financial operations of the Papua and New Guinea Administration for the years 1958–59 to 1962–63. Further information on each Territory will be found on pages 127 and 133.

## TERRITORY OF PAPUA AND NEW GUINEA: REVENUE AND EXPENDITURE (£)

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
<b>REVENUE</b>					
<b>Taxation—</b>					
Income tax .. .. .		1,812,963	2,347,978	2,211,929	2,578,706
Customs duties .. .. .	3,373,528	2,411,529	2,433,732	2,678,514	3,053,995
Motor registration .. .. .	71,733	77,770	87,768	102,380	112,648

<b>Total .. .. .</b>	<b>17,077,437</b>	<b>19,332,647</b>	<b>22,331,058</b>	<b>25,000,800</b>	<b>29,037,916</b>

2. Taxation.—The main forms of taxation are income tax, personal tax and import duties.

*Income Tax* was imposed on 1st August, 1959, to operate from 1st July, 1959. The scale of taxation is about 50 per cent. of the tax payable on the same taxable income in Australia. Deductions for dependants the taxpayer is maintaining, and maximum deductions for medical, dental and educational expenses, are considerably higher than those allowed in Australia. The tax on public companies is at a flat rate of 4s. in the £1, which is a little over half the predominant rate of company tax in Australia, while on private companies the rate is 2s. 6d. in the £1 for the first £5,000 and 3s. 6d. for the remainder,

and generally comparable deductions are allowed. On 1st January, 1958, a Personal Tax was introduced for all males (including non-indigenous) of 18 years of age and over in Papua and New Guinea. The maximum tax is £2 per annum; the tax assessed is subject to the taxpayers' ability to pay, and consequently large areas have been exempted. Native Local Government Councils (which are formed voluntarily by the indigenes) are, however, empowered to levy taxes on villagers for the purpose of providing for local services carried out by the Councils. These taxes are set off against the indigene's Personal Taxation.

The present Customs Tariff provides high revenue rates on imports of ale, spirits, tobacco and cigarettes, timepieces, cigarette papers, fancy goods and jewellery, but allows entry of most necessities affecting living and building costs duty free, or at a low rate of duty. There is a by-law provision under the Customs Tariff to enable duty-free admission to be granted for plant, machinery and chemicals to be used mainly for industrial and developmental purposes and for goods imported by passengers. No preferential rates are specified in the schedule. Export duties imposed on copra, cocoa, rubber, mother-of-pearl, trochus and burgos shell, and gold were repealed in July, 1959.

Provision is made in the *Australian Customs Tariff (Papua and New Guinea Preference)* 1936 for the free entry into Australia of certain goods produced in and imported direct from the Territory (see Chapter XIV. Oversea Trade), and a proclamation of 25th September, 1935, exempted from primage duty goods produced or manufactured in the Territory.

## PAPUA

### § 1. General Description

1. *Area, etc.*—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Tagula and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Strait. The length of Papua from east to west is upwards of 920 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerable narrower. The Territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux and Louisiade groups. The length of coast-line is estimated at 3,664 miles—1,728 on the mainland, and 1,936 on the islands. The total area is 90,540 square miles, of which 87,540 are on the mainland, and 3,000 on the islands. A description of the physical characteristics of the Territory appears in previous issues of the Year Book (see No. 18, p. 633).

2. *Administration.*—Particulars of the early administration of Papua are given in Official Year Book No. 19, page 576. The Territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of 18th March, 1902, and was accepted by the Commonwealth by the *Papua Act*, 1905, which came into force by virtue of the aforesaid proclamation. The transfer was made under the authority of Section 122 of the Constitution. The Territory is under the control of the Commonwealth, but not included within it, and is divided into six magisterial districts, Southern Highlands, Western, Gulf, Central, Milne Bay and Northern.

### § 2. Population

1. *Non-indigenous Population.*—At the Census of 30th June, 1961, the non-indigenous population of Papua was 5,490 males, 4,304 females, 9,794 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947 and 1954 was, respectively, 2,078, 2,173, 3,239 and 6,313 persons. At 30th June, 1962, the total non-indigenous population was 10,697.

The European population of Papua increased slowly, and with some reversals in trend, from less than 700 in 1906, the year in which the Territory came under Commonwealth control, to 1,343 at the Census of 1921. At the 1961 Census, it amounted to 8,260 persons.

2. *Indigenous Population.*—It is not possible to give exact data regarding the number of indigenes because part of the interior is not as yet under complete Government control. However, the enumerated and estimated population of the Territory of Papua at 30th June, 1962, numbered 528,856 persons. This comprised 481,256 enumerated persons (253,996 males and 227,260 females) and 47,600 estimated. The total number was distributed through districts as follows:—Southern Highlands, 160,678; Western, 68,736; Gulf (including the former Delta district), 55,403; Central, 105,056; Milne Bay, 88,509; and Northern, 50,474.

### § 3. Land Tenure

The basic principle of the land laws of Papua is that all land not specifically alienated by due process from the native people, or established to be vacant and ownerless, is native land. At 30th June, 1963, of the total area of Papua, approximately 58,000,000 acres, only 1,885,177 acres had been alienated. The distribution of alienated land at 30th June, 1963, according to tenure, was as follows:—held by private non-indigenous inhabitants, freehold, 24,280 acres, leasehold, 368,239 acres; native reserves, 68,192 acres; other, including public reserves and land available for leasing, 1,424,466 acres.

Although a small amount of freehold land exists in Papua, no further estates in freehold can be granted under the provisions of the *Land Ordinance* 1911–1961 of Papua. Leases of various kinds may be granted by the Administration. The principal types of leases available are agricultural leases, pastoral leases, leases of town allotments, business leases and residence leases of other than town allotments, and various forms of special leases and licences over land. Leasehold terms are liberal, and, in general, leases may be granted for periods of up to 99 years. Rent is based on the unimproved value of the land.

Leases of Crown land are granted by the Administrator following a land use examination, advertisement of leases available and consideration of applications by the Land Board. Dealings in privately-owned land are a matter for private treaty. Native-owned land, however, cannot be acquired or leased from the native owners by private individuals. The Administration alone may purchase native-owned land, and then only if the owners are willing to sell and the Administration is satisfied that the owners do not require, and are not likely to require, the land.

The registration of titles, interests and dealings in alienated land is provided for under the *Real Property Ordinance* 1913–1955 modelled on the Torrens system of land registration.

### § 4. Production

1. **General.**—The products of the Territory are obtained principally from its agricultural, forestry, mining and fishing industries. Native subsistence agriculture, fishing, and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, bananas and papaws. Peanuts are becoming of increasing importance in native diet. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, do produce copra for export, while native enterprise in other fields of agricultural production for export purposes, e.g., cocoa and coffee, is undertaken. The principal agricultural products of Papua for the export trade are copra and rubber. Native production of copra is increasing. Practically all the timber milled during 1960–61 was absorbed by local building requirements. The main products of fisheries exported from Papua are trochus and green snail shell. Gold, manganese, zinc-lead and copper ores have been mined in commercial quantities in the past, but current production is limited.

For the sake of convenience, agricultural and pastoral conditions in Papua and New Guinea have been dealt with as a whole, and reference should be made to pages 116–19 for information on the soils, climate, crops, methods of cultivation, etc., throughout both Territories. The following paragraphs relate to forestry, mining, fisheries and water-power resources in Papua.

2. **Forestry.**—A general description of the forest policy which applies in Papua as well as in the Trust Territory of New Guinea is given under the heading, Timber, on pages 129–30.

Mixed species tropical rain forest covers most of Papua, although north-east of Port Moresby there is an area of monsoonal savannah country. Because of the mixed nature of the timbers in any one area, their utilization on an economical basis is somewhat difficult. Mangroves occur in large areas fringing the Gulf of Papua. Forestry field work is carried out in Papua with a view to assessing the forest resources available and also to survey areas subsequently made available for cutting.

At 30th June, 1963, 19 permits and 15 licences were current. The total areas of forest involved were 230,722 acres and 34,023 acres respectively. The total number of mills was 21, and the total sawn-timber produced for the year was 3.7 million super. feet, most of which was used locally.

3. **Mining.**—Although a large number of minerals have been found in Papua, including platinum, gold, silver, copper, tin, lead, zinc, cinnabar, iron, osmiridium, manganese, sulphur, chromite, gypsum, and lignite, current mineral production is not of economic importance.

Gold was discovered in 1888 and has been found since in many parts of Papua. Before the 1939–45 War, gold was an important item in the Territory's production, but it has since dwindled to insignificance.

Large quantities of copper ore were mined and exported up to 1940. Good samples of galena (sulphide of lead) have been obtained, but other minerals are not found in commercial quantities.

Since the search for oil began in Papua in 1911, approximately £36 million has been spent. The existence of petroleum has been proved at scattered intervals over a large area, but commercial quantities have not been discovered. At 30th June, 1963, eight companies held interests in petroleum prospecting permits and licences under the provisions of the *Petroleum (Prospecting and Mining) Ordinance 1951–1962*. Oil prospecting is confined mainly to the Gulf and Western Districts, including off-shore areas in the Gulf of Papua.

4. **Fisheries.**—Surveys have been carried out of the fisheries resources of Papua. These have been demonstrated to be considerable, and efforts are being made to increase the present small degree of utilization. Assistance is also being given by the Administration in improving the indigenous methods of fishing, and the use of improved gear is being encouraged by extension workers. Shell fishing, particularly trochus, provides the main cash return, exports being valued at £10,000 in 1962–63.

5. **Water Power.**—Most of the rivers in Papua carry a large volume of water from a great height over a relatively short distance, thereby offering opportunities for the installation of hydro-electric power plants. It is estimated that there is at least 10 million horse-power available for this purpose.

## § 5. Trade, Transport and Communication

1. **Imports and Exports.**—(i) *Total Values.* The table below summarizes the values of imports and exports for the years 1957–58 to 1961–62.

### TERRITORY OF PAPUA: IMPORTS AND EXPORTS

(£)

Particulars	1957–58	1958–59	1959–60	1960–61	1961–62

<b>Total .. .. .</b>	<b>2,082,667</b>	<b>2,564,551</b>	<b>2,986,448</b>	<b>2,468,161</b>	<b>2,389,825</b>

2. **Shipping.**—In 1962–63, 221 British vessels and 50 of other nationalities called at Territory ports and discharged 129,553 tons of cargo and loaded 39,402 tons.

Regular passenger and freight services operate between Australia, New Guinea and Papua. Vessels trading between Australia and the East also call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the two principal ports of Port Moresby and Samarai.

3. **Other Forms of Transport and Communication.**—Scheduled flights provide a network of air transport throughout Papua and regular air services link the Territory with Australia and neighbouring Territories. There were 91 aerodromes and seaplane alighting areas in Papua at 30th June, 1963, and of these 14 were the responsibility of the Department of Civil Aviation, 43 were operated and maintained by the Administration, and 34 owned and maintained by Missions, plantation and mining interests. Much of the internal traffic and freight is carried on a charter basis.

At 30th June, 1963, there were 1,810 miles of road in Papua, of which 768 miles were suitable for medium and heavy traffic, the greater proportion being located in the Central, Milne Bay, and Northern Districts.

Telephone services operate in the main centres. The radio station at Port Moresby for both transmission and reception is jointly shared by the Overseas Telecommunications Commission and the Administration. The former provides a service between Papua, Australia and the Territory of New Guinea, while the latter operates radio telephone and radio telegraph services from Port Moresby, Samarai and Daru to 125 outstations. A direct telegraph service operated by the Overseas Telecommunications Commission, on a schedule basis, is in operation between Port Moresby and West New Guinea.

Medium and short-wave programmes are broadcast from the Australian Broadcasting Commission stations 9PA and VLT6 located at Port Moresby.

## § 6. Education and Health

1. **Education.**—Education in the Territory is provided by the Administration and various Mission Organizations. Schools for indigenes have also been established by Native Village Councils. The *Education Ordinance 1952-1957* enables the Administration to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and native teachers are trained in the Territory by the Administration and Missions. During the year ended 30th June, 1962, 147 schools were maintained by the Administration for 14,443 children, of whom 917 were Europeans, 110 Asian or of mixed race, and 13,416 indigenes, a further 905 children, all indigenes were receiving tuition by correspondence. The total number of pupils in the various grades of mission schools was 47,203, of whom there were 257 Europeans, and 494 Asian or of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment, and text-books. In addition, the sum of £102,932 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1962.

2. **Health.**—The Department of Public Health of the Territory of Papua and New Guinea has the general oversight of all dental and medical services. The Department has the following seven functional divisions: medical services; preventive medicine; medical training; infant, child and maternal health; medical research; administration; and mental health. The services for the Territory of Papua are under the administrative control of a regional medical officer, with headquarters staff at Port Moresby.

At 30th June, 1962, the Administration had established 27 general hospitals, two special hospitals for the treatment of tuberculosis, two hospitals (together with special wards in four general hospitals) for the treatment of Hansen's disease, one Hansenide-tuberculosis hospital and one mental hospital; the Missions had established 30 general hospitals, with special wards at Eroro, Sideia and Orokolo for the treatment of Hansen's disease and two Hansenide hospitals. There were 418 village aid posts or medical centres (121 Mission) and 97 maternal and child welfare clinics (50 Mission). School medical examinations, immunization, ante-natal and post-natal care and pre-school services are also provided. The Missions employ their own doctors and nurses in their medical establishments.

For some years, suitably qualified indigenes attended the Central Medical School at Suva, Fiji, to be trained as Assistant Medical Officers. In 1959, the Administration began training to a similar standard at the Papuan Medical College which is associated with the Port Moresby General Hospital. The College, planned to accommodate 600 students eventually, is being built in stages. The course consists of a preliminary year and five years further study. Training for nurses and medical auxiliaries in many categories is also being provided.

The cases treated in hospital are mainly malaria, tropical ulcers, pneumonia, tubercular infections and tuberculosis, bronchitis, and confinements.

### § 7. Finance

The following table shows the principal items of revenue and expenditure for the Territory for each year from 1958-59 to 1962-63.

#### TERRITORY OF PAPUA: REVENUE AND EXPENDITURE (£)

(a) Includes Harbour Dues and Wharfrage.

For particulars of the finances of the combined Territory administration, see page 121.

#### TRUST TERRITORY OF NEW GUINEA

### § 1. General Description

1. Area, etc.—The land area of the Territory of New Guinea is about 93,000 square miles, and the area, including the sea, within the lines drawn through its extreme outer points is more than one million square miles. As the coastlines have not been completely surveyed, the areas of the various islands are known only approximately.

The approximate areas of the principal islands, together with the small islands adjacent thereto, are as follows:—North-East New Guinea, also called the mainland, 70,200 sq. miles; Bismarck Archipelago—New Britain, 14,100 sq. miles, New Ireland, 3,340 sq. miles, Lavongai, 460 sq. miles, Admiralty Islands, 800 sq. miles, total Bismarck Archipelago, 18,700 sq. miles; Solomon Islands—Bougainville, 3,880 sq. miles, Buka, 220 sq. miles, total Solomon Islands, 4,100 sq. miles; grand total, 93,000 sq. miles.

Information regarding physiography and climate will be found in Official Year Book No. 22, page 613, and in the *Official Handbook of the Territory of New Guinea*.

2. **Early Administration.**—On 17th September, 1914, the Acting Governor of German New Guinea signed terms of capitulation with the officer commanding a Naval and Military Expedition sent from Australia, and thereafter the Territory was under military administration until the establishment of Civil Government on 9th May, 1921.

In 1919, it was decided by the Principal Allied and Associated Powers that the Territory of New Guinea, which Germany gave up as one of the terms of peace, should be entrusted to the Government of the Commonwealth under Mandate from the League of Nations. However, the issuing of the Mandate was delayed, and it was not until 17th December, 1920, that its terms were settled, and the Mandate itself did not reach Australia until April, 1921.

The terms of the Mandate are given in Year Book No. 33 (*see p. 264*).

For particulars of the administration of the Territory of New Guinea prior to the setting-up of the Papua and New Guinea Administration, *see Official Year Book No. 36* and earlier issues, and for events following the outbreak of the Pacific War *see Official Year Book No. 37* and subsequent issues.

3. **Trusteeship (1946).**—The Commonwealth Government undertook to place the Territory of New Guinea under the Trusteeship System established under the Charter of the United Nations. The Trusteeship Agreement for the Territory, under which the Government of Australia is the sole administering authority, was approved by the General Assembly of the United Nations Organization on 13th December, 1946. The terms of the Agreement are shown in Year Book No. 39, pages 355–7.

For administrative purposes, the Territory is divided into the following nine districts:—New Britain, comprising New Britain and adjacent islands; Morobe, Madang, Eastern Highlands, Western Highlands, and Sepik on the mainland; New Ireland, comprising New Ireland, Lavongai and adjacent islands; Manus, comprising the Admiralty Group; and Bougainville in the Solomon Islands. Each district is administered by a District Commissioner.

## § 2. Population

1. **Non-indigenous Population.**—At the Census of 30th June, 1961, the non-indigenous population of the Territory was 9,158 males, 6,378 females, 15,536 persons. The total non-indigenous population at the Censuses of 1921, 1933, 1947 and 1954 was, respectively, 3,173, 5,216, 6,200 and 11,442 persons. At the 1961 Census, the European population numbered 11,702 persons. At 30th June, 1962, the total non-indigenous population was estimated to be 15,847.

2. **Indigenous Population.**—The indigenes are divided into two main groups—Melanesian and Papuan—the former, with a few exceptions, constituting the population of the Bismarck Archipelago, the Solomon Islands, and the coastal districts of the New Guinea mainland, the latter inhabiting the interior of the mainland. Some tribes of Negritos exist in the mountains of New Guinea. There is a strain of Papuan, and, possibly, of Polynesian blood in the Admiralty Islanders, while the Western Islanders and the inhabitants of the small islands east and south-east of New Ireland are Micronesians. (*See Official Year Book No. 16, p. 670, and Official Handbook of the Territory of New Guinea, Pt. V.*)

The enumerated and estimated indigenous population of the Territory as at 30th June, 1962, numbered 1,469,320 persons, comprising enumerated, 1,421,090 (748,773 males and 672,317 females), and estimated, 48,230. The total population was distributed throughout the several districts as follows:—Eastern Highlands, 351,825 persons; Western Highlands, 280,246; Sepik, 260,116; Madang, 141,601; Morobe, 201,798; New Britain, 115,021; New Ireland, 40,659; Bougainville, 59,619; Manus, 18,435.

## § 3. Land Tenure

The principles governing the acquisition and ownership of land and types of tenure available in New Guinea are in general similar to those which obtain in Papua, and although, under the *Land Ordinance 1922–1961*, grants of freehold estates may be made, as a matter of policy all grants are now restricted to leaseholds. In New Guinea, however, the amount of freehold land of earlier origin held by private non-indigenous owners amounts to more than half a million acres. Freehold titles to this land, which includes a good deal of plantation land, may be transferred by purchase, subject only to the general provision that dealings in land require the approval of the Administrator.

The area of the Territory of New Guinea is estimated at 59,520,000 acres, of which at 30th June, 1963, only 1,468,702 acres were alienated. The following was the distribution of alienated land according to tenure at 30th June, 1963:—held by private non-indigenous inhabitants—freehold, 537,401 acres, leasehold, 361,059 acres; held by Administration, 535,716 acres; held by New Guineans 6,860 acres; native reserves, 27,666 acres.

Under German law there was a system of registration of titles in a Ground Book, but registration did not confer an indefeasible title. The German system has been replaced by one modelled on the Torrens plan, embodied in the *Lands Registration Ordinance* 1924–1955. The land registers were lost during the 1939–1945 War, but provision for restoration of the lost titles is made in the *New Guinea Land Titles Restoration Ordinance* 1951–1955. A start has been made on the recording of native land interests under the *Native Land Registration Ordinance* 1952.

#### § 4. Production

1. **General.**—The products of the Territory are obtained principally from its agricultural, mining, fishing and forestry industries. A copra crushing mill near Rabaul, established in 1952, commenced crushing at about 18,000 tons of copra per annum, and its capacity is now about 60,000 tons of copra per annum. Crushing of about 40,000 tons of copra was in view for 1964. At Bulolo, a company is producing high quality moisture-proof plywood in a factory whose capacity is 40 million square feet, on a  $\frac{3}{8}$ -in. basis, per annum. Native subsistence agriculture, fishing, and hunting produce most of the food requirements of the indigenous population. The main native agricultural products are taro, yams, sweet potatoes, coconuts, bananas and papaw. Non-indigenous enterprise produces most of the commodities exported. Indigenes, however, produce copra for export, and in recent years have taken up the production of introduced crops such as peanuts, rice, cucurbits and maize for their own consumption and cocoa and coffee for export. The principal agricultural products of New Guinea for the export trade are copra and coconut oil, cocoa, and coffee. Most of the timber milled during 1961–62 was absorbed by the local market, but exports remained at a high level (*see* para. 2 below). The main products of fisheries exported from New Guinea are trochus and green snail shell, including that collected by indigenes. Gold is the principal mineral mined. Indigenes are taking an increasing interest in mining for alluvial gold on their own account, and production from this source is continually rising, in contrast to falling European production.

For information on the agricultural and pastoral industries, which for the sake of convenience covers the Territory of Papua and New Guinea as a whole, *see* pages 116–19. The following paragraphs relate to the timber, fishing and mining industries in the Territory of New Guinea alone.

2. **Timber.**—Various species of timber are found in the Territory, and one accessible pure stand is the valuable pine forests of the Bulolo Valley. This timber is used mainly for the production of plywood and veneer by Commonwealth-New Guinea Timbers Ltd., which has an annual cut of about 10 million super. feet of logs. About 32.0 million square feet of plywood, on a  $\frac{3}{8}$ -in. basis, was produced by the company in 1960–61 from these logs and from veneer produced by South Pacific Timbers Limited at Lae. Exports of plywood in 1961–62 were 26.4 million square feet, valued at £935,000, and 5.1 million square feet of veneer, on a  $\frac{1}{8}$ -in. basis, valued at £32,000. During the year, 1.7 million super. feet of logs, valued at £41,000, and 2.7 million super. feet of sawn timber, valued at £188,000, were also exported from the Territory. The Territory forests also provided fitches, battery veneer and egg-case parts for export.

The Administration operates a training centre for forestry workers, nurseries and a herbarium, and is establishing a research institute in Port Moresby.

The *Forestry Ordinance* 1936–1951 provides for the issue of permits and licences to cut timber. Present policy calls for the orderly development of the timber industry on sound forestry principles to ensure no waste of the resources and no over-exploitation; the grant of emergency timber permits for limited quantities to assist in providing timber for Territory requirements; the disposal by public tender of timber areas designated by forest officials of the Territory; and the development of the pine stand in the Bulolo Valley by Commonwealth-New Guinea Timbers Ltd. Timber growing on native lands cannot be acquired

by private purchasers direct from the native people, but must be obtained through the Administration. Royalty is payable on all forest produce taken under permit or licence. Reforestation of areas dedicated for forestry in perpetuity is carried out by the Administration.

At 30th June, 1963, 34 permits and nine licences were current, the total area of forest involved being 356,492 acres and 15,794 acres respectively. The Administration was also exploiting 28,000 acres.

3. Fisheries.—The wealth of the waters of the Territory has been little exploited, but as the result of surveys and the development of the Administration fisheries service, action is being taken to promote increased use of the resources. Fish are caught at many places along the coast to supply the small local demand of the natives and of Europeans. Trochus shell to the value of £21,712 and green snail shell to the value of £6,877 were exported during 1961–62.

4. Mining.—The production of gold and associated silver is the most important mining activity in New Guinea. Gold has been discovered on the Waria, the Ramu, the Francisco, and the Markham Rivers, and in tributaries of the Sepik River. Rich gold deposits were first discovered in the Morobe District in 1926. The field is situated about 80 miles (40 by air) inland from Lae, the nearest coastal port. Communication is established with the coast by regular air service and by road transport. Silver is usually found associated with the gold in these deposits. Osmiridium is reported to have been found on the upper tributaries of the Ramu, and platinum on the Kabenau River. Copper has been discovered in the form of chalcopyrite and malachite in the Baining District. Iron ore occurs as magnetite and haematite in the Baining District. Sulphur occurs in several localities in the volcanic regions of the Territory. Brown coal has been found on the mainland in the vicinity of Astrolabe Bay, and in the southern portion of New Ireland. The commercial production of minerals other than gold and associated silver has not been undertaken.

The granting of rights, leases and claims for mining purposes is provided for in the *Mining Ordinance 1928–1962* and regulations thereunder.

The production of gold in New Guinea since the 1939–45 War has been on a much smaller scale than before the war, averaging less than £800,000 in value per annum for the last five years. The 1962–63 production was valued at only £666,787.

The *Petroleum (Prospecting and Mining) Ordinance 1951–1961* has facilitated the carrying out of geological surveys and prospecting activities generally. There are, however, no prospecting permits for oil current at the present time.

## § 5. Trade, Transport and Communication

1. Imports and Exports.—(i) *Total Values.* The table below summarizes the values of imports and exports for the years 1957–58 to 1961–62.

### TERRITORY OF NEW GUINEA: IMPORTS AND EXPORTS

2. **Shipping.**—Regular passenger and freight services operate between Australia, Papua and the Territory of New Guinea. Vessels trading between the East and Australia and the Pacific Islands call at Territory ports, and there are monthly services from continental and United Kingdom ports. Coastal and inter-island shipping services are maintained by vessels operating from the principal ports of the Territory. Shipping within the Territory is regulated by the *Shipping Ordinance* 1951–1960 and the Coastal Shipping, Ports and Harbours Regulations.

Main ports of call for oversea vessels are Lae, Madang, Alexishafen, and Wewak (mainland), Rabaul (New Britain), Kavieng (New Ireland), Lorengau (Manus), and Kieta (Bougainville). Ports proclaimed under the Coastal Shipping, Ports and Harbours Regulations for the service of local vessels are, in addition to the main ports above-mentioned, Salamaua, Aitape and Vanimo (mainland), Gasmata and Talasea (New Britain), Nama-tanai (New Ireland), and Buka Passage (Bougainville).

There are no inland waterways and the natural river system is not generally suitable for vessels except those of small tonnage.

In 1962–63, 268 British vessels and 111 vessels of other nationalities called at Territory ports and discharged 199,509 tons of cargo and loaded 177,524 tons. Corresponding figures for 1961–62 were 280, 122, 198,017 and 151,411 respectively.

3. **Other Forms of Transport and Communication.**—There are no railways in New Guinea, but a road construction programme is being undertaken progressively to assist the economic development of the Territory. Road transport services operate in the main towns and on the trunk roads linking Rabaul and Kokopo; Lae, Bulolo and Wau; Kavieng and Namatanai; and on the network in the Eastern and Western Highland Districts centred on Goroka and Mt. Hagen. The total mileage of roads in the Territory of New Guinea at 30th June, 1963, was 5,281, of which 3,549 were suitable for heavy and medium traffic.

Scheduled flights provide a network of air transport throughout New Guinea and regular air services link the Territory with Australia and neighbouring territories. There were 181 aerodromes and seaplane alighting areas in New Guinea at 30th June, 1963, and of these 15 were controlled by the Department of Civil Aviation, 62 by the Administration, and 104 by private interests.

Telephone services operate in the main centres. Radio telephone trunk circuits link Port Moresby with Lae, Rabaul and Madang, and service is available from subscribers' telephones in Port Moresby, Lae and Rabaul, and from the Post Office at Madang. Nine zone or group centres for radio telegraph communication with out-stations have been established at Lae, Rabaul, Kavieng, Lorengau, Madang, Mt. Hagen, Wewak, Sohano and Goroka. From these centres, radio telegraph services are also available to 278 out-stations.

## § 6. Education and Health

1. **Education.**—Education in the Territory is provided by the Administration and various Mission organizations. Schools for indigenes have also been established by Native Village Councils. The *Education Ordinance* 1952–1957 enables the Administrator to establish an education advisory board, district education committees and European and native schools, and to grant financial aid for educational purposes. European teachers are recruited from Australia and overseas, and native teachers are trained in the Territory by the Administration and the Missions. During the year ended 30th June, 1962, 284 schools were maintained by the Administration for 26,593 children, of whom 1,233 were Europeans, 372 Asians, 176 of mixed race and 24,812 indigenes. The total number of pupils in the various grades of mission schools was 120,882, of whom there were 219 Europeans, 155 Asians and 260 of mixed race. To assist the educational work of the Missions, the Administration provides expert advice, educational equipment, and text-books. In addition, the sum of £238,340 was distributed among the Missions as grants-in-aid during the year ended 30th June, 1962.

For details of the missions operating in the Territory, see *Official Year Book* No. 48 and earlier issues.

2. Health.—The cases treated in hospital are mainly malaria, pneumonia, tropical ulcers, bronchitis, tubercular infections and tuberculosis, skin infections and confinements. The Department of Public Health is engaged in combating diseases with a staff of fully-trained medical officers, medical assistants and orderlies in native hospitals. Its staff also supervises hospitals on plantations. It has facilities for research in tropical medicine, and schemes for training indigenes as medical orderlies and nurses. At 30th June, 1962, there were 67 Administration hospitals, including three Hansende colonies, two tuberculosis hospitals and one Hansende and tuberculosis hospital. The Missions have established an additional 80 hospitals, including two Hansende colonies and one Hansende and tuberculosis hospital. There are 1,214 village aid posts or medical centres (182 conducted by Missions) and 480 maternity and child welfare centres (87 provided by Missions). The Missions staff their own medical establishments but receive financial assistance from the Administration, which also provides much of their medical stores and supplies.

### § 7. Finance

The principal items of revenue and expenditure for the Territory of New Guinea during the years 1958–59 to 1962–63 are shown in the following table.

#### TRUST TERRITORY OF NEW GUINEA: REVENUE AND EXPENDITURE (£)

(a) Includes Harbour Dues and Wharfrage. (b) Includes expenditure chargeable to Loan Fund, £360,332 in 1960–61, £290,436 in 1961–62 and £521,475 in 1962–63.

For information on the finances of the combined Territory administration see Papua and New Guinea, § 6, page 121.

## TRUST TERRITORY OF NAURU

1. **General.**—Nauru is an oval-shaped atoll about 12 miles in circumference, having an area of about 5,263 acres, of which approximately two-thirds is phosphate-bearing. It is situated in latitude 0° 32' S. and longitude 166° 55' E. Portion of the island between the sandy beach and the coral cliffs is comparatively fertile, and it is there that most of the Nauruans reside. With the exception of a small fringe around an inland lagoon, the plateau which contains the phosphate deposits possesses few food plants and is uninhabited, but portion of the area has been planted with fruit trees. The system of land tenure is governed by an old custom, and, with the exception of small allotments held by the Government, the British Phosphate Commissioners, and the Missions, the whole of the island is owned by individual natives. The temperature range is from 76° F. at night to 94° F. during the day and the average humidity about 80 per cent. Normally the rainfall is comparatively low for islands of the Pacific, the annual average for twenty years from 1920 to 1940 being 80.5 inches. However, falls as high as 181.76 inches during 1940 and as low as 12.29 inches during 1950 have been recorded.

2. **History.**—The island, discovered by Captain Fearn in 1798, was annexed by Germany in 1888, and prior to 1914 was part of the protectorate of German New Guinea.

In November, 1914, Nauru was occupied by a detachment from the Australian Naval and Military Expedition at Rabaul, and it was included in the cession of colonies made by Germany in 1919 to the Allied and Associated Powers, whose representatives agreed that a mandate for its administration should be conferred upon His Britannic Majesty. The mandate was confirmed by the Council of the League of Nations on 17th December, 1920. On 2nd July, 1919, the British, Australian and New Zealand Governments agreed that the administration (which, since 1915, had been in the charge of an official appointed by the British Colonial Office) should be vested in an Administrator, who took up duty in June, 1921. The agreement between the three Governments was approved by the Commonwealth Parliament in the *Nauru Island Agreement Act 1919* and is shown in the Schedule to that Act. A supplementary agreement concerning Nauru was drafted in May, 1923, and ratified by the Commonwealth Parliament by the *Nauru Island Agreement Act 1932*.

On 25th August, 1942, nine months after the outbreak of the war in the Pacific, the island was occupied by Japanese forces and communications with Nauru ceased. It was re-occupied by a joint Australian Naval and Military Force on 14th September, 1945, and civil administration was re-established on 1st November, 1945.

3. **Trusteeship Agreement.**—On 1st November, 1947, the General Assembly of the United Nations approved a Trusteeship Agreement for the Territory of Nauru submitted by the Governments of Australia, New Zealand, and the United Kingdom in substitution for the terms of the mandate under which the Territory had been administered. This Agreement designates the Governments of Australia, New Zealand, and the United Kingdom as the Joint Administering Authority, with the Government of Australia continuing, on behalf of the Administering Authority, to exercise full powers of legislation, administration and jurisdiction in and over the Territory. The terms of the Agreement were given in Official Year Book No. 39, pages 370-1.

4. **Administration.**—The administration of the island is vested in an Administrator, who is obliged to conform to instructions issued by the Government which appointed him. The Administrator is advised on matters affecting the Nauruan community by the Nauru Local Council, consisting of nine Nauruan Councillors elected by adult suffrage. This Council also carries out works and supplies certain services for the Nauruan community, and acts as the Board of Directors of the Nauru Co-operative Society. Until the Government of Australia ceases to exercise full powers of legislation, administration, and jurisdiction in and over the Territory on behalf of the Administering Authority in pursuance of Article 4 of the Trusteeship Agreement, all ordinances made by the Administrator are subject to confirmation or disallowance by the Governor-General of Australia acting on the advice of the Federal Executive Council. All administration expenses are met from local revenue and phosphate royalties.

5. *Population.*—The Nauruan component of the population numbered about 1,100 in 1921, but had grown to more than 1,800 before the Japanese invasion in August, 1942. In 1946, it numbered less than 1,400, but by 30th June, 1963, had risen to 2,558. Chinese have, for many years, formed a considerable part of the population of Nauru, but their numbers are not as great as formerly, and at 30th June, 1963, they amounted to 697. The number of other Pacific Islanders in the early 1920's was almost 300, but they subsequently decreased, then rose again, and at 30th June, 1963, there were 1,077. The European population after 1921 fluctuated, but with a generally upward trend, between one and two hundred, and in recent years has gradually increased, reaching 469 at 30th June, 1963. The total population of Nauru at the Census of 30th June, 1961, was 3,019 males, 1,594 females, 4,613 persons.

6. *Phosphate Deposits.*—(i) *General.* From 1906 to 1919, the deposits were worked by the Pacific Phosphate Company, which also worked the deposits on Ocean Island (about 165 miles east of Nauru and part of the Gilbert and Ellice Islands Colony administered by the Colonial Office). The quantity remaining on Nauru has been estimated at about 64 million tons, and the exports average 85 per cent. to 88 per cent. of tricalcium phosphate.

The interests of the Pacific Phosphate Company in the two islands (though not in other islands in the Pacific in which it had workings) were bought by the British, Australian and New Zealand Governments on 25th June, 1920, for £3,500,000, the purchase money being contributed in the proportions of 42, 42 and 16 per cent. respectively. The Agreement of 2nd July, 1919, provides for the working of the deposits by three British Phosphate Commissioners, one appointed by each Government, and the three countries are entitled to receive the output in the same proportions of 42, 42 and 16 per cent.

(ii) *Royalty on Phosphate.* Under an agreement between the British Phosphate Commissioners and the Nauruan landowners, a royalty has been payable since 1st July, 1953, for each ton of phosphate exported. As from 1st July, 1962, the rate was increased to 3s. 8d. a ton made up as follows:—

- 10d. to the Nauru Royalty Trust Fund to be used for the benefit of Nauruans;
- 1s. 10d. to the landowner, being an immediate payment of 1s. 2d. a ton, and 8d. a ton to be invested on his account;
- 1s. to the Nauruan Community Long Term Investment Fund.

From 1st July, 1962, the lump sums payable to landowners from whom phosphate-bearing lands are leased were also increased to £120 an acre in respect of land above the 80 ft. contour line.

(iii) *Phosphate Industry.* Exports of phosphate from Nauru in 1962–63 amounted to 1,608,750 tons, valued at £3,981,656, 61 per cent. to Australia, 25 per cent. to New Zealand and 14 per cent. to the United Kingdom. During the five years ended 30th June, 1963, 6,218,262 tons of phosphate were exported.

Apart from a limited number of Europeans, the employees of the Commissioners are Chinese and Pacific Islanders engaged under one year contracts. Increasing numbers of Nauruans are being employed, mainly in trade capacities.

7. *Trade.*—The *Customs Tariff* of Nauru provides for the free admission of all goods other than cigars, cigarettes, tobacco, spirits, wines, beer, cider and perry. Articles imported by the Administration for its own use and spirits for scientific purposes are exempt. The tariff rates apply to all countries alike. In 1962–63, imports were valued at £2,138,822 and exports, 1,608,750 tons of phosphate, at £3,981,656. Of the total imports in 1962–63, Australia supplied 88 per cent. valued at £2,049,181; the balance came mainly from Hong Kong, New Zealand and the United Kingdom.

In 1962–63, 981,550 tons of phosphate were exported to Australia, 399,300 tons to New Zealand and 227,900 tons to the United Kingdom.

8. *Transport.*—There is no regular air service to Nauru, but when the need arises charter flights are made to the island.

There is relatively frequent communication by sea with the island. Most of the vessels are run or chartered by the British Phosphate Commissioners for the carriage of phosphate. Many of them also provide for the carriage of passengers and other cargo as required. The total calls by vessels were 165 in 1962-63.

9. **Health.**—Cases of the usual diseases known in the Pacific occur, but the health of all sections of the population is generally satisfactory. An area has been set apart for the segregation of sufferers from Hansen's disease, and the latest methods of treatment are applied. The total number of persons receiving treatment at 30th June, 1963, was 46, of whom, however, only three were in segregation at the Hansenide colony. Three hospitals are maintained on the island, one by the Administration for Nauruans, and two by the British Phosphate Commissioners, one for European and one for non-European employees. The Administration also conducts eleven maternity and child health centres. A regular anti-mosquito campaign is conducted. Steps have been taken by the authorities to improve the water supply and to provide efficient sanitation generally. Every Nauruan is required to undergo medical examination at intervals of three months.

10. **Education.**—The Administration assumed full responsibility for education on 1st October, 1923. Prior to that date, the education of native children was undertaken by the Missions, which were subsidized by the Administration. There are four infant schools, three primary schools, one Nauruan secondary school and one mission school providing primary and secondary classes. At 30th June, 1963, 740 Nauruans, 99 other Pacific Islanders, 15 Chinese and 79 Europeans were enrolled in the infant and primary schools, and 264 at the two secondary schools.

The curriculum is based generally on that used in Victorian schools, and the teaching is generally in English. Education is compulsory for Nauruan children from six to seventeen years of age. At 30th June, 1963, 58 Nauruans were studying in Australia. Of these, 44 were at secondary schools, and the remainder were receiving vocational training. Thirty-five held Administration scholarships, 12 were Administration cadets, and the remaining 11 were privately sponsored. In addition to these, there were three students at the Central Medical School, Suva, one at the Papuan Medical College, Port Moresby, and two apprentices and one tradesman in Victoria.

11. **Judiciary.**—The District Court is a court of record and consists of such magistrates as the Administrator appoints. Additionally, there is the Central Court which, as a superior court of record, consists of such judges or magistrates as are appointed and which, *inter alia*, may hear and determine appeals from judgments of the District Court. A Court of Appeal comprising a judge appointed by the Administrator has also been constituted with jurisdiction to hear and determine appeals from judgments of the Central Court.

12. **Revenue and Expenditure.**—The revenue of the Administration for the year 1962-63 amounted to £559,253 and expenditure to £658,676.

Of the revenue, payments by the British Phosphate Commissioners amounted to £530,525, post office and radio receipts, £14,647, and import duties, £5,592. Main items of expenditure were administration, £267,349, miscellaneous services (health, education, etc.), £237,187, and capital works and services, £96,087.

#### HEARD ISLAND AND McDONALD ISLANDS

These islands, about 2,500 miles south-west of Fremantle, were transferred from the United Kingdom to Australia as from 26th December, 1947. The laws of the Australian Capital Territory were declared to be in force in the Territory of Heard Island and McDonald Islands by the *Heard and McDonald Islands Act 1953*.

In December, 1947, an Australian scientific station was established on Heard Island, and meteorological investigations were conducted until the station was closed in March, 1955, following the establishment of Mawson station on the Antarctic mainland. Heard Island is about 27 miles long and 13 miles wide. The McDonald Islands are 26 miles to the west of Heard Island. They are small, rocky and precipitous.

## AUSTRALIAN ANTARCTIC TERRITORY

An Imperial Order in Council of 7th February, 1933, placed under Australian authority all the islands and territories other than Adelie Land situated south of 60° S. lat. and lying between 160° E. long. and 45° E. long. The Order came into force with a Proclamation issued by the Governor-General on 24th August, 1936, after the passage of the *Australian Antarctic Territory Acceptance Act 1933*. The boundaries of Adelie Land were definitively fixed by a French Decree of 1st April, 1938, as the islands and territories south of 60° S. lat. lying between 136° E. long. and 142° E. long. The *Australian Antarctic Territory Act 1954* declared that the laws in force in the Australian Capital Territory are, so far as they are applicable and are not inconsistent with any ordinance made under the Act, in force in the Australian Antarctic Territory.

On 13th February, 1954, the Australian National Antarctic Research Expeditions (A.N.A.R.E.) established a base on MacRobertson Land at latitude 67° 36' S. and longitude 62° 53' E. The base was named Mawson in honour of the late Sir Douglas Mawson and was the first permanent Australian station to be set up on the Antarctic continent. Meteorological and other scientific research is conducted at Mawson, which is the centre for coastal and inland survey expeditions.

A second Australian scientific research station was established on the coast of Princess Elizabeth Land on 13th January, 1957, at latitude 68° 34' 36" S. and longitude 77° 58' 36" E. The station was named Davis in honour of Captain John King Davis of Melbourne, who commanded a number of famous Antarctic ships. In February, 1959, the Australian Government accepted from the United States Government custody of Wilkes Station, which was established by the United States on 16th January, 1957, on Vincennes Bay, at latitude 66° 15' S. and longitude 110° 33' E. The station was named in honour of Lieut. Charles Wilkes, who commanded the 1838-40 United States expedition to the area. Scientists from both countries participate in the programme of research at Wilkes. A.N.A.R.E. have also operated a station, since the 1947-48 Antarctic season, at Macquarie Island, approximately 850 miles south-east of Hobart. Macquarie Island is a dependency of the State of Tasmania.

On 1st December, 1959, Australia signed the Antarctic Treaty with Argentina, Belgium, Chile, France, Japan, New Zealand, Norway, South Africa, U.S.S.R., United Kingdom and the United States of America. The Treaty reserves the Antarctic area south of 60° S. latitude for peaceful purposes, provides for international co-operation in scientific investigation and research, and preserves, for the duration of the Treaty, the *status quo* with regard to territorial sovereignty, rights and claims. The Treaty entered into force on 23rd June, 1961. Since then, the 12 Antarctic Treaty powers have held two consultative meetings under the Treaty, the first at Canberra in July, 1961, and the second at Buenos Aires in July, 1962. The third will be held in Brussels in June, 1964.

## COCOS (KEELING) ISLANDS

1. General.—The Cocos (Keeling) Islands, two separate atolls comprising some 27 small coral islands with a total area of about five square miles, are situated in the Indian Ocean in latitude 12° 5' S. and longitude 96° 53' E. They lie some 1,720 miles north-west of Perth and 2,290 miles almost due west of Darwin, while Johannesburg is some 3,800 miles further distant to the south-west, and Colombo is 1,400 miles to the north-west of the group.

The main islands of the Territory are West Island, the largest, about 6 miles from north to south, on which is the aerodrome and most of the European community; Home Island, the head-quarters of the Clunies-Ross Estate; Direction Island, on which is situated the Cable and Wireless Station and the Department of Civil Aviation's Marine Base; and Horsburgh Island. North Keeling Island, which forms part of the Territory, lies about 15 miles to the north of the group and has no inhabitants.

Main settlements are on West Island, Home Island and Direction Island. The group of atolls is low-lying, flat and thickly covered by coconut palms, and surrounds a lagoon which has a harbour in the northern part but which is extremely difficult for navigation.

The climate is equable and pleasant, usually being under the influence of the south-east trade winds for about three-quarters of the year. However, the winds vary at times, and meteorological reports from the Territory are particularly valuable to those engaged in forecasting for the eastern Indian Ocean. The temperature varies between 70° and 89° F., and the average rainfall is 80 inches. There are occasional violent storms. The worst cyclone in the recorded history of the islands was in 1909, when about 400,000 coconut palms were uprooted or decapitated and the accompanying tidal wave left only five buildings standing.

The population at 30th June, 1963, was 664 (367 males and 297 females).

2. **History.**—The islands were discovered in 1609 by Captain William Keeling of the East India Company. They were uninhabited and remained so until 1826 when the first settlement was established on the main atoll by an Englishman, Alexander Hare, who quitted the islands in about 1831. In the meantime, a second settlement was formed on the main atoll by John Clunies-Ross, a Scottish seaman and adventurer, who landed with several boat-loads of Malay seamen. In 1857, the islands were annexed to the Crown and formally declared part of the British Dominions, and in 1878 responsibility for their supervision was transferred from the Colonial Office to the Government of Ceylon, and subsequently, in 1882, to the Government of the Straits Settlements. By indenture in 1886, Queen Victoria granted the land comprised by the islands to John Clunies-Ross in perpetuity, and until 1946 the patriarchal rule of the head of the Clunies-Ross family was recognized. The head of the family had semi-official status as resident magistrate and representative of the Government. However, in 1946, when the islands became a dependency of the Colony of Singapore, a Resident Administrator responsible to the Governor of Singapore was appointed.

On 23rd November, 1955, the Cocos Islands ceased to form part of the Colony of Singapore and were placed under the authority of the Commonwealth of Australia. The transfer was effected by an Order in Council made by Her Majesty Queen Elizabeth the Second under the Imperial Act entitled the *Cocos Islands Act 1955* and by the *Cocos (Keeling) Islands Act 1955* of the Commonwealth whereby the islands were declared to be accepted by the Commonwealth as a Territory under the authority of the Commonwealth to be known as the Territory of Cocos (Keeling) Islands.

3. **Administration.**—Responsibility for the administration of the Territory rests with the Minister for Territories. The first Official Representative was appointed on 23rd November, 1955, to take charge of the local administration of the Territory. Under the *Official Representative Ordinance 1955-1961* of the Territory, the Official Representative is given such powers and functions in relation to the Territory as are delegated to him by the Minister under the *Cocos (Keeling) Islands Act 1955-1958* or are otherwise conferred on him under that Act or by or under any other law of the Territory. The laws of the Colony of Singapore which were in force in the islands immediately before the date of the transfer were, with certain exceptions, continued in force by the *Cocos (Keeling) Islands Act 1955-1958*. They may be amended or repealed by Ordinances made under the provisions of that Act which empower the Governor-General to make Ordinances for the peace, order and good government of the Territory.

4. **Transport.**—There is an international airport at West Island under the control of the Department of Civil Aviation. This is a re-fuelling point for aircraft of Qantas Empire Airways Ltd., which operates a fortnightly service between Australia and South Africa, and also for South African Airways which operates a fortnightly service on the same route. Although there is no regular shipping service, vessels from Australia and Singapore call at intervals.

## CHRISTMAS ISLAND

1. **General.**—Christmas Island is an isolated bank, situated in the Indian Ocean in latitude 10° 25' 19" S., longitude 105° 42' 57" E. It is approximately 220 miles south from Java Head, at the south entrance to Sunda Strait, 810 miles from Singapore and 1,625 miles from Fremantle. Christmas Island covers an area of about 55 square miles. It:

consists of a central plateau at about 600 to 800 feet with several prominent rises up to 1,170 feet. The plateau descends to the sea in a series of steep slopes alternating with terraces, the last dropping in a cliff of 200 to 300 feet to a shore terrace, terminating in a sea cliff of 10 to 150 feet, which is continuous round the island except in a few places, the chief of which is Flying Fish Cove where the shore is formed of coral shingles.

The principal settlement is at Flying Fish Cove which is also the only known anchorage. Vessels are moored close inshore opposite two piers with extension conveyors, by which means direct loading to ships is carried out. The main installations of the phosphate industry are located here, together with the European married quarters and the Chinese and Malay settlements. There is a secondary settlement with maintenance shops, etc., at South Point, and several other small settlements or camps across the central plateau and at the small pumping plants at springs and wells. A stream at Waterfall Beach feeds a dam which supplies the settlement at Flying Fish Cove.

The climate is healthy and pleasant, the prevailing winds being from the south-east to east-south-east from May to December, but from then to April (the wet season) they occasionally shift round from north to north-east. The average yearly rainfall is about 80 inches with a marked summer incidence. The porous nature of the ground prevents the formation of pools of water, but there are several good springs which maintain an adequate supply of fresh water for the small population and the installations. The mean average temperature is about 80° and does not vary greatly throughout the year.

The population of Christmas Island at 30th June, 1961, was 3,099 (1,963 males and 1,136 females). At 30th June, 1963, the total population was 3,349.

2. **Education.**—At 30th June, 1963, there were two school systems on the Island—the Christmas Island school system which serves the majority of the children, and a European school which serves a small number of children. The Christmas Island school system follows the Singapore curriculum, with 23 teachers, mostly Singapore trained, and 742 pupils (624 primary and 118 secondary). The European school follows the Western Australian primary school syllabus, with one teacher seconded from the Western Australian Department of Education, and 23 pupils.

Four Administration scholarships are available each year for Asian students who have completed a three year secondary course to enable them to receive further secondary education at Singapore or Malaya up to University Matriculation level. An education allowance of £145 per annum, plus annual return fare for the scholar, is paid to Europeans resident in the Territory who send their children to Australia for secondary education. The British Phosphate Commission awards scholarships from time to time.

3. **History and Administration.**—The first mention of Christmas Island appears in a map published in Holland in 1666, in which it is called Moni Island, although it is believed that Captain William Mynors of the East India Company had sighted the island on Christmas Day in 1643 and had named it accordingly.

In June, 1888, it was annexed by Captain H. W. May of H.M.S. *Imperieuse* as part of the British Dominions and placed under the supervision of the Straits Settlements Government for administrative purposes. Following upon this, a small settlement was established at Flying Fish Cove by Mr. G. Clunies-Ross of Cocos (Keeling) Islands. In February, 1891, Sir John Murray and Mr. Clunies-Ross were granted a 99-year lease of the Island. This lease was transferred to the Christmas Island Phosphate Co. Ltd. in 1897, following the discovery of large deposits of phosphate of lime on the Island. In 1900, Christmas Island was incorporated for administrative purposes with the Settlement of Singapore and the laws of Singapore were generally applied to the Island.

The *Straits Settlements (Repeal) Act* 1946, passed by the United Kingdom, repealed the Act establishing the whole of the Straits Settlements as a single colony. Subsequently, the Singapore Colony Order in Council, in 1946, decreed that the Island of Singapore and its dependencies, the Cocos or Keeling Islands and Christmas Island should be governed and administered as a separate Colony and called the Colony of Singapore. From 1st January, 1958, pending transfer to Australia, Christmas Island was administered by the United Kingdom as a separate Crown Colony. The Island was transferred to the Commonwealth of Australia on 1st October, 1958, by the *Christmas Island Act* 1958, and is now administered as a Territory under the authority of the Commonwealth.

Responsibility for the administration and government of the Territory rests with the Minister for Territories, and day to day affairs on the Island are administered by an Official Representative under delegation from the Minister. The laws which were in force in the Island at 30th September, 1958, were continued as the laws of the Territory after its transfer to Australia on 1st October.

**4. Phosphate Deposits.**—The only commercial activity carried out is the mining of phosphate. The British Phosphate Commissioners act as managing agents for the Christmas Island Phosphate Commission.

There are three principal phosphate deposits on the islands of which the largest is that now being worked at South Point. This field is situated on the 600 feet to 800 feet level and is approximately 11 miles from the drying and shipping plant at Flying Fish Cove. During 1962–63, 546,603 tons of phosphate ore were mined and exported to Australia; 4,156 tons of phosphate dust were shipped to Australia and 76,625 tons to Malaya. The extraction rate is being progressively increased.

There is little prospect of any economic development outside the phosphate industry.

**5. Transport.**—Transport to and from the island is maintained by vessels operated under charter by the Christmas Island Phosphate Commission. One vessel makes regular trips between Christmas Island and Singapore, and other vessels carry phosphate to Fremantle and other Australian ports.

#### EXTERNAL TERRITORIES: RESULTS OF 1961 CENSUS OF POPULATION

Detailed information obtained from the results of the Population Census of 30th June, 1961, was given on pages 165–78 of Year Book No. 49.

## CHAPTER VI

### MANUFACTURING INDUSTRY

NOTE.—Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Secondary Industries*, Parts I and II. Information is also published, as soon as the data can be prepared, in a series of 35 annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in Statistical Publications of Australia, of the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*. A preliminary annual statement (*Factory Statistics*) and monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of 46 monthly *Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical Publications).

#### § 1. General

1. **Introduction.**—A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

Prior to the federation of the Australian States in 1901, the manufacturing industry in Australia was engaged primarily in the production of goods for local use, mainly food commodities, furniture, bricks, clothing made from imported materials, printing, the repair rather than the manufacture of machinery, and the preliminary treatment of primary products, such as wool-scouring and sawmilling.

After federation, steady expansion of the manufacturing industry resulted from the removal of interstate trade barriers and the operation of a uniform protective tariff. This expansion was quickened as a result of the demands created by the 1914-18 War, the curtailment of imports, and the rapid growth of spending power within the community. New and more advanced development took place, iron and steel works and many related and subsidiary industries were established, extensive manufacture of machinery was begun, and a wide range of high-grade products—textiles, metal manufactures, electrical goods, etc.—was added to the list of commodities made in Australia. A factor in the post-war growth of manufacturing industry in Australia was the creation in 1921 of the Tariff Board (see Chapter XIV. Oversea Trade). As well as encouraging primary industries, the Board, by means of protective tariffs, assisted new manufacturing industries until they were soundly established, and local manufacturers who had been adversely affected by overseas competition.

This expansion was checked by the world-wide economic depression of 1929-33, but in 1933 returning general prosperity and the opportunities opened to local manufacturers by import restrictions, together with depreciation of Australian currency, gave renewed

stimulus to manufacturing enterprise. As economic conditions improved, the tariff, revenue duties and primage were reduced, but without materially prejudicing the progress of local manufactures.

When war broke out in September, 1939, Australia became a major source of supply for British countries east of Suez, and in meeting their demands, as well as those arising locally because of interruption of oversea imports, existing manufacturing industries expanded, and new enterprises were developed rapidly for the production of all classes of munitions, aircraft, ships, many new kinds of machinery and metal manufactures, scientific equipment, textiles, chemicals, etc. The outbreak of war with Japan, the basing of Allied armed forces in Australia, and Australian responsibility for supplies in the South-west Pacific Area, gave added impetus to these developments, and manufacturing in Australia outstripped all previous levels.

The cessation of war production and the transition of industry to a peace-time basis temporarily retarded progress, but from 1945-46 onward there has been renewed expansion of the manufacturing industries to which an inflow of capital from overseas contributed.

**2. Decentralization of Manufacturing Industries.**—Following upon a report by the Secondary Industries Commission, the Commonwealth Government called a conference of Commonwealth and State Ministers in August, 1945, to formulate a national policy for the decentralization of secondary industries. It was agreed that the State Governments should seek to promote decentralization along the lines appropriate to each, providing necessary services, assistance and concessions to the full extent of State resources. The Commonwealth undertook to collaborate in all matters of Commonwealth industrial policy affecting the development and location of industry, to investigate, in association with the States, the prospects of developing secondary industries in selected areas, to advise the States of developments desirable for defence purposes, and to provide financial assistance for projects of national importance where the cost would be great relative to the State's resources.

The Commonwealth assisted decentralization by allocating munitions and other defence buildings in decentralized areas to private industry and by accommodating migrants in provincial centres with prospects of development. Oversea firms contemplating establishment in Australia are encouraged to select locations in rural areas or the less industrialized States.

**3. Customs and Excise Tariffs and Bounties on Manufactures.**—Particulars of Australian customs and excise tariffs, and the constitution and functions of the Australian Tariff Board in relation to matters affecting the industrial development of Australia, are given in Chapter XIV. Oversea Trade.

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards.

**4. Scientific Research and Standardization.**—(i) *The Commonwealth Scientific and Industrial Research Organization.* The function of this Organization is to initiate and conduct research in connexion with industries in Australia, to train research workers, to establish industrial research studentships and fellowships, to make grants in aid of pure scientific research, to establish industrial research associations in various industries, to provide for testing and standardization of scientific equipment, to conduct an information service relating to scientific and industrial matters, and to act for Australia in liaison with other countries in matters of scientific research. For further information concerning the work of the Organization, see Chapter XIX. Education, Cultural Activities and Research, of this Year Book.

(ii) *The Standards Association of Australia.* The Standards Association of Australia is the national standardizing organization of Australia, and issues Australian standard specifications for materials and codes of practice. For further information on this organization see Chapter XIX. Education, Cultural Activities and Research.

(iii) *The National Association of Testing Authorities.* The National Association of Testing Authorities organizes testing facilities throughout Australia to serve private and governmental needs. For further information on this organization see Chapter XIX. Education, Cultural Activities and Research.

(iv) *Industrial Design Council of Australia.* The Industrial Design Council of Australia was established in June, 1958, for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. The decision to set up the Council arose from a realization on the part of representatives of industry and government, designers and educationists, that there was a pressing need in Australia for an independent and authoritative body to promote better design in the interests of trade development.

The Council has a membership fully representative of industry, commerce and government, together with designers and educationists. It is financed by donations from industry and by Commonwealth grants. In 1962, the Commonwealth Government announced a grant to the Council of up to £20,000 per year for the next three years. State Committees for Industrial Design are being set up in order to extend the Council's activities throughout Australia and to co-ordinate efforts for the promotion of better design.

As part of its programme of assisting industry, the Council conducts lecture series dealing with various aspects of product design. Design counselling is available to manufacturing companies on request, and manufacturers seeking the services of designers are put in touch with qualified people.

Other projects include the setting-up of a Design Index, providing a photographic catalogue of well designed Australian goods, for reference by manufacturers, retailers, architects, designers and the public; a Register of Designers, providing a comprehensive reference to Australian designers to assist those seeking their services; displays and exhibitions of well designed goods, both local and overseas; design training—the council is aware of the urgent need to raise the standard of training in industrial design and is co-operating with education authorities to this end; information services—it is intended to establish information offices in all capital cities, to provide information on matters concerned with design.

5. **Definitions in Factory Statistics.**—The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States, from returns supplied to them annually by manufacturers in accordance with the statistical acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover small-goods makers, laundries, photography studios, florists and seedsmen, or most abattoirs. It should be noted that details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars as to the number, age, wages, etc., of their employees, the value of premises and equipment, the horse-power of machinery, the value, and in most cases the quantities, of raw materials (including containers, tools replaced, etc.) and fuel used, and quantities and values of principal materials

and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

All *persons employed* in the manufacturing activities of a factory are counted as factory employees including working proprietors and "out-workers".

The *average number of persons* employed is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

*Value of materials used* includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of fuel, etc., used* includes also the cost of power and light used, of lubricants and of water.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges).

In the process of manufacture, many goods are treated in several industries, the output of one becoming the raw material of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, and timber from the sawmills used in furniture factories and in joinery. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of the output, is used as a measure of activity in the manufacturing industries as a whole.

In the special case of government factories and workshops, the value of output is, in most cases, estimated by adding 10 per cent. to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The *rated horse-power of engines used* for factories other than central electric stations relates to the rated horse-power of engines ordinarily in use.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are not included in the figures contained in this chapter.

**6. Classification of Factories.**—In the compilation of statistical data relating to factories in Australia, a standard classification of manufacturing industries, formulated at a conference of Australian statisticians in 1902 and revised from time to time, was used until the year 1929–30. A new classification was introduced in 1930–31, and this in turn was revised and extended (principally in respect of the placement and composition of sub-classes) in accordance with decisions of the 1945 Conference of Statisticians.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below are published in the latter portion of this chapter, and full details for all sub-classes may be found in the bulletin *Secondary Industries, Part I.—Factory and Building Operations*, published annually.

The classes and sub-classes in the current classification of factories are as follows.

### CLASSIFICATION OF FACTORIES

#### CLASS I.—TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

Coke works  
Briquetting and pulverized coal  
Carbide  
Lime, plaster of paris, asphalt  
Fibrous plaster and products  
Marble, slate, etc.  
Cement, portland  
Asbestos cement sheets and mouldings  
Other cement goods  
Other

#### CLASS II.—BRICKS, POTTERY, GLASS, ETC.

Bricks and tiles  
Earthenware, china, porcelain and terracotta  
Glass (other than bottles)  
Glass bottles  
Other

#### CLASS III.—CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

Industrial and heavy chemicals and acids  
Pharmaceutical and toilet preparations  
Explosives (including fireworks)  
White lead, paints and varnish  
Oils, vegetable  
Oils, mineral  
Oils, animal  
Boiling-down, tallow-refining  
Soap and candles.  
Chemical fertilizers  
Inks, polishes, etc.  
Matches  
Other

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES

Smelting, converting, refining, rolling of iron and steel  
Foundries (ferrous)  
Plant, equipment and machinery, including machine tools  
Other engineering  
Extracting and refining of other metals; alloys  
Electrical machinery, cables and apparatus  
Construction and repair of vehicles (10 groups)  
Ship and boat building and repairing, marine engineering (government and other)  
Cutlery and small hand tools  
Agricultural machines and implements  
Non-ferrous metals—  
Rolling and extrusion  
Founding, casting, etc.  
Iron and steel sheets  
Sheet metal working, pressing, and stamping  
Pipes, tubes and fittings—ferrous  
Wire and wire working (including nails)  
Stoves, ovens and ranges  
Gas fittings and meters  
Lead mills  
Sewing machines

#### CLASS IV.—INDUSTRIAL METALS, MACHINES, CONVEYANCES—continued

Arms, ammunition (excluding explosives)  
Wireless and amplifying apparatus  
Other metal works

#### CLASS V.—PRECIOUS METALS, JEWELLERY, PLATE

Jewellery  
Watches and clocks (including repairs)  
Electroplating (gold, silver, chromium, etc.)

#### CLASS VI.—TEXTILES AND TEXTILE GOODS (NOT DRESS)

Cotton ginning  
Cotton spinning and weaving  
Wool—carding, spinning, weaving  
Hosiery and other knitted goods  
Silk, natural  
Rayon, nylon and other synthetic fibres  
Flax mills  
Rope and cordage  
Canvas goods, tents, tarpaulins, etc.  
Bags and sacks  
Textile dyeing, printing and finishing  
Other

#### CLASS VII.—SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

Furriers and fur-dressing  
Woolscouring and fellmongery  
Tanning, currying and leather-dressing  
Saddlery, harness and whips  
Machine belting (leather or other)  
Bags, trunks and other goods of leather and leather substitutes

#### CLASS VIII.—CLOTHING (EXCEPT KNITTED)

Tailoring and ready-made clothing  
Waterproof and oilskin clothing  
Dressmaking, hemstitching  
Millinery  
Shirts, collars, underclothing  
Foundation garments  
Handkerchiefs, ties and scarves  
Hats and caps  
Gloves  
Boots and shoes (not rubber)  
Boot and shoe repairing  
Boot and shoe accessories  
Umbrellas and walking sticks  
Dyeworks and cleaning, etc.  
Other

#### CLASS IX.—FOOD, DRINK AND TOBACCO

Flour-milling  
Cereal foods and starch  
Animal and bird foods  
Chaffcutting and corncrushing  
Bakeries (including cakes and pastry)  
Biscuits  
Sugar-mills  
Sugar-refining

**CLASS IX.—FOOD, DRINK AND TOBACCO—**  
*continued*  
Confectionery (including chocolate and icing sugar)  
Jam, fruit and vegetable canning  
Pickles, sauces, vinegar  
Bacon curing  
Butter factories  
Cheese factories  
Condensed and processed milk factories  
Margarine  
Meat and fish preserving  
Condiments, coffee, spices  
Ice and refrigerating  
Salt  
Aerated waters, cordials, etc.  
Breweries  
Distilleries  
Wine-making  
Cider and perry  
Malting  
Bottling  
Tobacco, cigars, cigarettes, snuff  
Dehydrated fruit and vegetables  
Ice cream  
Sausage casings  
Arrowroot  
Other

**CLASS X.—SAWMILLS, JOINERY, BOXES, ETC.,**  
WOOD TURNING AND CARVING

Sawmills  
Plywood mills (including veneers)  
Bark mills  
Joinery  
Cooperage  
Boxes and cases  
Woodturning, woodcarving, etc.  
Basketware and wickerware (including sea-grass and bamboo furniture)  
Perambulators (including pushers and strollers)  
Wall and ceiling boards (not plaster or cement)  
Other

**CLASS XI.—FURNITURE OF WOOD, BEDDING, ETC.**  
Cabinet and furniture making (including billiard tables and upholstery)  
Bedding and mattresses (not wire)  
Furnishing drapery

**CLASS XII.—FURNITURE OF WOOD, BEDDING, ETC.—**  
*continued*

Picture frames  
Blinds

**CLASS XIII.—PAPER, STATIONERY, PRINTING,**  
BOOKBINDING, ETC.

Newspapers and periodicals  
Printing—  
Government  
General, including bookbinding  
Manufactured stationery  
Stereotyping, electrotyping  
Process and photo engraving  
Cardboard boxes, cartons and containers  
Paper bags  
Paper-making  
Pencils, penholders, chalks, crayons  
Other

**CLASS XIII.—RUBBER**

Rubber goods (including tyres made)  
Tyre retreading and repairing

**CLASS XIV.—MUSICAL INSTRUMENTS**

Gramophones and gramophone records  
Pianos, piano-players, organs  
Other

**CLASS XV.—MISCELLANEOUS PRODUCTS**

Linoleum, leather-cloth, oil-cloth, etc.  
Bone, horn, ivory and shell  
Plastic moulding and products  
Brooms and brushes  
Optical instruments and appliances  
Surgical and other scientific instruments and appliances  
Photographic material (including developing and printing)  
Toys, games and sports requisites  
Artificial flowers  
Other

**CLASS XVI.—HEAT, LIGHT, AND POWER**

Electric light and power  
Gas works

7. Factory Development since 1901, Australia.—The development of the manufacturing industries in Australia at intervals since 1901 is summarized in the following table.

**FACTORIES: AUSTRALIA**

Year	Fac- to- ries	Em- ploy- ment(a)	Salaries and wages paid(b)	Value of—				
				Materials and fuel used	Output	Pro- duction (c)	Land and build- ings	Plant and ma- chinery

(a) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (b) Excludes drawings by working proprietors. (c) Value added in process of manufacture (i.e., value of output less value of materials and fuel, etc., used).

## § 2. Number of Factories

1. Number of Factories in each State.—The following table shows the number of factories operating in each State in the years 1957–58 to 1961–62.

## FACTORIES: NUMBER

Year	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
1957–58 .. ..	22,270	16,426	5,528	4,168	3,941	1,655	53,988
1958–59 .. ..	22,684	16,527	5,651	4,235	4,125	1,666	54,888
1959–60 .. ..	23,274	16,979	5,758	4,684	4,279	1,683	56,657
1960–61 .. ..	23,585	17,173	5,882	5,042	4,334	1,766	57,782
1961–62 .. ..	23,629	17,300	5,824	5,519	4,418	1,760	58,450

2. Number of Factories in Industrial Classes.—(i) *Australia*. The next table shows the number of factories in Australia during 1957–58 to 1961–62 classified to the industrial classes agreed upon by the Conference of Statisticians in 1930. Details of some of the principal industries included in the table will be found in § 11.

## FACTORIES: NUMBER IN INDUSTRIAL CLASSES, AUSTRALIA

Class of industry	1957–58	1958–59	1959–60	1960–61	1961–62
I. Treatment of non-metalliferous mine and quarry products .. ..	1,328	1,344	1,374	1,434	1,454
II. Bricks, pottery, glass, etc. .. ..	660	663	682	694	694
III. Chemicals, dyes, explosives, paints, oils, grease .. ..	1,184	1,218	1,248	1,258	1,285
IV. Industrial metals, machines, conveyances .. ..	20,518	21,254	22,622	23,512	24,193

## § 3. Classification of Factories by Number of Persons Employed

NOTE.—The size classification of factories is based on the average weekly number of persons employed during the period of operation (including working proprietors).

1. States, 1961-62.—The following table shows, for each State, the number of factories classified by the average number of persons employed.

## FACTORIES: CLASSIFICATION BY SIZE OF FACTORY, 1961-62

Size of factory (Persons employed)	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
NUMBER OF FACTORIES							
Under 4 ..	10,226	6,262	2,167	2,543	2,201	790	24,189
4 ..	1,872	1,387	553	467	404	153	4,836
5 to 10 ..	5,359	4,109	1,537	1,174	904	423	13,506
11 to 20 ..	2,761	2,369	693	589	420	183	7,015
21 to 50 ..	1,986	1,817	527	434	315	127	5,206
51 to 100 ..	744	686	164	169	101	41	1,905
101 to 200 ..	364	389	101	80	48	25	1,007
201 to 300 ..	124	115	46	22	12	5	324
301 to 400 ..	50	44	16	15	6	4	135
401 to 500 ..	41	34	8	3	4	1	91
501 to 750 ..	44	58	5	10	1	2	120
751 to 1,000 ..	24	13	4	5	1	2	49
Over 1,000 ..	34	17	3	8	1	4	67
<b>Total ..</b>	<b>23,629</b>	<b>17,300</b>	<b>5,824</b>	<b>5,519</b>	<b>4,418</b>	<b>1,760</b>	<b>58,450</b>

The relative importance of large and small factories is illustrated by the following classification of the average number of persons employed by the size of factory in which they worked.

**FACTORIES: AVERAGE NUMBER OF PERSONS EMPLOYED BY SIZE OF FACTORY, 1961-62**

Size of factory (Persons employed)	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
AVERAGE NUMBER EMPLOYED DURING PERIOD WORKED							
Under 4 .. ..	18,914	12,450	4,440	4,636	4,053	1,556	46,049
4 .. ..	7,488	5,548	2,212	1,868	1,616	612	19,344
5 to 10 .. ..	37,104	28,781	10,563	8,125	6,195	2,937	93,705
11 to 20 .. ..	40,247	35,072	9,951	8,611	6,027	2,673	102,581
21 to 50 .. ..	62,074	57,664	16,591	13,864	9,847	3,977	164,017
51 to 100 .. ..	51,800	47,988	11,537	11,866	6,900	2,799	132,890
101 to 200 .. ..	50,755	55,111	14,467	11,455	6,595	3,323	141,706
201 to 300 .. ..	30,201	28,498	11,015	5,416	2,744	1,245	79,119
301 to 400 .. ..	17,020	15,521	5,696	5,141	1,933	1,347	46,658
401 to 500 .. ..	18,024	15,350	3,641	1,384	1,733	418	40,550
501 to 750 .. ..	27,203	35,050	3,042	6,174	749	1,296	73,514
751 to 1,000 .. ..	20,887	11,335	3,435	4,317	783	1,531	42,288

### § 4. Power Equipment in Factories

1. General.—Since 1936-37, statistics of power equipment in factories relate to the "rated horse-power" of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of central electric stations are collected in greater detail. To avoid duplication, it is essential that some distinction should be made between central electric stations and other classes of industries. In the following tables, central electric stations have been treated separately from other factories.

2. Rated Horse-power of Engines in Factories other than Central Electric Stations.—The following table shows the total number of factories and the total rated horse-power of engines and electric motors ordinarily in use and in reserve or idle during 1961-62.

#### FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS, 1961-62

State	Factories(a)	Rated horse-power of engines and motors	
		Ordinarily in use(b)	In reserve or idle (omitting obsolete)
New South Wales	23,574	2,559,208	390,044
Victoria .. .. .	17,259	1,574,269	213,743
Queensland .. .. .	5,772	584,617	88,855
South Australia .. .. .	5,485	471,775	56,995
Western Australia .. .. .	4,329	276,186	39,348
Tasmania .. .. .	1,746	281,743	40,439
<b>Australia .. .. .</b>	<b>58,165</b>	<b>5,747,798</b>	<b>829,424</b>

(a) Includes gas works but excludes central electric stations, details of which are shown on p. 152.

(b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

3. Rated Horse-power of Engines and Electric Motors Ordinarily in Use.—(i) *According to Type, States.* Particulars of the types and the total rated horse-power of engines, etc., ordinarily in use in each State are given below.

#### FACTORIES(a): TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, 1961-62

State	Steam		Internal combustion			Water	Motors driven by electricity		Total (b)(c)
	Reciprocating	Turbine	Gas	Petrol or other light oils	Heavy oils		Purchased	Own generation (d)	
N.S.W. ..	59,105	186,049	3,634	40,096	17,619	..	2,252,705	112,399	2,559,208
Victoria ..	23,172	83,512	1,771	43,628	..	890	1,421,296	57,156	1,574,269
Queensland ..	72,652	66,899	1,996	17,427	10,426	..	415,217	112,222	584,617
S. Australia ..	3,880	11,535	890	8,670	4,653	10	442,137	20,728	471,775
W. Australia ..	9,430	11,615	3,395	17,269	7,271	..	227,206	6,235	276,186
Tasmania ..	1,048	21	1	10,728	173	192	269,580	..	281,743
<b>Australia ..</b>	<b>169,287</b>	<b>359,631</b>	<b>11,687</b>	<b>137,818</b>	<b>40,142</b>	<b>1,092</b>	<b>5,028,141</b>	<b>308,740</b>	<b>5,747,798</b>

(a) Includes gas works but excludes central electric stations, details of which are shown on p. 152.

(b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

(c) Excludes particulars in column (d).

(ii) *According to Type, Australia.* In the following table, details of the total rated horse-power of the various types of engines in use are given for Australia for the years 1957-58 to 1961-62.

**FACTORIES(a): TYPES AND TOTAL RATED HORSE-POWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, AUSTRALIA**

Year	Steam		Internal combustion			Water	Motors driven by electricity		Total (b)(c)
	Reciprocating	Turbine	Gas	Petrol or other light oils	Heavy oils		Purchased	Own generation (d)	
1957-58 ..	204,854	266,659	9,487	118,106	64,498	1,770	4,062,006	274,287	4,727,380
1958-59 ..	190,905	302,594	10,821	122,916	56,503	1,271	4,310,456	270,981	4,995,466
1959-60 ..	188,892	328,116	9,484	137,835	48,441	1,092	4,558,175	302,091	5,272,035
1960-61 ..	178,074	334,908	9,045	140,384	42,238	1,092	4,862,080	293,051	5,567,821

(a) Not available for publication; figures are included in total for Australia.

**§ 5. Employment in Factories**

1. **Number Employed.**—(i) *General.* All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and “out-workers” (see para. 4, p. 156), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods and retailing storemen, are excluded. From 1945–46 the occupational groupings collected were—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; (iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers and persons working regularly at home; but from 1960–61 the last three categories were amalgamated into one group—(iv) foremen and overseers, workers in factory and others.

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to the number of persons employed (*see* § 3, p. 148), which is based on the average number employed over the period worked.

(ii) *Australia.* Particulars of the numbers employed, the increase in employment and the rate per cent. of such increase are given for the years 1957-58 to 1961-62 in the following table.

## FACTORIES: EMPLOYMENT, AUSTRALIA

Year	Males			Females			Persons		
	Number employed	Increase on preceding year		Number employed	Increase on preceding year		Number employed	Increase on preceding year	
		Number	Per cent.		Number	Per cent.		Number	Per cent.

4. **Persons Employed According to Occupational Grouping.**—In the following table, the average number of persons employed in each State during 1961-62 is classified according to occupational grouping. As stated in para. 1 of this section (*see p. 152*), persons employed in factories are now classified on a basis different from that adopted prior to 1960-61.

**FACTORIES: PERSONS EMPLOYED—OCCUPATIONAL GROUPING, 1961-62**

State	Average number of persons employed				
	Working proprietors	Managerial and clerical staff, etc.(a)	Chemists, draftsmen, etc.	Foremen and overseers, workers in factory and others(b)	Total
New South Wales .. ..	14,292	60,754	8,509	377,532	461,087
Victoria .. ..	12,772	48,446	7,538	308,989	377,745

(a) Includes salaried managers and working directors.

(b) Includes persons working regularly at home.

The term "outworker" or "homeworker" has acquired a special meaning in connexion with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory and others, and separate details are not available.

5. Monthly Employment, 1957-58 to 1961-62.—(i) *Australia*. The following table shows the number of persons (excluding working proprietors) employed in factories on the last pay-day of the month during the years 1957-58 to 1961-62.

**FACTORIES: MONTHLY EMPLOYMENT, AUSTRALIA**

6. **Distribution of Employees According to Age.**—The extension of statistics of employment in factories, decided upon at the Conference of Australian Statisticians held in 1945, provided for a distribution of employees (excluding working proprietors) into seven age-groups from 1945–46 onwards, instead of three as in previous years. From 1960–61, however, the distribution into three groups was re-introduced. The numbers employed in each age-group on the last pay-day in June, 1961 and 1962, are given below.

**FACTORIES: DISTRIBUTION OF EMPLOYEES BY AGE**  
(EXCLUDING WORKING PROPRIETORS)

Age group	June, 1961			June, 1962

1961–62 .. ..	312	262	481	473	650	467	326

(a) Number of males per 100 females.

4. **Employment of Females in Particular Industries.**—(i) *General.* The majority of females in manufacturing industries are employed in four classes, namely:—IV., Industrial Metals, Machines, etc.; VI., Textiles; VIII., Clothing; and IX., Food, Drink and Tobacco. In 1961–62, these industries accounted for 78.03 per cent. of all females in factories. In two classes only did the number of females exceed the number of males, namely, in Class VI., Textiles, where there were 135 females to every 100 males, and in Class VIII., Clothing, with 242 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes in 1961–62.

**MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES, 1961-62**

Class	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
<b>MALES</b>							
IV. Industrial metals, etc. ..	194,022	132,581	34,756	49,354	20,440	9,469	440,622

(a) Number of females per 100 males.

## § 7. Children Employed in Factories

1. Number of Children Employed, 1960 to 1962.—In the returns for the various States, the term "child" denotes any person under sixteen years of age. The following table shows the number of children of each sex employed in manufacturing industries in June of the years 1960 to 1962.

## FACTORIES: CHILDREN(a) EMPLOYED

State	June, 1960			June, 1961			June, 1962		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons

Paper, stationery, printing, bookbinding, etc. .. ..	658	714	53,716	19,209	1.22	3.72
All other industries .. .. .	991	587	138,123	30,901	0.74	1.90
<b>Total .. .. .</b>	<b>9,176</b>	<b>8,764</b>	<b>839,177</b>	<b>264,374</b>	<b>1.09</b>	<b>3.32</b>

(a) Under sixteen years of age.

(b) Excludes working proprietors.

3. **Apprenticeship.**—Acts are in force in all States for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

### § 8. Value of Production, Materials Used, Salaries and Wages

*Note.*—In all tables relating to salaries and wages paid in factories, the amounts drawn by working proprietors are excluded.

1. **General.**—The gross value of factory output for 1961–62 was £5,242 million, of which £2,855 million was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and £192 million the value of the power, fuel, light, water and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, £2,195 million, represents the net value of factory production, defined as “the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production”. Depreciation, however, is not deducted (*see* para. 6 of this section, p. 169). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories. They have, therefore, little statistical significance. The net value of factory production indicates the relative importance of manufacturing in the Australian economy in current money terms. The total amount of salaries and wages paid in factories in 1961–62 was £1,143 million, excluding amounts drawn by working proprietors.

2. **Salaries and Wages Paid.**—(i) *In Classes of Industry, 1961–62.* The amounts of salaries and wages paid in the various classes of industry in each State are shown in the following table.

FACTORIES: SALARIES AND WAGES PAID, 1961-62

(£'000)

(ii) *Totals and Averages, 1957-58 to 1961-62.* The following table shows the total amount of salaries and wages paid, and the average amount paid per employee in each State, for each year. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table, regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands are employed in Class VIII., Clothing, comprising a relatively high percentage of women and children.

(a) Includes value of lubricants and water.

4. *Value of Materials Used.*—(i) *In Classes of Industry, 1961-62.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced and repairs to plant) in factories in Australia in 1961-62 reached £2,855 million, or 54.4 per

cent. of the value of the final output (see para. 5). The following table shows the value of the materials used in various classes of industry in each State.

FACTORIES: VALUE OF MATERIALS USED, 1961-62(a)  
(£'000)

Class of industry	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
I. Treatment of non-ferrous metal and quarry products .. .. .	40,270	20,646	5,327	6,647	3,336	1,587	77,813

(a) See para. 1 of this section, p. 162.

5. Value of Output.—(i) *In Classes of Industry, 1961-62.* The value of the output of factories in the various classes in each State in 1961-62 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the net value of factory production (see paras. 1 and 6 of this section).

## FACTORIES: VALUE OF OUTPUT, 1961-62(a)

(£'000)

(a) See para. 1 of this section p. 162.

6. *Value of Production.*—(i) *In Classes of Industry, 1961-62.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as "the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production".

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the "value of output". Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items "value of materials used" and "value of fuel used" as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only "value of materials used" and "value of fuel used" from the "value of output". The value of factory production, therefore, approximates "net value added" in the manufacturing process.

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that, when wages and salaries are deducted from the value of production, the whole of the "surplus" is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows, for 1961-62, the value of production in each State for the various classes of industry.

FACTORIES: VALUE OF PRODUCTION, 1961-62(a)

**§ 9. Value of Land, Buildings, Plant and Machinery**

1. General.—The following statement shows the value of land and buildings and of plant and machinery used in connexion with manufacturing industries during the year 1961-62.

**FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a), 1961-62**  
(£'000)

Value of—	N S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
Land and buildings	643,483	443,683	89,632	98,297	49,168	79,575	1,403,838
Plant and machinery	670,635	467,887	137,251	126,503	61,716	60,795	1,524,787
<b>Total ..</b>	<b>1,314,118</b>	<b>911,570</b>	<b>226,883</b>	<b>224,800</b>	<b>110,884</b>	<b>140,370</b>	<b>2,928,625</b>

(a) Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

2. Value of Land and Buildings.—(i) *Totals for Australia.* The following table shows, for Australia as a whole, the approximate value of land and buildings occupied in connexion with manufacturing industries for 1957-58 to 1961-62.

**FACTORIES: VALUE OF LAND AND BUILDINGS(a), AUSTRALIA (£'000)**

(a) Includes estimated value of rented premises, plant and machinery.

### § 10. Principal Factory Products

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories* (see NOTE at beginning of this chapter).

The following table shows the total recorded production of some of the principal articles manufactured in Australia during the years ended 30th June, 1960 to 1963. A more complete list, together with values, where available, is published in the bulletin *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories.*

Preliminary figures for a restricted number of major commodities for the year 1963-64 are shown in the Appendix to this volume.

Zinc oxide (see pigments)				

(a) Subject to revision. (b) Not yet available. (c) Includes stovettes, cookers, etc.  
(d) Supplied by Superphosphate Industry Committee. (e) Excludes wheatmeal for baking included with flour. (f) Includes mixtures predominantly of the fibre mentioned.

## § 11. Individual Industries

1. **General.**—Particulars on pages 147-174, §§ 2-9 afford a general view of the magnitude of industries, in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible, within the limits of this publication, to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour or capital, or for other features of special interest. Where there are only one or two establishments in a particular industry in the State or the Commonwealth, details of activities are not published, but are combined with some other factory group so that operations of individual concerns will not be disclosed.

Details of some of the principal articles produced in factories in Australia during the years 1959-60 to 1962-63 are shown in the table on the preceding pages (§ 10).

2. **Portland Cement and Cement Goods.**—The manufacture of portland cement and cement goods is an important industry included in Class I. Particulars for the three industries under this general heading are shown for 1961-62 and for a series of years in the following table.

**PORTLAND CEMENT, ASBESTOS CEMENT SHEETS, ETC., AND OTHER CEMENT GOODS**  
AUSTRALIA, 1961-62

Particulars	Portland cement	Asbestos cement sheets and mouldings	Other cement goods	Total

10. Iron and Steel Works and Engineering.—(i) *General.* The first group included under this heading (Smelting, Converting, Refining and Rolling of Iron and Steel) covers blast furnaces, steel works and rolling mills. The second group, Foundries (Ferrous), covers those engaged in the founding of iron and steel. The third group (Plant, Equipment and Machinery including Machine Tools) covers those industries engaged in the production of

boilers, engines, machines and machinery, machine tools, structural steel fabrications, steel furniture, etc. The fourth group (Other Engineering) includes jobbing and general engineers not elsewhere included. Detailed statistics for the four groups mentioned are shown in the following tables.

(ii) *Smelting, Converting, Refining and Rolling of Iron and Steel.* In the following table, particulars are shown for each State for 1961-62 and for Australia for a series of years for the group Smelting, Converting, Refining and Rolling of Iron and Steel.

Horse-power of engines ordinarily in use h.p.	13,506	12,952	14,302	14,856	15,353

17. **Cotton.**—(i) *General.* Cotton has been grown in Australia since 1860, but never on a very large scale, and production has shown marked fluctuations over the long term. The growing of cotton, which is confined mainly to Queensland, is treated in some detail in Chapter XXIII. Rural Industry. The ginning and marketing of cotton is controlled by the Queensland Cotton Board which operates ginneries and processes by-products. The production of raw cotton is insufficient for local factory requirements and is supplemented by imports from overseas, chiefly (in 1962-63) from the United States of America, Mexico, Brazil and Columbia.

(ii) *Spinning and Weaving.* The number of establishments engaged in cotton spinning and weaving in Australia and other particulars of the industry are shown in the following table for the years 1957-58 to 1961-62.

## COTTON SPINNING AND WEAVING: AUSTRALIA

26. Boots and Shoes.—The following tables refer to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand-shoes, goloshes and gum, etc. boots of rubber are not included here, being classified under Rubber Goods, see para. 43, page 207.

(a) Includes confectionery in Tasmania.

29. Sugar-mills and Sugar Refineries.—Sugar-cane is grown in New South Wales and Queensland, and particulars of area, yield, etc., are given in detail in the chapter Rural Industry. The products of the sugar-mill are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment.

The following table shows the number of sugar-mills and the number of persons employed therein in New South Wales and Queensland for the years 1957-58 to 1961-62.

## SUGAR-MILLS

Particulars	1957-58	1958-59	1959-60	1960-61	1961-62
-------------	---------	---------	---------	---------	---------

## NEW SOUTH WALES

Number of factories .. ..	3	3	3	3	3
Number of persons employed .. ..	170	254	243	200	219

## QUEENSLAND

Number of factories .. ..	31	31	31	31	31
Number of persons employed .. ..	6,547	6,621	6,197	6,014	6,053

In 1961-62, there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia and Western Australia.

30. Confectionery.—Particulars for 1961–62 for each State and for Australia for a series of years are shown hereunder.

**CONFECTIONERY**

The butter, cheese and condensed milk industries are dealt with more fully in Chapter XXIII. Rural Industry.

34. **Meat and Fish Preserving.**—The industries included in this group are engaged chiefly in the freezing and preserving of meat. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. In recent years, there has been considerable expansion in the canning of meat and fish.

Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in Chapter XXIII. Rural Industry.

35. **Breweries.**—The following table gives particulars of breweries for Australia for each of the years 1957-58 to 1961-62. Since a separate return for each branch of their activities is not available from all breweries, the figures may include details of employment, wages, output, etc., not directly concerned with the brewing of beer, although associated with it. These extraneous activities include cooperage, malt works, aerated waters, etc.

(b) Excludes Excise Duty.

39. *Sawmills, etc.*—The most important industry in Class X. is sawmilling. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the following table, together with plywood and veneer mills. The figures exclude particulars of a small number of itinerant and travelling sawmills.

Horse-power of engines ordinarily in use h.p.	37,440	37,440	40,116	45,815	45,776

42. Paper Making.—Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred. The number of factories operating in 1961-62 comprised four in New South Wales, eleven in Victoria, two in Queensland, two in South Australia, one in Western Australia, and three in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States, wrappings, other papers and boards. Particulars for this industry are shown in the following table.

Mills producing pulp from eucalypt timber are operating in Victoria and Tasmania, while in South Australia pulp is being produced from locally-grown softwoods.

## CHAPTER VII

### ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts:—the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme; and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory. A Statistical Summary is appended.

The information contained in the chapter relates to situations existing and projects contemplated in 1963, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

#### INTRODUCTION

1. **Distribution of Population and Location of Power Resources.**—The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations.

By far the most important source of energy used in the production of electric power in Australia is coal. At 30th June, 1962, thermal power equipment represented 71 per cent., hydro plant 26 per cent., and internal combustion equipment 3 per cent. of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent. receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland.

The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 3,000,000 kW within the next 25 years. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount there available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent. of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

2. **Electric Power Generation and Distribution.**—(i) *Ownership of Undertakings.* At the beginning of this century, Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety, and to define the scope and obligations of the private organizations. A trend towards public ownership commenced during the 1914–18 War and became more pronounced after the 1939–45 War. By 1961, all major generating stations supplying the public were, in varying degrees, under the control of statutory organizations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organizations which undertake reticulation.

In addition to the private, local government and statutory organizations which generate and/or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, and the power regularly produced for such internal consumption is, in any case, a relatively small proportion of the total power produced.

(ii) *Power Production and Generating Capacity.* Since the 1939-45 War, the demand for power has increased considerably, industry and commerce have expanded rapidly, many new houses have been built, the population has increased by approximately 45 per cent., electricity supply has been extended to rural areas, and the use of domestic electric appliances has increased. The measures taken by the various authorities to satisfy the demand created by these developments are described in the following pages.

At 30th June, 1962, installed generating capacity in Australia was 7.22 million kW compared with 6.67 million kW in 1961, an increase of nearly 8 per cent. In 1961-62, each kW of installed capacity produced an average of 3,700 kWh. These figures are based on Commonwealth totals; figures for the States vary, depending on such factors as the distribution of demand, number of consumers, and type of equipment employed. In 1962-63, the production of electric power in Australia was 29,215 million kWh.

### SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME\*

1. *Snowy Mountains Hydro-electric Power Act 1949.*—In July, 1949, the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth:—(i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Authority is constituted by a Commissioner and two Associate Commissioners, the three appointments being made by the Governor-General. It is empowered to construct, maintain, operate, protect, manage and control works:—

- (a) for the collection, diversion and storage of water in the Snowy Mountains Area;
- (b) for the generation of electricity in that area;
- (c) for the transmission of the electricity generated;
- (d) incidental or related to the construction, maintenance, operation, protection, management or control of any works otherwise specified in the Act.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

2. *Geography of the Area.*—The Snowy Mountains area in south-eastern New South Wales is the only part of the continent in which altitudes exceed 7,000 feet and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 150 inches a year in the vicinity of Mt. Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy River, which flows southward to Bass Strait.

3. *Description of the Scheme.*—(i) *General.* The broad basis of the scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut

\* See also Chapter VIII. Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-1130.

Development and the Snowy-Murray Development (*see* map p. 215). For purposes of both power production and irrigation, it is necessary to regulate run-off, and this will be achieved by the use of Lake Eucumbene, formed by the construction of Eucumbene Dam, and other smaller storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers for the Snowy-Tumut Development and of the Snowy River for the Snowy-Murray Development. A sectional diagram of the Scheme appears on page 216.

(ii) *Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene, the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel. The 14-mile Eucumbene-Tumut Tunnel is used during periods of high flow to divert waters of the Tumut River from Happy Jacks Shaft or the combined waters of the Tumut and Tooma Rivers from Tumut Pond reservoir back to Lake Eucumbene for storage.

From Tumut Pond Reservoir, water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

Tumut 3 Power Station will be constructed between Talbingo and Blowering Reservoirs. Blowering Dam is to be constructed by the Snowy Mountains Authority for the State of New South Wales and will provide for the regulation of power station discharges for use for irrigation in the Murrumbidgee Valley. The Authority will construct a power station at the foot of this dam to make use of irrigation releases for power purposes.

(iii) *Snowy-Murray Development.* The principal features of the Snowy-Murray development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development will be as follows.

- (a) Construction of a tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, will be the Scheme's largest stations and will have a combined capacity of 1,500,000 kW.
- (b) Construction of a tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water will be returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) Construction of a dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers, and the construction of a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it will join the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme will be increased by the construction of subsidiary hydro-electric projects on the Upper Snowy River above Island Bend and on Windy Creek, a tributary of the Upper Geehi.

4. *Utilization of Power.*—The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing

New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilize the potential of the Snowy Mountains Scheme most effectively, the order of development is being arranged so that the early stations operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States.

Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2 : 1.

5. **Progress and Future Programme.**—The scheme's first power station, Guthega, of 60,000 kW initial capacity, came into operation in February, 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground power station in 1962. The total installed capacity of the scheme at present is 660,000 kW. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May, 1958. Tumut Pond Dam, completed in September, 1958, provides the balancing storage for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June, 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity has been concentrated on the Snowy-Murray development. Construction is well advanced on the 15-mile Eucumbene-Snowy Tunnel, the 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the 1-mile Pressure Pipeline and the 950,000 kW Murray 1 Power Station. These works, together with the Khancoban Dam, which will regulate power station releases before discharge into the Murray River, are to be substantially completed in 1966. At this time, the first trans-mountain diversion of water from the Snowy River to the Murray River and the first generation of electricity from the Murray 1 Power Station will occur.

## STATES AND TERRITORIES

### § 1. New South Wales

1. **General.**—In Year Book No. 39, an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present, the following three main Acts govern electricity supply in New South Wales.

The *Local Government Act*, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The *Electricity Development Act*, 1945–1957, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The *Electricity Commission Act*, 1950–1961, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

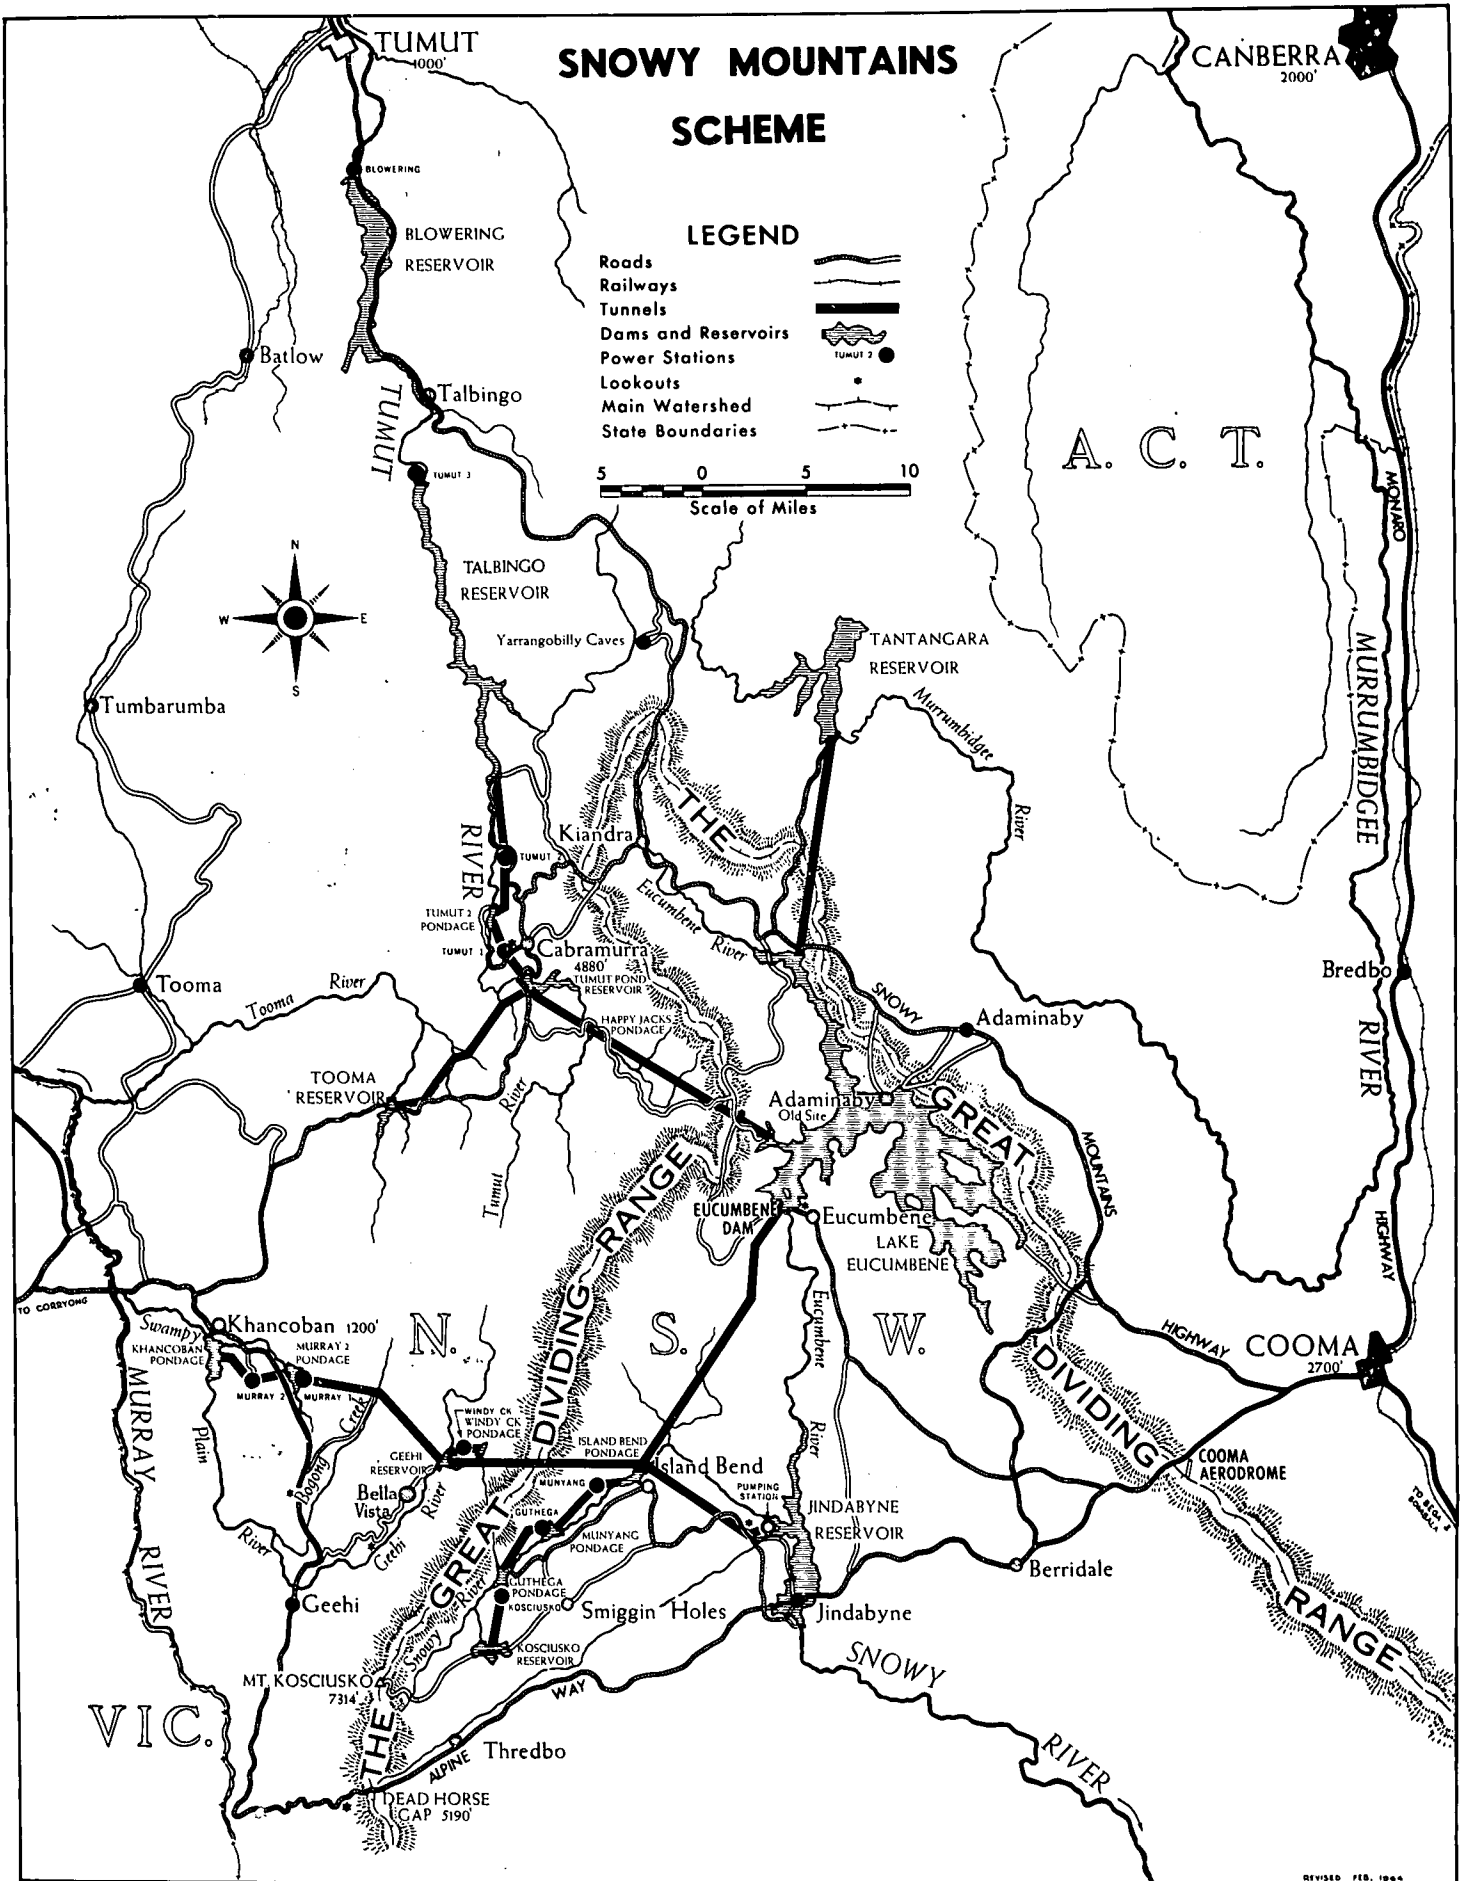

2. **Organization.**—(i) *The Electricity Commission of New South Wales.* The Commission, which is directly responsible to the Minister for Local Government, consists of five members, of whom one is full-time Chairman and one is full-time Vice-Chairman.

Outlet portal of the spillway tunnel at Geehi Dam.

**The completed excavation for the Murray 1 Pipelines. These pipelines will carry water from the Murray 1 Pressure Tunnel to the Murray Power Station, 1,300 feet below.**

The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the government railways, and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except the Snowy Mountains region.

(ii) *Other Electricity Supply Authorities.* The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of groups of shire and/or municipal councils), or private franchise holders. At 30th June, 1963, there were 53 supply authorities throughout the State, of which 14 also generated part or all of their power requirements. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

Over the past few years, there has been a distinct trend towards the consolidation of supply areas, many of which have been individually too weak to form satisfactory areas for distribution. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal areas grouped only for electricity supply purposes, and administered by a county council of representatives elected by the constituent councils. Of the 225 cities, municipalities and shires in New South Wales, 215 are included in one or other of the 35 electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30th June, 1963, was supplying 504,263 consumers in the Sydney Metropolitan Area.

(iii) *The Electricity Authority of New South Wales.* The Electricity Authority was constituted for the purpose of promoting and regulating the co-ordination, development, expansion, extension and improvement of electricity supply throughout the State. A regulatory body, it consists of seven members of whom one is a full-time Chairman. Like the Electricity Commission, it is responsible to the Minister for Local Government.

The following are the main functions of the Authority.

*Distribution.* The approval of the Authority is required for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils.

In exercising these powers, the Authority is concerned mainly with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts.

*Rural Electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see para. 4, p. 219).

*Safety.* The *Electricity Development Act, 1945–1963*, contains provisions for the making of regulations relating to most aspects of safety, and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumers' installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen and overhead line construction.

*Generation and Transmission.* The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

**3. Generation and Transmission.—(i) General.** Except in the Snowy Mountains district and in one or two other areas, New South Wales is lacking in major water power potential, and for the generation of electricity the State is dependent mainly on steam power stations. During the year ended 30th June, 1963, coal-fired stations generated 92.0 per cent. of the State's energy requirements, hydro-electric stations 7.5 per cent. and internal combustion plants 0.5 per cent. In addition, 1,100 million kWh were purchased from the Snowy Mountains Hydro-Electric Authority during the year.

With the future plant development of the Snowy Mountains scheme, an increasing amount of power will be generated by the Authority, but at no stage of its development will the scheme supply more than 15 per cent. of the State's energy requirements. Coal-fired steam power stations, therefore, will continue to supply the greater part of requirements for the foreseeable future.

(ii) *Major Generating Stations.* In New South Wales, the generation of electricity has followed the general world trend towards large centralized power stations supplying large areas through interconnected transmission networks. Whereas until a few years ago the greater part of the coal-fired generating plant was located in the industrial areas of Sydney, Newcastle and Wollongong, where most of the population is also located, major power stations are now being located on the coalfields to the north, south and west of Sydney, and power is transmitted to the load centres through high voltage transmission lines.

At 30th June, 1963, the major power stations of the State system of the Electricity Commission of New South Wales and their installed capacities were as follows:—*Steam*—Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; Vales Point (Lake Macquarie), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Ultimo (Sydney), 80,000 kW; Port Kembla, 60,500 kW; Zarra Street (Newcastle), 45,000 kW; Muswellbrook, 30,000 kW; Lithgow, 27,000 kW; Tamworth, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume (near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 34,470 kW. The total installed capacity of the Electricity Commission's system was 2,427,970 kW.

The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

(iii) *Major Transmission Network.* The retailing of electricity to 97 per cent. of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30th June, 1963, there were in service 680 route miles of 330 kV (including 131.5 miles operating for the time being at 132 kV) and 1,515 miles of 132 kV transmission lines (including 243 miles operating for the time being at 66 kV or lower). There were also in service 2,377 miles of transmission line of 66 kV and lower voltages.

Superimposed upon the 132 and 66 kV network will be a powerful 330 kV trunk system extending from the Snowy Mountains Hydro-electric Scheme in the south through Wollongong, Sydney and Newcastle to Armidale in the north. At 30th June, 1963, the 330 kV transmission line was in operation between the Snowy Mountains Upper Tumut Switching Station and the Commission's Vales Point power station, linking these major sources of power for the New South Wales network, and interconnecting the systems of the Electricity Commission of New South Wales and the State Electricity Commission of Victoria at the Upper Tumut Switching Station.

The installed transformer capacity at the Commission's 96 sub-stations was 5,986,800 kVA.

(iv) *Separate Systems and Total State Installed Capacity.* A number of small plants which supply isolated towns and villages have not yet been interconnected with the main network.

Some local government bodies have undertaken the development of independent power stations. Of these, the more important are:—the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 12,500 kW steam power station on the Ashford coalfield.

The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 2,536,144 kW at 30th June, 1963.

(v) *Future Development.* The major new thermal stations already built and those now being developed on the coalfields will become the main base load centres for the northern, southern and western regions. Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

At Vales Point, on Lake Macquarie, work is in progress on a large thermal station with a designed capacity of 875,000 kW. The plant will consist of three 200,000 kW units and one 275,000 kW unit. The first 200,000 kW unit has been commissioned and construction of the remaining three is progressing.

Construction of the Munmorah Power Station, located between Lakes Munmorah and Budgewoi (on the central coast) has commenced. Initially the plant at Munmorah will comprise two 350,000 kW generating units.

The development of the 330 kV main system is continuing. The 330 kV line from the Snowy region has been extended to the Vales Point Power Station, a distance of 335 miles. The section between the Snowy Mountains Hydro-electric Authority's Upper Tumut Switching Station and the Commission's 330 kV Centre at Yass has been duplicated, and the section between Yass and Dapto has also been duplicated. A second circuit from Sydney North 330 kV Substation to Vales Point Power Station will be available for the commissioning of the second Vales Point unit early in 1964. Development of the 330 kV network around the Sydney metropolitan area is proceeding.

Work has commenced on the Sydney West 330 kV Substation which is located near Mount Druitt. Plans to augment the transmission system during the next five years provide for the construction of 480 route miles of 330 kV lines and three associated substations, 740 route miles of 132 kV line and 18 substations, as well as additions to existing substations and a number of lower voltage works.

(vi) *Hydro-electricity.* The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains Area (*see* Snowy Mountains Hydro-electric Scheme, p. 210). Apart from this area, there are in operation the new hydro-electric stations at the Warragamba Dam (50,000 kW) and Hume Dam (50,000 kW), and stations at the Burrinjuck Dam (20,000 kW), Wyangala Dam (7,500 kW) (shortly to be closed during repairs and extensions to the dam), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney Metropolitan Area, and the output of the other stations on the release of water for irrigation.

Of the remaining hydro installations, the largest is that of the New England County Council on the Oakey River, a tributary of the Macleay River, which has a capacity of 5,250 kW.

The Northern Rivers County Council operates a hydro-electric power station on the Nymboida River, a tributary of the Clarence River. This station has a capacity of 4,500 kW.

The Bega Valley County Council has constructed a hydro-electric scheme at Brown Mountain utilizing the headwaters of the Bemboka River. This installation has a capacity of 3,950 kW.

The Mullumbimby Municipal Council has in operation two 150 kW hydro units on Wilson's Creek, a tributary of the Richmond River.

4. *Rural Electrification.*—When the Electricity Authority of New South Wales was constituted in 1946, only 16,000 New South Wales farms were being served with electricity—less than one-quarter of those within reasonable reach of public electricity supply systems. Under a subsidy scheme approved in August, 1946, local electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidized. Originally this limit was £250 per consumer when averaged over the cost of the whole extension, but the limit was raised to £400 in December, 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of £400 was not subsidized.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State, the subsidy scheme was extended from May, 1959, to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of £600–£800.

Between August, 1946, and June, 1963, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing £32.4 million to give supply to some 54,000 farming properties and 33,000 other rural consumers and involving 47,300 miles of line. The greater part of this work had been completed at 30th June, 1963. At this date, the Authority was committed to the payment of £13,504,878 in subsidies, of which £6,807,752 had been paid.

## § 2. Victoria

1. *General.*—In Year Book No. 39, a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

2. *State Electricity Commission of Victoria.*—(i) *Power and Fuel Authority.* Since it began operating in 1919, the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves over 97 per cent. of the population through a supply network covering more than three-quarters of the populated area of the State.

Development of Victoria's electricity system is based on the utilization for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria is entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for its purposes. Victoria also shares with New South Wales in the electricity generated at Hume Hydro Station on the River Murray. About 80 per cent. of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. All the brown coal and briquette fuel is supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1962-63 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 17,244,345 tons, of which 11,868,590 tons were used in the Commission's own power stations, and 4,979,924 tons were manufactured into 1,805,347 tons of brown coal briquettes, 52 per cent. of the briquette output then being used for electricity production in metropolitan and provincial steam power stations.

The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel consumed in the power stations, the process of briquette manufacture results also in the generation of electricity, since the steam needed for processing the raw coal for briquetting is first used to operate turbo-generators.

(ii) *Status and Power.* Constituted by the *Electricity Commissioners Act 1918*, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose, it is vested with power to erect, own, and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own, and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn. It also owns large housing estates in the surrounding area, but is progressively selling houses in these estates to Commission employees. In the Kiewa hydro-electric works area, it has built the two townships of Mount Beauty and Bogong, municipal administration of the former now being vested in the Shire of Bright. With construction at Kiewa now complete, many houses at Mount Beauty have been sold for holiday homes.

(iii) *Electricity Supply.* At 30th June, 1963, consumers in Victoria served by the State system numbered 972,741. Outside the State system, there were 11,388 other consumers served by local country undertakings. The system supplies all the Melbourne metropolitan area and over 1,800 other centres of population.

Complete electrification of the State is now within sight. By 30th June, 1963, about 827,000 of the 862,000 homes in the State and 54,200 of Victoria's 71,500 farms were supplied with electricity. By the end of this decade (1970-71), allowing for extensions then in progress, only about 6,000 homes and fewer than 1,250 farms in remote areas will be out of reach of public electricity supply, but efforts will be continued to connect as many of these as possible.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. The number of consumers served by the State system outside the Melbourne metropolitan area is 434,437. Of the new consumers connected to supply each year, more than two-thirds are outside the metropolitan area. New farm connexions average nearly 3,000 a year.

The Commission's retail consumers numbered 775,108 at 30th June, 1963. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches (Ballarat, Eastern Metropolitan, Geelong, Gippsland, Midland, Mildura, Northern, North-Eastern, South-Western and Wimmera). At 30th June, 1963, there were branch and district supply offices in 87 towns in Victoria.

(iv) *Electricity Production.* Electricity generated in the State system or purchased by it totalled 7,688 million kWh in 1962-63 or 99 per cent. of all Victoria's electricity. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30th June, 1963, was 1,898,000 kW. Power stations are interconnected, and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates more than half of Victoria's electricity. Other power stations in the interconnected system comprise the important brown coal burning power station at Morwell; steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat and also at Redcliffs, which has, in addition, an internal combustion plan; hydro-electric stations at Kiewa; at Eildon; on the Rubicon and Royston Rivers, near Eildon; and at Cairn Curran; and internal combustion stations at Shepparton and Warrnambool. All within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system. A 330 kV transmission line links the Victorian system with the Snowy Mountains undertaking, and also provides facilities for interconnexion between the Victorian and New South Wales State generating systems. Also linked with the Victorian interconnected system is the hydro station at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales.

In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system is assigned a predetermined function dependent upon the availability of power from each group and the economics of generation. The various stations are utilized in the combination that will meet the system load most economically at a given time.

(v) *Transmission and Distribution.* The electrical transmission and distribution system in the State supply network at 30th June, 1963, comprised 39,650 miles of power-lines, 18 terminal receiving stations, 85 main transmission sub-stations and over 33,000 distribution sub-stations. Main transmission is by 220 kV, 132 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnexion between the power stations. The 220 kV system now totals 1,011 miles.

(vi) *Future Development.* Major new construction is concentrated on the erection of a large new brown coal burning power station (Hazelwood) near Morwell in the brown coal fields of the Latrobe Valley. At the same time, the Commission continues its programme of rural electrification and extension and reinforcement of the State system (particularly in western and north-western Victoria).

At Morwell, six miles from Yallourn, the Commission has almost completed a second brown coal power and briquette undertaking. The new undertaking comprises a brown coal open cut and power station operating in association with a briquetting plant. Some of the electricity generated at Morwell is needed to operate the briquette works, but most of the output of the power station is transmitted through Yallourn to metropolitan terminal stations for general supply through the State network. The installed generator capacity of Morwell Power Station is 170,000 kW. The briquette works have a production capacity of approximately 1,300,000 tons of briquettes a year. The Commission's new Hazelwood Power Station is being erected a short distance south of Morwell. It will operate on raw brown coal fuel supplied by belt conveyor direct from the Morwell open cut. The power station will have a capacity of 1,200,000 kW and will comprise six turbo-generators each of 200,000 kW capacity. Hazelwood is being built in stages. Contracts have been placed for four generating units (800,000 kW) and the related boiler plant, and work is well advanced on the first 400,000 kW stage. The first turbo-generator is due to be in service in 1964 and the second in 1965. Succeeding units are scheduled to be in service in 1966, 1967, 1970 and 1971. Power generated at Hazelwood Power Station will be transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network.

3. **Local Country Electricity Undertakings.**—At 30th June, 1963, there were 20 independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. Most of these undertakings were in the far south-west, west and north-west of the State. Under the State Electricity Commission's rural electrification programme, almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1962-63, the total production of the independent undertakings was 41 million kWh. The number of consumers at 30th June, 1963, was 11,388. The operation of the independent undertakings is governed by the *Electric Light and Power Act 1958*, which the State Electricity Commission administers.

### § 3. Queensland

1. **General.**—In Year Book No. 39, an account is given of the growth of electricity generation in Queensland, with particular reference to the City Electric Light Co. Ltd. of Brisbane (now the Southern Electric Authority of Queensland), the Brisbane City Council and the Toowoomba Electric Light and Power Co. Ltd. (taken over by the Southern Electric Authority) (see para. 3, p. 223).

The generation and distribution of electric power in Queensland in earlier years had tended to lag behind developments in this field in other States of Australia, and in 1935, the Queensland Government, being concerned with the need to develop the State's power resources in the public interest, appointed a Royal Commission to inquire into and make recommendations on matters relating to the generation and distribution of electric power in Queensland. (An account of the results of its investigations and of the alternative proposals put before it will be found on page 1182 of Official Year Book No. 39.) The Report of the Royal Commission recommended that a commission to control the generation and distribution of electric power be vested in the State; but if the establishment of an operating commission was not found practicable, then electrification under public control with ultimate public ownership should be implemented by means of a controlling commission capable of being converted into an operating commission. In 1937, the State Government constituted the State Electricity Commission of Queensland.

2. **The State Electricity Commission of Queensland.**—The State Electricity Commission of Queensland commenced to function during January, 1938, its main powers being to secure a proper and efficient supply of electric power, review tariffs, grant licences to supply electricity, secure the safety of the public, and control and advise electrical undertakings generally. It was thus a controlling authority as distinct from an operating authority. Details of its growth and development may be found in earlier issues of the Official Year Book (see No. 44, p. 284). Since its inception, the Commission has made considerable progress in its task of developing the State's power resources and promoting a more widespread use of electric power. The degree of utilization of electrical energy in Queensland now compares favourably with other States in the Commonwealth. Over 90 per cent. of the State's population is now supplied with electricity.

3. **The Southern Electric Authority of Queensland.**—A further major step in electrical progress was taken with the passing of the *Southern Electric Authority of Queensland Act, 1952*. This Act constituted the City Electric Light Co. Ltd. as a public authority to be known as the Southern Electric Authority of Queensland. Two government representatives (including

the Commissioner for Electricity Supply) are included on the board of the Authority, whose establishment prepares the way for the complete amalgamation, in due course, of the electrical undertakings serving the south-eastern Queensland area of supply.

As from 1st July, 1954, the Southern Electric Authority acquired the Toowoomba Electric Light and Power Co. Ltd., thus bringing that company's area of supply under its control. The Southern Electric Authority is now responsible for the electrical supply and development of a consolidated area of over 17,000 square miles and is also providing bulk supply to the Western Downs area centred on Dalby. The Authority also supplies the Tweed area of northern New South Wales. Construction has reached an advanced stage on a 132 kV interconnexion with the area of the Wide Bay-Burnett Regional Electricity Board whereby the output of the Howard power station will be supplemented from the Southern Electric Authority's generating station.

The Southern Electric Authority previously supplied the requirements of the inner portion of the City of Brisbane and those of a considerable rural area in the south-eastern corner of the State from modern power stations at Bulimba, a suburb of Brisbane, and a "packaged plant" at Abermain (near Ipswich). The output of a small hydro-electric unit at Somerset Dam near Brisbane is fed into the Southern Electric Authority system. From 1st January, 1963, the Authority assumed control of the power stations previously operated by the Brisbane City Council at Tennyson and New Farm and main transmission facilities in the Brisbane area. At the same time it relinquished control of the distribution of electricity to the inner city, which is now a function of the Brisbane City Council. The Authority continues to control distribution in the rural areas surrounding Brisbane.

During 1961-62 and 1962-63, the Authority generated 974 million kWh and 1,465 million kWh respectively. The number of consumers served by the Authority at 30th June, 1962, was 121,540, while at 30th June, 1963, the Authority's reduced area of supply contained 105,178 consumers.

4. **The Brisbane City Council.**—The Brisbane City Council's electrical undertaking previously comprised power stations at New Farm and Tennyson (with a "packaged plant" also installed at the latter locality) and supplied suburban Brisbane. As from 1st January, 1963, these power stations were transferred to the control of the Southern Electric Authority together with main transmission facilities, whilst the Council's area of distribution was enlarged to include the inner city as well as suburban Brisbane. During 1961-62, the Council generated 826 million kWh, and during the first six months of 1962-63, 483 million kWh. At 30th June, 1963, its enlarged area of supply contained 173,668 consumers.

5. **Regional Electricity Boards.**—With a view to facilitating the control and development of electricity supply in areas of low population density and those having a predominantly primary producing economy, the Government passed the *Regional Electric Authorities Act 1945*, which provided for the creation of regions of electricity supply and the constitution of regional electricity boards. Prior to the establishment of these boards, no attempt had been made to unify or co-ordinate electricity supplies outside south-eastern Queensland, and rural electrification, apart from reticulation within certain townships, was practically unknown.

Soon after passage of the Act, four regional boards were constituted, Wide Bay, Capricornia, Townsville and Cairns. A fifth board, South Burnett, became an operating authority in October, 1947, but on 1st July, 1951, was absorbed in the Wide Bay Regional board, and this organization is now known as the Wide Bay-Burnett Regional Electricity Board. As from 1st March, 1957, a further regional board became operative, covering the areas of Mackay, Sarina, Proserpine and adjacent rural areas under the name of Mackay Regional Electricity Board.

The Townsville Regional Electricity Board's area was extended in July, 1957, to include that of the Bowen Electricity Undertaking, in October, 1959, to include the Hughenden Electricity Undertaking, and in September, 1960, to include the Collinsville Electricity Undertaking. The local authority areas of Thursday Island and Cook were included in the Cairns Regional Electricity Board's area from 1st July, 1956, and 1st July, 1957, respectively, and the Normanton Undertaking was transferred to this Board on 1st January, 1962. As from 1st January, 1958, the Capricornia Region was extended to include the Shires of Bauhinia, Belyando, Emerald and Peak Downs in central-west Queensland. Further expansion of the existing areas of the Regional Electricity Boards into more remote, but contiguous, areas is anticipated in the immediate future, and this trend is expected to continue in subsequent years as economic and technical considerations render it practicable in various areas of the State. As stated in para. 7 below, it is proposed to place the generating facilities of this northern interconnected system under unified control.

Activities of the five Regional Boards in 1961-62 and 1962-63 compared with operations of the stations located in regions in 1945-46 are shown in the following table.

QUEENSLAND: REGIONAL OPERATIONS

Region	1945-46		1961-62		1962-63			
	Units generated	No. of consumers	Units generated	No. of consumers	Units generated	No. of consumers		
	Million kWh		Million kWh		Million kWh			
Wide Bay-Burnett .. ..	13.7	11,467	109.3	34,770	122.5	35,963		
Capricornia .. ..	19.5	11,196	175.8	25,346	187.2	26,173		
Townsville .. ..	25.8	11,612	} a399.9	{ 31,332	} a440.3	{ 32,426		
Cairns .. ..	22.7	9,722					{ 24,649	{ 25,676
Mackay .. ..	6.5	4,283						
<b>Total .. ..</b>	<b>88.2</b>	<b>48,280</b>	<b>685.0</b>	<b>129,450</b>	<b>750.0</b>	<b>134,337</b>		

(a) Generated by interconnected Northern network.

Installed generator capacity of the five regional boards at 30th June, 1963, was:—Wide Bay-Burnett, 37,500 kW; Capricornia, 54,488 kW; Townsville, 41,725 kW; Mackay, 15,250 kW; Cairns, 146,180 kW; total, 295,143 kW.

6. Hydro-electricity.—Behind the coastal plain of the Cairns-Ingham area is an extensive plateau with elevation ranging from 2,000 to 3,000 feet, although isolated peaks exceed 4,000 feet. The short coastal streams which rise on the plateau descend rapidly into deep gorges, which they have cut through the divide. With heavy monsoonal rainfall on their catchments and concentrated fall, these streams represent a considerable potential source of power, but storage, which can be provided in most cases, is essential to control the very variable flow.

There is a pronounced wet season from December to March, with a dry season from July to November. Average annual rainfall varies greatly with location, being 178 inches at Deeral (midway between Cairns and Innisfail), but only 34 inches at Cashmere (120 miles south-west of Innisfail).

In 1935, a small hydro-electric power station of 3,800 kW was placed in service at Barron Falls, ten miles north-west of Cairns. An output of 32 million kWh was attained during 1962-63, the station operating essentially as a run-of-river station, without any significant water storage capacity being available.

The hydro-electric power scheme at Tully Falls was commissioned in September, 1957, with an initial plant installation of 36,000 kW. Work was completed during 1958-59 on the installation of a further two 18,000 kW sets, making a total installation of 72,000 kW. An output of 318 million kWh was obtained from this station during 1962-63. Power is transmitted to the load centres at Cairns, Innisfail and Tully by means of 132 kV transmission lines. Further extensions of the Tully Scheme may be undertaken at a later date. Interconnexion of the Tully Scheme with the Townsville area, which is also being served by a thermal station, was completed in February, 1958, by the provision of a 160 mile double circuit 132 kV transmission line. In December, 1962, interconnexion with the Mackay Region by means of a 66kV transmission line was effected.

A new peak load power station was commissioned in September, 1963, at Barron Falls. This station will provide a firm (dry year) output of 60,000 kW at 25 per cent. load factor (i.e. firm output of 131 million kWh per annum), and will ensure an adequate supply of power to the Cairns, Townsville and Mackay areas until 1968. The completed scheme has an underground power station below the Barron Falls containing two 30,000 kW Francis turbines, operating under a head of 920 feet.

Other major schemes which have been, or are currently being, investigated include North Johnstone-Russell Rivers (32,000 kW); Beatrice-North Johnstone Rivers (9,000 kW); South Johnstone River (25,000 kW); Herbert River (90,000 kW); Burdekin River (80,000 kW); and Broken River.

The State Electricity Commission, in conjunction with other Government departments, is constantly reviewing the development of hydro-electric resources. It is estimated that full development of the hydro-electric potential of north Queensland would provide the equivalent of over 300,000 kW of power at 50 per cent. load factor or approximately 1,300 million kWh a year.

**7. Generating Capacity.—(i) Regions.** Within the areas administered by the regional electricity boards, development extending over a considerable period may be divided into two stages. The first stage, which is now virtually completed, saw the construction of central power stations at the principal load centres, and of transmission systems, taking supply to smaller centres, thus superseding local generation. The second stage provides for the interconnexion of regional transmission systems to take advantage of lower production costs at the larger power stations. At the same time, it is becoming more economic to locate power stations on coalfields rather than at load centres. The selection of the Callide and Collinsville coalfields as the sites for the next major generating stations in Central and north Queensland is illustrative of this fact.

As part of the first stage, the following new generating stations were commissioned:—Howard (Wide Bay-Burnett Region) which has an installed capacity of 37,500 kW, Rockhampton (Capricornia Region) with 52,500 kW, and Townsville (Townsville Region) which contains 37,500 kW of plant. In the Cairns Region, the Tully Falls hydro-electric power station has been completed with 72,000 kW installed capacity.

The Tully Falls Scheme (*see* para. 6, p. 224) was planned to supply power to the Cairns and to the Townsville Regional Electricity Board systems, and the interconnexion has now been extended southwards to embrace the Mackay Regional Board area also. The commissioning of the further hydro-electric station on the Barron River in September, 1963, has added a further 60,000 kW of hydro-electric generation capacity to these interconnected regional systems. The first stage of the scheme's development is estimated to cost £5,850,000, and initially, full use will be made of available storage capacity at Tinaroo Falls Dam, thus enabling construction of a £5,000,000 storage dam on Flaggy Creek to be postponed for a number of years.

At Mackay, where power was first supplied in 1924, a Regional Electricity Board has now been constituted, and the generating capacity of the station under the control of this Regional Board is 12,500 kW of steam plant and 3,000 kW of diesel plant. To supplement this output a 66 kV transmission line from the Townsville Region has been commissioned. The three North Queensland regions of Cairns, Townsville and Mackay thus form an interconnected system with integrated generation facilities, based mainly on hydro-electric generation.

To serve the needs of the Capricornia region, the construction of a power station capable of being developed to 150,000 kW capacity has commenced at a site on the Callide coalfields. Transmission to the main load centres will be at 132 kV. The Capricornia Region is not connected with either the northern or southern grids.

**(ii) Western Queensland.** In Western Queensland, prior to the war, small isolated internal combustion generating stations supplied power to a number of the larger towns. After the war, the capacities of these existing stations were augmented, they were modernized and converted from direct to alternating current. Supply was also established in larger towns without electrical facilities. Financial assistance towards this electrical development was given by the Government in the form of cash subsidies up to 50 per cent. towards the capital cost involved.

In addition to improving supplies to the larger western towns, a scheme was implemented from 1952 onwards whereby electricity supply was given to smaller western townships where consumers range from 50 to 200. Subsidies of 65 and 60 per cent. are granted if the number of consumers supplied is less than 100 and 200, respectively. At 30th June, 1963, 22 townships in western Queensland were provided with electricity supplied by small oil-driven generating sets with automatic controls which can be run with a minimum of operating attendance. It is planned to install at Birdsville a small generating plant using a pelton wheel driven by water supplied from an artesian bore. For a considerable time, 5 kW generating plant at Quilpie has also been powered in this manner.

Coal-burning gas producers have been successfully commissioned for public electricity supply purposes at Longreach, Clermont, Blackall and Barcaldine, and further extension of their use in western Queensland is predicted, as lower tariffs and more efficient production of electricity is expected to follow their use. The use of natural gas for electricity generation was pioneered in Australia in Western Queensland at Roma. Following the discovery of commercial supplies, and since April, 1961, this fuel has been used at the Roma power

station. During 1962-63, over 73 million cubic feet were utilized. Large boilers now being constructed in the south-eastern portion of the State are being designed to burn natural gas as an alternative fuel should it become available at competitive prices.

In a limited number of cases, transmitted supply from larger generating centres has replaced local generation in small townships, and in southern border areas, transmitted supply is provided from New South Wales to certain townships and rural areas. By teeing off from such transmission lines, supply has been given to many rural properties. The Single Wire Earth Return system of supply has been used extensively in the less populous rural areas.

The State Electricity Commission has acted as consultant for practically all the western local authorities operating electricity undertakings.

All electricity undertakings in western Queensland are operated by local authorities.

(iii) *South-eastern Queensland.* As from 1st January, 1963, all generating and main transmission facilities in south-eastern Queensland have been operated by the Southern Electric authority following a rationalization agreement with the Brisbane City Council. This arrangement will enable all units of generating plant to be operated in the most efficient manner, which was not possible under the previous duality of control. At 30th June, 1963, the combined installed capacity of the Authority was 517,500 kW, comprising 75,000 kW at New Farm, 92,500 kW at Bulimba A, 150,000 kW at Bulimba B, 180,000 kW at Tennyson, and two packaged plants of 10,000 kW each at Abermain (near Ipswich) and Tennyson. The Authority also receives into its system the output of a 3,200 kW hydro-electric plant at Somerset Dam which is operated by the Water Supply Department of the Brisbane City Council. Current plans include the installation by 1964 of a further 60,000 kW at Tennyson and 30,000 kW at Bulimba "B".

To cater for the power needs of this portion of the State after the completion of existing stations, work has commenced on a new power station at Swanbank, on the West Moreton coalfields, with an ultimate capacity of 360,000 kW.

Power from this station will also be transmitted to the Wide Bay-Burnett region at 132 kV, which will obviate the installation of additional plant within this region.

#### § 4. South Australia

1. **General.**—An account of the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd. in 1932 and 1935.

Following an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the *Electricity Act 1943* was passed, which, *inter alia*, established the South Australian Electricity Commission.

2. **The Electricity Trust of South Australia.**—Early in 1946, the assets of the Adelaide Electric Supply Co. Ltd. were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the *Adelaide Electric Supply Company's Acts 1897-1931*, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organizations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organizations, and give or receive supplies of electricity in bulk.

3. **Capacity and Production.**—Three main categories of organizations generate electric power in South Australia, namely:—(a) governmental, which include the Electricity Trust; (b) local authorities, e.g. municipal and district councils, and the Renmark Irrigation Trust; and (c) other, including individuals and firms primarily engaged in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

Of the total installed capacity in South Australia, the Electricity Trust operated plant with a capacity of 551,000 kW, and is the most important authority supplying electricity in the State. There were approximately 337,000 ultimate consumers of electricity in the State, of whom 312,600 were supplied directly and approximately 11,000 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne "A" (64,000 kW), Osborne "B" (180,000 kW), and Port Augusta Playford "A" (90,000 kW) and Playford "B" (180,000 kW), the balance of the capacity controlled consisting of house sets and regional stations at Port Lincoln and Mount Gambier, where the Trust operates steam power stations of 5,000 kW and 21,800 kW capacity respectively, the former burning fuel oil and the latter either wood waste or fuel oil. In March, 1963, Mt. Gambier was connected with the Metropolitan system by a 132 kV line.

No hydro-electric potential exists in South Australia. Steam generating units comprise 97 per cent. of installed capacity and the balance is internal combustion equipment. Until 1946, all fuel consumed in the thermal stations was obtained from sources outside the State, and at times power restrictions were necessary owing to the inadequacy of supplies.

4. Leigh Creek and other New Capacity.—With a view to reducing the dependence on external sources of fuel, steps have been taken to produce local coal and to install plant to use it. Fairly extensive deposits of low-grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the *Electricity Trust of South Australia Act Amendment Act* 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30th June, 1963, 1,470,150 tons of coal were produced, practically all of which was used by the electricity undertaking.

The Playford "B" Power Station at Port Augusta will be completed in March, 1964, with the commissioning of the fourth 60,000 kW turbo-alternator. Leigh Creek coal is used exclusively in both power stations at Port Augusta.

A further 60,000 kW turbo-alternator with an associated oil fired boiler is being installed at Osborne "B" station and is due to be commissioned early in 1965.

A large power station is to be constructed on Torrens Island near Adelaide and two 120,000 kW turbo-alternators and associated oil fired boilers have been ordered, the first to be commissioned early in 1967.

## § 5. Western Australia

1. General.—Electrical undertakings in Perth and Fremantle formerly owned by the Perth City Council, the Western Australian Government Electricity Supply, the Fremantle Municipal Tramways and Electric Lighting Board, and other metropolitan, municipal and road board supply authorities have been taken over by the State Electricity Commission of Western Australia. For information on the early history of electricity supply in the metropolitan area, see Year Book No. 39, page 1189.

2. The State Electricity Commission of Western Australia.—In order to ensure an organized and co-ordinated future growth of electricity generation and distribution throughout the State, the Government passed the *State Electricity Commission Act* 1945 and the *Electricity Act* 1945. Under these Acts, the State Electricity Commission was established and given power to secure the ultimate co-ordination of all State or other electrical undertakings in the State, to construct and operate power stations and transmission lines, and to purchase as a going concern and carry on the undertaking of any supply authority. No person or organization is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and that their proposals are not inconsistent with the Commission's plans.

3. General Pattern of Electricity Supply.—(i) *General.* The State Electricity Commission gives central power station supply to the metropolitan area and an area of approximately 25,000 square miles defined in the report which formed a basis for the *South West State Power Scheme Act* 1945. These areas include the more highly developed rural districts with a greater population density, which can more readily be connected to a central power station system. It has been announced recently that a similar scheme to be known as the Northern Areas State Power Scheme will be developed during approximately the next sixteen years to serve towns as far north as Northampton.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes, with the exception of Kalgoorlie which is separately mentioned below.

(ii) *Interconnected System.* At the request of the Government, the Electricity Advisory Committee, in 1945, submitted a report which recommended, among other things, a national power scheme for the south-west. The plan provided for acquisition of the existing Collie Power Station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connexion of the south-west scheme with the metropolitan system. In 1946, the State Electricity Commission acquired the Collie Power Station, and since then it has acquired a number of electrical undertakings from municipal bodies and private organizations in the south-west area and is proceeding with arrangements for the purchase of others. In August, 1951, the first portion of the South-West Power Scheme was officially opened at Collie, and most of the south-west towns have now been connected by transmission line to the interconnected system.

Statistics relating to activities of the interconnected system are shown in the following table.

#### WESTERN AUSTRALIA: INTERCONNECTED SYSTEM

Particulars					1961-62	1962-63
Plant capacity	..	..	..	.. kW	289,500	289,500
Maximum load	..	..	..	.. kW	191,000	229,000
Units generated	..	..	..	.. Million kWh	866	987
Fuel used per unit (kWh) generated	..	..	..	.. lb.	1.54	1.49
Coal used	..	..	..	.. tons	521,978	583,170

In Kalgoorlie, all gold mines now generate their own power requirements. The Power Corporation has ceased operations, and the Kalgoorlie Town Council operates a new 50 cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Council will continue to operate for some time at least.

4. *New Projects.*—Since its inception in 1946, the State Electricity Commission has made the provision of an adequate reserve of generating plant its primary object. With the commissioning of the first unit at South Fremantle Power Station in May, 1951, the lag caused by shortages during the war and early post-war years was overcome. The system then developed rapidly to keep pace with the expansion of industry and housing. Generating plant has been quadrupled in the past seventeen years. The three major power stations have been interconnected with the South West Power Station at Collie enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is being undertaken to keep pace with the growth in consumer demand, which is being maintained at a high level.

Work has commenced on two 60,000 kW turbo alternators, boilers and buildings for the first section of a new station at Muja near Collie, adjacent to a source of open-cut coal. The first unit is planned to be in service in the latter part of 1965, with similar units to be ready for commercial service in March, 1967, 1968 and 1969.

## § 6. Tasmania

1. *General.*—A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low costs is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The cheap power has led to the establishment in Tasmania of several large electro-chemical and metallurgical works with high load factor, and as a consequence the system load factor is also very high (at present 65.2 per cent.).

For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

2. **The Hydro-Electric Commission.**—(i) *Present System.* In 1929, the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vests in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorizes it to develop and reticulate electric power for all purposes. In 1930, this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department.

The first project undertaken by the Commission was the Shannon Power Development which utilizes 258 feet of the difference in level between the Great Lake (Mienna Dam) and Waddamana forebay.

The Tarraleah Power Development was commenced in 1933. In this scheme, the waters of the River Derwent are picked up near Butler's Gorge by a canal and conveyed 14 miles to the pipeline forebay 982 feet above the power station on the Nive River.

The Trevallyn Power Development, which commenced in 1949, was the first constructed by the Commission outside the Central Plateau region and was undertaken primarily to meet the requirements of the aluminium industry. The waters of the South Esk River are diverted through two miles of tunnel and pipeline to a power station on the Tamar River near Launceston.

The Tungatinah Scheme, on which construction started in 1948, draws water from three separate catchment areas located on the Central Plateau between the Great Lake (Shannon-Waddamana) and Lake St. Clair (Butler's Gorge-Tarraleah) catchments, and control of practically the whole run-off from the Central Plateau has now been effected.

The Wayatinah Power Development, started in 1952, comprises two power stations and headworks to utilize water which is, in the main, already regulated and which has been used several times. The volume of water available is much larger and the head smaller than in the case of other major stations.

For further details of these schemes see Year Book No. 48, pp. 243-4, and earlier issues.

The Catagunya Power Development utilizes the whole of the waters flowing through Tarraleah and Tungatinah Power Stations and successively through the Liapootah and Wayatinah Power Stations plus water from the Florentine River. Preliminary construction on this development began early in 1957. Four miles below Wayatinah, a diversion dam was constructed at Catagunya, and a power station with an installed capacity of 48,000 kW was completed at the end of June, 1962. The dam was designed and built as a pre-stressed concrete structure, 147 feet in height, and it is notable as being only the second of its type and the largest yet undertaken by this technique anywhere in the world.

The total installed capacity of the present system throughout Tasmania in June, 1963, was as follows.

	Power station	Installed capacity of alternators	
			kW
Shannon .. .. .	.. .. .	.. .. .	10,500
Waddamana " A " .. .. .	.. .. .	.. .. .	49,000
Waddamana " B " .. .. .	.. .. .	.. .. .	48,000
Tarraleah .. .. .	.. .. .	.. .. .	90,000
Butler's Gorge .. .. .	.. .. .	.. .. .	12,200
Trevallyn .. .. .	.. .. .	.. .. .	80,000
Tungatinah .. .. .	.. .. .	.. .. .	125,000
Lake Echo .. .. .	.. .. .	.. .. .	32,400
Liapootah .. .. .	.. .. .	.. .. .	83,700
Wayatinah .. .. .	.. .. .	.. .. .	38,250
Catagunya .. .. .	.. .. .	.. .. .	48,000
<b>Total</b> .. .. .	.. .. .	.. .. .	<b>617,050</b>
King Island (diesel plant)	.. .. .	.. .. .	390

(ii) *New Capacity.* The installed capacity of the system now stands at 617,050 kW, and approved construction will bring this total to approximately 1,230,000 kW by 1974. Investigations are continuing into the very considerable resources as yet untouched, principally in the west and north-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 2,400,000 kW to the system.

The Hydro-Electric Commission is engaged on a construction programme which comprises the Great Lake Power Development, the Lower Derwent Power Development and the Mersey-Forth Power Development. In the first named, the water of the Great Lake,

by its diversion in the direction of the most precipitous fall, will be used to much greater advantage than at present. Eventually reaching the South Esk River, it will be used again through the generators of the Trevallyn Power Station. In this development, the power will be generated by the fall of water through a vertical distance of 2,730 feet to an underground power station where generators of 300,000 kW capacity will be installed. The station will be known as Poatina Power Station. A further section of the scheme includes the provision of a dam at Arthur Lakes to increase greatly the storage of the system, and a pumping station and a conduit discharging into the Great Lake so that water from this catchment may be utilized through the Poatina Power Station.

In the Lower Derwent Power Development, a three-stage development is under construction below Catagunya on the River Derwent. With dams and power stations named Repulse, Cluny and Meadowbanks, the completion of this project by 1968 will add a further 85,000 kW to the system, and it will also bring to an end the exploitation of the power potential of the River Derwent and its tributaries.

The Mersey-Forth Power Development has been sanctioned for construction and is scheduled to be completed by 1974. In this development, the Mersey River will be diverted westward to the Forth River by the construction of the Parangana Dam about half a mile below the junction of the Mersey and Fisher Rivers. Thence the flow will be conducted by a tunnel and penstock to Lemonthyme Power Station on the Forth River. The combined flow will be used for power generation at three power stations on the Forth River situated at the foot of dams at Cethana, Devil's Gate, and Palooana. The Wilmot River will be diverted to the east by a dam through a tunnel to a power station on the Forth River upstream from Cethana Dam. The diverted flow of the Wilmot River will also be used to produce power at Cethana, Devil's Gate, and Palooana. A sixth power station will result from the development of the Fisher River, where a rapid fall from Lake Mackenzie on the plateau to the Mersey River enables a head of some 2,100 feet to be exploited.

The principal storage in the development will be situated on the upper Mersey River at Walters Marsh. Smaller storages will be provided by Lake Mackenzie and by Parangana, Wilmot, Cethana and Devil's Gate Dams.

The six stages of the development are to be completed progressively between 1969 and 1974 and will add a total of 286,000 kW to the system.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme.

**3. Power Usage by Secondary Industry.**—The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries for which energy costs constitute a large proportion of the total cost of production. These include the Electrolytic Zinc Company of Australasia Ltd., Comalco Aluminium (Bell Bay) Ltd., the Australian Newsprint Mills Ltd., the Associated Pulp and Paper Mills Ltd., the Australian Commonwealth Carbide Company Ltd., the Mount Lyell Mining and Railway Company Ltd., the Goliath Portland Cement Company Ltd. and the Tasmanian Electro Metallurgical Co. Pty. Ltd. A paper pulp mill constructed by Australian Paper Manufacturers Ltd. at Geeveston, south of Hobart came into operation towards the end of 1962. The continuous power demands of all these organizations when plant is in full operation aggregates 273,000 kW.

The associated Pulp and Paper Mills Ltd. is now constructing an entirely new particle board mill at Wesley Vale, near Devonport in northern Tasmania, and it is known that other industrial undertakings in the State are also contemplating expansion of their activities.

## § 7. Commonwealth Territories

**1. Internal Territories.**—(i) *General.* The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

(ii) *Australian Capital Territory.* The supply authority is the A.C.T. Electricity Authority which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1st July, 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connexion to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies, and 5,100 kW of locally owned steam generating plant was disposed of during 1962–63.

Total population served with electricity at 30th June, 1963, was 73,000 and the total number of ultimate consumers was 21,663.

During the year 1962-63, the bulk electricity purchased was 202,457,700 kWh and the system maximum demand was 54,756 kW.

(iii) *Northern Territory.* At Darwin, supply was established by the Town Council in October, 1934, but during April, 1937, responsibility for generation and supply was transferred to the Northern Territory Administration. The power station is now equipped with turbo alternators with a total capacity of 15,000 kW. Tenders were called in March, 1964, for an additional 15,000 kW turbo alternator and boiler for installation at Stokes Hill, Darwin, power station. In addition, diesel generating plant of approximately 6,500 kW is available. A 66 kV transmission system is used.

At Alice Springs, the power station is equipped with diesel generating plant of 3,800 kW capacity.

At Katherine, the power station is equipped with a diesel generating plant of 960 kW capacity, and a 550 kW set is currently under contract.

The diesel station at Tennant Creek was closed down in 1957, supply for the township being purchased in bulk from Peko Mines N.L.

The total number of ultimate consumers served in the Territory at 30th June, 1963, was 5,691.

**2. External Territories—Papua and New Guinea.**—Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1st July, 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works.

The Commission, on its own behalf, operates the public supplies in the main centres of population, and, on behalf of the Administration, operates the supply in the minor centres and patrol posts, hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply.

The Commission also has regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory. The Appliance Approval By-laws will be based upon complete reciprocity with the Australian approval authorities.

The generating capacity in the centres under the control of the Commission is as follows:—Port Moresby—diesel, 2,223 kW, hydro, 5,500 kW; Rabaul—diesel, 3,000 kW; Lae—diesel, 2,640 kW; Madang—diesel, 1,610 kW; Wewak—diesel, 615 kW; Goroka—hydro, 400 kW; Samarai—diesel, 300 kW; Kavieng—diesel, 194 kW; Kokopo—diesel, 64 kW.

On behalf of the Administration, the Commission operates generating sets totalling some 4,000 kW distributed over 130 centres, with capacities between 5 and 150 kW.

The townships of Wau and Bulolo are supplied by power generated by Bulolo Gold Dredging Limited, which operates hydro-electric plant of 5,500 kW capacity. Power produced by this plant is used mainly in the plywood mill and gold dredges at Bulolo.

The Commission has a policy to take increasing advantage of the hydro potential existing in the Territory. Work has recently been completed on the Sirinumu Dam on the Laloki River near Port Moresby, which will provide regulation of the river, to give a minimum flow of 200 cusecs.

Tenders have recently been let for the supply of three 6,000 kW generating sets, which will be installed in an underground power station, which will take advantage of the fall in the Laloki River over the Rouna Falls. This station will have an ultimate capacity of 30,000 kW. It is planned to commission the station in August, 1967.

Preliminary investigations have indicated the economics of developing the potential of the Upper Ramu River adjacent to Kainantu in New Guinea, to provide a regional supply to Lae, Madang, Kainantu, Goroka and Mount Hagen. The present planning is to provide a station designed for ultimate capacity of 50,000 kW, and for the installation of two 8,000 kW machines in the first stage.

Some 400 miles of 66 kV transmission line will be constructed to bring power to the centres of consumption.

To meet the growing needs of the Territory, pending the commissioning of the hydro-electric power stations on the Laloki and Upper Ramu Rivers, the Commission is adopting the policy of installing skid-mounted diesel generating sets of a capacity which will permit their transfer at a later date to other growing centres. Trends indicate that a total of seven 500 kW sets will be needed at Port Moresby. These will later be transferred to Lae and Madang.

Extensive investigations have been made to locate a suitable source of hydro-electric power to supply the township of Rabaul and the quickly developing area along the Gazelle Peninsula. However, the geological reports on those sites so far investigated have not been encouraging, and at present no firm proposal has been put forward.

Several small hydro-electric installations have been made or are in process of construction to serve isolated centres. These are—Aiyura Agricultural Station—30 kW; Mount Hagen—120 kW; Mendi (under construction)—100 kW; Tapini (under construction)—30 kW.

The Commonwealth Department of Works has a Stream Gauging Section and maintain records of many of the main rivers in order to provide material for future investigations into some of the major hydro-electric potential which exists in the Territory.

In 1950, the Commonwealth Government joined with the British Aluminium Co. Ltd. of London to locate and develop large capacity hydro-electric schemes in New Guinea. A company was formed, known as New Guinea Resources Prospecting Co. Ltd., with a capital of £100,000. The Commonwealth Government held 51 per cent. of the shares, and had a controlling interest on the Board of five members, but it later sold its interest to a company formed by Consolidated Zinc Pty. Ltd. and British Aluminium Co. Ltd., both of London. This company carried out very extensive investigations into the rivers of the Gulf of Papua and, in particular, into the Purari River.

The number of consumers served by the Commission as at 30th June, 1963, was 7,410. The consumers in minor centres approximate 2,000.

#### STATISTICAL SUMMARY

The following table shows statistics for each State separately and for the six States combined for the year 1961-62.

Statistics of the electricity supply industry for the years 1957-58 to 1961-62 are given in Chapter VI. Manufacturing Industry.

(a) Not available for publication; included in the total for Australia. (b) Average employment in generating station, over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. (f) Approximate figures supplied by the electricity authority in each State. An "ultimate consumer" is a person, business, undertaking, etc., that has contracted to receive electric power from a public or private organization supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household.

## CHAPTER VIII

## WATER CONSERVATION AND IRRIGATION

## RESOURCES, UTILIZATION AND NATIONAL AND INTERSTATE ASPECTS

## § 1. Introduction

Official Year Book No. 37, pages 1096-1141, contained a special article on the conservation and use of water in Australia, and for details of general, descriptive and historical matter reference should be made to this article.

For further details on geographical and climatic features determining the Australian water pattern, reference should be made to Chapter II. Physiography; on water supply and sewerage in metropolitan areas, cities and towns to Chapter XX. Local Government; and on the generation of hydro-electric power to Chapter VII. Electric Power Generation and Distribution, of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-65 of Official Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of issue No. 48.

## § 2. Water Resources and their Utilization

1. **Surface Supplies.**—Though river gaugings have been recorded over considerable periods in some parts of Australia, records elsewhere are intermittent, of short duration, or non-existent. At present, therefore, it is impossible to estimate, with any degree of reliability, the total average annual flow of Australian streams, but it would probably amount to only a small figure in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Nile, 72; Danube, 228; Amazon, 1,780; Volga, 148; Mississippi, 474; and the ten main rivers of the United States of America in the aggregate, 900.

2. **Major Dams and Reservoirs.**—The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June, 1963. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are, in addition, many others of smaller capacity in Australia.

## MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
EXISTING DAMS AND RESERVOIRS				
Eucumbene ..	Eucumbene River, New South Wales	3,500,000	381	Part of Snowy Mountains Hydro-electric Scheme
Eildon .. ..	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume .. .. .	Murray River near Albury	2,500,000	142	Part of Murray River Scheme—storage for domestic, stock and irrigation purposes. Hydro-electric power also developed
Menindee Storage Lakes	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River Water Conservation Scheme for irrigation and possible hydro-electric power generation
Warragamba ..	Warragamba River, New South Wales	1,670,000	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation

(a) Useful storage only.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<i>EXISTING DAMS AND RESERVOIRS—continued</i>				
Miena .. ..	Great Lake, Tasmania	(a)984,500	40	Regulates water to Waddamana hydro-electric power station
Burrinjuck .. ..	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset .. ..	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Lake Victoria .. ..	Murray River, near South Australian border, in New South Wales	551,700	..	Natural storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo .. ..	Lake Echo, Tasmania	(a)412,200	60	Storage for Lake Echo and Tungatinah hydro-electric power stations
Keepit .. ..	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation
Waranga .. ..	Goulburn River, Victoria	333,400	..	Irrigation storage
Tinaroo Falls .. ..	Barron River, north Queensland	330,000	133	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn .. ..	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands .. ..	Glenelg River, Victoria	272,000	..	Part of Wimmera-Mallee domestic and stock water supply system
Clark .. ..	Derwent River, Tasmania	(a)253,400	200	Serves Tarraleah hydro-electric power station
Eppalock .. ..	Campaspe River, near Heathcote, Victoria	252,900	150	To supplement supply to Bendigo and for irrigation
Wyangala .. ..	Lachlan River, New South Wales	(b)245,000	200	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. ( <i>See also</i> under Dams and Reservoirs under Construction)
Tantangara .. ..	Murrumbidgee River, New South Wales	(a)193,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon .. ..	Avon River, New South Wales	173,800	232	Part of Sydney water supply
Glenmaggie .. ..	Gippsland, Victoria	154,300	100	Storage for irrigation
Lake St. Clair .. ..	Central Highlands, Tasmania	(a)154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington .. ..	Collie River, Western Australia	150,100	112	For supply of water to irrigation districts and to agricultural areas and country towns
Serpentine .. ..	Serpentine River, Western Australia	144,000	171	For Perth water supply
Lake Brewster .. ..	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran .. ..	Loddon River, Victoria	120,600	..	Storage for irrigation
Upper Yarra .. ..	Yarra River, Victoria	110,000	270	For Melbourne water supply

## DAMS AND RESERVOIRS UNDER CONSTRUCTION

Burrondong .. ..	Macquarie River, near Wellington, New South Wales	1,361,000	250	For rural water supplies, flood mitigation and possible hydro-electric power generation
Wyangala .. ..	Lachlan River, New South Wales	1,000,000	270	Strengthening and enlarging of existing dam for increased water supply and hydro-electric power generation. ( <i>See also</i> under Existing Dams and Reservoirs)
Arthur Lakes .. ..	Source of Lake River near Great Lake, Tasmania	(a)339,000	50	Part of Great Lake hydro-electric power development
Koombooloomba .. ..	Tully River, north Queensland	146,000	123	For hydro-electric and possibly irrigation purposes

(a) Useful storage only.

(b) Temporary reduced level.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—continued

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
DAMS AND RESERVOIRS PROJECTED				
Burdekin Falls ..	Burdekin River, North Queensland	6,584,000	150	For generation of hydro-electric power, irrigation and flood mitigation
Chowilla ..	Murray River, in South Australia, near Victorian border	4,750,000	41	Regulation of the lower Murray River
Ord River ..	Near Wyndham, Western Australia	3,500,900	200	For irrigation, generation of hydro-electric power and flood mitigation. (Additional 6,000,000 acre-feet flood control proposed)
Blowering ..	Tumut River, New South Wales	1,300,000	346	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for power generation
Buffalo ..	Buffalo River, near Myrtleford, Victoria	800,000	260	For irrigation
Talbingo ..	Tumut River, New South Wales	600,000	500	Part of Snowy Mountains Hydro-electric Scheme
Jindabyne ..	Snowy River, New South Wales	560,000	210	Part of Snowy Mountains Hydro-electric Scheme
Warkworth ..	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for the Hunter Valley
Winton ..	Winton Swamp, near Benalla, Victoria	300,000	35	To store flood flows in Broken River for irrigation
Rowallan ..	Mersey River, North Tasmania	110,000	140	Storage for Mersey-Forth power development

3. Irrigation.—(i) *History.* For some brief remarks on the history of irrigation in Australia see issues of the Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Year Book No. 37, page 1099.

(ii) *Extent and Nature of Irrigated Culture.* The following table shows the area of land irrigated in each State during the seasons 1958-59 to 1962-63, and the nature of irrigated culture in each State in 1962-63.

AREA OF LAND IRRIGATED (Acres)

Season and crop	N.S.W. (a)(b)	Vic. (c)	Q'land	S. Aust.	W. Aust.	Tas.	N.T. (d)	A.C.T.	Aust. (e)
1958-59 ..	641,361	965,766	154,633	85,081	44,102	13,431	274	1,224	1,905,872
1959-60 ..	889,441	1,052,782	152,136	100,899	45,889	18,108	365	869	2,260,489

(a) Source: Water conservation and Irrigation Commission. (b) Includes total area irrigated by licensed Diversions, but details for individual crops, etc., in 1962-63 (205,675 acres), are not available. (c) Source: State Rivers and Water Supply Commission. (d) Incomplete, excludes area of rice irrigated. (e) See footnote (b) to New South Wales. (f) Not available for publication; included in Other crops. (g) Not available for publication; excluded from totals. (h) Incomplete, see footnotes to individual States. (i) Not available separately; included in Other crops. (j) Includes tobacco, 15,202 acres.

Nearly half of Australia's irrigated acreage is in Victoria, and about two-thirds is situated along the Murray and its tributaries (including the Murrumbidgee) in the three States of New South Wales, Victoria and South Australia. In those areas served by the Murray and its tributaries, irrigation water is used extensively for vines, orchards, pastures, fodder, and for domestic and stock purposes. Approximately forty per cent. of Queensland's irrigated acreage is devoted to sugar cane. Western Australia's small irrigated acreage is confined to areas in the south-west where vegetables, orchards, fodder, and pastures are served. Large scale irrigation schemes have not been developed in Tasmania or the Northern Territory, although investigations are at present being carried out in the Northern Territory to determine the availability of irrigation water for agriculture.

(iii) *Research.* Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following:—high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilization of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; and the potability of saline waters for stock.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Irrigation Research Laboratory at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, wine grapes and lucerne. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Merbein (Victoria), the Horticultural Research Section is working on problems of the dried-fruit industry. The Division of Land Research and Regional Survey conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connexion with the utilization of underground water for irrigation. The Division of Soils and the Soil Mechanics Section are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River. The Division of Physical Chemistry is investigating methods of minimizing evaporation losses from water storages by the use of monomolecular layers.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee Irrigation Areas. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales and certain farmers' organizations (including extension groups). Finance is provided by these authorities on an agreed basis. The objectives are:—to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organization; to provide means for farmer opinion to have due weight in the consideration of

regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and the co-ordination of the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

4. **Preservation of Catchments.**—Since water conservation commences on the catchments, it is becoming increasingly recognized that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimize the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reafforestation and the preservation of catchments. In recent years, efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

5. **Sub-surface Supplies.**—(i) *General.* Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes. These supplies are indispensable in most inland areas. The quality of the water ranges from usable to very saline. In inland areas, a considerable amount of water has been tapped that is unusable because of its high salt content. Because of this, development of an economic desalting process would provide the interior with additional large quantities of usable water.

Considerable use is also made of sub-surface water, other than pressure water, from local storages, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies, but its use for these purposes is increasing.

Commonwealth and State departments interested in underground water resources are represented on the Technical Committee on Underground Water (formerly the Underground Water Conference of Australia), which is under the auspices of the Australian Water Resources Council (*see* § 3, para. 2, p. 239).

The various States and Territories maintain Geological Surveys and Water Commissions which are continually extending the knowledge of their own States. These authorities have been assisted more recently by various scientific and industrial foundations. In New South Wales, for example, the Hunter Valley Research Foundation is carrying out scientific investigations in the catchment area of the Hunter River, and this includes an integrated study of water, soils and climate.

In addition, the University of New South Wales recently formed the Water Research Foundation which has among its objectives research into underground water. To date, research has been devoted mainly to run-off studies, to the design of large earth farm dams and to sponsoring post-graduate hydrology courses.

As a result, a general picture exists of Australia's available and potential underground water resources. Much remains, however, to be done in the mapping and assessment of individual artesian and sub-artesian basins and in the investigation of their constituent aquifers. Detailed investigations also remain to be carried out of shallower underground water in alluvial deposits, coastal sands and mantles of weathered and jointed rock.

Surveys of this nature are of great importance because of the fundamental need for underground sources of water in the settlement of large areas of Australia.

(ii) *Artesian and Sub-artesian Supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. The following are the principal defined water-bearing basins in Australia.

## PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

Name	State	Geological age of chief aquifers	Approximate area	Depth to pressure water
			Square miles	Feet
Great Artesian ..	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic .. ..	676,250	Up to 7,000
Canning ..	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Georgina (including Barkly and Daly) ..	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian and Upper Proterozoic(?)	108,000	150 to 1,000
Murray ..	Victoria, New South Wales and South Australia	Miocene-Eocene ..	107,000	100 to 1,300
Eucla .. ..	Western Australia, South Australia	Pliocene-Miocene ..	74,000	300 to 2,000
Carnarvon ..	Western Australia	Cretaceous, Permian ..	45,000	200 to 4,000
Perth .. ..	Western Australia	Recent, Jurassic ..	21,000	200 to 2,500
Western District (Otway)	Victoria ..	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian and Permian	12,000	Unknown
Pirie-Torrens ..	South Australia ..	Recent, Pleistocene ..	9,000	Up to 600
East Gippsland ..	Victoria ..	Pleistocene-Eocene ..	3,500	200 to 3,500
Adelaide ..	South Australia ..	Recent, Oligocene ..	1,100	10 to 600

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins, the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies, Australia has been faced with the problem of flow diminution. It was recognized early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasized the need to eliminate wastage as much as possible, and investigations have been made regarding wasteful methods of distribution of artesian water by open channels or bore drains and the careless use of water. (For greater detail on this subject see Year Book No. 37, pp. 1103-4 and § 4, para. 3.)

(iii) *Shallow Groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock and domestic purposes. Two of the most important of these supplies are in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day.

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the underground water resources of river and coastal alluvium for irrigation and town water supplies.

### § 3. National and Interstate Aspects

1. *General.*—As the Commonwealth Constitution makes special reference to water rights, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources rests with the individual State governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

2. *Australian Water Resources Council.*—This Council was established in 1962 to provide a means of securing the highest level of basic information on Australian water resources and of making it readily available. The major problem faced by the Council is that Australia does not have a reliable estimate of how much water is available now, and how much will be available in the future. The Council therefore intends to provide a comprehensive assessment of Australia's water resources, and to extend measurements and research so that future planning can be carried out on a sound and scientific basis.

The first meeting of the Council was held in March, 1963. The Council comprises the Minister for National Development as Chairman, the Minister for Territories, and the Minister in charge of water supplies from each State. Provision has been made for Ministers responsible for closely related activities to be co-opted when problems of particular concern to them are under discussion. The Council is assisted by a Standing Committee of Commonwealth and State officers. Technical committees on surface water and on underground water have been established to undertake detailed investigations.

3. *Murray River Scheme.*—(i) *General.* The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 414,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and one-fortieth of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows:—Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,623,000 acre feet; Darling River, 2,896,000 acre feet; Goulburn River (including Broken River), 2,570,000 acre feet; Murrumbidgee River, 2,054,000 acre feet; and Ovens River, 1,222,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

(ii) *River Murray Waters Agreement.* For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia, see issues of the Year Book prior to No. 39. Under the Agreement, construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949, see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see para. 5, Snowy Mountains Hydro-electric Scheme, p. 241) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7th April, 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6th November, 1958.

Legislation to permit further amendment of the Agreement to provide for the construction of a storage of approximately 4,750,000 acre feet capacity at Chowilla in South Australia has been passed by the Commonwealth and State Parliaments. The dam will be located some six miles downstream from the border between Victoria and South Australia, and will consist of concrete outlet structures and a bank forty-one feet high across the flood plain. The overall length of the dam will be three and one-third miles, and the lake formed behind it will extend to Wentworth Weir, a distance of about one hundred and twenty miles by river.

The estimated quantity (in acre feet) of water diverted during 1962-63 from the Murray and its tributaries for irrigation and other purposes under the River Murray Agreement was as follows:—New South Wales, 2,602,000; Victoria, 3,060,000; South Australia, 296,000; a total of 5,958,000 acre feet.

(iii) *River Murray Works.* One of the major works of the Murray River Scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, 10 miles above Albury, forming a lake of 56,000 acres. The design comprises a mass concrete spillway and outlet works extending for 1,000 feet, and an earthen embankment 142 feet high extending for 4,000 feet across the river flats, the length of the total structure being approximately one mile. Work on the enlargement of the reservoir to its approved capacity was completed in 1961.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, served by the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, to serve 1,500,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, to serve 270,000 acres. Only a portion of each area will be irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing very materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Burrinjuck (Murrumbidgee), Keepit (Namoi) and Wyangala (Lachlan); Victoria—Eildon (Goulburn) and Waranga (Goulburn). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia at present, but the construction of a large storage at Chowilla is proposed (*see sub-para. (ii) above*).

4. **New South Wales-Queensland Border Rivers Agreement.**—The New South Wales-Queensland Border Rivers Agreement came into effect on 1st July, 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Commission to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the Macintyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi. The cost of these works and of administration are to be borne by the States in equal shares. The agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

The Water Conservation and Irrigation Commission of New South Wales, which is the constructing authority for the dam, carried out investigations of several dam sites on the Dumaresq River near Mingoola Station homestead, which is approximately 39 miles from Tenterfield. Foundation drilling supplemented by a geophysical survey carried out by the Commonwealth Bureau of Mineral Resources disclosed unfavourable foundation conditions at all sites, the depth of alluvium overlying sound rock exceeding 150 feet in all cases. In an endeavour to obtain more economical storages, investigations were extended to tributary streams, and superficially suitable sites have been located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. This report is at present under consideration.

The Irrigation and Water Supply Commission of Queensland is the constructing authority for the new weirs and regulators. Bonshaw and Cunningham Weirs on the Dumaresq River were completed in 1953 and 1954 respectively.

A weir and regulator have been constructed on the Barwon River at the offtake of the Boomi River. A low level weir to establish a pumping pool at Glenarbo on the Dumaresq River was also constructed. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed, it is unlikely that any weirs, other than those referred to above, will be required.

The catchments for the border streams (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilize and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

5. **Snowy Mountains Hydro-electric Scheme.\***—Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act 1949* setting up an Authority to implement the proposals agreed upon.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

\* See also Chapter VII. Electric Power Generation and Distribution, p. 210. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. Miscellaneous, of Year Book No. 42.

The Scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in Chapter VII. Electric Power Generation and Distribution (*see pp. 210-12*).

An additional 500,000 acre feet of water per annum is now available for irrigation in the Murrumbidgee Valley. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land which is expected to result in a substantial increase in annual primary production.

#### § 4. International Aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-four countries, including Australia, have already been admitted to membership.

The Central Office of the International Commission is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain and Japan, in that order. The sixth Congress will be held in India in January, 1966.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, "that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms and individuals actively interested in irrigation and drainage". The Committee meets annually.

### STATES AND TERRITORIES

#### § 1. Australian Local Pattern of Water Conservation and Use

The foregoing sections deal with water conservation and irrigation in Australia generally and with international, national and interstate projects. The following survey covers the local pattern of water resources and the steps taken by the State governments to bring about their development. It will be seen that water policies in the various States tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria, almost every form of water scheme is in operation. In New South Wales, major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilize sugar production.

Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

## § 2. New South Wales

1. **General.**—(i) *Rainfall and History.* On page 1110 of Year Book No. 37, information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also Chapter II. Physiography, p. 47, of this issue.)

(ii) *Administration.* The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the *Water Act* 1912–1955, the right to the use and flow and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales–Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 241 of this chapter.

2. **Schemes Summarized.**—(i) *Location and Type.* The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc., in many places, and a head storage on the Macquarie River is nearing completion. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are:—The Murrumbidgee Irrigation Areas, consisting of 451,260 acres served with water through a channel system stemming from the river at Berembded Weir; the Coomealla Irrigation Area of 34,672 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,393 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,693 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (109,179 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in sub-section (iii) below.

(ii) *Works.* The capacities of the main storages (in acre feet) are:—

*Darling*—Menindee Lakes Storages (2,000,000);

*Murray*—Half share of Hume Reservoir, weirs and locks to Wentworth (1,361,420); Stevens Weir, Edward River (7,165);

*Murrumbidgee*—Burrinjuck Dam (837,000); Berembded Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

*Namoi*—Keepit Dam (345,000);

*Lachlan*—Wyangala Dam (temporary reduced level 245,000); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200); and

*Hunter*—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 4,772 miles. This comprises 3,367 miles of supply channels (including main canals), 1,336 miles of drains and escape channels, and 69 miles of pipe lines.

(iii) *Extent of Systems and Nature of Irrigated Culture.* The following table shows the areas of the various irrigation systems in 1962-63 and particulars of the areas under irrigated culture in New South Wales during the seasons 1958-59 to 1962-63.

**AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES**

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous: in 1962-63, deciduous amounted to 10,010 acres, of which 9,796 acres were in the Murrumbidgee Irrigation Area. (c) Includes details (except Total area) for Licensed Diversions. (d) Includes total area irrigated by Licensed Diversions, but details for individual crops, etc., are not available. (e) Not available. (f) Incomplete. (g) Details for individual crops, etc., are not available.

3. **Irrigation Areas.**—(i) *Murrumbidgee.* (a) *Description.* These areas, together with adjacent lands supplied under agreement, received 403,770 acre feet, or nearly a quarter of the total water (1,702,301 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, 40 miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerembah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September-May irrigation season. It passes along the river channel to Berembed Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30th June, 1963, its population was approximately 27,000, that of Leeton Shire being 10,500 and that of Wade Shire 16,500.

(b) *Administration.* The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30th June, 1963, was 408,876 acres, including 37,278 acres held for short lease grazing, agriculture, etc.

(c) *Production.* The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season, the water supplied for rice represents about half the total delivered to the Areas.

(ii) *Other Irrigation Areas.* The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

4. **Irrigation Districts.**—These Districts are set up under the *Water Act* 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to landholders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilize the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on “extensive” irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by landholders. “Water right” means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Deniboota and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tullakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30th June, 1963, the total

length of completed canals and channels in Berriquin District was 996 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 782 miles, escape channels 107 miles and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day.

Wakool, with 387 miles of channel, contains 309 holdings, and the area developed by irrigation includes about one acre in five of the total area. Sheep raising is the main industry.

Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying and wheat growing are the main industries.

**5. Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts.**—The *Water Act* 1912-1955 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilize necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following water trusts—other than irrigation—have been constituted (the area in acres of each district is shown in parenthesis)—*Murray River*—Little Merran Creek (157,440), Tuppal Creek (78,080), Bullatate Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajeel Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condobolin West Weir (4,480); *Miscellaneous*—Great Anabranche of Darling River (959,184), Nidgerly Weir (46,880), Algdudgerie Creek (9,760), Collarenebri town water supply (117)—making in all a total area of 2,907,871 acres. Thirteen of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

**6. River and Lake, and Farm Water Supplies.**—During recent years, the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognized as a means of stabilizing production in dry months. There has also been a considerable increase along the Murrumbidgee and Lachlan.

Under the *Farm Water Supplies Act* 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, flood and spray irrigation systems.

**7. Underground Water.**—Extensive use is made of artesian, sub-artesian, and shallow underground water. The Great Artesian Basin underlies an area of some 81,250 square miles in north-western New South Wales. Eighty-seven Bore Water Trusts and 12 Artesian Wells Districts have been constituted. Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts the settlers maintain the drains. Bore Trusts and Artesian Districts cover 5,597,202 acres and distribute water through 3,623 miles of open earth drains.

As at 30th June, 1963, 1,114 artesian bores had been constructed in the New South Wales section of the Basin. At that date, 641 bores were flowing and were capable of producing about 64,000,000 gallons per day. Conservation measures control this to about 50,000,000 gallons per day. The total length of bore drains, including those for Trusts and Districts, is approximately 8,000 miles.

Of other structural basins of sedimentary rocks, e.g., Murray, Sydney, Oxley and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and,

in some instances, small scale irrigation, are obtained from porous sandstone in the Moss Vale-Picton area, but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin, but the centre of this basin lies under the Liverpool range. The Clarence Basin is relatively unimportant from a groundwater viewpoint, but stock supplies are obtained from some sections.

In other parts of the State, the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western-flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 60,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation and town water supply. The Government is carrying out investigations to determine the ground-water potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan Valley. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter.

Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney's water supply, the Botany sands are now utilized mainly by industry. The Tomago sands provide a considerable proportion of the Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their ground-water potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain, they yield useful stock supplies, mostly at depths between 50 and 250 feet.

It is necessary under the *Water Act* 1912-1955 that all wells and bores be licensed, and details of over 20,500 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the ground-water potential and are thus of considerable benefit to landholders.

8. **Future Programme.**—The programme of development in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Construction of Burrendong Dam on the Macquarie River is nearing completion. Legislation has been passed authorizing the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley and a storage dam at Blowering on the Tumut River. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyangala Dam, on the Lachlan River, the fixed crest of the dam spillway has been lowered temporarily to enlarge the spillway for passage of greater floods. Construction has commenced on a new earth and rock-fill dam which will be built behind the present dam to give a storage of 1,000,000 acre feet. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At the 30th June, 1963, 114 large area farms and 8 horticultural farms had been allotted south of the Murrumbidgee River, whilst 47 large area farms had been allotted north of the river and now form part of the Murrumbidgee Irrigation Areas.

9. **Hydro-electricity.**—A survey of the use of water for power generation in New South Wales may be found in the previous chapter (*see* p. 219).

### § 3. Victoria

1. **General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (*See also* Chapter II. Physiography, p. 47, of this issue.)

(ii) *Administration.* The passing of the *Irrigation Act* 1886 put the control of surface waters under the Crown, provided for the establishment of Irrigation Trusts and marked the beginning of irrigation development. The *Water Act* 1905 established the State Rivers and Water Supply Commission and gave it control of all irrigation, rural domestic and stock supplies, town water supplies, and flood protection and drainage undertakings outside the Metropolitan area, with the exception of the irrigation area operated by the First Mildura Irrigation Trust and the town water supplies operated by locally constituted waterworks trusts or local governing bodies.

The operations of the First Mildura Irrigation Trust, the waterworks trusts and local governing bodies administering town water supplies, the river improvement and drainage trusts and the various sewerage authorities which control sewerage undertakings in country towns are also subject to general supervision by the Commission.

2. **Works Summarized.**—In 1902, a great drought emphasized the need for a concerted attack on water problems. Subsequently to the establishment of the State Rivers and Water Supply Commission, the total capacity of storages controlled by that Commission has increased from 172,000 acre feet in 1906 to 4,515,278 acre feet at 30th June, 1963. In addition, Murray River storages with a combined capacity of 2,722,840 acre feet are shared equally by New South Wales and Victoria under the River Murray Waters Agreement, subject to certain obligations to South Australia. The total storage capacity available to Victoria is thus some 5,876,698 acre feet. Most of the water from these storages is used for irrigation. The area actually irrigated has risen from 105,000 acres in 1906 to 1,151,555 acres in 1962-63, to which 1,539,890 acre feet of water were delivered. The Commission estimated the value of irrigated production in 1961-62 at £61,355,000, representing about one-sixth of the value of Victoria's total rural production.

Besides supplying water to its own irrigation districts, the Commission supervises the diversion of water for irrigation by private persons by means of licences and permits. In the last ten years, the area so licensed has doubled, and private diverters now provide a fifth of total irrigation production.

3. **Storages.**—The capacities of the main storages in the various systems (in acre feet) at 30th June, 1963, were as follows:—

*Goulburn System*:—Eildon Reservoir, 2,750,000; Waranga Reservoir, 333,400; Total, 3,104,100; *Murray-Loddon System*:—Half share of Murray River storages, 1,361,420; Cairn Curran, 120,600; Tullaroop, 60,000; Total, 1,690,230; *Campaspe River*:—Eppalock Reservoir, 252,860; *Wimmera-Mallee*:—Rocklands, 272,000; Total, 563,800; *Gippsland*:—Glenmaggie, 154,300; Total 154,340; *Coliban*:—62,730; *Werribee-Bacchus Marsh*:—34,900; *Mornington Peninsula*:—5,800; *Otway*:—1,080; *Miscellaneous*:—6,858; *Grand Total*:—5,876,698.

4. **Extent of Systems and Nature of Irrigated Culture.**—The following table shows the areas of the various irrigation systems in 1962-63, and the areas under irrigated culture during the seasons 1958-59 to 1962-63.

#### AREAS OF SYSTEMS AND OF LAND IRRIGATED: VICTORIA

(Source: State Rivers and Water Supply Commission)

(Acres)

Season and system	Total area (a)	Area irrigated								Total	
		Cereals	Fodder crops		Pastures		Vineyards	Orchards	Market gardens		Fallow and miscellaneous
			Lucerne	Other	Sown	Natural					
1958-59 .. ..	2,149,466	9,436	38,752	15,228	716,951	72,802	44,267	35,349	18,595	14,386	965,766

(a) Excludes Other Northern Systems and Private Diversions. (b) Includes First Mildura Irrigation Trust.  
(c) Not available. (d) Excludes private diverters in the Torrumbarry System, but includes all other private diverters along the Murray River.

5. **Irrigation Systems.**—(i) *Goulburn.* The storage capacity for this system is provided principally by Eildon Reservoir, the enlargement of which was completed in 1956. Large-scale works have been in progress for several years to distribute the extra water available from this and other major storages.

Water from Eildon Reservoir flows down the Goulburn River to the Goulburn Weir, located near Nagambie. This raises the summer level of the river about 45 feet for the purpose of diversion. From this weir, water is diverted via the East Goulburn Main Channel direct to the irrigation areas around Shepparton. The western main channels from the weir convey water to the Waranga Reservoir near Murchison in addition to supplying part of the large Rodney area directly.

Two main outlet channels issue from Waranga Reservoir. One serves the western section of Rodney area, while the other serves irrigation areas as far west as Boort, and continues into the Wimmera-Mallee domestic and stock system to provide a supplementary supply as far as Beulah East (*see* para. 6, below).

Water is also supplied to part of the Goulburn-Loddon system from Cairn Curran Reservoir on the Loddon River, and from Tullaroop Reservoir on one of its tributaries, together with the new Eppalock Reservoir on the Campaspe River. Eildon itself may be used to supplement supply to the districts along the Murray River.

The main products of the Goulburn system are dairy produce, fruit, wool and fat lambs. Annual production of deciduous canning fruits in the area is about two-thirds of Australia's total.

(ii) *Murray River System.* The waters of the Murray River are used to supply the area between Yarrawonga and Merbein. The districts between Yarrawonga and Swan Hill, except Tresco near Swan Hill, are supplied by gravitation and those west of Swan Hill by pumping.

The main items produced in the Murray Valley Irrigation Area, which is served from Yarrawonga Weir, are dairy products, fat lambs and canning fruit.

The gravitation system based on Torrumbarry Weir (52 miles downstream from Echuca) serves the area around Cohuna, Kerang, Koondrook and Swan Hill. (Also included in the Torrumbarry System is the Tresco District supplied by pumping from Lake Boga.) Dairying and fat lamb raising are the major industries. Vine and orchard fruits and vegetables are grown extensively around Swan Hill.

West of Swan Hill lie four Commission districts with a pumped supply—Nyah, Robinvale, Red Cliffs and Merbein. These contain about 1,500 holdings devoted mainly to dried vine fruit, although citrus fruit and table and wine grapes are of some importance. The area around Mildura is controlled by the First Mildura Irrigation Trust, the only irrigation trust operating in Victoria. It serves an irrigated area about half the combined size of the four Commission districts and has similar major products.

(iii) *Southern Systems.* The most important southern system is the area around Maffra and Sale, devoted mainly to dairying. This is supplied from Glenmaggie Reservoir on the Macalister River and from the natural flow of the Thomson River when the flow is adequate. Other important irrigation districts are located quite close to Melbourne around Werribee and Bacchus Marsh. These districts are intensively developed for dairying and vegetable growing.

6. **Wimmera-Mallee Domestic and Stock Supply System.**—This system serves an area of 11,000 square miles or about one-eighth of the State. Without the artificial supply of water, development in this area would be meagre and hazardous owing to the constant threat of drought. The main supply is drawn from the Grampians storages and can be supplemented by water drawn from the Goulburn and Loddon Rivers, via the Waranga Western Channel referred to previously. Works in progress will make the Wimmera and Mallee independent of supplies from the Goulburn and Loddon Rivers in the near future. In addition, some 300 farmers in the north of the system are provided with a domestic and stock supply direct from pumps on or near the Murray River.

As far as possible, water is distributed in the winter and spring to reduce evaporation losses in 6,500 miles of Commission channels and 3,000 miles of farm channels. It is the responsibility of the 7,000 farmers served to provide sufficient storage capacity on their farms to meet their domestic and stock needs for the year. In addition to meeting rural and domestic demand, together with stock requirements, the Grampians storages provide a water supply for more than 40,000 people in 47 towns, and are used to irrigate a small area near Horsham.

7. **Town Water Supplies and Sewerage.**—Details of the operations of the State Rivers and Water Supply Commission with respect to water supplies and sewerage for country towns and local government authorities are given in Chapter XX. Local Government, of this Year Book.

8. **Drainage, Flood Protection and River Improvement.**—The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 80,000 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million pounds each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and, since 1950, 20 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

9. **Finance.**—The net capital liability of the Commission at 30th June, 1963, was £113 million. Of this amount, nearly £78 million were expended on irrigation and £8 million on domestic and stock supply systems. Both these amounts were financed entirely by the State. The total liability for urban supply was £17 million, of which 55 per cent. was borne by the State and the remainder by the districts concerned. The remaining £10 million were due for expenditure on flood protection and drainage (£2 million) and items such as loan flotation expenses, surveys and investigations, and buildings, plant and stores (£8 million).

10. **Underground Resources.**—A survey of these resources is being carried out by the Victorian Department of Mines. Their deep drilling plant has located suitable water for town supplies at Portland, Heywood, Port Fairy, Timboon and Petersborough during exploration to 5,500 feet in the Western District basin. Other drilling plants are engaged in other parts of the State, and up to date over 100 wells have been successfully completed.

The Murray Artesian Basin underlies an area of 107,000 square miles, of which 27,000 square miles are in Victoria, 28,000 square miles in South Australia and 52,000 square miles in New South Wales. The quality of the water varies, and is suitable for domestic purposes in much of the south-western part of the basin in Victoria, but elsewhere is suitable only for limited stock use. Maximum depth of development of underground water in Victoria is approximately 4,500 feet. Some individual bores can yield up to 2,000,000 gallons a day. In the last few years, the Department of Mines has expanded considerably the work of exploration for underground water.

11. **Future Programme.**—The principal works under construction are Bellfield Reservoir on Fyans Creek (Grampians Mountains) to supplement the supply to the Wimmera-Mallee system (*see* paragraph 6 above), and a channel enlargement and remodelling project in the Goulburn system (*see* paragraph 5 (i) above).

In July, 1963, the Government announced plans for a long-term storage programme to cost a total of £37.5 million between 1963-64 and 1973-74. Some of the storages are already under construction, namely Bellfield Reservoir, Devilbend Reservoir (to serve the Mornington Peninsula system) and the first stage of the large Buffalo Reservoir referred to in the table on page 235. The others are Chowilla Reservoir (a River Murray Commission storage) and Winton Reservoir, also included in the table on page 235 together with the following:—

- (a) Tarago Reservoir on the Tarago River to supplement supply to the Mornington Peninsula area.
- (b) Nillahcootie Reservoir on the Broken River below Mansfield, to be used for irrigation;
- (c) Lerderderg Reservoir on Coimadai Creek, to be filled mainly from the Lerderderg River and Goodmans Creek, and used to supplement irrigation water supplies at Werribee and Bacchus Marsh; and
- (d) Corop Lakes, two natural lakes near Rochester to be used as an adjunct to Waranga Basin for off-river storages for irrigation.

#### § 4. Queensland

1. **General.**—(i) *Rainfall.* Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* Chapter II. Physiography, page 47, of this issue.)

(ii) *Administration.* In Queensland, the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply.

For a description of the development of the present administration *see* Year Book No. 42 and earlier issues.

(iii) *Water Utilization.* In Queensland, private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner.

2. *Irrigation.*—(i) *General.* Irrigation as a means of stabilizing and increasing agricultural production continues to receive attention in Queensland. As a large portion of Queensland is tropical, the State's crops differ considerably from those of other States. Sugar cane is the greatest individual crop, representing in value nearly half of the total agricultural production. In 1962-63, 17 per cent. of the sugar cane acreage was irrigated. This represented 37 per cent. of the total irrigated area in Queensland. Queensland is also Australia's major tobacco-producing State, and plans are in hand to increase greatly the annual production of this crop by means of development under irrigation. The area of tobacco irrigated during 1962-63 represented 97 per cent. of the total plantings of this crop in the State.

Most irrigation in Queensland is undertaken by private farmers operating under licence to obtain water by pumping from streams or from natural underground storages. During recent years, there has been considerable development of individual water conservation projects (water harvesting) to provide storage for irrigation of pastures, fodder crops and small crops, and orchards. Where available, electricity is the most popular source of power for pumping, and the principal areas supplied with electricity are the Burdekin Delta, the Lockyer Valley, and the Darling Downs.

It has been estimated that about two-thirds of the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley and Redland Bay. Similar development is taking place in other areas such as parts of the Darling Downs.

Furrow irrigation is used for cotton, sugar cane, most tobacco and some other crops. Spray irrigation is used widely on fruit, vegetables, fodder crops and a small part of the tobacco crop. Spraying is well suited for the application of water on deep soils by small pumping plants, particularly when the quantity of water available is limited. Use of the border check method in the irrigation of pasture and fodder crops has proved successful.

The following table shows the number of irrigators and the areas irrigated for the years ended 31st March, 1959 to 1963, and for each division for the year ended 31st March, 1963.

AREA OF LAND IRRIGATED: QUEENSLAND

Season and division	No. of irrigators	Area irrigated (acres)							Total
		Vegetables	Fruit and vineyards	Sugar-cane	To-bacco	Cot-ton	Other crops	Pas-tures	
1958-59 .. ..	7,149	26,597	4,876	65,613	7,490	1,520	38,135	10,402	154,633
1959-60 .. ..	6,889	27,207	5,212	62,346	9,256	2,579	36,115	9,421	152,136
1960-61 .. ..	7,932	29,698	5,758	68,987	13,789	2,675	50,139	15,651	186,697
1961-62 .. ..	8,433	32,139	6,537	74,541	13,671	2,040	59,947	20,544	209,419
1962-63—									
Southern Queensland ..	5,952	28,061	5,775	21,949	3,181	298	44,449	17,334	121,047
Central Queensland ..	625	1,051	253	233	38	1,862	9,094	2,123	14,421
Northern Queensland ..	1,962	5,146	992	59,557	11,983	46	4,486	2,884	85,094
<b>Total, 1962-63 ..</b>	<b>8,539</b>	<b>34,258</b>	<b>7,020</b>	<b>81,506</b>	<b>15,202</b>	<b>2,206</b>	<b>58,029</b>	<b>22,341</b>	<b>220,562</b>

The pattern of irrigation in Queensland is unlike that in southern States. The spring to autumn "irrigation season" of the temperate southern irrigated lands is not applicable, as round-the-year irrigation is required throughout most of the State, the timing and duration of the summer "wet" season being too variable to enable a definite non-irrigation season to be fixed.

Two of the more important areas of development by irrigation by private pumping are the Lockyer Valley and Burdekin River Delta.

(a) *Lockyer Valley.* West of Brisbane and within 30 miles of that metropolitan market is the Lockyer Valley, which is portion of the Brisbane River Basin. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels

and sands carrying water suitable for irrigation. Despite a mean annual rainfall of 30 inches, the variation is great, and irrigation is necessary for continuous agricultural production. Surveys suggest that of some 60,000 acres of land highly suitable for irrigation only about a third is under irrigation. Most of the farmers operate electric pumps for irrigation purposes, and a special policy designed to encourage such development is fostered by the Southern Electric Authority of Queensland. The Irrigation and Water Supply Commission has constructed a number of small weirs on Lockyer Creek with a total storage of 1,340 acre feet. These also tend to augment and conserve underground supplies. The Irrigation Research Station established at Gatton has been converted to a Regional Experimental Farm under the control of the Department of Primary Industries.

The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize and dairy products.

(b) *Burdekin River Delta.* The Burdekin River, which enters the sea between Townsville and Bowen, is a major factor in the life of north Queensland. In most years, heavy floods from a catchment twice the size of Tasmania cause extensive damage and traffic disruptions. On the other hand, the fertile delta area, with its underground water supplies at shallow depth, has contributed greatly to the agricultural prosperity of north Queensland. The average annual rainfall of this area is some 41 inches, but the major part falls in the months December to March. Consequently, sugar growers and other farmers have tapped the underground water resources of the delta to obtain supplies in the dry periods. Sugar is the main crop irrigated, together with citrus fruits, pineapples, vegetables and tobacco. The irrigated area is in excess of 30,000 acres, with up to 1,000 acre feet of water being drawn daily from underground sources.

In the Home Hill-Inkerman areas on the south side of the Burdekin, water is obtained from shallow wells by electric pumps supplied from a local power station controlled by the Townsville Regional Electricity Board. Around Ayr, on the north side of the river, electric power from the mains of the Townsville Regional Electricity Board is now being used in place of individual internal combustion engines. At both Home Hill and Ayr, water for domestic supply is raised by a windmill on each property.

In 1940, the Burdekin River Trust was formed to safeguard the sugar areas of the delta from erosion and floods. An irrigation research station studies the development of pastures and irrigated crops under local conditions.

(ii) *Government Projects.* The Irrigation and Water Supply Commission has constructed and operates two dams and forty-two weirs with a storage capacity of 457,326 acre feet. Water from these storages supplies four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

(a) *Mareeba-Dimbulah Irrigation Area.* The large areas of sandy soils in the valleys of the Walsh and Barron Rivers in the neighbourhood of Mareeba and Dimbulah are suitable for tobacco production, and in 1952 an irrigation undertaking was established.

Construction of Tinaroo Falls Dam on the Barron River has been completed, and construction of irrigation works which will serve a total of 78,000 acres is proceeding. Of this area, 49,000 acres will be irrigated. It is expected that 910 tobacco farms and 180 mixed farms will be served. While tobacco will be the basic crop, peanuts, vegetables, maize, cotton and stock fattening also appear suitable. One hundred and fifty miles of channels have been constructed, and irrigation water from Tinaroo Falls Dam is available to 501 farms.

In 1962-63, the value of tobacco leaf sold was £6.3 million from 516 farms.

(b) *Burdekin River Irrigation Area.* While construction of the major part of the Burdekin River Irrigation, Hydro-electric and Flood Mitigation Project has been deferred indefinitely, three sections associated with the Project have been completed. These are the Clare, Millaroo and Dalbeg sections, all of which are used predominantly for tobacco production. Located from 25 to 65 miles upstream from the mouth of the Burdekin, these areas comprise 18,862 acres, and obtain irrigation waters from central pumping stations drawing on the flow of the Burdekin. A storage of 7,670 acre feet capacity has been constructed about 79 miles upstream from the mouth of the Burdekin to augment supplies. During 1962-63, a further storage of some 2,550 acre feet was completed. At 30th June, 1963, 149 farms were occupied, and total production for 1962-63 was valued at £470,736.

(c) *Dawson Valley Irrigation Area.* A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923. Much investigational and survey work on the scheme was carried out, but the general financial

depression and limited loan funds brought about the cessation of the work. However, the initial step in construction was completed, comprising a weir on the river at Theodore and irrigation works to serve an area of 3,500 acres supplied from a central pumping station. Two additional weirs have since been built, giving a total storage of 10,280 acre feet and covering some 61 farms in production, returning an estimated £292,000. Pasture, vegetables, cotton, fruit and dairy products are the principal produce. Recently, further attention has been given to the former plans for the valley, and earlier work has been under close scrutiny as a prelude to future development.

(d) *St. George Irrigation Area.* The St. George irrigation area comprises 19 farms engaged mainly in raising fat lambs in conjunction with irrigated pastures. Water supply for the area is obtained by pumping from the combined weir and road bridge on the Balonne River at St. George.

(e) *Warrill Valley Project.* Moogerah Dam on Reynolds Creek (a tributary of Warrill Creek) is of double curvature thin arch construction 105 feet high to spillway crest level, and will serve some 11,000 acres of the Valley by private diversion of water released from its 73,000 acre feet storage into Reynolds and Warrill Creeks.

(f) *Mary Valley Project.* The construction by contract of Borumba Dam on Yabba Creek is nearing completion. This is a rock-fill structure with an upstream impermeable concrete membrane 144 feet high above stream bed. In its initial stage, storage capacity will be 34,500 acre feet with provision for later increase to 80,000 acre feet. In its first stage, water released from the dam will be available to maintain the town water supply for Gympie, and will allow extension of the area irrigated by private diversion from the Mary River to some 18,000 acres.

(g) *Upper Condamine Project.* Work is continuing on the construction of Leslie Dam on Sandy Creek, a tributary of the Condamine River. This will be a mass concrete gravity dam 95 feet above foundation level. In its initial stage, storage capacity will be 38,500 acre feet with provision for later increase to 87,000 acre feet. Water released from the dam will be available for irrigation of sections of the Darling Downs downstream the Condamine River as far as Cecil Plains. In addition, the city of Warwick will be supplied by pipeline from Leslie Dam.

(h) *Border Rivers Project.* The development of the rivers constituting portion of the border between Queensland and New South Wales is under the authority of the Dumaresq-Barwon Border Rivers Commission on which each State is represented. For information on the project, see page 241.

3. *Underground Water.*—(i) *General.* The use of underground water supplies has been a very important factor in agricultural and pastoral development in Queensland. Detailed information is given below concerning the Great Artesian Basin, which is the major source of stock water supplies over more than half of the State. Elsewhere, supplies obtained at shallower depths, in porous, fractured or fissured rocks, are extensively used for domestic and stock purposes. Underground water also supports more than half the irrigated area in the State, supplies being obtained chiefly from alluvial formations along river valleys, and from river deltas, the most conspicuous example of which is the Burdekin River Delta. Reference has been made to these areas in para. 2 above.

(ii) *Great Artesian Basin.* (a) *General.* Western Queensland, beyond the 20 inch rain-fall belt, is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry mineral field and the Barkly Tableland. It comprises 421,000 square miles or nearly two-thirds of the total State area of 667,000 square miles.

(b) *Artesian Water.* Although the number of bores has gradually increased over the years, the total flow of all bores has declined since the peak flow of 351 million gallons a day. A report on the nature and structure of the Great Artesian Basin, presented in 1954, indicated that the output would continue its decline during the next sixty years, at which stage the flow from the remaining flowing bores would be of the order of 110 million gallons a day. The discharge from windmills, springs and other leakages, together with the underflow past the Queensland borders, would then be about 20 million gallons a day. It was further expected that the total discharge, of the order of 130 million gallons a day, would be in equilibrium with the recharge of the basin. It was anticipated that numbers of bores on higher ground would cease to flow during the next sixty years and the area served by the flowing bores would contract by perhaps twenty per cent.

Up to 30th June, 1963, 2,814 artesian bores had been drilled, of which 1,898 were still flowing. The total depth drilled amounted to 3,952,832 feet and the estimated daily flow was 200 million gallons. Although very few bores exceed 2,000 feet in depth (the average depth is 1,405 feet) and a new bore greater than 3,000 feet deep is exceptional, the deepest bore recorded was sunk to 7,009 feet. Some bores which had been classified as "ceased" have been inspected and found to be still flowing, while other ceased bores have responded to deepening and have recommenced flowing. Both the pressure and flow of artesian bores are steadily diminishing, the rate of decrease varying widely throughout the basin. Present average rates of diminution are:—pressure, 1–2 feet/head; total flow, 2–3 per cent. per annum. The greater part of the artesian discharge is distributed by some 15,500 miles of open earth channels, from which a large proportion of the water is lost by soakage and evaporation, less than 10 per cent. being actually used by stock.

Although artesian beds underlie a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams and natural waterholes. In many districts, artesian bores do not provide economical watering facilities because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. The quality of artesian water from the greater part of the basin is not suited for prolonged use for irrigation on most soils, nor are the supplies sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

Shallower supplies, which come from beds unconnected with artesian beds, are of variable quality and volume. These supplies are available at depths of less than 1,000 feet over a large area of the basin. Some 10,996 sub-artesian bores within the Great Artesian Basin have been registered in Queensland. An important practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

(c) *Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity, and to conserve artesian supplies by fully utilizing flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by local boards or by the Commissioner of Irrigation and Water Supply, acting as a board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1962–63 are:—areas constituted, 73; administered by the Commissioner, 55; administered by local boards, 6; number abolished, 12; area benefited, 4,247,540 acres; average rate per acre, 1.34d.; number of flowing bores, 57; total flow, 26,122,000 gallons a day; drains served, 2,646 miles.

(iii) *Other Sources.* Outside the Great Artesian Basin, ground water supplies can conveniently be divided into two broad groupings, (a) those obtained in porous, weathered, fissured or fractured rocks, and (b) those obtained in unconsolidated sediments of Cainozoic age.

In the first group, supplies, often within short distances, are widely variable both in quantity and quality, but normally are sufficient only for stock-watering purposes. Because storage is generally small, seasonal fluctuation of water level tends to be high, and this can have a significant effect on the supply available during dry seasons.

Small to moderate irrigation supplies (up to a few thousand gallons an hour) are sometimes obtained and, in exceptional cases, particularly with basalts and limestones, supplies may be as much as 10,000 gallons an hour.

The second group comprises the main irrigation supplies and, although it is common to find a wide range in the supply normally available from individual bores in any area, pumping rates as high as 10,000 gallons an hour are not uncommon. The availability of underground water has been investigated in a considerable number of alluvial valleys in south eastern Queensland and in a number of coastal areas, particularly in the vicinity of the estuaries of the Burnett, Pioneer and Burdekin Rivers, where underground water is the main source for irrigation of sugar cane.

Reference has already been made to the importance of underground water for irrigation in the Lockyer Valley (*see* para. 2 (i) (a) above), and other areas in which irrigation supplies from alluvial formations have been extensively utilized include the Callide Valley, the Monto area, parts of Barker and Barumbah Creeks, Warrill Creek, Cressbrook Creek, the Upper Logan River and parts of the Upper Condamine River and its tributaries.

Government authorities do not normally undertake private drilling for landholders, but, as discussed below, assistance is given in the location and development of ground water supplies through the provisions of the *Farm Water Supplies Assistance Act 1958*. This assistance has considerably accelerated the use of underground water for irrigation, and there is no doubt that there are many areas with a large potential for future expansion.

4. Stock Watering.—(i) *General*. A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about a seventh of the sheep. In addition to the stabilization of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

(ii) *Main Stock Routes*. The Queensland Irrigation and Water Supply Commission acts as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance. From 1935, when the scheme was inaugurated, to 30th June, 1963, 593 facilities had been completed, and at 30th June, 1963, 48 facilities were under construction or investigation. A State-wide investigation is being carried out by the two authorities mentioned above to ascertain the general movement of stock, determine primary and secondary routes, register existing water facilities, and formulate a co-ordinated plan in regard to the provision of new watering facilities.

(iii) *Channel Country Stock Routes*. Under *The State Grants (Encouragement of Meat Production) Acts 1949-1954*, the Commonwealth Government agreed to meet half the cost of providing additional watering facilities in stock routes leading into, along, and out of, the Channel country and on the route from Camooweal to Mount Isa. These routes connect with the main far-western route included in the State scheme inaugurated in 1935.

This scheme was completed during 1962-63. The total number of watering facilities constructed since the commencement of the scheme was 37, at a total cost of £299,592.

5. Technical and Financial Assistance to Farmers.—The *Farm Water Supplies Assistance Act 1958* is designed to improve the standard of water supply installations on individual holdings, encourage greater development of individual irrigation schemes, and provide greater stability of production and avoid losses in time of drought together with generally increasing production.

To achieve this purpose, the Act authorizes the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Act are carried out under Commission supervision, and for the payment of a small charge the Commission will supervise the construction of works designed by its staff, but for which the landowners do not require financial assistance under the Act.

During 1962-63, 767 requests (569 for technical assistance only, and 198 for technical and financial assistance) were dealt with in addition to advice on a further 285 requests on ground-water supplies. An amount of £282,966 was approved for advances under the Act in 1962-63.

6. Hydro-electricity.—An outline of hydro-electricity schemes operating in Queensland is given in the previous chapter (*see p. 224*).

## § 5. South Australia

1. *General*.—(i) *Rainfall*. Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (*See also* Chapter II. Physiography, page 47, of this issue.)

(ii) *Administration*. Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the *Waterworks Act 1886* governing the supply of water through mains in water districts for townships and farm lands. The *Water Conservation Act 1886* provides for the construction of storages in non-reticulated areas, and authorizes the Minister concerned to "divert and impound the water from any streams or springs or alter their courses, and take water therefrom, or any other waters as may be found in, under, or on, any land entered upon for the purpose of supplying water to the inhabitants of any water district".

(iii) *Methods of Catchment and Conservation*. Early in the history of the State, the rights to all running streams, springs and soaks were vested in the Crown. The *Water Conservation Act* was passed in 1886 and, up to 30th June, 1963, more than 550 dams, tanks and rainsheds, together with 460 wells and 340 bores, had been built or acquired by the State at a total cost of £1,853,585. The rainsheds are timber frameworks roofed with galvanized iron to collect rainfall which is delivered to storage tanks and is available for surrounding settlers and travellers. Rainshed catchments vary from a few hundred square feet to four acres in extent. Over most of the State, extraordinary precautions are taken to counteract

evaporation, and pipelines in preference to open channels and covered storages are used for this purpose. Meters are attached to practically all services to check usage by individual consumers.

2. Irrigation.—Australian irrigation originated in the upper Murray of South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in South Australia during the seasons 1958-59 to 1962-63.

AREA OF LAND IRRIGATED: SOUTH AUSTRALIA  
(Acres)

Season and authority	Vine fruits	Tree fruits	Citrus fruits	Other crops <sup>(a)</sup>	Pastures	Total

(a) Includes fodder and fallow land.

3. **Water Supply Schemes.**—(i) *Adelaide Metropolitan Water Supply.* Adelaide derives its water from six reservoirs in the nearby Mount Lofty Ranges, and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 87,400 acre feet and the pipeline has a capacity of 65,000 acre feet a year.

To the north, the new city of Elizabeth receives water from South Para Reservoir in the Barossa system and from the metropolitan storages. The consumption for the whole area for the year 1962–63 was 88,800 acre feet, equivalent to a consumption of 100 imperial gallons per head per day. The capital cost to 30th June, 1963 was £43,648,315.

(ii) *Country Reticulated Supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa, and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Agricultural towns and areas further north are supplied from Beetaloo, Bundaleer and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. There is a supplementary supply from the Mannum-Adelaide pipeline through the Warren Reservoir. The 223-mile pipeline from Morgan to Whyalla can carry up to 10,000 acre feet of water a year from the Murray River. Work is commencing on a second main of more than double that capacity. A large part of Eyre Peninsula is supplied through the 240-mile Tod River Main and the 104-mile East Coast Main with water from the Tod River reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and the newly developed Poldia Basin. Along the Murray River, all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes.

Water conservation and distribution works in country districts to 30th June, 1963, have cost £44,257,662 (exclusive of river control and irrigation works on the Murray River) and contain 7,267 miles of water mains.

4. **Underground Water.**—The occupied portion of South Australia is, on the whole, well endowed with underground water, and the extent of the several artesian basins is reasonably well known. There are also considerable areas in which groundwater occurs, notably in the south-east of the State where, in the Keppock district, supplies exceeding 100,000 gallons an hour are not uncommon. Quality varies widely, but a great deal is at least useful for watering stock, and this is the major use to which it is put.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Government to provide watering places along stock routes, and bores around the basin margin have developed pressure waters which occur at comparatively shallow depth, as at Marree township, where the deepest flowing bore is 575 feet. In addition to the pressure waters, the non-pressure aquifers of the subsidiary basins provide pastoralists with stock water supplies which can be readily and economically developed.

The use of the waters of the Murray Basin is essential to settlement in the Murray Mallee country and in the south-east of the State, especially for farms and township supplies. Mount Gambier draws its water from Blue Lake, which is fed from the Basin. Bores supply a number of towns in this Basin, the deepest bore being 1,805 feet.

On Eyre Peninsula, the Uley-Wanilla Basin has been in use since 1949, the Lincoln Basin since 1960, and the Poldia Basin since 1963, to supplement surface water supplies. Investigations are being made in another basin south-west of the Uley-Wanilla Basin.

The Lincoln Basin is now fully developed and is yielding up to 20 million gallons a week which provides a water supply for the town of Port Lincoln on Eyre Peninsula.

The Poldia Basin near the township of Lock was brought into operation late in 1962. The present pumping plant has a capacity of 7 million gallons a week. The water is reticulated to townships and farming properties on the upper Eyre Peninsula. Investigations are currently proceeding for the further development of this basin.

Pastoralists, farmers, market gardeners and others have been assisted with expert advice on drilling, and the Government maintains and operates 25 drilling plants which to date have developed an underground water supply potential in excess of 150 million gallons of water a day throughout the State. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and considerable tracts of previously undeveloped country in the upper south-east, Kangaroo Island and Yorke Peninsula have been found to have usable water and are now being opened up.

Groundwater resources surveys are undertaken continually by geologists of the Department of Mines, the results being published in various bulletins and reports issued from time to time. The *Groundwater Handbook* published in 1959 by the department provides a comprehensive detailed review of the State's groundwater resources.

5. **Farm Water Schemes.**—The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs, on farms, and on the use and suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied with water under pressure from the extensive distribution systems connected to various reservoirs or the Murray River.

6. **South-Eastern Drainage.**—In the south-east of South Australia it has been necessary to construct costly drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage.

The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston southerly to near Millicent and Kalangadoo. Up to 1948, about 430 miles of drains had been provided at a cost of £720,876. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948, the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,100,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work is in progress on the northern section of 140,000 acres, where 48 miles of drains, involving the excavation of 2,787,000 cubic yards of material, have been completed. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. As part of the first stage of the work (which involves the construction of a main diversion drain from Beachport to Struan), an existing drain from Beachport to Legges Lane (a distance of over 24 miles) has been enlarged, and work is proceeding between Legges Lane and Struan (a distance of 33 miles). A total of 4,156,000 cubic yards of material has been excavated.

The capital cost of drainage in the South-Eastern Drainage Area System to 30th June, 1963, was £7,060,000, and the length of drains constructed was 745 miles.

## § 6. Western Australia

1. **General.**—(i) *Rainfall.* Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also Chapter II. Physiography, p. 47, of this Year Book.)

(ii) *Administration.* Natural water rights in the State, with few exceptions, are vested in the Crown. Irrigation districts are administered by the Minister for Water Supply, Sewerage and Drainage under the *Rights in Water and Irrigation Act 1914–1954*, and he is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. Water supplies in country areas in Western Australia coming under the provisions of the *Water Boards Act 1904–1954* and the *Country Areas Water Supply Act 1947–1960* are controlled either by the local authority or by the Public Works Department. Those controlled by the Department (except for some local water supplies to country towns still under the provisions of the *Water Boards Act*) form the Country Areas Water Supply, consisting of the Goldfields and Agricultural Water Supply, the Great Southern Towns Water Supply and local water supplies to country towns and districts. The Department also controls individual water supplies serving isolated mines, stock routes, and agricultural areas.

2. **Irrigation.**—The main irrigation areas are situated in the south of the State along the South-Western Railway between the towns of Waroona (70 miles from Perth) and Dardanup (116 miles from Perth). In the north, new irrigation areas are being established at Carnarvon on the Gascoyne River, Camballin on the Fitzroy River and at Kununurra on the Ord River.

The Public Works Department controls three irrigation districts—Waroona, Harvey and Collie River—the total area irrigated in these districts during 1962–63 being 27,974 acres and the total water used 94,785 acre feet. Investigations are being carried out with a view to irrigating a further 30,000 acres south of the Collie River Irrigation District.

The Waroona Irrigation District (3,051 rated acres) is supplied from Samson Brook Dam (7,437 acre feet capacity) and Drakes Brook Dam (1,855 acre feet); the Harvey Irrigation District (12,863 rated acres) from Stirling Dam (46,191 acre feet) and the Harvey Weir (8,372 acre feet); and the Collie River Irrigation District (10,490 rated acres) from the Wellington Dam (150,107 acre feet). The Logue Brook Dam (19,246 acre feet) within the Harvey Irrigation District was completed in November, 1963.

An area of approximately 1,350 acres of Gascoyne River flats adjacent to Carnarvon is under irrigated cultivation. The principal crops are bananas and beans, but others such as tomatoes are also grown. For this agriculture, some 3,500 acre feet of water were drawn during 1962–63 by the individual growers pumping from aquifers situated in and adjacent to the dry bed of the Gascoyne River. The quantity of water which any grower may pump is controlled by the Public Works Department, assisted by an advisory committee with local representation. Allocations of water are granted on a monthly basis, and are based on river behaviour and the capital values of the properties concerned. A pilot scheme to augment the supply to 20 settlers by pumping from aquifers five miles upstream was completed in 1962–63.

On the Liveringa flood plain adjacent to Camballin, 65 miles south-east of Derby, commercial production of rice has been achieved following successful experimental work. Irrigation water from the Fitzroy River is diverted through Uralla Creek for 25 miles to the rice growing area where a natural storage of approximately 1,200 acre feet exists. During periods of low flow in the Fitzroy River, the supply of water is augmented by pumping. Further storage with a capacity of 4,500 acre feet has been provided by the construction of a dam on Uralla Creek 18 miles from the Fitzroy River. A weir which has been constructed across the Fitzroy River provides gravity flow to Uralla Creek while the Fitzroy River is flowing.

The Ord River in the Kimberley Division of Western Australia traverses a tropical area served with monsoonal rains of irregular incidence and quantity, varying from 20 inches in the south to 30 inches in the north. The hottest months (December to March) are also the months of highest rainfall. Communications and population are sparse. The Western Australian Government is considering a proposal to build a dam equipped with a hydro-electric plant, to conserve  $3\frac{1}{2}$  million acre feet of water, which might supply water for an area of some 200,000 acres agriculturally and topographically suitable for irrigation. Investigations show that the climate and soil conditions are suitable for the cultivation of sugar cane, rice, cotton, safflower and various oil seeds. The economic production of these and other crops, as well as the possible use of such irrigation areas for fattening cattle, is being examined at the Kimberley Research Station on the Ord River. Construction of a diversion dam at Bandicoot Bar, some 30 miles downstream from the main dam site, was virtually completed by June, 1963. Irrigation of safflower on the first five farms commenced in May, 1963. This dam will provide water for an area of 30,000 acres.

Particulars of the areas of crops and pastures irrigated in Western Australia in the seasons 1958–59 to 1962–63 are given in the table below.

#### AREA OF LAND IRRIGATED: WESTERN AUSTRALIA

(Acres)

Season	Vegetables	Fruit	Vineyards	Other crops (a)	Pastures	Total
1958–59..	8,211	6,850	630	3,429	24,982	44,102
1959–60..	8,447	7,642	705	3,668	25,427	45,889
1960–61..	9,076	8,335	897	5,591	24,652	48,551
1961–62..	9,596	8,840	972	4,235	25,036	48,679
1962–63..	9,375	9,588	924	4,447	27,167	51,501

(a) Includes fodder and fallow land.

3. **Water Supply Schemes.**—(i) *Metropolitan.* Particulars relating to the Metropolitan Water Supply are given in Chapter XX. Local Government.

(ii) *Goldfields and Agricultural Water Supply.* Western Australia has one of Australia's most spectacular water supply schemes, and a brief account of its development will be found on page 1134 of Year Book No. 37. Mundaring Reservoir on the Helena River, 26 miles from Perth, is the source of water supplied to the Eastern Goldfields and has a capacity of 62,435 acre feet and a catchment of 569 square miles. The water passes through 346 miles of main pipeline, mostly steel and 30 inches in diameter, equipped with eight pumping stations.

Maximum pumping capacity from Mundaring Pumping Station is 13.75 million gallons a day with provision to increase this to 18.5 million gallons a day. The total capacity of all receiving, regulating, standby and service tanks along the main pipeline is 154 million gallons, which includes three standby reservoirs at Kalgoorlie having a combined capacity of 60 million gallons.

Hundreds of miles of branch pipelines have been laid to mining areas, agricultural areas and country towns, a notable one being the Norseman extension of 103 miles. The system serves some 87 towns, and water is reticulated to 4,200,000 acres of mixed farming lands. The total length of pipelines is 3,782 miles and the number of services is 24,963. The total quantity of water pumped from Mundaring Reservoir in 1962-63 was 3,184 million gallons. The total cost of the scheme to the end of 1962-63 was £18,991,388, of which the Commonwealth Government contributed £3,609,278 under the terms of the Comprehensive Water Supply Scheme.

(iii) *Comprehensive Water Supply Scheme.* A comprehensive water supply scheme to supplement water supplies to the goldfields, agricultural areas, and country towns, authorized in 1947 as a joint work between the Commonwealth and State Governments, was completed towards the end of 1961. The northern section is an enlargement and extension of the Goldfields and Agricultural Water Supply. The southern section is the Great Southern Towns Water Supply. Linked with Wellington Dam (initially an irrigation work on the Collie River) by 80 miles of 30-inch diameter pipe through three pumping stations to Narrogin, it now supplements the existing water supplies to country towns along the Great Southern Railway, north to Brookton and south to Kojonup. The raising of the impounding wall of Wellington Dam to increase its storage to about 150,100 acre feet was completed in 1960. Expenditure on the Scheme to 30th June, 1963, amounted to £10,248,861.

(iv) *Local Water Supplies.* Local schemes other than as above comprise those in the remaining agricultural and mining areas, including the North-west and Kimberley Divisions: Ninety-three separate reticulated water supplies serve country towns and districts. Of these, eighty-four are controlled by the Water Supply, Sewerage and Drainage Department and the remainder by local authorities.

(v) *Commonwealth and State Government Railways.* Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the Railways from other sources, e.g., Public Works and Metropolitan Water Supply Departments.

(vi) *Catchments.* The water supplies to these country schemes come from stream flow, dams, tanks, wells and bores.

A total of 81 rated stream gauging stations is operating in the South-west, North-west and Kimberley Divisions. Three types of catchment peculiar to this State developed in connexion with local water supplies and deserving special mention are:—rock catchments, which consist mainly of clear granite out-cropping rock, from which the overall run-off from rain amounts to approximately 40 per cent.; bituminous catchments, which are areas which have been sealed with emulsified bitumen—some hundreds of acres have been so treated and yield a run-off of approximately 80 per cent. of the rainfall; and roaded catchments, where selected areas of a catchment are cleared, graded and formed into roads to assist in obtaining additional rainfall run-off.

4. **Underground Water.**—Considerable use is made of underground water by individual farmers, pastoralists, market gardeners, etc., and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of the water is only suitable for stock. However, artesian aquifers are tapped to supply or augment the town supplies of Perth, Bunbury, Busselton and Denham, and non-pressure water is used in the public supplies of thirty-five other towns.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins has been made as a result of extensive geological surveys by oil exploration companies in recent years. The Hydrology Division of the Geological Surveys of Western Australia is investigating and assessing the underground water resources of the State. A detailed survey of the Perth Basin, including systematic exploratory drilling, is in progress. The Geological Survey undertakes geological investigations in connexion with new town water supplies or extensions of existing town water supplies, and arranges for the drilling of recommended exploratory bores. Projects are in progress, or have recently been completed, for the towns of Northampton, Geraldton, Morawa, Watheroo, Lancelin, Mandurah, Capel, Eaton and Busselton. The Geological Survey advises Local Government authorities, private industry and individuals on underground water problems, and supervises departmental exploratory drilling.

## § 7. Tasmania

1. **General.**—(i) *Rainfall.* Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (See also Chapter II. Physiography, page 47 of this Year Book.)

(ii) *Main Purposes of Conservation and Utilization.* Owing to the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are by any means permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests, and by municipal authorities for town water supplies.

Until a few years ago, irrigated areas were negligible except for long-established hop fields, but there is a rapidly extending use of spray irrigation on orchards and pastures, and to some extent on potatoes and beans. Up to the present, there has been almost complete dependence on natural stream flows, but the need for some regulating storages is now apparent. A few farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water is generally of poor quality through mineralization, but a small quantity, exploited to a minor degree by bores and pumps, exists over an area in the midlands, on the north-west coast, and on King Island.

(iii) *Administration.* In 1962, a new authority, the Metropolitan Water Board, assumed control of water supplies to Hobart, Glenorchy, Kingborough and Clarence. Water supplies to other areas are primarily the responsibility of local councils, subject to approval of plans and finance by the Rivers and Water Supply Commission.

While the Commission does not own the waters of streams and lakes, it is empowered to take them, or issue licences, subject to pre-existing statute and common law rights. These include water reserved for specific industries, municipal requirements, and ordinary riparian rights. The Commission is also concerned with drainage trusts' operations, river improvement, including repairs after flood damage, and stream gauging.

2. **Hydro-electricity.\***—With the exception of a small diesel plant on King Island, electricity generation in Tasmania has resulted entirely from the development of its plentiful waters, and on a world basis this State ranks second to Norway in electricity consumption per head of population. The Hydro-Electric Commission, the authority controlling the generation of electricity in Tasmania, conducts a continuous survey of the water power resources of the State assisted by modern methods such as aerial photography and geo-physical exploration.

3. **Regional Water Schemes.**—Three regional water schemes are in operation. The first draws water from the east bank of the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities, and a second, which increases existing supplies to Hobart, pumps water from the west bank of the River Derwent at Lawitta. These two schemes are controlled by the Metropolitan Water Board. In addition, the State government has constructed a regional water scheme to serve the aluminium refinery at Bell Bay on the River Tamar and to supply several municipalities with bulk water for domestic and industrial purposes.

\* See also Chapter VII. Electric Power Generation and Distribution, p. 228.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. Diversion to the eastern half of the watersheds is not regarded as practicable.

4. **Industrial.**—Three principal industrial schemes have been installed privately. About 10 million gallons of water a day are being pumped from the Derwent River at Lawitta for use in a nearby paper mill. Another paper mill at Burnie uses several million gallons of water a day from the Emu River, and a factory at Heybridge reticulates water from Chasm Creek.

The State Government has constructed some water schemes for use primarily for industrial purposes. The scheme serving the aluminium refinery at Bell Bay is referred to in para. 3 above. A new wood-pulping plant near Geeveston uses several million gallons of water a day and, in order to supplement the summer flows of the Kermandie River for use by the industry, the State Government in 1962, through the Hydro-Electric Commission, constructed a storage on Riley's Creek by means of a 37-foot high rock-fill dam. The Prosser River Scheme, at present under construction, is designed to supply water to a sodium alginate industry at Louisville near Orford and to supplement the water supply of the township of Orford.

5. **Irrigation.**—There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a storage for the Coal Valley. Preliminary investigations have also been made in the Jordan Valley. The *Water Act* 1957 provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose, but no such works have been undertaken to date. All systems operating are privately owned, and with one exception (at Bushy Park) are single-farm units. At Bushy Park, a small system serves a group of properties. The larger proportion of the area under irrigation is watered by gravitational systems and the remainder comprises areas devoted to vegetables and served by municipal water supplies or private spray systems.

Details of the areas of crops and pastures irrigated in Tasmania in the seasons 1958–59 to 1962–63 are shown in the following table.

**AREA OF LAND IRRIGATED: TASMANIA**  
(Acres)

Season	Vegetables	Fruit	Hops	Other crops (a)	Pastures	Total
1958–59 . . . . .	1,386	1,737	1,292	1,514	7,502	13,431
1959–60 . . . . .	1,235	2,350	1,311	1,873	11,339	18,108
1960–61 . . . . .	2,103	3,311	1,364	1,787	10,369	18,934
1961–62 . . . . .	3,388	3,930	1,447	2,711	11,713	23,189
1962–63 . . . . .	4,100	4,446	1,465	2,839	11,435	24,285

(a) Includes fodder and fallow land.

## § 8. Northern Territory

1. **Climate and Topography.**—Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in Chapter II. Physiography, and a brief outline of contour and physical characteristics in Chapter V. The Territories of Australia.

2. **Administration.**—Under the *Control of Waters Ordinance* 1938–1961 of the Northern Territory, natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and diversion of water is prohibited except under prescribed conditions. There is a Water Resources Branch of the Northern Territory Administration under the control of a Director. The functions of the branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, and flood prevention and control.

Another function of the branch, which is increasing in importance as it builds up a body of technical data and information about the Territory's water resources, is the dissemination of this knowledge by the provision of advice and assistance to professional drillers and to landholders for the development and improvement of water supplies on agricultural and pastoral leases.

**3. Underground Water.**—The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry, which provides a large proportion of the Territory's income. The inadequacy of surface water during the dry season emphasizes the importance of underground water supplies in the Territory, where most of the cattle numbers are dependent on underground supplies for three to five months each year.

Rainfall is one of the factors controlling cattle numbers, but geological features, controlling both soils and the storage of underground water, are equally important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, this area has a comparatively low carrying-capacity for cattle, and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in winter, despite dry conditions.

South from this well-watered northern-most portion, the Territory becomes progressively drier, with an average annual rainfall of only 5 inches at the margins of the Simpson Desert in the south-east corner. In the lower rainfall areas, the search for potable underground water becomes exacting, but in the Ord-Victoria region and the Barkly Tablelands, the best pastures are generally in areas where sub-surface conditions are suitable for the storage of underground water.

In the Ord-Victoria region, the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Groundwater is obtained in shallow bores averaging 70 to 80 feet in depth and producing small supplies which range up to 1,500 gallons an hour. For the most part, water is stored in joints, faults or cracks in the rocks, although in places sub-artesian conditions exist. On the whole, selection of bore sites is difficult. Outcrops of sandstone, limestone and shale also occur in this area and underlie the volcanics in most places. In general, these sedimentary rocks dip gently to the east, and sub-artesian conditions obtain. Sandstone aquifers within the group yield good supplies of water ranging up to 4,000 gallons an hour. There are also small basins of younger sedimentary rocks in the region, some of which yield sub-artesian, and in places artesian, water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places, underground water is under pressure (sub-artesian), but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent. of the bores is suitable for stock and over 50 per cent. of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

In the Alice Springs district, valuable pastures occur on a great variety of rock types, and from some of these very little underground water is available. Many shallow bores obtain water from alluvium near stream channels. There are also many successful bores in porous sands and limestone in Mesozoic and Cainozoic sedimentary basins and in some Upper Proterozoic and Palaeozoic limestones and sandstones. However, boring in the metamorphic rocks and granite of the basement has, on the whole, met with little success. In many areas, the underground water is of poor quality.

Considerable research has been undertaken in recent years by the Water Resources Branch of the Northern Territory Administration into increasing the Alice Springs town water supply from alluvial basins and providing a water supply for the mining town of Tennant Creek from the Cabbage Gum Basin, a small basin of alluvium and deeply weathered Precambrian rocks, 15 miles south of the town. Recent work by this authority has also proved the existence of high-yielding dolomitic aquifers of probable Lower Proterozoic age in the region of Darwin.

Up to 30th June, 1963, 3,855 bores and wells had been registered in the Territory. Of these 2,342 were on pastoral properties, 170 on agricultural properties, 311 served town and domestic water supplies, 27 were located on mining fields, 334 were being used as test-bores and 390 were used by defence Departments during World War II. The number of registered stock route bores established by the Government is 281.

4. **Irrigation.**—There are no large-scale water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for a further dam site to augment Darwin's water supply and to provide reticulated water to properties without natural waters have commenced in the Berry Springs area.

Hydrological investigations are being carried out by the Administration to determine the supply of water and the best methods of control and use in the potential rice-growing areas of the Territory. One hundred and forty-eight gauging stations were in operation in the Territory at 30th June, 1963, under the control of the Administration's Water Resources Branch. Of these, 126 measure the volume of discharge from rivers and streams, 5 record tide levels (one of these being the Darwin Harbour Tide gauge, which is operated on behalf of the Harbour and Marine Branch) and the remaining 17 measure the level of flooding of the north sub-coastal plains.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River and Alice Springs areas, with only small acreages being utilized. In these areas, a total of 320 acres on 49 farms is under irrigation. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and for dairying and mixed farming.

The Katherine River appears to offer irrigation potentialities on the level soil below the township. Approximately 14 properties in and around Katherine are at present drawing water from the Katherine River for irrigation purposes, vegetables and pastures being the usual crops grown. The Katherine River passes through a gorge upstream of the town under conditions which appear suitable for dam construction. The Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production.

The possibility of using the Daly and Adelaide Rivers for irrigation is also being investigated. The Commonwealth Government recently approved the establishment of three pilot farms on the Marrakai Land System along the Adelaide River to ascertain whether rice and fodder crops could be grown on a commercial scale in this area.

## § 9. Papua and New Guinea

1. **Rainfall.**—Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua).

2. **General.**—For a general description of these territories see Chapter V. The Territories of Australia, page 116, of this Year Book. Irrigation has not been developed on any organized basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet. However, complete data regarding water resources are not available.

The largest rivers in the Territory include the Fly (at least 500 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles) and the Markham (110 miles).

The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in the previous chapter.

## CHAPTER IX

### POPULATION

Statistics in this chapter cover, in the main, the year 1962. More detailed figures will be found in the annual bulletin, *Demography*, and current statistics are published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, and the *Australian Demographic Review* (a mimeographed series issued at intervals throughout the year on oversea arrivals and departures, population, and vital statistics).

Statistics of the population of the principal countries and continental groupings of the world are set out in § 15.

Summarized results of the 1961 census of population are contained in § 7 of this chapter, and corresponding results relevant to the subject-matter are included in other chapters of this Year Book; for detailed results, reference should be made to the series of printed and mimeographed bulletins relating to individual States and Territories, Australia as a whole, and particular characteristics of the population (*see* Chapter XXX. Miscellaneous).

All statistics in this chapter, except for those in § 14. The Aboriginal Population of Australia, are exclusive of particulars of full-blood Aboriginals.

#### § 1. Population Statistics

Population statistics for Australia or the component States and Territories at specific dates are of two types.

- (i) *Those ascertained by census enumeration.* These results attain a very high degree of accuracy and may generally be accepted without reservation.
- (ii) *Estimates derived by the application of vital and migration statistics to census data.* In general, three estimates are made for any specific date.
  - (a) Original estimates for dates subsequent to a census made before another census is taken. These estimates represent the population ascertained at the census, plus natural increase and recorded net migration since the census. As complete records of interstate migration are not available, the estimated State or Territory populations so derived are approximate, and are subject to revision when the actual population of each State or Territory is ascertained at the next census. For some States, such revisions are substantial.
  - (b) Two-stage revision of the original estimates for each newly completed intercensal period to adjust for the difference between the new census result and the comparable estimate. This is to bring intercensal estimates into line with the two census populations and thus effect adjustment for unrecorded movement of population in the intercensal period. The first revision is reconciled with preliminary census results and the second revision with final census results.

Final revised figures become the permanent population estimates. For purposes requiring a mean population for any twelve-month period, such mean is calculated as described in § 4. As populations at specific dates are used in these calculations, consequential revisions are made to mean populations when the estimates for specific dates are revised as described above.

In accordance with this policy, all Australian population statistics shown in this issue of the Year Book for dates up to 30th June, 1961, and all mean populations for calendar years up to 1960 and financial years up to 1960-61, are final. Population statistics for dates or years subsequent to these will be revised in accordance with the results of the next census.

Since the establishment of the Commonwealth Bureau of Census and Statistics, the populations of the States and Territories have been estimated in a comparable manner and attention has been given to the improvement of the basic data from which the estimates are compiled. The principal source of error in early estimates lay in the migration records, both overseas and interstate, and post-censal revisions were made to these figures. With the improvement of records of overseas migration, however, such post-censal revision of the records of overseas migration was not found necessary after the 1933 census. The same level of improvement has not been achieved in respect of records of interstate movement, which cover travel by sea, air, rail and some movements by road.

## § 2. The Census

1. *Census-taking.*—Although “musters” of the population were carried out at least annually from 1788 to 1825, the first regular census in Australia was not taken until 1828, when a count of the population of the Colony of New South Wales was made. Subsequent censuses were taken sporadically in the various colonies until 1881, when a census was taken on the same date throughout Australia.

In 1891 and 1901, census-taking was still in the hands of the Government Statisticians of the States, but, in 1911, under the provisions of the *Census and Statistics Act 1905* which provided for the enumeration to be made from one centre instead of by each State as formerly, the Commonwealth Statistician undertook the first census of the Commonwealth of Australia. The second was taken in 1921, the third in 1933, the fourth in 1947, the fifth in 1954, and the sixth in 1961.

2. *Population recorded at Censuses.*—State and Territorial populations recorded at the Australia-wide censuses taken over the period 1881 to 1961 are shown in the following table. The figures relate to the political boundaries of the several States (or Colonies) and Territories as they existed at the date of each census, except that the Northern Territory has been shown separately from South Australia for the censuses prior to its transfer from that State. The years of formation of the separate Colonies and transfer of the Territories are shown in Chapter 1, § 3 and § 4. The total populations recorded at the censuses taken in the Colonies from 1828 to 1881 were shown in Year Book No. 40, page 326.

### POPULATION: AUSTRALIAN CENSUSES

(a) Part of New South Wales prior to 1911.

The results of the 1961 Census of the Australian External Territories are shown in § 13 of this chapter.

3. Increase since 1891 Census.—The increases in the populations of the several States and Territories and of Australia as a whole during the last seven intercensal periods are shown in the following table, which distinguishes the numerical increases, the proportional increases (which do not allow for the differences in the length of the intercensal periods) and the average annual rates of increase.

## POPULATION: INTERCENSAL INCREASES

State or Territory	1891-1901 (10 years)	1901-1911 (10 years)	1911-1921 (10 years)	1921-1933 (12½ years)	1933-1947 (14 years)	1947-1954 (7 years)	1954-1961 (7 years)

Australia ..	1.73	1.67	2.01	1.63	0.96	2.46	2.26

(a) Includes Australian Capital Territory prior to 1911.

(b) Part of New South Wales prior to 1911.

NOTE.—Minus sign (-) denotes decrease.

## § 3. Growth and Distribution of Population

1. Growth of Population.—The table which follows shows the growth in the population of each sex in the various States and Territories as measured by the estimated population at 31st December in 1900 and thereafter at decennial intervals to 1960, and for each year from 1959 to 1963.

## ESTIMATED POPULATION:

(a) Part of New South Wales prior to 1911. (b) Includes all defence personnel enlisted in Australia irrespective of movements subsequent to enlistment.

Estimates of population for intercensal years are obtained in the manner outlined in § 1.

The estimated population at 31st December each year from 1788 to 1946 was shown in *Demography*, Bulletin No. 67, 1949, and for the period 1881 to 1962 in *Demography*, Bulletin No. 80. A graph illustrating the growth of the population of Australia and of each State and Territory appears on page 282.

2. **Proportion of Area and Population, Density and Masculinity.**—The previous table shows the estimated number of persons in each of the States and Territories at 31st December, 1963. In the following table, the proportions of the total area and of the total population represented by each State and Territory are given, together with the density and the masculinity of the population.

DENSITY AND MASCULINITY OF POPULATION, 1963

State or Territory	Proportion of total area (per cent.)	Proportion of estimated population, 31st December, 1963 (per cent.)			Density (a)	Masculinity (b)
		Males	Females	Persons		
New South Wales .. .. .	10.42	36.93	37.21	37.07	13.21	100.90
Victoria .. .. .	2.96	27.84	28.05	27.94	35.05	100.88
Queensland .. .. .	22.45	14.36	14.16	14.26	2.36	103.16
South Australia .. .. .	12.79	9.26	9.25	9.26	2.68	101.73
Western Australia .. .. .	32.85	7.16	7.06	7.11	0.80	103.13
Tasmania .. .. .	0.88	3.41	3.37	3.39	14.25	102.93
Northern Territory .. .. .	17.62	0.31	0.22	0.26	0.06	144.67
Australian Capital Territory .. .. .	0.03	0.73	0.68	0.71	82.62	109.20
<b>Australia .. .. .</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>100.00</b>	<b>3.7£</b>	<b>101.67</b>

(a) Number of persons per square mile.

(b) Number of males per 100 females.

Additional information regarding density and masculinity of population appears in later sections of this chapter.

3. **Urban and Rural Distribution.**—The table on pages 270–1 shows the distribution of the population among metropolitan, other urban and rural areas in each State and Territory at the 1954 and 1961 censuses. Corresponding details for previous censuses were shown in earlier issues of the Year Book.

Metropolitan Urban Divisions comprise the capital cities of the States and the City of Canberra, the National Capital, and include, together with the cities proper, a number of adjacent municipalities and shires. The boundaries of the metropolitan urban divisions are determined for census purposes by the Statisticians of the States in collaboration with the Commonwealth Statistician and, in order to conform to the growth of the metropolitan urban population, the boundaries are reviewed at each census and adjustments made, wherever necessary, to embrace contiguous urban areas that have developed since the previous census. Amendments were made, prior to the census of 1961, to the boundaries of the Metropolitan Urban Divisions of Victoria, Queensland and Tasmania.

Other Urban Divisions comprise (i) all separately incorporated municipalities (or cities, towns or boroughs) outside the Metropolitan Urban Division (including Darwin, the capital city of the Northern Territory) except for any municipality or part of a municipality which was specifically regarded as rural for census purposes; and (ii) towns, not separately incorporated, with a population of 1,000 persons or more (750 persons or more in Tasmania).

Rural Divisions comprise the remaining portions of each State and Territory.

The term "Migratory" used in the following tables refers to persons not elsewhere enumerated who at midnight between 29th and 30th June, 1961, were on ships in Australian waters or were travelling on long-distance trains, motor coaches or aircraft.

Before comparisons are made between the populations of the metropolitan urban, other urban and rural divisions at various censuses, consideration must be given to the changes which have taken place in the composition of these divisions from census to census. In the following table, the comparative figures for 1954 have been adjusted to the boundaries used in 1961.

## URBAN AND RURAL POPULATION(a): CENSUS, 30th JUNE, 1961

(a) See letterpress preceding this table for definitions of urban, rural, etc., and for reference to the adjustments to 1954 census figures in order to provide approximate comparisons on the 1961 census basis.

NOTE.—Minus sign (—) denotes decrease.

A feature of the metropolitan population is its relatively higher femininity, but this has become less marked over the last 20 years owing to the excess of males in the high annual number of births and in the oversea migration flow in that period. In 1933, the masculinity ratio of metropolitan population was only 90.35 males per 100 females, but in succeeding censuses the ratios have been: 1947, 92.76; 1954, 96.04; and 1961, 97.67. There is little difference in the ratios between the several metropolitan areas, the ratio of males per 100 females ranging from 95.39 in Perth (Western Australia) to 98.71 in Melbourne (Victoria).

4. **Principal Urban Areas.**—The following table shows the population of the principal cities and towns (population 6,000 or more) in each State and Territory of Australia at 30th June, 1963, or at 30th June, 1961, where later figures are not available.

**ESTIMATED POPULATION OF PRINCIPAL CITIES AND TOWNS: AUSTRALIA**

(a) Metropolitan area. (b) Entire urban area. (c) Non-municipal town, i.e., a town not separately incorporated for purpose of local government. (d) 30th June, 1961. (e) Population count, 1st July, 1963.

5. **Urban Population Outside Metropolitan Areas.**—The aggregate urban population at the 1961 census of all cities and towns outside the metropolitan area of each State with 2,000 or more and 3,000 or more urban inhabitants, irrespective of whether such centres were incorporated separately or not, together with the proportion of the aggregate urban population of these cities and towns to the total population of the State, is shown in the following table.

**AGGREGATE URBAN POPULATION OF NON-METROPOLITAN CITIES AND TOWNS OF SPECIFIED SIZE: CENSUS, 30th JUNE, 1961**

State or Territory	Cities and towns outside metropolitan area with urban population of—					
	2,000 and over			3,000 and over		
	Number	Population	Proportion of total population	Number	Population	Proportion of total population
New South Wales .. .. .	101	1,074,922	27.44	71	1,002,344	25.59

Australian Capital Territory(a) .. .. .	..	..	..	..	..	..
<b>Total .. .. .</b>	<b>264</b>	<b>2,467,132</b>	<b>23.48</b>	<b>182</b>	<b>2,269,539</b>	<b>21.60</b>

(a) The only city or town is Canberra, the capital city of Australia, classed as metropolitan.

In the foregoing table, "Urban Areas" comprising two or more local government areas, or portions thereof, are treated as units. The "Urban Areas" so treated are: in New South Wales, Newcastle; in Victoria, Ballarat, Bendigo, Geelong, Latrobe Valley (Urban); in Western Australia, Kalgoorlie; and in Tasmania, Launceston. With the exception of Latrobe Valley (Urban), the areas in each instance are composed of the nucleus town and neighbouring local government areas, either in whole or in part, to form one continuous built-up area. In Latrobe Valley (Urban) there is no nucleus town, but all urban localities are closely associated with the development of the Latrobe Valley brown coal deposits.

A table showing similar data for the 1954 census was given in Official Year Book No. 47, page 295 and one for the 1947 census in Official Year Book No. 40, page 334. Comparisons between these various tables can be made only if allowance is made for changes in the status and structure of local government areas and for changes in the manner of determining urban population at each census.

6. **Principal Cities of the World.**—The following table shows the population of the world's largest cities at the latest available date. Since the way in which cities are delimited differs from country to country, the table shows data for the urban agglomeration, if such exists, as well as data for the so-called city proper. The urban agglomeration is defined in the United Nations *Demographic Year-book* 1962 (page 35), from which most of the figures in the table have been taken, as the suburban fringe or thickly settled territory lying outside of, but adjacent to, city boundaries. (See also the Technical Notes on Statistical Tables and footnotes to the table in the *Demographic Year-book*.)

(a) New York-Northeastern New Jersey urbanized area, which includes Elizabeth, Jersey City, Newark, Paterson and Yonkers. Area extended considerably compared with that previously shown.

(b) East Berlin (1,058,000) and West Berlin (2,180,000).

### § 4. Mean Population

1. General.—Mean populations are calculated for twelve-month periods to provide a satisfactory average basis for calculations requiring allowance for the continuous change in population figures during such periods.

From 1901 onwards, the mean population for any year has been calculated by the formula:—

$$\text{Mean Population} = \frac{a + 4b + 2c + 4d + e}{12}$$

where *a*, *b*, *c*, *d* and *e*, respectively, are the populations at the end of the quarter immediately preceding the year and at the end of each of the four succeeding quarters; e.g., in the case of a calendar year, 31st December of the preceding year and 31st March, 30th June, 30th September and 31st December of the year under consideration. This formula gives a close approximation to the mean of a theoretical population progressing smoothly through the five values *a*, *b*, *c*, *d*, *e*.

2. Results.—(i) *Calendar Years*. The following table shows the mean population of each State and Territory for the calendar years 1954 to 1963.

MEAN POPULATION: CALENDAR YEARS

### § 5. Elements of Increase

1. General.—The two factors which contribute to the growth of a population are “natural increase”, i.e., the excess of births over deaths, and “net migration”, i.e., the excess of arrivals over departures. The “total increase” of the population is obtained by combining natural increase with the increase by net migration. However, comparison of the total increase so obtained with that derived by subtracting the population recorded at one census from that recorded at the next census reveals differences which can be attributed partly to differences in the coverage of the census enumerations, and partly to deficiencies in the records of the elements of increase. The principal source of error in the elements of increase in earlier years lay in migration records, oversea as well as interstate, and adjustments were made to these records for the intercensal periods. With the gradual improvement of

records of overseas migration, it was considered that from July, 1933, it was no longer possible to attribute the much smaller differences for Australia as a whole solely to records of overseas migration, and since that date the differences, when ascertained for the intercensal period, have been shown as a separate item, with the elements of increase left as recorded. However, it has not been possible to effect a similar improvement in the records of interstate migration, and much of the intercensal differences for particular States may be attributed to deficiencies in this factor.

2. *Elements of Increase, 1936-1963, Australia.*—In the following table, particulars are given of the elements of increase for each five-year period from 1936 to 1960 and for each of the years 1959 to 1963. The numbers of males, females and persons are shown separately.

## POPULATION: ELEMENTS OF INCREASE

(a) Excess of births over deaths. For the period September, 1939, to June, 1947, deaths of defence personnel, whether overseas or in Australia, have been included. (b) Excess of arrivals over departures. Excludes troop movements for the period September, 1939, to June, 1947. (c) Adjustment of population on the basis of the final results of the 1947, 1954 and 1961 censuses. (d) For periods subsequent to the census of 30th June, 1961, the intercensal adjustment will not be known until after the next census has been taken.

3. Analysis of Intercensal Increase, 30th June, 1954, to 30th June, 1961.—In the following table, particulars are given for States and Territories of the recorded elements of increase and the intercensal adjustment for the whole of the seven-year intercensal period from 30th June, 1954, to 30th June, 1961.

As stated in § 1. of this chapter (see p. 265), complete records of interstate migration are not available. For this reason, the differences between the estimated populations and those recorded at the census of 30th June, 1961, i.e. the intercensal adjustments, were substantial for some States.

(a) Census. (b) Excess of births over deaths. (c) Excess of arrivals over departures for recorded interstate and overseas migration. (d) Adjustment of population on the basis of the census of 30th June, 1961.

4. Rate of Population Growth.—The annual percentage rate of population growth is computed by the formula:—

$$P_1 = P_0 (1 + r)^t$$

where  $P_0$  and  $P_1$  are the populations at the beginning and end of the period respectively,  $t$  is the number of years intervening and  $r$  is the annual rate of growth.

The annual rates of growth of population (per cent.) in Australia during each of the five yearly periods 1936-40 to 1956-60 and the years 1959 to 1963 are shown in the following table.

**POPULATION: RATE OF GROWTH, AUSTRALIA**  
(Per cent.)

Period	Annual rate of population growth(a)		
	Natural increase(b)	Net migration (c)	Total increase (d)
1936-40 .. .. .	0.79	0.13	0.94
1941-45 .. .. .	0.94	0.02	0.98
1946-50 .. .. .	1.36	0.91	2.26
1951-55 .. .. .	1.38	0.95	2.31
1956-60 .. .. .	1.40	0.83	2.22
1959.. .. .	1.39	0.77	2.15
1960.. .. .	1.39	0.89	2.27
1961.. .. .	1.45	0.59	2.04
1962.. .. .	1.36	0.59	1.95
1963.. .. .	1.30	0.67	1.97

(a) Annual rates for single years represent the increase during the period expressed as a proportion (per cent.) at the beginning of the period. (b) Excess of births over deaths including deaths of Australian defence personnel. (c) Excess of overseas arrivals over departures excluding overseas movements of Australian defence personnel. (d) Total of natural increase and net migration, together with adjustments for differences disclosed by the results of population censuses up to 30th June, 1961.

The annual rate of population growth during the present century has been 1.75 per cent., but the results from year to year have deviated widely from this figure. In the following table, the period 1st January, 1901, to 31st December, 1963, has been arranged into certain defined groups of years according to the occurrence of influences markedly affecting the growth of population.

**POPULATION: PERIODICAL RATES OF GROWTH**

Period	Interval (years)	Total increase ('000)	Average annual numerical increase ('000)	Annual rate of population growth (per cent.)		
				Natural increase	Net migration	Total
1901 to 1913 .. .. .	13	1,128	87	1.55	0.49	2.04
1914 to 1923 .. .. .	10	862	86	1.49	0.15	1.64
1924 to 1929 .. .. .	6	680	113	1.26	0.62	1.88
1930 to 1939(a) .. .. .	10	569	57	0.82	0.02	0.85
1940 to 1946(a) .. .. .	7	513	73	0.98	0.01	1.01
1947 to 1952(a) .. .. .	6	1,222	204	1.37	1.19	2.54
1953 to 1963 .. .. .	11	2,283	208	1.38	0.76	2.13

(a) For the period September, 1939, to June, 1947, overseas movements of Australian defence forces have been excluded and deaths of members of these forces, whether occurring in Australia or overseas have been included.

Up to 1913, the rate of natural increase was rising, and this factor, coupled with the impetus given to immigration from 1911 onwards by increased governmental assistance, was responsible for the comparatively high annual rate of 2.04 per cent. during this period. The 1914-18 War was a dominating influence in the decade 1914-23, and its effects can be seen in the reduction of the rate from 2.04 to 1.64 per cent. From 1924 to 1929, more settled and prosperous conditions were experienced; encouraged migration was resumed on a large scale and, despite a further decline in the rate of natural increase owing to the persistent fall in the birth rate, the annual rate of growth rose to 1.88 per cent. After 1929 came the economic depression and immigration ceased—in fact, Australia actually lost people through an excess of departures over arrivals in 1930, 1931, 1932 and 1935. The rate of natural increase also fell, and the annual rate of growth of the population fell to 0.85 per cent. With the outbreak of war in 1939, Australia entered a new phase in her demographic history. The immediate effect of the war was to increase the number of marriages

and to reverse the downward trend in fertility. The number of births increased each war year from 1940 to 1945, and these increases more than offset the rise in deaths due to war casualties and higher civilian death rates. As might be expected, migration over these years was negligible. The period 1947 to 1963 was marked by a continued high natural increase and a resumption of immigration, the latter resulting in very high net gains in each of the four years 1949 to 1952. The annual rate of growth for the period 1947 to 1952 was 2.54 per cent., and from 1953 to 1963 it was 2.13 per cent.

Rates of population growth from 1881 are shown for each State and Territory of Australia in the annual bulletin, *Demography*.

Estimated rates of growth of the population of Australia in comparison with those for other countries of the world for the years 1958-1961 are shown in the table in § 15. International Statistics of Population.

## § 6. Density

From certain aspects, population may be less significant in respect of its absolute amount than in its relation to the area of the country. Australia, with an area of 2,971,081 square miles and an estimated population at 31st December, 1963, of 11,022,811, excluding full-blood aboriginals, has a density of only 3.71 persons to the square mile, and is, therefore, one of the most sparsely populated countries of the world. For other continents and sub-continents, the densities in 1961 were approximately as follows:—Europe (excluding U.S.S.R.), 225; Asia (excluding U.S.S.R.), 165; U.S.S.R., 25; Africa, 22; Northern and Middle America, 29; and South America, 22. The population density of Australia in 1961 was 3.54; about one-sixth of that of South America and of Africa; about one-seventh of that of U.S.S.R.; about one-eighth of that of Northern and Middle America; about one-forty-seventh of that of Asia (excluding U.S.S.R.); and about one sixty-fourth of that of Europe (excluding U.S.S.R.).

Because of the large area of Australia and the unsuitability for settlement of much of the country, the density of population must necessarily increase slowly. In Australia as a whole, the figure has increased from 1.29 per square mile in 1901 to 3.71 in 1963. The rise in density from 1901 to 1963 in each State and Territory was:—New South Wales 4.45 to 13.21, Victoria 13.77 to 35.05, Queensland 0.76 to 2.36, South Australia 0.95 to 2.68, Western Australia 0.20 to 0.80, Tasmania 6.68 to 14.25, Northern Territory 0.01 to 0.06, and Australian Capital Territory 2.05 (in 1911) to 82.62. When comparing the density of population of the several States, consideration should be given to the average annual rainfall distribution in each State as an indication of the climatic influence upon probable population numbers. The proportion of the area of Australia receiving less than 10 inches of rainfall is 39 per cent.; that of the various States is:—New South Wales, 20 per cent.; Victoria, nil; Queensland, 13 per cent.; South Australia, 83 per cent.; Western Australia, 58 per cent.; and Tasmania, nil.

The number and density of population of the principal countries and continental groups of the world are shown in the table in § 15. International Statistics of Population.

## § 7. General Characteristics

NOTE.—The corresponding section of the previous issue of this Year Book contained particulars of the characteristics of the population of Australia at the 1961 census compared with the 1954 census, and for the individual States and Territories at the 1961 census. The latter information has not been repeated in this issue. Details of the various characteristics of the population at the 1961 census as shown in the previous issue have been amended, and the amended figures for Australia appear in the following paragraphs.

1. **Sex Distribution.**—The number of males to each hundred females has been adopted as a measure of the "masculinity" of the population. The masculinity of the population of each of the States may be obtained for each year from 1796 to 1907 from the table on pages 163-5 of Year Book No. 2 and for the years 1900 to 1910 from the table on page 123 of issue No. 5.

With the exception of some dislocation arising from the two World Wars, there was a continuous diminution of the masculinity of the population until 1945. This resulted from the increasing proportion of the population in the higher age groups, in which females preponderate owing to their greater longevity, and the general long-term fall in the birth rate. At the 1947 census, the numbers of the sexes were practically equal, but during the following decade there was an increase in masculinity owing to the greater number of males as compared with females in net overseas migration.

The following table shows the masculinity of the population at ten-year intervals from 1900 to 1960 and for each of the years 1958 to 1963.

(a) At the 1954 and 1961 censuses, unspecified ages were distributed over all ages prior to tabulation.

NOTE.—Minus sign (-) denotes decrease.

# POPULATION OF AUSTRALIA, 1788 TO 1963

## RATIO GRAPH

NOTE - THE VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO THE RATE OF INCREASE OR DECREASE, ACTUAL NUMBERS ARE INDICATED BY THE SCALE

# OVERSEA ARRIVALS AND DEPARTURES AUSTRALIA, 1925 TO 1963

Of the 10,508,186 persons enumerated at the 1961 census, 39.3 per cent. were under 21 years of age; 52.2 per cent. were 21 to 64 years; and 8.5 per cent. were aged 65 years and over. At the 1954 census, 36.3 per cent. were under 21 years of age; 55.4 per cent. were 21-64 years; and 8.3 per cent. were aged 65 years and over.

(ii) *Proportional Distribution, Censuses, 1871 to 1961.* The next table shows the changes which have taken place in the age distribution of the population of Australia since 1871.

(a) Based on the age distribution at the census of 30th June, 1961, and on subsequent births, recorded ages at death and recorded ages of migrants.

3. *Conjugal Condition.*—(i) *Censuses, 30th June, 1954 and 1961.* Of the total population of Australia at the 1961 census, 48.0 per cent. were never married; 46.2 per cent. were married (including 1.4 per cent. married but permanently separated); 5.0 per cent. were widowed and 0.8 per cent. were divorced. Between 1954 and 1961, the number never married increased by 19.8 per cent.; those married (including permanently separated) by 14.8 per cent.; the widowed by 13.0 per cent.; and the divorced by 18.7 per cent.

The ratio of widowed females to widowed males increased from 311 : 100 in 1954 to 352 : 100 in 1961. This disparity between the number of widowed males and widowed females is the result of two influences. The first is the greater longevity of females coupled with the usually younger age at marriage; and the second is that a larger proportion of males cancel their widowhood by remarriage.

The ratio of males to females in the never married group "15 years of age and over" increased from 141 : 100 in 1954 to 143 : 100 in 1961.

The numbers of males, females and persons recorded at the censuses of 30th June, 1954 and 1961, are shown in the following table according to their conjugal condition.

POPULATION: CONJUGAL CONDITION, AUSTRALIA

Conjugal condition	Census, 30th June, 1954			Census, 30th June, 1961			Increase, 1954-61
	Males	Females	Persons	Males	Females	Persons	
Never married—							
Under 15 years of age ..	1,309,660	1,253,674	2,563,334	1,626,195	1,550,803	3,176,998	613,664
15 years of age and over	962,491	684,154	1,646,645	1,098,450	770,048	1,868,498	221,853
Total .. .. .	2,272,151	1,937,828	4,209,979	2,724,645	2,320,851	5,045,496	835,517

Widowed .. .. .	113,064	351,102	464,166	116,085	408,623	524,708	60,542
Divorced .. .. .	32,389	36,650	69,039	38,640	43,339	81,979	12,940
Not stated .. .. .	9,021	4,953	13,974	(a)	(a)	(a)	-13,974
Grand Total .. .. .	4,546,118	4,440,412	8,986,530	5,312,252	5,195,934	10,508,186	1,521,656

(a) In processing the 1961 census data, a conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

NOTE.—Minus sign (—) denotes decrease.

(ii) *Conjugal Condition and Occupational Status.* Tables showing the occupational status in conjunction with the age and conjugal condition of the population are included in Chapter XII. Employment and Unemployment.

4. *Countries of Birth.*—At 30th June, 1961, the Australian-born element of the population of Australia represented 83.1 per cent. as compared with 85.7 per cent. at the 1954 census. The number of Australian-born increased by 1,029,342 or 13.4 per cent. between 1954 and 1961, while the oversea-born population increased by 492,314 or 38.3 per cent. The latter resulted mainly from the increase of 441,110 in the number of persons of European birthplace between 1954 and 1961—principally persons born in Italy (an increase of 108,397); United Kingdom and Republic of Ireland (91,096); Greece (51,461); and the Netherlands (50,099).

Of persons born outside Australia, 55.5 per cent. were males and 44.5 per cent. females.

The following table shows the countries of birth of the population recorded at the census of 30th June, 1961, as compared with the census of 30th June, 1954.

## POPULATION: COUNTRY OF BIRTH, AUSTRALIA

(a) Excludes full-blood Aboriginals.

NOTE.—Minus sign (-) denotes decrease.

6. **Nationality.**—At 30th June, 1961, 9,984,709 persons, or 95.0 per cent. of the Australian population, were of British nationality (consisting of 83.1 per cent. born in Australia and 11.9 per cent. born outside), compared with 95.5 per cent. in 1954 (85.7 per cent. born in Australia and 9.8 per cent. born outside). Of the oversea-born population in 1961, 70.6 per cent. were British subjects, compared with 68.6 per cent. in 1954.

The following table shows the numbers of males, females and persons at the 1954 and 1961 censuses classified by nationality (i.e. allegiance).

**POPULATION: NATIONALITY (i.e., ALLEGIANCE), AUSTRALIA**

(a) All persons of individual citizenship status who, by virtue of the Nationality and Citizenship Act 1948, are deemed to be British subjects. Includes naturalized British. For purposes of this table Irish nationality is included with British.

NOTE.—Minus sign (—) denotes decrease.

7. **Religion.**—At the 1921 census, 92,258 persons in Australia, or 1.7 per cent., gave no reply to this question, but at the censuses of 1933, 1947, 1954 and 1961, when the public was informed that there was no legal obligation to answer this question, 848,948 persons (12.8 per cent.), 824,824 (10.9 per cent.), 855,819 (9.5 per cent.) and 1,102,929 (10.5 per cent.) respectively, gave no reply. Of males 11.2 per cent., and of females 9.8 per cent., did not state their religion in 1961.

Amongst the denominations with the larger numbers of adherents, the greatest proportional increase since 1954 was recorded by Roman Catholic and Catholic combined, 27.1 per cent.; then Presbyterian, 12.2 per cent.; Methodist, 10.1 per cent.; Church of England, 7.6 per cent. The largest proportional increase was that of the Greek Orthodox denomination, 107.3 per cent.

At the 1961 census, as at earlier censuses, 99 per cent. of those who stated their religion professed the Christian faith. Between 1954 and 1961 the number who stated they were of non-Christian religion increased by 26 per cent., while those specifically stating they had no religion increased by 59 per cent.

The following table shows the number of adherents of the various religions as recorded at the censuses of 30th June, 1954, and 30th June, 1961.

## POPULATION: RELIGION, AUSTRALIA

(a) So described in individual census schedules.

NOTE.—Minus sign (—) denotes decrease.

8. **Industry, Occupational Status and Occupation.**—Information concerning the industry and occupational status of the population which was previously included in this chapter is now included in Chapter XII. Employment and Unemployment, which contains also particulars of the various occupations of the population.

9. **Other General Characteristics.**—In addition to the questions asked at the 1961 census on the foregoing characteristics, a question on race was asked. The information supplied in reply to this question is not available for inclusion in this chapter, but will be included in the Appendix.

For information supplied at the 1961 census in answer to questions asked on dwellings and householders *see* Chapter XI. Housing and Building.

## § 8. Oversea Arrivals and Departures

NOTE.—More detailed statistics of overseas arrivals and departures, covering country of residence, country of embarkation/intended disembarkation, mode of travel, month of arrival or departure, etc., are shown in the tables of Section II. "Overseas Arrivals and Departures" of the annual bulletin, *Demography*.

1. **Overseas Arrivals and Departures since 1936.**—Earlier issues of the Official Year Book contain, in summary form, tables showing the increase of population by net migration from 1861 to the latest date, while information for individual years from 1881 is published in the annual bulletin, *Demography*. The following table shows, for Australia, arrivals and

departures since 1936, and refers to total movement irrespective of length of stay. Air crews and ships' crews and persons passing through Australia on board the same ship or aircraft are excluded from Australian statistics of overseas arrivals and departures. A graph showing arrivals and departures from 1921 to 1963 appears on page 283.

### OVERSEA ARRIVALS AND DEPARTURES: AUSTRALIA

Period	Total arrivals			Total departures			Excess of arrivals over departures		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons
1936-40(a) ..	161,774	159,538	321,312	140,901	137,283	278,184	20,873	22,255	43,128

(a) Excludes movements of defence personnel from September, 1939, to June, 1947.

2. *Excess of Arrivals over Departures.*—(i) *General.* The excess of total overseas arrivals over total departures is one of the elements of population increase taken into account in preparing the estimated population for other than census dates (see § 5 of this chapter, pp. 275-9). It is necessary to use statistics of total overseas arrivals and departures for this purpose, because Australian population statistics relate to the total population present in Australia at the date of the census or estimate, and not the population normally resident in Australia (which would include those temporarily overseas and exclude those temporarily visiting Australia). In the following paragraphs are set out particulars of the net gain or loss of population due to overseas migration, according to age and conjugal condition and country of birth, during the years 1961 to 1963.

(ii) *Age Distribution and Conjugal Condition.* The net gain to the population of Australia due to total migration movement for the years 1961 to 1962 according to age and conjugal condition, was as follows. Particulars for the year 1963 will be found in the Appendix to this volume.

### EXCESS OF ARRIVALS OVER DEPARTURES: AGE DISTRIBUTION AND CONJUGAL CONDITION, AUSTRALIA

NOTE.—Minus sign (-) indicates excess of departures over arrivals.

3. **Stated Purpose of Travel.**—Since 1st July, 1924, overseas travellers have been classified according to declared intention in regard to residence into two principal categories, distinguishing movements for short terms from movements for longer periods (including permanently). Prior to 1957, these categories were *temporary* and *permanent*. Thereafter the categories were entitled *short-term* and *permanent and long-term*, but the basis of classification was not changed and the figures are directly comparable for the whole period. For short-term movements, overseas visitors and Australian residents have been identified separately.

Revised questions for travellers were introduced in mid-1958, and these enabled the separation, from 1st January, 1959, of permanent from other long-term movements and also the identification of former settlers departing among the permanent departures.

The principal categories of travellers according to stated purpose of travel are as follows:—

*Permanent movement*—consisting of persons arriving with stated intent to settle permanently in Australia, and Australian residents departing with stated intent to reside permanently abroad;

*Long-term movement*—consisting of the arrival of visitors and the departure of residents with stated intent to stay (in Australia or in a country abroad respectively) for twelve months or more; and departure of visitors and return of residents who have stayed (in Australia or in a country abroad respectively) for twelve months or more;

*Short-term movement*—consisting of all other movements, including the movement of Australian troops irrespective of period of stay;

*Settlers*—persons who, on arrival in Australia, indicated that they came intending to settle;\*

*Former Settlers*—persons who, on departure from Australia, stated that they had come to Australia intending to settle, had stayed for a period of twelve months or more and were now departing permanently.\*

\* Included in *Permanent movement* above.

This classification is based on the purpose of travel stated by travellers on arrival in, or departure from, Australia. These statements represent the traveller's intention at that time. Many travellers subsequently change their intentions, and this must be borne in mind in interpreting the statistics.

The numbers so classified since 1st January, 1936, on the basis of declared intention as to residence, and since 1st January, 1959, on this basis supplemented by additional particulars as to stated purpose of travel, are as follows.

### OVERSEA ARRIVALS AND DEPARTURES BY STATED PURPOSE OF TRAVEL: AUSTRALIA

(Persons)

#### ARRIVALS

Period	Permanent and long-term movement				Short-term movement				Total arrivals

§ 9. Assisted Migration into Australia

1. General.—In the following table, particulars are shown of the total numbers of persons who were assisted to come to Australia by the Australian Government under all assisted passage schemes during the period 1936 to 1963.

“ASSISTED” MIGRATION: AUSTRALIA

Period								Nominated and selected (assisted) arrivals
1936-40	..	..	..	..	..	..	..	3,828
1941-45	..	..	..	..	..	..	..	..
1946-50	..	..	..	..	..	..	..	273,195
1951-55	..	..	..	..	..	..	..	275,241
1956-60	..	..	..	..	..	..	..	305,517
1959	..	..	..	..	..	..	..	64,146
1960	..	..	..	..	..	..	..	68,254
1961	..	..	..	..	..	..	..	55,685
1962	..	..	..	..	..	..	..	45,276
1963	..	..	..	..	..	..	..	62,914

2. Joint Commonwealth and States Scheme.—Details of the joint scheme of assisted immigration arrived at by agreement between the Commonwealth and State Governments,

which operated from 1920 to 1939, were published in earlier issues of the Year Book (*see* No. 38, p. 576). After the outbreak of hostilities in 1939, it was decided to discontinue the grant of assisted passages for the duration of the war.

3. Migration from Britain.—(i) *General*. Resumption of migration was the subject of negotiations between the Commonwealth and British Governments towards the end of 1945, and two agreements were signed in March, 1946. These agreements, which came into operation on 31st March, 1947, provided for free and assisted passages to be granted to British residents desirous of settling in Australia. The Free Passage Agreement, which applied to British ex-servicemen and their dependants, was terminated on 28th February, 1955. From 1st April, 1949, the Assisted Passage Agreement continued in operation under renewal from time to time and was again renewed as from 1st April, 1962.

(ii) *Assisted Passages*. Under the existing financial arrangements, the British Government's contribution towards the Assisted Passage Scheme is agreed upon when the agreement is extended, and for the five years from 1st April, 1962, was fixed at a maximum amount of £150,000 sterling a year.

The Assisted Passage Agreement covers five main groups of migrants (and their families), namely, personal nominees, group nominees, Commonwealth nominees, "Bring out a Briton" campaign families, and unnominated migrants. *Personal nominees* are migrants sponsored by residents of Australia able to provide suitable accommodation for them (any adult resident of Australia may nominate friends or relatives in Britain who are eligible to be considered for assisted passages under this agreement). *Group nominees* are recruited on a trade-qualification basis to meet applications lodged by employers and State Governments, who undertake to provide employment and accommodation for those selected. *Commonwealth nominees* comprise workers selected against known and assessed employment demands in Australia. Migrants in this group can live in hostels established by the Commonwealth Government for up to two years while they are seeking to obtain private accommodation. The Commonwealth nominee scheme was introduced in 1950 in order to reinforce the personal and group nomination schemes. "Bring out a Briton" campaign families are selected to fill employment and accommodation vacancies located by special voluntary committees formed by community effort to stimulate the flow of British migrants who are otherwise unable to obtain sponsorship. *Unnominated migrants* may also be granted assisted passages, even though they are unable to arrange personal nominations and are not occupationally qualified for approval under other existing assisted passage selection schemes. Unnominated families must possess a minimum of £500 sterling for transfer to Australia. Unnominated single persons must possess £25 sterling, and married couples without children £50 sterling, and must be between the ages of 19 and 45 years. The unnominated categories must be prepared to make their own accommodation arrangements after arrival.

Although the Commonwealth is not generally prepared to accept single persons or married persons without children if they have reached their forty-sixth birthday before the date of sailing, the parents or close relatives of intending migrants or of persons established in Australia may, if otherwise acceptable under the scheme, be granted passages irrespective of age. Each migrant of 19 years of age and over is required to contribute £10 sterling towards the cost of his or her passage, while persons under 19 years travel free. Apart from this contribution and that made annually by the British Government, the cost of the passages is borne by the Commonwealth Government.

(iii) *Number of Arrivals*. The numbers of British migrants who came to Australia under the Free and Assisted Passage Agreement during the years January, 1947, to June, 1963, are given in the following table, according to the State of proposed destination.

**UNITED KINGDOM FREE AND ASSISTED PASSAGE AGREEMENT: NUMBER OF MIGRANTS(a)**

Period	N.S.W.	Vic.	Qld.	S. Aust.	W. Aust.	Tas.	A.C.T.	C'wealth nominees (b)	Total
1958-59 ..	4,375	4,931	2,449	2,912	1,853	706	210	11,070	28,506
1959-60 ..	6,341	6,324	2,862	3,988	1,442	873	277	11,790	33,897
1960-61 ..	6,313	6,186	2,579	3,308	1,613	657	234	13,830	34,700
1961-62 ..	5,804	4,433	2,593	3,317	2,094	509	157	8,161	27,070
1962-63 ..	8,093	6,118	2,980	4,512	5,294	677	271	13,755	41,700
<b>Total, January, 1947 to June, 1963 ..</b>	<b>96,576</b>	<b>104,487</b>	<b>48,909</b>	<b>40,582</b>	<b>40,683</b>	<b>13,160</b>	<b>4,338</b>	<b>120,903</b>	<b>469,638</b>

(a) Includes child migrants as shown in para. 4 (iii) below.

(b) See text, p. 298, for explanation.

4. **Child Migration from Britain.**—(i) *General.* Since the commencement of the assisted passage schemes in 1947, the migration of unaccompanied children and youths from Britain has been encouraged under the auspices of approved voluntary organizations. The organizations at present introducing child migrants include the Fairbridge Farm Schools, Dr. Barnardo's Homes, the Big Brother Movements of New South Wales and Tasmania, and the Northcote Children's Emigration Fund. All the principal religious denominations are also participating in the scheme. There are 34 approved homes in Australia for the care of child migrants. There is also a growing interest in the Family Schemes operated by the Fairbridge Society and the Northcote Children's Farm School. Children of school age may be accepted under the Fairbridge Scheme by schools at Molong (New South Wales) and at Pinjarra (Western Australia) and, by arrangement with the Northcote Trust, at the Northcote Farm School near Bacchus Marsh (Victoria). Children with only one parent living may be accommodated at the St. John's Home for Boys and Girls at Canterbury (Victoria) conducted by the Church of England, and at Draper's Hall, Adelaide. Maintenance payments for these children vary within each State.

(ii) *Financial Assistance.* The British Government contributes £A1 5s. a week for each child, and in addition, the respective State Governments contribute amounts varying from 7s. a week in New South Wales to 16s. in Western Australia. The Commonwealth Government pays the normal child endowment. In addition, the Commonwealth Government and the State Government concerned have contributed towards the capital expenditure on accommodation for child migrants.

(iii) *Number of Arrivals.* From the beginning of 1947 to 30th June, 1963, a total of 6,575 British children and youths arrived under the sponsorship of voluntary organizations. New South Wales took 4,203, Western Australia 1,360, Victoria 561, and the other three States 451. These children were brought to Australia under the United Kingdom Free and Assisted Passage Scheme and are included in the figures shown in the table above.

5. **Maltese Migration.**—On 31st May, 1948, the Commonwealth Government and the Government of Malta entered into an agreement under which both Governments grant financial assistance towards the passage costs of selected Maltese migrants. This agreement has been extended from time to time. On 13th August, 1957, a new agreement, which was acknowledged to have come into effect as from 1st July, 1956, was signed between the two governments. This agreement has been extended by exchange of letters and is currently operative until 30th June, 1964.

From its inception until 30th June, 1963, a total of 28,944 Maltese had arrived under this scheme. Up to the end of June, 1963, 261 Maltese children had been brought out to approved institutions in Australia. These are included in the number shown above.

6. **Netherlands Migration.**—A migration agreement outlining the terms and conditions under which Netherlands nationals may be selected in the Netherlands and assisted with their passage costs to enable them to settle in Australia was concluded between the Commonwealth and Netherlands Governments in February, 1951, and came into operation on 1st April of that year. This superseded an earlier arrangement in 1946, between the Commonwealth and the Netherlands Emigration Foundation (*see Official Year Book No. 39, p. 567*). The agreement has continued in operation under extensions since 1st April, 1956.

The provision of shipping is the responsibility of the Netherlands Government. The Commonwealth arranges for the reception of migrants and their after-care and assists in the securing of employment. Families who have not obtained private accommodation prior to arrival may be temporarily accommodated in an Immigration Centre. When the breadwinner is placed in employment, he proceeds either to employer-found accommodation or to a Commonwealth Hostel. These arrangements continue until the family can secure its own accommodation, or vacancies enable a family to be united in a hostel. Up to the end of June, 1963, 65,649 Dutch migrants had settled here under the Netherlands—Australia Migration Agreement.

7. **Italian Migration.**—On 29th March, 1951, the Commonwealth and Italian Governments entered into a migration agreement effective for a period of 5 years, under which certain selected Italian migrants were assisted to Australia. The agreement came into force on 1st August, 1951.

The agreement was temporarily suspended at the end of 1952, but in March, 1954, provision was made for assisted passages to be granted to certain relatives and fiancées of migrants who had previously settled in Australia under the agreement. On 1st December, 1954, the agreement proper was re-opened and was extended to 31st July, 1959. It has since been further extended. Up to 30th June, 1963, arrivals under this agreement totalled 45,420 persons.

8. **German Migration.**—On 29th August, 1952, a migration agreement was signed between the Commonwealth Government and the Government of the Federal Republic of Germany. This was somewhat similar to the agreements concluded with the Netherlands and Italy and was effective for a period of 5 years. The agreement was renewed on 27th August, 1958, to be effective from 29th August, 1957. Arrivals of German assisted migrants numbered 69,814 to the end of June, 1963.

9. **Austrian Migration.**—Late in 1952, arrangements were made with the Intergovernmental Committee for European Migration for the migration to Australia of a small number of selected rural and other workers and their families from Austria. Later,

---

NOTE.—Australia makes a basic per capita contribution of \$U.S.100 towards the transport costs of assisted national migrants who are moved under the auspices of the Intergovernmental Committee for European Migration from Malta, the Netherlands, Italy, Germany, Austria, Greece, Belgium and Spain. A similar basic contribution is made for refugees selected under assisted passage arrangements. An additional payment of up to approximately \$U.S.64 per migrant is also made in accordance with the financial requirements of each of the foregoing schemes. The balance of the required passage costs is made up by the Governments of the emigration countries concerned, by the migrants themselves, and in respect of Greece and Spain, by the Intergovernmental Committee for European Migration. The Commonwealth Government also contributes \$U.S.100 per capita towards the movement to Australia of each handicapped refugee and accompanying family member who do not at present qualify for an Australian per capita contribution under assisted passage arrangements.

these arrangements were extended to cover greater numbers and wider categories of migrants. Reception arrangements, temporary accommodation, after-care and placement in employment are undertaken by the Commonwealth. Under these arrangements, 17,122 Austrians arrived in Australia up to 30th June, 1963.

10. **Greek Migration.**—An arrangement similar to the Austrian one was made with the Intergovernmental Committee for European Migration late in 1952. Reception arrangements, temporary accommodation, after-care and employment are undertaken by the Commonwealth. The balance of passage costs, after the Australian Government contribution, is made by the migrants themselves, the Greek Government, and the Intergovernmental Committee for European Migration. Under these arrangements, 33,608 Greek assisted migrants had settled in Australia up to 30th June, 1963.

11. **Spanish Migration.**—Negotiations were completed in 1958 with the Spanish Government and the Intergovernmental Committee for European Migration under which selected rural workers suitable for sugar-cane cutting were offered assisted passages to Australia. Later this arrangement was extended to include other occupational groups and to certain family dependants nominated by assisted migrants already in Australia.

The Spanish Government, the migrant, and the Intergovernmental Committee for European Migration contribute the balance of passage costs after the Australian Government contribution.

Reception arrangements, temporary accommodation and initial placement in employment are the responsibility of the Commonwealth. Under these arrangements, 7,880 Spanish nationals arrived in Australia up to 30th June, 1963.

12. **Belgian Migration.**—On 1st February, 1961, the General Assisted Passage Scheme, which had covered Belgian nationals, ceased to operate in Belgium, and, following agreement with the Belgian Government and with the Intergovernmental Committee for European Migration, arrangements were made for assisted Belgian nationals to travel under the auspices of the Intergovernmental Committee for European Migration. Reception arrangements, temporary accommodation, after-care and placement in employment are undertaken by the Commonwealth.

The Commonwealth contribution and the arrangements for reception, accommodation, after-care and employment are the same as for Austrian migrants. Under these arrangements, 1,152 Belgian assisted migrants arrived in Australia up to 30th June, 1963.

13. **Refugee Migration.**—On 21st July, 1947, the Commonwealth Government entered into an agreement with the International Refugee Organization to settle displaced persons in Australia. Although the International Refugee Organization concluded its activities in 1951, the Commonwealth agreed to receive those displaced persons already accepted for migration, but whose passages had still to be arranged. A total of 170,700 persons settled in Australia under this scheme. Following the cessation of the Displaced Persons Scheme in 1951, Australia has accepted for permanent resettlement under assisted passage arrangements 32,171 refugees of European origin to 30th June, 1963. Included in this figure are 14,060 Hungarians who have been granted asylum in Australia since the uprising in October, 1956. The Commonwealth Government granted a total of £A.130,000 for the relief of Hungarian refugees and, in addition, contributed the equivalent of \$100 a head to the passage costs of those refugees who were granted assisted passages.

Australia continues to accept refugees under assisted passage and full-fare arrangements. In recent years, assisted passage migration for refugees has been maintained with application mainly in Italy and Austria. In the post-war period to 30th June, 1963, 202,871 refugees arrived as assisted passage and 67,962 as full-fare migrants.

14. **General Assisted Passage Scheme.**—To encourage the migration of persons from the United States of America, Switzerland, Denmark, Norway, Sweden and Finland, the Commonwealth Government on 10th September, 1954, introduced an assisted passage scheme for nationals of these countries. Later, the scheme was extended to cover certain British subjects living in a number of countries other than the United Kingdom and to nationals of Eire, Belgium and France. (As from 1st February, 1961, new arrangements have operated for Belgium. See para. 12 above.) Up to 31st December, 1958, the Commonwealth made a contribution of £37 10s. sterling per adult and *pro rata* amounts for children according to the fare paid, but this was increased to £57 2s. 10d. sterling (\$160) per adult and *pro rata* for children in respect of migrants approved on and after 1st January, 1959. To the end of June, 1963, 20,188 migrants had arrived in Australia under this scheme.

15. **Other Assisted Migration Schemes.**—The Displaced Persons Scheme, the Empire and Allied Ex-Servicemen's Scheme, the Triestian Scheme and the Eire Assisted Passage Scheme have now lapsed. Details of these schemes were published in earlier issues of the Year Book (see No. 47, pp. 321-3).

16. **Summary of Arrivals of Assisted Migrants.**—The following table shows the number of assisted migrants who arrived in Australia in each of the last five financial years and since January, 1947.

#### ARRIVALS UNDER ASSISTED MIGRATION SCHEMES

Assisted migration scheme	1958-59	1959-60	1960-61	1961-62	1962-63	January, 1947, to June, 1963

Other schemes .. .. .	623	406	323	..	..	28,098
<b>Total .. .. .</b>	<b>58,020</b>	<b>69,317</b>	<b>66,996</b>	<b>42,062</b>	<b>57,159</b>	<b>990,384</b>

(a) Mostly Scandinavians, U.S. Americans and British nationals from countries other than the United Kingdom.

NOTE.—(i) All arrivals indicated in this table have obtained some financial assistance from the Australian Government towards payment of their passage money. Transport to Australia for the migrants concerned has been arranged on (1) ships under charter to the Department of Immigration, (2) ships and aircraft under charter to the Intergovernmental Committee for European Migration, and (3) normal commercial shipping and airlines.

(ii) The arrivals under these schemes include a small number of nationals of countries other than those referred to, and stateless persons.

## § 10. The Regulation of Immigration into Australia

1. Powers and Legislation of the Commonwealth.—(i) *Constitutional*. Under section 51 (xxvii.) and (xxviii.) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws with respect to immigration, emigration, aliens and the influx of criminals.

(ii) *Legislation*. Immigration into Australia is regulated by the *Migration Act 1958* which came into force on 1st June, 1959, and repealed the *Immigration Act 1901–1949* and the *Aliens Deportation Act 1948*.

Any immigrant entering Australia after the commencement of the Act without having been granted an "entry permit" or who is not within an exempted class is a prohibited immigrant. Exempted persons include diplomatic, consular and trade representatives of other countries, and seamen who enter on leave while their ships are in Australian ports. For the purposes of the Immigration Act an immigrant includes a person entering for temporary stay.

An entry permit is normally granted at the port of entry by means of a stamp in the traveller's passport or equivalent travel document. There is no form of application involved. Temporary entry permits are granted to persons who have been authorized to enter for a limited period only. Persons eligible to enter for indefinite residence are granted permits of unrestricted validity. A person who is refused an entry permit must be kept on board the ship on which he arrives; otherwise, the shipping company is liable to a fine of £500.

The Act abolished the "Dictation Test" as a means of excluding or deporting ineligible persons. Other deportation powers which were contained in the repealed legislation were largely re-enacted, although with some revision.

The Act revised the law relating to the emigration of Aborigines and children, repealing the *Emigration Act 1910*.

The Act does *not* affect passport or visa requirements for entry to Australia. All persons who, prior to the 1958 Act, had been required before embarkation to obtain visas or other kinds of authority to proceed to Australia, are still required to obtain them. Likewise, persons who have not had to obtain prior authority to proceed to Australia are not now required to obtain such authority solely as a result of the Act. Persons previously allowed to enter without production of passports—notably British people arriving from New Zealand—are still able to do so.

The *Aliens Act 1947–1959* provides that a register of aliens shall be maintained for every State or mainland Territory of the Commonwealth. Unless exempted, aliens 16 years of age and over are required to register with the Department of Immigration and to notify the Department of any change of address, occupation or employment, and of their marriage. The Act provides also that the consent of the Department must be obtained before an alien may change his surname.

The *Immigration (Guardianship of Children) Act 1946–1952* provides that the Minister for Immigration becomes the legal guardian of every person under the age of 21 years who enters Australia (except for certain groups exempted) other than in charge of, or for the purpose of living in the care of, a parent or adult relative. It is primarily administered through the Child Welfare authorities in each State and mainland Territory who, as the Minister's delegates under the Act, supervise the welfare of each "immigrant child".

2. Conditions of Immigration into Australia.—(i) *Admission of Non-Europeans*. Australia's immigration policy is directed towards maintaining a predominantly homogeneous population. It is hoped in this way to avoid difficult social and economic problems.

It is regarded as fundamental to this policy that people coming to Australia for permanent residence should be capable, both economically and socially, of ready integration into the community. Consequently, preference is given to persons of European origin.

The Australian practice is not one of the total exclusion of persons of other than European origin. The immigration laws governing residence in Australia permit the Minister to exercise discretion. The policy so administered takes into account the qualifications of persons wishing to settle here and the merits of each case, including considerations of a humanitarian nature and broad national interest.

In addition to the Aborigines, there are in Australia more than 30,000 people of non-European origin. These include more than 12,000 Asian and other non-European students attending Australian Universities, schools and technical colleges. There are also some 8,000 non-Europeans who have been admitted for temporary residence (on a short-term or long-term basis) in a wide variety of categories. The remaining 10,000 comprise mainly non-Europeans who are Australian citizens by birth, or who have acquired citizenship through the process of naturalization or registration.

The present immigration policy provides, *inter alia*—

- (a) that non-Europeans, who are the spouses, unmarried minor children or aged parents of Australian citizens, or of British subjects permanently resident here, may be admitted for permanent residence;
- (b) that a European British subject proceeding from overseas to Australia for permanent residence may be accompanied by his non-European spouse and unmarried minor children;
- (c) that non-Europeans who have been admitted for temporary residence may qualify, on residential and other grounds, for permanent resident status and subsequently for naturalization;
- (d) in addition to those non-Europeans admitted for temporary residence for commerce and trade, for the admission, on a selective basis for indefinite stay, of highly qualified and distinguished people who seek to reside here (including those non-Europeans who have taken educational courses at the tertiary level in Australia, who have spent at least five years in their own countries after having completed their courses, and who have qualifications from which the Australian community would benefit); and
- (e) that those non-Europeans, whose continued residence in Australia was induced by political events in their own countries, may be permitted to remain here indefinitely.

(ii) *Persons of European Race.* Maltese, Cypriots and aliens of European race desiring to settle permanently in Australia are required to obtain authority for admission from the Department of Immigration or an Australian overseas post. Their admission under the present policy is subject to their compliance with the Commonwealth's requirements with regard to health, character, freedom from security risk and general suitability as settlers.

(iii) *General Information.* General information as to conditions of entry into Australia may be obtained from the following officers:—

- (a) in Australia—the Secretary, Department of Immigration, Canberra, Australian Capital Territory, and Commonwealth Migration Officers in the capital cities of the various States;
- (b) in overseas countries—from migration officers or from Australian Diplomatic posts (a complete list of these is given in Chapter XXIX. International Relations).

### § 11. Passports

Australian passports are issued, under the *Passports Act* 1938-1948 and Passport Regulations, to Australian citizens.

Diplomatic passports are issued to persons travelling on official missions of a diplomatic character. Official passports are granted to persons travelling on the official business of the Commonwealth or a State Government.

Australian passports are obtainable on application at offices of the Commonwealth Department of Immigration in each State and internal Territory of Australia or from overseas offices of that Department, from any Australian diplomatic or consular mission abroad, or from the office of any Australian Government Trade Commissioner overseas.

Applicants for passports must furnish evidence of their identity and nationality and pay a fee of £1.

Approximately 50,000 Australian passports are issued each year in Australia and abroad.

### § 12. Citizenship and Naturalization

1. *Commonwealth Legislation.*—The *Nationality and Citizenship Act* 1948 commenced on Australia Day (26th January), 1949, and repealed all previous Commonwealth legislation on this subject. The most significant effect of the Act was the creation for the first time of the status of "Australian Citizen". In this respect the Act was complementary to citizenship legislation passed or about to be passed by other countries of the Commonwealth of Nations. All Australian citizens, and the citizens of other countries of the Commonwealth of Nations, are declared to be British subjects. For details of the Act, see Official Year Book No. 42, page 619.

2. *Naturalization Certificates Granted.*—The following tables show the number of certificates granted during 1962 and the number of persons affected by these certificates. The certificate covers the person being naturalized and his/her children under the *Nationality and Citizenship Act* 1948-1960.

#### NATURALIZATION CERTIFICATES GRANTED AND PERSONS AFFECTED: PREVIOUS NATIONALITIES OF RECIPIENTS, AUSTRALIA, 1962

(a) Excludes children affected by grant of certificates.

The number of persons affected by certificates granted in 1962 in respect of residents of the various States and Territories was as follows:—New South Wales, 18,686; Victoria, 19,508; Queensland, 3,603; South Australia, 6,463; Western Australia, 3,470; Tasmania, 718; Northern Territory, 217; Australian Capital Territory, 411; External Territories, 135; Total, 53,211.

### § 13. Population of External Territories

Ordinances of the individual external territories under the control of Australia provide for a census of the population to be taken on the day prescribed for the taking of a census in the Commonwealth of Australia.

The following table shows the population of the Territories of Christmas Island, Cocos (Keeling) Islands, Norfolk Island, Papua, the Trust Territory of New Guinea and the Trust Territory of Nauru at the census of 30th June, 1961, and as estimated at 30th June, 1963.

#### POPULATION: EXTERNAL TERRITORIES

Territory	Census, 30th June, 1961			Estimate, 30th June, 1963
	Males	Females	Persons	Persons
Christmas Island .. ..	1,963	1,136	3,099	3,349
Cocos (Keeling) Islands .. ..	333	273	606	664
Norfolk Island .. ..	421	423	844	853
Papua .. ..	(a) 5,490	(a) 4,304	(a) 9,794	(b) 543,138
Trust Territory of New Guinea .. ..	(a) 9,158	(a) 6,378	(a) 15,536	(b) 1,516,385
Trust Territory of Nauru .. ..	3,019	1,594	4,613	4,801

(a) Non-indigenous population only. The indigenous population was estimated to be—Papua, 513,648; Trust Territory of New Guinea, 1,433,383. (b) Total population. The non-indigenous population was estimated to be—Papua, 11,998; Trust Territory of New Guinea, 15,728.

Further particulars concerning the indigenous populations of the territories are given in Chapter V. The Territories of Australia.

## § 14. The Aboriginal Population of Australia

In Official Year Book No. 17, pages 951-61, a brief account was given of the Australian Aboriginal population, its origin, its numbers as estimated from time to time and the steps taken for its protection. On pages 914-6 of Official Year Book No. 22, particulars were shown for each of the States and Territories of Australia at successive periods, while a special article dealing with the estimated number and distribution of the native population at the date of first settlement of the white race in the continent appeared on pages 687-96 of Official Year Book No. 23.

The Aborigines are scattered over the whole of the mainland, but are mostly in the Northern Territory, Queensland, and Western Australia. Particulars of the number in each State and Territory at the census of 30th June, 1961, are shown in the following table. Half-caste Aborigines are included in the numbers of the population and are of course enumerated at the census.

## ABORIGINAL POPULATION, 30th JUNE, 1961

State or Territory	Full-blood					Half-caste (enumerated at the census)			Total full-blood and half-caste
	Number enumerated at census, 30th June, 1961			Estimated number out of contact at census	Total number as recorded or estimated at 30th June, 1961	Males	Females	Persons	
	Males	Females	Persons						
New South Wales ..	791	697	1,488	..	1,488	6,703	6,525	13,228	14,716
Victoria ..	141	112	253	..	253	758	785	1,543	1,796
Queensland ..	4,686	4,000	8,686	..	8,686	5,460	5,550	11,010	19,696
South Australia ..	1,181	966	2,147	..	2,147	1,426	1,311	2,737	4,884
Western Australia ..	4,243	3,878	8,121	2,000	10,121	4,108	4,047	8,155	18,276
Tasmania ..	..	..	..	..	..	24	14	38	38
Northern Territory ..	7,857	7,585	15,442	1,944	17,386	1,156	1,162	2,318	19,704
Aust. Cap. Territory ..	..	..	..	..	..	78	65	143	143
<b>Australia ..</b>	<b>18,899</b>	<b>17,238</b>	<b>36,137</b>	<b>3,944</b>	<b>40,081</b>	<b>19,713</b>	<b>19,459</b>	<b>39,172</b>	<b>79,253</b>

Torres Strait Islanders, both full-blood and half-caste, are not included as Aborigines, but are included in the populations shown on pp. 266-89. At the 1961 census there were 4,972 full-blood and 245 half-caste Torres Strait Islanders of whom 4,970 and 237 respectively were recorded in Queensland.

For further information as to the estimated numbers of full-blood Aborigines, and the difficulty of arriving at precise figures, see Year Book No. 47, page 329.

## § 15. International Statistics of Population

1. Introduction.—In the following tables, the population, density, rate of growth, natural increase and masculinity are shown in respect of all countries which had an estimated population of at least one million persons in 1961, plus Papua and Western New Guinea (West Irian). The source of these figures is the 1962 *Demographic Yearbook* which is prepared and published by the Statistical Office of the United Nations. The tables include figures varying in reliability and accuracy, there being considerable variation in the quality of demographic statistics as between countries, but this information has been shown to provide some form of guide as to the magnitude and trend of population movements in oversea countries.

Where the information available to the Statistical Office of the United Nations relates to only part of the population of a country, the population characteristic (e.g. rate of growth), or vital statistics rate (e.g. marriages), has been omitted from the tables, and this is indicated by a footnote.

For fuller particulars of the differences in the quality of the statistics and their reliability and for other qualifications, reference should be made to the detailed explanations contained in the *Demographic Yearbook* of the Statistical Office of the United Nations (*see particularly Technical Notes on Statistical Tables and footnotes to the tables*).

**2. Population, Rate of Growth and Density: World, Continents and Regions.**—The following table shows for the World, Continents, and Regions, estimated population and density at ten-yearly intervals since 1930, and for 1961. The annual rate of increase (per cent.), together with the average annual increase during the period 1950–61, is also shown. It should be noted that the population figures have been adjusted for underenumeration and errors in estimation. In preparing these figures, the Population Branch of the United Nations revises, from time to time, the estimates for previous years as new data become available, for example, from a census. The figures are estimates only, and as such are subject to a substantial margin of error.

**POPULATION, DENSITY AND RATE OF INCREASE FOR THE WORLD AND CONTINENTS—SELECTED YEARS**

(Source: United Nations *Demographic Yearbook*, 1962)

Continent and region	Population							Density (persons per square mile)
	Adjusted estimates of mid-year population (millions)					Annual rate of increase 1950–61 (per cent.)	Average annual increase 1950–61 (millions)

**3. Population, Density, Rate of Growth, Natural Increase and Masculinity of Principal Countries.**—Certain details of the population of the larger countries within continental groups are shown in the following table. As explained above, reference should be made to the detailed comments contained in the United Nations *Demographic Yearbook*, 1962, regarding geographical units used, boundaries of areas, reliability of estimates, etc.

## POPULATION, DENSITY, RATE OF INCREASE, NATURAL INCREASE AND MASCULINITY—SELECTED COUNTRIES

## CHAPTER X

### VITAL STATISTICS

**NOTE.**—The tables in this chapter are confined to the principal characteristics of vital statistics for Australia, and relate, in the main, to the year 1962, except for the totals of marriages, births, deaths and infant deaths, for which it has been possible to include figures for 1963. Comparisons have been restricted, in general, to the individual years 1958 to 1963 and the five-year periods 1926–30 to 1956–60, while age data have been shown in five-year groups. Comparisons over longer periods, together with more detailed figures such as single age particulars and cross-classifications of various characteristics, will be found in the annual bulletin, *Demography*. Current information is published in the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics* and the *Australian Demographic Review* (a mimeographed series issued at intervals throughout the year on population and vital statistics).

Figures of births and deaths for Australia are exclusive throughout of full-blood Aborigines.

Vital statistics for the principal countries of the world are set out in § 7. International Vital Statistics.

#### § 1. Provisions for Registration and Compilation of Statistics

In Australia, vital statistics are compiled from information supplied for the registration of births, deaths and marriages. Each State and Territory has an independent system of registration. Provisions for the civil registration of births, deaths and marriages have been in force in Tasmania from 1839, in Western Australia from 1841, in South Australia from 1842, in Victoria from 1853, and in New South Wales and Queensland (then part of New South Wales) from 1856. Registration in the Territories is administered by the Commonwealth Government, registration in respect of the Northern Territory having been taken over from South Australia in 1911 and in respect of the Australian Capital Territory from New South Wales in 1930. The authority responsible for the registration of births, deaths and marriages occurring within his particular State or Territory is the Registrar-General (the Government Statist in Victoria) or the Principal Registrar.

New Registration of Births, Deaths and Marriages Ordinances came into operation in the Northern Territory and the Australian Capital Territory on 1st September, 1963. Under the provisions of these ordinances, information concerning a birth is required to be supplied to the Registrar of Births, Deaths and Marriages within 28 days, though provision has been made for late registration. For the registration of a death the period allowed is 14 days. Prior to 1st September, 1963, information concerning a birth was required within 21 days, and information concerning a death within 14 days. The provisions for the registration of marriages are those laid down in the *Marriage Act* 1961 which came into operation on 1st September, 1963 (*see below*).

Information concerning a birth is required to be supplied within 42 days in South Australia, while in other States a period of 60 days is allowed. For the registration of a death the period allowed is 8 days in Tasmania, 10 days in South Australia, 14 days in Western Australia, 21 days in Victoria and 30 days in New South Wales and Queensland.

The *Marriage Act* 1961 came into operation on 1st September, 1963, placing the Marriage Laws of all States, the mainland Territories and Norfolk Island on a uniform basis. Provision is made for the celebration of marriage by ministers of religion registered with the Registrar of Ministers of Religion appointed in each State and Territory by the Attorney-General, and by certain civil officers. In all cases, the authorized celebrant is required to register particulars of the parties married with the appropriate registering authority in each State or Territory. The celebrant is requested to register a marriage as soon as practicable and in any case not later than fourteen days after the marriage. Prior to the coming into operation of the *Marriage Act*, the celebrant was required to register particulars of the parties married with the Registrar-General (the Government Statist in Victoria) or the Principal Registrar immediately following the ceremony in Victoria, Western Australia, the Northern Territory and the Australian Capital Territory; within 7 days in Tasmania and South Australia; and within 30 days in New South Wales and Queensland.

The registration of stillbirths is compulsory in all the States and Territories, except Tasmania. Western Australia was the first State to introduce compulsory registration in 1908, followed by the Australian Capital Territory in 1930, New South Wales in 1935, South Australia in 1937, the Northern Territory in 1949, Victoria in 1953, and Queensland in 1959.

Prior to the bringing into operation of the new Registration of Births, Deaths and Marriages Ordinances on 1st September, 1963, the registration of a stillbirth was effected in the Northern Territory and the Australian Capital Territory as a birth and subsequent death. From 1st September, 1963, the Births, Deaths and Marriages Ordinances provides that a stillbirth shall be registered in the Register of Births. Registration is effected in New South Wales and Western Australia as a birth and subsequent death and in the other States as a stillbirth. Though registration is not compulsory in Tasmania, it is believed that for various reasons nearly all stillbirths are registered voluntarily. In this chapter, stillbirths have been excluded from all tables of births and deaths and are shown only in those specially relating to stillbirths.

The data for the compilation of vital statistics are obtained from registry records and dispatched, through the Statistical Office in each State and Territory, to the Commonwealth Statistician. The compilation and publication of vital statistics for Australia is one of the functions of the Commonwealth Statistician. The Deputy Commonwealth Statisticians compile and publish statistics relating to their respective States.

## § 2. Marriages

1. Number of Marriages.—The numbers of marriages registered in each State and Territory in five-year periods from 1926–30 to 1956–60, and for each of the years 1959 to 1963, are shown in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, page 575. A graph showing the number of marriages in each year from 1870 to 1963 appears on page 317 of this issue.

1951–55 ..	8.41	8.34	7.91	8.11	8.44	8.35	9.13	8.20	8.29
1956–60 ..	7.70	7.50	7.14	7.26	7.36	7.69	8.63	7.51	7.50

(a) Number of marriages per 1,000 of mean population.

## CRUDE MARRIAGE RATES—continued

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
ANNUAL RATES									
1959 ..	7.50	7.35	7.23	7.18	7.57	7.52	8.68	7.55	7.40
1960 ..	7.65	7.22	6.86	6.99	7.36	7.82	8.28	7.51	7.34
1961 ..	7.61	7.26	6.86	7.02	6.98	7.57	7.89	7.13	7.30
1962 ..	7.63	7.49	6.91	7.10	7.24	6.91	9.01	7.31	7.39
1963 ..	7.65	7.22	7.32	7.24	7.44	7.43	9.07	7.21	7.42

The crude marriage rates for Australia and the principal countries of the world are shown for the latest available year in § 7. International Vital Statistics.

3. **Marriage Rates based on Marriageable Population.**—As the marriage rates in some international tabulations are based on the unmarried population aged 15 years and over, the corresponding rates have been calculated for Australia for the nine census periods to 1960–62. The period in each case comprises the census year with the year immediately preceding and the year immediately following, and the figures are as follows.

## PERSONS MARRYING PER 1,000 OF UNMARRIED POPULATION: AUSTRALIA

Period	Rate(a)	Period	Rate(a)
1880–82 ..	48.63	1932–34 ..	42.88
1890–92 ..	44.04	1946–48 ..	71.24
1900–02 ..	42.14	1953–55 ..	65.32
1910–12 ..	50.12	1960–62 ..	62.27
1920–22 ..	55.97		

(a) Average annual number of persons who married per 1,000 unmarried persons, including widowed and divorced, aged 15 years and over.

4. **Age and Conjugal Condition at Marriage.**—(i) *General.* Particulars of age at marriage in age groups, and previous conjugal condition of bridegrooms and brides in 1962 are given hereunder. There were 8,924 males under 21 years of age married during 1962, while the corresponding number of females was 30,991. At the other extreme, there were 1,114 bridegrooms and 541 brides in the age group 65 years and over.

AGE AND CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES:  
AUSTRALIA, 1962

Age at marriage (years)	Bridegrooms				Brides			
	Bachelors	Widowers	Divorced	Total	Spinsters	Widows	Divorced	Total

65 and over ..	1,114	..	1	3	4	3	13	32	1,058
<b>Total Brides</b>	<b>79,090</b>	<b>43</b>	<b>21,354</b>	<b>37,060</b>	<b>8,650</b>	<b>3,827</b>	<b>2,512</b>	<b>1,730</b>	<b>3,914</b>

(iv) *Average Ages of Bridegrooms and Brides.* The average age at marriage of brides and bridegrooms has declined during recent years. The average ages, in years, of brides for each of the five years to 1962 were:—1958, 25.00; 1959, 25.01; 1960, 24.84; 1961, 24.73 and 1962, 24.68. The average ages, in years, of bridegrooms were 28.36 in 1958, 28.39 in 1959, 28.15 in 1960, 28.07 in 1961 and 28.03 in 1962. The difference in the average age at marriage between brides and bridegrooms is generally just over three years, the difference in 1962 being 3.35 years.

5. Previous Conjugal Condition.—The following table shows the relative conjugal condition of bridegrooms and brides in 1962.

CONJUGAL CONDITION OF BRIDEGROOMS AND BRIDES: AUSTRALIA, 1962

Conjugal condition of bridegrooms	Total bridegrooms	Conjugal condition of brides		
		Spinsters	Widows	Divorced
Bachelors .. .. .	71,323	67,361	1,193	2,769
Widowers .. .. .	3,061	1,027	1,353	681
Divorced .. .. .	4,706	2,461	652	1,593
<b>Total Brides .. .. .</b>	<b>79,090</b>	<b>70,849</b>	<b>3,198</b>	<b>5,043</b>

6. Countries of Birth of Persons Marrying.—The following table shows the relative countries of birth of bridegrooms and brides married in 1962.

RELATIVE COUNTRIES OF BIRTH OF BRIDEGROOMS AND BRIDES:  
AUSTRALIA, 1962

Country of birth of bridegroom	Country of birth of bride											Total bridegrooms
	Australia	New Zealand	United Kingdom and Ireland	Germany	Greece	Italy	Netherlands	Poland	Yugoslavia	Other European	Other and unspecified	
Australia .. .. .	54,555	208	2,555	280	50	81	345	56	39	317	421	58,907

<b>Total Brides .. .. .</b>	<b>62,594</b>	<b>354</b>	<b>4,139</b>	<b>1,021</b>	<b>3,275</b>	<b>2,988</b>	<b>919</b>	<b>400</b>	<b>601</b>	<b>1,570</b>	<b>1,229</b>	<b>79,090</b>

7. Occupation of Bridegrooms.—The distribution of the 79,090 bridegrooms for 1962 amongst classes of occupations was as follows:—craftsmen, 26,286; labourers, 9,961; administrative and clerical workers, 9,793; rural and mining workers, 8,251; professional and technical workers, 7,082; workers in transport and communication, 5,994; service, sport and other workers, 5,393; sales workers, 5,066; persons not in the work force, 1,264.

8. Celebration of Marriages.—Under the provisions of the *Marriage Act 1961*, marriages may be celebrated either by ministers of religion who are registered for that purpose with the Registrar of Ministers of Religion in each State or Territory, or by certain civil officers, in most cases district registrars. Most of the marriages are celebrated by ministers of religion. The registered ministers in 1962 belonged to more than forty different denominations, some of which, however, have only very few adherents. A number of these have been combined under the heading "Other Christian". The figures for 1962 are shown in the following table.

## MARRIAGES IN EACH DENOMINATION, 1962

Denomination	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Australia	
									No.	Proportion of total

# INFANT MORTALITY RATES: AUSTRALIA, 1910 to 1963

(INFANT DEATHS PER 1,000 LIVE BIRTHS)

## § 4. Fertility and Reproduction

1. **Introduction.**—Of the two elements of increase in the population, natural increase and net migration, the former has been the more significant in Australia for many years. The level of natural increase depends on the excess of births over deaths, and the relation between fertility and mortality determines the rate of reproduction or replacement of the population.

2. **Number of Live Births and Confinements.**—(i) *Year 1962.* There are various methods of measuring the fertility of the population by relating the number of births to the numbers of the population. In each, the basic data are, of course, the numbers of live births.

The number of live births registered in Australia during 1962 is shown in the following table. The table shows also the number of confinements resulting in one or more live births. The figures exclude cases where the births were of still-born children only.

## LIVE BIRTHS AND CONFINEMENTS, 1962

Particulars	N.S.W.	Vic.	Q'land	S. Aust.	W.A.	Tas.	N.T.	A.C.T.	Aust.
LIVE BIRTHS									
Single births	83,522	64,391	34,994	20,883	16,763	8,671	904	1,793	231,921
Twins ..	1,875	1,462	687	475	298	220	20	26	5,063
Triples ..	38	37	9	3	3	3	..	..	93
Quadruplets	4	..	..	..	..	..	..	..	4
Males ..	44,014	33,876	18,354	11,003	8,824	4,629	495	915	122,110
Females ..	41,425	32,014	17,336	10,358	8,240	4,265	429	904	114,971
<b>Total ..</b>	<b>85,439</b>	<b>65,890</b>	<b>35,690</b>	<b>21,361</b>	<b>17,064</b>	<b>8,894</b>	<b>924</b>	<b>1,819</b>	<b>237,081</b>

## STILLBIRTHS ASSOCIATED WITH MULTIPLE BIRTHS INCLUDED ABOVE

Twins ..	43	12	11	7	4	8	2	..	87
Triples ..	4	2	..	..	..	..	..	..	6

## CONFINEMENTS RESULTING IN BIRTHS SHOWN ABOVE

Nuptial ..	79,786	62,217	32,893	20,123	15,917	8,324	814	1,783	221,857
Ex-nuptial ..	4,710	2,924	2,453	1,002	998	462	101	23	12,673
<b>Total ..</b>	<b>84,496</b>	<b>65,141</b>	<b>35,346</b>	<b>21,125</b>	<b>16,915</b>	<b>8,786</b>	<b>915</b>	<b>1,806</b>	<b>234,530</b>

NOTE.—Owing to the registration procedure adopted in some States, it is possible that in some cases where one child only of a multiple pregnancy was live-born, the confinement has been treated as a single birth. However, the numbers of multiple births are not significantly affected. See also para. 12, p. 327.

(ii) *Live Births, Years 1926 to 1963.* The average annual number of live births in each State and Territory for each five-year period from 1926 to 1960 and the total number of live births for each year from 1959 to 1963 are given in the following table. Corresponding figures for each five-year period from 1861 to 1950 were published in Year Book No. 39, page 583.

## LIVE BIRTHS

1963 ..	84,065	65,649	35,934	21,367	17,290	8,530	859	1,995	235,689

A graph showing the number of births in each year from 1870 to 1963 will be found on page 317.

3. *Crude Birth Rates.*—The oldest and most popular method of measuring fertility is to relate the number of births to the total population, thus obtaining the *crude birth rate*. The crude birth rate measures the rate per thousand persons (irrespective of age or sex) at which the population has added to its numbers by way of births during a given period. Other methods of measuring fertility are shown on pages 323 *et seq.*

Crude birth rates for each five-year period from 1926 to 1960 and for each year from 1959 to 1963 for each State and Territory are set out below.

## CRUDE BIRTH RATES(a)

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	21.76	19.65	21.90	19.41	21.54	22.29	15.60	14.96	20.98
1931-35 ..	17.28	15.60	18.48	14.89	18.36	19.95	15.99	15.77	16.94
1936-40 ..	17.51	16.20	19.48	15.82	19.16	20.58	19.96	18.68	17.52
1941-45 ..	19.79	19.27	22.28	20.43	21.72	22.23	11.40	26.82	20.28
1946-50 ..	22.60	22.51	24.69	24.41	25.24	26.71	23.77	37.92	23.39
1951-55 ..	21.78	22.42	24.11	23.25	25.37	25.58	29.37	32.22	22.86
1956-60 ..	21.55	22.52	23.80	22.27	24.20	25.45	31.49	30.10	22.59

ANNUAL RATES									
1959 ..	21.49	22.36	24.31	22.12	24.04	25.26	33.70	29.22	22.57
1960 ..	21.38	22.41	23.62	22.19	23.41	25.52	30.95	30.12	22.42
1961 ..	22.07	22.51	24.17	23.10	23.16	25.40	33.46	29.49	22.85
1962 ..	21.46	22.04	23.19	21.59	22.59	24.75	34.26	27.69	22.14
1963 ..	20.75	21.49	23.00	21.18	22.36	23.42	29.96	27.20	21.59

(a) Number of births per 1,000 of mean population.

NOTE.—The birth rates in the table above are based on *live births registered in the respective States and Territories*. Some confinements, however, take place in States other than the State in which the mother usually resides, particularly in areas near State borders.

The variations thus caused in the birth rates for the States and Territories by referring the birth registrations to the mother's usual residence are shown by the following corrected rates for 1963—New South Wales, 20.83; Victoria, 21.44; Queensland, 22.92; South Australia, 21.07; Western Australia, 22.39; Tasmania, 23.41; Northern Territory, 31.81; and Australian Capital Territory, 27.05.

See Year Book No. 47 (p. 339) for the effect of the variations in the availability of hospital facilities on the birth rate in the Australian Capital Territory and in the neighbouring town of Queanbeyan in New South Wales.

A graph showing the birth rate for each year from 1870 to 1963 will be found on page 318.

The crude birth rates of Australia and the principal countries of the world for the latest available year are shown in § 7. International Vital Statistics.

4. **Fertility Rates.**—The principal demographic factors affecting the level of crude birth rates are the proportion of women of child-bearing age in the population and the proportion of such women who are married. These factors may vary considerably at different periods and for different countries, and a population with a higher proportion of married women of child-bearing age will have a much higher crude birth rate than one with a low proportion, although the fertilities of the two populations may be identical.

In order to compare fertilities, births are sometimes related to the number of women of child-bearing age or, alternatively, nuptial births are related to the number of married women of child-bearing age. Thus births are related to potential mothers, giving the fertility rate.

The following table sets out for certain periods, commencing with 1880–82, the number of births per thousand of mean population, the number of births per thousand women of child-bearing age and the number of nuptial births per thousand married women of child-bearing age. For purposes of this table, the child-bearing age has been taken to be 15–44 years inclusive, but births to mothers who were stated to be under 15 or over 44 years have been included in the compilations.

#### CRUDE BIRTH RATES AND FERTILITY RATES: AUSTRALIA

Period	Average annual rates			Index nos. (Base: 1880–82 = 100)		
	Crude birth rate(a)	Fertility rates		Crude birth rate(a)	Fertility rates	
		Births per 1,000 women aged 15–44 years	Nuptial births per 1,000 married women aged 15–44 years		Births per 1,000 women aged 15–44 years	Nuptial births per 1,000 married women aged 15–44 years
1880–82.. ..	35.3	170	321	100	100	100
1890–92.. ..	34.5	159	332	98	94	103
1900–02.. ..	27.2	117	235	77	69	73
1910–12.. ..	27.2	117	236	77	69	74
1920–22.. ..	25.0	107	197	71	63	61
1932–34.. ..	16.7	71	131	47	42	41
1946–48.. ..	23.6	104	160	67	61	50
1953–55.. ..	22.7	109	149	64	64	46
1960–62.. ..	22.5	112	154	64	66	48

(a) Number of births per 1,000 of mean population.

The table above shows how increasing proportions both of women of child-bearing age and of married women of child-bearing age inflate the crude birth rate. Thus, while the nuptial birth rate for married women increased by only 22 per cent. over the period 1932–34 to 1946–48, the crude birth rate rose by 41 per cent. owing principally to the greatly increased number of marriages during that period.

5. **Age-specific Fertility Rates for Females.**—So long as customary ages at marriage do not change drastically, the main demographic factor affecting the number of births is the age composition of the potential mothers in the population. Within the child-bearing group, the fertility of women of different ages varies considerably, and a clearer view of the fertility of the population can be obtained from an examination of what are known as its age-specific fertility rates, that is, the number of births to women of specified ages per thousand women of those particular ages.

Age-specific fertility rates are more commonly expressed in age groups than in single ages. In the following table, such rates, calculated in terms of female births for the purpose of obtaining the gross and net reproduction rates described in para. 6, are shown in five-year age groups for Australia for the period 1926 to 1962.

#### AGE-SPECIFIC FERTILITY RATES(a): AUSTRALIA

Age group (years)	1926	1931	1936	1941	1946	1951	1956	1961	1962
15-19 .. ..	14.02	13.08	12.18	11.90	12.63	18.59	20.84	22.87	21.53
20-24 .. ..	60.23	53.08	50.33	59.42	73.52	85.84	101.46	110.01	104.53
25-29 .. ..	76.82	62.47	62.02	70.78	89.51	90.24	98.11	107.73	104.24
30-34 .. ..	61.90	51.25	46.33	49.72	65.03	59.16	59.65	63.62	62.35
35-39 .. ..	43.55	33.23	28.89	28.69	37.43	32.29	31.32	30.53	29.80
40-44 .. ..	17.63	13.61	10.19	9.52	11.87	9.97	9.48	9.36	8.80
45-49 .. ..	1.90	1.45	1.11	0.80	1.03	0.80	0.76	0.70	0.60

(a) Number of female births per 1,000 women in each age group.

6. **Gross and Net Reproduction Rates for Females.**—A single measure of reproduction, known as the gross reproduction rate, is obtained by adding together the specific fertility rates for each age in the child-bearing group. This measure indicates the number of female children who would be born on an average to women living right through the child-bearing period, if the conditions on which the rate is based continue. The rate is unaffected by the age composition of the potential mothers, and consequently it shows more clearly than the crude birth rate the reproductive propensity of the population. It is, however, an imperfect measure of reproduction because it does not take into account the females who fail to live from birth to the end of the reproductive period. A more accurate measure of this nature is obtained by multiplying the specific fertility rates by the number of females in the corresponding age group of the stationary or life table population and summing the products. Allowance is thus made for the effect of mortality, and the result is known as the net reproduction rate. The net reproduction rate indicates the average number of female children who would be born to women during their lifetime if they were subject at each age to the fertility and mortality rates on which the calculation is based. A constant net reproduction rate of unity indicates that the population will ultimately become stationary. If it continues greater than unity, the population will ultimately increase; if less than unity, it will ultimately decrease. The following table should be read in the light of the comment which follows it and of the index of marriage fertility in paragraph 8, page 325.

#### GROSS AND NET REPRODUCTION RATES: AUSTRALIA

Year	Gross reproduction rate	Net reproduction rate	Year	Gross reproduction rate	Net reproduction rate
1881(a) .. ..	2.65	(b) 1.88	1947 .. ..	1.493	(g) 1.416
1891(a) .. ..	2.30	(b) 1.73	1954 .. ..	1.558	(h) 1.497
1901(a) .. ..	1.74	(c) 1.39	1958 .. ..	1.667	(h) 1.603
1911 .. ..	1.705	(d) 1.421	1959 .. ..	1.678	(h) 1.614
1921 .. ..	1.511	(e) 1.313	1960 .. ..	1.677	(h) 1.613
1931 .. ..	1.141	(f) 1.039	1961 .. ..	1.724	(h) 1.658
1941 .. ..	1.154	(f) 1.053	1962 .. ..	1.659	(h) 1.596

(a) Approximate only. (b) 1881-1890 mortality experience used. (c) 1891-1900 mortality experience used. (d) 1901-1910 mortality experience used. (e) 1920-1922 mortality experience used. (f) 1932-1934 mortality experience used. (g) 1946-1948 mortality experience used. (h) 1953-1955 mortality experience used.

NOTE.—It is not strictly correct to assume, as in the calculations of the rates above, that a particular age-specific fertility rate can be applied to a hypothetical group of women reaching that age, without taking account of previous fertility and marriage experience. Reproduction rates are therefore unreliable when birth and marriage rates have been changing. The indexes of marriage fertility shown on the next page are also of doubtful reliability in similar circumstances.

7. **Gross and Net Reproduction Rates, Various Countries.**—In the following table, a comparison is given of the gross and net reproduction rates recorded for various countries in the period 1954 to 1962. These represent the latest available international comparisons.

GROSS AND NET REPRODUCTION RATES: VARIOUS COUNTRIES

Country	Period	Reproduction rate		Country	Period	Reproduction rate	
		Gross	Net			Gross	Net
Thailand ..	1954	2.26	1.70	England and Wales	1960	1.29	1.25
New Zealand(a) ..	1961	2.03	1.96	Finland ..	1960	1.29	1.22
Canada ..	1961	1.87	1.81	Austria ..	1960	1.28	1.19
United States of America(b) ..	1960	1.72	1.66	Belgium ..	1960	1.24	1.13
Australia(c) ..	1962	1.66	1.60	Denmark ..	1959	1.21	1.11
Ireland, Republic of	1955	1.59	1.45	Czechoslovakia ..	1959	1.16	1.04
Netherlands ..	1960	1.52	1.46	Germany—			
Portugal ..	1958	1.47	1.26	Federal Rep. ..	1959	1.16	(d)
Scotland ..	1961	1.42	1.37	Eastern ..	1955	1.13	(d)
Norway ..	1959	1.39	1.34	Switzerland ..	1959	1.15	1.09
France ..	1960	1.33	1.28	Sweden ..	1959	1.08	1.04
Yugoslavia ..	1959	1.31	1.08	Japan ..	1959	0.99	0.93
				Hungary ..	1960	0.98	0.91

(a) Excludes Maoris. (b) White population only. (c) Excludes full-blood aboriginals. (d) Not available. (e) 1960.

In comparing the reproduction rates of the countries shown above, allowance should be made for any differences in years, as the rates for any one country from year to year are affected by variations in the incidence of marriage, as well as the stationary or life table population used.

8. Fertility of Marriages.—More satisfactory estimates of the fertility of marriages may be made by relating nuptial confinements in each year to the marriages from which they could have resulted. Confinements of women of a certain number of years duration of marriage are related to the number of marriages taking place that number of years previously. The table below sets out this index of current fertility per marriage in respect of confinements in the individual years shown.

FERTILITY OF MARRIAGES: AUSTRALIA

Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage	Year	Nuptial confinements per marriage
1948 ..	2.44	1953 ..	2.66	1958 ..	2.88
1949 ..	2.45	1954 ..	2.66	1959 ..	2.93
1950 ..	2.56	1955 ..	2.71	1960 ..	2.96
1951 ..	2.55	1956 ..	2.76	1961 ..	3.05
1952 ..	2.63	1957 ..	2.87	1962 ..	2.98

NOTE.—See NOTE to table on p. 324.

The figure for a particular year gives the estimated number of children which a marriage would produce according to the fertility conditions of that year. The figures for 1949 and subsequent years present a somewhat inflated index, as many of the births which have been used to calculate the index relate to marriages of immigrants which took place overseas and consequently are not included in Australian marriage records. Partial investigation suggests that this factor probably overstated the index by very little in 1949, but that the overstatement at present is about 8 per cent.

9. Masculinity of Live Births.—The masculinity of live births, i.e., the number of males born for every 100 female births, has remained fairly stable for Australia at about 105. But when the number of births for which masculinity is being calculated is small (for example, totals for smaller States), considerable variation is shown. The averages for the ten years 1951-60 were as follows:—New South Wales, 105.38; Victoria, 105.50; Queensland, 105.80; South Australia, 104.89; Western Australia, 105.25; Tasmania, 104.96; Northern Territory, 107.16; Australian Capital Territory, 108.77; Australia, 105.43. The following table shows the figures for Australia for each ten-year period from 1901 to 1960 and for each of the years 1961 to 1963.

MASCULINITY<sup>(a)</sup> OF LIVE BIRTHS REGISTERED: AUSTRALIA

Particulars	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60	1961	1962	1963
Total births ..	105.22	105.27	105.55	105.12	105.38	105.43	105.34	106.21	105.75
Ex-nuptial births	104.08	105.25	105.16	105.36	105.34	103.99	108.02	106.23	106.76

(a) Number of males born for every 100 female births.

10. Ex-nuptial Live Births.—(i) *General.* The variations in the proportions of ex-nuptial live births as between the individual States and Territories for 1963 are shown below.

## EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, 1963

Particulars	N.S.W.	Vic.	Q'land	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number ..	4,823	3,078	2,661	1,059	1,229	464	102	38	13,454
Proportion of total births %	5.74	4.69	7.41	4.96	7.11	5.44	11.87	1.90	5.71

The number and proportion of ex-nuptial births at intervals from 1901 to 1963 are as follows.

## EX-NUPTIAL LIVE BIRTHS: NUMBER AND PROPORTION, AUSTRALIA

Particulars	Annual average						1959	1960	1961	1962	1963
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60					
Number ..	6,498	6,836	6,238	5,133	6,780	9,013	10,687	10,987	12,269	12,813	13,454
Proportion of total births %	6.05	5.22	4.66	4.40	4.13	4.25	4.71	4.77	5.11	5.40	5.71

(ii) *Rate of Ex-nuptiality.* A further measure of ex-nuptiality is obtained by calculating the number of ex-nuptial births per thousand of the single, widowed and divorced female population aged from 15 to 44 years. On this basis, the number of ex-nuptial births per 1,000 unmarried women of ages 15 to 44 is as follows:—1880-82, 14.49; 1890-92, 15.93; 1900-02, 13.30; 1910-12, 12.53; 1920-22, 10.50; 1932-34, 6.91; 1946-48, 11.45; 1953-55, 14.45; and 1960-62, 18.49. Ex-nuptial births to married women, which are not recorded separately, are included in these figures and it is not possible to determine to what extent they influence the trend shown.

(iii) *Comparison of Rates.* The following table shows the relative ratios of ex-nuptial and nuptial births to the total population for periods from 1901.

## CRUDE EX-NUPTIAL, NUPTIAL, AND TOTAL BIRTH RATES (a): AUSTRALIA

Birth rate	Annual average						1961	1962	1963
	1901-10	1911-20	1921-30	1931-40	1941-50	1951-60			
Ex-nuptial ..	1.60	1.39	1.04	0.76	0.90	0.97	1.17	1.19	1.23
Nuptial ..	24.91	25.18	21.40	16.47	20.99	21.75	21.68	20.95	20.36
Total ..	26.51	26.57	22.44	17.23	21.89	22.72	22.85	22.14	21.59

(a) Number of births per 1,000 of mean population.

11. Legitimations.—Under the provisions of the *Commonwealth Marriage Act 1961*, which came into operation on 1st September, 1963, a child whose parents were not married to each other at the time of its birth becomes legitimized on the subsequent marriage of his parents. The legitimation takes place whether or not there was a legal impediment to the marriage of the parents at the time of the child's birth and whether or not the child was still living at the time of the marriage, or in the case of a child born before 1st September, 1963, at that date. Prior to the introduction of this Act, legitimations took place under Acts passed in the several States to legitimize children born before the marriage of their parents, provided that no legal impediment to the marriage existed at the time of birth. On registration in accordance with the provisions of the Legitimation Acts, any child who came within the scope of their purposes, born before or after the passing thereof, was deemed to be legitimate from birth by the post-natal union of its parents, and entitled to the status of offspring born in wedlock. During 1962, the number of children legitimized in Australia was 1,143.

12. Multiple Births.—Because the current Australian birth statistics are based only on those confinements which resulted in a live-born child, the number of confinements for multiple births for Australia is understated—firstly, because in cases where all children of a multiple birth are still-born the confinement is excluded, and secondly, because some cases of multiple births in which only one child was live-born are registered as single births.

During 1962, multiple births recorded on this basis comprised 2,575 cases of twins, 33 cases of triplets and 1 case of quadruplets, the resultant numbers of live-born and still-born children being respectively 5,063 and 87 for twins, 93 and 6 for triplets, and 4 liveborn children for quadruplets. This represents an average of 10.98 recorded cases of twins and 0.14 recorded cases of triplets per 1,000 confinements or, alternatively, mothers of twins represented 1 in every 91 mothers and mothers of triplets 1 in every 7,107. Total cases of multiple births represented 11.12 per 1,000 confinements or 1 in every 90 mothers.

The proportion of mothers of multiple births to total mothers does not vary greatly from year to year.

13. Ages of Parents.—The relative ages of the parents of children whose births were registered in 1962 have been tabulated separately for male and female births, multiple births being distinguished from single births. For total births and for multiple births, the relative ages of parents are shown in *Demography*, Bulletin No. 80. In the following table, the relative ages of parents are shown in five-year groups.

CONFINEMENTS: RELATIVE AGES OF PARENTS, AUSTRALIA, 1962

Age of father (years) and type of birth	Total	Age of mother (years)

Other and unspecified ..	1,513	21	260	41	137	32	115	12	10	87	1,699	3,927
<b>Total Mothers ..</b>	<b>180,367</b>	<b>827</b>	<b>11,723</b>	<b>2,349</b>	<b>4,145</b>	<b>9,127</b>	<b>3,502</b>	<b>861</b>	<b>1,364</b>	<b>4,158</b>	<b>3,434</b>	<b>221,857</b>

15. **Occupation of Fathers.**—In the 221,857 cases where nuptial confinements resulted in one or more live births, the classes of occupations of the fathers were distributed as follows:—craftsmen, 69,527; rural and mining workers, 30,106; administrative and clerical workers, 29,059; labourers, 23,685; workers in transport and communication, 20,588; professional and technical workers, 19,097; service, sport and other workers, 15,076; sales workers, 14,719.

16. **Age, Duration of Marriage and Issue of Mothers.**—(i) *General.* The total number of nuptial confinements resulting in live births in 1962 was 221,857, comprising 219,395 single births, 2,429 cases of twins, 32 cases of triplets and 1 case of quadruplets. The following tables relating to previous issue exclude the issue of former marriages and still-born children. On the other hand, they include in some States children by the same father who were born to the mother prior to the marriage. Children born at the present confinement are included in the total issue shown.

(ii) *Duration of Marriage and Issue of Mothers.* The following table shows that in 1962 the duration of marriage of mothers of nuptial children ranged from less than one year to over 25 years and that the average family increased fairly regularly with the duration of marriage. The average issue of married mothers who bore children in 1962 was 2.61, compared with 2.60 in 1961, 2.59 in 1960, 2.58 in 1959, and 2.56 in 1958.

**NUPTIAL CONFINEMENTS: DURATION OF MARRIAGE AND ISSUE OF  
MOTHERS, AUSTRALIA, 1962**

<b>Total Married Mothers ..</b>	<b>15,307</b>	<b>70,728</b>	<b>66,324</b>	<b>41,939</b>	<b>21,275</b>	<b>5,924</b>	<b>354</b>	<b>6</b>	<b>221,857</b>

(v) *Multiple Births—Previous Issue of Mothers.* Figures regarding the previous issue of married mothers of twins in 1962 show that 565 mothers had no previous issue either living or deceased, 588 had one child previously, 498 had two previous issue, 344 three, 213 four, 101 five, 65 six, 20 seven, 18 eight, 6 nine, 5 ten, 2 eleven, 2 twelve, 1 fifteen and 1 seventeen.

Of the 32 cases of nuptial triplets and one case of quadruplets registered during 1962, 8 mothers had no previous issue, 8 had one, 7 had two, 5 had three, 1 had four, and 4 had five previous issue.

17. *Nuptial First Births.*—(i) *Duration of Marriage.* The following table shows the interval between marriage and first birth for periods since 1911. In cases of multiple births, the first live-born child only is enumerated.

## NUPTIAL FIRST BIRTHS: DURATION OF MARRIAGE, AUSTRALIA

18. *Stillbirths.*—Interstate comparisons of the figures and rates in the following tables are affected by the differences in the definitions of stillbirths adopted by the various States, and only the trends in the rates for the States should be compared.

For various reasons, the registration of stillbirths is not as complete as for live births and deaths. Particulars for the Territories and smaller States are more affected on this account than are those for the larger States.

The number of stillbirths recorded in each State and Territory since 1936 is shown in the following table.

**STILLBIRTHS**

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
<b>ANNUAL AVERAGES</b>

1956-60 ..	15.49	13.50	16.07	13.55	13.70	12.64	8.57	14.26	14.59
ANNUAL RATES									
1958 ..	14.87	13.30	15.92	11.83	13.27	12.11	7.12	10.86	14.05
1959 ..	15.11	12.67	15.30	13.61	12.98	12.48	6.24	13.04	14.04
1960 ..	15.15	13.10	15.41	13.18	13.18	11.83	16.46	13.71	14.16
1961 ..	14.89	13.25	14.87	12.00	13.86	12.21	18.99	10.84	13.98
1962 ..	12.70	11.63	14.36	12.85	11.76	11.34	9.65	10.88	12.52

(a) Numbers of stillbirths per 1,000 of all births (live and still). (b) Not available.  
 (c) Three years 1938-40. (d) Four years 1942-45. (e) Excludes Queensland for 1941.  
 (f) Excludes Northern Territory.

NOTE.—Because of the smallness of the numbers of stillbirths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. the number per thousand live births and stillbirths) are subject to considerable fluctuation.

## § 5. Mortality

1. Number of Deaths.—(i) Year 1963. The following table shows the number of deaths, male and female, registered in each State and Territory during the year. Stillbirths, although registered as both births and deaths in some States, are excluded from the death statistics published herein.

## DEATHS, 1963

Sex	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
Males ..	20,594	14,709	7,878	4,678	3,444	1,601	119	189	53,212
Females ..	16,632	12,211	5,397	3,523	2,532	1,217	42	128	41,682
Persons ..	37,226	26,920	13,275	8,201	5,976	2,818	161	317	94,894

(ii) Years 1926 to 1963. A summary of the number of deaths in each State and Territory from 1926 to 1963 is given in the following table. Annual averages for each five-year period from 1861 to 1950 were published in Official Year Book No. 39, page 597.

## DEATHS

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.

1963 ..	37,226	26,920	13,275	8,201	5,976	2,818	161	317	94,894

(a) Excludes deaths of defence personnel and of internees and prisoners of war from overseas for the period September, 1939 to June, 1947.

A graph showing the number of deaths in each year from 1870 to 1963 will be found on page 317.

2. **Crude Death Rates.**—The commonest method of measuring the mortality rate is to relate the number of deaths for a given period to the mean population for that period, thus obtaining the crude death rate. This rate for a given period measures the number per thousand of population by which the population is depleted through deaths during that period. Crude death rates for each State and Territory from 1926 to 1963 are shown in the following table.

CRUDE DEATH RATES<sup>(a)</sup>

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
AVERAGE ANNUAL RATES									
1926-30 ..	9.26	9.56	9.06	8.83	8.91	9.44	15.83	5.36	9.26
1931-35 ..	8.68	9.72	8.62	8.72	8.83	9.63	13.46	3.81	9.00
1936-40 <sup>(b)</sup> ..	9.45	10.36	9.08	9.33	9.22	9.91	11.69	4.54	9.63
1941-45 <sup>(b)</sup> ..	9.73	10.63	9.24	10.26	9.86	10.21	6.43	4.98	9.96
1946-50 <sup>(b)</sup> ..	9.70	10.37	9.13	9.76	9.23	9.30	6.27	5.31	9.74
1951-55 ..	9.49	9.55	8.71	9.25	8.49	8.48	6.86	4.58	9.25
1956-60 ..	9.20	8.91	8.36	8.62	7.90	7.97	5.32	4.31	8.78

## ANNUAL RATES

1959 ..	9.37	9.01	8.43	8.62	7.72	8.14	5.25	4.12	8.87
1960 ..	9.14	8.59	8.30	8.26	7.88	7.70	5.34	4.03	8.61
1961 ..	8.95	8.37	8.42	8.06	7.77	7.89	4.88	3.33	8.47
1962 ..	9.26	8.64	8.56	8.32	7.69	7.99	5.34	3.30	8.70
1963—									
Males ..	10.12	9.58	9.92	9.19	8.76	8.68	7.01	4.92	9.66
Females ..	8.25	8.03	7.03	7.05	6.66	6.77	3.59	3.66	7.70
Persons ..	9.19	8.81	8.50	8.13	7.73	7.74	5.62	4.32	8.69

<sup>(a)</sup> Number of deaths per 1,000 of mean population.  
etc., from September, 1939 to June, 1947.

<sup>(b)</sup> Excludes deaths of defence personnel.

NOTE.—Crude death rates (i.e. the number of deaths per thousand of mean population) are affected by the particular age and sex composition of the population. In the Australian Capital Territory and the Northern Territory the population at risk in the higher ages is lower proportionately than in other States, largely as a result of the rapid increases of the population in the lower ages.

A graph showing the crude death rate for each year from 1870 to 1963 will be found on page 318.

3. **Standardized Death Rates.**—(i) *General.* The death rates quoted above are crude rates, i.e., they simply show the number of deaths per thousand of mean population without taking into consideration differences in the sex and age composition of the population. Other conditions being equal, however, the crude death rate of a community will be low if it contains a large proportion of young people (not infants), and conversely it will be relatively high if the population includes a large proportion of elderly people. The foregoing table of crude death rates, therefore, does not indicate comparative incidence of mortality either as between States in the same year or in any one State over a period of years. In order to obtain a comparison of mortality rates on a uniform basis as far as sex and age constitution are concerned, "standardized" death rates may be computed. These are computed by selecting a particular distribution of age and sex as a standard, and then calculating what would have been the general death rate if the death rates for each sex and in each age group had been as recorded, but the age and sex distribution had been the same as in the standard population. For the standardized rates which follow, the standard population compiled by the International Institute of Statistics has been used. This standard is based upon the age distribution according to sex of nineteen European countries at their censuses nearest to the year 1900.

An examination of the age distribution of deaths and the resultant age-specific death rates is made in paragraph 7, page 340.

(ii) *Comparison of Crude and Standardized Death Rates.* The relative incidence of mortality as between individual States and as between the years 1921, 1933, 1947, 1954 and 1961 is illustrated in the following statement of crude and "standardized" death rates. These years have been chosen for comparison because the census data give essential information as to sexes and ages of the State populations. Crude death rates are shown to indicate the degree to which they disguise the true position.

#### CRUDE AND STANDARDIZED DEATH RATES

Particulars	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	Aust.
<b>Crude death rate(a)—</b>							
1921 .. .. .	9.50	10.52	9.37	10.02	10.42	10.30	9.91
1933 .. .. .	8.58	9.59	8.84	8.44	8.64	9.60	8.92
1947 .. .. .	9.53	10.44	9.15	9.61	9.39	9.17	9.69
1954 .. .. .	9.46	9.20	8.63	9.01	8.38	8.67	9.10
1961 .. .. .	8.95	8.37	8.42	8.06	7.77	7.89	8.47
<b>Standardized death rate(b)—</b>							
1921 .. .. .	10.35	10.79	10.24	10.38	11.88	10.83	10.58
1933 .. .. .	8.52	8.74	9.10	7.66	8.74	8.86	8.62
1947 .. .. .	7.44	7.31	7.47	6.77	7.28	7.21	7.34
1954 .. .. .	7.24	6.63	6.80	6.52	6.71	7.02	6.90
1961 .. .. .	6.56	6.12	6.26	5.90	6.02	6.19	6.27

(a) Total deaths per 1,000 of mean population.  
in para. 3 (i) p. 333.

(b) See explanation of standardized death rates

The comparisons above relate to individual years in which a census of population was taken and should not be used as the basis for general conclusions as to changes in incidence of mortality for other than those years.

4. **True Death Rates.**—The main objections to standardized death rates are that the choice of a standard population is arbitrary and that the standardized rates have little value except for comparative purposes, and even then variation of the standard population may make appreciable differences. However, a correct measurement of the mortality of the population can be obtained from life tables. A life table represents the number of survivors at each age from a group of newly-born children who are subject to given mortality conditions, and from such a table the complete expectation of life at birth can be calculated. The reciprocal of this figure is known as the true death rate, since, if the complete expectation of life of a person at birth is 50 years, say, then each person will on the average die 50 years after birth, so that in a stationary population one person in 50 or 20 per thousand will die each year. The true death rate for a given period is unaffected by the particular age distribution of that period and is determined solely by the mortality experience of the period as manifested in the rate of survival from each year of age to the next. The table below sets out complete expectation of life at birth and true death rates for the periods covered by Australian life tables.

#### COMPLETE EXPECTATION OF LIFE AT BIRTH AND TRUE DEATH RATES: AUSTRALIA

Period	Complete expectation of life at birth (years)		True death rate	
	Males	Females	Males(a)	Females(b)
1881-1890 .. .. .	47.20	50.84	21.19	19.67
1891-1900 .. .. .	51.06	54.76	19.58	18.26
1901-1910 .. .. .	55.20	58.84	18.12	17.00
1920-1922 .. .. .	59.15	63.31	16.91	15.80
1932-1934 .. .. .	63.48	67.14	15.75	14.89
1946-1948 .. .. .	66.07	70.63	15.14	14.16
1953-1955 .. .. .	67.14	72.75	14.89	13.75

(a) Number of deaths per 1,000 males in stationary population.

(b) Number of deaths per 1,000 females in stationary population.

The crude death rates and the true death rates of Australia and the principal countries of the world for the latest available year are shown in the table in § 7. International Vital Statistics, pages 353-4.

5. *Australian Life Tables.*—(i) *Life Tables prior to 1954.* It has been the practice at each census from 1911 onwards to prepare Life Tables representative of the mortality experience of Australia. The mortality of the Australian population for the thirty years from 1881 to 1910 inclusive was investigated in 1911 by the Commonwealth Statistician. Tables were compiled for each State and for Australia as a whole in respect of each sex for each of the decennial periods 1881-1890, 1891-1900 and 1901-1910. These compilations furnished a comprehensive view of Australian mortality in respect of sex, time, and geographical distribution, and practically superseded all Life Tables prepared in Australia prior to 1911. In addition, monetary tables based on the experience for the whole of Australia for the ten years 1901-1910 were prepared and published.

At the Census of 1921, Life Tables were prepared by the Commonwealth Statistician from the recorded census population and the deaths in the three years 1920 to 1922. In 1933 and 1947, Life Tables based on the census population and the deaths in the years 1932 to 1934 and 1946 to 1948 respectively were compiled by the Commonwealth Actuary.

(ii) *Life Tables of Census of 1954.* On the occasion of the 1954 Census, the seventh Life Tables in the series were compiled by the Commonwealth Actuary. These were based on the population recorded at the Census, adjusted to allow for variation in the net movement into Australia over the years 1953 to 1955, and deaths during these years. Full particulars of the data used, the method of construction and the tabulations of these Life Tables will be found in the report of the Commonwealth Actuary, which was published by the Commonwealth Statistician in 1958. This report also appears in Volume VIII. of the detailed tables of the 1954 Census.

The main features of the tables are set out in the following summary table. Comparisons with earlier Australian tables and with the latest experience in the United Kingdom and New Zealand are provided in Year Book No. 48, pages 338-40.

LIFE TABLES, 1953-55

Age (x)	Males			Females

$q_x$  = probability of dying within one year at specified ages.  $l_x$  = number surviving at specified ages out of 100,000 births.  ${}^e e_x$  = complete expectation of life at specified ages.

The following table shows a comparison of the complete expectation of life at selected ages for males and females as calculated from the life tables of 1920-22, 1932-34, 1946-48 and 1953-55.

COMPLETE EXPECTATION OF LIFE ( $e_x$ ) AT SELECTED AGES: AUSTRALIA

Age (x)	Males				Females

1963 ..	19.90	18.92	20.09	18.67	20.42	17.94	31.43	19.05	19.55

(a) Number of deaths of children aged under one year per 1,000 live births registered.

Compared with other countries, Australia occupies a favourable position in respect of infant mortality. In 1962, only a few countries recorded a lower rate than Australia. Rates for Australia and the principal countries of the world for the latest available year are shown in the tables in § 7. International Vital Statistics, pages 353-4.

(b) *Under Four Weeks.* The following table shows infant mortality rates under four weeks of age in each State and Territory during the period 1926 to 1962.

**INFANT MORTALITY RATES(a): UNDER FOUR WEEKS**

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
<b>AVERAGE ANNUAL RATES</b>									
1926-30 ..	29.63	29.75	27.66	26.84	25.10	33.12	14.37	28.86	28.96
1931-35 ..	27.62	27.78	27.91	22.99	25.11	30.09	35.26	23.45	27.27
1936-40 ..	27.63	25.94	26.15	21.62	22.62	29.56	28.80	16.33	26.19
1941-45 ..	24.52	24.40	24.41	20.86	20.60	27.24	33.57	12.54	23.97
1946-50 ..	20.53	17.55	19.95	18.38	19.53	19.34	21.45	15.80	19.34
1951-55 ..	17.34	15.18	17.09	14.95	17.27	16.34	19.63	11.28	16.45
1956-60 ..	16.04	14.50	15.15	13.67	15.01	13.29	24.19	9.64	15.07
<b>ANNUAL RATES</b>									
1958 ..	15.30	14.48	13.76	13.72	14.35	12.37	17.22	11.76	14.50
1959 ..	16.37	15.22	14.61	14.03	13.79	14.84	27.63	8.81	15.31
1960 ..	15.25	15.84	13.70	13.26	15.89	11.18	27.03	12.00	14.64
1961 ..	14.86	13.46	14.80	12.99	12.76	11.91	14.81	10.96	14.01
1962 ..	15.46	14.17	15.02	13.44	14.48	14.06	19.48	11.54	14.71

(a) Number of deaths of children aged under four weeks per 1,000 live births registered.

NOTE.—Because of the smallness of the numbers of these deaths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. number of such deaths per thousand live births) are subject to considerable fluctuation.

(c) *Four Weeks and under One Year.* Infant mortality rates for children aged four weeks and under one year are shown in the following table for the period 1926 to 1962.

**INFANT MORTALITY RATES(a): FOUR WEEKS AND UNDER ONE YEAR**

Period	N.S.W.	Vic.	Q'land	S. Aust.	W. Aust.	Tas.	N.T.	A.C.T.	Aust.
<b>AVERAGE ANNUAL RATES</b>									
1926-30 ..	25.11	22.59	19.75	20.11	24.17	20.25	51.72	42.45	23.03
1931-35 ..	14.30	14.98	11.55	12.13	15.70	14.38	45.34	11.03	14.00

1956-60 ..	6.19	5.17	5.85	6.84	6.41	7.33	11.81	4.04	5.98
<b>ANNUAL RATES</b>									
1958 ..	5.99	4.75	5.64	8.68	7.17	7.12	14.34	6.28	5.99
1959 ..	6.28	5.99	5.64	6.68	6.37	8.58	11.31	2.94	6.23
1960 ..	5.91	4.76	5.17	5.68	5.73	7.91	6.43	5.69	5.52
1961 ..	5.98	4.34	5.21	7.01	6.91	4.90	9.11	4.61	5.53
1962 ..	5.90	4.33	6.11	5.71	7.79	6.63	20.56	6.05	5.70

(a) Number of deaths of children aged four weeks and under one year per 1,000 live births registered.

NOTE.—Because of the smallness of the numbers of these deaths occurring in the Australian Capital Territory and the Northern Territory, the rates for these Territories (i.e. number of such deaths per thousand live births) are subject to considerable fluctuation.

(ii) *Australia. (a) Under One Year.* The fact that out of 593,835 male infants born from 1958 to 1962, 13,514 (22.76 per 1,000) died during the first year of life, while of 563,038 female infants only 10,107 (17.95 per 1,000) died during the first year, accords with the universal experience that during the first few years of life the higher death rate of male infants tends to counteract the excess of male births. Stillbirths, for which masculinity is also higher, are not included in any of the tables relating to deaths.

As shown by the following table, the disparity is greater during the first four weeks of life, termed the neonatal period, than during the remainder of the first year of life, or the post-neonatal period.

### INFANT DEATHS AND MORTALITY RATES: AUSTRALIA

Period	Number of deaths						Rates(a)

(a) Number of deaths per 1,000 male or female live births registered.

(b) *Under Four Weeks.* The following table shows particulars of infant deaths in the first four weeks of life, or the neonatal period, from 1931 to 1962. It will be seen that for both males and females the risk of death is very much greater during the first day of life than subsequently.

### INFANT DEATHS AND MORTALITY RATES—UNDER FOUR WEEKS: AUSTRALIA

Period	Number of deaths						Rates(a)					
	Early neonatal				Late neonatal— one week and under four weeks		Early neonatal				Late neonatal— one week and under four weeks	
	Under one day		One day and under one week				Under one day		One day and under one week

(a) Number of deaths per 1,000 male or female live births registered. (b) Not available. (c) Includes under one day.

Graphs showing infant deaths and infant mortality rates for each year from 1910 to 1963 will be found on pages 319 and 320 respectively.

(iii) *Causes of death—Children under One Year.* (a) *Numbers.* Causes of death of children under one year of age should be considered in relation to age at death, because the emphasis on various causes changes rapidly as age at death varies.

A summary for 1962 of deaths of children under one year of age, classified according to principal causes of death and age at death, is given in the following table.

## CAUSES OF DEATH: CHILDREN UNDER ONE YEAR OF AGE, AUSTRALIA, 1962

Inter-national Statistical Classification number	Cause of death	Age at death										Total under one year

(a) 490-493, 500-502, 763.

7. Age Distribution.—(i) *Number of Deaths.* Age at death is recorded for statistical purposes in days for the first week of life, in weeks for the first four weeks, in months for the first year and in completed years of life thereafter. These ages are usually combined in groups for publication, the most common being weeks for the first four weeks, months or groups of months for the first year, single years of age of the first five years and thereafter the five-year groups 5-9 years, 10-14 years, etc. A summary in this form for the year 1962 is given for Australia in the following table.

## AGE AT DEATH: AUSTRALIA, 1962

Age at death	Males	Fe- males	Per- sons	Age at death	Males	Fe- males	Per- sons
Under 1 week .. .. .	1,799	1,281	3,080	5- 9 years .. .. .	291	187	478
1 week and under 2 weeks ..	132	91	223	10-14 .. .. .	232	134	366
2 weeks and under 3 weeks ..	57	38	95	15-19 .. .. .	511	211	722

				100 years and over ..	15	43	58
				Age not stated .. ..	22	8	30
				<b>Total, All Ages ..</b>	<b>52,378</b>	<b>40,785</b>	<b>93,163</b>

There are different mortality rates at various stages of life, and the actual number of deaths in any period is related to the numbers living at the respective stages. Changes in the number of deaths from one period to another are associated with changes in the rate of mortality in the various age groups and by the changed proportions of persons living in the different groups.

The combined effect of various influences, i.e. the steady decline in the rate of mortality, the long-term decline in the birth-rate, and the effects of past and present migration on the age distribution of the population, is shown in the following table, which shows the proportion of deaths in various age groups in ten-year periods from 1901 to 1960 and for the year 1962.

## PROPORTION OF DEATHS IN EACH AGE GROUP: AUSTRALIA

(Per cent.)

Period	Age at death (years)								Total
	Under 1	1-4	5-19	20-39	40-59	60-64	65 and over	Unspeci- fied	
1901-10 ..	20.51	6.45	6.37	14.99	17.99	5.31	28.26	0.12	100.00
1911-20 ..	16.66	6.09	5.49	14.44	20.32	6.19	30.68	0.13	100.00
1921-30 ..	13.10	4.51	4.85	12.12	20.55	8.26	36.53	0.08	100.00
1931-40 ..	7.40	2.56	3.83	9.36	20.54	8.36	47.92	0.03	100.00
1941-50 ..	6.79	1.71	2.26	6.01	19.04	9.33	54.84	0.02	100.00
1951-60 ..	5.59	1.33	1.80	4.90	17.27	9.18	59.90	0.03	100.00
1962—									
Males ..	5.33	0.95	1.97	5.17	20.13	9.91	56.50	0.04	100.00
Females ..	5.03	1.00	1.30	3.15	13.31	6.92	69.27	0.02	100.00
Persons ..	5.20	0.97	1.68	4.29	17.14	8.60	62.09	0.03	100.00

A table showing these proportions for males and females separately for the period 1901 to 1950 was published in Year Book No. 39, page 614.

(ii) *Age-specific Death Rates.* In previous issues of the Year Book, average annual age-specific death rates were given for each State and Australia for the periods 1932-34, 1946-48 and 1953-55 (see Year Books, No. 37, pp. 778-9, No. 39, pp. 615-6 and No. 44, pp. 640-1). These rates were based on the age distribution of the population at the relevant censuses.

Intercensal estimates of the age distribution of the population are available for Australia and for the larger States. The following table shows age-specific death rates for Australia for the year 1962, for males, females and persons.

AGE-SPECIFIC DEATH RATES(a): AUSTRALIA, 1962

Age group (years)	Males	Females	Persons	Age group (years)	Males	Females	Persons
Under 1 (b) ..	22.8	17.8	20.4	45-49 ..	6.3	3.6	5.0
1-4 ..	1.1	0.9	1.0	50-54 ..	10.1	5.7	7.9
5-9 ..	0.5	0.4	0.4	55-59 ..	16.9	8.0	12.6
10-14 ..	0.4	0.3	0.4	60-64 ..	26.5	13.3	19.6
15-19 ..	1.1	0.5	0.8	65-69 ..	41.8	21.7	30.6
20-24 ..	1.7	0.6	1.2	70-74 ..	64.2	38.3	49.7
25-29 ..	1.5	0.7	1.1	75-79 ..	95.0	62.9	76.3
30-34 ..	1.7	1.0	1.3	80-84 ..	145.9	110.3	124.0
35-39 ..	2.3	1.4	1.9	85 and over ..	248.6	201.1	217.5
40-44 ..	3.6	2.2	2.9				

(a) Average number of deaths per 1,000 of mid-year population in each age group estimated in respect of 30th June, 1962. (b) Infant deaths per 1,000 live births registered.

8. *Causes of Death.*—The classification of causes of death adopted for Australia by the Commonwealth Bureau of Census and Statistics at the inception of its mortality statistics in 1907 was that introduced by the International Institute of Statistics in 1893, reviewed by that Institute in 1899, and revised by an International Commission in 1900. This classification became known as the International List of Causes of Death, and further international revisions in 1909 (Second), 1920 (Third), 1929 (Fourth), 1938 (Fifth), 1948 (Sixth), and 1955 (Seventh), were successively adapted for use in Australian statistics.

The Sixth Revision of the International Statistical Classification of Diseases, Injuries and Causes of Death was used in Australia for deaths registered in 1950 to 1957. The Seventh Revision has been used for deaths registered in 1958 and subsequent years. The Sixth Revision, for the first time in connexion with the International Classification, laid down rules for a uniform method of selecting the main cause to be tabulated if more than one cause is stated on the death certificate. These rules were maintained in the Seventh Revision, which was concerned mainly with certain essential changes and amendment of errors and inconsistencies in the previous classification. Prior to 1950, the rules adopted in Australia for the selection of the cause of death to be tabulated were those laid down in the United States Manual of Joint Causes of Death, first published in 1914 and revised to conform to successive revisions of the International List.

The adoption of the new method introduced with the Sixth Revision and maintained in the Seventh marked a fundamental change in Australian cause of death statistics, emphasis now being placed on the underlying cause of death as indicated by the certifying practitioner. This change in principle affects the comparability of the statistics for 1950 and subsequent years with those for earlier years. A complete detailed classification of causes of death for Australia for 1950 according to both the Fifth and Sixth Revisions was shown in *Demography*, Bulletin No. 68, 1950.

In order to facilitate the concise presentation of cause of death statistics, the present International Classification provides two special lists of causes for tabulation—the Intermediate List of 150 causes and the Abbreviated List of 50 causes. The latter has been used as the base of the cause of death tabulations A to C which follow. Some categories have been sub-divided to show additional particulars of interest in Australian statistics. Tables A and B show deaths of males and females, respectively, in age groups for 1962, and Table C shows the total numbers of males and females who died, the death rates per million of mean population, and the percentage of total deaths for 1962.

9. Deaths from Principal Causes.—(i) *General*. In the preceding tables, particulars have been given for each of the causes of death comprising the Abbreviated Classification according to the Seventh Revision of the International List. Certain important causes are treated in detail hereunder. The Abbreviated Classification numbers used in tables A to C (pp. 343-6) are indicated in parentheses for each cause or group of causes.

(ii) *All Forms of Tuberculosis (B1, B2)*. (a) *General*. The total number of deaths classified to all forms of tuberculosis in 1962 was 475, consisting of 388 males and 87 females. In comparing any of the figures for 1950 and subsequent years with those for 1949 and earlier years, consideration should be given to the effect of the change in basis from the Fifth to the Sixth Revision of the International List. This was discussed in Year Book No. 39, page 626.

(b) *Age at Death*. The following table shows the age groups of males and females who were classified as dying from tuberculosis in 1962, together with figures for 1931, 1941, 1951, and 1961.

TUBERCULOSIS (ALL FORMS): DEATHS IN AGE GROUPS, AUSTRALIA

Age group (years)	Males					Females				
	1931	1941	1951	1961	1962	1931	1941	1951	1961	1962
0-14 .. ..	90	63	23	5	..	81	54	35	1	1
15-29 .. ..	294	162	46	2	..	487	275	68	..	2
30-44 .. ..	585	428	135	25	19	422	319	142	20	9
45-64 .. ..	674	793	570	128	154	252	251	126	41	30
65 and over ..	193	279	306	175	214	89	110	86	50	44
Not stated ..	..	..	..	..	1	..	..	1	..	1
<b>Total ..</b>	<b>1,836</b>	<b>1,725</b>	<b>1,080</b>	<b>335</b>	<b>388</b>	<b>1,331</b>	<b>1,009</b>	<b>458</b>	<b>112</b>	<b>87</b>

(c) *Death Rates*. The reduction in mortality from tuberculosis is shown by the decline in the crude death rate from tubercular diseases, which fell from 49 per 100,000 of mean population in 1931 to 18 in 1951, and still further to 4 in 1962. The reductions in the younger age groups are much greater, as can be seen from the table above.

Death rates from tuberculosis per 100,000 of mean population for various countries for the latest available year are as follows:—Netherlands, 2.7; Denmark and Canada, 4.2; Australia, 4.4; New Zealand, 4.8; United States of America, 5.4; South Africa (European population), 7.1; England and Wales, 7.2; Northern Ireland, 7.4; Scotland, 9.3; Switzerland, 12.4; Italy, 17.5; Greece, 17.9; France, 20.4; Finland, 23.0; Japan 29.6; Portugal, 39.6.

(iii) *Malignant Neoplasms, including Neoplasms of Lymphatic and Haematopoietic Tissues (B18)*. (a) *General*. Deaths classified under this heading according to the Sixth Revision of the International List (used in Australia for deaths registered in 1950 to 1957) are not directly comparable in total with those on the Fifth Revision basis (see Year Book No. 39, p. 628). This should be kept in mind in considering the comparisons shown in the following pages.

(b) *Seat of Disease*. Tables showing the seat of disease in conjunction with age and conjugal condition of the persons dying from malignant neoplasms in 1962 are included in *Demography*, Bulletin No. 80. A summary regarding seat of disease for 1962 is given below.

**DEATHS FROM MALIGNANT NEOPLASMS AND NEOPLASMS OF LYMPHATIC AND HAEMATOPOIETIC TISSUES: AUSTRALIA, 1962.**

Seat of disease	Males	Females	Persons

(c) *Age at Death.* The ages of males and females who died from malignant neoplasms in 1962 are given below, together with figures for 1931, 1941, 1951, and 1961. The increase in the number of deaths from malignant neoplasms in the years since 1931 is due principally to the increase in the number of people in the higher age groups, at which ages the risks of cancer are much greater. While the total population increased by about 64 per cent. between 1931 and 1962, the number of people aged 55 years and over increased by about 105 per cent. The increase in the number of deaths in the lower age groups from 1951 is partly due to the inclusion of neoplasms of lymphatic and haematopoietic tissues, and it is probable also that part of the increased number of deaths from cancer recorded in recent years has been due to improved diagnosis and certification on the part of the medical profession.

(a) Includes neoplasms of lymphatic and haematopoietic tissues.

(d) *Death Rates.* The death rates from malignant neoplasms have continued to rise over recent years. The rates are crude death rates representing the number of deaths from malignant neoplasms per 100,000 of mean population and do not take account of changes in the age constitution of the population, and to a substantial extent they reflect the increasing age of the population rather than the true change in mortality from malignant neoplasms (see previous paragraph). In 1931, the rate for Australia was 101 (males, 105; females, 97); in 1941 it was 119 (males, 119; females, 120); and in 1951 it had risen to 126 (males, 130; females, 122). Figures for 1961 gave a rate of 130 (males, 139; females, 121), and for 1962 a rate of 131 (males, 142; females, 121).

Death rates from malignant neoplasms per 100,000 of mean population for Australia and for various other countries are as follows:—Portugal, 98; Japan, 102; Canada, 130; Australia, 131; South Africa (white population), 134; New Zealand, 139; Italy, 150; United States of America, 149; Finland, 156; Northern Ireland, 160; the Netherlands, 171; Switzerland, 188; France, 198; England and Wales, 216; and Scotland, 217. The rates are for the latest available year in each case.

(iv) *Diseases of the Heart (B25 to B28).* The number of deaths classified to diseases of the heart in 1962 was 34,257 (20,125 males and 14,132 females). This class is the largest among causes of death, the rate having increased from 112 per 100,000 of mean population in 1911–15 to 320 in 1962. The increase in the number of deaths recorded from heart diseases has been particularly pronounced during the past twenty years. The rapid increase in mortality is partly a reflection of the ageing of the population, but the figures have been influenced mainly by improved diagnosis and certification by medical practitioners.

The death rates for heart diseases for various years from 1931 were as follows:—1931, 159 (males, 178; females, 142); 1941, 269 (males, 306; females, 231); 1951, 314 (males, 367; females, 259); 1961, 304 (males, 356; females, 250); and 1962, 320 (males, 372; females, 266). Deaths from heart diseases in 1962 represented 37 per cent. of the total deaths.

(v) *Puerperal Causes (B40).* It was shown in *Official Year Book No. 39*, page 634, that the changes introduced with the Sixth Revision of the International List did not significantly affect the comparability of the total number of deaths from puerperal causes. The Seventh Revision, introduced in 1958, did not affect comparability. The death rate from these causes has fallen rapidly during recent years and in 1962 the rate was 0.4 per 1,000 live births, compared with a rate of 6 per 1,000 in 1936. The 85 deaths in 1962 correspond to a death rate of 1.60 per 100,000 females. The death rate may be expressed in other terms by stating that 1 of every 2,789 women giving birth to a live child in 1962 died from puerperal causes.

The death rate per 1,000 live births from puerperal causes in various countries for the latest available year is as follows:—United States of America, 0.3; United Kingdom, New Zealand, Canada, Denmark, the Netherlands and Australia, 0.4; France, 0.5; Finland and Switzerland, 0.7; Italy, 1.1; and Japan, 1.3.

Tables showing ages at marriage and at death, duration of marriage, and issue for 1962 are given in *Demography*, Bulletin No. 80.

(vi) *Causes of Infant Mortality.* See paragraph devoted to causes of infant deaths on pages 339–40.

(vii) *Accidents, Poisonings and Violence (BE47 to BE50).* (a) *General.* Deaths in this class are classified according to external cause and not according to nature of injury. The classification provides sub-groups for accidents, including adverse reactions to prophylactic inoculations, therapeutic misadventures and late effects of accidental injury; suicide; homicide and injuries purposely inflicted by other persons; and injury resulting from operations of war, including delayed effects.

The following table, showing the death rates in the main sub-groups per 100,000 of mean population, indicates that the death rate from violence is between two and three times as great for males as for females. It can be seen also that in 1962 the proportion of deaths caused by violence was 7.80 per cent., compared with 6.76 per cent. in 1931–35.

The low level of the rates and proportions for the years 1941–45 is due largely to the exclusion of deaths of defence personnel from accidents, suicide and homicide, though the rates have been based on total mean population (including defence personnel). A further contributing factor is the decrease during this period in the number of automobile accidents. From July, 1947, deaths of defence personnel from accidents, etc., have again been included.

## ACCIDENTS, POISONINGS AND VIOLENCE: DEATH RATES(a)

Period	Death rate from—												All violence, proportion per 10,000 deaths		
	Accidents(b)			Suicide			Homicide(c)			Total violence

1962 ..	71	33	52	19	9	14	2	1	2	92	43	68	952	559	780

(a) Number of deaths per 100,000 of mean population. (b) Includes "open verdict".  
(c) Includes late effects of injuries due to operations of war.

(b) *Accidents (BE47, BE48)*. In 1962, the total number of deaths from accidental causes was 5,616 (3,855 males and 1,761 females). Over half of the accidental deaths were the result of transport accidents. Of these, the numbers attributable to the major causes, and the percentages of the total accidental deaths in each case, were as follows:—Motor vehicle traffic accidents, 2,570 (45.76 per cent.); motor vehicle non-traffic accidents, 62 (1.11 per cent.); other road vehicle accidents, 63 (1.12 per cent.); railway accidents, 99 (1.76 per cent.); water transport accidents, 88 (1.57 per cent.); aircraft accidents, 49 (0.87 per cent.); a total of 2,931 (52.19 per cent.). Other important causes were accidental falls, 1,066 (18.98 per cent.); accidental drowning, 407 (7.25 per cent.); and accidents caused by fire and explosion of combustible material, 193 (3.44 per cent.).

(c) *Suicide (BE49)*. *Modes Adopted*. Deaths from suicide in 1962 numbered 1,469 (males, 1,011; females, 458). Poisoning, other than by gases, was used in 509 cases (34.65 per cent. of total deaths by suicide). Other important modes adopted, together with the numbers and relevant percentages, were as follows:—firearms and explosives, 341 (23.21 per cent.); poisoning by gases, 271 (18.45 per cent.); hanging or strangulation, 190 (12.93 per cent.); submersion (drowning), 64 (4.36 per cent.); other modes, 94 (6.40 per cent.).

Of the 1,011 males who committed suicide, 315 (31.16 per cent.) used firearms or explosives. For females the most common mode was poisoning (other than by gases). This was used in 248 cases (54.15 per cent.).

*Age at Death*. The following table shows the age of persons who committed suicide in 1962.

## AGE OF PERSONS WHO COMMITTED SUICIDE: AUSTRALIA, 1962

Age group (years)	Males	Females	Persons	Age group (years)	Males	Females	Persons

55-59 ..	103	51	154				
				<b>Total Deaths ..</b>	<b>1,011</b>	<b>458</b>	<b>1,469</b>

(d) *Homicide and Operations of War (BE50)*. Of the 182 deaths recorded in 1962, there were 165 deaths from homicide and injury purposely inflicted by other persons (not in war), of which assault by firearms and explosives caused 64, assault by cutting and piercing instruments 25, and assault by other means 76. Deaths from injury resulting from the operations of war numbered 17, but all were deaths from late effects of such injuries.

10. Age at Death and Average Issue of Deceased Married Males and Females.—*Demography*, Bulletin No. 80, contains a number of tables showing, in combination with the issue, the age at marriage, age at death and occupation of married (including widowed or divorced) persons who died in Australia in 1962. Deaths of married males in 1962 numbered 40,203, and those of married females, 32,686. The tables which follow deal, however, with only 39,680 males and 32,470 females, the information regarding issue in the remaining 739 cases being incomplete. The total number of children in the families of the 39,680 males was 116,789 and of the 32,470 females, 103,323. The average number of children is shown for various age groups in the following table.

AGE AT DEATH AND AVERAGE ISSUE OF DECEASED MARRIED<sup>(a)</sup> MALES  
AND FEMALES: AUSTRALIA

(a) In cases where the deceased was married more than once this represents age at first marriage.

### § 6. Vital Statistics of External Territories

The following table shows, for the year 1962, the number of marriages, births and deaths registered in the external territories under the control of Australia. More detailed information will be found in a series of tables in *Demography*, Bulletin No. 80.

#### EXTERNAL TERRITORIES: VITAL STATISTICS, 1962

Territory	Marriages	Births	Deaths
Christmas Island(a) .. .. .	..	90	16
Cocos (Keeling) Islands(a) .. .. .	3	19	5
Norfolk Island(a) .. .. .	6	11	14
Papua(b) .. .. .	114	257	22
Trust Territory of New Guinea(b) .. .. .	100	369	40
Trust Territory of Nauru(b) .. .. .	4	22	4

(a) Total population.

(b) Non-indigenous population only.

### § 7. International Vital Statistics

**Vital Statistics Rates—Principal Countries.**—In the following table, vital statistics rates for selected countries are shown. Crude marriage, birth, and death rates represent the number of "events" reported for the year stated per 1,000 of the population. Infant mortality rates

are the number of deaths which occurred under one year of age per 1,000 live births. The true death rates (reciprocals of the expectation of life at birth) have been computed from the life tables for the respective countries as published in the United Nation's *Demographic Yearbook*, 1962 (see explanation of true death rates, para. 4, p. 334).

In many instances, the rates shown in the following table are estimates and the results of sample surveys only. Reference should be made to the detailed comments contained in the United Nation's *Demographic Yearbook*, 1962 (see particularly Technical Notes on Statistical Tables and footnotes to the tables).

## CHAPTER XI

### HOUSING AND BUILDING

NOTE.—In § 1 of this chapter details are given of the characteristics of dwellings as obtained from censuses, § 2 provides a summary of building activities, § 3 outlines government activities in the field of housing, and § 4 relates to financial arrangements associated with the erection or purchase of homes.

For further information on dwellings as obtained from censuses, reference should be made to the results published in the detailed tables of the 1961 census and earlier censuses and in the mimeographed statements of the 1961 census (*see* Chapter XXX. Miscellaneous).

More detailed information on building activity may be found in the *Quarterly Bulletin of Building Statistics*, and current information is obtainable also in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and in the mimeographed statements *Building Statistics: Number of New Houses and Flats* (quarterly), and *Building Approvals* (monthly). Details for a particular State are available from publications issued regularly by the Deputy Commonwealth Statistician in that State.

Commonwealth Government activities relate in the main to the provision of moneys to State Governments under Commonwealth-State Housing Agreements, to the assistance of ex-service personnel in the erection and purchase of homes, and to the provision of homes in the Territories. Further details of activities of the Commonwealth and State Housing Authorities are shown in the reports issued by these authorities.

#### § 1. Census Dwellings

1. **General.**—At each census of the population, in addition to the questions relating to the personal particulars of the individual members of households, there have been a number of important questions on the census schedule designed to elicit information concerning the dwellings in which the population was housed at the date of the census. For the purpose of the census, a "dwelling" is any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has therefore a very wide reference, and includes, *in addition to houses and flats*, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution.

All statistics in this section are exclusive of particulars of dwellings occupied solely by full-blood Aboriginals.

2. **Number of Dwellings.**—(i) *Censuses, 1911 to 1961.* The following table shows the number of occupied and unoccupied dwellings in Australia at each census from 1911 to 1961. Occupied dwellings are classified into "private" and "other than private" dwellings (*see* para. 3, p. 357, for definitions of "private" and "other than private" dwellings). As the term "unoccupied dwellings" includes "week-enders", "holiday homes" and other dwellings whose usual occupants were temporarily absent on census night, the total number of unoccupied dwellings must not be taken as representing the number of vacant houses and flats available for occupancy. Newly completed dwellings awaiting occupancy are also included as "unoccupied".

**DWELLINGS: AUSTRALIA, CENSUSES**

Census	Occupied			Unoccupied (a)
	Private	Other than private	Total	
1911 .. .. .	894,389	29,070	923,459	33,473
1921 .. .. .	1,107,010	46,275	1,153,285	51,163
1933 .. .. .	1,509,671	37,705	1,547,376	68,772
1947 .. .. .	1,873,623	34,272	1,907,895	47,041
1954 .. .. .	2,343,421	36,932	2,380,353	112,594
1961 .. .. .	2,781,945	35,325	2,817,270	194,114

(a) *See text on page 369.*

(ii) *Census, 1961.* The following table shows the number of occupied and unoccupied dwellings in the urban and rural areas of Australia at the census of 30th June, 1961. (For definitions of "urban" and "rural" see Chapter IX. Population, para. 3, p. 269.) The boundaries of the metropolitan urban and other divisions of States differ from census to census, and consequently accurate comparison cannot be made between figures for corresponding divisions.

The total number of occupied dwellings in Australia at the census of 30th June, 1961, showed an increase of 18.4 per cent. over the corresponding figure for the 1954 census, compared with an increase of 16.9 per cent. in population. Occupied private dwellings increased by 18.7 per cent., while occupied dwellings other than private decreased by 4.4 per cent. At the 1961 census, 98.7 per cent. of the total occupied dwellings in Australia were private dwellings, compared with 98.4 per cent. in 1954. Proportional increases in total occupied dwellings over 1954 figures in each State and Territory were:—New South Wales, 16.3 per cent.; Victoria, 19.7 per cent.; Queensland, 17.4 per cent.; South Australia, 21.6 per cent.; Western Australia, 19.3 per cent.; Tasmania, 15.8 per cent.; Australian Capital Territory, 95.8 per cent.; and Northern Territory, 59.9 per cent.

Unoccupied dwellings increased by 72.4 per cent.

#### DWELLINGS: AUSTRALIA, CENSUS, 30th JUNE, 1961

<b>Australia .. .. .</b>	<b>2,380,353</b>	<b>112,594</b>	<b>2,817,270</b>	<b>194,114</b>

(a) See text on page 369.

3. **Class of Dwelling.**—The following table shows the numbers of the various classes of occupied dwellings in the metropolitan urban, other urban, and rural areas of Australia at the censuses of 1954 and 1961.

Private dwellings are classified into the following four categories:—

*Private House*—includes houses, sheds, huts, garages, etc., used for dwelling purposes, and shared private houses for which only one householder's schedule was received;

*Share of Private House*—portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received;

*Flat*—part of a house or other building which can be completely closed off and which has its own cooking and bathing facilities;

*Other Private Dwelling*—includes private dwellings such as rooms, apartments, etc., which are parts of buildings but are not self-contained units.

Other than Private dwellings include hotels; motels; boarding houses, lodging houses and hostels; educational, religious and charitable institutions; hospitals; defence and penal establishments; police and fire stations; clubs; staff barracks and quarters, etc.

It is desirable when considering the question of housing to exclude those forms of accommodation which do not represent the normal housing conditions associated with family life, and the statistics which follow relate therefore mainly to private dwellings.

### OCCUPIED DWELLINGS BY CLASS: AUSTRALIA

(a) See text on p. 356 regarding comparability as between censuses. (b) Includes shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) Prior to 1961, single self-contained dwellings attached to, or situated above, offices, shops, etc., were classified as private houses irrespective of the description stated in the householder's schedule. In 1961 such dwellings, if described as self-contained flats, were classified as flats. (e) Included with Private dwellings. (f) Certain institutions previously classified as "Educational" were in 1961 classified as "Religious".

NOTE.—Minus sign (-) denotes decrease.

4. **Population According to Class of Dwelling, etc.**—The following table shows the number of the various classes of occupied dwellings at the censuses of 1954 and 1961, together with the number of inmates therein.

**OCCUPIED DWELLINGS, ETC., AND INMATES: AUSTRALIA**

(a) Includes shared private houses for which only one householder's schedule was received.  
 (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) See footnote (d) to table on p. 357. (d) See footnote (e) to table on p. 357. (e) Shipping, railway and air travellers.

5. **Occupied Private Dwellings.**—(i) *Material of Outer Walls.* In the following table, occupied private dwellings are classified according to the material of the outer walls.

Wood has been the most extensively used material in the construction of the outer walls, followed by brick and fibro-cement, and for Australia at 30th June, 1961, the respective proportions for which material of outer walls was specified, were 41.5 per cent., 34.3 per cent., and 16.3 per cent. Fibro-cement dwellings have increased from 1933, when the proportion was 1.6 per cent. (23,696 dwellings), to 6.3 per cent. in 1947 (117,631 dwellings), to 12.7 per cent. in 1954 (296,553 dwellings), and to 16.3 per cent. in 1961 (452,270 dwellings). The proportions of both brick and wooden dwellings have shown small decreases since 1954. The numbers of dwellings of all other materials except fibro-cement and concrete have decreased. Brick dwellings in 1961 represented 50.3 per cent. of all occupied private dwellings in the metropolitan urban division, while in the other urban and rural divisions wooden dwellings predominated, the percentages of such dwellings being 54.8 per cent. and 55.3 per cent. respectively.

OCCUPIED PRIVATE DWELLINGS, BY MATERIAL OF OUTER WALLS:  
AUSTRALIA

(a) See text on p. 269 regarding comparability as between censuses.

NOTE.—Minus sign (-) denotes decrease.

(ii) *Number of Rooms.* For census purposes, the kitchen and any permanently enclosed sleep-out were included in the number of rooms in the dwelling, but the bathroom, pantry, laundry and storehouse were excluded.

Excluding houses with rooms unspecified, private houses of four, five and six rooms represented 80.2 per cent. of the total number of private houses in Australia at 30th June, 1961, compared with 78.3 per cent. in 1954; 90.2 per cent. of the total increase in the number of private houses since 1954 consisted of houses containing these numbers of rooms.

## METROPOLITAN URBAN(e)

(a) Includes kitchen and permanently enclosed sleep-out, but does not include bathroom, pantry, laundry or storehouse. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) See footnote (d) to table on p. 357. (e) See text on p. 356 regarding comparability as between censuses.

(a) Includes kitchen and permanently enclosed sleep-out but does not include bathroom, pantry, laundry or storehouse. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) See footnote (d) on p. 357. (e) See text on p. 356 regarding comparability as between censuses.

(iii) *Number of Inmates.* A classification of occupied private dwellings according to the number of inmates is shown in the following table.

For Australia as a whole, at the 1961 census, private houses with two inmates were most numerous, followed by those with four and three inmates in that order.

An increase of 21 per cent (93,420 houses) in the number of private houses occupied by two inmates brought this group from second position in 1954, to first position in 1961. Houses with two inmates in 1961 constituted 22 per cent. of the total number of occupied private houses in Australia, while private houses with four and three inmates constituted 21 per cent. and 19 per cent., respectively.

The greatest proportional increase since 1954 in the number of occupied private dwellings occurred in those with one inmate, the growth of 33.9 per cent. being due mainly to an increase of 34.5 per cent. in the number of private houses with one inmate and an increase of 108.3 per cent. in the number of flats with one inmate. The number of flats with two, three and four inmates showed increases of 66.7 per cent., 46.7 per cent. and 61.8 per cent. respectively since 1954. However, the comparison of figures for flats between 1954 and 1961 is affected by the classification as flats in 1961 of dwellings previously classified as private houses (see footnote (d) to table on p. 357).

At 30th June, 1961, dwellings with less than 6 inmates represented 86.4 per cent. of total occupied private dwellings compared with 87.2 per cent. in 1954.

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (c) See footnote (d) to table on p. 357. (d) See text on p. 356 regarding comparability as between censuses.

(iv) *Nature of Occupancy.* At the 1961 census, 52.0 per cent. of occupied private houses in Australia for which particulars were supplied were occupied by owners, 25.1 per cent. by purchasers by instalments, 20.7 per cent. by tenants, and 2.2 per cent. by others. The corresponding percentages in 1954 were—owners, 52.5 per cent.; purchasers by instalments, 16.8 per cent.; tenants, 28.1 per cent.; and others, 2.6 per cent. Owner-occupied houses in Australia increased by 17.3 per cent. between 1954 and 1961, and those being purchased by instalments by 76.8 per cent., the increase in these two groups combined being nearly 32 per cent., while tenant-occupied houses decreased by 12.4 per cent.

In the metropolitan areas, 80.6 per cent. of all occupied private houses were either owner-occupied or being purchased by instalments, as compared with 74.6 per cent. in the other urban areas and 70.2 per cent. in the rural areas.

Tenants occupied by far the greater proportion of flats and other private dwellings.

(d) See text on p. 356 regarding comparability as between censuses. (e) At the 1954 Census, figures were compiled from the answers furnished in response to the instruction on the householder's schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'". At the 1961 Census, householders were instructed on the schedule to write "Tenant (G)" if they paid rent to the Governmental Housing Authority in their State or Territory.

(v) *Weekly Rent—Tenanted Private Dwellings.* The following table shows tenanted private dwellings in the metropolitan urban, other urban and rural areas of Australia classified according to weekly rent (unfurnished).

Information tabulated concerning rents was restricted to the actual rent paid per week by tenants for unfurnished private dwellings. Particulars of rents shown in the following tables are therefore on an *unfurnished* basis. Dwellings shown as rent "Not stated" include those whose rents were shown on householders' schedules on a *furnished* basis, and those whose rents were not applicable (e.g., for shop and dwelling combined). In this section information on "tenanted private dwellings" *excludes particulars of dwellings occupied by "Tenants (Governmental Housing)" in each State, i.e. those householders who at the 1954 Census furnished answers in response to the instruction on the census householder's schedule "Tenant paying rent to a Government Authority to write 'Tenant (G)'" and those householders who at the 1961 Census furnished answers in response to the instruction on the census householder's schedule "Tenant paying rent to the Governmental Housing Authority in their State to write 'Tenant (G)'". For the Australian Capital Territory and the Northern Territory, particulars of all tenanted private dwellings are included.*

<b>Total Tenanted Private Dwellings . . .</b>	<b>486,176</b>	<b>68,081</b>	<b>103,384</b>	<b>46,949</b>	<b>704,590</b>	<b>408,084</b>	<b>46,072</b>	<b>156,519</b>	<b>44,207</b>	<b>654,882</b>
<b>Average weekly rent (unfurnished) per private dwelling . . .</b>	<i>s. d.</i> 32 2	<i>s. d.</i> 34 2	<i>s. d.</i> 50 6	<i>s. d.</i> 36 2	<i>s. d.</i> 35 0	<i>s. d.</i> 57 8	<i>s. d.</i> 66 4	<i>s. d.</i> 94 9	<i>s. d.</i> 62 5	<i>s. d.</i> 66 6

(a) These figures exclude dwellings occupied by "Tenants (Governmental Housing)" except those in the Northern Territory and the Australian Capital Territory. (b) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (c) Portion of a shared private house which is occupied separately and for which portion a separate householder's schedule was received. (d) See footnote (d) to table on p. 357. (e) See text on p. 356 regarding comparability as between censuses. (f) Includes tenanted dwellings which were rent-free, those rented on a furnished basis, and those for which the rents were not applicable (e.g., for shop and dwelling combined).

At the 1954 census, nearly 55 per cent. of the tenanted private houses in Australia for which unfurnished rents were stated had weekly rentals of between 20s. and 40s.; at the 1961 census, only 28 per cent. were within these limits. In 1954, 18 per cent. had rentals below 20s. and 27 per cent. above 40s. In 1961, 8 per cent. had rentals below 20s. and 64 per cent. above 40s. At the 1961 census, 31 per cent. of the flats in Australia had rentals of between 40s. and 70s., 10 per cent. were below this range, and 59 per cent. above it. At the 1954 census, the corresponding proportions were:—51 per cent., 34 per cent. and 15 per cent. In 1961, 14 per cent. of tenanted private houses and 40 per cent. of tenanted flats were in the rental range 100s. and over. Dwellings whose rents were not stated were excluded in obtaining these proportions.

The average rentals shown in this table for all tenanted private dwellings in Australia at the 1961 census were 90 per cent. higher than in 1954 (79 per cent. higher for houses and 88 per cent. higher for flats). Metropolitan rentals in 1961 were higher by 106 per cent., 98 per cent. and 93 per cent., respectively, than in 1954.

In all such comparisons as these, the difference in basis between the 1954 and 1961 Censuses, referred to in the opening paragraph (p. 356), and also the differences in the urban and rural divisions (*see* p. 364), should be borne in mind.

(a) These figures exclude tenanted private houses occupied by "Tenants (Governmental Housing)" in 1954, and those occupied by "Tenants (State Governmental Housing Authority)" in 1961. However, the data used for the Australian Capital Territory and Northern Territory include particulars of such dwellings. (b) *See* text on p. 356 regarding comparability as between censuses.

(vi) *Date of Building.* The numbers of occupied private dwellings in Australia at the census of 30th June, 1961, classified according to date of building from replies given to the relevant question at the 1961 census, are shown below.

## OCCUPIED PRIVATE DWELLINGS, BY DATE OF BUILDING: AUSTRALIA, CENSUS, 30TH JUNE, 1961

Date of building	Class of dwelling				Division			Total, Australia
	Private house (a)	Share of private house	Flat	Other	Urban		Rural	
					Metropolitan	Other		
<i>Before 1st July, 1954</i> ..	1,861,262	68,823	168,615	44,358	1,231,462	537,953	373,643	2,143,058

1958 ..	78,573	1,143	5,603	381	51,970	22,203	11,527	85,700
1959 ..	81,110	1,220	7,657	366	54,747	24,002	11,604	90,353
1960 ..	82,968	1,231	11,117	234	57,188	25,705	12,657	95,550
1961 (Jan.–June) ..	30,618	367	4,124	130	19,943	9,466	5,830	35,239
Not stated (b) ..	18,131	730	2,841	491	12,484	6,085	3,624	22,193
<i>Total, after 30th June, 1954</i> ..	543,526	8,001	43,371	2,454	354,587	157,561	85,204	597,352
Other not stated ..	30,378	2,726	5,600	2,831	21,343	11,021	9,171	41,535
<b>Grand Total</b> ..	<b>2,435,166</b>	<b>79,550</b>	<b>217,586</b>	<b>49,643</b>	<b>1,607,392</b>	<b>706,535</b>	<b>468,018</b>	<b>2,781,945</b>

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one household's schedule was received. (b) After 30th June, 1954, but year not stated.

NOTE.—The information above was derived from replies of occupants of dwellings at 30th June, 1961. For a number of reasons, the figures shown on the first line of the table do not agree with the number of dwellings by class recorded at the Census of 30th June, 1954, e.g., demolitions, conversion from one class of dwelling to another and errors of memory regarding date of building. Also, the figures are not precisely comparable with 1954 data because of changes in classification of dwellings adopted at the 1961 Census, as indicated in footnotes (d) and (e) to table on p. 357.

Of those occupied private dwellings in Australia where date of building was stated, 21.8 per cent. were built after 30th June, 1954. In the metropolitan urban division, 22.4 per cent. were built after 30th June, 1954, while in the other urban and rural divisions, the proportions were 22.7 per cent. and 18.6 per cent. respectively.

(vii) *Facilities, etc.* At the 1961 census a question was asked regarding the facilities gas, electricity and television. Of those persons who answered the question on gas and electricity, 51.4 per cent. had electricity but not gas, and 45.2 per cent. had both electricity and gas, making a combined total of 96.6 per cent. with electricity. Occupied private dwellings with gas but not electricity constituted 0.2 per cent. In the metropolitan urban division 99.7 per cent. of occupied private dwellings had electricity, while in the other urban and rural divisions the proportions with electricity were 98.7 per cent. and 82.5 per cent. respectively. The proportion of private dwellings with both electricity and gas was 65.6 per cent. in metropolitan urban, 25.3 per cent. in other urban and 4.4 per cent. in rural.

Of the occupied private dwellings in Australia stated as having a television set, 81.2 per cent. were in the metropolitan urban division. In this division 64.6 per cent. of occupied private dwellings were stated as having a television set.

Similar information was not compiled for the 1954 census, but a summary of information obtained at the 1947 census was published on page 571 of Official Year Book No. 38.

**OCCUPIED PRIVATE DWELLINGS BY FACILITIES: AUSTRALIA,  
CENSUS, 30th JUNE, 1961**

Facilities	Class of dwelling				Division			Total, Australia

With electricity only ..	1,322,300	28,580	63,378	9,568	546,588	517,041	360,197	1,423,826
With gas and electricity	1,008,763	49,769	153,231	39,428	1,052,980	177,974	20,237	1,251,191
Without gas or electricity ..	87,839	773	277	163	3,239	8,665	77,148	89,052
Not stated ..	10,878	323	529	381	3,007	2,241	6,863	12,111
<b>Total ..</b>	<b>2,435,166</b>	<b>79,550</b>	<b>217,586</b>	<b>49,643</b>	<b>1,607,392</b>	<b>706,535</b>	<b>468,018</b>	<b>2,781,945</b>
With television set(b) ..	1,139,578	30,126	97,226	11,731	1,038,837	168,875	70,949	1,278,661

(a) Includes houses, sheds, huts, etc., and shared private houses for which only one householder's schedule was received. (b) So stated in census schedules.

6. **Unoccupied Dwellings.**—The following table classifies unoccupied dwellings according to the reasons given by census collectors as to why the dwellings were unoccupied at the census date. Unoccupied dwellings include vacant dwellings available for sale or renting; dwellings such as "week-ender", "holiday home", "second home", "seasonal workers' quarters", which were not occupied on the night of the census; dwellings normally occupied, but whose usual occupants were temporarily absent on the night of the census; newly completed dwellings whose owners or tenants had not entered into occupation on the night of the census; dwellings described as "to be demolished", "condemned", "deceased estate", "exhibition home", etc.; and buildings constructed as dwellings, but used for non-dwelling purposes on the night of the census. The total number of unoccupied dwellings shown for any area must not, therefore, be read as representing the number of vacant houses and flats available for sale or renting.

**UNOCCUPIED DWELLINGS, BY REASON FOR BEING UNOCCUPIED:  
AUSTRALIA, CENSUS, 30th JUNE, 1961**

Reason for being unoccupied	Urban		Rural	Total, Australia

## § 2. Building

1. **General.**—(i) *Statistics of Building Approved.* Statistics of building approvals have been compiled from (a) permits issued by local government authorities in the areas subject to building control by these authorities, and (b) contracts let or work commenced and day labour projects authorized by governmental authorities. *They relate only to approvals for buildings as distinct from the construction of roads, bridges, railways, earth works, water*

*storage, etc.* Values shown represent the estimated cost when completed (excluding cost of land) of new buildings and alterations and additions to existing buildings. Additions of £5,000 and over are included with new buildings in all States except New South Wales, where they are included in "alterations and additions".

These statistics are available from the year 1953-54.

(ii) *Statistics of Building Commenced, Completed and Under Construction.* These relate to building by private contractors, government authorities and owner-builders.

The following outlines the scope of the statistics: (a) *only the erection of new buildings as distinct from the construction of railways, bridges, earthworks, water storage, etc., is covered*; (b) major new additions to existing buildings are included as new buildings (for New South Wales, major alterations also are included as new building); (c) minor additions, alterations, renovations and repairs are excluded because of the difficulty of obtaining details of this work; (d) temporary dwellings are excluded; (e) figures for houses exclude flats and dwellings attached to other new buildings (the value of dwellings attached to other new buildings is included with the value of buildings to which they are attached); figures for flats include "home units"; (f) imported prefabricated houses are included; (g) details obtained from government authorities and building contractors refer to all areas whereas details for owner-builders cover only areas subject to building control by local government authorities.

The following definitions of terms used in this section are necessary for interpretation of the data presented.

*Government or private ownership.* A building is classified as "government" or "private" according to ownership at date of commencement. Thus "government" includes buildings erected for Commonwealth and State Governments, semi-governmental and local government authorities, either by contractor or by day-labour, whether these buildings are for their own use, for rental or sale after completion. Houses erected *for particular persons* under government sponsored home building schemes or with government financial assistance are classified as "private".

*Owner-built.* An "owner-built" house is one actually erected or being erected by the owner or under the owner's direction without the services of a contractor who is responsible for the whole job.

*Contract-built.* Includes the operations of all building contractors and government instrumentalities which undertake the erection of new buildings.

*Commenced.* A building is regarded as having been commenced when work on foundations has begun. Owing to the difficulty of defining the exact point that this represents in building operations, classifications made by informants may not be entirely uniform.

*Completed.* A building is regarded as having been completed when the contractor has fulfilled the terms of the contract. As with commencements, the classifications made may not be entirely uniform.

*Under construction.* A building is regarded as being under construction if it has been commenced but not completed, whether or not work on the building is actively proceeding.

*Values.* All values shown exclude the value of land and represent the estimated value of buildings on completion.

*Type of building.* Classification is according to the function a building is intended to serve. A building which is ancillary to other buildings or forms part of a group of related buildings is classified according to the function of the group as a whole.

*Employment.* Figures relate to persons actually working on the jobs of contractors who undertake the erection of new buildings and of government instrumentalities which erect new buildings on their own account. They include persons actually working on alterations, additions, repairs and maintenance when these jobs are undertaken by such contractors and instrumentalities.

Contractors are asked to give details of all persons working on their jobs on a specified day, including working principals, men working as or for sub-contractors and men temporarily laid off on account of weather. Because of the intermittent employment of various types of sub-contractors on any particular job, it is sometimes difficult for contractors and authorities to

provide precise particulars of the number of sub-contractors and the number of employees of sub-contractors working on their jobs on the specified day. This factor may cause some estimation by persons completing returns and some degree of understatement in figures shown in tables. On the other hand, because of frequent movement between jobs of some types of tradesmen (such as electricians) who may work on several jobs on the one day, a small element of duplication may occur.

The figures exclude persons working on owner-built houses, and employees of builders who undertake only alterations, additions, repairs and maintenance.

2. **New Houses.**—(i) *Approved, Commenced, Completed and Under Construction, 1962-63.* The next table provides a summary of the number of new houses approved, commenced, completed and under construction in each State and Territory.

A graph showing the number of new houses commenced, completed and under construction for the period 1953-54 to 1962-63, will be found on page 385.

1962-63 ..	10,988	12,063	2,747	4,563	2,879	1,594	239	1,062	36,135

(a) Includes flats for periods prior to 1961-62.

3. **New Flats.**—The figures in the foregoing tables, except those for the Northern Territory for periods prior to 1961-62, do not include particulars of new flats. It should be noted: (a) that the figures hereunder are additional to the numbers of houses shown in other tables, (b) that each flat is counted as a separate unit, and the numbers shown therefore relate to individual flats, (c) that new flats only are included, i.e., conversions of old buildings into flats are omitted, and (d) "home units" are included as flats.

A graph showing the number of new flats commenced, completed and under construction for the period 1953-54 to 1962-63 will be found on page 386.

(i) *Approved, Commenced, Completed and Under Construction*, 1962-63. The summary below shows the number of new flats approved, commenced, completed and under construction for the year 1962-63.

**NEW FLATS: NUMBER, 1962-63**

(Individual living units)

Particulars	N.S.W.	Vic.	Q'land	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) From 29th June, 1962, also includes persons working on buildings, other than houses, erected without the services of a contractor responsible for the whole job. The estimated numbers involved, at 29th June, 1962, were—New South Wales, 1,745; Victoria, 1,025; Western Australia, 133.

### § 3. Government Activities in the Housing Field

1. *Housing Agreements between Commonwealth and State Governments.*—Under the Commonwealth-State Housing Agreements the Commonwealth Government makes substantial loans to the States for the provision of housing.

(i) *The 1945 Agreement.* In November, 1945, the Commonwealth Government entered into an Agreement with the Governments of the States whereby the Commonwealth Government would provide finance for, and the State Governments would undertake the building of, housing projects. Tasmania withdrew from the Agreement in August, 1950, and South Australia did not begin to operate under it until July, 1953.

Between 1945–46 and 1955–56, under this Agreement, the Commonwealth Government advanced £88,849,000 to New South Wales; £85,781,000 to Victoria; £24,344,000 to Queensland; £11,700,000 to South Australia; £27,050,000 to Western Australia; and £2,835,000 to Tasmania. When Tasmania withdrew from the Agreement, it repaid all advances made to it.

For information on the conditions of sale, etc., under the 1945 Agreement, see Year Book No. 48, page 367. In 1961, the 1945 Agreement was amended to allow sales of dwellings on terms decided by the States, but tenants eligible under the *War Service Homes Act 1918–1962* are entitled to purchase dwellings built under the 1945 Agreement on the terms provided in the Act.

(ii) *The 1956 Agreement.* In 1956, the Commonwealth and the States entered into a new agreement, under which added emphasis was placed on the construction of homes for private ownership. The Commonwealth Government provided finance to the States over a period of five years ending 30th June, 1961, for the erection of housing projects. For the first two years of the agreement, 20 per cent. of the money allocated to each State (and 30 per cent. for the next three years) was advanced to building societies and other approved institutions for lending to private house builders. The remaining allocation to each State was used by the States for the erection of houses for either rental or sale. The States determined the type of houses to be erected, their location and the selection of tenants, and also fixed the terms of selling.

The Commonwealth was entitled to specify that a portion of the moneys be set aside for the erection of houses for serving members of the defence forces nominated by the Commonwealth. The Commonwealth provided supplementary advances to the States equal to the amounts set aside by them for this purpose.

For other features of the 1956 Commonwealth and State Housing Agreement, see Year Book No. 48, page 368.

(iii) *The 1961 Agreement.* Following the termination of the 1956 Agreement on 30th June, 1961, a new agreement running for a further period of five years was entered into by the Commonwealth and the State Governments. This Agreement continues with some amendments the terms and conditions of the 1956 Agreement, but the Commonwealth and/or a State may agree to contribute funds in excess of the previous statutory maximum of 5 per cent. of a State's allocation, for the erection of dwellings for servicemen.

Under the 1961 Agreement, each advance of money, together with interest thereon, is to be repaid in equal instalments over a period of 53 years from the date each advance is made. The rate of interest chargeable on advances is the long-term bond rate at the time the advance was made, less one per cent. per annum. The interest rates under the Agreement have been: from 1st July, 1961, to 6th February, 1962, 4½ per cent. per annum; 7th February, 1962, to 22nd July, 1963, 4 per cent. per annum; and since 23rd July, 1963, 3½ per cent. per annum.

(iv) *Operations in 1962-63.* The following table shows operations under the various Housing Agreements during 1962-63.

2. *War Service Homes.*—(i) *General.* The provision of War Service Homes is a function of the War Service Homes Division of the Department of Housing, and the administration of the War Service Homes Act is under the control of the Director of War Service Homes. The War Service Homes Division was formerly a Division of the Department of National Development but was transferred to the Department of Housing in December, 1963.

The *War Service Homes Act 1918-1962* is a measure for the provision of homes for Australian ex-servicemen who served during the 1914-1918 War or the 1939-1945 War and to persons with service in Korea or Malaya. Provision is made also for assistance to the female dependants of Australian ex-servicemen and other classes of eligible persons as defined in the Act. Assistance may be granted to an eligible person and the wife or husband of that person as joint tenants, but the War Service Homes Division does not provide homes for occupation purely on a tenancy basis.

(ii) *Operations, 1962-63.* The following table gives details of the operations of the War Service Homes Division in the year 1962-63 and also since the inception of the Scheme on 6th March, 1919. The figures shown include operations in the Territories of Papua, New Guinea and Norfolk Island.

1953-54 TO 1962-63

3. **State Housing Authorities.**—The following paragraphs describe briefly the organizations of the various State Housing Authorities and their activities in the fields of home construction and provision of homes on a rental basis (see § 4 for their financial advances to persons wishing to purchase or build a home). For summarized figures of total government construction of houses and flats, see pages 373 and 376.

(i) *New South Wales*—*The Housing Commission of New South Wales.* (a) *General.* The Housing Commission of New South Wales was constituted in 1942, with a full-time salaried chairman and four other members remunerated by fees. The principal function of the Commission is the provision of low-cost housing for rental or sale to persons in the lower or moderate income groups. The Commission is also empowered to make surveys of housing conditions, recommend local government building ordinances, provide assistance to private home builders, and undertake the manufacture, purchase, and supply of building materials.

Most of the permanent dwellings provided by the Commission have been erected under the Commonwealth-State Housing Agreements. In 1962, 4,892 houses and flats valued at £14,675,000 were completed by or for the Housing Commission, mostly erected by private builders on contract to the Commission.

(b) *Capital, Income and Expenditure.* Advances from the Commonwealth have provided most of the Housing Commission's capital funds. Of the £151,482,000 total capital funds available to the Commission from its inception to 30th June, 1963, £142,462,000 (or 94.1 per cent.) came from Commonwealth advances, £2,522,342 (1.7 per cent.) from Consolidated Revenue, £4,963,000 (3.1 per cent.) from General Loans Account and £1,535,000 (1.1 per cent.) from other State funds.

During the year 1962-63, the Housing Commission's income and expenditure (other than capital transactions) was—total income, £11,173,540 (consisting of rent £7,116,169, interest £2,387,991, other £1,669,380); and total expenditure, £9,359,253.

(c) *Rental Housing (other than Housing Agreements).* Upon request by other State Departments, the Housing Commission will erect houses for employees of those Departments, e.g., Education, Agriculture, Water Conservation, etc. These Departments provide the necessary land and funds needed to finance the erection of the houses. Rentals charged are fixed by the Departments in accordance with the salaries of the officers occupying the houses. In addition, the Commission erects (with State funds) dwellings for employees of industries connected with decentralization and development. The number of rental houses erected (other than under the Housing Agreements) is 1,011.

Specially designed units are erected by the Housing Commission to provide dwellings for elderly persons at rentals within their means. The rents of these units are £1 per week for elderly single persons and £1 10s. per week for elderly couples. Nine hundred and seventy-six of these units have been completed.

(d) *Sales Schemes.* Applicants for Commission housing may, when their priority has been reached, elect either to purchase or to rent the dwelling allocated to them. Should they decide to purchase, terms of sale provide for a minimum deposit of £50 with repayments spread over a maximum period of forty-five years, with interest currently at the rate of 4½ per cent. There is no limit on the amount of outstanding indebtedness. Further, those tenants who originally elect to rent may subsequently purchase the dwellings occupied by them on similar terms, with the exception that the current rate of interest is 4½ per cent.

Applicants who have established eligibility for Housing Commission accommodation may now apply to have a standard type of dwelling erected on their own block of land. At 30th June, 1963, 275 dwellings had been completed under this scheme.

During the years 1954 and 1955, the Housing Commission completed 100 houses for sale. Under this scheme, the Commission acted as the construction authority, while administrative arrangements were carried out by the Rural Bank. Houses were sold on the basis of 10 per cent. deposit with repayment of the balance over a maximum period of 40 years. Construction has been limited to 100 houses.

(ii) *Victoria*—*Housing Commission, Victoria.* (a) *General.* A preliminary investigation into housing conditions in Victoria was begun in July, 1936, when a board for the purpose was appointed by the Government. As a result of their report, the *Housing Act 1937* was passed by Parliament which provided for the appointment of a Housing Commission of four members to be the central housing authority of the State. The Housing Commission of Victoria was appointed on 1st March, 1938.

The objects of the Commission as now laid down are the improvement of existing housing conditions; the provision of suitable rental housing for persons displaced from slum reclamation areas or living under unsatisfactory conditions, and for other eligible persons; the sale of houses to eligible persons and making of advances to such persons to enable them to own their homes; the development of land for housing and related purposes; and the responsibility of maintaining housing standards. Until the 1945 Commonwealth-State Housing Agreement was entered into, with its retrospective application to all estates or projects completed after 3rd December, 1943, the construction of dwellings by the Commission was financed by loan funds provided by the State and by three specific debenture issues raised by the Commission. Since the signing of the 1945 Commonwealth-State Housing Agreement, the construction of dwellings has been financed by the Commonwealth Government.

(b) *Dwellings Provided.* At 30th June, 1963, the Housing Commission had completed 1,328 dwelling units under the State Housing Scheme, and 47,677 dwelling units under Commonwealth-State Agreements. An additional 1,862 units were either under construction or let to contract at this date.

(c) *Dwellings for Elderly Persons.* Specially designed dwelling units are erected by the Commission to provide dwellings for elderly persons at rentals within their means. To 30th June, 1963, 1,972 of these units had been completed.

(d) *Housing of Aborigines.* Under the *Aborigines Act* 1958, as amended by the *Aborigines (Housing) Act* 1959, the Housing Commission is empowered to erect houses for the Aborigines Welfare Board for occupation as dwellings by Aborigines. To 30th June, 1963, 13 of these units had been completed.

(e) *Rental Housing (other than Housing Agreements).* State Government Authorities, such as the Public Works Department, State Electricity Commission, Victorian Railways, State Rivers and Water Supply Commission, etc., provide from time to time the necessary land and finance for the erection of dwellings for employees of those departments. Rentals charged are fixed by the Government Authorities in accordance with the salaries of officers occupying the dwellings. The dwellings erected by these State Government Authorities do not come under the control of the Victorian Housing Commission.

(f) *Rural Housing.* Prior to the end of the Second World War, the Commonwealth Government and various State Governments made arrangements for the settlement of discharged soldiers on the land as part of a general scheme of rehabilitation of ex-members of the Services. In 1945, the Victorian Government completed an Agreement with the Commonwealth Government, and legislation was passed constituting the Soldier Settlement Commission. On 17th March, 1962, the Rural Finance and Settlement Commission came into being, constituted by an Act passed in December, 1961. Activities under the *Soldiers Settlement Act* 1958 and the *Land Settlement Act* 1959, previously administered by the Soldiers Settlement Commission, are now carried out by the Settlement Branch of the new Commission. At 30th June, 1963, a total of 2,954 houses had been erected and 36 were still under construction.

(iii) *Queensland—The Queensland Housing Commission.* (a) *General.* The Queensland Housing Commission was established in 1945 to assist in meeting the existing housing shortage. It took over the operations of the State Advances Corporation which was established in 1916 to make advances to home builders under the *State Advances Act* 1916 (State Housing in Queensland originally began in 1910 under the Workers' Dwelling Board). In addition, the Commission was empowered to build houses itself, either for sale or for letting.

(b) *House Units Completed.* During 1962-63, the Commission completed 1,798 house units, bringing the total completions under all schemes since the revival of housing construction in 1944-45 to 27,924. Of this number, 16,349 houses, or 58.5 per cent., were for home ownership, and 11,575, or 41.5 per cent., were for rental.

(c) *Finance.* The Housing Commission finances its operations through two Treasury Trust Funds—the Queensland Housing Commission Fund and the Commonwealth-State Housing Fund. In addition, a Home Builders' Deposit Trust Fund is available to assist eligible persons to accumulate money to acquire land and erect a Commission dwelling

thereon, or to purchase a dwelling under contract of sale conditions. Total disbursements by the Commission for the year 1962-63 amounted to £11,427,391, representing £4,530,185 from the Queensland Housing Commission Fund and £6,897,206 from the Commonwealth-State Housing Fund, while the Home Builders' Deposit Fund had a balance of £3,454 at 30th June, 1963.

(d) *Rental Schemes.* In the field of rental housing, the Commission administers and acts as the constructing authority for the Commonwealth-State Housing Agreements of 1945, 1956, and 1961. These agreements have made possible large-scale home building programmes during the post-war years, the houses so built being mainly for rental, although they may be subsequently sold.

Until 28th March, 1961, when the *Workers' Homes Acts, 1919-1957*, were repealed, the Commission administered the Workers' Homes scheme, which was described in the Commonwealth Year Book No. 48, 1962, page 371.

(e) *Sales Schemes.* Operating under the provisions of the *State Housing Acts, 1945 to 1962*, the Commission, through its scheme of Workers' Dwellings, makes advances for the construction of dwellings to eligible persons who own a suitable building site. To be eligible to participate in any of its home-ownership schemes, a person must not own, nor must his wife or her husband own, a house in Queensland or elsewhere. The number of workers' dwellings completed during 1962-63 amounted to 632, making a total of 28,618 completions since the inception of the scheme. The Commission also has power to make advances, secured by mortgage, to firms for housing of employees.

Home ownership is further assisted through the Commission's powers to sell houses under contract of sale conditions. It may sell houses already erected to eligible applicants, or it will erect a dwelling to the intending purchaser's own design, on Commission land, for subsequent sale to him. Tenants of rental houses may also purchase, under contract of sale conditions, the houses they are occupying. Contract of sale agreements were made to purchase 684 of the Commission's houses during 1962-63.

The Commission is also authorized, under the *State Housing Acts Amendment Act, 1961*, to sell freehold land, or lease vacant Crown land which has been set apart for the purposes of the *State Housing Acts*, to an eligible person for the erection of a dwelling, subject to the condition that within 18 months from the date of contract he will execute a building agreement for the erection of a dwelling thereon for his occupation.

(iv) *South Australia—The South Australian Housing Trust.* (a) *General.* The South Australian Housing Trust was constituted in 1937 under the *South Australian Housing Trust Act, 1936-37*, for the purpose of providing comfortable homes for workers in regular employment on the lower ranges of income and for tenants in serious financial straits. The Housing Trust builds houses for both rental and sale and, in addition, administers an emergency dwelling scheme for the South Australian Government. From July, 1946 to 30th June, 1963, 46,941 houses were erected by the Trust in both city and country areas.

(b) *Rental Houses.* Rents charged for Trust accommodation are generally based on the overall cost of construction, and vary not only according to the size of the dwelling but also according to date of erection. As at 1st January, 1964, the rents of 5-roomed houses (i.e., 3 bedrooms) ranged from £1 17s. 6d. a week for houses of an older type to £3 12s. 6d. a week for houses then being completed in the Metropolitan Area. Factors taken into consideration when allotting rental houses include date of application, housing need and suitability of tenant. Persons with high incomes are asked to consider purchasing their own homes. Two and three storey groups of flats with weekly rentals ranging from £3 7s. 6d. to £6 12s. 6d. per flat have been built in the Metropolitan Area and at Elizabeth. At 1st January, 1964, 1,059 of these flats had been completed in the Metropolitan Area and 220 at Elizabeth. In 1953 the Trust began building cottage or pensioner flats for elderly people. At 30th June, 1963, it had built 670 cottage flats for its own scheme and an additional 264 for, and at the expense of, charitable organizations.

In 1958, the State Government instituted the rental-grant scheme for the purpose of providing houses in the country towns for people who cannot afford to pay an economic rent, and to 30th June, 1963, 180 houses had been built.

(c) *Sales Scheme.* Houses built under this scheme, which was inaugurated in 1946, are of solid or timber-frame construction. More than 22,400 have been completed in both metropolitan and country areas since the scheme began. The Trust may receive cash payment for the house and land. More usually, the purchaser pays a deposit (which varies according to the type of house and locality—at present £160 for a timber-frame house and £200 for a 5-roomed brick house—and the purchaser's ability to pay) and raises the balance by way of mortgage. In 1956, the Trust began the erection of houses, which may be of solid or timber-frame construction or a mixture of both, for individuals on their own land. Houses are built by contract under the Trust's supervision. Prices for building and supervision of the standard houses covered by the scheme in late 1963 ranged from £3,200 for a 2-bedroom brick house to £5,000 for a 5-roomed house. During 1962–63, the Trust commenced construction of rental-purchase houses. The aim of this scheme is to provide less expensive houses for the lower-middle income wage earner, and it is expected that such houses will, as far as possible, replace the demand for the double-unit type rental houses. By 1st January, 1964, 218 rental-purchase houses had been built.

Upon request by State Government Departments, the Trust will erect houses for purchase by those Departments for the accommodation of their employees. During the financial year 1962–63, 90 houses were built for Education, Police, Highways, Aboriginal Affairs and Woods and Forests Departments, etc. Rents for the houses are determined by the Public Service Board.

(d) *Rural Housing.* In order to assist primary producers, the Trust will erect houses on the applicant's own land for his own use or that of his employees, either using local materials or transporting prefabricated houses to the site. At 30th June, 1963, prices for houses erected on level sites within 100 miles of Adelaide ranged from £2,300 for a 2-bedroom minimum type timber house to £3,000 for a 3-bedroom asbestos cement sheeted timber house.

(v) *Western Australia—State Housing Commission of Western Australia.* (a) *General.* The State Housing Commission was established in January, 1947, under the *State Housing Act, 1946* to replace the Workers' Homes Board which had been created in 1912 to "erect and dispose of workers' dwellings and to make advances to people of limited means to provide homes for themselves". The *State Housing Act, 1946–1961* has as its objects "the improvement of existing housing conditions" and "the provision of adequate and suitable housing accommodation for persons of limited means and certain other persons not adequately housed". The legislation is comprehensive in scope, providing for the erection of homes for workers, the making of advances to workers for the purchase of homes, the erection of homes for letting on a weekly rental basis, the acquisition and development of land, the clearing of slums, the erection of hostels and the planning of community facilities. The Commission, consisting of seven members, builds houses for letting or sale and lends money for home building. The houses are built by private contract on land provided by the applicant or the Commission. Government housing is primarily the responsibility of the Commission, whose functions, in addition to its operations under the *State Housing Act*, include the administration in Western Australia of the Commonwealth and State Housing Agreements and the War Service Homes Act.

(b) *Operations.* The number of houses completed under the *State Housing Act* up to 30th June, 1963, was:—freehold—2,374; leasehold—3,086; assistance by second mortgage—1,035.

Various forms of assistance have been granted by the Commission to encourage home ownership, including schemes for arranging purchase by means of loans secured by mortgage, advances made under contract of sale, advances for securing homes under leasehold conditions, second mortgage loans and loans for the completion of partly built dwellings. Under the leasehold scheme a purchaser can convert, from perpetual Crown lease or a lease for a term of years, to freehold conditions upon having a 10 per cent. equity in the improvements and by agreeing to purchase the land at the valuation determined at the date of commencement of the lease.

The Commission also conducts certain other housing schemes and has completed, or is currently engaged in, other specific projects. Among the more important of these were the building of 653 homes at Medina and Calista between 1952–53 and 1955–56 in terms of the agreement contained in the *Oil Refinery Industry (Anglo-Iranian Oil Company Limited)*

Act, 1952; the Government Employees' Housing Scheme, which commenced in 1958-59 and, up to 30th June, 1963, had provided 93 rental houses in country areas for certain government employees; the construction of 100 houses to be built under the provisions of the *Laporte Industrial Factory Agreement Act, 1961*; the construction of approximately 40 homes at Esperance to aid the development of the fertilizer industry; the building of up to 30 homes per year until 1969-70 as part of the Broken Hill Proprietary Company's Agreement with the State to establish an integrated steel industry; and the management, free of charge, of the McNeess Housing Trust, a private endowment, the income from which, together with State Government allocations and Lotteries Commission donations, is used to provide homes for aged and infirm persons not able to acquire a home from their own resources. The Commission also undertakes the construction of houses for some other State Government Departments and semi-governmental authorities.

(vi) *Tasmania—The Housing Department.* (a) *General.* The Housing Department was established in July, 1953, as a separate identity, and is responsible for administering that portion of the *Homes Act 1935* which relates to the acquisition and development of land for housing purposes and the erection of homes for rental and ultimate sale, and the *Homes (Old Age Pensioners') Act 1940*. Housing Department construction utilizes both day labour and private contractors to build houses on land developed by the Department. On-site construction is supported by the Department's factory which incorporates joinery works, timber mill, plumbing and electrical workshops, material stores, and garage. Most of the dwellings constructed by the Department are three-bedroom timber dwellings. Roofing is usually corrugated iron, but some coloured asbestos cement sheeting is used. Flats for elderly persons and multi-unit flats have also been constructed.

(b) *Construction of Dwellings.* During 1962-63, 531 dwellings were completed. Construction since 1944 is summarized in the following table.

Type of dwelling	One-bedroom	Two-bedroom	Three-bedroom	Total
Single unit—Timber .. .. .	..	510	6,114	6,624
Other material .. .. .	..	..	775	775
Elderly persons' flatettes .. .. .	50	114	..	164
Maisonettes .. .. .	..	12	10	22
Multi-unit flats .. .. .	125	157	14	296
<b>Total Dwelling Units .. .. .</b>	<b>175</b>	<b>793</b>	<b>6,913</b>	<b>7,881</b>

(c) *Dwellings for Rental.* Flats, maisonettes and elderly persons' homes are for rental only. It is the Department's policy to allot single-unit dwellings on a purchase contract basis except where the allottee would be unable to meet the full economic charges or where the dwelling would not be large enough for the allottee's future requirements. In the June quarter of 1963, rents of three-bedroom timber dwellings averaged £3 14s. 6d. per week, but on similar new dwellings allotted during 1962-63 rents averaged £5 4s. 10d. per week. Rental rebates are allowed in certain cases and the Department is reimbursed by the State Treasury. Rents of elderly persons' flatettes are graduated according to the incomes of occupiers. Under the current rental rebate formula, a married couple whose only income is the age pension pays £1 18s., while a single person solely dependent on the pension pays £1 per week.

(d) *Dwellings for Sale.* Allotments are made on a no deposit purchase contract basis with repayments over a 53-year term, but allottees are encouraged to pay a deposit if they are in a position to do so. Purchase contracts are sometimes surrendered to the Department. Net of surrenders, 4,737 purchase contracts had been entered into by June, 1963. The sale price, excluding land, of a new three-bedroom timber house in the Hobart metropolitan area was approximately £3,265 in the June quarter of 1963. Prices in the north and north-western areas were slightly lower.

The weekly instalments on a purchase contract are slightly less than the weekly rent of a similar dwelling, as the latter includes a charge for maintenance.

4. **Housing Schemes in Commonwealth Territories.**—(i) *Northern Territory.* In 1946, control of all government-owned residences in the Territory (excluding those belonging to the Defence Services or Commonwealth Railways, or attached to post offices) was vested in the Administration. The Administration provides houses for rental to officers and employees of the Commonwealth. The Northern Territory Housing Commission provides rental housing for persons of limited means who are not adequately housed and who are not officers of either the Commonwealth or the Northern Territory Public Service. The Commission was established in 1959 and operates under authority of the *Housing Ordinance 1959-1963*; to 31st October, 1963, a total of 361 houses and 24 flats had been completed and a further 43 houses and 72 flats were under construction.

(ii) *Australian Capital Territory.* The Commonwealth Government provides houses and flats for rental to persons employed in the Australian Capital Territory. At 30th June, 1963, the Department of the Interior controlled 7,308 houses and 1,765 flats for rental purposes.

Government rental houses may be purchased by tenants. Up to 30th June, 1963, 2,975 houses had been sold to tenants.

(iii) *Papua and New Guinea.* In 1960, the Administration, through the Commissioner for Housing, commenced a scheme for providing low-cost houses for rental and eventual sale where possible to indigenes, mixed race peoples and Asians. To 30th June, 1963, 214 houses had been completed.

5. **Summary of Rental Activities of Government Authorities.**—(i) *Revenue from Rentals.* The following table shows the revenue from rentals for dwellings under control of Government Housing Authorities each year from 1958-59 to 1962-63.

**GOVERNMENT HOUSING AUTHORITIES: REVENUE FROM RENTALS**  
(£'000)

Year	N.S.W.	Vic.	Old (a)	S.A. (b)	W.A.	Tas.	N.T.	A.C.T.	Aust.
1958-59 ..	5,856	5,568	1,502	2,476	1,849	426	115	823	18,615
1959-60 ..	6,094	5,562	1,599	2,687	1,914	454	138	1,045	19,493
1960-61 ..	6,272	5,537	1,642	2,993	1,983	498	170	1,188	20,283
1961-62 ..	6,575	5,549	1,791	3,397	2,076	545	200	1,598	21,731
1962-63 ..	7,116	5,705	1,983	3,752	2,192	561	244	1,761	23,314

(a) Excludes rentals in respect of tenanted temporary dwellings.

(b) Excludes rentals in respect of temporary and emergency dwellings.

(ii) *Number of Tenants Paying Rent.* The following table shows the number of tenants paying rent for dwellings under control of Government Housing Authorities at the end of each year from 1958-59 to 1962-63.

**GOVERNMENT HOUSING AUTHORITIES: NUMBER OF TENANTS  
PAYING RENT**

Year	N.S.W.	Vic.	Old (a)	S.A. (b)	W.A.	Tas.	N.T.	A.C.T. (c)	Aust.
1958-59 ..	38,123	32,496	10,233	18,038	12,509	2,704	1,026	6,768	121,897
1959-60 ..	38,673	32,386	10,345	19,309	12,853	2,755	1,095	7,723	125,139
1960-61 ..	38,756	31,894	10,629	21,114	13,041	2,803	1,210	8,349	127,796
1961-62 ..	40,796	32,146	11,079	22,983	13,338	2,935	1,366	8,832	133,475
1962-63 ..	41,207	32,371	11,575	24,632	13,848	3,144	1,678	9,073	137,528

(a) Excludes tenanted temporary dwellings.  
At 30th June, 1963, these numbered 2,549.

(b) Excludes temporary and emergency dwellings.

(c) Number of occupied dwellings at 30th June.

## § 4. Advances to Home Purchasers

Many prospective home purchasers wish to borrow for the purpose of constructing or purchasing their own homes. Usually the loan is covered by way of mortgage of the home to be constructed or bought. Such loans are provided from a number of private sources and from agencies owned or guaranteed by the State or Commonwealth Governments. The information in this section concerns the direct loans made to home purchasers by the more important institutional lenders. Loans to institutions which in turn lend moneys to home purchasers and loans to contract builders, etc., are excluded as far as possible. The loans may be for the construction of new dwellings, the purchase of existing dwellings, for additions, renovations, etc., as first or subsequent mortgages, overdrafts and so on.

While figures of all loans to home purchasers are not available, the institutions mentioned below account for a significant proportion of total loans. Details of the terms and conditions of lending are given, together with available information on the number and value of loans made.

1. State Authorities and Agencies.—(i) *New South Wales.* (a) *Housing Commission of New South Wales—Commission Financed Advances.* Under the *Housing Act, 1912–1955*, the Housing Commission is empowered to provide finance to persons to have houses erected on their own land, to purchase existing dwellings, or to effect improvements or repairs to houses. Regulations prescribing the present maximum amount that may be advanced and the limitation on income which may be received by an applicant for a loan have not been published, and at present no advances or sales are being made under this legislative provision.

(b) *Rural Bank of New South Wales—Sale of Homes Agency.* A Sale of Homes Agency was established in 1954 within the Rural Bank's Government Agency Department to arrange for the sale on terms of houses erected by the Housing Commission of New South Wales.

The Agency's operations began with the sale to selected purchasers of 100 houses made available by the Commission during 1954–55 and 1955–56. The sales were made on the basis of 10 per cent. deposit and repayment of the balance over a maximum period of 40 years, with interest at 4½ per cent. per annum. Total advances under that scheme amounted to £323,324; at 30th June, 1963, the advances outstanding amounted to £234,175 in respect of 89 houses.

Since 1956, the Sale of Homes Agency has acted as the agent of the Housing Commission in arranging the sale on terms of houses erected under the 1956 Commonwealth-State Housing Agreement. These houses are sold, in general at the Bank's valuation, to persons who have satisfied the Commission as to their housing needs and have registered as prospective purchasers. The terms of sale provide for a minimum deposit of £50 and repayment of the balance over a maximum period of 45 years, with interest at 4¾ per cent. (5½ per cent. from May, 1961, to March, 1962) per annum. The cash deposits and periodical instalments payable by purchasers are collected by the Agency as agent for the Commission. Particulars of the advances made by the Agency in connexion with the sale of houses erected under the 1956 Agreement are given in the following table.

**RURAL BANK OF NEW SOUTH WALES—SALE OF HOMES AGENCY: ADVANCES FOR HOMES SOLD UNDER THE 1956 COMMONWEALTH—STATE HOUSING AGREEMENT**

Year	Advances during year		Advances outstanding at end of year(a)	
	Number of houses	Amount	Number of houses	Amount
		£'000		£'000
1956–57	1,604	5,079	1,604	4,976
1957–58	3,012	9,983	4,612	14,715
1958–59	2,013	6,326	6,623	20,808
1959–60	2,227	7,200	8,831	27,692
1960–61	1,565	5,218	10,364	32,487
1961–62	1,826	6,537	12,129	38,508
1962–63	1,825	6,752	13,830	44,487

(a) Comprises principal outstanding and loan charges due but not paid.

(c) *Rural Bank of New South Wales—Other Loans.* The Rural Bank of New South Wales provides assistance to individuals for the erection or purchase of homes and for other approved purposes associated with homes. Advances are based on the bank's official valuation of the dwelling. The rate of interest on long-term loans for housing purposes was increased from 5 per cent. to 5½ per cent. from 1st October, 1956, and to 5¾ per cent. from 15th December, 1960. The rate of interest was reduced to 5¼ per cent. per annum from 11th April, 1963.

The following table shows particulars of Rural Bank advances for homes during the last ten years.

RURAL BANK OF NEW SOUTH WALES: ADVANCES FOR HOMES

Year	Advances during year(a)		Advances outstanding at end of year(b)	
	Number of dwellings	Amount	Number of dwellings	Amount
		£'000		£'000
1953-54	1,375	2,135	20,045	15,749
1954-55	2,133	3,488	19,615	16,750
1955-56	1,399	2,757	18,778	17,419
1956-57	1,372	2,851	18,098	18,171
1957-58	1,576	3,490	17,644	19,595
1958-59	1,176	2,722	16,915	20,212
1959-60	1,610	4,026	16,611	21,967
1960-61	2,032	5,400	17,096	25,282
1961-62	1,668	5,658	17,357	28,211
1962-63	2,014	6,542	18,017	31,381

(a) The number of advances during a year represents the number of dwellings in respect of which an advance was first made in the year, but the amount of advances includes subsequent advances made in respect of the dwellings. (b) The number of advances outstanding at the end of a year represents the number of dwellings on which a debt was still outstanding. The amounts shown comprise principal outstanding and loan charges due but not paid.

(ii) *Victoria. (a) Housing Commission, Victoria.* Very few houses were sold by the Commission until 1954. The amendments to the Commonwealth-State Housing Agreement in 1955-56 have had the effect of substantially increasing the number of houses sold. Whereas between 1949 and 1954 only about 100 houses were sold, a total of 16,081 houses were sold on terms to 30th June, 1963, the total value of terms sales exceeding £59 million.

Houses are sold on a minimum deposit of £100, with a maximum repayment term of 45 years, and interest at 4½ per cent.

An inducement to tenants of the Commission to purchase their homes was the introduction of a Death Benefit Scheme, to provide for the property under purchase to pass to the estate of the purchaser free of debt in the event of his death prior to completion of purchase. If application is made for admittance to the Death Benefit Scheme, the maximum period for repayment is reduced to 30 years, the rate of interest is fixed at 5¼ per cent. and the contract must terminate before the purchaser's 70th birthday.

(b) *Home Finance Trust.* In 1956, a Home Finance Trust was established with the object of receiving money from institutions and others in order to make loans for the erection or purchase of houses. Applicants for loans must declare that they intend to use the houses as homes for themselves, their families and dependants. Except in special circumstances, no loan will be granted if the borrower or wife or husband of the borrower already owns a house in Victoria at the date of the proposed mortgage.

Loans granted are on the basis of a first mortgage over the house. Loans are not to exceed 95 per cent. of the value of the security (house and land) and are not made if the value of the security exceeds £5,000. The house must not have been erected more than two years before the date of the mortgage. Repayment of loans may be made over a maximum period of 30 years, with interest charges determined by the Trust. At 30th June, 1963, 2,397 loans totalling £6,823,168 had been approved.

In 1963, the Trust was empowered to make housing loans on the security of second mortgages subject to conditions similar to those applying with respect to the first mortgage loans, excepting that the maximum term for repayment of a loan is ten years and no restriction is placed on the percentage of loan to valuation.

At 30th June, 1963, 97 second mortgage loans had been approved, the amount involved being £38,920.

The Trust was also empowered to make a loan to the trustees of a fund established to provide a home for a doctor or a dentist at a place located more than thirty miles from the City of Melbourne. There is no valuation limit or age limit of the dwelling in cases of this nature.

(See para. 3, Savings Banks, pp. 398-9, for activities of the Crédit Foncier Department of the State Savings Bank of Victoria.)

(iii) *Queensland.* (a) *The Queensland Housing Commission.* The present maximum advance allowable under the Acts is £3,500 for a timber, brick veneer, brick, or concrete building. Since 1st August, 1963, two rates of interest have applied, namely 5½ per cent. per annum on advances existing at that time, and 4¾ per cent. on new advances. Repayment may be made at the option of the borrower over either a 30-year or a 45-year period. A borrower or purchaser who elects to repay over a 30-year period, who is under 40 years of age, and who has passed a prescribed medical examination, is entitled to free life insurance cover to an amount sufficient to liquidate his indebtedness to the Commission in the event of his death before his loan has been fully repaid, provided that the maximum benefit payable under such insurance cover does not exceed £2,250.

(b) *Workers' Dwellings.* From 4th October, 1962, the maximum advance under this scheme was increased to £3,500 for all types of workers' dwellings. Total advances made for dwellings since operations commenced in 1910 to 30th June, 1963, amounted to £27,236,136.

(iv) *South Australia.* (a) *The South Australian Housing Trust Sales Scheme.* A minimum deposit of £50 is required for houses under the Rental-Purchase scheme for a maximum loan of £4,000, repayable at an interest rate of 4¾ per cent. per annum over a period not exceeding 40 years.

Prospective purchasers of Housing Trust houses (other than Rental-Purchase houses) can arrange or have arrangements made for a first mortgage to be granted by a lending institution of their choice. In cases where the deposit and the first mortgage so raised are insufficient, the Trust may advance the balance of the house price by way of a second mortgage, the repayment term of which is a maximum of 30 years, interest being at the rate of 6 per cent. per annum.

During 1962-63, the Trust commenced 705 second mortgages valued at £424,000. At 30th June, 1963, second mortgages totalled 6,602, and the balance outstanding at that date was £3,565,000.

(b) *State Bank of South Australia.* The State Bank, together with the Housing Trust, is the principal agent of the State Government for the distribution through the Home Builders' Fund of moneys received under the Commonwealth-State Housing Agreement.

During 1962-63, the Bank opened 1,626 new accounts worth £4,798,358 in the Home Builders' Fund. The balance of loans outstanding at 30th June, 1963, in this Fund totalled £12,987,518.

In addition, £263,127 was made available during 1962-63 by the State Government under the *Advances for Homes Act 1928-1935* which is administered by the Bank. Under this Act, 157 new accounts were opened during 1962-63, leaving a balance outstanding at 30th June, 1963, of £15,073,690.

The present maximum housing loans under either of these schemes is £3,500, repayable over a period not exceeding 50 years at a rate of interest of 5 to 5½ per cent. per annum calculated on monthly balances. Persons who have received benefit under either of these schemes are ineligible for another mortgage.

(v) *Western Australia. State Housing Commission of Western Australia.* The maximum loan is £2,500 by way of mortgage and leasehold, and £2,750 plus land for contract of sale, under the *State Housing Act 1946*. For houses built north of the 26th parallel the Minister may approve of an advance exceeding £2,750.

To proceed under the mortgage conditions, a deposit of not less than 10 per cent. is required, but under the contract of sale or leasehold provisions the minimum deposit is £100. The interest rate in both cases is  $5\frac{3}{4}$  per cent. per annum and the repayment period is 45 years. To obtain assistance, an applicant cannot have an income exceeding £1,235 a year, plus £25 for each dependent child under 16 years of age. This figure varies according to the movement of the basic wage. North of the 26th parallel, the Minister may allow a higher-income family to be assisted.

A second-mortgage scheme exists under the *State Housing Act* which provides that assistance be limited to those applicants who are building or purchasing new homes, the cost of which, excluding land, does not exceed £3,300. By policy decision, the Commission limits the second mortgages to a maximum of £1,000.

(See para. 3, Savings Banks, p. 399, for activities of the Savings Bank Division of the Rural and Industries Bank of Western Australia.)

(vi) *Tasmania. (a) The Housing Department.* Amounts outstanding in respect of loans made by the Housing Department by way of purchase contracts were as follows for the years 1958-59 to 1962-63.

#### TASMANIAN HOUSING DEPARTMENT: PURCHASE CONTRACTS

Particulars	1958-59	1959-60	1960-61	1961-62	1962-63
Number of loans outstanding .. ..	3,254	3,471	3,835	4,156	4,427
Amount outstanding .. .. £'000	8,901	10,112	11,317	12,601	13,612

The interest rate on contracts signed after February, 1962, was 4 per cent., immediately prior to which the rate was  $4\frac{3}{4}$  per cent. To be eligible for a house on purchase contract terms, an applicant must be married or about to be married, or have dependants for whom it is necessary to provide a home. Number of dependants, income and existing accommodation are considered in determining the priority of applicants.

(b) *Agricultural Bank of Tasmania.* The Agricultural Bank, as an approved institution under the Commonwealth-State Housing Agreement, receives part of those funds allocated for advances to home builders. Prior to the commencement of the agreement, the Bank borrowed from the State Loan Fund and from private institutions. To be eligible for a loan, an applicant must be married or about to be married and be over the age of 21, and when, as is usual, the advance is required to build a house, the applicant must own a block of land. The maximum amount of an advance to an applicant is £3,300 for brick or concrete block type houses in certain areas, or £3,000 for a timber dwelling, provided that the total advance does not exceed 90 per cent. of the Bank's valuation of land and dwelling. Advances to borrowers are repayable by equated instalments over 31 years. Advances made as from 1st February, 1962, were at an interest rate of  $5\frac{1}{4}$  per cent., immediately prior to which the rate was  $5\frac{3}{4}$  per cent. The following table shows details for recent years.

#### TASMANIAN AGRICULTURAL BANK: ADVANCES FOR HOUSING(a)

Advances outstanding(b) .. .. £'000	3,957	4,195	4,512	4,996

(a) Excludes advances to Building Societies.

(b) At 30th June.

Since November, 1945, a total of 2,357 loans amounting to £6,358,000 have been approved, of which 2,170 have been for erection of dwellings and 187 for the purchase of existing homes.

2. Commonwealth Authorities and Agencies.—(i) *Department of Housing.* In December, 1963 a Division of the Department of National Development was formed into the Department of Housing. Further details relating to this Department may be found in § 4 of Chapter III. General Government (*see p. 83*).

(ii) *War Service Homes.* The maximum amount of loan or advance which may be granted under the *War Service Homes Act 1918–1962* is £3,500. The period of repayment may be up to 45 years. In the case of a widow or widowed mother of an Australian ex-serviceman, the period may be extended to a maximum of 50 years.

The following table gives details of advances by the War Service Homes Division in each State and Territory of Australia, and the Territories of Papua, New Guinea and Norfolk Island, for the years 1953–54 to 1962–63. (*See tables on p. 384 for the number of homes provided.*)

(a) Includes Norfolk Island. (b) Includes Territory of Papua and New Guinea.  
(c) Included in South Australia. (d) Included in New South Wales.

(iii) *Northern Territory. (a) Loans Scheme.* This Scheme was commenced in 1953 and is administered by the Commissioner for Housing under the *Housing Loans Ordinance 1949-1959*. Advances may be made for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. Loans are provided on a deposit of 5 per cent. of the first £2,000 and 10 per cent. of the balance of the Commissioner's valuation up to a maximum of £3,500. The rate of interest charged is 6 per cent. per annum reducible to 5 per cent. per annum if instalment payments are made by the due date. The maximum period of repayment is 45 years.

Up to 31st December, 1963, 929 loans totalling £2,507,045 had been approved. These were for:—erection, 654; purchase, 210; enlargement or completion, 16; discharge of mortgage, 49.

(b) *Sales Scheme.* Tenants of government-owned houses under the control of the Administration may purchase the dwellings they occupy, either for cash or on terms requiring a minimum deposit of 5 per cent. of the first £2,000 and 10 per cent. of the balance of the purchase price with repayments over a maximum period of 45 years including interest at  $4\frac{1}{2}$  per cent. per annum.

(c) *Housing Commission Sales Scheme.* Since the amendment of the *Housing Ordinance 1959-1963* in November, 1963, the Housing Commission is permitted to sell its houses to tenants in occupation. The terms require a minimum cash deposit of £100 and repayment of the remainder of the loan over a period not exceeding 45 years; there is no prescribed limit to the amount of the loan and the rate of interest is to be fixed by the Commission from time to time.

(iv) *Australian Capital Territory.* Loans may be granted by the Commissioner for Housing to enable persons to purchase or build a new house in the Australian Capital Territory. Where the Commissioner's valuation does not exceed £2,000, the maximum loan may not exceed 95 per cent. of the valuation. If the Commissioner's valuation exceeds £2,000, the maximum loan is 95 per cent. of the first £2,000 and 90 per cent. of the balance (but in no case can the amount lent exceed £3,500). Repayment may be made over a maximum period of 45 years. The current rate of interest is  $4\frac{1}{2}$  per cent. per annum. From 1st July, 1950, to 30th June, 1963, 1,902 loans were granted.

Government rental houses may be purchased by tenants. The basis of the sale is a minimum deposit of 5 per cent. of the purchase price fixed by the Department of the Interior with no limit to the amount which may be held on mortgage from the Department. Repayment of the amount covered by mortgage may be made over a maximum period of 45 years. The interest rate is  $4\frac{1}{2}$  per cent. per annum. Up to 30th June, 1963, 2,975 houses had been sold to tenants.

(v) *Papua and New Guinea.* Under authority of the *Housing Loans Ordinance 1953-1963* the Commissioner for Housing may make advances to any member of the community for the erection of a house, the purchase or enlargement of an existing house, the completion of a partially erected dwelling, or the discharge of a mortgage already existing. The maximum loan is £3,500. The maximum period of repayment is 35 years for brick, stone or concrete and 25 years for all other materials. Minimum cash deposit is 10 per cent. of the Commissioner's valuation. The effective rate of interest is  $4\frac{1}{2}$  per cent. per annum. Up to 31st December, 1963, 247 loans totalling £598,390 had been approved.

3. *Savings Banks.*—All savings banks lend funds for housing to both individuals and to building societies. Separate figures of loans to individuals are not available for all savings banks. The amounts outstanding on housing loans of all savings banks (including loans to building societies) were £306 million, £339 million and £397 million at the end of June, 1961, 1962 and 1963, respectively.

Some details in respect of three savings banks are shown below.

(i) *State Savings Bank of Victoria—Crédit Foncier Department.* The State Savings Bank of Victoria grants long-term loans to depositors to enable them to build, purchase or improve homes and to purchase or improve farms. Most, but not all, of the loans are made by the Crédit Foncier Department of the Bank.

In order to encourage new building, home loans are granted only on houses up to one year old. The maximum proportion of the valuation to be granted as loan is 80 per cent. and the maximum loan is £3,500. Interest is  $4\frac{1}{2}$  per cent. and the term of the loan is 10 years, subject to renewal.

During 1962-63, the Cr dit Foncier Department advanced £13,149,456 to 5,807 borrowers and at the end of that year £76,128,985 was owing by 40,769 borrowers.

(ii) *Savings Bank of South Australia.* The Bank grants mortgage loans for the building or purchase of houses for personal occupation. The maximum loans available on houses of solid construction are £3,750 for new homes and £4,500 for previously occupied homes. Normally advances are made up to 85 per cent. of the Bank's valuation but, if the loan is granted under the *Homes Act 1941*, 95 per cent. of such valuation may be advanced (maximum loan—£3,000). The maximum loan period is 30 years at a rate of interest of 5 per cent. per annum; this rate is subject to review after 5 years.

During 1962-63, the Bank advanced £5,828,696 on 2,076 loans for houses. At 30th June, 1963, there were 19,222 loans current with a balance outstanding of £35,570,000.

(iii) *The Rural and Industries Bank of Western Australia (Savings Bank Division).* The Rural and Industries Bank of Western Australia is authorized by the *Rural and Industries Bank Act 1944-1958* to make loans from moneys in deposit with its Savings Bank Division to a person or body for the purchase or erection of a dwelling. It is the policy of the Bank to provide funds for housing primarily for occupancy by the borrower. There is no fixed limit on the amount of a loan, but loans in excess of £3,500 are rarely made. The average loan in the case of a brick or timber house is about £2,500. The rate of interest varies with the current bank rate and is usually  $\frac{1}{2}$  per cent. lower. The rate at 30th June, 1963, was  $5\frac{1}{2}$  per cent. The average term of housing loans is 22 years.

4. **Trading Banks.**—Apart from loans by certain State banks as Government agencies (see State and Commonwealth Authorities and Agencies, paras. 1 and 2, pp. 393-8), advances for housing to individuals are also provided by the trading banks.

Amounts outstanding in respect of advances to individuals for housing purposes made by the major trading banks were £85 million, £95 million and £101 million at the second Wednesday of July, 1961, 1962 and 1963, respectively.

5. **Life Insurance Companies.**—The life insurance companies are another source of funds for housing. Details of new loans made during 1962 and 1963 (particulars for earlier years are not available) are given in the following table.

LIFE INSURANCE COMPANIES: HOUSING LOANS PAID OVER DURING  
1962 AND 1963

State or Territory	Amount (£'000)	
	1962(a)	1963
New South Wales .. .. .	9,206	10,286

Tasmania .. .. .	791	709
Australian Capital Territory .. .. .	80	170
<b>Total .. .. .</b>	<b>20,489</b>	<b>22,271</b>

(a) Figures for 1962 shown in the previous issue of this Year Book related to total new loans by life insurance companies on mortgage of real estate. (b) Includes loans made in Papua and New Guinea. (c) Includes loans made in Northern Territory.

Amounts outstanding at the end of June, 1961, 1962 and 1963 in respect of housing loans made by insurance companies were £151 million, £153 million and £158 million respectively.

6. **Registered Building Societies.**—Including the Victorian Co-operative Housing Societies, there are 2,598 registered building societies in Australia, of which 113 are permanent societies and the remainder terminating societies. The permanent societies are in the main investment societies which make loans for housing purposes, usually on *crédit foncier* terms, and obtain their funds from share capital deposits and borrowings from banks and other lending institutions. The terminating societies are co-operative societies which make loans to members from funds obtained from lending institutions (usually government guaranteed), members' subscriptions, and, since 1956, from moneys provided under the Commonwealth-State Housing Agreements.

Details of new loans granted and net advances outstanding for each of the years ended June, 1958 to 1962, are given in the following table, which now includes particulars of Victorian Co-operative Housing Societies, previously shown in a separate table.

## REGISTERED BUILDING SOCIETIES

(a) Year ended 30th April. (b) Year ended 31st December. (c) Not available.  
 (d) Excludes Victorian Co-operative Housing Societies. (e) Net of borrowing members' funds.

7. **Other Lenders.**—Little information is available on advances made by other lenders such as superannuation and other trust funds, private finance and investment companies, etc. In South Australia, advances on first mortgage are granted under the *Homes Act* 1941 by which the State Government guarantees up to 25 per cent. of the value of the mortgage, thus raising the limit of the advance. Loans so made are limited to 95 per cent. of the Superannuation Board's valuation to a maximum of £3,000, or 85 per cent. of the Board's valuation to a maximum of £3,500. The rate of interest is 5½ per cent. per annum, calculated on quarterly balances, reducing to 5 per cent. when payments are made within a prescribed period of 21 days from the end of the quarter. The term of the mortgage may run for 30 years on a stone or brick home or 20 years on a timber-framed construction. Trustee mortgages may be granted as an alternative to the foregoing. A maximum of 70 per cent. of the Board's valuation may be granted for a trustee mortgage, other conditions being those applicable to mortgages granted under the *Homes Act*.

At 30th June, 1963, there were 4,884 loans current, the principal outstanding totalling £8,060,046. During 1962-63, the value of advances made was £1,285,525.

## CHAPTER XII

## EMPLOYMENT AND UNEMPLOYMENT

NOTE.—Further detail on subjects dealt with in this chapter is contained in other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in Chapter XXX. Miscellaneous of this Year Book. Detailed information on employment and unemployment and the Work Force Survey is contained in the monthly mimeographed bulletin *Employment and Unemployment*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary estimates of civilian employment are issued in a monthly statement *Wage and Salary Earners in Civilian Employment*.

## THE WORK FORCE

## § 1. General

The work force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the work force, classified according to characteristics such as age, sex, conjugal condition, industry, occupational status and occupation, are obtained only at a general census of population. Quarterly estimates of the civilian work force are derived from the results of surveys of a sample of households selected by area sampling methods. Estimates are at present available only for the six State capital cities combined. A summary of the information about the work force that was obtained at the population census of June, 1961, and earlier censuses is given in § 2. Estimates derived from the quarterly work force surveys appear in § 3.

In earlier issues of the Year Book, tables were published showing particulars of total occupied persons in each State and Territory and in rural and non-rural industry at various population census dates to June, 1954. Although the figures were derived from census results, they differed because of certain adjustments from recorded census figures. Corresponding particulars in respect of the population census of June, 1961, have not been compiled.

## § 2. Population Censuses\*

1. Occupational Status.—(i) *General*. Occupational status of persons classified as in the work force at population census dates covers two broad groups: those at work and those not at work. The first group comprises employers, self-employed persons, employees (on wage or salary) and unpaid helpers. The category "not at work" includes those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the census by reason of sickness, accident, etc., or because they were on strike, changing jobs, or temporarily laid off, etc. It includes also persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the census. The numbers shown as "not at work" in the following two tables therefore do not represent the number of unemployed available for work and unable to obtain it.

(ii) *Australia, 30th June, 1954 and 1961*. The following table shows the occupational status of the population at the census of 30th June, 1961, as compared with that at the 1954 census.

At the 1961 census, 79.3 per cent. of persons in the work force were wage and salary earners classified as "at work"; 9.8 per cent. were self-employed; 6.3 per cent. were employers; and 4.1 per cent. were "not at work". Persons in the work force constituted 40.2 per cent. of the population, compared with 41.2 per cent. in 1954.

---

\* Particulars of full-blood Aborigines are not included in the tables in this section.

## OCCUPATIONAL STATUS OF THE POPULATION: AUSTRALIA

Occupational status	Census, 30th June, 1954			Census, 30th June, 1961			Increase 1954-61

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation in sub-para. (i) p. 401.

(iv) *Persons Not at Work, classified by Cause.* The total number of persons "not at work" has been recorded only at the dates of the various censuses. Since the 1947 census, this category has included all persons (usually engaged in industry, business, trade, profession or service) who were out of a job and not at work at the time of the census, for whatever reason, including any not normally associated with unemployment. The following table shows the numbers recorded as "not at work" at the censuses of 30th June, 1947, 1954 and 1961, classified according to cause. As explained in sub-para. (i) above, the totals shown as "not at work" do not represent the number of unemployed available for work and unable to obtain it.

PERSONS NOT AT WORK<sup>(a)</sup>, BY CAUSE: AUSTRALIA

Census	Unable to secure employment	Temporarily laid off	Illness	Accident	Industrial dispute	Other (b)	Total
--------	-----------------------------	----------------------	---------	----------	--------------------	-----------	-------

## MALES

1947 ..	17,314	12,458	14,639	2,985	475	18,743	66,614
1954 ..	9,912	4,423	11,879	2,804	344	11,652	41,014
1961 ..	85,455	12,153	13,931	6,262	547	10,278	128,626

## FEMALES

1947 ..	2,254	2,449	4,396	280	24	7,512	16,915
1954 ..	3,685	1,386	4,310	318	17	4,284	14,000
1961 ..	28,056	4,012	5,925	787	202	4,998	43,980

## PERSONS

1947 ..	19,568	14,907	19,035	3,265	499	26,255	83,529
1954 ..	13,597	5,809	16,189	3,122	361	15,936	55,014
1961 ..	113,511	16,165	19,856	7,049	749	15,276	172,606

(a) Persons in the work force who were "not at work" (*see* explanation p. 401) at the time of the census. (b) The majority of these persons were resting between jobs or changing jobs.

2. Industry.—(i) *General*. For census purposes, industry may be defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified industrially as belonging to that particular branch, irrespective of their personal occupations within the industry. Thus a single firm may employ persons performing completely different occupations in order to make a particular product, or to render a particular service, but the industrial classification of each of these persons is determined by the nature of the product made or of the service rendered by the firm that employs him.

(ii) *Australia, 30th June, 1954 and 1961*. The following table shows the number of persons in the work force in each industry group and sub-group at the censuses of 1954 and 1961. The figures include those at work and those not at work.

At the 1961 census, 60 per cent. of males and 20 per cent. of females were in the work force. Of the males in the work force, those engaged in manufacturing constituted the largest group (28.0 per cent. of the total); followed by those in commerce, 14.3 per cent.; primary production, 13.3 per cent.; building and construction, 11.5 per cent.; and transport and storage, 7.9 per cent. The more important industry groups in which females were engaged were manufacturing, 23.9 per cent.; commerce, 22.2 per cent.; community and business services, 21.5 per cent.; and amusement, hotels, personal service, etc., 12.8 per cent.

## INDUSTRY OF THE POPULATION: AUSTRALIA

Preliminary figures of the population of each State and Territory at the 1961 census, classified according to industry group, were published in Official Year Book No. 49, 1963, page 334. For reasons of space a classification by industry group and sub-group, similar to that in the previous paragraph, cannot be shown for States and Territories. Details of individual industries, by sex, are published for each State and Territory and for Australia as a whole in the mimeographed 1961 *Census Bulletin* No. 29.

3. Industry and Occupational Status.—Males and females in the work force at the 1961 census are classified in the following table according to industry and occupational status. Only the major industry groups are shown in this table; particulars for each sub-group are available in the mimeographed 1961 *Census Bulletin* No. 34.

PERSONS IN THE WORK FORCE, BY INDUSTRY AND OCCUPATIONAL STATUS:  
AUSTRALIA, CENSUS, 30TH JUNE, 1961

Industry group	At work				Total	Not at work (c)	Total in the work force
	Employer	Self-employed	Employee (a)	Helper (b)

(i) Includes 541,751 aged 0-4 years, 511,475 aged 5-9 years and 497,577 aged 10-14 years.

5. **Married Women in the Work Force.**—At the 1961 census, 444,680 married women (including 39,148 women who were married but permanently separated, legally or otherwise) were recorded as being in the work force. This represented 42 per cent. of the total number of females in the work force. A comparison with censuses since 1933 is given in the following table.

## MARRIED WOMEN IN THE WORK FORCE: AUSTRALIA

Census	Total females in the work force	Married women in the work force <sup>(a)</sup>	
		Number	Proportion of total females in work force
			Per cent.
1933.. ..	599,068	66,000	11.02
1947.. ..	717,162	141,637	19.75
1954.. ..	845,402	(b)289,932	34.30
1961.. ..	1,059,169	(b)444,680	41.98

(a) Includes women married but permanently separated, legally or otherwise. (b) See footnotes (b) and (c) to the table following.

Between 1954 and 1961, there was an increase of 154,748 or 53.4 per cent. in the number of married women in the work force, compared with an increase of 213,767 or 25.3 per cent. in total females in the work force. The largest increase (both numerical and proportional) in any age group was for married women aged 35-39 years, where the increase in the seven years 1954-1961 was almost 82 per cent. A comparison for all age groups is given below.

## MARRIED WOMEN IN THE WORK FORCE ACCORDING TO AGE: AUSTRALIA

Age last birthday (years)	Married women in the work force <sup>(a)</sup>		Increase, 1954-61	
	Census, 30th June, 1954 <sup>(b)</sup>	Census, 30th June, 1961 <sup>(c)</sup>	Number	Per cent.
15-19 .. ..	3,549	5,570	2,021	56.95
20-24 .. ..	35,452	51,002	15,550	43.86
25-29 .. ..	43,899	49,537	5,638	12.84
30-34 .. ..	43,320	59,025	15,705	36.25
35-39 .. ..	41,046	74,660	33,614	81.89
40-44 .. ..	42,265	67,695	25,430	60.17
45-49 .. ..	33,492	59,745	26,253	78.39
50-54 .. ..	23,346	41,142	17,796	76.23
55-59 .. ..	13,539	22,415	8,876	65.56
60-64 .. ..	6,609	9,342	2,733	41.35
65 and over .. ..	3,415	4,547	1,132	33.15
Total .. ..	289,932	444,680	154,748	53.37

(a) Includes women married but permanently separated, legally or otherwise. (b) The figures shown for 1954 include an allowance for the number of women whose conjugal condition was not stated. (c) A conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

6. Occupation.—(i) *General*. The working population may be classified according to distinct concepts—(i) the *occupation*, which is personal to the individual, and (ii) the *industry* in which the individual carries on his occupation. Thus the *occupation* of a person is the kind of work that he or she personally performs, while *industry* is defined as any single branch of productive activity, trade or service. Particulars of the work force classified according to industry are given in paragraphs 2 and 3 of this section; this paragraph contains particulars of the principal occupation groups (major and minor) of the work force at the census of 30th June, 1961. Details of individual categories of occupations are published in the mimeographed 1961 *Census Bulletin* No. 32.

(ii) *Australia, 30th June, 1961*. The following table shows, for Australia, the numbers of males, females and persons in the work force in each of the principal occupation groups at the 1961 census. Data of this type were last obtained at the 1947 census, but a comparison of the figures derived therefrom with those shown below is not possible because of differences in classification.

Only those persons regarded as being in the work force are classified according to occupation.

## OCCUPATIONS OF THE POPULATION: AUSTRALIA, CENSUS, 30th JUNE, 1961

Occupation group	Males	Females	Persons
<b>Professional, technical and related workers—</b>

### § 3. The Work Force Survey

1. **General.**—Estimates of the civilian work force are obtained in February, May, August and November of each year for the six State capital cities from surveys based on a sample of dwellings selected by area sampling methods. These surveys are now being extended to non-metropolitan urban and rural areas; the results from these surveys will enable quarterly estimates of the Australian work force to be published.

The survey information, which is obtained at sample dwellings by personal interview, enables the total civilian population fourteen years of age and over to be classified according to work force and demographic characteristics. The work force classification used conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, Geneva, 1954. Under this classification, the category to which an individual is assigned depends on his actual activity or status (i.e. whether working, looking for work, etc.) during a specified week covered by the survey.

The principal categories in the following tables are the employed and the unemployed, which together constitute the total work force, and the remainder who are not in the work force. Details of these categories are as follows.

- (a) *Employed persons* comprise all those who, during the specified week, worked for pay, profit, or payment in kind, in a job or business, or on a farm, and those who had a job, business, or farm, but were temporarily absent for the whole of the specified week for reasons other than lack of work. Persons who worked as unpaid helpers in a family business, or on a farm, are included in the employed if they worked fifteen hours or more during the specified week. The category includes employees, employers and workers on own account.
- (b) *Unemployed persons* comprise all those who, during the specified week, did no work at all, did not have a job or business, and were actively looking for work. The category also includes persons absent from work for the whole of the specified week without pay because of lack of demand for their services (i.e. those laid off without pay for the whole of the specified week).
- (c) *The work force* consists of all persons who, during the specified week, were employed or unemployed in terms of the classifications given in (a) and (b) above.
- (d) *Persons not in the work force* are those who, during the specified week, were not classified as employed or unemployed in terms of the classifications given in (a) and (b) above.

Figures in the tables which follow are estimates based on a sample and are therefore subject to sampling variability, that is, variations that may occur by chance because only a sample of the population is enumerated in the surveys. For this reason, figures are rounded but not adjusted to add to totals, because such adjustments would, in some cases, exceed the sampling variability of the estimates and tend to destroy their value as indicators of movement.

2. **Occupational Status, and Work Force Participation and Unemployment Rates.**—The following table shows, for November in each of the years 1960 to 1963, the distribution, by major work force category, of the civilian population fourteen years of age and over in the six State capital cities. The table also shows changes in the work force participation rate and unemployment rate over the period. As indicated in the general notes in paragraph 1 above, the classification of the population by work force category conforms to the standard recommended by the International Conference of Labour Statisticians. This International Standard has not as yet been adopted for the population census, and consequently the figures in this table are not strictly comparable with those in the tables in the preceding section of this chapter.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: OCCUPATIONAL STATUS, AND WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, SIX AUSTRALIAN STATE CAPITAL CITIES**

November—	Occupational status				Total civilian population 14 years of age and over ( <sup>'000</sup> )	Work force participation rate (b) (per cent.)	Unemployment rate (c) (per cent.)
	Civilians in the work force			Civilians not in the work force ( <sup>'000</sup> )			
	Employed (a) ( <sup>'000</sup> )	Un-employed ( <sup>'000</sup> )	Total ( <sup>'000</sup> )				
<b>MALES</b>							
1960 ..	1,682.4	11.5	1,693.9	358.1	2,052.0	82.6	0.7
1961 ..	1,689.0	38.2	1,727.1	385.4	2,112.5	81.8	2.2
1962 ..	1,731.5	24.2	1,755.6	396.0	2,151.7	81.6	1.4
1963 ..	1,764.2	18.6	1,782.8	414.5	2,197.3	81.1	1.0
<b>FEMALES</b>							
1960 ..	764.4	11.9	776.2	1,395.2	2,171.5	35.7	1.5
1961 ..	749.4	21.6	771.0	1,465.7	2,236.7	34.5	2.8
1962 ..	790.1	17.8	808.0	1,477.8	2,285.8	35.3	2.2
1963 ..	808.9	11.5	820.4	1,515.4	2,335.8	35.1	1.4
<b>PERSONS</b>							
1960 ..	2,446.8	23.4	2,470.2	1,753.3	4,223.5	58.5	0.9
1961 ..	2,438.4	59.7	2,498.1	1,851.1	4,349.3	57.4	2.4
1962 ..	2,521.6	42.0	2,563.6	1,873.8	4,437.4	57.8	1.6
1963 ..	2,573.1	30.1	2,603.2	1,929.9	4,533.1	57.4	1.2

(a) Includes employees, employers, self-employed persons, and unpaid helpers who worked 15 hours or more per week in a family business. (b) The civilian work force as a percentage of the civilian population 14 years of age and over. (c) The number unemployed as a percentage of the civilian work force.

3. Occupational Status and Age Distribution.—The following table shows the civilian population 14 years of age and over in the six State capitals at November in each of the years 1960 to 1963, classified according to occupational status and age distribution.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: OCCUPATIONAL STATUS AND AGE DISTRIBUTION, SIX AUSTRALIAN STATE CAPITAL CITIES**

(<sup>'000</sup>)

65 and over ..	43.5	13.7	*	..	44.4	13.7	177.7	326.7	222.2	340.4
<i>Total</i> ..	<i>1,764.2</i>	<i>808.9</i>	<i>18.6</i>	<i>11.5</i>	<i>1,782.8</i>	<i>820.4</i>	<i>414.5</i>	<i>1,515.4</i>	<i>2,197.3</i>	<i>2,335.8</i>

(a) Includes employees, employers, self-employed persons, and unpaid helpers who worked 15 hours or more per week in a family business.

\* Estimates of less than 5,000 are not published in the table because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can, in some cases, be derived from the tables by deduction, undue significance should not be attached to them.

4. **Work Force Participation and Unemployment Rates.**—The table below shows work force participation rates and unemployment rates by conjugal condition for the civilian population 14 years of age and over in the six State capitals at November in each of the years 1960 to 1963.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: WORK FORCE PARTICIPATION AND UNEMPLOYMENT RATES, BY CONJUGAL CONDITION, SIX AUSTRALIAN STATE CAPITAL CITIES**

(a) The civilian work force as a percentage of the civilian population 14 years of age and over.  
 (b) The number unemployed as a percentage of the civilian work force. (c) Includes never married, widowed and divorced.

5. **Unemployment in Industry Groups.**—(i) *Rates.* The following table shows the unemployment rate in each industry group for the six State capitals at November in each of the years 1960 to 1963. The total work force for a particular industry group comprises persons currently employed in the industry group and those unemployed persons whose last employment was in the group. The unemployment rates given in the table are the numbers unemployed in the industry groups expressed as percentages of the total work force in those groups. Because unemployed persons with no previous employment experience are excluded from the calculations used for this table, the unemployment rate shown for "All industries combined" differs from the unemployment rate for the civilian work force as a whole. This latter rate, which is given in the tables in paragraphs 2 and 4 above, takes into account all unemployed persons, including those seeking work for the first time.

**CIVILIAN POPULATION 14 YEARS OF AGE AND OVER: UNEMPLOYMENT RATES(a), BY INDUSTRY GROUP, SIX AUSTRALIAN STATE CAPITAL CITIES**

(Per cent.)

Industry group in which last employed	November—

7. **Persons Working Less than 35 Hours per Week.**—In the work force surveys, persons who report themselves as having worked less than 35 hours per week are further questioned to ascertain their reasons for not working longer hours. In the following table employed civilians 14 years of age and over in the six State capitals who worked less than 35 hours per week are classified according to the reasons why they did not work longer hours.

**EMPLOYED CIVILIANS 14 YEARS OF AGE AND OVER WHO WORKED LESS THAN 35 HOURS PER WEEK, BY REASON: SIX AUSTRALIAN STATE CAPITAL CITIES**

November—		Reason for working less than 35 hours per week

1963	..	0.5	8.8	9.3	0.3	8.2	8.5	0.8	17.0	17.8

(a) Excludes persons laid off for whole week without pay, who are included in the unemployed. The figures comprise persons working short time, those who lost their jobs or commenced in new jobs during the specified week, and those absent from work because of plant breakdowns or bad weather. (b) Own illness or injury, leave or holiday, and industrial disputes. (c) Persons who would prefer to work 35 hours or more per week if suitable work were available. (d) Persons who prefer to work less than 35 hours per week.

**WAGE AND SALARY EARNERS IN EMPLOYMENT**

1. **General.**—The series of estimates of the number of wage and salary earners in civilian employment (excluding employees in rural industry and private domestic service) published in Official Year Book No. 48, 1962, and earlier issues, has been replaced by a new series. Although covering virtually the same part of the work force, the new series, in addition to incorporating revised estimates, differs from the old in the classification of some industries and in being related to basic data derived from population censuses.

The monthly estimates are based on comprehensive data (referred to herein as "benchmarks") derived for the purpose from the population censuses of June, 1954, and June, 1961. Figures for periods between, and subsequent to, the two benchmark points of time are estimates obtained from three main sources, namely (a) current pay-roll tax returns, (b) current returns from Government bodies; and (c) some other direct current records of employment (e.g. for hospitals). Data from these sources have been supplemented by estimates of the changes in the number of wage and salary earners not covered by the foregoing collections.

Figures for current months are subject to revision. As they become available, particulars of employment obtained from other collections, such as the annual factory census and the censuses and sample surveys of retail establishments, are used to check, and, where desirable, to revise estimates in relevant sections. The work force survey now being developed (see page 417) will supply an additional check for future estimates.

The benchmark figures are derived from particulars recorded for individuals on population census schedules. The estimated monthly figures are derived mainly from reports supplied by employers relating to enterprises or establishments. These two sources differ in some cases in scope and in reporting of industry; however, the benchmark industry dissections have been adjusted, as nearly as may be, to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June, 1961.

Pay-roll tax returns are lodged at present by all employers paying more than £200 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals and other similar organizations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1962*). At June, 1954, this Act required employers paying wages of more than £80 a week to lodge returns. The exemption limit was raised to £120 a week from 1st September, 1954, and to the present level of £200 a week as from 1st September, 1957.

Employees in rural industry and in private domestic service are not included in the estimates, because of the inadequacy of current data.

The terms "Employment", "Number Employed", "Employees" and "Wage Earners" used herein are synonymous with, and related to, "Wage and Salary Earners" on pay-rolls or "in employment" in the latter part of each month as distinct from numbers of employees actually working on a specific date. They include some persons working part-time.

The prime purpose of the new series is the same as that of the previous series, namely to measure, as nearly as may be with available data, *current monthly trends* in employment in the defined field. The estimates may be less reliable for longer-term measurement. Detailed revision of the old series to a basis comparable with that of the new series is impracticable for periods prior to June, 1954, but an approximate revision of total figures (since June, 1947) to this basis was published in *Employment and Unemployment*, October, 1963.

2. Total Civilian Employees and Defence Forces.—The following table shows, for Australia, the estimated numbers of private and government civilian employees (excluding employees in rural industry and private domestic service) and the numbers in the defence forces at June of each of the years 1954 and 1959 to 1963 and at December, 1963.

## COMMONWEALTH EMPLOYMENT SERVICE

1. General.—Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act* 1945–1959 (sections 47 and 48). In brief, the main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities and qualifications; and to assist employers seeking labour to obtain employees best suited to the demands of the employers' particular class of work.

The organization and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948 of the International Labour Organization, which was ratified by Australia in December, 1949. In addition, C.E.S. practices follow substantially the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions within the Employment and Industrial Services Division of the Department of Labour and National Service on a decentralized basis. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State, with 144 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 341 agents in the smaller country centres. The District Employment Offices and Branch Offices are distributed as follows: New South Wales, 55; Victoria, 37; Queensland, 22; South Australia, 12; Western Australia, 12; Tasmania, 4; Northern Territory, 1; Australian Capital Territory, 1.

The C.E.S. provides specialized facilities for young people, persons with physical and mental handicaps, ex-members of the defence forces, migrants, rural workers and persons with professional and technical qualifications. Vocational guidance is provided free of charge by a staff of qualified psychologists. It is available to any person, but is provided particularly for young people, ex-servicemen and the physically handicapped. In New South Wales, the State Department of Labour and Industry provides this service, mainly to young people leaving school.

The C.E.S. has responsibilities in the administration of the unemployment benefits provided under the *Social Services Act* 1947–1963. All applicants for benefits must register at a District Employment Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them.

The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance to obtain employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of December, 1963, about 223,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951, it has been responsible for recruiting Australian experts for

oversea service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance. The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out, and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

2. Persons Registered for Employment.—The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include also persons in receipt of unemployment benefit (*see* Chapter XVI. Welfare Services).

## CHAPTER XIII

## LABOUR, WAGES AND PRICES

NOTE.—For particulars of the Farm Production Price Index, see Chapter XXX. Miscellaneous.

For current information on the subjects dealt with in this Chapter, see the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, also the mimeographed statements *Wage Rates and Earnings*, *Consumer Price Index*, *Wholesale Price (Basic Materials and Foodstuffs) Index*, and *Export Price Index*. For further information on these subjects, except the Export Price Index, see the *Labour Report* issued by this Bureau.

In addition, the following recent special publications were issued in mimeographed form:—*Minimum Wage Rates, January, 1961, to June, 1963* (S.B. 354); *Survey of Weekly Earnings and Hours—Australia, October, 1962* (S.B. 213).

## RETAIL PRICES AND PRICE INDEXES

## § 1. General

Retail prices of food and groceries and average rentals of houses for years extending back to 1901 were collected by the Commonwealth Statistician, and in some cases have been recorded by the Statisticians of various States for earlier years.

Retail prices of a more extensive range of commodities (including clothing) and certain services in common demand have been ascertained at frequent and regular intervals since 1923 and comparable information was ascertained for the month of November in each year from 1914 to 1922. The range of items for which retail prices data are obtained was considerably expanded in 1948 and in later years.

Average retail prices of certain food and grocery items in current periods are published in the annual *Labour Report*.

An explanation of the nature and purposes of retail price indexes is given in the various editions of the annual *Labour Report*, together with further particulars of indexes then current. In § 2 below, previous retail price indexes for Australia are briefly outlined. The current retail price index, entitled the Consumer Price Index, was published for the first time in August, 1960. It was compiled retrospectively to 1948–49. A description of the Consumer Price Index is given in § 3 on pages 432–4.

## § 2. Previous Retail Price Indexes

1. General.—Five series of retail price indexes had been compiled at various times for Australia by the Commonwealth Statistician prior to 1960. Each of these was continued until changed conditions required the compilation of indexes more directly relevant to current conditions. The respective indexes were as follows.

- (i) *The "A" Series Index* (covering food, groceries and house rents) was first compiled in 1912 with the year 1911 as base = 1,000. It was discontinued in June, 1938.
- (ii) *The "B" Series Index* (covering food, groceries and rent of 4 and 5 roomed houses) was first compiled in 1925 and continued until December Quarter, 1953. It was the food and rent constituent of the "C" Series Index and was designed to replace the "A" Series Index for general statistical purposes.
- (iii) *The "C" Series Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking and some other miscellaneous items) was first compiled in 1921. It was last issued on its original basis for December quarter, 1960. For certain transitional purposes a "C" Series Index was issued for some quarters after that. This was calculated by varying the index numbers of December quarter, 1960, in ratio to movements shown by the Consumer Price Index.

- (iv) *The "D" Series Index*, derived by combining the "A" and "C" Series Indexes, was used by the Commonwealth Court of Conciliation and Arbitration from May, 1933, to May, 1934, and then discontinued.
- (v) *The Interim Index* (covering food and groceries, rent of 4 and 5 roomed houses, clothing, household drapery, household utensils, fuel, lighting, fares, smoking, certain services and some miscellaneous items) was first compiled in 1954 with the year 1952-53 as base = 100. As its title indicated, it was constructed as a transitional index. Its compilation was discontinued following its replacement by the Consumer Price Index in June quarter, 1960.

2. **The "Court" Index.**—In 1937, the Commonwealth Court of Conciliation and Arbitration introduced a "Court" Index for the purpose of its system of making automatic quarterly adjustments to the basic wage within its jurisdiction. By decision of the Court, the "Court" Index ceased to be issued by the Industrial Registrar as at December quarter, 1953. These "Court" Index numbers were an arithmetical conversion of the "C" Series Retail Price Index.

### § 3. Consumer Price Index

1. **General.**—This retail price index was first compiled in 1960, retrospectively to September quarter, 1948. A full description of the index up to December quarter, 1963 is given in *Labour Report* No. 49, 1961. The Consumer Price Index, a chain of "fixed weight aggregative" indexes linked at short intervals to form a continuous series, was further linked at December quarter, 1963. Details of this link were published in the bulletin *Consumer Price Index*, March quarter, 1964, S.B. 426, and will be published also in *Labour Report* No. 50, 1962-63.

2. **Origin.**—The list of component items and the weighting pattern of the "C" Series Retail Price Index, first adopted in 1921, were slightly revised by Conference of Statisticians in 1936, but otherwise continued almost unchanged until the index was discontinued in 1960. The reasons for this, and the circumstances which led to the present Consumer Price Index, appear from ensuing paragraphs.

From the outbreak of war in 1939 to late in 1948, periodic policy changes in regard to various war-time controls (including rationing) caused recurrent changes in consumption and in the pattern of expenditure. This rendered changes desirable but made it impracticable either to produce a new index, or to revise the old one, on any basis that would render the index more representative than it already was of the changing pattern of household expenditure in those years.

When commodity rationing had virtually ceased in the latter part of 1948, action was taken by the Statistician to collect price data of about 100 additional items and to gather information as to current consumption and expenditure patterns. This was done to facilitate review of the component items and weighting system of the "C" Series Retail Price Index, in the light of the new pattern of wage-earner expenditure and consumption that appeared to be emerging. But there supervened, in the next few years, conditions which caused wide price dispersion coupled with a very rapid rise in prices and a new sequence of changes in consumption and in the pattern of wage-earner expenditure. Under these conditions it was not possible to devise any new weighting pattern likely to be more continuously representative of conditions then current than was the existing "C" Series Retail Price Index on the 1936 revision.

A Conference of Statisticians considered the matter in June, 1953, and resolved (in part) as follows:—

- "(a) that, in view of the persistence of recurrent changes in the pattern of consumer expenditure in the post-war period, it is undesirable to make a general revision of the list of items and weighting system of the "C" Series Retail Price Index at present, unless industrial tribunals expressly desire some revision for special purposes;
- (b) that an Interim Retail Price Index be compiled with putative weights and components representative, as nearly as may be, of the post-war pattern of consumer usage and expenditure."

The "C" Series Index continued to be compiled on its pre-war basis without significant change in procedures. The Interim Retail Price Index was introduced in 1954 and continued until March quarter, 1960.

The Interim Index was a transitional index designed to measure retail price variations on the "C" Series model in terms of post-war consumption weights, as emerging in the early 1950's. It embraced a wider range of commodities and services than did the "C" Series Retail Price Index, but it did not take into account successive major changes in the pattern of expenditure and modes of living that began to occur early in 1950 and through to 1960. These changes could not, in fact, be detected and measured promptly, and incorporated into an index, concurrently with their happening. Nor was it envisaged as desirable to adopt fundamentally new procedures in price index construction until it was fully evident that far-reaching procedural changes were necessary to meet the situation that had developed between about 1950 and 1960.

In this period, home owning largely replaced house renting, the use of the motor car greatly increased and partly replaced use of public transport, and various items of electrical household equipment and television came into widespread use. The impact of these (and other) changes in usage upon the pattern of household expenditure was heightened by disparate movements in prices. Together, they rendered nugatory the attempt to meet the situation by devising a single Interim Retail Price Index. As studies progressed and new data became available, it was clear that no single list of items and no single set of fixed weights would be adequately representative as a basis for measuring retail price changes at all times throughout the post-war period. In consequence, the situation was met by compiling the Consumer Price Index constructed as a chain of linked indexes with significant changes in composition and weighting effected at short intervals during the period 1950-1960.

**3. Purpose, Scope and Composition.**—The Consumer Price Index is a quarterly measure of variations in retail prices for goods and services representing a high proportion of the expenditure of wage-earner households. The weighting pattern relates to estimated aggregates of wage-earner household expenditures and not to estimated expenditures of an "average" or individual household of specified size, type, or mode of living. In this way, it is possible to give appropriate representation to owner-occupied houses as well as rented houses and to include motor cars, television sets, and other major expenditures which relate to some households and not to others.

Consumer (retail) price indexes are sometimes loosely called "cost of living indexes" and are thought to measure changes in the "cost of living". Neither the Consumer Price Index, nor any other retail price index, measures those changes in the cost of living that result directly from changes in the mode or level of living. Changes of that kind are matters for consideration apart from price indexes, but the change in prices of goods and services is a very important part of the change in the cost of living and this part is measured by consumer (retail) price indexes.

The Consumer Price Index covers a wide range of commodities and services arranged in the following five major groups:—

- Food;
- Clothing and Drapery;
- Housing;
- Household Supplies and Equipment;
- Miscellaneous.

These groups do not include every item of household spending. It is both impracticable and unnecessary for them to do so. Prices are collected regularly for specified quantities and qualities of a large and representative selection of commodities and services. Movements in the prices of these items, when combined in suitable proportions, provide a representative measure of price change as affecting a high proportion of the expenditure of wage-earner households.

**4. Structure—a Chain of Linked Indexes.**—Substantial changes occurred in consumer usage and patterns of expenditure following the 1939-45 War. In order to keep the weighting pattern representative of current expenditures, it became necessary to construct indexes with additional items and changes in the weighting pattern at intervals, rather than on the basis of a list of items and set of weights that remained unchanged throughout the whole period covered. Five new series for short periods (namely, from the September quarter of 1948 to the June quarter of 1952, from the June quarter of 1952 to the June quarter of 1956, from the June quarter of 1956 to the March quarter of 1960, from the March quarter of 1960 to the December quarter of 1963, and from the December quarter of 1963 onwards) were therefore constructed and linked to form a continuous retail price index series to be known as the Consumer Price Index. During each period between links,

the items and weighting remained unchanged. At times of linking, the weighting pattern was altered and new items that had become significant in household expenditure were introduced.

Under this method, in effect, average percentage price movements are assessed on one pattern up to the time of the link and on another pattern thereafter. The process of linking ensures that the series reflects only price variations and not differences in cost of the old and new lists of items. The introduction of new items and weights by linking does not, of itself, raise or lower the level of the index.

#### § 4. Tabular Statements of Retail Price Index Numbers

**Consumer Price Index.**—(i) *General.* The index has been compiled for each quarter from September quarter, 1948, and for each year from 1948–49. "All Groups" index numbers and "Group" index numbers for each of the five major groups are compiled and published regularly for the six State capital cities separately and combined. The reference base for each of these indexes is: year 1952–53 = 100.0. Figures appearing after the decimal point possess little significance for general statistical purposes. They are inserted to avoid distortions that would occur in rounding off the figures to the nearest whole number.

Index numbers for each quarter are first issued in mimeographed statistical bulletins available from the Commonwealth Statistician about three weeks after the end of the quarter. These bulletins contain comment on the index and on significant price movements in that quarter. Tables showing index numbers for preceding quarters and years are presented.

(ii) *Consumer Price Index Numbers.* The following table shows Consumer Price Index Numbers (Total All Groups), for the six State capital cities separately and combined, for periods from the year 1948–49.

#### CONSUMER PRICE INDEX: ALL GROUPS INDEX NUMBERS

SIX CAPITAL CITIES, SEPARATELY AND COMBINED

(Base of each Index: Year 1952–53 = 100.0)

NOTE.—The separate city indexes measure price movements within each city individually. They do not compare price levels as between cities.

(a) Weighted average.

The following table shows Consumer Price Index Group Index Numbers for the six State capital cities combined for periods from the year 1948-49.

CONSUMER PRICE INDEX: GROUP INDEX NUMBERS

WEIGHTED AVERAGE OF SIX CAPITAL CITIES

(Base of each Index: Year 1952-53 = 100.0)

NOTE.—The group indexes measure price movements of each group individually, and compare the degree of price change in the different groups.

The following table shows Consumer Price Index Group Index Numbers for each State capital city for recent years and quarters.

### CONSUMER PRICE INDEX: GROUP INDEX NUMBERS

(Base of each Index: Year 1952-53 = 100.0)

NOTE.—The index numbers hereunder are designed to measure movements in retail prices of specified groups of items for specified cities individually. They measure variations from time to time and not differences in price level as between cities nor comparative costs of groups of items.

## § 5. Retail Price Index Numbers, 1901 to 1963

The index numbers shown below are presented as a continuous series, but they give only a broad indication of long-term trends in retail price levels. They are derived by linking a number of indexes that differ greatly in scope. The successive indexes used are: from 1901 to 1914, the "A" Series Retail Price Index; from 1914 to 1946-47, the "C" Series Retail Price Index; from 1946-47 to 1948-49, a composite of Consumer Price Index Housing Group (partly estimated) and "C" Series Index excluding Rent; and from 1948-49 to 1963, the Consumer Price Index.

## RETAIL PRICE INDEX NUMBERS, 1901 TO 1963

SIX STATE CAPITAL CITIES COMBINED

(Base: Year 1911 = 100)

Year	Index number	Year	Index number
1901	88	1933	133

1928	167	1960	459
1929	171	1961	471
1930	162	1962	469
1931	145	1963	472
1932	138		

(a) November.

## § 6. International Comparisons

The following table shows index numbers of consumer (retail) prices for various countries. Except where otherwise noted, the year 1958 is taken as base (= 100). The index numbers show fluctuations in prices in each country, and do not measure relative price levels as between countries.

## INDEX NUMBERS OF CONSUMER (RETAIL) PRICES IN VARIOUS COUNTRIES

Dec. ..	128	113	113	113	106	123	108	116	113	112	107

(a) Consumer Price Index converted to base 1958 = 100 by Commonwealth Statistician. (b) Beginning 1963, new index—base: 1962 = 100. Before 1963, index for Paris. (c) Base: Average of March–December, 1958 = 100. (d) Index for Europeans only.

NOTE.—Symbol — on each side of an index number (e.g. -95-) indicates that two series have been linked at that period. Symbol — between two index numbers indicates that it is not possible to link two series (because of change in scope, etc.) and therefore the index numbers are not comparable with each other even though they are shown on the same base period.

## WHOLESALE PRICES AND PRICE INDEXES

## § 1. General

Two indexes of wholesale prices have been compiled by the Commonwealth Bureau of Census and Statistics. These are:—

- (i) The Melbourne Wholesale Price Index;
- (ii) The Wholesale Price (Basic Materials and Foodstuffs) Index.

A brief note on the Melbourne Wholesale Price Index, which is now obsolete, is given in § 3 on page 440. After reviewing the list of items and weighting of the Melbourne Wholesale Price Index, the 1930 Conference of Statisticians resolved that a new index of wholesale prices of basic materials and foodstuffs should be compiled. This index, the Wholesale Price (Basic Materials and Foodstuffs) Index, is compiled monthly and extends back to 1928.

## § 2. Wholesale Price (Basic Materials and Foodstuffs) Index

1. **Price Quotations.**—The prices used in the index have in the main been obtained directly from manufacturers and merchants, and, with a few important exceptions, from Melbourne sources. Apart from locally-produced building materials and one or two minor commodities, however, the price movements may be taken as representative of variations in wholesale prices of basic materials in most Australian markets.

Commodities in the index are priced in their primary or basic form wherever possible and in respect of imported materials as nearly as may be at the point where they first make effective impact on the local price structure. Thus the prices of imported goods are not taken at the time of import, but rather on an ex-bond (or into factory) basis.

Broadly, where home-consumption prices exist for local products, they have been used in this index. During the year 1950–51, wool for local manufacture was subsidized, and the home-consumption price for wool was used to calculate the index numbers shown in the table on page 440.

2. **Commodities and Grouping.**—For purposes of this index, “basic” materials (as opposed to certain of the foodstuffs) are commodities in the primary or basic forms in which they first enter into productive processes carried out in Australia. The list of items is divided into seven main groups, each of which is sub-divided into goods which are mainly imported, and goods which are mainly home-produced. The percentage of the total aggregate in 1962–63 contributed by each group was as follows:—Metals and coal, 17.46; oils, fats and waxes, 8.06; textiles, 3.32; chemicals, 3.79; rubber and hides, 1.56; building materials, 11.03; foodstuffs and tobacco, 54.78. Goods principally imported comprised 23.63 per cent. of the total aggregate in 1962–63, and goods principally home-produced, 76.37.

A full list of the commodities and the quantity-multipliers (weights) is published in *Labour Report* No. 49, 1961, page 40.

3. **Method of Construction.**—The index is constructed on the simple aggregative fixed-weights formula. The weights (quantity-multipliers) are based on estimates of the average annual consumption of the commodities in Australia during the period 1928–29 to 1934–35 inclusive. Changes in usage, changes of category as between “imported” and “home-produced” for some commodities, and changes in the industrial structure have affected the validity of some of the weights in the index.

During 1956, supplies and prices of potatoes and onions fluctuated violently between abnormally wide limits. These fluctuations were so great as to dominate the movement of the sections of the index in which these items were included, namely, “Foodstuffs and Tobacco”, “Goods Principally Home-produced” and “Total, All Groups”. In the circumstances, neither seasonal adjustment nor conversion of the index to a “changing weights” formula could be applied to eliminate these fluctuations. Accordingly, in order to provide a representative measure of general trend in wholesale prices, the index was reconstructed as from July, 1936, by omitting potatoes and onions.

Consideration is being given to the enlargement of the index to cover additional groups and to revision of the weighting pattern of the index.

4. **Index Numbers.**—Index numbers for each group of commodities and for all groups combined for the index of wholesale prices of basic materials and foodstuffs are given in the following table. Current index numbers, on the base: Average of three years ended June, 1939 = 100, are published monthly in the mimeographed statistical bulletin *Wholesale Price (Basic Materials and Foodstuffs) Index* and in the *Monthly Review of Business Statistics*. A table showing index numbers computed to the base 1928 = 100 is published in the *Labour Report*.

## WHOLESALE PRICE (BASIC MATERIALS AND FOODSTUFFS) INDEX NUMBERS

(Base of each Index: Average of 3 years ended June, 1939 = 100)

Period	Basic Materials							Food-stuffs and Tobacco (a)	Basic Materials and Foodstuffs		
	Metals and Coal	Oils, Fats and Waxes	Textiles	Chemicals	Rubber and Hides	Building Materials	Total		Goods principally imported (b)	Goods principally home produced (a)	Total, All Groups (a)
1928-29	127	106	129	121	115	95	114	107	91	118	110
1929-30	126	111	99	116	87	94	107	110	94	118	111
1930-31	116	117	80	117	73	96	105	91	100	99	99
1931-32	108	113	77	119	74	95	101	86	100	92	95

(a) Excludes potatoes and onions from 1936-37. See para. 3 on p. 439. (b) Represents only such imported commodities as are included in the Wholesale Price Index and does not measure charges in the prices of all imports.

## § 3. Melbourne Wholesale Price Index

An index of Melbourne wholesale prices was first compiled in 1912. It related chiefly to basic materials and foods weighted in accordance with consumption in the years immediately preceding that date. Neither the list of items nor the weighting was varied, except for some changes in the building materials group in 1949. The series has some historical significance as a measure of changes in the prices, since the year 1861, of its component items combined in the proportions in which they were in common use about the year 1910. A description of the index and a list of the commodities included in it were published in *Labour Report* No. 38, 1949, pages 43-45. Index numbers up to the year 1961, the last period for which the index was compiled, were published in *Official Year Book* No. 48, 1962.

## EXPORT PRICES AND PRICE INDEXES

## § 1. Previous Export Price Indexes

1. **1901 to 1917.**—An annual index of export prices has been published by the Bureau since its inception. The first index was compiled annually for the years 1901 to 1916–17. The method of computation was to select all articles of export which were recorded by units of quantity, and to apply to the quantities of these export commodities actually exported during any year the average price per unit ruling in the year 1901 (adopted as the base year). The "total value" so obtained was divided into the total recorded value of these exports for the year concerned and the result (multiplied by 1,000) was the export price index number for that year.

2. **1918 to 1930.**—The method was changed in 1918. Weights for all principal exports were calculated, based on the average quantities of exports for the nineteen and a half years from 1st January, 1897, to 30th June, 1916. To these weights were applied the "average unit export values" of each export in successive years, and a weighted aggregative index of "price" variations was derived. This index was published for the years 1897 to 1929–30. Particulars of this index were last published in Official Year Book No. 24, page 147.

3. **1928 to 1962.**—(i) *General.* After the 1914–18 War, the relative importance of different exports changed considerably, and the pattern of exports varied considerably from year to year. For these reasons, two new series of monthly export price indexes—one using fixed weights and the other using changing weights—were published in 1937, compiled back to 1928. The data on which both series were based differed from those used in the previous series of annual index numbers. The most important change was the use of actual (or calculated) export prices in place of the "unit values" declared at the Customs. Brief notes on these two indexes are given below. A full description of both indexes was last published in Official Year Book No. 48, 1962, pages 500–4.

(ii) *The Fixed Weights Index.* This was a weighted aggregative index of price variations. It was compiled back to 1928, with that year taken as base. In later years, it was published on the base: Average of three years ended June, 1939 = 100. The original weights (used for the period 1928 to 1936) were the average annual exports (production in the case of gold) during the five years 1928–29 to 1932–33. From July, 1936, the weights were revised and were based on average annual exports (production in the case of gold) during the three years 1933–34 to 1935–36. This index was published from 1937 until July, 1962, after which it was replaced by the current Export Price Index described in § 2 below.

(iii) *The Changing Weights Index.* This index was designed for shorter period comparisons—from one or more months of the current year to the corresponding months of the previous year. In computing these index numbers, the "quantity multipliers" were the quantities actually exported (sold, in some cases) in the months (or periods) to which the index numbers relate. This index was discontinued in 1962.

## § 2. The Current Export Price Index

1. **General.**—The current Export Price Index was first published in August, 1962, but index numbers were compiled back to July, 1959. The reference base of this index is: Year 1959–60 = 100. This index is a fixed-weights index, and its purpose (as was that of the previous fixed-weights index) is to provide comparisons monthly, over a limited number of years, of the level of export prices of the selected items, making no allowance for variations in quantities exported. The index numbers are thus measures of price change only. The price series used in the index relate to specified standards for each commodity and in most cases are combinations of prices for a number of representative grades, types, etc. For some commodities, price movements in the predominant market, or markets, are used, while for other commodities average realizations in all export markets are used. As nearly as possible, prices used are on the basis f.o.b. at the main Australian ports of export. The index is compiled by the method known as "weighted average of price relatives".

2. **Composition and Weighting.**—There are 29 items in the current index compared with 20 items in the previous index. These 29 items have constituted approximately 83 per cent. of the total value of Australian exports in recent years. (The 20 items in the previous index, which in pre-war years constituted about 85 per cent. of total exports, and for most of the post-war period averaged about 80 per cent. of total exports, in recent years constituted about 73 per cent. of total exports.) The weights for the current index are based on average

annual values of exports during the five years 1956-57 to 1960-61, whereas the weights for the previous index were based on average annual exports during the three years 1933-34 to 1935-36. A comparison of the old and new indexes, showing percentage contributions of the various items to the total index in the year 1959-60, is set out in the table below.

**COMPARISON OF PREVIOUS AND CURRENT EXPORT PRICE INDEXES**  
PERCENTAGE CONTRIBUTION OF ITEMS TO ALL GROUPS INDEXES IN 1959-60

Item	Percentage contribution to All Groups Index	
	Previous Index	Current Index
Wool .. .. .	51.24	50.73
Beef .. .. .	4.68	6.71
Lamb .. .. .	2.22	0.76
Mutton .. .. .	0.36	0.59
Pork .. .. .	0.32	(a)
Canned beef .. .. .	(a)	1.65
Canned mutton .. .. .	(a)	0.21
Processed milk .. .. .	(a)	1.36
Butter .. .. .	9.46	4.02
Cheese .. .. .	(a)	0.64
Eggs .. .. .	(a)	0.47
Wheat and flour .. .. .	15.02	10.11
Barley .. .. .	(a)	1.77
Oats .. .. .	(a)	0.66
Sultanas .. .. .	1.21	1.06
Raisins .. .. .	0.10	(b)
Currants .. .. .	0.35	0.12
Canned pineapples .. .. .	(a)	0.20
Canned apricots .. .. .	(a)	0.11
Canned peaches .. .. .	(a)	0.37
Canned pears .. .. .	(a)	0.68
Sugar .. .. .	2.89	3.99
Cattle hides .. .. .	0.55	0.72
Calf skins .. .. .	0.09	(c)
Tallow .. .. .	0.51	0.54
Coal .. .. .	(a)	0.63
Iron and steel .. .. .	(a)	3.48
Copper .. .. .	0.27	1.57
Tin .. .. .	0.27	(a)
Zinc .. .. .	2.50	1.23
Lead .. .. .	4.07	2.97
Silver .. .. .	0.61	0.66
Gold .. .. .	3.28	1.99
<b>Total</b> .. .. .	<b>100.00</b>	<b>100.00</b>

(a) Not included. (b) Included in weight for sultanas. (c) Included in weight for cattle hides.

The following table sets out a list of the items, and groups of items, in the new index, together with the percentage contribution of each item and group to the All Groups index in the reference base year 1959-60. The weights used for some of the items are adjusted to cover some related commodities which are not priced directly. The most important instances of this are wool, which includes wool exported on sheepskins, and copper, zinc, lead and silver, which include the estimated metallic content of ores and concentrates exported. In the previous index, the weight for gold was derived from production instead of export figures. For the period 1956-57 to 1960-61, production and exports of gold were similar, and therefore in the new index the weight for gold (as for the other items) is based on average annual exports during the period.

## EXPORT PRICE INDEX

LIST OF ITEMS AND PERCENTAGE CONTRIBUTION OF ITEMS AND GROUPS TO  
ALL GROUPS INDEX IN 1959-60

Group and item	Percentage contribution to All Groups Index
<i>Wool</i> .. .. .	50.73

(a) Nominal.

4. Link between Current and Previous Indexes.—In order to show approximate movements in export prices over a long period, the "All Groups" indexes of the previous and current series have been linked together at the year 1959-60, the earliest year for which the new index has been compiled. The table below shows this linked series and a long-term price index for wool, which is the most important single component in the movement of the "All Groups" index.

## EXPORT PRICE INDEX NUMBERS—LINKED SERIES

## CONTROL OF PRICES DURING AND SINCE THE 1939-45 WAR

An account of the measures taken by the Commonwealth Government to control prices from September, 1939, until 29th May, 1948 (the date of the Prices Referendum), was given in Official Year Book No. 37, pages 458-64. Subsequent measures for price control by the States consequent upon the rejection of the proposal in the Prices Referendum of 29th May, 1948, that permanent power to control rents and prices be conferred on the Commonwealth Government, are described in issues up to No. 49. Particulars of the amounts expended by the Commonwealth Government for the purpose of stabilizing prices are given in Year Book No. 38, page 414, and in later issues.

## WAGES, EARNINGS AND HOURS

## § 1. Arbitration and Wages Boards Acts and Associated Legislation

1. **General.**—Particulars regarding the operation of Commonwealth and State Laws for the regulation of wages, hours and other conditions of employment were first compiled for the year 1913, and revised particulars have appeared annually in the *Labour Report* and in issues of the Official Year Book prior to No. 38. A summary of the Commonwealth legislation and brief particulars of Commonwealth and State industrial tribunals are given in the following paragraphs.

2. **Commonwealth.**—Under placitum (xxxv) of section 51 of the Commonwealth of Australia Constitution, the Commonwealth Parliament is empowered to make laws with respect to "conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State". The Parliament has made such a law, namely the *Conciliation and Arbitration Act 1904-1961*.

This Act defines an "industrial dispute" as "(a) A dispute (including a threatened, impending or probable dispute) as to industrial matters which extends beyond the limits of any State; and (b) a situation which is likely to give rise to a dispute as to industrial matters which so extends; and includes—(c) such a dispute in relation to employment in an industry carried on by, or under the control of, a State or an authority of a State; (d) a dispute in relation to employment in an industry carried on by, or under the control of, the Commonwealth or an authority of the Commonwealth, whether or not the dispute extends beyond the limits of any one State; and (e) a claim which an organization is entitled to submit to the Commission under section eleven A of the *Public Service Arbitration Act 1920-1960* or an application or matter which the Public Service Arbitrator has refrained from hearing, or from further hearing, or from determining under section fourteen A of that Act, whether or not there exists in relation to the claim, application or matter a dispute as to industrial matters which extends beyond the limits of any one State."

The Conciliation and Arbitration Act was extensively amended by an Act (No. 44 of 1956) assented to on 30th June, 1956. This amendment altered the structure of the arbitration machinery by separating the judicial functions from the conciliation and arbitration functions. The Commonwealth Industrial Court was established to deal with judicial matters under the Act and the Commonwealth Conciliation and Arbitration Commission to handle the functions of conciliation and arbitration. A summary of the provisions of the *Conciliation and Arbitration Act 1904-1961* is given in the following paragraphs.

The Commonwealth Industrial Court is at present composed of a Chief Judge and three other Judges. The jurisdiction of the Court shall be exercised by not less than two Judges, except in the following circumstances. A single Judge may exercise the jurisdiction of the Court with respect to the dismissal or injury of an employee on account of industrial action, interpretation of awards, questions concerning eligibility of membership of an organization, disputes between an organization and its members and a prescribed matter of practice or procedure. A single Judge may refer a question of law for the opinion of the Court constituted by not less than two Judges. The Court is a Superior Court of Record with the same power to punish contempts of its power and authority as is possessed by the High Court. In general, decisions of the Industrial Court are final; however, an appeal lies to the High Court, but only when the latter grants leave to appeal. The Act provides for the registration of associations of employees and employers, and for inquiries to be held concerning disputed elections in organizations; and certain powers in connexion therewith are, by the Act, given to the Industrial Court. Provision is also made for the Commission to exercise the powers of the Court with regard to an application for cancellation of registration of an organization. Any such change of jurisdiction must be notified by proclamation. This provision could be used if the powers of the Court in this regard were declared, in whole or in part, to be invalid.

Special provision is made concerning the right of audience before the Commonwealth Industrial Court. Briefly, except in proceedings which, in general, involve questions of law or offences against the Act, parties are able to elect whether to appear personally or to be represented by lawyers or officials. Even in proceedings involving questions of law, except appeals from decisions by other Courts to the Industrial Court, on matters arising under this Act or the *Public Service Arbitration Act 1920-1960*, the parties may, if they wish and the Court grants leave, be represented by officials.

The Commonwealth Conciliation and Arbitration Commission at present consists of a President, five Deputy Presidents, a Senior Commissioner, ten Commissioners and three Conciliators. The Commission is empowered to prevent or settle industrial disputes by conciliation or arbitration, and to make suggestions and to do such things as appear right and proper for (a) effecting a reconciliation between parties to industrial disputes; (b) preventing and settling industrial disputes by amicable agreement; and (c) preventing and settling, by conciliation or arbitration, industrial disputes not prevented or settled by amicable agreement. The Commission may exercise its powers of its own motion or on the application of a party.

The President may assign a Commissioner to deal with industrial disputes relating to particular industries, or members of the Commission to deal with a particular industrial dispute. However, subject to the approval of the President, it is the duty of the Senior Commissioner to organize and allocate the work of the Commissioners and Conciliators.

When an industrial dispute occurs or is likely to occur, a Commissioner shall take steps for the prompt prevention or settlement of that dispute by conciliation or, if in his opinion conciliation is unlikely to succeed or has failed, by arbitration. A Commissioner may arrange with the Senior Commissioner for a Conciliator to assist the parties to reach an amicable agreement and shall do so if the parties so request. If an agreement is reached, a memorandum of its terms shall be made in writing, and may be certified by the Commission. A certified memorandum shall have the same effect as an award.

Only the Commission in Presidential Session, that is, the Commission constituted by at least three presidential members nominated by the President, has the power to make awards, or to certify agreements, concerning standard hours, basic wages and long-service leave.

Upon application by a party to an industrial dispute, a Commissioner shall consult with the President as to whether in the public interest any matter in dispute should be dealt with by a Commission constituted by not less than three members nominated by the President, at least one of whom shall be a presidential member and one, where practicable, the Commissioner concerned. The President may direct the Commission to hear the matter in dispute; however, after consideration, the Commission may refer the matter in dispute back for determination to the Commissioner originally dealing with the dispute.

An appeal against the decision of a Commissioner shall be heard by not less than three members nominated by the President, of whom at least two shall be presidential members of the Commission. However, an appeal will not be heard unless the Commission considers it is necessary as a matter of public interest. The President, after taking account of the views of the parties to a dispute, may appoint a member of the Commission to take evidence on behalf of a presidential bench of the Commission, so that it may have this evidence before it when it commences its hearing.

Full benches of the Commission not constituted by the same persons may sit in joint session at the direction of the President when he considers it desirable and has the opinion that a question is common to the matters before those benches. A joint session may be held whether the benches concerned are constituted pursuant to the Conciliation and Arbitration Act or the Public Service Arbitration Act, and whether they are constituted to hear references or appeals. However, it is left to each appropriate full bench to determine any of the matters before it.

Provision is also made in the Act for a presidential member of the Commission to handle industrial matters in connexion with the maritime industries, the Snowy Mountains Area and the stevedoring industry, except in those matters for which the Act requires that the Commission shall be constituted by more than one member.

The Commonwealth Conciliation and Arbitration Commission also deals with disputes and industrial matters, interstate or intra-state, associated with undertakings or projects of the Commonwealth Government which have been declared by the Minister to be Commonwealth projects for the purposes of this Act. In effect, this places employees of Commonwealth projects, so declared, under the jurisdiction of the Commission. The Minister has the power to exempt certain persons or classes of persons working on these projects from the jurisdiction of the Commission.

The Commission may make an award in relation to an industrial dispute concerning employees of a Commonwealth project or when the Public Service Arbitrator refrains from

dealing with claims made by a Public Service employee organization or consents to the claims being presented to the Commission, though such an award may be inconsistent with a law of the Commonwealth relating to salaries, wages, rates of pay or terms or conditions of service of employees in the Public Service as defined by section three of the *Public Service Arbitration Act* 1920-1960, not being the *Commonwealth Employees' Compensation Act* 1930-1962, the *Commonwealth Employees' Furlough Act* 1943-1959, the *Superannuation Act* 1922-1963 or any other prescribed Act.

The Act provides that where a State law, or an order, award, decision or determination of a State industrial authority is inconsistent with or deals with a matter dealt with in an award of the Commission, the latter shall prevail, and the former, to the extent of the inconsistency or in relation to the matter dealt with, shall be invalid.

For further particulars regarding Commonwealth arbitration legislation, see the annual *Labour Report*.

For information concerning the Australian Stevedoring Industry Authority and the Coal Industry Tribunal see the Transport and Communication chapter and the Mineral Industry chapter respectively of this Year Book, and for further information on the Commonwealth Public Service Arbitrator see the *Labour Report*.

3. States.—In each State, Industrial Tribunals have been established to regulate and arbitrate in industrial matters. Brief particulars are given in the following paragraphs.

(i) *New South Wales*. The controlling authority is the Industrial Commission of New South Wales, consisting of a President and seven other Judges. Subsidiary tribunals are the Conciliation Commissioners, the Apprenticeship Commissioner, Conciliation Committees and Apprenticeship Councils constituted for particular industries. Each Conciliation Committee consists of a Conciliation Commissioner as Chairman and equal numbers of representatives of employers and employees. The Apprenticeship Commissioner and the members of the Conciliation Committee for an industry constitute the Apprenticeship Council for the industry. These subsidiary tribunals may make awards binding on industries, but an appeal to the Industrial Commission may be made against any award. Special Commissioners with conciliatory powers and limited arbitration powers may be appointed. Compulsory control commenced in 1901, after the earlier Acts of 1892 and 1899 providing for voluntary submission of matters in dispute had proved abortive.

(ii) *Victoria*. The authorities are separate Wages Boards for the occupations and industries covered, each consisting of a chairman and equal numbers of representatives of employers and employees, and a Court of Industrial Appeals, the latter presided over by a Judge of the County Court. The system was instituted in the State in 1896, and represented the first example in Australia of legal regulation of wage rates.

(iii) *Queensland*. Legal control was first instituted in 1907 with the passing of the Wages Board Act. The *Industrial Conciliation and Arbitration Act* 1961 established the Industrial Conciliation and Arbitration Commission and preserved and continued in existence the Industrial Court. The Industrial Court is constituted by the President (a Judge of the Supreme Court of Queensland) sitting alone, and the Full Industrial Court by the President and two Commissioners. The Conciliation and Arbitration Commission is constituted by a Commissioner sitting alone; and the Full Bench of the Commission by at least three Commissioners. Not more than five Commissioners shall be appointed. A Commissioner shall not be capable of being a member of the Executive Council or of the Legislative Assembly, and shall not take part in the management of any business.

(iv) *South Australia*. The principal tribunal is the Industrial Court of South Australia, composed of the President (a person eligible for appointment as a Judge of the Supreme Court) who may be joined by two assessors employed in the industry concerned; Deputy Presidents may also be appointed. There are also Industrial Boards, for the various industries, consisting of a chairman and equal numbers of representatives of employers and employees. Another tribunal provided for under the Industrial Code is the Board of Industry, composed of a President, who shall be the President or a Deputy President of the Industrial Court, and four Commissioners. Broadly speaking, the functions of these three tribunals are:—(i) the Industrial Court delivers awards concerning workers who do not

come under the jurisdiction of the Industrial Boards, appoints Boards of Reference and hears appeals from decisions of Industrial Boards and Boards of Reference; (ii) the determinations of the Industrial Boards apply to most industries in the metropolitan area; however, for employees of the Public Service, Railways, and councils of a municipality or district, determinations of Industrial Boards apply to the whole of the State; (iii) the Board of Industry declares, for the whole of the State, the "living wage".

(v) *Western Australia.* The system of control comprises an Arbitration Court, Industrial Boards, Conciliation Committees and a Conciliation Commissioner. Employers and employees are equally represented on both Boards and Committees. The Court consists of a Judge of the Supreme Court and two members. Commissioners may also be appointed by the Minister for the settlement of particular disputes. Legal control dates back to 1900.

In November, 1963, an Act was passed replacing the Arbitration Court and Conciliation Commissioners with a four-man Industrial Commission and establishing a Court of Industrial Appeal to decide judicial matters. The Act became effective in February, 1964. Further particulars will be published in the next issue of this Year Book.

The Western Australian Coal Industry Tribunal, established under the *Mining Act* 1904-1963, has power to determine any industrial matter in the coal mining industry. It consists of a chairman and four other members (two representatives each of employers and employees). Boards of reference may be appointed by the Tribunal and decisions of the Tribunal may be reviewed by the Court of Arbitration on the application of a party subject to the decision.

(vi) *Tasmania.* The authority consists of Wages Boards for separate industries, comprising a Chairman (who is common to all Wages Boards), appointed by the Governor, and equal numbers of representatives of employers and employees, appointed by the Minister administering the Act. The system was instituted in 1910.

## § 2. Rates of Wage and Hours of Work

1. *General.*—This section contains indexes (with base: year 1954 = 100) of minimum weekly and hourly rates of wage and standard hours of work for adult males and adult females for Australia and each State. In the indexes, there are 15 industry groups for adult males and 8 industry groups for adult females. For relevant periods, these indexes replace cognate indexes (base: year 1911 = 1,000 for males and April, 1914 = 1,000 for females) published in issues prior to No. 46, 1960. The current indexes are based on the occupation structure existing in 1954. Weights for each industry and each occupation were derived from two sample surveys made in that year. The first was the Survey of Awards in April, 1954, which showed the number of employees covered by individual awards, determinations and agreements. This provided employee weights for each industry as well as a basis for the Survey of Award Occupations made in November, 1954. This second survey showed the number of employees in each occupation within selected awards, etc., thereby providing occupation weights.

The industrial classification used in the current indexes, shown in the table on page 451, does not differ basically from the previous classification, the alterations being largely in the arrangement of classes. The former Pastoral, Agricultural, etc., group and the Domestic part of the group Amusement, Hotels, Personal Service, etc. are excluded from the current indexes because of coverage difficulties.

The minimum wage rates and standard hours of work used in the current indexes are for representative occupations within each industry. They have been derived entirely from representative awards, determinations and agreements in force at the end of each month or quarter, commencing with March, 1939, for adult males and March, 1951, for adult females. From January, 1957, particulars for adult males have been available as at the end of each month. The index for adult males includes rates and hours for 3,424 award designations. However, as some of these designations are operative within more than one industry,

or in more than one State, the total number of individual award occupations is 2,322. For adult females, the corresponding numbers are 1,103 and 518. Using the industry and occupation weights derived from the surveys described above, these rates and hours were combined to give weighted averages for each industry group for each State and Australia. Weighted averages of the components of the total minimum weekly wage rate, i.e. basic wage, margin and loading, were calculated separately for employees covered by Commonwealth awards, etc., and for those covered by State awards, etc. (see pp. 452 and 455).

Because the indexes are designed to measure movements in prescribed minimum rates of "wages" as distinct from "salaries", those awards, etc., which relate solely or mainly to salary earners are excluded.

A more detailed description of the current indexes of minimum rates of wage and standard hours of work is given in the *Labour Report*, which also contains an extensive tabular presentation of the minimum rates of wage for adult males and females in the principal occupations in the capital city of each State. Further particulars of weekly wage rates and index numbers will be found in the statistical bulletins S.B. 123—*Minimum Weekly Wage Rates, 1939 to 1959*, S.B. 124—*Minimum Weekly Wage Rates, January, 1960 to June, 1962* (containing final figures for the period January to December, 1960) and S.B. 354—*Minimum Wage Rates, January, 1961 to June, 1963*. Current figures are published in the monthly bulletin *Wage Rates and Earnings*.

2. **Weekly Wage Rates.**—(i) *Adult Males—States.* The following table shows, for each State and Australia, the weighted average minimum weekly rates of wage payable to adult male workers for a full week's work, and index numbers at the dates specified.

(a) As prescribed in awards, determinations and agreements. (b) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends. (c) Includes the value of keep, where supplied. (d) Excludes rural.

(iii) *Adult Males—Components of Total Wage Rate.* A dissection of weighted average minimum weekly wage rates for adult males into the three components of the total minimum wage, i.e. basic wage, margin and loading, is given in the following two tables, separate particulars being shown for employees covered by awards, etc., within Commonwealth and

State jurisdictions. For the purposes of the index, the Commonwealth jurisdiction embraces awards of, or agreements registered with, the Commonwealth Conciliation and Arbitration Commission, and determinations of the Commonwealth Public Service Arbitrator. State jurisdictions embrace awards or determinations of, or agreements registered with, State industrial tribunals, together with certain unregistered agreements, where these are dominant in the particular industries to which they refer.

The basic wage rates shown herein are weighted averages of the rates prescribed in awards, etc., for the occupations included in the index for each State. For industries other than mining, metropolitan basic wage rates have generally been used. However, there are a number of occupations for which basic wage rates other than the metropolitan rate are prescribed. Also, in some States at various times, State Government employees under Commonwealth awards have been paid State basic wage rates, and the basic wage rates of some employees have been subject to automatic quarterly adjustments while those of other employees within the same jurisdiction have remained unchanged. In all such cases, the basic wage rate actually paid is used in tables below. For these and other reasons, the weighted average basic wage rates differ, in the majority of cases, from the metropolitan basic wage rates shown in other sections of this chapter.

Margins are minimum amounts, in addition to the basic wage, awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness and other like factors.

Loadings are minimum amounts, in addition to the basic wage and margin (if any), awarded for various kinds of disabilities associated with the performance of work, or to meet particular circumstances. They include payments such as industry loadings and other general loadings prescribed in awards, etc., for the occupations included in the index.

For a more detailed description of this dissection of weekly wage rates into components and for tables for each State and Australia, according to jurisdiction, extending back to 1939, see the statistical bulletins S.B. 123—*Minimum Weekly Wage Rates, 1939 to 1959*, S.B. 124—*Minimum Weekly Wage Rates, January, 1960, to June, 1962* (containing final figures for the period January to December, 1960) and S.B. 354—*Minimum Wage Rates, January, 1961 to June, 1963*.

(a) States. The following table shows the components of the total minimum weekly wage rate for each State and Australia, as at 31st December, 1963, according to jurisdiction.

3. *Standard Hours of Work.*—(i) *General.* In the fixation of weekly wage rates, most industrial tribunals prescribe the number of hours constituting a full week's work for the wage rates specified. The hours of work so prescribed form the basis of the compilation of the weighted averages and index numbers on pages 458-9. The main features of the reduction of hours to 44 and later to 40 per week are summarized below. In considering such changes, it must be remembered that even within individual States, the authority to alter conditions of work is divided between Commonwealth and State industrial tribunals and the various legislatures, and that the State legislation usually does not apply to employees covered by awards of the Commonwealth Conciliation and Arbitration Commission. However, it may do so in respect of matters not treated in Commonwealth awards.

(ii) *The 44-hour Week.* No permanent reduction to a 44-hour week was effected until 1925, although temporary reductions had been achieved earlier. In 1920, the New South Wales legislature granted a 44-hour week to most industries, but in the following year this provision was withdrawn. Also in 1920, the President of the Commonwealth Court of Conciliation and Arbitration (Higgins J.), after inquiry, granted a 44-hour week to the Timber Workers' Union, and in the following year extended the same privilege to the Amalgamated Society of Engineers. In 1921, however, a reconstituted Commonwealth Court of Conciliation and Arbitration unanimously rejected applications by five trade unions for the shorter standard week and reintroduced the 48-hour week in the case of the above-mentioned two unions then working 44 hours. During 1924, the Queensland Parliament passed legislation to operate from 1st July, 1925, granting the 44-hour standard week to employees whose conditions of work were regulated by awards and agreements of the Queensland State industrial authority. Similar legislative action in New South Wales led to the re-introduction of the 44-hour week in that State as from 4th January, 1926.

In 1927, after an exhaustive inquiry, the Commonwealth Court of Conciliation and Arbitration granted a 44-hour week to the Amalgamated Engineering Union and intimated that this reduction in standard hours of work would be extended to industries operating under conditions similar to those in the engineering industry. Applications for the shorter hours by other unions were, however, treated individually, the nature of the industry, the problem of production, the financial status and the amount of foreign competition being fully investigated. The economic depression delayed the extension of the standard 44-hour week until the subsequent improvement in economic conditions made possible its general extension to employees under Commonwealth awards.

In States other than New South Wales and Queensland, no legislation was passed to reduce the standard hours of work, so that, for employees not covered by Commonwealth awards, the change had to be effected by decisions of the appropriate industrial tribunals. In these cases, the date on which the reduction to 44 hours was implemented depended on the decision of the tribunals in particular industries, employees in some industries receiving the benefit of the reduced hours years ahead of those in others. In these States, the change to the shorter week extended over the years from 1926 to 1941.

(iii) *The 40-hour Week.* (a) *Standard Hours Inquiry, 1947.* Soon after the end of the 1939-45 War, applications were made to the Commonwealth Court of Conciliation and Arbitration for the introduction of a 40-hour week, and the hearing by the Court commenced in October, 1945. Before the Court gave its decision, the New South Wales Parliament passed legislation granting a 40-hour week, operative from 1st July, 1947, to industries and trades regulated by State awards and agreements, and in Queensland similar legislation was introduced in Parliament providing for the 40-hour week to operate from 1st January, 1948.

The Commonwealth Court of Conciliation and Arbitration, in its judgment on 8th September, 1947, granted the reduction to the 40-hour week from the beginning of the first pay-period commencing in January, 1948. The Queensland Act was passed, and was proclaimed on 10th October, 1947. On 27th October, 1947, the South Australian Industrial Court, after hearing applications by unions, approved the incorporation of the 40-hour standard week in awards of that State. The Court of Arbitration of Western Australia on 6th November, 1947, approved that, on application, provision for a 40-hour week could be incorporated in awards of the Court, commencing from 1st January, 1948.

In Victoria and Tasmania, the Wages Boards met and also incorporated the shorter working week in their determinations, so that from the beginning of 1948 practically all employees in Australia whose conditions of labour were regulated by industrial authorities had the advantages of a standard working week of 40 hours or, in certain cases, less.

(b) *Basic Wage and Standard Hours Inquiry, 1952-53.* In the 1952-53 Basic Wage and Standard Hours Inquiry, the employers sought an increase in the standard hours of work per week, claiming that one of the chief causes of the high costs and inflation had been the loss of production due to the introduction of the 40-hour week. This claim was rejected by the Court, as it considered that the employers had not proved that the existing economic situation called for a reduction of general standards in the matter of the ordinary working week. (See also § 5, para. 2 (iii) p. 469.)

(c) *Basic Wage and Standard Hours Inquiry, 1961.* In this case, the employers sought an increase in the number of ordinary working hours from 40 to 42 per week, with a concomitant increase in weekly wages by an amount equal to two hours' pay at ordinary rates. This was to be a temporary measure to have effect for four years, after which time, hours would revert to 40 and the increased wage would remain. The employers submitted that such a measure was called for by the balance of payments crisis, that it would lead to increased productivity at stable prices, and that work in excess of forty hours would be more evenly distributed with consequent financial relief for men not getting overtime work. The Commonwealth Conciliation and Arbitration Commission, which heard the application, was not persuaded that the anticipated consequences would follow, and the claim was rejected. (See also § 5, para. 2 (x) p. 475.)

4. **Hourly Wage Rates.**—(i) *General.* The average rates of wage in the preceding tables are based on the minimum rates prescribed for selected occupations in awards, etc., for a full week's work, excluding overtime. However, the number of hours constituting a full week's work differs in some instances between various occupations in each State, and between the same occupations in the several States. For some purposes, a better comparison may be obtained by reducing the results in the preceding paragraphs to a common basis, namely, the rate of wage per hour. The particulars of weighted average minimum hourly rates of wage given in the following tables relate to all industry groups except Rural, and Shipping and Stevedoring. The Rural industry is not included in the index and Shipping and Stevedoring has been excluded because, for some of the occupations in this group, definite particulars for the computation of average working hours and hourly rates of wage are not available.

(ii) *Adult Males—States.* The following table shows the weighted average minimum hourly rates of wage payable to adult male workers, and index numbers of hourly rates in each State.

(a) The amounts shown should not be regarded as actual current averages, but as an index expressed in money terms, indicative of trends.

5. **Weighted Average Standard Weekly Hours of Work.**—The 40-hour week has operated in Australia generally from 1st January, 1948, and in New South Wales from 1st July, 1947 (see para. 3 (iii), p. 457). However, as stated in para. 4 (i) on page 458, the number of hours constituting a full week's work (excluding overtime) differs between occupations and/or between States. The weighted average standard hours of work (excluding overtime) prescribed in awards, determinations and agreements for a full working week, in respect of adult male workers in all industrial groups except Rural, and Shipping and Stevedoring, at 31st December, 1963, were:—New South Wales, 39.95; Victoria, 39.97; Queensland, 39.98; South Australia, 39.96; Western Australia, 39.89; Tasmania, 39.97; Australia, 39.96. Corresponding figures for adult female workers at 31st December, 1962, were:—New South Wales, 39.53; Victoria, 39.81; Queensland, 39.70; South Australia, 39.77; Western Australia, 39.78; Tasmania, 39.56; Australia, 39.67.

## § 3. Average Weekly Earnings

1. **General.**—The figures in this section are derived from particulars of employment and of wages and salaries recorded on pay-roll tax returns, from other direct collections and from estimates of the unrecorded balance. Pay of members of the defence forces is not included.

Particulars of wages and salaries paid are not available for males and females separately from these sources; average weekly earnings have therefore been calculated in terms of male units. Male units represent total male employment plus a proportion of female employment based on the approximate ratio of female to male earnings. As it was not possible to estimate the ratio of male to female earnings in the several States the same ratio has been used in each State. Because the actual ratio may vary between States precise comparisons between average earnings in different States cannot be made on the basis of the figures shown in paragraph 2.

Since the previous issue of the Year Book, the series of average weekly earnings per employed male unit has been revised to incorporate the new series of employment estimates shown on pages 425–9 of the previous chapter. Opportunity was also taken to make other adjustments based on analyses of population census data.

Quarterly figures corresponding to those shown below are published in the monthly bulletin *Wage Rates and Earnings* and in the *Monthly Review of Business Statistics*.

The series of average weekly total wages and salaries paid, previously contained in this section, has been discontinued. The publications *Australian National Accounts—National Income and Expenditure* and *Quarterly Estimates of National Income and Expenditure* contain more comprehensive series of total wages, salaries and supplements. See also tables following Chapter XXX. Miscellaneous of this Year Book.

2. Average Weekly Earnings.—Particulars of average weekly earnings per employed male unit are shown in the following table for each of the years 1954–55 to 1962–63.

**AVERAGE WEEKLY EARNINGS PER EMPLOYED MALE UNIT(a)**  
(£)

Year	N.S.W. (b)	Vic.	Qld	S.A. (c)	W.A.	Tas.	Aust.
1954–55 .. ..	17.69	17.65	15.59	16.89	16.15	16.60	17.17

1962–63 .. ..	25.08	25.05	22.18	22.91	22.12	22.95	24.23

(a) Includes, in addition to wages at award rates, earnings of salaried employees, overtime earnings, over-award and bonus payments, etc. See explanatory notes in paragraph 1, p. 459. (b) Includes Australian Capital Territory. (c) Includes Northern Territory.

3. Index Numbers.—The following table shows, for “All industries” and for “Manufacturing”, the movement in average weekly earnings from 1953–54 to the March quarter, 1964. The “All industries” index is based on pay-roll tax returns and other data. The index for manufacturing industries for the years 1953–54 to 1962–63 is based on the average earnings of male wage and salary earners employed in factories as disclosed by annual factory censuses (see Chapter VI. Manufacturing Industry, § 8, para. 2 (iii), p. 164); figures for quarters subsequent to June quarter, 1963, are preliminary estimates based on pay-roll tax returns.

The index numbers for “All industries” and “Manufacturing” show the movement in average earnings for each group over a period of time. However, they do not give, at any point of time, a comparison of actual earnings in the two groups. The base of each series is the year 1953–54 = 100, and both series have been seasonally adjusted.

**INDEXES OF AVERAGE WEEKLY EARNINGS(a): AUSTRALIA**  
SEASONALLY ADJUSTED

(Base of each Series: 1953–54 = 100)

(b) Average earnings per employed male unit. See explanation in paragraph 1, p. 459.

#### § 4. Surveys of Wage Rates, Earnings and Hours

1. **General.**—Towards the end of 1960, a statistical survey of the wage structure of Australia was undertaken by this Bureau. The object of the survey was to obtain information as to marginal rates of wage and actual weekly earnings of adult male employees (excluding part-time and casual employees) for the last pay-period in September, 1960. A survey as at the last pay-period in October, 1961, provided similar information as to actual weekly earnings. A survey of weekly earnings and hours, carried out in respect of the last pay-period in October, 1962, provided information about the hours of work and average earnings of male and female employees in private industry.

The surveys were based on returns from stratified random samples of private employers subject to pay-roll tax. They did not include government or semi-government employment. Because of insufficient data, employees in rural industry and private domestic service were excluded, as also were employees of religious, benevolent and other similar bodies exempt from pay-roll tax. In addition, the 1960 survey excluded the shipping and stevedoring industry, the motion picture industry, certain businesses such as those of accountants and consultant engineers, and trade associations, etc.

A brief summary of the results of the 1960 and 1961 surveys is given in paras. 2 and 3 following. Only the proportions of the total employees in the various groups are shown in this issue, but more detailed particulars, including the number of employees in each group, may be found in Year Book No. 48, 1962, pages 410-18. The preliminary results of the 1962 survey were published in the previous issue of the Year Book.

2. **Survey of Wage Rates and Earnings, September, 1960.**—The sample for this survey was designed to provide accurate particulars only for Australia as a whole; hence no State details are shown in the tables below. The survey covered more than 1,100,000 adult male employees.

Definitions relevant to the survey are as follows.

- (a) *Adult Male Employees* refers to employees on the pay-roll of the last pay-day in September, 1960, and includes those who, although under 21 years of age, were paid at the adult rate prescribed in the appropriate award. Part-time and casual employees and those absent in the defence forces were excluded.
- (b) The term *awards* as used herein denotes awards or determinations of, or agreements registered with, Commonwealth or State industrial tribunals. Employees whose rates of pay and working conditions were not regulated by awards, and employees covered by formal, though unregistered, agreements between employee organizations and employers, are shown as "not covered by awards".
- (c) *Margins* are minimum amounts, in addition to the basic wage, awarded to particular classifications of employees for features attaching to their work, such as skill, experience, arduousness or other like factors. For the purposes of this survey the following were not included in margins:—special allowances prescribed in awards, such as shift, dirt, and height money, leading hand allowances, etc.; and other payments such as commission, payments above the minimum rate for contract and piece work, etc. (see sub-paras. (e) and (g) below and also § 6. Wage Margins). In the case of contract work, etc., the margin was determined by the minimum amount prescribed in the award for the class of work performed. Where the marginal rate of wage for an occupation was not specified in an award, the margin was assumed to be the difference between the total minimum prescribed rate of wage for the occupation and the appropriate Commonwealth or State basic wage. For employees not covered by awards, and whose margins were not specified in unregistered agreements, the margin was assumed to be the difference between the appropriate basic wage in the State jurisdiction and the agreed rate of pay for a standard working week (or the weekly equivalent of the agreed rate).

- (d) *Total Weekly Earnings* include ordinary time earnings at award rates (and, for employees not covered by awards, payments at agreed rates for a standard working week), overtime earnings and all other payments. Annual or other periodical bonuses were included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week was included.
- (e) *Ordinary Time Earnings at Award Rates* represent the total weekly payment to adult male employees (excluding part-time and casual employees) for hours of work paid for up to the standard or award hours, calculated at award rates of pay. They include payments for sick leave, proportion of annual leave, special allowances prescribed in awards, etc. (see sub-para. (c) above). For employees not covered by awards, they include payments at agreed rates for a standard working week.
- (f) *Overtime Earnings* represent the total weekly payment to adult male employees (excluding part-time and casual employees) for time worked in excess of award or agreed hours.
- (g) *Other Earnings* include all payments other than those in sub-paras. (e) and (f) above, such as commission, payments above the minimum rate for contract work, incentive scheme, piece-work, and profit-sharing scheme payments, proportion of annual or other periodical bonuses, points system payments, attendance or good time-keeping bonuses, etc. (see sub-para. (c) above).
- (i) *Marginal Rates of Wage. (a) Industry Groups.* In the following table, adult male employees in each of the main industry groups are classified according to weekly margin above the basic wage.

**ADULT MALE EMPLOYEES (EXCLUDING PART-TIME AND CASUAL EMPLOYEES) CLASSIFIED ACCORDING TO MARGINAL RATES OF WAGE: INDUSTRY GROUPS, AUSTRALIA, SEPTEMBER, 1960 (a)**

(c) Inquiry indicated that many of the adult males in this group were absent for part of the week.

3. Survey of Weekly Earnings, October, 1961.—For this survey the sample was designed so that particulars of the distribution of earnings in each State could be obtained as well as those for Australia (see p. 465), but it was not possible, without a considerable increase in the number of returns, to obtain particulars for each industry group in each State. State details were therefore restricted to the two major groups, manufacturing and non-manufacturing; those for Australia were obtained for eight separate industry groups. Because of limitations of space, it has not been possible to include all figures in the tables herein. For further details, reference should be made to Statistical Bulletin No. 22—*Survey of Weekly Earnings, October, 1961*, 14th February, 1962.

The businesses selected in the sample were allocated by States and by industry and size groups in such a way that the precision of the sample estimates for total manufacturing and total non-manufacturing, expressed as percentages of the estimates themselves, would be approximately the same in each State.

Definitions relevant to the survey are as follows.

*Adult Male Employees* refers to employees on the pay-roll of the last pay-period in October, 1961, and includes those who, although under 21 years of age, were paid at the adult rate prescribed for their particular occupation. Part-time and casual employees and those absent in the defence forces were excluded. Executive, clerical and sales staff were included, as were employees working short time who would normally have been full-time employees.

*Total Weekly Earnings* (i.e. gross earnings before taxation and other deductions) include ordinary time earnings, overtime earnings and all other payments, such as holiday and sick pay, commission, payments above the minimum rate for contract work, incentive scheme, piece-work and profit-sharing scheme payments, points system payments, attendance bonuses, etc. Annual or other periodical bonuses have been included only at the appropriate proportion for one week. For employees paid other than weekly, only the proportion of earnings equivalent to one week has been included.

(i) *States. (a) All Industries.* The following table shows the proportions of adult male employees in each earnings group in each State.

**ADULT MALE EMPLOYEES (EXCLUDING PART-TIME AND CASUAL EMPLOYEES) CLASSIFIED ACCORDING TO TOTAL WEEKLY EARNINGS, OCTOBER, 1961(a)**

(a) See p. 464 for particulars of the coverage of the survey. (b) For definitions, see p. 464. (c) Inquiry indicated that the majority of the adult males in this group did not work a full week because of absenteeism, changing jobs, etc. Others were working short time.

4. *Survey of Weekly Earnings and Hours, October, 1962.*—This survey provided, for Australia, information on average weekly and hourly earnings and average weekly hours paid for, in each of the principal industry groups. Preliminary results of the survey, which were published in Statistical Bulletin 213—*Survey of Weekly Earnings and Hours, October, 1962*, 20th March, 1963, were shown in Year Book No. 49, 1963, pages 482–5.

## § 5. Basic Wages in Australia

1. *General.*—The concept of a “basic” or “living” wage is common to rates of wage determined by industrial authorities in Australia. Initially the concept was interpreted as the “minimum” or “basic” wage necessary to maintain an average employee and his family in a reasonable state of comfort. However, it is now generally accepted “that the wage should be fixed at the highest amount which the economy can sustain and that the ‘dominant factor’ is the capacity of the community to carry the resultant wage levels”.\*

Under the *Commonwealth Conciliation and Arbitration Act 1904–1961* (see p. 446) the Commonwealth Conciliation and Arbitration Commission (previously the Commonwealth Court of Conciliation and Arbitration) may, for the purpose of preventing or settling an industrial dispute extending beyond the limits of any State, make an order or award “altering the basic wage (that is to say, that wage or that part of the wage, which is just and reasonable for an adult male [female], without regard to any circumstance pertaining to the work upon which, or the industry in which he [she] is employed) or the principles upon which it is computed”.

\* *Commonwealth Arbitration Reports*, Vol. 77, p. 494.

In the past, the Commonwealth Court of Conciliation and Arbitration held general basic wage inquiries from time to time, and its findings applied to industrial awards within its jurisdiction. Prior to the decision of the Commonwealth Court of Conciliation and Arbitration, announced on 12th September, 1953, discontinuing the automatic adjustment of basic wages in Commonwealth awards in accordance with variations occurring in retail price index numbers, the relevant basic wage of the Commonwealth Court of Conciliation and Arbitration was adopted to a considerable extent by State Industrial Tribunals. In New South Wales and South Australia, the State industrial authorities adopted the relevant Commonwealth basic wage. In Victoria and Tasmania, where Wages Boards systems operate, no provision was included in the industrial Acts for the declaration of a basic wage, although, in the past, Wages Boards generally adopted basic wages based on those of the Commonwealth Court. In Queensland and Western Australia, the determination of a basic wage is a function of the respective State Industrial or Arbitration Courts, and (subject to State law) they took into account the rates determined by the Commonwealth Court. Following the decision of the Commonwealth Court of Conciliation and Arbitration to discontinue automatic quarterly adjustments to the basic wage, the various State industrial authorities have determined State basic wages in accordance with the provisions of the respective State industrial legislation. Details of the action taken in each State and subsequent variations in State basic wages are set out in para. 5 of this section.

In addition to the basic wage, "secondary" wage payments, including margins for skill and various kinds of loadings peculiar to the occupation or industry, are determined by these authorities. The basic wage, and the "secondary" wage, where prescribed, make up the "minimum" wage for a particular occupation. The term "minimum wage" as distinct from the basic wage is used currently to express the lowest rate payable for a particular occupation or industry. (See also § 2, para. 2 (iii) *Adult Males—Components of Total Wage Rate*, pp. 452 and 455).

2. The Commonwealth Basic Wage.—(i) *Early Judgments.* The principle of a living or basic wage was propounded as far back as 1890, but it was not until 1907 that a wage, as such, was declared by a Court in Australia. The declaration was made by an order in terms of section 2 (d) of the *Excise Tariff* 1906 in the matter of an application by H. V. McKay that the remuneration of labour employed by him at the Sunshine Harvester Works, Victoria, was "fair and reasonable". Mr. Justice Higgins, President of the Commonwealth Court of Conciliation and Arbitration, defined the standard of a "fair and reasonable" minimum wage for unskilled labourers as that standard appropriate to "the normal needs of the average employee, regarded as a human being living in a civilized community".\* The rate declared was 7s. a day or £2 2s. a week for Melbourne, the amount considered reasonable for "a family of about five".

The "Harvester" standard was adopted by the Commonwealth Court of Conciliation and Arbitration for incorporation in its awards, and practically the same rates continued until 1913, when the Court took cognizance of retail price index numbers, covering food and groceries and rent of all houses ("A" Series) for the 30 more important towns of Australia, which had been published by the Commonwealth Statistician for the first time in the preceding year. The basic wage rates for towns were thereafter varied in accordance with the respective retail price index numbers. Court practice was to equate the retail price index number 875 for Melbourne for the year 1907 to the "Harvester" rate of 42s. a week (or the base of the index (1,000) to 48s. a week). At intervals thereafter as awards came before it for review, the Court usually revised the basic wage rate of the award in proportion to variations in the retail price index. In some country towns, certain "loadings" were added by the Court to wage rates so derived to offset the effect of lower housing standards, and consequently of house rents, on the index numbers for these towns.

Over the period of its operation, the adequacy or otherwise of the "Harvester" standard was the subject of much discussion, the author of the judgment himself urging on several occasions the need for its review. During the period of rapidly rising prices towards the end of the 1914-18 War, strong criticism developed that this system did not adequately maintain the "Harvester" equivalent. A Royal Commission was appointed in 1919 to inquire as to what it would actually cost a man, wife and three children under fourteen years of age to live in a reasonable standard of comfort, and as to how the basic wage might be automatically adjusted to maintain purchasing power. The Commission's

\* *Commonwealth Arbitration Reports*, Vol. 2, p. 3.

Reports were presented in 1920 and 1921. An application by the unions to have the amounts arrived at by the inquiry declared as the basic wage was not accepted by the Court, because they were considerably in advance of existing rates, and grave doubts were expressed by members of the Court as to the ability of industry to pay such rates. Further details of the recommendations of the Commission were given in *Labour Report* No. 41, page 102.

The system of making automatic quarterly adjustments to the basic wage in direct ratio to variations in the retail price index ("A" Series) was first introduced in 1921. The practice then adopted was to calculate the adjustments to the basic wage quarterly on the index number for the preceding quarter. Previously, adjustments had been made sporadically in relation to retail price indexes for the previous calendar year or the year ended with the preceding quarter. The new method would have resulted in a basic wage lower than that to which employees would have been entitled had the previous practice been continued, and in 1922\* the Court added to the basic wage a general loading of 3s. (known as the "Powers 3s."), "a sum . . . which did, to the extent of 3s. per week, relieve the employees from the detrimental effect so far as they were concerned of the change which the Court was then making in its method of fixing the basic wage".† This loading continued until 1934. The practice adopted by the Commonwealth Court in 1921 of making automatic quarterly adjustments continued until the Court's judgment of 12th September, 1953 (*see* p. 469).

For a description of the several series of retail price indexes referred to in these paragraphs, *see* pages 431-2 of this chapter.

(ii) *Basic Wage Inquiries, 1930 to 1950.* No change was made in the method of fixation and adjustment of the basic wage until the onset of the depression in 1930, when applications were made to the Court for a reduction of wages. From 1st February, 1931, the Court reduced all wages under its jurisdiction by 10 per cent. Subsequent applications in 1932 and 1933 for cancellation of this reduction were refused. In May, 1933, the Court transferred the basis of the quarterly adjustment of the basic wage from the "A" Series to the "D" Series Retail Price Index. Further particulars may be found in the *Labour Report*, Nos. 22 and 23.

The "Harvester" standard, adjusted by variations in retail price index numbers, continued to be the theoretical basis of the wage of the Commonwealth Court until the judgment of 17th April, 1934, when automatic adjustment was transferred to the "C" Series Retail Price Index, the base of the index being taken as equal to 81s. a week. The new rate for the six capital cities, £3 5s., was in effect the same as that previously paid under the "A" Series, without the "Powers 3s." and without the 10 per cent. reduction, which then ceased to operate. (*See Labour Report* No. 25, 1934.)

The following were the main features of the judgment of the 1937 Inquiry. (a) Amounts were added to the basic wage not as an integral, and therefore adjustable, part of that wage, but as "loadings" additional to the rates payable under the 1934 judgment (referred to as the "needs" portion of the basic wage). These loadings, commonly referred to as "Prosperity" loadings, ranged, for capital cities, from 4s. to 6s., that for the six capitals being 5s. (b) The minimum adjustment of the basic wage was fixed at 1s. a week instead of 2s. (c) The basis of the adjustment of the "needs" portion of the wage in accordance with the variations shown by retail price index numbers was transferred from the "C" Series to a special "Court" Series based upon the "C" Series. (d) Female and junior rates were left for adjustment by individual judges when dealing with specific awards. (*See Labour Report* No. 28, pages 77-87.)

In 1940, the combined unions applied to have the value of 1,000 (the base of the "C" Series Index upon which the "Court" Series was based) raised from 81s. to 100s. a week, and the "Prosperity" loadings incorporated in the new rate. In its judgment of 7th February, 1941, the Court unanimously refused to grant any increase, owing mainly to the uncertainty of the economic outlook under existing war conditions. The application was stood over for further consideration. (*See* p. 469.) In the course of the judgment, the Chief Judge suggested that the basic wage might be graded according to family responsibilities by means of a comprehensive system of child endowment, and that if a scheme of this nature were established, future fixations of the basic wage would be greatly simplified. (The Commonwealth *Child Endowment Act* 1941 came into operation on 1st July, 1941. For details *see* Chapter XVI. Welfare Services.)

\* 16 C.A.R., p. 32.

† *Ibid.*, p. 841.

In 1946, an application was made for restoration of the adjourned 1940 hearing (*see* p. 468). During the protracted hearing of the Standard Hours Inquiry (*see* p. 457), it became apparent that reconsideration of the amount of the basic wage was, in the public interest, a matter of increasing urgency, and the unions therefore applied for an "interim" basic wage declaration. Judgment was delivered on 13th December, 1946, whereby an increase of 7s. a week was granted in the "needs" portion of the basic wage, the rate for the six capital cities as a whole being increased from 93s. to 100s. a week. For automatic quarterly adjustments, a new "Court" Index (Second Series) (Base 1923-27 = 87.0) was adopted. All "loadings" on the basic wage were retained. Further particulars of this judgment may be obtained from *Labour Report* No. 38, page 79.

The Basic Wage Inquiry, 1949-50, completed the case begun in 1940 and continued in 1946 (*see* above). The general hearing of the unions' claims was commenced on 17th May, 1949, and separate judgments were delivered on 12th October, 1950.\* A majority of the Court (Foster and Dunphy *JJ.*) was of the opinion that the basic wage for adult males should be increased by £1 a week, and that for adult females should be 75 per cent. of the adult male rate. Kelly *C.J.* considered that no increase in either the male or the female wage was justified. On 24th October and 17th and 23rd November, 1950, the Court made further declarations concerning the "Prosperity" and other loadings. The "Prosperity" loading of 1937 (*see* p. 468), which was being paid at rates between 3s. and 6s. a week according to localities, was standardized at a uniform rate of 5s. a week for all localities and was declared to be an adjustable part of the basic wage, the "War" loadings were declared to be not part of the basic wage, and any other loading declared to be part of the basic wage ceased to be paid as a separate entity.

The new rates operated from the beginning of the first pay-period in December, 1950, being in all cases the rate based on the Court Index (2nd Series) for the September quarter, 1950, plus a flat-rate addition of £1, together with the standardized "Prosperity" loading of 5s. The new basic wage rate for the six capital cities (weighted average) was £8 2s., comprising £6 17s. Court (2nd Series) plus 5s. uniform "Prosperity" loading plus the £1 addition. The declaration provided that the whole of this basic wage would be subject to automatic quarterly adjustments as from the beginning of the first pay-period commencing in February, 1951, on the basis of the index numbers for the December quarter, 1950. For this purpose, the new rate of £8 2s. was equated to the "C" Series retail price index number 1,572 for the six capital cities (weighted average) for the September quarter, 1950. From this equation was derived a new "Court" Index (Third Series) with 103.0 equated to 1,000 in the "C" Series Index. Further particulars of the judgment may be found in *Labour Report* No. 39, page 81.

For more detailed descriptions of the foregoing inquiries, reference should be made to earlier issues of the *Labour Report* and the Year Book.

(iii) *Basic Wage and Standard Hours Inquiry, 1952-53.* On 5th August, 1952, the Commonwealth Court of Conciliation and Arbitration began hearing claims by employers' organizations that (a) the basic wage for adult males be reduced; (b) the basic wage for adult females be reduced; (c) the standard hours of work be increased; (d) the system of adjusting the basic wages in accordance with variations occurring in retail price index numbers be abandoned; and by employees' organizations, that the basic wage for adult males be increased.

The decision of the Court, announced on 12th September, 1953†, was as follows:—the employers' applications for reduction of the basic wages for adult males and females and for an increase of the standard hours of work were refused; the employers' applications for omission or deletion of clauses or sub-clauses providing for the adjustment of basic wages were granted; and the unions' applications for increases of basic wages were refused.

The Court in the course of its judgment said that nothing had been put before it during the inquiry in support of a departure from its well-established principle that the basic wage should be the highest that the capacity of the community as a whole could sustain. If the Court is at any time asked to fix a basic wage on a true needs basis, the question of whether such a method is correct in principle and all questions as to the size of the family unit remain open.

\* *Commonwealth Arbitration Reports*, Vol. 68, p. 698.  
Vol. 77, p. 477.

† *Commonwealth Arbitration Reports*,

In order to remove certain misconceptions about its function, the Court stated that it was neither a social nor an economic legislature, and that its function under section 25 of the Act was to prevent or settle specific industrial disputes. However, these must be settled upon terms which seem just to the Court, having regard to conditions which exist at the time of its decision.

The Court intimated that time would be saved in future inquiries if the parties to the disputes, in discussing the principle of the "capacity to pay", directed their attention to the broader aspects of the economy, as indicated by a study of employment, investment, production and productivity, overseas trade, overseas balances, the competitive position of secondary industry, and retail trade.

In accordance with its decision, the Court, commencing on 21st October, 1953, amended all Commonwealth awards by deleting the clauses providing for the automatic adjustment of the basic wage. Subsequently, the power of the Court to vary awards not the subject of an application by one of the parties was unsuccessfully challenged in the High Court of Australia.

For further particulars of the judgment, see *Labour Report* No. 46, page 64.

(iv) *Basic Wage Inquiry*, 1956. On 14th February, 1956, the Commonwealth Court of Conciliation and Arbitration commenced hearing an application by trade unions for an increase in the basic wage to the amount it would have reached if automatic quarterly adjustments deleted in September, 1953, had remained in force, plus a further £1; for the re-introduction of automatic quarterly adjustments; and for the abolition of what was known as the 3s. country differential. This application was regarded as a general application for variation of the basic wage in all Commonwealth awards.

All the claims made by the unions were opposed by the respondent employers. The Commonwealth Government intervened in the public interest and opposed the re-introduction of automatic adjustments. The States of New South Wales, Queensland, Western Australia and Tasmania supported the unions' claims for the re-establishment of the system of automatic adjustments and the raising of the basic wage to the levels indicated by the current "C" Series Index numbers, but the State of South Australia opposed these claims. The State of Victoria neither supported nor opposed the unions' claims.

The judgment was delivered on 26th May, 1956. The Court rejected each claim made by the unions, but decided to increase the adult male basic wage by 10s. a week, payable from the beginning of the first pay-period in June. As a result of this decision, the basic wage for adult females was increased by 7s. 6d. a week with proportionate increases for juniors of both sexes and for apprentices.

The Court took the view that its decision in 1953 to abandon the system of quarterly adjustments was clearly right and that "so long as the assessment of the basic wage is made as the highest which the capacity of the economy can sustain, the automatic adjustment of that basic wage upon price index numbers cannot be justified, since movements in the index have no relation to the movements in the capacity of the economy".\* After examining the state of the economy and the possible disastrous extension of inflation, the Court decided that the nation had not the capacity to pay a basic wage of the amount to which automatic quarterly adjustments would have brought it.

In its judgment, the Court stated that in future a yearly assessment of the capacity of Australia for the purpose of fixing a basic wage would be most appropriate and that it would encourage any steps to have the Court fulfil such a task each year.

For further details, see *Labour Report* No. 46, page 67.

(v) *Basic Wage Inquiry*, 1956-57. On 13th November, 1956, the Commonwealth Conciliation and Arbitration Commission in Presidential Session commenced to hear claims by the combined unions for an increase of the basic wage to the amount it would have reached if automatic quarterly adjustments had remained in force and for the restoration of automatic quarterly adjustments.† This application was treated by the Commission as a general application for alteration of the basic wage in all Commonwealth awards.

The unions' claims were opposed by the respondent employers. Victoria and South Australia were the only States to appear before the Commission and the Commonwealth Government intervened in the public interest. Victoria neither supported nor opposed the application by the unions. South Australia opposed the unions' claims and suggested that, if an increase in the basic wage were granted, the Commission should decide on the increase

\* *Commonwealth Arbitration Reports*, Vol. 84, p. 175.

† 87 *C.A.R.*, p. 439.

to be added to the six capitals basic wage, and then apportion that increase among the six capital cities on a basis accurately reflecting the differences in their cost of living. The Commonwealth opposed the restoration of the automatic adjustment system, whatever index was used for this purpose.

After hearing submissions by counsel for the unions that automatic quarterly adjustments of the basic wage should be restored and argument as to the appropriateness of using the "C" Series Index for this purpose, the Commission reaffirmed the decision of the Court in 1953, which, it said, "was primarily based on the view that there is no justification for automatically adjusting in accordance with a price index a wage assessed as the highest that the capacity of the community as a whole can sustain".\* Accordingly, the claim for restoration of automatic quarterly adjustments was refused.

The Commission, having considered all aspects of the state of the economy, decided that the adult male basic wage should be increased by 10s. a week, payable from the first pay-period to commence on or after 15th May, 1957. The basic wage for adult females was increased by 7s. 6d., with proportionate increases for juniors and apprentices.

The historical background of differential rates of basic wage for respective cities and towns was examined by the Commission and it acknowledged that the Federal basic wage had two components. The first and greater component differed for each capital city and represented a rate of wage calculated by the use of "C" Series retail price index numbers for the June quarter, 1953, and the second component, common to all places, was the uniform 10s. awarded by the Court in 1956. On the question of whether the increase should be of a uniform amount, the alternative open to the Commission appeared to be either to follow what the Court did in 1956, or to recalculate the inter-capital-city differentials of the newly-fixed standard basic wage according to the latest "C" Series index numbers. The Commission decided to grant an increase of a uniform amount.

Judgment was delivered on 27th April, 1957. The Commission advised that it approved an annual review of the basic wage and would be available for this purpose in February, 1958. However, although favouring an annual review of the basic wage, the Commission considered that "it would not be proper for it nor would it wish to curtail the existing right of disputants to make an application at whatever time they think it necessary to do so".†

A more detailed summary of the judgment may be found in *Labour Report* No. 46, pages 68-71.

(vi) *Basic Wage Inquiry*, 1958. On 18th February, 1958, the Conciliation and Arbitration Commission commenced hearing an application by unions respondent to the Metal Trades Award for an increase of the basic wage to the amount it would have reached had the quarterly adjustment system been retained, plus an addition of 10s., and for restoration of quarterly adjustments.‡

These claims were opposed by private employers and by the State of South Australia, which also contended that, as the cost of living was much lower in Adelaide than in Melbourne and Sydney, greater disparities in basic wage rates than then existed should be determined if, against its submission, any general increase in the basic wage were decided upon. Tasmania, the only other State represented, made no submissions. The Attorney-General of the Commonwealth intervened in the public interest, and leave to intervene was granted to a number of professional, salaried and public service organizations.

In its judgment, delivered on 12th May, 1958, the Commission rejected the submission by the Professional Officers' Association that consideration should be given to the question whether increased capacity should be reflected in an increased basic wage only or extended also to the marginal or secondary contents of aggregate wages and salaries. The Commission also rejected the submission by the Australian Council of Salaried and Professional Associations that when the Commission looked at the capacity of industry to pay and gave an increase in the basic wage, it always kept something in reserve for a subsequent marginal claim.

The claim of the unions for the restoration of the 1953 basic wage standard was rejected by the Commission on the same ground as in its 1957 judgment, i.e. that it was unsafe to assume that the economy could sustain the 1953 rate as a "standard" in real terms.

The Commission then considered the three specific issues before it, namely, (a) should the system of automatic adjustments be restored? (b) should the basic wage be increased, and if so, by what amount? and (c) should there be uniform or disparate increases?

\* 87 C.A.R. p. 445.

† *Ibid.*, p. 459.

‡ 89 C.A.R., p. 287.

Counsel for the unions submitted that the unions still regarded the "C" Series Index as a proper guide for the determination of basic wage levels, but that if this contention were unacceptable to the Commission, there should be an immediate decision upon principle, and later, if need be, an inquiry in an effort to ascertain a proper price index. He also submitted that there should be, from time to time, additions to wages to afford to workers their proper share of increased productivity and efficiency, and that although the unions had never claimed that increments for increased productivity could under present circumstances be made by way of automatic adjustment, the objective of wage increases commensurate with price increases could best be achieved by the use of an automatic adjustment system. After having considered the submissions, and without hearing arguments against the proposition, the Commission rejected the application for the restoration of automatic adjustments and for a deferred inquiry thereon. In the reasons for its judgment, the Commission stated that there was nothing in the submission to justify a departure from the decisions of 1953, 1956 and 1957 to reject automatic wage adjustments. The Commission also again expressed the opinion that a yearly assessment of the capacity of Australia for the purpose of fixing a basic wage would be most appropriate.

The Commission was unanimously of the opinion that the position of the economy regarded as a whole was such as to justify an increase in the basic wage, but a difference of opinion existed as to what the amount of the increase should be. Kirby C.J. and Gallagher J. considered that it was undesirable in the interests of all to grant an increase higher than 5s.; Wright J. considered that a basic wage level substantially higher than that proposed by the majority was justified. The decision of the majority prevailed, and the basic wage for adult males under Federal awards was therefore increased by 5s. a week.

The South Australian Government submitted that economically there was no scope at all for a basic wage increase anywhere in Australia, and again pursued the question of inter-city differentials as an answer to the union claim that the amount of the basic wage in Adelaide should be calculated by reference to the "C" Series retail price index numbers for that city. The substance of the State's case was that the actual cost of living was so much lower in Adelaide than in Melbourne and Sydney that greater disparities in basic wage rates than then existed should be determined by the Commission, if any general increase in the basic wage were decided upon. Subject to a stipulation that no reduction should be made in the existing basic wage rate for Adelaide, counsel for the South Australian Government claimed that the rate should be approximately 10 per cent. below the rate fixed for Sydney instead of approximately 5 per cent. below, as it then was. The Commission rejected the claim on the ground that it would not be wise or just to apply it in South Australia in view of the fact that it was neither sought nor supported by any other party, and its application to the government and its instrumentalities alone was not sought. The Commission indicated that the issues involved in inter-city differential wage rates were complex and could not be decided after a brief hearing.

The new basic wage rates for employees under Federal awards operated from 21st May, 1958.

(vii) *Basic Wage Inquiry, 1959.* On 24th February, 1959, the Conciliation and Arbitration Commission commenced hearing an application by unions respondent to the Metal Trades Award for an increase of the basic wage to the amount it would have reached had the quarterly adjustment system been retained, plus an addition of 10s., and for restoration of quarterly adjustments.\* A large number of applications for similar variation of other awards were ordered to be treated as involved in the inquiry, and as such to be decided upon the evidence, material and submissions made from the beginning of the hearing.

The application of the unions was opposed by private employers generally, and by the State of South Australia and two of its instrumentalities. Tasmania was the only other State represented, and it appeared in support of the application of the unions in regard to the increase of the basic wage and the restoration of the quarterly adjustment system. The Commonwealth Government intervened in the public interest and submitted that the application for restoration of the automatic adjustment system should be refused. The Commonwealth again supplied, for the benefit of the Commission and the parties, economic and statistical information and material, and, in addition, without making a particular submission as to whether there should be an increase, made a general submission on the state of the national economy.

\* *Commonwealth Arbitration Reports*, Vol. 91, pp. 683-4.

Organizations of employers in the pastoral industry asked for a reduction in the basic wage in the Pastoral Award of £1 5s., being the aggregate amount of the increases granted in 1956, 1957 and 1958. The Commission decided to join these applications in the main hearing on 17th March, 1959, as a matter of procedure only, and without deciding affirmatively that the Commission as constituted for that hearing had power to grant them in whole or in part. At the conclusion on 5th May, 1959, of submissions in support of these applications and without calling upon employees in reply, the Commission stated that it would reject the applications for reduction of the basic wage in the Pastoral Award, and again indicated that the question of jurisdiction as to whether the Commission had the power to decide a different basic wage remained "undecided and open".

On 5th June, 1959, the three Judges delivered separate judgments. On the question of whether the system of automatic quarterly adjustments should be restored, the members of the Commission were divided in opinion, and therefore the question was decided in accordance with the decision of the majority. The majority decision, namely, that of Kirby *C.J.* and Gallagher *J.*, was that the claim of the unions for restoration of quarterly adjustments should be refused. Foster *J.* dissented.

The members of the Commission were unanimous in the opinion that there should be an increase in the basic wage, but as to the amount of the increase they were divided in opinion as follows. The President, Kirby *C.J.*, was of opinion that the increase should be 15s. a week, and that the increased basic wage should become payable as from the beginning of the first pay-period commencing on or after 11th June, 1959. Foster *J.* was of opinion that the increase should be 20s. a week, payable as to 10s. as from the first pay-period in July, 1959, and as to the balance by increases of 2s. 6d. for four quarters commencing 1st January, 1960. Gallagher *J.* was of opinion that the increase should be one of 10s. a week, and that the increased wage should become payable as from the date chosen by the President. Foster *J.*, while holding his opinion, decided to concur in the decision proposed by the President.

A summary of the separate reasons for judgment was published in Official Year Book No. 46, pages 437-9.

(viii) *Basic Wage Inquiry*, 1960. On 16th February, 1960, the Conciliation and Arbitration Commission, constituted in Presidential Session by Kirby *C.J.* (President), Ashburner and Moore *J.J.* (Deputy Presidents), commenced hearing an application by respondent unions for the restoration to the Metal Trades Award of quarterly adjustments to the basic wage and for an increase in the amount of the basic wage. On the six capital cities rate, the amount of the increase sought was 22s. a week. This amount was composed of two parts—firstly, an addition of 5s. a week to restore to the basic wage the same real value as it had in 1953, and, secondly, a further amount of 17s. representing the unions' estimate of the minimum increase in productivity which had occurred in the period since the automatic adjustment system was abolished.

The Commonwealth Government intervened in the public interest and again presented a detailed analysis of the economic situation of Australia, together with comments on fiscal and budgetary policy. It also announced its opposition to the unions' application both for restoration of automatic quarterly adjustments and for an increase in the basic wage. The State of South Australia presented material to the Commission to show the effect which wage increases would have on its finances, and opposed the unions' application. Victoria, Queensland and Western Australia presented information to show how their finances would be affected by wage increases, but neither supported nor opposed the claims of the applicants. Tasmania indicated that it supported the application for restoration of quarterly adjustments, but made no submissions.

In its judgment, delivered on 12th April, 1960, the Commission refused the unions' application.\* A summary of the judgment is given in the following paragraphs. Further particulars may be found in Official Year Book, No. 47, pp. 443-6.

*Application for Restoration of Quarterly Adjustments.* Counsel for the unions criticized the decision in the 1953 inquiry to abolish automatic quarterly adjustments to the basic wage and also the decisions, in subsequent inquiries, against their re-introduction. He submitted that it would be inequitable and unjust not to restore the practice which existed for many years prior to 1953, of having the basic wage automatically adjusted each quarter in accordance with movements in a price index. He relied in particular on the 1934 basic wage judgment.

\* *Commonwealth Arbitration Reports*, Vol. 94, p. 313.

In refusing the application, the Commission stated that the decision in the 1934 case was not relevant, as the question of automatic quarterly adjustments must be decided in the light of existing situations and practices. In 1934, the basic wage was determined for an undefined period and automatic quarterly adjustments applied. In 1960, the Commission was considering a situation in which in practice the basic wage was re-assessed each year. The Commission decided that it was preferable to fix a basic wage which it considered just and reasonable for the ensuing twelve months and then review it. In the Commission's view it was not inequitable or unjust not to restore automatic adjustments.

*Application to Increase the Basic Wage.* The Commission referred to the two elements that comprised the total wage paid to most workers under federal awards, namely, the basic wage and a margin. The existence of these two elements was a result of the history of federal wage fixation and had received legislative approval. The legislation required that the basic wage and margins be dealt with by differently constituted benches of the Commission. The basic wage could be altered only by the Commission in Presidential Session, that is, by a bench constituted by three or more judges; margins could be altered by a single member of the Commission or by a full bench constituted by at least three members of whom at least one had to be a judge, and the President could, on the ground of public interest, direct that applications for alterations of margins be dealt with by a full bench. The Commission then went on to state briefly the recent history of basic wage and marginal fixation and referred to the four basic wage increases in the years 1956 to 1959 and the increases in margins in 1947, 1954 and 1959. The Commission expected that, in the light of the history of marginal fixation since 1947, it would be asked to consider the question of general marginal increases every few years. So long as its decisions regarding metal trades margins were given general application, and so long as the annual review of the basic wage continued, it followed that in one particular year the Commission constituted by a full bench of judges would review the basic wage and, constituted by a mixed bench, review margins. When the economy was found capable of sustaining an increase in both the basic wage and margins, it followed that the economic and psychological effect of each increase was affected and indeed highlighted by the other. This happened in 1959, when the basic wage was increased as from June by 15s., or an increase of 6 per cent., and margins were increased as from December by 28 per cent. of the amount of the margins existing as a result of the 1954 review by the Court. Together, the 1959 increases approximated 8 to 10 per cent. of award wages.

The Commission was required by legislation to treat the basic wage and margins separately, but although constituted differently for each task, at the time of fixation of rates it had to look forward to the period which its decision would cover; that is, a year for the basic wage and, generally speaking, a longer period for margins. In dealing with the application then before it, the Commission had to decide whether the basic wage should again be increased, although less than a year had elapsed since increases were granted in both the basic wage and margins.

The unions submitted that since 1952-53 all the economic indicators customarily used by the Commission had shown significant improvement. The employers submitted that there were two factors dominating the economic scene, namely, the two wage increases granted by the Commission in 1959, and the lifting of import restrictions by the Commonwealth Government. The whole of the economic material available to the Commission had to be discounted by the fact that the combined effect of the two wage increases had not at that time been felt by the economy. As to the lifting of import restrictions, the likelihood was that there would be an appreciable increase in the amount of imports, which would render more difficult the task of local manufacturers, a task already made difficult by the wage increases in 1959.

The Commonwealth Government stated that, although no quantitative estimate could be made of the increase in imports likely to occur as a result of the lifting of import restrictions, the significance of their removal was that it had come at a time when the effects of the 1959 wage increases had not been fully felt. The effect on the annual wages bill of the increased margins was estimated to be about £100 million and the direct cost of the 1959 basic wage increase about £65 million. In the Commonwealth's view, these increases would raise costs and price levels significantly and further secondary effects would follow. They would also give a further strong stimulus to the demand for goods and services. The Commonwealth Government submitted that what were needed were a firm rejection of any new measures that would add to current inflationary pressures and time for the adjustment of the economy to the general wage increases of 1959. The Commission considered that such a clear statement of the Commonwealth Government's attitude, supported by submissions and economic material, was a matter which it must seriously take into account.

Having referred to the substantial increases in both basic and secondary wages that had been granted in the previous twelve months to employees under federal awards, and to the fact that their effects had not at that time been reflected in the economy, the Commission concluded:—" We consider that it would be unsafe and perhaps dangerous to increase the basic wage at this point of time. We have formed this opinion with a full sense of the obligation which this Commission has to fix the basic wage from time to time at the highest amount that the economy can sustain so that the wage and salary earner may obtain his proper share of goods and services. On the other hand we are mindful of the danger to the whole community, including the wage and salary earner, of the basic wage being fixed at an amount which might increase inflation and upset the stability of the economy."\*

(ix) *Differential Basic Wage Inquiries, 1960.* On 9th August, 1960, the Commonwealth Conciliation and Arbitration Commission commenced hearing claims by:—(a) the Federated Engine Drivers and Firemen's Association of Australia to vary the Engine Drivers and Firemen's (General) Award by eliminating country differentials from basic wages prescribed therein; (b) employers' associations in South Australia to vary the Metal Trades Award by providing that future basic wage increases for Adelaide should be 25 per cent. less than basic wage increases for Sydney until the Adelaide basic wage was 90 per cent. of the Sydney basic wage, and that the basic wage applicable in areas other than Adelaide, Whyalla and Iron Knob should be £13 8s. and should remain unchanged until the Adelaide rate reached £14.

Judgment was delivered on 14th December, 1960. The Commission granted the application to eliminate specified country differentials from the Engine Drivers and Firemen's (General) Award, the new basic wages to be payable from the beginning of the first pay-period commencing on or after 1st January, 1961. Other awards were adjusted similarly on application to the Commission. The employers' applications in respect of basic wages in South Australia were both rejected.

(x) *Basic Wage and Standard Hours Inquiry, 1961.* On 14th February, 1961, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby C.J. (President), Ashburner and Moore J.J. (Deputy Presidents), commenced hearing applications by employers and unions for variation of the Metal Trades Award. In the first application the employers sought to increase the number of ordinary working hours per week from 40 to 42, with a concomitant increase in weekly wages by an amount equivalent to two hours pay at ordinary rates, and to effect certain other consequential variations. In the second the unions applied for an increase in the basic wage on a six capital cities basis by the amount of 49s. (which was amended during the hearing to 52s.) and for the re-introduction of automatic quarterly adjustments based on the "C" Series Retail Price Index. The amount claimed represented 27s. (30s.) for cost of living increases since 1953 and 22s. to reflect increases in productivity since that time.

In its judgment, delivered on 4th July, 1961, the Commission refused the employers' application and the unions' application for restoration of quarterly adjustments, and increased the basic wage of adult male employees covered by federal awards by a uniform amount of 12s. a week, payable from the beginning of the first pay-period commencing on or after 7th July, 1961.†

The applications were heard together, but although from time to time reference was made to the employers' claim, in essence it was the unions' claim which was to the forefront and with which all the parties principally concerned themselves.

*The Unions' Claims.* In dealing with the unions' claims, the Commission first discussed its own role and that of the Commonwealth and States.

In view of certain propositions put forward which seemed to be founded on the assumption that it had jurisdiction to deal with economic matters at large, the Commission once again set out the role and function of a federal arbitral tribunal in cases such as this. After citing what had been said in earlier judgments, the Commission further stated:—" We are not national economic policy makers or planners. We are confined to the legislation under which we act, and, in particular, in basic wage cases we have the function of deciding only what is a just and reasonable basic wage. This does not mean of course, that we have not to consider seriously the probable effects of our decision on the economy."

\* *Commonwealth Arbitration Reports*, Vol. 94, p. 321.  
Vol. 97, p. 378.

† *Commonwealth Arbitration Reports*,

The question of what weight the Commission should give to the attitude and submissions of the Commonwealth Government was again raised. In the 1960 Basic Wage Inquiry, the attitude of the Commonwealth was positively stated to be one of opposition to a wage increase, but in the 1961 Inquiry, although the Commonwealth followed its usual practice of supplying, for the benefit of the Commission and the parties, certain economic and statistical material, it expressed no attitude other than its opposition to the re-introduction of quarterly adjustments. The Commission stated that it was not concerned with drawing inferences, as it had been asked to do, from the material presented, as to whether the Commonwealth had an attitude, and as to what it might be. The mere fact that the Commonwealth adopted an attitude before the Commission would not result in that attitude being accepted. Any opposition to or support of any claim by the Commonwealth would be treated on its merits.

All States except New South Wales were represented at the hearing. South Australia made no submissions and called no evidence. Tasmania indicated its support for the unions' application for the restoration of automatic adjustments, plus an adjustment of the basic wage to the level indicated by the movement in the "C" Series Index, but presented no material. Victoria, Queensland and Western Australia neither supported nor opposed the application of the unions, but all presented some statistical information.

In claiming the re-introduction of automatic quarterly adjustments, counsel for the unions submitted, firstly, that the reasoning in each of the judgments of the Court and the Commission from 1952-53 to 1960 was wrong and that there was in none of them any proper reason for rejecting the principle of automatic quarterly adjustments; and secondly, that it was wrong for the Commission to fix a wage based on the capacity of the economy and not to provide some machinery which would ensure that the value of the wage was not subsequently eroded by price movements when prices increased.

The Commission considered it indisputable that at the time of its fixation the amount of a basic wage is both a money wage and a real wage, but the value of the real wage is altered by subsequent changes in price levels. Counsel for the unions submitted that a real basic wage should be determined from time to time with some interval longer than one year between determinations, and that the real value of the basic wage between determinations should be maintained automatically by adjustment in accordance with a price index. Unless this were done, the amount of goods and services that could be purchased by the basic wage would decline as prices rose.

The Commission was asked to assume that between basic wage fixations the capacity of the economy to maintain a basic wage would increase or remain constant. If capacity were to diminish, the unions argued, the Commission was of easy access and employers could seek corrective action. The Commission's duty was to fix a just and reasonable basic wage, and the provision of automatic quarterly adjustments would ensure that this was done. Further, the provision of automatic adjustments would relieve the Commission of the necessity of annual reviews of the state of the economy. The unions claimed that it was not practicable for the Commission to make a proper assessment of the economy, including movements in productivity, every twelve months, and to give proper consideration to the fixation of a new real basic wage.

The Commission rejected the employers' argument that the unions were really asking it to return to a needs basic wage as distinct from a capacity basic wage.

It went on to consider the practical difficulty which would in the past have confronted both the Court and the Commission if they had attempted to ensure that a basic wage fixed by them could be properly maintained at its real level. The Commission stated:—  
 " . . . the 'C' Series Index was over a period becoming suspect and the Court and the Commission could not have relied on it to achieve a proper result. The emergence of the Consumer Price Index, however, has removed that difficulty and we are therefore now able to seek to ensure that the basic wage which we fix should, subject to our supervision, maintain its real standard; in other words, that employees should, between fixations of the real basic wage and subject to our supervision, continue to be able to purchase the same amount of goods and services with the basic wage portion of their wage. We add that amongst other things the emergence of the Consumer Price Index has also enabled us to fix at this time a standard which, in our view, is more likely to be properly maintainable than recent past standards."\*

Having reached the conclusion that the principle of the maintenance of the purchasing power of the basic wage could be adopted, the Commission found it unnecessary to deal with the first part of the unions' argument, as to the correctness or otherwise of earlier decisions.

\* *Commonwealth Arbitration Reports*, Vol. 97, p. 385.

After comparing the "C" Series Retail Price Index and the Consumer Price Index, the Commission said:—"In our view the material available demonstrates the superiority of the Consumer Price Index over the 'C' Series Retail Price Index. The former is an index recently constructed by the Commonwealth Statistician in order to give a proper and accurate up-to-date coverage of movements in retail prices. The latter index, on a regimen constructed many years ago, can no longer in our view be considered reliable for wage-fixing purposes. We find the Consumer Price Index suitable under present circumstances for the maintenance of the purchasing power of the basic wage we will now fix."\*

It was then necessary to consider the question of how movements in the Consumer Price Index could be used. In the 1959 and 1960 basic wage decisions the Commission had stated that it was preferable to have an annual review rather than provide for automatic adjustments. However, with the publication of the Consumer Price Index, upon which greater reliance could be placed, what had been said in those two cases was no longer adequate. Nevertheless, the Commission was not prepared to return to a system whereby adjustment was purely automatic, because it thought that there should be some safeguard. Although the Consumer Price Index was preferred to the "C" Series Retail Price Index, it could not be assumed that this index would at all times so accurately measure movements in retail prices that the Commission would be prepared to apply its workings automatically to the basic wage.

In its judgment, the Commission stated:—"We consider it desirable that the application of the Consumer Price Index should always be subject to control by the Commission and the Commission should be able to decide whether a particular increase or decrease in the figures as disclosed in the Consumer Price Index should be applied to the basic wage. Our present opinion is that this consideration of prices should take place annually. We will each year make the assumption that the effect of movements in the Consumer Price Index should be reflected in the basic wage unless we are persuaded to the contrary by those seeking to oppose the change. As the basis of our decision is the desirability of maintaining the value of the real wage based on the concept of national capacity, the appropriate matter for consideration would appear to be what should be the effect on the six capital cities basic wage of movements in the six capital cities index. The resulting figure will be applied to all federal basic wages.

"Since such a consideration of price movements is to take place annually, the question remains whether the Commission should at the annual hearing continue to review all factors in the economy to decide whether or not to change the level of the real basic wage. It seems to us that once the question of prices is dealt with otherwise, a review of the economy generally and in particular of productivity increases could more properly take place at longer periods of time, say, every three or four years. This statement of our views does not, of course, preclude any party from seeking to exercise its right to come to the Commission more frequently than every three or four years to seek a change in the real basic wage but, except in unusual circumstances, we consider such a period a proper interval between reviews of this kind."†

The Commission concluded that the basic wage which it had fixed took into account increases in productivity up to June, 1960, and it therefore anticipated that a review of the real basic wage would not be necessary for some three years. The Commission went on:—"If our anticipation is correct, in the proceedings next year the only issue will be whether or not the money wage should be adjusted in accordance with any change in the Consumer Price Index. The onus will be on the party opposing such an alteration to show that it should not be made. If the price index has risen the unions may rely *prima facie* on that fact. It will then be for the employers to show that the increase in prices is of an exceptional character . . . so that it should not be reflected in a basic wage increase or that there is some special factor in the economy which would make it inadvisable to allow the increase."‡

The Commission had in the past felt some difficulty in endeavouring to make a satisfactory assessment of the economy from the long-range point of view every twelve months, and this difficulty played its part in the Commission's attempt to confine short-term considerations to price movements, and to allow a longer period of time between considerations of the long-term trends in the economy.

On the subject of departure from past practices, the Commission said:—"We consider it to be of importance that the Commission should not only consider itself open to depart from past practices when the occasion demands, but that it should make it quite clear that this will happen when the Commission, after due and careful consideration, considers it necessary. The concept is fundamental to our decision to depart from what has become the practice of having annual reviews of the basic wage in which the question of price increases is only one of a number of factors and is not given any special status."‡

\* *Commonwealth Arbitration Reports*, Vol. 97, p. 386.

† *Ibid.*, p. 387.

‡ *Ibid.*, p. 388.

*Productivity.* The unions claimed that there should be an increase of 22s. a week in the basic wage, based on an estimated one per cent. per annum increase in productivity over the previous decade, and that since 1952-53 no proper allowance had been made in the amounts awarded for increases in productivity. On this subject, the Commission stated:—"The question of productivity has been mentioned from time to time in various judgments of the Commission and there is really no dispute between the parties that workers are entitled to their share of increases in productivity. The issues between the parties are whether productivity can be measured with reasonable accuracy and whether in fact, through wage increases, workers have received their share of increased productivity."\*

In evidence presented by the unions, productivity was calculated by taking the Gross National Product for a year, deflating it by a price index and dividing the figure corrected for prices by (a) population and (b) the total of wage and salary earners in civilian employment. On the basis of these calculations, it was claimed that from 1952-53 to 1959-60 productivity had increased by about 2.6 per cent. per annum, "real" average earnings had increased by less than productivity, and the "real" basic wage had decreased. Counsel for the unions submitted that by taking 1 per cent. per annum the unions had clearly allowed for a safe margin of error.

In answer to this, the employers produced a similar type of calculation, but one that used a different deflator and 1949-50 as the base year. On this basis, it was claimed that the "real" basic wage had increased slightly more than productivity per person employed and some 10 per cent. more than productivity measured on a population basis, and "real" average weekly earnings had increased more than the "real" basic wage.

After considering the various calculations which had been submitted, the Commission concluded that 1952-53 was an abnormal year for the purpose of relevant comparison, and that 1949-50 was a more satisfactory starting point. In the Commission's view, it followed that the 1960 basic wage properly reflected increased productivity in so far as that could be approximately measured.

The employers claimed that the Commission should look at average weekly earnings as the true indicator of whether increases in productivity had been distributed to the work force, and that the only thing to be measured against productivity was what was in fact earned, and not the basic wage. In the Commission's view, the relevant consideration in fixing a basic wage was whether, if average weekly earnings properly reflected increased productivity but the basic wage did not, there was room for an increase in the basic wage based on the same increased productivity. In view of its finding that the 1960 basic wage did reflect increased productivity, the Commission concluded that it was unnecessary to decide the question on that occasion.

The Commission, having reviewed in detail indicators of the state of the economy, considered that the economy had the capacity to sustain an increase of 12s. in the basic wage and that that increase was the highest that could be sustained. This amount was sufficient to restore to the 1960 basic wage its purchasing power as measured by the Consumer Price Index.

The Commission considered the standard of the seven basic wages of the previous ten years and decided that the most appropriate one was the standard of 1960. It felt that the new basic wage combined in the result its conclusions on fundamental factors in a threefold way, because it was fixed at the highest amount the capacity of the economy allowed, it adopted as a standard that set by the basic wage of 1960, and it took account of productivity increases up to and including 1959-60.

Both the employers and the Commonwealth Government warned of the danger of inflation which might result from an increase in wages. However, the Commission pointed out that there was no legal reason why any increase in the basic wage should not be absorbed by over-award payments, although this might not be possible because of industrial pressure and scarcity of skilled labour. While the increase in wages granted would cause some increase in costs, the stimulation of demand would only restore it to the level of the previous year. The estimated increase of £60 million a year in wages and salaries would add less than 2 per cent. to the annual wages bill.

*The Employers' Claim.* The employers' claim was for an increase in standard hours from forty to forty-two per week, with a concomitant increase in the weekly wage equivalent to two hours pay at ordinary rates. This was to operate for four years, after which time weekly hours would revert to forty but the increased wage would remain. The Commission rejected arguments supporting this application, which stated that such a measure was called

\* *Commonwealth Arbitration Reports*, Vol. 97, p. 389.

for by the balance of payments crisis, and that it would lead to increased productivity at stable prices and distribute more evenly the amount of overtime worked. The Commission did not think that the state of the economy was such that standard hours should be increased.

*Employees on Lower Margins.* During the course of the proceedings, the President asked for submissions on the question of whether, by prescription of the basic wage, special consideration should or could be given to those employees who receive a margin above the basic wage of, say, £1 a week or less. The Commission decided that even if it had jurisdiction it would not, as a matter of discretion, make a differential basic wage at that time.

*Annual Leave Decision.* The Commission rejected the view that the reasons given for not granting an increase in annual leave in 1960 should impel it to refuse an increase in the basic wage. The question of wages was more fundamental and more important to the worker than the question of leave, and reasons which might delay the granting of additional leave might not be of sufficient weight to delay a basic wage increase. Also, had an increase in annual leave been granted, the Commission might not have been able to grant the increase in wages.

*Decisions.* The decisions of the Commission were as follows.

- “ 1. The employers' claim for an increase in the standard hours of work from forty to forty-two with a concomitant increase in the weekly wage equivalent to two hours' pay at ordinary rates is refused.
2. The unions' claim for restoration of automatic quarterly adjustments is refused.
3. The basic wages of adult male employees covered by federal awards will be increased by a uniform amount of 12s. per week.
4. The new rates will come into effect from the beginning of the first pay-period commencing on or after 7th July instant subject to special cases.
5. For the specific reasons set out in the judgment we consider that in February next the only issue in regard to the basic wage should be why the money wages fixed as a result of our decision should not be adjusted in accordance with any change in the Consumer Price Index and for the purpose of deciding that issue the Order giving effect to the decisions hereby announced will also provide for the adjournment of the application of the unions for increase of the basic wages under the Metal Trades Award to Tuesday, 20th February, 1962, in Melbourne, when such submissions thereon as are desired to be made will be heard.
6. The decision regarding increases in basic wages is applicable to all the applications which have been ordered by the Commission to be joined for hearing and decision with the original application and those joined applications are stood over to a date after 20th February, 1962, to be fixed by the Commission.”\*

(xi) *Basic Wage Inquiry, 1962.* In accordance with decision No. 5 in the 1961 Inquiry (see above), the adjourned hearing was held on 20th February, 1962, before Kirby C.J., and Ashburner and Moore JJ.

Counsel for the unions submitted that, although the 1961 judgment represented a recognition of union claims as to the need to maintain the real value of the basic wage, it had not met in full the demands of the trade union movement. The unions intended to return to the Commission at the appropriate time to argue at length for the implementation of their policy as to the basic wage standard and the question of quarterly adjustment.

In the employers' submission, reference was made to the Commission's 1961 judgment as indicating a firm intention to confine argument in the current hearing to the quantum of any basic wage change and to exclude any re-examination of the Commission's departure from previously accepted principles. As the Consumer Price Index had shown practically no change between the March and December quarters of 1961, there could be no change in the basic wage. However, the employers' view was that in any hearing involving movement in the basic wage the parties must be free to discuss economic capacity to sustain the basic wage at any given level and the principles upon which it is computed.

Counsel for the Commonwealth stated that at the proper time the Commonwealth would appear before the Commission to present argument as to the use of price indexes in basic wage fixation and other important issues raised by the 1961 judgment. However the matter might come before the Commission as a matter of procedure, when circumstances called for the debate of any substantive issue the Commonwealth would be in a position to make further submissions.

---

\* *Commonwealth Arbitration Reports*, Vol. 97, p. 416.

The Commission decided that there would be no alteration in the amounts of the existing basic wages until further order; and further adjourned the application before it until 19th February, 1963. At the adjourned hearing the issues would be: (a) The issue set out in paragraph 5 of the decisions of 4th July, 1961 (*see p. 479*); (b) Any issue which a party desired to raise and of which it had given notice to the Industrial Registrar, the other parties and to the Attorney-General by 31st January, 1963. The applications referred to in paragraph 6 of the decision of 4th July, 1961, were stood over to a date after 19th February, 1963, to be fixed by the Commission with liberty to any of the parties to those applications to apply in the meantime.

(xii) *Basic Wage Inquiry*, 1963. This was an adjourned inquiry which arose out of an order made by the Commission on 20th February, 1962 (*see p. 479*). The hearing was held on 5th February, 1963 before Kirby C.J., Ashburner and Moore J.J.

During the proceedings, counsel for the unions discussed the various methods by which changes in the rates of basic wage could be calculated by using changes in the index numbers of the Consumer Price Index. Counsel asked for a direction by the Commission as to which method should be used.

In conformity with the decision in the 1962 Basic Wage Inquiry (*see above*), counsel for the employers gave notice to the Commission that issues and procedures referred to in the 1961 Basic Wage Judgment that related to the fixation of wages or conditions of employment by reference to the capacity of the national economy would, of necessity, be argued at the present hearings.

The employers submitted that the following matters were essential considerations in the hearing and determining of any application seeking to alter wages and conditions of employment on a national basis.

- (a) The role of the Commission in relation to government economic or fiscal policies, inflation, etc.
- (b) The justification for adjustment of wages by reference to a price index either automatically or *prima facie*, including the relationship between movements in a price index and variations in capacity of the national economy.
- (c) The relationship between the capacity of the economy to absorb increases in wages or labour costs and the movements or likely movements in national productivity.

Counsel for the unions pointed out that the matters raised by the employers could be discussed only before a Presidential Bench of the Commission and that the employers could not seek the right to argue the 1961 basic wage decisions before a bench of the Commission constituted otherwise.

In the judgment given on 5th February, 1963 the Commission said:—

“1. There will be no alteration in the amounts of the existing basic wage until further order of the Commission.

2. The application before the Commission is further adjourned until 18th February, 1964.

3. At such adjourned hearing the issues will be:

- (a) The issue set out in paragraph (5) of the decision of 4th July, 1961 (*see page 479*), and
- (b) Any issue which a party desires to raise and of which it has given notice to the Industrial Registrar, the other parties, and the Attorney-General, by the 31st January, 1964.”

With regard to the matter of the use of statistics, which had been raised by counsel for the unions, the Commission felt that it was not the appropriate time to deal with the matter, but it would be further considered when it was appropriate.

The Commission referred to the matter raised by the employers concerning the considerations to be taken into account by the Commission when hearing applications to alter wages and conditions of employment, and ruled that it was not the appropriate time to deal with the submissions made.

If submissions were made before benches of the Commission differently constituted from the present one, then those benches were the ones to deal with their relevance, admissibility or otherwise.

The application referred to in para. 6 of the decision of 4th July, 1961, were further stood over to a date after 18th February, 1964, to be fixed by the Commission with liberty to any of the parties to these applications to apply in the meantime.

(xiii) *Basic Wage Inquiry, 1964.* The Commonwealth Conciliation and Arbitration Commission announced on 9th June, 1964, its decision on trade union claims for an increase in basic wages for adult males covered by federal awards. The Commission was unanimous that an increase be granted, but was divided equally in opinion on the amount of the increase, the President (Kirby C.J.) and Moore J. being of the opinion that it should be 20s. and Gallagher and Nimmo J.J. that it should be 10s. The Commission being equally divided in opinion, the matter was decided according to the opinion of the President, as provided in the Conciliation and Arbitration Act. The increase of 20s. a week would apply to adult male employees covered by federal awards and would operate from the beginning of the first pay period commencing on or after 19th June, 1964. The Commission refused the unions' application for restoration of automatic quarterly adjustments of the basic wage. The 1s. per week disparity in the basic wage for station hands under the Pastoral Award was abolished. A summary of the reasons for these decisions will be included in the next issue of the Year Book.

(xiv) *Employers' Total Wage Case, 1964.* On 9th June, 1964, the Commonwealth Conciliation and Arbitration Commission announced its decision rejecting the application of employers for deletion from the Commission's awards, generally, of the basic wage provisions and for the insertion in those awards of a wage expressed as a total wage. A summary of the reasons for this decision will be included in the next issue of the Year Book.

(xv) *Rates Operative, Principal Towns.* The basic wage rates of the Commonwealth Conciliation and Arbitration Commission for adult males and females, operative as from the beginning of the first pay period commencing on or after 19th June, 1964, are as shown in the following table.

COMMONWEALTH BASIC WAGE: WEEKLY RATES(a), 1964

City or town	Rate of wage		City or town	Rate of wage

(a) Operative from the beginning of the first pay-period commencing on or after 19th June, 1964; female rates are 75 per cent. of male rates. (b) Melbourne rate plus 6s. 6d. loading for males; 75 per cent. of male rate for females. (c) Adelaide rate plus 5s. for males; 75 per cent. of male rate for females. (d) Excludes special loadings—see p. 482.

The following table shows the movements of this wage in all State capital cities and the six capital cities during the period 1939 to 1964.

(a) Rates prescribed by the Commonwealth Conciliation and Arbitration Commission (before 30th June, 1956, the Commonwealth Court of Conciliation and Arbitration). Rates include prosperity loadings, where applicable. (b) Rates operative from the beginning of the first pay-period commencing in the month shown or commencing on or after the date shown. (c) From December, 1950 the basic wage rates for adult females have been 75 per cent. of the rates for adult males. (d) Automatic adjustment discontinued (see p. 469).

A table showing Commonwealth basic wage rates from 1923 to 1961 was published in the Appendix to *Labour Report No. 49*.

3. **Australian Territories.**—In the Northern Territory, there are two basic wages operating, one in respect of areas north of the 20th parallel of South Latitude, generally referred to as the “Darwin” rate, and the other in respect of areas south of that parallel and extending down to the 26th parallel (the “Port Augusta” rate).

The basic wage rates payable as from the beginning of the first pay-period commencing on or after 19th June, 1964 were:—“Darwin” rate, adult males £16 7s., adult females £12 5s.; “Port Augusta” rate, adult males £15 14s., adult females £11 15s. 6d.

In addition to these rates, special loadings were prescribed in Northern Territory awards following the fixation of the basic wage rates operative from November, 1951.

In the Australian Capital Territory, the rates payable as from the beginning of the first pay-period commencing on or after 19th June, 1964 were £15 10s. for adult males and £11 12s. 6d. for adult females.

Further details of basic wage rates in the Northern Territory and the Australian Capital Territory may be found in *Labour Report No. 49*, pages 114–118.

4. **Basic Wage Rates for Females.**—Reference should be made to *Labour Report No. 49* (pp. 112–114) for an account of the fixation of minimum rates and basic wages for adult females by the Commonwealth Court of Conciliation and Arbitration. At the end of the 1949–50 Basic Wage Inquiry, the Commonwealth Court of Conciliation and Arbitration, by a majority decision, fixed the basic weekly wage for adult females at 75 per cent. of the corresponding male rate from the beginning of the first pay-period commencing in December, 1950. This percentage has continued to be prescribed in subsequent inquiries.

5. *State Basic Wages.*—(i) *New South Wales.* The first determination under the New South Wales Industrial Arbitration Act of a standard "living" wage for adult male employees was made on 16th February, 1914, when the Court of Industrial Arbitration fixed the living wage at £2 8s. a week for adult males in the metropolitan area. A Board of Trade, established in 1918, with power to determine the "living" wage for adult male and female employees in the State, made numerous declarations from 1918 to 1925, but ceased to function after the *Industrial Arbitration (Amendment) Act, 1926* transferred its powers, as from 15th April, 1926, to the Industrial Commission of New South Wales.

The adult male rate was determined on the family unit of a man, wife and two children from 1914 to 1925; a man and wife only in 1927, with family allowances for dependent children; and a man, wife and one child in 1929, with family allowances for other dependent children. However, with the adoption in 1937 of the Commonwealth basic wage, the identification of a specified family unit with the basic wage disappeared.

A State scheme of supplementing wages by child endowment became operative in New South Wales from July, 1927, and continued until superseded by the Commonwealth Government scheme in July, 1941. A brief account of the main features of the New South Wales system was given in *Official Year Book No. 37*, pages 485–6. For particulars of the Commonwealth scheme, see Chapter XVI. of this Year Book.

Shortly after the Commonwealth Court of Conciliation and Arbitration announced its decision in the 1937 Basic Wage Inquiry, the Government of New South Wales amended the *Industrial Arbitration Act* to make the State basic wage agree with the Commonwealth rate ruling in New South Wales, and to adopt, as far as practicable, the general principles of operation laid down by the Commonwealth Court. Further amendments to the *Industrial Arbitration Act* were made in 1950 to give effect to the new rates declared by the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry (see page 469).

Differential basic wage rates for country areas (except Broken Hill) and for employees under Crown awards were eliminated by an amendment of the *Industrial Arbitration Act* in 1951. Separate rates for Broken Hill were discontinued in 1961 (see below).

Following the decision of the Commonwealth Court of Conciliation and Arbitration in September, 1953, to discontinue the system of automatic adjustment of the basic wage in accordance with changes in the "Court" Series retail price index numbers, the New South Wales Industrial Commission deleted the automatic adjustment clause from awards, etc., within its jurisdiction. As a result, the basic wages applicable for the State and operative from the beginning of the first pay-period commencing in August, 1953, remained unchanged until November, 1955.

In October, 1955, the *Industrial Arbitration Act, 1940–1955* was amended to provide for the automatic adjustment of the existing basic wage each quarter, in accordance with the movements in the Commonwealth Statistician's "C" Series retail price index numbers. The first adjustment, based on the index number for the September quarter, 1955, represented the amount which would have been added to the basic wage if quarterly adjustments had not been suspended, and was made payable from the beginning of the first pay-period in November, 1955. Automatic adjustments have continued to operate since that date.

Act No. 29, 1961 (assented to on 13th October, 1961) amended the *Industrial Arbitration Amendment Act, 1961*, by adopting the Consumer Price Index numbers in place of the "C" Series retail price index numbers for purposes of the automatic quarterly adjustment of the basic wage. The November, 1961, variation was the first based on the Consumer Price Index. Consumer Price Index numbers relate only to capital cities and the weighted average for the six capital cities, and as a result the Sydney basic wage rate became the rate for the whole of New South Wales, separate rates no longer being prescribed for Broken Hill and "5 Towns" after November, 1961.

From the beginning of the first pay-period in May, 1964, the basic wage for adult males was £15 5s. and for adult females £11 9s.

The *Industrial Arbitration (Female Rates) Amendment Act* (No. 42, 1958), which became operative on 1st January, 1959, defined the existing basic wage for adult females as being 75 per cent. of the adult male rate and made provision for equal pay for males and females in certain circumstances. Where the Industrial Commission or a Conciliation Committee is satisfied that male and female employees are performing work of the same or a like nature and of equal value, they shall prescribe the same marginal or secondary rates of wage. The basic wage for these adult females was prescribed as 80 per cent. of the appropriate basic wage for adult males as from 1st January, 1959. Thereafter, the basic wage was to be increased annually by 5 per cent., so that on 1st January, 1963, it became the same as that for adult males.

A table showing, for the period from 16th February, 1914, to November, 1962, the basic wage rates for adult males and females payable in Sydney was published in the Appendix to *Labour Report* No. 49, 1961.

(ii) *Victoria*. There is no provision in Victorian industrial legislation for the declaration of a State basic wage. Wages Boards constituted from representatives of employers and employees, with an independent chairman, for each industry group or calling, determine the minimum rate of wage to be paid in that industry or calling. In general, these Boards have adopted a basic wage in determining the rate of wage to be paid.

By an amendment to the *Factories and Shops Act* in 1934, Wages Boards were given discretionary power to include in their determinations appropriate provisions of relevant Commonwealth Awards. A further amendment to this Act in 1937 made it compulsory for Wages Boards to adopt such provisions of Commonwealth Awards. The 1937 Act, as amended, also gave Wages Boards power to adjust wage rates, "with the variation from time to time of the cost of living as indicated by such retail price index numbers published by the Commonwealth Statistician as the Wages Board considers appropriate". The Wages Boards thus adopted the basic wages declared by the Commonwealth Court of Conciliation and Arbitration and followed that Court's system of adjusting the basic wage in accordance with variations in retail price index numbers.

After the Commonwealth Court of Conciliation and Arbitration discontinued the system of automatic adjustment of the Commonwealth basic wage in September, 1953, a number of Wages Boards met in November, 1953, and deleted references to these adjustments. However, an amendment to the *Factories and Shops Act* in November, 1953, required Wages Boards to provide for the automatic adjustment of wage rates in accordance with variations in retail price index numbers.

In October, 1956, an amendment to the *Labour and Industry Act* (which had superseded the *Factories and Shops Acts* in 1954) deleted the automatic adjustment provision and directed Wages Boards in determining wage rates to take into consideration relevant awards of, or agreements certified by, the Commonwealth Conciliation and Arbitration Commission. As a result of this legislation, the last automatic quarterly adjustment of the basic wage made was based on the variation in retail price index numbers for the June quarter, 1956, and was payable as from the beginning of the first pay-period in August, 1956. Following the judgment of the Commonwealth Conciliation and Arbitration Commission in the 1961 Basic Wage Inquiry, Wages Boards met in July and August, 1961, and varied their determinations by incorporating the new Commonwealth rates. As the 1964 Basic Wage Inquiry resulted in an increase of 20s. being made to the Commonwealth basic wage for adult males, the rates for Melbourne are £15 7s. a week for adult males and £11 10s. for adult females.

A table showing, for the period November, 1953 to July, 1961, the basic wage rates for adult males and females adopted by most Wages Boards was published in the Appendix to *Labour Report* No. 49, 1961.

(iii) *Queensland*. The *Industrial Conciliation and Arbitration Act* of 1929 established an Industrial Court, and provided that the Court could make declarations as to the basic wage and standard hours. This Act, as subsequently amended, was repealed by the *Industrial Conciliation and Arbitration Act* of 1961, which established, in addition to the Industrial Court, an Industrial Conciliation and Arbitration Commission. The full bench of the Commission, consisting of not less than three Commissioners, may make declarations as to, *inter alia*, the basic wage for males and/or females and the standard hours of work. The first formal declaration of a basic wage (£4 5s. for adult males) by the Queensland Court of Industrial Arbitration operated from 1st March, 1921. Prior to this declaration, the rate of £3 17s. a week for adult males had been generally recognized by the Court in its awards as the "basic" or "living" wage. The Queensland Industrial Conciliation and Arbitration Act provides that any basic wage declared must at least maintain an employee, his wife and family of three children in a fair and average standard of comfort.

From 21st April, 1942, the Queensland Industrial Court adopted the practice of making quarterly declarations of the basic wage on the basis of variations in the "C" Series retail price index numbers for Brisbane.

The Court granted increases of 7s. and 5s. to the basic wages for adult males and adult females respectively, payable from 23rd December, 1946, following the "interim" basic wage judgment of the Commonwealth Court of Conciliation and Arbitration announced earlier in December, 1946.

Following the decision of the Commonwealth Court of Conciliation and Arbitration to increase the male and female basic wages from December, 1950, the Queensland Industrial Court, after an inquiry, granted an increase of 15s. a week to both adult males and adult females, operative from 7th December, 1950. The new male rate was identical with the Commonwealth basic wage for the Brisbane metropolitan area and the basic wage payable to adult females became approximately 66 per cent. of the male rate.

In January, 1953, because the Court was not satisfied that the fall in the "C" Series index for Brisbane for the December quarter, 1952, was a true representation of the economic position for Queensland as a whole, it declined to make any alteration to the existing basic wage. However, quarterly adjustments were made for the next four quarters.

Following a Basic Wage Inquiry, the Court announced, on 11th June, 1954, that there would be no change in the basic wage rates declared for February, 1954. For the following four quarters, the Court also decided not to vary the existing basic wage rates. However, after considering the "C" Series index number for the quarter ended 30th June, 1955, and its relation to the index number for the March quarter, 1955, the Court announced that, as these figures showed a continued upward trend, the basic wage for adult males should be increased from 1st August, 1955. In this judgment, the Court emphasized that it held itself free whether or not to adjust the basic wage upwards or downwards in accordance with movements in the "C" Series retail price index numbers. The Court examined the movement in these index numbers for each subsequent quarter and announced variations in the basic wage.

On 22nd and 23rd April, 1958, the Court heard an application by combined unions for an immediate increase of £1 in the basic wage, on the ground that a state of emergency existed with regard to the cost of living. On 30th May, 1958, the Court dismissed the application.

In December, 1960, the Court determined that as from 1st May, 1961, the basic wage for adult females should be 75 per cent. of that for adult males.

In its basic wage declaration of 25th January, 1961, the Court referred to the opinion given by the Commonwealth Statistician that the "C" Series Retail Price Index had become an unreliable measure of retail price changes in recent quarters and to the fact that, for current statistical purposes, variations in retail prices were measured by the Consumer Price Index. Taking into consideration all relevant factors, including the approximate increase in price levels as disclosed by the Consumer Price Index, the Court decided to increase the basic wage for adult males by 4s. per week.

The *Industrial Conciliation and Arbitration Act* of 1961, which came into operation as from 2nd May, 1961, provided that all persons interested must be given an opportunity to be heard before any general declaration as to the basic wage can be made.

Following an inquiry, the Commission, in a decision issued on 24th May, 1961, increased the adult male basic wage by 4s. a week, which was approximately the amount of the increase indicated by the Consumer Price Index for March quarter, 1961.

In September, 1961 the Commission heard an application by employer organizations for a declaration of a general ruling that "in future the basic wage for males and/or females shall not be reviewed merely by reason of any change in the Consumer Price Index at intervals of less than twelve months". The application was opposed by the trade unions generally. In a judgment delivered on 14th November, 1961, the Commission refused the employers' application.

An inquiry held in November and December, 1962, dealt with an application by unions for increases of £1 4s. in the adult male basic wage and 18s. in the adult female basic wage. The application was opposed by employer organizations generally, by the State of Queensland and by the Queensland Commissioner for Railways. Judgment was given on 20th December, 1962, the application being refused.

A further application was made by trade unions for a declaration of a basic wage, and an inquiry was held in April, 1963. Employers generally opposed the application, and the State of Queensland, while adopting a neutral attitude, submitted information for the assistance of the Commission. In a judgment delivered on 26th April, 1963, the Commission increased the basic wage by 2s. a week for adult males and by 1s. 6d. a week for adult females from 6th May, 1963.

The rates payable in the Southern Division (Eastern District) from 6th May, 1963, were £14 6s. for adult males and £10 14s. 6d. for adult females.

In addition to the basic wage for the Southern Division (Eastern District), which includes Brisbane, adult males in other areas receive district allowances. As from 2nd February, 1959, the allowances have been:—Southern Division (Western District) 10s. 6d., Mackay Division 9s., Northern Division (Eastern District) 10s. 6d., Northern Division (Western District) £1 12s. 6d. The allowances for adult females are not less than 75 per cent. of those for adult males.

In the Appendix to *Labour Report* No. 49, a table was published showing adult male and adult female basic wage rates payable in the Southern Division (Eastern District) from 1st March, 1921, to 29th May, 1961.

(iv) *South Australia.* The *Industrial Code, 1920–1963* provides that the Board of Industry shall after public inquiry declare the “living wages” to be paid to adult male and adult female employees. The Board has power also to fix different rates to be paid in defined areas.

The family unit was not specifically defined in the Code, but the South Australian Industrial Court in 1920 decided that the average employee in respect of whom the living wage was to be declared was a man with a wife and three children. However, the concept of a family unit disappeared with the adoption of basic wage rates declared by the Commonwealth Conciliation and Arbitration Commission (*see below*).

The first declaration by the Board of Industry became operative from 4th August, 1921, when the living wage for adult male employees in the metropolitan area was determined at £3 19s. 6d. a week.

Following the “interim” increase in the “needs” basic wage of the Commonwealth Court of Conciliation and Arbitration, announced on 13th December, 1946, the South Australian Government made a provision in the *Economic Stability Act 1946* for the declaration by the Governor of a living wage based on the Commonwealth basic wage for Adelaide. This action was taken because the Board of Industry had made a determination on 5th September, 1946, and under the Industrial Code was unable to make a further determination for six months.

The *Industrial Code Amendment Act 1949* made provision for the quarterly adjustment of the living wage in accordance with the variations in the Commonwealth basic wage for Adelaide. In effect, this made the State living wage and the Commonwealth basic wage equal from the beginning of the first pay-period commencing in February, 1950. The prescribed adjustment to the female living wage was seven-twelfths of that made to the Commonwealth male basic wage. The Board of Industry retained power to amend the living wage, but any new living wage was to be adjusted quarterly as above.

Following the decision of the Commonwealth Court of Conciliation and Arbitration in the 1949–50 Basic Wage Inquiry, the South Australian *Industrial Code* was amended to provide for declarations of the living wage by proclamation to prevent unjustifiable differences between the State and Commonwealth rates of wage. By proclamation dated 30th November, 1950, the South Australian living wage in the metropolitan area was made identical with the December, 1950, rates fixed by the Commonwealth Court of Conciliation and Arbitration for the metropolitan area of South Australia. The female basic wage, which had been approximately 54 per cent. of the male basic wage, was increased to 75 per cent. of the corresponding male rate.

When the Commonwealth Court of Conciliation and Arbitration discontinued quarterly adjustments to Commonwealth basic wages in September, 1953, the South Australian living wage also ceased to be varied quarterly, and since that time it has remained the same as the Commonwealth basic wage for Adelaide. Following the Commonwealth basic wage inquiries in 1956 and subsequent years, increases were made to the South Australian living wages by proclamation. The rates operative from 22nd June, 1964, were £15 3s. for adult males and £11 7s. for adult females.

A table showing adult male and adult female basic wage rates for the whole State (with the exception of Whyalla and nearby area) from 1921 to July, 1961, will be found in Section XI of the Appendix to *Labour Report* No. 49.

(v) *Western Australia.* The *Industrial Arbitration Act 1912–1961* provides that the Court of Arbitration may determine and declare a basic wage at any time on its own motion and must do so when requested by a majority of industrial unions or by the Western Australian Employers' Federation, with the limitation that no new determination shall be made within twelve months of the previous inquiry.

The term "basic wage" is defined in the Act as "a wage which the Court considers to be just and reasonable for the average worker to whom it applies". In determining what is just and reasonable, the Court must take into account not only the "needs of an average worker", but also the "economic capacity of industry" and any other matters it deems relevant.

The Act provides that the Court of Arbitration may make adjustments to the basic wage each quarter, if the statement supplied by the State Government Statistician showing retail price index numbers and monetary equivalents in terms of the State basic wages indicates that there has been a variation of 1s. or more a week compared with the previous quarter. These adjustments generally apply from the dates of declaration by the Court.

The first declaration of the basic wage by the Court of Arbitration, after the authority to fix one was vested in the Court in 1925, operated from 1st July, 1926. The family unit is not specifically defined in the Act, but it has been the practice of the Court to take as a basis for its calculations a man, his wife and two dependent children. Since that date, the principal inquiries have been those of 1938, 1947, 1950 and 1951.

Following the judgment of the Commonwealth Court of Conciliation and Arbitration in the 1949-50 Basic Wage Inquiry, the Western Australian Court of Arbitration decided that the basic wage should be increased by £1 a week for adult males and by 15s. a week for adult females. As the result of a subsequent inquiry, the basic wage for adult females was increased from 1st December, 1951, to 65 per cent. of the corresponding male rate. This was subject to the condition that the increase in the basic wage should be offset by the reduction in, or deletion of, existing margins as specified by the appropriate award or determination.

Following the decision of the Commonwealth Court of Conciliation and Arbitration, in September, 1953, to discontinue quarterly adjustments to Commonwealth basic wages, the Western Australian Court of Arbitration exercised its discretionary power and declined to make any adjustments to the basic wage from November, 1953, to the June quarter, 1955.

However, from 9th August, 1955, the Court decided to increase the adult male basic wage by 5s. 11d. a week for Perth and to make corresponding increases for other areas. No further change was announced in the basic wage until January, 1956, and for each subsequent quarter to September quarter, 1961, the Court varied the State basic wages after considering the official statement supplied by the State Government Statistician, except in February, 1959, and February, 1960, when no change was made. Basic wage rates remained unchanged from 30th October, 1961, to 22nd April, 1963.

In a decision issued on 30th January, 1960, the Court, acting in recognition of an agreement between representatives of unions and employers, increased the basic wage for adult females from 65 per cent. to 75 per cent. of the adult male rate. The increased rates were payable from the beginning of the first pay-period commencing on or after this date. As in December, 1951, female margins were to be reduced or deleted to offset the increase in the female basic wage.

The rates payable in the metropolitan area as from 27th April, 1964, were £15 4s. 2d. for adult males and £11 8s. 2d. for adult females.

A table showing the West Australian State basic wage for the Perth Metropolitan Area, from 1926 to October, 1962, will be found in Section XI of the Appendix to *Labour Report* No. 49.

(vi) *Tasmania*. A State basic wage is not declared in Tasmania. Under the *Wages Board Act* 1920-1961, Wages Boards are constituted for a number of industries, from representatives of employers and employees and an independent chairman (who is common to all Wages Boards), with power to determine the minimum rates of wage payable in each industry. Until February, 1956, these Boards generally adopted the basic wages of the Commonwealth Court of Conciliation and Arbitration in determining the rates of wage to be paid.

Wages Boards have power to adjust their wage rates in accordance with variations in the cost of living as indicated by retail price index numbers published by the Commonwealth Statistician. When the Commonwealth Court discontinued the system of automatic adjustments of the basic wage in September, 1953, the Chairman of the Wages Boards stated he was of the opinion that automatic adjustment clauses should be deleted from all Wages Boards determinations. Before Wages Boards met to consider this matter, the wage rates for all determinations were automatically adjusted upwards from the beginning of the first pay-period commencing in November. By early December, 1953, all Wages Boards had met and deleted the automatic adjustment clause from determinations and cancelled the adjustment increases payable from November.

Automatic quarterly adjustments in accordance with movements in retail price index numbers were re-introduced by Wages Boards in February, 1956, and restored the basic wage to the level it would have reached if quarterly adjustments had not been discontinued in 1953. A further basic wage increase was payable from the first pay-period in May, 1956.

Upon application by the Employers' Federation of Tasmania, a compulsory conference of employer and employee representatives was held on 22nd and 25th June, 1956, to consider the adoption of Commonwealth basic wages and the deletion of automatic quarterly adjustment provisions. At the conclusion of the conference, the Chairman of the Wages Boards stated he was of the opinion that the adjustments should be suspended for a period in an endeavour to achieve some measure of stability. However, he pointed out that any Wages Board was competent to adopt, by agreement between the representatives of employers and employees or majority decision, the Commonwealth Court's basic wage or any other method of fixing the basic wage.

The majority of Wages Boards suspended automatic quarterly adjustments after the August, 1956, adjustment, and wage rates remained unchanged until July, 1959, when the Commonwealth rates were adopted. Following the decision of the Commonwealth Conciliation and Arbitration Commission in July, 1961, to increase the basic wage, Wages Boards met during July, and incorporated the new rates in their determinations. The rates for Hobart then became £14 14s. for adult males and £11 0s. 6d. for adult females. These rates operated until June, 1964, when, following the increase of 20s. in the Commonwealth basic wage for adult males, the rates became £15 14s. and £11 15s. 6d., respectively. During January, 1961, Wages Boards adopted the basic wage for Hobart as the uniform rate applicable throughout the State.

A table was published in the Appendix to *Labour Report* No. 49, 1961, showing basic wage rates for adult males and females generally adopted in Hobart for the period February, 1956, to July, 1961.

During 1962, a number of Wages Boards met and varied determinations by making provision for the automatic adjustment of the basic wage to conform to any change in the basic wage determined from time to time in awards of the Commonwealth Conciliation and Arbitration Commission.

(vii) *State Basic Wage Rates.* The "basic" wage rates of State industrial tribunals, operative in June, 1963, and June, 1964, are summarized in the following table.

(a) Where dates are not quoted, wage rates operate from the beginning of the first pay-period commencing in the month shown. (b) No basic wage declared. Rates shown are those adopted by most Wages Boards. (c) Wages Boards adopted the Commonwealth rate. (d) The "living wage" declared for the metropolitan area is also adopted for country areas, except at Whyalla and nearby areas, where a loading of 5s. a week for adult males is generally payable.

Tables showing State basic wage rates for a long period of years are contained in the Appendix to *Labour Report* No. 49, 1961.

## § 6. Wage Margins

1. **General.**—Wage margins have been defined as “ minimum amounts awarded above the basic wage to particular classifications of employees for the features attaching to their work which justify payments above the basic wage, whether those features are the skill or experience required for the performance of that work, its particularly laborious nature, or the disabilities attached to its performance ”.\*

Marginal rates of wage are determined by Commonwealth and State industrial tribunals. In the Commonwealth jurisdiction, prior to 1954, the Commonwealth Court of Conciliation and Arbitration had not made any general determination in respect of wage margins, but general principles of marginal rate fixation had been enunciated by the Court in the Engineers Case of 1924, the Merchant Service Guild Case of 1942 and the Printing Trades Case of 1947. Major determinations affecting margins were made in 1954, 1959 and 1963. The decisions of the Commonwealth Court and later the Commonwealth Conciliation and Arbitration Commission have generally been followed by State industrial tribunals in the determination of margins in State awards.

A summary of the 1954, 1959 and 1963 Margins Cases is given in the following paragraphs.

2. **Metal Trades Case, 1954.**—Employee organizations parties to the Metal Trades Award, 1952, filed applications during 1953 for increased margins for all workers covered by this award. The applications came on for hearing before J. M. Galvin C.C., who decided that they raised matters of such importance that, in the public interest, they should be dealt with by the Commonwealth Court of Conciliation and Arbitration. On 16th September and 6th October, 1953, the Conciliation Commissioner, pursuant to section 14A of the *Conciliation and Arbitration Act*, referred these applications to the Court.

The actual claims of the trade unions were that the marginal rate of 52s. a week payable to a fitter in the metal trades should be increased to 80s. a week (86s. for certain electrical trades), with proportionate increases for other award occupations. The margins then current, with a few exceptions, had been in existence since 1947. The employees' claims were in the nature of a test case to determine the attitude of the Court to other applications for increased margins.

Employer organizations respondent to the Metal Trades Award counter-claimed that existing margins for skilled tradesmen should remain unaltered, while those paid to partly skilled or unskilled workers should be reduced.

The Court decided to take the Commissioner's two references together, and the matter came on for hearing before the Full Arbitration Court (Kelly C.J., Kirby, Dunphy and Morgan J.J.) in Melbourne on 13th October, 1953.

In a judgment delivered on 25th February, 1954, the Court held that a *prima facie* case had been made for a re-assessment of margins but that the economic situation at that time, particularly in regard to the level of costs, did not permit of such a comprehensive review. The Court decided that, to avoid the creation of new disputes, to save expense and to obviate procedural difficulties, it would not reject the claims but adjourn them until 9th November, 1954.

On 25th and 26th August, 1954, summonses were filed by the employees' organizations for orders that proceedings in this case be brought forward, and the hearing was resumed on 5th October, 1954.

In a judgment delivered on 5th November, 1954†, the Court made an order re-assessing the marginal structure in the Metal Trades Award by, in general, raising the current amount of the margin to two and a half times the amount of the margin that had been current in 1937. However, in cases in which the result of that calculation produced an amount less than the existing margin, the existing margin was to remain unaltered. In effect, this decision increased the margins of a fitter from 52s. a week to 75s. a week, increased similarly margins of other skilled occupations, and made no increase in margins of what may generally be described as the unskilled or only slightly skilled occupations under the Metal Trades Award.

At the end of its judgment, the Court stated that, while its decision in this case related immediately to one particular industry, it was expected to afford general guidance to all authorities operating under the *Conciliation and Arbitration Act*, or under other legislation

\* *Commonwealth Arbitration Reports*, Vol. 80, p. 24.

† *Ibid.*, p. 3.

which provided for tribunals having power to make references, or being subject to appeal, to the Court, where the wage or salary may properly be regarded as containing a margin. The Court added observations for the guidance of these and of other tribunals " which may regard decisions of this Court as of persuasive authority ". Further details were published in *Labour Report* No. 46, 1958, pages 101-8.

3. *Margins Cases, 1959.*—On 25th August, 1959, the Commonwealth Conciliation and Arbitration Commission began considering a number of applications for changes in margins referred to it from the appropriate Commissioner. Applications had been made by various employee organizations for increased margins in Parts I. and II. of the Metal Trades Award, Part II. of the Aircraft Industry Award, the Bank Officials' Award and the Gold and Metalliferous Mining Award. An application by employers sought to reduce marginal rates in the Metal Trades Award. The Commission decided to hear all these matters together, permitting the applicant unions in respect of Part II. of the Metal Trades and Aircraft Industry Awards and the Bank Officials' Award to ask first for an interim increase. A summary of the principal decisions and reasons for judgment of the Commission is given in the following paragraphs. Further details, including extracts from the judgment, were published in *Official Year Book* No. 47, pages 455-9.

*Metal Trades Award, Part I.* The employee organizations claimed an increase in the margin for the fitter, as set out in the Metal Trades Award, 1952 (i.e. the award as it existed prior to the Metal Trades Case, 1954—see para. 2, page 489), from 52s. to 134s. a week and an increase of 157 per cent. in the margins for other classifications. The employers counter-claimed for a reduction in margins of 15s. a week.

The Attorney-General of the Commonwealth intervened, and not only submitted statistical material and an analysis of the economic situation, but also assisted the Commission with an exposition of various factors proper to be taken into account in the fixation of margins. In particular, the Commonwealth emphasized the desirability of flexibility in the workings of the arbitration system.

Counsel for the unions put broadly a case that in the proper fixation of margins the basic criteria were the market value at the time of the fixation of the wage and the economic capacity of the economy to pay the wages claimed, and he alleged that the 1954 Metal Trades decision had departed from these principles. He produced to the Commission material to demonstrate that the economic situation would justify the increases asked for. He also submitted that the true relativities in the Metal Trades Award should be those created by a combination of the 1947 Full Court decision and the second variation order made in 1947 by G. A. Mooney, C.C.\*

The employers adopted the view that no case had been made out for any increase and that there should be wage reductions. They also supplied the Commission with economic material in support of their case that there was no capacity in the community to sustain increased margins, and alternatively that any increased economic capacity which may have occurred since 1954 had been exhausted by basic wage fixations. As to relativities, the employers submitted that the 1954 decision should be adhered to and should be carried to its logical conclusion in so far as the lower paid classifications were concerned.

In its judgment, delivered on 27th November, 1959, the Commission rejected the employers' application to reduce margins, and made an order re-assessing the marginal structure in the Metal Trades Award by increasing the existing margins by 28 per cent., the amount of the increase being taken to the nearest 6d. The new margins applied from the beginning of the first full pay-period commencing in December, 1959. The effect of this decision was to increase the margin of the fitter from 75s. to 96s. a week and that for the process worker from 22s. to 28s.

The Commission stated that, not having before it the question of work values, and having decided not to alter the 1954 relativities, the increases had been expressed as a percentage of current margins, but this was not to be taken as an endorsement of that method of fixing margins.

In discussing the principles of marginal fixation, the Commission stated that there was no real reason why a margin should be expressed as a percentage of the basic wage, and that it would be unwise to express any margin in that way. On the related question of whether margins should be increased merely because of the decreasing power of money since last fixed, the Commission's view was that, although the automatic or mathematical approach

\* *Commonwealth Arbitration Reports*, Vol. 59, p. 1272.

† 92 C.A.R., p. 800.

should be rejected, some account must be taken, whenever a margin is under review, of the amount at which the margin was originally fixed and of any decrease in the purchasing power of money since the time of fixation.

On the question of economic capacity the Commission said that, prior to 1947, it had been the practice, in the metal trades industry at least, to consider the economic situation of the industry itself, but in 1954 the Court considered only the capacity of industry generally. However, the Commission pointed out that in many cases in the past, margins had been fixed without consideration of capacity, and it could see no reason why in appropriate circumstances that practice should not continue.

The submission by the employers that, even if there had been capacity to pay increased wages, that capacity had been exhausted by basic wage decisions in recent years, was rejected by the Commission.

The unions sought to have restored the relativities within the marginal structure of the Metal Trades Award which existed prior to the 1954 decision. The employers not only relied on the relativities created in 1937 and confirmed in 1954, except as to the lower paid classifications, but also asked the Commission to take the 1954 relativities to their logical conclusion in its decision in this matter as far as those classifications were concerned.

The Commission said that, in origin at least, relativities in margins were merely an expression of relative work values and there was no evidence of such values before the Commission. In the circumstances, the Commission was not prepared to accede either to the unions' submissions or to the employers' submission in this regard, and it accepted the relativities established by the 1954 decision except to the extent necessary to round some of the figures off. The question of relativities in margins in the Metal Trades Award, based on work value, thus remained open.

During the proceedings, the unions presented some evidence as to over-award payments in the industry. The Commission referred to the question whether it should pay regard to payments obtained by duress, and decided that the means by which over-award payments of sufficient duration were obtained was irrelevant when considering economic capacity. The mere fact that such amounts were being paid and had been paid over a considerable period was sufficient to demonstrate capacity.

The Commission could not arrive at any figure which could be said to be a reliable average over-award payment for any classification. The most it could say was that in the Metal Trades industry there were over-award payments of varying amounts in quite a number of establishments, and it had taken this factor, indefinite though it was, into account in arriving at its decision.

In reviewing the economic situation, the Commission considered the current position in the light of information which had become available since the 1959 Basic Wage Judgment. After considering various indicators of the state of the economy, the Commission discussed the problems of inflation and the maintenance of economic stability. The Commission said that it had looked at the increases which it proposed to grant in the light of the submissions about economic stability and it did not consider that such increases were so likely to affect that stability that the economy would be adversely affected. If marginal increases could not be granted in times of economic prosperity, it was difficult to imagine when they could be granted.

Summing up, the Commission stated:—" We have considered, with the qualifications already mentioned in this Judgment, the decrease in the purchasing power of money which has occurred since the 1954 marginal fixation, we have assessed as well as we are able to the increased capacity which has occurred in the Australian economy since that time and the fact that productivity has played its part in that increase of strength, and we have considered the Basic Wage decisions and appraisals of the economy by the Court and the Commission since 1954. In the result, we have thought it proper to increase margins in the Metal Trades industry in the particular circumstances which confront us by an amount which exceeds the loss in purchasing power of the 1954 margins, which excess we consider has been earned by the contribution of the employees to productivity increases and made possible by the additional strength of the national economy."\*

The Commission went on to say:—" This decision is based on the material placed before us and our general industrial knowledge which, in view of our functions under the Act, we think it proper to use. Both that material and that knowledge relate to the Metal

\* *Commonwealth Arbitration Reports*, Vol. 92, p. 793.

Trades industry and to the economy generally. Our decision, however, relates only to the Metal Trades Award. We realize that on occasions in the past, margins fixed in the Metal Trades Award, and in particular the margin of the fitter, have been used as standards for other awards. The use of the increases which we have granted as a guide in other disputes will be a matter for the parties as far as conciliation is concerned and, if arbitration is necessary, for this Commission however constituted."

*Gold and Metalliferous Mining Award.* Judgment was also delivered on 27th November, 1959, in connexion with the application for variation of margins in this award.\* The margin for the miner was increased from 30s. to 42s. 6d. a week from the beginning of the first full pay-period commencing in December, 1959. Marginal claims for other classifications were referred back to the appropriate Commissioner for consideration. Subsequently, the parties to the award agreed that margins for all other classifications should be increased in the same proportion as the margin for the miner (i.e. 41.7 per cent.). The Commissioner varied the award accordingly.

*Metal Trades Award, Part II., and Aircraft Industry Award, Part II.* On 11th December, 1959, the Commission delivered a judgment granting a 20 per cent. interim increase in margins to graduate and diplomate engineers and scientists, payable as from the beginning of the first full pay-period commencing in December, 1959.

*Bank Officials' Award.* On 11th December, 1959, a 20 per cent. interim increase in margins was granted to officers in the 10th to 18th year of service inclusive and to accountants and managers, payable retrospectively as from 11th June, 1959. Interim increases were not awarded to more junior officers, nor to females. Subsequently the parties to the Bank Officials' Award met before a single Commissioner, and a consent award was made giving final marginal increases to adult males and adult females and making adjustments to junior rates of pay.

4. *Margins Case, 1963.*—Following the conclusion of the 1963 Basic Wage Case, two benches of the Commonwealth Conciliation and Arbitration Commission commenced, on 5th February, 1963, to hear applications by metal trades unions for increased margins and for three weeks annual leave (see pp. 496–7). The two benches sat jointly for the convenience of the parties involved and were constituted as follows:—margins case—Kirby C.J. (President), Moore and Ashburner J.J. and Commissioner Apsey; three weeks' annual leave case—Kirby C.J. (President), Moore J. (Deputy President) and Commissioner Apsey. In their application, the claimant unions were supported by the Australian Workers Union, the High Council of Commonwealth Public Service Organizations, the Australian Council of Salaried and Professional Associations and certain affiliated organizations. The claim was opposed by the respondent employers, who were supported in their opposition by the banks, respondents to the Bank Officials Award, and by members of the Australian Wool Growers and Graziers Council.

The Unions' claim on margins was that the Commission restore, on an assessed basic wage, the relativities within the Metal Trades Award established in 1947 by what is known as the second Mooney formula. Taking £15 7s. as the assessed basic wage (calculated as the 1947 basic wage adjusted to price changes since 1947) and applying the percentage 48.6, which the fitter's margin was of the 1947 basic wage, the union arrived at a new marginal rate of £7 9s. for a fitter, an increase of £2 13s. on the current margin. This claim of £7 9s. was 2.86 times the 1947 fitter's margin, and hence the unions sought to have all 1947 margins multiplied by 2.86. This claim was opposed by the employers who asked that any consideration of marginal increases be deferred for an unspecified time.

The Commonwealth Government intervened in the public interest and made submissions as to the approach to be adopted to marginal fixation generally, and to marginal fixation in the metal trades industry, as well as supplying information to the Commission about the economic situation and the Government's assessment of it. The Commonwealth Government neither opposed nor supported the claim. The State of South Australia neither opposed nor supported the claim for marginal increases, but did oppose any change in present relativities. The State of Queensland neither opposed nor supported the application for increases in margins, but submitted certain information regarding possible effects in Queensland. The Commission declined to allow submissions aimed at showing what might happen in State awards if State industrial tribunals followed their past practices with respect to the Commission's decisions.

The unions' case in outline comprised—firstly, a critical analysis of major decisions of the Court and of the Commission extending back to the Harvester decision of 1907; secondly, a demonstration from those decisions of the basic criteria used in the fixation of margins, in

\* *Commonwealth Arbitration Reports*, Vol. 92, p. 796.

particular the market value of the work of the various classifications at the time of fixation and the inter-related consideration of economic capacity; thirdly, evidence to demonstrate what is the current market value; and, finally, material concerning economic capacity to pay the rates being claimed.

Referring to past decisions and the problem of marginal fixation, the Commission stated that "the assessment of particular margins at particular times must be an act of judgment by the person or persons making the assessment in the light of current knowledge and practice both of which are themselves susceptible of change . . . . We hold the view that whatever may have been the practice in the past there is no reason why any margin should, after a period of time, necessarily be restored to any earlier relativity which it may have had with any earlier basic wage . . . . Margins are awarded for skill and other factors which are not included in the assessment of the basic wage. The value from time to time of skill and other factors relevant only to margins may change independently of changes in the basic wage. We are not prepared to assume that because in 1947 the fitter's margin represented 48.6 per cent. of the basic wage that it should now represent the same percentage of the current basic wage." The Commission emphasised the need to have before it all information essential for a complete assessment of margins, some of which must relate to the work actually being done, and pointed out that margins in the Metal Trades Award cannot be properly assessed either absolutely or relatively until the Commission in one form or another has before it an application which will enable it to deal with all aspects of marginal fixation.

In absence of any evidence or material on work value, the Commission said they accepted the margins then current in the metal trades award as a starting point. Since last fixing margins in 1959, the Consumer Price Index had risen 6.05 per cent. and the Commission stated that they were prepared to assume that this showed a movement in purchasing power of money with sufficient accuracy to enable this to be taken into account in fixing margins, and believing that a compensating increase is within capacity they considered it would be inequitable not to award it. But as this would only restore margins to the real value of the 1959 margins, it was necessary to consider whether there was any ground for an increase in real margins. To do this, and in the absence of any material related to the work itself, the Commission said it could only consider the question of economic capacity in the metal trades and in industry generally.

The Commission repeated what had been said in the 1961 Basic Wage Case, namely, that productivity figures could be used only to demonstrate a trend and that productivity can only be approximately measured. The unions put forward the view that both past and future increases in productivity should be noted, whilst the employers said that the proper approach was to ignore the past except to the extent to which it indicated the future, and to adjust wages in a ratio slightly less than any expected future increase in productivity. The employers argued that if overall the level of wages increases at a faster rate than the increase in national productivity then there will be an increase in prices or a shift in income to the wages sector. The Commission made the following observations on this proposition—firstly, that productivity can only be imperfectly calculated and that such productivity figures as are now available can only be properly used to demonstrate a trend; secondly, that the case for marginal increase relates to the metal trades industry only; thirdly, that, if current margins are inadequate, it should be a matter of equity to award margins which are adequate even if such increase raises wages by a percentage greater than the estimated immediate future increase in national productivity; and, finally, that it was an oversimplification to relate the movement in prices to general economic considerations only. The Commission then considered figures from 1949–50 of the movement in national productivity based on gross national product per person employed at 1952–53 prices, and pointed out that, since the 1959 assessment of margins to 1961–62, national productivity measured in this way had increased by 5.1 per cent.

On economic capacity the Commission came to the conclusion that after a period of slowing down, the economy had recovered some of its impetus and that this recovery was likely to continue in the immediate future at a somewhat higher rate than that of the past year. After considering material related to the metal trades industry, namely, over-award payments, average hours of overtime and average weekly hours for adult males, and keeping in mind that employers did not suggest that the economic capacity of the metal trades industry was less than industry generally or that increases in productivity in that industry had been or would be less than increases in national productivity, the Commission was prepared to assume in the unions' favour that by and large the economic capacity of the metal trades industry was certainly not less than, and probably more than, that of industry generally.

Summing up, the Commission said: "In our judgment of national economic capacity, including productivity, the likely future trends in that capacity and the relationship between the capacity of the Metal Trades industry and national capacity we consider that we should as a matter of equity increase the real value of margins under this award. Having regard to this decision and the decreased purchasing power of money since the last assessment we consider that it would be fair to increase margins under this award by ten per cent. We have reached this conclusion in the knowledge that today employees under this award have been awarded an extra week's annual leave. We emphasise again that no information about work values has been placed before us which would enable us to make a more accurate and from our point of view a more satisfactory assessment."

The Commission then considered in detail the capacity of the economy as shown by the following economic indicators:—rural industry, balance of payments, competitive position of secondary industries, investment, employment, company income, money and banking and retail trade, and general. Under company income, the Commission dealt with a submission of the employers that because wages had gone up as a result of the 1961 Basic Wage decision in a period of comparatively low activity in the economy and because the price level had not risen as a result of that decision, there had been a movement in income from the company sector to the wage sector. Any further increase in wages, the employers submitted, would be likely to cause a further drift in company income, followed by a further dampening down of investment and a consequent deleterious effect on activity in the economy and a worsening of the economic position of wage earners. The Commission referred to figures of gross national product, company income and wages and salaries which indicated that movements in company income were not directly related to movements in wages and salaries, but stated that the fact that company incomes had been lower in the past two years indicated the necessity for caution in awarding marginal increases.

The Commission concluded its consideration of the indicators with these words " . . . our own investigation of the economy (is) that both from a long term point of view and also from a short term point of view the prospects for the economy may be reasonably regarded with optimism. On a consideration of the whole of the indicators, we conclude that national capacity has increased and that it is likely to continue to increase in the foreseeable future. In these circumstances we are confident that the economy is able to sustain the increase of ten per cent. in margins in this award which we consider is otherwise justified."

At the request of the parties the Commission took the unusual course of making a pronouncement early in the proceedings as to the extent to which the decision in the metal trades case should be used in other industries. The Commission re-affirmed what was said in the 1959 metal trades judgment that the decision would relate to the Metal Trades Award only, although they realized that the margin of the fitter had been used as a standard for other awards. In the present case the Commission stated it was not intended that the decision should be applied automatically outside the metal trades.

The order of the Commission was that the margins for adult males in the Metal Trades Award be increased by ten per cent., the increase to be calculated to the nearest shilling and to operate from the beginning of the first pay period to commence on and after 22nd April, 1963.

## § 7. Leave

1. **Annual Leave.**—In the judgment given by the Commonwealth Court of Conciliation and Arbitration in the Commercial Printing Case of 1936, *Dethridge C.J.*, in granting one week's annual leave with full pay to employees in the industry, said:—"This Court has frequently been asked to award annual leave on full pay but has hitherto not done so except in cases where employees have to work on Sunday, or suffer some other deprivation by reason of isolation or other cause, or in cases where such leave has become the custom generally by the practice of most of the parties concerned."\* This judgment has usually been regarded as the first statement of the principles involved in deciding whether or not annual leave should be awarded.

In 1940, *Beeby C.J.*, awarded annual leave of one week to the manufacturing section of the metal trades industry, and in the same year *O'Mara J.* extended leave throughout the industry, with the exception of that section engaged in the servicing of motor vehicles.

\* *Commonwealth Arbitration Reports*, Vol. 36, p. 738.

Annual leave in the Commonwealth jurisdiction was introduced over a period of time, industry by industry, if the Judge responsible for the industry considered it proper.

The question of annual leave was again before the Court in 1945.\* In that case applications had been made seeking variations of awards to prescribe an extension of annual leave from a period of seven days to fourteen days. The Court in its judgment set out what it considered to be the principles to be applied in all applications for an extension of the annual leave period to fourteen days. The question of altering any particular award to prescribe for two weeks' annual leave was left to the discretion of the single Judge who heard the application.

Further inquiries into annual leave were conducted by the Commonwealth Conciliation and Arbitration Commission in 1960, 1962 and 1963. A summary of the 1960, 1962 and 1963 inquiries is given in paras. 2, 3 and 4 following.

Employees in New South Wales in private industry, other than those covered by Federal awards, were granted three weeks' annual leave by an amendment to the Annual Holidays Act, passed in 1958. Generally, employees of government authorities (Commonwealth, State, local and semi-governmental), with the exception of State and local government employees in Western Australia, are entitled to three weeks' annual leave, as are also many salaried employees and wage earners in certain industries. In February, 1964, the New South Wales Government indicated that it would grant four weeks' annual leave to its employees.

**2. Three Weeks' Annual Leave Inquiry, 1960.**—Unions respondent to the Metal Trades Award applied to the Commonwealth Conciliation and Arbitration Commission on 18th July, 1960, to vary the Award to provide three weeks' paid annual leave instead of two weeks.

The application was opposed by employers, the State of Victoria and the Electricity Trust of South Australia. The State of Tasmania supported the application. The Commonwealth Government and the State of Queensland neither supported nor opposed the application, although the Commonwealth tendered statistical and economic information for the benefit of the Commission and the parties.

In its judgment of the 14th December, 1960, the Commission summarized the submissions made by the unions and the employers, and stated that the two economic factors considered most important were the export-import position and the state of employment. The Commission stated that it had decided to reject the application, but emphasized that its decision was not intended to apply to a situation where, for special reasons related to a particular industry, it may consider an amount of annual leave greater than two weeks to be justified.

At the conclusion of its judgment the Commission made the following statement. "We accordingly dismiss this application because of the present economic situation. In doing so we would again repeat what we have said earlier in this judgment that we do not consider that employees under Federal awards have yet achieved all the leisure which they should achieve. We have done no more than decide that the present is not an appropriate time in which to award an extra week's paid leave."†

For further particulars *see* Official Year Book No. 49, pp. 511-513.

**3. Three Weeks' Annual Leave Inquiry, 1962.**—On 10th April, 1962, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby C.J. (President), Moore J. (Deputy President) and D. G. Apsey (Commissioner) commenced hearing an application by unions respondent to the Metal Trades Award for variation of the award to provide three weeks' paid annual leave instead of two weeks.

Although the application was made in respect of the Metal Trades Award only, counsel for the unions made it clear that they wished the claim to be regarded as a test case which, if granted, would involve the inclusion in federal awards generally of the basic standard of three weeks' annual leave. The application was opposed by employers, the State of Victoria and the Electricity Trust of South Australia. New South Wales and Tasmania supported the application. The Commonwealth Government and the State of Queensland neither supported nor opposed the application, although the Commonwealth intervened in the public interest and made submissions on the state of the economy, as well as providing economic and statistical information for the benefit of the Commission and the parties.

\* 55 C.A.R., p. 595.

† *Commonwealth Arbitration Reports*, Vol. 96, p. 217.

The hearing was concluded on 2nd May, 1962, and on 30th May the Commission made the following announcement.

" We have given careful consideration to the submissions which have been made to us in this case. The applicant unions have asked that we consider the claim a general one, the result to be applied to Federal awards generally. This must result in greater caution on our part in deciding whether or not the application should succeed. Our present intention is that an increase to three weeks' annual leave generally in secondary industry, subject to special cases, should be granted as soon as we are satisfied that the economy is in a position to cope with the effects of such an increase. However, there are two aspects of the economic arguments about which we are troubled and about which we consider it too early to make any firm decision. These are, firstly, whether our internal economy has sufficiently recovered from the recession of late 1961 and, if so, what is the likely rate of its recovery in the future and, secondly, the effect on Australia of success or failure of the application of the United Kingdom to enter the European Common Market. There have been developments in relation to the latter question since the hearing which both emphasise its importance and the lack of accurate information as to what is going to happen and the short and long term effect on Australia's economy.

So that we may be able better to assess these matters we have decided to adjourn these proceedings until a date in February or March next which will be announced later when the parties and interveners will be able to make such further submissions on these two matters as they may desire."

A brief summary of the case is given in the following paragraphs.

Counsel for the unions submitted that about half of the Australian work force was already entitled to three weeks' leave or more, and that the Commission was being asked to settle a genuine industrial dispute arising from the disparity between the leave granted to different sections of the work force. He referred to the judgment in the 1960 Annual Leave Inquiry, in which the Commission had stated that its decision to refuse the application had been influenced by the export-import position and the state of employment, and submitted that there had been sufficient improvement in these two factors to justify the granting of the application, particularly as the Commission had in the 1960 case conceded that two weeks should not be regarded as the ultimate in paid annual leave.

Counsel then submitted evidence to show that three weeks' annual leave, which had been granted by legislation in New South Wales in 1958, had not had any adverse effects on the economy of that State. Also, in the 17 years since 1945, when annual leave was extended to two weeks, the national economy had developed in a way which would permit the granting of an extra week's leave with much more safety than had been possible in 1945, at the end of the war.

Counsel for the employers, in opposing the application, said that since the previous rejection of the unions' claim in 1960, Australia had undergone a major recession. No new arguments had been advanced by the unions in support of their claim and it should therefore again be rejected. Counsel submitted that even on the grounds of social justice the claim should be rejected because Australian workers enjoyed shorter annual hours of work than those of any other country in the world. In addition, an examination of the relation of average weekly earnings to productivity showed that they had already received the fruits of all productivity increases.

The balance of payments situation, though improved, had been achieved only through drastic government action and in fact looked satisfactory only in comparison with that of the previous year. As to employment, there was still a shortage of skilled labour, which would be aggravated by the granting of increased leave.

He submitted that the claim should not be treated as a test case, because it was being argued not only on general economic issues but also in relation to specific problems in the metal trades. No party to any other award should be inhibited in any way from arguing the particular circumstances of other industries.

**4. Three Weeks Annual Leave Inquiry, 1963.**—On 5th February, 1963, the Commonwealth Conciliation and Arbitration Commission, constituted by Kirby C.J. (President), Moore J. (Deputy President) and Commissioner Apsey, commenced hearing an application, which had been adjourned from May, 1962, to vary the Metal Trades Award, to provide three weeks' paid annual leave, instead of two (*see* paragraph 3 above).

The hearing was continued during March and April, 1963, jointly with the Metal Trades Margins case hearing (see pp. 492-4), and in its judgment on 18th April, 1963, the Commission referred to the announcement it had made on 30th May, 1962, as to the Commission's intention to grant a period of three weeks' annual leave, when it was satisfied that the economy was in a position to cope with the effects of such an increase. "In our view the Australian economy has recovered sufficiently from the recession of 1961 and its likely rate of recovery in the future is such as to enable us to grant three weeks' annual leave. The second aspect of the economic arguments about which we were troubled has for the purposes of this decision been changed in a manner in which the problem has become no longer relevant. Therefore we see no reason why we should not implement our express intention of May last year to increase annual leave to three weeks generally in secondary industry, subject to special cases."

The Commission then announced that the Metal Trades Award would be varied to produce the following result. "A period of 21 consecutive days' leave shall be allowed to employees who have completed twelve months continuous service by or after 30th November, 1963."

Provision for proportionate leave for periods of employment of one month and over was made in respect of employment after 1st June, 1963.

It was stated that the application of the new standard of annual leave for secondary industry in other Federal awards would be a matter for individual Commissioners upon proper application being made for variation.

In a decision given on 22nd October, 1963, the Commission, comprising Wright J. (Acting President), Moore J. (Deputy President) and Commissioner Winter, unanimously rejected an application by the Metal Trades Employers Association and other employers' organizations firstly for permission, at the employers' discretion, to require employees to take their annual leave in two periods of seven and fourteen days respectively, and secondly that the time after accrual, within which leave must be taken, should be extended to nine months when leave is taken in one period and twelve months when leave is taken in more than one period. The Commission considered that there might be individual cases where some relief would be desirable in the first Christmas period after the increase became effective and accordingly they favoured the insertion of a provision in the Metal Trades Award which would enable an employer "in order to maintain the efficient working of his undertaking or his service to the public, to seek from the union or unions concerned, an agreement to split annual leave of the employees in his establishment or part of it either by two close-downs or by rostering or by a combination of one close-down and rostering". In instances where agreement could not be reached, an employer would have the right to seek permission to split the leave from a Board of Reference.

This order was to operate for a period of six months and no longer, as it might be desirable to reconsider the matter after the ensuing Christmas-New Year period when it would be possible to see how the new standard of annual leave had affected industry.

On the material before it, the Commission was not prepared to alter the period in which leave must be taken, but this might be re-considered when the case was resumed on a date to be fixed in May, 1964.

5. *Long Service Leave.*—(i) *General.* Paid long service leave, i.e. leave granted to workers who remain with the one employer over an extended period of time, has been included in the provisions of industrial legislation in the several States. A brief summary is given in the following paragraphs. In all cases the transfer of ownership of a business does not constitute a break in continuity of service with the same employer.

(ii) *New South Wales.* Long service leave was first introduced for the majority of workers by the *Industrial Arbitration Act, 1951*, which provided such leave for workers under State awards. This Act was replaced by the *Long Service Leave Act, 1955*, which extended the benefits to any worker within the State. An amendment to the Act in 1963 provided for three months' long service leave for fifteen years' continuous service with the same employer and proportionate amounts on this basis after a minimum of five years' service.

(iii) *Victoria.* The *Factories and Shops (Long Service Leave) Act 1953* first provided for long service leave for workers in Victoria, the provisions of this Act being subsequently incorporated in the *Labour and Industry Act*. Leave provided for is thirteen weeks for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions from the Act.

(iv) *Queensland.* In 1952, the *Industrial Conciliation and Arbitration Act* was amended to include long service leave provisions for employees within the jurisdiction of the Industrial Court, and the Act was amended again in 1955 to extend these provisions to any employee in respect of whose employment there was not in force an award or industrial agreement under the Act and to seasonal workers in sugar mills and meat works. Leave provided for is thirteen weeks for twenty years' continuous service with the same employer.

(v) *South Australia.* The *Long Service Leave Act*, passed in 1957, exempts a large number of industrial agreements, with wide industrial coverage, from specifying long service leave for employees. For those covered by the Act, leave provided for is seven days in the eighth and in each subsequent year of continuous service. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions under the Act.

(vi) *Western Australia.* The *Long Service Leave Act* was passed in 1958, but it does not apply to employees whose conditions of work are regulated under the *Western Australian Industrial Arbitration Act*. The Court of Arbitration of Western Australia, in an order dated 1st April, 1958, incorporated, in most of the awards and agreements within its jurisdiction, provisions similar to those in the *Long Service Leave Act*. Leave provided for is thirteen weeks for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions from the Act.

A general inquiry into long service leave, public holidays, annual leave and hours was held by the Court in 1961. In its judgment, delivered on 5th May, 1961,\* the Court rejected the major claims by the parties relating to long service leave. However, it deleted a sub-clause of the 1958 Order which entitled an employer to offset any payment in respect of long service leave under the Order against any payment by him to any long service leave scheme, superannuation scheme, pension scheme, retiring allowance scheme, provident fund or the like or under any combination thereof.

(vii) *Tasmania.* The *Long Service Leave Act*, which was passed in 1956, provides for thirteen weeks leave for twenty years' continuous service with the same employer. Contributions by employers to retirement schemes can be taken into consideration in dealing with exemptions from the Act.

(viii) *Commonwealth.* Until May, 1964, the Commonwealth Conciliation and Arbitration Commission had not included provision for long service leave in its awards, and had refrained from determining disputes relating to this subject except in the case of the Northern Territory and the Australian Capital Territory (see p. 499). Consequently, till then, the provisions of the various State Acts relating to long service leave applied to workers covered by awards of the Commonwealth. The applicability of long service leave provisions under State law to workers under Commonwealth awards had been tested before the High Court and the Privy Council, and such provisions had been held to be valid.

The Commission's position was set out in its decision, issued on 16th September, 1959, regarding disputes on the inclusion, in the Graphic Arts (Interim) Award, 1957, of provisions for long service leave. It stated that it should refrain, until further order, from determining the disputes so far as they concerned long service leave and that if, in future, the Commission decided that long service leave on a national basis was desirable, it was open to proceed to the making of an award on the matter.

Following the hearing of claims for long service leave provisions by employers in the graphic arts and metal trades industries in August, 1963, the Full Bench of the Commonwealth Conciliation and Arbitration Commission, on 11th May, 1964, announced its decision that long service leave entitlement would be calculated on the basis of thirteen weeks for 20 years of unbroken employment, in respect of employment before 11th May, 1964 (or, in New South Wales, 1st April, 1963), and at the rate of thirteen weeks for 15 years in respect of service after 11th May, 1964 (or, in New South Wales, 1st April, 1963). After further periods of 10 years, employees would be entitled to an additional pro-rata period of leave calculated on the same basis. Those employees who completed an unbroken contract of employment of 10 years but less than 15 years, and whose employment was terminated by death or by the employer for any cause other than serious and wilful misconduct, or by the employee on account of illness, incapacity or domestic or other pressing necessity, would be entitled to pro-rata payment.

\* *Western Australia Industrial Gazette*, Vol. 41, p. 355.

Long service leave codes for employees in the Northern Territory and the Australian Capital Territory were prescribed on 4th December, 1961, by the Commonwealth Conciliation and Arbitration Commission in Presidential Session. The unions submitted that the Commission should refrain from exercising its jurisdiction and emphasized that it was the considered policy of the trade union movement "that long service leave should come from legislative action and not from prescription by industrial authorities." However, the Commission rejected the submission and awarded leave in each case in terms of the employers' applications, which were, in general, that employees should be granted three months' long service leave after 20 years service with one employer, even if part of this service was outside the Territory. In addition, the Australian Capital Territory code prescribed that employees presently employed might "go back for a period of 25 years in regard to the calculation of their present or future entitlement of long service leave."

The *Stevedoring Industry Act* 1961, which came into operation on 6th June, 1961, included provisions granting long service leave to persons who had been continuously registered as waterside workers under Commonwealth stevedoring legislation. Leave provided for is thirteen weeks after the completion of twenty years' qualifying service, and six and a half weeks for each subsequent ten years' qualifying service. An amendment to the Act in November, 1962, extended the eligibility and qualifying periods of the long service leave provisions of the Act.

## INDUSTRIAL DISPUTES

1. **General.**—Detailed information regarding industrial disputes involving stoppage of work is given in the *Labour Report*. A table showing statistics of industrial disputes for each year from 1913 is contained in the Appendix to *Labour Report* No. 49, 1961.

Particulars of all disputes in progress during the year are included in the annual figures, whether the dispute commenced in that year or was in progress at the beginning of the year. Consequently, details of "the number of disputes" and "workers involved" in disputes which commenced in any year, and were still in progress during the following year, are included in the figures for both years.

2. **Industry Groups.**—The following table gives, for Australia as a whole, particulars of industrial disputes which were in progress during 1963, classified according to industry groups.

## INDUSTRIAL DISPUTES(a): INDUSTRY GROUPS, AUSTRALIA, 1963

Industry group	Number	Workers involved			Working days lost	Estimated loss in wages (£'000)
		Directly	In-directly (b)	Total		
Agriculture, grazing, etc. .. ..	1	33	76	109	400	1.7

Railway and tramway services .. ..	22	22,013	76	22,089	12,666	50.4
Road and air transport .. .. .	25	15,342	..	15,342	12,621	50.1
Shipping .. .. .	2	497	..	497	336	1.3
Stevedoring .. .. .	312	118,438	..	118,438	95,050	415.2
Amusement, hotels, personal service, etc. ..	5	631	..	631	695	2.9
Other industries(c) .. .. .	17	11,553	27	11,580	12,659	41.5
<b>Total .. .. .</b>	<b>1,250</b>	<b>398,567</b>	<b>14,141</b>	<b>412,708</b>	<b>581,568</b>	<b>2,495.7</b>

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute. (c) Includes Communication; Finance and Property; Wholesale and Retail Trade; Public Authority (n.e.i.); and Community and Business Services.

A graph showing, for the years 1951 to 1963, the working days lost as a result of industrial disputes in the main industry groups is shown on page 453.

3. States and Territories.—The following table gives particulars of the number of industrial disputes in each State and Territory, together with the number of workers involved and the losses in working days and wages caused by disputes which were current during each of the years 1959 to 1963.

#### INDUSTRIAL DISPUTES(a): STATES AND TERRITORIES

State or Territory	Year	Number	Workers involved			Working days lost	Estimated loss in wages (£'000)
			Directly	Indirectly (b)	Total		
New South Wales ..	1959	547	123,558	2,493	126,051	211,352	819.6
	1960	736	289,266	7,646	296,912	416,762	1,731.9
	1961	529	131,661	5,295	136,956	318,629	1,316.0
	1962	752	195,344	13,623	208,967	303,400	1,285.9
	1963	817	214,643	4,333	218,976	307,440	1,314.7
Victoria ..	1959	60	31,134	1,107	32,241	35,890	131.4

	1963	8	915	..	915	968	4.7
Australian Capital Territory	1959	3	238	12	250	731	3.1
	1960	4	209	..	209	352	1.8
	1961	6	275	2	277	933	4.0
	1962	7	4,005	105	4,110	3,608	15.0
	1963	11	858	20	878	1,477	6.6
Australia ..	1959	869	229,469	8,002	237,471	365,039	1,377.2
	1960	1,145	592,053	11,226	603,279	725,107	2,926.8
	1961	815	288,526	11,831	300,357	606,811	2,723.8
	1962	1,183	330,823	23,030	353,853	508,755	2,122.1
	1963	1,250	398,567	14,141	412,708	581,568	2,495.7

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Persons thrown out of work at the establishments where the stoppages occurred but not themselves parties to the dispute.

4. Duration.—(i) *General*. The duration of each industrial dispute involving a loss of work, i.e. the time between the cessation and resumption of work, has been calculated in working days, exclusive of Saturdays, Sundays and holidays, except where the establishment involved carries on a continuous process (e.g. metal smelting and cement manufacture).

(ii) *Industry Groups, 1963*. The following table shows, for the year 1963, industrial disputes in coal mining, stevedoring and other industries classified according to duration.

## DURATION OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1963

Duration (working days)	Number	Workers involved(b)		Working days lost		Estimated loss in wages (£'000)
		Number	Proportion of total (per cent.)	Number	Proportion of total (per cent.)	
<b>COAL MINING</b>						
1 day and less .. .. .	151	19,485	67.1	9,926	21.6	43.9
2 days and more than 1 day ..	33	3,086	10.6	5,288	11.5	22.8
3 days and more than 2 days ..	11	3,856	13.3	9,173	20.0	39.8
Over 3 days and less than 5 days	10	995	3.4	3,897	8.5	18.1
5 days and less than 10 days ..	11	1,100	3.8	8,179	17.8	36.9
10 days and less than 20 days ..	3	385	1.3	4,911	10.7	21.9
20 days and less than 40 days ..	2	148	0.5	4,340	9.5	25.3
40 days and over .. .. .	1	4	..	200	0.4	0.7

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) includes workers indirectly involved. See footnote (b) to table on page 500.

5. Causes.—(i) *General*. In issues of the Year Book prior to No. 40, the causes of industrial disputes were classified in some detail for all industries combined. As from 1950, however, stoppages have been analysed in three separate groups, "Coal Mining", "Stevedoring" and "Other Industries".

Causes have been grouped under four main headings:—(1) Wages, Hours and Leave; (2) Physical Working Conditions and Managerial Policy; (3) Trade Unionism; (4) Other Causes. The first group is restricted to disputes involving general principles relating to wages, hours and leave; minor questions regarding the claims to pay or leave by individual employees are included under managerial policy. The second group comprises disputes regarding physical working conditions and general questions of managerial policy, which term covers disciplinary action, the promotion of employees, the employment of particular individuals, personal disagreements between employees and supervisory staff and disputes arising from the computation of wages, leave, etc., in individual cases. The third group includes stoppages over employment of non-unionists, inter-union and intra-union disputes, disputes over recognition of union activities, and sympathy stoppages in support of employees

in another industry. The last group comprises disputes by way of protest against situations not arising from the usual relationship of employer and employee, e.g. political matters, and cases (occurring mainly in the coal mining industry) where the cause of the stoppage is not officially made known to the management.

(ii) *Industry Groups.* The following table shows particulars of industrial disputes for 1963 classified according to cause in three industry groups.

**CAUSES OF INDUSTRIAL DISPUTES(a): AUSTRALIA, 1963**

Cause of dispute	Coal mining	Stevedoring	Other industries	All industries

(a) Refers only to disputes involving a stoppage of work of 10 man-days or more. (b) Includes workers indirectly involved. See note (b) to table on p. 500.

## WORKERS' COMPENSATION LEGISLATION

A conspectus of the principal provisions of Workers' Compensation Acts in force in Australia at 31st December, 1961, will be found in *Labour Report* No. 49, pages 167-175.

## LABOUR ORGANIZATIONS

## § 1. Labour Organizations in Australia

1. **General.**—The figures shown in this section are prepared from a special collection of membership of labour organizations at 31st December each year. The affairs of single unions are not disclosed in the published results and this has assisted in securing complete information. The Bureau is indebted to the secretaries of trade unions for their co-operation in supplying information.

2. **Organizations Registered under the (Commonwealth) Conciliation and Arbitration Act.**—Under Part VIII. of the *Conciliation and Arbitration Act* 1904–1961, any association of employers in any industry which has, or any employer who has, employed, on an average taken per month, not less than 100 employees during the six months preceding application for registration, or any association of not less than 100 employees in any industry, may be registered. However, under the Public Service Arbitration Act, an association of less than 100 employees may be registered as an organization, provided that its members comprise at least three-fifths of all persons engaged in that industry in the Service. Such organizations are included in the figures shown below. Registered unions include both interstate associations and associations operating within one State only. Registration under Commonwealth legislation began in 1906. At the end of 1963, the number of employers' organizations registered under the provision of the Conciliation and Arbitration Act was 66. The number of unions of employees registered at the end of 1963 was 154, with a membership of 1,663,822 representing 83 per cent. of the total membership of all trade unions in Australia.

3. **Particulars regarding Trade Unions.**—(i) *Types.* The trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organization, which, in its turn, may be a branch of an international body. Broadly speaking, there are four distinct classes of labour organizations:—(a) the local independent; (b) the State; (c) the interstate; and (d) the Australasian or international; but a number of variations occur from each of these classes. The schemes of organization of interstate or federated unions vary greatly in character. In some unions, the State organizations are bound together under a system of unification with centralized control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes.

(ii) *Number and Membership.* Returns showing membership by States and Territories at 31st December each year are obtained for all trade unions and employee organizations. The following table shows the position at the end of each of the years 1961 to 1963.

TRADE UNIONS: NUMBER AND MEMBERSHIP

State or Territory	Number of separate unions			Number of members			Percentage increase in membership(b)		
	1961	1962	1963	1961	1962	1963	1961	1962	1963
New South Wales ..	226	222	227	743,581	765,479	782,665	-3.2	2.9	2.2
Victoria ..	156	155	154	486,760	498,018	514,919	1.6	2.3	3.4
Queensland ..	133	135	137	329,746	333,999	339,351	0.7	1.3	1.6
South Australia ..	134	133	134	151,488	160,390	161,095	-1.3	5.9	0.4
Western Australia ..	152	152	154	115,000	121,067	128,996	-0.8	5.3	6.5
Tasmania	103	103	103	56,873	57,255	57,482	1.5	0.7	0.4
Northern Territory(c)	24	23	30	2,904	3,336	3,338	(c)	(c)	(c)
Australian Capital Territory(c)	34	38	54	8,251	10,940	15,604	(c)	(c)	(c)
Australia ..	(a)355	(a)347	(a)347	1,894,603	1,950,484	2,003,450	-0.9	2.9	2.7

(a) Without interstate duplication. See below. (b) On preceding year. (c) In some cases, union members in the Territories associated with State organizations are reported under the heading of that State. The annual figures reflect, in part, progressive improvements to more accurate reporting, and the comparability of totals for the Territories is affected by this aspect.

NOTE.—Minus sign (—) denotes decrease.

In the preceding table, under the heading "Number of Separate Unions", a union reporting members in a State or Territory is counted as one union within that State or Territory. The figures do not add to the Australian total (shown in the last line) because a union represented in more than one State or Territory is included in the figure for each State or Territory in which it is represented, but is counted only once in the Australian total.

A table showing the number and membership of trade unions in Australia for the years 1912 to 1961 will be found in the Appendix to *Labour Report* No. 49.

(iii) *Classification in Industry Groups.* The following table shows the number of unions and members thereof in Australia at the end of each of the years 1961 to 1963.

#### TRADE UNIONS: INDUSTRY GROUPS, AUSTRALIA

Industry Group	1961		1962		1963	
	No. of unions (a)	No. of members	No. of unions (a)	No. of members	No. of unions (a)	No. of members

Other industries(c) .. ..	38	148,601	36	158,420	38	161,013
<b>Total</b> .. ..	<b>355</b>	<b>1,894,603</b>	<b>347</b>	<b>1,950,484</b>	<b>347</b>	<b>2,003,450</b>

(a) Without interstate duplication. See para. (ii) p. 504.

(b) Includes communication,

municipal, etc. (c) Includes Community and business services.

(iv) *Number of Members and Proportion of Wage and Salary Earners.* The following table shows the estimated percentages of wage and salary earners in employment who are members of trade unions. As current estimates of wage and salary earners in employment do not include employees engaged in rural industry or in private domestic service, the percentages have been calculated on figures obtained by adding to the end of year estimates an estimate of the number of employees in rural industry and in private domestic service based on the results of the censuses of June, 1954, and June, 1961. For this reason, and also because the membership of trade unions includes some persons not in employment, the percentages shown in the table must be regarded as approximations.

#### TRADE UNIONS: NUMBER OF MEMBERS AND PROPORTION OF TOTAL WAGE AND SALARY EARNERS, AUSTRALIA

Year	Number of members			Proportion of total wage and salary earners (Per cent.)		
	Males	Females	Persons	Males	Females	Persons
1959 .. ..	1,494,669	356,058	1,850,727	64	41	57
1960 .. ..	1,534,423	377,969	1,912,392	63	41	57
1961 .. ..	1,521,900	372,703	1,894,603	63	41	57
1962 .. ..	1,561,854	388,630	1,950,484	64	41	57
1963 .. ..	1,588,454	414,996	2,003,450	62	42	57

(v) *Interstate or Federated Trade Unions.* The following table gives particulars of the number and membership of interstate or federated trade unions in 1963.

**INTERSTATE OR FEDERATED TRADE UNIONS(a): AUSTRALIA, 1963**

Particulars	Unions operating in—					Total
	2 States	3 States	4 States	5 States	6 States	
Number of unions ..	10	7	23	33	68	141
„ „ members ..	27,684	30,174	189,221	370,156	1,179,640	1,796,875

(a) Certain unions in this group have, in addition to branches in the States, branches in the Northern Territory and/or in the Australian Capital Territory.

4. *Central Labour Organizations.*—*Delegate organizations, consisting of representatives from a group of trade unions, have been established in each of the capital cities and in a number of industrial centres elsewhere. Their revenue is raised by means of a per capita tax on the members of each affiliated union. In most of the towns where such central organizations exist, the majority of the local unions are affiliated with the central organization, which is usually known as the Labour Council or the Trades Hall Council. In Western Australia, until 1962, a unified system of organization extended over the industrial centres throughout the State. In this State, there was a provincial branch of the Australian Labor Party, having a central council and executive, and metropolitan and branch district councils, with which the local bodies were affiliated. The central council, on which all district councils were represented, met periodically. In 1962, this organization was abolished, and a separate Trades and Labour Council with provincial councils was to be established outside the political organization. By the end of 1963 only the central council (the Trades and Labour Council of Western Australia) had been established. A number of provincial councils were established during 1964. In the other five States, while provision usually exists in the rules of the central council at each capital city for the organization of district councils or for the representation of the central council on the local councils, these councils are generally independent bodies.*

The table below shows the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith in each State and Territory at the end of 1963.

**CENTRAL LABOUR ORGANIZATIONS: NUMBER, AND UNIONS AND BRANCH UNIONS AFFILIATED, 1963**

Particulars	N.S.W.	Vic.	Q'land	S.A.	W.A. (a)	Tas.	N.T.	A.C.T.	Total
Number of councils ..	12	9	12	5	1	5	..	1	45
Number of unions and branch unions affiliated	335	295	170	154	83	121	..	27	1,185

(a) See explanation in text above.

The figures given in the preceding table concerning the number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated with the local trades councils in the several towns in which they are represented.

A Central Labour Organization, now called the Australian Council of Trade Unions, came into being during 1927. The Council was created to function on behalf of the trade unions of Australia, and was founded at an All-Australian Trade Union Congress held in

Melbourne in May, 1927. The A.C.T.U. consists of affiliated unions and affiliated Metropolitan and/or State Labour Councils and Provincial Councils. The Metropolitan or State Labour Council in each State is the State Branch of the A.C.T.U. and has the right to appoint one representative to act on the executive of the Council. In addition to the representatives of the State Branches of the A.C.T.U., six delegates are elected by and from Congress, one from each of the following industry groups of unions:—Building, Food and Distributive Services, Manufacturing, Metal, Services, Transport. To this executive are added the four officers, namely, President, two Vice-Presidents and Secretary, who are elected by and from the Australian Congress of Trade Unions.

The ordinary meetings of Congress are held in each alternate year. Special meetings of Congress shall be held whenever deemed advisable by decisions of the executive, as approved by the majority of its branches, or by resolution of unions representing one-third of the total membership of the A.C.T.U.

The objectives of the A.C.T.U. are the socialization of industry, i.e. production, distribution and exchange, and the utilization of the resources of Australia for the benefit of the people—ensuring full employment, with rising standards of living, real security and full cultural opportunities for all. The methods to be adopted are:—the closer organization of the workers by the transformation of the Australian trade union movement from the craft to an industrial basis, by grouping of unions in their respective industries and by the amalgamation of unions with a view to the establishment of one union in each industry; the consolidation of the Australian Labour Movement, with the object of unified control, administration and action; the centralized control of industrial disputes; educational propaganda among unions; and political action to secure satisfactory working-class legislation.

The A.C.T.U. was the first interstate body in Australia with authority to deal with industrial matters of an interstate character affecting the trade union movement generally. It is also the body responsible for submitting to the Commonwealth Government the names of persons suitable for selection as the Australian workers' delegate to the annual International Labour Conference.

All the major unions are affiliated with the A.C.T.U., with the exception of the largest, the Australian Workers' Union, which is itself virtually a central organization of branches catering in the main for employees in rural and constructional pursuits.

Between the trade union and the central organization of unions may be classed certain State or district councils organized on trade lines, and composed of delegates from separate unions whose members' interests are closely connected because of their occupations. Delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel, or brass trades, or with the building trades, may be so classed.

## § 2. International Labour Organisation

The International Labour Organisation (I.L.O.) was established on 11th April, 1919, as an autonomous institution associated with the League of Nations. Its original constitution was adopted as Part XIII. of the Treaty of Versailles and formed part of other treaties of peace. During the years between its establishment and the outbreak of the 1939-45 War, the I.L.O., with headquarters at Geneva, played a leading role in promoting the improvement of labour conditions throughout the world.

In 1940, in order to ensure that the I.L.O. should be able to continue to function freely, a working centre was established at Montreal, Canada. In 1946, the Organisation became the first of the specialized agencies of the United Nations. Under the terms of agreement, the United Nations recognizes the I.L.O. as a specialized agency having responsibility in the field defined by its constitution, which embraces labour conditions, industrial relations, employment organization, social security and other aspects of social policy. The Organisation has three basic parts. These are the International Labour Conference, its highest authority, which as a rule meets annually; the Governing Body, its executive council, which usually meets three times each year; and the International Labour Office, which provides the secretariat of the Organisation. The Conference is composed of delegations

from the Member States of the Organisation. At the end of 1963, there were 109 Member States, each of which is entitled to be represented by four delegates—two government, one representing employers and one representing workers, together with their advisers. Each delegate speaks and votes independently, so that all points of view in each country are fully expressed. The Governing Body consists of the representatives of twenty-four governments and twelve employers' and twelve workers' representatives. Of the twenty-four government representatives, ten are from the ten countries of major industrial importance and fourteen are elected by the remaining governments. These latter fourteen government representatives and the twelve employers' and twelve workers' titular delegates and the deputy members of the three groups are elected by their groups at the Conference every three years. Particulars are given in *Labour Report* No. 49 of the proceedings of International Labour Conferences up to the 45th Session, held in Geneva in June, 1961. For details of I.L.O. conventions ratified by Australia, see *Labour Report* Nos. 47 to 49.

## CHAPTER XIV

### OVERSEA TRADE

NOTE.—Because of the limitations of space, the statistics in this chapter are in the main restricted to summarized form. For details of imports and exports, reference should be made to the annual bulletins on *Oversea Trade* (preliminary and final), *Australian Exports*, and *Imports Cleared for Home Consumption*. Current information on oversea trade is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, the *Monthly Bulletin of Oversea Trade Statistics*, and a preliminary monthly statement on *Australian Oversea Trade—Merchandise*. The *Australian Balance of Payments* (mimeographed statement) contains detailed information on this subject, and there are also the following additional mimeographed statements:—*Exports of Wool* (monthly), *Oversea Trade with Major Groups of Countries* (quarterly), *Trade of Australia with the United Kingdom* (half-yearly) and *Trade of Australia with Eastern Countries* (annually).

#### § 1. Legislation affecting Oversea Trade

1. **Constitutional Powers.**—By the *Commonwealth of Australia Constitution Act*, section 51 (i), the power to make laws with respect to trade and commerce with other countries is conferred on the Commonwealth Parliament. Under section 86 of the Constitution, the collection and control of duties of customs and excise passed to the Executive Government of the Commonwealth on 1st January, 1901. Other references to trade and commerce are contained in sections 87 to 95 of the Constitution (*see pp. 18–19*).

2. **Commonwealth Legislation.**—The principal Commonwealth Acts affecting oversea trade at present in force are: the *Customs Act 1901–1963*; *Customs Tariff 1933–1963*; *Customs Tariff (Canada Preference) 1960–1963*; *Customs Tariff (New Zealand Preference) 1933–1963*; *Customs Tariff (Papua and New Guinea Preference) 1936–1959*; *Customs Tariff (Federation of Rhodesia and Nyasaland Preference) 1960–1963*; *Customs Tariff (Primage Duties) 1934–1958*; *Customs Tariff (Dumping and Subsidies) Act 1961*; *Trading with the Enemy Act 1939–1957*.

The Customs Act is the administrative Act under which the Department of Customs and Excise operates, while the Customs Tariffs provide the statutory authority for imposing the actual rates of duty operative from time to time.

3. **The Customs Tariff.**—(i) *General.* The first Commonwealth Customs Tariff was introduced by Resolution on 8th October, 1901, from which date uniform duties came into effect throughout Australia. The tariff has since been extensively amended. The Act at present in operation is the *Customs Tariff 1933–1963*.

The Australian Customs Tariff has been developed in conformity with the policy of protecting economic and efficient Australian industries and of granting preferential treatment to certain imports from certain countries of the Commonwealth of Nations. Duties are also imposed on some goods, generally of a luxury nature, for revenue purposes. Customs collections are a major source of revenue, but in its protective character the tariff has an important influence on the Australian economy.

Australia has three classes of tariff—the British Preferential Tariff, the Intermediate Tariff and the General Tariff.

(ii) *British Preference.* British Preferential Tariff rates of duty apply to goods the produce or manufacture of the United Kingdom, provided that such goods comply with the laws and statutory regulations in force at the time affecting the grant of preference,

and that the goods have been shipped in the United Kingdom to Australia and have not been transhipped, or, if transhipped, it is proved to the satisfaction of the Collector of Customs that the intended destination of the goods, when originally shipped from the United Kingdom, was Australia. For the purpose of the preferential tariff, the following goods are deemed by section 151A of the *Customs Act* 1901–1963 to be the produce or manufacture of the United Kingdom, provided the final process of their production or manufacture was performed in that country.

- (a) Goods which are wholly produced or wholly manufactured in the United Kingdom from materials in one or more of the following classes:—
- (i) materials wholly produced or wholly manufactured in the United Kingdom or in Australia;
  - (ii) imported unmanufactured raw materials;
  - (iii) imported manufactured raw materials as determined by the Minister.
- (b) Goods of the factory or works cost of which not less than 75 per cent. is represented—
- (i) by labour or material of the United Kingdom; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.
- (c) Goods of a class or kind not commercially produced or manufactured in Australia and of the factory or works cost of which not less than 25 per cent. (or 50 per cent. if the Minister so determines) is represented—
- (i) by labour or material of the United Kingdom; or
  - (ii) by labour or material of the United Kingdom and labour or material of Australia.

The British Preferential Tariff also applies to the Republic of Ireland and, with the exception of a relatively small number of commodities which carry special rates of duty, to Canada, New Zealand (except Cook Islands) and the Territory of Papua and New Guinea, and the abovementioned preference conditions apply *mutatis mutandis* to each of those countries, except that in respect of New Zealand the percentage content of goods under clause (b) of the said conditions is 50 per cent. of New Zealand and Australian labour and materials or 75 per cent. of New Zealand and United Kingdom or of New Zealand, Australian and United Kingdom labour and materials. In relation to certain goods, the British Preferential Tariff also applies to specified countries of the Commonwealth of Nations and most of the British non-self-governing colonies, protectorates and trust territories.

(iii) *Intermediate Tariff.* The Intermediate Tariff has been a feature of the Australian Tariff for a considerable number of years, although its effective application dates only from 1st January, 1937, consequent upon the conclusion of trade agreements with Belgium, Czechoslovakia and France in 1936. The countries to which the Intermediate Tariff applies include those countries with which Australia has concluded trade agreements (including tariff negotiations pursuant to the General Agreement on Tariffs and Trade) and countries which accord Australia reciprocal most-favoured-nation tariff treatment by reason of agreements between those countries and the United Kingdom. The Intermediate Tariff has also been extended to some countries to which Australia has no formal obligation to accord most-favoured-nation treatment. The countries and the particular tariff items to which the Intermediate Tariff applies are specified by order made in pursuance of section 9A of the *Customs Tariff* 1933–1963.

(iv) *General Tariff.* The General Tariff applies to goods other than those to which the British Preferential Tariff or Intermediate Tariff or special rates under trade agreements apply.

4. *Primage Duties.*—In addition to the duties imposed by the Customs Tariff, *ad valorem* primage duties at rates of 4 per cent., 5 per cent. or 10 per cent. are charged on some goods according to the type of goods and origin thereof under the *Customs Tariff (Primage Duties)* 1934–1958. Other goods are exempt from primage duty. Goods the produce or manufacture of New Zealand, Norfolk Island, Fiji, Cocos Islands, Christmas Island and the Territory of Papua and New Guinea are exempt from primage duty.

5. **Tariff Board.**—The *Tariff Board Act 1921–1962* provides for the appointment of a Tariff Board consisting of eight members. Of these, two must, and three may, be members of the Commonwealth Public Service at the time of their appointment (or first appointments in the case of re-appointments). Members of the Board are appointed for terms of not less than one year and not more than five years. The purpose of the Tariff Board is to advise the Government on matters relating to the protection and encouragement of Australian industry.

The Minister of State for Trade and Industry is required to refer to the Board for inquiry and report the following matters:—the necessity for new, increased, or reduced duties; the necessity for granting bounties and the effect of existing bounties; and any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods by charging unnecessarily high prices for his goods or acting in restraint of trade. In addition, the Minister may refer the following matters to the Tariff Board for inquiry and report:—the general effect of the working of the Customs Tariff and the Excise Tariff; the fiscal and industrial effects of the Customs laws on the Commonwealth; the incidence between the rates of duty on raw materials and on finished or partly finished products; and other matters affecting the encouragement of primary and secondary industries in relation to the Tariff. The Minister of State for Customs and Excise may refer to the Tariff Board for inquiry and report the following matters:—the classification of goods in the Customs Tariff or Excise Tariff and matters in connexion with the interpretation of these Tariffs; the question of the value for duty of goods; whether goods not prescribed in departmental by-laws should be so prescribed; and any matters in respect of which action may be taken under the *Customs Tariff (Dumping and Subsidies) Act 1961*.

Where a matter of the necessity for new or increased duties on any goods has been referred to the Board for inquiry and report, the Board may, in its report, recommend the restriction of the importation of those goods for such period as is specified in the report.

Inquiries conducted by the Board relating to a revision of the Tariff, a proposal for a bounty, a question under the *Customs Tariff (Dumping and Subsidies) Act*, or any complaint that a manufacturer is taking undue advantage of the protection afforded him by the Tariff or by the restriction of the importation of any goods, are held in public, and evidence in such inquiries is taken in public on oath, unless the Board accepts evidence as confidential or in the form of a written statement by a witness on oath. The Board is required to make available to the public the contents of any such written statement except any matter which it accepts as confidential.

6. **Special Advisory Authority.**—The Minister for Trade and Industry may also request a Special Advisory Authority to inquire into cases where urgent action appears necessary to protect an Australian industry against import competition pending receipt and consideration of a full report by the Tariff Board. The Special Advisory Authority's report must be submitted to the Minister within thirty days of the making of the request. Temporary protection recommended by a Special Advisory Authority may be imposed, but may only operate for a period of up to three months after the date of receipt of the final report by the Tariff Board on the goods concerned.

7. **Anti-dumping Legislation.**—The *Customs Tariff (Dumping and Subsidies) Act 1961* provides protection for Australian industry against various forms of unfair trading. Under this Act, dumping duty may be imposed on goods that are sold to Australia at an export price which is less than the normal value of the goods, where this causes or threatens material injury to an Australian industry.

“ Normal value ” under the Act means:—

- (a) fair market value in the country of export;
- (b) price in the country of export to a third country;
- (c) fair market value in a third country; or
- (d) cost of production, plus f.o.b. charges, plus selling costs and profit.

Countervailing duty may be levied on goods in respect of which any subsidy, bounty, reduction, or remission of freight or other financial assistance has been, or is being, paid or granted directly or indirectly upon the production, manufacture, carriage or export of those goods. The amount of the countervailing duty in respect of any goods is a sum equal to the amount of the subsidy, bounty, reduction or remission of freight or other financial assistance

Special duties may be collected also if dumped or subsidized goods are imported to the detriment of the trade of a third country in the Australian market.

Dumping and countervailing duties may be imposed to protect an Australian industry only after inquiry and report by the Tariff Board.

For information concerning the *Customs Tariff (Industries Preservation) Act 1921-1957* reference should be made to Official Year Book No. 47, page 483.

**8. Trade Descriptions.**—The *Commerce (Trade Descriptions) Act 1905-1950* gives power to require the application of a proper trade description on certain prescribed goods imported into or exported from Australia. Goods which must bear a prescribed trade description upon importation into Australia are specified in the Commerce (Imports) Regulations. As regards exports from Australia, marking requirements are prescribed in regulations issued under the Act and relating to specified export commodities.

**9. Import Controls.**—*Customs (Import Licensing) Regulations.* A comprehensive system of import licensing was introduced in Australia at the beginning of the second World War under the authority of the Customs (Import Licensing) Regulations.

With the end of the War, it was possible to relax the restrictions progressively. However, because of a serious deterioration in Australia's external financial position, import licensing controls were reimposed on 8th March, 1952, on imports from all sources except for goods originating in Papua, New Guinea and Norfolk Island.

The object of import licensing was to limit the value of imports to an annual rate determined by the government in order that payments for imports would not involve an excessive drawing on Australia's oversea exchange reserves. Imports were divided into a number of categories to which different licensing treatment was accorded (largely by the establishment of quotas for individual importers within each category). In general, the nature of goods and their relative importance to the Australian economy were taken into account in determining the licensing rate for particular goods.

Between March, 1952, and February, 1960, import restrictions were relaxed and intensified broadly in line with changes in Australia's balance of payments position.

The import controls were administered without discrimination as to country of origin, with the exception of those relating to imports from Japan and the dollar area. The special restrictions against Japanese imports were removed in July, 1957, and from October, 1955, Australia progressively removed discrimination against imports from the dollar area.

In accordance with the principle of relaxing and removing controls in the light of developments in Australia's balance of payments position, large-scale licensing changes involving the almost complete abolition of controls were made as from 23rd February, 1960. As a result of these changes, some 90 per cent. of total imports were exempted from control. The remaining import licensing controls were removed on 18th October, 1962, with the exception of some goods retained under control for reasons associated with the protection of the Australian industries concerned. The goods falling within this latter category at 31st December, 1963, are broadly described as:—aluminium and aluminium alloy, ingot and preliminary shapes, and waste and scrap; ball bearings; timber; and used, secondhand or disposal earthmoving and construction equipment.

The administration of the import controls is the responsibility of the Department of Trade and Industry, although the issue of import licences is a function of the Department of Customs and Excise at the various ports of the Commonwealth.

**10. Export Controls.**—(i) *Commodity Control.* Section 112 of the *Customs Act* provides that the Governor-General may, by regulation, prohibit the exportation of goods from Australia, and that this power may be exercised by—(a) prohibiting the exportation of goods absolutely; (b) prohibiting the exportation of goods to a specified place; and (c) prohibiting the exportation of goods unless prescribed conditions or restrictions are complied with. Goods subject to this export control are listed in the Customs (Prohibited Exports) Regulations.

(ii) *Exchange Control—Banking Act 1959.* As an integral part of the framework of exchange control, a control over goods exported from Australia is maintained under the provisions of Part III. of the Banking (Foreign Exchange) Regulations, to ensure that the full proceeds of such goods are received into the Australian banking system and that these proceeds are received in the currency and in the manner prescribed by the Reserve Bank of

Australia. This action is complementary to that taken under other parts of the Banking (Foreign Exchange) Regulations and under Part IV. of the *Banking Act 1959* to control the movement out of Australia of capital in the form of securities, currency and gold.

Export licences are issued subject to terms and conditions specified in the Banking (Foreign Exchange) Regulations, and may be subject to such further terms and conditions as are determined, or may be free from terms and conditions. On the receipt in Australia by the Reserve Bank, or by a bank acting as agent for that Bank, of advice that the foreign currency has been paid to the Reserve Bank or to an agent of the Bank in payment for goods exported in accordance with a licence granted under the regulations, the Bank, or an agent of the Bank, pays the licensee, or such other person as is entitled to receive it, an amount in Australian currency equivalent to the foreign currency received. In addition to commercial transactions involving exports, movements of personal effects are also controlled. Persons leaving Australia for overseas are required to obtain licences to cover their bona fide baggage, personal effects and household effects in any individual case where the gold content thereof exceeds £A.125, or where jewellery and other articles of high intrinsic worth either exceed £A.1,000 in value or have not been the personal property of the passenger for at least twelve months.

11. Trade Agreements.—(i) *The United Kingdom.* The original United Kingdom and Australia Trade Agreement (Ottawa Agreement) was signed on 20th August, 1932. Under this agreement, Australia secured preferences in the United Kingdom market for a wide range of Australian export commodities, and in return assumed obligations in respect of tariff levels and the grant of preference to United Kingdom goods.

A new Trade Agreement, designed to replace the original agreement and correct the unbalance in benefits which had emerged in the 25 years of its operation, came into effect on 9th November, 1956. Briefly, this agreement preserves security for Australian exports in the United Kingdom market, but lowers the obligatory margins of preference which Australia extends to the United Kingdom (*see also* pp. 515–6).

(ii) *Canada.* The existing agreement between Australia and Canada came into force on 30th June, 1960, replacing an agreement signed on 3rd August, 1931. The agreement provides for Australian goods to receive British Preferential Tariff rates, or better, upon entry into Canada, and for Canada to maintain margins of preference in favour of Australia on a range of commodities. The agreement specifies that Canadian goods, with some exceptions, shall receive the benefit of the British Preferential Tariff upon importation into Australia and that Australia shall maintain margins of preference in favour of Canada on a range of commodities. The agreement continues subject to six months notice.

(iii) *New Zealand.* The existing trade agreement between Australia and New Zealand came into force on 1st December, 1933. The basis of the agreement is, generally, the mutual accord of British Preferential Tariff treatment. The exceptions to this general rule are listed in the schedules to the agreement.

(iv) *Federation of Rhodesia and Nyasaland.* A trade agreement was negotiated with the Federation in June, 1955. Australia's principal undertaking was to grant an exclusive tariff preference to the Federation on unmanufactured tobacco—a concession formerly accorded Southern Rhodesia only, under a previous agreement. The Federation accorded preferential tariff treatment on a wide range of Australian export products. Following the dissolution of the Federation in December, 1963, the agreement has been applied on a provisional basis to each of the three constituent territories—Southern Rhodesia, Northern Rhodesia and Nyasaland.

(v) *Malaysia.* A trade agreement was signed with the former Federation of Malaya on 26th August, 1958. By common consent, the agreement continues in force, applying only to that part of Malaysia which formerly comprised the Federation of Malaya. (For administrative purposes this area is now known as the States of Malaya.) The trade agreement provides for concessional rates of duty on a limited number of items on both sides, and includes anti-dumping clauses to protect Malayan rubber and tin and Australian wheat and flour. The Agreement continues in force indefinitely, subject to six months notice of termination by either party. A review of the operation of the agreement is due every two years.

(vi) *Japan.* An Agreement on Commerce between the Commonwealth of Australia and Japan was signed on 6th July, 1957, and formally ratified on 4th December, 1957. It was provided that the Agreement would remain in force until 5th July, 1960, and thereafter

unless prior notice of termination should be given by either government. The agreement provides that each country shall extend most-favoured-nation treatment to the other in respect of customs duties and similar charges and import and export licensing. Japan is not entitled to claim the benefit of preferences accorded by Australia to Commonwealth countries and dependent territories. Japan also gave certain specific commitments on some important Australian export commodities.

Following a review of the agreement, a Protocol of Amendment was signed on 5th August, 1963. Under the Protocol, Australia agreed to withdraw action against Japan under Article XXXV of the General Agreement on Tariffs and Trade, and thus a full G.A.T.T. relationship is to be established between the two countries. This arrangement will take effect when the Protocol has been ratified by both Governments. Pending this action, both countries agreed to apply the new agreement provisionally.

The specific undertakings agreed in 1957, have now lapsed and the following commitments entered into.

Japan has—

- (a) undertaken not to accord less favourable import treatment (apart from tariff) for raw wool than for raw cotton,
- (b) stated that it has no present intention of imposing a duty on wool,
- (c) undertaken to continue imports of Australian soft wheat at a stabilized level, and to purchase Australian hard wheat when requirements are met,
- (d) stated that it will endeavour to expand opportunities for imports into Japan of Australian sugar, canned meat, leather, motor vehicles, butter and cheese.

Australia has—

- (a) undertaken to consult Japan on temporary protection cases affecting Japanese products (in such consultations Japan will consider whether the need for temporary protection can be obviated by measures taken in Japan),
- (b) stated that equal opportunities of fair and equal competition are accorded to Japanese products in Australian Government purchases overseas.

The new agreement will be effective for three years from the date of ratification and thereafter subject to three months' notice of termination by either Government. There is provision for consultations to take place at least annually.

(vii) *Federal Republic of Germany.* An agreement signed in October, 1959, provided for annual import quotas for Australian wheat, coarse grains, frozen mutton and lamb, canned meat, fruits preserved in sugar, canned tropical fruit and wine. The agreement also provided for Australia to be included in all global tenders for whole and skim milk powder, butter, cheese, frozen beef, apples, pears, canned fruits, jam and casein.

The Agreed Minute on the export of flour from the Federal Republic of Germany to certain traditional Australian flour markets was also signed in October, 1959.

(viii) *Indonesia.* This agreement came into operation on 1st July, 1959. It records the desirability of expanding trade between Australia and Indonesia. It also gives special recognition to the importance of the flour trade from Australia to Indonesia. Australia recognizes the importance to Indonesia of its traditional export items to Australia. The agreement is subject to review and renewal annually.

(ix) *Other Countries.* Australia has entered into bilateral agreements with South Africa, Brazil, Czechoslovakia, France, Greece and Switzerland. Summaries of the texts of these agreements were given in earlier issues of the Official Year Book. In 1951, Australia entered into a trade agreement with Israel under which each country undertook to accord most-favoured-nation treatment to imports from the other. A similar agreement with Iceland was concluded in 1952.

(x) *The General Agreement on Tariffs and Trade (G.A.T.T.).* The General Agreement on Tariffs and Trade, of which Australia is an original member, is an international trade agreement which has been in operation since 1st January, 1948. Some of the provisions of the Agreement were revised in 1954 and 1955.

The objectives of the G.A.T.T. include the expansion of world trade and the raising of living standards throughout the world. Its members work towards these objectives by the reduction of tariffs and other barriers to trade, and by reduction of discrimination between countries through negotiations on a reciprocal and mutually advantageous basis. The essential features of the G.A.T.T. are the schedules of tariff concessions which its members have agreed to apply consequent to tariff negotiations with each other, the application of most-favoured-nation treatment among its members, the avoidance of trade discrimination, and a code of agreed commercial policy rules for fair international trading.

Five series of tariff negotiations have been completed under the provisions of the General Agreement. As a result of these negotiations, Australia has obtained tariff concessions on a number of products of which it is an actual or potential exporter to the individual countries concerned. These concessions were a result both of direct negotiation by Australia and of negotiations by other countries—in the latter case, benefits occur through the operation under the Agreement of the most-favoured-nation principle.

In 1958, a Committee was set up to examine problems of expansion of trade in agricultural products and obstacles to the expansion of trade of under-developed countries, and in 1962, groups were set up to study the problems of trade in cereals and meat. Little progress has been made, however, in resolving the problems of expanding trade in agricultural products.

In May, 1963, a Ministerial meeting of Contracting Parties was convened principally to make arrangements for a new round of trade negotiations commencing in 1964—the “Kennedy Round”. The chief characteristics of the present proposals for Kennedy Round negotiations is that they contemplate a linear or “across the board” cut in tariffs of a suggested depth of 50 per cent. (whereas previous rounds were confined to negotiation of tariff cuts on an item-by-item basis) and are expected to embrace non-tariff barriers on agricultural and other products.

There are at present (January, 1964) 60 Contracting Parties to the Agreement, comprising most of the world's larger trading nations, and further countries are seeking accession or have some provisional association with the G.A.T.T. The Contracting Parties periodically hold plenary sessions to deal with the questions arising out of the administration of the Agreement. The 20th Session was held in October/November, 1962, and the 21st Session was scheduled to be held in February/March, 1964. A permanent Council has been set up to deal with urgent business arising between sessions and gives preliminary consideration to work arising at the sessions.

## § 2. Imperial Preference in the United Kingdom

1. **Preferential Tariff of the United Kingdom.**—A brief summary of the preferential tariff of the United Kingdom in the years prior to 1931 was published in Official Year Book No. 43, page 328. Further details were published in Official Year Book No. 48, page 474.

Since 30th October, 1947, Canada and the United Kingdom have, by an exchange of letters, recognized the rights of their respective Governments to reduce or eliminate the preferences they accord one another without prior consultation or consent.

In 1947, the United Kingdom and Australia adhered to the General Agreement on Tariffs and Trade, which prohibits increases in tariff preferences by either country. This rule, as is the case with the other provisions of the General Agreement, may be waived by a two-thirds majority of the signatories to the agreement.

2. **The Australia-United Kingdom Trade Agreement.**—The provisions and history of the original Australia-United Kingdom Agreement (Ottawa Agreement) were published in Official Year Book No. 43, page 329.

The major provisions of the current agreement (operative since 9th November, 1956) which affect Australia's position in the United Kingdom market are as follows.

- (a) Continued free entry for those Australian goods in which Australia has an active trade interest, and which were accorded free entry immediately prior to the new agreement.

- (b) A guaranteed minimum margin of preference in the United Kingdom Tariff on all items so treated in the previous agreement plus an extension of this guarantee to several items on which the margin of preference, although in force, was not bound to Australia. This latter group comprised currants, egg powder and egg pulp, jam, rice, tomato juice, pineapple juice and coconut oil. A selection of the items on which Australia receives a bound margin of preference and the extent of that preference is as follows (all values in sterling):—cheese (15 per cent. *ad val.*); canned peaches, pears and apricots (12 per cent. *ad val.*); raisins (8s. 6d. a cwt.); eggs in shells (1s. to 1s. 9d. a great hundred (10 dozen)); milk powder 6s. a cwt.; sweetened condensed milk (5s. a cwt.); apples (4s. 6d. a cwt. in season); honey (5s. a cwt.); flour (10 per cent. *ad val.*); light wine (2s. a gallon); heavy wine (10s. a gallon at present duty rate).
- (c) All rights under the Ottawa Agreement in respect of meat are maintained.
- (d) Australia receives an assured wheat market of at least 750,000 tons f.a.q. wheat or flour equivalent annually. Any Australian high-protein wheat sold to the United Kingdom is not counted against this obligation.
- (e) There is provision for full consultation between the two Governments on such matters as agricultural production and marketing, transport and communication, the disposal of surpluses and restrictive business practices.
- (f) The agreement shall be the subject of re-negotiation between the two Governments during the fifth year of its operation. (By agreement between the two governments this re-negotiation has been postponed.)

### § 3. Trade Commissioner Service

The stimulation of interest abroad in Australia's exports is an important government activity in which the Australian Trade Commissioner Service plays a prominent part. The origin of official Australian trade representation abroad dates back to 1921, when the first Trade Commissioner was appointed to Shanghai. In the following year, a second Commissioner was appointed to Singapore. These appointments, however, were terminated shortly afterwards.

In 1929, a Trade Commissioner post was opened at Toronto. Wellington was opened five years later. The *Trade Commissioners Act 1933* provided for the establishment of an Australian Government Trade Commissioner Service. In 1935, official trade representation was established at Batavia (now Djakarta), Shanghai and Tokyo. Cairo, New York and Calcutta posts were opened between 1937 and 1939 and the Singapore post was established in 1941.

After the War, the service increased steadily to take care of Australia's expanding export interests and the growing diversity of our export commodities. By December, 1963, there were 38 Trade Commissioner posts in 29 countries, new posts having been opened in Beirut, Lebanon, August, 1961; Lima, Peru, October, 1961; Caracas, Venezuela, March, 1962; Athens, Greece, July, 1962; and Bahrein, November, 1963.

In 1957, Australia's official commercial representation overseas was extended by the introduction of a system of government Trade Correspondents. These men, who as a rule already reside in particular centres overseas, are engaged on a part-time basis to carry out market research, arrange introductions between buyer and seller, and generally promote Australia's trade interests in the same way as Trade Commissioners. Each Trade Correspondent operates under the general direction of the nearest Trade Commissioner.

The first two Australian Trade Correspondents were appointed in 1957 at Montevideo, Uruguay and Nairobi, Kenya (since replaced by a Trade Commissioner). In 1958, four more were appointed at Suva, Honolulu (discontinued in 1963), Mauritius and Mexico City. Appointments have since been made at Taiwan, Malta, Istanbul and Madrid. In addition, Marketing Officers have been appointed at Los Angeles and Rangoon.

Trade Commissioners and, to a lesser extent, Trade Correspondents, are responsible for commercial intelligence in their territories. Particular facilities provided for Australian exporters and export organizations include—

- (a) surveys of market prospects;
- (b) advice on selling and advertising methods;
- (c) arranging introductions with buyers and agents;
- (d) providing reports on the standing of oversea firms;
- (e) advice and assistance to business visitors;
- (f) helping to organize and carry through trade missions, trade displays, newspaper supplements and other promotion and publicity media;
- (g) providing information on import duties, import licensing, economic conditions, quarantine and sanitary requirements, and other factors affecting the entry and sale of goods;
- (h) helping to attract desirable investment.

In some countries, Trade Commissioners also participate in inter-governmental negotiations in the economic and commercial fields. In certain countries where there is no diplomatic or consular mission he is called upon to act as the Australian representative.

Trade Commissioners usually enter the Service from either private enterprise or the public service, and applications for entry into the Service are called for periodically by public advertisement. In the more important posts, the Trade Commissioner is supported by an Assistant Trade Commissioner, who normally qualifies at a later stage for appointment as a Trade Commissioner.

The Trade Commissioner Service is administered by the Commonwealth Department of Trade and Industry (as distinct from the diplomatic and consular services administered by the Department of External Affairs), but in countries where there is an Australian diplomatic or consular mission it is the practice for Trade Commissioners to be attached to the mission and to hold an appropriate diplomatic or consular rank (Commercial Counsellor, Commercial Secretary or Commercial Attaché).

The oversea trade representation is shown in Chapter XXIX. International Relations.

#### § 4. Australian Trade Missions

Over the last decade, Trade Missions have become an integral part of the Commonwealth Government's campaign to develop and expand Australia's export trade.

They have proved successful in creating an awareness, especially in new markets, of Australia as a producer of quality primary and secondary products, in establishing Australia as a source of supply, and in establishing a basis for long-term business, as well as producing valuable export business from "on the spot" trading.

Trade Missions are of three different types: (i) the Trade Survey Mission, designed to investigate a particular area, assess its potentialities for Australian exports, and recommend a programme of trade publicity and promotion; (ii) the major Trade Mission, comprising representatives of private enterprise and of the Department of Trade and Industry, its function being firstly to sell, and secondly to publicize and promote Australia as an exporting nation; and (iii) the specialized trade mission, which is smaller than (ii) and confined to one industry at a time.

Since 1954, Australia has sent overseas fourteen major Trade Missions, three Trade Ships, five Trade Survey Missions and two Specialized Selling Missions. Africa, Asia, the Pacific, America and the Mediterranean and Arabian Gulf littorals are represented in the countries visited. Some of the countries have been visited more than once.

Further details on Trade Missions are included in Official Year Book No. 49, page 544.

### § 5. Export Payments Insurance Corporation

The *Export Payments Insurance Corporation Act* No. 32 of 1956 established the Corporation with the objective of protecting Australian exporters against risks of loss arising from non-payment of their overseas accounts.

The Corporation is charged to be self-supporting and operates on principles similar to those of any other form of insurance. There is no overlap with normal insurance facilities, since the Corporation does not cover risks which can normally be insured with commercial insurers.

The main risks of loss against which the Corporation insures are the "commercial" risks of the insolvency or protracted default of the buyer, and "political" risks. The cover for "commercial" risks is a maximum of 85 per cent., and the cover on "political" risks a maximum of 90 per cent. for the amount of loss in the pre-shipment period and a maximum of 95 per cent. in the post-shipment period.

The initial capital of the Corporation was £500,000 and the maximum liability limit of the Corporation was £25,000,000. In April, 1959, these limits were doubled to enable the Corporation to meet fully demands of the Australian exporters for this facility.

Further information on the Corporation is contained in Official Year Book No. 49, page 544.

### § 6. European Economic Integration

Official Year Book No. 49, pages 545-6, contained a short description of the following European economic organizations: the European Economic Community (E.E.C.), the European Coal and Steel Community (E.C.S.C.), the European Atomic Energy Community (Euratom), and the European Free Trade Association (E.F.T.A.), but information has not been repeated in this issue because of consideration of space. Details of Australia's trade and balance of payments with E.E.C. and E.F.T.A. countries are shown on pages 530-1 and 551-2 of this issue.

### § 7. Method of Recording Imports and Exports

1. **Source of Statistics.**—Overseas trade statistics are compiled from documents obtained under the *Customs Act* 1901-1963 and supplied to the Commonwealth Bureau of Census and Statistics by the Department of Customs and Excise. Certain items are excluded for which customs entries are not required. See sub-para. (viii) Balance of Payments, page 526.

2. **Customs Area.**—The area to which all overseas trade statistics issued by this Bureau apply is the whole area of the Commonwealth of Australia. Non-contiguous territories are treated as outside countries, and trade transactions between Australia and these non-contiguous territories are part of the overseas trade of Australia. Such transactions are shown separately, i.e. the trade of Australia with each particular country is separately recorded and tabulated.

3. **The Trade System.**—There are two generally accepted systems of recording overseas trade statistics, namely (a) special trade and (b) general trade. Statistics of both are published by the Bureau, although greater emphasis is placed on general trade. The Statistical Office of the United Nations defines the two systems as follows.

"*System of Trade.* Two systems of recording trade are in common use, differing mainly in the way warehoused and re-exported goods are recorded.

# OVERSEA TRADE: AUSTRALIA, 1945-46 TO 1962-63

# EXPORTS FROM AUSTRALIA, 1962-63

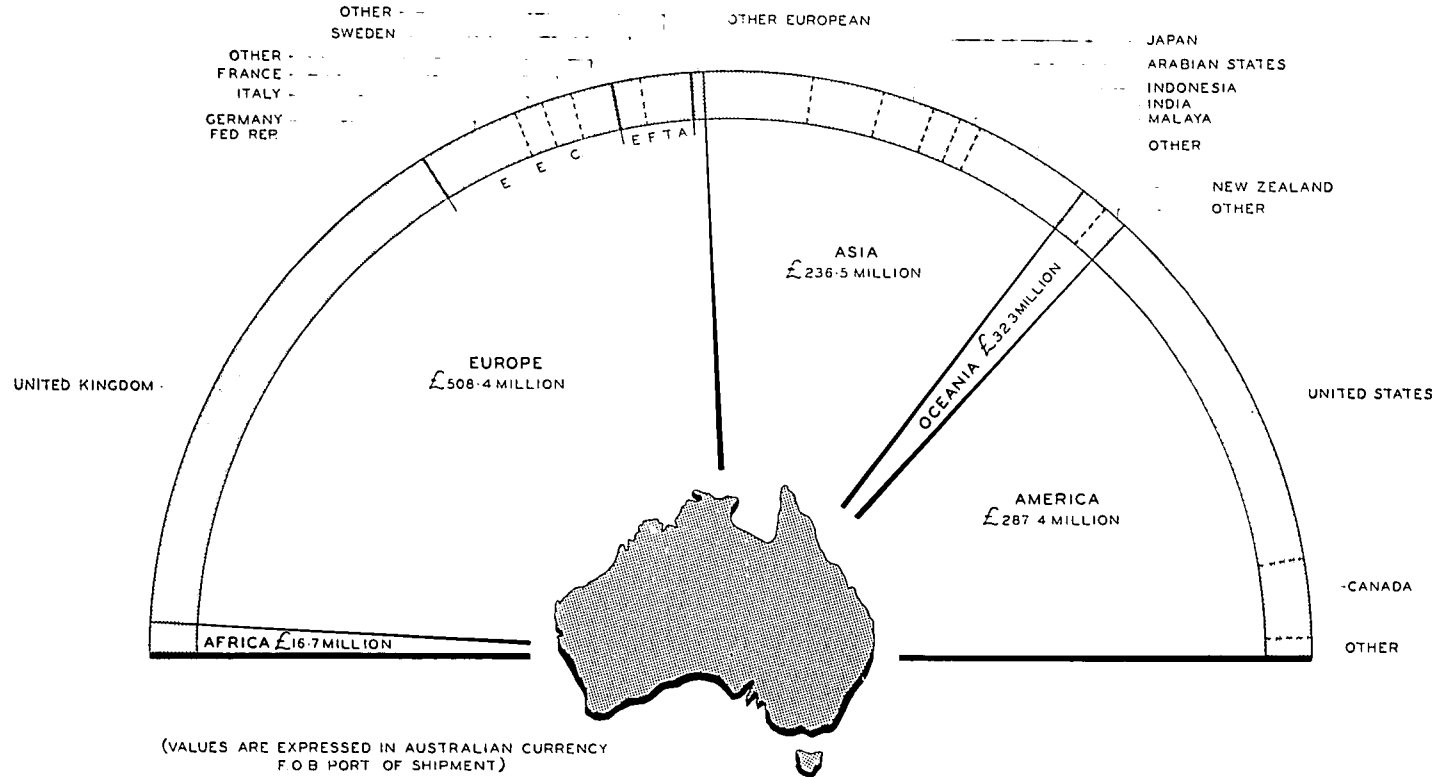

TOTAL EXPORTS - £1,075.9 MILLION

(VALUES ARE EXPRESSED IN AUSTRALIAN CURRENCY F.O.B. PORT OF SHIPMENT)

# IMPORTS INTO AUSTRALIA, 1962-63

TOTAL IMPORTS - £1,081.3 MILLION

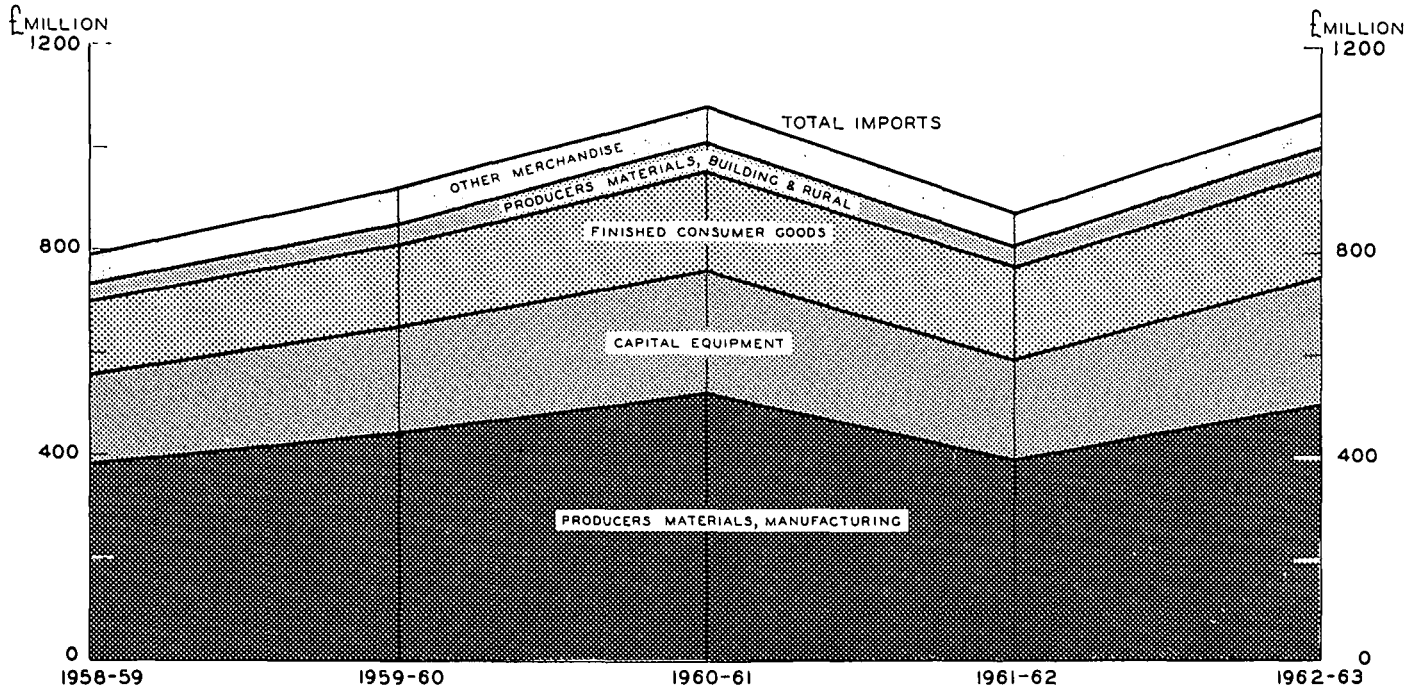

# EXPORTS OF PRINCIPAL COMMODITIES

AUSTRALIA, 1953-54 TO 1962-63

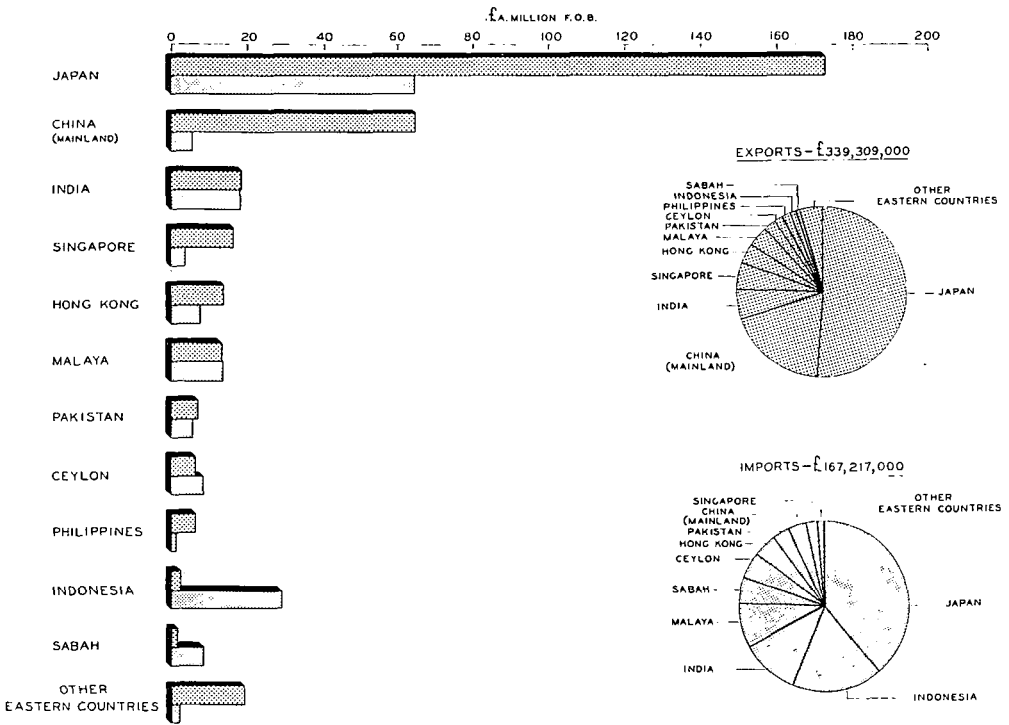

# IMPORTS BY ECONOMIC CLASS: AUSTRALIA

## 1958-59 TO 1962-63

## AUSTRALIA TRADE WITH EASTERN COUNTRIES, 1962-63

- (a) *Special Trade.* Special imports are the combined total of imports directly for domestic consumption (including transformation and repair) and withdrawals from bonded warehouses or free zones for domestic consumption. Special exports comprise exports of national merchandise, namely, goods wholly or partly produced or manufactured in the country, together with exports of nationalized goods. (Nationalized goods are goods which, having been included in special imports, are then exported without transformation.)
- (b) *General Trade.* General imports are the combined total of imports directly for domestic consumption and imports into bonded warehouse or free zone. General exports are the combined total of national exports and re-exports. Re-exports, in the general trade system, consist of the outward movement of nationalized goods plus goods which, after importation, move outward from bonded warehouse or free zone without having been transformed.

*Direct transit trade, i.e., goods merely being transhipped or moving through the country for purposes of transport only, is excluded from the statistics of both special and general trade.*"

The tables which follow refer to general trade, except for those appearing in § 17, para. 2, which refer to imports cleared for home consumption.

4. **Statistical Classification of Imports and Exports.**—Statistics of oversea imports and exports from which the summary tables in this issue of the Official Year Book have been extracted were compiled according to the revised classification which came into operation on 1st July, 1945. This classification is designed to allow for the inclusion of items which become significant with varying trade conditions, and in 1962–63 provided for over 3,700 import items and over 1,300 export items.

5. **The Trade Year.**—From 1st July, 1914, the statistics relating to oversea trade have been shown according to the financial year (July to June). Prior to that date, the figures related to the calendar year. A table is included in § 18 showing the total value of imports and exports in the calendar years 1958 to 1963 inclusive.

6. **Valuation.**—(i) *Imports.* The recorded value of goods imported from countries beyond Australia as shown in the following tables represents the amount on which duty is payable or would be payable if the duty were charged *ad valorem*.

Section 154 (1) of the *Customs Act* 1901–1963 provides that "when any duty is imposed according to value, the value for duty shall be the sum of the following:—

- (a) (i) the actual money price paid or to be paid for the goods by the Australian importer plus any special deduction, or
- (ii) the current domestic value of the goods, whichever is the higher; and
- (b) all charges payable or ordinarily payable for placing the goods free on board at the port of export."

"Current domestic value" is defined as "the amount for which the seller of the goods to the purchaser in Australia is selling or would be prepared to sell for cash, at the date of exportation of those goods, the same quantity of identically similar goods to any and every purchaser in the country of export for consumption in that country". *The recorded values of Australia's imports, as shown throughout this and other chapters of this issue of the Official Year Book, are therefore "transaction value (f.o.b.)" or "domestic value (f.o.b.)", whichever is the higher. These values are f.o.b. port of shipment Australian currency.*

(ii) *Exports.* Since 1st July, 1937, the following revised definitions of f.o.b. values have been adopted for exports generally.

- (a) Goods sold to oversea buyers before export—the Australian f.o.b. port of shipment equivalent of the price at which the goods were sold (e.g. as regards wool, the actual price paid by the oversea buyer plus the cost of all services incurred by him in placing the wool on board ship).

- (b) Goods shipped on consignment—the Australian f.o.b. port of shipment equivalent of the current price offering for similar goods of Australian origin in the principal markets of the country to which the goods were dispatched for sale (as regards wool, the f.o.b. port of shipment equivalent of the current price ruling in Australia will normally provide a sufficient approximation to the f.o.b. port of shipment equivalent of the price ultimately received).

Exporters are required to show all values in terms of Australian currency and to include the cost of containers.

An account of the bases of valuation in operation prior to 1st July, 1937, was given on page 469 of Official Year Book No. 39.

7. **Inclusions and Exclusions.**—(i) *Stores.* Prior to 1906, goods shipped in Australian ports on oversea vessels as ships' stores were included as exports. From 1906, ships' and subsequently aircraft stores have been specially recorded as such, and omitted from the tabulation of exports. A table showing the value of these stores shipped each year since 1958–59 is shown on page 542.

(ii) *Outside Packages.* Outside packages (containers, crates, etc.) have always been included as a separate item in the tabulation of imports, but, except for those received from the United Kingdom, a classification according to country of origin has been available only since 1950–51. For exports, however, the value recorded for each item includes the value of the outside package.

(iii) *Trade on Government Account.* Imports and exports on Government account are treated as normal transactions and are an integral part of oversea trade transactions.

(iv) *Currency.* Notes and coins are included in the oversea trade statistics at their commodity value only.

(v) *Gold Content of Ores and Concentrates.* The value of ores and concentrates imported and exported includes the value of the gold content. The latter is not recorded separately for purposes of inclusion in imports and exports of gold.

(vi) *Migrants' Effects.* Migrants' effects are included in imports and exports.

(vii) *Direct Transit Trade.* Particulars of direct transit trade through Australia are not recorded.

(viii) *Balance of Payments.* Statistics relating to oversea trade do not measure Australia's total balance of payments during the period shown. Particulars of other transactions entering into the balance of payments, for example, freight charges and oversea travel, payment of dividends, profits and interest and government expenditure overseas are provided in the statistical bulletin *Balance of Payments: Quarterly Summary* issued by the Commonwealth Statistician (see also § 20, p. 547). For items such as naval ships, merchant vessels trading overseas, aircraft for use on oversea routes, uranium and certain materials for inter-governmental defence projects, no customs entries are recorded, but these items are taken into account in estimates of the balance of payments.

8. **Countries.**—(i) *Imports.* From 1st January, 1905, in addition to the record of the countries whence goods arrived directly in Australia, a record of the countries of their origin was kept, as it was considered that classification of imports according to country of origin was of greater interest and value than classification according to country of shipment. Up to and including the year 1920–21, imports continued to be classified both according to country of shipment and according to country of origin, but the former tabulation was discontinued as from the year 1921–22. "Country of origin" referred to in import tables should be taken to mean the country of production.

(ii) *Exports.* In the export sections of tables in this chapter, "country" refers to the country to which the goods were consigned so far as this can be determined at the time of export.

9. Quantities.—Where quantities are shown, they are generally, but not invariably, expressed in terms of the normal trade unit. Where "cental" is used, the unit is equivalent to 100 lb. avoirdupois. Quantities are not tabulated in respect of items for which there is no appropriate unit of quantity (e.g. an item which covers a number of commodities and cannot be recorded under a uniform unit of quantity).

10. Pre-federation Records.—In the years preceding Federation each State recorded its trade independently, and in so doing did not distinguish other Australian States from foreign countries. The aggregation of the records of the several States is necessarily the only available means of ascertaining the trade of Australia for comparison with later years, but the results obtained may be subject to error, since past records of values and the direction of imports and exports were not on uniform lines. Imports and exports for years prior to Federation may be found in issues of the Official Year Book prior to No. 41. On the introduction of the *Customs Act 1901*, the methods of recording values were made uniform throughout the States.

### § 8. Total Oversea Trade

1. Including Gold.—The following table shows the total trade (including gold) of Australia with oversea countries from 1901 to 1962-63. The period 1901 to 1955-56 has been divided into five-year periods, and the figures shown represent the annual averages for the periods specified. Figures for the individual years were published in earlier issues, but figures for imports in issues prior to No. 37 were expressed in British currency.

VALUE OF OVERSEA TRADE: AUSTRALIA  
(INCLUDING GOLD)  
(£A. f.o.b.)

Period	Imports	Exports	Total	Excess of exports(+) or imports(-)	Value per head of population		
					Imports	Exports	Total

1955-56.. ..	821,088	781,864	1,602,952	- 39,224	88.1	83.9	172.0
1956-57.. ..	718,991	992,906	1,711,897	+ 273,915	75.4	104.2	179.6
1957-58.. ..	791,940	817,946	1,609,886	+ 26,006	81.3	83.9	165.2
1958-59.. ..	796,599	811,463	1,608,062	+ 14,864	80.0	81.5	161.5
1959-60.. ..	927,091	937,682	1,864,773	+ 10,591	91.1	92.2	183.3
1960-61.. ..	1,087,577	968,843	2,056,420	- 118,734	104.6	93.2	197.8
1961-62.. ..	884,746	1,077,284	1,962,030	+ 192,538	83.4	101.6	185.0
1962-63.. ..	1,081,335	1,075,906	2,157,241	- 5,429	100.0	99.5	199.5

(a) Prior to 1906, ship's stores were included in exports. For the value of such goods shipped on oversea vessels and aircraft during each of the years 1958-59 to 1962-63, see table in § 14 on p. 542.

A graph showing the oversea trade of Australia from 1945-46 to 1962-63 appears on page 519.

2. **Excluding Gold.**—The fluctuations in recent years in merchandise trade (including silver and bronze as merchandise) are shown more clearly in the following table, from which all gold movements have been excluded.

**VALUE OF OVERSEA TRADE: AUSTRALIA**  
(EXCLUDING GOLD)  
(£A. f.o.b.)

Year	Imports	Exports	Total	Value per head of population		
				Imports	Exports	Total
				£	£	£

2. According to Major Groups of Countries.—(i) *Countries included in Major Groups.* The following table shows the major groups of countries referred to in the tables on pages 530-1 and 551-2.

## COUNTRIES INCLUDED IN MAJOR GROUPS

Sterling area	Non-sterling countries	
United Kingdom	North America—	Soviet Area— <i>continued.</i>
British East Africa, British Pacific Islands, British West Africa, West Indies Federation, Hong Kong and other British colonies and dependencies (excluding New Hebrides)	Canada	Romania
Australia and Territories (including Papua and New Guinea)	United States of America and dependencies	Union of Soviet Socialist Republics
Ceylon	European Economic Community <sup>(a)</sup> —	China (Mainland)
Ghana	Belgium-Luxembourg	Korea (North)
India	France	Vietnam (North)
Malaysia, Federation of (Malaya, Sabah, Sarawak and Singapore)	Germany, Federal Republic of	Principal other countries—
New Zealand and dependencies	Greece	Argentina
Pakistan	Italy	Brazil
Rhodesia and Nyasaland	Netherlands (excluding dependencies)	China, Republic of
Other Commonwealth countries	European Free Trade Association (other than the United Kingdom) <sup>(a)</sup> —	Indonesia
Arabian States of Bahrain, Kuwait, Qatar, Muscat, Oman and Trucial States	Austria	Iran
Burma	Denmark	Iraq
Iceland	Finland	Japan
Ireland, Republic of	Norway	Korea, Republic of
Jordan	Portugal	Mexico
Libya	Sweden	Netherlands dependencies
South Africa	Switzerland	Peru
	Soviet Area—	Philippines
	Albania	Spain
	Bulgaria	Saudi Arabia
	Czechoslovakia	Thailand
	Germany, Eastern	Turkey
	Hungary	United Arab Republic
	Poland	Venezuela
		Yugoslavia

(a) Includes dependent territories, associated communities, etc., unless otherwise stated.

(ii) *Trade with Major Groups.* The following table shows the trade of Australia with the major groups of countries shown above during the years 1961-62 and 1962-63. Particulars of Australia's balance of payments with countries in these groups are shown on pages 551-2.

(a) 2,000 lb.

(b) Excludes railway sleepers.

4. Imports from the United Kingdom and Competing Countries.—Since 1908, permanent resident Commissioners appointed by the British Board of Trade have been located in Australia for the purpose of advising manufacturers and merchants in the United Kingdom with regard to Australian trade affairs. From 8th August, 1907, the Commonwealth Customs Tariffs have provided preferential rates of customs duties on certain goods the produce or manufacture of the United Kingdom, with the object of assisting the British manufacturer to retain or improve his position in this market in relation to other countries. The main provisions in these Acts relating to preference are dealt with on previous pages in this chapter.

In an investigation into the relative position occupied by the United Kingdom in the import trade of Australia, the comparison must, of course, be restricted to those classes of goods which are produced or manufactured in the United Kingdom. Imports into Australia include many commodities, such as tea, rice, raw coffee, unmanufactured tobacco, petroleum products, copra, timber, etc., which the United Kingdom cannot supply. These items, in addition to others not available from that country, have therefore been omitted from the following table.

The imports into Australia have been classified under nine headings, and the trade of the United Kingdom therein is compared with that of France, the Federal Republic of Germany, Japan, and the United States of America. These countries have been selected as the principal competitors in normal times with the United Kingdom for the trade of Australia under the specified headings. Totals for each of the years 1960-61 to 1962-63 are shown in the following table.

**VALUE OF IMPORTS FROM THE UNITED KINGDOM AND ITS MAIN  
COMPETITORS: AUSTRALIA**

(£A.'000 f.o.b.)

Nature of imports	Year	United Kingdom	France	Federal Republic of Germany	Japan	United States of America	All countries

(b) Not available.

A graph showing exports in principal commodity groups in each of the years 1953-54 to 1962-63 will be found on page 522.

4. Imports of Merchandise and Bullion and Specie.—The table hereunder shows the value of imports into Australia during each of the years 1958-59 to 1962-63, grouped under the headings—Merchandise, and Bullion and specie. The imports of merchandise are shown under the sub-headings of "free" and "dutiable" goods.

**VALUE OF IMPORTS OF MERCHANDISE, AND BULLION AND SPECIE:  
AUSTRALIA  
(£A.'000 f.o.b.)**

Year	Merchandise			Bullion and specie	Total imports
	Free goods	Dutiable goods	Total		
1958-59.. ..	464,274	330,114	794,388	2,211	796,599

1962-63.. ..	583,424	495,353	1,078,777	2,558	1,081,335

5. Exports of Merchandise and Bullion and Specie.—The next table shows the value of exports from Australia during each of the years 1958-59 to 1962-63, grouped under the headings—Merchandise, and Bullion and specie. The exports of Australian produce and re-exports are shown separately.

**VALUE OF EXPORTS OF MERCHANDISE, AND BULLION AND SPECIE:  
AUSTRALIA  
(£A.'000 f.o.b.)**

Year	Merchandise			Bullion and specie			Total exports
	Australian produce	Re-exports	Total	Australian produce	Re-exports	Total	
1958-59 ..	790,165	16,540	806,705	4,744	14	4,758	811,463
1959-60 ..	907,971	17,988	925,959	11,716	7	11,723	937,682
1960-61 ..	901,809	26,232	928,041	40,797	5	40,802	968,843
1961-62 ..	1,041,339	26,546	1,067,885	9,385	14	9,399	1,077,284
1962-63 ..	1,046,054	22,972	1,069,026	6,855	25	6,880	1,075,906

6. Ratios of Net Customs Revenue to Values of Merchandise Imported.—The following table shows the ratios of net customs revenue collected, including and excluding net primage, to values of merchandise imported during the years 1958-59 to 1962-63. The calculations are based on Australian currency values and on the assumption that the value of clearances approximated to the value of imports during the same period. For particulars of customs revenue collections see Chapter XXII, Public Finance.

**RATIOS OF NET CUSTOMS REVENUE COLLECTED TO VALUES OF  
MERCHANDISE IMPORTED: AUSTRALIA**

(Per cent.)

Ratio of—	1958-59	1959-60	1960-61	1961-62	1962-63
Net customs revenue collected (excluding net primage) to value of all merchandise imported .. .. .	8.8	8.9	9.2	9.4	9.5
Net customs revenue collected plus net primage to value of all merchandise imported .. .. .	9.0	9.1	9.4	9.6	9.7
Net customs revenue collected (excluding net primage) to value of dutiable goods only .. .. .	21.0	19.9	19.5	21.5	20.8

### § 14. Ships' and Aircraft Stores

The value of ships' and aircraft stores, which are excluded from the export figures, is shown in the following table for each of the years 1958-59 to 1962-63, with separate figures for oils.

VALUE OF STORES LOADED ON OVERSEA SHIPS AND AIRCRAFT:  
AUSTRALIA  
(£A.'000 f.o.b.)

Item	1958-59	1959-60	1960-61	1961-62	1962-63
Oils .. .. .	6,704	7,817	8,937	7,819	6,869
All stores (including oils) ..	10,876	12,413	14,205	13,324	12,937

In addition to oils, the principal items supplied to overseas ships and aircraft in 1962-63 were:—meats, £1,578,334; fruit and vegetables, £377,023; eggs, £164,356; butter, £99,873; sea food, £167,177; flour, £53,642; rice, £31,387; milk and cream, £28,946; ale, beer, wine, spirits, etc., £545,411; tobacco and cigarettes, £224,104.

### § 15. Movement of Bullion and Specie

1. Imports and Exports.—The following table shows the values of gold and silver bullion and specie, and of bronze specie, imported into, and exported from, Australia during each of the years 1960-61 to 1962-63.

VALUE OF OVERSEA TRADE OF AUSTRALIA IN BULLION AND SPECIE.  
(£A. f.o.b.)

Item	Imports			Exports

## § 16. Exports According to Industries

1. Classification.—The following table provides an analysis of the total recorded value of Australian exports for the years 1960-61 to 1962-63. This analysis is designed to show fluctuations in the value of exports of Australian produce dissected according to the main industry of their origin, although any such classification is necessarily arbitrary in some respects.

## VALUES OF EXPORTS OF AUSTRALIAN PRODUCE: INDUSTRIAL GROUPS

Industrial group	Value (£A.'000 f.o.b.)			Proportion of value of exports of Australian produce (excluding gold) (Per cent.)		
	1960-61	1961-62	1962-63	1960-61	1961-62	1962-63

<b>Gold exports (a) .. ..</b>	<b>39,960</b>	<b>8,977</b>	<b>6,470</b>	<b>..</b>	<b>..</b>	<b>..</b>
<b>Total Recorded Value of Exports .. ..</b>	<b>968,843</b>	<b>1,077,284</b>	<b>1,075,906</b>	<b>..</b>	<b>..</b>	<b>..</b>

(a) The value of refined newly-won gold was £16,203,000 in 1960-61, £16,205,000 in 1961-62, and £15,735,000 in 1962-63.

2. **Relative Importance of Industrial Groups.**—In the year 1962–63, Australian produce (other than gold) exported amounted to approximately £1,046 million. Of this, £907 million or 87 per cent. was mainly produce of primary industries, comprising £662 million of unprocessed produce and £245 million of goods which had been processed in some degree before export. The values of the principal individual items of processed Australian primary produce exported were:—raw sugar, £45,521,000; flour, etc., £15,695,000; canned fruit, £10,636,000; dried fruit, £9,552,000; wool (scoured, tops, etc.), £43,703,000; canned meats, £6,518,000; butter, £23,594,000; milk (condensed, dried, etc.), £10,237,000; pig lead, £11,097,000; lead bullion, £6,197,000; zinc bars, blocks, etc., £8,073,000; copper ingots, £6,802,000; and undressed timber, £2,305,000.

The value of manufactures exported as classified on page 544 was £102 million, approximately 10 per cent. of Australian produce (other than gold) exported in 1962–63. The values of principal individual items here included were:—manufactures of metal, £45,301,000; implements and machinery, £13,560,000; drugs and chemicals, £8,029,000; and paper and stationery, £4,127,000.

The items enumerated indicate the arbitrariness of the line necessarily drawn between primary produce and manufactures in any classification of this kind. The value of processed primary products exported includes some element of value added by the simpler processes of manufacture, while the value shown for manufactures exported necessarily includes the value of raw materials (primary produce) used in those manufactures.

Refined petroleum oils exported are shown separately, as they consist of imported crude oils refined in Australia and re-exported in the refined form. The values of principal individual items shown as “unclassified” in 1962–63 were:—individual consignments of less than £50 in value, £5,196,000; and military equipment and stores and supplies for Australian projects overseas, £2,547,000.

## § 17. External Trade of Australia and other Countries

1. **Essentials of Comparison.**—Direct comparison of the external trade of any two countries is possible only when the general conditions prevailing therein, and the system of record, are more or less identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance and charges may be added thereto. Again, the values of imports and exports in one may be declared by merchants, whereas in another they may be the official prices fixed from time to time by a commission constituted for the purpose. In later years, moreover, a very substantial difference in the value of imports would result from the different methods of converting the moneys of foreign countries, i.e. from the application of current rates of exchange or of the mint par. Lastly, the figures relating to the external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. This class of trade represents a much greater proportion of the trade of Switzerland and Belgium-Luxembourg than that of other countries. France and the United Kingdom also re-export largely, whereas in Canada, Australia and New Zealand the same class of trade represents a comparatively small proportion of the total.

2. **“Special Trade” of Various Countries.**—In the following table, the figures, which are expressed in Australian currency, relate as nearly as possible to imports cleared for home consumption in the various countries specified and to exports of their domestic products. It is to be noted, however, that these figures do not invariably denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption and, after undergoing some process of manufacture or further modification, are re-exported as domestic production. Nevertheless, a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest. The countries listed below are not necessarily all the important trading countries of the world, but those important countries for which comparable statistics are available. Information for countries other than Australia has been extracted from publications of the United Nations.

VALUES OF IMPORTS CLEARED FOR HOME CONSUMPTION, AND EXPORTS OF DOMESTIC PRODUCTS (MERCHANDISE ONLY (a)): VARIOUS COUNTRIES, 1962

Country	Imports cleared c.i.f.	Exports f.o.b.	Total	Trade per head of population

(a) Includes silver. (b) f.o.b. (c) Covers goods imported less goods re-exported. (d) Covers goods imported as distinct from goods cleared for home consumption. (e) Year ended June, 1962.

### § 18. Oversea Trade in Calendar Years

For the purpose of comparison with countries which record oversea trade in calendar years, the following table has been compiled to show Australian imports and exports for each of the calendar years 1959 to 1963.

#### VALUE OF OVERSEA TRADE IN CALENDAR YEARS: AUSTRALIA (£A.'000 f.o.b.)

Year	Merchandise		Bullion and specie		Total	
	Imports	Exports	Imports	Exports	Imports	Exports
1959 ..	826,131	892,571	2,075	3,338	828,206	895,909
1960 ..	1,056,842	874,585	2,389	40,577	1,059,231	915,162
1961 ..	934,333	1,036,950	2,331	17,753	936,664	1,054,703
1962 ..	1,009,594	1,046,550	2,224	5,367	1,011,818	1,051,917
1963 p ..	1,106,308	1,243,828	3,328	8,673	1,109,636	1,252,501

### § 19. Excise

Although excise goods have no immediate bearing on oversea trade, the rate of excise duty is in some cases related to the import duty on similar goods. Moreover, as the Excise Acts are administered by the Department of Customs and Excise, it is convenient to publish here the quantities of Australian produce on which excise duty has been paid. Particulars of customs and excise revenue are shown in Chapter XXII. Public Finance. The following table shows the quantities of spirits, beer, tobacco, etc., on which excise duty was paid in Australia during the years 1961-62 and 1962-63.

QUANTITY OF SPIRITS, BEER, TOBACCO, ETC., ON WHICH EXCISE DUTY WAS PAID: AUSTRALIA

## § 20. Balance of Payments

1. **Introduction.**—Estimates of a country's balance of payments are prepared for the purpose of providing a systematic record in money terms of the economic transactions which take place over a period between that country and all other countries. Such records are essential to the examination of influences which external factors have on the domestic economy. The Australian economy is subject to fairly large fluctuations in export income, and it is also affected in important respects by variations in the level of foreign investment and the demand for imports. Consequently, these estimates have always assumed particular importance in this country.

Official estimates of Australia's balance of payments covering the period 1928-29 to 1930-31 were included in the Appendix to Official Year Book No. 24, 1931. Except for the war years (1939 to 1945), estimates have since been published annually. Detailed estimates are currently provided twice yearly in the form of a mimeographed publication *Balance of Payments*. This publication brings the estimates forward to the end of the most recent financial year or half-year and, together with a printed volume *The Australian Balance of Payments, 1928-29 to 1950-51*, provides also a description of the various items included and the sources from which the information is obtained. A summarized statement of the principal current account items and some identified capital movements is prepared and issued on a quarterly basis in the *Balance of Payments—Quarterly Summary*.

The form in which the Australian estimates are presented follows the pattern originally adopted by the International Monetary Fund. In this presentation, a basic distinction is drawn between "current account" transactions and "capital account" transactions. Current account transactions are defined as those which involve changes in the ownership of goods or the rendering of services between residents of Australia and the rest of the world. They include such important items as exports, imports, shipping freights, dividends, profits and interest, travel and government expenditure. The current account also includes transfers in the form of personal gifts and government gifts of technical assistance, for which there is no consideration. Capital account transactions are defined

as those which involve claims to money and titles to investments between residents of one country and those of another country. Details are shown according to whether the items with which transactions are concerned are classified as assets or liabilities. For practical purposes, items are also broadly divisible into investment items (including overseas investment in companies in Australia and government loans), certain financing transactions, and monetary movements (including transactions with the International Monetary Fund and changes in the level of international reserves).

By definition, the balance of payments on current account is always equivalent to the balance on capital account. The net monetary movement is used as a control figure to which the net sum of all other figures must reconcile. However, errors and omissions occur in the estimation of the amounts involved in various items included in both current and capital accounts, and in addition there are timing differences between the statistical recording of trade transactions and certain invisible items, and the relevant foreign exchange transactions. Therefore, in order to preserve the identity between the total shown in the current account and the total shown in the capital account, it is necessary to introduce a "balancing item". The "balancing item" is included in the capital account, but, as mentioned above, it may include discrepancies in the current account, and it does not, as is frequently supposed, include only errors and timing differences related to investment and financing transactions.

Recent changes in the estimates include an adjustment for the estimated excess of the value of imports, as recorded in overseas trade statistics, over the actual selling price to the importer (see Appendix IV. *The Australian Balance of Payments 1957-58 to 1961-62*). Significant amendments to figures previously published for transportation items and changes in concept and presentation were made in the *Balance of Payments 1960-61, 1961-62 and First Half 1962-63*. Information on these changes is provided in "Notes to Tables" and Appendix II. of that publication.

Details of the estimates are assembled from a variety of sources of which the following are the more important:—(i) statistics of exports and imports obtained from Australian trade statistics; (ii) details of the import valuation adjustment obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia; (iii) information on particular invisible current account items and capital movements obtained by regular inquiry from private organizations and government departments; (iv) details of receipts and payments of foreign exchange provided by the banking system; (v) information on dividends remitted, undistributed income and private investment in companies provided by statistics of overseas investment collected by this Bureau; (vi) information on freight on imports and other items concerned with overseas shipping obtained from a sample of the invoices submitted to the Department of Customs and Excise in respect of imports into Australia and a survey of shipping operations conducted by this Bureau; and (vii) information on international reserves supplied by the Reserve Bank of Australia.

**2. Current Account.**—The balance of payments on current account is arranged to show a series of credit items and a corresponding series of debit items. In general, entries on the credit side include all current transactions which result in receipts of foreign exchange (for goods and services, investment income or donations), and on the debit side the similar transactions which result in payments of foreign exchange. The principal exceptions to this rule are the amounts shown for undistributed income. In respect of these amounts no movement of foreign exchange takes place, the amounts concerned being treated as credits or debits in the relevant sections of the current account, and as corresponding outflows or inflows in the relevant sections of the capital account. Exceptions also occur where debts incurred for current account items, principally goods, are subsequently capitalized.

The largest items shown in the current account are exports and imports, and the difference between them represents the balance of visible trade. This is the most important, and usually the most variable, relationship in the balance of payments. A full evaluation of the overall position on current account, however, occurs only after the invisible items have been taken into account. The most important of these are the transportation items. Entries appear on both the debit and credit sides, the principal component on the debit side being freight payable overseas on imports into Australia. The principal component on the credit side is expenditure by overseas carriers, which represents mainly overseas ships' expenditure for stevedoring, port charges, etc., incurred in loading and discharging goods at Australian ports, and stores purchased in Australia. The items next in importance are those concerning income from property. Debit entries under this heading include dividends, profits, interest and royalties, payable overseas, while the credit entries include similar details of amounts receivable by Australian residents. These items include undistributed income for which, as mentioned above, no monetary payments occur. The remaining items are smaller than those mentioned above, and include travel, government transactions, donations (including foreign aid made available by the Australian Government), and on the credit side the net value of Australian gold production.

<b>Balance on Capital Account</b> .. .. .	<b>-1.9</b>	<b>222.5</b>

On the assets side, the most important item is Australia's holdings of monetary gold and foreign exchange, usually referred to as international reserves. On the liabilities side, the most important items are government loans, I.M.F. transactions and private investment in Australian companies.

Transactions with international monetary and finance agencies appear on both sides of the capital account. On the assets side, items 2 and 3 show increases in subscriptions to these institutions, and on the liabilities side, items 10 and 11 show corresponding increases in liabilities or changes in liabilities previously incurred. Liabilities comprise, on the one hand, bank balances and special non-negotiable, non-interest bearing securities (payable in Australian currency but convertible by arrangement into foreign currency or gold) related to capital subscriptions to the various agencies and, on the other hand, drawings from the International Monetary Fund.

Changes in overseas investment in companies by Australian residents are shown on the assets side of the capital account (items 6 and 7), and changes in investment in Australian companies by overseas residents are shown on the liabilities side (items 13 (part) and 14). Figures shown for marketing authorities (item 5) represent changes in the estimated value of commodity stocks held overseas or in amounts owed by overseas debtors to the principal Australian marketing authorities.

The balancing item includes errors and omissions and timing differences, referred to on page 548.

4. Balance of Payments on Current Account, by Major Groups of Countries.—Estimates are also made of Australia's current account transactions with the following groups of countries (*see p. 530* for countries included in the several groups).

## CHAPTER XV

## TRANSPORT AND COMMUNICATION

NOTE.—The statistics in this chapter relate in the main to the year 1962–63, with comparisons restricted to a few recent years. More detailed figures and particulars for earlier years are included in the annual bulletins, *Transport and Communication*, *Commonwealth Finance*, and *State, Territories and Local Government Authorities' Finance and Government Securities* published by this Bureau.

Current information on subjects dealt with in this chapter appears in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, the *Monthly Bulletin of Registrations of New Motor Vehicles* and two preliminary monthly statements on *Registrations of New Motor Vehicles*.

The detailed results of the Census of Motor Vehicles, 31st December, 1962 (see summary tables later in this chapter) are being published in mimeographed and printed bulletins for each State and Territory and for Australia (see Chapter XXX. Miscellaneous).

## SHIPPING

## § 1. Control of Shipping

1. **Commonwealth Navigation and Shipping Legislation.**—By section 51 (i) of the Commonwealth Constitution, the Parliament of the Commonwealth is empowered to make laws in respect of "Trade and commerce with other countries, and among the States". By section 98, this power is further defined as extending to navigation and shipping. Section 51 (vii) empowers the Commonwealth Parliament to legislate in respect of "Lighthouses, lightships, beacons and buoys" and section 51 (ix) in respect of "Quarantine".

A review of the introduction and development of the *Navigation Act 1912–1950* was given in Year Book No. 40, pages 110–2. Amendments to the principal Act were made by the *Navigation Acts of 1952, 1953, 1956, 1958 and 1961*.

Other shipping Acts under the powers of the Commonwealth are the *Sea-Carriage of Goods Act 1924–1961*, the *Seamen's Compensation Act 1911–1960*, the *Seamen's War Pensions and Allowances Act 1940–1961*, *Pollution of the Sea by Oil Act 1960*, the *Australian Coastal Shipping Commission Act 1956*, the *Australian Coastal Shipping Agreement Act 1956* and the *Stevedoring Industry Act 1956–1962*.

The control of shipping during, and immediately after, the 1939–45 War and the establishment of the Maritime Industry Commission (abolished in 1952), the Australian Stevedoring Industry Board (replaced in 1956 by the Australian Stevedoring Industry Authority), and the Australian Shipping Board (replaced in 1956 by the Australian Coastal Shipping Commission) are described in Year Books No. 36, pages 121–30, and No. 39, pages 147–8.

2. **Australian Coastal Shipping Commission.**—This Commission was established in 1956 for the purpose of maintaining and operating interstate, oversea and territorial shipping services, and replaced the Australian Shipping Board. It operates the Australian National Line, a Commonwealth-owned merchant shipping service which, at 30th June, 1963, comprised 40 vessels totalling 172,261 gross tons. These included 15 vessels with a gross tonnage of 500 to 3,000, 12 vessels with a gross tonnage of 3,000 to 5,000, 11 vessels with a gross tonnage of 5,000 to 8,000, and the bulk ore carriers *Mount Keira* 10,229 gross tons and *Mount Kembla* 10,112 gross tons.

The Commission has currently on order a 7,500 ton deadweight bulk carrier, *Jeparit*, and a passenger vehicular vessel, *Empress of Australia*, of approximately 9,850 gross tons for operation between Sydney and Tasmania. The latter vessel will augment the service

already being provided between the mainland and Tasmania by the *Princess of Tasmania*, the vehicular container ship *Bass Trader* and the container vessel *South Esk*. The 21,400 ton deadweight bulk carrier *Musgrave Range*, now on the stocks, is expected to be in service during 1964.

In the year ended 30th June, 1963, the *Princess of Tasmania* carried 89,649 passengers, 19,760 accompanied vehicles, 7,410 commercial vehicles, 3,552 trade cars and 321 mail vans.

3. **Australian Shipbuilding Board.**—(i) *Constitution and Functions.* Originally established in 1941 under National Security Regulations, the Board has been reconstituted a number of times since its inception, and in 1948 was constituted on a permanent basis under the control of the Minister for Shipping and Transport. The membership of the Board consists of a Chairman, who is the General Manager, a Deputy Chairman, a Finance Member and two other members one of whom represents the Naval Board. The staff of the Board are employed under the *Public Service Act 1922–1960* as officers of the Department of Shipping and Transport.

The existing functions of the Board, which have been summarized in earlier issues of the Year Book, are set out in detail in regulation 22 (4) of the Supply and Development Regulations.

(ii) *Construction Programme.* From its inception to 30th June, 1963, the Board had arranged for the construction of 75 merchant vessels totalling 513,142 deadweight tons. During the 1939–45 War, the Board was also responsible for the construction of numerous small craft and a 1,000-ton floating dock.

At 30th June, 1963, current orders for trading vessels placed by the Board were for the construction of seven vessels totalling 64,375 deadweight tons. The vessels consisted of one passenger vehicular vessel of 2,175 dw.t., two 21,400 dw.t. bulk carriers, one 7,500 dw.t. general purpose bulk carrier, two roll-on roll-off vehicular traffic vessels, each of 3,250 dw.t., and one "seatainer" vessel of 5,400 dw.t. A further order has since been placed for a 3,650 dw.t. motor cargo vessel.

Other types of ships under construction at 30th June, 1963, included a Naval Survey vessel of 2,300 tons displacement, two lighthouse supply vessels and a survey vessel for use in the Philippines. Two further lighthouse supply vessels have been ordered since.

It is expected that orders will be placed this year for the construction in Australian shipyards of oil tankers for use on the Australian coast.

4. **Australian Stevedoring Industry Authority.**—In March, 1947, legislation established a permanent Stevedoring Industry Commission to continue in peace-time the functions performed during the war by the Commission established under National Security legislation. In June, 1949, legislation was enacted to abolish the Stevedoring Industry Commission, on which employers and employees were represented, and established in its place a Stevedoring Industry Board of three members, which attended to administrative matters formerly under the control of the Commission, such as the operation of labour bureaux at ports, payment of attendance money and provision of amenities. The industrial functions which previously came within the province of the Commission were assigned to a single Judge of the Commonwealth Court of Conciliation and Arbitration. In August, 1956, following a Committee of Inquiry into the stevedoring industry, the Stevedoring Industry Board was replaced by the Australian Stevedoring Industry Authority of three members, including a representative of the management side of industry and a representative of the trade union movement. At the same time, the judicial and non-judicial functions formerly exercised by the Commonwealth Court of Conciliation and Arbitration were divided between the Commonwealth Industrial Court and the Commonwealth Conciliation and Arbitration Commission respectively. Awards of the Conciliation and Arbitration Commission subsequently placed payment of sick pay, public holiday pay and annual leave under the administration of the Authority. Under amending legislation which operated from 6th June, 1961, the Authority became responsible for payment of long service leave to registered waterside workers, and its disciplinary powers were strengthened to reduce the time lost through unauthorized stoppages. The statutory provisions regulating the industry are now contained in the *Stevedoring Industry Act 1956–1962* and in Division 4 of Part III of the *Conciliation and Arbitration Act 1904–1961*.

## § 2. System of Record

In the system of recording statistics of oversea shipping, Australia is considered as a unit, and therefore only one entry and one clearance are counted for each voyage, without regard to the number of States visited (*see* also § 4, p. 559). For the purpose of these statistics, the Australian mainland and Tasmania are treated as Australia and all external territories as oversea countries.

On arrival at, or departure from, a port in Australia, whether from or for an oversea country or from or for another port in Australia, the master or agent must "enter" the vessel with the Customs authorities at the port, and supply certain prescribed information in regard to the ship, passengers and cargo. At the end of each month, the information so obtained is forwarded to the Bureau of Census and Statistics. This information relates, in the main, only to vessels engaged in the carriage of passengers and/or cargo between Australian States or between Australia and oversea countries.

The size of a vessel may be expressed in a number of ways. A vessel's gross tonnage, expressed in tons of 100 cubic feet, represents the total volume of the enclosed space, i.e. a ship of 25,000 tons has a total enclosed capacity of 2,500,000 cubic feet. Its net tonnage, expressed in tons of 100 cubic feet, represents the volume of enclosed space that can be used for cargo or passengers. Its displacement is its total weight and is expressed in tons of 2,240 lb. Its deadweight tonnage is the difference between the displacement of the vessel loaded to its summer deadline and the displacement light, i.e. it is the weight the vessel can carry, including the weight of bunkers and stores. Net tonnage is the concept generally used in the tables in this chapter, but since it can give a misleading impression of the size of ships which have a function other than carrying passengers and cargo (e.g. a tug has no net tonnage), some figures are given for deadweight tons and tons gross also.

Most of the cargo is recorded in terms of the ton weight of 2,240 lb. However, some additional cargo, mainly bulky commodities, is shipped and recorded on the basis of 40 cubic feet of space used representing one ton measurement.

Except in § 5. Shipping at Principal Ports (p. 562), intra-State (coastal) movements of vessels, including those of vessels engaged solely in trade within State limits, are excluded from the statistics in the following pages.

## § 3. Oversea Shipping

1. **Total Movement.**—The following table shows the number of entrances and clearances combined of oversea vessels at Australian ports, and the aggregate net tonnage, during each of the years 1958–59 to 1962–63.

**OVERSEA SHIPPING: ENTRANCES AND CLEARANCES (COMBINED) OF VESSELS DIRECT, AUSTRALIA**

Particulars	1958–59	1959–60	1960–61	1961–62	1962–63
Number of vessels .. ..	5,463	5,945	6,778	7,210	6,762
Net tonnage .. .. '000 tons	26,019	28,874	34,317	37,662	37,584

Particulars of the total oversea movement of shipping for each year from 1822 to 1920–21 were published in Year Book No. 15, page 507, and those for each year from 1921–22 to 1950–51 in Year Book No. 40, page 97.

2. **Total Oversea Shipping, States.**—The following table shows, for each State and the Northern Territory, the number of entrances and clearances of vessels direct from and to oversea countries, and the aggregate net tonnage, during the year 1962–63.

**OVERSEA SHIPPING: ENTRANCES AND CLEARANCES OF VESSELS DIRECT,  
1962-63**

Particulars		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.

	'000 net tons	5,841	3,730	2,999	1,082	4,695	199	80	18,626

3. **Shipping Communication with Various Countries.**—A vessel arriving in Australia from overseas is recorded as coming from the country where the voyage commenced, irrespective of the number of intermediate ports of call. Similarly, a vessel leaving Australia is recorded as going to the country where the voyage is scheduled to terminate.

The following table shows statistics of the net tonnage entered and cleared, with cargo and in ballast, according to the principal countries where vessels commenced or terminated their voyages to or from Australia.

**OVERSEA SHIPPING: COUNTRIES FROM WHICH ENTERED OR FOR WHICH

(a) Includes New Caledonia (29 during 1962-63).

The Australian tonnage which entered Australian ports from overseas during the year 1962-63 represented 0.7 per cent. of the total tonnage entered and was confined mainly to the New Zealand and Pacific Islands trade.

§ 4. Interstate Shipping

1. System of Record.—*Interstate Shipping* comprises two elements: (a) vessels engaged solely in interstate trade; and (b) vessels trading between Australia and overseas countries and in the course of their voyages proceeding from one State to another. (However, these vessels, except under special circumstances, do not engage in interstate carrying. Numerous overseas vessels obtain single voyage permits or exemptions under the *Navigation Act 1912-1950*. Such vessels include overseas tankers carrying petroleum products interstate, and, since the withdrawal of interstate passenger liners, other overseas vessels, under permit, carrying passengers and frozen cargo on the interstate run.) No complexity enters into the record of those in category (a), but with regard to the method of recording the movements of the overseas vessels (b), some explanation is necessary. Each State desires that its shipping statistics should show in full its shipping communication with overseas countries, but at the same time it is necessary to avoid any duplication in the statistics of Australia as a whole. In order to meet these dual requirements, a vessel arriving in any State from an overseas country—say the United Kingdom—via another State, is recorded in the second State as from the United Kingdom "Overseas via States", thus distinguishing the movement from a direct overseas entry. Continuing the voyage, the vessel is again recorded for the statistics of the third State as from the United Kingdom "Overseas via States". On an inward voyage, the clearance from the first State to the second State is a clearance interstate, and is included with interstate tonnage in conformity with the prefederation practice of the States, and to preserve the continuity of State statistics. Thus, movements of ships which are, from the standpoint of Australia as a whole, purely coastal movements, must for the individual States be recorded as "Overseas via States" or "Interstate" according to the direction of the movement. The significance of the record of these movements will be seen more clearly

from the following tabular presentation of the inward and outward voyages to and from Australia of an oversea vessel which, it is presumed, reaches Fremantle (Western Australia) and then proceeds to the terminal port of the voyage—Sydney (New South Wales)—via South Australia and Victoria. From the terminal port, the vessel will commence the outward voyage and retrace its inward track.

#### ITINERARY OF AN OVERSEA VESSEL ON THE AUSTRALIAN COAST

Particulars	Recorded as—		
	For the State and for Australia	For the States	
		1.	2.
<b>Inward Voyage—</b>			
Enters Fremantle from United Kingdom	Oversea direct	Interstate direct	
Clears Fremantle for Adelaide .. ..			
Enters Adelaide from United Kingdom via Fremantle .. ..		Interstate direct	Oversea via States
Clears Adelaide for Melbourne .. ..			
Enters Melbourne from United Kingdom via Adelaide .. ..		Interstate direct	Oversea via States
Clears Melbourne for Sydney .. ..			
Enters Sydney from United Kingdom via Melbourne .. ..		Interstate direct	Oversea via States
<b>Outward Voyage—</b>			
Clears Sydney for United Kingdom via Melbourne .. ..			Oversea via States
Enters Melbourne from Sydney .. ..		Interstate direct	
Clears Melbourne for United Kingdom via Adelaide .. ..			Oversea via States
Enters Adelaide from Melbourne .. ..		Interstate direct	
Clears Adelaide for United Kingdom via Fremantle .. ..			Oversea via States
Enters Fremantle from Adelaide .. ..		Interstate direct	
Clears Fremantle for United Kingdom ..	Oversea direct		

From the method outlined above, the requirements for Australia and for the individual States are ascertained as follows. (a) The aggregate of all ships recorded for each State as "Oversea direct" gives the oversea shipping for Australia as a whole; (b) the aggregate for all ships recorded in any State as "Oversea direct" plus those recorded as "Oversea via States" gives the total *oversea shipping* for that State; and (c) the aggregate for all ships recorded as "Oversea via States" may also be used, together with those recorded as "Interstate direct" (including those engaged solely in interstate movement) to furnish figures showing the total *interstate movement* of shipping.

2. **Interstate Movement.**—(i) *Interstate Direct.* The following table shows the number of entrances and the net tonnage of vessels recorded into each State and the Northern Territory from any other State (including oversea vessels on interstate direct voyages as in column 2 above) during each of the years 1960–61 to 1962–63.

#### INTERSTATE MOVEMENT OF SHIPPING: ENTRANCES OF VESSELS INTERSTATE DIRECT

State or Territory	Number			Net tons ('000)		
	1960–61	1961–62	1962–63	1960–61	1961–62	1962–63
