*Other activities.* The Department maintains laboratories which provide analytical services for governmental authorities and private bodies and provide a comprehensive clinical pathology service free of charge to all public and State hospitals and to medical practitioners attending patients unable to afford the fees of a private pathologist. It administers the Pure Food Act (which prescribes standards of quality and purity for food products) and laws relating to sanitation. It also supervises the work of local government authorities relating to public health matters. The Department also provides specialised services through the *Division of Forensic Medicine* which incorporates a medico-legal section.

*The Hospitals Commission* supervises the public hospital services, which are organised in terms of the Public Hospitals Act.

The public hospitals and organisations which provide district and bush nursing services and aerial medical services are classified by the Public Hospitals Act into two main groups. One group, termed the *incorporated hospitals*, consists entirely of hospitals incorporated under the Act. The second group, known as *separate institutions*, includes hospitals incorporated under special Acts of Parliament, hospitals conducted under the aegis of religious organisations, and hospitals registered under the Companies Act as non-profit organisations. Most of the incorporated hospitals are managed by a board of directors appointed by the Governor, but the management of the hospital is subject to inspection by the Hospitals Commission. The Commission determines which hospitals are to be subsidised and the amount of subsidy to be paid to each institution.

*Other State authorities concerned with health, hospital and associated services* in New South Wales include the Master in the Protective Jurisdiction of the Supreme Court (who controls and administers the estates of temporary and continued treatment patients in psychiatric hospitals), the Ambulance Transport Service Board (which supervises district ambulance services throughout the State), boards established for the registration of practitioners in certain professions (chiropody, dental, medical, nursing, optometry, optical dispensing, pharmacy, and physiotherapy), the State Cancer Council (for cancer education and research), and various boards and committees (e.g. the Board of Health, the Poisons Advisory Committee and the Air Pollution Advisory Committee).

## Victoria

All health, hospital and associated services either administered directly or supported financially by the Government are under the control of the Minister of Health. The *Department of Health*, set up under the *Ministry of Health Act 1943*, assists the Minister in carrying out the various duties imposed upon him by a variety of Acts associated with health. Included in the Department are four main service branches—the General Health Branch, the Maternal and Child Welfare Branch, the Tuberculosis Branch, and the Mental Hygiene Branch.

*The General Health Branch* which, *inter alia*, is the administrative branch for the Commission of Public Health, protects or promotes the health of the community in the following ways. The Engineering Division scrutinises from a public health point of view the plans of all public buildings and provincial sewerage installations and makes periodical inspections. Other activities include prevention of air pollution from industrial sources, prevention of stream pollution, and supervision of abattoirs and cattle sale yards. The Poliomyelitis Division provides a comprehensive orthopaedic, physiotherapy, and respirator service for all eligible patients and carries out rehabilitation in conjunction with the Commonwealth Government. Facilities developed for poliomyelitis are now being used for other neurological disorders. The Division is also concerned with the Salk immunisation campaign being undertaken in Victoria. Through the municipalities, immunisation against poliomyelitis, diphtheria, smallpox, whooping cough, and tetanus is encouraged and supervised. Prevention and control of infectious diseases are functions of this Branch, which also sponsors original research into virus diseases and epidemiological investigations throughout Victoria. The Venereal Diseases Division provides a centrally situated headquarters where the use of modern remedies is effecting a general improvement in the standard of treatment. Standards of quality and purity of foods and drugs are fixed by the Food Standards Committee and are administered and enforced by both departmental and municipal health inspectors. Investigations into occupational hazards to the health of workers, the treatment and incidence of occupational diseases, and research into the effects of toxic substances used in industry are conducted by the Industrial Hygiene Division. The Poisons Control Division is responsible for administering the law relating to poisons and deleterious substances. Legislation provides for extensive control, particularly at the wholesale (manufacturing and import) level. Control is exercised by a system of licences and permits.

Subsidies are granted to municipalities to provide meals for pensioners, to clubs for elderly citizens, and to emergency housekeeper services. Other services operated by the Branch are: registering plumbers and gasfitters; providing free travel to hospital for people with limited incomes; analysing food, drink, water, and sewerage effluents; registering cinematograph operators; administering the Cemeteries Acts; and advising industry on health hazards associated with handling radio-active substances.

*The Maternal and Child Welfare Branch* is concerned with pre-natal hygiene, infant welfare, the development of pre-school services, and the school medical and dental services.

*The Tuberculosis Branch* is concerned with the prevention of tuberculosis and the treatment and rehabilitation of tubercular patients. It controls the compulsory chest X-ray programme introduced in October 1963.

*The Mental Hygiene Branch* is controlled by the Mental Health Authority, appointed in 1951, and consists of institutions for in-patient care, out-patient's clinics, and other services necessary for a comprehensive community mental health programme.

The *Victorian hospital system* comprises both public and private hospitals. Since their inception in 1846, Victorian public hospitals have maintained a distinctive pattern. Firstly, they are managed by autonomous committees elected by contributors—following closely the practice applying in the United Kingdom prior to the introduction of the National Health Service. Secondly, they have received financial assistance by way of Government subsidies. With rising costs, this has steadily increased in amount and proportion. At present, hospitals in Victoria derive some 70 per cent of their income from Government sources. Thirdly, medical staffing has followed the pattern of honorary service. In recent years this has been supplemented by salaried doctors employed in university teaching and hospital departments.

Patients are broadly separated into two groups according to an income test. Those earning below a determined level of income are eligible for public hospital care at a fee of approximately half the actual cost; medical care is free through the honorary system. Those patients whose incomes are above the level prescribed are required to pay intermediate or private hospital accommodation charges at higher rates, but only rarely does the charge cover cost; they must, in addition, meet medical fees.

The *Hospitals and Charities Commission* was established by the 1948 Hospitals and Charities Act as the authority, under the Minister of Health, for the payment of State Government subsidies to public hospitals and other registered charitable organisations. It exercises a close scrutiny of all these organisations, particularly their financial activities. The Commission also has responsibility for co-ordinating hospital and institutional activities throughout the State. In country areas inter-hospital co-operation has led to the development of a regional organisation to give specialised services at a reasonable cost. Pathology, radiology, blood banks, and various types of therapy are provided from base hospitals to the smaller local hospitals with staff available on a visiting or consultant basis. Equipment is sent to small hospitals as they need it. This system has considerably improved the standard of medical services available in the country areas. The scheme also embraces central laundry and linen service, and engineering service to small hospitals.

The Commission co-operates with universities in developing teaching hospital programmes. Ten general and special teaching hospitals are established. These are affiliated with medical schools of the University of Melbourne and Monash University. Expansion of these teaching facilities is still progressing, with major work currently in progress at all hospitals. Discussions are advanced concerning the establishment of the eleventh teaching hospital, which is to be erected on Monash University Campus.

Attention is given to the medical and social care of the aged. Emphasis has been placed upon the development of geriatric units, rehabilitation services, hostels for the aged, day hospitals, and supporting domiciliary services.

There are more private than public hospitals in Victoria, but they are smaller in size. Their bed capacity is about 30 per cent of the total hospital accommodation available to the community. The Hospitals and Charities Commission registers these hospitals and ensures that adequate architectural, staffing and nursing standards are maintained. Medical, surgical, midwifery, convalescent, and chronic patients are accommodated in various private hospitals.

The Commission's authority covers the ambulance services in Victoria. Here again emphasis has been placed upon the development of regional services in all areas of the State. This has resulted in a scheme developed along lines similar to that operating among hospitals; however, individual ambulance stations have been merged into one regional controlling organisation, whereas within the public hospital regional scheme each hospital still maintains its own autonomy. This type of ambulance organisation leads to low operating costs and high standards of staff and equipment. A recent development is an air ambulance service which provides regular and emergency services for most parts of the State, enabling seriously ill patients to be transported to major metropolitan hospitals with minimum delay and inconvenience.

#### Queensland

'The Health Acts 1937 to 1966' are administered by the Director-General of Health and Medical Services, subject to the Minister for Health. A central staff controls the following divisions.

*The Division of Public Health Supervision* is controlled by the Deputy Director-General of Health and Medical Services, and comprises separate sections for communicable disease control,

environmental sanitation, food and drug control, enthetic (venereal) diseases, hookworm control and Hansen's disease (leprosy) control. Free treatment of venereal diseases is offered at the Department's clinics in Brisbane and at any public hospital. Free immunisation against poliomyelitis, diphtheria, whooping cough, tetanus, and smallpox is offered by most of the local authorities, and the majority of school children are immunised against diphtheria, whooping cough, tetanus, and poliomyelitis.

*The Division of Tuberculosis* controls a central chest clinic in Brisbane which offers skin tests, X-ray examinations and B.C.G. vaccination of skin negative reactors free of charge. Similar clinics are situated at the Cairns, Rockhampton, Thursday Island, Toowoomba, and Townsville district hospitals. Children in the eighth grade of school are skin tested and given B.C.G. vaccine. The division controls the compulsory X-ray examination of all persons over the age of twenty-one years. The survey is a continuous one and is conducted from mobile units, a specially equipped unit being used in the far northern, western and south-western districts, where electric power is not available.

The services of the *Division of Industrial Medicine* are available both to industry and to the trade union movement for the prevention of industrial hazards. The Division is particularly interested in occupational diseases, such as silicosis and lead and other poisoning, and advises on industrial problems such as lighting, ventilation, fatigue, hearing loss, and the use of radiation and radio-active isotopes.

*The Division of Maternal and Child Welfare* offers supervision and advice on the rearing and health of infants and pre-school children at 270 infant welfare centres throughout the State. Outlying centres are visited by air or by special rail car. Homes for in-patient treatment of infants with feeding problems have been established at Brisbane, Toowoomba, Ipswich, and Rockhampton.

*The Division of School Health Services* comprises the Chief Medical Officer, School Health Services, and a staff of doctors, dentists and visiting school nurses. Medical inspections are made at primary schools throughout the State approximately annually. Teacher trainees are also medically examined. During 1965-66 school dental officers visited 426 schools.

In the *Division of Mental Health* the Director of Psychiatric Services is associated with the planned integration of services. Mentally ill persons requiring special care are admitted to the State's four special hospitals at Brisbane, Toowoomba, Ipswich and Charters Towers. In the metropolitan area of Brisbane, out-patient, day hospital and in-patient care is provided by general hospitals and a community-based Psychiatric Clinic. The Brisbane General, Chermside, and Princess Alexandra Hospitals all provide psychiatric services. Regional development of services is based on general hospital services at Townsville, Rockhampton, Toowoomba, and Ipswich. Special care for epileptics is provided at a home in Toowoomba.

*The Division of Welfare and Guidance* has clinics for the diagnosis and management of emotional and behaviour disorders in children in the Greater Brisbane Area. Further clinics are planned for Townsville and Toowoomba. A part-time clinic functions in Toowoomba at present. The Wilson Youth Hospital has been opened for the social and psychiatric rehabilitation of boys convicted in the Children's Court. About forty boys can be accommodated. There is an out-patient section which girls also can attend. A Child Guidance Unit for out-patients, day-hospital patients and thirty in-patients is being constructed in the grounds of the Brisbane Children's Hospital. A similar unit is at present being planned for Townsville.

It is the policy of the Department, through the *Division of Social Work*, to establish social work services, where possible, in all relevant aspects of the health, medical and hospital services. Through these services patients in hospitals and sick, elderly and disabled persons in the community may receive assistance with their personal and social problems. Social work departments have been established in the major hospitals in Brisbane and in four country hospitals, and social workers have been appointed to work in health, psychiatric and child welfare, and guidance services. Development of this work is co-ordinated through the Division, and the Adviser in Social Welfare acts as official liaison officer with other State Government Departments as services relating to social work and family welfare are established.

*The Division of Geriatrics* controls a geriatric unit established at Princess Alexandra Hospital. The unit consists of two wards with accommodation for 128 in-patients, administration section, day hospital, and physio-therapy and occupational therapy departments.

*The Division of Laboratory Services* maintains two laboratories—the Laboratory of Microbiology and Pathology and the Government Chemical Laboratory—to ensure the purity of a wide range of foodstuffs and materials. The former also offers a service in clinical pathology to institutions, country hospitals and private doctors, and provides a medico-legal service for the whole State. A diagnostic virus laboratory has been established within the Laboratory of Microbiology and Pathology. The Institute of Forensic Pathology is controlled by the medical staff of the Laboratory of Microbiology and Pathology, and coroners' autopsies are conducted there.

All *public hospitals* in Queensland operate under the district system, which provides for the constitution of hospitals regions and hospitals districts, and a hospitals board for each district. The State is divided into eleven hospitals regions with a base hospital for each region except Moreton which has two, both within the capital city of Brisbane. Each region comprises a number of hospitals districts, the purpose of the regional scheme being to co-ordinate the public hospitals in the region with the base hospital. The administration of the hospital services, including public dental services, in each hospitals district is vested in the hospitals board, which comprises not less than four nor more than eight members appointed by the Governor-in-Council, and one member elected by the component local authorities. During 1964-65 there were sixty hospitals boards controlling 137 public hospitals, nine of which treated out-patients only. In addition, twenty-six other hospitals, six of which are treated as public hospitals, received aid from the Government, and an institution for the treatment of Hansen's disease in Aborigines was maintained at Fantome Island near Townsville. Other persons suffering from this disease are treated at an annexe of the Princess Alexandra Hospital, South Brisbane.

### South Australia

The first Health Act in South Australia was passed in 1873. This Act, which was modelled on earlier English legislation, established a Central Board of Health, and a number of town councils were constituted as local boards. Regulations were concerned mainly with improved sanitation and the checking of 'epidemic, endemic and contagious diseases'. Amendments to this Act followed in 1876 and 1884, and a fourth Act, replacing earlier legislation, was passed in 1898. The present Health Act dates from 1935. Administration was continued under the authority of the Central Board of Health until 1949, when the Department of Public Health was formed to co-ordinate the work of the Board and other health activities.

The *Department of Public Health* embraces the activities of the Central Board of Health, the School Health Branch (including the Deafness Guidance Clinic and the training school for school dental therapists), the Poliomyelitis Branch, the Food and Drugs Advisory Committee, the Radiological Advisory Committee, the Clean Air Committee, and also the public health aspects of the control of tuberculosis, including the chest clinic and the State X-ray health surveys. The Central Board of Health administers the Health, Food and Drugs, Dangerous Drugs, Noxious Trades, Bakehouse Registration, and Notification of Births Acts. The Board also has responsibilities under the Local Government Act and the Cremation Act. The Health Act and the Food and Drugs Act constitute every municipal or district council a local board of health or local authority for its area, except that in the metropolitan area the Metropolitan County Board (representing all metropolitan corporations) is the local authority under the Food and Drugs Act. The Central Board of Health acts as a supervisory body over all the 143 local boards under the Health Act, the Food and Drugs Act, and the Bakehouse Registration Act. It has concurrent jurisdiction with local boards. Outside the boundaries of local boards the Central Board is the administering authority.

The State Government conducts a chest clinic and a tuberculosis hospital in the metropolitan area. At the chest clinic patients are examined and treated, suspected cases are investigated, and contacts are advised of precautionary measures and periodically re-examined. The Morris Hospital, Northfield, with eighty-six beds, cares for the tuberculosis patients received from the chest clinic. The Kalyra Sanatorium at Belair, with seventy beds, is conducted by the James Brown Memorial Trust Inc. for tuberculosis sufferers.

The *Hospitals Department* administers three general hospitals in the metropolitan area—Royal Adelaide Hospital, the Queen Elizabeth Hospital and Morris Hospital (tuberculosis). In the country there are *government hospitals* at Port Pirie, Mount Gambier, Port Lincoln, Port Augusta, Wallaroo, and Barmera. In addition there are fifty *other hospitals* in country areas conducted by local boards of management, which receive maintenance subsidies from the State Government and come under the general supervision of the Hospitals Department. The Mental Health Services, a division of the Hospitals Department, is responsible for the management of public psychiatric services.

There are several large *private hospitals* in the metropolitan area, including Calvary Hospital, the Memorial Hospital and St. Andrew's Presbyterian Hospital, all of which are run by denominational bodies. Another large institution is the Home for Incurables at Fullarton, which provides accommodation and nursing attention for persons suffering from chronic disease.

### Western Australia

The central health authority is the *Department of Public Health*, administered by a Commissioner who must be a medical practitioner. The Commissioner is responsible for the administration of several important Statutes, including the Health Act, Radioactive Substances Act, Poisons Act, Clean Air Act, Anatomy Act, Cremation Act, and the Optical Dispensers Act.

The Health Act is comprehensive in scope. In the administration of its general sanitary provisions, including food and drug administration, the registration of lodging houses, eating houses and offensive trades, local health authorities are subject to the overriding authority of the

Commissioner. The Act provides for the construction of sewerage schemes in certain areas and confers on the Commissioner the powers necessary for the registration of private hospitals, the licensing of maternity homes and the supervision of construction and safety of public buildings. Infectious diseases are notifiable under the Act, and the Commissioner is empowered to isolate infected persons. The Maternal Mortality Committee, which was constituted under the Act, is given statutory power to investigate the circumstances of each maternal death.

In 1965 the Department took over the administration of the Poisons Act from the Pharmaceutical Council. The existing Statute provides for all poisons to be classified in eight schedules closely conforming to the recommendations of the National Health and Medical Research Council.

The Department has several major branches comprising the Public Health Laboratories, the Child Health services, the School Medical and Dental Services, the Tuberculosis Control Branch and the divisions of Epidemiology and Occupational Health.

A special feature of the Department's administration is the existence of a State Health Council. This Council is non-statutory and comprises representatives of all major groups within the medical profession, including nominees of the Faculty of Medicine of the University of Western Australia. The Council's advice is sought on many matters of professional and public health importance. It has four standing committees—the Hospital Requirements Committee, the Mental Health Committee, the Dental Health Committee, and the Maternal and Infant Health Committee.

*Government and government-assisted hospitals* in Western Australia operate under the *Hospitals Act, 1927-1955*, which is administered, subject to the direction of the Minister for Health, by the Medical Department. For administrative purposes a hospital under the direct control of the Medical Department is classified as 'departmental' and is financed from State funds. A hospital classified as a 'Board' hospital has its own board of management and is subsidised by the State Government. In all, forty departmental and fifty-six Board hospitals were located throughout the State at 30 June 1966.

In addition to the government hospitals there are a number of *private general and maternity hospitals* which are registered and inspected by the Department of Public Health. The principal private hospitals are those established by religious bodies in the metropolitan area and the main country towns.

All *mental hospitals* in Western Australia are administered by a Director of Mental Health Services responsible to the Minister for Health. In addition to the major mental hospitals there are day hospitals, out-patient clinics and a child guidance clinic. A new Mental Health Act came into force on 1 July 1966.

### Tasmania

The *State Department of Health Services* is under the jurisdiction of the Minister for Health, with the Director-General of Health Services as the permanent head. The Headquarters of the Department controls three Divisions, each under a Director, namely, Public Health, Psychiatric Services and Tuberculosis. Three specialised services are also part of the Department, namely, the State Health Laboratory under the control of the Director of Pathology, the Government Analyst and Chemist Laboratory under the control of the Government Analyst, and the School Dental Health Service under the control of the Deputy Director-General of Health Services.

*Administrative Headquarters.* The responsibilities of the headquarters of the Department of Health Services include the public hospital services and the licensing of private hospitals and other medical establishments under the *Hospital Act 1918*; the District Medical Service; Geriatric Services; the School Dental Health Service; the Tourist and District Nursing Services; legislation concerned with health and allied matters; the Nurses' Registration Board and Dental Mechanics' Registration Board; some specialist medical services; the statistical classification of public hospital morbidity and mortality; the State Drug Advisory Committee; liaison with the Health Departments of other States and the Commonwealth; the Hospital Employees' Award, the Medical Officers' Award, and the Nurses' (Public Hospitals) Award; the control and maintenance of Crown property occupied by various sections of the Department; and the appointment and salaries of staff who are not officers of the Public Service.

The *Division of Public Health* has responsibility for the preventive medical services of the State. The Director is responsible for the operation of the *Public Health Act 1957* and the control of medical officers of health and other health officers employed by the Department and by municipalities throughout the State. A major responsibility is public immunisation campaigns, conducted through the municipal councils (preparations distributed include the Salk and Sabin anti-poliomyelitis vaccines and the triple antigen vaccines against whooping cough, tetanus and diphtheria). The Division is also responsible for the Child Health Service, the School Medical Service, the Mothercraft Home, the Health Education Council, the Nutrition Advisory Service, industrial hygiene, environmental sanitation, pure food and pure drug quality control, public health aspects of the building regulations, infectious diseases control, and the National Fitness service.

The *Division of Psychiatric Services* controls the major psychiatric rehabilitation hospitals and provides regional clinical psychiatric facilities and the specialists employed, including social workers. Some services operate at the general hospitals, while others, such as the child psychiatric unit and the alcoholic rehabilitation service, are established separately. Day hospital facilities are available, and a clinic is maintained at the Division of Public Health in Hobart. The *Mental Health Act* 1963 superseded previous legislation and is based on the modern theory that a mental health institution should be a true hospital, where the majority of patients attend voluntarily and where there should be a high turn-over of short-stay patients who are given intensive treatment. Application of this principle has had the effect of reducing the number of patients compulsorily detained from about 75 per cent of the total psychiatric hospital patient population to about 25 per cent.

The *Division of Tuberculosis* is concerned with the prevention of tuberculosis in the State. It administers compulsory mass chest X-ray services throughout the State, four chest clinics and two chest hospitals.

The *State Health Laboratory* provides certain pathological services to hospitals and doctors and special bacteriological and cytological services in connection with public health and the anti-cancer campaign.

The *Government Analyst and Chemist Laboratory* is a public laboratory for the chemical analysis of a wide variety of foods, drugs and other substances and undertakes work for Government Departments and the public.

*State controlled hospitals*, for which the State accepts the major financial responsibility, are controlled either directly or through Hospital Boards each consisting of seven members, of whom five are appointed by the Minister. They include four general hospitals, sixteen district hospitals, twelve district nursing centres with bed accommodation, two mental hospitals, two maternity hospitals, two chest hospitals, and three homes for the aged. Under the 'personal patient' scheme a patient in a State-controlled hospital may have his own doctor, if the latter is an honorary doctor at the hospital, for the payment of an additional fee.

*Private hospitals* are operated by church and other private organisations. There are seven licensed to receive surgical, medical or maternity cases. Nursing homes and rest homes are institutions which do not conform to private hospital specifications with regard to equipment, construction and staffing, as laid down under the Hospitals Act, and treat general cases within limits as specified in the licence. There are thirty-three private institutions concerned with aged people, two for those with incurable or chronic illnesses, two for general convalescence, and two for retarded children.

The *Ambulance Commission of Tasmania* co-ordinates ambulance services through four Ambulance Boards and is responsible to the Minister for Health for seeing that they operate effectively. The Royal Flying Doctor Service was established in 1960 and operates with the ambulance services to bring remote patients to the Royal Hobart or Launceston General Hospitals.

#### Northern Territory

The *Commonwealth Department of Health* provides health services in the Northern Territory which include hospital, medical and dental services.

Four general hospitals have been established, and at 31 December 1966 the available accommodation for in-patients was as follows: Darwin Hospital, 316; Alice Springs Hospital, 147; Katherine Hospital, 52; and Tennant Creek Hospital, 35. The treatment of Hansen's disease (leprosy) is carried out at East Arm Settlement. A full range of ancillary services is available at the Darwin hospital, which serves as a base hospital for the Territory. Dental clinics have been set up at Darwin and Alice Springs.

Medical and dental services to outback areas are provided by road and air. The Department of Health has three De Havilland Dove aircraft stationed at Darwin and one at Alice Springs. They are staffed and serviced by Trans-Australia Airlines and are extensively used in ambulance and survey medical work. At Alice Springs medical officers of the Department of Health provide the medical services to the Royal Flying Doctor Service (South Australian base). Public health services are provided, and health inspectors visit all settlements periodically. A section of the Department of Health undertakes continuous investigations into Aboriginal health.

#### Australian Capital Territory

The A.C.T. *Public Health Ordinance* 1928-1966 places under the control of the Minister for Health matters relating to public health and hygiene in the Australian Capital Territory. In addition to the public health activities normally undertaken by the State Governments, the A.C.T. Health Services Branch of the Commonwealth Department of Health undertakes certain duties which in the States would be the responsibility of local government instrumentalities. This Branch is responsible for all health services within the A.C.T. including hospital development, national

fitness, health education and public health measures. It also provides the secretariat for registration of medical practitioners, dentists, pharmacists, optometrists, veterinary surgeons, and nurses in the Territory.

A medical officer of health and a staff of six health inspectors have been appointed to administer the Public Health Ordinance and ancillary regulations. During 1966, 980 licences were issued under various public health regulations, and legal action was taken in six cases for offences against these regulations. The inspection staff is responsible for the quarantine inspection of parcels arriving under bond at the Canberra Post Office, and, in addition, the inspection of plants and animals and the disposal of refuse from aircraft in Canberra as the first port of entry into Australia.

In continuation of the campaign to control the incidence of poliomyelitis, the Department of Health in Canberra during 1966 gave 6,200 injections of poliomyelitis vaccine to infants and school children, and 666 to adults. In September 1966 the Department of Health implemented Sabin oral poliomyelitis vaccination, and by the end of 1966 over 20,000 schoolchildren had received two of their three doses. In addition, over 1,000 adults have started a course of Sabin vaccination.

The *Commonwealth Health Laboratory* in Canberra provides full clinical laboratory services to the Canberra Community Hospital and to private medical practitioners in the Australian Capital Territory and surrounding districts. During 1966, 504,104 tests of human specimens were carried out in connection with 103,025 patients. The *Public Health Laboratory*, located in the Australian Institute of Anatomy, conducts tests on water, milk, meats and other foods, and sewage.

The *Canberra Community Hospital* is administered, subject to the direction of the Minister for Health, by a board consisting of five elected members and three members appointed by the Minister\*. At 31 December 1966 the hospital had accommodation for 482 in-patients. In October 1966 the Minister for Health announced plans for the construction of a government controlled 600-bed general hospital in the Woden district and a 200-bed general hospital to be erected and controlled by the Roman Catholic Order of the Little Company of Mary. A site for this hospital has since been selected in the Belconnen district.

The *Canberra Mothercraft Society*, which is subsidised by the Commonwealth Department of Health, administers the Infant Welfare Service in Canberra with a staff of nine triple-certificated nurses. The Queen Elizabeth II Coronation Home for Mothers and Babies, which is under the management of the Society, was opened on 7 January 1963. It is staffed by qualified nursing staff and provides post-natal care for mothers and problem babies. The Home has accommodation for two mothers and nine babies.

The First Assistant Director-General of the *Tuberculosis Division*, Commonwealth Department of Health, in addition to the responsibility of co-ordinating the activities of the States in the national campaign against tuberculosis, is concerned with the prevention, detection, examination, and treatment of tuberculosis in the Australian Capital Territory. In 1966 six cases of tuberculosis were notified in the Australian Capital Territory.

A district nursing service, administered by the Commonwealth Department of Health, was established in 1950 to provide a home-nursing service for the sick and aged. This service, available at the request of a registered medical practitioner, is provided by seventeen sisters, who in 1965-66 made 47,004 visits.

The supervision of the hygiene of dairies and piggeries and the control of the Canberra Abattoir are the responsibility of the veterinary service of the Department of Health. The duties of this service also include the prevention and control of disease in stock and advice to district stock owners, with field diagnosis on a herd or flock basis supported by laboratory confirmation.

### Supervision and care of infant life

Because the health of mothers and infants depends largely on pre-natal attention as well as after-care, government, local government and private organisations provide instruction and treatment for mothers before and after confinement. The health and well-being of mother and child are looked after by infant welfare centres, baby clinics, crèches, etc.

In all States, Acts have been passed with the object of supervising the conditions of infant life and reducing the rate of mortality. (Information regarding infant mortality will be found in Chapter 9, Vital Statistics—see pages 238-43.) Departments control the boarding-out of the wards of the State to suitable persons. Wherever possible, the child is boarded out to its mother or to a near female relative. Stringent conditions regulate the adoption, nursing and maintenance of children placed in foster-homes by private persons, while special attention is devoted to the welfare of ex-nuptial children.

Under the provisions of the *Social Services Act* 1947-1966 maternity allowances are paid to provide financial assistance towards the expenses associated with the birth of children. A sum of

\* See also Appendix.

\$30 is payable to the mother in respect of each confinement at which a living or viable child is born if the mother has no other children under sixteen years of age. Where there are one or two other children under sixteen, the amount payable is \$32, and where there are three or more other children under sixteen, the amount payable is \$35. Where more than one child is born at a birth, the amount of the allowance is increased by \$10 in respect of each additional child. More detailed information concerning maternity allowances is given in the chapter Welfare Services.

#### Nursing activities

Several State Governments maintain institutions which provide treatment for mothers and children, and, in addition, subsidies are granted to various associations engaged in welfare work.

*Infant welfare centres.* The following table gives particulars of the activities of infant welfare centres for the year 1966. The figures relate to all centres, whether permanently staffed or on a temporary or part-time basis. Centres may be located at accommodation specially provided for this purpose or at halls, schools, etc.

INFANT WELFARE CENTRES: STATES AND TERRITORIES, 1966

	N.S.W.	Vic.	Qld (a)	S.A. (a)	W.A.	Tas.	N.T.	A.C.T.	Aust.
Number of centres . . . . .	430	674	270	271	71	106	16	32	1,870
Attendances at centres . . . . .	1,058,638	1,379,027	457,956	262,952	240,401	138,304	18,717	43,669	3,599,664
Visits by nurses to homes . . . . .	n.a.	178,395	30,022	36,913	27,312	80,921	5,615	4,994	n.a.

(a) Year ended 30 June 1966.

Mobile units are used as centres in some States. The numbers of these in 1966 included in the above table were as follows: Victoria, 5; Queensland, 2; South Australia, 4; Western Australia, 4; and Tasmania, 12.

In the last thirty-five years the number of attendances at the infant welfare centres has increased almost four-fold. The numbers of attendances at five-year intervals since 1930 were as follows: 1930, 919,893; 1935, 1,355,306; 1940, 2,035,299; 1945, 2,927,764; 1950, 3,049,375; 1955, 3,099,233; 1960, 3,482,383; and 1965, 3,598,781.

*Bush Nursing Associations.* Treatment for mothers and children is also provided by the Bush Nursing Associations. The numbers of centres maintained by the Associations in 1966 were: New South Wales, 18; Victoria, 57; Queensland, 5; South Australia, 33; Western Australia, 17; and Tasmania, 24.

#### Medical and dental inspection of school children

Medical and dental inspection of school children is carried out in all States, in the Northern Territory and in the Australian Capital Territory. In some States travelling clinics have been established to deal with dental defects.

##### New South Wales

School medical and dental services in New South Wales are under the control of the State Department of Public Health. The staff of the Child Health and Special Services sections of the Department, which conduct the school medical services and provide respectively diagnostic and supervisory services for atypical children, included in January 1967 sixty-six medical officers, thirteen psychiatrists, ten part-time ear, nose and throat surgeons, an ophthalmologist, twenty clinical psychologists, eighty nurses, seventeen social workers, and twenty-three speech therapists.

The aim of the school medical services is to examine all school children in the State in order to discover any departure from normal health, physical or mental, and to notify the parent or guardian of any need for further investigation or treatment. Annual visits are made to government schools, and also to private schools which have applied for this service, in the metropolitan, Newcastle, and Wollongong areas, and in some of the larger country towns. Children are fully examined at kindergarten or on entry into primary school. Review examinations, with particular emphasis on vision and hearing, are conducted on pupils in fourth grade in primary schools and second, fourth, and sixth forms in secondary schools, and on others who appear to need additional examinations. Excluding review examinations, medical officers of this service examined 91,336 children in 1966. In other country areas there is a scheme for school children to be examined by local medical practitioners under the supervision of local municipal and shire councils.

The Department conducts eight child health centres (seven in the metropolis and one at Newcastle), ten child guidance clinics (nine in the metropolis and one at Newcastle), ten hearing

clinics (eight in the metropolis, one at Newcastle and one at Wollongong), most of which have been established at child health centres, and two separate speech therapy clinics. Children in need of treatment other than child guidance or speech therapy are referred to a medical practitioner or to the out-patient department of a public hospital.

In June 1966 the school dental service had a staff of thirty-four dental officers, twenty-six dental assistants, and six dental nurses. The service is provided by dental clinics established in the grounds of three metropolitan and two country public schools, eighteen mobile clinics in country areas, and three dental teams with the Royal Flying Doctor Service (located at Broken Hill). In 1966, 107,814 school children were examined by the school dental service, and 15,553 of these were treated.

### Victoria

The School Medical Service is a division of the Maternal and Child Welfare Branch of the Department of Health. It has a full time staff of forty doctors, forty-five nurses and nineteen administrative or office staff. As well, it has a part time staff of three medical officers, three nurses and the following consultants: two paediatricians, two psychiatrists and an ophthalmologist.

The aim of the service is to examine all primary school children in the second year at school and once again during secondary schooling. Children may also be examined at other times on the suggestion of teachers or parents, who suspect that ill health is interfering with school progress. Any disabilities found in children are brought to the notice of their parents who are advised to consult their family doctor for further advice or treatment. School nurses under medical direction visit homes and schools to follow up cases so referred. In co-operation with the Education Department and the Mental Health Authority, children with defects of vision and hearing and those who are mentally backward are assessed for special educational help.

School medical officers and nurses in all their activities seek to improve community and child health, through health education to parents, teachers and teachers in training, and school children. Special programmes are conducted in teachers colleges where, through education and counselling, school medical officers seek to induce positive attitudes to health and healthy living, and to foster the ability of the teacher in training to impart this to children.

The School Medical Service advises the Education Department on medical problems and undertakes all medical assessments in connection with the teaching service, including medical assessment for temporary and permanent appointments, resumption of duty after sick leave, confinement leave, and medical eligibility of teachers for superannuation benefits.

The School Dental Service has an establishment of forty-three dental officers and provides dental attention for children in the metropolitan area at three dental centres, and for a number of country districts by means of fifteen mobile units, including six twin-surgery units. It also provides dental services for children's institutions in and around Melbourne and certain provincial centres. The service is now providing dental attention for some 80,000 primary school children.

### Queensland

During 1965-66 medical officers and nurses examined 120,926 school children; 4,985 children had disabilities of which parents were notified and advised to seek attention. In western Queensland local doctors act as part-time ophthalmic surgeons. Advice is given on school sanitation, communicable diseases in schools and health education.

During 1966 school dentists gave treatment to 11,256 school children who resided in areas beyond easy reach of hospital dental clinics. The treatment was carried out at four rail dental clinics and with portable equipment at schools. In addition, school children are treated at hospital dental clinics in the larger towns.

### South Australia

State schools within a radius of sixty miles from Adelaide and at five large country centres are visited annually, and the children are medically examined while in grades 1, 4 and 7 in the primary schools and in their second and fourth years in secondary schools. Efforts are made to visit the remaining country schools every three years, when all the children are examined. Students who wish to become teachers are examined on appointment as teaching scholars while still attending secondary schools and again immediately prior to entering the Teachers' College and finally when they leave the College to take up teaching. Courses of lectures in health education are given to all College students.

During 1966, 89,040 children were examined by medical officers in 208 country and 159 metropolitan schools. Of these, 6,731 required treatment for defective vision, 2,848 for defective hearing, and 15,471 for dental disorders. Dentists using mobile vans examined 3,462 school children in country areas where a private dental service was not readily available; children offered treatment in 1966 numbered 3,808, including some who were examined in the previous year; 3,323 accepted and were treated free of charge. There were 3,067 children examined at the

Deafness Guidance Clinic during 1966. Of the 1,481 new patients, 803 were referred to doctors or hospitals for treatment. Educational work was assisted by talks to mothers' clubs and interviews with parents by doctors and dentists, and by home visits and interviews by nurses.

#### Western Australia

The School Medical Service of the State Health Department employs seven full-time medical officers. Details of this service during 1966 compared with 1965 figures, shown in parentheses, were as follows: number of children examined, 56,877 (49,286) (metropolitan, 41,388 [37,345], country, 15,489 [11,941]). The 376 (381) schools visited comprised metropolitan, 281 (267), of which 205 (193) were government and 76 (74) were non-government schools, and country, 95 (114) of which 76 (87) were government and 19 (27) were non-government schools.

During 1966 the 15 (12 in 1965) full-time dentists employed by the School Dental Service visited 4 (4) metropolitan schools, 87 (112) country schools and 27 (21) orphanages and Aboriginal missions. The number of children examined was 9,247 (9,952). With the consent of the parents, 5,256 (2,958) children were treated. Nine dental vans were in operation.

#### Tasmania

During 1966 three full time and thirteen part-time medical officers examined school children in government and non-government schools. In addition, two regional medical officers of health also examined school children. Twenty-two full-time and five part-time sisters visited homes and schools. Of the 34,609 children examined by medical officers, 9,873 were found to have defects.

The School Dental Health Service, available free to all school children, aims to examine and treat every child each six months. In 1965-66 fixed surgeries were in use or under construction in nineteen districts and in clinics at Hobart and Launceston. Fifteen mobile caravans were also in use. An orthodontic service based on Hobart, and using a mobile caravan, supplements the therapeutic dental service. During the year ended 30 June 1966, there were 18,744 new visits to school dentists and 31,062 repeat visits.

Adopting the New Zealand system, Tasmania became the first Australian State to establish a school of dental nursing. Ten students were enrolled in 1966 for the first year of a two-year course, and ten will be enrolled annually. A resident hostel is attached. The School, located in Hobart, has a principal and a matron, and will itself treat forty patients a day. It is expected that a total of approximately thirty dental nurses will work with dentists in the districts; a dental nursing certificate or its equivalent will be needed for a nurse to be appointed.

#### Northern Territory

The Schools Medical Officer makes routine physical examinations of all children attending pre-school centres and schools. The only children not so examined by him are those at the special Aboriginal schools, who are examined during Aboriginal health surveys. A special dental service for school and pre-school children is available in Darwin and Alice Springs. School doctors and dentists travel throughout the Territory to carry out diagnosis and treatment.

#### Australian Capital Territory

The A.C.T. Health Services Branch of the Commonwealth Department of Health is responsible for health aspects of child welfare in the Australian Capital Territory. These include the School Medical Service carried out by three medical officers and three trained nurses, and the School Dental Service, staffed by twelve dentists, together with surgery and clinical assistants.

A Child Guidance Clinic assists children with psychiatric disorders. During 1966 the clinic assisted 177 children of both pre-school and school age who were referred to it by private doctors, the School Medical Service, social workers, and the Australian Capital Territory Education Clinic. The Child Guidance Clinic is staffed by three part-time psychiatrists, a full-time psychologist and a social worker.

Medical examinations are carried out at all public and private schools within the territory. The total number of school children examined during the year 1965-66 was 6,243. Examinations of children attending pre-school centres were made according to the time available, 300 pre-school children being examined.

Defects during the year were: 450 eyesight, 167 ear, nose and throat, and 665 miscellaneous; and 299 cases of hearing loss not requiring further treatment were also found. Triple antigen injections, totalling 10,256 in 1966, were given at regular sessions held throughout the year, and 6,200 anti-poliomyelitis injections were given at baby health clinics. Since the introduction in September 1966 of Sabin oral poliomyelitis vaccine, 41,609 doses were given to school children, 4,469 to infants.

The School Dental Service provides free treatment for children attending infants and primary schools, both public and private, in the Australian Capital Territory. During 1966, 11,981 children were examined in Canberra and Jervis Bay schools. As in previous years, a visit was also made to the Cocos (Keeling) Islands where 72 adults and children were examined.

### Disposal of dead by cremation

The first crematorium in Australia was opened in South Australia in 1903. At 31 December 1966 there were twenty-two crematoria in Australia, situated as follows: New South Wales, 8; Victoria, 4; Queensland, 4; South Australia, 1; Western Australia, 2; Tasmania, 2; Australian Capital Territory, 1. There is no crematorium in the Northern Territory. The following table shows the number of cremations and total deaths in each State and Territory for each of the years 1962 to 1966.

#### CREMATIONS AND TOTAL DEATHS: STATES AND TERRITORIES, 1962 TO 1966

(a) Commenced operation 8 July 1966

### COMMONWEALTH GOVERNMENT ACTIVITIES

Commonwealth services outlined in the following pages are those provided under the National Health Services or otherwise administered by the Commonwealth Department of Health. For particulars of services administered by the Commonwealth Department of Social Services and of Commonwealth expenditure from the National Welfare Fund on all forms of social and health services see the chapter Welfare Services.

At the time of federation the only health function given to the Commonwealth Government under the Constitution was the power to make laws with respect to quarantine. Following on the passing of the *Quarantine Act* 1908 a branch of the Department of Trade and Customs, under the control of a Director of Quarantine, was created on 1 July 1909. The Commonwealth Department of Health was formed in 1921 by the extension and development of the quarantine service, the Director of Quarantine becoming the Director-General of Health. An amendment to the Constitution in 1946 gave the Commonwealth power to make laws with respect to pharmaceutical, hospital and sickness benefits, and medical and dental services. In addition, the Commonwealth Government has used its powers under Section 96 of the Constitution to make grants to the States for health purposes.

### National health benefits

#### Pharmaceutical benefits

A comprehensive range of drugs and medicines is made available to all persons receiving treatment from a medical practitioner registered in Australia. The benefits are supplied by an approved pharmacist upon presentation of a prescription, or by an approved hospital to patients receiving treatment at the hospital. The patient pays the first 50 cents of the cost of a prescription dispensed by an approved pharmacist, but pensioners who are eligible for treatment under the Pensioner Medical Service (see page 558) receive all benefits without any contribution being made. Special arrangements exist to cover prescriptions dispensed at locations outside the normal conditions of supply, e.g. in remote areas. Total Commonwealth expenditure on pharmaceutical benefits in the year 1965-66 was \$91,783,674.

#### Hospital and nursing home benefits

The *National Health Act* 1953-1966 provides for the payment of Commonwealth hospital and nursing home benefits. Commonwealth benefits are payable only in respect of treatment received in approved hospitals and approved nursing homes. For the purposes of the National Health Act, premises which provide medical treatment, care and accommodation for sick persons are approved either as hospitals or as nursing homes, depending mainly on their clinical standards and the type of patients accommodated. Usually premises are approved as hospitals if their general standards are substantially equivalent to those of a public hospital and if hospital treatment, as defined in the National Health Act, is provided. Premises are approved as nursing homes

where their general standards are similar to those prevailing in benevolent homes, convalescent homes, rest homes, or homes for the aged, and if nursing home treatment as defined in the Act is provided.

*Patients in approved hospitals.* A basic principle of the provision of benefits for patients in approved hospitals is the Commonwealth support of voluntary insurance against the costs involved. Insured patients in approved hospitals receive a Commonwealth hospital benefit of \$2 a day which is paid through the contributors' registered hospital benefits organisations. Total payments by contributors to organisations range from 10 cents to 65 cents a week for single persons and from 20 cents to \$1.30 a week for families. Examples of contributions and benefits payable, including Commonwealth benefits of \$2 a day, are:

Weekly contributions		Total benefits	
Single person	Family	Daily	Weekly
c	\$	\$	\$
10	0.20	4.40	30.80
15	0.30	5.60	39.20
20	0.40	6.80	47.60
25	0.50	8.00	56.00
40	0.80	11.60	81.20
55	1.10	15.20	106.40
65	1.30	17.60	122.20

A contribution of 80 cents a week covers a family for benefits in excess of the public ward charge in any State. Contributions are allowable deductions for income tax purposes.

During the waiting period of two months after joining an organisation the Commonwealth benefit is payable at the rate of 80 cents a day, unless the organisation pays fund benefits, in which case Commonwealth benefit is payable at the higher rate of \$2 a day. While a member is in arrears with his contributions and fund benefits are not payable, the Commonwealth benefit is payable at the rate of 80 cents a day unless the member was in receipt of unemployment or sickness benefits under the *Social Services Act 1947-1966*.

Contributors who would have been excluded from fund benefits because of organisations' rules covering pre-existing ailments, chronic illnesses or maximum benefits are assured of hospital fund benefits by the provisions of the special account plan. Since 1 January 1967 the hospital fund benefit usually payable in such cases is \$3.00 a day and is paid either from a special account, guaranteed by the Commonwealth, or from the ordinary account of the organisation. Prior to 1 January 1967 the fund benefit payable was \$1.60 a day. If the payments from the special account exceed contributions credited to the account, the amount of deficit is reimbursed by the Commonwealth.

A person who joins a registered hospital benefits organisation within eight weeks of being discharged from an approved nursing home is entitled to immediate Commonwealth benefit of \$2 per day and to fund benefits without having to serve a waiting period. If a qualified patient in an approved hospital is not insured (i.e. not a member of a hospital benefits organisation), a Commonwealth benefit of 80 cents a day is deducted from his account by the hospital. The Commonwealth subsequently reimburses the hospital. Under arrangements made under the National Health Act pensioners who are enrolled in the Pensioner Medical Service and are treated in public wards of public hospitals are entitled (with a few exceptions) to free public ward treatment. From 1 January 1967 the Commonwealth has paid the hospitals a benefit of \$5.00 a day for each pensioner. Prior to this date \$3.60 was paid.

*Patients in approved nursing homes.* The Commonwealth nursing home benefit of \$2 a day is payable in respect of all qualified patients in approved nursing homes, whether the patients are insured or not. This benefit is deducted from the patient's account and subsequently paid by the Commonwealth to the nursing home. If no charge is made by the nursing home, the Commonwealth nursing home benefit of \$2 a day is still payable to the nursing home in respect of qualified patients.

There is no need for patients in approved nursing homes to be insured with a registered hospital benefits organisation. Fund benefits are generally not payable. However, the National Health Act provides that where an insured special account patient is treated in an approved nursing home for an acute illness or condition and is given treatment equivalent to that which he would have received in an approved hospital, approval may be given to the payment of special account fund benefits.

*Australians overseas.* Australian residents who receive hospital treatment in recognised hospitals in overseas countries, while temporarily absent from Australia, are eligible to receive the Commonwealth and fund benefits to which they are entitled.

*Expenditure on hospital and nursing home benefits.* The following table shows the amount of Commonwealth hospital and nursing home benefits paid during 1965-66. This does not include expenditure on mental hospitals (see page 557).

**COMMONWEALTH HOSPITAL AND NURSING HOME BENEFITS PAID  
STATES AND TERRITORIES, 1965-66  
(\$'000)**

Type of patient	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

<b>Total</b>	<b>23,389</b>	<b>12,796</b>	<b>9,261</b>	<b>5,192</b>	<b>5,069</b>	<b>1,968</b>	<b>95</b>	<b>100</b>	<b>57,870</b>

(a) Does not include payments of \$2,873,345 towards special accounts deficits in 1965-66. (b) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organisation registered in one of the States, and payments to them are included in the respective States. (c) Includes Northern Territory.

*Registered hospital benefits organisations.* The following table shows the number of registered hospital benefits organisations, the membership at 30 June 1966, and fund benefits paid during 1965-66. As many persons contribute on behalf of both themselves and their dependants, the total number of persons covered by hospital benefit schemes is considerably higher than the number of members.

**HOSPITAL BENEFITS: ORGANISATIONS AND FUND BENEFITS, STATES, 1965-66**

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)

Fund benefits paid . \$'000	27,027	13,777	4,345	5,941	4,386	2,087	57,562

(a) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organisation registered in one of the States, and payments to them are included in the respective States. (b) Interstate branches are not included. (c) Includes eighteen Bush Nursing Hospitals.

**Mental hospitals**

In 1946, when Commonwealth hospital benefits were introduced for patients in public hospitals, no provision was made for patients in mental hospitals. To help meet the cost of maintaining patients in mental hospitals the Commonwealth Parliament passed the *Mental Institutions Benefits Act* 1948. This Act ratified agreements with the States, whereunder it was provided that the States would cease making charges for the maintenance of mental patients and that the Commonwealth would pay the States a benefit based on the amount which had been collected by the States from the relatives of patients in mental hospitals by way of charges for maintenance.

These agreements operated for five years and terminated in the latter half of 1954. The amount contributed by the Commonwealth during the operation of the agreements was approximately one shilling (10 cents) a day for each patient. When the agreements terminated, Dr. Alan Stoller, of the Victorian Mental Hygiene Authority, was commissioned to undertake a survey of mental health facilities and needs in Australia. His report, issued in May 1955, stated that serious overcrowding existed in the majority of mental hospitals in Australia. The provision of more beds was the most urgent need, but other accommodation and rehabilitation facilities were also required.

Following the report, the Commonwealth made an offer of \$20 million to the States as part of a capital expenditure programme of \$60 million on increasing and improving patient accommodation. All States accepted the Commonwealth offer. By 1963 more than three-quarters of the total grant under the *States Grants (Mental Institutions) Act* 1955 had been distributed, and the Commonwealth Government announced in November 1963 its intention of continuing assistance to the States towards capital costs on a similar basis, but without overall limit, for a period of three years. In May 1964 the *States Grants (Mental Health Institutions) Act* 1964 was passed to implement that policy. This Act provided for the continuation of Commonwealth aid of \$1.00 for every \$2.00 of capital expenditure by the States on mental health facilities. The new Act makes no provision limiting the size of the grant and the assistance is limited to the three-year period concluding on 30 June 1967. The following table sets out the amounts which have been paid to the State Governments by the Commonwealth Government from 1955-56 to 1965-66.

**EXPENDITURE ON MENTAL HOSPITALS BY THE COMMONWEALTH

(a) Expenditure for 1964-65 includes final grants, totalling \$406,454, made under the 1955 Act as follows: New South Wales, \$274,938; Queensland, \$21,210; and South Australia, \$110,306.

There are no mental hospitals in the Northern Territory or in the Australian Capital Territory.

#### Medical benefits

A medical benefits scheme has operated since July 1953, being authorised firstly by the National Health (Medical Benefits) Regulations and then by the *National Health Act* 1953-1966. The basic principle of the scheme is Commonwealth support of voluntary insurance towards meeting the costs of medical attention. The benefits provided by the Commonwealth are paid either on a fee-for-service basis in respect of the items set out in the schedule to the National Health Act or in the form of a subsidy not exceeding half of the payments made to doctors by registered organisations under contract arrangements.

Commonwealth fee-for-service benefits are paid in accordance with the list of benefits set out in the Schedule to the *National Health Act* 1953-1966. The present Schedule came into force on 1 June 1964.

In order to qualify for a Commonwealth benefit a person is required to be insured with a registered medical benefit organisation. The organisation pays the Commonwealth benefit to the contributor, usually at the time it pays its own benefit. Reimbursement of the Commonwealth benefit is subsequently made to the organisation by the Commonwealth.

Commonwealth benefits ranging from 80 cents for ordinary general practitioner visits to \$60 for major operations are payable to members of registered medical benefit organisations. The fund benefit payable varies according to the weekly contributions paid by the member and the particular medical service. Examples of the range of benefits are as follows.

Type of service	Combined Commonwealth and fund benefits(a)
	\$
Certain major operations .. .. .	150.00
Appendix operation .. .. .	45.00
Midwifery .. .. .	33.75
Tonsils—	
Under 12 years .. .. .	15.75
12 years and over .. .. .	22.50
Surgery consultation—general practitioner .. .. .	from \$1.60 to \$2.00

(a) The total benefit varies according to the weekly contribution rate. The most common contribution rates are 25 cents a week for single persons and 50 cents a week for a family. From 1 April 1965 the majority of medical benefit organisations introduced new tables of fund benefit based on the present Commonwealth Schedule. The general effect of these new tables was an increase in the fund benefits paid by the organisations to their contributors.

Provision is made for the payment of fund benefit from special account for claims lodged by contributors who have reached maximum benefits or who make claims in respect of pre-existing ailments. The medical special accounts are operated along the same principles as the hospital special accounts (see pages 555-6) and the special account fund benefit paid usually matches the Commonwealth benefit for the particular service.

*Australians overseas.* Australian residents temporarily absent from Australia who receive medical attention by registered medical practitioners in the country they are visiting are entitled, if insured, to the Commonwealth benefit and the medical fund benefit to which they would be entitled if the service were rendered in Australia.

*Expenditure on medical benefits.* The following table shows the number of registered medical benefit organisations, their membership, the number of medical services rendered to members and their dependants, and payments of Commonwealth benefits and medical fund benefits to members of registered organisations. As many persons contribute on behalf of both themselves and their dependants, the total number of persons covered by medical benefit schemes is considerably higher than the number of contributors.

**MEDICAL BENEFITS: SUMMARY, STATES, 1965-66**

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Registered organisations(b) no.	28	20	6	8	8	10	80
Members . . . . . no.	1,330,384	929,693	314,450	356,033	268,719	113,456	3,312,735
Medical services . . . . . no.	11,138,084	8,000,119	3,111,730	3,132,442	2,232,508	835,378	28,450,261
Commonwealth benefit(c) \$'000	15,929	11,030	4,142	4,933	3,337	1,137	40,507
Fund benefit . . . . . \$'000	18,393	10,539	4,390	4,712	3,269	1,256	42,560

(a) Members who live in the Northern Territory or the Australian Capital Territory, or who are abroad, receive their Commonwealth benefit and fund benefit through membership of an organisation registered in one of the States. (b) Interstate branches are not included. (c) Does not include payments of \$774,870 towards special accounts deficits.

#### **Pensioner Medical Service**

The Pensioner Medical Service, which commenced on 21 February 1951, was introduced under the authority of the National Health (Medical Services to Pensioners) Regulations made under the provisions of the *National Health Services Act 1948-1949*. The service has been continued under the provisions of the *National Health Act 1953-1966*. The service provided to eligible pensioners consists of medicine provided free of charge and a medical service of a general practitioner nature such as that ordinarily rendered by a general medical practitioner in his surgery or at the patient's home. Specialist services are not provided. Patients may be charged a small fee by doctors for travelling and attendance outside normal surgery or visiting hours. Doctors participating in the scheme are paid on a fee-for-service basis by the Commonwealth Government.

From 1 November 1955 to 1 January 1966 persons eligible to receive the benefits of the service were those who satisfied a means test and received an age, invalid or widow's pension under the *Social Services Act 1947-1966*, or a service pension under the *Repatriation Act 1920-1966*, or a tuberculosis allowance under the *Tuberculosis Act 1948*, and dependants of persons eligible for the service. Since 1 January 1966 all those pensioners and their dependants who qualify under the current means tests are eligible for the benefits of the Pensioner Medical Service. The means test now applied for enrolment in the Pensioner Medical Service is the merged means test determining eligibility for a full or part pension or a tuberculosis allowance.

At 30 June 1966 the total number of pensioners and dependants enrolled in the Pensioner Medical Service was 1,005,813, while the number of doctors participating in the scheme at that date was 6,034. As a result of the relaxation of the Pensioner Medical Service means test, which became effective as from 1 January 1966, an additional 137,000 pensioners and dependants were admitted to the Service. During 1965-66 doctors in the scheme provided 7,494,002 services—visits and surgery consultations—for persons enrolled in the scheme. For these services they were paid \$13,365,373. The average number of services rendered by doctors to each enrolled person was 8.4.

#### **Anti-tuberculosis campaign**

The main provisions of the *Tuberculosis Act 1948* are as follows: (a) Section 5 authorises the Commonwealth to enter into an arrangement with the States for a national campaign against tuberculosis; (b) Section 6 empowers the Commonwealth to take over or provide specified facilities for the diagnosis, treatment and control of tuberculosis; (c) Section 8 provides for the setting up of an advisory council to advise the Commonwealth Minister for Health on matters relating to the national campaign; and (d) Section 9 authorises the Commonwealth to pay allowances to sufferers from tuberculosis and to their dependants.

Under an arrangement with the Commonwealth Government, each State conducts a campaign against tuberculosis. The Commonwealth Government reimburses the State for all approved capital expenditure in relation to tuberculosis, and for net maintenance expenditure to the extent that it exceeds net maintenance expenditure for the year 1947-48. Thus the States carry out the physical or field work of the national campaign and the Commonwealth acts in an advisory, co-ordinating and financial capacity. For this reason the Commonwealth has not found it necessary to make much use of its powers under Section 6 of the Tuberculosis Act. An advisory council, known as the National Tuberculosis Advisory Council, has been set up. There are twelve members, the chairman being the Commonwealth Director-General of Health.

To help reduce the spread of infection the Commonwealth Government pays allowances to persons suffering from infectious tuberculosis, so that they may give up work and undergo treatment. These allowances have been in operation since 13 July 1950. The rates now payable are: married sufferer with a dependent wife, \$26.75 a week; sufferer without a spouse but with a dependent child or children, \$17.00 a week; dependent child or children under sixteen years of age and full-time student children from sixteen to twenty-one years, \$1.50 a week for each dependent child (additional to child endowment); sufferer without dependants, \$16.25 a week (reducible to \$13.00 a week if a person is maintained free of charge in an institution).

There is a means test on income but not on property. The allowance is reduced by the amount by which a person's income from sources other than his allowance exceeds, in the case of a married person, \$14 a week, and in the case of a person without a dependent wife, \$7 a week.

*New tuberculosis cases notified.* The following table gives particulars of the number of new cases of tuberculosis notified in Australia for 1966.

#### TUBERCULOSIS: NEW CASES NOTIFIED(a), STATES AND TERRITORIES, 1966

State or Territory	Age group (years)					Total
	0-14	15-34	35-54	55 and over	Not stated	
New South Wales . . . .	48	153	326	383	5	915
Victoria . . . . .	66	122	221	240	..	649

1965-66 .	1,286	13,586	696	15,569

(a) Includes administrative costs.

### Anti-poliomyelitis campaign

Information concerning the initial production by the Commonwealth Government in 1955 of anti-poliomyelitis vaccine in Australia, and of the testing procedures which were carried out, is contained in Year Book No. 49 and earlier issues.

Distribution of the Salk poliomyelitis vaccine, which was supplied free of charge to the States, began in July 1956. The States were responsible for the organisation and running of their own campaigns and for the distribution of the vaccine in accordance with priority groups established by the National Health and Medical Research Council. Up to 1958 priority was given to children in the 0-14 age group, expectant mothers, and persons subjected to special risk. During 1958 this priority was extended to persons in the 15-44 age group. No child can be vaccinated without the consent of a parent or guardian.

Vaccination against poliomyelitis takes the form of four injections of the vaccine. The second injection is given approximately four weeks after the first, the third injection is given not less than thirty-two weeks after the first, and the fourth injection a minimum of one year after the third dose. Where the incidence of the disease in certain areas approaches epidemic proportions, special efforts have been made to vaccinate as soon as possible all persons in the area who give their consent.

It is difficult to give a completely accurate estimate of the vaccination coverage for the whole of Australia because methods of recording vaccination data differ from State to State. The proportion of children who had received three injections by twelve months of age is considered to be very small; by the recommended dosage schedule the third injection is given at fourteen months or later. From figures available in 1964 more than 60 per cent of children from fifteen months to four years have received three injections. In the age group five to fourteen years, 90 per cent have had three injections, as also have the fifteen to nineteen year olds. Only 40 per cent of persons twenty to forty-five years old have received three or more injections.

Australia-wide information is not available regarding the proportion of the population which has now received a fourth injection, but if information from South Australia can be taken as a guide, it would appear that approximately 16 per cent of those persons who have already received three injections have also received a fourth dose.

One million doses of each of the three types of monovalent Sabin vaccine were imported by the Commonwealth in October 1962 for use in a possible emergency. The decision whether to use the Sabin vaccine rests with the individual State health authorities.

Following the success of a pilot scheme in 1964, the Tasmanian Government conducted a full scale Sabin vaccination programme in the latter months of 1965. In this campaign the oral vaccine was made available to all, irrespective of previous vaccination status.

Following a recommendation of the National Health and Medical Research Council, all States except Victoria have indicated that Sabin oral vaccination campaigns will be commenced during 1967. The Commonwealth commenced Sabin vaccination in the Australian Capital Territory in September 1966 and proposes to implement a campaign in the Northern Territory during the winter months of 1967.

Oral vaccination takes the form of three doses of vaccine given at intervals of at least eight weeks. The vaccine is administered either from a spoon or on a sugar lump.

*New cases of poliomyelitis notified.* The numbers of new cases of poliomyelitis notified, and confirmed by the Poliomyelitis Sub-committee of the National Health and Medical Research Council, are shown for each State for each year from 1961 to 1966 in the following table.

## POLIOMYELITIS: NEW CASES NOTIFIED, STATES AND TERRITORIES, 1962 TO 1966

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1962 .	178	22	38	17	4	..	1	..	260
1963 .	3	19	1	8	5	..	..	..	36
1964 .	1	6	..	..	..	..	..	..	7
1965 .	3	..	..	..	..	1	..	..	4
1966 .	..	..	1	..	..	..	..	..	1

## Free milk for school children scheme

The *States Grants (Milk for School Children) Act 1950* was passed with the object of improving the diet of school children by the addition of a small quantity of milk each day. All children under the age of thirteen years attending government or non-government primary schools, including nursery schools, kindergartens, crèches and missions for Aborigines, are eligible to receive free milk. The cost of the milk and half the capital or incidental costs, including administrative expenses of the scheme, are reimbursed by the Commonwealth to the States. All States now participate in the scheme. At 30 June 1966 approximately 1,712,000 children were entitled to receive free milk under this scheme. Expenditure by the Commonwealth Government during the years 1961-62 to 1965-66 was as follows.

COMMONWEALTH EXPENDITURE ON MILK FOR SCHOOL CHILDREN SCHEME  
STATES AND TERRITORIES, 1961-62 TO 1965-66  
(\$'000)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1961-62 . .	2,659	2,072	1,130	665	529	351	47	55	7,507
1962-63 . .	2,636	1,901	1,146	714	586	384	53	60	7,480
1963-64 . .	2,663	2,186	1,120	708	618	399	50	55	7,799
1964-65 . .	2,881	2,069	1,215	760	640	389	72	60	8,085
1965-66 . .	2,916	2,386	1,259	801	622	408	56	74	8,521

The figures in the foregoing table differ slightly from those in the table shown in Chapter 14, Welfare Services, as they include capital and administrative costs. Figures in the latter table represent only expenditure which is a charge on the National Welfare Fund (i.e. the cost of the milk).

## Commonwealth organisations concerned with health

## National Health and Medical Research Council

In 1926 the Commonwealth Government established a Federal Health Council, in accordance with a recommendation of the Royal Commission on Health (1925), 'for the purpose of securing closer co-operation between the Commonwealth and State Health Authorities'. In 1936 the Commonwealth Government decided to create a body with wider functions and representation, and the National Health and Medical Research Council was established with the following functions: to advise Commonwealth and State Governments on all matters of public health legislation and administration, on matters concerning the health of the public and on medical research; to advise the Commonwealth Government on the expenditure of money specifically appropriated to be spent on the advice of this Council; to advise the Commonwealth Government on the expenditure of money on medical research and on projects of medical research generally; and to advise Commonwealth and State Governments on the merits of reputed cures or methods of treatment which are from time to time brought forward for recognition.

The Council consists of the Commonwealth Director-General of Health (as chairman), two other officers of the Commonwealth Department of Health, the official head of each State Health Department, the Director of Public Health for Papua and New Guinea, a representative of the Commonwealth Serum Laboratories Commission, and ten other members, one each being nominated by the Australian Medical Association, the Australian Dental Association, the Australian Paediatric Association, the Australian College of General Practitioners, the Royal Australasian

College of Physicians, the Royal Australasian College of Surgeons, the Australian Regional Council of the Royal College of Obstetricians and Gynaecologists, the College of Pathologists of Australia, the College of Radiologists of Australasia, and the Australian universities having medical schools. An eminent layman and laywoman, appointed by the Commonwealth Minister for Health, also serve on the Council.

The Council has established three advisory committees—the Medical Research Advisory Committee, the Medicine Advisory Committee, and the Public Health Advisory Committee—to provide advice in each specialised field. It has also established other committees to consider specialised subjects such as antibiotics, dental health, child health, food standards, maternal health, nursing, nutrition, occupational health, and veterinary public health.

The first session of the National Health and Medical Research Council was held at Hobart in February 1937. The sixty-third session was held at Canberra in November 1966.

Under the *Medical Research Endowment Act* 1937 the Commonwealth Government has made an annual appropriation of funds to assist: (a) departments of the Commonwealth or of a State engaged in medical research; (b) universities for the purpose of medical research; (c) institutions and persons engaged in medical research; and (d) in the training of persons in medical research. For 1965–66 this appropriation was \$878,000 and for 1966–67, \$959,000.

#### National Biological Standards Laboratory

The *Therapeutic Substances Act* 1953–1959 provides the Commonwealth with powers to ensure that therapeutic substances used for the prevention, diagnosis and treatment of disease in man and animals are safe, pure and potent. The Director-General of Health is authorised under this Act to set up laboratories to test such substances. In 1958 the first steps were taken to establish an Australian National Biological Standards Laboratory in Canberra.

The Laboratory is divided into two main divisions, a Biological Division and a Pharmaceutical Division. The Biological Division consists of the Bacterial Products Laboratory, the Viral Products Laboratory, an Endocrine Products Laboratory, and an Antibiotic Products Laboratory. The Pharmaceutical Division consists of an Analytical Chemistry Laboratory and a Pharmacology Laboratory.

Samples of therapeutic agents available in Australia are taken and tested for compliance with legal standards. A major function of the laboratories is the establishment of such standards where none at present exist or present standards are unsatisfactory. The laboratories receive international reference standards of biological substances from stocks maintained by the World Health Organization, and will on request issue Australian reference standards which have been assayed against international standards.

#### Commonwealth Serum Laboratories

The laboratories were established in 1916 under the administration of the Department of Trade and Customs and from 1921 to 1961 were operated under the Department of Health. Control of the laboratories passed to the Commonwealth Serum Laboratories Commission on 2 November 1961.

The laboratories' basic function is to ensure the supply of essential biological products in accordance with national health needs. This includes production and supply of essential biological products; research and development relating to biological products and allied fields; and the maintenance of potential production capacity for use in emergencies.

Since their foundation the laboratories have greatly extended in size and scope. They now produce some 450 regular products and many special products for use in the diagnosis, prevention and treatment of human and animal diseases. Professional, technical and other staff total over 900.

Products comprise a full range of human bacterial and virus vaccines, veterinary bacterial and virus vaccines, serum products such as blood fractions, a wide variety of antibacterial and antitoxic sera, antivenenes, penicillin, endocrines, including insulin, A.C.T.H., pituitary and thyroid extracts, allergy testing materials and desensitising preparations, culture media, and diagnostic agents for clinical and laboratory work. More recently, tissue culture materials have been prepared and supplied to virus research workers throughout Australia.

Continual research is conducted into the relevant aspects of microbiology, immunology and related fields. As the growth of medical and scientific knowledge in Australia and overseas reveals new methods of diagnosis, prevention and treatment of diseases, this information is applied to the preparation of new biological products at the laboratories.

Facilities are maintained for investigations into public health matters which are inconvenient or impracticable to handle at the Commonwealth Health Laboratories or the School of Public Health and Tropical Medicine. The laboratories serve as a national centre for the maintenance in Australia of the international standards of the Permanent Commission on Biological Standards (World Health Organization). They act as a regional reference centre for WHO in collating reports of the prevalence of certain infectious diseases and provide facilities for the identification of these

diseases: Veterinary biological products produced at the laboratories have given the lead to other producers in Australia, resulting in the diminution of the incidence of a number of serious infectious stock diseases.

#### Commonwealth Health Laboratories

Health laboratories, of which there are fifteen, are situated in the following towns: Albury, Alice Springs, Bendigo, Cairns, Canberra, Darwin, Hobart, Kalgoorlie, Launceston, Lismore, Port Pirie, Rockhampton, Tamworth, Toowoomba, and Townsville. They were established as an essential part of the quarantine system but were also to undertake research into local health problems and to provide doctors of each district with up-to-date facilities for laboratory investigation and diagnosis. It was realised that co-operation between the general practitioner, with his clinical observations and knowledge of the environment of disease on the one hand, and the staff of a well-equipped laboratory on the other, is essential to the investigation and control of disease.

From this standpoint the laboratories have proved their value in the determination of leptospirosis and endemic typhus in North Queensland, in the investigation of special local problems in Darwin, of undulant fever throughout Australia, of silicosis and tuberculosis at Kalgoorlie, and of plumbism at Port Pirie. In these investigations close co-operation exists with State and local health and hospital services, especially in Queensland where collaboration has yielded exceptionally valuable results in differentiating the groups of fevers previously unclassified in that State. In this investigational work, as well as in more routine activities, the laboratories have at their disposal the full resources and technical and specialist facilities available at the Commonwealth Serum Laboratories and the School of Public Health and Tropical Medicine, Sydney.

The laboratories are unique in that, with the exception of the use of X-rays, they cover all the fields of diagnostic requirements, namely, pathology, public health, haematology, parasitology, mycology, bacteriology, biochemistry, and blood group serology.

#### Commonwealth Acoustic Laboratories

Sponsored by the National Health and Medical Research Council, the Acoustic Research Laboratory, Sydney, investigated inter-communication difficulties and noise problems in aircraft and tanks (1942-46). It then investigated the problem of congenital deafness in children resulting from maternal rubella. The Department of Health took over the laboratory in January 1947, and subsequently established branch laboratories in all other State capitals.

The *Acoustic Laboratories Act* 1948 gave the Minister for Health power to establish, maintain and operate, within the Commonwealth, acoustic laboratories for scientific investigations, including tests in respect of hearing aids and their application to the needs of individuals, and in respect of problems associated with noise as it affects individuals. Scientific investigations are carried out in the Central Laboratories in Sydney by specialised scientific groups in psychology and audiology, acoustics and electroacoustics, medical ultrasonics, and psychoacoustics. The results of this research are published in scientific literature and Commonwealth Acoustic Laboratories reports. In 1949 the Government approved the provision and maintenance of hearing aids, without charge, to deaf school and pre-school children. This service has since been extended to those whose hearing loss is discovered after leaving school, but who are still under twenty-one years. Since May 1964 the cost of hearing aids has been met from the National Welfare Fund. The laboratories' functions also include: provision and maintenance of hearing aids on behalf of the Repatriation and other Commonwealth Departments; assistance to the State Education Departments in measuring deafness by providing and maintaining portable audiometers; testing hearing of civil aviation aircrew as required by international agreement; and the making of independent tests on behalf of State and other authorities. The Central Laboratories located in Sydney are responsible for staff training, production of equipment, calibration of hearing-aids and audiometers, and the technical administration of branch laboratories.

#### Commonwealth X-ray and Radium Laboratory

In 1928 the Commonwealth Government purchased ten grammes of radium for use in medical treatment and research in Australia. The use of this radium was to be co-ordinated by the Department of Health, and in 1929 the Department established the Commonwealth Radium Laboratory to act as custodian of the radium and to ensure its equitable distribution and efficient use. The radium is distributed on loan to treatment centres throughout Australia. Under the terms of these loans, treatment at well-equipped clinics is available to all persons requiring it, irrespective of their ability to pay. Portions of the original stock of radium have been remounted from time to time, reflecting changes in techniques of treatment.

In 1935 the work of the laboratory was extended to include physical aspects of X-ray therapy, and the name of the laboratory was changed at that time to its present form. Since 1939 its functions have included investigations of the physical aspects of the diagnostic use of X-rays with particular emphasis on miniature radiography and high-kilovoltage techniques. In 1946 the laboratory imported the first artificially-produced radioactive isotopes used in Australia and established a system for the procurement and distribution of these substances.

A radiochemical laboratory and associated facilities were set up in the laboratory to permit the assay of radioactive materials present in minute amounts in the environment—in air, water, soil, and foods such as milk, grain and vegetables. A programme of monitoring the fall-out in Australia arising from the testing of nuclear weapons is continuing.

The laboratory assists with services developed in the capital cities of Australia to provide local facilities for the production of radon, for the calibration of X-ray therapy equipment, and for the measurement of the exposure to radiation of those who work with X-rays and radioactive materials. The services of the laboratory are available to all who work with ionising radiations.

A radon service has been operated by the laboratory since its inception. During 1965–66, 32,367 millicuries of radon were issued by the laboratory in the form of implants, needles and tubes for use in Victoria, Tasmania, South Australia, and Western Australia. A further 22,827 millicuries were issued by the associated centres in Sydney and Brisbane. The corresponding figures for 1964–65 were 34,480 millicuries and 23,291 millicuries, respectively. The issue of radon from a few centres to serve hospitals all over the continent is an Australian development which enables very efficient use to be made of the radium available.

Since 1935 the laboratory has maintained the Australian (free-air) standard for the precise measurement of X-ray doses. Sub-standard clinical dosimeters used by the laboratory and by centres in other States are calibrated in terms of this standard.

Through the development of atomic energy programmes overseas, supplies of radio-isotopes have been available for use in Australia since 1946. Some of the radio-isotopes required in Australia are prepared by the Australian Atomic Energy Commission in its reactor at Lucas Heights. At the present time the procurement and distribution of radio-isotopes to be used in medicine and medical research are the responsibility of the Department of Health, and these isotopes are procured by the laboratory, as a central procurement agency, principally from Great Britain, Canada, and the United States of America. The procurement and distribution of radio-isotopes for industrial and non-medical uses are the responsibility of the Australian Atomic Energy Commission.

The importation of radio-isotopes is restricted under the Customs (Prohibited Imports) Regulations. Approval for importation is given either by the Director-General of Health or by the Australian Atomic Energy Commission, depending on the category of use, after it has been established that the isotope will be used safely and usefully.

During 1965–66, 44 different isotopes were procured for use in medicine and medical research. They represented 2,150 separate deliveries, of which 156 (including 12 different isotopes) were from the Australian Atomic Energy Commission. Of the 44 isotopes, 25 were for use in medical diagnosis or treatment, as distinct from medical research. Bulk supplies of radio-isotopes used for diagnosis or treatment are obtained regularly, and these are distributed by the laboratory as individual doses for use on patients throughout Australia in accordance with a policy developed by the Radio Isotopes Committee of the National Health and Medical Research Council. These radio-isotopes are issued free of charge. In the year ended 30 June 1966, 24,751 individual doses of these materials were issued for medical diagnosis and therapy.

Investigations of the degree of protection necessary in particular applications of X-rays and radioactive materials continue to be an important activity of the laboratory. It prepares specifications of the protection facilities necessary in departments and laboratories employing ionising radiations in medicine, research and industry, and carries out measurements of radiation levels in existing departments and laboratories. A film-badge service to measure the radiation dose received by those exposed to ionising radiations is maintained. In 1965–66, 66,529 film-badges were processed, assessed and reported on; the corresponding figure for the previous year was 65,299.

The laboratory maintains a library of radiological literature and issues library bulletins at appropriate intervals. Technical communications on topics related to its functions are issued from time to time.

#### **School of Public Health and Tropical Medicine**

In March 1930 the Commonwealth Government, under an agreement with the University of Sydney, established a School of Public Health and Tropical Medicine at the University of Sydney for the purpose of training medical graduates and students in the subjects of public health and tropical medicine. The organisation of the Australian Institute of Tropical Medicine at Townsville was merged in the new school, and the staff, equipment and material were transferred to Sydney.

The School comprises sections of Preventive Medicine, Tropical Medicine, Occupational Health, Environmental Health, Biochemistry, Bacteriology and Pathology, Parasitology, Medical Entomology, and Medical Statistics. The Child Welfare section of the Institute of Child Health is located at the School, with which it is closely associated. The Occupational Health Section undertakes surveillance of the health of persons employed at the Small Arms Factory, Lithgow,

and at the Munitions Filling Factory, St. Mary's. The library, which includes approximately 20,000 bound volumes and a large collection of official and institutional papers and reports, forms an important information centre in the subjects of public health and tropical medicine.

The work of the School comprises both teaching and investigation. Courses are held for the university post-graduate diploma in public health and the diploma in tropical medicine and hygiene. Lectures are given in public health and preventive medicine as prescribed for the fifth year of the medical curriculum. Courses are provided also in hygiene and social medicine for students of architecture and social studies; in tropical medicine for lay officers, nurses in tropical service and missionaries; and in industrial health for engineering students. Training is also provided for certain personnel of the armed services, for laboratory workers from various services and institutions, and for post-graduate nursing diploma students.

Investigations cover a wide range of public health and medical subjects, both in the laboratory and in the field. Field work has been carried out in Australia and in Papua, New Guinea, Norfolk Island, and Nauru in co-operation with the local administrations and the South Pacific Commission. Limited accommodation and other facilities for investigation can be made available at the school for independent research workers.

### **Institute of Child Health**

Associated with the School of Public Health is the Institute of Child Health, part of which is located in the School of Public Health and Tropical Medicine in the grounds of the University of Sydney and part at the Royal Alexandra Hospital for Children, Camperdown. The activities of the Institute are concerned with research into medical and social problems of childhood, undergraduate teaching of students of the Faculty of Medicine in the University of Sydney, post-graduate teaching of doctors and members of associated professions, and collaboration with other bodies concerned with the general field of child health.

The establishment of the Institute at present consists of the director, two senior medical officers, one child psychiatrist, five other medical officers, a psychologist, two social workers and clerical staff. The director of the Institute is the Professor of Child Health in the University of Sydney. He is also a senior honorary paediatrician on the staff of the Children's Hospital. The child psychiatrist is also Associate Professor of Child Psychiatry in the University of Sydney. The director is required to co-ordinate and control undergraduate and post-graduate teaching in paediatrics and child health. Each group of medical students attends the Children's Hospital for ten weeks tuition in paediatrics and child health.

The particular research activities of the Institute vary with the immediate and long-term problems which present themselves. Fields of study have included rheumatic fever, scurvy, accidents, prematurity, hypothyroidism, and mental deficiency. Studies are undertaken into the problems of infants and children deprived of a normal home life. Members of the Institute staff are available for consultation by Commonwealth and State authorities and voluntary agencies.

### **Commonwealth Bureau of Dental Standards**

This Bureau is concerned with research, standards and testing related to dental and allied materials and processes. It became part of the Department of Health in January 1947, but for the preceding eight years it was sponsored by the National Health and Medical Research Council. During that time the then Dental Materials Research Laboratory established itself as a recognised authority in its special field and proved to be of value to the defence services, government departments, the dental profession, and manufacturers of dental products. By maintaining the quality of dental materials and improving techniques for their use the Bureau continues to assist the dentist in his service to the community—a service that calls for restorations and appliances of a high degree of precision and permanence under very exacting conditions.

The Bureau operates under Section 9 of the *National Health Act* 1953–1966, and its functions are as follows: original research into dental equipment, materials, techniques, and processes; regular reporting of the results of these investigations in recognised Australian scientific journals; the development of specifications for dental materials and equipment, through the Standards Association of Australia, in consultation with a committee representing the Commonwealth Department of Health, the Australian Dental Association, and manufacturers and distributors; and the provision of a consultative service and testing facilities for manufacturers and distributors of dental materials with a view to assisting them in the improvement of existing products and the development of new materials.

### **Australian Institute of Anatomy**

The Australian Institute of Anatomy is situated in a building erected in Canberra by the Commonwealth Government under the *Zoological Museum Agreement Act* 1924. The Institute became part of the Commonwealth Department of Health in 1931, and a number of Health Department sections are now situated in the Institute. These include the Museum and Medical Artistry Section, the Nutrition Section, the Public Health Laboratory, and a Veterinary Laboratory.

The scientific research work of the Institute is concentrated on problems of nutrition, taking the form of field surveys of the dietary status of the Australian population and laboratory investigations into the biochemistry of nutrition and metabolism.

### Control of infectious and contagious diseases

The provisions of the various Acts with regard to the compulsory notification of infectious diseases and the precautions to be taken against their spread are dealt with under the headings of quarantine and notifiable diseases.

#### Quarantine

The *Quarantine Act* 1908-1966 is administered by the Commonwealth Department of Health and has three sections of disease control, as follows: (i) human quarantine, which ensures that persons arriving from overseas are free of quarantinable disease; (ii) animal quarantine, which controls the importation of animals and animal products from overseas and the security of other animals present on vessels in Australian ports; and (iii) plant quarantine, which regulates the conditions of importation of all plants and plant products with the object of excluding plant diseases, insect pests and weeds.

In respect of interstate movements of animals and plants, the Act becomes operative only if the Governor-General considers that Commonwealth action is necessary for the protection of any State or States, and in general the administration of interstate movements of animals and plants is left in the hands of the States.

*Human quarantine.* All passengers and crews arriving in Australia from overseas, whether by air or sea, are subject to a medical inspection for the purpose of preventing the introduction of disease into Australia. At the major ports full-time quarantine officers carry out the work, but in the minor ports local doctors act as part-time quarantine officers. In each State, quarantine activities are controlled by the Commonwealth Director of Health, who is a medical officer of the Commonwealth Department of Health.

The main concern of the examining officers is to detect cases of the quarantinable diseases smallpox, cholera, yellow fever, plague, and typhus fever. These diseases are not endemic to Australia and it is of great importance to prevent their entry. Quarantine stations at the major ports and at Darwin and Townsville are kept ready for occupation at all times. In addition, persons arriving in Australia and suffering from infectious diseases such as chicken pox, mumps, scarlet fever, and measles are directed to appropriate care and placed in isolation where necessary.

Valid vaccination certificates are required of travellers to Australia as follows.

*Cholera.* All arrivals from infested areas and from India, Pakistan, Burma, Thailand, Vietnam, Malaysia, Philippines, and Indonesia. No certificate is required in respect of children under one year of age.

*Yellow fever.* All arrivals from yellow fever endemic zones.

*Smallpox.* All arrivals from all countries except British Solomon Islands, Fiji, Nauru, New Zealand, Norfolk Island, Ocean Island, Australian Territory of Papua and New Guinea, Gilbert and Ellice Islands Colony, Christmas (Indian Ocean), Cocos (Keeling), Heard, Kerguelen, Lord Howe, Macquarie, and Tonga Islands, provided travellers have not been outside these areas for at least fourteen days before arrival and that these areas are free of smallpox. Australia reserves the right, in respect of arrivals from other countries, to isolate any person who arrives by air without a smallpox vaccination certificate and refuses to be vaccinated. Children under one year of age are exempt. For passengers arriving in Australia by sea, exemption is granted to infants under twelve months of age and to persons who hold religious convictions against vaccination or who are suffering from a medical condition certified by a medical practitioner to contra-indicate smallpox vaccination.

All passengers, whether they arrive by sea or air, are required to give their intended place of residence in Australia, so that they may be traced if a case of disease occurs among the passengers on the aircraft or ship by which they travelled to Australia.

*Isolation.* Under the Australian Quarantine Act, airline and shipping operators are responsible for expenses of isolation of all travellers who disembark and (i) have come from a cholera infested area, or a cholera area specified above, within five days and do not possess a cholera vaccination certificate; or (ii) have come from an endemic zone within six days and do not possess a yellow fever vaccination certificate; or (iii) arrive by air without a smallpox vaccination certificate and refuse to be vaccinated on arrival.

The numbers of cases of infectious (non-quarantinable) diseases which were discovered among the passengers and crew of overseas vessels and aircraft calling at Australian ports during 1965-66 and during the preceding four years are shown in the following tables.

**HUMAN QUARANTINE: CASES OF INFECTIOUS (NON-  
QUARANTINABLE) DISEASES ON OVERSEAS VESSELS AND  
AIRCRAFT CALLING AT AUSTRALIAN PORTS, 1965-66**

Disease	Number of overseas vessels and aircraft on which cases were found	Number of cases of infectious disease	
		Passengers	Crew

1965-66 . . . . .	3,488	3,297	201	360	122

*Animal quarantine.* Animal quarantine, authorised by the provisions of the *Quarantine Act* 1908-1966, aims at preventing the introduction or spread of animal diseases. It covers the importation of all animals, raw animal products and biological cultures associated with animal diseases, and goods associated with animals.

Of the domesticated animals, only horses, dogs, cats and poultry are admitted from a limited number of countries depending on diseases being absent in the country of origin. All must be accompanied by health certificates which include prescribed tests. On arrival in Australia, they are subject to quarantine detention. Zoological specimens are imported into registered zoos, where they remain in permanent quarantine. Circuses are also registered if exotic species of animals are kept. In a similar manner, animals for scientific purposes are imported to approved laboratories. All these premises are kept under constant surveillance. Raw animal products such as hair, types of wool, skins, and hides are specially treated under quarantine control. Such items as raw meat, sausage casings and eggs, which cannot be sterilised, are admitted from very few countries. Other items, such as harness fittings, fodder and ship's refuse, are treated to destroy any possible infection. Special attention is given to the importation of biological substances of animal origin. The Animal Quarantine Service is also responsible for the health certification of animals for export overseas in accordance with the requirements of the various countries.

The division of Veterinary Hygiene was created in 1926 to deal with the administration of animal quarantine. The central administration is situated within the Health Department at Canberra, with a director, an assistant director and veterinary officers. The Principal Veterinary Officer of the Department of Agriculture in each State is appointed Chief Quarantine Officer (Animals) of that State, and members of his staff Quarantine Officers (Animals). These State officers carry out the quarantine policy formulated by the central administration. Quarantine accommodation is provided in permanent animal quarantine stations at each capital city.

The Division participates in world-wide international notifications of the more serious contagious diseases of animals and maintains a census of such diseases throughout the world. Information regarding animal diseases and parasites in Australia is also collected and disseminated by means of service publications. Consultation on technical matters is maintained with various scientific institutions, notably the Commonwealth Scientific and Industrial Research Organization. In matters of policy and the quarantine control of imports there is a close liaison with the Department of Customs and Excise.

The Division collaborates with the General and Plant divisions of the quarantine service. Many diseases of animals are communicable to man, and for this reason animal and general quarantine administration are in some respects inseparable. Similarly the interests of animal and plant divisions overlap, many items such as insects, fodder and straw being the subject of combined control.

Every two years the director of the Division convenes the Biennial Conference of Principal Commonwealth and State Veterinarians, which meets under the auspices of the Australian Agricultural Council to discuss problems of animal health, disease control and animal quarantine.

*Plant quarantine.* Since 1 July 1909 the importation into Australia of all plants or parts of plants, cuttings, seeds, and fruits, whether living or dead, has been subject to an increasingly stringent quarantine with the object of preventing the introduction of insect pests, plant diseases and weeds not yet established in this country. Under the *Quarantine Act* 1908-1966, quarantine inspectors are required to examine all plant material at the first port of entry and to release only material free from diseases and pests. Everyone entering Australia is required to declare if he or she has any plant material in luggage or personal effects. Heavy penalties are laid down for those found evading the regulations. All plant material entering as cargo must also be declared.

When the Commonwealth became responsible for all plant quarantine, the State Governments agreed to co-operate by providing and maintaining inspection facilities and personnel, for which they are reimbursed by the Commonwealth. In 1921 the administration of the regulations came under the newly-formed Department of Health, and in 1927 the Plant Quarantine Branch was created. It is controlled by a director who is responsible for policy and legislation and for co-ordinating the work of the State officers who carry out the detailed administration in their capacity as Commonwealth officers.

Any plant material found carrying diseases or pests, or suspected of doing so, may be ordered into quarantine for remedial treatment, or, if treatment is impracticable, may be destroyed. The cost of treatment is met by the importer. Regulations governing the different types of plants are based on the following broad principles. Importation of plants likely to be infected with plant diseases or pests, of noxious plants or fungi, and of poison plants is prohibited. Agricultural seed, not restricted under quarantine legislation, must conform to standards of purity, and insect pest and disease freedom. Seed of commercial crops which could introduce diseases are prohibited imports except with special permission. All plant products not specifically restricted, such as timber, logs and crates, are subject to inspection upon arrival and treatment if necessary. Many commodities, including hops, cotton, peanuts in shell, potatoes, and certain crop seeds, may be imported only by approved importers under specified conditions. All nursery stock, including bulbs, must be grown in post-entry quarantine. Prior approval is necessary, and such material may be imported only by approved importers who are registered for this purpose. The number of plants which may be imported in any one year is limited. The importation of propagating material of commercial fruits, vines and berries is permitted only after special prior approval and is subject to specific screening for virus by qualified authorities. Soil is a prohibited import, and any vehicles or goods contaminated with soil are required to be thoroughly cleaned, at the expense of the importer, before entry is permitted.

#### Notifiable diseases

*Methods of prevention and control.* Provision exists in the Health Acts of all States for the compulsory notification of certain infectious and other diseases and for the application of preventative measures. When any such disease occurs the local authority must be notified at once, and in some States notification must be made also to the Health Department.

As a rule, the local authorities are required to report from time to time to the Central Board of Health in each State on the health, cleanliness and general sanitary state of their several districts and on the appearance of certain diseases. Regulations provide for the disinfection and cleansing of premises and for the disinfection or destruction of bedding, clothing or other articles which have been exposed to infection. Regulations also provide that persons suspected to be suffering from, or to be carriers of, infectious disease must submit to clinical and laboratory examination. Persons suffering from certain communicable diseases, for example, smallpox and leprosy, are detained in isolation.

*Notifiable diseases and cases notified, 1966.* The following table shows, by State and Territory, the number of cases notified in 1966 for those diseases notifiable in all States and Territories. In May 1965 the National Health and Medical Research Council at its Fifty-ninth Session proposed a basic list of diseases to be notifiable in each State and Territory, and this table is based upon that proposal. The table does not include all diseases which are notifiable in a State or Territory. Factors such as the following affect both the completeness of the figures and the comparability from State to State and from year to year: availability of medical and diagnostic services; varying degrees of attention to notification of diseases; and enforcement and follow-up of notifications by Health Departments.

**NOTIFIABLE DISEASES(a): NUMBER OF CASES NOTIFIED(b)  
STATES AND TERRITORIES, 1966**

Disease	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Anthrax									
Brucellosis	13	43	11	1	3	1		1	73
Diphtheria	4		1		2		1		8
Gonorrhoea	4,449	1,754	1,479	256	681	169	221	27	9,036
Infectious hepatitis(c)	4,188	2,137	843	978	28	200	78	125	8,577
Leprosy		1	1		13		29		44
Leptospirosis	15	1	55	1	7				79
Paratyphoid fever	1				1				3
Poliomyelitis			1						1
Syphilis	542	57	151	7	20	4	16	1	798
Tetanus	7	12	16		2		1		38
Tuberculosis(d)	915	649	581	131	134	63	70	6	2,549
Typhoid	4	5	6	1	2	1	2		21
Typhus (all forms)	1		5						6

(a) This table is based on a proposal made by the National Health and Medical Research Council at its 59th session in May 1965 to recommend to State Health Departments a basic list of notifiable diseases. (b) No cases of cholera, plague, smallpox or yellow fever were notified. (c) Includes hepatitis, serum (homologous). (d) Queensland figure includes erythema nodosum and pleural effusion.

*Tuberculosis and poliomyelitis.* The number of new cases of tuberculosis notified in each State and Territory by age groups for the year 1966 is shown on page 559. Some data regarding deaths from tuberculosis are shown on page 248 of Chapter 9, Vital Statistics. Cases of poliomyelitis notified in each State and Territory for the years 1962 to 1966 are shown on page 561.

*Infectious hepatitis.* The following table shows the number of cases of infectious hepatitis notified in each State and Territory during the years 1962 to 1966.

**INFECTIOUS HEPATITIS: CASES NOTIFIED, STATES AND  
TERRITORIES, 1962 TO 1966**

State or Territory	1962	1963	1964	1965	1966
New South Wales	3,358	2,822	2,731	3,325	4,188
Victoria	3,533	3,840	2,697	1,987	2,137
Queensland(a)	884	1,433	1,163	556	843
South Australia	504	293	289	414	978
Western Australia	117	145	101	83	28
Tasmania	630	856	636	197	200
Northern Territory	101	104	57	128	78
Australian Capital Territory	88	20	12	51	125
<b>Australia</b>	<b>9,215</b>	<b>9,513</b>	<b>7,686</b>	<b>6,741</b>	<b>8,577</b>

(a) Includes hepatitis, serum (homologous).

*Venereal diseases.* The prevention and control of venereal diseases are the responsibility of State Health Departments. The necessary powers for the purpose are provided either by a special Venereal Diseases Act or by a special section of the Health Act. Venereal diseases were made notifiable in South Australia in November 1965 and the diseases are now notifiable in all States and Territories. While the provisions of the legislation differ from State to State, the Acts usually make it obligatory upon the patient to report for and continue under treatment until certified as cured. Treatment of venereal disease must be by a registered medical practitioner. Facilities for treatment of venereal disease free of charge may be arranged at subsidised hospitals or at special clinics. Penalties may be imposed on a patient who fails to continue under treatment. Clauses are inserted in the Acts which aim at preventing the marriage of any infected person, or the employment of an infected person in the manufacture or distribution of foodstuffs.

### Commonwealth grants to organisations associated with public health

In addition to providing the services mentioned on pages 554-69, the Commonwealth Government gives financial assistance to certain organisations associated with public health. Examples of organisations included in this category are the National Fitness Organisations, the Royal Flying Doctor Service of Australia, the Red Cross Blood Transfusion Service, the Lady Gowrie Child Centres and the National Heart Foundation of Australia.

#### National fitness

In 1938, arising from a recommendation of the National Health and Medical Research Council, the Commonwealth Government appointed a National Co-ordinating Council for National Fitness, under the Commonwealth Minister for Health, to effect collaboration of Commonwealth, State, and local government authorities in the National Fitness Movement. Following the recommendations of the first Co-ordinating Council meeting in 1939, the Commonwealth Government agreed to make available an annual sum of \$40,000 for five years, and grants were allocated to each State for purposes of organisation and to each of the six Australian universities to establish lectureships in physical education.

The movement was placed on a statutory basis with the passing of the *National Fitness Act* 1941. The Act provides for a Commonwealth Council for National Fitness to advise the Minister for Health concerning the promotion of national fitness. It provides also for the establishment of a Trust Account, known as the National Fitness Fund, to assist in financing the movement. In June 1942 the annual appropriation from revenue to the National Fitness Fund was increased to \$145,000 to include grants to the State Education Departments and for the work in the Australian Capital Territory. The annual appropriation was increased to \$200,000 in 1962, the increase of \$55,000 being made available to the National Fitness Councils in the States. A further increase in the annual appropriation was made for 1966-67 when an additional \$100,000 was made available to State National Fitness Councils. The current annual appropriation of \$300,000 is disbursed as follows: State National Fitness Councils, \$228,908; Universities, \$24,800; State Education Departments, \$34,000; central administration, \$6,792; and Australian Capital Territory, \$5,500. In addition, a sum of \$200,000 has been made available to State National Fitness Councils to assist in the development of national fitness capital projects on a \$1 Commonwealth to \$2 State basis for the three year period 1966-67 to 1968-69.

#### Royal Flying Doctor Service of Australia

The purpose of the Royal Flying Doctor Service of Australia is to provide medical and dental services to persons in isolated areas. Most remote homesteads are equipped with two-way radio sets which they use for receiving ordinary radio programmes, participating in the School of the Air, and for contacting each other. In cases of minor illness or injury they also use these sets to seek medical advice. If the illness or injury is serious a doctor flies to the homestead and, if necessary, flies the patient to the nearest hospital. Standard medicine chests are supplied by the service. Each chest contains a first-aid book and instructions on the use of the various drugs and medical supplies. Further instructions are given by doctors over the air. From time to time special purpose work is undertaken in connection with flood relief, searching for lost parties, and co-ordinating cattle movements.

The service is not conducted for profit. In some sections small charges are made for particular services or a fixed annual charge is levied on graziers. Other sections rely on voluntary contributions from those who use the services. Donations and government contributions help to provide much of the overhead and capital expenditure incurred each year. The Commonwealth has made an annual grant to the service for operational expenses since 1936. The Commonwealth annual grant to the Royal Flying Doctor Service of Australia towards maintenance was increased from \$110,000 to \$150,000 per annum for three years from 1 July 1965. The Commonwealth grant towards capital expenditure was increased from \$80,000 to \$130,000 per annum for the same period. This capital expenditure grant is made on a \$1 for \$1 basis, in respect of approved projects.

The Royal Flying Doctor Service of Australia is conducted by a federal council comprising representatives of seven sections, namely Queensland, New South Wales, Victoria, South Australia, Western Australia, the Eastern Goldfields of Western Australia, and Tasmania. The Queensland, New South Wales, South Australian, and Tasmanian sections are centred in their own States, but in Western Australia there are three centres, that in the far north being under the control of the Victorian section and that in the south-east under the control of the Eastern Goldfields section. The third, which has bases at Port Hedland and Meekatharra, is sponsored by the Western Australian section.

In 2,272 flights during 1964-65 the Service flew 814,052 miles. The map of the radio network operated by the Royal Flying Doctor Service shows the area of approximately 1½ million square miles covered by the Service. (See plate 34 opposite.)

#### Red Cross Blood Transfusion Service

The Australian Red Cross Society conducts a blood transfusion service in all States. The costs of the service are borne by a Commonwealth grant equal to 30 per cent of the certifiable operating expenses incurred by the Society in the conduct of the blood transfusion service in

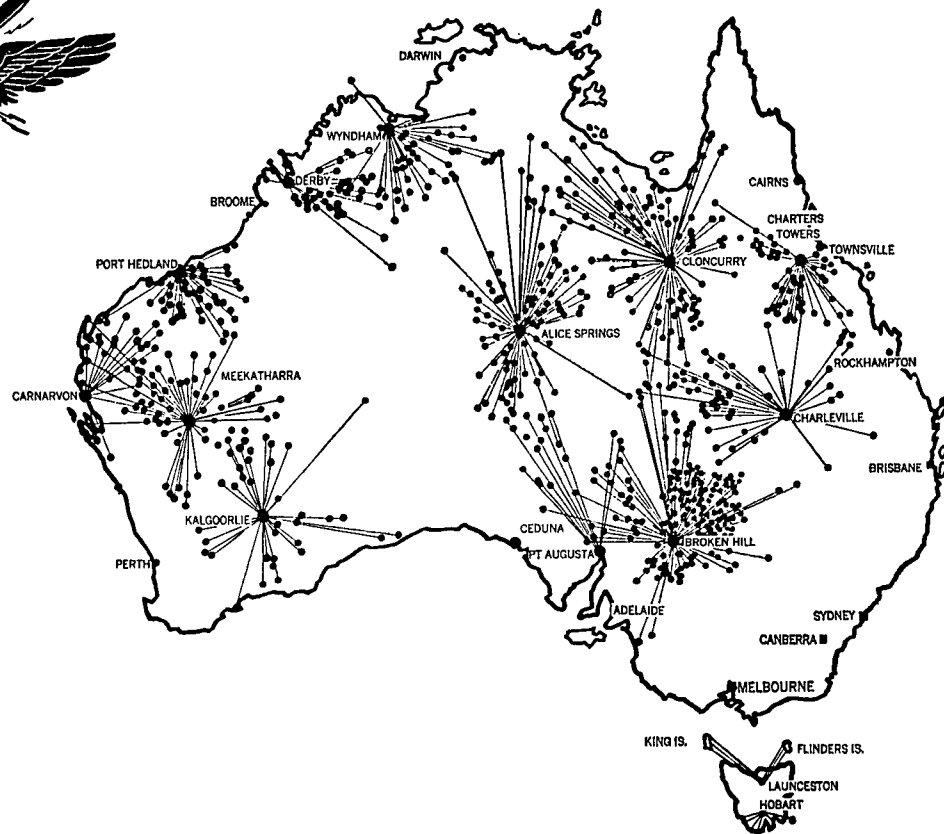

PLATE 34

each State, payment by the Government of the State concerned of 60 per cent of the expenses, and payment by the Society of the remaining 10 per cent. The payments made by the Commonwealth Government to the State Governments in 1965-66 were as follows: New South Wales, \$117,208; Victoria, \$144,124; Queensland, \$103,113; South Australia, \$61,282; Western Australia, \$44,002; Tasmania, \$12,682; total, \$482,413. The Commonwealth also assists the Society to the extent of ninety per cent of the cost of operating blood transfusion services in the Northern Territory and the Australian Capital Territory.

#### **Lady Gowrie Child Centres**

In 1940 the Commonwealth Government established a pre-school demonstration centre in each of the six State capital cities. These centres are known as the Lady Gowrie Child Centres and are administered by local State committees under supervision of the Australian Pre-school Association located at Canberra. An annual grant is made available by the Commonwealth towards the operation of the centres, \$107,700 being allocated for 1965-66 and \$120,000 for 1966-67.

The specialised function of the centres is that of demonstration and research, and the programmes are carried out under the supervision of the Federal Pre-school Officer. Each centre is concerned with a study of the factors promoting and retarding physical and mental health in young children and in demonstrating an educational health programme based on the developing needs of children aged three to six years. The centres are used for observation by students of medicine, psychology, education, social studies, architecture, nursing, and domestic science, and by student teachers.

#### **Home Nursing Subsidy Scheme**

The Home Nursing Subsidy Scheme provides payments to assist the expansion of home nursing activities. To be eligible for a subsidy an organisation must be non-profit making and must receive assistance from a State Government, local government body or other authority established by or under a State Act. It must employ registered nurses. It is provided that Commonwealth subsidy must not exceed the amount of State assistance received by the organisation concerned. Eligible organisations established prior to November 1956 now receive \$2,200 a year in respect of each additional qualified nurse employed. New organisations established since November 1956 receive \$1,100 a year in respect of each qualified nurse employed. Expenditure during 1965-66 on the promotion of the Home Nursing Service was \$546,358. The Commonwealth subsidy paid to various district nursing organisations has led to the employment of 391 trained nurses.

#### **National Heart Foundation of Australia**

The National Heart Foundation of Australia is a national organisation established to promote research in cardiovascular disease, to rehabilitate heart sufferers and to foster the dissemination of information about heart diseases. Formed in 1960, as a result of a public appeal yielding \$5 million to which the Commonwealth Government contributed \$20,000, the Foundation has its headquarters in Canberra. The organisation is controlled by a board of directors assisted by various committees. State divisions with their own administrations deal especially with rehabilitation and education. From its inception to the end of 1966 the Foundation has allocated about \$2 million for grants-in-aid towards research in university departments, hospitals and research institutes, research fellowships tenable in Australia and overseas, and overseas travel grants. Most of the annual expenditure of about \$600,000 is devoted to supporting research in cardiovascular disease.

#### **World Health Organization**

The World Health Organization (WHO) is a specialised agency of the United Nations. It acts as the directing and co-ordinating authority on international health work with the object of promoting and protecting the health of all peoples. Among its many functions it provides technical assistance, health services and facilities and other aid on request by Governments, or for special groups such as the peoples of trust territories.

The headquarters administration of WHO is located at Geneva, and there are six regional offices throughout the world, Australia being assigned to the Western Pacific Region. As a financial member, Australia is represented in the World Health Assembly and also on the Regional Committee for the Western Pacific. The nineteenth meeting of the Assembly was held at Geneva during May 1966 and the seventeenth meeting of the Regional Committee was held at Manila during September 1966.

The Commonwealth's contribution to WHO during 1965-66 was \$552,435.

### **INSTITUTIONS**

Institutions referred to under this heading are classified into the following groups: (i) public hospitals and nursing homes; (ii) mental hospitals; (iii) private hospitals and nursing homes; (iv) repatriation hospitals; (v) isolation hospitals.

## Public hospitals and nursing homes

The statistics shown under the heading 'public hospitals and nursing homes' refer to institutions providing hospital and nursing home treatment, whether general or special, with the exception of mental hospitals, private hospitals and nursing homes, repatriation hospitals, and isolation hospitals. They include institutions wholly provided for by the State, partially subsidised by the State or by State endowments but receiving private aid also, and hospitals established and endowed by individuals for the treatment of the sick generally. Public hospitals are premises of this kind in which patients are received and lodged exclusively for 'hospital' treatment, i.e. nursing care for the purpose of professional attention. Public nursing homes are such premises in which patients are received and lodged exclusively for the purpose of nursing home care, i.e. of a kind ordinarily provided in a benevolent home, convalescent home, home for aged persons, or rest homes for patients requiring professional attention.

## Number, staff and accommodation

## PUBLIC HOSPITALS AND NURSING HOMES: NUMBER, STAFF AND ACCOMMODATION, STATES AND TERRITORIES, 1964-65

(a) Excludes the six State hospitals and nursing homes. (b) Includes honorary and visiting medical officers. (c) Qualified and student nurses, assistant nurse trainees, nursing aides, and nursing aide trainees.

## In-patients treated

The following table gives particulars of in-patients treated. The figures shown refer to cases, that is to say, a person who is admitted to hospital or nursing home twice during a year is counted twice. Newborn babies are excluded unless they remain in hospital or nursing home after their mothers' discharge.

## PUBLIC HOSPITALS AND NURSING HOMES: IN-PATIENTS TREATED STATES AND TERRITORIES, 1964-65

In-patients at end of year—									
Males . . . . .	7,866	4,216	4,033	1,477	1,642	924	180	143	20,481
Females . . . . .	10,639	6,022	4,707	1,852	1,929	1,111	205	231	26,696
Persons . . . . .	18,505	10,238	8,740	3,329	3,571	2,035	385	374	47,177
Average daily number resident . . . . .	17,575	9,444	8,452	3,115	3,396	1,966	388	333	44,669

(a) Excludes patients in the six State hospitals and nursing homes.

In addition to those admitted to the hospitals and nursing homes, there are large numbers of out-patients treated. During 1964-65 there were 1,502,499 out-patients treated in New South Wales, 776,169 in Victoria, 720,157 in Queensland, 142,208 in South Australia, 179,000 (estimated) in Western Australia, 103,355 in Tasmania, 119,423 in the Northern Territory, and 20,402 in the Australian Capital Territory, making an estimated total for Australia of 3,563,213. The figures quoted refer to cases, as distinct from persons and attendances.

#### Revenue and expenditure

Details of the revenue and expenditure for the year 1964-65 are shown in the next table. The revenue includes the Commonwealth Hospital Benefits Scheme. For some States expenditure on capital items out of individual hospitals' own funds are not included in the figures shown. Comparison between the States should therefore be made with caution.

In previous Year Books, Commonwealth hospital benefits, which were paid direct to public hospitals and nursing homes in either full or part payment of fees incurred by pensioners and other uninsured patients, were shown for some States as a separate revenue item or included under 'Government aid'. In the following table this revenue has been treated on the same basis as Commonwealth hospital benefits paid for insured patients and included in the amounts shown for fees. Details of Commonwealth expenditure on each of the different categories of hospital benefits are shown on page 556.

#### PUBLIC HOSPITALS AND NURSING HOMES: REVENUE AND EXPENDITURE, STATES AND TERRITORIES, 1964-65 (\$'000)

(a) Excludes the six State hospitals and nursing homes. (b) Includes Commonwealth hospital benefits paid direct to public hospitals and nursing homes. (c) Major capital works only.

#### Summary for Australia

A summary, for the years 1960-61 to 1964-65, of the number of public hospitals and nursing homes in Australia, medical and nursing staffs, beds, admissions, in-patients treated, out-patients, deaths, average daily number resident, revenue, and expenditure is given in the following table.

#### PUBLIC HOSPITALS AND NURSING HOMES: AUSTRALIA, 1960-61 TO 1964-65

	1960-61	1961-62	1962-63	1963-64	1964-65
Hospitals and nursing homes . . . . .	736	739	746	748	753
Medical staff(a) . . . . .	10,386	10,535	r 11,023	r 11,287	11,920
Nursing staff(b) . . . . .	37,607	r 39,094	r 40,206	r 42,104	43,581
Beds and cots . . . . .	61,039	61,650	62,487	63,424	64,477
Admissions . . . . .	1,182,198	1,235,665	1,267,092	1,318,241	1,359,162
Total in-patients (cases) treated . . . . .	1,225,060	1,278,417	1,309,325	1,362,081	1,406,102
Deaths . . . . .	36,619	37,569	38,530	r 40,554	41,453
Average daily number resident . . . . .	41,009	42,166	42,926	44,004	44,669
Out-patients (cases)(c) . . . . .	2,794,400	2,946,800	r 3,107,400	3,327,000	3,563,000
Revenue . . . . . \$'000	218,798	239,787	258,271	278,216	301,717
Expenditure . . . . . \$'000	217,112	239,548	254,753	275,526	301,434

(a) Honorary, visiting and salaried. (b) Qualified and student nurses, assistant nurses, assistant nurse trainees, nursing aides, and nursing aide trainees. (c) Partly estimated.

### Mental health services

The organisation of mental health services in each State is described on pages 543-9 of this chapter.

The presentation of meaningful statistics of mental health services has become increasingly difficult because of changes in recent years in the institutions and services for the care of mental patients. The emphasis has shifted from institutions for the care of patients certified insane to a range of mental health services provided for in-patients and out-patients at psychiatric hospitals, admission and reception centres, day hospitals, out-patient clinics, training centres, homes for the mentally retarded and geriatric patients, psychiatric units in general hospitals, and the like.

To enable valid comparisons to be made of mental health statistics in each State the mental health authorities of all States have proposed standard statistical definitions. The statistical recording systems of a number of States are currently being reviewed for this purpose. Meanwhile certain limited information is available which is shown in the following paragraphs. Since a common measure has not yet been achieved, the figures which are relevant to the individual States to which they refer should not be added to form an Australian total.

#### In-patient institutions

The following table shows the number of major in-patient institutions in each State in 1965, the accommodation they provide for patients, and their staff. In-patient care for voluntary patients is also provided at many general public and a number of private hospitals. There are also psychiatric units attached to gaols, juvenile corrective centres and similar institutions. Only the following institutions are included in this table: *New South Wales*—the fourteen State psychiatric centres (a psychiatric hospital and associated admission centre being regarded as one psychiatric centre) and the two authorised private psychiatric centres (several other institutions provide in-patient care for voluntary patients only, but are excluded from the scope of the statistics); *Victoria*—the four psychiatric hospitals, ten mental hospitals, four informal hospitals, and eight intellectual deficiency training centres and schools; *Queensland*—four mental hospitals and one epileptic home (alcoholic clinics and inebriates' homes are excluded); *South Australia*—two mental hospitals and two receiving houses; *Western Australia*—the four mental hospitals, one psychiatric hospital, and the mental deficiency home for children; and *Tasmania*—the mental hospital and the psychiatric hospital.

#### MENTAL HEALTH: IN-PATIENT INSTITUTIONS, ACCOMMODATION AND STAFF STATES, 1965

	N.S.W. (a)	Vic.	Qld	S.A.	W.A.	Tas.
In-patient institutions . . .	16	26	5	4	6	2
Beds and cots for patients . .	12,885	(b)9,695	4,333	2,523	1,921	930
Staff—Medical . . . . .	189	136	(d) 19	32	17	8
Nursing . . . . .	(c)3,244	2,788	(d)1,198	668	470	262

(a) 30 June. (b) The number of beds and cots occupied on 31 October 1965. (c) Includes attendants. (d) Full-time staff only.

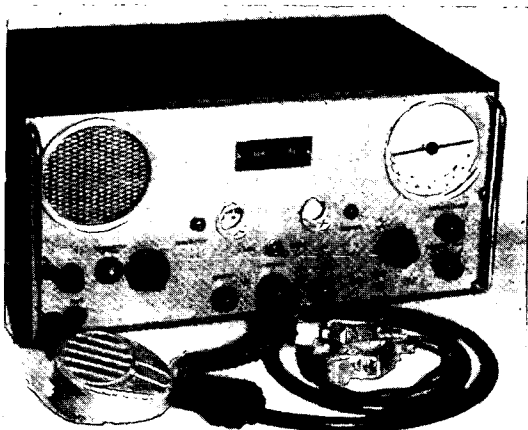

There are no in-patient institutions for mental patients in the Northern Territory or the Australian Capital Territory.

#### State government expenditure on mental health services

The following figures show particulars of total net expenditure (i.e. gross expenditure less receipts for services rendered) from consolidated revenue funds and certain trust or special funds on mental health institutions and services. The data have been compiled on the same basis as far as differences in organisation and accounting methods between States will permit. Expenditures on debt charges, pay-roll tax and superannuation payments have been excluded. State loan fund expenditures are also shown, but expenditure from moneys received as specific grants from the Commonwealth are not shown. For details of Commonwealth financial assistance to the States for mental health services, see pages 556-7.

Right: Interior of a Royal Flying Doctor Service aircraft.

Below: The transceiver—two-way radio set as used in the Royal Flying Doctor Service.

Standard medicine chest as supplied by Royal Flying Doctor Service.

**MENTAL HEALTH: NET EXPENDITURE(a), STATES, 1964-65**  
(S'000)

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.
Expenditure from general revenue and certain trust funds	17,586	15,721	5,287	4,062	2,956	1,372
Loan fund expenditure	4,695	4,384	242	500	863	666

(a) Net expenditure, i.e. gross expenditure less receipts for services rendered.

**Patients**

*New South Wales.* A new system of collecting particulars of admissions to and discharges from the sixteen psychiatric centres in the State was introduced from 1 July 1964 following a census of the in-patients at these centres in June 1964. Under this system, the sixteen psychiatric centres in the State are regarded as constituting a single Psychiatric Service, and 'admissions' and 'discharges' are identified in relation to the Service as a whole (and not to a particular centre). Patients are classified into three broad groups—voluntary, formally recommended, or forensic—according to the status under which they are admitted to the care (or remain under the care) of a psychiatric centre. The following table shows for the sixteen psychiatric centres the number of patients on the in-patient register and the admissions and discharges of in-patients in 1964-65.

**PATIENTS ON THE IN-PATIENT REGISTER OF PSYCHIATRIC CENTRES**  
**NEW SOUTH WALES, 1964-65**

	Males	Females	Persons
Patients on the register at 1 July 1964 . . . . .	7,116	6,374	13,490
Admissions during 1964-65—			
Voluntary . . . . .	3,208	3,250	6,458
Formally recommended—Inebriate . . . . .	392	79	471
Other . . . . .	4,301	4,442	8,743

<i>Persons</i> . . . . .	6,678	3,605	1,057	388	11,728
<b>Discharges</b> . . . . .	6,715	3,150	1,036	327	11,228
<b>Deaths</b> . . . . .	77	754	5	35	871
<b>Patients on the register at 31 December 1965—</b>					
Males . . . . .	412	3,979	34	1,158	5,583
Females . . . . .	479	3,786	60	1,231	5,556
<i>Persons</i> . . . . .	891	7,765	94	2,389	11,139

(a) Includes transfers from one institution to another.

There are also many non-residential psychiatric and out-patient clinics administered by the State mental health authority which provide treatment, but figures for these are not available. Other out-patient and community services include hostels, social clubs and sheltered workshops. The Personal Emergency Advisory Service dealt with 2,261 calls for assistance in 1965.

*Queensland.* In-patients at the five institutions for the mentally ill in 1964-65 were as follows.

### MENTAL PATIENTS: QUEENSLAND, 1964-65

	Males	Females	Persons
Patients on the register at 1 July 1964 . . . . .	2,349	1,656	4,005
Admissions and re-admissions—First admissions . . . . .	582	407	989
Re-admissions . . . . .	361	435	796
<i>Total admissions</i>	<i>943</i>	<i>842</i>	<i>1,785</i>
Discharges . . . . .	829	688	1,517
Deaths . . . . .	145	106	251
Patients on the register at 30 June 1965 . . . . .	2,318	1,704	4,022

During 1964-65 non-residential treatment was provided at the Psychiatric Clinic for 1,733 patients and at Welfare and Guidance Clinics for 2,474 patients. Of these 659 and 1,584 respectively were new patients within the year. In addition, 329 day patients were treated at the Alcoholic Clinic.

*South Australia.* In-patient statistics for the two hospitals and two receiving houses were as follows.

**MENTAL PATIENTS: SOUTH AUSTRALIA, 1964-65**

	Males	Females	Persons
Patients on register at 1 July 1964 . . . . .	1,559	1,276	2,835
Admissions during 1964-65(a)—			
Voluntary . . . . .	1,131	1,148	2,279
Formally recommended and forensic . . . . .	444	338	782
First admissions . . . . .	1,029	943	1,972
Re-admissions . . . . .	546	543	1,089
<i>Total admissions</i> . . . . .	<i>1,575</i>	<i>1,486</i>	<i>3,061</i>
Discharges . . . . .	1,542	1,404	2,946
Deaths . . . . .	97	101	198
Patients on register at 30 June 1965 . . . . .	1,495	1,257	2,752

(a) Excludes transfers.

The numbers of patients who received treatment during 1964-65 at non-residential clinics and services administered by the State mental health authority were as follows: out-patient clinics, 2,755; child guidance clinic, between 800 and 900; day hospital, 49; intellectually retarded clinic, 134. The last two institutions were opened during 1964-65.

*Western Australia.* In-patient statistics for the six institutions in 1964-65 were as follows.

**MENTAL PATIENTS: WESTERN AUSTRALIA, 1964-65**

	Males	Females	Persons
Patients on register at 1 July 1964 . . . . .	1,260	841	2,101
Admissions and re-admissions(a) . . . . .	894	828	(b) 1,722
Discharges(a) . . . . .	793	760	1,553
Deaths . . . . .	95	51	146
Patients on the register at 30 June 1965 . . . . .	1,266	858	2,124

(a) Excludes transfers. (b) Includes 952 voluntary admissions and re-admissions.

The numbers of patients who received treatment and services at non-residential agencies of the Mental Health Division during 1964-65 were as follows: psychiatric clinics, 3,011; day hospital, 817; child guidance clinic, 1,086. The number attending the Industrial Training Centre at 30 June 1965 was 180; these patients were drawn from the day hospital and three in-patient institutions.

*Tasmania.* In-patients statistics for the two institutions in 1964-65 were as follows.

**MENTAL PATIENTS: TASMANIA, 1964-65**

	Males	Females	Persons
Patients on register at 1 July 1964 . . . . .	351	380	731
Admissions and re-admissions . . . . .	564	481	1,045
Discharges . . . . .	414	389	803
Deaths . . . . .	29	26	55
Patients on the register at 30 June 1965 . . . . .	472	446	918

### Private hospitals and nursing homes

In addition to the other hospitals and nursing homes referred to in previous sections, there are private hospitals and nursing homes in each State. The figures shown in the following table refer to those private hospitals and nursing homes which have been approved for the payment of hospital benefits under the Commonwealth *National Health Act 1953-1966*. Statistical information on patients, staff and finance of these institutions is not available on a uniform Australia-wide basis.

#### PRIVATE HOSPITALS AND NURSING HOMES: STATES, 1961 TO 1965

State	30 June				
	1961	1962	1963	1964	1965

#### NUMBER OF PRIVATE HOSPITALS AND NURSING HOMES

New South Wales . . . . .	461	474	507	527	531

<b>Australia . . . . .</b>	<b>22,619</b>	<b>25,646</b>	<b>27,902</b>	<b>30,371</b>	<b>32,893</b>

There are no institutions of this nature in the Australian Capital Territory or the Northern Territory.

### Repatriation hospitals

The medical care of eligible ex-servicemen and dependants of deceased ex-servicemen is a major function of the Commonwealth Repatriation Department (*see the chapter Repatriation*), which provides a comprehensive service.

In-patient treatment is provided at Repatriation General Hospitals in each capital city; in addition, there are auxiliary hospitals in all States except Tasmania. 'Anzac Hostels' are maintained in Queensland and Victoria for long-term patients. In-patient treatment may also be provided in country hospitals at the Department's expense in certain circumstances. Mental patients requiring custodial care are, by agreement with the State Governments, accommodated at the expense of the Department in mental hospitals administered by the State authorities.

The average daily number of patients resident in the six Repatriation General Hospitals and eight auxiliary hospitals during the year ended 30 June 1966 was 3,707. The number of medical, nursing and other staff employed at these institutions at 30 June 1966 was 5,979 and a further 534 were employed at Repatriation out-patient clinics and limb and appliance centres. Total expenditure on Repatriation institutions during 1965-66 was \$23,095,058 and \$27,773,215 on other medical services.

**Hansenide hospitals**

There are four isolation hospitals in Australia for the care and treatment of persons suffering from Hansen's disease (leprosy). The numbers of isolation patients at these hospitals on 31 December 1966 were: Little Bay (New South Wales), 5; Fantome Island (North Queensland), 5; Derby (Western Australia), 178; and East Arm Settlement (Northern Territory), 32. In addition, there were 69 voluntary patients resident in the East Arm Settlement, mostly for the purpose of reconstructive surgery. With the exception of the Little Bay lazaret, nursing services are provided mostly by sisters of religious orders under supervision of Government medical officers.

Special wards for the isolation and treatment of leprosy patients are also provided at other centres. The location of these wards and the numbers of isolation patients resident at 31 December 1966, were: Fairfield (Victoria), 8; and Princess Alexandra Hospital (Queensland), 4.

Of the total 232 cases in isolation, 184 were full-blood Aborigines, 26 were others of Aboriginal blood, 2 were Pacific Islanders, 2 were Asians, and 18 were Europeans.

## CHAPTER 17

### EDUCATION, CULTURAL ACTIVITIES AND RESEARCH

For the most recent statistics available on subjects dealt with in this chapter reference should be made to the series of mimeographed bulletins *Social Statistics* issued by this Bureau. The *Quarterly Summary of Australian Statistics* contains summarised information on these subjects, and financial aspects are dealt with in the annual bulletins *Commonwealth Finance and State, Territory and Local Government Authorities' Finance and Government Securities*. The Annual Reports of the respective State Education Departments provide detailed statistical and other information concerning particular States.

#### EDUCATION

An account of the development of the Australian school system up to 1929 may be found in Year Books Nos. 1, 2, 17 and 22. In Year Book No. 40 a review of changes which occurred up to 1951 and of the practices then current was presented from material furnished by the Commonwealth Office of Education, which contributed much of the textual matter in the following sections.

#### Education in Australian schools

##### Administration and organisation

In Australia the provision of schools is mainly the responsibility of State Governments. During the nineteenth century all six Australian colonies had established systems of compulsory education, beginning with the *Education Act* 1872 in Victoria, and followed by similar Acts in Queensland (1875), South Australia (1875), New South Wales (1880), Tasmania (1893), and Western Australia (1893). These Acts, with subsequent amendments, constitute the legal basis of compulsory education in the Australian States to-day.

School attendance is compulsory throughout Australia between the ages of six and fifteen at least. The minimum leaving age is fifteen years in New South Wales, Victoria, Queensland, and South Australia, and sixteen years in Tasmania, while in Western Australia attendance is compulsory until the end of the year in which the child turns fifteen years. The Education Acts require that all children between the prescribed ages must attend either a government school or some other recognised educational institution. Children may be exempted from the requirement of compulsory attendance if they live too far from a school or suffer a physical disability. These children usually receive correspondence tuition.

The school year in Australia begins at the end of January or early in February; it ends in mid-December. The long vacation is taken over the summer months (December to February) and two short vacations divide the school year into three terms.

At government primary schools it is usual for both boys and girls to attend the same school; at the secondary level practices vary, but the trend is towards co-educational schools. Non-government schools cater mainly for boys and girls separately.

##### Government school systems

Government schools, except in the Commonwealth Territories, are a responsibility of the six State Governments. Although the educational systems are not identical, they have many similar features. Responsibility for framing educational policy and having it put into effect rests with a Minister for Education, who is a member of the State Cabinet. The administrative authority in each State is an Education Department headed by a Director-General or Director of Education. Separate divisions of the Education Department in each State administer primary, secondary and technical education (in New South Wales there is a separate Department of Technical Education). Other divisions look after such matters as the recruitment and training of teachers, pupil guidance, research, and the education of atypical children. In some States administration has been decentralised to a degree by the appointment of 'Area' or 'Regional' directors, who are responsible for policy in the area which they control.

Tuition at government primary and secondary schools is free in all States. Parents are usually expected to bear the cost of text-books, uniforms and charges for such things as the use of sports materials. However, income tax concessions exist in respect of these expenditures for both government and non-government systems, and certain text-book costs are subsidised in the case of pupils attending government and non-government schools in some States.

### Non-government schools systems

More than 80 per cent of the children at non-government primary and secondary schools attend Roman Catholic schools, which form a highly developed but not centralised system. At the primary level these children normally attend mixed parish schools, but at the secondary level there are boys schools, approximately half taking boarders, and girls schools. Some of the small convent schools in country districts enrol young boys as well as girls. The organisation of Roman Catholic schools is primarily on a diocesan basis under the general direction of the bishop, although many of the religious orders which conduct schools are Australia-wide and have their own internal organisation.

The majority of other non-government schools, sometimes known as 'private' or 'independent' schools, are conducted by, or are under the auspices of, various religious denominations, particularly the Church of England, Presbyterian and Methodist Churches. Others are conducted by the Baptist, Lutheran, Congregational, and Seventh-day Adventist Churches and by smaller religious groups. There are Jewish schools in several capital cities. A few non-government schools, including some of the foremost, are undenominational and conducted under the auspices of corporate bodies.

The methods adopted by the educational authorities to ensure an acceptable standard of education at non-government schools vary from State to State. In New South Wales, Victoria, Western Australia, and Tasmania these schools are regularly inspected. In Victoria and Tasmania, schools and teachers must be registered. In Queensland eight grammar schools which exist by statutory authority and are subsidised by the State are subject to annual inspection. Other non-government schools in Queensland and also those in South Australia are not subject to inspection.

The principals of a number of the larger non-government schools have formed organisations with both State and Australia-wide coverage, namely the Headmasters' Conference of the Independent Schools of Australia and the Association of Headmistresses of Independent Schools of Australia.

### Schools and courses

*Primary education in government schools.* Though school attendance is not compulsory until the age of six, most Australian children begin school when they are five, attending infants schools or infants classes attached to a primary school. In some States the first year in the infants department is known as 'kindergarten'. The emphasis in infants classes is on the development of skills in language and numbers. There is a gradual shift towards more formal activities in the second and third years. Creative expression through drawing, dancing, handiwork, dramatisation, and painting and similar activities is encouraged. At the end of their infants school training most children are able to read with some fluency, carry out simple arithmetical operations founded on the basic number facts, and write in pencil.

At about the age of eight most children pass into the primary school proper, where they usually spend four or five years. Primary schools are normally provided when and where there is sufficient population to justify them. Irrespective of the size or the location of the school, standards of tuition do not vary appreciably, because teachers within a State follow similar courses of training and transfer freely between metropolitan and country areas. The Education Departments prescribe syllabuses of instruction, which are drawn up with the assistance of expert committees. The primary syllabuses have an emphasis on basic subjects like reading, writing, arithmetic, social studies, and oral language, but the teacher has some freedom to modify courses to suit local circumstances and the varying abilities of his students.

Children attend primary schools in their own districts, usually within walking distance of their homes, on five days each week. The school day is broken up into three or four sessions by a lunch break and by a morning and sometimes an afternoon recess. The total period of instruction is four and a half to five hours daily with individual subject lessons lasting twenty to thirty minutes. Periods are set aside for physical education and sport. One teacher generally has charge of a class and teaches it all the subjects set out in the curriculum for the particular grade.

Pupils do not, as a rule, sit for a public examination during or at the end of their primary course, and progression from primary to secondary school is automatic. Allocation to particular schools or particular courses is based on the recommendations of the headmaster, general ability tests, tests of achievement in the basic subjects, and parents' wishes. In South Australia pupils may proceed to secondary school on receiving the Progress Certificate, which is awarded on satisfactory completion of the seventh grade, the highest grade at primary level.

*Secondary education in government schools.* The age of transfer from a government primary to secondary school is usually between twelve and thirteen. Most secondary schools are co-educational, although separate schools for boys and girls are not uncommon in capital cities. In the cities and larger country centres secondary and primary courses are provided in separate schools, but in less populous areas secondary classes sometimes share buildings with primary classes.

The secondary student takes up new studies, such as foreign languages and technical or commercial subjects, and moves on to more specialised studies in natural and social sciences and mathematics. The study of basic subjects begun in primary school is continued. The actual subjects studied depend on the ability of the pupil and the type of school. A school day is divided into 'periods' and the children are taught by a number of teachers, each specialising in a particular subject or group of subjects.

In the past, to meet the varying abilities and needs of students, various kinds of secondary schools were established in which different types of education were provided, although in country areas secondary schools tended of necessity to be comprehensive and offered a full range of secondary courses. But following the re-examination by expert committees in all States of the problems associated with the provision of appropriate secondary education for all, significant changes in the structure and curricula of secondary schools are taking place. In New South Wales, for example, following a committee's recommendation that the secondary curriculum should offer a core of common basic education to all students, secondary schools have become comprehensive. Pupils of different aptitudes and interests in a given locality now attend the same secondary school, undertake this core of common basic studies, and in addition specialise according to their proven abilities and interests.

The most common type of secondary school is the comprehensive or multi-purpose high school, which offers a wide range of subjects. To cater for this diversity of subjects, most high schools now have modern facilities for the teaching of domestic science, commercial subjects, woodwork, and other technical subjects. In some States there are still, however, separate high schools specialising in technical, commercial or home science subjects. In some States there are also a few separate agricultural high schools, some of them residential. The curriculum consists of general educational subjects and practical farm training. There are also 'area' and 'rural' schools offering up to three years of secondary study, and in some States courses in agriculture are also given at high schools.

*Primary and secondary education in non-government schools.* Non-government schools follow curricula similar to those laid down by Education Departments and prepare their students for examinations conducted by public examining authorities. Most non-government schools are comprehensive type schools, providing a range of subjects and courses at various levels. Although there are similarities between non-government and government schools in the courses they provide, more emphasis is given to the religious training of pupils in denominational schools. A few schools, mostly Roman Catholic secondary schools, specialise in agricultural and technical courses. Non-government schools offer some facilities additional to those normally found in government schools, such as personal tuition in music, ballet, etc. A few are organised on 'experimental' lines.

### Examinations

During the course of secondary education State-wide examinations are taken at two levels. The earlier examination qualifies pupils for entry to trade courses at technical colleges and agricultural colleges, to junior commercial positions in, for instance, insurance and banking, to nursing and secretarial courses, to lower grades of the public service, and to industry. The examination at the end of the secondary school course qualifies students for entry to teachers' colleges, the higher grades of the public service, and commercial occupations; this examination is also the qualification for entry to the university, certain subjects and combinations of subjects being set down as the matriculation requirements by the respective universities.

In most States the higher examination is controlled by a board consisting of representatives of the Department of Education, the universities, non-government schools, and sometimes of other bodies such as teachers' organisations. A brief description of the examinations in each State follows.

*New South Wales.* For pupils who commenced their secondary education in 1962 or later, the full secondary course is of six years duration, with a School Certificate Examination at the end of the fourth year, age about sixteen, and a Higher School Certificate Examination (Matriculation) after a further two years. The last Intermediate and Leaving Certificate Examinations under the old system were conducted in 1966. Now pupils who leave school before gaining their School Certificate receive a signed statement of attainment from their school principal.

*Victoria.* The Intermediate Examination taken at the end of the fourth secondary year, at about the age of sixteen, will be held for the last time in 1967. The School Leaving Examination is taken at the end of fifth year, and the Matriculation Examination at the end of sixth year. Pupils at approved non-government schools and certain government schools may be accredited for the Intermediate and Leaving by passing examinations set by their own schools.

*Queensland.* The Junior Public Examination is taken at the end of third year, at about the age of fifteen and a half. The Senior Public Examination conducted by the University of Queensland is taken at the end of fifth year, at about the age of seventeen and a half, and matriculation is obtained on results in this examination.

*South Australia.* The Intermediate Examination taken at the end of the third year, at about the age of fifteen and a half, will be held for the last time in 1968. The Leaving Examination is taken at the end of the fourth year and a Matriculation Examination is to be held at the end of the fifth year.

*Western Australia.* The Junior Certificate Examination is taken at the end of third year, at about the age of fifteen and a half. Students who pursue a less academic course may take the High School Certificate Examination at this level. The Leaving Certificate Examination is taken at the end of fifth year, at an average age of seventeen and a half, and matriculation is gained on results in this examination.

*Tasmania.* The Schools Board Certificate Examination is taken at the end of the fourth year, at about the age of sixteen and a half, and the Matriculation Examination conducted by the University of Tasmania at the end of the fifth or sixth year.

### Numbers of schools, teachers and pupils

The statistics which follow relate generally to schools providing education according to the primary or secondary school curricula of the various State Education Departments, or both, whether provided in government or non-government schools. Junior technical schools, correspondence schools, and schools in institutional homes, hospitals and similar establishments are included. Institutions providing only pre-school education, senior technical and agricultural colleges, evening schools, continuation classes, and institutions such as business colleges and coaching establishments are, as a rule, excluded.

School censuses are conducted annually at or about the beginning of August throughout all States and Territories of Australia. The numbers of pupils in the tables which follow refer to enrolments at the school census date. The numbers of schools and teachers refer to the position at dates which vary from State to State and in some instances from year to year. While it has not been possible to present all figures on a uniform basis between States, continuity of the figures for any one State over the period of years shown has been maintained as far as possible. Particulars relating to senior technical colleges are given on pages 599-602.

### Schools, teachers and pupils

The numbers of government and non-government schools, teachers and pupils for 1966 and earlier years are shown in the following tables.

### NUMBERS OF SCHOOLS AND PUPILS, BY CATEGORY OF SCHOOL STATES AND TERRITORIES, 1966

(a) Excludes teachers-in-training generally. (b) The methods used for calculating *equivalent full-time units* of part-time teaching vary from State to State, between government and non-government schools, and between primary and secondary schools within States. For most schools the information is based on either the total hours worked or total number of class periods taken in a week by part-time teachers, in relation to the normal hours worked or periods taken by full-time teachers. (c) A large proportion of male part-time teachers in Victoria are engaged in junior technical schools. A teacher is included as part-time if his teaching time at a junior technical school is less than 32 hours a week. (d) Excludes unqualified teachers and teaching assistants at mission schools. (e) Visiting teachers who attend more than one school are counted as part-time in each.

(a) Comprises Aboriginal children at special schools whose ages were not collected.

(b) Aboriginal children included in specified age groups.

# SCHOOLS: AGES OF PUPILS, AUSTRALIA, 1966

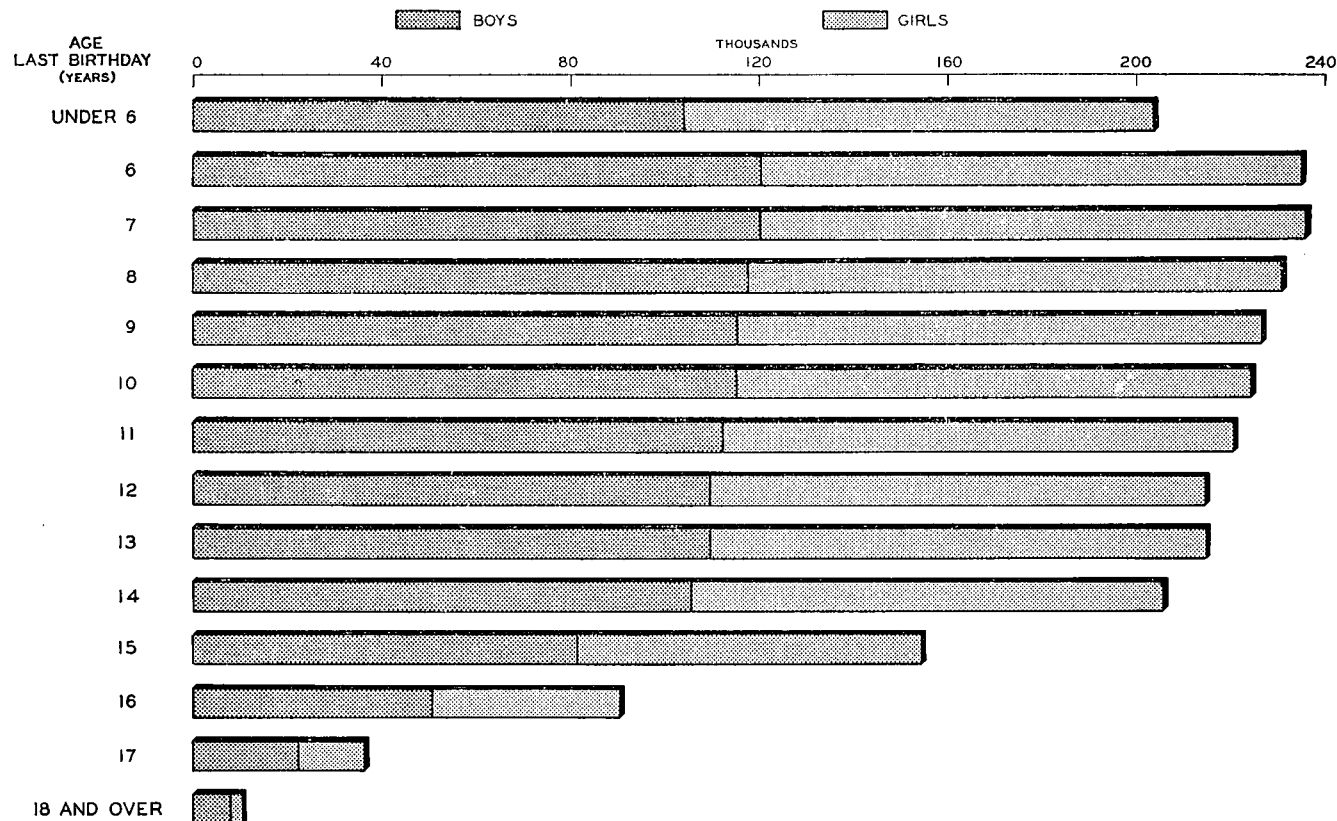

PLATE 36

## Grades of pupils

The numbers of pupils enrolled in grades in each State and Territory are shown in the following table. The grading of pupils differs for the various school systems in Australia because of the differences in curricula set by Education Departments. In addition, the methods of allocating classes to grades vary from State to State, and there are also differences in the administrative methods of aggregating grades of a more or less similar nature. The figures presented in these tables represent essentially the system of grading adopted in each different State and are therefore not comparable between States.

## Teacher training and recruitment

## Teachers for government schools

*Recruitment of teachers.* The teacher shortage evident in past years has now been overcome to a certain extent. Some States have no difficulty in recruiting and training sufficient staff to meet the present needs of primary schools. Despite expanded training programmes the shortage of secondary school teachers has proved a greater problem, especially in mathematics and science.

State Education Departments recruit most prospective teachers for government service from students leaving schools after a secondary course. Each Department offers training awards annually on the basis of academic merit and personal suitability. The traineeships cover the cost of a teacher training course (which may include university studies) and provide a living allowance. Students are usually required to enter into a bond to serve for a specified number of years in the government schools of the State where they have trained. In some States intending teachers can obtain a scholarship at Intermediate Certificate level to enable them to complete teachers' college entrance requirements. Such an award entails a bond of service for a longer period.

*Training of primary school teachers.* In most States teachers for government primary schools are trained in teachers' training colleges controlled and administered by the State Education Departments. These colleges are described on page 621. Generally, the duration of courses for primary teachers is two years; but several States are introducing a minimum three-year course for primary teachers. The basic subjects taken in the various courses are history and principles

of education, general and special methods of teaching in the primary school, school organisation, and educational psychology. In addition, students undertake courses in English (including speech training), mathematics, handicrafts, music, art, social studies, natural science, and physical and health education. Optional subjects may include dramatic art, visual aids, and so on. Supervised practice teaching in schools and the observation of demonstration lessons form part of all training courses. Since primary teachers in Australia may be called upon at some time to teach grouped classes in a small school or a 'one-teacher' school, special training for this kind of work is included in their course.

*Training of secondary school teachers.* Secondary teachers are normally specialists in a combination of subjects, such as English and history, modern languages, or mathematics and science. Intending secondary school teachers are normally required to complete a university degree and a year of professional training qualifying for a Diploma in Education. The degree courses followed are usually in arts, science, or economics, with the major studies providing the essential background for future subject teaching. During the post-graduate or professional year the student takes such subjects as the history and principles of education, comparative education, educational psychology, and special teaching methods. Training also includes practice teaching under the supervision of teachers college and university staff, and the observation of demonstration lessons.

At several Australian universities, students wishing to take up teaching as a profession can receive their professional training along with the study of their teaching subjects as part of a first degree course in Education. The time taken to complete such a Bachelor of Education degree course is four years.

*Training for specialist teaching.* Teachers of specialist subjects, such as music, art, manual arts, domestic science, and commercial subjects, receive from two to five years training which varies according to the institution concerned and the type of secondary school in which the teacher is to serve. In several States the shorter courses are provided wholly by the teachers colleges. In five States teachers of music receive their specialist training at conservatoria of music. Where the specialist course is given at an institution other than the teachers college—e.g. at a university, technical college, or conservatorium of music—as is usual for teachers of specialist subjects in high schools, trainees are required to attend teachers college or university lectures in education, and in some cases the specialist course is followed by a year of professional training. Courses designed to train physical education teachers are offered in universities in all States, and in four States at a teachers college as well.

Training for teachers of agricultural subjects in secondary schools is available in five States and consists of either an agricultural college diploma or a university degree course together with professional training. In New South Wales a two-year teachers college course in agriculture is available, and in Victoria there is a two-year agricultural college diploma course which follows on the normal two-year primary teachers course. Teachers of technical subjects in secondary schools may be trained in manual or industrial arts courses of two to four years duration, at teachers colleges, technical colleges, or, in one State, at a university. These courses include basic training in such subjects as wood and metal work, and geometrical drawing. In Victoria there is a separate Technical Teachers' College. Some teachers of trade subjects in technical schools are recruited from the ranks of qualified tradesmen engaged in industry or commerce. These teachers upon appointment usually receive instruction in classroom teaching techniques and procedures.

*In-service training.* As almost all teachers now enter the profession by way of teachers colleges or universities, where they receive basic professional training, in-service training in Australia is directed chiefly towards keeping teachers abreast of developments and adding to their basic training. In-service training usually takes the form of short courses held sometimes during vacations, sometimes during school-time or in the evening. In some States in-service courses for teachers in remote areas are provided by correspondence. Courses consist of discussions and lectures given by senior staff members of Education Departments and university and teachers college lecturers on such subjects as classroom techniques and supervision, librarianship, visual aids, music, arts and crafts, and physical education. In some States there are also in-service courses for special groups of teachers such as headmasters or teachers in one-teacher schools. In addition, district inspectors are responsible for organising short conferences of teachers, where professional topics are discussed. Education Departments encourage teachers to pursue university courses and in some States pay the cost of courses undertaken by selected teachers.

In 1966 and 1967 groups of Australian teachers again attended refresher courses in New Caledonia for Australian and New Zealand teachers of French. These courses were offered to the Australian Government by the French Government. The official publications of the Education Departments contain articles dealing with educational theory and practice. Magazines of the teachers' organisations, which reach the majority of government teachers, also contain articles of this type.

*Status of teachers.* Most teachers in governmental schools are permanent public servants and have security of tenure, superannuation rights, and the right of appeal in matters of promotion. The centralised education systems and the general policy of providing fully trained teachers for both city and country areas mean that teachers are subject to transfer to any part of the State in which they serve. It is common for a teacher's first appointment to be to a country school.

In each State there is a union of State school teachers and these together form a federal body, the Australian Teachers' Federation. Their aim is to advance the teachers' status and conditions and to stimulate community interest in educational problems.

#### **Training of non-government school teachers**

Teachers for non-government schools receive their training in a number of ways. The Roman Catholic Church staffs both its primary and secondary schools mainly with members of religious orders whose training has been obtained in conformity with the requirements of the particular order concerned. In recent years there has been a growth in the number of lay teachers being employed in Catholic schools, and training of students to become lay primary teachers has been instituted. Secondary teachers receive their academic training mostly through courses provided by Australian universities.

Other non-government schools tend to recruit their staffs from teachers who have already obtained qualifications in Australia or overseas. In New South Wales and Victoria non-government school authorities offer courses designed specially for teachers in their schools. Non-government schools recruit also university graduates, who are then given professional guidance by senior members of the school staff. In some instances private students may enrol at government teachers colleges on payment of a fee, but the number of places available is limited. Some teachers destined for non-government schools train in this way.

During vacations many non-government teachers attend in-service training courses organised by Education Departments. In recent years vacation courses have been provided by bodies other than Education Departments for teachers from both government and non-government schools. For example, an independent body, the Science Foundation for Physics within the University of Sydney, has provided such courses for teachers of science in secondary schools in New South Wales.

The training of pre-school teachers is carried out in five States in kindergarten training colleges set up by the Kindergarten Unions. These are described on page 621.

### **Other aspects of school education**

Information relating to school medical and dental services is given in the chapter Public Health, and particulars of school savings banks in the chapter Private Finance.

#### **Provisions for isolated areas**

Although the task of bringing education to isolated areas in Australia presents problems, all education authorities have aimed at providing opportunities for country children comparable to those available to city children. Country children follow the same curricula (with local adaptation, if desirable) and are under the guidance of teachers who are trained for service in country and city schools alike.

In areas where there are sufficient children of school age a 'one-teacher' school may be formed with all primary grades in a single classroom under the control of the one teacher. Special training is given to teachers undertaking work of this kind. Children who complete a primary course in a one-teacher school and cannot attend a secondary school may do secondary correspondence lessons under the teacher's supervision.

In districts where a number of small centres are scattered around a larger centre or country town the tendency is to close the one-teacher schools and transport pupils each day by buses to a 'consolidated' school in the larger centre. Consolidated schools provide primary instruction and from two to four years of post-primary instruction. The post-primary curriculum adopted is usually directed towards practical activities and training in subjects bearing on the primary industries of the locality.

Where a group of children is too small to warrant the establishment of a one-teacher school at public expense, a 'subsidised' school may be opened. The Education Department pays part of the cost and in some States appoints a teacher. Some States also administer 'provisional' schools, which are completely financed by the Government but which are not large enough, or sufficiently assured of adequate continued attendance of pupils, to warrant classification as permanent schools.

*Correspondence schools.* These have been established in each State capital city to meet the needs of children whose daily attendance at school is prevented by distance between home and school, by illness or by physical disability. The correspondence schools also cater for inmates of penal

institutions, Australian children overseas, pupils of other schools in which particular courses are not available, student teachers, members of the Defence Forces, and other adults completing their secondary education. Where children are involved, lessons are done with the help of a supervisor, usually a member of the child's family, and posted back to the correspondence school in the capital city, where they are corrected and returned with helpful comments. Every endeavour is made to maintain a personal link between teacher and pupil. Correspondence schools began with primary grades only, but were soon extended to cater for secondary pupils, and it is now possible to do a complete secondary course to matriculation standard by correspondence. Each year more than 20,000 students receive all or part of their instruction by correspondence.

*Schools of the air.* These are intended to give the outback child of school age some of the benefits of school life and to supplement correspondence education. Using the two-way wireless equipment developed first by the Royal Flying Doctor Service, children hundreds of miles apart participate in the same lesson, and teacher and pupils can talk directly with each other. The first school of the air was established in 1950 at Alice Springs in the Northern Territory; it has been followed by similar schools at Broken Hill in the far west of New South Wales; Ceduna and Port Augusta in South Australia; Charleville, Mount Isa and Charters Towers in Queensland; and Meekatharra, Derby, Kalgoorlie, and Port Hedland in Western Australia. These eleven schools serve children in an area of a million square miles.

### **Handicapped children**

Special provision is made for the education of physically and mentally handicapped children, both by the State authorities and by church and voluntary organisations, often working in conjunction. In many cases, where residential schools are necessary for particular groups, educational facilities and teaching staff are provided by a State Education Department, while a voluntary organisation provides accommodation and accepts responsibility for the general welfare of the children. Among the facilities available are: hospital schools for sick and crippled children; 'spastic centres' for cerebral palsied children; special schools and special classes for deaf children; schools for blind children; and special schools and classes for mentally retarded children. Special schools and classes have involved the appointment of departmental specialists, the provision of special training courses and close liaison with school health services. In some States, clinics attached to hospitals, or functioning as an independent child welfare service, handle cases of personality maladjustment and work in co-operation with the psychological services of the Education Departments.

### **Educational guidance**

Each Australian State has a comprehensive system of educational guidance administered by trained and experienced educational psychologists and backed by a system of individual pupil record cards. The functions of these services are to provide: advice on suitability of various secondary studies for particular children, diagnosis and guidance of atypical children, preliminary guidance, and, in some States, research. The weight given to each of these functions varies from State to State, but the aim is to provide thorough educational guidance for all children.

Throughout Australia branches of the Commonwealth Employment Service co-operate with State Education Departments by giving post-school vocational guidance, using the data obtained during the school careers of the children and made available by the Education Departments. In New South Wales a similar service is also provided by the Youth Welfare Section of the State Department of Labour and Industry.

### **Research**

All State Education Departments have set up branches undertaking research directed towards departmental activities. The work of the research branches is concerned with such matters as curriculum content, new teaching methods, evaluation procedures, wastage rates, and educational statistics.

### **School broadcasting and television**

Over the years an extensive school broadcasting system has been developed in Australia by the co-operative efforts of the Australian Broadcasting Commission and education authorities. The Australian Broadcasting Commission's Education Department is responsible for preparing and broadcasting programmes, but it draws freely on the advice and services of teachers and maintains permanent liaison with State Education Departments. In 1966 approximately 96 per cent of Australian schools were equipped to receive radio broadcasts. It is estimated that, in 1966, 7,446 primary schools used school programmes.

School broadcasts are presented as part of the regular Australian Broadcasting Commission programmes without separate stations or wave lengths. Special efforts are made to relate the broadcasts to school work by the extensive distribution of booklets, giving details of programmes

in advance, and subject notes accompanied by picture sheets, work books, and teachers' notes. Broadcasting has proved to be a most effective way of reaching the outback children of Australia, and radio lessons have been designed to supplement correspondence lessons.

The year 1965 saw a further increase in the number of schools receiving television broadcasts and in the number of programmes produced. During 1964, after consultation with the six Education Departments, the Australian Broadcasting Commission increased its output of school television programmes, especially instructional programmes in mathematics and science for secondary schools. Direct teaching lessons designed for the senior forms were presented. At the same time most Education Departments began to subsidise the purchase of television sets, and by the end of 1966, 3,753 schools in Australia were equipped to use educational television programmes.

#### **Scholarships and bursaries**

All States have schemes of financial assistance to school pupils, mostly at the secondary level, through scholarships or bursaries. As tuition in government schools is free, this assistance is usually in the form of maintenance allowances, both for children living with their parents and for those living away from home. These may be paid in a lump sum or in instalments throughout the year. Awards are usually made on the results of a competitive examination, and sometimes a means test is applied. Other government and private authorities, such as the Repatriation Department and the Legacy War Orphans Fund, assist special categories of pupils with their school education. Many non-government schools also award scholarships, on a competitive basis, which enable students to attend the particular schools without payment of fees.

In 1964 the Commonwealth Government, with the co-operation of the State Departments of Education, introduced a programme of secondary scholarships to encourage successful candidates to complete the final two years of secondary schooling. Ten thousand of these scholarships are awarded each year. In addition, there are 2,500 scholarships for technical education each year.

#### **School transport**

All States have systems of subsidies whereby transport is made available free or at concession rates for children travelling to and from school. In some States allowances are paid if private transport has to be used.

#### **School buildings**

The great increase in the school population in the last decade led to an expansion in school building. To cope with this growth in population, it was necessary at first to make use of temporary and emergency structures, but the period of resorting to this expedient has now given way to one of consolidation and development in school building programmes. Quite large schools may be built in stages to match increases in local population in new and rapidly developing suburbs in metropolitan areas. Authorities are giving much attention to the use of new materials and especially to the planning of sites. An increasing number of schools are planned with playing fields and tennis courts. Gymnasiums which may also serve as assembly halls are included, and lighting, heating and ventilation to meet different climatic conditions are carefully planned.

During the period 1 July 1964 to 30 June 1968 a total of \$39,623,200 will have been provided by the Commonwealth Government for the building and equipping of science laboratories in both government and non-government schools. Non-government schools in the Australian Capital Territory and the Northern Territory no longer receive this assistance. In these areas the Commonwealth Government now meets interest charges on loans raised for approved building projects and also repays the amounts of capital borrowed in equal annual instalments over periods of twenty years.

#### **Textbooks, materials and other equipment**

The State Education Departments supply government schools, free of charge, with essential equipment, including scientific apparatus, maps, blackboards, chalk, and cleaning materials, and non-consumable equipment for commercial, home science and manual training. Garden tools and physical training equipment are also supplied in most States. Readers and writing equipment for individual pupils are usually supplied free in primary schools, and several Education Departments produce monthly school magazines which are supplied free or cheaply. In primary schools (except in one State where textbooks are made available free to children in both government and non-government primary schools) and in secondary schools, textbooks must, however, be purchased by students. In several States schools own stocks of textbooks which are hired to students, and in one State secondary textbooks are sold at reduced prices. In four States certain textbook costs are subsidised for pupils attending government and non-government schools. Equipment such as radios, television sets, film and filmstrip projectors, pianos, duplicators, and

library books is ordinarily purchased for individual schools by the parent and citizen organisations associated with them, with the assistance of subsidies from the Departments.

The design of school furniture is undergoing considerable change following research on posture and the physical measurement of children. Dual desks are now being replaced in many schools by individual tables and chairs, provided in a range of sizes suitable to each class. In line with modern educational practice, the new type of furniture has been designed to allow more flexible arrangements of the classroom.

#### Visual aids

Visual aids are widely used in Australian education. Each of the State Education Departments has a visual education branch to handle the production and distribution of such materials. Film strips and posters are distributed free or at low cost. Films are held in central libraries and are requisitioned by schools as required for teaching purposes.

### Pre-school education

Pre-school centres of various kinds are conducted by approved private individuals, by church bodies and by voluntary organisations such as the Kindergarten Unions. Over recent years the Commonwealth Government, State Governments and some municipal councils have provided an increasing amount of financial assistance and they themselves maintain centres.

The Australian Pre-School Association is a federal body composed of the Kindergarten Unions and several other organisations. Its aim is to promote the development of pre-school education throughout Australia. It is also responsible for the administration of six Lady Gowrie Child Centres which were established in capital cities by the Commonwealth Government as model pre-school centres. Pre-school centres are located in city and country areas. Programmes are adapted to suit the areas in which centres are situated. Types of pre-school centres are nursery kindergartens, crèches with full-day care for children in closely settled industrial areas, play groups and play centres, occasional care centres, and residential holiday homes. Pre-school centres can cater for only a small proportion of children in the three- to five- or six-year age group, but radio and television have brought a form of education within the reach of practically every pre-school child in Australia. 'Kindergarten of the Air', the first programme of its kind in the world, is a session of twenty-five minutes broadcast every week-day over the national radio network of the Australian Broadcasting Commission. Through it, young children in hospitals, in homes in city and country towns and in bush homesteads in the outback, perhaps many miles from any school, receive many of the advantages of pre-school training. 'Play-school' is a 30-minute television programme transmitted each week-day. It is based on the interests of children from three to five years and is now broadcast in all State capital cities and in many country regions by the Australian Broadcasting Commission.

### Technical education

The following description of technical education refers to training in technical fields given by institutions other than secondary schools and universities. Students may proceed to this kind of training after completing three to five years at secondary school. Each State has developed a system of technical education based on institutions set up in all the State capital cities and in many country areas. These institutions are known variously as technical colleges, technical schools, institutes of technology, and schools of mines. The earliest began as local and even private ventures in the second half of the nineteenth century, but almost all of them have now come under the control of the State Governments.

The technical schools and colleges in Queensland, South Australia, Western Australia, and Tasmania are administered by branches of the State Education Departments. In Western Australia and South Australia the Institutes of Technology function as autonomous institutions. Certain recommended technical colleges and institutes are assisted by special Commonwealth Government grants introduced in 1965 following recommendations of a Committee set up to consider the future of tertiary education in Australia. New South Wales has a separate State Department of Technical Education. In Victoria there is a dual system with a number of the older colleges controlled by their own 'councils' in addition to government-controlled colleges administered by the Technical Education Branch of the Education Department. The council-controlled colleges receive government grants-in-aid.

Australian technical colleges offer training in all the major industrial skills and in a wide variety of commercial, artistic and domestic occupations. The three main types of courses are described on page 600.

**Trade courses**

These offer part-time training for apprentices. In developing a system of technical education, the Australian authorities were influenced by the British tradition which regards practical experience on the job as the fundamental training procedure, to be supplemented by theoretical and practical training at an appropriate school. In each of the Australian States there is an apprenticeship authority which supervises the administration of apprenticeships, and an education authority which provides technical education through its technical colleges.

Most students who wish to become tradesmen leave school on the completion of three or four years of secondary schooling at about sixteen years of age. An increasing proportion, however, is entering at higher educational levels and receiving credit for this. On entering apprenticeship in one of the trades, the young apprentice is required to enrol in an appropriate trade course in one of the network of technical colleges in capital cities and large country towns.

The time spent on training varies from three to five years in different trades and States. Between four and eight hours instruction a week are required. Most of this takes place in the employer's time, and it is unusual for more than two hours a week to be spent in attending classes outside working hours.

**Certificate courses**

These courses are designed to provide training in technical occupations and in some cases can be counted towards a diploma course. Certificate courses vary in length from State to State, but generally speaking they last from two to seven years. Attendance may be full-time for all or part of the course, or wholly part-time. Usually there are no occupational requirements for admission to a certificate course, and students who have completed a related trade course may be admitted together with other students to a certificate course. Educational requirements in most cases specify possession of an Intermediate level examination certificate, which may need to include passes at appropriate levels in certain specified subjects. In addition, in New South Wales the Department of Technical Education conducts the Certificate Entrance Examination, a pass in which qualifies a student for attendance at a technical college. Courses are offered in subjects such as accountancy, electrical fitting and mechanics, wool classing, and architectural drafting.

**Diploma courses**

Diploma courses are designed to provide professional training in fields such as architecture, art, building, commerce, management, public administration, manual arts, the various branches of engineering and metallurgy, and pure and applied science. They usually follow completion of a full secondary school course. The courses consist of complete progressive units of study in which the lecture room, laboratory and workshop are closely associated. They vary from three to five years full-time and from three to seven years part-time study. At least one full year of employment in an appropriate occupation is usually required. The aim of the courses is to develop highly trained technologists with the qualifications and experience required for membership of a professional institution.

While quite separate and distinct from a university course, a diploma course covers much the same ground as the early years of a university course. A diplomate who has matriculated is likely to be granted substantial exemptions in a related university course.

**Other technical courses**

Most colleges provide short post-diploma and refresher courses to keep students in touch with new developments in their fields, as well as courses of general interest, such as handicrafts and motor mechanics. Training in certain technical aspects of agriculture such as farm mechanics and wool classing is often given in the technical colleges. Some also offer general secondary courses to enable adults to prepare for matriculation and other public examinations.

**Technical correspondence teaching**

Each State has a well developed system of technical education by correspondence to extend the facilities of a metropolitan college to rural students. Entrance qualifications are identical with those for the regular classes. A major problem of correspondence work is the linking of theory with practice. This is overcome to a certain extent by holding practical sessions at appropriate training centres once or twice a year at the technical college where the correspondence school is based, or at a mobile workshop stationed for the time at a focal point within the district. In New South Wales these mobile workshops are rail cars equipped with machinery and fittings to make them self-contained training schools for engineering and other trades. Among practical courses offered by correspondence are trade drawing, fitting and machinery, welding, diesel engine operation, automotive engineering and workshop practice, and farm mechanics.

**Technical colleges, teachers and students**

The numbers of colleges, teachers and enrolments during the years 1961 to 1965 are given in the following table.

**TECHNICAL EDUCATION: COLLEGES, TEACHERS AND ENROLMENTS  
STATES AND TERRITORIES, 1961 TO 1965**

(a) Students enrolled represent gross enrolments, no allowance having been made for students enrolled in more than one course. (b) Includes Australian Capital Territory. Gross enrolments at Canberra Technical College were as follows: 1961, 1,889; 1962, 2,431; 1963, 2,895; 1964, 3,551; 1965, 4,267. (c) Figures include teachers and students at technical colleges and at other centres, such as high school classrooms, in which technical classes are conducted. (d) Includes correspondence course teachers and students. (e) Teachers include those at both senior and junior technical colleges. Revised figures exclude technical studentship holders. Student instructors are now shown as part-time teachers instead of full-time. (f) Student enrolment figures for 1965 are not comparable with those shown for earlier years. The census of students is now conducted in May instead of August and hence includes students taking short courses offered in the first term only, and students who discontinue their courses after the first term. (g) The figures for 1965 reflect the major reorganisation of technical education introduced at the beginning of the year. In addition to the establishment of the Institute of Technology, entry standards were raised, and the minimum number of students required to commence classes was also raised. (h) Excludes correspondence teachers and students. (i) Total students includes students enrolled in correspondence courses. Teacher figures include correspondence course teachers. (j) Teachers represent number of teaching positions.

**Training of technical instructors**

Prior to the 1939-45 War technical colleges were staffed chiefly by trained teachers in the employment of the Education Departments or technicians drawn from industry. Although some of the latter were highly qualified, the great majority had not been trained as teachers.

To preserve links with industry and trade practice, schemes have been developed which continue the recruitment of specialist tradesmen as instructors but provide also for their training in educational method and teaching techniques. In Victoria the Technical Teachers' College provides training for students with appropriate diploma or trade qualifications and suitable industrial experience. In New South Wales technical college lecturers and tradesmen-instructors receive an in-service course of teacher training in general educational theory and teaching method, while correspondence courses and visiting lecturers assist the newly appointed tradesman-instructor in country colleges. Variations of this scheme are in operation in other States. Many technical teachers, principally of academic, commercial and domestic science subjects, hold trained teachers certificates from teachers colleges.

### Government expenditure on schools and technical education

The following tables show particulars of the total net expenditure (i.e. gross expenditure less receipts for services rendered) from certain funds on government schools, education departments and technical education. The data have been compiled on the same basis as far as differences in organisation and accounting methods between States and Territories will permit. The tables include only expenditure from the consolidated revenue funds and certain trust or special funds. They exclude loan fund expenditure; expenditure on debt charges, pay-roll tax and superannuation payments, in so far as it is possible to identify these items; and some items for which information cannot be obtained from the public accounts of all States.

#### Government schools' and education departments' expenditure

The figures relate throughout to years ended 30 June. Net expenditure per pupil relates the total net expenditure to the mean of the numbers of pupils enrolled at government schools at two consecutive school censuses. Net expenditure per head of population relates the total net expenditure to the mean population.

(a) Figures include expenditure on adult education which amounted to \$1,398 in 1961-62, \$2,148 in 1962-63, \$916 in 1963-64, \$1,092 in 1964-65, and \$887 in 1965-66.

The following table shows, for the six States, the net expenditure on government schools and education departments classified into the following headings: primary education, secondary education, administration, transportation of school children and students, and training of teachers. Expenditure on technical and agricultural education is excluded from the tables.

It has been necessary to estimate some items of expenditure, largely because the meanings of 'primary' and 'secondary' differ between States and because elementary and higher educations are sometimes given in the same school by the same teachers. Expenditure on government schools in the Northern Territory and Australian Capital Territory is not included in the following table because the detail is not available.

**Non-government schools' finance**

Most Roman Catholic parochial schools charge fees, but payment is not insisted on in the case of families who cannot afford it. At the majority of non-government secondary schools privately endowed scholarships are available in varying numbers, and reductions in fees are normally made for children of clergy or for two or more members of one family attending the same school. With these exceptions, pupils of non-government schools must pay fees.

Certain State scholarships and bursaries are tenable at approved non-government secondary schools. Since the establishment of educational systems by the State Governments, official policy has been largely against the provision of direct financial assistance to non-government schools. Most States, however, have come to assist non-government schools in approved building projects. This assistance takes the form of payment of interest charges on loans raised for the extension of teaching space. The eight undenominational grammar schools in Queensland receive a State subsidy. In 1956 the Commonwealth Government undertook to contribute to the interest payments on loans raised in order to build non-government secondary school accommodation in the Australian Capital Territory and the Northern Territory. As from 1964-65 the Commonwealth Government has provided assistance to non-government schools for the building and equipping of science laboratories (see page 598). In the Australian Capital Territory and the Northern Territory these grants were superseded, in November 1965, by a scheme, extended to cover kindergarten and primary schools, under which the Commonwealth Government contributes to interest payments on loans raised to finance new buildings, extensions and additions to buildings, and expenditure of a capital nature on teaching equipment, and repays the loans in equal annual instalments over a period of twenty years.

**Universities**

Students qualify for entrance to Australian universities by passing a matriculation examination in one of the States after five or six years of secondary education. Each university has its own regulations for matriculation, specifying the number and combination of subjects to be passed for admission. Students entering the universities have the choice of undergraduate study in various faculties. All universities provide also postgraduate courses of study. The Australian universities, with their faculties or schools, are listed below in the order of their foundation.

**University of Sydney, 1850, Sydney, New South Wales:** Agriculture, Architecture, Arts, Dentistry, Economics, Engineering, Law, Medicine, Science, Veterinary Science.

**University of Melbourne, 1853, Melbourne, Victoria:** Agriculture, Applied Science, Architecture, Arts, Dental Science, Economics and Commerce, Education, Engineering, Law, Medicine, Music, Science, Veterinary Science.

**University of Adelaide, 1874, Adelaide, South Australia:** Agricultural Science, Architecture and Town Planning, Arts, Dentistry, Economics, Engineering, Law, Medicine, Music, Science, Technology and Applied Science.

**University of Tasmania, 1890, Hobart, Tasmania:** Agricultural Science, Arts, Commerce, Education, Engineering, Law, Medicine, Science.

**University of Queensland, 1909, Brisbane, Queensland:** Agriculture, Architecture, Arts, Commerce and Economics, Dentistry, Education, Engineering, Law, Medicine, Science, Veterinary Science.

**University of Western Australia, 1912, Perth, Western Australia:** Agriculture, Architecture, Arts, Dental Science, Economics and Commerce, Education, Engineering, Law, Medicine, Science.

**Australian National University**, 1946, Canberra, Australian Capital Territory: Institute of Advanced Studies—John Curtin School of Medical Research, Research School of Physical Sciences, Research School of Social Sciences, Research School of Pacific Studies; School of General Studies (formerly Canberra University College, established in 1930)—Arts, Economics, Law, Oriental Studies, Science.

**University of New England**, 1954 (formerly New England University College, established in 1938), Armidale, New South Wales: Agricultural Economics, Arts, Economics, Rural Science, Science.

**University of New South Wales**, 1958 (formerly the New South Wales University of Technology, established in 1948), Sydney, New South Wales: Applied Science, Architecture, Arts, Commerce, Engineering, Medicine, Science.

**Monash University**, 1958, Melbourne, Victoria: Arts, Economics and Politics, Education, Engineering, Law, Medicine, Science.

**University of Newcastle**, 1965 (formerly Newcastle University College, established in 1951), Newcastle, New South Wales: Applied Science, Architecture, Arts, Commerce, Engineering, Science.

**Flinders University of South Australia**, 1966, Bedford Park, South Australia: Language and Literature, Social Sciences, Physical Sciences, Biological Sciences.

**La Trobe University**, 1967, Bundoora, Victoria: Biological Sciences. Humanities, Physical Sciences, Social Sciences.

**Macquarie University**, 1967, North Ryde, New South Wales: Behavioural Sciences, Biological Sciences, Chemistry, Earth Sciences, Economic and Financial Studies, Education, English Studies, Historical, Philosophical and Political Studies, Mathematics and Physics, Modern Languages.

Each of the universities was established by a parliamentary Act as an autonomous institution, with its own Governing Council or Senate. Nevertheless, the Australian universities receive substantial government support from both State and Commonwealth sources, only part of their income being derived from students' fees, private donations and bequests.

There are also two university colleges. Townsville University College, founded in 1961, is a part of the University of Queensland. It offers some courses in the faculties of Agriculture, Arts, Commerce and Economics, Dentistry, Education, Engineering, Law, Medicine, Science, and Veterinary Science. Wollongong University College was opened in 1962 and is affiliated with the University of New South Wales. It offers some courses in the faculties of Arts, Commerce, Engineering, and Science.

### Organisation of courses

Bachelor degree courses are from three to six years in length, depending on the faculty, and for the majority full-time attendance is required. Certain courses, however, may also be undertaken by part-time or evening students. The university academic year begins in March and finishes in early December. At most universities two short vacation periods divide the year into three terms, but there are four terms in some universities.

Several universities make provision for external tuition, whereby students living away from university towns may take a restricted number of courses by correspondence. The University of Queensland has developed a system of correspondence tuition which now caters not only for students within the State but also for those in the Northern Territory, Papua and New Guinea, adjacent Pacific islands, and Asian countries. External students living in Queensland receive tutorial assistance at university centres in the principal country towns.

The University of New England's Department of External Studies offers a wide range of subjects for external study, leading to the degrees of Bachelor of Arts, Bachelor of Letters, Bachelor of Education, the Diploma in Education, and the Diploma in Educational Administration. External students must attend short annual residential schools of instruction in their subjects, usually held at the university.

Post-graduate courses leading either to a Master's degree or to a Doctorate are available at all universities. Facilities cover the humanities, social sciences and pure and applied sciences. Additional courses are constantly being introduced by the universities at both the undergraduate and the post-graduate level to cover new fields of knowledge and specialisation. Among announcements of new courses made in 1966 were: at the University of Sydney, Bachelor of Social Studies; at the University of New South Wales, Diploma in Education and Master of Education; at Monash University a Faculty of Education was established; and at the University of Western Australia a Faculty of Architecture was established.

### Research

A wide range of research work and training in research techniques is carried out by the universities as part of their normal functions. Post-graduate students and members of university staff are engaged in research, both as part of their work for post-graduate degrees and also as part of group and departmental research programmes. Support for research in universities is derived from public and private sources, including funds and foundations established to encourage research in a particular field.

### University expansion and development

Since the 1939-45 War the Australian universities have had to face greatly increased demands on their facilities, firstly from large numbers of ex-service personnel in the immediate post-war years and later from greatly increased numbers of students leaving secondary schools each year. By 1966 the total enrolments in Australian universities had reached a figure of 91,272, compared with an early post-war peak of 32,453 in 1948.

To assist the universities to cope with these demands, increasing co-operation between the Commonwealth Government and the State Governments in university finance became necessary. The Commonwealth Government set up a Committee on Australian Universities, whose 1957 report ('The Murray Report') led to more finance becoming available to universities and to the setting up of a permanent body, the Australian Universities Commission, to advise the Commonwealth Government on university development. In the years since the Murray Report the following major developments have taken place in the Australian university structure: the University of New South Wales was created from the earlier University of Technology in 1958; in the same year Monash University was established in Victoria; in 1960 the Australian National University was reconstituted, combining both undergraduate and post-graduate facilities, and now consists of the Institute of Advanced Studies and the School of General Studies created from the Canberra University College; the University of Queensland set up the University College of Townsville in 1961; the University of New South Wales established the Wollongong University College in 1962; in 1965 the University of Newcastle was created from the Newcastle University College; in 1966 the University of Adelaide at Bedford Park became The Flinders University of South Australia; and in 1967 Macquarie University and La Trobe University were established in New South Wales and Victoria respectively.

The Queensland Government is proceeding with plans for the construction of a third university institution at Mount Gravatt. It is expected that the campus will be established within the next four years as a satellite of the University of Queensland.

Despite their expansion, the Australian universities are still faced with a problem in providing tuition for all students who reach matriculation standard and wish to take up university courses. As a result, several universities have found it necessary to impose quotas on enrolments in their courses.

### University teaching and research staff

The following tables show particulars of the teaching and research staff of the universities during 1966 and earlier years.

**UNIVERSITIES: TEACHING AND RESEARCH STAFF(a), 1966**

**Assistance to university students**

The Commonwealth Government, through the Commonwealth Scholarships Board, grants undergraduate and post-graduate scholarships to university students. (Details of the Commonwealth Scholarship Scheme are given on page 623.) Commonwealth, State and local governments also award cadetships and other assistance to their employees. Foreign students are assisted by the Commonwealth Government under arrangements such as the Colombo Plan. The Universities themselves grant exhibitions and scholarships as well as special assistance to teachers, etc.

The following tables give details of students assisted at universities in 1966 and earlier years.

**UNIVERSITIES: ASSISTED STUDENTS, 1966**

University	Source of assistance					Type of course

**Resident university students**

In 1966, 7,720 full-time and 225 part-time students were in residence at affiliated colleges, halls of residence and university hostels. The 7,945 students in residence were distributed as follows: Australian National University, 815; Sydney, 984; New South Wales, 428; New England, 1,152; Melbourne, 1,593; Monash, 331; Queensland, 1,378; Adelaide, 382; Flinders, 24; Western Australia, 570; and Tasmania, 288. There were 5,831 male students and 2,114 female students in residence.

**University degrees conferred, etc.**

The following table shows the numbers of degrees conferred and diplomas and certificates granted for males and females separately at each university during the year ended 31 July 1966.

**UNIVERSITIES: DEGREES CONFERRED, AND DIPLOMAS AND CERTIFICATES GRANTED, YEAR ENDED 31 JULY 1966**

## University finance

Australian universities are incorporated by statute. Since their establishment they have come to depend greatly on government grants for their income. In recent years large amounts have been required for new buildings, as well as for current expenditure to provide staff and equipment to cope with increased student enrolments. In 1965 income from other than State and Commonwealth grants, including student fees, amounted to just over one-fifth of the total income. Income from non-government sources includes grants, mainly for research purposes, from businesses, international foundations and private individuals. Some income is also received from endowments.

## Financial assistance to universities from the Commonwealth Government

Prior to 1939 Commonwealth assistance was almost entirely concerned with research projects carried out by or in collaboration with the universities. During and since the 1939–45 War the Commonwealth extended assistance to university students, at first to increase the number of highly trained people required for the war effort, then with the object of rehabilitating ex-service-men, and finally as a social service benefit to the community. For the purpose of reconstruction training the Commonwealth Government made available to the universities approximately \$2 million for buildings and \$1 million for equipment.

Following a report submitted by a committee of inquiry appointed to report on university finances and requirements, the Commonwealth, since 1951, has made matched grants to the States for recurrent expenditure on university purposes and unmatched grants for university halls of residence and affiliated residential colleges. Since 1958 the Commonwealth has also assisted with the capital needs of the universities for building projects and for equipment, and grants for the building programmes of residential colleges affiliated with universities, including university halls of residence. In the 1961–63 triennium the Commonwealth matched State grants for buildings at teaching hospitals and in 1960 instituted grants for research at universities. As well as making grants available for State universities, the Commonwealth has continued to support the university institutions for which it is responsible.

In 1959, following the Report of the Committee on Australian Universities, the Commonwealth Government established the Australian Universities Commission under the *Australian Universities Commission Act 1959*. The Commission's principal functions are to advise the Prime Minister on financial assistance to Commonwealth universities and to States in relation to their universities and also on the balanced development of Australian universities. The Commission

commenced its work in July 1959. Since its establishment the Commission has produced three reports; the first, presented in October 1960 and covering the years 1961 to 1963, recommended Commonwealth grants totalling \$86 million for State universities. The Commission later recommended a Commonwealth grant of \$4 million for teaching hospitals. *The States Grants (Universities) Act 1960-1964* gave effect to the financial recommendations contained in the Commission's first report and subsequent recommendations for 1961-63. The Commission's second report was presented in August 1963, and recommended Commonwealth grants totalling more than \$121 million for State universities, subsequently increased by \$3.4 million for teaching hospitals, for the period 1964 to 1966. The *Universities (Financial Assistance) Act 1963-1966* gave effect to the financial recommendations contained in the Commission's second report and subsequent recommendations for 1964-66. In August 1966 the third report was presented. It recommended Commonwealth grants to the State universities of almost \$200 million for the period 1967-69, including almost \$6 million for teaching hospitals. The Commonwealth Government's grant, including \$5.7 million for teaching hospitals, was fixed at \$174 million. The Act giving effect to these grants is the *Universities (Financial Assistance) Act 1966*.

*Commonwealth grant for recurrent expenditure in universities.* This is a continuation of matched grants provided since 1951. The maximum amounts available in 1964 to 1969 are shown in the following table. These amounts have been adjusted to allow for the recommendations of the Report of the Inquiry into Academic Salaries by Mr Justice Eggleston in 1964.

(a) Includes grants for the university colleges at Wollongong and Broken Hill and, for 1964, the University College of Newcastle which became the University of Newcastle as from 1 January 1965. (b) In 1967-69 Commonwealth grants will be made through the Commonwealth Advisory Committee on Advanced Education.

Since 1961 matched grants have been made on a basis of \$1 by the Commonwealth for every \$1.85 of income received by a university from fees and State grants. From 1951 to 1960 the ratio was, in general, \$1 to \$3.

*Commonwealth grants for the teaching and administrative costs of halls of residence and residential colleges.* From 1964 the grants consist of unmatched Commonwealth payments each year of \$5,000 (previously \$4,000) to each college affiliated with or administered by a university, plus the sum of \$30 for each resident student, and a further \$10 for each non-resident student receiving tutorial assistance. The total Commonwealth grant paid in 1966 was \$512,390. In the period 1967 to 1969 the basic grant for affiliated residential colleges will be varied according to the size of the colleges. Colleges with fewer than 100 students will continue to receive \$5,000 per annum, while colleges enrolling 100, 120, 140, 160 and 180 students will receive extra grants in increments of \$500 up to a maximum grant of \$7,500 for a college of 180 or more students. For university halls of residence a Commonwealth grant of \$5,000 per annum is payable without variation for the number of students.

*Commonwealth grants for recurrent expenditure in university teaching hospitals.* Since 1965 the Commonwealth Government has supported recurrent expenditure at teaching hospitals affiliated with universities. During 1966 the Commission held discussions concerning capital and recurrent grants for the 1967-69 triennium with the eight universities having medical schools.

The Commonwealth Government's support for recurrent grants in 1967 to 1969 relates to three items of expenditure. These are maintenance and service costs incurred on behalf of clinical students, administrative costs involved in clinical teaching, and books for students at libraries of teaching hospitals. The table below sets out the Commonwealth recurrent grants for teaching hospitals for 1965 and 1966 and those approved for each year of the 1967-69 triennium.

**STATE UNIVERSITIES: MAXIMUM COMMONWEALTH GRANTS FOR

The basis of these grants is \$1 from the Commonwealth for every \$1.85 of income received by a university from fees and State grants for these purposes.

*Commonwealth grants for building projects in universities.* These grants, for the period 1967 to 1969, are shown in detail in the Second Schedule to the *Universities (Financial Assistance) Act* 1966. Payments are made up to a given maximum for each project, on the basis of \$1 from the Commonwealth for every \$1 of State grants. Since 1964 the grant, where appropriate, has included an allowance for furnishings and equipment. Previously, separate grants were provided for these items. Also, since 1964 the schedule showing grants for university building projects includes grants for university computing facilities, but grants for the erection and alteration of buildings for halls of residence administered by universities are shown elsewhere. The total Commonwealth grant under this heading for each University is shown in the following table.

*Commonwealth grants for buildings for halls of residence and affiliated residential colleges.* The *States Grants (Universities) Act 1963* shows the grant available to each university for both types of student residence in the Fourth Schedule. Previously, grants for buildings for university-administered halls of residence were included in the Schedule showing university building projects. Payments were made up to a given maximum for each project. For halls of residence the grant comprised \$1 from the Commonwealth for every \$1 of State grants. For affiliated residential colleges Commonwealth grants were up to half of the cost of a project, the other half being met from college or State government sources. For the 1964-66 triennium, however, payments were made up to a given maximum for each project on the basis of \$1 from the Commonwealth for every \$1 of residential college funds and State grants. This basis is to be continued for the 1967-69 triennium. The maximum Commonwealth grants available for each State university in this triennium are shown in the following table.

**STATE UNIVERSITIES; MAXIMUM

*Commonwealth grants for special research projects in universities.* A Commonwealth grant of \$1 million was made in the 1961-63 triennium for research equipment on the basis of \$1 from the Commonwealth for every \$1 of State grants. For the 1964-66 triennium the Australian Universities Commission recommended a Commonwealth grant for special research purposes of \$5 million for the State universities on the basis of \$1 from the Commonwealth for every \$1 of State grants. Of this amount a Commonwealth grant of \$3 million was allocated by the Commission in agreement with State governments. The remaining \$2 million was allocated by the Australian Research Grants Committee (*see* page 651) to individuals or research teams whether inside or outside universities. The maximum Commonwealth grant available to each university in the 1967-69 triennium is shown in the following table. The amount of these grants that will be paid by the Commonwealth will depend on agreement between the Commonwealth and States.

(a) Includes funds expended by various government departments and other bodies in respect of universities but not controlled by the universities. (b) In the case of endowments, only income from property and other investment of these endowments is included. The treatment of donations depends on the terms of the gift, etc. When the capital sum is specified to be expended over several years, only the portion of the capital sum allocated to each year is shown as income in that year, but if the capital sum is available for spending without limitation as to time, the full amount is recorded as income in the year it is received, irrespective of whether it is spent in that year or not. The capital value of land and buildings donated to the universities is not recorded as income, unless these properties are sold, in which case the amounts realised are included. (c) Excludes fees collected on behalf of student unions. (d) Income received specifically for new buildings, major alterations and additions to buildings, installation of services, purchase of land and buildings and major equipment.

(a) Included with the University of Adelaide.

## Other tertiary institutions

In addition to the degree-granting universities, various other institutions offer courses at tertiary level which may lead to a certificate, diploma or similar qualification. Included among these institutions are technical colleges, which have been described on pages 599–602.

## Colleges of advanced education

In 1966 the Commonwealth Government, acting on the advice of the Commonwealth Advisory Committee on Advanced Education, agreed to assist the States in the establishment of colleges of advanced education. It is envisaged that they will provide mainly tertiary education and training with vocational emphasis, as distinct from the academic education provided by

the universities. In some States, colleges of advanced education will be developed from existing technological institutions. In the Australian Capital Territory and Tasmania, separate colleges of advanced education are being established.

#### **Teachers colleges**

The State Education Departments conduct teachers' colleges to train teachers for government schools. There are eight colleges in New South Wales, thirteen in Victoria, four in South Australia, three in Western Australia, and two each in Queensland and Tasmania, making a total of thirty-two colleges. These colleges provide a variety of teacher training courses, including those for primary teachers, secondary teachers, and those specialising in teaching infants, handicapped children, art, music, and handicrafts. A description of the courses is given on pages 594-5. Teachers colleges are co-educational and, in the larger States, have been established in country areas as well as in cities. Students entering them have completed their secondary schooling and are usually about seventeen years of age. The principal and staff of the colleges are responsible to the Director of Education in the State concerned.

#### **Kindergarten training colleges**

The Kindergarten Unions in all States except Tasmania have established teacher training colleges providing three-year courses. The minimum entrance age is usually seventeen years and at least the Leaving Certificate or its equivalent is required for admission. In addition, in New South Wales the Sydney Day Nursery and Nursery Schools' Association maintains a training college.

The pre-school teacher training courses in these colleges are all full-time diploma courses and are similar in content and standards. Teachers are trained for work with children between the ages of two and seven years, and the training courses include the study of general educational theory, the theory of pre-school education, general cultural subjects, and art and crafts (including music). In addition, training is given in practical pre-school teaching.

#### **Agricultural colleges**

There are seven State agricultural colleges—Hawkesbury and Wagga (New South Wales), Longerenong and Dookie (Victoria), Lawes (Queensland), Roseworthy (South Australia), and Muresk (Western Australia), offering a comprehensive course of two or three years leading to the award of a Diploma in Agriculture or in a specialised field such as animal husbandry, dairy manufactures or horticulture. The School of Horticulture, Burnley, Victoria, also offers a three-year diploma course.

Agricultural colleges are government institutions administered by the State Departments of Agriculture in New South Wales, Victoria, South Australia, and Western Australia, and by the State Department of Education in Queensland. Their purpose is to teach the principles and practices of agriculture and its specialised branches to those intending to take up farming as a career and to those who propose to enter such occupations as agricultural field officer or technical officer in food processing industries.

The minimum entrance standard is the penultimate major secondary examination of the State concerned, except in Western Australia where it is the sub-leaving examination. As entry is competitive, there is a tendency for students to hold better than the minimum qualifications. All the colleges are fully residential and the minimum age at which students may enter them varies from fifteen to seventeen years, depending on the college and the type of course.

In addition to their formal courses of training, agricultural colleges offer short courses of from three days to one month to farmers and teachers in country districts.

#### **Schools of forestry**

Since 1965 tertiary training in forestry, previously carried out by the Australian Forestry School, Canberra, has been provided by a Department of Forestry in the Faculty of Science within the Australian National University's School of General Studies. A four-year degree course is offered. Training in forestry is also carried out at the Creswick School of Forestry in Victoria.

#### **Conservatoria of music**

There are conservatoria of music in five States. Those in Victoria and South Australia are attached to the Universities of Melbourne and Adelaide respectively. The New South Wales State Conservatorium, the Queensland State Conservatorium and the Tasmanian Conservatorium are controlled by the respective Departments of Education. All five conservatoria offer diploma courses for entry to which matriculation status is not required; at Sydney, Melbourne, Adelaide, and Western Australia degree courses are also available to matriculated students.

The Canberra School of Music, established in July 1965, is administered by the Department of the Interior. In 1967 a three-year full-time diploma course consisting of both practical and theoretical studies is being offered for the first time.

### Service and administrative colleges

Each of the three armed services maintains institutions for the training of officers. Descriptions of these can be found in the chapter Defence. The Royal Military College, Duntroon, Australian Capital Territory, has arrangements with universities whereby its graduates may enter university courses at an advanced stage. The Royal Air Force Academy, Point Cook, Victoria, has evolved from the Royal Australian Air Force College, which was established in 1948 as a tertiary training centre to provide a professional education for permanent officers of the Air Force. It is affiliated with the University of Melbourne and has adopted that University's Bachelor of Science course. The Academy is also permitted to present students for higher degrees in science and the degree of Doctor of Philosophy. Students may also proceed to the University of Sydney to take a degree in engineering.

The Australian School of Pacific Administration, controlled by the Department of Territories, trains students in the various aspects of service and administration in Commonwealth Territories, including teaching.

### Australian Administrative Staff College

Opened in 1957, the Australian Administrative Staff College is a private organisation working in close co-operation with government and other public bodies, the armed services and the trade union movement. It was founded, and is owned, by a large group of leading Australian companies and has its permanent premises at Mount Eliza, near Melbourne. The College conducts residential courses for administrators to further the study of the problems which arise in managerial work.

## Commonwealth activities in education

### Fields of activity

Although education is primarily the responsibility of the States, the Commonwealth has instituted a number of measures of direct assistance to educational institutions and to students. It is responsible for public education in its own Territories and is engaged in educational activities incidental to its responsibilities in such areas as defence, external relations, immigration and social services. Activities of the Commonwealth in education are not administered by a single authority but are divided among a number of departments and instrumentalities. Education in Commonwealth Territories is described in the chapter The Territories of Australia; various schools and colleges for the defence services are treated in the chapter Defence; and other activities which may be considered broadly as educational are described in the section on Broadcasting and Television and elsewhere in the chapter Transport, Communication and Travel.

### Department of Education and Science

A new Commonwealth Department known as the Department of Education and Science was created in December 1966. The new Department, which has absorbed the former Education Division of the Prime Minister's Department including the Commonwealth Office of Education, is concerned with grants for educational purposes, e.g. for universities, colleges of advanced education, technical schools, and science buildings, as well as with the new grants for building teachers colleges. It is responsible for assistance to students for the scheme of Queen Elizabeth II Fellowships and for special scholarships offered by overseas countries for Australians. Among the Department's responsibilities are matters in the field of international relations in education, including Unesco and Commonwealth Co-operation in Education, and liaison with State and other education bodies throughout Australia. The Department provides professional advice on education to other Commonwealth departments and authorities. It administers grants to such bodies as the Academy of Science, the Humanities Research Council, the Social Sciences Research Council, and the Institute of Aboriginal Studies, and is responsible for grants for scientific research such as those recommended by the Australian Research Grants Committee.

The *Australian Universities Commission* and the *Commonwealth Advisory Committee on Advanced Education* are responsible to the Minister for Education and Science. The Minister is also responsible for the *Commonwealth Scientific and Industrial Research Organization*, the *National Standards Commission*, the *Australian National University*, and the *College of Advanced Education* to be established in Canberra. The Prime Minister's Department continues to be responsible for the National Library and for art, literature and other cultural activities in which the Commonwealth is interested.

### Commonwealth Scholarships Board

This Board, under its former title of the Universities Commission, was established by the *Education Act* 1945. Prior to 1945 the Commission had functioned under wartime National Security Regulations. The Board consists of a chairman, who is the Director of the Office of Education, and three other members. The main responsibilities of the Board at present are advising the Government on the policy and administration of Commonwealth university and advanced education scholarships and Commonwealth post-graduate awards. The Board

is responsible for arranging and supervising the training of ex-service personnel and war widows at university and university type institutions under the Korea and Malaya Training Scheme and the Disabled Members' and Widows' Training Scheme. It was also responsible for arranging and supervising training under the Commonwealth Reconstruction Training Scheme until its completion at the end of 1961.

#### **Advisory bodies**

The Commonwealth Government has established various advisory bodies whose fields of concern relate to matters of education. Already mentioned (pages 613-14) is the Australian Universities Commission, which advises the Commonwealth Government on university development. The Commonwealth Advisory Committee on Advanced Education advises the Minister on the balanced development of tertiary education outside universities. Within financial limits nominated by the Minister, the Committee recommends grants to the States for colleges of advanced education and directs grants to any such colleges established by the Commonwealth. The Australian Research Grants Committee advises the Minister on the merit of applications for research grants from individuals and research teams, and suggests the allocation of funds. The Queen Elizabeth II Fellowships Committee advises the Minister on the merit of applicants for these Fellowships, which are awarded for post-doctoral study in the physical and biological sciences, and advises generally on the administration of this scheme of Fellowships.

The Commonwealth Government appointed in 1965 a committee of inquiry into the need for a college of advanced education in the Australian Capital Territory. The committee's report was presented to Parliament in October 1966 and the Government accepted its recommendation that a college—to be known as the Canberra College of Advanced Education—should be established.

The report of the Advisory Committee on Educational Television appointed in 1964 by the Australian Broadcasting Commission was tabled in Parliament in May 1966.

#### **Assistance to students**

The Commonwealth Government provides financial assistance to students who are undergoing tertiary training through a number of scholarship schemes, all of which are administered by the Commonwealth Scholarships Board. The most extensive of these is the Commonwealth University Scholarship Scheme, under which 6,000 scholarships are offered annually to undergraduates at universities.

The majority of the undergraduate scholarships are open entrance awards allocated among the States on a population basis and awarded competitively on the results of examinations accepted for matriculation in each State. In addition, 2,000 later year awards are available to students who have completed one or more years of a course, and a small quota of mature age awards is reserved for persons not less than twenty-five years of age. The upper age limit of thirty, which up to 1967 was a condition of these awards, has been removed. All successful applicants have their fees paid. Scholarship holders may also be paid a living allowance subject to a means test. As from 1 January 1967 the maximum rates of allowance have been \$852.80 per annum for a scholar living away from home and \$559 per annum when living at home.

In addition to these awards the Commonwealth Government provides up to 1,000 scholarships each year for students taking approved courses of advanced education at institutions other than universities. Benefits are as for Commonwealth university scholarships.

In 1959 a scheme of Commonwealth post-graduate awards tenable at Australian universities was introduced, under which 100 awards were made available each year. The benefits comprise a living allowance without means test and payment of university fees. The possible number of post-graduate awards was increased to 225 from 1963, to 400 from 1965, and to 500 from 1967. The Commonwealth Government contribution towards the stipend in respect of each award was raised to \$1,800 per annum from 1 January 1964. Awards may be renewed annually up to a maximum period of four years.

The Commonwealth schemes of secondary and technical scholarships are referred to on page 598.

#### **International relations**

The Commonwealth has been actively involved in the considerable extension which has recently taken place in relations and exchanges with other countries in the field of education. A significant encouragement to this growth has been membership of Unesco, to which Australia has belonged since 1946 when the organisation was founded.

Twelve specialist Unesco committees in Australia are responsible for a wide and varied programme of activities. The Committees' projects include the organisation of Australian and regional seminars, information programmes, and the preparation and circulation of travelling

exhibitions which deal with subjects forming part of Unesco's programme. The Australian National Advisory Committee for Unesco co-ordinates the work of the specialist committees and advises the Commonwealth Government on Australian participation in Unesco.

With the co-operation of educational institutions, State Education Departments and other bodies, the Commonwealth has accepted increasing commitments in schemes of international assistance and co-operation. The Colombo Plan Technical Co-operation Scheme, the United Nations Expanded Programme of Technical Assistance, the Australian International Awards Scheme, the Australian South Pacific Technical Assistance Programme, and the Special Commonwealth African Assistance Plan are some of the programmes through which the Commonwealth Government is providing training for overseas students in Australia and is sending Australian experts and equipment to many of the newly developing countries, especially in Asia and Africa. Australia is also actively sharing with other Commonwealth countries in the scheme of Commonwealth Co-operation in Education which includes the Commonwealth Scholarship and Fellowship Plan. There were some 1,850 sponsored foreign students in Australian educational institutions at 30 June 1966, compared with about 800 in 1956. Over three-quarters of these were Colombo Plan trainees, most of whom were studying in various fields of engineering, science, medicine, education, and economics.

In 1964, by agreement between the United States and Australian Governments, the Australian-American Educational Foundation, financed jointly by the two Governments, was established to operate a scheme of educational exchanges between the United States and Australia. This new scheme has similar aims and purposes to the Fulbright Scheme which it replaces and which had operated wholly on American funds.

Support is given to Australian participation in many international governmental and non-governmental organisations. For example, Australian educationists have attended yearly meetings of the International Bureau of Education, and regular contributions are made to the Bureau's international surveys into various aspects of education. Assistance has been given to bodies such as the Australian Teachers' Federation in sending delegates to meetings of the World Confederation of Organisations of the Teaching Profession.

#### **Grants for other educational purposes**

The Commonwealth gives assistance to various educational schemes and institutions. Grants are made each year by the Commonwealth to the Australian Pre-school Association for the development of kindergarten education, to the Commonwealth National Fitness Council, to the Australian Council for Educational Research, to the Department of Adult Education at the University of Sydney for the publication of the *Current Affairs Bulletin*, and to assist in the provision of training in occupational therapy, physiotherapy and nursing.

#### **Migrant education**

The Commonwealth Government's post-war immigration policy has brought to Australia a large number of immigrants with little or no knowledge of English. To assist the assimilation of these newcomers into the Australian community, a system of migrant education has been developed to teach them English and to give them information about Australia. This service is provided free of charge to immigrants above school leaving age.

Before arriving in Australia settlers who do not speak English are given some instruction in English by shipboard education officers. Some may have attended classes in Europe organised by the Inter-governmental Committee for European Migration, with which the Australian Government co-operates. In Australia, evening classes are arranged by State Education Departments wherever nine or more migrants in country areas, or twelve or more migrants in city areas, wish to learn English. There is also available through State Education Departments a free correspondence course in English. In addition, English lessons are broadcast regularly by the Australian Broadcasting Commission. The Commonwealth Office of Education provides technical advice on all aspects of migrant education and is responsible for the preparation of teaching materials, while responsibility for the overall supervision of the programme rests with the Department of Immigration, which also meets the costs.

In November 1966, 12,000 migrants were enrolled in classes and 7,045 were enrolled in radio and correspondence courses. Since the inception of the programme in 1948 approximately 530,000 migrants have been enrolled for English tuition.

#### **Technical training by government departments**

Although most needs of departments for trained staff are met by apprenticeship schemes and other technical college courses and by the universities, some departments provide training which is not available elsewhere. The most important field for which such training is provided is the training of telephone, telegraph, radio, and television technicians by the Postmaster-General's Department.

### Adult education

The term 'adult education' as used in Australia refers mainly to non-vocational educational and cultural activities for adults. While the nature of the recognised adult education authorities varies from State to State, their major activities have many common features. Regular courses of lectures are organised on such topics as literature, music, drama, international affairs, languages, and crafts. Some authorities also organise discussion groups, festivals and summer schools, and provide special services for groups in remote areas. In 1960 an Australian Association of Adult Education was formed, and its first annual conference was held in Adelaide in 1961. The Association handles matters pertaining to adult education at a national level and arranges liaison with similar bodies in other countries.

One of the first bodies active in the field of adult education in Australia was the Workers' Educational Association, which formed associations in all States in 1913. Its aims are to bring the universities into closer relationship with the community in general and to provide for higher education in civic and cultural subjects. These associations have been superseded by Adult Education Boards or Councils set up by the State Governments in Victoria, Queensland and Tasmania, and by the University in Western Australia. In the other two States, New South Wales and South Australia, the associations continue to co-operate with the universities in their extension work and are given direct grants by the Governments concerned.

There are throughout Australia various other organisations which are active in the field of adult education. The World Education Fellowship, for example (*see* page 628), has since its inception in Australia been interested in adult education.

The organisation of adult education and some of the activities in each State are described in the following pages.

#### New South Wales

The majority of State Government grants for adult education are allocated on the advice of the Adult Education Advisory Board. Grants are made to the University of Sydney (Department of Adult Education), the Workers' Educational Association, the University of New England (Department of University Extension), the University of New South Wales (Division of Post-graduate Studies), the Public Library of New South Wales (Adult Education Section), and the World Education Fellowship. The Arts Council of Australia (New South Wales Division) receives its grant direct from the State Government.

*University of Sydney.* The work of the Department of Adult Education is carried out under the supervision of two Senate committees, namely the University Extension Board and the Joint Committee for Tutorial Classes. A third committee, the Consultative Committee on Adult Education, is convened upon request to clarify questions of policy.

The University Extension Board provides two forms of education—the extension of existing university education to the public in the form of lectures, or to graduates in the form of refresher courses; and the extension of academic education beyond the existing university curriculum by special courses or classes in subjects not provided by university departments. The Joint Committee for Tutorial Classes works in conjunction with the Workers' Educational Association. Its activities include the provision of tutorial classes in a wide variety of subjects, discussion groups, and 'kits' to serve the needs of country districts and people who cannot be catered for by tutorial classes. It also publishes the fortnightly *Current Affairs Bulletin*.

*University of New South Wales.* The Division of Post-graduate Studies was formed in 1961 and is largely financed by the Council of the University. Its major concern is to provide university courses of an academic nature through correspondence, radio and television. In addition, however, extension courses in the humanities, languages and child development are offered.

*University of New England.* The Department of University Extension at the University of New England brings university extension activities especially to the people of northern New South Wales and conducts lectures, discussions, courses, radio talks, and classes in arts and social sciences in towns throughout this region. Short residential courses are held on topics of interest to primary producers in the area. Vacation schools attract participants from many other areas as well.

*Workers' Educational Association.* In addition to co-operating with the University of Sydney Department of Adult Education, the Workers' Educational Association itself provides classes in a wide variety of fields. It publishes *The Australian Highway*, a bi-monthly journal of adult education, and maintains a property near Sydney where short residential schools are held through the year. The Association also organises educational conferences and public lecture series at frequent intervals.

*Public Library of New South Wales.* The Public Library of New South Wales Adult Education section provides an adult education library service for all classes and groups conducted by the bodies mentioned above, with the exception of the University of New South Wales Division of Postgraduate and Extension Studies.

*New South Wales Department of Education.* The New South Wales Department of Education has established evening colleges consisting of classes held in school buildings and staffed largely by departmental teachers. Such colleges provide a wide range of educational, cultural and leisure activities for adolescents and adults, and at some there are facilities enabling adults to prepare for public examinations.

*Arts Council of Australia.* Adult education of a more informal kind is provided by the New South Wales Division of the Arts Council of Australia, which maintains a mobile theatre unit and organises touring ballet, opera and drama companies to country towns.

### Victoria

The Council of Adult Education is a government instrumentality established by the *Adult Education Act* 1946. Its aims are to stimulate adult education in Victoria and to encourage voluntary organisations and associations by giving them advice and assistance. Its activities include a variety of classes, usually consisting of ten to twenty sessions, on topics ranging from social studies, psychology, language, and literature to crafts, music and drama. Four separate non-residential schools are held in the Melbourne area. The Council publishes a monthly newsletter *Group Affairs* and a quarterly journal *Adult Education*. Its group service assists and provides programme material for discussion groups formed by organisations and individuals throughout the State. An important development is the extension of the Council's activities, including classes and discussion groups, to the prisons, as part of a general plan for penal reform in Victoria. The Council's income is derived mainly from a government grant, but also from student fees and Community Arts Service performances.

The Adult Education Association is a financially self-supporting voluntary association. Groups, generally consisting of students of Council classes, are formed and organise their own programmes.

The University of Melbourne Extension Committee arranges free public lectures and organises classes for matriculation students on points of interest in their studies.

The Victorian Education Department arranges classes in commercial subjects, arts and crafts, and shorthand and typing. Evening classes in leaving and matriculation subjects are also offered. A recent innovation is the establishment of the Wangaratta Centre, where the financial responsibility for the running of activities is in the hands of a local committee.

The Y.W.C.A. runs courses in physical education, languages, crafts and manual skills.

### Queensland

The Queensland Board of Adult Education was constituted in 1944 and is responsible under the Minister for Education for the provision of adult education facilities throughout the State. Under the executive officer of the Board are seven district officers, one based in Brisbane and six in large country towns, who are responsible for organising activities in country areas. The cost of the programme is borne by the State Government and admission to all courses is free. Activities include lectures, group meetings on a variety of topics, generally short-term, but some extending over a full year, and film screenings. Library and film services are provided. A Public Lecture Committee established by the University of Queensland is responsible for organising public lectures by local speakers and distinguished visitors to the university. Through the Institute of Modern Languages the university provides facilities for the study of modern languages by members of the general public.

The Queensland Division of the Arts Council of Australia sponsors and organises lectures, film screenings, exhibitions, drama festivals, and professional performances.

### South Australia

Since 1917 the University of Adelaide, through the Joint Committee for Tutorial Classes, has provided in the metropolitan area a series of tutorial classes, lecture classes and study circles on a wide range of subjects of cultural and current interest, in co-operation with the Workers' Educational Association of South Australia. In 1957 a Department of Adult Education was established in the university and a full-time Director appointed. A wide range of university extension courses and educational conferences, summer schools and seminars, including a number dealing with subjects at post-graduate level, are organised directly by the university. The Workers' Educational Association of South Australia, in addition, carries on an independent educational programme of classes, schools, exhibitions, and film festivals.

The State Education Department also arranges an extensive programme of educational activities for adults. In addition to classes in academic and craft subjects, the Department's adult education centres offer a wide range of leisure interests and cultural subjects.

The Arts Council of Australia (South Australian Division) organises adult education activities in the liberal arts.

### Western Australia

Adult education in Western Australia is organised by the Adult Education Board established in 1928 under the terms of the statutes of the University of Western Australia. The Board has a considerable degree of autonomy. Its executive officer is the Director of Adult Education. In the metropolitan area the Board conducts classes, refresher courses and short schools, conferences, seminars, and public lectures, and maintains a library. The Board's country work operates mainly through a box library scheme for discussion groups. Lecture tours and week-end schools are held, and local adult education is encouraged through local committees. Metropolitan work and country work are drawn together in an annual summer school. The Board also operates a community arts service and arranges screenings of foreign films. Regional drama festivals and music festivals are arranged, culminating in the annual Festival of Perth, inaugurated and administered by the Board.

### Tasmania

Some form of adult education has existed since the formation in 1913 of a Workers' Educational Association, which worked in conjunction with the University of Tasmania for a number of years. The Association received a grant through the university, which had a Director of Tutorial Classes. Later, the grant was paid direct to the Association by the Government, and the university's tutorial department ceased to exist. The Adult Education Board, established under the *Adult Education Act* 1948, organises classes on a wide range of subjects. The Board sponsors special lectures, film screenings and art exhibitions, recitals of music, and dramatic performances in both city and country areas. Its income is derived from a State Government grant and from students' fees. The executive officer of the Board is the Director of Adult Education. Activities are organised on a regional basis by organisers based in Hobart, Launceston and three large country centres.

The Arts Council of Australia (Tasmanian Division), which works in close contact with the Adult Education Board, organises exhibitions, concerts and public performances.

### Australian Capital Territory

The School of General Studies of the Australian National University has organised classes and discussion groups through its Adult Education Department since 1959. The Arts Council of Australia (A.C.T. Division) organises cultural activities of general community interest. The New South Wales Department of Education Evening College courses are offered at the Canberra High School Evening College.

## Overseas students in Australian educational institutions

The development of closer ties in education between Australia and other countries and the demand for education in many countries in Asia, Africa and the Pacific have brought about a remarkable growth in the number of overseas students who come to Australia to further their education. Part of the growth and much of the awareness of the facilities available may be attributed directly to the schemes mentioned on pages 623-4. Since 1955, when there were about 3,500 overseas students in Australia, the number has increased to some 14,000 in 1966. More than half attend institutions of higher education such as universities and technical colleges. Between 1955 and 1966 the numbers of foreign students in institutions of higher education had risen from about 1,800 to 7,300, most of whom came from Asian countries. Australian institutions have shown a readiness to accept overseas students, and in many cases special provisions have been made to suit their needs. Nevertheless, population growth and the demand for education, especially for higher education, within Australia have forced many institutions to restrict the admission of overseas students in common with Australian students.

## Organisations associated with education

### Australian Council for Educational Research

The Australian Council for Educational Research, a non-governmental body, is engaged on educational research in a wide variety of fields, ranging from tertiary to pre-school education. It conducts surveys and inquiries, makes grants to approved educational investigators, serves as a centre for disseminating educational information, provides training for research workers, and standardises and distributes educational and psychological tests for use in Australia. Although this council is an autonomous body, the Commonwealth and State Governments give substantial financial support.

### World Education Fellowship

The World Education Fellowship, formerly known as the New Education Fellowship, is a world organisation of parents, educators and other citizens interested in the development of new educational practices. It was founded in London in 1915 and spread to Australia at the time of a regional conference held here in 1937. There are now sections in each State. Its Australia-wide journal *New Horizons in Education* is published twice a year. A major conference of the world organisation was held in Australia in 1962, during which prominent educationists from Australia and overseas met in all States.

### Australian College of Education

The Australian College of Education was formed in 1959. Its aim is to bring together leading teachers and administrators in every field of education, to raise the standard of the profession of education in Australia, to establish and proclaim fundamental educational values, and to recognise outstanding contributions to educational practice. Chapters of the College have been set up in all States, and several of the addresses and papers delivered at meetings of the College have been issued in published form.

### Parent and citizen organisations

In Australia, where all government schools are administered by central departments, there is limited opportunity for local participation in education. Public interest is expressed through parents' committees or organisations of parents and other citizens interested in supporting their local school. The Education Acts of all States provide for the formation of groups of this type, whose aims are to promote an interest in the school by bringing parents and teaching staff together, to help provide supplementary teaching aids and recreation materials, to foster the regular attendance of children at school, and to help find accommodation for teachers. In several States the general maintenance of school buildings, equipment and grounds is a statutory responsibility of the parent groups, costs being covered by government grants. Lunch canteen services at local schools are maintained by groups in some States. Parent groups have established school children's insurance schemes, operated through State Government insurance offices or private insurance companies. These schemes cover accidents to children which occur between the time of leaving home for school and returning home by the usual direct route.

State-wide councils or federations of parents' groups are associated in a federal body, the Australian Council of School Organisations.

## CULTURAL ACTIVITIES

### Libraries

The Munn-Pitt report of 1935 greatly stimulated interest in libraries and librarianship throughout Australia. This is seen in the rapid development of libraries, the passing of legislation in all States to increase library services, and the establishment in 1937 of the Australian Institute of Librarians to improve the standard of librarianship. This body was reconstituted in 1949 as the Library Association of Australia and incorporated by Royal Charter in 1963, and its functions now include the promotion and improvement of libraries and library services. The Association conducts annual examinations in all States, for which students are prepared by courses of instruction. Formal library schools are conducted by the National Library of Australia, Canberra, the Library Board of New South Wales (held at Newcastle Public Library), and the State Library of Victoria, Melbourne. In 1960 the first library school to be attached to an Australian University was opened in the University of New South Wales, and the Royal Melbourne Institute of Technology set up a library school in 1963.

### Commonwealth libraries

*National Library of Australia.* This Library grew directly from the Library of the Commonwealth Parliament established in Melbourne in 1901, the Committee of which soon afterwards announced its intention of developing a library patterned on the Library of Congress at Washington, U.S.A., capable of serving purposes beyond those essential to the Parliament itself, appropriate to a national library and on a national scale. This policy was steadily pursued, so that, in addition to its primary function of serving Parliament, it gradually became a central source of information for the Government and its departments and other agencies, and assumed increasing reference and bibliographical responsibilities in relation to scholarship and research in Australia and abroad. It was also influenced by the basic elements of the national library concept of the older countries of Europe: namely, that a national library is the proper place to

collect the national literature systematically and to make it known and available for use, and that it is a place to which scholars may turn for what is most significant in the literature of other countries. For these growing extra-Parliamentary activities the Parliamentary Library Committee, in 1923, adopted the title of Commonwealth National Library.

In 1957 a committee appointed to examine the future control and functions of the Commonwealth National Library recommended its establishment as the National Library of Australia, separate from the Parliamentary Library, with wide functions and controlled by a board subject to a Minister; the transfer, as a separate agency to an appropriate department, of its Archives Division, which constituted the Commonwealth's agency for the custody and organisation of departmental records of permanent value which need no longer be held within departmental offices; and that the Parliamentary Library be a separate library under separate Parliamentary control. Continuing co-operation, where possible, between the two libraries was also proposed.

Effect was given to these recommendations by the *National Library Act* 1960, which created the National Library of Australia as a body corporate under the control of a Council of nine members, of whom one is a Senator elected by the Senate, one a member of the House of Representatives elected by that House, and seven appointed by the Governor-General. Its functions are: to maintain and develop a national collection of library material, including a comprehensive collection relating to Australia and the Australian people; to make the national collection available to such persons and institutions in such manner and subject to such conditions as the Council determines with a view to its most advantageous use in the national interest; to make available such other services in relation to library matters and material, including bibliographical services, as the Council thinks fit, particularly for the purposes of the library of the Parliament, the Departments and authorities of the Commonwealth, and the Territories of the Commonwealth; and to co-operate in library matters (including the advancement of library science) with authorities or persons, whether in Australia or elsewhere.

The National Library comprehensively collects and preserves Australian books, periodicals, newspapers, government publications, pictures, prints, manuscripts, maps, moving picture films, and sound recordings. It is assisted in this by the deposit provisions of the *Copyright Act* 1912-1966 and has also been enriched by the acquisition of such notable collections as the Petherick collection of 16,500 items in 1911, the Cook manuscripts in 1923, the Cumpston collection on Public Health in Australia in 1936, the Mathews Ornithological collection in 1940, the Nan Kivell collection of 16,000 items of Australian and Pacific interest including original paintings, prints, manuscripts, and printed material in 1959, the David Nichol Smith collection of 18th century English literature in 1962, the Clifford Family collection in 1964, and the Ferguson collection which is still under transfer. A feature of the Library's Australian work is the copying on microfilm, in association with the Public Library of New South Wales, of all important unique material overseas relating to Australia, including over three million pages in the Public Record Office in London. Compilation of a Guide to Collections of Manuscripts Relating to Australia began in 1964. The Library maintains a permanent exhibition of selected paintings, prints and other historical material from its collections. This exhibition is displayed in Parliament House, Canberra.

The Library publicises Australian publications, both at home and abroad, through select lists, the *Australian Books* (annual), the *Australian Public Affairs Information Service* which is a subject index to current literature (monthly with an annual cumulation), and by collections of Australian books maintained by it at all posts at which Australia is officially represented abroad. In London and New York the National Library maintains and staffs Australian reference libraries supervised by its own Liaison Officers in those centres. In the discharge of its wider bibliographic responsibilities, the library publishes the *Australian National Bibliography* (weekly with monthly and annual cumulations), which lists books, pamphlets, maps, prints, sheet music, government publications, the first issue of each new periodical or newspaper, and moving picture films produced in or relating to Australia. Commonwealth and State official documents, both monographic and serial, are listed in *Australian Government Publications* (annual). The Library is also building up union catalogues of serials in the social sciences and humanities, and of monographs in Australian libraries. A revised loose-leaf edition of *Serials in Australian Libraries: Social Sciences and Humanities*, of which the letters A-E have been issued since 1964, will progressively supersede the interim edition published in two volumes in 1963.

In 1956 the Australian Bibliographical Centre was established within the National Library to serve as the secretariat of the Australian Advisory Council on Bibliographical Services. The Council, made up of representatives of the National Library, State libraries and library boards, Parliamentary libraries, public libraries, college libraries, school libraries, special libraries, the Commonwealth Scientific and Industrial Research Organization, each of the universities, the Library Association of Australia and archivists, plans the further development and co-ordination of bibliographical services and co-operates with Unesco and its committees. The Centre organises bibliographical projects recommended by the Council and operates as a centre for bibliographical information in Australia and overseas. It has published a *Union List of Newspapers in Australian Libraries: Part 1: Newspapers published outside Australia* (1959); and Part 2:

*Newspapers published in Australia* (1960). Both were supplemented in 1964. *Resources of Australian Libraries*, a summary report of a survey conducted for the Council in 1961 by Maurice F. Tauber, was published in 1963.

The Library acts as a central library of documentary and educational films, its film collection containing approximately 8,000 titles, together with Australian historical films and a great number of film strips. It published *Australian Films: a Catalogue of Scientific, Educational and Cultural Films, 1940-58* in 1959 and annual supplements in succeeding years. A revised edition of the *Catalogue of 16-mm. Films*, which lists all films available for loan, was published in 1960. It was supplemented in 1964 and annual accession lists are issued. Special efforts are made to discover and preserve samples of early Australian film production.

Through its Extension Services Section the Library conducts the Canberra Public Library Service for residents of the Australian Capital Territory, to whom 774,375 books were lent during 1965-66. It also assists in the provision of similar services in the Northern Territory, the Territory of Papua and New Guinea, and Norfolk Island.

The National Library's collections contain approximately 885,000 volumes, 26,000 paintings, pictures and prints, 15,000 reels of microfilm, 1,000 running feet of manuscripts, 25,000 motion picture stills, 16,000 reels of moving picture films, 142,000 maps, and 400,000 aerial photographs. Special features of the book collection are its strong holdings of Australiana, materials relating to the Pacific area and east and south-east Asia, the publications of foreign governments and international organisations, and works in the social sciences, particularly in political theory and economics.

*Patent Office Library.* The Library of the Commonwealth Patent Office, Canberra, contains approximately 10,850 books and a wide variety of periodicals and other literature relating to pure and applied science, industrial technology and the industrial property (patent, trade mark, design, and copyright) laws and practice of most countries. Patent specifications of inventions are received from the principal countries of the world; present holdings are more than 9,670,000. Indexes include a microfilm of a classified index to 3,000,000 U.S.A. patents and translations of abstracts of U.S.S.R. patents.

*Commonwealth Archives Office.* In 1943, following a report by an Inter-departmental Committee, the Prime Minister directed the formation of a War Archives Committee to arrange for the preservation of war records. This Committee recognised that war archives could not be separated from peace-time archives, and in 1946 the name was changed to the Commonwealth Archives Committee. In 1952 the National Library became the sole Archival Authority for the Commonwealth and the Chief Archives Officer became the Executive Officer for the Committee. In March 1961, in accordance with a recommendation of the National Library Inquiry Committee, the Archives Division of the National Library was reconstituted as the Commonwealth Archives Office within the Prime Minister's Department. The Archives Office is primarily a central agency for the control of those records created by the Commonwealth Government which are no longer required for frequent use in the day-to-day business of government. This function is carried out through the following three basic activities.

*Control of destruction.* No Commonwealth records may be destroyed without the concurrence of the Chief Archivist whose responsibility it is to safeguard reference interests other than those of the department which compiled the records. This concurrence is given as far as practicable through continuing disposal authorities which enable Commonwealth departments to destroy certain routine classes of records automatically, but records not covered by such continuing authorities are checked before destruction is authorised.

*Provision of accommodation.* Any records which are no longer in active use but which are considered, either by the originating department or by the Archives Office, to warrant preservation, either permanently or for a further period, may be transferred to an archives repository. While in archival custody they are arranged and described so that the best use can be made of them.

*Provision of information.* Records in the custody of the Archives Office are available for use by the depositing and other departments of the Commonwealth Public Service. The Office also provides departments with a service for the provision of information from the records in its custody.

As a complementary function the Office also provides a service to persons engaged in academic and other forms of research. The headquarters of the Commonwealth Archives Office is in Canberra and there are branches in Sydney, Melbourne, Brisbane, Adelaide, and Perth.

*Commonwealth Scientific and Industrial Research Organization.* The library holdings of the Organization cover the pure and applied sciences. In addition to the Central Library in East Melbourne, each of the Divisions and Sections has a specialised collection covering such subjects as food preservation, forest products, chemistry, physics, animal health, and fisheries. The collections are particularly strong in the publications of overseas scientific and technical research institutions, with many of which extensive exchange arrangements have been made.

The Central Library maintains a union catalogue of the holdings of all C.S.I.R.O. libraries and is responsible for the following publications: *Scientific Serials in Australian Libraries*; *Australian Science Index*, an index of articles published in Australian scientific and technical periodicals; a *Directory of Scientific and Technical Research Centres in Australia*; and *C.S.I.R.O. Abstracts*, which include abstracts of papers published by C.S.I.R.O. officers, C.S.I.R.O. translations, translations available from other Australian organisations, and additions to the British Commonwealth Index of Scientific Translations. The larger libraries in the Organisation have photocopying facilities which, while normally for internal use, provide a service for the public when a publication is not held elsewhere in Australia.

*The Australian War Memorial Library.* In the War Memorial library are housed the documentary and pictorial records of Australia's fighting services in the 1914-18 and 1939-45 Wars, together with collections covering the war in Korea, 1950-53, and earlier wars in which Australian troops participated—Sudan, 1885; South Africa, 1899-1902; and the Boxer Rebellion in China, 1900-01. Books, periodicals and other records covering contemporary trends and events in the fields of military history and military science are constantly being added.

The printed records section contains approximately 70,000 volumes, a large collection of military maps, newscuttings and newspapers, sound recordings of war leaders, personalities and events, war posters, and postage stamps. Many personal collections by distinguished soldiers and historical documents relating to the wars have also been placed in the Memorial's custody for preservation. Written records comprise correspondence files of headquarters and units of both World Wars, and the original war diaries compiled from day to day by each unit during its service. The collection of official war photographs covering the 1914-18, 1939-45 and Korean Wars numbers over 250,000, and a collection of official motion picture film depicts Australia at war. Facilities for public research are not yet fully developed, but requests for information are met where practicable.

*Other Commonwealth Government libraries.* Most Commonwealth authorities have specialised collections in their own fields and in addition draw largely on the National Library.

*Northern Territory Library Service.* The Northern Territory Library Service maintains five centres in the Territory. At 30 June 1966 stocks totalled 52,371 volumes which were held at the following centres: Darwin, 24,035; Nightcliff, 3,829; Alice Springs, 16,298; Tennant Creek, 4,405; Katherine, 3,804.

### State libraries

*State Public Libraries.* In each of the capital cities there is a well-equipped public library, the libraries in Melbourne and Sydney especially comparing very favourably with similar institutions elsewhere in the world. The following paragraphs describe these libraries and other library services in each State.

*New South Wales.* The Free Library Movement in New South Wales, founded for the establishment of a system of public libraries on the basis suggested in the Munn-Pitt Report of 1935, helped to pave the way for the Library Act, 1939-1959, which was fully proclaimed as from 1 January 1944. At 30 June 1966, 173 councils had established libraries in terms of the Library Act. During 1966 they spent on their libraries \$4,042,694, including \$1,055,712 received in subsidy. There are 225 libraries, of which 66 are in the metropolitan area and 159 in the country. There are also 23 bookmobiles, of which 2 are in Sydney, 7 in the suburbs of Sydney, and 14 in country municipalities and shires. These libraries contain 3,296,288 volumes.

New South Wales departmental libraries are staffed by officers attached for duty from the State Library, which also provides a central cataloguing service for municipal and shire libraries constituted under the 1939-1959 Act. The State Library maintains an adult education section servicing adult education activities for the universities of Sydney and New England and the Workers' Educational Association.

The Circulation Department forwards books on loan to municipal and shire libraries and to individual borrowers. With the transfer of the School Box Service to the School Library Service of the Department of Education in 1965, 42,120 books were written off stock. The School Box Service had been operated as a service to country public schools by the Circulation Department since 1920. The total stock of the Department thus decreased to 63,581 volumes, all of which are now in the Reference Section. During 1965-66, 4,402 books were lent to public libraries and institutions, many of them in country areas, and 33,208 to individual borrowers.

The State Library, known as the Public Library of New South Wales, includes a general reference department of 518,469 volumes, together with the Shakespeare Tercentenary Memorial Library, and the Mitchell and Dixon Libraries and Galleries which are mainly devoted to Australian and Pacific material. The Mitchell Library, with more than 60,000 volumes and pamphlets and 300 paintings, was bequeathed to the trustees of the Public Library in 1907 by Mr. D. S. Mitchell, together with an endowment of \$140,000. In 1966 there were 216,980 volumes in the

library, in addition to valuable manuscripts, maps and other material. In 1929 Sir William Dixon gave a collection of historical pictures then valued at \$50,000. These were subsequently added to and at his death in 1952 Sir William bequeathed the whole of his collection of books, manuscripts, pictures, and other material, together with an endowment of more than \$226,000, mainly for the printing or reprinting of historical documents relating to Australia and the Pacific. The total number of volumes in the State Library now exceeds 844,000, apart from manuscripts, historical pictures and other material. The maintenance and control of the ordinary lending branch of the Public Library were transferred in 1908 to the Sydney Municipal Council to become the City of Sydney Public Library. The State Library, which had previously been the repository for State archives, transferred this responsibility to an Archives Authority in June 1961. The Authority consists of nine members, of whom the Trustees of the Public Library have a right to nominate one.

Other important libraries in New South Wales are: Teachers' Colleges, 294,741 volumes; the City of Sydney Public Library, 264,291; Railway Institute, 170,100; Technical Education Branch, 195,683; Australian Museum, 35,014; Government Transport Institute, 28,743; New South Wales Teachers' Federation Library, 23,000; Workers' Educational Association, 14,400; and the Library at the National Herbarium, 10,766 volumes. At 30 June 1966 the Parliamentary Library contained 157,821 volumes.

*Victoria.* The modern movement in municipal library service dates from the inception of the Free Library Service Board in 1947. The Free Library Service Board was a State Government instrumental ty which planned, encouraged and subsidised the development of municipal library services. Under the *Library Council of Victoria Act 1965*, the control of the Board passed to the Library Council of Victoria and in 1966 its office was redesignated the Library Services Division of the Library Council.

In 1967, 138 Councils, representing 2,569,000 Victorians, shared Government library grants amounting to \$1,120,000. Of this amount, \$1,042,000 was direct municipal library subsidy. With the addition of expenditure from these Councils' own funds the total expenditure on municipal library services for 1966-67 will be nearly \$2,462,000, representing an average expenditure of approximately 96 cents per head of the population served. In 1966 half a million borrowers used their free library services, now totalling 1,886,000 books, to the extent of almost 11 million issues.

Particularly in the country, service has been developed by means of regional libraries. These services, of which there are 18 at present, comprising a total of 76 councils, consist of groups of councils which pool their resources, book-stocks and trained staff. A development since 1962 has been the formation of three Metropolitan Regional Library Services. The Victorian Government provides an Establishment and Regional Library Development Grant of \$50,000 per annum. In 1967 this was increased by \$10,000.

There are 8 bookmobile services operating in Victoria, 5 in country regions and 3 in the metropolitan area.

The State Library of Victoria was established in 1856. It is controlled by the Library Council of Victoria and receives its finance from the State Government. The reference collections now total about 840,000 items, and the lending and travelling libraries have another 185,000 volumes. In addition, the library files 4,500 current periodicals, about 2,000 government publications from Australia and overseas, and 500 newspapers, in all about 50,000 volumes. Special collections include the J. K. Moir Collection of Australiana, the M. V. Anderson Chess Collection, and the Green and Brodie Shipping Collections. The Victorian Historical Collection contains pictures, drawings, prints, and objects of historical interest. The Archives Division is responsible for the preservation of government records.

*Queensland.* The Library Board of Queensland was established in 1945 under the provisions of 'The Libraries Act of 1943'. Its duty is to attain the fullest co-operation and improvement of the library facilities of the State, with the object of placing such facilities on a sound basis for the benefit and educational improvement of the citizens generally. The Board consists of six members including the State Librarian as *ex officio* member and secretary. A general function of the Board is to ensure that the fullest co-operation exists with the Department of Education, the University of Queensland, local bodies, and other bodies having for their object the encouragement of education, literature and the arts and sciences. A specific function of the Board is the control and management of the Public Library of Queensland. Its policy is to build up the main collection of the Library as the State's reference centre.

The Country Extension Service, which is administered as a department of the Public Library, lends books of non-fiction to adults and children residing outside the metropolitan area and to municipal libraries in areas of low population.

The Oxley Memorial Library, established in 1923, has been administered as a department of the Public Library since 1946, but the collection has been kept separate. It contains books, manuscripts, pamphlets, and other graphic material relating to the history and literature of Australia, and of Queensland in particular, and provides facilities for research students in Queensland literature and history.

In 1958 the section of the Libraries Act dealing with the preservation of public records was proclaimed, and in 1959 an Archives Section of the Public Library was instituted and an archivist appointed.

The Library Board staffs the libraries of the Teachers' Colleges and the Queensland Institute of Technology as well as the libraries of ten government departments, of which the largest is the Department of Primary Industries. The work is co-ordinated by an officer-in-charge, who also gives assistance and advice to independently staffed departmental libraries.

Since 1948 a course in librarianship has been held annually at the Public Library for the purpose of preparing trainees for the examinations of the Library Association of Australia, up to 1961 for its Preliminary Examination, and from 1962 for subjects 1 to 3 of its re-organised Registration Examination. In 1959 a course covering some subjects of the Association's Registration Examination was inaugurated at the Central Technical College, Brisbane.

The holdings of the Public Library of Queensland and its extension services in 1965-66 were: main reference collection, 175,337 volumes and 10,421 maps and pamphlets; Country Extension Service, 85,890 volumes; Oxley Memorial Library, 24,428 volumes and 23,922 maps, pamphlets and miscellaneous items.

Local authorities are empowered by the Libraries Act to establish and conduct library services as a function of local government. The Board encourages local authorities to use these powers. In 1965-66, 76 local authorities were conducting 130 library services. The Brisbane City Council has established 18 of these libraries. There were 105 libraries in Queensland free to adults. To help overcome the problems of a large area and sparse population, various local authorities provide library services on a regional basis. By 30 June 1965, 4 regional library services had been established; the South Western (7 shires), the Central Western (8 shires), the North Western (10 shires), and the Central Highlands (5 shires), with headquarters at Charleville, Barcaldine, Mt Isa, and Emerald respectively. During 1965-66 the Board received a grant of \$514,102 from consolidated revenue to finance the activities of the Public Library and to pay subsidies to local bodies of 50 per cent of endowable expenditure on books and the acquisition or improvement of library buildings and equipment. Subsidies were paid to 4 regional library service boards, 53 local authorities and 37 other bodies.

The library of the Parliament of Queensland was established in 1860. At 30 June 1966 the library held 98,000 books and pamphlets, consisting of official publications and books devoted largely to history, the social sciences, biography, and literature.

'*The Libraries Act Amendment Act of 1949*' provides for the Public Library and the Parliamentary Library each to receive a copy of all books, pamphlets, maps, and other printed material published in Queensland.

*South Australia.* In the reference department of the Public Library of South Australia there are about 235,700 volumes, most of which may be borrowed. Approximately 5,000 periodicals are filed and the collection of newspapers includes every newspaper printed in South Australia. There are 46,800 volumes in the lending department available to persons living in the metropolitan area, and the country lending service has 301,000 volumes, of which more than one-third are suitable for children. The library has an active programme for the publishing of facsimile editions of early Australian texts.

The Research Service specialises in scientific and technical inquiries and supplements the resources of the Public Library by borrowing from other libraries and by obtaining microfilm copies of material not available locally. It has an extensive collection of trade catalogues.

The library of the Parliament of South Australia held approximately 60,000 volumes at 31 December 1966.

There are 24 local public libraries in South Australia provided by 18 local government authorities. The libraries are subsidised on a \$1 for \$1 basis by the State Government. The Libraries Board of South Australia, through the Public Library of South Australia, provides various central services. Book-stocks are pooled in the Public Library of South Australia and are interchanged between the libraries.

At the end of June 1966 these local public libraries contained 178,142 books. There were 108,911 registered borrowers. During 1965-66, 1,457,656 books were lent.

*Western Australia.* In 1955 the Library Board of Western Australia was made responsible for all public library services throughout the State to which the State Government contributes funds. The Board has the following major functions: to encourage local authorities throughout the State to establish public libraries and to provide as a State subsidy all books and bibliographical services necessary for such libraries when established; to administer the State Reference Library; to advise the Government on all matters relating to libraries; and to provide for the training of librarians.

Local public libraries are subsidised on a \$1 for \$1 basis, the local authority providing accommodation and staffing, and the Board all books and related services. The Board provides at least one volume per head of the population. All non-fiction books may be made available at any public library throughout the State on request to the Board. All cataloguing is done by the Board. The first library under this scheme was opened in August 1954. By 31 December 1966, 97 libraries had been established.

The State Reference Library, established in 1887, is the reference division of the Library and Information Service of Western Australia. In addition to providing the normal facilities of a reference library for the metropolitan area, it extends its service throughout the State through local public libraries. It is divided into three divisions responsible for service in the subject fields of Western Australian history, science and technology, and the humanities.

The State Bibliographical Centre and the Central Music Library are housed in the State Reference Library building, and there is also a commercial information centre. The State archives are maintained by the State Reference Library and managed by the staff of the Battye Library. The State Reference Library is fully equipped with microfilm and photocopy apparatus.

The book-stock of the Board at 30 June 1966 was: 732,251 volumes, comprising circulation stock (including books in public libraries), 496,432 volumes; State Reference Library, 223,430 bound volumes; Central Music Library, 2,954 books on music and 9,435 scores.

The University of Western Australia, through its Adult Education Board, manages the Adult Education Library of some 17,000 volumes of general reading and fiction. Books are sent to country readers each month.

There are some 100 special libraries in government departments and industrial firms. Union catalogues of periodicals and books received in the libraries in Western Australia are maintained by the Library Board of Western Australia in the Bibliographical Centre in the State Reference Library building.

*Tasmania.* The Tasmanian Library Board, constituted in 1944, is responsible for administering the State Library headquarters in Hobart, for the extension of library services throughout the State, for the control of State aid to libraries, and for the State archives. The State Government provided \$477,231 towards the cost of the library services in 1965-66.

Municipal libraries are assisted with the purchase of books and participate in a book exchange scheme. In 1966, 47 municipalities took part in the service, leaving only 2 outside the scheme. In Hobart the Board operates, on behalf of the City Council, the Hobart Lending Library and a bookmobile which serves metropolitan schools. From the State Library of Tasmania 2 other bookmobiles operate in 13 southern municipalities, catering for areas without library premises, for children, old people's homes, etc.

Five municipalities and the Tasmanian Library Board co-operate in a Regional Library System with headquarters at Burnie. A bookmobile serves rural areas, and small public libraries serve the larger townships of the region. The city of Launceston operates a Lending and Reference Library for the city and the neighbouring municipalities, and supplies bookmobile services to neighbouring rural areas.

The Board also operates a Reference Library in Hobart from which reference and information services are available to people throughout the State. There is also a documentary film library and a recorded music library. The Board arranges screenings of documentary films, recitals of recorded music, poetry and play readings, library weeks in country centres, exhibitions of books, photographs, etc.

At 30 June 1965 the State Library, Hobart, held 99,478 volumes in the reference branch, 83,138 volumes in the ordinary lending branch, 178,660 volumes in the country lending branch, and 140,842 in the children's branch.

The Parliamentary Library works in close collaboration with the State Library, which provides a reference officer to serve members during sessions.

### University libraries

These libraries provide material not only for the education of graduates and undergraduates, but also for research workers and practical investigators all over the continent. Much of the material they contain is not available elsewhere, for although in most cases smaller, they are in many directions more highly specialised than the public libraries. They lend to one another and to State and private institutions as well as to individual investigators. Each of them is governed by a librarian, who is responsible as a rule to an executive sub-committee and a committee which is practically co-extensive with the professorial staff.

The following table shows the volumes held, accessions during the year, and expenditure of the Australian university libraries.

## UNIVERSITY LIBRARIES

University	Volumes (a)	Accessions during year (b)	Expenditure (c)
	'000	'000	\$'000
Australian National . . .	398	35	610
Sydney . . . . .	988	66	812
New South Wales . . . .	302	27	628

(a) 31 July 1966. (b) Year ended 31 July 1966. (c) During year ended 31 December 1965.

*Australian National University.* This library consists of two main collections; the former Australian National University Library, founded in 1948, which serves primarily the Institute of Advanced Studies, and the former Canberra University College Library, founded in 1938, which serves primarily the School of General Studies. At the end of 1966 the stock included 76,000 volumes in oriental languages. The collection serving the Institute of Advanced Studies (215,000 volumes) specialises in the fields of the physical and medical sciences, excluding clinical works. The R. G. Menzies Building of the University Library, which was opened by Queen Elizabeth II in March 1963, houses the administrative, cataloguing, etc., departments serving the whole university as well as certain research collections of the Institute of Advanced Studies. In the social sciences the library endeavours to provide a good working collection while giving consideration to the holdings of the Commonwealth National Library. It possesses significant collections in anthropology, linguistics, mathematics, and mathematical statistics. The collection serving the School of General Studies (130,000 volumes) has been built up to meet the needs primarily of undergraduates studying arts, economics, law, oriental studies, and science.

*University of Sydney.* The library consists of the central collection which is known as the Fisher Library, the Law Library, the Medical Branch Library, the Burkitt Library for pre-clinical medicine, and some 49 departmental libraries. The University Library holds a total of more than one million volumes.

The first books were acquired in 1851, and shortly afterwards the library of Sydney College was added. The collection of Nichol D. Stenhouse was acquired in 1878 as the gift of Thomas Walker. In 1885 Thomas Fisher bequeathed the sum of \$60,000, the income from which is used as a book fund. The Fisher Fund was matched in 1961 by establishment of the W. H. and Elizabeth M. Deane Library Fund. Perhaps the finest collection in extent and importance which has been given to the University is that of Sir Charles Nicholson. There have been numerous other benefactions, among which may be mentioned the library of Sir Francis Anderson, the W. H. Deane collection of books and manuscripts and the Dalley-Scarlett music library. In 1961 the University acquired the English literature collection of the late Hugh Macdonald, and the late Professor J. Stewart's library, an outstanding collection on archaeology and numismatics, was acquired in 1963. The Sydney University Library has an extensive collection of mediaeval manuscripts and early printed books.

*University of New South Wales.* The libraries in this university consist of the Central Library and a Bio-medical Library at Kensington. There is also a library at Wollongong University College and the Broken Hill Division. In December 1966 the university had 313,242 volumes in its libraries.

*University of New England.* The library was founded in 1938, when the New England University College was established. Sir William Dixon was its first benefactor. The library, which contains 185,000 bound volumes, is adding to its collection at the rate of approximately 20,000 volumes

a year. It receives about 4,800 current periodicals annually. It is housed in a three-storied, air-conditioned building, which also makes provision for a bindery and photographic and archives division. A post-graduate and research library is planned as an extension of the present building. The library has its own lecturer in bibliography and library science, and conducts formal courses in librarianship. A multi-copy collection of 36,000 volumes for external teaching is housed in the Public Library of New South Wales in Sydney.

*University of Newcastle.* The library has been in existence since 1951, although it was associated with the Technical College Library until 1961. In January 1966 a major part of the library's collections were transferred to temporary premises at the new site of the university at Shortland. About one-sixth of the collections remains at the old site at Tighes Hill for the use of the departments still operating there. The library has slowly but steadily developed over the years and now has a collection of 110,000 volumes. In the vicinity of 2,500 periodicals are taken into the library stock each year as a result of both subscription and donation. There are no departmental libraries. The resources of the library are used extensively on inter-library loan in the Newcastle district, particularly by local industries. The first stage of the permanent library building is under construction and it is anticipated that it will be ready for occupation in January 1968.

*Macquarie University.* The library began in 1965 to acquire books and to plan for its opening in 1967. It occupied temporary quarters in North Sydney until mid-1967, when it moved into the first stage of a new air-conditioned library building, which is centrally situated on the university site at Eastwood and planned to house eventually 800,000 volumes. The library's initial purchases were restricted mainly to undergraduate level material in those schools in which students were enrolled in 1967. The library subscribes to 1,300 serials and has an audio-visual area. When the library opened in March 1967, approximately half of its total collection of 70,000 volumes had been donated by private individuals, firms and other libraries.

*University of Melbourne.* Early in 1854 the first allocation for books was made, but the library was housed in temporary quarters until 1959. The W. L. Baillieu Trust made available the first instalments of a \$200,000 gift for building purposes, which have been followed by subsequent gifts and substantial grants from the Commonwealth and State Governments, and a new building was occupied at the beginning of 1959, the first in the university to be designed specifically for library purposes. Since 1959 the use of the library has increased fourfold, and during the academic year admissions of readers to the building average 8,000 a day. The resources of the library are also used extensively on inter-library loan by government instrumentalities, industries and other organisations throughout Australia. The University Library, including 13 branch libraries in various departments, is administered from the centrally situated Baillieu Library. The large medical branch library is specially rich in periodicals.

*Monash University.* The Library contains about 250,000 volumes and subscribes to some 5,500 journals. It has been decided that the library organisation will develop into four large units—the main library, a bio-medical library, a law library, and a library for the physical sciences and technology. The physical sciences and technology library has been named the Hargrave Library and was opened in December 1962. The main library, catering mainly for the humanities, was occupied in November 1963. The bio-medical library was occupied in 1966.

*La Trobe University.* The university was founded in December 1964 and the first books were acquired in 1965. Library activities began at 474 St Kilda Road, the temporary headquarters of the university itself. The move to the new building at the university site at Bundoora was completed in the first week of February 1967. The library is housed in a three-storey air-conditioned building which is designed to be extended horizontally in two stages by 1977. In 1967 only the top floor was occupied by the library. The ground floor and first floor were used for science teaching and office facilities which will be transferred to the science buildings in 1968. By the end of 1966, 45,000 volumes had been acquired and 1,340 serials received by gift or subscription. It is estimated that the accommodation available in 1967 will house about 100,000 volumes and 190 readers. The library will initially cater for the Schools of Humanities, Social Sciences, Biological Sciences, and Physical Sciences, containing the disciplines of English, French, history, philosophy, Spanish, economics, politics, sociology, biology, chemistry, mathematics and physics.

*University of Queensland.* The library was founded in 1911. There is a main library and a number of departmental libraries at St Lucia, and medical libraries at the Medical School and at teaching hospitals. The library receives more than 10,000 current periodicals. It has notable collections in geology, the history, development and culture of the Pacific region, and tropical aspects of agriculture, veterinary sciences and biological sciences. The total collection numbers some 450,000 volumes.

*University of Adelaide.* The main library is the Barr Smith Library which commemorates its first benefactor, Robert Barr Smith, who, with members of his family in and after 1892, gave the university over \$100,000 for the library. Seats are provided for 1,000 readers, including 270

in the main reading room. There are branch libraries for medicine, law and music. The South Australian branches of the Australian Medical Association, the Australian Physiotherapy Association, and the Australian Dental Association make annual contributions towards the maintenance of the medical library in return for borrowing privileges for their members. The Waite Agricultural Research Institute has a separately administered library of about 22,000 publications in agriculture. Total holdings of the university libraries at the end of 1966 were 429,000 volumes. Some 14,600 serial titles are received.

*The Flinders University of South Australia.* The acquisition of books for the library commenced in 1963 when the first library staff were appointed. The library occupied the first stage of its permanent building at the end of 1965, and when teaching commenced in March 1966 the collection consisted of some 60,000 volumes. Approximately 20,000 volumes are being added each year and the library receives currently about 2,300 periodical titles.

During the early development of the library emphasis is being placed on material to support the current teaching and research programmes of the university. Special attention is being paid to fields where little material is available elsewhere in Australia, for example Spanish literature.

*University of Western Australia.* The first full-time library staff was appointed in 1927. Provision for a permanent library building was not possible when the university moved to its present site, and space and facilities were inadequate for many years. A new four-storey building was completed at the end of 1963. The building provides facilities for microfilm readers, type-writing booths and photo-copying facilities. The University Library developed very slowly in the early years, but recently has been adding about 20,000 volumes a year to its stock. In addition to the main library there are a number of departmental libraries of which the more important are engineering, agriculture, pre-clinical, and law. There is also a medical library, in accommodation provided by the Royal Perth Hospital, for the use of the medical school.

*University of Tasmania.* To cater for an anticipated enrolment during 1967 of 2,600 students, the library currently has a collection of 161,490 volumes, and files 4,023 serial titles. The 1967 vote for all purposes is \$97,500, of which \$40,600 is allocated for books and \$48,400 for serial publications and back sets. The university library collects private and business archives and has a small rare book collection.

#### **Children's libraries and school libraries**

*New South Wales.* Children's libraries are being developed as departments of municipal and shire libraries. The Education Department maintains a school library service for the fostering of State school libraries, which are maintained partly by parents and citizens associations and partly by departmental subsidy. Secondary and central schools, and an increasing number of primary schools, have teacher librarians.

*Victoria.* Throughout Victoria an essential feature of libraries is the service for children; 117 municipal libraries share in a special children's library grant of \$10,000, and on the staff of the Library Services Division is a professional children's librarian who supervises and advises on work with children.

The Education Department is making provision for the building of library rooms in new schools. Where accommodation is available in existing schools, library furniture is provided free of cost to the schools, and the Government subsidises the purchase of books. In June 1966, 590 schools had central libraries. The Education Department has a library service officer with a small staff to advise and assist schools in the establishment and organisation of libraries. A one-year course for the training of teacher-librarians was established at Melbourne Teachers' College in 1955. Approximately 25 teachers are trained each year.

*Queensland.* The Library Board of Queensland stresses to local bodies the importance of providing adequate library services for children. There are in Queensland 128 libraries free to children, of which 16 are conducted by the Brisbane City Council. The children's libraries at Rockhampton, Toowoomba and Townsville are particularly active. Country children who are not catered for locally may borrow from the Country Extension Service which possesses a separate children's collection. The purchase of books for State school libraries in Queensland is financed by school committees and parents associations, with a subsidy from the Department of Education on a \$1 for \$1 basis. Trainees at the teachers colleges are instructed in school library organisation and management.

*South Australia.* A children's library of 36,000 volumes is used by school classes and individual children living in the metropolitan area. In 1965-66, 208,200 books were lent. There is a large collection of historical children's books assembled for the use of research workers. In August 1957 a youth lending service was opened for young people from thirteen to eighteen years of age. It has a stock of 15,500 volumes.

*Western Australia.* The Education Department provides library services, issues of books and subsidies on library books to schools. School libraries are supplied with shelving, furniture, stationery, and library supplies. The Library Services Branch of the department provides advisory services to assist schools in all aspects of library organisation and service. It also relieves schools of the professional and routine tasks of book preparation by providing a central cataloguing service for both new books and those previously uncatalogued in school libraries, a central processing service to cover books in plastic and prepare them for use, and a library book repair and binding service. Book selection in schools is assisted by a model library and by lists of recommended books.

The teachers colleges provide courses in school library organisation and service and have developed college libraries directed by qualified librarians. At the Perth Technical College part-time courses are provided on the syllabus for the examinations of the Library Association of Australia and are attended by many school librarians. The Perth Technical College and technical schools are equipped with libraries, and an allocation of funds is provided annually to each school and college department for the purchase of books and periodicals. Books for technical schools other than Perth Technical College are centrally ordered, catalogued and processed by the Library Services Branch.

All high schools are provided with library accommodation and furniture. New high schools have been provided with a main library, reading room, study room and librarian's office. High school libraries are staffed by one or two trained school librarians according to the size of the school. New high schools are issued with books to a value of \$1,000 in each of their first three years. All high schools receive annually an issue of books, as well as being entitled to a subsidy for the purchase of library books. A number of primary schools have organised school libraries in rooms which have become available, or in premises provided by the parents and citizens associations. Annual issues of books are made to all primary schools, varying according to the size of the school, and a subsidy is provided for the purchase of library books. The Charles Hadley Travelling Library provides 400 boxes of books which are circulated to all small schools, mission schools and special classes. Children who are unable to attend school, mainly those in isolated areas, are provided with books from the Correspondence School's library.

*Tasmania.* The Lady Clark Memorial Children's Libraries, with headquarters at the State Library, Hobart, aim at serving all children in Tasmania. At 30 June 1966, 164 children's libraries and depots had been established.

The Education Department provides library quarters in all high schools and in some of the larger primary schools. The purchase of books is financed by parents associations and by departmental subsidies. Teacher-librarians are appointed in high schools. The Schools Library Service issues loan collections of books to schools and gives advice on the setting up of school libraries.

### Special libraries

Before the 1939-45 War the number of special libraries, apart from those maintained by government departments, was small, but during recent years many manufacturing, commercial, research and other firms, as well as statutory bodies, have found it necessary to establish special libraries to serve their staff. These libraries, which are most numerous in Sydney and Melbourne, are being increasingly administered by trained librarians.

## Museums and art galleries

In 1964 an annual collection of statistics on a uniform basis was commenced from Australian museums and art galleries. The following paragraphs provide summarised results of the collection and refer individually to the more important museums and art galleries.

A museum or art gallery is considered to be a building, group of buildings or parts of buildings, managed as a unit and intended predominantly for the permanent display of objects of interest (museum) or objects of art (art galleries) to the general public. Institutions displaying live exhibits are excluded (the more important of these are mentioned on pages 643-4), as are buildings used for temporary displays (exhibitions, commercial galleries exhibiting only for sale) without a permanent stock of exhibits; permanent exhibitions which are ancillary to other activities, such as exhibits at council chambers, libraries, hotels, and other commercial enterprises providing services to tourists and sightseers; collections which are not readily accessible to the general public, such as university collections for the use of students and research workers; and historic homes, etc. not specifically intended for the permanent display of objects of interest (i.e. where the building itself and its normal fittings are essentially on display).

## Museums and art galleries, 1966

The following table classifies by States and Territories and by ownership the institutions in Australia which have been identified in 1966 as museums and art galleries (branches of museums and art galleries are not shown separately).

MUSEUMS AND ART GALLERIES: STATES AND A.C.T., AND OWNERSHIP, 1966

(a) Estimated.

Some descriptive detail follows in respect of the seventeen major institutions listed in the foregoing table.

**Australian Capital Territory**

*The Australian War Memorial, Canberra.* The Memorial comprises the national collection of war relics and the building in which these are preserved. The building was opened in 1941. The memorial is administered by a director responsible to a board of twelve trustees. There is a collection of 4,000 art works and a museum collection of more than 40,000 war relics, the gathering of which began on the battlefields of the 1914-18 War and was continued during the subsequent campaigns in which Australian forces have participated. The collection has been

enhanced by gifts of relics from the governments of Great Britain, the sister dominions and allied countries, and also by presentations made by ex-servicemen and relatives of those who died. The collection consists of items such as tanks, aeroplanes, submarines, field-guns, boats, and the widest possible range of war trophies down to the smallest items, each relic dependent for its value on its historical background. The works of art, all by Australian artists, depict battle scenes, individual officers and men, etc., and include oil and water colour paintings, drawings, statuary, bronzes, dioramas, and mosaics. There is also a library, which is described on page 631.

*The Australian Institute of Anatomy, Canberra.* The Institute is described in the chapter Public Health, pages 565–6. It contains displays of biological and anatomical aspects of man and the anatomy of Australian animals. A display of Aboriginal and Melanesian artefacts from the National Ethnographic Collections is temporarily housed in the Institute.

### New South Wales

*The Australian Museum, Sydney.* Founded in 1836, this is the oldest museum in Australia. It is administered by a director and a board of twenty-five trustees as a Government Department attached to the New South Wales Department of Education. It has fine collections of all groups of animal, including insect, fossils as well as mineral and ethnological collections, particularly in relation to Australia and the Pacific.

*Museum of Applied Arts and Sciences, Sydney.* This museum, with branches at Bathurst, Goulburn and Broken Hill, New South Wales, is administered by a director and a board of seven trustees appointed by the Governor of New South Wales. The museum specialises in applied arts (ceramics, glass, oriental arts, costumes, musical instruments, furniture, etc.), applied science and technology (engineering, transport, textiles, electronics, etc.), and among its special features are a Watt beam engine of 1785, No. 1 New South Wales locomotive, Lawrence Hargrave models, colour television, and a planetarium.

*Geological and Mining Museum, Sydney.* This museum is administered as a branch of the Department of Mines by a curator under the control of the Government Geologist. It is the only one in Australia devoted solely to geology and mining. The display contains a unique collection of ores and economic minerals from New South Wales with material from the other States and from overseas for comparison. Its most important functions are the identification of mineral and rock specimens, several thousands of which are received annually, and the supply of some 20,000 to 30,000 specimens free of charge to schools.

*Art Gallery of New South Wales, Sydney.* The Gallery originated in the Academy of Art founded in 1871. It is administered by a director and secretary under a board of thirteen trustees responsible to the New South Wales Minister for Education. The gallery has 7,957 exhibits, including 1,664 oils and 161 pieces of sculpture. Australian art in all aspects (except early colonial and native) and modern European painting and sculpture are featured. An Aboriginal art collection includes a unique set of large Melville Island graveposts. Assistance is provided to governments and private organisations in the design of books, coins, notes, etc., the preparation and judging of exhibitions, and the supply of research material and information.

### Victoria

*National Museum of Victoria, Melbourne.* The museum was founded in 1854. It is administered by a director and board of seven trustees. It houses substantial collections in the fields of zoology, geology and anthropology. There is a small branch at Tidal River, Victoria.

*Institute of Applied Science of Victoria, Melbourne.* The Institute was founded in 1870. It is administered by a director and board of seven trustees. Its collections are concerned with aspects of application of all science subjects, but with special emphasis on transport, astronomy, public health, arms, agriculture, and electronics. A planetarium was opened in December 1965.

*National Gallery of Victoria, Melbourne.* The gallery is administered by a director and board of seven trustees. Its large collections of over 20,000 items feature paintings by Rembrandt, Tiepolo and the Flemish primitives, Dürer engravings, Blake drawings, and English 18th century furniture.

### Queensland

*Queensland Museum, Brisbane.* The Museum, founded in 1855, is the State museum of natural science. It is administered by a director as a sub-department of the Queensland Department of Education. The collections are in the fields of the natural sciences, ethnology and history, and include extensive collections of fossil vertebrates.

*Queensland Art Gallery, Brisbane.* This gallery was established in 1895. It is administered by a director and board of thirteen trustees. The gallery especially features Australian art of all periods, British modern art, French sculpture, and French paintings from the Rubin collection. The Art Gallery has 1,790 display items, including 559 oils.

### South Australia

*The South Australian Museum, Adelaide.* The museum is a department of the South Australian Public Service and is administered by a director and board of five trustees. It features natural science and anthropological collections. The latter refer to the Australasian and Pacific regions and include an outstanding collection of Aboriginal artefacts.

*National Gallery of South Australia, Adelaide.* The gallery originated in 1881. It is administered by a director and board of seven trustees. Apart from the usual art gallery collections, devoted chiefly to British and Australian works, it features a large collection of prints containing examples from European, British, Oriental, and Australian schools, and a numismatic collection which is widely regarded as the finest in Australia. It also contains the South Australian Historical collection and a small collection of weapons. It has 56,626 exhibits, including 2,084 oils and water-colours, and 12,029 engravings and prints.

### Western Australia

*Western Australian Museum, Perth.* The museum was established in 1895. It is administered by a director and board of five trustees appointed by the Western Australian Government. The zoological collections cover all vertebrate and most invertebrate fields, particularly marine. There are collections relating to vertebrate palaeontology and meteorites, fossil invertebrates, and some fossil plants. There are extensive collections of Aboriginal artefacts and European arms and armour.

*The Western Australian Art Gallery, Perth.* The gallery was established in 1895 and is administered by a director and government-appointed board of five trustees. It features especially collections of Australian paintings, drawings, ceramics and sculpture, a fine collection of Australian contemporary art, and a major Henry Moore sculpture. It has collections of coins and of Western Australian stamps. Altogether there are 3,444 items, including 444 oils and 43 pieces of sculpture.

### Tasmania

*Tasmanian Museum and Art Gallery, Hobart.* Opened in 1887, the Tasmanian Museum and Art Gallery is administered by a board of trustees. It has a branch at Zeehan, namely The West Coast Pioneers' Memorial Museum. The museum part contains zoological, anthropological and geological displays relating to Tasmania. The art displays contain an excellent holding of Tasmanian historical works.

*Queen Victoria Museum and Art Gallery, Launceston.* This institution, opened in 1891, is owned and administered by the Launceston City Council through a director and a sub-committee of aldermen. It has a branch at Cradle Mountain. Attention is concentrated on collections relating to the natural, biological and historical environment of Tasmania, featuring Tasmanian fauna, Aboriginal relics and historical material. The arts associated with Tasmania are represented by an excellent collection of early colonial period painting and also by a fine collection of costumes, lace and ceramics.

### Other museums and art galleries

A short description of some of the twenty-nine remaining museums and art galleries is given in the following paragraphs. The institutions are grouped into those owned by the States, by municipalities and private trusts, by universities, and by private persons.

*State-owned institutions.* The Dixon and Mitchell Libraries (sections of the Public Library of New South Wales) have galleries in which paintings, drawings, engravings, photographs, coins and postage stamps, all related to Australian and south-west Pacific history, are exhibited. The main area of display comprises 7,051 square feet. Only a fraction of the many thousands of items can be shown. There is a geological museum, maintained by the Victorian State Mines Department, with a comprehensive collection of geological specimens. In South Australia there is a small museum of local and tourist interest—the Old Government House, Belair, displaying furniture, etc. of the colonial era.

*Municipal and private trust institutions.* In 1966 there were eleven institutions owned by various non-metropolitan municipalities throughout Australia. These range from the Mildura Art Centre with expenditure of more than \$275,000 in 1966, to the Fred and Lucy Gould collection of 319 paintings, drawings and antiques at Toowoomba. Similar institutions are often maintained in major provincial cities by private trusts. These and the municipal institutions often exhibit artistic, historical and other items of special local interest, and as a rule there are associated with them various local societies devoted to the exploration and encouragement of the arts, local history and the like. Thus the Lionel Lindsay Art Gallery and Library at Toowoomba, Queensland, is administered by a board of trustees, originally appointed in 1959 by deed of trust.

*University institutions.* Most university collections, some of them comprehensive and containing unique material, are reserved essentially for the use of students and research workers, and are therefore not included as museums or art galleries. However, the John Darnell Art Gallery of the University of Queensland, originating from a bequest in 1930, the Macleay Museum of Natural History at the University of Sydney, stemming from a gift to the university in 1888, and the Nicholson Museum of Antiquities at the University of Sydney are open to the public.

*Private museums and art galleries.* Only four establishments of this nature are included here as museums or art galleries. All of them are in South Australia.

### Botanical and zoological gardens

In addition to the zoological gardens referred to in the following paragraphs there are numerous privately owned zoos and sanctuaries, many of them at tourist resorts, which maintain collections of Australian flora and fauna. There are also various national parks, forests, reserves, etc., dedicated for public use, which are preserved largely in their natural condition.

#### New South Wales

The Sydney Botanic Gardens are situated on the shores of Farm Cove, Sydney Harbour, close to the heart of the city and on the site of the first farm established in 1788 by Governor Phillip. Now occupying sixty-six acres, they contain a large and varied collection of flowering plants, shrubs and trees as well as hothouses of orchids and ferns.

The Zoological Gardens at Taronga Park, on the northern side of Sydney Harbour, were opened in 1916. The area is about seventy acres. The natural formation has been retained as far as practicable, with the object of displaying the animals in natural surroundings, and an aquarium has been built within the gardens. In 1965-66 admissions to the grounds were 810,685 and to the aquarium 270,464. The receipts of the zoological department of the Taronga Park Trust amounted to \$439,542 in 1965-66, excluding an annual State grant of \$1,620, and expenditure amounted to \$430,687. Exhibits at 30 June 1966 comprised 1,276 mammals, 3,112 birds, 207 reptiles, and 795 fish.

#### Victoria

The main botanical gardens in the State are the Royal Botanic Gardens, an area of eighty-eight acres within one mile of the centre of the City of Melbourne, containing over 12,000 species of plants, of which there are some 30,000 individual specimens. Many species of native birds breed on islands in lakes within the gardens.

The Zoological Gardens are situated in Royal Park, and contain a wide selection of animals, birds and reptiles. A wild life sanctuary is also maintained at Healesville and contains specimens of indigenous fauna.

#### Queensland

Botanical gardens have been established in Brisbane and in several other cities. The Brisbane Botanic Gardens were established in 1855 by the Government of New South Wales. In 1925 the Queensland Government transferred them to the Brisbane City Council. They occupy approximately forty-six acres on the banks of the Brisbane River in the central city area and are noted for their collections of palms, tropical trees and shrubs, and succulents; they contain over 7,500 plants.

#### South Australia

The Botanic Garden, established in 1855, was opened to the public in 1857. It contains 45 acres of tropical and sub-tropical trees, shrubs and plants, a large range of glasshouses, and a rockery with cacti and succulents. Adjoining is the Botanic Park of 75 acres, which is treated as an arboretum.

The Zoological Gardens, opened in 1883, have an area of approximately 19 acres, and contain a fine collection of animals, reptiles and birds. There were approximately 330,000 visitors in 1965-66.

#### Western Australia

A botanic garden for the native plants of Western Australia was officially inaugurated in March 1963, and planting of the garden began in May 1963. More than one thousand species of native plants have been established in a natural bushland setting with access by grass paths, and

there is a central water garden feature. It was officially opened in October 1965. The site of 25 acres selected for garden development during the first five years is in King's Park, a reserve of almost 1,000 acres close to the centre of Perth. In June 1962 an arboretum of 35 acres was founded for the collection of native trees, and, with the exception of some rare mallees, nearly all trees native to the southern part of the State are represented.

The Zoological Gardens, which were opened in 1898 at South Perth, have an area of 46 acres and are under the control of the Acclimatisation Committee. Animals, birds and reptiles are exhibited. During the year 1965-66, 140,293 adults and 133,317 children visited the zoo.

### Tasmania

The Hobart Botanical Gardens adjoining Government House on the Queen's Domain contain a fine collection of exotic trees and shrubs. They are controlled by a board appointed by the State Government, which supports the gardens by annual grants.

There is no zoo in Tasmania, but a small collection of animals and birds is maintained by the Launceston City Council at the City Park.

### Northern Territory

The Darwin Botanical Gardens were established in 1873 and were planted with imported exotic plants and trees. The gardens now occupy eighty acres and feature tropical plants of both native and overseas origin. They are controlled by the Darwin City Council.

## Book publishing

### Australian book publishing

Statistical data relating to Australian book publishing are supplied by the National Library of Australia as part of its bibliographical responsibilities (*see* page 629). Through the deposit provisions of the *Copyright Act* 1912-1966, its overseas collection agents and its own efforts, the library receives practically all Australian publications, although not necessarily in the year of publication. Because the statistics compiled and shown hereunder are classified according to the year of publication, the figures are subject to revision as publications not yet received in the National Library come to hand.

For books published in 1961 and thereafter the method of counting conforms with international practice. Each title is counted as one unit. The figures cover all non-periodical publications (i.e. those published at irregular intervals or regularly at intervals of one year or longer) published in Australia. They refer to all publications of five pages or more and include pamphlets, new translations and re-editions. They include government publications, educational textbooks, university theses, etc., but exclude publications not available to the general public, advertising material, publications of transitory interest, off-prints, musical works, children's picture books, and maps and charts.

### Number of publications

The following table shows the number of books, etc. published in Australia during the years 1962 to 1966 received by the National Library to the end of 1966.

NUMBER OF PUBLICATIONS RECEIVED BY THE NATIONAL LIBRARY  
AUSTRALIA, 1962 TO 1966

Received by the National Library to the end of—					Published during—				
					1962	1963	1964	1965	1966
1962	.	.	.	.	1,793	..	..	..	..
1963	.	.	.	.	2,501	1,416	..	..	..
1964	.	.	.	.	2,675	2,167	1,385	..	..
1965	.	.	.	.	2,700	2,312	1,934	2,039	..
1966	.	.	.	.	2,700	(a) 2,312	2,117	3,180	1,712

(a) A small number of 1963 publications are shown in later years.

The next table shows the 1963 to 1966 publications received up to the end of 1966, classified by subject matter.

**NUMBER OF 1963 TO 1966 PUBLICATIONS RECEIVED BY THE NATIONAL LIBRARY, BY SUBJECT(a): AUSTRALIA, TO 1966**

Subject	Published during—

(a) The classification is based on the divisions of the Dewey Decimal Classification.

### Commonwealth Literary Fund

In 1908 the Commonwealth Government, under Alfred Deakin, first established the Commonwealth Literary Fund. The Fund was entirely a compassionate one devoted to literary pensions for aged or infirm authors, for the families of literary men who died in poverty, and for writers who were unable for financial reasons to continue their activities.

In 1939, in an endeavour to encourage the development of Australian literature and to foster appreciation of it, the Commonwealth Government greatly enlarged the scope of the Fund. The Fund now awards fellowships each year, assists in the publication of manuscripts of high literary merit, makes annual grants for lectures in Australian literature, and awards pensions to writers who have achieved a nation-wide reputation for their work in the field of creative literature. The fellowships are awarded each year to writers who have proved their capacity in the field of creative literature, to enable them to devote their time to working on a literary project they specify. A fellowship carries a maximum value of \$4,000 a year. The Fund does not seek out people on whom to bestow fellowships, but considers only those who submit applications.

The Fund also assists in the publication of manuscripts which have outstanding literary merit, but which, in the opinion of publishers, may constitute a commercial risk. This assistance takes the form of a guarantee of assistance to the publisher. The Fund does not itself enter the field of publishing, nor does it make outright grants to authors to enable them to arrange publication.

From 1940 to 1965 the Fund made grants to universities for special lectures in Australian literature. In 1940, with rare exceptions, universities ignored Australian writing, but by 1964 the majority of them were actively engaged in its study, and Australian literature had become an accepted field of university scholarship. The Commonwealth Literary Fund lectures played an important role in stimulating interest in Australian literature. At present universities may apply for a grant to enable lectures to be given on special occasions.

In 1956 the Fund initiated a scheme of lectures to the general public and to schools, mainly in country areas, with the co-operation of State adult education authorities and Education Departments. All States receive grants for this purpose. The Fund also assists certain literary magazines of recognised literary value.

The Fund is administered by a committee consisting of one representative of each of the three main political parties in the Parliament, the chairman being nominated by the Prime Minister. The committee is advised on all literary matters by an advisory board of six persons with literary qualifications.

### Literature Censorship Board

In 1937 the Commonwealth Government introduced legislation to provide for a literature censorship board to advise the Minister for Customs and Excise on imported literature. At the same time an appeal censor was appointed to afford appellants an avenue of appeal which did not make expensive court proceedings necessary. The appeal censor was replaced by an appeal board in 1960. The Literature Censorship Board consists of a chairman, a deputy chairman, and four other members, while the Appeal Board is made up of a chairman and two other members.

The boards were set up to deal with that part of the problem which provides the greatest amount of controversy—restriction on books which have a real place in the field of literature. In practice, no imported publication having literary merit is prohibited without prior reference to the Literature Censorship Board. Should the Minister decide to prohibit the importation of a book on the recommendation of the Board, an appeal against the decision may be made for reference to the Literature Censorship Appeal Board. A decision to prohibit the importation of a book may be challenged through the normal processes of law. Control of indigenous matter comes under the jurisdiction of the State Governments.

### Film production

#### Australian film production

Australia was one of the pioneers in the history of film-making, *Soldiers of the Cross*, a multi-reel story film, having been made in 1900, three years before America's *The Great Train Robbery*, which is generally considered to be the first genuine story-film. It has been claimed that *The Kelly Gang*, made in 1905–6, was the first full-length feature film produced in the world. Following the outbreak of the 1914–18 War a series of short patriotic films were produced. In 1917 the first of a successful series of rural comedies was made, featuring a family called the Hayseeds. In the same year *The Kelly Gang* was remade and the first film version of *For the Term of his Natural Life* appeared. A first film version of C. J. Dennis's *The Sentimental Bloke* was made in 1919.

The year 1920 was notable for a number of productions with an authentic Australian flavour: *On our Selection*, a first version of *Robbery Under Arms*, another remake of *The Kelly Gang*, and C. J. Dennis's *Ginger Mick*. Production continued at about the same level until the coming of sound in 1928. Altogether, approximately 255 theatrical films were produced by Australian units in the silent period (1900–1930). Lack of equipment hampered the commencement of production of sound films in Australia, but during the 1930's nearly 60 sound films were produced.

During the 1939–45 War, commercial film production combined with the Commonwealth Government in making films. Since the war, a number of British and American companies have made films in Australia. Altogether, about 131 feature films were produced in Australia between 1930 and 1966.

#### Australian National Film Board

The Australian National Film Board was inaugurated in April 1945, on the recommendation of a Commonwealth Government inter-departmental committee. It was attached for administrative purposes to the Department of Information. With the abolition of that Department in March 1950, administration of the Board was transferred to the News and Information Bureau, Department of the Interior.

In November 1950 the Board was reconstituted as an advisory body to the Minister for the Interior on matters concerned with the production, acquisition and distribution of films required by Commonwealth departments for use within Australia on important matters of national interest and welfare, such as school and adult education, rehabilitation, social development, international understanding, trade and tourist expansion, and immigration; and for dissemination abroad to expand trade and commerce with other countries, to encourage tourist traffic with Australia, to improve Australia's relations with other countries and, where necessary, to explain Australia's national policies, and to encourage immigration.

The constitution provides for a membership of twelve, with the Director of the News and Information Bureau as chairman and the remainder representative of Commonwealth departments, State government instrumentalities, and organisations interested in the production, distribution or utilisation of films for national publicity.

#### Film Division of the News and Information Bureau

Official government film production originated with the appointment in May 1913 of a cinematographer and photographer in the Department of External Affairs. A later development was the establishment, in Melbourne in 1920, of the Cinema and Photographic Branch of the Department of Commerce, and a Government film unit has existed in one form or another to

the present day. Early in the 1939-45 War the newly-established Department of Information was made responsible for the operation of the Cinema Branch and for an Official War Photography Unit. When the Australian National Film Board was established in 1945, the Film Division of the Department of Information became the official film production and distribution agency for Commonwealth departments and instrumentalities. In 1950, with the closing down of the Department of Information and the transfer of its functions, the Division became the Film Division of the News and Information Bureau then set up within the Department of the Interior. The Film Division is also known as the Commonwealth Film Unit. Theatrical and television distribution in Australia, and both theatrical and non-theatrical distribution overseas, of all Film Division productions are organised by the Bureau's home office or its overseas representatives. Non-theatrical distribution in Australia is organised through the National Library, Canberra, in co-operation with State film distribution agencies.

Since 1946 the Film Division has produced films for general exhibition, as well as training and special purpose films. In 1965-66 the Film Unit produced approximately 100 reels of new films and 82 reels of foreign versions of existing films. Prints are distributed through 70 overseas embassies and diplomatic posts. While many films are released commercially in Britain, the emphasis is on distribution of educational and information films through non-theatrical circuits. Films are frequently shown on television both in Britain and continental Europe. A similar situation exists in the U.S.A., where there is wide non-theatrical distribution and considerable use of the films by television networks. In Canada the Australian High Commission handles the placement of films for non-theatrical use, while a recently completed contract with the Canadian Broadcasting Corporation has resulted in a considerable increase in the number of Australian films appearing on television in Canada. Selected films have been recorded in French, Dutch, German, Italian, Swedish, Russian, Spanish, Japanese, Malay, Thai, Danish, Greek, Portuguese, Esperanto, and Pidgin.

In addition to films made on its own initiative, the Film Division produces films under the sponsorship of, or with the co-operation of, Commonwealth departments and many other bodies such as the Australian Road Safety Council, the Snowy Mountains Hydro-electric Authority, the Australian National University, the Australian Broadcasting Commission, the Victorian State Electricity Commission, the National Capital Development Commission, the Atomic Energy Commission, the British Broadcasting Corporation, the Australian National Shipping Line, and the Institute of Aboriginal Studies.

#### Film censorship

**Legislation.** The Commonwealth Government's powers over censorship of films extend only to imported films and imported advertising matter, and stem from the Customs Act. Under that Act the Customs (Cinematograph Films) Regulations provide for the appointment of a Film Censorship Board whose function is to ensure that films and related advertising material coming within certain defined categories are not admitted into Australia. Under those regulations the Film Censorship Board may pass films in their original form, reject them, or pass them after eliminations have been made. Legislation passed by the State Governments of Victoria, Queensland, Western Australia, and Tasmania names the Commonwealth Film Censorship Board as the censorship authority and vests in it the power to classify films as suitable for general exhibition or not. The State Acts give the Commonwealth Board the authority to censor films made in Australia for commercial exhibition and advertising matter made in Australia.

The censorship organisation comprises a Censorship Board of seven persons and an Appeal Censor, the headquarters being in Sydney. Importers have a right of appeal to the Minister against decisions of the Board and the Appeal Censor.

**Thirty-five mm films for exhibition in motion picture theatres.** In 1966, 1,388 films comprising approximately 5½ million feet were censored. This represented approximately 1,030 hours screening time. Of these films, 379 originated in the United States of America, 371 in the United Kingdom, and 638\* in other countries. Principal suppliers among the last mentioned were: Italy, 117; Greece, 81; France, 67; U.S.S.R., 58; Germany, 34; and Poland, 22. Included in these figures were 554 full-length feature films which constitute the main theatrical attractions. This was an increase of 119 over imports for 1965. Feature films came from: the United States of America, 140; the United Kingdom, 74; Italy, 107; Greece, 76; France, 39; U.S.S.R., 36; Germany, 11; and Sweden, 9. Twenty-four feature films were initially rejected and cuts were made from 131. Two rejected feature films were subsequently reconstructed and passed, and one was passed on appeal. There were 6 appeals, 1 against cuts, which was allowed, and 5 against rejection, of which 4 were disallowed and 1 allowed. Feature films classified as suitable for general exhibition numbered 253, and 277 were considered not suitable for children. Of the latter, 53 carried the special condition that all advertising should indicate that they were suitable only for adults. These classifications are advisory only and are designed to enable picture-goers and particularly parents to obtain a general idea of the nature of any particular film. In addition to these imported films, 166 35mm films of 174,132 feet produced in Australia were cleared. These were mainly newsreels and documentaries intended for commercial exhibition or export.

\* Includes 76 Australian-produced films.

*Sixteen mm films.* Excluding those imported for television use, 6,439 16mm films of approximately 4½ million feet were examined. These were films commercially produced for screening in theatres used by business undertakings for advertising and instructional purposes, and for screening in churches, schools and universities, and on home movies. One was rejected.

*Eight mm and 9.5mm films.* Approximately 103,000 feet of these small dimension type films were examined. One hundred and sixty-three films with an approximate footage of 12,000 feet were rejected.

*Television films.* In 1966, 7,555 films, predominantly 16mm, of approximately 9 million feet, for use on television, were censored. The number of films is not a true indication of volume because many of these were of short duration. In terms of screening time the films censored for television amounted to approximately 4,293 hours. On a footage basis the United States of America supplied 68 per cent of the total imports and the United Kingdom 31 per cent. Sixty-six television films were rejected outright and an additional 1 was classified as unsuitable for televising. Eliminations were made from 1,057. There were 24 appeals, 22 against rejection, 2 against classification, of which 9 were allowed and 15 disallowed.

*Foreign language films.* Countries other than the United Kingdom and the United States of America supplied 562 of the 35mm films imported for theatrical exhibition, of which 340 were feature films. Generally, the dialogue is in a foreign language with explanatory English captions. A few have an English commentary and in some cases English 'dubbed' dialogue. Of 6,439 16mm commercial films censored, 1,465 originated from non-English speaking countries. The chief supplying countries were: France, 286; Germany, 235; Japan, 167; Poland, 103; Holland, 81; Switzerland, 50; Sweden, 48; Italy, 42; China, 33; U.S.S.R., 32.

*Export of films.* The quantity of films exported for the year was approximately 2.5 million feet, consisting mainly of newsreels, advertising films and documentaries. This footage included in many cases several prints of the one film. It also included large quantities of exposed negatives sent overseas for processing.

### Arts Council of Australia

Patterned on the Council for the Encouragement of Music and Arts which operated in the United Kingdom during the Second World War, an Australian organisation was brought into being in 1943. In 1945 it became The Arts Council of Australia. Originating in New South Wales, Divisions are active now in the Australian Capital Territory, New South Wales, Queensland, South Australia, and Tasmania. A Federal Council was formed in 1964. New South Wales has a country branch network of over fifty centres. Rapid development in Queensland has resulted in the formation of over twenty-six branches.

The Arts Council receives State Government grants through the Departments of Education in New South Wales, Queensland and South Australia. From 1963 to 1966 substantial contributions were received from a private organisation. Some activities of the Council are supported financially by non-metropolitan local government bodies, and grants were made by the Gulbenkian Foundation in 1964 to 1966 to help in re-establishing the Federal Council. The New South Wales Division is a member of the Adult Education Advisory Board in that State, representing the 'live art' section of adult education. The Tasmanian Division is represented on, and works closely with, the Adult Education Board of that State.

Activities of the Arts Council are directed towards decentralisation of the arts for the benefit of country centres and metropolitan and country schools. It is greatly concerned with taking the arts to children as a basic cultural development. Tours of high standard companies in opera, ballet, drama, puppets, etc. are operating throughout the year. The Young Elizabethan Players Company was formed jointly by the Arts Council and the Australian Elizabethan Theatre Trust in 1958 to take Shakespeare to schools in New South Wales and Queensland. This has now been replaced by the Young Tote Company sponsored by the Arts Council and the University of New South Wales Drama Foundation. The Council handles a wide range of art exhibitions, both for city and country areas. Summer schools for drama, painting, pottery, music, and other arts are an established annual feature of the work of the New South Wales and Queensland Divisions.

Yearly drama festivals are conducted for the Little Theatre movement. In 1963 and again in 1965 the New South Wales Division sponsored the first arts festivals for Sydney (North Side Arts Festival), with a wide range of cultural activities concentrated on the north side of Sydney Harbour. The festival is now a biennial event with the third festival being planned for August 1967.

### Australian Elizabethan Theatre Trust

Inaugurated in 1954 to commemorate the first visit to the Commonwealth of Her Majesty the Queen, the Australian Elizabethan Theatre Trust has since presented drama, opera, ballet and puppetry throughout the Commonwealth. The Trust receives annual grants from the Commonwealth Government, the State Governments and city councils. Its income also includes subscriptions from members and donations from business houses.

In the field of drama it has presented, *inter alia*, the works of Australian playwrights, including plays which were subsequently presented overseas. The Elizabethan Trust Opera Company has given seasons of opera and has presented overseas guest artists, conductors and producers. From 1956 to the end of 1966, more than 1,200 performances of opera have been given by the Trust Opera Company in all States and the Australian Capital Territory. Twenty-eight operas have been the repertoire in this period. The Australian Ballet, which commenced its inaugural season in November 1962, has visited all mainland capitals and New Zealand and presented world premiere productions of three commissioned ballets during 1964. The Commonwealth Government gave financial assistance for the Ballet to represent Australia at the Commonwealth Festival of Arts in Britain in 1965. The company also danced at Baalbek, Nice, Paris, Berlin, Copenhagen, and Honolulu. It will tour New Zealand, Canada and major Latin American cities during 1967. The Trust has also been associated with commercial managements in the presentation of overseas attractions and large-scale musicals.

In 1965 the Trust and Arts Council of Australia jointly formed the Marionette Theatre of Australia to promote puppetry, and one puppet company with sponsorship from the Department of External Affairs began a twelve-nation tour of Asia late in 1966.

Country areas have been visited by Trust companies presenting opera, drama, ballet, and puppetry, in association with the Council of Adult Education in Victoria and the Arts Council of Australia. During 1967 five special companies will present Shakespeare and other curricular plays for schools in all States, this being an extension of similar work undertaken annually since 1958.

In Victoria the Trust is associated with the University of Melbourne in the Union Theatre Repertory Company. It is also associated with the University of New South Wales Drama Foundation in the Old Tote Theatre Company. The corresponding activity in Adelaide, the South Australian Theatre Company, was introduced by the Trust in 1965. Assistance is given to the Adelaide Festival of Arts, the Festival of Perth, the Perth Playhouse, the National Theatre and Fine Arts Society of Tasmania, and other companies. From a special commissioning fund the Trust commissions theatrical works in all major forms from Australian creative artists.

An important activity of the Trust is its association with the University of New South Wales and the Australian Broadcasting Commission in maintaining the National Institute of Dramatic Art, which they jointly established. This provides a training ground for young Australian actors, producers and technicians. Performing a similar function for selected ballet students, the Australian Ballet School is maintained by the Trust in Melbourne.

### The Australian Council of National Trusts

The Australian National Trusts were founded to further the general objectives of preservation and conservation of lands, places, buildings, works, and articles which are of national importance by reason of educational, historic, architectural, artistic, scientific, cultural, or other special interest, and places of natural beauty, including conservation of their flora and fauna.

The first Australian National Trust, the National Trust of Australia (New South Wales), was formed in 1945. Since then National Trusts have been formed in each of the other States. The Trusts in New South Wales, Queensland, South Australia, and Western Australia have statutory authority, and those in Victoria and Tasmania are incorporated under the Companies Acts of their respective States. The Australian Council of National Trusts, which was incorporated in 1965 to co-ordinate the activities of the State National Trusts and represent them at the federal level and internationally, has associations with the National Trusts in Great Britain and the United States of America.

Membership of the National Trusts is open to all individuals and organisations. Total membership throughout the Commonwealth is approximately 18,000. The Trusts are financed by members' subscriptions, the sponsorship of commercial and industrial organisations, the State Governments, and the Commonwealth Government. A total of approximately \$40,000 was received from entrance fees to National Trust properties throughout Australia during 1966-67.

The number of properties owned or controlled by the Trusts exceeds fifty. These include houses, natural reserves, a garden, a powder magazine, a police station, and a paddler streamer. About thirty other buildings have been classified by the National Trusts as being of outstanding interest, but are not owned or controlled by the Trusts. The Tasmanian Government has agreed to make available to the National Trust of Australia (Tasmania) a total of \$60,000 over a period of five years as a contribution towards the restoration of Clavendon, a country mansion near Evandale.

### Historic Memorials Committee

The Historic Memorials Committee was established in 1911 for the purpose of securing portraits of distinguished Australians who had taken an active part in Federation. Later the Committee decided to obtain portraits of all Governors-General, Prime Ministers, Presidents of the Senate, Speakers of the House of Representatives, and other notable Australians. In addition the Committee may commission, and has in fact commissioned, paintings recording special events connected with the Commonwealth Parliament.

The Committee comprises the Prime Minister (Chairman), the President of the Senate, the Speaker of the House of Representatives, the Vice-President of the Executive Council, the Leader of the Opposition, and the Leader of the Opposition in the Senate. An Art Advisory Board, comprising a group of artists, was established in 1912 to assist the Committee by advising on works of art to be commissioned by the Committee.

### Commonwealth Art Advisory Board

Since its beginning in 1912 the Art Advisory Board has always consisted of artists. At present there are five members. As well as assisting the Historic Memorials Committee the Board also advises the Government on the purchase of works of art for inclusion in the National Collection. In 1966-67, \$50,000 was provided for this purpose. The National Collection now contains over 1,200 works of art.

The Board, on behalf of the Government, also organises and finances exhibitions of Australian art in overseas countries. In addition, it financially assists the showing in State Art Galleries of major exhibitions from abroad or assembled by one or more State Art Galleries. In 1966-67, \$12,000 was provided to meet the costs involved in these exhibitions.

### SCIENTIFIC RESEARCH

A special article on Science and Technology in Australia, prepared by the Commonwealth Scientific and Industrial Research Organization of Australia, was included in Year Book No. 49 (see page 781).

### Outline of Research in Australia

#### Scientific research in Australia prior to the 1939-45 War

Interest in science goes back to the beginning of Australian history. Captain James Cook discovered the east coast of Australia when returning from a scientific expedition to the South Pacific, and one of his passengers was the President of the Royal Society, Sir Joseph Banks, who was the first of many naturalists to be fascinated by the unique flora and fauna of the continent. The Stone Age culture of the Aborigines drew the early attention of anthropologists. The Aboriginal boomerang was a source of interest to the Surveyor-General of New South Wales, Sir Thomas Mitchell, who attempted to apply its spinning characteristics in a 'boomerang propellor' for driving steamships.

Until the 1914-18 War Australian science rested on the individual accomplishments of a few outstanding men, working largely in isolation. Three names stand out in this period—Farrer, Hargrave and Mitchell. After years of patient work as a plant breeder, Farrer developed the first successful strain of rust-resistant wheat. Hargrave's experiments in aviation attracted world-wide attention. Mitchell, a hydraulic engineer, invented a thrust bearing which made it possible to increase greatly the motive power of ocean-going screw steamships.

During the first world war Australia followed the British example and set up, in 1916, the Commonwealth Advisory Council for Science and Industry which finally became the Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.). The Munitions Supply Laboratories formed in 1916 under the Ministry of Defence provided scientific services and undertook development tasks related to the supply of military material. Between the two world wars most of the systematic research done in Australia was carried out in the Council's laboratories. A little was done by some State departments of agriculture, but very little in the universities, which had not yet come to be regarded as research centres. Many of the most able Australian scientists were attracted to posts abroad.

#### Scientific research during and following the 1939-45 War

The situation changed with the onset of the 1939-45 War and the economic expansion which followed it. Until 1939 the activities of the Council for Scientific and Industrial Research had been concentrated in the biological sciences, stimulated by the needs of primary industry. With the war C.S.I.R.O.'s work expanded greatly and spread into the physical sciences, with particular attention to the technical problems of industrial production. Many products previously

imported, such as drugs and precision instruments, had to be manufactured locally, and much research and developmental work was necessary before this could be done. The work was carried out by C.S.I.R., by the Department of Supply, by university science departments, and by industrial firms. These wartime activities had permanent effects, particularly in the universities and in C.S.I.R.

As the following paragraphs indicate, Australian research continued to expand after the war, with the Commonwealth Government taking a significant role both in its own research activities and in furthering research in general. The establishment in December 1966 of the Commonwealth Department of Education and Science indicates the importance placed on research by the Federal authorities. There is no section of non-government research (universities, independent research institutions, industrial research, and individual research, workers) for which Government support is not now provided, although some of the schemes are as yet in their infancy.

#### **Australian National University and other university research**

In 1946 the Commonwealth Government established the Australian National University, whose statutory functions required it to 'encourage and provide facilities for post-graduate research and study, both generally and in relation to subjects of national importance to Australia'. The University's Institute of Advanced Studies is devoted to research and post-graduate training. The Institute comprises the John Curtin School of Medical Research and the Research Schools of Physical Sciences, Social Sciences, Pacific Studies, and Chemistry. The research activities of a teaching university are carried out in the University's School of General Studies. The growth of the National University, with its major emphasis on research and post-graduate training, introduced a new influence on the university scene which, apart from its own research activities, has provided an important stimulus, indirectly, for the growth of research in other universities. This was made financially possible by increased grants from the Commonwealth. Until 1936 only small *ad hoc* research grants had been made to the universities. In 1936 a five-year programme was inaugurated by which \$60,000 was spent annually on grants for research in the physical and biological sciences. This figure had grown to \$200,000 in 1950, after which the amount was absorbed in the new system of Commonwealth grants to the States for university purposes. In 1957 the report of the Committee on Australian Universities (the Murray Report) recommended increases in research funds and drew attention to the small number of post-graduate students. A further increase was approved in 1963, following the second report of the Australian Universities Commission. In 1965 the Commonwealth established the Australian Research Grants Committee to recommend and administer grants for individual research projects, mostly in universities. In 1964 the Commonwealth Government established the Queen Elizabeth II Fellowship Scheme for post-doctoral studies in the physical or biological sciences. Ten fellowships may be awarded annually to young scientists of exceptional promise and proved capacity for original work. The fellowships, which may be awarded to Australian or United Kingdom citizens, are tenable in an Australian university or approved research institution normally for two years.

The growth of university research is reflected in the increase of post-graduate studies. The Ph.D. degree was introduced into Australia only after the second world war, and the first such award was made by the University of Melbourne in 1948. Between 1948 and 1966 inclusive more than 1,900 Ph.D.'s were awarded in Australian universities. Some 600 higher doctoral degrees were awarded over the same period. During the year ended 31 July 1966, 336 Ph.D. degrees and 47 higher doctorates were awarded.

Research in the universities is mostly of a 'pure' or 'fundamental' character, although universities have also concerned themselves with 'applied' research directed to the solution of practical problems, e.g. in metallurgy, chemical industry, agriculture, and food processing. A recent example of co-operation between a university and a State government agency was the investigation carried out by the University of Melbourne into the production of town gas from the lignite of the Yallourn-Morwell deposits in Gippsland, Victoria. In 1959 the University of New South Wales established Unisearch Ltd., with the purpose of assisting by research and other suitable means the advancement, development and practical application of science to industry and commerce.

#### **Research by Government agencies**

The post-war growth of C.S.I.R.O. has proceeded in both pure and applied science. Although increasing attention is being paid to industrial problems, the major impact of C.S.I.R.O. activities is still in the field of primary production. Research on pasture improvement, for example, is estimated to have brought about a doubling of the high-quality pasture in the decade 1948-58, and the successful programme of rabbit control that followed C.S.I.R.O.'s work on myxomatosis brought about a notable increase in the numbers of sheep during the same period. Apart from C.S.I.R.O., the research activities of other Commonwealth agencies have grown substantially since the war. These include the Long Range Weapons Research Establishment set up in 1947 under an agreement with the Government of the United Kingdom and reorganised in 1955 as

the Weapons Research Establishment; the Munitions Supply Laboratories, later renamed the Defence Standards Laboratories; and the C.S.I.R.O.'s Division of Aeronautics which was transferred to the Department of Supply and renamed the Aeronautical Research Laboratories. (Details of the research activities of these establishments are given in Chapter 4, Defence, pages 86-8.) In 1954 the Atomic Energy Commission decided to set up its own research establishment at Lucas Heights, near Sydney. The Royal Australian Navy also maintains an experimental laboratory. Other agencies engaged in research include the Bureau of Meteorology, the Ionospheric Prediction Service and the Bureau of Mineral Resources, Geology and Geophysics. Attached to the Commonwealth Health Department are several institutions doing research work, e.g. the Commonwealth Serum Laboratories, The School of Public Health and Tropical Medicine, The Commonwealth Acoustic Laboratories, The Bureau of Dental Standards, The Commonwealth Health Laboratories, The National Biological Standards Laboratory, and the Commonwealth X-ray and Radium Laboratory. (Further particulars of these research establishments will be found in Chapter 16, Public Health, pages 561-6.)

Research work by State Government agencies remains largely in the field of agriculture. In Queensland the great importance of the sugar industry is reflected in the work of the Bureau of Sugar Experiment Stations. Some co-ordination of research in agriculture is exercised through the Standing Committee on Agriculture, a joint Commonwealth-State body. In recent years some interest has also been shown in problems related to power generation, public health and water supply.

#### **Research in industry**

Research in industry has also expanded, though not at the same rate as in government agencies or the universities. Since 1955 several large firms have established their own central laboratories, and appreciable sums are being spent on research in the chemical, metals, sugar, and paper industries. To encourage this trend the Commonwealth Government has announced that it will make available a sum of \$6,000,000 a year for grants to firms willing to increase their expenditure on research and development. Special tax concessions apply to expenditure on research and development.

#### **Research in social sciences**

Research in the social sciences has developed largely since the war. Before 1939 such work was virtually confined to anthropology and economics, although educational research was carried out by the State education departments and by the Australian Council for Educational Research. The latter, which was established in 1930, is now mainly supported by Commonwealth and State financial grants. The need for a much wider scale of activity was one of the motives for the establishment of the Australian National University, with a Research School of Social Sciences and a Research School of Pacific Studies. In 1952 the Social Science Research Council was established, with support from the Carnegie Corporation and the Commonwealth Government, to encourage the advancement of the social sciences, to foster research and to subsidise the publication of studies. The Institute of Applied Economic Research, supported by private funds, was set up at the University of Melbourne in December 1962; its work ranges from the economics of industry to the economics of welfare. In 1961 the Australian National University set up the New Guinea Research Unit, based in Port Moresby, which is carrying out a range of investigations into economic and social change in the Territory of Papua and New Guinea. The first election held in the Territory in 1964 was the subject of a full-scale study. In 1961 the Commonwealth established the Australian Institute of Aboriginal Studies, for the organisation and finance of research on Aboriginal matters, largely within Australian universities. The Institute's own staff is small although its annual budget currently exceeds \$300,000. Despite these developments, the growth of research in the social sciences has been considerably slower than in the natural sciences. Its growth has, however, been stimulated by the establishment of new universities with strong interests in the social sciences, and by the increased demand for information about social changes arising from both public and private sources.

#### **Distribution of Australian research work**

Research in Australia has not, on the whole, been strongly concentrated in particular fields. Nevertheless, some fields have attracted more attention than others, either because of their special economic or social importance or because Australia offers particular facilities for pursuing them. The wool industry, mineral processing and the manufacture of paper from native hardwoods are examples of the former. The most notable example of the latter is radio-astronomy, for which Australia has special advantages because of its geographical position. The projected installation of one of the world's largest optical telescopes, to work in conjunction with radio-astronomical observations, will enable the exploitation of Australia's climatic advantages for optical astronomy. The combination will give Australia a premier position in this field of physical science. Hitherto the most notable achievements of Australian scientists have been in the biological sciences, as shown by the three Nobel Prizes won by Australians—Lord Florey for work on penicillin, Sir Macfarlane Burnet for immunology and Sir John Eccles for neuro-physiology.

## Commonwealth Scientific and Industrial Research Organization

The Commonwealth Scientific and Industrial Research Organization (C.S.I.R.O.) is Australia's largest civil scientific body. Established as the Council for Scientific and Industrial Research (C.S.I.R.) in 1926, it was re-organised in 1949 under the Science and Industry Research Act and now has a staff of more than 5,500 including some 1,700 professional scientists. An account of the organisation and work of the former Council, and the earlier Commonwealth Institute of Science and Industry from which the Council was formed, was given in earlier issues of the Year Book. (See No. 14, p. 1061 and No. 37, p. 1183.)

The principal function of C.S.I.R.O. is to carry out scientific research for the primary and secondary industries of the Commonwealth and its Territories. C.S.I.R.O. does not conduct defence research, medical research or atomic energy research. The other powers and functions of C.S.I.R.O. as defined in the Science and Industry Research Act of 1949, include:

- the training of scientific research workers and the awarding of scientific research studentships and fellowships;
- the making of grants in aid of pure scientific research;
- the recognition or establishment of associations of persons engaged in any industry, for the purposes of carrying out industrial scientific research and the co-operation with, and the making of grants to, such organisations;
- the testing and standardisation of scientific apparatus and instruments and the carrying out of scientific investigation connected with standardisation;
- the collection and dissemination of information relating to scientific and technical matters;
- the publication of scientific and technical reports, periodicals and papers.

Before 1939 C.S.I.R. was engaged largely in research into problems of primary industry, in particular, plant and animal diseases and nutrition, soils, pasture improvement, insect pest control, usage of Australian timbers, food processing, and fisheries. Since 1939 an extensive programme of wool research has been developed, and research has been extended into the physical and engineering sciences with particular reference to international standards, radiophysics, various aspects of chemistry, metal physics, meteorological research, mineral processing, building research, dairy products research, engineering research, and coal utilisation.

### Organisation

C.S.I.R.O. is a statutory corporation operating under its own Act of Parliament and exercising its powers subject to the regulations and the approval of the Minister for Education and Science.

The governing body of the Organization is the Executive, which consists of nine members appointed by the Governor-General. There are five full-time members, one of whom is chairman, and four part-time members. At least five of the members must possess scientific qualifications. The Executive is responsible to the Minister for the policy and the work of the Organization.

For carrying out its research work, C.S.I.R.O. is divided into four major group laboratories and a number of Divisions and Sections. The four group laboratories are the Animal Research Laboratories comprising four Divisions, the Chemical Research Laboratories comprising five Divisions, the National Standards Laboratory comprising two Divisions, and the Wool Research Laboratories comprising three Divisions. There are also seventeen independent Divisions in other research fields and an additional nine independent Sections. The Head Office is in Melbourne and associated with it are the Central Library (*see* pages 630-1), the Film Unit and the Translation Unit. Regional administrative offices are located at Brisbane, Canberra, Melbourne, and Sydney. The Organization also maintains the Australian Scientific Liaison Office in London and the Office of the Scientific Attaché in Washington.

Since the Organization's activities are Commonwealth-wide and often involve extensive field work, a number of branch laboratories and field stations have been established in various parts of Australia. The more important of these are included in the following lists.

### Laboratories and Divisions

*Animal Research Laboratories*, consisting of the following four Divisions.

- Animal Genetics, Sydney, with a branch laboratory and field station at Rockhampton, Queensland, and field stations at Armidale and Badger's Creek, New South Wales, and at Cunnamulla, Queensland.
- Animal Health, Melbourne, with branch laboratories in Sydney and Brisbane, and field stations at Jimboomba, Queensland, and Werribee, Victoria.
- Animal Physiology, Sydney, with a laboratory and field station at Armidale, New South Wales, and a branch laboratory in Brisbane.
- Nutritional Biochemistry, Adelaide, with a field station at O'Halloran Hill, South Australia.

*Chemical Research Laboratories*, Melbourne, consisting of the following six Divisions.

Applied Chemistry.  
Applied Mineralogy, with branch laboratories in Perth and Sydney.  
Chemical Engineering.  
Chemical Physics.  
Mineral Chemistry.  
Microanalytical Laboratory.

*National Standards Laboratory*, Sydney, consisting of the following two Divisions.

Applied Physics.  
Physics, with the Solar Observatory at Culgoora, New South Wales.

*Wool Research Laboratories*, consisting of the following three Divisions.

Protein Chemistry, Melbourne.  
Textile Industry, Geelong, Victoria.  
Textile Physics, Ryde, New South Wales.

The other Divisions are as follows.

Building Research, Melbourne, with an office in Port Moresby, New Guinea.  
Coal Research, Sydney.  
Dairy Research, Melbourne.  
Entomology, Canberra, with branch laboratories in Sydney, Brisbane, Hobart, Perth, and Armidale, New South Wales, and field centres at Albury, Trangie and Wilton, New South Wales, and at Amberley, Queensland.  
Fisheries and Oceanography, Cronulla, New South Wales, with branch laboratories in Brisbane, Melbourne and Perth.  
Food Preservation, Sydney, with branch laboratories at Gosford, New South Wales, (operated jointly with the New South Wales Department of Agriculture), and in Brisbane and Hobart.  
Forest Products, Melbourne.  
Land Research, headquarters in Canberra, and field stations and laboratories at Alice Springs, Katherine and Darwin, Northern Territory, and Kununurra, Western Australia.  
Mathematical Statistics, Adelaide, with officers stationed at a number of Divisions and Sections and at the University of Melbourne.  
Mechanical Engineering, Melbourne.  
Meteorological Physics, Melbourne.  
Plant Industry, Canberra, with branch laboratories in Perth, Hobart, Brisbane, and Melbourne, and at Deniliquin and Armidale, New South Wales, field stations and experimental farms at Canberra and Deniliquin, and at Kojonup and Baker's Hill, Western Australia, and a tobacco research institute at Mareeba, Queensland.  
Radiophysics, Sydney, with the Australian National Radio Astronomy Observatory at Parkes, New South Wales, and the Radio Heliograph at Culgoora, New South Wales.  
Soils, Adelaide, with branch laboratories in Brisbane, Canberra, Perth, and Hobart, and Townsville, Queensland.  
Tribophysics, Melbourne.  
Tropical Pastures, Brisbane, with branch laboratories at Townsville and Lawes, Queensland, and field stations at Samford and Woodstock, Queensland.  
Wildlife Research, Canberra, with a branch laboratory in Perth.

## Sections

Computing Research, Canberra, with subsidiary installations at Adelaide, Melbourne and Sydney.  
Editorial and Publications, Melbourne.  
Horticultural Research, Adelaide, with a field station at Merbein, Victoria.  
Irrigation Research Laboratory, Griffith, New South Wales.  
Ore Dressing Investigations, Melbourne.  
Physical Metallurgy, Melbourne.  
Soil Mechanics, Melbourne, with a branch laboratory in Adelaide.  
Upper Atmosphere, Camden, New South Wales.  
Wheat Research Unit, Sydney.

The Organization's total budget for 1966-67 was nearly \$42,000,000. About three-quarters of this was provided by the Commonwealth Government, while much of the remainder was provided by trust funds which have been set up by various primary producer groups. The largest of these is the Wool Research Trust Fund, but the wheat, dairy, beef cattle, leather, and tobacco industries also contribute substantial amounts. The funds are derived from a levy on produce matched by a Government contribution.

### Mount Stromlo and Siding Spring Observatories

Mount Stromlo Observatory and Siding Spring Observatory are the two astronomical research stations of the Research School of Physical Sciences, Australian National University. The staff of the observatories are academic staff of the University's Institute of Advanced Studies. The permanent headquarters of the observatories is located at Mount Stromlo, together with the library, laboratories and offices of the scientific staff. The older telescopes are located on Mount Stromlo, the newer ones on Siding Spring Mountain. At Siding Spring there is a lodge to house the astronomers, permanently based at Mount Stromlo, who visit for short periods to make observations there.

The observatories constitute the principal centre of optical astronomical research in the southern hemisphere. Their research facilities are second only to the great observatories of the south-western United States, and because of their geographical latitude observations can be made on parts of the sky permanently inaccessible to northern astronomers. The functions of the observatories is to carry out original investigations (both observational and theoretical) in astronomy and astrophysics, and to provide post-graduate training for the future generation of Australian astronomers.

The direction of the researches conducted depends on the steadily widening interests of the staff and scholars as the subject of astronomy itself rapidly progresses. Areas of permanent interest to which the observatories have made important contributions include the evolution of stars and of stellar systems, the study of the Magellanic clouds and their globular star clusters, the chemical composition of the stars and the study of pulsating stars. The results of the work carried out at the observatories are published in the international scientific periodicals, principally in the *Monthly Notices of the Royal Astronomical Society* and the *Astrophysical Journal*.

Mount Stromlo Observatory is situated at  $35^{\circ} 19' 16''$  south latitude and  $149^{\circ}$  east longitude at an altitude of 2,560 feet. It is on the summit of a ridge of low hills in the Australian Capital Territory seven miles west of the city of Canberra. The first regular scientific work was started at this site in 1925, and the Observatory was incorporated in the Australian National University in 1957. The main instruments are 30-inch, 50-inch and 74-inch reflecting telescopes and associated spectrographs, photometers and spectral scanners.

Siding Spring Observatory was established in 1965. It is located at  $31^{\circ} 16'$  south latitude and  $148^{\circ} 41'$  east longitude at an altitude of 3,820 feet and occupies the summit of Siding Spring Mountain in the Warrumbungle Ranges, near Coonabarabran, New South Wales. This site has one of the best climates for astronomical research to be found anywhere in Australia—considerably better than that at Mount Stromlo. The instruments at present operating at Siding Spring Observatory include a 40-inch and a 24-inch reflector.

The observatories also operate the National Time Service whose headquarters are located at Mount Stromlo.

### Australian Atomic Energy Commission

#### Establishment and functions of the Commission

In November 1952 a Commission of three members was appointed to control the Commonwealth's activities in relation to uranium and atomic energy, and in April 1953, upon the enactment of the *Atomic Energy Act 1953*, the Commission was established as a statutory authority with powers and functions as defined in the Act. Under amending legislation the number of Commissioners was increased to five in April 1958. The Commission is a corporate and autonomous body controlling its own service. It functions under the direction of the Minister for National Development.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research, and generally fostering the advancement of atomic energy technology.

#### Uranium prospecting and mining

Production of uranium concentrate in Australia is now confined to the Rum Jungle Plant, Northern Territory. Since 1953, mining and treatment operations here have been conducted for the Commonwealth by a mining company. Mining of presently known reserves of uranium in this area was finished in 1963, but treatment of stock-piled ore has continued. Australia's own domestic requirements of uranium oxide to the end of the present century are expected to be greater than currently known reserves. Because of this the Commonwealth has continued exploration for uranium in the Rum Jungle area and has sought to encourage private producers to resume exploration.

### Research

The Commission's Lucas Heights Research Establishment is Australia's atomic energy research and information centre. Its research programme is concerned with the development of nuclear power, the production and utilisation of radioisotopes, and other related fields. It is directed towards the long-term development of national resources.

The research programme over the past few years has been a technical and feasibility study of an advanced high temperature gas cooled reactor system in which the core was composed of ceramic materials—oxides of uranium, plutonium, thorium and beryllium. Carbon dioxide was considered as the coolant gas. The study has been largely concerned with fundamental research and development in the fields of reactor materials, nuclear and reactor physics, and nuclear engineering. After a detailed technical assessment of the system in 1966, the Commission concluded that it was not as attractive for base-load power stations as previously expected. The Commission has decided to taper off this study, subject to the completion of those parts of the study which are considered valuable from the point of view of scientific merit or reactor technology. The effort will be transferred largely to a technical and economic assessment of a natural uranium fuelled, heavy water moderated reactor. This type of reactor system is now considered to be most suitable for future installation in Australia for the economic production of nuclear power.

The use of radioisotopes is increasing rapidly in Australia in scientific research and development, in treatment of diseases, and in agriculture and industry generally. Most of these, especially short-lived radioisotopes which cannot be imported, are being produced in the Commission's high flux research reactor HIFAR at Lucas Heights. The A.A.E.C. is also producing the majority of cobalt 60 teletherapy sources for cancer treatment in Australia, and is exporting high activity sources to New Zealand and to Asia. The Commission is promoting research into radioisotope application and is co-operating with universities, industry and governmental bodies in making available the most up-to-date techniques involving the use of radioisotopes in every field.

Large-scale hydrological investigations using radioactive tracers have been conducted by the Commission. These have included sand tracing in Botany Bay and silt tracing in Newcastle Harbour and the Hunter River in association with maritime and development authorities.

Extensive research and development work on the technical and scientific applications of gamma radiation is also being carried out. The possibilities of radiation for such purposes as industrial sterilisation, food preservation, disinfestation of wheat and flour, and the control of fruit fly and other insect pests are being investigated. Scientists at Lucas Heights are also studying the biological effects of radiation and questions of health and safety.

The Research Establishment has developed facilities for the absolute standardisation of radioisotopes and has participated in international intercomparisons in the health and safety field. Work is directed to various aspects of radiation dosimetry, to radiation biology, and to aspects of the toxicology of beryllium compounds.

Lucas Heights is a centre of specialised equipment and information. In addition to the research reactor HIFAR, used for testing materials and producing radioisotopes, there is much other equipment unique in Australia. All these facilities are available to universities and other institutions under suitable conditions. In these endeavours the Atomic Energy Commission is working in close co-operation with the United Kingdom Atomic Energy Authority, under arrangements which give Australia access to results of British research on peaceful atomic energy uses. Results of research in Australia are in like manner available to Britain. Work in Australia, though constituting a self-contained programme, is co-ordinated with the British programme to avoid overlapping of research objectives and duplication of investigations. Australia also has bilateral arrangements with the United States, Canada and Japan, and recently accredited a diplomatic mission to the European Atomic Energy Community (Euratom). Australia is also taking part in the promotion of the peaceful uses of atomic energy through the International Atomic Energy Agency. For the year 1965-66 the Commission placed \$98,000 worth of research contracts mainly within Australian universities on matters related to the research programme at Lucas Heights. Since 1954 the Commission has placed research contracts to a total value of about \$1,146,000.

Considerable potential exists in Australia for possible future application of nuclear explosives for large civil engineering and mining projects. The Commission has maintained close interest in the developmental work under the United States Plowshare Program. A United States expert visited Australia in 1962, and an Australian technical mission visited the United States of America in 1963 to make a detailed examination of the use of nuclear explosives for peaceful purposes. The Commission continues to receive data and reports relating to progress in this field.

The Australian Institute of Nuclear Science and Engineering comprises the Australian Atomic Energy Commission and Australian universities. The Institute's operations are financed by membership subscriptions and a Commonwealth Government grant which amounted to \$150,000 in 1965-66. The purpose of the Institute is to stimulate research and training in nuclear science and engineering within the universities and to arrange access for university research workers to the highly specialised equipment at the A.A.E.C. Research Establishment.

The Australian School of Nuclear Technology is jointly sponsored by the Commission and the University of New South Wales. Courses are now being offered in nuclear technology, production and use of radioisotopes, radiological safety, health physics, and other related topics.

### Scientific societies

#### Royal Societies

The following table contains the latest available statistical information regarding the Royal Societies in each State.

ROYAL SOCIETIES, DECEMBER 1966

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Canberra
Year of charter . . . . .	1866	1859	1884	1880	1913	1844	1930
Number of members . . . . .	357	483	374	236	234	596	173
Volumes of transactions issued(a) . . . . .	99	80	(b) 77	90	55	100	..
Number of books in library . . . . .	32,200	30,000	68,349	23,000	6,710	35,600	..
Societies on exchange list . . . . .	390	333	294	331	235	314	..

(a) Cumulative total. (b) Volumes of proceedings.

#### Australian Academy of Science

The Australian Academy of Science is the national institution representing science in Australia. Constituted by Royal Charter in 1954, the Academy promotes scientific knowledge and research, maintains standards of scientific endeavour and achievement in the natural sciences in Australia, and recognises outstanding contributions to the advancement of science. The Academy represents Australian science and scientists at the national and international level, organises meetings of scientists, holds symposia, and arranges for visits of scientists, from other countries to Australia.

In its functions it is comparable with the Royal Society of London and national academies of science of many other countries. Its Fellows (designated F.A.A.) are eminent in some branch of the physical or biological sciences in Australia, occupying professional positions in universities, the Commonwealth Scientific and Industrial Research Organisation, other research organisations, and industry. A very few places are reserved for Fellows who have rendered conspicuous service in the cause of science. No more than six new Fellows are elected in any one year. Its present membership is about 120 Fellows.

The Academy co-ordinates Australian contributions to such co-operative ventures as the International Geophysical Year, the International Year of the Quiet Sun, and the International Biological Programme. Representation is provided at the general assemblies of the International Scientific Unions and similar bodies relating to astronomy, geophysics, geology, physics, crystallography, mathematics, biochemistry, physiology, geography, biological sciences, chemistry, Antarctic research, space research, and oceanic research.

As the Australian Academy of Science is too young a body to be financially self-sufficient, the Commonwealth Government makes annual grants of general purpose funds without affecting the autonomy of the Academy. These grants, together with substantial private benefactions, enable the Academy to continue its work. Research fellowships provided by industry are administered. The Academy is managed by an elected council comprising a president, treasurer, two secretaries and eight ordinary members who are drawn equally from the physical sciences and biological sciences. Chief administrative officer is the Executive Secretary who is not a Fellow. Its conference centre in Canberra was opened in 1959.

#### Australian and New Zealand Association for the Advancement of Science

This association was founded in 1887. Its headquarters are at Science House, Sydney, and congresses are held at intervals of approximately eighteen months in the various States and in New Zealand. The 40th Congress is to be held in Christchurch, New Zealand, in January 1968. Divisions of A.N.Z.A.A.S. have been formed in Western Australia and New South Wales.

#### Other scientific societies

The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1874 for 'the cultivation and study of the science of natural history in all its branches'. Sir William Macleay, who died in 1891, during his lifetime and by his will endowed the Society to the amount of \$134,000, which has been increased by investment to approximately \$240,000. The objects of the Society are achieved by holding meetings, by publishing proceedings, by maintaining a library, and by offering research fellowships. The Society publishes annual volumes of the proceedings, issued in three parts, in which are printed papers read at the general meetings.

Ninety-one volumes of such proceedings have been issued and the Society exchanges with about 300 kindred institutions and universities throughout the world. The library has some 19,000 volumes. The Society offers annually to graduates of the University of Sydney, who are members of the Society and resident in New South Wales, a research fellowship (Linnean Macleay Fellowship) in various branches of natural history. The membership at the end of 1966 was 303.

The British Astronomical Society has a branch in Sydney, and in each of the States there is a branch of the Australian Medical Association.

There are more than 200 other learned societies devoted to the study of particular sciences. Some of these, including the Royal Australian Chemical Institute and the Institution of Engineers, Australia, are qualifying bodies, admission to which is by qualification only. Others, such as the Institute of Food Technologists, are open to any interested person. Some societies, such as the Australian Biochemical Society, have annual symposia of a very high standard. A great many of these bodies publish appropriate journals.

### STATE GOVERNMENT EXPENDITURE ON EDUCATION, ETC.

Estimates of the expenditure by each State Government on education and related items are shown in the following tables.

#### Expenditure from revenue and special funds

Details shown relate to net expenditure from Consolidated Revenue and the special funds: Opera House Account, Maintenance and Repairs to Schools and Police Buildings Account and the Joint Coal Board Welfare Fund (New South Wales); Forestry Fund (Victoria); and Lotteries Commission Fund (Western Australia). Details exclude expenditure from the Commonwealth university grants, and expenditure on debt charges, pay-roll tax and superannuation payments. The cost of medical and dental inspection of school children is also excluded, as this service is considered to be more appropriately classified under public health. For these reasons, the figures do not represent total current government expenditure on education in each State. Furthermore, because of differences in organisation and accounting methods, the information shown is not on exactly the same basis for all States, and consequently comparisons of State expenditures are approximate only.

#### STATE NET EXPENDITURE ON EDUCATION, ETC. (a) FROM REVENUE AND SPECIAL FUNDS, 1961-62 TO 1965-66 (\$'000)

Year	New South Wales	Victoria	Queensland	South Australia	Western Australia	Tasmania	Total
1961-62 . .	125,974	89,264	36,016	32,534	25,016	12,722	321,526
1962-63 . .	135,176	100,352	39,852	35,612	26,922	13,920	351,834
1963-64 . .	151,262	113,288	43,894	40,318	29,940	15,340	394,042
1964-65 . .	179,218	124,935	47,265	44,468	34,137	17,382	447,405
1965-66 . .	189,456	140,030	51,826	49,621	39,257	18,572	488,762

(a) Includes expenditure on administration, transport of school children, teacher training, primary secondary, technical, agricultural, and university education; and expenditure of libraries, museums, etc.

#### State Loan Fund expenditure on educational buildings

Details in the following table show gross Loan Fund expenditure in each State on educational buildings.

#### STATE GROSS LOAN FUND EXPENDITURE ON EDUCATIONAL BUILDINGS 1961-62 TO 1965-66 (\$'000)

Year	New South Wales	Victoria	Queensland	South Australia	Western Australia	Tasmania	Total
1961-62 . .	32,356	28,320	6,834	11,888	5,814	3 770	88,982

## CHAPTER 18

# NATIONAL ACCOUNTS

### NATIONAL INCOME AND EXPENDITURE

National accounting aims at providing a systematic summary of the transactions taking place in the economy, especially of those that relate to the production and use of goods and services, and to transfers of income or capital between sectors of the economy.

Estimates of national income and expenditure have been compiled by the Bureau since 1944-45 and have been published annually as papers entitled *National Income and Expenditure* accompanying the Commonwealth Budgets. Detailed annual estimates of national income and expenditure on a revised basis were published in *Australian National Accounts, National Income and Expenditure*, 1953-54 to 1965-66. Preliminary estimates for 1965-66 were published in a Budget Paper. Quarterly estimates are published in *Quarterly Estimates of National Income and Expenditure*.

The figures shown on pages 663-70 are as published in *Australian National Accounts, National Income and Expenditure*, 1953-54 to 1965-66.

### Description of the National Accounts

A brief description of the conceptual basis of national accounts is given in this section, but for a more detailed treatment of the concepts and structure of the Australian National Accounts reference should be made to *Australian National Accounts, National Income and Expenditure*, 1953-54 to 1965-66 or to Year Book No. 50, pages 1253-68.

#### Definition and relationship of the concepts of product, income and expenditure

The main concepts of product, income and expenditure in the Australian National Accounts are defined and expressed in equivalents as follows.

*Gross national expenditure* is the total expenditure within a given period on final goods and services (i.e. excluding goods and services produced or imported and used up in the process of further production) bought for use in the Australian economy. It is equivalent to gross national product, plus imports of goods and services, less exports of goods and services.

*National turnover of goods and services* is the total flow of final goods and services within a given period in the Australian economy as a whole (i.e. excluding goods and services produced or imported and used up in the process of further production) derived from production in Australia and imports. This value is equivalent to gross national product plus imports of goods and services or, alternatively, to gross national expenditure plus exports of goods and services.

*Gross national product* is the total market value of goods and services produced in Australia within a given period after deduction of the cost of goods and services, other than capital equipment, used in the process of production. Thus gross national product, as here defined, is 'at market prices'. It is equivalent to gross national expenditure, plus exports of goods and services, less imports of goods and services.

*Gross national product at factor cost* is that part of the cost of producing the gross national product which consists of gross payments to factors of production (labour, land, capital, and enterprise). It represents the value added by these factors in the process of production and is equivalent to gross national product, less indirect taxes, plus subsidies.

*Net national product* is the part of the value added within a given period by factors of production (labour, land, capital, and enterprise) which accrues as income to their suppliers after allowing for the depreciation of capital equipment. It is equivalent to gross national product at factor cost less allowance for depreciation.

*National income* is the net income accruing within a given period to Australian residents from their services in supplying factors of production (labour, land, capital, and enterprise), in Australia or overseas. It is equivalent to net national product, plus income receivable from overseas, less income payable overseas.

*Personal income* is the total income, whether in cash or kind, received by persons normally resident in Australia. It includes both income received in return for productive activity (such as wages, salaries and supplements, incomes of unincorporated enterprises, etc.) and transfer incomes (such as cash social service benefits, interest, etc.). Personal income also includes any property income received by non-taxable organisations such as private schools, churches, charitable organisations, etc. However, it excludes any income which might be said to accrue to persons in the form of undistributed company income and retained investment income of life insurance, etc., funds.

#### Framework of accounts and sectors

In the accounts shown in Tables 1 to 7 four internal sectors are distinguished—persons, public authorities, financial enterprises, and trading enterprises. In addition, there is an overseas sector which shows a summary of the transactions into which overseas governments, persons and businesses enter with Australian residents. All the sectors (except the overseas sector) engage in productive activity, but in the tables a national production account for the whole economy is shown instead of separate accounts for each sector. Similarly, the tables show only a national capital account for the economy, but a current (or income appropriation) account is shown for each sector. The system of accounts as thus envisaged is a completely articulated system in that a credit in any account must be matched with a corresponding debit in some other account—or in the same account if a complete consolidation of the transactions appropriate to that account has not been carried through.

The framework of sectors and accounts underlying the form of social accounts shown in this Year Book is set out in the following diagram. As stated in the previous paragraph, each sector could be envisaged as having separate production, appropriation and capital accounts, but in the tables compiled for Australia the production and capital accounts have been combined. In the diagram the solid rectangles depict the actual form of the tables, and the remaining rectangles show the full amount of detail which would be needed to provide a complete articulation of the accounts. The appropriate number of each table on pages 663–7 is shown on the left of the diagram.

#### ARTICULATION OF AUSTRALIAN NATIONAL ACCOUNTS

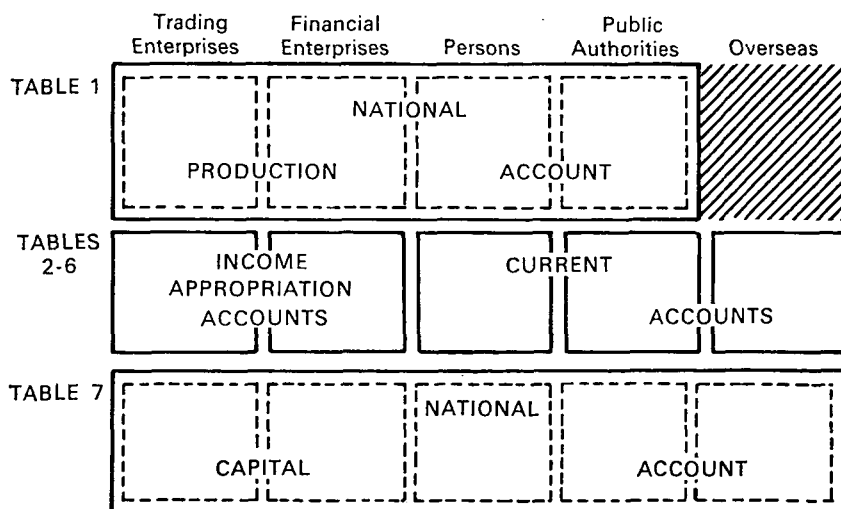

PLATE 38

#### Description of the accounts

The *national production account* is a consolidation of the production accounts of each sector. The production account is shown as receiving revenue from the sale of goods and services to final buyers; all intermediate goods and services are cancelled out, since they represent a cost to one producer to offset the revenue of the other. On the payments side are shown the payments of indirect taxes, and, since the account is presented from the point of view of the producing unit, the wages and salaries paid to employees. The balance is the gross operating surplus which is carried to the trading enterprises income appropriation account.

The *trading enterprises income appropriation account* is shown as receiving the gross operating surpluses from the national production account, and dividends, non-dwelling rent and interest from other sectors. The allocation of this total to depreciation allowances and to various transfer payments (taxes, dividends, interest, etc.) is shown on the appropriation side. All net income of unincorporated enterprises is treated as being transferred to persons. Any income of trading companies not distributed but retained for use in the business is shown as undistributed income and transferred to the national capital account either directly or by way of the overseas current account (when it accrues to non-residents).

The *financial enterprises income appropriation account* is in the main similar to the preceding account. There is, however, no operating surplus, as property income (which is treated as transfer income, not as income of factors of production) is the sole receipt.

The *personal current account* records all receipts on current account whether of factor incomes (wages and salaries) or transfer incomes (interest, etc., dividends, net business incomes, cash benefits from public authorities, and remittances from overseas). On the payments side are shown current payments for goods and services and transfer payments (taxes, interest, etc., remittances to overseas). The balance is transferred to the national capital account under the heading of saving.

The *public authorities current account* reflects a distinction between current and capital expenditure, which is necessarily arbitrary in some measure and has been made on the basis of excluding from the current account expenditure on public works and increase in stocks. Expenditure on public works is taken to include new buildings, construction, plant and machinery, and any replacement of assets charged to loan funds or capital works votes. It includes capital expenditure of public enterprises, including replacements of assets charged to depreciation reserves but not those charged directly to working expenses. It includes all expenditure on roads for which a satisfactory distinction between new works and maintenance cannot be made, but excludes all defence expenditure, which is included in the current account.

The income of public enterprises shown in this account is derived by deducting from their operating surplus any depreciation shown by these enterprises in their published accounts, except in the case of enterprises (e.g. railways and Postmaster-General's Department) whose accounts are included in the Commonwealth or State budgets and are for the present analysed on the basis of these cash accounts in which depreciation is not deducted. The depreciation allowances set aside by the enterprises whose accounts are not included in Commonwealth or State budgets are shown in the capital account. As in the case of persons, all overseas gifts are included in the current account. These include gifts for international relief, technical assistance, etc., grants, and other expenditure in connection with the administration of Papua and New Guinea.

The *overseas current account* records all transactions of a current nature between Australian and overseas residents. It should be emphasised that this account is shown here from the point of view of overseas residents, i.e. receipts from Australia are shown as credits, and payments to Australia as debits. Australians temporarily overseas are regarded as residents, and visitors to Australia as non-residents.

Capital transactions of the four domestic sectors and the net deficit on current account with overseas are shown in the *national capital account*. On the receipts side are shown the savings of the various sectors—saving by enterprises, personal saving, the retained investment income of insurance funds, and the public authority surplus on current account. Net apparent capital inflow from overseas and withdrawal from monetary reserves is also reflected in the item 'overseas balance on current account'. On the payments side are shown the purchases by all sectors of new buildings and capital equipment and the increase in the value of stocks. The private component of capital expenditure includes new dwellings and major alterations to dwellings and expenditure of a capital nature by private non-profit institutions (churches, schools, clubs, etc.), but excludes motor vehicles for personal use and other durable consumer goods, which are included in personal consumption expenditure.

### Estimates at constant prices

For certain types of economic analysis it is useful to examine estimates of the principal flows of goods and services in the economy revalued in such a way as to remove the direct effects of changes in their prices which have occurred between the years under review. Such estimates, conventionally described as 'at constant prices', are presented in Table 8 for gross national product, gross national expenditure, and the principal components of the latter.

Constant price estimates amount to an attempt to express every component item of expenditure as the product of a price and a quantity, instead of only as a value, and to substitute for the actual current prices the prices that ruled in the chosen base year. Such estimates can be made only on the basis of approximations and assumptions, and this should be borne in mind in the interpretation and use of the results.

*Estimates of gross national expenditure at constant prices.* For a considerable part of personal consumption expenditure it is possible to identify specific units of quantity and price and to revalue the quantities at base-year prices. Where it is not possible to express the values in successive years as the product of prices and homogeneous units of quantity, the treatment generally adopted is to divide values by appropriate price indexes.

For the remaining components of gross national expenditure a greater degree of approximation and assumption is involved. Some components of gross fixed capital expenditure are revalued by means of appropriate price or volume indexes. For the remaining components of gross national expenditure, where homogeneous or standard units of quantity do not exist, the values are divided by indexes of prices of labour and materials. The resulting estimates have considerable limitations for many uses, for example in studies of productivity.

The information available on which to base an estimate of changes in stocks at constant prices is very limited, and hence any estimate made is subject to an appreciable margin of error. The method used involves an adjustment for stock revaluation, arising out of the replacement during the year of trading stocks with equivalent new stocks at different prices, or because of the practice of revaluing existing stocks.

*Estimation of gross national product at constant prices.* Gross national product may be thought of as the difference between the value of output and the value of materials used in production; that is, as the difference between the values of two flows of goods and services. By revaluing each of these flows it is possible to revalue gross national product in this sense.

Gross national product is equivalent to gross national expenditure, plus exports of goods and services, less imports of goods and services. This relationship has been used in deriving the estimates of gross national product at constant prices shown in Table 8. Availability of data at present makes it more practicable to take the aggregate estimates of gross national expenditure at constant prices supplemented by similar estimates for exports and imports of goods and services for the whole economy, rather than to use a method involving revaluation of the sales and purchases of trading enterprises firm by firm or industry by industry.

Part I of *Australian National Accounts, National Income and Expenditure, 1953-54 to 1965-66* contains a fuller discussion of the conceptual problems involved in making these estimates, and Appendix B of that publication contains a brief account of the sources and methods used in preparing the estimates.

#### **Reliability and future revisions**

Estimates of national income and expenditure are necessarily prepared from a very wide range of information, some of which is available quickly, some of it with a delay of several years after the period to which it relates. Some of it is closely related to the desired national income concepts, while some of it is not completely satisfactory in various respects, including coverage, concepts and timing. Estimates, in particular for the most recent years, are therefore subject to revision.

This applies especially to estimates based on income tax statistics—income of companies, non-farm unincorporated enterprises, depreciation, and part of gross private fixed investment—which are subject to substantial revisions for the last two years, as tabulations of income tax statistics do not become available until about twenty-two months after the end of each financial year.

It is not possible to put precise limits on the degree of revision likely in any particular series, nor to state degrees of reliability in a statistical sense. These depend in large part on the range and quality of the basic statistical data. For illustrations of common causes of revisions reference should be made to *Australian National Accounts, National Income and Expenditure, 1953-54 to 1965-66*.

## National accounts and tables

Items in tables 1 to 7 are consecutively numbered from 1 to 28, with or without the addition of a letter, and this system is used to identify the corresponding credit and debit entries in the accounts and as a key to the notes on pages 671-4. In some cases the items correspond exactly, while in other cases an entry in one table is the sum of two or more entries in other tables; here the total is given a number, and the components have a number and a letter. In the remaining type of case all entries are given the same number and a distinguishing letter, because in this group one item is not the sum of one or more entries. The relationship between these items can still be traced through because the sum of all credit entries must equal the sum of all debit entries.

## Description of items in the National Accounts

## Tables 1 to 7

*Item 1. Wages, salaries and supplements.* Payments in the nature of wages and salaries as defined for pay-roll tax, including allowances for income in kind (board and quarters, etc.), together with supplements to wages, and pay and allowances of members of the forces. In addition to wages and salaries paid by employers subject to pay-roll tax, this item includes wages and salaries paid by employers not subject to pay-roll tax, based on estimates of employment and average earnings. Supplements consist of employers' contributions to pension and superannuation funds, direct payments of pensions and retiring allowances, and amounts paid as workers' compensation for injuries. Pay and allowances of members of the forces consist of active pay, field allowances, subsistence allowances, dependants' allowances, and the value to the members of the forces of food, clothing, normal medical attention, etc. supplied in kind.

*Item 2. Gross operating surplus of trading enterprises.* The operating surplus, before deduction of depreciation provisions, dividends, interest, rent and royalties, and direct taxes payable of all trading enterprises operating in Australia. Trading enterprises include all companies, public enterprises, partnerships, and self-employed persons engaged in the production of goods and services for sale, but exclude financial enterprises. Public trading enterprises are government undertakings which attempt to recover all, or a substantial part, of their costs through charges made to the public for the sale of goods and services. All owners of dwellings are included whether they let the dwellings or occupy them themselves. Trading enterprises' gross operating surplus is shown separately for companies (item 2a), unincorporated enterprises (item 2b), dwellings owned by persons (item 2c), and public enterprises (item 2d).

*Item 3. Indirect taxes less subsidies.* Indirect taxes comprise taxes on purchases, sales or other transactions, or on the ownership of property, etc. paid by enterprises, public authorities and persons. They include licence fees in respect of rights conferred, such as liquor licences, etc. Subsidies are transfer payments made with the object of providing incentives to, or of assisting, certain industries or activities. Such payments may take the form of bounties on goods produced, subsidies to producers to ensure a guaranteed price, payments to transport undertakings to permit a reduction of freights on certain classes of goods, assistance to producers, etc.

*Item 4. Imports of goods and services.* The value of goods imported from overseas and amounts payable overseas for services. In Table 6 this item is sub-divided into the following components.

*Item 4a. Imports f.o.b.* Recorded trade figures adjusted for the purpose of balance of payments estimates. The principal adjustments are the addition of unrecorded imports, including ships and aircraft for use on overseas routes, the subtraction of films imported on a rental basis, imports of gold, goods for repair and goods intended for re-export, and the deduction of a 'valuation adjustment' representing the excess of the recorded value of imports (based on value for duty) over the estimated selling price to the importer as shown on invoices accompanying customs entries.

*Item 4b. Transportation.* Freight payable to foreign carriers on goods imported into Australia and transported between Australian ports, fares payable in Australia, the overseas expenditure of Australian ships, remittances to foreign airlines, and premiums (less claims) on marine insurance payable overseas on imports into Australia, less the net earnings on marine insurance business undertaken by Australian firms in respect of both exports and imports.

*Item 4c. Travel.* Net remittances in the form of travellers' cheques, etc., by Australians visiting overseas for pleasure and for business.

*Item 4d. Government transactions.* Expenditure overseas for defence, including the pay and allowances of personnel serving overseas, expenditure overseas on diplomatic, consular and trade representation, contributions to international organisations, government pensions paid abroad, overseas expenditure on immigration, and miscellaneous payments for services.

*Item 4e. Other goods and services.* Cinema and television film rentals payable overseas, expenses of Australian firms transacting business overseas, commissions, brokerage, etc., and the value of repairs on goods previously exported for repair and return, etc.

*Item 5. Net current expenditure on goods and services—personal consumption.* Net expenditure on goods and services for purposes of consumption by persons and private non-profit making bodies serving persons. This item excludes the purchase of dwellings and capital expenditure by non-profit making bodies (included in item 8), and maintenance of dwellings (treated as expenses of private enterprises), but includes personal expenditure on motor vehicles and other durable goods and the imputed rent of owner-occupied dwellings. Purchase of motor vehicles is the estimated expenditure by persons on new motor vehicles, second-hand motor vehicles purchased from business enterprises and public authorities, and net dealers' margins on purchases and sales of motor vehicles within the personal sector. Motor vehicles include cars, station wagons, motor cycles, and motor scooters bought on personal account. The value of income in kind (e.g. food produced and consumed on farms, board and lodging provided free to employees) is included in both personal income and personal consumption expenditure, but goods chargeable to business (expense) accounts are excluded.

*Item 6. Net current expenditure on goods and services—financial enterprises.* The current expenditure of banks, instalment credit companies, short-term money market companies, and building societies after deduction of bank charges to customers. Charges by instalment credit companies are treated as interest receipts and therefore are not offset against expenditure. This item includes wages, salaries and supplements, indirect taxes, and other payments for goods and services. Public financial enterprises are government businesses (mainly banks, including the Reserve Bank) which operate in a manner analogous to other financial enterprises, in that their current expenditure is largely financed by the net receipt of interest. The interest received by government housing authorities is treated as a receipt by public financial enterprises, but their other receipts, including net profit on sale of houses, and all their expenditure, are included in those of public trading enterprises.

*Item 7. Net current expenditure on goods and services—public authorities.* Expenditure by public authorities (not public enterprises) which does not result in the creation of fixed tangible assets or in the acquisition of land, buildings or second-hand goods (other than imported). It comprises expenditure on wages, salaries, and supplements, and on goods and services other than fixed assets and stocks; fees, etc. charged by public authorities for goods sold and services rendered are offset against purchases. Net expenditure overseas by public authorities and purchases from public enterprises are included. All expenditure on defence is classified as current.

*Item 8. Gross fixed capital expenditure—private.* Expenditure on fixed assets whether for additions or replacements. This item includes expenditure on dwellings (item 8a), other building and construction (item 8b), and vehicles, plant, machinery, etc. (item 8c). It includes also expenditure on second-hand assets (other than houses purchased from public authorities) as well as new assets, less sales of existing assets. Expenditure on ordinary repair and maintenance of fixed assets is excluded as being chargeable to current account. Major additions are, however, regarded as capital expenditure. New dwellings purchased by persons from public housing authorities are included in private capital expenditure.

*Item 9. Gross fixed capital expenditure—public enterprises.* Expenditure on fixed assets whether for additions or replacements, including wages and salaries paid by public enterprises in connection with capital works.

*Item 10. Gross fixed capital expenditure—public authorities.* Expenditure on fixed assets whether for additions or replacements other than for defence purposes. Because it has not been possible to make a satisfactory dissection, all expenditure on roads, including maintenance, is classified as fixed capital expenditure. Expenditure on housing, included in this item, includes the estimated expenditure on construction of dwellings for rental purposes and hostels for migrants and others, but excludes houses built for sale, which are included in private capital expenditure. Advances by War Service Homes Division and other authorities for financing home purchase schemes are also excluded.

*Item 11. Increase in value of stocks.* The change in book value of non-farm stocks held by trading enterprises and public authorities (item 11b) and the change in the value of farm stocks (item 11a).

*Item 12. Statistical discrepancy.* The difference between the sum of the direct estimates of gross national product and imports of goods and services on the one hand and the sum of the estimates of components of gross national expenditure and exports of goods and services on the other hand. Conceptually these two totals are the same. Inclusion of the discrepancy on the expenditure side of the national production account implies nothing as to the relative accuracy of the estimates of gross national product and expenditure. Similarly its inclusion in the capital account does not imply that estimates in this table are less accurate than those in other tables, or that capital expenditure estimates are less accurate than estimates on the receipts side of this account.

*Item 13. Exports of goods and services.* The value of goods exported overseas and receipts from overseas for other goods and services. In Table 6 this item is sub-divided into the following components.

*Item 13a. Exports f.o.b.* The recorded trade figures adjusted for balance of payments purposes. The adjustments are similar to those made to the recorded import figures but no change is made to the basis of valuation. The adjustment for unrecorded exports includes exports of uranium ores.

*Item 13b. Transportation.* The expenditure of overseas carriers in Australian ports, the overseas earnings of ships owned or chartered by Australian operators, the remittances from overseas to Australian domestic and international airline operators.

*Item 13c. Travel.* Net receipts of travellers' cheques, etc. from persons visiting Australia for pleasure and for business.

*Item 13d. Government transactions.* Receipts for services rendered by the Australian Government to other governments and other payments in Australia by foreign governments on defence and other projects, on diplomatic, consular and trade representation, and for pensions paid in Australia.

*Item 13e. Other goods and services.* The value of Australian production of gold less net industrial usage, business expenses of overseas firms in Australia, and commissions, brokerage, etc.

*Item 14. Depreciation allowances.* The financial provisions made for depreciation which are deducted to obtain net income. The estimates represent, in the main, amounts allowed under income tax legislation, but include also the estimated depreciation on tenanted and owner-occupied dwellings and provisions made by public enterprises. This item is divided into depreciation allowances of trading enterprises (item 14a) and of financial enterprises (item 14b).

*Item 15. Interest, etc.* Comprises interest, non-dwelling rent and royalties. This item appears in most accounts as receipts and payments of interest, etc., but in the case of some entries the amounts are combined with dividends and overseas profits. The item is shown net of intra-sector receipts and payments. Payment of interest, etc. by public enterprises is included in item 15g. Payment of interest, etc. by trading enterprises (item 15a) includes interest charged on borrowings for the purchase of a house by persons, which is treated as an appropriation from the gross operating surplus of dwellings owned by persons. Non-dwelling rent includes only actual payments. It is estimated net of the expenses of the owner of the premises on rates, maintenance, etc., which are treated as working expenses of the enterprises renting the building. Royalties include mining and forestry royalties paid to public authorities and royalties and fees for use of trade marks, patents, etc. paid overseas.

*Item 16. Income tax, estate and gift duties.* Income tax payable by trading and financial companies (items 16a and 16b) and persons (item 16c) are amounts payable at rates of taxation applicable in each year. Income tax payable by companies in respect of the most recent year's income is estimated on the basis of rates of tax applicable in respect of the preceding year's income. The difference between the amounts of income tax payable and the cash receipts by public authorities (part of item 16e) is included in item 16f. Income tax payable by persons (item 16c) includes the total income tax payable by individuals on all forms of income whether wages, business income or property income. Estate and gift duties (item 16d) are the amounts actually paid by persons in that year.

*Item 17. Dividends.* All receipts and payments of dividends, including dividends payable overseas and the remitted profits of Australian branches of overseas enterprises. Dividends payable (items 17a and 17c) are the dividends declared by trading and financial companies in respect of the year (including an estimate of dividends to be declared in respect of the most recent year). Receipts of dividends (other than dividends receivable from overseas subsidiaries) are cash receipts, and the difference between the amounts payable and received is included in item 17h. The items are shown net of intra-sector receipts and payments.

*Item 18. Undistributed income.* The undistributed income of companies comprising trading enterprises (item 18a) and financial enterprises (item 18c) is the balance of total company income, including profits receivable from overseas (items 18b and 18d) after deduction of income tax and dividends payable, and is equal to the sum of undistributed income accruing to overseas residents (item 18f) and undistributed company income accruing to residents (item 18g). Profits receivable from overseas is the unremitted part of profits earned by overseas branches of Australian companies and undistributed profits of overseas subsidiaries of Australian companies.

*Item 19. Unincorporated enterprises income.* The gross operating surplus of unincorporated enterprises less interest, etc. paid and depreciation allowances. It comprises the income of farm unincorporated enterprises (item 19a) and the income of all other unincorporated enterprises (item 19b).

*Item 20. Personal income from dwelling rent.* The gross operating surplus of dwellings owned by persons less interest, etc. paid and depreciation allowances.

*Item 21. Public enterprises income.* Includes income of public trading enterprises (item 21a) and income of public financial enterprises (item 21b). For trading enterprises it is equal to gross operating surplus after the deduction of depreciation allowances; for financial enterprises it is the net income after depreciation allowances, interest paid, and net current expenditure on goods and services by government banks are deducted from total receipts of interest and non-dwelling rent. Depreciation allowances deducted in arriving at the income of public trading enterprises are those shown in their published accounts, except in the case of enterprises whose accounts are included in the Commonwealth or State budgets and are analysed on the basis of their cash accounts in which depreciation is not deducted. In particular, no amount is included for the Post Office or most railways, since cash accounts for these enterprises have been used.

*Item 22. Retained investment income of life insurance funds, etc.* Total dividends, interest, etc. received by life insurance and superannuation funds, less rent and interest paid, depreciation allowances, income tax and dividends payable.

*Item 23. Overseas grants, contributions and remittances.* All transfers to or from overseas on public authority or private account which are not payments for goods and services or payments of dividends, interest, etc.

*Item 23a. Personal remittances overseas.* Gifts of money by resident persons and private institutions, payments for sustenance, and transfers of emigrants' funds and legacies from Australia to overseas, together with the value of goods exported as personal effects and gifts.

*Item 23b. Personal remittances from overseas.* Gifts of money received from non-resident persons and private institutions, receipts for sustenance, and transfers of immigrants' funds and legacies from overseas to Australia, together with the value of goods imported as personal effects and gifts.

*Item 23c. Public authority overseas grants.* Grants to, and payments made on behalf of, the Territory of Papua and New Guinea, and expenditure overseas in respect of technical assistance and relief under the Colombo Plan and United Nations projects. Payments to United Nations and other organisations due by virtue of membership of these organisations are included in net current expenditure on goods and services.

*Item 24. Personal saving.* The excess of personal income over the sum of personal consumption expenditure, interest paid, income tax payable, estate and gift duties paid, and remittances overseas. Personal saving is estimated as the balancing item in the personal current account. It includes saving through life insurance and superannuation funds (defined as premiums, etc. paid less claims, etc. received and administrative expenses of life insurance offices) and the increase in assets of marketing authorities. Personal saving may also take the form of increases in holdings of cash and net purchases of securities, the net increase in bank deposits less advances, the reduction in the outstanding advances of instalment credit companies to persons and unincorporated enterprises, and the increase in the equity of persons in dwellings and in capital equipment, buildings and stocks of unincorporated enterprises.

*Item 25. Cash benefits.* Current transfers to persons from public authorities in return for which no services are rendered or goods supplied. Principal components are scholarships; hospital, medical, pharmaceutical, maternity, sickness, and unemployment benefits; child endowment; widows', age, invalid, and repatriation pensions; and attendance money for waterside workers.

*Item 26. Grants towards private capital expenditure.* Grants to meet part of the costs of private capital expenditure, e.g. Commonwealth Home Savings grants, grants towards construction of science laboratories in private schools and of houses for aged persons, etc.

*Item 27. Public authorities surplus on current account.* The excess of current revenue, including income of public enterprises, over current outlay. Current outlay includes current expenditure on goods and services, as defined in item 7, and transfer payments (interest, cash benefits, subsidies, grants towards private capital expenditure, and overseas grants). The surplus is transferred to the capital account where it is shown as part of total funds available for financing capital outlay.

*Item 28. Overseas balance on current account.* The excess of payments to the rest of the world on current account over receipts from the rest of the world on current account. In the national capital account it is shown divided into drawings on Australia's overseas monetary reserves (item 28a) and net apparent capital inflow (item 28b).

## CHAPTER 19

### PRIVATE FINANCE

Further information on the subjects dealt with in this chapter is contained in the annual bulletins *Banking and Currency and Insurance and Other Private Finance*. Current information is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics* (monthly), and the monthly mimeographed statements *Banking Statistics* (bulletin and preliminary statement), *Savings Bank Statistics* (bulletin and preliminary statement), *Australian Life Insurance Statistics*, and *Finance Companies: Australia*. The annual mimeographed bulletin *Australian Fire, Marine and General Insurance Statistics* contains the latest information available on the subject of general insurance. Other relevant mimeographed statements are: *Finance Companies: July 1964 to December 1966*; *Instalment Credit for Retail Sales*; *Unit Trusts, Land Trusts, and Mutual Funds*; *New Capital Raisings by Companies in Australia*; and *Capital and Maintenance Expenditure by Private Business in Australia*—quarterly; *Government Pension and Superannuation Schemes, 1964–65*; *Survey of Private Pension and Retiring Allowance Schemes, 1962–63*; *Survey of Selected Large Private Pension Funds, 1964–65*; and *Registered Building Societies, 1964–65*. Preliminary monthly statements *Instalment Credit for Retail Sales* and preliminary estimates of New Capital Raisings are also issued.

### CURRENCY

Until 13 February 1966 Australian currency was based on the British unit, which is the pound (£) divided into 20 shillings (s) each of 12 pence (d). A decimal currency system was introduced in Australia on 14 February 1966 based on a major unit—the dollar—equal to ten shillings in the old currency. The minor unit—the cent—is one-hundredth part of the major unit and is equal to 1.2 pence in the old currency. Decimal notes and coins became legal tender from 14 February 1966. The par value of the Australian dollar, under the terms of the International Monetary Fund, was established at 0.99531 grams of fine gold.

The official changeover arrangements provided for a dual currency and for a transition period of eighteen months to two years following the changeover. From the changeover day all cheques and other bills of exchange and all promissory notes have to be executed in dollars and cents. During the transition period, however, contracts and other monetary transactions might be arranged in terms of either £ s. d. or \$ c.

After the end of the transition period (1 August 1967 fixed by proclamation) contracts and other documents will have to be made out in terms of \$ c. All references to £ s. d. in existing contracts, agreements, etc. with continuing effect will be converted automatically into their exact equivalents in decimal currency. Payments of amounts owing in £ s. d. will be made in \$ c on a nearest-cent basis according to the conversion table shown in the Currency Act (see Year Book No. 52, page xvi). Threepences, pennies and halfpennies will be legal tender only in multiples of sixpence. All £ s. d. notes and coins from sixpence upwards will continue to be legal tender on the same basis as decimal notes and coins.

Historical notes of the arrangements for the introduction of decimal currency and the relationship between £ s. d. and \$ c are published in Year Book No. 52, pages 671–4.

### Australian coinage

Prior to Federation in 1901 the coins circulating throughout Australia were many and varied. For a full account of the history of pre-Federation coinage see Year Book, No. 51, 1965, pages 812–14. After Federation the only coins which were legal tender within Australia until 1909 were English coins.

The Constitution in 1901 gave the Commonwealth Parliament power to make laws with respect to coinage and in 1909 the Coinage Act was passed prescribing the standard weight and fineness of coins. The first coins exclusively for circulation in Australia—silver (925 fine) florins, shillings, sixpences and threepences—were minted in 1910 by the Royal Mint, London, followed by bronze coins in 1911. The Melbourne Branch of the Royal Mint produced in 1916 the first Commonwealth coins (pence) minted in Australia. The Sydney Branch of the Royal Mint commenced production of halfpennies in 1919 and in 1922 the Perth Branch minted its first pennies.

The Commonwealth Treasury administered the Coinage Act which was repealed and replaced by the *Currency Act* 1965. All coins produced under authority of these two Acts have been ordered by the Treasury.

### Australian mints

Brief historical notes relating to Australian mints and details of pre-decimal Australian coins obtained from each mint to 30 June 1965 are given in Year Book No. 52, page 675.

The construction of the Royal Australian Mint in Canberra provided the Commonwealth Government for the first time with facilities for minting its own coinage. Production at the Royal Australian Mint was initially restricted to the new coins for issue on the changeover to decimal currency on 14 February 1966. It was estimated that a minimum of 1,700 million pre-decimal coins needed to be replaced by the new coinage. The critical coins were the bronze one cent and two cents to replace the threepence, penny and halfpenny which had no counterparts in the decimal range. The initial capacity of the Royal Australian Mint was directed to the production of bronze coin with some capacity being directed to the fifty cent silver coin. Bronze decimal coins were also produced at the Melbourne and Perth branches of the Royal Mint, and the Royal Mint, London, contracted to produce 30 million each of the cupro-nickel five, ten and twenty cent denominations for issue in February 1966. All Australia's coin requirements are now met by the Royal Australian Mint, with the Melbourne and Perth branches of the Royal Mint providing some bronze coins on contract to the Commonwealth Treasury.

### Coins in circulation

Brief historical notes relating to the Australian pre-decimal coinage are given in Year Book No. 37, pages 557 and 558. For weight, metal composition, etc., of Australian pre-decimal coins in circulation see Year Book No. 39, page 697. The silver coins issued prior to July 1947 had a millesimal fineness of 925 (thirty-seven fortieths silver and three-fortieths copper) and those issued after 1 July 1947 (dated 1946 and later) had a millesimal fineness of 500 (one-half silver and one-half other metals).

The net issues of Australian pre-decimal silver and bronze coins from 1910 to 30 June 1966 were: crown (5s.), \$551,000; florin (2s.), \$47,065,000; shilling (1s.), \$21,522,000; sixpence (6d.), \$15,975,000; threepence (3d.), \$13,010,000; total silver coin, \$97,992,000; penny (1d.) \$5,597,000; half-penny (½d.), \$1,342,000; total bronze coin, \$6,938,000. Except in the total, no allowance has been made for \$131,000 worth of damaged silver coin, for which denominations are not available, withdrawn since 1910. Australian decimal coin issued from 14 February 1966 to 30 June 1966 was: 50 cents, \$11,299,000; 20 cents, \$5,835,000; 10 cents, \$2,924,000; 5 cents, \$1,451,000; 2 cents, \$4,051,000; 1 cent, \$3,043,000; total \$28,603,000.

### Profits on pre-decimal coinage

Australian coins are token coins and, as the face value of the coins is greater than the value of the bullion they contain, a profit is made from their issue. This profit forms part of the Commonwealth Consolidated Revenue. In the following table details are given of the value of pre-decimal coins issued, the cost of bullion, the cost of minting, and sundry expenses connected with the issue, and the profits made on the issue of coins during the years 1961-62 to 1965-66.

**AUSTRALIAN PRE-DECIMAL SILVER AND BRONZE COINS: PROFITS FROM ISSUE**  
1961-62 TO 1965-66  
(\$'000)

Year	Face value of coin issued (a)	Cost of bullion	Gross profit	Cost of minting and sundry charges	Net profit

(a) Includes selected and proof pieces.

Minus sign (—) denotes a loss.

**Gold receipts and issues**

Since early in the 1939-45 War all gold has been acquired by the Reserve Bank, and the export and use of gold has been subject to regulation by the Commonwealth Government. All trading banks in Australia, Deputy Master of the branch of the Royal Mint in Perth, and three private refining companies are authorised under the Banking (Gold) Regulations to deal in gold on behalf of the Reserve Bank. The Melbourne Mint ceased to deal in gold in 1964. The Royal Australian Mint at Canberra is not authorised to receive and issue gold.

Details of the production of gold, subsidy payable, etc. are given in the chapter Mineral Industry.

**Price of gold**

The following table shows the average prices of gold, the average values of the sovereign's gold content in London, and the sovereign's Reserve Bank buying price in Australia for the years 1961-62 to 1965-66. The average price of gold in Australia is fixed by the Reserve Bank and at present reflects the parity value of Australian currency established in conformity with the *International Monetary Agreements Act 1947*.

**PRICE OF GOLD: LONDON AND AUSTRALIA, 1961-62 TO 1965-66**

Year	London		Australia		
	Average price per fine oz	Average value of sovereign's gold content	Average price per fine oz	Sovereign	
				Reserve Bank buying price	Equivalent to a premium on mint par value of—
	£stg s. d.	£stg s. d.	\$	\$	per cent
1961-62 . .	12 10 1	2 18 10	31.25	7.25	267.8
1962-63 . .	12 10 6	2 19 0	31.25	7.25	267.8
1963-64 . .	12 10 9	2 19 1	31.25	7.25	267.8
1964-65 . .	12 11 8	2 19 3	31.25	7.25	267.8
1965-66 . .	12 11 8	2 19 3	31.25	7.25	267.8

In December 1951 arrangements were made whereby producers could sell a proportion of newly-mined gold for industrial purposes on overseas premium markets. Under these arrangements gold is acquired by the Reserve Bank in the usual manner and sold, at the Bank's buying price, to an association representing gold producers participating in the scheme. The association pays the Bank's handling charges and the costs of preparation of the gold and makes arrangements for export and sale. Profits earned by the association after meeting administrative expenses are distributed to members in proportion to the quantity of gold delivered to the Reserve Bank. Until August 1952, when permission was given for the export of fine gold, gold exported under this arrangement was not to exceed a fineness of 22 carats ( $\frac{11}{18}$ ths).

The average prices per fine ounce in Australian currency obtained for gold exported under this scheme for each month during 1965-66 for which there were sales were: July, \$31.452; August, \$31.458; September, \$31.527; October, \$31.427; November, \$31.327; December, \$31.315; January, \$31.326; February, \$31.311; March, \$31.343; April, \$31.414; May, \$31.437 and June, \$31.425.

**The Australian note issue**

In 1901 notes in circulation in Australia consisted of bank notes payable in gold coin and issued by the trading banks, and Queensland Treasury notes. Bank notes circulated in all States except Queensland, but were not legal tender except for a brief period in 1893 in New South Wales. There were, however, some restrictions on their issue or other provisions for the protection of the public. Queensland Treasury notes were issued by the Queensland Government and were legal tender in that State. Notes of both categories continued in circulation until 1910, when the *Australian Notes Act 1910* and *Bank Notes Tax Act 1910* were passed by the Commonwealth Parliament. The *Australian Notes Act 1910* prohibited the circulation of State notes as money and the *Bank Notes Tax Act 1910* imposed a tax of ten per cent per annum on 'all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act, and

not redeemed'. These Acts put an end to the issue of notes by the trading banks and the Queensland Treasury. The *Reserve Bank Act* 1959 expressly prohibits persons, including States, from issuing bills or notes payable to bearer on demand and intended for circulation.

The *Reserve Bank Act* 1965 authorised the Bank to issue Australian notes in denominations of \$1, \$2, \$5, \$10, \$20, or \$50, or in any other denomination that the Treasurer, by instrument of writing published in the Gazette, determines. The Act provided that each note of the previous currency should have the value in dollar currency set out in the following table:

10s.	.	.	.	\$1
£1	.	.	.	\$2
£5	.	.	.	\$10
£10	.	.	.	\$20
£20	.	.	.	\$40
£50	.	.	.	\$100
£100	.	.	.	\$200
£1,000	.	.	.	\$2,000

The Act came into force on 14 February 1966, and notes of \$1, \$2, \$10, and \$20 denominations were issued forthwith as legal tender to any amount throughout Australia. A description of these notes is published in Year Book No. 52, page 678.

On 29 May 1967 \$5 notes were issued throughout Australia and the Territory of Papua and New Guinea. The \$5 note was designed by Gordon Andrews, the designer of the other dollar notes already in circulation. On the front is a portrait of Sir Joseph Banks (1743–1820), with an assemblage of Australian flora. Sir Joseph Banks accompanied Captain James Cook on his voyage to Australia in 1770, personally meeting the cost of the scientific equipment and staff that were with him. He collected and wrote about Australian flora and over a long period enthusiastically encouraged and financed others to carry out scientific investigations in Australia in a variety of fields. On the back Mrs Caroline Chisholm is portrayed against a background composed of illustrations of women and children of her time and of ships and Sydney streets of the period. Caroline Chisholm (1808–1877) was a pioneer in encouraging the migration of women and families from England to Australia. The \$5 note, which measures 150-mm by 75-mm, is basically mauve in colour with the main features being overprinted in black. The paper contains a watermark portrait of Captain Cook and an embedded metal thread running down near the centre.

#### **Gold reserve against the note issue**

The *Australian Notes Act* 1910 provided that the Treasurer should hold, in gold coin, a reserve of an amount not less than one-fourth of the notes issued up to \$14,000,000 and an amount equal to the excess over \$14,000,000. In 1911 this provision was amended and the Treasurer was required only to hold, in gold coin, an amount not less than one-fourth of the total amount of Australian notes issued. In June 1931, to permit further shipments of gold to meet short-term obligations in London, an amendment to the Commonwealth Bank Act provided for the reduction of the gold reserve for the two years ended 30 June 1933 to not less than 15 per cent. The reserve was to be increased, by graduated steps, to 25 per cent by 30 June 1935. In May 1932 a further amendment to the Commonwealth Bank Act provided that the reserve might be held 'in gold or in English sterling or partly in gold and partly in English sterling'. English sterling was defined as 'currency which is legal tender in the United Kingdom, and included (a) balances standing to the credit of the Bank at the Bank of England or at any other of its bankers in London; (b) Bills of Exchange or advances secured by Bills of Exchange which (i) are payable in the United Kingdom in currency which is legal tender in the United Kingdom; (ii) will mature in not more than three months, and the security for the payment of which bills is, in the opinion of the Bank, satisfactory; and (c) Treasury Bills or other securities of the United Kingdom which will mature in not more than three months'.

The statutory reserve against the note issue was abolished by the *Commonwealth Bank Act* 1945 which provided that the assets of the Note Issue Department should be held in gold, on deposit with any bank, or in securities of the Government of the United Kingdom or of the Commonwealth or a State. This provision was continued in the *Reserve Bank Act* 1959.

## Australian notes in circulation

## Reserve Bank—Note Issue Department

The following statement shows particulars of liabilities and assets of the Note Issue Department of the Reserve Bank as at 30 June 1965 and 1966.

**RESERVE BANK OF AUSTRALIA: NOTE ISSUE DEPARTMENT**  
**LIABILITIES AND ASSETS, 30 JUNE 1965 AND 1966**  
(\$ million)

Liabilities	1965	1966	Assets	1965	1966
Notes on issue(a) . . . . .	862.4	835.3	Gold and balances held abroad (including money at short call) . . . . .	381.1	435.0
Special reserve—			Other overseas securities . . . . .	174.1	134.8
Premium on gold sold . . . . .	9.5	9.5	Government securities (including Commonwealth Treasury bills) . . . . .	337.8	296.2
Other liabilities(a) . . . . .	21.3	21.5	Other assets . . . . .	0.2	0.2
<b>Total . . . . .</b>	<b>893.2</b>	<b>866.2</b>	<b>Total . . . . .</b>	<b>893.2</b>	<b>866.2</b>

(a) Notes of a denomination not exceeding one pound which have been on issue for more than twenty years and notes of a denomination exceeding one pound which have been on issue for more than forty years are not included in the item Notes on issue but are included in the item Other liabilities.

Until June 1951 all profits of the Note Issue Department, with the exception of \$4,000,000 and \$2,400,000 paid to the capital accounts of the Rural Credits Department and Mortgage Bank Department respectively, were paid to the Commonwealth Consolidated Revenue Fund. For the years 1951–52 to 1955–56 the profits were distributed as follows: (a) \$1,000,000 per annum to the capital accounts of the Commonwealth Trading Bank (prior to 3 December 1953 the General Banking Division of the Commonwealth Bank) and the several departments of the Commonwealth Bank, distributed two-sevenths each to the Commonwealth Trading Bank, Mortgage Bank Department and Industrial Finance Department and one-seventh to the Rural Credits Department, and (b) the balance to the Commonwealth Consolidated Revenue Fund. Since 1955–56 the profits have been paid to the Commonwealth Consolidated Revenue Fund. Profits of the Note Issue Department in 1965–66 amounted to \$31,070,000.

## Rates of exchange

In the following table the par of exchange (based on par values agreed with the International Monetary Fund) and average telegraphic transfer selling rates of exchange for Sydney on a number of overseas countries are shown. Generally, the averages, which are averages of daily quotations, are based on rates quoted by the Commonwealth Trading Bank. Where these were not available, rates used by the Department of Customs and Excise in converting import values to \$A for purposes of calculating customs duty are shown.

## OVERSEAS EXCHANGE RATES: PAR OF EXCHANGE AND AVERAGE TELEGRAPHIC TRANSFER SELLING RATES FOR SYDNEY ON OVERSEAS COUNTRIES, 1965-66

## BANKING

The Australian banking system has developed along the lines of the British system with widespread branch banking conducted by relatively few banks.

## Development since federation

With federation in 1901 the new Commonwealth Parliament was given power, under section 51 of the Commonwealth Constitution, to legislate with respect to 'Banking, other than State Banking, also State Banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money'. In 1911 the Commonwealth entered the field of banking, with the establishment of the Commonwealth Bank of Australia, which conducted both trading bank and savings bank operations. A separate Commonwealth Savings Bank was established in 1928.

### Central bank

Central banking functions of the Commonwealth Bank developed gradually over the years prior to and during the second world war. In November 1935 a Royal Commission was appointed by the Commonwealth Government to inquire into the monetary and banking systems in operation in Australia and to report whether any, and if so what, alterations were desirable in the interests of the people of Australia as a whole, and the manner in which any such alterations should be effected. The Commission presented its report in July 1937, and a summary of the recommendations appears in Year Book No. 31, page 1010.

In 1945 the Commonwealth Government legislated to give full legal effect to the central banking functions already being exercised by the Commonwealth Bank of Australia and to regulate the banking system as a whole. The Commonwealth Bank of Australia further developed as mainly a central bank when from 3 December 1953 the Commonwealth Trading Bank of Australia was established to take over most of the general trading bank functions of the Commonwealth Bank of Australia.

Legislation in 1959 completed the separation of the trading banking and central banking functions of the Commonwealth Bank of Australia with the establishment of the Commonwealth Development Bank of Australia under the *Commonwealth Banks Act* 1959 to take over the Industrial Finance Department and Mortgage Bank Department of the Commonwealth Bank of Australia.

A new bank, the Reserve Bank of Australia, was established under the *Reserve Bank Act* 1959 as the nation's central bank to administer the provisions of a new banking Act (*Banking* 1959). A statutory corporation, The Commonwealth Banking Corporation, was set up under the *Commonwealth Banks Act* 1959 to control the Commonwealth Trading Bank of Australia, the Commonwealth Development Bank of Australia, and the Commonwealth Savings Bank of Australia.

### Trading banks

Commercial banking in Australia is predominantly carried on by eight major trading banks. One of these banks is owned by the Commonwealth Government and seven are privately owned companies established by Act or Charter or incorporated under State or British law. Two of these private banks are owned by British interests. Since 1945 no new private trading banks may be established without the approval of the Commonwealth. State-owned trading banks operate in three States under State law and confine their activities to their own States. One small trading bank confines its operations to one city and three foreign banks operate on a restricted basis.

### Term Loan Fund

Lending by trading banks is generally conducted on an overdraft basis. A departure from this practice followed discussions during 1961-62 involving the Commonwealth Government, the Reserve Bank and the major trading banks, which resulted in arrangements whereby the banks agreed to create a fund known as the Term Loan Fund, the resources of which would be employed to make loans for capital expenditure on production in the rural, industrial and (to a lesser extent) commercial fields and to finance exports. The loans would be made for fixed terms, varying usually between three and eight years.

### Farm Development Loan Fund

Discussions in March 1966 between the Commonwealth Government, the Reserve Bank and the major trading banks resulted in the establishment of a fund known as the Farm Development Loan Fund, from which resources would be available to provide rural producers, particularly smaller producers, with greater access to medium and long-term finance.

### Savings banks

Until 1956 savings bank operations were, apart from two small trustee banks in Tasmania, conducted by the Commonwealth Government and some State Governments. In January 1956 private savings banks were established as subsidiary companies by two of the private trading banks. By mid-1962 all the major private trading banks had established savings bank subsidiary companies.

### Current legislation

Operations of banks and banking in Australia are currently governed by (i) Commonwealth legislation enacted in 1959 in respect of banking other than State banking, and (ii) State legislation relating to the incorporation of banks and management of State banks.

### Commonwealth banking legislation

(a) The *Banking Act* 1959-1966 provides for the regulation of banking and for the protection of the currency and the public credit of the Commonwealth. This Act, which replaced the *Banking Act* 1945-1953, was first assented to on 23 April 1959 and came into operation on 14 January

1960 as the *Banking Act* 1959. It was amended by the *Banking Act* 1965 and the *Statute Law Revision (Decimal Currency) Act* 1966 in order to make certain changes required by the change to decimal currency. It applies to all banks, including savings banks, operating in Australia or the Territories of the Commonwealth except State banks trading in their own State. The objects of the Act are: (i) to provide a legal framework uniform throughout Australia for regulating the banking system; (ii) to safeguard depositors of the banks from loss; (iii) to provide for the co-ordination of banking policy under the direction of the Reserve Bank; (iv) to control the volume of credit in circulation and bank interest rates; (v) to mobilise and to provide machinery for the control of the foreign exchange and gold resources of the Australian economy. A summary of the main provisions of the *Banking Act* 1959 is given in Year Book No. 46, pages 759-60.

(b) The *Reserve Bank Act* 1959-1966 provides for the constitution and management of the Reserve Bank of Australia and the management of the Australian note issue.

(c) The *Commonwealth Banks Act* 1959-1966 provides for the constitution and management of the Commonwealth Banking Corporation, Commonwealth Trading Bank of Australia, Commonwealth Savings Bank of Australia, and Commonwealth Development Bank of Australia.

The Commonwealth Banking Corporation came into being on 14 January 1960. It is the controlling body for the Commonwealth Trading Bank, Commonwealth Savings Bank and Commonwealth Development Bank. Under the *Banking Act* 1959-1966 the Corporation and its constituent banks are subject to the same central banking controls as are the private trading banks.

The Board of the Corporation consists of the Managing Director of the Corporation, the Deputy Managing Director, the Secretary to the Treasury, and eight other members appointed by the Governor-General of whom one is Chairman and another Deputy Chairman. In addition, there is an Executive Committee of the Board for each of the three separate banks. These Executive Committees are appointed by the Treasurer, after consultation with the Board, and are charged with taking such action as is necessary to ensure that effect is given by the respective banks to the policies laid down for them and to any directions given by the Board in relation to their affairs. Under the Board the Corporation is managed by the Managing Director and the Deputy Managing Director. Each of the three constituent banks of the Corporation has its own statutory functions and responsibilities and its separate identity within the framework of the Corporation. Each bank is managed by a General Manager under the Managing Director of the Corporation.

On pages 686-7 details are given of the assets and liabilities of the Commonwealth Development Bank. Details for the Commonwealth Savings Bank are shown on pages 708-10. Details for the Commonwealth Trading Bank are included in statistics of cheque-paying banks—Major Trading Banks, on pages 688-94.

#### *State banking legislation*

The State Acts under which the various banks are incorporated differ. While some of the older banks were incorporated by special Act or Charter, e.g. the Bank of New South Wales by Act of Council 1817, the Bank of Adelaide by Act of the South Australian Parliament, and the Bank of New Zealand by Act of the General Assembly of New Zealand, most of the banks are incorporated under a Companies Act of the States or the United Kingdom. This is also the case with those banks which were reconstructed after the financial crisis of 1893. State banks, constituted under State Acts, transacting general banking business are The Rural Bank of New South Wales, the State Bank of South Australia, and The Rural and Industries Bank of Western Australia. State savings banks, constituted under State Acts, transacting savings bank business are The State Savings Bank of Victoria and The Savings Bank of South Australia (see pages 707-15).

#### **Presentation of banking statistics**

Because of the different purposes they serve in the Australian financial system, Australian banks have been divided for statistical purposes into the following four groups and a separate series is presented for each.

- (i) *The Reserve Bank of Australia*. Statistics of the Central Banking Business, the Note Issue Department, and the Rural Credits Department are shown separately. (See pages 684-6).
- (ii) *The Commonwealth Development Bank of Australia*. The prime purpose of this Bank is to assist in the development of worthwhile enterprises in the field of both primary and secondary industries which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. (See pages 686-7.)
- (iii) *Cheque-paying banks—Major Trading Banks*. These comprise the Commonwealth Trading Bank of Australia, Australia and New Zealand Bank Ltd, The Bank of Adelaide, Bank of New South Wales, The Commercial Bank of Australia Ltd, The Commercial Banking Company of Sydney Ltd, The English, Scottish and Australian Bank Ltd, The National Bank of Australasia Ltd. (See pages 687-705.)

*All cheque-paying banks.* These comprise the major trading banks and the following banks—the Bank of China, Bank of New Zealand, The Brisbane Permanent Building and Banking Co. Ltd, Banque Nationale de Paris (formerly Comptoir National de l'Escompte de Paris), the General Bank Department of the Rural Bank of New South Wales, the State Bank of South Australia, and the Rural Department of the Rural and Industries Bank of Western Australia. (See pages 687 and 693–8.)

*Australian cheque-paying banks* (see pages 688–92) comprises all cheque-paying banks except the Bank of China, Bank of New Zealand and Banque Nationale de Paris.

- (iv) *Savings Banks.* Savings banks operating at 30 June 1966 were—the Commonwealth Savings Bank of Australia, the Australia and New Zealand Savings Bank Ltd, the Bank of New South Wales Savings Bank Ltd, and the National Bank Savings Bank Ltd (in all States and Territories within and without Australia); The Bank of Adelaide Savings Bank Ltd (all States except Tasmania); The Commercial Savings Bank of Australia Ltd and the E.S. & A. Savings Bank Ltd (in all States and Territories within Australia), the C.B.C. Savings Bank Ltd (in all States and in the Australian Capital Territory); the State Savings Bank of Victoria, The Savings Bank of South Australia, the Savings Bank Division of The Rural and Industries Bank of Western Australia, and the two trustee banks, The Hobart Savings Bank and Launceston Bank for Savings. (See pages 707–16.)

### Reserve Bank of Australia

The Reserve Bank of Australia, established under the *Reserve Bank Act 1959*, which came into operation on 14 January 1960, continued in existence the body corporate known as the Commonwealth Bank of Australia. An account of the progress and development of that bank is given in earlier issues of the Year Book (see No. 37, pages 570–2, and No. 45, pages 735–7).

The general functions of the Reserve Bank are set out in Section 10 of the *Reserve Bank Act 1959*–1966, which states:

‘It is the duty of the Board, within the limits of its powers, to ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank under this Act, the *Banking Act 1959*, and regulations under that Act are exercised in such a manner as, in the opinion of the Board, will best contribute to,

- (a) the stability of the currency of Australia;
- (b) the maintenance of full employment in Australia; and
- (c) the economic prosperity and welfare of the people of Australia.’

In addition to its functions as a Central Bank, the Bank controls the Australian note issue through a Note Issue Department, provides special banking facilities through the Rural Credits Department, and acts as banker to the Commonwealth and some of the States.

### Management

Under the provisions of the *Reserve Bank Act 1959*–1966 the policy of the Reserve Bank is determined by a Board consisting of the Governor (Chairman), the Deputy Governor, the Secretary to the Treasury, and seven other members appointed by the Governor-General. The Bank is managed by the Governor, who acts in accordance with the policy of the Board and with any directions of the Board. The Bank is required to inform the Government of the monetary and banking policy of the Board. In the event of a disagreement between the Government and the Board as to whether the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia, the Governor-General, acting with the advice of the Executive Council, may determine the policy to be adopted by the Bank.

### Central banking business

Under the powers it possessed under the *Commonwealth Bank Act 1911*–1943 and under its war-time powers under the National Security Regulations the Commonwealth Bank gradually assumed the functions of a Central Bank. Part III. of the *Commonwealth Bank Act 1945* formally constituted the Bank as a Central Bank and granted the necessary powers to carry on the business of a Central Bank, and these powers were carried through into the present Act constituting the Reserve Bank. Under the provisions of the *Reserve Bank Act 1959*–1966 the capital for the Central Banking Business is the capital of the Commonwealth Bank for Central Banking purposes immediately prior to 14 January 1960 and such other sums as are transferred from the Reserve Bank Reserve Fund. The profits of the Bank are distributed as follows: (a) such sums as the Treasurer, after consultation with the Bank, determines shall be placed to the credit of the Reserve Bank Reserve Fund and (b) the remainder shall be paid to the Commonwealth.

### Note Issue Department

The Note Issue Department, established in 1920 when the control of the Australian note issue was transferred from the Commonwealth Treasury to the Commonwealth Bank, was maintained in the same form under the *Reserve Bank Act 1959*. The Reserve Bank may, through this Department, issue, re-issue and cancel Australian notes. Under the *Reserve Bank Act 1959-1966* the profits of the Note Issue Department are paid to the Commonwealth.

### Rural Credits Department

The Rural Credits Department, established in 1925 for the purpose of making short-term credit available for the orderly marketing of primary produce, was continued in the same form under the *Reserve Bank Act 1959*. The Reserve Bank may, through this Department, make advances upon the security of primary produce placed under the legal control of the Bank, or other security associated with the production or marketing of primary produce, to co-operative associations or marketing boards formed under the laws of the Commonwealth or a State or Territory of the Commonwealth or other bodies specified by proclamation. The period of the advance shall not exceed one year. Under the provisions of the *Reserve Bank Act 1959-1966* the capital of the Rural Credits Department is the capital of the Rural Credits Department of the Commonwealth Bank immediately prior to 14 January 1960, and \$4,000,000 provided by the Reserve Bank. The profits of the Rural Credits Department are dealt with as follows: (a) one half to the credit of the Rural Credits Department Reserve Fund and (b) one half to the credit of the Rural Credits Development Fund.

**Commonwealth Development Bank of Australia**

The Commonwealth Development Bank of Australia was established by the *Commonwealth Banks Act* 1959 and commenced operations on 14 January 1960. It was formed basically from an amalgamation of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank. Under the Act the Bank is authorised to provide assistance for the development of worthwhile enterprises in the fields of primary and secondary industries, which would otherwise be unable to obtain the necessary finance on reasonable and suitable terms and conditions. The Commonwealth Development Bank is managed by a General Manager under the Managing Director of the Commonwealth Banking Corporation, and its policy is determined by the Board of that Corporation. The capital of the Development Bank consists of the capital of the Mortgage Bank and Industrial Finance Departments of the Commonwealth Bank immediately prior to 14 January 1960, \$10,000,000 provided by the Reserve Bank, \$20,000,000 appropriated from the Consolidated Revenue Fund in 1961-62 by the *Commonwealth Banks Act* 1961 and the *Commonwealth Banks Act* 1962, \$10,000,000 appropriated in 1963-64 by the *Commonwealth Banks Act* 1963, and such other sums as are provided from the Commonwealth Development Bank Reserve Fund. The net profits of the Bank are paid to the Commonwealth Development Bank Reserve Fund.

1965–66	8.7	6.5	0.1	2.2

(a) Discount and interest earned, net exchange commissions and other items (including transfers from contingencies accounts)—after deducting interest paid and accrued on deposits, rebate on bills current at balance date, amounts written off assets, and losses on realisation of assets and transfers to the credit of contingencies accounts (out of which accounts provision for all bad and doubtful debts has been made).

(b) Includes proportion of expenses of Commonwealth Banking Corporation attributable to the Development Bank.

**Cheque-paying banks****Banks transacting business in Australia**

At 30 June 1966 the fifteen banks operating in Australia transacted all classes of banking business at 4,544 branches and 1,746 agencies. The major trading banks have branches throughout Australia. The Rural Bank of New South Wales, the State Bank of South Australia, and The Rural and Industries Bank of Western Australia, being State Government banks, have branches only in their respective States. The Brisbane Permanent Building and Banking Co. Ltd. transacts business only in Brisbane. The remaining three banks are branches of overseas banks.

## Australian cheque-paying banks—balance sheets

Liabilities and assets of individual Australian cheque-paying banks at balance dates in 1966 (and corresponding totals for these banks in 1965) are shown in the following tables. The information for the Major Trading Banks and The Brisbane Permanent Building and Banking Co. Ltd. has been obtained from the annual returns lodged with the Commonwealth Statistician under Section 52 of the *Banking Act* 1959–1966, whereas that for the other banks has been compiled from information published in their annual reports.

**Major Trading Banks—classification of bank advances within Australia**

Classifications of bank advances of the Major Trading Banks outstanding for each State at 11 January 1967 and for Australia at July 1964 to 1966 and January 1967 are shown in the following tables.

Resident borrowers cover institutions (including branches of overseas institutions) engaged in business in Australia and persons permanently residing in Australia. Non-resident borrowers cover all other persons and institutions incorporated abroad, which, though represented, do not carry on business in Australia.

Advances to resident borrowers have been classified as business advances, advances to public authorities, personal advances, and advances to non-profit organisations.

Business advances have been further classified to the main industry of the borrower and include advances to partnerships, companies and other institutions engaged in business in Australia, advances to persons actively engaged in business on their own behalf if the advance is mainly for business purposes, advances to mutual, co-operative and benefit societies which distribute their profits or surpluses (if any) to members by way of dividends, rebates on charges for goods and services, or increased benefits.

Advances to public authorities cover advances to local and semi-governmental authorities including separately constituted government business undertakings but not the Commonwealth or State Governments. Personal advances cover advances to persons for purposes other than carrying on a business. Advances to non-profit organisations cover advances to organisations which are not carried on for the purpose of making a profit or gain to individual members, any income of the organisation being used for the purposes of the organisation or for the benefit of the community.

------------------------------	----------------	--------------	----------------	--------------	----------------	--------------	----------------	--------------

(a) Excludes deposits of Commonwealth and State Governments. (b) Includes Papua and New Guinea.  
(c) The combined deposits of these two groups are distributed over the industries above.

**Major Trading Banks—new and increased lending commitments and overdraft limits**

Particulars of new and increased lending commitments and overdraft limits of the Major Trading Banks are shown on page 702. The figures represent gross new lending commitments of banks and do not take account of cancellations and reductions of existing limits. Figures for cancellations and reductions of existing limits can be obtained from this series (after deducting term loan component and adjusting the weekly averages to a monthly basis) in conjunction with that of overdraft limits shown in the following table. However, these derived figures should be regarded as an approximation only, since there are unavoidable differences in the basis of compilation of the two series.

**MAJOR TRADING BANKS: NEW AND INCREASED LENDING COMMITMENTS  
AND OVERDRAFT LIMITS, 1962-63 TO 1965-66 AND JULY 1965  
TO DECEMBER 1966**

(a) Excludes commitments in respect of temporary advances to woolbuyers. (b) Excludes limits in respect of temporary advances to woolbuyers, term loans and farm development loans. (c) Year ended second Wednesday of July.

The following table shows new and increased lending commitments in respect of the Major Trading Banks to selected industrial groups for the six months ended July 1965 to January 1967. The classification is an abridgement of that used for bank advances (see page 698).

The table indicates the sources of demand for new lending. If taken in conjunction with the classification of overdraft limits outstanding (*see below*), it also shows the approximate rate of cancellations and reductions of limits in the main industrial groups.

**MAJOR TRADING BANKS: NEW AND INCREASED LENDING COMMITMENTS TO SELECTED INDUSTRIAL GROUPS(a), SIX MONTHS ENDED**

(a) Excludes commitments in respect of temporary advances to woolbuyers. (b) Includes Farm Development Loan approvals: \$4.6 million, July 1966; \$11.2 million, January 1967.

The following table shows the classification of overdraft limits outstanding in respect of the Major Trading Banks for January 1964 to 1967. The classification is similar to that used for advances (*see page 698*). The table shows the trend of net new lending classified by industry. If used in conjunction with the classification of bank advances, it shows the range of limits usage by industry, and if used in conjunction with the classification of new and increased lending commitments (*see above*), it shows the approximate rate of cancellations and reductions of limits by industry.

## Cheque-paying banks—debits to customers' accounts

Statistics of debits to customers' accounts have been collected since September 1945. Generally they represent the total of all cheques drawn by the customers of the banks. The following table shows the average weekly debits to customers' accounts of all cheque-paying banks (including the Rural Credits Department of the Reserve Bank and the Commonwealth Development Bank). Debits to accounts of Australian Governments in capital cities are excluded, as they are subject to abnormal influences and are not uniform for each State.

**CHEQUE-PAYING BANKS: AVERAGE WEEKLY DEBITS TO CUSTOMERS' ACCOUNTS, STATES AND TERRITORIES, 1961-62 TO 1965-66**

(Excluding debits to Commonwealth and State Government accounts in capital cities)

(\$ million)

**Trading bank charges**

In October 1962 the trading banks instituted a system of charges on current accounts, and abolished the interstate exchange rates obtaining prior to this date. Details of interstate exchange rates prior to October 1962 may be found in Year Book No. 48, page 785. Charges on current account comprise a basic maintenance fee, a ledger activity fee and a cheque collection fee, each calculated on a quarterly basis and debited as a composite item to accounts four times a year. These charges were revised from 1 October 1966. The following are the current charges.

*Basic maintenance current account fee.* Sixty-five cents quarterly (non-rebated).

*Ledger activity fee (quarterly).* Up to  $\frac{1}{2}$  folio (20 entries), 25 cents; over  $\frac{1}{2}$  folio to 1 folio, 80 cents; over 1 folio to 2 folios, \$2.25; over 2 folios to 3 folios, \$5; over 3 folios to 4 folios, \$7.75; over 4 folios to 5 folios, \$10.50; over 5 folios to 6 folios, \$13.25; over 6 folios to 7 folios, \$16; over 7 folios to 15 folios, \$16, plus \$2.25 per folio or part thereof exceeding 7; over 15 folios to 35 folios, \$34, plus \$1.75 per folio or part thereof exceeding 15; over 35 folios, \$69, plus \$1.25 per folio or part thereof exceeding 35. Rebates of one free folio (or equivalent of approximately 40 entries) will be allowed for each complete \$1,000 minimum quarterly credit balance. Where rebates are applicable the number of free folios is deducted before the activity fee is calculated.

*Collection fee on cheques, etc., deposited.* Up to 20 cheques per quarter, free; 21 to 100, 60 cents, plus 30 cents per 10 cheques or part thereof exceeding 20; 101 to 500, \$3.00, plus \$1.50 per each 50 or part thereof exceeding 100; 501 to 1,000, \$15, plus \$3 for each 100 or part thereof exceeding 500; 1,001 to 10,000, \$30, plus \$15 per each 500 or part thereof exceeding 1,000; 10,001 to 50,000, \$300, plus \$20 per each 1,000 or part thereof exceeding 10,000; 50,001 to 100,000, \$1,100, plus \$75 per each 5,000, or part thereof exceeding 50,000; over 100,000, \$1,850, plus \$125 per each 10,000 or part thereof exceeding 100,000.

**Savings banks****Savings banks in Australia**

For information on the origin of savings banks in Australia and the facilities currently available, see Year Book No. 46, page 779 and earlier issues.

All savings banks, including trustee savings banks, but not State savings banks, are subject to the *Banking Act* 1959–1966. Details of this Act and the special provisions applying to savings banks are given in Year Book No. 46, pages 759–60.

*Commonwealth Savings Bank.* The Commonwealth Savings Bank of Australia was established as a separate institution on 9 June 1928, having functioned previously as a department of the Commonwealth Bank (for particulars of the origin of the Savings Bank Department and the extension of its services see Year Book No. 46, page 782, and earlier issues). It has since then operated independently, publishing its own balance-sheets and profit and loss accounts. The *Commonwealth Bank Act* 1927, which provided for the establishment of the Commonwealth Savings Bank as a separate institution, provided for a Commission of three members to manage the savings bank. This Commission was never appointed, and the *Commonwealth Bank Act* 1945 placed the control of the Commonwealth Savings Bank under the Governor of the Commonwealth Bank. Under the provisions of the *Commonwealth Banks Act* 1959–1966, which came into operation on 14 January 1960, the Commonwealth Savings Bank was maintained in the same form, but was placed under the control of the Commonwealth Banking Corporation (see also page 682).

*State savings banks.* State savings banks at present operating (with date of establishment shown in parentheses) are: The State Savings Bank of Victoria (1841); The Savings Bank of South Australia (1848); the Savings Bank Division of The Rural and Industries Bank of Western Australia (1956).

*Trustee savings banks.* Two trustee savings banks, The Hobart Savings Bank and Launceston Bank for Savings, operate within Tasmania. These banks commenced business in 1845 and 1835 respectively.

*Private savings banks.* The Bank of New South Wales Savings Bank Ltd., the Australia and New Zealand Savings Bank Ltd., and the C.B.C. Savings Bank Ltd. commenced business in 1956, the E.S. & A. Savings Bank Ltd. in 1961, The Bank of Adelaide Savings Bank Ltd., The National Bank Savings Bank Ltd., and The Commercial Savings Bank of Australia Ltd. in 1962.

(b) Includes inter-branch transfers.

**Savings banks—depositors' balances**

The amount at credit of depositors' accounts and the average per head of population for each State and Territory at the end of June 1962 to 1966 are shown in the following table. Deposit stock and non-interest bearing cheque accounts at the State Savings Bank of Victoria and the Savings Bank of South Australia and fixed deposit accounts at the Trustee Savings

Banks in Tasmania are included in the depositors' balances shown below. Separate details are not available.

**SAVINGS BANKS: DEPOSITORS' BALANCES IN AUSTRALIA  
JUNE 1962 TO 1966**

End of June(a)—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Private savings banks at last Wednesday in June, Launceston Bank for Savings at last Monday in June, other savings banks at end of June.

**Savings banks—cheque accounts**

At most savings banks cheque accounts are available to non-profit organisations such as friendly, co-operative and charitable societies. Similar facilities are also available to other depositors at The State Savings Bank of Victoria and The Savings Bank of South Australia. Details of the transactions on these accounts during the year ended June 1966 (excluding The Savings Bank of South Australia), together with the number of operative accounts and the amount on deposit at the end of June 1966, were as follows: deposits during the year, \$1,512.9 million; withdrawals during the year, \$1,500.8 million; interest added during the year, \$2.7 million; amount on deposit at end of year, \$145.2 million; number of operative accounts at the end of year, 315,819. These figures are included in the statistics in previous paragraphs.

**School savings banks**

Agencies of the savings banks have been established at most of the schools throughout Australia. Particulars of operative accounts within Australia at the end of June 1962 to 1966 appear below.

**SCHOOL SAVINGS BANKS: AUSTRALIA, JUNE 1962 TO 1966**

End of June(a)—	Number of school agencies	Number of operative accounts	Deposits	Deposits per operative account
		'000	\$'000	\$
1962 . . .	9,444	1,219	18,449	15.13
1963 . . .	9,551	1,255	19,331	15.41
1964 . . .	9,878	1,294	20,374	15.75
1965 . . .	9,544	1,364	22,055	16.16
1966 . . .	9,999	1,390	23,313	16.77

(a) See footnote (a) to table above.

**Savings banks—assets**

The assets within Australia of all savings banks at the end of June 1965 and 1966 are shown in the following table. In the table on pages 709–10 assets are shown at balance-sheet date which are not in June for some banks. In addition, the table on pages 709–10 excludes statistics for the Savings Bank Division of the Rural and Industries Bank of Western Australia, which are included in the table below.

**SAVINGS BANKS: ASSETS WITHIN AUSTRALIA(a), JUNE 1965 AND 1966**  
(\$ million)

	End of June(b)—	
	1965	1966
Coin, bullion and Australian notes . . . . .	10.8	10.7

<b>Total . . . . .</b>	<b>5,150.3</b>	<b>5,545.9</b>

(a) Includes assets in Papua, New Guinea and other external Territories.  
table on page 713.

(b) See footnote (b) to first

**Savings banks—classification of depositors' balances**

The classification of deposits published by savings banks does not permit a fully detailed analysis for Australia as a whole, but the classification at 30 June 1962 to 1966 of the combined deposits for The State Savings Bank of Victoria and The Savings Bank of South Australia<sup>7</sup> is shown below.

**STATE SAVINGS BANKS: CLASSIFICATION OF DEPOSITS**  
**30 JUNE 1962 TO 1966**  
(Per cent)

30 June—	Up to \$2,000	Over \$2,000
1962 . . . . .	57.31	42.69
1963 . . . . .	54.41	45.59
1964 . . . . .	51.89	48.11
1965 . . . . .	50.86	49.14
1966 . . . . .	49.90	50.10

## Savings banks—rates of interest on deposits

SAVINGS BANKS: INTEREST RATES ON DEPOSITS(a), 30 JUNE 1962 TO 1966  
(Per cent per annum)

Size of account	30 June—				
	1962	1963	1964	1965	1966
Ordinary accounts(b)—					
Up to \$2,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$2,001 to \$3,000 . . . . .	3.50	5.00	3.25	3.50	3.50
\$3,001 to \$4,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$4,001 to \$5,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$5,001 to \$6,000 . . . . .	3.50	3.00	3.25	3.50	3.50
Friendly and other society accounts—					
Up to \$4,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$4,001 to \$5,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$5,001 to \$6,000 . . . . .	3.50	3.00	3.25	3.50	3.50
\$6,001 and over . . . . .	2.00	1.50	1.75	2.00	2.00

(a) Rates allowed by the Commonwealth Savings Bank, private savings banks and The State Savings Bank of Victoria. Trustee savings banks and The Savings Bank of South Australia allow slightly higher rates of interest. (b) No interest is payable on amounts in excess of the maximum amount shown.

## Savings banks—predominant lending rates

The following table shows the predominant lending rates in respect of different types of loans by savings banks from 1961 to 1967.

SAVINGS BANKS: PREDOMINANT LENDING RATES OF INTEREST  
(Per cent per annum)

Date of change in rate	Loans to local government authorities	<i>Crédit foncier</i> housing loans(a)	Loans to co-operative housing
1961—1 January . . . . .	5.75—5.875	5.25—5.75	(b) 5.25—5.50
1962—26 January . . . . .	5.375—5.50	..	..
1963—11 April . . . . .	..	4.75—5.25	4.75—5.00
17 June . . . . .	5.00—5.125	..	..
2 October . . . . .	4.875—5.000	..	..
1964—1 June . . . . .	..	4.75—5.50	4.75—5.25
August . . . . .	5.50	..	..
1965—1 April . . . . .	..	5.00—5.75	5.00—5.50
8 April . . . . .	5.75	..	..
1967—2 February . . . . .	5.875	..	..

(a) The rate of interest on *crédit foncier* loans may be varied only at the expiration of each ten years of the currency of a loan. (b) The changes in interest rates on 1 January 1961 applied to all societies then financed and to future loans.

## FINANCE COMPANIES

The section dealing with finance companies, which was included in this chapter in previous issues of the Year Book is being extensively revised and further information is included in the Appendix of this issue.

## INSURANCE

## Legislation

Section 51 of the Commonwealth Constitution confers the necessary powers on the Commonwealth Parliament to legislate with respect to 'insurance other than State insurance; also State insurance extending beyond the limits of the State concerned'. Commonwealth legislation includes the *Marine Insurance Act* 1909–1966 defining the limits of marine insurance and regulating the terms of contracts, etc., the *Insurance Act* 1932–1966 requiring the lodgment of deposits by insurance companies, and the *Life Insurance Act* 1945–1965 generally regulating life insurance business in Australia. The *Marine Insurance Act* 1909–1966 and the *Insurance Act* 1932–1966 have limited application, and except for life insurance business, which is regulated by the *Life Insurance Act* 1945–1965, insurance business is conducted almost entirely under State laws.

## Insurance Act 1932–1966

Companies, persons or associations of persons carrying on insurance business in Australia or in any Territory of Australia are required to lodge a deposit with the Commonwealth Treasurer. Money deposited is invested by the Treasurer in prescribed securities selected by the depositor, and all interest is paid to depositors. Deposits remain as security against liability to policy holders, and are available to satisfy judgments obtained in respect of policies. Deposits held by States on 1 February 1932 could, however, remain with the States subject to the conditions embodied in the laws of the States, and depositors to the extent of the value of these deposits were exempt from liability to make deposits under the Commonwealth Act.

The following are not regarded as insurance business under the Act: staff superannuation schemes; schemes of religious organisations solely for insurance of their property; friendly society, union and association schemes involving superannuation or insurance benefits to employees.

This Act does not apply to State insurance within the limits of the State concerned, and under the *Life Insurance Act* 1945–1965 ceased to apply to life insurance business.

## Life Insurance Act 1945–1965

The objects of this Act are: (a) to replace all State legislation on the subject of life insurance, except that relating to the life insurance operations of State Government insurance offices within the State concerned, and to provide uniform legislation for the whole of Australia; (b) to appoint an Insurance Commissioner to exercise active supervision of the activities of life insurance companies, with a view to securing the greatest possible protection for policy holders; (c) to set up adequate machinery for dealing with any company that fails to maintain a required minimum standard of solvency. The Act came into operation on 20 June 1946. A summary of the provisions of the Act is given in Year Book No. 37, pages 595–7.

## Deposits under Insurance Acts

Deposits lodged under the Insurance Acts at 30 June 1966 totalled \$33.9 million, comprising \$4.3 million held by the Commonwealth in respect of life insurance, and \$29.6 million held by the Commonwealth and \$20,060 held by the State of New South Wales in respect of other forms of insurance. The deposits consisted of Commonwealth Government securities \$20.4 million, United Kingdom Government securities \$1.7 million, fixed deposits \$0.4 million, bank guarantees and undertakings \$8.7 million, corporation debentures and stock \$0.9 million, and titles and mortgages \$1.8 million.

## Life insurance

Since 1947, returns lodged under the *Life Insurance Act* 1945–1965 have been used to compile life insurance statistics. Except where otherwise indicated, the figures in the succeeding paragraphs refer only to Australian business. Business in the Territories of Papua and New Guinea is, however, included in the Australian figures. The information shown has been compiled from returns of life insurance business submitted in the financial years which ended during the year stated.

## Offices transacting business

The number of offices which transacted life insurance business in Australia during 1965 was 45, including 12 overseas companies. Of the 33 Australian offices, 6 are purely mutual, including one which transacts general business in respect of which share capital is used, 25 are public companies, and 2 are State Government institutions. Of the total, 33 transacted ordinary business only and the remainder both ordinary and industrial business. Where possible, ordinary, industrial and superannuation business have been kept separate in the following tables.

(a) Prior to 1962, includes superannuation business.

**Liabilities and assets**

The liabilities of the Australian offices consist mainly of their insurance funds, but in the case of public companies there is a further liability on account of the shareholders' capital. The assets consist chiefly of government and municipal securities, mortgages, loans on policies, landed and house property, etc. Loans on personal security are granted by very few of the Australian offices. Separate details of liabilities in respect of Australian business are not available.

*Total liabilities and assets.* In the two tables which follow the details of liabilities and assets relate to all business (Australian and overseas) of Australian companies, the life insurance business of the two State Government offices, and the Australian business only of the twelve overseas companies operating in Australia. For various reasons several offices do not attempt the dissection of liabilities and assets according to type of business, and, therefore, the figures in the following tables relate to all types of business combined.

**LIFE INSURANCE: TOTAL LIABILITIES, 1965**

(\$ million)

(a) State or Territory of location of mortgage, registration of policy, or residence of borrower. (b) Includes Papua and New Guinea. (c) Includes Northern Territory.

**Fire, marine and general insurance**

The following statistics, which are in respect of the Australian business of companies operating in Australia and State Government insurance offices, conform to the following definitions and should be interpreted in accordance therewith.

- Premiums represent the full amount receivable in respect of policies issued and renewed in the year, less returns, rebates and bonuses paid or credited to policy-holders during the year. They are not adjusted to provide for premiums unearned at the end of the year and consequently the amounts differ from 'earned premium income' appropriate to the year. When business is increasing, as in recent years, premiums receivable (as shown in the statistics) are greater than 'earned premium income' appropriate to the year. The converse applies when business is declining.
- Claims or losses include provision for outstanding claims and represent claims or losses incurred in the year. Salvage and other amounts recoverable have been deducted.
- Contributions to fire brigades, commission and agents' charges, and expenses of management represent mainly charges paid during the year.
- Taxation represents mainly payments made during the year, and includes income tax, pay-roll tax, licence fees, stamp duty (where paid by the company), etc. Income tax paid during the year is based on the income of earlier years.

The figures relate to selected items of statistics and are not construable as 'Profit and Loss' statements or 'Revenue Accounts'.

In cases where the business is underwritten in one State and the risk is situated in another, the business is included in the State in which the policy was issued.

During 1965-66 revenue from premiums amounted to \$609.6 million, and that from net interest on investments, etc. to \$34.9 million, a total of \$644.6 million. Expenditure on claims amounted to \$384.9 million, contributions to fire brigades \$14.7 million, commission and agents' charges \$53.6 million, expenses of management \$96.9 million, and taxation \$17.1 million, a total of \$567.2 million.

**Premiums and claims**

The following tables show the aggregate premium income less returns, rebates and bonuses, and claims or losses less amounts recoverable, for each State and for all classes of insurance other than life for the years 1961-62 to 1965-66.

**FIRE, MARINE AND GENERAL INSURANCE: PREMIUMS AND CLAIMS, STATES

### The Export Payments Insurance Corporation

The Export Payments Insurance Corporation was established under the *Export Payments Insurance Corporation Act 1956* to provide exporters with insurance against risks associated with overseas trade which are not usually acceptable to commercial insurers, and to give certain guarantees in connection with that trade. The Corporation commenced business in 1957. Where the Corporation is not in a position to accept business on its commercial account it may be authorised under its statute to provide insurance facilities on the Commonwealth Government's account in the national interest. *See also* the chapter Overseas Transactions, page 376.

### INSTALMENT CREDIT FOR RETAIL SALES

Information relating to instalment credit for retail sales in Australia is given in the following tables. Information in more detail may be found in the annual bulletin *Insurance and Other Private Finance* and in the monthly and quarterly statements relating to instalment credit for retail sales issued by this Bureau (*see* beginning of chapter).

The statistics cover operations of all types of instalment credit schemes which relate primarily to the financing of retail sales of goods, whether the credit is advanced by a retail business or by a non-retail finance business. In general, the term 'instalment credit' is defined as relating to schemes in which repayment is made by regular pre-determined instalments. Types of schemes covered include hire purchase, time payment, budget account, and personal loan schemes which relate primarily to the financing of retail sales of goods. In these statistics the term 'retail sales' relates not only to retail sales by retail establishments coming within the scope of the Censuses of Retail Establishments conducted periodically by this Bureau, but includes also other sales of goods to final purchasers (e.g. plant and machinery).

Figures for amounts financed *exclude* interest, hiring charges, insurance, etc. Figures for balances outstanding and collections *include* interest, hiring charges, insurance, etc. Details are not available of these charges or of other items (e.g. rebates allowed for early payments, late payment charges, bad debts written off) which affect the reconciliation of the three main instalment credit series—amount financed, collections, and balances outstanding.

Statistics of amounts financed are classified by type of goods, defined as follows: *motor vehicles* (new and used separately)—motor cars and motor cycles, commercial vehicles, tractors, caravans, trailers, motor parts and accessories, etc.; *plant and machinery*—farm machinery and implements, earth-moving equipment, aircraft, industrial plant and machinery, business machines and equipment (including commercial refrigeration equipment), etc.; *household and personal goods*—furniture, furnishings and floor coverings, domestic refrigerators, electrical goods, radios, television, musical instruments, bicycles, motor mowers, clothing, etc.

Further explanatory detail on these series may be found in the bulletin and statements referred to on page 734.

# Total instalment credit, by type of business

The following table gives separate particulars of the instalment credit transactions of retail businesses and non-retail finance businesses for the years 1961–62 to 1965–66.

## INSTALMENT CREDIT FOR RETAIL SALES, BY TYPE OF BUSINESS: AMOUNT FINANCED, BY COMMODITY GROUP, COLLECTIONS, AND BALANCES OUTSTANDING, AUSTRALIA, 1961–62 TO 1965–66

(\$ million)

Year	Amount financed during year					Collec- tions during year	Balances out- standing at end of year

(a) Includes Australian Capital Territory.

(b) Includes Northern Territory.

### NEW CAPITAL RAISINGS BY COMPANIES IN AUSTRALIA

Information relating to capital raised by companies in Australia is given in the following tables. More detailed information may be found in the annual bulletin *Insurance and Other Private Finance* and in quarterly bulletins dealing with capital raisings (*see beginning of chapter*).

The statistics (the collection of which commenced in July 1954) relate to capital raised by companies through issues of shares, and in the case of companies listed on stock exchanges, through the issue of debentures, notes and similar securities and the acceptance of deposits, and in the case of unlisted companies, by way of loans secured over the entire assets of the company. Capital obtained by way of bank overdraft or bank loans, trade credit, temporary advances, and loans secured over part only of the assets of the company is not included. Totally unsecured loans are included in the case of listed companies, but are excluded in the case of unlisted companies.

Separate statistics are given for listed and unlisted companies. Listed companies are companies incorporated in Australia or the Australian territories and listed on one or more of the Australian stock exchanges. All other companies incorporated in Australia, including subsidiaries of listed companies, are classified as unlisted companies. Companies incorporated overseas, whether listed on an Australian stock exchange or not, are excluded from the statistics of share issues. However, subsidiaries of overseas companies, if incorporated in Australia, are included in the statistics of share issues. The statistics of new capital raised through issues of debentures, notes, etc., and the acceptance of deposits, include, in addition to capital raised by companies incorporated in Australia (including subsidiaries of overseas companies), capital raised in this way from Australian sources by overseas public companies through their Australian offices.

The following are explanatory notes relating to some of the items shown in the tables.

**New money.** This is the net amount of cash transferred from the investing public to the companies. For this purpose the 'investing public' includes banks and life insurance companies (except when subscribing to issues by associated companies) and government and private superannuation funds, but excludes other government agencies. Subscriptions by associated companies, whether local or overseas, are excluded. In the tables which follow the amount of new money is obtained by deducting from the total cash raised the 'amount not involving a net transfer of funds from the investing public'.

**Amounts not involving new money.** These amounts include cash subscriptions received by issuing companies from associated companies. Such subscriptions represent inter-company transfers only, and do not involve a receipt of funds from the 'investing public'. Also included

are amounts which, although subscribed by the 'investing public' (i.e. subscribers other than 'associated companies'), are not retained by the issuing company or its associates, but are used to redeem shares, debentures or unsecured notes, etc. or are used to purchase from individuals existing shares, debentures, etc. in other companies, including existing shares, etc. in associated and subsidiary companies. The funds used in this way are thus returned to another section of the 'investing public' and do not represent a *net* transfer of cash from the 'investing public' to the companies. (Besides these purchases of existing shares, etc. from individuals, purchases of existing shares, etc. from companies other than associates of the issuing company might also be included in this item, but the amounts involved are small and separate details have not been collected.)

#### Companies listed on stock exchanges

Details of new capital raised through issues of shares, debentures, or registered notes, or through accepting deposits are given in the following table for each of the years 1961-62 to 1965-66.

#### LISTED AUSTRALIAN COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES, DEBENTURES, OR REGISTERED NOTES, ETC.(b), OR ACCEPTING DEPOSITS(c), 1961-62 TO 1965-66

(\$ million)

Year	Share capital						Debentures, registered notes and deposits		
	Value of issues commenced	Non-cash issues commenced (d)	Cash issues commenced	Cash raised during period (e)	Amounts not involving new money	New money	Total amount raised (f)	Amounts not involving new money (f)	New money
1961-62 . . .	383.0	145.8	237.2	189.8	37.4	152.4	762.4	563.2	199.2
1962-63 . . .	276.5	144.2	132.2	150.2	45.5	104.7	839.2	609.3	229.9
1963-64 . . .	260.8	119.3	141.4	169.2	42.8	126.4	907.7	745.5	162.2

1965-66 . . .	292.1	85.6	206.3	232.6	61.5	171.3	981.0	834.7	146.4

(a) Includes companies incorporated in the Australian Territories. (b) Includes convertible notes. (c) Deposits accepted by banks, life insurance companies, pastoral companies and building societies, and loans to authorised dealers in the short-term money market are not included. (d) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (e) Amounts paid up on issues commenced during the year plus calls on issues commenced in earlier years. (f) Includes conversions, renewals, etc.

#### Companies not listed on stock exchanges

Details of new capital raised by unlisted companies through issues of shares and loans secured by charges over the companies' entire assets are given in the following table for each of the years 1961-62 to 1965-66.

#### UNLISTED COMPANIES(a): NEW CAPITAL RAISED THROUGH ISSUES OF SHARES AND LOANS SECURED BY CHARGES OVER THE COMPANIES' ENTIRE ASSETS, 1961-62 TO 1965-66

(\$ million)

Year	Share capital						Loans secured by charges over the companies' entire assets		
	Value of issues commenced	Non-cash issues commenced (b)	Cash issues commenced	Cash raised during period (c)	Amounts not involving new money	New money	Total amount raised (d)	Amounts not involving new money (d)	New money
1961-62 . . .	503.6	268.6	235.0	216.6	161.8	54.8	48.0	34.2	13.8
1962-63 . . .	412.6	218.7	193.9	204.8	159.1	45.7	58.8	45.4	13.3
1963-64 . . .	432.3	222.5	209.9	211.6	163.2	48.4	68.7	46.1	22.6
1964-65 . . .	563.5	303.1	260.5	233.9	182.2	51.7	65.3	40.1	25.2
1965-66 . . .	455.3	260.1	195.4	216.3	165.5	50.8	63.8	40.7	23.1

(a) Excludes companies incorporated in the Northern Territory and Australian External Territories for 1962-63 and previous years, but includes Northern Territory incorporations for 1963-64 and subsequent years. (b) Includes bonus issues, conversion issues, issues in exchange for existing shares, etc. (c) Amounts paid up on issues commenced during year plus calls on issues commenced in previous years. (d) Includes conversions, renewals, etc.

**Listed and unlisted companies—new money raised, classified by industry group**

A summary of new money raised by listed and unlisted companies during each of the years 1961-62 to 1965-66, as shown in the preceding tables, is given below, together with a classification by industry groups of the amounts raised.

**LISTED AND UNLISTED COMPANIES: NEW MONEY RAISED, BY INDUSTRY GROUP, 1961-62 TO 1965-66**  
(\$ million)

Year	Companies listed on stock exchanges			Companies not listed on stock exchanges			Grand total
	Share capital (a)	Debentures, registered notes and deposits (b)	Total	Share capital (a)	Secured loans (c)	Total

**RURAL DEBT**

Major sources of credit for rural purposes include banks, Commonwealth and State government financial agencies, pastoral finance companies, and life insurance companies. The following table shows the estimated rural debt to these lenders.

**ESTIMATED RURAL DEBT TO SPECIFIED LENDERS  
30 JUNE 1962 TO 1966**

*(Source: Reserve Bank of Australia)*

(\$ million)

Lender	30 June—				
	1962	1963	1964	1965	1966
Major trading banks . . . . .	479	495	514	584	649
Ex-service settlement . . . . .	118	113	108	104	98
Other government, incl. State banks and State savings banks . . . . .	159	169	191	216	249
Pastoral finance companies . . . . .	208	214	228	258	250
Commonwealth Development Bank . . . . .	34	45	55	72	92
Life insurance companies . . . . .	51	52	56	66	75
<b>Total . . . . .</b>	<b>1,049</b>	<b>1,088</b>	<b>1,152</b>	<b>1,300</b>	<b>1,413</b>

In addition, credit is supplied to the rural sector by finance companies, merchants, co-operative producer organisations, and by private lenders and investors, the most noteworthy of these last-mentioned sources involving family arrangements and property vendors. No data are currently available on the extent of the outstanding debt by the rural sector to these sources.

### SHORT-TERM MONEY MARKET

For some years prior to 1959 leading stockbrokers had been actively engaged in the acceptance of short-term funds against the security of government securities, but their operations were limited by the absence of suitable short-term securities and their liquidity requirements. In February 1959 the Commonwealth Bank (now the Reserve Bank) gave official status to the market by announcing that under certain conditions it would act as lender of last resort to authorised dealers in the short-term money market.

The form of organisation consists of nine companies whose functions are:

- (i) to accept loans overnight, at call or for fixed periods, in minimum amounts of \$50,000 and to invest these funds in Commonwealth Government securities with currencies not exceeding three years and, since March 1965, in commercial bills that had been accepted or endorsed by a trading bank; and
- (ii) to engage as traders in the buying and selling of these specific classes of securities.

Dealers are required to have a minimum paid-up capital of \$400,000 and a level of shareholders' funds sufficient to permit the lodgment of 'margins' with the Reserve Bank, in the form of Commonwealth Government securities, as general backing for their operations. These securities lodged as margins are required to be, on market values, equivalent to at least:

- (a) one-half per cent of the dealer's holding of Treasury Notes;
- (b) one per cent of the dealer's holding of Commonwealth Government securities and commercial bills maturing within one year;
- (c) two per cent of the dealer's holding of Commonwealth Government securities maturing within one to two years; and
- (d) four per cent of the dealer's holding of Commonwealth Government securities maturing within two to three years.

The total amount of loans a dealer may accept is determined by the Reserve Bank in relation to the level of the dealer's shareholders' funds. Under the lender of last resort arrangements the dealer may borrow from the Reserve Bank against the lodgment of securities.

### Selected assets and liabilities of authorised dealers and rates of interest on loans accepted

In the following table details of selected assets and liabilities of authorised dealers and the interest rates on loans accepted by dealers are given for June 1961 to 1965 and for each month January to December 1966.

# FRIENDLY SOCIETIES, REGISTERED BUILDING SOCIETIES AND CO-OPERATIVE SOCIETIES

## Friendly societies

The total membership of friendly societies in Australia is about 430,000, but as certain benefits such as medical attendance and free medicines, and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must be more than doubled to arrive at an estimate of the number of persons who receive some direct benefit from these societies, even when due allowance is made for young and unmarried members. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its proposed rules conform to the law, and that the scale of contribution is sufficient to provide the promised benefits. Societies are obliged to forward to the Registrar annual returns about their membership and their finances, and reports are published in most of the States dealing with the returns received.

### Societies, members and revenue

The following table sets out the number of societies, members, etc., revenue and expenditure, and funds of registered societies for the year. More detailed information is available in the bulletin *Insurance and Other Private Finance*, and issue No. 4, 1965-66, contains particulars for the year 1964-65.

(a) Excludes juvenile branches, dispensaries, medical institutes, and certain miscellaneous societies. Receipts and payments of subsidy under the Commonwealth medical and hospital benefit schemes are excluded.  
(b) Includes the Australian Capital Territory. (c) Year 1965.

## Registered building societies

### Summary

During 1963-64 and 1964-65 returns were received from 3,162 and 3,444 societies respectively, but the information was not exhaustive, as particulars regarding a number of organisations were not included. In the following table general information is given relating to the societies in each State for the year 1964-65 and to the combined States for 1963-64. More detailed information is available in the mimeographed bulletin *Registered Building Societies*, Issue No. 4 contains information for the year 1965-66.

<b>Total . . . . .</b>	<b>909,060</b>	<b>34,217</b>	<b>943,277</b>	<b>845,025</b>

(a) See footnote (a) to table above. (b) Includes advances on mortgage of terminating societies which are on a gross basis. Net advances may be derived by subtracting borrowing members' funds. See table above.

## Co-operative societies

Co-operative societies are divided into three classes: (i) those engaged in the manufacture and marketing of primary products and trade requirements; (ii) those engaged in retailing general household requirements; and (iii) those engaged in activities covered by both classes (i) and (ii). The first class may be described briefly as Producers' Co-operative Societies and the second as Consumers' Co-operative Societies. The particulars given for New South Wales relate to societies registered under the Co-operation Act, 1923-1954. A summary of the business of all co-operative societies for the year 1964-65 for all States except Western Australia is given in the following tables. Separate particulars for each of the three types of co-operative societies are given in the annual bulletin *Insurance and Other Private Finance*, and issue No. 4, 1965-66 contains details for 1964-65. Particulars are not collected in Western Australia.

LOTTERIES AND BETTING

Lotteries

State Governments operate lotteries in New South Wales, Queensland and Western Australia. Tattersall Lotteries are operated under government licence in Victoria and also sell tickets under government licence in Tasmania and New Zealand. The statistics of sales of tickets and prizes for Victoria include sales and allotments of prizes in Tasmania and New Zealand by Tattersall of Victoria. Tasmanian Lotteries were operated under government licence until 30 September 1961, when they surrendered their licence. In general, revenue derived by the State Governments from these lotteries is used directly or indirectly to provide funds for expenditure on hospitals, charities, etc. For information as to the origin, purpose and method of payment of proceeds or taxes to State revenues *see* Year Book No. 46, page 808 and earlier issues.

Details of ticket sales, prizes allotted, and taxes paid and other net contributions to State Government revenues, relating to lotteries drawn during each of the years 1961-62 to 1965-66, are given in the following table.

LOTTERIES: VALUE OF TICKET SALES, PRIZES ALLOTTED, TAXES PAID  
AND OTHER NET CONTRIBUTIONS TO STATE GOVERNMENT REVENUES

1961-62 TO 1965-66

(\$'000)

(a) Off-course investments only. Totalisator Agency Board commenced operating from 1 September 1964.

(b) Estimated from taxes on betting with licensed bookmakers.

**PENSION AND SUPERANNUATION SCHEMES**

**Government, local government and semi-governmental pension and  
superannuation schemes**

The Commonwealth and all State Governments have established pension and superannuation schemes for their employees. These schemes are operated through funds to which both the Governments and their employees make contributions. Employees of local government and semi-governmental authorities are covered either by the Commonwealth and State Government schemes or by a separate scheme of the authority which is operated either through a separately constituted fund or through a life insurance office.

### Coal and oil-shale mine workers' superannuation schemes

In all States except South Australia superannuation schemes have been established for coal and oil-shale mine workers. These schemes are operated through funds to which mine workers, mine owners and the State Governments contribute.

**Private superannuation, pension and retiring allowance schemes**

Details of the results of a survey of private superannuation, pension and retiring allowance schemes conducted by private businesses for the benefit of their employees during the year ended June 1963 or the accounting period nearest that year and of similar surveys conducted in 1960-61 and 1961-62 are published in Year Book No. 51 (pages 898-900).

In 1955-56, 1960-61, 1961-62, and 1962-63 sample surveys were conducted of pension and retiring allowance schemes in private businesses subject to pay-roll tax, other than in rural industries, private domestic service, and certain businesses such as accountants, trade associations, consultant engineers, etc. Commonwealth Government airlines and banks were included where they had established their own funds separately from the Commonwealth superannuation funds, but statutory coal miners' pension funds were excluded. Details were asked for three types of pension and retiring allowance schemes. They were (a) schemes operated through life insurance offices, (b) schemes operated through separately constituted funds, and (c) direct payments of pensions and retiring allowances.

The results of the 1955-56 survey are available in *Finance Bulletin* No. 47, Part I—*Public and Private Finance*, and the 1960-61, 1961-62 and 1962-63 survey results were published in *Insurance and Other Private Finance*, Bulletin No. 2 and Year Book No. 51 (pages 898-900). Details of the operations of government and semi-governmental superannuation schemes were published in *Insurance and Other Private Finance*, Bulletins No. 1 and No. 2 for 1961-62 and 1962-63 respectively, and in Parts I of the *Finance Bulletin* for years prior to 1961-62. The results of the 1963-64 survey of government and semi-governmental superannuation schemes were published in March 1966 in a mimeographed bulletin. The monthly bulletin *Life Insurance Statistics* contains some information on the superannuation business of life insurance offices.

In the years 1956-57 to 1958-59, 1963-64 and 1964-65 information was collected from a small number of selected larger funds, and for the years 1955-56 and 1960-61 to 1962-63 the returns for the selected pension schemes were extracted from the sample surveys and tabulated in respect only of the business of their separately constituted funds. Results of the survey for 1964-65, together with comparative figures for previous years, were published in April 1966 in a mimeographed bulletin. Although only a small number of funds were included in these surveys, they accounted for about 34 per cent of total assets of the funds covered by the more comprehensive sample survey in 1962-63.

In order to improve the coverage of the surveys of selected pension funds, a larger number of funds was surveyed in 1964-65 than in previous surveys of selected funds. The separately constituted private pension funds included in the 1964-65 survey, the results of which are shown below, accounted for about 72 per cent of total contributions, 71 per cent of the income, 68 per cent of the expenditure, and 77 per cent of the assets of the funds included in the 1962-63 sample survey.

Since the *Survey of Selected Private Pension Funds* for 1964-65 was not a representative sample, it is not known to what extent their share of the whole field has changed since the 1962-63 survey; nor is the pattern of income, expenditure and asset distribution of the large funds included in this survey necessarily representative of the whole field.

## CHAPTER 20

### PUBLIC FINANCE

The subject of public finance is dealt with in this chapter under the two major divisions of Commonwealth Finance and State Finance. The close financial relations between the Commonwealth and States, however, particularly since the Financial Agreement has been in operation, demand also a combination of these two divisions under the heading of Commonwealth and State Finance. Under the Financial Agreement the Commonwealth assumed the liability to bondholders for the States' securities existing at the date of the Agreement and now arranges for all borrowings for and on behalf of the Commonwealth or any State and for all conversions, renewals, redemptions and consolidations of such securities. In view of this it is convenient to deal with the Commonwealth and State Government securities on issue in a separate division of this chapter (page 808). The subject of income taxes is also dealt with in a separate division at the end of this chapter (page 823).

For further detailed information on the subjects covered by this chapter *see* the annual bulletins *Commonwealth Finance*; *State, Territory and Local Government Authorities' Finance and Government Securities*; and *Commonwealth Taxation Assessments*. Current information in summarised form is contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics* and the *Digest of Current Economic Statistics*. A mimeographed statement *Commonwealth, State and Territory Taxation Collections* is issued annually as soon as possible after the relevant information has been assembled.

#### COMMONWEALTH FINANCE

##### Financial provisions of the Constitution

The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are contained in Sections 81 to 105A of the Commonwealth Constitution (*see* pages 16–19 of this Year Book). Two other sections which have a most important bearing on questions of Commonwealth finance are Sections 69 and 51.

Section 69 provides for the transfer from the States to the Commonwealth of certain specified departments, and Section 51, in outlining the powers of the Commonwealth Parliament, implies the transfer or creation of other departments. Sections 87 and 96 deal with the financial relations between the Commonwealth and the States. These matters have been treated in previous issues of the Year Book, and on pages 766–75 of this issue a summary is given of the present provisions for Commonwealth financial assistance to the States.

The *Audit Act* 1901–1966 lays down the procedure which must be followed in accounting for the receipt and disbursement of public funds. The general administration of Commonwealth finances is the responsibility of the Treasurer of the Commonwealth.

#### Commonwealth Public Account

##### Nature of account

The Commonwealth Public Account includes the Consolidated Revenue Fund, the Trust Fund and the Loan Fund. Ordinary revenues from taxation and other sources are paid into the Consolidated Revenue Fund, from which the main expenditures are for defence, war and repatriation services, social services, payments to the States, Commonwealth business undertakings (mostly postal, telephone and telegraph), and administration. The Trust Fund covers special transactions outside the ordinary operations of departmental expenditures, such as pension funds and moneys held for expenditure by the Commonwealth at some future time. The Loan Fund receives its funds from the sale of Commonwealth securities, and expenditures from the Fund are made in accordance with the purpose of issue of each loan. The main disbursements from the Loan Fund are to the States, either by way of distribution of the proceeds of loans raised by the Commonwealth on their behalf or in accordance with the provisions of the Commonwealth and State Housing Agreements, and the remaining disbursements are for Commonwealth purposes such as defence or war service land settlement.

## Summary of receipts and expenditure

A summary of transactions on the Commonwealth Public Account for 1965-66 and the four preceding years is given in the table which follows. The transactions are recorded on a cash basis.

**COMMONWEALTH PUBLIC ACCOUNT: SUMMARY OF TRANSACTIONS**  
**1961-62 TO 1965-66**

(\$ million)

	1961-62	1962-63	1963-64	1964-65	1965-66
Expenditure(a)(b) . . . . .	3,786.0	3,987.7	4,389.1	4,784.6	5,379.7
Receipts(b) . . . . .	3,441.0	3,565.3	3,993.3	4,627.9	5,128.6
<i>Excess of expenditure over receipts— borrowing requirement</i> . . . . .	345.0	422.4	395.8	156.8	251.1
Borrowings—					
Overseas loan proceeds(c) . . . . .	58.8	139.3	73.3	43.1	37.6
Less redemptions, etc. . . . .	58.9	38.5	47.3	80.1	77.4
Net proceeds . . . . .	-0.1	100.9	26.0	-37.0	-39.8
Australian loan proceeds(d) . . . . .	463.1	518.7	578.4	501.7	546.2
Less redemptions, etc. . . . .	172.0	165.1	153.4	270.2	254.5
Net proceeds . . . . .	291.0	353.6	425.1	231.5	291.6
Total net loan proceeds . . . . .	290.9	454.5	451.1	194.5	251.8
Residual financing—					
Borrowings from Reserve Bank . . . . .	+44.0	-170.0	-68.0	+38.0	-36.0
Treasury Notes (issue +, redemption -) . . . . .	..	+139.0	+13.6	-72.1	+35.7
Cash balances (increase -, decrease +) . . . . .	+10.0	-1.1	-0.9	-3.6	-0.4
	+54.0	-32.1	-55.3	-37.7	-0.7
Total . . . . .	345.0	422.4	395.8	156.8	251.1

(a) Excludes payments to Loan Consolidation and Investment Reserve: 1961-62, \$44.3 million; 1962-63, \$52.8 million; 1963-64, \$29.8 million; 1964-65, \$222.7 million and 1965-66, \$210.5 million. (b) Comparisons between these figures are affected by accounting changes. (c) Overseas refinancing operations are treated as adding to both loan proceeds and redemptions where they involve receipts into and expenditures from Loan Fund. (d) Excludes State domestic raisings and loans raised on behalf of Qantas Empire Airways and Australian National Airlines Commission.

Minus sign (-) denotes decrease.

**All Commonwealth funds: summary of receipts and expenditure**

The following table represents a reclassification of Commonwealth Government receipts and expenditure in a national accounts form. It includes the Commonwealth Government components (with slight re-arrangement) of Tables 57 and 60 in *Australian National Accounts, National Income and Expenditure 1953-54 to 1965-66*. Advances to semi-governmental business undertakings are included in 'Other advances', but grants to other semi-governmental bodies

**ALL COMMONWEALTH FUNDS: EXPENDITURE—TYPE, FUNCTION 759**

(National Capital Development Commission, Australian National University, Stevedoring Industry Authority, etc.) are classified according to the final expenditure of the authority concerned.

**ALL COMMONWEALTH FUNDS: RECEIPTS AND EXPENDITURE, 1961-62 TO 1965-66**

(\$ million)

(a) This table includes the Commonwealth Government component of Tables 66 and 75 in *Australian National Accounts, National Income and Expenditure 1953-54 to 1965-66* together with net expenditure on stocks.

**Main components of Commonwealth expenditure**

The tables on pages 764-73 supply details of some of the main components of total expenditure of the Commonwealth Government.

## Subsidies

The following table shows details of Commonwealth expenditure from all funds on assistance to primary producers, subsidies and bounties for the years 1961-62 to 1965-66. Expenditure on special relief such as drought, frost, flood, and bush fire, etc., is not included here (included as cash benefits to persons in tables, pages 765-6) nor is expenditure from the proceeds of certain taxes on primary products and profits from marketing schemes, which have been paid to trust funds for the purpose of price or other stabilisation schemes or for distribution to producers (see pages 786-8). Payments to the States for cattle tick control, dairy industry extension and agricultural advisory services are not included under this heading, but included under the heading Grants to the States (see pages 767-9). Further information relating to assistance to primary producers is given in the chapter Rural Industry. Details of price stabilisation subsidies and of various forms of assistance to primary producers for earlier years are given on pages 414 and 1014-15, respectively, of Year Book No. 38.

Further information concerning items in the two preceding tables is given in the appropriate chapters of this Year Book.

**Payments to or for the States**

An outline of the provisions of the Constitution providing for the Commonwealth to make payments to the States, and of the systems which followed, is given in earlier issues of the Year Book (see No. 37, pages 633 to 638). A distinction is made in this Year Book between (a) direct Commonwealth financial assistance to the States in the form of grants to provide revenue for general and specific purposes and (b) those forms of assistance for developmental and other specific purposes which include, in part or in total, payments made in the form of repayable advances. Some information about the more important or most recent of these forms of financial assistance is given on pages 772-5, but for greater detail on these and other forms of financial assistance see Year Book No. 51, pages 921-4, and earlier issues. Further information is available also in the chapters of this issue dealing with the respective subjects.

*Grants.* The following three tables show particulars of the amounts paid to the States as grants for the purposes referred to in (a) on page 766.

## ALL COMMONWEALTH FUNDS: GRANTS TO THE STATES, BY FUNCTION, 1965-66

The figures in the table above represent gross advances, and take no account of repayments made by the States.

*Contributions under Financial Agreement.* Details of the Financial Agreement between the Commonwealth and the States are given in Year Book No. 37, pages 685-90. Under this Agreement the Commonwealth undertook to contribute \$15,169,824 per annum towards interest payable on the State loan securities for a period of 58 years from 1 July 1927. This amount is distributed among the States as follows: New South Wales, \$5,834,822; Victoria, \$4,254,318; Queensland, \$2,192,470; South Australia, \$1,407,632; Western Australia, \$946,864; Tasmania, \$533,718. These amounts are equal to the sums paid by the Commonwealth to each State in the year 1926-27 at the rate of \$2.50 per head of population, the rate at which the Commonwealth had contributed annually to the States since 1 July 1910 as compensation for the States relinquishing, after federation, the right to levy customs and excise duties.

In addition, under the Financial Agreement the Commonwealth agreed to make certain contributions to the National Debt Sinking Fund for redemption of State loan securities. Details of these are given on pages 822-3 of this chapter.

*Special grants to the States.* The Constitution provides in Section 96 for the granting of special financial assistance to the States. The Commonwealth Grants Commission inquires into and reports upon claims made by any State for a grant of financial assistance and any matters relevant thereto. The recommendations of the Commission in respect of the years 1962-63 to 1966-67 are shown in their two parts in the following table. One part is the Commission's estimate of the indispensable need of the claimant State for the year in which the payment is to be made after allowing a sufficient margin for safety. The other part is an adjustment of this estimate for an earlier year after an examination of the audited accounts for that year. Thus the grants for 1966-67 include an estimate of the indispensable need of the claimant State for 1966-67 and an adjustment to the estimated grant for 1964-65.

(a) Adjustment to estimated grant paid two years previously.

*Financial assistance grants.* Under the provisions of the *States Grants Act* 1965-1966, the financial assistance grant paid to each State was determined by increasing the grant paid to that State in 1964-65 (with the addition of \$2,000,000 to the grant paid to Queensland in that year) in accordance with a formula using estimated movements in the population of that State between 31 December 1964 and 31 December 1965, the increase in average wages for Australia as a whole between 1963-64 and 1964-65, and a betterment factor of 1.2 per cent.

*Drought assistance.* Under the *States Grants (Drought Assistance) Acts*, New South Wales and Queensland were given Commonwealth financial assistance in respect of the total cost of such measures as each State deemed necessary to relieve the effects of drought. In addition, the Commonwealth is providing special financial assistance to those States to meet budgetary problems arising from the effects of drought on their revenues.

*Grants for road construction.* Details of the *Main Roads Development Act* 1923-1925, *Federal Aid Roads Acts* 1926, 1931 and 1936, *Federal Aid Roads and Works Act* 1937, *Commonwealth Aid Roads and Works Act* 1947-1949, *Commonwealth Aid Roads Act* 1950, *Commonwealth Aid Roads Act* 1954, *Commonwealth Aid Roads (Special Assistance) Act* 1957, and *Commonwealth Aid Roads Act* 1959 are given in earlier issues of the Year Book (see No. 38, pages 787-8, No. 41, page 621, No. 46, page 838, and No. 51, page 922) and in the annual bulletin *Commonwealth Finance*. A new scheme of Commonwealth assistance to the States for roads was established by the *Commonwealth Aid Roads Act* 1964. Under this Act, which is to operate for a period of five years from 1 July 1964, the Commonwealth has undertaken to make available up to \$750,000,000 to the States for the construction, reconstruction, maintenance and repair of roads. Of this amount, a total of \$660,000,000 will be paid to the States as basic grants for roads over five years. The basic grants are fixed annual amounts which rise progressively by \$4,000,000 a year from \$124,000,000 in 1964-65 to \$140,000,000 in 1968-69. In each year the grants will be distributed between the States on the basis of 5 per cent of the total to Tasmania and the balance shared between the other five States, one-third in proportion to their respective populations at the date of the last preceding Census, one-third in proportion to their respective areas, and one-third in proportion to the respective number of motor vehicles registered in these States at 31 December preceding the year of payment. The balance of up to \$90,000,000 over the five years will be made available to the States as matching assistance for roads. The total amount of matching assistance increases by \$6,000,000 a year from \$6,000,000 in 1964-65 to \$30,000,000 in 1968-69.

*Reimbursement under Tuberculosis Act* 1948. The *Tuberculosis Act* 1948 provided for the reimbursement by the Commonwealth of capital and maintenance expenditure incurred by the States in the provision of facilities for the diagnosis, treatment and control of tuberculosis. Re-imbursements from the National Welfare Fund of maintenance expenditure on tuberculosis hospitals are classified as cash benefits under Health and Welfare expenditure, and they equal

the amounts by which such expenditures of the States in any financial year exceed those for the year 1947-48. As from 1 July 1948 the States have also been reimbursed from annual appropriations of the Department of Health for all their capital expenditure on buildings, furnishings, equipment, and plant.

The *States Grants (Mental Health Institutions) Act* 1964 authorised assistance to the States amounting to one-third of their total expenditure on building and equipping approved mental health institutions during the three years ending 30 June 1967.

*Education.* Payments to the States for universities were first introduced in 1951-52, and details of the *States Grants (Universities) Acts* under which they were continued are given in earlier issues of the Year Book (see No. 51 page 923 and No. 52 page 770). The *Universities (Financial Assistance) Act* 1966 authorised grants totalling approximately \$175 million for the Commonwealth share of the agreed programme of development of State Universities for the years 1967 to 1969. (See also the chapter Education, Cultural Activities, and Research, pages 613-17.)

*Colleges of Advanced Education.* Under the *States Grants (Advanced Education) Acts*, the Commonwealth is providing financial assistance to the States for recurrent and capital expenditures of Colleges of Advanced Education.

The *States Grants (Science Laboratories and Technical Training) Act* 1964 and the *States Grants (Science Laboratories) Act* 1965-1966 provide for grants during 1964-65 to 1967-68 inclusive for improving science teaching in both government and non-government secondary schools.

Grants for buildings and equipment for use in technical training in schools and colleges conducted by States only are provided for under the *State Grants (Science Laboratories and Technical Training) Act* 1964 and the *States Grants (Technical Training) Act* 1965-1966.

Under the *States Grants (Research) Act* 1965 the Commonwealth made available \$2,000,000 to support research projects, selected on the basis of relative merit, being carried out in any academic field by individuals or research teams during 1964-65 and 1965-66.

*Railway projects.* Under the *Railway Standardization (South Australia) Agreement Act* 1949 the Commonwealth provided funds for the conversion of lines in the south-eastern division of the State as an initial step towards eventual standardisation to 4' 8½" gauge. The State is to repay three-tenths of the cost of this work over a period of fifty years and is to bear the full cost of subsequent conversion from broad to standard gauge. Similar conditions apply to expenditures under the *Railway Equipment Agreement (South Australia) Act* 1961. Under the *Railway Standardization (New South Wales and Victoria) Agreement Act* 1958 the Commonwealth provided funds for the construction of the standard gauge rail link between Albury and Melbourne on the basis that the States of Victoria and New South Wales will each bear fifteen per cent of the cost by instalments over a period of fifty years.

The total expenditure on railway standardisation (the thirty per cent advances to the States and the seventy per cent grants to the States) is charged to the capital works and services vote of the Department of Shipping and Transport. Under the *Railway Agreement (Western Australia) Act* 1961 the Commonwealth is providing financial assistance for the construction of a standard gauge railway from Kwinana to iron ore deposits at Koolyanobbing and to Kalgoorlie.

*Cattle roads grants.* The *Queensland Beef Cattle Roads Agreement Act* 1966 increased the limit of financial assistance available for beef roads in Queensland from \$16.6 million to \$20.5 million. Under the *Western Australia Grant (Beef Cattle Roads) Acts* special grants were made to Western Australia for certain beef cattle road works in the north of the State.

*Western Australia—northern development.* The *Western Australia (Northern Development) Agreement Act* 1963 provided for financial assistance of \$7,000,000 to Western Australia for development of approved projects during the three years 1963-64 to 1965-66.

*Brigalow lands.* Under the *Brigalow Lands Agreement Acts* Commonwealth advances to the State of Queensland for specified works associated with the production of beef cattle and other primary products in the Fitzroy River Basin and the supply of beef for export are fixed at an overall limit of \$23,000,000. Repayments over a twenty-year period are to commence in 1968 in respect of advances made prior to 1 July 1967 and in 1971 in respect of advances made from 1 July 1967.

*Flood mitigation, New South Wales.* Commonwealth payments under the *New South Wales Grant (Flood Mitigation) Act* 1964-1966 are limited to \$5,500,000 in respect of flood mitigation works on the Macleay, Clarence, Richmond, Tweed, Shoalhaven, and Hunter Rivers. The Commonwealth grants will match State expenditure which, in turn, will be in a prescribed ratio to local authority expenditure on flood mitigation works.

*Blowering Reservoir, New South Wales.* The Blowering Reservoir is to be constructed at the expense of the State of New South Wales mainly by the Snowy Mountains Hydro-electric Authority, and the Commonwealth will finance half the cost in the form of repayable interest-bearing loans to that State.

*Chowilla Reservoir, New South Wales.* The Chowilla Reservoir is to be constructed as an approved work under the River Murray Waters Agreement, and the Commonwealth advances to New South Wales are to assist in the financing of that State's one-quarter contribution of the cost of construction.

*Water resources investigations.* Under the *States Grants (Water Resources) Act 1964* the Commonwealth is authorised to grant financial assistance to the States for the purpose of accelerating the States' programmes of measuring the discharge of rivers and investigating underground water resources. Grants to each State are related to that State's capital expenditure and the operational expenditure it incurs in carrying out its measurement and investigation programmes.

*Development of Exmouth township, Western Australia.* In 1965-66 the Commonwealth contributed an amount of \$750,000 to the Western Australian Government towards the cost of developing a township at Exmouth in connection with the United States Communications Base being established at North West Cape.

*Weipa development, Queensland.* Under the *Weipa Development Agreement Act 1965* the Commonwealth is providing financial assistance of up to \$3,270,000 to Queensland by way of interest-bearing advances to finance harbour works to be carried out at Weipa on Cape York Peninsula.

#### War service land settlement

The following section deals with the financial operations of the War Service Land Settlement Division of the Department of Primary Industry. This information was previously included in the chapter Land Settlement and Tenure, (*see* Year Book No. 52, page 80). Additional information concerning the operations of the Division appears in Chapter 22, Rural Industry.

<b>Total . . . . .</b>	<b>18,166</b>	<b>30,048</b>	<b>1,282</b>	<b>75,539</b>	<b>106,240</b>	<b>56,484</b>	<b>287,759</b>

#### Loans and Allowances (Agricultural Occupations) Scheme

Full details of the measures taken for the re-establishment of ex-servicemen in rural occupations were given in earlier Year Books (*see* List of Special Articles, etc., preceding General Index to this volume). These measures provide for a scheme of loans and allowances to assist ex-servicemen in establishing themselves in agricultural occupations. The loans are made to eligible ex-servicemen for the purchase of land, effecting improvements on land, the acquisition of tools of trade, livestock, plant or equipment, the establishment of a co-operative business with other persons, reduction or discharge of a mortgage, bill of sale, etc. At 30 June 1966, 14,307 loans had been approved, and advances amounting to \$20,356,000 had been made. The allowances are payable only in respect of the period during which the income derived from the occupation by the

ex-serviceman concerned is considered inadequate. At 30 June 1966, 16,114 applications for allowances had been made, and the total amount paid in allowances was \$4,553,000.

Year Book No. 48 (page 98) contains details of the applications received and approved and the amounts involved for the individual States and Territories to 30 June 1961. There has been little subsequent change.

*War Service Land Settlement Branch—total expenditure*

The following table shows the total expenditure on various projects by the War Service Land Settlement Branch to 30 June 1966.

**COMMONWEALTH WAR SERVICE LAND SETTLEMENT BRANCH: EXPENDITURE  
STATES AND TERRITORIES TO 30 JUNE 1966**

**Other Commonwealth taxation**

Taxes other than customs and excise duties, the various export charges and some taxes on particular commodities are assessed and collected by the Commissioner of Taxation. The Commissioner's organisation comprises a head office in Canberra, an office in each State assessing the returns of taxpayers whose interests are restricted to that State, and a central office situated in Melbourne assessing taxpayers whose interests are in the Australian Capital Territory or are in more than one State.

Details of the purposes and rates applicable to the main forms of Commonwealth taxation, excluding customs and excise, currently imposed and of current legislation are given in the following pages. Historical information is given in Year Book No. 51, pages 905-10, and in

earlier issues. Taxes on income are treated separately on pages 823-34, and customs and excise duties are dealt with in the chapter Overseas Transactions. For detailed statistics relating to Commonwealth income taxes, estate duty, gift duty, and sales tax see the annual bulletin *Commonwealth Taxation Assessments*.

**Sales tax.** The general rate of tax levied on all goods other than those specified in the schedules to the *Sales Tax (Exemptions and Classifications) Act 1935-1966* was 12½ per cent, and goods subject to special rates were taxed at the rates of 2½ and 25 per cent.

Particulars of the net amount of sales tax payable and the sales of taxable and exempt goods in each State for 1965-66 are given in the following table. The figures relate to sales during the period 1 July to 30 June. The figures for sales tax payable differ from those for net collections shown on page 776 because the latter include some adjustments in respect of earlier tax years and relate to tax payable on returns lodged during the year, which in general cover sales for the period June to May.

(a) Includes Australian Capital Territory.

Sales of taxable and exempt goods and sales tax payable for Australia as a whole are shown in the following table for the years 1961-62 to 1965-66.

**COMMONWEALTH SALES TAX AND AMOUNT OF SALES  
AUSTRALIA, 1961-62 TO 1965-66  
(\$ million)**

Year of sale	Net sales on which sales tax was payable	Sales of exempt goods by registered persons	Total sales of taxable and exempt goods	Sales tax payable
1961-62 . . . . .	2,100	4,832	6,931	297
1962-63 . . . . .	2,303	5,254	7,557	314
1963-64 . . . . .	2,393	6,116	8,509	329
1964-65 . . . . .	2,589	6,819	9,408	365
1965-66 . . . . .	2,645	7,112	9,757	367

In the foregoing tables sales include goods transferred to stock for sale by retail, goods imported by persons other than registered taxpayers, and goods used in the business of the taxpayer. Exempt sales relate to goods exempted from sales tax under the *Sales Tax (Exemptions and Classifications) Act 1935-1966*. The figures shown do not represent the total sales of all commodities, as vendors trading only in exempt goods are not required to be registered, and consequently the volume of their sales is not included in the statistics above. In addition, non-taxable sales (i.e. goods sold by one registered taxpayer to another registered taxpayer) are excluded.

**Pay-roll tax** came into operation on 2 May 1941 and the relevant laws are *Pay-roll Tax Assessment Act 1941-1966*, *Pay-roll Tax Act 1941*, and *Pay-roll Tax Regulations*. From 1 September 1957 pay-roll tax of 2½ per cent (rate unchanged since its inception) was payable by employers on all wages and salaries in excess of \$400 a week or \$20,800 per annum. Employers whose export sales have increased above the annual average of export sales effected during a base period of two years ended 30 June 1960 are entitled under the Commonwealth Government's export incentive scheme to a rebate of pay-roll tax of twelve and one-half times the percentage increase in export sales.

*Estate duty.* Under the *Estate Duty Assessment Act 1914-1966* estate duty is assessed on the net value of the estate less a statutory exemption determined in accordance with the following formula, applying from 31 October 1963: (a) where the whole of the estate passes to the widow or widower, children (including adopted children, step-children and ex-nuptial children), or grand-children of the deceased, the sum of \$20,000 decreasing by \$2 for every \$8 by which the value exceeds \$20,000 and ceasing to apply at \$100,000; (b) where no part of the estate passes to the widow or widower, children or grand-children, the sum of \$10,000 decreasing by \$2 for every \$8 by which the value exceeds \$10,000 and ceasing to apply at \$50,000; and (c) where only part of the estate passes to the widow or widower, children or grand-children, the statutory exemption is to be calculated proportionately under (a) and (b). Special exemptions are also allowed in respect of estates of defence personnel who die on active service or within three years of termination of their active service, from injuries received or diseases contracted while on active service. Rebates of duty are provided on estates which become liable for duty on two or more occasions within a period of five years.

The rates of duty levied under the *Estate Duty Act 1914-1941* increase as the value of the estate for duty increases, as follows: does not exceed \$20,000, 3 per cent; \$20,001 to \$40,000, 6 per cent; \$40,001 to \$240,000, 6 per cent to 26 per cent; \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; \$1,000,001 and over, 27.9 per cent.

Particulars of the number and value of estates and duty assessed, for each of the assessment years 1961-62 to 1965-66, are given in the following table.

## COMMONWEALTH ESTATE DUTY ASSESSMENTS, 1961-62 TO 1965-66

		1961-62	1962-63	1963-64	1964-65	1965-66

Deductions . . . . .	\$'000	95,450	106,732	115,002	116,821	117,304
Statutory exemption	\$'000	74,360	74,510	81,836	92,641	109,468
Dutiable value . . . . .	\$'000	388,954	407,064	436,714	392,754	360,715
Net duty payable	\$'000	34,328	37,988	39,840	40,935	38,410
Average dutiable value	\$	23,646	24,472	24,732	31,615	32,948
Average duty per estate	\$	2,086	2,284	2,256	3,295	3,508

*Gift duty.* The *Gift Duty Act 1941-1966* and the *Gift Duty Assessment Act 1941-1966* impose a gift duty on gifts made after 29 October 1941. A gift is defined as any disposition of property which is made otherwise than by will, without adequate consideration in money or money's worth. There is a liability on both the donor and the donee to furnish a return, and both are jointly and severally liable for payment of the duty. However, if a return is furnished by the donor, the donee is relieved of this obligation.

Where the value of the gift together with the total value of gifts made by the donor during the preceding eighteen months does not exceed \$3,000, no return is necessary.

The rate of gift duty applicable to any particular gift is fixed by reference to the total value of all gifts made by the same donor within the period of eighteen months before and eighteen months after the time of making that gift. The present rates of duty are: not exceeding \$4,000, nil; \$4,001 to \$20,000, 3 per cent provided that the gift duty payable shall not exceed half the amount by which the gift exceeds \$4,000, or a proportionate amount where more than one gift is involved; \$20,001 to \$40,000, 3 per cent to 6 per cent; \$40,001 to \$240,000, 6 per cent to 26 per cent; \$240,001 to \$1,000,000, 26 per cent to 27.9 per cent; \$1,000,001 and over, 27.9 per cent.

Particulars of the number of gift duty assessments, value of gifts as assessed and duty assessed for each of the assessment years 1961-62 to 1965-66 are given in the following table.

## COMMONWEALTH GIFT DUTY ASSESSMENTS, 1961-62 TO 1965-66

		1961-62	1962-63	1963-64	1964-65	1965-66
Assessments . . . . .	no.	7,049	7,020	7,676	8,306	7,515
Value as assessed	\$'000	103,836	107,146	118,126	124,709	111,658
Duty assessed . . . . .	\$'000	5,882	6,066	6,768	6,870	5,911

*Wool tax.* The present rate of wool tax is 2 per cent of the sale value of the wool and this rate has operated since 1 July 1965.

**Wheat export charge and wheat tax.** The *Wheat Export Charge Act 1963-1966* repealed the *Wheat Export Charge Act 1958* and provided for an export charge on wheat and wheat products for the seasons 1963-64 to 1967-68 inclusive. The charge which may be levied is the excess of the export price over the cost of production or \$0.15 per bushel, whichever is the less. Under the *Wheat Industry Stabilization Act 1963-1965*, to which the *Wheat Export Charge Act* is complementary, the Commonwealth Government guarantees a return to wheat-growers of the ascertained cost of production on up to 150 million bushels of wheat harvested each season exported from Australia. Collections from the wheat export charge are paid into the Wheat Price Stabilization Fund, out of which payments will be made to the Australian Wheat Board, when required, for the purpose of building up the average export price for any season to the guaranteed price. If the fund is exhausted, additional payments will be made from the Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 (No. 20) Pool, when \$3,178,000 was collected. The *Wheat Tax Act 1957-1966* imposes a tax of three-tenths of a penny (0.25 cents) for each bushel of wheat delivered to the Wheat Board on or after 1 October 1965. (See also the chapter Rural Industry.)

**Miscellaneous export charges.** These consist of charges levied on exports of apples and pears (*Apple and Pear Export Charges Act 1938-1966*), canned fruits (*Canned Fruits Export Charges Act 1926-1966*), dried fruits (*Dried Fruits Export Charges Act 1924-1965*), and eggs (*Eggs Export Charges Act 1947-1965*).

**Stevedoring Industry Charge.** The rate of charge between 1 April 1962 and March 1967 was 33.5 cents per man-hour. The rate was increased to 48 cents per man-hour from 8 March 1967.

**Tobacco charge.** The rates of tobacco charge currently in force are as follows:

- (a) in respect of leaf sold to a manufacturer:
  - (i) one half cent per pound of leaf, payable by the grower or other persons who own the leaf immediately before sale, and
  - (ii) one cent per pound of leaf, payable by the manufacturer;
- (b) in respect of leaf grown and used by grower-manufacturers:
  - (i) where the manufacturer grows nine-tenths of the leaf used by him—one half cent per pound of leaf,
  - (ii) in other cases—one cent per pound of leaf.

(See also the chapter Rural Industry.)

**Dairy produce and butterfat levies.** The *Butter Fat Levy Act 1965-1966* which superseded the *Dairy Produce Levy Act 1958* and the *Dairy Produce Export Charge Act 1924-1962* provide for a maximum rate of \$0.60 per hundredweight of butterfat content of dairy products and for the apportionment of the proceeds between overseas marketing (40 per cent), local promotion (40 per cent), and research (20 per cent) (See also the chapter Rural Industry.)

**Canning fruit charge.** The present rate of canning fruit charge is \$0.75 per ton of fruit. This rate has operated since 1 December 1964.

**Honey levy.** The current rate of levy on honey sold for domestic consumption in Australia is four-tenths of a cent per pound.

**Livestock slaughter levy.** The *Livestock Slaughter Levy Act 1964-1966* imposed a levy on all cattle (over 200 lb dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies operated from 1 August 1964 and replaced the charge imposed on meat exports and also subsumed the cattle slaughter levy for beef research purposes imposed in 1960 (see page 909 of Year Book No. 51). The rates of levy are not to exceed 75 cents for cattle of which a maximum of 20 cents is for beef research, and 7.5 cents for sheep or lambs, of which a maximum of 3.75 cents is for sheep or lamb research.

**Dried Vine Fruits Contributory Charge.** Charges in respect of 1964 season fruits were paid into the varietal stabilisation funds during 1965-66 at the following rates: currants, \$6.13 a ton, sultanas \$17.80 a ton, and raisins \$20.00 a ton.

**Poultry industry levy.** The rates of levy for each hen kept for commercial purposes (the first twenty hens being exempt) was three pence and one farthing per fortnight from 1 July 1965 to 23 February 1966 and 2.8 cents per fortnight from 23 February 1966 to 13 July 1966.

## Commonwealth Consolidated Revenue Fund: expenditure

### Details of expenditure from Consolidated Revenue

In the following table gross expenditure from Consolidated Revenue is classified by function and economic type, the classification being consistent with that used for tables on pages 761-3. As with grants to other Commonwealth authorities, transfers to trust funds are here classified as expenditure according to the nature of the respective trust funds. Further information on the expenditure of business undertakings and the Territories, and on other particular functions is included in the chapters Transport and Communication and The Territories of Australia and in the chapters dealing with the respective activities.

(a) Includes expenses of undertakings in Northern Territory and Australian Capital Territory.  
 (b) Includes grants to Administration of Papua and New Guinea and grants under Colombo Plan, United Nations Technical Assistance Administration, etc. (c) Excludes loan management expenses included in other functions.

Minus sign (—) denotes the result of differences in timing between payments for, and deliveries of, defence equipment.

More detailed information on defence expenditure, on current and capital expenditure on goods and services, and on primary production research and sales promotion, etc. is given in the following tables.

## Defence services expenditure

Details of the expenditure on defence services shown in the following table cover expenditure from Consolidated Revenue and Loan Funds by the service and associated departments, including the cost of maintaining forces in overseas posts. In recent years there has been no expenditure on defence services from Trust Funds.

**COMMONWEALTH CONSOLIDATED REVENUE FUND**

## Current expenditure on goods and services

This table gives details of expenditure on items included under this general heading in the table on page 783, and in the main includes expenditure on administrative services and other activities (i.e. what might be termed 'running expenses') and therefore *excludes* expenditure on capital works (see table on page 786). Information on the functions of departments and the Acts administered by the Ministers of Departments may be found on pages 87-98 of Year Book No. 49.

(a) See also separate item Housing.

(b) See also under Business undertakings.

**Expenditure on primary production—research and sales promotion, export funds, etc.**

Expenditure under this item is classified in the table on page 785 to development of resources and assistance to industry as it includes the proceeds of special industry taxes and profits from marketing schemes which are paid to trust funds or other authorities for the purposes of the industries concerned. Information relating to the taxes levied is given in the table on page 779. Some details of expenditure from the trust funds are included in the table on page 788. Details of expenditure from the Consolidated Revenue Fund during the last five years are given in the following table.

### Commonwealth Loan Fund

Brief historical notes relating to the Commonwealth Loan Fund are given in earlier issues of the Year Book (see No. 37, page 640). The following tables show details for the years 1961-62 to 1965-66 of receipts by, and expenditure from, Commonwealth Loan Fund in respect of loans raised for both Commonwealth and State Governments. Information relating to the Commonwealth Government securities on issue is given in the division Government Securities on Issue, Commonwealth and States, of this chapter.

## STATE FINANCE

## Functions of State Governments

In comparing the financial results of the States allowances must be made for the various functions discharged by the respective State Governments and for local conditions in each case. Direct comparisons of the revenue, expenditure and debt of the individual States are difficult, owing to the fact that functions which in one State are assumed by the central government are in another delegated to local government or semi-governmental bodies which are vested with certain defined borrowing powers and whose financial transactions are not included with those of the central government. Care is needed, therefore, in making comparisons, and the particulars contained in this chapter should be read with those contained in the chapter Local Government.

## Accounts of State Governments

The various financial transactions of the States are in each case concerned mainly with one or other of three funds—the Consolidated Revenue Fund, the Trust Fund and the Loan Fund.

The following table shows the receipts by, and expenditure from, Commonwealth Loan Fund in respect of loans raised for the State Governments during the years 1961-62 to 1965-66.

All revenue (except certain items paid into special funds) collected by a State is paid into its *Consolidated Revenue Fund*, from which payments are made under authority of an annual Appropriation Act passed by the legislature, or by a permanent appropriation under a special Act. Figures relating to New South Wales represent the transactions of the Consolidated Revenue Fund and the business undertakings included in the annual budget papers. These undertakings are: railways, tramways and omnibuses, and Sydney Harbour Trust Section of the Maritime Services Board. Adjustments have been made to the Budget figures, however, in order to eliminate duplications caused by inter-fund payments. Particulars for all other States relate to the transactions of the Consolidated Revenue Fund.

The *Trust Fund* comprises all moneys held in trust by the Government and includes such items as superannuation funds, road funds, insurance companies' deposits, etc.

The *Loan Fund* is debited with all loan moneys raised for the State and credited with the expenditure therefrom on public works or other purposes.

#### Inter-relation of Commonwealth and State finances

A statement in some detail, covering the inter-relation of Commonwealth and State finances during the period from the inception of federation to the passing of the *Financial Agreement Act* 1928, was published in Year Book No. 22, pages 379-80. Changes in the financial relations between the Commonwealth and States since the passing of the Financial Agreement Act have been described in issues of the Year Book from year to year.

#### State Consolidated Revenue Fund expenditure

The principal heads of State expenditure from Consolidated Revenue Funds are: (a) interest, exchange and debt redemption charges in connection with debt; (b) working expenses of business undertakings; (c) education; (d) health and charitable expenditure; (e) justice; (f) police; (g) penal establishments; and (h) all other expenditure, including expenditure on public works, lands and surveys, agriculture and forestry, legislative and general administration, pensions, and miscellaneous.

The working expenses of railways and tramways are the largest item of State Government expenditure. In 1965-66 the working expenses of the railways, tramways and omnibuses were 21.3 per cent of the total expenditure from the State Consolidated Revenue Funds; education, 23.6 per cent; debt charges, 17.5 per cent; charitable, public health and hospitals, 13.6 per cent; and law, order and public safety, 5.8 per cent.

#### Total expenditure

The total expenditure from the Consolidated Revenue Funds of the several States and the expenditure per head of population during each of the years 1961-62 to 1965-66 are shown in the following table.

#### STATE CONSOLIDATED REVENUE FUND EXPENDITURE, 1961-62 TO 1965-66

## State Consolidated Revenue Fund receipts

The principal sources of State revenue are: (a) taxation; (b) the business undertakings controlled by the State Governments; (c) sale of and rental from crown lands; (d) interest on advances; (e) payments by the Commonwealth Government under the Financial Agreements, Special Grants and Financial Assistance Acts, etc.; (f) Commonwealth National Welfare Fund payments; and (g) miscellaneous sources, comprising fines, fees, etc.

Of these sources, that yielding the largest revenue to the Consolidated Revenue Funds for the States as a whole in the year 1965-66 was Commonwealth payments under financial assistance and other grants (40.4 per cent of the total revenue). Next in magnitude was the group of business undertakings (26.4 per cent), the principal contributors being the Government railways and tramways, followed by taxation receipts (18.0 per cent). More than one-quarter of the total State taxation collections are not paid into Consolidated Revenue Funds, however, but into special funds (*see* pages 796 and 798). Of the remaining sources of revenue, interest (n.e.i.) constituted 4.3 per cent, land revenue 3.0 per cent, and National Welfare Fund payments 1.3 per cent.

## Total receipts

The following table shows particulars of the total receipts and the receipts per head of population of the Consolidated Revenue Funds of the several States.

(a) See page 791. (b) Tasmanian transport services are under the separate control of semi-governmental authorities. (c) In all States certain taxation collections are not paid into Consolidated Revenue Fund. For total collections see next page. (d) Excludes Commonwealth payments paid to trust funds. (e) Includes payments under Financial Agreement, special grants, additional financial assistance, grants to universities, etc. (f) Consolidated Revenue Fund receipts only. Excludes payments to Trust Funds.

## State receipts from taxation

In the tables on taxation collections in these paragraphs the collections have been grouped according to the nature of the tax rather than the method of collection. For example, stamp duties on betting tickets and bookmakers' licences have been included under Racing instead of under Stamp duties and Licences respectively.

## Net taxation collections

The following tables show, for the year 1965-66, details of the collections by each State Government from the various types of tax in operation, irrespective of whether such moneys have been paid into the Consolidated Revenue Funds or not. For this reason the particulars hereunder differ from those shown in the tables relating to the Consolidated Revenue Funds and present a comprehensive statement of all taxation collections by the Government in each State.

**State Consolidated Revenue Fund receipts  
from business undertakings**

A considerable proportion of State gross revenue is made up of receipts from business undertakings under the control of the Governments. The most important of these are railways and tramways, harbour works, water supply and sewerage, and electricity supply. In addition, State batteries for the treatment of auriferous ores in Western Australia and various minor revenue-producing services rendered by the Governments of all States are included. For the year 1965-66 the receipts from these sources was \$553,946,000 or 26.4 per cent of the receipts from all sources.

### Other State Consolidated Revenue Fund receipts

#### State land receipts

The receipts from the sale and rental of Crown lands have, with few exceptions, been treated from the earliest times as forming part of the Consolidated Revenue Funds, and have been applied to meet ordinary expenses. The following table shows the revenue from sales and rentals of Crown lands for the year 1965-66.

STATE CONSOLIDATED REVENUE FUND LAND RECEIPTS, BY SOURCE  
1965-66  
(\$'000)

Source	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Total

<b>Total . . .</b>	<b>34,501</b>	<b>8,654</b>	<b>10,701</b>	<b>2,067</b>	<b>4,598</b>	<b>1,759</b>	<b>62,281</b>

(a) Includes mining royalties, rents, etc.

The total land receipts for all States for the years 1961-62 to 1965-66 respectively were: \$31,572,000, \$32,725,000, \$38,478,000, \$56,458,000, and \$62,281,000.

#### State receipts from Commonwealth grants

Commonwealth grants to the States represent a very large proportion of the States' receipts. In 1965-66 the total amount (excluding sundry minor items) paid to the Consolidated Revenue Funds of the States was \$846,477,000 (40.4 per cent). Details were as follows: contribution towards interest on States' debts under the Financial Agreement, \$15,170,000; special grants to the States of Western Australia and Tasmania, \$41,770,000; financial assistance, \$757,351,000; drought assistance, \$21,700,000; grants to universities, \$9,897,000, and other grants, \$589,000. In addition to these, the States receive a number of other grants which are paid to Trust Funds. The main items in this class are the contribution to the sinking fund on States' debts (\$17,761,000 in 1965-66) paid to the National Debt Sinking Fund, grants for Commonwealth Aid Roads (\$140,000,000 in 1965-66), and grants for universities (\$36,881,000 in 1965-66) paid to State Trust Funds. More detailed information concerning Commonwealth grants to the States is given on pages 766-75.

#### State receipts from Commonwealth National Welfare Fund

The States also receive payments from the Commonwealth in respect of hospital and pharmaceutical benefits, milk for school children, and reimbursement of maintenance expenditure on tuberculosis sanatoriums. These receipts are paid into Consolidated Revenue Funds or Trust Funds according to the varying accounting procedures in the States. In 1965-66 the total amount paid to State Consolidated Revenue Funds was \$26,329,000 (1.3 per cent). This amount was made up of hospital benefits, \$2,798,000; pharmaceutical benefits, \$8,384,000; milk for school children, \$2,916,000; tuberculosis—reimbursement of maintenance expenditure, \$11,484,000; other, \$748,000.

## State surplus revenue

The following table shows for each of the years 1961-62 to 1965-66 the total amount and amount per head of population of the surplus or deficit of each State.

(a) See page 791.

Minus sign (-) indicates deficit.

## State Loan Funds

The principal purpose of State public borrowing is to assist in financing the development of the resources of the country, e.g. the establishment and operation of railway systems and electricity undertakings, construction of roads and water and sewerage works, and improvements to harbours and rivers.

Statements relating to 'gross' loan expenditure are shown on page 802. Gross expenditure represents the amounts disbursed during each year. Details of 'net' loan expenditure, i.e. gross expenditure less any credits to the Loan Fund during the year on account of repayments of advances to local governing bodies, settlers, etc., the sale of assets, and transfers from other funds, may be found in the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*. Such moneys are credited to the Loan Fund in the year of repayment irrespective of when the advance was made.

## Gross loan expenditure

Particulars of gross loan expenditure on works, services, etc., are shown in the following tables.

(a) Includes exchange, discounts and flotation expenses, revenue and general cash deficits. (b) From Consolidated Revenue Fund.

Information relating to the government securities and borrowings on issue on behalf of the States is given in the division on Government Securities on Issue: Commonwealth and States (*see* page 808).

### Advances to settlers

A detailed statement regarding the terms and conditions governing advances to settlers in the several States and the Northern Territory may be found in earlier issues of the Year Book (*see* List of Special Articles, etc., preceding General Index to this issue). The summaries of loans and advances under State authorities in the following paragraphs are compiled from returns supplied by the State Government lending agencies concerned. This information was previously included in the former chapter Land Settlement and Tenure (*see* Year Book No. 52, page 86). A summary for Western Australia is not included, as practically the only governmental funds being made available are Commonwealth (*see* pages 775-6). The figures include transactions in lands acquired under closer and soldier settlement schemes, but exclude balances owing on former Crown lands sold on the conditional purchase, etc., system. Advances made by general banking institutions in the course of their ordinary business are not included. For information on such advances *see* Chapter 19, Private Finance.

The amounts outstanding do not represent the actual differences between the total advances and settlers' repayments, for considerable remissions of indebtedness have been made in all States as a result of re-appraisements of land values and the writing down of debts. In general they include both principal and interest outstanding.

In New South Wales and Victoria expenditure on the acquisition, development and improvement of land for war service land settlement is provided for by the States, and particulars thereof are included in the respective summaries. In Queensland no money is paid for the value of the land acquired, most land being occupied on lease from the Government, but advances in respect of improvements are included. In the other States this expenditure is provided for by the Commonwealth, and particulars are included on page 775.

Loans (Agricultural Occupations) under the *Re-establishment and Employment Act* 1945-1966 and certain advances for the purchase of wire-netting and for other purposes made from finance provided by the Commonwealth are included in the summaries following.

### ADVANCES TO SETTLERS, ETC.: NEW SOUTH WALES, TO 30 JUNE 1966

Advances, etc.	Advances, etc., made during 1964-65	Advances, etc., made during 1965-66	Total advances, etc., to 30 June 1966	Balances outstanding at 30 June 1966

## Western Australia

The operations prior to 1945 covered in this section related to moneys made available through, or by, the old Agricultural Bank and other Government Departments for the purpose of agricultural development. On 1 October 1945, however, the Agricultural Bank was reconstituted as the Rural and Industries Bank of Western Australia, and was given authority to operate in similar manner to the associated banks. Certain securities in the books of the old bank were taken over by the general banking division of the new bank, and the clients concerned then operated with privileges and obligations similar to those provided by other banking institutions. The majority of the remaining securities, also, were eventually transferred.

At present, very limited funds are being made available by the State Government for advances for agricultural development, the bulk of the moneys for this purpose being provided by the Commonwealth Government under the War Service Land Settlement and Commonwealth Re-establishment and Employment Acts. Particulars of this expenditure are shown on pages 775-6.

## Tasmania

Particulars of advances made for the purchase of land for closer and soldier land settlement included in this table for earlier years are now omitted, as they are not regarded as outstanding advances by the Department of Agriculture; the areas so purchased have been leased on 99-year terms with an option of purchase which the leaseholder may exercise at any time.

## ADVANCES TO SETTLERS, ETC.: TASMANIA, TO 30 JUNE 1966

## Northern Territory

During the year 1965-66 thirty-five advances totalling \$189,608 were approved and advances made totalled \$176,065. At 30 June 1966 the balance outstanding from seventy-six settlers, including interest, was \$683,701.

## COMMONWEALTH AND STATE FINANCE

## Consolidated Revenue Fund expenditure and receipts

The following table shows the aggregate expenditure and receipts of the Consolidated Revenue Funds of the Commonwealth and States for each of the years 1961-62 to 1965-66. In the table the combined Commonwealth and State totals have been adjusted to exclude major duplications, but the separate Commonwealth and State figures are as shown in other divisions of this chapter. The items excluded from the total figures are: payments made by the Commonwealth to the States and included in the State Consolidated Revenue Funds on account of financial assistance grants in 1961-62 to 1965-66, interest under the Financial Agreement, special grants, special financial assistance, grants to universities, cattle tick control, Tuberculosis Act capital expenditure, National Welfare Fund payments, and estimated payments of pay-roll tax by the States to the Commonwealth. There are other relatively minor payments for which adjustments have not been made, and the adjusted figures are therefore still slightly overstated.

## COMMONWEALTH AND STATE CONSOLIDATED REVENUE FUND EXPENDITURE AND RECEIPTS, 1961-62 TO 1965-66

Year	Expenditure			Receipts		
	Commonwealth	States	Total	Commonwealth	States	Total
	\$'000	\$'000	\$m	\$'000	\$'000	\$m

(a) Includes arrears of State income taxes.

**GOVERNMENT SECURITIES ON ISSUE: COMMONWEALTH AND STATES**

For the following reasons, Government Securities on Issue, as set out in the tables in this division, may not be aggregated without adjustment to indicate what is sometimes described as the 'public debt' or 'net public debt' of the Commonwealth and State Governments. There are forms of debt not evidenced by the issue of securities. Again, some of the securities included in the tables are held by the Governments themselves. For example, a State Government may hold temporarily, or even for long periods, securities issued by the Commonwealth Government. The Commonwealth Government itself, through such institutions as the National Debt Commission, or through the Trust Funds, holds large investments in securities issued, either directly by itself or on behalf of the States. In addition, some of the securities issued on behalf of the States and held by the Commonwealth Government represent the proceeds of overseas loans, securities for which were issued directly by the Commonwealth Government. From the point of view of the aggregate net debt of the Commonwealth and the States, it would thus involve duplication if the sum of the securities on issue were to be regarded as representing the 'net public debt'.

Under the Financial Agreement between the Commonwealth and the States in 1927 the Commonwealth Government accepted responsibility for the securities of the State Governments then on issue, and was empowered to arrange for all future borrowings on behalf of the Commonwealth and the States and to issue Commonwealth securities for all money borrowed. The Commonwealth is reimbursed by the States for interest, exchange, etc., paid on their behalf, and the securities are redeemed from the National Debt Sinking Fund to which both the Commonwealth and State Governments make contributions.

In the statistical tables relating to Government securities, details of securities on issue, annual interest liability and average rate of interest liability, except on pages 812-14, are shown in the currencies in which they are repayable or payable respectively. Australian currency equivalents for overseas loans have been calculated using International Monetary Fund par rates of exchange (and the calculated equivalent for Swiss francs) ruling at 30 June in each year shown. Rates of exchange to \$A at 30 June 1966 were as follows: £Sterling, 0.4000; United States dollars, 1.1200; Canadian dollars, 1.2108; Swiss francs, 4.8978; Netherlands guilders, 4.0544; German Deutsche marks, 4.4800.

The full text of the original Financial Agreement between the Commonwealth and the States was given in Year Book No. 31, page 21, a summary of the original Agreement as affected by the subsequent Agreements in later issues up to No. 37 (see pages 685-90), and a summary of the main provisions in further issues up to No. 50 (see pages 952-3).

## Government securities on issue: Commonwealth and States

Government securities on issue, annual interest payable and average rate of interest

In the following tables, details are given of government securities on issue on account of the Commonwealth and States, annual interest payable and average rates of interest.

Government securities on issue at each rate of interest and according to earliest and latest years of maturity

For details of securities on issue for Commonwealth and State purposes at 30 June 1966 at each rate of interest and classified according to the earliest and latest years of maturity see the annual bulletin *State, Territory and Local Government Authorities' Finance and Government Securities*.

**Short-term securities on issue**

Particulars of the short-term securities (Treasury bills, Treasury notes and seasonal securities) of the Commonwealth and States in Australia at intervals from 30 June 1962 to 30 June 1966 are shown in the following table. These securities are included in the government securities on issue as shown elsewhere. No short-term securities have been raised overseas since September 1956, when all such securities held in London were expatriated to Australia.

**GOVERNMENT SHORT-TERM SECURITIES ON ISSUE MATURING IN AUSTRALIA(a)  
COMMONWEALTH AND STATES, 30 JUNE 1962 TO 30 JUNE 1966**  
(\$A'000)

(a) Excludes overdrafts and internal Treasury bills. (b) Treasury bills.

The Treasury bill discount rate in Australia has remained at 1 per cent since 29 July 1952.

In 1962-63, daily issues of Treasury notes replaced those of seasonal securities which had, during the three previous financial years, all matured in the course of the same financial year in which they were issued. Treasury notes with a currency of thirteen weeks were issued in multiples of \$2,000 over the minimum subscription of \$10,000, and increases in value were subject to the usual income tax rebate of ten cents in the dollar. In 1965-66 the issue prices of Treasury notes were 98.95 per cent from July to February and 98.87 per cent from February to June, and yields varied accordingly from 4.254 per cent to 4.58 per cent.

**Government securities on issue on account of the States; local government and semi-governmental authority securities on issue**

In some States certain public utilities, such as tramways, water supply and sewerage, harbour services, etc., are controlled by boards or trusts, which in addition to receiving advances from the central government raise loans by borrowing on their own behalf, while in other States these services are controlled by the central government. Direct comparisons between States of the securities on issue on account of the several States should therefore be made with caution. The table following shows for 1960-61 to 1964-65 particulars of the securities on issue on account of the States, the securities on issue by local government and semi-governmental authorities, and the aggregates of these.

(a) Excludes amounts due to the central government. Includes bank overdrafts. (b) Oversea holdings have been converted to Australian currency at the rates of exchange current at 30 June of each year shown.

## Commonwealth loan raisings

Under the Financial Agreement between the Commonwealth and the States the Commonwealth is responsible for raising all loan moneys required either by the Commonwealth or by the State Governments. Details of loan transactions given in this section relate, therefore, to all loans raised for the Commonwealth and the States.

## New loans raised

*Australia.* The following table shows details of new loans raised in Australia by the Commonwealth during the three years 1963-64 to 1965-66.

(a) Includes loans raised for redemption of Treasury bills, but excludes conversion loans, loans for redemption of debt maturing in London, short-term debt and certain miscellaneous debt (see page 820).

(b) Special bonds open for continuous subscription redeemable at prices commencing at par and increasing to a premium of 3 per cent if held until maturity, 1966-72. Interest increases over period of currency.

(c) Special issue. For details see following paragraph.

The loan of \$169,000,000 raised in June 1966 was for the purpose of fulfilling an undertaking given by the Commonwealth that the States would have access to loan funds for their works programmes up to the approved Loan Council borrowing programmes. These programmes totalled \$510,000,000 in 1962-63, \$544,000,000 in 1963-64, \$580,000,000 in 1964-65, and \$605,000,000 in 1965-66. The subscription to the special loan in 1965-66 came from the Loan Consolidation and Investment Reserve Trust Account. Loan No. 155 of June 1965 was for the same purpose.

Finance for the approved Loan Council programmes from 1962-63 to 1965-66 was provided from the following sources:

	1962-63 \$'000	1963-64 \$'000	1964-65 \$'000	1965-66 \$'000
Public loans, domestic raisings, etc.	406,294	508,782	424,092	413,871
Overseas loans and special Commonwealth assistance . . . . .	103,706	35,218	155,908	191,129
<b>Total . . . . .</b>	<b>510,000</b>	<b>544,000</b>	<b>580,000</b>	<b>605,000</b>

In addition to the new loans raised as shown in the table on the previous page and the redemption and conversion loans shown on page 818 there were other miscellaneous loan operations in Australia (see page 820).

*London.* A loan of £Stg 12,000,000, 5.5 per cent interest, price of issue 98 per cent, maturing 1978, was raised in London during 1962-63 and a further loan of £Stg 20,000,000, 5.5 per cent interest, price of issue 98.5 per cent, maturing 1982, was raised in 1963-64.

*New York.* The following table gives details of the loans raised during the period 1963-64 to 1965-66.

**COMMONWEALTH NEW LOANS REPAYABLE IN UNITED STATES

(a) No account has been taken of the cost of issuing the conversion loans at a discount. Exchange calculated at \$A1 = £Stg 0.4000 (the International Monetary Fund par rate of exchange in the years shown).

*New York.* During 1946-47 four loans totalling \$US 128,000,000 were raised in New York to redeem loans which became due for redemption or which the Commonwealth had the option of redeeming. No further loans were raised in New York for this purpose until December 1954. The loan raised in New York for this purpose in March 1957 amounted to \$US 17,114,000, at 5 per cent interest, issued at par, maturing in 1972. No loans were raised for the purpose of redeeming loans which became due for redemption or which the Commonwealth had the option of redeeming during 1957-58 to 1960-61, or in 1962-63 and 1963-64. In 1961-62 a re-financing loan of \$US 30,000,000 was raised at 5.5 per cent interest, issued at 98.25 per cent, maturing in 1982.

Drawings from cash loans, for which Commonwealth notes were issued in New York between 1956 and 1964, were used to finance the purchase of aircraft and equipment by Qantas Empire Airways from November 1956, and to finance aircraft purchases by Trans-Australia Airlines from September 1958. At 30 June 1966 outstanding notes which are subject to interest rates varying between 4.25 per cent and 5.75 per cent and which are all repayable before 1 January 1975 amounted to \$US 81,914,000.

#### **International Bank for Reconstruction and Development loans**

To provide dollar funds for the purchase of certain types of capital equipment and plant which were indispensable to the furtherance of development in Australia and which could be obtained only in the United States of America or Canada, the Commonwealth Government arranged five loans from the International Bank for Reconstruction and Development between August 1950 and December 1956, amounting to \$US 308,500,000, repayable over periods of from ten to twenty-five years at rates of interest of from 4.25 to 4.75 per cent. The proceeds of the latest of these loans were finally drawn in March 1959.

The capital equipment and plant purchased from the proceeds of these loans were made available to Commonwealth and State Government departments and agencies, and private firms and individuals for use in the development of Australian resources. The goods were imported and distributed through normal channels, and payment was made through the Australian banking system.

The loan on behalf of Qantas Empire Airways of \$US 9,230,000 at 4.75 per cent maturing in 1966-87 was finally drawn at the end of July 1958, and in 1962-63, 1963-64, 1964-65, and 1965-66 respectively drawings of \$US 31,851,000, \$US 27,018,000, \$US 23,519,000 and \$US 17,057,000 were made from the loan (at 5.75 per cent maturing in 1966-87) raised for the purposes of the Snowy Mountains Hydro-electric Authority.

Drawings from International Bank loans have been made mainly in United States dollars but partly in Canadian dollars, Swiss francs and German Deutsche marks.

#### **Swiss loans**

To foster industrial development in Australia and to stimulate trade relations between the two countries, the Commonwealth Government arranged for the issue in Switzerland in November 1953, February 1955, March 1960, and March 1961 of four public loans each of 60,000,000 Swiss francs. The loans were underwritten by a Swiss banking group headed by the Swiss Bank Corporation, the *Crédit Suisse* and the Union Bank of Switzerland. Certain Swiss taxes connected with the issue and servicing of the loans were paid on an agreed basis by the Australian Government.

The first loan was for a period of fifteen years with an option on the part of the Commonwealth Government to repay the loan in full or in part after twelve years. The rate of interest was 4 per cent and the issue price 99. Bondholders have the option of requiring payment either in Australian pounds or in the foreign currency equivalent of Australian pounds.

The second loan was for a period of fifteen years with an option to redeem after ten years. The rate of interest was 3.75 per cent, issue price 99.50 per cent. Bonds and interest are payable only in Swiss francs. The third loan was for a period of fifteen years with an option to redeem after ten years. The rate of interest was 4.5 per cent, issue price 99 per cent. The fourth loan was issued at par in March 1961, at the rate of 4.5 per cent maturing in April 1976. Payments of interest and repayments of principal are to be made only in Swiss francs.

The loans were fully subscribed, and Swiss franc proceeds, after deducting borrowing expenses, were sold by the Commonwealth Government to the Reserve Bank in return for an equivalent amount of Australian currency.

#### **Canadian loans**

In October 1955 the Commonwealth Government arranged for the issue in Canada of a public loan of 15,000,000 Canadian dollars raised to assist Australia's development programme. The loan was for a period of fifteen years with an option on the part of the Australian Government to repay the loan in full or in part at any time prior to 1 November 1970. The rate of interest

was 4 per cent, payable half-yearly, and the issue price 98.50 per cent. A second loan, of 20,000,000 Canadian dollars, was raised in March 1961, on the security of the Commonwealth of Australia, 5 75 per cent twenty-year bonds being issued at the rate of 98.50 per cent. Bonds and interest are payable in Canadian dollars in each case. The loans were fully subscribed, and the net Canadian dollar proceeds were sold to the Reserve Bank for Australian currency.

#### Netherlands loan

In 1961 the Commonwealth arranged for a public flotation in the Netherlands of a loan of 40,000,000 Netherlands guilders at par, with an interest rate of 5 per cent per annum. The proceeds were used to assist the loan programmes of the Commonwealth and States. The loan is to be repaid in fifteen annual instalments from 1967 to 1981, but, at the Commonwealth's option, an earlier redemption date may be negotiated on and after 15 December 1971.

#### Summary of loan transactions

The following table contains a summary of loan transactions on behalf of the Commonwealth and State Governments during the five years 1961-62 to 1965-66.

#### COMMONWEALTH LOAN TRANSACTIONS: SUMMARY, 1961-62 TO 1965-66

	1961-62	1962-63	1963-64	1964-65	1965-66

### National Debt Sinking Fund

#### Securities on issue on behalf of the Commonwealth

Particulars relating to the creation of sinking funds are included in issues of the Year Book prior to No. 23. The old sinking funds were merged in the National Debt Sinking Fund on 11 August 1923. Particulars of receipts and expenditure of the Commonwealth Account for the years 1961–62 to 1965–66 are as follows.

## NATIONAL DEBT SINKING FUND: COMMONWEALTH ACCOUNT, 1961-62 TO 1965-66

**TAXES ON INCOME**

A description of the development of income taxes in Australia appeared in Year Book No. 35, page 926. Since July 1942 the Commonwealth, under the uniform tax arrangement, has been the only authority imposing taxes on income.

The *Income Tax Assessment Act 1936-1966*, the *Income Tax Act 1966*, the *Income Tax (Non-Resident Dividends) Act 1965*, and the *Income Tax Regulations* deal with the assessment and imposition of Income Tax. The second-mentioned Act is an annual measure, and its primary purpose is to declare the rates of tax payable for the financial year.

Both individuals and companies are liable for income tax. Private companies are subject to tax on undistributed income in addition to the primary income tax levied on all companies.

The operation of the *Income Tax Assessment Act 1936-1966* is affected by the following Acts:

- (a) *Taxation Administration Act 1953-1965*, which provides for the administration of certain Acts relating to taxation;
- (b) *Income Tax (International Agreements) Act 1954-1966* which gives the force of law to agreements between the Commonwealth and the Governments of the United Kingdom, Canada and New Zealand, and to a convention between the Government of the Commonwealth and the United States of America, for the avoidance of double taxation and the prevention of evasion of taxes on income.

**Lodgment of returns and assessment of income tax**

Individuals and non-profit companies with total income in excess of \$416 and all partnerships, trusts and companies deriving income are required to lodge returns of income by 31 July each year (31 August for business incomes). The income tax payable is assessed, and assessment notices showing the amounts payable are issued, during the year following the year of income. In respect of individuals the approximate amount payable, however, has already been collected during the income year from employees by deductions from wages and from non-employees by a provisional tax. The amount shown on the assessment notice is therefore adjusted against the amount already paid and any difference either collected or refunded. No such system of 'pay-as-you-earn' is in operation in respect of companies.

**Pay-as-you-earn system**

*Salary and wage earners.* Under this system salary and wage earners are subject to instalment deductions for payment of the tax at current rates from weekly (or fortnightly) earnings. Employers are required to make the deductions in accordance with a prescribed instalment scale.

This scale shows the amount to be deducted according to the income and number of dependants of the employees. Under the group scheme of deduction, covering most employers of more than ten persons, the amount deducted is remitted to the Taxation Department within seven days of the close of the month in which the deduction is made.

Not later than 14 July each year employers are required to supply each employee with a group certificate showing amount earned and total deductions during the year ended 30 June. This certificate, together with the employee's return of income, is forwarded to the Taxation Department. If the tax assessed on the basis of the return is less than the amount shown on the group certificate, a refund is forwarded with the assessment, if not, the employee is required to pay the balance.

Under the stamp scheme used by employers other than group employers a stamp deduction sheet in two parts is used. Each four weeks the employer purchases stamps (also in two parts) for the amount of deductions made each pay day and sticks one part on each half of the sheet. At the end of the year the employer gives the employee one half of the sheet and sends the other half to the Taxation Department. The employee's half is then used in the same way as a group certificate.

*Taxpayers with income other than salary or wages.* These taxpayers pay provisional tax in respect of income other than salary and wages. Collection of tax for the current year is made at the same time as collection and assessment for the previous year are adjusted. The notice of assessment shows an amount of provisional tax for the current year. The provisional amount is an approximation to the tax which will be payable after the return of income for the current year has been lodged. It is ascertained by assuming that the income of the current year will be the same as that for the previous year (for which a return has already been lodged), but the rates for the current year are applied to the income and not the rates for the year in which it was derived. The assessment notice shows the provisional tax paid in the previous year as a credit against the tax assessed on the basis of the return for that year. On receipt of his assessment, the taxpayer may elect to substitute his own estimate of income for the current year and pay tax on the basis of this estimate. To protect the revenue, a penalty is imposed if the taxpayer elects to pay provisional tax on an estimate of income more than twenty per cent lower than the income of the previous year and he underestimates his income by more than twenty per cent. An employee with income of \$300 or more from sources other than salaries or wages is required to pay provisional tax in respect of that income.

*Tax collected.* During the collection years 1961-62 to 1965-66 net receipts (i.e. tax collected less refunds to taxpayers) from individual taxpayers were \$1,074.7m; \$1,083.4m; \$1,272.2m; \$1,570.4m, and \$1,731.2m respectively. Of these amounts, instalments from salaries and wages in the respective years accounted for \$653.4m (60.80 per cent), \$684.4m (63.17 per cent), \$792.2m (62.28 per cent), \$990.6m (63.08 per cent), and \$1,160.4m (67.03 per cent). The remainder came from direct cash payments from individual taxpayers.

#### Assessable income

As a general principle income assessable to income tax includes all income other than exempt income derived directly or indirectly from sources in Australia. Thus a non-resident is taxed on income derived in Australia, while a resident is, in general, not taxed on income (other than dividends) derived from overseas, if the income is taxed in the country in which it is derived.

The word income is used in its ordinary sense and includes certain receipts declared by the Assessment Act to be assessable income. Receipts such as gifts (other than gratuities received by an employee from his employer in the course of his employment), legacies, profits from the sale of property not acquired for the purpose of profit making by sale), lottery wins, and most capital gains are not regarded as income and are not assessable.

Certain types of Australian income are exempt from tax in Australia, the more important being (i) pensions, child endowment and other payments under the *Social Services Act* 1947-1966 and the *Tuberculosis Act* 1948, (ii) income from gold-mining and uranium mining, (iii) twenty per cent of certain mining profits, (iv) dividends paid out of exempt mining profits, and (v) income received from a scholarship, bursary or other education allowance. No amount is included in assessable income on account of a house occupied by its owner.

For the 1965-66 and subsequent income years the pay and allowances and bounties for part-time duty, and the gratuity payable on a call out for continuous full-time service of members of each service of the Defence Force Emergency Reserves is exempt from income tax. This exemption does not apply to pay and allowances for continuous full-time service in Australia. Also the pay and allowances earned by members of the Defence Force for service outside Australia while allotted for duty in special areas (i.e. part of Borneo and adjacent waters, and South Vietnam) are exempt from income tax.

Expenses incurred in gaining or producing assessable income or necessarily incurred in carrying on a business for that purpose are allowable deductions, except to the extent that such expenses are of a capital, private, or domestic nature, or are incurred in gaining or producing exempt income. Certain subscriptions to business associations and trade union dues are also allowable deductions.

Special deductions for both resident and non-resident taxpayers include such items as trading losses incurred over the previous seven years, bad debts, depreciation, rates and taxes on land which are annually assessed, gifts to certain institutions (e.g. scientific, charitable, benevolent, etc.), and one-third of amounts paid as calls to certain mining, prospecting, oil-prospecting, or afforestation companies operating in Australia. Resident taxpayers only are allowed a deduction from income of the full amount paid as calls and as application and allotment moneys to certain companies engaged in the search for oil in Australia and the Territory of Papua and New Guinea.

Special deductions may be allowed for capital actually expended in mining operations conducted for the purpose of earning assessable income. In the case of primary producers certain developmental expenditure of a capital nature may be deducted. Deductions in addition to depreciation are allowed to manufacturers and primary producers by way of an investment allowance for expenditure on specified plant and equipment. Subject to a maximum permissible tax saving, a double deduction is effectively allowed for certain expenditure incurred in export market development.

Residents of prescribed isolated areas subject to uncongenial climatic conditions and high costs of living are entitled to a zone allowance deduction. Two zones, A and B, have been prescribed and the boundaries are as defined in the Second Schedule, *Income Tax Act 1936-1966*. The allowances are: Zone A, \$540 plus an amount equal to half the total deductions allowable to the taxpayer for the maintenance of dependants; and Zone B, \$90 plus an amount equal to one-twelfth of the total deductions allowable to the taxpayer for the maintenance of dependants. Members of the defence forces serving in certain overseas localities, other than those declared to be special areas (see previous page), for more than half the year of income are also entitled to a deduction of the same amount as residents of Zone A.

Income tax is levied on the taxable income remaining after making these deductions and the concessional deductions to which reference is made in the following paragraphs.

#### Concessional deductions

Concessional allowances to residents for dependants, medical and dental expenses, life insurance and superannuation contributions, etc. are made by way of a deduction from income. The maximum deduction allowed for the income year 1966-67 for each dependant or for a housekeeper employed by the taxpayer is shown in the following table.

Dependant, etc. (resident)	Maximum deduction(a)
	\$
Spouse . . . . .	286
Daughter-housekeeper(b) . . . . .	286
Housekeeper(c) . . . . .	286
Parent or parent-in-law . . . . .	286
One child under 16 years of age . . . . .	182
Other children under 16 years of age . . . . .	130
Invalid relative(d) . . . . .	182
Child 16 to 21 years receiving full-time education . . . . .	182

(a) If the dependant is maintained for part only of the year, a partial deduction is allowed. (b) Of a widower or widow. (c) Caring for a spouse in receipt of an invalid pension, or caring for children under 16 years of age of a widower or widow. (d) Child, step-child, brother or sister over 16 years of age.

When the dependant maintained derives separate income, the amount of the concessional deduction is reduced by the amount, if any, by which the separate net income exceeds \$130. Separate net income includes age and invalid pensions but not child endowment. Scholarships are excluded except insofar as they relate to maintenance.

For the 1966-67 income year medical expenses (less amounts recouped from hospital and medical funds) paid by a taxpayer who is a resident, in respect of himself or dependants, including children under twenty-one years of age, are allowed as a concessional deduction. Medical expenses include payments made to a legally qualified medical practitioner, nurse or chemist, or to a hospital, in respect of an illness or operation, payments for dental services, payments for therapeutic treatment and eye tests, expenditure on medical or surgical appliances, artificial limbs or

eyes, hearing aids and spectacles, the remuneration of an attendant of a person who is blind or confined to a bed or invalid chair, and payments for the maintenance of a trained dog used for the guidance of a blind person.

Other concessional deductions allowed to resident taxpayers include: (i) payments of life insurance premiums and contributions to superannuation funds and friendly societies, not exceeding an aggregate of \$800, (ii) payments to medical or hospital benefits funds, (iii) funeral expenses of a dependant not exceeding \$100, and (iv) expenditure incurred for the full-time education of children or dependants who are less than twenty-one years of age, with a maximum of \$300 for each child or dependant.

#### Effective exemption from tax

For the income years 1950–51 to 1962–63 taxpayers without dependants were exempt from income tax if their income did not exceed \$208. For 1963–64 to 1966–67 this exemption was \$416. The effect of the deductions for dependants was to exempt resident taxpayers up to the incomes shown hereunder.

#### RESIDENT TAXPAYERS: EFFECTIVE EXEMPTIONS FROM TAX

(\$)

Taxpayer with—	Income years		
	1953–54 to 1956–57	1957–58 to 1962–63	1963–64 to 1966–67
No dependants . . . .	208	208	416
Wife . . . . .	468	494	702
Wife and one child . . . .	624	676	884
Wife and two children . . .	728	806	1,014
Wife and three children . .	832	936	1,144
Wife and four children . . .	936	1,066	1,274

For the 1966–67 income year an aged person (i.e. a man who has attained the age of sixty-five years or a woman who has attained the age of sixty years and is a resident of Australia during the whole of the year of income) is exempt from income tax if his or her net income (i.e. gross income less expenses of earning that income) does not exceed \$1,070. If the net income exceeds \$1,070 but does not exceed \$1,264 the tax cannot exceed nine-twentieths of the excess of the income over \$1,070. An aged person who contributes to the maintenance of a spouse is exempt from tax if the combined net incomes of the taxpayer and the spouse do not exceed \$1,980. Where their combined incomes exceed \$1,980 the tax payable by the taxpayer (provided his net income does not exceed \$2,958) is limited to nine-twentieths of the excess of their combined net income over \$1,980.

#### Rates of income tax on individuals

The table on page 827 shows the rates of income tax for income years 1953–54 to 1966–67.

The minimum amount of income tax payable is 50c.

Where the taxable income of a person does not exceed \$428 the amount of tax payable is limited to one half of the amount by which the taxable income exceeds \$416.

For primary producers the rate of income tax for the current year is determined by the average of the taxable incomes for the five years up to and including the current year. A taxpayer may elect not to have these averaging provisions applied to his assessment, but the election, once made, is irrevocable. The application of the averaging provisions is limited to that part of the taxable income which does not exceed \$16,000. When the taxable income does exceed \$16,000, the balance is taxed at ordinary rates applicable to that part. When the taxable income is less than \$16,000, the rate of tax for averaging purposes is limited to the rate on a taxable income of \$16,000.

The taxable income, including any abnormal receipts, of actors, artists, composers, inventors, etc. is taxed at the rate appropriate to the normal taxable income plus one-third of the abnormal receipts.

Interest on Commonwealth loans issued prior to 1 January 1940 is subject to the condition that it shall not be taxed at rates higher than those for 1930-31. Interest derived from bonds, debentures, stocks or other securities issued after 1 January 1940 by the Commonwealth, together with interest on certain State semi-governmental loans issued free of State income tax, is subject to a rebate of 10 cents for each \$1 included in the taxable income.

#### Company income taxes

For taxation purposes companies are divided into two main groups—private and public. Broadly, a private company is defined as a company in which all the issued shares are held by not more than twenty persons, or which is capable of being controlled by not more than seven persons, and which is not a company in which the public is substantially interested, or is a subsidiary of a public company. All other companies are regarded as public companies. Both private and public companies pay primary tax assessed on a taxable income ascertained on the same principles as for individuals.

Dividends received are assessable income; resident companies however, receive a rebate at the average rate on the amount of dividends included in the taxable income, while this rebate is not allowed to non-resident companies.

**Rates of tax.** A private company incurs liability for additional tax on its undistributed income if it fails to make a sufficient distribution of income within a specified period after the close of the year of income. The tax is levied on the undistributed amount which, for practical purposes, is the taxable income less—(a) primary income tax payable; (b) retention allowance (i.e. the proportion of the reduced distributable income which a company may retain without incurring liability for undistributed income tax); and (c) certain dividends paid by the company.

The rates of primary tax for all companies and additional tax for private companies applicable to income years 1955-56 to 1965-66 are shown in the following table.

**RATES OF TAX: COMPANIES, 1955-56 TO 1965-66 INCOME YEARS**  
(Cents per \$)

Income year	Private company			Public company(a)	
	Up to \$10,000	On remainder of taxable income	Rate of additional tax on undistributed income	Up to \$10,000	On remainder of taxable income
1955-56 . . . . .	25	35	50	35	40
1956-57 to 1958-59 . . . . .	22½	32½	50	32½	37½
1959-60 to 1962-63 . . . . .	25	35	50	35	40
1963-64 to 1965-66 . . . . .	27½	37½	50	37½	42½

(a) Excludes co-operative, non-profit and life insurance for which the rates of tax (in cents per \$) for 1965-66 were as under:

Mutual income .. .. .	27½	37½
Other income .. .. .	37½	42½

For non-resident companies rate of tax (cents per dollar) on dividends only was: up to \$10,000 and remainder of taxable income respectively—1955-56, 30 cents and 40 cents; 1956-57 to 1958-59, 27½ cents and 37½ cents; 1959-1960 to 1962-63, 30 cents and 40 cents; 1963-64 to 1965-66, 32½ cents and 42½ cents.

For 1966-67 where the taxable income of a non-profit company does not exceed \$1,188 the amount of tax payable is limited to half the amount by which the taxable income exceeds \$416.

For the income years 1952-53 to 1965-66 the retention allowance (see page 829) was the proportion of the reduced distributable income shown in the following table.

**RETENTION ALLOWANCE: PRIVATE COMPANIES**  
**1952-53 TO 1965-66**  
(Per cent)

Reduced distributable income	1952-53 to 1957-58	1958-59 to 1961-62	1962-63 to 1965-66
First \$2,000 or part . . . . .	50	50	..
Next \$2,000 „ „ . . . . .	40	40	..
„ \$2,000 „ „ . . . . .	35	..	..
„ \$2,000 „ „ . . . . .	30	..	..
First \$10,000 „ „ . . . . .	..	..	50
Next \$10,000 „ „ . . . . .	..	..	45
Balance . . . . .	25	35	40

In addition to the foregoing proportions, 10 per cent of distributable income from property, except dividends from other private companies, is also allowed.

For the income years 1952-53 to 1965-66 the reduced distributable income was calculated by deducting from the taxable income the primary tax payable and the amount of all property income included in taxable income. The additional tax on undistributed income was imposed at a flat rate of 50 cents in the dollar on the undistributed amount.

#### Income tax assessments

1963-64 income year. The following tables show, for the 1963-64 income year, the number of taxpayers, income, and net income tax assessed for individuals and resident and non-resident companies. For further information of this nature see the annual bulletin *Commonwealth Taxation Assessments* issued by this Bureau.

### COMMONWEALTH INCOME TAX ASSESSMENTS(a): RESIDENT INDIVIDUALS BY GRADE OF INCOME AND BY STATE, ETC. OF ASSESSMENT

(Income derived in the year 1963-64)

(a) Assessments in respect of 1963-64 incomes issued to 31 December 1965. Assessments issued after that date are not included. (b) Actual income is defined briefly as 'Gross income including exempt income less expenses incurred in gaining that income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions. (d) Excludes additional tax levied on the undistributed income of private companies. (e) Net tax assessed is nil because of rebates. (f) This figure is not included in the total shown for taxable income. (g) Not included in figures shown in adjoining column.

*Income tax on residents, by grade of income.* Individual income taxes assessed on residents are distributed according to grades of actual income in the following table. The year shown in each case is the year of income of the taxpayer. Assessments issued after the normal assessing period are not included.

**COMMONWEALTH INCOME TAX ASSESSMENTS

*Income tax assessed.* The amounts of income tax covered by statistical analyses of assessments for recent years are shown in the following table. The amounts are shown under the year of income of the taxpayer. Tax is usually paid by companies in the year following the year of income. Individuals pay tax in the year of income, but there is usually an adjustment in the following year. Tax assessed after the close of the normal assessing period is not included.

*Refunds of revenue.* Income tax collections, as previously shown, are net amounts after refunds of revenue made in the course of the year. Refunds are of two types—those charged to special appropriations under authority of the Income Tax Assessment Act and those charged to special appropriations under authority of the Audit Act. Income tax instalment refunds, by far the greatest part of income tax refunds, are made when the instalments deducted during the year exceed the tax assessed on incomes for that year. Refunds made from special appropriations under section 37A of the Audit Act include refunds of moneys paid to the revenue in error, refunds of tax overpaid, refunds due to the amendment of assessments, etc. Refunds of income tax during the collection years 1961-62 to 1965-66 were: 1961-62, \$211,035,328; 1962-63 \$236,625,942; 1963-64, \$242,421,772; 1964-65, \$264,366,042; and 1965-66, \$305,830,170.

## CHAPTER 21

### LOCAL GOVERNMENT

This chapter includes, in addition to information on the operation of local government authorities, information on the operation of certain semi-governmental authorities. The latter information is not comprehensive for this type of authority, and is included partly because of the association of the functions performed with those of local government authorities, and partly for convenience in preparation. Particulars of the activities of other semi-governmental authorities, e.g. transport, electricity and gas, and banking undertakings, for which only some financial statistics are given in this chapter, are included in the chapters relevant to those subjects.

#### Coverage

##### Local government authorities

In each State of the Commonwealth there exists a system of local government whose powers and responsibilities are in general similar, and cover such matters as the construction and maintenance of roads, streets and bridges, water, sewerage and drainage systems, and health and sanitary services, the supervision of building, and the administration of regulations relating to items such as weights and measures, slaughtering, the registration of dogs, etc. In addition to these obligatory functions, there are also many which may be performed by a local government authority either with or without the consent of the ratepayers or the Governor-in-Council. These include transport facilities, electricity, gas, and other business undertakings, hospitals, charitable institutions, recreation grounds, parks, baths, libraries, museums, etc.

The system is based on the principle of a grant of specific powers by the State legislatures to the local authorities, their autonomy, however, being more or less limited by the provision for general supervision by a department of the central government or by the Governor-in-Council. Otherwise, within the scope of the Acts under which they are constituted or which they have to administer, they are responsible only to the ratepayers. While the broad pattern of local government throughout the States of Australia is similar, the range of activities, election of officers, methods of valuation and rating powers, etc. differ considerably.

The areas over which local government bodies exercise general control, numbering 900, are known in New South Wales as cities, municipalities and shires; in Victoria as cities, towns, boroughs, and shires; in Queensland as cities, towns and shires; in South Australia as cities, corporate towns and district council areas; in Western Australia as cities, towns and shires; and in Tasmania as cities and municipalities. In New South Wales some local government authorities in an area have combined to provide services such as electricity, water, sewerage and drainage—e.g. the county councils. Within shires there are also some municipal units known as urban areas. Apart from the more thinly populated parts of New South Wales and South Australia, and the Commonwealth Territories (except for the City of Darwin), practically the whole of Australia comes within local government jurisdiction.

The financial statistics in the following section are classified under the headings of Ordinary Services and Business Undertakings. The former covers the obligatory and general functions referred to above. Business Undertakings include public utilities such as water supply, sewerage, electricity, gas, transport and hydraulic power undertakings, and other miscellaneous works such as abattoirs, quarries, ice works, cinemas, etc.

##### Semi-governmental authorities

In addition to local government authorities, a large number of authorities have been set up to control specific activities, which are often identical with some of those performed by either, or both, of the other classes of public authority—central government and local government—and a complete picture of any field of activity for a State or Australia as a whole cannot be obtained without reference to each class operating in that particular field. These semi-governmental authorities differ primarily from local government authorities in that their operations are restricted to the specific activity for which they were constituted—e.g. roads and bridges, water and sewerage, electricity and irrigation, harbours, or tramways, etc.—i.e. each dispenses a specific service throughout an area as distinct from the general services of the local authority. In the sections which deal with debt, roads and bridges, water supply and sewerage, harbours, and fire brigades particulars are included of the more important of these authorities which operate within the range covered by this chapter.

**Roads, bridges, etc.**

The construction and maintenance of roads, bridges and ferries are generally part of the functions of local authorities, but in each State there exists a central road authority or a government department whose duties relate to the construction, reconstruction and maintenance of 'main' and 'developmental' roads, the distribution of funds to local bodies, and the supervision and co-ordination of road construction and policy throughout the State. Owing to difficulty in obtaining complete particulars of receipts and expenditure of the various local governing bodies in respect of roads under their control, the details of receipts and expenditure given on pages 846-53 are those of central governments only, relating either to the supervisory board or commission in the State or to direct activities of a department. However, estimates of the aggregate net expenditure of all public authorities concerned with roads and bridges in Australia are given on page 854 of that section. On pages 838-9 some information is given of the revenue and expenditure of local government authorities in respect of roads.

**Water supply and sewerage**

In the cities of Sydney, Melbourne and Perth the control of water supply and sewerage is in the hands of special boards, while in Adelaide these services are under the direct supervision of a government department. In most of the other cities and towns the municipal councils or, in some cases, water trusts are the controlling bodies, which either construct the works out of their own resources or take them over after they have been constructed by the government.

**Harbours**

The majority of the harbours in Australia are managed by boards, the members of which are either elected by persons interested, or appointed by the government. In some instances, however, they are directly controlled by the government.

**Fire brigades**

In all the States the management of fire brigades is undertaken by boards. These boards usually comprise members elected by the councils of municipalities and insurance companies within the districts placed under their jurisdiction, and one or more members appointed by the government. Occasionally volunteer or country fire brigades are represented.

**Local government authorities****New South Wales**

For purposes of local government the whole of the Eastern and Central land divisions and more than two-thirds of the sparsely populated Western division have been divided into cities, municipalities (most principal towns) and shires (mainly large rural areas, some of which include important towns). At the end of 1966 the area incorporated was 272,000 square miles, or nearly nine-tenths of the total area of the State. All local government authorities in the State are subject to the general provisions of the Local Government Act. Municipalities and shires may combine to form county councils for the establishment and conduct of services of joint benefit, e.g. electricity, water, gas, abattoirs. At 31 December 1966 there were fifty-three county councils, including the Sydney County Council.

**Victoria**

Local government is established throughout the State, the various divisions being termed cities, towns, boroughs, or shires. The only unincorporated areas are French Island (41,600 acres) in Westernport Bay, Lady Julia Percy Island (652 acres) off Port Fairy, Bass Strait Islands (966 acres), part of Gippsland Lakes (81,920 acres), and Tower Hill (1,460 acres) adjacent to the Borough of Koroit. Melbourne and Geelong were incorporated under special statutes prior to the establishment of a general system of local government, but are now subject to several provisions of the Local Government Act.

**Queensland**

The whole of the State (except certain islands along the coast, the Dawson Valley Irrigation Area and the Somerset Dam Area) is incorporated into cities, towns and shires under '*The Local Authorities Act of 1902*' and its amendments.

**South Australia**

The settled portion of South Australia is incorporated, being mostly under municipal corporations in the larger cities and towns and district councils in the agricultural areas.

**Western Australia**

Local government is established throughout the State, the divisions being cities, towns and shires.

**Tasmania**

The whole State is divided into municipal districts, Hobart and Launceston being incorporated as cities under separate Acts.

**Area, population, dwellings, and value of rateable property**

The area, population, dwellings, and value of rateable property in the incorporated areas of each State are shown for the year 1964-65 in the following table. The valuations relate to rateable property only and exclude government and other non-rateable property, whose value in the aggregate is considerable. In some cases councils rate on annual value, or unimproved capital value, or improved capital value, or partly on each of these bases of valuation. The amounts stated are the totals for the areas rated according to each basis of valuation. In this table particulars of dwellings are in accordance with the definition used in the 1961 census, and are compiled from information collected on the census schedules. For the purpose of the census a dwelling was defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term has, therefore, a very wide reference and includes, in addition to houses and flats, a great variety of dwellings ranging from a single-roomed shack to a multi-roomed hotel or institution. Unoccupied dwellings include vacant dwellings available for sale and renting, 'week-end' and holiday dwellings, and other dwellings temporarily unoccupied on the night of the Census. Dwellings being built are not included.

In the following table metropolitan areas include the whole of some shires and municipalities part only of which is regarded as metropolitan for census and other purposes. This is because the financial activity of such areas cannot be split into 'metropolitan' and 'other' sections. The areas should not be compared with census metropolitan areas.

(f) Includes City of Redcliffe and that part of Pine Rivers Shire within the Metropolitan Area of Brisbane but outside the Brisbane City Area.

**Local government finances**

The following tables show the latest available financial statistics for local government authorities. The figures relate to the year 1964-65 except for New South Wales, where they relate to the year 1964. For further detail on local government finances see *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 4, 1965-66, issued by this Bureau.

*Ordinary services.* In the returns of revenue and expenditure in the following tables the proceeds from loans and expenditure thereof have been excluded. The financial operations of business undertakings controlled by the various local government authorities are given in the next paragraph. The profits resulting from the working of these undertakings, where taken into general revenue, have been included.

**Local government and semi-governmental authorities' debt**

Statistics of local government and semi-governmental debt for 1960–61 to 1964–65 are given in the following paragraph. The information covers all local government authorities and those semi-governmental authorities responsible for the provision of the following services.

*New South Wales.* Water Supply, Sewerage and Drainage, Electricity and Gas Supply, Fire Brigades, Banking, Grain Elevators, Roads and Bridges, Marketing, and Miscellaneous. County Councils are included among these authorities.

*Victoria.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Tramways, Electricity and Gas Supply, Fire Brigades, Marketing (Buying and Selling), Industry Assistance, Grain Elevators, and Housing.

*Queensland.* Water Supply and Sewerage, Irrigation and Drainage, Harbours, Transport, Electricity Supply, Fire Brigades, University, Hospitals and Ambulances, Marketing (Buying and Selling and Agency), and Industry Assistance.

*South Australia.* Irrigation and Drainage, Tramways, Electricity Supply, Fire Brigades, Hospitals and Ambulances, Marketing (Agency), Industry Assistance, Banking, Housing, and Miscellaneous.

*Western Australia.* Water Supply and Sewerage, Harbours, Transport, Electricity Supply, Fire Brigades, Hospitals, Marketing (Agency), Housing, University of Western Australia, and Miscellaneous.

*Tasmania.* Harbours, Electricity Supply, Fire Brigades, Transport, Housing, and Water Supply.

A detailed list of the authorities included is shown in *State, Territory and Local Government Authorities' Finance and Government Securities*, Bulletin No. 4, 1965–66.

The following table provides a summary of new money loan raisings, provisions for debt redemption, debt outstanding and interest payable by local government and semi-governmental authorities for the year 1964–65. For greater detail see *State, Territory and Local Government Authorities' Finance and Government Securities*.

Annual interest payable(a) . . . . .	(c) 62,487	92,783	15,618	20,882	12,255	13,631	(c) 217,656

(a) Includes debt or interest payable in London and New York. Debt in London is payable in £ sterling which have been converted at the I.M.F. rate of £Stg1 to \$A2.50; New York debt is payable in U.S. dollars which have been converted at the I.M.F. rate of \$U.S.1.12 to \$A1. (b) Included in debt figures above. (c) Excludes amounts of annual interest payable on net overdraft—New South Wales.

In the table above and the following table debt includes all liabilities for which arrangements have been made for repayment over a period of one year or more, and net overdrafts. Interest capitalised and amounts due for the capital cost of assets or for services rendered which are to be repaid over a period of one year or more are included. Current liabilities, such as interest accrued (but not capitalised), trade creditors, amounts held in trust, and other debts which are to be repaid in less than one year are not included. Net overdraft is the gross overdraft of all funds less all bank credit balances (including fixed deposits) which do not form part of a sinking fund to repay a loan. New loans raised during the year include new loan liabilities incurred during the year, loans raised from the public to repay indebtedness to the Government, and interest capitalised. Loans raised and redeemed within the year, increases in overdrafts, and loans raised for conversion

or redemption of existing debt are excluded. Funds provided for redemption include instalments of principal repaid and amounts credited to sinking funds established for the purpose of repaying the debt on maturity. Amounts provided for redemption from loans raised for that purpose are excluded.

### Roads and bridges

#### Commonwealth Government grants

The following table shows the allocation to the States under the several Commonwealth Aid Roads Acts for road construction, maintenance, repair and other works connected with transport for each of the years 1961-62 to 1965-66. After 1 July 1959, when the *Commonwealth Aid Roads Act* 1959 came into operation, the Commonwealth made separate provision for expenditure on strategic roads and the promotion of road safety practices. See also the chapter Public Finance, and Finance bulletins.

### New South Wales

Main roads administration is organised as a separate department under the control of a Commissioner. The activities of the Department of Main Roads include works on main, developmental, secondary and tourist roads throughout the State, all roads in the unincorporated portion of the Western Division, and certain associated works, principally bridges and vehicular ferries, constructed and maintained from government funds. The Department of Main Roads co-operates with the municipal and shire councils in the work of constructing and maintaining the main roads system. Public roads may be proclaimed (*see page 463*) by the Governor as main roads on the recommendation of the Commissioner for Main Roads.

In the County of Cumberland, which for the purposes of the Main Roads Act is deemed to include the City of Blue Mountains and small sections of other councils' areas on the boundary of the County of Cumberland, the full cost of road and bridge construction is met from the funds of the Department of Main Roads. The Councils do not contribute directly to the cost of these works but are required to pay a levy of 0 2083 cents in the \$ on the unimproved capital value of rateable property within Council's area or at a uniform percentage determined annually by the Commissioner of between ten per cent and fifteen per cent of Council's total rate income, whichever is the less. In the former case the rate payable in respect of lands used principally for primary production is half the rate levied on other lands.

In country districts the Department meets the full cost of road and bridge works on State highways, the full cost of bridge construction works and three-quarters of the cost of road construction and road and bridge maintenance works on trunk roads, and three-quarters of the cost of bridge construction works and two-thirds of the cost of road construction and road and bridge maintenance works on ordinary main roads. The cost of constructing developmental roads and works is borne in full by the Department of Main Roads, but local Councils are required to maintain them in a satisfactory condition. The Department of Main Roads generally meets half the cost of works on secondary roads and on tourist roads.

*Length of roads.* The total length of proclaimed roads (*see page 463*) in New South Wales at 30 June 1966 was 25,589 miles classified as: State highways, 6,530 miles; trunk roads, 4,159 miles; ordinary main roads, 11,661 miles; secondary roads, 144 miles; developmental roads, 2889 miles; and tourist roads, 206 miles. The length of main roads (highways, trunk and ordinary main roads) maintained by the Department of Main Roads at 30 June 1966 was 6.036 miles (27 per cent) while the length maintained by Councils was 16,314 miles (73 per cent). These figures exclude secondary, developmental and tourist roads, and unclassified roads in the Western Division of the State. In the area outside the County of Cumberland (the metropolis and adjoining areas) the proportions of main roads maintained by the Department and Councils respectively were: State highways, 75 per cent, 25 per cent; and trunk and ordinary main roads, 5 per cent, 95 per cent. Unclassified roads in the Western Division of the State, totalling 1,137 miles, were maintained by the Department, while developmental roads, totalling 2,889 miles, were maintained by Councils. In the County of Cumberland the proportions of main roads maintained by the Department and Councils respectively were: State highways, 98 per cent, 2 per cent; and ordinary main roads, 57 per cent, 43 per cent. Secondary roads totalling 144 miles were maintained by Councils. Of the 206 miles of tourist roads throughout the State, 177 miles (86 per cent) were maintained by Councils and 29 miles (14 per cent) by the Department. In 1966 the total length of all roads in New South Wales was estimated at 131,043 miles. The length of roads, according to their surface, were as follows: bitumen or concrete, 28,575 miles; gravel or stone, 44,594 miles; formed only, 26,911 miles; cleared only, 30,963 miles.

*Department of Main Roads—operations.* Progress has continued with the implementation of the Department's plan for main roads development in the County of Cumberland. Most of the Department's proposals have been incorporated in the County of Cumberland Planning Scheme approved by Parliament under the Local Government (Amendment) Act, 1951. The Department's proposals for the development of the main roads system in Newcastle and the surrounding

districts have been largely incorporated in the Northumberland County District Planning Scheme, and some sections of the system have been constructed. With some modifications, the Department's proposals for the planning of the main roads in the Wollongong-Port Kembla district have been incorporated in the planning scheme prepared by the Illawarra Planning Authority. The Commissioner for Main Roads is a member of the State Planning Authority which was established in June 1964 to co-ordinate these and other planning schemes throughout the State.

During 1965-66, 66 new bridges were constructed. In addition, 72 concrete box culverts each having a waterway width of twenty feet or more were completed. Major bridge works under construction included 17 steel and/or concrete bridges each costing over \$100,000.

*Department of Main Roads—revenue and expenditure.* The funds of the Department of Main Roads are derived principally from motor vehicle taxation, charges on heavy commercial goods vehicles under the Road Maintenance (Contribution) Act, 1958, grants under Commonwealth Aid Roads Act (see page 844 and the chapter Public Finance), other grants from the State or Commonwealth Governments, and proceeds of a levy on municipal and shire councils in the County of Cumberland in accordance with the Main Roads Act, 1924-1965. The State Government also makes repayable advances for Main Roads Department works, and since 1963 the Commissioner for Main Roads has had the power (with the approval of the Governor on the recommendation of the Treasurer) to borrow moneys.

(a) Excludes repayable advances by the State Government and private loans (\$1,270,000 in 1961-62, \$1,780,000 in 1962-63, \$4,020,000 in 1963-64, \$7,500,000 in 1964-65, and \$5,005,000 in 1965-66), and transfers from Sydney Harbour Bridge Account for Expressway construction (\$3,644,000 in 1961-62, \$4,162,000 in 1962-63, \$3,078,000 in 1963-64, \$2,360,000 in 1964-65, and \$4,750,000 in 1965-66). Expenditure from these amounts is fully reflected in Expenditure. (b) Excludes debt redemption (\$106,150 in 1961-62, \$114,176 in 1962-63, \$123,992 in 1963-64, \$177,406 in 1964-65 and \$213,062 in 1965-66) and repayment of government advances (\$120,000 in 1962-63, \$120,000 in 1963-64, \$1,020,000 in 1964-65, and \$200,000 in 1965-66). (c) Mainly purchase of assets not subject to annual depreciation charge. The purchase of other assets is omitted here because the depreciation charge for them is reflected each year in 'Roads and bridges'.

Figures shown on page 846 represent the aggregate revenue and expenditure of five funds: the County of Cumberland Main Roads General and Special Purposes Funds, the Country Main Roads General and Special Purposes Funds, and the Developmental Roads Fund.

*Sydney Harbour Bridge.* The Sydney Harbour Bridge was opened for traffic on 19 March 1932. The main span is 1,650 feet and clearance for shipping 170 feet from high water level. The deck, 160 feet wide, carries a roadway of eight traffic lanes and two railway tracks, and there is also a footway on each side. The capital cost of the bridge and associated roadways to 30 June 1966 was \$27,294,000, but this amount will be reduced slightly on completion of the disposal of the remaining surplus resumed property. The portion met from repayable loan funds, almost \$24,000,000, is repayable from toll income. Income for 1965-66 amounted to \$4,301,000, including road tolls, \$3,859,000; railway passenger tolls, \$281,000; and omnibus passenger tolls, \$29,000. Expenditure amounted to \$2,504,000, including interest, exchange, flotation expenses, etc., \$859,000; sinking fund, \$323,000; maintenance, \$568,000. The accumulated surpluses of the Bridge Account have been used to finance conversion of tram tracks to roadway on, and the construction of expressway-type approaches to, the bridge. From 1957-58 to 1965-66 a total of \$2,011,000 was expended on tram track conversion and \$20,454,000 on the bridge expressway-type approaches. The account showed a deficiency of \$1,850,000 at 30 June 1966. During 1965-66, 37,897,966 road vehicles (excluding omnibuses and exempt vehicles), 25,712,317 rail travellers and 13,318,652 omnibus travellers crossed the bridge, contributing respectively 92 per cent, 7 per cent, and 1 per cent of the total toll revenue.

### Victoria

With the object of improving the main roads of the State, the Country Roads Board was established by legislation passed in 1912. The principal duties of the Board are to determine which roads should be declared in the various classifications; to supervise the construction, reconstruction and maintenance of these roads; to inquire into the State's resources in road materials and the most effective methods of road construction and maintenance; and to recommend deviations in existing roads or the construction of new roads in order to facilitate communications or to improve the conditions of traffic.

*Length of roads.* The total length of roads declared (see page 463) by the Country Roads Board in Victoria at 30 June 1966 was 14,502 miles, classified as follows: State highways, 4,465 miles; main roads, 9,094 miles; by-pass roads, 37 miles; tourist roads, 445 miles; forest roads, 461 miles. The length of the surface sealed (bitumen or concrete) included in the foregoing mileage was 12,569 miles or 87 per cent of the total. In addition to the 14,502 miles of classified roads, there were approximately 85,000 miles of unclassified roads at 30 June 1966. The total length of roads and streets in Victoria at 30 June 1966 is estimated as: bitumen or concrete, 27,007 miles; gravel or stone, 29,621 miles; formed only, 20,921 miles; cleared only, 21,934 miles; total, 99,483 miles.

*Country Roads Board—operations.* During 1965-66, 1,896 miles of declared roads under the Board's control were treated with bitumen. In addition, 1,031 miles of undeclared roads, for which the Board contributed funds, were similarly treated. The total length of bitumen treatment carried out in 1965-66 was 3,067 miles (including 140 miles for other authorities). Of the work on the roads under the Board's control in 1965-66, 754 miles related to State highways and by-pass roads. During 1965-66, 175 bridge projects of an estimated total value of \$5,060,000 were initiated. Of these, 112, estimated to cost \$1,974,000, were under municipal supervision.

*Country Roads Board—receipts and payments.* The funds of the Country Roads Board are derived principally from motor registration fees, two-thirds of additional registration fees (charged on initial registration or transfer), a proportion of drivers' licence fees, fines, payments by the Commonwealth Government under the Commonwealth Aid Roads Acts, road charges under the Commercial Goods Vehicles Act, and repayments by municipalities. As from 1 July 1964 proceeds from fines are paid to consolidated revenue, but an equivalent amount to replace them is made available to the Board from the loan fund. In addition, loans have been authorised from time to time under the Country Roads Acts for permanent works on main and developmental roads, State highways, tourists' roads, and forest roads, while the State Government has provided, free of repayment, loan moneys for restoration of flood and bush fire damage. During 1965-66 loan receipts and payments each amounted to \$1,020,000. The total loan expenditure to 30 June 1966 was \$33,983,016. This figure does not include loan expenditure from the Developmental Roads Loan Account, a fund which was created for the purpose of constructing and maintaining subsidiary or developmental roads. Loan money raised on this account was exhausted at 30 June 1937, the total expenditure at that date being \$12,851,516. In 1965-66 \$2,272,642 was allocated to the Board for expenditure on certain special road projects. This was part of the revenue raised by the increase in motor registration fees under the *Roads (Special Projects) Act 1965*.

(a) After deducting costs of collection. Prior to 1 January 1965 one half of the drivers' licence fees was credited to the funds of the Country Roads Board while the remaining half was credited to the Municipalities Assistance Fund. Since that date of the total amount collected, one quarter is paid to the Country Roads Board, one quarter is paid to the Municipalities Assistance Fund, and one half is paid to Consolidated Revenue. (b) Excludes portion of Commonwealth Aid Roads Acts advances drawn by the Public Works Department for expenditure on wharfs, jetties, etc. (c) Includes \$1,000,000 Special Grant from Commonwealth Government.

*Melbourne and Metropolitan Board of Works.* Since assuming responsibility for carrying-out planning scheme proposals relating to metropolitan highways and bridges, a tentative construction programme of urgent highway works throughout the metropolitan area of Melbourne has been adopted. Expenditure on these projects up to 30 June 1966 was \$8,912,970.

*Level crossings.* In 1954-55 the Level Crossings Fund was created under the *Country Roads and Level Crossings Funds' Act* 1954 to finance (a) the elimination of level crossings or the provision of alternative routes to enable road traffic to avoid level crossings; (b) the provision of lights, signs, and lighting at, and the improvement of approaches to, level crossings; and (c) generally, the reduction of danger at level crossings. The Act provides for the payment into the Fund of one-third of all moneys received by way of additional motor registration fees and money provided under any other Act. The amount available for expenditure in 1965-66 was \$752,249, consisting entirely of receipts from owners' certificates. Expenditure from the Fund amounted to \$464,922, of which \$338,932 was incurred by the Railways Department and \$125,990 by the Country Roads Board, leaving a balance carried forward of \$1,021,299.

## Queensland

The Department of Main Roads was constituted in February 1951, with the Commissioner of Main Roads as its permanent head. The duties of the Commissioner are to carry out surveys and investigations necessary to determine State highways, main, developmental, and secondary roads; and the responsibility for building and maintaining these declared roads is largely that of the Commissioner. Roads of purely local importance are constructed and maintained by local authorities. In many cases construction is financed by the State Government by means of Treasury loans. Other roads may be built by the Public Estate Improvement Branch of the Lands Department in order to open up areas of previously inaccessible or undeveloped country.

*Length of roads.* The total length of declared roads (see page 463) in Queensland at 30 June 1966 was 24,438 miles; comprising State highways, 6,331 miles; main roads, 5,176 miles; developmental roads, 4,377 miles; and secondary roads, 8,554 miles. By the amendments to the Main Roads Act published in the Government Gazette of 6 April 1959, mining access, farmers' and tourists roads became secondary roads, and the provisions relating to the declaration of tourist tracks were repealed. The total length of roads and streets in Queensland at 30 June 1966 was: bitumen or concrete, 15,555 miles; gravel or stone, 19,854 miles; formed only, 42,803 miles; cleared only, 43,340 miles; total, 121,552 miles.

*Department of Main Roads—operations.* During 1964–65 the Department completed 1,806 miles of roads, including new construction and stage construction. Bridges of all types to a length of 7,806 linear feet were constructed, bringing the total constructed by the Department at 30 June 1965 to 247,168 feet. In addition, at 30 June 1965, 10,532 feet were under construction.

*Department of Main Roads—receipts and payments.* The funds of the Department of Main Roads are obtained chiefly from motor vehicle registration and collections, fees, etc. under the Transport Acts, contributions under the Commonwealth Aid Roads Acts, and loans, grants and advances from the State Government. The total receipts and payments during each of the years 1960–61 to 1964–65 are shown below.

(a) Includes grants to local authorities for road purposes.

## South Australia

The Highways and Local Government Department is administered by the Commissioner of Highways, who is empowered, subject to the approval of the Minister of Roads, to undertake the construction, maintenance and protection of the principal roads of the State, allocate grants to councils for roadworks and supervise the expenditure of these grants, and assist Councils to purchase road-making plant and to defray the cost of roadworks. In addition, the Commissioner advises Councils on technical questions concerning the construction, maintenance or repair of roads. Funds of the Department are derived mainly from the Highways Fund, into which are paid the proceeds from motor vehicle registration and drivers' licences (less cost of collection), appropriations from loan funds, repayments of advances made to Councils, and contributions by the Municipal Tramways Trust, and from contributions under the Commonwealth Aid Roads Acts.

*Length of roads.* In South Australia there are only two classifications of roads. These are main roads proclaimed (*see* page 463) under the provisions of the Highways Act and all other roads, commonly designated district roads. At 30 June 1966 there were 8,193 miles of *proclaimed main roads* and approximately 66,788 miles of district roads, including roads and tracks outside local government areas, totalling 74,981 miles. *Total lengths of roads*, classified by surface, were estimated to be: bitumen or concrete, 7,940 miles; gravel or stone, 15,950 miles; formed only, 10,538 miles; unformed, 40,553 miles.

*State Highways and Local Government Department receipts and payments.* The following table shows particulars of receipts and payments, during the years 1961-62 to 1965-66, of funds controlled by the Highways and Local Government Department.

**HIGHWAYS AND LOCAL GOVERNMENT DEPARTMENT, SOUTH AUSTRALIA**

(a) Includes reimbursement works for Commonwealth Government. (b) Includes administration expenses. (c) Represents gross repayments less recoveries by charges to works on account of depreciation and materials used.

## Western Australia

Work connected with road construction and maintenance and associated projects in Western Australia is undertaken by the State Government, through the Main Roads Department, and by local government authorities throughout the State. The Department operates under the *Main Roads Act, 1930-1966*, and is administered by a Commissioner of Main Roads responsible

to the Minister for Works. The Act makes provision for public roads in the categories of main roads, controlled-access roads and developmental roads (*see* page 463). An additional category, that of important secondary roads, is used by the Department in determining its works programme. Within its own district each local government authority is responsible for the provision and upkeep of roads other than those provided by the Main Roads Department. In addition, the local authority is required by the Main Roads Act to maintain any developmental road situated in its district.

*Length of roads.* The total length of constructed roads for which financial provision was made by the Main Roads Department at 30 June 1966 was: main roads, 3,465 miles, including seven miles of controlled-access roads; important secondary roads, 7,958 miles; and developmental roads, 43,330 miles. In addition, there were 74 miles gazetted as controlled-access roadway as yet not constructed. The total length of roads and streets in Western Australia at 30 June 1966 was made up as follows: bitumen or concrete, 12,977 miles; gravel or stone, 22,917 miles; formed only, 44,860 miles; cleared only, 27,843 miles; total, 108,597 miles.

*Main Roads Department—operations.* During the year 1965–66 the activities of the Department included clearing, 2,808 miles; forming, 3,964 miles; gravelling, 2,311 miles; reconditioning, 8,862 miles; and stabilising, 87 miles. In addition, 1,797 miles were primed and sealed (including widening). New and replacement bridges constructed totalled fifty, while seven bridges were widened.

*Main Roads Department—receipts and payments.* The funds of the Main Roads Department are derived principally from allocations made under the *Commonwealth Aid Roads Act* 1964. In addition, financial assistance was given by the Commonwealth Government to the extent of \$1,500,000 in 1965–66 for the improvement of roads used for the transport of beef cattle in the Kimberley District. For the five-year period ended 30 June 1966 additional grants totalling \$6,900,000 were received from Commonwealth funds and were matched by a corresponding State contribution. In 1966–67 a further \$1,500,000 will be received from the Commonwealth. Other sources of income include overload permit fees, one-half of the net amount of traffic fees collected in the Metropolitan Traffic Area, and an allocation from drivers' licence fees. Further moneys for expenditure on road maintenance are available under the *Road Maintenance (Contribution) Act, 1965*, administered by the Commissioner of Transport. Receipts for the year ended 30 June 1966 amounted to \$391,902, and there were no disbursements to that date. (Outside the Metropolitan Traffic Area motor vehicle licence fees are collected and retained by the local authorities with the provision that from 1 January 1965 they are required to contribute to the Central Road Trust Fund the amount of their annual vehicle licence collections which exceeds that of the base year 1958–59. Such amount is reimbursed together with an addition of 75 per cent from Commonwealth matching grants.) Receipts and payments for the years 1961–62 to 1965–66 are shown in the following table.

(a) Includes \$1,896,000 transferred from an Overhaul Account previously administered by the Public Works Department. (b) Excludes \$1,400,000 advance from State Treasury. (c) Excludes \$1,000,000 advance from State Treasury. (d) Includes administration and expenditure on hire and maintenance of road construction plant, etc., and on purchase of materials. (e) Excludes \$1,400,000 refund of advance to State Treasury. (f) Excludes \$1,000,000 refund of advance from State Treasury.

**Tasmania**

Under the *Road Construction (Transfer of Functions) Act 1951*, which came into operation on 1 July 1951, the control of the construction and maintenance of roads and certain road making plant was vested in the Minister for Lands and Works. Works authorised by the Minister in respect of roads classified as State highways, tourist and developmental roads are constructed by the Department of Public Works and financed from the State Highways Trust Fund, into which are paid the proceeds from Commonwealth Aid Roads grants, motor vehicle registration fees and taxes, licence fees for drivers and public transport, and other moneys made available by Parliament. In addition, provision was made under the *Road Construction (Transfer of Functions) Act* for certain works authorised by the Transport Commission to be carried out and constructed by the Department. The expenditure by the Public Works Department during 1965-66 on the construction and maintenance of roads, tracks and bridges amounted to \$15,326,140, of which \$9,948,084 was charged to road funds, \$15,623 to revenue, \$4,423,476 to loan, and \$938,957 to other funds. Except in special cases, municipal councils bear the cost of maintaining country roads and a proportion of the cost of main and secondary roads.

*Length of roads.* The length of *classified roads* (see page 463) at 30 June 1966 was 2,246 miles, comprising State highways, 1,205 miles; main roads, 662 miles; secondary roads, 196 miles; tourist roads, 47 miles; and other roads, 136 miles. The mileages of sealed (bitumen or concrete) roads and their proportions to the respective totals were: State highways, 955 miles (79 per cent); main roads, 441 miles (67 per cent); secondary, tourist and other roads, 96 miles (25 per cent). The total length of classified sealed roads was 1,492 miles (66 per cent). The total length of local authorities roads at 30 June 1966 was 8,727 miles, comprising bitumen or concrete, 1,354 miles (16 per cent); gravel or stone, 6,109 miles (70 per cent); formed only or cleared only, 1,264 miles (14 per cent). Roads of other authorities (Hydro-Electric Commission, Forestry Commission and Closer Settlement Board) totalled 1,854 miles.

The *total length of all roads* in Tasmania at 30 June 1966 was 12,827 miles, comprising bitumen or concrete, 2,893 miles (23 per cent); gravel or stone, 8,664 miles (68 per cent); formed only or cleared only, 1,270 miles (10 per cent).

*Combined road funds—receipts and payments.* The table following shows particulars of the receipts and payments of the combined Road Funds for the years 1961-62 to 1965-66.

**Summary of roads open for general traffic**

The tables showing road lengths in the several States and Territories classified according to class of road and surface of road formerly included in this section have been transferred to Chapter 13, Transport, Communication and Travel.

**Aggregate net expenditure on roads and bridges in Australia**

In most States there are three classes of authorities concerned with roads and bridges, the State Government, the central road authority, and numerous local government bodies. The Commonwealth Government, in addition to the grants it makes to the States for road purposes, is concerned with roads in the Northern Territory and the Australian Capital Territory and roads of access to Commonwealth property in the various States. Some information relating to Commonwealth grants to the States for road purposes and particulars of the expenditure on roads and bridges by local government bodies and the central road authorities are given in preceding sections of this chapter.

Most of these authorities may expend money directly on road construction or indirectly by means of grants and payments to other authorities. These indirect payments, if included in an aggregate, would duplicate expenditure; this, together with the fact that some authorities are unable to supply separate information concerning their road expenditure, makes it difficult to compile precise statistics of aggregate expenditure on roads and bridges.

The information in the following table, which is partly estimated and which excludes the main indirect payments, provides an approximate measure of the aggregate net expenditure by the three classes of authorities mentioned above on roads and bridges in Australia during each of the years ended 30 June 1962 to 1966. Expenditure on roads by those authorities whose primary activity is directed towards functions other than roads, e.g. electricity, forestry, housing, etc. authorities, is not included. The figures cover expenditure on the construction, reconstruction and maintenance of roads and bridges, and direct administration but not debt charges. Because of the difficulties associated with the indirect payments mentioned above, it is not possible to give separate net details for each authority.

**PUBLIC AUTHORITY NET EXPENDITURE ON ROADS AND BRIDGES  
STATES AND TERRITORIES, 1961-62 TO 1965-66**

### Water supply, sewerage and drainage

The information in this section relates primarily to the metropolitan areas and provincial cities and towns. For information on water supply and irrigation in rural areas *see* the chapter Water Conservation and Irrigation.

#### New South Wales

The two largest domestic water supply and sewerage systems are controlled by statutory boards, each consisting of a president and a vice-president appointed by the State Government, and five members elected by local councils. These are (a) the Metropolitan Water, Sewerage and Drainage Board, which administers the systems in the County of Cumberland, i.e. in Sydney and in the surrounding districts, and, in addition, has jurisdiction over territory extending along the South Coast beyond Wollongong to Lake Illawarra, Shellharbour and Kiama, and (b) the Hunter District Water Board serving the Newcastle-Maitland-Cessnock areas. At Broken Hill and Cobarr similar boards include representatives of the mining companies. Other systems, apart from irrigation projects and water storage systems administered by the State Government, are controlled by county, municipal or shire councils.

*Metropolitan and Hunter District water supply (to 30 June 1966).* The storage reservoirs of the *metropolitan system* with a combined available capacity of 574,730 million gallons, drain catchment areas of 3,860 square miles (Warragamba, 3,480 square miles, Upper Nepean, 347 square miles, and Woronora, 33 square miles). The development of a water supply system on the Warragamba River was completed with the official opening of the Warragamba Dam in October 1960. This dam, constructed in concrete, has a storage capacity of 452,505 million gallons. Its safe net draught is estimated to be 274 million gallons a day. A hydro-electric power station at the dam generated 341 million kWh in 1963-64, but, because of dry conditions, only 1 million kWh in 1965-66. At 30 June 1966 there were 169 service reservoirs in use with a combined capacity of 663 million gallons. Rating for water for 1965-66 was 3.75 cents in the \$ of assessed annual value. For water in excess of the allowance provided for in the rate (calculated at 30 cents per 1,000 gallons) the charge was 28 cents per 1,000 gallons.

The water supply of the *Hunter District system* is drawn principally from three sources: the Chichester Reservoir, with a storage capacity of about 5,000 million gallons and draining a catchment of 76 square miles, the Tomago Sandbeds, which extend northerly along the coast towards Port Stephens, and the Grahamstown Water Supply Scheme which is still being developed. Another source of supply is provided by the Nelson Bay-Anna Bay Scheme. Service reservoirs and tanks distributed throughout the water supply district have a total storage capacity of 125 million gallons. Water rating for 1965-66 was 6.9792 cents in the \$ of assessed annual value. The price of water to domestic and industrial consumers is 27.5 cents per 1,000 gallons.

The following tables show, for the Metropolitan and Hunter District systems, the number of properties, the estimated population supplied, and other details.

**METROPOLITAN WATER SUPPLY(a), NEW SOUTH WALES  
SERVICES, 1961-62 TO 1965-66**

Year	Improved properties for which water mains available	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of mains	Number of meters

1965-66 . . .	94,779	320,451	32.7	11,970	346	102	1,673

(a) Newcastle, Maitland and Cessnock areas.

*Metropolitan and Hunter District sewerage and drainage system (to 30 June 1966).* The metropolitan system serving Sydney and suburbs comprises 3 major sewerage systems and 7 minor systems, consisting of 6 outfalls discharging directly into the Pacific Ocean and 4 treatment works. In addition, 7 centres outside the metropolitan area (Camden, Campbelltown, St Mary's, Port Kembla, Richmond, Warragamba township, and Wollongong) are served by local treatment works. Stormwater drainage channels under the control of the Metropolitan Water, Sewerage and Drainage Board at 30 June 1966 were 181 miles long. Sewerage rating for 1965-66 was 3.95 cents in the \$ of assessed annual value, and drainage rating 0.5208 cents in the \$.

The main sewerage system of the Hunter District serves the City of Newcastle and discharges into the Pacific Ocean at Burwood Beach. There are also local treatment works at Maitland, Cessnock and some of the outlying districts. Sewerage rates for 1965-66 were 4.7917 cents in the \$ of assessed annual value, and drainage rates (on certain areas served) 0.5208 cents in the \$.

The following table gives details of sewerage services and stormwater drains of the Metropolitan system.

**METROPOLITAN SEWERAGE AND DRAINAGE(a)**  
**NEW SOUTH WALES: SERVICES, 1962 TO 1966**

30 June—	Improved properties for which sewerage available	Estimated population served	Lengths of sewers	Length of stormwater channels

1961-62 . . .	55,408	5,466	2,791	2,101	529	5,421	+45

(a) Includes provision for renewals, long service leave, etc. (b) County of Cumberland, City of Greater Wollongong, Shellharbour and Kiama Municipalities, and parts of Colo and Wollondilly Shires. (c) Newcastle-Maitland-Cessnock areas.

*Local government country water supply and sewerage systems.* At 31 December 1964 country water supply services were conducted or under construction by 49 municipalities, 87 shires and 5 county councils, and country sewerage services by 51 municipalities and 40 shires. The capital indebtedness of these schemes was \$80,961,000 at 31 December 1964, namely \$56,447,000 for water and \$24,513,000 for sewerage. Debt of the municipalities amounted to \$39,255,000, shires to \$30,787,000, and county councils to \$10,918,000. Government advances amounting to \$851,570 are included in these figures. Aggregate income and expenditure amounted to \$14,188,000 and \$10,827,000, respectively, in 1964.

*Other country water supply and sewerage systems.* The water supply and sewerage services for Broken Hill are operated by a statutory board, the Broken Hill Water Board. Its capital indebtedness at 31 December 1965 was \$6,124,000. In 1965 income (excluding subsidies, State Government \$165,000 and mining companies \$443,000) amounted to \$678,000 and expenditure (excluding debt redemption \$189,000) amounted to \$1,086,000. The Cobar Water Board was constituted in February 1964. At 31 December 1965 its capital indebtedness was \$2,501,000. The following country water supply systems—South-West Tablelands, Junee, and Fish River—are administered by the Department of Public Works. These supply water in bulk to municipalities and shires, the Railways Department and other large consumers. Only a small quantity is sold direct to private consumers. The capital indebtedness of these systems was \$15,064,822 at 31 December 1965. The Mulwala Water Supply and Sewerage Service was constructed as an urgent war-time work for the Commonwealth, and the Bethungra Water Supply System is administered by the Department of Public Works in conjunction with the Junee supply.

### Victoria

*Melbourne and Metropolitan Board of Works.* The Board consists of a Chairman and fifty-one Commissioners elected to represent the municipalities which lie wholly or partly within the metropolitan area. The principal functions of the Board are: to control and manage the metropolitan water supply system; to provide the metropolitan area with an efficient main and general sewerage system; to deal with main drains and main drainage works; to control and manage the rivers, creeks and watercourses within the metropolitan area; and to carry out the functions of a permanent planning authority.

*Metropolitan water supply.* There are 6 storage reservoirs serving the metropolitan area—Yan Yean, 7,233 million gallons (available for consumption, 6,649 million gallons); Toorourrong, 60 million gallons; Maroondah, 6,289 million gallons (4,870 million gallons); O'Shannassy, 930 million gallons; Silvan, 8,853 million gallons (8,823 million gallons); and Upper Yarra, 45,400 million gallons (44,120 million gallons); total 68,765 million gallons (65,452 million gallons). Service reservoirs number 45, with a total capacity of 366 million gallons. The water rate levied by the Board in 1965–66 was 2.5 cents in the \$ on the net annual value of the properties served. The charge for water consumed in excess of the quantity which, at 20 cents per 1,000 gallons, would equal the assessed water rates on each property, was 20 cents per 1,000 gallons. The following table shows particulars of Melbourne metropolitan water supply services for the years 1961–62 to 1965–66.

MELBOURNE WATER SUPPLY: SERVICES, 1961–62 TO 1965–66

Year	Number of houses supplied	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of aqueducts, etc., mains and reticulation	Number of meters
					Per house	Per head of estimated population		
		'000	mill. gals.	mill. gals.	gallons	gallons	miles	
1961–62	519,216	1,869	157.6	57,521	304	84.3	5,477	422,318
1962–63	547,123	1,981	151.3	55,225	277	76.4	5,622	460,866
1963–64	572,431	2,072	162.9	59,621	285	78.6	5,882	485,856
1964–65	595,727	2,157	168.2	61,409	282	78.0	6,098	511,077
1965–66	612,844	2,218	178.7	65,218	292	80.5	6,280	536,093

*Metropolitan sewerage and drainage.* Particulars of sewerage and drainage services for 1961–62 to 1965–66 are shown on the next page. The rate levied in 1965–66 for sewerage was 4.375 cents in the \$ on the net annual value of the property served. The drainage rate was 0.625 cents in the \$.

**MELBOURNE SEWERAGE AND DRAINAGE: SERVICES**  
1961-62 TO 1965-66

Year	Number of houses for which sewers are provided	Estimated population for which sewers are provided	Average daily pumping	Total sewerage pumped for the year	Average daily pumping		Length of sewers, etc.	Length of main drains
					Per house	Per head of estimated population		
		'000	mill. gals.	mill. gals.	gallons	gallons	miles	miles
1961-62	399,890	1,361	83.0	30,308	207.6	61.0	3,665	198
1962-63	422,899	1,402	84.9	30,997	200.8	60.6	3,769	205
1963-64	443,291	1,446	89.7	32,833	202.4	62.0	3,932	211
1964-65	453,078	1,491	93.6	34,152	206.5	62.8	4,113	218
1965-66	467,705	1,599	94.6	34,545	202.4	59.2	4,311	229

The metropolitan sewerage system consists of the main system (serving an area of 100,572 acres) and 6 subsidiary systems—the Sunshine system (serving an area of 2,980 acres), the Laverton system (serving an area of 290 acres), the Kew system (serving an area of 112 acres), the South-eastern system (serving an area of 4,138 acres in Cheltenham, Parkdale, Mentone, and Mordialloc), Watsonia system (serving an area of 188 acres), and the Maribyrnong system (serving an area of 182 acres). The Metropolitan Sewerage Farm, 26,809 acres in extent and situated about twenty-four miles south-west of Melbourne beyond the township of Werribee, serves to purify and dispose of approximately ninety-eight per cent of the sewerage flow of the metropolis before its discharge into Port Philip Bay. The total capital cost (less depreciation) of the farm to 30 June 1966 was \$9,895,593. Revenue during 1965-66 amounted to \$578,681, cost of sewerage disposal to \$623,213, trading expenses to \$300,500, interest to \$543,739, and net cost of sewerage purification to \$888,771. These financial particulars are included in the sewerage items of the summary below.

*Melbourne and Metropolitan Board of Works finances.* The following table provides for the year 1965-66 a summary of the financial operations of the water supply, sewerage and drainage services conducted by the Melbourne and Metropolitan Board of Works, and of the combined services for the years 1961-62 to 1965-66.

**MELBOURNE AND METROPOLITAN BOARD OF WORKS: FINANCES**  
1961-62 TO 1965-66  
(\$'000)

Service, etc.	Capital cost of works and buildings at 30 June(a)	Revenue	Expenditure				Surplus (+) or deficit (-)
			Working expenses	Interest and exchange	Debt redemption	Total	
Water	146,540	13,701	4,472	7,680	..	12,152	+ 1,549

(a) Total loan indebtedness—1965-66, \$322,748,311. (b) Statutory and general expenditure not distributed over services.

*State Rivers and Water Supply Commission.* Water supply and conservation throughout Victoria (except for the area controlled by the Melbourne and Metropolitan Board of Works) is under the jurisdiction of the State Rivers and Water Supply Commission. The events leading to the establishment of the Commission, and its works in the spheres of irrigation, domestic and stock water supply to farms, drainage, flood protection, and river improvements, are described in the chapter Water Conservation and Irrigation. This section is therefore confined to the Commission's functions in connection with urban water supply and sewerage.

*Extra-metropolitan water supply.* At 30 June 1966 the Commission provided a reticulated water supply from its own works to 140 cities and towns having a combined population of 206,000 persons. The principal systems operated by the Commission serve part of the Mornington Peninsula—Dandenong area (about 91,000 people supplied); Bendigo, Castlemaine, etc. (57,000); and about 8,400 people in the Western District. In addition, 12,000 persons in a number of towns in the Bellarine Peninsula receive supply through a Commission-operated distributory system from headworks controlled by the Geelong Waterworks and Sewerage Trust. The Bendigo-Castlemaine supply also provides for the irrigation of 11,000 acres as well as urban requirements in the area. Outside these areas the Commission supplies mainly small towns in the north of the State in areas where it also supplies farms with water for irrigation or domestic and stock purposes. Capital expenditure by the Commission on urban water supply at 30 June 1966 was divided between the several systems as follows: Mornington Peninsula, \$22,800,000; Bendigo-Castlemaine, \$9,700,000 (includes the costs of supplying a comparatively large rural system with water for irrigation, stock and domestic purposes); Bellarine Peninsula, \$2,100,000; Otway System (Western District), \$2,500,000; other, \$2,500,000; total, \$39,600,000. This expenditure is net of redemption payments. In addition to the towns supplied by the Commission there are 639,000 people in 230 cities and towns throughout the State who get a reticulated water supply from works operated by local authorities.

All these authorities operate under the supervision of the State Rivers and Water Supply Commission, largely because the Government subsidises their capital expenditure. Most new works are financed from Government loan funds, but the Geelong Trust and in recent years some other local authorities borrowed money privately. In most cases the local authority controls both headworks and distribution system, but several towns—serving in all about 52,000 people—draw their water from the State Rivers and Water Supply Commission and are concerned only with reticulation of the water. Together, therefore, the Commission and local authorities supply 370 urban centres containing more than 845,000 people. Very few towns of any importance are now without reticulated water supply. The following table presents the financial position in respect of town water supply at 30 June 1966.

**TOWN WATER SUPPLY, VICTORIA: CAPITAL LIABILITY**  
30 JUNE 1966  
(\$'000)

	Water supply provided by—		
	Local authorities	State Rivers and Water Supply Commission	Total
Government advances . . .	57,700	40,800	98,500
Less redemption . . .	4,300	500	4,800
<b>Government advances outstanding . . .</b>	<b>53,400</b>	<b>40,300</b>	<b>93,700</b>
Borne by State . . .	12,400	14,600	27,000
Borne locally . . .	41,000	25,700	66,700

In addition, nearly \$19,000,000 has been borrowed locally, mainly by the Geelong Waterworks and Sewerage Trust.

The proportion of loan capital borne by the State is much higher in the case of Commission undertakings than for towns supplied by local authorities. This is because most Commission undertakings have been developmental in nature. Besides meeting interest on capital borne by it, the State pays the difference between three per cent and the actual rate paid on practically all the capital carried locally. The total annual subsidy on country town water supply is currently about \$2,700,000.

*Extra-metropolitan sewerage systems.* With the exception of the town of Eildon, whose sewerage system is controlled directly by the State Rivers and Water Supply Commission, the construction and management of sewerage works in Victoria's country cities and towns are the responsibility of local authorities supervised by the Commission. Except for the Geelong Waterworks and Sewerage Trust and the Latrobe Valley Water and Sewerage Board which have

special Acts dealing with their activities, all sewerage authorities operate under the Sewerage Districts Act. At 30 June 1966 there were 59 cities and towns with sewerage systems in operation. These contained about 523,000 persons, nearly half the total number of residents outside the metropolitan area.

Expenditure on sewerage in Victorian country towns at 30 June 1966 was approximately \$65,000,000, of which some \$51,000,000 had been advanced by private lenders. The annual State subsidy on country sewerage in Victoria is currently about \$1,350,000, provided mainly in the form of subsidies on interest rates paid along the same lines as for town water supply. Comparatively little capital is borne directly by the State.

*Geelong Waterworks and Sewerage Trust.* The Geelong Waterworks and Sewerage Trust was constituted in 1908 and reconstituted under the *Geelong Waterworks and Sewerage Act* 1909. It was further reconstituted in September 1950 to include a government nominee (chairman), and provision was made for a commissioner to be elected by the ratepayers of the Shire of Corio, making a total of seven commissioners. The amount of loan money which may be raised is limited to \$24,000,000 for water supply undertakings and \$10,000,000 for sewerage undertakings. The population supplied is estimated by the Trust at 109,482 persons. This and other general information relates to 30 June 1966.

The *Geelong water supply scheme* comprises two systems for gathering and storing water, the water in both systems being brought over fifty miles to Geelong. There are 7 storage reservoirs and 11 service basins whose total storage capacity is 13,292 million gallons. The length of water mains and reticulation is 558.9 miles. The total expenditure on water supply to 30 June 1966 was \$16,131,881. General fund expenditure for 1965-66 comprised \$447,720 for working expenses and \$1,029,734 for interest, redemption and reserves, while revenue amounted to \$1,478,014. The sinking fund appropriations at June 1966 amounted to \$947,438. The replacement and contingencies reserve amounted to \$1,036,057. There is a water rate of 5.83 cents in the \$ (with minima of \$1 for vacant land and \$2 for tenements) on the net annual value of rateable properties.

The *Geelong sewerage scheme* consists of a main outfall sewer to the ocean and 314.6 miles of main and reticulation sewers. The sewerage area is 11,851 acres, and the number of buildings connected within the sewered areas is 26,843. The total expenditure on sewerage works to 30 June 1966 was \$7,443,704. The revenue in 1965-66 amounted to \$743,628, and the general fund expenditure comprised \$246,160 on working expenses and \$497,049 on interest, redemption and reserves. Sinking fund appropriations at 30 June 1966 were \$538,019. Replacement and contingencies reserve amounted to \$1,082,511. A general rate of 4.58 cents in the \$ is levied on the net annual value of rateable properties.

Under the *Barwon River Improvement Act* 1939 a portion of the Barwon River is vested in the Geelong Waterworks and Sewerage Trust. General maintenance and improvements of the surrounding area is financed by the levying of an improvement rate of 0.21 cents in the \$ on the net annual value of all lands within the drainage area. The revenue for 1965-66 amounted to \$38,533.

*The Ballarat Water Commissioners and the Ballarat Sewerage Authority.* The body known as the Ballarat Water Commissioners was constituted on 1 July 1880 and the Ballarat Sewerage Authority on 30 November 1920. The members of the Water Commissioners constitute the Sewerage Authority. General and financial information given herein relates to the year ended 31 December 1966.

The *Ballarat water supply district* comprises an area of about 62 square miles, containing a population of about 62,000. The total storage capacity of the 7 reservoirs is 5,435 million gallons and the catchment area is 24,182 acres. The capital cost of construction of the waterworks was \$5,988,651 to 31 December 1966. The liabilities amounted to \$3,773,199 at 31 December 1966, including loans due to the Government totalling \$3,519,244. The revenue for the year 1966 was \$430,723. Working expenses during 1966 amounted to \$245,004 and interest and other charges to \$185,415. A water rate of 3.2 cents in the \$ on the net annual valuation is levied, with a minimum charge of \$4 per annum on any rateable property; water by measure, 14 cents per 1,000 gallons.

The *Ballarat sewerage district* comprises the City of Ballarat and parts of the Shires of Ballarat, Bungaree and Grenville and the Borough of Sebastopol. There are more than 192 miles of sewers. The capital cost of sewerage construction works to 31 December 1966 was \$4,397,354. Two hundred and sixty-seven sewered areas had been declared as at 31 December 1966. Assessments in the sewerage district numbered 19,740, while those in sewered areas numbered 16,851. There were 15,403 buildings connected. The scheme is financed by debenture-issue loans from various financial institutions. The liabilities on account of loans secured for construction at 31 December 1966 amounted to \$3,813,935; redemption payments at that date totalled \$849,392. House connections financed by the Authority numbered 4,330. Revenue during 1966 amounted to \$452,048, and expenditure, which included \$264,284 for interest and redemption, was \$440,256. A sewerage rate of 4.2 cents in the \$ on the net annual valuation is levied, with a minimum charge of \$8 on any rateable property. The charge for trade wastes is 10 cents per 1,000 gallons.

*Latrobe Valley Water and Sewerage Board.* The Latrobe Valley Water and Sewerage Board was constituted on 1 July 1954. The Board consists of seven members, namely: two Government nominees (one of whom is Manager and also Board Chairman), three members elected by water supply, sewerage and river improvement authorities within the Latrobe Valley, and one representative each of the State Electricity Commission of Victoria and the Gas and Fuel Corporation of Victoria.

The Board is empowered to construct *water supply works within the Latrobe Valley*, but at present its main construction activities are confined to the central industrialised areas and the new township of Churchill. The total capital cost of construction of the waterworks was \$10,888,179 to 30 June 1966. Liabilities amounted to \$11,615,930, including loans due to the Government totalling \$11,180,928. Revenue for the year was \$748,390. Expenditure during 1965-66 amounted to \$658,344, including interest amounting to \$337,120. The Board does not strike a rate, but supplies consumers, including local water supply authorities, by measure. The quantity supplied during the year ended 30 June 1966 was 10,400 million gallons.

The *Latrobe Valley sewerage system* consists of a main outfall sewer, about 52 miles in length, to convey wastes to an area where they are disposed of on land for agricultural purposes. Wastes conveyed consist mainly of industrial wastes, such as paper wastes and gasification wastes, together with small quantities of domestic sewage. The capital cost of the sewerage construction works to 30 June 1966 was \$6,000,592. Liabilities amounted to \$6,745,824, including loans due to the Government totalling \$5,821,955. Revenue in 1965-66 was \$277,352 and expenditure totalled \$309,200, including \$116,065 interest payments. No sewerage rate is levied, but a charge is made by measure for wastes both from industries and public authorities.

*Other sewerage authorities.* At 30 June 1966, 79 other sewerage authorities had been constituted under the provisions of the Sewerage Districts Acts, and systems were in operation in 55 districts.

## Queensland

*Brisbane City Council (to 30 June 1966).* This organisation conducts the water supply and sewerage systems of the City of Brisbane, and also supplies, in bulk, the whole of the water used by the City of Ipswich and a portion of that used by the City of Redcliffe and Albert Shire Council. Redcliffe supplements its supply from that of the Pine Rivers Shire Council, while Albert also draws on its own reservoirs.

Storage facilities for *Brisbane water supply* comprise the following (available capacities are shown in parentheses): Somerset Reservoir, 200,000 million gallons (67,000 million gallons); Lake Manchester, 5,800 million gallons (5,700 million gallons); Brisbane River, Mt Crosby Weir, 540 million gallons (480 million gallons); Pure Water Reservoir, Holt's Hill, 11 million gallons (11 million gallons); Enoggera Reservoir, 1,000 million gallons (600 million gallons); Gold Creek Reservoir, 407 million gallons (400 million gallons). There are 18 service reservoirs with a capacity of approximately 43 million gallons. The Somerset reservoir is a dual purpose project with a designed total holding capacity of 200,000 million gallons, 67,000 million gallons to be for water storage and 133,000 million gallons for flood mitigation. Water rating for the year ended 30 June 1966, was 1.25 cents in the \$ on the unimproved valuation of all rateable land, with a minimum charge of \$24 for the year for each assessment. The following table is a summary of operations of the complete Brisbane City Council system (Brisbane, Ipswich, Redcliffe, and portion of Albert Shire) for the years 1961-62 to 1965-66.

BRISBANE WATER SUPPLY(a): SERVICES, 1961-62 TO 1965-66

Year	Services connected	Estimated population supplied	Average daily consumption	Total consumption for the year	Average daily consumption		Length of trunk and reticulation mains
					Per service	Per head of estimated population	
			mill. gals.	mill. gals.	gallons	gallons	miles
1961-62	178,279	649,970	45.3	16,538	254	69.7	2,284
1962-63	182,804	665,479	48.3	17,644	264	72.6	2,378
1963-64	188,032	685,223	51.2	18,696	272	74.8	2,410
1964-65	193,471	703,258	61.4	22,409	317	87.3	2,564
1965-66	197,707	722,970	67.6	24,668	342	93.5	2,666

(a) Includes Ipswich, Redcliffe and portion of Albert Shire.

The sewage treatment works of the *Brisbane sewerage scheme* is situated at Luggage Point at the entrance to the Brisbane River. Sewerage rating for the year ended 30 June 1966 was 1.1 cents in the \$ on the unimproved valuation of each portion of land, with a minimum charge of \$24 for the year. The following table is a summary of operations of the Brisbane sewerage scheme for the years 1961-62 to 1965-66.

BRISBANE SEWERAGE: SERVICES, 1961-62 TO 1965-66

Year	Premises connected	Estimated population served	Total sewage pumped for the year	Length of main, branch, reticulation, etc. sewers
			mill. gals.	miles
1961-62 .	67,407	249,406	5,933	906
1962-63 .	71,754	265,490	6,851	944
1963-64 .	75,964	281,067	7,211	1,042
1964-65 .	84,390	312,243	7,190	1,222
1965-66 .	90,940	336,478	8,821	1,341

*Brisbane City Council water supply and sewerage systems—finances.* The following table shows particulars of the finances of the water supply and sewerage undertakings of the Brisbane City Council for the years 1961-62 to 1965-66.

BRISBANE WATER SUPPLY AND SEWERAGE: FINANCES, 1961-62 TO 1965-66 (\$'000)

Service and year	Gross capital cost to 30 June	Revenue	Expenditure			Surplus (+) or deficit(—)
			Working expenses	Interest, redemption, etc. charges	Total (a)	
<b>Water supply—</b>

1965-66 . .	55,858	4,829	882	1,829	4,172	+ 657

(a) Total, including other expenditure.

*Country towns.* In addition to the City of Brisbane, there were at 30 June 1965, 203 cities and towns in Queensland provided with water supply systems controlled by municipal and shire councils. At 30 June 1965 there were 45 cities or towns in addition to Brisbane with sewerage systems. The receipts (other than loan and loan subsidy) of water undertakings controlled by the cities and towns referred to above amounted to \$6,819,052 in 1964-65. Expenditure amounted to \$7,017,580, including \$2,984,999 for debt charges. In addition, expenditure from loans and loan subsidy amounted to \$5,719,906. Finances of sewerage undertakings are incorporated in council general funds and are not available separately.

#### South Australia

The water supply and sewerage systems in this State were constructed mainly, and are maintained, by the Engineering and Water Supply Department, under the control of the Minister of Works. Works controlled by the Department are the Adelaide, Barossa, Beetaloo, Bundaleer, Moorook, Tod River, Warren, Yorke Peninsula, and other country water districts systems, the Morgan-Whyalla water supply system, the metropolitan and country sewerage systems, the

Metropolitan Flood Waters Scheme, and works on the River Murray constructed under the River Murray Waters Agreement. Several water supply schemes on the Murray River are operated by the Department of Lands in conjunction with its irrigation works, and supplies to Woomera and Leigh Creek coalfield are controlled by the operating authorities. The following tables show particulars of metropolitan and country waterworks combined.

**WATERWORKS, SOUTH AUSTRALIA: SERVICES, 1961-62 TO 1965-66**

Year	Assessments(a)		Area of districts supplied (a)	Capacity of reservoirs, tanks, etc.	Length of mains	Number of meters
	Number	Annual value				
		\$'000	'000 acres	mill. gals.	miles	
1961-62 . . .	338,636	85,404	13,154	45,106	9,634	247,972
1962-63 . . .	357,342	92,737	13,287	45,062	9,996	262,571
1963-64 . . .	365,579	104,159	13,373	45,173	10,469	278,183
1964-65 . . .	376,425	109,651	13,524	45,179	10,748	292,212
1965-66 . . .	390,045	127,599	13,849	45,189	11,091	303,288

(a) Excludes Morgan-Whyalla Water Supply—water sold by measure.

**WATERWORKS, SOUTH AUSTRALIA: FINANCES, 1961-62 TO 1965-66**  
(£'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Deficit
			Working expenses (b)	Interest	Total	
1961-62 . . .	146,231	9,065	8,390	5,388	13,778	4,713
1962-63 . . .	161,817	9,903	7,975	6,395	14,370	4,467

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide waterworks.* At 30 June 1966 the Adelaide waterworks supplied a district of 216,926 acres. The capacity of reservoirs and storage tanks was 24,230 million gallons and there were 3,108 miles of mains. Water is also drawn from the 11,300 million gallon reservoir at South Para in the Barossa Water District. The Mannum-Adelaide pipeline conveys water from the River Murray to Adelaide at a rate of up to 66 million gallons a day. Water is delivered to a terminal storage near Adelaide and hence to the metropolitan distribution system or alternatively it can be delivered into metropolitan reservoirs on the River Torrens or to reservoirs on the River Onkaparinga by further pumping. The pipeline supplements the Warren system and other country areas.

**ADELAIDE WATERWORKS: FINANCES, 1961-62 TO 1965-66**  
(£'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus (+) or deficit (-)
			Working expenses (b)	Interest	Total

(a) After deduction of depreciation. (b) Includes debt redemption.

*Adelaide metropolitan sewerage system.* The Adelaide metropolitan sewerage system, comprising the Adelaide, Glenelg, Port Adelaide, Christies Beach, and Salisbury-Elizabeth areas of 179 square miles in all, includes treatment works at Glenelg, Port Adelaide, Bolivar, and Christies Beach. Financial and other particulars for 1961-62 to 1965-66 are shown hereunder.

**ADELAIDE METROPOLITAN SEWERAGE: SUMMARY**  
1961-62 TO 1965-66

Year	Length of sewers	Number of connections	Invested capital at 30 June (a)	Revenue	Expenditure			Surplus
					Working expenses (b)	Interest	Total	
	miles		\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1961-62 . . .	1,659	179,918	29,090	4,422	1,827	1,049	2,876	1,546
1962-63 . . .	1,714	186,143	33,510	4,689	2,002	1,151	3,153	1,536
1963-64 . . .	1,774	194,889	38,996	5,239	2,201	1,265	3,466	1,774

1965-66 . . .	1,952	213,375	56,235	6,386	2,614	1,561	4,175	2,211

(a) After deduction of depreciation.

(b) Includes debt redemption.

*Country sewerage schemes.* Sewerage schemes are operating at Port Lincoln, Naracoorte, Mount Gambier, Lobethal, Gumeracha, Nangwarry, Mount Burr, Myponga, and Angaston. At Port Lincoln and Mount Gambier the sewers discharge to ocean outfalls, and treatment works are used on the other systems. There are 152 miles of sewers and 5,046 connections in the country systems. A sewerage scheme for Whyalla is under construction.

*Country water supply.* Water districts systems at 30 June 1966 comprised an area of 13,632,249 acres. Supply came from reservoirs having a total capacity of 20,959 million gallons, from the River Murray, and from underground sources. Apart from local supplies, water from the River Murray comes from branches of the Mannum-Adelaide main and from the Morgan-Whyalla main. The principal areas of underground supplies are in the south-east of the State, where water from the Murray Basin can be had at moderate depths or from lakes, and from sand beds on Eyre Peninsula. In the year 1965-66 supplies made to Mount Gambier, Naracoorte and other towns amounted to 1,145 million gallons, and the Uley-Wanilla, Lincoln and Poldas Basins contributed 658 million gallons to the Tod River Water District.

**COUNTRY WATERWORKS, SOUTH AUSTRALIA: FINANCES**  
1961-62 TO 1965-66  
(\$'000)

Year	Invested capital at 30 June (a)	Revenue	Expenditure			Deficit
			Working expenses (b)	Interest	Total	
1961-62 . . .	68,976	2,763	3,636	2,651	6,286	3,523

1965-66 . . .	103,772	3,872	4,553	4,128	8,681	4,809

(a) After deduction of depreciation.

(b) Includes debt redemption.

*Morgan-Whyalla water supply scheme.* This scheme, which has 223 miles of main, was officially opened on 31 March 1944, the capital invested to 30 June 1966 being \$28,594,600. Particulars of the scheme, where applicable, are included in the tables of the combined waterworks, page 863.

Apart from supplying Whyalla, the main has been used to allow expansion of reservoir supplies in the northern agricultural area of the State, and to meet new demands caused by industrial growth at Whyalla, duplication of the main is under way. During 1965-66 water used from the scheme amounted to 4,486 million gallons.

### Western Australia

The principal water supply systems of Western Australia are under the control of two State authorities, the Metropolitan Water Supply, Sewerage, and Drainage Board and the Department of Public Works and Water Supply. The Metropolitan Water Supply, Sewerage, and Drainage Board is constituted under the provisions of the *Metropolitan Water Supply, Sewerage, and Drainage Act, 1909-1966* and consists of seven members appointed by the Governor. The area which constitutes the territory administered by the Board encompasses approximately 1,270 square miles and extends from Perth southward to Rockingham and Serpentine, northward to Sorrento, and eastward to Greenmount and Kalamunda. The Department of Public Works and Water Supply controls the Goldfields and Agricultural Water Supply and the Great Southern Towns Water Supply as well as ninety-one local water supplies (*see also* the chapter Water Conservation and Irrigation). Five independent town schemes are controlled by local Water Boards in country areas, and individual water supplies serve railways, timber mill towns, isolated mines, pastoral properties, stock routes, and agricultural areas, mainly from dams, tanks, wells, and bores.

*Metropolitan water supply, sewerage and drainage.* The sources of the metropolitan water supply are Serpentine Reservoir and Serpentine Pipehead Reservoir, Canning Reservoir, Wungong Brook Diversion Weir, Churchman Brook Reservoir, and Victoria Reservoir. The largest of these sources are the Serpentine Reservoir and the Canning Reservoir. Serpentine Reservoir is constructed of rolled earth fill, and the embankment rises 171 feet above the stream bed, the length at the crest being 1,390 feet. Its capacity is 39,000 million gallons, and the area of the catchment is 245 square miles. Canning Reservoir, with an estimated catchment area of 302 square miles, has a storage capacity of 20,550 million gallons retained by a concrete wall 218 feet high and 1,534 feet long at the crest. Water from storages on the Darling Range is conveyed to service reservoirs to serve the City of Perth and the metropolitan area. A limited quantity of water is drawn from Mundaring Weir to serve the Kalamunda area and sections of Greenmount, and to meet the peak demands of summer consumption supplies are supplemented from artesian bores, which can provide a daily maximum of 15 million gallons. The amount of bore water used is rarely more than 10 per cent of the metropolitan consumption and is usually considerably less.

The following table shows particulars of the *metropolitan water supply services* for 1961-62 to 1965-66.

**METROPOLITAN WATER SUPPLY, WESTERN AUSTRALIA  
SERVICES, 1961-62 TO 1965-66**

Year	Number of services (a)	Average daily consumption	Total consumption for year	Average daily consumption per service (b)	Length of mains	Number of meters
		mill. gals	mill. gals	gallons	miles	
1961-62 . . .	137,960	50.6	18,492	373	2,179	116,610
1962-63 . . .	142,246	47.1	17,214	336	2,278	123,364
1963-64 . . .	149,033	53.2	19,454	362	2,411	130,480
1964-65 . . .	154,051	55.7	20,339	367	2,526	135,471
1965-66 . . .	158,675	59.5	21,707	375	2,654	139,435

(a) Figures relate to 30 June. (b) Calculated from averages for the year.

Water rating for 1965-66 was 5 cents in the \$ on annual valuation on land used for residential purposes and 7.5 cents in the \$ on annual valuation on land not so used.

Some particulars of the *metropolitan sewerage and main drainage services* for 1961-62 to 1965-66 are shown in the following table.

**METROPOLITAN SEWERAGE AND MAIN DRAINAGE  
WESTERN AUSTRALIA: SERVICES  
1961-62 TO 1965-66**

Year	Services	Length of sewers	Length of main drains
		miles	miles
1961-62 . . .	67,378	736	77
1962-63 . . .	68,223	751	81
1963-64 . . .	68,958	769	94
1964-65 . . .	69,553	777	100
1965-66 . . .	70,283	816	102

Sewerage rating for 1965-66 was 8.75 cents in the \$ on annual valuation, while metropolitan main drainage rating was 1.66 cents in the \$.

*Metropolitan Water Supply, Sewerage and Drainage Board—finances.* The following table shows particulars of the finances of the Western Australian Metropolitan Water Supply, Sewerage and Drainage Board.

**METROPOLITAN WATER SUPPLY, SEWERAGE AND MAIN DRAINAGE

*Country water supplies.* Information concerning country water supplies is included in the chapter Water Conservation and Irrigation.

**Tasmania**

*Waterworks.* At the end of 1965-66 there were 96 municipally operated waterworks in Tasmania. The capacity of the reservoirs was approximately 2,500 million gallons, the estimated population served was 306,000, and the number of properties served was approximately 98,000.

The North Esk Regional Water Supply Scheme is operated by the Rivers and Water Supply Commission as a State concern, supplying bulk water to the municipalities of St Leonards, George Town, Lilydale, and portion of Westbury. This scheme also supplies water to industries situated near the Tamar River. Also vested in the Commission is the West Tamar Water Supply Scheme which serves the Municipality of Beaconsfield, and is operated by the Beaconsfield Council as the agent of the Commission. The overall control of water supply in the greater Hobart area, comprising the municipalities of Hobart, Clarence, Glenorchy, and Kingborough, is vested in the Metropolitan Water Board, but the municipalities retain primary responsibility for reticulation. The Board has constructed a large bulk supply at Bryn Estyn, near New Norfolk, which supplies bulk water from the Derwent River to the metropolitan area and has a pipeline capacity of 20 million gallons a day. In addition, the Board also controls the Southern Regional Water Supply Scheme, which supplies water to Hobart's eastern shore. In addition to supplying the metropolitan area, the Board extended its service to supply the towns of Cambridge, Midway Point, Sorell, and Seven Mile Beach, and it is planned to take it to the towns of Rokeby, Lauderdale, Margate, Snug, and Howden in due course. The Board has at present under construction a storage at Risdon Brook with a capacity of 800 million gallons and estimated to cost \$2½ million. This work is expected to be completed during 1967-68.

*Sewerage.* At the end of 1965-66 there were 22 municipal sewerage schemes in operation in Tasmania. They served an estimated population of 204,000 and the number of tenements served was approximately 55,300.

#### Northern Territory

Information relating to water supply in the Northern Territory may be found in the chapter Water Conservation and Irrigation.

#### Australian Capital Territory

The water supply, sewerage and drainage systems in the Australian Capital Territory are under the control of the Commonwealth Department of Works. The sources of the water supply are: Cotter Dam (capacity 967 million gallons) and Bendora Dam (2,360 million gallons). Eight pumps are capable of pumping approximately 31.6 million gallons daily to 12 major reservoirs. The total population served in the Australian Capital Territory, which during 1965-66 consumed 4,804 million gallons of water, was 95,290 (at 30 June 1966). In addition, the Canberra water supply system supplied 356 million gallons of water to Queanbeyan, New South Wales. The total number of water meters at 30 June 1966 was 23,043 and the total length of water lines was 425 miles. The sewerage system for Canberra and suburbs consists of a treatment works, 345 miles of sewerage reticulation, and 6½ miles of rising mains (at 30 June 1966). There were also 361 miles of stormwater sewers.

### Harbour boards and trusts

The number and net tonnage of vessels which entered the major ports in each State during the years 1964-65 and 1965-66 are shown in Chapter 13, Transport, Communication, etc. (see page 432). Particulars of overseas and interstate cargo discharged and shipped are shown on page 433 of the same chapter.

#### New South Wales

*Maritime Services Board of New South Wales.* The Maritime Services Board of New South Wales is a corporate body of seven commissioners comprising three full-time members and four part-time members representing shipping and other maritime interests. The Board was constituted on 1 February 1936, under the Maritime Services Act, 1935, to co-ordinate the port and navigation services of the State, which had previously been administered by the Sydney Harbour Trust and by the State Department of Navigation. The Board exercises general control over intra-state shipping, including the survey and certification of vessels, the licensing of harbour craft, and the examination and issue of certificates to officers. It is responsible for the provision of pilotage services, lights, beacons, buoys, and other port facilities, imposes and collects rates and charges on goods and vessels, and is vested with the general control and management of the navigable waters and ports within the State. At the ports of Sydney, Newcastle and Botany Bay the Board is also responsible for the provision of adequate wharfage and channels and carries out all construction, maintenance and dredging work. All revenue earned by the Board at the ports of Sydney, Newcastle and Botany Bay, with the exception of that earned from pilotage and navigational services, is credited to the Maritime Services Board Fund, and all revenue expenditure incurred at the three ports is drawn from that Fund. The following table shows particulars of the finances of the Board in respect of the ports of Sydney, Newcastle and Botany Bay.

**MARITIME SERVICES BOARD FUND: FINANCES OF THE PORTS OF SYDNEY,  
NEWCASTLE AND BOTANY BAY, 1961-62 TO 1965-66**  
(\$'000)

Year	Revenue				Expenditure(a)			Surplus
	Wharfage and transhipment rates	Tonnage rates and berthing charges	Other charges	Total	Administration and maintenance	Interest, debt redemption, exchange, etc.	Total	
1961-62 .	9,308	1,399	2,585	13,293	7,513	5,714	13,228	65
1962-63 .	9,693	1,581	2,438	13,712	7,543	6,056	13,599	113
1963-64 .	10,838	1,755	2,933	15,526	7,864	7,567	15,431	95
1964-65 .	11,594	1,858	3,565	17,017	9,109	7,835	16,945	72
1965-66 .	10,711	1,832	3,980	16,523	9,512	6,916	16,428	95

(a) Excludes capital expenditure but includes transfers to the Renewals Fund Reserve Account (\$2,750,000 in 1961-62, \$3,091,000 in 1962-63, \$4,778,000 in 1963-64, \$5,080,000 in 1964-65, and \$3,060,000 in 1965-66).

*Port of Sydney.* The entrance to Sydney Harbour, the principal port of New South Wales, is nearly a mile wide, and the depth of its navigable channel is not less than 80 feet. Between the entrance, known as 'The Heads', and the Harbour proper, a distance of four miles, there are two separate channels, each 700 feet wide, the Western Channel not less than 42 feet deep (low water ordinary spring tide) and the Eastern Channel 42 feet deep. The foreshores, which have been reduced by reclamations, are 152 miles in length, and the total area of the port is 13,600 acres, or 21 square miles, of which about one-half has a depth of 30 feet or more at low water ordinary spring tide. The mean range of tides is 3 feet 6 inches.

The wharves are situated close to the business centre of the city, about four or five miles from the Heads. At 30 June 1966 there were 5 dolphin berths 3,350 feet long, and 88 effective commercial cargo berths with a total length of 45,565 feet, controlled by the Board. Accommodation for harbour craft amounts to 2,245 feet, while the length of other berths, including oil and private wharves, totals 23,961 feet. Depth of water at wharves is up to 36 feet. Special facilities for the storage and handling of products such as wheat, wool, coal, etc. are provided, and modern plant has been installed for replenishing ships' bunkers with oil or coal. Docking facilities are available for large vessels and the Captain Cook Graving Dock ranks among the largest graving docks in the world, being 1,139 feet by 147 feet 7½ inches with a depth of 45 feet 2 inches over the sill at high water. There are also several smaller dry docks and floating docks in the port.

*Port of Newcastle.* As from 1 May 1961 the Maritime Services Board of New South Wales became the single authority for the port of Newcastle. An Advisory Committee consisting of eight members, appointed by the Governor, assists the Board in matters associated with the operation of the port. It is primarily a coal-loading port, and the proximity to the coal fields has led to the establishment of important industries, including iron and steel works, in the district. Facilities are available for the shipment of wool, wheat and frozen meat, and a wharf is available for timber.

The area used by shipping is about 570 acres, excluding the entrance to the harbour and the inner basin, which together cover an area of 162 acres. The width of the harbour at the entrance is 1,200 feet, and the navigable channel, with a depth of 30 feet at low water, is 500 feet wide. Work is now in hand to increase the depth to 36 feet. Wharfage accommodation amounts to approximately 16,000 feet, including about 3,000 feet of privately owned wharfage. There are also two dolphin berths available for tie-up purposes. A floating dock of 15,000 tons capacity is available at the port.

*Botany Bay.* The Maritime Services Board of New South Wales is the administrative and controlling authority. The port is primarily a discharging centre for the oil refinery at Kurnell, near Sydney, and two berths are available as well as tanker mooring buoys. The entrance to the Bay is approximately one and a quarter miles wide, with a minimum depth of about 37 feet in the dredged swinging basin.

*Port Kembla.* As from 3 May 1948 the Maritime Services Board assumed the administration and navigational control of Port Kembla, which had previously been administered by the New South Wales Department of Public Works. This Department, however, continues to be the constructing authority in respect of works, dredging and maintenance. An Advisory Committee consisting of nine members, appointed by the Governor, has been formed to assist the Board in the operation of the port. It has an area of approximately 340 acres, with depths ranging from 20 to 50 feet (low water ordinary spring tide), and wharfage accommodation totalling

8,000 feet has been provided for large ocean-going vessels. No cargo sheds are available, as the nature of trade at the port does not call for the provision of sheltered storage accommodation at the berths. It is the port of the southern coalfields and for the expanding industrial area in and about Wollongong. The developmental programme for Port Kembla includes the construction of an inner harbour to provide wharfage for the steelworks in addition to modern general cargo berths; a coal loading plant capable of loading at the rate of 2,000 tons an hour is now available. Present accommodation is 1,900 feet of wharfage, with 36 feet (an water ordinary spring tide) of water alongside. Width in the entrance to the inner harbour basin is 400 feet.

*Other ports.* In addition to the ports of Sydney, Newcastle, Port Kembla, and Botany Bay, the Board controls 29 outports along the coastline of 609 miles. The shipping trade of these outports is relatively small.

*Port charges.* The port charges payable in respect of shipping and ships' cargoes in New South Wales are imposed by the Commonwealth Government in terms of the Lighthouses Act and the Navigation Act, and by the State authorities under the Navigation Act of New South Wales, the Harbour and Tonnage Rates Act, and the Sydney Harbour Trust Act. Since 1 February 1936 the State enactments have been administered by the Maritime Services Board. The gross collections by the State authorities amounted to \$22,592,000 in 1965-66. This figure includes the revenue for the ports of Sydney, Newcastle and Botany Bay (see table on page 868) and State navigation service collections, \$6,069,000 in 1965-66.

## Victoria

*Melbourne Harbor Trust.* Information regarding the origin and constitution of this Trust, which controls the port of Melbourne, appears in Official Year Book No. 12, pages 970-2. The port of Melbourne comes under the control of the Melbourne Harbor Trust Commissioners, an independent autonomous statutory organisation, with a full-time chairman and five part-time commissioners with specialised knowledge of the requirements of exporters, primary producers, shipowners, importers, and of all aspects of port labour. The area of water and land under the control of the Trust is ten and a half square miles, with sheds available for cargo in transit totalling 22,928 feet in length and covering an area of about 43 acres. Three of the largest transit sheds on the Australian coast are now in operation at Appleton Dock. The sheds are 600 feet long by 150 feet wide, each with a cargo stacking area of 81,000 square feet. The berths are used for the general cargo trade and have both rail and crane facilities and modern amenities for port workers. The total length of wharves, piers and jetties in the port is 61,550 feet, covering an area of about 59 acres with 56,940 feet of effective berthing space.

During 1965 major reconstruction and modernisation of several cargo berths in the Port including 1-4 Victoria Dock and 19 South Wharf was concluded. Construction of a new shipping control centre seventy-four feet above ground level, with radar and visual observation of the entire port area, was continued. The specifications and design for the construction of a 250-ton dual purpose floating crane were finalised and tenders called for the building of the crane. A modernisation programme costing \$720,000 was undertaken on the main overseas passenger terminal at Station Pier. The depth of water (low water ordinary spring tide) from the main channels to the principal wharves is 31 to 39 feet. The following table shows particulars of the financial operations of the Trust.

### MELBOURNE HARBOR TRUST: FINANCES, 1962 TO 1966

(\$'000)

Year	Gross loan indebtedness at 31 December	Revenue		Expenditure				Surplus (+) or deficit (-)
		Wharfage and tonnage rates	Total	Operation, administration and maintenance	Interest, debt redemption, exchange, etc.	General reserve, depreciation, renewals and insurance account	Total	
1962 . .	29,750	4,883	7,958	5,170	1,793	969	7,932	+ 26
1963 . .	29,835	5,459	8,969	5,391	1,918	1,546	8,855	+114
1964 . .	29,773	7,145	11,312	6,687	2,632	1,812	11,131	+181
1965 . .	30,473	7,058	11,434	6,451	2,393	2,382	11,226	+208
1966 . .	32,229	6,393	10,695	6,235	1,712	2,583	10,530	+165

**Geelong Harbor Trust.** The Geelong Harbor Trust, constituted in 1905, is under the control of three Commissioners appointed from time to time by the Governor-in-Council. At the end of 1966 there were 18 effective berths in the port, plus 2 berths at the Commonwealth Explosives Pier, Point Wilson, owned and operated by the Commonwealth. Point Henry Pier, a 4,000 feet alumina discharging structure, was officially opened on 13 April 1966, and Corio Quay South No. 1, a new general cargo and meat loading berth, came into operation in February 1967. The construction of a modern dry bulk berth with an initial discharge rate of 1,000 tons an hour will commence in 1967, but the 4 seven and a half ton cranes to operate on this berth have in the meantime commenced to operate on the adjacent Kings Wharf. Eight berths have a depth of 36 feet at low water, while all other berths (except Commonwealth Explosives Pier, Point Wilson, and Point Henry Pier, 30 feet) have a depth of 32 feet at low water. Revenue for the year 1965 was \$3,224,548 and expenditure from revenue totalled \$1,978,528. At 31 December 1965 the value of the Trust's fixed assets was \$22,936,336 and loans outstanding amounted to \$7,683,070.

**Portland Harbor Trust.** Construction of an all-weather deep-sea port of three berths with a low water depth of 36 feet was completed to operational standards in 1960. A new oil tanker berth was brought into commission during 1963, from which petroleum products are pumped to bulk terminals at North Portland, and the completion of a bulk grain terminal now provides in-transit storage for one and a quarter million bushels of grain awaiting overseas shipment. Cargo vessels loading or discharging cargo during 1965-66 financial year showed an increase of 10 vessels over the previous year's figure. The current construction programme of a new bulk shipping berth will comprise the first stage of development of No. 2 Quay. Timed for completion in mid-1968, No. 6 Berth has been designed primarily for the discharge of phosphate rock and other chemicals. Operating revenue for the year ended 30 June 1966 was \$322,776 and revenue expenditure was \$267,116. The value of the Trust's fixed assets, less depreciation, was \$16,697,089 at 30 June 1966, and loans and advances outstanding amounted to \$17,109,875.

### Queensland

The ports of Queensland, except Brisbane and certain minor ports, are administered by Harbour Boards with members representing the towns and districts served by the ports. Brisbane and the minor ports are controlled by the State Treasury through the Department of Harbours and Marine, which supervises the engineering activities of the other ports.

**Brisbane.** Brisbane, in its dredged and improved river, accommodates comfortably the largest vessels in the Australian trade. The main centres for shipping, although further downstream than formerly because of the increasing size of vessels, are still within easy access of the city. Adequate dry-docking facilities are available. The finances of Brisbane Harbour for the years 1960-61 to 1964-65 are shown below.

**BRISBANE HARBOUR: FINANCES, 1960-61 TO 1964-65**  
(*\$'000*)

Year	Loan indebtedness at 30 June	Receipts		Payments	
		Harbour dues	Total	Working expenses(a)	Total
1960-61	5,627	1,525	2,327	1,357	1,801
1961-62	5,431	1,485	2,168	1,256	1,698
1962-63	5,296	1,640	2,514	1,774	2,146
1963-64	5,032	1,859	2,500	3,346	3,837
1964-65	4,912	2,125	2,796	2,305	2,646

(a) Excludes interest and redemption included in total.

In addition to Brisbane harbour, the Department of Harbours and Marine also controls the Brisbane Dry Dock, the Cairncross Dock, and 10 smaller harbours not administered by harbour boards.

**Harbour Boards.** Harbour boards control the ports of Bowen, Bundaberg, Cairns, Gladstone, Mackay, Rockhampton, and Townsville. Finances for each port for the year ended 30 June 1965 are shown below, together with a summary for the years ended 30 June 1961 to 1965.

**HARBOUR BOARDS, QUEENSLAND: FINANCES, 1960-61 TO 1964-65**  
(\$'000)

Harbour board	Loan indebtedness at 30 June	Revenue		Expenditure (excluding loan)		Surplus(+) or deficit(-)
		Wharfage and harbour dues	Total	Working expenses	Total (including interest and redemption) (a)	
Bowen . . . .	532	20	25	21	29	- 4
Bundaberg . . . .	6,328	475	1,789	197	1,798	- 9
Cairns . . . .	7,062	498	1,087	316	1,024	+ 63
Gladstone . . . .	4,470	216	706	67	625	+ 82
Mackay . . . .	4,162	453	1,404	317	1,288	+116
Rockhampton . . . .	2,599	81	105	51	126	- 21
Townsville . . . .	8,671	670	1,221	429	1,281	- 60
<b>Total, 1964-65 . .</b>	<b>33,824</b>	<b>2,412</b>	<b>6,337</b>	<b>1,398</b>	<b>6,169</b>	<b>+168</b>
1963-64 . . . .	28,369	2,329	5,419	1,362	5,402	+ 17
1962-63 . . . .	22,619	2,179	4,119	1,203	3,731	+388
1961-62 . . . .	19,682	1,883	3,571	997	3,248	+322
1960-61 . . . .	18,791	1,724	3,366	1,095	3,251	+116

(a) Includes expenditure on capital works from accumulated revenue.

**South Australia**

*The South Australian Harbors Board.* All South Australian harbours are controlled by the South Australian Harbors Board, which consists of three commissioners appointed by the Governor for a period of five years and eligible for re-appointment. The Board is responsible to the Minister of Marine for the discharge of its duties and functions. The most important ports are the 5 deep-sea ports of Port Adelaide, Port Pirie, Wallaroo, Port Lincoln, and Thevenard. At a few ports the wharves or jetties are privately controlled, the principal of these being at Whyalla, Ardrossan and Rapid Bay, all of which are controlled by the Broken Hill Pty. Co. Ltd. Port Augusta is controlled by the Commonwealth Railways on behalf of the Commonwealth Government. Maximum depths of water (low water) at the wharves of the main ports range from 27 feet at Port Pirie to 35 feet at Port Adelaide (Outer Harbor). The following table shows the finances of the Board for 1961-62 to 1965-66.

**THE SOUTH AUSTRALIAN HARBORS BOARD: FINANCES**  
1961-62 TO 1965-66  
(\$'000)

Year	Capital at 30 June (a)	Revenue	Expenditure from revenue			Surplus
			Working expenses	Interest	Total	
1961-62 . . . .	37,112	5,153	3,353	1,402	4,755	399
1962-63 . . . .	38,968	5,098	3,344	1,531	4,876	222
1963-64 . . . .	40,996	6,114	3,591	1,581	5,172	942
1964-65 . . . .	42,474	6,201	3,908	1,679	5,587	614
1965-66 . . . .	44,316	6,194	3,941	1,734	5,675	519

(a) State Treasurer's funds and reserve employed.

**Western Australia**

*Fremantle Port Authority.* The Port of Fremantle is operated and controlled by the Fremantle Port Authority, a body corporate administered by a Board of five commissioners appointed triennially by the Governor. The port covers an extensive water area of some 180 square miles and comprises an inner and an outer harbour. The inner harbour includes 18 deep-water land-backed berths, providing 703,850 square feet of covered storage space and 11,148 feet of wharf

berth accommodation. All inner harbour berths are dredged to a low water depth of 36 feet. The outer harbour includes 3 main anchorages, Gage Roads, Owen Anchorage and Cockburn Sound. Deep-water jetties, including the oil refinery jetty in Cockburn Sound, are available in the outer harbour. Ocean-going deep draft ships enter the Sound by means of a channel dredged through Success and Parmelia Banks to a low water depth of 38 feet and a bottom width of 500 feet. In the outer harbour there are 3 tanker berths each with a low water depth of 44 feet at the Kwinana oil refinery, 1 berth at the nearby steelworks jetty with a low water depth of 30 feet, and 1 berth at the alumina works jetty with a low water depth of 40 feet. There is also a special berth for the handling of explosives. Gross earnings for 1965-66 amounted to \$7,870,126, working expenses to \$6,040,556, interest charges on loan capital \$742,502, sinking fund contributions \$200,964, and capital and other funds employed totalled \$18,649,104.

*Albany Harbour Board.* The Albany Harbour is controlled by a board of five members appointed by the Government. The depth of water in the entrance channel is 33 feet, at one arm of the jetty 31 feet and at the other arm 33 feet. In the approaches to wharf berths the depth is 33 feet. Berthing accommodation totals 3,615 feet, comprising 1,115 feet at the wharf berths and 2,500 feet at the Deepwater Jetty. Gross earnings for the year 1965-66 amounted to \$402,635, working expenses \$145,555, interest and sinking fund charges \$209,381, and capital account totalled \$3,738,945.

*Bunbury Harbour Board.* The Bunbury Harbour is controlled by a board of five members appointed by the Government. The depth of water in the harbour is 30 feet and berthing accommodation is 4,808 feet. Gross earnings for the year 1965-66 amounted to \$624,465, working expenses \$233,528, interest on loan capital \$294,857, and capital account totalled \$6,725,951.

*Other ports.* The following ports are controlled by the State Government Harbour and Light Department: Broome, Busselton, Carnarvon, Derby, Esperance, Geraldton, Onslow, Point Samson, Port Hedland, and Wyndham. Ports privately controlled comprise Yampie and Dampier, both operated by iron ore mining companies, and Exmouth, the port serving the communications installation at North West Cape. Lighter facilities at Barrow Island are operated by a private organisation currently developing a petroleum oil field.

### Tasmania

There are 8 marine boards and 1 harbour trust in Tasmania. The marine boards control the ports of Hobart, Launceston, Stanley (Circular Head), Burnie and Wynyard (Table Cape), Devonport and Ulverstone, Strahan, Currie (King Island), and Whitemark (Flinders Island), and the harbour trust controls the port of Smithton. Hobart, Launceston, Burnie, and Devonport are the principal ports of Tasmania. In addition to their interstate and intra-state traffic, there is also considerable overseas shipping. Depths of water at wharves vary, in general, between 16 and 40 feet.

### MARINE BOARDS AND HARBOUR TRUST, TASMANIA: FINANCES, 1964-65 AND 1965-66 (\$'000)

Authority	Loan indebtedness at 30 June (a)	Receipts (revenue account)		Expenditure (revenue account)		Surplus (+) or deficit (-)
		Wharfage charges	Total	Loan charges	Total	
Hobart . . . .	2,645	806	1,560	326	1,168	+392
Launceston . . . .	2,892	630	1,781	242	1,632	+149
Devonport . . . .	4,142	526	823	354	932	-109
Burnie . . . . .	8,767	626	1,241	550	1,284	-43
Circular Head . . . .	168	11	28	19	32	-4
King Island . . . .	95	35	54	7	43	+11
Strahan . . . . .	27	25	36	4	46	-10
Flinders Island . . . .	3	15	17	2	8	+9
Smithton . . . . .	..	..	1	..	2	-1
<b>Total, 1965-66 . . .</b>	<b>18,739</b>	<b>2,674</b>	<b>5,541</b>	<b>1,504</b>	<b>5,147</b>	<b>+394</b>
<b>1964-65 . . . . .</b>	<b>17,099</b>	<b>2,542</b>	<b>5,062</b>	<b>1,302</b>	<b>5,015</b>	<b>+47</b>

(a) The total of new loans raised during 1965-66 was \$2,055,000, of which Launceston raised \$200,000, Devonport \$400,000, Burnie \$1,400,000, King Island \$18,000, and Circular Head \$37,000.

### Fire brigades

#### New South Wales

A Board of Fire Commissioners, consisting of five members, one appointed by the State Government (President) and one each representing insurance companies, local government authorities, volunteer firemen, and permanent firemen, operates under the Fire Brigades Act, 1909-1958, and 158 fire districts had been constituted at the end of 1965. The cost of maintenance of fire brigades is borne in proportions of local councils and the Government each one-eighth, and the insurance companies three-quarters. The Board's borrowing power is limited to \$2,000,000.

At 31 December 1965 the actual strength of the Fire Brigade throughout the fire districts of New South Wales was 422 officers and 1,290 permanent and 2,656 volunteer firemen. Corresponding figures for the Sydney Fire District were 344, 1,145 and 322. The revenue for the year 1965 was \$8,456,000, made up as follows: from the Government, \$1,044,000; municipal and shires, \$1,044,000; fire insurance companies and firms, \$6,263,000; and from other sources, \$104,000. The disbursements for the year were \$8,196,000. The Board of Fire Commissioners provides the fire protection services for Canberra, in the Australian Capital Territory, and the cost of these services is reimbursed by the Commonwealth Government.

Under the Bush Fires Act, 1949-1963 a Bush Fire Fighting Fund exists from which finance is provided for the prevention and fighting of bush fires. Contributions to the Fund by the Government, councils and insurance companies are in the proportion of one-quarter, one-quarter and one-half, respectively. At 30 June 1966 Volunteer Brigades equipped by means of this fund numbered 2,500 with an active membership of about 150,000 persons. The approved expenditure from the Fund for equipment, up to 30 June 1967, amounted to \$7,982,000.

#### Victoria

In Victoria, fire brigades are controlled by the Metropolitan Fire Brigades Board consisting of ten members, including an employees' representative, and the Country Fire Authority consisting of eleven members.

*Metropolitan Fire Brigades Board.* The Metropolitan Fire Brigades Board receives contributions from the municipalities and the insurance companies in the proportion of one-third and two-thirds respectively. On 30 June 1966 the Board had under its control 44 stations, 1,088 permanent staff, 229 special service and clerical, etc. staff, and 14 part-time firemen. The total receipts for 1965-66 were \$5,519,192, comprising contributions \$4,707,900, receipts for services \$510,126, and interest and sundries \$301,166. The expenditure was \$5,733,753.

*Country Fire Authority.* This authority is responsible for the prevention and suppression of fires in the 'country area of Victoria', which embraces the whole of the State outside the Metropolitan Fire District, excluding State forests and certain Crown lands. The country area has been divided into twenty-five fire control regions, four of which (Ballarat, Bendigo, Geelong and the Dandenong, Chelsea and Frankston areas) are wholly urban and the remainder mixed urban and rural. The Country Fire Authority receives contributions in the proportion of two-thirds from insurance companies and one-third from the Treasury. At 30 June 1966 the Country Fire Authority Act applied to 192 insurance companies and 206 urban and 1,048 rural fire brigades. The effective registered strength of the brigades was 112,984 members. Income for the year 1965-66 amounted to \$2,140,287. Total expenditure other than loan amounted to \$1,957,905.

#### Queensland

Fire districts are constituted under the Act of 1964. For each district, there must be a Fire Brigades Board consisting of seven members, and the cost of maintenance of each brigade is proportioned as follows: Treasury one-seventh, insurance companies five-sevenths, and local authorities one-seventh. The insurance companies' contribution is paid to the State Government and thence to fire brigades.

At 30 June 1965 there were 84 Fire Brigade Boards. The number of stations was 162 and full-time staff numbered 968, including 25 administrative, 223 officers and 720 firemen. Volunteers numbered 72. Part-time staff numbered 1,259, including 85 administrative, 131 officers and 1,043 firemen. The total revenue for the year 1964-65 was \$3,681,990, received mainly from the following sources: Government \$496,496, local authorities \$496,496, insurance companies \$2,482,542. Loan receipts (Government and other) were \$707,732. The total expenditure for the year was \$3,728,936, the chief items being salaries and wages \$2,571,958, and interest and redemption of loans \$431,448.

#### South Australia

The Fire Brigades Act, 1936-1958 provides for a board of five members, that the expenses and maintenance of brigades are defrayed in the proportion of two-ninths by the Treasury, five-ninths by insurance companies and two-ninths by the municipalities concerned, and that when the

Treasury proportion exceeds its statutory contribution of approximately \$26,000, the excess is borne five-sevenths by insurance companies and two-sevenths by the municipalities. At 30 June 1966 there were altogether 37 fire brigade stations, of which 13 were metropolitan and 24 country.

The strength of the permanent staff at 30 June 1966 was 460, including 337 officers and men, 89 country auxiliary firemen and 34 other employees (including maintenance workers). The total revenue for the year 1965-66 was \$1,430,746, including contributions of \$1,208,574 made up as follows: insurance companies \$727,159, Treasury \$190,552 and municipalities \$290,863. The Treasury contribution includes a special grant of \$164,292.

#### Western Australia

By the provisions of the *Fire Brigades Act, 1942-1966* certain local government areas are constituted fire districts under the control of the Western Australian Fire Brigades Board. There were 52 fire districts at 30 September 1966. The contribution to the Board is made in the proportion of 16 per cent from the Government, 20 per cent from local government authorities, and 64 per cent from insurance companies. The number of local government authorities and insurance companies who contributed numbered 74 and 164 respectively. The brigades throughout the State controlled by the Western Australian Fire Brigades Board at 30 September 1966 numbered 71, with a staff of 1,628, including 315 permanent officers and firemen and 1,313 volunteer brigade officers and firemen. The revenue for the year ended 30 September 1966 was \$1,732,357 and the expenditure \$1,680,266.

Under the *Bush Fires Act, 1954-1965* a Bush Fires Board, consisting of thirteen members, six of whom are nominated by the Country Shire Councils' Association, was set up to advise the Minister for Lands on bush fire control. The Act also provides for the registration of bush fire control officers, who numbered 2,065 at 30 June 1966, and the establishment of bush fire brigades, 871 at 30 June 1966. Many individual brigades are large organisations with numerous self-contained sections.

#### Tasmania

The *Fire Brigades Act 1945* provided for the creation of the Fire Brigades Commission of Tasmania to co-ordinate the activities of existing fire brigade boards, while leaving the responsibility for individual control and management with the boards. The Commission consists of two persons nominated by the Minister, one person elected by the City or Municipal Councils' representatives and three persons elected by the insurance representatives of the Fire Brigades Boards. Contributions towards the cost of operations are on the basis of one-quarter each from the treasury and the municipalities and one-half from the insurance companies concerned. The cost for the year 1965-66 amounted to \$540,269. There were, at 30 June 1966, 23 boards controlling 35 stations, and their aggregate staffs numbered 570 (officers and firemen), including 134 permanent firemen, 366 part-time firemen and 70 volunteers; the volunteers all operate under the Hobart Board in the forested and mountainous Fern Tree area.

## CHAPTER 22

# RURAL INDUSTRY

This chapter is divided into four major parts:

Introduction, dealing with the disposal of Crown lands, closer settlement and war service settlement (all transferred from the former chapter Land Tenure and Settlement) and general rural activity in Australia;

Agricultural production;

Pastoral production; and

Other rural industries, which includes the dairying, poultry and bee industries.

For greater detail on the subjects dealt with in this chapter see the annual bulletins *Rural Industries*, *Value of Production*, and *Secondary Industries* (regarding butter, cheese, etc. factories) issued by this Bureau. Current information on commodities produced is obtainable in the *Quarterly Summary of Australian Statistics*, *Monthly Review of Business Statistics*, *Monthly Bulletin of Production Statistics*, and *Digest of Current Economic Statistics* (monthly). The series of bulletins *Classifications of Rural Holdings by Size and Type of Activity* (see page 883) shows particulars of rural holdings classified by size, nature and area of crops, and numbers of livestock, and also according to main type of activity. The mimeographed annual *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia* contains details of the production and utilisation of foodstuffs. The following mimeographed publications also contain considerable detail on the particular subjects dealt with.

**General.** *Value of Production and Indexes of Price and Quantum of Farm Production* (annual), *Value of Primary Production (Preliminary Statement)* (annual), *Value of Primary Production (Preliminary Estimates)* (annual), *Farm Machinery on Rural Holdings* (annual), *Tractors on Rural Holdings*, 31 March 1966 (detailed information), *New Tractors: Receipts, Sales and Stocks* (quarterly), and *New Agricultural Machinery* (quarterly).

**Agricultural production.** *Rural Land Use and Crop Production* (annual), *Agricultural Statistics (Preliminary Statement)* (annual), *The Wheat Industry* (two a year), *The Fruit Growing Industry* (annual), and *Fruit Statistics (Preliminary Statement)* (annual).

**Pastoral production.** *Livestock Statistics* (annual), *Livestock Numbers* (annual), *The Meat Industry* (monthly), *Wool Production* (annual), and *Wool Production and Utilisation* (annual).

**Other rural production.** *The Dairying Industry* (monthly and half-yearly), *Livestock Statistics* (annual), *Livestock Numbers* (annual), *Manufacturing Industries No. 20.—Bacon Curing and No. 21.—Butter, Cheese and Condensed, Concentrated, etc., Milk* (annual), *Production Summaries No. 36.—Preserved Milk Products and No. 55.—Butter and Cheese* (monthly), and *Bee-farming* (annual).

Values of Australian overseas trade shown throughout this chapter are expressed as f.o.b. port of shipment.

Throughout this chapter yearly periods for area and production of crops relate to years ended 31 March. Other periods in respect of e.g. factory and trade statistics relate to years ended 30 June.

## INTRODUCTION

### Disposal of Crown lands

The information on pages 875–82, was formerly included in a separate chapter Land Tenure and Settlement (see Year Book No. 52, pages 78–86).

### Land legislation and tenures

The following sections contain figures showing the extent of the different land tenures in the several States and Territories, classified under broad headings indicating the nature of the tenure, together with some general descriptive matter. Information in greater detail, descriptions of the land tenure systems of the several States and the internal Territories, and conspectuses of land legislation in force and of the systems of land tenure were provided in Year Book No. 48 and previous issues (see also Year Book No. 50, page 85 and List of Special Articles, etc. preceding General Index to this Volume).

**Free grants and reservations**

Provision exists in all States except Tasmania for the disposal of Crown lands for public purposes by free grants, and in all States for the temporary and/or permanent reservation of Crown lands for public purposes. In the Northern Territory any Crown lands not subject to any right of, or contract for, purchase may be resumed for public purposes, and the whole or any portion of the lands resumed may be reserved for that purpose. In the Australian Capital Territory, under the *Seat of Government (Administration) Act* 1910, Crown lands may not be sold or disposed of for any estate in freehold except in pursuance of some contract entered into before the commencement of the Act.

**AREAS OF CROWN LANDS RESERVED: STATES AND TERRITORIES, 1962 TO 1966**

('000 acres)

Year	N.S.W. (a)	Vic. (b)	Qld (b)	S.A. (a)	W.A. (a)	Tas. (a)	N.T. (a)	Total (c)

1966 . .	15,937		25,662	22,878	78,226	4,191	60,922	

(a) At 30 June. (b) At 31 December. (c) Excludes the Australian Capital Territory.

The purposes for which areas were reserved are given hereunder for the latest years available as set out in the table above.

*New South Wales.* For travelling stock, 4,958,978 acres; forest reserves, 1,539,292 acres; water and camping reserves, 760,863 acres; mining reserves, 1,033,950 acres; for recreation and parks, 726,620 acres; other reserves, 6,917,345 acres; total, 15,937,048 acres.

*Victoria.* For roads, 1,706,981 acres; water reserves, 314,643 acres; agricultural colleges, 24,409 acres; forest and timber reserves, 5,753,921 acres; mallee reserves, 410,000 acres; other reserves, 675,022 acres; total, 8,884,976 acres.

*Queensland.* For timber reserves, 1,954,956 acres; State forests and national parks, 7,666,115 acres; Aboriginal reserves, 6,642,535 acres; for streets, surveyed roads and stock routes, 4,024,693 acres; general reserves, 5,374,178 acres; total, 25,662,477 acres.

*South Australia.* Total area of surveyed roads, railways and other reserves, 22,877,721 acres, including 18,833,822 acres set apart as Aboriginal reserves.

*Western Australia.* For State forests, 4,448,827 acres; timber reserves, 1,859,538 acres; other reserves 71,917,590 acres; total, 78,225,955 acres.

*Tasmania.* For forest reserves, 3,607,000 acres; national parks, 584,000 acres; total, 4,191,000 acres.

*Northern Territory.* For Aboriginal, defence and public requirements, 60,921,977 acres.

**Conditional and unconditional purchases of freehold**

Crown lands in the States may be disposed of by unconditional purchase at public auction or by certain other forms of purchase (for details see Year Book No. 48, pages 91-2). Conditional purchases of various types may also be made. In the Northern Territory only 0.1 per cent of the total area is alienated, the remainder being held under lease or licence, or reserved for various purposes or unoccupied. In the Australian Capital Territory about 18 per cent of the area is alienated or in process of alienation in consequence of contracts existing prior to the establishment of the Territory.

**Leases and licences**

Well over half the area of the States of New South Wales and South Australia and of the Northern Territory and more than four-fifths of that of Queensland are occupied under some form of lease or licence. In Victoria, only about one-tenth of the area is leased or licensed, more than half being alienated; in Western Australia, more than one-third is leased or licensed, most of the remainder being unoccupied; and in Tasmania only one-twelfth is leased or licensed, while about half the area of the State is occupied by the Crown or unoccupied, and the remainder alienated. Areas leased or licensed in the States are held under Crown lands Acts, closer settlement Acts, mining Acts, etc., and in the Territories under various Ordinances.

*Land Acts and Ordinances.* The types of lease and licence which obtain under land legislation cover a wide range, and vary with each State or Territory. The following are examples: grazing or pastoral, settlement and closer settlement, settlement purchase, conditional and unconditional

purchase, perpetual and Crown; however, the variations of these forms and the special forms of lease and licence which exist would extend this list considerably. Details of the various types in existence are given in Year Book No. 48, pages 93-4, and some detail is included in the tables on pages 878-81 of this chapter.

**Closer settlement and war service settlement**

**Closer settlement**

Particulars of the methods of acquisition and disposal of land for the closer settlement of civilians and returned service personnel (1914-18 War) in the several States are given in issues of the Year Book up to No. 22 (see No. 22, pages 163-9), and the results of the operations of the several schemes have appeared in subsequent issues in considerable detail. However, the amalgamation in some States of closer settlement records with those of other authorities has since made it impossible to obtain up-to-date figures for those States and for Australia as a whole. Page 96 of Year Book No. 48 contains particulars as at 30 June 1960 of the areas and costs for those States for which separate information is available.

**War Service Land Settlement Scheme**

The War Service Land Settlement Scheme provides for the settlement on the land of eligible ex-servicemen from the 1939-45 War and the Korea-Malaya operations. Finance for capital expenditure under the scheme in South Australia, Western Australia and Tasmania and for special loans to New South Wales and Victoria is provided through Loan (War Service Land Settlement) Acts. Finance for other aspects of the scheme in all States is provided by annual parliamentary appropriation. The *States Grants (War Service Land Settlement) Act 1952* provides that the responsible Commonwealth Minister may make grants of financial assistance to the States under such terms as he may from time to time determine.

New South Wales, Victoria and Queensland agreed, at the inception of the scheme, to find their own finance for the acquisition and development of properties. In 1954 Queensland abandoned the scheme and made available for general settlement all unallotted lands held under it. Detailed information about the agreements and the methods of operation and administration of the scheme are contained in earlier Year Books (see List of Special Articles, etc., preceding General Index to this volume).

**WAR SERVICE LAND SETTLEMENT: SUMMARY, STATES, TO 30 JUNE 1966**

State	Land acquired	Farms allotted		Farms in course of development		Other

(a) War Service Land Settlement was discontinued in 1954, and unallotted lands were made available for general settlement. (b) Includes land disposed of outside the scheme and discrepancies to be corrected upon survey.

Particulars of expenditure on war service land settlement are given in Chapter 20, Public Finance (*see* pages 775-6).

### Alienation and occupation of Crown lands

The figures in the previous parts of this chapter show separate particulars of various forms of land settlement. The following tables set out the position with regard to the tenure of land in each State, in the Northern Territory and in the Australian Capital Territory for the latest years available. A summary for each State and Territory and for Australia as a whole is also included. Particulars for each year from 1955 to 1965 appear in the bulletin *Rural Industries* No. 3, 1964-65, page 1. The area occupied includes roads, permanent reserves, forests, etc. In some cases lands which are permanently reserved from alienation are occupied under leases or licences, and have been included therein. Lands occupied under leases or licences for pastoral purposes are frequently held on short tenures only, and could thus be made available for settlement practically whenever required.

#### New South Wales

The total area of New South Wales is 198,037,120 acres, of which 30.9 per cent had been alienated at 30 June 1966; 2.6 per cent was in process of alienation; 57.1 per cent was held under leases and licences; and the remaining 9.4 per cent was unoccupied or held by the Crown.

#### ALIENATION AND OCCUPATION OF CROWN LAND: NEW SOUTH WALES 30 JUNE 1966 (Acres)

Tenure	Area	Tenure	Area
Alienated . . . . .	61,118,244	Held under leases and licences— Homestead selections and grants . . . . .	1,709,521
		Alienable leases, long-term and perpetual . . . . .	23,870,082
		Long-term leases with limited right of alienation . . . . .	1,295,890
		Other long-term leases . . . . .	81,559,373
		Short-term leases and temporary tenures . . . . .	2,827,440
		Forest leases . . . . .	1,667,155
		Mining and auriferous leases . . . . .	231,934
		<i>Total leased or licensed . . . . .</i>	<i>113,161,395</i>
In process of alienation— Conditional purchases . . . . .	3,936,484	Unoccupied— Particulars of Lord Howe Island not being available, the area, 3,220 acres, is included under unoccupied (approximate) . . . . .	18,559,932
Closer settlement purchases . . . . .	754,693		
Soldiers' group purchases . . . . .	119,911		
Other forms of sale . . . . .	386,461		
<i>Total in process of alienation . . . . .</i>	<i>5,197,549</i>	<i>Total area of State . . . . .</i>	<i>198,037,120</i>

#### Victoria

The total area of Victoria is 56,245,760 acres, of which 56.7 per cent had been alienated up to 31 December 1965; 4.1 per cent was in process of alienation under deferred payments and closer settlement schemes; 11.1 per cent was occupied under leases and licences; and 28.1 per cent was unoccupied or held by the Crown.

## ALIENATION AND OCCUPATION OF CROWN LANDS: VICTORIA

31 DECEMBER 1965

(Acres)

Tenure	Area	Tenure	Area
Alienated . . . . .	31,866,897	Leases and licences held— Under Lands Department— Perpetual leases . . . . .	157,649
		Agricultural college leases . . . . .	24,409
		Other leases and licences . . . . .	1,543
In process of alienation— Exclusive of mallee and closer settlement lands . . . . .	127,016	Temporary (yearly) grazing licences(a) . . . . .	6,000,900
Mallee lands (exclusive of closer settlement lands) . . . . .	910,889	<i>Total leased or licensed . . . . .</i>	<i>6,184,501</i>
Closer settlement lands . . . . .	1,255,308	Occupied by the Crown or un- occupied . . . . .	15,901,149
<i>Total in process of alienation</i>	<i>2,293,213</i>	<i>Total area of State . . . . .</i>	<i>56,245,760</i>

(a) In addition, 78,996 acres of reserved Crown lands are held under grazing licenses.

## Queensland

The total area of this State is 426,880,000 acres, of which, on 31 December 1966, 6.2 per cent was alienated; 1.8 per cent was in process of alienation; and 85.6 per cent was occupied under leases and licences. The remainder, 6.3 per cent, was either unoccupied or held as reserves or for roads.

## ALIENATION AND OCCUPATION OF CROWN LANDS: QUEENSLAND

31 DECEMBER 1966

(Acres)

Tenure	Area	Tenure	Area
Alienated . . . . .	26,534,242	Occupied under leases and licences— Pastoral leases . . . . .	242,589,600
		Occupation licences . . . . .	16,595,840
		Grazing selection and settle- ment farm leases . . . . .	92,501,483
		Leases—special purposes(a) . . . . .	4,923,385
		Mining leases . . . . .	2,591,000
		Perpetual lease selections . . . . .	5,988,643
		Auction perpetual leases, etc. Forest grazing leases (of reserves) . . . . .	48,549
		Development leases . . . . .	211,120
		<i>Total leased or licensed . . . . .</i>	<i>365,456,517</i>
		Reserves (net, not leased) . . . . .	17,413,390
		Surveyed roads and surveyed stock routes . . . . .	4,024,693
		Unoccupied . . . . .	5,610,068
In process of alienation . . . . .	7,841,090	<i>Total area of State . . . . .</i>	<i>426,880,000</i>

(a) Special leases of Crown land, 910,111 acres; special leases of reserves, 4,013,274 acres.

**South Australia**

The area of South Australia is 243,244,800 acres and at 30 June 1966, 6.6 per cent was alienated; 0.2 per cent in process of alienation; 61.8 per cent occupied under leases and licences; and 31.4 per cent occupied by the Crown or unoccupied.

**ALIENATION AND OCCUPATION OF CROWN LANDS: SOUTH AUSTRALIA**  
**30 JUNE 1966**  
 (Acres)

Tenure	Area	Tenure	Area
Alienated . . . . .	16,110,907	Held under lease and licence(a)—	
		Perpetual leases, including irrigation leases . . .	20,677,830
		Pastoral leases . . . .	126,829,719
		Other leases and licences . .	2,914,222
		<i>Total leased or licensed . .</i>	<i>150,421,771</i>
		Area unoccupied(b) . . . .	76,321,322
In process of alienation . . .	390,800	<b>Total area of State . . .</b>	<b>243,244,800</b>

(a) Mining leases and licences have also been issued over an area comprising 224,226,000 acres.

(b) Includes surveyed roads, railways and other reserves, salt water lakes, lagoons, and fresh water lakes.

**Western Australia**

The total area of Western Australia is 624,588,800 acres, of which, at 30 June 1966, 4.9 per cent was alienated; 2.4 per cent was in process of alienation; and 39.4 per cent was occupied under leases and licences issued by the Lands, Mines or Forests Departments. The balance of 53.3 per cent was unoccupied.

**ALIENATION AND OCCUPATION OF CROWN LANDS: WESTERN AUSTRALIA**  
**30 JUNE 1966**  
 (Acres)

Tenure	Area	Tenure	Area
Alienated . . . . .	30,487,407	Leases and licences in force—	
		(i) Issued by Lands Department—	
		Pastoral leases . . . . .	235,113,241
		Special leases . . . . .	4,002,666
		Leases of reserves . . . . .	646,471
		Residential lots . . . . .	4,475
		Perpetual leases . . . . .	1,895,058
In process of alienation—		(ii) Issued by Mines Department—	
Free homestead farms . . . .	303,403	Gold-mining leases . . . . .	18,573
Conditional purchase . . . .	14,330,201	Mineral leases . . . . .	25,150
Selections under Part VIII. of the Land Act . . . . .	227,892	Miners' homestead leases . . . . .	32,684

In process of alienation . . . .	207,737	Soldier settlement . . . . .	40,882
		Short-term leases . . . . .	1,128
Leases and licences—		(ii) Issued by Mines Department . . . . .	44,606
(i) Issued by Lands Department for—		<i>Total leased or licensed . . . . .</i>	<i>1,291,363</i>
Pastoral purposes . . . . .	875,245	Area occupied by the Crown or unoccupied . . . . .	8,769,835
Timber getting . . . . .	313,755		
Closer settlement . . . . .	15,747	<i>Total area of State . . . . .</i>	<i>16,885,000</i>

**Northern Territory**

The area of the Northern Territory is 332,979,200 acres, of which, at 30 June 1966 only 0.1 per cent was alienated; 57.3 per cent was held under leases and licences; 18.3 per cent was reserved for Aborigines, defence and public requirements; and the remaining 24.3 per cent was unoccupied and unreserved.

The following shows the mode of occupancy of areas at 30 June 1966: alienated, 324,802 acres; leased—pastoral leases, 174,451,920 acres; other leases, licences and mission stations, 16,236,069 acres; total leased, 190,687,989 acres; reserved for Aboriginal, defence and public requirements, 60,921,977 acres; unoccupied and unreserved, 81,044,432 acres; total 332,979,200 acres.

**Australian Capital Territory**

Alienated land of the Territory at 30 June 1966 comprised 10.6 per cent of the total area; land in process of alienation 6.9 per cent; land held under lease and licence 46.4 per cent; land otherwise occupied, including city tenures, 12.4 per cent; and unoccupied 23.7 per cent.

The following are the particulars of land areas in the Australian Capital Territory at 30 June 1966: alienated 63,754 acres; in process of alienation 41,224 acres; leased—grazing, agricultural, etc., leases, 260,133 acres; grazing licences, 12,359 acres; total leased, 272,492 acres; otherwise occupied, including city area leases, 63,146 acres; unoccupied, 142,313 acres; total, 582,929 acres. Including the Jervis Bay area of 18,000 acres—6,266 acres leased and 11,734 acres otherwise occupied—the grand total for the whole Territory is 600,929 acres.

## Summary

The following table provides a summary for each State and Territory, and for Australia as a whole, of the alienation and occupation of Crown lands in 1966.

### ALIENATION AND OCCUPATION OF CROWN LANDS: STATES AND TERRITORIES 1966

State or Territory	Private lands				Crown lands				Total area
	Alienated		In process of alienation		Leased or licensed		Other (a)		
	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres	Per cent	'000 acres

Australia	173,122	9.1	30,900	1.6	1,073,521	56.5	621,918	32.7	1,899,462

(a) Occupied by Crown; reserved; unoccupied; unreserved. (b) At 30 June. (c) At 31 December 1965. (d) At 31 December 1966. (e) Includes Jervis Bay area.

### Number and area of rural holdings

#### Number and area

A holding in Australia has been defined by statisticians on a more or less uniform basis, and discrepancies which exist are not of sufficient importance to prevent comparisons. For the purpose of these statistics a holding has been defined as land of one acre or more in extent used in the production of agricultural produce or for the raising of livestock and the production of livestock products.

There are considerable fluctuations from time to time in the numbers of very small holdings, and it is very difficult to determine in some cases whether or not they are rural holdings within the definition. In addition, in the very dry parts, such as the far west of New South Wales and Queensland and the remoter parts of South Australia and Western Australia, there are large areas of marginal lands sporadically occupied for extensive grazing under short-term lease or other arrangement, and the areas so occupied tend to fluctuate with the seasons. Similarly, there are rugged areas in the mountain country of some States which are also occasionally occupied.

### RURAL HOLDINGS: NUMBER AND AREA, STATES AND TERRITORIES 1961-62 TO 1965-66

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

**Land utilisation of rural holdings**

The following table shows the purposes for which the land on the rural holdings referred to in the preceding paragraph was used.

**RURAL HOLDINGS: LAND UTILISATION, 1961-62 TO 1965-66**  
(<sup>'000</sup> acres)

Year	Area used for crops(a)	Land lying fallow(b)	Area under sown grasses and clovers(c)	Balance of holdings (d)	Total area of holdings
1961-62 . . . . .	27,907	8,049	39,063	1,094,216	1,169,235
1962-63 . . . . .	30,056	8,719	40,991	1,097,879	1,177,645
1963-64 . . . . .	29,948	8,510	44,211	1,101,837	1,184,506
1964-65 . . . . .	32,251	8,466	47,159	1,102,894	1,190,770
1965-66—					
New South Wales . . . . .	8,780	3,771	10,884	147,727	171,161
Victoria . . . . .	5,396	2,620	14,804	15,023	37,844
Queensland . . . . .	3,990	860	3,739	371,736	380,325
South Australia . . . . .	5,931	1,201	5,923	146,340	159,394
Western Australia . . . . .	8,449	1,942	11,382	248,281	270,054

Northern Territory . . . . .	4	..	17	175,841	175,862
Australian Capital Territory . . . . .	6	1	86	262	355
<b>Australia . . . . .</b>	<b>32,798</b>	<b>10,471</b>	<b>48,519</b>	<b>1,109,703</b>	<b>1,201,492</b>

(a) Excludes (i) duplication on account of area double cropped, except for New South Wales and South Australia, and (ii) clovers and grasses cut for hay and seed which have been included in Area under sown grasses and clovers, and differs therefore from crop area figures shown later in this chapter. (b) Excludes short or summer fallow. (c) Includes paspalum. (d) Used for grazing, lying idle, etc.

**Classification by size and type of activity**

Some of the information obtained from the 1965-66 Agricultural and Pastoral Census has been classified by size of principal characteristics (area of holdings, area of sown grasses and clovers, area of selected crops, and numbers of livestock). In addition, all holdings have been classified according to type of activity. Tables showing this information, for statistical divisions and States, and an outline of the methods used will be published in a series of bulletins *Classification of Rural Holdings by Size and Type of Activity, 1965-66*. Similar information was published in a series of bulletins for the year 1959-60. A size classification for each State is available for the year 1955-56.

**Employment on rural holdings****Persons engaged**

The following table shows, for each State and Territory, the recorded number of males working on rural holdings. Particulars for females are not available except for New South Wales. Additional particulars relating to the number of males employed in agriculture up to 1941-42 are shown in Year Book No. 36, page 852, and previous issues. Similar details for later years are not available.

**MALES(a) ENGAGED ON RURAL HOLDINGS: STATES AND TERRITORIES  
31 MARCH 1966**

(a) Details for females not available except for New South Wales. (b) Includes 1,034 male full-blood Aborigines employed as temporary employees.

Information regarding the number of persons (males and females) working full-time on rural holdings in Australia at 31 March of years to 1958 appears in Year Book No. 50, page 987, and in earlier Year Books. Data for subsequent years are the subject of investigation and are not available at this stage.

**Salaries and wages paid**

Particulars of salaries and wages paid to employees (including amounts paid to contractors) working full-time on rural holdings are shown below for the year 1965-66. Data for New South Wales and Victoria, and hence Australia, are not available.

**EMPLOYEES ON RURAL HOLDINGS: SALARIES AND WAGES PAID(a)  
STATES AND TERRITORIES, 1965-66  
(\$'000)**

### Technical aspects of rural industry

#### Farm machinery on rural holdings

The history of the development of large-scale field crops and sown pastures in Australia is essentially also the history of the mechanisation of the rural industries. This may be divided into four phases.

The first phase extended from initial settlement to the mid-nineteenth century, when agriculture was primarily local and non-commercial, and confined by the use of hand methods to small areas and low production per farm worker.

The invention of an effective wheat stripper in South Australia in 1843 and the extension of its use into Victoria and New South Wales, however, greatly increased the area which could be harvested in a season. This initiated the second phase, which continued with the development of stump-jump implements in the 1870's and the scrub roller and mulleniser in the 1890's. These later developments made possible an extension of the wheat belt into the drier mallee lands of Victoria and South Australia. By the turn of the century machinery had thus been developed to conduct all cropping operations on an extensive basis.

The third major change in farm machinery followed the 1914-18 War, when tractor power became increasingly available in a variety of models and sizes. The increase in numbers of tractors on rural holdings and higher operating speeds led in turn to new and improved types of farm machinery drawn by tractors. These trends were interrupted by the economic depression of the 1930's.

After the 1939-45 War there was a widespread expansion of labour-saving machinery and devices in all sectors of rural industry. Clearing methods were extended with the bulldozer, log, chain, and hi-ball units, and cultivation was improved by means of large disc ploughs and disc harrows, and seeding and harvesting machinery. These methods were extended to crops for which methods involving greater use of manual labour had previously been employed. Milking machines

almost entirely replaced hand milking on dairy farms, and labour-saving machinery was introduced into farm and station development and maintenance operations. These operations included fencing, bulk transport of grain and fodder, pasture treatment, fodder conservation, and pasture improvement.

The tables following show data for the principal types of farm machinery on rural holdings in the several States and Territories at 31 March 1966 and throughout Australia for a series of years. A more detailed analysis of tractors on rural holdings according to horse-power, type of fuel used, and age of tractor has been published in the Statistical Bulletin *Tractors on Rural Holdings—Australia, 31 March 1966*.

### The soils of Australia

Year Book No. 52 contains an article (pages 873-9) on the soils of Australia which deals with the following matters: nature and development of Australian soils, including the agricultural development of soils, and types of Australian soils. A soil map of Australia and illustrations are included on plates 47 to 51 of Year Book No. 52.

### Soil improvement and conservation

#### Fertilisers

In the early days of settlement in Australia the principles of scientific cultivation were little understood. It was common for the land to be cropped continuously until the natural fertility was almost exhausted. More scientific methods have been adopted in recent decades, much of the improvement in this regard being due to the assistance and guidance offered to farmers by various State and Commonwealth departments and authorities.

Fertiliser is generally applied to pastures at the time of sowing, and periodical (usually annual) top-dressings are carried out afterwards to keep the pastures in good condition. The introduction of the modern seed-drill, acting also as a fertiliser distributor, has greatly facilitated the use of artificial manures, and much land formerly regarded as useless for cultivation has now been brought into production. With the rapid increase in the area of sown pastures, particularly since the 1939-45 War, large quantities of artificial fertilisers have been used. In addition, increasing areas of native pastures have been top-dressed. The use of aircraft for the distribution of fertilisers has increased greatly in recent years (*see* page 890) and, in particular, has enabled the fertilising of some areas which would otherwise be inaccessible. In 1965-66 pastures (sown and native) accounted for over 60 per cent of both the total area fertilised and the total quantity of fertiliser used.

The Australian output of prepared fertilisers is derived chiefly from imported rock phosphate. Complete information regarding local production of fertilisers is not available. The number of firms engaged in the manufacture of chemical fertilisers in Australia for the year 1965-66 was 48 made up as follows: New South Wales, 12; Victoria, 6; Queensland, 5; South Australia, 9; Western Australia, 8; and Tasmania, 8. The production of superphosphate in Australia during 1965-66 amounted to 4,265,000 tons.

Information regarding the area treated with artificial fertilisers and the quantity of artificial fertilisers (superphosphate, bonedust, nitrates, etc.) used in each State during the 1965-66 season is given in the following table.

AREA FERTILISED AND QUANTITY OF ARTIFICIAL FERTILISERS USED  
STATES AND TERRITORIES, 1965-66

State or Territory	Crops			Pastures			Total

The chief sources of Australia's supplies of rock phosphate are Nauru, Christmas Island (Indian Ocean) and the Gilbert and Ellice Islands. Sodium nitrate is obtained chiefly from Chile.

The imports of artificial fertilisers during the five years ended 1965-66 are shown in the following table.

**ARTIFICIAL FERTILISERS: IMPORTS INTO AUSTRALIA, 1961-62 TO 1965-66**

<b>Total . . .</b>	<b>15,672</b>	<b>15,144</b>	<b>20,846</b>	<b>27,526</b>	<b>29,508</b>

Exports of fertilisers (manufactured locally) amounted to 37,000 cwt valued at \$124,000 in 1965-66 compared with 36,000 cwt valued at \$149,000 in 1964-65.

**Aerial agriculture**

During recent years increasing use has been made of aircraft for top-dressing and seeding, for spraying and dusting of crops and pastures, and for pest and vermin extermination.

For 1956-57 (the first year for which data are available) the total area treated was 1,466,000 acres; in 1965-66 the total was 15,010,000 acres, more than ten times as great. The following table shows details of area treated and materials used for each State for the five years ended 31 March 1966.

(f) Includes 226,910 acres baited for rabbit destruction, etc.

NOTE. The information contained in this table was collected by the Department of Civil Aviation.

### Pasture improvement

An article on pasture improvement, which includes notes on indigenous and introduced species of grasses and which traces the development of pasture research in Australia, appears on pages 1001-2 of Year Book No. 49.

### Soil conservation

Year Book No. 49 contains an article (pages 1003-4) on soil conservation which deals with the following matters: land use and soil erosion, agents of erosion, prevention and control, and the activities of various Commonwealth and State authorities which promote and co-ordinate research into the problems of soil erosion and the initiation of preventive measures.

## AGRICULTURAL PRODUCTION

In general, statistics in this chapter relating to agricultural production are derived from 'census' returns supplied by approximately 250,000 farmers who utilise one acre or more of land for agricultural or pastoral purposes. The latest figures available are those for the year 1965-66. The returns are collected on a substantially uniform basis in all States at 31 March each year, and relate mainly to crops sown in the previous twelve months. Where harvests are not completed by March (e.g. potatoes), provision is made in some States for a special collection after the harvest is completed and in others for the inclusion of the total estimated yield expected from the complete harvest. In cases where additional data are available from marketing authorities or other sources these are used in conjunction with the 'census' returns. The statistics published in this section are therefore shown in 'agricultural' years. For most purposes there will be little error involved in considering them as applying to years ended 30 June.

For more detailed information on period covered and details of the weights and measures used in recording production of agricultural commodities see introductory notes to the bulletin *Rural Industries*.

# Progress, assistance and control

## Early development

The coastal districts of southern Australia are characterised to a large degree by leached soils of low fertility, with limited areas suitable for intensive crop cultivation. This, combined with an unfamiliar climate and problems associated with the clearance of scrub-land, severely checked early attempts to establish crops. A brief reference to these attempts at cultivation by the first settlers in New South Wales and to the discovery of suitable agricultural land on the Parramatta and Hawkesbury Rivers prior to the year 1813 and west of the Blue Mountains thereafter is contained in early issues of the Year Book. (See No. 22, page 670.)

In an *Account of Live Stock and Ground under Crop in New South Wales, 19th August, 1797* Governor Hunter gives the acreage of crops as follows: wheat, 3,361 acres; maize, 1,527 acres; barley, 26 acres; potatoes, 11 acres; and vines, 8 acres. The following details of crops were collected in 1808: wheat, 6,874 acres; maize, 3,389 acres; barley, 544 acres; oats, 92 acres; peas and beans, 100 acres; potatoes, 301 acres; turnips, 13 acres; orchards, 546 acres; and flax and hemp, 37 acres.

By the year 1850 the area of crops had increased to 491,000 acres, of which 198,000 acres were cultivated in what is now the State of New South Wales and 169,000 acres in Tasmania. At the end of 1850 the area under cultivation in Victoria, which was then the Port Phillip District of New South Wales, was 52,190 acres. The bulk of the arable land in this part of the colony was devoted to the extensive grazing of sheep.

The gold discoveries of 1851 (at Bathurst in New South Wales and later at Ballarat and Bendigo in Victoria) had at first a very disturbing effect on agricultural progress. The area of crops declined from 491,000 acres in 1850 to 458,000 acres in 1854, as landowners and rural labourers joined in the various gold rushes. The demand for agricultural products occasioned by the large influx of population was, however, soon reflected in the increased area cultivated, for at the end of 1858 the land under crop in Australia exceeded a million acres. There was still a shortage of rural labour, and the increased acreage was due largely to the increasing mechanisation of crop operations.

## Progress of cultivation

The following table shows the area of crops in each of the States and Territories of Australia at ten-yearly intervals since 1860–61 and during each of the ten seasons 1956–57 to 1965–66. Plate 43 in this chapter shows the area of crops in Australia from 1900–01 onward (page 894).

The progress of agriculture was practically uninterrupted from 1860-61 to 1915-16, when, as the result of a special effort to increase wheat production during the 1914-18 War, 18.5 million acres were cultivated in Australia. There was a temporary setback in later war years, but after the end of the war the area continued to expand and increased steadily to the record area of 25.2 million acres in 1930-31. In the following years the slump in wheat prices seriously depressed incomes in the agricultural industry, and the area of crops decreased to just under 20 million acres in 1935-36.

By 1938-39 the industry was recovering from the depression, and the total area under cultivation reached the high level of 23.5 million acres. Thereafter, as a result of war-time manpower shortages and shipping difficulties, the area declined to less than 16 million acres in 1943-44. After that year production gradually increased again until, in 1947-48, 22.5 million acres were sown to crops. This upward trend was reversed after 1948-49, largely because many primary producers transferred from wheat to wool production as a result of the high prices of wool. After 1951-52, however, when the area sown was 20.0 million acres, the area under crops increased steadily except for 1956-57, when excessively wet conditions caused reductions in the area sown to wheat. Subsequent to that year the area of all crops has generally shown an upward trend and, in 1965-66, 34.5 million acres were sown, which was 0.2 million acres below the record area sown in 1964-65. As the area under wheat in Australia constitutes a large proportion of the total area cropped (51 per cent during the five years ended 1965-66), fluctuations in the former have been largely responsible for year to year variation in total crop area.

### **The Australian Agricultural Council**

The influence of governmental and semi-governmental authorities on Australian rural industry is most apparent in the fields of guaranteed prices, subsidies and controlled marketing. Many of these aspects of intervention at the national level take place indirectly through the Australian Agricultural Council. This is a permanent organisation which was formed following a conference of Commonwealth and State Ministers on agricultural and marketing matters, held at Canberra in December 1934. The Council consists of the Commonwealth Ministers for Primary Industry and Territories and the State Ministers of Agriculture, with power to co-opt the services of other Commonwealth and State Ministers as required. The principal functions of the Council are: the promotion of the welfare and development of agricultural industries generally; the exchange of information on agricultural production and marketing; the improvement of the quality of agricultural products and the maintenance of high grade standards; to ensure, as far as possible, balance between production and available markets; and organised marketing.

In addition, a permanent Standing Committee on Agriculture was formed to advise the Council, to secure co-operation and co-ordination in agricultural research, to advise State and Commonwealth Governments on the initiation and development of agricultural research, and to secure co-operation between all Governments in respect of quarantine measures against pests and diseases of plants and animals.

The Standing Committee on Agriculture comprises the permanent heads of the State Departments of Agriculture, the Secretary, Department of Primary Industry, and a representative each from the Commonwealth Departments of the Treasury, Health, Trade and Industry, and Territories, and from the Commonwealth Scientific and Industrial Research Organization.

### **Financial assistance to primary producers**

Financial assistance to primary producers by the Commonwealth Government may be provided in a number of ways. Examples of these follow.

*Bounties.* A bounty to producers, not exceeding \$4,000,000 in any one year, is currently paid on raw cotton produced and sold for use in Australia. This arrangement is due for review in 1968.

A bounty of \$27,000,000 paid annually on the production of butter, cheese and related butterfat products and an export bounty on processed milk products of a maximum of \$800,000 annually are both continued in the fifth Five Year Dairy Industry Stabilization Plan which commenced 1 July 1967.

*Commitments to industry-financed stabilisation schemes.* In schemes of this nature the Commonwealth generally accepts a defined contingent liability to contribute to Government

approved stabilisation funds if falling prices, or rising costs, or both, lead to a situation where growers' contributions prove inadequate. The Dried Vine Fruits Stabilization Fund and the Wheat Prices Stabilization Fund are examples of this.

#### **Other financial assistance**

The Commonwealth Government also pays for cattle tick control, flood, drought and bush fire relief, fisheries research, and farm mechanisation research.

Over recent years legislative research schemes financed by matching contributions from the Commonwealth, and industry or States, or both, have been initiated in regard to tobacco, wool, wheat, dairy produce, meat, eggs, wine, and honey. Non-legislative schemes, on a similar financial basis, have been operative in relation to Australian plague locusts, pest management in pome fruit orchards, grape crop forecasting, honey research, barley research, banana research, and fruit fly research.

#### **Agricultural training and research**

Agricultural colleges have been established in all States except Tasmania. The primary function of these colleges is the training of students in the various phases of agriculture and livestock husbandry. Students are required to undertake a considerable amount of practical work in addition to lectures and theory. A secondary function of the colleges is agricultural research and experimentation. To a lesser degree, they carry out extension work in the form of public field days. Upon graduation, students receive diplomas in agriculture, dairying, etc., according to the course undertaken.

Experimental farms have been set up by State Departments of Agriculture in all States. They are concerned primarily with agricultural research and experimentation, each farm concentrating on problems specific to the region in which it is located. The results of the work undertaken are passed on to farmers at field days which are held at regular intervals, through publication in various agricultural or scientific journals, and through the agricultural extension services of the State Departments of Agriculture.

The Commonwealth Scientific and Industrial Research Organization has field stations in many parts of Australia, and sometimes undertakes research jointly with the appropriate State authorities. It also has regional laboratories in several States, conducting research into agronomic and livestock problems as they occur in each particular region (*see also* the chapter Education, Cultural Activities and Research). The State Departments of Agriculture study problems of particular significance within their own boundaries. In addition, the universities carry out valuable work in their laboratories and on their experimental farms.

#### **Extension services**

Extension services operate in each State and in the Northern Territory, Australian Capital Territory and the Territory of Papua-New Guinea. Commonwealth funds have been provided to assist the States in their extension activities, through the Commonwealth Extension Services Grant and the Commonwealth Dairy Industry Extension Grant. These grants totalled \$1.4 million in 1965-66. In 1966 the Commonwealth determined that the grants would be amalgamated and enlarged, undertaking to make available in 1966-67 and each of the next four years additional funds rising to at least \$5.4 million per annum. The amount provided in 1966-67 was \$2.9 million. The scope of the grant was widened to enable support to be given to extension, regional (adaptive) research, information services, economic advisory work, etc., and to training for these purposes.

### **Distribution, production and value of crops**

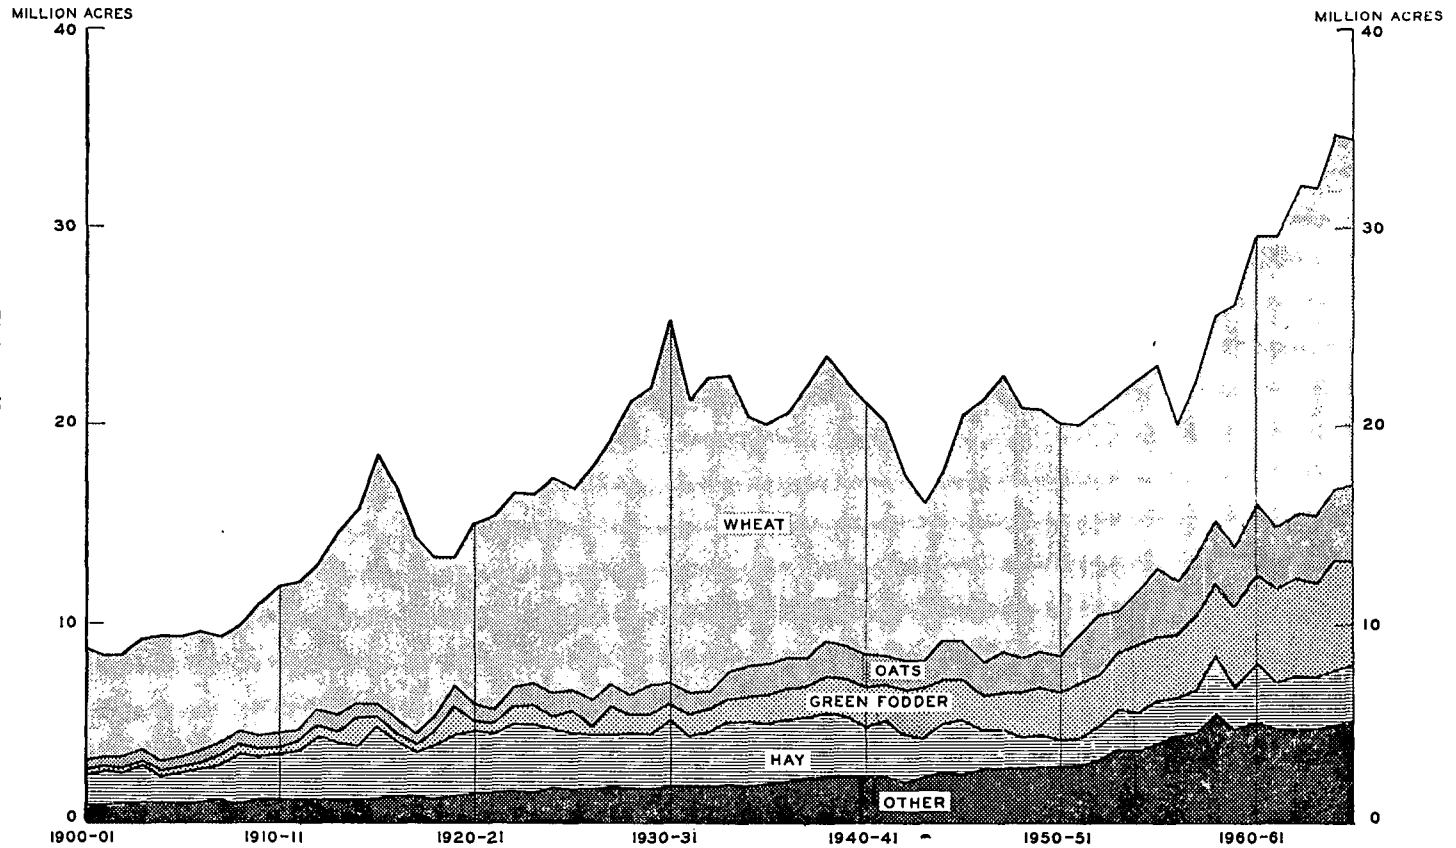

#### **Distribution of crops**

The wide range of climatic and soil conditions over the agricultural regions of Australia has resulted in a diversity of crops being grown throughout the Commonwealth. Generally, cereal crops (excluding rice and sorghum) are grown in all States over wide areas, while industrial crops are confined to specific locations in a few States. A graph showing the area sown to principal crops for the years 1900-01 to 1965-66 appears on plate 43, over the page.

(a) No deduction has been made for depreciation and maintenance.

**Indexes of quantum and price of agricultural production**

Indexes of quantum and price of agricultural production are shown in the following table. The quantum indexes relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been revalued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realised at the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. Further details on weights used, etc. are to be found in the chapter Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF AGRICULTURAL  
PRODUCTION, 1961-62 TO 1965-66**

(Base: Average three years ended June, 1939 = 100)

	1961-62	1962-63	1963-64	1964-65	1965-66
<b>Quantum produced—</b>					
Wheat . . . . .	150	186	199	224	158
Other crops . . . . .	171	194	194	214	200
<i>Total, all crops</i> . . . . .	<i>163</i>	<i>191</i>	<i>196</i>	<i>218</i>	<i>184</i>
<i>Per head of population</i> . . . . .	<i>106</i>	<i>122</i>	<i>122</i>	<i>133</i>	<i>110</i>

<i>Total, all crops</i> . . . . .	<i>348</i>	<i>334</i>	<i>351</i>	<i>351</i>	<i>354</i>

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values of the base years (1936-37 to 1938-39).

**Wheat**

Wheat is grown on a large scale in all States except Tasmania, and is the most important crop in Australia in terms of area, production and exports. The present limits of the wheat belt have been established after considerable fluctuation over the last four decades. In January 1934 a Royal Commission was appointed to inquire into and report upon the economic condition of the growing, handling and marketing of wheat, and the manufacturing, distributing and selling of flour and bread. The Report of this Royal Commission provides an authoritative description of all aspects of the industry up to that time.

**Wheat marketing and research**

Two of the aspects of governmental and semi-governmental assistance and control which have contributed to the development of the industry are the organisation of overseas marketing and of research.

As a large proportion of the Australian wheat crop is normally exported, the marketing of wheat plays an important part in the industry. The Australian Wheat Board was constituted in September 1939, under National Security (Wheat Acquisition) Regulations, to purchase, sell, or dispose of wheat or wheat products, and to manage and control all matters connected with the handling, storage, protection, shipment, etc. of wheat acquired, and such other matters as were necessary to give effect to the regulations. Details of the operations of the Australian Wheat Board and the Wheat Stabilization Board in licensing wheat grown during the seasons 1941-42 to 1948-49 will be found in Year Book No. 38, pages 940-1, and a detailed survey of legislation relating to stabilisation of the wheat industry, including controls exercised during the 1914-18 and 1939-45 Wars and legislation establishing the Wheat Stabilization Plan in 1948, is given in the Appendix to Year Book No. 37, pages 1295-9.

The Wheat Stabilization Board ceased to function on 31 December 1948, and under the *Wheat Industry Stabilization Act* 1948 the Australian Wheat Board was reconstituted for five years to administer the first stabilisation plan and was given powers similar to those held under the National Security Regulations. The new Board commenced to function on 18 December 1948. The Board has been continued in existence by the *Wheat Industry Stabilization Acts* 1954, 1958 and 1963 for the purpose of administering the second, third and fourth five-year stabilisation plans. Details of the more recent plans were published in Year Book No. 40, pages 841 and 842 (1947-48 to 1952-53 Plan), No. 44, page 861 (1953-54 to 1957-58), and No. 48, pages 903 and 904 (1958-59 to 1962-63).

*Fourth Post-war Wheat Industry Stabilisation Plan.* Following negotiations during 1962 and 1963, the fourth post-war Wheat Industry Stabilisation Plan was enacted by the Commonwealth and States towards the end of 1963. The new plan operates on very much the same lines as the previous ones. However, there are some important changes in detail in the main features of the plan which are set out below.

The plan operates for five years. It commenced with the 1963-64 wheat crop and will end with the marketing of the 1967-68 crop.

The *Wheat Export Charge Act* 1963 repealed the *Wheat Export Charge Act* 1958 and provided for an export charge on wheat and wheat products for the seasons 1963-64 to 1967-68 inclusive. The charge which may be levied is the excess of the export price over the cost of production or 15 cents a bushel, whichever is the less. The Commonwealth has guaranteed a return to growers applying to a maximum of 150 million bushels of wheat exported from each crop during the period of the plan. The guaranteed return is based on the findings of a survey of the economic structure of the wheat industry conducted by the Bureau of Agricultural Economics. It is subject to adjustment in each year of the plan in accordance with the movements in costs based on a cost index established from the survey. The guaranteed returns per bushel since the inception of the latest plan were: 1963-64, \$1.442; 1964-65, \$1.458; 1965-66, \$1.517. For the 1966-67 season the guaranteed return has been fixed at \$1.550 per bushel. The ceiling of the stabilisation fund is established at \$60 million; any excess beyond this figure is returned to growers on the 'first-in, first-out' principle. Collections from the wheat export charge are paid into the Wheat Prices Stabilization Fund, out of which payments will be made to the Australian Wheat Board, when required, for the purpose of building up the average export price, for any season, to the guaranteed price. When the average export realisations fall below the guaranteed return the deficiency is made up first by drawing upon the stabilisation fund in respect of up to 150 million bushels of wheat from each crop. If the fund is exhausted, additional payments will be made from the Consolidated Revenue Fund. As the return from exports has been below the guaranteed price, there have been no collections of the wheat export charge since the 1956-57 (No. 20) pool when \$3,178,000 was collected. In fact, growers' moneys in the Fund were exhausted with the closure of the 1959-60 Pool and since then the Commonwealth has been obliged to meet its commitment in respect of the export guarantee. Up to the closure of the 1964-65 Pool this has involved an amount totalling \$81 million.

The Australian Wheat Board is retained as the sole constituted authority for the marketing of wheat within Australia and for the marketing of wheat and flour for export from Australia for the period of the plan.

The home consumption base price for 1963-64, the first year of the new plan, was established at \$1.442 a bushel, bulk basis, f.o.r. ports plus 1.66 cents a bushel loading to cover the cost of transporting wheat to Tasmania. (Provision is made for a loading on the price of all wheat sold for consumption in Australia to the extent necessary to cover the cost of transporting wheat from the mainland to Tasmania in each season of the plan.) There is provision in the plan for annual adjustments in the following years in accordance with the guaranteed price as outlined above. The home consumption price for the 1965-66 season was \$1.533 a bushel and is \$1.565 a bushel for the 1966-67 season, including the freight to Tasmania loading of 1.5 cents a bushel.

A premium is paid from export realisations on wheat grown in Western Australia and exported from that State, in recognition of the natural freight advantage enjoyed by Western Australia owing to its proximity to the principal overseas markets for wheat. The premium is the amount of the actual freight advantage enjoyed by Western Australia up to a maximum of 2.5 cents a bushel.

#### F.A.Q. standard of wheat

Sales and shipments of grain in bulk overseas are generally made on a 'fair average quality' (f.a.q.) basis. Samples of wheat are obtained each year from the different wheat districts and mixed to give a representative sample of the whole crop in each State. From this representative sample the f.a.q. weight for each State is determined by the use of the Schopper 1-litre scale chondrometer. This standard is used as a basis for sales of each crop and it varies from year to year and from State to State. F.a.q. is an Australian term, and the method of selling differs from that of other countries, which sell according to sample, or (as in Canada) according to grades which are fixed and do not vary from year to year. The f.a.q. method does not, however, take protein quantity and quality into account, and it gives no indication therefore of the baking strength of the resulting flour.

There are two main classifications of Australian wheat in addition to the f.a.q. standard, namely, 'semi-hard' and 'premium-hard'. The former applies to wheat segregated as such in South Australia, and the latter to higher-protein wheat of northern New South Wales and Queensland of a guaranteed minimum protein content. Both wheats sell at a premium above f.a.q. The f.a.q. weight of a bushel of wheat in each of the four main wheat-producing States for the 1965-66 season's crop was as follows: New South Wales, north, none fixed due to drought conditions, south and west, 63 lb; Victoria, 63½ lb; South Australia, semi-hard, 62½ lb, f.a.q., 63 lb; and Western Australia, 62½ lb.

#### Bulk handling and storage of wheat

A detailed description of the bulk handling system, including its advantages and disadvantages compared with other methods of handling, appears on pages 954-8 of Year Book No. 39.

New South Wales, Victoria and Western Australia have operated bulk handling systems for a number of years, and in more recent years other States have also introduced bulk systems. The bodies concerned with the administration of bulk handling in the various States are: Grain Elevators Board of New South Wales, Victorian Grain Elevators Board, State Wheat Board (Queensland), South Australian Co-operative Bulk Handling Ltd., Co-operative Bulk Handling Ltd. (Western Australia), and the Tasmanian Grain Elevators Board.

The table below sets out the bulk handling capacities of the several States for the years 1962 to 1966.

**WHEAT: TOTAL CAPACITY OF BULK HANDLING FACILITIES<sup>(a)</sup>**  
**STATES, 30 NOVEMBER 1962 TO 1966**  
('000 bushels)

State	1962	1963	1964	1965	1966
New South Wales . . . . .	79,486	87,046	93,727	104,852	117,472
Victoria <sup>(b)</sup> . . . . .	76,969	86,253	90,247	97,132	101,302
Queensland . . . . .	9,525	11,081	13,178	15,956	19,213
South Australia . . . . .	23,220	28,370	35,483	39,685	43,328
Western Australia . . . . .	98,734	99,535	115,438	128,175	134,898
Tasmania . . . . .	960	960	960	1,060	1,060
<b>Australia . . . . .</b>	<b>288,894</b>	<b>313,245</b>	<b>349,033</b>	<b>386,860</b>	<b>417,273</b>

(a) Includes terminals, sub-terminals, country installations, and temporary storage. (b) Includes storage in southern New South Wales operated by the Victorian Grain Elevators Board.

Particulars of the operation of the bulk handling and storage systems in each State are set out on pages 916 and 917 of Year Book No. 48.

#### International wheat agreement

Details of the first and second International Wheat Agreements operative from 1 August 1949 to 31 July 1953, and from 1 August 1953 to 31 July 1956, respectively, were published in

Year Book No. 42 (see pages 840-1) and previous issues. Details of the third and fourth International Wheat Agreements which covered the period from 1 August 1956 to 31 July 1959 and 1 August 1959 to 31 July 1962 were published in Year Books 43 (page 836) and 48 (page 906), respectively.

A fifth International Wheat Agreement, ratified by the required number of wheat exporting and importing countries, came into force on 1 August 1962. This was intended to cover the three-year period from 1 August 1962 to 31 July 1965, but at a special meeting held in February 1965 the International Wheat Council adopted the text of a protocol providing for the prolongation of the Agreement, without amendment, to 31 July 1966. The council stated that it recognised the need for the maintenance of institutional arrangements to provide for continuing international co-operation in wheat matters, and that, following its decision to recommend a one-year extension of the existing agreement, it had given immediate consideration to preparatory work designed to ensure effective arrangements to follow the expiry of the term of the protocol. The Agreement was subsequently extended by protocol to 31 July 1967 and, with the exception of provisions relating to maximum and minimum prices, for a further year to 31 July 1968.

The current Agreement, negotiated at an international conference convened by the United Nations, continues the basic arrangements covered by previous Agreements. It seeks to obtain an element of stability in world wheat marketing by providing that a significant proportion of wheat entering international trade will be bought and sold at prices within a prescribed price range. The maximum and minimum prices fixed under the Agreement are expressed in terms of 'Canadian currency per bushel, at the parity of the Canadian dollar determined for the purposes of the International Monetary Fund as at 1 March 1949'. Member exporting countries compete to supply at prices within the prescribed range, which is from 202.5 cents (U.S. equivalent) or about 182.9 cents (Australian), to 162.5 cents (U.S. equivalent), or about 145.0 cents (Australian) per bushel. The maximum of the range is based on the price of Canada's No. 1 Northern Manitoba wheat in bulk in store at Fort William/Port Arthur. The minimum f.o.b. price for each exporter is the equivalent of the c. and f. price in the United Kingdom of the minimum price of Canada's No. 1 Northern Manitoba wheat in bulk in store at Fort William/Port Arthur, using currently prevailing transportation costs and exchange rates and making such allowance for differences in quality as may be agreed between the exporting and importing countries concerned.

Member importing countries have undertaken to buy each year from member exporting countries a stated percentage of their total commercial requirements at prices within the agreed range. For their part, exporting countries are obliged to make wheat available for purchase by importing countries in any crop year at prices within the price range in quantities sufficient to satisfy the commercial requirements of those countries; if the price goes to the maximum, exporters have undertaken to make available, at that maximum price, specified (datum) quantities based on their past trading record with member importers.

The current Agreement empowers the International Wheat Council to make an annual review of the world wheat situation, including the international implications of national policies in respect of wheat production, stocks and marketing, and the disposal of wheat surpluses on non-commercial terms.

Provision has also been made for the right of appeal against excessive discounts from the minimum price on the basis of differences in quality between the basic wheat—Canada's No. 1 Northern Manitoba wheat—and the wheat supplied by other member countries.

Member countries of the fifth International Wheat Agreement are as follows.

*Exporters.* Argentina, Australia, Canada, France, Italy, Mexico, Spain, Sweden, Union of Soviet Socialist Republics, and United States of America.

*Importers.* Austria, Belgium and Luxembourg, Brazil, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Federal Republic of Germany, Finland, Greece, Guatemala, Iceland, India, Indonesia, Ireland, Israel, Japan, Liberia, Libya, the Netherlands, New Zealand, Nigeria, Norway, Peru, Philippines, Portugal, Republic of Korea, Saudi Arabia, Sierra Leone, South Africa, Rhodesia, Switzerland, Tunisia, United Arab Republic, United Kingdom, Vatican City, Venezuela, and Western Samoa.

#### Research into the wheat industry

The extension and growth of the wheat industry in the past has been made possible to a large extent through research into new varieties of seed, crop rotation and fertiliser treatments by governmental, university and private research organisations. In recent years there has been a growing awareness of the value of this research, and funds are being raised by a direct levy on the growers' returns.

The *Wheat Tax Act* 1957 imposed a tax of 0.21 cents for each bushel of wheat:

- (a) which was delivered to the Wheat Board on or after the first day of October 1956 and before the date of commencement of the Act, or
- (b) which was delivered to the Wheat Board on or after that date.

The Act was amended in October 1965 to become the *Wheat Tax Act 1957-1965* to provide for an increase in the rate of taxation from 0.21 cents to 0.25 cents for each bushel of wheat delivered to the Board on or after 1 October 1965. The *Wheat Research Act 1957* provided for the establishment of a Wheat Research Trust Account to receive moneys payable under the *Wheat Tax Act 1957*, and for the setting up of a Wheat Industry Research Council to direct the expenditure of moneys from that account for research, etc. to benefit the wheat industry. This money, contributed by the growers, is being spent by the Wheat Industry Research Committees set up in the wheat-growing States. These Committees, which consist of representatives of wheatgrowers, universities and State Departments of Agriculture, also received a total of \$568,000 under the provisions of the *Wheat Acquisition (Undistributed Moneys) Act 1958*.

The Commonwealth Government has undertaken to supply additional funds for research (with a maximum of \$1 for \$1 against the growers' contribution) and has set up the Wheat Industry Research Council to make recommendations on the appropriate expenditure of the Commonwealth contribution. The Council, at its inaugural meeting in February 1958, considered that possible avenues of research would include the breeding of better varieties, cereal chemistry, soil fertility, mechanisation, the industry's cost structure, and marketing problems. To the end of June 1966 the Council and the State Committees had spent \$7,488,812, including grants to the Commonwealth Scientific and Industrial Research Organization, State Departments of Agriculture, universities, and agricultural colleges.

#### Wheat farms: number and classification by activity

Particulars of the number of farms growing twenty acres and upwards of wheat for grain during each of the years 1961-62 to 1965-66 are shown in the following table. A farm worked on the share system or as a partnership is included as one holding only.

NUMBER OF FARMS GROWING TWENTY ACRES AND UPWARDS  
OF WHEAT FOR GRAIN: STATES AND A.C.T., 1961-62 TO 1965-66

State or Territory	1961-62	1962-63	1963-64	1964-65	1965-66
New South Wales . . . . .	17,489	18,286	17,753	18,537	16,194
Victoria . . . . .	11,648	12,166	11,370	11,981	11,355
Queensland . . . . .	4,483	5,095	4,927	5,236	4,941
South Australia . . . . .	9,434	9,881	9,902	9,657	9,387
Western Australia . . . . .	8,722	8,966	8,983	8,779	9,044
Tasmania . . . . .	222	243	251	255	213
Australian Capital Territory . . . . .	25	27	29	20	13
<b>Australia . . . . .</b>	<b>52,023</b>	<b>54,664</b>	<b>53,215</b>	<b>54,465</b>	<b>51,147</b>

There is in Australia a widespread combination of wheat growing with other rural activities. This is illustrated, for the 1959-60 season, by a table on pages 1016 and 1017 of Year Book No. 49.

#### Varieties of wheat sown

The breeding of wheat suitable to local conditions has long been established in Australia. Farrer (1845-1905) did invaluable work in pioneering this field, and the results of his labour and the continued efforts of those who have followed him have proved of immense benefit to the industry. Their efforts have resulted in the development of disease-resistant varieties, better average yields, and a greater uniformity of sample, with which have accrued certain marketing advantages, as well as an improvement in the quality of wheat grown. More than 1,000 different varieties of Australian wheats have been catalogued by the Commonwealth Scientific and Industrial Research Organization, but the number of principal varieties grown in any one season is restricted to about forty-five.

The principal varieties of wheat sown and the percentage of each to the total area sown in the five main wheat-producing States of Australia in 1965-66 were as follows: New South Wales, Heron (26.6), Falcon (15.5), Olympic (14.3); Victoria, Insignia (47.1), Olympic (23.2), Pinnacle (18.7); Queensland, Spica (33.2), Mendos (19.0), Gala (14.9); South Australia, Insignia (37.4), Heron (17.5), Gabo (13.6); and Western Australia, Gamenya (24.9), Gabo (18.4), Insignia (17.0), Insignia 49 (10.7). A detailed table of wheat varieties sown appears in the annual bulletin *The Wheat Industry* (see no. 110, published in February 1967).

## Wheat area, production and yield per acre

Prominent factors in the early development of the wheat industry were the increase in population following the discovery of gold and the redistribution of labour after the surface gold had been won. The economic depression of 1893 interrupted its progress, but its subsequent recovery was assisted by the invention of mechanical appliances, the use of superphosphates as an aid to production, and the introduction of new and more suitable varieties of wheat for Australian conditions. The establishment of closer settlement schemes and the settling of returned soldiers and others on the land were additional factors in its expansion.

The area, production and yield per acre of wheat for grain in each State are shown below for the years 1961-62 to 1965-66 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

WHEAT FOR GRAIN: AREA, PRODUCTION AND YIELD PER ACRE  
STATES AND A.C.T., 1936-37 TO 1965-66

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.

(a) 60 lb per bushel.

A graph showing the area sown to wheat for grain in Australia since 1900-1 appears on plate 43 of this Year Book, and a map showing the distribution of areas growing wheat for grain throughout Australia in 1962-63 appears on page 1013 of Year Book No. 50. Similar maps showing the distribution of wheat areas in 1924-25, 1938-39, 1947-48, and 1954-55 appeared respectively in Year Books No. 22, page 695, No. 34, page 451, No. 39, pages 977-8, and No. 43, page 883.

Apart from the variations in the area sown, the size of the wheat harvest in Australia is determined largely by the nature of the season, resulting in considerable year-to-year fluctuations in production. The main wheat-producing States of Australia are New South Wales, Victoria, South Australia, and Western Australia. Tasmania imports wheat from the mainland to satisfy its needs, though it exports flour made from local wheat which is particularly suitable for biscuits.

Production of wheat in 1965-66 at 259,666,000 bushels was 30 per cent below the record production of 1964-65, owing to severe drought conditions in New South Wales and Queensland. Compared with the previous season, production decreased in New South Wales by 112,367,000 bushels (74 per cent), Victoria, 17,574,000 bushels (23 per cent), Queensland, 5,400,000 bushels (24 per cent), and South Australia, 12,841,000 bushels (24 per cent). The fall in production was offset to some extent by a record crop in Western Australia, which exceeded that of the previous year by 39,085,000 bushels (62 per cent).

Short-term variations in yield per acre are due chiefly to seasonal influences. The yield per acre in 1965-66 (14.8 bushels) was the lowest since 1957-58. A record yield of 20.7 bushels was obtained in 1958-59.

The following table shows the average area, production and yield per acre for decennial periods since 1861 together with similar details for the latest season, 1965-66. Repeated cropping and short rotations (mainly in the eastern States) are believed to have led to the decline in yield to 1900, while fallowing and the widespread use of artificial fertilisers contributed to the increased yields in the decade following. The increase in yield since 1950 has been generally ascribed to the impact of improved pastures and ley-farming (broadly, the alternation of crops and pastures) upon soil fertility in wheat-growing areas. The production and yield per acre of wheat for each year from 1935-36 to 1965-66 are shown on plate 44 opposite.

**WHEAT FOR GRAIN: AVERAGE AREA AND PRODUCTION, AUSTRALIA, 1861 TO 1965-66**

#### Price of wheat

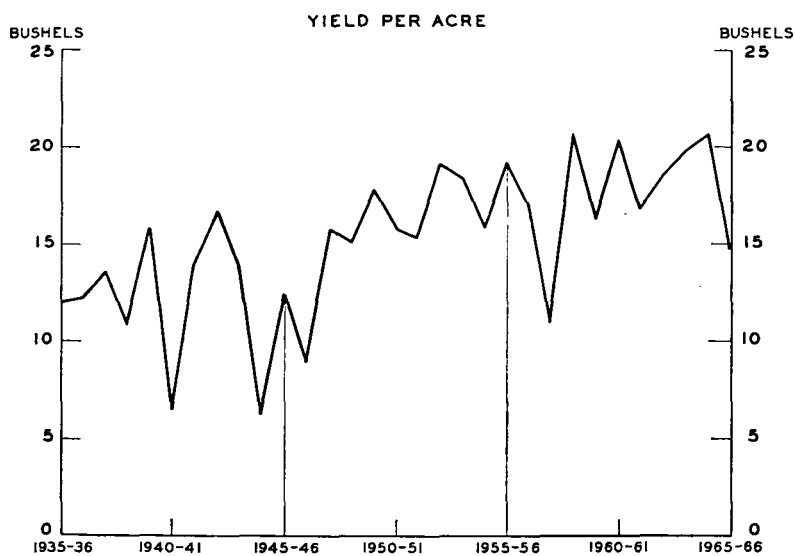

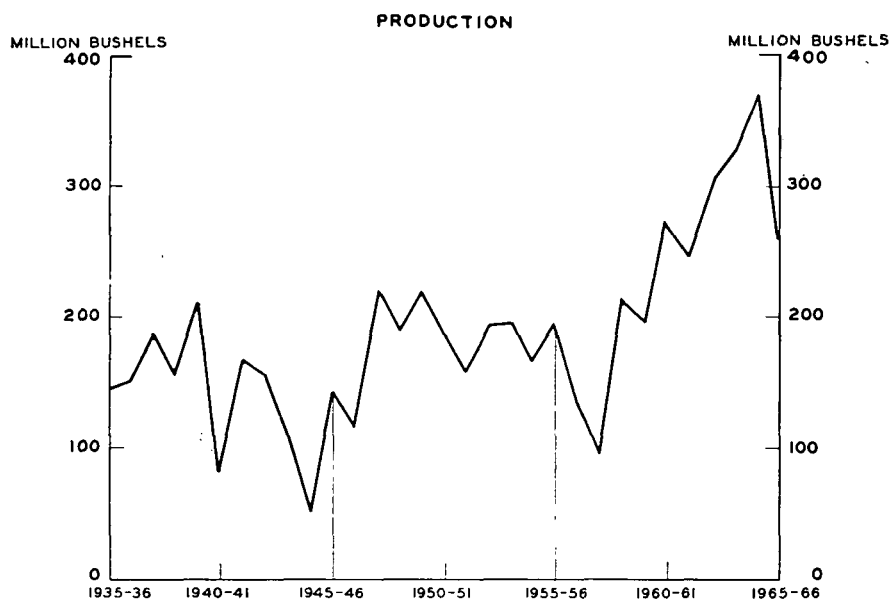

The prices charged by the Australian Wheat Board for wheat sold to millers for gristing into flour for consumption in Australia and for wheat sold as stock feed were as follows: year ended 30 November 1963, \$1.60; 1964, \$1.46; 1965, \$1.47; 1966, \$1.53; and 1967, \$1.57. These prices include a loading to meet freight charges incurred on wheat shipped to Tasmania (1.25 cents in 1963; 1.66 cents in 1964; 0.83 cents in 1965; 1.66 cents in 1966; and 1.50 cents in 1967).

The Wheat Board's monthly basic export selling prices for f.a.q. bulk wheat f.o.b. basis, both for wheat sold under the International Wheat Agreement and for 'free' wheat sold on the open market, fell in the following ranges: season ended 31 July 1963, \$1.42 to \$1.49; 1964, \$1.43 to \$1.58; 1965, \$1.35 to \$1.52; and 1966, \$1.38 to \$1.51. Actual selling prices have been lower than the basic prices in some cases, particularly where other exporting countries enjoy a geographical freight advantage.

The 1959 International Wheat Agreement set the maximum price at 200 cents (U.S. equivalent) a bushel and the minimum at 150 cents (U.S. equivalent) for f.a.q. wheat sold under the Agreement. Under the current 1962 Agreement operative from 1 August 1962 (see page 903) the agreed price range is between 202.5 cents (U.S. equivalent) and 162.5 cents (U.S. equivalent). Directly converted into Australian currency these limits are approximately 182.9 cents and 145.0 cents a bushel respectively.

# WHEAT FOR GRAIN

## AUSTRALIA, 1935-36 TO 1965-66

Details of export prices of wheat in previous years, including those received for wheat sold under the terms of the 1949-1953 International Wheat Agreement, are given in Year Book No. 40, pages 849-50, and in the statistical bulletin *The Wheat Industry, Australia*, No. 99, March 1961, and in previous issues of these publications.

#### Value of the wheat crop

The estimated gross value of the wheat crop in each State and in Australia during the season 1965-66 and the value per acre are shown below.

#### WHEAT FOR GRAIN: VALUE OF CROP<sup>(a)</sup>, STATES, 1965-66

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(b)
Aggregate value	\$'000	56,524	89,939	25,231	59,559	153,050	508	384,853
Value per acre	\$	12.35	29.26	26.45	21.70	24.89	36.01	21.97

(a) Gross value of total crop, including wheat used for seed and for stock feed on farms. Also includes payment of \$16,154,000 by the Commonwealth Government. (b) Includes the Australian Capital Territory.

#### Production and disposal of wheat in Australia

In the following tables details are given of Australian Wheat Board transactions and of total production and disposal of wheat during each of the years ended 30 November 1962 to 1966.

#### AUSTRALIAN WHEAT BOARD WHEAT RECEIVED, STATES, 1961-62 TO 1965-66 HARVESTS (\*000 bushels)

Pool	Harvest	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
25 . . .	1961-62	67,784	55,121	9,981	30,737	60,459	208	224,290

29 . . .	1965-66	27,554	60,904	13,701	36,160	95,837	217	234,373

Stocks of wheat (including flour in terms of wheat) held by the Australian Wheat Board in each State at 30 November for the years 1962 to 1966 are shown in the following table. These data relate to stocks held at mills, sidings, ports, and depots as recorded by the Australian Wheat Board.

#### AUSTRALIAN WHEAT BOARD: STOCKS<sup>(a)</sup> OF WHEAT (INCLUDING FLOUR IN TERMS OF WHEAT), STATES, 30 NOVEMBER 1962 TO 1966 (\*000 bushels)<sup>(b)</sup>

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
1962 . . .	5,574	6,021	1,333	1,831	2,449	491	17,699
1963 . . .	10,879	7,000	775	1,775	2,221	625	23,275
1964 . . .	7,340	7,490	806	3,048	1,257	472	20,413
1965 . . .	15,265	3,716	862	2,602	1,556	382	24,383
1966 . . .	3,406	6,020	343	2,623	3,626	529	16,547

(a) Held at mills, sidings, ports and depots. Excludes new season's wheat received from growers prior to 30 November of years shown. (b) One short ton (2,000 lb) of flour is taken as being equivalent to 46.3 bushels of wheat.

Particulars of the disposal of wheat during the years ended 30 November 1962 to 1966, as recorded by the Australian Wheat Board, are shown in the following table.

### AUSTRALIAN WHEAT BOARD: DISPOSAL OF WHEAT, 1962 TO 1966

('000 bushels)

	Year ended 30 November—				
	1962	1963	1964	1965	1966
Exported as wheat . . . . .	152,818	203,703	221,530	243,725	158,104
Exported as flour(a) . . . . .	25,123	24,903	31,797	23,318	16,615
Sold for local consumption as flour . . . . .	40,736	40,389	42,954	44,160	44,164
Sold for other purposes . . . . .	11,635	10,791	13,658	30,556	22,705

(a) Includes wheat equivalent of manufactured wheat products exported.

A summary of *all* transactions in wheat for Australia, as distinct from those recorded for the Wheat Board above, appears in the following table.

### WHEAT: PRODUCTION AND DISPOSAL, AUSTRALIA, 1962 TO 1966

(f) Subject to additional \$16,154,000 provided by the Commonwealth Government and payment of \$586,000 to Wheat Industry Research Fund.

Details of earlier pools will be found in previous issues of the Year Book.

## Imports of wheat

Wheat and flour have been imported in substantial quantities on three occasions since 1900; in 1902-3 the wheat harvest was only 12,378,000 bushels, and wheat and flour equivalent to 12,468,000 bushels of wheat were imported. An equivalent of 7,279,000 bushels was imported in 1914-15 to supplement the yield of 25 million bushels produced in that season. Owing to drought conditions in 1957-58 supplies of high protein wheat were insufficient for local requirements and, as a result, 1,485,000 bushels were imported from Canada in 1958. No wheat has since been imported.

## Exports of wheat and flour

Statistics in the following three tables are for years ended 30 June and relate to the exports of *Australian produce* only.

## WHEAT AND FLOUR: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66

Year	Quantity				Value		
	Wheat	Flour		Total (in terms of wheat)	Wheat	Flour(a)	Total
		As flour (a)	In terms of wheat (b)				
	'000 bushels	short tons	'000 bushels	'000 bushels	\$'000 f.o.b.	\$'000 f.o.b.	\$'000 f.o.b.

The exports of wheat during the year 1965-66 are illustrated in plate 45 over the page.

# EXPORTS OF WHEAT AND FLOUR AUSTRALIA, 1965-66

## WHEAT

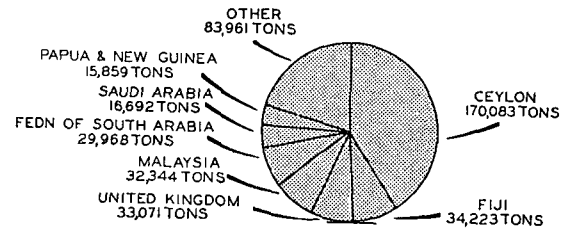

PLATE 45

912

TOTAL: 189.5 MILLION BUSHEL

## FLOUR

TOTAL: 416,201 SHORT TONS

(ONE SHORT TON OF FLOUR IS EQUIVALENT TO 46.3 BUSHEL OF WHEAT  
I.E. 416,201 SHORT TONS OF FLOUR = 19.3 MILLION BUSHEL OF WHEAT)

## World area and production of wheat

The figures in the following table of the world area and production of wheat by principal countries and by continents have been compiled from the statistics published by the International Wheat Council. Harvests in the northern hemisphere occur in the first of the two years mentioned in each column heading, and in the southern hemisphere at the end of that year and the beginning of the next. Harvests of the northern hemisphere countries are thus combined with those of the southern hemisphere which immediately follow; e.g. in 1965-66 the Canadian harvest occurred from August to September 1965 and the Australian harvest from September 1965 to February 1966.

(b) International Wheat Council estimate.

## Principal wheat exporting and importing countries

The following table shows world exports of wheat and wheat flour (in terms of wheat) by the major wheat exporting countries, according to continents and countries of primary destination, based on statistics recently published by the International Wheat Council. While Australia's production of wheat has averaged about three per cent of the world's total during recent years, its exports account for a much higher proportion of the total quantities shipped. For the three years ended 1965-66 Australia's share of the world wheat exports has averaged twelve per cent.

## WORLD EXPORTS OF WHEAT AND WHEAT FLOUR IN TERMS OF WHEAT

(a) Excludes U.S.S.R., details for which are shown separately.

The above particulars are based on customs clearances of the exporting countries, and relate to years ended 30 June. There are small differences between Australian exports as shown and those on pages 910-11 due in part to the use by the International Wheat Council of a slightly different factor to convert flour to wheat equivalent.

## Oats

This cereal is widely grown in all agricultural areas which have autumn, winter and spring rainfall; it is tolerant of wet conditions and heavy soils. It has excellent feed value and produces a higher yielding crop than other winter cereals. It needs less cultivation, but requires ample fertiliser. Oats has a variety of uses—as a pasture plant when rough sown into stubble or heavy clover pastures, as silage if cut before maturity, as a hay crop when mown and baled or cut for chaff, or as a grain when stripped (the stubble then being grazed off). The grain is sold on a 'fair average quality' basis through voluntary pools in Victoria, South Australia and Western Australia.

**Oats area, production and yield per acre**

Oats is usually next in importance to wheat among the grain crops cultivated in Australia. However, while wheat grown for grain in 1965-66 accounted for 51 per cent of the area of all crops, oats grown for grain represented only 11 per cent. The area, production and yield per acre of oats in each State are shown below for the years 1961-62 to 1965-66 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. Drought conditions in New South Wales, one of the principal producing States, caused the 1965-66 crop to fall below the level of recent years.

(a) 40 lb per bushel.

Graphs showing the area sown to oats and production of oats in Australia appear on pages 993 and 995 of Year Book No. 49, and a map showing the distribution of areas growing oats for grain throughout Australia in 1962-63 appears on page 1015 of Year Book No. 50. The area sown to oats from 1900-01 is shown in plate 43, page 894.

In 1965-66 the production of oats was 60,739,000 bushels, 26,166,000 bushels (30 per cent) below the record harvest of 86,905,000 bushels in 1958-59. The yield per acre in 1965-66 was 16.1 bushels, compared with the record yield of 21.9 bushels per acre established in 1958-59. The lowest yield recorded was 4.4 bushels per acre in the abnormally dry season of 1944-45.

#### Value of oat crop

The average wholesale price in the Melbourne market for oats of good milling quality was \$0.94 a bushel in 1965-66, compared with \$0.77 in 1964-65. The estimated gross value of the oat crop in each State for the 1965-66 season and the value per acre were as follows.

OATS FOR GRAIN: VALUE OF CROP, STATES, 1965-66

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust. (a)
Aggregate value . \$'000	15,002	15,287	691	3,346	18,403	558	53,323
Value per acre . \$	14.53	15.83	15.36	7.36	14.84	19.72	14.15

(a) Includes the Australian Capital Territory.

#### Exports of oats

The production of oats in Australia is sufficient to allow for an export trade which fluctuates with the incentive offered by overseas prices. The quantities and values of Australian-produced oats exported from Australia during the years 1961-62 to 1965-66 are shown below.

OATS: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66

	1961-62	1962-63	1963-64	1964-65	1965-66
Quantity . . . '000 bus.	19,064	17,744	16,673	20,161	13,825
Value . . . \$'000 f.o.b.	14,957	14,152	12,623	15,616	11,980

In 1965-66 the principal countries of destination were the Federal Republic of Germany (9,282,000 bushels), Italy (1,502,000 bushels), the United Kingdom (919,000 bushels), the Netherlands (768,000 bushels), and Japan (606,000 bushels). Imports of oats into Australia are not recorded separately.

#### Oatmeal and other oat products

In 1965-66 the production of granulated or rolled oats or oatmeal (kilned and unkilned) for breakfast foods, porridge and other purposes was 35,600 tons.

#### World production of oats

The world production of oats for the year 1965, according to figures issued by the United States Department of Agriculture, amounted to 3,030 million bushels, harvested from 73.5 million acres, resulting in an average yield of 41.2 bushels an acre. This compared with an estimated production in the previous year of 2,890 million bushels from an area of 74.5 million acres and an average yield of 38.8 bushels an acre.

### Barley

This cereal contains two main groups of varieties, 2-row and 6-row. The former is generally, but not exclusively, preferred for malting purposes. Barley was formerly stubble-sown, but is now grown principally on pasture land worked up early in the year of sowing. In this way it forms an important phase in the rotation of the land. Like oats, it may also be sown for fodder production or for grain. When sown for fodder, sowing may take place either early or late in the season, as it has a short growing period. It may thus provide grazing or fodder supplies when other sources are not available. Barley grain may be crushed to meal for stock (especially pigs) or sold for malting.

Crops sown for malting purposes require well-worked, weed-free paddocks of even soil, and are thus restricted to specific districts. The main barley-growing areas in Australia are situated in South Australia (Murray-Mallee, Eyre and Yorke Peninsulas), but considerable quantities are grown also in New South Wales, Victoria, Queensland, and Western Australia.

**Barley boards**

The bulk of the barley crop in the various States is acquired and marketed by grower-controlled boards. Pooled returns from sales are distributed to growers at standard rates for the individual grades and varieties delivered. The Victorian and South Australian crops are marketed by the Australian Barley Board (a joint board established by the two State Governments), and the Queensland and Western Australian Barley Boards handle the crops of their respective States. Particulars of the proportion of barley production which was received by the Australian Barley Board (for Victoria and South Australia), together with details of quantity sold, advances and total payments to growers, are presented below.

**AUSTRALIAN BARLEY BOARD: BARLEY RECEIVED, SOLD, ETC.  
1961-62 TO 1965-66**

Pool	Quantity received	Quantity sold(a)	Total advances made per bushel on 2-row no. 1 grade less freight	Total net payments to growers
	'000 bushels	'000 bushels	\$	\$'000
No. 23 (1961-62 Crop)	20,081	20,059	1.1607	19,414
" 24 (1962-63 " )	17,195	17,285	1.1563	16,666
" 25 (1963-64 " )	23,145	23,204	1.1862	22,446
" 26 (1964-65 " )	25,465	25,404	1.2000	25,184
" 27 (1965-66 " )	14,922	14,893	b 1.2000	b 13,785

(a) Includes surplus or shortage in out-turn, except for No. 27 Pool for which the surplus has not yet been ascertained. (b) As at 30 April 1967. At that date it was estimated that the amount still to be paid to growers was 6.969 cents per bushel.

**Barley area, production and yield per acre**

There was a substantial increase in the area of barley sown for grain (particularly in Western Australia and Queensland) in the years up to 1960-61, and in that year the area sown reached the record level of 2,830,000 acres. However, the area sown in 1965-66, 2,298,000 acres was 19 per cent less than the area in 1960-61. The production of barley for grain in 1965-66, 41,835,000 bushels, was 39 per cent less than the record production of 67,970,000 bushels in 1960-61. The area, production and yield per acre of barley for grain in the several States for the years 1961-62 to 1965-66, compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. Separate details for 2-row and 6-row varieties are shown for all States for 1965-66.

(a) 50 lb per bushel.

For Australia, 77 per cent of the area of barley for grain in 1965-66 was sown with 2-row barley, while the remainder consisted of 6-row varieties. The proportion, however, varied considerably in the several States. The utilisation of barley during the season ended November 1966 was as follows: exports, 9,842,000 bushels; malting and distilling, 13,200,000 bushels; pearl barley, 141,000 bushels; seed, 3,000,000 bushels.

The following table sets out the acreage and production of 2- and 6-row barley in Australia during the seasons 1961-62 to 1965-66 and the averages for the three years ended 1938-39, 1948-49 and 1958-59.

(a) 50 lb per bushel. (b) Excludes Tasmania.

A graph showing the production of barley in Australia since 1935-36 appears on page 995 of Year Book No. 49, and a map showing the distribution of barley growing areas throughout Australia in 1962-63 appears on page 1014 of Year Book No. 50.

#### Value of barley crop

The average wholesale price for 2-row English malting barley in the Melbourne market was \$1.47 a bushel in 1965-66, the same figure as in 1964-65. The estimated gross value of the barley crop in each State for the 1965-66 season and the value per acre are shown in the following table.

**BARLEY FOR GRAIN: VALUE OF CROP, STATES, 1965-66**

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value.	\$'000	5,318	3,662	10,521	20,234	7,298	899	47,932
Value per acre	\$	22.52	19.05	31.11	18.43	17.67	45.16	20.86

#### Exports of barley

South Australia was the principal exporting State in 1965-66, and Italy, the Federal Republic of Germany, Japan, the United Kingdom, and the Netherlands were the principal countries to which barley was shipped. Particulars of exports of Australian produced barley for the years 1961-62 to 1965-66 are shown in the following table.

**BARLEY: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

		1961-62	1962-63	1963-64	1964-65	1965-66
Quantity	'000 bus	31,435	10,322	17,756	16,281	9,994
Value	\$'000 f.o.b.	29,908	10,458	18,298	18,002	11,508

In addition to exports of barley grain, there are also exports of Australian pearl and Scotch barley, the total for 1965-66 amounting to 529,945 lb, valued at \$20,264, the main country of consignment being Kuwait. Imports of barley into Australia are not recorded separately, but are considered to be negligible.

#### Barley malt

Details of the recorded usage of barley and the production of barley malt in the years 1961-62 to 1965-66 are given in the following table.

**BARLEY MALT: GRAIN USED AND MALT PRODUCED, AUSTRALIA  
1961-62 TO 1965-66**

		1961-62	1962-63	1963-64	1964-65	1965-66
Barley used	'000 bus(a)	10,287	10,119	11,886	11,667	12,883
Malt produced	'000 bus(b)	10,207	10,429	11,988	12,127	13,235

(a) 50 lb per bushel.

(b) 40 lb per bushel.

Since 1952-53 the production of malt in Australia has been sufficient to meet local requirements and to provide a margin for export. Exports of Australian produce amounting to 4,058,000 bushels (value \$7,842,000) and 4,678,000 bushels (value \$9,295,000) were recorded in 1964-65 and 1965-66 respectively.

#### World production of barley

In comparison with the barley production of other countries that of Australia is extremely small. The main producers in 1965 were the Union of Socialist Soviet Republics, the United States of America and the United Kingdom. China is also normally a major producer, but details for 1965 are not available. Australian production in that year was approximately 1 per cent of the world total.

According to estimates made by the United States Department of Agriculture, world production of barley in the year 1965 amounted to 4,232 million bushels harvested from 154.0 million acres, equivalent to a yield per acre of 27.5 bushels. This compared with the production of 4,295 million bushels in the previous year from 162.5 million acres, a yield of 26.4 bushels per acre.

### Sorghum

Grain sorghum is a summer-growing annual palatable to stock and more drought- and frost-resistant than maize. It requires a summer rainfall. The growing of this crop for grain on an extensive scale is a comparatively recent development in Australia, and, as with other cereals, operations are highly mechanised.

The climatic conditions of Queensland and northern New South Wales are particularly suited to the growing of sorghum, and development has so far been restricted mainly to these areas, more particularly to Queensland. The grain produced is fed to livestock and has become an important source for supplementing other coarse grains for this purpose. Other sorghums are grown in Australia mainly as green fodder, hay and silage (sweet sorghums and Sudan grass) and for the production of brush for broom manufacture (broom millet). In Queensland the growing of grain sorghum is concentrated in the Burnett, Dawson-Callide areas and in the central highlands. In New South Wales the north western slopes and Murrumbidgee Irrigation Area are the main areas. This crop is also suitable for the semi-tropical areas of the Northern Territory and the Kimberleys.

Particulars of the area and production of sorghum grown for grain in recent years are given in the following table.

**GRAIN SORGHUM: AREA, PRODUCTION AND YIELD PER ACRE, STATES  
1961-62 TO 1965-66**

Year	Area			Production(a)			Yield per acre(a)		
	N.S.W.	Qld	Aust. (b)	N.S.W.	Qld	Aust. (b)	N.S.W.	Qld	Aust. (b)
	acres	acres	acres	'000 bushels	'000 bushels	'000 bushels	bushels	bushels	bushels
1961-62 .	70,134	292,397	362,666	1,308	8,054	9,361	18.6	27.5	25.8
1962-63 .	80,255	311,068	391,334	1,891	8,361	10,252	23.6	26.9	26.2
1963-64 .	61,203	303,857	365,708	1,269	6,612	7,889	20.7	21.8	21.6
1964-65 .	51,699	292,769	345,737	1,270	5,883	7,164	24.6	20.1	20.7
1965-66 .	99,576	332,768	433,437	605	6,533	7,149	6.1	19.6	16.3

(a) 60 lb per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year. (b) Includes small areas sown and quantities produced in other States and Territories.

### Maize

Like sorghum, maize is a summer cereal demanding specific soil and climatic conditions. For grain, it is grown almost entirely in the south-east and Atherton Tablelands of Queensland and the north coast and northern tablelands of New South Wales. On the Atherton Tablelands in Queensland, and generally in New South Wales and Victoria, it provides a stock feed for dairy cattle, fat stock and pigs. In times of drought it is used also as a sheep feed. In all States except South Australia, however, this crop is grown to some extent for green fodder and silage, particularly in connection with the dairying industry. There is practically no difference between grain and fodder varieties.

There has been a considerable increase in recent years in the growing of maize from hybrid strains of seed. Varieties have been developed which are capable of producing yields per acre considerably in excess of the older open pollinated types. The expansion in areas sown to hybrid maize has led to a parallel development in the specialised industry of growing hybrid strains for seed.

#### Maize area, production and yield per acre

The area, production and yield per acre of maize for grain in each State for the years 1961-62 to 1965-66 compared with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are given in the following table. Separate details for hybrid and other varieties are shown for all producing States except Western Australia for 1965-66.

Total . . .	38.3	60.3	21.0	..	60.0	..	..	25.0

(a) Not available for publication. (b) Incomplete. (c) Included in Other maize. (d) 56 lb per bushel. Production in New South Wales and Queensland harvested from crop sown in previous year.

The average yield for Australia for the five-year period ended 1965-66 was 31.9 bushels per acre. Among principal producing countries, the United States of America averaged 73.1 bushels per acre and Brazil 18.3 bushels for 1965.

Value of maize crop

The average wholesale price of maize in the Melbourne market in 1965-66 was \$2.83 a bushel compared with \$1.89 in 1964-65. The estimated gross value of the crop in each State for the 1965-66 season and the value per acre were as follows.

MAIZE FOR GRAIN: VALUE OF CROP, STATES, 1965-66

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value . . . \$'000	3,359	121	6,037	..	..	..	9,517
Value per acre . . . \$	79.98	71.90	39.44	..	..	..	48.37

**Exports of maize and maize products**

Exports of Australian-produced maize for the years 1961-62 to 1965-66 are shown hereunder.

**MAIZE: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

	1961-62	1962-63	1963-64	1964-65	1965-66
Quantity . . . . . '000 bus	2	552	14	20	1
Value . . . . . \$'000 f.o.b.	6	480	27	42	4

The increase in exports of maize in 1962-63 was due principally to the shipment of 474,000 bushels to Japan, a country to which there had been no previous exports. Imports of maize into Australia are not recorded separately, but are considered to be negligible.

**World production of maize**

According to figures issued by the United States Department of Agriculture, world production of maize in the year 1965 amounted to 8,182 million bushels, harvested from 240 million acres, giving an average yield per acre of 34.1 bushels. This compared with production in the previous year of 7,835 million bushels from 248 million acres, and an average yield of 31.6 bushels per acre.

The United States of America is the most important maize-producing country in the world, and during the three years ended 1965 the area sown to maize in that country averaged 58 million acres or 24 per cent of the world total. During the same period production averaged 3,949 million bushels or 49 per cent of the world total.

**Rice**

The principal rice-growing areas of the world are confined almost entirely to Asia, although limited quantities are grown in other countries. In Australia rice was first cultivated at the Yanco Experimental Farm in New South Wales, but it was not grown commercially until 1924-25, when 16,240 bushels were produced from 153 acres. Favoured by high average yields and protected by tariff, rice culture made rapid progress in the Murrumbidgee Irrigation Areas until local requirements were met and a surplus became available for export. The acreage sown in this area is controlled, as the quantity of water available is limited.

Until recent years rice-growing in Australia was practically confined to the Murrumbidgee Irrigation Areas in New South Wales. However, there is now some experimental rice-growing in Western Australia and the Northern Territory, but particulars are not available for publication. The bulk of Australia's exports of rice in 1965-66 was shipped to Papua and New Guinea and the Pacific Islands. Details relating to area, production, and Australian-produced exports for the years 1961-62 to 1965-66 are shown in the following table.

**RICE: AREA, PRODUCTION AND EXPORTS, AUSTRALIA(a)  
1961-62 TO 1965-66**

Year	No. of holdings growing rice(b)	Area	Production (paddy rice)		Average yield (paddy) per acre	Exports(c)	
			Quantity	Gross value(d)		Uncleaned	Cleaned
		acres	'000 bushels (e)	\$'000	bushels (e)	cwt	cwt
1961-62 . . . . .	878	50,185	7,045	7,664	140.4	280,540	748,920
1962-63 . . . . .	956	54,929	7,129	7,676	129.8	239,820	905,580

1965-66 . . . . .	893	64,398	9,540	10,224	148.1	228,140	1,042,000

(a) Particulars of area and production for Western Australia and the Northern Territory are not available for publication, and are excluded. (b) Twenty acres or more in area. (c) Imports into Australia are not recorded separately, but are considered to be negligible. (d) Excludes the value of straw. (e) 42 lb per bushel.

## Fodder crops

## Hay

Because of the comparatively unreliable nature of rainfall in Australian agricultural and pastoral areas, hay as a fodder crop occupies a position of importance. In 1965-66 hay represented 8 per cent of the total area of crops. Up to 1946-47 hay, in terms of area, was second only to wheat for grain, but in more recent years it has been supplanted by green fodder (for feeding-off) and oats for grain. Hay is generally considered to include cereal hay, meadow hay and lucerne hay. Cereal crops cut early for hay contain a higher level of protein than those cut late.

In most European countries hay is made almost entirely from meadow pastures, but in Australia a very large proportion is made from cereals and lucerne, the hay being stored loose, in sheaves or baled. Because of its bulk, hay is usually produced for individual or local use, except in times of drought, when large inter-regional transfers may take place. Meadow hay requires greater care in preparation than cereal hay. Baling must be spaced carefully behind mowing to ensure that the bales are dry enough to prevent moulding, but not so dry as to result in excessive leaf loss. The leaves contain the bulk of the protein. Lucerne hay requires similar attention.

The area, production and yield per acre of hay of all kinds in the several States during the years 1961-62 to 1965-66 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below.

<b>Australia . . . . .</b>	<b>585,897</b>	<b>456,917</b>	<b>292,687</b>	<b>1,444,712</b>	<b>2,780,213</b>

For all States and the Territories combined, the proportions of the areas sown to the principal kinds of hay in 1965-66 were 21.1 per cent for oaten, 16.4 per cent for lucerne, 10.5 per cent for wheaten, and 52.0 per cent for other hay.

The following table shows the estimated gross value, and the value per acre, of the hay crop of the several States for the 1965-66 season.

**HAY: VALUE OF CROP, STATES 1965-66**

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Aggregate value . . . \$'000	33,685	40,753	13,792	6,923	8,457	3,991	107,755
Value per acre . . . \$	45.94	35.43	89.22	23.18	29.08	27.00	38.76

(a) Includes \$47,000 and \$107,000 for the Northern Territory and Australian Capital Territory respectively.

#### Farm stocks of hay

Particulars of stocks of hay held on farms at 31 March for the years 1962 to 1966 are given in the table below.

**STOCKS OF HAY HELD ON FARMS, STATES AND A.C.T.  
1962 TO 1966  
(Tons)**

At 31 March—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.(a)
1962 . . .	1,775,977	1,847,725	231,335	496,564	254,377	305,108	12,241	4,923,327
1963 . . .	1,609,639	2,197,725	194,948	470,202	273,500	333,650	6,896	5,086,560
1964 . . .	1,610,063	1,911,475	179,422	547,354	274,812	276,650	5,085	4,804,861
1965 . . .	1,586,969	2,402,299	145,737	614,451	275,948	414,415	7,606	5,447,425
1966 . . .	1,158,481	1,915,693	190,659	444,089	291,528	296,196	5,171	4,301,817

(a) Excludes the Northern Territory, for which particulars are not available.

Under normal conditions, hay, whether whole or in the form of chaff, is somewhat bulky for overseas trade, and consequently does not figure largely among Australian exports. During 1965-66 exports amounting to 3,304 tons, valued at \$153,877, were made, principally to Malaysia, Kuwait and Singapore. There were no imports of hay in 1965-66.

#### Green fodder

Considerable areas are devoted to the growing of green fodder, usually as an adjunct to cereal operations or as a minor crop in irrigation areas. The areas recorded in respect of green fodder include areas of crops cut for feeding to live stock as green fodder or ensilage, together with areas fed off to stock as green forage. Statistics of green fodder exclude areas which may have been sown with the intention of harvesting for grain, but which, owing to adverse conditions,

showed no promise of producing grain or even hay and were fed off to livestock. The principal crops cut for green fodder are oats, wheat and lucerne, while small quantities of barley, sorghum, maize, rye, and sugar cane are also used in this way. In 1965-66 the area under green fodder (5,324,333 acres) consisted of oats (2,169,435 acres), lucerne (2,097,815 acres), sorghum (192,643 acres), wheat (176,811 acres), barley (151,801 acres), maize (34,179 acres), rye (21,851 acres), sugar cane (4,284 acres), and other crops (475,514 acres). Particulars concerning the area of green fodder in the several States during each of the years 1961-62 to 1965-66 are given in the following table.

**GREEN FODDER: AREA, STATES AND TERRITORIES, 1961-62 TO 1965-66**  
(<sup>'000 acres</sup>)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1961-62	1,830	539	865	787	622	57	1	1	4,702
1962-63	1,900	478	912	928	668	65	..	1	4,952
1963-64	1,974	431	1,011	972	417	71	..	1	4,877
1964-65	2,397	454	1,111	1,135	446	67	1	1	5,614
1965-66	1,952	526	1,143	1,210	414	78	1	1	5,324

In the 1965-66 season green fodder ranked second to wheat in area of crops throughout Australia. A graph showing the area sown to green fodder appears on plate 43. The value of these crops is variously estimated in the several States, but the Australian total, excluding Western Australia, may be taken as approximately \$25,000,000 for the 1964-65 season and \$28,000,000 for the 1965-66 season.

#### Ensilage

Ensilage is produced from herbage compacted tightly to exclude air and kept from contact with air and extraneous moisture to avoid moulding. Fermentation results in a dark mass of high protein and lactic acid content. Molasses may be added to hasten fermentation. Ensilage may be stored in pits or stacks or in constructed silos.

The several State Governments devote a considerable amount of attention to the education of the farming community with regard to the value of ensilage. Monetary aid is afforded in the erection of silos, and expert advice is supplied in connection with the design of the silos and the cutting and packing of the ensilage. Information regarding production and farm stocks of ensilage for the years 1961-62 to 1965-66 is given in the following table.

**ENSILAGE: PRODUCTION AND FARM STOCKS, STATES AND A.C.T.**  
**1961-62 TO 1965-66**  
(Tons)

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	A.C.T.	Aust.

#### Sugar cane

The growing of sugar cane is restricted to those coastal areas in Queensland and northern New South Wales which have suitable climatic and soil conditions.

The Bureau of Sugar Experiment Stations in Queensland and the Colonial Sugar Refining Company Limited render useful service to the sugar industry by advocating and demonstrating better methods of cultivation and the more scientific use of fertilisers, lime, etc. and by producing and distributing improved varieties of cane. In common with these two organisations, Sugar Research Ltd, of Mackay, undertakes technological research in raw sugar milling practices.

#### Sugar agreements and marketing arrangements in Australia

In Year Book No. 37, pages 940-1, a summary is given of the agreement operating between the Commonwealth and Queensland Governments in respect of the sugar industry in Australia. Briefly, the agreement places an embargo on sugar importations and fixes the price of sugar

consumed in Australia. The current agreement is for the period from 1 September 1961 to 31 August 1968. The Commonwealth Government appointed a Committee of Enquiry in 1960 to investigate all facets of the sugar and canned fruits industries. The Committee presented its report, publication of which was restricted to a summary of conclusions and recommendations, in 1961. There was no variation of the consequent agreement.

Production of sugar is regulated under the terms of the agreement. At the mill level control is exerted by means of seasonal 'mill peaks' in respect of Queensland mills and a proportionate allowance for New South Wales mills. The combined total equals the estimated requirements of the domestic and export markets. Farm production is regulated according to the limit on the mill which the farm supplies. Up to the end of 1961 exports were limited by the export quota provisions of the International Sugar Agreement, but these provisions have not been operative since then (*see below*).

The Queensland Government acquires the whole of the sugar production of that State and of New South Wales by legislation and private agreement respectively. The net proceeds of all sugar sold are pooled and a uniform price paid to mills. In 1963 a Queensland Government Committee of Enquiry recommended that the industry should expand production to 2.26 million tons (of 94 net titre sugar) by 1965-66, of which New South Wales might produce 132,000 tons. This recommendation has been implemented, although seasonal conditions prevented the attainment of the target until 1966-67, when 2,342,000 tons were produced, the New South Wales contribution being 140,000 tons.

#### **International Sugar Agreement**

The International Sugar Agreement of 1937 was superseded by the International Sugar Agreements of 1953 and 1958. Details of the 1937 and 1953 Agreements were given in Year Books No. 40, pages 881-2, and No. 48, page 936, respectively. The 1958 Agreement, which came into operation on 1 January 1959, established basic export quotas for exporting countries. The British Commonwealth was allocated a total quota, the distribution of which remained a matter for internal arrangement by the countries and territories concerned (*see below*). The Australian quota for 1960 and 1961 was approximately 651,000 tons per annum.

The quota and price provisions of the International Sugar Agreement were subject to review before 31 December 1961. A conference in Geneva in 1961 failed to reach agreement on quota provisions for 1962 and 1963. The conference adjourned with a resolution that it be reconvened if circumstances became favourable for an agreement on quotas. The principal practical effect of the adjournment of the 1961 conference was that former export limitations on participating exporting countries, including Australia, did not apply until such time as agreement on this question was again reached at a resumed session of that conference or at a newly convened conference.

The question of convening a United Nations conference to consider re-introduction of an agreement with quota provisions was deferred at a meeting of the International Sugar Council in April 1963. The 1958 Agreement, in its restricted form, was extended by protocol until 31 December 1965.

A United Nations conference was convened at Geneva in September 1965. The conference did not negotiate a new agreement but extended the 1958 Agreement, in its currently restricted form, until 31 December 1966. Arrangements for a second session of the conference are being negotiated; pending resumption of the Conference, the restricted Agreement has been further extended until 31 December 1968.

#### **British Commonwealth Sugar Agreement**

On 1 January 1953 the British Commonwealth Sugar Agreement became effective. This agreement, which has been extended to 1974, provides for Australia to export to preferential markets a maximum of 600,000 tons per annum. Of the 600,000 tons, 335,000 tons are purchased by the United Kingdom Government at a regularly negotiated price and the balance may be sold at world market prices plus tariff preferences where applicable. The negotiated price of £Stg42 a ton bulk f.o.b. and stowed payable for Australian raws in 1965 was increased to £Stg43 10s. a ton for 1966, 1967 and 1968.

#### **Fruit Industry Sugar Concession Committee and sugar rebates**

The Fruit Industry Sugar Concession Committee was established by agreement between the Commonwealth and Queensland Governments and administers a fund contributed by the Queensland Government on behalf of the sugar industry.

Until 15 May 1960 a rebate of \$4.40 a ton of refined sugar used in processing approved fruit products was paid to Australian manufacturers, provided they bought fresh fruit at prices not lower than those declared by the Committee as reasonable. This was increased to \$10 a ton from 16 May 1960.

An export sugar rebate is also paid by the Committee to exporters of approved fruit products to ensure that manufacturers do not pay higher prices for the Australian sugar content than the price for which the cheapest imported sugar could be landed duty free in Australia. The

Queensland Government is responsible for payment of a similar rebate to exporters of other approved products. Payment of the export sugar rebate in respect of approved fruit products has been made conditional upon such fruit having been purchased at not less than the prices (if any) which the Committee has declared to be reasonable at the time of purchase.

Under the Sugar Agreement for 1961-68 the Queensland Government contributes to the fund \$528,000 annually, reimburses the Committee for the actual expenditure on export sugar rebates, and, by a supplementary agreement operating from 1 September 1962, pays the Committee an additional sum equal to the amount payable by way of domestic sugar rebate in respect of the products exported. Any money remaining in the fund after the payment of rebates and administrative expenses may be used by the Committee for the promotion of the use and sale of fruit products, or for research for the purpose of increasing the yield per acre of Australian fruit, or of obtaining information regarding Australian fresh marketable fruits.

#### Financial assistance to the sugar industry

In September 1966 the Commonwealth Government arranged a loan of \$19 million through the Queensland Government to the sugar industry to raise returns from sales of the No. 1 Pool in the 1966 season to a level comparable with that received in the 1965 season.

The money was advanced, initially, by the Reserve Bank to the Queensland Sugar Board in October 1966, but the arrangement provided that after 1 July 1967 the Commonwealth Government would provide the Queensland Government with a repayable grant sufficient to meet its obligations to the Reserve Bank.

The grant will be repayable over ten years commencing in mid-1970, and will not be subject to interest before then. Thereafter it will incur interest at the medium term bond rate prevailing when the grant was made.

The *Sugar Marketing Assistance Agreement Act 1967* gives effect to this arrangement.

#### Bulk handling of sugar

The total conversion of the Australian sugar industry to bulk handling and mechanised loading and unloading of raw sugar has now been accomplished, except for the operation of a bagging station specially provided at Townsville to meet the needs of a few overseas customers. Terminals for the bulk loading of sugar were opened at Mackay in 1957, at Lucinda and Bundaberg in 1958, at Townsville in 1959, at Mourilyan in 1960, and at Cairns in 1964. A second storage shed at Bundaberg, a third shed at Mackay and second sheds at Lucinda and Townsville have been opened subsequently. The comparatively small New South Wales sugar industry was converted to bulk handling in 1954. Bulk receiving facilities are in operation at all Australian refineries.

#### Area of sugar cane

A brief outline of the development of the industry was included in earlier issues of the Year Book (see No. 38, page 985). The area of sugar cane in Australia for the seasons 1961-62 to 1965-66 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table. The areas shown in the table do not include the small acreage cut for green fodder, which in 1965-66 amounted to 4,284 acres. The whole area planted is not cut for crushing during any one season, there being always a considerable amount of young and 'stand-over' cane as well as a small quantity required for plants.

SUGAR CANE: AREA(a), STATES, 1936-37 TO 1965-66  
(Acres)

Period	New South Wales			Queensland			Australia			Total

(a) Excludes areas cut for green fodder and small area sown in Western Australia.

**Production of cane and sugar**

The production of sugar cane in 1965-66 was 14.2 million tons, 6.1 per cent below the record level of 15.1 million tons in 1964-65. A graph showing the production of sugar appears on page 995 of Year Book No. 49.

In the following table production data relating to cane and raw sugar are shown for the seasons 1961-62 to 1965-66 together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

**SUGAR CANE: PRODUCTION OF CANE AND RAW SUGAR, STATES  
1936-37 TO 1965-66**

(Tons)

(a) Raw sugar at 94 net titre.

Owing to climatic variations the crop in New South Wales matures in from twenty to twenty-four months, whereas in Queensland a period of from twelve to sixteen months is sufficient. The average yields of cane and sugar per acre for the years 1961-62 to 1965-66 and for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown below. Allowance should be made in interpreting these figures for the disparity in maturing periods noted above.

**SUGAR CANE AND SUGAR: YIELD PER ACRE, STATES, 1936-37 TO 1965-66**

**Production and utilisation of sugar**

Details of the production and utilisation of sugar for the years 1961-62 to 1965-66 are shown below. Consumption is shown in terms of refined sugar, including that consumed in manufactured products.

**SUGAR: PRODUCTION AND UTILISATION, AUSTRALIA  
1961-62 TO 1965-66**

Year	Changes in stocks(a)	Production (raw)	Exports (b)	Miscellaneous uses(c)	Consumption in Australia(d)	
					Total	Per head
	'000 tons	'000 tons	'000 tons	'000 tons	'000 tons	lb
1961-62 . .	- 4.8	1,404.2	862.5	18.0	528.5	111.7
1962-63 . .	+ 111.9	1,831.6	1,175.8	17.8	526.1	109.1
1963-64 . .	- 65.3	1,648.7	1,156.0	21.3	536.7	109.2
1964-65 . .	- 4.0	1,880.0	1,308.2	20.1	555.7	110.9
1965-66 . .	+ 84.1	1,961.8	1,288.9	20.2	568.7	111.3

(a) Includes allowance for estimated sugar content of imported foodstuffs. (b) Includes sugar content of manufactured products exported. (c) Includes refining losses and quantities used in golden syrup and treacle. (d) Includes sugar content of manufactured products consumed.

The quantity of sugar recorded as used in factories in 1965-66 amounted to 377,708 tons compared with 359,596 tons in 1964-65 and 308,304 tons in 1963-64. Particulars of sugar used in establishments not classified as factories are not available, and consequently these quantities are deficient to that extent. In 1965-66 consumption by factories engaged in the production of jams, jellies and preserved and dried fruit amounted to 82,042 tons, by those producing confectionery, ice cream, etc. to 69,366 tons, by breweries to 49,198 tons, and by factories producing aerated waters, cordials, etc. to 55,811 tons.

**Sugar by-products**

Industrial chemicals, together with large quantities of molasses, are produced as by-products in sugar mills. Further, during the period 1939 to 1960 building boards were made from the residue of crushed fibre after removal of the sugar content from sugar cane. These boards possessed high insulating and sound absorbing properties which made them particularly suitable for use in walls and ceilings. Early in the period referred to, the boards were manufactured almost entirely from crushed fibre residue, the remaining component being non-millable pine, but gradually the pine content was increased until by 1960 fibre residue was no longer being used. The main purpose for which crushed cane fibre residue is now used is furnace fuel in sugar mills.

**Sugar prices and returns**

The current prices of sugar in Australia (as determined under the Sugar Agreement in Australia—see page 926) and details of net returns for raw sugar from 1961-62 to 1965-66 are shown in the following tables.

**SUGAR: PRICES IN AUSTRALIA**

Year	Raw sugar, 94 net titre			Refined sugar		
	Average return per ton received by millers and growers for—			Date of determination	Wholesale price to retailer per ton	Retail price, capital cities per lb
	Home consumption	Exports(a)	Whole crop (a)			
	\$	\$	\$		\$	\$
1961 . .	124.95	75 50	96 43	16.5.60 to 18.6.67 19.6.67	180.52 206.72	0.092 0.105
1962 . .	125 10	82 18	95.98			
1963 . .	122 00	131 22	127.97			
1964 . .	120 75	83 89	95 78			
1965 . .	121.95	67.27	85.14			

(a) Includes 'excess' sugar.

**RAW SUGAR(a): NET RETURNS, AUSTRALIA, 1961-62 TO 1965-66**  
(Source: The Queensland Sugar Board)

Year	Proportion exported	Net value of exports per ton	Average price per ton for whole crop	Estimated value of crop
	per cent	\$	\$	\$'000
1961-62 . . .	57.66	75.50	96.43	133,306
1962-63 . . .	67.85	82.18	95.98	177,496
1963-64 . . .	64.70	131.22	127.97	220,520
1964-65 . . .	67.76	83.89	95.78	186,728
1965-66 . . .	67.31	67.27	85.14	166,270

(a) 94 net titre.

The estimated value of the raw sugar produced has been based upon details taken from the audited accounts of the Queensland Sugar Board. The values stated comprise the gross receipts from sales in Australia and overseas, less refining costs, freight, administrative charges, etc., and export charges, but including concessions to the fruit industry and other rebates which in 1965-66 amounted to \$3,426,000. The value thus obtained represents the net market value of all raw sugar sold, which, less the rebates, is divided between the growers and millers in the approximate proportions of 70 per cent and 30 per cent respectively.

**Exports of sugar**

Particulars of the exports of Australian-produced cane sugar (raw and refined) for each year from 1961-62 to 1965-66 are as follows.

**RAW AND REFINED SUGAR: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

	1961-62	1962-63	1963-64	1964-65	1965-66
Quantity . . . . . tons	843,537	1,145,966	1,116,190	1,269,139	1,252,575
Value . . . . . \$'000 f.o.b.	67,790	91,042	156,512	112,682	93,926

**Tobacco**

Tobacco is a summer-growing annual which requires a temperate to tropical climate, adequate soil moisture and a frost-free period of approximately five months. In Australia almost all tobacco is grown under irrigation. Because of specialised requirements, commercial production is restricted mainly to river valleys where suitable light friable soil types are found. Grown in the three eastern States of Australia, the centres of production include Mareeba (northern Queensland), Bundaberg (central coastal Queensland), Beerwah (Glasshouse Mountains, Queensland), Texas (south-western Queensland), Ashford (north-western New South Wales), Myrtleford (north-eastern Victoria), and Gunbower (northern Victoria). All tobacco produced in Australia is of the flue-cured type. The main variety grown is Hicks.

**Marketing**

Between 5 May 1941 and 24 September 1948 all leaf was under the direct control of the Australian Tobacco Board, and prices were paid on leaf appraisal. Subsequently the Board was disbanded, and sales have been by open auction through the Tobacco Leaf Marketing Board (Queensland and northern New South Wales) and the Victorian Tobacco Growers Association

Ltd (southern New South Wales and Victoria). In 1964 the Victorian Tobacco Leaf Marketing Board was set up to market the portion of the crop that was formerly sold by the Victorian Tobacco Growers Association Ltd, and in 1965 a Board was established in New South Wales. However, the actual physical handling of New South Wales leaf at auction will continue to be carried out by the Queensland and Victorian authorities.

A stabilisation plan for the tobacco growing industry was agreed between Commonwealth and State Governments in 1965. The plan, which will operate initially for four years, commenced with the 1965 selling season. It provides broadly for the establishment of an annual marketing quota of 26 million pounds (green weight) of leaf which is sold under an agreed grade and price schedule providing for an average minimum price, based on a normal crop fall-out. The overall marketing quota is divided among tobacco-producing States and the State quotas are in turn divided among individual growers.

The plan is administered by the Australian Tobacco Board, constituted under the *Tobacco Marketing Act* 1965-1966 and representative of the Commonwealth, tobacco-producing States, growers, and manufacturers.

The average minimum price for the 1967 season, i.e. 109.4 cents per lb, is unchanged from the previous season.

#### Central Tobacco Advisory Committee

The Australian Agricultural Council formed the Standing Advisory Committee on Tobacco during 1950. This Committee consisted of representatives of tobacco growers, tobacco manufacturers and the Commonwealth and State Governments. Its main functions were to review the industry and make recommendations on its problems. The Committee was reconstituted by the Agricultural Council during 1952-53.

In 1955 the Committee formulated a programme for increased research and advisory activities. The capital costs of establishing this programme were estimated at \$336,000, of which the Commonwealth Government and tobacco manufacturers each agreed to contribute half. Annual contributions are made to a fund by the Commonwealth and State Governments and tobacco growers and manufacturers. A Tobacco Industry Trust Account was established under the *Tobacco Industry Act* 1955 to receive these contributions. The contributions from growers and manufacturers are obtained under the Tobacco Charges Assessment Act and the Tobacco Charges Acts, whose purpose is to provide funds to be used in research and otherwise with a view to fostering and expanding the Australian tobacco industry. This programme commenced in 1956, and since then \$3,970,512 has been paid to State and Commonwealth departments for expenditure on tobacco research and extension. The allocation for 1966-67 was \$710,664. As from 1 July 1964 the annual Commonwealth contribution has been increased to one-half of approved expenditure from the Tobacco Industry Trust Account. In 1961 a Research Sub-Committee was established to review annually scientific programmes and finance in relation to the Tobacco Industry Trust Account and make recommendations to the Central Tobacco Advisory Committee. However, following the establishment of the Australian Tobacco Board, the Australian Agricultural Council in 1966 abolished this sub-committee and reconstituted the Central Tobacco Advisory Committee with the following terms of reference:

'To make recommendations annually to the Australian Agricultural Council, through the Standing Committee on Agriculture, regarding research and extension programmes to be financed from the Tobacco Industry Trust Account.'

#### Other assistance and research

Details of the recommendations by the Tobacco Inquiry Committee and grants periodically approved by the Commonwealth Government up to 30 June 1953 are given in Year Book No. 40, pages 895-6, and in previous issues.

The Commonwealth Scientific and Industrial Research Organization and the State Departments of Agriculture in the tobacco growing States are carrying out investigations into a wide range of problems involving fundamental research, plant breeding, variety trials, irrigation, disease and pest control, fertilisers, crop rotation, and cultural practices.

#### Tobacco factories

Manufacturers of Australian cigarettes and tobacco are granted a lower rate of duty on imported tobacco leaf, provided it is blended with a prescribed minimum percentage of Australian leaf. Since November 1946 these percentages have been increased from 3 per cent for

cigarettes and 5 per cent for tobacco to 43 per cent and 40 per cent respectively from 1 July 1962. The percentage applicable to both cigarettes and tobacco from 1 July 1963 was 40 per cent and from 1 July 1964, 41 5 per cent. The rate was increased quarterly from 1 April 1965 to 1 January 1966, from which date onwards it has been set at 50 per cent for both cigarettes and tobacco.

In 1965-66 the quantity of cured leaf recorded as used in tobacco factories in Australia amounted to 49 million lb, of which 23 million lb was of local origin. The balance was imported, chiefly from the United States of America and Rhodesia.

#### Tobacco area and production

The area of tobacco in 1965-66 was 20.1 per cent below the record area established in 1962-63. Production at 27,361,000 lb was 20 3 per cent below the record established in 1963-64.

In the following table particulars of the area and production of tobacco are given by States for each of the seasons 1961-62 to 1965-66, together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

#### TOBACCO: AREA AND PRODUCTION, STATES AND N.T., 1936-37 TO 1965-66

Period	N.S.W.	Vic.	Old	S.A.	W.A.	Tas.	N.T.	Aust.

Year—								
1961-62 . . .	3,116	6,515	12,751	..	196	..	..	22,578
1962-63 . . .	2,885	9,447	14,787	..	29	..	..	27,148
1963-64 . . .	2,652	14,459	17,231	..	..	..	..	34,342
1964-65 . . .	2,356	12,080	10,675	..	..	..	..	25,111
1965-66 . . .	1,698	11,083	14,580	..	..	..	..	27,361

#### Imports and exports of tobacco

Imports of tobacco and tobacco manufactures into Australia during 1965-66 were valued at \$26.2 million. This included 27.9 million lb of unmanufactured tobacco valued at \$20.1 million. Exports of tobacco and tobacco manufactures during 1965-66 were valued at \$2,003,000, including Australian produce, \$1,443,000.

#### Cotton

This annual shrub requires a hot climate and inter-row weed control. Lint (long fibres) is extracted from the seed cotton in the ginneries and is used for yarn. The residue, consisting of linters (short fibres), kernels and hulls (outer seed coat), is treated in oil mills. From linters and kernels are produced such items as short-fibred cotton, cotton seed oil for human consumption and industrial purposes, and meal cakes for stock feed. The hulls may be used as fuel.

The production of cotton in Australia was formerly restricted mainly to the coastal river valleys of Queensland. In recent years, however, the Namoi River area of New South Wales has emerged as the predominant growing area, while smaller quantities are grown in the Murrumbidgee Irrigation Area. The Ord River district in Western Australia is also becoming an increasingly important cotton producer. The extension of areas of cotton under irrigation in these regions has resulted in greatly increased yields.

#### Cotton bounty

For particulars of the *Cotton Bounty Act* 1951 and amendments of 1952, 1955 and 1957, see page 1044 of Year Book No. 49. Under the *Raw Cotton Bounty Act* 1963-1966 the Commonwealth pays a bounty on raw cotton produced and sold for use in Australia at the rate of 13.4375 cents per lb for Middling 1" White, with premiums and discounts on grades and staples above and below, up to a maximum of \$4 million in any one year. The bounty is for a period of five years from 1 January 1964.

#### Cotton area and production

The area under cultivation and the production in the several States for the years 1961-62 to 1965-66 are shown below.

#### COTTON: AREA, PRODUCTION AND YIELD PER ACRE, STATES AND TERRITORIES. 1961-62 TO 1965-66

1965-66	3,113	(a)	754	..	2,460	..	..	..	(b) 2,436

(a) Not available for publication. (b) Incomplete; see individual States.

NOTE. Production in Queensland relates to the crop harvested in the first of the years mentioned in column 1, and in other States to the year following: e.g., for 1965-66, the Queensland crop was harvested during 1965, while the crop in other States was harvested during 1966.

Production of ginned cotton for 1961-62 was 3,830,000 lb; 1962-63, 5,403,000 lb; 1963-64, 6,570,000 lb; 1964-65, 17,286,000 lb; and 1965-66, 40,885,000 lb.

The gross value of unginned cotton for the five years ended 1965-66 was \$1,294,000; \$1,876,000; \$2,212,000; \$7,685,000; and \$14,323,000 respectively.

Imports of raw cotton (excluding linters) during the past five years were: 1961-62, 37,735,000 lb; 1962-63, 42,543,000 lb; 1963-64, 56,663,000 lb; 1964-65, 55,474,000 lb; and in 1965-66, 32,096,000 lb.

### Peanuts

Peanuts, or groundnuts, are a sub-tropical legume (and hence summer growers), the pods of which mature beneath the surface of the soil. They thus require well drained, light textured soils. At harvest the plant is pulled, wind-rowed, field-cured for two to four weeks, and then threshed to recover the pods. The main products of the industry are nuts, peanut oil, oil cake, and synthetic protein fibre.

The production of peanuts in Australia is confined mainly to Queensland, although small quantities are grown in New South Wales, the Northern Territory and, in some years, Western Australia. Details of the area and production of peanuts are given in the following table for the years 1961-62 to 1965-66.

PEANUTS: AREA AND PRODUCTION, STATES AND N.T., 1961-62 TO 1965-66

Year	Area (acres)				Production (cwt)			
	N.S.W.	Qld	N.T.	Aust.(a)	N.S.W.	Qld	N.T.	Aust.(a)
1961-62 . .	573	33,131	307	34,011	6,003	292,267	1,343	299,613
1962-63 . .	395	35,552	(b)	c 35,947	4,258	315,144	(b)	c 319,402
1963-64 . .	478	44,482	(b)	c 44,960	4,744	455,982	(b)	c 460,726
1964-65 . .	400	45,554	(b)	c 45,954	4,746	202,369	(b)	c 207,115
1965-66 . .	394	57,298	16	57,708	4,468	543,735	76	548,279

(a) Excludes, for some of the years shown, Western Australia, for which details are not available for publication. (b) Not available for publication. (c) Incomplete; excludes Northern Territory.

The gross value of the 1965-66 crop was \$5,289,000 which was approximately \$3,085,000 more than in 1964-65. All production is consumed in Australia. In recent years considerable quantities of peanut kernels have been imported. Total supplies available for consumption in Australia in 1965-66 were 14,072 tons (in shell equivalent), after allowing for an increase of 9,360 tons in stock held by the Peanut Marketing Board and exports of 64 tons of peanuts and peanut products. Supplies were made up of 18,675 tons from Australian production received into store by the Board and 11,321 tons imported.

### Flax

#### Flax for linseed

Prior to 1948-49 the growing of flax for linseed oil had not been developed extensively in Australia. Since then, however, action has been taken to develop this industry, the ultimate objective being the production of sufficient linseed to meet Australia's total oil requirements. The main producing areas are the Darling Downs in Queensland, the wheat belt of New South Wales, and the western and north-eastern districts of Victoria.

The question of assistance to the industry was investigated by the Commonwealth Tariff Board in 1953, and its conclusions are contained in its Report on *Linseed and Linseed Products* dated 23 October 1953.

Particulars of area and production of flax for linseed, by States, are given in the following table for the years 1961-62 to 1965-66. The significant reduction in area in 1965-66 was attributable to over-production in 1964-65.

## FLAX FOR LINSEED: AREA AND PRODUCTION, STATES, 1961-62 TO 1965-66

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Aust.
<b>Area (acres)—</b>						
1961-62 . . . . .	7,266	17,711	34,390	1,513	1,253	62,133
1962-63 . . . . .	11,493	25,232	58,493	1,220	626	97,064
1963-64 . . . . .	15,335	16,240	83,336	1,002	1,588	117,501
1964-65 . . . . .	23,769	9,953	97,092	898	2,135	133,847
1965-66 . . . . .	3,658	7,370	12,266	1,196	97	24,587
<b>Production (tons of linseed)—</b>						
1961-62 . . . . .	856	6,093	5,187	275	178	12,589
1962-63 . . . . .	2,634	8,180	14,477	290	136	25,717
1963-64 . . . . .	3,722	4,758	20,342	283	411	29,516
1964-65 . . . . .	8,761	2,671	34,175	426	567	46,600
1965-66 . . . . .	213	2,538	2,895	403	15	6,064

## Flax for fibre

This crop was grown only in Victoria and Western Australia until 1963-64, when no production was recorded in Victoria. In 1964-65, Western Australia was again the only State growing flax for fibre, 1,388 tons being harvested from 729 acres. There was no production of flax for fibre recorded in 1965-66.

## Hops

Hops are grown from perennial rootstocks over deep, well-drained soils in localities sheltered from the wind. The hop-bearing vine shoots are carried upon wire and coir trellises, from which they are later harvested, principally by hand. The green hops are kiln-dried and bleached with sulphur dioxide fumes, following which the cured hops are pressed into bales.

Hop growing in Australia is confined to the Derwent, Huon and Channel areas of Tasmania and the Ovens and King Valleys in Victoria. A small area is also under hops in Western Australia, near Manjimup, but the details are not available for publication.

## Production and imports of hops

The production of hops in Australia is insufficient to meet local requirements, and additional supplies are imported to meet the needs of the brewing industry. In the following table details of the production and imports of hops and the quantity of hops used in breweries are shown for each of the years 1961-62 to 1965-66. Exports of hops are negligible and are not recorded separately.

HOPS: PRODUCTION AND DISPOSAL, AUSTRALIA  
1961-62 TO 1965-66

Year	Production(a)		Imports	Net available supplies (b)	Quantity used in breweries
	Quantity	Gross value			
	cwt	\$'000	cwt	cwt	cwt
1961-62 . . . . .	32,936	2,484	5,569	38,505	39,064
1962-63 . . . . .	33,629	2,570	1,337	34,966	38,202
1963-64 . . . . .	19,858	1,534	536	20,394	37,033
1964-65 . . . . .	27,893	2,372	9,521	37,414	39,517
1965-66 . . . . .	37,394	3,020	12,696	50,090	35,223

(a) Excludes production in Western Australia, for which details are not available for publication. (b) Disregards movements in stocks.

## Safflower

The cultivation of safflower in Australia has developed rapidly in recent years to make it one of the major oilseed crops. It is best cultivated, either in the warm temperate zones or as a winter crop in the tropical or sub-tropical regions, on moderately fertile, weed-free, clay or sandy loams. Adequate moisture is required up to the flowering stage, after which it is relatively drought resistant. The soil preparation and sowing techniques are similar to those employed for small grains; it is usually harvested by combine when the seed is hard and dry. The oil, produced by crushing, is used in the manufacture of margarine, soaps, paints, varnishes, enamels, and textiles.

Queensland is the main producer of safflower where suitable growing conditions exist particularly in the marginal wheat regions of Dawson-Callide Valleys, Fitzroy Basin, Central Highlands, and the Darling Downs. Suitable growing conditions also exist in New South Wales, Victoria and Western Australia, but, at present, production in these areas is relatively small.

Particulars of the area and production of safflower for the years 1961-62 to 1965-66 are given in the following table.

**SAFFLOWER: AREA AND PRODUCTION, STATES AND TERRITORIES**  
1961-62 TO 1965-66

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust. (a)

(a) Incomplete; see individual States.

(b) Not available for publication.

(c) 40 lb per bushel.

Imports of crude safflower seed oil in 1964-65 and 1965-66 totalled 781,000 gallons and 873,000 gallons respectively. These imports came mainly from the United States of America.

## Vegetables for human consumption

## Area, production and trade

Vegetables were initially grown on a large scale near the main cities, where there was ready access to reliable water supplies and to markets. Later, the expansion of irrigation areas and improvement in transport services resulted in their production being extended into many other areas. At present, because of the wide diversity of climatic conditions across Australia, supplies for main city markets are drawn from widely different areas, depending upon the times of maturity of the various crops. Apart from potatoes and onions, which are sold in some States through marketing boards, the bulk of vegetable trading takes place at the metropolitan markets of the cities concerned.

Details of the areas planted and production of individual kinds of vegetables are shown on page 937 for the seasons 1963-64 to 1965-66. Certain particulars shown are incomplete in that details for specific vegetables in some States are either not available or are not available for publication. For further information see the bulletin *Rural Industries*. Details of the estimated consumption of vegetables for a series of years ending 1965-66 are given in the chapter Miscellaneous.

**FRESH VEGETABLES FOR HUMAN CONSUMPTION: AUSTRALIA  
1963-64 TO 1965-66**

**Processed vegetables**

Total production of canned vegetables in 1965-66 amounted to 180,098,000 lb; the principal types produced being green peas (including mint-pro peas), 38,786,000 lb; green beans, 9,593,000 lb; baked beans (including pork and beans), 41,151,000 lb; asparagus, 10,006,000 lb; beetroot, 30,159,000 lb; and mushrooms, 9,098,000 lb.

The production of dehydrated vegetables, including split peas, during 1965-66 amounted to 16,573,000 lb, while the production of potato crisps, chips and flakes was 16,427,000 lb.

There has been rapid development in the quick-frozen vegetable industry. Data were collected for the first time in 1957-58, when 13,846,000 lb of frozen vegetables were produced, made up principally of 10,131,000 lb of peas and 2,540,000 lb of beans. In 1965-66 production had risen to 98,885,000 lb, of which 67,691,000 lb were peas and 14,982,000 lb were beans.

**Exports and imports of vegetables**

The quantity and value of overseas exports of pulse and fresh (including fresh frozen) vegetables during 1965-66 were respectively: pulse, 8,958 tons, \$660,492; onions, 1,609 tons, \$171,844; potatoes, 10,064 tons, \$626,230; other vegetables, 5,443 tons, \$1,041,135. Imports of pulse amounted to 9,075 tons, valued at \$1,566,000, while imports of fresh and frozen vegetables in total were 13,119 tons, valued at \$2,232,000.

In 1965-66 exports of vegetables preserved in liquid consisted of: asparagus, 991,325 lb, \$303,148; beans (including baked), 291,179 lb, \$43,208; peas, 241,406 lb, \$34,432; tomatoes, 361,460 lb, \$55,357; other vegetables, 522,753 lb, \$112,228. Exports of vegetables otherwise prepared amounted to 82,375 lb, valued at \$50,494.

**Potatoes**

This crop requires deep friable soils, which in Australia are usually basaltic, alluvial or swampy in origin. Fertiliser requirements, which are generally high, vary with the type of soil. Potatoes are killed by heavy frost, but require only moderate temperatures for growth. Mechanical planters and diggers are used to a variable extent depending upon a variety of factors including terrain, state of the soil and scale of operations. Seed certification schemes, which operate in all States except Queensland, provide a supply of seed which is free from viral, fungal and bacterial diseases. In Australia potatoes are used almost entirely for human consumption and not for the production of starch or alcohol. They are rarely used as stock feed.

## Potatoes

*Area, production, and yield per acre.* Victoria possesses particular advantages for the growing of potatoes, as the rainfall is generally satisfactory and the climate is unfavourable to the spread of Irish blight; consequently, the crop is widely grown. The principal areas of that State are the central highlands and the south-western and Gippsland districts. Until 1958-59 Tasmania (where production is mainly in the north-west) came next in order of acreage sown, although production exceeded that of Victoria in some of the war years. Since then, however, acreage in New South Wales and Queensland has increased considerably, and there is now a greater area of potatoes in both of these States than in Tasmania. In New South Wales production is chiefly in the tablelands districts.

The area sown, production and yield per acre of potatoes in each State during the years 1961-62 to 1965-66 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown hereunder. A graph showing production since 1935-36 appears on page 996 of Year Book No. 49.

(a) Not available for publication.

(b) Incomplete; excludes Northern Territory.

*Potato marketing boards* were established in all States except Tasmania under separate State legislation after Commonwealth control of potato marketing under war-time legislation ceased at the end of 1948. The life of the Queensland Board was not extended when its term ended in 1954. The New South Wales Board was voted out by growers in 1956, and the Victorian Board also ceased functioning in that year. The boards in South Australia and Western Australia are the only statutory boards still in operation.

*Value of potato crop.* The estimated gross value of the potato crop of each State for the 1965-66 season and the value per acre are shown in the following table.

POTATOES: VALUE OF CROP, STATES, 1965-66

		N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust. (a)
Aggregate value	\$'000	7,418	11,050	12,704	4,692	5,027	2,856	43,751
Value per acre	\$	339	322	790	816	807	238	454

(a) Includes Northern Territory and Australian Capital Territory.

*Consumption and exports of potatoes.* The annual consumption of potatoes in Australia during each of the three years 1963-64 to 1965-66 amounted to 508,100 tons, 465,300 tons and 575,100 tons respectively or 103.4 lb, 92.8 lb and 112.6 lb respectively per head of population. These figures exclude the quantities used for seed, which averaged about 47,000 tons annually over this period. Details showing exports and imports for the years 1961-62 to 1965-66 are given in the following table.

POTATOES: EXPORTS AND IMPORTS, AUSTRALIA  
1961-62 TO 1965-66

Year	Exports		Imports	
	Quantity (tons)	Value (\$'000 f.o.b.)	Quantity (tons)	Value (\$'000 f.o.b.)
1961-62	4,121	320	3,233	218
1962-63	15,819	850	..	..
1963-64	12,722	643	..	..
1964-65	4,715	427	5,404	343
1965-66	10,064	626	7,208	455

Western Australia has emerged in recent years as the principal exporting State, accounting for about 75 per cent of the Australian total in 1965-66. Its principal markets are Malaysia and Singapore. New Zealand is the principal source of imports.

### Onions

*Area, production and yield per acre.* Australia's onion supply comes chiefly from Victoria and Queensland. The Victorian crop consists almost entirely of brown onions, and the bulk of the crop is grown in a small section of the Western Division of the State, where the volcanic ash soils have been found to be particularly suitable for onion growing on a commercial scale. Most of Queensland's onion production is grown in the Lockyer Valley and also consists mainly of brown varieties. Details of the area, production and yield per acre are given in the following table for the years 1961-62 to 1965-66 together with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. A graph showing production since 1935-36 appears on page 996 of Year Book No. 49.

*Value of onion crop.* The estimated gross value of the onion crop and the value per acre are shown in the following table for the 1965-66 season.

**ONIONS: VALUE OF CROP, STATES, 1965-66**

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.
Aggregate value . \$'000	745	1,814	2,588	1,067	393	60	6,667
Value per acre . \$	746	614	942	929	1,187	870	808

*Consumption and exports of onions.* The consumption of onions in Australia during 1965-66 was 66,300 tons or 13.0 lb per head of population. Onions are the only root crop, other than potatoes, in which any considerable overseas trade is carried on by Australia. In 1965-66 exports amounted to 1,609 tons, valued at \$171,844, and were shipped mainly to Papua and New Guinea, New Caledonia and Singapore. The quantity of exports in 1964-65 was 2,247 tons, valued at \$177,270. Imports of onions amounted to 1,538 tons, valued at \$136,000, in 1965-66, and 815 tons, valued at \$74,112, in 1964-65. The principal country from which onions were imported was New Zealand.

### Fruit

The varieties of fruit grown differ in various parts of the States, ranging from pineapples, papaws and mangoes in the tropics to strawberries, raspberries and currants in the colder parts of the temperate zone. In New South Wales citrus fruit (oranges, lemons, etc.) and bananas are the principal crops, although apples, peaches, plums, pears, and cherries are grown extensively. The principal varieties grown in Victoria are apples, pears, peaches, oranges, and apricots. In Queensland apples, pineapples, bananas, oranges, mandarins, peaches, and plums are the varieties most largely cultivated. In South Australia, in addition to oranges, apples, peaches, apricots, and pears, almonds and olives are grown extensively. In Western Australia apples, oranges, plums, and pears are the chief varieties. In Tasmania apples occupy over three-quarters of the fruit-growing area, but small fruit, such as currants, raspberries and gooseberries, is grown extensively, the balance of the area being mainly taken up with pears and apricots.

#### Overseas marketing of fruits

The *Apple and Pear Organization Act 1938-1966* provides for the establishment of an Australian Apple and Pear Board comprising representatives of growers, exporters, employees, and the Commonwealth Government. A representative in London has also been appointed by the Board. An export levy to meet the expenses of the Board is provided for in the *Apple and Pear Export Charges Act 1938-1966*. The function of the Board is the organisation and control of exports of fresh apples and pears, and it has the power to regulate shipments, determine export quotas, allocate consignments from each State, and recommend the licensing of exporters. The Board contributes to apple and pear publicity activities overseas.

In January 1964 the *Canned Fruits Marketing Act 1963-1966* replaced the *Canned Fruits Export Control Act 1926-1959* under which the overseas marketing of canned fruit was initially organised (see Year Book No. 49, page 1050). The Australian Canned Fruits Board, which is constituted under the Act, determines the terms and conditions for overseas sales. The Board exercises this control through a system of export licences. The Board, whose membership was increased from five to eleven members and which was granted greater powers under the new Act, comprises representatives of the Commonwealth Government (one), canners of deciduous fruit (six), growers of deciduous fruit (three), and pineapple interests (one). The Board maintains a London office. The *Canned Fruits Export Charges Act 1926-1966* provides for a levy on exports to meet the Board's expenses, which include contributions to overseas publicity connected with the canned fruit industry. In 1963 an excise duty was imposed by the *Canned Fruits Excise Act 1963* on canned deciduous fruit entered for domestic consumption, and the proceeds of the duty are made available to the Board to assist in the promotion of overseas sales of canned deciduous fruit.

In 1959 the Australian Canned Fruit Sales Promotion Committee was established to promote the sale of canned deciduous fruit on the home market and overseas. The operations of the Committee are financed by a levy on fruit accepted by the canneries for the production of canned fruit. The Committee comprises representatives of growers and processors of canning fruit and a representative of the Commonwealth Government.

#### Area and production of fruit

The area under fruit in Australia has been increasing steadily in recent years, and new record levels have been reached each year since 1960-61. The following tables set out the area under fruit and production in the several States.

**FRUIT: AREA, STATES AND TERRITORIES, 1961-62 TO 1965-66**  
(Acres)

**Production and consumption of jams and jellies and preserved fruit**

In Australia considerable quantities of fruit are used in the production of jams and jellies and for preserving. During 1965-66 output of jams, conserves, fruit spreads, etc. amounted to 97,149,000 lb, while output of preserved fruit amounted to 579,619,000 lb. Of the latter figure, pears accounted for 156,706,000 lb, peaches 217,549,000 lb, and pineapples 62,310,000 lb.

In 1965-66, 8,015,973 cwt of fruit was recorded as used in factories classified to the sub-classes Oils, vegetable; Jam, fruit and vegetable canning; Condiments, coffee, spices; Aerated waters and cordials; and Dehydrated fruit and vegetables. Details of the estimated consumption of fruit and fruit products per head of population for a series of years ending 1965-66 are shown in the chapter Miscellaneous.

**Imports and exports of fruit and fruit products**

The imports of fresh fruit into Australia are negligible, while those of dried fruit consist mainly of dates obtained almost entirely from Iraq and Iran. A considerable export trade in both fresh and dried fruit is carried on by Australia with overseas countries. The values of the shipments in 1965-66 amounted to \$37,819,000 and \$28,439,000 respectively. Apples constitute the bulk of the fresh fruit exported, although exports of pears and citrus fruit are considerable. Particulars of the Australian export trade in fresh and frozen fruit for each of the years 1961-62 to 1965-66 are shown in the following table.

**FRESH AND FROZEN FRUIT: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

Year	Apples		Pears		Citrus		Total value(a)
	Quantity	Value	Quantity	Value	Quantity	Value	
	'000 bus	\$'000 f.o.b.	'000 bus	\$'000 f.o.b.	'000 bus	\$'000 f.o.b.	\$A'000 f.o.b.
1961-62 . .	7,083	18,792	1,639	5,150	673	2,172	26,726
1962-63 . .	7,206	23,290	1,071	3,500	862	2,566	29,968
1963-64 . .	8,212	24,036	1,666	5,294	961	2,986	33,156
1964-65 . .	7,051	20,989	1,461	5,297	1,082	3,382	30,543
1965-66 . .	8,363	25,863	2,089	7,464	1,210	3,685	37,819

(a) Includes exports of all other fresh and frozen fruit.

The quantity and value of overseas imports and exports of dried fruit, other than raisins and currants, for the years 1961-62 to 1965-66 are shown below.

**DRIED TREE FRUIT(a): IMPORTS AND EXPORTS, AUSTRALIA  
1961-62 TO 1965-66**

Year	Imports(b)		Exports	
	Quantity	Value	Quantity	Value
	'000 lb	\$'000 f.o.b.	'000 lb	\$'000 f.o.b.
1961-62 . . . . .	8,266	628	5,951	1,564
1962-63 . . . . .	8,939	592	6,603	1,903
1963-64 . . . . .	10,262	604	8,479	1,988
1964-65 . . . . .	8,454	601	9,414	1,808
1965-66 . . . . .	8,145	557	11,907	2,450

(a) Excludes sultanias, raisins and currants dealt with separately under Vineyards (see below). (b) Dates and figs only.

Exports of jam and jellies in 1965-66 were 10,346,000 lb, valued at \$1,504,000, compared with 11,006,000 lb, valued at \$1,677,000 in 1964-65. Imports of jams and jellies in 1965-66 were 1,304,000 lb, valued at \$268,000, compared with 1,234,000 lb, valued at \$251,000 in 1964-65.

Large quantities of canned or bottled fruit are normally exported from Australia, the quantity recorded in 1965-66 being 138,082 tons valued at \$37,763,000. Exports in 1965-66 were made up principally of peaches (56,413 tons), pears (49,446 tons), fruit salad (11,359 tons), pineapples (7,516 tons), and apricots (5,266 tons). In addition, the exports of pulped fruits during 1965-66 amounted to 1,027 tons valued at \$364,102.

The total value of canned or bottled fruit (including fruit juices) imported into Australia during 1965-66 was \$812,000. The value of exports of fruit juices in 1965-66 was \$886,000.

### Vineyards

Grapes require a warm to hot climate and a predominantly winter rainfall. Freedom from late spring frosts is essential. They are grown for wine-making, drying and, to a minor extent, for table use. In Australia wine is produced very largely from irrigated crops, as are dried fruits. Some of the better known wine producing areas are the Murray Valley (South Australia and Victoria), Barossa Valley and Southern Vales Areas (South Australia), the Murrumbidgee Irrigation Area and the Hunter Valley (New South Wales), the Mildura, Rutherglen and Stawell districts of Victoria, and the Swan Valley (Western Australia). Nearly all the dried fruit is produced along the River Murray and its tributaries, with small localised areas in the other States.

#### Area of vineyards

The area under vineyards in the 1965-66 season in Victoria and South Australia constituted 77 per cent of the total area of vineyards. The total area of vines in the several States during each of the years 1961-62 to 1965-66 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

**VINEYARDS: AREA, STATES, 1936-37 TO 1965-66**

**Wine industry**

Australia produces wine of every type and also brandy. In recent years there has been a distinct trend toward greater consumption and production of unfortified or table wines. Until 1957-58 production of these wines (which include burgundy, claret, riesling, sauterne, and sparkling wines) was less than half that of the fortified varieties (sherries, ports, etc.). By 1965-66 production of table wines reached a volume only 5 per cent smaller than that of fortified varieties.

*The Wine Overseas Marketing Act* 1929-1966 was introduced to place the overseas marketing of wine on an orderly basis. The Australian Wine Board, consisting of representatives from wineries and distilleries, grape-growers and the Commonwealth Government, supervises the sale and distribution of Australian wine exported and recommends conditions under which export licences should be issued. The Board also engages in wine publicity and trade promotion activities both in Australia and overseas. In London the Board maintains an Australian Wine Centre, which is a medium for promoting interest in Australian wines and brandy. It is also a retail shop for the sale of these products. *The Wine Grapes Charges Act* 1929-1966 provides for the imposition of a levy on all grapes used in Australia for the manufacture of wine, brandy and spirit used for fortifying wine. The proceeds of the levy are used to meet the Board's projects in Australia and overseas and to defray the administrative expenses of the Board, which has no other source of income.

**Production and consumption of wine and brandy**

In 1965-66 the total production of wine (beverage and distillation) in Australia was 34.0 million gallons, while total consumption of beverage wine was 15.3 million gallons (1.34 gallons per head of population). Similar particulars for 1964-65 are 38.5 million gallons and 13.8 million gallons (1.23 gallons per head of population) respectively.

The quantities of wine and brandy produced in the several States during the 1961-62 to 1965-66 seasons, together with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59, are shown in the following table.

**WINE: PRODUCTION(a), STATES, 1936-37 TO 1965-66**  
(<sup>'000</sup> gallons)

1964-65 . . .	1,183,351	1,400,100
1965-66 . . .	1,167,309	1,371,217

(a) Includes New South Wales and Victoria, for which separate details are not available for publication.

**Exports and imports of wine and brandy**

Principal markets for exports of Australian wine are the United Kingdom, Canada and New Zealand. During 1965-66 these countries received 1,251,368 gallons, 384,026 gallons and 81,222 gallons respectively. Exports of Australian-produced wine for the five years ended 1965-66 are shown in the following table.

**WINE: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

Year	Quantity (gallons)			Value (\$f.o.b.)		
	Sparkling	Other	Total	Sparkling	Other	Total
1961-62 . . .	5,145	1,664,984	1,670,129	34,200	2,737,860	2,772,060
1962-63 . . .	17,245	1,596,887	1,614,132	92,444	2,657,052	2,749,496
1963-64 . . .	10,373	1,527,666	1,538,037	62,118	2,682,108	2,744,226
1964-65 . . .	16,035	1,977,329	1,993,364	96,056	3,427,426	3,523,482
1965-66 . . .	34,888	1,932,374	1,967,262	170,859	3,384,696	3,555,555

Imports of wine for 1965-66 amounted to 145,861 gallons valued at \$647,000, compared with 149,818 gallons valued at \$618,000 in the previous year. During 1965-66 Italy supplied 70,034 gallons valued at \$224,000, France 33,626 gallons valued at \$251,000 and the Federal Republic of Germany 12,741 gallons valued at \$71,000.

Exports of Australian-produced brandy in 1965-66 amounted to 117,434 proof gallons, valued at \$559,000. Imports of brandy, mainly from France, amounted to 77,476 proof gallons, valued at \$476,000.

#### **Dried vine fruit industries**

The dry period from November to March in the lower Murray valley makes this an ideal area for dried vine fruit. Harvesting for drying takes place at the end of summer. The sun-drying process is often accelerated by using a dip of cold potash.

The *Dried Fruits Export Control Act* 1924-1966 was passed to organise overseas marketing of Australian dried vine fruit. The Australian Dried Fruits Control Board, consisting of growers' representatives, members with commercial experience in marketing dried fruits and a Government representative, controls the sale and distribution of dried fruit exports, recommends the licensing of exporters and contributes to dried vine fruit publicity activity overseas. In conjunction with its London office, the Board has improved dried fruit marketing overseas by its system of appraisal, regulation of shipments and advertising. The *Dried Fruits Export Charges Act* 1924-1965 provides for a levy on exports of dried fruit to defray costs and expenses incurred by the Board.

For details of the bulk purchase agreements between the Governments of the United Kingdom and Australia which operated during the period 1946-53 see Year Book No. 40, page 888. From 1 December 1953 exports to the United Kingdom have been on a trader to trader basis.

In June 1963 Australian, Greek and Turkish dried vine fruit interests concluded an agreement to maintain minimum prices for sultanas on world markets. The agreement, which aims at international price stability, is periodically reviewed. A permanent committee of the contracting parties was established in London for the purpose of supervising the working of the agreement, and a sub-committee of the permanent committee was established in Hamburg in 1964.

The Dried Vine Fruits Stabilization Scheme was introduced under the *Dried Vine Fruits Stabilization Act* 1964-1966 to stabilise seasonal returns to growers of currants, sultanas and raisins. Its main features are as follows.

Growers are guaranteed an average return from seasonal sales of currants, sultanas and raisins equal to the average cost of production of each variety less \$10.00 a ton.

The maximum quantities for which returns are guaranteed each season are 13,500 tons of currants, 75,000 tons of sultanas and 11,000 tons of raisins.

Growers are required to contribute to separate varietal stabilisation funds when the average return to the industry from seasonal sales of a variety exceeds cost of production by more than \$10.00 a ton, with a limit on such contributions of \$20.00 a ton.

When the quantity received for packing in any season does not reach 8,000 tons of currants, 50,000 tons of sultanas or 6,000 tons of raisins, growers are not required to contribute to the stabilisation fund for the variety concerned.

Contributions are to be made by the Commonwealth to raise average returns to the guaranteed price when there is insufficient industry money in a stabilisation fund for this purpose.

Limits are set to the accumulation of money in the stabilisation funds. These are \$1,000,000 in the case of both the currant and raisin stabilisation funds, and \$4,000,000 in the case of the sultana stabilisation fund.

Where these limits are exceeded during the operation of the scheme, the excess will be used first to reimburse the Government for any contribution it may have made to a fund; any balance will be repaid to growers on a first-in first-out basis.

The scheme is to operate for five years. At the end of the fifth year any credit balance in the stabilisation funds will be used, in the first instance, to reimburse the Government for unpaid contributions (if any). If the scheme is not renewed any remaining money will be returned to growers.

Growers' contributions for the scheme are collected under the *Dried Vine Fruits Contributory Charges Act* 1964-1966 and the *Dried Vine Fruits Contributory Charges (Collection) Act* 1964-1966.

The production of dried vine fruit during each of the seasons 1961-62 to 1965-66 and the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59 are shown in the following table.

**DRIED VINE FRUIT: PRODUCTION, STATES, 1936-37 TO 1965-66**  
(Tons)

(a) Includes sultanas and lexias.

The following table shows the exports of dried vine fruit during each of the years 1961-62 to 1965-66.

**DRIED VINE FRUIT(a): EXPORTS, AUSTRALIA, 1961-62 TO 1965-66**

Year	Raisins, sultanas and lexias		Currants		Total	
	Quantity	Value	Quantity	Value	Quantity	Value
	tons	\$'000 f.o.b.	tons	\$'000 f.o.b.	tons	\$'000 f.o.b.
1961-62 . . .	60,169	17,910	4,564	1,240	64,733	19,150
1962-63 . . .	56,696	16,058	4,208	1,141	60,904	17,199
1963-64 . . .	57,451	17,442	5,512	1,601	62,963	19,043
1964-65 . . .	63,197	20,324	6,532	1,968	69,729	22,292
1965-66 . . .	74,704	24,070	6,102	1,918	80,805	25,988

(a) Excludes quantities exported as mincemeat.

The chief countries importing Australian dried vine fruit are the United Kingdom, Canada, New Zealand, the Federal Republic of Germany, and Ireland. The quantities exported to these countries in 1965-66 were 34,382 tons, 20,316 tons, 7,685 tons, 7,063 tons, and 1,931 tons respectively.

**Table grapes**

Grapes for table use are grown in all States except Tasmania, but the area of this type was only about 8 per cent of the productive area of vines in 1965-66. The quantities of table grapes produced during the season 1965-66 in each State are shown on page 897.

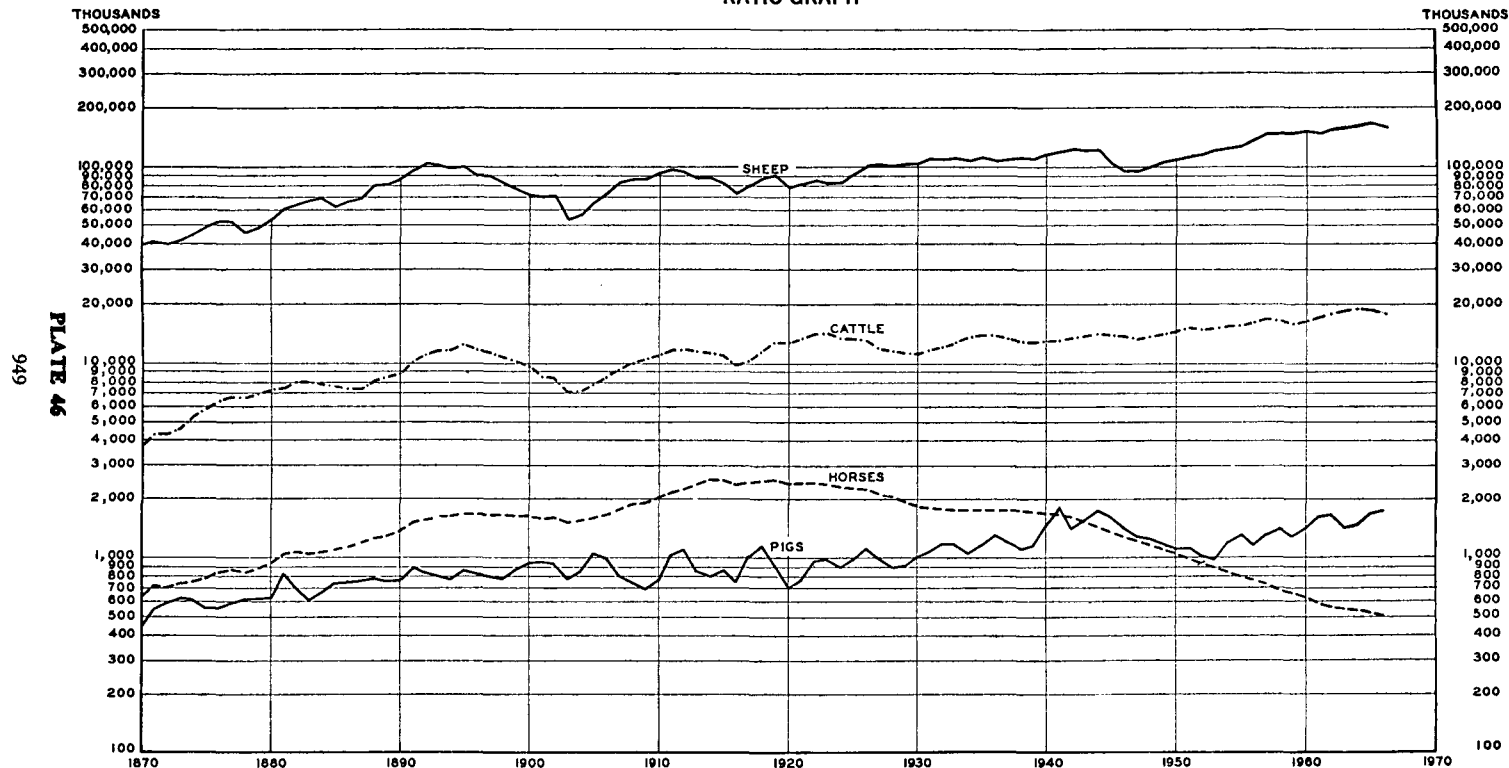

**PASTORAL PRODUCTION**

**Livestock numbers**

A detailed account of the various enumerations of livestock in Australia made prior to 1860 was given on page 748 of Year Book No. 35. Since 1860 annual enumerations have been made, based, with few exceptions, on actual collections made through the agency of the State police or by post. Particulars concerning the numbers of each of the principal kinds of livestock in Australia, at decennial intervals from 1860 to 1960, and from 1962 onwards in single years, are given in the following table, and are shown continuously since 1870 on the graph on plate 46 opposite.

# LIVESTOCK: AUSTRALIA, 1870 TO 1966

RATIO GRAPH

NOTE:- VERTICAL SCALE IS LOGARITHMIC, AND THE CURVES RISE AND FALL ACCORDING TO RATE OF INCREASE OR DECREASE; ACTUAL NUMBERS ARE INDICATED BY SCALE.

## LIVESTOCK: AUSTRALIA, 1860 TO 1966

('000)

Year	Horses	Cattle	Sheep	Pigs	Year	Horses	Cattle	Sheep	Pigs

While livestock numbers (particularly sheep) have increased substantially since 1860, marked fluctuations have taken place during the period, mainly on account of widespread droughts which have from time to time left their impressions on the pastoral history of Australia. These occurred in 1868, 1877, 1883-84, 1892, 1893, 1895, 1901-02, 1912, 1914, 1918, 1919, 1922-23, 1925-26, 1927-28, 1929-30, 1940-41, 1944-45 to 1946-47, and 1965-66. The years in which the numbers of livestock attained their peaks are as follows: horses, 1919 (2,527,000); cattle, 1964 (19,055,000); sheep, 1965 (170,622,000); and pigs, 1941 (1,797,000).

The distribution throughout Australia of sheep, beef cattle, dairy cattle, and pigs at 31 March 1963 is shown in the maps on pages 1049 and 1050 and facing pages 1082 and 1083 of Year Book No. 50.

The numbers of horses, cattle, sheep, and pigs in each State and Territory are shown later in this chapter. As explained on page 954, since 1964 farmers are no longer asked to classify their herds as either 'beef cattle' or 'dairy cattle', detailed statistics of cattle from 1964 onwards are not comparable with those for earlier years.

## Value of pastoral production

Values of pastoral production are shown for 1965-66 and earlier years in the following tables. Further details of the source of the information and an explanation of the terms used in this compilation will be found in the chapter Miscellaneous. Maintenance costs and depreciation have not been deducted; consequently the net values are inflated to the extent of these amounts.

## GROSS, LOCAL AND NET VALUES OF PASTORAL PRODUCTION, STATES AND TERRITORIES, 1965-66

(\$'000)

State or Territory	Gross production valued at principal markets	Marketing costs	Local value of production	Value of materials used in process of production	Net value of production(a)
New South Wales . . . . .	468,443	37,492	430,951	(b) 74,481	356,470
Victoria . . . . .	413,558	42,429	371,130	24,900	346,230

1965-66 . . .	84.80	108.47	120.73	114.82	157.30	60.42	103.86

(a) No deduction has been made for depreciation and maintenance. (b) No allowance has been made for costs of power, power kerosene, petrol and other oils. (c) Includes Northern Territory and Australian Capital Territory.

**Indexes of quantum and price of pastoral production, 1961-62 to 1965-66**

The quantum indexes shown in the following table relate to gross output of farm products valued at constant prices. The quantities of each farm product produced each year have been re-valued at the unit gross value for the period 1936-37 to 1938-39. The price indexes relate to average 'prices' of farm products realised in the principal markets of Australia. Average quantities of each product marketed in the period 1946-47 to 1950-51 have been used as fixed weights. For further details of the methods of calculating these indexes and of the weights used see the chapter Miscellaneous.

**INDEXES OF QUANTUM(a) AND PRICE OF PASTORAL PRODUCTION  
AUSTRALIA, 1961-62 TO 1965-66**

(Base: Average 3 years ended June 1939 = 100)

	1961-62	1962-63	1963-64	1964-65	1965-66
Quantum(a) produced—					
Wool . . . . .	174	170	183	183	169
Other products . . . . .	144	154	158	158	157
<i>Total, pastoral . . . . .</i>	<i>160</i>	<i>163</i>	<i>172</i>	<i>172</i>	<i>163</i>
Per head of population . . . . .	104	104	107	105	98
Price—					
Wool . . . . .	412	449	531	437	458
Other products . . . . .	433	451	480	496	567
<i>Total, pastoral . . . . .</i>	<i>421</i>	<i>450</i>	<i>511</i>	<i>460</i>	<i>501</i>

(a) Index of value at constant prices, i.e. quantities revalued at average unit values of base years 1936-37 to 1938-39.

## Sheep

## Distribution throughout Australia

With the exception of a short period in the early eighteen-sixties, when the flocks of Victoria outnumbered those of New South Wales, the latter State has occupied the premier position in sheep-raising, depasturing nearly one-half of the sheep of Australia (43 per cent over the five years ended March 1966). In Western Australia, sheep numbers have shown a marked increase in recent years, having doubled between 1952 and 1966.

A map showing the distribution of sheep in Australia at 31 March 1963 appears on page 1049 of Year Book No. 50. Graphs showing the number of sheep in Australia from 1870 onwards appear on plates 46 and 47 of this Year Book (pages 949 and 961).

## SHEEP: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1966

('000)

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average for three years ended—									
1939 . . .	51,202	17,845	21,889	8,916	8,972	2,460	23	251	111,558
1949 . . .	46,525	17,900	16,442	8,793	10,368	2,060	24	227	102,339
1959 . . .	67,006	26,615	22,537	15,285	15,609	3,259	25	265	150,601
At 31 March—									
1962 . . .	69,498	27,533	22,125	16,415	18,314	3,531	10	286	157,712
1963 . . .	70,021	27,472	22,811	15,737	18,727	3,570	9	279	158,626
1964 . . .	71,764	28,413	24,337	16,403	20,165	3,600	10	289	164,981
1965 . . .	72,396	30,437	24,016	17,289	22,392	3,793	9	290	170,622
1966 . . .	61,396	30,968	18,384	17,993	24,427	4,127	9	258	157,563

Drought conditions in 1965-66 resulted in heavy losses of sheep in New South Wales and Queensland, and brought about a reduction of 8 per cent in the Australian total at 31 March 1966, compared with the record numbers of the previous year. The percentage distribution in the several States in 1966 was: New South Wales, 39; Victoria, 19; Queensland, 12; South Australia, 11; Western Australia, 16; and Tasmania, 3.

## Movement in sheep numbers

SHEEP AND LAMBS: ANALYSIS OF MOVEMENT IN NUMBERS, AUSTRALIA  
1961-62 TO 1965-66

('000)

Year ended 31 March	Numbers at beginning of season	Lambs marked	Net exports	Sheep and lambs slaughtered (a)	Estimated deaths on farms (b)	Numbers at close of season
1962 . . .	152,679	45,596	181	33,317	7,065	157,712
1963 . . .	157,712	45,146	247	33,944	10,041	158,626
1964 . . .	158,626	47,818	312	33,240	7,911	164,981
1965 . . .	164,981	47,608	307	33,549	8,111	170,622
1966 . . .	170,622	40,330	273	33,580	19,536	157,563

(a) Includes an estimate for numbers boiled down.

(b) Balance figure; excludes lambs which died before marking.

Comparisons of Australian flock numbers with those of certain other principal sheep producing countries are given on page 968.

## Classification of sheep according to age, sex and breed

SHEEP, BY AGE AND SEX: AUSTRALIA, 1962 TO 1966  
(<sup>'000</sup>)

Description	1962	1963	1964	1965	1966
Rams, 1 year and over . . .	1,956	1,979	1,986	2,047	2,002
Breeding ewes (including ewes intended for mating) . . .	70,693	70,936	72,862	75,580	73,626
Other ewes, 1 year and over . . .	8,729	8,878	8,631	8,952	7,397
Wethers, 1 year and over . . .	43,021	44,267	46,203	49,284	45,649
Lambs and boggies, under 1 year	33,313	32,566	35,299	34,759	28,890
<b>Total, sheep and lambs . . .</b>	<b>157,712</b>	<b>158,626</b>	<b>164,981</b>	<b>170,622</b>	<b>157,563</b>

Particulars of the principal breeds of sheep at 31 March 1965 (details are collected on a triennial basis) are shown in the following table.

SHEEP, BY PRINCIPAL BREED: STATES AND TERRITORIES, 31 MARCH 1965  
(<sup>'000</sup>)

Breed	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Merino . . .	56,232	14,148	23,655	14,581	20,533	351	9	245	129,754
Other recognised breeds . . .	7,601	7,486	129	1,218	788	2,352	..	13	19,587
Merino comeback (a) . . .	1,163	2,160	47	284	287	419	..	4	4,364
Crossbreds(b) . . .	7,400	6,643	185	1,206	784	671	..	27	16,917
<b>Total . . .</b>	<b>72,396</b>	<b>30,437</b>	<b>24,016</b>	<b>17,289</b>	<b>22,392</b>	<b>3,793</b>	<b>9</b>	<b>290</b>	<b>170,622</b>

(a) Merino comeback is the progeny of a crossbred Merino ewe and a Merino ram, i.e. finer than half-bred.  
(b) Half-bred and coarser.

## Exports and imports of sheep

The overseas exports of live sheep from Australia are of comparatively minor importance. On 27 November 1929 the export of stud Merino sheep was prohibited, except with the approval of the Minister for Primary Industry. Exports of sheep are now principally for slaughter overseas. Consignments for this purpose in recent years were made chiefly from Western Australia to Kuwait and Singapore. In 1965-66 the number of sheep exported was 290,960, valued at \$2,513,000 (1964-65, 286,205, valued at \$2,411,000). Since June 1958 an embargo has been imposed on the import of sheep in order to prevent the introduction of the disease 'blue-tongue'.

## Cattle

## Objects of cattle-raising in Australia

Cattle-raising is carried out in all the States, the main object in certain districts being the production of stock suitable for slaughtering purposes and in others the raising of profitable dairy herds. While dairy cattle are restricted mainly to coastal districts, beef cattle are more widely distributed, particularly in the eastern States, and are raised in areas unsuitable for dairy cattle, such as the tropical area of northern Queensland, the Northern Territory and the Kimberley district in the north of Western Australia.

## Distribution throughout Australia

Although cattle numbers declined after 1957 because of drought conditions and heavy slaughterings, they began to rise again in 1960 and in 1964 reached a record level of 19,055,000. Again because of drought in the eastern States, this figure declined to 17,936,000 in 1966.

A graph showing the number of cattle in Australia from 1870 onwards appears on plate 46, page 949.

**CATTLE: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1966**

Although the proportion was not as high as it has been in some previous years, Queensland was carrying 38 per cent of the cattle in Australia in 1966. The percentage in each State and Territory during that year was: New South Wales, 23; Victoria, 19; Queensland, 38; South Australia, 4; Western Australia, 7; Tasmania, 3; and Northern Territory, 6.

Maps showing the distribution of beef and dairy cattle in Australia appear on pages 1050 and 1082 of Year Book No. 50, and maps showing the distribution in earlier years were published in previous issues of the Year Book.

**Classification of cattle**

The wording and layout of the cattle section of the statistical forms used for the Agricultural, Dairying and Pastoral Census conducted at 31 March 1964 was changed from that used previously. Prior to 1964 farmers were asked to classify their herds as either 'beef cattle' or 'dairy cattle'. These two terms tended to confuse breed and purpose, and in those instances where vealer production was carried on in association with dairying, farmers were in doubt how to classify part or all of their herds. Since 31 March 1964 farmers have been asked to classify their cattle according to the two main purposes of (i) milk production and (ii) meat production, irrespective of breed, and to report separately the number of cows and heifers kept for their own domestic milk supply. Consequently detailed statistics of cattle from 1964 onwards are not comparable with earlier figures. However, four broad groupings of cattle are generally comparable with earlier years, and particulars for each year from 1962 to 1966 are shown below.

For beef cattle and dairy cattle numbers prior to 1964 see pages 1056 and 1078 respectively of Year Book No. 50.

**Meat research schemes**

In November 1965 the Commonwealth Parliament passed legislation providing for the extension of the cattle and beef research scheme to cover beef, mutton and lamb research. Details of the beef research scheme were set out on page 1050 of Year Book No. 51. Under the new legislation the Cattle and Beef Research Committee was re-constituted as the Meat Research Committee, its powers and functions being the same as the former Committee as widened to include mutton and lamb research. The Meat Research Committee consists of twelve members—seven meat producer representatives, the Chairman of the Australian Meat Board, one representative from the Universities engaged in meat research, the Commonwealth Scientific and Industrial Research Organization, the Australian Agricultural Council, and the Department of Primary Industry. The new Committee came into being in March 1966 and the Cattle and Beef Research Committee ceased to exist from that date.

The scheme is financed from the Livestock Slaughter Levy (*see below*). The Commonwealth makes a matching contribution on a \$1 for \$1 basis to meet expenditure on research. The research is conducted by existing bodies such as the universities, C.S.I.R.O. and State Departments of Agriculture.

The Minister for Primary Industry has approved a beef research programme of just over \$2,000,000 for 1966-67. This is approximately the same amount as in the previous year. As yet no programme has been formulated for mutton and lamb research.

**The Livestock Slaughter Levy**

The *Livestock Slaughter Levy Act* 1964-1966 imposed a levy on all cattle (over 200 lb dressed weight), sheep and lambs slaughtered within Australia for human consumption. These levies, operative from 1 August 1964, replace the charge imposed on meat exports and also include the cattle slaughter levy for beef research purposes imposed in 1960. (*See* page 909 of Year Book No. 51 for details.) The proceeds of the levies under the Livestock Slaughter Levy Act are for the purposes of meat market development (including the financing of the operations of the Australian Meat Board) and for research into the technical, scientific and economic problems of the meat industry. The rates of levy are not to exceed 75 cents for cattle, of which a maximum of 20 cents is for beef research, and 7.5 cents for sheep or lambs, of which a maximum of 3.75 cents is for sheep or lamb research.

**Exports and imports of cattle**

In 1965-66 the number of cattle exported was 7,315, valued at \$932,000 (1964-65, 9,425 valued at \$835,000). The bulk of the animals at present being exported are sent to the Philippines for slaughtering, the number exported thereto in 1965-66 being 3,567 head valued at \$240,000. Prior to June 1958 small numbers of cattle were imported, consisting mainly of valuable animals for stud purposes. Since that date an embargo has been imposed on the import of cattle in order to prevent the introduction of the disease 'blue-tongue'.

**Comparison with other countries**

The following table shows the number of cattle in Australia and in some of the principal cattle-raising countries of the world at the latest available date.

### Horses

The number of horses in Australia reached a peak of 2,527,000 in 1919. Since then it has declined, because of mechanisation of transport and farming, and the number recorded at 31 March 1965 (the latest year for which complete figures are available) was 520,000. Particulars of horses are no longer collected in all States annually. An Australian total will next be available in respect of the year 1967 and, thereafter, at triennial intervals only.

A graph showing the number of horses in Australia since 1870 appears on plate 46, page 949.

### Overseas trade in horses

Exports of Australian-bred horses in 1965-66 numbered 662, valued at \$910,000, made up of horses for breeding (231 valued at \$294,000), horses for racing (322 valued at \$562,000, shipped principally to Singapore, Republic of Korea and New Zealand), and horses for other purposes (109 valued at \$53,000). Horses imported into Australia in 1965-66 (560 valued at \$1,773,000) were mainly from New Zealand and the United Kingdom.

### Pastoral products: wool

With about one-sixth of the world's woolled sheep, Australia produces almost one-third of the world's wool and more than half the world's fine-quality merino wool. The bulk of the production is exported, mainly as greasy wool, although substantial amounts of scoured and carbonised wool, wool on sheep skins and small quantities of semi-manufactured wool are also shipped. The important position held by Australia among the principal sheep and wool producing countries of the world is shown in the table on page 968.

### Wool marketing

Details of past wool marketing schemes and agreements, including the 1914-18 War Imperial Purchase Scheme, the British Australian Wool Realization Association Ltd, the 1939-45 War Acquisition Scheme, Joint Organization, and Minimum Reserve Price Plan, are given in previous issues of the Year Book.

More than ninety per cent of the Australian wool clip is disposed of at auction. (During both world wars, however, auction selling was suspended and replaced by bulk purchase schemes.) There are fourteen recognised wool-selling centres, namely Sydney, Goulburn, Newcastle, Albury, Melbourne, Geelong, Ballarat, Portland, Brisbane, Adelaide, Perth, Albany, Hobart, and Launceston. At these centres wool-selling brokers operate large stores where wool received from growers is held awaiting sale.

Each year a wool-selling programme is drawn up jointly by the selling brokers and wool-buyers on the basis of the expected clip. Selling dates and the quantities to be offered are then determined for each centre. Before each sale the selling brokers, who act as agents for the wool-growers, display a representative portion of the wool to be sold on show floors for buyers' inspection and valuation. Auction sales are attended by buyers purchasing on behalf of wool users in more than fifty countries.

### Wool Marketing Committee of Inquiry

In 1961 the Commonwealth Government appointed an independent committee to inquire into the marketing and promotion of Australian wool and related matters (see Year Book No. 48, page 977, for further details). The Committee presented its report to the Government in 1962. Its most important recommendation was that wool promotion, research and testing should be brought under the control of a single body, which should also act as an advisory authority on wool marketing. This recommendation was implemented under the *Wool Industry Act 1962-1966* which set up the Australian Wool Board.

### Australian Wool Board

This Board consists of a chairman, six woolgrower representatives, three members with special qualifications, and a representative of the Commonwealth Government. The first chairman of the Board was appointed by the Minister for Primary Industry after consultation with the Australian Wool Industry Conference (*see below*), but subsequent chairmen are to be appointed on the nomination of the Board. The six woolgrower representatives are appointed by the Minister on the nomination of the Wool Industry Conference, and the three members with special qualifications are appointed from a panel of names submitted by the Conference. The Act provides that the latter members must be experienced in one of the following fields: wool marketing and manufacturing, research, finance, and commerce.

When the Board came into being on 1 May 1963 it took over the functions of the Australian Wool Bureau. On 1 July 1963 the Australian Wool Testing Authority became part of the Board, and on 1 January 1964 the Board took over the functions of the Wool Research Committee. Information on these three former instrumentalities appears in Year Book No. 48, pages 977-81.

Following the organisational changes carried out under the Wool Industry Act, the functions of the Board embrace the following activities.

*Wool promotion in Australia and overseas by publicity and other means.* Promotion overseas is carried out through the International Wool Secretariat, which is maintained jointly by the Wool Boards of Australia, New Zealand and South Africa.

*Provision of a testing service for wool and wool products.* This service is administered by a subsidiary board retaining the name Australian Wool Testing Authority.

*Administration of wool research.* The Board is responsible for preparing annual programmes of research expenditure which are subject to the approval of the Minister for Primary Industry. Two committees established by the Board, the Wool Production Research Advisory Committee and the Wool Textile Research Advisory Committee, assist in this task.

*Investigation into all aspects of wool marketing on a continuing basis.* The Wool Marketing Committee, an ancillary body appointed by the Board, assists in carrying out this function. The Board is required to report to the Australian Wool Industry Conference on its findings and advise it on measures which should be adopted to meet changing marketing conditions. However, the Board has no executive powers over marketing.

In July 1964 the Board, after an investigation by the Wool Marketing Committee, made recommendations to the Australian Wool Industry Conference for the introduction of a Reserve Price Plan for wool, which were put to woolgrowers in a referendum in December 1965. For details *see* Year Book No. 52, page 945.

*Maintenance and administration of the wool stores which were entrusted to the Board by the Commonwealth Government.* Further details concerning these stores appear in Year Book No. 48, page 978.

*Other activities approved by the Minister for the benefit of the wool industry, including the operation of the Wool Statistical Service and the registration of wool classers.* The Wool Statistical Service (described in more detail in Year Book No. 48, pages 977-8) provides comprehensive statistics on the Australian wool clip, while the registration of wool classers is designed to improve the standards of wool classing in Australia.

At present the main sources of finance for the various activities of the Board are a levy paid by woolgrowers and contributions by the Commonwealth Government.

### The Australian Wool Industry Conference

This body was formed by woolgrowers in October 1962 to meet the need for an organisation with sufficient authority to speak on behalf of the woolgrowing industry as a whole. It is not a statutory body and consists of twenty-five members each from the Australian Woolgrowers' and Graziers' Council and the Australian Wool and Meat Producers' Federation, and, from October 1965, five members from the Australian Primary Producers' Union. The fifty-five member conference is presided over by an independent chairman.

The Conference makes recommendations to the Commonwealth Government on policy matters concerning the wool industry. Under the Wool Industry Act it is the responsibility of the Conference to nominate woolgrower representatives for appointment to the Australian Wool Board and to prepare panels of names from which the three Board members with special qualifications are selected. Under the Wool Tax Acts (*see below*) the Conference is also responsible for recommending to the Commonwealth Government what rates of levy should be paid by woolgrowers to finance the activities of the Wool Board.

### Wool levy

Since 1936 a statutory levy has been collected from woolgrowers to finance wool promotion activities. The initial rate of 5c a bale was increased at the request of woolgrowers to 20c a bale in 1945 and 40c a bale in 1952, the latter rate continuing until 1960. Further details regarding the operation of this levy prior to 1957 appear in Year Book No. 48, page 978.

Under legislation passed in 1957 provision was also made for the payment by woolgrowers of a contribution for wool research which was fixed at 20c a bale. In 1960 the wool promotion levy was raised to 50c a bale, and the following year it was increased further to \$1 a bale. The operation of this rate was subsequently extended for 1962-63 and 1963-64.

On 1 July 1964 the basis of collecting the woolgrowers' combined levy for wool promotion and research was changed from the existing unit charge per bale to a percentage of the gross sale value of the wool. The maximum rate was set at 2 per cent and provision was made for annual adjustments to the operative rate, not greater than that maximum, to yield the required amounts. At the same time the levy for wool promotion was increased from \$1 a bale to the equivalent of \$2.70 a bale, but the levy for research remained unchanged at the equivalent of 20c a bale. For 1964-65 the rate for the combined levy for wool promotion and research was set at  $1\frac{1}{4}$  per cent and for 1965-66 and 1966-67 it was at the full rate of 2 per cent. In February 1967 the Australian Wool Industry Conference agreed that the collection of the levy on the basis of a percentage of the gross sale value of wool should continue for the three years commencing 1967-68. The 2 per cent maximum rate of levy is to be retained as are the provisions for annual adjustments to the operative rates.

The imposition and collection of the combined levy from woolgrowers is governed by six complementary Acts, the Wool Tax Acts (Nos. 1 to 5) 1964 and the *Wool Tax Administration Act* 1964-1966.

#### Commonwealth Government's contributions to wool research and promotion

In 1945 the Commonwealth Government commenced contributing on a statutory basis to wool research. Initially the contribution was at the rate of 20 cents a bale, but this was doubled in 1957 to 40 cents a bale. At this rate the Commonwealth Government contributed about \$2,000,000 to wool research in 1965-66, and a similar sum is expected to be provided in 1966-67.

Prior to 1964-65 the Commonwealth Government had not contributed to wool promotion. However, following representations made by the Australian Wool Industry Conference, the Commonwealth Government undertook to provide assistance to the Australian Wool Board to finance its commitment to the vastly expanded wool promotion activities of the International Wool Secretariat. The five-year wool promotion programme, announced by the Secretariat, envisaged an increase in the Wool Board's annual contribution to overseas wool promotion campaigns from the then level of \$5,000,000 to about \$20,000,000.

In October 1963 the Commonwealth Government agreed to match on a \$1 for \$1 basis any increase in contributions by wool growers for wool promotion in excess of the levy of \$1 a bale then in force. This arrangement operated from 1 July 1964 and was to be reviewed at the end of the period. In January 1964 the Wool Industry Conference agreed to increase the growers' levy to the equivalent of \$2.70 a bale, which resulted in a Commonwealth commitment of \$1.70 a bale. In aggregate this commitment required a Commonwealth contribution for promotion of about \$8,500,000 a year, commencing in 1964-65.

In November 1966 the Commonwealth Government stated that during the three years commencing July 1967 it would match the total funds contributed by woolgrowers for wool promotion and research on a \$1 for \$1 basis up to a maximum of \$14,000,000 a year for both promotion and research. This offer was formally accepted by the Wool Industry Conference in February 1967.

#### Wool production

Wool as shorn from the sheep contains an appreciable amount of grease, dirt and other extraneous matter, and is termed 'greasy wool'. The quantity of grease and other matter in a fleece differs not only between countries, but between districts in the same country. It fluctuates with the vagaries of the season, and with the breed and the condition of the sheep. To allow for this factor, the weight of greasy wool is sometimes given on a 'clean' basis, i.e. minus the estimated amount of impurities. The net wool fibre content of greasy wool, expressed as a percentage, is termed 'clean yield'.

From 1946-47 to 1952-53 the Australian Wool Realization Commission, and from 1953-54, the Wool Statistical Service, have assessed annually the clean yield of the Australian wool clip. During the period of assessment the clean yield showed a continuous rise up to 1951-52, when it reached 57.5 per cent. It has since fluctuated between 55.8 per cent and 57.7 per cent. It was 56.4 per cent in 1965-66.

Wool scoured, washed and carbonised in Australia before export, however, has a clean yield somewhat lower than for the whole clip, because the grade of greasy wool treated locally for export as scoured, washed or carbonised includes a large proportion of dirty and low-grade wool. In recent years it has been slightly over 50 per cent. The quantity of this wool exported during 1965-66 was about 11 per cent of the total raw wool exports (excluding wool exported on skins) in terms of greasy. For the clean yield of Australian scoured wools exported a standard factor of 93 per cent is taken.

The production of wool in the States and Territories varies broadly in accordance with the number of sheep depastured and with seasonal conditions which affect clip per head (*see* page 962). In general, however, South Australia obtains from its large-framed Merinos a much heavier fleece per sheep than the Australian average. In addition, as a result of better management (improved pastures, fodder conservation, better breeding, control of diseases, etc.), the long-term trend has been towards higher fleece weights, although the Australian average for sheep and lambs combined in 1965-66, at 8.54 lb, was the lowest since 1957-58 when it was 8.22 lb.

The following table shows details of total wool (i.e. shorn, dead and fellmongered, and exported on skins) produced by each of the States and Territories during the years 1961-62 to 1965-66 compared with averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. A graph showing the production of wool in relation to sheep numbers from 1870 onwards appears on plate 47 opposite.

The bulk of the Australian wool production (about 91 per cent in recent years) is shorn from live sheep. The remainder is obtained by fellmongering (about 2 per cent) or is exported on skins (about 7 per cent). The following table shows details of total wool production according to method of obtaining wool, and also the gross value of wool produced. Gross value is based, for shorn wool, upon the average price realised for greasy wool sold at auction and, for skin wools, on prices recorded by fellmongers and skin exporters.

**QUANTITY (GREASY BASIS) AND VALUE OF WOOL PRODUCED**

**Classification of wool according to quality**

The following table provides a detailed analysis of wool sold at auction, according to quality, for the years 1961-62 to 1965-66. These data are compiled by the Wool Statistical Service on the basis of catalogues of auction sales. 'Quality' ('64's, 60's, 58's, etc.) is a measure of the fineness and texture of wool for spinning purposes. Broadly, it means the maximum number of hanks of yarn, each of 560 yards length, which can be spun from 1 lb of combed wool. For instance, wool of 64's quality is of a fineness and texture which will produce 64 hanks, each of 560 yards, from 1 lb of tops (combed wool) of that particular wool.

(a) All greasy wool sold at auction except 'wool re-offered account buyer'.

**Price and value**

During 1965-66 the price of greasy wool sold in the selling centres of Australia averaged 50.1c per lb compared with the average price of 47.8c per lb in 1964-65 and 58.1c per lb in 1963-64. These prices are as compiled by the National Council of Wool Selling Brokers and represent the average price realised for all greasy wool, of whatever type or quality, marketed during the years indicated.

Fluctuation in Australian wool prices has a marked effect on the nation's rural and national income. In 1945-46 the gross value of wool production was \$117,194,000, representing 17.4 per cent of the gross value of production of all rural industries, while in 1950-51, when prices reached a peak, wool was valued at \$1,303,804,000 or 55.6 per cent of the total value of production for all rural industries. The value of wool production fluctuated considerably in subsequent years. In 1965-66 it was \$808,437,000, 24.1 per cent of the gross value of production of rural industries.

**ESTIMATED GROSS VALUE OF TOTAL WOOL PRODUCTION: STATES AND TERRITORIES, 1961-62 TO 1965-66(a)**

(a) Includes shorn, dead and fellmongered wool and wool exported on skins.

**Stocks of wool**

Stocks of raw wool held in Australia at 30 June 1966 amounted to 291.0 million lb (greasy basis), of which 66.3 million lb (41.6 million lb as greasy and 24.7 million lb as scoured and carbonised) was held by woollen mills, wool scourers and fellmongers, and 224.7 million lb, assumed to be all greasy, was held by brokers. Of the wool held by brokers, 62.9 million lb was unsold wool and 161.8 million lb was sold wool held awaiting shipment. These stocks exclude wool on skins, since this wool is not recorded as production until fellmongered in Australia or exported on skins.

**Consumption of wool**

Statistics of raw wool consumption published in recent years for the purposes of broad international comparisons are based on the quantities of scoured or carbonised wool used on the woollen and worsted systems (mill consumption), plus quantities used in such processes as felting. Consumption estimates compiled on this basis have obvious defects, as they disregard overseas trade in semi-processed wool (e.g. tops and yarns) as well as woollen goods. Estimates of raw wool used on the woollen and worsted systems and by felt manufacturers in Australia are shown in the following table for the years 1961-62 to 1965-66.

**ESTIMATED CONSUMPTION OF RAW WOOL: AUSTRALIA, 1961-62 TO 1965-66**  
( '000 lb)

Year	Greasy basis			Clean equivalent		
	Used on woollen and worsted systems	Used for felt manu- facture (including hats)	Total	Used on woollen and worsted systems	Used for felt manu- facture (including hats)	Total
1961-62 . . . .	117,555	4,328	121,883	70,682	2,056	72,738
1962-63 . . . .	120,238	3,868	124,106	72,295	1,837	74,132
1963-64 . . . .	124,591	3,568	128,159	74,441	1,695	76,136
1964-65 . . . .	116,179	2,826	119,005	71,206	1,342	72,548
1965-66 . . . .	115,199	2,016	117,215	70,606	958	71,564

As considerable quantities of tops, noils and yarn are exported from Australia, the series on raw wool consumption shown above is over-stated to this extent. The series entitled 'Estimated consumption of processed wool in Australia' provides a more reliable indication of wool consumption in Australia, as allowance has been made for exports of wool in semi-processed form. This series is shown in the following table for the years 1961-62 to 1965-66. Briefly, the series measures consumption of wool in terms of yarn used in Australian mills and other factories to produce woollen cloth and other woollen goods, yarn used for hand knitting purposes, and scoured wool used for felt manufacture. No allowance has been made for overseas trade in woollen piece goods, clothing, etc., because of the obvious difficulties of estimating accurately the wool content of these products.

### ESTIMATED CONSUMPTION OF PROCESSED WOOL: AUSTRALIA

1961-62 TO 1965-66

**Value of wool exported**

The value of wool (other than wool on sheepskins) exported from Australia during 1965-66 was 30 per cent of the total value of exports of merchandise of Australian origin, while the proportion for the five years ended 1965-66 averaged 33 per cent. The value for the five years ended 1965-66, together with the principal countries to which wool was exported, is shown in the following table.

**VALUE OF WOOL EXPORTS: AUSTRALIA(a), 1961-62 TO 1965-66**

(a) Excludes wool exported on sheepskins.

**World sheep numbers and wool production**

The following table shows particulars of the woolled sheep numbers and total production of wool, in terms of greasy, in the principal wool-producing countries of the world, together with estimates of world production of merino, crossbred, and carpet type wool for the latest available years.

In 1965-66 Australia produced 29 per cent of the world total of all types of wool. Other principal wool producers were New Zealand with 12 per cent of the world total, Argentina, 8 per cent, South Africa, 6 per cent, and United States of America, 4 per cent. Production in the U.S.S.R., China and eastern European countries together amounted to 20 per cent.

Australia's wool clip is predominantly merino. New Zealand and Argentina produce mainly crossbred wool, while the clip of the U.S.S.R. is largely of the carpet type.

**Principal importing countries and sources of supply**

The following table, prepared from information published by the Commonwealth Secretariat, furnishes, in respect of the principal importing countries, details of their imports of wool for 1965 together with the chief sources of supply. The quantities imported refer to the actual weight of wool, without distinguishing between greasy and scoured, except in the case of the United States of America, where estimated clean content of raw wool is quoted.

**PRINCIPAL WOOL IMPORTING COUNTRIES AND SOURCES OF SUPPLY, 1965**

(Source: Information published by the Commonwealth Secretariat, London)  
(Million lb)

Importing country	Quantity imported from— (a)					Total imports
	Australia	New Zealand	Argentina	South Africa	Other countries	
United Kingdom . . . . .	182.5	135.3	45.0	45.7	149.8	558.3
Japan . . . . .	453.6	38.4	16.6	33.6	4.5	546.7
France . . . . .	145.3	94.8	21.7	50.8	16.2	328.8
Italy . . . . .	117.9	33.5	23.8	32.0	56.5	263.7
Belgium . . . . .	108.0	49.8	18.2	0.8	47.0	223.8
Germany, Federal Republic of	88.9	32.8	14.9	36.1	50.1	222.8
United States of America(b)	71.9	67.3	47.1	22.9	61.8	271.0

(a) Actual weight of greasy and scoured wool. (b) Imports are in terms of estimated clean content of greasy and scoured wool. Actual weight of total United States of America imports was 369.2 million lb.

As a considerable transit trade exists between European countries, it must not be assumed that the whole of the imports recorded by these countries is retained for their own consumption. The countries chiefly concerned with the transit trade are the United Kingdom and Belgium.

### Pastoral products: meat

#### Australian Meat Board

The Australian Meat Board, which was re-constituted under the *Meat Industry Act 1964-1966*, is the body responsible for controlling the external marketing of Australian beef, mutton and lamb. Powers and membership of the Board prior to its re-constitution in 1964 are set out on page 801 of Year Book No. 40. The Board's primary function is to ensure that Australian meat exports are marketed in a manner which will safeguard the long-term interests of the Australian meat industry. It consists of representatives of producers, exporters and the Commonwealth Government, and an independent Chairman.

The Board regulates overseas marketing of Australian meat by means of an export licensing system. It has power of control over the kinds of meat that may be exported by licensed exporters to particular places, or to particular agents and representatives. The Board also has power to undertake measures to promote the sale and consumption of meat both in Australia and overseas, and it may purchase and sell meat in its own right for the purpose of market development. However, the exercise of this power is limited to activities aimed at meeting special marketing problems or circumstances which preclude the effective participation of private traders. The Board may also purchase and sell meat, with the approval of the Minister for Primary Industry, for the purpose of administering any international arrangements to which Australia may be a party. See also *Livestock Slaughter Levy*, page 956.

#### United Kingdom long-term purchase arrangements

Details of the long-term meat contracts with the United Kingdom from 1939 to 1952 and of the Fifteen Year Meat Agreement (1952-67) are given on page 710 of Year Book No. 41 and in earlier issues. In September 1953 the trade in meat between the United Kingdom and Australia reverted to private traders. The main features of the arrangements were given in Year Book No. 47, page 960. Details of minimum prices operating and deficiency payments received in recent years under private trading appear in Year Book No. 48 (page 973) and No. 50 (page 1068).

#### Lamb Guarantee Scheme

Since the 1962-63 lamb export season the Australian Meat Board has guaranteed exporters a minimum price on all lambs 36 lb and under shipped to the United Kingdom. For the 1962-63 and 1963-64 seasons these prices were set at 15c per lb f.o.b. for the period September to November and 13.8c per lb for the following three months, December to February. For the 1964-65 and 1965-66 lamb export seasons the corresponding prices were 15.8c per lb and 14.6c per lb. For the 1966-67 season the prices were set at 16.0c per lb and 14.5c per lb. The higher guaranteed price for the initial period is aimed at stimulating early shipments of lamb, because normally the most opportune time for selling Australian lamb in the United Kingdom market is early in the export season. Any commitment by the Board is payable from moneys accrued in the Lamb Deficiency Payments Account under the Fifteen Year Meat Agreement.

#### United States-Australia Meat Agreement

In February 1964 the Governments of Australia and the United States concluded an agreement for the regulation of beef, veal and mutton exports from Australia to the United States with the object of promoting the orderly development of the trade in these classes of meat between the two countries. The agreement sought to preserve approximately the current pattern of trade in beef and mutton and to permit Australia to obtain a reasonable share of the expected market growth. Under the agreement Australia undertook to limit its exports of beef, veal and mutton to the United States to 242,000 tons in 1964, 251,000 tons in 1965, and 260,000 tons in 1966. There is provision for this figure to be increased in succeeding years in accordance with the estimated rate of increase in the total United States meat market. The agreement is subject to review every three years.

In August 1964 the United States Congress passed a Bill providing for the imposition of quotas on imports of beef and veal, mutton and goatmeat from all sources, in 1965 and subsequent years, if imports of these items are estimated by the United States Department of Agriculture to equal or exceed 110 per cent of a basic quantity. The basic quantity, 323,840 tons, is approximately the average of imports from 1959 to 1963. This quantity may be increased or decreased in any future calendar year by a percentage equal to that by which the United States average annual commercial production of beef and veal, mutton and goatmeat has changed since the base period 1959-1963. For this purpose the level of domestic production is the average of estimated commercial production for the year in which quotas may be applied and the two

preceding years. An increase of 24.7 per cent in the basic quantity was set for 1967, providing for allowable imports of approximately 403,800 tons (397,300 tons in 1966) and an import ceiling, at which quotas would be established, of about 444,200 tons (437,000 tons in 1966). On the basis of the first official estimate of United States meat imports during 1967, the United States Secretary for Agriculture announced on 23 December 1966 that it would not be necessary to invoke meat import quotas for 1967. However, if a later quarterly estimate in 1967 indicated that the import ceiling would be equalled or exceeded then quotas could be imposed.

#### Cattle slaughtered

The numbers of cattle slaughtered during each of the years ended June 1962 to 1966 compared with averages for the three-year periods ended June 1939, 1949 and 1959, are shown in the following table.

#### CATTLE (INCLUDING CALVES) SLAUGHTERED STATES AND TERRITORIES, 1936-37 TO 1965-66 (<sup>'000</sup>)

#### Consumption of beef and veal

The highest post-war consumption of beef and veal (including canned beef and veal) was 132.7 lb per head in 1956-57. With the buoyant overseas market for beef and the high prices ruling in Australia during the following four years, consumption per head fell substantially, and in 1960-61 amounted to only 88.3 lb. In 1965-66 consumption per head was 97.2 lb, of which 93.2 lb was carcass meat and 4.0 lb was canned meat (in terms of carcass equivalent).

**PRODUCTION AND DISPOSAL OF BEEF AND VEAL (CARCASS WEIGHT)  
AUSTRALIA, 1936-37 TO 1965-66**

Period	Net change in stocks	Production	Exports (a)	For canning	Apparent consumption in Australia	
					Total	Per head per year

1965-66 .	..	931	412	43	476	93.2

(a) Includes carcass equivalent of boneless beef exported and all fresh and frozen meat shipped as ships' stores.

**Exports of beef and veal**

In 1965-66 chilled beef exports were 95,000 lb valued at \$37,000, while frozen beef exports amounted to 593,255,000 lb valued at \$189,725,000.

While beef and veal were previously shipped largely in carcass form, there has been in recent years a substantial increase in the amount of boneless beef exported. From 1958-59 to 1965-66 the quantity of boneless beef shipped exceeded that exported in carcass form. The trade in boneless beef has been developed principally with the United States of America. Since 1958-59 the United States has surpassed the United Kingdom as the principal market for Australian beef exports, the United Kingdom now occupying second place. The total value of beef and veal shipped to these two countries during 1965-66 was \$114,481,000 and \$54,619,000 respectively.

**EXPORTS OF FROZEN AND CHILLED BEEF AND VEAL(a): AUSTRALIA

**Consumption of mutton and lamb**

In 1959-60 consumption of mutton and lamb, at 103 lb per head of population, showed a rise of approximately 15 lb per head over the previous year and exceeded that of beef and veal for the first time on record. Subsequently, consumption of mutton and lamb combined has declined each year; since 1962-63 it has been below the consumption of beef and veal. The consumption in 1965-66 was 83.3 lb per head.

(a) Includes carcass equivalent of boneless mutton exported.

**Exports of frozen mutton and lamb**

The quantities and values of exports of Australian frozen mutton and lamb in each year from 1961-62 to 1965-66 are shown in the following table.

**EXPORTS OF FROZEN MUTTON AND LAMB(a): AUSTRALIA  
1961-62 TO 1965-66**

Year	Exports of frozen mutton		Exports of frozen lamb		Exports of frozen mutton and lamb	
	Quantity	Value	Quantity	Value	Quantity	Value
	'000 lb	\$'000 f.o.b.	'000 lb	\$'000 f.o.b.	'000 lb	\$'000 f.o.b.
1961-62 .	109,113	16,312	37,399	5,248	146,512	21,560
1962-63 .	136,741	23,304	56,615	10,362	193,356	33,666
1963-64 .	149,918	24,752	41,606	7,718	191,524	32,470
1964-65 .	162,964	29,517	54,132	10,832	217,096	40,349
1965-66 .	176,424	37,242	35,574	8,176	211,998	45,417

(a) Actual weight shipped, not carcass equivalent.

In 1965-66 the principal buyers of Australian frozen mutton and lamb were the United States of America (62,973,000 lb, valued at \$15,362,000); Japan (57,029,000 lb, valued at \$10,471,000); Canada (28,180,000 lb, valued at \$7,144,000); and the United Kingdom (27,338,000 lb, valued at \$5,097,000).

#### Consumption of meat and meat products

The apparent consumption of meat (including cured and canned meat) and edible offal per head of population in Australia is shown in the table below for the years 1961-62 to 1965-66 in comparison with the averages for the three-year periods ended 1938-39, 1948-49 and 1958-59.

#### MEAT (INCLUDING CURED AND CANNED) AND EDIBLE OFFAL AVAILABLE FOR CONSUMPTION: AUSTRALIA, 1936-37 TO 1965-66 (lb per head per year)

Period	Beef and veal (a)	Mutton (a)	Lamb (a)	Pork (a)	Offal	Canned meat (b)	Bacon and ham (c)	Carcass equivalent of meat and meat products (d)
Average for three years ended—								
1938-39 .	140.3	60.0	15.0	8.5	8.4	2.1	10.2	250.9
1948-49 .	109.1	45.1	25.2	7.1	8.9	2.6	11.7	215.7

(a) Carcass weight. (b) Canned weight. (c) Cured carcass weight. (d) Includes offal.

#### Other pastoral products

##### Tallow

Details of tallow consumption are collected from the principal factories using tallow. Recorded usage of inedible tallow in these factories (soap and candle, chemical, pharmaceutical and toilet preparations, and woolscouring works) for the five years 1961-62 to 1965-66 was as follows: 1961-62, 1,058,000 cwt; 1962-63, 1,090,000 cwt; 1963-64, 1,079,000 cwt; 1964-65, 1,158,000 cwt; 1965-66, 1,061,000 cwt. These figures are, however, deficient to the extent that no allowance has been made for small unrecorded amounts used in other types of establishments. Details of edible tallow consumed in factories are not available.

Particulars of exports of edible and inedible tallow of Australian origin are shown in the following table for the five years 1961-62 to 1965-66.

#### TALLOW: EXPORTS, AUSTRALIA, 1961-62 TO 1965-66 (cwt)

	1961-62	1962-63	1963-64	1964-65	1965-66
Edible . .	130,015	120,944	135,425	96,611	51,869
Inedible . .	1,853,161	2,229,230	1,976,000	1,846,543	1,243,584
Total . .	1,983,176	2,350,174	2,111,425	1,943,154	1,295,453

**Overseas trade in hides and skins**

The value of cattle and horse hides, sheep and other skins, and skin pieces sent overseas during 1965-66 amounted to \$88,501,000, compared with a total of \$79,534,000 in 1964-65 and \$91,180,000 in 1963-64.

Of the total exports of sheepskins with wool during 1965-66, amounting to 197,901,000 lb valued at \$63,042,000, 128,268,000 lb valued at \$38,995,000 (62 per cent of total value) were shipped to France, 35,161,000 lb valued at \$12,974,000 (21 per cent) to Italy, and 9,769,000 lb valued at \$2,735,000 (4 per cent) to the United Kingdom. In the previous year France received 64 per cent (by value) of all sheepskins with wool exported, Italy 14 per cent and the United Kingdom 7 per cent. The exports of sheepskins with wool during each of the years 1961-62 to 1965-66 were as follows.

**EXPORTS OF SHEEPSKINS WITH WOOL: AUSTRALIA  
1961-62 TO 1965-66**

	1961-62	1962-63	1963-64	1964-65	1965-66
Number . . . '000	26,237	26,795	27,913	27,248	28,952
Value . . . \$'000	48,444	55,484	73,696	59,621	63,042

In 1965-66 a total of 1,125,000 sheepskins without wool were exported, valued at \$701,000. Of these, sheepskins without wool to the value of \$194,000 (28 per cent) were shipped to France; \$133,000 (19 per cent) to the United States of America and \$72,000 (10 per cent) to the Netherlands.

The export trade in cattle hides and calfskins during 1965-66 was distributed among the main importing countries as follows: Japan \$12,229,000; the Federal Republic of Germany, \$1,812,000; and Italy, \$1,114,000. The total quantity exported was 116,677,000 lb, valued at \$20,736,000.

The exports of furred skins in 1965-66 were valued at \$2,196,000, of which kangaroo and wallaby skins constituted \$1,266,000 and rabbit and hare skins \$818,000. In 1964-65 they accounted for \$1,611,000 and \$1,321,000 respectively, out of a total of \$3,022,000. The skins were shipped principally to the United States of America, the United Kingdom, Italy, and the Federal Republic of Germany; the values shipped to each in 1965-66 being: United States of America, \$1,656,000; United Kingdom, \$281,000; Italy, \$78,000; and Federal Republic of Germany, \$65,000.

The quantity of cattle hides, including calfskins, imported into Australia during the year 1965-66 amounted to 2,374,000 lb, valued at \$337,000. The chief sources of supply were Pakistan, New Zealand and the Pacific Islands.

**OTHER RURAL INDUSTRIES: DAIRYING, POULTRY AND BEE-FARMING****The dairying industry**

The introduction of cattle into Australia and the early history of the dairying industry are treated in some detail in earlier issues of the Year Book. Australian dairy cattle have shown steady improvement in quality, as demonstrated by yield, over the years. This is attributable to improved breeding, associated with herd recording, and better feeding, resulting from the use of improved pastures. Better farming methods, arising from the development of modern farm machinery and the application of the results of research, have also played a part in the increased yields.

The Australian dairying industry is conducted under conditions ranging from tropical to temperate and Mediterranean type climates, and nowhere is it necessary to house cattle in the winter months. Most Australian dairy cattle are fed only on pasture and pasture products, and this accounts for average yields being somewhat lower than in those countries where stock are fed heavily on concentrated feed. In general, dairy farming is confined to the coastal and near coastal regions where rainfall and topography are favourable. These conditions are found in parts of the eastern, southern and south-western coasts. Inland districts include the lower north-east of Victoria, the south-western slopes of New South Wales, the fertile Darling Downs in Queensland, and the irrigated districts of the Riverina in New South Wales and northern Victoria.

The manufacturing and processing sections of the industry are highly organised and are well advanced technologically. Certain techniques and equipment developed in Australia are being adopted overseas. Dairy experts of the various State agricultural departments give instruction in approved methods of production, and inspect animals, buildings and marketable produce, with the result that a high standard of cleanliness and technology prevails in the industry.

### Marketing of dairy products

The export trade is regulated by the terms of the *Commonwealth Customs Act 1901-1954* and the *Commonwealth Commerce (Trade Descriptions) Act 1905-1966* and regulations thereunder. This legislation requires that the true trade descriptions, etc. be marked on all produce intended for export, while official inspection ensures the maintenance of purity and quality. Upon request of the exporter the goods are given a certificate by the inspector.

Details of the *Dairy Produce Export Control Act 1924-1966* and of the Australian Dairy Produce Board constituted under it were given in earlier issues of the Year Book (see No. 48, pages 999-1000). The administrative expenses of the Australian Dairy Produce Board and other sundry expenditure were met from the proceeds of a levy imposed by the *Dairy Produce Export Charges Act 1964* (see Year Book No. 51, page 1070). In 1965 this Act, together with the *Dairy Produce Levy Act, 1958* was repealed by the *Butterfat Levy Act 1965* (see page 977).

### Equalisation schemes

Reference is made to the butter and cheese equalisation schemes in Year Book No. 48, pages 998-9. Particulars of the returns realised on local and overseas sales and of the average equalisation rate for the years ended June 1962 to 1967 are given on page 983 of this issue. Details are also given on page 982 of the wholesale prices of butter and cheese for home consumption as determined by the Commonwealth Dairy Produce Equalisation Committee Ltd.

An equalisation scheme for casein similar to that for butter and cheese has been operated since 1952 by the Commonwealth Dairy Produce Equalisation Committee Ltd. Average realisations per cwt under the scheme were \$16.328 in 1961-62, \$15.908 in 1962-63, \$16.101 in 1963-64, \$17.381 in 1964-65, and \$24.50 in 1965-66. The interim equalisation value for 1966-67 has been fixed at \$22.00 per cwt.

### Commonwealth subsidies and stabilisation plans

*Butter and cheese.* Under the provisions of the various Dairy Industry Assistance Acts, the first of which was passed in 1942, the Commonwealth Government has provided subsidies on milk supplied for the manufacture of butter and cheese. Subsidies were paid on a seasonal basis prior to 1 April 1946, but from that date have been on a flat rate basis. Subsidies are distributed by the Commonwealth Dairy Produce Equalisation Committee Ltd, through factories, to milk producers by payments on butter and cheese manufactured. Details of the three five-year stabilisation plans which operated up to 30 June 1962 will be found in Year Book No. 49, page 1084. Information regarding the plan which operated during the five years ended 30 June 1967 appears in Year Book No. 52, page 961.

A new five-year stabilisation plan came into operation on 1 July 1967. All the features of the previous plan have been retained. The fixed bounty of \$27,000,000 payable in each year of the plan on butter, cheese and butterfat products containing 40 per cent or more butterfat is continued.

The underwriting of final minimum equalised returns on butter and cheese, each year, is also continued. Returns to producers which have been underwritten at 33c per lb on commercial butter, each year, since the inception of the underwriting arrangement in 1958 have been raised to 34c per lb for the 1967-68 season.

Amounts realised on exports of butter and cheese in excess of the f.o.b. equivalent of the guaranteed return have been credited to the Dairying Industry Stabilisation Fund, which was established in July 1948 for the purpose of stabilising returns from exports. During 1951-52 the Stabilisation Fund met the deficiency in respect of all exports which did not earn sufficient to meet the basic return to the factory. From 1 July 1952 to 30 June 1957 it was available to the industry to be used, in whatever manner it considered desirable, to make good any deficiency in respect of all exports other than the 20 per cent provided for under the Commonwealth Government's Five-year Stabilisation Plan. The Act was amended in 1957 to enable the Board to use the fund for such other purposes as are approved by the Minister for Primary Industry. The amount standing to the credit of the Dairying Industry Stabilisation Fund at 30 June 1966 totalled approximately \$4,353,000. The major portion of the fund represents capital and other investments in milk recombining plants now established by the Board in Bangkok, Singapore and Manila.

*Processed milk products.* Subsidy on milk supplied for the manufacture of processed milk products was also payable from 1942 until 30 June 1948, and again from 1 July 1949 to 30 June 1952. The Commonwealth Government provided, under the *Processed Milk Products Bounty Act 1962*, for the payment of a maximum amount of \$700,000 as a bounty on exports of processed

milk products in 1962-63. The bounty is to continue under present legislation until 30 June 1972, the maximum amounts made available being \$1,000,000 for 1963-64 and \$800,000 for each subsequent year.

*Whole milk.* In addition to the subsidies referred to above, the Commonwealth Government subsidised the production of whole milk consumed directly from 1943-44 to 1948-49. Details of the amounts distributed during each year will be found in Year Book No. 38, page 1031.

#### Extension, research and promotion of the dairying industry

*Dairy Industry Extension Grant.* An annual grant of \$500,000, to be expended by State Governments for the purpose of promoting improved farming practices in the dairying industry, was first made by the Commonwealth Government for the five years from 1 July 1948. This assistance was continued for further periods of five years from 1 July 1953 and from 1 July 1958 at the same rate. For the five years from 1 July 1963 the amount of the annual grant has been increased to \$700,000.

*Dairy industry research and sales promotion.* At the request of the Australian Dairy Industry Council, legislation was enacted in 1958 to provide for a sales promotion campaign for butter and cheese in Australia and also for research into industry problems. The legislation provided for a statutory levy on the manufacture of butter and cheese (the Dairy Produce Levy) which was initially set at rates of 0.104c per lb for butter and 0.052c per lb for cheese, the proceeds being divided equally between research and sales promotion. The rates of levy operative from November 1959 were 0.156c per lb for butter and 0.078c per lb for cheese, of which two-thirds was allocated to sales promotion and one-third to research.

In August 1964 the legislation was amended to include butter powder, at the same rates as for butter, and butteroil and ghee at 0.065c per lb for research and 0.130c per lb for sales promotion. In 1965 the Dairy Produce Levy Act was repealed and replaced by the *Butterfat Levy Act 1965* which provides for the amalgamation of the three levies into one levy on butterfat used in the manufacture of butter, cheese and related products. The maximum rate of levy in the Act is 60 cents per cwt of butterfat and the prescribed operative rate is 52 cents per cwt (22 cents for promotion, 20 cents for administration and overseas market development, and 10 cents for research).

The Commonwealth Government agreed to contribute one half of the costs incurred on approved projects included in the programme of research, with a maximum contribution of \$1 for \$1 against funds raised by way of levy and allocated to research. The sales promotion programme is financed solely by the levy. The following table lists the amounts of levies collected for research and sales promotion during the five years 1961-62 to 1965-66.

#### BUTTER FAT LEVY: AMOUNTS COLLECTED FOR RESEARCH AND SALES PROMOTION, 1961-62 TO 1965-66

	(\$)				
	1961-62 (a)	1962-63 (a)	1963-64 (a)	1964-65 (a)	1965-66
Research(b) . . .	260,000	263,500	264,200	262,800	310,200
Sales promotion . . .	520,000	527,000	528,400	543,000	823,600
<b>Total collected(b) .</b>	<b>780,000</b>	<b>790,500</b>	<b>792,600</b>	<b>805,800</b>	<b>1,133,800</b>

(a) Collected under Dairy Produce Levy Act.  
by the Commonwealth Government

(b) Excludes amounts contributed

The scheme is administered by the Australian Dairy Produce Board, which, in respect of research, is advised by a statutory committee, the Dairy Produce Research Committee.

#### Dairy cattle

For the reasons indicated earlier in this chapter (*see* page 954), farmers are no longer asked to classify their herds according to breed. Commencing with the 1964 census they have been asked instead to classify their cattle according to the two main purposes of (a) milk production and (b) meat production and to report separately the number of cows and heifers kept for their own domestic milk supply. Consequently the statistics shown in the following table are not comparable with those for earlier years.

**DAIRY BREED BULLS, AND COWS AND HEIFERS USED OR INTENDED FOR  
PRODUCTION OF MILK OR CREAM: STATES AND TERRITORIES  
31 MARCH 1964 TO 1966**

31 March	Bulls, dairy breed (a)	Cows and heifers used or intended for production of milk or cream for sale					House cows and heifers (b)
		Cows		Heifers			
		In milk	Dry	1 year and over		Under one year	
				Spring- ing(c)	Other		
1964 . . . .	99,270	3,078,075		821,286		717,895	218,098
1965 . . . .	95,012	3,011,832		843,212		690,267	202,138
1966—							
New South Wales	19,007	523,356	152,126	194,998		134,147	92,773
Victoria . . .	39,162	886,333	305,374	320,122		325,026	30,351
Queensland . .	16,887	468,871	157,792	167,686		103,754	39,291
South Australia .	6,175	92,673	62,268	21,182	24,594	38,425	6,274
Western Australia	4,438	42,777	66,514	24,290	27,778	32,051	10,182
Tasmania . . .	4,296	148,452		41,951		47,317	6,265
Northern Territory	12	349		96		82	25
Australian Capital Territory . . .	32	1,105	382	190		231	428
Australia . . .	90,009	2,908,372		822,887		681,033	185,589

(a) Used or intended for service; excludes bull calves (under 1 year). (b) Kept primarily for rural holdings' own milk supply. (c) Within three months of calving.

For particulars relating to dairy cattle numbers up to 1963 see page 1078 of Year Book No. 50.

A map showing the distribution of dairy cattle in Australia at 31 March 1963 appears facing page 1082 of Year Book No. 50.

### Milking machines

**MILKING MACHINES ON RURAL HOLDINGS: NUMBER OF UNITS(a)  
STATES AND TERRITORIES, 1962 TO 1966**

31 March	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
1962 . . .	43,369	95,661	47,486	18,831	10,562	12,220	} n.a. {	99	(b)228,228
1963 . . .	43,089	97,372	46,674	18,836	10,514	12,701		84	(b)229,270
1964 . . .	42,970	98,321	45,072	19,057	10,157	13,382		83	(b)229,042
1965 . . .	42,209	101,994	44,074	19,135	10,055	13,806		93	231,389
1966 . . .	41,796	105,003	42,199	18,833	9,780	15,894		94	233,625

(a) The number of units indicates the number of cows that can be milked simultaneously, i.e. the cow capacity of installed milking machines. (b) Excludes the Northern Territory.

### Production of milk

The quantity of milk produced by a dairy cow can be as high as 1,000 gallons a year, and varies greatly with breed, locality and season. For all dairy cows and for all seasons for Australia prior to 1916 production averaged considerably less than 300 gallons per annum. Largely owing to an improvement in the quality of the cattle and the increased application of scientific methods the 300-gallon average has been exceeded in each year since 1924. In the last five years an average of 462 gallons per cow per annum has been obtained. In 1965-66 the average yield was 483 gallons. The annual average yields per cow shown in the following table are obtained

by dividing the total production of whole milk for the year ended June by the mean of the number of cows in milk and dry and house cows at 31 March of that year and of the preceding year. They are, in effect, based on the approximate number of cows which were in milk during any part of the year. The average shown is, therefore, less than that for cows which were yielding during the greater part of the year, but it may be accepted as sufficiently reliable to show the general trend.

### AVERAGE MILK PRODUCTION PER COW: STATES AND TERRITORIES 1936-37 TO 1965-66

(Gallons)

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust. (a)
Average for three years ended—									
1938-39 . . .	315	439	298	442	353	349	} n.a. {	349	354
1948-49 . . .	310	506	267	565	370	419		328	371
1958-59 . . .	322	522	267	513	406	537		420	393
Year—

1964-65(b) . . .	347	613	306	614	490	589	248	547	467
1965-66(b) . . .	378	616	316	602	508	578	234	524	483

(a) Excludes the Northern Territory before 1963-64. (b) May not be comparable with earlier years; see pages 977-8.

In the following table particulars of the production of whole milk in the various States and Territories are shown for the years 1961-62 to 1965-66 compared with the averages for the three years ended 1938-39, 1948-49 and 1958-59. Victoria is the principal milk-producing State, and in 1965-66 the output from that State, 751 million gallons, represented 49 per cent of total production. Output from New South Wales in 1965-66 was 301 million gallons (20 per cent of the total) and that of Queensland 221 million gallons (15 per cent). Production in the remaining States and Territories accounted for 16 per cent.

### TOTAL PRODUCTION OF WHOLE MILK: STATES AND TERRITORIES 1936-37 TO 1965-66

('000 gallons)

(a) Principally fluid milk for domestic purposes.  
is included in 'Other purposes'.

(b) Milk used for farm production of butter and cheese

**Production of butter, cheese and preserved milk products**

The establishment of large central butter factories, either on a co-operative or independent basis, has resulted in a considerable reduction in the cost of manufacture. The product is also of a more uniform quality, and whereas formerly the average quantity of milk used per pound of hand-made butter was about three gallons, factory butter requires only about two gallons. In addition, subsidy payments by the Commonwealth Government are made only on factory-produced butter. As a result the production of farm-made butter has declined to negligible proportions. A similar position exists in the cheese-making industry.

In 1965-66 factories in Australia engaged in the processing of milk into butter or cheese or the various preserved milk products numbered 337 and were distributed among the States as follows: New South Wales, 69; Victoria, 119; Queensland, 63; South Australia, 44; Western Australia, 19; and Tasmania, 23. More details regarding numbers of factories, output, etc., are given in the chapter Manufacturing Industry.

Factory production of butter in 1965-66 at 461,085,000 lb was 6,207,000 lb (1.4 per cent) more than the amount produced in 1964-65, and 6,876,000 (1.5 per cent) less than the record post-war production of 1955-56.

**BUTTER PRODUCTION IN FACTORIES: STATES**  
**1936-37 TO 1965-66**

14 February 1966 . .	30.80	30.80	30.80	30.80	30.80	30.80

**Local consumption of butter and cheese**

Following the cessation of butter rationing after the 1939–45 War, consumption per head rose to 31.2 lb in 1951–52. However, in later years it gradually declined, and in 1965–66 it reached its lowest level since the war. At 21.8 lb per head it was 3.5 per cent below the level of 1964–65. Consumption of cheese per head has been rising steadily in recent years, reaching 8.0 lb in 1965–66.

(a) Interim rates.

**Overseas trade in dairy products**

The production of butter and cheese in Australia is considerably in excess of local requirements, and consequently a substantial surplus is available for export overseas. In normal circumstances the extent of this surplus is chiefly dependent upon seasonal conditions.

Exports of butter in 1965-66 amounted to 167.6 million lb, compared with 202.2 million lb in 1964-65. Exports of cheese in these years were 55.8 million lb and 60.9 million lb respectively. As in previous years, the principal importing country for Australian butter and cheese was the United Kingdom. In 1965-66, 82 per cent of butter and 36 per cent of cheese exported was consigned to the United Kingdom.

All butter and cheese exported comes under the provisions of the Exports (Dairy Produce) Regulations and is subject to supervision, inspection and examination by officers appointed for that purpose. These commodities are graded according to quality, which has been fixed by regulation as follows: flavour and aroma, 50 points; texture, 30 points; and condition, 20 points. Butter and cheese graded at 93 to 100 points is of choicest quality; at 90 to 92 points, first quality; at 86 to 89 points, second quality; and at 80 to 85 points, pastry or cooking quality or, in the case of cheese, third quality.

In the following table particulars are given of the relative proportions of butter and cheese graded for export according to quality. Further details, which include actual quantities by States, are to be found in *Rural Industries*, 1964-65, Bulletin No. 3.

**BULK BUTTER AND CHEESE GRADED FOR EXPORT**  
**AUSTRALIA, 1963-64 TO 1965-66**  
(Per cent)

(a) Includes malted milk.

### Pigs

At 31 March 1966, 1,747,000 pigs were recorded, representing an increase of 87,000 (5.2 per cent) on numbers a year earlier. The number of pigs in each State and Territory at 31 March for each of the years 1962 to 1966 compared with the averages for the three-year periods ended 31 March 1939, 1949 and 1959, are given in the following table.

## PIGS: NUMBERS IN STATES AND TERRITORIES, 1937 TO 1966

Period	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Average for three years ended—

(a) Not available for publication.

(b) Incomplete, excludes Australian Capital Territory.

A long-term comparison of pig numbers is given in the division Pastoral Production of this chapter (see page 950). A map showing the distribution of pigs in Australia at 31 March 1963 faces page 1083 of Year Book No. 50 and a graph showing the number of pigs in Australia from 1870 onwards appears on plate 46 of this Year Book (see page 949).

The number of pigs slaughtered during each of the years 1961–62 to 1965–66, compared with the averages for the three-year periods ended 1938–39, 1948–49 and 1958–59, is shown in the following table.

## PIGS SLAUGHTERED: STATES AND TERRITORIES, 1936-37 TO 1965-66 ('000)

(a) Pressed and canned bacon and ham have been converted to cured carcass weight for periods subsequent to 1948-49.

**Consumption of pigmeat, bacon and ham**

Apparent consumption of pigmeat per head in 1965-66 was 13.5 lb, compared with 11.9 lb per head in 1964-65. The 1961-62 level of 13.6 lb was the highest since the war. In recent years annual consumption of pigmeat per head has not fallen below 11 lb.

**PRODUCTION AND DISPOSAL OF PIGMEAT (CARCASS WEIGHT)**

Pigs, live . . .	number	547	n.a.	n.a.	80	n.a.	n.a.

**The poultry industry**

Originally the poultry industry was conducted in conjunction with other branches of rural activity, mainly dairying, but it is now a specialised and distinct industry. It is from this source that the bulk of the commercial production is obtained. Practically all farm households keep poultry for the purpose of supplying their own domestic requirements, and some supplies from this source are also marketed. In addition, some private homes in both rural and suburban areas keep small numbers of fowls in back-yard runs to help satisfy domestic needs. Because of the incompleteness of data available on poultry throughout Australia, details of poultry numbers are not published.

### Stabilisation scheme for the egg industry

A Commonwealth industry stabilisation scheme for the egg industry has been in operation since 1 July 1965. The principal features of the scheme are embodied in three Commonwealth Acts—*Poultry Industry Levy Act 1965–1966*, *Poultry Industry Levy Collection Act 1965–1966*, and *Poultry Industry Assistance Act 1965–1966*.

The scheme provides for the imposition of a levy on hens over six months of age kept for commercial purposes. The money obtained from the levy is used to meet trading losses on surplus eggs. Previously, returns to producers were equalised by State Egg Boards, who imposed an equalisation deduction to cover deficits which resulted from sales to overseas markets.

In determining the rate of the hen levy, the Minister for Primary Industry is required to take into consideration any recommendations by the Council of Egg Marketing Authorities of Australia (which consists of all members of the State Egg Marketing Boards) and is precluded from prescribing a rate in excess of such recommendations. The initial rate of levy was set at about 2.71c per hen per fortnight (the equivalent of \$0.70 per bird per year). This rate was increased to 2.80c on 23 February 1966. Following upon recommendations by the Council of Egg Marketing Authorities of Australia, the Minister for Primary Industry approved an increase in the levy to 3.50c per fortnight operative from 13 July 1966. As from 19 April 1967 the levy was increased to 5.00c per fortnight for the remainder of the financial year 1966–67. This had the effect of raising the total levy for the year to the maximum permitted under the legislation of \$1.00 per hen per year.

Exemptions from payment are granted on the first 20 hens in each flock and also on a substantial proportion of broiler breeder hens. The eggs produced by broiler breeder hens which are not used for hatching determine the proportion of those hens on which the levy becomes payable in accordance with a formula incorporated in the legislation.

By agreement with the Commonwealth, the State Egg Boards collect the levy from individual producers and remit the total amount to the Commonwealth. The Commonwealth Government pays into the Poultry Industry Trust Fund amounts equal to the receipts obtained from the hen levy. These amounts totalled \$6,427,000 in 1965–66. Payments from the Fund are made to the State Governments for financial assistance to the poultry industry, and are authorised by the Minister for Primary Industry, after consideration has been given to the recommendations by the Council of Egg Marketing Authorities of Australia. Payments from the Trust Fund totalled \$5,540,000 in 1965–66.

### Research

The *Poultry Industry Assistance Act 1965–1966* permits expenditure from the Poultry Industry Trust Fund to be made for research. The Commonwealth Government has agreed to match expenditure from this Fund on a \$1 for \$1 basis with a limit to its contribution of \$100,000. There is no restriction on the amount which may be expended from the Fund for research purposes.

Research projects are recommended by the Council of Egg Marketing Authorities of Australia for approval by the Minister for Primary Industry. Expenditure may be approved for scientific technical or economic research, the publication of reports thereon, the training of persons for research, and the dissemination of information and advice on scientific, technical or economic matters.

### Marketing of eggs

Details of the annual contracts entered into between the United Kingdom and Australian Governments up to 1952–53 and of the results of trading under free market conditions in the four years following appear in previous issues of the Year Book.

Australian exports of shell eggs in 1965–66 amounted to 3,935,000 dozen compared with 3,327,000 dozen in 1964–65. The main outlets for Australian eggs in 1965–66 were the United Kingdom (1,040,000 dozen), Kuwait (925,000 dozen), Federation of South Arabia (446,000 dozen), Federal Republic of Germany (239,000 dozen), and Qatar (201,000 dozen).

The United Kingdom provides the major export market for egg pulp. Australian exports of pulp to that country were approximately 15,215,000 lb in 1964–65 and 7,400,000 lb in 1965–66. In 1965–66 the United Kingdom absorbed the bulk of the exports of dried eggs (233,000 lb) also.

Details of the *Egg Export Control Act 1947* were given in earlier issues of the Year Book (see No. 47, page 997).

**Recorded production of eggs and egg products**

Available statistics of the production and disposal of eggs in Australia are restricted to those recorded by the Australian Egg Board and the Egg Marketing Board of New South Wales. Details of production as recorded by these authorities are shown in the following table.

**SHELL EGGS: PRODUCTION(a) RECORDED BY EGG BOARDS  
STATES, 1961-62 TO 1965-66  
(<sup>'000</sup> dozen)**

State	1961-62	1962-63	1963-64	1964-65	1965-66
New South Wales(b)	61,657	54,609	56,713	62,918	65,240

<b>Total(c)</b>	<b>120,718</b>	<b>110,305</b>	<b>111,226</b>	<b>124,089</b>	<b>132,740</b>

(a) Receipts from consignors and sales by producer agents. (b) Includes Australian Capital Territory.  
(c) Excludes Tasmania.

Particulars of the production of whole egg pulp as recorded by the Egg Marketing Board for the State of New South Wales and by the Australian Egg Board for the other States are shown in the following table.

**LIQUID WHOLE EGG PULP: PRODUCTION RECORDED BY EGG BOARDS  
STATES, 1961-62 TO 1965-66  
(<sup>'000</sup> lb)**

State	1961-62	1962-63	1963-64	1964-65	1965-66
New South Wales	20,916	11,500	9,272	18,463	12,539
Victoria	12,000	7,684	3,216	5,456	3,283
Queensland	3,321	3,864	3,922	5,731	5,443
South Australia	3,374	2,836	3,001	2,639	4,148
Western Australia	620	533	835	1,450	977
Tasmania	n.a.	n.a.	n.a.	n.a.	n.a.
<b>Total(a)</b>	<b>40,231</b>	<b>26,417</b>	<b>20,246</b>	<b>33,739</b>	<b>26,390</b>

(a) Excludes Tasmania.

In addition to liquid whole egg, production was also recorded of liquid egg whites and liquid egg yolks. Output in 1965-66 amounted to 3,877,000 lb and 2,663,000 lb, respectively, compared with 2,866,000 lb and 2,135,000 lb, respectively, in the previous year. These figures exclude small quantities produced in Tasmania for which details are not available.

**Consumption of eggs and egg products**

Because of the operations of producers in areas outside the control of the Egg Boards and the extent of 'back-yard' poultry-keeping, for which no statistics are collected, figures relating to total egg production must be accepted with some reserve. The production shown in the following table, together with details of exports and consumption, is based upon the records of Egg Boards of production from areas under their control, plus estimates of production from uncontrolled areas and from 'back-yard' poultry-keepers.

**ESTIMATED PRODUCTION AND DISPOSAL OF EGGS IN SHELL  
AUSTRALIA, 1936-37 TO 1965-66**

Frozen poultry	'000 lb	501	792	857	226	331	350
Poultry, live(b)	number	1,027,871	735,911	323,601	258	184	79

(a) Includes frozen pulp. (b) Includes day-old chicks.

Imports of canned poultry in 1965-66 amounted to 526,000 lb, valued at \$138,000, compared with 226,000 lb, valued at \$63,000, in 1964-65.

**The bee-farming industry**

**Production of honey and bees-wax**

Although practised as a separate industry, bee-farming is also carried on in conjunction with other branches of farming. It is a feature of the industry that it consists mainly of itinerant apiarists operating on a large scale with mobile equipment. Some of these apiarists move as far afield as from Victoria to Queensland in an endeavour to provide a continuous supply of nectar from flora suitable for their bees. The returns of honey from productive hives during 1965-66 show an average of 128.9 lb per hive, and the average quantity of wax was 1.7 lb per productive hive.

**BEEHIVES, HONEY AND BEES-WAX: STATES AND A.C.T., 1965-66**

(a) At 30 June 1966.

The production of honey and bees-wax fluctuates considerably and is determined mainly by the flow of nectar from flora, particularly the eucalypts, which varies greatly from year to year.

**Honey levy**

A levy is imposed on domestic sales of honey for the purpose of financing the operations of the Australian Honey Board. The current rate of levy, which became effective on 14 February 1966, is four-tenths of a cent per lb, but under the provisions of the *Honey Levy Act* 1962-66, it can be increased by regulation to a maximum of one cent per lb. The proceeds of this levy may be expended on the regulation of Australian exports of honey and on associated promotional and research activities. In 1963-64, 1964-65 and 1965-66 collections amounted to \$81,000, \$104,000 and \$101,000 respectively.

**Overseas trade in bee products**

The principal importer of Australian honey in 1965-66 was the United Kingdom, importing 13,229,000 lb, valued at \$1,203,000.

Bees-wax was exported mainly to the United Kingdom and the Federal Republic of Germany in 1965-66.

**EXPORTS OF HONEY AND BEES-WAX: AUSTRALIA, 1963-64 TO 1965-66**

## CHAPTER 23

# WATER CONSERVATION AND IRRIGATION

### RESOURCES, UTILISATION AND NATIONAL AND INTERSTATE ASPECTS

Official Year Book No. 51, pages 228-31, contains a description of recent developments in the measurement of Australia's water resources. For information concerning general, descriptive and historical matter *see also* Year Book No. 37, pages 1096-1141.

For further details on geographical and climatic features determining the Australian water pattern, *see the chapter Physiography*; on water supply and sewerage in metropolitan areas, cities and towns, the chapter *Local Government*; and on the generation of hydro-electric power, the chapter *Electric Power Generation and Distribution* of this issue.

A series of maps showing the location of major dams and reservoirs and the various irrigation schemes operating in each of the States may be found on pages 259-65 of Year Book No. 46, and a map showing the extent of known artesian basins throughout Australia is shown on page 273 of Year Book No. 48.

### Water resources and their utilisation

#### Surface supplies

An assessment of Australia's surface water resources has been made, based on measured and estimated stream flows within 197 river basins, as follows. The total average annual discharge of Australian rivers has been assessed at 280 million acre feet. This can be divided into 108 million acre feet measured discharge and 172 million acre feet estimated for areas where there are generally no gauging records. For the whole area of Australia (approximately 3 million square miles) only 1.9 million square miles are regarded as contributing to stream flow (i.e. there is practically no flow from Western Plateau drainage division and from arid parts of other divisions).

The flow of Australian rivers is small in comparison with the flow of rivers in other continents, some examples of which, expressed as mean annual discharges in millions of acre feet, are: Amazon, 2,950; Mississippi, 465; Mekong, 405; Niger, 308; Volga, 205; and the ten major rivers of the United States of America in the aggregate, 900.

#### Major dams and reservoirs

The table below lists existing major dams and reservoirs, together with those under construction and those projected, at June 1966. The list is confined to dams and reservoirs with a capacity of 100,000 acre feet or more. There are many others of smaller capacity in Australia.

### MAJOR DAMS AND RESERVOIRS IN AUSTRALIA

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>EXISTING DAMS AND RESERVOIRS</b>				
Eucumbene . . .	Eucumbene River, New South Wales	3,890,000	381	Part of Snowy Mountains Hydro- electric Scheme
Eildon . . . . .	Upper Goulburn River, Victoria	2,750,000	260	Storage for irrigation and for the generation of electricity
Hume . . . . .	Murray River, near Albury, New South Wales	2,480,000	142	Part of Murray River Scheme— storage for domestic stock and irrigation purposes. Hydro- electric power also developed
Menindee Lakes Storage	Darling River, near Menindee, New South Wales	2,000,000	..	Part of Darling River Water Conservation Scheme
Miena . . . . .	Great Lake, Tasmania	1,710,000	60	Storage for Poatina hydro- electric power station
Warragamba . . .	Warragamba River, New South Wales	1,670,000	379	For Sydney water supply. Also provides for generation of hydro-electricity and flood mitigation

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>EXISTING DAMS AND RESERVOIRS—<i>continued</i></b>				
Burrundong	Macquarie River, near Wellington, New South Wales	1,361,000	250	Storage for rural water supplies
Burrinjuck	Murrumbidgee River, New South Wales	837,000	264	Storage for irrigation and production of hydro-electric power
Somerset	Stanley River, Queensland	735,000	173	Brisbane-Ipswich water supply, flood mitigation and small hydro-electric power station
Jindabyne	Snowy River, New South Wales	558,000	225	Part of Snowy Mountains Hydro-electric Scheme
Lake Victoria	Murray River, near South Australian border, in New South Wales	551,700	..	Natural off-river storage for irrigation in South Australia. Storage improved by construction of embankments and control regulators
Lake Echo	Lake Echo, Tasmania	442,000	60	Storage for Lake Echo, Tunga-tinah, Liapootah, Wayatinah and Catagunya hydro-electric power stations
Clark	Derwent River, Tasmania	434,000	220	Storage for Tarraleah, Liapootah, Wayatinah, and Catagunya hydro-electric power stations
Arthur Lakes	Source of Lake River, near Great Lake, Tasmania	410,000	50	Part of Great Lake hydro-electric power development
Keepit	Namoi River, near Gunnedah, New South Wales	345,000	177	For rural water supplies and hydro-electricity generation
Waranga	Goulburn River, Victoria	333,400	..	Irrigation storage
Tinaroo Falls	Barron River, North Queensland	330,000	136	For irrigation purposes in the Mareeba-Dimbulah area
Glenbawn	Hunter River, near Scone, New South Wales	293,000	251	Part of Hunter Valley conservation work, for irrigation and flood mitigation
Rocklands	Glenelg River, Victoria	272,000	..	Part of Wimmera-Mallee domestic and stock water supply system
Eppalock	Campaspe River, near Heathcote, Victoria	252,860	150	To supplement supply to Bendigo and for irrigation
Wyangala	Lachlan River, New South Wales	(a)245,000	200	Storage for domestic, stock and irrigation purposes and for generation of hydro-electric power. (See also under Dams and Reservoirs under Construction)
Tantangara	Murrumbidgee River, New South Wales	206,000	148	Part of Snowy Mountains Hydro-electric Scheme
Avon	Avon River, New South Wales	173,800	232	Part of Sydney water supply
Upper Yarra	Yarra River, Victoria	162,000	270	For Melbourne water supply
Glenmaggie	Gippsland, Victoria	154,300	100	Storage for irrigation
Lake St Clair	Central Highlands, Tasmania	154,200	..	Improved natural storage for Tarraleah hydro-electric power station
Wellington	Collie River, Western Australia	150,100	112	For supply of water to irrigation districts and to agricultural areas and country towns
Grahamstown	Grahamstown River, near Newcastle, New South Wales	147,000	35	To supplement supply to Newcastle and district
Koombooloomba	Tully River, North Queensland	146,000	123	For hydro-electric and irrigation purposes
Serpentine	Serpentine River, Western Australia	144,000	171	For Perth water supply
Lake Brewster	Lachlan River, near Hillston, New South Wales	123,900	..	Storage of rural water supplies for the lower Lachlan
Cairn Curran	Loddon River, Victoria	120,600	..	Storage for irrigation

(a) Temporary reduced level.

MAJOR DAMS AND RESERVOIRS IN AUSTRALIA—*continued*

Name	Location	Capacity (acre feet)	Height of wall (feet)	Remarks
<b>DAMS AND RESERVOIRS UNDER CONSTRUCTION</b>				
Blowering . . . .	Tumut River, New South Wales	1,320,000	370	For regulation of discharges from stations of Snowy Mountains Hydro-electric Scheme, primarily for irrigation but also for hydro-electric power generation
Wyangala . . . .	Lachlan River, New South Wales	1,000,000	270	Strengthening and enlarging of existing dam for increased water supply and hydro- electric power generation. ( <i>See also under Existing Dams and Reservoirs</i> )
Wuruma . . . .	Nogoa River, Central Queensland	157,000	120	For irrigation storage
Rowallan . . . .	Mersey River, North Tasmania	110,000	140	Storage for Mersey Forth power development
Eungella . . . .	Broken River, North Queensland	104,000	150	Provision of cooling water for Collinsville power station and for irrigation purposes

## DAMS AND RESERVOIRS PROJECTED

Chowilla . . . .	Murray River, in South Australia, near Victorian border	25,000,000	41	Regulation of the lower Murray River
Ord River (main) . . . .	Near Wyndham, Western Australia	3,500,900	200	For irrigation, generation of hydro-electric power and flood mitigation. (Additional 6,000,000 acre feet flood control proposed)
Maraboon . . . .	Nogoa River, Central Queensland	1,170,000	148	For irrigation and probable thermal power station
Buffalo (second stage) . . . .	Buffalo River, near Myrtleford, Victoria	800,000	260	For irrigation
Talbingo . . . .	Tumut River, New South Wales	700,000	530	Part of Snowy Mountains Hydro-electric Scheme
Warkworth . . . .	Wollombi Brook, Hunter Valley, New South Wales	406,000	130	Flood mitigation and irrigation dam for the Hunter Valley
Mokoan . . . .	Winton Swamp, near Benalla, Victoria	300,000	35	To store flood flows in Broken River for irrigation
North Pine . . . .	North Pine River, near Petrie, Queensland	164,000	125	To supplement supply to northern Brisbane area

(a) Subject to final survey.

## Irrigation

For some brief remarks on the history of irrigation in Australia *see* issues of the Year Book prior to No. 39. Trends in irrigation practice in more recent years were described in Year Book No. 37, page 1099.

### **Irrigation research**

Comprehensive programmes of research and investigation are being pursued by State water and agricultural authorities and the Commonwealth Scientific and Industrial Research Organization, often in collaboration. Special attention is being given to the following: high water tables due to the application of water; surface accumulation of salt and other soil changes associated with irrigation; methods of applying water efficiently; soil treatments to improve the physical condition of irrigated heavy clay soils; the utilisation of irrigated pastures by stock; growth problems affecting plants and trees; the prevention of evaporation from water storages; the potability of saline waters for stock; the de-salting of brackish waters; and cloud-seeding over catchments.

Irrigation is studied by the Commonwealth Scientific and Industrial Research Organization at a number of its research stations and laboratories, the principal one being the Irrigation Research Laboratory at Griffith (New South Wales), where investigations are concerned with limiting the degradation of land by irrigation, improving the quality and range of irrigated crops, and assessing the amount of water required by irrigated crops and the most economical means of applying it. The crops being studied include citrus, cotton, wine grapes and lucerne. The Organization's Division of Plant Industry studies irrigated pastures at Deniliquin (New South Wales) and Canberra (Australian Capital Territory), and tobacco at Mareeba (Queensland). At Adelaide (South Australia) and Merbein (Victoria) the Horticultural Research Section is working on problems of the dried-fruit industry. The Division of Land Research conducts research on rice at the Coastal Plains Research Station, Darwin (Northern Territory), and on a number of irrigated crops, including rice, safflower, linseed, and cotton, at the Kimberley Research Station (Western Australia). The Division has also carried out a number of hydrological investigations in connection with the utilisation of underground water for irrigation. The Division of Soils and the Soil Mechanics Section are studying methods of reducing seepage from earthen dams, and take part in the examination of the physical properties of sediments beneath proposed dam sites. The Division of Soils is also looking at underground water movement and the water balance in the south-east of South Australia, and at the drainage and soil moisture regime of the irrigated swamps of the lower Murray River. The Division of Physical Chemistry is investigating methods of minimising evaporation losses from water storages by the use of monomolecular layers.

The Irrigation Research and Extension Committee plays an important part in the agricultural activity of the Murrumbidgee and Coleambally Irrigation Areas. It is representative of the New South Wales Department of Agriculture, the Commonwealth Scientific and Industrial Research Organization, the Rural Bank of New South Wales, the Soil Conservation Service of New South Wales, the Water Conservation and Irrigation Commission, and the Rice Marketing Board of N.w South Wales, and secondary industries and farmers' organisations. Finance is provided by these authorities on an agreed basis. The objectives are: to enable the agricultural extension services to the farmers in the defined sub-region to be continued and developed; to provide a system for advising on local agricultural policy and organisation; to provide means for farmer opinion to have due weight in the consideration of regional agricultural administration and policy; to achieve a unified approach to sub-regional extension in all branches of agriculture; to advise on the research needs of the sub-region and to co-ordinate the agricultural research of the various rural institutions working therein; to achieve close liaison between research and extension; and to conduct research in extension methods.

### **Preservation of catchments**

Since water conservation commences on the catchments it is becoming increasingly recognised that anything which interferes with catchment efficiency affects the quantity of water available for all purposes. Active steps are being taken to counteract soil erosion, to conserve soil generally, and to minimise the effects of floods, overstocking, bush fires, and the destruction of vegetative cover. All States and the Commonwealth have initiated forestry policies which provide for reforestation and the preservation of catchments. In recent years efforts to counteract soil erosion have been intensified, and there is some evidence of a more unified approach to catchment, water, forestry, and land use factors regarded as parts of a single problem.

### **Sub-surface supplies**

Much of Australia's underground water is obtained from artesian and sub-artesian basins and is used for stock purposes and domestic use. These supplies are indispensable in most inland areas. The quality of the water ranges from usable to very saline. In inland areas a considerable amount of water has been tapped that is unusable because of its high salt content. Because of this, development of an economic desalting process would provide the interior with additional large quantities of usable water.

Considerable use is also made of sub-surface water, other than pressure water, from local storages, particularly in the well-settled areas. The water is used mainly for domestic and stock purposes. Compared with other countries with similar rainfall and climate, underground water is not used extensively for town and individual industrial supplies, but its use for these purposes is increasing.

*Artesian and sub-artesian supplies.* Pressure water (either artesian or sub-artesian), variable in quantity and quality, is obtainable in many parts of Australia, the various artesian basins extending over about half the continent. A map of Australia showing the extent of the known artesian basins appears on page 273 of Year Book No. 48.

The Great Artesian Basin, the most extensive in the world, underlies an area of approximately 676,250 square miles, comprising about 421,000 in Queensland, 135,000 in South Australia, 81,250 in New South Wales and 39,000 in the Northern Territory. The table below shows the principal defined water-bearing basins in Australia.

More than 18,000 artesian bores have been drilled within the Great Artesian Basin, while the daily free discharge from all bores continuing to flow in Australia has been stated as exceeding 350 million gallons, of which the loss by evaporation and seepage has been estimated at more than 90 per cent. Sub-artesian bores and wells throughout Australia number more than 200,000.

Artesian water generally is good stock water, but most is unsuitable for plant life, while in certain areas sub-artesian waters are suitable for all uses including irrigation. In the Eucla Basin and parts of the Murray and Pirie-Torrens Basins the water is of poor quality, being barely suitable for stock.

In common with other countries possessing artesian supplies Australia has been faced with the problem of flow diminution. It was recognised early that flows were diminishing as more bores were drilled, but it is now considered that while many of the bores will ultimately cease to flow, others will assume a perpetually steady rate of flow, corresponding with the average intake of water from rainfall absorbed by permeable outcrops, mainly sandstone and limestone. Diminution in flows from artesian bores has emphasised the need to eliminate wastage as much as possible. Licences now issued for the construction of new artesian bores prohibit the distribution of water through drains, channels, etc., and the supplies must be confined to the borehead or piped to appropriate watering points.

#### PRINCIPAL WATER-BEARING BASINS IN AUSTRALIA

Name	State	Geological age of chief aquifers	Approximate area	Depth to pressure water
			square miles	feet
Great Artesian . . .	Queensland, New South Wales, South Australia and Northern Territory	Mesozoic . . .	676,250	Up to 7,000
Canning . . .	Western Australia	Mesozoic-Palaeozoic	150,000	100 to 1,800
Murray . . .	Victoria, New South Wales and South Australia	Miocene-Eocene . .	109,000	100 to 1,300
Georgina (including Barkly and Daly)	Northern Territory, Queensland	Cretaceous, Ordovician, Cambrian, and Upper Proterozoic	108,000	150 to 1,000
Eucla . . .	Western Australia, South Australia	Pliocene-Miocene . .	74,000	300 to 2,000
Carnarvon . . .	Western Australia	Cretaceous, Permian	45,000	200 to 4,000
Perth . . .	Western Australia	Recent, Jurassic . .	21,000	200 to 2,500
Western District (Orway)	Victoria . . .	Pleistocene-Upper Cretaceous	13,000	100 to 4,500
Basins of Ord-Victoria region	Northern Territory, Western Australia	Mainly Cambrian and Permian	12,000	200 to 1,000
Pirie-Torrens . . .	South Australia . .	Recent, Pleistocene .	9,000	Up to 600
East Gippsland . .	Victoria . . .	Pleistocene-Eocene .	3,500	200 to 3,500
Adelaide . . .	South Australia . .	Recent, Oligocene . .	1,100	200 to 600

*Shallow groundwater.* Shallow groundwater supplies are used in various parts of Australia for industry, irrigation, stock, and domestic purposes. Two examples of the use of these shallow supplies for industrial and domestic purposes occur in New South Wales. The Hunter District Water Board pumps 15 million gallons a day for general use from the Tomago coastal sands near Newcastle, and at Botany, Sydney, private industry pumps 8-10 million gallons a day for its own use from similar sands. Exploration of the coastal sands north of the Tomago Sands has revealed a further potential production of 25 million gallons a day. Examples of the use of shallow groundwater supplies for irrigation include the Burdekin Delta and the Bundaberg area in Queensland. In the Burdekin Delta, which covers an area of some 200 square miles, the present extraction for irrigation from underground sources is in the region of 200,000 acre feet per annum (about 150 million gallons a day) and in the Bundaberg area it is approximately 50,000 acre feet per annum (about 37 million gallons a day).

A scheme for artificial recharge of underground supplies has been implemented on the north side of the Burdekin Delta. Pumping at a rate of 90 cusecs from unregulated river flows will provide for an average recharge of 41,000 acre feet per annum to the aquifer.

In recent years there has been a marked increase, particularly in Queensland, New South Wales and Victoria, in investigation into the groundwater resources of river and coastal alluvium for irrigation and town water supplies.

### National and interstate aspects

As the Commonwealth Constitution makes special reference to water rights, both the Commonwealth and the State Governments have an interest in the control and conservation of water. The main responsibility for control of water resources rests with the individual State Governments, but as political boundaries sometimes intersect river valleys and catchments, co-operation between Governments has been necessary to develop resources in certain cases. Specific examples of Commonwealth-State and interstate co-operation and approach are given in the following paragraphs.

#### Australian Water Resources Council

The Australian Water Resources Council was established by joint action of the Commonwealth and State Governments in 1962. The council comprises the Minister for National Development as Chairman, the Minister for Territories, and the Ministers for Water Supply in each State. The Minister for the Interior, who is responsible for the Commonwealth Bureau of Meteorology, is a co-opted member. It has as its principal objective the provision on a continuing basis of a comprehensive assessment of Australia's water resources and the extension of measurement and research so that future planning can be carried out on a sound and scientific basis.

An important factor is that the Council is not concerned with particular works projects, normally the responsibility of the States or the Commonwealth, for which there are established channels, such as the Premiers' Conference and Loan Council, for the exchange of views and allocation of funds.

Assisting the Council is a Standing Committee of senior officers from Commonwealth and State water authorities, and there are a number of committees advising the Standing Committee, namely: Water Research and Education and Steering Committee, Technical Committee on Surface Water, Technical Committee on Underground Water, Advisory Committee on Hydraulics Laboratory Facilities, and a number of *ad hoc* panels.

The Water Resources Council published, early in 1965, a *Review of Australia's Water Resources (Stream Flow and Underground Resources)* 1963. Among important matters receiving attention the more urgent include recommendations for the provision of a Commonwealth-States water resources research fund and of a post-graduate scholarship scheme.

In 1964 Australian Governments adopted an accelerated programme of stream-gauging (surface water measurement) to extend over the next ten years. They have also recognised the need for a continuous programme of underground water investigations. Under the *States Grants (Water Resources) Act* 1964 the Commonwealth Government grants financial assistance to the States in connection with the measurement and investigation of their water resources. This means that \$3,692,000 of additional funds (a 60 per cent increase on current rates of expenditure) relative to these programmes could be made available over the three years to 1966-67.

All authorities represented on the Council and its committees have agreed to work towards a common, nation-wide system of recording hydrologic data in a digital form suitable for rapid analysis by computer. The Council is also giving attention to the extent to which particular kinds of water research and specialised training of research workers can assist in bringing about the comprehensive water resources assessment envisaged as the Council's objective.

#### Murray River scheme

The Murray River and its tributaries form the largest river system in Australia. The catchment is approximately 408,000 square miles, or one-seventh of the area of the Australian continent, comprising five-sixths of New South Wales, over one-half of Victoria, one-sixth of Queensland and a small part of South Australia. The Murray proper is 1,600 miles long. Its main tributaries are the Darling (1,700 miles), the Murrumbidgee (980 miles), and the Goulburn (350 miles). The average annual flow of each of the chief contributory streams is as follows: Upper Murray, including the Mitta Mitta and Kiewa Rivers, 3,820,000 acre feet; Darling River, 2,820,000 acre feet; Goulburn River (including Broken River), 2,580,000 acre feet; Murrumbidgee River, 2,050,000 acre feet; and Ovens River, 1,266,000 acre feet. Irrigated production in the Murray River Basin is mainly grapes for wine, dried fruits, fresh fruits, rice, vegetables, dairy produce, wool, and fat lambs.

*River Murray Waters Agreement.* For a brief summary of the historical events leading up to the River Murray Agreement (1915) by the Governments of the Commonwealth, New South Wales, Victoria, and South Australia see issues of the Year Book prior to No. 39. Under the Agreement construction works are carried out by the States (which are also responsible for maintenance) subject to the approval and direction of the River Murray Commission. The Agreement provides that the minimum quantity of water to be allowed to pass for supply to

South Australia in each year shall be sufficient to maintain certain specified flows in the lower river varying from 47,000 acre feet a month in the winter months to 134,000 acre feet a month in the four summer months of maximum demand—the total amounting to 1,254,000 acre feet over twelve months. The flow at Albury is shared equally by New South Wales and Victoria, and each of these States has full control of its tributaries below Albury, subject in each case to the fulfilment of the South Australian allocation. For a brief outline of the operation of the Agreement prior to 1949 see Year Book No. 40, page 1065, and earlier issues.

At a conference of Ministers held in 1949 to consider the diversion of the Snowy River it was decided that, by diversion of streams in the Snowy Mountains area, an average of approximately 440,000 acre feet per annum would be added to the Murray River (see Snowy Mountains Hydro-electric Scheme, page 1004) and that increased storage should be provided in order to give additional regulation of the Murray River itself as well as to provide for regulation of the diverted waters. Hydro-electric potentialities would also affect the size of the storage.

The River Murray Commission investigated the position and subsequently recommended to the contracting Governments that the River Murray Waters Agreement be amended to provide for enlargement of the Hume Reservoir by 500,000 acre feet to 2,500,000 acre feet. A conference of Ministers in 1954 agreed to the enlargement, and it was also agreed that the Commission should be given power to construct regulators and to carry out such other work on the Murray River between Tocumwal and Echuca as it considered necessary to reduce the losses from the regulated flow in that stretch of the river. The amended Agreement was ratified in the Parliaments of the Commonwealth and the three States and was proclaimed on 7 April 1955. In view of the proposed diversions by the Snowy Mountains Authority to and from the Murray River, and for other reasons, amendments to those sections of the River Murray Waters Agreement dealing with the distribution of the waters of the Murray were considered desirable. Following ministerial conferences, amendments were ratified by the four Parliaments concerned, and came into force on 6 November 1958.

Further amendment of the Agreement to provide for the construction of a storage of approximately 5,000,000 acre feet capacity at Chowilla in South Australia was ratified by legislation in the Commonwealth and State Parliaments and came into force on 30 April 1964. The dam will be located some six miles downstream from the border between Victoria and South Australia, and will consist of concrete outlet structures and a bank forty-one feet high across the flood plain. The overall length of the dam will be three and one-third miles, and the lake formed behind it will extend to Wentworth Weir, a distance of about 120 miles by river.

As a temporary measure, to assist in drought mitigation pending completion of the Chowilla reservoir, it has been agreed that portion of the waters in the Menindee Lakes storage will be made available to the Commission for allocation between the States of New South Wales, Victoria and South Australia. The arrangement, to operate for a period of seven years from 1 January 1963, was approved by the *Menindee Lakes Storage Agreement Act 1963*.

The quantity (in acre feet) of water diverted during 1965–66 from the Murray and its tributaries for irrigation and other purposes was as follows: New South Wales, 2,063,000; Victoria, 2,553,000; South Australia, 350,750; a total of 4,966,750 acre feet.

*River Murray works.* One of the major works of the Murray River scheme is the Hume Reservoir, situated just below the junction of the Murray and Mitta Mitta Rivers, ten miles above Albury, forming a lake of 50,000 acres. The design comprises a mass concrete spillway and outlet works extending for 1,000 feet, and an earthen embankment 142 feet high extending for 4,000 feet across the river flats, the length of the total structure being approximately one mile. Work on the enlargement of the reservoir to its approved capacity of 2,500,000 acre feet was completed in 1961.

The Yarrawonga Diversion Weir, which was completed in 1939, raised the river level so that water could be diverted by gravitation into main channels constructed on either side of the river. Between the Yarrawonga Weir and the Murray mouth, thirteen weirs and locks have been built. Two flood diversion weirs have been constructed on the Murrumbidgee—one between Hay and the Lachlan junction and the other below the Lachlan junction.

The Mulwala Canal, supplied from the Yarrawonga Weir, has an off-take capacity of 2,500 cubic feet a second, servicing 1,800,000 acres of land in New South Wales. The Yarrawonga Channel, on the Victorian side, has an off-take capacity of 1,250 cubic feet a second, serving 300,000 acres. Not all of this area is irrigated.

Adjoining the river in New South Wales, and 35 miles from the Murray-Darling junction, Lake Victoria storage, with a surface area of 27,670 acres, was completed in 1928. The water released from Lake Victoria is used by the South Australian settlements. The inlet channel to Lake Victoria was enlarged in 1957 to permit greater diversion of periodical flood flows of short duration.

Five barrages across channels near the Murray River mouth connecting Lake Alexandrina with the sea were completed in 1940 to prevent ingress of salt water to Lakes Alexandrina and Albert and to the lower river, thereby increasing the productivity of adjacent lands. The structures

maintain a sufficiently high level for 50 miles up river to permit watering by gravitation of a considerable area of reclaimed river flats. The total distance across the barrages and intervening islands is 15 miles.

In addition to the works carried out under the auspices of the Commission, the separate States have constructed thousands of miles of distribution channels and have provided a number of storages on the tributaries, thereby contributing materially to the large amount of irrigation development in the Murray Basin. The main storages are: New South Wales—Menindee Lakes Storage (Darling), Burrinjuck (Murrumbidgee), Keepit (Namoi), Burrendong (Macquarie), and Wyangala (Lachlan); Victoria—Eildon (Goulburn), Waranga (Goulburn), Eppalock (Campaspe), and Cairn Curran (Loddon). Details of these and other State works on Murray tributaries will be found in the sections dealing with State systems. No storages exist on the Murray in South Australia at present, but the construction of a large storage at Chowilla is proposed (see page 1003).

#### **New South Wales-Queensland Border Rivers Agreement**

The catchments for the border streams of New South Wales and Queensland (2,000 square miles) extend to the granite areas in the vicinity of Tenterfield (New South Wales) and Stanthorpe (Queensland), and elevation rises to 3,000 feet. Average rainfall is 30 inches. The catchments and the areas suitable for irrigation are approximately equal in each State. Climatic conditions are such that from April to October it is necessary to supplement rainfall by irrigation to stabilise and increase production. The capacity of the area to grow lucerne and tobacco under irrigation has already been demonstrated. Other possible development of the area includes irrigation of cotton, root crops, cereals, and citrus fruit, and expansion of the fat stock industry.

The New South Wales-Queensland Border Rivers Agreement came into effect on 1 July 1947. The Agreement provides for the construction of certain works on those sections of the Severn, Dumaresq, Macintyre, and Barwon Rivers which constitute part of the boundary between New South Wales and Queensland for the furtherance of water conservation, water supply and irrigation in those States.

The works to be constructed comprise a dam on the Dumaresq River at a site to be selected by the Water Conservation and Irrigation Commission of New South Wales (the constructing authority) to give a storage basin with a capacity as large as is reasonably practicable and not less than six nor more than twelve weirs as may be found necessary to meet the requirements of irrigation along the rivers. Provision is also made for the construction of not more than four regulators in the effluents from the barrier rivers and for the taking over of the existing weir on the Macintyre River at Goondiwindi and the existing weir on the Barwon River at Mungindi (the Irrigation and Water Supply Commission of Queensland is the constructing authority for new weirs and regulators). The cost of these works and of administration are to be borne by the States in equal shares. The Agreement further provides that the water discharge from the Dumaresq storage, whether by regulated or unregulated flow, shall be available to the two States in equal shares.

After unfavourable foundation conditions were disclosed at several dam sites on the Dumaresq River, investigations were extended to tributary streams, and superficially suitable sites located on Pike Creek and the Mole River. A geophysical survey was made at each of these sites and preliminary comparative estimates were prepared to determine the relative economy of providing one large storage at Mingoola or two smaller storages on the tributaries. Following exploratory drilling of the tributary sites, a report dealing with alternative storage proposals and possible amendments to the existing Agreement was submitted to the participating States. It was subsequently agreed by the State Governments that, at the appropriate time, the existing Agreement would be amended to include, *inter alia*, provision for the construction of storages on Pike Creek (Queensland) and the Mole River (New South Wales).

Completed works include Bonshaw and Cunningham Weirs on the Dumaresq River, a weir and regulator on the Barwon River at the offtake of the Boomi River, and a low level weir to establish a pumping pool at Glenarbon on the Dumaresq River. The existing Goondiwindi and Mungindi Weirs are being maintained, operated and controlled by the Queensland Irrigation and Water Supply Commission. Until a dam has been constructed it is unlikely that any other weirs will be required.

#### **Snowy Mountains Hydro-electric Scheme\***

Following a comprehensive investigation into both the water and power potential of the Snowy River waters by a Technical Committee representative of the Commonwealth and the States of New South Wales and Victoria in 1947 and 1948, and the submission by the Committee of reports in 1948 and 1949, the Commonwealth Parliament passed the *Snowy Mountains Hydro-electric Power Act 1949* setting up an Authority to implement the proposals agreed upon.

\* See also the chapter Electric Power Generation and Distribution. For more detailed information see special article by the Commissioner, Snowy Mountains Hydro-electric Authority (Sir William Hudson) which appeared in Chapter XXIX. Miscellaneous of Year Book No. 42.

The basis of the proposals is to impound the Snowy River waters at high elevations and, by diverting them into tunnels passing under the Alps, to use their potential power for the generation of electricity and then to discharge them into the Murray and Murrumbidgee River systems for use in the irrigation areas.

The scheme involves two main diversions, that of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and that of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. In addition, works required to make use of the waters of the Upper Murrumbidgee, the Upper Tumut, the Upper Tooma and the Geehi Rivers for power generation also provide additional regulation of these streams, and this makes more water available for irrigation. Details of the two trans-mountain diversions and the associated power works together with details of progress and construction are given in the chapter Electric Power Generation and Distribution.

An additional 500,000 acre feet of water per annum is now available for irrigation in the Murrumbidgee Valley. When all works are completed, it is estimated that the total gain to the Murrumbidgee by diversion and regulation will amount to 1,120,000 acre feet per annum and the total gain to the Murray will be 800,000 acre feet per annum. This additional water should be sufficient to provide irrigation for approximately 1,000 square miles of land, which is expected to result in a substantial increase in annual primary production.

### International aspects

Australia maintains contact with international developments in water conservation and irrigation through its membership, since 1952, of the International Commission on Irrigation and Drainage. This Commission was set up in India in 1950 in order that the technical experience of all countries might be pooled for the benefit of all, and to promote the development and application of the science and technique of irrigation and drainage in the engineering, economic and social aspects. The Commission is constituted of National Committees of participating countries, and fifty-seven countries, including Australia, have already been admitted to membership.

The Central Office of the International Commission is situated in New Delhi, India. Congresses, which are held every three years, have taken place in India, Algeria, the United States of America, Spain and Japan, in that order. The sixth Congress was held in India in January 1966.

An Australian National Committee was established following a meeting of representatives of Australian authorities held in Melbourne in 1953. At that meeting it was decided, *inter alia*, 'that a National Committee should be formed and that the National Committee would consist of representatives of Government Departments, Statutory Authorities, firms, and individuals actively interested in irrigation and drainage'. The Committee meets annually.

Under the National Water Resources Development Programme the Commonwealth Government is to grant to the States approximately \$50 million during the next five years. The main aim of the programme is to increase water conservation for drought mitigation and to increase primary production. Accordingly, projects principally for urban purposes or hydro-electric power generation will not be included.

### STATES AND TERRITORIES

The foregoing text deals with water conservation and irrigation in Australia generally and with international, national and interstate aspects. The following survey covers the local pattern of water resources and the steps taken by the State Governments to bring about their development. In the various States water policies tend to assume a distinctive and characteristic pattern closely allied with climatic conditions and specific local needs.

In Victoria almost every form of water scheme is in operation. In New South Wales major emphasis at present is on irrigation and stock development in the dry areas along the Murray and Murrumbidgee Rivers, though a substantial scheme of intensive irrigation is being conducted in the Murrumbidgee Irrigation Areas. In Queensland, up to the present, the predominant emphasis has fallen on water (mainly underground sources) for stock, and the development of small irrigation schemes in sub-humid and humid areas, especially to stabilise sugar production. Apart from regular irrigation practices along the Murray River, South Australian authorities are vitally concerned with reticulated supplies for rural areas and towns. Western Australia has developed unique rock catchments and piped supplies for agricultural areas and towns in dry districts. Tasmanian interest relates almost exclusively to hydro-electric generation. The Northern Territory is concerned primarily with stock supplies and the safeguarding of long stock routes.

### New South Wales

On page 1110 of Year Book No. 37 information is given on the pattern of rainfall and the history of irrigation in New South Wales. (See also the chapter Physical Geography and Meteorology of this issue.)

#### Administration

The Water Conservation and Irrigation Commission of New South Wales consists of three members appointed by the Governor. The operations of the Commission cover water conservation, control of irrigation areas, the establishment, operation and maintenance of works for domestic and stock water supply, irrigation districts, flood control districts, sub-soil drainage districts, constitution of water trusts, the issue of licences for private irrigation, artesian and shallow boring, assistance under the provisions of the farm water supplies scheme, and river improvement works.

Under the Water Act, 1912-1955 the right to the use and flow and the control of water in all rivers and lakes which flow through, or past, or are situated within, the land of two or more occupiers, is vested in the Commission for the benefit of the Crown. A system of licences operates for the protection of private works of water conservation, irrigation, water supply, drainage, and prevention of inundation.

For particulars of the New South Wales-Queensland Border Rivers Agreement ratified by Acts of both States in 1947, see page 1004 of this chapter.

#### Schemes summarised

The bulk of irrigated land is along the Murray and its tributary the Murrumbidgee. Smaller areas are served by the Wyangala Dam, Lake Cargelligo and Lake Brewster on the Lachlan (a tributary of the Murrumbidgee), by Glenbawn Dam on the Hunter River, by Keepit Dam on the Namoi River, and by the Menindee Lakes Storage on the Darling River. None of the other rivers is regulated by large head storages, though weirs and dams have been provided for town supplies, etc. in many places. A head storage on the Macquarie River is nearing completion and construction of a dam has commenced on the Tumut River near Tumut. In addition, substantial use is made of artesian and sub-artesian water in pastoral areas.

New South Wales legislation provides for the constitution and control of various schemes having different characteristics and including irrigation areas, irrigation districts, water trust districts, flood control and irrigation districts, and river improvement districts. There are nine irrigation areas, although two of these, Yanco and Mirrool, are generally described under the one heading, namely, the Murrumbidgee Irrigation Areas. The Areas are: The Murrumbidgee Irrigation Areas, consisting of 451,263 acres served with water through a channel system stemming from the river at Berembded Weir; the Coomealla Irrigation Area of 34,626 acres, served by pumping from the Murray; the Curlwaa Irrigation Area of 10,393 acres, supplied from the Murray by pumping; the Hay Irrigation Area of 6,850 acres, supplied with water pumped from the Murrumbidgee; the Tullakool Irrigation Area of 18,006 acres, supplied from the Edward River by diversion at Stevens Weir; the Buronga (8,739 acres) and Mallee Cliffs (1,900 acres) Irrigation Areas, served by pumping from the Murray; and the Coleambally Irrigation Area (139,572 acres), served by diversion from the Murrumbidgee River. All these Areas are administered by the Commission, and details of the various schemes are given in the table on page 1007.

The capacities of the main storages (in acre feet) are:

*Darling*—Menindee Lakes Storages (2,000,000);

*Murray*—Half share of Hume Reservoir, weirs and locks to Wentworth (1,351,570); Stevens Weir, Edward River (7,165);

*Macquarie*—Burrundong Dam (964,000); installation of radial gates will increase storage by 397,000 acre feet for flood mitigation;

*Murrumbidgee*—Burrinjuck Dam (837,000); Berembded Weir (10,000); Redbank Weir (7,360); Maude Weir (6,740);

*Namoi*—Keepit Dam (345,000);

*Lachlan*—Wyangala Dam (temporary reduced level 245,000); Lake Brewster (123,900); Lake Cargelligo (29,435); Jemalong Weir (2,200); and

*Hunter*—Glenbawn Dam (185,000 acre feet irrigation storage; 108,000 acre feet flood mitigation storage).

The total length of supply channels, drains, escape channels and pipe lines constructed by the Water Conservation and Irrigation Commission in New South Wales is 4,922 miles. This comprises 3,420 miles of supply channels (including main canals), 1,433 miles of drains and escape channels, and 69 miles of pipe lines.

## Extent of systems and nature of irrigated culture

The following table shows the areas of the various irrigation systems and the areas irrigated in 1965-66 and corresponding particulars for the State as a whole during the seasons 1961-62 to 1965-66.

**AREAS OF SYSTEMS AND OF LAND IRRIGATED: NEW SOUTH WALES  
1961-62 TO 1965-66**

(a) Excludes Flood Control Districts and some Irrigation Trusts, particulars for which are not available. (b) Citrus and deciduous; in 1965-66 deciduous amounted to 12,833 acres, of which 10,504 acres were in the Murrumbidgee Irrigation Areas. (c) Includes total area irrigated by Licensed Diversions, but details for individual crops, etc., are not available. (d) Includes lands outside irrigation areas supplied under special agreement. (e) Incomplete.

### Irrigation Areas

**Murrumbidgee.** These areas, together with adjacent lands supplied under agreement, received 459,146 acre feet, or nearly a quarter of the total water (2,158,813 acre feet) allocated within the State for stock, domestic supply and irrigation. They are served by the Burrinjuck Dam on the Murrumbidgee, forty miles north-west of Canberra. The catchment above the dam is about 5,000 square miles. The river rises on the high plateau north of Mount Kosciusko where the average annual rainfall exceeds 60 inches. Flow for the irrigation areas and districts is supplemented by unregulated flow from the Tumut River below the dam. The dam also provides town supplies for Gundagai, Wagga, Narrandera, Hay, Balranald, and for towns served by the South-West Tablelands scheme.

Domestic and stock water and water for irrigation are supplied to the Irrigation Districts of Tabbita, Benerembah and Wah Wah, and the Flood Control and Irrigation District of Lowbidgee. Flood flows are relied on to serve the Lowbidgee district, and water is not released from the dam for that purpose. For the other undertakings, however, water is stored during the winter, fed by melting snows and spring freshets, and is released during the September-May irrigation season. It passes along the river channel to Berembd Weir, 240 miles westward, where it is diverted to the main canal with an off-take capacity of 1,600 cubic feet a second. The main canal has been completed to beyond Griffith, 106 miles from the off-take. Reticulation channels aggregate approximately 900 miles and drainage channels 880 miles. In addition, approximately 440 miles of supply channels run through irrigation districts adjacent to the Murrumbidgee Areas in which the water supply is operated and maintained by the Water Conservation and Irrigation Commission.

The Water Conservation and Irrigation Commission controls land transactions and water supplies for the Murrumbidgee Irrigation Areas only, and has no jurisdiction over land transactions in the adjacent irrigation districts, although it is responsible for the operation and maintenance of the water supply in these areas. Other local government services, including electricity and town water supply, are provided by Councils. Land is disposed of by the Commission by purchase or under perpetual lease tenure or leased for short terms for grazing or cultivation. The area under occupation at 30 June 1966 was 411,508 acres, including 37,524 acres held for short lease grazing, agriculture, etc.

The land on which the Murrumbidgee Irrigation Areas and associated districts are situated originally comprised large sheep stations and was sparsely populated, but at 30 June 1966 its population was approximately 29,560, that of Leeton Shire being 10,956 and that of Wade Shire, 17,779. The principal products of the Murrumbidgee Irrigation Areas are wool, livestock for slaughtering, rice, citrus fruits, peaches and nectarines, grapes, tomatoes, peas, beans, and root vegetables. Rice growing was initiated on the Areas in 1924 and has since become the most important crop. In a normal season the water supplied for rice represents about half the total delivered to the Areas.

**Other Irrigation Areas.** The Coomealla, Tullakool, Buronga, Mallee Cliffs, Hay, Curlwaa, and Coleambally Irrigation Areas follow the same administrative pattern as the Murrumbidgee Areas—that is, land transactions are administered by the Water Conservation and Irrigation Commission which is responsible also for the operation and maintenance of works to supply water.

### Irrigation Districts

These districts are set up under the Water Act, 1912–1955 for (a) domestic and stock water supply and (b) irrigation. They differ from water trusts in that the cost of the works is not required to be repaid over a period, but annual charges are made by the State for water supplied to land-holders.

Since the completion of the Hume Reservoir, several such districts have been established along the Murray to utilise the New South Wales share of the storage. Water is not available for the whole of the 5,000,000 acres adjacent to the Murray in New South Wales, and therefore the schemes are based on 'extensive' irrigation, that is, water rights are allotted to holdings on the basis that only a portion of each holding (one acre in three, five or ten, according to the district, etc.) will be irrigated, but additional water, when available, may be obtained by land-holders. 'Water right' means right to such a quantity annually of water, 12 inches deep, as will cover an area of one acre.

Water to serve Berriquin, Denibootea and Denimein Districts is diverted through a main canal which is approximately 100 miles long. Water for the Wakool Irrigation District and the Tuliakool Irrigation Area is diverted from the Edward River at Stevens Weir, and a supplementary supply is also obtainable from Mulwala canal. At 30 June 1966 the total length of completed canals and channels in Berriquin District was 1,000 miles, comprising Mulwala canal 75 miles, Berrigan channel 22 miles, subsidiary channels 788 miles, escape channels 105 miles, and cross drainage channels 10 miles. Off-take capacity of the Mulwala canal is 5,000 acre feet a day. Wakool, with 422 miles of channel, contains 323 holdings, and the area developed by irrigation

includes about one acre in six of the total area. Sheep raising and rice growing are the main industries. Considerable subdivision has occurred within the Berriquin District, and the proportion of the total area developed for irrigation is higher than in the case of Wakool. Sheep (including fat lambs), dairying and wheat growing are the main industries.

#### **Water Trust Districts, Irrigation Trusts and Flood Control and Irrigation Districts**

The Water Act, 1912-1955 provides for the constitution of Trust Districts for domestic and stock water and irrigation, and empowers the Commission to construct, acquire or utilise necessary works. When the works are completed, they are handed over to trustees to administer. The trustees are elected by the occupiers of the land and act with a representative of the Commission. They are empowered to levy and collect rates covering the cost of the works repayable to the Crown by instalments and also the cost of operation and maintenance of the works. The rates are struck according to the area of land which benefits. The following are the water trusts, other than irrigation, as at present constituted (the area in acres of each district being shown in parenthesis): *Murray River*—Little Murrumbidgee (157,440), Bullatale Creek (68,320), Poon Boon (34,300), Minnie Bend Flood Prevention (2,190); *Murrumbidgee River*—Yanco, Colombo and Billabong Creeks (1,007,780); *Lachlan River*—Marrowie Creek (292,640), Torrigan, Muggabah and Merrimajee Creeks (170,240), Ulonga (64,960), Micabil Weir (11,500), Condo-bolin West Weir (4,480); *Miscellaneous*—Great Anabranch of Darling River (959,184), Nidgerly Weir (46,880), Aludgerie Creek (9,760), Collarenebri town water supply (117)—making in all a total area of 2,829,791 acres. Twelve of these trusts have been formed for the provision of water for domestic and stock purposes, one for a town supply and one for flood prevention.

Irrigation Trusts are established under the same Act and are administered by trustees in a similar way. There are six of these trusts.

The Lowbidgee Provisional Flood Control and Irrigation District, the first of its kind, was constituted in 1945. Its purpose is to provide flood irrigation for pasture lands on the lower Murrumbidgee by water diverted from the Maude and Redbank Weirs. Another district, Medgun, near Moree in the north-west, is also in operation.

#### **River, lake and farm water supplies**

During recent years the numbers of licences and permits issued to individuals to draw water from rivers and lakes for irrigation have increased substantially, especially along the coastal streams in sub-humid districts where the value of supplementary irrigation is becoming more recognised as a means of stabilising production in dry months. There has also been a considerable increase along the Murrumbidgee, Lachlan, Namoi, and Macquarie Rivers.

Under the Farm Water Supplies Act, 1946, technical advice and assistance, and also financial assistance, are made available to help individual farmers and groups of farmers to provide and improve water supplies for domestic, stock and irrigation purposes by means of wells, bores, excavated tanks, weirs or dams, flood and spray irrigation systems.

#### **Underground water**

Extensive use is made of artesian, sub-artesian, and shallow underground water. The Great Artesian Basin underlies an area of some 81,250 square miles in north-western New South Wales. Eighty-seven Bore Water Trusts and twelve Artesian Wells Districts have been constituted. Bore Trusts are administered in the same way as Water Trusts, but in Artesian Wells Districts the settlers maintain the drains. Bore Trusts and Artesian Districts cover 5,500,000 acres and distribute water through 3,500 miles of open earth drains. At 30 June 1966, 1,150 artesian bores had been constructed in the New South Wales section of the Basin. At that date 676 bores were flowing and were capable of producing about 63,650,000 gallons a day. Conservation measures control this to about 51,500,000 gallons a day. The total length of bore drains, including those for Trusts and Districts, is approximately 8,000 miles.

Of other structural basins of sedimentary rocks, e.g. Murray, Sydney, Oxley, and Clarence Basins, the Murray is the largest and also the most important in that it affords stock water supplies over an extensive area of the south-western section of the State. Only a few of these bores flow, the remainder being sub-artesian. Good supplies for stock and, in some instances, small scale irrigation, are obtained from porous sandstone in the Moss Vale-Picton area, but the remainder has limited potential. Stock supplies are obtained from bores in the fringe zones of the Oxley Basin, but the centre of this basin lies under the Liverpool range. The Clarence Basin is relatively unimportant from a groundwater viewpoint, but stock supplies are obtained from some sections.

In other parts of the State the largest and best quality groundwater supplies are obtained from sands and gravels in the alluvium of the major rivers and their tributaries, particularly the western-flowing rivers, e.g. Lachlan, Macquarie and Namoi. Supplies of up to 180,000 gallons an hour are obtained from wells and screened bores in these areas and are used for irrigation

and town water supply. The Government is carrying out investigations to determine the ground-water potential of the alluvium of such valleys, particularly with regard to irrigation use, and a test-boring programme is in progress in the Lachlan and Namoi Valleys. Coastal river systems have a much more limited potential in this regard, the main exception being the Hunter. Old sand dune areas along the coast provide large supplies of good quality water. However, since the soils of these areas are not suited to agricultural pursuits, exploitation has been largely confined to the Sydney and Newcastle areas. Initially a source of Sydney's water supply, the Botany sands are now utilised mainly by industry. The Tomago sands provide a considerable proportion of the Newcastle water supply.

The older rocks, which are mostly folded and jointed, are very variable in their groundwater potential and only rarely do they yield supplies sufficient and suitable for limited irrigation. Where suitable conditions obtain, they yield useful stock supplies, mostly at depths between 50 and 250 feet.

A licence under the Water Act, 1912-1955 is required for all bores sunk in any part of New South Wales, and details of over 30,000 bores and wells in the State are recorded. When assessed in relation to the geologic and topographic conditions of any particular area, such records provide valuable evidence of the groundwater potential and are thus of considerable benefit to landholders.

#### **Future programme**

The programme of development in hand includes the provision of additional dams and storages, diversion weirs, and flood mitigation and river protection works in various parts of the State. Work has commenced on a dam at Blowering on the Tumut River, and legislation has been passed authorising the construction of a flood control and irrigation dam at Warkworth in the Hunter Valley. The Hunter River development, of which Glenbawn Dam is an integral part, concerns an exceptionally fertile coastal valley, forming the hinterland to Newcastle, where the annual rainfall is not heavy and variations from month to month are considerable. This is the first coastal scheme initiated in New South Wales. At Wyangala Dam, on the Lachlan River, the fixed crest of the dam spillway has been lowered temporarily to enlarge the spillway for passage of greater floods. Construction has commenced on a new earth and rock-fill dam which will be built behind the present dam to give a storage of 1,000,000 acre feet. Within the new Coleambally Irrigation Area further development of farms has been carried out and water is being supplied by the new diversion weir at Gogeldrie. At 30 June 1966, 194 large area farms and 14 horticultural farms had been allotted.

### **Victoria**

Particulars of the rainfall pattern of Victoria were given on page 1117 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

#### **Administration**

Victorian Governments have been active in the development of country water supplies since the 1860's when major works to supply the Bendigo goldfields were undertaken. Local trusts to construct and operate waterworks under Government supervision were provided for in the *Water Conservation Act* 1881. Development under the trust system was greatly stimulated by the *Irrigation Act* 1886, which provided for the construction of national headworks by the State, and vested in the Crown the right to the use and control of all surface waters. By 1900 there were 33 irrigation trusts and 18 other rural water supply trusts, but the system of local control was then breaking down under financial difficulties.

The *Water Act* 1905 established the State Rivers and Water Supply Commission to take over the Irrigation Trust districts (except the still-existing First Mildura Irrigation Trust) and to exercise the State's functions in the further control and development of surface waters outside the metropolis. The Commission now supervises all private diversions from streams and directly administers irrigation districts covering 2,247,000 acres, rural waterworks districts covering 7,000,000 acres, drainage and flood protection districts covering 165,600 acres, and urban water supplies serving 200,000 people. It also supervises the activities of local urban water supply authorities supplying 600,000 people in more than 200 towns, as well as 80 local sewerage authorities and 25 river improvement and drainage authorities.

#### **Works summarised**

Since the State Rivers and Water Supply Commission began its operations in 1906 the capacity of storages under its control has been increased from 172,000 acre feet to 4,600,110 acre feet. In addition, Victoria has in effect a half share in River Murray Commission storages totalling 2,703,150 acre feet, bringing total capacity available to Victoria at 30 June 1966, to 5,951,680 acre feet. Most of the water used from these storages is for irrigation. The area irrigated has

increased from 105,000 acres in 1906 to 1,262,661 acres in 1965-66. Irrigation deliveries in 1965-66 totalled 1,970,607 acre feet. The value of irrigation production in 1964-65 was estimated at \$157,250,000. Of the total irrigation production about one-quarter was from lands irrigated by 'private diverters', i.e. irrigators who are authorised to take water from streams, lakes, etc., but who do not come within the boundaries of an irrigation district.

### Storages

Capacities of principal storages (in acre feet) at 30 June 1966 were as follows:

*Goulburn System*—Eildon, 2,750,000; Waranga, 333,400; total, 3,104,100;

*Murray System*—half share of Murray storages, 1,351,570; Lake Buffalo, 19,500; total, 1,411,930;

*Loddon System*—Cairn Curran, 120,600; Tullaroop, 60,000; total, 272,950;

*Campaspe River*—Coliban storages, 62,730; Eppalock, 252,860; total, 316,690;

*Wimmera-Mallee Systems*—Rocklands, 272,000; total, 627,890;

*Gippsland*—Glenmaggie, 154,300; total, 154,340;

*Werribee-Bacchus Marsh*—total, 34,900;

*Mornington Peninsula*—total, 17,640.

### Nature of irrigated culture

The following table shows the areas irrigated in the various irrigation systems in 1965-66, and corresponding particulars for the State as a whole during the seasons 1961-62 to 1965-66.

#### AREA OF LAND IRRIGATED: VICTORIA, 1961-62 TO 1965-66

(a) Includes First Mildura Irrigation Trust. (b) Excludes private diverters in the Torrumbarry System, but includes all other private diverters along the Murray River.

### Irrigation systems

*Goulburn-Campaspe-Loddon.* The principal storage for Goulburn waters is Lake Eildon, which was completed in 1956, submerging the original 306,000 acre feet Eildon storage completed in 1927. For the distribution of additional supplies available from Eildon and from other new storages on the Loddon and Campaspe rivers it has been necessary to undertake major enlargements in the distribution system by a long term programme of channel works which is still in progress. Deliveries have increased from 395,000 acre feet in 1954-55 to 798,000 in 1965-66. Goulburn river water is diverted to the irrigation areas by gravitation from the pool formed by

the Goulburn Weir, near Nagambie, completed in 1890 as a State work. The East Goulburn main channel of 1,000 cusecs capacity supplies the areas around Shepparton. Two 1,500 cusec channels to the west convey water to the off-river Waranga Reservoir and supply part of the Rodney area through offtakes on the way. From Waranga Reservoir there are two main outlets, one supplying the western part of the Rodney area and the other, of 1,200 cusecs capacity, supplying the Waranga Western Main Channel, which runs more than 100 miles west across the Campaspe and Loddon valleys to Boort.

Flows in the Waranga Western Main Channel are augmented by the injection of Campaspe water through a pumping station of 200 cusecs capacity near Rochester. Supply to the Tragowel and Boort areas is augmented by gravitational diversion of Loddon water.

The gross area of holdings in the Goulburn-Campaspe-Loddon systems is 1,352,217 acres. The main products are dairy produce, fruit, wool, and fat lambs. Annual production of deciduous canning fruits in the eastern part of the system is about two-thirds of Australia's total.

*Murray River system.* Water is diverted from the Murray by gravity at the Yarrawonga Weir for the Murray Valley Irrigation Area and at the Torrumbarry Weir for the Torrumbarry irrigation system which extends to Swan Hill. Holdings in the Murray Valley area total 301,807 acres, devoted mainly to dairying, fat lambs and canning fruit. Holdings in the Torrumbarry system total 365,126 acres, devoted mainly to dairying and the production of fat lambs, with a concentration of vineyards, orchards and market gardens around Swan Hill.

Downstream from Swan Hill there are 5 districts supplied by pumping: the district of the First Mildura Irrigation Trust and the 4 Commission districts of Nyah, Robinvale, Red Cliffs, and Merbein. These districts together serve 80,596 acres, producing mainly dried vine fruits, with some citrus fruits and table and wine grapes.

*Southern systems.* The Macalister district, covering 130,595 acres around Maffra and Sale, is supplied from the Macalister River, regulated by Lake Glenmaggie, and from the unregulated flow of the Thomson River. Dairy farming is the principal activity. The Bacchus Marsh and Werribee Districts, supplied from storages in the Werribee River only 20 miles west of Melbourne, cover 16,344 acres intensively developed for dairying and vegetables.

#### **Wimmera-Mallee domestic and stock supply system**

Storages in the Grampians in south-west Victoria ensure farm water supplies over an area of 11,000 square miles extending northward through riverless pastoral and cereal lands to the Murray. Farm dams throughout this region, which covers one-eighth of the total area of the State, are filled once each year, in the winter-spring season, through the medium of 6,500 miles of Commission channels and 3,000 miles of private channels. Without this supply, occupation of the region would be extremely hazardous. Headworks storage capacity has now been increased from 563,800 acre feet to 627,890 acre feet by construction of Lake Bellfield. Fifty towns, with a population of 46,000, receive their supply from the same system. Near Horsham and Murtoa, close to headworks in the south, a supply is maintained for the irrigation of an area of 7,560 acres, mainly for dairying.

#### **Drainage, flood protection and river improvement**

The largest work in this category undertaken by the State Rivers and Water Supply Commission is the Koo-wee-rup-Cardinia flood protection district embracing 89,245 acres of a continuous depression along the seaboard of Westernport. Once useless, indeed a hindrance to communication, this area now yields primary products worth several million dollars each year.

By the *River Improvement Act* 1948, the formation of local river improvement and drainage trusts under the supervision of the Commission has been greatly facilitated and, since 1950, 25 such trusts have been formed. The importance of river improvement work is expected to continue to grow.

In 1963 the Dandenong Valley Authority was created, by special legislation, with jurisdiction over the whole catchment of the Dandenong Creek (300 square miles) for purposes of arterial drainage, river improvement and flood protection. In June 1966 the Authority took over the Commission's Carrum Drainage District.

#### **Finance**

The net capital liability of the Commission at 30 June 1966 for works under its direct control was \$276 million. Of this amount, \$181 million was expended for irrigation and \$20 million for rural, domestic and stock supplies, the costs being borne entirely by the State. The total liability for urban supplies was \$39 million, of which \$24 million was borne by the districts concerned. The remaining \$36 million was for expenditure on flood protection and drainage districts (\$4 million), items such as loan flotation expenses, miscellaneous surveys and investigations, and buildings, plant and stores.

### Underground resources

*Underground water.* The investigation, exploration and survey of underground water resources in Victoria is carried out jointly by the State Rivers and Water Supply Commission and the Department of Mines. The Commission is concerned mainly with investigation of shallow waters in irrigation districts, while the Department covers all other work, including exploratory drilling to 5,500 feet. Underground water is the only available source of supply other than rain in some areas of the State. It is of particular importance in the western portions of the Wimmera-Mallee districts where annual rainfall ranges between 10 and 20 inches and there are no surface streams. Elsewhere underground water is used to supplement surface supplies and in places it may be the only developed source for town, industry, rural, domestic, stock, or irrigation use.

The Wimmera and Mallee districts are situated over part of the Murray Basin where, to the west of the Wimmera River, Miocene marine limestones form an aquifer with water suitable for town supply and irrigation. It is used for this purpose at Kaniva, Murrayville and Nhill, where yields between 10,000 and 60,000 gallons per hour may be obtained. North of Murrayville and Underbool the water in the limestones is more saline and in the extreme north it is too saline even for stock use. East of the Wimmera River to Lake Tyrrell and north of Swan Hill the marine rocks consist of marls and silts with calcareous beds capable of yielding saline water at less than 1,000 gallons per hour. These aquifers are not developed. Lower Tertiary swamp, deltaic and estuarine carbonaceous and ligneous sediments underlie and extend eastward of the marine rocks. Sands in these sediments contain water of greater or lesser salinity than that of the marine deposits. Yields of up to 10,000 gallons per hour have been obtained from the deltaic aquifers between Swan Hill and Robinvale. In the Natya-Kenley area the water is suitable for most stock purposes and for limited irrigation under favourable conditions. Overlying the marine and estuarine sediments there are aquifers consisting of Pliocene to Pleistocene terrestrial, fluvial and lacustrine sands and sandstones. Yields from these rocks are limited to windmill supplies. The quality is variable and in the north-west highly saline. East of the Avoca River the deposits of the Murray Basin are entirely non-marine and consist of terrestrial, fluvial and lacustrine gravels, sands, silts, and clays to a maximum depth of about 600 feet. Water from the sands and gravels is of variable quality. In places it is too saline for stock use, but the quality improves towards the east and it is used for town supply at Katunga and Wangaratta, and at Barnawartha, Bright and Chiltern where the deposits partly fill valleys in the bedrock of the highlands.

In the Otway Basin in the south-west of Victoria the Upper Cretaceous-Lower Tertiary sands have been developed for underground water supplies to Portland, Heywood, Port Fairy, Peterborough, Port Campbell, and Timboon. In the central (Warrnambool and Koroit) and northern parts of the basin the waters are suitable only for stock. In the areas of better quality water the depth of the aquifers (2,000-4,500 feet) renders their development uneconomic except for town supply and industry. Oligocene to Miocene marine limestones occur in the south-central and western portions of the basin. The salinity of the water in the limestones is often less than that of the water in the sands beneath, but the limestone waters are generally hard. They are used in part to supply Portland and also for irrigation. Small underground water supplies are obtained from the Pliocene-Pleistocene deposits of ferruginous sands, marine sandy limestones and dune limestones in the west and from the dune limestones along the coast between Warrnambool and Portland.

In and around the structural depressions of the Port Phillip and Western Port Bay districts there are several small areas where underground water of good quality occurs. Among these are the Lower Tertiary sand aquifers at Anglesea which are being developed to yield approximately 200,000 gallons per hour for industrial purposes; the Middle Miocene sands, shelly silts and limestones which have been developed for market garden watering south-east of Melbourne; and the Pleistocene sands and shelly silts on the Nepean Peninsula where the water is used for market gardens and pasture irrigation.

*Irrigation.* Brackish waters in the Eocene to Oligocene sands under the Werribee Plains have some potential for industrial use. The Westernport area has yielded large supplies of water from Tertiary marine and non-marine sands, and from fractured fresh basalt in some areas. Extensive use is made of water from the sands for irrigation of pastures and cash crops in the Koo-wee-rup Swamp area. Yields of up to 30,000 gallons per hour are common. In the Lang Lang area the water is used for town and industrial supply, but not as yet for irrigation. Stock supplies with one or two minor exceptions are available at shallow depth over the whole of the area.

The Gippsland Basin contains two main groups of water-bearing rocks, the Lower Tertiary coal measures and marine sands, and the Upper Tertiary sands and gravels. Water from the Lower Tertiary rocks is frequently high in bicarbonate and therefore soft. It is used for irrigation at Bairnsdale and Yarram, and some abnormally hot water is used for industrial purposes at Maryvale. The Upper Tertiary rocks yield large quantities of very good quality water, mainly in the east-central part of the basin, where it is used extensively for irrigation. Stock supplies are generally available at shallow depth in rocks of various types and ages.

The pre-Upper Cretaceous sedimentary and igneous rocks of the highland areas generally yield small supplies of water suitable for stock. Exceptions to this are the Devonian sandstones

of the Grampians where large supplies of good quality water may be obtained, and the better quality waters suitable for domestic use from the higher rainfall area of the eastern highlands of the State.

The Lower Tertiary volcanic rocks, mainly basalts, yield large supplies, up to 15,000 gallons per hour where the basalt is well jointed and little weathered, but only small quantities where the rocks are weathered. Where yields are large as in the west and south-west of Gippsland and on French Island the water quality generally is suitable for irrigation, but on the Bellarine and Mornington Peninsulas, Phillip Island and at Cranbourne the small yields of water are suitable for limited stock use only. Pliocene to Pleistocene volcanic rocks, basalts with tuffs and agglomerate occur extensively over the Werribee Plains and Western District and in valleys in the western half of the Central Highlands. Yields from these rocks are variable, the maximum recorded being 16,000 gallons per hour. From the weathered basalt yields are usually less than 1,000 gallons per hour. The quality is generally suitable only for stock but may be suitable for irrigation. Underground water derived from the later basalts of the stony rises west of Colac usually has high nitrate content.

#### Future programme

In July 1963 the Government announced plans for a long-term storage programme to cost a total of \$75 million between 1963-64 and 1973-74. Three storages, namely Chowilla Reservoir (a River Murray Commission Storage), Lake Buffalo (second stage) and Lake Mokoan, appear in the list of dams and reservoirs projected in the table on page 999.

Other works are:

- (a) An extensive channel enlargement and remodelling project in the Goulburn system (*see* pages 1011-2);
- (b) Tarago Reservoir on the Tarago River to supplement supply to the Mornington Peninsula area;
- (c) Nillahcootie Reservoir on the Broken River below Mansfield, to be used for irrigation;
- (d) Lake Merrimu on Coimadai Creek, to be filled mainly from the Lerderberg River and Goodmans Creek, and to be used to supplement water supplies at Werribee and Bacchus Marsh; and
- (e) Corop Lakes, two natural lakes near Rochester, to be used as an adjunct to Waranga Basin for off-river storages for irrigation.

### Queensland

Particulars of the rainfall pattern of Queensland are given in Year Book No. 37, page 1122. (*See also* the chapter Physical Geography and Meteorology of this issue.)

#### Administration

In Queensland the right to the use and flow of non-tidal surface water contained in, or flowing through or past, the land of two or more occupiers, and all artesian and sub-artesian water vests in the Crown. Subject to certain reservations for local authority and other purposes, such water is controlled by a Commissioner of Irrigation and Water Supply. Private diversions from watercourses, artesian wells and, in certain declared areas, sub-artesian wells, are subject to licence by the Commissioner. Dams and weirs are constructed by the Commissioner to safeguard supplies in streams from which private pumping for irrigation takes place, and also to provide water for irrigation areas established by the Commissioner. For a description of the development of the present administration *see* Year Book No. 42 and earlier issues.

#### Irrigation—extent, systems and methods

In Queensland sugar cane represents in value nearly half the total agricultural production of the State. In 1965-66 almost 23 per cent of the sugar cane acreage was irrigated, representing 42 per cent of the total area irrigated in the State. Tobacco is another major crop, and the area irrigated during 1965-66 represented 97 per cent of the total plantings.

Most irrigation in Queensland is undertaken by farmers operating under licence to obtain water by pumping from streams or from natural underground storages. Over half the total area irrigated in Queensland is supplied from underground water. The main areas where these supplies have been developed extensively are the Burdekin Delta (Ayr-Home Hill area), the Pioneer Valley, Callide Valley, Lower Burnett (Bundaberg area), Lockyer Valley, and Redland Bay.

Furrow irrigation is used for cotton, sugar cane, some tobacco, and miscellaneous row crops. Spray irrigation is used widely on fruit, vegetables, fodder crops, sugar cane, and the major part of the tobacco crop. Irrigation is required round-the-year for most of Queensland, as the timing and duration of the summer 'wet' season are too variable to enable a definite non-irrigation season to be fixed, as can be done in southern States.

## AREA OF LAND IRRIGATED: QUEENSLAND, 1961-62 TO 1965-66

Season and division	No. of irrigators	Area irrigated (acres)							
		Vegetables	Fruit and vineyards	Sugar cane	Tobacco	Cotton	Other crops	Pastures	Total
1961-62 . . . . .	8,433	32,139	6,537	74,541	13,671	2,040	59,947	20,544	209,419

1964-65 . . . . .	9,310	35,020	8,092	120,556	13,499	4,148	71,634	28,224	281,173
1965-66—									
Southern Queensland . . . . .	6,928	31,992	7,556	45,633	1,967	3,904	70,213	27,969	189,234
Central Queensland . . . . .	685	1,082	523	285	39	2,236	14,886	3,545	22,596
Northern Queensland . . . . .	2,284	5,652	970	95,076	10,110	193	4,971	3,732	120,704
Total, 1965-66 . . . . .	9,897	38,726	9,049	140,994	12,116	6,333	90,070	35,246	332,534

**Areas under private irrigation**

In five important areas irrigation has been developed by private pumping. In the Lockyer Valley, 30 miles west of Brisbane, more than a third of an estimated total irrigable area of 60,000 acres is under irrigation. The valley comprises an extensive flood plain where heavy black alluvial soil thickly overlies gravels and sands carrying water suitable for irrigation, which is necessary for continuous agricultural production. A number of small weirs with a total storage of 1,340 acre feet have been constructed on Lockyer Creek by the Irrigation and Water Supply Commission; these also tend to augment and conserve underground supplies. The Lockyer Valley produces a substantial proportion of Queensland's onions, potatoes, pumpkins, lucerne, hay, green fodder, maize, and dairy products.

The Callide Valley in central Queensland is an important source of grain, dairy products, fodder, and cotton and is largely dependant on irrigation from underground water resources. Some 10,000 acres are now irrigated from underground supplies. The broad expanses of alluvium in the Pioneer Valley near Mackay have been extensively developed for cane production. The area under irrigation from groundwater and surface supplies is some 12,000 acres. The lands in the vicinity of Bundaberg are cultivated for sugar cane production and over 40,000 acres are irrigated from surface and underground supplies.

The other important area is the fertile delta region of the Burdekin River, where the irrigated area is over 67,000 acres. The delta has ground water supplies at shallow depth, and these have been tapped to obtain supplies in the dry periods of the year. Sugar is the main crop irrigated, together with citrus fruits, pineapples, vegetables, and tobacco. In 1940 the Burdekin River Trust was formed to safeguard the sugar areas of the delta from erosion and floods, and an irrigation research station studies the development of pastures and crops. A scheme to replenish the subterranean water supplies in the North Burdekin Delta by pumping from the Burdekin River is in operation under the control of the North Burdekin Water Board. In the South Burdekin Delta a similar Board has been formed, and the required works are under construction.

**Government irrigation areas and projects**

The Irrigation and Water Supply Commission has constructed and operates five dams and forty-two weirs with a storage capacity of 568,126 acre feet. Water from these storages supplies the following four irrigation areas operated by the Commission and supplements numerous streams from which pumping for private irrigation takes place.

**Mareeba-Dimbulah Irrigation Area.** In 1952 an irrigation undertaking was established to assist tobacco production in the valleys of the Walsh and Barron Rivers. Tinaroo Falls Dam on the Barron River (330,000 acre feet) has been completed, and construction is proceeding on irrigation works to serve 78,000 acres (comprising 910 tobacco farms and 180 mixed farms), of which 49,000 acres will be irrigated. One hundred and eighty-six miles of channels have been constructed, and irrigation water from the dam is available to 579 farms. Tinaroo Falls Dam is also providing a regulated flow of water in Barron River at Kuranda for the generation of hydro-electric power at Barron Falls.

**Burdekin River Irrigation Area.** The Clare, Millaroo and Dalbeg sections of the Burdekin River Irrigation, Hydro-electric and Flood Mitigation Project have been completed. Located from twenty-five to sixty-five miles from the mouth of the Burdekin, these areas comprise 18,862 acres and obtain water from central pumping stations drawing from the river. Two storages of 7,670 acre feet and 2,550 acre feet capacity have been constructed about seventy-nine miles and seventy-two miles respectively from the mouth of the river. Sugar cane production predominates in the area.

**Dawson Valley Irrigation Area.** A scheme for the development of the Dawson Valley providing for the irrigation of 70,000 acres was inaugurated in 1923, but work was discontinued after three weirs had been built in this area. Their total storage is 10,280 acre feet, covering about sixty-one farms (4,894 acres) in production. Dairy products and cotton account for the major part of the production from irrigated areas. Further development of the scheme is dependent on the provision of additional storage works.

**St. George Irrigation Area.** This area comprises 19 farms, of which a maximum of 3,275 acres can be irrigated from a weir on the Balonne River (8,200 acre feet). Fat lambs, wool, and fodder and cotton crops are the main products.

Several additional projects have recently been completed and work is in progress on others. Moogerah Dam (Warrill Valley Project) on Reynolds Creek (75,000 acre feet) is capable of serving some 11,000 acres of the Warrill Valley, and will provide water for the thermal power station now under construction at Swanbank, near Ipswich. Borumba Dam (Mary Valley Project) on Yabba Creek (34,500 acre feet) makes water available to maintain the town water supply for Gympie and allows extension of the area irrigated from the Mary River to about 18,000 acres. Callide Dam (37,800 acre feet) on Callide Creek, 9 miles upstream from Biloela, will provide cooling water for the Calcap power station and compensation water for maintenance of underground supplies along Callide Creek; provision has been made to increase the storage capacity to 87,000 acre feet. Leslie Dam (Upper Condamine Project), on Sandy Creek, has an initial capacity of 38,200 acre feet, with provision for later increase to 87,000 acre feet. Water from the dam is available for irrigation of sections of the Darling Downs downstream the Condamine River as far as Cecil Plains and for a supply to the city of Warwick. A 61,000 acre feet dam under construction at Coolmunda (Macintyre Brook Project) will allow irrigation of up to 8,000 acres. Wuruma Dam (Upper Burnett Project), under construction on the Nogoa River, will have a storage capacity of 157,000 acre feet for irrigation of 11,000 acres along 100 miles of the Burnett River. The Eungella Dam (Bowen-Broken Project), under construction on the Broken River, will have a storage capacity of 104,000 acre feet. It will provide cooling water for the Collinsville power station and irrigation water along the Bowen and Lower Burdekin rivers. The development of rivers constituting portion of the Queensland-New South Wales border, under the authority of the Dumaresq-Barwon Border Rivers Commission, is described on page 1004.

#### **Rural Water Supply Areas**

Although provisions existed in the Water Acts for many years for the constitution of rural water supply Areas and Boards, little advantage was taken of these powers until 1964 when an amendment of the Acts extended the purposes for which these Areas and Boards may be constituted and the methods of rating and financing of works, and provided for resumption or acquisition of lands by such Boards. This form of water supply is being sought increasingly by groups of landholders in various parts of Queensland to provide a reasonably economical measure of permanent supply for stockwatering, dairy and domestic purposes in areas prone to drought, and thus achieve a permanent form of drought relief. Usually the capital cost of works is met by a 50 per cent subsidy by the Government and the balance by a Board borrowing by Government guaranteed loan on the security of debentures.

At present five Rural Water Supply Areas, Grevillea, Back Creek, Brigooda, Tarampa, and Coreen, are operating, supplying 135 holdings covering 97,900 acres, reticulated by 74 miles of pipelines. Two other schemes, Proston and Roadvale, are in course of construction; these will supply a further 241 consumers by 104 miles of pipelines serving 57,550 acres.

Water conservation, irrigation and drainage schemes may also be carried out under these Acts, and two group irrigation proposals and ten group drainage proposals are currently under investigation. No subsidy has yet been considered for these proposals.

#### **Underground water—Great Artesian Basin and other sources**

The use of underground water supplies has been a very important factor in agricultural and pastoral development in Queensland. The Great Artesian Basin is the major source of stock water supplies over more than half the State. Elsewhere, supplies obtained at shallower depths, in porous, fractured or fissured rocks, are extensively used for domestic and stock purposes. Underground water also supports more than half the irrigated area in the State, supplies being obtained chiefly from alluvial formations along river valleys, and from river deltas, the most conspicuous example of which is the Burdekin River (see page 1015).

#### **Great Artesian Basin**

Western Queensland, beyond the 20-inch rainfall belt, is predominantly pastoral and is mainly dependent for water supplies on artesian and sub-artesian bores and, where surface storage is not readily available, on excavated tanks. The Great Artesian Basin in Queensland corresponds approximately with the area lying west and south of the Great Dividing Range, excluding the Cloncurry mineral field and the Barkly Tableland. It comprises 421,000 square miles or nearly two-thirds of the total State area of 667,000 square miles.

*Artesian water.* Although the number of bores has gradually increased over the years, the total flow of all bores has declined from the peak flow of 351 million gallons a day. A report on the nature and structure of the Great Artesian Basin, presented in 1954, indicated that the output would continue its decline during the next sixty years, at which stage the flow from the remaining flowing bores would be of the order of 110 million gallons a day. The discharge from windmills, springs and other leakages, together with the underflow past the Queensland borders, would then be about 20 million gallons a day. It was further expected that the total discharge, of the order of 130 million gallons a day, would be in equilibrium with the recharge of the basin. It was anticipated that numbers of bores on higher ground would cease to flow during the next sixty years and the area served by the flowing bores would contract by perhaps twenty per cent.

Up to 30 June 1966, 2,966 artesian bores had been drilled, of which 1,947 were still flowing. The total depth drilled amounted to 4,141,424 feet and the estimated daily flow was 202 million gallons. Although very few bores exceed 2,000 feet in depth (the average depth is 1,397 feet) and a new bore greater than 4,000 feet deep is exceptional, the deepest bore recorded was sunk to 7,009 feet. Some bores which had been classified as 'ceased' have been inspected and found to be still flowing, while other ceased bores have responded to deepening and have recommenced flowing. Both the pressure and flow of artesian bores are steadily diminishing, the rate of decrease varying widely throughout the basin. Present average rates of diminution are: pressure, 1-2 feet of head; total flow, 2-3 per cent per annum. The greater part of the artesian discharge is distributed by some 15,500 miles of open earth channels, from which a large proportion of water is lost by soakage and evaporation, less than 10 per cent being actually used by stock.

Although artesian beds underlie a large area of the State, only 79,000 square miles are primarily watered by bore drains. The remaining area is watered by artesian bores (with small or no flow and limited drains), sub-artesian bores, excavated tanks, dams, and natural waterholes. At the present time an increasing use is being made of pipelines for the reticulation of artesian water. In many districts artesian bores do not provide economical watering facilities because of depth, limited area to be watered, and difficult terrain for distribution of water by drains. The quality of artesian water from the greater part of the basin is not suited for prolonged use for irrigation on most soils, nor are the supplies sufficient for both large scale irrigation and stock-watering. Practically the whole of the final steady-rate discharge from flowing bores will be needed for the watering of stock.

Shallower supplies, which come from beds unconnected with artesian beds, are of variable quality and volume. These supplies are available at depths of less than 1,000 feet over a large area of the basin. Some 11,911 sub-artesian bores within the Great Artesian Basin have been registered in Queensland. An important practical consideration is that the main artesian beds are continuous and the sub-artesian beds are not continuous.

*Bore Water Areas.* The constitution of Bore Water Areas was inaugurated in 1913 to aid pastoral settlement in districts where large flows were available at a cost beyond individual capacity, and to conserve artesian supplies by fully utilising flows from the existing bores on the land resumed for closer settlement. Bores and drains are constructed from loan funds repayable over a period of years. The areas are administered by local boards or by the Commissioner of Irrigation and Water Supply, acting as a board. Rates are levied to meet interest, redemption, maintenance and administration costs. Statistics for the year 1965-66 are: areas constituted, 74; administered by the Commissioner, 55; administered by local boards, 6; number abolished, 13; area benefited, 4,810,734 acres; average rate per acre, 1.16 cents; number of flowing bores, 60; total flow, 25,211,000 gallons a day; drains served, 2,567 miles.

#### Other underground sources

Outside the Great Artesian Basin, ground water supplies can conveniently be divided into two broad groupings, (a) those obtained in porous, weathered, fissured, or fractured rocks, and (b) those obtained in unconsolidated sediments of Cainozoic age. In the first group, supplies, often within short distances, are widely variable both in quantity and quality, but are normally sufficient only for stock-watering purposes. Because storage is generally small, seasonal fluctuation of water level tends to be high, and this can have a significant effect on the supply available during dry seasons. Small to moderate irrigation supplies (up to a few thousand gallons an hour) are sometimes obtained and, in exceptional cases, particularly with basalts and limestones, supplies may be as much as 10,000 gallons an hour. The second group comprises the main irrigation supplies and, although a wide range may be found in the supply normally available from individual bores in any area, pumping rates as high as 10,000 gallons an hour are common. The availability of underground water has been investigated in a considerable number of alluvial valleys in south eastern Queensland and in a number of coastal areas, particularly in the vicinity of the estuaries of the Burnett, Pioneer and Burdekin Rivers, where underground water is the main source for irrigation of sugar cane.

Reference has already been made to the importance of underground water for irrigation in the Lockyer and Callide Valleys (see page 1015). Other areas in which irrigation supplies from alluvial formations have been extensively utilised include the Monto area, parts of

Barker and Barambah Creeks, Warrill Creek, Cressbrook Creek, the Upper Logan River, and parts of the Condamine River and its tributaries. Government authorities do not normally undertake private drilling for landholders, but assistance is given in the location and development of ground water supplies through the provisions of *'The Farm Water Supplies Assistance Acts, 1958 to 1965'* (see below). This assistance has considerably accelerated the use of underground water for irrigation, and there is no doubt that there are many areas with a large potential for future expansion.

#### Stock watering

A predominant interest in the field of water conservation has been the provision of stock and domestic water supplies in Queensland's great pastoral areas, which contain more than a third of the Commonwealth's cattle and about a seventh of the sheep. In addition to the stabilisation of water supplies in the pastoral areas, the provision of water along stock routes for travelling stock has received much attention in recent years.

*Main stock routes.* The Queensland Irrigation and Water Supply Commission acts as consultant and constructing authority to the Stock Routes Co-ordinating Board for watering facilities on stock routes. On completion, facilities are vested in local authorities for control and maintenance. From 1935, when the scheme was inaugurated, to 30 June 1966, 649 facilities had been completed, and at 30 June 1966, 35 facilities were under construction or investigation. A State-wide investigation is being carried out by the two authorities mentioned above to ascertain the general movement of stock, determine primary and secondary routes, register existing water facilities, and formulate a co-ordinated plan in regard to the provision of new watering facilities.

*Channel Country stock routes.* Under the *States Grants (Encouragement of Meat Production) Act 1949-1954* the Commonwealth Government agreed to meet half the cost of providing additional watering facilities in stock routes leading into, along, and out of, the Channel country and on the route from Camooweal to Mount Isa. These routes connect with the main far-western route included in the State scheme inaugurated in 1935. This scheme was completed during 1962-63. The total number of watering facilities constructed since the commencement of the scheme was 37, at a total cost of \$599,184.

#### Technical and financial assistance to farmers

*'The Farm Water Supply Assistance Acts, 1958 to 1965'* are designed to improve the standard of water supply installations on individual holdings, encourage greater development of individual irrigation schemes, provide greater stability of production, and avoid losses in time of drought as well as generally increase production. To achieve this purpose, the Acts authorise the provision of technical and financial assistance to landowners for the investigation, design and installation of approved works of farm water supply. All projects for which finance is provided under the Acts are carried out under Commission guidance, and for the payment of a small charge the Commission will advise on the construction of works designed by its staff, but for which the landowners do not require financial assistance under the Acts.

During 1965-66, 933 requests (615 for technical assistance only and 318 for technical and financial assistance) were dealt with in addition to advice on a further 769 requests on ground-water supplies. An amount of \$1,110,953 was approved for advances under the Acts in 1965-66, and the amount advanced was \$919,631.

### South Australia

Brief particulars of the climatic conditions in South Australia are given on page 1129 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

#### Administration

Water supplies, other than irrigation works, are under the control of the Engineering and Water Supply Department, which administers the Waterworks Act, 1932-1966 and Water Conservation Act, 1936, both of which empower the Minister of Works to impound or divert the water from any lake, watercourse or underground source for the purpose of establishing and maintaining public water supply schemes. The Waterworks Act, 1932-1966 governs the principal reticulated water supplies in proclaimed water districts throughout the State. A feature of these supplies is the extensive network of water mains supplying country townships and farmlands where local water resources are practically non-existent.

Under the Water Conservation Act, 1936, small dams, wells, bores, rainsheds, storages and, in some instances, minor reticulation works are provided in remote areas to assist local settlers in development and to supply travellers and travelling stock.

#### Irrigation

Australian irrigation originated in the upper Murray of South Australia and the Mildura area of Victoria. South Australian irrigation commenced with an agreement between the Government

and the Chaffey brothers in 1887 whereby an area of land at Renmark was made available for the establishment of certain irrigation works. In South Australia, irrigation is almost exclusively confined to the Murray Valley. Except for that held in various lock pools, no water from the Murray is stored in South Australia. Water is either pumped onto the land or gravitated from the river.

The two major authorities administering irrigation areas are the Department of Lands and the Renmark Irrigation Trust. The Trust is controlled by a local board of management consisting of seven members. This area differs from other South Australian irrigation areas in that the land is freehold instead of leasehold and is self-contained and self-controlled. Every settler is entitled to vote for the election of Trust members. The Trust maintains 100 miles of reticulation channels.

The following table shows particulars of the areas of crops and pastures irrigated in the various areas during 1965-66 and in South Australia as a whole during the seasons 1961-62 to 1965-66.

AREA OF LAND IRRIGATED: SOUTH AUSTRALIA, 1961-62 TO 1965-66

### Water supply schemes

*Adelaide Metropolitan Water Supply.* Adelaide derives its water from six reservoirs in the nearby Mount Lofty Ranges and by means of pumping stations and a pipeline from the Murray River at Mannum. The reservoirs have a storage capacity of 87,400 acre feet and the pipeline has a capacity of 88,000 acre feet a year.

To the north, the city of Elizabeth receives water from South Para Reservoir in the Barossa system and from the metropolitan storages. The consumption for the whole area for the year 1965-66 was 102,000 acre feet, equivalent to a consumption of 105 imperial gallons per head per day. The capital cost to 30 June 1966 was \$103,532,180.

*Country reticulated supplies.* Areas extending to a distance of 90 miles north of Adelaide are supplied from the Warren, Barossa and South Para Reservoirs (50,350 acre feet) in the Barossa Ranges. Supplies to these areas are supplemented by River Murray water delivered into Warren Reservoir through a branch from the Mannum-Adelaide pipeline. A pipeline to pump water from the River Murray at Swan Reach directly into the Warren Trunk Main at a point near Stockwell is at present under construction. Agricultural towns and areas further north are supplied from Beetaloo, Bundalser and Baroota Reservoirs, and the Morgan-Whyalla Pipeline. The original 223-mile pipeline from Morgan to Whyalla and the completed sections of a second and larger pipeline currently being constructed are at present able to carry 25,000 acre feet of water a year from the River Murray. The ultimate designed capacity of the two pipelines is 61,000 acre feet per year. A large part of Eyre Peninsula is supplied, through the 240-mile Tod River Main and the 104-mile East Coast Main, with water from the Tod River Reservoir (9,160 acre feet), the sand beds of the Uley-Wanilla Basin, the Lincoln Basin, and Poldia Basin. Along the Murray River all towns are supplied from the river. Water from the river is also reticulated through adjacent farmlands for up to 30 miles. Surface and underground resources have been developed to supply most rural centres not covered by the larger schemes. Water conservation and distribution works in country districts to 30 June 1966 have cost \$118,387,127 (exclusive of river control and irrigation works on the Murray River) and contain 7,983 miles of water mains.

### Underground water

Underground water supplies in South Australia are under the control of the Department of Mines, which administers the Underground Water Preservation Act, 1959-1966. This Act provides for the control of artesian flows and the conservation of fresh water aquifers, and empowers the Minister to restrict the discharge of underground waters and the drilling of new bore holes in defined areas, if necessary, to prevent contamination or undue depletion of the underground water in such areas.

Surveys of groundwater resources are undertaken continually by geologists of the Department of Mines, the results being published in various bulletins and reports. The *Groundwater Handbook* published in 1959 by the Department provides a comprehensive and detailed review of the State's underground water resources.

The deepest portion of the Great Artesian Basin (in the north-east) is not extensively developed because development costs are high in proportion to the carrying capacity of the arid land. Deep boreholes have been drilled by the Department of Mines to provide water along stock routes, and pressure waters have been developed around the basin margin. These waters occur at comparatively shallow depth, as at Marree township, where the artesian bore is 575 feet. In addition to pressure waters, the non-pressure aquifers of the subsidiary basins provide pastoralists with stock water supplies which can be readily and economically developed.

Use of the waters of the Murray Basin is essential to settlement in the Murray-Mallee country and in the south-east of the State, especially for farms and township supplies. Mount Gambier draws its water supply from the Blue Lake, which is fed from the Basin. Water supplies of a number of towns are obtained from bores in the Basin. The deepest bore drilled so far is Geltwood No. 1 Stratigraphic Bore, being 12,301 feet deep. In the Kingston-Millicent area about 100 boreholes tap an artesian aquifer, and development of this aquifer is increasing. Supplies of up to 50,000 gallons per hour for flood irrigation are being obtained.

On Eyre Peninsula the Uley Basin has been in use as a source of groundwater since 1948. The water level had dropped below the critical point and no groundwater was taken from this Basin from 1963 to 1965, but pumping was re-commenced in 1966. The Lincoln Basin is now fully developed, yielding up to 20 million gallons a week, and since 1960 providing the water supply for the town of Port Lincoln. The Poldia Basin near the township of Lock was brought into operation late in 1962. The present pumping plant has a capacity of 7 million gallons per week. The water is reticulated to townships and farming properties on the Upper Eyre Peninsula. Investigations in the Basin are complete and the yield recommended is 20,000 gallons per hour from each large diameter borehole. Investigations are currently proceeding for further development of basins in the County Musgrave which is west of the Poldia Basin. Investigations in South Uley Basin are completed and a yield of 100,000 gallons per hour has been proved from one single bore.

Pastoralists, farmers, market gardeners, and others have been assisted with advice on drilling, and the Department of Mines maintains and operates 22 drilling plants, which to date have developed an underground water supply potential in excess of 150 million gallons a day throughout the State. The whole of the Murray River Basin has been examined critically to ascertain the extent of land which could be used for lucerne, and considerable tracts of previously undeveloped country in the upper south-east Yorke Peninsula have been found to have usable water and have been opened up.

#### **Farm water schemes**

The Department of Mines gives assistance to individual farmers in the provision of supplies from underground sources, and the Department of Agriculture provides an advisory service on water conservation and irrigation designs, on farms, and on the use and suitability of underground water for irrigation and stock purposes. In addition, a great part of the farming areas is supplied with water under pressure from the extensive distribution systems connected to various reservoirs and the Murray River.

#### **South-eastern drainage**

In the south-east of South Australia it has been necessary to construct drainage schemes to dispose of surplus water from areas where a series of valleys or flats is separated by low ranges, parallel to the coastline, which prevent natural drainage. The Millicent Drainage System, completed in 1885, reclaimed 100,000 acres. The South-Eastern Drainage Area System, which is controlled by the South-Eastern Drainage Board, comprises drains constructed by the Government at national cost, plus those undertaken by the Government in co-operation with the landholders. The area is bounded on the east by the State boundary, and on the west by the sea coast. It extends from about 55 miles north of Kingston, southerly to near Millicent and Kalangadoo. Up to 1948 about 430 miles of drains had been provided at a cost of \$1,441,752. These were of a developmental nature intended more to promote the rapid removal of floodwaters than to provide a complete system of drainage. Since 1948 the complete drainage of the Biscuit, Reedy Creek and Avenue Flats in the Western Division has been in progress. The southern section of 260,000 acres, which involved the excavation of 8,100,000 cubic yards and the provision of 343 miles of new or enlarged drains, has been completed. Work is in progress on the northern section of 140,000 acres, where 85 miles of drains, involving the excavation of 2,989,880 cubic yards of material, have been completed. In addition, work is in hand for the drainage of 727,000 acres of land in the Eastern Division of the south-east, situated east of Bakers Range, and extending from near Kalangadoo to north of Naracoorte. Part of the first stage of this work provided for the construction of a main diversion drain (consisting of the enlargement of an existing drain for a distance of 24 miles and the excavation of 21 miles of new drain) from Beachport to Struan. The work to date has required the excavation of 6,074,830 cubic yards of material; the total length of the diversion drain is 45 miles. Work is proceeding on the internal drainage of the area, and 33,240 cubic yards of excavation have been carried out over a length of 4 miles of partially completed drains. The capital cost of drainage in the South-Eastern Drainage Area System to 30 June 1966 was \$16,489,400, and the length of drains constructed was 824 miles. An extensive system of private drains (many of which are connected to the drains constructed under Government authority) also exists in the south-east of the State.

#### **Murray River Irrigation District**

Excess waters from the irrigation of orchards in the Murray River Irrigation Districts are building up a perched water table, which is rising to the levels of the tree root system. Investigations have proved that adequate drainage can be obtained in the underlying limestone aquifer. The building up of groundwater pressures due to drainage in these aquifers is being studied, as the outflow of saline waters into the Murray River surface waters must be prevented.

### **Western Australia**

Brief particulars of the climatic conditions in Western Australia are given on page 1133 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

#### **Administration**

The Minister for Water Supply, Sewerage and Drainage administers the departmental irrigation schemes under the *Rights in Water and Irrigation Act, 1914-1964*. He is advised by an Irrigation Commission representing the local irrigationists and governmental, technical and financial branches. The Minister for Works administers, under the *Country Areas Water Supply Act, 1947-1964*, the water supplies to 216 towns and 4,200,000 acres of reticulated farmland, and also controls minor non-revenue producing supplies to stock routes and a few mines and agricultural areas with their associated communities. Five town supplies are administered by local boards under the *Water Boards Act, 1904-1964*, which provides a large degree of autonomy with ultimate Ministerial control.

**Irrigation**

Irrigation schemes have been established by the Government on the coastal plain south of Perth in the Waroona, Harvey and Collie River Irrigation Districts between Waroona and Dardanup, the water being channelled from dams in the adjacent Darling Range.

Logue Brook Dam with a capacity of 19,717 acre feet, Harvey Weir (6,495 acre feet) and Stirling Dam (46,191 acre feet) supply the Harvey Irrigation District, the rated area of which is 13,290 acres. The Harvey District links up with the Waroona Irrigation District, which is served by Waroona Dam (12,105 acre feet), Drakes Brook Dam (1,855 acre feet) and Samson Brook Dam (7,437 acre feet) and comprises a rated area of 3,060 acres. Wellington Dam on the Collie River with a capacity of 150,107 acre feet serves an area of 10,870 rated acres in the Collie River Irrigation District.

During the past thirty years a centre of tropical agriculture has been developed at Carnarvon, near the mouth of the Gascoyne River. Private pumping from sands of the Gascoyne River is the principal source of irrigation water for the 158 plantations. Because of the high risk of drawing in surrounding saline ground waters by over-pumping, the usage of water by the planters is controlled strictly by the Government. The Government is developing up-river sources and delivers water by pipeline to 23 plantations in the district. Bananas for the Perth market and fruit and vegetables for the Perth and Adelaide markets are the principal crops. A tropical research station is maintained at Carnarvon by the Department of Agriculture.

A project has been embarked upon to provide water supplies for irrigation in the area traversed by the Ord River in the Kimberley Division. The project provides for the eventual development of an area of 175,000 acres of land agriculturally and topographically suitable for irrigation, and comprises four stages. The first stage is now complete with 30,000 acres of the district supplied from the Diversion Dam which holds 80,000 acre feet of water. Thirty farms averaging 660 acres each have been developed for cotton growing in addition to the original 2,400-acre pilot farm. The remaining stages envisage the construction of an earth and rock fill structure storing 3.5 million acre feet of water (equivalent to more than 950,000 million gallons), a distribution irrigation network to serve a further area of 140,000 acres, approximately one-third of which is located in the Northern Territory, and the construction of a hydro-electric power station at the site of the Main Dam.

On the Liveringa flood plain, water is diverted from the Fitzroy River through Uralla Creek to a natural storage of about 1,200 acre feet, which, together with a dam on Uralla Creek (4,600 acre feet), provides for irrigation at Camballin sixty-five miles south-east of Derby. Irrigated crops of rice and sorghum are grown in the area.

**AREA OF LAND IRRIGATED: WESTERN AUSTRALIA, 1961-62 TO 1965-66**  
(Acres)

Season	Vegetables	Fruit	Vineyards	Cotton	Other crops (a)	Pastures	Total

**Country water supplies controlled by Department of Public Works and Water Supply**

Since 1947 enlargement and extensions of the Goldfields and Agriculture Water Supply and the development of the Great Southern Towns Water Supply have been carried out, mainly in accordance with a project known as the Modified Comprehensive Scheme. Under this scheme water has been supplied to towns and farms in an area of 4.1 million acres in mixed farming (cereal and sheep) districts of Western Australia. The modified scheme was completed in 1961 at a cost of \$20.6 million, of which the Commonwealth contributed \$10 million under the *Western Australia Grant (Water Supply) Act 1948*. A further request was made by the State Government in 1963 for a grant of \$10.5 million representing half the estimated cost of proposed extensions which would increase by 3.7 million acres the area served by the scheme. The Commonwealth agreed to provide assistance in the form of an interest-bearing loan up to a maximum of the amount requested, advances to be made during a period of eight years commencing 1965-66. Legislative authority for the loan is given by the *Western Australia (South-west Region Water Supplies) Agreement Act 1965*.

Mundaring Reservoir on the Helena River, twenty-six miles from Perth, is the source of water supplied to the Eastern Goldfields. It has a capacity of 62,435 acre feet and is connected to Kalgoorlie by a pipeline with extensions to towns and agricultural areas. At 30 June 1966 the Goldfields and Agricultural Water Supply was serving 96 towns, and water was being reticulated to farms in an area of 4.2 million acres. The total length of pipelines was 3,992 miles and the number of services was 25,094. Consumption during 1965-66, including supplies drawn from local schemes and from the Metropolitan Water Supply, was 2,602 million gallons.

The Great Southern Towns Water Supply pipes water from Wellington Dam to towns on the Great Southern Railway from Brookton to Katanning as well as a number of other towns. At 30 June 1966 the Supply was serving 23 towns, the total length of pipelines was 450 miles, and the number of services was 7,958. Consumption during 1965-66, including supplies drawn from local sources, was 611 million gallons.

Ninety-one local schemes supply water from stream flow, dams, tanks, wells, and bores, mainly to country towns. At 30 June 1966 the total length of water mains was 796 miles and the number of services was 22,389. During 1965-66 consumption was 1,689 million gallons.

#### **Other country water supplies**

As well as the schemes controlled by the Department of Public Works and Water Supply, there are five local Water Boards which also draw supplies from stream flow, dams, tanks, wells, and bores. In addition, some local authorities supply water within their boundaries. The Forests Department and sawmilling companies operate schemes to supply water to their mill towns. Railways of the Commonwealth and State Governments make independent provision for supplies of water for their own purposes, although considerable additional quantities are consumed by the railways from other sources, such as those controlled by the Department of Public Works and Water Supply and the Metropolitan Water Supply, Sewerage and Drainage Board.

#### **Underground water**

Considerable use is made of underground water by individual farmers, pastoralists, market gardeners, etc., and it is estimated that over 50,000 bores are in use in the State. The quality of the water varies from place to place and much of it is too saline for irrigation or even stock. However, artesian aquifers are tapped to supply or augment the town supplies of Perth, Bunbury, Busselton, Eaton, and Denham, and non-pressure water is used in the public supplies of 37 other towns.

Considerable advances in the knowledge of aquifers and quality of water in the main sedimentary basins have been made as a result of extensive geological surveys by oil exploration companies and exploratory drilling by the Mines Department.

The Public Works Department and the Metropolitan Water Board are responsible for development work. The Geological Survey is responsible for all exploratory works, as well as for investigating and assessing the State's groundwater resources, advising local Government authorities, private industry and individuals on groundwater problems, and supervising departmental drilling.

Groundwater exploration projects are in progress or have recently been completed for the towns of Port Hedland, Exmouth, Geraldton, Morawa, Jurien Bay, Yunderup, Mandurah, Albany, Esperance, and additional supplies have been located for the Perth metropolitan area. A long-term systematic exploratory drilling programme in the Perth Basin is continuing.

### **Tasmania**

Brief particulars of the rainfall pattern in Tasmania are given on page 1136 of Year Book No. 37. (See also the chapter Physical Geography and Meteorology of this issue.)

#### **Main purposes of water conservation and utilisation**

Because of the generally more adequate rainfall in Tasmania, scarcity of water is not such a problem as it is in most mainland areas, though not all streams are permanently flowing. The only large scale conservation by reservoirs is for hydro-electric power generation, but there are some moderately sized dams built by mining and industrial interests and by municipal authorities for town water supplies. 'Run of the river' schemes are quite adequate for assured supply in many municipalities.

Until a few years ago irrigated areas were negligible except for long established hop fields, but there is a rapidly expanding use of spray irrigation on orchards, pastures, potatoes, and beans. Until recent years there has been almost complete dependence on natural stream flows, but the need for some regulating storages has become apparent. Increasingly, farmers are constructing storages of their own, and the extension of this practice is foreseen as the logical solution in most areas, as valleys are narrow and steep sided. Single large reservoirs cannot economically serve large areas of suitable land, as nearly every valley is separated from others by pronounced hills, prohibiting the construction of cross-country channels.

Underground water suitable for stock, minor irrigation works and limited domestic use is exploited in the consolidated rocks of south-east, midlands and north-western Tasmania. In the midlands and south-east of the State nearly all groundwater is recovered from Permian and Triassic rocks. In the north-west, water is recovered from a variety of rocks ranging from Precambrian dolomites, quartzites and schists to Tertiary basalt. The Precambrian rocks are the highest yielding consolidated rocks. At the present time more drilling is being undertaken in the basalts, which have been shown to be reliable aquifers yielding good quality water.

Much water is also obtained in the unconsolidated Tertiary sediments of the central north. These sediments, which are dominantly clay, yield fairly saline water. Water is thought to be contained in hair-line shrinkage fractures in weathered clays. At present a drilling programme is continuing to assess the stratigraphy and reserves of the basins. Gravel zones between basalt flows in the north-west yield up to 5,000 gallons per hour. On King and Flinders Islands water of variable quality suitable for stock and limited domestic use is obtained from aeolian sands. The township of Currie on King Island obtains up to 200,000 gallons a day for domestic use from this source.

Underground water investigations and most of the water boring in Tasmania are carried out by the Mines Department. Groundwater projects have been recently completed in the Cygnet district, and work is in progress in the Longford basin and the Cole and Jordan River basins.

#### Administration

In 1962 a new authority, the Metropolitan Water Board, assumed overall control of water supplies to the cities of Hobart and Glenorchy and the municipalities of Kingborough and Clarence, all of which, however, retain primary responsibility for reticulation. The authority is also vested with control of a regional scheme serving other southern municipalities. Water supplies to other areas are primarily the responsibility of local councils, subject to approval of plans and finance by the Rivers and Water Supply Commission.

While the Commission does not own the waters of streams and lakes, it is empowered to take them, or issue licences, subject to pre-existing statute and common law rights. These include water reserved for specific industries, municipal requirements, and ordinary riparian rights. The Commission is also concerned with drainage trusts' operations, river improvement, including repairs after flood damage, and stream gauging.

#### Regional water schemes

Four regional water schemes are in operation. The first draws water from the east bank of the River Derwent at Lawitta to provide domestic and industrial supplies in five southern municipalities, and the second, which increases existing supplies to Hobart and suburbs, pumps water from the west bank of the River Derwent at Lawitta. These two schemes are controlled by the Metropolitan Water Board. In addition, the State Government has constructed two other regional water schemes; the first, to serve the aluminium refinery at Bell Bay on the eastern bank of the River Tamar and to supply bulk water to several municipalities; the second, to supply water along the western bank of the Tamar. The two northern schemes are the responsibility of the Rivers and Water Supply Commission.

Potential sources capable of greater development without storage exist on the Derwent, South Esk, Huon, Lake, Mersey, and Forth Rivers. There is also a great reserve of untapped permanent streams in the western half of the State, which is largely unsettled. The State's largest rivers discharge in the west, but diversion to the eastern half of the watersheds is not regarded as practicable.

#### Industrial water schemes

Three principal industrial water schemes have been installed privately—for a paper mill near Lawitta on the Derwent River, for a paper mill at Burnie using water from the Emu River, and for a factory at Heybridge reticulating water from Chasm Creek. The State Government has constructed some water schemes for use primarily for industrial purposes. These include the scheme serving the aluminium refinery at Bell Bay referred to above, a storage supplementing the summer flows of the Kermadie River for use by a wood-pulping plant at Geeveston, and the recently completed Prosser River Scheme which supplies water to a sodium alginate industry at Louisville near Orford and supplements the water supply of the township of Orford.

#### Irrigation

There are no State irrigation projects at present, but the Rivers and Water Supply Commission is investigating the possibility of establishing a scheme near Cressy. The *Water Act 1957* provides for irrigation works to be undertaken by municipalities and by trusts constituted for the purpose, but no such works have been undertaken to date. With the exception of the Lawrenny estate at Ouse, which is the largest single area under irrigation in the State, and also

the only formally constituted irrigation district, there are no extensive schemes utilising one common source of water supply in Tasmania. The larger proportion of the area under irrigation is watered by pumping systems.

Details of the areas of crops and pastures irrigated in Tasmania in the seasons 1961-62 to 1965-66 are shown in the following table.

AREA OF LAND IRRIGATED: TASMANIA, 1961-62 TO 1965-66  
(Acres)

Season	Vegetables	Fruit	Hops	Other crops(a)	Pastures	Total
1961-62 . . .	3,388	3,930	1,447	2,711	11,713	23,189
1962-63 . . .	4,100	4,446	1,465	2,839	11,435	24,285
1963-64 . . .	6,319	5,933	1,463	4,162	15,693	33,570
1964-65 . . .	8,302	5,955	1,553	4,318	14,194	34,322
1965-66 . . .	12,994	7,241	1,524	5,786	17,651	45,196

(a) Includes fodder and fallow land.

### Northern Territory

Some particulars of the climate and main topographical features of the Northern Territory are given on page 1138 of Year Book No. 37, and in this issue information on climatic conditions will be found in the chapter Physical Geography and Meteorology, and a brief outline of contour and physical characteristics in the chapter The Territories of Australia.

#### Administration

Under the *Control of Waters Ordinance* 1938-1962 of the Northern Territory natural waters are vested in the Crown. Where a watercourse or lake forms a boundary of any land alienated by the Crown, the beds and banks are deemed to remain the property of the Crown (except in special cases) and the diversion of water is prohibited except under prescribed conditions. There is a Water Resources Branch of the Northern Territory Administration under the control of a Director. The functions of the branch include systematic stream gauging, collection of data on surface and underground water supplies, planning of water use for irrigation and town water supplies, and flood prevention and control.

Under the *Water Supplies Development Ordinance* 1960-1963 the Water Resources Branch gives financial assistance to landholders for the development and improvement of water supplies on agricultural and pastoral leases. Another function of the branch, which is increasing in importance as it builds up a body of technical data and information about the Territory's water resources, is the dissemination of this knowledge by the provision of advice and technical assistance to professional drillers and to landholders.

#### Underground water

The marked seasonal rainfall over the whole of the Northern Territory is one of the basic factors affecting the pastoral industry, which provides a large proportion of the Territory's income. Underground water supplies are of great importance in the Territory, where most of the cattle numbers are dependent on underground supplies for three to five months each year, because of the inadequacy of surface water during the dry season.

Rainfall is one of the factors controlling cattle numbers, but geological features, controlling both soils and the storage of underground water, are equally important. In the northern-most portion of the Territory, which receives from 25 to 60 inches of seasonal rainfall a year, surface water supplies are, in general, adequate for the pastoral industry. Despite this, however, the area has a comparatively low carrying capacity for cattle, and the pastoral industry is concentrated more in inland areas where feed retains more nutritive value in winter, despite dry conditions. South from this well-watered northern-most portion, the Territory becomes progressively drier, with an average annual rainfall of only five inches at the margins of the Simpson Desert in the south-east corner. In the lower rainfall areas the search for potable underground water becomes exacting, but in the Ord-Victoria region and the Barkly Tablelands the best pastures are generally in areas where sub-surface conditions are suitable for the storage of underground water.

In the Ord-Victoria region the best grass lands overlie volcanic rocks and extend over some 10,000 square miles. Outcrops of sandstone, limestone and shale also occur in this area and underlie the volcanic rocks in most places. In general, these sedimentary rocks dip gently to the

east, and sub-artesian conditions prevail. Underground water in this region is obtained from sandstone aquifers which yield supplies ranging up to 4,000 gallons an hour. Most of the bores are required in areas where the sediments are overlain by basalts; selection of bore sites is usually difficult. Supplies of shallow groundwater from joints, cracks and faults in the basalt are insignificant, and virtually all the bores obtain water from the sub-basalt sandstone aquifers. Successful bores in this area have ranged in depth from 200 feet to more than 900 feet. There are also small basins of younger sedimentary rocks in the region, some of which yield sub-artesian, and in places artesian, water and provide areas of good pastures.

The Barkly Tablelands, which extend into Western Queensland, overlie flat-lying limestone, sandstone and shale of the Barkly Basin. In most places underground water is under pressure but no flowing bores are known. Sandstones and beds of limestone with fractures and solution cavities provide a number of aquifers within the Basin. The hydraulic surface (to which pressure water will rise in bores) ranges between 500 and 600 feet above sea level, and adequate supplies for the watering of stock are available at depths ranging from 150 to 400 feet from the surface. The water from over 90 per cent of the bores is suitable for stock and over 50 per cent of it is suitable for human consumption. Investigations by the Commonwealth Bureau of Mineral Resources, Geology and Geophysics indicate that underground water supplies will be more than sufficient for the future development of the pastoral industry on the Tablelands.

In the Alice Springs district valuable pastures occur on a great variety of rock types, and from some of these very little underground water is available. Many shallow bores obtain water from alluvium near stream channels. There are also many successful bores in porous sands and limestone in Mesozoic and Cainozoic sedimentary basins and in some Upper Proterozoic and Palaeozoic limestones and sandstones. Small supplies of underground water are obtained from bores intersecting joint zones in metamorphic rocks and granite of Archaean age. However, except in areas close to recharge, the water quality varies from moderate to poor.

The Water Resources Branch of the Northern Territory Administration has intensified research aimed at increasing the water supplies for Alice Springs and Darwin. Bores into the Palaeozoic Mereenie sandstone, twelve miles south of Alice Springs, have intersected sub-artesian aquifers at depths between 500 and 1,000 feet, and water from these bores is now the main source for the town supply. High-yielding dolomite aquifers of Lower Proterozoic age in the area sixteen miles south of Darwin have been developed and are augmenting the Darwin water supply. Tennant Creek now has a water supply pumped from Cabbage Gum Basin, a small basin of alluvium and deeply weathered Precambrian rocks nine miles south of the town. A continuous check on the hydrological results of such pumping is maintained in order to adjust future yields from the basin. A recent investigation has revealed large quantities of potable underground water in the Kelly Well Basin five miles south of the Cabbage Gum Basin. Two production bores are being constructed so that the water from the Kelly Well Basin can be used to augment the Tennant Creek town supply.

At 30 June 1966, 5,346 bores and wells were registered in the Territory. Of these, 3,501 were for pastoral use, 304 were for agricultural use, 360 served town and domestic water supplies, 33 were in use on mining fields, 545 were investigation bores, 394 were Government established stock route bores, and 209 were classified under other uses. These include successful bores which have collapsed, and bores which were unsuccessful owing to drilling difficulties, or to insufficient quantity or poor quality of underground water.

### Irrigation

There are no large water conservation projects in the Territory with the exception of the Manton Dam (12,700 acre feet), which serves Darwin with a reticulated supply. Some water is drawn from the rising main between the Manton Dam and Darwin for irrigation purposes, but the trend is for properties in this area to develop their own water supplies, either by boring or by pumping from watercourses or lakes. Investigations for additional water to augment Darwin's water supply are proceeding on the Darwin River, at Berry Springs, and in the McMinns Lagoon area. In the McMinns area a production bore has been drilled and is expected to yield one million gallons per day. This bore will be connected to the rising main from Manton Dam.

Hydrological investigations are being carried out by the Water Resources Branch to determine the available water and the best method of control and use in the potential irrigation areas of the Northern Territory. Since the start of stream gauging activity in the Northern Territory the Water Resources Branch has established 221 gauging stations. As at 1 June 1966, the Northern Territory stream-gauging network comprised 168 operating stations; of these, 114 were base stations for measuring stream flow and 54 were supplementary stations.

Agricultural activity in the Territory is not extensive, being confined to the Darwin, Adelaide River, Coomalie Creek, Daly River, Katherine River, and Alice Springs areas, with only small acreages being utilised. In the Territory 33 licences to divert water from streams have been issued. The total licensed area is 2,003 acres, but the actual area irrigated is less than this. There are also a number of farms irrigated from bore supplies, particularly in the Alice Springs

area. Purposes for which irrigation water is used include the growing of fruit, vegetables, crops and pastures, and also dairying and mixed farming. Some 300 acres of irrigated rice were grown commercially on the Adelaide River in the 1964-65 season in a pilot farm project.

The Northern Territory Administration and the Commonwealth Scientific and Industrial Research Organization are investigating the potentialities of the Katherine area for agricultural production. In this area there are twelve licensed stream diversions covering an area of 220 acres, and investigations are continuing into the possibility of using the Adelaide and Daly Rivers for irrigation. A dam site is under investigation at Adelaide River Township. The Daly River appears promising for irrigation purposes as it has a minimum dry season flow of 275 cusecs and a reliable annual flow, without regulation, of 300,000 acre feet.

### Papua and New Guinea

Rainfall in Papua and New Guinea varies considerably from approximately 250 inches near Lindenhafen (New Britain) and 230 inches at Kikori (Papua) to about 70 inches near Marienburg (New Guinea) and 40 inches at Port Moresby (Papua). For a general description of these territories see the chapter The Territories of Australia, of this Year Book. Irrigation has not been developed on any organised basis owing to the availability of high rainfall and the nature of agricultural development.

The Territory of Papua and New Guinea is well served with large rivers deriving their water from heavy tropical rains and high mountains which rise to over 14,000 feet, but complete data regarding water resources are not available. At 31 July 1966, 38 stream gauging stations were in operation, of which 24 are base stations regarded as part of the permanent network. It is planned to increase this number to 51 base stations. However, the difficulty of the terrain and the inaccessibility of some regions gives rise to considerable difficulties in the installation and operation of such stations. The available stream gauging records up to the end of 1964 are being prepared for publication, and it is intended that further publications will be issued at five-yearly intervals.

The largest rivers in the Territory include the Fly (700 miles long, situated in the western division of Papua), the Sepik (700 miles), the Ramu (450 miles), the Purari (300 miles), and the Markham (110 miles). The main water conservation interest in New Guinea at present is the hydro-electric potential, which is extensive. An outline of schemes at present in operation is given in Chapter 28, Electric Power Generation and Distribution.

## CHAPTER 24

### FORESTRY

For further details on subjects dealt with in this chapter see the annual bulletins *Non-Rural Primary Industries, Value of Production, and Manufacturing Industry* (for sawmills, etc. operations).

#### Source of statistics

Statistics relating to forestry are, in general, provided by the various authorities concerned with forestry administration. Particulars of forest reservations contained in this chapter have been collected by the Statisticians of the various States, mainly from information provided by the State forestry authorities. Other information on forested areas, together with certain other data, has been provided by the Commonwealth Forestry and Timber Bureau. Statistics of timber and by-products have been compiled from the annual factory collections undertaken by the Statisticians in the several States. Figures of production of gums, resins and tanning barks have been provided by the State forestry authorities. Data of imports and exports of forest products and timber and timber products have been compiled in the Commonwealth Bureau of Census and Statistics as part of the statistics of overseas trade. The figures shown relate, in general, to years ended 30 June.

#### Forestry in Australia

##### Objects of forestry

The main object of forestry authorities is to manage the forests of the country in a manner that will provide the maximum benefits, both direct and indirect. Direct benefits include the provision of essential commercial commodities such as structural timber, pulpwood, plywood, veneers, firewood, bark products, tars, oil, and resins. Indirect benefits include protection of soil and stock from wind and exposure, regulation of stream flow, provision of recreational facilities, and aesthetic effects. Forestry also aims at improving existing forests and woodlands by properly controlled exploitation, by protection from such destructive agencies as fire and insect attack, and by inducing regeneration where it is desirable. The provision of a partial tree cover on denuded lands where this cover is necessary for protective purposes and a complete cover when the land is better under forest than under any other land use are further aims of forestry.

##### General account of forests and timbers

The area of land in Australia suitable for the production of commercial timber as a primary crop is very small in comparison with the size of the continent. Broadleaved forests (hardwoods) cover 97 per cent of the total forested area, and approximately 94 per cent of the broadleaved forests area is occupied by eucalypts.

*Eucalypts.* The genus *Eucalyptus* is remarkable in that it includes over 600 species, ranging in size from the mighty forest giants, mountain ash (*E. regnans*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia, down to the small mallee species which inhabit vast areas of the inland. The habitats range from the dry inland areas to the high mountain areas in the Australian Alps, from areas with the annual rainfall as low as 10 inches to those where it is 150 inches. Of the 600 species, only about 100 are used for sawmilling, and not more than 40 of these are exploited extensively.

The better class of eucalypt forest is concentrated mainly in the higher rainfall areas such as the east coast, the highlands of southern New South Wales, Victoria and Tasmania, and the south-western corner of Western Australia. The more important species include blackbutt (*E. pilularis*), tallowwood (*E. microcorys*), flooded gum (*E. grandis*), and red mahogany (*E. resinifera*) of New South Wales and Queensland; alpine ash (*E. delegatensis*) of New South Wales, Victoria and Tasmania; mountain ash (*E. regnans*), messmate (*E. obliqua*) and blue gum (*E. bicostata*) of Victoria and Tasmania, and karri (*E. diversicolor*) of Western Australia. For height and grandeur, mountain ash and karri are unequalled among the broadleaved trees of the world and are excelled only by a few North American coniferous (softwood) species.

In the coastal regions with lower rainfall the eucalypt forests contain many durable species such as the ironbarks, grey gums and bloodwoods of the east coast, and jarrah (*E. marginata*) and tuart (*E. gomphocephala*) of Western Australia. The spotted gum (*E. maculata*) occurring in New South Wales and Queensland is another example.

Along most of the inland streams and adjacent flood-plains there are riverain forests consisting mainly of river red gum (*E. camaldulensis*), a very durable broadleaved tree which has supplied large quantities of sawn timber, railway sleepers and fence posts.

Eucalypts also occur in open forest and savannah woodland formations in areas receiving a reliable rainfall of about 10 to 20 inches per annum, as on the goldfields of Western Australia where salmon gum (*E. salmonophloia*), brown mallet (*E. astringens*) and wandoo (*E. wandoo*) occur. These forests are of considerable value for firewood, as mining timbers and for fencing. Minor forest products such as sandalwood, tan bark, essential oils, etc. also come from isolated areas in this type of country, and in the more arid areas.

In 1965-66 the volume of eucalypt timber sawn was 1,363 million super ft.

**Other broadleaved timbers (hardwoods).** Broadleaved genera other than *Eucalyptus* cover a comparatively small portion of the forested land in Australia (some 6 per cent), but these areas provide a great variety of timbers suitable for a multitude of uses. There are two basic types of forest containing supplies of broadleaved timbers other than eucalypts, namely, the tropical and sub-tropical rainforests of coastal New South Wales and Queensland and the temperate rainforests of southern Victoria and Tasmania, both of which yield species known collectively as rainforest or brushwood species. The total volume of brushwood species produced in 1965-66 was estimated at 75 million super ft, i.e. less than 7 per cent of the total broadleaved timber cut in Australia.

The tropical and sub-tropical rainforest along the eastern coast of Australia contains a large number of different species. Tropical rainforest occurs in northern Queensland in the vicinity of Cairns and on the Atherton Tableland, providing such well-known cabinet woods as Queensland maple (*Flindersia brayleyana*), Queensland walnut (*Endiandra palmerstonii*) and the silky oaks. The sub-tropical rainforest found in southern Queensland and northern New South Wales yields the tulip oak, crab apple (*Shizomeria ovata*) and white beech (*Gmelina leichhardtii*). Coachwood (*Ceratopetalum apetalum*) and sassafras (*Doryphora sassafras*) occur in regions to the south near Dorrigo and have yielded valuable timber for many years.

Turpentine (*Syncarpia glomulifera*), an excellent harbour pile timber resistant to marine borer attack, and brush box (*Tristania conferta*), a superior structural and decking timber, are found in association with some eucalypts in the wetter rainfall areas on the north coast of New South Wales and in southern Queensland.

Temperate rainforest which is to be seen in southern parts of Victoria and western Tasmania consists of myrtle beech (*Nothofagus cunninghamii*), but produces also southern sassafras (*Atherosperma moschata*) and blackwood (*Acacia melanoxylon*).

**Conifers (softwoods).** One of the most important species of native conifers is white cypress pine (*Callitris hugelii*). The main cypress pine forests of commercial value occur in New South Wales and southern Queensland west of the Great Dividing Range. The trees are comparatively small, but the timber has particular value owing to its durability and resistance to termites. It is suitable for use as scantlings, flooring, linings, weatherboards, poles, and posts. As much of the area originally covered by cypress pine has been cleared for wheat farming and grazing, the production from the remaining State forests is now strictly regulated to ensure a continuous supply. The volume of cypress pine cut in 1965-66 was approximately 64.5 million super ft.

Another important native conifer is hoop pine (*Araucaria cunninghamii*), which occurs naturally in the sub-tropical rainforest of southern Queensland and northern New South Wales associated with tulip oak, crab apple, white beech, coachwood, and sassafras. The greater part of the original hoop pine forests has been exploited, but considerable areas have been replanted to this species in Queensland and, to a lesser extent, in New South Wales.

Other native conifers which have played a useful but minor part in the Australian timber industry include bunya and kauri pines (*Araucaria bidwillii* and *Agathis palmerstonii*) of Queensland and celery top, Huon and King William pines (*Phyllocladus asplenifolius*, *Dacrydium franklinii* and *Athrotaxis selaginoides*) of Tasmania. Kauri pine is found in the tropical rainforest of northern Queensland in association with non-eucalypt broadleaved trees, while bunya pine occurs in the sub-tropical rainforests. In the temperate rainforests of Tasmania celery-top, Huon and King William pines are found in association with myrtle beech, southern sassafras and blackwood.

#### Extent of forested areas

Estimates prepared for the Eighth British Commonwealth Forestry Conference held in Kenya in 1962 show the total area of forest in Australia as 512.2 million acres, or about 27 per cent of

the total land area of the continent. In making these estimates the Food and Agriculture Organization definition of 'forest' (published in *World Forest Inventory*, 1958, page 123) was used. This definition includes areas of sparse or stunted tree growth, and in the case of Australia some four-fifths of the total forest area falls into this category.

### CLASSIFICATION OF FOREST AREA(a): AUSTRALIA

(Source: Forestry and Timber Bureau)

('000 acres)

Type of forest	Area
<b>LANDS</b>	
Accessible forests—	
Productive forests in use—	
Coniferous (softwood) . . . . .	492
Non-coniferous (broadleaved) . . . . .	24,352
Mixed woods . . . . .	5,636
Open areas . . . . .	245
Total, productive forests in use . . . . .	30,725
Productive forests not in use . . . . .	(b) 31,961
Unproductive accessible forests . . . . .	(c) 257,687
Total, accessible forests . . . . .	320,373
Inaccessible forests . . . . .	191,795
Total, forested area . . . . .	512,168

### OWNERSHIP OF ACCESSIBLE FORESTS

Publicly-owned forests—	
State forests . . . . .	23,534
Other forests . . . . .	150,329
Total, publicly-owned forests . . . . .	173,863
Privately-owned forests . . . . .	145,537
Ownership not yet determined . . . . .	973
Total, accessible forests . . . . .	320,373

(a) Based on the 1960 classification of forests. (b) Includes approximately 25 million acres capable of producing fuelwood only.  
(c) This area carries only sparse, stunted trees.

**Forest reserves**

The distribution of forest reserves is shown by States in the following table. Detailed comparisons between States are not possible because of the lack of uniform definitions.

**LEGALLY ESTABLISHED PERMANENT FOREST RESERVES: STATES AND TERRITORIES, 31 MARCH 1966**

<b>Total area, all reserves .</b>	<b>9,890</b>	<b>6,255</b>	<b>9,598</b>	<b>949</b>	<b>4,852</b>	<b>3,540</b>	<b>2,405</b>	<b>157</b>	<b>37,646</b>

(a) Forest lands reserved by law for the production of logs, pulpwood, pit props, poles, posts, and fuelwood for commercial purposes. (b) Reserved lands, the management of which is principally aimed at the protection of natural resources, of fauna and flora, or at other purposes not directly related to the production of wood (e.g. parks, watersheds, soil conservation, etc.). Industrial cutting may or may not be allowed in these protection reserves. (c) No cutting allowed. (d) Includes national parks, 30,000 acres and watersheds 370,000 acres.

A considerable proportion of the permanently reserved areas is in inaccessible mountainous country, and many of the forests contain a mixture of species, only some of which are at present of commercial value. Much of the area consists of inferior forest, and a large proportion of the whole has been seriously degraded by recurrent fires.

**Plantations**

The indigenous forest of Australia does not contain adequate supplies of coniferous timber, and Australia's requirements have had to be met largely by imports. As a result of the planned policy of the forest services and of several private commercial organisations, the area of coniferous plantations, mainly of exotic species, is steadily increasing. It was natural that this aspect of forestry should receive earliest attention in South Australia, as this is the State most poorly endowed with natural forest. South Australia now has a larger area of planted conifers than any other State in Australia, and for some years has been exploiting considerable quantities of timber from these plantations. Production is also increasing in the other States, and the thinnings from their plantations are already supplying a significant volume of timber.

The total production of roundwood from Australia's coniferous plantations is now more than 70 million cubic feet per annum and is expected to increase substantially during the next decade.

A special article prepared by the Forestry and Timber Bureau giving a detailed account of the history and development of coniferous plantations and of the characteristics of individual species is included in Year Book No. 44, page 975.

Broadleaved plantations (mainly *Eucalyptus spp.*) comprise a much smaller area, and the total acreage at 31 March 1966 was 35,000 acres, about two-thirds of which was mallet. Plantations of this species have been established in Western Australia for tan bark production.

**AREA OF CONIFEROUS AND BROADLEAVED PLANTATIONS: STATES AND TERRITORIES, 31 MARCH 1966**

**Forest administration and research**

*Commonwealth Forestry and Timber Bureau.* The functions of the Commonwealth Forestry and Timber Bureau are laid down in the *Forestry and Timber Bureau Act 1930-1953* and include forestry research and education, the study of timber supply, and advice to the Government on forestry matters. The administering department is the Department of National Development.

In 1961 the Commonwealth Government decided to expand its activities in forestry research in Australia. The existing Forestry and Timber Bureau Divisions of Silvicultural Research and Forest Management Research were combined to form the Forest Research Institute as a separate branch of the Bureau. The purpose of the Institute is to provide complete coverage in forestry research, ensuring that all problems of primary importance to the practice and development of forestry in Australia are investigated. In developing a programme with this objective, the Institute takes account of the research activities and potential of the State forest services and other organisations. The research work carried out by the existing sections of the Forest Research Institute covers a wide range of studies, including the following: factors affecting tree growth, tree breeding, introduction of exotic species, forest nutrition, forest botany, forest entomology and pathology, fire protection, watershed management, forest mensuration, forest management and management economics, aerial inventory, biometrics, and tree seed. The Forest Research Institute maintains six regional establishments in the Commonwealth, two of which have an outstation in addition to the regional headquarters. These regional stations are run on a co-operative basis with State forest services and private forest companies or other government instrumentalities.

The Forestry and Timber Bureau also maintains a Timber Supply Economics Branch concerned with the compilation and analysis of statistics of production, consumption and trade in timber and other forest products. This Branch also carries out studies in forest economics and research into logging methods and machines. Advice on timber supply matters is currently made available to government departments and private enterprise. Research is also undertaken on matters associated with the marketing of timber products.

*Commonwealth Scientific and Industrial Research Organization, Division of Forest Products.* The Division of Forest Products was formed in 1928 to carry out investigations into Australian forest products, assist in the effective use of such products, reduce waste, reduce losses from decay and insect attack, and conduct research into the fundamental chemical, physical and mechanical properties of Australian timbers.

The research work of the Division is carried out by eight separate sections: wood and fibre structure, wood chemistry, timber physics, timber mechanics, timber preservation, timber seasoning, plywood and glueing, and timber utilisation. In addition, the Division provides assistance to individuals and local industry, administers courses of instruction on timber properties and usage, and maintains co-operative projects with several overseas authorities operating in the same field.

*Forestry in the Territories.* Forestry activities in the Territory of Papua and New Guinea are controlled by the Administration through its Department of Forests. The management of forests in the Australian Capital Territory is the responsibility of the Forestry Section of the Department of the Interior.

The Forestry and Timber Bureau advises the Administrations of the Australian external Territories on the management of the forests in those Territories, while the Northern Regional Station of the Forest Research Institute advises the Northern Territory Administration on forestry matters affecting the Northern Territory.

*Forestry activities of the States.* Forestry on State-owned lands in the various States is the responsibility of the respective State Governments, but they do not exercise any control over forestry activities on private property. The powers and functions of State forest authorities are laid down under forest Acts and Regulations. In each State there is a department or commission to control and manage State forests. Its functions include the introduction of proper measures for the control and management of forest land; the protection of forest land; the conversion, marketing and economic utilisation of forest products; the securing of an adequate and permanent reservation of State forests; and the establishment and maintenance of coniferous forests to remedy the existing deficiency of conifers in Australia. All State forest services are actively engaged on research programmes. Annual reports are issued by each State forest authority.

In addition to developing permanent forest reserves in each State, foresters are surveying all forested Crown lands with a view to obtaining dedications of new State forests to add to the permanent forest estate or to release for other uses areas unsuitable for forestry. State forest authorities control over 10 million acres of timber reserves, national parks, etc. They also usually control all timber on unoccupied Crown lands.

*Private forestry.* Privately owned lands contribute considerably to the total production from Australian forests. The most important areas of managed native forest in private ownership are the forests owned by pulp and paper companies. Schemes of financial assistance to individual land owners—designed primarily to encourage establishment and management of coniferous plantations—have been recently introduced by the Governments of New South Wales and Victoria.

The area of privately owned coniferous plantations is rapidly increasing, and here again the pulp and paper companies are very active. In step with the increase in afforestation programmes, the number of professional foresters employed in private forestry enterprise is increasing, while several are engaged on research.

An estimate of the area of coniferous plantations established by private companies and individuals is included in the table on page 1033.

#### **Forestry education**

The functions of the Australian Forestry School at Canberra, previously a division of the Forestry and Timber Bureau, were taken over by the Australian National University at the beginning of the 1965 academic year. The school was absorbed into the University's School of General Studies as the Department of Forestry. This department provides a full four-year training leading to the degree of B.Sc. in forestry. The University of Melbourne also maintains a School of Forestry which gives training leading to a B.Sc. degree in forestry. The universities in all States provide facilities for post-graduate studies in forestry leading to higher degrees.

The Victorian Forests Commission maintains a Forestry School at Creswick where recruits are trained, mainly for employment in the Commission.

#### **The Australian Forestry Council**

Following extensive discussions the Commonwealth Government and the Governments of the six Australian States agreed in 1964 to establish an Australian Forestry Council, comprising the Ministers responsible for forestry in the seven Governments and the Commonwealth Minister for Territories.

The Council is intended to provide the means for the mutual exchange between the State and Commonwealth Governments of information and views on forestry. It will co-ordinate research into problems affecting the establishment, development, management, and fire protection of all forests, and the utilisation of forest products. It will assist in co-ordinating the work of State and Commonwealth Governments and also private enterprise in the development of Australian forestry.

The Council is supported by a Standing Committee, consisting of the Director-General of the Forestry and Timber Bureau, the heads of each of the six State Forest Services, the Chief of the Division of Forest Products, C.S.I.R.O., and the Secretary of the Department of Territories.

#### **Fire protection**

The provision of adequate fire protection is one of the main problems facing forest and rural authorities. The commercial forest area is estimated at 63 million acres, and of this area the forest services maintain a high degree of protection over a relatively accessible area of about 23 million acres, about 17 million acres in the more inaccessible area receive a lesser degree of protection, and about 8 million acres are at present not protected. The remaining area of 15 million acres is mainly privately owned or leased, and under some degree of fire protection from the rural volunteer fire-fighting organisations or Government-financed fire protection associations.

Very intensive fire protection is afforded the coniferous plantation area of Australia. During the severe 1964-65 season 3,130 acres of coniferous plantations were burnt. This represents 0.56 per cent of the area of 556,000 acres for which statistics are available. This was the largest area of coniferous plantations burnt since 1952. The area burnt in 1965-66 was 1,520 acres, or 0.25 per cent of the area of 610,000 acres for which statistics are available.

Protection of private property outside urban areas is undertaken by volunteer bush fire brigade organisations which are co-ordinated in each State by a committee or board carrying out functions of an advisory or educational nature and fostering the growth and organisation of the bush fire brigade movement. Throughout the main agricultural and forest areas of Australia there are over 5,000 registered volunteer bush fire brigades with a membership approaching 250,000. Although forest and rural fire organisations are entirely separate entities, a high degree of co-operation and liaison is maintained.

In addition to the forest service and rural organisations, various private and semi-governmental bodies in each State maintain fire protection organisations, which are generally concerned with the protection of private forestry operations and hydro-electric and water catchment areas.

Over the five-year period 1962 to 1966 the annual cost of protecting from fire the 40 million acres of forest land for which State forest services, semi-governmental bodies and private companies provide protection, is estimated at \$5,000,000, or about twelve cents an acre. The cost of fire protection during the severe 1964-65 fire season was \$5,500,000. The cost of rural fire control as a whole cannot be estimated with any degree of accuracy, because by far the greatest contribution comes from the personal efforts of volunteer brigade members.

The Australian fire season is very variable, especially in the eastern and southern States. On the average, damaging fires can occur over a period of four months in all climatic zones. Occasionally this occurrence can extend one month either side of the main fire period. Individual fire seasons are generally of much shorter duration than four months, and the severity of a season is judged more on the number of 'blow-up' days than on its length. On the average, four years in ten are classified as of average severity and two years in ten as severe, the remaining four years being of below-average severity. During severe seasons in the past as much as 15 per cent of the forest area has been burnt. However, with improving fire control services, it can be expected that the area burnt in severe fire seasons will in future be significantly reduced. The number of forest fires and the forest area burnt during recent years is shown in the following table.

**NUMBER OF FIRES AND FOREST AREAS BURNT: AUSTRALIA  
1961-62 TO 1965-66**

(Source: Forestry and Timber Bureau)

Year	Number of fires	Forest areas burnt	Burnt areas as a proportion of area receiving protection(a)
	no.	'000 acres	per cent
1961-62 . . . . .	1,761	297	0.8
1962-63 . . . . .	1,299	275	0.7
1963-64 . . . . .	1,494	549	1.5
1964-65 . . . . .	2,307	1,626	4.1
1965-66 . . . . .	1,865	465	1.2

(a) For this table the area receiving protection has been taken as the 40 million acres for which State forest services provide protection.

Intensive research work is being undertaken on fire problems, and several government groups are working on such projects as the study of fire behaviour and associated fuel and meteorological conditions, the use of chemical aids in fire suppression, the development of protective clothing and devices to aid fire-fighters, and the development of more efficient fire-fighting equipment, including aerial methods of attacking fire and infra-red scanning devices.

Since fire prevention is one of the most important aspects of the problem, intensive campaigns are being conducted to reduce the incidence of man-caused fires. A study of fire causes in recent years reveals that human agencies account for about 90 per cent of all fires, and of this figure at least 80 per cent are preventable. It is estimated that 'burning-off' (much of which is started illegally) accounts for 30 per cent of all fires. Lightning accounts for a little over 10 per cent of all fires in Australia, although the incidence of fires caused by lightning is much higher in certain areas, especially the southern highlands regions in New South Wales and Victoria. Although

lightning is a relatively small numerical cause of fire, the percentage area burnt from this cause is estimated at about 20 per cent. This higher figure is due to the occurrence of multiple fire outbreaks which cause fire fighting difficulties and to the inaccessibility of the areas in which such fires generally occur.

An increasing number of fires are starting from roadsides, and smoking materials account for a high proportion of these fires. The fire-proofing of roadsides by chemical and mechanical means should reduce this incidence, which has accounted for over 25 per cent of all fires in some regions.

The damage resulting from bushfires in Australia is difficult to estimate. Eucalypts, which comprise the main forest species, are seldom killed by fire, and damage estimates frequently involve the complicated question of loss of increment and degradation of timber quality. It may be conservatively estimated that damage to forest values lies between \$2 and \$4 per acre burnt per year and that over the last ten years the average value of forest fire damage is of the order of \$4 million a year. In very severe fire seasons such as 1925-26, 1938-39 and 1951-52, which affected large areas of the continent, fire loss may have been as high as \$200 million.

#### Commonwealth loans to expand softwood plantations

In February 1965 the Australian Forestry Council recommended that the rate of expansion of softwood timber planting in Australia should be increased from their existing level of about 40,000 acres a year to 75,000 acres a year for the next thirty-five years. The recommendation envisaged a phased increase in the rate of Government plantings by the various State Governments up to a level of some 65,000 acres per annum, and an average of at least 10,000 acres per annum by private forest owners. This programme would make a major contribution towards meeting Australia's future requirements for softwood products.

In February 1966 the Commonwealth Government endorsed this recommendation and agreed, as a first step towards achieving the proposed annual target of 75,000 acres, to provide financial assistance to each State, over a five-year period commencing 1 July 1966, to enable them to accelerate their rate of softwood plantings. The assistance, which will be provided to the States under section 96 of the Constitution, will take the form of long-term loans repayable over twenty-five years with repayments of principal and the payment of interest to commence ten years after the date of each advance. The *Softwood Forestry Agreements Act* 1967 authorised the Commonwealth to enter into agreements with each of the States to provide financial assistance by way of loans during the financial years 1966-67 to 1970-71 inclusive. Payments under the Act by the Commonwealth to all States in 1966-67 amounted to \$291,000. It is estimated that \$3,926,000 will be provided in 1967-68.

### Employment in forestry

#### Persons engaged in forestry activities

In the following table, which shows particulars collected in the population censuses of Australia of 30 June 1947, 1954 and 1961, the numbers of persons whose industry statements were classified to 'forestry (excluding sawmilling)' are shown, together with the numbers engaged in all primary industries and the total work force. An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

#### PERSONS ENGAGED IN FORESTRY: AUSTRALIA, CENSUSES, 1947, 1954 AND 1961

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Forestry (excluding sawmilling)	24,793	15,468	13,847
All primary industries	563,607	560,100	513,286
Total work force	3,196,431	3,702,022	4,225,096
Persons employed in forestry (excluding sawmilling) as a proportion of—			
All primary industries	4.4	2.8	2.7
Total work force	0.8	0.4	0.3

#### Employment by Forestry Departments

In the table following details are shown of the number of persons employed by State forestry departments and by the Forestry and Timber Bureau in the Australian Capital Territory and the Northern Territory at 30 June 1966.

**PERSONS EMPLOYED BY FORESTRY DEPARTMENTS  
STATES AND TERRITORIES, 30 JUNE 1966**

Occupational group	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) Excludes some production from private land, thought to be relatively small, details of which are not available. (b) See footnote (b) to previous table. (c) See footnotes (c) and (d) to previous table. (d) Incomplete; see footnote (d) to previous table. (e) See footnotes (e) and (f) to previous table. (f) Includes timber used for tannin extract and sandalwood and substitutes in Western Australia.

## Value of production

While statistics of both the gross value (at principal markets) and local value (at place of production) of the forestry industry are available, particulars of the value of materials used in the process of production are not available for all States. For this reason values cannot be stated on a net basis, as has been done with most other industries. A more detailed reference to the value of production of forestry and other industries in Australia, as well as a brief explanation of the terms used, will be found in the chapter Miscellaneous.

**GROSS AND LOCAL VALUE OF FORESTRY PRODUCTION  
STATES AND TERRITORIES, 1965-66

(a) Includes Northern Territory and Australian Capital Territory.

## Timber and timber products

## Mill production of timber

Particulars of logs treated and the production of sawn, peeled and sliced timber by sawmills and other woodworking establishments are shown in the following table. These figures have been compiled from the annual factory collections in each State, which cover virtually all sawmills. The only omissions are some small portable mills operated by itinerants, e.g. sleeper cutters.

OUTPUT OF AUSTRALIAN-GROWN TIMBER: ALL MILLS, STATES, 1965-66  
(\*000 super ft)

	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
Logs treated (gross hoppus)(b)—

(a) Excludes Australian Capital Territory and Northern Territory. (b) Gross hoppus basis: not necessarily comparable with details for previous years, which are generally on a true volume basis.

In addition to the mill production of timber shown in the preceding tables, a large quantity of hewn and round timber, e.g. sleepers, piles, poles, fencing timber, timber used in mining and fuel, is obtained directly from forest and other areas. Complete information in respect of the volume of this output is not available.

**Veneers, plywood, etc.**

Cutting of timber for the manufacture of veneers, plywood, etc. has been carried out in most States for a number of years. In recent years this has been considerably extended, since plywood manufacture has allowed the use of some species unsuitable for sawing. Special attention has been paid to ensure that logs suitable for peeling are diverted to ply factories.

**PLYWOOD PRODUCED: STATES, 1961-62 TO 1965-66**  
('000 square feet:  $\frac{3}{8}$ -in basis)

State	1961-62	1962-63	1963-64	1964-65	1965-66
New South Wales . . . . .	56,184	56,766	58,880	59,045	54,201
Queensland . . . . .	98,086	85,746	97,252	94,766	80,761
Other States . . . . .	48,537	52,751	60,150	63,249	52,296
<b>Australia . . . . .</b>	<b>202,807</b>	<b>195,263</b>	<b>216,282</b>	<b>217,059</b>	<b>187,258</b>

Of the total plywood produced in 1965-66, 101,939,000 square feet ( $\frac{3}{8}$ -in basis) were classed as 'Commercial', 63,452,000 as 'Waterproof', 3,228,000 as 'Case', and 18,640,000 as 'Sliced fancy'.

During 1965-66, 753.0 million square feet ( $\frac{1}{8}$ -in basis) of veneers were produced by the rotary process for the manufacture of plywood, including 243.5 million square feet ( $\frac{1}{8}$ -in basis) sold or added to stock, the bulk of which would eventually be used in the production of plywood. In addition, 44.5 million square feet of sliced veneers were produced.

**Manufactured boards**

**Hardboard.** During the three years ended 30 June 1966 the following quantities of hardboard were produced: 1963-64, 358 million square feet; 1964-65, 381 million square feet; and 1965-66, 362 million square feet.

**Resin-bonded boards.** Production of resin-bonded boards (made from wood chips, wood wool, sawdust, etc.) amounted to 8,428,000 square yards during 1965-66.

**Wood pulp and paper**

*Wood pulp.* During 1965-66 wood pulp production was 331,077 tons of chemical, mechanical and other pulp. During the previous year production was 317,435 tons.

Detailed information relating to the types and methods of production of wood pulp in the various States was published in Year Book No. 50, 1964, page 1110.

*Paper and paper board.* Paper and paper board are manufactured in all States, but the greater part of the industry is in New South Wales, Victoria and Tasmania. During 1965-66 twenty-five paper mills were operating, eleven in Victoria, four in New South Wales, four in Tasmania, two each in Queensland and South Australia, and two in Western Australia. A wide variety of paper and paper board is produced in Australian mills. The table below gives details of the production of some of the principal items.

**PRODUCTION OF PAPER PRODUCTS: AUSTRALIA, 1963-64 TO 1965-66**

Type of paper	Quantity (tons)			Value (\$'000)		
	1963-64	1964-65	1965-66	1963-64	1964-65	1965-66

Veneers, plywood boards, 'improved' or reconstituted wood and other wood, worked, n.e.s. . . . .	..	5,617
Wood, worked, n.e.s. . . . .	..	2,683
Cork manufactures . . . . .	..	1,200

Owing to the adoption of the new Australian Import Commodity Classification from July 1965 (see page 379) completely comparable figures for years prior to 1965-66 are not available.

Imports of coniferous timbers, shaped or simply worked, came mainly from Canada and the United States of America in 1965-66. Malaysia was the source of by far the greater proportion

of non-coniferous timber imports. The Federal Republic of Germany and the United Kingdom supplied most of Australia's imports of veneers, while plywood imports came mainly from Japan and Papua and New Guinea.

### Exports

Details of exports of Australian forest and timber products in the years 1963-64 to 1965-66 are given in the following table.

#### EXPORTS OF AUSTRALIAN FOREST PRODUCTS, TIMBER AND TIMBER PRODUCTS(a): AUSTRALIA, 1963-64 TO 1965-66

	Quantity			Value (\$'000 f.o.b.)		
	1963-64	1964-65	1965-66	1963-64	1964-65	1965-66
Logs not sawn . . . . '000 sup ft	4,070	2,994	1,762	371	323	250
Undressed timber(b)—						
Sleepers . . . . .	21,578	9,735	4,792	2,263	1,056	644
Fence posts, girders and pole blocks . . . . .	650	701	915	80	73	115
Softwoods(c), n.e.i. . . . .	117	203	279	22	41	76
Hardwoods(d), n.e.i. . . . .	13,499	16,490	12,256	1,856	2,320	1,854
Dressed timber . . . . .	1,907	1,632	1,374	536	448	292
Veneers . . . . . '000 sq ft	2,453	1,411	3,272	102	61	138
Plywood . . . . .	735	590	1,494	174	161	333
Tanning substances . . . . cwt	101,008	92,498	94,922	611	597	662
Charcoal . . . . .	5,793	2,128	10,243	54	20	121
Eucalyptus oil . . . . . '000 lb	304	295	275	230	269	222
Acaroid resin, grass tree and yacca gum . . . . . cwt	6,583	6,774	6,746	26	21	26

(a) Excludes re-exports. (b) Excludes stumps and the like. (c) Non-pored woods. (d) Pored woods.

Of the exports of logs in 1965-66, 49 per cent were consigned to New Zealand; of the sleepers exported, 39 per cent were consigned to the United Kingdom and 38 per cent to New Zealand; while of all undressed timber exported, 45 per cent were consigned to New Zealand. Consignments to the United States of America accounted for 73 per cent of the exports of tanning substances in 1965-66.

## CHAPTER 25

### FISHERIES

Further information on subjects dealt with in this chapter is contained in the annual printed bulletin *Non-Rural Primary Industries and Value of Production* and in the annual mimeographed statistical bulletin *Fisheries*, particularly as regards types of fish, etc. caught.

#### Fisheries resources and their commercial exploitation

##### Fish

It has been calculated that there are approximately 2,000 species of fish in Australia and the waters surrounding it (including freshwater species). Fishing is carried out continually in estuarine, coastal and offshore Australian waters in the east and south from Port Douglas in Queensland to Ceduna in South Australia, and in Western Australia from Esperance to Exmouth Gulf, and sporadically in the Onslow, Broome, Darwin, and Karumba areas in the north. Most fishing is done in waters over the continental shelf, which varies greatly in width around the continent, but tuna is sometimes fished beyond the shelf. As in other countries, fisheries in Australia may be divided into three types: the estuarine fisheries, located in the tidal waters of rivers and coastal lakes; the pelagic fisheries, which exploit species inhabiting the surface layers of the open ocean; and the demersal fisheries, which fish the bottom layers of the sea. The estuarine fisheries produce considerable quantities of the table varieties, such as mullets (*Mugil cephalus* and associated species) and breams (*Acanthopagrus spp.*). In addition to these there is a small freshwater commercial fishery, principally in New South Wales and South Australia, exploiting Murray cod (*Maccullochella macquariensis*) and golden perch (*Plectroplites ambiguus*). The pelagic fisheries produce species exploited during their seasonal migration, such as Australian 'Salmon' (*Arripis trutta*), which is a member of the order Perciformes, or perch-like fishes, tunas (*Fam. Thynnidae*, *Katsuwonidae*, *Sardidae*), barracouta (*Leionura atun*), and mackerels (*Cybium spp.*). These fisheries, with the exception of some tuna, mackerel and reef fisheries, are concentrated in the temperate waters around the southern half of the continent. The offshore demersal fisheries include those pursued on the reefs which may be found virtually right around the continent, and which yield such species as snapper (*Chrysophrys auratus*), the so-called 'cods' (*Epinephelus*, *Choerodon*, *Callyodon spp.*) and associated species; those pursued on the trawling grounds, which produce species such as flathead (*Neoplatycephalus*, *Trudis spp.*), morwong (*Nemadactylus spp.*), John Dory (*Zeus faber*), etc.; and the important fishery for edible shark (school shark, *Galeorhinus australis* and gummy shark, *Mustelus antarcticus*) in south-eastern Australia.

##### Crustaceans

Crustaceans taken in Australia include crayfish, prawns, crabs, and freshwater lobsters. Crayfish (southern, *Jasus lalandei*; western, *Panulirus cygnus*; and eastern, *Jasus verreauxi*) is the most important crustacean exploited in Australia, and various species occur on the reefs of the continental shelf in all States. The commercial fishery, for technological reasons and through lack of knowledge of numbers, has not extended to the tropical species (*P. ornatus*), etc., but is concentrated on species found around the southern half of Australia. Prawns (*Penaeus* and *Metapenaeus spp.*) are taken in the estuarine, coastal and offshore waters of New South Wales and Queensland, in the Shark Bay and Exmouth Gulf region of Western Australia, and in the Gulf of Carpentaria in Northern Territory. Crabs (*Scylla* and *Portunus spp.*) are taken mainly in Queensland and Western Australia, but small quantities are also taken in the other States. Freshwater lobsters (*Euastacus serratus*) are caught in inland streams in New South Wales, and one species, marron (*Cheraps tenuimanus*) forms the basis of an amateur fishery in the south-west of Western Australia.

##### Molluscs

Edible molluscs produced in Australia include oysters (mainly *Crassostrea commercialis*), scallops, mussels, and some of the cephalopods (squid, octopus, cuttlefish). Naturally-grown oysters are produced in all States except South Australia. In New South Wales, and to a lesser extent in Queensland, edible oysters are cultured commercially. The scallops (*Pecten meridionalis* and *Equichlamys bifrons*) are taken in Tasmania, the saucer scallop (*Amusium balloti*) is harvested in Queensland, and a fishery exploiting the species *Pecten alba* has been developed in Port Phillip Bay. Mussels (*Mytilus planulatus*) are gathered mainly in Victoria. Small quantities of cephalopods,

mainly squid (*Loligo spp.*), are produced in many localities. Increased interest in the abalone (*Haliotis spp.*) has resulted in the development of fisheries off southern New South Wales and Victoria and the east and south-west coasts of Tasmania. Other edible molluscs taken from time to time include pipis (*Plebidonax deltoides*).

#### Pearl-shell and trochus-shell

The shell of the Australian species of pearl oyster (*Pinctada maxima*) is taken in the tropical waters of Australia from Exmouth Gulf in Western Australia to Cairns in Queensland for the manufacture of buttons, knife handles, etc. Live pearl-shell is used for pearl culture, the *Pinctada maxima* being capable of producing pearls which are the largest in the world and which command top market prices. Trochus-shell is found mainly on coral reefs off the Queensland coast, although small quantities occur in Western Australia.

#### Whales

The Australian whaling industry formerly exploited the humpback whales (*Megaptera novaeangliae*) during their winter migrations along the east and west coasts of Australia. However, owing to the total prohibition placed on their capture by the International Whaling Commission in 1963, Australian whaling is now confined to the sperm whale (*Physeter catodon*) which has been taken in the southern waters of Western Australia since 1955.

#### Marine flora

Seaweeds of possible commercial value occur in the coastal waters of New South Wales, Tasmania, South Australia, and Western Australia. At Louisville, Tasmania, a factory is processing seaweed (*Macrocystis pyrifera*) for its alginic content.

### History of the development of fisheries industries in Australia

#### Fishing

At the beginning of this century Australian fisheries were principally estuarine and onshore, and the deeper offshore resources were comparatively unknown. Vessels were generally sail-powered, and catching and preservation methods were primitive.

From 1909 to 1914 a Commonwealth vessel was engaged in research into fisheries resources around Australia. As a result of this exploration, otter trawling in the south-eastern waters began in 1915. There have been several years of high production from this fishery, but in each case the peak year was followed by a period of low production. Danish seine trawlers entered this fishery in 1936. In 1958–59 steam otter trawling vessels used in this area were taken out of service. This fishery is at present stabilised at a relatively low level of production.

The tuna fishery began with the establishment in 1937 of a cannery at Narooma in New South Wales to exploit the occurrences, mainly of southern bluefin tuna (*Thunnus thynnus maccoyii*), which had been revealed by aerial surveys in 1936. However, landings were insignificant for over a decade. In 1950 the Commonwealth Government sponsored an American-owned clipper and trained crew to instruct fishermen in the pole-and-live-bait method of catching tuna (see plate 49). Development of the South Australian tuna fishery followed the visit of two American tuna experts in 1954. Recent developments in tuna fishing include the use of gill netting, long lining and the purse seine technique which was successfully used for the first time in 1965. Techniques for taking species of tuna other than southern bluefin are being investigated.

#### Crustaceans

The crayfishery, which is pursued off south-eastern Australia and off the west coast of Western Australia, was for many decades on a small scale. It was not until 1944 that the major sector, the western crayfishery, began to develop into what is now Australia's most productive single fishery. Between 1944 and 1947 production from the shallow areas of Houtman Abrolhos was used for canning for the armed forces. From 1948 to 1953 mechanisation of the fleet was introduced progressively and deeper waters were worked. The United States market for frozen craytails was established during this period. The period 1954 to 1962 saw the introduction of larger and more powerful vessels, of conservation measures designed to maximise the sustainable yield, and of increased processing facilities. In the southern crayfishery development has followed similar lines, but on a smaller scale because of the smaller crayfish population. (See photographs, plate 50.)

The prawn fishery was pursued for many decades on a small scale, but it was not until the discovery that prawns spawn in oceanic waters that interest developed in catching them during this phase of their life cycle. The discovery in 1947 of stocks of prawns in Stockton Bight and off Evans Head (both in New South Wales) initiated the development of deep-sea prawning in Australia. Since that time the prawn fishery has expanded to the eastern offshore grounds. Commercial prawn fisheries in Western Australia commenced at Shark Bay in 1962 and at Exmouth Gulf in 1964.

### **Molluscs**

Natural oyster-beds were being harvested soon after settlement first began, but by 1870 rapid depletion of the stocks had resulted in restrictive legislation being passed in New South Wales. By the end of the nineteenth century, however, farms had been established in New South Wales and oyster cultivation was a notable industry. This cultivation has been almost entirely confined to the river estuaries of New South Wales. Very few oysters are exported and importation of oysters is necessary to cope with home demand. During 1964 a commercial scallop fishery was established in Port Phillip Bay and there was a noticeable development in the harvesting of abalone in the waters of New South Wales, Tasmania and Victoria.

### **Whaling**

Whaling has been undertaken from time to time in Australia since the early days of settlement. Humpback whaling was carried out from stations on the west coast of Australia from 1949, and on the east coast from 1952. However, depleted stocks of the species resulted in the closing down by 1962 of the eastern stations, and in 1963, owing to the severe decline in world stocks of humpback whales, the International Whaling Commission, of which Australia is a member, prohibited the capture of the species south of the equator for an indefinite period. Australian whaling is now carried out from Albany only, where the catch is confined to sperm whales.

### **Pearling**

Since the middle of the nineteenth century, when pearling by Europeans first began in Australia, the collection of natural pearls has been incidental to the production of mother-of-pearl shell. Although attempts to establish pearl culture in Australia had been partially successful as early as the end of the last century, it was not until 1956 that the modern technique, as developed by the Japanese, was introduced into Australia at Kuri Bay in Western Australia. The joint venture between Australian and Japanese interests proved successful and others entered the industry. There are now fifteen pearl culture farms in Western Australia, the Northern Territory and Queensland. Twelve of the farms are operated as joint ventures by Australian and Japanese interests, while three are wholly Australian enterprises. The technique of pearl culture is still a closely-guarded trade secret.

## **Fisheries administration and research**

### **Government administration**

The fisheries within territorial waters (that is, within three miles of the shore) are administered by State departments and Territory administrations. The Fisheries Branch of the Department of Primary Industry develops and administers fisheries in extra-territorial waters and co-ordinates fisheries administration. In 1967 the Commonwealth Government announced that it proposed to extend exclusive fishing limits around Australia from three to twelve miles. This proposal does not involve any change in territorial waters, and the new zone will be administered by the Commonwealth.

The fisheries laws of each State and Territory and of the Commonwealth provide for the licensing of boats used in commercial fishing operations and of commercial fishermen. The provisions are broadly similar in each State, the general requirement being that any person who takes fish for sale, and any boat used in such fishing operations, must be licensed in the State or Territory concerned. Some States extend the licensing requirements to amateur or part-time fishermen. Australian nationals who fish commercially outside the territorial waters of a State or Territory, but within Australian waters as proclaimed under the *Fisheries Act 1952-1966*, are required to take out licences and to register their boats under that Act.

Fish stocks inhabiting Australian waters are a common property resource. With the exception of the Western Australian and Tasmanian crayfisheries and the Shark Bay and Exmouth Gulf prawn fisheries, there are no restrictions on recruitment of men and vessels to any fishery. It has, therefore, been necessary for governmental action to be taken in an endeavour to provide rules of operation in certain fisheries which are vulnerable to depletion. The policy basic to the management of these fisheries is the greatest sustainable yield consistent with economic operations. Where a fishery, for economic reasons, is not producing its maximum yield, efforts to discover new methods of utilisation of the catch are made.

The *Pearl Fisheries Act 1952-1966* provides for the management of the pearl-shell resources in accordance with Australia's proclamation of sovereign rights over the natural resources of the sea bed and subsoil to the 100 fathom line. It requires that all pearlers, vessels, etc. must be licensed, and prohibits the removal of live shell from Australian waters except with the written permission of the Minister for Primary Industry.

Under the *Whaling Act 1960-1966* the Commonwealth controls whaling from Australian stations in accordance with conditions laid down by the International Whaling Commission. This Commission was established by the International Convention for the Regulation of Whaling, 1946, to organise world-wide conservation measures.

### Research

The aim of all fisheries research in Australia is to achieve the greatest sustainable yield of fish and to assist in the development of an efficient industry. To this end much of the biological research already undertaken has been directed at formulating recommendations for management measures in various fisheries. Research work is also carried out which is expected to lead to the development of new fisheries, the expansion of under-exploited fisheries, more economical operations, and the use of more efficient equipment.

The organisations in Australia at present engaged in research into fisheries matters are:

- (i) Division of Fisheries and Oceanography, C.S.I.R.O. (fisheries science and oceanography);
- (ii) Division of Food Preservation, C.S.I.R.O. (research into handling, storage, processing, and transportation of fish);
- (iii) the several State fisheries departments (general biological research);
- (iv) Fisheries Branch, Department of Primary Industry (economic and management research, gear technology, extension work to the industry).

### Collection and presentation of fisheries statistics

#### Source and basis of statistics

Statistics presented in this chapter have been collected by a number of authorities. The various State fisheries authorities have supplied, through the Deputy Commonwealth Statisticians in the States, the details of employment, boats, equipment, and production of the general fisheries and the pearl and shell fisheries. The Fisheries Branch of the Department of Primary Industry has supplied particulars of the whaling industry. Statistics of the processing of general fisheries products and of overseas trade in the products of fishing and whaling have been compiled in the Commonwealth Bureau of Census and Statistics.

The statistics refer, in general, to financial years. However, pearl and shell fishing data refer to the season ended in the financial year shown. Whaling statistics are shown by calendar years, and refer to the season in the calendar year. All overseas trade information refers to financial years.

In the preparation of Australian fisheries production statistics the quantities of individual products are generally in terms of the form in which they are taken from the water. For example, the statistics of fish production published in this chapter are in terms of 'estimated live weights' which are calculated from landed weights by using conversion factors for each species in each State. These conversion factors allow for the fact that the quantities of fish reported are frequently in a gutted, headed and gutted, or otherwise reduced condition. Crustaceans are reported on a 'whole weight' basis and molluscs (edible) on a 'gross (in-shell) weight' basis. The figures of pearl-shell and trochus-shell refer to the actual quantities of dry shell for sale and exclude the weight of the fish.

In Australia the basic source of statistical information on commercial fishing operations is the fishermen. In four of the six States monthly returns of catch by species have been obtained from fishermen for a number of years. In the other two States (Queensland and South Australia) there have been no statistical collections from fishermen, and catch statistics have been derived from other sources such as markets and receiving depots. In general it is recognised that catch statistics in Australia have been somewhat incomplete in past years. For example, details of production given in this chapter refer in most cases only to the recorded commercial production. In view of the importance of amateur fishermen in certain types of fishing, details shown cannot be taken as representing the total catch. In addition, it is likely that the figures shown understate to some extent the full commercial catch because no information is available on fish taken for sale by persons not licensed as professional fishermen.

Two weaknesses of fisheries statistical collections in Australia to date have been the lack of uniformity, which makes it difficult to compile statistics on an Australia-wide basis, and the lack of data on the effort involved in taking fish (time spent fishing, gear used, etc.). Recognising these weaknesses, the Commonwealth-States Fisheries Conference in 1960 appointed a Statistics Committee 'to examine all aspects of fisheries statistics and fully document a proposed system for submission to the States and Commonwealth for approval'.

#### Model system of catch and effort statistics, 1962

The model system of catch and effort statistics designed by the Committee was adopted by the Commonwealth-States Fisheries Conference in 1962. The new system was introduced in Tasmania in 1963 and in Victoria and Western Australia in 1964. The system was introduced in Queensland for the otter trawl fishery early in 1965, but there are no definite plans at present to extend the system to other fisheries. Arrangements are proceeding for the introduction of the model system in New South Wales, but there are no plans as yet for the introduction of the system in South Australia.

Under the new system fishermen are asked to report, on a monthly basis, for the various fishing methods used, catch of each species taken and the locality where the greatest proportion of the catch is taken. Fishermen are asked to record catch in terms of landed weight, and appropriate conversion factors are used to obtain live weight where this is required. A grid system of 1° rectangles (relating to latitude and longitude) is used for recording location of catches at sea, and estuaries and inland waters are recorded where appropriate. Other data obtained include details of fishing effort, ports at which catch is landed, and employment details.

The eventual implementation of this system in all States is expected to ensure the availability of statistical information of a much higher standard in the future. In addition to the new system of catch and effort statistics, a uniform boat registration system is now being introduced by the States. This new system will eventually ensure that details of various characteristics of the commercial fishing fleet are available on a uniform basis for all States.

### Boats and equipment used in fisheries

#### Fish, crustaceans and molluscs (edible)

The boats used for the estuarine fisheries are mostly small vessels, propelled by diesel or petrol engines of low power. The offshore vessels range in length from 30 feet to 120 feet and are almost invariably powered by diesel engines. Many of them have insulated holds to carry fish in ice, and some of the crayfish boats are fitted with wells in which the catch is kept alive. Some vessels have dry refrigeration, and others, including some of the tuna live-bait pole-fishing vessels, are equipped with brine refrigeration.

A recent survey showed that about 50 per cent of Australia's commercial fishing fleet, including tenders, consists of vessels up to twenty feet in length, about 25 per cent are in the 20-29 feet category, and the remainder are greater in length. Only a very small number are greater than fifty feet in length. It is hoped that more precise information on this aspect of the fishing fleet will be available in the future when an improved boat registration system is adopted in all States. Almost every type of fishing equipment is used. The following table sets out the equipment most commonly used for the main types of fish, crustaceans and molluscs.

#### FISHING EQUIPMENT USED IN AUSTRALIA

Type of fish	Equipment used
Mullet . . .	Beach seine, gill net
Shark (edible) . . .	Long-lines, gill net
Australian salmon . . .	Beach seine
Barracouta . . .	Trolling lines
Flathead . . .	Danish seine, otter trawl
Snapper . . .	Long-lines, traps, gill net, hand-line
Morwong . . .	Danish seine, otter trawl, traps
Whiting . . .	Handlines, Danish seine, beach seine
Garfish . . .	Gill net, beach seine
Mackerel . . .	Trolling lines
Tuna(a) . . .	Pole and live-bait, trolling lines, gill net, purse seine
Prawns . . .	Otter trawl, beam trawl, seine net
Crayfish . . .	Pots, traps
Scallops . . .	Dredge, otter trawl

(a) Lampara nets and purse seines are used for taking live bait for tuna.

#### Pearls, pearl-shell and trochus-shell; whaling

Ketch-rigged luggers about fifty-five feet long which carry crews of eight to fourteen members are used for pearl and pearl-shell fishing around Australia.

The whaling industry is highly mechanised. Standard equipment includes aircraft to locate whales, diesel-powered catchers of about 100 to 125 feet in length, and tow boats.

**Boats and equipment employed, by industry**

The following two tables show details of boats and equipment employed in the taking of fish, crustaceans and edible molluscs, pearl-shell and trochus-shell, and the number of chasers and stations engaged in whaling operations. The reservations mentioned on page 1049 regarding the use of employment information are also applicable to these tables. Boats employed in more than one industry are classified to their main activity.

**Employment in fisheries****Census data**

In the following table, which shows particulars collected in the population censuses of Australia at 30 June 1947, 1954 and 1961, the numbers of persons whose industry statements were classified to 'fishing' are shown together with the numbers engaged in all primary industries and the total work force. The census classification 'fishing' includes such activities as fishing, whaling, pearl-shell fishing, etc. An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

## PERSONS ENGAGED IN FISHING: AUSTRALIA, CENSUSES, 1947 TO 1961

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Fishing . . . . .	10,656	8,637	8,252
All primary industries . . . . .	563,607	560,100	513,286
Total work force . . . . .	3,196,431	3,702,022	4,225,096
Persons engaged in fishing as a proportion of—			
All primary industries . . . . . %	1.9	1.5	1.6
Total work force . . . . . %	0.3	0.2	0.2

## Classification of registered commercial fishermen by industry

The following two tables are derived mainly from the licensing records of the various State fisheries authorities. Because the definitions and licensing procedures used by these authorities are not uniform the statistics should not be used to compare the relative productivities of fishing industries in the several States. Persons engaged in more than one industry are classified according to their main activity, and so may be classified differently from one year to the next.

REGISTERED COMMERCIAL FISHERMEN: STATES AND NORTHERN TERRITORY  
1965-66

Industry	N.S.W.	Vic.	Qld	S.A.	W.A.(a)	Tas.	N.T.	Aust.
General fisheries . . . . .	2,420	1,566	2,250	(b)2,400	2,346	1,154	120	12,256
Edible oyster fisheries . . . . .	904	..	164	..	4	..	..	1,072
Pearl-shell and trochus-shell . . . . .	..	..	544	..	107	..	27	678
Whaling(c)—At sea . . . . .	..	..	..	..	44	..	..	44
Ashore . . . . .	..	..	..	..	42	..	..	42

(a) Figures are for the year ended December 1965.

(b) Estimated; the total number of licensed (including part-time, i.e. non-commercial) fishermen was 8,000.

(c) Estimated.

## REGISTERED COMMERCIAL FISHERMEN: AUSTRALIA, 1961-62 TO 1965-66

Industry	1961-62	1962-63	1963-64	1964-65	1965-66

**Pearls, pearl-shell and trochus-shell**

In recent years the production of pearl-shell has declined, owing to the development of plastics. However, the advent of pearl culture has since created a growing demand for live pearl-shell.

**PEARL CULTURE OPERATIONS: AUSTRALIA, 1961 TO 1965**

(a) The quotas set in the years 1962 and 1963 by the Department of Primary Industry were in terms of humpback whales, and for this purpose 1 blue whale is taken to be equivalent of 2 fin, 2½ humpback, 6 sei, or 6 bryde whales.

**Processing of fish**

Quick-freezing is used at sea and ashore to preserve fish before delivery to consumers. The main technique employed in Australia is brine-freezing, as used extensively in the tuna and salmon fisheries.

Fish canning in Australia on a modern scale dates from 1937, before which the only fish-canning carried out was on an occasional basis by factories handling other foodstuffs. The main canneries handle tuna (Eden, New South Wales; Melbourne, Victoria; Port Lincoln, South Australia); Australian salmon (Eden, New South Wales; Melbourne, Victoria; Port Lincoln and Adelaide, South Australia; Albany, Western Australia; Margate, Tasmania); snoek (barracouta) (Melbourne and Portland, Victoria; Margate, Tasmania); scallops (Morningson, Victoria); and abalone (Melbourne, Victoria).

Other methods of fish processing include smoking and bottling, but these are undertaken on a minor scale only. Among the few fish by-products produced are small quantities of fish meal.

## FISH PROCESSING (EXCEPT FREEZING): AUSTRALIA, 1961-62 TO 1965-66

Fish meal(d) . . . . .	2,640	2,076	2,222	2,373	n.a.

(a) Fish used for canning (including fish loaf), smoking and the manufacture of fish paste, but excluding the weight of oysters, other shellfish and crustaceans used for canning. (b) Excludes canned crayfish, lobsters, prawns, oysters, and clams, details of which are not available for publication. (c) Includes fish loaf, fish cakes, etc. (d) Excludes whale meat.

## Processed crustaceans and molluscs

Quick-freezing is also used to preserve crustaceans and molluscs. The chief technique employed to preserve crayfish and scallops is air blast freezing, while plate contact freezing is being used on an ever increasing scale for prawns, scallops and abalone. Crayfish for the domestic market are usually cooked whole and then frozen, as are some exported crayfish. However, the major proportion of crayfish exports consists of frozen raw craytails. Most prawns for domestic consumption are sold in a whole cooked condition. Some are also exported in this form, after freezing. As a rule, however, the majority of prawn exports consist of green headless prawns, sometimes de-veined, sometimes split in 'butterfly' style, but in all cases frozen into five-pound blocks. Scallops are normally frozen in cello-wrapped five-pound blocks, although packaging of individually frozen scallops in polythene pouches is growing in popularity for local consumer packs. Canned abalone is now packed for the Asian market, as well as abalone soup for domestic and overseas sale. Small quantities of frozen abalone are also now being exported to the United States of America and Asia.

## Whale processing

Oil from sperm whales is used in the manufacture of soap, plastics and watch lubricants, and in automatic transmission systems in motor cars.

## WHALE PROCESSING: AUSTRALIA, 1962 TO 1966

(a) 6 barrels = 1 ton.

**Domestic marketing of fisheries products**

Although virtually the whole of the tuna and Australian salmon catches and a large proportion of the snook (barracouta) catch are canned, the greater part of Australian fisheries production is marketed fresh or frozen.

Marketing arrangements for fresh fish vary from State to State. In New South Wales fish marketing is the responsibility of the New South Wales Fish Authority, which operates the Metropolitan and Wollongong Fish Markets. In other coastal centres of New South Wales fishermen's co-operatives may become registered as local fish markets. Fish for industrial use do not pass through any of these markets. The Queensland Fish Board sells all production on behalf of fishermen in that State, and has branches in eighteen centres, as well as depots at eight others. The Board also purchases fish on its own account to stabilise prices. In Victoria, Western Australia and Tasmania the marketing of fish is undertaken through agents. In South Australia the great majority of the fishermen are members of the South Australian Fishermen's Co-operative Ltd., which handles the whole of their production. Canned fish and frozen fish in the form of consumer packs are marketed mainly by the supermarket-type retail establishments. Oysters are usually sold live in the shell directly to restaurants, or are shelled and bottled before being sent to retailers.

**Value of fisheries production**

The following tables show details of the values of production of edible fisheries products, pearl-shell and trochus-shell for the years 1961-62 to 1965-66. *See also* the chapter Miscellaneous for an explanation of the value terms used.

**FISHERIES PRODUCTION: GROSS VALUE**  
**STATES AND NORTHERN TERRITORY, 1965-66**  
 (\$'000)

Product	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	Aust.
Fish	5,210	2,231	(a)1,776	2,708	(b)1,256	491	57	(a)13,730
Crustaceans	2,152	1,183	2,332	3,334	12,448	2,557	2	24,008
Molluscs (edible)	2,801	989	106	4	(c) 7	252	..	4,159
Pearl-shell(d)	..	..	(e) 166	..	(f) 258	..	(e) 2	427
Trochus-shell	..	..	(e) 2	..	..	..	..	2

(a) Excludes freshwater fish caught in Queensland, particulars of which are not available. (b) Not comparable with previous years owing to a change in method of valuation. (c) Excludes scallops, particulars of which are not available for publication. (d) Queensland figure includes pearl-shell taken by Queensland luggers operating in Northern Territory waters. (e) Season ended January. (f) Season ended December.

**FISHERIES PRODUCTION: GROSS VALUE, AUSTRALIA**  
**1961-62 TO 1965-66**  
 (\$'000)

Product	1961-62	1962-63	1963-64	1964-65	1965-66
Fish(a)	12,147	12,290	13,660	12,187	13,730
Crustaceans	14,959	16,030	15,629	22,386	24,008
Molluscs (edible)(b)	2,504	2,808	3,351	3,804	4,159
Pearl-shell(c)	(d) 722	668	391	371	427
Trochus-shell(c)	56	36	10	5	2

(a) Excludes freshwater fish caught in Queensland. (b) Excludes pipis in New South Wales (no pipis were taken in 1965-66) and scallops in Western Australia. (c) Season ended December (Western Australia) or January (Queensland and Northern Territory) of years shown. (d) Excludes pearl-shell taken by Japanese pearlers in Australian waters. The Japanese pearling fleet did not operate in Australian waters after 1961-62.

**FISHERIES: GROSS AND LOCAL VALUE OF PRODUCTION  
STATES AND NORTHERN TERRITORY, 1965-66  
(\$'000)**

State or Territory	Gross value(a)	Marketing costs	Local value(b)
New South Wales . . .	10,163	1,608	8,555
Victoria . . . . .	4,403	606	3,797

**Overseas trade in fisheries products**

Values shown in this section are expressed as \$ f.o.b. port of shipment. The tables of exports relate to Australian produce only, but quantities and values quoted in the text sometimes include re-exports, the amounts involved, however, generally being small.

**Edible fisheries products**

The United Kingdom and Japan each supplied 25 per cent of the value of edible fisheries products imported in 1965-66, South Africa (9 per cent) and Canada (8 per cent) being the other principal suppliers.

The value of crayfish tails exported in 1965-66 was 74 per cent of the value of all exports of edible fisheries products. Of all crayfish tails exported in 1965-66, 96 per cent (9,335,000lb, valued at \$17,443,000) were consigned to the United States of America.

The table below gives further details of Australia's overseas trade in edible products in the years 1963-64, 1964-65 and 1965-66.

**OVERSEAS TRADE IN EDIBLE FISHERIES PRODUCTS: AUSTRALIA  
1963-64 TO 1965-66**

(a) Excludes frozen smoked, which is included in item Smoked, dried etc.. (b) Excludes frozen smoked, which is included in item Products not elsewhere included.

**Pearls**

Pearls valued at \$523,000 were imported into Australia in 1965-66. This was 52 per cent less than the value imported in 1964-65 (\$1,078,000). In 1965-66 imports of pearls valued at \$505,000 (97 per cent of the total value of pearl imports) originated in Japan.

Cultured pearls exported from Australia in 1965-66 were valued at \$1,534,000, \$235,000 more than 1964-65. In 1965-66 cultured exports consigned to Japan were valued at \$1,452,000, 95 per cent of the value of all cultured pearls shipped in that year. The value of natural pearls exported from Australia (excluding re-exports) in 1965-66 was \$39,000, an increase of \$11,000 compared with 1964-65 (\$28,000). In 1965-66 natural pearls consigned to Japan were valued at \$29,000, 74 per cent of the value of natural pearls shipped in that year.

**Pearl, etc. shell and marine animal oils**

Of the pearl-shell exported in 1965-66, 337,000 lb (29 per cent) were consigned to the Federal Republic of Germany, 336,000 lb (29 per cent) to Japan, and 320,000 lb (28 per cent) to the United States of America. Exports of trochus-shell in 1965-66 were 24,000 lb, 89 per cent less than in 1964-65. Imports of shells included quantities of pearl, trochus and green snail shell from New Guinea, Papua and the Pacific Islands, which were subsequently re-exported from Australia.

**OVERSEAS TRADE IN SHELLS: AUSTRALIA, 1963-64 TO 1965-66**

## CHAPTER 26

### MINERAL INDUSTRY

Further detailed statistics and information on the subjects dealt with in this chapter are contained in the annual printed bulletins *Non-Rural Primary Industries* and *Value of Production* issued by this Bureau and in *The Australian Mineral Industry—Annual Review* and other publications issued by the Bureau of Mineral Resources, Geology and Geophysics, which also issues, in conjunction with this Bureau, a quarterly publication, *The Australian Mineral Industry*, comprising two parts—Part 1—Quarterly Review and Part 2—Quarterly Statistics. The annual mimeographed statistical bulletins *Mining and Quarrying* and *Minerals and Mineral Products* of this Bureau contain economic statistics of the industry prepared and published as soon as possible after the data have been compiled. Two monthly statistical bulletins *Minerals and Mineral Products* and *The Gold Mining Industry, Australia* are issued also, and other current statistics on mining or mine products are contained in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*.

### Geology

#### General geology

The greatest part of the area of outcropping rock on the Australian continent is Precambrian in age. These basement rocks form the western and central core of the continent and are flanked by younger Palaeozoic rocks, which, along the eastern edge of the continent, form a belt several hundred miles wide extending from north Queensland to Tasmania. Mesozoic sediments overlies large areas of the continent and reach their greatest development in central Queensland. Cainozoic rocks occur mainly in the southern parts of Victoria and South Australia and as residual basalt cappings over an extensive area of the Palaeozoic rocks of eastern Australia.

#### Economic geology

Minerals of economic significance occur widely throughout the Precambrian and Palaeozoic rocks of the continent. Palaeozoic mineralisation is perhaps more varied, but the Palaeozoic deposits now being worked are in general smaller than those found in Precambrian rocks. Most of Australia's metallic mineral deposits occur within two broad regions, a region of Precambrian rocks in the west and central areas of the continent and a region of younger Palaeozoic rocks in the east. This situation is especially true in the case of the larger base metal deposits and also for smaller deposits of metallic minerals.

The major deposits of metallic minerals, including iron ore, lead, zinc, silver, copper, uranium, and gold, are contained in the Precambrian rocks of the Australian shield. Smaller deposits of tin, tungsten, tantalum, mica, beryllium, manganese, and cobalt are also contained in these rocks.

The mineralised Palaeozoic rocks contain major deposits of gold, now mostly worked out, and a few large copper and lead-zinc-silver occurrences. Smaller amounts of tin, tungsten, molybdenum, bismuth, and other metals also occur in these rocks.

Outside these two main categories, however, there are some metallic mineral deposits of considerable economic importance which were formed during the Tertiary Period. These include bauxite which occurs as a surface capping over various rocks, mostly of Mesozoic age. Extensive deposits of bauxite occur at Weipa on Cape York peninsula in north Queensland, at Gove on the north-eastern tip of the Northern Territory, in the Darling Range in Western Australia, and near Kalumburu in the north-west of Western Australia. These deposits are the result of a long period of weathering.

Mineral sands, another important exception, contain rutile, zircon, ilmenite, monazite, and other minerals, and are particularly well developed on the central and northern New South Wales coast, southern Queensland and south-western Western Australia. The deposits of the eastern States are considered to be derivatives of Mesozoic rocks. The Western Australian deposits are thought to be derivatives of the Precambrian granites of the Australian shield.

Occurrences of fuel minerals (coal, oil and natural gas) are characteristically located in former sedimentary basins. Large areas of Australia are covered by these basins, and more than twenty major sedimentary basins have been identified on the Australian mainland. In addition, sedimentary basins are known to exist in off-shore areas adjacent to the Australian coast. The individual basins range in area from 4,000 to 510,000 square miles and contain marine and continental sedimentary rocks ranging in maximum thickness from 1,000 to about 50,000 feet and including rocks of all ages from Proterozoic to Palaeozoic.

Deposits of black coal in Australia are mainly of Permian age and are located in sedimentary basins in the coastal areas of the eastern States. The majority of the New South Wales and Queensland black coal deposits are bituminous in type. The extensive brown coal deposits of Victoria were formed during the Tertiary Period.

Oil and natural gas have been found in a number of sedimentary basins, but the only proved commercial fields at present are at Moonie, Alton and Conloi in the Surat Basin in south-east Queensland and Barrow Island off the coast of north-west Western Australia. The Moonie deposit is found in rocks of lower Jurassic age. The Barrow Island field, which began production in 1967, is mainly of Cretaceous age, but minor oil shows have been recorded from the underlying Jurassic rocks. Other discoveries of potential commercial significance have been made in the Gippsland Basin, off shore from eastern Victoria (natural gas and oil); at Richmond and Gilmore in Queensland (gas); at Mereenie in the Northern Territory (gas); and at Moomba and Gidgealpa in South Australia (gas).

Of the non-metallic minerals, many, such as clay, sand and silica, etc., are not restricted to the rocks of any particular era and are often polycyclic in nature. However, Precambrian rocks do contain deposits of blue asbestos in Western Australia, limestone and dolomite in South Australia, and mica in the Northern Territory.

Opals are found in the flat-lying sedimentary beds of the Great Artesian Basin in Queensland, New South Wales and South Australia. These opal deposits were formed during the Tertiary Period.

Most of the larger mineral deposits now being mined in Australia are shown in the following table, according to the age of the geological formation in which they are found.

PRINCIPAL AUSTRALIAN MINERAL DEPOSITS

Age of geological formation in which located	Metal or mineral	State or Territory	Locality
Precambrian (more than 520 million years old)	Copper . . .	Queensland . . .	Mount Isa
	Gold . . .	Northern Territory	Tennant Creek
		Western Australia .	Kalgoorlie and other localities
	Iron . . .	South Australia . .	Middleback Ranges
Palaeozoic (between 200 and 520 million years old)	Lead-silver-zinc	Western Australia .	Yampi Sound and Pilbara
		New South Wales . .	Broken Hill
		Queensland . . .	Mount Isa
	Black coal . . .	New South Wales . .	Hunter Valley, Lithgow, South Coast
		Queensland . . .	Kianga-Moura, Baralaba, Bowen, etc.
		Western Australia .	Collie
	Copper-gold . .	Queensland . . .	Mount Morgan
		Tasmania . . .	Mount Lyell
	Lead-silver-zinc	Tasmania . . .	Mount Read and Rosebery
	Tin (lode) . . .	Queensland . . .	Herberton
Mesozoic (between 75 and 200 million years old)		Tasmania . . .	North-east of State
	Tungsten . . .	Tasmania . . .	King Island and north-east of State
	Black coal . . .	Queensland . . .	Ipswich
		South Australia . .	Leigh Creek
Cainozoic (less than 75 million years old)	Manganese . . .	Northern Territory	Groote Eylandt
	Bauxite . . .	Queensland . . .	Weipa
		Western Australia .	Darling Range
	Brown coal . . .	Victoria . . .	Gippsland
	Mineral sands(a)	New South Wales . .	North coast
		Queensland . . .	South coast
		Western Australia .	South-west coast
	Tin (alluvial) . .	New South Wales . .	Tingha
		Queensland . . .	Herberton
		Tasmania . . .	North-east of State

(a) Derived from granites of Palaeozoic age and sandstones of Mesozoic age in eastern Australia and from granites of Precambrian age in Western Australia.

**Mineral resources**

Australia is self-sufficient in most minerals of economic importance and much more than self-sufficient in some. The following table summarises, in a general way, known reserves and production of the principal metals and minerals in relation to Australian consumption of these commodities and present export availability. Many qualifications are necessary to a simple summary of this kind and the table should be read in conjunction with the following detailed notes on principal minerals.

**RESERVES OF MINERALS: AUSTRALIA**

(Source: Bureau of Mineral Resources, Geology and Geophysics)

Production	Reserves adequate	Reserves uncertain	Reserves negligible
Production sufficient for domestic demand and exports	Barite Bauxite Cadmium Coal (black) Copper Gold Gypsum Iron ore Lead Manganese ore (metallurgical) Mineral sands(a) Nickel(b) Opal Salt Silver Tin Tungsten Zinc	Beryl Talc Tantalite	
Production sufficient for domestic demand	Clays (except light grade china clay) Coal (brown) Dolomite Felspar Limestone	Glass sands Sillimanite	
Production not sufficient for domestic demand	Lithium minerals Sulphides (as source of sulphur)(c)	Abrasives Antimony Bentonite China clay Chromite Cobalt Diatomite Fluorite Magnesite Manganese ore (chemical) Mineral pigments Petroleum Phosphate rock Platinum	Asbestos (chrysotile) Bismuth Molybdenum
Production nil	Magnesium Potassium salts (from alunite muds)	Arsenic Crocidolite asbestos(d) Diamonds Graphite Vanadium Vermiculite	Borates Mercury Nitrates Sulphur

(a) Ilmenite, monazite, rutile, zircon. (b) Mine production commenced mid-1967. (c) At a price disadvantage as compared with imported brimstone for the manufacture of sulphuric acid. (d) Mine ceased operating during 1966.

**Lead-zinc**

Since the discovery in 1883 and subsequent development of the ore body at Broken Hill, Australia has been a major producer of lead and zinc. Ore reserves in the Broken Hill area are stated to exceed 17 million tons, and further exploration is being undertaken to extend reserves. Mt Isa, with ore reserves in excess of 27 million tons, is the major lead-zinc deposit in Queensland, and further reserves exist in adjacent leases. In Tasmania substantial lead-zinc deposits are situated at Read-Rosebery near the west coast. In the Northern Territory investigation of a large lead-zinc ore body in the McArthur River area is proceeding.

**Copper**

The principal deposit of this metal is at Mt Isa, where ore reserves were estimated at 33 to 35 million tons in 1965. Recent discoveries have indicated very large additional reserves at Mt Isa and further exploration and testing is proceeding. Other important deposits are situated at Mt Morgan, Queensland, and Mt Lyell, Tasmania. Small deposits at Ravensthorpe, Western Australia, and Tennant Creek, Northern Territory, have also been developed. In New South Wales exploration at Cobar has resulted in the opening of a new operation at a previously abandoned mine, and ore reserves in this area are now estimated to be in excess of 18 million tons.

**Aluminium**

As a result of the recent discoveries at Weipa, Gove and the Darling Range, Australia's reserves of bauxite are known to be very large, perhaps the largest in the world. Total reserves in the Weipa region are probably in excess of 2,000 million tons, while the deposits at Gove are reported to contain up to 200 million tons of bauxite. The Darling Range deposit has nearly 80 million tons of proved reserves, with a reasonable indication of a further 100 million tons. In addition, another potentially significant deposit has been identified in the Kimberley district of Western Australia.

**Tin**

The main deposits of tin now being exploited are in the Herberton field inland from Cairns, Queensland, in north and central Tasmania, in south-west Western Australia, and in the New England area and Ardlethan in New South Wales. Exploration and expansion of known deposits is expected to result in Australia again becoming self sufficient in tin by 1969.

**Gold**

Australia's gold resources are heavily concentrated in Western Australia, mainly in the Kalgoorlie-Coolgardie area. However, small deposits of gold-bearing ore occur in all States. In addition, gold is commonly obtained as a by-product of other mining activities, particularly copper mining. Gold ore reserves at Kalgoorlie were estimated to be about 12 million tons in 1965, with a gold content of between 3.90 and 5.40 dwt per ton.

**Iron ore**

In recent years very extensive deposits of iron ore have been discovered in Australia. These discoveries have established Australia as one of the most important iron ore provinces in the world. The largest deposits, in the Pilbara region of Western Australia, are currently being developed. The first shipments to fulfil long-term contracts were made to Japan early in 1966. A deposit in the Savage River region of north-west Tasmania is also under development. These deposits are adequate to supply the estimated needs of the Australian iron and steel industry far into the future, as well as providing a large export availability. Total Australian reserves are estimated to be in excess of 15,000 million tons.

**Manganese**

Australia's known reserves of manganese, which is highly important for the iron and steel industry, are on a more restricted scale than the deposits of iron ore. The principal deposits currently being worked are in the Pilbara and Peak Hill areas of Western Australia and on Groote Eylandt in the Gulf of Carpentaria. Reserves on Groote Eylandt are believed to be substantial, and testing of the deposits is continuing. The first shipment of ore from Groote Eylandt was made in March 1966.

**Tungsten**

The main deposits of tungsten ores are in northern Tasmania (wolfram) and on King Island (scheelite). Australia's own requirements are small, and production is principally for export.

**Mineral sands**

Ores of titanium (rutile and ilmenite), zircon (zirconium) and thorium (monazite) occur in beach sands over extensive areas of the north coast of New South Wales, the south coast of Queensland and the south-western coast of Western Australia. Resources are large and easily workable. Australia's reserves of rutile represent the bulk of the world's reserves of this mineral.

### Nickel

Deposits of nickel have been discovered in Western Australia, central Australia and Queensland. At Kambalda, near Kalgoorlie in Western Australia, reserves of 4.5 million tons of 3.6 per cent nickel have been established and mining has commenced.

### Uranium

Australia's known reserves of uranium ore were heavily depleted during the years 1953 to 1963. During this period substantial quantities of uranium concentrate were exported to the United Kingdom and the United States. It was estimated during 1964 that total Australian known commercial reserves of uranium ore contained 10,950 short tons of  $U_3O_8$ . The Mary Kathleen deposit is estimated to contain in excess of three million tons of uranium-bearing ore.

### Coal

Australia has adequate coal resources in relation to present and estimated future needs. These resources include coal of all types, except pure anthracite. The table below shows that the major part of the black coal reserves is bituminous. Australia's coal reserves are concentrated mainly in the mainland eastern States. The bituminous coal is located mainly in New South Wales and, to a lesser degree, in Queensland; Victoria has very substantial brown coal reserves in the Latrobe Valley.

#### AUSTRALIAN COAL RESERVES

(Source: Joint Coal Board, Eighteenth Annual Report, 1964-65)

State	Type of coal	Reserves (in million tons)	
		Measured and indicated	Inferred
New South Wales . . .	Bituminous	2,951	Very large(a)
Queensland . . . . .	Bituminous-sub-bituminous	1,243	Very large(a)
Western Australia . . .	Sub-bituminous	282	1,597
South Australia . . . .	Sub-bituminous	49	Very small
Tasmania . . . . .	Bituminous	Very small(b)	137(c)
Victoria . . . . .	Bituminous	20	11
Victoria . . . . .	Brown	54,700	43,000
South Australia . . . .	Lignite	530	..

(a) Inferred reserves are more than 10,000 million tons. (b) Measured reserves in Tasmania amount only to several thousand tons. (c) This figure includes both indicated and inferred reserves.

### Crude petroleum

Continued exploration is slowly accumulating evidence that Australia may possess significant resources of petroleum and natural gas. The Surat Basin (Moonie) in south-east Queensland and the Barrow Island field are Australia's only existing commercial oil fields. Other possible commercial fields have been discovered, however, the most important being off-shore Victoria.

### Natural gas

Several discoveries of natural gas deposits have been made in Queensland, Western Australia, Northern Territory, South Australia, and off-shore Victoria. In some areas reserves are extensive but commercial development will depend on the availability of markets and related capital costs. Two major offshore wells Gippsland Shelf Nos 1 and 2 were completed as potential gas producers; together they constitute the Barracouta natural gas field which is to supply natural gas to Melbourne. There are indications that the Sydney-Newcastle-Wollongong area will also be supplied with natural gas within a few years, but its source has not yet been determined.

### History

The mineral industry has been an important factor in the growth of the Australian economy since the middle of the nineteenth century, when the discovery of gold attracted population to Australia and thus provided a valuable impetus to economic development. Over the years the mineral industry has been a substantial earner of foreign exchange, and has in general provided ample supplies of raw materials for Australia's developing manufacturing industries. In addition, earnings from mineral production have provided capital for the development of important manufacturing industries such as iron and steel production.

The history of mineral discovery and development in Australia, however, has not been one of continuous growth, and the growth of the industry may be divided into several episodes of activity which to some extent overlap. Probably the first mining in Australia was for coal, following discoveries in the northern and southern portions of the Sydney coal basin in 1796 and 1797. Metal mining first began in the 1840's in South Australia, where small deposits of silver-lead and copper were mined. In 1851 Edward Hargreaves discovered gold near Bathurst, New South Wales, and shortly afterwards several other gold strikes were made in Victoria and Queensland. Thus began the first gold-rush in Australian history, and a rapid development of gold mining followed. Gold production for the ten years 1851-1860 was nearly 25 million ounces. However, by the mid-1860's gold mining had declined and the average annual gold production fell to less than 2 million ounces.

Subsequently a number of important discoveries of other minerals were made, and the development of these deposits revitalised the mining industry. These finds included the discoveries of copper, tin and lead-zinc from 1870 to the late 1890's (including Mount Bischoff in 1871, the Broken Hill Lode in 1883 and Mount Lyell in 1890) and the gold discoveries in Western Australia, beginning about 1884 (including Coolgardie 1892 and Kalgoorlie 1893). These discoveries were followed by large increases in the production of gold, silver-lead, copper, tin, and coal. Indeed, for a considerable period prior to 1900 Australia was the major gold-producing country in the world. In addition, from 1890 to 1910 Australia was the leading tin-producing country. This resurgence of the mineral industry, which began in the late 1880's, reached a peak in 1907 with a value of output being achieved which was not surpassed until 1937.

During the period 1908 to 1931 the industry underwent a period of decline, with a concomitant reduction in mineral exploration activity in Australia. This reduction has been attributed to the rapid expansion of the gold mining industry in South Africa about this time. British mining capital which had been channelled into Australia was diverted to another area of the world, and the limited amount of local capital was reserved mainly for agricultural and other less speculative activities. Despite this, a few very important mineral discoveries were made—the Mount Isa lead-zinc deposit in 1923 (and subsequently the copper deposit in 1929-31) and the Aberfoyle tin and wolfram deposits in 1926. During the period 1931-1941 the mineral industry experienced a period of recovery. Major production increases in gold and coal occurred for a short period. However, during the latter years of the second World War another period of decline occurred and gold production fell once again.

The immediate post-war period saw the beginning of a major era of expansion and diversification of the industry, which has continued, with little interruption, to the present. Since 1950 the value of mining and quarrying output has doubled, while the output of manufacturing industries processing and treating minerals has expanded even more rapidly. The expansion of mineral processing in Australia (smelting and refining of metals, the processing of non-metallic minerals, etc.) is one of the most important features of the post-war expansion of the industry. A considerable part of the diversification and development which has occurred, or which is under way at present, can be attributed to the number of important mineral discoveries which have been made in Australia in the post-war period.

These discoveries include the following major finds:

Uranium—Mary Kathleen (Qld), Rum Jungle and South Alligator River (N.T.);

Bauxite—Weipa (Qld), Gove (N.T.), Darling Range (W.A.), Kalumburu (W.A.);

Iron ore—Pilbara (W.A.), Savage River (Tas.);

Manganese—Groote Eylandt (N.T.);

Nickel—Kambalda (W.A.);

Oil and gas—Moonie, Roma area (Qld), Barrow Island, Gingin and Yardarino (W.A.), Mereenie (N.T.), Moomba and Gidgealpa (S.A.), off-shore Gippsland area (Vic.).

Developments which have occurred in the last few years have important implications for the future of the industry. Most attention at present is being focussed on the large iron ore deposits which have been discovered, the expansion of the aluminium industry, the revitalisation of the coal mining industry, and the results of an increasing rate of exploration, particularly petroleum exploration. One notable feature of these recent developments is that the industry is becoming much more involved in export trade, and its contribution to export earnings is expected to increase considerably in the next few years. Japan has emerged as the major market for Australia's minerals.

### Administration

For all practical purposes all mineral rights in Australia are vested in the Crown. In the States, sovereign rights are held by the State Governments with respect to mineral resources within their boundaries. In the Territories of the Commonwealth these rights are vested in the Commonwealth Government. The Commonwealth Government is able also to influence overall development and production activity in the mineral industry by virtue of its statutory powers with respect to

international trade, customs and excise, taxation, and loan raisings. Certain specially formed bodies such as the Joint Coal Board and the Australian Atomic Energy Commission have been given administrative responsibility in defined areas.

### Control of mining

Each State or Territory in the Commonwealth has its own mining Acts or Ordinances and regulations governing the prospecting for and working of mineral deposits. These Acts, etc. are similar in principle, but differ in detail. They all make provision for the following tenures.

- (i) The holding of a miner's right which gives the holder the right to prospect on Crown land, and to use the timber and water necessary for his operations. The miner's right does not give the power to remove or sell any mineral.
- (ii) Small mining leases, having a maximum area of about 100 acres, which necessitate the payment of rent and, in most cases, a royalty. There is usually no limit on the number of such leases which may be held by any one person, partnership, private or public company. In practice a restriction is imposed by the requirement that a lease must be continuously worked, or that work to a given value must be done annually, but exemption from the labour requirements may be obtained under certain circumstances. The exemption is given for limited periods only, and where the labour requirements are not met and exemption has not been granted any person may apply for forfeiture of the lease in his favour. If the rental is not paid the lease is forfeited.

Provision is also made in the various Acts and Ordinances for prospecting areas, claims, etc. Such areas, claims, etc. are all quite limited in size and from the practical viewpoint are cheap forms of mining lease which carry limiting powers relating to the removal of minerals. A very large enterprise may take the course of acquiring mining titles by negotiation with the appropriate Minister for Mines and having the agreed terms and conditions embodied in an Act of the State Parliament. This method of acquisition has been used in several cases where the leasing company undertook an obligation (such as the erection of a large treatment works) in return for leases over large areas for a long period, and has become more common in recent years, particularly where very large-scale capital intensive projects are involved (e.g. iron ore in Western Australia, coal and bauxite in Queensland, bauxite in the Northern Territory).

The following table sets out particulars of the areas occupied under mining Acts and Ordinances in the several States and Territories for the period 1962 to 1966. Further details of the various types of mining lease and licence are given in Year Book No. 48, pages 94-5.

**AREAS OCCUPIED UNDER MINING ACTS AND ORDINANCES: STATES AND TERRITORIES, 1962 TO 1966**  
(<sup>'000</sup> acres)

Year	N.S.W. (a)	Vic.	Qld (b)	S.A. (a) (b)	W.A. (c)	Tas. (b)	N.T.	Total (d)
1962 . .	492	55	2,335	5,364	166	45	38	8,495
1963 . .	425	46	2,185	7,894	201	44	62	10,857
1964 . .	956	50	2,097	7,894	221	42	61	11,321
1965 . .	1,015	60	2,494	6,621	263	41	61	10,555
1966 . .	1,083	84	2,591			45		

(a) Year ended 30 June. (b) Excludes lands held under miners' rights and dredging claims. (c) Excludes holdings under miners' rights. (d) Excludes Australian Capital Territory.

### Control of exploration

Following the introduction of large-scale modern prospecting methods (particularly air-borne prospecting), small prospecting areas were found to be unsuitable, and steps have been taken in the States and Territories to ensure the availability of large areas for prospecting by interested persons. Large areas may be made available in either of the following ways:

- (i) by the Minister of Mines withdrawing an area from the provisions of the Mining Act and giving an informal agreement that the prospector would have preference in applying for titles to leases within the area; or
- (ii) by provision within the Mining Acts or Ordinances for the issue of authorities to prospect over an area defined by a written agreement which also sets out provisions as to the amount of money to be spent, methods of prospecting, tenure of the agreement, etc.

The tenure of such areas is limited, usually to one or two years only, and, if renewed for a further period, is only over an area selected from the larger area as a result of work done during the life of the initial agreement. Neither form of prospecting concession gives the holder any rights over, or authorities to prospect on, land already held under a mining title within the

agreed area. Unless specifically stated in an agreement, the discovery of minerals, whether inside or outside an area covered by an authority to prospect, gives the discoverer no legal rights except the right to apply for a mining lease over the area in which the discovery was made. Suitable prospects are converted to mining tenements by making application for lease under the appropriate mining Act.

The above discussion refers in general to the exploration for all types of mineral deposits in Australia. Additional information relating to the search for petroleum is given below.

### **Control of petroleum exploration**

*On-shore.* In Australia, all petroleum on or below the land is, and shall be deemed always to have been, the property of the Crown. Consequently, full control of petroleum mining rights is vested in the Government or Administration of each State or Territory. Any company, syndicate, or individual proposing to join in the search for petroleum must first satisfy the Government concerned that the necessary financial resources are available to carry out exploration activity.

The names given to different types of exploration permits differ with variations in petroleum legislation from State to State, but there are essentially two basic forms of authorisation for exploration: (a) permit for surface survey; (b) licence for exploratory drilling (does not apply in the Northern Territory).

In most States the minimum permit area is 1,000 square miles and up to a maximum area of 10,000 square miles in the Northern Territory. There is no limit in most States on the number of permits that may be held by one company, syndicate or individual. The term of the initial permit varies between States from one year to five years, but in all cases there is provision for extensions with a maximum in most States of ten years and in the Northern Territory of fifteen years. A bond must be lodged, and in some States rent is payable. All permits contain obligations to carry out certain exploration work with a general provision that survey must be started within three to six months after a permit is granted.

In most States the maximum licence area is 200 square miles (in Papua-New Guinea it is 2,500 square miles) with no limit to the number of licences that may be held. The term of the initial licence varies from State to State and ranges from two to five years. Extensions are permissible with a maximum term ranging in most States from six to ten years. A bond is required in most States, and some States also charge a fee. All States charge a rental ranging from 10c to \$13 a square mile per annum. The obligations of a licence require a company, syndicate or individual to carry out more detailed survey work than at the permit stage and may also require a minimum drilling programme.

If exploration is successful a lease may be granted which gives the right to produce petroleum. The maximum lease area is 100 square miles, except in the Northern Territory where the limit is 1,000 square miles and in Papua-New Guinea where it is 500 square miles. In most States there is no limit to the number of leases that may be held. When a lease is granted the remaining portion of the licence area in which a lease is situated must in most cases be surrendered to the Crown, but surrender clauses vary from State to State.

The initial term of a lease in most cases is twenty-one years, and the lease may be renewed for a similar period. Also, one of the general obligations of a lease is that drilling for production must be commenced within six months. In some States the appropriate Minister has jurisdiction over the processing and marketing of the oil.

Legislation in most States requires the payment of rent at the rate of \$20 (\$30 in the Northern Territory and Papua-New Guinea) a square mile per annum, but this is deductible from any royalties payable on commercial production. All States and Territories have provisions requiring the operating company to guard against wasteful and dangerous practices and make provision for field development in accordance with sound oilfield practice.

*Off-shore.* Federal and State Ministers and Attorneys-General began a series of conferences in 1963 to determine the extent of their respective jurisdictions over rights to prospect for petroleum in Australian off-shore areas. In 1965 it was announced that agreement had been reached between the Federal and State Governments on a system of joint legislation to control and safeguard the exploration for, and the exploitation of, the petroleum resources on the territorial sea-bed and on the outer continental shelf. The continental shelf is described as submerged land not exceeding 200 metres in depth or beyond that limit to where the depth of the superjacent waters admits of exploitation of the natural resources of the shelf. After further conferences, and consideration of representations made by the off-shore exploration companies, it was announced in April 1967 that it was expected that legislation would be presented to the several Parliaments before the end of 1967.

Under the draft legislation the State Governments administer the legislation and collect all rents and fees. Granting of tenements is subject to approval by the Federal Government in so far as its constitutional responsibilities are concerned, e.g. external affairs, defence, customs, and

navigation. Standard royalties (10 per cent of value of production at the well-head) are divided on a 40-60 basis between the Federal Government and the adjacent State. Over-ride royalties, if applicable, and all rents and other fees are retained by the adjacent State.

The draft off-shore legislation provides for a two-stage system of granting authorities to explore and produce. A permit covers all stages of exploration, including drilling. A licence (equivalent to a lease on land) for production is issued for twenty-one years, with the licensee having the right of extensions for a further twenty-one years. Further extensions may be granted. The standard royalty of 10 per cent (plus over-ride royalty, if applicable) is payable for the first twenty-one years. Royalty rate for the whole of the second twenty-one year period will be fixed by the Parliaments at or before the time of granting a renewal, and in the absence of Parliamentary action to fix a new rate the previous rate will continue to apply for the period of the licence.

There is provision for the establishment over off-shore areas of a graticular system of block areas. The size of each graticular block is five minutes of arc of latitude by five minutes of arc of longitude. This results in graticular blocks ranging in area from a little over thirty square miles in northern Australia to approximately twenty-five square miles in southern Australia. Reduction in size is due to the fact that minutes of latitude decrease in length between the Equator and the South Pole. The maximum permit area is 400 blocks (approximately 10,000 square miles). There will be no statutory limitation on the number of permits which may be granted to any individual company. Permits will be issued for an initial period of six years with rights of renewal for further successive periods, each of five years, subject to satisfactory compliance with the conditions of the permit and to the permittee's surrendering half of the effective permit area at the end of each period. Furthermore, the draft legislation will include discretionary powers for the Minister to modify the requirement for compulsory reduction if this would result in a permit area being reduced below sixteen blocks (i.e. approximately 400 square miles).

Following a discovery of petroleum within a permit area the permit holder will be asked to nominate a block which will then become the centre of a group of nine blocks, called a location. The permit holder has the option of applying for a licence over five of the blocks (an area of approximately 125 square miles), on which a standard royalty of 10 per cent is payable, with the remaining four blocks reverting to the Crown, or of taking all or some of the additional four blocks (making a total area of up to 225 square miles) on payment of an additional over-ride royalty on all blocks taken up at the location. In the latter event, separate licences are granted over the five and four (or less) blocks, respectively. The rate of over-ride royalty will be negotiable between the adjacent State or Territory and the permittee within a range of 1 per cent to 2½ per cent. Where locations consist of less than nine blocks they will be split evenly between the permittee and the Crown if the number of blocks within the location is even, and the odd block will be available to the permittee if the number is uneven. The permit holder has at least two years, which may be extended to four years, in which to make his selection. Graticular blocks not selected by the permit holder will be excised from the permit area and may be disposed of by State or Territories by tender. Existing tenements which have been previously issued by States or Territories will be honoured wherever possible.

#### *Petroleum prospecting or exploring leases: areas occupied*

#### AREAS OCCUPIED UNDER AUTHORITIES TO PROSPECT OR EXPLORE FOR PETROLEUM: STATES AND NORTHERN TERRITORY, 1962 TO 1966 (\*000 acres)

Year	N.S.W. (a)	Vic.	Qld	S.A. (a)	W.A.	N.T.	Total
1962	127,658	53,310	563,795	199,409	471,856	67,366	1,483,394
1963	175,026	53,345	464,567	228,235	441,795	160,498	1,523,466
1964	156,543	53,345	379,562	228,235	529,594	147,839	1,495,118

1966	113,276	31,174	389,252	224,226			

(a) Year ended 30 June.

#### Mineral royalties

The collection by governments of royalties for the production of minerals within their area of authority is an internationally accepted practice. In Australia the responsibility for mineral royalties is largely a State concern, and all States except Tasmania currently collect some form of mineral royalty payments. In the past most States have relied on an established system of standard rates which were uniform for all producers of any particular mineral in the State concerned. These charges were either a fixed monetary amount per ton (e.g. 5c per ton on gypsum mined in New South Wales) or an *ad valorem* royalty (e.g. 1.5 per cent of gross value of gold produced in New South Wales).

In recent years there has been an important basic change in the system of establishing royalty commitments, and it is now quite common for State Governments to negotiate special royalty rates with companies which are seeking mineral leases for large scale developments. These royalty rates may vary depending on whether production is for export or for domestic processing. The rates for a particular mineral may also vary between producers. Important examples of this type of royalty agreement are the iron ore development agreements in Western Australia and coal development agreements in Queensland. Mineral royalties received by State Governments in recent years are shown in the table below.

**MINERAL ROYALTY RECEIPTS**  
**STATES(a) AND NORTHERN TERRITORY, 1961-62 TO 1965-66**  
 (\$)

State or Territory	1961-62	1962-63	1963-64	1964-65	1965-66
New South Wales . . .	2,901,734	1,633,640	5,090,622	19,946,772	24,317,168
Victoria . . .	(b) 76,732	(b) 85,004	(b) 94,072	(b) 39,996	71,072
Queensland . . .	727,688	486,938	642,560	1,201,264	1,183,046
South Australia . . .	789,310	756,156	895,540	962,668	985,560
Western Australia . . .	239,454	248,646	243,182	291,354	478,295
Northern Territory . . .	65,960	61,982	68,682	80,894	88,727

(a) No mineral royalties are collected in Tasmania. (b) Includes, in addition to mineral royalty receipts, mine-tailing licences and rents.

#### Control of exports

The Commonwealth Government maintains export controls over certain minerals and metals. These controls are enforced by means of Customs (Prohibited Exports) Regulations as amended from time to time by Statutory Rules. The Commonwealth authorities having jurisdiction over mineral and metal exports, together with the relevant products, are listed below. A clearance to export is needed in each case.

*Department of National Development*—iron ores, beneficiated iron ores and iron concentrates; mineral sands in all forms (including concentrates) containing zircon, rutile or ilmenite; lithium ores and concentrates; manganese ores; beryllium ores and concentrates.

*Department of Primary Industry*—phosphate rock, phosphate and superphosphate, and fertilisers containing phosphate or superphosphate.

*Australian Atomic Energy Commission*—uranium and thorium minerals including monazite; uranium, thorium, beryllium, hafnium, and lithium metals, compounds and alloys; hafnium-free zirconium metals, alloys and compounds; very pure calcium metal; nickel metal in certain forms; minerals, raw and treated (including residues and tailings), containing more than 0.05 per cent of uranium or thorium, singly or together.

In addition to these controls which are, in general, of fairly long standing, the Commonwealth Government has imposed export controls on copper and copper-bearing materials in recent years. These controls have been administered by the Department of National Development.

In November 1964, as a result of the closure of the copper smelter at Mount Isa, an emergency ban was imposed on the export of copper and copper scrap. The ban did not include copper concentrates or fabricated copper products. These restrictions were lifted as from 1 September 1965.

Subsequently another ban on the export of copper scrap and copper alloy scrap was announced on 20 December 1965. As from 1 May 1966 the ban was extended to include the following materials from which copper may be obtained—residues, speiss, slag, dross, scale, sweepings, ash, sludge, slime, dust, and wastes. In addition, it was announced that export permits would not be issued for copper and copper alloy cakes, billets and similar shapes produced from scrap.

#### Joint Coal Board

The Joint Coal Board was established in 1946 under joint legislation of the Commonwealth and of the State of New South Wales to carry out special administrative functions in regard to the New South Wales black coal mining industry. A summary of these functions is given below.

- (i) To ensure that coal is produced in the State of New South Wales in such quantities and with such regularity as will meet requirements throughout Australia and in trade with other countries;
- (ii) to ensure that the coal resources of the State are conserved, developed, worked, and used to the best advantage in the public interest;

- (iii) to ensure that coal produced in the State is distributed and used in such manner, quantities, classes and grades, and at such prices as are calculated best to serve the public interest and secure the economical use of coal and the maintenance of essential services and industrial activities; and
- (iv) to promote the welfare of workers engaged in the coal industry in the State.

#### **Australian Atomic Energy Commission**

During 1953 Commonwealth legislation was enacted to set up an Atomic Energy Commission which is responsible, in an overall sense, for the production and utilisation of uranium in Australia. This Act, the *Atomic Energy Act 1953*, superseded the *Atomic Energy (Control of Materials) Act 1946*, but retains a provision of that Act which provides for the control of substances which could be used for production or use of atomic energy.

The functions of the Commission fall under two main headings. Firstly, it is responsible for undertaking and encouraging the search for and mining of uranium and is empowered to co-operate with the appropriate authorities of the States in connection with these and related matters. Secondly, it is authorised to develop the practical uses of atomic energy by constructing and operating plant for this purpose, carrying out research and generally fostering the advancement of atomic energy technology. The Commission functions under the direction of the Minister for National Development.

### **Government assistance**

The Commonwealth Government and the various State Governments provide assistance to the mineral industry in a variety of ways. The main forms of assistance are discussed below.

#### **Commonwealth Government assistance**

Assistance provided by the Commonwealth Government takes the form of income taxation concessions, subsidies, bounties, and technical assistance mainly through the work of the Bureau of Mineral Resources and the Commonwealth Scientific and Industrial Research Organization. A table showing direct Commonwealth Government payments to sectors of the mineral industry is given on page 1074.

*Income taxation concessions.* One-fifth of the net income derived from mining for prescribed minerals in Australia or the Territory of Papua and New Guinea is exempt from tax. The metals or minerals to which this concession applies are as follows: asbestos, bauxite, chromite, emery, fluorspar, graphite, ilmenite, kyanite, magnesite, manganese oxides, mica, monazite, pyrite, quartz crystals (piezo-electric quality), radio-active ores, rutile, sillimanite, vermiculite, and zircon; and ores of antimony, arsenic, beryllium, bismuth, cobalt, columbium, copper, lithium, mercury, molybdenum, nickel, osmiridium, platinum, selenium, strontium, tantalum, tellurium, tin, tungsten, and vanadium.

Income derived from mining principally for gold in Australia or the Territory of Papua and New Guinea is exempt from tax. The exemption is also available in respect of income derived from mining principally for gold and copper if the value of the gold obtained is not less than 40 per cent of the value of total output.

Income attributable to uranium obtained from working a mining property in Australia or the Territory of Papua and New Guinea, or from the treatment of ore in Australia or the Territory to recover uranium concentrates, is exempt from tax for residents of Australia and the Territory of Papua and New Guinea. The exemption is, however, conditional upon the uranium recovered being owned by the Commonwealth or disposed of to a person approved by the Commonwealth.

Dividends paid wholly and exclusively out of exempt mining income are also exempt from tax.

Valuable assistance has been given in the form of certain taxation concessions to encourage the search for petroleum. Resident investors are permitted, for tax purposes, to deduct from their assessable income all sums paid for shares issued by petroleum exploration companies in respect of application, allotment, and call moneys. These deductions are allowable only if a petroleum exploration company elects to forgo an equivalent amount when, in the event of commercial production, capital expenditure is claimed as a deduction for tax purposes. Most Australian petroleum exploration companies have elected to pass on this benefit to their shareholders. Special deductions for capital expenditure incurred in the discovery and mining of petroleum are allowable to a company deriving income from the sale of petroleum, and products of that petroleum, mined by the company in Australia or the Territory of Papua and New Guinea. The general effect of the deductions is to free the proceeds from the sale of Australian or Territory petroleum and its products from tax until all allowable capital expenditure has been fully recouped. Dividends paid wholly and exclusively out of profits so freed from tax are exempt.

*Petroleum search subsidy.* In 1957 the Commonwealth Government introduced the *Petroleum Search Subsidy Act 1957* whereby stratigraphic drilling operations were subsidised to the extent of 50 per cent of cost. The *Petroleum Search Subsidy Act 1959* widened the scope of operations for which subsidy was offered to include all types of geophysical surveys and off-structure drilling operations. Another amendment in 1961 further widened the scope of the 1959 Act to provide subsidy for test drilling and detailed structure drilling operations. It also provided for the calculation of drilling subsidies on a footage basis as an alternative to the total cost basis. A sum of \$10 million was allocated to the petroleum search subsidy scheme for 1962-63 compared with an allocation of \$5.4 million in the previous year. Applications for subsidy increased to such an extent, however, that in spite of the increased allocation, the maximum rate of subsidy was reduced from 50 per cent of the allowable cost of approved operations to 30 per cent.

The *Petroleum Search Subsidy Act 1959-1961* was amended in June 1964 to extend Commonwealth subsidy for a further three years. The *Petroleum Search Subsidy Act 1959-1964* provides subsidy for approved geophysical surveys and test and stratigraphic drilling operations; bore-hole surveys, off-structure and detailed structure drilling are no longer eligible. As in the previous Act, an applicant may elect to receive subsidy for both types of drilling operations on either a footage basis or a total cost basis. In addition, the production testing of any well approved for subsidy is also eligible for additional subsidy. Under the Act the Minister may vary the rates of subsidy for prescribed operations, but they may not exceed one-half the total cost. The present rates of subsidy for approved operations on a cost basis are 30 per cent for test-drilling and 40 per cent for stratigraphic drilling. The rate for all types of geophysical operations is 30 per cent. The 1959-1964 Act also specifies that exploration for petroleum on the Australian continental shelf is eligible for subsidy retrospective to 1959. The Federal budget for 1966-67 contained an appropriation of \$11.9 million for subsidies under the Act. Payments under this Act in each of the years 1962 to 1966 are shown in the table on page 1074.

On 28 October 1964 the Minister announced that action was necessary to limit the burden of the Commonwealth subsidy scheme on the Australian taxpayer in view of the many recent encouraging discoveries of oil and gas which were now providing the incentive to further exploration. To this end the Minister announced that operations within certain defined areas around discovery wells and fields would not be approved for subsidy. For the present, projects in the following areas would not be eligible for subsidy: twenty miles from a gas well; thirty miles from an oil well; forty miles from a gas field; fifty miles from an oil field. Specified areas excluded from subsidy payments are periodically announced by the Minister.

*Pricing of Australian crude oil.* The Commonwealth Government, subsequent to a Tariff Board Inquiry during 1965, established a basic price for Australian crude oil of \$US 2.48 a barrel at the nearest refining centre, plus a differential for the quality of the oil produced, plus an exploration incentive of 75 U.S. cents a barrel. In the case of Moonie crude oil, the quality differential is 27 U.S. cents a barrel, and the price for Moonie crude oil delivered Brisbane is \$US 3.50.

In order to ensure that local crude oil is used in Australian refineries, the Government will impose penal import duties of 0.8c a gallon on crude oil and 2.4c a gallon on motor spirit to be paid by those companies which do not take their share of local crude oil. A more detailed discussion on the pricing of Australian crude oil is included on page 1102.

*Assistance to the gold-mining industry.* Assistance to the gold-mining industry by subsidy was introduced at a time of rising costs in the industry and fixed official world price for gold. Because many producers were faced with the likelihood of closing down, the Government decided to subsidise marginal producers in Australia and the Territories of Papua and New Guinea. Under the *Gold-Mining Industry Assistance Act 1954* a producer, the value of whose gold output exceeded 50 per cent of the total value of his mine output, was eligible for assistance, subject to certain conditions, on the production of gold from 1 July 1954. The assistance scheme has been reviewed on a number of occasions since the Act was originally passed, and some liberalisations have been approved, including increases in the rates of subsidy payable authorised in amendments enacted on 22 October 1957, 22 May 1959 and 2 June 1965.

The rate of subsidy payable under the original Act was increased under amendments enacted on 22 October 1957 and 22 May 1959. The Act was again amended on 2 June 1965. Under the Act as it now stands the subsidy payable to small producers whose annual deliveries do not exceed 500 fine oz is \$6 per fine oz, irrespective of cost of production. For large producers, subject to certain provisions, the rate of subsidy payable is an amount equal to three-quarters of the excess of the average cost of production over \$27 per fine oz, with a maximum amount of subsidy of \$8 per fine oz. A producer whose deliveries during the year exceed 500 fine oz may elect to be treated as a small producer. In this case the subsidy rate payable per fine oz on total deliveries is \$6 reduced by 1c for each fine oz by which deliveries exceed 500 fine oz. The benefit under this provision terminates when deliveries in a year reach 1,100 fine oz. Where a producer receives an amount in excess of the official price of \$31.25 per fine oz as a result of sales on overseas premium markets or otherwise, the subsidy payable is reduced by the amount of the excess. Prior to 1 July 1965 subsidy payable to large producers was subject also to a limiting

provision that the annual net profit of a producer was not, with the addition of the subsidy, to exceed 10 per cent of the capital used in the production and sale of gold. This limitation has now been removed. The latest amendments also provided for the removal of two other restrictive provisions. A large producer's entitlement to subsidy is no longer subject to reduction if the amount of expenditure on development included in costs exceeds a certain amount, or if the grade of ore being mined falls below a certain level. On the other hand, the Act now provides that subsidy may be adjusted if it is considered that operations are not conducted in accordance with good mining practice. With effect from 1 July 1965 a large producer is able to include in his costs for subsidy purposes one-half of net costs incurred in approved exploratory diamond drilling elsewhere than on his mining property. Payments under the amended Act are to apply to production until 30 June 1970. Payments under the Act commenced in March 1955, and the amounts paid to gold producers in the various States and Territories of Australia in each of the years 1962 to 1966 are shown in the table on page 1074.

The purpose of the *Gold Mines Development Assistance Act* 1962 was to provide assistance to gold producers in Australia and the Territories of Papua and New Guinea not receiving subsidy under the *Gold-Mining Industry Assistance Act* 1954-1962, in order to increase the rate of their development work and so to add to their proved reserves of gold-bearing minerals. In recent years these reserves had declined to the extent that the long-term prospects of the industry were jeopardised. The Act, which applied to 1962-63 and the next two financial years, provided that a development allowance was payable to a mine approved for the purposes of the scheme equal to the amount by which its allowable expenditure on development in a year, as defined in the Act, exceeded a defined base amount which would normally be the average annual amount spent by the mine on development during the three years preceding 1962-63. The payment of allowance was also subject to a number of other conditions and limits provided for in the Act. With the liberalisation of the *Gold-Mining Industry Assistance Act* from 1 July 1965, the Commonwealth Government decided not to extend the development assistance legislation which, accordingly, lapsed on 30 June 1965.

*Assistance to the copper mining industry.* After a Tariff Board investigation, assistance was accorded to the industry in 1958, partly by import duty and partly by bounty. The assistance was continued until 31 December 1965. However, because of the unsettled conditions in the industry at this time, it was decided to defer a Tariff Board Inquiry and to continue the existing bounty assistance until 31 December 1966 unless an earlier date of cessation was proclaimed. Under the *Copper Bounty Act* 1958-1966 bounty was payable, subject to specified conditions, on refined copper sold for use in Australia. The rate of bounty was \$70 per ton when the overseas price, as determined by the Minister for Customs and Excise, was \$580 (£Stg232) or less. When the overseas price rose above \$580, the bounty fell by the same extent, so that no bounty was payable when the overseas price was \$650 (£Stg260) or more. The Act lapsed on 31 December 1966. Payments under the Act in each of the years 1962 to 1966 are shown on page 1074. The import duty continues in operation, and is imposed on imports of copper when the overseas price falls below \$580 a ton, to the extent of \$1 for each \$1 that the price falls below \$580. Including freight and other charges, the landed cost of imported copper is thus expected not to fall below \$610 a ton.

*Assistance to producers of sulphuric acid and iron pyrites.* Following recommendations of the Tariff Board, the *Sulphuric Acid Bounty Act* 1954 was extended for a period of five years from 1 July 1960. Arising from these same recommendations, the *Pyrites Bounty Act* 1960 was enacted on 15 December 1960 to be operative for a period of four and a half years from 1 January 1961. The Acts provide for bounties to be paid, subject to specified conditions, on sulphuric acid produced from prescribed materials of Australian origin and to producers of iron pyrites. In June 1965 it was announced that assistance under these Acts would continue until 31 December 1965. Both of these Acts have now been extended by legislation to 30 June 1969. Payments under the above Acts in each of the years 1962 to 1966 are shown in the table on page 1074.

*Payments to producers of phosphate fertilisers.* The *Phosphate Fertilizers Bounty Act* 1963-1966 provides for a bounty to be paid on superphosphate and ammoniated phosphate fertilisers manufactured and sold for use in Australia on and after 14 August 1963. The bounty is based on the fertiliser value of superphosphate as measured by its soluble content of phosphorus pentoxide. A standard grade of superphosphate containing 20 per cent, plus or minus 0.5 per cent, soluble content of phosphorus pentoxide qualifies for the full bounty of \$6 per ton. When the phosphorus pentoxide content of the superphosphate is less than 19.5 per cent or above 20.5 per cent, bounty is payable at the rate of \$30 for each ton of contained phosphorus pentoxide. Bounty in respect of ammonium phosphate is payable at the rate of \$30 for each ton of the phosphorus pentoxide content of the ammonium phosphate. In addition to standard grade superphosphate, 'double' and 'triple' superphosphate, containing 40 per cent and 50 per cent phosphorus pentoxide respectively, are produced in Australia, and bounty on these products is payable at the rate of \$12 a ton and \$15 a ton respectively. The intention of this Act is to assist consumers of superphosphate (primary producers). The Act is due to expire on 31 October 1969. Payments under the above Act in each of the years 1962 to 1966 are shown in the following table.

COMMONWEALTH GOVERNMENT PAYMENTS TO THE MINERAL INDUSTRY  
AUSTRALIA, 1962 TO 1966

(\$)

Year	Petroleum exploration (a)	Gold mining (b)	Copper mining (c)	Pyrites mining (d)	Sulphuric acid production (e)	Phosphate fertiliser production (f)
1962 .	5,930,752	1,351,394	1,372,868	686,680	1,865,314	..
1963 .	10,519,208	1,614,600	1,297,704	960,334	2,590,248	1,908,252
1964 .	9,121,910	1,382,124	1,065,782	1,320,668	2,046,542	22,772,978
1965 .	10,412,842	1,984,966	5,262	1,113,964	2,138,914	22,604,562
1966 .	10,154,171	3,758,757	1,314	288,319	1,397,679	25,817,516

(a) *Petroleum Search Subsidy Act 1959-1964.* (b) *Gold-Mining Industry Assistance Act 1954-1966 and Gold Mines Development Assistance Act 1962 (expired 30 June 1965).* (c) *Copper Bounty Act 1958-1966.* (d) *Pyrites Bounty Act 1960-1965.* (e) *Sulphuric Acid Bounty Act 1954-1966.* (f) *Phosphate Fertilizers Bounty Act 1963-1966.*

*Bureau of Mineral Resources, Geology and Geophysics.* The functions of the Bureau of Mineral Resources, Geology and Geophysics are to explore, investigate and encourage the development of mineral deposits; to survey and assess the mineral resources of the Commonwealth and its Territories and to initiate and investigate proposals for their development; to interpret the results of completed surveys and recommend ways of remedying or meeting mineral deficiencies and to advise on all aspects of the mineral economy of Australia, including the best utilisation of mineral resources in the national interest; to carry out geological and geophysical surveys and investigations and advise on all aspects of applied geology and geophysics.

The Bureau comprises five branches under the Director: Operations, Mineral Resources, Geological, Geophysical, and Petroleum Exploration. The Operations Branch consists of three sections, Planning and Co-ordination, Publications and Information, and Administrative. It carries out central office functions, including planning and control of programme, assessment of results, co-ordination of activities, liaison, and distribution of information. The Mineral Resources Branch comprises the sections Mineral Economics, Mining Engineering, and Petroleum Technology, and is concerned largely with those aspects of the Bureau's work which involve studies of the mineral industry as a whole, and the preparation of advice and reviews for the Government, industry and the public. The Geological and Geophysical Branches are responsible for the principal field activities of the Bureau, and the operation of observatories; while the Petroleum Exploration Branch is concerned with the administration of the *Petroleum Search Subsidy Act 1959-1964* and is also engaged in the assessment of sedimentary basins in Australia and its Territories. The establishment of the Bureau is 586 officers, of whom 291 are professional. The budget for the financial year 1966-67 was \$17.6 million, of which \$11.9 million was provided for payment under the *Petroleum Search Subsidy Act 1959-1964*.

The Bureau maintains in Canberra, Melbourne and Darwin laboratories which are engaged on geochemical, geochronological and petroleum technological studies and basic research into the design and testing of geophysical equipment. The Bureau also maintains a vulcanological observatory at Rabaul and geophysical observatories at Melbourne, Toolangi, Mundaring, Darwin, Port Moresby, Mawson and Wilkes (Antarctica), and Macquarie Island. The geophysical observatories are engaged in magnetic, ionospheric, and seismic investigations and are base stations for field operations.

*Commonwealth Scientific and Industrial Research Organization.* The activities of this body with respect to the mineral industry are discussed on page 1076 under Research.

#### State Government assistance

In addition to free assays and determinations of rocks and minerals carried out for prospectors by the Mines Departments of the States and Territories, technical officers of these departments provide advice to the mining and allied industries where required, carry out field examinations of mining prospects, advise on exploration and development, select sites for water supply, and in general give a free technical service to the mining industry.

*New South Wales.* State aid to assist metalliferous mining may consist of grants to assist the prospecting and/or mining for gold and minerals, and for the purchase, removal and installation of mining plant or equipment. A quantity of mechanical equipment is also available in several localities for hire at reasonable rentals to prospectors and small mine operators, and district inspectors have geiger counters and scheelite detectors which are loaned to approved persons. In the year 1965-66 \$400,000 was made available for exploration work carried out by the Department and to give financial assistance to exploration groups and prospectors.

*Victoria.* Loans may be granted to assist prospecting and development or the purchase of machinery for gold mining. The Mines Department has stamp batteries in different parts of the State to crush ore for prospectors at nominal rates. Small mining companies may avail themselves of these facilities. Drilling with diamond, rotary and percussion drills is carried out by the Mines Department for mining companies and for general mineral exploration. A survey of the State's underground water resources is in progress, in conjunction with the development of town water supplies from underground sources.

*Queensland.* Various forms of assistance to mining are made available by the Queensland Department of Mines. Grants are made from the Consolidated Revenue Fund for use on construction and maintenance of roads in mining areas. Advances are made from the Gold Mining Encouragement Fund for mining development work. This assistance is restricted to gold mines, and advances are repayable from proceeds of the mine, if any. From the Assistance to Metalliferous Mining Fund, plant such as jackhammers, compressors and pumps is purchased and maintained. Such plant is made available on hire, the rental payments being credited back to the fund. Prospecting assistance is made available in approved cases, the rates being \$5 a week for a single man and \$7 a week for a married man with dependants. This is not repayable. From the Advances to Mining Fund, assistance by way of subsidy is advanced for mine development. This is repayable from proceeds of the mine. The department also maintains a treatment works for tin ores, etc. at Irvinebank, an assay office at Cloncurry and diamond-drilling plants in several parts of the State. The Venus State battery at Charters Towers is available for the treatment of gold-bearing ores.

*South Australia.* The Department of Mines provides the following services and facilities to the mineral industry: (i) hire of boring plant and mining equipment, boring and testing of mineral deposits, financial loans in approved cases for prospecting and mining development, development of sub-surface water supplies for farming, pastoral, irrigation, and mining purposes, and purchase of basic metal ores from prospectors; (ii) geological examination of mineral deposits, water supply, dam foundation and drainage problems, guidance on mining legislation, and publication and issue of geological bulletins and maps. It also provides, through the Australian Mineral Development Laboratories, chemical and metallurgical and analytical and assay investigation, testing and treatment of ores and minerals, and petrographic, mineragraphic and radiometric determinations. Pilot scale metallurgical and chemical treatment plants are maintained and operated for the development of mineral extraction processes.

*Western Australia.* Prospectors receive assistance of either \$15 or \$17.50 a week according to the prospecting locality. North of the 26th parallel and within a defined area south of this lying largely outside the agricultural areas assistance is given to the extent of \$17.50 a week. In the remainder of the State prospectors receive \$15 a week. Provision is also made for the supply of some tools required for prospecting. There are twenty State batteries operating intermittently throughout the goldfields for the treatment of ore from prospectors and small mine-owners at a nominal charge. A cartage subsidy is also granted to such operators sending ore to State batteries for treatment. Provision is made for loans to mine-owners who require assistance to develop mines. The Government also has a drilling scheme, financing mine-owners on a \$1 for \$1 basis.

*Tasmania.* The Department of Mines provides financial assistance to mining lessees for the purchase of plant and machinery, for sinking, repairing or de-watering of shafts, for construction of dams and water races, for testing and proving a deposit of any mining product, for developmental work, and for diamond and other types of drilling. The Department has available for hire percussion and diamond drills for exploration, as well as a complete plant for small shaft sinking and tunnelling. Other assistance is rendered to the industry in the form of geological and engineering advice, through ore-dressing research into metallurgical recoveries, and the selection and design of treatment plant. In consequence of a serious fall in world tungsten prices the *King Island Scheelite Agreement Act 1963 (No. 1)* was passed. This Act permitted the Tasmanian Government to provide financial assistance until the end of August 1963 so that production of scheelite on King Island could be continued. A second Act (*King Island Scheelite Agreement Act 1963 (No. 2)*) gave authority for advances in the period to 31 May 1964. In October 1964 the price of tungsten on world markets moved above the level at which repayments under the subsidy agreement apply, and repayments to the Tasmanian Government, in accordance with a formula related to monthly production, were commenced by the operating company. In April 1966 a final repayment liquidated the remaining liability (the total advanced was \$397,910).

*Northern Territory.* To encourage the development of the mining industry the Northern Territory Administration operates two batteries for the treatment of miners' ores. The batteries are at Tennant Creek and at Mount Wells near Burrundie. The Tennant Creek battery is currently cyaniding the gold in accumulated tailings while the Mount Wells battery is crushing parcels of tin ores and small quantities of gold, lead and copper ores. The crushing charges are subsidised by government grants. In addition, the Administration provides cartage subsidies and financial advances to encourage miners to carry out developmental work. Assistance is also given to the industry by drilling encouraging prospects. Roads and water supply services are provided and maintained for mines under active development throughout the Territory.

### Research

Research investigations into problems of mining, ore-dressing and metallurgy are conducted by Governmental bodies, by universities, by private enterprise, and by combined efforts of these bodies. A summary of their functions follows.

#### **Commonwealth Scientific and Industrial Research Organization**

Research for the mineral industry by the Commonwealth Scientific and Industrial Research Organization is undertaken mainly in the Divisions of Applied Mineralogy and Mineral Chemistry and in the Ore Dressing Laboratory. Work of a more specifically chemical engineering nature is undertaken in the Division of Chemical Engineering. All of these groups have laboratories in Melbourne. In addition, the Division of Applied Mineralogy has laboratories in Perth and Sydney, and the Division of Mineral Chemistry has a laboratory in Sydney.

The research programme of the Division of Applied Mineralogy is concerned mainly with the production and utilisation of natural and synthetic mineral products. Research is undertaken on cement and concrete, industrial refractories, engineering ceramics, clays, mineral-organic complexes, fillers, foundry materials, and the geochemistry of some economic minerals. The Mineralogical Investigations laboratory of the Division has become a general reference point in C.S.I.R.O. for examination of minerals and for advice on problems concerning their nature and origin. The Division of Mineral Chemistry is undertaking research aimed at more complete evaluation of Australian minerals and their better utilisation through chemical, electrochemical and metallurgical processes. It includes studies on mineral exploration techniques, chemical upgrading of minerals, and the production of metals, and investigations on processes with possibilities for application in the exploitation of minerals. Work is continuing on the evaluation of coals from all the significant deposits in Australia, and on the technical problems of coal combustion in large power stations. In the Division of Chemical Engineering, projects of particular interest to the mineral industry include studies on the dynamics and automatic control of mineral processing operations such as grinding, classifying and flotation, fluidised-bed techniques, high-temperature extraction metallurgy and metal refining, and the production of high-calorific-value gas by direct hydro-gasification of coal at high pressures and temperatures. The Ore Dressing Investigations laboratory, which is under the joint control of C.S.I.R.O. and the University of Melbourne, undertakes research on mineral processing and has continued to serve industry on problems arising from the processing of particular Australian minerals. In addition, it is collaborating with interested firms in long-term studies on the chemistry of flotation pulps and the assessment of the resistance of ores to grinding.

All C.S.I.R.O. groups taking part in mineral research are in close contact with industry. Several projects are being developed by collaboration between C.S.I.R.O. and Australian firms and a significant proportion of the Organization's mineral research is now carried on with funds provided by industry. A committee set up by the Advisory Council of C.S.I.R.O. is continuing to examine and advise on research needs in the mining and processing industries in the changing environment.

#### **Australian Atomic Energy Commission**

The Australian Atomic Energy Commission conducts research at its laboratories at Lucas Heights in Sydney on the development of nuclear power, including research on nuclear materials and on metals and ceramics used for nuclear power. Research conducted by the Commission is discussed in detail in the chapter Education, Cultural Activities and Research.

#### **Australian Mineral Development Laboratories**

Research investigations into mineral problems are undertaken by the Australian Mineral Development Laboratories in Adelaide. This organisation is sponsored by the Commonwealth Government, the South Australian Government and the Australian Mineral Industries Research Association (*see Research by private enterprise next page*). These sponsors furnish work for the laboratories, or guarantee finance, in the proportions 25 : 50 : 25 respectively. The laboratories have sections dealing with mineralogy, petrology, chemical analysis, ore-dressing, ceramic and extractive and physical metallurgy, and operations research.

#### **The Baas Becking Geobiological Research Laboratory**

In 1965 the Baas Becking Geobiological Research Laboratory was established in the Bureau of Mineral Resources Building in Canberra, under the joint sponsorship of the Commonwealth Scientific and Industrial Research Organization, the Bureau of Mineral Resources, and the Australian Mineral Industries Research Association (*see Research by private enterprise, page 1077*). The broad objective of the research work is to investigate the biological and chemical processes associated with the formation of mineral deposits of the stratiform type.

Initial emphasis is being placed on investigations to establish the relationship of biological factors to the natural physico-chemical environment with particular reference to the possible role of these factors in the formation and transformation of sulphide minerals. Investigations will include the response of micro-organisms to heavy metals; biochemistry and physiology of oxidative and reductive sulphur transformations; role of organisms in the concentration of mineral elements; physico-chemistry of low-temperature mineral synthesis; mobility of sulphides under the influence of temperature and pressure and the interaction of mineral types; and biological leaching of low-grade sulphide minerals.

The laboratory is named after the late Dr L. G. M. Baas Becking, who was one of the first to recognise the possibility that biological, in particular microbial, activity may play an important part in the genesis of sulphide ores. Dr Baas Becking carried out research in this field while on loan to the Bureau of Mineral Resources from the C.S.I.R.O.

#### **National Coal Research Advisory Committee**

The functions of the National Coal Research Advisory Committee, which began operating in January 1965, are to report on all coal utilisation research programmes in Australia, and advise the contributing Governments and industry as to the disposition of funds made available for such research. The Commonwealth matches additional funds made available by State Governments and by coal producing and consuming industries. In the first two years of operation, additional funds of \$520,000 have been made available in each year for increased coal utilisation research, bringing total expenditure on coal utilisation research in Australia to nearly \$2.5 million annually. In association with the setting up of the National Coal Research Advisory Committee, a new company, the Australian Coal Industry Research Laboratories Limited, was formed in late 1965 to take over all the current activities of the Australian Coal Association (Research) Limited, which was financed largely by the coal producing industry. This new company has available additional funds from the coal producing and consuming industries and from State and Commonwealth Governments to permit the expansion of the former work of the Australian Coal Association (Research) Limited in the particular direction of coal utilisation research. The constitution of the Advisory Committee and the establishment of the new laboratories unit have brought into effect the recommendations of the Coal Utilisation Research Advisory Committee which tabled its Report to Parliament in 1962.

#### **University research**

The various universities in Australia carry out research into various aspects of the mineral industry such as geology, ore mineralogy and genesis, mining techniques, mineral processing, extractive metallurgy, and materials and metals technology.

#### **Research by private enterprise**

Most large mining and smelting companies have laboratories dealing with their own individual immediate problems. Private industry has formed the Australian Mineral Industries Research Association, which is composed of forty-three members representing a large proportion of the mining, metallurgical and related companies operating in Australia at present. It was set up in 1959 chiefly to represent private industry in the management of the Australian Mineral Development Laboratories, but the Association now finances other research work into geology, mining and ore-dressing at Universities, C.S.I.R.O. and elsewhere. Expenditure for the year 1965-66 was \$51,897.

### **International relations**

Because Australia is a large supplier of certain minerals to the rest of the world and because the welfare of the domestic industry depends to a large extent on the maintenance of a high level of exports, international relations are of considerable importance to the industry, and the Commonwealth Government takes an active role in international consultations and discussions relating to minerals. The most important international commitments are discussed below.

#### **International Tin Agreement**

The First International Tin Agreement (of the post-war period) was in operation for five years from 1 July 1956 to 30 June 1961. This Agreement was subsequently replaced by the Second International Tin Agreement, which came into force provisionally on 1 July 1961 and definitively on 21 February 1962.

This Agreement was for a period of five years and had the following objectives:

- (a) to prevent or alleviate widespread unemployment or under-employment and other serious difficulties likely to arise from maladjustments between the supply and the demand for tin;

- (b) to prevent excessive fluctuations in the price of tin and to achieve a reasonable degree of stability of price;
- (c) to ensure adequate supplies of tin at prices which are fair to consumers and provide a reasonable return to producers; and
- (d) to provide a framework for the consideration of measures to promote the progressively more economic production of tin, while protecting deposits of tin from unnecessary waste or premature abandonment, thus facilitating expansion in world consumption of tin; and to keep under review the long-term need for the development of new deposits of tin.

The Third International Tin Agreement, which came into force provisionally on 1 July 1966 and definitively on 21 March 1967, contains several additional objectives:

- (a) to ensure conditions which will help achieve a dynamic and rising rate of production of tin on the basis of a remunerative return to producers, which will help secure an adequate supply at prices fair to consumers and which will help provide a long-term equilibrium between production and consumption;
- (b) in the event of a serious shortage of supplies of tin occurring or being expected to occur, to take steps to secure an increase in the production of tin and a fair distribution of tin metal at equitable prices.

Although the framework of the Third Agreement is basically that of the Second, objectives have been broadened in line with the principles of the United Nations Conference on Trade and Development (UNCTAD) and, as such, emphasise the need for expansion of export earnings in the developing countries. Thus the emphasis has been shifted from surplus production and export controls inherent in the Second Agreement to one of increased production in the new Agreement.

The Agreement is operated by the International Tin Council, which is made up of the following Governments: Australia, Austria, Belgium, Bolivia, Canada, Czechoslovakia, Democratic Republic of the Congo, Denmark, France, India, Indonesia, Italy, Japan, Korea, Malaysia, Mexico, Netherlands, Federation of Nigeria, Spain, Thailand, Turkey, United Kingdom. Member Governments participate as producing or consuming countries. The producing countries hold a total of 1,000 votes, distributed so that each country receives five initial votes and an additional number corresponding to its percentage as laid down by the Agreement. The consuming countries hold a total of 1,000 votes also distributed so that each country receives five initial votes and an additional number proportionate to tonnages. The allocation of votes in each category is periodically reviewed.

The International Tin Agreement establishes floor and ceiling prices for tin and, by the medium of a buffer stock and remedial trading on the London Metal Exchange, aims at confining the price within these limits. The buffer stock was established with contributions from producing countries, equivalent to 10,000 tons of metal, wholly made in cash at £stg1,000 a ton; a further £10 million remains on call from the producer members and a standby-credit facility of £10 million from a consortium of banks. Existing buffer stock price range is: ceiling £1,400—must sell; £1,300 to £1,400—may sell; £1,200 to £1,300—no action; £1,100 to £1,200—may buy; floor £1,100—must buy. However, since the Third Agreement came into operation prices have in general been maintained in the range £1,200 to £1,300 in which the buffer stock does not operate.

#### **International Lead-Zinc Study Group**

With the cessation of stockpile buying of lead and zinc by the United States Government in 1958, world producers were faced with the prospect of a serious imbalance between world supply and demand for these metals. To meet this problem a series of meetings of interested governments was held, at which Australia was represented. These meetings culminated in the formation of the International Lead and Zinc Study Group which was established in January 1960. The Study Group comprises the following Governments: Algeria, Australia, Austria, Belgium, Canada, Czechoslovakia, Denmark, Finland, France, the Federal Republic of Germany, India, Italy, Japan, Mexico, Morocco, the Netherlands, Norway, Peru, Poland, the Republic of South Africa, Spain, Sweden, Tunisia, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia. The Group provides opportunities for inter-governmental consultations on international trade in lead and zinc and for studies of the world situation in lead and zinc having regard especially to the desirability of providing continuous accurate information regarding the supply and demand position and its probable development.

### Tungsten Conference

During 1963 meetings were held by the United Nations *ad hoc* Committee on Tungsten and by the Committee's Technical Working Group to assess the world tungsten situation and to consider methods for dealing with the depressed state of the market, and action has been taken to collate world data. The Working Group recommended that the Tungsten Committee be put on a regular rather than an *ad hoc* basis; this recommendation was adopted by the Committee at its fourth session held in May 1965. The necessity of obtaining comprehensive, uniform and timely world statistics was also formally recognised. However, in view of the recent buoyant marketing conditions for tungsten, no direct action to influence the world market for tungsten has been taken.

## Scope and sources of statistics

### Scope of statistics

Statistics presented in this chapter refer mainly to mining and quarrying, although data relating to mineral processing and treatment activities are included where appropriate to present a more complete picture of the place of minerals in the Australian economy.

The mining and quarrying industry is defined for statistical purposes as including all mining and quarrying and the recovery of minerals from ore dumps, tailings, etc. Ore-dressing and elementary smelting of metallic minerals (e.g. in the case of gold) and miscellaneous treatment of non-metallic minerals, where these are carried out in an associated plant at or near the mine, are included in the mining industry. However, establishments primarily engaged in smelting and/or refining (including the smelting and refining sections of the large plants operated at Mount Morgan and Mount Isa in Queensland and at Mount Lyell in Tasmania) are excluded from the statistical definition of the mining industry and are classified to the manufacturing industry.

The statistical coverage of establishments engaged in mining is considered to be satisfactory. However, coverage of establishments engaged in the quarrying of construction materials is incomplete in most States. This deficiency is due primarily to the inherent difficulty of obtaining complete lists of quarries (including those operated by government authorities), many of which operate intermittently and in different locations. There is difficulty also in obtaining satisfactory returns from quarries operated in conjunction with some other activity, e.g. roadmaking, brick-works, etc., and quarries operated in conjunction with large construction projects, such as the Snowy Mountains Scheme, are excluded from these statistics. In some States there have been deficiencies also in the collection of data for certain non-metal (excluding fuel) mining industries, mainly because these are outside the fields normally under the administrative control of Mines Departments. Products chiefly affected are clays, loam and silica.

### Sources of statistics

Mining industry data (such as employment, costs, value of output, etc.) have been obtained annually since 1952 from the Mining and Quarrying Census. This Census is carried out in collaboration with the several Mines Departments and involves the uniform collection of particulars from all establishments employing on the average four or more persons during the period worked by the mine. A representative specimen collection form is included in the bulletin *Non-Rural Primary Industries*, No. 3, 1964-65. For smaller mines either simplified census returns covering number of persons employed and value of output are collected, or these particulars are compiled from data made available by the Mines Departments. Oil search operations are excluded from the annual census, but the Bureau of Mineral Resources conducts an annual survey of these activities.

Mineral production statistics contained in this chapter consist, in the main, of data from the annual census and official statistics of the Mines Departments of the several States and of the Northern Territory Mines Branch. The particulars shown have been compiled as far as practicable on the standardised basis which has been used in Australia since 1950, and this presentation has involved some re-arrangement of official statistics published by the Mines Departments in some States. These statistics have been supplemented, as necessary, by data obtained from the Statisticians of the several States, the Bureau of Mineral Resources, Geology and Geophysics, the Joint Coal Board, and from several other sources.

Data of imports and exports of minerals and mineral products have been extracted from the official trade statistics compiled in the Commonwealth Bureau of Census and Statistics. Values of Australian overseas trade shown throughout this chapter are expressed as \$ f.o.b. port of shipment.

### Mineral exploration

In recent years mineral exploration in Australia has expanded considerably compared with earlier periods. Exploration for extensions of known reserves in producing localities has increased, and some important additions to known reserves have been made (e.g. at Mt Isa). In addition, exploration for new deposits has continued and, as outlined earlier, a number of important new finds have been made in recent years.

Some important features of exploration for minerals in Australia in this period have been the uranium exploration boom in the mid-1950's, the expansion of petroleum exploration since 1960, and the even more recent upsurge in general mineral exploration which has been marked by an influx of overseas companies and capital. Currently there is more active mineral exploration being carried out in Australia than at any earlier time.

The pattern of exploration at present is that, in terms of expenditure and footage drilled, exploration for petroleum is the most important activity. Exploration for other minerals, although expanding rapidly, is not on as large a scale as petroleum exploration. The range of minerals sought is diverse, with probably most attention being devoted to the base metals and phosphate rock.

### Petroleum exploration

During the post-war period there has been a very great increase in exploration for petroleum in Australia, and this increase has been particularly notable since 1961. In the years 1946 to 1965 more than \$358 million was spent on petroleum exploration in Australia and Papua and New Guinea out of a total expenditure to the end of 1965 of almost \$370 million. Until recently, exploration was concentrated in the sedimentary basins on the land mass, but increased attention is now being paid to the off-shore areas of the continental shelf, with promising results. Up to the end of 1965 the bulk of expenditure related to exploration in Queensland, Western Australia and Papua and New Guinea. Footage drilled has been greatest in Queensland, Western Australia and Victoria, with footage drilled in Papua and New Guinea being comparatively low. The growth of expenditures and drilling footage over recent years is shown in the following tables. These statistics have been derived from the Bureau of Mineral Resources, Geology and Geophysics. Recent developments in the search for petroleum are discussed on page 1102, and particulars of areas occupied under authorities to prospect or explore for petroleum are given on page 1069.

#### EXPENDITURE ON PETROLEUM EXPLORATION BY PRIVATE ENTERPRISE AND BY GOVERNMENTS: AUSTRALIA, 1965

Origin of expenditure	Expenditure	Percentage contribution
Private enterprise—	\$'000	
Funds of Australian origin . . . . .	20,409	30.3
Funds of overseas origin . . . . .	32,706	48.5

**Other mineral exploration**

As a result of the influx of overseas companies and an increase in exploration by the major Australian mining companies, exploration for minerals other than petroleum is also at a very high level and is expanding rapidly. It has been estimated that this exploration is about equally divided between areas in which mineral discoveries were made fifty to seventy years ago and geologically favourable areas where sub-surface exploration is being carried out for the first time. Statistics relating to this exploration are not available at present, but statistical coverage of these activities is being established and a basic range of statistics will be available shortly.

**Mining and quarrying**

The mining and quarrying industry is classified into four major groups, namely metal mining, fuel mining, non-metal mining (excluding fuel), and construction material quarrying. Mining and quarrying establishments are classified to these groups and to sub-divisions of these groups on the basis of the product or products of the establishments. This method of classification is straightforward for those establishments which produce only one product, but for mines and quarries which produce more than one product classification is not as simple a matter. Such establishments are classified according to the most important mineral produced in terms of value. Thus a mine producing, say, both tin and tungsten minerals would be classified as a tin mine if tin were the more important product by value, and as a tungsten mine if tungsten were the dominant product. There is, however, one important exception to this rule in that the mining establishment at Mount Isa is classified to the lead-silver-zinc sector rather than to the copper-gold sector.

For mines and quarries which produce more than one product it is not possible to apportion particulars of operations (such as employment, salaries and wages paid, costs) to the minerals produced. In practice, then, these data are recorded only as a total for each mine, and the mine is classified to an industry sector as outlined above.

Statistics relating to the structure of the industry, employment, production costs, value of additions and replacements to fixed assets, and value of output and production are given in the following pages.

**Number of mines and quarries**

The following tables show the number of mines and quarries which operated in each State and Territory in 1965 and in Australia for the years 1961 to 1965.

## NUMBER OF MINES AND QUARRIES: STATES AND TERRITORIES, 1965

<b>Total, all mining and quarrying</b> . . . . .	<b>2,824</b>	<b>2,908</b>	<b>2,777</b>	<b>2,892</b>	<b>2,978</b>

(a) Incomplete. See Scope and sources of statistics, page 1079.

**Employment in mining and quarrying**

*Persons engaged.* Statistics of persons employed in the mining and quarrying industry are derived mainly from the annual census of that industry.

Data on the work force employed in the industry are also obtained from the population censuses of Australia. The population census figure for mining and quarrying includes a number of persons excluded from the mining and quarrying census employment figure, e.g. persons engaged in exploration activities, prospectors, head office employees, etc.

In the following table, which shows particulars collected in the population censuses of Australia at 30 June 1947, 1954 and 1961, the numbers of persons whose industry statements were classified to 'mining and quarrying' are shown together with the numbers engaged in all primary industries and the total work force.

**PERSONS ENGAGED IN MINING AND QUARRYING: AUSTRALIA  
1947 TO 1961**

	Census, 30 June—		
	1947	1954	1961
Persons engaged in—			
Mining and quarrying . . .	57,574	62,107	54,401
All primary industries . . .	563,607	560,100	513,286
Total work force . . .	3,196,431	3,702,022	4,225,096
Persons engaged in mining and quarrying as a proportion of—			
All primary industries . . . %	10.2	11.1	10.6
Total work force . . . %	1.8	1.7	1.3

An adjustment was made to the 1947 and 1954 industry data by distributing over the range of recorded industry the number of persons whose industry was not stated. No such adjustment was made to the 1961 figures.

The following table is derived from mining census data and shows the average numbers engaged in the various mining industries in each State or Territory in 1965.

*Size classification of mines and quarries.* Most of the mines and quarries worked during 1965 employed less than four persons, including working proprietors. However, more than half of the persons engaged in mining and quarrying were in the 49 mines each employing 200 persons or more. The following table shows the distribution of the total number of mines into various size groups according to the average number of persons employed during the period worked by each mine in 1965.

## NUMBER OF MINES AND QUARRIES AND PERSONS EMPLOYED, BY AVERAGE NUMBER EMPLOYED: STATES AND TERRITORIES, 1965

Mines and quarries employing on the average( <i>a</i> )—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T. and A.C.T.	Aust.
<b>Less than 4 persons—</b>								
Establishments . . . . .	748	282	428	222	200	138	59	2,077
Persons . . . . .	1,168	524	652	390	626	248	161	3,769
<b>From 4 to 20 persons—</b>								
Establishments . . . . .	184	156	77	84	72	33	11	617
Persons . . . . .	1,460	1,226	692	793	564	251	108	5,094
<b>From 21 to 200 persons—</b>								
Establishments . . . . .	81	29	71	13	23	11	7	235
Persons . . . . .	6,565	1,124	3,379	706	1,580	868	337	14,559
<b>More than 200 persons—</b>								
Establishments . . . . .	28	2	2	2	12	2	1	49
Persons . . . . .	12,511	1,819	3,595	584	5,499	1,425	305	25,738
<b>Total—</b>								
Establishments . . . . .	1,041	469	578	321	307	184	78	2,978
Persons . . . . .	21,704	4,693	8,318	2,473	8,269	2,792	911	49,160

(a) Average during period worked. Includes working proprietors.

*Accidents in mining.* Particulars of numbers of persons killed and injured in accidents in mines and associated treatment plants are recorded by State Mines Departments. Numbers injured are not reported on a uniform basis in all States, as varying criteria are used in determining what constitutes injury. In 1965, 44 persons were recorded as killed and 1,233 as injured in mining (excluding quarrying) accidents. Recorded deaths and injuries in that year in black coal mines were 19 and 301, respectively, silver-lead-zinc mines 4 and 226, gold mines 8 and 268, and mineral sands mining 3 and 59. Persons killed and injured in the construction material quarrying industry numbered 2 and 86 respectively in 1965.

#### Salaries and wages paid

Salaries and wages paid in the mining and quarrying industries in Australia during each year 1961 to 1965 are shown in the following table. Information regarding rates of wages paid in the mining industry is shown in the chapter Labour, Wages and Prices (page 317) and also in the *Labour Report*.

#### MINING AND QUARRYING: SALARIES AND WAGES PAID<sup>(a)</sup>, AUSTRALIA 1961 TO 1965 (\$'000)

Industry	1961	1962	1963	1964	1965
<b>Metal mining—</b>

**Value of output and production**

The following tables show particulars of value of output on an ex-mine basis (local value of production) and value of production (net value of production) for recent years. *These statistics are on an industry basis and not by product.* A more detailed reference to the value of production of mining and quarrying and other industries together with a brief explanation of terms used will be found in the chapter Miscellaneous.

*Local value of mining and quarrying production.* The following tables show particulars of the local value of production of mining and quarrying for 1965 and earlier years.

(a) Local value (i.e. value of output at mine or quarry), less cost of power, fuel, light, and other materials and stores used; depreciation and maintenance costs have not been deducted.

## Quantities of principal minerals produced

In the preparation of Australian mineral commodity production statistics the quantities and values of individual minerals produced are recorded in terms of the form in which they are dispatched from the locality of each mine. For example, in the case of metalliferous mines, the output is recorded as ore if no treatment is undertaken at the mine, or as a concentrate if ore-dressing operations are carried out in associated works in the locality of the mine. In addition to the basic quantity data, the contents of metallic minerals and contents or average grade of selected non-metallic minerals are recorded. Whenever practicable, contents (based on assay) of metallic minerals are shown for each metal which is a 'pay metal' or a 'refiners' prize' when present in the particular mineral. In general, other metallic contents which are not recovered are excluded. Individual mineral products are arranged in four groups corresponding to the major groups of the industry, namely metal mining, fuel mining, non-metal mining (excluding fuels), and construction material quarrying, referred to on page 1082. Particulars relating to uranium-bearing minerals are excluded.

The following tables show particulars of the quantity of the principal minerals produced during 1965 and earlier years.

**QUANTITIES OF PRINCIPAL MINERALS PRODUCED**

(a) Incomplete owing to difficulties of coverage. See Scope and sources of statistics, page 1079.

NOTE. Particulars of the value of uranium concentrate produced are not available for publication and have been excluded from the table above.

Owing to the necessity of classifying individual mines according to the principal mineral produced, the values in the table on page 1088 for mining industry groups differ slightly in some cases from totals of the corresponding groups of mine products shown in the table above.

### Mineral processing and treatment

The extraction of minerals from ore deposits, as in mining and quarrying, is only part of the wider field of mineral technology. It is only in rare instances that minerals can be used directly in the form in which they are produced by mines, and much more commonly minerals must undergo considerable processing and treatment before their full utility and value can be realised. Examples of this processing and treatment are the smelting and refining of metals, the production of coke from coal, the refining of oil, and the treatment of non-metallic minerals as in the production of superphosphate and other chemicals and building materials like bricks and cement. The sectors of the economy which carry out this work are classified for statistical purposes to the manufacturing industry, and particulars relating to those activities which principally involve mineral processing and treatment—i.e. the treatment of non-metalliferous mine and quarry products, the manufacture of mineral oils and chemical fertilisers, the smelting, converting, refining and rolling of iron and steel, the extracting and refining of other metals, and the manufacture of alloys are given in the chapter Manufacturing Industry, pages 1110-36 and 1144-5.

#### Principal products

The following table shows particulars of the production of certain important manufactured products of mineral origin during the years 1961-62 to 1965-66. Secondary metal is excluded from the metal production statistics except in the case of ingot steel. For blister copper and lead bullion the figures shown relate to the copper and lead content respectively.

**PRODUCTION OF PRINCIPAL MANUFACTURED PRODUCTS  
OF MINERAL ORIGIN: AUSTRALIA, 1961-62 TO 1965-66**

(a) Metallic content. (b) Newly-won gold of Australian origin.

**Overseas trade**

A significant proportion of Australia's mineral production is exported to overseas markets, and these exports make a valuable contribution to total exports. The major exports at present are lead, zinc, coal, mineral sands, gold, silver, copper, basic iron and steel products, and opals.

Mineral imports are dominated by crude petroleum, imports of which have expanded rapidly since the mid-1950's, concomitant with the growth of the domestic petroleum refining industry. Of the other mineral imports, the most important are phosphate rock, sulphur, ferro-alloys, asbestos, tin, and alumina.

### Exports and imports

Particulars of the quantities and values (\$ f.o.b. port of shipment) of the principal minerals and mineral products exported from and imported into Australia during the years 1963 to 1965 are shown in the following table.

### EXPORTS AND IMPORTS OF PRINCIPAL MINERALS AND MINERAL PRODUCTS AUSTRALIA, 1963 TO 1965

(a) Includes lead-copper concentrate.

**Direction of trade**

Australia's minerals are exported to many countries throughout the world, but the principal markets are Japan, United Kingdom, United States, and Europe. Since 1960 Japan has been the principal buyer of Australian minerals. The distribution of exports according to principal destinations, and imports according to principal sources, for the years 1963 to 1965, are shown in the following table.

**VALUE OF OVERSEAS MINERAL TRADE, BY COUNTRY OR REGION  
AUSTRALIA(a), 1963 TO 1965**

Country or region	Value (\$ m f.o.b.)			Percentage		
	1963	1964	1965	1963	1964	1965

(b) Excludes uranium oxide and alumina, details of which are not

### Review of recent developments in the Australian mineral industry

Prior to Year Book No. 52 it was customary to include a series of detailed reviews of the principal commodities produced by the Australian mineral industry and recent developments concerning these commodities. However, with the increasing diversification and development of the industry, it has become impractical to continue these reviews in the Year Book and the reader who wishes to obtain information of this kind is referred to *The Australian Mineral Industry—Annual Review* published by the Bureau of Mineral Resources, Geology and Geophysics. That publication contains comprehensive reviews of mineral commodities of importance to the Australian economy, as well as a general review of the industry's performance during each year. Major developments in the industry, particularly during the last year, are reviewed briefly in subsequent parts of this section.

#### General review, 1966

Expansion of the Australian mineral industry was maintained during 1966 with the preliminary value of mineral production increasing by 15 per cent from \$544 million in 1965 to \$624 million in 1966. The major reasons for this increase in the value of mineral production were the commencement of production on a large scale from three large iron ore developments in Western Australia, improved prices for copper minerals, and increased production of copper and bauxite. The value of exports of minerals and mineral products also increased, in particular because of the commencement of exports of iron ore under long-term contracts, mainly to Japan.

#### Bauxite

The history of the aluminium industry and recent significant developments in the industry were reviewed in previous issues of the Year Book (No. 51, page 1168 and No. 52, page 1048). The year 1966 and early 1967 were periods of continued growth in the industry both in mining and processing as detailed below.

Bauxite production from deposits at Weipa, Queensland, has been increased to a rate of 2.5 million tons per annum following completion of a further stage in the development of the mine and associated township, and of ore treatment and loading facilities. It is expected that production will rise to nearly 5 million tons by the early 1970's. Approximately half the output from Weipa will be used by the Gladstone, Queensland, alumina refinery, a further 110 thousand tons will be shipped to Bell Bay, Tasmania, and the remaining production will be exported.

Bauxite deposits at Gove, Northern Territory, covering reserves of the order of 150 million tons of bauxite, are being developed by a consortium of seven Australian and one overseas company. The consortium plans to construct an alumina plant at Gove by 1971 with an initial capacity of 500,000 metric tons per annum. The ultimate capacity of the plant is to be 2 million metric tons per annum; the plant is to consist of four independent production units, each with an annual capacity of 500,000 metric tons.

#### Alumina

An alumina refinery with a capacity of 600,000 tons per annum at Gladstone, Queensland, which was completed at a cost of \$115 million, was commissioned in March 1967. Plans have already been announced to increase the capacity of the refinery to 900,000 tons per annum, with an eventual capacity of 1,800,000 tons per annum. Plans were also announced to increase the capacity of the alumina refinery at Kwinana, Western Australia, from 410,000 metric tons to 830,000 metric tons per annum by the end of 1969. Bauxite supplies for the Kwinana refinery are obtained from deposits 28 miles away at Jarrahdale, Western Australia, the reserves of which were recently re-assessed from 200 million tons to 500 million tons.

#### Aluminium

Initial construction of an aluminium smelter with a capacity of 40,000 tons per annum at Kurri Kurri near Newcastle, New South Wales, was commenced in 1967 for completion in 1969. An aluminium powder and paste plant, capable of supplying the whole of Australia's needs, is to be established at Bell Bay, Tasmania. A letter of intent has been received by the Western Australian Government regarding the possible establishment of an aluminium smelter at Kwinana in possibly ten to twelve years.

#### Copper

Copper production (copper in mine products) increased to 109,260 tons in 1966, mainly because of resumption of production after the long strike at Mount Isa in late 1964 and early 1965. A \$130 million expansion programme at Mount Isa was completed in 1966 with the commissioning of a new shaft and concentration plant. During the development period when lower grade ore is being extracted, the Mount Isa output will be supplemented by ore from the Young Australia mine, fifty miles south of Cloncurry, Queensland, where known reserves were reported to be sufficient for twelve months operations.

In early 1967 a pilot plant to test the new Worra copper smelting process for the continuous production of metallic copper directly from copper concentrates was completed at Port Kembla, New South Wales.

The basis of the Australian Producers' price for copper was changed in August 1966 from \$870 to \$1,250 per ton to relate to copper prices on the London Metal Exchange, which were significantly higher than the Australian Producers' price. Since August 1966 the Australian Producers' price has been adjusted regularly to reflect movements in London Metal Exchange prices, the price in May 1967 being \$950 per ton.

#### **Gold**

A new gold-copper mine will be developed near Tennant Creek, Northern Territory. The first stage of development, which will cost \$10 million, will have an installed mining capacity of 400,000 tons of ore per annum.

#### **Iron ore**

The year 1966 was one of significant developments in the iron ore mining industry. Production commenced during 1966 from deposits at Mount Tom Price, Mount Goldsworthy and Koolanooka in Western Australia. Development of deposits at Savage River, Tasmania (including the construction of a pelletisation plant at Brickmakers Bay) and at Frances Creek and Mount Bunday, Northern Territory was undertaken during 1966, for production in late 1967 or early 1968.

Development of deposits at Mount Tom Price involved the construction of a railway from the mine to the deepwater port at Dampier, a distance of 182 miles. The development of the Mount Goldsworthy deposits required the construction of seventy miles of railway to the port at Port Hedland. Both projects included the development of port facilities with ore loading equipment, and the dredging of channels to the loading wharves. A two-million tons per annum pelletisation plant is under construction at Dampier and is to commence production in 1968. Details of major export contracts for the sale of iron ore were shown in the previous issue of the Year Book (No. 52, page 1048).

In mid-1967 plans were announced for the development of deposits at Mount Newman, Western Australia, by a consortium of companies from Australia, the United States of America, Japan, and the United Kingdom. Contracts were signed to supply 100 million tons of ore to Japan over fifteen years at an approximate value of \$820 million. The project involves the construction of a 260-mile railway from Mount Newman to Port Hedland together with associated loading and port facilities.

Production commenced during 1967 from deposits at Koolyanobbing, Western Australia. Ore will be shipped on a recently converted standard gauge railway 304 miles to Kwinana, where a blast furnace is to be completed early in 1968. Initially the ore will be shipped to Port Kembla and Newcastle, New South Wales.

Investigation and negotiations for export contracts continued with respect to deposits at Robe River and Nimingarra in Western Australia.

#### **Steel**

In September 1965 it was announced that blast furnace, plate and strip capacity at Port Kembla would be expanded at a cost of \$80 million. The complete expansion programme will include coke ovens, new steel making and primary rolling equipment, and additions to the tin-plate plant. The coke ovens and additions to the tin-plate plant were commissioned during 1966.

#### **Lead and zinc**

The Australian lead-zinc industry experienced one of the most prosperous periods of its history between 1963 and 1965 as a result of higher prices for its products. Prices fell slightly in 1966, however, which resulted in lower values for mine production of lead and zinc.

A new shaft is to be sunk at one of the four mines at Broken Hill, New South Wales, at an estimated cost of \$7 million.

Further exploration has proceeded at the large zinc-lead deposit at McArthur River in the Northern Territory. Metallurgical testing of the zinc-lead ores of this deposit continued, but satisfactory mineral separation has not yet been achieved.

#### **Black coal**

There has been a significant revival in the Australian black coal industry in recent years as a result of increased exports and increased consumption of black coal in iron and steel production and electricity generation. These increases have more than balanced reduced consumption in some applications due to competition from fuel oil.

The expansion of the export trade has been of major significance. In 1955 exports were about 200,000 tons valued at about \$1.7 million; in 1966 exports were 8.3 million tons valued at \$65.6 million. These increased exports have been almost wholly to Japan for use in the iron and steel industry. As a result of this increased demand, new mines have been opened and are under development in Queensland and New South Wales, and many established mines are being expanded. Exploration for coal has been stimulated, and in early 1967 there were indications that a further rich deposit of coking coal had been located in Queensland.

Details of agreements for exports of coal were shown in the last issue of the Year Book (No. 52, page 1049). During 1966 a further major contract for the export of coal from the Moura, Queensland, field of 15 million tons to Japan over ten years from 1968 was announced.

### **Petroleum**

Petroleum exploration in Australia continued to expand in 1966 and early 1967, and encouraging discoveries during this period, although still small by world standards, have been a stimulus to further exploration. Developments in the last few years were reviewed in previous issues of the Year Book (No. 48 pages 1094-8, No. 51, page 1179 and No. 52, page 1050). A summary of developments in 1966 and early 1967 follows.

Australia now has four commercial oilfields, Moonie, Alton and Conloi in Queensland (connected by pipeline to Brisbane, Queensland), and at Barrow Island, Western Australia, capable of supplying about 6 per cent of the nation's requirements. The oilfield at Barrow Island was commissioned in April 1967 when the first shipment of oil was despatched to Kwinana, Western Australia, for refining.

Commercial production of natural gas, currently restricted to the Roma field in Queensland, is planned for deposits at Gidgealpa and Moomba in South Australia, and off-shore Victoria. Further expansion of production from the Roma field is envisaged. It is expected that a pipeline from the Roma field to Brisbane, at a cost of \$11 million, is to be completed by the end of 1968. A pipeline is planned from Gidgealpa and Moomba field 500 miles to Adelaide. A pipeline from off-shore deposits on the Gippsland shelf of Victoria will serve Melbourne and areas of Victoria. An absorption plant is under construction at Sale, Victoria, and off-shore platforms for drilling production wells are also under construction.

Considerable attention has been given recently to off-shore exploration, particularly off the Victorian coast where several substantial gas and oil flows have been discovered. Several off-shore drilling rigs of various types have been transported from other countries and a semi-submersible rig has been constructed at the shipbuilding works at Whyalla, South Australia.

Proposals have been made for uniform Australian legislation to control and administer the off-shore search for oil. These proposals are outlined on pages 1068-9

Early in 1965 the Tariff Board conducted a public enquiry to determine an appropriate price for Australian crude oil, having regard to the Commonwealth Government's desire to encourage the search for oil and the consequent need to offer sufficient incentive to exploration companies. At the same time the Government indicated that it was anxious to prevent or minimise increased costs of petroleum products to consumers, and to ensure that refineries using Australian crude oil were not detrimentally affected in relation to other refineries. Evidence was heard from oil exploration, marketing and refining interests, government officials, coal and power interests, and major users of refined petroleum products. The Tariff Board subsequently recommended that Australian crude oil should be valued at \$US 2.48 a barrel at the nearest refining centre, plus a differential for the quality of the oil produced. The Board also recommended an additional margin of 25 cents a barrel to provide an incentive for increased exploration activity. The Government adopted the Tariff Board's recommendations, but raised the incentive margin to 75 cents. As a result, the price for Moonie crude is \$US 3.50 a barrel delivered Brisbane, made up as follows: crude oil value, \$US 2.48; incentive margin, \$US 0.75; quality differential, \$US 0.27. This pricing structure will operate for five years, but the Government will consider reviewing the valuation during this period if it considers that the incentive to exploration has proved inadequate.

In order to ensure that local crude oil is used in Australian refineries, the Government has also adopted the Tariff Board's recommendation to impose penal import duties of 0.8 cents a gallon on crude oil and 2.4 cents a gallon on motor spirit to be paid by those companies which do not take their share of local crude oil. The share of local crude to be taken will be based on the importer's share of total imports of refinery feedstock or refined products or both.

Any oil found in the Territory of Papua and New Guinea will be covered by these policies in the same way as oil found in Australia.

### **Mineral exploration**

Increased interest in the potentialities of the mining industry in Australia since 1960 have seen a considerable expansion in mineral exploration, and several major discoveries have resulted. Some discoveries have been mentioned in earlier Year Books or other parts of this section. Details of other major discoveries follow.

### **Nickel**

Significant discoveries of nickel have been made near Kambalda, Western Australia. Mining operations at Kambalda commenced in mid-1967, and the company concerned has obtained a contract to sell 40,000 tons of contained nickel over ten years to Japan.

### **Phosphate**

Major deposits of phosphate rock were discovered during 1966 near Duchess in north-west Queensland. The deposits are large by world standards, and feasibility studies are in progress.

### **Silver-lead-zinc**

A discovery of a silver-lead-zinc deposit was made by the Bureau of Mineral Resources at Rum Jungle in the Northern Territory towards the end of 1966. Further drilling is continuing.

## CHAPTER 27

### MANUFACTURING INDUSTRY

Further detail on the subjects dealt with in this chapter is contained in the annual printed bulletins *Manufacturing Industry* and *Manufacturing Commodities*, formerly *Secondary Industries*, Parts I and II. Information is also published, as soon as the data can be prepared, in a series of thirty-five annual mimeographed bulletins, *Manufacturing Industries*, each relating to a particular industry or group of industries. Details of the industries covered are contained in Statistical and other official publications of Australia of the Miscellaneous chapter. Advance annual information is published in mimeographed form in *A Summary of Principal Statistics of Factories* and in *Principal Factory Products*. Current information on factory products is available in the *Quarterly Summary of Australian Statistics*, the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Monthly Bulletin of Production Statistics*. Preliminary annual statements (*Factory Statistics*) and *Principal Statistics of Factories, by Class of Industry* and a monthly statement (*Production Statistics*) are also issued.

In addition to the above-mentioned publications, there is also a series of fifty-one *Monthly Production Summaries*, each relating to the production of a particular commodity or group of commodities (see reference above to Statistical publications).

In this issue of the Year Book factory statistics have been advanced by two years to 1965-66, but details for the year 1964-65 have been omitted in respect of some tables. The information thus omitted is available in *Manufacturing Industry*, 1964-65, Bulletin No. 2 and in the mimeographed statement *A Summary of Principal Statistics of Factories*, No. 17, 1964-65.

#### Introduction

A complete statistical account of the growth of the manufacturing industry in Australia cannot be given, as the necessary statistics were not collected by the several States on a definite and uniform basis prior to 1906. A standard classification of manufacturing industries was formulated at a conference of Australian statisticians in 1902 and adopted by all States in 1906, and figures on this basis were prepared for 1907 and subsequent years.

An historical summary of the development of the manufacturing industry in Australia since 1901 is contained in earlier issues of the Year Book (see No. 51, pages 143-4).

#### Decentralisation of manufacturing industries

The decentralisation of secondary industries, and the steps taken by Commonwealth and State Governments towards its development, are referred to in previous issues of the Year Book (see No. 51, page 144).

#### Bounties on manufacture

Bounties are paid by the Commonwealth Government to encourage local manufacture of certain products. The statutory provisions usually fix a term of operation of the bounty, provide for payment at a rate varying according to changes in the corresponding customs duty, specify the annual maximum amount of bounty payable, and require the bounty to be withheld or reduced if a manufacturer's net profit in production of the commodity exceeds a certain rate, or if rates of wages and conditions of employment in production of the commodity do not conform to prescribed standards. (See Chapter 20, Public Finance for products on which bounties are paid.)

#### Standardisation

The *Commonwealth Scientific and Industrial Research Organization* has functions concerned with the improvement of efficiency in industrial operations. For further particulars see the chapter Education, Cultural Activities and Research of this Year Book.

The *Standards Association of Australia* is the national standardising organisation, and issues Australian standard specifications and test methods for materials and products and standard codes of practice.

The Standards Association was established in July 1929 by the amalgamation of the Australian Commonwealth Engineering Standards Association and the Australian Commonwealth Association of Simplified Practice. It was incorporated by Royal Charter in 1950. It is an independent

body in close touch with modern industrial requirements and has the full recognition and support of the Commonwealth and State Governments and of industry. Half of its funds are provided by Commonwealth Government grant, the remainder coming from membership subscriptions, other contributions, and sale of publications. Organisations, companies and individuals are eligible for subscription membership.

The governing body of the Association is a Council, on which industry is fully represented, together with official representatives of the Commonwealth and State Governments and their technical departments, and of scientific, professional and commercial organisations. Voluntary assistance is rendered in the drafting of specifications and codes by several thousand individuals who are experts in their particular fields. They are organised into some hundreds of committees. These committees are grouped under broad industry divisions, including building construction and civil engineering, electrical engineering, mechanical engineering, chemical, timber, plastics, packaging, and iron and steel.

The Association publishes standards of many kinds for the benefit of industry and commerce. Its specifications provide a suitable standard of performance, quality and dimension, and an equitable basis for tendering. They help to eliminate redundant qualities and sizes. They enable purchasers to obtain their requirements with greater assurance of satisfaction, with more rapid delivery, and without the necessity of drafting individual specifications. As a rule the Association creates national standards based on Australian practices, but attention is also given to international recommendations issued by the international standards bodies referred to below. There is also some endorsement of British standards, with or without modification. More than 1,500 Australian standards have been published and more than 600 projects are in hand.

The underlying principles covering the preparation of the specifications and codes are that they shall be in accordance with the needs of industry; that the common interests of producer and consumer be maintained; that periodical revision should keep the work abreast with progress; and that standardisation be arrived at by general consent without coercion. The Association has two specialised libraries, one in Sydney and one in Melbourne, containing the national standards of all countries with standards organisations. These libraries serve to provide necessary material for committee work and also give freely a service to those concerned with standards or related matters, e.g. to importers and exporters seeking details of practice in other countries.

The Association has international affiliations and is a member, representing Australia, of the International Organization for Standardization (ISO) and of the International Electro-technical Commission (IEC). Close links are maintained with the British Standards Institution and the standards organisations of other British Commonwealth countries. The Association is the Australian agent of the British Standards Institution and can supply all British standards. Its functions are linked to some extent with those of the National Association of Testing Authorities in that whereas the Standards Association establishes and publishes standard test methods, the Association of Testing Authorities works to ensure that registered testing laboratories maintain their level of competence.

The headquarters office of the Association is in Sydney and there is a major branch office in Melbourne. Branch offices are located also in other capital cities and at Newcastle, New South Wales.

*The National Association of Testing Authorities* organises testing facilities throughout Australia to serve private and governmental needs.

Membership is open to authorities whose testing laboratories conform to the standards of staffing and operation defined by the Association. Testing authorities may register their laboratories voluntarily. The Association assesses the competence of the laboratories and ensures that their standards of competence are maintained. Certificates of test issued by registered laboratories may be endorsed in the name of the Association. NATA endorsed test certificates are generally accepted by governmental, industrial and commercial interests.

Laboratories are registered for performance of specific tests in the fields of metrology, mechanical testing, electrical testing, optics and photometry, non-destructive testing, heat and temperature measurement, chemical testing, biological testing, and acoustic and vibration measurement. At the end of 1966 there were 570 laboratories registered with the Association, which had a further eighty applications for registration before it.

*The Industrial Design Council of Australia* was established in June 1958 for the purpose of encouraging better design in Australian-made goods and fostering an appreciation of good design throughout the community. It has a membership fully representative of industry, commerce and government, together with designers and educationists and is financed by donations from industry and by Commonwealth grants. The Council is responsible for the Australian Design Index which provides a detailed, illustrated record of well-designed Australian products. A Record of Designers has been set up to register information about industrial designers and their work. The Council is also concerned, in co-operation with education authorities, with raising the standard of training in industrial design. For further particulars see Year Book No. 51, page 145.

### Definitions in factory statistics

The statistics relating to factories have been compiled from tabulations made by the Deputy Commonwealth Statisticians in the several States from returns supplied to them annually by manufacturers in accordance with the statistical Acts of the States and the Commonwealth. A return must be supplied in respect of every *factory*, which is defined for this purpose as an establishment where four or more persons are employed or where power (other than manual) is used in any manufacturing process. This definition includes factories in educational and charitable institutions, reformatories, and other public institutions (except penitentiaries), but does not cover smallgoods makers, laundries, photography studios, florists and seedsmen, or most abattoirs. Details relating to small establishments not classified for statistical purposes as factories are not included in the figures contained in this chapter.

If a manufacturing business is conducted in conjunction with any other activity, particulars relating to the manufacturing section only are included in the statistics. Where two or more industries are conducted in the same establishment, a separate return is obtained for each industry if practicable.

Manufacturers are requested to state in their returns particulars of the number, age, etc. of their employees, salaries and wages paid, the value of premises and equipment, the horse-power of machinery, the value of raw materials (including containers), tools replaced, etc., the values and in most cases the quantities of fuel used, and quantities and values of principal materials used and articles produced. The returns obtained from manufacturers are not intended to show a complete record of the income and expenditure of factories nor to show the profits or losses of factories collectively or individually.

All persons employed in the manufacturing activities of a factory are counted as factory employees, including working proprietors and 'out-workers'.

The average number of persons employed is quoted on two different bases, the average during the period of operation and the average over the whole year. Of these, the former is simply the aggregate of the average number of persons employed in each factory during its period of operation (whether the whole or only part of the year). This average is used only in respect of details relating to classification according to the number of persons employed. The latter, which is used in all other instances, is calculated by reducing the average number working in the factories (irrespective of period of operation) to the equivalent number working for a full year.

*Working proprietors* are included in all employment figures other than those relating to monthly employment and age dissections, but salaries and wages paid in all cases exclude drawings by working proprietors.

*Value of materials used* includes the value, in the usual sense, of the materials used, stores used, containers, tools replaced, and materials used in repairs to plant.

*Value of fuel, etc., used* includes also the cost of power and light used, of lubricants and of water.

The *value of factory output* is the value of the goods manufactured or their value after passing through the particular process of manufacture concerned, and includes the amount received for repair work, work done on commission and receipts for other factory work. The basis of valuation of the output is the selling value of the goods at the factory, exclusive of all delivery costs and charges and excise duties, but inclusive of bounty and subsidy payments to the manufacturer of the finished article. In the special case of government factories and workshops, the value of output is, in most cases, estimated by adding ten per cent to the value of materials and fuel used and other factory costs, including salaries and wages paid.

The *value of production* is the value added to raw materials by the process of manufacture. It is calculated by deducting from the value of factory output the value (at the factory) of the materials used, containers and packing, power, fuel and light used, tools replaced, and materials used in repairs to plant (but not depreciation charges). In the process of manufacture many goods are treated in several industries, the output of one becoming the raw material of another, so that such commodities are counted more than once in the aggregate value of output and of raw materials. Examples are raw sugar passing from the mills to the refinery, metals from the smelters which become raw materials in establishments concerned in the production of metal goods, timber from the sawmills used in furniture factories and in joinery, and synthetic resins from chemical works used to make plastic products. On the other hand, the aggregate value of production is assessed without duplication, the value added by each industry being taken into account once only. For this reason, the value of production, and not the value of output, is used as a measure of activity in the manufacturing industries as a whole.

The *rated horse-power of engines used* for factories other than central electric stations relates to the rated horse-power of engines ordinarily in use.

Statistics relating to factory activity in the Australian Capital Territory and Northern Territory are included in the figures contained in this chapter as from 1 July 1964, unless otherwise indicated.

A standard classification of manufacturing industries is used in compiling statistical data relating to factories in Australia. It is designed in accordance with decisions of the 1945 Conference of Statisticians, and represents a revision and extension of a new classification which was introduced in 1930-31, replacing the revised versions of the original classification formulated in 1902.

Owing to limitations of space, details published in general tables in this chapter are confined either to the sixteen classes of industry or to total factory activity. Some particulars of certain of the sub-classes shown below are published in the latter portion of this chapter, and full details for all sub-classes may be found in the bulletin *Manufacturing Industry* (previously entitled *Secondary Industries, Part I—Factory and Building Operations*).

The classes and sub-classes in the current classification of factories are as follows.

### CLASSIFICATION OF FACTORIES

#### CLASS 1. TREATMENT OF NON-METALLIFEROUS MINE AND QUARRY PRODUCTS

1. Coke works
2. Briquetting and pulverised coal
3. Carbide
4. Lime, plaster of paris, asphalt
5. Fibrous plaster and products
6. Marble, slate, etc.
7. Cement, portland
8. Asbestos cement sheets and mouldings
9. Other cement goods
10. Other

#### CLASS 2. BRICKS, POTTERY, GLASS, ETC.

1. Bricks and tiles
2. Earthenware, china, porcelain, and terracotta
3. Glass (other than bottles)
4. Glass bottles
5. Other

#### CLASS 3. CHEMICALS, DYES, EXPLOSIVES, PAINTS, OILS, GREASE

1. Industrial and heavy chemicals and acids
2. Pharmaceutical and toilet preparations
3. Explosives (including fireworks)
4. White lead, paints and varnish
5. Oils, vegetable
6. Oils, mineral
7. Oils, animal
8. Boiling-down, tallow-refining
9. Soap and candles
10. Chemical fertilisers
11. Inks, polishes, etc.
12. Matches
13. Other

#### CLASS 4. INDUSTRIAL METALS, MACHINES, CONVEYANCES

1. Smelting, converting, refining, rolling of iron and steel
2. Foundries (ferrous)
3. Plant, equipment and machinery, including machine tools
4. Other engineering
5. Extracting and refining of other metals; alloys
6. Electrical machinery, cables and apparatus
- 7-16. Construction and repair of vehicles (10 groups)
- 17, 18. Ship and boat building and repairing, marine engineering (government and other)
19. Cutlery and small hand tools
20. Agricultural machines and implements
- Non-ferrous metals—
21. Rolling and extrusion
22. Founding, casting, etc.
24. Sheet metal working, pressing and stamping
25. Pipes, tubes and fittings—ferrous
26. Wire and wire working (including nails)
27. Stoves, ovens and ranges
28. Gas fittings and meters
29. Lead mills
30. Sewing machines
31. Arms, ammunition (excluding explosives)
32. Wireless and amplifying apparatus
33. Other metal works

#### CLASS 5. PRECIOUS METALS, JEWELLERY, PLATE

1. Jewellery
2. Watches and clocks (including repairs)
3. Electroplating (gold, silver, chromium, etc.)

#### CLASS 6. TEXTILES AND TEXTILE GOODS (NOT DRESS)

1. Cotton spinning
2. Cotton spinning and weaving
3. Wool—carding, spinning, weaving
4. Hosiery and other knitted goods
5. Silk, natural
6. Rayon, acrylics and other synthetic fibres
7. Flax mills
8. Rope and cordage
9. Canvas goods, tents, tarpaulins, etc.
10. Bags and sacks
11. Textile dyeing, printing and finishing
12. Other

#### CLASS 7. SKINS AND LEATHER (NOT CLOTHING OR FOOTWEAR)

1. Furriers and fur-dressing
2. Woolscouring and feltmongery
3. Tanning, currying and leather-dressing
4. Saddlery, harness and whips
5. Machine belting (leather or other)
6. Bags, trunks and other goods of leather and leather substitutes

#### CLASS 8. CLOTHING (EXCEPT KNITTED)

1. Tailoring and ready-made clothing
2. Waterproof and oilskin clothing
3. Dressmaking, hemstitching
4. Millinery
5. Shirts, collars, underclothing
6. Foundation garments
7. Handkerchiefs, ties and scarves
8. Hats and caps
9. Gloves
10. Boots and shoes (not rubber)
11. Boot and shoe repairing
12. Boot and shoe accessories
13. Umbrellas and walking sticks
14. Dyeworks and cleaning, etc.
15. Other

#### CLASS 9. FOOD, DRINK AND TOBACCO

1. Flour-milling
2. Cereal foods and starch
3. Animal and bird foods
4. Chaffcutting and corncrushing
5. Bakeries (including cakes and pastry)
6. Biscuits
7. Sugar-mills
8. Sugar-refining
9. Confectionery (including chocolate and icing sugar)
10. Jam, fruit and vegetable canning
11. Pickles, sauces, vinegar
12. Bacon curing
13. Butter factories
14. Cheese factories

**CLASS 9. FOOD, DRINK AND TOBACCO—continued**

15. Condensed and dried milk factories
16. Margarine
17. Meat and fish preserving
18. Condiments, coffee, spices
19. Ice and refrigerating
20. Salt
21. Aerated waters, cordials, etc.
22. Breweries
23. Distilleries
24. Wine-making
25. Cider and perry
26. Malting
27. Bottling
28. Tobacco, cigars, cigarettes, snuff
29. Dehydrated fruit and vegetables
30. Ice cream
31. Sausage casings
32. Arrowroot
33. Other

**CLASS 10. SAWMILLS, JOINERY, BOXES, ETC., WOOD TURNING AND CARVING**

1. Sawmills
2. Plywood mills (including veneers)
3. Bark mills
4. Joinery
5. Cooperage
6. Boxes and cases
7. Woodturning, woodcarving, etc.
8. Basketware and wickerware (including sea-grass and bamboo furniture)
9. Perambulators (including pushers and strollers)
10. Wall and ceiling boards (not plaster or cement)
11. Other

**CLASS 11. FURNITURE OF WOOD, BEDDING, ETC.**

1. Cabinet and furniture making (including billiard tables and upholstery)
2. Bedding and mattresses (not wire)
3. Furnishing drapery
4. Picture frames
5. Blinds

**CLASS 12. PAPER, STATIONERY, PRINTING, BOOKBINDING, ETC.**

1. Newspapers and periodicals
- Printing—
2. Government
3. General, including bookbinding
4. Manufactured stationery
5. Stereotyping, electrotyping
6. Process and photo engraving
7. Cardboard boxes, cartons and containers
8. Paper bags
9. Paper-making
10. Pencils, penholders, chalks, crayons
11. Other

**CLASS 13. RUBBER**

1. Rubber goods (including tyres made)
2. Tyre retreading and repairing

**CLASS 14. MUSICAL INSTRUMENTS**

1. Gramophones and gramophone records
2. Pianos, piano-players, organs
3. Other

**CLASS 15. MISCELLANEOUS PRODUCTS**

1. Linoleum, leather-cloth, oil-cloth, etc.
2. Bone, horn, ivory, and shell
3. Plastic moulding and products
4. Brooms and brushes
5. Optical instruments and appliances
6. Surgical and other scientific instruments and appliances
7. Photographic material (including developing and printing)
8. Toys, games and sports requisites
9. Artificial flowers
10. Other

**CLASS 16. HEAT, LIGHT, AND POWER**

- 1-3. Electric light and power
- 4-6. Gas works

**Factory development since 1901, Australia**

The development of the manufacturing industries in Australia at intervals since 1901 is summarised in the following table.

**FACTORIES: AUSTRALIA(a), 1901 TO 1965-66**

Year	Factories	Employment(b)	Salaries and wages paid(c)	Value of—				
				Materials and fuel used	Output	Production (d)	Land and buildings	Plant and machinery
	No.	'000	\$'000	\$'000	\$'000	\$'000	\$'000	\$'000
1901 . . . . .	11,143	198	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
1911 . . . . .	14,455	312	55,056	163,526	266,044	102,518	65,402	63,032
1920-21 . . . . .	17,113	367	125,864	427,118	647,986	220,868	121,662	137,310
1930-31 . . . . .	21,751	339	124,910	344,978	581,598	236,620	224,422	248,996
1940-41 . . . . .	27,300	650	275,838	773,762	1,289,590	515,828	288,188	322,712
1950-51 . . . . .	43,147	969	983,436	2,613,926	4,301,670	1,687,744	605,570	673,230
1960-61 . . . . .	57,782	1,145	2,289,230	6,115,930	10,465,765	4,349,835	2,389,140	2,785,565
1961-62 . . . . .	58,450	1,121	2,286,550	6,113,465	10,508,098	4,394,635	2,809,641	3,052,079
1962-63 . . . . .	59,147	1,168	2,446,694	6,688,062	11,483,303	4,795,241	3,006,820	3,286,533
1963-64 . . . . .	59,375	1,210	2,651,620	7,372,682	12,642,686	5,270,003	3,204,685	3,480,673
1964-65 . . . . .	61,042	1,269	2,993,709	8,140,600	14,037,355	5,896,754	3,505,859	3,766,253
1965-66 . . . . .	61,686	1,294	3,162,769	8,443,953	14,719,308	6,275,355	3,776,698	4,156,285

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory. (b) 1901 and 1911—average employment during period of operation. Later years relate to average employment over whole year. Working proprietors are included in all years. (c) Excludes drawings by working proprietors. (d) Value added in process of manufacture (i.e. value of output less value of materials and fuel, etc. used).

## Number of factories

Number in each State and Territory

## FACTORIES: NUMBER, STATES AND TERRITORIES, 1961-62 TO 1965-66

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust. (a)

**Classification of factories by number of persons employed**

The classification of factories in the tables on pages 1111-13 is based on the average weekly number of persons employed during the period of operation (including working proprietors).

The following two tables show the number of factories and the average number of persons employed therein, classified by the average number of persons employed.

**FACTORIES: NUMBER OF FACTORIES AND PERSONS EMPLOYED, BY AVERAGE

**Employment in factories****Number employed**

All persons employed in the manufacturing activities of a factory, including proprietors who work in their own business and 'out-workers' (see page 1117), are counted as factory employees, while those employed in selling and distributing, such as salesmen, travellers, collectors, carters employed solely on outward delivery of manufactured goods, and retailing storemen, are excluded. From 1960-61 the occupational groupings collected have been—(i) working proprietors; (ii) managerial and clerical staff including salaried managers and working directors; (iii) chemists, draftsmen and other laboratory and research staff; and (iv) foremen and overseers, workers in factory and others, in which were amalgamated the three former groups—(iv) foremen and overseers; (v) skilled and unskilled workers; (vi) carters (excluding delivery only), messengers, and persons working regularly at home.

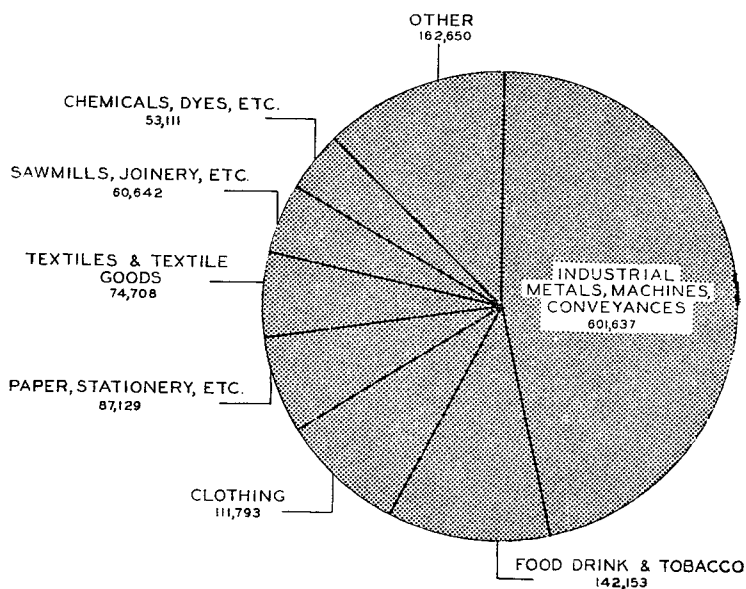

Statistics of factory employment represent the equivalent average number employed over a full year of fifty-two weeks except for the classification of factories according to the number of persons employed (see page 1111), which is based on the average number employed over the period worked.

Particulars of the numbers employed in Australia, the increase in employment, and the rate per cent of such increase are given in the table on page 1115.

# FACTORIES: AVERAGE NUMBER OF PERSONS EMPLOYED

BY INDUSTRY

AUSTRALIA, 1965-66

Australian Capital Territory . . . . .	135	618	29	2,713	3,495
<i>Total males . . . . .</i>	<i>33,621</i>	<i>107,711</i>	<i>23,081</i>	<i>808,998</i>	<i>973,411</i>
<i>Total females . . . . .</i>	<i>6,408</i>	<i>67,097</i>	<i>2,611</i>	<i>244,296</i>	<i>320,412</i>
<b>Total persons . . . . .</b>	<b>40,029</b>	<b>174,808</b>	<b>25,692</b>	<b>1,053,294</b>	<b>1,293,823</b>

(a) Includes salaried managers and working directors home.

(b) Includes persons working regularly at home.

The term 'outworker' or 'homeworker' has acquired a special meaning in connection with manufacturing industries, and includes only persons to whom work is given out by factories to be done at home. Persons working regularly at home for factories are included in the group foremen, overseers, workers in factory, and others, and separate details are not available.

## Monthly employment

The following tables show the number of persons (excluding working proprietors) employed in factories on the last pay-day of each month.

**FACTORIES: MONTHLY EMPLOYMENT, BY SEX, AUSTRALIA(a), 1961-62 TO 1965-66**  
(EXCLUDING WORKING PROPRIETORS)

<b>Australia(a)</b>	<b>-3.45</b>	<b>5.90</b>	<b>4.65</b>	<b>6.81</b>	<b>2.80</b>

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

Minus sign (-) indicates decrease.

**Masculinity of persons employed**

The following table shows the proportion of males to females employed in factories in each State and Territory.

**FACTORIES: MASCUINITY(a) OF PERSONS EMPLOYED  
STATES AND TERRITORIES, 1961-62 TO 1965-66**

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.(b)
1961-62	312	262	481	473	646	464	n.a.	n.a.	326
1962-63	306	255	469	466	644	480	n.a.	n.a.	319
1963-64	301	251	466	457	639	467	n.a.	n.a.	315
1964-65	294	245	456	441	623	461	980	444	307
1965-66	293	241	449	434	584	447	1,055	483	304

(a) Number of males per 100 females. (b) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

**Employment of females in particular industries**

The majority of females in manufacturing industries are employed in four classes, namely: 4., Industrial metals, machines, etc.; 6., Textiles; 8., Clothing; and 9., Food, drink and tobacco. In 1965-66 these industries accounted for 77.52 per cent of all females in factories. In two classes only did the number of females exceed the number of males—in Class 6. Textiles, where there were 141 females to every 100 males, and in Class 8., Clothing, with 287 females to every 100 males. The following table shows the average number of males and females employed in each of the four classes.

**MALES AND FEMALES EMPLOYED IN PARTICULAR INDUSTRIES  
STATES AND TERRITORIES, 1965-66**

Class of industry	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
<b>Males—</b>									
Industrial metals, etc.	222,535	158,683	41,849	61,244	26,099	10,766	719	1,001	522,896
Textiles and textile goods (not dress)	9,076	17,543	908	1,294	399	1,787	..	..	31,007

**Children employed in factories****Number of children employed**

In the returns for the various States and Territories the term 'child' denotes any person under sixteen years of age. The following table shows the number of children of each sex employed in manufacturing industries in June of each year from 1964 to 1966.

**FACTORIES: CHILDREN(a) EMPLOYED  
STATES AND TERRITORIES, JUNE 1964 TO JUNE 1966**

State or Territory	June 1964			June 1965			June 1966		
	Males	Females	Persons	Males	Females	Persons	Males	Females	Persons
New South Wales .	2,854	2,215	5,069	2,435	1,829	4,264	2,212	1,748	3,960
Victoria .	2,072	2,207	4,279	1,690	1,614	3,304	1,525	1,488	3,013
Queensland .	1,987	1,494	3,481	1,835	1,413	3,248	1,369	1,132	2,501
South Australia .	677	721	1,398	528	539	1,067	471	471	942
Western Australia .	919	397	1,316	962	409	1,371	944	430	1,374
Tasmania .	123	96	219	121	107	228	126	87	213
Northern Territory .	n.a.	n.a.	n.a.	10	..	10	3	..	3
Aust. Capital Territory .	n.a.	n.a.	n.a.	33	9	42	40	8	48
Australia(b)	8,632	7,130	15,762	7,614	5,920	13,534	6,690	5,364	12,054

(a) Under sixteen years of age. (b) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

**Industries employing children**

The distribution of children employed in factories and the proportion of children employed to total employees, by the main classes of industry employing persons under sixteen years of age, are shown in the following table.

**FACTORIES: CHILDREN(a) EMPLOYED, BY SEX, AND CLASS OF INDUSTRY  
AUSTRALIA, JUNE 1966**

Class of industry	Children employed (a)		Total employees (b)		Proportion (per cent) of children employed to total employees (b)	
	Males	Females	Males	Females	Males	Females
Industrial metals, machines, conveyances .	3,245	548	507,907	78,294	0.64	0.70
Textiles and textile goods (not dress) .	210	654	30,379	41,966	0.69	1.56
Clothing (except knitted) .	304	2,589	24,222	80,718	1.26	3.21
Food, drink and tobacco .	870	581	95,414	41,283	0.91	1.41
Sawmills, joinery, boxes, etc. .	649	84	53,131	4,098	1.22	2.05
Furniture of wood, bedding, etc. .	280	87	16,519	5,177	1.70	1.68
Paper, stationery, printing, bookbinding etc. .	574	459	62,661	23,738	0.92	1.93
All other industries .	558	362	150,330	37,622	0.37	0.96
Total .	6,690	5,364	940,563	312,896	0.71	1.71

(a) Under sixteen years of age. (b) Excludes working proprietors.

**Apprenticeship**

Acts are in force in all States for the regulation of the age at which children may be employed in gainful occupations. Legislative provision is also made for the regulation of apprenticeship under the various State Factories Acts or Arbitration Acts. These Acts, while laying down general principles, leave to the wages tribunals the actual determination of the conditions under which apprentices may be employed.

**Power equipment in factories**

Since 1936-37 statistics of power equipment in factories relate to the 'rated horsepower' of engines ordinarily in use and engines in reserve or idle, omitting obsolete engines. In addition, particulars of the power equipment of central electric stations are collected in greater detail. To avoid duplication it is essential that some distinction should be made between central electric stations and other classes of industries. In the following tables central electric stations have been treated separately from other factories.

**Rated horse-power of engines in factories other than central electric stations**

The following table shows the total number of factories and the total rated horsepower of engines and electric motors ordinarily in use and in reserve or idle during 1965-66.

**FACTORIES(a): TOTAL RATED HORSEPOWER OF ENGINES AND ELECTRIC MOTORS, STATES AND TERRITORIES, 1965-66**

State or Territory	Factories(a)	Rated horsepower of engines and motors	
		Ordinarily in use(b)	In reserve or idle (omitting obsolete)
New South Wales . . . . .	24,482	3,155,277	438,596
Victoria . . . . .	17,958	1,993,293	260,944
Queensland . . . . .	5,962	798,747	108,749
South Australia . . . . .	6,035	728,025	62,317
Western Australia . . . . .	4,821	371,888	53,336
Tasmania . . . . .	1,778	330,030	49,419
Northern Territory . . . . .	180	6,290	773
Australian Capital Territory . . . . .	217	12,838	1,891
<b>Australia . . . . .</b>	<b>61,433</b>	<b>7,396,388</b>	<b>976,025</b>

(a) Includes gas works but excludes central electric stations, details of which are shown on pp. 1124-5. (b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

**Rated horsepower of engines and electric motors ordinarily in use, by type**

Particulars of the types and the total rated horsepower of engines, etc., ordinarily in use in factories are given in the two following tables.

**FACTORIES(a): TOTAL RATED HORSEPOWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, BY TYPE, STATES AND TERRITORIES, 1965-66**

State or Territory	Steam		Internal combustion (all types)	Water	Motors driven by electricity		Total (b)(c)
	Reciprocating	Turbine			Purchased	Own generation (d)	
New South Wales . . . . .	50,835	259,105	64,198	10	2,781,129	135,248	3,155,277
Victoria . . . . .	16,294	95,919	55,283	890	1,824,907	68,823	1,993,293
Queensland . . . . .	48,213	190,435	27,112	..	532,987	175,270	798,747
South Australia . . . . .	3,530	56,534	11,262	..	656,699	32,019	728,025
Western Australia . . . . .	8,230	13,599	32,843	..	317,216	7,941	371,888
Tasmania . . . . .	658	..	10,184	1	319,187	689	330,030
Northern Territory . . . . .	..	..	188	..	6,102	..	6,290
Australian Capital Territory . . . . .	15	30	125	..	12,668	..	12,838
<b>Australia . . . . .</b>	<b>127,775</b>	<b>615,622</b>	<b>201,195</b>	<b>901</b>	<b>6,450,895</b>	<b>419,990</b>	<b>7,396,388</b>

(a) Includes gas works but excludes central electric stations, details of which are shown on pp. 1124-5.

(b) Excludes motors driven by electricity generated in factories not classified as central electric stations.

(c) Excludes particulars in column (d).

**FACTORIES(a): TOTAL RATED HORSEPOWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE, BY TYPE, AUSTRALIA(b) 1961-62 TO 1965-66**

Year	Steam		Internal combustion (all types)	Water	Motors driven by electricity		Total (c)(d)
	Reciprocating	Turbine			Purchased	Own generation (e)	
1961-62. . . . .	169,287	359,631	189,649	1,092	5,025,141	308,740	5,744,800
1962-63. . . . .	165,312	397,213	193,309	900	5,376,452	322,828	6,133,186
1963-64. . . . .	154,628	439,121	198,597	840	5,733,810	335,580	6,526,996
1964-65. . . . .	147,417	477,268	194,458	891	6,090,766	362,719	6,910,800
1965-66. . . . .	127,775	615,622	201,195	901	6,450,895	419,990	7,396,388

(a) Includes gas works but excludes central electric stations, details of which are shown on pp. 1124-5.

(b) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory. (c) Excludes motors driven by electricity generated in factories not classified as central electric stations. (d) Excludes particulars in column (e).

**Rated horsepower of engines and electric motors ordinarily in use, by class of industry**

The next table shows the total rated horsepower of engines and electric motors ordinarily in use in the various classes of industry in each State and Territory.

**FACTORIES(a): TOTAL RATED HORSEPOWER OF ENGINES AND ELECTRIC MOTORS ORDINARILY IN USE(b), BY CLASS OF INDUSTRY, STATES AND TERRITORIES, 1965-66**

## Value of production, materials used, salaries and wages

In all tables relating to salaries and wages paid in factories the amounts drawn by working proprietors are excluded.

The gross value of factory output for 1965-66 was \$14,719 million, of which \$7,957 million was the value of the materials used, including containers, etc., tools replaced, and repairs to plant and buildings, and \$487 million the value of the power, fuel, light, water, and lubricating oil used. The difference between the sum of the last two amounts and the gross value of output, namely, \$6,275 million, represents the net value of factory production, defined as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'. Depreciation, however, is not deducted (*see p. 1130*). The gross value of factory output and the value of materials used each contain inherent elements of duplication, as the output of some factories becomes the materials used in other factories.

## Salaries and wages paid

*By class of industry.* The amounts of salaries and wages paid in the various classes of industry in each State and Territory are shown in the following table.

FACTORIES: SALARIES AND WAGES PAID, BY CLASS OF INDUSTRY  
STATES AND TERRITORIES, 1965-66  
(\$'000)

Class of industry(a)	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.

(a) For full titles see table on page 1127.

**Totals and averages.** The following table shows the total amount of salaries and wages paid, and the average amount paid, according to sex, per employee in each State and Territory. The figures exclude working proprietors and the amounts drawn by them.

In comparing the figures in the following table regard should be paid to the nature of certain industries which are carried on to a greater extent in some States than in others. In Victoria, for instance, a large number of hands are employed in Class 8., Clothing, comprising a relatively high percentage of women and children.

(a) Includes 1,926,672 tons of Leigh Creek coal. (b) Less than 500 tons.

**Value of materials used**

*By class of industry.* The value of materials used (which includes the value of containers, packing, etc., the cost of tools replaced, and repairs to plant) in factories in Australia in 1965-66 reached \$7,597 million, or 54.1 per cent of the value of the final output (see page 1130). The following table shows the value of the materials used in various classes of industry in each State and Territory.

**FACTORIES: VALUE OF MATERIALS USED, BY CLASS OF INDUSTRY**

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

**Value of output**

*By classes of industry.* The value of the output of factories in the various classes in each State and Territory in 1965-66 is shown in the following table. It represents the selling value at the factory (excluding delivery costs and charges) of goods made or processed during the year, including by-products. In addition, it includes the amount received for other work done, such as repair work, assembling and making up for customers. The difference between the sum of the values of the materials and of the power, fuel and light used, and the value of output is the net value of factory production (see page 1130).

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

**Value of production**

*By class of industry.* The value of production for any industry was defined at the Conference of Statisticians at Sydney in 1925 as 'the value of consumable commodities produced during the year, deducting, so far as possible, the value of goods consumed in process of production'.

In accordance with this definition, it was agreed that a deduction consisting of the costs of raw material, containers, power, fuel, light, lubricants, water, tools replaced, repairs to plant and depreciation should be made from the 'value of output'. Because of the difficulty experienced in securing accurate figures for depreciation, however, it was subsequently decided that no deduction should be made on this account. All the deductions mentioned above, with the exception of depreciation, are included in the items 'value of materials used' and 'value of fuel used' as defined above. The net value of production as given in the following tables is obtained, therefore, by deducting only 'value of materials used' and 'value of fuel used' from the 'value of output'. The value of factory production, therefore, approximates 'net value added' in the manufacturing process.

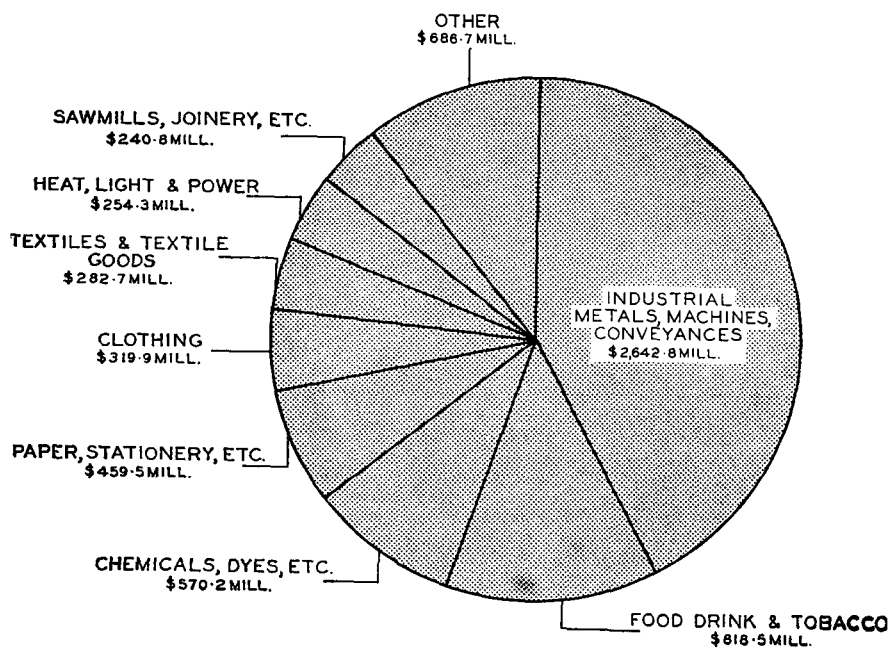

Only certain selected items of costs are recorded in the annual census of production. It must not, therefore, be inferred that when wages and salaries are deducted from the value of production the whole of the 'surplus' is available for interest and profit, as many miscellaneous expenses such as taxation, insurance, advertising, and other overhead charges, as well as depreciation, also have to be taken into account.

The following table shows the value of production in each State and Territory for the various classes of industry.

# FACTORIES: VALUE OF PRODUCTION

**Value of land, buildings, plant and machinery**

The following table shows the value of land and buildings and of plant and machinery used in each State and Territory in connection with manufacturing industries.

**FACTORIES: VALUE OF LAND, BUILDINGS, PLANT AND MACHINERY(a)**  
**STATES AND TERRITORIES, 1965-66**

(\$'000)

Value of—	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	N.T.	A.C.T.	Aust.
Land and buildings	1,658,597	1,176,942	273,559	276,531	151,047	211,923	6,208	21,891	3,776,698
Plant and machinery	1,672,719	1,209,046	477,459	423,458	197,210	158,672	7,587	10,134	4,156,285
Total	3,331,316	2,385,989	751,018	699,989	348,257	370,596	13,795	32,025	7,932,983

(a) At end of year. Includes estimated value of rented premises and plant.

The values recorded in this section are generally the values apportioned in the books of the individual firms after allowance has been made for depreciation, but they include estimates of the capital value of premises and plant rented. Consequently, the totals shown in the table do not represent the actual amount of capital invested in the items specified.

#### Value of land and buildings

*By class of industry.* The following tables show the approximate value of land and buildings occupied in connection with manufacturing industries.

#### FACTORIES: VALUE OF LAND AND BUILDINGS(a) BY CLASS OF INDUSTRY, AUSTRALIA(b), 1961-62 TO 1965-66 (\$'000)

Class of industry	1961-62	1962-63	1963-64	1964-65	1965-66
1. Treatment of non-metalliferous mine and quarry products	62,264	66,009	72,616	76,489	82,525
2. Bricks, pottery, glass, etc.	52,200	63,060	68,470	73,402	79,323
3. Chemicals, dyes, explosives, paints, oils, grease	191,750	201,028	219,212	231,170	247,653

**Land and buildings, plant and machinery—values, additions and replacements, depreciation**

The following table summarises the recorded totals for Australia and also includes particulars of additions and replacements.

**FACTORIES: VALUE OF LAND AND BUILDINGS, PLANT AND MACHINERY**

AUSTRALIA(a), 1961-62 TO 1965-66

(\$'000)

Year	Book values at 30 June(b)		Additions and replace- ments during year(b)		Depreciation allowed during year	
	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery	Land and buildings	Plant and machinery
1961-62 . . . . .	2,809,641	3,052,079	359,729	561,185	36,891	279,860
1962-63 . . . . .	3,006,820	3,286,533	191,797	566,066	38,797	304,154
1963-64 . . . . .	3,204,685	3,480,673	192,419	564,958	39,711	336,929
1964-65 . . . . .	3,505,859	3,766,253	249,779	666,490	46,095	366,702
1965-66 . . . . .	3,776,698	4,156,285	272,052	773,271	51,813	406,397

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.  
estimated value of rented premises, plant and machinery.

(b) Includes

**Principal factory products**

The factory production of certain commodities is shown in the monthly and quarterly publications of this Bureau, in the series *Manufacturing Industries*, and in the bulletin *Manufacturing Commodities*, formerly *Secondary Industries, Part II.—Materials Used and Articles Produced in Factories*.

The following table shows the total recorded production of some of the principal articles (i.e. of those for which production can be represented in quantitative terms) manufactured in Australia. A more complete list, together with values, where available, is published in the aforementioned bulletin and in the mimeographed statement *Principal Factory Products*. Because of revisions figures for some items in the following table may differ from corresponding figures in earlier chapters.

(a) Includes wall ovens but excludes cooking tops. (b) Upright and elevated (with oven) including wall ovens, but excluding hotplates, stovettes, etc. (c) Source: Department of Primary Industry. As from June 1964 includes double and triple superphosphate and ammonium phosphate expressed in terms of single phosphate, i.e. 22% P<sub>2</sub>O<sub>5</sub> equivalent. (d) Excludes bicycle and 'other'. (e) Primary origin only—includes small quantities of zinc dust.

## Individual industries

Particulars on pages 1109-36 afford a general view of the magnitude of industries in the sixteen groups adopted by the Conference of Statisticians in 1930. While it is not possible within the limits of this publication to give a detailed account of each industry, particular industries dealt with hereunder are of special importance because of the employment which they provide for labour or capital, or for other features of special interest. Details for individual States are available from publications issued by the Deputy Commonwealth Statistician in each State and, for selected industries, in the Central Office series *Manufacturing Industries*.

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

The preceding table shows particulars of establishments engaged in metal extraction and ore reduction including secondary recovery of metals, but excluding blast furnaces engaged in production of pig iron from iron ore. Ore dressing and elementary smelting of metallic minerals (e.g. in the case of gold), when these are carried out in an associated plant at or near the mine, are included in the mineral industry (*see* the chapter Mineral Industry).

**ELECTRICAL MACHINERY, CABLES AND APPARATUS**  
**AUSTRALIA(a), 1961-62 TO 1965-66**

	1961-62	1962-63	1963-64	1964-65	1965-66

(a) Includes motor body repairing, panel beating, duco spraying, etc.

The industries catering for the motor trade are included in Class 4, Industrial metals, machines and conveyances. In the table above a summary is given of the principal statistics for 1965-66 for each branch of industry associated with the motor trade of Australia.

In the next table similar details are shown for Australia for these industries combined, for the years 1961-62 to 1965-66. Victoria, New South Wales, and South Australia account for the bulk of the output of these industries. Most of the output of the other States and Territories is from repair work.

### MOTOR VEHICLES—CONSTRUCTION, ASSEMBLY, REPAIRS, ETC.

Horse-power of engines ordinarily in use . . hp	14,805	15,351	15,594	15,394	16,117

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory. (b) Includes details of Boot and shoe repairing in Tasmania.

The table above refers to boot and shoe factories as distinct from those devoted to repairing, except in Tasmania, where it has been necessary to include details of boot and shoe repairing, in order to avoid disclosure of confidential information for that State. Factories engaged in the manufacture of sand-shoes, goloshes and gum, etc., boots of rubber are not included here, but are classified under Rubber Goods, see page 1159. About two-thirds of the output of boots and shoes is produced in Victoria.

## FLOUR-MILLING: AUSTRALIA(a), 1961-62 TO 1965-66

	1961-62	1962-63	1963-64	1964-65	1965-66

Sugar-cane is grown in New South Wales and Queensland, and particulars of area, yield, etc. are given in detail in the chapter Rural Industry. The products of the sugar-mills are raw sugar and molasses, the former being sent to the refineries in different parts of Australia for further treatment. In 1965-66 there were two sugar refineries in Queensland and one each in New South Wales, Victoria, South Australia, and Western Australia.

**CONFECTIONERY: AUSTRALIA(a), 1961-62 TO 1965-66**

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

The industries included in this group are engaged chiefly in the freezing and preserving of meat. Most abattoirs are excluded, except in Queensland and Western Australia. Works have been established at the seaports for the purpose of handling beef, lamb and mutton for export, and insulated space for the carriage of chilled and frozen produce is provided by shipping companies trading between Australia and other parts of the world. In recent years there has been considerable expansion in the canning of meat and fish. Particulars of the quantities and values of beef, mutton and lamb preserved by cold process exported from Australia over a series of years will be found in the chapter Rural Industry.

#### CONDIMENTS, COFFEE, SPICES: AUSTRALIA(a), 1961-62 TO 1965-66

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

Sawmilling is the most important industry in Class 10. Because of difficulties associated with the classifying of sawmills into forest and town mills, they have been combined in the above table, together with plywood and veneer mills. The figures exclude particulars of a small number of itinerant and travelling sawmills.

## JOINERY: AUSTRALIA(a), 1961-62 TO 1965-66

(a) Prior to 1 July 1964 excludes Northern Territory and Australian Capital Territory.

Although the paper manufacturing industry has been established in Australia for many years, it was not until the manufacture of paper pulp from indigenous timber commenced in 1938-39 that any marked development occurred. The number of factories operating in 1965-66 comprised four in New South Wales, eleven in Victoria, two in Queensland, two in South Australia, two in Western Australia, and four in Tasmania. In Tasmania, newsprint, writing and printing papers are produced, and in the other States, wrappings, other papers and boards. Mills producing pulp from eucalypt timber are operating in Victoria and Tasmania, while in South Australia pulp is being produced from locally-grown softwoods.

## CHAPTER 28

# ELECTRIC POWER GENERATION AND DISTRIBUTION

This chapter is divided into three major parts: the Introduction, which deals briefly with the resources, generation and distribution, and future development of electric power in Australia; the Snowy Mountains Hydro-electric Scheme: and the origins, development, present situation and new projects of electrical systems in each Australian State and Territory.

The information contained in the chapter relates to situations existing and projects contemplated in December 1966, and may be considerably affected by changes in policy or plans, or by developments in the projects themselves.

## INTRODUCTION

### Distribution of population and location of power resources in Australia

The two principal centres of population and industry in Australia, the metropolitan areas of Sydney and Melbourne, make the greatest demands for electric power, and their growth has been associated with the development of large deposits of coal located relatively close to the source of demand. This, together with the fact that the major water resources are also located in the south-eastern portion of Australia, materially influences the distribution of industrial population and the location of major electric power stations. By far the most important source of energy used in the production of electric power in Australia is coal. At 30 June 1966 thermal power equipment represented 72 per cent, hydro plant 25 per cent, and internal combustion equipment 3 per cent of the total installed generating capacity.

Most of Australia is poorly supplied with water, only about 13 per cent receiving an annual rainfall of 30 inches or over, and these areas are confined largely to Tasmania and to the narrow coastal strip along the east coast of the mainland. The only region on the mainland of Australia high enough to receive reliable winter snowfall, and from which, therefore, reasonably constant water supplies throughout the year can be expected, is the mountain chain which stretches from the high plateaux of south-eastern New South Wales to the north-eastern highlands of Victoria. The hydro-electric potential of this area is considerable, and plans have been formulated to develop more than 4,000,000 kW by 1975. The two major construction projects in this area are the Snowy Mountains and Kiewa schemes. Other hydro-electric potential does exist on the mainland on the rivers of the coastal areas of New South Wales and Queensland, but the amount available is smaller than the potential of the Alpine region. In Tasmania, hydro-electric resources have been estimated at about 50 per cent of the total Australian hydro-electric potential. On the mainland the chief source of energy is coal; in Tasmania it is water.

### Electric power generation and distribution

At the beginning of this century Australia's electrical undertakings were carried on mainly by private enterprise, but with some measure of governmental control designed to provide standards of safety and to define the scope and obligations of the private organisations. A trend towards public ownership commenced during the 1914-18 War and became more pronounced after the 1939-45 War. By 1961 all major generating stations supplying the public were, in varying degrees, under the control of statutory organisations constituted with the object of unifying and co-ordinating the generation and distribution of electricity supplies. There are still a large number of small private and municipal enterprises generating power for supply to country towns, although central authorities are extending supply to these places wherever practicable. In many areas it has been, and remains, the practice for central authorities to sell power in bulk to local distributing organisations which undertake reticulation.

In addition to the private, local government and statutory organisations which generate and/or distribute electricity for sale, numerous firms generate power for use in their own establishments, particularly those engaged in mining pursuits remote from the main centres of population. This chapter, however, is concerned mainly with the activities of central electric stations, as the power regularly produced for such internal consumption is, in any case, a relatively small proportion of the total power produced. The measures taken by authorities to satisfy the demand created by the post-war growth in population and building and by developments in industry and commerce are described in the following pages.

### SNOWY MOUNTAINS HYDRO-ELECTRIC SCHEME\*

#### Snowy Mountains Hydro-electric Power Act 1949

In July 1949 the Commonwealth Government established the Snowy Mountains Hydro-electric Authority, and empowered it to generate electricity by means of hydro-electric works in the Snowy Mountains Area; supply electricity to the Commonwealth (i) for defence purposes, (ii) for consumption in the Australian Capital Territory; and supply to a State, or to a State Authority, electricity not required for defence purposes or for consumption in the Australian Capital Territory.

The Authority is constituted by a Commissioner and two Associate Commissioners, the three appointments being made by the Governor-General. It is empowered to construct, maintain, operate, protect, manage and control works:

- (a) for the collection, diversion and storage of water in the Snowy Mountains Area;
- (b) for the generation of electricity in that area;
- (c) for the transmission of the electricity generated;
- (d) incidental or related to the construction, maintenance, operation, protection, management or control of any works otherwise specified in the Act.

The Snowy Mountains Act is supported by a detailed agreement between the States of New South Wales and Victoria and the Commonwealth with regard to the construction and operation of the Scheme, the distribution of power and water, charges to be made for electricity, and other such matters. The Snowy Mountains Council, established under the terms of the Agreement and consisting of representatives of the Commonwealth, the Authority and the two States, directs and controls the operation and maintenance of the permanent works of the Authority and the allocation of loads to generating stations.

#### Snowy Mountains Hydro-electric Scheme

The Snowy Mountains area in south-eastern New South Wales is the only part of the continent in which altitudes exceed 7,000 feet and in which there is a substantial area over the altitude of 6,000 feet. The precipitation which results from the presence of this barrier on the line of the prevailing winter depressions of Antarctic origin amounts to as much as 150 inches a year in the vicinity of Mt Kosciusko, the highest point in Australia. The drainage from the snowfields is practically all to three systems—those of the Murray and Murrumbidgee Rivers, which flow inland, and that of the Snowy River, which flows southward to Bass Strait.

The broad basis of the Snowy scheme is to transfer waters, which would otherwise flow to the sea unharnessed, from the Snowy River and its tributaries to the inland system, so that the water may be used for irrigation and to provide power. It involves two main diversions, the diversion of the Eucumbene, a tributary of the Snowy, to the Upper Tumut River, and the diversion of the main stream of the Snowy River at Island Bend and Jindabyne to the Swampy Plain River. These two diversions divide the scheme geographically into two sections, the Snowy-Tumut Development and the Snowy-Murray Development (*see* plate 18 of Year Book No. 52). For purposes of both power production and irrigation it is necessary to regulate run-off, and this will be achieved by the use of Lake Eucumbene (formed by the construction of Eucumbene Dam) and other smaller storages to control the waters of the Eucumbene, Murrumbidgee, Tooma, and Tumut Rivers of the Snowy-Tumut Development and of the Snowy and Gechi Rivers for the Snowy-Murray Development. A sectional diagram of the scheme appears on plate 19 of Year Book No. 52.

*Snowy-Tumut Development.* This development comprises works for the diversion and regulation of the waters of the Eucumbene, Upper Tooma, Upper Murrumbidgee, and Upper Tumut Rivers and their combined development through a series of power stations down the Tumut River. A major dam has been constructed on the Eucumbene River to create Lake Eucumbene, which has an ultimate usable storage of 3.5 million acre feet. The waters of the Upper Murrumbidgee River are diverted into Lake Eucumbene by a dam at Tantangara and a 10½-mile tunnel from Tantangara Reservoir. From Lake Eucumbene the water flows through a 14-mile tunnel to Tumut Pond Reservoir on the upper reaches of the Tumut River, where it joins the waters of the Tumut River itself and the waters of the Tooma River diverted to Tumut Pond Reservoir by a diversion dam and a 9-mile tunnel. The 14-mile Eucumbene-Tumut Tunnel is used during periods of high flow to divert waters of the Tumut River from Happy Jacks Shaft or the combined waters of the Tumut and Tooma Rivers from Tumut Pond Reservoir back to Lake Eucumbene for storage.

From Tumut Pond Reservoir water is conveyed by pressure tunnel to Tumut 1 underground Power Station (capacity 320,000 kW), returned to the Tumut River and then by another pressure tunnel to Tumut 2 underground Power Station (capacity 280,000 kW), thence discharging into Talbingo Reservoir, also on the Tumut River.

\* *See also* the chapter Water Conservation and Irrigation of this issue and special detailed article in Year Book No. 42, pp. 1103-30.

Tumut 3 Power Station, the largest station of the scheme (capacity 1,500,000 kW, of which 500,000 kW will be provided by pump turbines) will be constructed below Talbingo Reservoir and will discharge into Jounama Pondage on the Tumut River. This pondage will provide a downstream pumping pool and also re-regulate discharges from Tumut 3 Power Station as required. Releases from Jounama Pondage will then enter Blowering Reservoir formed by Blowering Dam. This dam is under construction by the Snowy Mountains Authority as an agent for the State of New South Wales and will provide for the regulation of power station discharges for irrigation use in the Murrumbidgee Valley. The Authority is constructing a power station at the foot of the dam to generate power from releases of water for irrigation purposes.

*Snowy-Murray Development.* The principal features of the Snowy-Murray Development are the diversion of the main stream of the Snowy River by tunnels, shafts, and pipelines westwards through the Great Dividing Range into the Swampy Plain River in the catchment of the Upper Murray, and the development of power on the western slopes of the Alps. The main works of the development will be as follows.

- (a) A tunnel from the Snowy River near Island Bend through the Great Dividing Range to Geehi Reservoir on the Geehi River, and two power projects between Geehi Reservoir and the Swampy Plain River near Khancoban. The power stations associated with these two power projects, Murray 1 and Murray 2, will have a combined capacity of 1,500,000 kW.
- (b) A tunnel from a small dam on the Snowy River near Island Bend to Eucumbene Dam to carry Snowy water to Lake Eucumbene for storage at times of high river flows. When river flows are lower than average, this stored water will be returned towards Island Bend and thence through the Snowy-Geehi Tunnel to Geehi Reservoir and Murray 1 and Murray 2 Power Stations.
- (c) A dam on the Snowy River near Jindabyne to store the residual flow of the Snowy and Eucumbene Rivers downstream from Island Bend and Eucumbene Dams, including the flows of major tributaries, the Crackenback and Mowamba Rivers; and the construction of a pumping plant, pipeline and tunnel to lift this water from Jindabyne Reservoir to the Snowy-Geehi Tunnel near Island Bend, where it will join the flow to the Geehi Reservoir for use through Murray 1 and Murray 2 Power Stations.

The power output of this section of the Scheme will be increased by the construction of subsidiary hydro-electric projects on the Upper Snowy River above Island Bend and on Windy Creek, a tributary of the Upper Geehi.

#### Utilisation of power from scheme

The future electric power plants on the mainland of Australia will be predominantly thermal or thermo-nuclear installations, and in an electrical system in which the greater part of the energy is generated in thermal plants it is usually found that the hydro installations operate to the best advantage on peak load. However, the existing New South Wales and Victorian systems include a proportion of relatively old and less efficient installations which, for reasons of fuel economy, are also best used for the production of peak load power. Therefore, in order to utilise the potential of the Snowy Mountains Scheme most effectively, the order of development is being arranged so that the early stations operate, initially, somewhat below the peak of the system load, with a progressive change to predominantly peak load operation as construction proceeds and as the load increases in magnitude.

The Snowy Mountains Scheme is situated about midway between the principal load centres of Sydney and Melbourne and is connected to those cities by 330 kV transmission lines. It is, consequently, in a position to take advantage of the diversity in the power requirements of these two load systems, a most important factor in so far as it affects the economy of operation of the supply systems of the two States. Although most of the output from the scheme will go to the States of New South Wales and Victoria, the Commonwealth Government has the right to draw from the scheme its requirements of power and energy for the Australian Capital Territory and for defence purposes. For convenience, the Commonwealth's requirements are drawn from the New South Wales transmission network by an exchange arrangement between the Commonwealth and the Electricity Commission of New South Wales. Electricity over and above that required by the Commonwealth Government is divided between the States of New South Wales and Victoria in the ratio 2: 1.

#### Progress of scheme and future programme

The scheme's first power station, Guthega, of 60,000 kW initial capacity, came into operation in February 1955. It was followed by Tumut 1, an underground power station with a capacity of 320,000 kW, in 1959, and by the 280,000 kW Tumut 2 underground Power Station in 1962. Eucumbene Dam, which provides the major regulating storage for the scheme, was completed in May 1958. Tumut Pond Dam, completed in September 1958, provides the balancing storage

for the power stations of the Upper Tumut Works. The first trans-mountain diversion of water from Lake Eucumbene to the Tumut River at Tumut Pond was made possible when the 14-mile Eucumbene-Tumut Tunnel was completed in June 1959. The 10½-mile Murrumbidgee-Eucumbene Tunnel and the 9-mile Tooma-Tumut Tunnel came into operation early in 1961. Following the completion of the Upper Tumut Works, construction activity has been concentrated on the Snowy-Murray development. The first unit of this development, the Eucumbene-Snowy project which comprises Island Bend Dam and the 15-mile Eucumbene-Snowy Tunnel, commenced diverting Snowy River water to storage in Lake Eucumbene in August 1965. Completion of a 9-mile trans-mountain Snowy-Geehi Tunnel, the 7½-mile Murray 1 Pressure Tunnel, the first of the 1-mile long Pressure Pipelines, and the first two units of the 950,000 kW Murray 1 Power Station in April 1966 allowed the first diversion of the water from the Snowy River to the Murray River in the west. Two more of the ten turbo-generators have since been brought into commercial operation and the Murray 1 Project is planned for completion by the close of 1967. The total installed capacity of the scheme has now reached 1,040,000 kW.

Khancoban Dam, designed to regulate power station releases before their discharge into the Murray River, was completed in February 1966. Construction is proceeding on the Murray 2 Project in the base of the open cut excavated in the bank of Khancoban Reservoir downstream of Murray 1 Project. The four units of Murray 2 Power Station totalling 550,000 kW are scheduled to come into commercial operation in the first half of 1969.

Construction is also proceeding on the Jindabyne Project. The earth and rockfill dam is planned for completion by the close of 1967, and the pumping station and Jindabyne-Island Bend Tunnel will come into service by the end of 1968.

Blowering Dam on the Tumut River will also be in service towards the end of 1968, and the 80,000 kW Blowering Power Station, also under construction, will be ready for commercial operation by the summer of 1969 when the first of the stored water in the Blowering Reservoir will be released for the irrigation season downstream on the Murrumbidgee Irrigation Areas.

Work has begun on the Tumut 3 Project with the excavation of foundations for Jounama Dam. This earth and rockfill embankment will be sufficiently complete by winter of 1968 to allow the rising waters of the Blowering Reservoir to flood the Jounama Dam Site. The remaining sections of Tumut 3 Project are planned for completion by 1974.

## STATES AND TERRITORIES

### New South Wales

In Year Book No. 39 an account was given in some detail of the origin and development of electricity generation and distribution in New South Wales. At present the following three main Acts govern electricity supply in New South Wales.

The Local Government Act, 1919, which lays down the various rights and responsibilities of local government bodies in the establishment and operation of electricity trading undertakings.

The Electricity Development Act, 1945-1965, which established the Electricity Authority of New South Wales as the body responsible for the co-ordination of electricity supply throughout the State.

The Electricity Commission Act, 1950-1965, which constituted the Electricity Commission of New South Wales as the major generating authority and not subject to the provisions of the Electricity Development Act.

### Electricity Commission of New South Wales and other electricity supply authorities

The Commission, which is directly responsible to the Minister for Local Government, consists of five members, of whom one is full-time Chairman and one is full-time Vice-chairman. The main function of the Commission is the generation and transmission of electricity, which it sells in bulk to distributing authorities (mainly local government bodies) throughout a large part of the State, to the Government railways and to certain large industrial consumers. As the major generating authority, it is also responsible for the development of new power sources except in the Snowy Mountains region.

The retail sale of electricity to the public is, in general, carried out by separate electricity supply authorities—municipal and shire councils, electricity county councils (consisting of groups of shire and/or municipal councils) or private franchise holders. At 30 June 1966 there were forty-six supply authorities throughout the State, of which twelve also generated part or all of their power requirements. Most of the small power stations which had operated in many country centres have closed down as the main transmission network has been extended.

Over recent years there has been a distinct trend towards the consolidation of supply areas on a district basis for electricity distribution purposes. Generally, these consolidations have taken the form of a county district consisting of a number of neighbouring shire and municipal and city areas grouped only for electricity supply purposes, and administered by a county

council of representatives elected by the constituent councils. Of the 224 cities, municipalities and shires in New South Wales, 215 are included in one or other of the thirty-four electricity county districts. The majority of these county districts have been constituted since 1945. The largest of the county councils is the Sydney County Council, which at 30 June 1966 was supplying 546,707 consumers in the Sydney metropolitan area.

#### Electricity Authority of New South Wales

The Electricity Authority was constituted for the purpose of promoting and regulating the co-ordination, development, expansion, extension, and improvement of electricity supply throughout the State. A regulatory body, it consists of seven members of whom one is full-time Chairman. Like the Electricity Commission, it is responsible to the Minister for Local Government. The following are the main functions of the Authority.

*Distribution.* The approval of the Authority is required for the establishment or acquisition of an electricity trading undertaking by a local government council, for the granting or renewing by such a council of electricity franchise agreements or corresponding agreements with other councils, and for the giving or taking of bulk supplies of electricity. It also has power to formulate proposals for the establishment of county councils. In exercising these powers, the Authority is concerned mainly with seeing that distributing authorities are sufficiently strong to provide an economical, efficient and satisfactory service. Its most important activities in this regard are in investigating supply areas and in making recommendations to the Minister for the consolidation of such areas into county districts.

*Rural electrification.* The Authority administers the rural electricity subsidy scheme under which rural electrification throughout the State is progressing very rapidly (see pages 1166-7).

*Safety.* The Electricity Development Act, 1945-1965 contains provisions for the making of regulations relating to most aspects of safety, and these powers are being used more and more extensively. Safety regulations now in force cover such matters as inspection of consumers' installations, licensing of electricians and electrical contractors, approval of electrical appliances, safety of linesmen, and overhead line construction.

*Generation and transmission.* The approval of the Authority is required for the establishment or extension of power stations and main transmission lines (with the exception of those of the Electricity Commission).

#### Generation and transmission

Except in the Snowy Mountains district and in one or two other areas New South Wales is lacking in major water power potential, and for the generation of electricity the State is dependent mainly on steam power stations. During the year ended 30 June 1966, coal-fired power stations generated 89.7 per cent of the State's energy requirements, hydro-electric stations 9.8 per cent and internal combustion plants 0.5 per cent. Of the 9.8 per cent generated from hydro-electric stations approximately 30 per cent was from the Snowy Mountains Scheme. This proportion will increase with the expansion of that scheme, but it is not expected that more than 15 per cent to 20 per cent of the State's power needs will be supplied from this source. The coal-fired steam power stations (and possibly atomic power stations in the future) will therefore continue to supply the greater part of requirements.

*Major generating stations.* In New South Wales the generation of electricity has followed the general world trend towards large centralised power stations supplying large areas through interconnected transmission networks. Whereas until a few years ago the greater part of the coal-fired generating plant was located in the industrial areas of Sydney, Newcastle and Wollongong, where most of the population is also located, major power stations are now being located on the coalfields to the north, south and west of Sydney, and power is transmitted to the load centres through high voltage transmission lines.

At 30 June 1966 the major power stations of the State system of the Electricity Commission of New South Wales and their installed capacities were as follows: *Steam*—Vales Point (Lake Macquarie), 875,000 kW; Bunnerong (Sydney), 375,000 kW; Wangi (Lake Macquarie), 330,000 kW; Tallawarra (Lake Illawarra), 320,000 kW; Wallerawang (near Lithgow), 240,000 kW; Pyrmont (Sydney), 200,000 kW; White Bay (Sydney), 172,000 kW; Balmain (Sydney), 107,000 kW; Port Kembla, 60,500 kW; Zarra Street (Newcastle), 42,500 kW; Muswellbrook, 30,000 kW; Lithgow, 27,000 kW; Tamworth, 27,000 kW; Maitland, 20,000 kW; Penrith, 20,000 kW; Liverpool, 20,000 kW; *Hydro*—Hume (near Albury), 50,000 kW; Warragamba (near Penrith), 50,000 kW; Burrinjuck (near Yass), 20,000 kW. There were also various other steam, hydro and internal combustion stations aggregating 35,990 kW. The total installed capacity of the Electricity Commission's system was 3,021,990 kW. The greater part of the Commission's generating plant is concentrated within a hundred mile radius of Sydney—the largest stations outside this area being located at Hume, Muswellbrook and Tamworth.

*Major transmission network.* The retailing of electricity to 97 per cent of the population of New South Wales is in the hands of local distributing authorities, which obtain electricity in bulk from the Commission's major State network. This network of 330 kV, 132 kV, 66 kV and some 33 kV and 22 kV transmission lines links the Commission's power stations with the load centres throughout the eastern portions of the State, extending geographically up to 400 miles inland.

At 30 June 1966 there were in service 934 route miles of 330 kV (including 143 miles operating for the time being at 132 kV) and 2,273 miles of 132 kV transmission lines (including 55 miles operating for the time being at 66 kV or lower). There were also in service 2,456 miles of transmission line of 66 kV and lower voltages. The installed transformer capacity at the Commission's 123 sub-stations was 10,102,750 kVA.

*Separate systems and total State installed capacity.* A number of small plants which supply isolated towns and villages have not yet been interconnected with the main network. Some local government bodies have undertaken the development of independent power stations. Of these, the more important are: the Northern Rivers County Council, which has constructed a steam power station at Koolkhan (near Grafton) with an installed capacity of 28,750 kW, and the North-West County Council, which has established a 15,000 kW steam power station on the Ashford coalfield. The aggregate installed capacity for the whole of the New South Wales systems and isolated plants was 3,189,975 kW at 30 June 1966 and the number of ultimate consumers at this date was 1,387,563.

#### **Future development**

The major new thermal stations already built and those now being developed on the coal-fields will become the main base load supply sources for the State. Vales Point and Wangi, on Lake Macquarie, Wallerawang, near Lithgow, and Tallawarra, on Lake Illawarra, have been completed.

Construction of the Munmorah Power Station, located between Lakes Munmorah and Budgewoi (on the central coast) is in progress. The plant at Munmorah will comprise four 350,000 kW generating units, the first of which is programmed for commissioning in 1967, and the second, third and fourth units will follow at yearly intervals thereafter.

During the first half of 1965 work commenced on the Liddell Power Station project in the Hunter Valley, between Singleton and Muswellbrook. The designed capacity of Liddell is 2,000,000 kW, consisting of four 500,000 kW generating units, and is the biggest thermal power station yet planned in Australia. The first unit is scheduled for commissioning in 1971, and the second, third and fourth units in 1972, 1973 and 1974 respectively. The development of the 330 kV main system is continuing.

Recent work has included construction of a third circuit between the Vales Point-Munmorah area and Sydney, and between the Snowy Area and Yass. New work in hand includes the extension of 330 kV transmission to Tamworth and the construction of major 330 kV transmission centres at Tamworth, Newcastle, Canberra (A.C.T.), and later Armidale. Plans to augment the transmission system during the next five years provide for the construction of 537 route miles of 330 kV lines, 1,255 miles of 132 kV overhead lines, 35 miles of cables, and 25 new sub-stations.

#### **Hydro-electricity**

The greater part of the hydro-electric potential of New South Wales is concentrated in the Snowy Mountains area (*see* Snowy Mountains Hydro-electric Scheme, page 1162). Apart from this area, major hydro-electric stations are in operation at the Warragamba Dam (50,000 kW), Hume Dam (50,000 kW), Burrinjuck Dam (20,000 kW), and Keepit Dam (6,000 kW). The output of Warragamba Power Station depends upon the availability of water surplus to the requirements of the Sydney metropolitan area, and the output of the other stations on the release of water for irrigation. Of the remaining hydro installations, the largest is that of the New England County Council on the Oakey River, a tributary of the Macleay River, which has a capacity of 5,250 kW. The Northern Rivers County Council operates a hydro-electric power station on the Nymboida River, a tributary of the Clarence River. This station has a capacity of 4,500 kW. The Bega Valley County Council has constructed a hydro-electric scheme at Brown Mountain utilising the headwaters of the Bemboka River. This installation has a capacity of 3,950 kW. The Mullumbimby Municipal Council has in operation two hydro units with an effective rating of 140 kW each, on Wilson's Creek, a tributary of the Richmond River.

#### **Rural electrification**

When the Electricity Authority of New South Wales was constituted in 1946 less than one-quarter of New South Wales farms within reasonable reach of public electricity supply systems were being served with electricity. Under a subsidy scheme approved in August 1946, local

electricity suppliers receive subsidies from the Electricity Authority towards the cost of new rural lines. The amount of subsidy is based on the estimated cost of the proposed extension and the number of consumers able to be served by the new lines. The scheme was designed to encourage local electricity supply authorities to construct the more economic extensions first by fixing a limit to the cost for which suppliers could be subsidised. Originally this limit was \$500 per consumer when averaged over the cost of the whole extension, but the limit was raised to \$800 in December 1953. Some subsidy was paid on higher cost extensions, but the excess over an average of \$800 was not subsidised.

To assist supply authorities in extending supply to less populated, and thus high-cost, areas of the State the subsidy scheme was extended from May 1959 to provide for payment of increased subsidy in respect of extensions where the average capital cost per consumer lies within the range of \$1,200–\$1,600.

Between August 1946 and June 1966, applications for subsidy had been made by electricity suppliers to the Authority covering rural extensions costing \$78 million to give supply to some 58,288 farming properties and 35,199 other rural consumers and involving 56,145 miles of line. The greater part of this work had been completed at 30 June 1966. At this date the Authority was committed to the payment of \$32,437,388 in subsidies, of which \$18,025,374 had been paid.

### Victoria

In Year Book No. 39 a detailed description is given of the development of electricity generation in the cities of Melbourne, Geelong, Bendigo and Ballarat up to the time of transfer of control of electricity undertakings in those cities to the State Electricity Commission of Victoria. An account is also given of the events culminating in the establishment of the Commission in 1919, and of the early developments in the Commission's undertakings.

Constituted by the *Electricity Commissioners Act 1918*, the State Electricity Commission is a semi-governmental authority administered since 1921 by a full-time Chairman and three part-time Commissioners. The principal duty of the Commission is to co-ordinate and extend on an economic basis the supply of electricity throughout Victoria. For this purpose it is vested with power to erect, own and operate power stations and other electrical plant and installations, supply electricity retail to individual consumers or in bulk to any corporation or public institution, acquire and operate electricity undertakings, develop, own and operate brown coal open cuts and briquetting works, and develop the State's hydro-electric resources. From its own revenues, which it controls, the Commission must meet all expenditure in the operation of its power, fuel and subsidiary undertakings, and all interest and other charges incurred in the service of its loans and other capital commitments.

The Commission is the controlling authority for all electrical undertakings in Victoria. It is responsible for the registration of electrical contractors, the licensing of electrical mechanics, the control of installation methods and material, and the testing and approval of electrical equipment and appliances. Incidental to its main operations, the Commission owns and operates the tramway systems in Ballarat and Bendigo. For the accommodation of its employees at Yallourn, the Commission owns and administers the town of Yallourn. It also owns large housing estates in the surrounding area, but is progressively selling houses in these estates to Commission employees. In the Kiewa hydro-electric works area it has built the two townships of Mount Beauty and Bogong, municipal administration of the former now being vested in the Shire of Bright. With construction at Kiewa now complete, many houses at Mount Beauty have been sold for holiday homes.

#### State Electricity Commission of Victoria

Since it began operating in 1919 the State Electricity Commission has expanded and co-ordinated the production and supply of electricity on a State-wide basis to the point where its system now generates almost all the electricity produced in Victoria and serves 98 per cent of the population. Development of Victoria's electricity system is based on the utilisation for both power and fuel of Victoria's extensive brown coal resources in the Latrobe Valley in eastern Gippsland, with supplementary development of the hydro-electric potential of north-eastern Victoria. Victoria is entitled to one-third of the electricity from the Snowy Mountains Hydro-electric Scheme, after the Commonwealth has taken the power it needs for its purposes. Victoria also shares with New South Wales in the electricity generated at Hume Hydro Station on the River Murray. About 86 per cent of the State's electricity is generated from brown coal, either used in its raw state or manufactured into higher quality fuel in the form of brown coal briquettes. All the brown coal and briquette fuel is supplied by undertakings which the Commission itself owns and operates. Output of brown coal in 1965–66 from the three open cuts at Yallourn, Yallourn North and Morwell totalled 21,066,991 tons, of which 15,368,426 tons were used in the Commission's own power stations, and 5,274,829 tons were manufactured into 1,882,814 tons of brown coal briquettes, 33 per cent of the briquette output then being used for electricity production.

in metropolitan and provincial steam power stations. The two functions, generation of electricity and production of fuel, are closely integrated. Apart from the large proportion of brown coal and briquette fuel consumed in the power stations, the process of briquette manufacture results also in the generation of electricity, since the steam needed for processing the raw coal for briquetting is first used to operate turbo-generators.

#### **Electricity supply**

At 30 June 1966 the number of ultimate consumers in Victoria was 1,094,462. Of these, 1,086,879 were served by the State system and 7,583 by local country undertakings. The State system supplies all the Melbourne metropolitan area and over 2,200 other centres of population.

Complete electrification of the State is now within sight. By 30 June 1966 about 921,400 of the 934,000 homes in the State and 64,700 of Victoria's 72,300 farms were supplied with electricity. By 1968-69, allowing for extensions then in progress, only about 3,000 homes and fewer than 1,250 farms in remote areas will be out of reach of public electricity supply, but efforts will be continued to supply as many of these as possible.

The Commission sells electricity retail in all areas except part of the metropolitan area, where it sells in bulk to eleven municipal undertakings which operate as local retail supply authorities under franchises granted before the Commission was established. Bulk supply is also being provided at present to several New South Wales municipalities and irrigation settlements bordering the River Murray. The number of consumers served by the State system outside the Melbourne metropolitan area is 505,716. Of the new consumers connected to supply each year, more than two-thirds are outside the metropolitan area. New farm connections average nearly 3,500 a year.

The Commission's retail consumers numbered 876,462 at 30 June 1966. Retail supply is administered through the metropolitan branch and ten extra-metropolitan branches (Barwon, Eastern Metropolitan, Gippsland, Mallee, Midland, Mid-Western, North-Eastern, Northern, South-Western and Wimmera). At 30 June 1966 there were branch and district supply offices in Melbourne and 92 other cities and towns in Victoria.

#### **Electricity production, transmission and distribution**

Electricity generated in the State system or purchased by it totalled 10,281 million kWh in 1965-66, or more than 99 per cent of all Victoria's electricity for public supply. The system comprises a series of thermal and hydro-electric power stations. Inclusive of generator capacity both within the State and available to the Victorian system from outside the State, the total installed generator capacity at 30 June 1966 was 2,395,000 kW. Power stations are interconnected and feed electricity into a common pool for general supply. The major power station in this interconnected system is the brown coal burning power station at Yallourn, which alone generates over 40 per cent of Victoria's electricity. Other power stations in the interconnected system comprise two further base load brown coal burning power stations, Morwell and Hazelwood (which now has three of its planned eight 200,000 kW generating sets in service); steam stations in Melbourne (Newport, Richmond and Spencer Street), Geelong and Ballarat, and also at Red Cliffs, which has, in addition, some internal combustion plant; hydro-electric stations at Kiewa, at Eildon, on the Rubicon and Royston Rivers near Eildon, and at Cairn Curran; and an internal combustion station at Warrnambool. All within Victoria are Commission-owned, except Spencer Street Power Station, which remains the property of the Melbourne City Council, although operated as a unit in the interconnected system. A 330 kV transmission line links the Victorian system with the Snowy Mountains undertaking, and also provides facilities for interconnection between the Victorian and New South Wales State generating systems. Also linked with the Victorian interconnected system is the hydro station at Hume Dam on the River Murray. This power station is operated by the Electricity Commission of New South Wales. Output and operating costs are shared by Victoria and New South Wales. In meeting the total demand on the system, which fluctuates throughout the day and from month to month, each group of stations in the interconnected system is assigned a predetermined function dependent upon the availability of power from each group and the economics of generation. The various stations are utilised in the combination that will meet the system load most economically at a given time.

The electrical transmission and distribution system in the State supply network at 30 June 1966 comprised 49,708 miles of power-lines, 21 terminal receiving stations, 98 main transmission sub-stations, and nearly 47,000 distribution sub-stations. Main transmission is by 330 kV, 220 kV, 132 kV and 66 kV power lines which supply the principal distribution centres and also provide interconnection between the power stations. The 330 kV and 220 kV systems total 1,240 miles.

#### **Future development**

Major new construction is concentrated on the erection on the brown coal fields of the Latrobe Valley, of a large brown coal burning power station (Hazelwood), which is designed to operate on raw brown coal fuel supplied by belt conveyor direct from the Morwell open cut. Hazelwood Power Station is the largest project yet undertaken by the Commission and is designed to have

a capacity of 1,600,000 kW in 1971. By that year the State's power resources, including Victoria's share of the output of the Snowy scheme, will have increased by 63 per cent to 3,894,000 kW. The first of Hazelwood's eight 200,000 kW turbo-generators was commissioned in October 1964, the second generating set went into service in 1965 and the third generating set in 1966. Five other 200,000 kW sets will follow at yearly intervals. Power generated at Hazelwood Power Station is transmitted at high voltage to Melbourne metropolitan terminal stations for distribution through the State supply network. To follow the Hazelwood project a new power station—to be known as Yallourn 'W'—will be built about half a mile west of the present Yallourn Power Station. It will also operate on brown coal which will be supplied by conveyors from Yallourn open cut. Yallourn 'W' will have two 350,000 kW turbo-generators, the first to be in service in 1972 and the second in 1973.

#### Local country electricity undertakings

At 30 June 1966 there were six independent electricity undertakings in country centres in Victoria generating and distributing their own local supply. Three of these undertakings were in the west and north-west of the State. Under the State Electricity Commission's rural electrification programme almost all the independent local country undertakings will ultimately be acquired and absorbed into the State system. For the year 1965–66 the total production of the independent undertakings was 31 million kWh. The number of consumers at 30 June 1966 was 7,583. The operation of the independent undertakings is governed by the *Electric Light and Power Act* 1958, which is administered by the State Electricity Commission.

### Queensland

In Year Book No. 39 an account is given of the growth of electricity generation in Queensland, with particular reference to south-eastern Queensland, and of the events leading up to the establishment in 1937 of the State Electricity Commission of Queensland.

Electricity supply in Queensland is governed by the following Acts which are administered by the Commission.

- '*The State Electricity Commission Acts, 1937 to 1965.*' These Acts constituted the Commission and define its powers, duties and responsibilities.
- '*The Electric Light and Power Acts, 1896 to 1965.*' These Acts relate to the constitution of electric authorities, and define their powers, duties and responsibilities, and the conditions under which electricity is to be supplied and used, and also provide for the making of regulations governing safety and other matters.
- '*The Regional Electric Authorities Acts, 1945 to 1964.*' These Acts provide for the constitution of Regional Electricity Boards representative of the Commission and the Local Authorities within each region, and define their powers and responsibilities.
- '*The Southern Electric Authority of Queensland Acts, 1952 to 1964.*' These Acts established the Southern Electric Authority as a public authority and successor to the City Electric Light Co. Ltd., and define the powers and responsibilities of the Authority.
- '*The Northern Electric Authority Acts, 1963 to 1964.*' These Acts established the Northern Electric Authority with responsibility for the generation and main transmission of electricity in north Queensland and for its sale in bulk to regional distributing authorities. They also define its powers and responsibilities.
- '*The Electrical Workers and Contractors Acts, 1962 to 1964.*' These Acts deal with the execution of electrical works, the competency of electrical workers and the licensing of electrical contractors.

#### State Electricity Commission of Queensland

The Commission commenced to function in January 1938. Generally, the Commission is the statutory authority concerned, *inter alia*, with the administration of electricity supply legislation, the general control, organisation and efficient development of the electricity supply industry in Queensland, the forward planning of such development, the control of electricity charges, the administration of regulations and rules relating to safety, the raising of capital, the provision of engineering and consulting services, the promotion of the use of electricity, particularly in manufacturing and rural industries, and the fixing of standards. In addition, it is an authority to which consumers may appeal on matters in dispute between them and their electric authorities. The Commission is also empowered to own directly and operate generating stations and transmission lines and to sell electricity in bulk, but up to the present it has not been found necessary or desirable to implement this power.

### Development and organisation

Following the 1939-1945 War, regional systems of electricity supply were established in and adjacent to the eastern coastal area, which is over 1,300 miles long. Five Regional Electricity Boards were established to replace the numerous individual electricity undertakings which had supplied only the larger centres of population. Under this system supply was delivered from central generating stations at or near the principal load centres. Each region comprised a homogeneous area, possessing relatively common interests, within which integrated transmission and distribution systems were established. Transmitted supply was taken to load centres previously served by relatively costly local generating stations, and a vigorous policy of rural electrification was pursued. In south-eastern Queensland regional electrification was undertaken by the Southern Electric Authority and the Dalby Town Council. The Brisbane City Council supplies the metropolitan area.

In the pastoral areas west of the Great Dividing Range supply had been provided by means of small diesel-operated generating stations run by local authorities. These independent units are fairly uniformly scattered throughout western Queensland and no town or village with more than fifty potential consumers is without electricity. With increasing consumption there has been a trend in this area for local generating stations to be superseded by transmitted supply from larger centres. From such transmission lines it has been possible to provide electricity to many otherwise isolated rural properties.

A further stage in the electrical development of Western Queensland was reached with the establishment during 1966 of the Central Western Regional Electricity Board with headquarters at Barcaldine. This Board's area of operations embraces eight shire councils. Its establishment will consolidate electricity supply in the area by the concentration of generation at Barcaldine and Longreach. Interconnection with the Capricornia Region will be implemented in the future when economically practicable.

Continued load growth led naturally to the interconnection of regional systems, and by this means the production of electricity was concentrated on the cheapest sources of power. The three northern Regional Electricity Boards (Cairns, Townsville and Mackay) were consolidated into one interconnected grid. In the south the supply systems of the Southern Electric Authority, the Brisbane City Council, the Wide Bay-Burnett Regional Electricity Board, and the Dalby Town Council also form an interconnected grid. The central Queensland network, which is operated by the Capricornia Regional Electricity Board, is not yet connected with either the northern or southern grids.

The natural sequel to the interconnection of regional supply systems has been the severance of the production and distribution functions. For the northern grid the Northern Electric Authority is responsible for the operation of generation and main transmission facilities, with the Cairns, Townsville and Mackay Regional Electricity Boards buying in bulk and acting as distributing authorities. In the south the Southern Electric Authority is responsible for generation and transmission, with the other authorities purchasing in bulk and performing the distribution function. However, the Southern Electric Authority also distributes over a large rural area surrounding Brisbane, and the Wide Bay-Burnett Board generates on a small scale. The Capricornia, Townsville and Cairns Boards operate a number of small isolated diesel generating stations.

All electricity undertakings in Queensland are now publicly owned, and with the exception of the Southern Electric Authority are controlled by representatives of local authorities within the areas concerned. Further interconnections and amalgamations within the electricity supply industry will be effected as soon as they will produce greater efficiency and lower costs to consumers. A major co-ordinating factor has been the inclusion of the Commissioner for Electricity Supply on the Boards of the Southern Electric Authority, the Northern Electric Authority and the five Regional Electricity Boards since their inception.

### Electricity generation, transmission and distribution

Electricity generated in the State is based primarily on black coal, 84.5 per cent of the total production during 1965-66 being derived from this fuel. Hydro-electric stations, located mainly in north Queensland, provided 13.9 per cent, and the balance of the production, 1.6 per cent, was from internal combustion plants located mainly in western Queensland, utilising oil, wood, coal, or natural gas as fuel. Natural gas is the principal fuel used at the Roma power station. Electricity generated in Queensland in power stations in 1965-66 totalled 3,950 million kWh. At 30 June 1966 the major power stations within the State were as follows: *Steam*—Bulimba A (Brisbane), 92,500 kW; Bulimba B (Brisbane), 180,000 kW; New Farm (Brisbane), 75,000 kW; Tennyson A (Brisbane), 120,000 kW; Tennyson B (Brisbane), 120,000 kW; Swanbank A (Ipswich), 66,000 kW; Howard (near Maryborough), 37,500 kW; Rockhampton, 52,500 kW; Callide, 30,000 kW; Mackay, 12,250 kW; Townsville, 37,500 kW; *Hydro*—Kareeya (Tully Falls), 72,000 kW; Barron Gorge (near Cairns), 60,000 kW. The Mackay station also contains 3,000 kW of internal combustion plant. The Southern Electric Authority also operates two steam packaged plants each of 10,000 kW capacity. The total installed capacity of all Queensland generating stations was 1,086,180 kW, which comprised 919,750 kW of steam plant, 135,205 kW of hydro-electric plant and 31,225 kW of internal combustion plant.

The electrical transmission and distribution systems within the State comprised 36,650 circuit miles of electric lines at 30 June 1966. The main transmission voltages are 132 kV, 110 kV, 66 kV and in certain areas 33 kV. Extensive rural electrification has been undertaken by means of the single wire earth return system. At 30 June 1966 the total number of electricity consumers was 495,500, of whom 198,000 were in metropolitan Brisbane. The total number of farming properties supplied with electricity was approximately 26,500.

#### Future development

Major new construction is concentrated on the development of four new power stations sited on coalfields. These are at Swanbank (396,000 kW and 480,000 kW) on the West Moreton coalfield near Ipswich, Callide (120,000 kW) on the Callide open-cut coalfield near Biloela, and at Collinsville (120,000 kW) on the Collinsville coalfield. These stations will supply the southern, central and northern networks, respectively. Cooling water for the Callide station is provided from a multipurpose dam on Callide Creek which will also satisfy irrigation needs. A similar multipurpose dam on the Broken River will serve the Collinsville station. The water requirements of the Swanbank power station will be supplied from the Moogerah Dam. The Swanbank station will consist of six 66,000 kW generating sets, the first of which was commissioned in 1966. The remaining sets are scheduled for commissioning, one in late 1966, one in 1967, two in 1968 and one in 1969. The first stage of the Callide station consists of two 30,000 kW sets, the first of which was commissioned in June 1965. The second and third sets are scheduled for commissioning in 1967 and the final set in 1969. At Collinsville the first stage of two 30,000 kW sets is planned for commissioning in 1968, with the third and fourth sets scheduled for 1970 and 1971 respectively. In November 1965 Government approval was secured for the construction of a second thermal power station at Swanbank. This station has a planned capacity of 480,000 kW, and one 120,000 kW generating set will be commissioned annually from 1970 to 1973. In North Queensland, developments being considered include the further expansion of thermal generation at Collinsville and the further utilisation of the area's hydro-electric potential.

The electrical development in the west of Queensland is being assisted by the progressive extension westwards of the boundaries of the major regional electricity undertakings to include smaller western undertakings, bringing with it the advantages of incorporation within larger authorities, lower tariffs and greater financial and technical resources. Organisational changes involving amalgamation of isolated undertakings and their interconnection by transmission lines are being implemented as and when economic benefits to the consumers will result. In the extreme far west the isolated undertakings must inevitably continue to remain as such for the foreseeable future. New measures now proposed include the further westward extension of the areas of supply of the Townsville and Capricornia Regional Electricity Boards.

### South Australia

An account of the companies generating electric power in South Australia prior to the establishment of the Adelaide Electric Supply Co. Ltd., and describing the development of that company's activities, was given in Year Book No. 39. Also included in the account was some reference to the early measures of public control over electricity supply in South Australia and the extent to which they were applied, and also to the inquiries into the activities of the Adelaide Electric Supply Co. Ltd., in 1932 and 1935. Following an inquiry instituted by the Government in 1943, relative to measures for increasing electricity supply to the metropolitan area and country districts, the Electricity Act, 1943 was passed, which, *inter alia*, established the South Australian Electricity Commission.

#### Electricity Trust of South Australia

In 1946 the assets of the Adelaide Electric Supply Co. Ltd. were transferred to a newly formed public authority, the Electricity Trust of South Australia, which became responsible for unification and co-ordination of the major portion of the State's electricity supply and which took over the powers previously vested in the South Australian Electricity Commission. In addition to the powers specified in the Adelaide Electric Supply Company's Acts, 1897-1931, the Trust may supply electricity direct to consumers within a district or municipality with the approval of the local authority, and by agreement with other organisations which generate or supply electricity, arrange to inter-connect the mains of the Trust with those of other organisations, and give or receive supplies of electricity in bulk.

#### Capacity and production

Three main categories of organisations generate electric power in South Australia, namely: (a) governmental, which include the Electricity Trust; (b) local authorities, e.g. municipal and district councils; and (c) other, including individuals and firms engaged primarily in generating power for sale, firms generating power primarily for their own use but supplying outside consumers, and firms generating power solely for their own use.

Of the total installed capacity in South Australia at 30 June 1966, the Electricity Trust operated plant with a capacity of 661,400 kW, and is the most important authority supplying electricity in the State. There were approximately 383,000 ultimate consumers of electricity in the State, of whom 364,000 were supplied directly and approximately 11,000 indirectly (i.e. through bulk supply) by the Trust. Its major steam stations are Osborne 'A' (60,000 kW), Osborne 'B' (240,000 kW), and Port Augusta Playford 'A' (90,000 kW) and Playford 'B' (240,000 kW). At Mt Gambier and Pt Lincoln the Trust operates steam power stations of 21,800 kW and 5,000 kW capacity respectively. The former burns either wood waste or fuel oil, while the latter burns fuel oil. In addition there is a diesel station at Pt Lincoln of 4,600 kW. Mt Gambier is connected with the metropolitan system by a 132 kV line. No hydro-electric potential exists in South Australia. Steam generating units comprise 98 per cent of installed capacity and the balance is internal combustion equipment.

#### **Leigh Creek and other new capacity**

Fairly extensive deposits of low grade sub-bituminous coal are obtainable at Leigh Creek, about 360 miles north of Adelaide. Under the Electricity Trust of South Australia Act, 1946, the Trust was given authority to develop Leigh Creek coal for use in its own undertakings and also for sale to other consumers. Production from the Leigh Creek field commenced in 1944, and in the year ended 30 June 1966, 1,974,357 tons of coal were produced, practically all of which was used by the electricity undertaking at the Port Augusta Playford Power Stations, which use Leigh Creek coal exclusively.

A large power station is to be constructed on Torrens Island near Adelaide, and four 120,000kW turbo-alternators and associated oil fired boilers have been ordered, the first to be commissioned early in 1967.

### **Western Australia**

Since 1952 the State Electricity Commission of Western Australia has generated and distributed all electric current in the Perth metropolitan area, including Fremantle. Previously the Fremantle Municipal Tramways and Electric Lighting Board and other metropolitan municipal and road board supply authorities had purchased current in bulk from the Commission for distribution through their own system. For information on the early history of electricity supply in the metropolitan area. *see* Year Book No. 39, page 1189.

#### **State Electricity Commission of Western Australia**

The State Electricity Commission of Western Australia was established by the *State Electricity Commission Act, 1945*, and, as at present constituted, consists of nine members, including the Chairman, appointed by the Governor. Four of the Commissioners are representatives of consumers, one for the metropolitan area, two for the rest of the State and one representing commercial consumers. Of the remaining five, one is the Under Treasurer of the State or his deputy, one represents employees of the Commission and three are required to be qualified engineers.

The Commission is empowered to co-ordinate all State and other power undertakings in the State; to encourage and promote the use of electricity and other power, especially for industrial, manufacturing and rural purposes; and to carry out investigations to determine the safest, most economical and effective means for promoting, establishing, extending, and improving works for the generation, transmission, distribution, supply, and use of electricity or other power throughout the State. No person or organisation is permitted to construct or extend an electricity supply undertaking without consent from the Commission. Local authorities are empowered to operate and construct power stations and other works associated with the supply of electricity, provided that authority is first obtained from the Commission and that their proposals are not inconsistent with the Commission's plans.

#### **General pattern of electricity supply**

The State Electricity Commission gives central power station supply to the metropolitan area and an area of approximately 30,000 square miles defined in the report which formed a basis for the *South West State Power Scheme Act, 1945*, and an area extending eastward from Perth to Koolyanobbing. These areas include the more highly developed rural districts with a greater population density, which can more readily be connected to a central power station system. The policy of extending power supplies to rural consumers is continuing, and at 30 September 1966 some 6,780 rural consumers were connected. A similar scheme known as the Northern Areas State Power Scheme will be developed, and a depot has been established in the Geraldton area. The Commission purchases power in bulk to supply districts as far north as Northampton.

In the other areas of the State, towns are supplied by the local authority or by a concessionaire operating under an agreement with the local authority and the Commission. Power stations operated under these conditions are exclusively diesel of varying sizes.

The total number of consumers at 30 June 1966 was 217,174 of whom 198,302 were supplied by the Commission.

At the request of the Government, the Electricity Advisory Committee, in 1945, submitted a report which recommended, among other things, a national power scheme for the south-west. The plan provided for acquisition of the existing Collie Power Station and installation of additional generating capacity, construction of a power station at Bunbury and inter-connection of the south-west scheme with the metropolitan system. In 1946 the State Electricity Commission acquired the Collie Power Station, and since then it has acquired a number of electrical undertakings from municipal bodies and private organisations in the south-west area and is proceeding with arrangements for the purchase of others. In August 1951 the first portion of the South-West Power Scheme was officially opened at Collie, and most of the south-west towns as well as towns in the eastern wheat belt area as far east as Koolyanobbing have been connected by transmission line to the interconnected system. Statistics relating to activities of the interconnected system for the years 1964-65 and 1965-66 are shown in the following table.

	1964-65	1965-66
Plant capacity . . . . . kW	349,500	349,500
Maximum load . . . . . kW	320,000	363,000
Units generated . . . . . million kWh	1,215	1,371
Fuel used per unit (kWh) generated . . . lb	1.47	1.46
Coal used . . . . . tons	686,928	795,032

In Kalgoorlie the large gold mines generate their own power requirements. The Kalgoorlie Town Council operates a 50-cycle diesel station to supply A.C. consumers in Kalgoorlie and Boulder. The D.C. stations of the Kalgoorlie and Boulder Town Council will continue to operate for some time at least.

#### New projects

Since its inception in 1946 the State Electricity Commission has made the provision of an adequate reserve of generating plant its primary object. With the commissioning of the first unit at South Fremantle Power Station in May 1951, the lag caused by shortages during the war and early post-war years was overcome. The system then developed rapidly to keep pace with the expansion of industry and housing. Generating plant has increased six-fold in the past twenty years. The four major power stations are interconnected with the South-West Power Station at Collie enabling the most economical units to be used as a base load station. Continuous development of the transmission and distribution system is being undertaken to keep pace with the growth in consumer demand, which is being maintained at a high level.

The first of the four turbo alternators to be installed at Muja Power Station (near Collie) was commissioned on 10 July 1965, and work on the other units is proceeding to schedule. One of these was ready for service in November 1966, another will be ready in 1967 and the fourth in 1968. In addition, contracts have been let for two 120,000 kW oil fired units for a new station to be built at Kwinana. It is expected that these units will be commissioned in 1970 and 1971.

### Tasmania

A considerable part of the water catchment in Tasmania is at high level, with a substantial natural storage available, and this has made it possible to produce energy at lower cost than elsewhere in Australia, or in most other countries. Another factor contributing to the low cost is that rainfall is distributed fairly evenly throughout the year with comparatively small yearly variations. The abundant and comparatively cheap supplies of electricity and other natural resources have attracted to Tasmania a number of important secondary industries, including large electro-chemical and metallurgical works with high load factor (in consequence of which the system load factor is also very high—70 per cent), for which energy costs constitute a large proportion of the total cost of production. The continuous power demand of these organisations when plant is in full operation aggregates 278,000 kW. For information on hydro-electric development in Tasmania prior to the establishment of the Hydro-Electric Commission in 1930, see Year Book No. 39, pages 1192-3.

#### Hydro-Electric Commission

In 1929 the Government passed the *Hydro-Electric Commission Act 1929*, which established the Hydro-Electric Commission and vested in the Commission, with some minor exceptions, the right to use the waters of the State of Tasmania, and authorised it to develop and reticulate electric power for all purposes. In 1930 this corporate body took over the State hydro-electric undertaking and the business of the Hydro-Electric Department. For details of projects undertaken

by the Commission prior to 1957 *see* Year Book No. 48, pp. 243-4, and earlier issues. Particulars of the Catagunya Power Development Scheme, begun in 1957 and completed in 1962, are contained in subsequent issues up to No. 51.

In the Great Lake Power Development the water of the Great Lake, by its diversion to the north-east in the direction of the most precipitous fall, is used to much greater advantage than previously through Shannon and Waddamana. Eventually reaching the South Esk River, it is used again through the machines of the Trevallyn Power Station. The works consist of an intake at the Great Lake, a four-mile headrace tunnel through the Western Tiers, one mile of high pressure pipeline on the face of the Tiers, a vertical shaft leading to the Poatina Power Station some 500 feet underground, a two-mile trailrace tunnel discharging into a canal, and then a channel to the Lake River, a tributary of the South Esk. In this development the power is generated by the fall of water through a vertical distance of 2,730 feet to the underground Poatina Power Station. Three 50,000 kW generators were in operation by mid-1964, a fourth in September 1964 and a fifth in February 1965. A sixth generator, to be installed at a later date, will bring the station's installed capacity to 300,000 kW. A further section of the scheme includes a dam at Arthur Lakes, from which water is pumped via conduit into the Great Lake, thus increasing the storage for use through the Poatina Power Station. The water from Arthur Lakes, as it falls to the Great Lake, is exploited in the small Tods Corner power station where one 1,600 kW generator is installed. With the commissioning of Poatina Power Station, Shannon Power Station was taken out of service in June 1964, and the original Waddamana 'A' Power Station was taken out of service in June 1965. Waddamana 'B' Station is being retained to provide peak load capacity and spare plant.

The total installed capacity of alternators in the various power stations throughout Tasmania in June 1966 was as follows:

	kW
Waddamana . . . . .	48,000
Tarraleah . . . . .	90,000
Butler's Gorge . . . . .	12,200
Trevallyn . . . . .	80,000
Tungatinah . . . . .	125,000
Lake Echo . . . . .	32,400
Liapootah . . . . .	83,700
Wayatinah . . . . .	38,250
Catagunya . . . . .	48,000
Poatina . . . . .	250,000
<b>Total . . . . .</b>	<b>807,550</b>
King Island (diesel plant) . . . . .	390

Approved construction will bring this total to approximately 1,240,000 kW by 1972. The number of ultimate consumers at 30 June 1966 was 134,679.

#### New capacity

The Hydro-Electric Commission is engaged on a construction programme which comprises the Lower Derwent Power Development and the Mersey-Forth Power Development. In the first-named a three-stage development is under construction below Catagunya on the River Derwent. With dams and associated power stations Repulse, Cluny and Meadowbank, completion of this project by 1967 will add a further 85,000 kW to the system, and it will also bring to an end the exploitation of the power potential of the River Derwent and its tributaries.

The Mersey-Forth Power Development is also under construction and is scheduled to be completed by 1972. In this development the Mersey River will be diverted westward to the Forth River by the construction of the Parangana Dam about half a mile below the junction of the Mersey and Fisher Rivers. Thence the flow will be conducted by a tunnel and penstock to Lemonthyme Power Station on the Forth River. The combined flow will be used for power generation at three power stations on the Forth River, situated at the foot of dams at Cethana, Devil's Gate and Paloona. The Wilmot River will be diverted to the east by a dam through a tunnel to a power station on the Forth River upstream from Cethana Dam. The diverted flow of the Wilmot River will also be used to produce power at Cethana, Devil's Gate and Paloona. A sixth power station will result from the development of the Fisher River, where a rapid fall from Lake Mackenzie on the plateau to the Mersey River enables a head of some 2,100 feet to be exploited. The principal storage in the development, Lake Rowallan, will be situated on the upper Mersey River at Walters Marsh, and Rowallan Power Station will exploit the water released from this storage. Smaller storages will be provided by Lake Mackenzie and by Parangana, Wilmot, Cethana, and Devil's Gate Dams. The six stages of the development are to be completed progressively between 1969 and 1972 and will add a total of 298,500 kW to the system.

The Commission is conducting extensive surveys and investigation of other schemes with a view to further construction after the completion of the present programme. Investigations are continuing into the very considerable resources as yet untouched, principally in the west and north-west of the State, and it is estimated that the potential which can be developed economically should ultimately harness 2,400,000 kW to the system.

### Statistical Summary

The following table shows statistics for each State and Territory separately and for Australia for 1964-65 and 1965-66. Statistics of the electricity supply industry for the years 1961-62 to 1965-66 are given in the chapter Manufacturing Industry. Particulars of the Snowy Mountains scheme are included under New South Wales in the following table.

#### CENTRAL ELECTRIC STATIONS, STATES AND TERRITORIES

(a) Not available for publication; included in the total for Australia. (b) Average employment in generating stations over whole year, including working proprietors. (c) Value, at generating station, of electricity produced plus certain earnings. (d) Value added in the process of generation. (e) Total generated including that generated by factories for their own use. The generation of electricity within each State takes no account of interchange of electricity between States. Furthermore, Victorian details exclude entitlements to generation from Hume Power Station and the Snowy Mountains Hydro-electric Scheme. (f) Approximate figures supplied by the electricity authority in each State. An 'ultimate consumer' is a person, business, undertaking, etc. that has contracted to receive electric power from a public or private organisation supplying this service. The number of ultimate consumers is not identical with the number of persons served with electricity because one ultimate consumer may represent three or four persons, e.g. in a household. (g) Not available. Excluded from Australian total.

### Commonwealth Territories

The electricity supply undertakings at Canberra in the Australian Capital Territory and at Darwin, Katherine, Tennant Creek, and Alice Springs in the Northern Territory are operated by the Commonwealth Government.

#### Australian Capital Territory

The supply authority is the A.C.T. Electricity Authority, which took over the functions of the Canberra Electric Supply Branch, Department of the Interior, on 1 July 1963. Supply was first made available in Canberra during 1915 and was met from local steam plant. Connection to the New South Wales interconnected system was effected in 1929, and all requirements are now taken from this system. Locally owned plant consists of 4,000 kW of diesel alternators which are retained as a standby for essential supplies. The total number of ultimate consumers at 30 June 1966 was 28,271. During the year 1965-66 the bulk electricity purchased was 328,140,000 kWh and the system maximum demand was 89,750 kW.

#### Northern Territory

At Darwin, supply was established by the Town Council in October 1934, but during April 1937 responsibility for generation and supply was transferred to the Northern Territory Administration. The power station is now equipped with turbo alternators with a total capacity of 15,000 kW. Tenders were let during 1964 and 1965 for two additional 1,500 kW turbo alternators and boilers for installation at Stokes Hill, Darwin, power station. In addition, diesel generating plant of approximately 6,500 kW is available. A 66 kV transmission system is used. At Alice Springs the power station is equipped with a diesel generating plant of 5,800 kW total capacity, with an additional 2,200 kW set being installed during 1966-67. At Katherine the power station is equipped with a diesel generating plant of 1,900 kW total capacity. The total number of ultimate consumers served in the Territory at 30 June 1966 was 7,278.

#### Papua and New Guinea

*Papua and New Guinea Electricity Commission.* Responsibility for the operation and establishment of the electrical undertakings in Papua and New Guinea is vested in the Papua and New Guinea Electricity Commission, whose headquarters are located at Port Moresby. The Commission came into operation on 1 July 1963, and assumed the functions and responsibilities previously vested in the Electrical Undertakings Branch of the Department of Public Works. The Commission, on its own behalf, operates the public supplies in the main centres of population and, on behalf of the Administration, operates the supply in the minor centres and patrol posts, hospitals, agricultural establishments, etc., where the supply cannot be considered to be a fully commercial supply. It has also regulatory functions associated with the licensing of electricians and contractors, the control of franchise holders and the approval of appliances and electrical materials for use in the Territory.

The generating capacity in the centres under the control of the Commission is as follows: Port Moresby—*diesel*, 4,470 kW, *hydro*, 5,500 kW; Rabaul—*diesel*, 3,000 kW; Lae—*diesel*, 2,640 kW with an additional 600 kW under construction; Madang—*diesel*, 1,620 kW; Wewak—*diesel* 1,355 kW; Goroka—*diesel*, 500 kW, *hydro*, 400 kW; Samarai—*diesel*, 300 kW, with an additional 150 kW under construction; Kavieng—*diesel*, 194 kW, with an additional 150 kW under construction; Kokopo—*diesel*, 80 kW. On behalf of the Administration, the Commission operates generating sets totalling some 5,300 kW distributed over 135 centres, with capacities between 5 and 150 kW. The townships of Wau and Bulolo are supplied by power generated by Placer Development Limited, which operates hydro-electric plant of 5,500 kW capacity. Power produced by this plant is used mainly in the plywood mill at Bulolo. The number of consumers served by the Commission at 30 June 1966 was 10,250. The consumers in minor centres approximated 4,000.

*Future development.* Following its policy of taking increasing advantage of the hydro-electric potential existing in the Territory, the Commission is proceeding with the construction of the No. 2 hydro-electric power station of the Laloki River Scheme. This station, planned to be commissioned in mid-1967, will have an initial capacity of 6,000 kW with an ultimate capacity of 30,000 kW.

Investigations have been completed on the proposed hydro-electric development of the Upper Ramu River, and recommendations have been submitted by the Administration to the Commonwealth Government. The recommendations include proposals for a station designed for an ultimate installed capacity of 72,000 kW for a regional supply to Lae, Madang, Kainantu, Goroka, and Mount Hagen. Some 400 miles of 66 kV and 132 kV transmission line will be required to bring power to the centres of consumption.

To meet the growing needs of the Territory pending the commissioning of power stations on the Laloki and Upper Ramu Rivers, the Commission has called tenders for the construction of 70 miles of 66,000 kV transmission line from Bulolo to Lae to take advantage of surplus power supplies from Placer Development Limited's hydro-electric plant, and continues its policy of installing skid mounted diesel generating sets in these centres to be served ultimately by hydro-electricity. These sets will be suitable for transfer to other growing centres at a later date. Three such sets of 500 kW capacity have been installed at Port Moresby, with a further two to be commissioned later in 1966.

Investigations are still continuing to locate a suitable source of hydro-electric power to supply the developing area along the Gazelle Peninsula of New Britain. The Wharongoi River, at present being investigated, seems to offer the best possibilities, but no firm proposal has as yet been put forward. Several small hydro-electric installations are in service or are in process of construction to serve isolated centres. These are—Aiyura Agricultural Station—30 kW; Mount Hagen—120 kW; Mendi (under construction)—200 kW; Tapini—30 kW. The Commonwealth Department of Works has a Stream Gauging Section and maintains records of many of the main rivers in order to provide material for future investigations into some of the major hydro-electric potential which exists in the Territory.

In 1950 the Commonwealth Government joined with the British Aluminium Co. Ltd. of London to form a company, New Guinea Resources Prospecting Co. Ltd., to locate and develop large capacity hydro-electric schemes in New Guinea (the Commonwealth Government later sold its interest). The company carried out very extensive investigations into the rivers of the Gulf of Papua and, in particular, into the Purari River.

## CHAPTER 29

### EMPLOYMENT AND UNEMPLOYMENT

Further detail on subjects dealt with in this chapter is contained in the *Labour Report* and other publications of this Bureau. For subjects relating to population censuses reference should be made to the series of mimeographed and printed publications listed in the chapter Miscellaneous of this Year Book. Detailed information on employment and unemployment and the Work Force Survey is contained in the monthly mimeographed bulletin *Employment and Unemployment*. Current information is also available in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and the *Quarterly Summary of Australian Statistics*, and preliminary estimates of civilian employment are issued in a monthly statement *Wage and Salary Earners in Civilian Employment*.

#### THE WORK FORCE

The work force comprises two categories of persons: those who are employed and those who are unemployed. In the first category are included employers, self-employed persons, wage and salary earners, and unpaid helpers. Comprehensive details for each State and Territory and for Australia as a whole in respect of persons in the work force, classified according to characteristics such as age, sex, conjugal condition, industry, occupational status, and occupation, are obtained only at a general census of population. Quarterly estimates of the civilian work force are derived from the results of surveys of a sample of households selected by area sampling methods. Estimates are at present available only for the six State capital cities combined. A summary of the information about the work force that was obtained at the population census of June 1961 and earlier censuses is given on pages 1179-87. Estimates derived from the quarterly work force surveys appear on pages 1188 *et seq.*

#### Population censuses\*

##### Occupational status

Occupational status of persons classified as in the work force at population census dates covers two broad groups; those at work and those not at work. The first group comprises employers, self-employed persons, employees (on wage or salary), and unpaid helpers. The category 'not at work' includes those who stated that they were usually engaged in work, but were not actively seeking a job at the time of the census by reason of sickness, accident, etc., or because they were on strike, changing jobs, or temporarily laid off, etc. It also includes persons able and willing to work but unable to secure employment, as well as casual and seasonal workers not actually in a job at the time of the census. The numbers shown as 'not at work' in the following tables, therefore, do not represent the number of unemployed available for work and unable to obtain it.

The tables following show the occupational status of the population of Australia at the 1954 and 1961 censuses and of the States and Territories at the 1961 census.

#### OCCUPATIONAL STATUS OF THE POPULATION: AUSTRALIA, CENSUSES, 1954 AND 1961

Occupational status	Census, 30 June 1954			Census, 30 June 1961			Increase 1954-61
	Males	Females	Persons	Males	Females	Persons	
In work force—							
At work—							
Employer . . . . .	220,878	30,104	250,982	224,369	42,712	267,081	16,099

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation on page 1179.

Particulars of males and females in the Australian work force classified by occupational status and industry are given on page 1183, and pages 407–10 of Year Book No. 50 contain tables showing males and females at the census of 30 June 1961, classified according to occupational status in conjunction with age and conjugal condition. This information may also be found in Labour Report No. 50, 1962 and 1963, pages 150–3.

**Persons not at work**

The total number of persons 'not at work' has been recorded only at the dates of the various censuses. Since the 1947 census this category has included all persons (usually engaged in industry, business, trade, profession, or service) who were out of a job and not at work at the time of the census for whatever reason, including any not normally associated with unemployment. The following table shows the numbers recorded as 'not at work' at the censuses of 30 June 1947, 1954 and 1961, classified according to cause. As explained on page 1179, the totals shown as 'not at work' do not represent the number of unemployed available for work and unable to obtain it.

**PERSONS NOT AT WORK(a), BY CAUSE: AUSTRALIA  
CENSUSES, 1947, 1954 AND 1961**

Census	Unable to secure employment	Temporarily laid off	Illness	Accident	Industrial dispute	Other (b)	Total
<b>Males—</b>							
1947 . . . . .	17,314	12,458	14,639	2,985	475	18,743	66,614
1954 . . . . .	9,912	4,423	11,879	2,804	344	11,652	41,014
1961 . . . . .	83,945	11,930	13,684	6,152	540	12,375	128,626
<b>Females—</b>							
1947 . . . . .	2,254	2,449	4,396	280	24	7,512	16,915
1954 . . . . .	3,685	1,386	4,310	318	17	4,284	14,000
1961 . . . . .	27,562	3,939	5,821	773	199	5,686	43,980
<b>Persons—</b>							
1947 . . . . .	19,568	14,907	19,035	3,265	499	26,255	83,529
1954 . . . . .	13,597	5,809	16,189	3,122	361	15,936	55,014
1961 . . . . .	111,507	15,869	19,505	6,925	739	18,061	172,606

(a) Persons in the work force who were 'not at work' (see explanation on page 1179) at the time of the census. (b) The majority of these persons were resting between jobs or changing jobs.

**Industry**

For census purposes, industry may be defined as any single branch of productive activity, trade or service. All persons engaged in any such branch of economic activity are classified industrially as belonging to that particular branch, irrespective of their personal occupations within the industry. Thus a single firm may employ persons performing completely different occupations in order to make a particular product, or to render a particular service, but the industrial classification of each of these persons is determined by the nature of the product made or of the service rendered by the firm that employs him.

The following table shows the number of persons in the work force in each industry group and sub-group at the censuses of 1954 and 1961. The figures include those at work and those not at work.

## INDUSTRY OF THE POPULATION: AUSTRALIA, CENSUSES, 1954 AND 1961

Industry group and sub-group	Census, 30 June 1954			Census, 30 June 1961			Increase or decrease (-) 1954-61
	Males	Females	Persons	Males	Females	Persons	
<b>Primary production—</b>							
Fishing . . . . .	8,451	115	8,566	8,124	128	8,252	-314

Details of individual industries within the foregoing sub-groups, by sex, are published for each State and Territory and for Australia as a whole in the mimeographed 1961 *Census Bulletin* No. 29 and in the respective parts of the census volumes.

**Industry and occupational status**

Males and females in the work force at the 1961 census are classified in the following table according to industry and occupational status. Only the major industry groups are shown in this table; particulars for each sub-group are available in the mimeographed 1961 *Census Bulletin* No. 34 and in the respective parts of the printed census volumes.

**PERSONS IN THE WORK FORCE, BY INDUSTRY AND OCCUPATIONAL STATUS  
AUSTRALIA, CENSUS, 30 JUNE 1961**

(a) On wage or salary. (b) Not on wage or salary. (c) See explanation on page 1179.

**Married women in the work force**

At the 1961 census 444,680 married women (including 39,148 women who were married but permanently separated, legally or otherwise) were recorded as being in the work force. This represented 42 per cent of the total number of females in the work force. At the 1954 census the corresponding percentage was 34.3. Between 1954 and 1961 there was an increase of 154,748 or 53.4 per cent in the number of married women in the work force compared with an increase of 213,767 or 25.3 per cent in total females in the work force. The largest increase (both numerical and proportional) in any age group was for married women aged 35-39 years, where the increase in the seven years 1954 to 1961 was almost 82 per cent.

## EMPLOYMENT AND UNEMPLOYMENT

**MARRIED WOMEN IN THE WORK FORCE  
ACCORDING TO AGE: AUSTRALIA  
CENSUSES, 1954 AND 1961**

Age last birthday (years)	Married women in the work force(a)		Increase, 1954-61	
	Census, 30 June 1954(b)	Census, 30 June 1961(c)	Number	Per cent
15-19 . . .	3,549	5,570	2,021	56.95
20-24 . . .	35,452	51,003	15,551	43.86
25-29 . . .	43,899	49,536	5,637	12.84
30-34 . . .	43,320	59,025	15,705	36.25
35-39 . . .	41,046	74,660	33,614	81.89
40-44 . . .	42,265	67,695	25,430	60.17

50-54 . . .	23,346	41,142	17,796	76.23
55-59 . . .	13,539	22,415	8,876	65.56
60-64 . . .	6,609	9,342	2,733	41.35
65 and over . .	3,415	4,547	1,132	33.15
<b>Total . . .</b>	<b>289,932</b>	<b>444,680</b>	<b>154,748</b>	<b>53.37</b>

(a) Includes women married but permanently separated, legally or otherwise. (b) The figures shown for 1954 include an allowance for the number of women whose conjugal condition was not stated. (c) A conjugal condition was allocated prior to tabulation in all instances where this information was not stated.

**Occupation**

The working population may be classified according to distinct concepts—(i) the *occupation*, which is personal to the individual, and (ii) the *industry*, in which the individual carries on his occupation. Thus the *occupation* of a person is the kind of work that he or she personally performs, while *industry* is defined as any single branch of productive activity, trade or service. Particulars of the work force classified according to industry are given on pages 1181-3 of this section; pages 1185-7 contain particulars of the principal occupation groups (major and minor) of the work force at the census of 30 June 1961. Details of individual categories of occupations are published in the mimeographed 1961 *Census Bulletin* No. 32 and in the respective parts of the census volumes.

The following table shows, for Australia, the numbers of males, females and persons in the work force in each of the principal occupation groups at the 1961 census. Data of this type were last obtained at the 1947 census, but a comparison of the figures derived therefrom with those shown below is not possible because of differences in classification. Only those persons regarded as being in the work force are classified according to occupation. Corresponding details for persons in each State and Territory are given in Year Book No. 50, pages 415-16 and in *Labour Report* No. 50, 1962 and 1963, pages 158-9.

## OCCUPATIONS OF THE POPULATION: AUSTRALIA, CENSUS, 30 JUNE 1961

## The work force survey: six State capital cities

The estimates of the civilian work force contained in this section are based on the result of surveys of a sample of households selected by area sampling methods in the six Australian State capital cities. The boundaries of the capital cities are those defined for the population census of June 1961.

Surveys have been conducted quarterly in February, May, August, and November of each year since November 1960. Carefully selected and specially trained interviewers obtained the required information at about 19,500 households over a four-week period in each quarter. Each person included in the survey is assigned to a work force or not in the work force category on the basis of his actual activity during a specified week, his activity during that week being determined from answers to a set of questions specially designed for the purpose.

The enumeration includes all persons, 15 years of age and over, living in selected households, with the exception of members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement, and certain diplomatic personnel customarily excluded from the census and estimated populations. To take account of changes in the school leaving age, and to bring the work force survey definitions into conformity with those adopted at the 1966 population census, the scope of the survey was restricted, as from August 1966, to civilians aged 15 years and over. Previous surveys included persons aged 14 years, and in some of the tables which follow these persons have been included.

The principal categories in the following tables are the employed and the unemployed, which together constitute the total work force, and the remainder, comprising persons who are not in the work force. Details of these categories are as follows.

- (a) *Employed persons* comprise all those who, during the specified week, worked for pay, profit, or payment in kind, in a job or business, or on a farm, and those who had a job, business, or farm, but were temporarily absent for the whole of the specified week for reasons other than lack of work. Persons who worked fifteen hours or more without pay in a family business (or on a farm) owned and operated by a member of the same household are included. The category includes employees, employers and self-employed persons.
- (b) *Unemployed persons* comprise all those who, during the specified week, did no work at all, did not have a job or business, and were actively looking for work. The category also includes persons absent from work for the whole of the specified week without pay because of lack of demand for their services (i.e. those laid off without pay for the whole of the specified week).
- (c) *The work force* consists of all persons who, during the specified week, were employed or unemployed in terms of the classifications given in (a) and (b) above.
- (d) *Persons not in the work force* are those who, during the specified week, were not classified as employed or unemployed in terms of the classifications given in (a) and (b) above.

The foregoing work force classification conforms closely to that recommended by the Eighth International Conference of Labour Statisticians, held in Geneva in 1954. This international classification was not adopted for population censuses prior to the census of 1966, and consequently the figures in the tables which follow are not strictly comparable with those in the preceding section of this chapter.

Since the survey estimates are based on a sample they are subject to sampling variability, that is, variations that might occur by chance because only a sample of the population is enumerated. Further information on variability of survey estimates is available on request.

The figures given in the following tables may be revised as a consequence of revisions to estimated populations since the 1961 census in the light of results from the population census of June 1966.

#### Occupational status

The following table shows, for November in each of the years 1962 to 1966, the number of persons in the civilian population aged fifteen years and over in the six State capital cities, and the numbers in the work force and not in the work force.

#### CIVILIAN POPULATION AGED 15 YEARS AND OVER: OCCUPATIONAL STATUS, BY SEX, NOVEMBER 1962 TO 1966

SIX AUSTRALIAN STATE CAPITAL CITIES  
(‘000)

November—	In the work force			Not in the work force	Total population
	Employed (a)	Un- employed	Total		
<b>Males—</b>					
1962 . . .	1,725.0	23.1	1,748.0	342.3	2,090.4

(a) Includes employees, employers, self-employed persons, and unpaid family helpers.

\* Estimates of less than 5,000 are not published in the table because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived from the table by deduction, undue significance should not be attached to them.

**Work force participation and unemployment rates**

The next table shows work force participation rates and unemployment rates by marital status for the civilian population aged fifteen years and over in the six State capital cities at November in each of the years 1962 to 1966.

**CIVILIAN POPULATION AGED 15 YEARS AND OVER: WORK FORCE  
PARTICIPATION AND UNEMPLOYMENT RATES, BY MARITAL STATUS  
AND SEX, NOVEMBER 1962 TO 1966**

SIX AUSTRALIAN STATE CAPITAL CITIES

(Per cent)

November—	Work force participation rate(a)				Unemployment rate(b)			
	Males		Females		Males		Females	
	Married	Not married (c)	Married	Not married (c)	Married	Not married (c)	Married	Not married (c)
1962 . . . . .	88.8	73.1	27.7	50.7	0.8	2.6	1.9	2.3
1963 . . . . .	88.4	72.0	27.3	50.7	0.6	1.9	1.1	1.7
1964 . . . . .	88.7	71.3	28.5	49.5	0.4	1.4	1.6	1.6
1965 . . . . .	89.1	71.5	30.4	49.8	0.6	2.0	1.8	2.0
1966 . . . . .	89.3	70.9	32.3	50.2	0.7	2.3	1.5	2.1

(a) The civilian work force as a percentage of the civilian population aged 15 years and over. (b) The number unemployed as a percentage of the civilian work force. (c) Includes never married, widowed and divorced.

**Unemployment in industry groups**

The following table shows the unemployment rate in each industry group for the six State capital cities at November in each of the years 1962 to 1966. The total work force for a particular industry group comprises persons currently employed in the industry group and those unemployed persons whose last employment was in the group. The unemployment rates given in the table are the numbers unemployed in the industry groups expressed as percentages of the total work force in those groups. Because unemployed persons with no previous employment experience are excluded from the calculations used for this table, the unemployment rate shown for 'All industries combined' differs from the unemployment rate for the civilian work force as a whole.

**CIVILIAN POPULATION: UNEMPLOYMENT RATES(a), BY INDUSTRY  
GROUP, NOVEMBER 1962 TO 1966**

SIX AUSTRALIAN STATE CAPITAL CITIES

(Per cent)

Industry group in which last employed	November—				
	1962 (b)	1963 (b)	1964 (b)	1965 (b)	1966 (c)
Manufacturing . . . . .	1.3	0.9	0.8	0.9	1.1

<i>Total . . . . .</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>	<i>100.0</i>

(a) Persons aged 14 years and over. (b) Persons aged 15 years and over.

**Persons working less than 35 hours a week**

In the work force surveys, persons who report themselves as having worked less than thirty-five hours a week are further questioned to ascertain their reasons for not working longer hours. In the following table, employed civilians in the six State capital cities who worked less than thirty-five hours a week are classified according to the reasons why they did not work longer hours. Figures for November 1966 relate to persons aged fifteen years and over; those for earlier periods include persons aged fourteen years.

**EMPLOYED CIVILIANS WHO WORKED LESS THAN 35 HOURS A WEEK, BY REASON: NOVEMBER 1962 TO 1966**

**SIX AUSTRALIAN STATE CAPITAL CITIES**

November—	Reason for working less than 35 hours a week								
	Persons who usually work 35 hours or more a week			Persons who usually work less than 35 hours a week			All persons who worked less than 35 hours in the survey period		
	Lack of work (a)	Other reasons (b)	Total	Lack of work (c)	Other reasons (d)	Total	Lack of work (a)(c)	Other reasons (b)(d)	Total
Number ('000)—									
1962(e)	14.7	228.3	243.0	12.2	197.4	209.6	26.9	425.7	452.6
1963(e)	12.4	229.9	242.2	7.6	213.1	220.7	20.0	443.0	463.0
1964(e)	10.7	226.5	237.2	7.3	230.5	237.8	18.0	457.0	475.0
1965(e)	17.2	238.8	256.0	7.8	258.1	265.8	25.0	496.8	521.8
1966(f)	17.5	239.0	256.5	6.5	279.0	285.5	24.0	518.0	542.0
Proportion of the civilian work force of the six capitals (per cent)—									
1962(e)	0.6	8.9	9.5	0.5	7.7	8.2	1.1	16.6	17.7
1963(e)	0.5	8.8	9.3	0.3	8.2	8.5	0.8	17.0	17.8
1964(e)	0.4	8.5	8.9	0.3	8.6	8.9	0.7	17.1	17.8
1965(e)	0.6	8.6	9.2	0.3	9.3	9.6	0.9	17.9	18.8
1966(f)	0.6	8.3	8.9	0.2	9.7	9.9	0.8	18.1	18.9

(a) Excludes persons laid off for whole week without pay, who are included in the unemployed. The figures comprise persons working short time, those who lost their jobs or commenced in new jobs during the specified week, and those absent from work because of plant breakdowns or bad weather. (b) Own illness or injury, leave or holiday, and industrial disputes. (c) Persons who would prefer to work 35 hours or more a week if suitable work were available. (d) Persons who prefer to work less than 35 hours a week. (e) Persons aged 14 years and over. (f) Persons aged 15 years and over.

**Surveys of multiple jobholding**

Surveys of the nature and extent of multiple jobholding in Australia were conducted during November 1965 and August 1966. A multi-stage area sample of households (inclusive of hotels, hospitals, and other non-private dwellings) was used, and the surveys covered all employed civilians aged fifteen years and over in August 1966 and fourteen years and over in November 1965, other than certain diplomatic personnel customarily excluded from the census and estimated populations.

For the purpose of these surveys, employed persons are defined as in the previous section dealing with the work force survey (see page 1188). The numbers of multiple jobholders shown in the following tables do not include persons who were described as employers or self-employed in two businesses (including farms). They comprise only those persons who were employed in at least one of their jobs as a wage or salary earner or as an unpaid family helper. For the purpose of the survey a second job did not exclude such occupations as those of professional sportsmen, part-time musicians, paid coaches and the like. Persons who by the very nature of their employment worked for more than one employer, e.g. domestics, odd-job men, baby-sitters, etc. were not counted as multiple jobholders unless they also held another job of a different kind, nor were those who worked for more than one employer solely by reason of changing jobs during survey week.

The November 1965 survey was largely exploratory and some of the questions were modified in the August 1966 survey. The figures shown in the following tables for all persons who held a second job in the survey week are not strictly comparable for the two surveys; however, the figures shown for persons who actually worked in a second job in the survey week are comparable. Further details of the results of these two surveys may be found in Statistical Bulletins 465, *Survey of Multiple Jobholding, November 1965*, and 564, *Survey of Multiple Jobholding, August 1966*.

**Occupational status**

The following table shows, for November 1965 and August 1966, the occupational status of multiple jobholders in their main and second jobs.

**PERSONS WITH MORE THAN ONE JOB(a): OCCUPATIONAL STATUS IN MAIN AND SECOND JOBS, BY SEX, AUSTRALIA, NOVEMBER 1965 AND AUGUST 1966**

	Aug. 1966	39.4	*	74.5	15.8	113.9	18.6
<b>Total</b>	Nov. 1965	37.2	*	89.9	16.4	127.1	19.4
	Aug. 1966	39.4	*	87.7	18.0	127.1	20.9

(a) Comprises only those civilians who were employed in at least one of their jobs as a wage or salary earner or as an unpaid family helper. See note (c). Figures for August 1966 relate to persons aged 15 years and over; those for November 1965 relate to persons aged 14 years and over, the number of 14 year olds included being approximately 100. (b) The main job is the job at which most hours were worked during survey week or, where no hours were worked or the hours were equal, the job considered by the respondent to be the main job. (c) Includes a small number of unpaid family helpers. (d) Figures for November 1965 are not strictly comparable with those for August 1966.

\* Estimates less than 5,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived, undue significance should not be placed on them.

**Distribution by States**

The following table shows, for November 1965 and August 1966, the number of multiple jobholders in each State.

**PERSONS WITH MORE THAN ONE JOB(a): STATES, NOVEMBER 1965 AND AUGUST 1966**  
(<sup>'000</sup>)

	Date	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Australia (b)
Persons who actually worked in a second job in survey week	Nov. 1965	36.1	30.1	10.5	17.6	11.5	5.0	113.3
	Aug. 1966	44.4	33.5	10.1	18.1	10.7	5.7	125.2
All persons who held a second job in survey week(c)	Nov. 1965	49.6	36.1	15.1	21.3	14.9	7.1	146.5
	Aug. 1966	53.0	38.0	14.3	20.7	12.7	6.5	148.0

(a) Comprises only those civilians who were employed in at least one of their jobs as a wage or salary earner or as an unpaid family helper. Figures for August 1966 relate to persons aged 15 years and over; those for November 1965 relate to persons aged 14 years and over, the number of 14 year olds included being approximately 100. (b) Includes the Northern Territory and the Australian Capital Territory. (c) Figures for November 1965 are not strictly comparable with those for August 1966.

NOTE. The numbers of females are too small to show in the detail given above. The surveys indicate that in August 1966 there were 20,900 female multiple jobholders, of whom 8,400 were in New South Wales and 5,000 in Victoria; corresponding figures for November 1965 were 19,400, 6,400 and 5,100.

**Industry group of main and second job**

The following table shows the industry dissection of the main and second job(s) of multiple jobholders in November 1965 and August 1966.

(d) Comprises mining and quarrying, electricity, gas, water and sanitary services, finance and property.

\* Estimates less than 5,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although the figures can be derived, undue significance should not be attached to them.

### Surveys of leavers from schools, universities or other educational institutions

Surveys using a multi-stage area sample of households (inclusive of hotels, hospitals and other non-private dwellings) were carried out on an Australia-wide basis in February of each year from 1964 to 1967.

The survey questions were designed to distinguish persons who had attended full time at a school, university or other educational institution at some time in the previous year and, among such persons, to identify those who were intending to return to full-time education and those who were not returning to full-time education, the latter being described in this section as 'leavers'.

Estimates shown in the following tables relate to the total population of Australia within the age range fifteen to twenty-four years, with the exception of members of the permanent armed forces, national servicemen enlisted in the Regular Army Supplement, and certain diplomatic personnel customarily excluded from census and estimated populations.

Persons who were patients in hospitals and sanatoriums, or inmates of gaols, reformatories, etc. and for whom, for the purpose of the survey, the institution was regarded as their dwelling, although included in the survey, were not asked the particular questions on attendance at schools, etc. Persons who were reported as permanently unable to work were also not asked these questions. An estimate of the total number of such persons for whom no information on attendance, etc. can be given is shown in the first table in this section.

The 'leavers', i.e. the persons who had attended full time at a school, university, etc. at some time in the previous year and who were not returning to full-time education, were asked to indicate when they had ceased full-time education. All persons were asked questions about their occupational status and those in the work force were further questioned about occupation and industry. Although many persons who were intending to return to full-time education were in the work force at the time of the surveys, their numbers would not give a useful indication of the extent of vacation working, because of the timing of the surveys. The occupational status of each person was determined in the same way as in the work force survey (see page 1188).

For further details reference should be made to Statistical Bulletin 679, *Survey of Leavers from Schools, Universities or Other Educational Institutions, February 1964, 1965, 1966 and 1967*.

**School attendance status**

The following table shows, for February in each of the years 1964 to 1967, the school attendance status of the civilian population aged fifteen to twenty-four years.

**CIVILIANS AGED 15 TO 24 YEARS(a), BY ATTENDANCE OR  
NON-ATTENDANCE FULL-TIME AT A SCHOOL, UNIVERSITY, ETC.  
IN THE PREVIOUS YEAR: AUSTRALIA, FEBRUARY 1964 TO 1967**

Total(a) . . . . .	87.6	78.2	83.3	79.6	88.7	84.8	85.0	82.4	167.4

(a) See notes (b) and (c) to first table on page 1195. (b) Includes a small number of persons who left school, university, etc. in January or February of the following year.

\* Estimates of less than 5,000 are not published because they would be subject to sampling variability too high for most practical purposes. Although figures for these small components can be derived, undue significance should not be attached to them.

## WAGE AND SALARY EARNERS IN EMPLOYMENT

The series contained in this section, except those relating to government employees and defence forces, are based on comprehensive data (referred to herein as 'benchmarks') derived for the purpose from the population census of June 1961. Between population censuses the employment data are obtained from three main sources, namely (a) current pay-roll tax returns; (b) current returns from government bodies; and (c) some other current direct records of employment (e.g. for hospitals). The total of recorded employment is supplemented each month by estimates of changes in the number of wage and salary earners not covered by the foregoing collections. The series relate only to wage and salary earners. They therefore exclude employers, self-employed persons and unpaid helpers. Also excluded, because of the inadequacy of current data, are employees in rural industry and in private domestic service.

Pay-roll tax returns are lodged at present by all employers paying more than \$400 a week in wages (other than certain Commonwealth Government bodies, religious and benevolent institutions, public hospitals, and other similar organisations specifically exempted under the *Pay-roll Tax Assessment Act 1941-1967*). The present exemption limit of \$400 was introduced as from 1 September 1957.

The benchmark figures were derived from particulars recorded for individuals on population census schedules, while the estimated monthly figures are derived mainly from reports supplied by employers, relating to enterprises or establishments. Because the two sources differ in some cases in scope and in the reporting of industry, the industry dissection of the benchmark totals was adjusted to conform as closely as possible to an enterprise/establishment reporting basis. The industry classification used throughout the series is that of the population census of June 1961.

At the 1961 population census those persons who were not stated to be engaged in an industry, business, profession, trade, or service were required to be described as students, pensioners, engaged in home duties, etc., and were automatically classified as not being in the work force. It is believed that many persons—particularly married women—classified themselves according to their main or usual activity or status (e.g. home duties) and overlooked any part-time or casual employment that they may have had at the time of the census. Had the census questions been designed to obtain particulars of each person's actual activity during a specified period (as the 1966 population census work force questions were), so that all employees who did any paid work at all would have been included, these persons would have been counted in the total of employed wage and salary earners.

The scope of the current monthly series is similar to and subject to the same limitations as that of the population census benchmarks. For this reason the totals shown in this section for Australia, for States and Territories, and for industries, do not necessarily represent, at any point of time, the total numbers of wage and salary earners employed full-time or part-time in those areas or industries. Instead, they represent the estimated numbers of persons who would have been counted as wage and salary earners at a population census in which the concepts and definitions were the same as those of the 1961 census. Concepts and definitions adopted at the 1966 census differed from those of 1961 and conformed closely to the recommendations of the Eighth International Conference of Labour Statisticians, all persons who did any paid work for an employer or who had a job as an employee from which they were temporarily absent being included in the total of employed wage and salary earners. As a result, the estimates for June 1966 shown in this section will differ from the corresponding census figures. The monthly estimates are also different in concept from the estimates obtained by means of the quarterly work force survey (see definitions on page 1188).

Current data supplied by reporting enterprises or establishments generally refer to persons on the payroll for the last pay-period in each month. Persons who are on paid leave or who work during part of the pay-period and are unemployed or on strike during the rest of the period are generally counted as employed. Those not shown on employers' payrolls because they are on leave without pay, on strike or stood down for the entire period are excluded.

Although the level of the estimates in this section may be affected by the exclusion of some part-time employees from the 1961 census benchmarks, nevertheless it is considered that they measure reasonably well the short-term trends in employment in the defined field. However, they may be less reliable for longer-term measurement. Because of conceptual differences between benchmark and payroll data, changes in such factors as labour turnover, multiple jobholding and part-time working are all apt to affect the trend during intercensal periods.

**Total civilian employees and defence forces**

The following table shows, for Australia, the estimated numbers of private and government civilian employees (excluding employees in rural industry and private domestic service) and the numbers in the defence forces at June of each of the years 1961 and 1963 to 1967.

(a) Includes semi-government authorities. See explanation on page 1202.

**COMMONWEALTH EMPLOYMENT SERVICE**

Statutory warrant for the Commonwealth Employment Service (C.E.S.) is to be found in the *Re-establishment and Employment Act 1945–1966* (sections 47 and 48). In brief, the main functions of the Service are to assist people seeking employment to obtain positions best suited to their training, experience, abilities, and qualifications; and to assist employers seeking labour to obtain employees best suited to their needs. The organisation and functions of the C.E.S. conform to the provisions of the Employment Service Convention, 1948, of the International Labour Organisation, which was ratified by Australia in December 1949. In addition, C.F.S. practices accord substantially with the provisions of the I.L.O. Employment Service Recommendation, 1948.

The C.E.S. functions on a decentralised basis within the Employment and Industrial Services Division of the Department of Labour and National Service. The Central Office is in Melbourne and there is a Regional Office in the capital city of each State. There are 150 District Employment Offices and Branch Offices in suburban and the larger provincial centres and 318 agents in the smaller country centres. The District Employment Offices and Branch-Offices are distributed as follows: New South Wales, 54; Victoria, 37; Queensland, 25; South Australia, 14; Western Australia, 13; Tasmania, 4; Northern Territory, 2; Australian Capital Territory, 1.

Specialised facilities are provided for young people, persons with physical and mental handicaps, ex-members of the defence forces, national service discharges, migrants, rural workers, and persons with professional and technical qualifications. The C.E.S. provides vocational guidance free of charge in all States and has a staff of qualified psychologists for this function. Guidance is available to any person, but is provided particularly for young people, ex-servicemen and the handicapped. In New South Wales the C.E.S. provides vocational guidance to adults, including ex-servicemen and the handicapped, while the State Department of Labour and Industry provides a vocational guidance service within the school system and for young persons leaving school.

All applicants for unemployment benefits under the *Social Services Act 1947–1966* must register at a District Office or agency of the C.E.S., which is responsible for certifying whether or not suitable employment can be offered to them. The C.E.S. is responsible for placing in employment migrant workers sponsored by the Commonwealth under the Commonwealth Nomination and similar schemes. This includes arranging for them to move to their initial employment and for their admission, if necessary, to Commonwealth migrant hostels. Assistance in obtaining employment is provided to other migrants as required. From the inception of the various free and assisted schemes, including the Displaced Persons Scheme, to the end of June 1967, about 245,000 British and European migrant workers had been placed in initial employment by the C.E.S. Since 1951 it has been responsible for recruiting Australian experts for overseas service under the Colombo Plan and the United Nations Expanded Programme of Technical Assistance (now replaced by the U.N. Development Programme). The principal spheres in which experts have been supplied are agriculture, education, engineering, geology, health, and economic and scientific research and development.

In association with placement activities, regular surveys of the labour market are carried out and detailed information is supplied to interested Commonwealth and State Government departments and instrumentalities and to the public. Employers, employees and other interested persons are advised on labour availability and employment opportunities in various occupations and areas and on other matters concerning employment.

The Service completed its twenty-first year of operation in May 1967. During 1966 there were 1,024,238 applicants who registered for employment, of whom 792,235 were referred to employers and 411,662 placed in employment. New vacancies notified numbered 592,882 and vacancies unfilled at the end of December 1966, 76,457.

#### Persons registered for employment

The following table shows the number of persons who claimed, when registering for employment with the Commonwealth Employment Service, that they were not employed and who were recorded as unplaced. The figures include those persons who were referred to employers and those who may have obtained employment without notifying the C.E.S. They include persons in receipt of unemployment benefit (*see* the chapter Welfare Services).

## CHAPTER 30

### MISCELLANEOUS

This chapter comprises statistics and other descriptive information not directly related to the subjects of the preceding chapters, or which it is convenient to assemble in single sections, arranged as follows: Valuation of Australian production; Indexes of farm production; Consumption of foodstuffs and beverages; Retail trade; Interstate trade; Statistical organisation in Australia; Statistical and other official publications of Australia; 36th Session of the International Statistical Institute.

#### Valuation of Australian production

The value of production for Australia is computed in accordance with the decisions reached at the Conferences of Australian Statisticians and principally at the Conference held in 1935. The figures published in the following tables have been compiled by the Statisticians in the various States from the latest and best data available and are on a substantially uniform basis. However, marketing costs are not on a completely comparable basis between States and, in addition, accurate information is difficult to obtain for many items. In consequence, differences between States in the relationships of local to gross value should be treated with some reserve.

Attention is directed to the fact that the values shown in the tables herein refer only to the production of primary industries and factories, and exclude the building and construction industry, those industrial establishments not classified as factories, and certain agricultural and farmyard produce obtained from areas of less than one acre.

#### Explanation of terms used

The following is a brief explanation of the terms used.

- (a) *Gross value of production* is the value placed on recorded production at the wholesale price realised at the principal markets. In general, the 'principal markets' are the metropolitan markets in each State. In cases where primary products are consumed at the place of production or where they become raw material for a secondary industry, these points of consumption are presumed to be the principal markets.
- (b) *Local value* (i.e. gross production valued at the place of production) is ascertained by deducting marketing costs from the gross value. Marketing costs include freight, cost of containers, commission, and other charges incidental thereto.
- (c) *Net value of production* represents local value less value of materials used in the process of production. Materials used in the process of production include seed, power, power kerosene, petrol and other oils, fodder consumed by farm stock, manures, dips, sprays, and other costs. No deductions have been made for depreciation or certain maintenance costs as particulars are not available for all States. The net value of production is the only satisfactory measure to use when comparing or combining the value of primary industries with those of other industries.

For the years shown in the following tables, no allowance for power, power kerosene, petrol, and other oils has been made in New South Wales. In the case of the mining and quarrying industry, however, this allowance has been made in all States. Marketing costs for mining and quarrying and costs of materials used in the process of production in respect of bee-farming, trapping, forestry, and fisheries are not available for all States. Local values have been used for these industries, with consequent understatement in gross value for the mining and quarrying industry and overstatement in net value for the other industries.

#### Value of production, Australia

The following table shows particulars of the gross, local and net values of production in Australia, by industry.

**GROSS, LOCAL AND NET VALUE OF PRODUCTION OF PRIMARY INDUSTRIES  
AND FACTORIES: AUSTRALIA, 1965-66**  
(\$'000)

Industry	Gross production valued at principal markets	Local value—gross production valued at place of production	Net value of production (without deduction of depreciation or maintenance)
Agriculture . . . . .	1,184,571	1,014,556	861,115

### Indexes of farm production

In the first two tables in this section indexes of price and quantum (i.e. value at constant prices) of production are given for the following industrial groups: Agriculture, Pastoral, Dairying, poultry and bee-farming, and All farming combined (including separate indexes for Wool and Products other than wool). In the third table indexes of quantum (i.e. value at constant prices) of production, exports and consumption of farm products for food use are shown.

#### Farm production price indexes

The farm production price indexes shown in the following table relate to average 'prices' of agricultural, pastoral, dairying, poultry and bee-farming products realised at the principal markets of Australia. The 'price' data used are average unit values for the total quantities of the relevant commodities produced or marketed in each year, and the index numbers therefore measure both the effects of changes in prices (as such) and of variations in the quality, type, usage, etc. of products marketed. The index numbers for any year relate to the average values of products produced or marketed in that year irrespective of the periods in which payment is received by producers.

The indexes have been calculated by the fixed-base weighted aggregative method. 'Prices' for each commodity in any year are obtained by dividing gross value of production by the quantity produced in that year. In the original published series of Production Price Index Numbers the average quantities of the relevant commodities *produced* in the period 1923-24 to 1927-28 were used as fixed weights. This series, re-computed to the base average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (*see* No. 43, page 1050). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average quantities of each product *marketed* during the period 1946-47 to 1950-51 were used as fixed weights. In the revised series the regimen was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were also incorporated in the revised indexes, the principal of which was the omission from the weights used for the All farming index of quantities of crops marketed for livestock feeding in Australia.

#### FARM PRODUCTION: INDEXES OF PRICES AT PRINCIPAL MARKETS, AUSTRALIA 1951-52 TO 1965-66

(Base: Average of 3 years ended June 1939 = 100)

Year	Agri- culture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool
1951-52 . . .	355	501	332	410	552	363
1952-53 . . .	364	531	387	440	623	379
1953-54 . . .	324	534	395	429	621	365
1954-55 . . .	316	489	371	401	540	355
1955-56 . . .	330	451	392	397	468	373
1956-57 . . .	336	536	386	432	607	374
1957-58 . . .	336	435	382	388	473	359
1958-59 . . .	322	396	386	369	370	369
1959-60 . . .	329	464	402	403	440	391

1965-66 . . .	354	501	422	431	458	423

**Indexes of quantum (i.e. value at constant prices) of farm production**

The indexes shown in the following table relate to gross output of farm products valued at constant prices. They have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the base years.

In the original published series the period 1923-24 to 1927-28 was adopted as the base for revaluing each farm product. This series, re-computed to the base: average 1936-37 to 1938-39 = 100, was published in earlier issues of the Year Book (see No. 43 page 1051). For 1936-37 and later years the original series was replaced in December 1952 by a revised series in which average unit values for the period 1936-37 to 1938-39 were used. The regimen used for the revised series was extended and modified to include farm products (as defined by Australian Statisticians) in all cases. Certain other refinements were incorporated in the revised indexes, the principal of which was the omission, in calculating the All farming index, of quantities of crops fed to livestock in Australia.

**INDEXES OF QUANTUM(a) OF FARM PRODUCTION: AUSTRALIA  
1951-52 TO 1965-66**

*(Base: Average of 3 years ended June 1939 = 100)*

Year	Agri- culture	Pastoral	Dairying, poultry and bee- farming	All farming	Wool (shorn and dead)	Products other than wool
1951-52 . . . . .	103	105	97	103	112	100
1952-53 . . . . .	121	126	108	121	131	118

1965-66 . . . . .	184	163	138	166	169	165

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

**Farm products for food use: indexes of quantum (i.e. value at constant prices) of production, exports and consumption**

The indexes shown in the following table have been calculated by revaluing quantities of each farm product included in the indexes at the average unit gross value of each product for the years 1936-37 to 1938-39. The items included comprise products in the form in which they are sold from farms in all cases except livestock sold for slaughter for meat, which are included in terms of dressed carcass weight of meat. Quantity data relating to exports include exports of processed food in terms of farm product equivalent. The indexes of production relate basically to gross output of farm products for food use, including crops exported for stock-feeding overseas.

**FARM PRODUCTS FOR FOOD USE: INDEXES OF QUANTUM(a) OF  
PRODUCTION, EXPORTS AND CONSUMPTION  
AUSTRALIA, 1951-52 TO 1965-66**

(Base: average of 3 years ended June 1939 = 100)

Year	Production		Exports		Consumption in Australia

(a) Indexes of value at constant prices, i.e. quantities revalued at average unit values for the base years (see text preceding table).

### Consumption of foodstuffs and beverages

#### Quantities consumed

The estimates of total consumption and consumption per head of population in Australia in the two tables which follow have been compiled by deducting net exports from the sum of production and imports and allowing for recorded movements in stocks of the respective commodities. While the estimates may be generally accepted as being reasonably accurate, there are some deficiencies to which attention should be directed. These relate chiefly to the quantities of poultry, fish, rabbits and hares and the quantities of certain oils and fats entering consumption. In addition, little information is available on the quantities of vegetables, fruit, eggs, etc. which householders produce for their own requirements and the extent of wastage occurring in the marketing of foodstuffs. In all these cases careful estimates have been compiled from the best available data, and the quantities shown as entering consumption in Australia have been adjusted to allow for these circumstances. The absence of particulars for stocks of certain commodities has resulted in some inaccuracies in the estimates of annual consumption. Consumption of foodstuffs is measured in general at 'producer' level. As a result, no allowance is made for wastage before the foodstuffs are consumed. In recent years wastage of foodstuffs has possibly been less than previously because of more efficient distribution and storage methods. Furthermore, it is likely that the quantities of foodstuffs shown in the following pages as available for consumption have been supplemented by production by householders for their own requirements. In most cases broad estimates of non-commercial (householders') production have been made. Except in a few special cases, no adjustment has been made for changes in stocks held by wholesalers and retailers. Where no allowance is made it is considered unlikely that these stocks would make any appreciable difference to consumption estimates. It is felt that the foregoing deficiencies do not seriously impair the accuracy of the estimates compiled.

The estimates of consumption per head of population shown in the second of the following tables have been derived by dividing the total apparent consumption of each commodity or commodity group in a given year by the mean population of Australia in the same period.

More detailed information on the consumption of foodstuffs and beverages is contained in the statistical bulletin: *Report on Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia*, issued by this Bureau.

The following tables show the average annual consumption during the three-year periods ended 1938-39, 1948-49 and 1958-59, together with the data for each of the years 1963-64, 1964-65 and 1965-66.

#### Level of nutrient intake

The next table shows details of the estimated supplies of nutrients available for consumption in Australia during the three years 1963-64 to 1965-66 in comparison with the annual averages for the three-year periods ended 1938-39, 1948-49 and 1958-59. The table has been compiled by the Nutrition Section of the Commonwealth Department of Health and is based on the estimates of the quantity of foodstuffs available for consumption per head of population shown in the preceding table.

### Retail trade

The statistics in this section relate to retail establishments throughout Australia and the value of retail sales of goods by these establishments.

Information of this nature was first collected in respect of the year ended 30 June 1948 by a full census of all retail establishments. As this was the first census of its type in Australia, its scope and the data sought were the minima consistent with the objective of securing a record of the number of such establishments, their type, their geographical distribution, their aggregate sales of goods, and a simple commodity dissection, together with a record of the value of certain services provided. This census was followed by a second census of all retail establishments trading during the year ended 30 June 1949.

Further censuses were taken in respect of the years ended 30 June 1953 and 1957. In these censuses retailers were asked to furnish more detailed information concerning the dissection of their turnover into commodity groups, and questions were asked about stocks of goods on hand, the number of persons engaged in retail activities, and credit sales. In addition, the 1956-57 census included questions relating to purchases, customers' indebtedness and type of organisation.

The most recent census was taken in respect of the year ended 30 June 1962, and results have been published for all States and Australia. With the exception of some modifications to the scope of the collection (*see hereunder*), the 1961-62 census followed the same general principles adopted for the previous census.

In general terms the census covered the retail trading activities of establishments which normally sell goods by retail to the general public from fixed premises (i.e. shops, rooms, kiosks, and yards). Retail activities of wholesalers and manufacturers were included if they sold regularly by retail to the general public. Sales by itinerant vendors (e.g. hawkers, street sellers, etc.) and sales from casual stalls or booths were excluded. Organisations such as clubs and societies making sales to their own members were excluded from the main census collection, but a supplementary collection was made, covering sales by *licensed* clubs.

In general, establishments with retail sales of goods amounting to less than \$1,000 in the census year are not included in the census tabulations. However, some 'service' establishments with retail sales of less than \$1,000, but with takings of \$1,000 or more from repairs, meals or hairdressing were included in the main census collection, and details of these establishments are included in tables in Year Book No. 50, page 1244. The types of establishments in this category are boot repairers, repair-only garages, cafés and restaurants, and hairdressers.

The design of the census is such that particulars of retail sales relate principally to sales to the final consumer of new and second-hand goods generally used for household and personal purposes. For this reason, sales of building materials, farm and industrial machinery and equipment, earth-moving equipment, etc. have been excluded from the censuses. For the same reason, and also because of difficulties in obtaining reliable and complete reporting, sales of builders' hardware and supplies, business machines and equipment, grain, feed, fertiliser and agricultural supplies, and tractors were excluded from the 1961-62 census. Retail sales of motor vehicles, parts, etc. have been included, whether for industrial, commercial, farm, or private use.

During the period between censuses variations in the value of retail sales have been measured by means of quarterly sample surveys. Annual totals derived from these surveys, adjusted to a basis comparable in scope with the 1961-62 census, and some of the results of the 1961-62 census, are included in this section.

Year Book No. 50, pages 1239-45, contains details of the number of retail establishments, the values of retail sales and of retail stocks, and particulars of hairdressing, boot repairing and motor repairing establishments, restaurants, self-service stores and licensed clubs, for each State and Territory, from the results of the 1961-62 census. Major classifications are by commodity groups and type of business. More complete details are set out in published bulletins of the 1961-62 Census of Retail Establishments. (See page 1223).

#### Value of retail sales in each commodity group, Australia

The following table shows the value of retail sales of goods in each of the commodity groups specified in the years 1961-62 to 1965-66 on a comparable basis throughout. The figures for the year 1961-62 were obtained from the census, whereas figures for the other years shown are estimates based on sample surveys.

**VALUE OF RETAIL SALES: COMMODITY GROUPS, AUSTRALIA(a)**  
1961-62 TO 1965-66  
(\$ million)

Commodity group	1961-62	1962-63	1963-64	1964-65	1965-66
Groceries . . . . .	858.3	892.7	941.5	1,018.3	1,095.4
Butchers' meat . . . . .	422.3	444.6	467.4	506.8	543.5
Other food(b) . . . . .	729.9	765.2	794.8	846.1	889.4
<i>Total, food and groceries</i> . . . . .	<i>2,010.5</i>	<i>2,102.5</i>	<i>2,203.7</i>	<i>2,371.2</i>	<i>2,528.3</i>
Beer, wine and spirits(c) . . . . .	545.9	574.2	592.6	630.0	682.5
Clothing and drapery . . . . .	900.0	929.6	1,012.8	1,075.5	1,114.2
Footwear . . . . .	154.7	162.4	171.6	178.0	181.7
Hardware, china and glassware(d) . . . . .	146.0	155.0	154.9	164.4	165.4
Electrical goods(e) . . . . .	348.0	367.0	388.5	412.5	397.9
Furniture and floor coverings . . . . .	230.1	245.0	272.0	300.7	307.3
Chemists' goods . . . . .	265.8	284.1	307.2	336.3	364.8
Newspapers, books and stationery . . . . .	166.4	172.8	191.4	203.7	213.6
Other goods(f) . . . . .	489.7	519.3	556.7	598.4	635.1
<i>Total (excluding motor vehicles, etc.)</i> . . . . .	<i>5,257.1</i>	<i>5,511.9</i>	<i>5,851.4</i>	<i>6,270.7</i>	<i>6,590.8</i>
Motor vehicles, parts, petrol, etc.(g) . . . . .	1,603.2	1,985.6	2,180.2	2,327.8	2,289.2

(a) Excludes Northern Territory and Australian Capital Territory. (b) Includes fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc., but excludes some delivered milk and bread. (c) Excludes sales made by licensed clubs. (d) Excludes basic building materials, builders' hardware and supplies such as tools of trade, paint, etc. (e) Includes radios, television and accessories, musical instruments, domestic refrigerators, etc. (f) Includes tobacco, cigarettes, etc., jewellery, sporting goods, etc., but excludes grain and produce and business machines. (g) Includes new and used motor vehicles, parts, petrol, etc., but excludes tractors, farm machinery and implements, earth-moving equipment, etc.

#### Total value of retail sales, States

The following tables show the totals, excluding motor vehicles, etc., and totals, motor vehicles, parts, petrol, etc. dissected according to States.

**TOTAL VALUE OF RETAIL SALES (EXCLUDING MOTOR VEHICLES, PARTS  
PETROL, ETC.) STATES, 1961-62 TO 1965-66**  
(\$ million)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
1961-62 . .	2,060.4	1,517.1	701.6	451.6	360.3	166.1	5,257.1
1962-63 . .	2,157.7	1,585.2	738.2	479.8	377.9	173.1	5,511.9
1963-64 . .	2,248.9	1,694.8	800.1	523.7	404.0	179.9	5,851.4
1964-65 . .	2,386.0	1,822.0	859.6	571.6	440.3	191.2	6,270.7
1965-66 . .	2,492.6	1,914.9	901.9	597.8	484.7	198.9	6,590.8

(a) Excludes Northern Territory and Australian Capital Territory.

**TOTAL VALUE OF RETAIL SALES OF MOTOR VEHICLES, PARTS, PETROL  
ETC., STATES, 1961-62 TO 1965-66**  
(\$ million)

Year	N.S.W.	Vic.	Qld	S.A.	W.A.	Tas.	Aust.(a)
1961-62 . .	623.1	431.2	218.0	143.1	133.9	53.9	1,603.2
1962-63 . .	777.6	525.1	279.5	180.5	159.8	63.1	1,985.6
1963-64 . .	827.8	575.7	326.5	210.9	168.9	70.4	2,180.2
1964-65 . .	866.7	629.2	352.3	235.6	168.7	75.3	2,327.8
1965-66 . .	847.6	624.7	343.6	216.8	179.5	77.0	2,289.2

(a) Excludes Northern Territory and Australian Capital Territory.

### Interstate trade

Prior to the federation of the Australian Colonies (now States) each Colony published statistics of its trade with the other Colonies. A similar record was continued by the Commonwealth Government under the provisions of the Constitution (section 93). On the expiry of the 'book-keeping' period these records were discontinued as from 13 September 1910, and the last published statements were for the year 1909. Later, the Governments of Western Australia and Tasmania revived the records, and relevant statistics are available again for those States. A detailed collection for Queensland was re-introduced from July 1953.

At the Conference of Statisticians held in January 1928 it was resolved that efforts should be made in other States to record the interstate movement of certain principal commodities. Complete interstate trade statistics are now published in detail for Queensland, Western Australia and Tasmania by the Deputy Commonwealth Statisticians in those States, and incomplete statistics, relating mainly to trade with Western Australia and Tasmania, by the Deputy Commonwealth Statisticians in the remaining States.

### Statistical organisation in Australia

Information about the early development of Australian statistics, the creation of the Commonwealth Bureau of Census and Statistics and the integration of Commonwealth and State statistical services may be found in Year Book No. 51, pages 1247-8 and in earlier issues.

#### The Australian statistical organisation and its functions

The Commonwealth Bureau of Census and Statistics consists of the Central Office, located in Canberra, and the six State Offices each under the control of a Deputy Commonwealth Statistician. The Central Office is responsible for the overall planning and direction of the Bureau's work and for the collection, compilation and publication of statistics relating to (i) Australia and (ii) the States as components of Australian totals. The State Offices are responsible for providing statistics for both State and Commonwealth requirements. Collection activities are largely concentrated in the State Offices, which also engage in the compilation and publication of statistics on a State basis, together with intra-State analysis by divisions, local government areas, geographical areas, etc.

The Bureau produces statistics relating to all aspects of the economy and social condition of Australia—population, employment, primary and secondary industries, national accounts, public and private finance, retail and wholesale trade, overseas transactions, transport and communication, labour, wages and prices.

Research into the theory and practice of sampling, data processing, population projections, price and quantum indexes, seasonal adjustment, classification systems, and other methodological aspects is conducted on a continuing basis. Pilot input-output tables for 1958-59 have been compiled, and work is continuing on a comprehensive table for a more recent year. The extension of the scope of the Bureau's statistics and the integration of existing statistical collections so as to place them on a co-ordinated and mutually exclusive basis are other important aspects of research and development work.

A recent important extension of the Bureau's activities was given effect to by the publication in July 1967 of *Seasonally Adjusted Indicators 1967*.

This bulletin contains original and seasonally adjusted data in tabular and graphical form for forty-eight selected series of statistical indicators of Australian economic activity. The seasonal adjustment of these series is intended to serve as an aid in statistical interpretation and analysis. Later figures in these series, and other series to be seasonally adjusted, will be published in the *Monthly Review of Business Statistics*, the *Digest of Current Economic Statistics*, and in other existing monthly and quarterly publications of this Bureau. The purposes of this publication are to provide a comprehensive long-term series and to give a detailed description of the methods used. It is intended that the bulletin be re-issued annually, following annual re-analyses of the series.

The seasonally adjusted series published in this bulletin were calculated by means of the Commonwealth Bureau of Census and Statistics Control Data Corporation 3600 Electronic Computer. Without powerful electronic computing equipment and expert programming services, it would not have been possible to carry out the elaborate seasonal analyses upon which these results are based. The basic computer programs employed are those of the United States Census Bureau Method II, X-11 Variant. The computer programs as originally supplied were amended in some minor respects and extended in various ways in order to adapt them to this Bureau's computer configuration and to meet particular operational requirements. By these means it was possible to systematise the extensive and intricate analyses which are needed in order to specify the particular variation of the seasonal adjustment method to be used for each series, and to assess the results obtained. It was also possible to present in the bulletin numerical data and graphs as automatic computer print-out for subsequent printing by a photo-reduction process. The graphs were produced by means of the Calcomp Digital Plotter installed in the Commonwealth Scientific and Industrial Research Organization Computer Centre in Canberra.

The economic interpretation of statistics and the use of models in economic analysis and forecasting is the responsibility of policy-making departments (including the Department of the Treasury and the Department of Trade and Industry). The Bureau provides these Departments with statistical information and expert statistical and methodological advice.

At the end of June 1967 the staff of the Bureau in its Central Office and six State Offices numbered approximately 2,600, of whom 1,150 were employed in the Central Office.

#### **Nature of the Central Office of the Commonwealth Bureau of Census and Statistics**

The Central Office of the Bureau is organised functionally into Branches (*italic type*) and Sections (*roman type*) dealing with specific fields of statistics or providing services for the Bureau as a whole. The organisational patterns of the State Offices are broadly similar, although local requirements have naturally given rise to differences in detail.

##### *Population Census*

*Demography and Employment.* Demographic and Social; Population Research; Employment and Field Surveys

##### *Prices and Labour*

*Production, Distribution and Development.* Primary Industry; Secondary Industry; Internal Trade and Development

*Finance and Overseas Transactions.* Balance of Payments; Overseas Trade and Shipping; Private Finance; Classification and Integration

*National Accounts.* National Income and Expenditure; Public Finance and Taxation; Inter-industry Accounts

*Sampling and Methodology.* Sampling; Methodology; Special Projects

*Services.* Establishments and Finance; Publications; Secretariat

The work of each Section is supervised by a Director. Each Director in turn is responsible to an Assistant Statistician whose principal function is to co-ordinate and direct the operations of several Sections.

During the past year the Bureau's Automatic Data Processing Branch has been re-organised and re-designated as the Computer Service Centre. The Centre is under the direction of a Director (who is responsible to the Commonwealth Statistician) and a Deputy Director, and is organised functionally into Sections. Each Section is supervised by a Principal Programmer.

*Automatic Data Processing.* Hardware Systems and Operations; Program Design; Analysis and Standards; Software Systems; Applications Systems.

### Recruitment of statisticians

The demand by the Bureau for professionally qualified statisticians (i.e. graduates) is met in three principal ways. Firstly, the conditions under which persons are recruited to the Commonwealth Public Service ensure that the majority of junior appointees are qualified to matriculate, and the Bureau encourages these recruits in a variety of ways (e.g. free study time, payment of university fees, etc.) to pursue an appropriate university degree course on a part-time basis. A substantial number of the professional statisticians have, in fact, acquired their qualifications in this way. Secondly, the Bureau awards to high level matriculant students statistics cadetships, of four years duration, tenable at an Australian university and leading to an honours degree in economics, statistics and/or mathematics. The cadetship scheme also provides for one- and two-year cadetships for undergraduates who have demonstrated their ability to succeed with an appropriate university course. These undergraduate cadetships also lead to an honours degree in economics, statistics and/or mathematics. The third way in which the Bureau acquires professionally qualified staff is by direct recruitment of graduates who have had no attachment to the Bureau prior to completing their university degrees. Recruits from this source are predominantly the product of Australian universities, but in recent years a substantial number of overseas graduates, principally from United Kingdom universities, have joined the Bureau's staff.

### Mechanical and electronic equipment

The Bureau possesses considerable experience in the use of mechanical equipment for data processing, having first installed punched-card machinery in 1921. It has recently installed a large scale high-speed digital computer network which is progressively superseding most of the existing mechanical tabulation equipment. The computer network comprises Control Data 3600 and 3300 computers in Canberra, 3300, 3200 and 160-A computers in both Sydney and Melbourne and 3200 computers in the other three mainland States with a full complement of peripheral devices including magnetic tape units, disk drives and remote inquiry stations. The computers are used to perform a wide range of accounting and administrative work for Government departments (notably the Department of the Treasury) in addition to normal statistical functions.

### Relation of the Bureau to other Commonwealth Departments

The role of the Commonwealth Bureau of Census and Statistics relative to the compilation of statistics in other Commonwealth Departments is outlined in Year Book No. 51, page 1248.

## Statistical and other official publications of Australia

The official statistical publications of Australia may be divided bibliographically into two main divisions, namely: (i) Commonwealth publications dealing both individually and collectively with the several States of Australia; and (ii) State publications dealing with individual States only. Commonwealth publications containing statistics may be grouped under two heads, namely: (i) publications issued by the Commonwealth Statistician; and (ii) Parliamentary and Departmental Reports and Papers. State publications may similarly be grouped into publications issued by the Deputy Commonwealth Statistician in each State and State Parliamentary and Departmental Reports and Papers. The statistics contained in the second group in each case are in the main incidental to the primary purpose of the particular report or paper.

### Publications issued by the Commonwealth Statistician

*Principal statistical publications.* The following is a list of the principal statistical publications issued from the Central Office of the Commonwealth Bureau of Census and Statistics since its inauguration.

*Australian Capital Territory Statistical Summary.* Annually, 1963 to 1967.

*Balance of Payments, Australia.* Statements Nos 1 to 3, 1928-29 to 1951-52.

*Banking and Currency.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1965-66.

*Causes of Death.* Bulletin, annually, 1963 to 1965.

*Census (1911) Results.* Bulletins. Vols I (Statistician's Report), II and III, with Appendix *Mathematical Theory of Population.*

*Census (1921) Results.* Bulletins, Nos 1 to 26. Parts I to XVI, forming Vol. I, and Parts XVII to XXIX (Part XXVII, Life Tables), forming, with the Statistician's Report, Vol. II.

*Census (1933) Results.* Bulletins, Nos 1 to 25. Parts I to XIV, forming Vol. I, Parts XV to XXVIII, forming Vol. II, and Parts XXIX to XXXVII, forming, with the Statistician's Report and Australian Life Tables, 1932-1934, Vol. III.

*Census (1947) Results.* Bulletins, Nos 1 to 25. Parts I to XVI, forming Vol. I, Parts XVII to XIX, forming Vol. II, and Parts XX to XXVIII, forming with the Statistician's Report and Australian Life Tables, 1946-1948, Vol. III.

- Census (1954) Results.* Bulletins, Nos 1 to 3. Vols. I to VI, comprising respectively Parts I to V for each State; Vol VII, comprising Parts I to V for the Australian Territories; Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1953-1955, and the Statistician's Report.
- Census (1961) Results.* Vols I to VI, comprising respectively Parts I to V for each State; Vol. VII, comprising Parts I to V for the Australian Territories; and Vol. VIII, comprising Parts I to III for Australia, Australian Life Tables, 1960-1962, and the Statistician's Report.
- Census (1966) Results.* Summarised results for each State and Territory and for Australia are being published in a series of mimeographed bulletins available from the Commonwealth Statistician (see page 1225).
- \**Conference of British Commonwealth Statisticians, 1951, Report of Proceedings.*
- \**Dairying Industry* (formerly *Summary of Dairying Industry*). Statistical Bulletin, monthly and half-yearly; first issue, September 1937.
- Demography.* Bulletin, annually, 1911 to 1965. Commencing 1963, excludes details of causes of death, see *Causes of Death*.
- \**Digest of Current Economic Statistics.* Monthly from August 1959 onward.
- \**Export Commodity Classification, Australian.* Annually, 1966-67 and 1967-68 (sectional revisions).
- Exports, Australian.* Annually, 1958-59 to 1966-67.
- \**Factories, Principal Statistics, Summary.* Annually, 1948-49 to 1965-66.
- Finance.* Bulletin, 1907 to 1960-61. Commencing 1955-56, issued in two parts—Part I, Public and Private Finance; Part II, Commonwealth Taxation. Commencing 1961-62, issued as five separate bulletins, see *Banking, Finance (2), Insurance, and Taxation*.
- Finance, Commonwealth.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1966-67.
- Finance, State, Territory and Local Government Authorities', and Government Securities.* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1965-66.
- \**Food Production and the Apparent Consumption of Foodstuffs and Nutrients in Australia, Report on.* Statistical Bulletin, half-yearly, 1946-47 to 1947-48; annually, 1948-49 to 1965-66.
- \**Fruit Growing Industry* (formerly *Summary of Fruit Growing Industry*). Statistical Bulletin, annually, 1944-45 to 1965-66.
- \**Import Commodity Classification, Australian.* Annually, 1965-66 to 1967-68 (sectional revisions).
- Imports Cleared for Home Consumption.* Annually, 1950-51 to 1966-67.
- Insurance and Other Private Finance (other than Banking and Currency).* Bulletin, annually, 1961-62 and 1962-63 (combined issue) to 1965-66.
- Labour and Industrial Statistics.* Memoranda and Reports, various, to 1922.
- Labour Report.* 1913 to 1965 and 1966 (combined issue).
- Life Tables, Australian, 1901-1910.* *Australian Joint Life Tables, 1901-1910.*
- Life Tables, Australian, 1920-1922.*
- Life Tables, Australian, 1932-1934.* *Australian Joint Life Tables, 1932-1934.*
- Life Tables, Australian, 1946-1948.*
- Life Tables, Australian, 1953-1955.*
- Life Tables, Australian, 1960-1962.*
- \**Livestock Numbers* (formerly *Summary of Livestock Statistics*). Statistical Bulletin, annually, 1943 to 1966.
- Local Government in Australia.* July 1919.
- Manufacturing Industries.* Bulletins on individual industries, annually, 1936-37 to 1939-40, 1940-41 (issue incomplete) and 1944-45 to 1965-66.†
- Manufacturing Industry.* Bulletin, annually, 1963-64 and 1964-65.
- Manufacturing Commodities.* Bulletin, annually, first issue 1963-64 and 1964-65 (in preparation).
- ‡*Mineral Industry, The Australian* (formerly *Minerals and Metals Bulletin*). Part 2—*Quarterly Statistics* of a quarterly bulletin issued jointly with the Bureau of Mineral Resources.
- Monthly Review of Business Statistics.* October 1937 onward.
- Motor Vehicles, Census of, 31st December, 1955.* Bulletins Nos 1 to 8.
- Motor Vehicles, Census of, 31st December, 1962.* Bulletins Nos 1 to 9.
- Motor Vehicles, Survey of (1947-48), Results.* Bulletins Nos 1 to 7.
- National Accounts, Australian (National Income and Expenditure), 1948-49 to 1961-62,* first issue, mimeographed\*, to 1965-66.
- §*Non-rural Primary Industries.* Bulletin, annually, first issue, 1964-65 (in preparation).
- Non-rural Primary Industries and Value of Production.* Bulletin, annually, 1962-63 and 1963-64. (Commencing 1964-65 issued as two separate Bulletins, see *Non-rural Primary Industries, and Value of Production*).
- Northern Territory Statistical Summary.* Annually, 1960 to 1967.

- \* *Occupation Survey (1945) Results*. Detailed tables.
- Official Year Book of the Commonwealth of Australia*. 1907 to present issue (No. 53). Issues Nos 40 to 51 also published in parts.
- Pocket Compendium of Australian Statistics* (formerly *Statistical Digest*). 1913, 1914, 1916 and 1918 to 1967, annually.
- Population and Vital Statistics*. Bulletins and Reports, various, 1906-1910.
- Primary Industries*. Bulletins, annually, 1950-51 to 1961-62 in two parts—Part I, Rural Industries; Part II, Non-rural Industries and Value of Production. Commencing 1962-63, issued as two separate Bulletins, see *Rural Industries* and *Non-rural Primary Industries and Value of Production*.
- Primary Industries, Australian*. Report prepared for the Empire Producers Conference, Sydney, March 1938.
- Production*. Bulletin, annually, 1906 to 1949-50. From 1936-37 to 1949-50 issued in two parts—Part I, Secondary Industries; Part II, Primary Industries (including Total Recorded Production); thereafter separate Bulletins (see *Primary Industries* and *Secondary Industries*).
- Professional Papers*. Various. A full list appears in Official Year Book No. 13, page 3.
- \* *Publications of the Commonwealth Bureau of Census and Statistics*. Annually (1964 to 1967 printed).
- Quarterly Summary of Australian Statistics* (replaced *Monthly Summary of Australian Statistics*). December 1917 onward.
- \* *Retail Establishments, Census of (1947-48), Results*. Bulletins, Nos 1 to 7.
- \* *Retail Establishments, Census of (1948-49), Results*. Bulletins, Nos 1 to 7.
- \* *Retail Establishments, Census of (1952-53), Results*. Bulletins, Nos 1 to 14.
- Retail Establishments, Census of (1956-57), Results*. Bulletins, Nos 1 to 8 (mimeographed\*) and 9 to 15 (printed).
- Retail Establishments and Other Services, Census of (1961-62), Results*. Bulletins Nos 1 to 7 (printed) and 8 and 9 (mimeographed\*).
- \* *Rural Holdings, Classification by Size and Type of Activity, 1959-60*. Bulletins, Nos 1 to 7.
- Rural Holdings, Size Classification of, 1955-56*. Bulletins Nos 1 to 7.
- Rural Industries*. Bulletin, annually, 1962-63 to 1964-65.
- \* *Rural Land Use and Crop Production* (formerly *Summary of Crop Statistics*). Statistical Bulletin, annually, 1943-44 to 1965-66.
- \* *Seasonally Adjusted Indicators*. Bulletin, annually, first issue 1967 (see page 1220).
- Secondary Industries*. Bulletin, annually, 1950-51 to 1962-63 (commencing 1960-61 issued in two parts—Part I, Factory and Building Operations; Part II, Materials Used and Articles Produced in Factories). Commencing 1963-64 issued as separate bulletins, see *Manufacturing Industry* and *Manufacturing Commodities*.
- Social Insurance*. Report to the Hon. the Minister for Trade and Customs, 1910.
- Social Statistics*. Bulletin, 1907 to 1915 annually, and 1918.
- Superannuation for the Commonwealth Public Service*. Report to the Hon. the Minister for Home Affairs, 1910.
- Taxation Assessments, Commonwealth*. Annually, 1961-62 to 1965-66.
- Trade, Overseas*. Bulletin, annually, 1906 to 1966-67.
- \* *Trade, Overseas*. Preliminary Bulletin, annually, 1952-53 to 1966-67, in two parts—Part I, Exports; Part 2, Imports. (See also *Exports, Australian* and *Imports Cleared for Home Consumption*.)
- Transport and Communication*. Bulletin, 1906, 1908 to 1916 annually, 1919 to 1930 annually and 1932 to 1965-66 annually.
- § *Value of Production*. Bulletin, annually, first issue, 1964-65.
- Wealth*. The Private Wealth of Australia and its Growth as ascertained by various methods, together with a Report on the War Census in 1915.
- \* *Wheat Industry* (formerly *Summary of the Wheat Situation*). Statistical Bulletin, periodically; first issue, July 1936.
- \* *Wool Production and Utilisation*. Bulletin, annually, 1952-53 to 1965-66.

The foregoing list includes all the printed publications issued from the Bureau and certain more important mimeographed publications issued for the most part annually. Minor changes in the titles of several publications have not been referred to above. Copies of a number of these publications, particularly earlier issues, are not available.

\* Distributed by the Commonwealth Statistician—for methods of obtaining other publications still in print see back pages of this volume.

† The series for 1965-66 comprises: Nos 1. Cement and Cement Goods, 2. Bricks, Tiles, Pottery and Earthenware, 3. Chemicals, Drugs and Medicines, 4. White Lead, Paints and Varnish, 5. Chemical Fertilisers, 6. Soap and Candles, 7. Basic Metal Industries, 8. Metal Fabricating Industries, 9. Motor Vehicles and Cycles, 10. Cotton Mills, 11. Woollen Mills, 12. Rope and Cordage, 13. Tanneries, 14. Boots and Shoes, 15. Clothing (including Hosiery and Knitted Goods), 16. Flour and Other Grain Mills, 17. Biscuits, 18. Confectionery, 19. Jam, Fruit, Vegetables, Pickles, Sauces, Condiments, etc., 20. Bacon Curing, 21. Butter, Cheese and Condensed, Concentrated, etc., Milk, 22. Aerated Waters and Cordials, 23. Meat and Fish Preserving, 24. Breweries, 25. Wineries and Distilleries, 26. Tobacco, Cigars and Cigarettes, 27. Sawmilling, 28. Pulp and Paper Making, 29. Rubber Works, 30. Brooms and Brushes, 31. Electric Light and Power Works, 32. Gas Works, 33. Plastic Moulding and Products, 34. Leather Goods (including Saddlery and Belting), 35. Printing and Stationery.

‡ Copies available from the Department of National Development in each capital city (\$1 each).

§ Previously included in *Non-rural Primary Industries and Value of Production*.

*Other statistical publications.* Other mimeographed statements are distributed by the Commonwealth Statistician and deal with a wide variety of subjects, as follows.

*Triennially.* Tractors on Rural Holdings.

*Annually.* Agricultural Statistics (Preliminary); Australian National Accounts—Gross National Product at Current and Constant Prices (No. 1), Personal Income, by States (No. 2), Gross National Product at Factor Cost, by Industry (No. 3) (Preliminary Statements); Bee Farming; Consumption of Tea and Coffee; Factories, Principal Statistics of, by Class of Industry; Factory Products, Principal; Factory Production, Indexes of; Factory Production, Packaging and Associated Items; Factory Statistics, Australian Capital Territory; Factory Statistics, Northern Territory; Factory Statistics (Preliminary); Farm Machinery on Rural Holdings; Finance Companies; Fire, Marine and General Insurance; Fisheries (formerly Fishing and Whaling—also Preliminary); Fruit Statistics (Preliminary); Government Pension and Superannuation Schemes; Livestock Statistics (Preliminary); Minerals and Mineral Products; Mining and Quarrying (also Preliminary); Overseas Investment; Overseas Investment in Companies in Australia (Preliminary); Registered Building Societies, Registrations of New Motor Vehicles (also Preliminary); Rural Statistics of the Australian Capital Territory; Survey of Private Pension and Retiring Allowance Schemes; Survey of Retail Establishments, Australian Capital Territory; Survey of Retail Establishments, Northern Territory; Survey of Selected Large Private Pension Funds; Commonwealth, State and Territory Taxation Collections; Trade of Australia with Eastern Countries; University Statistics (also Preliminary); Value of Primary Production (Preliminary); Value of Production and Indexes of Price and Quantum of Farm Production; Wholesale Sales and Stocks of Wine and Brandy; Wool Production (Preliminary).

*Half-yearly.* Balance of Payments; Labour Turnover; Trade of Australia with the United Kingdom—no longer published separately, included in quarterly publication Overseas Trade—Major Groups of Countries; Minimum Rates of Wage and Prescribed Hours of Work—Adult Male and Adult Female Occupations, Sydney and Melbourne.

*Quarterly.* Aerial Agriculture; Average Retail Prices of Food and Grocery Items; Balance of Payments; Building; Building—Australian Capital Territory; Building—Northern Territory; Building—Number of New Houses and Flats (Preliminary); Capital and Maintenance Expenditure by Private Businesses in Australia; Capital Expenditure by Private Businesses in Australia (Preliminary); Consumer Price Index; Industrial Disputes; Instalment Credit for Retail Sales; National Income and Expenditure; New Agricultural Machinery; New Capital Raisings by Companies in Australia; New Capital Raisings by Companies in Australia (Preliminary); New Tractors; Overseas Arrivals and Departures; Overseas Shipping Cargo; Overseas Trade with Major Groups of Countries; Retail Sales of Goods (also Preliminary); Road Traffic Accidents; Unit Trusts, Land Trusts and Mutual Funds; Wholesale Prices—Price Index of Electric Installation Materials.

*Monthly.* Banking (General) (also Preliminary); Building Approvals; Employment and Unemployment; Export Price Index; Exports by Commodity Divisions; Exports of Wool; Finance Companies; Gold Mining Industry; Imports of Assembled New Passenger Motor Cars (Other than Buses or Special Vehicles); Instalment Credit for Retail Sales (Preliminary); Life Insurance; Meat Industry; Minerals and Mineral Products; Overseas Arrivals and Departures (Preliminary); Overseas Trade (also Preliminary); Overseas Trade, Imports by Commodity Divisions; Production Statistics (also Preliminary); Production Summaries\*; Registrations of New Motor Vehicles (also Preliminary); Retail Sales of Goods (Provisional); Savings Banks (also Preliminary); Wage and Salary Earners in Civilian Employment (Preliminary); Wage Rates and Earnings; Wholesale Price (Basic Materials and Foodstuffs) Index; Publications issued by Commonwealth Bureau of Census and Statistics.

*Periodically.* Demographic Review (separate issues cover population and vital statistics (quarterly), births, deaths and marriages (all annual)); Social Statistics, including Schools, Universities, Hospitals (all annual), and Divorces (annual and quarterly).

---

\* Current series: Nos 2. Chemicals, etc., 3. Plastic and Synthetic Resins, etc., 4. Paints and Other Surface Coatings, 5. Electricity and Gas, 6. Soaps, Detergents and Glycerine, 7. Internal Combustion Engines, 8. Lawn Mowers, 9. Electric Appliances, 10. Motor Bodies, Trailers, etc., 11. Pedal Cycles, 12. Meters, 13. Building Fittings, 14. Cotton Goods, 15. Wool-scouring, Carbonising and Fellmongering, 16. Wool Textile Industry, 17. Wool Weaving, 18. Hosiery, 19. Shirts, Cardigans, Nightwear, Underclothing, etc., 20. Cellulosic and Synthetic Fibre, Tops, Yarns and Woven Fabrics, 21. Paper, Wood Pulp and Adhesive Tapes, 22. Floor Coverings, 23. Electric Motors, 24. Men's, Youths' and Boys' Outer Clothing, 25. Foundation Garments, 27. Gloves; Slide Zip Fasteners, 28. Footwear (excluding Sandshoes, Galoshes, and Gumboots, etc. of Rubber), 29. Biscuits, Ice Cream, Cocoa, Confectionery, 30. Storage Batteries, 31. Assembly of Motor Vehicle Chassis, 32. Perambulators, Pushers and Strollers, 33. Motor Vehicles, 34. Radio, etc., Television Sets and Cabinets, 35. Mattresses, 36. Preserved Milk Products, 38. Canned Fish, 39. Jams and Preserved Fruit and Vegetables, 40. Cereal Products, 41. Margarine and Other Edible Processed Fats, 42. Malt and Beer, 43. Stock and Poultry Meals (Other than Cereal), 45. Phonograph Records, 47. Aerated Waters, Cordials and Syrups, and Concentrated Cordial Extract, 48. Sports Goods, 49. Building Materials, 50. Electrodes for Manual Welding, 51. Hides and Skins used for Tanning, 52. Electrical Power Transformers, Chokes and Ballasts, 53. Plastics Film, Sheet and Coated Materials, 55. Butter and Cheese, 56. Canned Meat, 58. Steel Wire and Wire Products, 59. Non-ferrous Rolled, Extruded and Drawn Products.

*Occasional publications.* In addition to the publications listed on pages 1221–4, most of which are issued regularly, there have been a number of statements issued by this Bureau which contain the results of special surveys or new statistical series and descriptions thereof. The more recent of these are listed below.

Special Business Survey No. 16. Incidence of Industrial Awards, Determinations and Agreements, May 1963; Minimum Wage Rates, January 1960 to June 1963; Wage and Salary Earners in Employment, June 1954 to June 1961; Wage and Salary Earners in Employment, June 1961 to June 1965; Projections of the Population of Australia (1966 to 1986); Survey of Private Pension and Retiring Allowance Schemes, 1962–63; Surveys of Weekly Earnings and Hours, October 1962, October 1963, October 1964, and October 1966; Survey of Weekly Earnings, October 1965; Mining and Quarrying, Statistical Summary (1952–1964); Minimum Wage Rates, March 1939 to June 1965; Surveys of Leavers from Schools, Universities or other Educational Institutions, February 1964, 1965 and 1966 (issued October 1966) and February 1967 (issued June 1967); Survey of Multiple Jobholding, August 1966; 1966 Census Bulletins, for each State and Territory and Australia, dealing with particular characteristics, also population and dwelling summaries and totals for local government areas, etc.

*Information on current Bureau publications.* Further information on current publications of the Commonwealth Bureau of Census and Statistics is contained in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1967, available free on request from the Commonwealth Statistician, Canberra. This contains a list of all Bureau publications, a subject index to show the central office publications in which information on the various subjects dealt with by the Bureau is to be found, and short descriptions of major central office publications. The information on issues in this publication is supplemented in monthly statements.

#### Commonwealth and State Parliamentary and Departmental Reports and Papers

No comprehensive list of current publications of this nature is available, but the National Library of Australia issues an annual publication *Australian Government Publications*, a list of official publications of the Commonwealth, States and Territories, compiled from records of material received by the Library during the year.

The Publications Branch of the Commonwealth Government Printing Office, Canberra, issues a monthly publication *Commonwealth Publications* and at irregular intervals *Commonwealth Publications Consolidated List*. These publications list Commonwealth publications currently becoming available or in stock, showing the titles and prices of Parliamentary Papers, Parliamentary Debates (Hansard), records of Parliamentary proceedings, Acts, Statutory Rules, Ordinances, and departmental bulletins and reports issued annually or irregularly.

The National Library of Australia issues annually a publication *Australian Books*, a reprint of the 1966 issue of which is included on pages 1231–1277. See page 629 of the chapter Education, Cultural Activities and Research for further information concerning the National Library's publicising of Australian publications.

#### Publications issued by the Deputy Commonwealth Statisticians

A list of the current publications issued by the Deputy Commonwealth Statistician of each State appears in *Publications of the Commonwealth Bureau of Census and Statistics*, April 1967, and this information is supplemented also in the monthly statements mentioned above.

### 36th Session of The International Statistical Institute

On the invitation of the Government of the Commonwealth of Australia the 36th biennial Session of The International Statistical Institute was held at the Wentworth Hotel, Sydney, from 28 August to 7 September 1967. It was the first occasion in the 82-year history of the Institute that a meeting had been held in Australia, and the Commonwealth Government was the twenty-third national government to act as host to one of the Institute's biennial sessions.

The International Statistical Institute is the leading international scientific academy in the field of statistics. Its objectives are to develop and improve statistical methods; to foster the exchange of professional knowledge among statisticians; to encourage statistical research and the proper use of statistical methods; and to foster public appreciation of sound statistical practices. The Institute also plays an important role in statistical education and conducts statistical education centres in Beirut and Calcutta.

An Australian Organising Committee was established under the chairmanship of the Commonwealth Statistician, Mr K. M. Archer, to make all arrangements for the 36th Session. Invitations were extended to members of the Institute and to representatives of national and international organisations and societies affiliated with the Institute. In addition, national governments with whom Australia maintains diplomatic relations were invited to send delegations to the Session, and a number of leading statisticians who were not members of the Institute were also invited to participate. A total of 362 delegates from 45 countries attended the Session, 153 of these being residents of Australia.

The Session was formally opened on 29 August 1967 by His Excellency the Governor-General of the Commonwealth of Australia, Lord Casey.

A total of 116 technical papers were presented at the Session. Of these, 45 were submitted by eminent statisticians who were specially invited to prepare papers for the Session and 71 were contributions from members of the Institute and non-members who attended the meetings. A list of the papers, together with the author and the author's country of residence, is shown at the end of this section.

During the course of the Session twenty-four separate scientific meetings were held and papers on the following topics were presented and discussed:

- Standardisation of Procedures for Evaluation of Data;
- Unsolved Problems in Biometrics;
- Distribution-free Methods;
- Economic Statistics;
- Statistical Measurement of the Supply and Utilisation of Natural Resources;
- Statistical Theory and Method—Relationships and Multivariate Methods;
- Statistical Theory and Method—Estimation and Testing;
- Design and Analysis of Non-experimental Enquiries;
- Statistics in the Physical Sciences;
- Problems of Statistical Development in Developing Countries;
- Data Storage and Linkage;
- Statistical Theory and Method—Design of Experiments;
- Statistical Theory and Method—Sampling;
- Appraising the Demands for and Utilisation of Official Statistics;
- Statistical Theory and Method—Time Series and Stochastic Processes;
- Income Distribution;
- University and Non-university Training in Statistics.

In accordance with tradition, the Australian Organising Committee arranged a statistical exhibition in conjunction with the 36th Session. National statistical offices, together with national and international statistical organisations and societies, were invited to exhibit. The exhibition included official statistical publications, journals and textbooks, and for each exhibiting national statistical office a chart showing the organisation of official statistical services. In addition, several exhibitors, including Australia, provided graphs of economic and social statistics for display. The Australian exhibit included also a series of panels illustrating the development of the Australian official statistical system.

The Proceedings of the 36th Session are at present being prepared and are expected to be published in two-volume form early in 1969. The Proceedings will include a record of the papers presented and associated discussion during the technical meetings, together with details of some organisational features of the Session, including a list of participants and details of the general programme.

The 36th Session provided a unique opportunity for Australian statisticians to meet with their colleagues from overseas countries and discuss problems of common interest and concern. While the tangible results of the Session will be evident from the Report of the Proceedings, the intangible results of personal contact and discussion which took place outside the Session will be of considerable value to statisticians in Australia.

#### TECHNICAL PAPERS PRESENTED AT THE 36TH SESSION OF THE INTERNATIONAL STATISTICAL INSTITUTE

##### INVITED PAPERS

- R. BACHI, R. BARON and G. NATHAN (Israel)—Methods of Record-Linkage and Applications in Israel.
- B. G. BANTEGUI (Philippines)—Perspectives of Statistical Development in the Developing Countries of Asia and the Far East.
- Ch. A. BICKING (U.S.A.)—Statistics in the Selection and Control of Research and Development Projects.
- J. G. BOLTON (Australia)—Statistics of Extragalactic Radio Sources.
- K. G. BROLIN (Sweden UNESCO)—Statistics on Science and Technology in Developing Countries.
- VOILET R. CANE (United Kingdom)—Random Walks and Physical Processes.
- V. J. CHACKO (India)—Problems in Statistical Assessment of Forest Resources and Products.
- D. G. CHAPMAN (U.S.A.)—Statistical Problems in the Optimum Utilization of Fisheries Resources.

- T. E. DALENIUS (Sweden)—Official Statistics and their Uses.
- G. de MEO (Italy)—Incomes and Expenditure of Italian Families on the Basis of the Results of a Recent Survey.
- R. DUMAS and S. RONCHETTI (France EEC)—Les revenus des ouvriers dans le Marché commun.
- W. J. EWENS (Australia)—The Transient Behaviour of Stochastic Processes, with Applications in the Natural Sciences.
- A. M. FLORES (Mexico)—Problems in the Development of Economic and Social Statistics.
- S. A. GOLDBERG (Canada)—The Demand for Official Statistics and Their Utilization in Canada with Special Reference to the Role of the National Accounts.
- J. HABB (Czechoslovakia)—From Central Planning to Socialist Marketing: Problems of Information Systems.
- E. J. HANNAN (Australia)—Fourier Methods and Random Processes.
- M. H. HANSEN, W. N. HURWITZ and L. PRITZKER (U.S.A.)—Standardization of Procedures for the Evaluation of Data: Measurement Errors and Statistical Standards in the Bureau of the Census.
- M. H. HANSEN and R. B. VOIGHT (U.S.A.)—Program Guidance Through the Evaluation of Uses of Official Statistics in the United States Bureau of the Census.
- W. HOEFFDING (U.S.A.)—Some Recent Developments in Nonparametric Statistics.
- E. E. HOUSEMAN and H. C. TRELOGAN (U.S.A.)—Progress Towards Optimizing Agricultural Area Sampling.
- INSTITUTE OF STATISTICIANS (United Kingdom)—Institute of Statisticians Training for Professional Statisticians.
- J. N. R. JEFFERS (United Kingdom)—The Contribution of Statistical Methods to Forest Research and Management.
- M. MAESTRE (France)—Sur un modèle des échanges entre la recherche et la production et les problèmes statistiques connexes.
- B. MATÉRN (Sweden)—Sample Survey Problems.
- T. MATSUDA (Japan)—Development of Agricultural Statistics in Japan.
- S. MAZUMDAR (Italy FAO)—Some Problems of Developing Agricultural Statistics in Developing Countries.
- M. A. MÓD (Hungary)—Comprehensive Income Statistics System in Hungary (Socio-economic Stratification and Income Distribution).
- F. MOSTELLER (U.S.A.)—Statistical Comparisons of Anesthetics: the National Halothane Study.
- S. NORDBOTTEN (Norway)—Purposes, Problems, and Ideas Related to Statistical File Systems.
- I. OHLSSON (Sweden)—Merging of Data for Statistical Use.
- E. N. OMABOE and K. T. de GRAFT-JOHNSON (Ghana)—Possibilities for Evaluation of Census or Survey Data in Developing Countries.
- YU. V. PROHOROV (U.S.S.R.)—Newest Investigations on Distribution-free Methods in the U.S.S.R.
- B. RAMAMURTI (India)—Appraisal of the Demands for and Uses of Official Statistics: with Special Reference to Developing Countries.
- A. RÉNYI (Hungary)—On some Problems in the Theory of Order Statistics.
- H. E. RILEY (U.S.A.)—Statistics of Research and Development in the United States.
- H. S. SICHEL (South Africa)—Application of Statistical Techniques to the Evaluation of Mineral Deposits.
- W. R. SIMMONS (U.S.A.)—Analysis of Bias in Interview-Reported Hospital Experience.
- J. STEINBERG and L. PRITZKER (U.S.A.)—Some Experiences with and Reflections on Data Linkage in the United States.
- R. STONE (United Kingdom)—The Generation, Distribution and Use of Income.
- K. SZAMEITAT and R. DEININGER (Germany)—Some Remarks on the Problem of Errors in Statistical Results.
- C. TAEUBER (U.S.A.)—The Development of Population Censuses and Vital Statistics.
- E. J. WILLIAMS (Australia)—The Development of Biomathematical Models.
- W. T. WILLIAMS and G. N. LANCE (Australia)—Application of Computer Classification Techniques to Problems in Land Survey.

H. O. WOLD (Sweden)—Non-experimental Statistical Analysis from the General Point of View of Scientific Method.

S. S. ZARKOVICH (Yugoslavia FAO)—A System of Statistical Quality Codes.

# CONTRIBUTED PAPERS

G. N. ALEXANDER and A. B. SUSTS (Australia)—The Logarithmic Transformation and its Application to Hydrologic Data.

B. BARBERI (Italy)—Some Problems on the Statistical Measurement of Capital.

R. E. BARLOW (U.S.A.)—Likelihood Ratio Tests for Restricted Families.

R. BARTOSZYŃSKI (Poland)—A Model of Age Dependent Inheritance of Cancer-proneness.

D. BASU and J. K. GHOSH (India)—Sufficient Statistics in Sampling from a Finite Universe—Part I.

T. N. BHARGAVA and S. D. CHATTERJI (U.S.A.)—Mathematical Models in Management Sciences: Consumer Behaviour as a Markov Process.

T. N. BHARGAVA and D. L. FISK (U.S.A.)—Random Graphs and Probability Models.

F. BURKHARDT and L. OSADNIK (Germany)—Standardisierung von Differentialgleichungen für die Auswertung von ökonomischen und demographischen Daten.

J. M. CALLIES (Madagascar)—Les problèmes de l'expansion statistique dans les pays en voie de développement.

H. CHERNOFF (U.S.A.)—Bounds on the Efficiency of a Classification Procedure.

G. R. CHEVRY (France)—Avenir des enquêtes officielles.

D. R. COX (United Kingdom)—Some Results Connected with the Logistic Binary Response Model.

H. A. DAVID and R. S. MISHRIKY (U.S.A.)—Order Statistics For Discrete Populations and for Grouped Samples.

P. J. DELAPORTE (France)—Etude de la corrélation entre plusieurs caractères mesurés avec des erreurs de connaissance.

J. DURBIN (United Kingdom)—Tests of Serial Independence Based on the Cumulated Periodogram.

I. ESENWEIN-ROTHER (Germany)—University Training in Economic Statistics.

L. FÉRAUD (Switzerland)—Modèles d'évolution d'un personnel d'après l'âge et le salaire. Stationnarité et stabilité.

R. W. FERGIE and K. M. ARCHER (Australia)—Official Statistics in the Decision-making Process with Special Reference to Problems of Urban Growth.

I. S. FRANCIS (U.S.A.)—Selecting and Assessing Variables in the Classification Problem.

V. P. GODAMBE (U.S.A.)—A Fiducial Argument with Application to Survey-Sampling.

W. M. HARPER (Australia)—The Distribution of the Mean Half-Square Successive Difference.

L. HARRIS (U.S.A.)—On Interdependent Decision Problems.

H. O. HARTLEY and J. N. K. RAO (U.S.A.)—A New Approach to the Classification Problem.

T. HATORI (Japan)—On Some Considerations of the Learning Models and Related Problems.

F. E. HOBSON (Canada)—A Contribution to Mathematical Modelling for Health Services.

F. B. HORNER (Australia)—Training of Professional Staff within the Commonwealth Bureau of Census and Statistics.

R. A. HORVÁTH (Hungary)—The Contribution of Netherlandish Thinking to the Formation of Statistics as an Autonomous Discipline.

H. M. HUSEIN and A. E. SARHAN (U.A.R.)—A Study of the Relationship of Height and Weight with Age of School Children in U.A.R.

INSTITUTO NACIONAL DE ESTADÍSTICA DE ESPAÑA (Spain)—Ordenación de las Estadísticas Para la Planificación Económica.

K. JOGDEO and G. P. PATIL (U.S.A.)—Characterization of Independence in Bivariate Families with Regression Dependence.

P. W. M. JOHN (U.S.A.)—Extending the Cubic Association Scheme.

S. JOHN (Australia)—A Central Tolerance Region for the Multivariate Normal Distribution.

L. KATZ (U.S.A.)—Statistical Decision: Theory versus Application, Exemplified in Smoking-Health Controversy.

- S. H. KHAMIS (Lebanon)—Some Problems Relating to the International Comparability and Fluctuations of Production Volume Indicators.
- S. KORENAGA (Japan)—Chronological Series Analysis of Economic Statistics and its Stochastic Foundation.
- D. B. LAHIRI (India)—The Indian National Sample Survey—The Strategy for Analytical Studies: Design Aspects.
- H. O. LANCASTER (Australia)—The Infection and Population Size in Australia.
- M. R. LEADBETTER (U.S.A.)—On the Distributions of the Times Between Events in a Stationary Stream of Events.
- E. LUKACS (U.S.A.)—Some Properties of Stable Frequency Functions.
- G. MALECOT (France)—Conséquences statistiques de la parenté.
- R. C. MILTON (U.S.A.)—Sequential Two-Sample Rank Tests of the Normal Shift Hypothesis.
- H. V. MUHSAM (Israel)—The Population Factor in the Income Pyramid.
- C. S. OKUNO and T. OKUNO (Japan)—A Computer Programme for the Analysis of 3<sup>rd</sup>-type Fractional Factorial Designs.
- HONG NAI PARK (Korea)—A Partial Retention Scheme for Multi-stage Sampling on Successive Occasions.
- E. PARZEN (U.S.A.)—System Identification by Time Series Methods.
- H. D. PRIDMORE (Australia)—Elements of a Set-theoretic Approach to Data Storage and Linkage.
- M. L. PURI (U.S.A.)—The van Elteren W test and Non-null Hypothesis.
- C. R. RAO (India)—On Vector Variables with a Linear Structure and a Characterization of the Multivariate Normal Distribution.
- R. A. REYMENT (Sweden)—A Multivariate Paleontological Growth Problem.
- L. ROSENBERG (U.S.A.)—Estimation of the Parameters of the Weibull Distribution from Attribute Data.
- T. V. RYABUSHKIN (U.S.S.R.)—Specific Features of Interindustry Balance-sheet Construction in the Soviet Union.
- A. E. SARHAN (U.A.R.) and B. G. GREENBERG (U.S.A.)—Linear Estimates for Doubly Censored Samples from the Exponential Distribution with Observations Also Missing from the Middle.
- J. SETHURAMAN (India)—Stopping Time of a Rank-order Sequential Probability Ratio Test Based on Lehmann Alternatives—II.
- N. C. SEVERO (U.S.A.)—Generalizations of Some Stochastic Epidemic Models.
- L. R. SHENTON and K. O. BOWMAN (U.S.A.)—Sampling Moments of Moment and Maximum Likelihood Estimators for Discrete Distributions.
- W. L. SMITH (U.S.A.)—Remarks on Renewal Theory when the Quality of Renewals Varies.
- I. STEFANOV (Bulgaria)—Statistische Grundlagen zur Erforschung der Innenwanderung.
- M. A. STEPHENS (Canada)—A Goodness-of-fit Statistic for the Circle, with Some Comparisons.
- M. S. SRIVASTAVA (Canada)—Some Sequential Tests for Student's Hypothesis.
- A. B. SUNTER and I. P. FELLEGI (Canada)—An Optimal Theory of Record Linkage.
- G. TAGLIACARNE (Italy)—Nécessité du calcul du revenu national par région.
- P. THIONET (France)—Emploi d'une suite markovienne (processus markovien non-homogène à temps discret) pour retrouver quelques tests non paramétriques connus.
- L. THIRRING (Hungary)—Historical Statistics and the International Statistical Institute.
- J. TORRENS-IBERN (Spain)—Un nouveau test d'homogénéité pour échantillons multiples.
- D. S. TRACY (Canada)—Pattern Coefficients for Products of Generalized k-Statistics.
- D. VERE-JONES (Australia)—Statistical Methods in the Analysis of Earthquake Data.
- A. VESSEREAU (France)—Le centre de formation aux applications industrielles de la statistique.
- J. W. E. VOS (Netherlands)—Variance Estimators in Systematic Sampling.
- G. S. WATSON (Australia)—Some Problems in the Statistics of Directions.
- P. WHITTLE (United Kingdom)—Nonlinear Migration Processes.
- W. WINKLER (Austria)—Real Versus Nominal Age.

## AUSTRALIAN BOOKS 1966

The following pages are a reprint of the latest issue of a publication of the National Library of Australia begun in 1933 as *Select List of Representative Works dealing with Australia* and given its present form and title with *Australian Books* 1949. The list was included in issues of the Year Book annually up to No. 48, 1962, but exigencies of space in recent years have caused its omission. It is designed to meet the growing need, in Australia as publishing develops, and overseas as interest in Australia widens, for an authoritative current reference and reading list of books dealing with Australia or of Australian authorship, wherever published.

Australians will find these books in the National Library and in their State Libraries as well as in leading bookshops. Ideally they should be in every general library of importance, including municipal and shire libraries.

Overseas readers may have access to them in the collections which the National Library maintains at sixty-three posts in fifty countries. They will be found also, increasingly, in leading libraries and bookshops in many countries. For example, they are supplied by the National Library to the National Library of Canada, the Fundamental Library of Social Sciences, Moscow, and the National Diet Library, Japan. In the United States also, Australian books are included in the Farmington Plan in which sixty-two libraries and research institutions co-operate to ensure that at least one copy of all material published in any part of the world and likely to be required for a serious purpose will be available promptly somewhere in the country.

The list is classified broadly by subject, and under each heading there is first a list of the principal standard books still in print, then a list of selected books and official publications (excluding annual reports) published in the last few years. To ensure that, so far as is possible, an evenness of standard is maintained in the compilation of the list, the advice of a representative range of experts in the various subject fields has been sought.

Where known the retail price in the country of publication is given, but this is subject to fluctuation. Generally, the price of Australian publications is given in decimal currency. Prices shown for items published in the United States are in United States dollars.

In further fulfilment of its obligations to make Australian publications widely known, both at home and abroad, the Library issues a series of select lists which include *Australian Public Affairs Information Service* (monthly, and, since 1955, cumulated annually): a subject index of material in current periodicals with an important bearing on investigations in Australian political, economic, cultural, and social affairs, and the following full bibliographies.

*Australian National Bibliography*, a list of monographs and new serial titles (including government publications), maps, prints, sheet music, and moving picture films, of Australian interest. Formerly issued monthly, from January 1967 this publication will be issued four times a month, the fourth issue cumulating the entries from the preceding three.

An annual cumulation of *Australian National Bibliography* and an annual publication entitled *Australian Government Publications*, listing Commonwealth and State government monographs and serials.

### GENERAL AND DESCRIPTIVE

#### Standard Works in Print

AUSTRALIA. *Commonwealth Bureau of Census and Statistics*. Quarterly summary of Australian statistics. Canberra, 1912 to date. 50c ea.

AUSTRALIA. *Department of the Interior*. Australia; official handbook. Canberra, 1961 to date. Latest issue 1966. \$1.00 ea.

AUSTRALIA. *Department of National Development*. Atlas of Australian resources (First series). Canberra, 1953-1960. Second series, 1963 to date. *Contents*: Physical features, Geology, Mineral deposits, Climatic regions, Temperatures, Rainfall, Drainage systems, Conservation of surface water, Underground waters, 2nd ed., Soils, Vegetation regions, Dominant land use, Croplands, Agricultural production, Distribution of stock, Forest resources, Mineral industry, Electricity, Manufacturing industries, Population distribution and growth, Population increase and decrease, 1933-1947, Population increase and decrease, 1947-1954, Immigration, Railways, Roads and aerodromes, Ports and shipping, Educational facilities, Health services, State and local government areas, Major developmental projects.

Each map-sheet accompanied by a booklet of commentary on the general subject of the map (included in price). Single maps; unfolded or folded to commentary size, 50c ea., linen strip mounted for loose-leaf binder, 60c ea. Complete sets folded (in three boxes), \$17.00, in loose-leaf binder with commentaries in box, \$21.00.

- AUSTRALIA. *National Capital Development Commission*. The future Canberra. Sydney, Angus and Robertson, 1965. \$4.20.
- AUSTRALIA in facts and figures, Canberra, Australian News and Information Bureau, 1943 to date. Quarterly. Limited gratis distribution.
- AUSTRALIAN encyclopaedia; (ed.-in-chief Alec Chisholm) Sydney, Grolier Society of Australia, 1965. Price on application, 10v. Supplemented by the *Encyclopaedia year book*.
- AUSTRALIAN quarterly; a quarterly review of Australian affairs. Sydney, Australian Institute of Political Science, 1929 to date. 50c ea.
- BEAN, C. E. W. On the wool track. Sydney, Angus and Robertson, 1963. \$2.10.  
First published in 1910.
- CURRENT affairs bulletin, Sydney, Department of Tutorial Classes, University of Sydney, 1947 to date. Fortnightly. \$2.00 p.a.
- HURLEY, F. Australia: a camera study. Res. ed. Sydney, Angus and Robertson, 1966. \$7.00.
- LIFE in Australia. Melbourne, Oxford University Press, 1959 to date. 50c ea.  
This series covers such topics as country towns, orchards, Murray River, kangaroos, lyrebirds, cattle stations, beaches, and living in cities.
- MARSHALL, A. J. Journey among men, by Jock Marshall and Russell Drysdale. London, Hodder and Stoughton, 1963. 53s.  
Also issued by Sun Books for \$1.65.
- MOORE, T. Inglis, ed. A book of Australia. London, Collins, 1961. 10s. 6d. (Collins national anthologies).
- NOBLE, N. S., ed. The Australian environment. 3rd ed. Melbourne, C.S.I.R.O. in association with Melbourne University Press, 1966. \$4.00.
- OFFICIAL year book of the Commonwealth of Australia. Canberra, Govt. Pr, 1908 to date. Latest issue no. 52. \$2.00 ea.

Latest issue, 18th, 1965, edited by J. A. Alexander. *See also* biographical articles in *The Australian encyclopaedia*.

## Recent Publications of Interest

ADAMS, Nancy. Family fresco. Melbourne, Cheshire, 1966. \$4.50.

These memoirs include reminiscences of the educationalist, Dr Alexander Morrison, the authors' grandfather and of her father, the barrister Sir Edward Mitchell.

BATESON, C. Patrick Logan, tyrant of Brisbane Town. Sydney, Ure Smith, 1966. \$3.00.

The career of Logan, explorer and commandant of the penal settlement at Moreton Bay, was cut short by murder.

BAGOT, A. Coppin the great; father of the Australian theatre. Melbourne, Melbourne University Press, 1965. \$6.50.

BARRY, Sir John. The life and death of John Price; a study in the exercise of naked power. Melbourne, Melbourne University Press, 1964. \$5.00.

Price was appointed commandant at Norfolk Island in 1846 and was later head of the Penal Department in Melbourne. While holding this office he was murdered by convicts.

BRENNAN, N. Dr Mannix. Adelaide, Rigby, 1964. \$4.75.

Dr Mannix, Roman Catholic Archbishop of Melbourne from 1917 to his death in 1963, exerted great influence over public affairs in Australia.

CASEY OF BERWICK, R. G. C., *Baron*. Australian father and son. London, Collins, 1966. 36s.

The Governor-General's account of his pioneering forbears is based on family diaries.

CASEY OF BERWICK, R. G. C., *Baron*. Personal experience, 1939–1946. London, Constable, 1962. 31s.

Wartime reminiscences covering the period when the present Governor-General was successively Australian Minister to the United States, British Minister in the Middle East, and Governor of Bengal.

CASEY, Maie, *Lady*. An Australian story, 1837–1907. London, M. Joseph, 1962. 25s.

Story of four generations of Australian families in the course of settling into a new environment, by the wife of the Governor-General of Australia.

CASEY, Maie, *Lady*. Tides and eddies. London, M. Joseph, 1966. 30s.

These reminiscences are concerned mainly with life in England, Washington, Cairo, and India.

These reminiscences are concerned mainly with life in England, Washington, Cairo and India.

CLARK, Mavis. Pastor Doug; the story of an aboriginal leader. Melbourne, Lansdowne, 1965. \$3.95.

CRESWELL, Sir William. Close to the wind; the early memoirs (1866–1879) of Admiral Sir William Creswell, K.C.M.G., K.B.E. London, Heinemann, 1965. 36s.

The author of these memoirs was appointed in 1905 the first Director of the Australian naval forces.

CROCKER, W. Nehru; a contemporary's estimate. London, Allen & Unwin, 1966. 28s.

DEBENHAM, A. E. Without fear or favour; the biography of a career. Sydney, Edwards & Shaw, 1966. \$2.50.

Experiences of a quarter-century as Chamber and Stipendiary Magistrate.

DOWER, A. Crime chemist; the life story of Charles Anthony Taylor, scientist for the crown. London, John Long, 1965. 30s.

EDWARDS, C. Bruce of Melbourne; man of two worlds. London, Heinemann, 1965. 63s.

Lord Bruce was Prime Minister of Australia from 1923 to 1929. His subsequent career, in public affairs and business, has been centred largely in England.

FITZHARDINGE, L. F. William Morris Hughes; political biography. 1: That fiery particle, 1862–1914. Sydney, Angus and Robertson, 1964. \$6.40.

The first volume of a definitive biography of one of Australia's best known politicians, who was Prime Minister during World War I.

GREAT people in Australian history. General editor. J. Mark Howard. Melbourne, Longmans, 1965 to date. 50c ea.

A series designed for use in primary schools.

HARTNETT, L. J. Big wheels and little wheels, as told to John Veitch. Melbourne, Lansdowne, 1964. \$4.50.

Autobiography of a leading engineer and business entrepreneur who was managing director of General Motors-Holden in Australia from 1934 to 1947.

HASLUCK, Alexandra. Thomas Peel of Swan River. Melbourne, Oxford University Press, 1965. \$6.00.

Biography of one of the founders of Western Australia, who attempted to launch an ambitious scheme to settle 10,000 emigrants in the new colony.

HENNING, Rachel. The letters of Rachel Henning, edited by David Adams. With a foreword and pen drawings by Norman Lindsay. Sydney, Angus and Robertson, 1966. \$3.75.

First published by *The Bulletin*, 1951–2.

These letters present a picture of family life in the Victorian era in the country districts of New South Wales and Queensland.

HETHERINGTON, J. A. Australian painters; forty profiles. Melbourne, Cheshire, 1963. \$4.00.

HETHERINGTON, J. A. Uncommon men. Melbourne, Cheshire, 1965. \$3.60.

The author portrays a selection of notable Australians 'whose actions had in some way set them apart from the rest of their fellows'.

HEYDON, P. R. Quiet decision; a study of George Foster Pearce. Melbourne, Melbourne University Press, 1965. \$6.75.

Pearce was a Senator in the Commonwealth Parliament from its inception in 1901 until 1937, and held cabinet rank for much of that period.

LA NAUZE, J. A. Alfred Deakin; a biography. Melbourne, Melbourne University Press, 1965. 2v. \$13.00.

This account deals with Deakin's personal and intellectual life as well as his political career which began in the Victorian State Parliament and culminated in three terms as Prime Minister of Australia.

LEGG, F. Once more on my adventure; the life of Frank Hurley, by Frank Legg and Toni Hurley. Sydney, Ure Smith, 1966. \$4.75.

A well illustrated account of the noted photographer.

LINDSAY, Sir Daryl. The leafy tree; my family. Melbourne, Cheshire, 1965. \$3.95.

A study of one of Australia's most colourful and influential families in the field of literature and art.

LYONS, Dame Enid. So we take comfort. Melbourne, Heineman, 1965. \$4.75.

Biography of J. A. Lyons, Prime Minister of Australia from 1931 to his death in 1939, by his widow, a notable figure in Australia public life who was the first woman elected to the House of Representatives.

MCINNES, G. Humping my bluey. London. H. Hamilton, 1966. 25s.

A sequel to the author's *The road to Gundagai*.

MACK, J. D. Matthew Flinders 1774–1814. Melbourne, Nelson Australia, 1966. \$4.75.

MACMILLAN, D. S. The Kater family 1750–1965. Sydney, 1966. \$4.20.

Sir Norman Kater, who died in 1965, was a member of a family who first settled in New South Wales in 1839 and subsequently was well known in the public affairs of the colony.

MCNALLY, W. Smithy; the Kingsford-Smith story. London, R. Hale, 1966. 25s.

MANSFIELD, B. Australian democrat; the career of Edward William O'Sullivan, 1846–1910. Sydney, Sydney University Press, 1965. \$3.00.

O'Sullivan, journalist and politician, was a member of the New South Wales Parliament for eighteen years and Minister for Public Works from 1899 to 1904.

MAWSON, Paquita, Lady. Mawson of the Antarctic; the life of Sir Douglas Mawson. London, Longmans, 1964. 35s.

PAGE, Sir Earle. Truant surgeon; the inside story of forty years of Australian political life. Edited by Ann Mozley. Sydney, Angus and Robertson, 1963. \$3.00.

Sir Earle Page was prominent in the foundation of the Country Party, its leader for many years, and for a brief period, Prime Minister of Australia.

- PORTER, H. *The paper chase*. Sydney, Angus and Robertson, 1966. \$3.25.  
A further autobiographical volume by the well known Australian writer.
- RIVETT, R. *Australian citizen; Herbert Brookes, 1867-1963*. Melbourne, Melbourne University Press, 1965. \$6.50.  
A study of Herbert Brookes, manufacturer and pastoralist, who took a leading part in Australian public affairs.
- RONAN, T. *Once there was a bagman; a memoir*. Melbourne, Cassell Australia, 1966. \$4.00.  
A continuation of his *Packhorse and pearling boat*.
- SAVA, G. *A surgeon in Australia*. London. Faber. 1966. 25s.
- SAYERS, C. E. *David Syme; a life*. Melbourne, Cheshire, 1965. \$7.00.  
From 1860 to his death in 1908 Syme held a controlling interest in the *Age*, a newspaper which exerted power and influence over the Victorian governments of that period.
- SPRATT, E. F. *Eddie Ward, firebrand of East Sydney*. Adelaide, Rigby, 1965. \$4.50.  
Ward held the Federal seat of East Sydney for the Australian Labor Party for thirty-two years.

## DIARY OF PRINCIPAL ECONOMIC EVENTS, 1966-67

The principal economic events in earlier years were shown in the following issues:

<i>Years</i>	<i>Year</i>	<i>Book No.</i>	<i>Pages</i>
1931 to 1938	.	33	968-77
1939 to 1944	.	36	1129-41
1945 to 1948	.	37	1235-45
1949 to 1951	.	39	1331-40
1952 to 1955	.	42	1149-60
1956 to 1958	.	46	1185-92
1958-59 to 1961-62	.	48	1188-1200
1962-63	.	49	1253-56
1963-64	.	50	1283-88
1964-65	.	51	1269-74
1965-66	.	52	1185-88

The year 1966-67 was marked by an increase in the rate of economic progress as compared with the previous year.

In current prices gross national expenditure increased by about 8 per cent in 1966-67 compared with an increase of 6 per cent in 1965-66, while gross national product increased by 9 per cent in 1966-67 compared with 5 per cent in 1965-66. The larger rise in the 1966-67 product was assisted by a recovery from the effects of drought conditions, which, in the previous year, had substantially reduced the farm output. The Consumer Price Index, the components of which relate to a substantial portion of total consumption expenditure, increased by 2.7 per cent between 1965-66 and 1966-67. This, together with other available but incomplete price and cost data, indicates that the average increase in prices of all items included in gross national expenditure may have been a little more than 3 per cent.

Exports of goods and services increased by 11 per cent compared with an increase of 2 per cent in imports, but after allowing for other balance of payments factors international reserves decreased by \$177 million.

An increase in retail sales (excluding motor vehicles, parts, petrol, etc.) of 6 per cent was accompanied by an increase in outstanding balances in transactions financed by instalment credit from \$1,431.1 million in June 1966 to \$1,441.3 million in June 1967, and an increase of \$336.3 million in loans, advances, and bills discounted by Major Trading Banks. At the same time the combined trading bank and savings bank deposits reached \$11,378 million. The liquid assets and Government securities ratio of Major Trading Banks decreased from 24.2 per cent in June 1966 to 23.7 per cent in June 1967, but the amount in the banks' Statutory Reserve Deposit Accounts with the Reserve Bank increased from \$474 million in June 1966 to \$475 million in June 1967.

There was continued activity in the iron ore mining industry during the year, and substantial shipments of ore were shipped to Japan. New mineral deposits of silver-lead, phosphate and vanadium were discovered, and a considerable expansion in existing activity took place. Additional discoveries were made in the oil and natural gas industry, particularly in islands off the coast of Western Australia and off-shore leases in Bass Strait (Victoria).

Average weekly earnings increased by 8.0 per cent from June 1966 to June 1967 compared with an increase of 3.4 per cent in the previous year. The 'Total Wage' judgment of the Commonwealth Conciliation and Arbitration Commission in the 1967 National Wages Case handed down in June 1967 increased wages under Commonwealth awards by \$1 a week.

Climatic conditions during 1966-67 were widely varied. Central Australia received the heaviest rainfall since 1957, and rail services were reduced because of damage to the track. In Queensland and parts of New South Wales, floods caused considerable damage towards the end of the year. On the other hand, Tasmania suffered from lack of rain, and the Hobart and southern Tasmania area experienced the worst bush-fires in history early in February, and New South Wales and Victoria suffered bush-fires though of lesser intensity.

Building activity increased again, although not quite up to the 1964-65 level, and the number of new houses and flats commenced increased from 107,200 in 1965-66 to 114,800 in 1966-67. Motor sales, as shown by the number of new motor vehicles registered, also reached a higher figure, increasing from 392,000 in 1965-66 to 403,000 in 1966-67. Total civilian employment (other than rural) continued to increase and in June 1967 was 3.8 million, an increase of 2.0 per cent on the previous year.

1966-67

- 7 July. Contract for the supply of 100,000 tons of re-roll steel billets to Pakistan, estimated to be worth about \$6 million.
- 8 July. Commonwealth Conciliation and Arbitration Commission announced an increase of \$2.00 in the basic wage.
- 14 July. Commonwealth cash loan opened, issued with yields of 5 per cent for 3 years, 5.16 per cent for 9 years, 5.25 per cent for 22 years, and 5.25 per cent for 35 years. An amount of \$88 million was raised.
- 25 July. Arrangements made for loan of \$20 million by Australia to New Zealand to strengthen New Zealand's overseas reserves position.
- 29 July. Oil arrived at Westernport Bay for commissioning of new \$30 million refinery at Crib Point, Victoria. First basic industry on Mornington Peninsula.
- 1 August. Import duties on fully assembled cars, station wagons, utilities, and panel vans increased by 10 per cent.
- 5 August. Australian price of copper was increased, by \$380, to \$1,250 a ton (*see* page 1101).
- 16 August. Commonwealth Budget for 1966-67 introduced into House of Representatives. In 1965-66 receipts of the Consolidated Revenue Fund were \$4,879.2 million, and expenditure (excluding payments of \$210.5 million to the Loan Consolidation and Investment Reserve) amounted to \$4,668.7 million. The main items of revenue (1964-65 figures shown in parentheses) were: income taxes, \$2,549.7 million (\$2,295.6 million); excise duties, \$751.2 million (\$631 million); customs duties, \$272.4 million (\$268.8 million); sales tax, \$369.4 million (\$362.8 million); and pay-roll tax, \$161.9 million (\$150.1 million). The main items of expenditure were: payments to or for the States, \$1,117.0 million (\$976.9 million); social and health services, \$941.6 million (\$890.4 million); defence services, \$747.9 million (\$609.0 million); war and repatriation services, \$263.7 million (\$239.0 million); capital works services, \$418.1 million (\$387.0 million). The budget for 1966-67 provided for an estimated expenditure of \$5,235.9 million, to be provided from Consolidated Revenue Fund.
- 23 August. First shipment of iron ore (52,000 tons valued at \$464,000) from Mount Tom Price, the largest single cargo ever to leave Australian shores, left Dampier, Western Australia, for Japan.
- 26 August. Announcement of 6.4 per cent overall increase in cargo freight rates from Australia to Europe.
- 31 August. 1966-67 Budget introduced into South Australian House of Assembly. In 1965-66 revenue amounted to \$236,816,000 and expenditure to \$243,650,000, leaving a deficit of \$6,834,000. For 1966-67 it was estimated that revenue would be \$255,702,000 and expenditure \$258,018,000, leaving a deficit of \$2,316,000.
- 4 September. General increase of 3 per cent in airline fares and freight rates approved by Minister for Civil Aviation.
- 7 September. 1966-67 Budget introduced into Tasmanian House of Assembly. The transactions of the Consolidated Revenue Fund in 1965-66 resulted in a deficit of \$2,021,000. Receipts of the Consolidated Revenue Fund totalled \$83,564,000 and expenditure \$85,585,000. For 1966-67 it was estimated that expenditure would be \$93,481,000 and revenue \$91,139,000, leaving a deficit of \$2,342,000.
- 8 September. Stevedoring Industry Conference told by chairman that principle of permanent employment for waterside workers had been approved. Administrative details still to be finalised.
- 9 September. Bank of New South Wales introduced new system of unsecured personal loans up to maximum of \$1,000, at flat rate of interest of 6 per cent. (Other banks later introduced similar systems.)
- 14 September. Agreement between Commonwealth and Queensland Governments for loan of \$19 million by Commonwealth to assist sugar industry in the State.
- 1966-67 Budget introduced into Victorian Legislative Assembly. In 1965-66 revenue amounted to \$508,553,000 and expenditure to \$516,689,000. The 1966-67 Budget provided for expenditure of \$554,913,000 and revenue of \$552,491,000, leaving a deficit of \$2,423,000. Railway operating expenses and income were estimated at \$109,693,000 and \$106,329,000 respectively, giving a deficit of \$3,364,000.
- 21 September. Third report of Australian Universities' Commission and first report of Commonwealth Advisory Committee on Advanced Education presented in Senate. They foreshadowed spending by Commonwealth and State Governments of \$610 million on tertiary education during next three years.
- 23 September. Big power restrictions in Victoria as a result of industrial dispute concerning State Electricity Commission's power station workers. Estimated that 200,000 workers affected in other industries.

- 26 *September*. Special Bonds Series N issued at par with interest rising from 4.50 to 5.25 per cent and optional redemption prices at par to 103 per cent at maturity.
- 27 *September*. 1966-67 Budget introduced into New South Wales Legislative Assembly. During 1965-66 the transactions of the Consolidated Revenue Fund, Railways, Metropolitan and Newcastle Transport Services, and Maritime Service Board resulted in a deficit of \$21,524,000 (total revenue overall was \$773,227,000, total expenditure \$794,752,000). After providing for debt charges there was a deficit of \$12,251,000 on the Department of Railways, a deficit of \$5,625,000 on the Metropolitan and Newcastle Transport Services, and a surplus of \$95,000 from the operations of the Maritime Services Board. The 1966-67 Budget provided for an overall deficit of \$8,834,000 (revenue \$825,336,000, expenditure \$834,170,000). After meeting debt charges, it was estimated that there would be a deficit of \$504,000 on the Railways, a deficit of \$5,340,000 on the Metropolitan and Newcastle Transport Services, and a surplus of \$40,000 on the Maritime Services Board.
- 29 *September*. 1966-67 Budget introduced into Queensland Legislative Assembly. In 1965-66 receipts of the Consolidated Revenue Fund amounted to \$294,502,000 and expenditure to \$298,022,000. For 1966-67 it was estimated that revenue would amount to \$324,864,000 and expenditure to \$324,836,000, leaving a surplus of \$28,000.
- 1 *October*. Average increase of 15 per cent in trading bank charges for current accounts came into effect throughout Australia.
- 5 *October*. State Electricity Commission of Victoria let \$43 million contract for supply of two reheat boilers for its new Yallourn 'W' Power Station.
- 6 *October*. 1966-67 Budget introduced in Western Australian Legislative Assembly. Financial transactions for the year 1965-66 resulted in a deficit of \$10,000. For 1966-67 it was estimated that expenditure would be \$223,054,000 and revenue \$222,436,000, leaving a deficit of \$618,000.
- 11 *October*. Special excursion fares and concessions to young people introduced for air travel between Australia and overseas.
- 12 *October*. Commonwealth Cash Loan opened, issued with yields of 5 per cent for 2 years 11 months, 5.16 per cent for 10 years 9 months and 5.25 per cent for 34 years 9 months. An amount of \$194 million was raised.
- 17 *October*. Flow of natural gas reported from Marlin B1 well in Bass Strait.
- 26 *October*. Following report by Tariff Board, Commonwealth Government announced strong tariff measures, ranging from 25 per cent to 40 per cent general duty, to protect Australian chemical industry.
- 27 *October*. Contract for purchase by Japan of 100 million tons of iron ore (worth \$800 million) from Mount Newman, Western Australia, the largest single mineral contract in Australia so far. Delivery to be spread over fifteen years.
- 28 *October*. Announced that Australia's first major deposit of phosphate had been discovered near Cloncurry, Queensland.
- 29 *October*. Amendment to Commonwealth Public Service Act proclaimed, providing for permanent employment of married women by Commonwealth.
- 1 *November*. Minimum housing and food standards for Aboriginal employees in Northern Territory gazetted. New minimum wage rates for Aborigines employed under Northern Territory Wards Employment Ordinance (\$6.90 for non-pastoral workers, \$14.50 for pastoral workers) became effective.
- 4 *November*. Western Australian State Basic Wage increased to \$33.50.
- 24 *November*. Industrial dispute over wage claims concerning Qantas pilots began; 3,000 staff members also affected. Settled after twenty-seven-day disruption of services.
- 14 *December*. Contract for \$56 million let by Electricity Commission of New South Wales for supply of four steam generators for Liddell Power Station.
- 24 *December*. Commonwealth Treasury Note terms adjusted, price 98.95, to yield 4.256 per cent per annum at 13 weeks maturity.
- 29 *December*. Commonwealth and Victorian Governments reached agreement on development of off-shore oil and natural gas in Bass Strait. Victorian Government and oil search companies to get concessions on royalties asked for by Commonwealth.
- 23 *January*. New five-year plan for Australian dairy industry submitted to Government by Australian Primary Producers' Union.
- 28 *January*. Maritime Services Board, Sydney, let \$4.5 million contract for construction of container terminal wharves at White Bay, Balmain, New South Wales.

- 7 *February*. Worst bushfires in history of Tasmania caused serious loss of life and extensive property damage in Hobart environs and southern Tasmania. Commonwealth provided \$4.5 million relief aid in grants and interest-free loans.  
Commonwealth cash loan opened, issued with yields of 4.59 per cent for 3 years, 5 per cent for 9 years 8 months, 5.25 per cent for 21 years 5 months, and 5.25 per cent for 34 years 5 months. An amount of \$204 million was raised.
- 14 *February*. Australian Agricultural Council decided to maintain existing margarine quota limits.
- 16 *February*. Commonwealth Government relaxed State tax reimbursement formula to grant States more money.
- 23 *February*. Commonwealth Government announced that it would spend up to \$14 million a year for the next three years for wool promotion and research, on a dollar for dollar basis with amounts raised by wool industry.
- 25 *February*. Vanadium deposits estimated at 100 million tons found near Jameson Range, 520 miles north-east of Kalgoorlie, Western Australia.
- 26 *February*. Australian Workers' Union affiliated with Australian Council of Trade Unions.
- 1 *March*. Interstate rail fares increased by 10 per cent throughout Australia. Trade talks begun in New Zealand between Australian and New Zealand Ministers for Trade.
- 6 *March*. Heavy rains in Northern Territory delayed work on relaying of Frances Creek to Darwin railway and cut rail and road links with Alice Springs.
- 13 *March*. Record floods in Northern Queensland caused property damage and food shortages. Many towns isolated.
- 16 *March*. \$5 million main contract for Pindari Dam (northern New South Wales) let to French company.
- 3 *April*. Prospectus for \$25 million capital issue filed by Australian-based mining group—biggest yet made. Two major oil companies agreed on \$150 million 2-year joint development programme for Bass Strait oilfield.
- 7 *April*. Commonwealth 50 million Swiss francs (\$10.2 million) loan opened in Basle, Zurich and Lucerne, issued at par with interest at 5.50 per cent for a period of 15 years. The loan was fully subscribed.  
Commonwealth and State Attorney-Generals, State Ministers for Mines and Minister for National Development settled on formula for sharing of off-shore oil and gas rights (*see also* 29 December, page 1281).
- 11 *April*. Under new regulations for export of uranium, exporters must find new deposits at least equal in quantity to proposed exports.
- 17 *April*. Magistrate ruled that Victorian Egg Board had no power to deduct Commonwealth levies from egg producers.
- 23 *April*. First tanker loaded with oil from Barrow Island, Western Australia.
- 4 *May*. Commonwealth cash loan opened, issued with yields of 4.60 per cent for 2 years 9 months, 5 per cent for 9 years 5 months, 5.25 per cent for 21 years 2 months, and 5.25 per cent for 34 years 2 months. An amount of \$69 million was raised.
- 10 *May*. Natural gas discovered on Pascoe Island off Western Australian coast.
- 12 *May*. Expert committee recommended \$30 million partial rehabilitation of Nauru phosphate workings.
- 18 *May*. Copyright Bill 1967 introduced by Attorney-General.
- 19 *May*. Oil strike reported near Roma, Queensland.
- 31 *May*. Oil strike, 1,500 barrels a day, in Kingfish A1 well in Bass Strait.
- 2 *June*. Minister for National Development announced that the Snowy Mountains Hydro-electric Authority would be disbanded as an integrated construction force. No more than 700 of the present 3,000 odd employees are to be retained for investigation design and scientific work.
- 5 *June*. Judgment handed down by Commonwealth Arbitration Commission introducing 'Total wage' concept (*see* Appendix, page 1294) and increasing wage by \$1.00 a week.
- 6 *June*. Commonwealth \$US 25 million loan opened in New York, issued at 97.50 with interest at 6.50 per cent for a period of 15 years; fully subscribed, principally from European sources.
- 15 *June*. Agreement signed giving Nauruans full control of the island's phosphate deposits, transfer to be completed in three years. Royalty payments for 1966-67 increased from \$1.75 million to \$4.50 million.
- 28 *June*. Loan Council met in Canberra and approved borrowing programme for 1967-68 of \$677 million (\$554 million for State Works, \$123 million for Commonwealth-State Housing).

## CHRONOLOGICAL TABLE

### CHRONOLOGICAL TABLE OF CHIEF EVENTS IN AUSTRALIA SINCE 1955

NOTES. In issues of the Year Book up to No. 48 (see No. 48, page 1201) this table covered events back to the establishment of settlement in Australia in 1788. Later issues up to No. 50 (see No. 50, page 1289) covered events back to 1945. This issue covers the years 1955 to 1966 and the first half of 1967.

For each earlier year this Table rarely contains more than two or three items; for recent years, however, in order to provide a wide cover of events, etc., it includes a much greater number. Both the nature of the Table and considerations of space render necessary a continual reduction in these items, and for more information the reader should therefore consult earlier issues.

- 1955 First power generated by Snowy Mountains Hydro-electric Authority. Australian population reached 9,000,000. Cocos (Keeling) Islands became Territory under authority of Commonwealth.
- 1956 Amendment to Conciliation and Arbitration Act altered the structure of the arbitration machinery by separating judicial functions from conciliation and arbitration functions.
- 1957 High Court ruled that interstate vehicles could not be compelled to register in New South Wales, but upheld validity of Victorian tax on commercial vehicles, including those engaged in interstate trade, imposed solely for the maintenance of roads. National Capital Development Commission set up to co-ordinate development of Canberra as centre of government.
- 1958 Prime Minister officially opened Australia's first nuclear reactor at Lucas Heights, near Sydney. Christmas Island (Indian Ocean) transferred to Australian Administration.
- 1959 Annual Holidays Act, 1944-1958 provided for three weeks annual holiday for all New South Wales workers. Population reached 10 million.
- 1960 Provision made for Social Service benefits to be paid to Australian Aborigines. *Commonwealth Banks Act 1959* and *Reserve Bank Act 1959* proclaimed (see page 682). Goods comprising 90 per cent of Australia's current imports exempted from licensing provisions. National Service training suspended. Commonwealth Government announced special economic measures designed to counter inflationary trend and safeguard overseas funds.
- 1961 Australia's first guided missile base established at Williamstown (New South Wales). *Commonwealth Matrimonial Causes Act 1959* unifying State Acts became operative (see page 528). Commonwealth Government announced tax concessions to exporters for promotional expenses in developing overseas export markets. Oil discovered in south-west Queensland. Australian population census taken. Iron ore deposits estimated at 1,800 million tons discovered at Pilbara (Western Australia).
- 1962 *Commonwealth and Western Australian Electoral Acts amended to provide for votes for Aborigines*. Work began on standardisation of rail gauge from Kwinana to Kalgoorlie (Western Australia). Commonwealth provided \$3,530,000 grants to States for assistance to universities in development of training facilities for medical students in teaching hospitals. First production of bauxite ore from Weipa deposits. Aborigines exercised voting rights in Northern Territory for first time.
- 1963 Commonwealth Committee of Economic Enquiry appointed to investigate broad aspects of the Australian economy. Approval given to agreement for United States to operate a naval communications station at North West Cape, Western Australia. Western Australian Government signed \$156 million contract for the establishment and development of a new iron and steel industry in the State. Australia signed Nuclear Test Ban Treaty. *Uniform Marriage Act 1961* came into effect. Decimal currency legislation introduced into House of Representatives (see Year Book 52, page 675). Australian population reached 11 million.
- 1964 Agreement concluded with United States of America on establishment of meteorological research station at Pearce (Western Australia) R.A.A.F. Base. R.A.N. Destroyer *Voyager* sunk in collision off Jervis Bay with loss of eighty-two lives. First general election from common roll in Papua-New Guinea. New South Wales Government employees granted four weeks annual leave. Commonwealth Government announced programme of assistance for schools for teaching of science. Commonwealth Bureau of Roads to be set up to make a full and continuous study of the roads problem. Moonie to Brisbane oil pipeline opened and Australia's first commercial oil production started. Northern Territory Legislative Council passed legislation removing discrimination against Aborigines. Army sent instructors and advisers to Vietnam. First applications lodged for Commonwealth Home

- 1964** Savings Grants. United States and Australian Governments agreed to establish joint educational foundation to succeed Fulbright Scheme. Commonwealth Government approved construction of \$2 million tracking station at Gove in the Northern Territory for ELDO (see page 87). Northern Territory *Social Welfare Ordinance* 1964 (see page 124) repealed *Welfare Ordinance* 1953-1963 and provided for assistance without control for any person socially or economically in need of it. Commonwealth Government established licensing system for intrastate civil aviation. Australian forces saw action in Malaysia. Prime Minister announced expansion of defence provisions involving additional defence expenditure of \$2,440 million over three years, resumption of National Service Training and establishment of special Reserve Forces (see page 76). *National Service Act* 1964 passed. Commonwealth Government allowed export of iron ore to Japan from fields in Western Australia (see page 1064). First awards of Commonwealth Scholarships to secondary school students.
- 1965** New passenger car ferry, the *Empress of Australia*, commissioned for Sydney-Hobart run. Full High Court judgment on intra-state airlines case held that New South Wales Air Transport Act requiring intra-state services to hold a State licence was valid, but also that four out of five relevant Commonwealth regulations were valid, so that airlines needed Commonwealth licence as well. Australia signed major defence agreement to buy \$312 million of aircraft and other military equipment in next three years. Royal Australian Mint opened. Martin Report on tertiary education tabled in House of Representatives (Commonwealth will provide grants, subject to matching grants by States, rising from \$5 million to \$50 million over six-year period for development of technical education at tertiary level and will award 1,000 additional scholarships, to total of 6,000). Australia changed to metric system for dispensing of medicine. New steelworks opened at Whyalla (South Australia). 1st Battalion, Royal Australian Regiment, embarked for service in South Vietnam. Australia agreed to establishment of Legislative Council for Nauru and payment of substantially higher phosphate royalties. Report of Vernon Committee of Economic Enquiry tabled in House of Representatives. First trade agreement between Australia and U.S.S.R. signed in Moscow. One of world's largest seismological installations was set up in Northern Territory over a period of time by United Kingdom Atomic Energy Authority in association with Australian National University. Economic sanctions imposed on Rhodesia. Mills Cross radio telescope opened by Prime Minister near Hoskinstown (N.S.W.). Housing Loans Insurance Corporation commenced operations in all States. Largest Australian built ship, the 49,000 ton bulk ore carrier *Darling River*, launched.
- 1966** *January*. Mr Harold Holt sworn in as Prime Minister. Dame Annabelle Rankin included in new ministry, first woman to administer a Government department in Australia.
- February*. Australia adopted dollar-cent system of decimal currency.
- March*. Immigration laws amended to provide for relaxation of restrictions on entry of persons of non-European race (see page 200). Prime Minister announced the replacement of the Australian Army battalion in Vietnam by an Army Task Force of two battalions and support units. H.M.A.S. *Perth*, Australia's new guided missile destroyer, arrived in Sydney. Parliament passed Act giving member for Australian Capital Territory full voting rights. Oil flowed from well 27 miles off-shore from Lakes Entrance (Victoria).
- May*. Europa 1, first ELDO rocket, launched at Woomera. First National Serviceman in Australian army ever to die on foreign soil killed in action in Vietnam. Australia's third commercial oilfield declared at Barrow Island, 50 miles off Western Australian coast.
- June*. World's largest solar still, and first to be used for town water supply in Australia, set up at Coober Pedy (South Australia). First shipment of iron ore from Mount Goldsworthy field left Port Hedland (Western Australia). Australia joined eight other Asian and Pacific nations in forming Asian and Pacific Co-operation Council (ASPAC). SEATO Conference held in Canberra. 1966 Census taken. ANZUS foreign ministers held Conference in Canberra. Australian and New Zealand Prime Ministers held Conference in Canberra.
- July*. Commonwealth Conciliation and Arbitration Commission announced an increase of \$2 a week in the Basic Wage. Mr Justice Eggleston appointed as first President of Trade Practices Tribunal. Motor vehicle design committee set up by Commonwealth Government to report on car safety. Arrangements concluded for loan of \$20 million by Australia to New Zealand to strengthen New Zealand's overseas reserves position. Sir Robert Menzies installed as Lord Warden of the Cinque Ports.
- August*. Commonwealth Government signed \$8 million contract for 1,500 mile trans-continental telephone link from Northam, Western Australia to Kimba, South Australia. Most drastic water restrictions in the history of the Murrumbidgee Irrigation Areas announced, Burrinjuck Reservoir only one-third full. First shipment of iron ore (\$2,000 tons valued at \$464,000) from Mount Tom Price, the largest single cargo ever to leave Australian shores, left Dampier, Western Australia, for Japan. Prime Minister left for conference of Commonwealth Prime Ministers in London.

1966 *September.* Seventh Biennial Regional Conference on Water Resources Development organised by ECAFE held in Canberra. Stevedoring Industry Conference told that principle of permanent employment for waterside workers had been approved; administrative details still to be finalised. President of British Board of Trade made official visit to Australia. Viscount aircraft crashed in Queensland with loss of twenty passengers and four crew. First migrants arrived under new Special Passage Assistance Programme (see pages 197-8).

*October.* United States, United Kingdom, New Zealand, and Australia participated in largest naval exercise in Australian waters since World War II. President Johnson of United States of America made four-day visit to Australia. Australian delegation attended Vietnam peace talks in Manila. Amendment to Commonwealth Public Service Act proclaimed providing for permanent employment of married women by Commonwealth. Announced that National Servicemen would be eligible for re-establishment loans of up to \$6,000 at 4½ per cent interest on discharge.

*November.* Minimum housing and food standards for Aboriginal employees in Northern Territory gazetted. New minimum wage rate for Aborigines employed under Northern Territory Wards Employment Ordinance (\$6.90 for non-pastoral workers, \$14.50 for pastoral workers) became effective. First television programmes interchanged direct between Britain and Australia by means of the orbiting satellite Intelsat two.

*December.* Posthumous Victoria Cross awarded to Warrant Officer K. A. Wheatley for gallantry in Vietnam. Australia made gift of 150,000 tons of wheat and flour to India. New Commonwealth Department of Education and Science established. Hon. H. Opperman appointed first Australian High Commissioner to Malta. Australia's commitment in Vietnam increased by 1,700 men, 12 tanks, 2 minesweepers, and 8 bombers.

1967 *January.* Marshal Ky, Prime Minister of South Vietnam, made official visit to Australia. Registration for National Service intended to cover aliens resident in Australia. Sir Francis Chichester reached Australia at end of outward leg of round-the-world solo yacht voyage. Worst bushfires in history of Tasmania caused loss of 51 lives and property damage estimated to be more than \$20 million in Hobart environs and southern Tasmania. Commonwealth provided relief aid in grants and interest-free loans to supplement State aid. Australia-wide Red Cross Appeal heavily supported.

*February.* Prime Minister made seven-day visit to New Zealand. Australian Agricultural Council decided to maintain existing margarine quota limits. First George Medal in Vietnam War awarded to helicopter crewman, Sgt G. Buttriss.

*March.* New White Ensign adopted for use in Australian Navy. Navy took over Vietnam bound freighters when seamen's union placed ban on cargo. Honeysuckle Creek space tracking station for Apollo moon-probe opened by Prime Minister. Contract let for construction at Parramatta of \$2.8 million training centre for retarded children. Queen Elizabeth opened SEACOM communications cable linking Australia with south-east Asia. Duke of Edinburgh paid short visit to Australia to discuss 3rd Commonwealth Study Conference. Prime Minister made two-week visit to South-east Asia.

*April.* Trial system of oral customs declaration for air travellers commenced. Commonwealth and State Governments reached agreement on off-shore oil and gas legislation. National Capital Development Commissioner appointed by New South Wales Government as planner to survey future development of 'The Rocks' (Sydney). Under new regulations for export of uranium, exporters must find new deposits at least equal in quantity to proposed exports. \$3.5 million naval base to be built on Manus Island. United Nations World Symposium on man-made forests held in Canberra. First tanker loaded with oil from Barrow Island (W.A.). Referendum in northern New South Wales concerning proposed new State of New England resulted in defeat of proposal.

*May.* Agreement made between Australia and United Kingdom for building of 150-inch optical telescope at Siding Springs, New South Wales. Commonwealth Government issued details of scheme for light passenger aircraft network. New oil strikes reported near Roma, Queensland and in Kingfish A1 well in Bass Strait. Members of Women's (Defence) Services may serve overseas in future. Two Commonwealth referendums held—proposal to abolish link between size of Senate and House of Representatives defeated; removal from Constitution approved of discriminatory wording concerning Aborigines. (See Appendix, page 1293).

*June.* Minister for National Development announced that Snowy Mountains Hydro-electric Authority would be disbanded as an integrated construction force on completion of scheme. First direct satellite telecast from North America to Australia marked Australia's day at Montreal Expo '67. New judicial inquiry into *Voyager* disaster commenced (see 1964). Australia's first Oberon class submarine left United Kingdom shipyard for Australia. Senate, recalled during recess, disallowed post and telephone charge increases. Senior Japanese defence officers visited Australia.

# STATISTICAL SUMMARY: AUSTRALIA

In most cases where figures are available back to 1861, these were shown in Year Book No. 39. pages xxviii-xxix.

The statistics in this summary relate in general to the periods shown in the table headings where the statistics relate to other periods, this is indicated in footnotes.

		Year ended 30 June—							
		1902	1912	1922	1932	1942	1952	1962	1967
<b>DEMOGRAPHY(a)—</b>

## APPENDIX

Some recent information which has come to hand since the various chapters were sent to press is given in summarised form in the following pages, but for later statistics on subjects dealt with in chapters reference should in general be made to other publications issued by this Bureau, e.g. the *Monthly Review of Business Statistics*, the *Quarterly Summary of Australian Statistics*, the *Digest of Current Economic Statistics*, and the various mimeographed statements issued on particular subjects (*see* Publications issued by the Commonwealth Statistician, pages 1221-5 of the chapter Miscellaneous).

### CHAPTER 3. GENERAL GOVERNMENT

#### Parliamentary government

##### Commonwealth Ministries, page 57

Following the resignation of the Rt Hon. C. F. Adermann as Minister for Primary Industry the Hon. J. D. Anthony was appointed to that portfolio as from 16 October 1967. The Hon. P. J. Nixon was appointed to fill the resulting vacancy as Minister for the Interior.

##### State Ministries, page 58

*Victoria.* Following the 1967 election the ministry was reconstituted. The new ministry, which took office on 9 May 1967 is as follows.

##### *Premier and Treasurer—*

THE HON. SIR HENRY BOLTE, K.C.M.G., M.P.

##### *Chief Secretary—*

THE HON. A. G. RYLAH, C.M.G., E.D., M.P.

##### *Minister of Agriculture—*

THE HON. G. L. CHANDLER, C.M.G., M.L.C.

##### *Minister of Education—*

THE HON. L. H. S. THOMPSON, M.L.C.

##### *Attorney-General and Minister of Immigration—*

THE HON. G. O. REID, M.P.

##### *Minister of Public Works—*

THE HON. M. V. PORTER, M.P.

##### *Minister of Housing and Minister of Forests—*

THE HON. E. R. MEAGHER, M.B.E., E.D., M.P.

##### *Minister for Local Government—*

THE HON. R. J. HAMER, E.D., M.L.C.

##### *Minister for Fuel and Power and Minister of Mines—*

THE HON. J. C. M. BALFOUR, M.P.

##### *Minister of Labour and Industry—*

THE HON. J. F. ROSSITER, M.P.

##### *Minister of Transport—*

THE HON. V. F. WILCOX, M.P.

##### *Minister of Health—*

THE HON. V. O. DICKIE, M.L.C.

##### *Minister of State Development—*

THE HON. J. W. MANSON, M.P.

##### *Minister of Lands, Minister of Soldier Settlement and Minister for Conservation—*

THE HON. SIR WILLIAM McDONALD, M.P.

##### *Minister of Water Supply—*

THE HON. W. A. BORTHWICK, M.P.

*South Australia.* The Hon. F. H. Walsh, M.P., resigned as Premier on 1 June 1967, and the Hon. D. A. Dunstan succeeded him in that office. The reconstituted ministry was as follows.

##### *Premier, Treasurer, Attorney-General and Minister of Housing—*

THE HON. D. A. DUNSTAN, Q.C., M.P.

##### *Chief Secretary and Minister of Health—*

THE HON. A. J. SHARD, M.L.C.

##### *Minister of Works and Minister of Marine—*

THE HON. C. D. HUTCHENS, M.P.

##### *Minister of Social Welfare—*

THE HON. F. H. WALSH, M.P.

##### *Minister of Education and Minister of Aboriginal Affairs—*

THE HON. R. R. LOVEDAY, M.P.

##### *Minister of Local Government, Minister of Roads and Minister of Mines—*

THE HON. S. C. BEVAN, M.L.C.

##### *Minister of Labour and Industry and Minister of Transport—*

THE HON. A. F. KNEEBONE, M.L.C.

##### *Minister of Agriculture and Minister of Forests—*

THE HON. G. A. BYWATERS, M.P.

##### *Minister of Lands, Minister of Repatriation, Minister of Irrigation and Minister of Immigration—*

THE HON. J. D. CORCORAN, M.P.

*New South Wales.* As from 27 June 1967 the Honourable W. C. Fife, formerly Assistant Minister for Education, took over the portfolio of Minister for Mines from the Honourable T. L. Lewis, who thus became solely Minister for Lands.

*Queensland.* On 9 June 1967 the Honourable A. T. Dewar resigned as Minister for Industrial Development. The Honourable F. A. Campbell was appointed to fill the vacancy on 20 June 1967.

#### Leaders of the Opposition, page 60

Following the resignations of the Leaders of the Opposition in the Commonwealth, Victorian and Western Australian Parliaments Messrs E. G. Whitlam, Q.C., M.P., A. C. Holding, M.P., and J. T. Tonkin, M.L.A., were appointed, respectively, to fill the vacancies.

### Parliaments and elections

#### Commonwealth Parliaments and elections, page 63

*Members of the Senate.* Following the death of Senator D. C. Hannaford, Senator C. L. Laucke was sworn in on 3 November 1967 to fill the vacancy to the end of June 1968.

#### HOUSE OF REPRESENTATIVES ELECTIONS: 26 NOVEMBER 1966

(Summary of votes cast for political parties in each State and Territory)

State or Territory	Electors enrolled	Votes recorded						Total
		Liberal Party of Australia	Australian Country Party	Australian Labor Party	Australian Democratic Labor Party	Others	Informal	
New South Wales .	2,308,775	862,407	226,355	862,631	96,102	69,981	69,340	2,186,816
Victoria .	1,702,864	622,708	130,468	548,743	197,026	66,619	60,779	1,626,343
Queensland .	900,492	253,663	165,358	354,674	63,175	5,365	15,595	857,830
South Australia .	585,465	296,923	.	222,828	19,281	8,089	16,220	563,341
Western Australia .	433,097	160,894	32,524	168,257	28,502	2,875	16,518	409,570
Tasmania .	197,666	78,684	.	96,246	11,132	289	2,849	189,200
Northern Territory .	17,395	.	7,221	6,734	.	.	500	14,455
Australian Capital Territory .	48,127	16,685	.	22,721	2,193	2,396	777	44,772
Australia .	6,193,881	2,291,964	561,926	2,282,834	417,411	155,614	182,578	5,892,327

Elections to fill casual vacancies in the Senate in accordance with section 15 of the Constitution were held simultaneously with the election for the House of Representatives. Vacancies were as follows: New South Wales, 1; Victoria, 2; Queensland, 1; and Western Australia, 2. As a result of this voting three Liberal Party candidates were elected (one each in New South Wales, Queensland and Western Australia), one Country Party (in Victoria) and two Labor Party (one each in Victoria and Western Australia).

#### State elections, page 67

*Victoria.* Elections for both Houses of Parliament were held in Victoria on 29 April 1967. The numbers enrolled and votes cast at this election were as follows.

#### VICTORIAN ELECTIONS, 1967

	Legislative Council	Legislative Assembly
Electors enrolled . . . . .	1,723,981	1,723,981
Electors who voted . . . . .	1,625,371	1,625,239
Percentage of electors who voted . . . . .	94.28	94.27

In accordance with the *Electoral Provinces and Districts Act* 1965, the number of members elected were, for the first time, thirty-five for the Legislative Council, and seventy-three for the Legislative Assembly.

**Commonwealth referendums, page 66**

Two referendums on proposals for the amendment of the Constitution were submitted to electors for approval on 27 May 1967. The first, a proposal to alter the Constitution so that the number of members of the House of Representatives might be increased without necessarily increasing the number of Senators, was defeated, a majority in favour of the proposed law having been obtained in one State only, New South Wales. The other, a proposal to alter the Constitution so as to omit from paragraph xxvi. of section 51 the words 'other than the aboriginal race in any State' and to repeal section 127 so that Aborigines are to be counted in reckoning the population, was approved, a majority in favour of the proposed law having been obtained in each State. *See* page 66 for requirements for alteration of the Constitution.

A summary of the results of the voting on each of these proposals follows.

**CONSTITUTION ALTERATION (PARLIAMENT) REFERENDUM, 27 MAY 1967**

State	Electors enrolled	Result of scrutiny			
		Number of votes in favour of proposed law	Number of votes not in favour of proposed law	Informal	Total
New South Wales	2,315,828	1,087,694	1,044,458	34,355	2,166,507
Victoria	1,734,476	496,826	1,112,506	21,262	1,630,594
Queensland	904,808	370,200	468,673	9,855	848,728
South Australia	590,275	186,344	363,120	11,380	560,844
Western Australia	437,609	114,841	280,523	10,302	405,666
Tasmania	199,589	42,764	142,660	3,821	189,245
<b>Total</b>	<b>6,182,585</b>	<b>2,298,669</b>	<b>3,411,940</b>	<b>90,975</b>	<b>5,801,584</b>

**CONSTITUTION ALTERATION (ABORIGINALS) REFERENDUM, 27 MAY 1967**

State	Electors enrolled	Result of scrutiny			
		Number of votes in favour of proposed law	Number of votes not in favour of proposed law	Informal	Total
New South Wales	2,315,828	1,949,036	182,010	35,461	2,166,507
Victoria	1,734,476	1,525,026	85,611	19,957	1,630,594
Queensland	904,808	748,612	90,587	9,529	848,728
South Australia	590,275	473,440	75,383	12,021	560,844
Western Australia	437,609	319,823	75,282	10,561	405,666
Tasmania	199,589	167,176	18,134	3,935	189,245
<b>Total</b>	<b>6,182,585</b>	<b>5,183,113</b>	<b>527,007</b>	<b>91,464</b>	<b>5,801,584</b>

**The Parliaments of the States and State elections, page 67**

A referendum held on 29 April 1967 in nineteen northern electorates of New South Wales on the proposal to form a new State of New England resulted in a majority against the proposal.

**CHAPTER 7. THE TERRITORIES OF AUSTRALIA****Trust Territory of Nauru, page 155**

A statement by the Minister for Territories in the House of Representatives on 24 October 1967 outlined proposals made by the Nauruan delegation (during discussions on the constitutional future of Nauru, between representatives of the Nauruan people and of the Governments of Britain, New Zealand and Australia) seeking the agreement of the partner Governments to Nauru's becoming an independent State on 31 January 1968; the alternative arrangements put forward for consideration by the three Governments; and the reaction thereto of the Nauruan delegation. The statement continued: the partner Governments would respect the views put forward by the Nauruan delegation and were agreeable to meet its request for full and unqualified independence; the date on which Nauru would become independent required consideration in view of what was necessary to enable the change to be made; and the three Governments had agreed to take steps to seek from the United Nations General Assembly a resolution for the termination of the Trusteeship agreement upon independence being achieved.

A Bill for the *Nauru Independence Act* 1967 was introduced in the House of Representatives on 26 October 1967 so that on and after Nauru Independence Day Australian law would cease to apply. The Act was assented to on 10 November 1967.

**CHAPTER 8. POPULATION****General characteristics of the population, page 181**

Particulars of characteristics from June 1966 census results are being published in mimeograph form in Census Bulletins for each State and Territory and for Australia. Summarised information is shown on pages 1297-1305 of this Appendix.

**CHAPTER 11. LABOUR, WAGES AND PRICES****Surveys of wage rates, earnings and hours****Surveys of Weekly Earnings and Hours, page 327**

A Survey of Weekly Earnings and Hours was conducted in October 1966, and the results were published in a mimeographed bulletin issued on 3 May 1967.

**Basic wages in Australia****National Wage Cases of 1967, page 344**

Two benches of the Commonwealth Conciliation and Arbitration Commission commenced hearing on 4 April 1967 applications by trade unions and employers. Three matters were before the Commission, namely, an application by unions for an increased basic wage, an application by employers for a total wage, and an application by unions for an increase in margins. The last two matters were part heard (*see* Basic Wage, Margins and Total Wage Cases of 1966, pages 343-4) when the unions' basic wage application was made and were listed before the Commission on the application of the employers so that all three might be considered together.

The Presidential bench dealing with the basic wage application comprised Kirby *C.J.*, Gallagher and Moore *JJ.* and the reference bench dealing with the remaining matters comprised Gallagher and Moore *JJ.* and Commissioner Winter.

The unanimous decisions of the two benches were made in the form of a pronouncement by the President of the Commission (Kirby *C.J.*) on 5 June 1967. The pronouncement concluded with the following orders.

'Each bench will make formal orders in these proceedings. The Commission in Presidential Session will formally dismiss the unions' application for an increase in the basic wage. On behalf of the reference bench I announce the elimination of basic wages and margins and the introduction of total wages. The total wages will be arrived at by adding an amount of \$1 per week to

the weekly award wages of all adult males and females, but no employee is to receive the increase twice. By virtue of existing award provisions male and female juniors including apprentices will receive proportionate increases. The increase will also be added to the minimum standard for adult males introduced in July 1966. The necessary variation will come into operation from the beginning of the first pay period to commence on or after Saturday, 1 July 1967 . . . '

**State basic wages, etc., pages 346-50**

Subsequent to increases in Commonwealth awards as a result of the National Wage Cases of 1967 (*see above*), award wages in State awards, etc. were also increased as follows.

*New South Wales.* Award rates of wages and salaries for adult males and adult females were increased by the addition of a fixed loading of \$1 per week described as 'July 1967 economic loading' to take effect from the beginning of the first pay-period to commence on or after 1 July 1967.

*Victoria.* Wage rates for adult males and adult females in most Wages Board determinations were increased by \$1 per week from 1 July 1967. Basic wages and margins were deleted from determinations and wage rates expressed as total wages.

*Queensland.* Award rates of pay for both adult males and adult females were increased by \$1 per week to operate from 3 July 1967.

*South Australia.* The 'living wages' for both adult males and adult females were increased by \$1 per week to operate from 3 July 1967.

*Western Australia.* The decision of the Industrial Commission was that the *minimum* weekly wage payable to adult male workers under certain awards be increased from \$36.55 to \$37.55; 'that the wage rates for adult workers not in receipt of the "minimum wage" be increased by 60 cents per week; and that other wage rates be adjusted as if the basic wage for males and the basic wage for females had been increased by that amount.' These increases were declared to operate from the beginning of the first pay-period commencing on or after 1 July 1967.

*Tasmania.* The chairman of Tasmanian Wages Boards announced on 4 July that a \$1 per week increase in basic wage rates for adult males and adult females would be incorporated in Wages Boards determinations beginning in July 1967.

## CHAPTER 16. PUBLIC HEALTH

### Public health legislation and administration

#### Australian Capital Territory, page 550

An A.C.T. Hospital Advisory Committee has been established consisting of five members appointed by the Minister for Health. The functions of the Committee are to advise the Minister for Health with regard to the future development of hospitals in the A.C.T. for all types of patients; the co-ordination of the activities of such hospitals and related services; and measures to ensure efficient and economic utilisation of such services.

The Committee has been set up in view of the development in the A.C.T. of a multiple hospital system. For this reason also the composition of the Canberra Community Hospital Board has been changed to a Management Board of five members nominated by the Minister for Health. The change became effective from 1 October 1967. The functions of the new Management Board, subject to the directions of the Minister, are to provide general oversight of the management of the affairs of the hospital; provide facilities for the treatment of patients as required; appoint such staff as is necessary; submit for approval an annual financial and staff budget and operate the hospital within the approved budget; and make by-laws for the conduct of the administration of the hospital.

## CHAPTER 19. PRIVATE FINANCE

### Rates of exchange, page 680

On 18 November 1967 devaluation of the £1 sterling by 14.3 per cent (from \$A2.51 to \$A2.14) was announced. Subsequently devaluations were announced in the currencies of the following countries: New Zealand, Ireland, Denmark, Spain, Israel, Hong Kong, Fiji, Malta, Guyana, Bermuda, Malawi, Cyprus, Gambia, Mauritius, and Barbados.

### Finance companies, page 716

The statistics of finance companies are still being revised at the time of this Year Book going for press, and the revised information will be published in a mimeographed bulletin, to be issued as soon as possible. Current monthly information is available in the mimeographed statement *Finance Companies*.

## CHAPTER 20. PUBLIC FINANCE

(a) Assessments in respect of 1964-65 incomes issued to 31 December 1966. Assessments issued after that date are not included. (b) Actual income is defined briefly as 'Gross income including exempt income less expenditure incurred in gaining that income'. (c) Taxable income is the income remaining after deducting from assessable income all allowable deductions. (d) Excludes additional tax levied on the undistributed income of private companies. (e) Net tax assessed is nil because of rebates. (f) This figure is not included in the total shown for taxable income. (g) Not included in figures shown in adjoining column.

## CHAPTER 8. POPULATION

### Population recorded at censuses, page 171

The following table shows the final totals recorded for each State and Territory at the Census of 30 June 1966.

#### POPULATION, BY SEX: STATES AND TERRITORIES, CENSUS 30 JUNE 1966

State or Territory	Males	Females	Persons
New South Wales . . . . .	2,124,463	2,109,360	4,233,823
Victoria . . . . .	1,613,904	1,605,622	3,219,526
Queensland . . . . .	843,897	819,788	1,663,685
South Australia . . . . .	548,530	543,345	1,091,875
Western Australia . . . . .	426,691	409,982	836,673
Tasmania . . . . .	187,380	184,036	371,416
Northern Territory . . . . .	21,508	15,925	37,433
Australian Capital Territory . . . . .	49,977	46,036	96,013
Australia . . . . .	5,816,350	5,734,094	11,550,444

The figures above and in the following section are exclusive of particulars of full-blood Aborigines.

### General characteristics of the population, page 181

The following tables show, by sex and by State and Territory, the numbers of persons recorded at the census of 30 June 1966 according to the following characteristics: age; marital status; birthplace; period of residence of overseas-born; nationality; religious denomination; occupational status; occupation; and industry. The figures are preliminary, subject to amendment.

## LIST OF SPECIAL ARTICLES AND MISCELLANEOUS MATTER CONTAINED IN PREVIOUS ISSUES

This list refers to special articles and other more or less important miscellaneous matter which have appeared in previous issues of the Year Book but which are not included, or are included in abbreviated form only, in the present issue.

The figures below indicate, respectively, the number and page of the Year Book to which reference is made. In cases where matter was published in more than one previous issue, the volume and page for the last issue containing such matter are given. For possible revisions, however, issues immediately following the one referred to should also be consulted.

## GENERAL INDEX\*

This index is preceded by a list of the special articles, etc. which have appeared in previous issues of the Year Book. The illustrations contained in this issue are listed under the various chapters in the Contents (pages vii-xii). Subject matter extending continuously over more than one page is indexed according to the first page only. *Where more than one reference to a subject is given, the chief reference, wherever it has been possible to determine it, is indicated by italic type. Two references to a subject so indicated signify major, and approximately equal, importance.*

'A' Series Retail Price Index, 297  
 Aboriginal

## PRINTED PUBLICATIONS

### *issued by the Central Office of the Commonwealth Bureau of Census and Statistics*

The publications listed below may be purchased either over-the-counter or through the post from the Director of Publications, Commonwealth Government Printing Office, Canberra, A.C.T. 2600.

When ordering publications through the post, the price including postage should be forwarded. Prices including postage in Australia are shown; air mail and overseas rates are available on application. The Director of Publications will arrange account, standing order or reminder service facilities if required.

These publications may also be purchased over-the-counter from the Office of the Deputy Commonwealth Statistician and the Commonwealth Sub-Treasury in each State capital or from book sellers.

In addition to printed publications, a number of mimeographed publications are available in limited numbers free of charge.

Publications dealing with individual States only are produced by the Deputy Commonwealth Statistician in each State.

A complete list of publications issued by the Bureau is given in *Publications of the Commonwealth Bureau of Census and Statistics* available from the Commonwealth Statistician, Canberra, A.C.T. 2600.

Dates of publication are printed in *italics*.
